The libraries provide public access to a wide range of material, including online exhibits, digitized collections, archival finding aids, our catalog, online articles, and a growing range of materials in many media.

When possible, we provide rights information in catalog records, finding aids, and other metadata that accompanies collections or items. However, it is always the user's obligation to evaluate copyright and rights issues in light of their own use.

# Dramatic results in post-menopausal low back pain

Low backache in the post-menopausal woman is, far more often than was formerly realised, due to, or associated with, decalcification arising from reduced osteoblastic activity and matrix formation caused by oestrogen deficiency. Dianabol relieves the pain by correcting decalcification. It is also effective in preventing osteoporosis and produces remarkable improvement when the condition is established.

## DIANABOL

T.M.

methandrostenolone

### NEW NON-VIRILISING ANABOLIC AGENT

DIANABOL produces the nitrogen retention and calcium deposition required for healthy bone and tissue formation.

It is indicated in cachexia of malignant disease, long-term surgery, recovery from chronic illness, corticosteroid-induced osteoporosis and under-developed children.

**DOSEAGE:** Initially 15—20 mg. daily. For maintenance, 5—10 mg. daily or intermittently.

DIANABOL is available as 5 mg. tablets in 25's (Basic N.H.S. price 11s. 4d.), 100's and 500's.

### A TYPICAL CASE HISTORY

*I am very impressed by the result of giving the new compound Dianabol. Four weeks ago I had an old woman of seventy years of age who had so much pain from osteoporosis that she was taking the weight of her body on her arms with these resting on her thighs. I prescribed Dianabol and at the end of one month she is completely free from pain and is able to get about with a brace.*
