OPINIONS AND DECISIONS

OF THE

Railroad Commission of Wisconsin

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF
STANDARDS FOR TELEPHONE SERVICE IN THE STATE OF
WISCONSIN.

Submitted Feb. 12, 1914. Decided Aug. 13, 1914.

The Commission is required by the Public Utilities Law to establish standards of adequate service for public utilities. Notice of hearing to consider this question was served on all the telephone utilities of the state. A large number participated, and tentative rules were submitted. Later a second hearing was had. The rules and regulations promulgated in the present order were thus formulated after full and careful consideration. The rules formulated deal with the elimination of cross-talk and noise, the number of subscribers per line, the maintenance of lines for through traffic where service is furnished between two or more exchange points, the proper maintenance of equipment, the maintenance of sufficient switchboard capacity and operating force, the provisions for emergencies, the proper handling of calls, the question of directories, and the elimination of interruptions and irregularities in the service. The name and address of the official handling service matters, and a copy of each new directory are to be filed with the Commission. Upon request a complete map of each telephone system is to be filed with the Commission, and a similar map is to be kept at the principal office of each utility and revised from time to time as changes in the system are made. No specific rules are prescribed with regard to toll service, but general provisions are made for the testing of circuits, the reporting of trouble on circuits, accurate devices looking to correct toll charges, the avoiding of unnecessary delay on account of toll business, correct methods on the part of the operators, and the recording of the condition of long distance circuits entering each exchange. It is ordered that all telephone utilities operating in the state of Wisconsin comply with the rules and regulations promulgated in the present order. Sixty days is deemed a reasonable time for compliance.

The Public Utilities Law requires all public utilities to furnish adequate service and empowers the Railroad Commission to formulate standards of adequate service. Believing that the establishment of standards for telephone service would be of material aid in bettering such service throughout the state, an investigation of the matter was instituted by the Commission. Notice of hearing was served on all telephone utilities in the state, and a large number participated. The first hearing was held at Madison on September 23, 1913, and tentative rules were discussed. These tentative rules were revised in the light of the testimony and printed, and were sent with notice of a further hearing to all telephone utilities in the state and other interested parties. The second hearing was held at Madison on February 12, 1914.

The following rules and explanations are the result of careful study and have been formulated after full consideration of the testimony offered and subsequent correspondence with reference thereto. In our judgment they define a quality of service which will be economical and at the same time reasonably adequate for the public. We realize that it is impossible in the present stage of telephone development to establish general rules which will effectively cover every contingency, and if rigid adherence to the rules herein prescribed should in any particular case result in hardship to the company or higher rates to the consumer without a commensurate betterment in service, application should be made to the Commission for a modification, giving reasons therefor. The Commission, through its inspectors, will require full compliance with the rules except in cases where special modifications are secured upon individual application.

Rule 1. Equipment and lines shall be so constructed and maintained as to eliminate all cross-talk and noise which unreasonably interfere with the transmission of messages for ordinary distances.

Objectionable noise and poor transmission frequently occur where ground return lines are in service or where the lines are in close proximity to power lines. Present day construction tends to eliminate these conditions and should be followed wherever practicable. When lines are reconstructed, or when new lines are built, metallic circuits should be provided, except in cases where adequate service can be rendered by less costly construction. Existing ground lines should be replaced by full metallic circuits if adequate service in any particular case demands such a change.

Rule 2. The number of subscribers on any one line shall not be greater than that consistent with adequate service.

All new construction should comply with this requirement. Where existing lines are overloaded, steps should be taken as soon as practicable to rectify this condition by increasing the number of lines. Under ordinary circumstances rural lines should be limited to ten or twelve subscribers, but in special cases a larger number may be justified. Where the use of the service and the revenue derived therefrom warrants such action, the number of subscribers on any one line should be reduced materially below this maximum. Service of a higher class should be rendered to subscribers who demand it and who are willing to pay the additional cost thereof.

Rule 3. Each utility, furnishing service alone or jointly with other utilities in two or more cities, villages or other exchange points, shall provide at least one line for through traffic between such points, along which few if any subscribers' instruments are installed.

Where the through traffic is light, it may be permissible to install instruments for local service along through lines, but between more important exchange points such installations should not be made. In special cases, toll stations may be installed along through lines until such time as the traffic warrants additional lines. This rule should be adhered to whether the through traffic is handled on a toll basis or is included in the regular charges for service.

Rule 4. Each utility shall maintain in proper condition the lines, instruments and other equipment used on its system and shall make such tests and inspections as are necessary.

Inasmuch as the nature of these tests and inspections largely depends upon the kind of system, the character of protective devices and the interference from storms or other external sources usually experienced, it is undesirable to specify their exact nature and extent. The Commission, through its inspectors, will outline the character of tests and inspections necessary in particular cases upon request of the utility and will make such suggestions as are deemed expedient. Signaling equipment, switchboard cords and other equipment requiring frequent attention should be kept in first class condition at all times. When permanent repairs can not be immediately ef-

ected, such temporary repairs should be made as are necessary to insure a prompt resumption of service, pending the completion of the permanent work.

Rule 5. Each exchange shall have sufficient switchboard capacity and a sufficient operating force to handle the traffic at all times with reasonable facility. Traffic studies shall be made and recorded, of such extent and frequency as to demonstrate to the Commission that sufficient equipment is in use and that an adequate operating force is employed.

At exchanges where operation is not continuous, provision should be made for handling emergency calls during such hours as the exchange is closed for regular service.

Traffic studies should include the number of calls made each hour, the hour of heaviest traffic, the variation of these conditions with the day of the week or month or with seasonal conditions, and the distribution of calls among operators.

Rule 6. Reasonable provision shall be made against the failure of lighting or power service, fires and storms, sudden increases in traffic, the illness of operators, or other emergencies which would seriously impair the service if not promptly met.

An exchange should not be left in the sole charge of one operator unless some other person capable of operating the exchange is within reasonable calling distance. Provision should be made for changing to another system of ringing and for a reserve source of lighting instantly available for the operating room. A reasonable supply of repair parts and line supplies should always be on hand.

Rule 7. At exchanges serving five hundred or more subscribers 94 per cent of the calls should be answered within ten seconds or less. At all other regular exchanges 90 per cent of the calls should be answered within ten seconds or less. At small exchanges, operated in connection with other work, slower service may be adequate. Calls shall be carefully supervised and parties disconnected promptly after conversations are completed.

Exchanges now operated in connection with other work should be provided with operators devoting their entire time to the switchboard whenever such a change is justified by the traffic and the revenue derived therefrom.

Rule 8. Suitable rules and instructions shall be adopted covering the phraseology and methods to be employed by operators in handling regular and special calls.

Speed, accuracy and reliability are of vital importance in telephone efficiency, and a definite plan of operation is necessary to establish these qualities of service. Patrons should be required to call by number wherever practicable. In order to avoid giving the wrong number it is advisable for operators to repeat the number to the subscriber before making the connection. Telephone courtesy is extremely important in stimulating the growth of the business, and in eliminating dissatisfaction and complaints. It should be required of all employes and generally encouraged. Employes must not "listen in" on lines except when it is an operating necessity. Care must be taken to avoid diverting business from a subscriber to his competitors, or discriminating between subscribers in the attention given their calls.

Rule 9. Directories in which 1,500 or more subscribers are listed shall be revised at least semiannually. All other directories shall be revised at least once each year. All directories shall be dated.

This rule is general and will apply under ordinary conditions. However, in cases where the changes to be made are so few as to become practically negligible, it may be unnecessary to revise the directory within the time limit. In some instances it may be desirable to make revisions more frequently than specified in the rule. The matter is one which should be governed by the number of changes which are necessary.

Rule 10. Directories shall contain such instructions and rules governing local and toll service and methods of payment as may be necessary to inform subscribers of their rights and obligations.

It may be found desirable to publish the Commissions rules, illustrations showing the proper method of speaking into transmitters, suggestions as to enunciation, time and method of payment for service, and other information, varying with different exchanges, which will tend to promote business efficiency and precision of operation.

Rule 11. Reasonable efforts shall be made to eliminate interruptions and irregularities, and to correct them promptly when they occur. Records shall be kept of all complaints or irregularities in the service, showing the day and time at which the trouble is reported, the nature of the trouble, its duration and final disposition.

Trouble records are useful in locating defects in equipment and operation, since in this way chronic troubles may be distinguished from occasional complaints due to exceptional circumstances. For this purpose the preservation of the ordinary slips filled out when the trouble is reported and the notes of the trouble man or wire chief with reference thereto will be sufficient. Subscribers should be given instructions as to how and to whom they should report difficulties, and the person designated to receive complaints should be readily accessible and should have time and authority to properly remedy them. Employes should be encouraged to report all complaints, irregularities and criticisms. Patrons should be requested to report trouble in sufficient detail so that an accurate record of the nature of the complaint can be made. The coöperation of the public in promoting good service should be encouraged in the matter of tree trimming, in refraining from monopolizing party lines and in other matters not wholly within the control of the utility.

Rule 12. The name and address of the official or employe designated to handle service matters and a copy of each new directory shall be filed with the Commission. Upon request a complete map of each telephone system shall be filed with the Commission, and a similar map shall be kept at the principal office of each utility and revised from time to time as changes in the system are made.

TOLL SERVICE

No specific rules with regard to the adequacy of toll service are prescribed at this time, but the following suggestions are offered. Toll service should be properly routed so as to be most efficient and to secure justice to the telephone companies where more than one utility is involved. In general, each utility should test all toll circuits early each morning and after storms in order that trouble may be promptly eliminated. On joint lines, or when one utility uses the lines of another utility, trouble on circuits should be promptly reported to the utility responsible for the maintenance of the line. Accurate and convenient timing

devices should be installed in order that toll charges may be correctly computed, and that the service may not be unnecessarily delayed. The tone of voice used by operators is very important, particularly for toll service. They should cultivate not only a distinct articulation, but low tones and pleasing voice. This would aid materially in giving satisfactory service at highest efficiency. A record of the condition of long distance circuits entering each exchange should be kept for the convenience of the utilities in properly maintaining their lines, and for the Commission's information.

IT IS THEREFORE ORDERED, That all telephone utilities operating in the state of Wisconsin hereafter comply with the requirements of the rules and regulations enumerated above.

Sixty days is deemed a sufficient time within which to comply with this order.

JOHN BOUK ET AL.

vs.

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted April 16, 1914. Decided August 13, 1914.

Complaint was made that the station facilities for freight and passengers at Porter's Mills in Eau Claire county are inadequate, and the Commission was asked to require the respondent to provide a suitable platform for freight, and a shelter shed for the accommodation of passengers. It appeared that neither shelter nor platform were provided, that the absence of the latter necessitated the lifting of milk and cream from the ground to the car floor, and that in inclement weather passengers were obliged to expose themselves to the elements or take refuge in near-by houses, a practice occasionally resulting in their missing trains. It seems that an average of three passengers a day alight from or board trains at this point.

Held: A small shed and platform, which can be constructed without great expense, should be provided as a minimum of service, even though the traffic is light. Passengers should not be obliged to depend on near-by residents for shelter while waiting for trains. The respondent is ordered to provide a shelter shed and platform at Porter's Mills, which shall be adequate for the freight and passenger traffic. Sixty days is deemed a reasonable time for compliance with the order.

The petition, which is signed by fifty-six producers and shippers of farm produce, alleges in substance that the station facilities for freight and passengers at Porter's Mills in Eau Claire county are inadequate. The Commission is therefore asked to require the respondent to provide a suitable platform for freight and a shelter shed for the accommodation of passengers.

The respondent submits in its answer a letter from its general manager who states that the company will grade and surface with cinders a stretch thirty or forty feet alongside of the track, but that additional expenditure is not warranted by the traffic. The dismissal of the complaint is therefore asked.

A hearing was held at Porter's Mills on April 16, 1914, at which *John Bouk* appeared for the petitioners and *W. J. Thiele* for the respondent.

The testimony shows that no shelter is now provided for pas-

sengers or freight at Porter's Mills. There is no platform, and milk and cream must be lifted from the ground to the car floor. In inclement weather passengers are obliged to expose themselves to the elements or wait at private houses in the vicinity. These houses are so located that it is difficult to reach the stopping place after the train can be heard approaching, and passengers have missed trains in this way. The owner of one of the near-by houses testified that it is inconvenient and annoying to him to be obliged to furnish shelter to persons waiting for trains. Witnesses stated that trains are frequently late, especially during the winter.

Porter's Mills is 4.8 miles south of Eau Claire and two trains each way daily are stopped there on signal. The nearest stations are Shawton 3.3 miles north, and Lufkins Siding, 3 miles south. The latter place was in 1913 provided with a shelter shed about 16 by 16 feet in dimension, equipped with a stove, but it is not listed as a passenger station. Witnesses stated that the traffic at Lufkin's Siding is no greater than that at Porter's Mills. They estimated that more than fifty-six families live within a mile of Porter's Mills and would naturally make use of train facilities there. In addition some passengers come from a distance of four miles to this station. An average of from two to six passengers a day were said to board or alight from trains at Porter's Mills.

Subsequent to the hearing the respondent submitted a statement of its freight earnings at Porter's Mills and Lufkins Siding as follows:

FREIGHT EARNINGS IN YEAR SPECIFIED.

Station.	1911	1912	1913
Porter's Mills.....	\$183 70	\$39 09	*\$77 77
Lufkins Siding.....	900 89	368 53	194 54

*1913 data were furnished in respondent's answer.

Ticket sales to Porter's Mills in 1913 are stated in respondent's answer as 487, yielding a revenue of \$62.48. Assuming that outbound traffic is substantially the same, the total number of passengers would be approximately 974. Eliminating Sundays, this would give an average of three passengers a day throughout the year.

In the light of the testimony it is our judgment that the station facilities at Porter's Mills are inadequate. Even though the traffic is light, it is essential that a small shed and platform, which can be constructed without great expense, should be provided as a minimum of adequate service. Passengers should not be obliged to depend upon near-by residents for shelter while waiting for trains.

IT IS THEREFORE ORDERED, That the respondent, the Chicago, Milwaukee & St. Paul Railway Company, provide a shelter shed and platform at Porter's Mills which shall be adequate for the freight and passenger traffic.

Sixty days is considered a sufficient time within which to comply with this order.

IN RE PROPOSED EXTENSION OF THE LINE OF THE GRANGE
HALL FARMERS TELEPHONE COMPANY IN THE TOWN OF
ROCK ELM, PIERCE COUNTY, WISCONSIN.

Submitted May 14, 1914. Decided Aug. 13, 1914.

The Grange Hall Farmers Tel. Co. on Dec. 13, 1913, filed notice with the Commission of a proposed extension of its line in the town of Rock Elm. The company informed the Commission that the extension in question would not interfere with any other company. Accordingly, when the twenty day period fixed by statute had elapsed and no objection to the extension had been filed, the company was notified that it was authorized to proceed. It later appeared, through an investigation following a complaint by the Highland Tel. Co., that the proposed extension would parallel the line of the latter company for fully three miles, and that the Grange Hall Farmers Tel. Co. had not complied with the law in that it had not served written notice upon the Highland Tel. Co. The former company was then notified that the proceedings instituted in December 1913 were void, and that a new notice would be necessary. Such notice was accordingly served on the Commission on April 21, 1914, and hearing held pursuant thereto on May 14. At the hearing it developed that the construction of the extension in question had proceeded to completion in spite of the fact that the matter was before the Commission for determination and that nineteen subscribers were attached to the new line, six of whom had discontinued the service of the Highland Tel. Co. The controlling reason for the construction of the extension seemed to be the belief that subscribers of the new line would get the benefit of a much lower rate, though it appeared that the lower rate was not fixed at a proper amount, as it made no allowance for maintenance, taxes, depreciation, and interest, but covered only the cost of switching service. It did not appear that the rates of the Highland Tel. Co. were unreasonably excessive, and an inquiry into the merits of the case revealed that there was no public need for the extension in question.

Held: Sec. 1797m—74 of the statutes was aimed to prevent such wasteful duplication of telephone lines as has arisen in the present case. Such duplication is not to be permitted merely because the rates of existing companies are thought to be excessive. The law provides an adequate remedy for such a situation through the filing of a complaint with the Commission. Sec. 1797m—102 imposes upon the Commission the duty of enforcing the provisions of sec. 1797m—1 to 1797m—109. In enforcing the provisions of those statutes, it is no less the duty of the Commission to take steps to abate a condition that has arisen than the law was designed to prevent, than to prevent the occurrence of that condition in the first place. The con-

struction of the line in question was clearly an illegal act. If the Grange Hall Farmers' Tel. Co. and the individual patrons of the new line do not permanently discontinue the service over the line in question within two weeks following the date of the present decision, the matter is to be turned over to the attorney-general for prosecution.

On April 21, 1914, the Grange Hall Farmers Telephone Company gave notice to this Commission, as required by law, of a proposed extension of its line in the town of Rock Elm, Wis. The Highland Telephone Company of Elmwood notified the Commission of its objection to the extension, and a hearing was held on the matter at Elmwood, May 14, 1914, at which the Grange Hall Farmers Telephone Company was represented by *Frank Wild* and *Bert Collett*, and the Highland Telephone Company by *John Schwebach* and *Joseph Johnson*.

There are certain occurrences antedecent to the filing of the formal notice that occasioned this hearing that are necessary to a complete understanding of the case. The first notice of the extension was served upon the Commission by the Grange Hall Farmers Telephone Company on December 13, 1913. In the letter accompanying the notice the secretary of the Grange Hall company said "This extension does not interfere with any other company, as it starts from our own central and runs into the country to no place of business". When the twenty day period fixed by the statute had elapsed, the Commission, relying upon the fact that no objection to the extension had been filed and also upon the above quoted statement of the Grange Hall company, wrote the latter company that it was authorized to proceed. In March 1914 complaint was received by the Commission from the Highland Telephone Company that the Grange Hall company was proceeding with the hauling of poles along the route of the Highland company's line and that no notice of any proposed extension had ever been served upon the Highland Telephone Company. The Commission sent a member of its engineering staff to investigate the situation, and his report showed that the new line would parallel the Highland line for a distance of fully three miles. Upon receipt of this report the Commission wrote the Grange Hall Farmers Telephone Company that inasmuch as it had not complied with the plain requirement of the law in the matter of serving written notice upon the Highland Telephone Company, the proceedings instituted in December, 1913, were void and a new notice would have to be filed.

Such notice, as above stated, was served upon the Commission on April 21, 1914, and the matter was set for hearing on May 6. At the request of the Grange Hall company, the hearing was postponed until May 14.

At the hearing then held it developed that the construction of the new line had proceeded to completion in spite of the fact that the matter was before the Commission for determination; and the actual connecting of telephones had taken place between the date of notice and the date of the hearing. Nineteen subscribers were attached to the new line, and six of these had previously been subscribers of the Highland Telephone Company and had discontinued its service in favor of that of the Grange Hall company. Under these circumstances, the construction of the line was clearly an illegal act. It appears, therefore, that the Grange Hall Farmers Telephone Company failed to comply with the law in that it did not give written notice to the Highland Telephone Company in December of its intention to construct; that it misled the Commission by stating that the proposed extension would not affect any other company, whereas, it did as a matter of fact parallel the line of the Highland Telephone Company and takes away six subscribers from that company; and that upon being notified of its failure to perfect its legal right and being instructed to file a new notice, the company filed the notice but proceeded to build the line without waiting for a hearing or a determination of the matter by the Commission.

It was stated by the representative of the Grange Hall company that the Highland Telephone Company had had verbal notice of the proposed construction of the line, but the evidence shows that the verbal notice related to a meeting which was to be held for the purpose of discussing the telephone situation in the community; that the secretary of the Highland Telephone Company attended this meeting, but no action was taken and he had no knowledge that the construction was actually contemplated until he observed the hauling of poles early in the spring of the present year.

Although the construction of the line in question was unlawful because the conditions precedent were not complied with as required by statute, the Commission's investigation has included an inquiry into the merits of the case in order to determine whether the situation is actually such as to indicate a public need for the new line. Rock Elm is located seven or eight miles

southwest of Elmwood and the Highland Telephone Company, with headquarters at Elmwood, has a metallic line running from Elmwood to Rock Elm, connecting at the latter point with the switchboard of the Grange Hall Farmers Telephone Company. The latter company, in turn, has a grounded line running over another highway from Rock Elm to Elmwood and connecting with the Highland switchboard at Elmwood. There is free interchange of messages between the two companies. The Highland line from Elmwood to Rock Elm runs through a community known as Farm Hill, about three or three and a half miles east of Rock Elm, and the new line of the Grange Hall Company parallels the Highland line on the same highway from Farm Hill to Rock Elm. At Farm Hill the new line turns south, running for a mile into territory not reached by the Highland company. As has been shown, the paralleling of lines has resulted in the loss of six subscribers to the Highland company, five of whom were renters and one a stockholder of that company. The inquiry discloses, therefore, that there was no actual use for the extension such as would have warranted this Commission in permitting it to be made had the situation been brought regularly before it at the time of the first application.

The controlling reason for the construction of the new line in the identical territory already occupied by the Highland Telephone Company appeared at the hearing to be a matter of rates. The rate of the Highland Telephone Company is twelve dollars a year, while the patrons of the new line expect to get their service for about three dollars per year. It seems that the Grange Hall Farmers Telephone Company is a corporation owning two or more switchboards, but that it does not own the rural lines running into them. These lines, including the one involved in the present case, were built and maintained by the farmers living along them, and they pay the Grange Hall company a uniform rate of three dollars per telephone per year for the switching service. It does not appear clearly what the situation is as to the ownership of the rural lines or as to how the corporation known as the Grange Hall Farmers Telephone Company is controlled. As far as operating matters are concerned, however, it is clear that the entire central office expense of each subscriber is represented by a charge of three dollars per year. It is the belief of the patrons of the new line that their other expenses will amount to practically nothing, it being the duty of each farmer

to keep in repair the portion of the line running past his farm. Thus, it was argued at the hearing, there is a difference of nine dollars a year between the cost of the Highland Telephone Company's service and the cost of service of the new line, and this difference made it decidedly worth while for the farmers to construct a line of their own.

It has been pointed out in several decisions of this Commission that ruinous duplication of lines and service is not to be permitted merely because the rates of existing companies are thought to be excessive. The law provides an adequate remedy for excessive rates by the filing of complaints with this Commission. But because of the conception that seems to exist in the minds of the patrons of the line here in question that the construction of the new line made them a clear saving of nine dollars a year in telephone rental, we deem it appropriate to comment at this time upon the merits of the contention relating to rates. Experience has shown that a rate of twelve dollars per year for rural service, such as is charged by the Highland Telephone Company, is usually by no means excessive. On the other hand, it is quite plain on the face of things that the service of the new line can not be had for three dollars per year per telephone. The experience of those engaged in the telephone business is uniformly to the contrary. The sum of three dollars covers merely the cost of switching service. Nothing is allowed for maintenance of pole and wire lines, renewal of batteries or repair of subscribers' instruments, taxes, depreciation, or a return on the investment. Some of these items involve only a small outlay of money during the first few years of operation, but as time goes on and the lines become old the maintenance items are greatly increased. Then, when the line has reached the end of its useful life and has to be replaced, a second outlay about equal to that made for construction of the original lines will be necessary. If instead of considering the immediate cost to which they will be subjected, the patrons of the new line would look far enough into the future to determine the ultimate cost, and apportion this cost over the years, they would find the expense of their service to be much more than three dollars per year. Probably it would be nearer ten dollars and it might be higher, even though the minimum of maintenance cost and general expenses were incurred.

This Commission has consistently refused to permit paralleling of lines and interference with the business of other companies under circumstances similar to those existing in this case. Along the highway from Farm Hill to Rock Elm the residents can have, if they desire it, the service of the Highland Telephone Company, which includes free connection with all the Grange Hall lines, and this service is available at rates which are reasonable or can be made reasonable upon a complaint to the Commission. Thus, the line in question was constructed in territory in which its construction could not have been permitted if the proper legal steps had been taken. In such a situation the Commission has no alternative but to order a discontinuance of the service given by the unlawfully constructed line. Sec. 1797m—74 of the statutes says, “No public utility already engaged in furnishing telephone service shall install or extend any telephone exchange for furnishing local service to subscribers in any municipality where there is in operation a public utility engaged in similar service without having first served notice in writing upon the Commission and any other public utility already engaged in furnishing local service to subscribers in such municipality of the installation or extension of such exchange which it proposes to make”, etc. The obvious purpose of the statute was to prevent the creation of the identical state of affairs that has arisen in this instance, namely, a wasteful duplication of telephone lines. It is the duty of the Commission to give this law effect. Sec. 1797m—102 says, speaking of the Commission, “It shall be its duty to enforce the provisions of sections 1797m—1 to 1797m—109”. In enforcing the provisions of the statutes specified, it is no less the duty of the Commission to take steps to abate a condition that has arisen that the law is designed to prevent than it is to prevent the occurrence of that condition in the first place.

The continued existence and operation of the line in question is an act for which those concerned are liable to prosecution. It is a further duty of the Commission to report to the attorney-general violations of the statute so that such prosecution may be begun.

The situation with respect to the ownership of the line in question and responsibility for its construction is not entirely clear from the evidence, since the parties themselves did not seem to have any very definite idea on the subject. The line was built

by the nineteen farmers who are using its service, but it was built with the knowledge and acquiescence, if not the actual assistance, of the Grange Hall Farmers Telephone Company, and it is the latter company that has acted for the new line in dealing with this Commission. Furthermore, the Grange Hall Farmers Telephone Company has connected the line with its switchboard and is giving service over it. Therefore, both the Grange Hall Farmers Telephone Company and the individuals who constructed and perhaps own the line in question would seem to be legally responsible for its construction and use.

The Grange Hall Farmers Telephone Company and the individual patrons of the new line will be given a reasonable time in which to discontinue service over the line, but if such service is not permanently discontinued at the end of two weeks following the date of this decision, the matter will be turned over to the attorney-general for prosecution.

WILKINS AND WILKINS,

vs.

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted April 13, 1914. Decided Aug. 13, 1914.

Complaint was made that the passenger train service at Allens Grove was inadequate and that Bardwell was not provided with a suitable walk or road to a public highway. Bardwell is a junction point between two branches of respondent's system, and is 1.7 miles east of Allens Grove station, and 2.5 miles west of Darien. The train service now afforded Allens Grove was considered, and the revenues arising therefrom. As regards Bardwell, it appeared that a station was made necessary at that point by reason of an intersecting line and interlocking plant, and that the local traffic would probably not warrant a station independently of the transfer business.

Held: The train service at Allens Grove is reasonably adequate for the present. As to Bardwell, it devolves upon the town board to construct a suitable public highway to the station, if the additional convenience of boarding trains at Bardwell instead of Allens Grove or Darien is regarded by the community as warranting such an expenditure. Where a station is located for the purpose of handling transfer traffic, at a considerable distance from a highway, and where the locality is reasonably well served by other stations, it would be unjust to require the railway company to incur large expense for approaches in order to make such junction station accessible for local use. However, patrons from the vicinity should be allowed to use such a station in the absence of unusual danger.

The petition, which is signed by 53 residents of the territory adjacent to Allen Grove and Bardwell stations in Walworth county, alleges in substance that the passenger train service at Allens Grove is insufficient, and that no suitable walk or road from Bardwell to a public highway is provided. The Commission is asked to require the railway company to stop additional trains at Allens Grove.

The respondent in its answer alleges that its passenger train service at Allens Grove is adequate and asks that the petition be dismissed.

A hearing was held on April 13, 1914, at Allens Grove, J. N. Davis appearing for the respondent.

The testimony shows that Bardwell is a junction point between two branches of the respondent's system. An interlocking tower is maintained and in connection therewith is a waiting room approximately 16 feet by 24 feet in dimension for the accommodation of passengers. It is listed as a station in the respondent's folders. Bardwell is 1.7 miles east of Allens Grove station and 2.5 miles west of Darien. The nearest highway crossing is about one-half mile distant. The stations known as Bardwell and Allens Grove are about equidistant from the village of Allens Grove, a community of about 300 inhabitants, and residents of that village and the surrounding country go to Bardwell to board trains which do not stop at Allens Grove or to take trains on the other line. Such patrons cannot reach the junction point except by trespassing on the railway right of way and crossing a trestle which is dangerous for pedestrians.

Witnesses stated that the supervisors of the town of Darien had been asked to build a highway from the Bardwell station to an existing public highway, but that they have failed to take favorable action in the matter, fearing that if Bardwell were to be made accessible to the locality surrounding it, traffic would be diverted from Darien. A statement submitted by the respondent subsequent to the hearing shows that during ten days ending April 14, 81 passengers boarded trains at Bardwell in addition to the transfer traffic.

Respondent's time table shows that Allens Grove now enjoys the service of two passenger trains in each direction daily except Sunday. It is possible for patrons to leave that station at 11:07 a. m., arriving in Beloit at 11:40 a. m., and to leave Beloit on the return trip at 5:06 p. m., arriving in Allens Grove at 5:35 p. m. In the other direction a patron can leave Allens Grove at 6:25 a. m., arriving in Racine at 8:35 a. m., and can return the same day, leaving Racine at 3:50 p. m. and arriving at Allens Grove at 5:45 p. m. The morning eastbound train enables passengers to take a train at Bardwell for Chicago, arriving there at 10:20 a. m., but the return trip cannot be made on the same day on this line. By waiting at Bardwell about three and one-half hours a resident of Allens Grove can reach Madison at 11:55 a. m. and return the same day, arriving in Allens Grove at 5:45 p. m.

A statement showing the passenger earnings at this station, submitted by the respondent subsequent to the hearing, has been summarized as follows:

Month.	Number of tickets sold.	Revenue from tickets sold.
January 1913.....	114	\$33 40
February	71	19 07
March	114	35 31
April	115	21 95
May	126	36 08
June	121	32 02
July	86	32 91
August	*	33 69
September	*	35 15
October	*	26 58
November	*	44 06
December	*	45 43

*Not given.

In the light of the testimony it is our judgment that the train service at Allens Grove is reasonably adequate for the present. The chief point of complaint is the inaccessibility of the Bardwell station. This station was made necessary, not by the development of the adjacent country, but by reason of the construction of an intersecting line and an interlocking plant, and it is impossible that the local traffic would warrant a station independently of the transfer business. If a railway company of its own volition establishes a station necessary for local traffic at a distance from a public highway, it should provide a reasonably convenient means of approach at its own expense. But if a station is located for the purpose of handling transfer traffic at a considerable distance from a highway, and if the locality is reasonably well served by other stations, it would be unjust to require the railway company to incur large expense in order to make its junction station accessible for local use. However, where such a station is maintained, patrons from the vicinity should be allowed to use it, if such use is not attended by unusual danger. If the additional convenience of boarding trains at Bardwell instead of Allens Grove or Darien is regarded by the community as warranting such an expenditure, it devolves upon the town board to construct a suitable public highway to the station.

