# PUBLIC DOCUMENTS

**FOR 1905-1906.**

---

## **CONTENTS OF VOLUME I.**

Message of the Governor.  
Report of the Secretary of State.  
Report of the State Treasurer.  
Report of the Attorney General.

---

## **CONTENTS OF VOLUME II.**

Report of the Railroad Commissioner.  
Report of the Railroad Commission.  
Report of the Adjutant General.  
Report of the Quartermaster General.  
Report of the State Board of Health.

---

## **CONTENTS OF VOLUME III.**

Report of the Department of Public Instruction.  
Report of the Regents of the University.  
Report of the Regents of Normal Schools.  
Report of the Free Library Commission.  
Report of the State Board of Control.  
Report of the Milwaukee Hospital for Insane.  
Report of the Commissioners of Public Lands 1906.

## **CONTENTS OF VOLUME IV.**

- Report of the Commissioner of Labor Statistics.
  - Report of the State Teachers' Association.
  - Report of the Inspectors of Illuminating Oils 1905.
  - Report of the Inspectors of Illuminating Oils 1906.
- 

## **CONTENTS OF VOLUME V.**

- Report of the Commissioner of Banking 1905.
  - Report of the Commissioner of Banking 1906.
  - Report of the Building and Loan Associations 1905.
  - Report of the Building and Loan Associations 1906.
  - Report of the Tax Commission.
- 

## **CONTENTS OF VOLUME VI.**

- Report of the Agricultural Experiment Station 1905.
  - Report of the Agricultural Experiment Station 1906.
  - Report of the Agricultural Experiment Association 1905.
  - Report of the Agricultural Experiment Association 1906.
  - Report of the Cheese Makers Association 1906.
  - Report of the Cheese Makers Association 1907.
- 

## **CONTENTS OF VOLUME VII.**

- Report of the State Board of Agriculture 1906.
- Report of the State Board of Agriculture 1907.
- Report of the Dairy and Food Commissioner 1906.
- Report of the Live Stock Sanitary and Veterinary Board.
- Report of the Commissioners of Fisheries.

## CONTENTS OF VOLUME VIII.

- Report of the State Horticultural Society 1906.
- Report of the State Horticultural Society 1907.
- Report of the Dairymen's Association 1905.
- Report of the Dairymen's Association 1906.
- Report of the State Forester.
- Report of the Civil Service Commission.

TWELFTH BIENNIAL REPORT

OF THE

Department of Public Instruction

OF THE

STATE OF WISCONSIN.

## LETTER OF TRANSMITTAL.

---

DEPARTMENT OF PUBLIC INSTRUCTION,

MADISON, WIS., October 22, 1906.

Hon. JAMES O. DAVIDSON,

*Governor of Wisconsin.*

SIR:—I have the honor to submit herewith, as required by law, the Twelfth Biennial Report of the Department of Public Instruction.

I am,

Very respectfully yours,

C. P. CARY,

*State Superintendent.*

# TABLE OF CONTENTS.

## PART I.

	PAGE.
INTRODUCTORY .....	1
DEPARTMENT FORCE .....	2
FADS AND FUNDAMENTALS.....	3-10
RURAL SCHOOLS .....	11-47
School board conventions.....	11-14
Length of school year in counties.....	15-24
Agriculture .....	25-26
Additional school rooms.....	26-27
Compulsory education .....	27-28
Consolidation .....	28-29
Special days .....	29-30
Minimum wage law.....	30-31
County Superintendent .....	32-37
County Superintendents' reports .....	37-47
Institutes .....	47
REPORTS OF TRAINING SCHOOLS:	
Buffalo county .....	62-64
Dunn county .....	64-66
Eau Claire county .....	67-68
Manitowoc county .....	68-71
Marathon county .....	71-72
Marinette county .....	73
Polk county .....	74-76
Richland county .....	77-79
Waupaca county .....	78-81
Wood county .....	82
County Schoo's of Agriculture:	
Dunn county .....	84-87
Marathon county .....	88-89

---

*Contents.*

---

	Page
STATE GRADED SCHOOLS.....	90-93
FREE HIGH SCHOOLS .....	93-109
Township free high schools.....	96-98
Aid to district high schools.....	98
The high school law.....	99
Course of study .....	99-101
Manual training .....	107-109
Commercial courses .....	101
Free tuition law .....	101-103
The North Central Association .....	103-106
STATE NORMAL SCHOOLS .....	113-119
STATE UNIVERSITY .....	119-120
DAY SCHOOLS FOR THE DEAF.....	109-113

---

 PART II.—STATISTICAL TABLES.

1. COUNTIES.	Page.
Census statistics, 1904-1905.....	122-123
Census statistics, 1905-1906.....	216-217
Enrollment and attendance, 1904-1905.....	124-125
Enrollment and attendance, 1905-1906.....	218-219
Teachers' certificates, 1904-1905.....	126-128
Teachers' certificates, 1905-1906.....	220-222
Teachers' and township libraries, 1904-1905.....	129-131
Teachers' and township libraries, 1905-1906.....	223-225
Teachers' wages classified, 1904-1905.....	132-133
Teachers' wages classified, 1905-1906 .....	226-228
Enrollment of pupils classified in counties, 1904-1905...	134-136
Enrollment of pupils classified in counties, 1905-1906...	229-231
High and Graded Schools, teachers, etc., 1904-1905.....	137-139
High and Graded Schools, teachers, etc., 1905-1906.....	232-234
Financial Receipts, 1904-1905.....	140-142
Financial Receipts, 1905-1906.....	235-237
Financial Disbursements, 1904-1905.....	143-145
Financial Disbursements, 1905-1906.....	238-239

*Contents.*

2. CITIES.	Page
Census statistics, enrollment and attendance, 1904-1905.	146-147
Census statistics, enrollment and attendance, 1905-1906.	240-241
Teachers' salaries, certificates, 1904-1905.....	148-149
Teachers' salaries, certificates, 1905-1906.....	242-243
Financial Receipts, 1904-1905.....	150-151
Financial Receipts, 1905-1906.....	244-245
Financial Disbursements, 1904-1905.....	152-153
Financial Disbursements, 1905-1906.....	246-247
3. FREE HIGH SCHOOLS HAVING FOUR YEAR COURSES.	
Qualification of principals, teachers employed, enrollment, 1904-1905 .....	154-161
Qualification of principals, teachers employed, enrollment, 1905-1906 .....	248-256
Attendance, pupils in different branches, cost of instruction, average age of pupils, 1904-1905.....	162-169
Attendance, pupils in different branches, cost of instruction, average age of pupils, 1905-1906.....	257-265
Graduates, tuition, 1904-1905.....	170-177
Graduates, tuition, 1905-1906.....	266-274
Salaries, pupils enrolled by grades, free text books, apportionment, 1904-1905 .....	178-185
Salaries, pupils enrolled by grades, free text books, apportionment, 1905-1906 .....	275-286
4. FREE HIGH SCHOOLS HAVING THREE YEAR COURSES.	
Qualification of principals, teachers employed, enrollment, 1904-1905 .....	186
Qualification of principals, teachers employed, enrollment, 1905-1906 .....	284
Attendance, branches, average age of pupils, etc., 1904-1905 .....	187
Attendance, branches, average age of pupils, etc., 1905-1906 .....	285
Graduates, tuition, 1904-1905.....	188
Graduates, tuition, 1905-1906.....	286
Salaries, pupils enrolled by grades, free text books, apportionment, 1904-1905 .....	189

# TWELFTH BIENNIAL REPORT

OF THE

## Department of Public Instruction.

---

MADISON, Wis., October 22, 1906.

*To the Legislature of Wisconsin:—*

The close of the biennial period in the administration of state affairs, is made by law, the occasion of submitting to your honorable body a report by the State Superintendent of Public Instruction, setting forth the general condition of the public school system of the state, and giving the history and statistics of educational interests during that period. I have the honor to submit, herewith, my report for the biennial period ending June 30, 1906, through His Excellency, the Governor of the State.

C. P. CARY,

*State Superintendent.*

---

*Department of Public Instruction.*

---

## STATE OF WISCONSIN

## DEPARTMENT OF PUBLIC INSTRUCTION.

C. P. CARY .....	Superintendent.
J. B. BORDEN .....	Asst. State Superintendent.
CHAS. L. HARPER .....	Chief Clerk.
MAUD BARNETT .....	Library Clerk.
WINONA MERRICK .....	Index and Filing Clerk.
HATTIE G. MILHAUPT .....	Mailing Clerk.
MARY MESSERSCHMIDT .....	Stenographer.

---

INSPECTORS.

H. L. TERRY .....	High School Inspector.
ANNA E. SCHAFER .....	Inspector of Schools for Deaf.
GEO. H. DREWRY .....	State School Inspector.
WALTER H. HUNT .....	State School Inspector.
L. W. WOOD .....	State Inspector of Rural Schools.

---

BOARD OF EXAMINERS,

## State Certificates.

C. F. VIEBAHN .....	Watertown.
A. H. SAGE .....	Oshkosh.
W. A. SCOTT .....	Madison.

---

COMMITTEE ON INSTITUTES, BOARD OF REGENTS, STATE NORMAL SCHOOLS.

C. P. CARY .....	State Superintendent.
C. H. CROWNHART .....	Superior.
JOHN HARRINGTON .....	Oshkosh.

*Fads and Fundamentals.*

---

## FADS AND FUNDAMENTALS.

A fad in education is a proper subject over-emphasized or a subject entirely out of place in the curriculum. Doubtless Arithmetic and Spelling have been fads at times in the history of education. They were fads because of over-emphasis. Like roller skating or bicycling they had their period of ascendancy and subsequent decline. Educational fads are not confined to the school room. Within the past dozen years we have witnessed the child-study fad come and go; apperception as a subject of discussion assumed the proportions of a fad, likewise concentration and correlation. A fad usually is an instance of much cry and little wool. Perhaps one might venture to say that with some people manual training is a fad, that is, a subject that in the mind of the faddist looms up too large, a subject that is out of perspective. A fad may properly belong in the curriculum, as above stated, but not be entitled to the time and attention it is receiving. The cure for fads is the thoro and impartial study of the relative values of the subjects in the course of study. The typical faddist in education is a person of great enthusiasm for matters of relatively small concern, a person of too narrow a mind to see things whole, in other words, to see things in right relations.

Fundamentals in elementary education are subjects that are necessary for the further progress of the pupil or for use in life, or for both. The word necessary may be used in its strict sense as when we say that the four fundamental processes in Arithmetic are necessary to further progress in Arithmetic, or very desirable as when we say that it is necessary for every child to be acquainted with some of the best juvenile literature. By a fundamental study, I mean, first of all a study or discipline, some proficiency in which is essential to the performance of one's simpler duties in life and the enjoyment of one's privileges in a manner becoming a civilized man in a civilized community. In the second place, and in a subordinate degree, I

---

*Fads and Fundamentals.*

---

mean by a fundamental study or discipline, a subject that adds to the pleasures of life and the larger social success of the individual. Of the first importance in all education, and therefore the most essential, is man's ability to communicate with others of his kind. For us this means ability to talk, to read, to spell and to write. A crude ability to talk is learned in the home and from contact with one's fellows, but this crude speech must be extended and refined in the school. Reading and writing and spelling are usually left entirely to the school. It would be difficult to over-emphasize the value of these studies, provided they are intelligently taught. They all have their *form* side, and *content* side. The two should be divorced as little as possible, at least the form side should never for long receive the main emphasis. These studies lead on by natural steps to grammar, rhetoric, literature, the art of public speaking and the like. It is thus readily seen that such subjects are fundamental from the point of view of use in life, and of further progress in other studies. The basic art here is the ability to speak and understand speech, after that comes the ability to read, after that the ability to write. By ability to read I would be understood to mean at least a fair degree of proficiency in interpreting the newspaper and simple literature as found in books.

It is impossible to get on in life without frequent use of the art of counting and measuring. Time, distance, value, quantity,—all have to be measured in daily experience. This art is learned in the study of Arithmetic. This subject is therefore fundamental in its applications to the activities of life, also in further progress of the student in mathematical studies.

The man who has had no systematic instruction in geography by means of books or teachers must necessarily be so ignorant of the globe on which he lives as to be conspicuous for his ignorance. While no one fact of geography beyond the sphere of observation may be regarded as absolutely essential, yet at least an elementary knowledge of the form, size and political

---

*Fads and Fundamentals.*

---

divisions of the earth, the products and the character of the people is so desirable as to make it fundamental.

In like manner an elementary knowledge of the history of our country and of our forms of government may well be looked upon as fundamental in elementary education. Less fundamental and essential to an elementary education are drawing, singing and the study of environment, and a degree of familiarity with some of the great juvenile classics, as for instance Robinson Crusoe.

If the analysis thus far given is correct we have as primarily fundamental, if I may be allowed the expression, reading, writing, spelling, language lessons (leading to grammar), arithmetic, geography, United States history and civil government, and I may add hygiene; while secondarily fundamental branches are juvenile and other simple classics, drawing, singing, and a few others. It is evident that the subjects that are primarily fundamental should occupy the leading position in the elementary program, while the others should be duly subordinated. A reversal of this proceeding makes of these subjects fads. On the other hand, an attempt to reach an extraordinarily high degree of proficiency in any subject, as arithmetic, for instance, makes of that subject a fad. We may, no doubt, with safety say that for a generation past the efforts to reform and liberalize the school curriculum have led frequently to false emphasis, at least in discussion, upon such subjects as music, drawing, manual training, nature study, and the like. It has also led, because these have been the object of attack, to the minimizing of the value of the subjects that once constituted the main, if not the only, subject-matter, namely, reading, writing, spelling, arithmetic (including drill in mental arithmetic), grammar and geography. So far has this reversal of things gone that the subjects just named are frequently looked upon by at least the young teachers trained in our best institutions, not to mention some of their instructors, as being fads. They are tolerated with a condescending air, and are pushed aside as

---

*Fads and Fundamentals.*

---

promptly as possible, as being "old fogyish." On the other hand, to be up to date, means a readiness to place emphasis upon basket weaving, sewing, cooking, drawing, nature study, juvenile literature, paper folding, manual training, and so on to the end of the list, if happily there be an end. For the past few years I have intentionally led young men and young women, who are about to enter the teaching profession, to express their views concerning the relative value of studies in elementary education, and, by the way, it is that alone that I am now discussing. With surprising frequency, I am informed that the educational world has passed the benighted period in which children were taught the three R's with vigor and zeal, and that we have entered upon a period of enlightenment in which we see clearly that grammar is worthless, that writing, spelling, arithmetic, and the like, can be taught in a purely incidental way, and that the whole movement of enlightenment and reform is in the direction of discovering and following the child's interests. Drill is, to all intents and purposes, an obsolete word in modern pedagogy, according to these same young people. This is not so surprising when we realize that a man who has an international reputation as a philosopher, psychologist, and educator, has recently said, "There is never any excuse for drilling a child on the fact that 9 and 8 are 17," for, said he, "If the child once actually has occasion to use in his experience the fact that 9 and 8 are 17, he will always thereafter remember that interesting fact in numbers." For proof of it he called attention to the fact that we do not have to drill a child in order to have him know the fact that snow is white. This philosopher forgot his philosophy for the time being or he would have known that white is one of the attributes by which the child recognizes snow but that 17 is not a visible attribute of 9 and 8. The same educator said, and it was quoted far and wide, that the school is not preparation for life, the school is life. Either this statement is a mere truism or it is false and pernicious as an educational doctrine, and it was

---

*Fads and Fundamentals.*

---

undoubtedly intended to be interpreted in the way that I would characterize as dangerous. The teacher should be a follower, is Froebel's way of saying the same thing, tho Froebel, thinking as he was of the kindergarten child, was not so far out of the way as was the modern philosopher. The school is organized for the purpose of acquainting the child as soon as possible with the most valuable race experiences and achievements for the purpose of aiding him in making the most out of life both for society and himself. What is necessary for him to acquire in the way of knowledge and experience cannot possibly be known by him at the start, else a school were unnecessary. Society alone, guided by its educational philosophers and teachers, can determine what the child should interest himself in, and spend his time at, while attending school. That his first serious attempts in formal education should be in the direction of mastering the arts of communication, no one can seriously doubt. This, whether the child leads in that direction or not. The possession of the aforesaid arts is necessary for the further acquisition of the accumulated knowledge and wisdom and technical skill of the race and these arts are therefore fundamental, as before stated. Following this, and indeed accompanying it as was also earlier stated, the knowledge that is of the most universal use to man, acting as a member of society, should be taught, and that, too, in so thoro-going a way as to make it actually available in the manifold experiences of life. Much of our modern knowledge of fundamental things is like the old lad's knowledge of the time to plant potatoes. She was absolutely certain that they should be planted in the light or the dark of the moon, but for the life of her she could not remember which. The old lady was aware of her ignorance, however, and that places her a notch above certain young woman upon whom the state had spent much money to fit her to teach, who assured the examiner with great positiveness that the Fox River rises in Green Bay, flows southward, and empties into the Wisconsin thru a canal. The child should not lead. The

---

*Fads and Fundamentals.*

---

teacher should lead, except on such rare occasions as he finds it necessary to drive, and if he is not equal to the task, he should resign, and give over the job to abler hands. We educate children so that they may be able to progress by giant strides in fields in which they would falter and stum'ble and lose their way without such education. When properly educated by society the individual is in the main in harmony with the highest ideals of society and is swift and skillful to do his share of the work and bear his share of the burdens of society. On the other hand, he is capable of receiving from society, by means of his formal education, the richest blessings it can give. But this social efficiency, as it may be called, results in its fullest measure, not from half knowledge or from crude skill in the arts he is called upon to practice, but from full and exact knowledge and adequate skill. The old-time virtue of thoroness is one to which we need to return in our educational work. By thoroness I do not mean exhaustiveness. I do, however, mean definite mastery of the most essential things in every subject that is taught, from the lowest primary onward indefinitely. This applies both to knowledge and to skill. A young man recently told me that his professor in mathematics rarely, if ever, required his class in trigonometry to solve problems. That sort of thing was out of date, the professor himself said (and he is a man of national reputation in his department), adding, that all that was necessary, was for his class to grasp the theory as he presented it in lectures. Whether his students grasped the theory or not, I do not know, but I do know that so far as my observation went, they were utterly unable to make any use of trigonometry, in a practical way, as they would have been had they never heard of the subject. A graduate of one of the best high schools of the state spent a year or two in the state university. Circumstances then made it necessary for her to earn her own living and she applied for a county superintendent's certificate. On the first trial she got 15 in arithmetic, on a scale of 100, on a test that an eighth grade pupil ought, I

---

*Fads and Fundamentals.*

---

should think, to have made 90 or a hundred per cent in, without pencil, in twenty or thirty minutes. On a second trial, on a still easier set of questions, she reached a standing of 25. An extreme case you think. Possibly. I am not so sure. Let us hope that it was.

It really seems that we have lost both the art of and the desire for thoroughness in what we do in our schools,—barring, of course, numerous worthy exceptions. Pupils are coming up to and, for that matter, passing thru our higher institutions of learning, who are not possessed of organized, related, usable knowledge in *any* subject. Their minds, however, are crowded to overflowing with chaotic ideas upon many subjects. Question such students in history, question them in literature, question them in mathematics, or in science, and it is the same story. The latest account of a test comes from Mount Holyoke College, where the teacher of literature asked her class of a hundred eighty-four sophomores (women), some extremely commonplace questions in literature, such as "In what century did Hawthorne live?" The questions were all directly related to college entrance requirements in this subject. The results will astound you if you read them, no matter how pessimistic you may be about the slipshod character of the work in modern education. Those who care to refer to it will find the article in the *October Critic*. Knowledge is power, ran the line in our old copy books. Knowledge is power when it is so completely at command as to be readily usable, but it is not power but lumber, rather, if it is vague, hazy and chaotic. We have been passing thru a period of reaction against the narrow, pedantic, self-sufficiency and the dreary grind of the three R's of your school days and mine. We have gone to extremes in this reaction. We have followed fads of various kinds. Is it not time to return to that middle ground, where we may avail ourselves of much of the benefit of the typical thoroughness of the older days in a few things and at the same time, hold fast, some, at least, of the richer, more inspiring things that have found their way

---

*Fads and Fundamentals.*

---

into the curriculum in recent years? It would seem that the time is ripe for the return swing of the pendulum of educational reform to the extent that the word "mastery" may, with propriety, come into the educational vocabulary here and there before the student reaches a Ph. D. degree.

The mastery to which I refer is mastery of such homely and old-fashioned matters as, for instance, the multiplication table. There are some who are so pessimistic as to believe that the art of memorizing is a lost art, but I cannot believe the art is permanently lost. The fact that pupils once in years gone by learned tables of various kinds, even including addition tables, leads me to believe that with a sufficiently strenuous effort, it may even now be accomplished. I shall go so far as to say that I believe that in some back woods places such results are reached today. To use the memory vigorously is *work*. Ordinarily it is uninteresting, and that which is uninteresting must, now-a-days, be eliminated from the class room, at least so thinks the up-to-date teacher, and especially the up-to-date pupil. No plea is here made for the uninteresting teacher, but the teacher who thinks that to be interesting she must relieve her pupils from strenuous effort, makes an egregious and fatal blunder. The light intellectual calisthenics of the modern school room as compared with the heavy gymnastics of the best schools of a quarter of a century ago, is a form of degeneration, from which reaction should speedily come.

*Work is eternally a condition of success.* This should be burned into every fiber of our young people who are undergoing the educational process. A smattering of general information, more or less accurate, is not education. It may do very well for the fringe or the trimming of the garment, but not for its body. The key to interest, that much abused but useful word, is not variety and kaleidoscopic change, but concentration upon and mastery of the strategic points and the general principles of the solid subjects of the curriculum.

---

*Rural Schools.*

---

## RURAL SCHOOLS.

The problem of the rural school has been a perplexing one for years, not only in this state but in every state in the union. All other schools are making a reasonable degree of progress, but the country schools seem to have reached a stage of arrested development. No one problem has given so much serious concern to the department of education, in the past four years at least, as this one. A large percentage of pupils of school age was not enrolled at all in any given year, and out of the enrollment a large percentage of students attended very irregularly.

The schools were not equipped with proper apparatus, the school houses were not ventilated, the heating, seating and lighting were poor. The teachers were in the main untrained, except as they got experience at the expense of their own pupils, and even this experience tended to erect into habits the blunders the untrained beginner naturally made. While many teachers were earnest and desired to improve, it is also true that many teachers seemed to care little, if anything, except for the meager salary they were getting.

County superintendents were not able to cope with this situation for various reasons, chief of which was that they were unable to reach a given school more than once or twice a year. Often it happened that the county superintendent was unable to reach the school taught by an inexperienced girl until a few days before the close of the term, when his visit was of practically no benefit so far as helping her was concerned. Worst of all there seemed to be in many communities indifference as to school privileges. The community seemed to desire to run the school with as little expense as possible, to get as cheap a teacher as possible, and have as short a term as possible. In many communities the state and county fund was made to pay all expenses of the school, and in some places, if I am correctly informed, they ran up a bank account with the money paid in from the state and county.

---

*Rural Schools.*

---

For the purpose of changing this condition if possible, by getting at the root of the matter, the last legislature was urged to enact two laws; one calling for school board conventions to be held in every county in the state and making it obligatory upon the clerk at least to attend such meeting; the other a law authorizing the state superintendent to appoint a man to devote his entire time to country school problems. Fortunately these two laws were passed, and last year both were in effect. County superintendents at the request of the educational department arranged their school board conventions in such a manner as to enable one or more members of the department to be present at every meeting held in the state. The rural school inspector attended something like two thirds of these conventions, and the state superintendent one third. In every case except two or three, two addresses were made,—one on “The Working Tools of a Modern Rural School,” the other on “The Sanitary Condition of the School and How to Improve it.”

The recommendations made were uniform, and the results up to date are surprisingly good. At practically all of the school board conventions held during the school year ending June 30, 1906, the school board members present were urged to purchase the necessary equipment for their schools. Further more, in a circular issued by the state superintendent a short time before the holding of the annual school meetings for 1906 their attention was again called to the necessity for better equipment. The following is a minimum list of apparatus deemed essential for successful work in the rural schools, and is the one which school board members were urged to immediately procure for the use of the teachers in their respective districts:

1. A roller case containing a set of eight good maps, costing from fifteen to twenty dollars.
2. A few academic dictionaries, in addition to the large dictionary.
3. A set of supplementary primers. Also a set of first readers, a set of supplementary second readers, and a set of supplementary third readers. These should be used by the class for the purpose of gaining facility and expression in reading, after the corresponding reader has been carefully read.

---

*Rural Schools.*

---

4. A globe from nine to twelve inches in diameter, and costing not more than five dollars.

5. At least one complete set of geographical readers.

6. A good book case.

7. A good curtain with spring rollers for each window.

8. Plenty of good black-board. Slate black-board is the only kind it is safe to recommend. A school room should have from 75 to 100 square feet, and the lower edge should be placed 28 inches above the floor.

(Small items, not recommended above, as brooms, crayons, water bucket or tank, dippers, etc.)

It would seem that, if it is the duty of the state to compel citizens to send their children to school, that it is also the duty of the state to demand that the schools which these children are compelled to attend shall have at least such equipment as is absolutely essential in order that teachers may do creditable work. If there is to be any substantial improvement in the rural schools, the people in the rural districts must use at least as much business sense in running their schools as they do in running their farms. Although all of the necessary working tools of a rural school can be had for a sum not to exceed one hundred dollars, neither the state department of education nor the county superintendents have the power to insist that they shall be supplied.

The hearty reception given the member from the department by the school board members was encouraging beyond what could have been reasonably expected. It was a common occurrence for school board members to go away saying that they wished every member of the board had been present, and many of them also said that they wished the people of their communities could have heard the addresses. Word reaches the department that everywhere people are talking about ways and means for ventilating the school houses, and probably in every county are numerous examples of the accomplishment of this end. Many schools have ordered the necessary supplies. County superintendents are greatly encouraged in their work and are going at their duties with renewed vigor.

The work yet remaining to be done is vast and difficult, but

---

*Rural Schools.*

---

it would seem that a real start has been made in the uplift of the country school. It is the purpose of the department to push with the utmost vigor, needed reforms in the country schools from this time on, and in this the department is working hand in hand with all the live county superintendents in the state. An improved common school course of study which is now in the hands of country teachers, will, it is believed, add much to the stimulus given to common school education.

The following is a summary of the work done by the rural school inspector in his first year service, from July 1st, 1905, to June 30, 1906:

Whole number of rural schools visited.....	133
Whole number of counties visited in an official capacity.....	61
Whole number of school board conventions visited.....	56
Whole number of county training schools visited.....	7
Whole number of addresses given at school board conventions, teachers' institutes and teachers' associations, public meetings in rural districts, etc.....	149

In practically every village and city in the state the children of school age have an opportunity to attend school nine months each year, and there seems to be no good reason why the children in the rural districts should not have an opportunity to attend school at least eight months each year. However, the fact is that about one-third of the children in the rural districts of the state do not have this opportunity. In twelve counties, more than one-half the rural districts maintained school for only seven months during the school year ending June 30th, 1906. Following is a complete list of the counties of the state showing the whole number of rural schools in each county and the time that these schools were in session during the school year ending June 30th, 1906.

The following statistics collected from the various counties with reference to the length of school term, are submitted for the consideration of the legislature. Whether or not it is desirable to increase the minimum number of months each district shall maintain school in order to share in the apportion-

*Rural Schools.*

ment of state aid for common schools may well receive the attention of the legislature:

*Summary on Length of School Year in the Rural Schools for Year Ending June 30, 1906.*

Number that maintained school 5½ months.....	1
Number that maintained school 7 months.....	2158
Number that maintained school 7½ months.....	42
Number that maintained school 8 months.....	2610
Number that maintained school 8½ months.....	44
Number that maintained school 9 months.....	1591
Number that maintained school 9½ months.....	10
Number that maintained school 10 months.....	55
Number that maintained school 11 months.....	1
Total .....	6512

A few districts in various portions of the state did not maintain a school in the district but paid the tuition of their pupils in neighboring districts.

It appears from the above summary that fully thirty-three per cent of the rural school districts maintained only seven months of school during the year, and it should be borne in mind that unless a district maintains at least seven months of school it can not share in the school fund. Putting the matter in another way, thirty-three per cent of the rural school districts in the state maintained a school no longer than they were obliged to in order to share in the state school fund.

## AGRICULTURE.

The introduction of agriculture in the curriculum for the common schools marks a distinct step forward in educational progress. Agriculture is now one of the subjects required to be taught in every district school in the state. It is not expected that teachers in the rural schools will be able to teach *actual* agriculture to any considerable extent, but it is expected that they will be able to teach *about* agriculture. This subject

---

*Additional School Rooms.*

---

is placed with the branches to be taught in the public schools with the hope that the children of the commonwealth will thereby gain some additional knowledge of the elementary principles underlying the science and art of agriculture. It is believed that if the pupils in rural communities are led to understand the reasons for the operations carried on in all well conducted and successful farm work, that they will have greater interest in farm life and be less disposed to seek other and less remunerative employment. As an aid to teachers in teaching this branch in rural schools, the department prepared and distributed an outline of work that could be profitably completed if time and conditions permitted. This syllabus outlined in a brief way the ground to be covered by teachers giving instruction in this branch. It is not expected to take the place of a text book, but to serve as a guide and to indicate the general line of work to be pursued in the rural schools. The teachers had been prepared for work of this nature by having the subject taught for several years in the summer institutes, and the teaching force of the state was fairly well equipped to undertake the work from the text book side of the subject. The results obtained have been gratifying, and teachers generally report that the work is well received by both the pupils and the parents. The success of this new branch in the schools of the state is fixed beyond a doubt. It is certainly a move in the right direction and will serve to stimulate pupils to a greater interest in all matters pertaining to plant and animal life.

#### ADDITIONAL SCHOOL ROOMS.

The last legislature enacted a law providing that in districts where the total enrollment during any one term should reach or exceed sixty-five pupils, the electors of the district at the next ensuing annual meeting must vote upon the question of providing an additional room and teacher for the next ensuing term, corresponding to the one in which the enrollment ex-

---

*Compulsory Education.*

---

ceeded the stated number, under a penalty of losing their right to share in the apportionment of the fund accruing from what is known as the seven-tenths mill tax. This law has now been in operation for two years, and has been productive of good. The first real test of the law came at the last annual school meeting, in July, 1906. Reports received from the county superintendents throughout the state show that in many districts the electors promptly responded to the wishes of the legislature and made arrangements for the building of an additional room and the hiring of an additional teacher.

In a few districts where the enrollment was such as to bring it under the operation of the law, the electors failed to provide for the additional room and teacher, and consequently the district is in a position to suffer the penalty provided for failure to comply with its provisions.

### COMPULSORY EDUCATION.

In nearly all the cities throughout the state many pupils between the ages of seven and fourteen years, do not attend school regularly. Chapter 189, laws of 1903, now furnish to city school authorities ample means for compelling parents and guardians to enforce the attendance of their children or wards upon some public, parochial or private school for at least 160 days in each year. School authorities in cities have been prompt to enforce the provisions of this law and many pupils who would otherwise have roamed the streets have attended with reasonable regularity.

In villages and rural communities the law has not received that support which it deserves. Owing to a disinclination to offend parents who permit their children to remain out of school, school boards have not vigorously enforced the truant law. It is to be hoped that the future boards will not allow business interests and personal friendships to interfere with their duties as school officers. All children should have an

---

*Consolidation.*

---

education and shortsighted parents should not be allowed to deprive their children of an opportunity to enter the race of life upon an equal footing with their competitors.

### CONSOLIDATION.

One of the live educational topics before the people of this state today is that of consolidation. In many parts of the state, especially in the older long settled communities, school attendance has fallen to an unsatisfactory minimum. The younger population has drifted to the cities and villages, leaving the country districts with but few children for which to provide school. Where formerly there was a school population of sixty or seventy persons of school age residing within the district, there is now but one of fifteen or twenty. Teachers do their best work in schools where the number of pupils present permits the arousing of that interest which is essential to the life of a first class school. In schools having an average daily attendance of only six or eight pupils, teachers find it difficult to arouse much enthusiasm in the work of the school. As a result of the small attendance, district boards have felt justified in lowering the wages of the teachers, consequently, the professional quality of the teachers employed is correspondingly low. Educators for a number of years have urged the consolidation of sparsely settled school districts into one large district; the erecting of a central school and the transportation of the pupils of the enlarged district to and from school. This movement has not reached any distinctive proportions in this state. There have been a few isolated cases of consolidation. The results have been uniformly satisfactory and encourage the promoters of this idea in Wisconsin to renew their efforts in favor of the extension of this movement. Many communities have solicited the help of the state department in furthering this project. Members of this department have responded to the calls, conferences have been held with the electors of the

---

*Special Days.*

---

districts considering the question of consolidation, and every facility has been extended to explain the workings of the scheme. In many instances it has not been found feasible owing to unfavorable local conditions, to urge the adoption of the plan. In others the electors have been so opposed to giving up their local district organization, that the project has been dropped. There is no question but what consolidation is the remedy for many of the unfavorable conditions now surrounding the rural schools and the department will use every endeavor to urge consolidation in all communities where after investigation, it is thought that the movement will prove successful and the cost of the central school and transportation of pupils will not impose an unreasonable tax upon the people included in the consolidated district.

#### SPECIAL DAYS.

During the last two years the department of public instruction has made special efforts to impress upon school officers and teachers the necessity for the proper observance of the special days authorized by law to be recognized by the schools of the state. The annual Arbor Day and Memorial Day bulletins were prepared as usual, and distributed among the schools. In addition the department distributed 20,000 copies of a bulletin devoted to bird study. This pamphlet was especially well received. The illustrations were in color, and the reading matter of interest to all lovers of birds. The text of the bulletin was prepared by Mr. and Mrs. I. N. Mitchell, of the Milwaukee State Normal School. Pupils are always interested in the life of birds and are eager for any information which will give them knowledge of the habits and life of the common birds. Any instruction which has for its purpose the encouraging of the regard for bird and animal life is well worthy of a place in the curriculum of any school. The department hopes to be able to issue further bulletins on this subject in the years to come.

---

*A Minimum Wage Law.*

---

Owing to the fact that new material available for publication in the Memorial Day Annual is not abundant, and the really valuable selections have been published time and again, the question has been raised if the time has not arrived when it would be wise to collect all of the valuable pieces of literature of a patriotic character and publish the same in a permanent form. It is difficult to secure new selections with which to compile annually a creditable Memorial Day Circular. It might be well to consider the proposition of discontinuing the annual publications of this bulletin and in its place issue a larger book to become the permanent property of school libraries. Such an edition could be issued once in five years, and would furnish each teacher throughout the schools with ample material with which to prepare a suitable Memorial Day program. There is no wish or intention to do away with the providing with material for the proper observance of our national days. It is thought that a larger collection of the better class of national literature, permanently bound, would better serve the end for which this bulletin was intended.

#### A MINIMUM WAGE LAW.

The question of teachers' wages is one which must be met before the settlement of the rural school problem can be finally determined. It is true that the law of supply and demand will, unless regulated by law, ultimately determine the wages that shall obtain in the teaching profession. Where there are two or more teachers willing to teach one school, wages are apt to be low. Theorists incline to the belief that school boards will be so considerate of the welfare of the children whose education has been entrusted to their keeping, that they will hire the better qualified teacher even though at an increased monthly wage. Experience does not show that this belief is verified in practice. It is to be regretted that boards are often guided in their action by sordid motives. The reason that owing to the

---

*A Minimum Wage Law.*

---

small number of scholars attending school, and the primary character of the instruction given in the rural schools, as they are organized today, any teacher will answer the purpose. Consequently the cheaper teacher is engaged. This general tendency throughout the state has lowered wages beyond a point where the teaching profession is attractive to young men and women. The question has been raised whether it would not be advisable for the legislature to consider the propriety of enacting a minimum wage law for teachers in the rural districts of this state. Several other states have legislated upon this question, and now have on the statute books a minimum wage scale for teachers. Public and educational opinion is strongly directed towards the increasing of the efficiency of the rural schools. Before such schools can be placed upon a sound basis, the question of wages, irrespective of the law of supply and demand, will have to receive consideration at the hands of the law makers and others interested in the welfare of the rural schools. It would seem that the tax payers of this state would not object to having the teachers paid a salary equal at least to that received by common labor. In the last few years the purchasing value of money has decreased. Teachers' wages have slightly increased, but not in proportion to the increased cost of living. It is not at all surprising that wages have not raised in the teaching profession when there has been a reasonable supply of teachers to fill vacancies. So long as the secondary schools of the state annually furnish a supply of inexperienced candidates for the vacant positions in the rural schools, who are willing to teach at almost any price in order to gain experience, wages will remain low. Statistics show that high school graduates having obtained experience at the expense of the country schools, do not remain long in the work, but attend higher institutions and either prepare for other occupations, or fit themselves for positions in higher institutions of learning. These questions are factors in the rural school problem.

---

*The County Superintendent.*

---

## THE COUNTY SUPERINTENDENT.

The biennial period just closed has been one of progress in the administration of the office of county superintendent of schools in the several counties throughout the state. The majority of county superintendents have been eager to advance the interests of the schools under their supervision, and have been active in the prosecution of the duties of their office. Nearly every superintendent reports a healthy condition of the schools under his charge and renewed activity in all lines of school work. Most of the superintendents have responded to every call made by this department with a view to bettering the conditions existing in the schools. Teachers' meetings have been held, personal inspections of the schools made, and state institutes conducted. Everywhere the report comes that superintendents, teachers, and patrons are becoming interested in the movement which has for its purpose the raising of the standard of the rural schools. In some counties the board of supervisors has provided an assistant for the county superintendent. This is a move in the right direction, and one that might well be followed by other counties. It is hardly to be expected that one man can thoroughly inspect and supervise one hundred or more district schools throughout a school year averaging less than eight months, and properly attend to all the other duties of such a position. The correspondence in the office of the county superintendent of schools is necessarily large and much of his time is occupied with clerical duties. A deputy competent to take charge of the clerical side of the work enables the superintendent to devote his entire time to inspection, teachers' meetings, and institute work. Money expended in this manner is sure to bring ample dividends to the tax payers of the county. The salary of county superintendent should be increased, since the work required is of a difficult kind, necessitating executive and educational ability of a high order. Besides, the position is one requiring much traveling at a time when it is far more

---

*The County Superintendent.*

---

pleasant to be engaged in teaching or some other in-door occupation.

Since the enactment of the law authorizing the department to appoint a rural school inspector, it has been brought more intimately into connection with the county superintendents and the rural schools. The rural school inspector has in addition to his addresses made at the county school board conventions, visited rural schools with many of the county superintendents, and obtained at first hand reports of the conditions in such schools, and the instruction given therein. He has been able to give the county superintendents the results of his inspections in other counties of the state and in this manner many of the new features adopted by the different superintendents for improving the conditions of the schools in their charge have been brought to the attention of others. Where visits have been made by the inspectors, the results of his inspections have been sent to the district clerks with such recommendations as he thought proper to make. These visits and reports have been of great assistance in securing for the country schools that equipment without which successful work cannot be accomplished. The efforts of the department in this line have been enthusiastically received by the superintendents and teachers.

Six county superintendents have resigned during the last two years, and their places have been filled by appointment by the state superintendent. The men appointed have given satisfaction to the electors of the counties over which they have jurisdiction, and have vigorously prosecuted the work of the office.

In accordance with the law, there was held at Madison, a superintendents' convention in the spring of each year covered by this report. These meetings were attended by the county superintendents and were made the occasion for discussion of topics of mutual interest to the superintendents and the department. The papers presented were of a practical nature, and brought strikingly before the superintendents the needs of

---

*The County Superintendent.*

---

the country schools and methods for improving the conditions. The programs presented at these meetings are given below.

PROGRAM.

1. Inspection of country schools. SUPT. LURA BURCE.
2. Condemnation and improvement of country school buildings. SUPT. JOHN KELLEY.
3. What can the country superintendent do to enforce the compulsory education law? SUPT. JOHN P. LEWIS.
4. Meetings of district school boards. SUPT. JULIA ROCKAFELLOW.
5. How can a better use of the school library be made? SUPT. GEO. V. KELLEY.
6. From the county superintendent's point of view, what can the state department do to co-operate with county superintendents? SUPT. GEO. F. SNYDER.
7. The making of the annual report. SUPT. A. J. INGLI.
8. What can Wisconsin do to help the country schools? ROUND TABLE DISCUSSION.

STATE CONVENTION OF COUNTY SUPERINTENDENTS.

Held in the Assembly Chamber, Madison, Wisconsin, May 9th and 10th, 1906.

PROGRAM.

*Wednesday, 9:30 A. M.*

1. How may the superintendent help his teachers to become more efficient? (a) Office work. (b) Field work.
2. Discussion of the chief difficulties superintendents have experienced in supervising their schools.

*Wednesday 2 P. M.*

3. The county superintendent and his relation to the summer institute. ....Supt. C. P. Cary.
4. Favorable and unfavorable phases of recent school legislation. Needed legislation.

*Thursday, 9:30 A. M.*

5. A talk.....Inspector L. W. Wood.
6. Miscellaneous topics suggested by county superintendents.

NOTE—No definite assignments are made for the discussion of these topics by county superintendents. All superintendents are requested to come prepared to discuss the above topics.

In order that some of the suggestions which the department and the county superintendents were attempting to bring before the teachers of the state might be more forcibly called to their

---

*The County Superintendent.*

---

attention, the following communication was printed and distributed by the department to the teachers in the several counties:

*To Country School Teachers:*

This communication is sent you in the hope that it may prove useful to you in the trying position in which every conscientious country teacher is placed. The following hints and suggestions are of a practical nature. To economize space they are stated tersely and in the main in the imperative mode. Such suggestions will prove of no value to careless teachers or to those who teach *only* because they have to do something for a living, but in the hands of earnest, conscientious teachers the suggestions, it is hoped, will prove of value. Kindly keep this sheet on your desk with your Manual and refer to it until the suggestions have ceased to be needed.

1. Country school attendance is too often very irregular and many children of school age are not enrolled in the public or any other sort of school. You are aware that we have in this state a compulsory education law, requiring children between the ages of seven and fourteen to attend school at least one hundred days in the course of the year. Can you not do something to increase the enrollment, and to improve the regularity in attendance of those who are enrolled? I would advise you to consult your county superintendent as to the best method of procedure. This is a matter that should be managed with discretion, but it should be undertaken with a firm determination to accomplish results.

2. Children often have but little interest in their school work, and frequently they are trying to do work they are not prepared to do. The best way to stimulate the interest of children is for the teacher to be deeply interested in their educational progress. But it should be remembered that permanent interest is never created in the minds of children by doing their work for them. If pupils are not prepared for work they are trying to do, exercise tact in bringing in reviews till they are ready to go on with their work.

3. Keep your school room neat and clean. Dump out the old dusty decorations that no longer possess any value, and put up such decorations as you may be able to secure.

4. Do not allow outbuildings to remain filthy, or in a dilapidated condition. If there are not two outbuildings (one for boys and one for girls), see your board promptly and request them to put up another building. Do not hesitate an instant about this on account of modesty, or fear of the board.

5. See to it that the stove, or furnace, is in good condition, and that there is, before cold weather, an abundant supply of good fuel and kindling, protected from the weather.

6. See to it that the floor is scrubbed from time to time, the windows washed, and the walls and ceiling freed from clinging dust. Of course this should be done at the expense of the district.

7. If it is possible to get your district to provide proper ventilation for the building, assuming that it has not already been provided), do not fail to bring it about. [See Common School Manual, page 4.]

8. Do not allow children to sit facing windows unless the curtains are drawn, and do not allow curtains or other obstructions to shut out the light even from the top of the windows, unless it is necessary to do so in order to keep the sunlight off the childrens' work.

---

*The County Superintendent.*

---

9. You ought to have the following tools to work with. If any of them are lacking, try and get them from your board without delay:

a. A roller case containing a set of eight good maps, costing from fifteen to twenty dollars.

b. A few academic dictionaries, in addition to the large dictionary.

c. A set of supplementary primers. Also a set of first readers, a set of second readers, and a set of third readers. These should be used by the class after the corresponding reader has been carefully read through, for the purpose of gaining facility and expression in reading.

d. A globe from nine to twelve inches in diameter, and costing not more than five dollars.

e. At least one complete set of geographical readers.

f. A good book case.

g. A good curtain for each window.

h. Plenty of good black-board. Slate black-board is the only kind it is safe to recommend. A school room should have from 75 to 100 square feet, and the lower edge should be placed 28 inches above the floor.

(Small items, not mentioned above, as brooms, crayons, water bucket or tank, dippers, etc.)

10. Keep the Common School Manual on your desk, and *make daily use of it.*

11. Remember that a good school is a place of business,—orderly, systematic, economical of time. Everybody should have his definite work to do, and definite time for doing it, and should be held responsible for its accomplishment.

12. Keep an accurate register,—make records daily.

13. Get acquainted with the people in the district.

14. Do not yield to the temptation to go to parties frequently. No teacher can dance several nights in the week, and do her duty by her school. Better cut out all excesses in the way of parties, or give up the school and devote your whole time to parties. Do not for one moment get it into your head that it is nobody's business but your own what you do at night. Nothing is further from the truth.

15. Keep in good humor with yourself, and with everybody else if you can. This is a busy world, and you should not think, if you do not receive all the attention you believe is due you, that people are displeased with you. *Go out to them and do not wait for them to come to you.* By all means get acquainted with your board members. Talk over your *plans* with them. Talk over your *needs* with them. Do not *always* talk shop. Do not bore them. If one of them happens to be a crank or a bluffer, hold your own with him,—do not let him brow-beat you, but remember not to allow yourself to become over-serious in such contests. An over-strenuous teacher is almost as much of a failure as a frivolous one. *Balance and persistence are the qualities needed.*

16. When you are "blue" or feel that you are too weak to stem the tide, read Emerson's essay on Self-reliance.

17. Do not try to win the good-will of your pupils by letting them have their own way. When you think it is best to refuse their requests, do so promptly, decisively but pleasantly, and after that do not let them coax you to change your mind.

18. Do not let it slip your mind for a single day that the chief thing we desire is that our children shall grow up into honest, truthful, self-supporting citizens—good citizens. The main thing that we

*County Superintendents' Reports.*

are striving for, after all, is that our citizens shall be people of good habits, honest motives, and sympathetic natures. When we are able to add to this a trained and cultured intelligence, we have reached the end that schools should strive to accomplish.

C. P. CARY,  
*Ch'm Committee on Institutes.*

## COUNTY SUPERINTENDENTS' REPORTS.

The following extracts from the supplementary reports of the county superintendents are published here, as they show in a general way how the progress of the rural school is viewed by the superintendents themselves. Space forbids publishing the reports in full.

The past year has been a progressive one in the educational history of our county. Teachers, pupils, parents, and school officers have all united to make the school work as successful as possible.

*Attendance.*

The past year has far surpassed any previous year in the matter of attendance. This is undoubtedly due in part to the mild winter, but also to an increased interest in school work. The average attendance for the last seven years has been as follows:

1900.....	5692
1901.....	5339
1902.....	5335
1903.....	5885
1904.....	5632
1905.....	5802
1906.....	6270

We have during the past few years issued certificates of perfect attendance to children who have attended regularly six months. When a child has attended school a month without being absent or tardy, the teacher issues a small certificate. When he has six of these, a large one is issued by the county superintendent. Last year 625 large certificates were granted; this year, 825.

*School Buildings and Equipment.*

Several new school buildings have been erected during the year. Mishicot has completed a beautiful four-roomed brick structure to take the place of the two-roomed one. Rockville has spent about \$1,900, and Eastwin about \$1,600. Both are fine one-roomed buildings. Valders has built a new school house at a cost of \$2,500. It is a two-story building with the lower room finished. The people of the district, believing that two rooms might at some time be needed, decided to provide them now. School Hill, Branch, Rapids and Two Creeks (Dist. No. 2), have commenced the erection of two-roomed buildings which will be completed this fall. Quarry and Cooperstown are sadly in need of new buildings, but no definite steps have been taken, though con-

---

*County Superintendents' Reports.*

---

siderable urging has been done. Should these districts fail the coming year to provide new buildings, condemnation proceedings will be resorted to.

Much has been done during the past year to get the schools better equipped. The matter of school equipment was taken up at the school board convention, and the agitation has been continued ever since. The articles that have been most emphasized have been supplementary readers and academic dictionaries. In many districts these have been provided, and during the next year we intend to get them into every school. In every instance the people were willing to supply them when it was made clear what they are for, and the added advantage their children would have because of their introduction.

---

*School Board Convention.*

At the school board convention the districts were represented as follows:

All three members present.....	17 districts
Two members present.....	42 districts
One member present.....	46 districts
Unrepresented .....	6 districts

Total .....	111 districts
-------------	---------------

Much good has resulted from this meeting, and some of the progress during the year is unquestionably due to the more intelligent co-operation of all the forces concerned in the running of the schools. We found, however, that we had too many subjects on the program, and we shall profit by this knowledge in arranging for the convention next fall.

*School Visitation.*

During the past year I have made 236 visits, an increase of 29 over the previous year. In these visits I paid most attention to the teaching of reading and language. In the former, especially, there is a great improvement, due chiefly to the work of the training school. Both pupils and teachers are getting higher ideals of what reading is. The primary work, especially, is getting to be quite good throughout the country. The introduction of supplementary reading books is doing much to secure good results. In many cases, also, attention was called to the opportunity offered the children by the libraries. Special books were spoken of and the children urged to read them.

*Teachers' Association.*

The M. C. T. A. held its usual meetings during the year, and they added much to the success of the school work. Every qualified teacher is a member of the association. The county is divided into five sections, each section having three meetings during the year. All twelve meetings of the county schools were successful with the exception of two, these being failures because of bad weather. At these meetings "The Princess" was taken up as a study in literature, and exercises were conducted in parliamentary practice. An outline of this work is appended to this report.

Another feature of the association work was a social meeting held

---

*County Superintendents' Reports.*

---

at Reedsville Feb. 24. Over 100 teachers were present, including some of the Calumet County Teachers. The program was literary in character, consisting of a debate, general talks, and music. A banquet added much to the enjoyment of the day, especially the toasts which showed that teachers can talk about other things than "shop."

*County Fair.*

The county fair has had an educational department for many years. In addition to the regular school work exhibited, another department has been added known as the children's garden. The exhibit was fair. Pupils prepare the soil, sow the seed, and get the exhibit ready. This is done on their fathers' farms, however, and not in the school yard.

*Examinations This Spring.*

showed more thoroughness of preparation than ever before. There were fewer poor ones. Eighty were granted diplomas at the county graduation exercises on June 9th. This is the fourth time that we have had central graduation exercises, and the large gatherings show that much interest is taken in them. Fully 800 were present. The address was given by W. C. Hewitt. In addition to the usual exercises, contests were had in spelling and adding. A program of this event is enclosed. To prepare for this contest, "town contests" were held throughout the county during the winter. At these gatherings the schools of the town met at some central place for a spell-down, an adding match, and a general program, at which some one spoke to the people on educational subjects. Four spellers and two adders were selected from each town as representatives to the county contest. We found these gatherings very helpful to increase the interest in the common branches, besides bringing together the people to compare their schools and discuss school subjects.

To defray the expenses in connection with the county contest, the M. C. T. A. issued a small pamphlet (accompanying this report) which was sold at five cents per copy. The sales from this pamphlet have brought us enough to clear these expenses which were \$22.30.

*Local School Gatherings.*

In addition to these town meetings, gatherings were held in school houses throughout the year. The teacher would prepare a program and often get a speaker to address the people. In this way I have been present at forty meetings during the year, and Mr. Christiansen and others have been out also, so most of the districts have been affected directly or indirectly. The people are interested in these exercises and there is a great opportunity to reach them. At these gatherings we have talked supplementary reading, new school buildings, importance of thoroughness in education, farm education, school attendance, teachers' wages, or any subject of special value to the people addressed. These meetings are also valuable in bringing the superintendent in direct touch with the people.

*Nature Study.*

To prepare a pupil for agriculture we have spent considerable time and effort to develop in the teachers and pupils the habit of observa-

---

*County Superintendents' Reports.*

---

tion. In our training school we keep this in mind during the entire year, and give the students work that will familiarize them with the world about them. At our institute Mr. Christiansen took up agriculture from the nature standpoint. The pupils in the schools are enthusiastic over the work where the teacher knows how to present it. In nearly all schools something has been done, and in some schools we have had very excellent results. I believe that the introduction of agriculture must come through the development of the observational faculties of the children during the primary and middle forms. To do this we must first of all train the teachers to observe. Text-book knowledge counts for very little when not backed up by a knowledge of the real things. We have in most cases discouraged text book work in agriculture in school.

*Teachers' Wages.*

The following table will show how the teaching profession has progressed financially since 1900:—

Year	No. of teachers employed	Amt. paid in salaries
1899-1900	179	\$66,007 78
1900-1901	183	69,344 38
1901-1902	191	74,704 80
1902-1903	195	79,358 50
1903-1904	200	84,100 56
1904-1905	203	89,932 83
1905-1906	205	96,871 36

It will be seen from the above that the amount paid teachers the last year is almost 50 per cent above what it was seven years ago. We try to furnish the best teachers available and limit the supply to the demand. This can be done by making the examinations sufficiently difficult to prevent immature and unprepared applicants from passing and securing certificates.

*The Libraries.*

The libraries of the county are becoming more useful every year. During the coming year it is the plan to catalog them and thus make them more useful for both teachers and pupils. During the past year the selection has been made as follows:—

(1) I secured as many samples as possible from the various companies and placed them in the office for the teachers to examine.

(2) The teachers came to the office and there together we selected the books most adapted to the needs of each particular school.

In this way there is little chance of duplication, and the two together can do better than either alone. I believe that, as a result, we have the best selection that has ever been made.

The coming year we shall have the selection completed by April, and thus get our books in time to use during the spring term.

*Country Schools and City Schools.*

As this county includes also the city schools, there has been opportunity to compare the work done in the grades with that done in the country school. Though the work of the grades is more organized and more efficiently done, yet our country schools work is by no means far in the back ground. The country child becomes the more independent

---

*County Superintendents' Reports.*

---

of the two. He becomes accustomed to plan and execute much of the work, and this gives him confidence in himself. He does not easily give up when confronted with difficult tasks. Here is where there is a tendency to weakness in our city schools. Teachers do too much for the pupils.

Again, the little tasks the country child does outside of school strengthen him. He is brought up with the idea that work is honorable and is often made to feel responsible for certain duties performed, while, too often, the city child has no work, no duty, no responsibility, and thus loses much of what is necessary to form a strong character. What we need in our country schools is teachers with strong personalities who can bring out all the latent forces of the community and put them into activity. My observation has been that, taking all things into consideration, the country school can turn out as strong and even stronger products than the city schools.

*The Training School.*

The effect of the training school is clearly visible. The work is becoming more thorough and more systematic. With the teachers trained, we can move forward as a body and do much more efficient work. There is much less energy wasted. The training school graduate starting out on the first year of teaching is far superior to the one lacking the training. Of course, there are weak ones among our training school people and strong ones among those who are not from the training school, but in general the difference is very noticeable. Our training school is becoming better every year. Both the board and the faculty are trying to improve the work in such a way that the students shall get the very best it is possible to give them in the year they are with us. We are emphasizing thoroughness in the common branches. We also try to raise the standard of admission from year to year.

*Next Year.*

During the coming year we intend to carry out the following plans:—

- (1) Have Primary and middle form examinations.
- (2) Catalog the school libraries.
- (3) Continue the emphasis upon reading, language, and skill in handling certain work in arithmetic.
- (4) Issue a county annual.
- (5) Urge more teachers to work for higher grade certificates.
- (6) Make the school board convention a meeting in which just as much practical information can be given school officers as possible.
- (7) Continue local school gatherings, local contests, and county graduation exercises.
- (8) Organize a county agricultural society.
- (9) Issue a larger and better M. C. T. A. pamphlet.

---

*School Buildings Heating and Ventilation.*

Most of the buildings are in good or fair condition. Some new buildings are needed and at least two thirds of the buildings are in need of better means for heating and ventilation. The jacketed stove advo-

---

*County Superintendents' Reports.*

---

cated by Mr. Wood last year has been talked here for the past five or six years, and though nearly half of the schools jacketed their stoves, not a single district put in the fresh air flue and double chimney without which the system was a failure. A few days before the annual meeting, I sent a circular to school officers enumerating the merits and advantages of the Manuel-Smith System. Two districts voted at the annual meeting to install the system and Mr. Smith's agent spent a week here during August in which time he installed six plants. They will spend more time here in September. We have ten basement furnaces in the rural schools and one is being put in this year. With this start I shall try to have over half of the schools supplied with a modern heating and ventilating system before January 1, 1908.

*Text Books and Supplementary Readers, etc.*

I visited the schools in the central and northeastern parts of the county during September and October last year and found them fairly well supplied with up-to-date text books and apparatus as given in my report to the county board but in January when the teachers' reports on text books, apparatus, etc. came in I found that fully half of the schools were in need of a change in text books and better apparatus.

*Teachers and Teachers' Wages.*

The supply of teachers has been short in this county for four or five years before 1905. At times school boards found it difficult to secure teachers and many teachers from other counties were employed but it resulted in a substantial raise in teachers' wages. Last August when it was found that we had a few teachers to spare, some predicted a decrease in teachers' wages but the reports show an increase of 80 cents for female teachers and \$2.63 for male teachers over the previous year. A minimum standing of 55 and an average of 70 are required for a third grade, 60 and 75 for a second grade and 65 and 80 for a first grade. No standing below 80 can be refilled. I have been advised by the state department to raise this to 85 but the supply of teachers hasn't been such to warrant the raise yet. I think that I can raise the five per cent and also some of the other standards about next August.

*Teachers' Meetings.*

The plan of our work is given on page 12 of the enclosed pamphlet. Three meetings were held in each district, one being a joint association with St. Croix County. In addition to this the Central Association was held at Ellsworth in February. The attendance at all meetings was very satisfactory and the teachers took a very active part in the discussions. The same plan will be in vogue the coming year and I plan to have a good book on teaching discussed at each meeting.

*Diploma Examinations.*

Diploma examinations in Arithmetic, Spelling, Orthoepy, Reading, History and Physiology were held on February 24 at nine places in

---

*County Superintendents' Reports.*

---

the county. Standings of 65 or above could be held. On June 8 and 9 examinations were given in Grammar, Geography, Constitution and Agriculture and applicants were given a chance to write again on branches that they failed on at the first examination. By using this plan pupils need not carry all of the branches during the entire school year. In a few days I shall send a circular to teachers outlining work to be done in reading and literature so that the work may be more definite.

Principals of graded schools make out their questions for graduation basing them on the course of study for graded schools. These questions are submitted to me for approval and if found satisfactory the examinations are given by the principals. All written papers for the common school diploma are forwarded to this office and marked by a competent committee, thereby assuring uniformity in marking.

*Libraries.*

The new library law, though it adds considerably to the duties of the superintendent, worked very satisfactorily this year. Last year through the negligence of either the town clerks or supply company many districts or towns didn't get their books till away along in the winter. Books were ordered this year in June, they reached the town clerks in about two weeks after the order was sent in and nearly all reported that their lists tallied with the list I sent them. If the books are not distributed by September 10, I shall endeavor to find out the reason for the town clerk's failure to do his duty.

While there is always an opportunity for improvement, I am happy to say that at least one item in my statistical report shows a decided improvement over former years. In total number of days attendance my annual report shows an increase in 43,703 days during the past school year. This is by far the largest increase in days or attendance in any one year of the school history of St. Croix County.

One of the most difficult problems in our educational field to-day is to keep the older boys and girls in school; but I maintain that if the attendance in the lower grades can be bettered, not so many of the older pupils will drop out of school.

St. Croix County has 112 rural districts, (6 of which do not maintain a school), 11 graded schools, (8 of the first class, and 3 of the second class), and 4 high schools; and when all schools are in session employs 175 teachers.

The teachers' institute held the last summer was the largest ever held in the county. The general spirit of the teachers was good; and in my school inspection work now, it is gratifying to note the excellent results of the professional work done at the institute.

The "School Spirit" throughout the county among patrons and school boards seems to be getting better than in the past. While this is largely due to a hearty co-operation among the teachers, I attribute it, to some extent to the influence of the school board convention, now held annually as required by law, and the work of the rural school inspector.

While the general condition of the school buildings is not what it should be, considerable improvements have been made the past year in the way of new buildings and repairing.

A considerable number of districts having had only seven months of school each year have voted to have an additional month of school this year. Free text books are becoming more general throughout the

---

*County Superintendents' Reports.*

---

county; not so many of the districts change teachers during the year as in the past; and a general advancement is apparent in the progress of the schools.

In May I sent a circular to the teachers which among other things contained a list of about forty of the new books that I had examined and found good. I sent a recommendation blank along with the list and asked the teachers to make selections for the schools. The lists of some of the younger teachers had to be revised some but most of the lists recommended were very satisfactory.

For the library records, I used those supplied by the Eau Claire Company and asked teachers to keep all books under one class together, i. e. put down all under No. 1—Reference books—first, then all under No. 2 or Government second, etc. My records are very convenient and satisfactory. Next week I shall send a circular to district clerks asking them to purchase boxes and cards necessary for the card cataloging of the libraries, giving reasons why this will be a good investment. I believe the state department could help this important matter along by getting out a circular setting forth the advantages of card cataloging the libraries and sending a sufficient number to each county superintendent to supply either the teachers or district clerks.

Educators and official visitors tell us that Pierce County schools rank up well with those of any other county in the state. Perhaps this is true, but it seems to me they are in need of improvement in so many different directions, that we can't afford to attempt to *rest on our laurels*. Where progress ceases retrogression begins. Nearly all school boards are slow and unless the questions I have written on are agitated and influence brought to bear upon them they are perfectly satisfied to allow things to remain just as they are, thereby pleasing many of the *conservative* people of the district who are afraid to pay a few cents extra in taxes for the education of the rising generation.

Herewith I have the honor to present for your consideration my second annual report as Superintendent of Waupaca Co.

I am pleased to be able to report that the schools of the county are progressing and that during the past year 17 districts have put in complete sets of maps, several have purchased globes and a few have provided book cases, also the amount of black board has been greatly increased and of a much better quality than has been used formerly. The old text books which have been in use for many years past are gradually disappearing and boards are adopting up to date texts for their schools. Several districts have put in supplementary readers. The last school having home made desks discarded them during this vacation and will open this fall with patent seats and a Manuel-Smith ventilating plant. One other district in the county has also put in this new system. Several other districts have torn down their old chimneys and have arranged their buildings for a jacket stove having foul air outlet and chimney in the same end of the building as advised by Mr. Wood.

I trace this activity to the school board convention held last fall and find the members of the school boards anxious to follow out the suggestions made at that time.

The Town Chairman and I found it advisable to condemn the school building located in Dist. No. 3, Town of Little Wolf. Some of the residents of the district questioned the need of such action and during Mr. Wood's visit to the Institute I had him inspect the building. He agreed with me in that it should be condemned but gave them until the fall of 1907 to erect the new building. One other district

---

*County Superintendents' Reports.*

---

voted to get material together during the coming year and have a new brick building put up ready for occupancy at the beginning of school, fall of 1907. One new brick building has been erected this summer and is now ready for use.

The work of the Institute this summer was very satisfactory. One hundred and thirty-two teachers were enrolled, all of whom showed by their earnestness that they were not there for entertainment and the idea is gradually disappearing that the institute is a place for academic cramming.

The work of all the conductors was energetic and inspiring, especially was this true in the Library Reading.

Several of the teachers have the promise of cabinets from their boards and three already have them and the books catalogued.

During the past year all of the teachers in the county, with the exception of 10, have had better training than that received in the country schools. No limited certificates were issued and many of the teachers are working for first and second grade certificates.

Wages are steadily advancing and the teachers are getting more of a professional spirit and refuse to underbid each other.

There were 236 applicants for Common School Diplomas, 102 of whom received them. This is a larger number than usually write and it speaks well for the interest taken in this matter by the teachers in the rural districts.

I look forward to a prosperous year and trust that the good work started at the school board conventions may continue.

---

There is at the present time a strong educational sentiment throughout the county, and the time seems opportune for accomplishing something in a practical way for the betterment of the schools.

Recent legislation should be credited, in a measure at least, for the present auspicious circumstances. The law providing for school board conventions has made it possible to meet school officers and discuss mutual interests. Furthermore, the law has the commendable provision of compensation, which makes it operative.

The discussion of sanitary measures at last year's conventions by Inspector Wood, especially as related to ventilation, has awakened inquiry that is bringing practical results. A better sentiment is beginning to prevail among the rural population as to this interest, owing to the fact, in part, that conductors of farmers' institutes have impressed upon our people the necessity of well ventilated barns as a precautionary measure against the spread of contagious diseases among cattle, more especially that form of contagion known as tuberculosis.

Every school house built or repaired the past year, in this county, has been provided with some scheme or system of ventilation. At present, sentiment is favorable to the idea of ventilation for the school room; and the chief obstacle to its practical realization seems to be the apparent lack of a cheap, simple, and effective system for one-room school buildings.

The new library law, while it has greatly increased the burdens of the county superintendent, is effective as to results. Books for the various districts of Shawano county were selected and the last order sent out the 30th day of June. The orders were promptly and satisfactorily filled by the Eau Claire Book & Stationery Co., so that, by August 15th, the consignments for the schools of each town and vil-

---

*County Superintendents' Reports.*

---

lage had been received by the town and village clerks of the same. If these officers are prompt in the discharge of their duties, there is no reason why the new library books shall not be in the respective schools by September 3rd, at which time many schools begin.

Our summer institutes were well attended and excellent work was done. In fact, the average daily attendance as compared with the total enrollment, was considerably higher than ever before in the institute history of the county. The professional side of school work was emphasized.

We had a common school library of one hundred books at each institute, and special attention was given to the care, classification and use of school libraries. Professor A. M. Olson had immediate charge of the latter work at Shawano, and Prof. M. H. Jackson at Wittenberg. The instruction in each case was thorough and practical, and better results may be expected the coming year in the schools.

Nothing has yet been done in this county looking to the consolidation of schools; and it is questionable whether conditions are at present favorable to the installment of the system. In fact, sentiment is more generally in favor of multiplying schools by dividing the larger districts.

Centralization has not yet taken root here, though here and there a district has raised money to pay tuition of pupils residing at a distance from the home-school in an adjacent district. In one school, No. three, town of Hutchins, school was suspended for the year and money raised to school the children of the district at Mattoon, in the public school.

The compulsory school law continues to be inoperative in Shawano county, owing in a great measure, no doubt, to its unpopular provisions for enforcement. Although the school population reported for the past year was not greater than for the preceding one, more were enrolled in the public schools, and the whole number of days' attendance by different pupils was also greater. Further, one hundred seventeen common school diplomas were issued, graduates of the district schools the past year, being forty-six per cent more than for any previous year.

More districts evince a willingness to pay good wages than formerly, and there is beginning to be more discrimination as to teachers' qualifications. While there is always a wide margin for improvement, conditions in Shawano county are fairly satisfactory; by this is meant, simply, that conditions are favorable to further progress.

---

In making a few general statements concerning progress in school matters, it is but fair to say that conditions still continue to improve. All districts show great interest in their schools and in the maintaining of good schools. Few teachers get less than \$35 per month and many are paid \$40 for an eight month's term.

The difficulty in the past of having so few teachers belonging in the county is practically over. Fully 75 per cent of the rural schools are now taught by our own teachers. Many of these have had from one to three years experience and are doing much to improve their qualifications and the work in their schools.

As the county becomes more thickly settled, the city, towns and villages have to enlarge and improve their school accommodations. One of the graded schools during the past year has advanced to a high

---

*Institutes.*

---

school. Aside now from 79 district schools there are in the county three high schools, three graded schools of the first class and one of the second.

It gives me pleasure to report that the districts of Rusk County have provided liberally for their schools, so far as material things are concerned. As I have reported in former years, the equipment is generally good and this year many schools have made improvements in systems of ventilation.

The average daily attendance of pupils has increased considerably during the past year but the enrollment has not increased proportionately with the growth in population. Local truant officers do not as a rule enforce the compulsory education law and the conditions seem to warrant the vesting of its enforcement in a county truant officer.

While we are rich in material things, the power of the trained teacher is rare. The education of our teachers is not as high as it should be. Conditions are not much improved by sending high school graduates into the country to teach, for, while their education is usually sufficient, they show a lack of adaptability to country conditions and discontentment in their positions. We are not able to get enough teachers from the state normal schools to supply the graded schools and there are but two teachers in the country schools that have attended normal schools as much as one year. It would appear, then, that we must look to some other source for our training. We have had a few teachers here from county training schools and they have given general satisfaction. Our county board has voted for a training school to be organized as soon as state aid can be obtained. We believe this will be the best way available for increasing the efficiency of the country schools.

---

**INSTITUTES.**

One of the agencies which the State of Wisconsin employs to increase the efficiency of the work done in the rural schools of the state, is the teachers' institute. Under the direction of a committee of the Board of Regents of Normal Schools, of which the state superintendent of public instruction is chairman, institutes for the instruction of rural school teachers are held annually in the several counties of the state. Instruction is offered in theory and art of teaching, school management, and such academic studies as the committee on institutes may deem best suited to the needs of the schools. The membership of the schools is largely composed of young and inexperienced teachers. It is in the institutes that the annual influx to the ranks of the rural school teachers gain their first knowledge of how

---

*Institutes.*

---

to conduct successful rural schools. The institute holds an important place in the educational system of the state. If the county superintendents, and instructors fail to realize the responsibilities devolving upon the summer institutes, little progress can be made in advancing the educational interests of the rural communities. In recent years, special efforts have been made to impress upon superintendents and institute conductors, the importance of making the institute a model school, and to require from those in attendance the same attention to the work at hand as would be demanded in any well organized institution. There has been in consequence a general strengthening of the management of all institutes. The work has been definite, the order good and the interest of teachers and conductors well sustained. In order that the work carried on in the several counties might be uniform and of a definite character, there was held at Madison in March, 1905, an institute convention for the purpose of presenting and discussing the course of study and subject matter to be used in county institutes for current year. This convention was productive of good results. County superintendents, high school principals, and normal school teachers were in attendance and took part in the general discussions. The influence of this convention could be clearly seen in the work done by the conductors during the next institute season. At this convention the institute conductors of the different normal schools in the state presented typical exercises. The outlines prepared and illustrated by the persons on the program were made the basis of the institute work for the succeeding season. The following is the program of the convention:

Library Reading .....	W. H. Cheever
History .....	J. F. Sims
Geography .....	J. F. Sims
Literature .....	W. C. Hewitt
Algebra .....	G. C. Shutt's
Reading .....	O. J. Schuster
Agriculture .....	V. E. McCaskill
Language .....	F. S. Hyer

*Institutes.*

REPORT OF COMMITTEE ON INSTITUTES.

1904-1905.

During the year, ninety institutes were held in the state. Seventy of these were held during the months of July and August. All counties in the state excepting Sawyer and Iron held summer institutes. Twenty short term institutes were held later in the year, all of these, excepting one, being in session for a term of two days. One one-day institute was held.

The following table shows the length of institutes and number held in the state during the year:

STATISTICAL REPORT.

Number of days in session.	Number of Institutes.
20 .....	1
15 .....	2
10 .....	44
5 .....	22
3 .....	7
2 .....	19
1 .....	1
Total .....	90

The committee held an institute convention in the city of Madison on March 28, 29 and 30th, 1905. One hundred and sixty persons were enrolled in this convention. The convention was under the direction of the chairman of the committee who was assisted in the work by the regular conductors of the State Normal Schools.

The convention was attended by members of the faculties of Normal Schools, city and county superintendents, high school principals and assistants, graded school principals, University students, and other persons preparing themselves for institute work.

The work to be done in the institutes during the coming year was exemplified in a very able manner by the persons in charge of this convention.

The following is a report of the money available and of the money expended for institute work in the state during the year:

*Financial Report.*

Total institute fund available .....	\$14,000 00
Salaries of conductors .....	\$10,069 50
Expenses .....	2,928 48
Incidentals .....	650 45
Deficit from last year .....	355 89
Total .....	\$14,004 32
Overdraft .....	4 32

The institutes held during the year were reported to the State Super-

---

*Institutes.*

---

intendent, and nearly every institute was inspected by the State Superintendent or by some person from his office.

C. P. CARY,  
JOHN HARRINGTON,  
KATE S. STEVENS,  
*Committee.*

Owing to the fact that nearly all of the institute conductors on the approved list had attended several sessions of the institute convention, and had demonstrated their comprehension of the institute problems in the active work of the institute field, and as the number of conductors on the approved list was adequate to supply all institutes with experienced men, it was thought unnecessary to convene a conductors' institute school for the year 1906. As soon as it was determined that no school would be called, the chairman of the committee on institutes sent to each conductor on the permanent list, the following letter:

To Institute Conductors:—

There are some who will probably recall the statement made by the State Superintendent at the close of the convention of Institute Conductors in the spring of 1903, to the effect that no one is properly qualified to do institute work unless he is reasonably familiar with the actual conditions existing in rural schools. The hope was then expressed that those who desired to do institute work in the future, would find time and opportunity to visit rural schools for a few days every year, in order to familiarize themselves with existing conditions. So far as the superintendent is aware, the suggestion bore no fruit. The criticism is made by institute inspectors that in numerous institutes one instructor at least does not succeed in presenting his work in a way to reach and solve the difficulties confronting the rural teachers.

Institute conductors are therefore urged to find, if possible, within the coming year, the time and opportunity to visit a few rural schools. These visits, if undertaken, should result in benefit to the teacher as well as the visitor.

This office will supply, on request, suitable blanks for reports to the State Superintendent and to the County Superintendent on the character of the work observed, the condition of buildings and other matters of importance.

---

This communication was sent out in the hope that conductors desiring to do institute work during the summer of 1906 would visit several of the rural schools and view at first hand the

---

*Institutes.*

---

conditions confronting the rural school teacher. It was thought that if institute conductors would familiarize themselves with the problems to be solved in the rural schools, they would be better prepared to fulfill their duties as institute conductors. The response to this circular letter was enthusiastic and prompt. Many of the leading conductors visited from three to ten rural schools during the year, and made reports upon their visitation to the state superintendent. The data secured by these reports was valuable, and threw much light upon the needs of the rural schools.

In view of the fact that no institute convention was held, the following circular was sent to all who were to act as instructors in the institutes:

An inspection of many institutes last year brought home to the inspector the fact that half or nearly half of the members of most of the institutes have never taught. It seems very desirable to give these inexperienced young people a carefully selected body of work and instruction, in the ten days they spend in getting ready to teach. It is believed by those who have the general management of the institutes, that the best work for such students is to be found in the following subjects: Primary Reading, Language, School Management and Pedagogy, Library Reading, including use of library. County superintendents and institute conductors are therefore urged to require the above named studies of all beginners, and of all others who have not had adequate instruction in these branches. Library Reading is this year a required subject in all institutes and for all teachers, except for such members of the institute as have by professional training fitted themselves for efficient work in library reading in the school.

The school district libraries are not half so valuable as they might be and it is the wish of the institute committee to remedy so far as possible the defect.

No work beyond that indicated in the circular should be attempted this year unless the situation urgently demands it. No member of the institute should be allowed to take more than four subjects requiring preparation.

It seems advisable to allow teachers who have attended institutes in the past, particularly the past two years, to take up one or two advanced subjects. Literature and algebra are included among the subjects to be offered this year to properly qualified members of the institute.

It would be unfortunate and indeed out of place to have the leading conductor, who presumably is most familiar with the needs of the teachers and best prepared to give them practical instruction in relation to their duties in the school room, devote his time to such work. Academic work should not be encouraged, as the institute is for the professional instruction and inspiration of teachers. In every institute will be found many young people who have never taught a

---

*Institutes.*

---

day and who have given no serious thought to any of the problems that confront the teacher. Such young people should be carefully instructed in the proper use of the common school manual. They should also be instructed by the county superintendent or some other competent person, as to the main problems that will confront them in the school room, and how these problems and difficulties should be met. It would therefore seem desirable or even necessary to give all inexperienced members of the institute instruction in school organization and school management. Inexperienced teachers will ordinarily have most difficulty with primary reading and the problems of management.

Most of the institutes of the past season were so well conducted that criticism as to the management was unnecessary. Nevertheless it was sometimes found necessary to criticize experienced institute conductors for not holding the institute with a sufficiently firm grip. In a few cases members of the institute when they should have been in the recitation, were sitting under trees, or in the shade of the building, or meandering around town. Sometimes the institute was slow in coming to order when called. Often members of the institute were unprepared to recite when called upon for subject-matter that had been assigned the day before. Sometimes conductors failed to correspond and arrange the work until the institute was near at hand, or even until they arrived at the place where the institute was to be held.

This is regarded by the institute committee as inexcusable. Those found guilty of repeating such conduct will be mercilessly ruled out of institute work, unless the circumstances leading up to such a condition of affairs are most extraordinary. No institute conductor in the state is prepared to give without special preparation, the kind of instruction that the institute committee desires him to give. We occasionally hear of a man who is giving the same instruction today that he gave ten or twenty years ago, but such stereotyped teaching is not in demand.

The county superintendents of the state are deeply interested in securing for their institutes those instructors who show the greatest ability in getting results. They are right in believing that the supreme test of institute work is the effect that it has upon the schools under their supervision. Ability to do high-grade institute work,—work that will tell in the improved methods and management of the schools, is a somewhat rare quality. Many young men and young women who are good class room instructors, fail through laziness or lack of appreciation of the limited time at their disposal and the character of the work that ought to be accomplished. Institute work should be simple, direct, forceful and should be skillfully illustrated. It should deal with the most vital things in a vital way. It should compel close attention and vigorous effort on the part of all members of the institute.

---

*Instruction in Physiology and Hygiene.*

---

## INSTRUCTION IN PHYSIOLOGY AND HYGIENE.

Section 447a, page 58 of the school code reads as follows: "Provision shall be made by the proper local school authorities for instructing all pupils in all schools supported by public money or under state control, in physiology and hygiene with special reference to the effects of stimulants and narcotics upon the human system. The text-books used in giving such instruction shall have the joint approval of the state superintendent and the state board of health."

The comment on this law as found in the school code is as follows:

"This section contemplates instruction in physiology and hygiene, for all pupils sufficiently advanced in age and scholarship, with special reference to the effects of stimulants and narcotics upon the human system. Under the guidance of an approved book, oral instruction in this topic may be given to pupils that are too immature to be benefited by the use of a text book.

"The effectiveness of the work in this branch, so far as its oral presentation is concerned, will depend upon the simplicity of the instruction, and the good judgment of the teacher in avoiding abstruse and offensive statements. In all instruction given under this law the subject of anatomy should be considered as taking a secondary place."

The question has recently been raised whether teachers are to the best of their ability carrying out the letter and spirit of the law. It seems probable that there has been in many quarters, neglect with reference to the matter. County superintendents and institute conductors are requested to take up this question with the members of the institute and at least explain to them what their duties are. It would seem that for the younger pupils, that is for all who are not studying physiology from a text-book, there should be given regularly once a week a carefully planned oral exercise and instruction on the part of the teacher. Not only the question of the effects of stimulants and narcotics, but other questions of importance coming under the general head of Hygiene, should receive careful attention at such times. For the successful carrying out of such a series of oral lessons, it is usually necessary for the teacher

---

*Instruction in Physiology and Hygiene.*

---

to have in her possession a book adapted to her needs. If she does not make use of some such book, the chances are that the work will be loose, slip-shod and ineffective.

#### REPORT OF COMMITTEE ON INSTITUTES.

During the year eighty-two institutes were held in the state; of this number sixty-nine were held in the months of July and August, and the remainder at different times later in the year. The latter were of two and three days' duration. All counties except Florence, Forest, Iron and Sawyer held summer institutes. These counties held their institutes later in the year on account of the fact that most of the teachers were non-residents and were absent during the summer months from the counties in which they teach.

The institutes were exceptionally well attended. In many, nearly every teacher in the superintendent's district was enrolled. The percentage of attendance reached as high as 98½, and in very few of the institutes was it less than 95 per cent. The following table shows the length of institutes and numbers held in the state during the year:

#### STATISTICAL REPORT.

No. of Days in Session.	No. of Institutes.
20.....	1
15.....	1
10.....	43
5.....	2
3.....	3
2.....	10
Total.....	82

There was no Institute Convention held this year.

#### *Financial Report.*

Total Institute fund available.....		\$14,000 00
Salaries of conductors.....	\$9,988 00	
Expenses .....	2,221 66	
Incidentals .....	330 64	
Total.....		\$12,540 30
Balance.....		\$1,459 70

The institutes held during the year were reported to the state superintendent and nearly every institute was inspected by the State Superintendent or by some person from his office.

Respectfully submitted,

C. P. CARY,  
JOHN HARRINGTON,  
C. H. CROWNHART,

*Committee.*

---

*Township Libraries.*

---

## INSPECTION.

During both the years covered by the biennial report, nearly every institute held in the state was inspected by the state superintendent or some member of his department. The inspections were for the purpose of determining the character of the work presented in the institutes. Reports were made not alone upon the thoroughness of the academic work being done, but upon the ability of the several instructors to present the subjects in such a manner as to illustrate to the teachers the best methods of conducting classes. Improvement on both the academic and pedagogical side was shown in nearly every institute. Some instructors failed to realize the necessity of a thorough organization of an institute and for the same discipline and order which should be in every well-regulated school. On the whole, the institutes for the biennial period ending June 30, 1906, were of a high order and the county superintendents and conductors have reason to feel satisfied with the work accomplished.

## TOWNSHIP LIBRARIES.

The fund for purchase of school library books is obtained by a per capita tax of ten cents for each person of school age residing in any school district. Section 486a, R. S. 1898, is as follows:

“The treasurer of every county in this state shall withhold annually from the apportionment received from the school fund, or other income from school districts, an amount equal to ten cents per capita for each person of school age residing in the county, said money to be expended for the purpose of library books, as hereinafter provided.”

(Chapter 717, Laws of 1905.)

The present law specifically requires (a) that the books for town, village and city libraries shall be purchased between the first day of April and the first day of the following September; (b) that they **MUST** be purchased from the firm to whom the contract is awarded; (c) that they must be selected by the

---

*Township Libraries.*

---

county, district or city superintendent of schools; (d) that they must be selected from the latest library list issued by the State Superintendent.

The township library law applies to incorporated villages and cities of the fourth class.

Prior to 1905 the purchase of books was made by town clerks some time between May 1st and September 1st. Though orders for books were usually sent to the furnishers named by the State Superintendent yet it was not obligatory that they should be sent there and many purchases were made from other firms. It will readily be seen that the law has been changed for the better. The county, district or city superintendent, dealing as he does with teachers and pupils should be better qualified to select books for them than most of the town clerks in the state who are largely men of business and very few of them in a position to give much attention to school work.

The law provides also for the further preparation of the county, district or city superintendent for the work he has to do. It reads as follows:

"It shall be the duty of the county or district superintendent to procure a list of books now in the library of each school district and to arrange such lists by districts and towns in numerical and alphabetical order. When such lists have been obtained, the county or district superintendent shall make a selection for each school district under his supervision, the books to be taken from the list prepared by the state superintendent.

With these lists on file in his office the superintendent will be able to strengthen libraries which show lack of material in necessary subjects and to avoid duplication of books or of subjects. It is an advantage to both purchaser and dealer to have all the books sold to school libraries handled by one firm. The dealer, assured of his orders will be able to buy to better advantage and to systematize his work and thus arrange to have sufficient help during his busy season. Buying to better advantage and arranging his work systematically he will be in a position to give his customers better prices and better service.

---

*Township Libraries.*

---

The furnisher of books to school libraries is named in the following way. The List of books for township libraries having been prepared in the office of the State Superintendent is sent to dealers wishing to make bids on it, the fact that the list is ready for bids having first been advertised. The bidder agreeing to furnish the books at the lowest price is named as the furnisher other conditions not being unfavorable.

Each bid is accompanied by a certified check for \$1,000 payable to the State Treasurer and a bond is required of the successful bidder which is forfeited if books are not supplied as per agreement. Orders of books sent in to the furnisher by County Superintendents are so arranged that shipment may be made direct to the clerks of each town. The town clerk, upon receiving the books, sends them to the district clerks, and the district clerks finally place them in the schools, at which time the teacher or other librarian becomes responsible for them. Pupils have access to them in the school room and are permitted at stated times to carry them to their homes. In this way, the school books reach many of the adults in the immediate neighborhoods.

Another new feature of the law of 1905 is the granting to the school board, or the board of education of any school district, town, village or city in which a free public library is provided for and maintained, and to the board of directors of any free public library the privilege of making "such exchanges and loans of books as said officers shall agree upon for the purpose of increasing the efficiency of both libraries and insuring the best service to the schools and all citizens."

The whole number of volumes in school libraries in the state of Wisconsin is much less than it would be if rebinding were done to any extent. In some of the larger libraries, books showing signs of wear, are promptly rebound, but in most rural libraries there is no attention paid to rebinding. The department has tried to bring about a reform in this particular line, and it is hoped that in the future there will be less waste of

---

*Township Libraries.*

---

money by neglect in rebinding and mending books. It is hoped, however, that by following instructions for mending given in the last township list teachers will prolong the lives of many of the books in their libraries.

A list of books for township libraries was put out in the early part of the year 1906. This list is a revision of the 1904 list. The list of books for teachers included in the list of 1904 was omitted in the list of 1906 it having been decided that such books were tools for the teacher and that it was not in accordance with the spirit of the law to use money arising from the per capita tax for the purchase of teacher's tools. All text books on Agriculture were also eliminated from the list. This was done because Agriculture has become a study prescribed by law and it is thought best not to list texts on prescribed subjects.

A new feature of the 1906 list is the Introduction wherein is given direction for cataloging and classifying books, also many illustrations of catalog cards. In addition to this each book on the list has been analyzed and a set of headings for catalog cards follows the entry of each book listed. In this way teachers may make dictionary catalogs for their libraries with little difficulty. Much attention has been paid to the card cataloging in the institutes during the past summer and the County Superintendents are making great efforts to get the actual work done. There is no doubt that a dictionary catalog of any library greatly increases its efficiency and it is believed that a considerable movement toward the making of these dictionary catalogs has been started. On the whole it is felt that library work in the Wisconsin school system is in a healthy condition.

*County Training Schools.*

---

## COUNTY TRAINING SCHOOLS.

Wisconsin is the pioneer in the field of providing institutions for the preparation of teachers for rural schools. Educators, teachers and citizens have long discussed means and ways for providing trained teachers for this class of schools. It was found that the graduates of the state normal schools rarely accepted work in the district schools. The demand for trained teachers in the cities and villages has been such as to provide positions for all normal trained teachers. The rural schools have been obliged to take teachers trained in their own schools or in the high schools of the state. Few, if any, of the secondary schools offered special training designed to fit teachers for work in the country schools. Naturally teachers in this class of schools were inexperienced, and unfamiliar with the problems confronting teachers of ungraded schools. No one question caused so much discussion as the means for providing trained teachers for rural schools. The establishment of state normal schools failed to solve the problem. The secondary schools were unable to furnish that instruction which would peculiarly fit their graduates to perform this class of work. It was clear that it would be necessary to establish schools especially designed for the work of fitting teachers for work in the rural schools, if the problem was ever to be solved.

The legislature of 1899 authorized the establishment of county training schools for teachers. They were designed for the purpose of giving special instruction in the common school branches, and in the management of rural schools to persons preparing for rural school work. Graduates of the district school and pupils from the high schools desiring to teach were here to find instruction in the branches which they would be required to teach in the district schools. Heretofore there had been no school where pupils of limited education could receive in a brief time training in the subject outlined in the Manual of the Course of Study for the Common Schools. To some the

---

*County Training Schools.*

---

education offered here may seem limited in amount, and elementary in character. This is in a measure true. It is not contended that the county training schools will offer broad educational opportunities. The state provides other schools for those desiring such a mental equipment. The county training schools are special institutions designed to meet a special and hitherto unmet need. The teachers in the country schools prior to the establishment of the county training schools, were not receiving training directly designed to prepare them for their chosen work. They gained their knowledge of the rural schools by painful and often costly experience. They became teachers at the expense of their pupils and of the tax payers who employed them. As a natural result the efficiency of the district schools was on the decline. It was high time that the law makers and educators of the state directed their attention to the relief of this highly important branch of the educational service of the state. The establishment of the county training schools has done much towards the placing of the rural schools in a healthy growing condition. In counties where the county training schools have been established, new interest has been aroused in all matters pertaining to rural school education. The very fact that tax payers and members of the county board have had to provide means for carrying on this work, has called their attention directly to the importance of securing the best possible instruction for the children in rural communities. The "little red school house" is again coming into prominence, and is once more a place about which the interest of the people of the districts center.

Since the enactment of the law, the legislature has from time to time, made provisions for the establishment and aid for additional schools until today there are twelve counties maintaining county training schools for teachers. Sauk County secured the last school authorized by law to be established. During the last year nine counties have made inquiries rela-

---

*County Training Schools.*

---

tive to the establishment of a training school, and six county boards have passed resolutions authorizing the equipping and starting of a training school as soon as the legislature provides for the establishment of a larger number. Unquestionably one of the first bills to be introduced into the legislature, will be one authorizing the establishment of additional training schools for teachers. From the interest shown and the applications already on file, it would seem that the legislature could well consider the propriety of doubling the number of schools already in existence.

The following course of study from the Marathon County Training School shows the general character of the courses of study adopted:

*First Quarter.*

Manual.  
Reading.  
Arithmetic.  
Geography.  
Grammar.

*Third Quarter.*

Practice Teaching.  
Literary Reading.  
U. S. History.  
Physiology.  
Library Readings.

*Second Quarter.*

Pedagogy.  
Literary Reading.  
Arithmetic.  
Physical Geography.  
Grammar and Composition.

*Fourth Quarter.*

Practice Teaching.  
American Literature.  
U. S. History.  
Elements of Agriculture.  
Constitutions.

While at the present time the course of instruction offered covers but one year, it is probable that within the near future the question of enriching this course will be taken under advisement. At the time of the establishment of the schools, the course of study adopted was of a tentative nature. Experience has shown the course adopted admirably meets the conditions and demands of the present time. If there is a call for a more extended course covering two years, it is probable that the schools having the larger attendance will be granted permission to do advanced work.

---

*County Training Schools.*

## BUFFALO COUNTY TRAINING SCHOOL.

ALMA, WIS., June 27, 1906.

To the School Board of the Buffalo County Training School for Teachers.

Dear Sirs:—I hereby submit the following report for the year 1905-6.

School opened August 28, 1905, with an attendance of 32, 6 young men and 26 young women. The total enrollment for the year is 37. The average age at the time of entrance was between 17 and 18 years. Number who entered by high school diploma 3, by state graded school diploma 5, by common school diploma 23, by examination 6.

The course of study prescribed by the State Superintendent, including observation and practice in the public schools, was carried into effect.

Commencement exercises were held on June 19, 1906, when diplomas were granted to 26 people, 6 young men and 20 young women.

The record of our former graduates indicates to what extent our school is realizing the purpose for which it was organized. Total number of former graduates 77. Of these, 69 taught in our public schools during the past year, 5 attended normal schools, 1 attended a business college, 1 clerked in a store and 1 worked at home on the farm.

The continued improvements in our school yard during the past year make our surroundings pleasanter and teach our students an often neglected duty of school work. The growing of native trees and shrubs in the school yard has been begun. The card catalog just provided for our library will materially facilitate school work and add much to the value of the library. For the interests of those who spend two years in school here it seems advisable to provide a two years' course of study.

Respectfully submitted,

H. H. LIEBENBERG.

---

 ANNUAL REPORT OF THE BUFFALO COUNTY TRAINING SCHOOL  
 FOR TEACHERS, JUNE 30, 1906.

C. P. CARY, State Superintendent,

Madison, Wis.

Dear Sir:—We herewith submit our fourth annual report of the Buffalo County Training School for Teachers.

We give below a table showing a record of the graduates of our school since its establishment.

Year	No. who taught.	Attended Normal.	Other work.
Class 1903—			
1903-4 .....	23	0	0
1904-5 .....	20	3	0
1905-6 .....	18	3	2
Class of 1904—			
1904-5 .....	30	3	1
1905-6 .....	32	2	0
Class of 1905—			
1905-6 .....	20	0	0

---

*County Training Schools.*

---

The above table shows that 90 per cent of the graduates of this school taught the past year. Eighty-six per cent of them taught in country schools and 14 per cent in the grades of city and village schools. Only 7 per cent of the rural school teachers engaged the past year had received a year or more of normal training. These facts bear out the statement that the training school is performing a mission which the normal school is unable to perform.

It gives our young people of the county, who desire to teach, an opportunity to make the necessary preparation at such small expense that they can well afford to teach for the wages offered them in the country districts. The graduates of our school find no difficulty in securing positions, being preferred by school boards to untrained teachers, and with but few exceptions these young people have met with marked success as teachers. Each succeeding year has added new friends to the school so that at the present time practically no opposition to the school exists.

The average common school graduate finds it next to impossible to complete the course in one year. Under the one year course plan, those failing must needs take the same work over again the next year, the repetition necessarily lacking in freshness and interest to the student.

We propose the ensuing year to offer a two years' course to such as are unable to take it in one year so that a student may take two years of continuous work without material repetition and a student failing to meet the requirements need not feel humiliated for not being able to complete the work in one year as is the case now.

Respectfully submitted,

NIC. WEINANDY, *President,*  
 E. F. GANZ, *Treasurer,*  
 W. J. EBERWEIN, *Secretary,*  
*Training School Board.*

 SEVENTH ANNUAL REPORT OF THE DUNN COUNTY TEACHERS'  
 TRAINING SCHOOL.

HON. C. P. CARY, State Superintendent,  
 Madison, Wisconsin.

*Dear Sir:*—Herewith we transmit to you the seventh annual report of the Dunn County Teachers' Training School. The report contains, also, a statement from the principal regarding the work of the school as seen by the faculty and a financial statement showing the receipts and disbursements of the school fund.

The school was in session ten months last year, beginning on August 28th, 1905, and closing June 15th, 1906. Three teachers were employed during the year: Prof. G. L. Bowman as principal with Elizabeth Allen and Maud Brewster as assistants. Miss Brewster resigned at the close of the year to accept a position tendered her as first assistant in the County Training School at Antigo.

Practice work has been continued in the grades of the city schools this year and considerable observation has been done in the country schools by the members of this year's class. This work taken in connection with instruction given in the school will, we believe, enable these new teachers to go out into the country schools admirably fitted for school room work.

Members of the faculty have kept in close touch with the graduates of the school, through visitation, conferences with County Superintendent and School Boards, and through Teachers' meetings.

We as a board look upon the work of the school this year as the most successful the school has yet enjoyed, and with the increased facilities we now have, we look forward to greater prosperity for another year.

Respectfully submitted,

J. E. FLORIN, *Treasurer,*

JENNIE M. BRACKETT, *Secretary.*

*County Training Schools.*

---

## SEVENTH ANNUAL REPORT OF THE DUNN COUNTY TRAINING SCHOOL FOR TEACHERS, 1906.

*To the board of Trustees of the Dunn County Training School for Teachers.*

I take great pleasure in submitting the seventh annual report of the teachers' training school for Dunn county. The school opened in accordance with your rules and regulations on August 28th, 1905, and closed on June 15th, 1906, being in session the full forty weeks in accordance with law.

The school admitted, during the year, one hundred students and seated or enrolled ninety-five. The remaining five will be enrolled with the pupils for the coming year. These were selected through an entrance examination held on three occasions during the year and in accordance with your rules and regulations for the same. The first was held at the opening of the school year, the second at the close of the first semester and the third at the close of the third quarter.

The attendance in its regularity and punctuality has been the best in the history of the school. Very few cases of absence and fewer cases of tardiness is the fact in this connection. I believe this to be due to the counting of the daily work in recitation as two-thirds of the content in the final standing in the several branches. Under this plan, absence or tardiness is detrimental in a very vital way to the progress and standing of the student who admits these irregularities.

The school graduated, during the past year, forty-seven people. Thirty-five were unconditioned. This number includes one young man. The remaining twelve were conditioned in outside work—that is practice teaching, observations or both. These conditions arose under the recently adopted rules which permit the appearance of pupils at the commencement events when they have conditions appearing in the work outside of the training school and over which the normal management has not full control. The rules permit students who have been unable to clear in outside work to appear at commencement provided they elect to do so and their conditions can be explained only on the grounds that immaturity or ill health or both has not allowed them time enough to complete the required work.

The texts in civil government, psychology, theory of teaching, grammar and English composition have been changed during the year. This was done for the reasons that the texts we had were much worn, that the newer texts were superior to the old ones and that we in some instances could substitute two texts for the one of the new type. The arithmetics were changed also.

The members of the faculty have visited during the year upwards of forty schools. The purpose served in the visits has been to assist teachers who were specially lacking in sagacity and to keep each of us in intelligent touch with the actual conditions of the common school as they are now. In three instances the visits were to examine into the merits of teaching with a view to clear the teacher in outside conditions. One of the three was able to raise her conditions and a diploma and certificate were granted at the commencement time. In view of the provisions of the new law making the first year of the certificate a probationary year a greater importance surrounds this plan of visiting the teachers in the actual field of work.

The school has been inspected during the past year by several hun-

---

*County Training Schools.*

---

dred visitors, some of them coming from other countries than our own.

The introduction of ventilation in the south recitation room and the treating of the walls and ceiling of the assembly room and halls are much needed improvements now going on.

In the administration of the affairs of the school I have been ably assisted by my teachers—Miss Allen and Miss Brewster, who have been vigilant, painstaking and efficient in their service. In this connection I wish to specially remark the high character of the work given the school by Miss Maud E. Brewster, who severs her connection with the school to assume new duties in another school of like character as our own. This well merited promotion comes to her as a recognition of the good work done for us. Miss Nora Murley of Boscobel, in this state, has been secured to succeed her.

The prospects of the school for the coming year are very good. The seats will again be filled for the beginning of the eighth year on August 27th next.

In closing this report, I wish to attest my appreciation of the ever ready help and sympathy by members of your board in the administration of affairs pertaining to the school during the past year.

Very respectfully yours,

G. L. BOWMAN,  
*Principal.*

Menomonie, Wis., June 30, 1906.

EAU CLAIRE, WISCONSIN, July 1, 1906.

SUPT. C. P. CARY.

Madison, Wisconsin.

In accordance with the law, the board of the Eau Claire County Training School for Teachers, herewith submits its first annual report. We have kept in touch with the work of the school by frequent visitation and are gratified with the results of the first year. The school spirit has been splendid and our teachers have done faithful, conscientious work. The people throughout the county are pleased with the prospect and the many demands for our graduates show the confidence placed in their ability.

Respectfully submitted,

EDMUND HORAN, *President.*

GUS DITTMER, *Treasurer.*

LURA BURCE, *Secretary.*

Miss Lura Burce,

Secretary Eau Claire County Training School Board.

I have the pleasure of submitting herewith the first annual report of the Eau Claire County Training School for Teachers.

This school was opened August 29, 1905, and has been in operation ten months, in compliance with the law governing this class of schools, closing for the year on the 15th of June, 1906.

The school opened with a full attendance and as soon as students have for any reason withdrawn there have been others waiting to take the vacant places.

Owing to limited seating capacity and teaching force we have not attempted to accommodate more than fifty students at any one time. For this reason our total enrollment for the year is only fifty-nine but it would have far exceeded this number had it been advisable to have taken in more.

There are at present twenty-two applications for admission on file from students qualified to enter, indicating a large attendance next year.

---

*County Training Schools.*

---

The average membership for the year has been 47.5 and the average daily attendance 46.

Twelve students were granted diplomas at the end of the year and six or eight more will complete the work and be ready to enter the field by the middle of next year.

Yours respectfully,

W. A. CLARK, *Principal.*

---

Manitowoc, Wis., June 29, 1906.

Hon. C. P. Cary,

State Superintendent, Madison, Wis.

*Dear Sir*—We herewith submit to you our fifth annual report of the Manitowoc County Teachers' Training School.

Our school has now graduated 122 persons, 23 of these having completed the work this year. During the past year 64 of these graduates have taught in Manitowoc County, 5 taught outside of the county, and 10 have attended higher institutions. At the present time several are attending the Oshkosh Normal Summer School and others intend to attend higher institutions next fall.

Of the 21 who were graduated last year, 18 taught in the county, and in the large majority of cases they did excellent work as beginners, which is shown by the fact that in twelve cases, the school boards have already asked for their return next year.

In most cases the class of last year were good disciplinarians. We aim to have the fact impressed upon the students while at the school that much of their success depends upon their ability to govern.

The secretary of this board as superintendent has visited last year's class frequently during the year and generally found the schools in good condition, with excellent order and with a definiteness of plan and firmness of execution that are highly gratifying. In nearly all cases these young people taught as good a school as the untrained teacher after two or more years' experience.

We believe in thoroughness in the common branches, and our aim is to have the school work toward that end. The teacher must, first of all, know the subject matter to be taught. The purpose of the Training School is not to give a superficial knowledge of the higher branches, but to fit its students to do the most effective service in preparing our country boys and girls for life.

We have visited the Training School classes from time to time during the year and have found them conducted in a business-like way with an excellent spirit prevailing. The young people showed powers of thought and expression which marked them as students in the true sense of the word. A class with such conceptions of work cannot but elevate the standards of our country schools.

Following is our financial report for the year:

*Receipts.*

On hand at beginning of year including state appropriation	\$1,610 94

	W. E. LARSON, <i>Secretary.</i>

Mr. W. E. Larson,

Superintendent of Manitowoc County.

*Dear Sir:*— I herewith submit the fifth annual report of the Manitowoc County Training School for the year ending June 30, 1906.

The school opened Monday, September 4, with an enrollment of fifty-one. By the Christmas holidays the number had been reduced to forty-two. During the last quarter thirty-five were present, and of these twenty-three were graduated.

Of those who finished the work this year, eight came to us as high school graduates and the remainder either from graded or country schools. Nine out of the twenty-three completed the course in one year. Of these three had taught school previously.

During the year as much country school visitation was done as possible. Twice the whole school went out in a body making half-day visits to neighboring schools, and during our vacations the students visited many country schools in various parts of the county. Reports were made of these visits and discussions were held in class concerning features observed.

The practice of attending gatherings in country schools was continued and the principal has been present at several school programs. In addition to these, he has also visited several of the schools taught by graduates of the Training School and also schools taught by others. In this way we keep in touch with our people after they leave school, and also keep before us the needs and the progress of our country communities.

Special emphasis was laid upon Nature Work. Trees and plants were studied objectively, the purpose being to direct the students in careful observation and prepare them for carrying the work into their schools. Incidentally considerable work in drawing was accomplished by having students sketch leaves, fruit and the like. This phase of

*County Training Schools.*

the work prepares the teacher to enter into the spirit of country life by opening the eyes of the pupils to the beauties of nature, and also affords much excellent material for language work, besides laying a good foundation for agriculture and other work in science.

The work in Manual Training was carried out much the same as last year, the aim being to make it as practical as possible. All who were graduated were required to take this work. Though the time is limited much can be done to awaken interest in the subject and to show the possibilities along this line of work. Also the musical part of the work, the calisthenics and the rhetorical exercises were of such character that they might be suggestive of similar work suitable for country schools. Thoroughness was insisted upon in all lines of work and emphasis was laid upon the importance of forming correct habits of study. Every recitation is an exercise in language and every written lesson is a composition. All reports that are handed in are considered from their language standpoint as well as from the standpoint of thought. It is the aim of the faculty of the school to have the academic and professional work of the school go hand in hand,—that as they are studying the various branches with a view of mastering the subject matter, they are also studying the presentation of such matter to children. The ultimate end of the Training School is the development of teachers who can go into our country schools and carry the work forward with thoroughness and yet make the greatest possible progress with the children.

The principal visited the Oshkosh Normal School in order to secure for our graduates credits for equivalent work required at the Normal School. The assistant made visits to some of the other Training Schools to get suggestions from them and compare our work with that done by others. The school was visited during the year by three inspectors from the state department, Messrs. Wood, Drewry, and Terry.

The graduation exercises were held on Thursday, June 28, and the day following was Alumni Day.

Respectfully submitted,

FRED CHRISTIANSEN.

## ANNUAL REPORT OF THE POLK COUNTY TRAINING SCHOOL.

HON. C. P. CARY,  
Madison, Wis.

*Dear Sir:*—We herewith transmit to you the first annual report of the Polk County Training School for Teachers.

The school was authorized by the County Board of Supervisors at the annual session of 1904 but it was found necessary to await the action of the legislature, providing for more schools of this class before action could be taken according to the resolution of the board. The board chose St. Croix Falls for the location of the school and the sum of \$2,500 was voted for maintenance. W. C. Reilly of Osceola and J. C. Saxton of Clear Lake were elected members of the Training School Board. Supervisors M. C. Pederson and Robert Smith were chosen to act with the training school board as a building committee.

Comer Bros. of St. Croix Falls gave two acres of land for a building site and the village of St. Croix Falls the sum of \$5,000 for the building. The building was begun in August, 1905, and has been occupied by the school since February 1st, 1906.

The board elected W. F. Lusk, principal, and Gertrude Earhart, assistant. School opened in temporary quarters on September 4th, 1905, with an enrollment of 22. Total enrollment during the year 38, number of graduates 6. The average attendance has not been as great as the enrollment would indicate. Several dropped out finding the work too difficult and several teachers came during the winter vacation.

The absence of those having some experience in teaching but who need such training as this school gives has been a noticeable feature. There seems to be an impression in some quarters that this school is for those who are to teach and that the possession of a certificate places the holder above and beyond its course. Another reason why teachers do not come is because there is a school for anyone who holds a certificate. Teachers are so scarce that anyone holding any form of certificate is sure of a position if she wishes it. As time passes and the purposes of the school become better known more teachers will come to see that they cannot afford to go on teaching without making special preparation for the work and it is hoped that the output of the school will help to lessen the shortage of teachers.

The relations existing between our school and the schools of the village have been most cordial. The privilege of observing the work in the grades has been given our students and special pains taken by the teachers in charge to so shape the work as to give an opportunity to the training school classes to see special phases of it.

Annexed to this report is the report of the principal to the county superintendent and also a financial statement for the last year and an affidavit as to its accuracy.

Respectfully submitted,

W. C. REILLY, *Treasurer,*  
J. C. SAXTON, *President,*  
C. W. MONTY, *Secretary.*

## PRINCIPAL'S REPORT.

ST. CROIX FALLS, WIS., June 25, 1906.

*To the Board of the Polk County Training School.*

*Gentlemen:*—I herewith submit the first annual report of the Polk County Training School for Teachers for the year ending June 22, 1906.

The total enrollment for the year has been 38. The average attendance through the year has been 21. Entrance examinations were held upon the opening day of the school year, September 4, 1905, for those who did not have the required qualifications for admission. None of those who were required to write the entrance examinations was able to pass them but, owing to the small number of qualified applicants, they were given an opportunity to try to make up their deficiencies. Practically all of those who were thus admitted were obliged to withdraw later, being unable to do the required work. Later two applicants for admission were refused because unable to meet the requirements.

In general the qualifications of those applying for admission were inferior to those of the older training schools both in academic preparation and maturity. This is perhaps due in part to the fact that the school is new and in part to a mistaken impression that the school is intended to make those teachers who would otherwise have difficulty in becoming teachers. The idea that the school is intended to replace the poorer teachers of the county with a good quality of teachers is not yet well understood. The school has an office to perform for those even whose academic qualifications are equivalent to those of a high school graduate.

Six teachers were graduated from the school at the close of the year. There were others whose work in the school had been satisfactory but who were denied the diploma of the school because of immaturity. The school hopes to keep in close touch with the pupils of the school who go out to teach during the coming year, both through visits to the schools where they are teaching and through conferences with them.

The accommodations for the school during the first half year, while the best that could be secured, were decidedly unfavorable to good school work. The absence of ventilation and hygienic heating facilities and the poor lighting of the school room were probably accountable in a large measure for the unusual amount of sickness in the school. Since removal to the new training school building there has been a noticeable improvement in the character of the work done by the pupils and in the regularity of attendance, the latter being all that could be desired in the best school.

The second school year will see the school housed in a building which has been erected with the needs of the school in view. The equipment will be found adequate to the needs and all conditions as favorable as can be made for a successful year's work.

Respectfully,

W. F. LUSK.

JACOB WIPF, *President*,  
W. E. SMITH, *Secretary*.

