The data for cheese, butter, milk delivered to condenseries, whey cream, milk delivered to milk plants and shipped to Chicago, and other dairy products produced at the factories was obtained from blanks filled out by the operators of these plants.

The figures used for cheese and butter produced on farms were taken from the report of 1915.

The value of milk produced other than that furnished cheese and butter factories and condenseries was estimated as the amount used for family consumption by the total population of the state, which population is taken as 2,500,350 (figures reported by the U. S. Census Bureau, July 1, 1916). In estimating this amount, one pint per capita per day was used and the milk valued at 2½ cents per pint.

In obtaining the estimate for the value of milk and cream shipped to Chicago, St. Paul, Minneapolis, Dubuque, and other points, the figures given in the 1915 report were used.

Skim-milk was valued at one-half as much per hundred pounds as shelled corn is per bushel; and the value of whey at one-half of skim-milk. The value of shelled corn was placed at \$1.63 per bushel (page 12, Bulletin No. 14, Agricultural Statistics for 1917 by W. F. Callander).

Following is a tabulation by counties of statistics for cheese and butter factories of Wisconsin for the calendar year 1917 as compared with the year 1915.

Estimated value of milk and cream shipped to Chicago, St. Paul, Minneapolis, Dubuque and other points outside of Wisconsin.....	250,394,650	7,061,129.13
Total		\$277,583,053.25

According to figures given out by the Crop Reporting Department of the Federal and State Departments the average price received by producers for milk in 1919 was \$2.82 per hundred weight and the average production per cow in 1919 was 4,926 pounds. The average number of cows in 1919 was 1,819,000. At the average production of 4,926 pounds of milk per cow during the year 1919 there was produced 8,960,394,000 pounds of milk.

The data for cheese, butter, condensery products and ice cream was obtained from blanks filled out by the operators of these plants.

The figures used for cheese and butter produced on farms were taken from the census report of 1917.

The value of milk produced other than that furnished cheese and butter factories and condensaries and ice cream plants was estimated as

OCT 4 1920
Wis. Printing Bd.

the amount used for family consumption by the total population of the state, which population is taken as 2,500,350 (figures reported by the U. S. Census Bureau, July 1, 1916). In estimating this amount, one pint per capita per day was used and the milk valued at 3c per pint.

In obtaining the estimate for the value of milk and cream shipped to Chicago, St. Paul, Minneapolis, Dubuque, and other points, the figures in the 1909 report were used. The value for such milk was estimated at \$1.14 per hundred pounds which is the value of hundred pounds milk for 1909 as reported by the Crop Department. The amount of milk was increased 10 per cent assuming that there was that percentage of increase from 1909 to 1919. The value of milk for the year 1919 was placed at \$2.82 being the value reported by the above mentioned department.

Skim milk was valued at one-half as much per hundred pounds as shelled corn is per bushel; and the value of whey at one-half of skim milk. The value of shelled corn was placed at \$1.40 per bushel being figures given us by the State Department of Agriculture.

Following is a tabulation by counties of statistics for cheese and butter factories in Wisconsin for the calendar year 1919 as compared with the years 1915 and 1917 and a tabulation showing the number of pounds of American, Brick, Limburger and Swiss cheese by counties as well as the value of cheese, Cottage cheese, butter and other dairy products which includes condensary products, ice cream, milk and whey.