IT IS THEREFORE ORDERED, That the petition herein be and the same is hereby dismissed.

TOWN OF CAMPBELL

vs.

CHICAGO, BURLINGTON AND QUINCY RAILROAD COMPANY.

Decided August 13, 1914.

Complaint was made that the crossing of the North Salem road and respondent's line in the town of Campbell, La Crosse county, is dangerous to public travel. The crossing in question is located about one-fourth of a mile north of Grand Crossing station, and it appeared that respondent had not improved it, as provided by sec. 1299h—1 of the statutes.

Held: The crossing in question is more than ordinarily dangerous. The respondent is ordered to construct and maintain a highway, in the manner specified, within its right of way limits. As the alterations ordered are necessary for compliance with sec. 1299h—1 of the statutes, the entire cost is assessed against the respondent. Sixty days is considered a sufficient time for compliance with the order.

Under date of March 12, 1913, the supervisors of the town of Campbell in La Crosse county filed with the Commission a complaint which alleges in substance that the crossing of the North Salem road and the respondent's line is dangerous to public travel.

No formal answer was filed by the respondent.

A hearing was held at La Crosse on May 23, 1913, at which *Woodward & Lees*, by *Andrew Lees*, appeared for the respondent. The petitioner was not represented.

As a result of an inspection by an engineer of the Commission and correspondence subsequent thereto, the respondent under date of November 10, 1913, offered to make the improvements recommended by the Commission in the spring of 1914, alleging that the crossing could be placed in better condition than than would be the case if the grading were done in the fall or winter. This arrangement was approved by the Commission and a decision in the matter held in abeyance. Under date of May 14, 1914, the respondent informed the Commission that it was ready to begin the improvement of the crossing and asked permission to make the highway ten feet narrower than that suggested by

the Commission. In reply, respondent's attention was directed to its earlier promise and the width of highway originally suggested was insisted upon. On June 5, 1914, a letter was received from the town chairman stating that the work had not been started. The matter was again taken up with the respondent, which replied under date of July 1, 1914, offering further objections to the improvements suggested by the Commission. It therefore appears necessary to issue an order in the matter.

The crossing in question is located about one-fourth of a mile north of Grand Crossing station. The railway tracks run approximately north and south and the highway northeast and southwest. Approaching on the highway from the southwest the first track to be crossed is the respondent's main line, at which sixteen foot planking is provided. The road then proceeds northeasterly about five hundred feet to three tracks of respondent's freight line. At the first of these tracks sixteen foot planking is used and at the other two twenty-four foot planking is provided. About one hundred twenty feet further northeast the road intersects the single line of the Green Bay & Western Railroad Company. Between the main line and the freight tracks a traveled roadway approximately sixteen feet wide is maintained. The highway is on a fill. On each side of the crossing the town has constructed a hard surfaced macadam highway.

From a careful examination of the testimony and the separate reports of two members of our engineering staff who made personal inspection of the situation, we find that the crossing in question is more than ordinarily dangerous, and that it has not been improved as provided by sec. 1299h—1 of the statutes.

The highway within the right of way lines should be widened so as to provide a roadway available for travel thirty feet wide. This roadway should be properly surfaced with macadam and provided with thirty foot planking at the tracks. In widening the portion of the highway between the main track and the freight tracks it should be straightened somewhat by filling on the south side near the main track and on the north side near the freight tracks. With these improvements the crossing will, in our judgment, be reasonably safe under the existing traffic conditions. Inasmuch as the alterations ordered herein are necessary for compliance with sec. 1299h—1 of the statutes, the entire cost thereof is assessed against the respondent.

IT IS THEREFORE ORDERED, That the respondent, the Chicago, Burlington & Quincy Railroad Company, construct and maintain within the limits of its right of way at the North Salem road crossing, located about one-fourth of a mile north of its Grand Crossing station, a highway with a crown available for travel thirty feet wide, properly surfaced with macadam and planked for its full width at each track crossing.

Sixty days is considered a sufficient time within which to comply with this order.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF THE HIGHWAY CROSSINGS ON THE LINE OF THE CHICAGO, ST PAUL, MINNEAPOLIS AND OMAHA RAILWAY COMPANY AT DEWEY STREET AND PUTNAM STREET IN THE CITY OF EAU CLAIRE.

Submitted May 6, 1914. Decided Aug. 13, 1914.

The Commission, on its own motion, investigated two grade crossings on the line of the C. St. P. M. & O. Ry. Co. at Dewey street and Putnam street in the city of Eau Claire. It appeared that the two crossings in question afford the only means of access from the southern portions of the city to the "North Hill district"—a section with a population of approximately 4,000 persons. West of the Putnam street crossing, which crosses seven tracks, the tracks curve northward around the foot of a bluff. At the Dewey street crossing, which is used by the Chippewa Valley Ry. Lt. & P. Co's interurban line to Chippewa Falls, four tracks are crossed. It was conceded by all concerned that the crossings are very dangerous to public travel. After numerous conferences between the engineers of the Commission, the city, the C. St. P. M. & O. Ry. Co. and the Chippewa Valley Ry. Lt. & P. Co., a plan for the separation of grades was formulated. This plan was acceptable in its general outlines to all parties and forms the basis of the present order.

It is ordered that the highway grade crossings at Dewey street and at Putnam street in the city of Eau Claire, and on the line of the C. St. P. M. & O. Ry. Co., be closed, and that a subway be constructed at Dewey street and an overhead passageway for pedestrians at Putnam street in conformity with the requirements specified. A new street, with detours to North Dewey street and Madison street is to be constructed, in the manner specified, from the north portal of the subway in a northeasterly direction to an intersection with Madison street. The city of Eau Claire, by appropriate action, is to take certain steps, as necessary, in the carrying out of the grade separation. The city is to vacate the portion of Putnam street which lies within the railway company's right of way. The city is to pave the floor of the subway, the sidewalks in connection therewith, and the streets altered or constructed under the part of the railway company and the Chippewa Valley Ry. Co. under this order. The city is to assume responsibility for all damages to property resulting from changes in streets and crossings under the order, subject to right of intervenor on the part of the railway company and the Chippewa Valley Ry. Co. The city is to grant its permission to the latter company to make all necessary changes in its tracks and distributing system so that it may operate its cars along the new street and through the subway, and that company is to make such changes and also to pave such portions of the street as

it is obligated to pave. Notice of necessary obstruction in any public street is to be given to the city. All work is to be subject to approval by the Commission, and, where not specifically assigned to the city or the Chippewa Valley Ry. Lt. & P. Co., is to be performed by the railway company. Upon completion of the work the railway company is to obstruct the grade crossing at Putman street so that it cannot be used by the public; and the city, the Chippewa Valley Ry. Lt. & P. Co., and the railway company, after the adjustment of damage claims, are to furnish the Commission with a complete account of the expense incurred, whereupon the Commission will determine and apportion the actual total cost—25 per cent to the city, 25 per cent to the Chippewa Valley Ry. Lt. & P. Co. and 50 per cent to the railway company. The work is to be commenced immediately and completed on or before May 1, 1915, subject to additional allowance for certain contingencies.

The Commission having been satisfied, upon due investigation, that there were sufficient grounds to warrant a hearing on the necessity of protecting, by grade separation or otherwise, two grade crossings on the line of the Chicago, St. Paul, Minneapolis & Omaha Railway Company at Dewey street and Putnam street in the city of Eau Claire, a hearing was duly ordered and held at Eau Claire on October 3, 1913. This hearing was continued on the following dates at the same place: November 24, 1913; January 28, 1914; April 17, 1914; and May 6, 1914. The city of Eau Claire was represented by *Mayor J. B. Fleming* and *City Attorney A. H. Shoemaker*. The representatives of the Chicago, St. Paul, Minneapolis & Omaha Railway Company were its *General Solicitor J. B. Sheean*, its *General Manager A. H. Trenholm*, and its *General Superintendent F. R. Pechin*. *Bundy & Wilcox* and *General Manager George B. Wheeler* appeared for the Chippewa Valley Railway, Light and Power Company. Several civic and business associations and a church congregation were also represented.

At the hearings it was conceded by all parties concerned that the crossings under consideration are very dangerous to public travel. Some evidence was introduced by the Chicago, St. Paul, Minneapolis & Omaha Railway Company, hereinafter designated as the "railway company," tending to show that adequate protection could be afforded without a separation of grades, but this contention was not pressed, and at the hearing held on April 17, 1914, the railway company's representative stated that a separation of grades to be effected by an under-highway crossing at Dewey street would be acceptable to it. After numerous conferences between the engineers of the Commission, the city, the

railway company, and the Chippewa Valley Railway, Light and Power Company, hereinafter designated as the "electric company," a plan for the separation of grades acceptable in its general outlines to all parties in interest has been formulated.

In view of the facts above set forth, it is unnecessary to review the testimony tending to show the dangerous character of the crossings, the inadequacy of the existing protection and the necessity of grade separation. However, a brief statement of the physical surroundings and the traffic conditions is necessary to a clear understanding of the order made herein.

The crossings under consideration are about nine hundred feet apart and both are within the railway company's yard limits. The passenger station being located between the two streets south of the tracks and adjacent to Putnam street. North of the tracks the land rises abruptly, and to the west the tracks curve northward around the foot of a bluff. Putnam street runs due north to the railway line, crosses seven tracks at right angles and turns to the northeast up a steep ascent to a connection with Madison street. At the Dewey street crossing four tracks are crossed. Dewey street runs north and south with a steep grade north of the tracks. It intersects Madison street, which runs northeast and southwest at the point of crossing with the railway company's line. The electric company's interurban line to Chippewa Falls approaches the crossing from the south along Dewey street and north of the tracks proceeds northeast on Madison street to Putnam street.

These two crossings afford the only means of access from the southern portions of the city to the section known as the "North Hill district" which lies north of the railway company's line. This section comprises a population of approximately 4,000 persons. It contains a fire station, a hospital, a parochial school, a church, four cemeteries, a pleasure park, and a number of factories. Moreover, traffic from Chippewa Falls and the country districts north of Eau Claire must use these crossings in traveling to and from the city. A traffic study was made at both crossings continuously for a week in October under the direction of the city engineer, the results of which are summarized in the following tables:

PUTNAM STREET CROSSING.

The topography of the locality is such that many difficulties in effecting a separation of grades present themselves. These peculiar conditions resulted in the formulation of several different plans for eliminating the grade crossings by the engineers who studied the problem. These were considered in detail at the hearings and in the informal conferences between interested parties, but inasmuch as a plan generally acceptable to all has been agreed upon, it is unnecessary to enter into a discussion of the relative merits of the various plans in this decision. The plan which was adopted, and which will form the basis of this order, contemplates the construction of an under-highway crossing at Dewey street and an overhead passageway for pedestrians at Putnam street, the latter grade crossing to be closed for vehicu-

lar traffic. A new street will be constructed on what is now for the most part a portion of the railway company's right of way, connecting the north entrance of the undercrossing with Putnam street and having a uniform grade of ascent from the subway of 6 per cent. The portion of Madison street north of the tracks and east of Putnam street as it now exists will not be materially disturbed, but will be connected with the new roadway by a somewhat roundabout road on a 6 per cent descending grade, entering the new roadway at a point about 250 feet north-east of the subway. From this point a connection with North Dewey street on a 6 per cent grade will be constructed. Steps or an inclined walk connecting the north entrance of the subway directly with North Dewey street are also contemplated. Suitable approaches from both Madison street and Dewey street on the south side will be provided. It is the belief of the Commission that the execution of the plan thus outlined will effect a permanent and highly desirable solution of a difficult situation.

After a careful review of the testimony and of the briefs submitted by the parties in interest, we regard as equitable an apportionment under which the city shall pay 25 per cent of the total cost, the electric company 25 per cent thereof, and the railway company 50 per cent thereof.

IT IS THEREFORE ORDERED, That the highway grade crossing at Dewey street and at Putnam street in the city of Eau Claire on the line of the Chicago, St. Paul, Minneapolis & Omaha Railway Company be closed, and that a subway be constructed at Dewey street and an overhead passageway for pedestrians at Putnam street in conformity with the requirements hereinafter specified.

SECTION 1. The subway at Dewey street shall be constructed with stone or concrete masonry substructure and with steel or concrete or combined steel and concrete superstructure and be so located that the front face of the east abutment at its southerly end will be located on the east property line of Dewey street extended north to the tracks of the railway company. The center line of the subway shall be approximately at right angles to the main tracks of the railway company.

SECTION 2. The subway shall have a vertical clearance of not less than 13 feet, a roadway with a clear span at least 36 feet wide, and two sidewalks not less than 10 feet wide in the clear. Two lines of posts may be placed in the curb lines or inside

thereof. The approach to the subway from the south on Dewey street shall be on a uniform ascending grade from the north line of Wisconsin street (East) to approximately the south portal of the subway, and shall have a roadway 36 feet wide in the clear and two sidewalks 6 feet in width, properly connected with the existing street and sidewalks. The approach to the subway from the southwest on Madison street shall have a roadway 30 feet wide in the clear and two sidewalks each 6 feet wide, properly connected with the existing street and sidewalks. A new street shall be constructed from the north portal of the subway northeasterly for a distance of approximately 1,100 feet to an intersection with Madison street, which new street shall have a roadway 36 feet wide in the clear, a sidewalk 6 feet wide on the northerly side, properly connected with the sidewalk on Madison street, and a sidewalk on the southerly side 6 feet wide extending approximately 300 feet northeasterly of the north portal of the subway. A detour shall be constructed from the new street to a connection with North Dewey street and with Madison street, turning northwesterly from the new street to a point approximately 250 feet northeasterly of the north portal of the subway. Between the new street and North Dewey street this detour shall have a roadway 32 feet wide in the clear, with a sidewalk 4 feet wide on the southerly side. The detour to Madison street shall branch off from the North Dewey street detour at a point approximately 150 feet northwesterly from the north boundary of the new street, and shall have a roadway 24 feet wide in the clear. The grades of the streets and approaches constructed or altered under this order shall in no case exceed 6 per cent. A suitable connection between the north portal of the subway and North Dewey street for the use of pedestrians shall be provided by steps or an inclined walk. Suitable steps for the use of pedestrians shall be constructed approximately 400 feet northeasterly of the north portal of the subway so as to connect the northerly walk of the new street with Madison street. Provision shall be made for the proper drainage of the subway and for the protection of traffic on the highway from the action of the elements and the result of railway operation. Where necessary for the proper protection of vehicular or foot traffic, suitable railings shall be provided.

SECTION 3. The overhead passageway for pedestrians shall be constructed from a point south of the tracks in Putnam street

to a point at the southerly edge of the new street due north thereof. It shall be at least 8 feet wide in the clear, and shall be provided with suitable steps at its south entrance connecting with Putnam street.

SECTION 4. The city of Eau Claire shall, by appropriate action of its common council and by other necessary proceedings to that end, make the necessary changes in the grades of the existing streets and alleys, shall lay out the new streets specified herein, shall vacate the portion of Putnam street which lies within the railway company's right of way, and shall require such utilities as maintain conduits, pipes, poles, wires or other structures in the streets affected by this order to proceed to make such changes in their equipment as may be necessary, within ten days after the receipt of notice from the railway company. The provisions of this section shall be complied with as a condition precedent to the obligations of the railway company and the electric company.

SECTION 5. If it shall become necessary to disturb, remove or deflect any pipes, conduits, sewers, wires or similar structures belonging to the city of Eau Claire, the city shall be notified to that effect by the railway company, and within ten days after the receipt of such notice it shall proceed to make the required changes.

SECTION 6. When the floor of the subway and the surface of the streets altered or constructed under this order shall be properly graded and ready for paving, the railway company shall notify the city to the effect that the city shall, within ten days of the receipt of such notice, proceed to pave said streets and subway and the sidewalks in connection therewith, except such portions as the electric company is obligated by contract or otherwise to pave. In determining the apportionable cost only the cost of standard macadam construction, which is approximately the existing condition, will be allowed. If the city desires at this time to lay more expensive paving, it may do so, but the additional expense will not be allowed as a part of the apportionable cost of the work herein ordered.

SECTION 7. The city of Eau Claire shall assume the responsibility for all damages to property resulting from changes in streets and crossings made under this order, provided, however, that the railway company and the electric company shall have a right to intervene in all proceedings which may be commenced

for the recovery of damages by reason of the carrying out of this order.

SECTION 8. The electric company, with the permission of the city of Eau Claire, shall make all necessary changes in its tracks and distributing system so that it may operate its cars through the undercrossing and along the portion of Dewey street to be altered under the provisions of this order, and along the new street to be constructed from the north entrance of the undercrossing to Putnam street, and whenever the prosecution of the work ordered herein requires any change in its conduits, pipes, poles, wires, tracks or other property, or that paving be done on portions of the street which it is obligated to pave, said electric company shall proceed to make such change and to perform such work within ten days after the receipt of notice from the railway company that such change or work is necessary.

SECTION 9. The city of Eau Claire shall grant permission to the electric company to make such changes in its tracks and distributing system as are necessary for compliance with this order.

SECTION 10. If it shall become necessary to obstruct any public street temporarily, at least twenty-four hours' notice to that effect shall be given to the city of Eau Claire by the railway company, and similar notice shall be given to the electric company if such street is occupied by its tracks.

SECTION 11. All work necessary for full compliance with this order not heretofore specifically assigned to the city of Eau Claire or the electric company shall be performed by the railway company.

SECTION 12. All work ordered herein shall be performed subject to the inspection and approval of the Commission.

SECTION 13. Upon the opening of the undercrossing and passageway for pedestrians to the use of the public, the railway company is hereby authorized and directed to obstruct the grade crossing at Putnam street so that it cannot be used by the public.

SECTION 14. Upon the completion of the work ordered herein and the adjustment of damage claims resulting therefrom, the city of Eau Claire, the electric company, and the railway company shall each furnish the Commission with a complete and detailed account of all expenses incurred by it therein, whereupon the Commission, with or without further hearing as may be deemed best, will determine the actual total cost of such work

and apportion the total cost, as so determined, between said parties upon the following basis: the city of Eau Claire to pay 25 per cent, the electric company 25 per cent, and the railway company 50 per cent thereof.

SECTION 15. The work ordered herein shall be commenced immediately upon compliance by the city of Eau Claire with the provisions of section 4, and shall be completed and the subway and overhead passageway for pedestrians opened for public use on or before May 1, 1915. Delays occasioned by strikes, riots, judicial intervention, the failure of public utilities to change pipes, conduits, wires or other property within a reasonable time, or by action of the city, shall be added to the time allowed herein for the completion of the work, provided that the railway company shall give immediate notice in writing to the Commission, the electric company and the city attorney of the cause and duration of such delays.

A. C. LAUDER

vs.

CHICAGO, ST. PAUL, MINNEAPOLIS AND OMAHA RAILWAY COMPANY.

Submitted May 26, 1914. Decided Aug. 19, 1914.

Complaint was made that the respondent had ceased to furnish telephone service at its railway station at Shell Lake. It was alleged that the installation of a telephone in the depot is necessary to adequately serve patrons who receive freight at Shell Lake and reside at a considerable distance, and the Commission was asked to take such action as it deems just in the premises. This proceeding is instituted under sec. 1797g—2 of the statutes, which imposes upon the Commission the duty, upon complaint, of fixing a reasonable regulation, practice or service, when telephone service with any railroad is found unreasonable, inadequate, or unjustly discriminatory. It appears that the discontinuance of the service was caused by a disagreement between the respondent and the Shell Lake Tel. Exch. over a contract relating to the service in question, and the respondent contends that the Commission should require the restoration of the telephone under the terms of the contract.

Held: The public should not be inconvenienced because of a controversy between the railway company and the telephone company as to the validity of the contract in question. If the telephone company has breached such contract, the remedy therefor must be sought in the courts. The Commission is not authorized to pass upon the validity of private contracts, entered into by public utilities with their patrons, with a view of rendering judgments specifically enforcing the same or granting damages for their breach, if found valid. The installation of a business telephone with unlimited service at the Shell Lake depot is necessary for the reasonable accommodation and convenience of the patrons of the railway company in the transaction of railway business. The respondent is ordered to furnish adequate telephone connection between its depot at Shell Lake and the Shell Lake Telephone Exchange.

The petitioner is a general merchant who resides at Hertel and whose shipping point is Shell Lake. He has telephone connection with Shell Lake over the lines of the Bashaw Valley Telephone Company and the Shell Lake Telephone Exchange. The petition alleges in substance that the latter company has for several years operated a telephone at the respondent's rail-

way station at Shell Lake, but that it has discontinued such service because the railway company refuses to pay the rental. It further sets forth that the installation of a telephone in the depot is necessary to adequately serve patrons who receive freight at Shell Lake and reside at a considerable distance from that station. The Commission is therefore asked to take such action as it deems just in the premises.

The respondent, in its answer, alleges that the Shell Lake Telephone Exchange has discontinued the telephone service at the depot in violation of a contract still in force, which provides for free service at the depot on condition that the station agent answer telephone calls.

A hearing was held at Spooner on May 26, 1914, at which *J. M. Smith* appeared for the petitioner and *R. L. Kennedy* for the respondent.

The testimony shows that a telephone was installed in the Shell Lake depot in 1906 pursuant to the contract referred to in the respondent's answer. In 1911 all of the equipment of the Shell Lake Telephone Exchange was purchased by M. E. Albee, who refused to continue this arrangement and rendered a bill for service. The respondent having repeatedly refused to pay, the telephone was removed on April 6, 1914. A private telephone is maintained in the depot for operating purposes.

Witnesses who live at a distance from the station testified that they are greatly inconvenienced by the lack of telephone connection with the depot, being obliged to depend upon the mails for notice of the arrival of freight, instead of enjoying direct telephone service. Moreover, telegrams to and from the vicinity of Shell Lake are delayed by the lack of telephone connection.

The respondent contends that its contract with the utility is binding and that, having been executed prior to the enactment of the Public Utilities Law, its fulfillment can not be regarded as a discrimination on the part of the telephone exchange. It argues that the Commission should require the restoration of the telephone under the conditions of the contract. The present owner of the Shell Lake Telephone Exchange takes the position that the contract signed by the former proprietor is not legally binding upon him and furthermore, that compliance with its terms would constitute a discrimination.

This action is instituted under sec. 1797g—2 of the statutes which is as follows:

“Upon complaint to the railroad commission of Wisconsin that any telephone service with any railroad is inadequate or in any respect unreasonably or unjustly discriminatory or that such service can not be had, it shall be the duty of said commission to investigate the same and if upon investigation the commission shall find that any telephone service is inadequate or unreasonably or unjustly discriminatory or that such service can not be had it shall determine and by order fix a reasonable regulation, practice or service to be installed, imposed, observed and followed in the future.”

From an examination of the testimony and the report of a member of our engineering staff, we find that the installation of a business telephone with unlimited service at the Shell Lake depot is necessary for the reasonable accommodation and convenience of the patrons of the railway company in the transaction of railway business. The public may not be inconvenienced because of a controversy between the railway company and the telephone company as to the validity of the contract in question. If the telephone company has breached such contract the remedy therefor must be sought in the courts. This Commission is not authorized to pass upon the validity of private contracts entered into by public utilities with their patrons with a view of rendering judgments specifically enforcing the same, or granting damages for their breach if found to be valid.

When the requirements of the particular statute here invoked are found to exist in any case it is incumbent upon the railway company to provide reasonably adequate telephone facilities. Even independent of this statute the duty of furnishing telephone facilities, when required for the proper transaction of the railway business, is imposed by the common law as well as by the provisions of the Railway Commission Act declaratory thereof. *Peoples Tel. Co. v. Eastern Ry. Co. et al.* 1908, 2 W. R. C. R. 822.

IT IS THEREFORE ORDERED, That the respondent, the Chicago, St. Paul, Minneapolis & Omaha Railway Company, furnish adequate telephone connection between its depot at Shell Lake and the Shell Lake Telephone Exchange.

FRANK WINTER

vs.

LA CROSSE TELEPHONE COMPANY,
WISCONSIN TELEPHONE COMPANY.

Decided Aug. 20, 1914.

The respondent companies in the present proceeding were ordered (May 14, 1913, 11 W. R. C. R. 748) to make such physical connection of their toll lines or systems as would be necessary for the furnishing of toll line service over the toll lines of both companies to the subscribers of each company at the stations installed in their residences and places of business. It subsequently appeared that the companies were unable to determine and agree upon the manner of the physical connection, or the joint toll charges to be made, or the apportionment of the toll charges, and the Commission accordingly proceeded to investigate the matters in controversy. In the absence of any experience showing the effects of a physical connection of lines upon the business of the competing companies, the order made is necessarily experimental and subject to revision or rescission at any time either company appears to suffer injury from the arrangement.

The Wis. Tel. Co. submitted quite elaborate plans and specifications to the La Crosse Tel. Co. and to the Commission for a permanent connection between the switchboards of the two companies, but the La Crosse Tel. Co. rejected these plans, presumably on the ground that, as the order was necessarily experimental, the cost of a permanent connection was not warranted at the present time. As regards a temporary connection, it appeared that a cable of the La Crosse Tel. Co. containing 15 available pairs, and one of the Wis. Tel. Co. containing 10 or more available pairs, are so situated that they could easily be connected by stringing twisted pair distributing wire a distance of approximately 35 feet from one terminal pole to the other. It further appeared that such a temporary connection from board to board could probably be made within a day's time, and with very little expense, and that it would require only a few hours' time to connect an additional circuit when found necessary.

Held: The plans and specifications submitted probably provide more extensive facilities than a liberal estimate of the traffic to be expected would justify. In order to determine just what provision should be made to handle the traffic resulting from a physical connection of the systems, a temporary connection, using the present switchboard equipment and spare cable pairs in the present distributing cables of each company, should be provided. The respondents are ordered to connect three trunk circuits for the present as follows: 1. Wis. Tel. Co. toll to La Crosse toll; 2. Wis. Tel. Co. toll to La Crosse local; 3. Wis. Tel. Co. local to La Crosse toll; and, as the business requires, the respondents are also to make such further connection of

circuits as is necessary to furnish reasonably adequate service. All calls are to be "ticketed" for the purpose of adjusting charges, thus providing a means of checking traffic over the trunks in question, and also, when traffic becomes somewhat settled, of determining what should be provided in the permanent construction.

The Wis. Tel. Co., relative to the question of joint tolls and their division, proposed that the subscriber of one company wishing the service of the other should pay a charge of \$6.00 per year for the right to obtain such service, and, in addition, the regular toll charge of the connecting company, and, in addition thereto, if a subscriber of the La Crosse Tel. Co., a charge of 15 cts. for each message sent or received over the Wis. Tel. Co.'s lines.

Held: The proposition is unreasonable. The charges suggested would be prohibitive of the services proposed and defeat the very purpose of the statute. The legislature primarily contemplated continuity of service over two or more systems, wherever the same could be established advantageously to all parties concerned, and not that the public desiring the facilities of two telephone companies should be indirectly required to become subscribers to each. No reason is seen for changing the conclusion reached in the original decision that the interests of the utilities, after connection, may be preserved through an additional charge to be paid by the patrons of either company using the toll lines of the connecting company. However, under the conditions in this state the arbitrary to be exacted should not be a uniform charge, but should be graduated on a zone basis. It is ordered that each subscriber of either company desiring service over the toll lines of the other company shall be charged for each message, in addition to the connecting company's regular charge, for all distances not over 50 miles, 5 cts.; for all distances over 50 miles and not over 100 miles, 10 cts.; and for all distances over 100 miles, 15 cts. Distances are to be measured by air line from the office of the connecting company. Neither company is to absorb the additional charge, but each is to collect the charge in question from its subscriber, and pay to the other the long distance tariff toll plus such additional charge. If the foregoing division of tolls, after a fair trial, is found to be inequitable, and the companies cannot agree upon a proper division, the Commission will by supplemental order establish such division. Ten days is deemed a reasonable time for compliance with the order.

SUPPLEMENTAL REPORT AND ORDER.

On May 14, 1913, the Commission made and entered an order in the above entitled case requiring the La Crosse Telephone Company and the Wisconsin Telephone Company to make such physical connection or connections of their toll lines or systems as is required for the furnishing of toll line service to the subscribers of each company at the stations installed in their residences and places of business over the toll lines of the other company; and further apportioning the expense of making such physical connection or connections and the subsequent maintenance of the same equally between the said companies.

Thirty days were given the companies within which to comply with the terms of the order. (11 W. R. C. R., 748.)

Subsequently it appeared that the companies were unable to determine and agree upon the manner of the physical connection provided in the order or the joint toll charges to be made or the apportionment of the toll charges. Thereupon notice was given to all the parties that the Commission would investigate the matters in controversy on July 22, 1913, and make such order as was required in the premises.

Pursuant to stipulation of the parties, the hearing was continued until August 13, 1913, at which time the petitioner appeared in his own behalf, the La Crosse Company by *George H. Gordon*, its attorney, and the Wisconsin Telephone Company by *Edwin S. Mack* and *L. G. Richardson*, its attorneys.

Upon the hearing considerable testimony was offered, most of which consisted of opinions and was of little value in determining the questions at issue. This was natural, as in the absence of any experience showing the effects of a physical connection of lines upon the business of the competing companies, the opinions given could be only speculative. Under the circumstances any order made must necessarily be experimental and subject to revision or rescission at any time either company may appear to suffer injury from the arrangement.

Taking up first the question of the manner of connection, we find that the Wisconsin Telephone Company submitted quite elaborate plans and specifications to the La Crosse Telephone Company and to the Commission for a permanent connection between the switchboards of the two companies. The La Crosse Telephone Company rejected the plans, presumably on the ground that as the order was necessarily experimental, the cost of a permanent connection at this time was not warranted. It is probable that the plans and specifications provide more extensive facilities than a liberal estimate of the traffic to be expected would justify. The meager data at hand do not indicate that such specified construction work will be presently required, and in order to determine just what provision should be made to handle the traffic resulting from a physical connection of the systems, it would seem wise to provide a temporary connection, using the present switchboard equipment and spare cable pairs in the present distributing

cables of each company, by means of which it will be possible to observe the traffic created.