## REPORT TO TRAINING SCHOOL BOARD FOR YEAR 1905-06.

*To the Training School Board,*

*Waupaca County Training School, New London, Wis.*

*Gentlemen:*—I have the honor to submit for your consideration the fourth annual report of the Waupaca County Training School and trust that it may be received with as much satisfaction as it is written. The school year, just closed, has been a very active one and, perhaps I may say, a prosperous one as well. The enrollment for the year reached a total of 54 pupils which is seven more than that of last year. These students have come from all parts of the county and have differed widely in their preparation and in their ability to do the work of the school. Out of the total enrollment ten students have been from Outagamie county and one from Ashland county. A number of the pupils discovered early in the course that they were insufficiently prepared and dropped out to attend high or graded schools. Two students withdrew because of removal from the state. Out of those who remained for the year a class of twenty-four were granted diplomas and about 14 will be continued in school the coming year having been unable to complete the work in a single year. Of the total number of graduates this year 10 were graduates of common schools, 7 of graded schools and 7 had had one or more years of high school work. Ten students out of the 24 required more than a year to complete the course, a number of them taking two full years.

The year has witnessed great improvement in the material equipments of the school, the work being greatly improved in quality because of the liberality of the board in this respect. Texts were added in "School Management" and "Sentence Structure." Sufficient dictionaries to supply each pupil with a copy have been added. New

---

*County Training Schools.*

---

desks have been supplied. In addition to the above about \$125 has been spent on the library in the purchase of new books and the cataloging of the entire library. The school now has a good working collection of books and nearly all are properly catalogued and indexed. Another evidence of the liberality of the board is found in the new museum cabinet which adorns the office and contains the curios, natural and industrial, of which the school has a very fine collection. Other smaller items might be mentioned as having been supplied during the year which while not of so much importance, have yet their place in a complete school equipment.

The work has been varied a little from former years and with the approval of the board still other changes will be made. More attention has been given to literature, two periods per week for the entire year having been devoted to it. Definite work has also been done in rhetoricals, each pupil having appeared before the school six times in the last school year. Pupils have also received some instruction in cataloging library and in library management. A little work of an experimental character has been done in natural science. Much work of a constructive character has been attempted such as the making of reading charts, word cards, drill charts, orthoepy charts, soil charts, diagrams and plans for seat work. We believe this work has been valuable and shall continue it another year. The exhibit held at the close of the year gave ample evidence of improvement in all the above lines which are eminently practical and adaptable to rural school conditions.

It is planned next year to modify the course of study somewhat in accordance with the suggestions of the state department. The subject of physical geography will be given more time and will be placed at the beginning of the year. More work will be done on the manual which on account of lack of texts and the fact of revision we have somewhat neglected this year. It is probable that a little more attention will also be given to technical grammar in which subject nearly all applicants are especially weak.

As a result of observation and experience I am about ready to suggest a somewhat radical revision of our course of study and the adoption of the plan which is being practiced in the newly organized schools. This is a two course scheme, a one year course for high school graduates or those who have done at least two full years of high school work or its equivalent, and a two years' course for the graduates of the common school. This would permit of a better classification of our students and would make it possible to more thoroughly fit all classes for the work of teaching and also to secure for each student at least a year of credit at the state normal schools. It would necessitate the employment of an additional assistant who could probably be secured for from 60 to 70 dollars per month and I believe the results would justify the additional expense. We also desire to do more thorough and practical work in music. We wish to fit our graduates to train their pupils a little in this humanizing branch of art. We had hoped to be able to arrange with the city school board to secure the services of the local teacher of music, but there does not seem to be any time at her disposal which can be devoted to this work. In case an additional teacher was added to help carry another course one could be secured who could do the work required in music.

In addition to the above suggestions I would recommend a change of text books in physiology and possibly in agriculture for reasons which I can clearly set forth. I should also recommend the adoption and

---

*County Training Schools.*

---

purchase of a text in physical geography in order to give this subject the place which it deserves in our Course of Study. I should also recommend the purchase of a small amount of physical apparatus and physiological models and a set of outline maps. With the above additional equipment better work can, of course, be done and better prepared teachers result.

Perhaps it is in order at this time to look back over the work of the school since its inception and take note of what it has accomplished. During the four years of its existence it has graduated 79 students. Previous to the graduation of the present year's class the number was 55. Of these 55 graduates all have taught more or less since graduation and most of them are still thus employed. The first class numbered six members of whom two married and one went to Normal School after teaching two years. The other three have finished the third year of teaching under the Training School Certificates and will now either go on to Normal School or continue teaching. Of the second class one is married and another studying for the ministry. The remaining members of the class are all completing their second year of school work. Of last year's class numbering 23 members every one has taught the past year and with one or two exceptions will be in the work next year also. Of the 55 graduates for the first three years 50 are still in the service. The county or state has already received from these people an aggregate of 88 years of teaching service. It is a matter of congratulation that a large number of our graduates, as soon as their certificates expire or they become financially able, pass on to the Normal School, there to further fit themselves for the work of teaching.

We are glad to be able to report that applications for seats are continually coming in, so that while we do not expect as large a number of applications as we had last year there is reason to believe that the seats will all be taken when school re-opens, August 27 next. A number of the applications are from Outagamie County the increase in the number of students from that County probably being due to the fact that the County has under the law assumed the burden of tuition. The prospects thus appear bright and a prosperous and valuable career seems to be open to the Training School which is gaining in power and influence and in the appreciation of the public.

For an account of the receipts and expenditures of book rent fund see statement of same attached herewith.

Respectfully submitted,

C. B. STANLEY,

*Principal of Training School.*

W. E. SMITH,

*County Superintendent.*

*County Schools of Agriculture.*

---

**COUNTY SCHOOLS OF AGRICULTURE AND DOMESTIC ECONOMY.**

The County School of Agriculture and Domestic Economy is no longer an experiment. It has proven its right to exist in the educational system of the state. The first two authorized by the legislature and established at Menomonie, Dunn County, and Wausau, Marathon County, have done excellent work, and are a decided success. In the last year several counties have made application for the two remaining schools authorized by law to be established. The applications of Clark County and Marinette County were the first received and placed on file in the office of the state superintendent, and were approved. Inquiries concerning the establishment of agricultural training schools have also been received from Sauk, Jefferson and Wood Counties. The county board of supervisors for Marinette County has made arrangements to start the school granted them. The school will open September, 1907. It is understood that the final disposition of the question of maintaining a school in Clark County will be settled this fall. So marked has been the success of these schools that it would seem that the legislature ought in the near future make it possible to establish at least four more County Schools of Agriculture and Domestic Economy. Wisconsin has paid great attention to higher education, and now it is but right that the farming communities be afforded opportunities for securing schools which are especially equipped for giving instruction in branches pertaining to agriculture. The advantages to be gained by any community establishing an agricultural school are marked, and manifold, and are material as well as intellectual. These schools certainly pay, and bring large returns to the communities establishing such institutions. They give to the farmer boy a profession; they make farm life interesting and profitable. Now that agriculture is one of the subjects required to be taught in every district school, it would

---

*County Schools of Agriculture.*

---

seem that the state ought to provide a school in each agricultural county where the instruction commenced in the rural schools could be extended and amplified. Pupils desiring to make agriculture their life work should be provided an opportunity to complete this education. The state now has as a part of the university of Wisconsin, an agricultural school which is renowned throughout the nation. Many parents are unable to afford the expense of sending their children to Madison to secure this education. It would seem that the agricultural education commenced in the rural schools should be continued and opportunities afforded whereby the children could pass from the rural school to the county school of agriculture and finish their education at the University of Wisconsin. There should be a complete agricultural school system provided for the state.

Reports of the schools in Dunn and Marathon Counties are as follows:

FOURTH ANNUAL REPORT OF THE DUNN COUNTY SCHOOL OF AGRICULTURE AND DOMESTIC ECONOMY.

Hon. C. P. Cary, State Superintendent,

Madison, Wisconsin.

*Dear Sir:*—Herewith we transmit to you the fourth annual report of the Dunn County School of Agriculture and Domestic Economy. The report contains also a statement from the principal concerning the work done in the school.

We look upon the past year as being the most successful year the school has seen. The teaching force consisted of Prof. K. C. Davis, principal, and instructor in agriculture; Prof. L. M. Cole, instructor in manual training, and Miss Angeline Wood, instructor in domestic economy.

Prof. Cole at the close of the year resigned to accept a more lucrative position. while we deeply regret Mr. Cole's departure, we deem ourselves fortunate in securing as his successor Prof. Geo. Bell of Lafayette, Indiana.

Members of the faculty endeavor to keep in touch with all graduates and are ever ready to give help when needed. The assistance given by this school to the country school teachers in the introduction of agriculture into the country schools has been especially valuable.

During the summer of 1905 the regular County Institute was conducted by the faculty of the County School. The regular attendance and the interest shown by the young people who were in attendance, is the strongest testimonial of the work done.

*County Schools of Agriculture.*

During the past year members of the faculty have gone out with the County Superintendent to assist in teachers' meetings, thus bringing the rural school teachers in closer touch with the school.

The exchange of work between the agricultural school and the training school was somewhat extended, and it is possible to extend it somewhat further the coming year. The harmony between the two schools of course is as settled a fact, as it is between the agricultural school and the city schools.

The work of this school meets our most hearty approval, and we look forward to its increased usefulness.

Respectfully submitted,  
..... *President.*

J. E. FLORIN, *Treasurer.*

JENNIE M. BRACKETT, *Secretary.*

REPORT OF THE PRINCIPAL OF THE DUNN COUNTY SCHOOL OF AGRICULTURE  
AND DOMESTIC ECONOMY.

Menomonie, Wis., June 30, 1906.

To the Dunn County School Board:

I have the honor to submit the following report of the Dunn County School of Agriculture and Domestic Economy for the year ending June 30, 1906. The School has had a year even more successful in some particulars than usual. The several lines of work carried on by the school have been continued and a few other lines commenced. The free offers to farmers, enumerated in my report of a year ago, have been taken advantage of more readily by the farmers of the county.

The special lines in which there seems to be an increased interest are chiefly the following:—

- Improving dairy herds by weighing and testing milk.
- Proper ventilation of barns and school houses.
- Proper planning of barns and silos before building.
- Setting out orchards of home-grown trees.
- Good farm management and crop rotation.
- Introduction of pure-bred stock.

In these and all the lines mentioned in my last report the school aids the farmers materially in the improvement of farm conditions.

The instructors of the school, assisted by farmers, have held twenty farmers' institutes in the different towns of the county during the year. The School, by the generosity of Senator Stout, secured an illustrated public lecture by Supt. O. J. Kern of Winnebago County Illinois. The School was also instrumental in securing for the community an illustrated lecture by Prof. D. Lange on economic birds, and a pure food lecture by Commissioner Emery and a demonstration by his assistant, Mr. Moore. All of these have been well attended and full of interest.

The principal of the school has addressed three school meetings on consolidation, two rural school commencement meetings, one school board convention for this county, and the Northwestern Wisconsin Teachers' Association. He also addressed the meeting of the supervisors of Clark County in November, 1905. Our manual training instructor addressed the school board convention in Clark County in the winter.

---

*County Schools of Agriculture.*

---

The teachers' institute of last summer held at this School, by direction of the County Superintendent and State Superintendent, was of such a practical nature as to stimulate the rural schools to greater interest in the lines taught. For the teaching of agriculture in those schools a number of sets of apparatus for simple exercises and experiments have been put up at the Agricultural School in box cupboards and sold to districts at cost.

The School has continued to co-operate in the aiding of rural teachers and schools through the means mentioned in other reports.

There were four School Bulletins and five circulars published and distributed, thousands of farmers' bulletins handed to farmers, and numerous farm topics discussed by the instructors and students in local papers.

The School Farm has been a useful adjunct, not only in training of students, but in carrying on illustrative experiments for farmers to see at county fair time and frequently through the summer.

Products and work of students in all departments exhibited at the county fair has continued a matter of much help and interest.

The work of this School has attracted visitors from all over this county, many other counties, other states, and other countries, throughout the time of its existence and notably the past year.

The School closed May 18, 1906, with exercises consisting chiefly of discussions by graduates of the regular course. A number of these were accompanied with experiments or demonstrations and were pronounced of even greater interest than usual.

Sixteen students were graduated—seven young ladies and eight young men from the regular course, and one young man from the short course.

The enrollment for the year reached 65,—27 young men with an average age of 19 $\frac{1}{4}$  years, and 38 young women with an average age of 17. The average daily attendance for the 160 days of school was 37 $\frac{1}{4}$ . The enrollment for the sixty days of the winter term was 57, with an average daily attendance of 46 2-3.

All but ten of the students live on farms or gain their support therefrom. All who were retained in the School were preparing for life on the farm. Five of the students were from outside of Dunn county.

The new heating plant for the three buildings was not quite completed at the time of my last report. It is provided with two 12-foot horizontal boilers of the Kewaunee make, housed in the new bank-base-ment. It gives very good satisfaction and adds the features of safety, cleanliness and economy of labor in the two county schools. But the cost for fuel has been somewhat increased as compared with the preceding year.

Respectfully submitted,  
K. C. DAVIS, *Principal.*

JENNIE M. BRACKETT.

Wausau, Wis., July 2, 1906.

Hon. C. P. Cary,  
Madison, Wis.

Sir.—We have the honor to submit the fourth annual report of the Marathon County School of Agriculture and Domestic Economy, together with the principal's report, the financial statement and the usual verification.

The board has no recommendations to make.

Respectfully,

JOS. BURGER, *President.*  
CHAS. NIEMAN, *Treasurer.*  
W. J. FARRELL, *Secretary.*

---

*County Schools of Agriculture.*

---

Wausau, Wis., June 22, 1906.

Supt. W. J. Farrell,

Sec. Marathon County School Board.

Sir:—I have the honor to submit the following report of the Marathon County School of Agriculture and Domestic Economy for the school year of 1905–1906.

The total number enrolled during the year was sixty-three, of whom twenty-three were boys and forty were girls. The average age of both sexes was slightly more than seventeen years. All boys, with the exception of one, were from farm homes and these have in all cases returned to their homes.

A class of ten students—five boys and five girls— was graduated from the two year's course.

The plan of holding educational meetings in the different towns of the county was carried on throughout the year and twenty-seven of these meetings were held, being in nearly all cases largely attended by the farming people and their families. Different phases of farm life and farm management were treated and discussed with the farmers by the teachers of the school. A stereopticon was used in this work and plans for the construction of farm buildings including houses, barns, silos, etc. were shown. Correct methods of ventilating stables and other stock buildings were shown and explained by the school architect and the work of laying cement floors and building stone roads was thoroughly discussed while being shown on the screen.

Pictures of model types of animals were shown with the lantern and their good qualities discussed. Subjects along the various lines of horticulture, farm crops, gardening, etc., were taken up in open informal talks with the farmers. Fifteen hundred pounds of the literature of the U. S. Dept. of Agriculture and the different State Experiment Stations have been distributed among the farmers of our county during the past year.

It would appear that this work is some of the most important done by the school. It puts the patrons of the school in close touch with the members of the faculty and gives the teachers an opportunity to understand the actual conditions that surround the farm home and also affords them a means for giving practical instruction to the adult farmers of the county.

During the past year the city of Wausau has made extensions to its sewer system which will enable the school to drain its grounds thoroughly before another season.

An appropriation for the building of a barn upon the school grounds was asked of the County Board at its meeting in November, 1905. One thousand dollars was appropriated and the class of boys in carpentry have built a barn forty-five feet long by thirty feet wide, no money being paid for labor except \$39.43 paid the mason.

A resolution is now pending before the County Board for a dormitory for the use of the school.

In the way of new equipment during the year the school has received a complete set of the Universal Cyclopeda and Atlas, a card index of all agricultural publications, a U. S. Milk Separator, six dissecting microscopes, and a chemical balance.

More than two-hundred tests of milk and cream have been made by the boys of the dairy class and the teachers, for farmers of the county during the year.

The school has published a bulletin every three months containing articles upon some subject connected with the different lines of work

---

*County Schools of Agriculture.*

---

carried in the courses. This is sent to nearly all tax-payers in the county.

An exchange of work was made with the Marathon County Training School for Teachers the past year, their students receiving their work in agriculture in the Agricultural School.

The past year has certainly been the most prosperous in the school's history. The attitude of the people of the county has become one of confidence in the school and a spirit of co-operation is growing up which promises a position of greatest usefulness to the institution.

Respectfully submitted,

R. B. JOHNS, *Principal.*

*State Graded Schools.*

---

## STATE GRADED SCHOOLS.

In the year 1901 a law was passed providing for the organization of state graded schools. Any school of more than one department, not located in a city nor situated in a high school district, may become a state graded school by making application to the state superintendent and complying with the requirements of the law governing such schools.

State graded schools are divided into two classes, first and second. Those of the first class consist of schools maintaining three or more departments; those of the second class consist of schools maintaining two departments only.

Schools that comply with the provisions of the law and the requirements of the state department receive special state aid as follows: first class graded schools receive three hundred dollars each year; second class graded schools receive one hundred dollars each year.

The law provides that the state superintendent shall appoint two inspectors to assist him in inspecting and organizing state graded schools. Every such school must be inspected at least once each year by the state superintendent or one of his inspectors, and the distribution of state aid depends upon the report of such inspectors.

In order that schools may receive special state aid, the following requirements must be met:

First, the school must be maintained for at least nine months each year, and the average daily attendance must not be less than fifteen for the entire year in each department of second class schools, and in at least three departments of first class schools.

Second, the teachers employed must be competent. The qualifications required by the law are as follows: The principal of a state graded school of the first class must hold some form of state certificate. One assistant may hold a third grade certifi-

---

*State Graded Schools.*

---

cate, one a second grade certificate, and all others must hold first grade certificates or state certificates. In state graded schools of the second class, the principal must hold a first grade certificate or a state certificate. The assistant may hold a third grade certificate or a certificate of a higher grade. When teachers holding third grade certificates are employed they must have had at least one year of successful experience.

Third, the school house shall be equipped with the necessary apparatus, and shall be kept in a comfortable and sanitary condition. The grounds shall be well kept and outbuildings must be adequately built and sanitary.

Fourth, the work of the school must be graded and organized according to the course of study made out by the state superintendent. Teachers not able to follow this course of study and do good thorough work as outlined therein, are deemed incompetent teachers and state aid may according to law be refused the district employing such teachers.

Fifth, the school board must make application, to become a state graded school, before September 1st of each year, and must send to the state superintendent such reports as he may from time to time require.

The number of state graded schools has materially increased every year since the passage of the law. In the year 1902-1903 there were 131 schools of the first class and 194 of the second class. In the year 1903-1904 there were 144 of the first class and 201 of the second class. In the year 1904-1905 there were 146 of the first class and 218 of the second class. In the year 1905-1906 there were 168 of the first class and 232 of the second class. Preliminary reports for 1906-1907 received show that the total number of graded schools will be about 425.

Every year a number of the larger graded schools become high schools. The larger second class schools organize three departments and become first class schools, and many of the larger one room country schools are organizing second class state graded schools.

---

*State Graded Schools.*

---

The state graded school is an incentive to consolidation in many parts of the state. In many instances several small districts have already or are contemplating consolidating and organizing state graded schools. Wherever this has been done it has been a success, and the people are well pleased. The special state aid received helps to pay the cost of transportation, and the ultimate cost after consolidation is not greater than under former conditions and the results are much better.

The course of study for state graded schools consists of eight grades of work known as the common branches. This course has been revised several times until it now seems to meet the needs of the pupils who leave school at the end of the graded school course, and prepares well those who wish to take up high school work. Many of the schools, where sufficient teaching force is furnished, are taking up some advanced work beyond the regular course as outlined. This is encouraged when it can be done without interfering with the regular work outlined in the course. Whenever advanced work is pursued, the English course for free high schools is followed.

The state graded school inspectors have inspected practically all of these schools each year and many schools have received two inspections yearly. These inspectors make such recommendations to the school boards as seem necessary, with regard to the condition of school buildings, and surroundings, also with regard to the teachers and general working of the school. The result of each inspection is reported to the state superintendent and he gives official instructions to the school boards.

In most cases school boards have been willing and anxious to cooperate with the state department, and the result has been general improvement in the condition of the state graded schools throughout the state. The county superintendents have assisted the inspectors materially in bringing about needed changes and improvements, and to them is due much credit for the present condition of these schools.

A law passed by the legislature of 1905 provides that when

---

*Free High Schools.*

---

any district school shall enroll sixty-five pupils or more in any one term, it shall be the duty of the electors of the district at the next annual meeting to provide for the establishment of a two room school. The enforcement of this law has brought about the establishment of several state graded schools this year.

The marked increase from year to year in the number of state graded schools in the state is an indication of the popularity of these schools. If this interest continues to grow in the farming communities, the near future will see many state graded schools in the country districts. . .

### FREE HIGH SCHOOLS.

Since my last report the high schools have shown a continuous growth and advancement, the number of free high schools having increased from 237 to 252. A large number of new buildings have been erected within the two years, and many more will be built the coming season.

Those at Ashland and Appleton were the most expensive, the former having cost about \$125,000, and the latter \$100,000. Many smaller districts have taxed themselves fully as heavily, in proportion to their ability, to provide suitable accommodations for their high schools.

Great care has been exercised in the construction of these buildings in regard to securing the most approved methods of heating, ventilation and sanitation; their equipment is generally good, and, taken altogether, they serve as indications of a strong interest in the communities in support of the high school as an institution.

No new three year high schools have been established, while of the former three year list only 3 now remain; all of the others have adopted a four years course and the probabilities are that this list will very soon disappear. I have in a few cases, where the expense of a good high school seems very bur-

---

*Free High Schools.*

---

densome, advised that the high school organization be discontinued and a good graded school established. A good graded school is much to be preferred to a poor high school. As illustration of the popularity of a high school when once established, however, it is interesting to note that none of these places have as yet accepted my suggestion.

In my judgment it is not wise, except in cases where there is a certainty of a large non-resident attendance, or a rapid future growth of the village, to establish a high school unless the assessed valuation of the proposed district is at least a half million dollars. Even this estimate is somewhat low when the fact is taken into consideration that the assessed value of property now approaches much more nearly the real value than was the case only a few years ago, and that a low rate of taxation now means perhaps a greater burden than a high rate meant then.

If salaries are paid sufficient to secure and retain well qualified teachers, a good high school of three teachers costs at least \$2,500 per year, making no allowance for more than the usual running expenses when the school is in connection with a graded system of schools. Not counting anything for tuition of non-residents, this, in a district (not township) receiving the usual state aid, would require a tax of at least four mil's per dollar on an assessed valuation of \$500,000.

Of course many such schools have only two teachers and salaries are much lower than allowed for in the above estimate, but their work is likely to be very unsatisfactory as a whole. If by chance strong teachers are found and the school made a success, they usually cannot be retained more than two years at the low salaries and the standard of the school is again lowered.

At least three teachers are necessary to conduct a four year high school in a satisfactory manner. A single four year course calls for sixteen daily recitations. For a fair sized class in high school studies a period of 35-40 minutes is needed for a

---

*Free High Schools.*

---

successful recitation. If only two teachers are employed, this makes necessary a program of 8 periods daily and each teacher's time is entirely filled, leaving no opportunity for attention to the related work outside of classes, such as research work, debates, recitations, etc., which are so prominent factors in all well conducted high schools. This leaves no time either for the supervisory work demanded of a principal in such schools, and which is absolutely necessary for successful grade work. Again, the amount of preparation necessary to the conduct of successful recitations in the number of different subjects implied in eight daily recitations, is altogether more than should be demanded of any teacher, and very few even experienced teachers can do it. The small schools must compete in their product with the large ones and while they may have advantages which might enable them to successfully meet the specialization and superior equipment of the large schools if other conditions are favorable, they should not be overburdened with work because their schools are small.

A good high school needs at least three teachers for still another consideration. It is desirable for many reasons (not merely to fit for college work) that opportunity be given for the study of a foreign language. Since this manifestly cannot be done when only two teachers are employed, the graduates are sent out without having been fitted for entrance to college and without having received the practical benefit which comes from the study of a language other than their native one.

Very few high schools have the full number of classes during the first one or two years, but it is not too much to say that all calculations relating to the permanent establishment of a high school should estimate a cost at least as great as indicated above. Many of the smaller villages are coming to an appreciation of these facts and are turning to the township system as a means of relief.

---

*Township High Schools.*

---

## TOWNSHIP HIGH SCHOOLS.

As is well known, the original idea in the establishment of the free high school system of Wisconsin was that such schools should be township schools. The people have not availed themselves of the advantages of this law to the extent anticipated and comparatively few such schools have been organized.

For various reasons, of which the passage of the act providing for free tuition is probably one of the greatest, a much greater interest in the matter has been manifested in the last two years, and several of these schools have been established, while the matter is being agitated in all parts of the state. The following is a list of the schools of this class, the last eight named having been established since my last report: Colby, De Forest, Eagle River, Florence, Hayward, Manawa, Marshall, Middleton, Montfort, Shell Lake, Verona, Marion, Waterford, Tigerton, Seneca, Minocqua, Mt. Hope, Patch Grove, Hixton, Waunakee.

In addition to the above several towns have taken preliminary steps toward being placed on the list.

This is a very gratifying showing. If these schools once become popular I am satisfied that they will so develop that they will rank with the strongest.

In the first place the cost is not usually burdensome. Many townships in the central and southern parts of the state, especially those including a village, have an assessed valuation of from  $1\frac{1}{2}$  to 2 millions of dollars. With the latter assessment a tax of  $1\frac{1}{4}$  mills on a dollar would yield \$2,500, an amount large enough to pay the running expenses of a school of 50 pupils, without any state aid whatever, while with such an assessed valuation and the present liberal state aid for this class of schools, the cost of a high school under such conditions becomes a mere trifle and is not at all burdensome even with a valuation only half as great.

---

*Township High Schools.*

---

Again, such schools financially well enough supported to secure and retain strong capable teachers, are likely to do excellent work as a result of the home training, even though the preparatory district school may not be up to the grade of the city schools. Country boys and girls are usually trained to work at home. Parents have something for them to do, and the children know what it means to be given a task and to be held accountable for its accomplishment. Manual training is, pedagogically considered, only an effort to supply something to take the place of the work which the old time boys and girls did toward the support of the family before our modern industrial conditions were developed. This old time training is still given to a great extent to children growing up on a farm. The value of this when taken advantage of by the capable teacher can hardly be overestimated, and the fact of the absence of this home training in the case of so many of the city children, with the corresponding lack of a sense of accountability and responsibility, constitutes one of the greatest difficulties of the city teacher.

A third great reason why these schools have in them elements of success, is the fact that the pupils are kept at home under the close supervision of the parents at just the age when such care counts very greatly in forming life habits and inclinations. It is altogether probable that had the idea of the township high school been generally adopted from its inception in 1875, that very many of the young men and women who have been so badly needed on the farms would have remained at home, and that the state would have been the gainer, both financially and socially.

The total apportionment to this class of schools last year (at that time twelve in number) was \$11,641.83, an average of \$895.52. As only \$25,000 is available for this purpose, it is evident that with the probable increase in number a scaling of the amount to each school will be necessary before the next session of the legislature, unless additional provision be made.

---

*Aid to District High Schools.*

---

In view of the fact stated above, that there is so great an increase of interest just now in these very desirable schools, it would seem that every encouragement should be given, and that it would be unwise to leave the appropriation so small that each school will receive less than at present.

### AID TO DISTRICT HIGH SCHOOLS.

Owing to the increased number of both district and township high schools, the state aid to the former has again fallen much below the limit of \$500, the last apportionment being only \$371.04. Next year the apportionment will be still less unless the appropriation is increased.

While the full limit of \$500 cannot be considered a large amount of state aid, that together with other advantages of free high schools, has proved sufficient to induce nearly all of the high schools of the state to remain on the list. As a result there exists a uniformity of courses, methods, and purposes to a much greater extent than would be possible under independent organization. This has come about not through arbitrary management, but mainly through the natural knitting together which results from having some central authority exercising a general supervision and inspection. In my judgment it would be very unwise to allow the amount of state aid to so decrease as to tend to destroy the present unity of system. I would accordingly recommend that the amount of appropriation available for township high schools be increased to at least fifty thousand dollars, and that the surplus not required by such schools be distributed among the district free high schools according to the present provisions of the law.

---

*Courses of Study.*

---

## THE HIGH SCHOOL LAW.

The present law is in the main essentially as it was when first enacted in 1875, when little was known of what the results might be. Some of its provisions have proved obscure and ineffective, and should be amended to meet existing conditions. The greatest weakness is in the doubtful extent of the authority of the state superintendent in withholding the aid from such schools as are not satisfactory in work and equipment. The law specifically provides for supervision and inspection by him; but his power to withhold the aid is merely implied. While the courts would probably hold that he has this power, it would be much better to have a clear statement in the law than to settle the question by a test case. The laws since enacted relating to state aid for graded and manual training schools are clear and explicit and would well serve as models for the amendment of the high school law.

## COURSES OF STUDY.

The suggested revision of the course of study for the state high schools published in the fourth edition of the high school manual, and republished in my last biennial report, has proved very acceptable to the high schools. An entire uniformity of work is probably not desirable; local conditions are often such that they should be taken into consideration in determining what should be attempted even in schools which do not differ in size or general equipment. Again, the large city school with its highly specialized corps of teachers should be able to attack subjects from a different standpoint from that of the school not so favorably located, though very often this is not successfully done. The leading occupation of a community also enters in as a great factor. Thus agricultural communities are likely to ask for systematic work in agriculture, while others insist

---

*Free Tuition Law.*

---

on a commercial training. These variations, however, are small when compared with the whole course. A general uniformity is very desirable and I am pleased to be able to report that this is being secured without arbitrary action on my part but through a willing acceptance of the suggestions indicated. It should not be difficult, even now, for pupils who remove from one school to another to be so accredited with part work that they need lose little time by the change.

At the same time I do not wish to imply that modifications will not be necessary. The place in the course and the proper subject matter of many of the studies are still very unsettled and the best authorities differ decidedly as to what should be done, while single able authors modify their books by many editions. A very gratifying tendency is increasingly observable year by year toward simplification of subject matter to more nearly suit the needs and ability of high school students. There is a growing appreciation of the fact that especially in the earlier years of the course the students are still immature boys and girls, and that a certain degree of maturity is needed before college methods and matter, even in a diluted and modified form, can be made suitable. Thus in physics the exacting quantitative work is being displaced by an endeavor through qualitative methods to give an understanding of fundamental facts and some of their applications to every day life. This is only an illustration of what is taking place in regard to other subjects. More and more attention, too, is being given to what may be called the practical element which should enter into the education of to-day. Economic relations of studies are being considered, not merely in their "bread and butter" aspect, but as a means of counteracting the tendency toward narrowness of commercial life and in making broad and liberal minded citizens careful of both individual and social rights.

This modification of the matter does not and should not mean a tendency toward superficiality or easy work. In fact it is often much more difficult to get a thorough comprehension of

---

*Free Tuition Law.*

---

a simple fundamental principle than it is to make applications after the fact is once established; and the defect in the past has been that the pupils were moved to the higher without having given the hard drill and study necessary for a mastery of the rudimentary aspects of the subject.

### COMMERCIAL COURSES.

While the above general tendencies are manifest, it is yet true that distinctively commercial studies such as book-keeping, stenography, type-writing and the study of simpler commercial law, are not being given the attention which their importance in business as well as their possibilities for certain kinds of training should demand; this does not appear to be due to any lack of demand by patrons, but to certain difficulties in the way of their introduction. In many cases where they are attempted, the work is of little value. Well qualified teachers are very scarce, and they command a larger salary than most places are willing to pay, for the reason that their services are in demand at better salaries in commercial positions. This is what might be expected, since they can earn more in commercial positions than in schools, and the scarcity will probably continue until communities are ready to pay what such teachers can earn elsewhere.

### THE FREE TUITION LAW.

The law providing for free tuition of non-resident pupils in free high schools appears to be increasingly popular. The non-resident attendance in such schools was reported as 4,142 in the year 1901-2, the last before the tuition law went into effect; in 1906 it was 5,862; an increase of 41.5 per cent. In the same time the total enrollment increased from 17,724 to 21,946, a gain of only 23.8 per cent.

---

*Free Tuition Law.*

---

While all this increase may not have been due to the law, it is fair to assume, from evidence from other sources, that the law is accomplishing its purpose—to provide country boys and girls with educational privileges corresponding to what are enjoyed by those living in the cities and villages.

Some dissatisfaction in regard to the rate allowed is being manifested in high school districts, the claim being made that the rate is so low that it is below the actual cost to the district, even if the allowance received from the state is taken into consideration. In a sense this is true. Taking into account the cost of buildings, repairs, janitor work, fuel, general incidentals, and supervision and instruction the cost per capita of attendance in nearly all high schools greatly exceeds the fifty cents per week received for tuition. As a matter of fact, however, there is often an actual profit from the non-residents.

Unless the number of tuition pupils is very large, it does not affect the size of the building, amount of fuel consumed, the cost of the janitor work, in short what may be called the plant. It increases the cost of instruction only. In the well regulated larger schools an assistant teacher is allowed for about every thirty pupils. If the number of non-residents is below this or between 30 and 60, or between 60 and 90, etc., there then are likely to be a certain number for whom tuition is received without any increase of teaching force being allowed, and what is received is clear profit. The extra teachers employed are likely, too, to be merely cheaper additional teachers, while the high priced principal and assistants would still be needed for the home pupils.

Again, non-residents are usually profitable for other than financial reasons. They are largely selected pupils from the country districts and so constitute a very desirable, studious, steady element in the school, taking rank with the best students and elevating the tone of the whole.

While it is true as stated that the loss is not as great as is often assumed, yet it is quite possible that, in justice to the

---

*North Central Association.*

---

districts supporting the high schools, the rate of tuition which may be charged back to the towns, should be increased to an amount which would allow for something more than the mere added cost of instruction.

The changes in the law, at the last session of the legislature, in regard to qualifications required for admission to high schools under the provisions of the law, have proved wise and beneficial.

### THE NORTH CENTRAL ASSOCIATION.

This is an association composed of nearly all of the prominent universities, colleges, and secondary schools of the North Central states, for the purpose, especially, of forming a list of secondary schools accredited to all of the universities and colleges of the association. Although it has been in existence but a few years, it already exerts a strong and growing influence upon the high schools of the states of this section.

It has prescribed rules and regulations relating to the management of such schools as shall be considered eligible to be placed upon the accredited list, the qualifications of their teachers, the number of teachers in proportion to the enrollment, and the number and length of the recitation periods.

It is very evident that such an organization will be a powerful factor in shaping the work of our high schools. The prestige both local and in the territory included by the association is an incentive to them to make great effort to be placed upon the list. In this way the high schools become linked more closely to the higher institutions and the latter control more and more largely the nature of the work of the former.

So far this influence has been of decided benefit to the high schools in certain directions. Standards of qualifications and work have been raised and a unity brought about which would have required a long time to reach under the usual conditions.

---

*North Central Association.*

---

At the same time, it has, by the rule that only college graduates shall be employed, disqualified many of our ablest teachers who hold only normal diplomas or state certificates from teaching in the large schools.

Again, through its refusal to recognize commercial and manual training courses as entrance preparation for college literary courses it is no doubt exercising a hampering effect upon the development of certain modern tendencies that are believed to be desirable and necessary. The effect of this association in this direction is not so marked, however, owing to the fact that only the larger and stronger schools can hope to meet the conditions imposed and become accredited. Such schools may if they desire carry on such courses independently for the benefit of pupils who do not desire to go to college.

The ultimate effect of this new movement is yet to be seen. By declaring, as stated above, that only college graduates shall teach in high schools, this association practically assumes the preparation of the teachers and dictates the nature of the instruction to be given in the secondary schools. The work of high schools is now often justly criticised as being too literary in its character and as lacking in the practical elements which are of use in every day affairs.

This weakness may be due to several causes: the requirements for entrance to college, the nature of the training of the teachers, and the lack of experience of the teachers in the practical affairs of life. For the first two of these the higher schools are directly responsible, and we must look to them for any improvement, even to the extent of demanding it if necessary. At present, although a very large proportion of the graduates of the literary courses become teachers, the training for this work appears to be a very minor consideration with the average college professor, and the graduates enter the high schools without either the actual knowledge which they will need to give, or any real appreciation of the purposes of high school instruction. If our own university would train our high

---

*North Central Association*

---

school teachers for their work as well as it trains students in the technical departments for theirs, we should soon see a quality of work done in the high schools which would so thoroughly convince people of their value that salaries and other inducements would reach a point which would attract strong men and women to teaching as a life work instead of a mere temporary occupation as they now make it. In this way lack of experience, third cause of defective instruction, noted above, would be largely met.

If then our own university both individually and as a member of the North Central Association will, in assuming to regulate the qualifications of teachers in order to entitle their schools to be placed upon its accredited list, also assume the responsibility of giving the teachers the proper preparation, and if the patrons and superintendents of our high schools will rigidly insist on such preparation, great benefit will result from such a centralizing influence; otherwise the tendency will be more and more toward a deadening formalism fatal to all real advance.

Twenty-nine free high schools, seven independent high schools, and four academies of this state are now accredited, and their graduates may enter the higher schools without entrance examinations.

The following is a list of the secondary accredited schools of Wisconsin, and the standards of admission to the accredited list.

#### STANDARDS OF ADMISSION.

The following constitute the standards of admission to the accredited list of the North Central Association of Colleges and Secondary Schools for the present year:

1. No school shall be accredited which does not require fifteen units, as defined by the Association for graduation.
2. The minimum scholastic attainment of all high school teachers shall be equivalent to graduation from a college belonging to the North Central Association of Colleges and Secondary Schools, including special training in the subjects they teach, although such requirements shall not be construed as retroactive.

---

*North Central Association.*

---

3. The number of daily periods of class room instruction given by any one teacher should not exceed five, each to extend over at least forty minutes in the clear. (While the Association advises five periods, the Board of Inspectors has rejected absolutely all schools having more than six recitation periods per day per teacher.)

4. The laboratory and library facilities shall be adequate to the needs of instruction in the subjects taught as outlined by the Association.

5. The efficiency of instruction, the acquired habits of thought and study, the general intellectual and moral tone of a school are paramount factors, and therefore only schools which rank well in these particulars, as evidenced by rigid, thorough-going, sympathetic inspection, shall be considered eligible for the list.

6. Wherever there is reasonable doubt concerning the efficiency of a school, the Association will accept that doubt as ground sufficient to justify rejection.

7. The Association has omitted for the present the consideration of all schools whose teaching force consists of fewer than five teachers exclusive of the Superintendent.

8. No school shall be considered unless the regular annual blank furnished for the purpose shall have been filled out and placed on file with the inspector. All hearsay evidence, no matter from what source, is rejected.

9. All schools whose records show an abnormal number of pupils per teacher, as based on average number belonging, even though they may technically meet all other requirements, are rejected. The Association recognizes thirty as a maximum.

10. The time for which schools are accredited shall be limited to one year, dating from the time of the adoption of the list by the Association.

11. The organ of communication between the accredited schools and the Secretary of the Commission for the purpose of distributing, collecting and filing the annual reports of such schools and for such other purposes as the Association may direct, is as follows:

a. In states having such an official, the Inspector of Schools appointed by the State University. b. In other states the Inspector of Schools appointed by state authority, or, if there be no such official, such person or persons as the Secretary of the Commission may select.

The above plan contemplates the making of but one annual report to the Commission by each school, said report to be made directly to the state authority and by him transmitted to the Secretary of the Commission for permanent filing.

The Association is very conservative, believing that such action will eventually work to the highest interests of the schools and the Association. It aims to accredit only those schools which possess organization, teaching force, standards of scholarship, equipment, esprit de corps, etc., of such character as will unhesitatingly commend them to any educator, College or University in the North Central territory.

Antigo, Appleton, Ashland, Baraboo, Beaver Dam (Wayland Academy), Beloit, Berlin, Eau Claire, Elkhorn, Fond du Lac, Fort Atkinson, Grand Rapids, Hudson, Janesville, Kenosha, La Crosse, Madison, Manitowoc (North Side) Marinette, Marshfield, Menomonee, Merrill, Milwaukee: East Division, South Division, West Division, Sem. Dept., Downer Col.; Oshkosh, Plymouth, Racine, Racine (Gram. School of Racine College), Ripon, Sheboygan, Superior: Blaine, Nelson Dewey; Tomah, Waukesha, Waukesha (Carroll College Academy), Wausau, Wauwatosa, Whitewater.

---

*Manual Training.*

---

## MANUAL TRAINING.

The law provides that the courses of study, and the scope and character of the work shall be such as to meet the approval of the state superintendent. Up to the present time no definite general requirements in these respects have been made, but the work of each school has been individually considered.

The limit of twenty schools to receive state aid has been reached, and the status of manual training in Wisconsin is such that it is deemed best to establish a minimum amount of time and scope of work in such departments, the same to go into effect for the school year 1907-1908. It is highly desirable that schools receiving state aid for the year 1906-1907 shall approximate this limit, and in case any school falls considerably below, aid will be refused and the school taken from the list.

## SCOPE OF THE WORK.

The scheme of work should require at least seventy minutes daily for two years in the high school, preceded by preliminary preparation equivalent to one period weekly for one year. It should provide for two optional courses. (1) Instruction and exercises in wood work and drawing. (2) Instruction and exercises in domestic science.

Specifically, course one should include:

- (a) Instruction and exercises in free-hand and mechanical drawing of objects used as exercises.
- (b) Instruction and exercises in bench work in wood-sawing, planing, tenons, mortises and joinery.
- (c) Instruction and exercises in lathe work in wood, wood turning, face-plate, and center turning, polishing and simple designing.
- (d) Project work.
- (e) Lessons in kinds and qualities of woods, care of tools, etc.

While it is not intended that the following list shall be an

---

*Manual Training.*

---

arbitrary one, it includes in a general way what should constitute suitable work with tools for a course as indicated above. In schools which provide for a part or all of this in the grades more extended work in carpentry should be given.

## BENCH WORK.

- |  |                        |
|--|------------------------|
| 1. Exercise in squaring, guaging, chamfering, and rounding with plane. | 11. Bracket shelf.     |
| 2. Pointer.  | 12. Towel rack.        |
| 3. Bench hook.   | 13. Coat rack.         |
| 4. Plate mat.  | 14. Knife box.         |
| 5. Bill file.  | 15. Half splice.       |
| 6. Coat hanger.  | 16. Mortise tenon.     |
| 7. Plant pot stand.  | 17. Double tenon.      |
| 8. Pen tray.   | 18. Mortise and tenon. |
| 9. Hatchet handle.   | 19. Keyed tenon.       |
| 10. Broom holder.  | 20. Dovetail.          |
|  | 21. Half miter frame.  |

## LATHE WORK.

1. Plain cylinder. Involving: Use of gouge in roughing and finishing; centering and preparing stock for lathe; sharpening tools; speed of lathe.
2. Use of turning or skew chisel.
3. Concave turning with gouge.
4. Convex and concave turning. Practice with chisel and gouge.
5. Chisel handle. Polishing in lathe.
6. Turning tool handle.
7. Mallet.
8. Bracket. Relation of bench and lathe work.
9. Egg.
10. Rosette. Face plate work.

---

*Day Schools for the Deaf.*

---

11. Additional face plate work.
12. Ring. Making and use of chuck.
13. Plate. Practice in chucking.
14. Goblet. Inside turning.
15. Napkin ring. Finishing on mandrel.
16. Hat rack. Practice in assembling.
17. Towel rack. Plain and face plate work combined.
18. Candelabra. Same as above.
19. Mirror frame. Built up work.

Courses two should include:

- (a) Instruction and exercises in sewing—forms of stitches, piecing, hemming, darning, mending, patching, cutting, fitting, and making garments.
- (b) Instruction and exercises in cooking—study of foods, dietetic values and combinations, uses and processes of cooking, invalid cooking, preparation of common foods—soups, meats, vegetables, bread, tea, coffee, cocoa, cakes, pies, puddings, etc.
- (c) Serving of food, study of markets, food materials and their preservation, etc.
- (d) Household management—drainage, water supply, ventilation, heating, lighting, etc.

#### DAY SCHOOLS FOR THE DEAF.

The past two years show a decided advancement in the growth of the Day Schools for the Deaf. There are now twenty such schools located as follows: Antigo, Appleton, Ashland, Black River Falls, Bloomington, Eau Claire, Fond du Lac, Green Bay, La Crosse, Marinette, Milwaukee, New London, Oshkosh, Platteville, Racine, Sheboygan, Sparta, Stevens Point, Superior, Wausau. The enrollment numbers 284. 40 teachers are in charge of these schools. The steady increase of the Day Schools—their increasing popularity throughout

---

*Day Schools for the Deaf.*

---

the state, and the quality of work they are doing, leaves no question as to their efficiency. They are no longer in the "experimental" stage—but are a vital part of the public school system.

City Superintendents and School Boards are held responsible for the "business side" of these schools. This responsibility necessitates a close relationship to the school and an intimate acquaintance with its work. School Boards become deeply interested in these schools. The same is true of communities where they are located. These schools not only benefit the deaf—but they are a distinct gain to the community because they develop the altruistic spirit which seeks to lighten the burden of those who are unfortunate—and to reach out a helping hand to them, rather than to set those who are afflicted aside as an entirely distinct class.

By housing the deaf children in the same building with the hearing—they are brought into daily contact with them, a benefit which cannot be over-estimated—as the great aim in the training of deaf children is to fit them to lead useful lives among a world of hearing and speaking people. It has been proven that the mind of the deaf child is not inferior to that of the hearing. He is just as rational, just as impressionable. His deafness is simply an inconvenience which he can surmount by careful training and it is the privilege as well as the duty of the hearing people to help him, so that *he may help himself*. The Day Schools in Wisconsin have demonstrated that education may do for the deaf child, just what it does for the hearing. Possessing as he does, the same constitutional temperament and all its attributes,—by being subjected to the same training, educated by the same methods, the deaf child can master the same course of study given the hearing. It is not unusual for a deaf child to draw himself up proudly and say—"I study Geography just like John in the fifth grade"—or—"I study Arithmetic just like Minnie in the fourth grade." This has its effect upon the deaf child. It increases his self-

---

*Day Schools for the Deaf.*

---

respect to discover that he is able to hold his own, in some measure at least, with his hearing friends.

Particular effort is made in these Day Schools to give the deaf boys and girls the advantages of Manual Training. Sixty per cent of the pupils in these schools have regular manual training under expert direction. Ninety-five per cent have the lighter forms of hand work, such as sewing, embroidery, weaving, drawing and painting. Where Domestic Science is established in the city schools—the deaf girls enjoy all the privileges of the class.

As the deaf children enrolled in Day Schools live *at home*—there is abundant opportunity for them to enter into the practical life of the home. The lessons in personal responsibility, learned here, are invaluable. An authority on the training of the deaf says: "A routine which furnishes few emergencies, a dead level of sufficiency in food and clothing and shelter, with no knowledge of its means of production, is less like life *as it must be lived*, than is a home where there is more or less hard scrambling."

Much attention has been given to rhythmic exercises for cultivating bodily poise and grace of movement. Daily vocal rhythmic drills are given for improving the speech of the deaf. Persistent effort in this respect is accomplishing much, in the way of modulating the tones and improving the enunciation. A number of the deaf schools have been furnished with pianos. The piano is a wonderful help in the rhythmic work and it is hoped that every deaf school may be supplied with one before long. Among the various appliances for aiding the semi-deaf is the acousticon. The value of this instrument was demonstrated at the Special Education section of the Teachers' Association in 1905. Several schools are now using the acousticon to good advantage.

Nearly all of the Day Schools are well supplied with books and apparatus. Some of them possess not only books, but good

---

*Day Schools for the Deaf.*

---

pictures and statuary—and present a most inviting and home-like appearance. The *surroundings* are an education in themselves. Since the deaf must depend almost entirely upon the *eye* for the acquisition of knowledge, it is doubly important that the school room should not only be equipped with all that goes to make a model school room, but should appear home-like as well.

About 18 per cent of the children attending the Day Schools must board. In many instances they go to their homes over Saturdays and Sundays. They are invariably placed in good homes, where they are treated as members of the family and enjoy all the benefits of family life.

It is hoped that a compulsory law providing for the attendance of deaf children at some school may soon be passed. This would lessen the difficulty of securing the attendance of these children, when parents are indifferent, as is sometimes the case.

The annual test in Language given by the State Department to all the Day Schools has stimulated both teachers and pupils to their best effort. 112 pupils participated last year, 173 this year. The general average in this test for all the schools in 1905 was eighty per cent. In 1906, it was eighty-six per cent.

Statistics regarding enrollment, grading, expenditures, etc.—will be found elsewhere in this report hence they are withheld here.

City Superintendents and Boards of Education are untiring in their efforts to improve these schools—and to advance the interests of the deaf pupils enrolled. They are entitled to much credit for the good work they are doing. It must be a matter of interest and satisfaction to all who are interested in educational matters to know that Wisconsin leads all other states in providing for the education and training of the deaf children. The Day Schools are faithfully trying to improve

---

*State Normal Schools.*

---

their work by keeping in touch with the most advanced thought on the education of the deaf. As public schools, they are *in the open* and invite inspection, and welcome all suggestions that tend to their improvement.

## STATE NORMAL SCHOOLS.

The normal school system of Wisconsin comprises seven well equipped schools, located as follows: Milwaukee, Oshkosh, Platteville, River Falls, Stevens Point, Superior, Whitewater. The legislature of 1905 appropriated the sum of \$10,000 for the purchase and improvement of a site for an eighth Normal School in the city of La Crosse. The board of Regents of Normal Schools in June, 1906, located, and authorized the purchase of a site in the city of La Crosse. It is expected that the legislature of 1907 will make the necessary appropriation for this new building and that it will be ready for use in September, 1909.

The legislature of 1903 appropriated the sum of \$35,000 for enlarging and improving the Normal School building at Platteville. This amount was found to be inadequate by the Board of Regents and hence no change was made until the legislature of 1905 made an additional appropriation of \$100,000 for a new building. In October, 1905, the Board awarded contracts for the new building at a cost of \$126,976. This structure when completed in August, 1907, will be a credit to the state. It belongs to the French Renaissance style of architecture and is commodious, well lighted and well ventilated.

The legislature of 1905 appropriated the sum of \$185,000 for a new Normal School building and site in the city of Milwaukee. In October, 1905, the Board of Regents met in Milwaukee and selected a site conditioned on a perfect title. In March, 1906, the Board awarded contracts for the new building at a cost of \$146,929. Later, the supreme court of Wis-

---

*State Normal Schools.*

---

consin rendered a decision relating to the vacation of alleys in cities which prevented the Board from acquiring clear title to the site provisionally selected. It will be necessary to have additional legislation before the Board can proceed further in the matter.

The buildings at Stevens Point, River Falls and Superior are admirable in arrangement, convenience, equipment and in architecture. The buildings at Oshkosh and Whitewater are older but they are substantial and creditable structures and well equipped.

The management of the Normal Schools is vested in a state Board of Regents of eleven members. Ten members are appointed by the Governor, each for a term of five years. The state superintendent of schools is a member *ex-officio*.

## SOURCES OF INCOME.

1. A permanent fund established by the legislature in 1865, and derived from the sale of public lands. This fund now amounts to \$1,955,108.66. The annual interest from this fund for the year ending June 30, 1906, was \$93,679.06.

2. An annual state tax for the support of Normal Schools, which is fixed since 1903, at \$230,000.

3. An annual appropriation from the general fund of the state for the support of Teachers' Institutes, \$7,000.

4. Local receipts at the several schools from book-rents, tuition of pupils in the Training Department, etc., amounting annually to about \$23,000. Total, about \$350,000.

In case of new buildings, the legislature makes special appropriations.

## ORGANIZATION OF THE WORK.

Each of the seven schools has:

1. The normal Department, comprising persons preparing definitely for the work of teaching.

---

*State Normal Schools.*

---

2. The Training Department, or School of Observation and Practice, composed chiefly of children from the community, and including all the grades of the Elementary School.

3. In some of the schools, a Preparatory Class is organized for pupils not sufficiently prepared for the regular work of the Normal Department; but no departments are maintained which do not conspire towards the preparation of teachers for the public schools.

4. Most of the schools have Kindergartens as an adjunct of the Training Department.

## SPECIAL DEPARTMENTS.

Are organized as follows:

At Milwaukee, A Kindergarten Training Department.

At Oshkosh, A Training Department for Manual Training.

At Stevens Point, A Training Department in Domestic Science.

## CONDITIONS OF ADMISSION.

1. Students are admitted to the Elementary Course on passing a successful examination in the following branches, viz.: Reading and Spelling, Arithmetic, Grammar, Geography and U. S. History.

2. Persons holding a Second Grade Teachers' certificate granted by a County Superintendent are admitted without examination.

It may be said that the standard for admission to the Elementary Course is one year higher than that for admission to High Schools.

Pupils are passed from the Ninth Grade of the Model Department into the Elementary Course.

3. Graduates from High Schools having a four years' course are admitted to the Advanced Course (Junior Class)

---

*State Normal Schools.*

---

without examination; but must pass a preliminary examination in Arithmetic, Geography and Grammar before becoming eligible to enter the "Professional Review" classes in those subjects.

RECOGNITION OF DIPLOMAS.

The Diploma of the Advanced Course when countersigned by the State Superintendent, after one year of successful teaching in the schools of Wisconsin, becomes a Life Certificate, valid for any grade of public schools.

The Certificate of the Elementary Course, when countersigned by the State Superintendent, after one year of successful teaching, becomes a State Certificate for five years, good for any grade of public schools except as principal of High Schools with Four Year Courses.

For the probationary year of teaching, a license is issued by the State Superintendent, on application, to all graduates in either Course.

Graduates from the Advanced Course are admitted to Junior rank in the State University, in which the "Philosophical Course" is designed especially for Normal School graduates.

COURSES OF STUDY.

*The Elementary Course.*

Mathematics—Arithmetics, 10 weeks; Algebra, 20 weeks; Geometry, 20 weeks; Bookkeeping (optional); total...	50 weeks
Vocal Music .....	20 weeks
Drawing .....	20 weeks
English Language—Orthoepy and Reading, 20 weeks; Word Analysis (optional), 10 weeks; Grammar and Composi- tion, 30 weeks; total.....	50 weeks
Natural Sciences—Geography, including Physical, 20 weeks; Physiology, 10 weeks; Botany, or Elementary Zoology, 10 weeks; Physics, 20 weeks; total.....	60 weeks
Elements of Agriculture.....	10 weeks
U. S. History and Civics.....	30 weeks

*State Normal Schools.*

Professional Work—School Management, School Law, Theory and Methods of Teaching, 50 weeks; Practice Teaching, 20 weeks; total.....	70 weeks
Minimum aggregate of Elementary Course.....	310 weeks

*Advanced Courses.*

Mathematics—Algebra and Solid Geometry.....	30 weeks
Drawing .....	10 weeks
English Language—Rhetoric and Literature.....	60 weeks
Natural Sciences .....	70 weeks
From the following Elective List, viz.:	
Physiology, 10 weeks; Botany, 10 weeks; Zoology, 20 weeks; Chemistry, 20 weeks; Geology, 20 weeks; Physics, 20 weeks; Physiography, 20 weeks.	
General History.....	30 weeks
Physiography or Economics.....	20 weeks
Professional Reviews in Common Branches.....	30 weeks
Psychology and Science of Education.....	30 weeks
History of Education.....	10 weeks
Practice Teaching .....	20 weeks
Minimum aggregate of Advanced Course.....	310 weeks

*Latin and German Courses.*

The Latin Course is similar to the above except that it substitutes three years in Latin for a corresponding amount of other studies. The German Course substitutes two and one-half years (100 weeks) of German for a like amount of other studies.

STUDENTS AND GRADUATES.

The total enrollment during the past two years was 100 more than during the preceding biennium. The total enrollment in the Normal Department, proper, was 124 more than during the preceding biennium.

The total number of graduates was 27 more than during the preceding two years. There were 25 more graduates from the advanced course than during the preceding biennium.

*State Normal Schools.*

## THE STATE UNIVERSITY.

The University of Wisconsin is the culmination of the free educational system of the state. In the educational policy of the state, the university sustains a similar relation to the high schools that the high schools sustain to the primary and grammar schools. As those who have passed through the grammar grades may freely avail themselves of the high schools, so those who have completed with credit a full high school course may advance to the opportunities offered by the university. It is not expected that all pupils who complete the grammar grades will advance to the high school; nor is it expected that all who complete a high school course shall go forward to the university. But the school system of the state has been so arranged as to make the passage from one grade to another as easy and natural as possible, in order to afford every encouragement to thorough education. The state through the university undertakes to furnish instruction in the various branches requisite for a liberal education, in the technical branches of engineering, law, agriculture, pharmacy, commerce, home economics, and music. It also aims to encourage research work in all departments, to produce creative scholars, and thus do its part in the enlargement

---

*State University.*

---

of the domain of knowledge. Thus it is the general policy of the institution to foster the higher educational interests of the state, broadly and generously interpreted. By prescribing a large number of studies during the first two years of undergraduate work, and by leaving all, or a large part of the work of the last two years to the free selection of the student, under a definite system, the university endeavors to give a wise measure of direction, leaving at the same time sufficient room for choice to encourage individual adaptation and special development. The graduate work is, of course, wholly elective.

ORGANIZATION.

The University embraces—

- The College of Letters and Science.
- The College of Mechanics and Engineering.
- The College of Law.
- The College of Agriculture.
- The Graduate School.

The College of Letters and Science embraces—

- General Courses in Liberal Arts.
- Special Courses, which include:
  - Commerce.
  - Pre-medical Studies.
  - Pharmacy.
  - Education.
  - Music.
  - Home Economics.

The College of Mechanics and Engineering embraces—

- The Civil Engineering Course.
- The Sanitary Engineering Course.
- The Mechanical Engineering Course.
- The Electrical Engineering Course.
- The Applied Electrochemistry Course.
- The General Engineering Course.
- The Mining Engineering Group of Electives.

The College of Agriculture embraces—

- The Experiment Station.
- The Long Agricultural Course.
- The Short Agricultural Course.
- The Dairy Course.
- The Farmers' Institutes.

The College of Law embraces—

- A Three Years' Course.

BIENNIAL REPORT

OF THE

Regents of the University

FOR THE

Years 1904-5 and 1905-6.

MADISON

DEMOCRAT PRINTING COMPANY, STATE PRINTER

1905

# THE REGENTS OF THE UNIVERSITY.

---

## THE REGENTS.

THE PRESIDENT OF THE UNIVERSITY, *Ex-officio*.  
C. P. CARY, State Superintendent, *Ex-officio*.  
State-at-Large, MAGNUS SWENSON, Madison.  
State-at-Large, MRS. E. RAY STEVENS, Madison.  
First District, DELBERT UTTER, Lake Beulah.  
Second District, LUCIEN S. HANKS, Madison.  
Third District, JAMES LL. JONES, Hillside.  
Fourth District, W. J. McELROY, Milwaukee.  
Fifth District, ARTHUR J. PULS, Milwaukee.  
Sixth District, M. C. MEAD, Plymouth.  
Seventh District, EDWARD EVANS, La Crosse.  
Eighth District, EDWARD E. BROWNE, Waupaca.  
Ninth District, ORLANDO E. CLARK, Appleton.  
Tenth District, GEORGE F. MERRILL, Ashland.  
Eleventh District, AUGUST J. MYRLAND, Grantsburg.

---

## OFFICERS OF THE REGENTS.

M. C. MEAD, *President*.  
A. J. MYRLAND, *Vice-President*.  
STATE TREASURER, *Ex-officio Treasurer*.  
E. F. RILEY, *Secretary*.  
D. EARLE BURCHELL, *Auditor*.

---

## STANDING COMMITTEES.

(The President of the University is *ex-officio* a member of all standing committees of the board with power to vote in case of a tie.)

Executive—SWENSON, HANKS, McELROY.

College of Letters and Science—MERRILL, SWENSON, CARY, EVANS,  
STEVENS, PULS.

College of Agriculture and Mechanic Arts—CLARK, UTTER, JONES,  
BROWNE, MERRILL.

College of Law—McELROY, MYRLAND, BROWNE.

Trust Funds and Donations—HANKS, PULS, UTTER.

Finance—HANKS, SWENSON, CLARK, BROWNE, MERRILL.

## REPORT OF THE REGENTS.

---

Madison, Wis., December 1, 1906.

PLYMOUTH, WIS., NOVEMBER 28, 1906.

To His Excellency, JAMES O. DAVIDSON,

*Governor.*

In behalf of the Regents of the University, I have the honor to present to you herewith their biennial report for the years 1904-5 and 1905-6.

Very respectfully,

M. C. MEAD,

*President.*

# REPORT OF THE PRESIDENT

FOR THE YEARS 1904-5 AND 1905-6.

---

To the Honorable M. C. MEAD,

*President of the Regents of the  
University of Wisconsin.*

SIR:—Herewith I submit report for the biennial period ending June 30, 1906.

The report consists of four sections, as follows:

- I—The progress of the University;
- II—The University the instrument of the State;
- III—Medical studies at the University;
- IV—Additional buildings needed immediately.

This general report is supplemented by more detailed statements of the deans of the colleges, the director of the graduate school, and the librarian.

## I. PROGRESS OF THE UNIVERSITY.

### CHANGES IN THE FACULTY.

During the past two years there have been many changes in the faculty. These changes are fully discussed by the deans of the respective colleges and are summarized in a table at the end of the report. Therefore only a general statement will be here made.

I must first mention the death of Professor David Bower Frankenburger, who served the University as professor of rhetoric and oratory for twenty-seven years. During these years Professor Frankenburger has given his entire energy to the University with a faithfulness and a singleness of devotion rarely equalled. Indeed, he drew upon his energy faster than nature could supply his system. Professor Frankenburger not only did his class work regularly, but he was ever ready to respond to any call for general university duty. An illustration of this is the work he did year after year upon the alumni directory. In addition to his class work and general work for the University, Professor Frankenburger gave a very large amount of time to personal instruction, perhaps as much as to his regular instructional work. His departure from among us is felt to be a great loss by the faculty and students alike.

In my report for the preceding biennial period I pointed out that the increase of students had been much more rapid than the increase in income, and that the faculty was greatly in need of strengthening; that several professorships were vacant, and could not be filled on account of lack of funds, and that the grade of many of the instructors was not satisfactory. In consequence of the wise and liberal laws of 1905 with reference to the University, it has been possible to remedy the defects spoken of. By somewhat increasing the amount which could be offered to instructors and assistants, it has been possible to improve greatly the grade and efficiency of these classes of the instructional force. At the present time this division of the force is in a very satisfactory condition. It has been possible also to fill vacant professorships in a number of departments where men of this class were greatly needed.

For some years because of the fact that the number of students in the University was increasing faster than the income, the number of instructors and assistants had increased faster than the men of higher rank, until they considerably outnumbered them. This unfortunate tendency, made necessary because of lack of funds, has been remedied and for the year 1905-6 the number of professors, associate professors, and assistant professors exceeds by one the number of instructors and

assistants. A comparison with catalogues of other first grade institutions shows that this proportion is a very creditable one, since in the majority of the larger institutions the number of instructors and assistants somewhat outnumbers the men of higher rank.

It is believed that the faculty as a whole has never had a higher average efficiency than at present. The larger part of the increase in expenditure for salaries of the instructional force during the year 1905-6 as compared with the previous year has been due to increase in the number and improvement in the grade of the instructional force, and the smaller part of such increase has been due to increase in salaries. It has been found that whenever there is a vacant position it costs more to fill that place than has been paid in the past to men of equal capacity and position within the University. Recognizing the injustice of this a moderate step was taken in 1905-6 to remedy this inequality, and a further step will be taken the coming fiscal year. However, both of these steps are not altogether sufficient to remedy the inequality, and the total increase of salaries in consequence of them will not be as great as the increase in the cost of living during the past few years. The result is that after the increases of 1905-6 and 1906-7 are made, the members of the instructional force will still be no better off financially than they were upon the lower salaries of several years ago.

The low standard of salaries which prevailed two years ago was recognized by the visiting committee. That committee stated that injustice was being done by the then existing scale of salaries and that an increase should be made in accordance with the increased cost of living.

#### INCREASE IN STUDENTS.

The rapid increase in attendance reported for the previous biennial period has continued without check during the present biennial period. The total attendance for the year 1903-4 was 3,151; for the year 1904-5, 3,342; and for the year 1905-6, 3,571. This shows an increase for the first year of the biennial period of 191, for the second year of 231, and for the two years of 422.

The details of the changes in the number of students are

given by the deans and will not be repeated here. However, two or three points of significance should be noted. The increase in the number of students in the College of Letters and Science has been marked, the numbers in this college being for the year 1903-4, 1,312; for the year 1904-5, 1,476; and for the year 1905-6, 1,579; an increase for the first year of the biennial period of 164, and for the second year of 103.

In the College of Agriculture the most notable change has been the rapid increase in the number of students in the long course. The attendance for the year 1903-4 was 57; for the year 1904-5, 80; and for the year 1905-6, 136. It thus appears that in the biennial period the attendance in this course has more than doubled. This growth in the long course in agriculture is very significant. For a long time the increase in the four years course was very small as was the growth in the College of Engineering in its earlier years. But the time came in engineering when there was a rapid increase in the number of students in that college, and this growth has continued until the present time. It looks as if this period has been reached for the long course in the College of Agriculture. It is coming to be recognized that this subject is an applied science involving a broad and deep knowledge of physics, chemistry, and biology, and their applications to the practical problems of the farmer. In consequence of this realization there is a rapidly increasing demand for men having full scientific training in agriculture to take charge of large estates and the demand is likely to increase greatly. Also the enormous value of the agricultural products of the country has led to rapid expansion of instructional and investigative work in agriculture in the various states and by the national government, and this has led to a large demand for men trained for positions in agricultural experiment stations and agricultural colleges. It is probable therefore that the demand for highly trained men in agricultural science will for a long time to come exceed the supply and in consequence of this the number of students in the long course in agriculture will continue to increase rapidly.

Until the present biennial period the attendance in the Graduate School for a number of years has remained nearly stationary. In 1903-4, the attendance was 115; in 1904-5, 148; and

in 1905-6, 161. These numbers are for the regular college year; if the students for the summer session are added these numbers will be as follows: for 1903-4, 209; for 1904-5, 228; and for 1905-6, 298.

#### *Growth in Summer Session.*

Another direction in which there has been a gratifying growth is in the summer session. The attendance for the year 1904 was 403; for 1905, 528, an increase of 125. It is the plan of this session to maintain work of as high a grade as in the remainder of the year. There are many summer sessions in which elementary work is given, but few of university grade. One of the great advantages of maintaining such a summer session is that the students attending upon the sessions of the University may thereby shorten their courses to three years and thus save a year in their preparation for life. But perhaps more important than this, the summer session meets the needs of men and women engaged in teaching in the high schools, normal schools, and colleges, who wish to continue their advanced work. A low grade summer session will not supply their wants. In providing a summer session of high grade such men and women may broaden and deepen their educations and thus better fit themselves to perform their work for the state.

#### *Students Entering to Advanced Standing.*

While there has been a very rapid increase in the number of students in the University, this has not been due mainly to a large increase in the freshman class, but to an increase in the number who have entered with advanced standing, many such students being those who entered the Graduate School. The increase in the number of students who have entered with advanced standing has been due in part at least to the cooperation of the University with the colleges and normal schools of the state.

#### RELATION WITH COLLEGES AND NORMAL SCHOOLS OF THE STATE.

In the autumn of 1904 a conference with several of the presidents of the colleges of the state was held, as a result of which it was mutually agreed that the colleges and the Univer-

sity should maintain the same entrance requirements; and that there should be migration from one institution to the corresponding college of the other institution with full credit for the first two years of work. The University authorities have cooperated with the authorities of Lawrence University and Ripon College in reference to arranging courses in these institutions which will be most advantageous to students who wish to enter the College of Engineering of the University. Students of senior rank in Lawrence and Ripon who enter the College of Law will receive credit for their law studies towards graduation in the institution from which they come to amounts to be determined by these institutions. The fundamental idea was to do everything we could to assist the colleges to do their work. They have no plans to undertake professional or graduate work, and for such work they are sending their students to the University. To further the principle of cooperation between the colleges and the University along these lines there were this year established four graduate scholarships, one each to be filled annually by the faculties of Beloit College, Ripon College, Lawrence University, and Milwaukee-Downer College, from their senior classes.

A conference also was held with the presidents of the normal schools of the state in the winter of 1905, as a result of which the philosophical course was modified so that it would be better adapted to the needs of the normal school graduates, and also an arrangement was made by which credits for normal school graduates toward the A. B. degree will be in all cases one year, and may be as great as one and one-half years, depending on the merits of the case.

The motive in entering into these arrangements with the colleges and normal schools of the state was to unify, harmonize, and make most effective all of the educational interests of the state, so that while each is doing the special work to which it is adapted, the students may transfer from these institutions and continue their work at the University under the most favorable circumstances.

#### CHANGE IN LAW.

The legislature of 1905 passed a new law for the support of the University. The appropriations made by section 390 of the

Revised Statutes of 1898, as amended from time to time, for the support of the University, was amended so as to levy two-sevenths of a mill tax for support, or if the state treasury was in a condition to render such levy unnecessary to allow the proper officers to transfer from the general fund to the University fund income an equivalent to that which would be given by the tax levy. Instead of making specific appropriations for individual buildings, as has heretofore been the practice, an appropriation of \$200,000 per annum for the period of three years was also made for new buildings, for repairs and improvements, for furniture and equipment, for apparatus, and for the library. The effect of this act was to provide the necessary increase in income to meet adequately the current needs of existing departments in the University.

The act also involved the principle of allowing the regents to appropriate the funds granted by the state for the support of the University to the various colleges and departments in accordance with their judgment. Further in appropriating a definite sum to construct buildings and for the other purposes mentioned the regents are left free to provide for the most pressing constructional necessities of the University in the order of the greatest need.

#### INCREASE IN EQUIPMENT.

The increase in the material facilities of the University during the biennial period has included buildings, apparatus, and books.

#### *Chemical Laboratory.*

The Chemical Laboratory, partly constructed by the appropriation of 1903 and equipped by the appropriation of 1905, has been occupied one year. The occupancy of this building gives to the department of chemistry adequate quarters for the first time in a number of years. This department besides giving all of the instructional work in chemistry for the students of the College of Letters and Science does all of the training in pure chemistry for the students of the Colleges of Agriculture and Engineering; hence the necessity of providing it with adequate accommodations. In the new Chemical Labora-

tory in addition to the department of chemistry the department of pharmacy has found satisfactory quarters, and finally, in this building is located the state laboratory of the Dairy and Food Commission.

#### *Hydraulic Laboratory.*

The essential part of the two lower stories of the Hydraulic Laboratory has been constructed, and while last winter the third story was not added and the building finally enclosed, it was temporarily enclosed so that it was used for instructional work during 1905-6. This building has thus supplied the needs of a very important department, which before had wholly inadequate quarters, and has by its removal relieved to a slight extent the congestion of the main engineering building.

#### *Repairs and Improvements.*

In my report two years ago, I stated that the funds which had been available for repairs and improvements to the buildings had been so small that buildings had not been kept in a satisfactory state of repair. During the fiscal year now closing much has been done in improving this condition. The interior of North Hall which was in an especially bad state of repair has been refitted thruout and the building adapted to the needs of the departments of German and commerce. The interior of the old Chemical Building has been remodelled and refitted to adapt it to the needs of the department of chemical engineering and the department of physiology. It has been necessary to crowd both of these departments into this building as well as some of the work in electrical engineering. Altho the course in chemical engineering has been but recently established, the number of students in it has increased so rapidly and the demand for this work has been so great that at the outset the quarters in the old Chemical Building are inadequate. The entire building should have been given to this department, but it is simply impossible to do this because of the necessity to provide room for physiology and to some extent to relieve the pressure in electrical engineering. In addition repairs and improvements have been made upon a number of the other buildings, the more important of which were those upon the Gymnasium and Chadbourne Hall.

*North Wing of University Hall.*

In my report of two years ago it was stated that the construction of the north wing of University Hall was one of the most pressing necessities. This work has been begun and it is hoped that the wing will be ready for occupancy by the end of 1906. This wing will greatly increase the effectiveness of the instruction in the humanities by supplying additional lecture rooms and offices, both of which were sorely needed.

*Fire Protection.*

During the year there has been installed a thoro system of fire protection, including one or more fire escapes and outside standpipes to each of the large buildings, one hundred feet of hose at every floor of each standpipe, outside hose houses, hose carts, additional hose, etc.

*Apparatus.*

One of the great deficiencies of the University has heretofore been lack of funds for adequate apparatus. During the year the apparatus has been materially increased and the most pressing needs supplied. Each year, however, it will be necessary to expend a considerable sum for this purpose, in order to keep the rapidly expanding departments supplied with sufficient apparatus to perform their work effectually.

*Increase in the Library.*

But perhaps the most important of the increased facilities has been the purchase of books. Until the appropriations of 1905 were available the amount of money which could be spent upon the Library was ridiculously inadequate. For the first time it has been possible to spend a fair sum upon books. While the current year some of the most pressing demands for books have been supplied, it will continue to be necessary for some years in the future to spend liberal sums for books before the Library, the most essential organ of the college of liberal arts, can be placed in a satisfactory condition.

*Recapitulation.*

In recapitulation it may be stated that the special appropriation made by the legislature for the year 1905-6 has been ex-

pended mainly for the equipment of the Chemical Laboratory, for remodelling the interior of North Hall and the old Chemical Building, for the north wing of University Hall, for the Hydraulic Laboratory, for repairs of various buildings, for fire protection, and for apparatus and books.

#### PURCHASE OF LAND.

From the current income of the year 1905-6, \$73,237.50 have been spent for the purchase of land. The largest tract of this land, 32 acres, is an addition to the west end of the agricultural farm. Another part of the land is south of the University campus, and one piece is east of the campus.

The parcel west of the farm is to increase the area available for plat work, an enlargement sorely needed because of the encroachment upon the land available for this purpose by buildings, and because of the necessity to use Camp Randall for the purpose for which it was purchased. The land south of the University campus is to be used for the location of the future consolidated central heating plant of the University, and for the dormitories, commons, and union for the men. The land east of the University is to be the location of the future administration building of the University.

In reference to the wisdom of these purchases, I think there can be no difference of opinion. The growth of the University during the past twenty-five years has been phenomenal and its growth in the future promises to be equally rapid. If in view of the past expansion reasonable foresight were not exercised in providing for future needs, the University authorities would be justly subject to criticism. Already it is necessary to use the Caesar tract purchased two years since. The new Agronomy and Farm Engineering Buildings, the contracts for which have been let, are to be located upon this tract. If it were not available it would not be possible to place these buildings suitably with reference to convenience of instruction and the future central heating plant.

All the other plats purchased are for definite purposes for which they will be utilized as soon as funds are available for the constructional work. For the last half dozen years there has been a very rapid increase in the price of land about the Uni-

versity and we regret that from current funds we were not able to complete the necessary purchases to provide adequate space for the dormitories, commons, and union.

In conclusion of this section it is to be remarked that from the appropriation made for current expenditures of the University a permanent investment for the state has been made to an amount in excess of \$70,000, from which the students who are receiving instruction the present year do not gain any advantage, and the expense of which should not therefore be charged to instruction for them.

#### IMPROVEMENT IN ORGANIZATION.

During the biennial period advance has been made in the organization of the instructional force. In the early history of the University when the work of a department was all done by one professor with one or two assistant professors or instructors, the organization and control of students were easy problems. However, with the enlarged instructional force which has resulted from the very large increase in students it has been necessary to give more attention to the organization of the various departments.

The points aimed at in such improved organization have been to make it certain that the grade of instruction in the earlier years shall not be inferior to that of the advanced work, and second, to obtain for the individual student proper supervision and advice. These problems have been the subjects of serious study by the deans and heads of the various departments.

An inquiry as to the present situation shows that in all those departments in which freshmen and sophomores are prepared to take the work of the departments, the professors, associate professors, and assistant professors are doing their full share of elementary work. A point often not appreciated in this connection is that many departments are of themselves so advanced that the freshmen and sophomores are not prepared to enter any of the work of such departments. This may be illustrated by such subjects as anatomy, geology, and the majority of the engineering subjects. A student cannot begin the study of anatomy until he has had biology. He cannot take work in geology until he has had physics and chemistry. He cannot enter the

department of mechanics, railway engineering, steam engineering, applied electricity, or in fact the greater number of subjects in engineering until he has had elementary physics and mathematics at least, and for some subjects in addition to these, chemistry. When a student is prepared to enter any of such departments he immediately comes into contact with the professors of the departments.

Under the system of student advisers each student is assigned to some member of the instructional force as his adviser, this work being so divided that each instructor has only a small number of students, in order that he may know in detail about the work of those in his charge.

The supervision of the instruction in the large departments is handled in different ways in different cases. In various departments the professors have daily conferences with their instructors, and the instructors furnish regular reports to them. In other cases where there are large quiz sections the instructors who are to do the quiz work attend the lectures and discuss with the professors the points to be brought out in the quiz work. In each of the large departments the head of the department visits the classes and laboratories in the charge of the instructors.

In all departments some of the members of the instructional force have office hours at which they may be consulted by the students. However, in the humanities we have been greatly hampered by lack of office room for such purposes. The completion of the north wing of University Hall will remedy this defect, and it is planned to extend greatly the system of conferences of students and instructors.

More detailed statements in reference to the improvement in the organization of the departments are contained in the reports of the deans of the College of Letters and Science and the College of Engineering.

#### SOCIAL AFFAIRS.

In the control of social affairs it is believed that improvements have been made in various directions during the biennial period. Some years ago the young women's Self Government Association adopted the rules that no parties should be held upon days other than Fridays, Saturdays, and legal holidays,

and that all parties should close before midnight, except by special permission of the faculty. While these rules were at first partially carried out by the young women, there developed an increasing tendency to disregard them. In consequence of this, last year upon the recommendation of the social committee the rule was definitely adopted by the faculty that "No parties shall be held on other days than Fridays, Saturdays, and legal holidays, except as authorized by the faculty social committee: all parties shall close on or before midnight, except by special permission of that committee." There has been a serious attempt upon the part of the committee to enforce these rules and the committee believes that in general they have been obeyed.

In the year 1905-6 the social committee took up the investigation of the housing of young women living at places other than Chadbourne Hall or the sorority houses. It was found that at a number of rooming houses women only were taken, but it was also ascertained that at a number of rooming houses are both men and women. In all such cases the social committee took up the question with the rooming-house keepers as to whether or not they were willing to take women alone. The result was that a number of the rooming-house keepers agreed to this. This work done, a list was published of the rooming-house keepers who are willing to take women alone, and was sent to the parents of every young woman in the University, and also to the parents of every young woman who had applied for admission to the University. The result was that the parents made applications for accommodations for young women beyond the capacity of the designated houses. This year the canvass has been repeated and the list somewhat enlarged. It is our hope to have additional halls of residence for women and to enlarge this list so that finally there shall be adequate accommodations in houses in which there are no men, for all the young women who wish to enter the University.

Notwithstanding the advances which have been made, more remains to be accomplished in the control of social affairs. Of much more importance than this is the development of a dominating sentiment among the young women that they are here for educational purposes and that social engagements shall be subordinate to such purposes.

After a long search the position of adviser of women has been filled by the appointment of Mrs. Cora Stranahan Woodward, of Brooklyn. Upon her will rest the responsibility of leadership in still further improving the social conditions of the young women of the University.

#### ATHLETICS.

For some years there has been a growing feeling within the faculty that athletic affairs are taking too important a place in the university life. As intercollegiate athletics have developed, excesses of various kinds have appeared and these have become more and more formidable. The excesses in athletics have been especially connected with football. At the close of the football season of 1905, a special committee of the faculty was appointed to take up the matter. At the request of the committee President Angell was asked to call a conference of the Intercollegiate League of the Upper Mississippi Valley. This conference was called and several meetings were held.

As a result many reforms were recommended to the colleges for the control of intercollegiate athletics, all of which have been adopted by them. Among these are rules requiring a year of residence before participating in athletics; confining participation to three years; confining participation exclusively to students who have not taken any degree; excluding all students who have not been in continuous attendance between the first and second participations; taking financial control of athletics out of the students' hands; forbidding the employment of professional coaches by the students, etc. It is believed that these rules will be very helpful influences in confining athletics to students who come to the University for intellectual rather than athletic purposes. Indeed, it is the desire of the faculty to exclude wholly the latter class.

The faculty was not content with the advances of the conference and for next year made an additional step which prohibits large football games. The intense excitement, rivalry, and loss of time in connection with football have been largely associated with the three big games with Chicago, Michigan, and Minnesota, and for 1906 no games are scheduled with these institutions.

The faculty are in thoro sympathy with the general participation of the students in out-of-door games. They care compara-

tively little for success or non-success in intercollegiate contests. To promote general out-of-door sports, the regents have adopted the plan of consolidating all of the in-door and out-of-door work, thus making physical training for men a single department. The physical training will be in charge of a committee of the professors of the department the same as in other departments of the University. Dr. Charles P. Hutchins, of Syracuse, N. Y., comes here as the chairman of the committee.

It is believed that the steps taken will be sufficient to reduce intercollegiate athletics to the subordinate place they should occupy in university life. If the steps taken are not sufficient, the temper of the faculty is such that additional steps will be taken to accomplish this end.

#### UNIVERSITY AUDITOR.

In October 1905, at my request, the subject of accounting and auditing within the University was taken up with D. E. Burchell, professor of business administration. The University has rapidly grown from an institution in which the financial transactions were rather small to one in which they aggregate a large sum. As the students have increased in numbers the variety of fees paid and the total amount of such fees have greatly increased. As the College of Agriculture has increased in size, the business transactions of that college have greatly expanded. On account of the rapid growth of the University it seemed desirable that the entire question of the systematization of the accounts in the various departments, and their correlation should be taken up. This matter was presented to the regents at the meeting in January 1906, with the result that the regents authorized the establishment of the office of university auditor, and Professor Burchell was appointed to this place. Before the beginning of the second semester an auditing system so far as it refers to the secretary's office was established, and the study of the problem of the best system of accounting for the various colleges and the requisition system was continued. As a result of this study recommendations were submitted by the auditor at the June meeting of the regents for the complete systematization of accounts in all departments and the auditor was authorized to put into operation July 1, 1906, the full system recommended.

Under the system all financial transactions of the University are to be checked by the auditor's office independent alike of the secretary's office and the various colleges. The auditor receives receipt stubs for all moneys received by the University from whatever source, and a daily audit is made of each department. It is believed that the result of the system will be that all accounts will be effectively audited and also that each department will know at any time the exact condition of its accounts.

#### ADDITIONAL SUPERINTENDENTS.

Heretofore the actual direction of the work of repairs and improvements, the charge of buildings, and the work upon the University grounds, have been largely in the hands of Mr. Riley, who is secretary of the regents and the business agent of the University. But with the growth of the University it has become manifest that the direction of the business office and the work of superintendent are too much for one man to undertake. Therefore during the biennial period there have been created the positions of superintendent of roads and grounds and superintendent of buildings. At the present time therefore we have a supervising architect, a superintendent of the steam plant, a superintendent of water works, a superintendent of roads and grounds, and a superintendent of buildings, each being directly responsible to the president of the University and thru him to the executive committee or the regents. This has resulted in increased efficiency of these various departments.

#### IMPROVEMENT OF GROUNDS.

Several years ago when the late Dr. Adams was president of the University, an arrangement was made with O. C. Simonds, a well-known landscape gardener of Chicago, for a report upon a plan for the improvement of the roads and grounds. This work was begun but Dr. Adams was taken ill and the report was never rendered. The regents requested Mr. Simonds to complete his study and render a report. This he has done and his report gives a complete plan for the improvement of the grounds.

As has been stated, the office of superintendent of roads and grounds has been created and Professor E. P. Sandsten has been

appointed to this place. Already he has begun the execution of the plan of Mr. Simonds. The grading, making of the lawn, and planting about the new Chemical Laboratory have been completed. A large amount of shrubbery has been planted at a number of places to hide unsightly features and cut off unnecessary pathways. Fences have been erected at several places on the campus to prevent such pathways. A large number of young elm and ash trees have been planted on the main campus and in the wood lot. All this work is carried on under the general plan furnished by Mr. Simonds, so that as far as possible expenditures in the department of roads and grounds shall be permanent improvements.

#### THE COLLEGE OF LAW.

In the College of Law there has been marked progress in a number of directions, as shown by the report of the dean. The faculty of the College of Law has been strengthened. The practice work has been placed under the charge of Professor R. M. Bashford, who gives a course in this subject running thru two years, thus placing this work upon satisfactory footing.

In consequence of the increase in the faculty it has been possible to increase the number of subjects offered so that there is more liberty in the choice of subjects and also an opportunity for students capable of carrying the work to take more than the minimum amount required for graduation.

The entrance requirements for admission to the College of Law have been increased so that they are now the equivalent to the end of the first year of the College of Letters and Science. This increase in the admission requirements has already greatly improved the quality of students, with the result that the pace of work has been accelerated. It is the purpose in the year 1907-8 to raise still further the entrance requirements so that they shall be the equivalent of two years of the College of Letters and Science. When this is accomplished it is believed that we shall have reached the correct standard for entrance to the college. Certain universities of the country require the A. B. degree or its equivalent for admission to their colleges of law. As yet we are not convinced that standards as high as this are desirable.

In consequence of the increased entrance requirements there has been a slight falling off in attendance, but it is believed that this is temporary, for a considerable number of students who came here in the autumn of 1905 to enter the College of Law, finding that their preparation was inadequate, entered the College of Letters and Science in order to be able to meet the entrance requirements and later enter the College of Law.

During the biennial period progress has been made in the closer correlation of the work of the College of Law and of the College of Letters and Science. Still more remains to be done in this direction, especially toward closer correlation with the work of the departments of political economy and political science. This is essential since public law is a subject which is desired both by the students in the College of Letters and Science and in the College of law. This problem will be taken up, it is expected, during the coming year.

During the year 1905-6 much progress has been made in rounding out the library which has been heretofore defective in many particulars. During the coming year it is planned to make further purchase of books and thus put the library in thoroly good condition to meet all reasonable needs of the students.

The most pressing need of the College of Law is for additional space to provide a reading room for the students, for the enlargement of the library, and for an additional lecture room made necessary by the increase in the number of courses. It will be possible to meet these needs next year when the regents' office is moved to the Porter house. At that time the architect's office will be moved from the second floor of the Law Building to the front room on the first floor, now occupied by the regents. This adjustment will give the room now occupied by the architect for an extension of the library. It will give an additional lecture room on the first floor. The basement room now used as a store room for the regents' office can be fitted up as an excellent reading room. When these changes are made the College of Law will have as good quarters as any department of the University.

#### REPORT OF VISITING COMMITTEE FOR 1904-5.

As shown by the foregoing, the increased appropriations have

enabled the regents during the fiscal year 1905-6 to follow various suggestions urged by the Board of Visitors in their report of 1904-5, and found as an accompanying part of this biennial report. The additional class rooms suggested by the committee on modern languages for the department of German have been provided in North Hall. The committee on pharmacy reported that that course had inadequate accommodations in North Hall. During the year this course has been provided with excellent quarters in the new Chemical Laboratory. As recommended by the committee on physics a modern liquid air apparatus has been installed in this department and additional appropriation has been made for apparatus. As recommended by the committee on the College of Mechanics and Engineering a course in chemical engineering has been offered, the work of this course finding accommodations in the old Chemical Building, as already stated, and the Hydraulic Laboratory recommended has been constructed. The urgent demands of the committee on the College of Law have been met. The faculty has been strengthened by the addition of one full professorship. A practice court strongly recommended by the committee has been installed. Finally, the library of the college, declared to be wholly inadequate by the committee, has been greatly enlarged. Certain other recommendations of the visiting committees which we have as yet been unable to comply with, we hope to follow as soon as practicable. Thus the recommendation of the visiting committee with reference to the ventilation of Science Hall has not yet been carried out, but this is to be done during the coming summer, so that the building will be satisfactorily ventilated for the coming college year.

#### ADDITIONAL DEPARTMENTS AND PROFESSORS FOR 1906-7.

##### *Physiology and Physiological Chemistry.*

Provision has been made for instruction in the additional subjects of physiology and physiological chemistry in 1906-7. These subjects were mentioned before the committees of the legislature as being the next steps in the provision of the scientific work preparatory to medicine. Professor Joseph Erlanger of Johns Hopkins University has been elected to the chair of physiology. Physiological chemistry has also been provided

for. This work is to be taken up by Assistant Professor Harold C. Bradley from Yale. Physiology and physiological chemistry will be furnished quarters in the old Chemical Building. Necessary apparatus has been purchased and the work will be open for the students in the autumn of 1907.

### *Sociology.*

Heretofore sociology has been given in the University only by a lecturer who has been here only one semester. In adjacent universities this department is a very important one. To fill the chair of sociology Professor Edward A. Ross of the University of Nebraska has been called.

### *Other Departments Strengthened.*

In the statement before the committee of the legislature, it was said that the great growth in the department of history required another professor in this department. To fill this place Professor A. L. P. Dennis of the University of Chicago has been called and he will be here ready for work the coming year.

Next year the College of Law will be strengthened by the addition of Professor Walter W. Cook who comes here from the University of Missouri.

In the department of mathematics Professor E. B. Van Vleck of Wesleyan will take the place of Professor C. A. Van Velzer, resigned, and in railway engineering Professor W. D. Pence of Purdue will take the place of W. D. Taylor, resigned.

### THE ADAMS ACT FUND.

Thru the enthusiasm, courage, and persistency of Congressman H. C. Adams, a bill has passed Congress providing an additional appropriation for research in the College of Agriculture. The amount of this fund for each state the first year is \$5,000, to be increased each year by \$2,000 until it reaches the sum of \$15,000. The coming fiscal year \$7,000 will be available. A part of this money will provide for an additional professor in agricultural chemistry. To take this place Professor E. B. Hart of the New York Experiment Station at Geneva, New York, has been secured. This addition to the force in agricultural chemistry is much needed, since heretofore the members

of the department have been greatly overworked, and this is a department in which research work is of very great importance to the agricultural interests of the state.

GIFTS.

During the biennial period the University has received gifts from private sources as follows:

Under the will of Mrs. Fannie P. Lewis, of Watertown, for the endowment of the Fannie P. Lewis Scholarship Fund, the income to be paid each year to two women students, selected by the regents, .....	\$10,000
From Henry Gund, of La Crosse, for endowment of Henry Gund Fellowship in German, .....	5,000
From James J. Hill, of St. Paul, for a railway library, .....	5,000
In addition to the above there have been given for current expenditures, mainly for fellowships, scholarships, and prizes, .....	3,236
Total, .....	\$23,236

While the amount is not large as compared with the sums given to institutions mainly supported by private gifts, it has been very helpful indeed. With the exception of the James J. Hill Library, the major portion of the above amount is for the support of fellowships, scholarships, and student prizes. There is no direction in which the gifts of citizens of the state interested in the University and in the advancement of education is more appreciated than in providing for fellowships and scholarships, because the funds of the University for this purpose are far too small. It is believed that when it is appreciated that the University, altho receiving state support, has opportunities far beyond its income, private beneficence will become an increasing factor in contributing to the support of its many needs.

II. THE UNIVERSITY THE INSTRUMENT OF THE STATE.

It is usually assumed that the University exists solely for the students who are in attendance upon it. In consequence of this assumption, in various statements which have been publicly made, the entire cost of the University to the state has been divided by the number of students in attendance and thus the cost to the state of instruction per student determined.

Anyone who has reflected at all as to the real situation knows

that the University does not now, nor has it for many years, if ever, existed solely for the students. At the present time a very large fraction of the work of the University is done not for the students who are here, but for the two and one-half millions of people of the state.

If there is one feature which especially characterizes the present administration of the University it has been the emphasis of the University as the instrument of the state. To make this clear I shall briefly summarize some of the directions of expansion along this line, especially emphasizing the steps which have been taken during the three years that I have had responsibility for direction of affairs. In making this summary, I do not mean to suggest that I am mainly responsible for the various steps in thus making the University the instrument of the state. All that is meant to say is that I have done everything in my power to further this movement.

#### COLLEGE OF AGRICULTURE.

For many years the main work of the College of Agriculture was not for the students in attendance at Madison, but for the entire agricultural interests of the state. In recent years the student attendance in the College of Agriculture has rapidly increased with the result that an increasing proportion of the money granted to that college and the energy of the force has been given to student instruction.

In my report of two years ago some of the important pieces of successful investigation which have been conducted by the College of Agriculture were mentioned and it was pointed out that the direct material gain to the state which could be shown to have come from the investigative work of the college was many-fold its cost,—indeed, vastly greater than the entire cost of the University. The results of these investigations thru publications and thru letters are distributed to the farmers of the state, and as shown by Dean Henry, this work has reached vast proportions and makes a heavy draft upon the energy and time of the force of the College of Agriculture.

Aside from the investigative work done at the Station itself, the College of Agriculture has for many years carried on work in other parts of the state which is directly for the interests of

the people. Thus, the special appropriation spent by the University for the farmers' institutes has been expended in all parts of the state. During each of the two years of the biennial period the report of Mr. McKerrow shows that institutes have been held in some eighty different localities. Each year sixty thousand farmers' institute bulletins have been published and distributed to the people.

Similarly, the testing of dairy cows, the testing and approving of commercial fertilizers, and the work in nursery inspection, have been done thruout the state, and directly for the people engaged in agriculture.

#### AGRICULTURAL SUB-STATION WORK.

During the biennial period a very important step has been taken by the college to further benefit the state,—that is, investigative and demonstration work at other places than the central station at Madison.

#### *Demonstration Farms.*

Dean Henry points out in his report that south of Lake Superior is a region, the soil and climate of which are very different from those at Madison. It is therefore necessary that the agricultural problems of this region be studied in that area. One of the results of the increase in income granted by the legislature of 1905 was the location of three demonstration farms in northern Wisconsin, one near Superior, another at Iron River, and a third at Ashland. At the first of the stations to be established, that near Superior, a plat of land which had been so wet as to give a very poor growth of hay has been tile drained. The water flowed from the tiles all winter, and this spring the ground is so well drained that barley is making an excellent growth. Upon the other farms work was begun this spring. It is believed that the experimental and demonstration work on these three farms will be very important factors in the development of the agricultural interests of this part of the state.

#### *Soil Work.*

In the central part of the state are large areas of marsh and sandy soils. The methods of draining the first and the treatment

to which these soils should be subjected are matters which require very careful investigation. If these classes of land can be made fruitful they will add greatly to the fertile acreage of the state, since the total area of such lands amounts to millions of acres. Realizing the importance of this subject we have this year made arrangements for the use of three plats of land, one at Phillips and one at Marinette located on marsh soils, and one at Sparta located on sandy soil. Also we have a cooperative field at Mather in the Wisconsin River Valley.

It is the purpose to study the marsh soils, first, with reference to the degree of drainage necessary, second, with reference to the fertilizers required by them, and third, to determine the crops and methods of management best suited to these soils. Upon the sandy soils it is the purpose, first, to find practical methods of developing a good supply of humus, second, to determine the value of various fertilizers, including peat as a substitute for manure, and third, to determine the method of cultivation and rotation which will be most effective to prevent the blowing of the sand.

It is confidently expected that these lines of study will result in a very great increase in farm values in the areas where there are marsh, swamp, and sandy soils, altho the investigation is a difficult one which will require a number of years, certainly five, possibly ten, before the problems are worked out, and the methods ascertained for making these lands as highly productive as they should be.

#### *Fruit Stations.*

In the raising of fruit, differences in latitude, in elevation, in humidity, are all of the highest importance. It therefore seemed advisable that experimental orchards should be begun in different parts of the state in order to ascertain the types of fruit which are adapted to the various local conditions. This has led in the present year to arrangements for carrying on experimental work upon five acre tracts at Madeline Island, at Bayfield, and at Superior. Very favorable contracts have been entered into for a period of fifteen years involving no cost to the University except for trees and freight charges. The owners are to cultivate, prune, and spray under the direction of the Experiment Station. The University reserves the right to take all fruit

necessary for experimental purposes. It is hoped to ascertain what fruits are adapted to the exceptional Lake Superior climate and so assist these northern counties in the growth of fruit which if even moderately successful is a great comfort to the farmer.

In addition to this work experiments are being made with reference to strawberries at Iron River. Since strawberries ripen in this district nearly a month later than in southern Wisconsin, if this fruit can be raised on a commercial scale in northern Wisconsin, the product will come on the market at the time when the prices are the highest, and therefore with great profit to the raiser.

#### *Potato Work.*

In addition to carrying on investigative work on leased areas a considerable amount of work has been done upon lands which have not been leased, but which are temporarily placed at the disposal of the college. Along this line is the demonstration work upon potato blight by the Bordeaux mixture, which has been carried on in Waupaca and Dunn counties with great success. As a result of spraying with a combination of the Bordeaux mixture with Paris green devised by the Station it was found that the yield of potatoes was increased from twenty to twenty-five per cent. Thus it has been shown already that the increased production on account of the eradication of this blight by the use of the mixture may amount to hundreds of thousands of dollars a year to each of these counties. It is planned to continue this work the present year in Columbia, Portage, and Burnett counties and in the future the work will be extended to other counties where the potato is a principal crop.

#### *Cranberry and Tobacco Work.*

Beginning the last year of the previous biennial period, there has been carried on investigative work upon tobacco and cranberries. The work upon tobacco has been upon the securing, testing, and distribution of seeds of the qualities best adapted to Wisconsin; experiments upon commercial fertilizers for tobacco in Rock, Columbia, and Crawford counties; experiments upon cover crops to supply humus and nitrogen; the advisability of

raising in Wisconsin shade grown Sumatra tobacco; the producing of new varieties of tobacco adapted to Wisconsin; and handling, curing, and fermenting the crop. Already several hundred pounds of seeds have been distributed. Good results have been produced by mixing commercial fertilizer and barnyard manure. It has been shown that between the crops vetch will produce a thick mess of herbage, rich in nitrogen and humus, and progress has been made upon cross breeding.

The investigations upon cranberries have been concerned with the amelioration of the dangers from frosts.

#### *Registration of Stallions.*

Another line of work which has been taken up the present year, and which promises to be of great value to the horse industry of the state, is the registration of stallions, the purpose being to eliminate all unsound animals.

#### COLLEGE OF LETTERS AND SCIENCE.

In the College of Letters and Science there have been heretofore no available funds for research alone, and therefore the amount of work which this college has been doing directly for the people has been proportionally less than in the College of Agriculture. Notwithstanding this disadvantage, the enthusiasm of the force has been such and their ambition to increase the sum of human knowledge so great that a large amount of investigative work has been done. The work of instruction, however, in this college has been so heavy and its income so small, that it has not been possible to accomplish results at all commensurate with its opportunity. The increase of income the past two years enabled the University to secure, as has already been pointed out, the necessary apparatus and books for advanced work, and to some extent to allow more time for such work by the men best qualified to carry on research.

While a money value cannot be given the results of investigations in bacteriology, anatomy, hygiene, physics, chemistry, biology, geology, political science, political economy, history, and sociology, it is certain that investigations in these subjects are not less important to the general welfare and intellectual upbuilding of mankind than are the investigations in agriculture

or engineering, for increasing the material wealth of the state. To illustrate: It is certain that researches in bacteriology, anatomy, and hygiene, are of the utmost importance to the general health of the community. Also it is plain that the investigations in the departments of political economy, political science, history and sociology, are very useful influences in the improvements of the laws and therefore of the social and economic condition of the people.

Two subjects may be mentioned in which advance steps have recently been taken in the College of Letters and Science:

Three years since the hygienic laboratory was established at the University. The purpose of this laboratory is the examination of water supplies for sanitary purposes, the examination of material from contagious and infectious diseases, with the purpose of early checking the expansion of centers of infection and eliminating them, and the general improvement of the hygienic conditions of the state. In carrying out this purpose, examinations have been made of many water supplies, samples of blood for diagnosis of typhoid fever, throat smears for diphtheria, and other material for such diseases as rabies, anthrax, etc. During the first two years of the organization of the laboratory more than fourteen hundred examinations were made, the result being in a number of cases the early discovery of the difficulty and the prevention of the spread of the contagion. The laboratory has also assisted in the crusade against tuberculosis, etc. An example a direct service for the state is the work done at the time of the outbreak of typhoid fever in Mendota Hospital. The laboratory immediately took up the study of the conditions which led to the infection with the result that it was traced to the contamination of the lake water used for general domestic purposes, but not for drinking. The discovery of the source of the trouble permitted an early check of the disease, which otherwise might have become a serious epidemic.

In Milwaukee is one of the centers of tuberculosis infection. There has therefore been established a fellow at the Milwaukee Social Settlement with the purpose of studying the conditions of this plague spot, since it is recognized that such knowledge is essential in planning to eradicate the disease. This is the first move toward taking up work in applied sociology in the state.

It is believed that here is a great field where the University can do immeasurable good. Says H. H. Jacobs, at the head of the Settlement at Milwaukee: "What the agricultural department does for the farmers, the engineering department for manufacture, mining, and transportation, the school of commerce for business, the departments of economics and sociology should do for the great human interests involved in such questions as factory conditions, child labor, tuberculosis in its social aspects, juvenile offenders, home manufactures, housing conditions, etc."

It is my hope that there may be rapid development of work in applied economics and sociology within the state. Much can be done by the cooperation of the departments of economics and sociology at the University with other organizations. But independent work will be required also if the University does all that it ought to do for the state in these directions.

#### COLLEGE OF ENGINEERING.

Some years since it was realized that the large mechanical plant of the College of Engineering might be available during the summer for artisans and thus assist in the education of those who were not able to take regularly the course in engineering. At once the importance of this movement was recognized by the manufacturers and the Summer School for Artisans and Apprentices has been a success from the outset. No class of students who have attended at Madison have exceeded in industry the artisans who are here for the summer. They have shown themselves worthy of the efforts made in their behalf and have to the limit of their capacity taken full advantage of the opportunities afforded.

In the College of Engineering during the biennial period investigative work has been carried on especially with reference to the problems which are of importance to the people of the state. At the newly constructed Hydraulic Laboratory has been taken up the problem of raising large volumes of water a moderate distance by centrifugal pumps. This investigation is an important one, since the raising of large volumes of water is a very important factor in the cost of the production of lead and zinc in the southwestern part of the state, and because many of the smaller towns use underground water for domestic purposes.

In the department of electrometallurgy Professor Burgess has made progress upon the separation and reduction of zinc ores, upon boiler corrosion, and upon the properties of pure iron. The latter work is supported by funds from the Carnegie Institution.

In the testing laboratory work upon reinforced concrete has been carried on, largely at the expense of the United States Geological Survey. Reinforced concrete provides a very cheap fireproof construction, one which promises to be as cheap or cheaper than the milled construction commonly used in the past in large buildings. Thus this work has a direct bearing upon the constructional work of the state. Already the University has profited from these investigations, and it is proposed to construct the Farm Engineering Building and the Agronomy Building in reinforced concrete; since competitive bids have shown that this can be done and the University have fireproof structures almost as cheaply as the combustible buildings built by milled construction.

#### WIDESPREAD INFLUENCE OF RESEARCH.

While the investigations of the Colleges of Agriculture, Letters and Science, and Engineering, as shown by the above, are largely directed to the interests of the state, it should be remarked that the results of these investigations are not limited in their usefulness to this state, but many of them are of equal value to other states and nations. This may be illustrated by the Babcock milk test which is used not only in this state, but in every civilized country in the world. It is the peculiar glory of the investigative work of the University that while it advances the state of Wisconsin, it is also a contribution of this state to the advancement of the world.

While at the University the research problems of the state have been taken up and will continue to be handled as they arise, it is not the aim to restrict the investigations to problems which can be shown to have a direct practical importance to the state. In my inaugural address I pointed out that investigation and research of all kinds are sure sooner or later to have a value to man in some way, material, intellectual, or spiritual.

*The Writing of Books.*

The results of the investigations in the various colleges have been largely incorporated into books so that they might be known not only to the people of this state, but to the entire world. Upon the point that the professors are writing books to the detriment of their instructional work there has been misconception in certain quarters.

In general it may be said that those men of the instructional force of the University who have shown intellectual productivity by the publication of books and papers are men who are most valuable to the University as instructors. They are the men who quickly learn of any new achievement in the advancement of knowledge, and they are the men who enliven the knowledge of the past ages by bringing it into relations with present problems and needs. A man who has been fruitful in publishing works of a high order, either in the form of textbooks or research papers, is invariably a man of high value to the institution, one that the University desires to retain. Without fail he is one who brings to his teaching that spark of enthusiasm which is vital for the most successful instruction. A professor who merely acquires and imparts to his students knowledge that others have gained can never arouse in his students a love for study, raise them to the lofty pitch of enthusiasm, and inspire them with the hope that they themselves may become instruments in the advancement of knowledge, as do men who are productive scholars.

These general statements are fully justified by a consideration of the departments within the University. Wherever there is a department in which the spirit of research is pervasive, there is a department in which the instruction is in a satisfactory condition. Almost without exception such departments are thronged with students. This is true of the elementary as well as of the advanced classes. Indeed if a department is successful in producing many advanced students it must have a large number of elementary students from which to recruit advanced men. The departments of the University which are instructing departments only are the ones which are weak and need stimulus.

Research in the University and publication of books do not damage the instructional work. Upon the contrary they are of

immeasurable advantage in raising its grade and increasing its efficiency.

#### UNIVERSITY EXTENSION.

University extension work was first organized in the University in 1891. For a number of years the duties of the secretary of the university extension were assigned to the man who also had charge of high school inspection. The work of the two together was too much for one man to handle, and since it was a necessity to keep up the work of the high school inspection, the work of the university extension has not been emphasized. Another reason why this work has not been pushed has been lack of funds. With the increased income of the University this reason no longer holds. Therefore in 1906 E. W. Pahlow was appointed secretary for this work to study the problem and organize the movement. The coming year the department of the university extension will be regularly organized, with H. E. Legler as secretary, F. A. Hutchins as field organizer, and W. H. Lighty in charge of the correspondence work.

It is the purpose of the reorganized extension department not only to carry on extension lectures as heretofore, but to greatly extend work so as to assist all the groups of people that wish to undertake work of a serious character of whatever kind in any part of the state. To this end the work of study clubs will be organized and directed. Clubs for teachers will be assisted. The department of business administration will cooperate with associations of business men, bookkeepers, etc. Debating societies will be assisted. Speakers will be furnished for teachers' conventions and institutes, and for commencement addresses. At the outset this work will be done largely by the university extension force and by the faculty of the University at Madison, but as the work expands, it is the expectation to recognize as members of the university extension force men capable of giving instruction of university grade who do not reside in Madison. It is believed that in the future extension work conducted by non-residents will become of considerable importance.

In other parts of the state are already some men capable of conducting instructional work of University grade. One group of such men is in the normal schools. As the number of men who

have done graduate work in the University of Wisconsin and other institutions increases in the state, this class of men will be gradually augmented. Where in addition to the men of the kind indicated there are adequate library and laboratory facilities, it will be possible to have a certain amount of some kinds of work of university grade conducted at other places than Madison.

Another very important line of the extension division will be the correspondence branch. There are tens of thousands of students in the state of Wisconsin who are already taking correspondence work in private correspondence schools, probably more than thirty thousand, and they are paying for this work outside of the state more than three-quarters of a million dollars per annum. These figures show how large is the demand in the state for this correspondence work.

A large number of departments in the University are planning to offer correspondence courses. Thus the correspondence work offered will have the widest range, including language and literature, political economy, political science, history, sociology, mathematics, the pure sciences, and the applied sciences. It is not only expected to offer a large number of subjects, but to group the subjects into regular courses so that any individual may follow a systematic line of study during several years. There will be courses for locomotive engineers, for mechanical draftsmen, for shop foremen, etc., etc. Thus it is planned to lay out broad courses adapted to the individual applicant or for groups of applicants.

The University with its strongly organized departments, with its summer session in letters and science, and summer school for artisans, is in a very strong position to do correspondence work of the highest efficiency.

It is believed that educational work of high grade can be carried on in many departments by correspondence. Indeed this has been demonstrated by the experience of correspondence schools. It will be a very great advantage indeed to the people of the state to be able to avail themselves of the guidance and direction of the well organized university departments in their correspondence work.

The faculty has adopted a plan thru which the various lines of extension work of university grade may receive university

credit. The amount of this credit is limited to one-half of the amount required for a degree and does not become available until the student has spent one year of residence in the University and received credit for the year, and has thus shown by actual achievements that he is capable of doing university work.

*University Extension at Home.*

Too much cannot be said as to the importance of university extension under which the University goes out to the people. It has also seemed to us that if we could get the farmers of the state who are interested in serious study to come to the College of Agriculture we would have university extension at home, that is, under the most favorable circumstances. Therefore three years ago the two weeks' course for farmers was started. The aim of this is to get representative farmers from all parts of the state to come to the University to hear its professors and take advantage of its facilities. It was believed that a series of lectures, addresses, and demonstrations could be given covering the subjects in which the farmers are most interested, that would be most helpful and beneficial to them. It was believed that if the farmer could be brought to the University where there are men, laboratories, and other facilities, more could be accomplished than could be done for him by attending many agricultural institutes away from the University. These were the dominant ideas upon which the mid-winter farmers' course was established. The first year of this course there were here about one hundred and seventy-five farmers from all parts of the state, from twenty-five to seventy or more years of age, who took the lectures and saw the demonstrations upon a wide range of subjects in agriculture. The second year the number considerably exceeded two hundred and twenty-five, and the third year over four hundred were in attendance.

