The libraries provide public access to a wide range of material, including online exhibits, digitized collections, archival finding aids, our catalog, online articles, and a growing range of materials in many media.

When possible, we provide rights information in catalog records, finding aids, and other metadata that accompanies collections or items. However, it is always the user's obligation to evaluate copyright and rights issues in light of their own use.

DIPHThERIA ANTITOXIN P. D. & CO.

CONCENTRATED AND REFINED (GLOBULIN)
IN SYRINGE CONTAINERS OF
RECENT DESIGN

NOTWITHSTANDING the fact that Diphtheria Antitoxin is specific, the mortality from diphtheria is still too high, and it rises with each day's delay in the administration of the antitoxin. If the dose is inadequate, cardiac failure may cause death, or paralysis may intervene, with its attendant incapacity.

For best results, the antitoxin must be highly concentrated, of low protein content, and of maximum potency.

Diphtheria Antitoxin, P. D. & Co., meets these requirements.

Its superior quality is the result of years of research endeavor and scrutinizing care in manufacture. The syringe container is especially designed for convenience and ease of manipulation under the most trying conditions, such as those attending the injection of antitoxin in children.

Diphtheria Antitoxin, P. D. & Co., is supplied in syringe containers of 1000 antitoxic units for prophylaxis, and 3000, 5000, 10,000 and 20,000 units for curative effect.

Our 22-page booklet, "Diphtheria—Prophylaxis and Treatment," is available to physicians upon request.