Information obtained by a member of the engineering staff of the Commission shows that there are at present ten incoming and twenty outgoing ring-down circuits available on the toll board of the Wisconsin Telephone Company, and six ring-down circuits available on the toll board of the La Crosse Telephone Company. The La Crosse Telephone Company's cable No. 5 contains fifteen available pairs, and that of the Wisconsin Telephone Company contains ten or more, which can easily be connected by stringing twisted pair distributing wire a distance of approximately thirty-five feet from one terminal pole to the other. These connections from board to board could probably be made within a day's time and with very little expense. The specifications submitted by the Wisconsin Telephone Company for temporary trunking facilities suggest a similar way of handling the proposition, which, however, would be more expensive. They also provide a greater number of trunks than it would seem reasonable to provide at present. Since it would require only a few hours' time to connect an additional circuit when found necessary, and as it is probable that the development of traffic will be very slow, it seems advisable that three trunk circuits be connected, for the present, as follows:

- 1, Wisconsin Telephone Company toll to La Crosse toll;
- 2, Wisconsin Telephone Company toll to La Crosse local;
- 3, Wisconsin Telephone Company local to La Crosse toll.

All calls will be "ticketed" for the purpose of adjusting charges. This record will provide a means of checking traffic over these trunks at any time, and such a record, when traffic becomes somewhat settled, will afford a means of determining what should be provided in the permanent construction.

Relative to the question of joint tolls and the division of same, the Wisconsin Telephone Company submits for consideration the following proposition:

"Each subscriber to the exchange of the La Crosse Telephone Company who wishes service on the lines of the Wisconsin Telephone Company shall subscribe for such service and pay a charge of \$6.00 per year for the right to obtain such service, and in addition thereto pay the regular toll charges of said Wisconsin Telephone Company for each toll message plus an additional charge of 15 cts. for each message sent or received by him. Each subscriber of the Wisconsin Telephone Company who

wishes service over the line of the La Crosse Telephone Company shall subscribe for such service and pay a charge of \$6.00 per year for the right to obtain such service, and in addition thereto pay the regular toll charge of said La Crosse Telephone Company for each toll message sent or received by him. The division of the amount of the aforesaid charges between the two companies can be determined after the basis of such charges has been agreed on."

The proposition in our judgment is unreasonable. The charges suggested would be prohibitive of the services proposed and defeat the very purpose of the statute. In requiring physical connection between lines of telephone companies it was not the intention of the legislature to indirectly require the public desiring the facilities of both telephone companies to become subscribers to each. Continuity of service over two or more systems, wherever the same could be established advantageously to all parties concerned, was the primary purpose of the act. Of course, the property and business of each company must be protected. Any arrangement by which one company would obtain an advantage over the other by acquiring the others' subscribers could not be sustained.

In the opinion rendered upon the original hearing it was said (11 W. R. C. R. 748, 758) :

"In the peculiar situation found in the instant case, it is possible to prescribe terms and conditions which will preserve the interests of the utilities, respectively, after the connection has been made. The subscriber of one company desiring toll service over the lines of the other company must pay in addition to the rate charged the patrons of the latter company a reasonable compensation for the additional service. Neither company will be permitted to absorb such additional charge, but the same must be paid by the patrons of either company using the toll lines of the connecting company. This will not result in any discrimination between subscribers of the same exchange, but will result in a just and necessary discrimination between the subscribers of the different exchanges. A subscriber who has not installed the telephone of both exchanges is not entitled to toll service of both exchanges without paying an additional charge to the exchange with which he is not connected when desiring to use its toll line facilities."

There has been nothing presented upon the supplemental hearing now under consideration which has changed our views as to the position thus taken. These views are reënforced by a decision of the Canadian commission rendered in a case present-

ing a situation somewhat similar to the one presented in this case, *Rural Tel. Cos. v. Bell Tel. Co.* 1911, 12 Can. Ry. Cases, 319. In the Canadian case a number of rural telephone companies applied for physical connection of their lines with the toll lines of the Bell Telephone Company. It appears that in the village of Ingersoll the Bell company's local exchange was in competition with those of the rural companies. The question before the commission was the furnishing of toll service to the rural companies without decreasing the number of subscribers of the Bell company in Ingersoll. Speaking of the situation of the Bell company in the matter, the commission said (pp. 323-4):

“We have then this company with its capital invested, furnishing a service to its subscribers; we have the Ingersoll company gradually encroaching upon what is said to have been the preserve of the Bell Telephone Company, until to-day there are in Ingersoll twice as many subscribers to the Ingersoll system as there are to the Bell system, but they are without the long distance connection. That long distance connection is the sheet anchor of the Bell Telephone Company. Without it I feel perfectly satisfied that there would not be the 250 subscribers that they have in Ingersoll now. It is the local company that has the prestige. It is the local business man actively promoting concerns of this kind that make them successful, make them aggressive and get two or three times the subscribers that the outside company is able to get. The condition existing in Ingersoll no doubt will grow up elsewhere. It has grown up in some places. Now, while it is our duty, if we can, to give the subscribers to these rural exchanges long distance connection over the lines of the Bell Telephone Company, and while parliament by putting this law on the book intended that we should act upon it, the question that is presented to us is under what terms are we able to relieve this tension without being unfair to either the subscribers to the Ingersoll Telephone Company or to the stockholders of the Bell Telephone Company.”

The commission required the subscribers of the rural exchanges to pay 15 cts. long distance toll in addition to the regular long distance tariff of the Bell company from the point of exchange or connection with the local company to the point of destination.

Under the conditions existing in this state we are of the opinion that instead of a uniform charge the arbitrary to be exacted should be graduated upon a zone basis, and that, accordingly, for a distance of not over 50 miles from the office of each com-

pany in the city of La Crosse, the arbitrary should be 5 cts. ; for a distance over 50 miles and not over 100 miles, 10 cts. ; and for all distances over 100 miles, 15 cts. If this tariff, after a fair trial, should not prove satisfactory or if it should result in detriment to either company, the same will be changed by the Commission upon application of either company.

NOW, THEREFORE, IT IS ORDERED, That the La Crosse Telephone Company and the Wisconsin Telephone Company connect three trunk circuits for the present as above indicated, and as the business requires make such further connections of circuits as is necessary to furnish reasonably adequate and efficient joint toll line service.

IT IS FURTHER ORDERED, That each subscriber of the Wisconsin Telephone Company desiring service over the toll lines of the La Crosse Telephone Company shall be charged for each message, in addition to the regular charge of the La Crosse Telephone Company, as follows :

1. For all distances of not over 50 miles from the office of the La Crosse Telephone Company, 5 cts. ; for all distances over 50 miles and not over 100 miles from such office, 10 cts. ; and for all distances over 100 miles from such office, 15 cts. All distances shall be measured by air line.

IT IS FURTHER ORDERED, That each subscriber of the La Crosse Telephone Company desiring service over the toll lines of the Wisconsin Telephone Company shall be charged for each message, in addition to the regular charge of the Wisconsin Telephone Company, as follows :

2. For all distances of not over 50 miles from the office of the Wisconsin Telephone Company, 5 cts. ; for all distances over 50 miles and not over 100 miles from such office, 10 cts. ; and for all distances over 100 miles from such office, 15 cts. All distances shall be measured by air line.

3. Neither of the companies shall absorb any such additional charges, but shall collect the same from its subscribers ; but each of the companies shall be liable to the other and shall pay to the other the long distance tariff toll plus such additional charge.

If this division of tolls, after a fair trial, shall be found to be inequitable, and the companies cannot agree upon a proper division of the tolls, the Commission will by supplemental order establish such division.

Ten days is deemed a reasonable time within which to comply with this order.

PESHTIGO LUMBER COMPANY

vs.

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Decided Aug. 21, 1914.

Complaint was made of excess charges on 21 carloads of saw logs shipped from Brown's Spur, Wis., to petitioner's mill at Peshtigo, Wis., and refund asked. It appears that at the time the shipments moved there was no rate applicable to logs moving between the points mentioned, and that consequently the respondent was obliged to apply its lumber tariff to the shipments in question. The respondent, upon learning of these shipments, published a tariff providing for such shipments, but that tariff did not become legally effective until ten days after the last shipments here involved were made.

Held: The charge of 7½ cts. per cwt. on the shipments in question from Brown's Spur to Bagley Junction was exorbitant. A reasonable charge for such services would have been a rate of 1.8 cts. per cwt., as provided in respondent's present tariff, plus a \$3.00 switching charge from Bagley Junction to Peshtigo. Refund on that basis.

The petitioner alleges that during the months of January, February and May, 1914, it shipped twenty-one carloads of saw logs from Brown's Spur, Wis., to its mill at Peshtigo, Wis., for manufacture and reshipment; that said shipments were charged on the basis of the rate applying on lumber, namely 7½ cts. per cwt. to Bagley Junction, plus \$3.00 per car switch, Wisconsin & Michigan Railway; that the rates applied were carried in respondent's tariff G. F. D. 60500-B; that effective May 15, 1914, as per respondent's tariff G. F. D. 11704-A, the respondent established a rate on logs to be manufactured into lumber and the lumber product reshipped over respondent's rails of 1.8 cts. plus \$3.00 per car beyond Bagley Junction; that to charge the lumber rate on shipments of logs under the circumstances is unusual and that such rate is exorbitant; wherefore petitioner prays that the respondent be authorized and required to refund to it the excess charge on said shipments, amounting to \$785.31.

The respondent railway company, answering the petition, admits all the material allegations thereof and submits the claim on the pleadings without hearing.

It appears that from January 1, 1914, to May 9, 1914, the petitioner shipped twenty-one carloads of saw logs, as alleged, and was charged therefor at the rate of $7\frac{1}{2}$ cts. per cwt. from Brown's Spur to Bagley Junction, plus a \$3.00 switching charge by the Wisconsin & Michigan Railway Company. The total amount of charges thus paid by the petitioner was \$1,106.41. If such shipments had been charged at the rate of 1.8 cts. plus a \$3.00 switching charge, the total charges would have amounted to \$321.10, or \$785.31 less than was actually exacted by the railway company. At the time the shipments moved, there was no rate applicable to logs moving between the points mentioned, consequently the railway company was obliged to apply its lumber tariff to such shipments. The appliance of a lumber rate was evidently due to the fact that no previous shipments had been made between the points mentioned; however, the railway company, upon receiving knowledge of the shipments, immediately published a tariff providing for such shipments, but the tariff did not become legally effective until ten days after the last shipments were made.

We find and determine that the charges exacted of the petitioner on the aforesaid shipments of logs from Brown's Spur, Wis., to Peshtigo, Wis., are unusual and exorbitant, and that the reasonable charge for such services is that contained in respondent's tariff G. F. D. 11704-A providing a rate of 1.8 cts. from Brown's Spur to Bagley Junction, plus a \$3.00 switching charge from the latter point to Peshtigo.

NOW, THEREFORE, IT IS ORDERED, That the respondent railway company be and the same is hereby authorized and directed to refund to the petitioner the aforesaid sum of \$785.31.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF THE HANCHETT CROSSING IN THE TOWN OF BLOOMING GROVE, DANE COUNTY, ON THE LINE OF THE CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Decided Aug. 22, 1914.

The Commission, on its own motion, investigated the Hanchett crossing on the line of the C. M. & St. P. Ry. Co., about two and three-fifths miles southeast of Madison, in the town of Blooming Grove, Dane county.

Held: The crossing is unusually dangerous. The respondent is ordered to install and maintain at the crossing an automatic electric bell, with a visual signal for night indication, plans for track circuits to be submitted to the Commission for approval. The respondent is further ordered to grade the crossing so as to provide an adequate roadway 24 feet wide within its right of way lines, and to replace the board wing fences at the crossing with woven wire fences.

The Commission, on its own motion, investigated the Hanchett crossing on the line of the Chicago, Milwaukee & St. Paul Railway Company about two and three-fifths miles southeast of Madison, in the town of Blooming Grove. A hearing was duly ordered and held at Madison on August 8, 1913. *P. C. Eldredge* appeared for the Chicago, Milwaukee & St. Paul Railway Company.

The testimony shows that the railway runs approximately east and west through a cut, curving northward west of the crossing. The highway descends to the track from the north on a 5 per cent grade, and is approximately level south of the crossing. The banks of the cut, weeds on the right of way, corn growing in the adjacent fields, some trees along the highway north of the crossing and board wing fences are the principal obstructions to the view. The limits of vision as reported by our engineer from observations made on July 15, 1913, are as follows:

Distance of point of observation in highway from track.		View east.	View west.
North	50 feet.....	140 feet	100 feet.
"	100 ".....	1,500 "	500 "
"	200 ".....	50 "	730 "
"	300 ".....	750 "	650 "
"	400 ".....	300 "	600 "
South	50 ".....	600 "	700 "
"	100 ".....	750 "	400 "
"	200 ".....	4,000 "	550 "
"	300 ".....	4,000 "	300 "
"	400 ".....	4,000 "	175 "

The distances given above show the points at which the tops of cars disappear from view. In a number of cases the view for this distance is badly obstructed at intervals.

The highway is not a main traveled road, but it is used by a considerable number of farmers who regularly haul dairy products over the crossing. A count was made on July 30, 1913, by an engineer of the Commission, who testified that from 7 a. m. to 7 p. m. on that day ten teams, three automobiles and one pedestrian used the crossing. During the same period there were twenty-four train movements. A farmer who hauls over the road every day estimated the daily traffic at twenty vehicles.

In the light of the testimony and of our engineer's report we find that the crossing in question is unusually dangerous. An electric bell with a visual signal for night indication should be installed, the highway should be widened to 24 feet within the railway right of way lines, the board wing fences at the crossing should be replaced by woven wire fences, and the weeds on the right of way near the crossing should be kept closely trimmed. These improvements will, in our judgment, render this crossing reasonably safe under the existing traffic conditions.

IT IS THEREFORE ORDERED, That the Chicago, Milwaukee & St. Paul Railway Company install and maintain at the "Hanchett" crossing, two and three-fifths miles southeast of Madison in the town of Blooming Grove, an automatic electric bell with a visual signal for night indication, plans for track circuits to be submitted to the Commission for approval; that it grade said crossing so as to provide a roadway available for travel 24 feet in width within its right of way lines, and that it replace the board wing fences at said crossing with woven wire fences.

Ninety days is considered a sufficient time within which to comply with this order.

ARCHIE HOPE ET AL.

vs.

CHICAGO, ST. PAUL, MINNEAPOLIS AND OMAHA RAILWAY COMPANY.

Submitted May 26, 1914. Decided Aug. 22, 1914.

Complaint was made that no shelter for passengers or facilities for handling live stock are provided at Earl in Washburn county, and the Commission was asked to require the respondent to furnish accommodations suitable for the traveling public. The revenues accruing to the respondent at Earl and the general situation were considered. It appears that the only facilities at present provided are a spur track, a milk platform and a cinder platform located about 20 rods from the store at which passengers are accustomed to wait for trains, and that these are not infrequently late. A count showed that during one month an average of six passengers a day boarded or alighted from trains at Earl. As regards the establishment of stockyards, it seems that at Trego and Spring Brook, the nearest stations, distant three and four and two fifths miles, respectively, the total shipments amounted to only twenty-four carloads of stock in a year.

Held: The establishment of stockyards at Earl is not warranted at the present time, but the station facilities are inadequate. The respondent is ordered to erect a building which shall be adequate for the accommodation of the freight and passenger traffic, and to employ a caretaker to keep it clean, warm and lighted, and open twenty minutes before any train carrying passengers is scheduled to stop and until such train departs. Ninety days is considered a sufficient time for compliance.

The petition, which is signed by forty-four residents of the territory adjacent to Earl in Washburn county, alleges in substance that no shelter for passengers, or facilities for handling live stock are provided at Earl. The Commission is therefore asked to require the respondent to furnish accommodations suitable for the traveling public.

The respondent, in its answer, alleges in substance that the station facilities at Earl, in connection with the accommodations at Trego and Spring Brook, amply cover all the requirements of the territory served and that the traffic does not justify the maintenance of station facilities and an agent at Earl.

A hearing was held at Spooner on May 26, 1914, at which

Wm. Sweet appeared for the petitioners and *R. L. Kennedy* for the respondent.

The testimony shows that Earl is located three miles northeast of Trego and four and two-fifths miles southwest of Spring Brook, the distance by wagon road being somewhat greater in each case. Both Trego and Spring Brook are equipped with accommodations for freight and passenger traffic and with facilities for handling stock. The road extending from Spring Brook southwest to the farms of some of the complainants is hilly and difficult to travel. The direct road from Earl to Spring Brook is comparatively level, but is sandy. The road from the vicinity of Earl to Trego contains several steep grades. North of Earl the country is relatively undeveloped, but to the south there is a level valley suitable for agriculture, and a considerable area is under cultivation. The chief shipments are dairy products and potatoes. Farmers who raise live stock testified that they would ship from Earl if facilities for loading stock were provided. At Earl there are two potato warehouses and two stores, one of which contains the post office and a telephone exchange. Witnesses stated that persons come to Earl for train service from ten or fifteen miles to the south, and estimated that about three hundred persons live within a mile radius of the station. The postmaster testified that about seventy-five people receive their mail at Earl.

The only facilities now provided are a cinder platform, a spur track and a milk platform. The cinder platform is located about twenty rods from the store at which passengers are accustomed to wait for trains. The passenger trains which stop at Earl are sometimes late and the way freights are frequently from fifteen minutes to an hour behind schedule. Passengers are obliged to wait some little time on the exposed platform, since one must leave the store about five minutes before the train is scheduled to arrive and flag it. A count made by the respondent's local agent shows that during February, 1914, an average of six passengers a day boarded or alighted from trains at Earl.

Subsequent to the hearing the respondent submitted a statement of its freight and passenger earnings at Earl, which has been summarized as follows:

Month.	Freight earnings		Ticket sales and cash collections.	Total revenue.
	Received.	Forwarded.		
April 1913.....	\$138 23	\$400 16	\$50 31	\$588 70
May	129 90	52 96	47 58	230 44
June	89 81	8 56	54 13	152 50
July	36 09	22 59	48 53	107 21
August	78 98	1 6 57	67 19	272 74
September	139 26	178 58	58 65	376 49
October	113 05	589 69	86 73	789 47
November	80 39	1,021 38	73 14	1,174 91
December	97 79	491 69	80 79	670 27
January 1914.....	27 56	862 46	38 92	928 94
February	76 18	1,117 41	50 34	1,243 93
March	164 01	857 45	49 85	1,071 31
Total.....	\$1,171 25	\$5,729 50	\$706 16	\$7,606 91

Of the freight revenue reported above \$3,707.75 is interline of which approximately 60 per cent accrues to carriers other than the respondent. However, the ticket sales to Earl, which are probably about the same as for the outbound movement, should be added. Allowing for these corrections, the total revenue at Earl amounts to \$6,088.42, or an average of \$507.37 per month.

Respondent's statement also shows that during the period covered twenty-four carloads of stock were shipped from Trego and Spring Brook, yielding a total revenue of \$601.85.

In the light of the testimony and the report of our engineer, we find that the station facilities at Earl are inadequate. A suitable building for the accommodation of freight and passengers should be erected and a caretaker employed to keep it clean, warm, lighted and open at train times. In view of the fact that facilities for loading stock are provided at both Trego and Spring Brook, and the further fact that the total shipments from both of these stations amounted to only twenty-four carloads in a year, we do not regard the establishment of stockyards at Earl as warranted at the present time.

IT IS THEREFORE ORDERED, That the respondent, the Chicago, St. Paul, Minneapolis & Omaha Railway Company, erect a building at Earl which shall be adequate for the accommodation of the freight and passenger traffic, and employ a caretaker who shall keep it clean, warm and lighted, and open twenty minutes before any train carrying passengers is scheduled to stop and until such train departs.

Ninety days is considered a sufficient time within which to comply with this order.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF
THE SERVICE OF THE NEBAGAMON TELEPHONE COMPANY.

Submitted Jan. 27, 1914. Decided Aug. 22, 1914.

Complaint was made that the respondent was not rendering adequate service. The chief complaint seemed to result from the poor condition of the poles and other line equipment. It appears that formerly the village of Lake Nebagamon had a larger population than it now has. At one time there were ninety connected telephones in the village, but at present there are only twenty-five. The poles in the village are owned by the company, but the rural lines are the property of the subscribers, of whom many are behind in the payment of the monthly rentals. The manager stated that the financial condition of the company is such that it cannot undertake to rebuild the rural lines.

Held: Adequate service is required by law. In the present case it cannot be rendered until the poles and other line equipment are put in proper condition, and such repairs as are necessary must be undertaken by the company. The situation is covered by the general order issued Aug. 13, 1914, prescribing rules and standards of adequate telephone service, Rule 4 providing that each utility shall maintain the equipment used on its system in proper condition and make the necessary tests and inspections. Rules should be adopted, calculated to insure prompt payment of rentals in the future, and vigorous efforts should be made to collect unpaid bills. Should the utility fail to secure a sufficient number of additional subscribers to place the company on a substantial business basis after the restoration of adequate service and the adoption of an efficient method of collecting revenue, application may be made to the Commission for authority to charge rates sufficient to permit proper maintenance and operation. The respondent is ordered to repair and reconstruct the equipment used on its system and thereafter maintain the same in proper condition. Sixty days is considered a reasonable time for compliance.

Upon receipt of a complaint signed by fourteen patrons of the Nebagamon Telephone Company, alleging that the service rendered by that utility is inadequate, an investigation, on motion of the Commission, was ordered. A hearing was held at Lake Nebagamon on January 27, 1914, at which *C. O. Lilegren* appeared for the complainants and *J. C. Crowley, Jr.*, for the Nebagamon Telephone Company.

It appears from the testimony that the chief complaint results from the poor condition of the poles and other line equip-

ment. Witnesses told of places where poles were down or where trees had fallen across the wires or where the wires were in contact with brush. Such causes of poor service have not been quickly remedied by the company. A number of days have elapsed in some instances before the service has been restored after trouble has been reported.

The manager explained that when trouble is reported, an employe of the Peoples Telephone Company comes out to Lake Nebagamon from Superior to correct it. The Nebagamon Telephone Company is still indebted to the Superior company for much of this repair work. The arrangement was uneconomical and caused much delay, since the railway fare from Superior amounts to considerable and the train service is infrequent. Recently, however, one of the local subscribers has been engaged to make necessary repairs, as directed by the manager who lives in Superior. This is a better arrangement, but it could be further improved by allowing the local repair man to receive trouble reports directly instead of through Superior.

Lake Nebagamon was formerly a milling town with a larger population than it now has. At one time there were ninety connected telephones in the village, whereas now only twenty-five are in service. In the village the poles are owned by the company, but on the rural lines they are the property of the subscribers. Rates charged are \$1.50 per month for a business telephone and \$1.00 per month for a residence telephone. Rents are supposed to be paid monthly, but many subscribers are behind in their payments. The manager stated that the financial condition of the company is such that it can not undertake to rebuild the rural lines. The indebtedness for "trouble" work is probably greater than it would have been if a more economical arrangement had been made. It should also be remembered that the number of subscribers is likely to increase if good service is established.

If the company shows an active interest in improving conditions it can without doubt secure the coöperation of subscribers to that end. At the hearing one subscriber offered to provide the poles necessary for repairing the line along his farm if other farmers and the company would coöperate, and his offer was commented upon favorably by the manager. An inspection on June 24, 1914, indicates that this subscriber has fulfilled his promise, but that other subscribers and the company have done

nothing toward coöperating with him. The company should encourage such coöperation rather than discourage it by inaction.

It is evident that adequate service can not be rendered until the lines are overhauled, the broken poles replaced, brush and trees trimmed where necessary, and the wires properly strung and insulated. Adequate service is required by law and such repairs as are necessary must be undertaken by the company. In the interest of efficiency it is desirable that the responsibility for proper maintenance should rest upon the utility rather than upon individual subscribers, even though such subscribers have furnished the initial equipment. Rules should be adopted calculated to insure prompt payment of rentals in the future, and vigorous efforts should be made to collect unpaid bills.

When adequate service has been restored and an efficient method of collecting revenue adopted, it is probable that a sufficient number of additional subscribers can be secured to place the company on a substantial business basis. If, however, the existing rates prove to be insufficient to permit proper maintenance and operation, application may be made to the Commission for authority to increase rates.

The situation in this case is covered by the general order issued on August 13, 1914, *In re Invest. Standards for Tel. Service in Wisconsin*, 1914, 15 W. R. C. R. 1, prescribing rules and standards of adequate telephone service. One of these rules is as follows:

"Rule 4. Each utility shall maintain in proper condition the lines, instruments and other equipment used on its system and shall make such tests and inspections as are necessary."

Sixty days were allowed for compliance with these rules, but in view of the peculiar conditions which confront the Nebagamon Telephone Company, this time will be extended to sixty days from the date of the order herein.

IT IS THEREFORE ORDERED, That the Nebagamon Telephone Company repair and reconstruct the lines, instruments, and other equipment used on its system and thereafter maintain the same in proper condition.

Sixty days is considered a reasonable time within which to comply with this order.

JOHN WEEK LUMBER COMPANY

vs.

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY,
MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY
COMPANY.

Submitted Aug. 4, 1914. Decided Aug. 24, 1914.

Complaint was made that the respondents were demanding exorbitant rates on shipments of saw logs in carloads from Madras to Stevens Point, Wis., and the Commission was requested to fix a reasonable rate for such shipments and to order the respondents to refund all excess charges. It appeared that the distance from Madras to Stevens Point is 30.4 miles, and that from Madras to Junction City, the haul of the "Milwaukee" road, is 19.4 miles. It further appeared that Madras is at the end of a spur of the "Milwaukee" road, and that this spur diverges from the main line of the Wisconsin Valley division of that road at Knowlton, and is eight or nine miles in length. The "Milwaukee" made no proposition in answer to a request for joint rates, but demanded 4½ cts. per cwt. for its haul from Madras to Junction City. The "Milwaukee" contended that an extra crew was required to handle business between Madras and Knowlton and that, should the Commission put in force the distance tariff for a one line haul with the addition of a ¾ ct. arbitrary for the junction transfer, an additional ¾ ct. arbitrary should be added for the transfer at Knowlton. The petitioner desired a joint rate about the same as the joint rate obtaining on pulp wood for similar service, presumably because saw logs and pulp wood are similar. With reference to the refund asked, it seems that petitioner, owing to certain circumstances, was obliged to ship logs from Madras to Stevens Point subsequent to the filing of the complaint, but before there could be an order in the premises.

Held: The rates complained of are unreasonably high. As regards the alleged greater convenience of handling the business on the Madras-Knowlton spur with an extra crew, the cost of handling log traffic on spurs or tap lines is pretty well established, and the fact that for any reason a company might prefer to handle the business in a more expensive way would not warrant the charging of an exorbitant rate. And since the haul of the "Milwaukee" from Madras to Junction City can only be considered as a one line haul, the claim of that company that there should be an additional ¾ ct. arbitrary for the transfer at Knowlton is not tenable. On the other hand, the pulp wood rate is too low a rate for the service involved. The similarity between saw logs and pulp wood is no ground, in the present case, for making a similar rate. The pulp wood rates in question were established when the cost per unit for transportation was on the whole somewhat lower than at present, and were also in a measure based on the rates out on the products into

which the pulp wood is manufactured, and on many other special conditions surrounding that traffic. A fair rate to all consumers for the saw log traffic involved in this case would be 3.3 cts. per cwt. The respondents are ordered to establish, in place of the present rates, a joint rate on logs from Madras to Stevens Point not to exceed 3.3 cts. per cwt. Should the companies fail to agree upon the division of this joint rate, the Commission will determine the matter. No other change is made in any of the existing rules affecting the traffic involved. The respondents are further ordered to refund to the petitioner the amounts paid by it on all log shipments made after August 1, 1914, in excess of the joint rate established.

The complaint of the petitioner in this case alleges that the respondent companies "are demanding rates of transportation on shipments of saw logs in carloads from Madras to Stevens Point which are unjust and exorbitant; and petitioner prays that an order be made fixing a just and reasonable rate for such shipments; also that the said companies be ordered to refund to petitioner all excess charges, etc."

After due notice a hearing was held on August 4, 1914, in the office of the Railroad Commission at Madison. *A. R. Week* appeared for the petitioner and *J. N. Davis* for the Chicago, Milwaukee & St. Paul Railway Company (the "Milwaukee"), and *A. H. Lossow* for the Minneapolis, St. Paul & Sault Ste. Marie Railway Company (the "Soo").

The testimony given at the hearing shows that a request for joint rates had been responded to by the "Soo" road with a proposition to concede a joint rate providing the "Soo" would get for its share of the haul not less than 1.3 cts. per cwt. Later the "Soo" offered to make the rate 1 ct. per cwt. for its haul on condition that it get the out-haul of the lumber products. The "Milwaukee" made no proposition as to joint rates but demanded 4½ cts. per cwt. for its haul from Madras to Junction City.

It also appeared from the testimony that the petitioner had, when the complaint was made, a million feet of logs ready to load at Madras for shipment to its mill at Stevens Point; that these logs were banked on the banking ground of the Union Tanning Co., and that the latter had informed the petitioner that it must get its logs out of the way, as the banking ground was likely to be needed for the company's own shipping purposes. It further appeared that the petitioner, in view of this urgent need for shipping its logs, had ordered from the Milwaukee company the cars and locomotive necessary to move the logs,

so that at the time of the hearing the logs were already being shipped from Madras to Stevens Point.

The distance from Madras to Stevens Point is 30.4 miles; that from Madras to Junction City, the haul of the Milwaukee road, is 19.4 miles. Madras is at the end of a spur of the Milwaukee road, diverging from the main line of the Wisconsin Valley division of the Milwaukee road at Knowlton. Over this spur, which is eight or nine miles long, the Milwaukee road handles only the by-product of the Union Tanning Co., and such part of the product of the petitioner as is not drawn to Knowlton and dumped in the Wisconsin river at that point for floating down to Stevens Point.

It was contended by the representative of the Milwaukee road that it required an extra crew to handle business between Madras and Knowlton, it being off the main line, and that the Milwaukee road not only had no chance for out-shipment of the manufactured product from such log traffic, but that it had to haul only empty cars back to Madras, there being no return traffic of any kind. For these reasons, it was argued, the "Milwaukee" was entitled to the rate it fixed, namely, $4\frac{1}{2}$ cts. per cwt. from Madras to Junction City. The representatives of the "Milwaukee" further contended that if the Commission were to put in force the distance tariff for a one-line haul with the addition of a $\frac{3}{4}$ ct. arbitrary for the junction transfer, then there should be added an additional $\frac{3}{4}$ ct. arbitrary for the transfer on its line at Knowlton.