The regular work for this course is done by the instructional force of the College of Agriculture, but in addition to this there are evening lectures by men in other departments of the University. During the time this extension work is running at the University it cuts into the efficiency of the regular work of the professors, but it is believed that a vastly greater service to the state is accomplished by this work than could be done if the profes-

sors confined themselves thruout the year to their regular routine. The farmers' course is justified, if the fundamental conception be correct, that the University is to be managed in such a way as to be of greatest possible service to the state.

University extension at home has not been confined to the College of Agriculture. Parallel with the farmers' course is the housekeepers' conference which attempts to give the women assistance in the performance of their household duties. This course has been given both years of the biennial period. While originally planned for the wives and daughters of those in attendance upon the farmers' course, experience has shown that the housekeepers' conference is of interest to and should benefit other women of the state. It is the purpose hereafter to considerably enlarge the scope of this work so that it shall be equally available to women of all classes.

It has been thought by some men that work of the kind done in the farmers' course and housekeepers' conference is below the dignity of a University. This is a misconception. The names of the men and women who attend these short courses do not go into the catalog; no degrees or certificates are given to them. Thus the published lists of students are in no way padded, and the standards of the University are not lowered. A state university should not be above meeting all those needs of the people for which it is the best available instrumentality.

#### COOPERATION WITH THE STATE DEPARTMENT OF EDUCATION.

Another line in which we have attempted to assist the state is by the cooperation of the department of education of the University with the office of the state superintendent. The professors of this department and other professors have attended and taken part in the various educational meetings of the state. Especially Professor Elliott has attended county meetings of the school boards with reference to assisting in the upbuilding and improving of the rural schools. The department is taking part in the campaign for the consolidation of these schools, a change agreed upon by all as necessary if these schools are to keep pace with the rural schools in states where consolidation has been inaugurated. It is the aim to make the department of education as influential a factor in the development of the primary

and secondary schools of the state as it is within the University. To do this will require the force to be more numerously manned than at present. But it is clear that the duty of the department of education is only half fulfilled if it is confined to the instruction of the students at the University.

SERVICE OF UNIVERSITY FORCE ON STATE BOARDS.

Another way in which the University assists the state is by the instructional force serving upon the boards of the various state commissions. The dean of the College of Letters and Science is the director of the state Geological Survey, and is a member of the Fish and Forestry Commissions. The dean of the College of Agriculture is a member of the Forestry Commission. The College of Engineering is the custodian of the public standard weights and measures, and the dean is the official sealer of weights and measures. The professor of history is a member of a commission for the purpose of devising a plan to provide for the preparation of the history of the Wisconsin soldiers in the Civil War. The professor of bacteriology is a member of the state Live Stock Sanitary Board. The professor of railway engineering has been an aid to the Tax Commission and the Railroad Commission, his particular duty being to make a valuation of the railroads of the state and report upon their physical conditions from time to time. A professor of political science is chairman of the Civil Service Commission. A professor in the department of political economy has been carrying on investigations for the Tax Commission for the purpose of ascertaining the true value of the real estate of the commonwealth, and upon mortgages and mortgage taxation of the state of Wisconsin and in various counties of surrounding states. The president of the University is president of the Geological Survey Commission, president of the Forestry Commission, and a member of the Free Library Commission.

It is thus seen that a considerable number of the members of the University are giving expert assistance to the state in various ways. Without exception the service rendered has been satisfactory. There is no doubt that this service has cost the state much less than it would under any other arrangement. It is also a source of gratification to the members of the instructional

force that they have been able to supplement their service in the University by taking part in the practical affairs of the state.

#### DAIRY AND FOOD COMMISSION.

The laboratory of the Dairy and Food Commission is located in the University buildings and accommodations, including heat, light, and gas, are furnished by the University, thus giving increased efficiency and economy so far as the state is concerned, for it is plain that a laboratory of the kind needed by this commission can be more cheaply located in one of the scientific buildings of the University than to have constructed for it an entirely separate laboratory.

#### COST OF INSTRUCTION PER STUDENT.

In closing this part of the subject attention should be called to the fact that the cost of research at the University and the cost of extension work should not be charged to the expenses of instructing the students at the University. All of the investigative work of the College of Agriculture at the central station and at various places within the state, as well as the cost of all the investigation of the College of Letters and Science and Engineering which is done with reference to state problems, all of the extension work, both at Madison and elsewhere, as has been said, are done directly for the entire people of the state. The cost of this work from state funds should be subtracted from the appropriation of the state for current expenses as well as the amount of money which has been used from this income for permanent investments, such as land, in calculating the actual cost to the state of instruction per student at Madison. So interwoven are investigation and instruction that it is difficult to estimate accurately the cost of the former, but even if the charges for these purposes be made upon the most conservative basis, a calculation shows that the cost of instruction per student to the state is as moderate as at any state university in which efficient instruction is maintained.

#### III. MEDICAL STUDIES AT THE UNIVERSITY.

The time has now come for the next step in the development of the University. At the present time there is a College of Letters

and Sciences, a College of Law, a College of Agriculture, and a College of Engineering, but no provision has as yet been made at the University for the teaching of medicine. This seems strange in view of the fact that at the present time in this country the following state universities have complete medical departments: Alabama, Arkansas, California, Colorado, Georgia, Illinois, Indiana, Iowa, Kansas, Kentucky, Michigan, Minnesota, Missouri, Nebraska, North Carolina, Oregon, South Carolina, Tennessee, Texas, Vermont, and Virginia. The following give the first two years of medicine: Mississippi, North Dakota, Oklahoma, Utah, and West Virginia.

It is to be noticed that in the list giving complete medical courses are all of the states surrounding Wisconsin, viz., Michigan, Illinois, Iowa, and Minnesota, and that in this list is included almost every important state university in the country with the exception of our own.

The omission of medicine from the colleges at the University is all the more strange since in the act of the legislature in 1848 providing for the creation of the University of Wisconsin it was stated that there were to be four departments:

- “1. The department of Science, Literature, and Arts,
2. The department of Law,
3. The department of Medicine,
4. The department of the Theory and Practice of Elementary Instruction.”

In these early days there was a strong demand for a medical school at the University and in response to it in 1855, the regents established a department of medicine on paper which was to have eight chairs of instruction. The catalogs of 1855-6 and 1856-7 actually give the names of eight physicians who constituted the faculty of the department of medicine, but as there was no money for this college its only existence was a purpose.

In 1866 when the University was reorganized the legislative act corresponded to the existing facts, the University comprising the following departments:

- “1. The College of Arts,
2. The College of Letters,
3. Such professional and other colleges as from time to time may be added thereto or connected therewith.”

Thus the University consisted at this time of what is now the College of Letters and Science with no professional school. Since that time there have been added the following professional schools: Agriculture as a department in 1868; Law as a department in 1868; and Engineering as a department in 1868. In 1889 these departments were organized as colleges in an act which gives the organization of the University as:

- “1. College of Letters and Science,
2. College of Mechanics and Engineering,
3. College of Agriculture,
4. College of Law,
5. Such other colleges, schools, or departments as now are or may from time to time be added thereto or connected therewith.”

At the present time the College of Letters and Science includes all liberal subjects, as well as a school of music, a course in commerce, a course in pharmacy, and a course in studies preparatory to medicine.

The legislature of 1905 in making an appropriation to provide for adequate support for the existing schools and colleges added the provision that “No new school or college shall be established unless authorized by the legislature,” thus making it clear that the purpose of the increased income was to give proper support to existing schools and colleges and also making it necessary for the University authorities to apply to the legislature whenever any new school or college is added to the University. It is fortunate that this provision was added, since it prevents any possible misunderstanding upon both of these points.

Whatever have been the causes which have led to the present situation, they have not been unfortunate, for by concentration of the available resources of the University upon existing departments they have been made strong and efficient. The College of Letters and Science is admitted to be strong. The College of Agriculture, the College of Engineering, and the College of Law all have high rank. They have provided adequately for applied education in these subjects, and in consequence of the work of the College of Agriculture and the College of Engineering, the material wealth of the state has been enormously increased.

After these lines of work have been provided for there have been no funds to provide for medicine and this appears to have been the fundamental reason why the provision of the early law which gave the regents authority to establish a college of medicine was not taken advantage of. However, the state is now so wealthy, and this wealth so largely augmented each year by the work of the University that medicine ought not longer to be neglected.

The state has provided for the intellectual training of her sons and daughters. She has provided training which will lead them to follow successfully various vocations. Thru the College of Agriculture much has been done with reference to the improvement of breeds of animals and thru this college and the state Live Stock Sanitary Board much has been done to eradicate disease among animals, but until three years since the state had done almost nothing for the prevention of disease in man and its cure. The legislature of 1903 provided for a hygienic laboratory at the University, already spoken of, and the legislature of 1905 provided for a tuberculosis hospital. These two acts show that there is a growing sentiment in the state that we are hereafter to give consideration to the health and therefore to the happiness of the human beings of the state as well as to the health of the cattle and horses and hogs.

In this matter it is my belief that the University has a great function to perform,—a function which must be undertaken if the ideal is carried out of making the University the instrument of the state in the broadest sense.

Before taking up the problem of what is proposed for Wisconsin, it is necessary to consider briefly the present organization of medical education in the better universities of the country. In this I shall follow a statement given me by Dr. Charles R. Bardeen, professor of anatomy:

“The formal education of one intending to be a physician falls into three fairly well marked divisions:

1. That of general studies;
2. That of special preparation in the basal sciences on which scientific medicine rests; and
3. That of clinical instruction.

“1. *General Studies*.—In all communities advanced in civili-

zation a preliminary education in language, mathematics, history, and science, equivalent to that furnished by a four year high school course in America is required before a student is permitted to enter upon a specialized training for medicine. During the last ten years this has been made the minimum preliminary training permitted in most of the states in this country. A similar training is required in Great Britain while in the more advanced countries on the European continent the preliminary training required is equivalent to from one to three years of a college course in addition to the high school course in America. This is true of France, Spain, and Portugal, where a bachelor's degree in letters or science is required; in Germany and Austria where one must be a graduate of a gymnasium or a realschule; in Switzerland and in Russia, where the corresponding requirements are made; in Italy where one must have spent five years in a gimnasio and three in a liceo; in Sweden, Norway, and Finland where a year of preliminary study must be taken at the university after the gymnasium is left. Holland is the only European country where no knowledge of Latin is required. In those countries where physics, chemistry, and natural history are not made a part of the medical curriculum, they are included among the studies that must be taken during the preliminary education.

“In America the more advanced medical schools require for entrance a training equivalent to from one to four years of a college course. At Columbia, Cornell, Minnesota, Missouri, and Texas, one year; at Michigan, Chicago-Rush, Indiana, George Washington University, and California, two years; at Western Reserve, three years; and at Johns Hopkins and Harvard, a college degree. Whether or not a college degree is required, there is a tendency in the better schools toward making as an essential preliminary requirement, a reading knowledge of German, French, and Latin, and a good training in chemistry, physics, and general biology. While it is improbable, and scarcely desirable that a college degree should be made an essential requirement for all entering upon special medical studies, the studies just mentioned should be required as essential to the entrance upon more special medical work. The country has a great number of medical schools, but it is in need of more schools requir-

ing high standards of entrance equivalent to from one to three years of college education.

“2. *Special Preparation in the Basal Sciences on which Medicine rests.*—These sciences include the more general and fundamental sciences of physics, chemistry, and biology, and the more specialized sciences of anatomy, physiology, physiological chemistry, pathology, bacteriology, and pharmacology, as applied to man. In some countries as for instance, in Germany, special provision is made for the study of all of these sciences in the medical curriculum. There where the medical course extends over about five years, a minimum of five semesters, two and a half years, must be spent on these subjects with the exception of bacteriology and a part of pathology which go over into the latter half of the course. When this minimum time has been spent upon these subjects the student can come up for examination upon them, and only after completing this examination is he permitted to enter upon clinical studies. In England the less specialized studies of physics, chemistry, and biology, may be taken in the philosophical department of a university or a teaching institute and for this a year's time is credited. Otherwise these studies are included among the earlier studies of a five year course along with the more specialized studies above mentioned. In France where the course extends over four years, all of the sciences above mentioned are included in the early part of the course and the same is true of Italy where the medical course lasts six years, and Sweden where the medical course lasts about eight years, and these basal sciences constitute the first three years' work.

“In the United States the standard medical course extends over four years. The work of these four years is becoming more and more sharply divided into parts, of which the first half is devoted to the basal sciences, the latter half to clinical study. In those schools where physics, chemistry, and biology are not required for entrance they must be taught in the medical course, but in the better schools where these studies are required for entrance the more specialized sciences are taught during the first two years of the medical curriculum. The sharp division between the work in the basal sciences and clinical work in the medical schools has made it possible for a number of universities

which have no facilities for clinical work to extend their biological departments so as to offer work in the specialized sciences included in the first two years of the medical curriculum. The student is then enabled to take up his clinical work at some medical school which may or may not be affiliated with the university where he has studied the basal sciences. North Carolina, West Virginia, Kansas, Nebraska, Chicago, and Cornell (at Ithaca) are among the institutions which are thus affiliated with schools offering clinical instruction, while Indiana has no such affiliations. Since the specialized sciences on which medicine is based may be taken in these and other institutions as a part of a four years college course, and the clinical work can be taken in two subsequent years, it is possible to get the A. B. and M. D. degrees in six years by studying at these institutions. This possibility has proven attractive to many students.

“3. *Clinical Work.*—The minimum amount of clinical work required for the doctor's degree in any of the more advanced countries is two years, as in America; in many it is more. In Germany it amounts to two and a half years and steps are being taken to add to this a year in special hospital training. Plans are there being made for special clinical institutes for work of this nature. In England the last of the five year course in medicine must be spent in special practical clinical work. In Sweden from three to five years must be spent in special study in dispensaries and hospitals. At the Rush Medical School plans are being laid for a special hospital year to be added at the end of the course. Nearly all of the brighter graduates of American medical schools spend at least a year after graduation in hospital study.”

Of the three groups of study outlined by Professor Bardeen as necessary for a medical education, the first group, that of general studies, is now adequately provided for in the College of Letters and Science.

Of the second group of studies, the basal sciences preparatory to medicine, physics, chemistry, biology, bacteriology, and anatomy are provided, and provision has been made for physiology and physiological chemistry for the coming fiscal year.

The development of the work in sciences preparatory to medicine led to the formation of a pre-medical course of studies near-

ly twenty-five years ago. At the time this course was established, the amount of training demanded for medical work in this country was wholly inadequate, most medical courses not exceeding two years. Since that time the medical courses in all reputable institutions have been extended to four years. At the University during this change, there has been a steady addition to and improvement of the course preparatory to medicine, with the result that at the present time we are able at the University to offer all of the foundation work of the first group of studies, preparatory to medicine, and of the second group of studies the larger part of the work of the first year.

#### PROPOSED DEVELOPMENT OF MEDICAL WORK.

The next step in medical education at the University is to incorporate as a medical college, with the expectation of giving all of the scientific work of a medical course which can best be done at a university.

When this step is taken we shall not give a medical degree for work at the University alone, but shall give the medical degree only to students who have completed their medical studies at an institution capable of providing adequate clinical facilities.

#### ADVANTAGES OF PLAN.

That the adoption of the proposed plan will be most advantageous, indeed is a necessity in case the University does what it should for the state, is shown by the following statement.

1. In the first place it is necessary that the University incorporate its medical work as a college in order that credit for the work done by the students of the University who take the pre-medical course may be granted by reputable medical colleges. A number of states require that those who practice medicine shall have four years work in a medical college. Among these are the neighboring states of Iowa and Minnesota. In consequence of this requirement, and for other reasons, reputable medical colleges have recently declined to accredit students to advanced standing except from institutions having medical schools. In consequence of this action by the chief

medical schools of the country, it is no longer possible for the students who have taken the pre-medical course at the University to gain time credit for the work which they have done in medical studies. Unless the University incorporates a medical college the result will be that Wisconsin boys who intend to take medicine will be driven to other institutions than the University for their entire medical course, notwithstanding the fact that the facilities here for the basal sciences preparatory to medicine and the work in such subjects as anatomy, histology, bacteriology, etc., can be as well done at the University as at any place in the country.

In simple justice therefore to the young men of Wisconsin who wish to gain as much of their medical course as possible under the most favorable circumstances, it is necessary to incorporate a medical school as a part of the University.

2. The work of the first two years, or somewhat more, of the medical course, can be better done at a university than at a school devoted to medicine alone. Upon this point there seems to be no difference of opinion among the men qualified to judge as to the best possible course for students preparing for the practice of medicine. Letters have been written to a number of prominent men connected with Johns Hopkins, and to a number of our own alumni who formerly took the pre-medical course and are highly successful in the practice of medicine, and without exception these men give the same opinion upon this point. Some of their statements may be quoted:

Dr. William H. Welsh, professor of pathology at Johns Hopkins University, states: "Medical science is to-day one of the most rewarding subjects in the province of universities, and it needs the ideals and environment of a great university for its best development. The advantages of such a union are mutual, for a successful medical department adds greatly to the usefulness and renown of a university, while it receives inspiration and stimulus from the latter.

"The University of Wisconsin is particularly strong in the studies fundamental to medicine.—chemistry, physics, biology, and many of the best students in the Johns Hopkins Medical School have received their preliminary training there.

"The University has established departments of anatomy and

of physiology, the former of demonstrated usefulness, and the latter of great promise. The next step would then seem to be a department of pathology, and I see no reason why such a department, with especial emphasis upon pathological histology and experimental pathology, should not be most successful and a great service to the medical profession of the state and to the general public. Bacteriology is already well represented at the University, and problems of public hygiene have been investigated successfully here.

“I am not sufficiently informed concerning local conditions to express an opinion concerning the desirability of attempting to provide for clinical teaching at Madison. I have no doubt, however, that all of the purely scientific branches can be most successfully developed in immediate association with the University.

“This country greatly needs laboratories under university control for the study and teaching and investigation of anatomy, physiology, including physiological chemistry, pharmacology, pathology, bacteriology, and hygiene.

“In most of our medical schools, particularly the independent ones, these subjects are inadequately taught and promoted.

“If it were possible for such a university as that of Wisconsin to maintain good laboratories in these departments of medicine this would be a great service to medical science, to the country, to the state, and I doubt whether an equal expenditure of money would reap richer returns in any other direction than in this. The benefits would be not only to science and the practice of medicine, but to the welfare of the people.”

In another place Professor Welsh states that “well organized medical departments should include six laboratories.—anatomy, physiology, physiological chemistry, pathology, pharmacology, and hygiene.”

V. C. Vaughan, dean of the department of medicine at Michigan, says: “Every state university should foster the fundamental sciences whose contributions are utilized in the prevention and cure of disease.”

Dr. John M. Dodson, one of the early pre-medical graduates of Wisconsin, now dean of the Rush Medical College, says: “Many of those who are interested in the advance of medical

education in this country believe that the greatest hope for the future lies in placing these fundamental medical branches, anatomy, physiology, etc., in the university and on the same footing as other general sciences. It is only in such an atmosphere and immediate contact with physics, chemistry, and the biological sciences, that the most sure and abundant development of anatomy, physiology, bacteriology, and the other sciences immediately fundamental to medicine can be assured."

Dr. A. J. Ochsner, one of the chief surgeons of Chicago, another of our pre-medical graduates, states: "It seems as if the University of Wisconsin were ideally located to give a medical student the best possible opportunities for completing the first and second years of a four years medical course, or the first four years of a combined six years collegiate and medical course. . . . Anatomy, physiology, biology, embryology, histology, surgical anatomy, pathological anatomy and histology, bacteriology, toxicology, physiological chemistry, and urine analysis, can all be taught at Madison, at least as well as at any school in the country."

Dr. H. B. Favill, another of our pre-medical graduates and one of the leading physicians of Chicago, says: "I have become convinced that it is desirable to institute a medical course in the University and for the following reasons:

"First. The foundations of medicine are and will continue to be purely scientific studies requiring larger culture and larger facilities than the technical medical schools are liable to possess.

"Second. The universities of the grade of Wisconsin have ready at hand and in close relation to eligible students, the advantages in question.

"Third. With the enormous increase in necessary study the problems of economizing the time of students by merging their literary and professional studies in some practical way can better be worked out by the universities than in any other manner. I am therefore anxious that the University of Wisconsin should ardently undertake medical education. . . . It seems to me therefore that you can without hazard or danger of serious mistake, plan three years of medical study and with

the certainty of giving a broader and deeper foundation than most of the schools in the world. Incidentally, it may gratify you to know that the University of Wisconsin has sent not only to us in Chicago, but everywhere that they have gone, the very best class of students on the whole which is to be found."

Perhaps the strongest statement in reference to the proper development of medical education which has come to my attention is that published by Dr. Lewellys F. Barker, formerly professor of anatomy at the University of Chicago, now of Johns Hopkins University. From his paper, which has greater force because it was written not with reference to the University of Wisconsin, but with reference to medical education in general, I make the following quotations:

"As soon as physics, chemistry, and biology began to make the tremendous strides forward which characterized the last century, they were taken out of the medical schools and incorporated in the philosophical faculties of the universities with the happy results familiar to all. . . .

"Anatomy, physiology, and pathology have followed physics, chemistry, and biology, into the university. Large and well equipped laboratories and libraries are devoted to these subjects. . . .

"In the best semi-university schools the departments of the first two years are now on a true university basis; not so the departments concerned with the teaching of the last two years of the course. There is no reason why internal medicine, surgery, obstetrics, and certain other branches, should not be similarly elevated; on the contrary, for the sake of people who need help in time of illness, for the sake of the medical profession, on account of our universities, and for the prestige of the science of the nation, there is every reason for that elevation. And this would speedily be brought about if universities and their benefactors fully understood the situation.

"How can a semi-university school be transformed into a real university school? By putting *all the departments*, at any rate, all the principal departments, on a true university basis. . . .

"My own opinion is that it would be a step towards evolution to a higher stage if the work of the present third year were

taught by professors and instructors who give their whole time to university hospitals. . . .

“The great discoveries which have been made in practical medicine recently have resulted largely from the introduction of the experimental method. There is no doubt in my mind that it is to experimental medicine that we must look for advances of the future. Had it not been for Pasteur’s brilliant discoveries, and the ingenious methods devised by Koch, we should not so soon have had the evolution of Lister’s work into the aseptic surgery of to-day, nor would a disease like diphtheria, formerly so fatal, have been robbed of its terrors, thru the introduction of an antitoxine. . . .

“In research hospitals university men could give their patients the benefits which have accrued from medical science in all countries; hypothetical remedial measures would first be proven to be of undoubted value by animal experimentation before they were applied to the treatment of diseased human beings.

“The sooner something is done to inhibit the reckless experimentation now carried out on human beings by ignorant practitioners at the instigation of the manufacturing chemists, the better for all concerned. Carefully planned, judicious animal experimentation, controlled by medical scientists of rigorous training and high ideals, offers, in the near future, the greatest hope for the prevention of suffering and the curing of disease in both animals and man.”

The foregoing statements render it perfectly clear that the first two years of medical work is of a strictly university character, which should be studied with the university spirit at a university, and in the opinion of Dr. Favill and Professor Barker, the same is true of the third year of the medical course. It is plain that at Wisconsin we should at once make provision for the first two years of medical work. This will involve in addition to departments which exist, or for which we have arranged, the departments of pharmacology, hygiene, and pathology.

It is perhaps not necessary to amplify upon the necessity for introducing the first two into the curriculum, but it will be well to emphasize the advantages which will follow from the study of pathology at the University.

*Human and Experimental Pathology.*

It is clear that the anatomical study of diseased tissues of all kinds from cancer to catarrh, the study of the transformations thru which the diseased tissues go in order to discover the laws under which such pathological alterations take place, and thus to discover remedies for them, are studies of immeasurable importance to mankind. A pathological department would cooperate with the State Board of Health to immense advantage in increasing the effectiveness of their work. In order to carry on studies in human pathology most effectively it is necessary that this department include experimental pathology, animals serving for such experimental work. For work in pathology the situation at the University of Wisconsin is very fortunate, since it has an agricultural college.

While the work in pathology will be of extreme importance to man, the results which are obtained will be equally valuable with reference to the animal husbandry of the state. A pathological laboratory would cooperate with the Live Stock Sanitary Board in the elimination of animal diseases within the state. It is certain that at a university where there is an agricultural department is the best location for a department of pathology on a broad basis including both animals and man.

*The Preparation of Serums.*

In connection with the department of animal pathology, serums, antitoxins, etc., should be prepared or tested. The preparation or testing of such materials is being asked by the physicians of the state. At the present time the health officers and physicians can only obtain these materials from commercial manufacturers. They report that they frequently fear to use commercial serums because of their uncertain quality, and in many cases the unsatisfactory results which are obtained are attributed either to impure serums or to their deterioration. The manufacture of serums for state use is already done in some eastern states, notably in Massachusetts and New York, and in Germany all antitoxins and serums are examined and stamped by the government laboratory. Dr. A. J. Puls points out that in our state there is no supervision of the commercial serums.

This should be a function of the laboratory of experimental pathology.

Thus it will be the purpose of the pathological department not only to study all diseases but to develop methods for their control and elimination; in short, to do everything possible for the advancement of preventive medicine.

#### *Plant Pathology.*

At the same time animal pathology is provided for, the University should also arrange for the teaching and study of plant pathology. This again is a study that can be taken up with special advantages by a university where there is an agricultural college. It has already been pointed out that the agricultural college is doing certain lines of work in the cure of plant diseases. However, the whole subject of the diseases of plants should be taken up in the department of botany in a scientific way with reference to plant infection of all kinds. The life history of the fungi, etc., which are the causes of plant diseases should be studied. At the present time in the University a small amount of work is done upon plant pathology by Professor Harper and Professor Allen, but the work which they have to do on normal plants is so great that plant pathology cannot be taken up by them in a broad way. While progress has been made upon the control of grain smut, potato rot, mildew of the grape, many other diseases and pests upon field crops are still entirely uncontrolled and uncontrollable by any means as yet discovered. Among such are the grain rusts, the losses from which are estimated by Galloway to exceed all other losses by diseases in field crops. The intensive cultivation of truck crops under glass is constantly leading to new types of diseases and increased virulence of well known and hitherto harmless parasites. These changed conditions should be studied in order to find some counteracting method of treatment. Another reason for taking up the study of plant pathology at the present time in this state is that a movement has just been begun to reforest large areas in northern Wisconsin. According to Professor Harper, the resetting of forests on a large scale results in the development of diseases of seedings

which lead to great losses and discouragement if they are not controlled.

It is certain that if plant pathology were strongly provided for in the University and the scientific study of the diseases of plants could be taken up especially with reference to those which obtain in Wisconsin and cause damage to our agricultural and forest interests, that the returns from such investigations would within a short time repay many fold the cost. The department would do for the state for the prevention of plant disease what the department of animal pathology would do for the prevention of man and animal diseases.

Considering the proposed plan to establish a department of pathology upon a broad basis merely from the point of view of the material wealth of the state without reference to the health of its human beings the necessary outlay will be justified many fold as an investment.

#### *Training of Physicians.*

After the necessary additional departments are introduced, the students of the University who wish to become physicians may complete the first two years of their course under the most favorable circumstances, by taking the courses preparatory to clinical medicine. Much of this work will be a part of the requirements for the A. B., or B. S., degree. Upon completing the first two years of medical work students may transfer to medical colleges which are acceptable to the University, and after pursuing their clinical studies in such colleges may receive the degree of M. D. from the University of Wisconsin. This arrangement has the sanction of the Universities of Oxford and Cambridge, where exactly this practice obtains. The strictly scientific work of the medical course which can best be done at a university is done in these institutions and the men then go up to London or to some other place where clinical facilities are available to complete their medical training.

#### *Course in Hygiene for Health Officers.*

When the departments mentioned are established in the University it will be possible to give a course in hygiene for the training of health officers. At the present time no university in

the country gives such a course. The consequence is that health officers are in general inadequately trained, poorly paid, and often extremely inefficient. If a systematic course for health officers were given and the men had proper training, the avocation would be dignified and the work of the health officers much more efficient. What this would mean to the state is beyond estimation.

When tuberculosis gets into a herd of cows and the animals are slaughtered by the state veterinarian, we can calculate the loss to the state, but what measure shall we use to estimate the unnecessary loss each year by the death of thousands of men and women in the full maturity of their powers, and the sickness and ill health of tens of thousands.

The University should be more deeply interested in the general health and efficiency of the community even than in the curing of the sick. It is true that the sick should be cared for and all necessary steps be taken to restore them to health, but it is immeasurably wiser to produce the highest possible state of health in the community. There is little doubt that, if the University could have a free hand in the establishment upon an adequate scale of departments to handle the subjects of the first two years of medicine, including men and laboratories, and the work of the departments were supported by suitable laws, marvelous progress could be made in the next ten years in the reduction of communicable diseases in the state. At the present time knowledge is available which within a decade, or at most a score of years, would practically eliminate from the state such infectious diseases, as whooping cough, measles, diphtheria, scarlet fever, and typhoid fever, and even tuberculosis could be practically eliminated in one generation. Already the State Board of Health has begun a campaign for the latter purpose, and in this campaign the University should cooperate.

In carrying out the plan to improve the health conditions of the state the work should be extended so as to involve the study of the conditions which bear upon health thruout the state in advance of outbreaks of disease. At the present time all that the laboratory can do is to handle the latter cases. When there is an outbreak of typhoid fever, or some other dis-

ease, the laboratory takes up the matter, but before the infection is eradicated there is an invariable loss of human life. This is the method of locking the barn after the horse is stolen. A much wiser plan is possible. If only the hygienic laboratory were provided with sufficient funds and force, a systematic study could be made of the hygiene condition of the state. If the Board of Health or some other board had authority to give orders in reference to the modification of unsanitary water systems, could enforce a regulation that no milk be sent into a city which was not clean and free from disease germs, was authorized to ascertain the facts as to the existence of tuberculosis and other infectious and contagious diseases in any individual suspected, and were given power to require a prescribed course of action upon the part of people thus afflicted, the advance in the control of communicable and infectious diseases within a decade would be nothing short of marvelous, and the practical elimination of such diseases would finally be accomplished.

With the present state of knowledge of disease, and with the possibility to use men and laboratories to ascertain additional necessary knowledge, if we remain a people subject to sickness and death due to infectious and contagious diseases, this will be due to our own stupidity, our own penuriousness. We had not the wisdom to obtain and use necessary knowledge, we were too shortsighted and mean to put the necessary money into the work of preserving our own health and that of the community. May not the state of Wisconsin lead in the matter of eliminating disease, and thus by doing immeasurable good within the state, do even greater good by its example which will be followed by other states of the Union.

#### *Summary.*

In summary it may be said that the plan proposed for the incorporation of a medical college and providing the first two years of a medical course will give the following results to the state:

First. The advancement of knowledge in the scientific subjects of the first two years of medicine, viz., anatomy, bacteri-

ology, physiology, pharmacology, physiological chemistry, and pathology, including human, animal, and plant pathology.

Second. The young men and women of the state who wish to study medicine will be able to gain at the University in addition to their preparatory training, at least two years of medical work. They will then be able to complete their medical course elsewhere by not to exceed two years additional work. Such men and women will receive as thoro and broad a training by this combination of courses as can be gained anywhere in the country at much less cost to them than if the entire medical training were taken outside of the University.

Third. Advances will be made in the elimination and control of the diseases of animals and plants, and such advances will be the cause of great material wealth to the state in the departments of animal husbandry, agronomy, horticulture, and forestry.

Fourth. The advance in knowledge will be a contribution by Wisconsin to the knowledge and control of all human diseases, the value of which cannot be estimated in money as in the case of animal and plant diseases, but which will be of immeasurable importance to humanity.

Fifth. A course in hygiene and preventive medicine will be established and a campaign made to control and finally to eliminate infectious and contagious diseases in the state. These purposes, that of the advancement of the knowledge of preventive medicine, the dissemination of knowledge with reference to the maintenance of health, and the formulation and enforcement of proper laws thruout the state, seem to me to be the most fundamental of the advantages to the state that can be gained by the adoption of the plan proposed. If the plan proposed be carried out it is believed that it will be possible within a reasonable period to make death by communicable diseases within the state an exception, and a life of normal length the rule for all healthy children that are born and live within the commonwealth. If the plan be adopted, this will be the most fundamental thought in controlling the installation and development of the additional necessary departments.

## ADDITIONAL APPROPRIATION NECESSARY TO CARRY OUT PLAN.

It has already been pointed out that it was the intention of the legislature that the increase of income made for the University in 1905 be used for the rounding out and strengthening of existing colleges and schools. The addition of the first two years of a course of medicine, provisions for a course in hygiene, and for work in experimental animal and plant pathology, will necessarily involve an additional annual appropriation for these purposes.

## IV. ADDITIONAL BUILDINGS NEEDED IMMEDIATELY.

In my biennial report of two years ago, the needs of the University so far as buildings are concerned were emphasized. The legislature appropriated \$200,000 per annum for three years for building purposes, for apparatus, for books, and for repairs and improvements. The amount for the first year has been available during the present biennial period. It has already been pointed out that this money has been used for the equipment of the Chemical Building, for the Hydraulic Laboratory, for the north wing of University Hall, for various repairs and improvements, for apparatus, books, and fire protection.

*Work of Coming Year.*

From the appropriation for the coming year it is proposed to finish the north wing of University Hall, to finish the Hydraulic Laboratory, to construct the Farm Engineering Building and the Agronomy Building, and to provide for apparatus and books and for necessary repairs and improvements. Among the latter will be the modification of the Porter residence, recently purchased, to serve as offices for the regents. This will relieve the pressure in the Law Building, giving the law department two additional rooms, thus providing for the necessary extension of the law library and for a much needed lecture room.

After this work is done, all of which has been contracted for or provided for by appropriations by the regents, the following are the more pressing constructional needs of the University.

*Central Heating Plant.*

In my report of two years ago the proposal was made to remove the central heating plant from its present position since the plant is very badly located and is entirely inadequate. At that time no definite location had been decided upon for the new plant. After a careful consideration of the whole problem it was decided that the best possible location for such plant is south of University avenue adjacent to the Chicago, Milwaukee and St. Paul Railway tracks, so that the expense of hauling the coal from the railroad to the coal vaults would be saved. Also another very important advantage in this location is that it is centrally placed in an east and west direction, the longer axis of the University group of buildings. After this conclusion was reached land was purchased for the central plant at the corner of Johnson and Bruen streets. A careful study of all the modern central heating plants in the country has been made and the preparation of plans has been begun for such a building. However the cost of a central heating plant large enough to provide for the present entire group of University buildings and for buildings to be constructed within a reasonable period in the future will be considerable. It was hoped to provide for such a structure out of the funds for the coming year, but this has not proved practicable and it will be necessary to make temporary modifications upon the old heating plant in order to heat the north wing of University Hall the coming winter.

*Biology Building.*

In my biennial report for the years 1902-4 the extremely congested condition of Science Hall was described, and the necessity of a building for biology pointed out. All that is said in that report may be now renewed with additional emphasis, since there have been still further increases in the number of students in all departments accommodated in Science Hall. Dean Birge puts a biological building as the most pressing constructional necessity of the College of Letters and Science at the present time. Of this building he says that this "is a necessity if the educational efficiency of the college is to be maintained. It is difficult to see how the present condition can be endured even

for the time which it would take to construct a building, if it were already planned.”

*Building for Women.*

In my report of two years ago the necessity for a building for women was strongly emphasized. Up to the present time no steps have been taken in the direction of supplying this need, except to have plans drawn for the structure. During the year 1905-6 there were seven hundred twenty-five women in the University. In Chadbourne Hall is one room which is made to answer for a gymnasium for this great number. As a matter of fact its facilities are about adequate to provide properly for one hundred women, the number that have rooms in Chadbourne Hall. The result is that the health of hundreds of young women is suffering because of the shameful lack of facilities for their physical training. The future women's building, besides containing an adequate gymnasium, should contain rooms for social purposes, and would thus be the social center for the young women of the University. It should also provide rest rooms, as well as offices for the adviser of women, etc. The extremely pressing necessity for a building of this kind is so well recognized by all interested in the education of the young women of the state that it need not be further amplified.

Scarcely less pressing than the necessity for a women's building are additional dormitory accommodations for the women. It was pointed out two years ago that only about one hundred young women are provided for in Chadbourne Hall. About one hundred thirty-five are furnished accommodations in sorority houses and the Young Women's Christian Association building provides for about thirty. A considerable number of young women live at the homes of their parents, their relatives, or their friends; however, there remains a large group of young women scattered about in boarding and rooming houses of the town.

It has already been noted that with a view to improving the condition of affairs last year, the keepers of such rooming houses were visited by the members of the social committee and a list of places was made the owners of which would accommodate young women only. This list was sent to the parents.

The result was that the space in such recommended houses was taken up and the demand far exceeded the supply. This fact shows that the parents of the state are desirous of sending their daughters to quarters which are under some university supervision, at least to places where young women only board and room. This is not possible at the present time for more than a part of the young women, nor does it seem likely that it will become possible until additional women's dormitories are provided.

#### *Horse Building.*

In the College of Agriculture Dean Henry places as the most pressing need of that college a horse building. The time is now ripe in this state for the beginning of a campaign to develop its horse industry analogous to that which was undertaken some fifteen years ago in reference to the dairy industry. The future horse building should include a suitable pavillion for conducting horse exhibitions and stock sales. Already the University regents have been petitioned by Wisconsin farmers, thru the Wisconsin Draft Horse Breeders' Association, to construct a building in order to hold such stock sales. It is urged that if the College of Agriculture is to do for horse breeders what is necessary in order to assist them in the same way that other departments of agriculture have been assisted by the agricultural college, this building is a necessity.

#### *Additional Room for the College of Engineering.*

In my report of two years ago it was urged that the accommodations for instructional work in the College of Engineering are very inadequate. To some extent the pressure has been relieved by turning over the larger part of the old Chemical Building to this college, and by the construction of the Hydraulic Laboratory; but notwithstanding this, Dean Turneaure states that the college is greatly in need of more class rooms, offices, and drawing rooms. He says that there is at present especially pressing necessity for additional class rooms of large size to accommodate the junior and senior classes of one hundred to one hundred and fifty students. More room is needed also for drafting and for offices.

*Dormitories, Commons, and Unions for Men.*

In my inaugural address, in my report of two years ago, and at various times and occasions, I have emphasized the very great desirability of giving the men dormitory accommodations and thus giving them advantages similar to those which a limited number of women have in Chadbourne Hall. This need has been generally recognized, but the only steps which have yet been made toward satisfying it are the purchase of a part of a block upon which such buildings are to be located, and a preliminary set of plans by Architects Laird and Peabody.

In addition to what has been before said in reference to the dormitory system, I may add the following:

First. A comparatively small number of men, perhaps somewhat more than three hundred, are housed in fraternity buildings, and these men have to some extent the advantages of the dormitory system.

Second. The purpose of establishing the dormitory system here is to give to the more than two thousand men outside of the fraternities all of the advantages of the communal life under university control.

Third. It is very desirable that the cost of living be reduced for the poorer young men who come here. If we could have at once dormitory room for five hundred students, it is believed that this would be an important factor in the accomplishment of this desirable end. The charges should be sufficient so that the use of a room in a dormitory would not be a bestowal of a charity, but should be sufficiently low so that an able young man who is not fortunate enough to have financial support may by industry and frugality work his way thru the University.

Fourth. Another feature of the dormitory system should be a commons which would offer board at a reasonable rate so that students of small means would be able to live decently. At the Harvard commons a system has been adopted by which the price of board is placed very low, including everything but eggs, fish, and meat. Any student at any meal may order these articles at a small additional amount just sufficient to cover their actual cost. The result is that students are able to get board which is entirely satisfactory and nutritious from between two and three dollars a week up to any amount they

are willing to pay, and the great point is that the student who is able to pay but little more than two dollars a week for his food, boards in the same halls and is on the same footing socially as the man who pays several times this amount.

Fifth. The dormitory and commons should be accompanied by a union, where the men after they had finished their studies would find pleasant rooms. This union should have a kitchen or be adjacent to the commons, so that in the evening light refreshment, such as sandwiches, coffee, or chocolate, etc., could be obtained. I believe that such a union would be of great value in keeping young men away from undesirable places. At the present time the more than two thousand young men who do not live in fraternity houses have absolutely no social center to which they can go to spend a quiet hour in reasonable recreation. The result is that the attractions of undesirable places draw many students who otherwise would never be thus influenced.

In conclusion, I believe that dormitories, commons, and union will accomplish more toward assisting young men of small means to get thru college and to help develop sobriety and character, in short all round adjustable manhood, than any other combination of means which the state can place at the disposal of the University.

#### *New Pumping Station.*

In my previous report I have called attention to the unsatisfactory condition of the University pumping station. As to the condition of the present station Professor Mead, superintendent of the water works, makes the following statement:

“The pumps are hardly of sufficient capacity for the ordinary service of the University, and are much too small to afford adequate fire protection. The building is poorly adapted for its use as a pumping station, and it is not large enough to permit of satisfactory installation of additional machinery. The piping inside of the station is badly arranged, and in poor condition. The inlets from the lake are too small for the increasing pumpage, and now appear to be in bad condition. Altogether the plant is unfit for the requirements of a university

water supply and still more unfit for any use for instructional purposes."

Professor Mead says that it may be possible to keep the present pumps in running order for another year, but within that time it will be necessary to make provision for a new plant. Such new plant will involve the construction of a building, the addition of a large new pump, a new intake, and of course the removal of the old machinery so far as it is available from the old plant to the new one. The cost of such new pumping plant Professor Mead estimates at \$15,000.

*Building for Political Economy, Political Science, and History.*

The allied departments of political economy, political science, and history, are scattered in various buildings,—in the Library, in North Hall, and in University Hall. These departments are of a kind which require continuous access to the Library. As the humanities grow and the space these departments occupy in North Hall and in University Hall are needed for other departments of the humanities, it will be advisable to provide for these allied departments in a building devoted to them adjacent to the Library.

*Model School for the Department of Education.*

The department of education has need of a model school. The report of the dean of the College of Letters and Science proposes a plan of cooperation with the city schools under which a certain amount of practice work may be obtained by those preparing for teaching, but this arrangement at best will be merely an imperfect device to remedy the defect in applied educational work. If the department of education is to build up a course for teachers which shall have anything like the standing and influence in the country that have those of the educational departments of Columbia University, the University of Chicago, or the University of Illinois, it will be necessary to provide a model school for professional training. Such a model school will serve the same purpose with reference to the department of education that the machine shops do to the department of mechanical engineering. A model school is also a necessity for investigations in education. It cannot be

expected that this department can make important contributions to the science of education until proper facilities are afforded for such work.

But before a model school can be installed it will be necessary that a building be constructed especially for that purpose, or else that some other building be temporarily used to this end.

*Gymnasium at Camp Randall.*

One building now serves for gymnasium, armory, and auditorium. These three needs are quite inconsistent with one another. At the present time it is impossible to handle properly physical training and the work of the military department, and both of these departments are less effective than they would be if each one had a suitable building for its purposes. To make the matter still worse, whenever there is a general meeting of the University students, it is necessary to use the gymnasium floor as an auditorium, and this involves temporary seating of the same, putting up temporary platforms, and after the exercises are finished, removing the seats and platforms. The consequence is that whenever the building is used for auditorium purposes there is interference with the physical training or military work, or both. The only way to obviate the difficulties mentioned are to provide separate buildings for these purposes. However, we can scarcely hope to get two additional buildings at once, and it is believed that the best arrangement will be to build a new gymnasium on Camp Randall and devote the present hall to the purposes of the military department and auditorium.

Very respectfully,

CHARLES R. VAN HISE,

*President.*

June 30, 1906.

## REPORT OF THE DEAN OF THE COLLEGE OF LETTERS AND SCIENCE.

---

PRESIDENT CHARLES R. VAN HISE,  
*The University of Wisconsin.*

SIR:—I submit herewith my biennial report as dean of the College of Letters and Science.

### I. CHANGE IN FACULTY.

In addition to the ordinary changes in the faculty, caused by the promotion of instructors to permanent places in the teaching force, numerous changes have occurred by the appointment of new professors and by resignation. One death has occurred in the faculty, that of Professor David B. Frankenburger, who died February 6, 1906. Professor Frankenburger graduated from the University with the class of 1869 and served as instructor for the two following years, studying law at the same time and graduating from the College of Law with the class of 1871. He entered the practice of law in Milwaukee but returned to the University in 1878 as professor of rhetoric and oratory in which position he served until his death. More than nine-tenths of the students who have passed through the University have been connected with it since Professor Frankenburger joined its faculty, and no member of that faculty was better known or more beloved by students and alumni than was he. No words are necessary in this place to emphasize the loss which the University has sustained in the death of one who devoted himself to the duties of his position with such fidelity, and gave his life so completely to the students of the University.

Professor B. H. Meyer terminated his duties as a member of the teaching force of the University at Commencement, 1904, on

his appointment as a railroad commissioner for Wisconsin. His name still remains on the list of the faculty, with leave of absence.

At the close of the present year Professor C. A. Van Velzer, who has been connected with the department of mathematics since 1881 as instructor, assistant professor, and professor, resigned in order to go into business.

Professor William H. Hobbs, who came here in 1889 as instructor in mineralogy and by successive promotions reached the position of professor of mineralogy and petrology in 1899, resigned to continue geological studies in Europe.

Assistant Professor A. C. L. Brown, who has been connected with the department of English literature as instructor and assistant professor since 1901, resigned to accept the professorship of English literature in Northwestern University.

Assistant Professor A. A. Young, who was appointed assistant professor of political economy in 1905, taking the place of Professor Meyer, resigns at the close of the current year, to accept a professorship in Leland Stanford University.

The appointments of new professors, which took effect at the opening of the college year 1904-05, were noted in my last report. These were Professor Hunt in home economics, Professor Bardeen in the department of anatomy, and Professor Commons in the department of political economy.

In the following year a considerable number of new appointments was made. The vacancy which had existed in the departments of philosophy and education since the resignation of Professor Stearns in 1903, was filled by the appointment of Evander B. McGilvary, Ph. D., as professor of philosophy. Professor McGilvary was at the time of his appointment Sage professor of ethics in Cornell University, having earlier held appointments in the University of California. In the department of education Edward C. Elliott, Ph. D., was appointed as associate professor. Professor Elliott came to us directly from advanced study in Columbia University, which he had been pursuing after a successful career as teacher and superintendent of public schools. His specialty in the department of education is school supervision. There was appointed also, as instructor in education, Walter F. Dearborn, Ph. D., who will give special attention

to educational psychology. It should also be stated that Frank C. Sharp, who has been connected with the University since 1893, was promoted to the position of associate professor of philosophy in 1904, and the following year advanced to the position of professor of philosophy. B. H. Bode, who has served as assistant and instructor in philosophy since 1900, was promoted in 1906 to the position of assistant professor of philosophy. By these new appointments and promotions the teaching force in the departments of philosophy and education is stronger than it ever has been before.

Hugh A. Smith, Ph. D., was appointed professor of romance languages in 1905, becoming executive head of the department of French, which position he took at the request of Professor Owen. Professor Smith came to the University of Wisconsin from Colorado College, where he had for several years held the position of professor of French.

In the department of zoology, Samuel J. Holmes, Ph. D., was appointed assistant professor of zoology and placed in charge of the general course in biology and the advanced courses in invertebrate zoology.

Dr. Marshall, who has been assistant professor of zoology, was promoted to the position of associate professor of entomology and will devote the greater part of his instruction to the subject indicated in the title of his chair.

Rollo L. Lyman, A. B., was appointed assistant professor of rhetoric and oratory, with the expectation that he would act as colleague of Professor Frankenburg in the department of rhetoric and oratory, but the illness and subsequent death of Professor Frankenburg made it necessary for him to assume charge of the work in that department.

Three appointments to full professorships have been made at the close of the current year and the persons named will begin their duties with the opening of the college year 1906-7. In the department of mathematics Professor Edward B. Van Vleck, Ph. D., has been appointed professor of mathematics to succeed Professor Van Velzer. Professor Van Vleck was instructor in mathematics in the University of Wisconsin from 1893 to 1895, and since that time has been professor of mathematics in Wesleyan University, Middletown, Connecticut.

Joseph Erlanger, M. D., associate professor of physiology in Johns Hopkins University, has been appointed professor of physiology, becoming the head of this newly established department.

Edward A. Ross, Ph. D., professor of political economy in the University of Nebraska, has been appointed professor of sociology and will begin his duties at the opening of the next college year. This appointment places the department of sociology on a permanent basis. Several years ago Professor Raymond devoted part of his time to teaching this subject, and for the past five years Mr. Jerome Dowd has taught the subject, holding the position of resident lecturer. The importance, however, of sociology has demanded the appointment of a professor which the University has now been able to make.

Alfred L. P. Dennis, Ph. D., formerly associate professor of modern history in the University of Chicago, was appointed professor of European history in June, 1905. He was given leave of absence for a year and will join the faculty of the University in the fall of 1906. This appointment will add much strength to the faculty of this large and important department of the University.

These appointments from without the University represent only very partially the increase which has been made in the teaching force of the College of Letters and Science during the past two years. In 1903-4 the teaching force of the College of Letters and Science consisted of 41 professors, 30 assistant professors, 47 instructors, and 27 assistants. Two years later there were 48 professors, 31 assistant professors, 61 instructors, and 35 assistants. The increase was most marked in the professorships, which increased by seven, and among the instructors, where 14 were added. While several important positions still remain to be filled, and while additional secondary instruction is needed, yet the two years covered by my report have seen large progress made in satisfying the first need mentioned in my report of 1904, namely: the necessity for increased instruction.

## II. THE NUMBER OF STUDENTS.

The number of students registered in the college during the two years covered by this report is as follows:

Graduates .....	1904-5 135	1905-6 144
Undergraduates .....	1,345	1,435
Total .....	1,476	1,579

The total number of students registered in 1903-4 was 1,312. The biennial period has thus seen an increase of 267 in this college, or an addition during the two years of more than 20 per cent. to its numbers. This is the largest percentage increase that the college has had for more than a decade; and the largest numerical increase in the history of the college; no earlier biennial period during that time having shown an increase greater than 16 per cent., or any biennial period an increase in numbers exceeding 150. The increase has been shared both by graduate students and undergraduates, and among the latter the increase has been quite as marked in the general course leading to the degree of A. B. as in the course in commerce and in other special courses. The expectation which I expressed in my last report, that the college would grow more rapidly in the future than during the past decade, has thus been fully confirmed by the experience of the last two years. Fortunately for the educational success of the college, the number of students in engineering has not grown as rapidly during the past two years as in the former periods; the checking of the rapid increase in this college being due to increased requirements for admission. Had there been a growth in the College of Engineering proportional to that in the College of Letters and Science, it would have been difficult, if not impossible, to provide proper instruction for the members of the lower classes.

The attendance on the summer session of 1904 was 403, a substantial increase over the number of 318, present in 1903. In 1905 the number in attendance rose to 528, an increase of 125, the largest in the history of the summer session.

## III. PROGRESS OF THE COLLEGE.

In my report for 1902-4 I placed first in the needs of the college an enlarged income, in order that the teaching force might be increased in number, and in order that the salaries of the present members of the faculty might receive some addition. Both of these needs have been fairly met by the increased income which the college has received from the appropriations made by the legislature of 1905. The list of appointments to professorships, given in a preceding section of the report, indicates the considerable additions made to the teaching force of the University, and the statement regarding the enlargement of the number of instructors and assistants shows that the secondary faculty has been much increased. For many departments it has been possible to raise the minimum salary offered to instructors, thus not only adding to the teaching force but also securing teachers of greater experience and efficiency. It has been possible also to raise the salaries of a good many members of the faculty. This action has been demanded by common justice for several years, as the cost of living has greatly risen. While the additions to salaries which have been granted by no means equal the increased cost of living, they make the conditions of life at least somewhat easier. Much the larger part of the additions to the cost of instruction in the College of Letters and Science has been devoted to securing new teachers. In 1903-4 the salary list of the instructional force of the College of Letters and Science was about \$173,000, which was raised in the following year to about \$197,000. Of this increase, over \$18,000 was caused by additions to the instructional force. In the following year \$36,000 was added to the salary list, of which something more than \$26,000 went to the payment of additional instruction. Most of the money devoted to increasing salaries necessarily went to those teachers who are entitled to advance in consequence of promotion or to advancement through the several grades of the position which they hold. The University is, however, attempting to make the standard salary of its full professors \$3,000 and to raise the maximum salary for assistant professors to \$2,000.

The increase of income for the college has permitted expenditures for appliances in teaching only second in importance to the increase of the teaching force. The library has grown rapidly, as is reported in another place, and of almost equal importance to the scientific departments have been the large additions which have been made to their apparatus fund. This fund in 1903-4 amounted to \$5,400; having been growing very slowly during the past years. A small addition only was made during the following year, when it rose to \$6,000, but in 1905-6 small additions were made to the funds for the several departments and the sum of \$4,000 was appropriated for a general apparatus fund, besides a special appropriation of \$2,500 for equipping the physiological laboratory. It is difficult to exaggerate the stimulating effect of these additions to the library and apparatus fund, both on research and teaching in the several departments.

During the present year the biological laboratory has also been provided with new microscopes, which were greatly needed, as the instruments formerly in use were nearly worn out, and large additions were made to the apparatus for instruction in the elementary physics laboratory. It has, of course, been necessary to expend large sums in the equipment of the new chemical laboratory with chemicals and apparatus, but these have not been spent under the direction of the College of Letters and Science. Altogether the college is in better condition for teaching, both as regards the instructional force and the material appliances, than has been the case in many years.

Two years ago I reported the change in the scheme of study of the college, by which the several courses of study which had existed for many years were merged in a general course leading to the degree of Bachelor of Arts. During the past two years the plan then adopted has been successfully operated and I think that no one in the faculty would wish to return to the former condition. The new course, however, has offered educational problems of its own, and unquestionably will continue to offer new problems in the future. One of the most serious of these problems has concerned the system of student advisers. So long as the College of Letters and Science was broken up into numerous courses which extended through the four years, it was pos-

sible to appoint advisers for each section of each class, and to appoint them from members of the faculty who were ordinarily concerned with teaching the students for whom they were advisers. When, however, freshmen to the number of 400 or more were included in one general course, it became a somewhat difficult matter to appoint advisers who would have at once the knowledge of University affairs which an adviser needs, and at the same time have a personal relation to the students who were placed in his charge.

The present solution which the college has reached is as follows: The freshmen on entering are sent to temporary advisers, who number about a dozen and are selected from the more experienced members of the departments represented in the freshman list of studies. These advise the student with regard to the selection of his course of study and start him in his work. When the classes have been arranged the freshmen are assigned to permanent advisers; each student being given an adviser who is actually teaching him. Not more than a dozen students are assigned to one adviser. The sophomores remain in the care of the freshman adviser, although they do not ordinarily recite to him. The personal knowledge which the adviser has acquired of the student makes it possible for him to advise intelligently, even though the student may not be in his classes. At the opening of junior year each student selects his major study and is assigned to a new adviser from the department in which the major study is taken, ordinarily the person under whom a considerable part of the work in the major study is to be done. As compared with the former method our present practice has the advantage of dividing the freshmen into small groups among the members of the faculty who necessarily become personally acquainted with them, and has the disadvantages which always come with the division of executive duties among a large number of persons.

The enlargement of the instructional force has made it possible to increase the number of sections in elementary classes, especially those which are taken by large numbers of freshmen. During the first semester of the current year there were 26 sections in English 1 (freshman English) with an average number of 27 students per section. For German there were 24 sections with an average registration of 25 students. In elementary

French there were 14 sections with an average registration of 28 students; of these, eight sections belong to the College of Letters and Science, with an average membership of about  $29\frac{1}{2}$ . In algebra there were 18 sections with an average registration of 24. A registration of 27 at the opening of the first semester is not at all excessive, since a considerable number of withdrawals from the freshman class always occurs and before the close of the semester the number remaining would not be unreasonably large. The sections in French were altogether too large, but will be reduced next year. While the average size of sections is in general not unsatisfactory, it has not been found possible as yet to divide the students exactly between the different sections. The recitations which come in the afternoon are avoided as far possible by students and the result is that the sections are quite uneven in size. Thus in French the minimum number in a section was 16, occurring in an afternoon class, while the maximum number was 42. The first section named was altogether smaller than necessary, while the other was quite too large for effective teaching in an elementary language. The divisions of classes belonging to the sophomore and later years and which recite in sections are in no case too large for efficient teaching. Such courses are the general course in English literature, advanced composition, etc.

The increase in numbers in the freshman class has brought with it administrative problems of very considerable difficulty with reference to elementary instruction. When the same study is taught to 20 or 30 sections of students it is plain that the work must be vigorously and efficiently supervised, if the teaching of the several sections is to cover the same ground and is to have approximately the same quality. Still another difficulty is inseparable from large classes, namely: that of so arranging the instruction that the freshmen may have the advantage of teaching from the professors of the University, and not be wholly under the care of instructors. In some subjects, as in English, mathematics, and elementary language, it is impossible to give lectures, and in these departments the work is chiefly in the immediate charge of instructors, under the supervision of the professor at the head of the department. Departmental conferences are held with the instructors, and through these and other similar methods, the work of the several sections is corre-

lated and efficiently supervised. In departments like physics, botany, and history, where it is possible and profitable to lecture to the students, the lectures are given to the elementary classes by the head of the department. For example, Professor Snow gives the elementary lectures in physics, Professor Harper in botany, Professor Munro in history, and Professor Lenher in chemistry. These lectures are given to classes numbering from 100 to 400 students, which are divided into smaller sections for review and questioning on the lectures and on the reading and laboratory work, which make a part of the course. By these and other similar methods which are specified in detail in a report which I made to you on April 13, the work of the elementary classes is correlated and supervised.

Yet the continuous increase in the number of students keeps the problem of the administration of the elementary work always before us, and improvements in the manner of meeting it are continually necessary. As the departments increase in size the administrative work becomes so great that no one person ought to assume the responsibility for it. If the professor in charge of the department is expected to direct the advanced teaching and investigation carried on in the department, and to teach classes of various grades, he will have little time left for the effective supervision of the elementary work. The University, therefore, ought to adopt the definite policy of assigning the supervision and correlation of the elementary work in the large departments to some member of the faculty of that department as his special duty. It should be understood that the supervision of the elementary work constitutes one of the most important services which a member of the faculty can render to the University. The success of the advanced work in any department depends upon the vigor and wisdom with which the elementary work is done. The direction of this work offers pedagogical problems, which are important in any university and which are especially difficult in a university like ours, where the students enter from preparatory schools which have various standards of efficiency.

Most of the members of the instructional force who are teaching elementary classes use every endeavor to see personally and advise with students who find the work of the University diffi-

cult. It is not always easy, however, to do this, since the University at present does not furnish to all of the teachers office rooms, or other suitable places where they can meet with students. Not the least of the advantages which the new north wing of University Hall will afford to the University is the increased opportunity for meeting students, which will be afforded by the large addition to the number of offices. The department of German in North Hall has an exceptionally large number of offices, and indeed is the only one adequately provided with offices among the departments of the University which do a large amount of elementary teaching. The University should adopt the policy of furnishing office room to all members of the instructional force and should expect them to keep regular hours outside of the recitation periods for consultation with their students.

The statements in the first section of this report, relating to the appointment of new professors, sufficiently indicate the important advances which have been made in departmental efficiency. During the two years covered by this report the new departments of anatomy and home economics have been established and have already found their place in the college. Large additions have been made to the faculty of the departments of philosophy and education. New professors or assistant professors have been appointed in political economy, history, Romance languages, zoology, and public speaking, and at the close of the period the department of physiology has been established.

Many more particulars might be given, showing the progress of the college during the past two years, but the facts already brought forward are perhaps sufficient to bear me out in the statement that the college has advanced during the past two years in a manner not surpassed in any previous period.

#### IV. COURSE PREPARATORY TO PRACTICAL MEDICINE.

The University has maintained for twenty-five years a course of study adapted to the wants of those who intend to enter the medical profession. This course has been regularly mentioned in the catalogues of the University and has been followed by many students. It was never separated from the general sci-

ence course of the College of Letters and Science, and when this course was merged with the others in the general course for the degree of Bachelor of Arts the pre-medical course shared the same fate. With the establishment of the departments of anatomy and physiology, however, it seemed necessary to organize the studies intended for future students of medicine, and, during the current year, the faculty adopted and recommended to the regents the establishment of a pre-medical course, leading to the degree of Bachelor of Science; thus for the first time organizing these studies into a distinct course. This action, marking—as it does—a period in the history of the course, gives occasion for a somewhat more complete treatment of the subject, especially as the college will naturally develop still further in this direction in the near future.

When the pre-medical course was established the length of the course of study in most medical schools was two years. In some it was three; but in most of the latter advanced standing was very properly given to students who had taken the pre-medical work here. The entrance requirements of the schools were low, and students well trained in the fundamental sciences on which medicine rests—biology, chemistry, and physics—had a great advantage over those who entered on the study of medicine not thus prepared. Within the last twenty years, however, standards of medical education have greatly advanced in this country. Entrance requirements have been raised and the course has been lengthened to four years. Thus a student who wishes to take a complete college course and then a complete medical course must now devote eight years to study after graduation from high school, instead of six, before getting the M. D. degree; and if he wishes much practical training, he must subsequently spend from one to two years in a hospital. Few can afford so long a period of preparation, nor is it necessary. The lengthening of the medical course is due, in great part to the introduction of laboratory work in the biological and physical sciences as taught in medical school, which previously was obtained, if at all, in the collegiate pre-medical course; and to the adoption of similar methods in the more strictly medical sciences. In the better medical schools throughout the world the course of study is sharply divided into two nearly equal

portions, the pre-clinical and the clinical. In the pre-clinical years the sciences on which medicine rests are studied; in the clinical the application of these sciences to the study and the relief of disease.

Of the studies belonging to the pre-clinical half of the medical course several—physics, chemistry, and biology, including histology and comparative anatomy—have long been included in the pre-medical course at this University. Bacteriology was well established here before it was in most of the medical schools and at present is taught in a more comprehensive manner than in any medical school. In 1904 a department of human anatomy was established, and a department of physiology is now being organized and will be opened in the fall. Thus students can at present anticipate in the pre-medical course here at least a year of the four-year medical course. It is highly desirable that as quickly as possible departments of pharmacology and physiological chemistry and of pathology be established. The work of the first two years of the four-year course in a medical school can then be furnished here and scientific studies of great value to the state can also be carried out in these departments.

This pre-clinical medical work could be completed in a four-year undergraduate course, or those students who desire a broader foundation or more general culture could devote at the University a year of graduate work to its completion. The clinical work could then be entered upon in some medical school which has abundant clinical facilities, and the medical degree would be received in two years more. In order, however, that the pre-clinical work done at the University be granted full credit elsewhere, it may be necessary to incorporate a medical department, the faculty of which can certify to the completion of two years of work in the medical sciences. This step may be rendered necessary by the action of several state boards of medical examiners which are opposed to granting time credit for work done outside of incorporated medical schools.

## V. NEEDS OF THE COLLEGE.

It is hardly possible to make a sharp distinction between matters discussed under this head and those spoken of under the general topic of progress of the college, since the two subjects are very closely related.

During the past two years North Hall has been completely remodeled for the use of the department of German and the course in commerce. This building is now for the first time in a thoroughly satisfactory condition, as a new system of heating and ventilation was installed and the rooms were altered so as to furnish offices as well as recitation rooms.

At the present time the north wing of University Hall is in process of erection and when completed will greatly increase the accommodations for recitation rooms and for offices in the departments of the humanities, which are located in that building. The increase from this wing will be even more important than that which was afforded by the building of the corresponding wing on the south, since the basement and first story of the south wing contain almost no recitation rooms. In the north wing the entire space is available for recitation rooms and small offices for the faculty. The completion of this addition will meet the present needs of the University for recitation rooms of the type which it provides. The departments of the humanities will then be measurably well provided with space, except that the current methods of teaching history, literature, and political science call for much more room in the library, or adjacent to it, than can be provided at present.

The need for a biological building, which was mentioned in my last report, still exists and is becoming greater with every year. The number of students in all of the departments housed in Science Hall is increasing and the conditions there are becoming almost unbearable. The biological lecture room, which was originally designed for not more than 60-75 must now house—I will not say accommodate—as many as 150. The same overcrowding is found in the geological lecture room and the general lecture room for physics is almost as greatly overcrowded. About one-fourth of the biological museum has already been taken for laboratory purposes by partitioning off

the east end. During the coming summer it will be necessary to remove all specimens and cases from the remainder of the museum, store them in a corner on the attic floor, and occupy with laboratories the space thus gained. I greatly regret the sacrifice of the museum, which is of much interest to visitors as well as to our own students; but the bare necessities of room for teaching can be met in no other way. Under the present conditions it is impossible to provide suitable accommodations for the students who come to the classes already established, and it is, of course, quite out of the question to permit the departments in Science Hall to develop as they should be allowed to do. The department of physics will secure a slight relief next year by the removal of the psychological laboratory to University Hall, but the departments of biology and geology are now occupying every foot of space which can be utilized for them. I must place, therefore, a biological building first among the buildings which are needed for the advance of the College of Letters and Science; or rather, I should say that it is a necessity if the educational efficiency of the college is to be maintained. It is difficult to see how the present condition can be endured, even for the time which would be necessary to construct a building, if it were already planned. In my judgment the necessity for this building stands first among the larger material needs of the college.

A second important building is also needed, which nominally belongs to the University, but as a matter of fact would be used almost exclusively by the students of the College of Letters and Science. This is a woman's building, which should contain the gymnasium for women, besides various rooms for rest, recreation, and social purposes, and which can serve as a center for the work of the adviser of women and other members of the faculty who are closely associated with the women of the University.

The increased income of the College of Letters and Science will make it possible to provide for the minor improvements needed in the several departments of the college, and I will, therefore, not speak of these needs here in detail. In two or three directions, however, the college should make large additions, and to these I shall briefly refer.

The first and most important movement which the college should make is in the direction of developing the pre-medical course. With the establishment of the department of physiology, the University is already giving a large share of the work necessary to the formal establishment and development of this course. This fact alone makes the completion of the course a natural line of development for the college. The needs of the state for investigation and scientific instruction along the lines which such a course would give is also manifest. Inasmuch as this subject is fully treated in the President's report, I shall make only this brief reference to it.

With the reorganization of the department of philosophy, and especially that of education, there comes the opportunity and the need for developing these departments. While the University has always given attention to the professional preparation of teachers, there is need for large advance in this direction. The teaching profession in Wisconsin, as well as in other states, has been too much in the hands of those who are not properly professional teachers. The fact that more than one quarter of the teachers in our schools are changed every year sufficiently indicates this. It is the duty of the University as a leader in the educational affairs of the state to give serious attention to the problem of preparing teachers for the secondary schools. I am not now prepared to present specific plans, but the matter should be taken up by the department and by the faculty and should be pushed forward as rapidly as possible.

The needs of the state call for the development of the instruction in the University in still another direction—that of forestry. The state forester gave, during the past year, a course of lectures on this subject and he will continue this service to the University in the future. Yet, while his lectures are excellent, so far as they go, they are very far from meeting the need for instruction in a subject which is of great importance, both scientifically and practically. The University ought to establish in the near future a department of plant pathology, in which not merely the diseases of cultivated plants should be investigated, but also the diseases of timber; and there should also be given regular and complete instruction in practical

forestry, and in other branches necessary to a complete course in this subject. The departments already established in the University in the College of Letters and Science and the College of Agriculture provide a considerable share of the instruction necessary to a course in forestry, and the University should regard it as among its first duties to provide a complete course in this subject.

I have thus briefly indicated the main directions in which I believe the college ought to advance in the near future. Among our material needs a biological building stands first, and then a woman's building. The development of the courses of instruction which lead toward medicine seems to stand first in the line of immediate educational progress, but almost as imperative is the need for organization and improvement of the professional training for teachers and the establishment of a course in forestry.

Respectfully submitted,

E. A. BIRGE,

*Dean.*

December 1, 1906.

## REPORT OF THE DEAN OF THE COLLEGE OF AGRICULTURE.

---

C. R. VAN HISE, President,  
*University of Wisconsin.*

DEAR SIR: In accordance with your request, I submit herewith a report on the condition of the College of Agriculture and Experiment Station for the biennial period closing June 30, 1906. Two years ago I prepared, under your direction, an extended account of the condition and needs of the Agricultural College and Experiment Station, which was published, with reports from other colleges and your own report. In what follows, I have followed much the same lines as in the previous report. Other subjects have been added and all matters have been brought down to date.

### EVIDENCES OF PROGRESS.

I am pleased to record a marked advance in the condition and prosperity of this division of the University. In the report of two years ago, it was made plain that the College of Agriculture and Experiment Station had practically reached their limit of growth and usefulness under the existing allowance. With the increased income provided by the Legislature of 1905, we have been enabled to progress once more as we should. Our growth during the past two years has been along every line, in truth, but the following are the most patent:

- (1) The acquirement of needed land.
- (2) The creation of the department of horse breeding, with Dr. Alexander in charge.

(3) The relief of Professor Moore from the care and supervision of the short course, thereby giving him his full time for building up the agronomy department.

(4) The release of myself from a large amount of wearing care and the oversight of many details of general office work.

These last two changes were effected by the appointment of Mr. D. H. Otis as assistant to the dean.

(5) The establishment of demonstration farms and orchards in the Lake Superior region.

(6) Dividing the department of agricultural physics into those of agricultural engineering and soils, and the beginning by the latter of a widely conducted, systematic study of the soils of the state, including marsh lands, sand lands, and various farming districts, which show signs of coming soil exhaustion in one or more of the essential elements of fertility.

(7) Providing better compensation, by which we are approaching a condition where we can hold members of our instructional and research force, and not lose them to other similar institutions.

(8) Increasing the clerical force to in some fair measure meet the rapidly expanding office and departmental work, made imperative by the large agricultural interests we serve.

(9) Providing the agronomy and agricultural engineering buildings, both of which we hope and expect to have ready for the winter instruction 1906-7.

A number of askings, made in the report referred to, have not yet been realized, but we are progressing toward them and expect to see the College still further improved and its usefulness greatly enlarged when they become realities.

The advancement of this College for the last two years is the greatest in its history.

#### ATTENDANCE.

The registration in the College of Agriculture for the past two years is shown in the following table:

## SUMMARY OF REGISTRATION IN COLLEGE OF AGRICULTURE FOR LAST TWO YEARS.

	Year 1904-5.	Year 1905-6.
Graduates.....	7	7
Long Course (four-year students).....	80	136
Short Course (two winters' instruction of 14 weeks each, average age of members 21 years).....	304	322
Dairy Course, summer and winter courses (six months' previous experience required; 12 weeks' instruction; average age of members 21 years).....	135	178
Farmers' Course (limited to persons 25 or more years of age; 10 days' instruction).....	227	410
Total.....	753	1,053

Twelve states and seven foreign countries represented the present year.

It will be seen that the condition of all courses is satisfactory, the farmers' course and four-year course showing a large increase. The dairy course has reached its winter limit of possible attendance.

## PUBLICATIONS.

The Agricultural College is more and more coming in touch with the people it seeks to serve. The following will show the publications issued by the Experiment Station for the past two years:

## STATION PUBLICATIONS FOR THE YEAR ENDING JUNE 30, 1905.

Serial No. of Bulletin.	Title.	Edition.	Pages.	Total Pages.
115	The quality of cheese as affected by rape and other green forage plants fed to dairy cows ..	20,000	16	320,000
116	On the relation of food to the production of milk and butter fat by dairy cows.....	6,000	85	510,000
117	The relation of food to dairy production .....	20,000	16	320,000
118	Licensed commercial feeding stuffs, 1904 .....	20,000	49	980,000
119	A report on cranberry investigations .....	6,000	77	462,000
105	The improvement of home grounds .....	8,000	39	312,000
(2nd. ed.)				
120	Concentrated feeding stuffs and fertilizers licensed for sale in Wisconsin, 1905. ....	18,000	11	198,000
121	Alfalfa or lucern .....	30,000	22	660,000
122	Licensed commercial fertilizers and feeding stuffs, 1905.....	20,000	28	560,000
123	The sugar beet industry in Wisconsin .....	20,000	69	1,380,000
124	Report on tobacco investigations in Wisconsin for 1903 and 1904.....	25,000	45	1,125,000
125	Silo construction .....	20,000	92	1,840,000
126	Two ways of treating tuberculosis in herds .....	30,000	15	450,000
	Total .....	243,000	564	9,117,000
	21st annual report .....	15,000	392	5,880,000
	Total pages reports and bulletins .....	258,000	956	11,997,000

STATION PUBLICATIONS FOR THE YEAR ENDING JUNE 30, 1906.

Serial No. of Bulletin.	Title.	Edition.	Pages.	Total Pages.
127	The principles and practice of horse breeding...	40,000	128	5,120,000
128	A swiss cheese trouble caused by a gas-forming yeast (English and German edition).....	7,500	26	195,000
129	Some creamery problems.....	25,000	26	650,000
130	Licensed commerca <sup>l</sup> feeding stuffs, 1905.....	18,000	70	1,260,000
131	Official tests of dairy cows.....	18,000	46	878,000
132	The manufacture of whey butter at Wisconsin swiss cheese factories (English and German editions).....	10,000	32	320,000
133	Distribution of tuberculosis in suspected and non-suspected herds in Wisconsin.....	25,000	15	375,000

CORRESPONDENCE, ETC.

In 1901 there were sent out from this College and the Experiment Station, 7,600 letters during the year; during 1905 we sent out 15,650 letters. During the present year we have run off on an average over 300 mimeograph sheets per day, and sent out 1,000 pieces of printed matter per day. We have had over 12,000 visitors, at least 1,200 of whom were from other states and countries. These and other facts should be taken into account in measuring the work of the College force.

DUTIES OF THE DEAN.

In the biennial report, submitted two years ago, I stated, among other things, the following, in substance:

That I was then closing my twenty-fifth year of service to the University: that during all that period I had been absent from the University once for three weeks, once for four weeks, twice for the full summer vacation period, and twice for two or three weeks more than the full summer vacation period. Other than this, I had taken no vacations whatever but had taught and worked continuously for the University, not only during term time, but during all the long and short vacation periods.

Mr. R. A. Moore began his work with us in building up the short course. To this duty there was added a couple of years ago the care of the agronomy department. The rapid growth of this department called for all his time and energies. A release from part of the duties laid upon us was needed by both. I had previously refrained from asking for this much needed relief, because our College lacked funds. The legislative grant of 1905 made help a possibility. Mr. D. H. Otis was chosen assistant to the dean and his services made to include the care of the short course, thus relieving Mr. Moore of that line.

Relief came none too soon for the good of the long course in agriculture and for myself. The complicated, ever-present, ever-increasing load which I had been carrying had made inroads on my health and strength. With a change now at hand, I am working no less hours per day than before, but the range of effort is not so extended and my time and energies are at this time being given to a different class of work—that of building up the long course in agriculture. The short course, dairy course, and farmers' course for a long time had received my continuous care and thought. The long course had been growing, as statistics further on show, steadily for some years past, and this without that fostering care which it really needed. The hope of this College in its highest, most enduring work, must be along the line of the long course, and it has been my ambition to put my best effort into the development of this course, especially in regard to its pedagogical requirements, and in a secondary way, to its increase in numbers, and finally, and in no small degree, in giving care to the proper placing of the students of that course in the great world of agricultural advancement. Our long course men, to fulfill their purpose in life, must occupy the higher positions. It is certainly a great opportunity to develop this course and bring it to its highest usefulness for the commonwealth.

#### SOME OF THE DIFFICULTIES OF AGRICULTURAL INSTRUCTION.

It is not out of place to refer to some of the difficulties we meet in pioneering agricultural instruction. In most other lines of effort in our University, the ways for teacher and pupil are more or less mapped out. With us everything is new and un-

tried. We started practically without tradition, precedent, custom, text book, or apparatus—in fact lacking everything that is so strongly in evidence in most of the well known lines of instruction. More than this, we have had first of all to go out and educate the public to furnish us the pupils. Only a short time ago the young man who might even think of coming to the University to study agriculture, was looked upon as a curiosity. We have had to overcome general and deep indifference and prejudice on every side. Even educators have often been indifferent or something worse toward these efforts in agricultural instruction. While agriculture, as an art, underlies everything done by civilized man, agricultural instruction is even now something more or less without form or substance. It is a splendid work, however, this pioneering, and it is developing strong, useful characters, as pioneer efforts in all lines important to mankind always do.

Not only have we had to educate the public and ourselves in these matters, but even our students, while with us, must receive many unusual attentions and much solicitous care, if we are to develop them to their highest usefulness. They too are pioneers—they have broken away from the lines usually followed by young men seeking college training, and are placing themselves in new fields. They too meet more or less prejudice, indifference and opposition at home and abroad. Timid ones, whether pupil or teacher should keep out of this agricultural effort. All this opposition is only enough after all to strengthen worthy minds.

Much that engages our time and energies cannot be described in a brief report like this. One tangible form can find illustration. I refer to finding places for our students. Where a few years ago there was no call for our students, no market for such educational product, as it were, we now have almost a thousand letters and personal visits annually from those who wish to employ them as farm hands, creamery and cheese factory operators, farm superintendents and managers, and finally as investigators and teachers. In each and every one of these cases, there must be personal conferences, in my office, or with Mr. Otis, or Mr. Farrington, plans must be laid, letters written, etc. Our correspondence on the one subject of placing our students in po-

sitions each year necessitates the writing of some thousands of letters and hundreds of personal conferences.

Relieved from many former cares, I am now coming into the closest contact with all the members of the long course classes and am giving these a large amount of time and study, each one's case being carefully considered. I realize that the way to get at the foundations of this course of instruction and build it up right is to thus study the characteristics, needs and opportunities of each one, and out of such studies to establish broad principles and build up rational instruction. One of the first outgrowths of these studies is the plan for a system of accredited farms and student apprenticeship treated elsewhere in this report.

#### ASSISTANT TO DEAN.

During the past year Mr. Otis has rendered helpful assistance in supervising the publication of the report and bulletins issued, has cared for visitors, given special attention to the long and short course students, not only in their college duties, but in placing them on farms and in other ways. He has conducted 168 recitations, with classes aggregating 565 students. Ninety of these recitations were with junior and senior long course students.

Mr. Otis has had charge of a feeding experiment begun by the undersigned ten years ago. In this experiment, so long continued, an effort is being made to determine the relative values of ground and unground corn as a food for fattening swine. We have now completed our tenth year of such feeding and a closing summary of results will appear in the next annual report. A number of experiments in practical feeding are being planned.

The coming of Mr. Otis has relieved Mr. Moore of the general care of the short course students. This is fortunate, for Mr. Moore is more than busy with the work of the agronomy department.

No small part of Mr. Otis' time is taken up in conferences with the students in regard to their studies, future occupation, and especially in aiding them in securing positions where they can earn money and help themselves along. This work alone involves the writing of a couple of thousand letters and scores

of conferences with farmers and others who visit the College, seeking to employ our students. It is matters of this kind in this division, as well as of others of the College of Agriculture—things which do not show in the records—that take so much of our time and energy. An institution of the character of ours, in close touch with the people it serves, can be of the highest use, and yet the labors involved are often little realized by the public generally.

#### AGRICULTURAL BACTERIOLOGY.

Doctor Russell reports that some fifty University students have studied bacteriology during the present college year, one-half of which were from this College. During the year the large bacteriological laboratory room in Agricultural Hall has been equipped through the allowance provided by the last Legislature and is now occupied by students. Thus our facilities for instruction have been materially increased. Dr. Russell states that we now have substantially sufficient equipment and facilities for instruction in this line for the coming year.

Research efforts in the bacteriological department have moved mainly along two lines during the last two years; namely, Swiss cheese investigations and studies in bovine tuberculosis. This division is in active co-operation with the State Live Stock Sanitary Board in its tuberculosis studies.

The work of locating and determining the prevalence of tuberculosis among cattle and eradicating the same when found, is expanding with wonderful rapidity. Our attainment stands in strong contrast with that in some other states. The state of Massachusetts, for example, expended something like three-quarters of a million dollars in an effort to stamp out bovine tuberculosis. The draft upon the state treasury was so heavy and the methods such, that there soon came a revulsion, and progress to the desired end was checked and has since been slow. At this institution a different plan has been followed from the beginning. Serious as is the matter, it was deemed prudent to begin a campaign of education in an inexpensive, quiet way, which has been persisted in at all times. Each winter tuberculosis cattle are slaughtered for inspection by students and visitors. We have also had slaughter tests for the instruction of members of

the legislature, and for the public generally on the state fair grounds during the annual fair. Several bulletins have been issued. The work has been pushed from the institute platform. Our students have been trained to conduct tests of suspected cattle with the Koch lymph. The department early united its efforts with those of the State Live Stock Sanitary Board, the co-operation of which, especially through its executive officer, Dr. Roberts, has been most economical and helpful to the commonwealth.

The rewards of this campaign, arduous as it has been, are ample and satisfactory. During the ninety days ending May 15th, the department furnished stockmen over 5,500 doses of the Koch lymph, which on use, has shown over 600 animals, nearly all dairy cows, to be afflicted with the dread disease. These animals have since been slaughtered and in so far a dangerous source of infection has been removed.

A series of exceedingly important experiments have recently been instituted in testing the Von Behring preventive treatment.

#### STATE AID REQUIRED.

After going over the situation with Dr. Russell, the evident conclusion is reached that the time is at hand for the state to recognize the dangers of bovine tuberculosis and take aggressive measures for its eradication. To this end the combination of the efforts of the Station with the State Live Stock Sanitary Board should continue. Experiments should be undertaken as follows: To further test immunizing methods; to eradicate the disease by breeding out the same; to test the effectiveness of suitable ventilation of stables, etc.; to study the relative degree of infectiousness of animals in different stages of the disease, and pasture infection. Such work involves the maintenance of diseased animals, which must be kept by themselves. This requires the lease or control of lands, buildings, etc., and work extending over a number of years. I earnestly recommend that the subject be taken to the legislature at its next session and an allowance sufficient for the work be secured. The funds of the Experiment Station are entirely inadequate to allow us to cope with this great plague.

It is important to report that the United States Department of Agriculture has supplied the University with over one thousand dollars' worth of the Koch tuberculin lymph. That it has in turn dispensed gratuitously to those farmers calling for it and using it under the rigid restrictions laid down by the Government and the bacteriological department.

#### AGRICULTURAL ENGINEERING.

For reasons beyond the control of the regents or the head of this College, the department of agricultural engineering is yet without a building, although provided for by the legislature of 1903. If present plans carry, a suitable structure will be ready for the winter classes of 1907-8. Provision should be made for equipping this building and the agronomy building.

#### AGRONOMY.

Twenty-eight long course and 150 short course students received instruction in agronomy this year.

When the new building provided by the legislature is completed, as we expect it to be by next winter, the department will be able to render service of still greater value to the state.

The sixty acre tract of land purchased two years ago is now devoted to testing and improving farm seeds and crops. Our facilities are greatly increased thereby.

Improving grains and forage plants through selection and hybridization is the leading effort. Twenty-four varieties of oats, sixty of barley, five of rye, and three of corn, now in the breeding plots, are being studied to secure superior strains which in time will certainly increase the yields of Wisconsin farms.

#### AN ILLUSTRATION.

In 1899 Mr. Moore secured from the United States Department of Agriculture, Washington, a number of varieties of oats for testing. One sample from Russia, weighing about two pounds, was planted, with many others. It showed superiority. The seed was saved and multiplied. These oats have been widely distributed, largely through former short course students, members of the Experiment Association. Mr. Moore estimates

that approximately 10,000,000 bushels, or one-tenth of all the oats of the state produced during the past season, were of this variety, and all from two pounds of seed, planted on the university farm in 1899.

#### BARLEY.

Through members of the last legislature, 133 sacks of seed barley were distributed in the state. From a number of reports received, it is shown that this barley gave a yield of about six bushels per acre more than the common barley grown by the farmers.

In 1898 a sample of barley, known as the Oderbrucker, was secured from the Ontario Agricultural College, Guelph. A test showed it to be very productive, and Mr. Moore began a study of its usefulness to our farmers. This barley contains an unusually large amount of protein. Protein-rich barleys have been held as poor for brewing purposes. High protein content render them valuable for nutritive purposes generally. During each of the past two seasons, 100 bushels of this barley have been furnished the Wahl-Henius Institute of Fermentology, Chicago, for brewing tests. The results of these tests go to disprove the statement that protein-rich barleys are necessarily not desirable for brewing purposes, this variety giving satisfactory results.

Last year the station grew 800 bushels of the Oderbrucker barley, which has this year been distributed among 250 members of the Agricultural Experiment Association.

#### CORN.

Out of the many varieties of corn tested, Mr. Moore has found three that he believes will be particularly valuable to the farmers of the state.

#### THE EXPERIMENT ASSOCIATION.

This Association, made up of former agricultural students, now living on their farms, has a paid membership of 704 at the time of writing this report, and will reach nearly 1,000 by the next annual meeting. A full account of what is being done is given in the annual report of the Association. It is the largest agricultural organization in the state.

## ANIMAL HUSBANDRY.

Mr. Humphrey reports that his force has given more than 1,300 hours' instruction in animal husbandry during the year now closing.

In earlier years there was more or less combination of short course and long course instruction in animal husbandry. Two years ago we began to divide the instruction and during the year now closing each class has practically had its separate work at all times. This has necessitated a large increase in the number of hours devoted to instruction, throwing much additional work on those involved. It has tended to greatly strengthen the long course training.

The correspondence and extension work of the animal husbandry department is large. It is called upon for every possible sort of help by a clientage as large as the farming interests of the state itself. What the professors and instructors are called on to do outside of the class room takes far more time and is more wearing than the regular instruction. There are 175,000 farmers in the state, and if only one in a hundred asks that which requires but a few minutes' time to answer, we would be swamped—yet we are all the time getting into closer touch with the farmers.

The numerous experiments in feeding sheep, swine, and dairy cattle are shown in the reports and bulletins of the station, and need not be here dwelt upon.

## NEEDS.

We have reached our limit of accommodations with the present quarters for farm animals, and there can be no increase in flocks and herds until we have more ample accommodations. Two years ago we asked for a cattle barn and stock-judging building. We need this building badly and should not have to wait much longer for it.

Our second, or "Hill Farm," purchased eight years ago, has a small, poor barn and a cheap shed for stock. No buildings have been placed thereon since it was purchased. A barn should be erected on this farm at the earliest possible date. This would

hold hay, and house stock when not needed at the University farm proper. .

#### CHEMICAL DEPARTMENT.

In the 22nd Annual Report, Doctor Babcock gives the results of long-continued studies of the efforts of withholding salt from dairy cows. This most valuable physiological study shows that all former work on the subject is practically worthless. These studies cannot but attract great interest among all students of physiology—animal and human.

Mr. Woll has devoted a good deal of time to studies of the nutrition of the dairy herd. The effect of tuberculin testing on the milk secretion of cows, and the adaptability of soils in the driftless area of the state for sugar beet growth, have also been under study.

The work of testing dairy cows grows steadily. Last year 356 different pure-bred cows were tested by this department for periods ranging from one to thirty days, the total number of tests so conducted being 863. As many as eight assistants were employed for this work at one time. This year the breeders are advancing in their methods of testing to a more satisfactory and reliable system. The monthly test throughout the year is supplanting the former seven-day test.

The inspection of commercial feeding stuffs and fertilizers has progressed satisfactorily. Seventy-six brands of feeding stuffs and twenty-two brands of commercial fertilizers have been licensed. Each brand pays a license fee of \$25. The supervision of this work takes a large amount of time.

Assistant Olson, employed largely upon feeding stuffs and fertilizers, has been in search of a method for calculating the proteids in milk. A large amount of work has been done by the department.

#### CHANGES.

The condition and needs of the chemical department call for careful consideration at this time. A thoroughly trained chemist is required who shall do a limited amount of teaching and give his time largely to research work of the highest grade. Mr. Brown is leaving us. His place should be supplied by a well

trained man, who will develop agricultural chemical instruction. Additional courses in agricultural chemistry should be provided and the standard of instruction brought to a higher level than it now is. We cannot do this until we have secured the two persons above indicated. We are now searching for them.

#### THE WORLD'S RECORD COW.

In conducting our numerous tests of cows about the state, it was found that the Guernsey cow, Yeksa Sunbeam, No. 15439 of the Guernsey Registry, owned by Mr. Fred Rietbrock, of Athens, Wisconsin, completed the largest year's record of any cow in the world, under similar official inspection. As in all such cases, once during each month a representative from the station appeared at the farm, without previous notice, and remained at least one day, weighing the milk produced by the cow and analyzing it for the fat content. The daily weights of milk by the owner were in this way authenticated. The results of the test for the year ending September 1905, show that this cow gave 14,921 pounds of milk, containing on an average about five and three-fourths per cent. of butter fat. The total calculated fat is 857.15 pounds. This amount of fat would produce 1,000 pounds of butter. The cow weighed 1,200 pounds. Thus it is seen that she gave during the year about eleven times her weight in rich milk. To date, this is the world's record for the production of a cow under Experiment Station supervision.

It is needless to say that the announcement of this test has created a great deal of interest everywhere throughout the dairy world. It has brought into prominence more than ever before the great value and importance of authenticating and thoroughly substantiating the record yields of dairy cows by the experiment stations in such manner as to give the public full confidence in the announced results. The Wisconsin Station has been in the front rank in carrying on this important work. The rules for officially testing cows laid down by this Station have been adopted almost in full by some of the breed associations.

## DEVELOPING THE BEET SUGAR INDUSTRY.

We are proud of what the Wisconsin Agricultural Experiment Station has accomplished for the state in the development of the great beet sugar industry through the studies of the chemical department. Seventeen years ago we began to study whether Wisconsin was adapted to the growth of the beet root, especially used for the production of sugar. We had before us the example of the nations of Europe, which, starting in an insignificant way, had carried on the production of sugar until about two-thirds of all used was from the beet root. And all of this was accomplished in competition with sugar produced by cheap labor in tropical regions. These studies have brought out the important fact that Wisconsin is one of the very best states in the union for the production of sugar from the beet root. Not only are soil and climate both favorable, but we have an industrious, thrifty people on our farms, who are glad and willing to undertake the laborious task of properly caring for the sugar beet, which is the most highly bred plant in existence.

Last year four sugar beet factories (three of them in the state) working up Wisconsin beets, produced about thirty million pounds of refined white sugar, worth nearly one million five hundred thousand dollars. Another factory is nearing completion in the city of Madison, and will add some millions of pounds of sugar to the output for the present year. Probably close to two million dollars' worth of sugar will be produced this year. When this is done, we will have substantially as much other agricultural products as before, and we will have most of the million and a half dollars, which would otherwise have been sent out of the state.

In studying the wonderful prosperity of our state and nation in these days, we should not forget that it rests primarily upon the increasing intelligence and efficiency of our agricultural people.

## DAIRY DEPARTMENT.

The students registered in this department during the present year were as follows:

Graduate students .....	2
Long Course .....	20
Dairy Course proper .....	178
Short Course men taking Farm Dairying .....	184

Over two hundred and fifty applications came during the past year for men to fill positions, mostly in creameries and cheese factories, but also as dairy teachers, instructors, managers of pure-milk supply plants, etc.

A considerable amount of research work is in progress. This includes a study of the mechanical losses in butter-making, the influence of analine butter colors on the flavor of butter, and Swiss cheese investigations.

A creamery sewage disposal plant was erected during the past year at a cost of several hundred dollars. An investigation of the disposal of creamery sewage is being carried on jointly by the College of Engineering, and the dairy, bacteriological and chemical departments of this College. A large amount of the work has been done, but we are not able to report results at this date. The problems under study are exceedingly complex, and we must exercise patience with those in charge.

## TEST OF A MILKING MACHINE.

The all-absorbing question with the American farmer is where to get labor. There is an imperative call for a milking machine, and inventors have been at work on the problem for a generation without much success until recently. During the last few years the subject has been taken up in a modern way and apparently we are near the attainment of a practical machine.

The D. H. Burrell Company, Little Falls, New York, appears to be in the lead. Their machine is being studied in a quiet way at two or three points. I recommend and urge that studies in this line be undertaken at once. These should include not only practical trials, but deeper studies, such as the effects of me-

chanical milking on the composition and yield of milk so drawn, effect on the milk glands. etc. It is entirely possible that while the cow may yield her milk to a machine, the flow or the quality may be modified, or the machine may have some other ulterior influence. This college, a leader in dairy matters, should at once take up this great problem and help solve it.

#### BUTTER SCORING.

In conjunction with the Dairy and Food Commission and the State Butter and Cheese Makers' Associations, this College has joined in a monthly butter and cheese scoring exhibition. Great interest is being awakened among the operators of creameries and cheese factories and we believe much good will come through the effort. It is most satisfactory to report that this enterprise is a joint one, the University uniting with other powerful state organizations in a common cause. This combination is in the direction of economy, the highest efficiency, and the broadest interest, and is in line with our teachings on the importance of union in all efforts whenever possible.

The co-operative work in cheese investigations carried on with the United States Department of Agriculture is reported elsewhere. Repairs are needed on the Dairy Building as follows: Cement front steps should be constructed and a tile vestibule placed in the main entrance. The bath rooms should be re-equipped. The walls of the churning and pasteurizing rooms should be re-lined.

#### FINANCIAL CONDITION OF THE UNIVERSITY CREAMERY.

I desire to call your attention to the most satisfactory financial condition of the University creamery. The following is a statement of receipts and expenditures for the year ending June 30, 1905.

Receipts and expenses of University Creamery for the year ending June 30, 1905.

#### *Salaries:*

Professor .....	\$2,300	
Assistant .....	1,000	
Instructors .....	1,965	
		\$5,265 00

Bookkeeper and stenographer.....	600 00
Wages of laborers, janitors and laundry.....	2,296 04
Payments to farmers for milk used.....	41,286 06
Office supplies, telephone, etc.....	346 92
Freight on products sold.....	481 92
Freight on machinery purchased, loaned for instruction and research, etc.....	224 72
Buildings and repairs.....	298 59
Furniture and fixtures .....	45 51
Tools, implements and machinery.....	693 50
Butter storage .....	58 60
Dairy supplies .....	1,038 41
Scientific apparatus .....	358 92
Electric power, light and gas.....	651 75
Printing dairy school circulars.....	91 50
Photos, lantern slides, etc.....	36 30
Ice .....	92 50
Horse shoeing .....	18 70
Traveling expenses .....	81 01
<hr/>	
Total .....	\$54,010 73
Receipts from sales of products.....	51,644 40
<hr/>	
Deficit.....	\$2,366 33

In the above statement, no credit appears for students' fees. Fees included, the University Creamery is nearly self-sustaining.

It should be remembered that the students come to us more or less without skill, and that there are unavoidable losses of products or injury thereto, with consequent depreciation of prices incident to the presence of such large numbers receiving instruction. As soon as the students become skillful, they leave us, only to be replaced by others who start at the bottom again. There is much breakage, a great amount of wear and tear of all kinds incident to laboratory work, instruction, etc.

The above statement of expense covers research as well as instruction. Considerable material is rendered worthless or of low value from this cause. It will be further noted that the above list includes expenditures for a large amount of tools and machinery, much of which is required in duplicate because of instruction; also a large amount for scientific apparatus used by students in the laboratories and for research purposes; also traveling expenses of inspectors visiting students who are working for dairy certificates; advertising matter and many other expenses unknown to a commercial creamery. Considered as an educational institution, combining the highest grade of theory and the most intensive, helpful practice, the University Creamery is,

I believe, without a parallel in the educational world. All of this has been accomplished through the splendid management of Mr. Farrington. Mr. Farrington is now in poor health. I lay this most regrettable fact to his great exertions in preparing and carrying on the St. Louis dairy exhibit last year and his arduous labors for so many years in building up the Dairy School. There should at once be added to the dairy force one more trained assistant.

Through Mr. Farrington's efficient management, the University of Wisconsin has a dairy department without an equal. It should be sustained and strengthened by the state in its every real need. Mr. Farrington has demonstrated that he can maintain the difficult combination of practical dairy manufacture, research and instruction. No other dairy school in America or Europe has so successfully maintained this combination in any large way, as we are doing.

#### DEPARTMENT OF HORSE BREEDING.

Wisconsin is eminently adapted to the rearing of high quality draft and carriage horses. Our farms are not large and the owners generally live thereon. These conditions, together with the favorable climate, numerous grasses and clovers, and pure waters, combine to furnish conditions for the most favorable nurturing of horses. Great markets are close at hand. It is not surprising, therefore, that this College has taken up horse breeding in an especial manner, thereby instituting a line of effort new to agricultural college effort in this country.

During the year Dr. Alexander has prepared Bulletin 127, relating to the horse, nearly forty thousand copies of which have been distributed. The passage of a bill by the last Legislature directing that all stallions used for public service in the state be registered by the Agricultural College, the owner paying a license fee of \$2.00, is working a great change for the good of the horse interests of the state. As Dr. Alexander's work in this particular is new, I submit herewith, marked "Exhibit A," a copy of his report to me on the work in hand. A reading of this report will show that a vast deal of work has been done in the department during the year. For several months past, the work has required not only Dr. Alexander's time, but that of from

two to four assistants as well. The expense of all this, including that for filing cases, stationery, postage, registered letters, etc., makes up a very large sum. This, however, is more than met by the license fees. It is impossible to estimate with any accuracy the receipts from license fees for the coming year, but they will certainly be much less than for the present year, as only stallions brought into service for the first time will be required to pay such a license. Of course those in authority will carefully conserve all receipts from this source and none will be used for any purpose other than promoting the horse breeding interests of the state, through the efforts of this College.

It is of the utmost importance that the University move with all diligence toward the erection of the horse building, asked from the last legislature. Whatever the building constructed, it should, like others the University now plans, be arranged for future enlargement, which will surely be demanded with future growth. For the sum asked, we can secure a suitable pavilion for housing horses and conducting horse exhibitions, stock sales, etc. Dr. Alexander's report covers fairly well the requirements, as we now see them. The future will, without doubt, make new calls.

I respectfully ask that Doctor Alexander, the University architect, and myself, be directed to at once proceed with the preliminary outline plans of the proposed building. There is no building in existence that will serve as a model for the one we need, yet a study of the buildings for the International Live Stock Show, Chicago, the veterinary buildings at Cornell, Pennsylvania, etc., will be suggestive and helpful.

When the proposed building is completed, the University will be in position to offer to the stockmen of the state a suitable place for conducting sales of pure-bred live stock. The good which will flow from such opportunity can scarcely be measured. Our stockmen will bring high quality representatives of their herds and flocks annually to the Agricultural College for sale and dispersion throughout the state and to other countries. These sales will be conducted with the greatest facility and comfort, and at the least possible cost to the stockmen interested. This alone will have a beneficial effect. The railroad facilities of Madison are the best in the state. Stockmen will be brought

into close touch with their Agricultural College, and, a matter of very great importance, our agricultural students and professors will have opportunity, through these sales, to study good representative specimens of the various breeds of live stock. Stock sales of this nature at an agricultural college are a novel feature for America. It is matter of history that this College has initiated a number of important movements for the advancement of agriculture. No other college has a building of the kind proposed and no other college has so far undertaken work in these lines. Let us proceed at once to plan, erect and equip the building here asked, and with all reasonable dispatch carry on the enterprise.

In my previous report, I asked for an annual allowance for the support of the department of horse breeding. As soon as we have the proposed building, its occupation and what goes with it, will make necessary the expenditure of the full sum asked. The allowance asked is but a small sum to represent the horse breeding interests of the state at its Agricultural College.

Your attention is called to Dr. Alexander's report (Exhibit A), in which we are told of the formation of a State Draft Horse Breeders' Association which promises great good to the state. The horse building will be used by this Association for an annual stallion show, a stallion sale, etc. The Society urged that we have the building ready for a show in February, 1907, but this is out of the question. We can and should have it ready for their use one year from that time.

#### HORTICULTURAL DEPARTMENT.

A large amount of instruction is given in the horticultural department. A number of University students, mostly young women, now elect studies therein. The laboratory facilities in this department are becoming more crowded, and I look to the future with considerable anxiety. Greenhouse instruction has greatly improved under the efforts of Instructor Moore. In considering this department it should be borne in mind that the University has no department or division of entomology. Nearly every other agricultural college of importance has such a department.

A wide range of experimental work is in progress. The extensive work of improving the wild plum, begun by the lamented Professor Goff, and continued by Professor Sandsten, will soon close, with some new varieties of excellence as the result. A number of promising seedling apples have likewise been developed. An important line of research is a study to determine the effects of low temperatures on the condition of apple trees.

An interesting and suggestive line is the variation in the structure of tomatoes, both leaves and fruit, brought about by supplying an abnormal amount of plant food. Seedless tomatoes have been produced in this way and the work verified by repetition. This opens up a most interesting and important field of research.

Extensive variety tests are being carried on with strawberries and potatoes, the latter for the further purpose of ascertaining if blight-resisting varieties are available. The last effort is in co-operation with the United States Department of Agriculture.

#### TOBACCO STUDIES.

By direction of the legislature, tobacco investigations are continued. In the past three years, over four hundred pounds of tobacco seed has been distributed, greatly to the benefit of those directly interested. The regents will be asked to permit the erection of a model tobacco-curing barn during the present summer, the same to be paid for out of the allowance directed by the legislature and set aside in the budget.

#### EXTENSION WORK.

An exceedingly useful line of extension work is that of preventing the dread potato blight by the use of the Bordeaux mixture. Last season was favorable to the blight and the demonstration work in Waupaca and Dunn counties was very effective. A bulletin describing the work has been issued.

During the present season the work will be continued in Columbia, Portage and Burnett counties.

## NURSERY INSPECTION.

A considerable amount of work falls upon the department through the annual inspection of nurseries, as directed by law. This is for the purpose of protecting the state from the introduction and spread of fungi and insects injurious to cultivated plants. The San Jose scale is proving a most destructive pest to fruit growers in many states. It is even attacking and killing many of the common shrubs on lawns. The pest has been found in one nursery in the state by our inspector. All infected trees were destroyed.

## A TOOL-STORAGE-SUPPLY BUILDING.

The horticultural department is in need of a building, in which may be kept tools, implements, field apparatus, supplies, etc. An inspection of the basement of the Horticultural Building in its present over-crowded condition, will show that this building should be early provided.

## DEPARTMENT OF SOILS.

Instruction is, this year, being given to freshman agricultural students in surveying for the first time. The class, numbering 53, is getting excellent drill, not only in the matter of surveying and platting farm lands, but in planning drainage systems and in laying drain tiles. This effort is further important in that it brings long course students in touch with their college during their first year at the University.

## CROWDED CONDITIONS.

The soils department is crowded to the limit in laboratory facilities for its students. Although the class has been divided into two sections, Mr. Whitson states that with any further increase in attendance, this arrangement will not long prove satisfactory. How to provide more room within the walls of the present building is beyond our ability to solve.

## RESEARCH.

In earlier times the department of agricultural physics covered farm machinery, soils, etc. The department of agricultural engineering, in charge of Mr. Oeock, now takes the farm machinery work, leaving Mr. Whitson free to carry the soils studies. He is taking up this work in a thorough, systematic manner, and I look for far-reaching results of the greatest value to accrue as his research proceeds.

Because of aid rendered by the last legislature, we have established several soil sub-stations in various counties, and larger efforts are contemplated for the coming year.

Mr. A. T. McLeod, a graduate student at the University of Chicago, has been engaged to aid in the work.

The soil work includes:

1. A general study of the different types of soils of the state. Marsh soils are being studied at Marinette, Phillips and Mather. Sand soils are under study at Sparta.
2. The great general problem of soil fertility. Under this head an effort is being made to ascertain the causes and effects of soil acidity, and the influence of humus on plant growth.
3. Influence of soil on the composition of the sugar beet. This last is in co-operation with Professor Woll.

## LAND DRAINAGE.

The department is rendering much valuable assistance in both large and small drainage operations at various points in the state.

## CRANBERRY INVESTIGATIONS.

The cranberry station at Cranmoor is in satisfactory condition. Mr. A. G. Malde has direct charge of the work, under Mr. Whitson's supervision. A most valuable result obtained in this study is the amelioration of frost danger to the blooming cranberry in spring and the ripening fruit in the fall, brought about by drainage, sanding and freedom from weeds. These findings are based upon a scientific study of conditions affecting frost temperatures.

## NEEDS OF THE DEPARTMENT.

The lack of laboratory room in the soils department, for instructional purposes, is referred to above.

Another need is the reconstruction of the large green house at the rear of the Soils Building. As now arranged, it is impossible to keep the space uniformly heated, and the heat loss is large. This change is greatly desired in order that important work in soils may be properly conducted.

## THE FARMERS' INSTITUTE.

At the closing Farmers' Institute, held at Plymouth, March 13-15, resolutions were passed in which reference was made to the increased expenses of the Institute, the decreased number of institutes held, and the necessity for a larger appropriation. The communication was addressed directly to the legislature, but a copy has been received by me from Superintendent George McKerrow, who informs me that other copies were forwarded to yourself and to the regents. For two years past the Institute expenses have exceeded the annual allowance.

The Farmers' Institutes have accomplished vast good to the agricultural interests of the state. I recommend that the matter receive consideration by the regents previous to the meeting of the next legislature, at which time steps should be taken to correct and improve the present situation.

## SHORT COURSE IN AGRICULTURE.

Twenty-six years ago I came to the University to take charge of its agricultural work. In the beginning an earnest effort was made to secure students for the four-year course, but almost without success. In 1885 the short course was instituted and we soon found that the University could help agriculture in that direction, where it had failed in its first efforts. For years, our energies were directed mainly to the briefer courses of instruction. Through the short course and dairy course efforts, a vast good has been accomplished to agricultural educa-

tion in general and to the agricultural interests of this state in particular. The Wisconsin University was the first institution in America to map out and give a definite, brief course of theoretical and intensely practical agricultural instruction, arranged in every particular to a definite, useful end.

This effort early met with criticism from several sources, some of which has not ceased even to the present time. It is an interesting and suggestive fact, however, that a large number of other institutions have taken up the same line of instruction, likewise with success. The requirements of our short course students forced us to develop agricultural pedagogy in a way and to a degree that would not have come had we traveled along the lines originally laid down. Earnest young farmers, eager for information, compelled us, as it were, to provide up-to-date, helpful, definite, agricultural instruction—they would accept no other. Under the short course impulse at this institution, some of the best agricultural text books now in use have been written and more have been prepared here than at any other one institution in the land.

#### THE FARMERS' COURSE.

Following the same line of thought as brought out in the short course, three years ago we instituted a ten days' course of instruction for the busy farmer, limiting attendance to those twenty-five or more years of age. The course is a marked success. Every county in the state is represented in attendance and much enthusiasm prevails. It is a splendid thing for the University of Wisconsin to bring to its doors each winter for a ten days' stay, the best and most energetic farmers of the state. The great intellectual wealth of the state, represented in all that comes under the term "University" is quickly recognized and keenly appreciated by this active body of citizens. The good accomplished can never be measured. How the course is appreciated is shown by its growth which for the years of its existence has been as follows:

1904 .....	175
1905 .....	227
1906 .....	410

## THE LONG COURSE.

In developing instructors, agricultural pedagogical methods, and acquiring suitable agricultural equipment, we were laying better than we knew the foundations for a strong, systematic, consistent, thorough course of agricultural instruction, which we call the long course. In this particular our development, after all, has been normal. This course, which was the first thought of, was, as before stated, a failure for many years. Students would not register under it. Now it has begun to grow and grow normally, and all has come without lowering our high standard of admission to the course, or holding out any other abnormal inducement. The growth of this course in recent years is shown by the following table:

Attendance of long (four year) course students by years since 1897.

1897-8 .....	8
1898-9 .....	6
1899-1900 .....	9
1900-01 .....	18
1901-02 .....	22
1902-03 .....	31
1903-04 .....	57
1904-05 .....	80
1905-06 .....	136

It will be seen that after advertising a long course in agriculture for thirty years, that in 1897-8 the University registered only eight students in such course. About 1900 the attendance really began to grow and has been increasing about fifty per cent. each year since that date.

