According to the figures given out by the Wisconsin Monthly Crop and Live Stock Reporter issued by the United States Department of Agriculture, and the Wisconsin State Department of Agriculture the average price received by producers for milk in 1927 was \$2.11 per hundredweight and the average production per cow in 1927 was 5,430 pounds. The number of producing cows in 1927 was 1,950,000. At the average production of 5,430 pounds of milk per cow during the year 1927, there was produced 10,588,500,000 pounds of milk.

The data for cheese, butter, condensery products, ice cream, casein, milk and cream shipped out of state were obtained from blanks filled out by the operators of these plants.

The figures for amount and value of butter produced on farms were obtained by estimating that two per cent of 180,000 dairy

LIST OF BUTTER AND CHEESE FACTORIES

farmers produced 200 pounds of butter per year, valuing it at the average value for butter for the year.

The value of milk produced other than that furnished cheese and butter factories and condenseries and ice cream plants was estimated as the amount used for family consumption by the total population of the State, which population is taken as 2,631,839 (census for 1920). In estimating this amount, one pint per capita per day was used and the milk valued at 3 cents per pint.

Skim milk was valued at one-half as much per hundred pounds as shelled corn is per bushel; and the value of whey at one-half of skim milk. The value of shelled corn was placed at 87 cents per bushel, being figures given by the Crop and Live Stock Department at Washington, D. C.

Following are tabulations by counties of statistics for cheese and butter factories in Wisconsin for the calendar year 1927 as compared with the years 1919, 1921, 1923, and 1925, and a tabulation showing the number of pounds of American, Brick, Limburger, and Swiss cheese by counties as well as other dairy statistics by counties.