This latter claim of the Milwaukee road is clearly not tenable. Knowlton is the point upon its own line where its own spur to Madras diverges from the main line. The haul of the "Milwaukee" from Madras to Junction City can only be considered as a one-line haul.

The other contention of the "Milwaukee", that because it finds it more convenient to handle the business on the Madras-Knowlton spur with an extra crew it is therefore entitled to more than the ordinary rates charged for such shipments, is scarcely more valid than the preceding one. The cost of handling log traffic on spurs or tap-lines is pretty well established. If a company for any reason prefers to handle the business in a more expensive way, that would hardly warrant the charging of an exorbitant rate.

The petitioner desires a joint rate in this case that is about

the same as the joint rate for similar service that obtains on pulp wood in this state. The inference is that since saw logs and pulp wood are similar, the rates of transportation thereon should also be about the same as for like service. This conclusion, however, is not justified by the conditions. The pulp wood rates in question were established when the cost per unit for transportation were on the whole somewhat lower than now. These pulp wood rates are also, in a measure, based on the rates out on the products into which the pulp wood is manufactured, and on many other special conditions which surround that traffic. While the Commission finds that the rates complained of in this case are unreasonably high, it also appears that the pulp wood rate in question is too low a rate for this service. In fact, it appears upon investigation that a joint rate of 3.3 cts. per cwt. for the saw log traffic involved in these proceedings would be fair to all concerned. In view of the fact that the rates complained of are exorbitant, we also find that the petitioner on shipments already made is entitled to a refund of the difference between the rates provided herein and the existing rates.

IT IS THEREFORE ORDERED, That the respondent companies, the Chicago, Milwaukee & St. Paul Railway Company and the Minneapolis, St. Paul & Sault Ste. Marie Railway Company, discontinue the rates complained of and in place thereof establish a joint rate on logs from Madras to Stevens Point, the said joint rate not to exceed 3.3 cts. per cwt. If the said companies fail to agree upon the division of the joint rate thus established, the Railroad Commission will determine the division for them.

IT IS FURTHER ORDERED, That the said respondent companies refund to the petitioner the amounts paid by it on all log shipments from Madras to Stevens Point made after August 1, 1914, in excess of the joint rate ordered to be established.

No change other than that outline in this order is made in any of the existing rules affecting the traffic involved.

IN RE PROPOSED EXTENSION OF THE LINE OF THE PEWAU-
KEE-SUSSEX TELEPHONE COMPANY IN SECTION 32, TOWN
OF LISBON, WAUKESHA COUNTY, WISCONSIN.

Submitted July 17, 1914. Decided Aug. 27, 1914.

The Pewaukee-Sussex Tel. Co. filed notice with the Commission of a proposed extension to a certain residence in the town of Lisbon, Waukesha county, Wis. The residence in question fronts on a north and south road upon which there is no telephone line, although the line of the Merton Tel. Co., which objected to the extension, is only a short distance to the north and that of the applicant a short distance to the south. It appeared that the residence in question is considerably closer to the line of the Merton Tel. Co. than to that of the Pewaukee-Sussex Tel. Co. and that, in fact, it could be reached from the line of the former company by the setting of one pole. It also appeared that the service of the Merton Tel. Co. would suit the purposes of the prospective customer.

Held: Public convenience and necessity do not require the construction of the extension in question. While the Anti-duplication Act does not intend that the presence of the line of a telephone company upon a highway shall preclude all other companies from approaching that highway, it does intend that where a prospective subscriber to telephone service is situated in close proximity to an existing line from which he can receive service fairly suited to his needs at a reasonable charge, he shall be regarded as legitimately a prospective customer of the existing line. A more liberal construction of the law would open the way to that unnecessary competition, which it is the obvious purpose of the law to prevent. Authorization of the proposed extension is refused.

On June 23, 1914, the Pewaukee-Sussex Telephone Company filed notice with this Commission of a proposed extension to the residence of Mr. Young in the town of Lisbon, Waukesha county. The Merton Telephone Company objected to the extension and the Commission proceeded to make an investigation to determine whether or not public convenience and necessity required that the extension be made.

The matter was set for hearing on July 3, 1914, but at the request of the Pewaukee-Sussex Telephone Company the hearing was postponed until July 17, the latter company waiving its right to have its case determined within the twenty days fixed by statute. At the hearing, which was held at the village of

Pewaukee, the applicant was represented by *Edward Hoskins*, its secretary. Owing to a misunderstanding as to the place of hearing the Merton Telephone Company failed to appear, but was allowed to submit its testimony the following day at the office of the Railroad Commission in the city of Madison. It was represented by *J. P. Schneider*, secretary.

The facts adduced show that the residence that the applicant desires to reach is situated within a triangular piece of territory containing but a few acres. This tract is bounded on the north by a sectional road along which the Merton Telephone Company has a line giving local service, on the west by a diagonal road, which is occupied by a joint toll line, and on the east by a north and south road upon which there is no telephone line. The residence of Mr. Young fronts upon this latter road. The Pewaukee-Sussex Telephone Company has a line giving local service which extends to the southern corner of the triangular piece of territory, i. e. to the junction of the diagonal road occupied by the toll line and the north and south road that runs in front of Mr. Young's residence. The testimony as to the comparative nearness of the local service lines of the two companies involved was somewhat conflicting, but it seems to be established that the residence of Mr. Young is considerably closer to the northern boundary of the triangular tract in which it is located than it is to the southern apex of the triangle. In fact, it was shown that it could be reached from the line of the Merton Telephone Company by the setting of one pole.

This case gives rise to one of those difficult situations in which it becomes necessary to determine whether or not public convenience and necessity warrants the construction of a telephone extension which, if allowed, will approach very close to the line of another company. While it is not our conception of the intent of the Anti-duplication Act that the presence of the line of a telephone company upon a highway shall preclude all other companies from approaching that highway, it does seem to be intended that where a prospective subscriber to telephone service is situated in close proximity to an existing line from which he can receive service fairly suited to his needs at a reasonable charge he shall be regarded as legitimately a prospective customer of the existing line. To adopt a more liberal construction of the law would open the way to that unnecessary competition which it is the obvious purpose of the law to prevent.

In the present case there seems to be little well substantiated proof that the service of the Merton Telephone Company is inadequate, or that it would not suit the purposes of the prospective subscriber here involved. The subscriber himself testified that most of his business interests lay within the village of Pewaukee, but even in that situation his needs would seem to be adequately met by the service of the Merton Telephone Company, since physical connection exists between that system and the Pewaukee-Sussex system. Some suggestion was made that the Merton company suspended service after nine o'clock in the evening, while the Pewaukee-Sussex company gave all-night service to its subscribers. Such service regulation may exist on the part of the Merton company, and yet standing alone it could hardly be regarded, in view of the well known practices in country districts with respect to the hours within which telephone service is usually required, as sufficient to justify the permission of another company coming into competition with the Merton company. The information of the Commission indicates that provision is made by the last named company for emergency calls arising at night. Thus subscribers of that company have all the advantages of night service that are given by other companies, except, perhaps, the convenience of social communications after nine o'clock in the evening, which latter, we believe, is a factor of slight importance in the instant case. There would appear, therefore, to be little reason why the subscriber here involved could not receive service suitable to his needs from the company already close at hand. For this reason it is considered that public convenience and necessity do not demand the extension for which authority is asked.

We therefore find and determine that the extension of the Pewaukee-Sussex Telephone Company in the town of Lisbon, Waukesha county, as proposed by the said company in its application of June 23, 1914, is not required by public convenience and necessity, and permission to construct the same is refused.

IN RE APPLICATION OF THE NEW UNION TELEPHONE COMPANY FOR A DIFFERENT APPORTIONMENT OF TOLL EARNINGS BETWEEN APPLICANT AND THE MINERAL POINT TELEPHONE COMPANY.

Submitted Feb. 19, 1914. Decided Aug. 28, 1914.

Application was made by the New Union Tel. Co. for authority to retain all tolls collected at its end of a toll line between Dodgeville and Mineral Point, and to collect from the Mineral Point Tel. Co. 75 per cent of all tolls on business originating on the Mineral Point end of the line. The New Union Tel. Co., a public utility operating a telephone system in the city of Dodgeville and in Iowa county, operates the toll line in question which extends to the northern limits of the city of Mineral Point, where it connects with the system of the Mineral Point Tel. Co. A valuation of this toll line by the Commission as of July 30, 1914, showed, as to the portion owned by the Mineral Point Tel. Co., a cost new of \$64 and a present value of \$34, and, as to the portion owned by the New Union Tel. Co., a cost new of \$714 and a present value of \$470. The applicant alleged that the Mineral Point Tel. Co. contributed nothing towards the expense of maintaining the toll line and that a division of the tolls by which each company retained the total amount collected at its end of the toll line was unreasonable and unjust. The revenues accruing to the two companies from the business over the toll line in question were considered. It appeared that, as the business has been conducted, the Mineral Point Tel. Co., in keeping all revenues from business originating at Mineral Point, has secured an amount equal to practically 50 per cent of the revenues from both incoming and outgoing messages, and that, in order for the New Union Tel. Co. to earn an amount sufficient to pay interest, maintenance, and depreciation charges on its excess investment, and divide the remainder of the revenues equally between the two companies, the Mineral Point Tel. Co. should retain 35 per cent of the revenues from both incoming and outgoing business. The Mineral Point Tel. Co. contended, however, that, since it had a larger exchange than the New Union Tel. Co., the service it furnished was more valuable than that furnished by the latter company and thus offset the additional service furnished by that company in owning and maintaining the toll line.

Held: The argument that, because Mineral Point has more subscribers than Dodgeville, the service furnished at Mineral Point is of more value, is unsound. Although Mineral Point offers a larger number of possible connections than Dodgeville, those offered by Dodgeville are available to the entire Mineral Point exchange, so that the only proper basis for computing the reasonable division of tolls is to consider the toll system as a system without reference to the size of the exchange at either end. Under the circumstances of the present case it is con-

sidered reasonable to permit the New Union Tel. Co. to earn a sufficient amount to reimburse itself for the interest, maintenance, and depreciation burden on its additional investment, the remainder of the revenue to be divided equally between the two companies. The division of tolls requested by the New Union Tel. Co., however, would give that company a larger proportion of the revenues than is necessary to accomplish that purpose.

It is ordered that the revenues from toll service over the toll line of the New Union Tel. Co. between Mineral Point and Dodgeville shall be so divided that the Mineral Point Tel. Co. shall retain 35 per cent and the New Union Tel. Co. 65 per cent of the revenues from both incoming and outgoing messages, the order to take effect and be in force Sept. 1, 1914.

Application in this matter was dated January 10, 1914, and filed with the Commission on January 12, 1914. Applicant is a public utility operating a telephone system in the city of Dodgeville and in Iowa county and operating a telephone toll line between Dodgeville and Mineral Point. The application sets forth that this toll line runs from the city of Dodgeville to the northern limits of the city of Mineral Point, where it connects with the system of the Mineral Point Telephone Company; that the Mineral Point Telephone Company has no interest in the toll line and contributes nothing toward the expense of maintaining it; that the toll charged for messages over this line is 15 cts., with no time limit; that the Mineral Point Telephone Company retains all of the toll collected for messages originating at its office or on its system, and that the applicant believes that a division of the tolls by which each company retains the total amount collected at its end of the toll line is unreasonable and unjust. Applicant therefore asks for authority to retain all tolls collected at its office, and to collect from the Mineral Point Telephone Company 75 per cent of all tolls on business originating on the Mineral Point system.

Hearing in this matter was held at Madison, Wis., February 19, 1914. *James E. O'Neill* appeared for the applicant, and *N. H. Snow* and *W. S. Pedley* appeared for the Mineral Point Telephone Company.

The hearing was devoted mainly to a discussion of the relations between the two companies which are parties to this case, and to the volume of business handled over the line. The objection of the Mineral Point Telephone Company to the division of tolls proposed by the applicant is that because the city of Mineral Point is considerably larger than Dodgeville, and be-

cause the Mineral Point Telephone Company has a larger number of subscribers than the New Union Telephone Company, the service furnished in connection with this toll business by the Mineral Point Telephone Company has a greater value than that furnished by the New Union Telephone Company, leaving out of consideration the toll line itself. It is the argument of the Mineral Point Telephone Company that the service furnished by that company, because it was a larger exchange, is more valuable than the service furnished by the New Union Telephone Company to an extent which offsets the additional service furnished by the latter company in owning and maintaining the toll line.

This argument we do not follow. Carried to its logical extreme, it would mean that if the Mineral Point exchange were even larger than it is, the Mineral Point Telephone Company should receive a larger share of the tolls than it has at present, and presumably that, as the size of the Mineral Point exchange increased, the New Union Telephone Company's share of the tolls would approach zero. The argument that because Mineral Point has more subscribers than Dodgeville the service furnished at Mineral Point is of more value seems to us to be unsound. While it is true that Mineral Point is offering a larger number of possible connections on its switchboard than Dodgeville is offering, it must be remembered that those offered by Dodgeville are available to the entire Mineral Point exchange. If there were no subscribers in Dodgeville but merely a toll station, and the line were furnished by the Dodgeville Company, it could hardly be argued that the Mineral Point company should be entitled to all of the tolls because of its having five or six hundred times as many stations as Dodgeville had. While Mineral Point would offer five or six hundred possible connections in the city which could be made from the toll station at Dodgeville, Dodgeville would be offering one connection to all of the subscribers of the Mineral Point company. It seems to us that the argument of the Mineral Point company reduces itself to an absurdity, and that the only proper basis for computing the reasonable division of tolls is to consider the toll system as a system without reference to the size of the exchange at either end.

There is no question introduced into this case as to the reasonableness of the 15 ct. toll charge for messages between Mineral Point and Dodgeville. The only issue is the division of these

tolls between the two companies. Inasmuch as there is nothing involved here relating to the reasonableness of the tolls, it seems to us that for purposes of this case, a reasonable method of apportionment would be to permit the Dodgeville company to earn an amount sufficient to pay interest, maintenance, and depreciation charges on the excess of its investment in the toll line over that of the Mineral Point company and to consider the service furnished at each end as of equal value. That is, after the New Union Telephone Company is reimbursed for the interest, maintenance, and depreciation burden on its additional investment, the remainder of the revenue from toll messages may be divided equally between the two companies. A valuation of the Dodgeville-Mineral Point toll line was made by the Commission as of July 30, 1914, and this value was apportioned according to the amount owned by each company. According to this valuation, the cost new of the portion of the line owned by the Mineral Point Telephone Company is \$64, and the present value is \$34. The portion of the line owned by the New Union Telephone Company has a cost new of \$714, and a present value of \$470. An allowance of 20 per cent to cover interest, depreciation, and maintenance of this line, based upon the cost new, would be \$155.60 per year. In round numbers, it appears that \$160 per year will be a proper allowance to cover these expenses. No data are available from which we can determine these expenses more accurately than this. Of the total cost new of the toll line the Mineral Point Telephone Company owns 8.2 per cent, so that the Mineral Point Telephone Company should be entitled to receive from the earnings of the line 8.2 per cent of the total cost of interest, depreciation, and maintenance, or \$13.12. The balance, or \$146.88, would be the amount required to cover these charges on the portion of the line owned by the New Union Telephone Company. The excess of these charges on the New Union investment over similar charges on the Mineral Point Company's investment is \$133.76 per year. The testimony offered at the hearing on February 19 shows that during the calendar year 1913 \$282 were collected at the Mineral Point end of the line for messages from Mineral Point to Dodgeville, and that the monthly amount collected varied from \$13.20 to \$30.50. The record of the amount collected at Dodgeville was furnished for eleven months of the calendar year 1913, and amounted to

\$262.65, varying from \$18.75 to \$33 per month, and being at the rate of \$286.56 per year.

For practical purposes, therefore, we may assume the total revenue for this toll business to be \$568 per year. The amount required to pay interest, depreciation, and maintenance charges on the excess of the New Union Telephone Company's investment over the investment of the Mineral Point Telephone Company in this line was found to be \$133.76 per year, or, we may say in round numbers, \$134 per year. This amount must be returned to the New Union Telephone Company for service furnished by it in addition to the service which it furnishes in Dodgeville equivalent to similar service furnished at Mineral Point. It seems to us that it will be fair in this case, after providing a return of \$134 per year to the New Union Telephone Company for its excess investment in the toll line, to divide the remainder of the revenues, or \$434 per year, about equally between the two companies. In order to secure this, it would apparently be necessary to permit the Mineral Point Telephone Company to retain between 35 and 40 per cent of the revenues from both incoming and outgoing messages, instead of 25 per cent of the revenue from outgoing messages alone. Inasmuch as the expenses of the toll line have had to be estimated, and no allowance has been made in the estimate for unusual expenses or for the possibility of the cost of maintenance being somewhat higher than the usual cost, it appears that fairness to the parties concerned would call for a division of the tolls which would permit the Mineral Point exchange to keep 35 per cent of the revenues on both incoming and outgoing business. As the business is at present conducted, the Mineral Point exchange, in keeping all revenues from business originating at Mineral Point, secures an amount practically equal to 50 per cent of the revenues from both incoming and outgoing messages. The effect of this order, therefore, will virtually be to give the New Union Telephone Company 15 per cent additional on both classes of messages, and to decrease the Mineral Point Telephone Company's share by 15 per cent. The division of tolls requested by the applicant would increase its proportion by approximately 37½ per cent of the revenues from both incoming and outgoing messages, but we believe that an increase amounting to an average of 15 per cent is all that should be authorized in this case.

The application in this case also asks that authority be granted

to charge the Mineral Point Telephone Company at the rate asked for from August 1, 1912, which was the time at which notice was served upon the Mineral Point Telephone Company by the New Union Telephone Company, that such a division would be expected. It does not appear that this is a matter which should be covered by the order in this case.

IT IS THEREFORE ORDERED, That the revenues from toll service over the toll line of the New Union Telephone Company between Mineral Point and Dodgeville shall be so divided that the Mineral Point Telephone Company shall retain 35 per cent of the revenues from both incoming and outgoing messages, and the New Union Telephone Company shall retain 65 per cent of the revenues from both incoming and outgoing messages.

This order shall take effect and be in force September 1, 1914.

PULP AND PAPER MANUFACTURERS' TRAFFIC ASSOCIATION

vs.

CHICAGO AND NORTH WESTERN RAILWAY COMPANY,
 CHICAGO, BURLINGTON AND QUINCY RAILROAD COMPANY,
 CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY,
 CHICAGO, ST. PAUL, MINNEAPOLIS AND OMAHA RAILWAY COM-
 PANY,

 MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY
 COMPANY,
 NORTHERN PACIFIC RAILWAY COMPANY,
 STANLEY, MERRILL AND PHILLIPS RAILWAY COMPANY,
 WISCONSIN AND MICHIGAN RAILWAY COMPANY,
 WISCONSIN AND NORTHERN RAILROAD COMPANY.

REHEARING AS TO

MARINETTE, TOMAHAWK AND WESTERN RAILWAY COMPANY,
 STANLEY, MERRILL AND PHILLIPS RAILWAY COMPANY,
 WISCONSIN AND NORTHERN RAILROAD COMPANY.

Submitted April 6, 1914. Decided Aug. 28, 1914.

The M. T. & W. Ry. Co., the S. M. & P. Ry. Co., and the W. & N. R. R. Co. petitioned for a rehearing in the matter of the above order (Feb. 11, 1914, 13 W. R. C. R. 735), which required all of the carriers party to the case to establish joint rates between their lines on pulp wood in carloads by adding to the previous single line distance rates an arbitrary of $\frac{3}{4}$ cts. per cwt. for each transfer from one road to another. The question presented in the present proceeding is whether a suspension of the order in question as to the three lines in question should be made permanent. It appeared that forest products, constituting well over half petitioners' total tonnage, are relatively much more important on petitioners' lines than on the large lines; that the petitioners' proportion of the interline shipments would be small; that the joint rates applied to the business now moving would mean greatly diminished revenues, and that none of the three petitioners at the present time is earning a fair rate of return on their investments.

Held: Under the circumstances the petitioner in this proceeding should be excused from compliance with the *Pulp Wood Joint Rate Order* of Feb. 11, 1914. It is ordered that the order of Feb. 11, 1914, insofar as it applies to the Marinette, Tomahawk & Western Railway Company, the Stanley, Merrill & Phillips Railway Company, and the Wisconsin & Northern Railroad Company is vacated, and the petition in that proceeding, insofar as it is directed against the foregoing companies, is dismissed.

The original order in this case, dated February 11, 1914, 13 W. R. C. R. 735, required all of the carriers party to the case to establish joint rates between their lines on pulp wood in carloads by adding to the previous single line distance rates an arbitrary of $\frac{3}{4}$ cts. per cwt. for each transfer from one road to another. On petition of the Marinette, Tomahawk & Western Railway Company, the Stanley, Merrill & Phillips Railway Company, and the Wisconsin & Northern Railroad Company, a rehearing as regards the application of this order to their lines was granted. Pending hearing and further order, the effectiveness of the original order was suspended as regards these three lines. The matter now before the Commission is to determine whether the suspension shall be made permanent.

The hearing was held April 6, 1914. The Pulp & Paper Manufacturers' Traffic Association appeared by *Felix J. Streyckmans*; the Marinette, Tomahawk & Western Ry. Co. by *C. H. Grundy*; the Stanley, Merrill & Phillips Ry. Co., by *M. W. Hodge*; and the Wisconsin & Northern R. R. Co. by *H. Hartley* and *William Neff*.

The testimony and exhibits introduced by the carriers were to the effect that their roads were not paying investments; that the Marinette, Tomahawk & Western Railway Company's property had been in the hands of a receiver from 1909 to 1912, and the present rate of return on the investment is less than 2 per cent; that the Stanley, Merrill & Phillips Railway is losing rather than making money; that the bulk of their traffic consists of forest products, a very large part of which would be affected by the joint pulp wood rates; that their proportions from the joint rates would be much less than their present rates on the same raw material; that the rates named in the Commission's order were based on the costs of operation of the large railroads which are much lower than the costs on the small lines, and, in consequence, their proportions from the joint rates on pulp wood would be insufficient to pay their costs of operation; that their lines were so located as not to be in position to carry any of the outgoing traffic of the paper mills; that by carrying the raw material beyond their lines the joint rates would deprive them of the higher rates on the finished products which they would enjoy were the wood to be manufactured into other form at stations on their lines; and that joint rates carrying raw material off their lines discourage the industries

on their lines which are necessary to develop traffic to put the roads on a paying basis.

Investigation of the conditions affecting the pulp wood traffic of these three roads shows that their part of the haul of the interline shipments would not be great. On the Stanley, Merrill & Phillips Railway and the Marinette, Tomahawk & Western Railway the effective haul would not exceed fifteen miles. Paper mills are located at nearby points on the connecting lines, but never in such position that either the Stanley, Merrill & Phillips Railway or the Marinette, Tomahawk & Western Railway would have as much as one-half of the entire haul. The hauls over the Wisconsin & Northern Railroad would be somewhat longer, but this would be partly offset by the fact that the distances to the nearby paper mills over the connecting carriers are proportionately greater. As a result of this situation these carriers, under the present methods of dividing joint rates, would receive but small percentages of the total charges. A comparison of their proportions of the joint rates to the paper mills with their present local rates demonstrates clearly that the joint rates would mean reductions of revenue to the petitioning roads. The Stanley, Merrill & Phillips Railway's proportions of the joint rates would mean an average revenue about 25 per cent lower than the revenue accruing from the lowest rates now effective on the same material, even though most of these rates carry a provision that the manufactured product shall be reshipped over that line. Compared with rates not bearing the outproduct provision, the difference would be still greater. The effect of joint rates on the class of traffic involved would be practically the same on the Marinette, Tomahawk & Western Railway. The Wisconsin & Northern Railroad is in a somewhat better position to obtain higher percentages of the joint rates, and its own rates on pulp wood material are so much lower than on the other two roads that the effect of the joint rates on its revenues would not be felt to so great an extent. In fact, on shipments from certain stations it would receive a trifle more from its wood moving under the joint pulp wood rates than under its present rates, but from other stations it would receive considerably less. Over 90 per cent of the tonnage of the Stanley, Merrill & Phillips Railway and the Wisconsin & Northern Railroad, and about two-thirds of the Marinette, Tomahawk & Western Railway, consists of forest products, and a large part

is of such a nature that it could move under the joint pulp wood rates. These percentages are much higher than on the larger lines to which the pulp wood joint rates ordered on February 11, 1914, apply. None of the three roads here considered are at the present time earning a fair rate of return on their investments. The pulp wood joint rates applied to the business now moving would mean much more diminished revenues. It is possible, of course, that the joint rates would produce enough new business to offset this decrease. But to restore the roads to their present net earnings would require at the very least not only enough new business to offset the decreases of revenue due to the lower rates, but also enough more to pay the cost of handling all the new business, and we are unwilling to make the prediction that the joint rates would stimulate enough traffic to accomplish this end.

In view of the above considerations, we are of the opinion that it will be proper to excuse the Marinette, Tomahawk & Western Railway, the Stanley, Merrill & Phillips Railway, and the Wisconsin & Northern Railroad from compliance with the *Pulp Wood Joint Rate Order* of February 11, 1914.

IT IS THEREFORE ORDERED, That the order of February 11, 1914, insofar as it applies to the Marinette, Tomahawk & Western Railway, the Stanley, Merrill & Phillips Railway, and the Wisconsin & Northern Railroad companies is vacated, and the petition, insofar as it is directed against said companies, is dismissed.

IN RE APPLICATION OF THE MINERAL POINT TELEPHONE COMPANY FOR AUTHORITY TO INCREASE RATES.

Submitted Feb. 17, 1914. Decided Aug. 31, 1914.

Application was made to the Commission to define what kind of rural lines the applicant should switch at the \$2.00 rate fixed by the Commission in its order of June 7, 1912 (*In re Appl. Mineral Point Tel. Co.* 9 W. R. C. R. 285), to authorize, after Sept. 1, 1914, a rate of \$4.00 per phone per year to parties on grounded lines, until such time as the lines be made metallic; to prescribe that, in cases where the rural lines have switches by which they can switch other lines through the Mineral Point exchange without pay to the applicant, the originating exchange charge for such calls; and to fix the maximum number of subscribers per line at a number not to exceed ten. A careful examination of the lines in question and of the situation in general was made. It appeared that twenty-one rural lines, of which three are metallic, were originally connected to the Mineral Point switchboard, that most of these lines are owned by different companies, that eight are now disconnected owing to tension between the various companies and the Mineral Point Tel. Co., and that a separate switchboard has been installed by one of the rural companies to do the switching for these lines.

The action of the Mineral Point Tel. Co. in urging full metallic construction, a decrease in the number of subscribers per line, and other improvements in construction upon the rural companies was one of the things which engendered a spirit of antagonism between the Mineral Point Tel. Co. and the other companies. It appeared that in the matters of construction and service there is considerable need for improvement on the part of the rural companies, that the present scheme for making repairs needs attention, and that poor construction material is used on nearly all the lines connecting with the Mineral Point exchange. It also appeared that a number of the lines are overloaded. There were, however, no facts indicating the propriety of authorizing a rate higher than \$2.00 should the rural lines be kept in good condition.

Held: Until some better scheme of maintaining and operating the lines in question is put into effect, the installation of full metallic service would be but a temporary relief to the present unsatisfactory conditions. Moreover, the present grounded construction, properly operated and maintained, would give the subscribers involved a fairly satisfactory grade of service.

It is recommended: 1, that each of the companies owning the rural lines in question proceed, as soon as possible, to make such an overhauling of its lines as will place them in a first class working condition; 2, that each company own, operate, and maintain all subscribers' drops and substation wiring; 3, that each company employ an experienced lineman to care for its lines, and furnish him with all necessary repair material, and invest him with all necessary authority to enable him to permanently

keep all lines in first class operating condition; 4, that the congestion on certain lines specified be relieved; and, 5, that various needed steps, as stated in the detailed investigation of the different lines, be taken to put them in proper operating condition.

It appears that the rural lines are straight bridging and that every call comes into the central office, whether intended for the operator or not, so that it is necessary for the operator to pick out her call. This, rural patrons contend, results in their calls being overlooked, especially during the peak period, and makes it necessary for them to ring a number of times before attracting the operator's attention.

Held: The contention is not without merit. However, the improving of the condition complained of rests almost entirely with the rural companies themselves. The installation of full metallic service, and the ringing of the central office through a push button and ground, or, in the case of grounded lines, push button with pulsating current to actuate the central office drop, are suggested as a satisfactory solution of the difficulty.

The Mineral Point Tel. Co. makes a practice of charging 15 cts. for each call through the Mineral Point switchboard the destination of which is beyond any switchboard connected directly to the Mineral Point exchange. It seems that this charge is very irritating to both local and rural subscribers, and was not made at the time of the Commission's examination, which preceded the order fixing the \$2.00 switching rate. It appears that these switchboards in a great many cases connect subscribers who live within such a radius of Mineral Point that a good deal of their marketing is done at that point, and that a considerable part of the value of the telephone service, both to them and to the Mineral Point subscribers, lies in their ability to call and be called by each other.

Held: The order of the Commission (*In re Appl. Mineral Point Tel. Co.* 9 W. R. C. R. 285) fixing the \$2.00 switching rate now in force was based upon the furnishing by the applicant of free exchange of calls to and from parties beyond its directory limits, but connected to a central which could call Mineral Point directly. The change to the present practice was never authorized by the Commission, and the original practice must be restored. While it is reasonable that free service limits should be established, under the circumstances of the present case they should not be the outer ends of the lines connected directly to Mineral Point. However, should the rural companies not put their lines in proper condition, a somewhat higher switching charge would seem warranted, and also a toll charge upon calls over all lines not directly connected to the Mineral Point Tel. Co.'s exchange.