There are limitations to what the University can undertake with the shorter courses in the way of numbers of students. Among these are the size of class rooms, the number of instructors, the duplication of equipment, etc. It is out of the question to receive any considerable percentage of 175,000 farmers of the state for actual instruction at the University. We must reach, and serve this class largely otherwise through publications, extension work, the institutes, and especially

through the county schools of agriculture, which, fortunately, are now being established. While there are natural limitations for direct University instruction to this class, there is practically no limit to our possibilities, with long course students, since these will never come in such numbers. The long course men, when properly trained, are to be the leaders, the teachers, the guides in all the great movements taking place in higher agriculture. Above all, the University must prepare these men most fully for the great work. I urge that this College receive at your hands, from the regents and from the legislature, every possible aid in building up the long course of instruction. More buildings, more equipment and more and better teachers are needed.

#### ACCREDITED FARMS AND STUDENT APPRENTICESHIP.

Farming is a business in which no amount of mere scholastic attainment will take the place of well grounded experience, skilled practice and good common sense. Science has been doing so much for agriculture these later years that, as teachers, we have had our attention and energies largely directed to the scientific side of agriculture and have been half blind to the importance of the practical. We have failed to properly recognize the necessity for a happy combination of the theoretical and the intensely practical. A number of years ago, in our effort to correct this, the writer planned a system, by which our students were to be specially instructed in practical agriculture on the University farm during the summer vacation, and also during term-time, receiving a limited compensation in consideration of performing certain operations. They were to be helpers, drawing some pay. A small appropriation was asked for the purpose, and allowed by the regents. The plan was never put into practice, for the University farm is, in my judgment, unsatisfactory for such training, and when we came to face the problem the results seemed to be too uncertain. From that time to the present the matter has rested, but I have never relinquished the desire to have this College more truly helpful to agricultural students in matters of practice than it has thus far been.

I believe the time is at hand for a forward movement which to me is full of promise. To this end I ask that the faculty of the College of Agriculture be allowed and directed to undertake in an experimental way, the development of a system of accredited farms and student apprenticeship.

#### ACCREDITED FARMS.

Accredited farms should be selected and designated as such by the University only after satisfactory inquiry into the character and standing of the owners or managers, and full knowledge that the farms chosen are operated in a thorough, business-like, up-to-date manner. Usually these farms will be selected because of their special excellence along one or more distinct lines of agricultural production. We believe and hope that farmer-citizens of our state will come to regard it as a mark of honor to have their places on the list of University accredited farms.

Agricultural students will be urged, beginning with their freshman year, to spend their vacations on accredited farms. Those who lack ordinary farm experience, will be urged either to take one year of practice before entering College or to withdraw from College, after a year or two of study, and give one year to drill on such farms. The student will be further urged to early elect some special line for his life work, such as floriculture, gardening, trucking, fruit growing, seed production, or some branch of animal husbandry. He should early make such selection, in order to go to such places as will give him the best training in his specialty. The student apprentice will work upon the accredited farms for wages mutually agreed upon by himself and employer. When sending the student to the accredited farm, the University will furnish the manager with carefully prepared blanks, which will be filled out by him and returned to the College. The student will be impressed with the importance of such conduct and industry as will secure good reports. It is our intention that these reports shall not have to do, for the present, at least, with securing a degree. For the present the University will grant its students a degree upon satisfactorily completing the catalogue curriculum. While

this may be so, nevertheless the results of an apprenticeship system on an accredited farm will be of great importance in helping this College guide and counsel the student in his future career.

We are constantly being called on to recommend students for all sorts of positions, in agriculture, ranging from farm hands to those requiring high scholastic training and thorough practical preparation. No man can hope to hold any of the higher positions in agriculture with eminent success who has not at some time had his faculties developed by well-rounded farm practice. We must impress upon our students in the future, more than ever in the past, the importance of supplementing the theoretical with the most rigid intensely practical drill possible.

We have already taken up the matter in an informal way, entering into correspondence with a number of leading farmer citizens of the state, and find that many are interested therein. There is encouragement on every side. Students are coming to us for conference and help in getting into line. A large number are this summer going to carefully selected farms.

The plan involves no direct outlay by the University, though there will be considerable indirect expense through increased clerical work, postage, etc. A large amount of time will be required of Mr. Otis and myself in developing the plan, formulating the blanks, conferring with the students, and bringing students and managers of accredited farms together.

The system of accredited farms will not only help our students, but it will bring many farmers into closer touch with the College. The very placing of such a proposed system in the University catalogue will show to the student, present and prospective, the necessity of combining good ample farm practice with the training of the lecture room and laboratory—something which, unfortunately, many of them now fail to properly appreciate. As matters stand, it is only too true that many of our students, at the time of leaving us, have little appreciation of the great importance of really being able to do useful things in a skillful manner.

I respectfully ask that we be allowed to take up the matter in a more formal way, attempting nothing large at first, but

developing the system as fast as opportunity offers. No appropriation is needed for the initial efforts. The work will be done by Mr. Otis and myself.

#### THE ADAMS ACT.

The Adams act, successfully passed through Congress by the efforts of Congressman H. C. Adams of this district, will prove of the highest benefit to the agricultural interests of the state and nation. By its provisions, the initial increase to our income next year will be \$5,000, rising \$2,000 per year until such annual increase amounts to \$15,000. Thus in time the present Hatch allowance of \$15,000 for research work will be doubled.

The provisions of the bill and the rulings of the Secretary of Agriculture, make it imperative that the money received by the stations from the Adams act shall be expended in high grade agricultural research in the strict sense of the term, and not for any other purpose whatsoever. This lays a new obligation on the state and the University. We must definitely outline in advance, one or more agricultural rescarches, strictly scientific in character. If there is not money enough for these, it should be provided for by the state. Indeed, the Committee on Agriculture of the House of Representatives, states of this bill: "It will necessitate corresponding increase of appropriation from the various states, because of the additional work provided for."

At this writing it is too early to make a definite statement of the lines of work most desirable to be undertaken under the provisions of the Adams act. The matter will be reported to the regents at the earliest possible date.

#### PURCHASE OF LAND.

The purchase of 32 acres of land, lying west of the original "University Farm," for \$16,000, is an important event in the history of the development of the land property of the University. It is patent that we must soon relinquish our control of the 31 acres of Camp Randall now used for farm purposes. It was because of this knowledge that I urged the regents to purchase the Albers land, extravagant as the price then seemed.

The wisdom of the purchase is already patent. A few months after the transaction, a company purchased a tract of about forty acres lying a third of a mile further out, for \$600 per acre, and is now selling this in lots at the rate of \$1,500 to \$2,000 per acre. A few acres west of the Albers tract (further from the city) have just been sold at \$600 per acre. The Albers tract will barely make good the loss of Camp Randall when that occurs, so that there is really no net permanent gain to the College of Agriculture.

The policy of land purchases should be continued. The normal development of the Wisconsin Agricultural College makes it imperative that the home farm should embrace at least twice its present area, if it is to conduct its work properly. We must have the farm animals close at hand when needed for investigation and instructional purposes. Our farm tract of 220 acres, two miles distant, is highly useful and supplements the home tract admirably, but cannot take its place.

The purchase of the King and Caesar tracts for the College is in accord with the wise policy inaugurated, and cannot be too favorably regarded. The College must naturally suffer otherwise for a time because of these expenditures, but those in authority are building for all time, and we should willingly accept the situation.

#### DEMONSTRATION FARMS IN THE LAKE SUPERIOR REGION.

Immediately south of Lake Superior is a region having a stiff, red clay soil, embracing about one million acres—now mostly a wilderness. South of this line a sand belt of still larger area, likewise a wilderness. On or near the shores of the lake are the cities of Superior, Bayfield, Washburn, Ashland and Iron River. About each of these points are a few settlers that have gradually spread out from them. The vast territory has no seeming organic connection with the remainder of the state further south. Agricultural progress has been distressingly slow.

A year ago last winter an effort to bring about a change for the better was set in motion by citizens of the region in question, the president of the University, and the dean of this Col-

lege. It is a pleasure to report as a result the establishment of three demonstration farms—one on the Poor Farm, Douglas County, another within the city of Iron River, and a third within the city limits of Ashland. Ample areas of land have been secured and crops have been planted at each place this spring. It is interesting in this connection to know that an investigation of this red clay region, conducted by experts of the United States Department of Agriculture, led to an unfavorable report of its agricultural possibilities. Among other things, it was stated that owing to the character of the clay soil, and deep freezing in winter, tile drainage would probably prove impossible or unsatisfactory. Last fall, under Mr. Whitson's direction, Assistant Jones drained with tiles several acres on the Demonstration Farm located on the Douglas County Poor Farm. The tiles are working satisfactorily and plainly improving the condition of the soil. It is too early to state definite results.

In securing the three demonstration farms, we have had invaluable help from the business men of the cities round about, and have been able to make most favorable contracts for the use of the land, etc. If we can continue as well as we have begun, we will obtain the largest possible results from the expenditure of a given reasonable sum of money. Mr. Delwiche, a member of the graduating class, has been placed in charge of the work of these demonstration farms. He will live at Iron River.

Mr. Sandsten has planted experiment fruit orchards on the main land near Bayfield and on Apostle Island, sixteen acres in all. We furnished the trees, the owners of the land contracting to care for them without further cost to us.

This undertaking, of the greatest importance to a large region which has heretofore practically been without University recognition or help, though sorely needing it, was made possible by the financial provisions of the last legislature. The work is under the joint charge of Professors Whitson, Sandsten and Moore.

CO-OPERATION WITH THE U. S. DEPARTMENT OF AGRICULTURE IN  
DAIRY WORK.

During the past winter the dairy division of the United States Department of Agriculture came to us, seeking co-operation along the line of cheese studies. As has been reported to you, we have arranged for co-operation with the Department through the dairy, chemical and bacteriological divisions of the Station. The Government will furnish a chemist, and also a cheese maker nine months in the year, we to employ and pay him during the three months of the winter dairy course. Work is now being inaugurated in the line indicated, a carefully worded contract having been entered into by the Department and this College, through the regents. This is believed to be a very important step. It is hoped that at some not distant date the government will furnish a bacteriologist. With a chemist and practical cheese maker provided by the Government, and its specialists combining with our own force in planning the work, and with the stimulus of a great industry pressing us on, surely good results will follow such seasonable co-operation.

Mr. C. F. Doane, special expert of the dairy division, has moved to Madison for the summer, in order to be in close touch with the undertaking here mentioned, and to carry on certain other studies along dairy lines in the state.

## FARMING OUT STOCK.

Every agricultural college has struggled from the beginning with the live stock problem. For instructional purposes, the college should have the finest specimens of horses, cattle, sheep, and swine. It is not particularly difficult, if the means are available, to secure a goodly equipment of such animals—money will buy them. Once bought, the trouble begins. How to keep this large assemblage of highly bred animals of many breeds up to the standard of required excellence presents a situation that has almost always met with failure in the agricultural colleges. The best practical stockmen usually devote their lives to the care of but a single strain of pure-bred ani-

mals. Even with but one breed to watch, there are many failures. The public will hardly be satisfied to find at the college what would be reasonably satisfactory and acceptable on a practical stock farm. Things must be more or less on the stock-show order, all the time, rather than as they appear on the practical farm. The whole matter is made a hundred times more difficult by carrying many breeds in each of the four great classes—horses, cattle, sheep and swine. Students and the public, both, are not satisfied unless representatives of all the leading breeds are found in the college herds and flocks. The burden thus thrown on the college is a heavy one from the financial side, and almost unbearable to those struggling to keep everything in proper condition. Under the high living required, animals many times become barren, or diseased, and soon unfit for the required purpose. The steady maintenance expense eats heavily into the allowance for the work. Almost every agricultural college in America can point to at least one failure in trying to maintain representative herds and flocks of high quality, pure-bred animals at the college farm. Some of them can record several such failures.

Some time ago Mr. Humphrey recommended a plan of relief which I believe will be practical and helpful. It is that of "farming out" college stock to breeders here and there over the state. For example, if we have a pure-bred cow of merit, but for some reason not then needed, instead of selling her to some other breeder at a low price, as we are always forced to do, or disposing of her at butchers' prices, this animal be turned over to some stock breeder, generally one of our own former students, who will take the animal, care for it, and return to us part of the produce, if there be any. An animal which is beginning to lose quality at the College, often picks up amazingly when changed to a new environment. We have already tried the matter far enough to know that it promises success with pigs, and we believe it will with dairy cows. If, as the years go on, we can succeed in placing a goodly number of pure-bred animals with young, intelligent, progressive stockmen, scattered over the state, we will accomplish two things thereby—help a good many young men in their early stock breeding efforts, and to the pure-bred stock of the state, and finally, we

will have lists of animals bred and maintained under more normal conditions than we possess, to be brought back to the College from time to time, as required. The system here described is original with Mr. Humphrey, so far as I know.

#### THE "HILL" FARM.

Our second farm, two and one-half miles distant, originally comprised 160 acres. Sixty acres have since been added for the benefit of the department of agronomy. The whole farm is now well fenced, and admirably serving its purpose in an inexpensive way. As yet, we have expended no money on this farm for buildings, except in the erection of a small, double corn crib. At the earliest possible date, there should be placed on this farm a good, plain, large farm barn, for the storage of hay and other forage, and for the housing of a considerable number of cattle, sheep and swine. This farm serves admirably to take the over-flow of live stock from the animal husbandry department, where the animals can be economically cared for. Our barn room is now so limited that this useful purpose is greatly abridged.

#### BUILDINGS REQUIRED.

If the Agricultural College is to continue to develop and to serve its intended purpose, there is need of a number of buildings. The list is as follows:

- Horse Building,
- General Stock Barn and Judging Pavilion,
- Various Poultry Buildings,
- Tool Barn,
- Barn at the Hill Farm,
- Service Building for Horticultural Department,
- Re-building Green House for Soils Department,
- Tobacco Barn,

The first four of the list were asked in the biennial report of two years ago.

## A POULTRY DEPARTMENT.

In my last asking, there was requested poultry buildings and their proper equipment, together with an allowance for the maintenance of a poultry department. The poultry interests of the state have already been too long without representation at their College. Maine, Rhode Island, Utah and Cornell University, all have strong poultry departments. A number of other colleges are doing something. Our students are calling for instruction in this line, and we frequently receive letters and personal visits from those who wish us to undertake this work. It seems as though this project, which has been in mind for years, should not be longer delayed. A poultry department will be most helpful to women students. It should be located in close proximity to the horticulture and dairy buildings, because women students will naturally gather in these three buildings. The fact that we have not heretofore had a suitable location for the poultry buildings has caused hesitation in trying to initiate the enterprise. The recent purchases of land solves this problem.

I again urge that we be directed to undertake poultry instruction at the earliest possible date, providing therefor proper facilities in the way of buildings and equipment, and a suitable instructor and helpers.

## FORESTRY.

When the central Agricultural Building was planned, I arranged quarters for a department of forestry. With the efficient State Forestry service now in existence, we are one step nearer the fruition of our ambition. I do not feel like urging the creation of this department, however, until those of horse breeding and poultry are firmly established.

## ECONOMIC ENTOMOLOGY AND VEGETABLE PATHOLOGY.

All the leading agricultural colleges of this country have specialists in one or both of these important lines. It has seemed best not to push for them here until some other lines

were in existence and others better established. We should not forget our weakness, however, and should round out in these regards as soon as possible.

#### A SUMMER COURSE FOR TEACHERS.

In the last biennial report, I dwelt at some length on the importance of establishing at as early a date as possible, a summer course in agriculture for teachers. We are frequently asked if we cannot give summer instruction in agriculture. There is a rapidly growing call, as well as a need, for this course.

With the numerous lines of instruction now in operation, research work constantly pressing for consideration, and the enormous amount of miscellaneous effort ever before us, the present force of the College is already worked to its limit. Nevertheless, our great equipment of buildings, lands, live stock and apparatus should not remain in only partial use during the summer months. This is neither wise nor economical. An effort is being made to include agriculture in the rural schools. If this movement ever amounts to what its friends hope it will, it must develop from the Agricultural College downward and outward. This College is not giving the help it should.

I consider this one of the most important matters now awaiting attention by the University.

#### SEPARATION OF RESEARCH FROM INSTRUCTION.

There is one matter which should receive considerable attention at this time, and cannot be much longer delayed. I refer to a more definite separation of the work of research from that of instruction. The rapid growth of the long course makes it imperative that certain teachers be employed for the most part in the class room throughout the college year. The increased income of the Station from the state, and especially from the Adams Bill, places new obligations upon us for enlarging agricultural knowledge. Heretofore, those who have been giving instruction, have dodged back and forth from one line to the other, each doing the best he could, without any very definite

division of time, or carefully arranged plans as to time or preparation for instruction and research. Order and system must take the place of the present unsatisfactory practices.

Two years ago I asked for an increase of one teacher in each of the several departments of this College, in order to divide up the work somewhat, and especially to increase our teaching facilities. We have not been able, as yet, to secure all of these instructors, but we should do so at the earliest possible date.

#### CORRELATING COLLEGE AND COUNTRY SCHOOL WORK.

The county training school for teachers is proving a boon to rural education. County agricultural schools are being established. There should be some definite, organic connection between this College and both these systems of most important schools. There are many useful ways in which this can be done. The following will illustrate one possible line:

Country school grounds are usually woefully unattractive. Order and neatness should take the place of the present untidy conditions. The Agricultural College can provide instruction for the county training schools, so that the teachers will be able to act intelligently on this matter. More than this, under our advice and counsel, these county training schools can arrange to furnish grass seed for lawns and shrubbery for planting at a nominal cost. When shrubs are purchased from nursery agents, the charge is from twenty-five cents to two dollars each. One-year-old shrubs can be purchased in quantity at an average price of about five to eight cents each. A county training school could purchase shrubs by the thousand, grow them for a year or two in a nursery near the school, and could furnish these to the different rural school districts at cost. From six to ten dollars should cover the necessary cost of trees and shrubs requisite for the proper liberal planting of the grounds of a rural school. When the school grounds have in some measure been properly decorated and cared for, there will immediately spring up a great demand among the farmers for shrubs to likewise decorate the lawn about the farm-house.

The system can in the same way be carried to the country home. This is an illustration of only one possibility of help through the training schools for school teachers and the county agricultural schools.

Respectfully submitted,

W. A. HENRY,  
*Dean and Director.*

December 1, 1906.

---

“EXHIBIT A.”

Madison, Wis., May 31, 1906.

DEAN W. A. HENRY,  
*Madison, Wis.*

DEAR SIR:—Permit me to submit the subjoined data relative to the operation of the new department of horse breeding, of the College of Agriculture, together with some suggestions as to requirements for further development and equipment:

We have prepared a special Bulletin (No. 127) dealing with “The Principles and Practice of Horse Breeding,” of which nearly forty thousand copies have been distributed.

Compiled a complete list of owners of stallions (Wisconsin) and supplied each of them with application blanks for license, leaflet, giving information in regard to the law, manner of filing blanks etc., and return envelope.

Compiled a complete list of graduate veterinarians (Wisconsin) and supplied them with special certificate blanks upon which to certify as to soundness of stallions; also supplied bulletins, information leaflets, return envelopes, etc.

Prepared License Certificate forms for Pure Bred, Grade and Cross Bred stallions; complete sets of card file forms for systematic record of all transactions of Department.

RECEIPTS.

From November 6, 1905, to May 31, 1906, inclusive, total receipts of Department have been .....\$4,985.64

Amount stated has come from license fees of \$2.00 each; Transfer fees of \$0.50 each and sundry small amounts in coin, stamps, etc.

There have been issued to date (May 31, 1906):

License certificates:			
Pure bred .....	992		
Grade .....	1,377		
Cross bred .....	4		
Incomplete and under investigation:			
Pure bred .....	59		
Grade .....	45		
		2,477 at \$2.00	\$4,954 00
Transfers, stamps, etc., .....			31 64
			<u>\$4,985 64</u>

RESULTS OF WORK.

While returns have not as yet been specially compiled, sufficient evidence is on file to warrant the statement that Chap. 116, Laws of 1905, is being generally complied with by stallion owners throughout the state.

That a majority of the stallions have already been licensed and the balance are coming in daily.

That enforcement of the law has caused general discussion of matters pertaining to horse breeding and especially as regards soundness of sires and dams, value of pedigree, comparative merit of pure bred and grade horses, etc.

That the educational effect of this discussion and agitation has, by common consent, been of great value in the advancement of the interests of the horse breeding industry of Wisconsin.

That numbers of unsound and "scrub bred" stallions have been retired from public service and that their place has largely been taken by sound horses of superior breeding.

That numbers of stallions of impure breeding previously used for public service in Wisconsin as pure bred and with fraudulent posters as to their breeding have been forced by the law to publish the fact that they are impure in breeding, and not eligible to record in any stud book recognized by the Department of Agriculture, Washington, D. C.

That the plan of allowing stallion owners the privilege of making affidavit to the soundness of their horses in place of having them examined and certified to as sound by graduate veterinarians is impractical as, either through ignorance or intent, unsound stallions are being sworn in as sound and are receiving licenses to stand for public service.

That examination of stallions by graduate veterinarians is an improvement upon the affidavit plan, but imperfect in that unscrupulous men have passed unsound horses, either for sake of gain or to prevent loss of patronage.

That the feasibility of some method of state inspection should be considered by the next legislature, and that, at least, the affidavit plan should be discontinued.

It might be added that as a result of the establishment of the department of horse breeding of the College of Agriculture there was organized last February a State Draft Horse Breeders' Association with a membership of over 140, which since has appointed a vice president in each county of the state to further the interests of horse breeding and carry out the instructions of the Association. As a further step for the encouragement of horse breeding in Wisconsin the Association has donated some five hundred dollars for extra prize money to be competed for at the State Fair and the sum thus subscribed has been duplicated by the State Board of Agriculture.

#### REQUIREMENTS FOR THE FUTURE.

For the proper housing and equipment of the department of horse breeding and the kindred department of veterinary science there is needed a special building which should be so constructed as to serve the purpose of a great Live Stock Coliseum having arena space for the showing of large numbers of fine animals at one time and seating capacity for not less than 2,500 students, farmers, and other visitors.

In connection with the one-story Coliseum there should be stall room (possibly under the amphitheater seats) for cattle to be sold by public auction, accommodation for the feed for same and possibly some of the rooms mentioned below.

The proposed building should in addition to the judging Coliseum comprise the following:

Horse stable of fire proof box stalls for pure bred stallions and mares with paddocks attached.

Horse hospital with stalls and box stalls.

Hospital with stalls and box stalls for cows.

Hospital with stalls and box stalls for sheep and swine.

Harness room.

Wash floor.

Feed room.

Hay bays.

W. C. and lavatory.

Platform scales.

Small research laboratory; bacteriological apparatus, fixtures, etc.; cages, pens, boxes, etc.

Store room.

Operating room, table, stocks, etc.

Dissecting room, fixtures, tables, etc.

Pharmacy, stock bottles, fixtures, etc.

Museum.

Library.

Lecture hall; stereopticon.

Executive offices.

Vaults.

Department of Horse Breeding,

A. S. ALEXANDER,

In Charge.

## REPORT OF THE DEAN OF THE COLLEGE OF ENGINEERING.

---

PRESIDENT C. R. VAN HISE,  
*University of Wisconsin.*

SIR: I submit herewith my biennial report for the period ending June 30, 1906:

### CHANGES IN THE FACULTY.

During the past two years the College has lost three members of its faculty by resignation:

W. D. Taylor, professor of railway engineering, resigned in February of this year to return to the active practice of the engineering profession, having been invited to accept the position of chief engineer of the Chicago & Alton Railroad. In the withdrawal of Professor Taylor the College has lost one of its most efficient men, both from the standpoint of the professional engineer and that of the teacher of young men.

B. V. Swenson, assistant professor of electrical engineering, resigned in 1905 to accept an important position as Secretary and Treasurer of the American Street Railway Association.

O. B. Zimmerman, assistant professor of machine design, resigned in 1905 to go into practical engineering work.

The following new appointments and promotions have been made:

Murray C. Beebe, B. S., of Pittsburg, Pennsylvania, formerly an instructor here, was appointed in September, 1905. associate professor of electrical engineering.

W. D. Pence, C. E., professor of civil engineering of Purdue University, was appointed in April of the present year professor of railway engineering, to enter upon his duties at the opening of the year 1906-07.

Judson C. Dickerman, B. S., of Woburn, Mass., was appointed in October, 1905, assistant professor of chemical engineering.

Charles F. Burgess, associate professor of electrical engineering, has been promoted to the professorship of applied electro-chemistry and has been placed in charge of the new department of chemical engineering. J. D. Phillips has been promoted from assistant professor of drawing to a full professorship. Leonard S. Smith has been promoted from assistant professor of topographical and geodetic engineering to an associate professorship, and instructor H. F. Moore has been promoted to an assistant professorship.

#### NUMBER OF STUDENTS.

The number of students in attendance in the College during the past two years was as follows:

1904-05 .....	804
1905-06 .....	768

During the year 1903-04 the attendance was 744, and in 1902-03, 585. The attendance of the past year, for the first time in several years, shows a decrease in numbers. This is due partly to accidental causes, but is, doubtless, due chiefly to the somewhat more stringent requirements of the courses and of the admission thereto. Last year the plan was put into force, after due announcement, of examining all engineering freshmen in algebra before permitting them to enter the regular classes in engineering mathematics. Students failing in the examination were required to make up the deficiency and to postpone some of the regular freshman studies. The effect of this has been favorable upon the number of students failing to meet the scholarship requirements during the year, the number dropped in June being much less than usual.

There is a steady increase in the number of students entering who have had a complete or partial college course in other colleges or normal schools, and the recent arrangement between the University and the colleges of the state has been very helpful in facilitating the transfer of students from college work to technical courses. The number of students in attendance from outside the state is about nineteen per cent of the total, which is about the same as for several years.

## GRADUATES.

Up to the close of the year 1906 there has been a total of 761 students graduated from this college, of which 105 graduated in 1905 and 93 in 1906. Notwithstanding the large number of graduates going out from the numerous engineering schools of the country, the opportunities in the profession for young men seem to be more numerous than ever before. During the past semester representatives from a large number of important industrial concerns have visited the college for the purpose of recruiting their engineering force from the members of the senior class. This policy of encouraging technical graduates to enter their employment is being adopted by manufacturing concerns more generally every year, special arrangements being made in most cases whereby the new graduate is enabled to learn the details of the business as rapidly as possible. Many desirable openings have also been brought to our attention in the large undertakings of the Government, and of such work as the New York Barge Canal and the public works of New York and Chicago. The water department of New York City, alone, expects to create a force of 600 to 800 engineers within the next two or three years to carry out its new works for an increased water supply. These various public works are conducted under civil service rules, and in the examination our graduates have been very successful. Limitations as to residence, which were formerly the rule, have now been largely withdrawn.

## CHANGES AND IMPROVEMENTS IN INSTRUCTIONAL WORK.

During the past year several important changes and improvements have been made in the work of instruction, these having been made possible by the increased appropriations available.

The most important addition to the work of the College has been the establishment of a course in chemical engineering, together with the addition of a department of chemical technology. Professor C. F. Burgess was transferred from the department of electrical engineering and placed in general charge of the new department, and additional instruction in chemical technology was provided for by the appointment of an assistant professor and an assistant. This force is able to take care of the

work satisfactorily for the present, but additional instructors will be needed in the near future. The course of study was laid out so as to include in the first three years a thorough-going training in all the fundamentals of engineering especially in chemistry, in thermodynamics, machine design and electricity. Special studies in chemical technology have been left almost entirely for the fourth and subsequent years. A careful study of the question led to the belief that a thoroughly good training in chemical engineering cannot be had in less than five years; and with this in view a five-year course has been arranged for, with the expectation that a large proportion of the students in this course will spend not less than five years in study at the University. The subject of gas engineering, in which the demand for trained men is very great, has been specially provided for in the five-year course. It is believed that the course in chemical engineering, as planned, offers a very superior training in this branch of technology, and that this is appreciated is indicated by the great interest taken in the school by prominent engineers and manufacturers. There are already about 40 students registered in the course.

Two years ago Professor D. W. Mead was placed in charge of the department of hydraulic engineering, a new department created by bringing together various courses in theoretical and applied hydraulics which had previously been taught in four separate departments. The result of this re-arrangement of work and placing it in the hands of a specialist has been greatly to strengthen the instruction. A new course dealing with the important subject of water power development has been added, and other courses enlarged. The new laboratory, while not yet complete as to building, has been in service during the past semester and has greatly increased the efficiency of the work and the interest of the students in the subject.

In the department of mechanics the combination of the work in materials with the theoretical work has offered opportunity for the several instructors in mechanics to come in contact with laboratory work, an arrangement which is proving of decided advantage, both with respect to the regular instruction and with respect to research work.

During the year 1904-05 there was established certain five and six-year courses of studies combining the technical work in the

College of Letters and Science, with especial reference to work in commerce. It was not expected that a large number of students would be able to spend the additional time at the University necessary to pursue such courses, but already a number of students have planned their work with reference to them, and there is a general tendency for the student to prepare himself better for his profession by a longer course of training. It is to be said, however, that the many opportunities for satisfactory employment which present themselves at the end of the four-year course tend to discourage a longer course of study, and so long as such conditions continue it cannot be expected that the average young man will spend longer than four years in college work.

The general engineering course is being availed of to an increasing degree by students desiring to take a less technical course than one of the regular courses. This is particularly true of those desiring to specialize in geology, and the establishment of the course has been well justified by the opportunity it has given to several most excellent students to get a technical training in connection with their work in this science.

The older courses of study have been considerably modified during the past two years, in most cases in the direction of broadening the courses. Some time has been gained for this by requiring a part of the shop work to be taken during the summer vacation.

In the regular instructional work a decided improvement has been brought about by the increased force made possible by increased appropriations. This has enabled the number of students in a division, in such studies as mechanics, to be reduced from the excessive number of 30 to 35, previously prevailing, to about 20, which should be considered a maximum number for work of this character. The instruction in the laboratories has also been improved in a similar way.

The Summer School for Artisans has been continued on about the same plane as heretofore, with a slight increase in the number of courses offered and in the attendance. The subject of manual training was included in the courses offered at the last session, and the attention given to this work has proven quite helpful to the faculty in its relations with the work done in secondary schools.

## ORGANIZATION AND SUPERVISION OF WORK.

The question of organization and supervision of instructional work is a matter of great importance, and it may be well to include here the substance of a report on this subject made to you during the past year, with special reference to students of the lower classes.

There is comparatively little instruction given to the freshmen and sophomores by the technical departments, most of the work of the first two years being given in the College of Letters and Science. Those departments of instruction in this college which have to do with lower class-men are the departments of drawing, surveying, machine design and mechanical practice.

The department of mechanical drawing gives instruction in drawing to freshmen and in descriptive geometry to sophomores. The work with freshmen is carried on by Professor Phillips, head of the department, with two instructors; in descriptive geometry the work is conducted almost entirely by the senior instructor of the department, Mr. Millar, Professor Phillips assisting to a small extent. Professor Phillips lectures to the entire freshman class and supervises all of the work in the drawing-rooms, assisting the instructors in nearly every drawing period.

The department of surveying devotes its attention very largely to freshmen and sophomores. The work is done by Associate Professor Smith and Instructor Owen. Most of the freshman work and some of the sophomore work is given by Mr. Owen. A large part of the latter is carried by Professor Smith, who also gives a large amount of instruction to juniors and seniors. The work of Mr. Owen is supervised, through consultation, in regard to practically all of the details of the work, and by direct contact in the conduct of field work.

The department of machine design gives a small amount of instruction to sophomores. This is largely in the hands of Instructor Vosskuehler, a man of several years' experience as a teacher.

The department of mechanics gives about equal amounts of instruction to sophomores and juniors. The teaching force consists of Professor Maurer, two assistant professors and two instructors. Each man gives about the same amount of instruction to both classes, all of the work consisting of year courses, begin-

ning at the middle of the sophomore year. The work is very carefully supervised through conferences, and discussions of recitation and quiz work two or three times weekly.

The machine shops give considerable instruction to freshmen and sophomores. All of this is given by instructors of several years' practical experience as well as experience in teaching.

In general the methods of supervision are practically the same in all departments. In all of them there is a very considerable amount of laboratory, field or drafting-room work, a part of which is usually conducted by instructors. In all cases the instruction is mapped out and carefully supervised by those in immediate charge, who are generally full professors, but in a few cases are men of lower rank. The nature of the work done by instructors makes it very easy to measure their efficiency and to assist them in improving their work. Naturally, it is not practicable to utilize to a large extent men of the grade of instructor to conduct lectures and class work in the advanced studies taken by juniors and seniors. Outside of the departments already mentioned, there are employed, however, several instructors to assist in laboratory work in the mechanical and electrical laboratories, and in a few cases advanced work is given by instructors of some years of experience.

During the past year a considerable improvement in the correlation of the drafting work in the several departments has been effected by a system of conferences among the professors in whose departments the work of drawing is of importance. Conferences have also been held on various matters in which the interests of two or more departments are involved. There has been most hearty co-operation among all members of the faculty, and it is the effort of all concerned to make the instruction, as a whole, as efficient in every way as possible.

#### BUILDINGS AND EQUIPMENT.

The construction of the new Hydraulic Laboratory has provided very satisfactory space for this department and has greatly relieved the crowded condition in the testing laboratory. The assignment of a large portion of the old Chemical Building to work of this college has provided fairly well for the new work in chemical engineering and in applied electro-chemistry, while

the transfer of the latter department from the shop building gives much needed space to other work in electrical engineering. It has been found necessary also to move the work in electrical testing and photometry from the basement of the Engineering Building to the old Chemical Building. This change has enabled us to increase the capacity and efficiency of our mechanic's shop very greatly, and to furnish a small laboratory for the department of geodetic engineering; but the transfer of so much work to the chemical building reduces the space available for chemical engineering below what was expected so that a rapid growth in this course will necessitate additional provision in the near future.

During the first year of the biennial period very little money was available for equipment, but during the past year the appropriations have been sufficient to enable us to add very substantially to our laboratory facilities. In the new department of chemical technology and hydraulic engineering a good beginning has been made in collecting a suitable equipment, but very much yet remains to be done. Several important additions have also been made in the electrical and mechanical laboratories and in the facilities for instruction in other departments.

#### RESEARCH WORK.

For the first time the college has had available during the past year a small fund for the conduct of research work. Owing to the incomplete condition of the hydraulic laboratory and repairs in the Chemical Building not as much has been accomplished as was hoped, but substantial progress has been made in several directions.

A valuable experimental centrifugal pump has been constructed in our shops, and at the earliest possible moment was installed in the basement of the Hydraulic Laboratory. The pump is specially designed so that all important conditions can be varied and thus enable a great many combinations of conditions to be tried. Experiments on this pump have now been going on for several weeks under the direction of Professor Mead, and results are nearly ready for publication. While this work is of general importance it is of especial interest with reference to the drainage problems in the mining districts of

the state, and the utilization of artesian waters for public water supplies throughout this section of the country. Last winter Professor Mead made a trip of inspection through the zinc and lead district to familiarize himself with the drainage problems, and he has now in preparation a bulletin discussing the various types of pumping machinery adapted to such work. During the coming summer experiments will be continued on the special pump, and another series carried out on large orifices and wiers which will be important in connection with the measurement of large quantities of water for irrigation, water power purposes, etc.

A very important line of research which has been under way for nearly two years is the work of Professor C. F. Burgess on pure iron. This has been conducted largely by means of a grant of \$2,500 per year from the Carnegie Institution. Many results of fundamental value have already been obtained and a new field of research opened up. A subject of investigation which is of special interest to this state relates to the separation and reduction of zinc ores by methods involving the use of the electric current. Many other problems in the fruitful field of electro-metallurgy are being studied and valuable work has been done in many other directions, especially on refractory materials and the corrosion of metals. The results of the work during the past year have formed the basis of several papers before engineering and scientific societies and one University bulletin has been prepared.

In the testing laboratory experiments on reinforced concrete have been carried on for the past two years with important results. This work is done partially under the auspices of the U. S. Geological Survey, the cost of material and labor being met by appropriations from the Survey. Experiments have also been carried on in this laboratory on the effect of freezing upon Portland cement, the strength of sand-lime brick, and on other minor subjects. The results of the concrete tests are ready for publication as a bulletin, and another bulletin will be issued containing other useful tests from the laboratory.

In the mechanical laboratory valuable results have been obtained from experiments on the steam turbine, on lubricants, on

certain features of the operation of locomotives, and other less important subjects.

The number of engineering students who remain for graduate work, with a view of taking merely additional courses of study in professional lines, will always be small. It is rather in those departments in which thorough-going research work in applied science can be carried on that we expect and desire to see the principal growth in graduate work; but until very recently the opportunities for such scientific work have been very inadequate. In those laboratories in which the facilities for research are now satisfactory a very considerable amount of such work is being done by advanced and graduate students. This is particularly true of the laboratories of applied electro-chemistry and chemical engineering, in which during the past year seven graduates were registered.

It is, however, not alone upon the graduate student that we should rely for the carrying on of investigations. In many lines of work the results obtained from time to time by individual students are insufficiently correlated and are too long delayed to be of the greatest value. As the work of the college in this direction develops it will, in my opinion, be very desirable to place a considerable amount of research work under the direction of special instructors, or professors who devote the larger part of their time to this work. In this way the work of the under-graduate can often be made available, and lines of research work can be carried on continuously to great advantage. During the past year this plan has been followed to some extent in the hydraulic laboratory, where research work has been conducted by Mr. C. B. Stewart, C. E., under the general direction of Professor Mead.

Co-operation with engineers and outside organizations in research work is being encouraged so far as possible. Besides the above mentioned instances of such co-operation, an extensive study of bridge stresses under moving loads, which is to be undertaken by the American Railway & Maintenance of Way Association, will be carried out largely under the direction of members of this faculty, thus giving very valuable opportunities for our instructors to get in touch with this important work.

In this connection there should also be mentioned the assis-

tance rendered to the public by Professor W. D. Taylor in his work with the State Board of Assessment, and by Professor L. S. Smith in his study of water power resources of the State.

#### NEEDS OF THE COLLEGE.

As already noted in preceding paragraphs, the increased appropriations granted by the legislature at the last session have enabled some of the most important needs of the college to be provided for; but there remain other and very pressing needs which have not yet been met. I desire again to urge that provision be made for proper foundry facilities for students in shop practice. This is an important subject for mechanical and electrical engineers, and should be placed on a good basis. We should have a permanent foundry instructor and pattern maker, but our present poor facilities have made this impracticable and we have employed each year an instructor for only three or four months. During the past year it has been impossible to get a good man for so short a time and no instruction has therefore been given in this subject. Besides a good foundry the shop needs a large appropriation for modern equipment in all departments, as it has been impossible from recent appropriations to add anything in the way of modern special machines.

The college is greatly in need of more class-rooms, offices and drawing-rooms. The present Engineering Building was designed for a much smaller number of students than we now have, and it is only by the most inconvenient crowding that the work can be provided for at all. With our present large senior and junior classes we need several lecture rooms seating 100 to 150 students with convenient facilities for the use of the lantern. As it now is there is no place where such classes can be held except in the large auditorium seating 325 students, which is unsuited to this work. The result is that in many cases it is impossible to bring the students of a course together for lectures but all the instruction must be given in sections.

The steam and mechanical laboratory occupying a part of the basement has reached the limit of its growth until additional space is provided. Several small rooms for thesis and research work are greatly needed in connection with this laboratory. A

very important piece of work undertaken this year could not have been done except for the space secured in the Physics department.

Much more space is also needed for draughting rooms and for offices. In short, the present building constructed when the attendance was about 300 is entirely inadequate, and I urge that provision be made for additional space at the earliest possible moment.

In the matter of equipment a very considerable sum of money must be spent each year to maintain the standard of the work. Not less than \$10,000 is needed to place the laboratories in chemical engineering on a reasonably satisfactory basis, and an equal amount should be spent at once in the shops. A large amount must still be spent in properly equipping the Hydraulic laboratory and constant large expenditures must be made in new lines in the electrical and mechanical laboratories, the materials testing laboratory and for the maintenance of our surveying outfits.

#### COURSE IN MINING ENGINEERING.

The demand for instruction in mining engineering is constantly growing. The recent large development of the mining industry in the southwestern part of the state makes it much more important than ever before for the University to give special instruction in this subject. Our strong departments in other lines of engineering, and in chemistry and geology, already provide for most of the instruction required in such a course. The additional courses needed would be those relating to the operations of mining, which could for some time be handled by one professor; and certain courses in metallurgy. To establish a fully equipped department in metallurgy would involve a very considerable expense and probably would not be wise at the present time, but those lines of metallurgy which concern the mining interests of this state should be provided for. The department of applied-electro-chemistry is already doing something in electro-metallurgy, but is not equipped for the other work.

I would therefore urgently recommend that instruction in mining and metallurgy, arranged with especial reference to the mining interests of this state, should be provided for at the earliest possible date.

Respectfully submitted,

F. E. TURNEAURE,

*Dean, College of Engineering.*

December 1, 1906.

## REPORT OF THE DEAN OF THE COLLEGE OF LAW.

---

*To the President of the University:*

I have the honor to submit the following report concerning the progress of the College of Law during the biennial period just closing, together with suggestions for its further development.

The progress made during this period has been satisfactory. The relation between the faculty and the students has been cordial while the work has been done with enthusiastic interest, and an unusually high order of scholarship has been the result. The deportment of the students has been all that could be expected or desired, only one case of discipline having arisen during the two years.

### FUNDS.

The funds available for the college have considerably exceeded the amounts expended in the preceding biennium. The total budget for the period 1902-1904 was \$30,700; for the period covered by this report \$39,340, an increase of \$8,640. From this amount should be deducted \$2,690, which represents the amount apportioned to this college on account of heat, light and water and insurance. This item does not appear in previous budgets, and does not represent an increase in expense. The actual total increase is then \$5,950. Of this amount \$5,800 has been paid for instruction; \$1,500 on account of increases in salaries of present instructors, and the remainder in providing for additions to the faculty.

## FACULTY.

Beginning with the university year 1904-05, Professor R. M. Bashford was placed in charge of the practice courses, embracing the subjects of pleading and practice under the statutes of Wisconsin, and a practice court. These subjects together with the subject of common law pleading now represent ten semester hours, exclusive of eight semester hours devoted to the practice court. The time devoted to practice equals, and in most cases exceeds, the time given to similar courses in other law schools. The student is instructed in the drawing of the various legal papers incident to the bringing of a cause to an issue under the practice act of this state.

Mr. H. C. Horack was appointed an instructor in 1904, and an assistant professor in 1905. In addition to courses in the law school, he has given a course in commercial law, open to seniors in the course in commerce. Professor Edwin S. Mack has given an additional hour of instruction during the period.

## LIBRARY.

The growing importance of the law library led to the appointment of a permanent librarian instead of student librarians, as was formerly the custom. Mr. Frank B. Sargent was appointed to this post in August, 1905.

To provide necessary additional library space, the lecture room adjoining the old library room was devoted to library purposes, a doorway being cut through the wall separating the two rooms, the space being equipped with the necessary book shelves and reading tables. An additional small lecture room on the third floor was secured by taking possession of space formerly used by the courses in commerce. Another room on this floor was fitted up for the use of the practice court. The remaining room on this floor was fitted up as a general reading room for students in the college.

During the summer of 1905, the law building was overhauled and repaired.

The serious inconvenience due to an insufficient number of sets of Wisconsin reports was remedied by act of the last general

assembly, provision being made for ten additional sets of Wisconsin reports. In June 1905, the regents made a special appropriation of \$15,000 for the purchase of books for the law library. About \$10,000 of this sum has already been expended. When the purchases contemplated have been completed, the library will contain the official reports of the various states and the United States, the English reports, the various series of special reports, the Supreme Court of Canada, and the province of Ontario, together with a large assortment of the latest standard treatises, files of the leading legal periodicals, and works dealing with the history of the law and jurisprudence. When thus completed, the college will have a fairly good working library, amply supplied to meet the ordinary demands of the student.

Access to an adequate library is absolutely essential to proper instruction and preparation. The changes enumerated have resulted in greater efficiency, and the proportion of students frequenting the library has largely increased over preceding years.

#### INSTRUCTION.

During the biennium, the faculty have offered a total of eighty-five semester hours of instruction per year, exclusive of practice courts, as compared with sixty-four semester hours heretofore offered. The experiment of grouping the fundamental courses in the junior year and allowing middles and seniors to elect from the courses offered in the middle and senior years has proven a success and will be continued and extended. A large proportion of the students have taken advantage of the opportunity to elect more than the required number of courses while no disposition is shown to avoid the more difficult courses. The advantage of the elective system lies in the fact that each student, within limits, can select as many courses as he demonstrates his ability to carry, and a common measure is not imposed on the able and dull alike. The ambitious student can thus cover more subjects in a given time than would be possible for a less able class-mate.

## ENTRANCE REQUIREMENTS.

As a result of a memorial from the law faculty, the regents authorized the raising of the entrance requirements for the college. Accordingly, the rule was adopted that all students entering the college in 1905-6 as candidates for a degree, should present additional credits equivalent to the freshman year in the College of Letters and Science, and that all students entering in 1907-8 or thereafter, should present additional credits equivalent to the freshman and sophomore years in that college. This step was taken in the belief that the students entering the law school from the high schools were not as a class mature enough or sufficiently prepared to take up the study of law to an advantage. The character of the instruction and the rapidity of progress is usually determined by the capacity of the less prepared members of the class.

The purpose of the change was then two-fold; first, to exclude immature men from the school; and second, to make possible higher standards of instruction.

The necessary period of preliminary study was fixed at the end of the sophomore year in the belief that the law, being a specialized topic, could probably be taken up at the same period that specialized topics are taken up in the College of Letters and Science.

While believing that as a class High School graduates can not take up the study of law to the best advantage, it was recognized that there always are exceptional cases of students who for some reason, cannot spend a year in college, and who by reason of their maturity and experience are capable of studying law profitably. Men of this class who have the equivalent of a high school course are permitted to enter as special students and may become candidates for a degree on demonstrating their ability to do a high order of work. Students who lack the high school training, but who demonstrate their ability to do university work in a creditable manner, by a year's residence in the College of Letters and Science are admitted as special students on similar terms.

At the time of the adoption of these requirements, it was recognized that the immediate result would be a falling off in

attendance and the regents were asked not to take the step unless they were prepared to sustain the efficiency of the college during the period of readjustment. A brief consideration of the enrollment for the present year when the regulations became effective will be instructive. The total enrollment is 153 as compared with 183 for the preceding year, a decrease of 19%. This decrease is entirely in the class entering in 1905 and affected by this rule. All other classes are larger than in the preceding year. Only five special students entered. Of forty-seven regulars 19% held academic degrees. 55% have had two or more years in college, and 25% one year in college. A consideration of the total enrollment of the school shows that 71% could comply with the new requirements. Of these 26% hold academic degrees. Over 30% have had two or more years in college; 15% at least one year; 28% a high school training only.

The records of those entering the school in the past are not complete enough to make an accurate comparison possible. When compared with the preparation of students in other law schools of like rank, the results shown are extremely gratifying.

The very large proportion of the present membership of the school who comply with the present requirement shows that the standard established is not unreasonably high.

It is the unanimous opinion of the faculty that the requirement has resulted in a much more efficient body of students. The work of the past year has been unusually satisfactory in consequence. Very few students have been dropped on account of defective scholarship. The new requirements have met the hearty approval of the members of the bar of this state, and favorable comments from law teachers generally. A number of schools have taken steps to enforce similar regulations.

It is believed that the falling off in attendance is temporary. A study of the attendance of other law schools, where the entrance requirements have been advanced from time to time shows that a sharp decline in attendance has followed every raising of standard. Ultimately readjustment takes place and the final result is a larger attendance, a stronger, more efficient school, and consequently better service to the student and the state. It is confidently expected that the same results will follow here, provided the school is properly supported during the period of

transition. The maximum attendance of the past is hardly to be expected or desired. The number of men coming to the bar in the various states has decreased, and the attendance at law schools generally is stationary or decreasing. The causes for this are many. The great opportunities in business in the past five years, and the higher requirements exacted by most states for admission to the bar have tended to cut down the number of candidates for the bar.

#### NEEDS OF THE COLLEGE.

During the greater part of its existence the relation of the College of Law to the other departments of the university has been hardly more than nominal. All matters of registration, entrance requirements, etc. were administered in the office of the Dean of the College of Law. Since the beginning of the university year 1903-04 the entrance requirements of the College of Law have been administered by the registrar of the university, and for the past three years the faculty of the College of Law have urged still closer relations in the belief that a university law school should be an integral part of the university.

The interdependence of the two colleges is strikingly illustrated by the fact that a large proportion of all candidates for degrees in law who have had more than a high school training have attained that training in the college of Letters and Science. Of the forty students holding academic degrees, twenty-eight are from this university; and of the sixty students who have had a year or more in college, forty-five have obtained their training in this university. When the two-year requirement becomes effective, it is believed that the tendency above indicated will increase. A large proportion of students making preparation for ultimate law study will undoubtedly take three years in college providing an arrangement is made whereby the degree in arts and law can be obtained in six years. At present seniors in the College of Letters and Science are permitted to take seven semester hours in the College of Law and count the same toward the A. B. degree. This arrangement has proven advantageous and it is believed that it is capable of further development, and steps are now on foot to that end.

As a result of a treaty between the authorities of Ripon College and Lawrence University, students who have completed the Junior year in that college are permitted to enter the College of Law, and upon completing the first year are granted a degree from the school from which they come.

#### SCOPE OF LAW SCHOOL INSTRUCTION.

In the future development of the course of study in the law school, it is the belief of the faculty that the growing importance of public law, particularly of administrative law, makes necessary the inclusion in the curriculum of courses in public law. The necessity of such courses is further apparent when it is considered that an increasing number of students enter the law school each year for the purpose of preparing themselves for business or public careers and with no intention of following the profession of law, and to this class of students a course in public law would particularly appeal. Such courses are now offered to some extent in the College of Letters and Science in the department of political science, and it is by co-operation between this department and the College of Law that an adequate course in public law can be realized. Measures are now on foot to bring about the results which are deemed desirable by the respective departments concerned. Such courses are now given in leading law schools by co-operation in the manner suggested.

#### SUMMER SESSION.

The number of inquiries received each year relative to the possibility of receiving instruction in law during the summer, warrants the belief that a summer session of the law school would be of service and attract many students. A large number of young men who expect to become lawyers are engaged in teaching and would welcome such an opportunity to make preparation for the bar. As it is, a large number of such men go to Chicago and Michigan where such courses are offered.

The expenses of such a session would not be large, as only a limited course would be offered, embracing the more fundamental subjects. Many candidates for the bar examination, which occurs in August, would doubtless take advantage of such a session.

If the courses in law are to be offered in the summer session as suggested above, they should be offered in as thorough a manner as courses given during the regular session in order that the students attending such session may obtain the same benefits of instruction as follow from attendance in the regular course, and full credit should be allowed toward the bachelor's degree in law for such courses.

#### FEES.

It has for some time been a matter of comment and complaint that the fees in the College of Law have not been on the same basis as fees of some of the other schools maintained by the University, but have been \$75 the first year, \$50 the second, and \$25 the third, with the further provision that when only the final year of work was taken here the fee was \$100. It is not suggested that these fees required are too high. On investigation it appears that these fees are from one-half to two-thirds less than those exacted by professional schools of private foundation. They are also the average of the fees charged by state university law schools generally. In a few instances no fees are required by state schools, but these form a rare exception to the prevailing custom of requiring a substantial fee.

By action at the June meeting of the regents the fees are placed for the future at \$50 per year payable at the beginning of each year, and thus the fees in the future will be practically the same as those in other University law schools.

#### EQUIPMENT.

The entire Law Building is needed for the use of the school. At the time when the courses offered were limited and the number of classes in consequence small, the space devoted to the work of the College of Law was ample, but under the new courses of study offered, a number of lecture rooms are required in order that satisfactory schedule hours can be made. If the rooms now occupied by the secretary of the board of regents and by the architect were devoted to the use of the school, it would be possible to provide ample accommodation for the

present number of students and also provide sufficient additional space for the growth of the law library. As the result of a recent purchase of a building by the University, the secretary's office will be removed from the Law Building within the coming year, and part of the desired space will thereby be secured.

#### GENERAL READING ROOM.

A general reading room should be provided for the accommodation of the students. At present a room on the third floor is used for that purpose, but it is inaccessible and is seldom used in consequence. The room under the secretary's office, basement floor, would make an admirable room for such a purpose. and if the plans to remove the secretary's office from the Law Building are carried out, this room will be available for such a purpose.

The students have organized a reading room association and through it provide newspapers and periodicals for the reading room. It is believed that unity of purpose and enthusiasm for the school would be promoted, if a room of this character were provided. The complaint is frequently made that the law students, although they have all their recitations in the law building, have little or no opportunity to become acquainted with each other, and a common meeting ground, which the reading room would furnish, would go a long ways toward obviating this difficulty. The expense involved in making the necessary change would be trifling.

The building should also be provided with lockers where the students can deposit their wraps in safety. The present cloak room is not only inadequate but also unsafe and frequent complaints are made on account of the loss of books or wraps left there.

It is believed that if a provision of this kind is made, it will in many ways add to the efficiency of the school. The books used by the students are large and the disposition is not to bring them to the class room although such practice is encouraged by the members of the faculty, because of the danger of losing them if left exposed, and on account of the inconvenience of carrying the books about during the entire period of recitation.

The reading room of the library urgently needs a new set of

chairs. Those now in the library have been in service for many years and are generally out of repair. They have never been satisfactory being  $1\frac{1}{2}$ " below the standard chair and uncomfortable in consequence.

The annex to the reading room should be provided with a cork carpet similar to the one in the general reading room of the library. It is found that good order and quiet is promoted by making provision of this kind, and the better order in the library since the carpet was placed there warrants the request that the annex be similarly equipped.

#### LIBRARY MAINTENANCE.

The importance of the library in the scheme of law school instruction can not be overestimated. It is as essential to such instruction as the laboratory is to the physical sciences. It is important, therefore, that the generous policy of the past year be maintained. After a careful estimate it is believed that its efficiency can be maintained by the annual expenditure of \$2,500 to cover repairs and continuations, with a small fund for further additions.

The policy of the faculty for the future may be summed up briefly as follows:

First, to perfect the courses now offered and to make the instruction as thorough and proficient as possible.

Second, to extend the course of study in those directions already indicated, which will fit students more completely for the practice of their profession, and also to deal with the larger public questions which must concern them both as lawyers and citizens.

As indicated in the beginning of this report, the spirit of the school is excellent. The students, a large proportion of whom are here on their own resources, are earnest and anxious to make the most of their opportunities. With this spirit prevailing and the more uniform preparation in its students obtained by the new regulations, it is felt that the coming years are most promising for the efficiency, success and growth of the school.

Respectfully submitted,

H. S. RICHARDS,

*Dean.*

December 1, 1906.

## REPORT OF THE DIRECTOR OF THE GRADUATE SCHOOL.

President CHARLES R. VAN HISE.

*University of Wisconsin.*

DEAR SIR: In compliance with your request I submit to you herewith the following report upon the Graduate School for the academic years 1904-5 and 1905-6. The very brief time available for the preparation of this report must suffice in explanation of its somewhat meager character.

Prior to 1895, the graduate work of the University was conducted by its several departments of instruction without further co-operation than is implied in their relations to the University as a whole. The development of this work, however, led to its organization in 1895, as a Department of Graduate Study, and in 1904 it was advanced to the status of a Graduate School, the administration of which was entrusted to a committee of the University Faculty called the Administrative Committee of the Graduate School. By very recent action of the Regents, this organization has been modified through the appointment of a Director of the Graduate School to serve as its executive head, while the administrative committee continues to exercise supervisory functions. The faculty of the Graduate School includes all heads of University departments in which graduate work is offered, and all members of the instructional staff of the University in charge of graduate courses.

The growth of the work since the organization of a Department of Graduate Study is illustrated by the following summary of graduate students in attendance at the University in the period between Commencement 1894 and Commencement 1906. For the later years of this period there is given the atten-

dance of graduate students at the summer session of the University, but these data cannot now be obtained for the earlier years.

YEARS.	NO. OF GRADUATE STUDENTS.		Totals.*
	College year.	Summer Session.	
1894-5.....	91	.....	.....
1895-6.....	105	.....	.....
1896-7.....	110	.....	.....
1897-8.....	128	.....	.....
1898-9.....	99	.....	.....
1899-0.....	97	101	184
1900-1.....	113	82	183
1901-2.....	126	90	203
1902-3.....	119	102	206
1903-4.....	115	94	196
1904-5.....	148	80	218
1905-6.....	161	137	277

\*Excluding names twice counted.

With reference to the foregoing figures it can hardly be said that in the years immediately prior to 1904 the department had shown any marked growth in numbers, certainly none comparable with the growth of the University as a whole. It would be unwarranted to insist at this time upon any casual relation between the reorganization of the department as a Graduate School, at the opening of the year 1904, and the somewhat marked increase of attendance immediately following, but we may at least look upon the latter as a happy augury.

Approximately twenty-three per cent. of the graduate students in attendance during the college year of the University are women, the ratio being nearly constant from year to year, with perhaps a slight tendency toward diminution. The corresponding ratio in the summer session, thirty-four per cent. of women, is also subject to but slight fluctuation.

Another standpoint from which to estimate quantitatively the growth of the graduate work of the University is furnished by the number of higher degrees conferred annually in course and a summary presentation of such data is contained in the following table. During the period covered there has been a marked change in the University policy with respect to the granting of second degrees, the one degree, Master of Arts, replacing in great measure the multiplicity of such degrees formerly conferred. Conforming to this development all second degrees are

here grouped in one class; without distinction between academic and professional study. For the purpose of this table the printed date denotes the academic year ending at Commencement of the calendar year named.

Year.	Second degrees.	Doctorates.	Year.	Second degrees.	Doctorates.
1892.....		1	1900.....	18	5
1893.....		2	1901.....	12	5
1894.....		1	1902.....	22	11
1895.....	13	3	1903.....	25	4
1896.....	20	5	1904.....	16	10
1897.....	12	9	1905.....	32	9
1898.....	19	5	1906.....	38	9
1899.....	18	6			

The inferences to be drawn from the table do not seem to be substantially different from those suggested by the exhibit of total graduate attendance.

Although the past two years have not been marked by any radical changes of policy in the administration of the Graduate School, evidence of healthful growth is found in numerous minor ameliorations. Perhaps the most conspicuous among these is the recognition of a growing demand for graduate study and higher degrees among a numerous class, teachers, clergymen, etc., whose professional duties bar them from regular attendance upon the University. In response to this demand provision has been made for candidacy for the M. A. degree, partly *in absentia*, utilizing the summer session of the University for securing a considerable amount of resident study and supplementing this work by conditions of study *in absentia* sufficiently onerous to safeguard the character of the degree.

The matter of fees to be paid in connection with such candidacy will probably call for adjustment in the near future. For the present they are fixed at the usual amount paid by candidates in residence. The diploma fee of five dollars hitherto required from all candidates for a higher degree has been recently abrogated, thus making the practice in the Graduate School conform to that in other parts of the University. While this is no more than justice to resident graduate students, there is a growing class whose relation to the matter is quite different. This includes graduate students, who, having nearly completed their

work, withdraw from the University for one or more years before proceeding to their final examination for a degree. To these should be added another class, not large at present, authorized by recent action of the Graduate Committee to take their general examination for the doctor's degree before completion of their thesis, and to apply at a subsequent time for examination upon the thesis. In the administration of the Graduate School all such irregular candidates are now required to register and to pay fees for the semester in which their examination is taken, a practice which is open to some question of expediency if not of right, and I suggest that a more satisfactory adjustment of this class of cases may be found through the establishment of a suitable examination fee for candidates for a higher degree who are not regularly in residence.

During the past year four honorary fellowships, fourteen fellowships and eighteen scholarships have been held by students engaged in graduate work. This number will be increased during the coming year by three new scholarships that are to be annually filled, one each, from the graduating classes of Lawrence University, Beloit College and Ripon College, upon nomination by the respective faculties of those institutions. All of these fellowships and scholarships are greatly in demand and constitute a most valuable adjunct to the Graduate School.

During the period under consideration there has been abrogated the limitation, hitherto maintained, by which professional studies could not be counted toward the acquisition of a higher degree, and the candidate for such a degree is now free to elect any work of graduate rank that is offered in any department of the University. It is hoped that hereby such semi-professional courses as the Pre-Medical Course of the University may offer additional attractions to holders of a baccalaureate degree who look to medicine as a career and who may here acquire the M. A. degree while *en route* to their profession.

A most important adjunct to the successful administration of any institution of higher learning is a proper *esprit de corps* among its students, an interest in and loyalty to the institution with which they are connected. It is the urgent desire of the Administrative Committee and of the Director to develop this spirit and concurrently to ameliorate the social conditions of

life among the graduate students. To this end students' organization is encouraged, and the Committee has during the past year welcomed the first attempts on the part of such organization to aid in the development of the Graduate School by the suggestion of administrative inconveniences to be mitigated and improved relations to be introduced. In my judgment such relations should be further encouraged even to the extent of inviting continuous student co-operation in all questions of policy to be adopted in the Graduate School.

I beg to call to your attention the increasing importance of the summer session in its relation to the graduate work of the University, as illustrated in the foregoing tabular exhibits. A very large percentage of the attendance upon the session is composed of graduates, teachers and others, who can be present at the University at this time only, and this percentage will doubtless be increased by the new privilege of candidacy partly *in absentia* above noted. At present the number of candidates for the doctor's degree at the close of the summer session, 1906, is greater than the number of similar candidates at Commencement 1906, and in addition there is a very substantial number of candidates for second degrees to be taken at the end of the summer session. Should such conditions continue it may well be inquired whether the granting of these higher degrees at the close of the summer session should not be attended with more formality than is now observed.

Under these circumstances it is apparent that even at the present time the administrative needs of the Graduate School are quite as urgent during the summer session as at any other period, and I note with satisfaction the very recent provision by the Regents for continuous discharge of these duties by the Director of the Graduate School.

There has already developed urgent need for a closer co-operation between the graduate work of the summer session and that conducted during the remainder of the academic year, to the end that candidates for higher degrees may find in consecutive summer sessions the requisite continuity of courses adapted to their needs. I hope to see this matter further developed during the coming academic year through co-operation between the Graduate Committee and the Director of the Summer Session.

The development of graduate work in the University during the past decade has been far from uniform. Some departments are conspicuously strong in this respect, while in others comparatively little progress has been made. In part this disparity is due to specific differences of subject matter, and the relation of that subject matter to the intellectual life and needs of the community, *e. g.* American history obviously occupies, in this respect, a more favorable position than would Oriental literatures, if such a department existed in the University. But in large measure the development of strong graduate departments is due to the character and capacity of the men connected with them, and I know of nothing else that will so powerfully tend to the development of the Graduate School as its continued reinforcement by men of this type. Capacity for inspiration and for independent thought are primary requisites in the development of graduate work. The existing status of the Graduate School testifies to their presence in the University of yesterday, but the demand for their increase in the University of to-morrow is far from being satisfied.

In this connection passing heed may be given to a somewhat common impression that the stronger members of the University faculties tend to devote too much time to graduate work and too little to the needs of the larger body of undergraduate students, and that the University as a whole is a sufferer thereby. This is assuredly a complete misunderstanding of the case, for if it were thus, the mischief would be most prominent in those departments conspicuously strong in graduate work, and the departments in which such work is little developed should show the best undergraduate results. I do not think that anyone conversant with existing conditions will maintain that such is the case in the the University of Wisconsin. The converse, indeed, is more nearly the truth, for the professor largely interested in graduate work is under the strongest incentive to care for and strengthen the undergraduate courses out of which the graduate work is developed and upon which it depends for its indispensable supply of students eager and adequately trained for the higher work. The development of graduate work is the necessary condition for the obtaining of the ablest men for the con-

duct of undergraduate courses. They recognize the need for and gladly devote themselves in part to such work, but they will not long serve an institution that offers nothing more, and the quality of its undergraduate instruction will speedily deteriorate through their loss.

By far the larger part of the graduate work of the University is at present done in departments belonging to the College of Letters and Science. The research work of the College of Agriculture has attracted a limited number of graduate students and a corresponding number have been drawn by facilities for advanced work in the engineering courses; but the number of such students is much inferior to that of graduate students in letters and science, and up to the present time little or no graduate work has been done in law or jurisprudence. The time seems ripe for the further development of graduate work in these professional directions, not only by response to the existing demand for such study but by stimulating and cultivating the demand itself. The increasing complexity of the social organization and the multiplying applications of technical knowledge to the affairs of life are rapidly increasing the need for men with a higher training than corresponds to a baccalaureate degree. In anticipating and providing for this demand the University may render to the commonwealth a service comparable with or even superior to that rendered the individuals who are its direct beneficiaries.

So also mutual interests may be subserved through the cultivation of closer relations between the Graduate School and the smaller colleges of the land, whose brighter graduates are now in considerable measure attracted to the University and who should be drawn hither in much larger numbers. I recommend that systematic provision be made for at least occasional visitation of a large number of these colleges by representatives of the Graduate School, who shall seek to awaken there an interest in graduate study and a desire and purpose to profit by the facilities for such study offered by the University.

In illustration of the character of service rendered to the community by those who have in largest measure availed themselves of the facilities for higher study offered by the University,

there is appended to this report a list of names of those persons who have here taken the degree Doctor of Philosophy, together with the positions that they now hold.

Very respectfully,

GEORGE C. COMSTOCK,

*Director.*

December 1, 1906.

## REPORT OF THE LIBRARIAN.

---

PRESIDENT CHARLES R. VAN HISE,  
*University of Wisconsin.*

DEAR SIR—I have the honor to submit the following brief report on the growth and condition of the University Library for the biennial period ending June 1906:

### GROWTH.

Gifts and a large increase in the book purchasing fund have made the accessions greater in number and importance than those of any preceding biennium. The total number of bound volumes in the general University Library and the departmental libraries accessioned with it, on 15 June, 1904, was 79,473. By 15 June, 1905, this number had risen to 86,026, and by 15 June, 1906, to 97,378. The accessions for the biennial period therefore numbered 17,905. This statement of increase does not include the library of the College of Law, which, through special appropriations, has grown from about 6,000 volumes in 1904 to nearly 13,000 volumes in 1906. The total strength of the University Library and all its branches at the present time is about 115,000 volumes and 33,000 pamphlets.

Important sets in all lines have been added to the Library during the past two years, making possible more effective work in many departments. Many partial files have been completed, the policy being followed of securing for the library those sets of fundamental importance, which are yearly becoming rarer and hence more expensive. It has already become very difficult to obtain sets of some greatly needed works, and for many items we have been obliged to wait months and even years. I

regret that limitation of space does not permit an enumeration here of the more important accessions.

All gifts as received are given individual acknowledgment. The two most important gifts of the biennium perhaps deserve special mention. In 1904, Mr. John Kremer, of Milwaukee, presented a valuable collection of 500 volumes in the field of political science. In the summer of 1905, Mr. James J. Hill, of St. Paul, presented \$5,000 to be expended in the development of a library on transportation. This sum of money is being carefully used to supplement the collection in this field already available at Madison, with special reference to American and English railroads. To date the additions from this source number 490 volumes and 1,750 pamphlets. This railroad collection has not yet been catalogued, but its temporary location in one of the library workrooms, with a special finding list, makes it available for the use of students and others. The larger gifts of the last few years have been most welcome, but not less acceptable are the smaller gifts of books and pamphlets, which reach the library constantly from alumni, members of the faculty, students, and other friends of the University in Wisconsin and elsewhere.

#### CATALOGUING DEPARTMENT.

In the summer of 1904, Miss Hester Coddington returned from four years of service in the Library of Congress to her former position as head cataloguer of the University Library. Under her efficient supervision, 6,309 volumes were catalogued in the year 1904-05, and 10,150 volumes in the year 1905-06. The great increase in work accomplished the last year is due of course to the necessary enlargement of the staff, although the record of the past year has been limited by sickness, resignations, and the necessary training of new assistants. The amount of cataloguing done is not adequately represented by the figures in volumes given above, as any given volume may be represented in the card catalogue by many main and subsidiary entries. So far as they are available for our use, the University Library continues to purchase printed catalogue cards from the Library of Congress, thus materially reducing the cost of cataloguing the works for which such cards can be obtained. This undertaking

of the Library of Congress deserves the hearty thanks of all sister libraries. As the years pass and the card stock of the Library of Congress increases, the cost of cataloguing per title will tend to still further decrease.

#### LOAN AND REFERENCE DEPARTMENT.

So much freedom is given in the unrecorded use of books in reading rooms, seminary rooms, and stacks, that statistics as to circulation have no significance as to the actual use of the Library. This is also complicated by the fact that the Wisconsin State Historical Library, in the same building, is equally accessible and equally used by our readers. The reference use of the libraries naturally increases year by year with the growth of the University and the constant development of reading courses. The enlargement of the force of workers at the reference and loan desk the past year has made it possible to give much more efficient, individual service at this point. In a library of this character, expert assistance at the reference desk is of prime importance in training students to help themselves. During term time the Library is now open from 7:45 a. m. to 10 p. m. daily, except on Saturdays and Sundays. On Saturdays the Library closes at 9 p. m. for the weekly cleaning of the reading rooms.

In spite of our hopeful growth, we still find it necessary from time to time to borrow books for the use of instructors and advanced students from other university and reference libraries, and the University is under obligations to many sister institutions for such favors. To some of these same institutions and to others, we have frequent occasion to loan from our collections. The Library loans to other libraries, or educational institutions, for the use of individuals and not ordinarily to individuals directly. Both libraries are especially glad to be of service to the college and public libraries of Wisconsin, and these libraries apply to us frequently for loan of books and bibliographical assistance.

#### RELATIONS WITH STATE HISTORICAL SOCIETY.

The relations of the University Library with the Wisconsin State Historical Library, in the same building, continue to be of

the most cordial character. While the libraries are distinct in management, it is aimed to conduct the two libraries, so far as the public is concerned, as one great state public library, open to all who would make use of its resources. The fields of collection of the two libraries, both by purchase, exchange, and gift, are kept distinct by careful co-operation. The greatly increased use of both libraries has richly justified the bringing of the libraries under one roof. The library of the Wisconsin Academy of Sciences, Arts, and Letters, a valuable collection of reports and transactions of learned societies, located in the same building, is becoming of increased service to scholarly workers here and elsewhere.

#### NEEDS.

One of the two most important needs of the University Library in the immediate future is the continuance of a liberal book purchasing fund. The growth of the Library in the past few years is gratifying, but the work of rapid development entered upon last year must be continued, if the Library is to prove adequate to the needs of the University. For years no part of the rapidly expanding University was so hopelessly inadequate, both absolutely and relatively, as was the Library. Advanced work in many departments was impossible, or greatly handicapped. The Library is still inferior to the libraries of most of those sister universities, with whom the University of Wisconsin is proud to compare herself in equipment and work.

In the removal to the new building six years ago, the Library entered on a new era. In that period the general University Library has grown from 55,000 volumes to nearly 98,000 volumes, an increase of over 78%. In the same period the Historical Library has grown from 108,000 to 140,000 volumes. This means that in the building over 75,000 more volumes are now stored than when the building was first occupied. This growth has necessarily taxed the storage capacity of the building and makes evident the second great need of the immediate future, viz., the construction of the northwest stack wing. It will be remembered that this stack wing, provided for in the original plans of the building, was necessarily omitted through lack of sufficient funds. At present, practically all the shelving in the

building is crowded, and only by constant readjustment are accessions accommodated. During the past year, practically all the remaining available space in the basement was fitted with temporary shelving, and this shelving is now all occupied. Even if the construction of the wing is provided for by the next legislature, the question of space for books will become a very serious one to both libraries before the wing can be completed. This enlargement of the library building is certainly one of the most urgent needs of the University, as it is of the Historical Society. No one thing, perhaps, means more at this time in the development of the University, both for the present and the future, than the rapid growth of both libraries. To care for this growth properly and thus to make readily available to students the book resources render the additional stack wing an urgent necessity of the immediate future.

Respectfully submitted,

WALTER M. SMITH,

*Librarian.*

## DIRECTORY OF DOCTORS OF PHILOSOPHY OF THE UNIVERSITY OF WISCONSIN.

---

### 1892.

CHARLES R. VAN HISE—President of the University of Wisconsin, Madison, Wisconsin.

### 1893.

DAVID KINLEY—Dean of the Graduate School and Professor of Political Economy, University of Illinois, Urbana, Ill.

KATE A. EVEREST. (Mrs. E. R. Levi). At home, Oakmont, Pa.

### 1894.

ADELBERT G. FRADENBURGH—Associate Professor of History and Politics, Adelphi College, Brooklyn, N. Y.

### 1895.

CHARLES J. BULLOCK—Assistant Professor of Economics, Harvard University, Cambridge, Mass.

EDWARD D. JONES—Professor of Commerce and Industry, University of Michigan, Ann Arbor, Mich.

ORRIN G. LIBBEY—Professor of United States History, University of North Dakota, Grand Forks, N. Dak.

### 1896.

GEORGE H. ALDEN—Professor of History and Political Science, University of Washington, Seattle, Wash.

HELEN P. BATES—Assistant Librarian, Sociology, New York State Library, Albany, New York.

JAMES H. HAMILTON—Head Worker, University Settlement, New York City.

HARRY H. POWERS—Bureau of University Travel, Boston Mass.

SAMUEL E. SPARLING—Assistant Professor of Political Science, University of Wisconsin, President Wisconsin State Civil Service Commission, Madison, Wisconsin.

### 1897.

JONATHAN B. BROWDER—Classical Master, Chestnut Hill Academy, Philadelphia, Pa.

WILLIAM B. CAIRNS—Assistant Professor of American Literature, University of Wisconsin, Madison, Wisconsin.

BALTHASAR H. MEYER—Professor of Political Economy, University of Wisconsin, (on leave of absence), Wisconsin State Railway Commission, Madison, Wisconsin.

JAMES F. A. PYRE—Assistant Professor of English Literature, University of Wisconsin, Madison, Wisconsin.

JOHN O. QUANTZ (Deceased)—State Normal School, Oshkosh, Wisconsin.

CHARLES H. SHANNON—Instructor in Latin, University of Tennessee, Knoxville, Tenn.

HENRY F. STECKER.

HENRY H. SWAIN—President of the Montana State Normal School, Dillon, Mont.

THOMAS K. URDAHL—Professor of Political Economy, Colorado College, Colorado Springs, Colorado.

#### 1898.

KATHARINE ALLEN—Instructor in Latin, University of Wisconsin, Madison, Wisconsin.

MYRON E. BAKER—Professor of English, University of Oregon, Deceased.

ERNEST R. BUCKLEY—State Geologist of Missouri, Rolla, Mo.

PAUL S. REINSCH—Professor of Political Science, University of Wisconsin, Madison, Wisconsin.

SAMUEL WEIDMAN—Wisconsin Geological and Natural History Survey, Madison, Wisconsin.

#### 1899.

WILMOT B. LANE—Professor of Philosophy and Pedagogy, Randolph-Macon College, Lynchburg, Va.

AZARIAH T. LINCOLN—Assistant Professor of Chemistry, University of Illinois, Urbana, Ill.

THEODORE RUNNING—Instructor in Mathematics, University of Michigan, Ann Arbor, Mich.

JOHN B. SANBORN—Attorney at Law, Madison, Wisconsin.

JOHN C. SHEDD—Professor of Physics, Colorado College, Colorado Springs, Colorado.

#### 1900.

ALBERT E. JENKS—Assistant Professor of Sociology, University of Minnesota, Minneapolis, Minn.

DELOS O. KINSMAN—Professor of Economics and History, State Normal School, Whitewater, Wisconsin.

CARL E. MAGNUSSON—Professor of Electrical Engineering, University of Washington, Seattle, Washington.

MASSADA SHIOZAWA—Instructor in Political Economy, Waseda University, Tokyo, Japan.

GRANT SHOWERMAN—Assistant Professor of Latin, University of Wisconsin, Madison, Wisconsin.

GEORGE R. WICKER—Assistant Professor of Economics, Dartmouth College, Hanover, N. H.

GENSAMRO S. ISHIKAWA—Japan.

#### 1901.

LOUISE P. KELLOGG—State Historical Library, Madison, Wisconsin.

CHARLES K. LEITH—Professor of Geology, University of Wisconsin, Madison, Wisconsin.

- CHARLES MCCARTHY—In charge of Wisconsin Legislative Reference Library, Lecturer in Political Science, University of Wisconsin, Madison, Wisconsin.  
 CHARLOTTE E. PENGRA. (Mrs. Arthur E. Crathorne). At home, Goettingen, Germany.  
 HERMAN SCHLUNDT—Professor of Physical Chemistry, University of Missouri, Columbia, Mo.

## 1902.

- HERMAN G. A. BRAUER—Australia.  
 CHARLES H. HANDSCHIN—Professor of German, Miami University, Oxford, Ohio.  
 BENJAMIN H. HIBBARD—Assistant Professor of Political Economy, Iowa State College, Ames, Iowa.  
 LAWRENCE M. LARSON—Teacher of History, East Side High School, Milwaukee, Wisconsin.  
 HARRISON E. PATTEN—Chemist, Bureau of Soils, U. S. Department of Agriculture, Washington, D. C.  
 ANNA Y. REED.  
 MARGARET A. SCHAFFNER—Social Legislation Expert, Wisconsin Legislative Reference Department, Madison, Wisconsin.  
 ARTHUR C. SCOTT.  
 OSWALD SCHREINER—Chemist, Bureau of Soils, U. S. Department of Agriculture, Washington, D. C.  
 HENRY C. TAYLOR—Assistant Professor of Political Economy, University of Wisconsin, Madison, Wisconsin.  
 ALLYN A. YOUNG—Associate Professor of Economics and Executive Head of the Department, Leland Stanford Jr. University, Palo Alto, California.

## 1903.

- GUSTAVE FERNEKES—Instructor in Chemistry, Michigan School of Mines, Houghton, Mich.  
 WILLIAM D. FROST—Assistant Professor of Bacteriology, University of Wisconsin, Madison, Wisconsin.  
 ANNIE M. PITMAN—Private Tutor, Madison, Wisconsin.  
 ELSBETH VEERHUSEN—Instructor in German, University of Wisconsin, Madison, Wisconsin.

## 1904.

- CHARLES E ALLEN—Assistant Professor of Botany, University of Wisconsin, Madison, Wisconsin.  
 WILLARD G. BLEYER—Assistant Professor of English, University of Wisconsin, Madison, Wisconsin.  
 JAMES E. BOYLE—Assistant Professor in charge of Economics and Sociology, University of North Dakota, Grand Forks, N. D.  
 ARTHUR L. BRESLICH—Clergyman, Madison, Wisconsin.  
 ROLLIN H. DENNISTON—Instructor in Botany, University of Wisconsin, Madison, Wisconsin.  
 MARIE McCLERNAN—Teacher of Greek, High School, Madison, Wisconsin.  
 FREDERICK W. MEISNEST—Professor of German, University of Washington, Seattle, Washington.  
 SUSIE P. NICHOLS—Science Hill Seminary, Shelbyville, Kentucky.  
 CHARLES J. O'CONNOR—Instructor in Latin, University of California, Berkeley, California.  
 FRITZ W. WOLL—Chemist of the Agricultural Experiment Station, Assistant Professor of Agricultural Chemistry, University of Wisconsin, Madison, Wisconsin.

## 1905.

- STEPHEN W. HADLEY—Professor of Mathematics, Penn College, Oskaloosa, Iowa.
- HADLEY W. QUAINANCE—Professor of Political Economy, University of Wyoming, Cheyenne, Wyo.
- JAMES D. BARNETT—Professor of Political Science, University of Oklahoma, Norman, Oklahoma.
- EDGAR B. HUTCHINS—Professor of Chemistry, Carroll College, Waukesha, Wisconsin.
- SCOTT H. GOODNIGHT—Instructor in German, University of Wisconsin, Madison, Wisconsin.
- BENTARO KAMIYAMA—Tokyo, Japan.
- WILLIAM V. POOLEY—Professor of History, Normal School, Kirksville, Ill.
- CHARLES N. SMILEY—Professor of Latin, Iowa College, Grinnell, Iowa.
- OLIVER P. WATTS—Instructor in Chemical Engineering, University of Wisconsin, Madison, Wisconsin.

## 1906.

- IRVING W. BRANDEL—Professor of Pharmacy, University of Washington, Seattle, Washington.
- FRANK T. CARLTON, Toledo, Ohio.
- ROBERT C. CLARK—Head of the Department of History, Normal School, Bloomsburg, Pa.
- THOMAS H. DICKINSON, Instructor in English, University of Wisconsin, Madison, Wisconsin.
- JOHN F. HAUSSMANN—Instructor in German, University of Wisconsin, Madison, Wisconsin.
- LEONARD R. INGERSOLL—Instructor in Physics, University of Wisconsin, Madison, Wis.
- MAX O. LORENZ—Instructor in Political Economy, University of Wisconsin, Madison, Wisconsin.
- GEORGE B. MANGOLD—Spechts Ferry, Iowa.
- JOHN L. SAMMIS—United States Department of Agriculture, Madison, Wisconsin.

## APPENDIX A.

## The Attendance at the University of Wisconsin.

## 1. Number of Students During the Past Ten Years.

College of	96-97	97-98	98-99	99-00	00-01	01-02	02-03	03-04	04-05	05-06
Letters and Science <sup>1</sup> ....	872	947	995	1,096	1,137	1,176	1,232	1,312	1,476	1,579
Mechanics and Engi- neering .....	218	227	242	327	411	513	585	744	804	768
Agriculture .....	215	277	326	331	440	448	461	525	526	628
Law .....	216	182	214	231	266	260	226	201	183	154
Course in Pharmacy....	64	61	55	51	44	35	35	36	33	32
School of Music.....	145	141	155	199	191	169	126	172	153	209
Summer Session .....				341	323	322	350	330	300	420
Summer School for Ar- tisans and Appren- tices .....						45	60	70	87	92
Summer Dairy Course .....									16	16
Summer School <sup>2</sup> .....	127	117	197							
Library School <sup>2</sup> .....	25	16	24	36	40	37	44	30	59	51
Less twice enumerated	80	68	64	<sup>3</sup> 204	<sup>3</sup> 193	<sup>3</sup> 191	<sup>3</sup> 205	<sup>3</sup> 239	<sup>3</sup> 236	<sup>3</sup> 33
Totals .....	1,650	1,767	1,923	2,422	2,619	2,777	2,870	3,151	3,242	3,571

The Summer Session of 1904 had a registration of 395 and the Library School of the same summer was attended by 59 persons.

## 2. Number of the Instructional Force.

	96-97	97-98	98-99	99-00	00-01	01-02	02-03	03-04	04-05	05-06
Professors .....	49	49	52	52	55	58	59	71	69	78
Associate Professors .....	2	2	1	2	1	1	2	1	8	9
Assistant Professors .....	23	24	27	29	37	33	35	40	38	45
Instructors .....	23	26	28	31	37	46	58	65	96	113
Assistants .....	12	14	17	23	32	29	30	43	44	47
University Fellows <sup>4</sup> .....	10	10	10	10	14	13	13	13	13	14
Totals .....	119	125	135	147	176	180	197	233	255	292

<sup>1</sup> This includes the course in Commerce. This course is so interwoven with the other courses of the College of Letters and Science that it cannot well be separated.

<sup>2</sup> Not included in totals.

<sup>3</sup> This large number is due to the fact that many persons who were present at the Summer Session were also present in the regular sessions of the University.

<sup>4</sup> The University Fellows, though primarily students, are classified here for the reason that according to the terms of their appointment, they are required to render a small amount of instruction. This requirement, however, applies only to the University Fellows; consequently the above enumeration does not include the Fellows provided for by private generosity.

## APPENDIX B.

## Changes in the Faculty.

During the fiscal year of July 1, 1904—June 30, 1905.

## APPOINTMENTS.

## Professors.

Name	Title.
CHARLES R. BARDEEN, M. D.,	Professor of anatomy.
JAMES L. BARTLETT,	Observer Weather Bureau.
EARLE D. BURCHELL, A. M.,	Assistant professor of business administration.
JOHN R. COMMONS, A. M.,	Professor of political economy.
DANIEL W. MEAD, C. E.,	Professor of hydraulic and sanitary engineering.
ETTORE PAIS, LL. D.,	Non-resident lecturer in history.
E. RAY STEVENS, B. L., LL. B.,	Lecturer in criminal law.

## Instructors and Assistants.

HENRY W. ALLINGER, A. B.,	Assistant in German.
ANDREW R. ANDERSON, Ph. D.,	Instructor in Greek.
WILLIAM B. ANDERSON, M. S.,	Assistant in physics.
MARTIN F. ANGELL, B. S.,	Assistant in physics.
ELIOT BLACKWELDER, A. B.,	Instructor in geology.
ELIOT BOARDMAN, A. B.,	Assistant in French.
FOSTER P. BOSWELL, Ph. D.,	Assistant in psychology.
WILLIAM BRADFORD, B. S.,	Instructor in experimental engineering.
WALTER S. BROWN, A. B., B. S. A.,	Instructor in horticulture.
ALEXANDER B. COFFEY, M. A.,	Lecturer in education.
CLARENCE C. CRAWFORD, M. A.,	Assistant in history.
ANDREW G. DUMEZ, Ph. G.,	Assistant in pharmacy.
HOWARD S. ELLIOTT, B. S.,	Instructor in electrical engineering.
CALEB A. FULLER, Ph. D.,	Assistant in state hygienic laboratory.
JAMES G. FULLER, B. S. A.,	Assistant in animal husbandry.
PHILIP J. GENTNER, M. A.,	Instructor in English.
STEPHEN W. GILMAN, LL. B.,	Assistant in commerce.
MARTIN H. HAERTEL, B. S., Ph. B.,	Assistant in German.
JOHN F. HAUSSMANN, A. M.,	Assistant in German.
HOMER C. HOCKETT, B. L.,	Assistant in history.
HUGO C. HORACK, Ph. B., LL. B.,	Instructor in law.
WILLIAM O. HOTCHKISS, B. S.,	Instructor in geology.
ELEEN A. HUNTINGTON, A. B.,	Instructor in home economics.
GEORGE I. KEMMERER, A. B.,	Assistant in chemistry.
WILLIAM S. KINNE, B. S.,	Instructor in drawing and descriptive geometry.

HENRY S. KNIGHT, A. B.,	Instructor in Hellenistic Greek.
JOSEPH H. MATTHEWS, B. S.,	Assistant in physical chemistry.
ANNE H. McNEIL, Ph. M.,	Assistant in education.
HERBERT F. MOORE, M. M. E.,	Instructor in testing laboratory.
GEORGE M. NORMAN, B. S.,	Instructor in electrical engineering.
GEORGE N. NORTROP, A. B.,	Instructor in English.
EDWIN L. NORTON, Ph. D.,	Instructor in philosophy.
CHARLES A. OCOCK,	Assistant in farm engineering.
MICHAEL B. OLBRICH, A. B. LL. B.,	Instructor in rhetoric and oratory.
EDGAR W. OLIVE, Ph. D.,	Resident lecturer in botany.
JAMES B. OVERTON, Ph. D.,	Instructor in botany.
GEORGE G. POST, B. S.,	Assistant in electrical engineering.
JOHN C. POTTER, B. S.,	Assistant in electrical engineering.
WILLARD A. PRICE, B. S.,	Instructor in civil engineering.
ARTHUR RANUM, A. B.,	Instructor in mathematics.
BENJAMIN M. RASTALL, M. A.,	Assistant in mathematics.
GEORGE M. REED, A. B.,	Assistant in botany.
AMY A. ROBINSON, A. B.,	Assistant in German.
EDWARD B. SCHLATTER, M. A.,	Instructor in French.
CHARLES N. SMILEY, M. A.,	Instructor in Latin.
WARREN D. SMITH, B. S.,	Instructor in geology.
CLINTON B. STEWART, M. E.,	Instructor in mechanics.
CHARLES W. STODDART, M. A.,	Instructor in agricultural physics.
LESLIE F. VAN HAGAN, B. S.,	Instructor in drawing and descriptive geometry.
CHARLES T. VORHIES, B. S.,	Instructor in zoology.
ROBERT M. WERNAER, Ph. D., LL. B.,	Instructor in German.
REINHARD A. WETZEL, B. S.,	Assistant in physics.
ARCHIE G. WORTHING, A. B.,	Assistant in physics.

**PROMOTIONS.****Professors.**

ALEXANDER S. ALEXANDER, F. H.	From instructor to professor of veterinary science.
A. S., M. D. C.,	
CHARLES E. ALLEN, B. S.,	From instructor to assistant professor of botany.
ARTHUR C. L. BROWN, Ph. D.,	From instructor to assistant professor of English.
CHARLES F. BURGESS, E. E.,	From assistant professor to associate professor of electrical engineering.
ALBERT S. FLINT, A. M.,	From assistant astronomer to astronomer.
WILLIAM F. GIESE, A. M.,	From assistant professor to associate professor of romance languages.
VICTOR LENIER, Ph. D.,	From assistant professor to associate professor of chemistry.
CHARLES E. MENDENHALL, Ph. D.,	From assistant professor to associate professor of physics.
WILLIAM S. MILLER, M. D.,	From assistant professor to associate professor of anatomy.
GEORGE C. SHAAD, B. S.,	From instructor to assistant professor of electrical engineering.
FRANK C. SHARP, Ph. D.,	From assistant professor to associate professor of philosophy.
HALSTEN J. B. THORKELSON, M. E.,	From instructor to assistant professor of steam engineering.
FRITZ W. WOLL, Ph. D.,	From assistant professor to associate professor of agricultural chemistry.

**Instructors and Assistants.**

SCOTT H. GOODNIGHT, M. A.,	From assistant to instructor in German.
FREDERICK W. HUELS, B. S.,	From assistant to instructor in experimental engineering.
HARRY B. NORTH, B. S.,	From student assistant to assistant in chemistry.
EARLE M. TERRY, M. A.,	From assistant to instructor in physics.
CHARLES A. TIBBALS, Jr., A. B.,	From student assistant to instructor in chemistry and assaying.
ELSBETH VEERHUSEN, Ph. D.,	From assistant to instructor in German.

**VACANCIES.**

Taking effect June 30, 1905, unless otherwise indicated.

**Professors.**

HOMER W. HILLYER, Ph. D.....	Term expired
Assistant professor of organic chemistry.	
ETTORE PAIS, LL. D.....	Term expired
Non-resident lecturer in history.	
BERNARD V. SWENSON, E. E.....	Resigned
Assistant professor of electrical engineering.	
OLIVER B. ZIMMERMAN, M. E.....	Resigned
Assistant professor of machine design.	

**Instructors and Assistants.**

PHILIP ADAMS, B. A.....	Resigned
Instructor in English.	
HENRY W. ALLINGER, A. B.....	Term expired
Assistant in German.	
ANDREW R. ANDERSON, Ph. D.....	Term expired
Instructor in Greek.	
WILLIAM B. ANDERSON, M. S.....	Term expired
Assistant in physics.	
MARTIN F. ANGELL, B. S.....	Term expired
Assistant in physics.	
JAMES D. BARNETT, A. B.....	Resigned
Assistant in political science.	
EDWIN S. BISHOP, B. L.....	Term expired
Assistant in physics.	
FOSTER P. BOSWELL, Ph. D.....	Term expired
Assistant in psychology.	
WILLIAM BRADFORD, B. S.....	Term expired
Instructor in experimental engineering.	
IRWIN W. BRANDEL, M. S.....	Resigned
Instructor in pharmaceutical technique.	
WILLIAM J. CARSON, B. S. A.....	Term expired
Instructor in dairying.	

ALEXANDER B. COFFEY, M. A. . . . .	Term expired
Lecturer in education.	
ANDREW G. DuMEZ, Ph. G. . . . .	Term expired
Assistant in pharmacy.	
PHILIP J. GENTNER, M. A. . . . .	Term expired
Instructor in English.	
CHARLES H. HANDSCHIN, Ph. D. . . . .	Resigned
Instructor in German.	
SABENA M. HERFURTH, M. L. . . . .	Term expired
Assistant in German.	
HOMER C. HOCKETT, B. L. . . . .	Term expired
Assistant in history.	
JOSEPH G. HOLTY, B. S. . . . .	Resigned
Assistant in chemistry.	
HENRY S. KNIGHT, A. B. . . . .	Term expired
Instructor in Hellenistic Greek.	
JOSEPH H. MATTHEWS, B. S. . . . .	Term expired
Assistant in physical chemistry.	
HENRY H. McPHERSON, M. E. . . . .	Resigned
Instructor in experimental engineering.	
GEORGIANA L. MORRILL, Ph. D. . . . .	Term expired
Instructor in English.	
GEORGE M. NORMAN, B. S. . . . .	Term expired
Instructor in electrical engineering.	
GEORGE N. NORTHROP, A. B. . . . .	Term expired
Instructor in English.	
EDWIN L. NORTON, Ph. D. . . . .	Term expired
Instructor in philosophy.	
MICHAEL B. OLBRICH, A. B., LL. B. . . . .	Term expired
Instructor in rhetoric and oratory.	
WILLARD A. PRICE, B. S. . . . .	Term expired
Instructor in civil engineering.	
ARTHUR RANUM, A. B. . . . .	Term expired
Instructor in mathematics.	
AMY A. ROBINSON, B. A. . . . .	Term expired
Assistant in German.	
FERDINAND SCHMITTER, A. B., M. D. . . . .	Term expired
Instructor in anatomy.	
HELEN SHERMAN, B. S. . . . .	Resigned
Laboratory assistant in botany.	
FREDERICK L. SHINN, M. A. . . . .	Resigned
Assistant in physical chemistry.	
CHARLES N. SMILEY, M. A. . . . .	Resigned
Instructor in Latin.	
JESSE D. SUTER, A. B. . . . .	Term expired
Assistant in mathematics.	
ASA C. TILTON, Ph. D. . . . .	Resigned
Instructor in history.	

JAMES E. TUTTILL, M. A.....	Term expired
Assistant in history.	
MELVIN E. TWEEDEN, Ph. G.....	Resigned
Assistant in practical pharmacy.	
LESLIE F. VAN HAGAN, B. S.....	Term expired
Instructor in drawing and descriptive geometry.	
ROBERT M. WERNAER, Ph. D., LL. B.....	Term expired
Instructor in German.	

### Changes in the Faculty.

During the fiscal year of July 1, 1905—June 30, 1906.

#### APPOINTMENTS.

##### Professors.

Name.	Title.
MURRAY C. BEEBE, B. S.,	Associate professor of electrical engineering.
JUDSON C. DICKERMAN, B. S.,	Assistant professor of chemical engineering.
EDWARD C. ELLIOTT, Ph. D.,	Associate professor of education.
EDWARD M. GRIFFITH,	Lecturer on forestry.
GEORGE D. HADZSITS, Ph. D.,	Acting assistant professor of Latin.
SAMUEL J. HOLMES, Ph. D.,	Assistant professor of zoology.
ROLLO L. LYMAN, A. B.,	Assistant professor of rhetoric and oratory.
CHARLES McCARTHY, Ph. D.,	Lecturer in political science.
EVANDER B. MCGILVARY, Ph. D.,	Professor of philosophy.
DANIEL H. OTIS, M. S.,	Assistant to Dean of College of Agriculture and assistant professor of animal nutrition.
FRANK W. SKINNER, C. E.,	Lecturer in civil engineering.
HUGH A. SMITH, M. A.,	Professor of romance languages.
ALLYN A. YOUNG, Ph. D.,	Assistant professor of political economy.

##### Instructors and Assistants.

ROLLAND C. ALLEN, A. B.,	Assistant in geology.
RUTH F. ALLEN, A. B.,	Assistant in botany.
ELIZABETH BASS, A. B.,	Instructor in physical training.
GUSTAV H. BENKENDORF,	Instructor in dairying.
FRANCES C. BERKELEY, A. M.,	Instructor in English.
JOHN E. BOYNTON, B. S.,	Instructor in mechanical drawing.
OLIVER W. BROWN, A. M.,	Instructor in applied electrochemistry.
SOLOM J. BUCK, M. A.,	Assistant in American history.
ARTHUR B. CLAWSON, A. B.,	Assistant in zoology.
CHARLES D. COOL, A. M.,	Assistant in romance languages.

DAVID A. CRAWFORD, A. B.,	Assistant in anatomy.
GEORGE J. DAVIS, C. E.,	Instructor in civil engineering.
WALTER F. DEARBORN, Ph. D.,	Instructor in education.
JAMES F. DILWORTH, M. A.,	Assistant in European history.
HENRY C. DUKE,	Student assistant in military science.
CALEB A. FULLER, Ph. D.,	Assistant in hygienic laboratory.
ROBERT F. EWALD, B. S.,	Assistant in civil engineering.
NATHAN C. GRIMES, A. B.,	Assistant in mathematics.
EDWARD B. HALL, B. S.,	Assistant in geology.
ROY D. HALL, Ph. D.,	Instructor in chemistry.
LEROY F. HARZA,	Student assistant in hydraulic engineering.
RALPH H. HESS, M. S.,	Assistant in political economy.
HERMANN HILMER, A. M.,	Assistant in German.
HOWARD C. JOHNSON,	Student assistant in military science.
LEONARD R. INGERSOLL, Ph. D.,	Instructor in physics.
EDWARD R. JONES, B. S. A.,	Assistant in soils and drainage.
FRANK J. KATZ, A. B.,	Assistant in geology.
ROBERT McA. KEOWN, B. S.,	Instructor in machine design.
JOHN L. KIND, Ph. D.,	Instructor in German.
WILLIAM F. KOELKER, Ph. D.,	Instructor in organic chemistry.
FRANCIS P. KRAUSKOPF, A. B.,	Instructor in analytic chemistry.
FRED KUHLMAN, Ph. D.,	Assistant in psychology.
DANIEL A. LEHMAN, M. A.,	Instructor in mathematics.
GOTTFRIED LEHMANN,	Assistant in German.
BENJAMIN F. LUTMAN, A. B.,	Assistant in botany.
WILLIAM G. MARQUETTE, B. S.,	Assistant in botany.
EUGENE F. McCAMPBELL, A. B.,	Assistant in bacteriology.
LAUROS G. McCONACHIE, Ph. D.,	Assistant in political science.
EDWARD S. MOLES, B. S.,	Instructor in mechanical drawing.
JAMES G. MOORE, M. S.,	Instructor in horticulture.
ERNEST A. MORITZ, C. E.,	Instructor in mathematics.
WILLIAM J. NEIDIG, A. B.,	Instructor in English.
WALTER R. NELLES, A. B.,	Instructor in English.
RAY OWEN, B. S.,	Instructor in civil engineering.
EDWIN W. PAHLOW, M. A.,	Instructor in history.
DAVID L. PATTERSON, B. S.,	Instructor in history.
REUBEN S. PEOTTER, B. S.,	Instructor in mathematics.
FRANK J. PETURA, B. S.,	Instructor in electrical engineering.
EDUARD PROKOSCH, Ph. D.,	Instructor in German.
CHARLES M. PURIN,	Student Assistant in German.
GEORGE R. RAY,	Student assistant in military science.
GEORGE M. REED, A. M.,	Assistant in botany.
FREDERICK W. ROE, A. M.,	Instructor in English.
RICHARD A. SCHMIDT, A. B.,	Student assistant in military science.
LEWIS P. SHANKS, A. M.,	Instructor in romance languages.
EDWARD M. SHEALY, B. S.,	Instructor in steam engineering.
FREDERICK L. SHINN, A. M.,	Instructor in analytical chemistry.
ARTHUR F. SIEVERS, Ph. G.,	Assistant in pharmaceutical chemistry.
EDWIN R. SMITH, A. B.,	Instructor in chemistry.
RALPH O. SMITH, Ph. D.,	Instructor in chemistry.
BARTHOLOMEW J. SPENCE, B. S.,	Assistant in physics.
CLINTON D. STEWART, M. E.,	Assistant in hydraulic laboratory.
VERNON A. SUYDAM, B. S.,	Assistant in physics.
JOHN G. THOMPSON, A. M.,	Assistant in political economy.
CARL VOEGTLIN, Ph. D.,	Instructor in chemistry.
JOSEPH H. VOSSKEUHLER, M. E.,	Instructor in machine design.

WILLIBALD WENIGER, A. B.,	Assistant in physics.
WILLIAM E. WICKENDEN, B. S.,	Assistant in physics.
ELMER H. WILLIAMS,	Assistant in physics.
MORTON O. WITHEY, C. E.,	Instructor in mechanics.
EDWIN C. WOOLLEY, Ph. D.,	Instructor in English.

**PROMOTIONS.**

WILLARD G. BLEYER, Ph. D.,	From instructor to assistant professor of English.
D. EARLE BURCHELL, A. B.,	From assistant professor to professor of business administration.
CHARLES F. BURGESS, E. E.,	From associate professor of electrical engineering to professor of applied electrochemistry.
MARSHALL B. EVANS, Ph. D.,	From instructor to assistant professor of German.
EDWARD G. HASTINGS, M. S.,	From instructor to assistant professor of agricultural bacteriology.
HUGO C. HORACK, Ph. B., LL. B.,	From instructor to assistant professor of law.
WILLIAM S. MARSHALL, Ph. D.,	From assistant professor of zoology to associate professor of entomology.
CHARLES E. MENDENHALL, Ph. D.,	From associate professor to professor of physics.
HERBERT F. MOORE, M. M. E.,	From instructor in testing laboratory to assistant professor of mechanics.
RANSOM A. MOORE.	From assistant professor to professor of agronomy.
JAMES D. PHILLIPS, B. S.,	From assistant professor to professor of drawing.
GEORGE C. SELLERY, Ph. D.,	From instructor to assistant professor of history.
FRANK C. SHARP, Ph. D.,	From associate professor to professor of philosophy.
LEONARD S. SMITH, C. E.,	From assistant professor to associate professor of topographic and geodetic engineering.
A. HOYT TAYLOR, B. S.,	From instructor to assistant professor of physics.
HENRY C. TAYLOR, Ph. D.,	From instructor to assistant professor of political economy.

**Instructors and Assistants.**

ROBERT F. EWALD, B. S.,	From assistant to instructor in civil engineering.
JAMES G. FULLER, B. S. A.,	From assistant to instructor in animal husbandry.
JOHN F. HAUSSMAN, Ph. D.,	From assistant to instructor in German.
EDGAR B. HUTCHINS, Ph. D.,	From assistant to instructor in chemistry.
CHARLES A. COCK, B. S.,	From assistant to instructor in agricultural engineering.
GEORGE G. POST, B. S.,	From assistant to instructor in electrical engineering.
JOHN C. POTTER, B. S.,	From assistant to instructor in electrical engineering.
FRANK RABAK, B. S.,	From assistant to instructor in pharmaceutical technique.

**VACANCIES.**

Taking effect June 30, 1906, unless otherwise indicated.

**Professors.**

ARTHUR C. L. BROWN, Ph. D.....	Resigned
Assistant professor of English.	
DAVID B. FRANKENBURGER, A. M., LL. B....	February 6, 1906, Died
Professor of rhetoric and oratory.	
GEORGE D. HADZSITS, Ph. D.....	Term expired
Acting assistant professor of Latin.	
WILLIAM H. HOBBS, Ph. D.....	Resigned
Professor of mineralogy and petrography.	
GEORGE N. KNAPP, B. S.....	April 17, 1906
Assistant professor of farm engineering.	
EDWIN S. MACK, A. M., LL. B.....	Resigned
Professor of law.	
GEORGE C. SHAAD, E. E.....	Resigned
Assistant professor of electrical engineering.	
FRANK W. SKINNER, C. E.,.....	Term expired
Lecturer in civil engineering.	
E. RAY STEVENS, B. L., L. L. B.....	Term expired
Lecturer in criminal law.	
WILLIAM D. TAYLOR, C. E.....	February 14, 1906, resigned
Professor of railway engineering.	
AUGUSTUS TROWBRIDGE, Ph. D.....	Resigned
Professor of mathematical physics.	
CHARLES A. VAN VELZER, Ph. D.....	Resigned
Professor of mathematics.	
ALLYN A YOUNG, Ph. D.....	Resigned
Assistant professor of political economy.	

**Instructors and Assistants.**

ROLLAND C. ALLEN, A. B.....	Term expired
Assistant in geology.	
RAYMOND C. BENNER, M. A.....	Resigned
Instructor in chemistry.	
JOHN E. BOYNTON, B. S.....	Resigned
Instructor in mechanical drawing.	
JOHN C. BROWN, M. S.....	Term expired
Instructor in agricultural chemistry.	
OLIVER W. BROWN, A. M.....	Resigned
Instructor in applied electro chemistry.	
WALTER S. BROWN, A. B., B. S. A.....	Term expired
Instructor in horticulture.	
SOLOM J. BUCK, M. A.....	Term expired
Assistant in American history.	
CLARENCE C. CRAWFORD, M. A.....	Term expired
Assistant in European history.	

JAMES F. DILWORTH, M. A.....	Term expired
Assistant in European history.	
JEROME DOWD, M. A.....	Term expired
Resident lecturer in sociology.	
HENRY C. DUKE.....	Withdrew
Student assistant in military science.	
ROBERT F. EWALD, B. S.....	Term expired
Instructor in civil engineering.	
EDWARD B. HALL, B. S.....	Term expired

Assistant in physics.	

## REPORT OF THE BOARD OF VISITORS, 1904-05.

---

Madison, April 17, 1905.

To the Board of Regents, University of Wisconsin.

Gentlemen:—On behalf and by direction of the Board of Visitors of the University of Wisconsin for the year 1904-1905, I have the honor to submit herewith the reports of the various sub-committees, which have been approved by the full Board of Visitors and adopted as constituting the Report of the Board for the current year.

Respectfully submitted,

(Signed) JNO. B. WINSLOW.

Chairman.

---

### REPORT OF THE COMMITTEE ON ANCIENT LANGUAGES.

Committees on ancient languages, designated by previous boards of visitors, have deplored, in their reports, the proportionate decline in numbers of students taking up the ancient languages at the University. So far as this fact is a result of general changes and evolution in the scope and function of higher education, it is to be viewed philosophically. If our University were less favorable to the ancient languages than other Universities, or if the fact alluded to were more noticeable here than in other universities, we should have grounds for further inquiry. But such does not seem to be the case.

The University may (in so far as remedial measures go towards giving the ancient languages their due place or resisting their relative disparagement) exert a wholesome influence upon the character of the curriculums, chosen by the accredited high schools and academies.

Your committee certainly has found in its visits to the University, and through an examination of the various courses offered, a most satisfactory state of affairs, and one indicating a favorable and liberal disposition towards the ancient languages.

It appears that, at the present time (according to the information furnished by the Registrar) the total number of the students in the College of Letters and Science is 1469. During the first semester of this year 19 courses in Latin were offered, and were attended by 314 students. In Greek 9 courses were offered, attended by 57 students. For the past two years an elementary course in Greek has been provided, and there is also a course in Latin for students whose preparation has for any reason been less than the amount nominally required

for entrance to the University. In both these cases the study "counts toward a degree and is accepted in fulfillment of the language required in the University."

So far as the appropriations available go, the department of ancient languages is well supplied with reference books and maps. Doubtless if the legislature, responding to the increasing growth and needs of the University, gives it a fixed income, as now asked, this department will be further advanced in its facilities.

It remains for members of the committee who have visited the classes in the ancient languages, to record their satisfaction with the efficiency of the instruction provided, and the general good spirit of the student body therein.

(Signed) H. J. DESMOND, *Chairman*,  
W. J. Mc ELROY.

---

#### REPORT OF COMMITTEE ON MODERN LANGUAGES.

HON. J. B. WINSLOW, Chairman, Madison, Wis.

Dear Sir. Your committee begs leave to report as follows:

In the present school year, we are informed, no considerable changes have been made in this department as far as its general features, organization, courses and methods of study are concerned. In visiting classes we found that the courses are well arranged, offering to the students ample facilities for acquiring a thorough knowledge of the most important of modern languages and their literatures; that the teachers devote themselves to their laborious work with zeal and ability, and that the students generally show interest and progress. Owing, however, to the increase in the number of the latter, especially in the German department, some classes are over-crowded, and so, for this department as well as for others, additional room and better accommodation ought to be provided.

(Signed) F. W. A. NOTZ, *Chairman*,  
HELEN L. BURHANS.

---

Madison, April 5, 1905.

#### TO THE BOARD OF VISITORS OF THE UNIVERSITY OF WISCONSIN.

Gentlemen: Your Committee appointed to inspect the College of Law of the University beg leave to make and file the following report:

The Committee on or about the 24th day of November, 1904, accompanied by the Hon. John B. Winslow, chairman of the Board, visited the College of Law building for the purpose of making an inspection. We there had the pleasure of attending recitations conducted by the Dean and the various professors and at the same time consulted with them as to the progress of the school and its needs.

We see no reason to dissent from the opinion expressed in the last annual report so far as it relates to the method of instruction employed and the apparently satisfactory results obtained therefrom. That the students in attendance are earnest and industrious is evident from their recitations and the general tone of the institution seems good.

We were pleased to learn that in pursuance of the recommendations made in the last annual report, more attention has since been given to instructions in practice; we were especially pleased to learn that the Hon. R. M. Bashford is now professor in charge of the department of practice and is furnished a capable assistance.