It is ordered: 1, that no charge be made by the Mineral Point Tel. Co. on messages to or from parties directly connected to a switchboard from which the Mineral Point Tel. Co. can be called directly, except as provided in part 4 of the order; 2, that the rate for switching service continue to be \$2.00 per phone per year except as provided in part 3 of the order; 3, that if rural lines are put in good repair in accordance with both the general and special recommendations embodied in the report of the Commission's inspectors by June 30, 1915, the switching rate continue to be \$2.00 per year as long as the lines are properly maintained, and, if not put in such repair, that a rate of \$3.00 be authorized from that date until the lines are put in satisfactory shape; 4, that where lines are not put in good con-

dition by June 30, 1915, as provided in part 3 of the order, the Mineral Point Tel. Co. may charge 10 cts. per message for incoming and outgoing calls from or to parties separated from Mineral Point by one intervening switch, and may continue to make such charge until the lines in question are put in shape and; 5, that outgoing calls from the Mineral Point switchboard to parties beyond the free exchange limits specified in part 1 of the order as qualified by part 4, be charged for by the Mineral Point Tel. Co. at 10 cts. per call, which rate is to supersede any rate in effect at the time of the order, and that incoming calls from points beyond the free exchange limits specified in part 1 of the order as qualified by part 4, are to be checked by the operators of the switches connected directly with Mineral Point, and be charged at the rate of 10 cts. per message at those points. The Railroad Commission is to determine whether or not the recommendations of its inspectors have been complied with and whether or not lines are properly maintained.

Application in this case was filed with the Commission on November 14, 1913. The application sets forth, (1) that rural lines now pay \$2.00 per year per phone for switching service in accordance with the decision of the Commission dated June 7, 1912 (9 W. R. C. R. 285), (2) that there are twenty-one rural lines connected to the Mineral Point switchboard, three of which are metallic, and (3) that none of the grounded lines which were connected in June, 1912, have been changed to metallic.

Applicant asks that the Commission define what kind of lines it should switch at the \$2.00 rate and fix the maximum number of subscribers on such lines. Applicant further asks that the number of subscribers on a line be reduced to ten and that from September 1, 1914, parties on grounded lines be required to pay \$4.00 per phone per year for switching service until such time as the lines shall be made metallic. Applicant further asks that in cases where rural lines have switches by which they can switch other lines through the Mineral Point Exchange without pay to the applicant, such originating exchange should charge for such calls.

Hearing was held at Madison on February 17, 1914. Applicant was represented by *N. H. Snow* and *W. S. Pedley*. There were no appearances entered in opposition.

Following the hearing it was apparent that a careful examination of the lines in question and of the situation in general should be made. Such an examination was made by members of the Commission's staff and their report is embodied herein and made a part of this decision. Following is their report:

“Investigation has been made of the telephone situation in Mineral Point for the purpose of determining so far as possible,

- “(1) The actual physical condition of the farmers’ lines which enter the Mineral Point switchboard,
- “(2) the quality of the service being rendered to these lines by the Mineral Point Telephone Company,
- “(3) the quality of service which these lines are able to render their own subscribers with regard to the type of construction used, and the manner of their maintenance,
- “(4) the advisability of requiring the rural companies to make their lines full metallic, and
- “(5) the toll situation between the Mineral Point Telephone Company’s exchange and farmer subscribers connected to a second exchange but not connected directly to the Mineral Point exchange.

“The situation is rendered rather complex, due to the fact that most of the rural lines entering the Mineral Point switchboard are owned by different companies. This fact has made it necessary that a complete study be made of each line. The table on page 74 sets forth general data relative to these lines, using the number of each line of the Mineral Point Telephone Company’s switchboard as the distinguishing feature.

“This table shows twenty-one rural lines entering the Mineral Point switchboard. At the present time eight of these lines (marked “*” in table) have been disconnected and a separate switchboard has been installed in Mineral Point by one of the farmers’ companies to do switching for these lines. The tension between the farmer companies and the Mineral Point Telephone Company is a result primarily of three factors:

“1st, the Mineral Point company makes a practice of charging 15 cts. for each call through the Mineral Point switchboard, the destination of which is beyond any switchboard which is connected directly to the Mineral Point exchange. Business men of Mineral Point as well as farmers object to this charge.

“2nd, farmer patrons allege that inasmuch as their lines are straight bridging and every call comes into the central office, whether for the operator or not, making it necessary that the operator pick out her call, the result is that, especially during the peak load, calls from the farmer lines are overlooked, making it necessary to ring a number of times before it is possible to attract the operator’s attention.

“3rd, the Mineral Point company has urged full metallic construction and a decrease in the number of subscribers per line upon the rural companies as well as other improvements in construction which have served to engender a spirit of antagonism between the companies.

TABLE I.
MINERAL POINT TELEPHONE COMPANY—RURAL LINES.

Metallic or grounded.	Sub- scribers number.	Owned by	Number of sub- scribers.	Connects with	Connected with this switch are		Remarks.
					Sub- scribers.	Lines.

G*	16	Jonesdale Tel. Co.....	28	Jonesdale....	87	6	Lines connect with Ridgeway, Mineral Point, Waldwick, Hollandale.
G*	17	Iowa & LaFayette County Tel. Co.....	13	Waldwick....	136	11	Few calls over this line from Waldwick.
G	18	Barreltown Tel. Co.....	14	No switch.....			
M	20	Rural Line.....	10	" ..			
G*	22	Dukes Prairie Tel. Co.....			136	11	Through line to Waldwick.
G	23	Lost Grove Tel. Co.....	11	May switch..	15	1	Linden (100 subscribers.) (?)

Practically all calls to and from Linden are routed over No. 23 instead of by way of Powell switch.

"In connection with the first of the above contentions the following extracts from the notes taken at Mineral Point in 1912, in connection with the case, *In re Appl. Mineral Point Tel. Co. for Authority to Increase its Rates, Tolls, and Charges*, 9 W. R. C. R. 285, indicate that the toll charge which is now made was not made in 1912:

" 'Mineral Point to Powell—no charge unless call goes beyond Powell's subscribers.'

" 'Mineral Point to Waldwick—no charge unless call goes beyond Waldwick subscribers.'

"It would seem, therefore, that the 15 ct. toll charge which is now being made from Mineral Point to all telephones beyond the Powell and Waldwick switches, may be invalid.

"With reference to this question, the following points seem evident:

"1. Inasmuch as the Mineral Point company does not own the lines over which these calls are sent, the making of the toll charge and the retaining of the full amount on outgoing calls by the Mineral Point company does not seem reasonable.

"2. As has been previously pointed out, this toll charge may be invalid, inasmuch as data which were taken in 1912 indicate that such a toll charge was not made at that time.

"3. Interviews were had with rural subscribers and representatives of the business men of Mineral Point, in which, in every instance, objections were made to the toll charge and statements were made to the effect that patrons would rather submit to a somewhat higher rate per telephone per year if necessary and have the toll charge removed. It seems that this charge which is billed to local and rural subscribers has the effect of being very irritating and is responsible to a large extent for the spirit of antagonism which exists on the part of the rural companies toward the Mineral Point Telephone Company.

"4. Although it appears reasonable that free service limits be established by companies beyond which limits charges should be made for the use of the service, it seems very questionable in the present case whether these limits should be placed at the outer ends of all lines which are connected directly to the Mineral Point exchange. These outer ends of the lines in a great many cases connect through switches with subscribers who live within such a radius of Mineral Point that a good share of their marketing is done at that point. A considerable part of the value of the telephone service to these subscribers, as well as to the Mineral Point subscribers, lies in their ability to call and be called by each other. This is attested to by the traffic study, which shows that there are a comparatively large number of calls from these rural subscribers to Mineral Point.

"It will therefore be recommended that the 15 ct. toll charge now in effect between Mineral Point and subscribers of rural companies having one intervening switch between them and the Mineral Point exchange, be discontinued.

“The rural patrons’ contention that their calls are often overlooked by the operator, undoubtedly has some merit. However, the improving of this condition would seem to rest almost entirely with the farm line companies. It could best be remedied by the installation of full metallic service and by ringing the central office through a push button and ground. With this arrangement, only calls for the operator will come into the central office. The three full metallic rural lines now connected to the Mineral Point switchboard are thus equipped, and testimonials from the subscribers of these lines indicate that the ringing service is very satisfactory. Approximately the same result may also be obtained by the use of the push button to ring central on the grounded lines, although it is not always as sure as with the full metallic construction. With the push button on the grounded line, the switchboard drop is actuated by a pulsating current from the subscribers’ generator, while the subscribers’ bells along the line are rung as usual by alternating current. Such an installation is in use on a number of lines within the state and is evidently giving satisfaction.

“Relative to the attitude of the Mineral Point Telephone Company in urging the farmer line companies to improve their construction and service, it would seem that there is considerable need for improvement in these respects. Especially does the present scheme of making repairs for these rural companies need attention. In general, each company’s system is divided into sections and the officers of the company or the stockholders delegate one of their number to act as trouble man for that section of the system. Needless to say, during the busy seasons of the year especially, the telephone business receives secondary consideration to the farm work, with the result that telephone troubles are not promptly attended to. It is further very evident that, inasmuch as the trouble men thus appointed are usually not trained telephone men, cases of trouble come up which are not handled with efficiency. A further practice which is indulged in throughout this section is for each subscriber to own and maintain his own stub line and instrument. It is asserted that the stockholders on some of the lines consider that even the trouble man for their section of the system has no right to come onto their premises to repair their telephone. The result of such a scheme is that almost invariably the stub lines are of cheap construction, instruments are poorly installed, and little or no maintenance expense of the stubs and instruments is incurred. These factors will be taken up later in this memorandum and recommendations made.

Investigation in Detail.

“In order that the data taken might be as full as possible, complete inventories were made of each of the rural lines run-

ning out of the Mineral Point exchange, together with notes on their condition of repair. Also tests of the service were made as frequently as possible and numerous interviews were had with the subscribers and stockholders of the various lines*.

General Recommendations.

“As has been previously pointed out, the poor construction material used on certain parts of nearly every rural line connecting with the Mineral Point exchange, together with the general schemes of maintenance of these lines, seems to be responsible to a large extent for the more or less unsatisfactory class of service which is being rendered by these rural lines. It is true that full metallic construction will give a higher grade of service than the grounded system if properly maintained. However, it is believed that until some better scheme of maintaining and operating these lines is put into effect, the installation of full metallic service will be but a temporary relief to the unsatisfactory conditions which now exist. Moreover, it would seem that the present grounded construction, properly operated and maintained, can give to the subscribers of this section a grade of service which will be fairly satisfactory.

“It is therefore recommended that the companies owning the rural lines running out of the Mineral Point exchange make such changes in the construction and operation of their systems as will conform to the following provisions:

“1. Each company to make as soon as possible such overhauling of its lines as will place them in a first class working condition.

“2. Each company to own, operate and maintain all subscribers' drops and substation wiring.

“3. Each company to make arrangements to hire an experienced lineman to care for its lines, to furnish such lineman with all necessary repair material and invest him with such authority as will enable him to permanently keep all lines in first class operating condition. It seems that two or more companies might well cooperate in the hiring of such a lineman and thus save considerable expense.

“It is further recommended that the 10 and 15 ct. toll charges, which are now made by the Mineral Point Telephone Company to all subscribers connected directly to the following switches: Harker's, May's, Clark's, Steffe's, Powell, Waldwick, and Jonesdale, Darlington and Linden, but not connected directly to the Mineral Point exchange, be discontinued at such time as each rural company shall have signified its intention to comply with recommendations of this memorandum, and the following schedule be adopted:

* The report, which follows in the formal decision, takes up the various lines in detail and is omitted because of no general interest. The various lines and switches are shown on the accompanying map.

"A. Free service both ways between Mineral Point and any subscribers connected directly with any of the above switches, providing the companies which own the lines connecting to these switches put their lines in a state of repair which will satisfy the above general recommendations 1 to 3. As an assurance that the above recommendations have been complied with, it would seem advisable that each company which owns lines connected to these switches be required to report to this Commission at such time as they shall have complied with the above requirements, stating precisely the extent of the repairs made and the name and amount of experience of the troubleman whom they have hired. In the event any of the companies do not choose to comply with these requirements, it would seem advisable and necessary to make a somewhat higher switching charge per phone for the phones on such lines connected directly to the Mineral Point exchange of the Mineral Point Telephone Company, and authorize the Mineral Point Telephone Company to collect a 10 ct. toll charge upon all calls from such lines not connected directly with the Mineral Point Telephone Company's switchboard but which are connected directly with the Powell, Waldwick, Steffes, Jonesdale, Harker's, May's, or Clark's switches. It is recommended that if it becomes necessary on account of the conditions of the lines that the toll charge be instituted that this charge be borne by the company owning the line in question and not by the subscriber making the call.

"B. Calls outgoing through the Mineral Point switchboard and going through any of the above switches and also through a second switch should be charged for by the Mineral Point Telephone Company at the rate of 10 cts. per call, which charge should be retained by the Mineral Point Telephone Company.

"C. Calls originating beyond any switch which is connected directly with the above named switches should be checked by the operators at these switches and a toll charge of 10 cts. per message imposed.

"It has not been deemed necessary that detailed recommendations be made for each of the lines or systems connecting with the Mineral Point exchange. The following out of the general recommendations Nos. 1, 2, and 3, will place most of the lines in a fairly workable condition. The detailed recommendations which follow will therefore take up only such irregularities as have not been specifically referred to in the body of this memorandum and are not covered by general recommendations Nos. 1, 2, and 3.

"The above general recommendations Nos. 1, 2, and 3 will apply in full to all lines excepting Nos. 5, 8 and 20, which are full metallic lines. Line No. 20 is well built throughout, however, recommendations Nos. 2 and 3 should also apply to this line. Line No. 8 is a fairly well constructed line and by following out recommendations Nos. 2 and 3 it can be placed up-

on a more satisfactory working basis. Line No. 5 connects Mineral Point with Linden. It is of the same general construction as No. 8 and the recommendations cited for this line will also apply to No. 5. At the present time no through calls between Mineral Point and Linden are routed over this line, owing to a disagreement between the owner of the Linden exchange and the Mineral Point & Livingston Telephone Company, owners of the line. Instead, calls between Mineral Point and Linden have to be routed by the round-about way of the May or Powell switches. In the event that free through service is not agreed upon over this line between Mineral Point and Linden, it is suggested that a suitable toll charge may be imposed upon calls both ways over this line. A 5 ct. toll charge, divided 2 cts. to the owner of the line over which the call is routed and 3 cts. to the exchange at which the call originates, would seem to be a fair solution of the problem.

"Table No. 1 shows that the line to Darlington, No. 15, owned by the Willow Springs Telephone Company, has eighteen subscribers. Also, as has been previously pointed out, certain portions, and especially the farmers' stub lines, are badly in need of repairs. Further, the traffic study shows that considerable use is made of this line as the through line between Darlington and Mineral Point. It would seem advisable that some step be taken to relieve the congestion on this line and place it in a better state of repair. It is therefore recommended that the Willow Springs Telephone Company string an additional wire so as to divide this line and not have more than twelve patrons on either line.

"Further reference to Table No. 1 shows that the Duke's Prairie Telephone Company owns three lines running out of the Mineral Point exchange as follows: Line No. 22, through grounded line to Waldwick, no subscribers; line No. 9, grounded line with thirteen subscribers; line No. 7, grounded line with nineteen subscribers. These lines follow the same pole lead to the end of the No. 7 line at station No. 4. It is evident that No. 7 and No. 9 are quite overloaded and it seems advisable that the number of subscribers be reduced to a smaller number per line. It is therefore recommended that the Duke's Prairie Telephone Company string a fourth wire from Mineral Point to such a point as will pick up $\frac{1}{3}$ of the total number of subscribers on lines No. 7 and No. 9. This would involve the stringing of not more than $3\frac{1}{2}$ miles of wires at a maximum outlay of \$40.

"According to table No. 1, line No. 16, which runs to Jonesdale, has twenty-eight subscribers, and line No. 12, which runs on the same pole line to a point approximately six miles from Mineral Point, has twenty-one subscribers. These lines are entirely too heavily loaded and should be cut down to a reasonable number per line. It is therefore recommended that such a number of wires be strung from Mineral Point and from Jonesdale

as will decrease the number of subscribers in this section to twelve or less per line.

“Further reference to Table No. 1 shows that there are remaining four lines which have sixteen or more subscribers per line, for which no detailed recommendations have been made. These lines are: No. 3 with twenty subscribers, belonging to the Mineral Point and Truman Telephone Company; No. 4 with sixteen subscribers, belonging to the Mineral Point and Belmont Telephone Company; No. 10 with seventeen subscribers, belonging to the Oak Park Telephone Company; and No. 14 with sixteen subscribers, belonging to the New Baltimore Telephone Company. These lines are without question overloaded and some effort should be made to relieve the condition. It is recommended that the number of subscribers per line on each of these lines be decreased to twelve per line or less. Inasmuch as all of the above lines are in group No. 1, which leaves the southwestern part of the city of Mineral Point on a common pole line, it is suggested that two or more of these companies might well combine in the running of extra wires to relieve the congestion.”

Little amplification of the report of the Commission's inspectors appears to be necessary except to say that we have no facts to indicate that a rate higher than \$2.00 should be authorized if rural lines are kept in good shape.

At the time of the Commission's examination in May, 1912, the Mineral Point Telephone Company was furnishing free exchange of calls to and from parties beyond its directory limits but connected to a central which could call Mineral Point directly. The change in this practice was never authorized by the Commission. The \$2.00 rate was based upon the existence of this practice and the practice must be restored.

IT IS THEREFORE ORDERED:

1. That no charge shall be made by the Mineral Point Telephone Company on messages to or from parties who are directly connected to a switchboard from which the Mineral Point Telephone Company can be called directly, except as provided in section 4 of this order.

2. That the rate for switching shall continue to be \$2.00 per phone per year, except as provided in section 3 of this order.

3. If rural lines are put in good repair in line with both the general and special recommendations embodied in the foregoing report of the Commission's inspectors, the switching rate shall continue to be \$2.00 per year. If lines are not put in such re-

pair by June 30, 1915, a rate of \$3.00 will be authorized from that date until the lines are in satisfactory shape. Where lines are put in satisfactory shape by June 30, 1915, the \$2.00 rate shall continue while lines are properly maintained.

4. Where lines are not put in satisfactory shape as outlined in section 3 of this order, by June 30, 1915, the Mineral Point Telephone Company may charge 10 cts. per message for incoming and outgoing calls from or to parties separated from Mineral Point by one intervening switch, and may continue to make such charge until the lines in question are put in shape.

5. Outgoing calls from Mineral Point switchboard to parties beyond the free exchange limits specified in section 1, as qualified by section 4, of this order shall be charged for by the Mineral Point Telephone Company at 10 cts. per call. This rate shall supersede any present rate for this service.

Incoming calls from points beyond the free exchange limits specified in section 1, as qualified by section 4, of this order shall be checked by the operators of the switches connected directly with Mineral Point and a charge of 10 cts. per message imposed at those switches.

6. The Railroad Commission shall determine whether or not the recommendations of its inspectors have been complied with and whether or not lines are maintained properly.

JOHN GUND BREWING COMPANY

vs.

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted May 5, 1914. Decided Aug. 31, 1914.

Complaint was made that the rate of $17\frac{1}{2}$ cts. per cwt. on bottles between Milwaukee and La Crosse was excessive, and the Commission was asked to establish a rate of 15 cts. per cwt. for shipments of bottles between the points in question, and to order a refund to the petitioner on twenty-eight carloads of bottles, which petitioners shipped from Milwaukee to La Crosse between Oct. 23, 1912, and Jan. 24, 1914, and on which petitioner paid charges at the rate of $17\frac{1}{2}$ cts. per cwt. It appeared that the $17\frac{1}{2}$ ct. rate had been in force less than a month when the first car of the shipment in question was shipped, and that the net rate on bottles from Milwaukee to Eau Claire—a longer haul by nearly one hundred miles—was and remains 15 cts. per cwt.

Held: The rate of $17\frac{1}{2}$ cts. is unduly high. A rate of 15 cts. would bring the respondent a generous return. The respondent is ordered to cease exacting a rate in excess of 15 cts. per cwt. on bottles in carload lots between Milwaukee and La Crosse, and to make refund to the petitioner on the shipments in question on the basis of a 15 ct. rate.

The petitioner in this case, the John Gund Brewing Company, sets forth in its complaint that it shipped over the respondent company's lines from Milwaukee to La Crosse, between the dates of October 23, 1912, and January 24, 1913, twenty-eight carloads of bottles on which it paid charges at the rate of $17\frac{1}{2}$ cts. per cwt., to the total amount of \$1,950.28; that the rate named was arbitrarily established by the respondent shortly before the date of shipment, and that it is grossly excessive, unreasonable and unjust. The Commission is asked to establish a rate of 15 cts. per cwt. for shipments of bottles between the points named and to order the respondent to refund the sum of \$270.88 to the petitioner, that being the difference between the amount paid upon the shipments in question and what would have been paid had the rate been 15 cts. per cwt.

In its answer by O. W. Dynes, its commerce counsel, the respondent denies that the rate charged the petitioner was excessive, unreasonable or unjust, and avers that on the contrary the rate charged was unprofitably low and that a higher rate, to-

wit, one not less than 20 cts. per cwt., should be established, if shipments of the character of that in question are to pay their fair and just proportion of the cost of maintaining the transportation systems which carry them.

A hearing was held, pursuant to notice, at Madison, on May 5, 1914, at which *George H. Gordon* appeared for the petitioner and *J. N. Davis* for the respondent.

At the hearing the fact was brought out that the rate of 17½ cts. per cwt. had been in force less than a month when the first car of the shipment in question was shipped. It was also shown that the net rate on bottles from Milwaukee to Eau Claire—a longer haul by nearly one hundred miles—was and remains 15 cts. per cwt., thus making a serious discrimination against it in favor of Eau Claire competitors, the petitioner alleges.

The problems involved in this case are simple and lie on the surface: Is the rate of 17½ cts. per cwt. on bottles from Milwaukee to La Crosse excessive? and, does the lower rate from Milwaukee to Eau Claire discriminate against La Crosse?

A careful examination of the cost of the service by the respondent makes it clear that the rate of 17½ cts. is unduly high and that a rate of 15 cts. would bring the respondent a generous return.

If there are conditions growing out of competition which would warrant a lower rate from Milwaukee to Eau Claire than from Milwaukee to La Crosse, they were not brought forward by the respondent at the hearing or otherwise presented. Counsel for respondent admitted that there was an irregularity in the rates on bottles between the points named which grew out of interstate tariff adjustments. These irregularities, he said, had been noticed for adjustment at the August meeting of the traffic association having control over the territory involved.

In view of these facts we find that the rate complained of in this case is unreasonably high and exorbitant; that it should be readjusted to the amount given in the order herein, and that the difference between the rate thus ordered and the rate charged be refunded to the petitioner.

IT IS ORDERED, That the respondent company cease to exact a rate in excess of 15 cts. per cwt. on bottles in carload lots between Milwaukee and La Crosse; and that the respondent company refund to the petitioner the sum of \$270.88 of the amount collected upon the shipments covered by the complaint in this case.

IN RE APPLICATION OF THE GREEN BAY WATER COMPANY FOR
AUTHORITY TO READJUST ITS RATES.

Submitted April 23, 1914. Decided Sept. 2, 1914.

Application was made by the Green Bay Water Co. for authority to re-adjust rates, so as to enable it to receive a 7 per cent return upon its investment. The order of Jan. 6, 1913 (*City of Green Bay v. Green Bay W. Co.* 11 W. R. C. R. 236), which established the schedule of meter rates now in force, was necessarily based on an estimate as to what the use of metered water would amount to in Green Bay, since only a small portion of the consumers were supplied on a meter basis. The utility's experience, after the installation of meters, indicated that the use of water was considerably less than the estimate of the Commission, and the revenues from the sale of water consequently smaller than the estimated revenues.

The value of the property, for the purposes of this case, was tentatively fixed as approximately \$770,000, as of July 1, 1914. The revenues and expenses were investigated, and revenues and schedules necessary to afford a 6, 6½ and 7 per cent return were arrived at and considered. It appeared that metering was practically completed during July 1914, and that during the last quarter of the fiscal year 1913-1914 there were 757 register numbers billed at flat rates, and 3,505 metered consumers, exclusive of certain large users whose meters are read monthly. An estimate was therefore necessary as to the amount of water which would be sold through the 757 services for which there was no record of metered consumption. It seemed fair to assume that the average consumption through the foregoing unmetered services would be approximately the same as that through those metered, excepting from the latter, as noted, certain large users. It is noted that any material increase in rates must be made with due consideration of the possibility that some of the larger consumers may find the rate prohibitive.

Held: Some increase in rates should be permitted. The increase, however, should not be as large as asked by the utility. An increase averaging about 5 cts. per 100 cubic feet of water sold is considered reasonable. The applicant is authorized to discontinue its present schedule of rates and substitute therefor the schedule of rates proposed by the Commission.

The application in this case was filed with the Commission on February 28, 1914. In substance the applicant alleges that the existing rates are insufficient to yield a fair return upon the value of the property, and that rates should be so adjusted as to enable the utility to receive a 7 per cent return upon its investment.

Hearing was held at Madison on April 23, 1914. Appearances were: For the Green Bay Water Company, *George G. Greene of Greene, Fairchild, North, Parker & McGillan*; for the city of Green Bay, *William Cook*, city attorney.

The facts with regard to the Green Bay Water Company have been reviewed rather fully in earlier decisions of the Commission, so that it will be necessary at this time to refer only to such conditions as are directly connected with this action.

At the time the decision (11 W. R. C. R. 236) was issued, on January 6, 1913, by which a new schedule of meter rates was established, the Commission could not obtain reliable information as to what the use of metered water would amount to in Green Bay, because only a small portion of the consumers were supplied on a meter basis. All that could be done was to estimate the consumption of water, with the estimate based upon conditions as found in other cities. After meters were installed the utility's experience indicated that the use of water was considerably less than the amount at which the Commission had placed its estimate, and that the revenues from the sale of water were consequently less than the estimated revenues. In what follows, the facts with regard to the use of water and to the financial condition of the utility are shown at some length.

During the year ended June 30, 1914, operating expenses of the Green Bay Water Company were as follows:

Steam pumping	\$11,766.26
Electric pumping	2,245.15
Distribution	4,021.72
Commercial	669.25
General	7,740.98
Undistributed	1,953.23
	<hr/>
Total of above	\$28,396.59
Taxes	11,525.33
	<hr/>
Total of above	\$39,921.92

There are very few of these expenses which can be questioned. Electric pumping expenses will probably be somewhat smaller due to the effect of the use of meters in curtailing the waste of water. Certain items of undistributed expenses may be reduced slightly, and there are some of the general expenses which might be diminished, although the total amount of such possible savings is not large. To some extent such savings will probably be offset by increased costs due to metering, such as the cost of

maintaining meters. On the whole, it appears that operating expenses and taxes will not be less than \$39,500 per year.

Depreciation was allowed for in the previous cases at the rate of \$6,550 per year, or practically 1 per cent of the depreciable property. Although the amount of depreciable property has been increasing, it is believed that careful handling of the accumulations would make the same allowance for depreciation adequate at this time.

In the case decided January 6, 1913, the fair value of the property as of January, 1912, was found to be \$683,229.

An exhibit filed by the company shows that total construction from January 1, 1912, to June 30, 1912, based upon the unit prices used in the Commission's valuation of the physical property, amounted to \$12,678.48.

The construction as shown on the company's books for the two year period from July 1, 1912, to June 30, 1914, amounted to \$62,388.11. The amount as actually charged on the books does not include much, if anything, in the way of overhead expenses such as cost of supervision, interest during construction, etc.

Applying the Commission's unit prices, including the allowance for overhead expenses to the property put in between January 1, 1912, and June 30, 1914, the company's exhibit shows a total value of property added during this period of \$91,984.73.

Applying the Commission's unit prices to the total property, starting with a valuation of \$683,229 as of January 1, 1912, the valuation of the property as of July 1, 1914, would be \$775,213.73.

The valuation as of January 1, 1912, included \$9,190 for materials and supplies. The exact amount of materials and supplies is not known, but there seems to be no reason to expect that it will normally be nearly as large as that. In round numbers \$770,000 will cover the reasonable value of the property. There seems to be no reason for including any allowance for working capital other than what was included in the original case.

In a case where the value of the property was the direct and important issue, as it would be, for example, in case of municipal purchase, a thorough review of all evidence might reveal a value slightly at variance with the amount shown above, but this case is concerned, not so much with the niceties of valuation, as with the need of the utility for revenues greater than it now has, and with securing substantial justice to both parties. Where part of

the conclusions must, in any event, be the result of estimates, the exact determination of the final, reasonable value is of no great importance if the tentative valuation is not obviously so far wrong as to work an injustice to one of the parties concerned.

For the purposes of this memorandum, therefore, it appears that results may be computed upon a tentative valuation of \$770,000.

Interest on this amount would be as follows:

At 6%	\$46,200
At 6½%	50,050
At 7%	53,900

Earnings for the past year are not a reliable guide to future earnings because the fire protection rate was changed during the year and because the process of metering was going on during the year.

A fairly reliable estimate of the earnings, however, can be made from an analysis of the consumer records of the utility.

Service charges of consumers who were on the meter basis during the last quarter of the fiscal year 1913-1914 amount to \$4,065.50, equivalent to a rate of \$16,262 per year. The company's records show that during this quarter there were 757 register numbers billed at flat rates, or which had been metered for so short a time that no reliable statement of metered consumption could be secured. Metering was practically completed during July, 1914. If all of these register numbers were to be supplied through 5/8 inch meters the annual service charges would amount to \$3,028 per year. The flat rate records do not show completely how many additional consumers are to be supplied at these 757 register numbers, but a record was obtained of 167 such consumers, and the total will probably not be far from 200. The added service charges at \$2.00 per year per additional consumer, would be \$400. Some of the meters will undoubtedly be of sizes larger than 5/8 inch, which will probably be sufficient to raise the total service charges of consumers who were unmetered during the last quarter, to \$3,500 per year, making the total of all service charges about \$19,762 per year.

Revenue from fire protection amounts to \$34,000 per year, so that the fire protection and the service charges will make up a total revenue of \$53,762 per year. Total expenses on a 6 per cent interest basis are about \$92,250 per year, on a 6½ per cent

basis, about \$96,100, and on a 7 per cent basis, about \$99,950 per year.

It is understood that there will be practically no revenue from street sprinkling, as some of the streets have been oiled and others are sprinkled by the traction company with water taken from its own source of supply. Builders' water will hereafter be supplied through meters so that no revenue can be expected from this source separately from the general metered service.

An analysis of the sales of water during the last quarter shows that, with all metered consumers placed upon a quarterly basis, and with a deduction of 125,000 cu. ft. for extraordinary leakage, which will not continue with meters in use, the distribution of sales for the quarter was as follows:

In the first 1000 cu. ft.....	2,085,613 cu. ft.
In the next 4000 cu. ft.....	1,267,190 cu. ft.
Excess	1,362,778 cu. ft.
Total	4,715,581 cu. ft.