Referring to the library of the institution, we have again to report that in our opinion, it needs immediate attention. It possesses but two sets of Wisconsin Reports, but one of which is furnished by the state. It is entirely deficient in text books. It lacks entirely the state reports of a number of states and nearly all the sets of state reports that it has are incomplete.

The state law library has always been used by the law students. In late years, as the practice in the Supreme Court has increased, the lawyers who attend that court frequently need to consult the books of the state law library. They frequently find this work interfered with by the law students having the books in use. This has gradually grown from an annoyance to almost a nuisance. Since the fire the students have been forbidden the use of the law library. This privilege having been taken away is likely never to be restored. In the future, therefore, the law students will have to depend entirely on the College of Law library. This being the case, it becomes especially necessary that this library be complete in every particular.

The College of Law library should be supplied at once by the state with from six to twelve sets of Wisconsin reports and an equal number of copies of the revised statutes of the State of Wisconsin for 1898; also, a complete outfit of session laws, especially, those of the session subsequent to 1898.

In pursuance of the opinion of the committee there was prepared and introduced into the legislature at its present session, a bill directing the superintendent of public property to deliver to the library of the College of Law of the University of Wisconsin eight sets of the Wisconsin Reports, ten copies of the statutes of 1898 and ten copies of the Session Laws subsequent to 1898. We are pleased to report that this bill is almost certain to be passed by the legislature and become a law.

A bill was also introduced providing for an increase in the annual amount to be used in caring for the library from \$1000 as it now is to \$2500; also, a bill appropriating \$15,000 to be used to complete the law library. These bills will not be urged for passage until the general bill providing the income for the University for the future is finally disposed of. If that bill is passed the last two bills mentioned will probably be indefinitely postponed as unnecessary. If the University bill is killed, we will then urge the passage of the two bills just mentioned relating to the College of Law. The committee is entirely satisfied that the disposition of the officers of the University and members of the Board of Regents is favorable to the College of Law and that hereafter it will receive its share of the general income provided for the University, in the bill now pending.

We deem it our duty to call attention to the fact that the College of Law has not sufficient quarters. When the library is completed, it will become necessary to break through from the library into the adjoining lecture room for the purpose of obtaining the necessary space for the additional books. This will deprive the College of one of its lecture rooms. It has none too many at the present time.

We would, therefore, recommend that as soon as possible, the entire building now occupied by the College of Law be turned over to it for its exclusive use.

Your committee now takes the liberty of drawing attention to the fact that the attendance in the College of Law has in no degree kept

pace with the attendance in the other departments of the University.

Why should Wisconsin young men who wish to study civil, electrical or mechanical engineering, medicine, agriculture, or pharmacy, willingly attend the University of Wisconsin to equip themselves in their chosen business or profession, while the young man who desires to become a lawyer seeks his education elsewhere? Your committee can give but one answer to this, to wit: That the other departments of the University of Wisconsin are better equipped and better known than the College of Law. As a matter of fact, it is more important that the young men of Wisconsin who intend to follow the profession of the law should receive their instruction in a Wisconsin college, than those who intend to equip themselves for other pursuits. This statement contains its own argument.

Your committee is of the opinion that the College of Law is entitled to and should be placed on an equal footing with the other departments of the University; this can only be brought about by it receiving its appropriate share of the income of the University. If the College of Law is to reach the high plane to which we hope to see it elevated, it will only be when it is provided with sufficient funds to fully and completely equip it with the necessary material in the way of books, etc., and also to enable it to procure a corps of professors and instructors, who will not only give it a reputation for thoroughness and efficiency at home, but standing and popularity abroad.

All of which is respectfully submitted.

Dated:

Milwaukee, Wisconsin, March 29, 1905.

(Signed) W. J. McELROY,  
ALDRO JENKS,  
G. G. SEDGWICK.

---

#### TO THE BOARD OF VISITORS TO THE UNIVERSITY OF WISCONSIN.

Your committee appointed to inspect the College of Agriculture would respectfully report that we have visited the college on several occasions and find nothing to criticize in its management. The attendance is constantly increasing while the scope of the work being done is being gradually extended and improved. The people of the state are realizing more and more the importance of this branch of education and are availing themselves more and more of the opportunities offered in this institution. This is evidenced by the fact that in largely increasing numbers, the long or four years course in agriculture is being sought out and chosen by young men who are looking forward and planning their life's work. Your committee believes that there is no course to-day in the University that can offer the opportunities presented by the long course in Agriculture. While the ranks are over-crowded in all the ordinary avocations of life, the demand for those who have received a liberal education in Colleges of Agriculture far exceeds the number available to meet these demands: The fact that the College of Agriculture, connected with the University of Wisconsin, is one of the foremost institutions of its kind in the world, causes a large demand to be made for the services of its graduates. Many institutions are seeking the services of these young men as professors in their colleges, not only throughout the United States but in foreign countries. Your committee feels that any amount that may be spent upon this institution will be money well expended, and

that it can be demonstrated that the College of Agriculture has not only repaid the people of the state for all that has been expended in its behalf, but that it has also returned to the state, in dollars and cents, considerable more than the University has cost the people from the time of its organization. At the present time the Experiment Station is dealing with large problems from which great things may be expected of the utmost importance to the agricultural element of our population. The principal needs of the institution at the present time are sufficient appropriations to install a poultry department and give instructions in poultry rearing, in developing a school of forestry and providing additional instruction in Veterinary Science. Your Committee would recommend that no niggardly policy be indulged in respecting the appropriations made for the work being conducted in this institution believing that it will richly repay all expenditures made upon it.

Respectfully submitted,

(Signed) ALDRO JENKS,

H. L. DESMOND,

Committee.

---

## REPORT OF COMMITTEE ON PHARMACY AND NATURAL SCIENCES.

Honorable John B. Winslow, Chairman of the Board of Visitors of the University of Wisconsin.

Dear Sir. Your committee begs leave to report as follows:

### SCHOOL OF PHARMACY.

From such investigation as we have made, we feel that the quality and strength of the work done in this department is high and in every way satisfactory. We feel, however, that when the department can be transferred to better and more commodious and convenient quarters that the work will be even more satisfactory, and will be more of a pleasure to the instructional force. The department is laboring under many difficulties and inconveniences in its present quarters, and we hope that arrangements can be soon made to provide it with better ones.

It has been suggested that it would be a wise policy to provide a manufacturing dispensary. Without making any specific recommendations on this matter we would, however, favor a careful investigation by the authorities of the University as to this project, and, if feasible, that it be worked out. We will not do more here than suggest the matter and leave the details of the advantage and benefits to be derived therefrom, if feasible, to be presented by the authorities in charge of the department if the matter can be taken up by the Board of Regents.

If a system of compulsory health insurance could be established in the University, as is now in vogue in Harvard University, this project of the manufacturing dispensary would be well worked in with such a system. The idea has to a certain extent been worked out in the Agricultural College, and we are informed that so far as the principle has been applied it has been satisfactory.

We feel that we should call the attention of the Board of Visitors to the fact that notwithstanding the laboratory of this department is

located on the third floor, from which floor there is only one stairway leading to the ground, there are absolutely no fire escapes or ropes, or any other means provided as a precaution against danger of fire. Chapter 349 of the Laws of 1901 provides: "Every\* \* \* \* building now or hereafter used in whole or in part as a public building, public or private institution, \* \* \* \* school house, \* \* \* \* place of assemblage or place of public resort, more than two stories high and containing above the ground floor \* \* \* \* offices, an assembly hall or work rooms \* \* \* \* all or any of which rooms are designed for occupancy by twenty-five or more persons, shall be provided with one or more fire proof stairways or ladders on the outside thereof, placed in such positions and as many in number as may be designated by the chief of the fire department or fire marshal of the city or village in which the building is located, or by the state factory inspector." The act further provides that failures to comply therewith shall constitute a misdemeanor and be punished by a fine not exceeding \$1000 or by imprisonment in the county jail not longer than ninety days.

Without attempting to construe this act or give a legal opinion upon it, we would suggest that the condition of North Hall in which the department of Pharmacy is located comes within the protection of this enactment. These quarters without fire escapes are particularly dangerous because of the constant use of explosives and chemicals. We would earnestly press upon the Board of Regents the matter of making some provision in reference to this situation.

#### SCHOOL OF NATURAL SCIENCES.

The attendance in this department has increased so rapidly that it is crowded to overflowing. As we have been advised that provision will be made for relief in this respect in the near future, perhaps no further comment thereon is necessary. The standard and quality of the work done in this department are thoroughly and generally satisfactory to your committee. Perhaps some additional instructional force should be added to the department, and in addition to that we recommend that provision be made for the purchase of a more adequate supply of apparatus for the more elementary laboratory work in the department of physics. We feel that this is much needed and hope that attention can be given to it.

The upper rooms of the Science Hall, which may be properly characterized as the attic, and also the third floor of the building are absolutely unprotected so far as fire escapes are concerned, and fall in the same measure as North Hall to comply with the law, if the law is applicable thereto. While this building is fire proof yet such fact does not exempt any building from the requirements of the law, either in its letter or in its spirit. It is a matter of common knowledge that fires oftentimes become disastrous in fire proof buildings, and with the large stairway in this building a vast amount of smoke would naturally go to the upper quarters and unless fire escapes are provided, might cause loss of life. We would respectfully call the attention of the Board of Regents to this shortcoming with reference to this building and urge it upon their attention. We see no reason why, if the law is applicable, it should not be complied with by the State and the University authorities as well as by private individuals.

In the upper floor of this building, and particularly in the assembly rooms, the ventilation is very defective and we think something should be done about it. It may be a difficult matter to enlarge the flues or air shafts, but we feel that some provision should be made. Very large classes are assembled in these rooms, and we are advised

that at times it is very difficult to keep the air in a pure condition. Surely a University of learning, teaching the principles of physiology ought not to condemn its pupils to ill health by failing to comply with the ordinary laws and rules of ventilation. We sincerely hope that some attention will be given to this matter and a remedy provided.

All of which is respectfully submitted,

(Signed) EDWARD M. SMART,  
Chairman.

F. W. A. NOTZ.

#### REPORT OF COMMITTEE ON ASTRONOMY AND MATHEMATICS.

To the Honorable J. B. Winslow, Chairman of Visiting Committee,  
University of Wisconsin:

The Special Committee on Astronomy and Mathematics respectfully report that they visited the departments assigned them, attending class exercises, and have held sessions with some of the instructors and availed themselves of other usual means of becoming advised as to the work being done in this branch of the University.

They find the observatory well kept and well managed. The classes in mathematics are well attended. In fact some of them seem to be rather over-crowded. Still the students are orderly and attentive and manifestly making thorough progress. The interest manifested shows that the students do not regard the study as dull and uninteresting. On the contrary, the attendance of about 70 per cent of the students in the regular course upon the classes in mathematics, although the study has been made elective, is proof that the professors in this department are doing thorough work and making the study interesting to the students.

The only possible manner in which the study of mathematics can be made interesting and that branch of study popular with the students, is to so conduct the classes that the work will be thoroughly understood as the class progresses, and this very desirable end seems to be attained to a commendable degree. The proportion of ladies attending the classes in mathematics is exceptionally large, and we are glad to say that they are doing good work.

We notice that there is quite a large percentage of scholars in this department who are not residents of this state, and who, on that account, are required to pay a small fee for tuition. The fee charged these students is much below the cost of instruction, and the question naturally arises, does it pay to permit students from without this state to attend the University upon payment of a fee below the cost per capita for conducting the University? While this may be a debatable question, we believe that these non-resident students are among the most progressive of the attendants. They come here with a high appreciation of the advantages which the University offers, and they come here for business, and their attendance is usually a help to the classes. Again, they take home with them a high appreciation of our University, and are the means in many cases of assisting worthy graduates of the University to obtain desirable situations in other states. At present, at least, we do not think it desirable to advance the charge for tuition made to outside students for reasons suggested among others.

The instructors in these departments have their classes well in hand and they are making commendable progress; the attendance on recitations is good and the work is manifestly being well mastered by the students as they progress.

Respectfully submitted,

(Signed) G. G. SEDGWICK,

F. W. A. NOTZ,

JESSIE M. COLE,

Committee.

---

Milwaukee, Wis., March 23, 1905.

Hon. J. B. Winslow, Chairman of Board of Visitors.

Dear Sir. Your committee on College of Mechanics and Engineering makes the following report:

The College of Mechanics and Engineering as a whole makes a very favorable impression on the visitor; the relations existing between dean, professors and students being excellent,—but a more detailed inspection of the various departments thereof, shows that certain changes, if made, would remedy unfavorable conditions and be of great advantage.

It has been observed, that the classes are overcrowded on account of the large increase in the number of students during the more recent years, nor is it expected that there will be any diminishing in attendance in the years to come. As it is, all available space in the present building, which, when erected, provided for ample accommodations, is being utilized, and the overcrowded conditions in the class rooms, as well as laboratories and drafting rooms are noticeable.

The Department is growing at the rate of one hundred students per annum; so rapidly in fact, that larger accommodations have become more than necessary. This lack of room is a serious drawback and can only be remedied by building an additional wing to the present department. At the same time a proper room might be provided therein, to exhibit the work of the students, which by and by would form the basis of a museum; furthermore, larger facilities are necessary to keep the instruments of the civil engineering department under proper care.

The present hydraulic laboratory on account of its lack of space, does not answer the purpose at all and a separate building should be erected on the lake shore where a large supply of water is to be had at all times; this being indispensable for proper and thorough hydraulic experiments. This laboratory conducted under the present instruction will prove of immense value to many problems which are at present awaiting solution.

The new method of concrete construction with steel bars or rods is coming more and more to the front in the building line; concrete beams and girders replacing those of steel. The different kinds of cement, however, must be tested, to prove their carrying strength, and in order to do this accurately, it is necessary to provide for a larger testing machine than the one now in use. Also steam turbines are lacking in the steam engine laboratory, which makes it difficult for the student to get acquainted with this important substitute for steam engines for certain purposes; furthermore, some new type of high speed engines should be acquired to keep this laboratory up to date.

Another building which this department needs, and has needed for a long time, is a new foundry. The present one is a very inadequate affair and might be called a thing of the past. It could with very

little expense be arranged for a large forge room, to answer the manifold requirements of mechanical as well as agricultural students and a new building be erected with a modern plant to take the place of the present foundry.

Then, too, we deem it advisable that a course of "Chemical Engineering" be introduced as soon as possible. The introduction of such a course would not merely be of the greatest importance to this institution and to the students who come here for their education, but also a direct benefit to the state. Through the more economical utilization of the boundless natural resources of our country and through its large influence on the development of new industries, it is a course, which adds greatly to the wealth of the country. One additional professor for this special work would be required in order to introduce this course, for which there is certainly a great demand.

These recommendations are based on personal observations and it is our most sincere wish, that the members of the present legislature may be interested to such a degree as to vote favorably for the bill, which would enable the Board of Regents and the different faculties, to lay out proper plans for improvements in due time to give the different departments sufficient funds, in order to keep them at standard height with other universities, that the University of Wisconsin shall be looked upon as one of the foremost institutions of learning, not only of the United States, but be considered even of high rank by its sister institutions abroad.

Respectfully submitted,  
 (Signed) WILLIAM J. UTHLEIN,  
 Chairman.  
 G. G. SEDGWICK,  
 C. G. CANNON.

---

#### REPORT OF SUB COMMITTEE ON PHYSICS.

The number of students working in the department of physics is approximately one-fifth the whole number attending the University, including the law school and the short course students. The space and equipment are practically what were provided for one-half the present number. In addition to the basement and first floor of Science Hall, which the department now occupies, the second floor is also needed to provide opportunities formerly presented.

It is hoped that a new building for the biological department may give the space needed, and that the present Science Hall may be given exclusively to physical science. Before this can be accomplished, however, it is recommended that, if possible, means be provided the students for enjoying in their present limited space the facilities which were formerly presented.

An expenditure of \$1000 for duplicate apparatus would be of great service in this direction, four hundred students being at present limited to the apparatus originally designed for two hundred.

A slight expenditure, also, for re-flooring and re-seating the physical lecture room would seem to be in the line of real economy, since at present practically the same lecture is given to three divisions on account of the limited seating capacity of the room. This room would easily seat one hundred more persons than at present, and as comfortably as those now accommodated, saving at least one third the time at present employed in reaching an equal number of students.

Our University has an enviable reputation for valuable experimental

work in many lines, and our physical department is most ably adding to this reputation. There seems to be no good reason why, with our advance in other lines, we should be behind Cornell, Michigan and Chicago in the matter of a liquid airplant. An expenditure of \$1500 for this equipment would give us an equal opportunity with these universities for experiment in valuable directions.

The amount of service given the students in the laboratories is no doubt a pressing need in many departments, but it seems wholly inadequate here, when one man is expected to direct seventy students.

One instructor gives his whole time to this work, while five others, who are working for higher degrees, are paid \$400 a year each for twenty-three hours' service each week in the laboratories, besides the examination every evening of seventy note books.

That anyone can be found to attempt such service is a tribute to the men under whom advanced work is sought; but from the students' standpoint, it would seem that more help is due than it is possible for one person to give to seventy workers.

Respectfully submitted,

(Signed) HELEN R. OLIN,  
HELEN L. BURHANS.

To the Hon. John B. Winslow, Chairman of the Board of Visitors, of the University of Wisconsin.

Your Committee on Student Life of Women respectfully report:

That by conference with members of the faculty, members of the University League, interested citizens and students, they find that the large body of women students are pursuing their work with interest and enthusiasm, that social life in Chadbourne Hall and most of the sororities is so regulated as to preserve the true relation between work and recreation; that frivolity and defiance of convention is confined to a few.

The University now has 720 women students. 118 belong to the School of Music. 266 are residents of Madison; 105 live in Chadbourne Hall; 123 live in sorority houses; the remaining 226 find homes in the city. These we shall consider later.

Life at Chadbourne Hall meets most nearly the needs and desires of the great majority of parents outside of Madison, but Chadbourne Hall accomodates but one-seventh of the whole number of women students for this year. Your committee reiterates the recommendation of last year that in making out the list of students at the Hall for next year, preference be given to the freshmen and sophomores, their youth and inexperience making them less able to meet outside conditions. We understand that but few freshmen were admitted this year.

The physical life of the young women is under the direction of a capable and enthusiastic woman. She is doing as fine work as possible, under the cramped conditions for room. We understand that plans are maturing for remedying these conditions.

To those who can afford to belong, and are fortunate enough to be invited to do so, the sororities furnish delightful homes. If adequately chaperoned, this grouping of congenial girls, interested in making and adorning a home; in letting that home radiate its hospitality to others, and in the mutual watchfulness, helpfulness and responsibility thus engendered, is admirable.

But it seems to your committee that the rules of the sororities and the chaperone selected should be subject to the approval of the faculty.

Of the 226 who are outside the Hall and the sororities, some are

guided and guarded in real homes. But there exists a perplexing remainder whose home conditions are undesirable, sometimes intolerable. In sixty-three boarding houses both men and women are taken. In some boarding houses young women have no place to receive callers, save their bedrooms; no parlor privileges being provided for.

The faculty are awake to these conditions, and their social committee is carefully preparing a list of boarding houses, showing these conditions. This list is to be mailed to High Schools and to parents, with the hope that when attention is called to the facts the parents will insist on separate boarding places. The boarding house keepers are requested by this committee to take only one sex. The University cannot guarantee to fill the boarding houses, and the keepers cannot be expected to sacrifice profit to propriety.

This University committee has also succeeded in practically putting a stop to midweek parties, most of the girls co-operating heartily.

Having recognized that conditions are not so bad as often represented; that remedial work is in progress, it is still the opinion of this committee that the crying need of the University now is adequate homes for its women students. We further believe that this need may be best met by the cottage system in successful operation at Wellesley and other colleges. Here the girls can have the advantages of the sorority homes at less expense and without the class distinctions fostered by the radical differences between cheap boarding places and expensive club houses and under the unquestioned direction of the University faculty.

Through the courtesy of Mrs. W. A. Scott of the University League, we examined letters from eight coeducational institutions as to home life. We give a brief synopsis that may interest you. Cornell has 300 women students: 275 live in Sage Hall. The State University of Missouri: "We strenuously discourage boarding houses without parlors for callers and boarding houses where both sexes are taken, and so far our persuasions have never been violated."

The University of Washington: "Girls are not allowed to room at the same place with men. We need more dormitory room and consider this the most satisfactory solution."

The University of North Dakota. "Practically all the young women are in our dormitories.

The Universities of Michigan, Iowa, Illinois and Nebraska have much the same conditions as here. No statutes but an advisory committee.

Respectfully submitted,

(Signed) HELEN L. BURHANS, Chairman  
JESSIE M. COLE.

---

#### REPORT OF COMMITTEE ON DEPARTMENT OF HOME ECONOMICS AND SCHOOL OF EDUCATION.

To the Board of Visitors of the University of Wisconsin:

Unfortunately this committee was unable to visit the department in a body. Each made an individual visit.

The recently established department of Home Economics occupies well-equipped quarters in South Hall. None of the older departments seem of greater importance than this one. In this department young women may pursue useful studies that stand on equal footing with any of the classical or scientific courses. The fact that more girls are

taking the courses in chemistry and bacteriology seems to indicate that they are making the required preparation to enter the department of Home Economics. This is not a mere "cooking school," but from the work done here, Wisconsin cannot fail to get better housekeepers and home makers. The work of the department demands of its students a knowledge of chemistry, dietetics, sanitation, economics, and market values. Judging the style of work from the lecture we had the pleasure of attending, no one can doubt the benefit to be derived from the course. Both the country and the city homes will be improved wherever the students from this course may go. The aim seems to be to teach how to live most healthfully and happily, to add to the beauty of living, to make the most of location of homes, to learn to enjoy the sun and all that promotes health. The lively discussions during and after the lecture betrayed the enthusiasm awakened by the lecturer as well as by the subject.

At the time of our visit all arrangements for work in kitchen were not completed. Of the future of this department, great expectations are cherished. We were told that the work this year has been handicapped by no work being offered in physiological chemistry. We were also informed that the University was in need of a department of art and design. All mechanical work in the University is strong, and it has good shops; but real *art work* is needed—one point in which the University of Wisconsin is behind the University of Illinois.

It is the intention of this department to make a collection of American pottery, obtain pictures, and in all ways to create a taste for the beautiful. If, as we have read, "to teach taste is to form character," the small beginning made in the past few months presages much for the success of the department in the near future.

The contrast between the pretty homelike office of the department and the same room as it was years ago, shows how, through the influence of the department, some of the other grim lecture rooms may be made more attractive.

The influence of the Home Economics work will be felt throughout the state. Through this teaching more thought will be put in the locating of houses on lots and the arrangements of the interior for comfort, health and beauty.

This department is increasing the scope of its influence and making its usefulness more fully appreciated by the people through such lectures as were given in February in the Housekeepers' Conference, which was held in connection with the Farmers' Course in Agriculture. The subjects discussed were Food and Health, Care of Children, Water Supplies, Ventilation, House Furnishing, Marketing. Being thus brought before the public, more people of the state will take an interest in their Home Economics course, just as they do in their Agricultural department. Would it not be well to offer a short course in Home Economics corresponding to the short course in Agriculture?

---

#### DEPARTMENT OF EDUCATION.

An attempt was made to call upon the head of the Department of Education, but as visit was made when all were making preparation for departure on holiday vacation, the attempt was in vain. However, from what was learned in other ways, we are assured that most excellent work is being done in the department and through it the work in the secondary schools, as well as in the University is very much benefited.

Respectfully submitted,  
(Signed) JESSIE M. COLE,  
H. J. DESMOND.

## TO THE BOARD OF VISITORS TO THE UNIVERSITY OF WISCONSIN.

Your sub-committee charged with the duty of visiting the graduate department and summer school, respectfully report that the chairman was unable to meet with the committee, but the remaining members of the committee visited the summer school July 26, 27, 28. The attendance was large, the interest manifested was good, and the school as a whole is to be highly recommended. The design of the summer school is to meet the wants of teachers and those undergraduates who desire to shorten their University course and of graduates who wish to devote a part of their vacation work to advanced courses. In addition, in the College of Engineering, there is a summer school for artisans established for the benefit of machinists, carpenters, sheet metal workers, stationary, marine and locomotive engineers, shop foremen and superintendents, superintendents of water works, electric light plants, power stations, and factories. The attendance in this department last year was 91 and your committee feels that every facility ought to be extended to the class of young men seeking to avail themselves of the opportunities afforded in this department. No detailed educational requirements are insisted upon for entrance to this work, but the instructors speak in the highest terms of the zeal of the students and the progress made by them. It will be seen that the courses followed in the summer session appeal to many classes of students and the instruction must necessarily be quite diversified in its character. Your committee believes the work in this department of the University is of sufficient importance to justify an increased outlay for the purpose of securing instructors and lecturers of national reputation. If sufficient inducements could be offered to procure the attendance and services of eminent specialists in the different departments from other institutions of learning, it would draw to the University many of the principals and teachers in our high schools that now seldom or never attend. This would result in better work being done in the high schools of the state and at the same time promote a friendly interest in the University on the part of those in attendance. A greater effort should be made to procure an attendance of the undergraduates of our normal schools and the minor colleges of the state. Here is a large student body that could be greatly benefited by the instruction given in the summer sessions. We cannot learn, however, that any serious attempt has ever been made to reach them and interest them in this branch of University work.

Your Committee would suggest to the Board of Regents and those charged with shaping the policy of the University, the advisability of placing the management of the summer school, advertising the same, procuring instructors, etc., in charge of some one official who shall be permitted to devote his entire time to the subject. As now conducted, the summer school is a mere incident to the work of those having it in charge. Most of their time and attention must necessarily be given to other matters and such persons naturally feel a greater interest in that which is regarded as their principal work than in something that is looked upon as a mere side issue. Were some one person to devote his entire time to organizing and advancing this department of University work, we believe a much larger attendance could be procured, especially from the normal school and other institutions of learning around us, thus adding to the usefulness of the University as a whole and creating a better feeling towards the University on the part of the students of such institutions.

Respectfully submitted,  
(Signed) ALDRO JENKS,  
F. W. A. NOTZ.

SUPPLEMENT TO THE REPORT OF THE COMMITTEE ON  
THE SUMMER SCHOOL.

As a supplement to the report on the Summer School the undersigned begs leave to submit the following:

In visiting the class in Library Training established by the Wisconsin Free Library Association and taught in connection with the University Summer School, I found it in excellent working order and attended by a goodly number of students. But considering the requirements now generally made for appointment to the position of librarian, both time and range of studies, in a course of about seven weeks' duration appear to be inadequate, so that not a few persons of this and neighboring states prefer to enter other institutions outside of Wisconsin, chiefly in eastern states, that offer a full two years' course in Library Science and Training, and to the graduate, a certificate which has more weight with an appointing body than that of a mere summer school. In view of this and of the fact that the number of public libraries and, consequently, the demand for thoroughly trained librarians are steadily increasing, and in consideration that the University is better equipped for conducting a full and regular course in this branch of studies than the Free Library Association, I beg, with the consent of the board of Visitors, to propose that the leading authorities of the University take into consideration the practicability of transferring and embodying the existing Library Summer School into the organization of the University, enlarging it into a regular Department of Library Science and Training, covering a two years' full course of study and issuing to its graduates a University certificate.

Respectfully,

(Signed) F. W. A. NOTZ,

*Member of Sub-Committee on Summer School.*

Watertown, April 12, 1905.

TO THE BOARD OF VISITORS OF THE UNIVERSITY OF  
WISCONSIN.

Your Committee appointed to investigate the finances and business methods of the University, report as follows:

We met at the office of the Regents December 7, 1904, and made a careful investigation of the methods of book-keeping and accounting followed in the office of the secretary of the Board of Regents. The system in use seems to be perfect in all its details and entirely adequate to attain the ends desired. The books are models of neatness and accuracy and the Secretary, Mr. Riley, deserves great credit for the efficiency with which these important details are cared for. All items of expenditure are passed upon by the executive committee of the Board of Regents and the items are carefully checked over and passed upon by several distinct departments before being finally audited. In the Registrar's office, also, business methods prevail. Here a careful account is kept of the work done by each student and by means of the card index is readily available for instant reference in after years. By means of reports which are required to be handed in by the various instructors, an account can be kept with the various students so that it can be ascertained and determined whether each student is paying the required fees due to the University and make it impossible for the

students to attend classes and receive credit for work done before the proper fees have been paid.

The only other department of the University calling for attention at our hands was found to be the College of Agriculture. In order that the students may have facilities to make a practical application of the principles taught them, a large farm has been provided by the state and large quantities of milk and cream are purchased annually. In the experimental work conducted by the school, the greatest accuracy and minutia is being observed. The general farm accounts are well kept. In the dairying department, your committee feels that there is room for material improvement in the methods of being observed. This is due largely to the fact that this department commenced in a very simple way and has gradually expanded until it has assumed large proportions. The system that was entirely adequate in the inauguration of the Dairy Department where its operations were confined mainly to the milk produced upon the farm, is entirely insufficient at the present day. There is also a lack of sufficient clerical force in the Agricultural College to properly carry out the system of book-keeping requisite to handle properly the present volume of business. Many thousands of dollars are paid out annually for milk and cream in order that the students may have sufficient material to work with. This is being manufactured into butter and cheese and the products sold in open market. Your committee found it impossible to ascertain from the records, the amount of butter or cheese manufactured within a given time in this department, or to ascertain what amount of either product should be on hand. At the same time we were informed by Dean Henry that no system of checking existed, nor was any investigation ever made to ascertain whether the amount of these products sold and accounted for was bearing the proper relation to the amount expended for milk and cream. With this system, or rather lack of system, it is quite evident that two or three persons having matters in charge of this department, could annually divert a large portion of the product to their own use without serious risk of detection. In saying this, your committee makes no reflection whatever upon any one nor have we any idea that there is any reason to suspect or doubt the integrity of those having these matters in charge. The business has, however, outgrown the original system of book-keeping devised for it. The opportunity to indulge in speculation with little chance of detection is frequently the undoing of trusted officials, and your committee feels it incumbent upon them to call the attention of the Board of Regents to the needs of further safeguards in this department.

With the constant increase in the attendance at the University comes the continually increasing need of larger appropriations to conduct the work of the University. These matters and the needs of the institution have been fully set forth by the President and your committee does not feel called upon to say anything upon this question.

Respectfully submitted,

(Signed) ALDRO JENKS,  
G. G. SEDGWICK,  
W. J. McELROY,  
Committee.

## REPORT OF THE BOARD OF VISITORS, 1905-06.

MADISON, WIS., April 11, 1906.

*To the Honorable, the Board of Regents, of the University of Wisconsin:*

The Board of Visitors of the University for the year 1905-06 herewith submits its report which consists of the reports of the various sub-committees, all of which were approved and adopted as the report of the board at a meeting held April 10, 1906.

It will be noticed that in connection with the report of the sub-committee on the School of Pharmacy there is an individual expression of opinion by Mr. Schranck, and that there is a similar individual expression of opinion by Judge Goodsell in connection with the report of the sub-committee on Horticulture. These are submitted simply as the opinions of the gentlemen named without recommendation either favorable or adverse on the part of this Board.

By order of the Board of Visitors,

(Signed) JNO. B. WINSLOW,  
*Chairman.*

MILWAUKEE, WIS., March 27, 1906.

HON. J. B. WINSLOW, Madison, Wis.

Dear Sir: Your committee on ancient languages begs leave to submit the following report:

Each member of the committee visited the University one or more times and attended classes in the various departments of ancient languages. The committee found the teaching in this department very satisfactory. The teachers were alive to their work and the recitations were well conducted. The students appeared interested and the spirit of the class room was inspiring and stimulating.

In conversation with the teachers and heads of the various departments, the committee learned that the material needs of the departments are on the whole well cared for, and that in general conditions are favorable to do good work. This is gratifying to the committee as it feels that the classic languages should be cherished in our universities as they contribute to civilization an element which no other department of human thought can supply.

The committee believes that untiring effort should be used to increase the study of Latin and Greek in the high schools of the state, since the character of University work depends upon the preparation which students have made in the high schools. The committee should be especially pleased to see Greek more generally offered in the high schools than it is to-day.

On the whole, the committee has only words of commendation for the work carried on in the various departments upon which it was asked to report.

Respectfully submitted,

CHAS. MCKENNY,  
B. F. DUNWIDDIE,  
F. W. A. NOTZ.

HON. JOHN B. WINSLOW, *Chairman of the Board of Visitors,*  
University of Wisconsin.

Dear Sir: Your Committee on Modern Languages reports as follows:

*German:*

We found the German Department thoroughly organized and well managed with every indication of excellent results.

*Romance Languages:*

The department of Romance Languages shows more signs of activity and vigor than for some time past. We commend the reorganization of the department which is now in progress and predict that with this more thorough organization and unification the department will grow in strength and efficiency.

*Norse:*

The work of Norse, while not extensive, is done in a very creditable manner, and calls for no special comment.

*English:*

The work of this department we consider the most important of any in the entire University curriculum. In this department, therefore, we spent a large portion of our time.

We found the English work for the lower classmen well organized, definite and thorough and on the whole very well done.

We especially commend the system of filing the themes of each student. By this means the progress or lack of progress of the individual student and the efficiency or lack of efficiency of each instructor can be followed readily.

In the other departments of English, while we found good individual work done by the professors visited, is seemed wholly individual. Department organization, unification and inspiration was lacking.

We understand that an effort is being made to obtain a head for this department. We heartily commend this effort and we urge that in making this selection time and care be taken and a sufficient salary be offered to obtain a man big enough and strong enough to give unity, life, vigor and inspiration to the entire department.

We noted in several departments that study rooms or reading rooms had been provided. We commend this arrangement and recommend that the practice be extended.

We also commend very highly the system of conferences between instructors and students which we noticed in every department, and urge that this practice be extended and systematized. These are the tests by which the real teacher can be known. Here he will show his ability to reach the individual.

There is one further recommendation which we want to make, and it applies to all departments with equal force. It is the opinion of your committee that in many cases the salary paid is not adequate, nor just. If the University is to get and to hold men worthy of the institution, we must pay them accordingly. We therefore recommend that with the increasing revenue which the University will now get, that a large amount of the increase be used in paying increased salaries, even though it may be necessary at times to wait for additional buildings and equipments.

Respectfully submitted,

J. T. HOOPER,

MRS. M. H. BRAND,

J. E. MCCONNELL,

*Committee.*

## REPORT OF COMMITTEE ON COLLEGE OF LAW.

HON. JOHN B. WINSLOW, *Chairman of the Board of Visitors:*

The committee on College of Law would respectfully report as follows:

That the members of this committee were unable to arrange for a visit together and at the same time to this college, and have been unable to confer together personally as to a report, but correspondence had, indicates a substantial agreement as to impressions received. We found much to commend, and on the whole were well pleased with the general character of the work being done. The instructional force appeared to be earnest, thorough, and for the most part very efficient, and the character of the instruction given of the highest order. We believe that the College of Law, in all its features will compare very favorably with any University College of Law.

We had a feeling, perhaps not well founded, that more attention should be given to instruction in pleading and practice, both in that of justice courts, and of courts of record. It is our conviction that instruction in principles of pleading and practice should begin very early in the course, and continue through the course. Ignorance in these particulars on the part of young practitioners, is a most fruitful source of serious and expensive mistakes, as well as of humiliation and discouragement. One sees in daily practice at the bar, the great lack in this regard on the part of young practitioners from law schools.

We did not have time to determine accurately what was really being done in this regard, but desire to emphasize our conviction of the importance of such instruction in the law school.

One matter was, however, called to our attention which seems to require explanation, and, if we are rightly informed, amendment. It appears that in practically all, if not in every, American university maintaining a four years' course in letters and a three years' course in law, the student who has completed the three years in letters is permitted to count his first year in law as his last year in letters, receiving his degree of A. B. at the end of his first year in law, and his LL. B. or J. D. degree at the end of the two additional years. The practical effect of this is to enable the student to complete the two courses and receive the two degrees in six years, devoting three years to each. The reasonableness of this practice commends it. Six years is as long as ought reasonably to be *required* of a young man for his collegiate and professional study though more may cheerfully be permitted. Moreover, the studies of the first year in law, embracing such fundamental subjects as contracts, torts, crimes, persons, especially when taught in a deductive way and from a historical standpoint are as truly cultural as history, economics, or science, and are possibly even more highly disciplinary. We were surprised to learn that, practically alone among the universities of the country, this system does not prevail in the University of Wisconsin. The College of Letters and Science declines, as we understand, to receive as the equivalent of the work of its fourth year, the work of the junior in the College of Law. It accepts it in part, but requires a part of the student's work in the fourth year to be taken in the College of Letters and Science, and endeavors to supply him there with law courses in place of those which he is not permitted to take in the College of Law.

This involves a duplication of effort and a probably loss of efficiency. It would seem that the law courses in the University should be given in the College of Law, or at least that no faculty should refuse recognition to courses given there which it recognizes if given else-

where. From the present condition the curious situation arises that a student wishing to take the full law course and obtain also the A. B. degree, all in six years, may do it by taking his first three years at Lawrence or Ripon, and then taking three years in the College of Law, but cannot do the whole thing at the University. He may, as before state, do it all at Chicago, Northwestern, Michigan, Minnesota, Indiana, or any of the universities which compete with Wisconsin; and they make much of such fact.

The College of Law has, we understand, applied for such recognition by the College of Letters and Science, but its application was refused by that college. It is a question in our minds whether the system prevailing in the other universities ought not to be adopted in the University of Wisconsin.

The supreme importance to the state, of the training given in this college is such as to demand that it be kept at the highest standard of efficiency. One has but to glance at a list of its graduates, and recall the large part they have taken, and are taking in the affairs of the state, to appreciate the influence it exerts.

We have great reason to be proud of the College of Law, the high character and efficiency of its corps of instructors, its reputation and the splendid work it is now doing. The state can not be too generous, in our opinion, in supporting it and maintaining it at the highest possible standard of excellence.

*Committee.*

HON. JOHN B. WINSLOW, *Chairman of Board of Visitors:*

Your Committee on the Student Life of Women in the University finds that there is a total attendance of seven hundred and seventy women and girls, of which number four hundred and seventy are non-residents. Of the four hundred and seventy non-residents, we find one hundred and four in Chadbourne Hall, one hundred and fifty-eight in sorority houses, thirty in the Y. W. C. A. building. All of these women are under a chaperone. We find of these non-residents one hundred and seventy-eight who are rooming and boarding, under more or less favorable conditions, in houses in different parts of the city. In our opinion, this condition should not exist longer. Next year the authorities propose to remedy this partially, by not allowing the senior girls to live in the hall, and the following year by keeping out both seniors and juniors. This is only a temporary measure, and one that does not appeal to your committee. We consider it unfair to the girls who have made the hall their home for two and three years, to be obliged to find a new home; and unfortunate for the younger girls, who through the loss of the older girls are deprived of many of the advantages of the hall. The hall girls are practically all non-sorority girls, and do not have many social pleasures outside of the hall, and those the hall brings. While we do not advocate too much social life, yet there should exist a certain amount of it, enough to add some bright spots to the daily routine and grind. The development of the social side of a woman is one very essential side of her University course. By taking these seniors and juniors from the Hall, and placing them in private homes, their ties and companionships are broken up, their last year or two deprived them of their happy associations, and their loyalty to the University must necessarily be greatly lessened. We feel that the state owes the protection and advantages of a home to all the young women who enter its doors, and we recommend the erection *at once* of cottages or dormitories, large enough and of sufficient number to house all the women connected with the University who now must live in boarding houses. If the authorities have already planned this year to use, for other buildings, the money appropriated to the University for such purposes, we recom-

mend that the authorities lease some of the University ground to investors, who shall erect suitable cottages or dormitories under the direction of the University, the University renting these and eventually buying them. The sorority houses have proven a great benefit to the University in providing homes with good chaperones, for so many of its young women. The great success of these sorority houses should be a plea for the cottage system, rather than large dormitories.

The committee feels most strongly the lack of elevators in the University buildings, and wishes it had the power to insist that elevators be put in every new building attended by women, and in as many old buildings as possible. The long flights of stairs to be climbed by the young women does more to break down their health than all their studies. We feel that this important part of our buildings has been too long overlooked.

The women of the University have organized themselves into a Self-Government Association. This organization exists to further in every way the unity of spirit of women in the University, to increase their sense of responsibility toward each other, and to be a medium by which the social standard of the University can be made and kept. The aim of this organization is excellent, and much good is accomplished through it, but it needs a head,—a Dean of Women; a woman with whom all the girls can consult; some one to guide and direct their organizations; one who would be an adviser in all matters. Such a woman will be an enormous benefit to the women of the University; and through the women, to the University itself. The marvellous growth of the University has led to a rapid increase in the social duties among the students. The extent to which these social pleasures has been carried, has had a very undesirable effect on the students and the University. We would recommend that a restraining hand be placed upon the house parties. During the Junior Prom days, the fraternities invite the girls whom they are to take to the Junior Prom, to be their guests during the three days from Friday until Monday, one or more mothers chaperoning the house party. At these house parties, one social event follows close on another, and by the end of the three days both girls and boys are completely tired out and fortunate if they are not sick. Each year the house parties are a little more elaborate and extravagant than the year before, and we feel that there is only one course to pursue,—to abolish them entirely. Through the co-operation of the young women, the mid-week parties have been abandoned; with a dean of women in authority, the young women can assist much in correcting all the Junior Prom extravagances.

The present gymnasium for women is far from adequate to meet the demands of the girls. Physical training is absolutely essential to the student body, and a gymnasium large enough for all young women, and properly ventilated, will do much towards keeping our young women strong and healthy. It is gratifying to know that steps have already been taken for such a building.

Respectfully submitted,

MARY C. BRITTINGHAM,  
MATTIE L. BRAND,  
CHARLES MCKENNY.

April 2, 1906.

HON. JOHN B. WINSLOW, *Chairman of the Board of Visitors:*

Your Committee on the Natural Sciences begs leave to report as follows:

Speaking generally your committee believe excellent work is being done in the sciences. Faculty and students alike show a lively interest in the work carried on in class rooms and laboratories, and the spirit of investigation which should characterize a scientific faculty

is evidenced by numerous private laboratories and by the valuable papers published in the Bulletin of the University and elsewhere.

The chief need at present is more room for the departments now crowded into Science Hall. It seems absolutely necessary that other quarters be provided for at least one of these departments in the near future; which one should be transferred and where the new building should be placed are problems to be worked out by the regents, taking into consideration the development of the University as a whole.

Your Committee is also of opinion that some arrangement should be made by which the geological department of the University and the State Geological and Natural History Survey may be brought into closer relations. Both should be housed in the same building and opportunity given for the enlargement of the geological museum. This collection is already valuable from a scientific standpoint, and interesting to any observer, and could easily be made one in which every citizen of the state would take pride.

Respectfully submitted,

J. E. MCCONNELL,  
HERMAN SCHAPER,  
*Committee.*

HON. JOHN B. WINSLOW, *Chairman of the Board of Visitors:*

Your Committee on Graduate Department and Summer School submits the following report:

Visits in a number of classes of the Graduate Department and inquiries have convinced us that the work of study, instruction and research is generally carried on with energy, ability and devotion by students and teachers, and that gratifying results have been obtained. The fact that this department numbers a large proportion of students graduated from other colleges and non-residents of Wisconsin indicates, we think, that it enjoys a good reputation far beyond the confines of Wisconsin; a fact which every friend of the state university ought to be proud of. Of late it has been publicly pronounced that the fostering of the post-graduate department in the interest of non-resident students and to the detriment of the undergraduates is a mistake. It appears to us that this charge is not justified by facts, and we believe that the true interests of our State University and of higher education in Wisconsin are best served by a liberal support and advancement of the graduate department, without, of course, neglecting the interests of the under-graduate work.

In visiting the summer school we noticed not only a remarkable increase in the number of students in comparison with that of the previous year so that many classes were crowded, but also an improvement in the quality of the new material, there being a large number of graduates and teachers of colleges and high schools enrolled among the students, who applied themselves to their studies with a set purpose and a devotion that made the teacher's task indeed a pleasant one. In fact in most classes we found both students and professors, enthusiastically pushing their work.

It seems to us that the summer school answers a real need of our time and state, and that it deserves all the encouragement and support that the means of the University will allow. And, in opposition to some adverse criticism we have noticed, we should recommend that no change be made in the mode of recompensing professors for devoting their vacation to teaching in the summer school, by granting them leave of absence for recreation and study, without deduction of salary. In this the University is setting a noble example of liberality and

gratitude toward deserving professors which ought to be imitated by many other higher institutions of learning in Wisconsin and elsewhere.

(Signed) F. W. A. NOTZ,  
*Chairman of Committee.*

Watertown, March 30, 1906.

*Domestic Science:*

The recent enlargement of the function of the University by adding a department of applied science for women, emphasizes the value of practical knowledge.

The Domestic Science Department, though yet scarcely two years old, has already demonstrated its right to be.

We are pleased with the practical nature of the instruction given, so vital to the intelligent and economic administration of the home. Knowledge of Chemistry and Bacteriology is applied to such practical questions as the discovery of food values, the composition of foods, the scientific principles of preparing them and their combination in dietaries from an economic and physiological standpoint.

Scientific principles of sanitation are investigated, especially in relation to selection of a building-site with reference to drainage and exposure to sun and air. Plumbing, heating and lighting are discussed as are also the care of woods, metals and cooking utensils.

This instruction given in lectures is, as far as possible, demonstrated in the laboratory by the student herself. What we do ourselves we know thoroughly.

But this is not all that this valuable department offers to young women. The course is rounded out by lectures on home-management, and the subject of home decoration is made a potent means of culture. The idealizing faculty is developed in connection with scientific knowledge and the student realizes beauty of expression as essentially practical. Tone, harmony, color, mean something. Vulgar and cheap decoration give place to the interpretive book or picture.

The office in its simple furnishings and harmonious coloring is an object lesson. The laboratory white, light and airy is no less effective. We wonder only that more of our young women do not take advantage of this splendid equipment. We think it should be better known.

The attention of the public has been directed to it, by such successful gatherings of women for instruction in Domestic Science as were conducted by Prof. Hunt and Miss Huntington in connection with the annual Farmers' Institutes held in Madison, and by the more recent Morris Exhibit.

We bespeak for it your hearty support and encouragement, and hope, in the near future to see the Department of Domestic Science, rank with the Colleges of Agriculture, Engineering and Law.

Respectfully submitted,

(Signed) MATTIE L. BRAND.

Milwaukee, March 28, 1906.

HON. JOHN B. WINSLOW, *Chairman of Board of Visitors:*

Your committee on Education begs to report as follows:

A very large number of the graduates from the Educational Department of the University become either principals or teachers in our High Schools. The training in preparation for this work consists in the study of the History and Principles of Education, Research in Education, Educational Psychology and kindred subjects, with lectures:

and discussions on school organization and school management, all of which is most excellent. We also find much to commend in the earnestness with which the work is carried on, and the lively interest shown by students in the discussions.

Still we feel that one thing is lacking; there is no opportunity to study class-room methods and management at close range. The ability to see quickly and to estimate accurately is a valuable part of a teacher's equipment, and should be made an important feature of his training. He should bring to the discussions, not only the knowledge derived from lectures and gleaned from books, but the results of his own personal observation.

A secondary school connected with the University and controlled by it would afford the students in the Educational Department the opportunity for critical observation of ideal conditions and advanced methods. This lack cannot be fully supplied by the best of theories given in lectures or studied in books, and without this means of training, your Committee believes the Educational Department cannot reach its highest efficiency.

The office room of this department, No. 30, University Hall, is now serving several professors for private consultation. This unpleasant crowding will probably be obviated when the new wing is finished.

#### UNIVERSITY EXTENSION.

The University Extension work has been in abeyance for the past few years, but we are glad to note that plans are already formulated to greatly increase its efficiency.

These plans include a large number of lecture courses covering a wide range of subjects. These will be suitable for lecture courses in cities where such lectures are desired. But this department contemplates more systematic instruction than can be given by lectures, independent of collateral reading and study, and the chief feature of the new work is the organization of study clubs or classes in all parts of the country.

Wherever or whatever, in town, hamlet or village, a number of persons unite in desiring to take up the study of any particular subject, there a class will be organized, the study outlined, syllabi furnished and the class put under the care of a member of the Faculty.

As the entire range of study pursued at the University will be open to these classes, including technical, when desired, the advantages of University instruction will be extended to a large number of earnest students who, heretofore, have been unable to share personally in its benefits.

Your Committee believes that no better means can possibly be devised for bringing the University into close touch with the great mass of its supporters, than just this extension work. It is an object lesson. It gives to the people of remote districts an appreciative knowledge of the work being done at the University, and arouses a corresponding interest in everything affecting its success. This work will make demands upon the faculty in every department, necessitating a large addition to the instructional force; but your committee believes that both in direct benefit to the classes assisted and as a means of broadening the scope of the University, the results to be obtained amply justify the extra expenditure.

Respectfully submitted,  
(Signed) MATTIE L. BRAND.

## REPORT OF COMMITTEE ON COLLEGE OF MECHANICS AND ENGINEERING.

Honorable John B. Winslow, *Chairman, Board of Visitors:*

Your committee assigned to visit the College of Mechanics and Engineering, would respectfully submit the following report:

We must confess to some embarrassment in attempting to make a report as to our visit to the above college, owing to our unfamiliarity with the work being done there, and the shortness of our visit, we can speak only in the most general way. We were much impressed by the great progress that has been made in this department of the University since the erection of the building now occupied by it. Already the building seems to be inadequate to afford room sufficient to meet the rapid growth of the work carried on, and the increasing number of students. We were also much impressed with the evident importance of the work being done in this special college. The legislature of the state will do well to foster and assist this department as far as possible, by way of furnishing further equipment, apparatus and facilities, and by enlarged or new buildings. A very noticeable and commendable feature which we noted was the apparent enthusiasm of both students and instructors in their work, and the high character of the instruction afforded, and the recitations made.

We have no criticisms to make, and no suggestions to offer other than the general ones herein specified.

Committee.

Lancaster, Wis., Apr. 9, 1906.

Hon. J. B. Winslow, Chairman, *Board of University Visitors, Madison, Wis.* . . .

Dear Sir: Enclosed herewith I beg leave to hand you report of your sub-committee on Horticulture and Science.

I regret very much my inability to be present at the meeting of the Board of Visitors called for to-morrow. It was my desire to be able to present before the Board my views regarding certain matters pertaining to the College of Agriculture, which I believe deserve careful consideration.

It is my opinion that the present requirements for entry to the University for students desiring to take the long course in agriculture, and the first two years of the course are such as to preclude a very large number of our bright young men who desire to take this course, from entering the University. This opinion is shared by a goodly number of people in this section of the state, who are interested in developing the agricultural resources of the state.

I believe that the entry requirements should be such that any bright boy with a good common school education might take advantage of this course, and this can only be done by making it possible for him to enter the University under conditions that do not now exist.

The present long course in agriculture is better calculated to fit young men as teachers and professors of Agriculture than it is to fit them for the actual work of going on to the farms of our state and developing the agricultural resources of the state.

I have not given this matter any consideration in the report of the committee of which I am chairman for the reason that I have had no opportunity to discuss the matter with the other members, but I believe it is a question of the gravest importance that should be called to the attention of the Board of Visitors.

I have the honor to remain,

Yours very truly,

(Signed) E. B. GOODSILL.

*To the Board of Visitors of the University of Wisconsin:*

Your committee on Horticulture and Science beg leave to submit the following report:

Recognizing the importance of the work being done by the Horticultural and Soils departments of the College of Agriculture, and believing that the agricultural interests of the state will be greatly benefited by furnishing these two departments with every facility for their perfect operation, your Committee would recommend that a thorough investigation be made regarding the needs of these two departments.

Your Committee found that the building now occupied by the Horticultural and Soils departments is inadequate in size, poorly arranged, improperly located and unsightly in appearance.

The green house in connection with the building is so located as not to admit of further expansion and is so shaded as to make a part of it cold, dark and useless at certain seasons of the year when there is most need for a green house, and when it is necessary that material for illustrating lectures to Short Course and Farmer Course classes be available.

A great saving in fuel could be effected during the two or three coldest months of the year if the green house could be divided so that the different portions could be heated separately.

The plant house in connection with the Department of Soils is not well adapted for the work being done in it, by reason of faulty construction. One defect is that no provision has been made to control the heat during the summer season. This defect might be cured by making suitable openings in the roof of the building.

Other states, (notably Illinois), recognizing the importance of testing the soils of the different parts of their respective states, have recently made very liberal appropriations for that purpose. Investigation of soils can best be made by the Soils Department of the College of Agriculture, and at a minimum of expense. It is therefore important that this department be provided with a proper equipment for thorough work.

Your committee believes that owing to the very rapid growth of the department of Agriculture in the University, it would be poor economy to attempt to so arrange the building now occupied by the Horticultural and Soils departments as to accommodate both these departments; and would recommend that such alterations and repairs as may be made in the present building, be made with the sole idea in view of fitting it in proper shape for one only of these departments. We would further recommend that a separate building be provided for one of these departments, properly equipped for the work to be done by the department. By following this course ample provision can be made for the two departments for many years to come, while any other course would, at best, be but a makeshift entailing more or less expense with no sufficient compensatory results.

Respectfully submitted,

(Signed) E. B. GOODSELL, *Chairman*,  
H. E. SWEET.

*To the Board of Visitors of the University of Wisconsin:*

Your Committee on "Student Life of Young Men, Including Gymnasium Work, Military Drill, Work in Literary Societies and Fraternities" submits the following report:

We believe that the subjects embraced in this field are of the highest importance and that they call for far more investigation and con-

sideration on our part than we have been able to give to them.

The value of general physical exercise among the students can scarcely be overrated and the military drill seems to us not only valuable because of serving that purpose, but because it trains the young men in the line of military efficiency which would be of great importance to the commonwealth should the need for soldiery arise.

The gymnasium affords ample opportunity for each student to take a sufficient amount of physical exercise. The young men from time to time are examined, their physical defects pointed out to them and the lines of exercise best calculated to cure these defects prescribed. Gymnasium work is made obligatory. This might seem unnecessary but strangely, the benefits of this line of work otherwise would fail to reach a large portion of the young men. The provision for the physical welfare of the young men seem wisely chosen and ably executed.

The work of the literary societies seems of an unusually high order and we are of the opinion that nothing in the university course does more to fit the young men for becoming influential members of society. We are inclined to suggest it would be well to make it obligatory for each student to take part in this work.

We have conferred with each other somewhat with reference to the influence of the fraternities on the student body, but do not as yet feel prepared to report.

Respectfully submitted,

(Signed) H. E. SWEET.

April 4, 1906.

HON. J. B. WINSLOW, Madison, Wis.

Dear Sir: Devoting a whole day to the examination of the system of "Finance and University Business" your Committee unhesitatingly declare that to the best of our knowledge (not being experts) we can thoroughly commend the methods as followed by the secretary, Mr. E. F. Riley. From the completion of the budget, and from the first requisition to the final receipt, each and every item, large or small, can easily and thoroughly be traced through all its meanderings. At any time the exact amount expended, the amount on hand for every department can be seen. The only recommendation would be a large, very much larger than the present fire proof vault, for all the papers, documents, vouchers, etc., that accumulate in said office, at a very early date.

Respectfully yours,

(Signed) HENRY C. SCHRANCK,  
GEO. B. NELSON,

Committee on "University Finances."

HON. J. B. WINSLOW, *Chairman*,  
Madison, Wis.

Dear Sir: Owing to the resignation of the Hon. Wm. Uihlein and the appointment of Henry C. Schranck, the performance of the duties devolving on your Committee was handicapped by lack of time. Under the circumstances, the report is not as complete as it might be. Your Committee visited Madison twice to look over "Buildings and Grounds." We find it such an enormous task that it is impossible to go into details. It is unnecessary to speak of the natural beauty of the University grounds. That has been spoken of in every report. There

is one important point, however, that we cannot refrain from again calling attention to. That is the appearance of the lower campus. The very point was thoroughly covered in the report of the visitors of 1903-04. The arguments for the improvement of the grounds in general, and the lower campus, in particular, are there stated in convincing form. We are informed that the Regents have taken steps toward the general improving of the grounds, but we do not know of any measure respecting the lower campus, in front of the library building. The report of the committee for 1903-04 will be found on pages 158-159.

*Library Building:*

The joint occupancy of the new library building by the libraries of the State Historical Society and the University of Wisconsin appears to your Committee an entire success. While of special use to all members of the University, this valuable collection of books is in reality a great state public library open to all. The increase of the book-purchasing funds of the library has made possible the procuring of long-needed sets of books and should be continued. For many years it was a reproach to the University that the growth of its library was not commensurate with its growth in other directions. If its present rate of growth is continued, this reproach will soon be a thing of the past. No single act of the present administration of University affairs deserves greater praise than its development of the library. When the library building was erected, lack of funds necessitated the omission of the northwest stack wing. The rapid growth of both libraries, in the past five years has already brought about a congested condition and the need for additional space for the storage of books is urgent. The necessity for speedy erection of the new wing is apparent. It is hoped that this matter may be properly brought before the next legislature and the necessary appropriation for the completion of the library building secured.

*Chemical Building:*

Your Committee regrets that the funds at the disposal of the regents prevented them from erecting a modern fire proof adequate building, such as the importance of this great and growing science demands. It is too late now to remedy this, but we cannot help recommending that more help be employed to keep the building clean. On visiting the building in February some of the windows had never been cleaned, while the wainscoting, stairs and window casings were very dirty. The janitor who has charge of the boilers was expected in addition to keep the building clean. This is an utter impossibility and we would recommend the employment of more help. The appearance of the corridors, etc., was certainly not a pleasing one.

*Engineering Building:*

The greatest need of the College of Engineering at the present time is more room. This is especially true in regard to recitation rooms. Then, some of the laboratories are too small, noticeably in the steam laboratory and testing laboratory. In the very near future these will be overcrowded. The only way, we can see, to remedy this is that the machine shops should be moved out where the new heating and power plant is to be located, during the coming year. Then the room in the machine shop could be temporarily arranged for recitation rooms, etc. We would also suggest that a professor of mining engineering be secured. We would then have an excellent course in mining, the facilities being otherwise the very best.

The University of Illinois has recently established an engineering

experiment station, at which machinery may be tested and other research work done. Such an establishment would seem to be an excellent investment both for the University and the state. It is also apparent the appropriations for our ordinary laboratories should be increased both because our classes are increasing and in order to keep up with the times and with other institutions in the line of new machinery and apparatus.

*Lake Front:*

The distinctive feature of the University is the beautiful Lake Mendota. It seems to this Committee that every effort should be made to preserve the lake front free from buildings and unsightly objects. Undoubtedly the necessities of the University may force it to use some of the lake front for buildings, but there seems no reason for using it for a dumping ground for ashes and other refuse. Such, however, seems to be the use to which the lake front near the old chemical laboratory is put. This Committee would earnestly recommend that steps be taken to clear the lake shore of all unsightly debris and that its natural beauty be, so far as possible, preserved.

Very respectfully yours,

(Signed) HENRY C. SCHRANCK,

CHAS. MCKENNY,

JOHN M. BEFFEL, M. D.

Committee "Grounds and Buildings."

Milwaukee, April 2, 1906.

*School of Pharmacy:*

In addition to the remarks made above the undersigned feels in duty bound to add a few words regarding the School of Pharmacy. The writer was for nearly fifteen years a member of the Board of Pharmacy and came in close touch with the druggists of the state and understands the needs of those who intend to take up the profession of pharmacy. Furthermore he was one of the prime movers to establish this school and has ever since taken a vital interest in all matters pertaining to its development. Recently, remarks and criticisms, on account of the small attendance, appeared in the Daily Press. It must, however, not be forgotten that those who choose Pharmacy as a profession are fully aware of the responsibilities which they assume. They also know that the remuneration for their daily service (frequently from twelve to sixteen hours) is but a mere pittance. The public demands a scientifically trained person. The present law requires five years of practical experience and the pharmacist must pass an examination before the Board of Pharmacy in the various branches of Pharmacy, viz.: Chemistry, Botany, Pharmacology, etc., and then be satisfied with a remuneration of possibly \$1,200 a year. Is it to be wondered at that intelligent men select other pursuits? In order to obviate some of these drawbacks and in order to create better pharmacists, the board, in the near future, demands a two years' attendance in a high school, and from 1908 on, a two years' course in the School of Pharmacy, before an applicant can apply for an examination before the state board. The writer was a member of the board when these resolutions were passed and feels convinced that in a few years, on account of these changes, the attendance in the University School will become larger. Let me add, in order to make the school more popular, it will be necessary to employ the best teachers who can be obtained, not only for scientific work, but such men who can enthuse the students in their work. The present director is a thoroughly scientific person whom the University could not well afford to lose.

The director of the Pharmacy department should be a person who is not only practical but who can interest his pupils in the demands of practical and every day questions pertaining to pharmacy and not one who prefers to discuss the details of biological research. With the addition of such an instructor to the present instructional force and for these reasons enumerated, the undersigned feels that a love for the profession can be engendered and that a larger attendance and prosperity of the School of Pharmacy may be predicted.

Respectfully submitted,

(Signed) HENRY C. SCHRANCK.

Milwaukee, April 2, 1906.

REPORT OF THE TREASURER.

MADISON, WIS., Nov. 12, 1906.

HON. M. C. MEAD,

*President of the Regents of the University of Wisconsin.*

Dear Sir: Herewith enclosed I submit my report as Treasurer of the Board of Regents, University of Wisconsin, for the fiscal years ending June 30, 1905, and June 30, 1906.

Yours truly,

JOHN J. KEMPF,  
*State Treasurer.*

## FINANCIAL CONDITION.

## REPORT OF THE SECRETARY.

MADISON, WIS., July, 1906.

HON. M. C. MEAD,

*President of the Regents of the University of Wisconsin.*

SIR.—I have the honor to report herewith the financial condition of the University for the biennial period July 1, 1904, to June 30, 1906. Receipts and disbursements for the fiscal year ending June 30, 1905, were as follows:

## RECEIPTS.

From State Appropriations:.....	\$510,500 00
From U. S. Appropriations:	
For Experiment Station (Hatch Fund)*.....	15,000 00
For Agricultural & Mechanic Arts (Morrill Fund)....	25,000 00
From Productive Funds:	
University Fund.....	13,221 22
Agricultural College Fund.....	25,877 63
From Income on Bequests:	
Adams' Estates .....	1,439 33
Bryan Prize Fund .....	12 50
Doyon Bequest .....	245 65
Jackson Bequest .....	1,732 40
Johnson Endowment Fund.....	254 50
Stein Bequest .....	50 00
Lewis Medal Fund .....	2 50
From Miscellaneous:	
Deposits by the Secretary, account of Students' fees, tuition, etc .....	68,381 58
Students' fees, Law School .....	9,786 00
Chadbourne Hall .....	5,690 75
Summer Session .....	5,710 00
Gymnasium fees .....	5,737 55
From Students, for Laboratory Supplies.....	26,000 00
Library fines, etc.....	35 22
College of Engineering, old iron sold.....	33 40
Agricultural College sales, proceeds of material after having been used for experimental purposes.....	59,960 72

Dairy tests .....	2,901 25
Feeding stuffs .....	1,600 00
Miscellaneous, College of Agriculture.....	86 10
Wisconsin Geological Survey for labor and material..	148 77
Junior Prom Committee, material .....	92 98
Miss B. C. Crowe, Matron Chadbourne Hall.....	1,163 20
President Chas. R. Van Hise, gas and current .....	69 56
State Historical Society, gas and current.....	316 88
Madison Gas & Elec. Co., refund on overcharge.....	97 75
Rufunds of freight, express, demurrage on coal cars, etc. ....	656 09
Gisholt Machine Co., for 2 old motors.....	200 00
Sale of University publications.....	34 00
Cinders sold .....	73 25
From all other sources.....	203 84
Advertising in and sale of Institute Bulletins, etc....	988 35
From Adams' Estates:	
Furniture .....	550 00
Redlands, Calif., house.....	10,531 00
Allyn & Bacon, royalty.....	364 49
Putnam & Sons, royalty .....	24 83
Dodd, Mead & Co., royalty.....	3 10
Harper Bros., royalty.....	26 50
Sale of oranges.....	5 50
Portland Gold Mining Co., dividend.....	220 00
Pennoyer Scholarship .....	50 00
F. W. Allis Grad. Scholarship.....	200 00
Lillian Paige-Allis Scholarship.....	150 00
W. T. Johnson, Scholarship.....	250 00
B. K. Miller, Scholarship.....	50 00
Halle Steensland Prize Fund.....	100 00
Gustav Kletzsch Fellowship Fund.....	400 00
F. W. Allis Periodical Fund.....	25 00
Cream City Prize Fund.....	300 00
Albert Trostel Prize Fund .....	400 00
Japanese Scholarship .....	50 00
Johnson Endowment Fund .....	161 00
From Bills Payable:	
Balance temporary loan from state	
Trust funds, unpaid at end of year.....	55,000 00
Soldiers' Memorial Loan, paid.....	5,000 00
L. W. Gay refunded, not used in buying land.....	5,000 00
	\$862,164 39

## DISBURSEMENTS—1904-05.

College of Agriculture and Experiment Station.....	\$144,421 31

## AGRICULTURAL COLLEGE PAY ROLL, 1904-1905.

\$27,589.66.

To whom paid and for what purpose.

A. A. Anderson, farm hand .....	\$514 10
A. L. Anderson, farmer .....	460 50
Gale Adams, picking berries .....	5 80
Mary Anderson, cleaning .....	3 13
Andrew Anderson, boarding men .....	43 25
J. M. Andrews, labor .....	24 00
C. A. Alteveg, pasteurizer .....	173 12
Henry Anderson, laborer .....	35 00
Joseph Bilkey, dairyman .....	263 75
L. L. Berry, laborer .....	96 46
G. H. Benkendorf, engineer .....	384 50
Ida M. Bibbs, clerk and stenographer .....	372 00
Mrs. S. M. Briggs, librarian .....	550 00
Maggie Berg, charwoman .....	2 50
Anna Berg, charwoman .....	2 50
Alfred Berard, laborer .....	51 00
Curtis Berard, laborer .....	2 06
Dorothy Berrick, clerk .....	1 05
A. Blelach, labor .....	8 67
S. L. Brown, labor .....	170 83
G. H. Brehm, fireman .....	225 00
Nettie Brewster, clerk and stenographer .....	289 00
J. P. Bouzelet, dairy tests .....	245 85
Gaynor Blackstone, assistant labor .....	18 06
Martin Bjerrum, month hand .....	72 50
Rose Burrows .....	32 70
Miss E. M. Barnes, copyist .....	4 00
M. Charles, laborer, night watch, farm hand .....	338 79
Robert Charles, picking berries .....	4 50
H. L. Cockerill dairy tests .....	44 51
D. B. Charles, janitor .....	540 00
Fred Carpenter, farm hand .....	48 53
Albert Cichy, labor .....	26 67
Cora Cuther, cleaning .....	35 63
J. C. Courter, labor .....	43 86
A. B. Clark, milker .....	51 70
W. M. Clark helper .....	4 50
Carl Courter, helper .....	6 88
Hugh Campbell, janitor laboratory .....	56 20
J. Carey, helper .....	32 50
Wallace Casey, helper .....	3 13
William Charles, student janitor .....	10 90
Frank Drives, dairyman .....	11 00
E. J. Delwiche, laborer .....	202 40
L. R. Davies, dairy tests, etc. ....	93 07
Vina Doyle, charwoman .....	14 28
C. A. Dixon, boarding .....	21 25
Herman Danck, month hand .....	73 25
Henry Danck, month hand .....	73 25
Alfred Ellickson, assistant .....	250 00
A. Elliott, dairy tests .....	279 56
T. Farley, picking berries, etc. ....	5 00
J. A. Ford, dairy tests .....	264 00
H. Gratz, teamster .....	41 21

F. Gauert, cement finisher	615 20
Alfred Goodell, laborer	498 45
H. J. Geny, laborer	233 45
Emil Grewe, butter maker	200 00
Miss A. Gundlach, laundry work	43 00
Gaynor, Blackstone Co., team hire and labor	44 32
I. Green, labor	18 00
Mrs. James Gaynor, board of men	239 50
Paul Gayton, laborer	1 63
Lucinda Gafke, stenographer	600 00
A. L. Gillette, picking plums, etc.	48 15
J. Gratz, labor	7 50
Fred Gratz	4 50
H. Genny, labor	5 92
Gugle & Frisch, threshing	9 62
J. P. Genman, month hand	56 08
George Hutton, foreman	670 00
John Hoffman, carpenter, etc.	793 26
Max Hoenig, laborer	281 00
Albert Hansen, laborer	5 60
H. A. Hass, pasteurizer	276 88
E. M. Henwood, bookkeeper	600 00
L. P. Haskins, assistant	431 67
W. Hammersley, picking berries, etc.	11 88
Roy T. Harris, dairy tests and feed inspection	529 27
O. J. Hanzlik, dairy tests	664 38
Ida Herfurth, clerk	1, 000 09
Otis Hoffman, picking berries	3 76
Leslie Housel, picking berries	1 87
Edwin Harding, labor	15 50
Mrs. John Hoffman, mending socks	7 60
Palmer Howard, labor	1 58
Elroy Holshausen, fireman	79 00
A. C. Haberstich, dairy machinist	137 94
L. M. Hatch, supervisor	151 28
Robert Hargran, month hand	68 88
C. B. Hardenberg, draughtsman	4 00
W. F. Hafermann, day fireman	22 50
Ed Johnson, laborer	20 00
Clark Jenkins, labor	7 60
M. E. Jahr, student labor	3 85
E. L. Jordan, assistant dairyman	60 00
Irvin Koch, picking berries, etc.	34 96
Elizabeth Kessenich, clerk and stenographer	80 60
Mrs. Koch, picking berries	1 76
Mrs. Kaub, picking berries	1 32
James Kelly, plumber	125 17
V. Kaub, picking apples	34 95
A. G. Logan, helper	231 42
Humboldt Lugger, laborer	528 00
William Linn, farm hand	210 02
P. Lathrop, picking plums	1 50
C. E. Lester, teaming	10 50
Mrs. R. M. Lamont, clerical work	122 69
R. M. Lamont, library assistant	2 50
C. A. Linde, draughtsman	2 85
Joseph Mathews, teamster	570 00
O. P. Martinson, laborer	505 89
C. J. McComb, dairyman	580 00
W. E. Markey, draughtsman	170 68
Martin H. Meyers, butter maker	315 00
O. J. Malde, assistant	602 00
James Milward, foreman	240 83
Sadie Mills, clerk and stenographer	290 08
Hannah McCowan, charwoman	2 50
Thomas McCarthy, labor	2 06
A. Martinson, labor	3 85
A. J. Meyer, dairy tests	155 69
Axle Martinson, labor	136 09
L. Martinson, labor	38 50
Emi Malec, helper	133 85
Axle Mathison, farm hand	39 38
S. Martinson, farm hand	254 39
Thos. McGovern, laborer	5 25
W. J. Mahoney, mailing bulletins	2 00
J. J. Meyer, sawing wood	10 00

John Mickels, special work.....	25 00	
C. P. Norgord, milker.....	24 15	
A. Olwin, swineherd.....	390 00	
Herman Oren, laborer.....	234 50	
Oscar Otterson, farm hand.....	240 54	
A. O. Oleson, supervisor.....	434 73	
George Peterson, teamster.....	404 27	
Peter Peterson, laborer.....	134 77	
J. A. Pynch, laborer.....	6 12	
O. L. Pratt, helper and farm hand.....	293 16	
K. Piper, picking berries.....	1 00	
Mrs. Price, charwoman.....	14 38	
Emma Philamalee, charwoman.....	1 25

## UNIVERSITY PAY ROLL, 1904-1905.

\$50,493.57.

## DETAIL.

To whom paid and for what purpose.

Harry Alford, draughtsman.....	\$510 00
Alma J. Anderson, clerk.....	146 87
R. C. Allen, student assistant.....	13 00
Carlton H. Allen, janitor .....	94 70
Mrs. C. Altscheimer, charwoman.....	48 14
Mary Antony, charwoman .....	61 38
Mabelle Ashard, bell maid .....	63 35
L. Backhaus, laborer with team.....	18 15
Kate Beyler, night watch .....	284 49
Charles C. Bishop, media work.....	138 50
C. Beye, drawings .....	5 45
H. W. Briggs, student assistant .....	3 00
K. Brennan, charwoman .....	59 40
Storm Bull, superintendent heating plant .....	500 00
F. Burke, laborer .....	11 46
John Bolzt, janitor .....	540 00
L. P. Biehle, laborer .....	149 00
G. W. Briggs, changing locks .....	17 50
Chester Brown, fireman .....	39 00
David Bogue, clerk .....	12 80
James Burke, laborer.....	11 46
Mary Bell, charwoman .....	1 25
W. E. Brown, museum work .....	28 50
Minnie Burke, charwoman .....	18 75
Margaret Burke, charwoman .....	10 00
Ida Brown, charwoman .....	3 75
E. S. Burnett, machinist .....	82 70
C. Brennan, charwoman .....	11 88
E. Burmeister, laborer .....	4 73
William Bergen, messenger .....	46 73
P. F. Brey, janitor .....	79 90
W. Burmeister, laborer .....	303 40
Vivian Brown, messenger .....	234 00
John Babcock, janitor .....	600 00
E. Biehle, hauling stone .....	42 20
A. Buser, laborer .....	3 45
William Butler, janitor .....	60 00
M. Brennan, charwoman .....	50
Minnie Beyler, charwoman .....	15 63
John Bauhs, drayman .....	600 00
Cora Cutler, charwoman .....	24 75
Frank Chech, steamfitter .....	401 41
J. D. Conohan, steamfitter .....	311 50
M. H. Crissey, stenographer .....	329 40
C. M. Comstock, president's secretary .....	375 00
Mary Caffrey, charwoman .....	21 25
Ray W. Clark, clerk .....	276 00
John Conohan, janitor.....	600 00
G. W. Crane, museum work .....	19 40
Daniel Curtin, work on coal .....	9 45
Charles Coyne, carpenter.....	681 80
A. E. Carpenter, counter clerk .....	160 81

William Crowley, fireman	235 48
E. H. Cole, clerk	10 00
Cora Curtis, charwoman	2 25
B. C. Crowe, mending	1 25
F. Casserly, labor	343 85
R. Dillon, laborer	18 20
John Doescher, janitor	600 00
B. Dressler, student machinist	608 58
Mary Davey, charwoman	23 13
C. Daggett, charwoman	20 00
W. Diebold, teamster	540 00
Minnie Daniells, charwoman	22 29
W. L. Distelhorst, clerk	59 15
Vina Doyle, charwoman	20 00
John Dresen, janitor	430 26
H. Dohr, carpenter	766 94
Thomas Ellis, engineer	840 00
I. Elliott, janitor	4 60
Mrs. Erbie, charwoman	63
V. Esser, laborer	22 20
Mrs. W. B. Esser, charwoman	8 75
Magdalen Evans, stenographer	362 50
Charles Foss, student machinist and laborer	309 97
Helen Flint, clerk	115 00
D. E. Foster, work in laboratory	2 25
Hugo Fischer, janitor	39 00
J. Fox, laborer	7 60
A. E. Foye, engineer	630 00
Kate Fuss, charwoman	20 00
Lizzie Fuss, charwoman	20 00
W. Faber, mason	90 60
Louena S. Findorff, stenographer	30 00
Mary Fuss, charwoman	6 25
Ray Fellows, messenger	150 23
W. H. Godding, mason	780 00
Mary A. Glen, clerk, educational department	720 00
Henry Gath, museum	6 13
J. Gunzelmann, laborer	26 60
William Goldschmidt, student clerk	43 65
John Gaffney, janitor	30 00
Samuel Gyles, carpenter	563 75
W. S. Harley, janitor	75 92
J. Harrison, laborer	540 20
Norman Hendrickson, repairing apparatus	4 00
Mrs. A. Hess, charwoman	2 50
C. Horstmeyer, work on coal	7 53
G. Harrington, laborer	214 20
John Hickey, janitor	150 00
Emma Harrington, charwoman	23 75
J. Hart, laborer	83 46
Mrs. Hinze, charwoman	9 38
William Hammersley, Jr., laborer	19 20
E. C. Harder, museum work	24 90
C. Holt, work on coal	2 28
Isabelle Holden, student assistant	4 30
E. B. Hall, student assistant	10 00
B. L. Hale, clerk	35 50
L. Hinze, charwoman	7 03
V. Herrlein, laborer	550 00
John Haak, janitor	490 00
H. C. Hopson, laboratory work	2 40
S. H. Hunt, bill and filing clerk	160 00
W. R. Harvey, student assistant	67 70
Anna Hart, bill clerk	400 00
F. Horstman, mechanician	775 00
L. Horstmeyer, work on coal	4 38
May Humphrey, bell maid	100 00
W. Hammersley, laborer	540 00
F. Ingold, laborer	25 60
J. D. Jarvis, cleaning guns	69 60
E. F. Johns, student machinist	9 63
John Jones, janitor	565 00
Lynn D. Joseph, clerk	216 00
M. E. Jahr, laborer	18 00
W. N. Jones, testing main	65 10
Park Kelly, catalogue work	2 25

Mrs. Kessler, charwoman	15 96
Mary Kurtz, charwoman	2 50
James A. Keeley, pipe work	6 30
William Kunerth, janitor	10 80
O. Karberg, machinist	40 00
W. Kessler, laborer	271 62
C. Kane, laborer	55 20
Mary Lenberger, charwoman	13 75
Walter F. Leonard, janitor	535 00
A. J. Letton, laborer	133 30
Lizzie Link, charwoman	1 88
Patrick Lynaugh, janitor	66 60
F. W. Lucas, monitor	49 50
C. H. Lang, laborer	14 20
Walter Lyford, electrician	459 93
James Lynch, care of pump	480 00
W. Lamphere, laborer	607 50
J. Luik, Jr., laborer	47 80
W. T. Lacher, marking papers	4 27
Mary Lemberger, charwoman	27 50
J. Mainland, repair work	1 05
Frank Malec, janitor	145 80
Ernst Morschauser, janitor	540 00
L. Mochlman, carpenter	547 98
Don E. Mowry, laboratory assistant	10 45
E. Mahoney, charwoman	118 89
W. H. Malcom, laborer	13 33
Flora McCramer, charwoman	20 00
Emma H. Maynard, stenographic work	320 00
G. B. Merrick, accountant	1,000 00
Tom McKeene, work on coal	8 75
William Mochlman, carpenter	502 88
Irving Mutchler, chief carpenter	1,000 00
Paul Moseley, messenger	13 50
J. Meyer, laborer with team	30 00
Thomas McEvelly, work on coal	3 76
W. Marquette, clerk and stenographer	30 00
Edward Meyer, cleaning	1 00
Amelia Murphy, charwoman	32 50
Anna Mann, charwoman	3 13
Willis Morse, janitor	600 00
J. B. McPherson, laborer	449 10
W. H. McIntosh, carpenter	82 88
Tillie Marks, charwoman	25 00
P. McManus, steamfitter	125 00
Hannah McGowan, charwoman	16 25
Edward Miles, steamfitter	564 75
Kate Nalon, charwoman	100 77
Gertrude Nutting, library work	2 55
G. Nenberg, clerk	16 68
Arthur Norman, painter	161 50
Susie P. Nichols, herbarium assistant	40 00
H. B. North, herbarium assistant	220 00
M. Nolan, watch	540 00
R. C. Oaks, cleaning shops	96 73
Maybelle Olson, bell maid	65 35
R. G. Olson, creamery apparatus	3 70
Frank Parker, cleaning shops	52 58
L. M. Post, mechanician	775 00
Mary Parsons, charwoman	16 25
Anna Parsons, charwoman	16 25
A. J. Powers, tool room boy	249 00
William Post, janitor	660 00
L. J. Pickarts, general clerk	453 71
J. Purcell, laborer	13 20
J. Paine, laborer	12 60
W. M. Persons, lantern work	38 50
M. Price, charwoman	55 30
J. J. Quan, janitor	600 00
B. W. Reynolds, addressing, etc	5 80
Carl Rodlund, carpenter	589 40
Mabel Randolph, assistant and clerk	900 00
W. J. Rowley, student machinist	3 00
F. Rapp, hauling stone	28 00
Kate Ryan, charwoman	10 63
Emma Ryan, charwoman	22 50

Mary Rutgers, charwoman	3 75
H. C. Russell, janitor	198 00
Gilbert G. Ryder, clerk	45 40
B. K. Read, draughtsman, etc	13 27
Jesse Russell, engineer	720 00
Walter C. Reinking, janitor	11 20
Alma B. Roump, typewriting	9 85
J. H. Rider, janitor	600 00
Anna Roberts, charwoman	16 50
Lucy Reese, chambermaid	235 14
F. O. Rowley, student machinist	187 87
Maggie Roberts, charwoman	15 87
G. Rassmussen, painter	765 80
H. Schiebel, laborer	91 20
Chris Swenson, carpenter	188 44
A. W. Steffen, janitor	480 00
M. C. Sands, herbarium assistant	360 00
Lottie I. Schnell, stenographic work	877 28
S. E. Sandberg, steamfitter	780 00
August Schlaak, carpenter	45 36
Florence I. Schnell, clerk	13 00
W. Stoppelworth, laborer	11 02
Dan Sloan, work on coal	10 68
Katherine Staley, stenographer	9 00
A. J. Smith, student machinist	5 00
Ada Steele, charwoman	18 75
William M. Small, janitor	480 00
E. N. Strait, student assistant	113 95
O. R. Smith, clerk	108 25
Ella Steele, charwoman	4 38
Henry H. Severin, janitor	79 80
A. T. Stewart, student machinist	8 40
Will Spalding, student machinist	11 20
Matilda L. Snyder, record work	179 41
G. M. Simmons, assistant in foundry	75 32
Stanley Skidmore, page	117 80
Fannie G. Sanford, stenographer and clerk	720 00
G. Schmelzer, foreman	780 00
D. W. Scruby, climbing staff	2 00
Katherine Spencer, clerk and stenographer	660 00
Henry Scheideler, janitor	405 00
Frank Schumm, laborer	19 25
N. C. Sorenson, laborer	5 95
Sarah Sears, charwoman	25 00
W. Straus, work on coal	3 85
Charles Schott, fireman	543 33
Etta Thompson, charwoman	24 50
William Toellner, janitor	12 00
J. E. Tuthill, clerk	6 05
Florence Turneaur, clerk and stenographer	535 00
J. C. Tarr, addressing	1 20
W. F. Tubesing, drafting	3 90
Violet S. Timberlake, clerk	480 00
Andrew Thompson, electrician	830 00
R. J. Usher, library assistant	83 00
William Urban, student assistant	16 50
Nettie Vetter, bell maid	10 27
C. C. Williamson, stenographer	120 00
R. G. Walter, assistant	32 70
W. B. Walker, St. Louis exposition	467 76
George Willett, janitor	480 00
W. Weniger, clerk at observatory	30 00
A. G. Worthing, clerk at observatory	57 10
Henry Wullner, painter	118 50
R. W. Whyman, drawing	5 00
George Westbury, page	53 00
Anna Wiese, charwoman	21 25
D. Wallace, laborer	62 83
C. H. Wegeman, student assistant	3 00
Julia M. Wilkinson, stenographer	720 00
Carl Zapffe, museum	14 40
	\$50,493 57

## UNIVERSITY PAY ROLL 1905—1906.

\$60,147.43.

To whom paid and for what purpose.

Harry Alford, draughtsman .....	\$150 00
Mary Antony, charwoman .....	2 50
Ellis Abbott, carpenter .....	127 51
Stuart Alverson, steam fitter .....	153 60
C. Aeschbacher, laborer .....	11 00
H. Aeschbacher, laborer .....	6 50
Harry Abbott, laborer .....	12 60
F. Amms, laborer .....	11 10
Peter Anderson, electrician .....	513 00
G. Anderson, laborer .....	220 27
B. S. Anderson, machinist .....	80 00
W. H. Alford, night watchman .....	2 00
M. Aberle, laborer .....	4 60
A. M. Appuhn, charwoman .....	10 00
Mrs. F. H. Appuhn, charwoman .....	15 63
William Albers, hauling sand .....	122 62
V. Armstrong, chart work .....	10 00

	3,921 25

## AGRICULTURAL INSTITUTE PAY ROLL, 1905-1906.

Arnold, Alex. A., beef and swine, salary	\$25 00
Bradley, W. C., conductor, salary	125 00
Convey, Thos., dairy and swine	30 00
Charles, D. B., janitor, salary	35 00
Coe, R. J., fruit and corn, salary	5 00
Griffiths, Nellie, clerk and stenographer, salary	350 00
Goodrich, C. P., dairy, salary	30 00

Hill, George C., assistant, salary .....	105 00	
Howie, Mrs. Adda F., poultry and dairy, salary.....	205 00	
Herbst, J. L., poultry and fruit, salary.....	30 00	
Imrie, David, assistant, salary.....	105 00	
Jacobs, E. C., dairy cattle, salary.....	5 00	
Kern, O. J., schools, salary .....	15 00	
Matteson, C. E., poultry and fruit, salary.....	125 00	
Martiny, L. P., assistant, salary.....	65 00	
Nordman, E., assistant, salary.....	105 00	
Roberts, E., sheep and swine, salary.....	105 00	
Ransom, Mrs. Clara I., poultry and bees, salary.....	5 00	
Sater, Miss Adella, cooking school, salary.....	35 00	
Scott, L. E., conductor, salary.....	130 00	
Scribner, F. H., conductor, salary.....	110 00	
Utter, Delbert, conductor, salary.....	135 00	
		\$1,880 00

DAIRY AND SHORT COURSE INSTRUCTORS' PAY ROLL, 1904-1905.

Ira Bergstrum, separator .....	\$120 00	
W. E. Clark, milk testing .....	150 00	
Peter Dinkleth, dairy .....	225 00	
J. M. Gilman, assistant .....	40 00	
H. A. Hass, pasteurizer .....	150 00	
A. C. Haberstich, dairy .....	125 00	
H. C. Jordan, cheese .....	100 00	
F. W. Laabs, cheese .....	66 67	
F. Y. Laabs, cheese .....	33 33	
E. C. Merrill, dairy .....	45 00	
Fred Marty, cheese .....	200 00	
Martin Meyers, butter maker .....	75 00	
Emil Mabe, butter maker .....	20 00	
C. J. McComb, dairyman .....	195 00	
A. Olive, swine .....	145 00	
H. W. Quinby, dairy .....	165 00	
R. W. Roberts, separator .....	100 00	
Harvey Sandell, assistant .....	75 00	
D. O. Thompson, assistant .....	5 00	
		\$2,035 00

DAIRY AND SHORT COURSE INSTRUCTORS' PAY ROLL, 1905-1906.

Altwegg, C. A., instructor, salary .....	\$250 00	
Bragg, C. T., instructor, salary .....	75 00	
Berry, L. S., instructor, salary .....	62 50	
S. A. Eastman, swine herdsman, salary .....	195 00	
Galloway, Geo., instructor, salary .....	150 00	
Haberstich, A. C., instructor, salary .....	435 00	
Kressin, Albert, instructor, salary .....	196 50	
Kohel, Louis, separator, salary .....	80 00	
Laab, Arthur, instructor, salary .....	100 00	
McComb, C. J., dairyman, salary .....	270 00	
Marty, Gottlieb, instructor, salary .....	350 00	
Noyes, H. J., instructor, salary .....	400 00	
Phillips, C. E., instructor, salary .....	100 00	
Schwingle, F. P., instructor, salary .....	100 00	
Story, Lester, instructor, salary .....	137 49	
Sandell, Harvey, instructor, salary .....	210 00	
Simmons, Miner, assistant, salary .....	165 00	
Willis, R. J., instructor, salary .....	120 00	
		\$3,396 49

BAND PAY ROLL, 1904-1905.

Arthur J. Clark, musician .....	\$14 50	
Emil L. Leasman, musician .....	15 00	
Robert F. Ewald, musician .....	15 00	
H. B. Gates, musician .....	14 00	
Harvey Gardner, musician .....	14 00	
Franklin H. Mann, musician .....	15 00	

Benjamin K. Read, musician .....	15 00	.....
L. D. Williams, instructor .....	60 00	.....
Lydon F. Wilson, musician .....	15 00	.....
		\$177 50
BAND PAY ROLL, 1905-1906.		
Brady, Daniel E., private, salary .....	\$29 00	.....
Diestler, Gilbert A., lieutenant, salary .....	30 00	.....
Griffith, Leon O., private, salary .....	14 00	.....
Kohn, Alvin J., private, salary .....	29 00	.....
Lueck, Arthur W., private, salary .....	14 00	.....
Leesman, Emil L., private, salary .....	29 00	.....
Nelson, Oliver O., private, salary .....	29 00	.....
Owen, Herman E., instructor .....	120 00	.....
Read, Benj. K., private, salary .....	11 00	.....
Read, James B., private, salary .....	28 00	.....
Stanley, Milton R., private, salary .....	15 00	.....
		\$348 00

## PRESIDENT'S REPORT.

---

His Excellency, James O. Davidson, Governor:

Sir:—I have the honor to submit, in accordance with law, my report for the biennial period ending August 31st, 1906, as follows, to-wit:

### I. LEGISLATION NEEDED.

At the last biennial session of the legislature, an act was passed, Chapter 121, Laws of 1905, appropriating the sum of ten thousand dollars for the purchase and improvement of a site for a state Normal School in the city of La Crosse, and directing the Board of Regents of Normal Schools to prepare full plans and specifications and estimates for the building and equipment necessary to properly establish and organize such school, and submit the same to the legislature at the beginning of the session of 1907.

In pursuance of this law, the Board of Regents of Normal Schools met in the city of La Crosse on April 27, 1906, and after an examination of the various sites offered unanimously adopted the following resolution:

*Resolved*, That it is the sense of this Board that it desires the site known as the Funk site, if possible to obtain; that a committee of three be appointed by the President to act with himself and Regent Morris to make further investigation and report at the June meeting of the Board.

At the annual meeting of the board at Madison, Wisconsin, June 21, 1906, the site thus provisionally selected, was formally approved by the following resolution which was unanimously adopted.

*Resolved*, That a State Normal School be and the same is hereby located in the city of La Crosse, Wisconsin, to be built

---

*President's Report.*

---

on the following described lands, to-wit: Blocks twelve (12) and thirteen (13) of Metzger's and Funk's Addition to the City of La Crosse, as authorized by Chapter 121, of the Laws of 1905.

The Board of Regents of Normal Schools at the said annual meeting appropriated the sum of ten thousand dollars for the purpose of purchasing a site, securing plans and improving grounds for a Normal School building in the city of La Crosse, and authorized the Executive Committee, together with Regent Morris, to proceed under the provisions of Chapter 121, Laws of 1905, to secure plans for a Normal School building at La Crosse, to be submitted to the Legislature, together with estimate of the cost of such building, and other data required by said chapter.

In due time the Executive Committee will submit to the Legislature such plans, estimate of the cost and other data relating to the construction of the new Normal School building in the city of La Crosse.

## II. FINANCES.

### 1. *General Appropriations.*

The fixed annual appropriation for the support of the seven Normal schools is \$230,000, as provided for by Chapter 135, Laws of 1903. This amount, together with interest on the Normal School Fund and the local collections at the several schools, is now deemed sufficient for the ordinary needs of the schools for the coming two years, provided no account is taken of the growth and development of the same.

### 2. *Special Appropriations.*

#### (a) *The Platteville Building.*

An appropriation of \$35,000 was made by the Legislature of 1903 for an addition to the Normal School building at Platteville. The Board of Regents of Normal Schools authorized the Resident Regent at Platteville to secure competitive plans for the purpose of building such addition in compliance with

*President's Report.*

the legislative act, and made a sufficient appropriation for the expense of securing the same. At the annual meeting of the Board in 1904, the Resident Regent above mentioned submitted some preliminary statements of architects, but no further action was recommended by him and the money was left in the General Fund.

The Legislature of 1905, Chapter 175, appropriated "the sum of one hundred thousand dollars, which sum, together with a sum heretofore appropriated, shall be used for the erection of a State Normal School building at Platteville upon land now owned by the state for Normal School purposes, and for equipping and furnishing the same."

On October 26th, 1905, the Executive Committee acting for the Board, having previously advertised for bids, awarded contracts to the lowest bidder as follows:

J. A. Silver, Appleton, Wis., for general construction .. . . .	\$103,720
Dwyer Heating and Plumbing Co., St. Paul, Minn., for heating and ventilating	17,056
H. J. Smiley and J. F. Marshall, Platteville, for plumbing .. . . .	6,200
Total .. . . .	\$126,976

The contractors began work in the spring of 1906 and the construction is proceeding satisfactorily. When completed, this building will be a credit to the state. It is expected to be ready for Normal School work in September, 1907.

(b) *The Milwaukee Building.*

The Legislature of 1905, Chapter 175, appropriated the sum of one hundred and eighty-five thousand dollars and authorized the sale of the present State Normal School building at Milwaukee and the land on which the same is situated, "for building a Normal School building at Milwaukee for the State Normal School there located, and furnishing and equipping the same and purchasing land on which to build the same."

On October 24th, 1905, the Board met in Milwaukee and adopted the following resolution:

"*Resolved*, That the Executive Committee and the Resident Regent be and the same are hereby authorized to purchase from the owner or owners the property known as the State and

---

*President's Report.*

---

25th Street site, located between State and Cedar, and 24th and 25th Streets, being about 350 by 320 feet, in the City of Milwaukee, Wisconsin, at a price not exceeding fifty thousand eight hundred dollars (\$50,800); provided, however, that such purchase shall not be made until a good and sufficient deed of conveyance according to law, with the usual covenants of warranty, together with an abstract of title, to be approved in writing by the Attorney-General, shall be presented to the said Executive Committee of this Board. And the owner or owners of said property shall have procured at their own expense the condemnation or vacation of all alleys upon said property in such manner and to such extent as shall be required by said Committee. Upon full compliance with the above conditions, the said Committee shall audit and cause to be paid the above mentioned consideration for such land in the usual manner, and said sum of \$50,800 is hereby appropriated for that purpose."

On March 27th, 1906, the Executive Committee, acting for the Board, having previously advertised for bids, awarded contracts to the lowest bidders as follows, conditioned that contracts cannot be executed until the Board acquires clear title to the proposed site at 25th and State Street, Milwaukee:

Chippewa Falls Construction Co., Chippewa Falls, Wis., for general construction.....	\$119,649
The Dwyer Heating and Plumbing Co., St. Paul, Minn., for plumbing .....	7,480
C. J. Fox, Milwaukee, Wis., for heating.....	19,800
Total .....	<u>\$146,929</u>

On June 21, 1906, at the Annual Meeting of the Board, the following resolutions were adopted unanimously:

"*Resolved*, That in view of the written opinions of the Attorney General, addressed to Regent Scheiber, and now on file in the office of this Board, to the effect that we cannot obtain legal title to the property we have contracted for in block 269 in Hawley's addition, in the 15th ward of the city of Milwaukee, for a site for the new Normal School for Milwaukee, either by condemnation or by proceedings for vacating alleys and a court on said property, without further legislation, all persons who have presented to this Board bids for work and materials required for a new Normal School, at Milwaukee that have been conditionally accepted by this Board, be permitted to withdraw their respective bids and their respective certified checks, deposited with their bids to secure perform-

---

*President's Report.*

---

ance of such bids, because of the inability of this Board presently to obtain legal title to the site bargained for."

"*Resolved*, That in the matter of a site for the Milwaukee Normal School, the Executive Committee be empowered to advertise for a new site for such school, if in their judgment the site selected cannot be secured in a reasonable time, and a special meeting may be called by the President to consider sites offered."

On August 31, 1906, a special meeting of the Board was called in Milwaukee for the purpose of selecting a site. The following resolution was adopted:

"*Resolved*, That the Board desires the 25th and State street site for a Normal School. If the representatives can furnish the Attorney General satisfactory evidence on or before October 25th, that they can furnish such title as shall meet with the approval of the Executive Committee of this Board, then said such site shall be accepted, otherwise the same shall be rejected and other sites considered."

(c) *Improvements for the Whitewater Building.*

The Legislature of 1905, Chapter 133, appropriated the sum of seven thousand dollars for the "construction of a separate boiler house for the Whitewater Normal School, the removal of the boilers from the school building to said house, and the installation of a sanitary and suitable system of water-closets for the use of said school."

On June 27, 1905, at the annual meeting of the Board the following resolution was unanimously adopted:

"*Resolved*, That the Executive Committee, together with the Resident Regent, at Whitewater, be and is hereby authorized and directed to proceed at once to adopt plans and let contracts to rehouse the boilers and install a closet system over the same at the Whitewater Normal School.

"*And be it further resolved*, That for the purpose of carrying out the provisions of the foregoing resolution, there is hereby appropriated the sum of seven thousand (7,000) dollars, or so much thereof as may be necessary, said money being the same appropriated by the Legislature of 1905."

On June 29th, 1905, a majority of the Executive Committee, together with the Resident Regent at Whitewater, met in Whitewater and awarded the contract to the Downey & Kruse

---

*President's Report.*

---

Co. of Milwaukee, for the rehousing of boilers and the installation of a closet system at the Whitewater Normal School for the sum of seven thousand dollars. These improvements were completed in due time and have proved satisfactory.

### 3. *The Normal School Fund.*

The management of this fund is placed by law in the hands of the Commissioners of Public Lands, to-wit: Secretary of State, State Treasurer and the Attorney General, and by courtesy of these officials, the Secretary of the Board of Regents of Normal Schools secures monthly such data as enables him to keep a set of books from which the following facts are obtained. The State Treasurer is the custodian of the cash and bonds, and the Secretary of State keeps the records of special loans, and of loans to school districts, villages, towns, counties and cities.

The total fund, August 31, 1906, at the close of business, was \$1,955,108.86. (An increase of \$1,024.50 during the biennium), of which \$14,632.34 was cash and the sum of \$1,940,476.52 was in bonds and loans as follows, to-wit:

State certificates of indebtedness at 7 per cent .....	\$515,700 00
Land contracts and individual loans, old law, at 7 per cent. ....	2,414 00
Bonds at 6 per cent. ....	5,000 00
Bonds at 5 per cent. ....	79,500 00
Bonds at 4½ per cent. ....	90,000 00
Bonds at 4 per cent. ....	25,400 00
Bonds at 3½ per cent. ....	184,950 00
Special loans at 6 per cent. ....	7,157 00
Special loans at 5 per cent. ....	9,966 68
Special loans at 4 per cent. ....	85,400 00
Special loans at 3½ per cent. ....	754,391 91
School district loans at 3½ per cent. ....	180,596 05
<b>Total</b> .....	<b>\$1,940,476 52</b>
Cash in treasury August 31, 1906 .....	14,632 34
<b>Total Normal School Fund, August 31, 1906</b> .....	<b>\$1,955,108 86</b>

The following shows the sources of interest on the Normal School Fund for the fiscal year ending June 30, 1906.

Interest on certificates of sales and school district loans .....	\$3,978 26
Interest on bank deposits .....	3,973 74
Interest on certificates of indebtedness .....	36,099 00
Interest on bonds and loans .....	49,623 06
<b>Total</b> .....	<b>\$93,673 06</b>

*President's Report.*

My predecessor, on August 31st, 1904, reported the rate of earning to be \$88,964.81 per year. The rate of earning on July 1, 1906, was \$93,679.06 per year.

The following is a list of the securities on August 31, 1906, in detail summarized above, to-wit:

*4. Fund Income.*

“ I quote from the last biennial report of my predecessor the following, which very clearly states certain facts which should be borne in mind, to-wit:”

“This fund is made up principally from (1) fixed annual appropriations, (2) special appropriations, (3) interest on the capital fund, and (4) tuitions, book rents, sales of all kinds, etc., and is placed by law wholly under the control of the board as follows: ‘The entire income of the normal school fund shall be placed at the disposal of the Board of Regents of Normal Schools by transfer to the treasurer of said board, and shall be distinct and independent from the accounts of the state, and be applied for the support of normal schools as provided by law.’”

(Vide W. S., Sec. 394.)

“I follow a long established custom of reporting the expenditures from this fund during the two preceding school years, ending with the disbursements made at the annual meeting in June, since the spirit of the law requiring the report seems not to be violated, and every rational purpose of the report seems far better served by so doing.”

During the biennial period, July 1, 1904, to June 30, 1906, inclusive, as shown by Appendix A, hereunto attached, there was disbursed a total of \$653,913.97, being \$9,218.08 more than during the preceding biennium. During the period from July 1, 1902, to June 30, 1904, there was expended a total of \$112.86 for building, while during the following two years there was expended for building purposes mainly at Whitewater,

*President's Report.*

Platteville and LaCrosse the sum of \$23,383.10. In addition to the \$112.86 expended for buildings during the first of the two bienniums under comparison, there was paid the principal and interest of a loan and for real estate the sum of \$22,000. Deducting these two amounts from the total expenditures, there remains a total of \$622,585.03 which was expended for regular normal school expenses from July 1, 1902, to June 30, 1904, inclusive. Deducting the \$23,383.10 for buildings during the biennium just closed, there was a total of \$630,550.87 expended for regular normal school expenses from July 1, 1904, to June 30, 1906, inclusive, being \$7,966.84 more than during the preceding biennium.

It should also be noted that owing to increased cost of living and the rise of salaries in educational positions, the amount paid in salaries has been \$17,821.36 more than during the preceding biennium. A careful comparison of the salaries paid in our seven normal schools with the salaries paid in the normals of adjoining states, discloses the fact that better salaries are paid in those normals than in the normal schools of Wisconsin. If we hope to retain, during any considerable period, the best talent in our state, this condition must be remedied.

The following is the biennial report of the treasurer of the board:

## NORMAL SCHOOL FUND INCOME.

Report of State Treasurer, July 1st, 1904, to July 1st, 1906.

<i>Receipts.</i>		
Balance on hand July 1st, 1904 .....	\$159,408 13

III. *Libraries.*

There has been no change in the general policy of the Board in maintaining in each school both a Text-Book and Reference-Book Library, both having been founded by appropriations, the former having been since supported by rentals, the latter supported and enlarged as needs have arisen by repeated appropriations.

The following tables show receipts and disbursements on this account during the past two years, to-wit:

*President's Report.**Receipts.*

	Items.	1904-5.	1905-6.	Totals.
Milwaukee.....	Book revenue....	\$1,650 11	\$1,739 09	\$3,389 20
Oshkosh.....	Book revenue....	2,115 19	2,304 92	4,420 11
Platteville.....	Book revenue....	1,226 90	1,234 25	2,461 15
River Falls.....	Book revenue....	1,173 03	1,245 37	2,418 40
Stevens Point.....	Book revenue....	1,465 44	1,477 07	2,942 51
Superior.....	Book revenue....	1,229 11	1,266 66	2,495 77
Whitewater.....	Book revenue....	1,292 16	1,404 79	2,696 95
Totals.....		\$10,151 94	\$10,672 15	\$20,824 09

*Disbursements.*

	Books, 1904-5.		Books, 1905-6.		
	Text.	Reference.	Text.	Reference.	Totals.
Milwaukee.....	\$500 08	\$703 90	\$591 90	\$983 07	\$2,778 95
Oshkosh.....	889 18	750 69	1,005 49	750 92	3,396 23
Platteville.....	641 60	256 99	771 84	448 89	2,119 32
River Falls.....	513 97	484 17	723 07	312 27	2,033 48
Stevens Point.....	736 31	600 06	711 51	667 90	2,715 78
Superior.....	798 54	412 80	887 13	343 79	2,442 26
Whitewater.....	803 54	410 50	1,060 77	352 46	2,627 27
Totals.....	\$4,883 22	\$3,619 11	\$5,751 71	\$3,859 30	\$18,113 34

It appears from the foregoing tables that the Libraries are not only self-supporting, but are a source of income to the Board, the total disbursements being \$2,710.75 less than the income during the two years.

IV. *Students.*

The total enrollment during the past two years was 100 more than during the preceding biennium. The total enrollment in the Normal Department, proper, was 124 more than during the preceding biennium.

The total number of graduates was 27 more than during the preceding two years. There were 25 more graduates from the advanced course than during the preceding biennium,

APPENDIX B.

REPORTS OF PRESIDENTS OF NORMAL SCHOOLS

MILWAUKEE.

HON. JAMES A. PEACOCK,

President Board of Regents of Normal Schools;

*Dear Sir:* I have the honor of submitting herewith the biennial report for the State Normal School at Milwaukee for the two years closing August 31, 1906.

INTERNAL CONDITION.

The biennial period just closed has witnessed no especial change in the internal condition of the school. Fortunately there have been relatively few changes in the faculty and the spirit of devotion to the highest ideals of a normal school to which I referred in my last report has not diminished.

ATTENDANCE.

The rule of the board limiting the number of students to 360 has resulted in turning away every year approximately a fourth of those who have applied. The attendance has been regular and the general character of the student body quite satisfactory. One feels assured as he compares the preparation of the students of one biennial period with that of the preceding that there is a gradual advance in the character of work done in the high schools of the state. The high schools are becoming more uniform in the work done, and with most the standard is gradually being lifted by at least a small degree.

The accompanying table gives the enrollment for the two years constituting the biennial period and the credentials on which the students entered.

*Normal Department.*

## COUNTIES REPRESENTED.

While the Milwaukee Normal School especially serves its immediate section of the state, fewer than half of its students come from Milwaukee county. In 1904-1905 43 counties were represented by students and in 1905-1906 46 were represented. More than half its graduates teach outside Milwaukee county.

## PRACTICE TEACHING IN THE CITY SCHOOLS.

In my last report I spoke of the arrangement entered into with the Board of Education of Milwaukee by which the students of the normal school were permitted to do practice teaching in the city schools. I am pleased to state that the arrangement still exists and that the experience of the last two years has demonstrated its value. It is of mutual advantage to the city and to the normal school. On the one hand the normal school is able to give its students a valuable experience in observing and teaching under conditions which are quite like what they will meet when they begin actual service as teachers. On the other hand the city reaps an advantage in having the pick of a body of young teachers who have become acquainted with the work done in the Milwaukee schools and who have been tested under conditions which are more like those actually obtaining in the average school than are to be found in the training department of the normal school.

## DEMAND FOR TEACHERS.

It is frequently asked, "Do all your graduates get positions?" At this date, September 1, 1906, there are not graduates of this school available to meet the calls for teachers now lying on my table, notwithstanding the fact that this school has graduated 796 during the last five years. There is no apparent likelihood that the normal schools of Wisconsin will overstock the market with trained teachers.

## NEEDS OF THE SCHOOL.

Now that a new and more commodious home for school is assured, it is safe to say that the most pressing needs of this school and of every normal school in the system is more adequate pay for its teachers. To acquire the education demanded of teachers in normal schools takes a man's time till the age of at least twenty-five, and if he must earn money for his education, years more must be added. Very few men or women who pay their way thru college and do graduate work, get their education paid for before they are thirty. Simple justice would demand that the pay for such preparation should be adequate. Wisconsin normal schools demand the best quality of teachers and to secure and keep such teachers they must pay as high salaries as neighboring states. As a matter of fact the

---

*Milwaukee Normal School.*

---

salaries in Wisconsin are lower than in any of the north central states of like rank and wealth, population, and the salaries paid to other public officials.

During the last five years there has been a general advance in salaries thruout the country. Unfortunately for Wisconsin the revenues of the Regents of Normal Schools have not warranted any corresponding advance in the salaries of normal school teachers.

It is hoped that in the near future the income of the board will be sufficiently increased to keep Wisconsin normal schools where they now are, in the front rank of efficiency.

Respectfully submitted,

CHAS. MCKENNY.

## OSHKOSH.

HON. JAMES A. PEACOCK,

President Board of Regents of Normal Schools:

I hereby submit my report of the condition and progress of the Oshkosh Normal School for the biennial period ending Aug. 31, 1906.

During the past two years the attendance of the school has increased somewhat, the exact figures being as follows: Total enrollment for year 1904-5, 552; for year 1905-6, 620. This increase is in keeping with the marked increase in numbers in higher institutions of learning during the same period.

Bearing in mind the emphasis placed by the Board of Regents upon the necessity for securing greater proficiency in the so-called common branches, we have sought to make even more thoro the work done by our students in these fundamental branches. High school graduates have been required to take a course in grammar, geography, and history, and such as have not passed the special examination in arithmetic have pursued that study in class. Thruout this period we have given during the first and third quarters of each year tests in spelling, and in the alternate quarters tests in mental arithmetic. Those who have failed to reach a reasonable standard of excellence have been required to take these subjects in classes. About one-fourth of the school have been so enrolled during the pass year. Against the criticism sometimes offered, that these tests and the subsequent drill do not accomplish all that is desired, we can urge that they do serve to emphasize in the minds of the student body the value of reasonable readiness in arithmetical combinations, and the desirability of conformity to accepted standards in English orthography. It costs much in time and strength on the part of both of the faculty and student body to carry on this training, but we feel that it pays.

The number of graduates of county training schools who come to the normal school is steadily increasing and will soon become an important factor in the constituency of the latter school. At present there seems to be a wide variation in the kind of preparation of the students presenting themselves for admission to the county training schools, and consequently of the product of these schools. There can be no question but the schools are helping materially to solve the vexing problem of the supply of teachers for the rural schools. If it be urged that the person who has barely been able to secure his diploma showing his completion of the common ungraded school can hardly be made into a well qualified teacher in one year's time, it may justly be contended in reply that such person is likely to begin teaching with just one year more of preparation than he was likely to have received before the enactment of this law. The graduates of these county training schools make very earnest students in the normal schools, and we must encourage their attendance. There seems to be some lack of uniformity in the practice of the different normal schools as to the amount of credit they are to give these students. Where the person enters the county training school upon a common school diploma and remains there but one year, we have never given more than one-half year's credit in the elementary course. It seems to me highly desirable that there be a conference of normal school presidents and principles of the county training schools to secure an equitable adjustment of this matter.

Our course for the preparation of teachers of manual training has accomplished much good, I believe, in calling attention to the possibility of so modifying the course for the preparation of teachers for schools in smaller towns and villages as to include manual training as an essential part of the teacher's equipment, and thus in bringing within the reach of such places at a slight increase in school expenditures teachers quali-

---

*Oshkosh Normal School.*

---

fied to give instruction in manual training as well as in the common branches. We need now to engage upon a systematic campaign within the state for arousing an interest in manual training in the smaller towns and villages, as well as in the rural districts. I believe that a comparatively small expenditure of money for sending a well qualified person into such communities with a traveling exhibit of manual training work would be a most profitable investment in education by your body.

Some ten or twelve years ago my predecessor, President Albee, asked permission of the Board of Regents to use the normal school building for a summer school to be conducted by members of the faculty of this school, who might desire to co-operate in the establishment of such a summer school. From a membership of sixty or seventy this school has steadily grown each year until this past summer we enrolled very nearly four hundred students. It is evident there is a demand for a school of this nature in this state from steady and marked increase in numbers in this school. The clientele of the school comes in part from the students of the Oshkosh normal school and other normal schools within the state, who wish to make up some work in which they are back, or who are desirous of making headway a little more rapidly than they would be able to do with attending only the regular sessions; but a much larger number of those who attend are teachers who have been engaged for a number of years in various parts of the state in this profession. They feel the necessity of getting in touch with instructors who are conversant with modern methods in their particular branches, and thus the schools are receiving fresh material thru the contributions of these more expert teachers. I have felt for a long time that the demand on the part of the teaching profession in this state was certainly sufficient to warrant the state's following the example of most of the states of the central West in organizing the summer school in connection with its normal schools as an integral part of their work, regarded as just as necessary as the regular session. I sincerely hope that the committee, which at the last meeting of the Board was appointed to make a special report upon this question, will recommend such summer schools to be established in the Wisconsin normal schools, or at least in some of the schools. It will probably make some additional expense, because, in all probability, an increase in the teaching force will be necessary, but I believe that the profit to the schools of the state will more than compensate the additional outlay thru the improvement of the teaching force of the state.

Nearly twenty-five years ago an appropriation was made by the Board of Regents of \$5,000 for the erection of the gymnasium in connection with the Oshkosh school. This was the first gymnasium built for any of the Wisconsin normal schools. It has more than justified the expenditure and has been a source of great profit in every way to the school. Since this time the other schools have been equipped with commodious and modern gymnasiums. The one at Oshkosh seems small for the uses of the school. It does not begin to afford space for the needs of the student body. We ought to have two separate gymnasiums, one for young women and one for the young men, inasmuch as during the greater part of the year out of school hours the gymnasium is very greatly desired by the young men and the young women at the same time. Separate accommodations, it seems to me, should therefore be provided for them.

More and more each year the calls that come to me from school boards seem to indicate that a teacher who can take charge of some line of gymnastic or athletic work is much preferred to one having no acquaintance with this important part of school training. We should do what we can to provide ample accommodations for the gymnastic training of the large number of students enrolled in the Oshkosh school. It would seem to me that the time has arrived when the state can afford to appropriate suf-

---

*Oshkosh Normal School.*

---

ficient money to build a new gymnasium, to meet the needs of the school. At the same time that it is doing this it seems to me that more ample facilities should be provided for our manual training department and that we should also secure accommodations for a department of domestic science, not with the view to preparing special teachers of this latter branch, but rather to afford such of our students as wish to take some training in this subject in addition to their work, an opportunity to do so. A number of times during recent years requests have come to me from school boards for grade teachers who could give instruction in domestic science in their grade work. We need this also in order that the girls of our training department should have an opportunity which is afforded in all of the best schools of the country at the present time, for the training along this most important line. If we could secure a new building, or an addition to the building that would provide increased facilities for the gymnasium, manual training, and domestic science, the work of the school would be very greatly improved.

I desire to call the attention of the board to the value of the professional meetings of our faculty conducted during the past two or three years. At these meetings we have taken up various phases of the course of study, and have gone over them pretty carefully. The results of some of our discussions have found a practical turn in an improved course of study. The material that has been collected for this has been prepared in a number of bulletins which have been issued during the past few months, for which there is a great demand on the part of the teachers of the state. I have also had requests for the same from teachers in normal schools, from the Atlantic to the Pacific. It is evident that the work that has been done is thoroughly appreciated by the members of the teaching profession. I wish to put on record my hearty appreciation of the wisdom of the Board of Regents in providing for the publication, in bulletins, of valuable material such as I have indicated.

Very respectfully submitted.

R. H. HALSEY.

Oshkosh, Wis., August 30, 1906.

## PLATTEVILLE.

Platteville, Wis., Aug. 15, 1906.

HON. J. A. PEACOCK,

President, Board of Regents of Normal Schools.

DEAR SIR: In compliance with the regulations of your honorable body, I have the honor of submitting the biennial report of the Platteville State Normal School.

The students, faculty, and friends of the school look forward with great pleasure to the fine new building in process of construction. All endure with greater patience, present cramped conditions because of future prospects. The handsome, modern, roomy new structure will be especially welcome in giving opportunity for the long desired kindergarten, and in affording more room for Professor Russell's department of manual training.

The attendance at Platteville has remained almost stationary during the past four years. The total enrollment for the respective years of this period has been 420, 435, 435, 433. During this time there has been a slight diminution in the number of normal students, with a corresponding increase in the enrollment of the Training School. In the management of the school, there is no desire to push for numbers, but a strong effort is being made to get more of the mature and promising sort of students.

High school graduates now constitute more than one-third of the school, and for each of the past four years this number has stood at about one hundred. These students prove desirable material. Their chief weakness is lack of thorough preparation in common school branches; but the recent modifications made in the courses offered high school graduates do much to remedy this deficiency. Strenuous insistence upon thoroughness in the branches to be taught by ninety per cent of the normal graduates seems to be the only logical action.

Platteville still holds nearly one hundred men in her normal classes. Of ninety-six in attendance the past year, thirty-two are voters having an average age of twenty-three years. These mature, manly fellows give vigor and virility to the school. The faculty would regard a diminution in the number of young men as detrimental to the welfare of the school. Should the clientage of normal schools become young women, with a sparse sprinkling of weak boys, such a condition would injure the strength of the normals, and weaken the teaching force of the future.

The Wisconsin normals can do the state valuable service by graduating an ever-increasing number of strong young men. The urgent and growing call for such teachers means a wholesome reaction on the part of the public in favor of employing more men in the high schools and in the upper grades. The vital problem of holding more boys in the public schools through the grammar and the high school grades is inseparably allied with the problem of placing in these departments more male teachers.

To get and to hold the right sort of young men in the normals, there must be a goodly proportion of men in the faculty. These teachers must be manly men who demand vigorous work in their respective departments, and who are in direct sympathy with the life and ambition of young manhood. Such men are not readily found, and can be retained only when liberal salaries are paid. The position of teacher in a state normal school should mean such liberality of salary, such security of position, such generous treatment as to draw from the high schools their men of greatest ability, broadest scholarship, best teaching power, strongest initiative, and most virile character.

The right sort of athletics must be found in a school that has one hundred young men. The farmer boy who has steadily followed the plow

---

*Platteville Normal School.*

---

needs to be taught to play. All these young men must have the proper quantity of outdoor exercise to keep in best trim for effective mental work. Wisely directed athletics minister to wholesome living, to the formation of clean personal habits, to the upbuilding of sturdier manhood. Encouragement of clean athletics will draw and hold more vigorous young men. The financial side of athletics assumes importance when the athletic association handles more than a thousand dollars per year.

The music at Platteville is an important factor in bringing to the school and holding these worthy young men. Last August twenty-eight young men reported for practice in the Normal Band, and a score of these have met regularly twice each week for instruction and drill. This organization has given, with other school aid, a series of six entertainments in the City Hall, providing at a nominal price, pleasing and profitable pastime for the school and community. The band in this way earned enough to pay all its expenses including the leader's salary. The Normal Orchestra consists of ten young men, and a still larger number constitute the Male Glee Club. The fact that four young men from the last graduating class became band or orchestra leaders in their new homes shows the value of such training in connection with their life in a normal school. Having an energetic and efficient man in charge of our music has placed it on a high plane and made it a potent factor for good in the school and city. Surely such an untiring, effective worker should be rewarded by a salary larger than that of an ordinary railway mail clerk.

Over one thousand persons have gone forth from this school as graduates. Platteville has never taken kindly to the elementary course, and so the relative number of those completing that course is small. Eight hundred forty-seven have won diplomas, and these graduates are now found in thirty-seven different states and territories and in several foreign lands. The graduates who went out just one year ago, have already scattered to thirty different counties and to four states.

The call for teachers having normal school training grows more urgent and constant. The supply falls far short of the demand. The state graded schools are especially eager to secure as principals young men who have won a normal diploma, and who are well prepared for the work. Especially good openings await all who supplement a normal course by university training.

A beautiful and healthful locality, a kindly and appreciative community, a clean, upright, earnest body of students, a loyal and efficient faculty are factors that prove conducive to good work in the Platteville State Normal School. The generous treatment accorded by the Board of Regents is fully appreciated. The kindly aid and constant encouragement given by Dr. Duncan McGregor, as resident regent, have done much to render pleasant the first two years of my administration as president in the school where thirty years ago I found him an inspiring teacher.

Respectfully submitted,

J. W. LIVINGSTON,  
*President.*

---

*River Falls Normal School.*

---

## RIVER FALLS.

Hon. J. A. PEACOCK,

President Board of Regents of Normal Schools.

DEAR SIR:—This is to report the condition of the River Falls State Normal School at the close of the biennial period ending August 31, 1906.

## GENERAL CONDITIONS.

During the two years covered by this report the school has gone forward, with reasonable success, in the work for which it is maintained, namely, the preparation of teachers for service in the public schools of the state.

The location of this school is peculiarly favorable to study and there are few distractions to deflect the mind of the learner from the purpose in attending the institution. The building, while not quite large enough for our needs, is in the highest degree comfortable and is supplied with an abundance of light and pure air, two essentials for good school work. The people of the city aid us in many ways, not the least of which is in opening their homes to the students and furnishing them board at reasonable rates. The faculty has been on the alert for the best interests of the school and has shown pronounced capability in those directions calculated to build up such an institution.

## CHANGES.

Since the close of the school, June 15, many changes have taken place, unavoidable, but none the less grave when the future welfare of the school is taken into consideration.

The death of Professor A. H. Fletcher, June 23, drowned while taking a pleasure trip down the Chippewa river, has robbed the school of a capable teacher whose pure life and noble character endeared him to faculty, pupils and community alike. He had just been promoted to the position of institute conductor. His death is the first that has ever occurred among the people under contract in this faculty and the severe loss to the school is recognized by every one connected with it.

The resignation of Mr. F. H. Lord from your Board takes from our local counsels a man of long experience in the workings of Wisconsin Normal Schools, one whose judgment was seldom in error, and whose good sense and helpfulness in business affairs gave stability to all the transactions of the school. But the interests of the school are still safe in the hands of Mr. Lord's successor, Regent F. D. Ensign, a graduate of the full course in the school, the first full course class ever graduated, and a man whose interest in this Normal has been continuous thru all the years of its existence.

The promotion of Mr. J. F. Sims to the presidency of our sister school at Stevens Point means the retirement of a strong and capable teacher who has served this school as teacher and institute conductor most faithfully during the last decade.

Miss Laura Peckham, who has directed our primary department in a very satisfactory manner for the last eleven years, and Miss Myrtes Clark, who has been recognized as one of our strongest teachers during the last four years, have both tendered their resignations and severed their connections with the school.

This simultaneous retirement of so many who have long been recognized as "standard bearers" must prove at least a temporary disadvantage to the school, no matter how capable their successors may prove themselves to be.

*River Falls Normal School.*

## ATTENDANCE.

*Normal and preparatory.*

	1904-1905.			1905-1906.		
	Gentlemen.	Ladies.	Total.	Gentlemen	Ladies.	Total.
Fourth year .....	15	30	45	9	36	45
Third year .....	14	52	66	23	48	71
Second year .....	22	66	82	9	73	82
First year .....	10	97	107	15	92	107
Preparatory .....	1	3	4	2	1	3
Total .....	62	242	304	58	250.	308
	Boys.	Girls.	Total.	Boys.	Girls.	Total.
Model grades .....	76	119	195	59	114	173
Total .....			499			481

It will be seen from the above tabulation that there has been a reasonably uniform attendance for the two years, a slight increase in the Normal and a slight decrease in the Model Grades.

Twenty-five counties in Wisconsin have been represented during the period and six other states have contributed less than a score of students. The claim sometimes made that this school is run in the interests of the youths of Minnesota has not now and has never had a particle of foundation in fact. But seven pupils entered from that state during the last year.

The average age of the student is nineteen and one-half years.

## PROFESSIONAL WORK.

While all the work in a Normal school may, in a sense, be called professional, the Practice Department furnishes the nucleus about which must gather the real professional interests of the school. It is here the true spirit of the school must reveal itself.

As I have previously pointed out to the Board the great weakness in our Normal School system is the lack of sufficient supervision of practice teachers who are trying to learn the very difficult process of teaching. It will be seen from the table given at the end of this report that during the last year we had 2,695 weeks of practice teaching, done in the forty weeks of school. This means that there were on the average sixty-eight practice teachers at work during the year. If the Supervisor did nothing but inspect the work of the tyros she would have to visit thirteen practice classes every day in order to see each teacher once a week, and that for a length of time which could not exceed twenty-five minutes. In this school the Supervisor has some assistance from one of the teachers in the Normal department, about half of the teacher's time, but she has to sacrifice almost as much of her time in hearing classes and other forms of work as is given by the assistant. In addition the critic teachers give some considerable assistance to the Supervisor. But altogether the time for supervision is inadequate for the work that is to be done. To make conditions anywhere near ideal the Supervisor in this school should have at least two full time assistants who could make intelligent inspection of the plan books, witness the work of the practice teachers, offer suggestions and give directions, all under the general direction of the Supervisor. This would not only give the opportunity for almost daily consulta-

*River Falls Normal School.*

tions in private but would make it possible to get the practice teachers together three or four days in the week for general conference and discussion, either all together or in suitable groups, and in this manner strengthen them where they are weak and advance their pedagogical interests much more rapidly than is at present possible. As it now stands practice teachers frequently express the wish to me that they might have some one visit their classes and tell them whether or not they are doing the work in a proper manner. But the visits from an inspector must of necessity be few with so many learners and so few to give them suggestion. More direct help for the Supervisor would relieve the critic teachers from a part of their heavy burdens of directing a department, teaching classes, advising practice teachers and reading plan books, a line of work such that if faithfully carried out, as it is in this school, involves the expenditure of time and energy wholly incommensurate with the salaries received by the teachers in the Model grades.

## SUMMARY OF PROFESSIONAL WORK.

	1904-1905.	1905-1906.
Whole number of practice teachers.....	122	131
Whole number of practice classes.....	483	539
Whole number of weeks of practice.....	2,415	2,695
Average time of practice in weeks.....	22	20.5
Maximum time by any one student.....	45	45
Minimum time by any one student.....	5	5
Number successful in practice.....	116	125
Number unsuccessful.....	6	6
Number taking observation.....	149	117
Number taking general method.....	105	104

In conclusion allow me to express to yourself and to the other members of the Board my appreciation of the many courtesies shown to me in my official capacity and the many favors bestowed upon the institution to which I am giving the best years and the best efforts of my life.

Respectfully submitted,

W. J. BRIER,  
*President.*

*Stevens Point Normal School.*

## STEVENS POINT.

HON. J. A. PEACOCK,  
President of the Board of Normal Regents.

DEAR SIR: I have the honor to submit to you the report of the Stevens Point Normal School for the biennial period ending August 31, 1906.

## PURPOSE OF NORMAL SCHOOLS.

It is the business of a Normal School to prepare young men and women for the work of teaching in the public schools of the state, in order to train the rising generation in the virtues of good citizenship,—without which no government known as a democracy is worthy of the name. All other purposes which might be named are secondary to this one. Therefore the location and equipment of the school, the formulation of the courses of study, the qualifications of the members of the faculty who administer the courses of study, should be considered in the light of that purpose. Holding steadfastly to that ideal, an intelligent purpose within reach, gives the feeling of confidence when means are to be adjusted to ends. It is believed that conditions must be brought about which will further this one great purpose in each of the great sisterhood of the Normal Schools in Wisconsin.

## STUDENTS AND ENROLLMENT.

The enrollment during the two years 1904-05 and 1905-06 is indicated by the following tabulation:

	1904-05.	1905-06.
Normal .....	296	308
Preparatory .....	11	6
Grammar .....	95	98
Intermediate .....	59	55
Primary and Kindergarten .....	83	67
Special .....	6	3
Total .....	550	537

The student body is characterized by the qualities of integrity of purpose, untiring industry, and unimpeachable character—qualities that are essential in the schoolmaster when supplemented by the equally essential qualifications of academic knowledge and pedagogical skill. During the past two years 86 students have graduated from the Elementary, and 82 from the Advanced Course, swelling the total number of graduates from the Elementary Course to 407 and that from the Advanced Course to 535.

## DOMESTIC SCIENCE.

The Domestic Science Course for the training of teachers of Domestic Science for the schools of the state, established by the Board four years since has grown in favor, demonstrating the wisdom of the Board in providing such training. Normal School Courses of study are ever in an evolutionary stage and conform to the same laws of development as do other institutions. The schools must prepare for citizenship, the courses of study affording a working tool, for the mastery of one's vocation. The time-honored three "R's" have been found inadequate, and slowly but surely have geography, history, literature, science, been incorporated into

---

*Stevens Point Normal School.*

---

the curriculum. Within the past twenty years, the demand has come for the introduction of Manual Training and Domestic Science, tangible subjects bearing intimate relationship to the practical side of affairs, reaching even into the sanctuary of the home and the fireside. These subjects serve to provide discipline for the mental faculties of observation, memory, judgment reasoning and imagination just as adequately as do the problems in arithmetic, the study of the manners and customs of people in foreign countries, or the analysis of a sentence in grammar, while their practical value is of incalculable estimate. The elements of these subjects of study can be introduced into the schools at a modicum of cost, and under the inspiration of the teacher skillfully trained in the teaching of them bring the maximum of benefit in their wake. The cultural and practical blessings flowing from the mastery of such courses invite students who respond generously. A large future of usefulness lies in this department of the Stevens Point Normal School.

#### THE TRAINING DEPARTMENT.

Normal Schools are professional schools, and the crux of the school lies in the training department. However admirably equipped the faculty, however strong in special lines, it remains true that the academic training alone is insufficient and the Normal School does its work only when it has trained the students to teach well. It can do this by giving instruction in the underlying principles of education, the methods growing logically out of these principles, and by giving students abundance of opportunity to apply these principles and methods in actual practice. But this practice needs the watchful guidance of trained supervisors, consequently in every school should be found that body of supervisors adequate to give systematic, thorough, and skillful supervision—supervision whose ultimate aim is to throw the student on his own resources, developing in him the power of initiative, the power of adapting means to ends in his teaching work outside of the Normal. Imitation in this line is suicide unless it leads to mastery of principle which alone gives life. I plead for such supervision and invite the members of the Board to accord it thoughtful consideration.

#### THE FUTURE.

The Stevens Point School is admirably located in the heart of the Badger State, the tributary country being fertile and well developed industrially; the citizens of the city of Stevens Point are public spirited and have given the school during its twelve years of history cordial support; the varicus members of the faculty have exemplified high ideals of manhood and teaching power; the hearts of the students have been attuned to the measure of uncompromising loyalty to the institution, and today the Stevens Point Normal School faces the future with the hope, and with the modest confidence that it will fulfill the mission for which, in the wisdom of the Board of Regents, it was established.

Respectfully submitted,

JOHN F. SIMS.

President.

---

*Superior Normal School.*

---

## SUPERIOR.

Hon. J. A. PEACOCK,

President Board of Normal School Regents.

DEAR SIR:—Complying with your regulations, I have the honor of submitting to you the biennial report of the State Normal School located at Superior, for the period ending August 31, 1906.

## ATTENDANCE.

The past two years have been the best in the history of the institution. The attendance has increased over that of the preceding biennial period and the clientage has advanced in maturity and steadfastness of purpose. Statistics made last year upon the request of the chairman of the Visiting Committee showed the average age of the freshman class to be a little under seventeen, while the graduating classes averaged a little more than twenty-two.

The demand for trained teachers is keeping pace with the greater efficiency of the school. Many teachers attend the institution for a few terms and return to country district work much strengthened by the instruction and training of the Normal School. When the fact is recalled that a Minnesota Normal School but a few minutes ride from this institution is in a flourishing condition, the inference may be readily drawn that in this rapidly developing northwest there is a hearty appreciation of professionally trained teachers. As in the past, the enrollment in the school is not confined to this immediate locality. Nearly two-fifths of the counties of the state have been represented during the biennial period now closing.

## A DORMITORY.

It would be a matter of wise economy for the people of the state for the Board of Regents to secure an appropriation and build a dormitory in which many young ladies from more remote sections may find rooms and board at actual cost. In a rapidly growing commercial and manufacturing center such as Superior many changes occur. The most serious obstacle to the material progress of the institution resides in the fact that it is often difficult to secure comfortable quarters for students at moderate prices for board and lodging. It has been the experience of Normal Schools, as well as other educational institutions of high rank, that well managed homes for students add greatly to their physical and spiritual well-being. It has also been demonstrated that such homes may be self-supporting, except for the initial cost of construction and equipment. Reasonable prices for accommodations where large numbers are cared for will keep up the property and afford the necessities and comforts of the most productive student life. Presidents of Normal Schools in other states speak of the advantages to students that arise from the social atmosphere of a well conducted dormitory. It is a matter of great concern to parents that their sons and daughters shall be located during their attendance at school where the best opportunities for study and legitimate recreation shall be afforded. It is my opinion after having studied the question carefully for several years that many more people would take advantage of Normal Schools in Wisconsin if such homes could be provided and consequently greater returns to the commonwealth would come thru the stimulation, guidance and control of well trained teachers.

## SUMMER SESSIONS.

It is a matter of great importance to the educational interests of the

---

*Superior Normal School.*

---

state to know that the Board of Regents is now considering the establishment of summer sessions in normal schools. Many other states have found summer sessions exceedingly profitable from an educational point of view. There are hundreds of teachers in the state of Wisconsin who are now unable to spare time and money to attend a normal school, who would be glad to seize the opportunity to get more professional training in a regular summer session.

The expenses of a summer term will be somewhat less than that of any other regular term and the returns in the better teaching of the boys and girls in the various districts of Wisconsin will be of immeasurable value. In view of the fact that the climate of Superior is cool and stimulating during the heated term elsewhere, this Normal school naturally has the hearty support of teachers, who have expressed a desire for a summer session.

The summer session of this school should be conducted on the same high plane that characterizes all other sessions; and the standard in every instance will be held to the highest plane. Credits earned in the summer school should have the same value as those earned at any other time. The steps already taken to inaugurate a summer session next year are appreciated by many substantial teachers in the state and in all probability the summer session will meet the characteristic success of this institution.

#### KINDERGARTEN TRAINING.

At the time of the installation of the Kindergarten three years ago, no effort was made to create a training department for kindergarten teachers. There is now a strong demand for kindergarten teachers in this section and many requests come for a kindergarten course. In order to meet the needs of the schools of northern Wisconsin, immediate steps should be taken to provide suitable quarters for the work and a modern kindergarten training course should be established.

#### CROWDED BUILDING.

The installation of domestic science for girls in the grades and women in the normal department three years ago is a valuable and highly appreciated part of the work of the school. All available space in the building is utilized and the training department and the kindergarten are badly crowded for class rooms. The Normal School must continue to furnish a trained product for Wisconsin schools. Demands more insistent than in the past for teachers with an elementary knowledge of manual training are legitimate. I would recommend the erection of a building to house the heating plant, provide room for manual training work of an elementary nature, and to make suitable quarters for a kindergarten training department.

#### FACULTY CHANGES.

Since the date of the preceding report the institution has lost the services of three efficient officers. Prof. S. A. Lynch, of the English department, was elected principal of the Blaine High School, Superior; Miss Emilie B. Wright, of the Latin department, resigned to accept a more lucrative salary in Chicago; and Miss Juliet V. Yeakle, of the Physical Culture department, returned to the Whitewater Normal where she began her teaching in Wisconsin. The places made vacant by these withdrawals have been filled. Prof. P. H. Hembdt succeeds Prof. Lynch, Miss Helen Fitzgerald has the work in Latin, and Miss Marion K. Varian directs the studies in Physical Culture.

Other members of the faculty have declined positions in institutions

---

*Superior Normal School.*

---

outside the state. Provisions should be made to increase the salaries of the most valuable officers so that Wisconsin may not lose their services.

SERVICE.

The fundamental aim of this institution is to serve the state. Officers of the school seek by contact with schools to know the educational needs of Northern Wisconsin. Members of the faculty realize that the largest interests are best fostered by holding up high standards and stimulating students to see that personal advancement and personal fitness are closely related. Students are led to feel that a school is an opportunity; and that the state in supporting this normal school offers a place where they may do great things for themselves.

The educational interest of this new and growing section of Wisconsin appreciates the loyal service and unselfish devotion of the late Hon. Frank Ostrander the first resident regent; of the Hon. F. A. Ross, who for eight years gave unselfish and splendid service on your Board; of Hon. Chas. A. Crownhart, the present resident regent who is devoting much valuable time to the cause he so ably represents.

Respectfully submitted,

I. C. McNIELL,  
*President.*

*Whitewater Normal School.*

## WHITEWATER.

Hon. J. A. PEACOCK,

President Board of Regents of Normal Schools.

DEAR SIR—In compliance with the regulations of the Board of Regents, I have the honor to submit the following report for the two years ending July 1, 1906:

## ENROLLMENT.

NORMAL DEPARTMENT.	1904-1905.	1905-1906.
Post graduates .....	4	
Senior class .....	59	63
Junior class .....	84	98
Second year classes .....	51	51
First year classes .....	71	69
Special students .....		1
Preparatory classes .....	3	5
Totals .....	272	287
Number of ladies .....	209	233
Number of gentlemen .....	63	54
MODEL DEPARTMENT.		
Grammar grades .....	35	26
Intermediate grades .....	52	42
Primary grades .....	58	49
Kindergarten .....	43	49
Totals .....	188	166
Total in Normal Department .....	272	287
Total in all departments .....	460	453

SOURCES OF MEMBERSHIP.	1905-1906.
Admitted on entrance examination .....	21
Admitted on high school diplomas .....	78
From 2d to 3d years of high schools .....	9
From 9th Grade .....	5
On teachers' certificates .....	1
Promoted from Preparatory Department .....	13
From other Normal Schools .....	2
From County Training Schools .....	2
	131

Certificated (Elementary Course).....	25	28
Graduated (Advanced Course).....	47	55
Totals.....	72	83

#### NEW ADDITION.

The appropriation of \$7,000.00 made by the Legislature at its last session for a new boiler house proved to be hardly adequate for the purpose, yet with some supplementing by the Board it has resulted in giving us a new annex in which the boilers have been more suitably and safely installed and ample storage room for coal provided. An even more gratifying result has been the provision of comfortable and sanitary toilet rooms, thus remedying a defect of long standing. Two excellent rooms for the Manual Training work were also afforded by the new structure. The school is, therefore, now more fitly and comfortably housed than ever before, though even now, we have not a foot of waste room anywhere in the building.

#### THE SUMMER SCHOOL.

The summer school of five weeks sustained for several years past by the aid of a small appropriation by the Board, has steadily grown in popularity and usefulness. The enrollment, which is not included in the table of attendance above given, has been as follows:

In 1903 .....	83	In 1905 .....	203
In 1904 .....	154	In 1906 .....	262

Aside from the benefit accruing to the teachers in attendance, this summer work can hardly fail to advertise the school favorably and increase its sphere of influence.

It would seem that this whole matter of summer work in the Normal Schools, with their expensive equipment otherwise idle during one-fifth of each year, is one which deserves greater attention and encouragement on the part of the Board, and the State.

It is doubtless impracticable to run summer sessions in all the Normal Schools of the State. The majority of teachers ought not to teach in the summer vacation. But if strong summer sessions were maintained in, say three of the schools, properly located, present demands would be fairly met.

---

*Whitewater Normal School.*

---

But the present necessity for changing a somewhat burdensome tuition fee ought to be removed. If sufficient money were appropriated for the proper support of the summer sessions, with tuition as free as it is in the regular terms, the attendance would be greatly increased. In several states where this policy is pursued, the attendance upon the summer term is greater than in any other part of the year. Until this policy is adopted, the Normal schools will not be fulfilling their duty and their opportunity.

**DEMAND FOR TEACHERS.**

The demand for trained teachers continues to be greater than we are able to meet. Our graduates command good positions and are no longer under the necessity of accepting the very low salaries which formerly prevailed. School boards in many places are awakening to the fact that the best teachers are the cheapest, and the value of professional training for teachers is more generally recognized from year to year. And yet, it is still true that teacher's wages are generally low as related to the cost of preparation and the financial possibilities in other vocations.

**SALARIES.**

It is true beyond question that the best talent in the teaching profession ought to be at the command of Normal schools. It is here that the very best teaching should be exemplified. But it is equally true that the best teaching talent can no longer be retained at the salaries now paid to the majority of teachers in the Wisconsin Normal schools. The most difficult problem which confronts the presidents of these schools is that of keeping their faculties up to the proper standard of excellence. The selection of suitable teachers is a difficult task, at the best, but it is greatly increased by inability to compete with other institutions and states offering such compensation as will attract and retain the best teaching talent.

Moreover, the work of teachers in the Normal schools is heavy as compared with that in higher institutions, the University for instance. They have to teach more hours in the day and more weeks in the year; their labor is intense and wearing. They are subject to criticism in their work as perhaps no other teachers are; and their positions are none too secure.

It would seem, for all these reasons, that the people of Wisconsin, and especially the Legislature, ought to be made duly aware, without further delay, of the conditions which exist, and the economic need, as well as justice of a more liberal salary scale in the Normal Schools of the State. Just at this time, that is unquestionably the most important condition for increasing efficiency and success in these schools.

**CHANGES IN THE FACULTY.**

As usual, changes have occurred in the faculty, teachers retiring whose places it was hard to fill. These need not be enumerated in detail; but special mention may fitly be made of the decease of Miss Cornelia Rogers, Teacher of Geography. Miss Rogers entered the school as a student in 1871, but did not finally graduate until 1882. She then became a member of the faculty in a subordinate position but advanced in time to the important position which she held in later years. She had, therefore, taught in the school for nearly 25 years. Her sturdy, sterling character and her enthusiasm in her work, along with her long term of service had made her

---

*Whitewater Normal School.*

---

a positive force in the school. Both she and Miss Margaret Hosford, Teacher of U. S. History, who has recently retired, after a faithful service in the school of 18 years, deserve honorable mention. Such long terms of service on the part of efficient teachers are of great value to any school. They tend to give continuity and unity to the work and—a matter of no small moment—they tend to hold the interest of alumni and strengthen their loyalty to their *Alma Mater*. The average alumnus is liable to lose interest in the school after all his own teachers have passed off the stage.

#### THE ALUMNI.

The school has now graduated 716 persons from the Advanced Course and 648 others from the Elementary Course. Fully 95 per cent of these have engaged in teaching, and the majority of them are still engaged in educational work. Of the first class, which graduated in 1870, one-half have taught continually from that day to this. The Alumni of the Whitewater Normal School are a loyal and worthy body of men and women, who are doing well their work in the world and, almost without exception justifying the expenditure of the State on their behalf; and the school takes justifiable pride in the quality and efficiency of her product.

#### SOME FEATURES OF THE SCHOOL.

It is the purpose of the Whitewater Normal School to keep abreast of the educational progress and enterprise of the day. Manual Training, the Kindergarten, the School Garden, and Physical Training are all recognized as accessories of modern education and all are in successful progress. But there are two educational agencies in whose development here we feel an especial pride.

1. Our Library, while already feeling the closeness of its quarters, is nevertheless made unusually effective by the excellence of its organization, the careful selection of books, and the practical instruction given to students in its proper use. The large and thoroughly classified collection of pictures provided for purposes of instruction is a valuable feature. The class instruction given in library methods has also attracted attention quite widely among educators.

2. The beautiful and well kept school grounds exert an unconscious educational influence of great value. It has been the purpose to establish in these grounds every species of tree and shrub that will endure the climate, thus forming a sort of arboretum. Over 100 species are already thus established. But still more important is the appeal to the sense of beauty, forming an effective means of aesthetic stimulus and culture.

Finally, it is believed that no school in the west furnishes a more safe and wholesome environment for school work or more pleasant and inspiring conditions for happy and successful student life than does the Whitewater Normal School.

Thanking you and the Board of Regents for the great measure of courteous and patient consideration accorded to me through the 21 years of my administration of this school, I am

Respectfully yours,  
ALBERT SALISBURY.

SIXTH BIENNIAL REPORT  
OF THE  
FREE LIBRARY COMMISSION  
OF WISCONSIN

1905-1906

*Published by Authority of Law*

MADISON  
DEMOCRAT PRINTING COMPANY, STATE PRINTER  
1906

## Wisconsin Free Library Commission

## Letter of Transmittal

---

MADISON, July 1, 1906.

To Hon. JAMES O. DAVIDSON, *Governor*:

SIR:—I have the honor to transmit, herewith, the sixth biennial report (1905–1906) of the Wisconsin Free Library Commission, in accordance with the provisions of section 383a, of the Wisconsin Statutes of 1898.

Very respectfully,

JAS. M. PERELES,

*Chairman.*

# WISCONSIN FREE LIBRARY COMMISSION

---

## SECRETARY'S REPORT

### I

During the biennial period which has just come to a close, library conditions in the state have advanced in reasonably satisfactory measure, both as regards numerical growth and efficiency of service. A comparison of the statistics which appear in this report with those in the five biennial compilations previously issued shows the uniformly steady growth in this field of educational endeavor. In the promotion of these interests, the Wisconsin Free Library Commission has sought to give impulse and direction. Aid has been rendered boards of trustees not only at the time of organization, but in many ways following the establishment of new libraries.

A summarized statement of the growth within this period comprises the following facts:

When the Commission was established in 1895, there were 28 public libraries in the state. In June, 1906, this number had increased to 142.

In 1895, but three libraries in the state were housed in their own buildings. In June of this year, 61 library buildings had been erected or provided for, and 28 others occupied more or less desirable quarters in city halls.

When the Commission was established, there were no traveling libraries in the state. There are now 618 circulated; these supply 454 stations, the total number of books contained in them being 30,147. Of these traveling libraries, 392 are circulated directly by the Commission, together with 171 groups of foreign books, all these supplying 261 stations; number circulated by county systems, 226 for 193 stations.

---

*Secretary's Report*

---

When the Commission was established, but one library in the state employed trained service. There are now thirty librarians in Wisconsin from library training schools, and of the other librarians and assistants employed in the state, nearly 100 have attended the summer school conducted by the Commission.

Gifts for library buildings in the state amount to \$1,299,500. Of this sum, \$807,500 has been contributed by Andrew Carnegie, and \$492,000 by citizens of the state.

Nor do these bare figures do more than partially indicate the progress in library work. Necessarily, there is much that cannot appear in a statistical recital; the immense improvement in the character of the books circulated; the development of communities in their educational and moral impulses as the result of library extension; the promotion of and assistance rendered to civic improvement and enterprises of community interest through the public libraries—these facts are not easily reduced to statistical form.

Notwithstanding this very gratifying showing, more remains to be done than has been accomplished. The number of traveling libraries would not supply those who are now without library facilities of any sort, were ten times the number available. While the average number of books per each 100 of the population is 58, there are scores of communities whose average supply is pitifully insufficient. There are a million residents of the state who have access to no libraries except those they have in their own homes, and there are doubtless many hundreds of homes whose possession of books is limited to those used by the children in their classes at school.

In the matter of trained service, whereby the usefulness of libraries is greatly multiplied and rendered more efficient, much has been accomplished through the agency of the summer school; the opening of the library school promises to advance this important phase of the work in a large degree. And more important than all else, because of its encouraging promise for

---

*Secretary's Report*

---

future development, is the growth of the right kind of library spirit among the people.

The number of free public libraries is steadily increasing, but the surprising growth of many of the smaller communities constantly adds to the total of communities without a library, though large enough and sufficiently prosperous to maintain one. It is the definite policy of the Commission to discourage the creation of new libraries in places whose means are insufficient to properly equip or maintain them. In these smaller communities the same result can be reached more economically and with greater efficiency by means of an arrangement whereby the reading room and an enlarged traveling library (one hundred volumes) are combined to serve the local needs. When added growth and resources warrant, this institution can be converted readily into a public library organized in the usual way. For want of a better or more distinctively descriptive term, the name Town Library Station has been applied to libraries established in this form. It is the exceptional city or village containing less than a thousand inhabitants that will not derive more profit from a town library system than the ill-supported public library. In the former, books are constantly renewed in sufficient quantities to satisfy patrons; in the latter, the purchases are infrequent and insufficient, and the library in the course of time goes to seed.

## CITIES AND VILLAGES WITHOUT LIBRARIES

Population 3000-5000	2	Population 900-1000	9
2500-3000	4	800-900	18
1500-2500	9	700-800	20
1000-1500	29	600-700	23
	—	500-600	27
	44		—
			97

Some difficulty has been experienced in obtaining satisfactory statistics. In the compilations which follow, only those libraries are included which have responded.

*Secretary's Report*

## LIBRARIES CLASSED ACCORDING TO POPULATION

<i>Less than 1,000</i>	<i>1,000-5,000</i>	<i>1,000-5,000</i>

## COMMISSION ACTIVITIES

The activities of the Commission staff in the earlier months of the biennium, were centered upon replacing in machinery and material what the capitol fire had swept out of existence. In this reorganization, past experience and future needs were considered. As a result, some of the work has been modified and some has been amplified. While the main purpose has been to extend and strengthen the work already in progress, some new lines of usefulness have been developed. The essential facts pertaining to these are enumerated and discussed in the departmental reports which follow. There will be found in more detail the purpose and results of the following channels of work pursued by the members of the Commission staff:

Educating public sentiment so that a genuine desire for library privileges will manifest itself in the practical form of local taxation adequate to proper maintenance.

Personal help in the organization of libraries, and instruction to the librarians and assistants tending to bring the institutions to the highest degree of efficiency possible.

From a circular of information issued by the Commission is extracted the following synoptical enumeration of Commission activities:

*Traveling Libraries*

A system of traveling libraries is maintained which furnishes books to rural communities and villages too small to support local libraries, and temporarily to larger villages and towns as an inducement to establish free public libraries.

Aid is given in the organization and administration of county traveling library systems, including advice as to book selection, records and local stations.

---

*Secretary's Report*

---

*Magazine Clearing House*

A clearing house for magazines is operated, to build up reference collections of bound periodicals in the public libraries of the state.

*Advisory Service*

Aid is given in the establishment of public libraries in localities able to support them.

Advice and assistance in planning library buildings. Floor plans, exterior and interior views of best typical buildings are supplied.

Statistics and facts concerning libraries are collected and published for the information of trustees.

Librarians and their assistants are given help and instruction in their own libraries by the field organizers and visitors.

Instructional publications and circulars of information are issued at frequent intervals as guidance in solving the everyday problems that arise in library administration.

Buying lists on special subjects or for special libraries are compiled upon request.

*Instructional*

A school for library training is maintained, the course comprising a year's work.

For persons engaged in library work who have not had the advantage of special training, there is an annual summer school. The course of six weeks is planned primarily to effect improvement of the service in the small libraries.

Institutes and round-table conferences are held for the instruction of those unable to attend the summer school.

Buying lists of the most desirable current books are distributed monthly to the book committees.

*Legislative Reference Work*

Material and critical data bearing on current questions of public moment and subjects of pending legislation is gather-

---

*Secretary's Report*

---

ed, classified and indexed for the use of members of the legislature, state officers, citizens, and students of public affairs.

A document clearing house is maintained for the benefit of the libraries of the state.

## II

## INSTRUCTIONAL WORK

During the second year of the biennial term, the members of the instructional staff were engaged chiefly in carrying on the work preparatory to the opening of the library school.

The establishment of this school has been made possible by the action of the Legislature, which in 1905 increased the appropriation of the Free Library Commission to provide for its support; by the generosity of Andrew Carnegie in enlarging his gift to the city of Madison for its new library building, providing a permanent home; and by the promised cooperation of the University of Wisconsin and of the various state and local libraries in Madison and its vicinity.

The school is founded to educate and train for library service. While the special needs of all classes of libraries will be considered, its primary purpose will be the equipment of students for the competent organization and administration of small public libraries. Especial emphasis will be laid upon the training for cooperation with schools, study clubs, and other features of public educational work incident to library extension.

The school is domiciled upon the second floor of the new building of the Madison Free Library. These quarters were especially planned for the purpose, and are pleasantly located, of ample size, and conveniently arranged and equipped. They include the office of the preceptor, a large work room for students, two lecture rooms, a library and a staff room.

The school library includes 2,000 volumes of general reference works, subject and trade bibliographies, library literature, catalogues, and technical books for every need. A model

---

*Secretary's Report*

---

collection of children's books, printed blanks and forms from various parts of the country illustrating different methods of administration, and library plans and reports, are also features of the library, which will be kept carefully up to date.

The libraries in Madison, all of them at the service of the school, are: the Wisconsin Historical Library with its world-famous collections of books, pamphlets, documents, newspaper files, manuscripts, and maps; the rapidly growing and admirably administered library of the University of Wisconsin; the library of the Wisconsin Academy of Sciences, Arts and Letters, consisting chiefly of transactions of learned societies; the Legislative Reference Library, conducted by the Wisconsin Free Library Commission with the cooperation of the Wisconsin Historical Library; the State Law Library, which is under the control of the Justices of the Supreme Court; and the Madison Free Library.

The public libraries of Appleton, Baraboo, Beloit, Madison, Menasha, Neenah, Oshkosh, Portage and Watertown have generously consented to serve as laboratories for the students of this school, thus providing for a distinctive and exceedingly valuable feature of its work.

The University of Wisconsin, now the foremost of western seats of learning, offers its cordial cooperation in this new undertaking. Several of the most prominent members of its instructional force have consented to deliver lectures upon the bibliographies of their respective specialties; and the students of the Library School will find open to them courses in modern languages, literature, English history, economics, political science, sociology, etc.

With a plan of work embracing the library needs of the state, the Commission will give an unrivalled opportunity to the students of its school to study traveling libraries, the cooperation of libraries and schools, libraries and study-clubs, library organization, the conduct of library institutes, and the other lines of its several activities.

The course of instruction will last throughout one year, pro-

---

*Secretary's Report*

---

viding thirty-eight weeks of actual curriculum work. It will consist of technical, literary and practical subjects and problems. These include cataloguing, classification, library economy in its various details, administration, reference work, public documents, bibliography, and history of the library movement.

But as the book is the unit of the library, the emphasis of the course will be placed upon the study of books themselves, this to include the history of printing and book-making, practical bibliography, studies of authors and publishing houses, the appraisal of books suited for public libraries, and the consideration of the subtle relation of the library and its books to the public that it serves.

A strong element in the course of study will be the apprentice work to be required of the students in certain designated libraries. During at least ten weeks of the course, students will be placed in these coöperating libraries, where they will do actual library work along all lines, under the direct supervision of the local librarians and the oversight of the faculty of the school. Such libraries of the state as are in process of organization or reorganization under the auspices of the Commission will also be used as laboratories.

This sustained laboratory work will seek to cover all phases of technical library routine, thus enabling students to practice the theories discussed in lectures and seminaries, and the problems considered in the class-room. It is hoped that thereby students may acquire poise and experience in meeting and serving the public, and ascertain for themselves how library work reaches out to all interests in a community, thus becoming a vital work.

Although much work, with resultant expenditure of time, was involved in the preparations for the school, the field work was not neglected. The usual summer school courses were given, and it is planned to give as well the supplementary courses arranged for each alternate year. It is hoped, when the school is fairly established, that the members of the in-

*Secretary's Report*

structional staff will be able to give much greater and more careful attention to field work than has been possible heretofore. During the past two years, closer relations than heretofore with library boards have been established. It has been found mutually helpful to send after each visit a schedule of suggestions as guidance to the librarian and her board. A copy of suggestions sent to one of the local boards will serve to indicate the general character of all of them, details varying according to local conditions:

## RECOMMENDATIONS TO THE BOOK COMMITTEE

Consult the shelf list when making out book lists for new books and try to balance the library better. Notice guides in shelf list where there is no representation for a given class of books.

Do not buy too many duplicates of books to begin with, until there are more books in the library.

Avoid cheap editions, as they are not fit to rebind and usually have poor paper and print.

Use the Suggestive List of Books for selection of adult books, together with the A. L. A. Booklist for the newer books, and the Pittsburgh List of Home Libraries for selection of children's books.

Do not buy reference books like a dictionary or encyclopedia without first consulting the Commission, in order to see if a bargain may not be secured.

Use the Wyer List of Documents for a Small Library for help in deciding what to keep in the way of public documents.

If it is difficult to supply enough copies of the newer books of adult fiction, try a rental collection for some of the books much wanted and charge 5 c. a week or 1 c. a day rent and make the book pay for itself. When the demand has worn off, put in the free collection. Be careful in selection of books for rent to put in only such as will be very popular; otherwise they can not be made to pay for themselves.

When making arrangements with a binder try a contract such as is enclosed herewith, in order to insure the proper sort of work and prices.

Do not rebind cheap books or those which are much soiled; it will be better to buy new copies.

Fine notices should be sent for over-due books when they have been over-due five days. Printed postal cards for such notices are most convenient.

Cover the magazines inexpensively as per sample left by Commission and circulate as books after the current number has been on the reading tables one month and the new ones are received. Circulate on short time; three days is recommended.

Use the seven-day label on new fiction and do not keep the books "seven-day" after the demand for the book has moderated.

Stamp all books and periodicals with the name of the library.

Put burlap over the children's shelves to use for a bulletin, and also have a bulletin made of the same material to hang near the loan desk for book notices, lists and any notice which is of interest to the general public.

A telephone is recommended if it can be secured at a reasonable rental or as a gift. It is a great convenience to patrons, but should not be used for social purposes.

List of new books should be printed in the local papers, and posted in the library. Also notes and news about the library.

The librarian should be required to make all orders for books and conduct the correspondence relating to same. She should also be required to keep the accounts connected with the library business, having them properly audited by the Finance committee from time to time. Properly ruled blanks have been left with the librarian for this purpose and the method of keeping same has been explained to her.

Books should be purchased as frequently as the funds will allow, even if not

---

*Secretary's Report*

---

more than \$20 worth is ordered at one time. Every two months is recommended as a reasonable interval in a library the size of this library. The interest of the readers will be maintained better, and the work of preparing the books will be rendered much easier by pursuing this course.

Books should be purchased of a reliable dealer who has a large stock and from some one who knows editions and prices, and who will not substitute cheap editions for better editions ordered.

## III

## TRAVELING LIBRARIES

From the statistical record given in some detail elsewhere in this report, the great growth in this department of work may be noted. Three-fifths of the 20,000 books now in the traveling libraries owned by the state have been added during this period. The coöperative traveling library idea has been utilized in ways not heretofore employed, so as to afford to needy and struggling little libraries help very much needed by them. The town library station system, the "new book" traveling library and the foreign groups, are among the new directions in which traveling library work has been advanced.

The county traveling library systems number eleven, including two proprietary systems, being an increase of four. For the successful administration of county systems of traveling libraries, a strong central public library from which the libraries can be circulated is essential. In some counties of the state the lack of such an administrative center prevents the adoption of the system. In all the county systems thus far established, material aid has been sought and obtained from the Commission. Stations have been located and organized, book lists have been compiled, simple records have been instituted, and the necessary business machinery installed. This has involved much time and labor, but has been warranted by the fact that through these channels the pressure upon the traveling library service rendered by the state has been lessened. The total number of books in the county traveling libraries is now 10,459, and the sum of \$2,000 will be appropriated annually hereafter by the several county board to add to the book purchases. The number of

---

*Secretary's Report*

---

stations supplied through this source is 193. Counting the state and county traveling libraries, the statistical summaries show the following figures:

Total number traveling libraries.....	618
Total number foreign groups.....	171
Total number of books.....	30,147
Total number of stations .....	454

Although reports received from some stations are defective, and from several, figures are wholly lacking, the returns from stations supplied by the Commission show a gratifying circulation. The total circulation was 122,097. The following interesting figures show the average circulation per book on one trip covering a period approximating six months:

## ENGLISH BOOKS

General libraries .....	7.85
Fiction .....	18.55
Children's .....	9.36

## FOREIGN

German .....	11.08
Norwegian .....	4.26
Polish .....	3.25
Bohemian .....	2.3

By vote of the Federation of Women's Clubs, all the study club libraries heretofore circulated through their Library Committee have been turned over to the Commission; they number 13. The Wisconsin Historical Society has also contributed eight splendid libraries on phases of American history—four of them on the history of Wisconsin. The Wisconsin Free Li-

*Secretary's Report*

Library Commission has at the present time the following study club libraries:

Subject	No. of libraries	Subject	No. of libraries

Japan (outlines and references) .....	1	Wisconsin Free Library Commission .....	33

Besides the study libraries listed, the Commission has a miscellaneous collection of about 200 volumes from which it loans individual books or small groups, and a collection of magazines from which special articles are sent. During the last year three groups, not incorporated in libraries, have been loaned for the year to supplement collections in local libraries, and thirty-five loans for short periods have been made. Hearty cooperation has been given by the State Historical, University, and Madison Public Libraries in the matter of short-time loans. The collection of outlines has been much increased and the Commission has been able to help a number of the larger clubs with

---

*Secretary's Report*

---

outlines where the book supply was amply provided by the local public library or by the purchases of the club.

Many requests have been made for libraries on Household economics and Improvement of town and village, which could not be filled. Use could have been made of more libraries on France.

The Commission has made a beginning toward a good collection of reproductions of pictures of great artists. Many of these have been loaned to clubs having books and are reported to be a valuable addition to sources of help.

List of towns where study libraries are placed, 42 stations:

Abbotsford	Almond
Antigo	Augusta
Black River Falls	Bloomington, 2
Brandon	Campbell
Colby	Cumberland
Eagle	Edgerton
Fort Atkinson	Jefferson
Kaukauna	Loyal
Mauston	Medford
Merrimac	Oconomowoc.
Omro	Portage
Poynette	Prairie du Sac
Randolph	Rhineland
River Falls	Shawano
Sparta	Sturgeon Bay
Sun Prairie, 2	Superior
Waterloo	Watertown
Waupaca	West Bend
West Salem	Whitehall, 2
Wyocena	

The different kinds of traveling libraries circulated by the Commission may be described, briefly, as follows:

*Collections supplied without fee*

English, miscellaneous, 60 volumes; sent to rural communities organizing a local association of not less than ten residents; transportation charges paid by local station; exchanges made semi-annually.

English, miscellaneous, 30 volumes; intended for neighbor-

---

*Secretary's Report*

---

hood groups in rural communities; same conditions apply as in the case of 60-volume libraries.

English fiction libraries; designed to aid struggling public libraries, temporarily embarrassed as to book funds, and to enable them to expend their limited funds to best advantage; transportation charges paid by library receiving books.

Children's libraries; same as to purpose and plan as fiction libraries.

Study libraries, sent to public libraries, women's clubs and organizations of citizens engaged in serious study of certain subjects; transportation charges paid by users, or organization representing them. Many of these libraries are accompanied by outlines and a few with illustrative material. Special study libraries on current subjects of public importance are made up in sizes varying according to quantity of material available; these are furnished to students, preferably through the medium of local libraries where such exist.

Foreign groups, comprising ten books each. These are added to the English traveling libraries sent to communities where a large foreign-born element can be served. Foreign groups comprise separate collections in the following languages: German, Polish, Norwegian, Swedish, Bohemian. These have proved immensely popular, the supply being unequal to the demand.

*Coöperative Collections*

"New-book" or rental libraries, comprising 60 books each. Intended for little libraries with limited funds. Circuits of six libraries are arranged, an annual fee of \$10 entitling each subscriber to use of two libraries annually, arrangement being for a term of three years, when the books are withdrawn from this service and otherwise utilized. With each semi-annual shipment, from six to a dozen of the best currently-published books are substituted for a like number of the older or less popular books.

Town traveling libraries, comprising 100 books each (Eng.

---

*Secretary's Report*

---

lish). Intended for the larger villages and smaller cities financially unable to maintain a public library, but too populous to remain satisfied with a traveling library of the usual size. Upon payment of \$50, the Commission agrees to supply 100 books, which are exchanged for other collections of like character semi-annually for five years, to each of ten communities comprising the circuit. A library organization is effected in each place joining the circuit, and frequently a reading room is opened in connection with the traveling library. Transportation charges are paid by the local station. The net result of this arrangement is that the local station bears half the cost of book purchase, and the Commission half—or the equivalent of cost represented by the standard traveling library sent to rural communities without charge.

Foreign-book traveling libraries, comprising 35 to 50 volumes each. Sent to public libraries having a large foreign-born constituency, upon payment of \$35. This payment entitles the subscribing library to exchanges every six months for a period of five years. Circuits of ten libraries are formed, their total subscription of \$350 representing the cost of the books included in the ten libraries. The Commission facilities are utilized as clearing house agency between the subscribing libraries, service in mending books as needed and keeping records being given without charge. The foreign-book libraries include German, Dano-Norwegian and Polish books.

By the coöperative systems above described, those who are served secure expert book selection, and the physical condition of the books is looked after in a manner to prolong their use.

*Traveling exhibits*

Ringling animal pictures—This exhibit consists of seven large reproductions of photographs of animals, the reproductions being made from photographs taken by one of the Ringling brothers. They have been exhibited in the public libraries of Baraboo, Superior, Ashland, Cumberland, Madison and Rice Lake.

---

*Secretary's Report*

---

Forestry pictures—An exhibit consisting of about 100 photographs sent out by the U. S. Forestry Department, which have been mounted and prepared for exhibit purposes by the Commission. They show different trees and stages of growth, in various sections of the country. These were used for a long period at the State Normal School, Platteville; Public library, Rhinelander.

Children's books—This exhibit of books, containing about 400 volumes suitable for children, is sent out by the Commission to serve a distinct purpose. It is not intended as a circulating or traveling library for use, but purely as an exhibit to arouse the interest of parents and teachers in selection of books for home and school use by permitting them to examine books about which they have read, to learn of the newer and more recent ones, and to show different editions of some of the children's classics. It also serves as an aid to the librarian in book selection, classification and cataloguing, as the books are fully classified and catalogued. Since October, 1905, this exhibit has been used to excellent advantage in the following libraries of the state: Baraboo, Sparta, La Crosse, Portage, Columbus, and Racine.

## IV

## LEGISLATIVE REFERENCE DEPARTMENT

This department has been slowly recovering from the effects of the capitol fire. The accumulation of material and the necessary indexing and cataloguing to replace the collections swept away by the fire and to extend the resources of the department have entailed much labor, calling for an increased membership of the staff. The success of the reference work and its great popularity with members of the legislature and with state officers has rendered necessary a great deal of work which could not be foreseen two years ago. The broadening scope of this work, as indicated by insistent demands from

---

*Secretary's Report*

---

members of the Senate and Assembly, leads in the following directions:

1. The drafting of bills. For this purpose the services of specially trained lawyers during the legislative sessions must be secured.

2. Statistical compilations for the use of the Committee on Claims in framing state budgets.

3. The private and local laws, which do not appear in the statutes, are in a chaotic condition. A thorough index of the session laws from the first session to the present time is needed.

4. A thorough index of special reports and governors' vetoes of the past should be made. The legislative journals should be gone over at once. There is constant search for lost material in this set of documents. A complete index of these documents is not necessary, but an index of special topics is required.

5. A record of bills and of committee hearings should be kept during the session. The business men of the state are constantly calling on the department for information relating to the introduction of bills and the time fixed for hearings. They dislike to keep lobbyists in Madison to keep guard over their interests, but are often compelled to do so by lack of information of this sort. A rough index of this sort was kept during the last session, but a more thorough index should be kept cumulatively, or there might, perhaps, be a publication of this sort issued from day to day.

6. The farmers of the state, as well as the legislators, are calling for an index of agricultural documents. An index was ready to go to press when the fire occurred. Were such an index in printed form available, all the agricultural publications of the state would become many times more valuable than they are now.

The department has secured lists of books upon special subjects in the several libraries of Madison for inclusion of titles in the card catalogue, so that the available resources in the

---

*Secretary's Report*

---

capital city can be drawn upon expeditiously. All the libraries are showing splendid coöperative spirit.

Since January, a series of bulletins on comparative legislation has been issued. The bulletins issued to date comprise the following subjects:

1. Railway co-employment.
2. Lobbying.
3. Corrupt practices at elections.
4. Exemption of wages.
5. Municipal electric lighting.
6. Trust companies.

Other bulletins ready to print or in preparation comprise the following:

7. Taxation of trust companies.
8. Municipal gas lighting.
9. Boycotting.
10. Blacklisting.

Work instituted with debating societies has become very popular, and numerous special traveling libraries on current topics have been sent to many parts of the state.

## V

## CO-OPERATIVE WORK

The policy of minimizing expense and labor and obtaining a maximum of efficiency has been pursued with considerable diligence. Existing agencies and organizations have been utilized for mutual profit in extension of work.

The League of Library Commissions has enabled the co-operating members to secure needed publications for field work and otherwise. Through this organization the Publishing Board of the American Library Association has been persuaded to undertake many publications useful to commissions. Most important of these is the A. L. A. Booklist, which is distributed to every library in the state, and ought to exert an ap-

*Secretary's Report*

preciable influence in better book selection than has been possible heretofore. Libraries have likewise been urged to use Library of Congress cards for their catalogues. The following is a list of subscribers in this state for L. C. cards:

The Secretary of the Wisconsin Free Library Commission has been appointed as secretary of the University Extension

---

*Secretary's Report*

---

Division, and the coöperative aid of the public libraries of the state is being enlisted in furtherance of this movement.

Negotiations are now in progress for incorporating in the University Summer session a course on Library Practice, with two-fifths credit. The course is designed to be of special value to the general student, and to teachers, clergymen and others who may have library duties to perform. It is not intended for the professional training of librarians. The aim of this course is to familiarize the student with the library as a working laboratory, and to suggest ways and means of using it to the best advantage.

The course will include the evaluation and use of reference books and periodical literature; indexes, catalogues and other bibliographical tools designed to make printed information quickly available; book selection and buying for private use; state and government publications of value to individuals; book binding; library devices for collecting, filing, preserving and indexing pictures, pamphlets and clippings; and the coöperation of the library with the other educational institutions of a community. Methods will be tested and applied through practical problems in the use of books and bibliographical aids.

Affiliated relations with the University of Wisconsin have led to many forms of coöperation. In the preparation of comparative legislation bulletins issued by the Commission, valuable aid has been given by the Political Science Department.

The cordial thanks of the Secretary of the Commission are due to the members of the staff for their loyal and unstinted labors in the furtherance of library extension. To omit appreciative acknowledgment of their splendid work, individually and in accord, would render this record of two years' work defective and incomplete.

HENRY E. LEGLER,  
*Secretary.*

## PUBLIC LIBRARIES OF WISCONSIN.

- Algoma.* Population 2,008  
Free public library—Estella J. Warner, librarian.  
In photograph gallery of George C. Wilbur.  
Books—no. volumes, 590; no. card-holders, 421.
- Antigo.* Population 6,663.  
Free public library—Clara H. Kunst, librarian; F. J. Finucane, president and chairman of book committee; G. K. Meneeley, secretary.  
Building—erected 1905; cost, \$15,000, gift of Andrew Carnegie; A. D. Conover, Madison, architect.  
Books—no. volumes, 3,156; annual circulation, 28,471; no. card-holders, 3,734.
- Appleton.* Population 17,000  
Free public library—Agnes L. Dwight, librarian; George C. Jones, president; F. S. Bradford, secretary; Orlando E. Clark, chairman book committee.  
Building—erected 1900; cost, \$40,000, gift of city; W. A. Holbrook, Milwaukee, and Herman Wildhagen, Appleton, architects.  
Books—no. volumes, 9,762; annual circulation, 47,505; no. card-holders, 3,718.
- Arcadia.* Population 1,316  
Free public library—Louise Gasser librarian; Emil Maurer, president; F. C. Richmond, secretary; R. C. Turner, chairman book committee.  
Building—not yet erected; cost, \$0,000, gift of Andrew Carnegie.  
Books—no. volumes, 1,487; annual circulation, 4,535; no. card-holders, 752.
- Ashland.* Population 14,519  
Vaughn public library—Tryphena G. Mitchell, librarian; S. S. Fifield, president; George Merrill, secretary; William Tomkins, chairman book committee.  
Business block, revenue from which supports library.  
Books—no. volumes, 5,500; annual circulation, 20,619; no. card-holders, 3,006.
- Avoca.* Population 411.  
Free public library—Mrs. L. P. Dietrich, librarian and president of board.  
Located in hotel office.  
Books—no. volumes, 204; no. card-holders, 120.
- Baraboo.* Population 5,835  
Free public library—Kate M. Potter, librarian; R. B. Griggs, president; L. S. Van Orden, secretary; Mrs. J. E. English, chairman book committee.  
Building—erected 1903; cost, \$15,000, gift of Andrew Carnegie; Claude & Starck, Madison, architects.  
Books—no. volumes, 3,411; annual circulation, 33,061; no. card-holders, 2,548.
- Bayfield.* Population 2,675  
Carnegie library—Katharine Mussel, librarian; H. J. Wacksmuth, president; O. L. Shepard, secretary and chairman book committee.  
Building—erected 1903; cost, \$10,000, gift of Andrew Carnegie; Henry Wildhagen, Ashland, architect.  
Books—no. volumes, 3,446; annual circulation, 9,991; no. card-holders, 581.
- Beaver Dam.* Population 5,615  
Williams free library—Hattie A. Doolittle, librarian; J. J. Dick, president and chairman of book committee; J. E. McClure, secretary.  
Building—erected 1891; cost, \$25,000, gift of J. J. Williams; E. T. Mix & Co., Milwaukee, architects.  
Books—no. volumes, 12,367; annual circulation, 24,473; no. card-holders, 1,797.
- Belleville.* Population 423  
Free public library—Mrs. Grace Knox, librarian and chairman book committee; Robert Luchsinger, president; F. A. Niles, secretary.  
Town hall.  
Books—no. volumes, 2,869; annual circulation, 3,313; no. card-holders, 224.

## TRAVELING LIBRARY STATISTICS ACCESSIONS DURING BIENNIAL PERIOD JULY 1, 1904—JULY 1, 1906.

		Libraries	Groups	Books
English	\$50 libraries	98		5586
English	\$25 libraries	30		890
English	Fiction libraries	9		228
English	Children's libraries	5		213
English	Rental libraries	6		301
English	Study libraries	40		1343
	Total	188		8561
German		28 (1083)	114 (1150)	2233
Norwegian		24 ( 849)	30 ( 322)	1162
Polish			17	171
Bohemian			10	116
	Total	240	171	12243

## TOTAL NUMBER OF TRAVELING LIBRARIES.

		Libraries	Groups	Books
English	\$50 libraries	179		10249
	\$25 libraries	30		890
	Miscellaneous	6		319
	Fiction	12		366
	Children's	6		259
	Rental	6		301
	Study	50		1875
	Total	289		14259
German		79 (2830)	114 (1150)	3980
Norwegian		24 ( 840)	30 ( 322)	1162
Polish			17	171
Bohemian			10	116
	Total	392	171	19688

## COMMISSION TRAVELING LIBRARIES JULY 1, 1906.

	Libraries	Groups
No. of stations July 1, 1904		190
No. of new stations added during biennial period		89
		279
No. of stations discontinued		18
No. of stations in Public libraries	100	
No. of stations in villages and country without Public libraries	160	
No. of stations in State Institutions	1	
	261	261
No. of stations receiving two libraries		39
No. of stations receiving three libraries		7
No. of stations receiving four libraries		3
No. of stations temporarily discontinued for the summer		27

Stations receiving more than one library have subscribed for foreign libraries or have study libraries.

*Traveling Libraries*

## CIRCULATION JULY 1, 1904—JULY 1, 1906.

English (general)	80,559
Fiction	7,362
Children's	2,577
Total English	90,498
German	28,097
Norwegian	3,275
Polish	181
Bohemian	46
Total circulation	122,097

## AVERAGE CIRCULATION PER BOOK ON ONE TRIP COVERING PERIOD OF ABOUT SIX MONTHS.

English General libraries	7.85
English Fiction libraries	18.55
English Children's libraries	9.26
English All libraries	8.68
German	11.08
Norwegian	4.26
Polish	3.25
Bohemian	2.3

## COUNTY TRAVELING LIBRARIES.

# REPORT

OF THE

# STATE BOARD OF CONTROL.

---

HONORABLE JAMES O. DAVIDSON,  
*Governor of Wisconsin.*

GOVERNOR: The State Board of Control of charitable, reformatory and penal institutions, respectfully submits its seventh biennial report covering the biennial period ending June 30, 1906.

In submitting this report it gives us pleasure to state that nothing unusual has occurred within the last two years which has in any way impaired the usefulness of any of the institutions. During that period the health of the inmates has been unusually good with the following exceptions: There were several cases of small-pox at the Northern Hospital for the Insane at Winnebago, the School for the Blind at Janesville and the Home for Feeble Minded at Chippewa Falls, but immediate steps were taken to prevent the spread of the disease and it was speedily eradicated. Aside from this no contagious diseases have occurred at any of the institutions.

Since our last report was made the population of some of the institutions has materially increased as will be shown by the following comparative table:

*General Report.*

	Population June 30, 1904.	Population June 30, 1906.
State hospital.....	443	535
Northern hospital .....	624	634
School for the deaf*.....	183	188
School for the blind*.....	96	93
Industrial school.....	327	305
State prison.....	620	639
State public school.....	146	147
Home for feeble minded.....	618	687
State reformatory.....	222	283
Total.....	3279	3511

No change in the personnel of the chief or governing officer of any of the institutions has taken place since our last report, except at the school for the blind. On August 3rd, 1905, Mr. Harvey Clark was appointed to succeed Mr. C. R. Showalter as superintendent and Mrs. Harvey Clark succeeded Mrs. Ida Showalter as matron of that institution.

We believe that all of the institutions are in very good condition and that the officers having them in charge are making diligent efforts to increase the efficiency of the service and to promote the best interests of the state and the welfare of the inmates.

The appropriations made by the last legislature for running or current expenses of the institutions and for special purposes were much less than the estimates made by the board, and less than they should have been to make the many improvements that were necessary.

For many years this board has called the attention of the executive and the legislature to the necessity for provision for segregating the violent and criminal insane, and recommended that such provision be made. This recommendation is renewed. There are now in the Northern hospital about forty criminal insane, transferred thereto from the state prison at Waupun and the state reformatory at Green Bay. A number of them are life prisoners who have been found guilty of murder in the first

\* At schools for deaf and blind the population given was number at close of school year.

---

*General Report.*

---

degree, and many of them are men who have been convicted of homicide in some other degree. At the present time there is no special place provided for these inmates, and it is necessary to care for them with the regular patients. The criminal insane should not be kept in hospitals or asylums with the regular patients. It is an injustice to patients who are regularly committed to hospitals for the insane for treatment to be obliged to associate or come in contact with the criminal insane thus transferred from the prison and reformatory. No adequate means are provided to prevent escapes of the criminal insane. The urgent need of a special building for keeping them should be readily understood. If such building were erected provision could also be made for the violent insane, who are now distributed among the thirty-two county asylums. Much difficulty is experienced in county asylums in caring for the violent insane. Many of them are exceedingly noisy and dangerous. It is estimated that \$100,000 will be required to erect and properly equip such a building.

More land is needed at several of the institutions. When it is considered that the work on the farms is done by the inmates without expense to the state, it does not seem to be good economy to have an insufficient amount of land. There should be enough land to give employment to all the surplus help. At the state prison at Waupun the amount of land is entirely inadequate. There is not sufficient land to pasture the cows, and for that reason hundreds of dollars are expended each year in the purchase of milk. Neither is there enough land to produce the vegetables needed. Several thousand bushels of potatoes have to be bought yearly. At the state hospital for the insane at Mendota, and the school for the deaf at Delavan more land is needed. A sufficient amount of land should be purchased to produce all the vegetables needed. If such land were purchased it would enable the management of the school for the deaf to instruct boys in farming, a branch especially adapted to this class of children. At the industrial school for boys there should also be additional land purchased. The farm should be sufficiently large to enable the management to produce all the vegetables and fruits, and to instruct the boys in farming, so that they could become fully equipped for taking up that branch of industry after discharge. If the boys

---

*General Report.*

---

were thus trained, many of them would return to the farm, where there is much less temptation to fall back to their evil habits than if sent to the cities. The county asylums, nearly all of which have large farms connected with them, give the best proof that sufficient farming land in connection with an institution is profitable. Most of them have enough land to keep all the inmates employed, and an examination of the reports of asylums shows that the farms are exceedingly profitable.

Up to the year 1905, the state reformatory farm consisted of 200 acres of land, and this amount was not sufficient to supply the vegetables for the institution and pasture for the cows. A tract of land consisting of 150 acres was purchased in 1905 and the institution is now enabled to supply the vegetables, milk and butter and all the feed for the stock belonging to the farm, besides a large surplus of hay and vegetables which are sold each year. During the past fiscal year, the institution sold 100 tons of hay; 3,000 bushels of onions; 1,000 bushels of oats; 1,000 bushels of potatoes, and produced and sold about one hundred dollars worth of milk per month in addition to supplying all the milk and butter necessary. There was also sold from the farm about two hundred and fifty dollars worth of sugar beets and one hundred and fifty dollars worth of currants. The institution received for farm produce sold \$2,269.44 for that year. The result of having sufficient land at the reformatory to employ the surplus labor would seem to be convincing that sufficient land for the employment of such surplus help should be procured for each of the other institutions.

At the state hospitals and the home for feeble minded, difficulty has been experienced in procuring proper and sufficient help at the wages that were paid to attendants. While the expense of living has materially increased, an attempt has been made to maintain the same scale of wages that has been paid for many years. This was found impossible; In order to obtain the necessary help, wages and salaries had to be increased. Less difficulty would be encountered in retaining experienced attendants in the hospitals for the insane if some provision were made for housing them outside of the institutions during the time that they are not on duty. Under present arrangements the attendants are obliged to spend

---

*General Report.*

---

most of their time on the wards in close proximity to the patients. Their sleeping rooms are now in the institutions, and during their sleeping hours they are frequently disturbed by noisy patients and it often occurs that they do not get sufficient rest after the long day's service which they are obliged to perform. It is, therefore, recommended that special buildings be erected at each of the hospitals for the insane for housing the attendants, the cost of which completely furnished is estimated at \$25,000. Two buildings will be needed for each of the hospitals for the insane; one for male and the other for female employees. In case such provision is made the room now occupied by employees would furnish the much needed additional space for the increasing number of patients.

The system of caring for the chronic insane in county asylums continues to furnish facilities for the increasing number of chronic insane. During the last biennial period the new asylum in Racine county was opened for occupancy. It has a capacity of about 200 patients and is modern in all its conveniences. License was granted Marinette county to erect an asylum, which was opened for occupancy last July and is one of the best arranged in the state. License has also been granted to Douglas county to erect an asylum to be opened for inmates some time during the year 1908. A site has been selected and plans are being prepared. After the opening of the Douglas county asylum, there will probably be sufficient capacity for the care of the chronic insane until the year 1910. A number of counties have made application for license, but have been refused for the reason that with the capacity of the Douglas county asylum in addition to the capacity of the present institutions, no more room will be needed until the year above stated.

The health of the inmates of the county asylums during the last two years has been good. No epidemic has existed in any of them during that period. All the county asylums are visited by this board, or some member or members of it, at least once every three months, and as much oftener as the work of the board will permit. The board endeavors to visit and inspect all county jails, poor houses and police stations once in each year.

*General Report.*

---

## PURCHASE OF SUPPLIES.

During the last biennial period the board continued to purchase supplies for the various institutions upon competitive bids. The goods thus purchased include most of the supplies for the institutions. Nearly all of the purchases are made in open market, without reference to the residence of the sellers. In all cases residents of the state are preferred to non-residents, if the bids are substantially equal. It is found that this system of purchasing supplies is the most satisfactory, both to the state and to the seller. Under it, all competitors are notified, and after bids are opened they have an opportunity to examine them and to examine the samples of the supplies which the successful bidder furnishes upon the contract. It is believed that many thousands of dollars have been saved to the state by this method of purchasing. It is also believed that the institutions get a better grade of goods than if the old method were employed.

## STATE HOSPITAL FOR THE INSANE.

The legislature by chapter 452, laws of 1905, appropriated \$20,000 for the purpose of completing and furnishing the new congregate dining room, which was then in process of construction at this institution, erecting a cold storage and installing an electric lighting plant to take the place of the gas plant which had become dilapidated and unfit for use. While the appropriation was not sufficient for all the purposes for which it was intended, the dining room was completed and furnished, a complete electric lighting plant has been installed and other improvements made. After consuming the amount thus appropriated the balance required to complete these improvements was paid from the current expense fund.

The new three story addition known as the "dining room" contains bath rooms on first, the dining room on the second, and the infirmary on the third floor. The acquisition of the new dining room enables the institution to furnish all the patients, or as many of them as are physically able to go there, with warm meals, which could not be done in the separate dining rooms on the different

---

*General Report.*

---

wards. A marked saving has been effected in the food bills, the waste, which could not be prevented under the old system now being avoided.

The separate dining rooms on the wards and the old infirmary made vacant by the change have been turned into dormitories which give additional quarters for about 195 patients. Practically all the additional room is now occupied, the population being about 560 as compared with 425 before the change.

The following improvements should be made at the state hospital. A receiving house should be provided, similar to the one now in use at the Northern Hospital, to which patients can be taken on their arrival, so that they can be properly bathed, newly clad and have the clothing in which they are received properly disinfected to prevent the bringing in of contagious diseases. At present all patients are taken into wards as soon as they are received, and there is constant danger that patients may be received who are affected with contagious diseases, or whose clothing may contain vermin. Three thousand dollars would be required to construct and equip a receiving house.

The plumbing of the institution is antiquated and unsanitary, endangering the health of the inmates. The fixtures are old and worn, the pipes decayed and the sewage frequently sets back into the basement. The plumbing throughout the building should be renewed and modernized. Eight thousand dollars will be required to put it in good sanitary condition.

The present cold storage is inadequate and a new one should be constructed so that the meat, milk, butter and other perishable provisions can be properly kept. Repairs on the ice house are also necessary. It will require \$6,000 to make these improvements.

The smoke stack is badly cracked in many places and there is constant danger that it may tumble down, endangering the lives of inmates and employees. To prevent such an accident, perhaps at a time when it might cause great suffering to the inmates, it should be rebuilt as soon as possible. The cost of this change is estimated at \$4,000.

The present fire protection is entirely insufficient, and to improve it the water tank should be raised about thirty feet, which

---

*General Report.*

---

would give pressure sufficient to reach the highest part of all buildings. The cost of this change is estimated at \$3,000.

The old bake oven is worn out and unfit for use, and should be replaced by a new one. The present bakery is located in a damp basement, is unsanitary and should also be changed. A new building should be constructed for the bakery. The bakery and oven would cost \$4,000.

The operating room in the new infirmary should be fitted out with the necessary surgical instruments and appliances requiring about \$1,000.

At least one hundred acres of land should be added to the farm. This would enable the institution to raise nearly all of the vegetables and other farm produce required by it. It could be worked by the patients and would be a good investment. An additional 100 acres would probably cost \$15,000.

A heater and purifier for the boilers is badly needed. The water used is hard water and must be softened before being used in the power boilers to prevent dangerous scaling. The same hard water must be used for washing, bathing and other domestic purposes and is now wastefully heated by high pressure steam.

A suitable heater and purifier, installed at a cost of \$2,000 can be made to soften and purify all the water needed for these various purposes by the use of exhaust steam, otherwise wasted during the summer months, and will replace inadequate, wasteful and worn-out apparatus.

#### NORTHERN HOSPITAL FOR THE INSANE.

During the last biennial period the following improvements have been made at the Northern hospital:

A new sewage disposal plant has been installed which was badly needed. A deep water main has been laid in order to bring the lake water close to the hospital and give ample fire protection. Most of the work required in the laying of the main was done by the patients. Several hundred feet of new cement walk have been constructed and new roofs have been put upon all the barns and stables and part of the main building.

---

*General Report.*

---

At this institution the following improvements are needed:

A new brick smoke-stack should be constructed to take the place of the one now in use, which is insecure and of insufficient capacity.

A new cold storage is also badly needed. With the present one it is impossible to properly keep the meats and other food supplies which require cold-storage room.

Im provement should also be made on the power and heating plant. It will require \$5,000 to construct a new smoke-stack and put the power and heating plant in proper condition. The expense of a new cold storage would be \$3,000.

In the introductory part of this report, attention was called to the necessity for constructing two buildings, one for male and the other for female employees, which should contain sleeping apartments and recreation rooms for such employees during the time that they are not on duty in the institution. The probable cost of such buildings and equipment would be \$25,000 each or \$50,000 for the two buildings.

Attention was also called in the introductory part of this report to the necessity for a building for segregating the violent and criminal insane. The construction of such a building should not be longer delayed. It could be built on the land of the Northern hospital and the heating and lighting could be supplied from the heating and lighting plant of that institution. It could be placed under the same management and thus the expense of a superintendent and other officials avoided. In that way it could be economically conducted.

#### SCHOOL FOR THE DEAF.

The legislature of 1905 made an appropriation of \$5,000 for this institution for a barn, cold-storage and refitting. The appropriation was insufficient to make all the improvements for which it was intended.

With the amount made available a new cold-storage was constructed, and repairs were made upon the engine room, dormitory and school building. The building of a barn which was contemplated by the appropriation had to be delayed on account of lack

---

*General Report.*

---

of money. The old one is dilapidated and ready to tumble down. It does not furnish sufficient room for the hay, horses and cattle of the institution. A new barn should be constructed at an approximate cost of \$4,000.

The sewage of the institution is now disposed of through an open ditch. This method of disposing of the sewage is unsanitary and is dangerous to the health of the inmates and the neighbors. A drain should be laid from the school to a creek into which the sewer empties. This would cost \$500.

The building used at the present time for teaching trades to the inmates is inadequate as well as old and dilapidated. All the deaf children and especially the boys should be taught some kind of a trade which would enable them to secure employment to support themselves after leaving the school. A new trade building with ample facilities for teaching a number of different trades should be constructed. Such a building, properly equipped, would cost \$15,000.

The capacity of the institution is insufficient to meet the demands upon it. With the increasing population of the state the number of deaf children also increases and to provide for all who apply for admission, it is necessary to have additional room. A new dormitory building should be erected. To construct and equip such a building and to proportionately enlarge the dining room and school house to meet the demand would require \$40,000.

Many minor improvements should be made, such as constructing cement walks, refinishing the interior walls of the different buildings and procuring a new hot water tank, and \$2,000 would be required to make these improvements.

#### SCHOOL FOR THE BLIND.

At this institution no appropriations were made by the last legislature for improvements or special purposes. Only the most necessary repairs were made during the last biennial period and the expenses of such repairs were paid out of the current expense fund. Ever since the institution was opened the water for it has been supplied by a company located at Janesville. The water supply costs the state about \$550 per annum, and it is poor economy

---

*General Report.*

---

to pay that amount for water when an expenditure of \$3,500 would furnish the institution with its own water supply. It is, therefore, recommended that an appropriation of that amount be made for that purpose.

One of the most profitable trades for the blind is piano tuning. A large percentage of the blind boys follow that trade after leaving the institution and it would seem but proper that they should be thoroughly instructed in it during the time they remain in the school.

The rooms set apart for teaching tuning are in the basement where it is damp and unhealthy. The rooms for piano practice are located on the first and second stories of the main building and most of them are dark inside rooms, without windows and poorly ventilated. These rooms were not originally intended for that purpose. The confusion of sound arising from the nineteen pianos in almost constant use is very annoying to the inmates of the institution and disturbing to the pupils in the adjoining school room. There should be a separate building for tuning and piano practice. It is estimated that such a building would cost \$10,000.

The coal shed is too small. At the present time not more than one-half of the coal required for a season can be stored. The coal shed should be enlarged and the cost of such improvement would be about \$1,500.

During the last winter there was an epidemic of small-pox at the school which demonstrated the necessity for an isolation hospital. It was almost impossible to isolate the children in the main building, and much difficulty was experienced on that account in stamping out the disease. An isolation hospital should be provided, which when properly equipped would cost about \$3,000.

An elevator is badly needed in the main building. The necessity for it is fully explained in the report of the superintendent of this institution. It could be installed for \$2,000. One thousand dollars should be appropriated for new cement walks, which are much needed.

---

*General Report.*

---

## INDUSTRIAL SCHOOL FOR BOYS.

During the last biennial period the following improvements were made at this institution:

The concrete tunnel leading to every building on the grounds was completed. This tunnel takes the place of the old wooden boxes in which the pipes were laid and which were the cause of very unsatisfactory heating and a great waste of fuel. Cement walks were constructed to form the covering of the tunnel. Improvements are required at this institution as follows.

The cow barn is not of sufficient capacity to house the number of cows necessary to supply the milk for the school. An extension should be built to the barn which will cost approximately \$2,500.

The present coal shed is old, dilapidated and ready to fall down, and does not furnish the necessary room for storing the supply of coal. A new one of sufficient capacity should be erected. The cost of this improvement is estimated at \$4,000. In nearly all modern industrial schools the boys are taught the art of printing. A printing outfit could be purchased for \$3,000 which would enable the boys to learn the printing trade. This would be a valuable addition to the equipment of the school.

At this institution additional land should be purchased. It would seem to be an economical and wise measure for the state to provide sufficient land to keep the boys employed and offer increased facilities for instructing them in agriculture. At the present time there is a tract of 115 acres of good land bordering upon the farm of the industrial school that can be purchased for \$13,225. This price seems to be reasonable and probably this land could not be purchased at that price if the purchase is longer delayed.

## STATE PRISON.

In its last report this board recommended that the sum of \$150,000 be appropriated for the erection of a new cell wing for the prison with a capacity of 250 convicts. It also recommended that other appropriations be made for special purposes.

---

*General Report.*

---

The legislature by chapter 452, laws of 1905, made an appropriation of \$58,000 for constructing a new cell house, a cold-storage, a reservoir, for new pumps and for refitting the center or administration building. It is needless to say that the appropriation was insufficient for all the purposes for which it was made. With the money made available the center or administration building, comprising the offices, chapel, and sleeping apartments for the guards, is being entirely remodeled giving additional room for services and entertainments and furnishing, when completed, a sufficient number of sleeping and recreation rooms for employees.

The new coal shed which will have a capacity of 3,000 tons will be ready for use before winter sets in. With a gate built on the plan of river locks, a turn-table and a track over the roof of the shed, the coal can now be handled at a minimum cost.

The new cell house which was contemplated by the legislature is in the course of construction, but cannot be completed until sufficient money for that purpose is provided. In addition to the amount already appropriated it will require \$50,000 to fully complete and equip it. Nearly all the work on the improvements above referred to is being done by prisoners under experienced foremen in building lines.

An addition should be built to the women's department of the prison to provide a suitable laundry, kitchen and bath-room. At present one basement room is used for all these purposes. The necessity for this addition is made more urgent by the increase in the number of prisoners in this department within the last five years. This will require an outlay of \$10,000.

Since the population of the prison is constantly increasing it will soon be necessary to add one or more new industries. There remains a balance of \$16,500 in the knitting shop fund and \$3,500 in the tailor shop fund, which amounts were appropriated for industrial purposes some years ago. These amounts are not now made use of in either of the departments mentioned and should be made available when necessity demands that a new industry be created.

The legislature of 1905 by joint resolution No. 8 authorized this board to make an investigation of the binder-twine industry and of the workings of binder-twine plants now in operation in

---

*General Report.*

---

prisons in other states, and the financial results of such binder-twine plants and report the same to the legislature. Such investigation has been partially made and as soon as completed will be reported to the legislature.

In case it is found that one or more industries are necessary, the space within the walls will have to be increased and it will be necessary to have the rear prison wall moved back several hundred feet from the present location and have the side walls extended to the new location of the rear wall. The cost of this change is estimated at \$15,000.

In its last report this board also recommended that 150 acres of additional land be purchased for the prison. This recommendation is renewed. There is sufficient help to work the additional land and it is believed that it would be a good investment. The land can be purchased for about \$100 per acre.

Under the new contract for the convict labor which went into effect shortly before the last report of this board, the revenues of the prison have been materially increased. The conditions of that contract were fully explained in that report. The receipts for convict labor for the year 1905 were \$71,137.99 and for the year 1906 \$74,727.58, as against \$47,694.36 for the year 1903 and \$60,322.57 for the year 1904, a gain in the last biennial period of \$38,848.64 over the previous one.

## STATE PUBLIC SCHOOL.

The legislature of 1905 appropriated the sum of \$1,500 for a concrete tunnel in which to carry the pipes from the power plant to the various buildings. That tunnel has been completed and will undoubtedly have the effect of heating the buildings more satisfactorily and saving considerable fuel. This appropriation was the only one made for special purposes.

A new modern brick oven has been installed at a cost of about \$700. This expenditure was made from the current expense fund.

The following improvements are needed at this institution :

More cement walks should be laid and it is estimated that about \$1,000 would be required for that purpose.

---

*General Report.*

---

The old wooden coal shed having burned, there is now practically no place in which to store the supply of coal. A new coal shed should be built and for this purpose \$3,500 is needed.

The baby cottage is at present over-crowded and should be enlarged. An appropriation of \$3,000 is required for this purpose.

A wooden pavilion is needed in which the small boys can play in bad weather. The cost of this would be \$600.

## HOME FOR FEEBLE MINDED.

This board in the last report recommended that an appropriation of \$80,000 be made for the erection of two additional dormitories at this institution, each to have a capacity of about 100. The legislature made an appropriation of \$45,000 for the erection of one dormitory, tunnels and improvements. The new dormitory has already been completed, equipped and thrown open for the receipt of inmates. An addition was made to the new concrete tunnel which was commenced about three years ago. A portion of the tunnel remains to be built. An addition to the laundry was built at a cost of \$3,000. Quite a large amount of additional cement walks was constructed, and other minor improvements made.

The board as well as the superintendent of the home is constantly besieged by people having feeble-minded children whom they desire to place in this institution. The courts have committed about 250 patients who cannot be received. In addition to that, there are about 400 applications for admission. There is a large number for whom no application has been made, because it is generally known that on account of lack of room it would be useless to apply. It is estimated that there are about 4,000 feeble-minded persons in the state. Probably at no institution is the necessity for additional room so great. When it is considered that a large percentage of the applications are for the admission of feeble-minded girls from the age of fourteen to thirty-five, who are unable to protect themselves in society, it would seem to be an economic measure for the state to provide for their care in some institution especially equipped for the care of that class of defectives, thus preventing them from bringing into the

---

*General Report.*

---

world children who would probably be feeble-minded and a burden to the state and society. It is of the greatest importance to the state that the increase of feeble-minded persons be prevented.

It would seem to be the wisest economy on the part of the state to immediately carry out the original building plan of the institution which provides for the care of one thousand inmates. To do this three more cottages will have to be erected. This would furnish room for about 300 more patients. It would enable the institution to relieve many homes that are sorely distressed in caring for a feeble-minded boy or girl. It would also, in many cases remove the danger of an increase of that class of defectives. It is, therefore, recommended that appropriations be made for the following buildings: A custodial building, completely furnished, which will cost approximately \$60,000 and two dormitories which will cost when equipped \$40,000 each.

At this institution fortunately there is sufficient land. There are 1021 acres of land connected with it. All of this land is not utilized. A large part of it could be used to advantage if an appropriation of \$8,000 were made for the construction of a creamery and additional barn room. With the help available it would then be an easy matter to make all the butter needed, which now costs the state about \$4,000 annually.

There is no hospital at this institution and there is constant demand for hospital provision. When it is considered that there are now between seven and eight hundred patients and that many times there are a large number of sick cases, it is certainly apparent that hospital facilities should be provided. An appropriation of \$25,000 should be made for the erection of such a hospital.

The concrete tunnel should be completed and an appropriation of \$3,500 is necessary for that purpose.

## STATE REFORMATORY.

The power house which was in process of construction when the last report of the board was made is now completed, and the power plant removed from the old to the new power house. A new brick smoke stack which is sufficient for the institution has been constructed and the underground coal shed has also been

---

*General Report.*

---

completed. The laundry in connection with the power house has been finished. All the brick used in the construction of the power house and smoke stack was made in the brick yard of the institution, and the power house, smoke stack and coal shed were erected entirely by the inmates under the direction of a competent mason who is regularly employed. No outside help was used. The outlay on account of improvements above referred to only consisted of expenditures for cement, lumber, iron and steel. In addition to the above improvements, a residence for the farmer and a large warehouse have been erected by the inmates, and a concrete tunnel and cement walks constructed by them. Arrangements have been made by which cars containing coal can be brought into the institution grounds and the coal dumped directly into the underground shed on the same level with the boiler room floor. This convenience necessitated quite a large amount of grading for the spur track and that was done by the inmates. The employment of so many of the boys in manufacturing brick for the erection of such buildings, grading, and making other improvements, limited the number who could be employed in the shops upon the overall contract. For that reason the receipts from that department were not so large as they otherwise would have been. Under the rules every boy working upon the overall contract is required to make a sufficient number of garments to earn seventy cents per day for the state. This is not a difficult task. All moneys earned by the inmate in excess of that amount are divided between him and the state. Under this system any inmate who is industrious can earn considerable money for himself. The amounts thus earned are deposited in the bank. When the boy's term expires, the money he has accumulated is turned over to him. The opportunity thus furnished to earn some money acts as an incentive to be industrious.

During the last biennial period the boys earned in the tailor shop the following amounts: For the year 1905, \$42,255.78 and for the year ending June 30, 1906, \$42,486.97, a total of \$84,742.75. In addition to this considerable money was earned in the broom factory and many thousands of dollars worth of brick were made and used in the construction of buildings, smoke stack, etc.

---

*General Report.*

---

Under present arrangements the dining room, kitchen, gymnasium and bath rooms are all located in the industrial building. If provisions were made to have these changed to some other building, the room thus made vacant in the industrial building could be used in establishing new industries. If the rear portion of the administration building were erected, the dining room, kitchen, gymnasium and bath rooms could be removed from the industrial building to the new addition. The brick for this improvement can be furnished from the brick yard of the institution and the work done by the inmates. This would not only be an economical method of constructing the building, but would also give further instruction to the boys in the building trade, and in that way carry out in a measure one of the purposes for which the institution was founded, the teaching of trades to boys.

The following improvements are needed: The rear portion of the administration building should be erected according to the original plan, and it is estimated that \$50,000 is necessary for that purpose.

To supply the necessary water for the institution and for fire protection a reservoir is needed, and it is estimated that \$1,500 would be necessary for that purpose.

In the year 1898, when the first cell wing was erected, a contract was entered into between the State Board of Control acting for and on behalf of the state with the Amberg Granite Company at Amberg, Wisconsin, by which that firm was to furnish all the granite needed for the construction of the reformatory at a price of 40c. per cubic foot f. o. b. cars at the quarry. The Amberg Granite Company at that time entered into an agreement with the labor union to quarry the granite at a price which would enable it to carry out its contract with the state. This contract expires in April, 1908. It is important that all the granite necessary for the completion of the institution be purchased before the expiration of the contract, for the reason that the balance of the granite required for the completion of the reformatory should match in color the part already constructed. The contract which the Amberg Granite Company made with the labor union for the quarry of the granite will expire in April, 1908, and it is likely that that firm could not furnish granite at the price agreed upon in the

---

*General Report.*

---

contract after that time. The Amberg Granite Company no longer exists as a company, but Mr. W. A. Amberg, the former president of the company has assumed the obligations of the company under its contract with the state and has signified his intention to carry out all its conditions, provided that the granite is furnished during the summer of 1907, or at least before the expiration of the labor contract.

It is believed that granite cannot be procured from any other quarry that will match in color that used in the part of the reformatory already constructed. All the granite necessary for the completion of the institution could be cut and dressed by the inmates. Provision should be made for the purchase of all the granite necessary to complete the institution so that it may be quarried and shipped before the labor contract expires. An appropriation of \$25,000 should be made for that purpose.

For additional industries, such as equipment of machine shop, moulding shop and tin shop, an appropriation of \$7,000 is recommended.

#### WORKSHOP FOR THE BLIND.

The legislature by chapter 432 of the laws of 1903, made an appropriation of \$10,000 to enable the Board of Control to procure a building or suitable apartments in some building situated in the city of Milwaukee in which any blind citizen of the state having learned a trade might pursue his vocation on his own account and receive for his own use the whole of the proceeds of his labor. The board, under the power vested in it by that statute, provided such apartments and opened the institution during the latter half of the year 1903. The appropriation was made so as to permit an experiment, as to whether blind artisans, with the aid of the facilities furnished, could become self-supporting. The experiment proved a success and proved that many adult blind persons could, with the facilities furnished, become self supporting.

The legislature of 1905, by chapter 345, of the laws of that year, made an additional appropriation of \$8,000 per year for the years 1905 and 1906, and also appropriated \$2,500 to be used in the purchase of material for use in the manufacture of different articles.

---

*General Report.*

---

Part of this last amount has been kept invested in material for the use of the blind artisans, and with considerable advantage to persons employed in the workshop.

Chapter 345 of the laws of 1905, also provided that the board might in its discretion provide means of instruction in such buildings or apartments for any adult blind residents of the state who desire to learn a trade, to enable such persons to avail themselves of the privileges conferred by that act and that said board might also provide for or make a reasonable allowance for the board of indigent blind persons who are not residents of the city of Milwaukee, so as to enable them to learn a trade, such allowance not to exceed the sum of \$75 to each. A number of persons have taken advantage of this provision. Of this number several have earned sums varying from \$6.00 to \$11.00 per week, which are unusual amounts to be earned by persons who are totally blind.

The goods made at the workshop have gained a reputation for excellent workmanship, and they can always be readily sold. There are now about twenty-five persons employed, and there seems to be little doubt that out of the nearly 500 adult blind men in the state, many more will avail themselves of the advantages offered when they learn of the results thus far attained. It is not improbable that eventually 100 or more persons will be employed.

Up to the present time most of the willow used at the workshop, about 6,000 pounds per month, was imported. Willow has been planted at several of the state institutions and it is likely that in a few years the willow thus planted will supply the needs of the workshop for that material. Already about ten acres have been planted, yielding the first year several tons of willow.

There is no doubt that in the near future the shop facilities will have to be increased to meet the demands for admission, and it will be for the legislature to say whether this board shall continue to rent suitable quarters or whether it is deemed best to erect a building to be used as workshop, warehouse and superintendent's resident.

#### TUBERCULOSIS SANATORIUM.

In addition to the institutions that were in existence at the time we made our biennial report two years ago, there is now being built the Wisconsin Tuberculosis Sanitarium, which has been

---

*General Report.*

---

located at Wales in Waukesha county. The legislature of 1905 appropriated \$90,000 for site, buildings and equipment of an institution for the treatment of tubercular cases and empowered the State Tuberculosis Commission, that was in existence at that time, to make the selection of the site. The tuberculosis commission examined many proposed sites, and finally located the institution at Wales. Contracts have been awarded for an administration building, refectory, power house and two summer shacks. These buildings are now being constructed. It was found necessary to construct a road from the buildings of the sanatorium to the highway leading from Wales, and that road has already been graded and is now in use. It is hoped that the institution will be ready for occupancy by the first of April, next. The appropriation was not sufficient to construct all the necessary buildings. A superintendent's residence, laundry building, stables, root cellar and two additional shacks should be built. An appropriation of \$40,000 should be made to cover these additions.

The reports of the chief officers of the various institutions under the control of this board will be appended hereto. These reports give in more accurate detail the improvements necessary at the several institutions. They also contain the statistics in relation to the movement of population and other matters that are of interest.

Tables are also appended giving the movement of population in county asylums and the financial reports of such asylums. Some statistics on jails and poor houses will be found appended hereto. Copies of orders which have been adopted by this board in relation to state institutions and county asylums are also made a part of this report.

Before the meeting of the legislature a supplemental report will be prepared giving the estimates for current expenses and special appropriations for the institutions.

Dated November 1st, 1906.

GUSTAV KÜSTERMAN,  
HERMAN GROTOPHORST,

## ORDERS ISSUED BY THE BOARD.

## ORDER NO. 1.

## OFFICE STATE BOARD OF CONTROL

MADISON, WIS., April 26, 1898.

"For the purpose of establishing and more clearly defining the functions of the Superintendent and Wardens of the several State Charitable, Penal and Reformatory Institutions governed by the Board of Control, and the officers and employes therein, their relations to each other and to the Board of Control, and the tenure of their respective offices, the following order is promulgated for the information and guidance of all concerned:

*First*—Superintendents, wardens, stewards and general matrons shall be appointed directly by the Board of Control.

*Second*—The following officers shall be appointed by the Board upon the nomination of the proper superintendent or warden: Chaplains, physicians, and assistant physicians, principals and teachers of schools, assistant wardens and stewards, head engineers, and agents at the State Public School and the Industrial School for Boys.

The superintendent or warden may suspend any of the officers mentioned in this paragraph, and may remove any of them except the assistant warden, principal of schools, chaplain and the agents above mentioned, promptly reporting to the Board such removal, or suspensions, and the causes therefor.

*Third*—Each superintendent or warden shall appoint, and in his discretion may remove, all other subordinate officers and all employes, not officers of his institution. The superintendent or warden shall monthly report to the Board, with his estimate for the ensuing month, all changes of subordinate officers during the past month, and the dates of such changes.

*Fourth*—The regular term of office of each officer or person mentioned in paragraphs No. 1 and 2 shall be one year from July 1st next after appointment. The nominations required in paragraph No. 2 shall be submitted to the Board May 20th in each year. Appointments to fill vacancies terminate on July first, next after they were made, and nominations therefor shall be submitted to the Board as soon as practicable after the vacancy occurs.

*Fifth*—Superintendents and wardens are charged with the duty of giving all subordinates in their respective institutions affected by this order timely notice of its contents."

## ORDER NO. 2.

OFFICE STATE BOARD OF CONTROL.

MADISON, WIS., January 3, 1900.

"A careful examination of the law fixing liability for the expense of the care and maintenance of the insane in the State Hospital and County Asylums seems to lead to the following conclusions:

## I.

The only statute giving the State a right of action against individuals for such expense is Section 604*g*, R. S. It applies alike to all persons committed as insane whether inmates of a State Hospital or a County Asylum, but it only reaches the case of an inmate who has an estate sufficient to pay for his or her maintenance, the cost of which must not exceed \$3.00 per week. The judge has the power in his discretion to refuse to charge the estate for the cost of maintenance of the owner, even though sufficient for that purpose, if such owner has a parent, wife or child dependent upon such estate for future support.

If a proceeding is instituted under the above Section, whether by State or County authority, it should be prosecuted before the judge in behalf both of the State and County, and his order for the payment should probably be in the name of the State and County, although perhaps action in behalf of each might be allowed.

## II.

Pursuant to Section 600, R. S., the sums charged any county for maintaining a patient in the State Hospital, chargeable to it, may be collected by such county, by suit, out of the property of the patient, or from any person legally bound to support such patient. The State has no interest in, or concern with, any such proceeding. It is merely designed to reimburse the county for its expenditures for maintaining such patient in the State Hospital.

## III.

If an insane person resident of and chargeable to any given county is maintained in the asylum of some other county, it seems quite certain that the county so chargeable may recover, in like manner, the sums legally paid by it for such maintenance, out of the estate of such insane person, or from any person legally liable for his or her support.

If the patient is maintained in the asylum of the county chargeable for his maintenance the recovery should be limited to \$3.00 per week for such maintenance, and in addition thereto, the cost of clothing, necessarily furnished such insane person by the county.

---

*Orders Issued by the Board.*

---

## IV.

If the county collects a sum equal to \$1.50 per week for the maintenance of such insane patient no part of the expense of his maintenance can properly be charged to the State. If less than \$1.50 per week be so collected the State is chargeable only for the difference between the sum collected and \$1.50 per week.

## V.

Under the provisions of Section 604*d*, and 604*e*, R. S., the State is not chargeable with the \$1.50 per week specified in Section 604*d*, for the care of an insane inmate of any county asylum who is a resident of the county maintaining such asylum, "whose support is not properly a public charge."

The support of any such inmate is not properly a public charge: (1) If some responsible person within the reach of the process of our courts is liable therefor, as in the case of a wife or minor child of a responsible husband or father; or (2) if such inmate has a father, mother or child in like manner amenable to the process of our court a sufficient ability under Section 1504, R. S., to maintain and care for such inmate or (3) if such inmate has an estate sufficient under Section 604*g*, R. S., to defray the cost of his or her maintenance and care.

This paragraph applies only to the maintenance of insane inmates of a county asylum who are residents of, and chargeable to the county maintaining such asylum.

## VI.

For the purpose of protecting the State from being charged for the support of insane persons for whose maintenance it is not legally chargeable, county asylum trustees are required to certify in their reports upon which State allowances, under 604*d*, R. S., are claimed that after diligent inquiry they believe no such claim is made therein on account of any insane persons, whose support is not properly a public charge under the laws.

Each board of trustees will also report to this Board the name of each inmate in their asylum, and in the State Hospital, chargeable to their county, for whose maintenance in whole or in part their county has been reimbursed during the time covered by their report, and the amount thus recovered on account of each such inmate.

## VII.

In determining whether some responsible person is liable, or may by legal proceedings be made liable, for the support of an inmate of any county asylum who is a resident of the county maintaining such asylum, or whether such inmate has a sufficient estate to pay for his or

---

*Orders Issued by the Board.*

---

her own maintenance, this Board does not insist upon nor desire the application of any rigid rules in favor of the State. In making such determination the officials of the asylum should consider the nature of the property of the person sought to be charged, its productiveness and the probable income which may be derived from it, the size and reasonable cost of maintaining the family of the owner and all other conditions which may reasonably be supposed to effect the liability of the owner to support such inmate. The mere fact that the cost of such support can be collected by legal proceedings against some person does not, of itself, necessarily prove that such person ought to be charged with the maintenance of such inmate and the State thereby relieved of such charge. All that the Board requires is that the asylum officials exercise a discriminating and just discretion in making their classifications of the inmates of their asylums who are residents of their county. Such is believed to be the true intent and spirit of the statute in that behalf.

## VIII.

Under section 604f, for all inmates of a county asylum whose support is not chargeable to the county maintaining such asylum, the State pays such county \$3.00 per week each and the amount necessarily expended for clothing them. The liability to pay this sum, and the liability of counties to refund to the state a portion of it, does not depend upon the question (as in the former paragraphs) whether or not the expense of the support of such patient is properly a public charge. The obligation of the State is absolute to pay the stipulated sum for each patient of that class, and it is equally absolute that the county chargeable with the maintenance of any such inmate shall refund to the State \$1.50 per week, and the amount necessarily expended for clothing him or her.

STATE BOARD OF CONTROL,

By W. P. LYON, President."

---

ORDER NO. 3.

COUNTY ASYLUMS FOR THE CHRONIC INSANE—DIRECTIONS CONCERNING  
THEIR MANAGEMENT IN CERTAIN PARTICULARS.

OFFICE STATE BOARD OF CONTROL,

MADISON, WIS., April 5, 1900.

Although the County Asylums for the Insane are erected, organized and managed by county authority, are primarily maintained by the respective counties, and, properly speaking, are county institutions, yet because the State contributes largely toward the support of all the inmates therein and has the necessary authority to prescribe proper care and treatment of such inmates (each of whom is a ward of the State) such asylums are also in a large sense state, or quasi-state institutions.

The State exercises its functions in respect to these asylums chiefly through the agency of this Board. In the discharge of its duty in that

---

*Orders Issued by the Board.*

---

behalf this Board has from time to time requested county asylum officials to adopt certain policies and methods of procedure in their respective asylums for the purpose of improving the condition and promoting the welfare of the inmates thereof. Such requests have the force of orders made by authority of the State, and must be so regarded. This Board has also decided to give some additional directions concerning the management of such asylums. These, with the directions heretofore given, are briefly as follows:

## I.

Asylum physicians should not be selected and contracts for the medical care of the insane awarded upon competitive bids. The Trustees should appoint some competent physician and fix his salary. The selection should be made with the care and consideration that might reasonably be expected in the selection of a family physician.

The asylum physician should visit the asylum a least twice in each week. At each visit he is expected in addition to attending to the sick inmates to examine the sanitary condition of the asylum and grounds and the condition of the patients, their health, diet, clothing and cleanliness, the work required of them and any other condition affecting their welfare and comfort. He will advise and direct the Superintendent as to which of the patients should be required to labor and the kinds and amount of work each working patient is able to perform. At each visit to the asylum the physician shall enter in a book, furnished by the Superintendent, the date of his visit, the name, age and malady of each patient treated by him, the treatment prescribed and the name of each patient he has advised the Superintendent should not be required to labor. At least once in each month the physician should also enter in said book statements of the sanitary condition of the institution, and the general condition of the patients in respect to matters herein mentioned. He is invited to enter therein any suggestions he may think proper to make for the improvement of the institution and the promotion of the welfare of the inmates. Such report book should be properly ruled and the required entries affecting individual patients should be made under the following heads:

Date of visit.	Name of patient.	Age.	Malady.	Treatment.	Remarks.
----------------	------------------	------	---------	------------	----------

Patients excused from labor may be named in second column or under the head of "Remarks." A separate portion of the book may be set apart for the monthly report above mentioned.

## II.

Each County Asylum shall have upon its staff of employes a female night attendant who shall be constantly on duty during each night in the apartments occupied by the female inmates. Such attendant shall make a daily report to the Superintendent, to be written in a book provided by him for that purpose, stating the name of each patient who

*Orders Issued by the Board.*

was sick or disturbed during the night, the nature of her sickness or cause of her disturbance and what was done for her relief; and stating also any unusual occurrence in the female apartments during the night. The Superintendent should see that this rule is faithfully complied with. The reports of the physician and female night attendant shall be kept by the Superintendent for the inspection of all persons entitled to see them.

III.

The Trustees of each County Asylum are required to employ and keep on duty a competent night watchman at their institution through each night during the whole year.

When it is considered that each of these institutions is inhabited by from one hundred to one hundred and fifty, and more, irresponsible persons, many of them prone to mischief, and nearly all incapable of self preservation in case of fire or other peril, it seems absolutely necessary to their proper protection that some intelligent man in full possession of his faculties be with them and upon the grounds of the institution constantly.

IV.

Regulations for ascertaining the amounts chargeable for clothing furnished by the Trustees of any County Asylum to the inmates thereof, a portion of whose maintenance is charged to counties other than that in which such asylum is situated, or wholly to the State, pursuant to Section 604f, R. S.

1. An accurate account shall be kept of the clothing furnished each such inmate and the same shall be charged to the proper county, at the actual cost thereof. The asylum authorities are expected to use reasonable diligence to make purchases of such clothing in the cheapest available market.

2. Clothing accounts made pursuant to Section 604f, R. S., must be verified by the affidavit of the proper Superintendent (or in case of his inability, by a Trustee) substantially in the following form:

“State of Wisconsin, }  
..... County } ss.

....., being first duly sworn, deposes and says that he is the Superintendent (or a Trustee) of the..... County Asylum for the Chronic Insane and has the keeping and custody of its accounts for clothing furnished the inmates therein, that the above and foregoing statement of clothing account charged to other counties, or to the State is accurate and just, that the value of such clothing so chargeable necessarily furnished each inmate of said asylum during the fiscal year ending September 30th,....., and the sums necessarily expended therefor are correctly stated therein and that no part of such sums has been paid or previously audited.