The amount of water which will be sold through the remaining 757 services for which we have no record of metered consumption, must still be estimated. There are 168 of the largest users whose meters the company reads monthly and who are probably not comparable to the unmetered users. There are 3,505 metered consumers, exclusive of the large users whose meters are read monthly, who used an average of 849 cu. ft. per consumer during the last quarter. The manager of the utility expressed the belief that consumers who were on flat rates would be rather small users, because there were a number of business buildings included where the amount of water used would be small. When consideration is given, however, to the rather large number of additional consumers who will be supplied through these meters, and to the further fact that the greater portion of the 757 unmetered services supply premises which seem to be fairly comparable with those already metered, it seems reasonable to expect that these consumers will have an average consumption as large as those already metered, exclusive of those having monthly meter readings. This would amount to 642,693 cu. ft. per quarter, and if the division into consumption groups follows the same lines as followed by the consumption of the 3,505 consumers with whom they are compared, the division will be as follows:

In the first 1000 cu. ft.....	435,103 cu. ft.
In the next 4000 cu. ft.....	177,383 cu. ft.
Excess	30,207 cu. ft.
Total	<u>642,693 cu. ft.</u>

The distribution of total sales for one quarter would be as follows:

In the first 1000 cu. ft.....	2,520,716 cu. ft.
In the next 4000 cu. ft.....	1,444,573 cu. ft.
Excess	1,392,985 cu. ft.

Placed upon an annual basis the distribution would be as follows:

In the first 1000 cu. ft.....	10,082,864 cu. ft.
In the next 4000 cu. ft.....	5,778,292 cu. ft.
Excess	5,571,920 cu. ft.
Total	<u>21,433,076 cu. ft.</u>

This total consumption is about 2,600,000 cu. ft. less than the estimated amount used in the former case, exclusive of water used for street sprinkling. The division into groups is also somewhat different from the estimate as shown below:

	Estimate	Actual
In the first 1000 cu. ft.....	50%	47%
In the next 4000 cu. ft.....	30%	27%
Excess	20%	26%

The effect of this difference in the distribution of sales is to lower the revenue still further below the estimated revenue because of larger quantities of the consumption coming in the secondary and excess group, at the lower rates.

The annual revenue from the consumption charge would be:

10,082,864 cu. ft. at 16 cts. per 100 cu. ft.....	\$16,132.58
5,778,292 cu. ft. at 13 cts. per 100 cu. ft.....	7,511.73
5,571,920 cu. ft. at 10 cts. per 100 cu. ft.....	5,571.92
Total	<u>\$29,216.28</u>

Total annual revenues of the utility will be made up as follows:

Fire protection	\$34,000.00
Service charges	19,762.00
Consumption charges	29,216.28
Total	<u>\$82,978.28</u>

Earnings will therefore fall \$9,271.72 short of paying a 6 per cent return, \$13,121.72 short of a 6½ per cent, and \$16,971.72 short of 7 per cent. To produce the revenue needed for a 6 per cent return the output rate would have to be raised an average of about 4.3 cts. per 100 cu. ft., for 6½ per cent about 6.1 cts., and for 7 per cent, without altering the service charge, it would be necessary to increase the output rate an average of about 7.9 cts. per 100 cu. ft.

There is some question as to whether an increase of the output charge as indicated would actually increase the return to 7 per cent. It must be remembered that a number of concerns which might naturally be expected to be large users of water from the utility's mains are furnishing their own water supply, and any material increase in the rates must be made with consideration given to the possibility that some of the larger consumers find the rate prohibitive.

In order to secure about a 6 per cent return, it would be necessary to substitute some such schedule of rates for water as the following:

21 cts. per 100 cu. ft. for the first 1,000 cu. ft.
 17 cts. per 100 cu. ft. for the next 4,000 cu. ft.
 14 cts. per 100 cu. ft. for the excess.

This would increase earnings by \$9,581.52 per year, approximately the amount needed for a 6 per cent return.

If the schedule were to be so changed as to enable the utility to earn a 6½ per cent return, it would probably be necessary to increase the service charges as follows:

	Present service charge.	Proposed service charge.
¾ inch meters.....	\$1 00	\$1 25
1 " "	1 50	1 75
1 " "	2 00	2 50
1½ " "	2 50	3 00
1½ " "	3 50	4 50
2 " "	7 00	9 00
4 " "	12 50	15 00

This would increase the revenue from the service charge about 25 per cent or approximately \$5,000 per year, which would leave about \$8,500 to be obtained from the charge for water, or about

4 cts. per 100 cu. ft. Output rates would have to be as follows, to yield 6½ per cent:

First 1000 cu. ft.....	21 cts. per 100 cu. ft.
Next 4000 cu. ft.....	16 " " " "
Excess	13 " " " "

To produce a 7 per cent return \$3,850 more would be needed than for 6½ per cent, or 1.8 cts. per 100 cu. ft. Service charges would have to be as shown above for 6½ per cent return and output charges would need to be about as follows:

First 1000 cu. ft.....	23 cts. per 100 cu. ft.
Next 4000 cu. ft.....	18 " " " "
Excess	14 " " " "

From a consideration of all the facts, we have concluded that some increase in rates should be permitted but that the increase should not be as large as asked for by the utility. An increase averaging about 5 cts. per 100 cu. ft. of water sold is considered reasonable.

THE APPLICANT, the Green Bay Water Company, IS THEREFORE AUTHORIZED to discontinue its present schedule of meter rates and to substitute therefor the following schedule:

Service charges:

To be the same as existing service charges.

Charges for water:

22 cts. per 100 cu. ft. for the first 1000 cu. ft. per quarter through a meter.

18 cts. per 100 cu. ft. for the next 4000 cu. ft per quarter through a meter.

14 cts. per 100 cu. ft. for the excess.

This rate shall apply from July 1, 1914.

BELMONT AND PLEASANT VIEW TELEPHONE CO. ET AL.

vs.

WHITE OAK TELEPHONE COMPANY.

BELMONT AND PLEASANT VIEW TELEPHONE CO. ET AL.

vs.

WISCONSIN TELEPHONE COMPANY,
LA FAYETTE COUNTY TELEPHONE COMPANY.

IN RE APPLICATION OF THE LA FAYETTE COUNTY TELEPHONE COMPANY FOR AN ORDER FIXING UNIFORM SERVICE, RATES, RULES, AND REGULATIONS AMONG TELEPHONE COMPANIES IN LA FAYETTE COUNTY AND FOR OTHER RELIEF.

Decided Sept. 3, 1914.

The Belmont & Pleasant View Tel. Co., operating telephone exchanges and lines in La Fayette and Grant counties, and the La Fayette & Iowa County Tel. Co. and the Willow Springs Tel. Co., operating in LaFayette and Iowa counties, petitioned the Commission: 1, for an order requiring the reestablishment of physical connection between their lines and those of the White Oak Tel. Co. at Darlington; 2, for an order requiring the establishment of physical connections between their lines and those of the Wis. Tel. Co. at Darlington; and, 3, by supplementary petition, for an order requiring physical connection with the La Fayette County Tel. Co. The La Fayette County Tel. Co., in an intervening petition, complains of various practices of the petitioners and requests that the Commission investigate the furnishing of telephone service and toll service at and in the vicinity of the city of Darlington, and throughout La Fayette county; that it investigate the service, rates, rules, etc. of the various companies furnishing service in such territory, and that it issue an order putting into effect uniform service, rates, rules, regulations and practices for the furnishing of telephone exchange and toll line service in the territory in question. The La Fayette County Tel. Co., in its intervening petition, further asks that the Commission either dismiss the petitions of the three companies or grant relief only upon the condition that the free toll service afforded by the petitioners and all other discriminatory practices on their part be discontinued, and that the petitioners be required to conform their service, rates, rules, etc. to those of the La Fayette County Tel. Co.

It appears that the lines formerly owned and operated by the White Oak Tel. Co. have been acquired by the La Fayette County Tel. Co., and are now operated by that company, and that the White Oak Tel. Co. does not at present operate any telephone lines.

As regards the application of the La Fayette County Tel. Co. for an order fixing uniform service, rates, rules, etc. among telephone companies in La Fayette county, it seems that each of the rural

companies involved occupies a more or less clearly defined territory, and that there is little if any destructive competition, and no evidence of improper competitive practices. In the city of Darlington, while the Darlington Farmers' exchange (maintained and operated jointly by the three petitioners) does charge a lower rate, it also appears to offer a different grade of service from that of the La Fayette County Tel. Co., and to have made no special effort to develop business within the city of Darlington, so that such competition as there is, is not very aggressive.

Held: Although in certain cases the Commission has established uniform rates and practices for utilities operating in the same city, thereby preventing rate wars with their wasteful duplication and almost inevitable consolidation, it does not appear, under the circumstances of the present case, that there should be an order fixing uniform rates, rules, regulations and service among telephone utilities operating in La Fayette county, or placing the rates in Darlington, of the Darlington Farmers' exchange and the La Fayette County Tel. Co. upon the same basis. To secure uniformity of service on telephone lines throughout La Fayette county, it would be necessary to require the same methods of construction of all companies—an action not considered advisable at the present time. It is believed that sufficient standardization will be secured through compliance with the standards of telephone service prescribed by the Commission. (*In re Standards Telephone Service, 1914, 15 W. R. C. R. 1.*)

As regards the question of physical connection with the toll lines of the Wis. Tel. Co. at Darlington, it appears that as a practical matter it is impossible for the subscribers of the three petitioning companies to secure adequate long distance service over the lines of the Wis. Tel. Co. at any point other than Darlington, and that physical connection at that point is thus demanded by public convenience and necessity. It seems, however, that this connection must be had through the switchboard of the La Fayette County Tel. Co., inasmuch as the telephone exchange property in the city of Darlington formerly owned by the Wis. Tel. Co. is now owned by the La Fayette County Tel. Co., of which, however, the Wis. Tel. Co. owns approximately one-half the stock. So far as any irreparable injury is concerned, the physical connection would almost certainly increase the toll business of the Wis. Tel. Co., and the La Fayette County Tel. Co., which competes in Darlington with the Darlington Farmers' exchange, may charge a reasonable amount for the use of its facilities, and thus protect itself against injury from such connection. As there was nothing to show that the construction or condition of the other two petitioning lines was materially different from that of the Belmont & Pleasant View Tel. Co., with which the Wis. Tel. Co. has an agreement for long distance connection at Belmont, and inasmuch as toll connections actually are furnished by the Wis. Tel. Co. at non-competitive points, there seems no reason to suppose that any substantial detriment to the service would result from the making of the physical connection in question. As regards physical connection with that part of the La Fayette County Tel. Co.'s system which was formerly owned by the White Oak Tel. Co., it does not appear that there exists a public necessity for such connection. However, with physical connection for toll purposes between petitioner's lines and the toll lines of the Wis. Tel. Co., petitioners' subscribers will be afforded a toll connection with Shullsburg, which, while possibly not as convenient

a method of securing service as would be a direct connection from Darlington, should be reasonably convenient and all that is necessary.

Held: Under the conditions specified in the statute (sec. 1797m—4), physical connection must be required between the Wis. Tel. Co. at Darlington and the exchange operated in Darlington by the petitioners. Physical connection with the system of the La Fayette County Tel. Co. cannot be required, however, except as such connection is incidental to complete compliance with the order requiring physical connection with the Wis. Tel. Co.

It is ordered: 1, that the petition against the White Oak Tel. Co. be dismissed; 2, that the application of the LaFayette County Tel. Co. for an order fixing uniform rates, rules, service and regulations be dismissed; 3, that physical connection be made at Darlington between the toll lines of the Wis. Tel. Co. and the Darlington exchange owned and operated by the petitioners, and that the Wis. Tel. Co. furnish as complete toll service to the three petitioning companies and their Darlington exchange as is furnished to exchanges of the Wis. Tel. Co.; and, 4, that the petition for physical connection with the system of the La Fayette County Tel. Co. be dismissed, with the exception that that company is to permit the use of its switchboard for physical connection between the petitioners and the Wis. Tel. Co.

Petitions in the cases against the White Oak Telephone Company and the Wisconsin Telephone Company were dated January 25, 1913, and filed with the Commission on February 1, 1913. On June 6, 1913, a supplementary petition was filed asking for physical connection with the La Fayette County Telephone Company. The petitioners are the Belmont & Pleasant View Telephone Company, the Iowa & La Fayette County Telephone Company, and the Willow Springs Telephone Company. The petitions in these matters show that the Belmont & Pleasant View Telephone Company is a corporation engaged in the operation of telephone exchanges and lines in La Fayette and Grant counties, and that the Iowa & La Fayette County Telephone Company and the Willow Springs Telephone Company are corporations engaged in the operation of telephone exchanges and lines in La Fayette and Iowa counties.

The petition in the case involving the White Oak Telephone Company points out that the White Oak Telephone Company is a corporation engaged in the operation of a telephone exchange and lines in La Fayette county.

The petition involving the Wisconsin Telephone Company sets forth that that company is a corporation engaged in the operation of telephone exchanges and lines at various points in the state of Wisconsin.

The petition in the White Oak case sets forth that the three corporations named as petitioners operate separate lines into the city of Darlington and maintain and operate a joint exchange in said city, through which messages are interchanged among said lines; that the White Oak Telephone Company joined with the petitioners in the construction of said exchange in the city of Darlington and in its maintenance and operation up to May 16, 1912, or thereabouts, but that since that time the White Oak Telephone Company has maintained no connection with the lines of any of the petitioners at Darlington, and has not participated in the maintenance or operation of the joint exchange above mentioned, that the discontinuance of physical connection between the petitioners' lines and the lines of the White Oak Telephone Company resulted in inconvenience and annoyance to petitioners' patrons, and that public convenience and necessity requires the reestablishment of physical connection at Darlington, that such physical connection would not result in irreparable injury to the owners or other users of the facilities of the White Oak Telephone Company or of the petitioners, nor in any substantial detriment to the service of any of these companies.

Petitioners therefore ask for an order requiring physical connection between their lines and the lines of the White Oak Telephone Company, together with such order as may be necessary relating to the conditions under which such connection shall be made and continued.

The petition against the Wisconsin Telephone Company states that that company operates and maintains an exchange in the city of Darlington, that no physical connection is maintained between the toll lines of the Wisconsin Telephone Company and the lines of the petitioners, and that public convenience and necessity require such physical connection, and that such physical connection would not result in irreparable injury to any of the parties nor in any substantial detriment to the service to be rendered by any of them. Petitioners in this case, therefore, ask for an order requiring physical connection between the lines of the Wisconsin Telephone Company and the lines of the petitioners and prescribing terms and conditions for such connection.

The supplementary petition asking for physical connection with the La Fayette County Telephone Company asks for an

order directing that physical connection be made, and determining the terms for such connection, and by whom the expense shall be paid, and for such other order as may be necessary.

The intervening petition of the La Fayette County Telephone Company was filed with the Commission on April 26, 1913. This petition shows that the La Fayette County Telephone Company is a public utility operating telephone exchanges in Darlington, Shullsburg, Gratiot, and Wiota in La Fayette county, and that its exchanges are connected by toll lines and are connected with toll lines operating out of these cities; that the La Fayette County Telephone Company exchange at Darlington was acquired by it from the Wisconsin Telephone Company with the permission and authority of the Railroad Commission; that at the time of such acquisition the La Fayette County Telephone Company also acquired the lines of certain other telephone companies operating into Darlington, and that the exchange and lines so acquired are now operated as one system; that each of the companies whose property was acquired by the intervening petitioner received in exchange capital stock of the La Fayette County Telephone Company; that the Wisconsin Telephone Company received and now owns substantially one-half of the capital stock of the petitioner and that the interests of the petitioner and the Wisconsin Telephone Company at Darlington and in La Fayette county are in many respects substantially identical; that the La Fayette County Telephone Company is the successor in interest of the Wisconsin Telephone Company in the telephone exchange business at Darlington and is operating the same property at Darlington as the Wisconsin Telephone Company formerly operated there, augmented by the addition of the other properties entering into the consolidation above mentioned; that petitioners' telephone exchange at Darlington is connected at Darlington with the toll lines of the Wisconsin Telephone Company, and that connections with these toll lines are also made at Shullsburg and Gratiot; that the lines of the petitioning companies in the cases brought against the White Oak Telephone Company and the Wisconsin Telephone Company are connected with the toll lines of the Wisconsin Telephone Company at Belmont pursuant to the terms of a contract between the Wisconsin Telephone Company and the Belmont & Pleasant View Telephone Company, dated February 21, 1908; that a physical connection between the systems of the three

petitioning companies and the toll lines of the Wisconsin Telephone Company at Darlington would result in serious interference with the service of the intervening petitioner at Darlington; that public convenience and necessity do not require physical connection between the toll lines of the Wisconsin Telephone Company and the telephone systems of the three petitioning companies because the exchange of the intervening petitioner at Darlington furnishes adequate terminal facilities there and in said city, and by its connection with the toll lines of the Wisconsin Telephone Company also furnishes adequate toll line service to all persons in or about said city and vicinity, and because the inter-connected systems of the petitioners being connected with the toll lines of the Wisconsin Telephone Company at Belmont already have sufficient connection with such toll lines; that such physical connection as is asked for by the petitioning companies will result in irreparable injury to the owners and other users of the facilities of the Wisconsin Telephone Company and the La Fayette County Telephone Company and in substantial detriment to their service; that such physical connection will not extend greatly or otherwise the use of the telephone systems of any of the companies involved or be of great or other advantage to the community served or to the subscribers of any of the telephone companies having exchanges or lines in or into the city of Darlington.

In addition to the allegations of the petition stated above, the intervening petitioner states that it believes that some of the rules, regulations, and practices of the three petitioning companies are not set forth in their schedules as filed, and that some of these practices are discriminatory; that the systems of these companies are composed largely of grounded lines, that an inferior service is furnished, that no extra charge is made for what is virtually toll service over these lines, and that these companies have heretofore cut the rates for telephone service in an effort to secure a larger proportion of the telephone business at and about the city of Darlington; that the service furnished by the intervening petitioner, the La Fayette County Telephone Company, is by means of metallic circuits, maintained and operated at a higher standard of efficiency than those of the other companies, that the rates are higher than those maintained by the three petitioning companies and that the rates, rules, regulations and practices of these three petitioners are in some respects

unreasonably unjust and discriminatory; that because of these conditions the business of furnishing telephone service in the localities concerned is in a confused and unsatisfactory condition; that it is impossible to furnish the high standard of telephone service furnished by the intervening petitioner or to maintain a metallic system at the low rates offered by the other companies; that in spite of the inferior service offered by the other companies, their low rates unjustly operate to the serious disadvantage of the intervening petitioner and permit an improper competition not contemplated by the laws of the state of Wisconsin.

In order to remedy the conditions which it alleges exist, the La Fayette County Telephone Company asks that the Railroad Commission dismiss the petition of the three petitioning companies who instituted these proceedings and that it investigate the furnishing of telephone service and toll service at and in the vicinity of the city of Darlington and throughout La Fayette County and the service, rates, rules, regulations and practices of the various companies furnishing service in such territory, and that the Commission prescribe an order putting into effect uniform service, rates, rules, regulations and practices for the furnishing of telephone exchange and toll line service in said territory. The intervening petitioner further asks that if the Commission shall determine to grant any relief on the petition of the three companies enumerated above, such relief be granted only upon the condition that the free toll service afforded by said petitioner be abolished, that all other discriminatory practices of such companies be discontinued, and that the service to be furnished by them and the rates, rules, regulations and practices of such companies be required to be made and maintained in uniformity with the service, rates, rules, regulations, and practices of the La Fayette County Telephone Company.

From the facts as set forth in the intervening petition of the La Fayette County Telephone Company and substantiated by testimony introduced at the hearings in these cases, it appears that certain allegations in the petitions against the White Oak Telephone Company and the Wisconsin Telephone Company are incorrect. It appears that the White Oak Telephone Company does not at the present time, nor did it at the time of the filing of the petition, operate any telephone lines. The lines formerly owned and operated by the White Oak Telephone Company

have been acquired by the LaFayette County Telephone Company and are now operated by that company. The White Oak Telephone Company owns a portion of the stock of the LaFayette County Telephone Company, but apparently does no telephone business. The Wisconsin Telephone Company does not operate at the present time nor did it operate at the time of the filing of the petitions a telephone exchange in the city of Darlington. The telephone exchange property in the city of Darlington formerly owned by the Wisconsin Telephone Company is now owned by the La Fayette County Telephone Company and the Wisconsin Telephone Company owns approximately one-half of the stock of the La Fayette County Telephone Company. The toll lines entering the city of Darlington and the other points at which the La Fayette County Telephone Company operates exchanges, which toll lines were formerly owned by the Wisconsin Telephone Company, are still owned and operated by that company.

Hearings were held on these matters on May 21, 1913, and December 19, 1913. Appearances were as follows: For the Belmont & Pleasant View Telephone Company, the La Fayette & Iowa County Telephone Company, and the Willow Springs Telephone Company, *Burr W. Jones*. For the Wisconsin Telephone Company and the La Fayette County Telephone Company, *Edwin S. Mack*. For the White Oak Telephone Company, *J. B. Simpson*. The White Oak Telephone Company was represented at the first hearing only.

Taking up first the complaint against the White Oak Telephone Company, we find the following conditions: The White Oak Telephone Company, in partnership with the three companies bringing the complaint, formerly operated an exchange in the city of Darlington, known as the Darlington Farmers' Telephone Company. This exchange performed switching service for rural lines of the four companies owning it and furnished service to a number of subscribers located in the city of Darlington.

As a result of certain differences between the White Oak Telephone Company and the petitioners, the White Oak company in May, 1912, transferred all of its property, with the exception of an undivided one-fourth interest in the Darlington Farmers' exchange, to the La Fayette County Telephone Company, and

the latter company took over the Darlington exchange of the Wisconsin Telephone Company.

As a result of this consolidation it appears that the White Oak Company had entirely ceased operations as a telephone utility prior to the filing of the petition in this case. Not only had it ceased operations but there had been an actual transfer of property so that at the time of the filing of the petition the White Oak company owned stock of the La Fayette County company, but no telephone exchange or lines.

Because of this, petitioners filed a supplementary petition asking for physical connection with the La Fayette County Telephone Company, which petition is considered later.

The second matter to be considered is the application of the La Fayette County Telephone Company for an order fixing uniform service, rates, rules and regulations among telephone companies in La Fayette county. This application raises some difficult questions. In certain cases the Commission has established uniform rates and practices for utilities operating in the same city. This has prevented rate wars, with their wasteful duplication of equipment and almost inevitable consolidation. We are inclined to think, however, that an order fixing uniform rates, rules, regulations and service among telephone utilities operating in La Fayette county should not be issued.

There seems to be little if any destructive competition. Each of the rural companies occupies a more or less clearly defined territory and there is no evidence that improper competitive practices are used or even that there is actual competition of any kind among the rural companies.

Within the city of Darlington the situation is somewhat different. There two utilities occupy the same territory. The rates charged by the Darlington Farmers' exchange are lower than those of the La Fayette County company. The service appears to be of a different grade, also, although nothing in the testimony shows that the service is unsatisfactory.

The uniformity which is asked is uniformity based upon the existing rates, service, rules, and regulations of the La Fayette County company. There is a fundamental difference between this company and the other companies concerned in this case which should be considered. The La Fayette County company operates with the expectation of making a profit. A reasonable provision for interests and profit must be considered a part of the operating expenses. The other companies serve a list of

subscribers who, as previously mentioned, are mostly stockholders. The failure to include any provision for interest and profits in the operating expenses greatly reduces the amount which it is necessary to obtain in revenue. The effect upon the stockholding subscriber is the same as it would be if a higher rate were charged and a part of the earnings paid out as dividends, except as the result is affected by the non-stockholding subscribers, who constitute only a small part of the total number of rural subscribers. Unless these rural companies determine voluntarily upon a change of policy, it does not seem, under the conditions existing in this case, that an order should be issued requiring them to place their rates upon the same level with those of the La Fayette County Telephone Company.

What has been said above applies particularly to the rates for rural service. Within the city of Darlington the situation is somewhat different. The subscribers of the Darlington Farmers' Telephone exchange are not stockholders of the companies which conduct the exchange. Testimony was introduced at the hearings which tended to show that the operation of this exchange had resulted in losses to the three companies owning it. No distinction, however, has been drawn between expenses chargeable to construction or reconstruction and those chargeable to operation and current maintenance. Neither does the fact that a considerable part of the cost of operating this exchange is chargeable to the rural lines for switching service appear to have been taken into consideration. Losses have certainly not been as great as the testimony would seem to indicate. The testimony shows that the owners of the Darlington Farmers' exchange have made no special effort to develop business within the city of Darlington, but that service is furnished only at the request of the party desiring it. Such competition as there is, is apparently not very aggressive.

Although it is probably poor policy for the owners of the Darlington Farmers' exchange to operate that exchange at a loss and although there is no reason why interest on the investment required to serve local subscribers should be foregone by the stockholders of the rural companies, if those companies choose to follow their present policy it does not appear that the conditions which exist at present or those which there is any reason to anticipate, are such as to call for an order placing the rates of both telephone utilities operating in the city of Darlington upon the same basis.

In order to secure uniformity of service on telephone lines throughout La Fayette county it would be necessary to require the same methods of construction of all companies. This we do not believe should be done at the present time. The Commission has recently issued an order (August 13, 1914, 15 W. R. C. R. 1) prescribing standards for telephone service generally throughout Wisconsin. These standards, of course, apply to the companies concerned in the present case and no other standardization is considered necessary or advisable at present. The application of the La Fayette County Telephone Company will therefore be dismissed.

The only matter remaining to be considered is the complaint against the Wisconsin Telephone Company, asking for physical connection for toll purposes. The Public Utilities Law states definitely under what circumstances physical connection shall be made. These are (1) whenever public convenience and necessity require such physical connection, and (2) such physical connection will not result in irreparable injury to the owners or other users of the facilities, nor (3) in any substantial detriment to the service.

Apparently, then, the disposition of the case involving connection with the Wisconsin Telephone Company must be governed by the findings relative to the three conditions specified in the law. The first element to be considered is whether such connection is required for public convenience and necessity. At the hearings counsel for the Wisconsin Telephone Company attempted to show that public convenience and necessity do not require such physical connection. It was shown that the Belmont & Pleasant View company has connection with the Wisconsin Telephone Company's toll lines at Belmont. Some of the testimony indicated that any subscriber of the Belmont & Pleasant View Telephone Company can secure long distance service through Belmont, and one witness testified that any one on the lines of the Willow Springs company or the Iowa & La Fayette County company can also secure long distance connection through Belmont. The testimony of other witnesses, however, indicates that farmers living on lines of the Belmont & Pleasant View company east of its switch at Seymour's Corners cannot get long distance connection through Belmont. This does not seem to be quite a correct statement, however, as it appears that such connection can be obtained when it is possible to secure

clear lines on the subscriber's line and on the line from Seymour's Corners to Belmont.

So far as we are able to ascertain, there is no condition existing which would make it altogether impossible for subscribers of the three applicant companies to secure long distance service through Belmont. As a practical matter, though, there can be no doubt that it is impossible at present to secure adequate service by this means. For example, the testimony shows that a farmer living near Waldwick would have to send a long distance message through Fayette, Darlington, Seymour, and Belmont in order to reach the toll lines. When it is remembered that the lines connecting these various centrals are all loaded rural lines, and that it is necessary to have them all clear at the same time, the practical impossibility of securing long distance service through Belmont is clearly seen.

The testimony also dealt with the possibility of securing long distance service through other points in the vicinity of Darlington which are reached by Bell toll lines. It was shown that such connection would be possible, among other places, at Argyle, but that the Iowa & La Fayette County company had refused to establish a checking station and consequently had been refused such connection by the Argyle exchange.

The possibility of the applicants securing adequate toll service at Belmont, Argyle, Mineral Point, or any point other than Darlington seems too remote to need further discussion. In order to secure such service it would be necessary for applicants to build lines to carry the toll business, as the loaded rural lines are not adequate.

The contention of the La Fayette County Telephone Company, intervenor in this case, is that if physical connection with the Wisconsin Telephone Company is granted to the applicants the local business of the La Fayette County company will be injured. This statement is rather hard to reconcile with the claim that petitioners are able to secure long distance service at present. If it were practical for petitioners' patrons to secure adequate long distance service at present, through connections such as those at Belmont, Argyle, and Mineral Point, parties connected to the local Darlington Farmers' exchange would not be securing any further service by connection to the toll lines at Darlington than they have at present. Consequently, the objection offered by the La Fayette County company that physical connection at Darlington would injure its exchange business because

its patrons would take the cheaper service of the Farmers' exchange if they could secure long distance connections through that exchange, is contradicted by the testimony introduced which tends to show that subscribers of the Farmers' exchange already have this service. It is impossible for both of these contentions to be sound. If there is adequate long distance service at present, service meeting the requirements of public convenience and necessity, physical connection at Darlington would not give petitioners' patrons any material advantage not already possessed by them and consequently would not lead to a change on the part of the people of Darlington from the La Fayette County service to that of the Farmers' exchange. If, on the other hand, the advantages to be derived from physical connection at Darlington are sufficient to cause the La Fayette County company to lose subscribers and the Farmers' exchange, to gain, it seems impossible that petitioners' subscribers can be getting adequate long distance service at present.

The fact seems to be, as stated above, that petitioners' subscribers cannot secure adequate long distance service at present, and it seems clear that this failure to secure adequate service is sufficiently serious to create a situation where public convenience and necessity require that the connection asked for be made.

The second matter for consideration must be whether or not such physical connection will result in irreparable injury to the owners or other users of the facilities involved. As far as the petitioners are concerned there is, of course, no question raised regarding this. Neither does there seem to be any probability of injury to the Wisconsin Telephone Company, unless indirectly because of its ownership of stock of the La Fayette County company. The Wisconsin Telephone Company does not do exchange business at Darlington. The effect of physical connection upon its toll business could hardly be injurious as the almost certain effect of such connection will be to increase the toll business.