Subscribed and sworn to before me  
this.....day of .....

.....  
Notary Public.”

---

*Orders Issued by the Board.*

---

3. The Board of Supervisors of any county charged with a portion of the expense of maintaining any person or persons in the Insane Asylum of some other county may at any time request the Trustees of such asylum to furnish it with an itemized account of the articles and cost of clothing furnished such person, and such Trustee when so requested will be expected to promptly furnish the same. The Board of Control will adjust any controversy as to the accuracy of such account.

## v.

If the County Asylum and the County Poor House are under the same management, the salaries and wages of all officers and employes whose duties are common to both institutions should be apportioned to such institutions on the basis of the average population of each. The monthly report of wages and salaries should be made, and the per capita cost of maintenance in the annual report should be computed on this basis.

There shall also be kept an account of all the products of the asylum farm used or consumed in the asylum, or disposed of and the proceeds so used. The fair market value thereof, or the money received from the same and so used in each year, shall be deducted from the annual interest at 4 per cent. of the cost of the asylum plant and equipment, excluding cost of poor-house and equipment, if there be a poor-house under the same management. The balance represents the net annual interest on the investment at 4 per cent. This balance should be included in the current expense account of the asylum upon which the per capita cost of maintenance is computed.

## vi.

Section 601, R. S., provides that every female over ten years of age committed to any hospital or asylum for the insane shall be accompanied by a competent female. This Board has been astonished to learn that this most salutary law, demanded by common decency for the protection of helpless insane women from possible outrage or neglect, has recently been disregarded in two instances, in each of which an insane woman was brought to the hospital, in one case by a sheriff alone and in the other by the sheriff and a male assistant only.

Failure to obey this law cannot be tolerated. Hence, Superintendents of hospitals and asylums are directed to report any such failure to this Board with the name of the delinquent officer, to the end, that a representation of the facts may be made by this Board to the authority having power to remove such officer.

The above directions were adopted and ordered printed and distributed April 14th, 1900.

STATE BOARD OF CONTROL,  
By W. P. LYON, President.

Statement of Current Expenses.

STATEMENT OF CURRENT EXPENSES.

At the several state institutions for the fiscal years ending June 30, 1905 and 1906, after taking into account the supplies on hand at the beginning and close of each year, and receipts and transfers from the different departments.

## SUPERINTENDENT'S REPORT.

---

MENDOTA, Wis., July 1, 1906.

*The Honorable, State Board of Control,*

GENTLEMEN:— In compliance with the law, I herewith submit to your Honorable Body this the twelfth biennial report of the Wisconsin State Hospital for the Insane, for the period ending June 30th, 1906.

On the twelfth of July, nineteen hundred and four, upon assuming the duties of the management of this institution as superintendent, I found that forty-three of the population were afflicted with typhoid fever, thirty-nine of whom were inmates, and four were employes. Seven deaths had occurred.

Thomas Fay, who died April tenth, Amanda Anderson, who died June first, were employes.

Paul Foega, who died June sixth, Edward Erickson, June tenth. Lawrence Linde, June twelfth, Mary Olson, June twenty-eighth, and Nellie Thayer, who died July second, were inmates.

By your permission the services of State Bacteriologist H. L. Russell were secured, and after making a thorough investigation of the entire institution and its surroundings, we found that the water supply for the hospital was taken partly from the artesian well and partly from Lake Mendota, and that the people were drinking from both supplies. The sewage of the institution was being discharged into the bay, only a short distance from the intake pipe of the lake water supply.

A careful examination of a large number of samples of water showed that it was contaminated and was evidently the cause of the typhoid epidemic.

On further investigation, I found, that on the third of April Thomas Fay, an employe, returned from Hot Springs and went to bed immediately and died on the tenth of the month.

---

*State Hospital.*

---

In my opinion his was the first case of typhoid. During his illness the dejecta were discharged undisinfected into the sewer and no doubt was the first cause of contaminating the lake water supply. James Leary, an attendant, acting as nurse for Mr. Fay was a victim of typhoid in due time. The dejecta from this patient were also discharged undisinfected into the sewer, which increased the contamination of the lake water supply. After this the cases of typhoid became more and more numerous.

At the end of ten days the necessary changes in the water system were completed which cut off the lake water supply, the intake pipe of the artesian well was increased from twelve to thirty-two feet, the pumps started, and all the tanks of the institution filled with artesian water. After this change in the water supply there were no new cases of typhoid except an employe and an inmate who had been previously infected. Of the number already ill three more deaths occurred. J. P. Pfaff who died July thirty-first and Olaf Qui ler who died August third, were inmates. Mable Liberty, an employe, died August twenty-fifth. Mr. Pfaff and Mr. Quisler were advanced cases of pulmonary tuberculosis and would have died in a short time had they not had typhoid.

The above is typical of typhoid epidemics all over the country, and it would seem that the number on record is sufficient to warn legislatures, councils, and those in authority generally, that sewage should not be discharged into public water supplies. No water supply should be polluted by sewage from any source when we have so cheap and safe a method of destroying it as now exists.

By your authority and assistance a proper septic sewage system was built and we believe that Lake Mendota has not been contaminated by sewage from this institution in the past two years.

With the exception of typhoid, the general health of the inmates for the past two years has been very good. In 1905,

---

*Superintendent's Report.*

---

the percentage of deaths on account of the epidemic was 5.44. In 1906, the percentage of deaths was 4.03, which is lower than the average. For the past thirty-five years, the average has been 4.50.

Believing that the best three tonics nature offers humanity are fresh air, sunlight and exercise, it has been the policy of the management to keep the inmates out of doors as much as possible, and to have all who are physically able, perform daily, as much light labor as appears beneficial,—this too, because we believe that no patient should be allowed to be any greater burden to the state than is necessary.

In the further treatment we insist upon regular hours and habits, liberal food of good quantity well prepared, cleanliness, kind treatment, and amusements.

Religious services are held in the chapel, conducted by the ministers of the various demoninations.

The Friday evening dances, the Monday, Thursday and Sunday concerts by our own orchestra, a number of plays and concerts by the employes and all the holiday entertainments, have proven sources of benefit and enjoyment.

The stenographer has the library in charge and issues books once a week to employes and patients.

The following list of periodicals and newspapers is taken by the State for distribution in the wards: Harper's Weekly, Harper's Bazaar, Munsey, Outlook, Youth's Companion, Judge, Puck, Smart Set, Scribner's, World's Work, Success, Leslie's Monthly, Harper's Monthly, Review of Reviews, Cosmopolitan, Everybody's Magazine, McClure's, Nation, Century, and Hoard's Dairyman, Chicago Record Herald, Madison Democrat, the State Journal and seven copies each of the Milwaukee Free Press and the Milwaukee Sentinel.

Chronicle (Two Rivers).	Elkhorn Independent.
Germania (Milwaukee).	Oconomowoc Free Press
Herold (Milwaukee).	

At the beginning of this biennial period I found that the power house, gas plant, water works, plumbing, and practically everything about the institution had reached the extreme stage of dilapidation.

By the permission, continued aid and generosity of your Honorable Body, the following substantial improvements have been made:

A new additional boiler in the power house, two new boiler fronts, a new track and cars to convey the coal from the shed to the boiler, a stack to ventilate the boiler room, new engines and dynamos which drive all the machinery of the repair shops, the carpenter shop, and the laundry, and furnish the power for electric lightning; a gasoline plant for cooking purposes. The whole institution has been wired in conduit for electric lighting and the plant has been in operation since February 17th, 1906.

The electric plant has materially reduced the danger from fire and the expense of lighting, and has relieved the hospital of the odor of coal gas, from which it has suffered for many years, on account of old leaky pipes.

In the administration and in the employes' portion of the

---

*Superintendent's Report.*

---

building the plumbing has been remodeled and the rooms repainted and decorated.

The employes' dining room has been enlarged and remodeled. A new building has been erected which provides a gymnasium and general bath rooms for each sex, and a new male, and female infirmary, and a new surgery and a congregate dining room.

The dining room, which can accommodate five hundred persons, is one of our greatest improvements. The patients, the food, and the service are easily observed at meal time.

From an economical standpoint the dining room has proven a success. There is a marked improvement in the condition of the food when it reaches the patients, and the amount of waste materially decreased.

The new building made it possible to convert the old ward dining rooms into dormitories, and the old infirmaries into a male ward, thus increasing the capacity of the hospital from four hundred and fifty to six hundred patients.

One of the green houses has been rebuilt.

An orchard of six hundred trees has been planted, with a loss of only three trees in the two years.

The old lagoon near the lake was filled last year while excavating for the new building, and is now an attractive part of the lawn.

The barnyard fences have been constructed anew and proper sheds have been built for the hogs.

A hennery has been added to the farm.

A systematic condemning system has been inaugurated which has saved the State many hundred of dollars in the past two years.

I respectfully request your Honorable Body, to petition the legislation for an appropriation sufficient to cover the cost of the following further needed improvements:

To erect the new building it was found necessary to remove one-half of the old cold storage, and as the remaining half

---

*State Hospital.*

---

stands within one foot of the new building it must necessarily be removed and a new one constructed.

A new oven, bread room, flour room, power mixer, in fact a new bakery outfit is absolutely essential.

The old oven is worn out and is situated in the basement where neither light nor air have access. The bread room is such that it is impossible to keep bread a proper length of time without its acquiring mould.

A new bakery is one of the greatest needs of our seven hundred and fifty people.

For the reason that the water tower is too low to cause proper flushing of the plumbing in the fourth stories of the main building, and because the water pressure offers no protection in case of fire in the attics, the tower should be extended thirty feet in height.

The smoke stack at the power house has a number of large cracks which extend many feet up and down its sides. I recommend that it be repaired or rebuilt before it occasions serious trouble.

There is still very much old, defective and worn out plumbing in the institution. In the wards its condition is as bad as possible and cannot be used at all. There are neither stools nor lavatories sufficient to accommodate the number of patients.

The capacity of the ice house is too small for our needs and must be increased the coming winter.

The increase in population demands more food of all kinds, making it necessary to increase the stock and extend the farm. An addition of one hundred acres of land is required to meet the demand. The paramount question in farming is help; that we always have.

The sidewalk, three-fourths of a mile long, to the station is worn out and in dangerous condition and a new walk is indispensable.

The tunnel connecting the main building and the power

*Superintendent's Report.*

house leaks throughout its entire length. I recommend that the dirt be removed and the top of the arch be covered with cement.

The gymnasium and the new surgery in the new building are unfinished and unfurnished. Both should be completed and equipped.

For the purpose of protection against the introduction of contagious diseases no institution of this kind and size should be without a receiving house where patients could be examined, bathed and their clothing sterilized before entering the institution.

A small isolated building is also necessary where patients suffering from contagious diseases could be cared for without danger to others. Seven hundred and fifty people are now exposed to contagious diseases which can be conveyed by patients coming from one half of the state.

This institution has no morgue. I would earnestly recommend the erection of a proper building.

An estimate of the cost of the above improvements is as follows:

Cold storage, .....	\$4,500 00
Bakery, .....	2,500 00
Raising water tower, .....	3,000 00
Smoke stack, .....	4,000 00
New Plumbing, .....	5,000 00
Enlarging ice house, .....	1,500 00
Land, .....	15,000 00
Walk to station, .....	1,000 00
Covering tunnel, .....	500 00
New surgery, .....	1,000 00
Receiving house, .....	2,000 00
Isolation hospital, .....	1,000 00
Morgue, .....	800 00
Total, .....	\$ 41,600 00

These recommendations may seem extensive and occasion surprise to those unfamiliar with this institution, but when it is kept in mind that the capacity has been increased and one hundred and fifty persons added to its population, and that our buildings and equipments are old, and that

---

*State Hospital.*

---

many years have elapsed since any special repairs or improvements have been made, and that the duties of caring for the insane are ever increasing, the reasons for all these improvements will be obvious.

It is my belief that the cottage plan for the insane is superior to any other, in that the violent, the noisy, the epileptic, the criminal, and the tubercular patients could be separated and classified much to the comfort and benefit of the other patients both in the State and County asylums.

On account of its rapidly increasing population it would be wisdom on the part of Wisconsin to begin the erection of a new institution, on the cottage plan, in the northern part of the State.

Since the population of this institution has increased, a third assistant physician has been placed on the medical staff.

The usual tables of statistics accompany this report. I wish to call your special attention to the financial tables, which I trust will show that the management has been as economical as is compatible with a high standard of maintenance.

I desire especially to acknowledge the skillful and earnest work of the assistant physicians and their untiring discharge of duty, and I wish to express deepest gratitude and appreciation to them and all the officers and employes to whom I am under obligation for loyal and painstaking work without which the successful conduct of the many departments of the hospital would not have been possible.

With grateful acknowledgement of my many obligations to your Honorable Body for counsel and assistance, for courteous treatment and confidence, for your efforts and active interests in the welfare of this institution,

I respectfully submit this report,

CHAS. GORST,

Superintendent, State Hospital for Insane.

*Statistical Tables.*

TABLE NO. 1.

Movement of population at Wisconsin State Hospital for Insane during each year of biennial term ending June 30, 1906.

	1904-1905.			1905-1906.		
	Male.	Female.	Total.	Male.	Female.	Total.
Remaining in hospital at commencement of each year, to-wit, July 1st.....	245	197	442	261	188	452
Returned from escapes effected, paroles granted, and transfers made before commencement of year.....	41	21	62	45	37	82

## SUPERINTENDENT'S REPORT.

---

WINNEBAGO, WIS., July 1, 1907.

*To The Honorable State Board of Control:*

The twelfth biennial report of the Northern Hospital for the Insane—from July 1st, 1904 to July 1st, 1906—is herewith submitted. The usual statistical tables are annexed.

The two years have been busy, anxious ones, crowded with incessant activities.

There were 1193 patients admitted, 637 paroled and 121 died.

The total number treated was 1818.

Every day there have been many solicitous friends and relatives seeking information. Some years ago I did away with the old rule which forbade visiting on Sundays and holidays for the reason that there are many excursions on those days and the poorer persons having relatives here could save money, and laboring men could come Sunday and not lose a day's wages. The result has been that the holidays and the Sundays have become our busiest days.

There is more suffering in the homes than in the Hospital and for that reason one of the important duties of the Hospital employes should be to make it as pleasant as possible for all visitors who are here to see relatives.

It is of supreme importance that the Hospital be firmly established in the confidence and good will of the community, so that patients may be committed promptly at the very beginning of the disease, and not stay at home until the curable period has gone.

The fact that it has often happened that patients have been

---

*Northern Hospital.*

---

anxious to have friends bring them back and sometimes they have run away from home to get back to the Hospital, is evidence that it is regarded as a house of refuge, as a genuine temple of healing.

In June, 1905, three cases of small-pox appeared. Dr. W. F. Whyte, President of the State Board of Health, was notified. The doctor came promptly and quarantined the Hospital.

The sick persons were isolated and all recovered. All patients and employes were vaccinated and no other cases developed.

There were three suicides during the biennial period. In one instance the coroner was notified and an inquest held. In the other cases the friends, the district attorney and all concerned were promptly informed and inquests were not considered necessary. A volume might easily be written on this subject, and it would take at least a small volume to go into all the details to show how it is really impossible to prevent a determined person from accomplishing his desires in this matter.

Several surgical operations were required during the years. Dr. C. W. Oviatt did some and Dr. W. A. Gordon, Jr., the others. Both of these gentlemen did their work gratuitously and are entitled to the thanks of the Board for their courtesy. All of the patients made prompt recoveries from the operations.

There have been a few permanent improvements during the two years. The most important, being the removal of the pumps from the lake to the Hospital and the bringing of the water to the building by gravity instead of by pumping; the building of the septic tank near the lake, so that all the sewage is filtered before going into the lake, is a hygienic precaution that should be required by law of all cities, towns, institutions and individuals. The pollution of lakes and rivers is a sanitary sin that should be suppressed, and the State Board of Control has set a good example in building this tank at this

---

*Superintendent's Report.*

---

place; 1187 ft. of cement walks were laid by the efficient mason, Mr Julius Pistohl, who has been in the service of the Hospital for twenty years; concrete steps at the North and South end of the building and by the kitchen are a permanent improvement; 8682 square feet of cork carpet has been placed on the halls. This prevents a great deal of noise and is easier for the patients to walk on; 220 iron beds have been purchased; all of the barns have had new roofs; the milk room has had a tile floor; a new concrete ice room was built for the wards and rear kitchen; the installing of two bath rooms with tubs for giving prolonged baths is a valuable addition to the medical armamentarium.

The work of the Hospital requires about 160 employes. In the last two years there have been 440 persons on the pay roll. This constant change of attendants is hurtful beyond calculation. Attention has often been called to this. Higher wages or a prospective pension at the end of long service would give better service.

The attention of the Legislature should again be directed to the fact that Wisconsin is years behind the times in compelling her insane citizens, her insane convicts and her insane epileptics to be housed under the same roof. Wisconsin needs an epileptic colony. Wisconsin should have a separate building or institution for her convict insane. To expatiate upon these needs would be out of place in a report of this kind. It is sufficient to say that our methods are parsimonious in view of the fact that all the richest counties in the State are running their county asylums as money-making institutions. They are calling for more chronic insane. The State Hospitals are unable to turn out incurable cases fast enough.

There is a gradual increase of insanity in the United States. This is partly due to heredity.

There is a law against the marriage of insane persons in this State, but there is no law against those who have become insane continuing to reproduce. Attention has often been

---

*Northern Hospital.*

---

called to the startling fact that the modern treatment of the insane is largely responsible for the increase of the disease. Nothing is done because the people are under the malign influence of the idiotic fetich called "personal liberty". Candid and scientific discussion of the sexual affairs of men and women is prohibited by public opinion in this country, and so the breeding of the insane criminal and epileptic classes continues. That this is mere fashion and affectation is evident from the fact that the neighing stallion decorated with ribbons is allowed to prance along the highways in the gentle spring time, and the prize bull, ram and rooster is exhibited to the daintiest and most cultured women and children. It would seem that some day the breeding of the insane, the epileptic and the criminal should be subjected to inquiry at least. Recently there were representatives of three generations of one family in this Hospital at one time.

There is a law against selling intoxicants to minors and Indians, but none against selling to the insane.

Many times "whiskey cases", as the alcoholic insane are called, are returned to the Hospital in a very short time because they are made drunken as soon as they get home. In one instance an individual, whose wife was here for alcoholism, had a wine supper ready for her when she got home. To interfere with the "personal liberty" of such a person would be contrary to the genius of the Constitution and would rend the palladium of our liberties.

Our childrens' children will have to pay the bills, which will be large, because we permit such unfit persons to procreate. This is a reasonable subject for legislative inquiry.

There should be two houses erected here to be used as sleeping apartments for the attendants. Attention has been directed to this in other years.

There should be a physiological laboratory, equipped for the scientific study of the insanities, established at one of the State Hospitals. The reasons for this are quite numerous and the arguments in its favor incontrovertible.

---

*Superintendent's Report.*

---

The largest item in the State's expenses is for the care of the insane and little heed is given by the law makers to the recommendations of physicians in this matter.

As society gradually through the ages becomes more intelligent, the voice of the doctor will, it is to be hoped, be more potent in shaping legislation on strictly medical topics.

To write a complete "report" of the two years work of this Hospital, its influence in modifying thousands of human lives is the greatest item. This influence has been, I believe, salutary as a rule. Wholesome ideas and views of life have gone into many homes. Correct notions concerning diet, foods, habits and the rights of man, woman and child have been imparted to numbers of persons. This educational influence of the Hospital is of supreme value to the community.

In a number of instances relatives of patients have requested that they be transferred to the nearest county asylum. In other instances people have objected to the transfer of relatives to the county asylums because they did not wish the insane relatives near home. I believe the law should be amended so that in certain cases the State Board of Control could send patients to other asylums than those of the County of which they are residents.

It is very irritating and humiliating to sensitive people to have a talkative, delusional relative near home where all his or her insane drivel becomes matter for neighborhood gossip. In a few cases asylum superintendents have traded patients for the sake of saving the feelings of relatives. This trading process is not the proper way to handle these cases.

During the biennial period there have been 79 patients' dances, 5 patients' and employes' dances, 1 employes' dance, 2 mask balls, 52 concerts (home talent), 3 band concerts in the grove, 2 fire work displays (4th of July), 5 lectures and stereoptican views by Rev. Payne, 2 entertainments by the Eagle Quartette, 1 entertainment by Leon and Bertie Allen, 3 entertainments by the Oshkosh Normal Mandolin Club, 1 dramatic

---

*Northern Hospital.*

---

recital by Mrs. Stuart-Richings, 5 entertainments by the Arion, Jr. Orchestra. 1 entertainment by J. C. Pope and dog, 1 entertainment by S. Di Grazia, 1 entertainment by Chas. Myslick and others, 2 entertainments by Mrs. Josslyn, Mr. Fling and others, 3 entertainments from the "Idea Theater", 1 entertainment by Mr. Bowen of Fon du Lac, 1 entertainment by Mr. Breon, 1 lecture and stereoptican views by Rev. Smith, 2 picnics for patients and 2 entertainments and Christmas trees.

We are indebted to Mrs. Wentworth of Fort Atkinson, Wis., for a box of magazines, and to Wm. Horlick of Racine, Wis. for two barrels of magazines, and to the W. T. C. U. of Brooklyn, Wis. for one box of magazines.

Religious services have been held every Sunday. These services are in the grove when the weather permits. Rev. John E. Farmer, Rev. John Helmes, Rev. James P. Abbott, Rev. E. H. Smith, Rev. A. M. Ayers, Rev. John McCoy, Rev. A. S. Badger, Rev. Geo. E. Farnum, Rev. M. J. Trenergy, Rev. J. C. Hazen, Rev. Paul E. Herb, Rev. Geo. Dillon and Rev. J. F. Meagher officiated at different times. These gentlemen also administered spiritual consolation to various patients at various times.

There have been several changes in the medical staff. Dr. B. V. Thomson, after three and a half years of earnest and conscientious service, resigned to return to private practice. Dr. F. W. Pope was here a year and a half and resigned to go into private practice. Dr. Pope was a popular and efficient officer. Dr. A. Nainka was in the service for a period of ten months, when he resigned because of ill health. Dr. Nainka has the best wishes of all for his future prosperity.

The Steward, Matron and Drs. Sherman and Jones continue to discharge their respective duties to the satisfaction of all concerned.

There was never a Superintendent who had better treatment at the hands of an official Board than I have had from you. For your constant aid and counsel and for your personal kind-

*Statistical Tables.*

ness and courtesy to me, and for your unflagging efforts to improve the methods and increase the efficiency of this Hospital, you have my sincerest thanks and gratitude.

Yours respectfully,

W. A. GORDON,  
*Superintendent.*

TABLE No. 1.

Movement of population during each year of biennial term, ending June 30th, 1906.

	1904-1905.			1905-1906.		
	Male.	Fe- male.	Total	Male.	Fe- male.	Total
1. Remaining in hospital at commencement of each year, to wit, July 1st .....	392	233	625	403	246	649
2. Returned from escapes made, and paroles granted before commencement of year.....	32	18	50	48	20	68
3. Original admissions during each year ..	326	193	519	339	217	556
4. Number in hospital during some part of each year.....	750	441	1191	790	483	1273
5. Absent at the close of each year (June 30th, 1905, and June 30th, 1906).....	174	115	289	233	111	344
6. Transferred to other institutions during the year .....	131	54	185	131	99	230
7. Eloped and not returned during each year .....	6	.....	6	5	.....	5

## STATISTICAL FORM STATE INSTITUTIONS.

Prepared in accordance with a resolution of the National Conference of Charities and Correction, adopted May 15, 1906.

Name of institution, Northern Hospital for the Insane.

Population.	1905.	1906.
Number of inmates at beginning of year.....	625	649
Number received during year.....	569	624
Number discharged, paroled or died during the year.....	545	639
Number at end of year.....	649	934
Daily average attendance (i. e. number of inmates actually present during the year.....)	641	632
Average number of officers and employes during the year.....	148	153

## EXPENDITURES.

Ending June 30,	1905.	1906.
Current expenses:		
1. Salaries and wages.....	\$50,860 38	\$50,560 82
2. Clothing.....	7,863 14	7,980 86
3. Subsistence.....	45,496 11	45,057 74
4. Ordinary repairs.....	4,980 94	3,092 16
5. Office, domestic and out door expenses...	31,031 60	28,105 48
Total.....	\$140,238 17	\$134,797 06
Extraordinary expenses:		
1. New buildings, lands, etc.....	.....	.....
2. Permanent improvements to existing buildings.....	\$8,000 00	.....
Total.....	\$8,000 00	.....

## Notes on current expenses:

1. Salaries and wages should include salaries of trustees or directors, if any.

2. Clothing includes shoes and also materials for clothing and shoes if they are manufactured in the institution.

4. Ordinary repairs include all of those which simply maintain the buildings in condition without adding to them. Any repairs which are of the nature of additions should be classed with "permanent improvements."

5. This item includes everything not otherwise provided for, e. g., furniture, bedding, laundry supplies, medicines, engineer's supplies, postage, freight, library, etc.

## SUPERINTENDENT'S REPORT.

---

DELAVAN, July 1, 1906.

*To the State Board of Control.*

GENTLEMEN:—The close of another biennial period, the second since my tenure here, makes it my duty to report upon the condition, progress and needs of this institution. I, therefore, submit this Twelfth Biennial and Fifty-fourth Annual Report of the Wisconsin State School for the Deaf.

### GENERAL CONDITIONS OF THE INSTITUTION.

It is with pleasure that I am able to report to you that the general condition of this institution seems to me satisfactory. The past two years have witnessed a very marked improvement in the wholesome, manly and womanly spirit displayed by our pupils. This is due to the faithful and efficient work performed by the officers and teachers. Considerable improvement has been made in our equipment during the last biennial period, altho very much remains to be done before we have an ideal plant for the purpose for which it is designed.

### IMPROVEMENTS.

Of the improvements and additions asked for two years ago the legislature saw fit to supply money for only one, namely, the refrigerator and store room. This building is now complete and affords ideal storage and refrigeration facilities. This, with the new tile floors and walls in the large kitchen, and the new equipment of ranges, steam kettles, tea and coffee urns, sinks, etc., in the same room gives us in the subsistence department all that we can properly ask.

---

*Wisconsin School for the Deaf.*

---

In addition to the above a number of minor improvements have been made under your direction. These improvements have necessarily been few because of the lack of funds, but they are nevertheless, highly appreciated:

Thirty rods of ornamental fence and sixty-five rods of pasture fence have been built.

A part of the outside woodwork has been repainted.

A much needed bath and toilet room has been arranged for the help.

The enlarged opportunities for training have been added during the past biennial period as follows:

A millinery department has been established for the older girls. This department promises to be a very popular and helpful one.

A picture library has been started for the instruction inspiration and entertainment of the students. Deaf children rely almost wholly on what the eye gives them. They are accustomed to see more in a picture and to interpret it more fully than are hearing children, hence the wisdom of a large picture collection in such a school as this. We have now over three thousand pictures in this library. They are all tastefully mounted, systematically accessioned and indexed, as are books in a public library.

The value of the drama to deaf children is constantly growing upon me. To people who have their mental life in what is seen, not what is heard, an atmosphere of pantomime is the normal one. During the past few seasons we have presented in dramatic form the Merchant of Venice, Miles Standish, Rip Van Winkle, Hiawatha, Mother Goose, Comedy of Errors, and several others. For the better presentation of similiar entertainments in the future our carpenter boys have erected at the east end of the chapel a very complete stage, equipped with proper curtains, scenery, etc.

*Superintendent's Report.*

---

## NEEDS OF THE INSTITUTION.

If this institution is to keep pace with the growth of educational matters the next biennial period must bring about other marked improvements. First of all we need more room. During the past few years it has been necessary to reject the applications of deaf girls because we had no room for them. Neither have we school rooms enough for the present. There are now three teachers having no school room of their own. They are obliged to take their classes and teaching paraphernalia first to one room, then to another for an hour or two each, as they can find an unoccupied room. Still another uses as a school room a room designed for a bed room. These are conditions that ought not to exist in any state school. It is not a credit to Wisconsin. Neither are our dormitory conditions right. We are still following the old field dormitory idea. This is all right for smaller girls, but not at all right for young women. Both for additional room and for better accommodations for our older girls we must have an addition. We also need a girls' gymnasium. Our present gymnasium is in the attic of the administration building on the fifth floor above the girls' play room. The attic was not originally designed for a gymnasium, is not large enough for it, nor equipped for such a purpose. To require the girls to climb four flights of stairs to and from their calisthenic work is little short of barbarism. I recommend very earnestly to your body that this need be urged upon by the proper legislative committees.

An addition to the east end of the chapel and a floor added to the present chapel building will accomplish the following results. The added floor above the chapel will give us excellent dormitory room, two or three girls in each room, for thirty of the older girls. The addition to the east end of the chapel will provide for enlarging the present pupils' dining room, with the girls' gymnasium in the basement. This can be connected

---

*Wisconsin School for the Deaf.*

---

with the girls' play room by a tunnel. Eight new school rooms and a well equipped stage opening into the east end of the chapel would thus enlarge the size of the chapel by the space occupied by the present stage. At the time this addition is made the pupils' dining room should be tiled and repainted. This addition cannot be properly made for less than \$40,000.

I also recommend a new shop building. We are now using a building erected in 1868. It was poorly constructed at that time and is now little more than a wreck. It cannot be properly heated in winter, nor is it large enough for our purpose. A new industrial building to contain adequate room for our carpenter and cabinet shop, shoe shop, printing office and millinery department can be erected for \$15,000. These two things are the large improvements this institution needs now and the need is great.

The open sewer draining across the cow pasture should be covered. While this is being done enough tile should be laid to under drain the low places in the pasture. This will probably cost \$500.

The outside woodwork of all the instruction buildings and the inside of many of them should be repainted.

#### HEALTH.

Owing to regular habits and wholesome food the health of the children here is exceptionally good. This is still further accentuated by the excellent location of the institution, its water supply and drainage being practically perfect.

Two deaths from sickness have occurred in the institution during the last biennial period. One was a very fragile little boy who had a light attack of pneumonia. His naturally weak constitution did not permit him to withstand the disease. Another died from diphtheria, a few cases of which we had two years ago. During the past year the health of the children has been phenomenal. No severe illness occurred throughout

---

*Superintendent's Report.*

---

the entire year. The only occasion we had to call the physician was for a few chronic cases which had not been attended to at home, and for slight accidents.

## SOCIAL LIFE OF THE CHILDREN.

Parties for the children are given on Thanksgiving evening, Christmas eve, New Year's eve, Washington's birthday, Valentine Day, and an annual picnic is given on Memorial Day. In addition to the above somewhat formal social functions many informal ones are held. These are given by the different teachers and officers.

## DISCIPLINE OF THE SCHOOL.

It is inevitable that in an institution where 200 children are in constant attendance there should be some cases of discipline. In order that no abuses may arise all serious cases for discipline are reported to the superintendent and he administers the punishment. All punishment in this institution is corrective and not retributory. It usually consists in depriving the pupil of some privilege, although a few cases of corporal punishment occur during the year. Except on the part of a very few students, not to exceed a dozen in the entire number, there is a high moral sense which makes the pupils largely self governing.

## SCHOOL DEPARTMENT.

The method of instruction used in this institution is what is known as the combined method. A careful study of the various methods used for the instruction of the deaf has led me to the conclusion that this is unquestionably the best method for teaching them. I do not mean to say this dogmatically, for I am well aware that there is a wide and honest difference of opinion in this matter. Nor do I believe that any one method

---

*Wisconsin School for the Deaf.*

---

is necessarily the only one to be employed. Perhaps the method which is the best administered is best. I approach this problem wholly free from the prejudices which seem to exist in the minds of many people who have long been in the work with deaf and brought to bear twenty years of experience in general educational work. My best judgment is as above stated. We apply the combined method thus:

Each new pupil is placed in an oral class. Here every effort is made to teach him articulation and lip reading. He is retained in this department until it becomes apparent that he can never become a good lip reader. Many deaf children perfectly capable of receiving a good education are not able to read lips with any degree of certainty. It does not seem wise in such cases to retard the child's education for the sake of devoting all his energy to lip reading and speech. I do not mean to minimize these accomplishments for the deaf. It is certainly a blessed thing for the deaf to be able to take a thought from lips of other people and to articulate, even though somewhat indistinctly, words used in ordinary conversation; but with many of the deaf lip reading is largely guessing and speech is unarticulate, and sometimes disagreeable. In these cases I believe it is better to place the child in the manual department.

There are at present in this institution thirteen teachers in the oral department and six in the manual department. This means that more than two-thirds of our pupils are in the oral department. I think this fraction justly records the proportion of deaf who can profitably be taught speech and lip reading.

#### LITERARY SOCIETIES.

Two literary societies are maintained by the students of the institution. The Ariadne Society is supported by the girls and the Phoenix Green Literary Society by the boys. These societies furnish opportunity for recitations, readings, debates, and other forms of literary entertainment. They supplement in a way the school work.

*Superintendent's Report.*

ATTENDANCE.

There have been enrolled in this institution during the past biennial period 235 students. This is an increase of 22 over the last biennial period. Of these 98 are girls and 134 are boys.

Statistics of attendance will be given on succeeding pages. I also append a copy of the year book which will set forth to you much more detailed information regarding the work of this institution.

I trust that it is not out of place for me to express here publicly my high appreciation of the faithfulness, zeal and efficiency manifested by the officers and teachers of this school and to express to your honorable body my gratitude for the many evidences of confidence you have reposed in me. Your constant support of my plans and sympathetic interest in the welfare of this institution has made my work exceedingly pleasant.

Respectfully submitted,

E. W. WALKER, *Superintendent.*

## COUNTY REPRESENTATION

By attendance of pupils, June 30, 1906.

- Ashland—Martha Blumel, Glidden; Margaret Schmidt, Glidden; Alice Sturgulewski, Ashland.
- Barron—Mary Kollenbach, Dallas; Rosilda Roux, Rice Lake; Edward Svancina, Dobie; Walter Van Horn, Mill's Center; Lillie Foster, Chetek; Ethel Calkins, Chetek.
- Brown—Joseph Delveaux, Champion.
- Columbia—John Confer, Pardeeville; Leslie Davis, Pardeeville Gladys Sadders.
- Chippewa—Tillie Guenther, Chippewa Falls; Theresa Long, Chippewa Falls; Herman Rasmus, Bloomer; Edward Rasmus, Bloomer.
- Clark—Harry Hansmann, Thorp; Meta Hansmann, Thorp; Jessie Oldham, Neillsville; Lynn Harding, Neillsville; Huldah Rehberg, Columbia; Minnie Rehberg, Columbia; John Shultz, Thorp; Alphonse Sutkiewicz Withee.
- Crawford—Albert Thomas, Eastman; Sadie Thomas, Eastman; Earle Bailey, Soldiers Grove.
- Dodge—Harold Linde, Beaver Dam; Hubert Suhr, Hustisford, Amelia Schwartz, Burnett Junc; Willie Uebel, Juneau.
- Dane—Clara Erdahl, Stoughton; Earl Erdahl, Stoughton; Clarence Erdahl, Stoughton; Merle Hook, Madison; Joseph Hamre, Morrixonville; Thos., Meredith, Stoughton; John Marter, Madison; Addison White, Madison; Tillie Jensen, Stoughton; Gerhard Breke, Mt. Horeb.
- Dunn—Annie Johnson, Colfax.
- Eau Claire—Nellie Stone, Augusta.
- Florence—Eskil Fernquist, Commonwealth.
- Forrest—Edna Brownell, Crandon.
- Green—Leon Bongey, Monroe; Lester Bongey, Monroe; Gwen Broderick, Brodhead.
- Green Lake—Evan Robinson, Berlin.
- Grant—Annie Bausch, Cassville; Bessie Munns, Fennimore; Grace Ramsour, Fennimore; Belle Ramsour, Fennimore; Belle Reed, Boscobel; Roy Thompson, Fennimore.
- Iowa—Elsie Jones, Mineral Point; John Jones, Mineral Point; Elmer

---

*Wisconsin School for the Deaf.*

---

- Prideaux, Dodgeville; Ralph Motelet, Avoca; Willie Eagan, Avoca.
- Iron—Frank Draldowski, Hurley; Arthur Trudeau, Saxon; Boryska Harris, Hurley.
- Jefferson—Carrie Fleming, Jefferson; Milo Hodge, Ft. Atkinson; Aldred Mules, Oak Hill; Herman Riege, Waterloo; Florence Tyler, Jefferson; Myrtle West, Hebron.
- Juneau—Willie Wood, Necedah; Reinhart Schneider, Finley.
- Kenosha—Agnes Jacobs, Kenosha; Louis Seidschlag, Wilmot; Lillian Fish, Kenosha.
- La Crosse—John Capper, Mindoro; Rebecca Larson, La Crosse; Frances Kabat, La Crosse.
- Langlade—Willie Gallengerger, Kewaunee; Wilda McGregor, Post Lake; Ira St. Louis Antigo.
- Lincoln—Elizabeth Herman, Tomahawk; Olaf Sorrenson, Merrill; Joseph Nick, Tomahawk; Arthur Leisman, Merrill.
- La Fayette—Joseph Murray, Platteville; John Matson, Dunbarton; Frank Stewart, Argle; Guy Anderson, Argyle; Brice Campbell, South Wayne.
- Marathon—Julius Goetsch, Wausau; Curtis Kidd, Spencer; George Duskey, Wausau.
- Manitowoc—Theodore Erickson, Collins; Clarence Hanson, Manitowoc; Emil Gauger, Kellnersville; Clara Gauger, Kellnersville.
- Monroe—Hubert Feeder, Tomah; Gertrude Hirte, Norwalk; Emily Hirte, Norwalk; Christian Hirte, Norwalk; Amy Peterson, Tomah; Charles Reidell, Sparta.
- Marinette—Albert Brault, Beaver; Mabel Nelson, Peshtigo; Louis Pudrzynski, Pound; Lydia Schroeder, Peshtigo; Louis Vandenberg, Marinette; Paul Vandenberg, Marinette.
- Marquette—Adalena Hageman, Monticello.
- Outagamie—Marie Buchman, Hortonville, Barbara Buchman, Hortonville; George Hahner, Kaukauna; Willie Hahner, Kaukauna; Willie Huss, Little Chute; Leta Jones, Shiocton, Lawrence Weigan, Appleton; Willie Faber, South Kaukauna.
- Oconto—Kasmir Klamman, Lena; Eric Olson, Oconto.
- Ozaukee—Alma Ehmke, Saukville.
- Pepin—Edith Nelson, Stockholm.
- Pierce—Floyd Bulmer, Rock Elm; Ella Bryystrom, Hagar City; Louise Clobes, River Falls; Helmer Hanson, Spring Valley; Jeanette Scroggie, River Falls; Grace Scroggie, River Falls; Charles Booth, Diamond Bluff.

---

*County Representation.*

---

- Portage—Pelegia Helminiak, Cassimer.
- Polk—Melvin Asp, Clayton; Ray Foster, Luck; Charles Larson, Dueholm; Esther Hultquist, West Sweden.
- Richland—Henrietta Greenheck, Bear Valley; Mary Greenheck, Bear Valley; Benjamin Greenheck, Bear Valley; Rolla Sheppard, Viola.
- Racine—Peter Bengaard, Racine; Elmer Rolfson, Waterford; Emma Rolfson, Waterford; Anna Rolfson, Waterford; Mida Wilson, Racine; James Renpaul, Racine; Charles Hlenosky, Racine.
- Rock—Margaret Jones, Milton Junction; George Reimer, Beloit; George Rubin, Janesville; Ruth Rockwood, Milton; George Anderson, Clinton; Alfred Jacobs, Beloit; Harry Churchill, Janesville.
- Shawano—Erwin Harter, Birnamwood; Charles Kuschell, Aniwa; Averill Knowles, Mattoon; Arthur Nueske, Wittenberg; Annie Behm, Birnamwood.
- Sheboygan—Dora Schmidt, Sheboygan; Hilda Wandersleben, Plymouth.
- Sauk—Laura Blackman, North Freedom; Reuben Blackman, North Freedom; Stanley Darrow, Reedsburg; James Sprague, Prairie du Sac; Emma Wartzog, Leland; Glen Warren, La Valle.

## STATISTICAL FORM FOR STATE INSTITUTIONS.

Prepared in accordance with a resolution of the National Conference of Charities and Correction, adopted May 15, 1906.

Name of Institution, School for Deaf.

Population.	1905.	1906.
Number of inmates at beginning of school year	171	168
Number received during year	30	33
Number discharged during the year and left	25	27
Number at end of school year	176	174
Daily average attendance (i. e., number of inmates actually present) during the year	190	187
Average number of officers and employes during the year	53	54

## EXPENDITURES.

Ending June 30.	1905.	1906.
Current expenses:		
1. Salaries and wages	\$25,861 51	\$26,270 26
2. Clothing	370 24	243 11
3. Subsistence	10,176 25	10,774 89
4. Ordinary repairs	1,714 77	1,364 56
5. Office, domestic and outdoor expenses	9,905 64	9,791 44
Total	\$48,028 41	\$48,414 26
Extraordinary expenses:		
1. New buildings, land, etc.		
2. Permanent improvements to existing buildings	7,661 74	

## Notes on current expenses:

- Salaries and wages should include salaries of trustees or directors, if any.
  - Clothing includes shoes and also materials for clothing and shoes if they are manufactured in the institution.
  - Ordinary repairs include all of those which simply maintain the buildings in condition without adding to them. Any repairs which are of the nature of additions should be classed with "permanent improvements."
  - This item includes everything not otherwise provided for, e. g., furniture, bedding, laundry supplies, medicines, engineer's supplies, postage, freight, library, etc.
- Superintendent, E. W. Walker.

## SUPERINTENDENT'S REPORT.

---

JANESVILLE, July 1, 1907.

*To the Hon. State Board of Control of Charitable Reformatory and Penal Institutions:*

GENTLEMEN:—In the performance of my duty I have the pleasure to submit herewith the report of the Wisconsin School for the Blind for the biennial period ending June 30, 1906.

Having been, for several years, a member of your body and then selected therefrom by you about one year ago to take the management of this institution, I am unable to make a report for the full biennial term. However, I desire to say at the beginning that it has been my aim, since I took charge, to conduct the work of this institution in all of its departments on the most liberal and progressive basis possible. Assuming control here within five or six weeks of the time of the opening of a new school year, with several positions on the teaching staff unfilled, with the matron and assistant matron who had been here many years, both removed, the former by death and the latter by a serious illness which soon after proved fatal, with a number of vacant positions to be filled among the general employes,—it looked anything but encouraging. Suffice it to say that fortune seemed to be on our side, and by the time the pupils arrived on the 13th day of September, every place was filled by persons not only competent but also possessing the dispositions and characters so essential to success in the care and education of the blind.

Here I want to pause long enough to acknowledge my grateful appreciation to the officers, teachers and other employes who by their faithfulness and efforts have in so many ways contributed to make our first year so harmonious and successful. Further proof of the harmony, progress and good

---

*Wisconsin School for the Blind.*

---

spirit that is manifested and is anticipated for the coming year is evidenced by the fact that not one change was found necessary in the faculty and only three or four in the force of employees and we are pleased to report that most of these were occasioned by matrimonial alliances.

It has been our endeavor to take a broad and comprehensive view of the value and importance of the training of the blind, and we have tried with our limited experience to direct the discipline and instruction along the most useful and practical lines.

As has often been said the work of education under the most favorable circumstances is a very serious matter and the proper training of the individual and the development of true character and right ideas in the minds of our youths cannot be lightly treated by the conscientious teacher. Only a portion is to be found in text books. Still more serious is the work when we deal with a class of children who are deficient in the sense of sight, regarded as the most important sense in the progress of education. While they have the advantages of music, which is so inspiring, they are deprived of the enjoyment afforded by the beauties of nature and the effect this has on the building up and formation of character is inestimable. Many parents overlook the great importance of this truth and with their sympathetic natures and in their eagerness to assist their afflicted ones they often substitute indulgences for judicious training and spoil the child. We have had this condition to meet in several instances during the past year and in two or three cases found it necessary to deprive the child of the privileges of the school. When these conditions are found in young people almost grown to manhood and womanhood and past the really favorable time for the moulding and shaping of character, it is very difficult to control and change these traits of character. For this reason in particular, and for the further reason that advantageous arrangements have within the past few years been made by the state for the instruction, occupation and remuneration of the male adult blind in the

GEOGRAPHY CLASS.

*Superintendent's Report.*

Workshop for the Blind in Milwaukee a rule has been promulgated which has proven to be a wise one, denying to persons over the age of twenty-one years entrance to this school. This rule has been with two or three exceptions strictly enforced and while in some cases it has seemed to the rejected applicant to be a great hardship, we cannot help but feel that its enforcement results in the greatest benefit to the greatest number. It has been urged that this rule has effected the population of our school. This may be true, although the enrollment and attendance for the years 1904 and 1905 and 1905 and 1906 was about the same as in previous years.

## ENROLLMENT.

	Males.	Females.
1902—1903 .....	60	45
1903—1904 .....	62	43
1904—1905 .....	56	45
1905—1906 .....	56	53

There appears to be a wide difference of opinion among educators of the blind as to what lines of work should be pursued in the main in schools for the blind. As illustrative of this we find some schools, which were among the first established, that advocate the pursuit of those things that will develop the mind only, alleging that by so doing they are able to send out into the world a highly intelligent class of people who are so well equipped mentally that they are able to take their place along side of their educated brother and make their way in the world the same as he. On the other hand there are a number of reputable schools of long standing who take issue with this policy, and maintain that during those years when the average normal young person devotes, at least a portion of his time to learning some handicraft, which may be properly utilized to a limited extent, if not followed as an exclusive pursuit, the young people in our blind schools should be trained in the trades just as much if not more, than along the literary lines, thus enabling them to step out into the world with their

---

*Wisconsin School for the Blind.*

---

handicap minimized to such an extent that they can be occupied and self supporting by virtues of such training as well as enlightened members of society.

Our school, I am glad to report, is committed to neither of these policies absolutely. It seems to have been, and is the practice of this school to utilize the best features of both these methods and it is our endeavor to develop and broaden our pupils along three different lines, namely, the literary, musical and industrial.

**LITERARY.**

In the literary department the work is fairly equivalent to that of the common schools and high schools (English Course) in this state and all pupils of "suitable age and capacity" are required to pursue this course. We are just about ready to establish a regular course of study, the pursuit and completion of which should give to our graduates sufficient credits to entitle them to entrance to the State University. We confidently believe that this will be greatly to the advantage of both teachers and pupils. In a school of this kind it is very difficult to classify the pupils and their work. This is due largely to the fact that they enter at various times and at such widely diverging ages and steps of preparation. Nevertheless we are firm advocates of having a system for a basis and believe when it is inaugurated and adhered to that our work will be simplified and much valuable time saved thereby. It is quite the consensus of opinion of the public at large that our pupils make slow progress in their studies and find many things that they are able to do little with. This supposition may be answered both in the affirmative and the negative. We must admit that the methods of instruction used for the blind are somewhat different than those of the public schools and that in reading and writing they go much slower. It is equally true that in some other branches of their work, where concentration and the reasoning powers are brought strongly into practice, they are often quicker than their seeing brother. Again, if it takes

---

*Superintendent's Report.*

---

a little longer to finish the regular course, it may be said that many of them have more when they have finished than pupils get in a number of the public schools for a large majority of these pupils have, by the time they graduate, finished a course in music and manual training, including some trade.

## MUSICAL DEPARTMENT.

Strange and absurd as it may seem many intelligent people seem to be imbued with the idea that because a person is blind he must be musical. Far is such an idea from the truth, for there is no more reason why a person deprived of the sense of sight should be gifted with the art of music than with any of the other arts. However, a great majority of them manifest a fondness for music and pursue it in some of the departments throughout their attendance at school.

Chorus work and individual instruction is given daily to those pupils having special ability and interest. An orchestra of fifteen pieces is maintained which meets daily under a competent leader, and individual lessons on the violin, horn and other orchestral instruments are a part of the work. During the past year the orchestra has filled a number of engagements in neighboring cities on invitation of their high schools. Regular instruction is given a majority of the pupils on the piano and a few take lessons on the pipe organ. A number of our pupils have become so proficient in their musical work as to be able to utilize it as a means of livelihood.

## INDUSTRIAL DEPARTMENT.

The industrial work is of two kinds, manual training and the trades. The great advantage of having a course of manual training in the public schools is no longer questioned, and one school after another has provided ways and means for the installation of such a course. Since the blind must of necessity learn to see largely through the sense of touch it is of the highest importance that the course of instruction include from the start such form of training as shall best develop and culti-

CLASS IN PHYSICAL CULTURE.

MANUAL TRAINING.

---

*Wisconsin School for the Blind.*

---

vate this sense. To this end a thorough course of wood-work, knife-work, bench-work and lathe-work has been carried on for the boys with gratifying results, and we can see no reason why this course should not be open to the girls and it shall be our endeavor to include them as soon as satisfactory arrangements can be made.

In the trades the course in piano tuning seems to hold out the greatest attraction to the young men, there having been sixteen carrying the work during the past year. There is probably no occupation that affords such a free and open field to the blind as this work and the success of a large number of those who have mastered it fully warrants others in turning their energies in this direction.

Carpet and rug weaving, chair caning and basketry are also taught and instruction is given at times in broom making, mattress making and hammock making.

The girls learn knitting, sewing, crocheting, weaving, bead work and cooking and acquire sufficient skill in these lines to enable them to assume many of the duties in the home that are incumbent upon a woman.

All pupils as soon as they are capable after entering are taught typewriting and are by this means soon able to write their school exercises and examinations and conduct their own correspondence. The invention of the typewriter was a great boon to the blind and does double duty as an educator and a time saver.

#### PHYSICAL CULTURE.

This phase of our work is as necessary and important as any portion of the work conducted here. All pupils are required to take a regular course in gymnastics under the direction of a competent physical director. If any of them are unable to take the regular work on account of some physical defect they are given special exercises adapted to their needs.

There is a tendency on the part of blind children to exercise too little, particularly in the open air, and these exercises

15—S. B. C.

TYPEWRITING.

PIANO TUNING.

---

*Superintendent's Report.*

---

in the gymnasium are very helpful in straightening the shoulders and developing the muscles of the legs and arms, expanding the chest, improving the carriage and developing self-reliance and freedom of movement.

It is now the practice to take Anthropometric measurements of all of the pupils soon after the opening of the school year in the fall and again toward its close in the spring. As a result of these measurements the exact physical development of the pupil during the year can be accurately obtained and the physical instructor is thereby enabled to classify the pupils and make certain that they are assigned to the exercises that will prove most beneficial in their particular case. These measurements are a source of great interest and show the necessity of physical training to aid in the growth and development of the growing boy or girl.

Field and track events in the fall and spring add much interest to the work and a number of records in walking, running, jumping, throwing the discus, putting the shot and in the tug of war have already been recorded that will take rank with those made by the athletes of many of our state high schools.

Our gymnasium is one of the best to be found in any state school, but is of no assistance when the season is right for outdoor exercise, and it is our intention to provide, as soon as possible, in addition to the swings we now have, merry-go-rounds, trolley slides and such other equipment as will stimulate more of a longing for play on the part of our children, and especially the girls. Spontaneous play is what is needed. The great question of the hour in the department of physical education of the blind is,—what can we do to get them to play more as other children play.

**LIBRARY.**

We have two reasonably well equipped libraries, one in ink print and one in embossed type. The ink print library contains something over 2000 volumes, and since it was cataloged

LATHE WORK.

---

*Superintendent's Report.*

---

about two years ago has proved of great assistance to both teachers and pupils. A number of daily papers and most all of the leading magazines and periodicals are to be found on its tables.

Our embossed library comprises about 3000 volumes and covers a wide range of good literature, with about the same proportion of history, biography, poetry, music, fiction and general literature as is found in the ink print library.

Under the provisions of a law recently passed by Congress these books are accessible to blind readers throughout the state and we are constantly sending them to blind people who are thus enabled to share the advantages of this library with the pupils without expense of any kind. The important features of this law are as follows:

“Books, pamphlets, and other reading matter in raised characters for the use of the blind, whether prepared by hand or printed, in single volumes, not exceeding ten pounds in weight, or in packages, not exceeding four pounds in weight, and containing no advertising or other matter whatever, unsealed and when sent by public institutions for the blind, or by any public libraries, as a loan to blind readers, or when returned by the latter to such institutions or public libraries, shall be transmitted in the United States mails free of postage, and under such regulations as the Postmaster General may prescribe.

On the upper left hand corner of the envelope or wrapper containing the matter, the name and address of the sender must appear, and on the upper right hand corner the word “FREE” over the words “READING MATTER FOR THE BLIND.”

#### SOCIAL LIFE.

There are two literary societies in the school, the Lincoln, for the older boys, and the White Rose for the older girls, that hold regular meetings throughout the year and give valuable training in writing, declaiming, debating and parliamentary practice. A Christian Endeavor for the older pupils, a Junior

---

*Wisconsin School for the Blind.*

---

League for the younger pupils and a Sunshine Club of little folks, and a society called Sigma Alpha Sigma, which is in reality an anti-slang society, whose membership is open to all of the girls, make up the social organizations. The officers and teachers are the guiding spirit in all of these societies. It is customary on Saturday evenings from 7:30 to 9:30 o'clock to throw open the gymnasium to all members of the household for a period of social recreation. These gatherings are held under the personal supervision of the superintendent and matron. A social chat interspersed with singing, playing and dancing not only does much to break the monotony of the long school year for all who participate, but adds much to the education of the pupils in the way of good form and grace of manner. It is here that they have their best opportunity to acquire the little courtesies of life so quickly noticed, especially in the blind, and observed by all with whom they come in contact.

**RELIGION.**

The Sabbath day is observed by the holding of two Sunday services, one in the morning at nine o'clock and one in the evening at seven o'clock. At the morning hour regular Sunday School services are conducted by Protestant and Catholic teachers for the benefit of the adherents of these respective faiths. At the evening hour general exercises of a non-sectarian nature are conducted by the superintendent. The pupils are required to attend these services, and those of suitable age are permitted to attend services at the city churches of their preference whenever conditions permit.

**HEALTH.**

The general health of the school during the past year has, I am sorry to say, not been up to the average. We are unable to ascribe any particular reason for this condition of affairs, unless it be the change in management, for hardly had we got our bearings after school opened last fall until we were quar-

---

*Superintendent's Report.*

---

antined by order of the State Board of Health, for smallpox. We labored along under these restrictions for over five weeks and treated twenty cases, none of which, we are happy to report,, were attended with serious results. After a thorough fumigation we were just ready to settle down to a resumption of normal affairs when the measles broke out and twenty-eight cases, most of which were quite light, resulted before they were run out.

No deaths occurred in the institution, although we are obliged, with much regret, to chronicle the death of one of our pupils during the year, namely Frieda Saxer of La Crosse, a bright and accomplished young girl just budding into womanhood, who was taken from school to her home after a short illness, and who passed away a few weeks thereafter with consumption. Our records also show that another of our pupils, Edith McLaughlin, of Beloit, died at her home on the first day of January, 1905, of pneumonia.

The unusual amount of sickness together with the character of it, strongly emphasizes the necessity for having more adequate facilities for caring for such cases. This will be more fully referred to under the subject of our needs.

#### WHAT WE NEED.

While our main building is sufficiently large and reasonably well arranged for the school work proper, we are laboring under a heavy handicap in our musical department. On account of its having proven itself to be something that a blind man can do as well, if not better, than a seeing one and the proceeds therefrom render him more than self-supporting, the course in tuning is taken by forty per cent of the male pupils. Such a large number has overtaxed the room provided for this department and more and better facilities should be provided without delay. By the mention of better facilities I mean that the tuning department should be taken out of the basement, where it is now located, and placed in a building by itself. The necessity of this lies in the fact that it is un-

---

*Wisconsin School for the Blind.*

---

healthy and unsanitary for the pupils to work, so steadily day in and day out, below the surface of the ground, and the great amount of dampness found in these basement rooms not only retards the tuning work but also does lasting damage to the pianos kept therein.

All of the other musical departments, which constitutes so important a part of our work here, could then be removed to this building and by so doing a very disturbing element that interferes greatly with the progress of the work in the several school rooms, would be eliminated. Such a building would do much to advance the progress and standing of our school. It could be so constructed as to include a swimming tank and system of baths, conveniences which are badly needed here for the health and development of these children. With the installation of these baths a course of instruction could also be added with very little expense, that would open another door of occupation to the blind. I refer to a course in massage. It is reported that in Japan this work is carried on almost entirely by the blind, and there is certainly a large and remunerative field for the same in this country.

A change in our water system so that we would be able to have a plant of our own would, in my judgment, be good business management. Since the meter was repaired, about a year and a half ago, the amount of water we have been charged with quartely is nearly double the amount used previously.

After a long and careful investigation of the matter I can find no way in which to materially curtail this amount. The water company, with whom we contract for this supply, have assured us that we cannot expect to lower the rate, so that now we are paying out nearly \$600 a year for water. Inasmuch as we own the pipes and hydrants on the grounds and have what appears to be a deep, reliable well under our boiler house, with plenty of power on hand, we ought to be able to install a water system with sufficient pressure for adequate fire protection for the amount we would pay out to this water company in the course of five or six years.

---

*Superintendent's Report.*

---

An elevator is badly needed in the main building in order to render the upper portion of the building accessible to teachers, pupils and employees who have occasion, several times daily, to climb from two to five long flights of stairs in going to and from their work. This elevator could be placed on the girls' side of the building, where it is most needed, and where there is already a shaft, at a very reasonable cost and the benefit it would be to the girls cannot be measured in dollars and cents. It is the unanimous verdict of all reputable practitioners today that the long flights of stairs young girls find it necessary to climb in attending the public schools are, in many cases, the the real beginning and constant source of weakness that eventually undermines their health and happiness and many times works lasting injury to them. This being true with the normal girl, how much greater the danger in the case of our girls who are as a rule hardly up to the standard in physical requirements?

Nearly every day some girl is reported as not being able to attend her classes. As a result the work of the class is either retarded or she is obliged to miss her work with very little chance to make it up. This results in the prolongation of the time she is required to remain at the school to finish her education, in case she finishes at all. A number of other hindrances to the progress of the work can be traced directly to the climbing of these long stairs. It is my firm belief that the state could make no better investment than the installation of an elevator in the School for the Blind.

The time has come when some provision must be made for the storing of our coal. We have been using an old wooden shed which has such a small capacity that only a very limited supply of coal can be stored. This shed is now in such a dilapidated condition that it must be replaced. A desirable location for a building of this kind would be at the west end of our present power house where a brick addition forty feet long, thirty feet wide and fourteen feet high would preserve the harmony of the present building and provide for the storage of

COOKING CLASS.

---

*Superintendent's Report.*

---

from five to six hundred tons of coal, nearly one-half a year's supply, which is very necessary in this day of strikes, lock-outs and shortage of cars.

One of the greatest and pressing needs of this institution is a building for isolation purposes. That a building for such purposes is an actual necessity at all state institutions is conceded by all those connected with their management, but events that have transpired here during the past year have emphasized, as nothing else could, the constant danger that surrounds us in our present condition. On the 3d. day of last November, after a consultation of several local physicians with members of the State Board of Health, they decided that some of our pupils had the small-pox, and by order of the latter we were placed under quarantine. We immediately took steps to prevent the spread of the contagion, but having no means to isolate those already afflicted, the handicap was too great and in a very short time new cases developed until at last we had twenty cases down with the disease. Fortunately, the disease was in a mild form, and with the exception of two or three cases, those stricken were not seriously ill, although it was a number of weeks before the quarantine could be raised. Housed as we are with nearly one hundred and fifty people under one roof with no separate building to which persons exposed and stricken by contagious diseases can be immediately removed and cared for, it is really almost miraculous that dire results have not followed long before this. Because of the nature of their affliction, there is no class of people with whom it is so difficult to maintain any sort of a strict isolation and quarantine as ours. Inasmuch as their method of acquiring knowledge depends largely upon the sense of touch, they are almost continually in bodily contact with their teachers and fellow pupils, thereby furnishing the most direct method of transmitting the germs of disease. From the foregoing it will be observed how necessary it is to provide this, of all the institutions, with an adequate isolation building.

This is the last season we can use the old board sidewalk on

---

*Wisconsin School for the Blind.*

---

State street that connects us with the city and furnishes an exercising place for the pupils. It will have to be replaced with a cement walk and it should be extended so as to run along the lawn in front of the main building. There is nothing but an old worn cinder path along here at present and it is under water for a day or two after every heavy rain, and in winter is, of course, of no avail. There is no better form of exercise, nor one that the blind can be more easily induced to follow than walking, and in their case, again, there should be here, of all places, a plentiful supply of good, well kept walks. The amount needed is about 10,000 square feet.

We will finish our needs by saying that a new floor is badly needed in our laundry which should be of tile, and a portion of the tile flooring in the corridor of the main building will soon have to be relaid.

For a number of years very little has been done in the way of painting and repairing and especially is this true in regard to the roofs and the woodwork, and provision should be made for doing this, if things are to be kept up as they should be.

To recapitulate,—a music building, a water system, an elevator, an isolation building, a coal shed, side walks, and a laundry floor and general repairs, are much needed, all of which are most strongly recommended.

#### GRADUATES.

The graduating classes the last few years have not been very large but it can be truly said of them that what they lacked in quantity they made up for in quality. Many of the pupils become so anxious to try their fortunes in the world after having spent a number of years in the school, that they cannot be persuaded to remain just a little while longer and finish their course.

Former officers of this institution prepared for a previous report a sketch of the careers of its graduates and its former pupils as evidence of the real work and value of the school and this record shows the Wisconsin School for the Blind to be of such a high standard as to make any citizen feel proud. On

*Wisconsin School for the Blind.*

account of its many points of interest and value as a reference work I take the liberty of again publishing it as a part of this report.

The first formal graduating exercises were held in 1885. The total number of graduates to date is sixty-eight. They hold honored and respected positions in the communities in which they live. Not all are independent. No one in our complex life is wholly independent. Seeing people must look to one another for support and assistance. Defining independence as that condition of self support in which one earns a salary sufficient for his needs or does for others as much as others do for him, at least 75 per cent of our graduates are self supporting. Their record in this respect will compare favorably with the graduates of the high schools for seeing. Following is given a list of graduates. Those marked with (a star) are totally blind or so nearly blind as to be unable to read ink print. Of these graduates eight are married. The total number of children resulting from these marriages, so far as I am able to learn, is eight and not one of them is blind. Three only are children of a parent congenitally blind.

## PUPILS NOT GRADUATES.

In the last twenty-four years about three hundred pupils have left school without graduating. Of these over forty are dead, many have left the state and their whereabouts are unknown to us, some have come into possession of property, and others are supported by parents or relatives who are financially well-to-do. There are over eighty of whom officers or teachers in the school have knowledge who are self supporting or nearly so.

Following is a partial list giving names, degree of blindness, residence and trade or business:

Chas. Adams, partial, Greenwood, weaver.

Mark Albert, partial, Oshkosh, canvasser.

John Amerhine, total, Milwaukee, peddler, supports wife and 4 children.

Medar Alleyn, partial, Evanston, Ill., cook, married.

Jens Anderson, total, Stoughton, weaving and other school trades, supports himself and assists parents.

Jos. Bergs, partial, Milwaukee, workshop for blind.

George Brooks, total, Eastman, weaving, violinist, singer, partially deaf.

R. Buckser, total, Milwaukee, tuner.

Jas. M. Biggs, total, Richland Center, weaver and store keeper.

Archie Belognia, partial, Oconto, store keeper.

Frank Bus, total, tuner.

Albert Bitter, partial, Milwaukee, rat killer.

Anthony Brunson, partial, Chicago, bicycle repairer.

Jas. Babcock, partial, Illinois, farm hand.

Thos. Carney, partial, Galesville, farmer.

Wm. Crandal, total, Walworth, undertaker, supports wife and 2 children.

Arthur Covey, total, Oshkosh, peanut dealer.

John Cunningham, total, Sun Prairie, weaver.

Grover Carey, partial, Madison, clerk.

Edward Donahoe, total, Portland, Oregon, married, two children, school trades.

Philip Donahoe, total, Big Spring, weaver.

Oscar Follansbee, partial, River Falls, married, two children.

---

*Superintendent's Report.*

---

- Hugo Feick, total, Plymouth, salesman.  
Emil Faulk, total, Oshkosh, weaver.  
Jos. Gockle, total, Milwaukee, editor and publisher.  
Edward Genrich, total, Eau Claire, tuner.  
Walter Goetzinger, total, La Crosse, married, musician.  
Laddie Gorna, total, Two Rivers, tuner.  
Louise Marsden (Goetzinger), partial, married, La Crosse.  
Frank Harmon, total, Elkhorn, farmer.  
Peter Holmgren, total, Hurley, weaver and merchant.  
Howard Hall, partial, Poynette.  
Edward Johnson, partial, Kendall, weaver.  
Bert Johnston, total, Milwaukee, tuner.  
Terrance Knight, partial, Darlington.  
Bernard Knuth, total, Milwaukee, workshop for blind.  
Julius Koepke, total, Whitewater, tuner.  
Levi McCulloch, partial, Janesville, broom maker and canvasser.  
Dennis Murphy, partial, Waupun, farmer.  
Ernst Montgomery, partial, Poplar Grove, weaver.  
Edward McMurphy, partial, Prescott, farmer.  
Wm. Mann, total, Milwaukee, workshop for blind.  
Louis Manz, total, Milwaukee, workshop for blind.  
Gustav Mansky, total, Milwaukee, workshop for the blind.  
Ernest Meissner, partial, Janesville, laborer.  
Placid Mougéniot, total, weaver.  
Lizzie Nix, partial, Milwaukee, clerk.  
John Nelson, partial, River Falls, printer.  
Nels Nelson, total, Pine Grove, fiddler.  
Wm. Nelson, total, Cushing, farm work.  
John Olson, total, Elroy, farm work.  
Peter Oren, total, Blanchardville, laborer.  
Edward Ouradnik, total, Slovan, weaver.  
Joseph Preston, partial, Janesville, shoe merchant.  
Ulmer Park, partial, Cong. clergyman.  
Frank Pratt, partial, Madison, music dealer.  
Alpheus Parseneau, partial, Fall River, farmer.  
Violet Patterson, partial, Milwaukee, teacher.  
Howard Pratt, partial, River Falls, butcher.  
Nels Peterson, total, Racine, weaver, married, two children.  
Emil Reutzen, partial, Milwaukee.  
Frank Richardson, partial, Burnam Woods, weaver.

---

*Wisconsin School for the Blind.*

---

Adam Rickert, blind and deaf, Portage, peddler.  
 Chas. Root, total, Milwaukee, tuner.  
 Hays Rouse, partial, Bay Settlement, farmer.  
 Frank Siegel, partial, Racine, married, tuner and salesman.  
 George Stuenfig, partial, Portage, farmer.  
 Edward Shattuck, partial, Milton, merchant.  
 Henry Schart, partial, Milwaukee, workshop for blind.  
 Phillip Slack, total, Oklahoma, book merchant, married.  
 Jerry Scribner, partial, Denver, tuner.  
 Charles Stern, partial, Hintz, weaver.  
 Frank Tamplin, total, Janesville, farmer.  
 Frank Tummand, total, Dubuque, weaver.  
 John Wilson, total, Eastman, musician.  
 Hesto Washburn, partial, Delavan, teacher.  
 Hirman Woodard, total, Lodi, weaver.

Of women who left school without graduating, twenty with partial vision and four of the totally blind have married and have charge of homes. Two or three are music teachers. Many earn a little money by selling bead work and other articles of their handicraft. The large majority live with relatives and support themselves not by earning salaries but by helping in the work of the household. "Home helpers" is our name for the positions they fill and it is to train blind girls to be a real help and blessing in the homes in which they live that much of the energy of the school is directed.

Of former pupils, two women and five men are in poor-houses. One of these women has money and pays two dollars a week toward her support; the other one makes and sells bead-work which helps in paying her expense. Two of the five men will probably soon be earning a living in the workshop for the blind in Milwaukee, so that four persons—three men and one woman is nearly a fair statement of the number of our former pupils now public charges in the almshouses of the state.

Of former pupils, not graduates, twenty-one women and thirteen men, with partial sight, and four women and ten men with no sight, have married. The marriages have resulted in forty-one children, two with defective vision.

*Superintendent's Report.*

Only four marriages have occurred the parties to which both attended school here, and in not more than one case, if any, was an attachment between the young people formed while attending school.

With grateful acknowledgement to your Honorable Board for the consideration shown me at all times, I respectfully submit the foregoing.

HARVEY CLARK,  
Superintendent and Steward.

List of supplies the children should have on entrance to the school.

*For Boys.*

2 suits for week-day wear  
1 suit for Sunday wear  
3 colored and 1 light day shirts  
2 night shirts  
6 prs. of socks or stockings  
1 hat and 1 cap  
2 suits of light underwear  
2 suits of heavy underwear  
3 pair shoes  
1 pair mittens or gloves  
1 comb and brush and toothbrush  
Handkerchiefs and collars  
4 towels

*For Girls.*

3 dresses for week-day wear  
1 dress for Sunday wear  
2 white underskirts  
3 colored underskirts  
3 night dresses or gowns  
6 pairs of stockings  
1 warm jacket and hat  
3 suits of light underwear  
3 suits of heavy underwear  
3 pairs of shoes and over shoes  
1 pair of mittens or gloves  
1 comb and brush and tooth brush  
Handkerchiefs  
4 towels.

Small boys should have more underwear than larger ones. Their pants, both woolen and cotton, should be of washable material for every day wear. They should have six waists (instead of shirts) and an extra pair of trousers also rubbers or overshoes. Small girls should be provided with aprons.

*Wisconsin School for the Blind.*

## STATISTICAL FORM FOR STATE INSTITUTIONS.

Prepared in accordance with a resolution of the National Conference of Charities and Correction, adopted May 15, 1906.

Name of institution, School for the Blind.

Population.	1905.	1906.
Number of inmates at beginning of school year.	89	89
Number received during year.....	12	20
Number discharged during the year and left....	18	17
Number at end of school year.....	77	92
Daily average attendance (i. e.) number of inmates actually present during the year.....	84	93
Average number of officers and employes during the year.....	43	43

## EXPENDITURES.

Ending June 30, 1906.	1905.	1906.
Current expenses:		
1. Salaries and wages.....	\$15,756 65	\$15,736 17
2. Clothing.....	172 18	118 15
3. Subsistence.....	9,072 86	8,239 45
4. Ordinary repairs.....	1,889 86	881 16
5. Office, domestic and outdoor expenses...	6,704 71	7,309 00
Total.....	\$33,596 26	\$32,283 93

## Notes on current expenses:

- Salaries and wages should include salaries of trustees or directors, if any.
- Clothing includes shoes and also materials for clothing and shoes if they are manufactured in the institution.
- Ordinary repairs include all of those which simply maintain the buildings in condition without adding to them. Any repairs which are of the nature of additions should be classed with "permanent improvements."
- This item includes everything not otherwise provided for, e. g., furniture, bedding, laundry supplies, medicines, engineer's supplies, postage, freight, library, etc.

J. B. NOBLE..... *Physician*

## SUPERINTENDENT'S REPORT.

---

WAUKESHA, July 1, 1907.

*To the State Board of Control:*

I hereby submit the report of the Wisconsin Industrial School for Boys for the biennial period ending June 30, 1906.

The tide of juvenile lawlessness is still rising. Serious crimes such as burglary, are committed by boys of very tender years, in many cases with a daring and skill that one expects to find only in experienced professional criminals. Organized gangs of young toughs are found in the streets of nearly all our cities, large and small. These boys are getting very little schooling. They are not learning the great lessons of obedience, honesty, industry and thrift that lie at the foundations of character and good citizenship. The problem of the delinquent child is still to be solved. It is one of the most serious problems of our times.

The period covered by this report has been characterized by a very healthful increase of interest in the welfare of backward, truant and delinquent children. This quickening of interest seems to have been wide spread. Every state in the union has felt the new impulse. It has been noticeably strong in Wisconsin. Our juvenile courts are working more and more efficiently as their place and function in our judicial system become more and more clearly defined. We have more and better truant officers. There is an increasing interest in our truancy and child labor laws, and a stronger disposition to enforce them. In many ways the interest of our people is centered upon the children with a promise of a decrease in the number of backward, truant and delinquent. This institution has shared in

---

*Wisconsin Industrial School for Boys.*

---

the benefits of the general increase of interest and greater definiteness of purpose. By chapter 50, laws of 1905, the age of commitment has been changed. Under the old law, boys over 10 years and under 18 years of age might be committed. Under the new law boys over 8 and under 16 may be committed. The good results of the change are already apparent. The school is relieved from the care of a large number of young men of strong criminal tendencies, many of them of bad criminal records. It is not wholly relieved from the care of this class of young men, as many that go wrong while out on parole are sent back by the courts or brought back by the authorities of the school for another term of detention. The number of young men of this class, however, is much smaller than formerly, and their influence much less potent. It is much easier to shield the younger boys from their evil companionship.

Under the new law, young boys born in bad neighborhoods and familiar from babyhood with vice and crime may be rescued two years earlier from their evil environments. Every human being has a right to his childhood. These young boys may now get a larger remnant of the childhood out of the most of which they have been defrauded. They have a better chance to retrieve their false start in life before their habits have become too strongly fixed.

This institution is becoming,—as it should—more and more a home and school, and less and less a penal institution. Its function and the function of the Wisconsin State Reformatory are becoming better differentiated. In caring for a delinquent child the controlling consideration is what is best for him,—not the only consideration, but the controlling consideration. In dealing with an adult, or adolescent criminal, the controlling consideration may be what is best for society in its relations to him. It is not wise policy to attempt to do in Waukesha the work that can be done better in Green Bay, nor to at-

---

*Superintendent's Report.*

---

tempt to do in Green Bay the work that can be done to better advantage in Waukesha.

By the same act, the authority to commit boys to this school, has been taken away from justices of the peace and vested exclusively in courts of record. The records of this school show that very many boys have been sent here that ought to have been kept at home. The judge whose duty it is to determine what shall be done with a vagrant, incorrigible or criminal boy must be a man of high intelligence, keen sense of justice, sound judgment and extensive special judicial experience. He must be able to make due allowance for the effervescence of boyish spirits, and for boyish thoughtlessness, impulsiveness and mischievousness, and to determine with a good degree of certainty in what cases "the morals and welfare of such child manifestly requires that he should be committed" to this school. The change in the law makes it more difficult to commit a boy and gives him the benefit of a higher order of judicial ability.

Chapter 444, laws of 1905, makes it a misdemeanor, punishable, upon conviction, with fine or imprisonment for any parent, guardian or person having the custody of a delinquent child to cause, encourage or contribute to his delinquency. Many boys have been sent to this school for larceny and other crimes to which they have been incited by their parents. Not all the punishment for the sins of the parent should be visited upon the children. There is now a plain and open way to the punishment of the delinquent father. The court, in a proper case, instead of punishing the delinquent father, may suspend sentence and put him on probation. This legislation is in the right direction. The parents of the boy are his natural providers, guardians, and correctors. In all possible ways society should hold parents to their best performance of these natural duties. There are too many parents willing to throw upon the state the care of their children under fourteen years of age. At fourteen the child escapes the compulsory attendance law and the child labor law. At fourteen he may be put to work.

---

His wages go to his father. There are fathers whose highest ideal of heaven on earth is to escape wholly the drudgery of manual labor and to be supported in comfort and idleness by their children. Chapter 444 makes it dangerous and more difficult for the father to impose upon the state the burden of the care of his son. Every effective means should be taken to prevent the father from living in idleness upon the earnings of his young son. Society should recognize and defend better the rights of the boy.

The new laws of 1905 have not been in operation long enough to show their full effect. They have been in operation long enough to show their beneficent tendency.

This school is for vagrants, incorrigibles and criminals. It should come to them with help; guidance, uplift, to the end that they shall cease to be vagrant, incorrigible, or criminal. I desire to make the purpose of this school so manifest in this work that it shall no longer be thought of as a place in which society wreaks its vengeance upon youthful incorrigibles in pains and punishments.

During the biennial period, the health of the boys has been remarkably good. There have been no deaths, no epidemics of contagious diseases, and very few serious illnesses. I hand in herewith, the report of the school physician.

The school has been prosperous. It is in session eight hours a day, all the year round. Every boy, with a few exceptions, attends school four hours a day, and engages in some form of manual labor four hours a day. There is plenty of time for play. I hand in the report of the principal.

PRINCIPAL'S REPORT.

---

Prof. A. J. HUTTON,

*Superintendent of the Industrial School for Boys:—*

I have the honor to submit to you herewith the biennial report of the department of instruction for the period ending June 30, 1906.

While there is still ample room for improvement in the department of instruction I am pleased to state that the changes that have taken place in our corps of teachers, during the past two years, have on the whole resulted in raising the standard. Both instruction and discipline have slowly but steadily improved and become more rational. Due to more definiteness in aim and preparation and greater sympathy between teachers and pupils an atmosphere of cheerfulness prevails in the class rooms. Interest in the work and desire to succeed or excel are displacing more and more the fear of punishment as incentives. Only financial limitations now hinder us in improving more rapidly the quality of the work, for the present compensation is not adequate to attract and hold the best talent. As long as continual changes take place we can never hope to reach the goal that continuity of service of the best talent insures.

## IMPROVEMENTS.

We have made a great improvement in the seating of the school rooms. In some rooms there was a mixture of double seats and desks with single seats and desks. Some rooms only had large seats and desks while others only had small ones while all the grades have pupils of all ages and sizes. All of the seats and desks in all of the rooms were badly cut up and defaced. We had all of the double seats and desks changed into

---

*Wisconsin Industrial School for Boys.*

---

single seats and desks, and all that were not too much cut up and defaced were scraped, sand-papered, filled and varnished. The worst ones were given new tops. All single ones were likewise improved. A number of broken ones that had been stored in the attic were also repaired. In this way we were able to reseat every school-room with seats as good as new without the purchase of a single additional seat and desk. All this work was done by the boys in the Manual Training Department under the direction of the Manual Training Teacher. By instruction in the proper care of property coupled with vigilance, appropriate penalties, and certainty rather than severity of punishment the school property has been preserved from further wilful and careless injury, and the boys have received training in habits that are essential to success in every trade, calling, and profession. The repairing and painting of all the walls and ceilings of the school rooms has had a marked effect in increasing the cheerfulness and in creating a proper school spirit.

## TEXT-BOOKS.

Most of the text-books that were in use when I took charge of this department besides being out of date were badly marked and cut up, ragged, torn, and out of binding. These have now nearly all been replaced by up-to-date text-books, which by the application of the same methods as in the case of the use of furniture have been kept from defacement, and destruction. This was by no means an easy task as every mark and injury in the old books continued in use side by side with the new ones, suggested the same treatment to the new ones, often not wilfully but by unconscious imitation.

The public school readers are very poorly adapted to our needs. Especially is this true in our lower grades, as the youngest of our boys even in the first grade are mostly above 8 or 9 years of age and associated with them are others 14 and 15 years and older. While these need easy reading material like all beginners the readers should contain subject matter

---

*Principal's Report.*

---

that is adapted to the wider experience and the greater maturity of our boys. The subject matter of the lower grade readers of the public schools is altogether too childish to interest boys of these ages, to hold their attention, and to stimulate them to mental effort. We have overcome the difficulty by the introduction of readers that deal with travel and adventure, biography and history, geography and industry. The principal ones being: *Around the World, Books One and Two; Fairbank's Home Geography; How We Are Fed; How We Are Clothed; Great Americans for Little Americans; American Life and Adventure; Pioneers of Land and Sea; Pioneers of the Mississippi Valley; Pioneers of the Rocky Mountains; Massasoit; American Leaders and Heroes; American Character Study Series: Samuel Adams, Otis, and Jefferson; American and English Classics.* Since these readers have been put into use there has been a marked increase in the interest in the reading lesson. It is further evident by the increased call for library books on biography, history, and travel, that a taste for this kind of literature is being developed. As the majority of our boys are of foreign parentage and have therefore had little chance of learning in their homes facts relating to the history and traditions of our country, its government, institutions, industries, and resources, it is evident that this line of reading most admirably supplies the needs for preparing them for intelligent and patriotic citizenship.

## SPELLING AND LANGUAGE.

As no spelling book was in use in this school, it is not surprising that this part of the work was lacking in system and method, and in spite of much effort to improve it continued decidedly unsatisfactory. It also occurred to me that the old traditional way of managing the Saturday writing sessions wasted a great deal of valuable time which might be employed to much better advantage. However, as the old system gave rest and relaxation to both teachers and pupils both were equal-

---

*Wisconsin Industrial School for Boys.*

---

ly well satisfied with it and were reluctant to have it replaced by anything that required effort and voluntary activity. We have now through the introduction of Frasier's Graded Speller and Spencer's spelling blank, together with the adoption of a uniform system and method of carrying on this work and stimulating it, found a way of improving the spelling, and of employing usefully much of the valuable time that was formerly wasted. Besides the regular daily oral and written spelling exercise, we have provided for a spelling-down contest on Fridays in each grade above the second as a review exercise on the work covered during the week, and every two weeks at the Saturday letter writing sessions for another spelling-down contest as a review exercise on the work covered during the preceding two weeks. As a further stimulus to the work before the end of the term there are to be held a series of contests in the Assembly Room between the forenoon and afternoon grades, in the same stage of advancement, to determine the championship for each grade, and as a culmination of the work, a final contest between the champions of the different grades to determine the championship for the school. Thus far the system has stirred up much interest in both teachers and pupils and has had a marked effect in improving the work in spelling.

By the introduction of Hyde's Language Book One, in the third and fourth grades, and the Webster-Cooley Language Series in all the higher grades the language work has become much more practical and systematic. We have laid particular stress on dictation, and the memorizing of choice extracts of prose and poetry, and upon proper instruction coupled with ample exercise in letter writing, and also upon thorough oral discussion as a necessary preparation to every written exercise. As so large a proportion of our pupils come from homes in which a foreign tongue is spoken, and as a natural consequence their limited and defective English vocabulary is made up mostly of the slang of the street it requires much drill along the lines indicated above, coupled with ample reading of well selected

---

*Principal's Report.*

---

library books to get these boys accustomed to the use of a tolerably fair English in their conversation and in their written work. Intelligent instruction coupled with persistent drill in the use of good English is one of the most important tasks that this school can perform.

## MANUAL TRAINING, SLOYD, AND MUSIC.

These three departments have all been carried on along lines similar to those stated in my previous report. The Manual Training and the music have both greatly improved in system, method, practicability, effectiveness, and usefulness. They have added to their popularity, and are in my judgment in a better condition than they have ever been before. In the overhauling of all the seats and desks of the school the Manual Training Department has done a valuable practical service to the school and the boys have gained skill and experience in the work of practical daily life. In seeing to it that only boys who are certain to continue in school at least six months or more are allowed to choose Manual Training work at promotion time, we have done away with the continual changes that formerly resulted through parole. Five divisions of 14 pupils each, or 70 of the larger boys are getting instructions in Manual Training during each six months term, and about the same number of smaller boys handled in two divisions receive training in Sloyd. Each Manual Training boy has two periods of two hours each per week while each Sloyd boy receives training daily for about one hour and a half.

In music each grade has two exercises a week of thirty minutes each in grade singing and all the forenoon grades meeting together and all afternoon grades likewise meeting together one exercise per week of about 25 minutes each in chorus practice. A choir of about fifty voices is maintained, and a brass band of about thirty pieces. The band has two hours of instruction daily and plays six times daily when boys march to and from the dining hall at meal time. The music instructor

---

*Wisconsin Industrial School for Boys.*

---

has during the past year given much attention to training the best singers in solo, duet and quartette singing. This special music has added much interest to the Sunday services as well as to our special entertainments.

## LIBRARY.

The entire library of 1215 volumes was overhauled, and re-catalogued this summer. All books not too badly worn were repaired, while those too badly dilapidated were discarded and replaced by new ones. The books were for the first time graded in the catalogue to assist both officers and boys in each family to select the reading material with more intelligence. Each family draws library books once in two weeks; the four families with odd numbers drawing one week, and the four with even numbers on the following week. Boys in the first grade are not allowed to draw library books.

## OTHER GOOD READING MATERIAL.

To provide the boys with good reading for Saturdays and Sundays that will keep them posted on current events the school subscribes for the following periodicals: three copies each of St. Nicholas, McClure's and the Cosmopolitan; four copies each of Our Times, and Collier's Weekly; eight copies each of Success, The American Boy, Judge's Monthly, Youth's Companion, Saturday Evening Post, and the Little Chronicle; sixteen copies of the Young People's Weekly; and one copy each of The Western Teacher, Wisconsin Journal of Education, Hoard's Dairyman, and The Wisconsin Farmer. Besides this we receive gratis The Catholic Citizen and a number of local papers from various parts of the state. It is hoped that this public spiritedness among our local newspaper publishers may not only continue among those that have shown themselves friends of the institution in the past, but that it may extend to many others.

All of which is respectfully submitted,

JOHN S. ROESELER,  
*Principal.*

## STATISTICAL FORM FOR STATE INSTITUTIONS

Prepared in accordance with a resolution of the National Conference of Charities and Correction, adopted May 15, 1906.

Name of institution, Industrial School for Boys.

Population.	1905.	1906.
Number of inmates at beginning of school year.	327	313
Number received during year.....	224	186
Number discharged during the year and left...	238	194
Number at end of year.....	313	305
Daily average attendance (i. e. number of inmates actually present) during the year.....	320	317
Average number of officers and employes during the year.....	52	52

## EXPENDITURES.

Ending June 30, 1905.	1905.	1906.
Current expenses.		
1. Salaries and wages.....	\$26,513 39	\$26,643 06
2. Clothing.....	4,229 87	3,550 94
3. Subsistence.....	21,179 57	,19,422 04
4. Ordinary repairs.....	1,319 54	3,168 97
5. Office, domestic and outdoor expenses ...	15,831 54	15,327 08
Total.....	\$69,173 91	\$68,112 19
Extraordinary expenses:		
Total.....		\$13,719 34

## Notes on current expenses;

1. Salaries and wages should include salaries of trustees or directors, if any.

2. Clothing includes shoes and also materials for clothing and shoes if they are manufactured in the institution.

4. Ordinary repairs include all of those which simply maintain the buildings in condition without adding to them. Any repairs which are of the nature of additions should be classed with "permanent improvements."

5. This item includes everything not otherwise provided for, e. g., furniture, bedding, laundry supplies, medicines, engineer's supplies, postage, freight, library, etc.

Superintendent, A. J. Hutton.

## WARDEN'S REPORT.

---

WAUPUN, June 30, 1906.

*State Board of Control,*

Madison, Wisconsin.

GENTLEMEN:—I beg leave to submit to your honorable body the twelfth biennial report of this institution, being for the period beginning June 30, 1904 and ending June 30, 1906. During this period extensive improvements have been made and several much needed additions to the buildings are now in process of construction. The legislature, by chapter 452, laws of 1905, appropriated \$58,000.00 for constructing new cell house, cold storage, storage reservoir, coal shed, reconstructing center building and repairing pump. Some of these improvements have been completed, the others are now being made.

### IMPROVEMENTS MADE.

A cold storage plant has been installed at the north west corner of the kitchen and under the prisoners dining room at a cost of \$4550.64. The ammonia refrigerating system is used and has proven entirely satisfactory. Separate rooms have been provided for dairy products, vegetables, bacon and smoked meats, scraps and fresh meats. The butcher shop has steel ceiling and tile floor and presents a neat, clean appearance.

Directly south of the cold storage, at the south west of the prisoners kitchen and dining room, a large, well lighted, airy room has been provided for the bakery. This room is fitted with steel ceiling and cement floor. A new Peterson brick oven has been built in which 275 loaves of bread can be baked at one time. The oven has proven a great fuel saver in comparison with the old, out of date oven heretofore used. The total cost of the bakery and oven was \$788.66.

---

*Wisconsin State Prison.*

---

For some time past it had been shown that we did not have sufficient electrical power. During the past year a new electrical unit has been installed with a modern switch board at a cost of \$7400.77. We now have sufficient electrical power for some time to come.

A new double wall, with a double gate, has been constructed at the south corner of the yard and forms an entrance for bringing cars from the Chicago, Milwaukee & St. Paul tracks within the prison yard. The walls were built of concrete, the total cost, including gates and locks, was \$911.10.

IMPROVEMENTS NOW BEING MADE.

A new coal shed 112 x 60 feet is now being constructed directly south of the boiler house. South of the coal shed and near the south wall a turnable has been placed, connecting with the tracks and car entrance before mentioned, so that in the future we can unload coal within twenty feet of the boiler house. The outside walls are being built of re-inforced concrete, the floor will be of cement. When completed we will have storage capacity for a year's supply of coal. A track has also been laid to the warehouse of the Paramount Knitting Co. (the contractors) so that their carload freight can be set opposite their warehouse where they can do their own unloading. Heretofore it has required 14 to 16 men to unload cars and handle freight and coal. When the improvements are completed a saving of from 8 to 10 men will be made. The old coal shed at the middle of the west wall can be used for storage purposes which are very badly needed.

The third floor of the main building is being entirely rebuilt. The inside walls have been removed and steel trusses placed to support the roof and tower. The chapel will occupy the entire third floor and will comfortably seat 800. When completed we will have a large, well lighted room with better facilities for handling the men and enforcing discipline. The platform or stage will be 30 x 22 feet, large enough to admit

---

*Warden's Report.*

---

our outside friends who in the past have provided us with entertainments and assisted in making our chapel exercises attractive to the prisoners. A gallery 80 x 15 feet has been built in the rear to accomodate visitors from the city and state. The gallery will also have sufficient room for the women prisoners. The chapel is expected to be completed by January first next.

The second floor of the main building, a part of which has been used for officers sleeping quarters, and the remainder for prisoners sleeping quarters, is also being re-constructed. When completed it will be occupied entirely by rooms for the officers residing within the prison. There will be ten large, well-lighted bedrooms, each room having at least one outside window. There will also be a reading room, recreation room, toilet and bath rooms and a large lounging room.

The new cell room which will be completed in the near future is a much needed improvement. Owing to the increasing prison population about 75 men have been sleeping in the corridors of the cell house and the old hospital quarters on the second floor of the main building. The new cell room will extend in a northwesterly direction from the main building, between the prisoner's dining room and the north cell room. The building will be 178 x 60 feet, the outside walls of pressed brick and the floor of cement. The cell block will consist of 200 cells, to be built of re-inforced concrete, each cell ten by five feet by seven feet six inches high, fifty cells on each tier. The cells will be modern in every respect, each cell containing a closet and lavatory making the sanitary conditions the best obtainable. The building of the new cell room necessitated some changes on the west side of the first floor of the main building. The deputy warden's office and the officers dining room will be extended to the stairway of the prisoners dining room.

## RECOMMENDATIONS.

I would recommend the purchase of 160 acres of land adjoining our farm, which would enable us to raise all the vegetables consumed by the inmates and pasture enough cows to furnish us with what milk is needed. This land could be bought for in the neighborhood of \$100.00 an acre.

The matter of extending the walls west should receive some consideration in the near future. The yard is now entirely filled with buildings and it would be impossible to provide more room for shops or other buildings. Owing to the increasing prison population each year it is only a question of a few years before additional workshops will be needed.

I would recommend that an addition be built to the female prison to provide quarters for a kitchen, dining room, laundry and bath room. The estimated expense for this addition is \$10,000.00.

Attention is called to the very considerable increase in earnings of the institution, brought about by the more favorable contract for labor made in 1903 and in part from the fact that the industry now established uses a larger proportion of the men than the industry it replaced. There still remains, however, something like 50 or 60 men of inferior physical and mental ability that could be employed in some industry not requiring a high grade of labor and who might be made to add considerably to the earnings of the institution.

The discipline of the institution is first class and I am indebted to all the officers for the efficient manner in which they have discharged their duties and aided me in having the rules governing convicts complied with.

In conclusion I wish to express my appreciation of the courtesy and consideration accorded me by your honorable body and to thank you for your aid and advise so cheerfully given.

Very truly yours,

HENRY TOWN, *Warden.*

PHYSICIAN'S REPORT.

*To the Honorable State Board of Control:*

Madison, Wis.

GENTLEMEN:—I herewith respectfully present the 12th biennial report of the Medical Department of the Wisconsin State Prison.

I wish to thank the State Board of Control, the Warden, Deputy and officers of the institution for their help and courtesies extended to me in my work in this department.

J. F. BROWN,  
*Prison Physician.*

TABLE No. 1.

Total number of persons July 1 1904.....	620
Total number received from July 1, 1904 to June 30, 1906.....	587
Total number discharged from July 1, 1904 to June 30, 1906.....	569
Total number treated in hospital from July 1, 1904 to June 30, 1906.....	522
Total number treated in dispensary from July 1, 1904 to June 30, 1906.....	26,646
Total number of deaths from July 1, 1904 to June 30, 1906.....	21
Total number transferred to asylum.....	12
Monthly average number in prison.....	623 $\frac{1}{2}$
Monthly average number in hospital*.....	21 $\frac{3}{4}$
Monthly average number treated in dispensary.....	1,110 $\frac{1}{8}$

\*Including four attendants and six old men.

REPORT OF CHAPLAIN.

---

*To the Warden:*

In submitting this, my biennial report, I have but little that is new to offer. In the department presided over by me innovations are a rarity, each year bring largely a repetition of the preceding ones, so far as routine is concerned. We are striving earnestly and conscientiously to fulfill the province of our office, and while sometimes discouraged with what appears to be a lack of progress desired, we are more often hopeful and encouraged with ultimate success in our chosen labor.

The attendance at Chapel exercises comprises practically, all of the inmates of the prison, who appear to give undivided attention to the services.

Our Christian Endeavor class has been attended by over one hundred inmates, who appear to manifest a sincere desire to fathom divine truths. On account of remodeling the Chapel and school room, we have been inconvenienced in this work for some time, but when the contemplated improvements are completed we will feel well compensated for the annoyance we have been subjected to.

Our school work, with somewhat increased equipment, has developed more satisfactory results than at any previous time. The close attention prevailing and the evident desire on the part of the scholar to acquire knowledge is manifest at all times. Many in attendance at the school are advanced in years and have had abundant opportunity to realize the handicap attendant upon a lack of education, and as a consequence this additional incentive prompts eagerness to learn.

In the Prison library we have 3230 volumes—2250 of which are in the English language,—400 in German, and the re-

mainder in Scandinavian and Polish, an appropriation by the legislature of 1902, permitting a much needed purchase of the better class of reading matter and making possible the acquisition of Scandinavian and Polish books, which heretofore we were unable to secure. Nearly 80 per cent of the inmates are constant readers, fiction of course being the favorite, although books of a scientific nature are continuously in demand. We feel very much the need of an annual appropriation, even though the amount be small, to enable us to purchase current books of a meritorious nature, which we are unable to secure.

We are indebted to many friends and charitable and religious societies throughout the state for a large amount of miscellaneous reading matter sent to the Prison for the use of the inmates, all of which is duly appreciated and fills a want which would otherwise be difficult to supply.

While in some directions progress has appeared to be inappreciable, I believe substantial advances have been made and while better equipment in some branches, particularly in school supplies is much desired, we are hopeful that our efforts will bear the desired fruit, and look to the Father of all for the guidance and help which alone can achieve the goal we seek.

Respectfully submitted,

July 1st, 1906.

G. W. PEPPER.

STATISTICAL FORM FOR STATE INSTITUTIONS.

Prepared in accordance with a resolution of the National Conference of Charities and Correction, adopted May 15, 1906.

Name of Institution, State Prison.

Population.	1905.	1906.
Number of inmates at beginning of year.....	621	607
Number received during year.....	290	297
Number died and discharged during year.....	304	265
Number at end of year.....	607	639
Daily average attendance (i. e. number of inmates actually present during the year).....	607	640
Average number of officers and employes during year.....	43	45

EXPENDITURES.

Ending June 30, 1905.	1905.	1906.
Current expenses:		
1. Salaries and wages.....	\$31,593 92	\$32,927 35
2. Clothing.....	5,330 63	6,378 80
3. Subsistence.....	36,739 16	40,152 91
4. Ord navy repairs.....	2,511 24	2,434 14
5. Office, domestic and outdoor expenses...	32,640 97	32,285 17
Total.....	\$108,815 84	\$114,179 37
Extraordinary expenses:		
1. New buildings, lands, etc.....	\$14,259 41	
2. Permanent improvements to existing buildings.....	14,259 41	
Total.....	\$14,259 41	

Notes on current expenditures:

1. Salaries and wages should include salaries of trustees or directors, if any.
  2. Clothing includes shoes and also material for clothing and shoes if they are manufactured in the institution.
  4. Ordinary repairs include all of those which simply maintain the buildings in condition without adding to them. Any repairs which are of the nature of additions should be classed with "permanent improvements."
  - 5 This item includes everything not otherwise provided for, e. g. furniture, bedding, laundry supplies, medicines, engineer's supplies, postage, freight, library, etc.
- Warden, Henry Town.

## SUPERINTENDENT'S REPORT.

---

SPARTA, Wis., June 30, 1906.

*To the State Board of Control:*

GENTLEMEN:—Herewith find the tenth biennial report of the State Public School for Dependent and Neglected Children, ending June 30, 1906.

### PROVINCE OF THE SCHOOL.

This school was created by act of the legislature of 1885, but not formally opened for the reception of children until in November 1886.

The school was primarily established after the great Bernardo schools in London, also after the first school of its kind in this country, located at Coldwater, Mich.

The above schools were opened about 1875 and the officers of our school at Sparta had the benefit of the experience of the great London school and the school at Coldwater as well.

The first child entered the Sparta school on November 27th, 1886. He is now grown to manhood and the care and training he received during the years he was under the charge of this school, contributed largely to the manhood and good citizenship he attained to some years since.

Up to date 2921 children have been received at this school which shows an increase over my report of two years ago of 280.

Many of these children came from homes where they were with parents of careless, shiftless habits, (if not of crime) and it has been a wonderful change to them, to step from neglected conditions to a place where cleanliness and godliness prevail. In a great majority of cases the children are quick to respond to their changed surroundings. But, I cannot say that all are changed, but it is believed that more than eighty-five per cent grow into new lives.

---

*State Public School.*

---

With this record, there is no more essential work in the broad fields of humanity and charity, than that of rescuing normal children from degrading habits and surroundings, where the next step is crime. In fact it seems that such schools are measures of economy to the commonwealth, as they prevent crime, rather than permit children to go on in vicious lives until prisons, almshouses or hospitals become the last resort.

After seven years of close and attentive work in this school, I am more and more convinced that the system is the very best for caring for dependent and neglected children.

OFFICERS AND EMPLOYEES.

One of the most responsible duties of every Superintendent is the selection of officers and employes. He should never let any personal friendships enter into his selections. Dignified, competent, conscientious, humane and industrious helpers, will do more to make an institution successful than any other factors. The superintendent who is a good judge of human nature, one who will put all politics and personal friendships behind him, and make his selections solely on the good of the institution, has met and solved some essential problems in carrying on the work.

When I came to the State School in 1899, I found that my predecessor had a number of good people who had served efficiently with him. These good people continue in the good work they were doing and today there are three who have served continuously during eighteen years, one seventeen years, and one fifteen years, while a number have been in the employ of the school for eight and nine years. Comparatively few employes have been discharged, and none except for the good of the service. In this way we have efficient employes, and I believe they feel safe in their positions as long as they perform their duties to the satisfaction of the Board of Control and the Superintendent in charge.

PRACTICAL MANUAL TRAINING.

---

*State Public School.*

---

## OUR AGENTS.

Mr. A. F. Brandt commenced his duties in the school Sept. 1st, 1897. He had been a teacher and county superintendent of schools, both conducive to an understanding and appreciation of child life.

Miss Elsie Loomis, the agent for the southern portion of the state commenced her work in the State School April 1st, 1900. She had taught and besides had valuable experience in child life in the state institution at Chippewa Falls. She entered upon her work with due appreciation of its importance.

I need not inform the Board of Control of the excellent work of these agents, but for the information of others I am glad to state that they are earnest, industrious, and conscientious in the discharge of their duties. Their work is laborious in the extreme, but the "cries of the children" and their necessities are ever sounding in their ears, and they heed them. Long rides on the cars are followed by carriage drives over all roads, at all seasons of the year, and many times darkness overtakes them when they are far from any hotel, or any place where they can pass the night.

The agents report daily to the superintendent on postal cards furnished for the purpose as follows:

Date.....1906.

*To the Superintendent of State School:*

I am today at .....

I will be at.....Hotel, at.....  
on the.....inst.

Signed

.....  
Agent.

Thus giving the Superintendent definite information of their whereabouts, that he may wire them in an emergency case, liable to arise at any time.

Our agents are on the road nearly all of the time. Their

*Superintendent's Report.*

specific duties are to place children, to visit homes and accept or reject applications for children, and to visit children who have been placed in homes. They are expected to visit every child at least twice a year. But some children require more visits than others, so the regulation is not rigidly adhered to.

When the agents return to the school they report in writing to the superintendent on blanks, as follows:

REPORT OF VISIT.

.....	Agent.	Date.....
Name of child .....		
Name of Guardian .....		
Post office address .....		
Child's Health .....	Attendance at school.....	
Conduct .....	Home Surroundings.....	
Remarks .....		
.....		
.....		

These visits are duly recorded.

This enables the superintendent to keep in touch with the child, to understand something of his life in his home, and especial cases are fully discussed by agents and superintendent.

The great problem in the care and training of these unfortunate children is in the home, rather than with those in the school. With those in the school their care and treatment is carefully inspected by all employes, by the Board of Control and hundreds of visitors every year. But the child in the home needs the watchfulness of the agents, because he has no official protection beyond the school.

HEALTHFULNESS OF THE CHILDREN.

The school has been fortunate in escaping epidemics. No detention cottage is used, but the child is carefully watched and extra precautions taken to remove him to the hospital, should there be the slightest indication of contagious symptoms during the first two weeks after his arrival. But the utmost caution will not always prevent.

---

*State Public School.*

---

As an illustration, a little fellow three years of age was brought to the school in the winter of 1906. Within a day he came down with the measles. He was placed in a room alone, but in due time other cases broke out in the school and for a few weeks every one was kept busy caring for the children.

This was the first epidemic in seven years, and on the whole our children enjoy far better health than the same number in homes. This is the result of regular habits, and the precaution taken by our excellent physician, who is competent and alert to insure good health in the school. In this he is ably assisted by the matron of the hospital, a trained nurse of acknowledged skill, who is ever ready and willing to do all that can be done for the children.

#### HAPPY CHILDREN.

Although away from parents, oftentimes from all relatives, our children are very happy. They enjoy their every day life of school and recreation, and look forward to their festive days with keen anticipation. All officers of the school devote their time to these holidays to give the children perfect enjoyment.

The Fourth of July is duly celebrated by the children, with processions of boys in improvised uniforms, with drums beating, flags flying and the most essential firecrackers.

A good dinner is served, then in the afternoon candy and lemonade are provided, and the day is brought to a close by the fire works in the evening. No children in the state are happier than those on the State School grounds on the Fourth of July.

During the last few years the annual picnic in August has been one of the features of the school, and is most satisfactory to the children. Many are heard to exclaim "this is the best day of the year".

About nine o'clock A. M. on the eventful day, the "whole family" with teams for those who cannot walk, take departure for a beautiful grove on the farm where the festivities occur. The day is passed in games, contests for small prizes and of course a picnic dinner is enjoyed by all.

FOUR OF OUR BABIES IN GOOD HOMES.

---

*State Public School.*

---

The annual county fair is enjoyed by all the children who are able to go. They often have exhibits of sewing, cooking, darning from the Domestic Science Department and vegetables from the garden, thus giving the children a personal interest in the fair.

Hallowe'en parties and Thanksgiving day are thoroughly enjoyed by all the children.

The great day of winter, Christmas, is duly observed. A Christmas tree is well supplied with presents, at least two for each child, some receive more as relatives and friends remember them.

In this connection I wish to notice the annual Christmas box that is sent by the teachers and students of the Milwaukee-Downer College. For many years this box has been as regular as the day itself, and has contributed much happiness to the children. It is indeed a kind and generous remembrance that pupils and officers of the State School are thankful for.

PER CAPITA STATEMENTS.

Some people are exceedingly fond of making figures for per capita expenses. No method could be more unjust and unfair. They simply take those in the school and give no credit whatever for those in homes. Last year we cared for more than 1,000 children. Now take your per capita statement: an annual appropriation of \$38,000 divided by 1,000 gives \$38 per capita for the year. To carry it to the extreme about seventy three cents per week and yet this is a fairer statement than to take just those who are in the school, or the average number in attendance.

The fact remains that the State Public school cares for more than one thousand children each year, at an actual cost of seventy three cents per week for each child and costs the state less per capita than any other state institution.

FARM AND GARDEN.

The farm and gardens of the school are helpful to the boys

---

*Superintendent's Report.*

---

as a means of instruction and most profitable in results. On the farm we raise rye, oats, corn, hay, potatoes, mangels, beans, and in fact everything for vegetable food for man and the animals.

We have a herd of twenty-five fine Holsteins, which furnish an ample supply of milk for the children. We also raise pigs, turkeys, geese, ducks and chickens.

For the last few years the farm has been under the direction of the boys' supervisor and he has brought it to an excellent condition. And now our farm produces perhaps on an average five times as much as it did six years ago.

Our garden is also a source of great revenue. Our gardener is one of the best in the state and takes a personal pride in what he can produce for the officers and the children. He furnishes a bountiful supply of all vegetables and many bushels of strawberries, raspberries, black berries and currants. The children have their full share of all of these fruits and thoroughly enjoy them.

#### MANUAL TRAINING.

The whole country is suffering from a scarcity of help for the homes and for the farms. The wages paid indicate this. Many children are taught nearly everything from books to the exclusion of work, to instruction in household duties, to work with the hands. Boys are taught just enough about tools to create a desire for a trade and thus a good farmer may be spoiled. While our boys are at the school, which is an indefinite time, they are taught farming. How to prepare the soil, something of fertilizers, how to seed, care for the harvest, the care of stock and how to handle a team.

Equally important our girls are taught sewing, plain cooking and many things that will fit them for domestic service. This work is done in our domestic science department and is very valuable to the girls who come from homes where the mother is ignorant and careless in housekeeping.

Our manual training is directly practical, and I feel that the

---

*State Public School.*

---

necessity of preparation for domestic life is the most valuable training our children can have.

While some of our pupils have gone into higher institutions, high schools, normal schools and the University to prepare for professional life, the great majority are preparing for domestic service. And I believe they and their instructors have chosen wisely for them in encouraging them in this line of work.

#### OUR TEACHERS.

The school employs five teachers for the following departments: grammar, intermediate, primary, Kindergarten and domestic science. Our teacher in the grammar room has been in the school fifteen years. The teacher of the intermediate, seven years, primary, nearly seven years, kindergarten, two years, and the teacher of domestic science, eight years. These years of service are mentioned only to show that officers and employees are not removed with changes of administration, but are continued as long as their services are acceptable.

While the frequent changes in pupils and the fact that the brightest and best pupils are taken to homes soon after their arrival, are not conducive to the very best results in school work, nevertheless the teachers do the very best they can for all committed to their care.

They are faithful in the work and maintain excellent discipline with their instructions. Boys and girls write to the Superintendent years after they leave school and express their gratitude to faithful instructors who taught them to seek for knowledge even after school days were over.

#### THE COTTAGE LIFE.

The matron of a cottage, the "Mother" of thirty boys or girls, occupies a most responsible position. Not alone for provisions for physical needs, but to train in habits of discipline and industry, in morals and manners, in something lasting for the life beyond the school.

The essential qualifications for a good matron cannot be de-

LUNCH TIME IN THE NURSERY.

---

*Superintendent's Report.*

---

terminated by any civil service examination or by any test beyond general appearance, with a fair knowledge of children. The Superintendent feels that the selection of matrons is one of his most responsible duties. Many times he has rejected four or five applicants who might have passed an examination for the position. There are no schools for matrons, as there are for teachers. Nature has to give them the qualifications and these can never be determined, positively, without actual trial. Whenever trials have resulted in failures, changes have been made, and today we feel that our cottage matrons compare favorably with matrons in other institutions, that they are earnest and conscientious in their work and they impress their charges with the best ideals for life.

#### WHAT THE SCHOOL NEEDS.

In 1899 and for some previous terms the biennial appropriation was \$85,000. There were also special appropriations for particular purposes, thus leaving the whole of the regular appropriation for current expenses.