The La Fayette County company is in a different position, however. This company is operating an exchange at Darlington in competition with the Farmers' exchange. For metallic service its rates are considerably higher than those of the Farmers' exchange, but for grounded service the rates are substantially the same as are the rates of the Farmers' exchange for either grounded or metallic service within the city of Darlington. If subscribers of the Farmers' exchange were to receive long dis-

tance service on the same conditions as subscribers of the La Fayette County exchange, it would be only reasonable to expect that the service of the Farmers' exchange would be made relatively more attractive and more valuable, and that there might be a considerable shifting of subscribers from the La Fayette County lines to the Farmers' lines. It would not result in one phone taking the place of two for local service, however, as the connection sought in this case would be only for toll purposes.

In order to prevent injury to the La Fayette County Telephone Company the terms upon which the connection should be made would have to be such as to prevent the loss of business by that company because of physical connection. The law provides that the companies concerned shall agree upon the terms and that in case an agreement cannot be reached the Commission shall fix the terms. It is not necessary, therefore, for the Commission to fix the terms in this order. We believe that terms can be reached which will prevent injury to the La Fayette County Telephone Company and that the requirement that the connection shall not work irreparable injury to the owners or other users of the facilities does not stand in the way of an order requiring physical connection in this case. It is understood that the physical connection would be made through the switchboard of the La Fayette County Telephone Company. It would be illegal for the Wisconsin Telephone Company to charge a different rate for toll service rendered to subscribers of the petitioning companies than it charges for service to subscribers of the La Fayette County Telephone Company, but the La Fayette County Telephone Company, intervenor in this case, may charge a reasonable amount for the use of its facilities, which will protect it against injury from such connection.

The third requirement of the law is that the connection shall not result in any substantial detriment to the service. If this is applied to service now being furnished there is nothing in the record which indicates that there would be any substantial detriment resulting from such connection as is sought in this case.

Some testimony was introduced, however, to show that the long distance service which would result from a connection of petitioners' lines to the toll lines of the Wisconsin Telephone Company would not be satisfactory. The testimony is, however, not conclusive that the effect on the service would amount to a substantial detriment. The attempt to show that adequate

long distance service can now be obtained through other points than Darlington seems to be inconsistent with any argument that satisfactory service could not be obtained by a physical connection at Darlington.

The testimony fails to show that the construction or condition of the Belmont & Pleasant View lines is materially different from those of the two other petitioners, but it was shown that the Wisconsin Telephone Company has an agreement with the Belmont & Pleasant View Telephone Company for long distance connection at Belmont. There is nothing in the record to indicate that the service to parties so situated that they can use it is unsatisfactory. The testimony merely shows that it would be impracticable for all of petitioners' patrons to secure toll connections at Belmont. In view of the fact that toll connections are actually furnished by the Wisconsin Telephone Company at points where competitive conditions do not exist, we fail to see the logic of an argument that unsatisfactory service would result from toll connection where physical conditions are substantially the same, but where competition is present. It has not been shown in this case that the connection desired would result in any substantial detriment to the service and therefore the provision of the law relating to this cannot stand in the way of physical connection as asked for by petitioners.

It appears that the conditions specified in the statute are all fulfilled in this case and that an order should be issued requiring physical connection between the toll lines of the Wisconsin Telephone Company at Darlington and the exchange operated in Darlington by petitioners.

There remains for determination the matter of physical connection with the La Fayette County Telephone Company. Practically no evidence was introduced to show the necessity for such connection, although considerable was said of the necessity of physical connection with the Wisconsin Telephone Company. The petition against the La Fayette County Telephone Company was filed after petitioners found that no action could be taken on the petition for connection with the White Oak Telephone Company. All that was originally contemplated was connection with the White Oak company or with that part of the La Fayette County system which had formerly been the property of the White Oak Company. No testimony was given bearing on the matter of physical connection with any other part of the La Fayette County system.

The system formerly owned by the White Oak company covered territory in the vicinity of Shullsburg. Undoubtedly it would be a convenience to certain of petitioners' subscribers to be able to talk to parties on this part of the La Fayette system, but it does not seem that there exists a public necessity for such connection.

With the physical connection for toll purposes between petitioners' lines and the toll lines of the Wisconsin Telephone Company it will be possible for petitioners' subscribers to obtain connection with the La Fayette County company's subscribers by securing toll connection with Shullsburg. This may not be as convenient a method of securing service as would be afforded by direct connection from Darlington but it appears to be reasonably convenient and to be all that is necessary.

In view of this it is not considered necessary to examine into the other conditions which must be co-existent with public necessity in order to require physical connection. Physical connection with the system of the La Fayette County Telephone Company will be denied except as such connection is incidental to complete compliance with the order requiring physical connection with the Wisconsin Telephone Company.

IT IS THEREFORE ORDERED :

1. That the complaint against the White Oak Telephone Company be dismissed.

2. That the application of the La Fayette County Telephone Company for an order fixing uniform rates, rules, service, and regulations be dismissed.

3. That physical connection be made at Darlington between the toll lines of the Wisconsin Telephone Company and the Darlington exchange owned and operated by the petitioners in the action brought against the Wisconsin Telephone Company, and that the Wisconsin Telephone Company furnish toll service to the three petitioning companies and to their Darlington exchange, and that such toll service be as complete as is furnished to exchanges of the Wisconsin Telephone Company.

4. That the petition for physical connection with the system of the La Fayette County Telephone Company be dismissed, except that the La Fayette County Telephone Company shall permit the use of its switchboard for physical connection between the petitioners and the Wisconsin Telephone Company.

TOWN OF MADISON

vs.

ILLINOIS CENTRAL RAILROAD COMPANY.

Submitted July 10, 1914. Decided Sept. 4, 1914.

Complaint was made by the respondent that the cost of certain improvements ordered by the Commission at the Summit crossing in the town of Madison was excessive. The grading of the Summit and Tillotson crossings, and the installation of a bell at the Tierman crossing were ordered on January 16, 1914 (*Town of Madison v. I. C. R. Co.* 13 W. R. C. R. 608). In the present proceeding it was stipulated between the parties, subject to the Commission's approval, that crossing bells should be installed at both the Summit and Tillotson crossings in lieu of the grading ordered by the Commission.

Held: The installation of bell protection at the crossings in question will be sufficient safeguard under present conditions of travel. The former order is so modified. The bells are to be automatic electric bells with a visual signal for night indication. Plans for track circuits are to be submitted to the Commission for approval. Sixty days is considered a reasonable time for compliance.

REHEARING.

An order was issued in the above entitled matter on January 16, 1914 (13 W. R. C. R. 608), requiring the Illinois Central Railroad Company to install a bell at the Tierman crossing and to perform certain specified grading at the Summit and Tillotson crossings. Under date of June 8, 1914, respondent petitioned the Commission for a rehearing, alleging that the cost of the improvements ordered at the Summit crossing is excessive and asking permission to install a bell at this crossing in lieu of the grading.

A rehearing was ordered and held on July 10, 1914, *Fay Hammersley* appearing for the town of Madison and *Jones & Schubring*, by *E. J. B. Schubring*, for the Illinois Central Railroad Company.

At this hearing it was stipulated by the town chairman and the representative of the respondent that, if approved by the Commission, crossing bells should be installed at both the Sum-

mit and Tillotson crossings in lieu of the grading provided for in the Commission's order. In our judgment the installation of bell protection will adequately safeguard these crossings under the existing conditions of travel.

Our former order herein is therefore modified insofar as it related to the Summit and Tillotson crossings, and in lieu of the improvements therein specified the respondent, the Illinois Central Railroad Company, Is **HEREBY ORDERED** to install and maintain at each of the two crossings on its line in the town of Madison, known as the Summit and Tillotson crossings, and automatic electric bell with a visual signal for night indication, plans for track circuits to be submitted to the Commission for approval.

Sixty days is considered a sufficient time within which to comply with this order.

WISCONSIN STATE BOARD OF AGRICULTURE

vs.

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted Aug. 14, 1914. Decided Sept. 4, 1914.

Complaint was made that the transportation facilities heretofore furnished by the respondent to State Fair Park in West Allis, near the city of Milwaukee, during State Fair week have been insufficient and inadequate, and the Commission was asked to require the respondent to operate sufficient and adequate special train service between its union station in Milwaukee and its stations at West Allis and Elm Grove during the period in question. It appears that respondent operates a line which branches off from the main line a short distance east of Merrill Park, passes the State Fair Park, and connects again with the main line at Elm Grove. Petitioner desires that all passenger trains be routed via this line during State Fair week, or that a shuttle train be operated hourly between the union station in Milwaukee and Elm Grove via the State Fair Park. The line in question, formerly used for eastbound passenger traffic, is now devoted exclusively to freight business. It seems that to divert regular passenger trains via the fair grounds, as requested, would conflict with the company's postal contract to deliver mail at intervening points on the main line. In addition it was evident that such a diversion would be unsafe for the traveling public, owing to the track layout and operating conditions on the line in question, an objection equally applicable to the operation of a shuttle train over that line. It also appeared that there was no evidence which would enable a determination as to the feasibility of loading and unloading passengers at the park in connection with the use of the available track facilities for handling exhibits.

Held: The safety of the traveling public, rather than its convenience, must control in the present case. The operation of passenger trains through freight terminals and over lines used exclusively for freight service is unusually hazardous. While it might be possible that with careful supervision passengers could be transported to the fair grounds over the proposed route, the danger would be greater than under usual methods of operation, and the saving of five minutes or even a half-hour in reaching the fair would not be a sufficient justification for subjecting passengers to unusual danger.

Petitioner is a duly organized state board and has charge of the State Fair held annually at State Fair Park in West Allis near the city of Milwaukee, which is scheduled in 1914 for September 14 to 19. It alleges in substance that the transpor-

tation facilities heretofore furnished by the Chicago, Milwaukee & St. Paul Railway Company to State Fair Park during State Fair week are insufficient and inadequate. The Commission is therefore asked to require the respondent to operate a sufficient and adequate special train service between its union station in Milwaukee and its stations at West Allis and Elm Grove on September 14, 15, 16, 17 and 18, 1914.

Answering the complaint, the respondent submits a report from its general superintendent in which the position is taken that the special train service prayed for is not practicable under the existing traffic and operating conditions. The dismissal of the complaint is therefore asked.

A hearing was held on August 14, 1914, at Milwaukee. *Walter Drew* appeared for the petitioner and *R. M. Trump*, for the respondent.

The State Fair is an annual event held at State Fair Park in West Allis for a period of five days. Transportation to the park is furnished by the Chicago & North Western Railway Company and The Milwaukee Electric Railway and Light Company. Visitors who desire to reach the State Fair from outlying points on the line of the Chicago, Milwaukee & St. Paul Railway Company arrive at the union station in Milwaukee and then take the street cars to West Allis, returning by the same route. Testimony shows that it is practically impossible for patrons from some sections of the state to reach the park, enjoy the full program, and return the same day. The secretary of the State Board of Agriculture estimated that for the past three years an average of 115,000 persons attended the fair during the five open days. Of this attendance about 60 per cent is drawn from outlying parts of the state. The secretary expressed the opinion that if the additional service prayed for is operated, the attendance will be greatly augmented.

Respondent operates a line which branches from the main line a short distance east of Merrill Park and runs southwesterly across the Menomonee river through the Soldiers' Home grounds and west to the West Allis station, passing the State Fair Park and to a connection with the main line at Elm Grove, formerly used for eastbound passenger traffic, but now devoted exclusively to freight business. Petitioner desires that all passenger trains be routed via this line during fair week, or that

a shuttle train be operated hourly between the union station and Elm Grove via the State Fair Park.

It was claimed by the general superintendent and other officials of the railway company that it is impracticable to operate a shuttle train between the union station and Elm Grove on account of the present freight movement over the old line, the delays necessitated by switching movements near the foot of 32d street and over the "hump" into the Blue Mound and Air Line yards, and the congested condition of traffic at the union station. The position was also taken that its regular trains cannot be diverted over the old line during fair week because they all carry mail to Wauwatosa which is on the main line.

The general superintendent testified that business has outgrown the facilities at the union station, and that they are now inadequate for normal traffic. The station master said that suburban service could not be handled at the union station without serious delay to regular trains. He stated that 57 passenger trains, comprising 164 cars, regularly use the station from 7 a. m. to 9 p. m., in addition to which there are approximately two extra passenger trains a day. Data submitted subsequent to the hearing show that during fair week in 1913 (September 7 to 13, 1913) a total of 41 special trains were handled at the station. As an indication of present traffic the statement also shows that from August 9 to 15, 1914, there were 16 special trains. The official time table showing the time of arrival and departure of all regular trains at the union station indicates that five tracks are available for station use, and that these tracks are occupied for the twenty minute period nearest the half-hour by regular trains as follows:

Period.	Number of tracks occupied.	Number of tracks vacant.
7:20 a. m. to 7:40 a. m.	4	1
8:20 " " " 8:40 " "	2	3
9:20 " " " 9:40 " "	2	3
10:20 " " " 10:40 " "	2	3
11:20 " " " 11:40 " "	1	4
12:20 p. m. to 12:40 p. m.	2	3
1:20 " " " 1:40 " "	4	1
2:20 " " " 2:40 " "	0	5
3:20 " " " 3:40 " "	3	2
4:20 " " " 4:40 " "	0	5
5:20 " " " 5:40 " "	0	5
6:20 " " " 6:40 " "	0	5
7:20 " " " 7:40 " "	3	2
8:20 " " " 8:40 " "	2	3
9:20 " " " 9:40 " "	0	5
10:20 " " " 10:40 " "	0	5
11:20 " " " 11:40 " "	0	5

From these data it therefore appears feasible that an hourly train starting thirty minutes after the hour could be operated without unduly congesting the tracks at the union station.

The superintendent of terminals in Milwaukee testified that as many as 1,800 cars a day are sometimes moved between the Air Line yard and Blue Mound yard over tracks designated as the "hump", crossing the line over which the proposed shuttle train would operate. He expressed the opinion that this condition would render the special service unsafe and impracticable from an operating standpoint. Observation made by a member of the Commission's engineering staff from 8 a. m. to 6 p. m. on August 17 and 18, 1914, shows that on those days the movement over the "hump" was not so great as indicated by the testimony. The data gathered are presented in the following table:

August 17, 1914.				August 18, 1914.			
Time of movement.	Duration of movement.	No. of cars moved.		Time of movement.	Duration of movement.	No. of cars moved.	
9:14 a. m. to 9:44 a. m.	30 min.	44		8:06 a. m. to 8:09 a. m.	3 min.	14	
10:44 " " 10:57 " "	13 "	31		8:53 " " 9:05 " "	12 "	29

Total.....	105 min.	289		Total.....	147 min.	272	

The superintendent of terminals stated that there are constant engine movements and also some train movements over the main passenger track and the adjoining tracks near the foot of 32d street, which would have to be crossed by the proposed shuttle train, and that these movements would seriously interfere with its operation. Our engineer's observations show that the movements at this point from 6:30 a. m. to 6:30 p. m. on August 13 were as follows:

Time.	Movements.					Freight included in total.
	Freight.		Passenger.		Total.	
	Light engines.	Engines and one or more cars.	East-bound.	West-bound.		Passenger and freight.
A. m. 6:30-6:45....	4	0			5	0

Respondent submitted a statement subsequent to the hearing showing the number of freight trains operated over the "old line" during the fair week of September 10 to 14, 1913, inclusive, as compared with the normal movement from August 9 to 13, 1914, inclusive. These data are summarized in the following table:

Date.	Regular trains.	Extra trains.	Terminal* transfers.	Total trains.
Sept. 10, 1913.....	8	7	5	20
" 11, ".....	5	8	6	19
" 12, ".....	5	10	8	23
" 13, ".....	5	13	6	24
" 14, ".....	1	10	1	12
Aug. 9, 1914.....	1	9	0	10
" 10, ".....	6	1	3	10
" 11, ".....	7	3	2	12
" 12, ".....	7	4	2	13
" 13, ".....	6	2	3	11
" 14, ".....	6	3	2	11
" 15, ".....	4	4	2	10

*NOTE:—Indicates trains in service over lines during fair week of 1913, regardless of number of trips; for 1914 indicates number of trips made.

A member of the Commission's engineering staff observed the traffic over the "old line" on August 17 and 18, 1914, between 8 a. m. and 6 p. m. with the following results:

August 17, 1914:

- 8:27 a. m. short train westbound
- 11:01 " engine and 87 cars eastbound
- 11:11 " " " 1 car westbound
- 12:30 p. m. light engine eastbound
- 5:02 " long train eastbound
- 6:01 " long train eastbound

August 18, 1914:

- 8:14 a. m. engine and six cars westbound
- 1:25 p. m. " " " one car eastbound
- 2:17 " " " 83 cars "
- 2:32 " " " 55 " "
- 5:29 " " " 26 " "
- 5:41 " " " 70 " "
- 5:58 " " " 65 " "

In the light of the testimony and the reports of our engineering staff, it appears that each of the plans suggested by the petitioner is practicable with careful operation, but that each is open to very grave objections on account of the physical and traffic conditions. To divert regular passenger trains via the fair grounds would conflict with the company's postal contract to deliver mail at intervening points on the main line, and the track layout and operating conditions on the old line are such as to make such a diversion unsafe for the traveling public. The latter objections would also apply to the operation of a shuttle train between the union station and Elm Grove, or even between the union station and the fair grounds. The regular

freight movements over the old line and the tracks which would have to be crossed at 32nd street and near the hump are frequent under normal traffic conditions, and the freight business is likely to be augmented during the fair week.

Furthermore, no data have been presented which would enable us to determine whether the loading and unloading of passengers at the park would be feasible, in connection with the use of the available track facilities for handling exhibits. We regard it as unusually hazardous to operate passenger trains through freight terminals and over lines which are used exclusively for freight service. The saving of a few minutes or even a half hour in reaching the fair is not, in our opinion, a sufficient justification for subjecting passengers to unusual danger which can be avoided. It is possible that with careful supervision passengers could be transported to the fair grounds over the proposed route, but the danger would be greater than under the usual methods of operation. The safety of the traveling public, rather than its convenience, must control in this case and for this reason we believe that the petition should be dismissed.

IT IS THEREFORE ORDERED, that the petition be and the same is hereby dismissed.

CITY OF JANESVILLE

vs.

JANESVILLE WATER COMPANY.

Submitted Sept. 8, 1914. Decided Sept. 11, 1914.

The petitioner asks that an order establishing a schedule of rates, rules and regulations for the Janesville W. Co. which was issued in this matter on Aug. 17, 1911 (7 W. R. C. R. 628), but subsequently suspended, be put into effect. The suspension of the order was originally authorized by the Commission upon application by the water company for a rehearing and was continued with the approval of both parties to the case, pending action before the Commission and subsequent action in circuit court involving the proceedings instituted by the city of Janesville for the acquisition of the property of the water company. The city now insists, however, that inasmuch as it will be impossible for the just compensation for the property to be determined and possession given to the city prior to Oct. 1, 1914, the order of Aug. 17, 1911, be put into effect on that date.

Held: There has been no change in the situation which would justify any modification of the order in question. It is ordered that the order become effective on Oct. 1, 1914.

This is an application for a rehearing of the matters involved in the order issued in the above entitled case on August 17, 1911, 7 W. R. C. R. 628, 706-708. An order was made on August 17, 1911, determining and establishing a schedule of rates, rules and regulations to be observed and followed by the Janesville Water Company, which order was to become effective on October 1, 1911. On September 26, 1911, this application for rehearing was made. Upon the receipt of the application and at the direction of a member of the Commission, a notice was given to the parties that the rehearing would be held at the office of the Commission in the capitol, in the city of Madison, on October 3, 1911, at 10 o'clock in the forenoon of that day, and such notice contained a provision that the effectiveness of the order would be suspended until the decision upon such rehearing. At the time set for the rehearing there was no appearance on the part of either party and the matter remained in *status quo*.

On November 2, 1911, the Janesville Water Company brought action against the Commission to set aside the order made on

August 17, 1911. On July 1, 1914, by consent of the parties, an order was entered extending the time within which the order of August 17, 1911, should become effective until the further order of the Commission. The matter of rehearing came on pursuant to notice of the Commission issued on August 28, 1914, at the capitol in the city of Madison, on September 8, 1914. The petitioner was represented by *W. H. Dougherty*, city attorney, and the respondent by *Jeffris, Mouat, Oestreich & Avery*.

The situation in this case has been somewhat complicated by numerous delays and orders. In justice to all parties concerned, some explanation is necessary.

When the original order was made establishing the schedule of rates for the water company, both the city and the company were dissatisfied with the order. The order reduced the rates to private consumers and increased the rates to the city for public consumption of water. The city officials contended at the time that the financial condition of the city was not such as to enable it to meet conveniently the increased expense for city water provided in the order. Thereupon the water company applied to the Commission for rehearing as above indicated. In view of the express attitude of the city officials toward the order, a member of the Commission advised suspending the effectiveness of the order until the decision upon the rehearing. No formal order was entered by the Commission in the matter, but the notice of rehearing issued by the secretary of the Commission contained a provision that the original order would be suspended until the decision upon the rehearing. After such application was made and filed the water company was in doubt as to its right to have the order of the Commission reviewed in court, if upon the rehearing the Commission should adhere to its original decision. In order to preserve its right to have a review of the order in court in such event, it commenced an action in the circuit court of Dane county to set aside the order of the Commission.

About this time, or shortly previous thereto, a movement was started in the city of Janesville for the acquisition of the plant of the water company by the city. This resulted in a submission of the question of purchasing the plant to the voters of the city at a special election. The majority of the voters decided to acquire the plant and upon receiving notice of such election, the Commission, pursuant to statute, fixed a time for a public hear-

ing of the matter of the just compensation to be paid to the Janesville Water Company by the city of Janesville for the water plant. The Janesville Water Company interposed certain objections to the jurisdiction of the Commission which were overruled. It subsequently brought an action in the circuit court of Rock county to test the validity of such election. The election was declared invalid by the supreme court. (*Janesville Water Co. v. City of Janesville et al.* 1914, 156 Wis. 655.)

During the time intervening between the making of the order in the first instance establishing the rates, and the decision of the supreme court holding the election invalid, neither the city of Janesville, as represented by its officials and a number of citizens, nor the water company desired that such order become effective. The city was of the opinion that if it came into possession of the plant it could ask for and be granted a modification of the order respecting charges established for hydrant rentals.

Shortly after the decision of the supreme court holding the election invalid, the Commission notified the Janesville Water Company to put the schedule of rates provided in the order of August 17, 1911, into effect. Before the beginning of the first quarter following the date of such notice, provision had been made to submit again the question of the purchase of the plant to the electors at a special election. Immediately thereupon pressure was brought upon the Commission not to insist upon the order going into effect until after the election had been held. It was represented to the Commission by those who favored the acquisition of the plant by the municipality that if the order became effective before the election, it might influence the voters adversely to the proposition of municipal ownership. The election resulted in an overwhelming vote in favor of the acquisition of the plant. Upon receipt of notice from the city of the result of the election, the Commission immediately fixed a time for a public hearing on the question of the just compensation to be paid to the company by the city. Pending the investigation, it was deemed advisable to allow the old rate to remain in effect and at the suggestion of the Commission the parties stipulated on July 1, 1914, that the rates fixed in the order of August 17, 1911, should not become effective until the further order of the Commission. At the time it was deemed possible for the question of compensation to be determined and the possession of the

plant transferred to the city prior to the quarter beginning October 1, 1914. However, upon the hearing it became evident that the question of just compensation could not be determined prior to October 1, 1914, and consequently the mayor of the city insisted that the order of August 17, 1911, become effective on that date, regardless of who should be in possession of the plant at that time. Pursuant to the request of the city the Commission gave notice on August 28, 1914, that the application for rehearing would be heard on September 8, 1914.

There has been no change in the situation justifying any modification of the order challenged and therefore, to terminate the controversy, it is deemed advisable by the Commission to direct that the order of August 17, 1911, fixing and establishing a schedule of rates, rules and regulations to be observed and followed by the Janesville Water Company, become effective on October 1, 1914.

Now, THEREFORE, IT IS ORDERED, That the order herein made on August 17, 1911, fixing and establishing a schedule of rates, rules and regulations to be observed and followed by the Janesville Water Company, be and the same shall become effective on October 1, 1914.

ALFRED T. JONES ET AL.

vs.

BERLIN PUBLIC SERVICE COMPANY.

Submitted Nov. 14, 1913. Decided Sept. 12, 1914.

Complaint is made that the rates, rules and regulations of the Berlin Public Service Co., a public utility engaged in supplying gas, electricity and heat in the city of Berlin, are unfair, unreasonable and unjustly discriminatory and that the service rendered is inadequate. Request is also made that the management and operation of the utility be investigated in order to disclose any inefficiency that may exist. The matter of electric service has been made the subject of a special investigation by the Commission and is therefore not considered here. Comparison of the operating statistics for the gas and electric departments of the utility with statistics for other Wisconsin plants similarly situated show that the operating costs of the utility are below normal, thereby indicating that the management is not inefficient. To determine the matter of rates, a valuation of the property used by each of the three departments of the utility was made and the revenues and expenses for each department were investigated.

The rules of electric service formulated by the Commission do not make periodic inspections of all installations compulsory, for the reason that some consumers object to the inspection of their installations as an unnecessary interference, but the rules are designed to secure lamp inspection service for such consumers as desire it. (Rule 27, *In re Standards for Gas and Electric Service*, 1913, 12 W. R. C. R. 418.)

Held: 1. Inasmuch as comparisons for the respondent's operating expenses and its investment with those of other utilities similarly situated do not place the respondent's business in an unfavorable light, sufficient ground is not established for a more costly investigation of the management and operation. 2. A reduction of rates is not warranted. The gas and electric rates should, however, be revised for the purpose of eliminating certain unreasonably discriminatory features. The present rates for heating are insufficient, but inasmuch as the utility objects to an increase at this time, on the ground that conditions in Berlin are such that an increased rate would be more detrimental than beneficial to the heating department, it is deemed advisable to authorize rather than to order the utility to make the increase found to be reasonable.

It is ordered that the utility put into effect schedules of rates determined by the Commission for the sale of electricity and gas and that the utility be authorized to put into effect a schedule of heating rates determined by the Commission. The utility is further ordered to apply rules and regulations filed by it to heating service furnished under either the existing or authorized schedule of heating rates. The electric rates include rates for commercial lighting, commercial power, the street lighting system of series arc lamps and tungsten lamps and the "Corinthian" street lighting system for the furnishing of ornamental lighting in the business district. The schedule of gas rates provides that the double meter system shall be abolished and that all service to each consumer shall be made through a single meter. The schedule of heating rates includes

charges for heating and for hot water boiler service and provides a formula for the computation of the amount of radiation required and rules and regulations for the installation and maintenance of heating systems.

A complaint against the Berlin Public Service Company was filed with the Commission May 15, 1913, and the matter came to a hearing on November 14, 1913, after continuances had been granted to both parties for good cause shown.

The complaint sets forth in detail the position of the petitioners. It holds that in general the rates, rules and regulations of the three departments of the utility, gas, electric, and heating, are unfair, unreasonable and unjustly discriminatory. With reference to the gas department, it is shown that three different rates prevail, under a double meter system. It is claimed that the gas is of poor quality, unclean and odorous, and that it is furnished at an insufficient pressure. With respect to electric service, complaint is made that at times sufficient light or power is not available and that no inspection of incandescent lamps is made. Attention is called to the electric rate schedule which contains both flat and meter rates. It is alleged that, under the different rates now effective, charges varying from 2 cts. to 16 cts. per kilowatt-hour are made, and that, should flat rates be abolished, the flat rate customers would be raised to the proper metered schedule. The lack of a minimum bill provision in the schedule is also noted. It is said that the heating rates are excessive and discriminatory; that the rule or rules by which radiation is computed are unfair and unjustly discriminatory; and that service is not rendered at all necessary times. It is asserted that loss of heat, due to poor insulation upon a part of the distribution system, becomes an operating expense which is a charge and burden upon the patrons of the heating department. As to the utility as a whole, it is claimed that the plant investment is sufficient for a city of 10,000 people. The prayer of the complaint formally requests that the rates be based upon quantity used and that they shall not exceed certain maximum figures as given by the petitioners. It is prayed that meter rentals be abolished; that inspection of incandescent lamps be made; that a rule for computing radiation be published and that all other matters as shown in the complaint be adjusted.

The hearing was held on November 14, 1913, at the city hall in Berlin. *Alfred T. Jones, Fred Englebracht, Jr., and Perry Kniskern* appeared in their own behalf as petitioners and in behalf of others similarly situated. *O. C. Irwin*, secretary and

treasurer of the Berlin Public Service Company, appeared for the respondent company.

The testimony taken at this time revealed the historical development of the concerns which now form the Berlin Public Service Company. The petitioners further explained the purpose of the complaint as being an attempt not to injure the company, but merely to secure an equitable adjustment of the rates and to assure the consumers that service, rules, and regulations are in accordance with the proper practice. Some discussion was had on comparative rates for other cities of the same size as Berlin. The main trend of the petitioners' testimony, however, was to call attention to certain conditions existing in Berlin and to ask that the Commission investigate the whole question of service, rates, and rules.

The respondent then showed the influence of former management upon the rates historically, admitting that the present rates are not correct, but disclaiming any ability to remedy conditions until the matter should be passed upon by the Commission. The method of computing radiation for heating was explained in some detail. The respondent, with respect to the quality of gas, claimed that inspections and tests by the Commission had found the quality in conformity with the prescribed standards.

SERVICE.

The whole matter of electric service has been made the subject of a special investigation. This is now on the Commission's docket and will come to a hearing shortly. Such matters as interruptions of service, quality of service and keeping of records will be taken up at that time and for this reason further consideration of these matters will be omitted at this time.

RATES.

The petitioners have prayed that a general investigation be made of the management and operation of the utility in order to disclose any inefficiency that may exist. No evidence on this subject was offered by the petitioners, but the entire matter was placed in the hands of the Commission. A preliminary investigation has been made by means of a comparison of operating statistics. The comparative figures, which are set forth below, show that the operating costs of the electric and gas departments are below the normal for Class B utilities of Wisconsin.

The total direct expense of the respondent's electric department is 2.33 cts. per kw-hr. The medium figure for Class B electric utilities is 3.10 cts. per kw-hr. The difference in favor of the Berlin utility is therefore 0.77 cts. per kw-hr. A similar situation was found with respect to the gas utility for which the total direct expenses are 80.7 cts. per thousand cubic feet of gas sold. The normal expense for all Class B gas utilities is represented by a median figure of 94.5 cts. The difference, therefore, is 14 cts. per thousand cubic feet in favor of the Berlin utility. Considering these circumstances, it does not appear to the Commission that investigation of this portion of the complaint need be carried further at this time.