At that time commodities of all kinds were from twenty-five to thirty-five per cent lower than during the present biennial term. In the face of this fact, however, our present appropriation was reduced by the legislature to \$76,000. Strict economy has been practiced in every possible way, except in food, clothing and general care of the children. Those standards have been maintained, but in improvements and repairs we have been forced to do as little as possible.

To high price and reduced appropriations, the number of children received in 1906 has been greater than in any year in the last decade. All these have contributed to the deficit that will be shown on July 1st, 1907.

So we need first of all an appropriation of \$90,000 for the ensuing biennial term.

Some of our special needs are a good coal house. One to take the place of the old house which burned in 1904. A tem-

SCENE IN GIRLS' COTTAGE.

---

*State Public School.*

---

porary shed has done very poor service and should be replaced by a good house. One that will cost at least \$3500.

A boys cottage should have a pavillion erected for use in rainy days, for an opportunity for the little fellows to get good air and exercise under cover. This will cost at least \$600, and is most essential and necessary in preservation of health.

The institution has never had a green house. One would cost \$800 and would pay for itself in a few years, in starting early seeds and vegetables.

After twenty years of service nearly all roofs of buildings need new shingles. This work should be done next season, and in my opinion will require \$500 for that purpose.

Our farm machinery is not well protected from the elements. We have done the best we could by placing it under sheds, but it needs better care. A good shed could be erected for \$800 and it would be an economical investment.

#### IMPROVEMENTS.

The condition of our finances has given little opportunity for necessary improvements. However the special appropriation of 1905 will pay for the tunnel, 1280 feet long, which will connect the hospital with the central heating plant.

The tunnel is now building, and we hope to complete it and make the necessary connections within the next two months.

We are also ready to put in a modern bake oven; work will be commenced on July 5th.

The oven is very much needed and will be in the line of economy when we consider the necessity for it. The old oven did not have sufficient capacity, would not do good work, consumed quantities of fuel and was unsafe.

#### RESIGNATIONS.

On May 1st, 1906, Mr. Arthur DeGroff resigned the position of Assistant Steward, after nearly eleven years service.

Mrs. DeGroff, stenographer, who had been in the school since March 1896, resigned at the same time.

---

*Superintendent's Report.*

---

Miss Lola Billings resigned as teacher in the intermediate department, to take effect July 1st, 1906.

And Miss Helga Toft, kindergartner, resigned at the same time. Mention is made of these resignations in this place, to give opportunity to the superintendent to bear testimony to the loyalty and efficiency of all of these officials and to state that he was very sorry to lose them from the work they have done so well.

## CONCLUSION.

To the members of the Board of Control, who by their co-operation and direct practical suggestions have rendered valuable assistance in the affairs of the school, I wish to assure of my appreciation and gratitude.

Likewise all officers and employes are entitled to thanks for their faithfulness in their work in assisting in the great work the institution has to do.

Respectfully submitted,

M. T. PARK.

*Dietary.*

---

## DIETARY FOR ONE WEEK.

Although high prices have prevailed on all eatables during the last biennial period, our children have been well fed. The food has been of the best quality, as all meats, vegetables, bread and butter, have been of the same kind in every respect as those furnished officers and employes.

The following dietary was taken during the fall. The list varies, of course, during the year. While there may not be as many luxuries as some children have in homes, the children have all they need at all times. Thanksgiving day, Christmas, and other holidays, bountiful dinners are served, such as may be seen in the best homes on such occasions.

*Monday.*

Breakfast—Oatmeal, meat, potatoes, milk, bread and butter.

Dinner—Roast beef, potatoes, gravy, pickles, muskmelon, bread and milk.

Supper—Tomatoes, bread and butter, cold meat, milk and biscuits.

*Tuesday.*

Breakfast—Oatmeal, milk, potatoes, bread and butter.

Dinner—Boiled meat, gravy, potatoes, pickles, boiled cabbage, milk, bread and butter.

Supper—Cold meat, tomatoes, apple sauce, milk, bread and butter.

*Wednesday.*

Breakfast—Oatmeal, potatoes, milk, bread and butter.

Dinner—Roast beef, potatoes, gravy, stewed tomatoes, pickles, milk, bread and butter.

Supper—Crabapple sauce, milk, bread and butter.

---

*State Public School.*

---

*Thursday.*

Breakfast—Oatmeal, hash, milk, bread and butter.

Dinner—Roast beef, potatoes, gravy, Lima beans, pickles, milk, bread and butter.

Supper—Cold meat, milk, cookies, syrup, bread and butter.

*Friday.*

Breakfast—Oatmeal, potatoes, hash, milk, bread and butter.

Dinner—Celery soup, meat, potatoes, pickles, crackers, bread and milk.

Supper—Cold meat, peach sauce, milk, bread and butter.

*Saturday.*

Breakfast—Oatmeal, potatoes, meat, milk, bread and butter.

Dinner—Meat, potatoes, pork and beans, pickles, milk, bread and butter.

Supper—Cold meat, prunes, milk, bread and butter.

*Sunday.*

Breakfast—Oatmeal, potatoes, milk, bread and butter.

Dinner—Frankfurt sausage, potatoes, milk, sweet pickles, bread and butter, apple pie.

Supper—Peach sauce, meat, beans, milk, bread and butter.

Hominy, rice and corn meal are served at various times, but the children prefer oatmeal for breakfast. Puddings, cake and fruit are also served from time to time.

## EXPENDITURES.

Ending June 30, 1906.	1905.	1906.
<b>Current expenses:</b>		
1. Salaries and wages.....	\$17,032 57	\$17,236 50
2. Clothing.....	2,227 57	2,494 20
3. Subsistence.....	9,864 58	9,805 01
4. Ordinary repairs.....	979 33	1,154 01
5. Office, domestic and outdoor expenses...	11,879 73	11,811 59
Total.....	\$11,983 78	\$42,501 34
<b>Extraordinary expenses:</b>		
1. New buildings land etc.....	.....	.....
2. Permanent improvements to existing buildings.....	\$1,500 00	.....

## Notes on current expenses:

1. Salaries and wages should include salaries of trustees or directors, if any.

2. Clothing includes shoes and also materials for clothing and shoes if they are manufactured in the institution.

4. Ordinary repairs include all of those which simply maintain the buildings in condition without adding to them. Any repairs which are of the nature of additions should be classed with "permanent improvements."

5. This item includes everything not otherwise provided for e. g., furniture, bedding, laundry supplies, medicines, engineer's supplies, postage, freight, library, etc.

## SUPERINTENDENT'S REPORT.

CHIPPEWA FALLS, July 1, 1907.

*To the Honorable, The State Board of Control:*

GENTLEMEN:—I herewith submit this, the fifth, biennial report of the Wisconsin Home for Feeble Minded.

The movement of population has been as follows:

In Home July 1st, 1904.....	618
Admitted July 1st, 1904 to June 30th, 1905..	80
Returned .....	68
Discharged .....	8
Eloped .....	38
Died .....	11
Went out on visit .....	45
Remaining June 30, 1905 .....	665
Admitted July 1st, 1905 to June 30th 1906..	53
Returned .....	69
Discharged .....	6
Went out on visit .....	50
Died .....	19
Eloped .....	26
Remaining June 30th, 1906.....	686

This increase in population is not due to increase in capacity, but, anticipating the opening of the new building for girls, we have crowded our departments beyond the limit of comfort, and beyond what would be a safe arrangement in severe weather, when we would have to depend on internal ventilation, and be unable to open windows freely. This crowding has occurred against our better judgment, for the purpose of relieving the most urgent applications, some of which have been waiting, under very distressing circumstances, for several years for relief.

---

*Home for Feeble-Minded.*

---

The general health of our wards has been good. Although we have nearly seven hundred of a class especially prone to lung trouble, there is only one case of tuberculosis at present in the Institution.

Our schools have made excellent progress. The interest displayed in this work by visitors, and the substantial recognition given it by disinterested committees at Expositions, have been a source of much gratification to our teachers, and are a strong incentive to increased efforts.

Two popular, but erroneous, ideas exist in the minds of many people in regard to the results of our training. One is that, by some means, we can effect a "cure" of feeble-mindedness, and, in a stated period, send such cases to their homes and their friends, "restored." No one experienced in this work can honestly make such a claim. Our mission is to find along what special lines we may develop our children to advantage, omitting such branches as are beyond their natural capacity. It is rare that, in any improvable child, a marked degree of success cannot be obtained along some line. This success leads to the second erroneous impression; that they should be sent out from our care, on their own responsibility, to make their own way.

The public forget that, to enable one to live congenially in modern society, there must be more than a reasonably cultivated memory. The individual must possess reasoning power sufficient to maintain himself, and those who may become naturally dependent upon him and to recognize the personal and property rights of his neighbors; and sufficient will power to control his natural instincts, and subordinate them to the rules governing the community at large.

It is not sufficient that they should know right and wrong; that is simply an act of memory. Many of our so-called moral imbeciles can recite the different right and wrong things, and principles, with the accuracy of a phonograph, and with hardly more appreciation of their actual value. This is the distin-

BOYS DRILL.

---

*Home for Feeble-Minded.*

---

guishing difference between the wild and mischievous boy, and the moral imbecile, both of them know which is right and wrong. The purely mischievous boy, under teaching and discipline, will improve. With the moral imbecile, with any amount of superficial intelligence, his instincts will always be stronger than his will; and even with his efforts, the weak will go down before the strong temptation with unfailing regularity. The good of society, as well as his own happiness, demands that he be kept under discipline no more strict than that which obtains in the ordinary boarding school, where he can be kept away from injurious temptation during the prolonged period of his mental childhood.

It is better that this class should be so guarded and protected than that they should go out into social conditions where they will remain continuously public offenders, if not actually dependents.

The work of our schools may be briefly described, then, as making them proficient in some useful occupation, teaching them to read and write, if possible, for their own comfort and enjoyment, striving unceasingly to impress on their minds the real value of correct conduct, thus broadening their lives and making them as happy as possible, through the only real source of happiness—consciousness of being useful.

A valuable adjunct to our school is the farm. This is a truly important factor in our system of manual training. It continually grows in extent and value. A tract of wild land is cleared each year and put under tillage. A class of boys engage in this work that can be taught nothing else. It is a most excellent work for our epileptics, who are benefited by the active, out-of-door life. The moderate hours of work appear to diminish the frequency of their attacks.

The work of replacing the ruined steam pipe boxes with concrete tunnels has progressed rapidly, and will be completed this summer. Most of the stone has been quarried by our boys, and they have given much aid in the construction, materially reducing its cost.

CLARK-ENG-MII

CARTAGE.

*Home for Feeble-Minded.*

---

The apple orchard, purchased by the Board, is beginning to bear well. Not over two per cent of the trees have been winter killed. This promises not only to be a profitable investment, but demonstrates that this fruit may be raised in this section of extreme temperature.

The demand on our laundry began to exceed its capacity for work; but the increased machinery installed, and the extension of the ironing room, according to the original design, will enable us to handle this work very comfortably.

Our new dormatory for girls will probably be in use before this report is in print. This will not only enable us to admit a portion of the girls, now on our "waiting list," but will also enable us to devote one of our cottages to the exclusive use of epileptics, giving them their own dining room, and enabling us to guard their diet—a most important factor in the care of this class.

First, and principal in our wants for the future, is more room. No other dependent class needs it more, and no other dependent class in this State wants for it. One extension very much needed is a farmhouse for boys and a dairy barn. From our wild land, as previously mentioned, our boys are rapidly clearing a dairy farm. This should be stocked with cattle. We have an admirable site for barn and farmhouse, directly across from our powerhouse. A small water pipe could be carried over with little expense, supplying an ample quantity of our pure spring water for dairy uses. The house should be made for farmer and wife, with a day room and sleeping room for twelve boys. I would not advise that a dining room be furnished for the boys, because they can readily go to the general dining room, which would place them under direct supervision three times a day. The proximity of this farmhouse to the office would enable us to give it the same supervision that the other cottages receive. I would respectfully suggest that the Board give this matter their attention at an early date.

In regard to the general extension, I beg to report that, out

25—S. B. C.

DORMITORY.

From this list, epileptics have gone without care, where the parents have been personally unable to provide it; weak girls have borne the shame of illegitimate motherhood, and added their blameless offspring, with a reasonable certainty of transmitting their own infirmity with them, as an unwelcome addition to our population. These are "undesirable immigrants,"

SCHOOL HOUSE.

---

*Home for Feeble-Minded.*

---

whose coming into our community is wholly preventable. A harmless imbecile woman recently admitted, had given six of these unfortunates to the public before she was given the protection which she should have been given years ago. Idiots have burdened, and often crippled, their unfortunate families, robbing their normal brothers and sisters of the mother's care and training.

All the blind, who ask the privilege, are educated to the limit of their capacity.

The deaf are taught in their own homes, in many instances, and all are at liberty to avail themselves of the broader education furnished by the large teaching staff at the State School.

The wants of the insane are almost anticipated, a new institution arising as soon as needed, so that no insane person need go without care. Surely this nearly, or quite, as numerous class may ask one institution completed for its care.

Public economy demands such increase in provision. The high grade imbecile is prolific. This class do not remain unmarried. One woman frankly explained her third marriage by saying that she "had no other way of getting a living;" a statement most pathetic, as such marriages forecast little happiness and children are born weak and are trained by incapable parents into incapable men and women.

It should be remembered that, in three hundred feeble-minded, one hundred will probably be due to accidental disease occurring in well-born children, while two hundred will probably claim neurotic ancestry, and their birth should never have occurred. The state can do no better service to this rising generation than to give this class the care it needs from its hands, and to cut off this increase, so far as is possible. No woman should be allowed to become a mother of nineteen defectives, as is recorded in one case, or of half that number, which occurs in very numerous instances. The State must protect such women from themselves, and incidentally the public purse and public morality.

CLARK-ENG-MIL

COTTAGE DINING ROOM.

---

*Home for Feeble-Minded.*

---

Four buildings were needed, and asked for, two years ago. We have one of these. The three others should be built. This will not admit all applicants, but it will enable us to receive the most urgent cases. It will, furthermore, enable us to provide separate quarters for our epileptic boys. This separation of the epileptic from non-epileptic people has been strongly advocated by the medical profession at large. Its expediency is very evident. It will provide separate quarters for our epileptic boys. This separation of the treatment of epilepsy. By furnishing separate tables for this class, it enables us to control the diet very carefully, without creating the discontent which is caused by seeing other children eating freely of substances they should not share. It takes from general day rooms the disturbing element of epileptic fits. Moreover, by having them segregated, it is easier to train nurses to give them the proper care. Removing them from the general buildings, leaves so many vacant beds for other children, who need the care and training of our school department.

Much of the Superintendent's success depends on the efficiency and loyalty of his assistants. I regard myself as most fortunate in this respect, and desire to express my grateful appreciation of the earnest work which has been given by those who have worked faithfully during the long days this service demands, and whose hearts have plainly been in sympathy with their helpless charges.

I beg to express again my grateful appreciation of the prompt response of your Board to every suggestion tending to a more comfortable care of the wards of this Institution, and for your instant attention to every request for counsel or assistance.

Respectfully submitted,

A. W. WILMARTH,

*Superintendent.*

## STATISTICAL FORM FOR STATE INSTITUTIONS.

Prepared in accordance with a resolution of the National Conference of Charities and Correction, adopted May 15, 1906.

Name of Institution, Home for Feeble Minded.

Population.	1905.	1906.
Number of inmates at beginning of year.....	618	665
Number received during year .....	134	120
Number discharged, died and paroled during the year .....	87	99
Number at end of year.....	665	686
Daily average attendance (i. e., number of inmates actually present) during the year.....	657	681
Average number of officers and employes during the year.....	117	123

## EXPENDITURES.

Ending June 30, 1906.	1905.	1906.
Current expenses:		
1. Salaries and wages.....	\$45,579 38	\$45,814 85
2. Clothing.....	8,824 38	8,357 54
3. Subsistence.....	34,603 04	37,303 59
4. Ordinary repairs.....	5,711 54	827 40
5. Office, domestic and outdoor expenses....	30,360 71	26,184 05
Total.....	\$125,079 05	\$118,487 43
Extraordinary expenses:		
1. New buildings, land, etc.....	3,500 00	.....
2. Permanent improvements to existing buildings.....		.....

## Notes on current expenses:

- Salaries and wages should include salaries of trustees or directors, if any.
- Clothing includes shoes and also materials for clothing and shoes if they are manufactured in the institution.
- Ordinary repairs include all of those which simply maintain the buildings in condition without adding to them. Any repairs which are of the nature of additions should be classed with "permanent improvements."
- This item includes everything not otherwise provided for; e. g., furniture, bedding, laundry supplies, medicines, engineer's supplies, postage, freight, library, fuel, etc.

Superintendent, Dr. A. W. Wilmarth.

O. E. BICKFORD.....	Assistant Superintendent
DR. J. P. LENFESTY.....	Physician
T. J. BAST.....	Ass't. Steward
J. W. CLARK.....	Engineer
W. C. JENS.....	Foreman

## SUPERINTENDENT'S REPORT.

GREEN BAY, July 1, 1906.

*To the State Board of Control:—*

I have the honor to present herewith the Fifth report of the Wisconsin State Reformatory, covering the biennial period from June 30, 1904 to July 1, 1906. During the two years covered by this report the financial condition of the institution has so far improved as to place it nearly, if not quite, upon a self-supporting basis. This may be more creditable to the institution from a commercial point of view than to the generosity of a Legislature from a reformatory and educational point of view. An institution of this character, if it hopes to do the reformatory and educational work designed for it, ought not to be forced to bend its best energies to the production of revenue to make up for the lack of legislative appropriation and to prevent a deficit in its accounts. This was the dilemma in which we found ourselves during the past two years because of circumstances that we trust will not again confront us. In the summer of 1904 we found our old power plant on the river bank, 1,700 feet away from the institution, becoming inadequate for our growing needs. The wastage in carrying steam for heating and cooking purposes, and electricity for lighting and power purposes, so great a distance was so enormous, and the separation of the building so inconvenient and hazardous, that it was decided by the Board to commence the erection of a new and modern power plant within the enclosure and central to the principal structures contemplated in the plans for the completed institution, and to equip the plant on a scale of sufficiency to meet the needs of future years. There was also an incidental purpose in the undertaking, and that was to make the erection and furnishing of this new plant a school of trades for the inmates in concrete work, brick laying, electric wiring,

---

*Wisconsin State Reformatory.*

---

pipe fitting and iron work, and to this end it was determined to do all the work incidental to the enterprise with our own labor under competent instructors. Therefore in July 1904, we began the erection of a concrete, brick and iron structure 143 x 180 feet in dimensions especially designed by the architects to contain an engine room, a machine shop, a coal shed sufficient to hold a year's supply and a boiler house arranged to accommodate eight boilers, with a huge brick smoke stack in the center 15 feet in diameter and 153 feet in height. It was expected, when we began the work, that the coming Legislature would make the necessary appropriation for the purchase of the materials and furnishings, provided our inmates would perform all the labor, especially since we were making our own brick which would result in a large saving to the State. The Legislature not only did not appropriate a dollar for the purpose, but increased our dilemma by cutting down our customary current expense appropriation \$12,000.00 in the face of an increasing population which had to be fed and clothed and for which some kind of employment had to be provided. With the building well under way, we could not then abandon the project. It has taken us just two years to complete the structure, set in place four new boilers and one new and powerful direct-connected Corless engine and electric generator, and extend the huge pipings to the various buildings in large bricks and concrete tunnels constructed especially for that purpose. A water heating and purifying plant was also installed in connection with the system, new pumps added and every appliance provided known to modern engineering skill. The coal shed portion of the structure is of concrete with a solid concrete trestle through the center sufficient to sustain a train of cars on the roof. The railroad tracks reach the roof by a long incline of earth taken from the excavations for the building. And all this has been accomplished by the labor of our inmates and paid for out of the earnings of our revenue producing industries. We now have the finest power plant

---

*Superintendent's Report.*

---

owned by the State. The purchases of materials for the building alone amounted to \$18,018.55. It consumed over one million brick which we supplied from our own brick yard. The architect estimated that this building would cost \$35,000 if let by contract.

The tunnels 6 x 6 feet leading from the power plant to the various buildings consumed 115,000 brick from our stock, and the necessary purchase of cement and iron amounted to \$435.84.

**OTHER PERMANENT IMPROVEMENTS.**

During the past two years we have also constructed, by the labor of inmates engaged in the building trades, a residence for the farmer, built of brick with concrete foundation, and supplied it with all necessary plumbing and electric light fixtures. The purchases of material and fixtures for this cottage amounted to \$870.56, and we used 63,000 brick in its construction.

We also constructed a brick and concrete tunnel between the basements of the cow barn and the horse barn, 8x 8 feet in dimensions and 50 feet long, for which we paid \$57.50 for cement and used 31,000 of our own brick.

We also built a large entrance tunnel to the basement of the horse barn for which we expended \$75.00 for cement and furnished 30,000 brick.

The railroad incline to the top of the coal shed would have cost \$1,000.00 if let by contract. It was built by our own labor at no expense.

We have just started to erect a two story fire proof warehouse, 70 x 70 feet, built of concrete foundation, brick walls and reinforced concrete floors and roof, for which \$254.08 has so far been expended for cement.

**SUMMARY OF PERMANENT IMPROVEMENTS.**

Placed in tabular form the amount of cash expended for permanent building improvements is as follows:

---

*Wisconsin State Reformatory.*

---

New Power House .....	\$18,018.55
Engine, Boilers and piping therein .....	10,344.52
Pipe Tunnels .....	435.84
Farmer's cottage .....	870.56
Warehouse .....	254.08
Two Barn Tunnels .....	132.50
Total .....	<u>\$30,056.05</u>

For the above we have supplied brick of our own manufacture worth \$7,464.

There are still nearly \$9,000.00 of bills for pumps, piping, pipe covering, purifying apparatus, fittings of all kinds and a final installment on the new engine, which had not been paid July 1st and which will become due during the next three or four months.

#### ADDITIONAL LAND.

In the spring of 1905 the farm received an accession of 111 acres of adjoining land. About 80 acres of this was acquired through condemnation proceedings and the remainder through direct negotiation. The Legislature made an appropriation in 1901 for the purchase of this land, but disagreement over the price led to the method of arbitration provided by law. This gives us a total of 350 acres attached to the institution. Considerable of this is devoted to buildings, lawns, brick yard and forest, leaving about 150 acres under the plow.

#### STATEMENT OF FINANCES.

During the year ending June 30, 1905, the total expenditures for all purposes, exclusive of land, amounted to \$81,099.81. Of this sum, the amount expended for maintenance, or current expenses proper, was \$40,340.80—a weekly cost per capita of \$2.988. The total cash receipts of the institution were \$40,574.05. The actual cost to the State, however, of the maintenance of the institution over and above

*Superintendent's Report.*

all offsets of permanent improvements, increase of inventory, cash receipts, etc., was only \$17,202.19 as the following statement will show:

1905.			
Inventory—1904 .....		\$300,655 11	
Purchases .....	\$80,612 72		
Less discount and other rebates.....	140 22		
	\$80,472 50		
Plus amount deducted by Secy. of State for printing and insurance .....	627 31	81,099 81	
Real estate purchased .....	\$18,680 00		
Artesian well transferred to real estate.....	740 00	19,420 00	
•Omitted from previous inventory .....		298 46	\$401,473 38
Conta.			
Inventory—1905 .....		\$343,697 14	
•Cash receipts .....		40,574 05	\$384,271 19
		\$17,202 19	
Actual cost to state for current expenses .....			\$17,202 19

For the fiscal year ending June 30, 1906, the total expenditures for all purposes were \$80,005.66, the cost of maintenance (current expenses proper) \$36,348.43, and the cash receipts \$48,127.79. The weekly per capita cost for this year was reduced to \$2,413. But the actual cost to the State of the maintenance of the institution was \$10,465.50, as the following statement will show:

1906.			
Inventory—1905 .....		\$343,697 14	
Purchases .....	\$79,390 40		
Less discount and rebates .....	184 64		
	79,205 76		
Plus amount deducted by Secy. of State for printing and insurance .....	799 90	80,005 66	
Labor of inmates transferred to power house .....	4,200 00		
Grading transferred to real estate .....	1,000 00	5,200 00	\$423,902 80

Cash receipts for year ending June 30, 1906.....	48,127 79	\$108,127 79
		<hr/>
Balance available July 1, 1906 .....		\$26,440 43

## CASH REVENUES.

The cash revenues of the institution from its productive industries have considerably increased during the biennial period. For the fiscal year ending June 30, 1905, the cash receipts from various sources were as follows: From overall factory \$36,927.96; from farm and garden \$1,007.31; from broom shop \$1,383.57, and from all other sources \$1,255.21, making a total of \$40,574.05. For the fiscal year ending June 30, 1906, the cash revenues were as follows: From overall factory \$42,486.97; from farm and garden \$2,269.44; from broom shop \$1,817.34; from miscellaneous sources \$1,554.04, making a total of \$48,127.79. The comparative increase in revenues since 1900 is shown in the following table:

Total cash revenues 1901 .....	\$14,748.51
Total cash revenues 1902 .....	\$15,258.13
Total cash revenues 1903 .....	\$25,288.00
Total cash revenues 1904 .....	\$34,888.27
Total cash revenues 1905 .....	\$40,574.05
Total cash revenues 1906 .....	\$48,127.79

It is probable that we have reached the limit of possible income from the productive industries now in operation.

We paid inmates for the year ending June 30, 1905, on their daily wage accounts, \$6,196.74, and for the year ending

*Superintendent's Report.*

June 30, 1906, the sum of \$9,466.60, a total of \$15,663.34 for the biennial period. For the year ending June 30, 1905, we paid inmates for extra work in the overall factory (over-task or profit sharing) \$3,870.78, and for the year ending June 30, 1906, the sum of \$3,660.09, a total of \$7,530.87 for the biennial period. As the over-task or profit-sharing is in addition to the daily wages allowed all inmates whatever their occupation may be, it will be seen that we have paid to inmates over and above their living, during the biennial period, the total sum of \$23,194.21. A portion of this money has been sent home to families and relatives or expended for books and other articles, but a large part of it has been carried away upon release. There was on hand in the savings department June 30, 1906, the sum of \$4,150.45 belonging to inmates, as against \$4,898.22 on June 30, 1905.

## EMPLOYMENT.

The average number engaged in various employments around the institution has been about as follows

Bookkeeping .....	3
Carpentry .....	3 to 5
Teaming .....	5
Firing boilers .....	3
Tending engine and dynamos .....	2
Kitchen and dining room .....	14
Pipe fitting .....	3 to 5
Broom making .....	15
Tailoring .....	5
Brick making in season .....	20 to 24
Concrete laying and smoothing .....	6 to 8
Cutting, making and shipping overalls .....	185
1 Clerks in office .....	2
Farming and gardening .....	8 to 10
Stock tending .....	3
Coal wheeling .....	1
Laundry .....	5
Barbers .....	3
Blacksmithing .....	2
Shoemaking .....	2
Bricklaying .....	6 to 8
Concrete mixing and wheeling .....	8 to 10
Painting .....	2

Besides scrubbers and cleaners, messengers, cell house tenders, etc.

*Wisconsin State Reformatory.*

THE OVERALL FACTORY.

The principal source of revenue has been, of course, the overall factory. The following table will show by months the total days attendance in the factory, the monthly earnings, the daily average earned per man and the total number of garments made. The product is confined to Children's wear, such as overalls and jackets, play suits, outing suits and the like:

Year.	Month.	Days attendance.	Amount earned.	Daily ave. per man.	Number garments made.
1904	July .....	2,983	\$2,887.66	\$.96	93,896
	August .....	3,099	3,036.22	.98	102,651
	September .....	3,022	2,674.66	.89	87,492
	October .....	3,436½	2,934.01	.86	98,532
	November .....	3,560	3,252.69	.91	110,750
	December .....	3,921	3,476.41	.88	117,322
1905	January .....	3,779	3,332.72	.88	112,638
	February .....	3,464½	2,997.64	.87	99,144
	March .....	4,162½	3,478.31	.84	110,412
	April .....	3,806	3,067.44	.87	101,564
	May .....	3,823½	3,286.14	.85	107,644

Totals .....		92,682½	\$78,714.01	\$.85	2,554,217

THE CLOTHING SHOP.

In the clothing shop from six to eight boys have been constantly employed in making grade suits and outgoing clothes for inmates, and uniforms for officers, as well as doing all the repairing and making up the sheets, pillow cases, towels and other articles of like nature. Two boys in this department.

---

*Superintendent's Report.*

---

have manufactured all the stogy shoes required for the institution and have done all the repairing in leather and harness work. The following is a summary of the articles manufactured in this department:

Officers' uniforms complete 19; officers' trousers 13; officers' vests 3; first grade coats 155; first grade trousers 307; first grade caps 169; second grade coats 97; second grade trousers 183; second grade caps 86; outgoing suits complete 265; work shirts 1,017; overalls 649; working jackets 118; overcoats 1; pairs stogy shoes 511; pairs felt shoes 36; cloth mittens 257; kitchen aprons 153; kitchen duck suits 75; cooks' caps 29; mattresses 32; inmates pillow slips 659; officers' pillow slips 24; inmates' bed sheets 606; officers' bed sheets 39; single towels 1,481; roller towels 95; table cloths 20; napkins 51. Each inmate, sometime before going out, is summoned to this department and his measure taken for a tailor made suit of clothes which is cut and manufactured by the boys engaged in the tailoring trade.

#### THE BROOM SHOP.

The broom factory has been employing from 13 to 15 boys to good advantage in learning a useful trade. There are now prospects of somewhat enlarging this industry. From June 30, 1905, to July 1, 1906, there were manufactured 5,621 dozen brooms. The revenue from this industry in that year was \$1,382.52. For the year ending June 30, 1906, there were manufactured 6,327 dozen brooms, from which the revenue amounted to \$1,817.34. This as well as all other industries is conducted on the piece-price plan.

#### THE BRICK YARD.

The brick yard has been operated each summer season, employing from 20 to 24 boys. We held over from the season of 1904 about 500,000 brick. We manufactured 720,000 in

---

*Wisconsin State Reformatory.*

---

1905 and 740,000 in 1906. We have used 1,240,000 in our own building operations and are now shipping the brick for the new cell wing in process of erection at the State Prison in Waupun, which will consume about 350,000. At this writing we have about 500,000 brick on hand.

#### MACHINE SHOP.

In constructing the new power plant we have reserved one fair sized room in it for a machine shop. It is very desirable that this room be equipped with proper iron working machinery such as lathes, planer, shaper, drills, metal saws, etc., not only for doing our own necessary work but, with a view of giving practical instruction in this branch of mechanics. Three thousand dollars would very satisfactorily supply the shop with required machinery shafting, motor and tools, and I most urgently ask for a legislative appropriation of that amount for this most admirable purpose.

#### FARM AND GARDEN.

With the addition of about eighty acres of tillable land to our farm in the spring of 1905, the farm and garden products have considerably increased during the past two seasons. The value of farm and garden products for the season of 1904 amounted to \$5,681.00. That of 1905 rose to \$7,631.26, and for the season of 1906 it reaches approximately \$8,565.00. Our dairy has become, also, a revenue producing industry and we are now selling about \$100.00 worth of milk a month besides supplying the institution with milk and all the butter used by the inmates. The total revenues from the sale of surplus farm products amounted to \$1,007.31 in 1905, and the still larger crop of the present season will probably make our sales upwards of \$3,000.00 for 1906. We raise on an average about 200 hogs a year. We are milking from 25 to 30 cows and have about 30 heifers ranging from calves to two year olds. Our stables contain eleven horses.

---

*Superintendent's Report.*

---

## CASTING FOUNDRY.

Another industry which could very well be introduced at this institution is iron moulding. The moulders trade is one particularly adapted to many of the brawny young fellows who are sent here. In even a small plant soil pipe and fittings could be cast for use in this and other State institutions where changes and additions in plumbing are constantly going on, besides which all sorts of ordinary castings required for State use could be turned out. I estimate that it would cost about \$3,000 to establish a suitable plant with a 30-inch cupola. I trust that the legislative appropriation for the ensuing biennial period will be sufficient to enable me to erect such a plant.

## A TIN SHOP.

Still another industry which I am anxious to establish on State account is a tin shop. The ordinary tin and sheet iron ware to be purchased in local hardware stores is illy suited to institutional purposes, and much that is used by institutions is necessarily made to order. I have the assurance of a good patronage from other State institutions in case a tin shop is established here. Moreover all kinds of galvanized iron work for use in the erection of State buildings could be turned out in such a shop, thus not only saving cost to the State but supplying a trade employment to some of the Reformatory inmates. Two thousand dollars will furnish the machinery, tools and appliances for a suitable shop of this kind.

## A GRANITE PROPOSITION.

When this institution was established in 1898, the law provided that the two cell wings and the main center building should be faced with Amberg granite, obtained at Amberg, about seventy miles north of Green Bay. The Board of Con-

---

*Wisconsin State Reformatory.*

---

trol thereupon made a contract with the Amberg Granite Company to furnish the granite to the State, or to any contractor for the State, at the price of forty cents a cubic foot in the rough. Up to this time only one cell wing has been constructed, the other cell wing and the main center building not having yet been authorized or provided for by the Legislature. In the meantime the Amberg Granite Company has gone out of existence, the quarries have been dismantled and Mr. W. A. Amberg of Chicago has succeeded to the ownership of the property. This is the only quarry from which the same kind of granite can be secured. Although not deeming himself bound by the Board's old contract with the Amberg Granite Company, Mr. Amber has agreed to reinstall machinery and quarry enough granite to construct the main center and remaining wing provided the State will receive and pay for it during the summer of 1907. He will not agree to deliver the undressed granite after that date, because of certain agreements existing between him and the granite workers unions. The suggestion has been made that if we had the granite we could open a granite cutting school and in the course of two or three years turn out the dressed product ready for the new buildings, thus eventually saving a large expense to the State, as the cutting of the granite is worth far more than the raw material. To do this, however, will tie up about \$25,000.00 of the State's money in the purchase of granite for future use, but, under the circumstances, it would be a profitable investment and would furnish excellent and instructive employment to a large class of our inmates.

## MOVEMENT OF POPULATION.

There were 222 inmates in custody on July 1, 1904. There were received from all sources during the biennial period 365, and 304 were discharged during that period, leaving a population of 383 on July 1, 1906. The tables in the appendix will show the movement of population in detail.

---

*Superintendent's Report.*

---

The inmate population has not increased so rapidly the past two years as was anticipated, and barring a few weeks when our cell room was all occupied, we have had plenty of room for inmates as fast as received. The total number received from all sources during each of the last four fiscal years was as follows:

Received from June 30, 1902, to July 1, 1903.	112
Received from June 30, 1903, to July 1, 1904.	143
Received from June 30, 1904, to July 1, 1905.	191
Received from June 30, 1905, to July 1, 1906.	172

It will thus be seen that while the number of arrivals in 1904 was 31 more than 1902, and 48 more in 1905 than in 1904, it was 19 less in 1906 than in 1905. Our cell house contains 296 cells and our inmate population July 1, 1906, is 283, leaving accommodations for 13 more inmates.

Of the 250 inmates paroled since the opening of the institution, 44 have violated their paroles—a percentage of .176.

#### THE GENERAL HEALTH.

The general health of the inmate population has been good. We have had no epidemics or contagious diseases. The calls upon the prison physician have been occasioned in most part by trifling ails such as are common in every community. Only occasionally has an inmate been sent to the hospital, and in most such instances the cause has been tuberculosis. In tuberculous cases the policy has been to send victims home on invalid paroles as soon as the symptoms have become well developed. There have been seven deaths among such paroled inmates during the past two years. One inmate died in his cell during an epileptic fit. He had long been subject to the disease. Our drinking water is excellent, coming as it does from an artesian well 875 feet deep, which gives ample supply for all domestic uses. The danger of typhoid is thus reduced to the minimum. The air in our spacious and well ven-

---

*Wisconsin State Reformatory.*

---

tilated cell house is probably better than that in a great many homes of the land. The danger lurking in the clothing of new arrivals is minimized by the immediate cremation of all incoming garments.

The teeth of inmates are taken care of by a dentist who spends one day each week at the institution, and a competent optician makes regular visits to examine eyes and fit glasses for all who need them.

#### MUSICAL INSTRUCTION.

I have been particularly gratified during the past year with the interest manifested by the inmates in music, to which it has been my pleasure to give every impetus possible. During the year over sixty pupils have received instruction in instrumental music under the tutorship of Prof. Chas. McKenzie, paying for their tuition out of their own earnings. The outcome has been the enlargement of the military band to about 35 members on the average, while a junior band furnishes the graduates for the senior organization. Many of the boys have become so proficient and so enthusiastic in their musical studies as to insist upon the purchase of their own instruments, which they take with them on leaving the institution. The band discourses music every evening in the week except Saturday evening, and also Sunday morning, for the entertainments of the institution and for the excellent practice it affords. Afternoon classes for the junior members are also in vogue. Our facilities will not accommodate all those who apply for musical instruction.

In vocal music a class of nearly one hundred is receiving instruction under Mr. Geo. L. North, leader of the Choral Society of Green Bay, and from this large class is evolved a boys' choir of about twenty-four voices which furnishes excellent singing for the Chapel services on Sunday afternoons. Saturday evenings and Sunday forenoons are devoted to the singing classes. I am pleased to say that music is one of the predom-

---

*Superintendent's Report.*

---

inating features of the institution, and I believe that nothing can be more salutary in its influence.

THE LIBRARY.

The library has been well patronized considering the number of books purchased by inmates for their private use and the large number of magazines and newspapers taken regularly by the boys and sent in by philanthropic contributors. The following table compiled for the past year will give a fair index as to the character of reading and number of books called for by the inmates:

Books issued from July 1905 to July 1906.

Fiction .....	6,306
Traveling Library .....	741
Travel .....	416
Biography .....	395
History .....	471
Poetry .....	162
Religion .....	154
Science .....	199
Miscellaneous .....	253
German .....	104

Grand Total ..... 9,201

It must not be understood that this denotes all the reading done by the inmate population. Aside from school text books, many of the inmates are gradually accumulating fair sized libraries of their own out of their own earnings. During the past year quite an impetus has been given to the individual purchase of scientific works,—on electricity, mechanical drawing, blacksmithing, brick laying, steam and gas engineering, automobiles, gasoline engines, carpentry, metal working machinery and other practical subjects as well as standard literature of the highest order. Nearly every inmate who can read

---

*Wisconsin State Reformatory.*

---

is supplied with newspapers regularly, and the most prominent magazines and illustrated periodicals are circulated in profusion. I have to gratefully acknowledge many donations of boxes of old magazines from W. C. T. U. and other organizations throughout this section of the State which supplement our other recourses to a very happy extent.

NEW PAROLE SYSTEM.

During the past year we have made quite an important modification in our parole system which is proving a gratifying success. Under the law no inmate can be paroled unless a place of employment has previously been found for him. Heretofore we relied upon the employer to look after the general welfare of the paroled. This was found to entail many difficulties. The employer was more frequently a corporation which could interest itself only with the labor and wages of the paroled, and perhaps could not furnish steady employment, much less bestow proper guardianship upon him. Oftentimes employers would accept paroled boys only on trial, to soon find them unsatisfactory in their particular kind of work. These and other difficulties gave suggestion to the idea of requiring some friendly or philanthropic person of good repute to accept guardianship over the paroled independent of and separate from his employment—one who would act as the agent of the State in personally looking after the paroled's welfare, securing for him employment and assisting him to find new employment should he lose his original position. It has been found much easier to induce kindly disposed persons to assume such guardianship than it is to find employers willing to assume the double responsibility of furnishing employment and guardianship as well. I herewith append the form of agreement adopted under the new system, which will be found self explanatory:

Superintendent's Report.

PAROLE GUARDIAN'S AGREEMENT.

It being agreeable to the State Board of Control and the Superintendent of the Wisconsin State Reformatory that.....

..... an inmate of the Wisconsin State Reformatory shall be allowed to go outside the Institution on parole, now I, .....residing at.....

..... and whose post office address is.....

do hereby agree to serve as the parole guardian of said inmate and in such capacity to act as the agent of the State Board of Control in looking after the welfare and reformation of the paroled with a view of inculcating in him habits of industry, honesty, frugality and sobriety. As such parole guardian I promise to secure for said paroled a place of employment and, to the best of my ability, to see that he is kept at some honorable and lawful employment during the unexpired term of his sentence to said Wisconsin State Reformatory, which term will expire .....190 unless he should sooner be finally and unconditionally discharged from further surveillance of the State. I further agree to do all in my power to persuade him to conduct himself honestly, avoid evil associations, obey the laws and abstain from the use of intoxicating liquors, and should he violate these conditions of his parole or conduct himself in a manner unsatisfactory to me, I promise to report him to the Superintendent of the Wisconsin State Reformatory for return to the Institution, upon which return all further obligations on my part as to matters herein set forth shall cease and determine. I further agree to act as financial agent of the Superintendent of said Wisconsin State Reformatory; to collect the wages of said paroled, to pay his board and purchase for him such clothing, reading matter and other supplies as in my judgment may be desirable for his welfare, and to remit to the Superintendent the surplus of his wages to be kept for him in the savings department of the Institution until his final release.

I further agree that if said paroled runs away or his whereabouts become unknown, I will forthwith inform the Superintendent by wire and will promptly report to the Superintendent any information I may thereafter gain as to his whereabouts, with a view to his capture and return to the Reformatory.

Signed in duplicate this.....day of.....190

..... Parole Guardian.

CERTIFICATE OF COUNTY JUDGE.

State of Wisconsin .....County of.....

I, .....County Judge of the above named County do hereby certify that....., residing at ..... is a person of probity and integrity and is a suitable person to become the Parole Guardian of ....., and I believe that he will execute the trust with fidelity and perform all the promises subscribed to above.

Dated this.....day of .....190

..... County Judge.

EMPLOYER'S AGREEMENT.

I, .....residing at ..... being engaged in the business of .....do hereby agree to give employment to .....a paroled inmate of the Wisconsin State Reformatory, so long as his services are satisfactory; and to pay to his Parole Guardian, ..... his wages which it is agreed shall be ..... Should the services of said paroled become unsatisfactory, I agree to notify the Parole Guardian before discharging him.

Dated this .....day of .....190

..... Employer.

*Wisconsin State Reformatory.*

---

## MORE EDUCATIONAL FACILITIES.

One of the pressing needs of the institution is larger educational facilities. Up to this time our endeavors have largely been devoted to securing those physical conveniences necessary to house, feed and clothe the inmates and provide work shops for their proper employment. In all these building operations and in the various industries established, valuable instruction has been afforded the inmates in such trades and lines of handicraft as are incidental to the erection of a new institution. At the same time careful attention has been given to the school of letters and to the classes in instrumental and vocal music, while good progress has been made in the introduction of scientific and trades literature. We have been seriously handicapped, however, for lack of recitation rooms for evening classes. Our temporary frame school house has been made to accommodate about 225 pupils by using the assembly hall overhead for two of the higher classes. This leaves about 60 inmates who cannot be accommodated in the day time, and many of these are engaged in employments which prohibit their attendance upon the day school. As our school house is situated some distance from the cell house, and there is no wall around the premises, it is impracticable to use the school house for evening classes. For like reasons we can have no assemblages or entertainments in the evening. It will be seen, therefore, that the next pressing need of the institution is the erection of at least the rear portion of the main central building which is planned to contain the class rooms and the chapel as well as the dining room. A portion of the factory building is now occupied temporarily as a dining room, which space is badly needed for trade school purposes. But with a chapel hall and class rooms accessible from the cell house several lines of evening instruction could be pursued, for which there are now no facilities whatever. I have found by experience that most of the boys committed to this institution, no matter how indolent or indif-

---

*Superintendent's Report.*

---

ferent they may have been, are thirsting for knowledge. Between those who have had no opportunities and those who have awakened to the realization of wasted opportunities and desire now to improve themselves, there is demand for a most important work. This work cannot be carried on without proper facilities, especially suitable buildings, which we do not now possess. The legislature has not appropriated a dollar for building purposes since 1899, while at the session of 1905 it cut down our current expense appropriation \$12,000.00 in the face of an increasing population. The result has been that every energy has of necessity been put forth to increase our cash revenues from productive industries in order to avoid a financial deficiency, a species of commercialism which is unwise and ought not to be forced upon an institution of this character. Notwithstanding these disadvantages under which we have labored, we have kept the instructional features as much to the fore as our limited building facilities would permit, and have made encouraging progress.

## INEQUALITY OF SENTENCES.

I wish to call attention once more to the unsatisfactory indeterminate sentence law in vogue in this State, which provides for a minimum and maximum period of confinement for first offenders, and then contradicts its own formula by providing that such a sentence shall be construed as a definite sentence for the maximum. As I have before pointed out, the confusion arising from the popular misunderstanding of the law creates much annoyance because of the fact that while, under the law, the commitment is for the maximum, those affected by it are lead to believe that the actual sentence is for the minimum. An experience of several years and a careful study of the question confirms me in the opinion that a definite sentence to the Reformatory for a period not exceeding the maximum penalty provided by law for the offence, but in no case to exceed five years, subject to the operations of the parole law, would conduce

---

*Wisconsin State Reformatory.*

---

to a better and easier accomplishment of the purposes of the institution: There could be no misunderstanding in respect to the intention and effect of such a sentence, and it would be far more logical than the wide range and inequality of present sentences. For instance, boys have been sentenced to the Reformatory for twenty years for breaking into stores and robbing them of mere trinkets of small value, while others who have robbed banks of thousands of dollars have received sentences of from a quarter to a half that period. One judge will sentence a boy to fifteen years for horse stealing, while another judge will impose a sentence of two years for the same offence. One fellow gets ten years for setting fire to a small empty frame structure, while another receives a sentence of three years for wilfully and maliciously burning a livery stable with all the horses in it. For rape one boy gets one year and another ten years, while a third comes here under a sentence for thirty years, with still others grading all the way up from one to twenty years. The sentences from one court may be characteristic for their long terms, while those of an adjoining jurisdiction may be as conspicuously short. I am speaking now of cases coming under the same statutory sections, and not materially differing in essential respects. The impression which these inequalities make upon first offenders, coming together from all directions and comparing each others' offences with their sentences, is not such as to enhance their respect for the justness of our criminal jurisprudence; and no class of persons is more sensitive and discerning in regard to even the semblance of unfair discrimination.

Logically speaking, if sentences are intended to be reformatory and not wholly punitive there is no warrant for such wide distinction between degrees of crime or between different crimes committed by first offenders. The true philosophy is to make the reformation fit the criminal, instead of vainly trying to make the punishment fit the crime. If the purpose of committing first offenders to imprisonment is reformatory,

---

*Superintendent's Report.*

---

what difference does it make, from a reformatory point of view, whether one of them has stolen a horse and another a bicycle? The incentive is the same in both cases, and the kind or degree of theft may be only incidental to the opportunity, while the statutory penalties therefor may widely differ. If a boy steals a pocket book his intentions are the same whether that pocket book happens to contain one dollar or a thousand dollars. The boy's real criminality is as great in one case as the other, but the law makes the accident of circumstances the difference between petit larceny and grand larceny. The boy needs to be taught not to steal pocket books, no matter what they contain.

If a reformatory with its parole features is to be established for first offenders in distinction from state prisons and penitentiaries for old offenders and hardened criminals, where the punitive principle is more largely required, the law should recognize that distinction. The sentence to a reformatory should be for course of treatment, so to speak, and not for a period of punishment as a penalty for a particular degree of crime. The average period of incarceration within the enclosure of the Wisconsin State Reformatory has been about one year and eight months. Therefore a definite sentence not to exceed five years in any case, subject to the parole features of the law, would amply cover all the requirements suggested by the experience tables of this institution.

In order to illustrate the inequality of sentences for like offences, I herewith append a few tables showing the number of persons sentenced for some of the more serious crimes and the periods for which they were sentenced:

---

*Wisconsin State Reformatory.*

---

*Burglary.*

4 for 6 months.  
 77 for 1 year.  
 3 for 14 months.  
 2 for 15 months.  
 26 for 1½ years.  
 79 for 2 years.  
 7 for 2½ years.  
 111 for 3 years.  
 11 for 4 years.  
 35 for 5 years.  
 5 for 8 years.  
 1 for 10 years.  
 5 for 20 years.

*Larceny.*

15 for 6 months.

*Superintendent's Report.*

---

## CIVIL SERVICE.

The civil service law went into operation during the latter part of 1905 since which time appointments to positions in the classified list have come through the State Civil Service Commission. While the law has not yet demonstrated its fullest usefulness, I have much hopes for it and would regret to see it repealed. It is of great assistance in promptly securing candidates for positions, although the class of applicants has so far proved of no higher grade than obtained under the old system. Up to the present writing our experience under the workings of the new law has been this: Eight candidates whose names were submitted by the Commission, declined to accept appointments; four accepted appointments and resigned after a short trial; two were released after trial as unsuited to the work; three were not accepted on making their appearance; five still remain in the employ of the institution. This shows the final retention of five out twenty-two. It is evident that not a few who look for positions in State institutions are imbued with the idea that such positions are largely sinecures. When confronted with the catalogue of the duties to be performed, or awoken to the truth in the performance of them, they are very apt to beat a hasty retreat. Whatever crudity the operation of the law may exhibit in its initial stages, I look for a gradual and helpful improvement in its eventual accomplishments.

## WISWELL STATION.

Owing to the rapidly increasing freight traffic into and out of this institution, and for the greater convenience of passengers desiring to reach the Reformatory from points along its route, the Chicago, Milwaukee & St. Paul Railroad Company, whose main line passes through the grounds of the institution, has established a station here and has named it Wiswell, after

---

*Wisconsin State Reformatory.*

---

the late George Wiswell of Milwaukee. Moreover, with general enterprise and for our larger accommodation the Company has built sidetracks from the main line into our prison enclosure and up the incline onto our new coal shed, so that now all our freight is delivered to us at the very doors of our warehouses. These added conveniences are not only highly valued by us, but will be appreciated by visitors traveling over the Milwaukee road.

## IN CONCLUSION.

In concluding this report I beg leave to express my sincere acknowledgement of the loyal support and cooperation I have received from Mr. O. E. Bickford, Assistant Superintendent, in the arduous work of the past two years; and to compliment the heads of departments and subordinate officers for their zeal and interest in the progress of the institution.

To the Board of Control which has lent every watchful aid in furthering our aims for improvement, and which has so ably guided us through so many doubts and perplexities I desire to signify my warmest appreciation.

Respectfully submitted,

C. W. BOWRON,  
*General Superintendent.*

## REPORT OF PRINCIPAL OF SCHOOLS.

---

*To the General Superintendent:—*

There are enrolled in our school of letters at the present time 225 pupils varying in age from 16 to 30 years. The inmates enter the school with various degrees of attainment. Some native born are wholly ignorant of the alphabet and cannot spell their own names. Many are foreigners with some reading knowledge of their own language but wholly deficient in the English language. Others may have had a slight schooling in the elementary branches, and but few indeed have had a high school training. The faculty of the school consists of five Guard teachers and one inmate teacher. The school is divided to eight grades, and the course of study corresponds as near as may be with that of the State graded schools.

### GRADE 1.

This grade contains the beginners who cannot read or write or have little or no knowledge of the English language. These are taught the alphabet and the forms of script letters, are drilled in pronunciation and spelling and are given simple sums in addition and subtraction. This grade progresses through the first half of part I of "Steps in English", Book No. 1, object lessons and picture lessons.

The curriculum of the remaining seven grades is as follows:

### GRADE 2.

Reading (a) Second Reader; (b) Suitable supplementary reading;  
(c) Memorizing passages from good literature.

Language Second half of Part I "Steps in English," Book 1, short stories and simple rhymes.

Arithmetic First part of Milne's Elementary Arithmetic, multiplication and division.

Spelling Words from Second Reader.

Writing Copying written work from blackboard.

---

*Wisconsin State Reformatory.*

---

## GRADE 3.

- Reading. (a) Part I of Haper's Fourth Reader; (b) supplementary reading; (c) memorizing four pages of good literature.
- Spelling. (a) New words in reading lesson; (b) first 25 pages of Swinton's Spelling Book."
- Arithmetic. Extended work in the four fundamental operations taught in preceding grades.
- Language. Part II of "Steps in English," Book I.

## GRADE 4.

- Reading. (a) Part I of Harper's Fourth Reader; (b) supplementary reading; (c) memorizing four pages of choice literature.
- Spelling. (a) New words in reading lesson; (b) first 25 pages of "Swinton's Spelling Book."
- Arithmetic. (a) Fractions and decimals, pages 145 to 205 Milne's Elementary Arithmetic.
- Geography. (a) Observational geography and lessons on the globe; (b) Geography of North and South America.
- Language. Part II of "Steps in English," Book I.

## GRADE 5.

- Reading. (a) Part II of Harper's Fourth Reader; (b) supplementary reading; (c) memorize four pages selections.
- Spelling. (a) Words in reading lesson; (b) section I, "Swinton's Spelling Book."
- Arithmetic. Pages 1 to 169 of Milne's Standard Arithmetic, covering advanced exercises in the four fundamental operations as applied to fractions and decimals.
- Geography. Grand divisions Eastern hemisphere from elementary text.
- Language. (a) Part III "Steps in English," Book I; (b) letter writing and various business forms.

---

*Principal's Report.*

---

## GRADE 6.

Arithmetic. Pages 170 to 230 Milne's Standard Arithmetic. Denominate numbers; linear, surface and cube measures; weights; angles; longitude and time; surveying.

Geography. Pages 1 to 111 Natural Advanced Geography.

History. (a) Early history U. S. to Washington's administration; (b) historical books from library.

Language. (a) Part I grammar section of "Steps in English," Book II; (b) part I in composition section of same.

## GRADE 7.

Arithmetic. Pages 231 to 300 Milne's Standard Arithmetic. Percentage; profit and loss; commission; discount; taxes; custom duties; insurance, simple and compound interest; notes stocks and bonds.

Geography. Eastern hemisphere, pages 112 to 155 Natural Advanced Geography.

History. (a) From Washington to present time; (b) historical books from library.

Language. (a) Part II grammar section of "Steps in English," Book II; (b) part II composition section of "Steps in English," Book II; spelling, pages 91-118, "Swinton's Spelling Book."

## GRADE 8.

Arithmetic. Page 300 to end of Milne's Standard Arithmetic. Foreign and domestic exchange; partnership; ratio and proportion; square and cube root; metric system; general review.

Civil Government. (a) U. S. Constitution; (b) Wisconsin Constitution; (c) Bill of Rights; (d) legislative, judicial, executive and administrative functions.

Language. (a) Part III of grammar section of "Steps in English," Book II; (b) part III Composition section of same.

Physiology. (a) Text in general; (b) special topics in hygiene.

Spelling. Pages 118 to 154 Swinton's Spelling Book.

---

*Wisconsin State Reformatory.*

---

The present enrollment in the different grades is as follows:

Grade 1 .....	10
Grade 2 .....	25
Grade 3 .....	33
Grade 4 .....	16
Grade 5 .....	36
Grade 6 .....	35
Grade 7 .....	34
Grade 8 .....	36
	225
Total .....	225

I desire to compliment the teachers for the conscientious interest they exhibit in striving to make the school a success. The school aims, during the short time many of the inmates remain here, at least to lay the foundation for self education, and to develop the latent faculties that have lain dormant for years or have had only a sluggish activity. The result is evident in the earnest application most of the inmates manifest in their studies.

Respectfully submitted,

J. R. JUNION,  
*Principal of Schools.*

## EXPENDITURES.

Ending June 30, 1906.	1905.	1906.
Current expenses:		
1. Salaries and wages .....	\$16,335 23	\$17,554 37
2. Clothing .....	2,048 38	3,056 97
3. Subsistence .....	13,788 57	13,378 77
4. Ordinary repairs .....	359 42	355 27
5. Office, domestic and outdoor expenses...	13,831 77	13,426 59
Total .....	\$46,363 37	\$47,771 97
Extraordinary expenses:		
1. New buildings, land, etc .....	\$21,265 00	.....
2. Permanent improvements to existing buildings.....	.....	.....

## Notes on current expenses:

1. Salaries and wages should include salaries of trustees or directors, if any.
  2. Clothing includes shoes and also materials for clothing and shoes, if they are manufactured in the institution.
  4. Ordinary repairs include all of those which simply maintain the buildings in condition without adding to them. Any repairs which are of the nature of additions should be classed with "permanent improvements."
  5. This item includes everything not otherwise provided for, e. g., furniture, bedding, laundry supplies, medicines, engineer's supplies, postage, freight, library, etc.
- Superintendent, C. W. Bowron.

WORKSHOP FOR THE BLIND.

FIRST BIENNIAL REPORT

OF THE

**Wisconsin Workshop for the Blind**

FOR THE

Biennial Period Ending June 30, 1906.

---

OFFICERS.

OSCAR KÜSTERMANN ..... Superintendent

INSTRUCTORS.

WILLIAM SCHROEDER ..... Instructor.

MICHAEL ZANNA ..... Assistant Instructor.

JOHN HENNING ..... Assistant Instructor.

## SUPERINTENDENT'S REPORT.

---

MILWAUKEE, June 30, 1906.

*To the Honorable State Board of Control,*

GENTLEMEN: It is with great pleasure that I submit this my first biennial report for your consideration, especially so because I can truthfully say that our undertaking has been crowned with merited and unqualified success. The Wisconsin Workshop for the Blind is now an established institution; the experiment of furnishing employment to adult blind men in our State has in my opinion been solved. I do not hesitate to say that any blind male adult not physically incapacitated and of average intelligence, who is willing to work, is now able to earn a livelihood at our institution.

Success is all the more assured since the practical enactment of our last legislature, which allows to every blind adult, who wishes to avail himself of the opportunities offered at our workshop, the sum of \$75.00 to defray the expenses of transportation, board and lodging during the term of his apprenticeship. We have at present several men, who came to make the attempt, and who are now, after a lapse of three months selfsupporting and have ceased to be a burden on their respective counties.

The expense of the State of Wisconsin compared with the disbursements of other states for a like purpose for the same period seems almost insignificant.

The Illinois Industrial Home for the Blind in Chicago was erected by the State in 1894 and maintained by it ever since. In August, 1905, its inmates numbered seventy men and fourteen women. Broom making for men and housework for women are their chief occupations. Apparently they are not allowed to receive more than \$1.00 per day. The expenditures in the year 1905 amounted to \$75,266.00. There were however 72 persons on the pay roll at one time or another during the

---

year, who were not blind, of whom 28 were employed in the shop.

The above amount of \$75,266.00 does not include the allowance of \$150.00 per year apportioned to every blind person remaining at home and idle.

The Pennsylvania Working Home for the Blind was incorporated in 1874. It is in effect a charitable factory, with blind operatives, under foremen who are not blind. It is the established policy of the concern to pay the workmen more than the market rate, in order to afford them a living wage. It is due to this fact that, while there is a large output, there is an annual deficit, amounting in recent years to \$20,000 and upwards. The State of Pennsylvania and the City of Philadelphia appropriate \$22,500 per year for this institution.

In 1902, the legislature of Michigan passed an act authorizing the establishment and maintenance of the Michigan Employment Institution for the Blind. The sum of \$85,000 for buildings and \$25,000 for current expenses was appropriated.

From statistics so gathered I have come to the conclusion that the Wisconsin Workshop is the only Institution that affords its women the opportunity to actually earn the amount necessary for their support.

Our Workshop now gives employment to 25 blind men whose weekly earnings vary from \$2.00 to \$10.00, a total weekly average for all employed of \$4.86 $\frac{3}{4}$ , a marked advancement over the earnings during our formation period. While this increase no doubt is due in some measure to the consummate skill of our artisans in their respective lines of work, it is to a greater extent due to the decrease in the price of our working material. Heretofore we were obliged to purchase our willows in foreign markets, while now a fair amount is procurable in this country.

Within the last two years several of our State Institutions have apportioned part of their allotted acreage to the industry of willow culture, for the express purpose of furnishing our Institution with their product. This year we were provided at a very reasonable price with several tons of willows raised on five acres planted therewith.

EXHIBIT AT STATE FAIR, MILWAUKEE, 1905—WISCONSIN WORKSHOP FOR THE BLIND.

---

*Wisconsin Workshop for the Blind.*

---

I would here pause for a moment to again impress the Members of your Honorable Board with the advisability of having a still greater area set aside for this purpose at the different State Institutions under your jurisdiction so that eventually we might receive all the required material through this source. The difference in the price of European willow and the one grown at our State Institutions is so great, that by using the latter, the earnings of the blind men will increase about 25 per cent.

Through personal observation and from the reports of the different workshops for the blind throughout the land I have come to the conclusion that our system of furnishing the workshop with all necessary tools and machinery, installing as instructors men who are not blind, and a manager to purchase material and dispose of the finished product is the only correct one. I would therefore never advocate the erection of a home in connection with a workshop. The lazy as well as the diligent would in this case be treated alike; not to mention the impracticability of such a system, such conditions would have a detrimental influence on the character and morals of persons so maintained. Individuality and that independent spirit which above all things seem to be a characteristic of the unfortunate blind man would be blotted out entirely and make way for dull uniformity and servile imitation. "Independence through Industry,"—our motto could not be properly predicated of any such institution. Our men after their days labor have an opportunity to mingle with people not afflicted like themselves to exchange views on any topic and supplement or correct any idea they might have conceived. A change in environment is as beneficial to the mind as a change of air and climate is to the body. Moreover such an addition to our institution would in no wise warrant the resulting expenditure.

While I do not and never would favor the idea of a home in connection with a workshop, I do believe the time has arrived when the State should erect a suitable and permanent building as a workshop. Our present quarters at a yearly rental of \$1,000.00 even now are crowded and to accommodate an additional number of workmen, as may be expected when

EXHIBIT AT SECOND ANNIVERSARY OF WORKSHOP, 1906—WISCONSIN WORKSHOP FOR THE BLIND.

---

*Wisconsin Workshop for the Blind.*

---

the results and success of our efforts become known, it will be necessary either to rent a larger factory or that the State erect a building of its own. Figuring that the State can borrow at four per cent, the present rent of \$1,000.00 per year would furnish a building costing \$25,000. It may be safely estimated that eventually from 100 to 200 workmen will take advantage of earning their livelihood in our workshop and for this reason the building erected should be of proper dimensions to serve its purpose for many years to come, costing with the land about \$45,000.

As a large city offers a better market for the disposal of goods, and better and more facilities for obtaining board and lodging and in view of the additional fact that most of our blind workmen have homes in this city, I would propose that the institution remain in Milwaukee. Our leading industry still continues to be the manufacture of willow ware and in this line we have achieved the greatest success. The workmen are instructed to make good and perfect wares, every article manufactured is closely examined by the manager or teachers before going into the market, with the result that we have gained the reputation of making the best and most substantial goods in our line in the United States.

A steady and increased demand for our baskets in Michigan, Minnesota, Dakota, Iowa, Nebraska, Illinois, Kentucky and our own State has been the consequence. The prices we quote compete favorably with those of the largest manufacturers in this country. During my visit in the East several months ago I found that some of the workshops sent out circulars begging their patrons to pay a higher price for their articles in order thereby to benefit the blind workmen. Our goods are sold on merit only, without asking special privileges or favors on the ground of being manufactured by the blind. We do not ask for charity, our success depending solely on the superior quality of our manufacture and on quoting them at the regular market price.

While the question of occupation for the male blind adult of the State is an established reality I have not decided upon the proper employment for blind women, but I am thoroughly

---

*Superintendent's Report.*

---

convinced that to employ both sexes in the same building would not be advisable. An industry in which the women could be employed at home on some article not manufactured by machinery would seem most feasible. In the meantime we have been in the habit of selling a large number of knitted and sewed articles for blind women, and shall continue to assist them in this way until some regular occupation is found for them.

From June 30, 1904, to June 30, 1906, we have manufactured 6029 Buggies, 13579 Baskets and Hampers etc. and have recaned 188 Chairs. Our working capital has increased to \$5,793.47 and as our trade expands a larger sum will be necessary. To continue assisting those learning a trade and for current expense it would therefor be advisable to increase the yearly appropriation to \$10,000.

Thanking you for the great interest you have shown in our workshop, I remain

Respectfully yours,

OSCAR KUSTERMAN,

*Superintendent.*

Milwaukee, Wis., June 30, 1906.

## STATISTICS OF PAUPERISM.

For the biennial period ending June 30th, 1906.

Movement of population in poor houses.	1905.	1906.
Number in poor house at beginning of year.....	1,500	1,523
Of whom were male.....	1,100	1,116
And females.....	400	407
There were received during the year.....	1,018	937
Of whom were male.....	866	747
And females.....	212	190
There were born in poor houses.....	11	11
Of whom were male.....	7	4
And females.....	4	7
Making the total in poor houses during the year.....	2,388	2,461
Of whom were male.....	1,921	1,857
And females.....	617	604
There were discharged during the year.....	503	439
Of whom were male.....	375	342
And females.....	128	97
There were placed out during the year.....	14	79
Of whom were male.....	6	56
And females.....	8	23
Ran away during the year.....	289	214
Of whom were male.....	260	191
And females.....	29	23
There died in the poor houses during the year.....	209	253
Of whom were males.....	156	184
And females.....	53	69
Total loss of population during the year.....	995	985
Of whom were male.....	779	774
And females.....	216	212
Number remaining in poor houses at the end of the year.....	1,502	1,578
Of whom were male.....	1,190	1,185
And females.....	392	393

On June 30, 1906, there were 42 county. 1 town and 3 city poor houses in the state.

Statistical Tables.

## COMPARATIVE TABLE.

Showing the total amount expended for poor relief including the amount expended in maintaining poorhouses, and the outdoor relief administered by counties, towns and municipalities.

*Statistical Tables.*

COUNTY JAILS, JUNE 30, 1904.

COUNTIES.	Material of which constructed.	Date of construction	Original cost of jail, including additions.	NO. OF CELLS.		How many can properly be accommodated.	REMARKS.
				For males.	For females		
Ashland .....	Brick .....	1888	\$85,000 00	16	4	40	First class jail, in good condition and well managed. The ventilation and sanitation are good.
Barron. ....	Stone and brick .....	1892	10,000 00	6	2	26	Cells are of steel, with corridors three feet wide around cage. Water closet in each cell and in outer room. Room for women in sheriff's residence. Considered fire proof.
Bayfield. ....	Stone brick and iron .....	1893	28,000 00	7	2	20	This is a new jail and a credit to Bayfield county. Prisoners were moved in November 11th, 1893.
Brown .....	Brick .....	1866	.....	6	2	16	Jail is on second floor of court house and is very defective and unsafe. The sanitary condition is bad.
Buffalo .....	Brick and stone .....	1888	5,000 00	3	1	6	A very good brick building. Covered buckets are used. Ventilation fair. Room upstairs for female prisoners.
Burnett .....	Brick and iron .....	1902	8,500 00	3	1	12	This jail is first class in all respects; has separate apartments for women.
Calumet. ....	Stone and iron .....	1877	5,000 00	4	2	12	A small jail, but answers fairly well as there are not many prisoners confined therein.
Clark .....	Stone brick and iron .....	1898	18,000 00	12	6	18	New jail of brick and stone. Has all modern improvements, including steam heating and electric light. Is a first class jail.
Columbia .....	Brick and iron .....	1887	18,000 00	16	3	38	A well constructed jail, but defective in regard to sewerage. Female cells above sheriff's residence.
Chippewa .....	Stone and brick .....	1875	20,000 00	20	2	44	This jail is in fair condition and fairly well kept.
Crawford .....	Stone and iron .....	1896	5,500 00	3	1	8	Facilities for separation of sexes. Old fashioned and not secure, but neatly kept.
Dane .....	Stone and brick .....	1893	48,000 00	40	4	88	A practically fire proof and very complete jail. One of the best in the state.
Dodge .....	Stone and brick .....	1891	20,000 00	10	4	50	A good jail with modern improvements.
Door .....	Brick and iron .....	1882	6,000 00	5	1	6	A well built jail with separate cell for women.
Douglas .....	Brick .....	1888	17,000 00	8	2	32	Of approved construction with steel cage, but too small for the needs of the county.
Dunn .....	Brick .....	[rebuilt] 1893	.....	6	2	8	A very well kept jail.
Eau Claire .....	Brick .....	1884	20,000 00	9	1	30	Jail fairly well kept but not well arranged nor large enough. No chance to properly classify prisoners. City uses jail for its prisoners.

Florence .....	Brick and iron .....	1889	7,000 00	3	1	12	Sufficiently large for present needs.
Fond du Lac .....	Stone and brick .....	1869	40,000 00	36	.....	36	A good jail, lacking however, facilities for the proper separation of sexes.
Forest .....	Wood and iron .....	1893	5,500 00	2	1	4	Condition fair at last inspection, but needs some repairs.
Grant .....	Stone and brick .....	1872	22,000 00	11	1	28	Steel cage with twelve cells. Ventilation poor. A new sheriff's residence contiguous to this jail, was erected in 1894.
Green .....	Brick and iron .....	1871	30,000 00	8	1	22	A very good jail and safe.
Green Lake .....	Stone .....	1899	6,500 00	10	2	24	Jail is old and unsafe and poorly ventilated. Should be replaced by new jail.
Iowa .....	Stone and iron .....	1875	12,000 00	8	.....	10	A fairly good building, need additional apartments for women.
Iron .....	Brick .....	1893	9,500 00	12	.....	30	A first class jail in all appointments. Fine cage and good beds. Well supplied with water and well ventilated.
Jackson .....	Brick .....	1878	5,000 00	4	1	10	Ventilation and sewerage good. City water. Separate rooms for females. New water closets have been installed.
Jefferson .....	Stone and brick .....	1874	18,000 00	14	2	32	A fair jail kept in good order, new system of ventilation installed.
Juneau .....	Stone and brick .....	1888	12,000 00	15	1	1	This jail is of good construction and fully meets the requirements of the couniv.
Kenosha .....	Stone and brick .....	1885	15,000 00	18	1	24	Two cages, one above the other. Separate room which may be used for females. Fairly well kept.
Kewaunee .....	Stone and brick .....	1885	5,600 00	6	.....	6	A good jail, except that there are no facilities for the separation of sexes.
*La Crosse .....	Stone and brick .....	1890	50,000 00	24	2	52	A very fine jail, heated by steam and lighted by electricity. Department for females. Finely kept.
Lafayette .....	Stone, brick and iron .....	1898	12,000 00	12	4	16	New jail with all modern improvements and is a first class jail. Separate apartments for women.
Langlade .....	Stone and brick .....	1885	8,000 00	4	.....	12	Two steel cages on each floor. The jail is too small for the needs of the county and is unsafe. Needs bathing facilities. Has many tramps.
Lincoln .....	Stone and brick .....	1885	11,500 00	2	1	10	A fair jail with good facilities for the separation of sexes but poor facilities for the classification of offenders.
Manitowoc .....	Stone and brick .....	1892	30,000 00	20	4	36	A fine jail furnished with all modern conveniences. Separate cell for females.
Marathon .....	Brick .....	1900	25,000 00	18	2	70	A first class jail in every particular. Facilities for separation of sexes. Has new cement floors.
Marinette .....	Stone and brick .....	1892	25,000 00	21	5	52	New with all modern improvements, well kept and in good condition. Separate cells for insane.
Marquette .....	Stone and brick .....	1866	8,000 00	2	.....	4	Steel cage in one room of basement of courthouse. This jail is not constructed according to law as it is dark, low and unhealthy.

## COUNTY JAILS, 1904—Continued.

COUNTIES.	Material of which constructed.	Date of construction	Original cost of jail, including additions.	NO. OF CELLS.		How many can properly be accommodated?	REMARKS.
				For males.	For females.		
Milwaukee .....	Stone and iron .....	1885	.....	69	3	15)	This is an excellent jail and its capacity is sufficient. All women or girl prisoners are confined in what is known as the female ward, which is separate from the part occupied by the males. Capacity of female department is 16.
Monroe .....	Stone and brick .....	1891	\$16,500 00	16	6	44	A very satisfactory jail and hitherto has had good management.
Oconto .....	Stone and brick .....	1887	9,000 03	7	.....	20	A very good jail, well supplied with water closets and bath rooms. Separate room for females.
Oneida .....	Stone and brick .....	1888	15,000 00	6	.....	12	A good building with iron cages. Large room for the temporary detention of women and boys.
Outagamie .....	Brick and wood .....	1886	30,000 00	23	.....	43	This is what is called a rotary cage and is fairly satisfactory, but needs repairing and painting.
Ozaukee .....	Brick and iron .....	1895	17,500 00	5	2	12	New building, having five double cells for males and two single cells for women. Bath tubs. Building heated by steam. Self regulating.
Pepin .....	Stone and brick .....	1895	4,060 20	2	.....	8	Is a good jail and sufficient for needs of the county.
Pierce .....	Brick .....	1903	12,000 00	6	2	12	New, modern and very satisfactory.
Polk .....	Stone .....	1881	2,000 00	2	.....	6	Located in basement of stone building, the two upper floors of which are occupied by county offices. The jail part is damp and unsuitable for occupancy.
Portage .....	Brick and steel .....	1897	17,500 00	22	.....	71	A very good jail with all modern improvements. Facilities for separation of sexes.
Price .....	Brick, stone and iron	1904	8,000 00	6	.....	18	This is a very good little jail and well kept. Has separate cells for females.
Richland .....	Stone .....	1904	20,000 00	6	2	12	A new jail with all modern improvements.
Racine .....	Stone and brick .....	1893	23,000 00	24	.....	37	This is a new jail, first class in every respect and well kept.
Rock .....	Brick, stone and steel	1900	23,060 00	18	1	60	First class jail but needs ventilation in cell room. Facilities for separation of sexes. Hospital ward over office.

St. Croix.....	Stone .....	1900	\$10,000 00	6	.....
Sauk .....	Stone and brick.....	1890	20,000 00	18	3
Sawyer .....	Wood .....	1884	3,500 00	6	.....
Shawano .....	Brick and stone .....	1902	20,000 00	10	.....
Sheboygan .....	Stone and brick.....	1893	21,500 00	18	4
Taylor .....	Brick .....	1892	14,000 00	12	.....
Trempealeau.....	Brick and iron.....	1884	9,000 00	2	1
Vernon .....	Stone and brick.....	1880	5,000 0	8	.....
Vilas .....	Stone and brick.....	1895	12,000 00	4	1
Walworth .....	Stone and brick.....	1878	10,000 00	11	3
Washburn .....	Brick .....	1900	10,000 00	8	.....
Washington.....	Stone and brick.....	1887	14,000 00	5	.....
Wanpaca .....	Brick .....	1896	12,000 00	12	.....
Waushara .....	Brick .....	1882	2,000 00	5	.....
Winnebago.....	Stone and brick .....	1900	24,000 00	28	.....
Wood .....	Stone and iron. ....	1882	.....	16	8
Waukesha .....	Stone and iron.....	1883	22,000 00	8	3

10 A new jail with modern improvements. Facilities for separation of sexes.

26 This is a modern new jail.

30 Three steel cells for men and one wooden one for women. Answers the purpose and is neatly kept.

10 A new jail with all modern improvements, one of the best in the state.

39 Ventilation system perfect. Very good jail.

40 Good, substantial building.

4 Not large but sufficient for the needs of the county. A very serviceable jail.

16 A fair jail with separate apartments for females.

11 A good substantial jail with modern improvements.

33 Altogether the jail is creditable to Walworth county, being as it is in every way superior to the average.

40 A new jail with modern improvements.

20 This jail has steel cage and cells. Separate cell for women.

50 New jail with all modern improvements. Facilities for separation of sexes.

5 Not very secure and of small proportion. Females kept in cell on upper floor.

50 This is a first class jail, one of the best in the state. Facilities for separation of sexes. Has hospital ward, insane ward and three cells for juveniles.

24 A basement jail with comparatively few prisoners. Very complete. Large enough to accommodate all classes of offenders except tramps.

18

*Proposals for Furnishing Supplies.*

---

## Proposals for Furnishing Supplies.

---

The following is a sample of the meat proposal adopted by the Board. Previous to the ending of a contract period, the stewards of the different institutions forward to the Board the amount and kinds of meat needed for the following contract period and the Board then sends out blank proposals to the different meat packers and dealers requesting them to bid on all the meats named in the proposal. The lowest bidder gets the contract.

SEALED PROPOSALS for furnishing meats to the various institutions as per enclosed specifications, for the months of May, June, and July, 1906, will be received by the State Board of control at its office, Madison, Wisconsin, until 11 a. m., May 6th, 1906.

On dressed beef, bids are desired on prime native steers (dressed), weighing not less than 600 nor more than 750 lbs. All carcasses to be subject to inspection and acceptance by the officers of the various institutions. Bidders will also quote price on fore quarters and hind quarters, same quality of beef. Bids are also desired on western steers of same weight, and bidders will quote price on same in blank provided for that purpose.

On veal, bids are desired on carcasses weighing from 90 to 120 lbs. Bidders will also quote prices on veal carcasses weighing from 120 to 200 lbs. in blank provided for that purpose.

The quantities of the meats of the various kinds enumerated in the specifications are estimates of the needs for one month, but the contract will be awarded for a period of three months.

On all meats, bids are desired on best quality.

The shipping directions will be given by the stewards of the different institutions, and payments will be made for all meats received up to the 25th of each month on the 12th day of the following month.

*Proposals for Furnishing Supplies.*

The Board reserves the right to reject any or all proposals if in its judgment the interest of the state will be thereby subserved.

Bids should be indorsed "Proposals for Meat."

STATE BOARD OF CONTROL.

Madison, Wisconsin.

MEAT PROPOSAL.

*State Board of Control, Madison, Wis.*

GENTLEMEN:—We hereby propose to furnish meats to the several state institutions in accordance with your specifications for the months of May, June and July, 1906, at the prices indicated below:

Name of firm.....

Address.....

Date.....

This Sheet must be Filled in, Dated and Signed.

The following is a sample of the grocery proposal for furnishing groceries to the different institutions. Previous to the end of a contract period the stewards of the different institutions forward their needs in the grocery line for the following 3 months. The Board then advertises requesting the different grocery firms to forward bids on the whole amount. The bids are compared, samples tested and the firm having the lowest bid and equally as good if not better samples than the other bidders, is awarded the contract.

---

*Proposals for Furnishing Supplies.*

---

The State Board of Control will receive proposals at its office in the Capitol, Madison, Wis., up to 10:00 o'clock A. M., Thursday, July 5, 1906, for furnishing groceries as per-attached schedule, for the months of July, August and September, 1906, to the following named institutions:

State Hospital, Mendota.  
Northern Hospital, Winnebago.  
School for Deaf, Delavan.  
School for Blind, Janesville.  
Industrial School, Waukesha.  
State Prison, Waupun.  
State Public School, Sparta.  
Home for Feeble Minded, Chippewa Falls.  
State Reformatory, Green Bay.

The attached schedule shows an approximate estimate of needs of the institutions, but the contract will be awarded for sufficient quantities of groceries to supply the institutions for the period named.

Contract will be awarded to the lowest bidder on the whole amount of supplies named in accompanying schedule.

All prices must be quoted on a basis of F. O. B. Milwaukee, Wis., subject to the usual trade discounts.

Prices must be quoted on the brands named in Schedule, but, if bidders are desirous of bidding on other brands, such proposals will be considered. All proposals to furnish goods of different brands than those named in schedule attached must be quoted on separate sheet.

All proposals must be accompanied by samples.

All goods must pass test of Pure Food Law.

The Board reserves the right to reject any or all bids, and to award contract for three or six months and to include all or exclude any of the institutions from the contract.

All successful bidders will be required to enter into a written contract to furnish goods in accordance with their bids.

Goods are to be shipped in such quantities and at such times as the stewards of the different institutions shall direct.

Payments will be made on 15th day of each month by State Treasurer's draft for goods furnished previous month.

The price and also the measure, as lb., bbl., cwt., doz., etc., must be inserted in their proper columns. Accurate extensions and footings must be made and total amount placed below last bid in space marked "total."

---

*Proposals for Furnishing Supplies.*

---

The following is a sample of the tea, coffee and spice proposal adopted by the Board. The manner of ascertaining the amount needed and of letting the contract is similar to the method adopted in letting grocery contracts.

The State Board of Control will receive bids at its office in the Capitol, at Madison, Wis., up to Friday, July 6 1906, at 10:00 o'clock A. M., for furnishing such amounts of tea, coffee and extracts as will be needed by the state institutions named in upper left hand corner of this sheet, during the months of July, August and September, 1907.

The accompanying list is an approximate estimate of the needs of the institutions, but the contract will be awarded for amounts more or less than is stated in the estimate. The contract will be awarded to the bidder making the lowest bid for the entire list of goods named in the accompanying estimate.

Goods should be figured on basis of f. o. b. institutions named and prices subject to the usual trade discount.

The quality of supplies is indicated and bidders will please send samples of all goods on which they bid.

The Board reserves the right to reject any or all bids and to award the contract for three or six months. The quality, as well as the price, will be considered, and the Board also reserves the right to include all or exclude any of the institutions from the contract.

All goods must pass test of Pure Food Law.

The following estimate is for three months.

The contract will not be awarded until July 7, but samples should be submitted on the 2nd so that tests may be made before the 9th.

TEA, COFFEE AND SPICES.

Coffee.....lbs. 5450 Bidders will submit samples on best grades for 10, 16, 20, and 25c per lb.  
 Cream Tartar.....lbs. 325 Pure cream tartar in 5 lb. cans.  
 Lemon extract.....qts. 20 Good quality.  
 Nutmeg.....lbs. 10 Good quality.  
 Tea.....lbs. 1650 Quote best prices on Japan for 15 and 25c and Young Hyson for 12 and 18c.  
 Vanilla extract.....qts. 28 Good quality.

STATE BOARD OF CONTROL.

Madison, Wis., June 25, 1906.

*Do not fail to send samples.*

The following form shows the manner in which the Board buys coal for the different institutions. Similar notices are sent to the different dealers requesting them to bid.

### COAL.

Proposals for furnishing the whole or any part of the following quantities of coal, to be delivered as hereinafter specified, will be received by the State Board of Control of Wisconsin, at its office in Madison, Wis., until 10:00 o'clock A. M.

*Tuesday, June 5, 1906.*

3,500 tons, more or less, of bituminous coal, lump, egg, mine run, nut, pea or screenings, washed or unwashed, for THE STATE HOSPITAL FOR THE INSANE, on spur track near coal house, Mendota Station, on side-track of Illinois Central Railway, Madison, Wis., and on side-track of C., M. & St. P. Railway, Madison, Wis., and on side-track of C., M. & St. P. Ry., Darwin Station.

4,000 tons, more or less, of bituminous coal, lump, egg, mine run, nut, pea or screenings, washed or unwashed, and 30 tons of anthracite egg coal, for the NORTHERN HOSPITAL FOR THE INSANE, on spur track of C. & N. W. Ry. near coal house, State Hospital Station, and on side-track of Wisconsin Central Railway, State Hospital Station.

1,500 tons, more or less, of bituminous coal, lump, egg, mine run, nut, pea or screenings, washed or unwashed, and 50 tons of anthracite egg coal, for the WISCONSIN SCHOOL FOR THE DEAF, on track, Delavan, Wis.

1,500 tons, more or less, of bituminous coal, lump, egg, mine run, nut, pea or screenings, washed or unwashed, and 25 tons of anthracite egg coal, for the WISCONSIN SCHOOL FOR THE BLIND, on side-track of C. & N. W. Railway, and on side-track C. M. & St. P. Ry., Jancsville, or in coal shed at the institution.

3,000 tons, more or less, of bituminous coal, lump, egg, mine run, nut, pea or screenings, washed or unwashed, and 30 tons of anthracite egg coal, for the INDUSTRIAL SCHOOL FOR BOYS, Waukesha, on the C. & N. W. Railway, or C., M. & St. P. Railway spur track at the school grounds, or on the side-track of the Wisconsin Central Railway, Waukesha, Wisconsin.

3,500 tons, more or less, of bituminous coal, lump, egg, mine run, nut, pea or screenings, and 250 tons of anthracite egg or nut coal, for the WISCONSIN STATE PRISON, on spur track of C, M & St. P. Railway, near prison shop, Waupun, Wis.

*Proposals for Furnishing Supplies.*

1,500 tons, more or less, of bituminous coal, lump, egg, mine run, nut, pea or screenings, washed or unwashed, for the STATE PUBLIC SCHOOL, Sparta, Wisconsin, on the side-track of C., M. & St. P. Railway, and on side track of C. & N. W. Railway, Sparta, Wis.

4,500 tons of bituminous coal, lump, egg, mine run, nut, pea or screenings, washed or unwashed, and 50 tons, more or less, of anthracite egg coal, for the HOME FOR THE FEEBLE-MINDED, on spur track of Wisconsin Central Railway, or on side-track of C., St. P., M. & O. Railway, Chippewa Falls, Wis.

2,500 tons of bituminous coal, lump, egg, mine run, nut, pea or screenings, washed or unwashed, for the WISCONSIN STATE REFORMATORY, Green Bay, Wis., on side-track of C., M. & St. P. Ry., near Reformatory, on side-track of C. & N. W. Ry., and on side-track of Green Bay & Western Ry., Green Bay, Wis.

The above amounts are only estimates of the needs of the institutions. In case any institution runs out of coal after receiving the amount of coal called for in the foregoing specifications, the contractor supplying such institution will be required and shall agree to furnish a sufficient additional supply at the contract price, to satisfy contingent needs to the end of July, 1907.

Contractors will be required to furnish the several institutions the following amounts of coal before October 1, 1906:

State Hospital for Insane.....	1,500 tons.
Northern Hospital for Insane.....	2,500 tons.
Wisconsin School for Deaf.....	600 tons.
Wisconsin School for Blind.....	300 tons.
Industrial School for Boys.....	1,200 tons.
Wisconsin State Prison.....	1,800 tons.
Home for the Feeble-Minded.....	2,500 tons.
Wisconsin State Reformatory.....	600 tons.
State Public School.....	500 tons.

The coal must be of the best quality and preparation of the kinds offered. It will be weighed as delivered, by or under the direction of the stewards of the several institutions, and payments made the last day of each month in accordance therewith.

Coal to be delivered in such quantities and at such times as the Board of Control shall direct.

Bids must state explicitly the name and location of the mines and the preparation of the coal.

---

*Proposals for Furnishing Supplies.*

---

The quality, as well as the price, will be considered in awarding contracts, and the Board reserves the right to reject any or all bids, if in its judgment the interests of the State will be thereby subserved.

STATE BOARD OF CONTROL.

Dated at Madison, Wis., May 21, 1906.

The result of the above notice was that the Board purchased the following grades of coal for the different Institutions:

Bids should be indorsed "Proposals for Coal."

State Hospital for the Insane—Carterville No. 3 washed nut at \$3.25 per ton, from Bell and Zoller Coal Co., Chicago, Ill.

Northern Hospital for the Insane—Youghioghenny dock run lump at \$3.65 per ton from A. G. Wells Company, De Pere, Wis.

School for Deaf—Carterville No. 3 washed nut at \$3.05 per ton from Bell and Zoller Coal Co., Chicago, Ill.

School for Blind—Weowna egg or lump at \$2.80 per ton from Beloit Lumber Co., Beloit, Wis.

Industrial School for Boys—Carterville egg at \$3 00 per ton from Beloit Lumber Co., Beloit, Wis.

State Prison—Carterville No. 3 washed nut at \$3.25 per ton from Bell and Zoller Coal Co., Chicago, Ill.

State Public School—Carterville mine run at \$3.15 per ton from Bell and Zoller Coal Co., Chicago, Ill.

Home for Feeble-Minded—Youghioghenny mine run at \$3 95 per ton from Robert B. Clark, Chippewa Falls, Wis.

State Reformatory—Youghioghenny Dock Run delivered in bins at \$3.15 per ton from A. G. Wells Co., De Pere, Wis.

---

WAUWATOSA, WIS., January 17, 1907.

To his Excellency, JAMES O. DAVIDSON, *Governor*.

We have the honor to submit herewith a complete statement of all facts relating to the government of the Milwaukee Hospital for Insane, during the two fiscal years ending September 30, 1906.

Very respectfully yours,

G. E. G. KUECHLE, *President*.

A. F. WALLSCHLAEGER, *Secretary*.

## SUPERINTENDENT'S REPORT.

---

*To the Honorable Board of Trustees*

Gentlemen:—My tenth Biennial Report of the operations of the Hospital for the period ending September 30, 1906, is herewith respectfully submitted:

The movement of the population during that period will be shown by the accompanying tables which set forth the following facts:

There remained under treatment Sept. 30, 1904, men 251; women 255; a total of 506. The new admissions for the year were: men 113; women 70; total 183. Readmissions, men 22; women 20; total 42. The whole number treated during the year was: men 387; women 344; total 731; and the daily average was 502 19-365. During this year the discharges as recovered were: men 28; women 29; total 57. As improved men 22; women 19; total 41. As unimproved, men 19; women 15; total 34. As not insane, men 11. Transferred to County Asylum, men 16; women 9; total 25; the number of deaths was: men 30; women 20; total 50; leaving under treatment Sept. 30, 1905; men 261; women 252; total 513.

The following year the new admissions numbered: men 127; women 90; total 217. Readmissions, men 19; women 27; total 46. Whole number treated during the year was: men 407; women 369; total 776. Average daily number treated was 528 212-365. During this year there were discharged recovered, men 27; women 35; total 62. Improved, men 18; women 20; total 38. Unimproved, men 22; women 12; total 34. Discharged not insane, men 17; women 3; total 20. Transferred to County Asylum, men 11; women 4; total 15. Died, men 47; women 26; total 73. Remaining un-

---

*Superintendent's Report.*

---

der treatment Sept. 30, 1906, men 265; women 269; total 534.

The health of the inmates in general has been very good, and the morale of the Institution as a whole, all that could be desired. We have also been unusually fortunate in escaping epidemics and casualties, with the exception of one case of suicide.

There has been no radical departure from the usual methods of care and treatment employed in the past, with the exception of special provision for the isolation of tuberculosis cases, which has been made and which has been in operation for the past six months. We have had as our object the general up-building of the patient by every means, medical, moral and hygienic, with the view of bringing order out of chaos, and wherever possible, restoring mental processes to their normal state. As reiterated in former reports, we are inclined to attach great credit for any results to the system of occupation for patients pursued in this Hospital for many years. The results in the way of recovery and death rate during the past Biennial period, though not equal to those of the previous period, are, on the whole, quite satisfactory, considering the fact that almost 50 per cent. of the newly admitted cases were essentially of the non-recoverable type; also that 40 per cent. of these cases had been affected for a period of one year or more prior to their admission to the Hospital. The ratio of recoveries based on the total number of admissions was 29.75 per cent. and on the number of cases of recoverable type 60 per cent. The death rate based on the whole number treated was 8.16 per cent. which is slightly higher than the previous period and is accounted for chiefly by the larger number of senile cases committed during this period.

The County Judge has, during the past two years, ordered that practically all cases committed to the Hospital, shall be conducted thereto by the nurses of the Hospital instead of by the deputy sheriffs as formerly. This practice is also followed

---

*Superintendent's Report.*

---

by the Judge of the District Court and it is assuredly a long step in advance and is most gratifying to the relatives of patients and the public in general. When we shall have achieved the further object which we have been aiming at for several years, namely, in securing a place of temporary detention in connection with the Emergency Hospital, for alleged insane and allied cases, the record of cases declared "not insane"—which during the past two years was 26 in number—will, I feel certain, be materially lessened and great injustice be averted in many instances. In this connection I would call attention to the fact that the necessity of providing some suitable means of transporting patients to the Hospital from their homes has been met by the County Board in appropriating a sum of money sufficient to cover the cost of an ambulance, horses and harness. The ambulance to be purchased is known as the "Bennett Invalid Coach" and bears no resemblance to the ordinary ambulance, having the appearance of an ordinary landau or rockaway, but still furnishing all the features of an ambulance of the best type; the horses can be utilized on the farm as well.

During this period a number of improvements and additions have been made which have added very materially to the efficiency of operation. One of the most notable was the construction of two concrete silos connecting with the cow barn. These silos are 30 feet in height—12 feet below ground and 18 feet above; 18 feet in diameter or 54 feet in circumference, and having a capacity of about 198 tons each. The walls are interlaced by one quarter inch iron rods, vertical and horizontal, to reinforce them and are 15 inches at the bottom, tapering to 12 inches at the top. The roof is also of concrete construction. These silos supply a long felt want and ought to be sufficient for our needs for many years, being in addition practically indestructible by the elements. The old wooden silos were converted into an addition to the cow barn, increasing its capacity to the extent of 23 additional head of cattle.

---

*Superintendent's Report.*

---

This addition, as well as the old portion of the cow barn, has been provided with a concrete floor throughout, with combined water and feed trough and metal stanchions. The total capacity of the barn as arranged is 59 head, and the general conditions, from a sanitary point of view, existing at present, are far in advance of those prevailing in the past. A trolley arrangement for transporting the ensilage from the silos, as well as to remove the manure to the barn-yard, has been provided and serves to make the appointments complete and perfect.

Extensive repairs have been made to the barn buildings in the way of supporting walls and pillars, reshingling of roofs, and two coats of paint applied to the entire block of buildings, including the piggery and hydrant houses.

The new equipment in the general kitchen, consisting of a 16 foot range, roasting oven, larger tea and coffee urns and kettles, is complete and meets our requirements perfectly. Owing to the contracted space in our general kitchen, an annex of re-enforced concrete construction 34 x 32 feet, was added, opening off and communicating with the cold storage house. This addition contains a room for preparing vegetables, a meat cutting room and a room for a milk separator and pasteurizer and ice cream freezer. The officer's kitchen has also been enlarged by an addition of two hundred square feet and equipped with a new range.

Metal ceiling has been extended to cover the upper general dining room, lower general dining room, lower corridors and wards 1 and 4 north and south. They have added very materially to the appearance of these rooms and wards, as well as forming a permanent improvement and a fire proof device. The carpenter has performed the work of installation and the cost of the ceilings is less than half that with hired labor, the expense being simply for the material.

Fifteen hundred willow shoots have been planted in the low-land near the main ditch running through the Hospital grounds. This crop will not be sufficiently matured until the

---

*Superintendent's Report.*

---

third year for use in basket making, which industry has at times in the past been pursued in our shop. We have heretofore been obliged to purchase willows for this work. This will not be necessary after the time stated and it will form a useful and valuable addition to our other established industries.

Much has been done in the past two years in adding to the attractiveness of the grounds. The space skirting the main drive on both sides has been converted into lawn with shrubbery interspersed. The slope between the main walk and the Superintendent's residence has been graded and seeded and forms a beautiful expanse of lawn which makes a most pleasing first impression on the visitor to the Hospital, also having a salutary effect on the patients enjoying the liberty of the grounds and is a source of pleasure generally.

The street railway station has been removed to a point east of the main entrance and the ground surrounding it beautified. Toilet facilities have also been provided in connection with the station in its new location.

Gate pillars of Bedford nstone and St. Louis brick have been erected at the main entrance, surmounted by ornamental copper light fixtures, consisting of a cluster of five balls, each supplied with incandescant lamps.

Very considerable extensions in the way of concrete side-walks have been made. A concrete side-walk, 6 feet in width, has been laid along the entire frontage bordering on the highway, the entrie length being 500 feet; a walk from the Superintendent's residence to the highway and to the main drive-way; a stretch of about 100 feet in length along highway in front of street car station and to toilet rooms in rear of station; from highway to main building connecting rear and front walks and in the rear of the North wing with that leading to the grove.

The base ball grounds have been graded and thereby enlarged and the club house moved west 50 feet. This improvement was greatly appreciated last season as the grounds were

---

*Superintendent's Report.*

---

too contracted in space and they form our chief means of entertainment for the patients in the summer season.

The heating coils and ventilation fans have been installed in their new location in the basement of each wing. Their operation was greatly appreciated by the considerable number of patients on back wards whose bed room doors are of necessity kept locked during the night. The work of installation, wiring, etc., was all done by our own force.

The new general storage building, 100 x 40 feet, in the rear of the power plant and skirting the R. R. spur track, is completed. This building is constructed of cement brick made by our own labor last winter, and is a most useful addition. It contains the carpenter shop and morgue; storage for flour, cement, hard coal and pipes and fittings on the side facing the railroad track, and on the other, the paint shop, tool shop and other storage, all on the first floor. The loft is used for the storage of onions and squash and the basement for the storage of other vegetables. The space occupied by the morgue has no connection with any other part of the building or with the basement, being set on the ground in one corner of the building. This location is preferable to an isolated building for such purposes, as not attracting the attention of patients to it.

Considerable has been done in the way of fire protection and more is planned for the near future. On the wards fire-escape exit doors have been made to open outward, properly lettered and red lamps placed above them and the doors equipped with electric opening device. The quarters occupied by the attendants and employes have been treated in essentially the same manner and fire escape balconies on each floor with connecting stairways have been erected. The balcony on the second floor on each wing will be made to communicate with the amusement hall, thus making two additional exits from this hall. Outside of the building each of the hydrants is equipped with a hose house containing sufficient length of hose already connected to the hydrant, nozzle connected and wrench and sledge hammer

---

*Superintendent's Report.*

---

in each. Extension ladders are hung on the foundation walls on each wing ready for instant use. In the engine room a complete equipment, consisting of helmet, rubber coat and boots and fire axes, for five men, to act as firemen, is kept in a locked cabinet with glass front. This cupboard also contains an ample supply of lanterns filled and ready for instant use. An additional fire-escape stairway has been provided on the north end of the industrial building. Two fire-escapes of the Kirker-Bender type have been contracted for, one for each wing, and they will shortly be placed in position. These escapes will connect directly with the Hospital wards and ought to prove of great efficiency in the case of bed-ridden patients.

The new pavillion for Tuberculosis cases, which has been in use for the past eight months, is occupied by sixteen cases, men and women, who are in charge of a woman nurse for both sexes, both day and night. The population of this cottage is made up largely of senile cases in addition to the tubercular insane. This cottage is on the dormitory plan with two single rooms for the two tubercular cases, which is all we have at present. It is provided with a balcony for fresh air treatment and the south exposure is provided with a broad pavement protected by an awning which can be rolled back in fair weather. These patients practically live out of doors during the day, and as the entire sides of the building consist of windows, an ample supply of fresh air is assured during the night.

The ice plant and cold storage equipment has worked to our entire satisfaction and it has effected a very material saving in the cost of operation.

A cement brick making machine has been purchased and the industry fully established, providing much needed and valuable labor for many of the working class of patients. We have turned out at an average of one thousand bricks daily besides concrete blocks to the number of fifty. This material was used in the construction of the storage building, the annex to the general kitchen and the foundation of the Staff house.

---

*Superintendent's Report.*

---

A new hot house, 110 feet long, 16 feet wide and 16 feet in height to the peak, is rapidly nearing completion and will be available for use this season. This house is thoroughly modern in construction consisting of iron supporting frame work with cypress sash and benches of iron and concrete. The additional space thus provided will be greatly appreciated as the old hot-house has long been outgrown by reason of the constant growth of our garden during the past ten years.

An apparatus for softening water for use in the laundry, boilers and toilet purposes was installed several months ago, and so far as we are able to judge at present, it has been most successful, reducing the water from 31 degrees of hardness to between 6 and 8 degrees. A saving of more than half the soap in the laundry has been effected, the boilers are entirely free from scale and the hot water pipes are no longer occluded by scale as formerly. It has rendered the use of boiler compound unnecessary.

A house for lodging the officers who are now occupying scattered rooms in the main building for the reason that the quarters on the second floor are too contracted to accomodate them, is another and much needed addition which is planned for next year. The space vacated by some of the officers will make room for quite a few additional patients. The foundation for the house is already completed.

An appropriation has been secured for the purchase of a 20-horse power gasoline engine mounted on a truck. This will form a valuable and much needed addition to our farm equipment.

Chief among my recommendations for the next year is the purchase of the Wells farm for the use of this Hospital. We have operated the farm for the past three years and it has proven not only advantageous in the way of furnishing much needed and healthful employment for our patients but from a pecuniary point of view has been of advantage and benefit to the Hospital. As will be seen by reference to the statistical ta-

---

*Superintendent's Report.*

---

bles, the total value of products of farm and garden for the past two years was \$26,499.83, and is in the main the result of the voluntary labor of patients whose physical health not only permitted but demanded such occupation. The matter of pasturage in itself is one of imperative necessity at the present time with our herd of 55 cows as we have absolutely no land for such purpose on our farm. It will be seen that during the last two years we produced 55,832 gallons of milk with a total value of \$6,699.84, which is certainly a showing most gratifying. I would simply add that the bulk of these products had heretofore to be purchased in the market owing to our limited acreage.

I would strongly advocate the erection of a home for the nurses. The quarters in the rear wings of the administration building are exceedingly cramped, being entirely outgrown by the increase in the population of the Hospital and coincidentally with the increase in the staff of nurses. At present there are in the larger rooms four nurses in one room, in the medium sized rooms three, and in the smallest two, attendants. It is the policy of all modern Hospitals for the Insane to make the living apartments of the attendants as attractive and quiet as possible and particularly, isolated from the scene of their daily labors. It is assumed, and with good reason, that the attendants will keep in better health and spirits, and consequently, give better service to the Hospital. The quarters now occupied by them could, with slight alterations, be converted into wards for the laboring class of women patients, and at a much less per capita cost than could be provided by a new building.

During the last season we were very successful in our canning operations. We put up for use during the winter, 1000 gallons of tomatoes, 500 gallons of corn, 250 gallons of peas, 200 gallons of string beans and 1100 gallons of pickles. I would recommend that next season we establish a cannery, on a small scale at least, and put up sufficient corn, peas, toma-

---

*Superintendent's Report.*

---

toes and lima beans to supply the patients liberally during the cold weather. I think that, with the assistance of patients, we can successfully carry out this project.

The weekly per capita cost of maintenance for the biennial period was \$3.16 $\frac{1}{2}$ . This is \$\$.091 $\frac{1}{2}$  less than for the previous period, and is, to a large extent, due to the increased productiveness of the Wells farm; also in a very considerable measure to the judgment and foresight of the Steward. I consider this a very satisfactory showing for a Hospital such as we are operating.

Weekly sessions of the training school for attendants have been held by the assistant physicians during the regular terms and lectures twice a month by the Superintendent to the Senior class of the Wisconsin College of Physicians and Surgeons and to the Milwaukee Medical College.

Much in the way of entertainments has been furnished the during the past two years. The regular weekly dances in winter and alternate dances and lawn concerts in summer have afforded them much pleasure. Baseball games on Wednesday and Saturday afternoons during the season have also contributed much to their pleasure. The holidays have been appropriately observed, Christmas and the Fourth of July particularly. On the latter a Venetian night on the lake was held, to the great enjoyment of all. The lake afforded much pleasure to the patients in the way of bathing, boating and fishing in summer and skating in winter. A large number of patients were taken in the 'bus to the State Fair exhibit, as well as on rides to the Soldiers' Home and Washington Park on Sunday afternoons. The club room has been well patronized by the patients and much interest shown in bowling, biliards and pool. An additional pool table has recently been supplied. Special entertainments given during the past biennial period were:

---

*Superintendent's Report.*

---

## 1905

March 22nd; Entertainment by Mr. Williams and party, consisting of stereoptican views, moving pictures, and songs by Mr. Williams and a quartette.

April 5th; Helen Stuart-Richings, Humorous recitations and impersonations.

May 17th; Miss Jennie Owens and pupils of Wisconsin Conservatory of Music—Vocal and instrumental music.

Aug. 23rd; Trolley ride and picnic at Washington Park.

## 1906

Jan. 10th; Entertainment by Col. Kammer, consisting of songs, stories, recitations, bugle calls and war reminiscences.

Feb. 21st; Phantom party.

Feb. 28th; Lecture on Yellowstone National Park, illustrated by stereoptican views by Mr. John C. Karel.

April 27th; Entertainment by Salvatari Di Grazia, consisting of banjo playing, dancing, impersonations, etc.

May 23rd; Lecture on Alaska, illustrated by stereoptican views by Mr. John C. Karel.

June 17th; Trolley ride—45 men.

Aug. 23rd; Trolley ride and picnic at Washington Park—44 women.

Church services have been held periodically during the year by Rev. Duemling and on Christmas morning Mass was celebrated by Rev. Father Leonard. To both we are under deep obligations, not only for these services, but for faithful and constant ministrations to the sick and dying during the year.

The usual number of magazines and periodicals have been furnished the patients and they have also received two copies of each of the daily newspapers of Milwaukee.

There have been no changes in the official staff of the Hospital with the exception of the appointment of John Falbe to the position of Steward to succeed James S. Prentiss, and

*Superintendent's Report.*

---

Miss Frances Stier to the position of matron, after a service of 11 years in the Hospital.

I beg to record my sincere appreciation of the efforts of the officers, employes and attendants, almost uniformly, to promote the general welfare of the Hospital and to minister to the comfort of the patients particularly.

Our grateful acknowledgements are due the members of the Consulting Staff for valuable service rendered the patients, particularly Drs. Levings, Kletzsch, Hitz, Cutler, Bach and Frank whose services were called into requisition during the past two years.

I desire to thank your Honorable Board for the many courtesies uniformly extended me and for wise counsel and assistance rendered me in the discharge of my official duties.

Very respectfully,

MOSES J. WHITE, M. D.,  
Medical Superintendent.

Jan. 1, 1907.

The following persons constitute the clerical force of the State Land Office at the present time

B. J. CASTLE ..... *Chief Clerk*  
W. H. BENNETT ..... *Assistant Chief Clerk*  
A. W. POTT ..... *General Clerk*  
MATT LAMPIERT ..... *General Clerk*  
MEDA STURDEVANT ..... *Stenographer*

**BIENNIAL REPORT**

OF THE

Commissioners of the Public Lands

OF THE

STATE OF WISCONSIN,

For the Biennial Fiscal Term Ending June 30, 1906.

---

OFFICE OF COMMISSIONERS OF THE PUBLIC LANDS.

MADISON, WIS., June 30, 1906.

TO HON. JAMES O. DAVIDSON,

*Governor of the State.*

In compliance with law we have the honor to submit the following report of the transactions of this office for the biennial fiscal term ending this date.

Legislative enactments of 1903 and 1905, creating a Forestry Commission, and withdrawing state lands from market for a Forestry Reserve, account for the light sales of such lands during the past two years, but do not indicate a lessening of development in the state or of settlement. On the contrary, it appears from daily enquiry made to this office concerning state lands, and applications to purchase, that settlement and improvement are progressing as vigorously now as at any time in the past.

Pursuant to law, some ten thousand acres in Burnett, Douglas and Marinette counties, which had been withdrawn from market for forestry reserve in 1905, were re-offered for sale on

---

*General Report.*

---

May 23, 1906, and the fact that since the latter date over three thousand acres in those three counties have been sold for settlement, at prices in some instances higher than appraisalment, is evidence that unimproved lands of the state are in demand, and that prices fixed for such lands by this commission are not generally too high.

Two years ago we recommended that sales of state lands should be in future for cash only. The legislature of 1905, acting upon the suggestion, passed a bill to that effect, and no state lands have since been sold on partial payments.

Demands upon the office for transcripts from its records and books, especially for copies of surveyors' field notes, increase rather than diminish as the state becomes more densely settled and the establishment of lines and titles becomes more important. To meet this demand, research and labor is required, occupying much of the time of clerks of which there is no evidence on the books and records of the office. Fees charged for this work are nominal, in accordance with long established policy, and do not equal the pay of clerks performing it. All work connected with the conveyance of state lands that are from time to time placed on sale by the Forestry Commission, as well as other lands, is conducted, necessarily, through this office, the Commissioners of the Public Lands being the only officials empowered to make such conveyance.

Trespassing upon state lands, guarded against by attaches of the Forestry Commission and others, is being reduced to the minimum. Many of the trespassers are unintentionally so, from ignorance of division lines. On discovering their error, or having their attention called to it, trespassers of this class are usually prompt to meet demands for payment. The amount collected for trespass during the past two years was \$491.38.

For right of way over state lands the sum of \$826.19 has been collected from various railroad companies since July 1, 1904.

---

*General Report.*

---

The demand from school districts for loans from the trust funds to build or enlarge school houses grows yearly. This class of investment of the trust funds has increased in the four years since June 30, 1902, from \$582,175 to \$1,297,519, and during the two years covered by this report the increase has been \$423,993. And there are now many applications on file awaiting such time as trust funds may be available for additional loans of this class. Attention is invited to tables herewith showing what loans have been made to school districts since July 1, 1904, the amount of principal paid on loans during the same time, and amount now due from each district.

For other detailed information as to the transactions of this office you are respectfully referred to tabular statements hereto attached.

Respectfully submitted,

W. L. HOUSER,

*Secretary of State,*

JOHN J. KEMPF,

*State Treasurer,*

L. M. STURDEVANT,

*Attorney General,*

*Commissioners of the Public Lands.*

*State Land Sold.*

## EXHIBIT 1.

Statement of lands sold from July 1, 1904, to June 30, 1906,  
and of lands held by state at date of this report.