TABLE I.

Berlin.....	47.4	9.9	1.2	18.1	4.1	80.7

¹ Includes 18 Class B utilities.

In order to establish a basis upon which to fix the rates for service, the Commission has considered the investment in the business and the expenses of operating it. Since it appears that both parties to this case agree that the rates are not what they should be and that neither objects to the form of schedules often established by the Commission, we shall not dwell much upon the details of the analyses, but shall present the basic facts upon which the conclusions rest.

VALUATION.

Table III shows the physical valuation for the three departments as found by the Commission:

NOTE:—Addition of 12% to cover engineering, superintendence, interest during construction, contingencies, etc.

The petitioners assert that the capacity of the respondent's equipment is sufficient to supply a city having a population of 10,000. While it is not definitely said so, the intimation appears to be that the capacity is much too large for Berlin and that the fixed charges upon the entire investment would unduly burden the customers if the rates should be based upon the entire amount.

Investigation of the facts does not disclose that the capacity is in excess of that which is required. The capacity of the electric plant is indeed much larger than is usually required for the ordinary lighting and power service of a city of this size but the reason for this is that the company has three, or at least two, customers with unusually large power installations. These are a feed mill with 50 horse power capacity, a flour mill with 225 horse power, and a quarry with 215 horse power. The consequence is that the capacity required to take care of the power business during the day time exceeds very much the capacity required at night.

It is not surprising under the circumstances that the petitioners discovered that the capacity of the electric plant does not closely correspond to the size of the city. They may be assured, however, that the size is not greater than the amount of the business warrants.

The respondent, on the other hand, contends that it has invested much more in the business than the Commission's physical valuations show and asserts that the book values represent the investment more accurately. The respondent further maintains that the Commission's computations of the cost of construction do not fully cover the actual cost because some unavoidable and unusual obstructions to construction have had to be overcome. The respondent is therefore unwilling to accept the Commission's valuations, but being desirous of an early settlement of the rate case and being unprepared to establish its claims without considerable delay, it indicated a willingness to accept for the present the Commission's conclusion regarding what the rates should be, as predicated upon the physical values, without actually assenting to the values themselves.

BALANCE SHEET.

The balance sheet for the respondent's business as of June 30, 1913, is given in Table IV;

INCOME ACCOUNTS.

The income accounts of the three departments, as reported to the Commission for the year ending June 30, 1913, are shown in Table V. Some of the expenses of operation, as for example boiler plant, undistributed and general expenses, are incurred jointly by two or more of the utilities. As it appeared that a modification of the company's apportionment of these joint expenses was advisable, the income accounts were revised and restated in Table VI.

TABLE V.

Amount available for interest and profits or deficit.....	\$7,755 31	¹ \$1,318 86	\$3,088 05	\$9,524 50

¹ Deficit.

The changes which were made in the income account will be explained briefly at this point. The company classified the earnings from rental of meters as a non-operating revenue, but for the purposes of this case it appears more proper to treat such earnings as coming from operation. Accordingly, the operating revenues have been increased and the non-operating revenues decreased by an amount equal to the meter rentals. The electric and heating station expenses have been redivided, taking into consideration the relative cost of operating each department independently. This resulted in an increase in the amount of station expenses chargeable to heating service. Undistributed and general expenses and taxes have been redivided in proportion to the division of the direct expenses. Allowance for de-

preciation was based upon the reserve required for the renewal of each item of equipment and the total so found replaces the company's charges for depreciation reserve. The net result of these changes shows that the amount available for interest and profits for the whole utility is \$9,524.50.

INTEREST AND PROFITS.

The respondent, in its brief, submitted a value of \$230,000 upon which the return should be based. This is not far from the book value of \$239,200.71, as of June 30, 1913. Starting, however, with the tentative appraisal of the physical property as a base and making due allowance for working capital and going value, it appears that the Commission, for the present, should adopt as the value of the gas, heating and electric departments, \$56,000, \$38,000 and \$80,000 respectively, or a total value of \$174,000 for the entire business. If at any future time the respondent should show, as it asserts can be done, that the value of the business exceeds the figure disclosed here, the facts so proven will be given proper consideration in any future action that may be brought before the Commission.

If the net earnings of the gas and heating business amounted to 7 per cent and the net earnings of the electric business to 8 per cent of the respective values shown in the preceding paragraph, the total net return of the business as a whole would be \$12,980, or 7.45 per cent. Reference to the income account, Table VI, reveals that the actual net amount available for interest and profits for the year ending June 30, 1913, was \$9,524.50, or 5.48 per cent. Judging from these figures, one must conclude that the present net earnings are not large and that a reduction is not warranted. The action of the Commission will therefore be directed toward a revision of the schedules designed to eliminate, as far as practicable, the inequalities of the rates and to place the business on sounder ground.

ELECTRIC DEPARTMENT.

PRESENT SCHEDULE OF RATES.

The schedule of rates now effective at Berlin, and as filed with the Commission, is as follows:

COMMERCIAL LIGHTING

Meter rates:

16 cts. per kw-hr. for residences, churches, lodge rooms, dental parlors, lawyers' and doctors' offices, dance halls, opera houses, public and

parochial schools, blacksmith shops, city fire department, city hall, upper floors of hotels that have flat rates for first floors, Saturday and holiday street lighting, and any temporary or intermittent service. No discount.

10 cts. per kw-hr. for all commercial consumers that do not have a minimum charge: business rooms and flats connected jointly on one meter service, moving picture shows, club rooms, machine shops, manufacturing plants. No discount.

10 cts. per kw-hr. for all commercial consumers that have \$1.00 minimum charge: bowling alleys, billiard halls, livery stables, hotels, printing offices. Same discount as on power. Meter rent 25 cts. per month.

Flat rates

	Price per month each.		
	6 p. m.	9 p. m.	12 p. m.
1-56 watt carbon lamp or 1-40 watt tungsten 1-50 watt G. E. M.	\$0.50	\$0.75	\$1.00
2-56 watt carbon lamps or 1-40 watt tungsten 1-50 watt G. E. M.	.45	.60	.75
3-56 watt carbon lamps or 1-40 watt tungsten 1-50 watt G. E. M.	.40	.55	.70
4 to 5-56 watt carbon lamps or 1-40 watt tungsten 1-50 watt G. E. M.	.35	.50	.65
6 to 7-56 watt carbon lamps or 1-40 watt tungsten 1-50 watt G. E. M.	.30	.45	.60
8 to 12-56 watt carbon lamps or 1-40 watt tungsten 1-50 watt G. E. M.	.27	.40	.55
8 to 12-56 watt carbon lamps or 60 watt tungsten	.30½	.60	.82½
14 or more 56 watt carbon lamps or 1-40 watt tungsten 1-50 watt G. E. M.	.25	.36	.50
14 or more 60 watt tungsten	.37½	.54	.75

A 25 watt tungsten is rated as an 8 c-p. carbon lamp; and 100 watt tungsten, and 100 watt G. E. M. are rated the same as a 32 c-p. carbon lamp. 9 p. m. consumers may have 12 m. service Saturdays and holidays without extra charge.

Arc Lighting

	Price per month each.		
	6 p. m.	9 p. m.	12 m.
One 6 ampere enclosed arc lamp.....	\$4.00	\$4.00	\$5.00
2 or more 6 ampere enclosed arc lamps	3.50	3.50	4.50

Special Lighting Contracts:

Employees of company, 50 per cent of regular meter rate.

Opera house, 10 cts. per kw-hr.

Hotel Whiting, \$32.00 per month.

Lamps rated at 114 top voltage are handled by the utility. The first installation of carbon lamps is not furnished free of charge. No lamps are renewed free of charge. 16 c-p. lamps are sold at 20 cts. Tungsten and tantalum lamps are sold above cost. The smallest size tungsten lamp handled is 25 watt. Information regarding these matters is given only verbally. No regular inspection of the incandescent lamps in service is made.

COMMERCIAL POWER.

Meter Rates:

A minimum charge of \$1.00 per month.

10 cts. per kw-hr. with following discount:

	1 kw-hr. to	10 kw-hr.	5 per cent	cash discount	in 10 days
11	25	" 5 & 5	"	"	" "

2001	3000	" 55 & 5	"	"	" "
3001	4000	" 60 & 5	"	"	" "
4001	and upward.....				special rates

Special Power Contracts:

Stillman, Writing & Company, 2 cts. per kw-hr.

Wisconsin Granite Company, meter rate \$0.02954 per kw-hr.

Coal \$3.25 per ton.

Wisconsin Granite Company, meter rate \$0.02½ per kw-hr.

Coal \$2.75 per ton.

The Luther Glove Company, 2 h. p. motor. \$7.80 per month.

No minimum service charge except to those that have power rates. A meter rental charge of 25 cts. per month. No rental if consumer owns meter. Service to employes of the company subject to special contract and rates. Special rates to very large consumers such as illuminating street lighting, Fair Grounds, public and private parks. Bills not paid on or before the 10th of the following month are subject to a penalty of 2 per cent.

STREET LIGHTING.

55 4-ampere, 85 volt, a. c. series enclosed arcs burning 2,500 hours per annum every night from dusk to 12 p. m. Rate \$35.00 per lamp per year.

22 200-watt, 4 ampere, a. c. series tungsten lamps burning 2,500 hours per annum every night from dusk to 12 p. m. Rate \$35.00 per lamp per year.

PHYSICAL DATA.

Data have been submitted by the respondent showing the monthly consumption, monthly bills, and connected load of the individual customers, and these data have been analyzed by the Commission. Commercial lighting consumers have been divided into the three general classes of residence, business and public places, as designated in the order attached hereto. The consumption of unmetered consumers has necessarily been estimated. A summary of the analysis is included herein as Table VII:

TABLE VII.
SUMMARY OF CURRENT SOLD.
BERLIN PUBLIC SERVICE CO.

	Metered service kw-hr.	Unmetered service kw-hr.	Total kw-hr.
Commercial lighting:			
Class A.....	30,333	15,304	35,637
Class B.....	44,091	12,420	56,511
Class C.....	10,503		10,503
Total.....	84,927	17,724	102,651
Commercial power.....	597,306	1870	598,176
Municipal contract lighting.....		154,120	54,120
Total.....	682,233	72,714	754,947

¹ Estimated.

The same analysis shows connected load as follows:

TABLE VIII.
CONNECTED LOAD.

Commercial lighting		
Class A	188,135	watts
Class B	119,476	"
Class C	62,214	"
Total	369,825	"
Commercial power	475,202	"
Municipal contract lighting.....	24,600	"
Total	869,627	"

No record of demand having been available, it has been necessary to use the estimates of the peak load submitted by the company. These figures are not a division of the coincident service peaks but represent the separate maximum demands of the several classes of service. They are as follows:

Commercial lighting	100	kw.
Commercial power	400	kw.
Municipal contract lighting.....	24.6	kw.

An unusual situation exists at Berlin, for the daily peak ordinarily occurs about 11 a. m., due to the two large power consumers, the Wisconsin Granite Company and the Wright Mills. The fact that the maximum daily demand arises from the high power load and comes during the forenoon creates a situation which is unusual to deal with in apportioning the expenses of

operation among the several classes of service. Ordinarily, the peak of the electric load is caused by the lighting business or, at any rate, the lighting so overlaps and adds to the declining power load that the crest must be met during hours of darkness. Under such circumstances utilities are able to furnish considerable power service without adding greatly to the investment required for lighting alone. In apportioning the expenses of the joint operation for light and power, lighting service benefits from the economy arising from the complimentary or double use of equipment, but power service receives the greater advantage because it is essentially off-peak.

In the case of the respondent's business, the situation is quite different, for it is evident that even though no lighting were used during the time of the peak on the plant, the capacity required for power service would be four times the capacity for lighting. If the expenses were apportioned in the ordinary manner, commercial power would be overloaded with fixed costs as well as certain variable expenses, while commercial lighting and municipal street lighting, which are furnished off-peak, would be so relieved that their rates would be very much lower than if the respondent furnished no power or only the normal proportion of power. Since the major part of the power business could not be retained with rates conforming to such an apportionment of expenses, and the lighting business could not carry the investment alone, it seems advisable to predicate the rates upon the normal expenses of the several classes of service, bearing in mind the total expenses of the business and the total revenues reasonably required. Upon viewing the situation in this light, we have concluded that the total operating revenues of the several classes of electric service should not be altered much at this time, but that the new schedules should be devised to distribute the operating burden more equitably among the customers.

NEW OR REVISED SCHEDULES OF ELECTRIC RATES.

The net rates which the Commission believes should be put into effect for lighting are as follows:

Primary: 13 cts. per kw-hr. for the first 40 kw-hr. used per month per kw. of active connected load.

Secondary: 10 cts. per kw-hr. for the next 60 kw-hr. used per month per kw. of active connected load.

Excess: 7 cts. per kw-hr. for all current used in excess of 100 kw-hr. per month per kw. of active connected load.

The gross rates should be one cent per kw-hr. more than the foregoing rates, the difference to constitute a discount for the prompt payment of bills.

It is contemplated that all lighting service will be placed on the foregoing schedule. This would result in putting business and residence lighting on an equal footing insofar as the steps of the schedule are concerned. Under the existing rates, the charge for residence lighting is 16 cts. per kw-hr., for some business places 10 cts. per kw-hr., and for other business places 10 cts. per kw-hr. with the discounts dependent upon the quantity of current consumed. This practice, which is unjustly discriminatory, will be remedied by the new rates. This disturbance of the respondent's lighting rates is almost bound to result in increases in the bills of some customers because the maximum rate of the new schedule is 13 cts., while the minimum rate of the old schedule for business places is 10 cts. But the increases so effected will be offset by the reduction in the residence rate from a uniform charge of 16 cts. per kw-hr. to a charge beginning at, and running down from 13 cts. per kw-hr.

Although the Commission has no present knowledge of the practice now followed by the company in charging its employes for electric service, there is found in the schedule on file with the Commission the following preferential rate: Employes of company, 50 per cent of regular meter rate. The granting of such rates is in violation of the Public Utilities Law and the practice should be discontinued at once if it is being indulged in by the company.

The petitioners have suggested that a provision for a minimum bill should be made in the electric lighting schedule. The Commission has always held this to be a fair practice, and will order that the minimum monthly bill hereafter be \$1.00.

The petitioners have requested that the company be required to inspect the incandescent lamps in use at stated intervals. The rules of service which the Commission has formulated do not require such a periodic inspection, but do require that "each utility * * * shall specifically inform each of its consumers as to the conditions under which efficient service may be secured from its system and render its consumers reasonable assistance in securing incandescent lamps and other appliances

best adapted to the service furnished." (Rule 27, *In re Standards for Gas and Electric Service*, 1913, 12 W. R. C. R. 418.)

It has been found in many instances that consumers object to the inspection of their installations as an unnecessary interference by the company. The present rule is designed to secure lamp inspection service for the consumers who desire it without making an inspection of all installations compulsory. It therefore appears reasonable that the company should add to its rules and regulations a rule to the effect that, upon the request of any consumer, an inspection of the incandescent lamps will be made for the purpose of ascertaining their state of efficiency.

NEW OR REVISED SCHEDULE OF POWER RATES.

The schedule of power rates which will be ordered and which will eliminate the inequalities arising under the present schedule from its regressive feature, consists of a demand charge plus charges for energy consumed. The schedule is as follows:

Demand charge: 50 cts. per month per active horse power connected, determined by fixed percentages of the rated capacity.

Energy charge: 8 cts. net or 9 cts. gross for the first 50 kw-hr. used per month.

7 cts. net or 8 cts. gross for the next 50 kw-hr. so used.

6 cts. net or 7 cts. gross for the next 100 kw-hr. so used.

5 cts. net or 6 cts. gross for the next 100 kw-hr. so used.

4 cts. net or 5 cts. gross for the next 500 kw-hr. so used.

2 cts. net or 3 cts. gross for all use in excess of 800 kw-hr. per month.

The monthly charges under the foregoing schedule will be very near to the charges under the present schedule but will show a small reduction.

In order that the demand charge plus the energy charge may in no instance amount to an unreasonable total per kw-hr. for the short hour or small consumers, the maximum rate per kw-hr. will be placed at 9½ cts. which shall prevail in all cases where the sum of the demand and energy charges exceeds an average rate of 9½ cts. per kw-hr. It should be provided, however, that no bill shall be rendered for less than \$1.00 per month, the minimum bill now effective.

The following percentages have been used in determining the active load of power service:

First 10 h. p. connected	90	per cent active.
Next 10 h. p. "	80	" "
Next 30 h. p. "	70	" "

SPECIAL CONTRACTS.

C. S. Morris, the Wisconsin Granite Company and the Wright Mills are at present purchasing current for power under special contracts. The rates at which these consumers are charged are not the same as the rates for the regular schedule, but since the service is not similar to that of other users it cannot be concluded on that ground that the rates are unjustly discriminatory. It appears inadvisable to change the rates under these contracts at this time because of possible disturbance of the whole business. The contracts will be at all times under the supervision of the Commission.

RATE FOR "CORINTHIAN" STREET LIGHTING SYSTEM.

When the complaint in this case was filed, the "Corinthian" street lighting system furnishing ornamental lighting in the business district was not in operation; consequently, the rate therefor was not at issue. Later on, however, some difference arose between the respondent and the parties interested in the ornamental lighting system concerning what the charges for that service would be, and the question was brought before the Commission informally. It appeared advisable to incorporate the matter in this case, then pending before the Commission, and so, in order that this might be done, the parties agreed to a tentative rate subject to the final decision of the Commission.

The operating expenses of the "Corinthian" lighting system, which have been carefully estimated, are placed at \$1,676.00 per year. The estimate of the yearly consumption of energy is 26,200 kw-hr. These figures, therefore, indicate that the rate for this service should be 6½ cts. per kw-hr.

The estimates made by the Commission are based on an installation of 17.3 kw, or 340 watts per post. Any departure from the number of posts, number of watts per post, or burning schedule upon which the estimates were based is likely to change the estimate of cost. In other words, the rate found by the Commission applies to particular conditions—those in effect at the present time.

The estimates for ornamental lighting are further based also on short term contract. Certain investment hazards are greater under short term contracts than for the longer periods, consequently a greater annual amortization charge is necessary on the annual basis. Should this service be contracted for on a basis of ten years service, the company will undoubtedly be willing to reduce the rate somewhat.

GAS DEPARTMENT.

PRESENT SCHEDULE OF RATES.

Three different rates are now effective in Berlin. They are as follows:

Illuminating.

Meter rate: \$2.00 per M cu. ft. gross or \$1.75 net.

Fuel.

Meter rate: \$1.50 per M cu. ft. gross or \$1.25 net.

Industrial Service.

Meter rate: \$1.00 per M cu. ft. net. No discount.

Minimum net monthly bill 25 cts. per meter.

In order to get the net rate bills must be paid on or before the 10th of the month at the company's office. If bill is not paid within 15 days after presentation, gas may be shut off. If meter is removed for non-payment of bill, a charge of \$1.00 will be made for resetting the same.

The petitioners have complained of the discriminatory features of this schedule. The respondent, at the hearing, admitted that the rates were discriminatory, but showed that they were fixed by the old gas company, before the present organization bought over the gas business.

PHYSICAL UNITS.

An analysis of consumer data submitted by the company shows sales of 8,707,600 cu. ft. The distribution of the sales was as follows:

1st	M cu. ft.	per month	54.4	per cent
2nd	"	"	25.0	"
Next 3	"	"	15.8	"
Next 5	"	"	3.4	"
Over 10	"	"	1.4	"

The consumer data submitted by the respondent covered the calendar year of 1913, but since the expense analysis was for

the fiscal year ending June 30, 1913, it is desirable to consider the sales also for that period. The percentages have therefore been applied to the sales reported for the fiscal year ending June 30, 1913, and the following figures for the distribution of gas sales have been determined.

1st	M cu. ft. per month	4,930,800	cu. ft.
2nd	" "	" "	2,266,000	" "
Next	3 " "	" "	1,432,100	" "
"	5 " "	" "	308,200	" "
Over 10	" "	" "	126,900	" "
Total			9,064,000	" "

The present schedule of gas rates is known as a double meter system of charges, i. e., the rate for gas used for fuel is different from the rate for gas for illumination, which makes it necessary for two meters to be installed on premises where gas is used for both purposes. If a uniform schedule of rates should be installed for all gas service so that one meter would be employed to measure all the gas consumed by any customer at any one locality, it is evident that the amount of gas falling in the different groups—first 1,000 cu. ft., second 1,000 cu. ft. etc.—would be different. From analyses made in former cases it is thought that the following percentages and amounts will be applicable to Berlin conditions when a single meter system is put in force:

1st	M cu. ft. per month—42 per cent	3,807	M cu. ft.
2nd	" " " —27 "	" "	2,447	" "
Next	3 " " " —21 "	" "	1,903	" "
Next	5 " " " —4 "	" "	363	" "
All over 10	" " " —6 "	" "	544	" "

According to the report for the fiscal year ending June 30, 1913, 665 meters were in use. The consumer records submitted for the calendar year of 1913 show 709 meters. The same records show 539 consumers. From these figures it is thought that 575 is a proper unit to use as the number of monthly bills under a single meter system. The same unit expressed in consumer months for the entire year is 6,900.

Capacity expenses as determined were \$2,581.32, or 37.4 cts. per consumer-month. Similarly, the output expenses were \$9,743.82. Therefore, the output unit cost is \$1.074 per thousand cubic feet of gas sold. With these figures the following table showing decreasing costs has been prepared:

TABLE IX.
DECREASING COSTS OF GAS SERVICE.

No. of M used per month	Consumer cost.	Output cost.	Total cost.	Average cost per M.
1	\$0.374	\$1.074	\$1.444	\$1.444
2	"	2.148	2.522	1.261
3	"	3.222	3.596	1.199
4	"	4.296	4.670	1.168
5	"	5.370	5.744	1.149
6	"	6.444	6.818	1.136
7	"	7.518	7.892	1.127
8	"	8.592	8.966	1.121
9	"	9.666	10.040	1.116

1000	"	1,074.000	1,074.374	1.074

NEW OR REVISED SCHEDULE OF GAS RATES.

The foregoing table suggests the application of the following net rates:

1st	2 M cu. ft. per month	\$1.45 per M
Next	3 " " "	1.20 "
"	5 " " "90 "
All over 10	" " "80 "

From the statistics of gas sold, the revenue from such rates is estimated at \$12,363.80, after an allowance for minimum bills is included. This approximates closely the net operating expenses, which were found to be \$12,425.14.

The gross rate will be composed of a reasonable addition of 10 cts. per thousand cubic feet and the difference between the gross and net rates will constitute a discount for prompt payment of bills.

The minimum bill now in effect is a charge of 25 cts. per month, which is inadequate to meet a reasonable portion of the consumer expenses which continue even when the consumer uses little or no gas. It appears under the circumstances that the minimum charge should be increased to 50 cts. per month.

HEATING DEPARTMENT.

PRESENT SCHEDULE OF HEATING RATES.

The rate now effective for heating service is 22 cts. per radiation-foot per heating season, with a discount of 2 cts. per radiation-foot if the bill is paid before the tenth day of the month in which payment is due.

All bills for service are payable at the company's office on or before the tenth day of each of the following months, as follows:

Month of	September	5	per cent of contract price
"	October	10	" " " "
"	November	15	" " " "
"	December	20	" " " "
"	January	20	" " " "
"	February	15	" " " "
"	March	10	" " " "
"	April	5	" " " "

The rates for hot water boilers are as follows:

30 gallon boilers	20 ft. rate	\$8.00	per heating season
40 " "	25 " "	10.00	" " "
52 " "	30 " "	12.25	" " "
63 " "	35 " "	14.50	" " "
82 " "	36 " "	18.50	" " "
100 " "	40 " "	23.00	" " "

PHYSICAL UNITS.

An analysis of consumer data has been made from the records of the heating department. It shows a total of 145 consumers who use 66,647 sq. ft. of radiation. The distribution of the heating area is as follows:

First	100 sq. ft. connected	14,462	sq. ft.
Second	100 " "	13,384	"
Next	300 " "	28,419	"
Next	500 " "	8,449	"
Over	1000 " "	1,933	"
Total			66,647 "

The expenses of the heating department are \$17,148.50. Net expenses for heating service are \$16,988.50, after deducting revenues from customers' boilers. The component items of this figure have been divided between consumer and output expenses,

resulting in a charge of \$1,293.33 to the former and \$15,695.17 to the latter. The consumer expenses are equivalent to \$8.92 per consumer per year, and the output expenses, \$23.55 cts. per square foot of radiation. The following table of decreasing cost of service is formed from these units.

TABLE X.
DECREASING COST OF HEATING SERVICE.

Sq. ft.	Consumer cost	Output cost	Total	Average per sq. ft.
100	\$8.92	\$23.55	\$32.47	\$0.325
200	"	47.10	56.02	.280
300	"	70.65	79.57	.265
400	"	94.20	103.12	.257
500	"	117.75	126.67	.253
600	"	141.30	150.22	.250
700	"	164.85	173.77	.248
800	"	188.40	197.32	.247
900	"	211.95	220.87	.245
1000	"	235.50	244.42	.244
1500	"	353.25	362.17	.241
2000	"	471.00	479.92	.240
2500	"	588.75	597.67	.239
3000	"	706.50	715.42	.238

This table indicates very plainly that the present net rate in Berlin is below cost. In fact, the average cost per sq. ft. of radiation is 25.4 cts., while the present average revenue is 19.6 cts. Under these circumstances, the Commission would be warranted in ordering increased rates for heating service. But the respondent company, after showing the insufficiency of the revenues, submits that present conditions in Berlin are such that an increased heating rate probably would be more detrimental than beneficial to the heating department. Therefore, the Commission will not order rates but will authorize the respondent to charge a net rate of 22 cts. per square foot radiation, which is 2 cts. per square foot more than the present rate.

The petitioners seemed to be in some doubt regarding the correctness of the formula used by the respondent in computing the radiation for customers of heating service. The petitioners requested that the formula be investigated and that a proper formula to be used by the company be published in order that all customers may know the basis upon which their heating requirements and charges are determined.

The respondent has filed the following rule for computation of the amount of radiation required :

Radiation in sq. ft. = (vol. in cu. ft. + E + W) x .011
 E = Sq. ft. of walls x 7.5 for ordinary frame buildings.
 E = " " " x 6.8 " frame buildings, back plastered.
 E = " " " x 6.3 " brick "
 Sq. ft. of walls means exposed walls.
 W = Sq. ft. of windows x 75 for exposed windows.
 W = " " " x 37.5 for storm windows.

(Applied on doors, skylights, window exposures properly equipped with storm doors, and sash made securely fast for the season by Nov. 15 and remaining so until April 1. If not so equipped during said period buildings will be considered as being without storm protection and the full rate will be collected until such windows and doors are placed in service. No sash hung on hinges to swing open will be considered a storm sash. Storm sash may be equipped with two shutters, 3 x 6 inches, for ventilation.)

Upon investigating the problem of determining the required radiation, it is found that eminent authorities on the subject advance different formulae, but that they seem to lead for the most part to about the same result. The most rational formulae take into consideration such factors as the influence of the volume of air to be heated, the frequency at which the air is displaced or renewed, the difference in room and outdoor temperature and the difference in room and radiator temperature. Empirical formulae less complicated than this have been devised by which the required radiation can be approximated. The respondent's formula appears to be one of these. It has been compared with other formulae in which careful consideration is given to the various factors influencing the needed amount of radiating area, and the conclusion is that the respondent's formula leads to a somewhat lower figure than the others. It therefore appears that, insofar as the charge for heating service is concerned, the formula used by the respondent does not lead to overcharges to patrons of the heating service. Whether the amount of heat received from radiation computed in this way is adequate is another matter. If it is not adequate, the improvement would have to be attained by an added amount of radiating area to which the company would not object, but for which the customer would have to pay. Under the circumstances, the company's rule may be accepted without injury to its customers through the charge for service.

SUMMARY.

The complaint in this case covers two general subjects: rates and service. Another investigation of the quality of the respondent's service, which is made on the Commission's own motion, is now pending, and it therefore appears proper to consider a number of the petitioners' allegations with reference to service along with the service matter under investigation. Accordingly, those questions will not be passed upon at this time. The respondent's operating expenses and investment have been examined and compared with those of other utilities similarly situated. As such comparisons do not place the respondent's business in an unfavorable light, sufficient ground is not established for a more costly investigation of the management and operation.

The net earnings of the electric, heating and gas business were 5.48 per cent of the Commission's appraisal of the business for the year ending June 30, 1913. No margin can be found in such earnings for a general reduction of the rates. In the heating department especially, the deficiency of the earnings is so great that a considerable increase in the charge for service would not be entirely unwarranted.

Several unreasonably discriminatory features are found in the respondent's schedules for gas and electricity. These will be corrected by fixing new and more equitable schedules yielding about the same net return. The establishment of a uniform gas rate for fuel and illumination and for residence and business places, and a uniform electric lighting rate will increase the charges to some customers who have heretofore enjoyed an unwarranted advantage under the old rates. But corresponding reductions to those who have paid the highest rates more than offset the increase to other customers, as may be seen by reference to total revenues, Table XI:

TABLE XI.
COMPARISON OF REVENUES.

	ELECTRIC DEPARTMENT.			Gas department.	Heating department.	Total revenues.
	Commercial lighting.	Commercial power.	Municipal contract lighting.			
Present revenues.....	\$13,863 00	\$16,696 42	\$2,952 86	\$11,493 19	\$13,269 64	\$58,115 11
Estimated future revenues..	13,463 75	16,575 19	2,952 86	12,363 80	13,169 64	58,525 23

The estimated decrease for the electric department is \$459 or 1.4 per cent of the electric revenues. The estimated increase for the gas department is \$871 or 7.6 per cent of the gas revenues. The net increase in the revenues for the business of the year ending June 30, 1913, would therefore be about \$412. While this appears to leave the net earnings of the respondent at about the point where they now are, it is believed that the net revenue from ornamental street lighting, the lower price paid for coal, and the possible increase in plant efficiency to be brought about by the company's projected changes in plant equipment, will add to the net earnings that will be available for interest and profits.

IT IS THEREFORE ORDERED, That the Berlin Public Service Company, respondent, do set aside the schedule of rates for electricity and gas now in force in Berlin, and do substitute therefor the following schedule of rates:

ELECTRIC DEPARTMENT.

Commercial Lighting.

Primary: 13 cts. net or 14 cts. gross per kilowatt-hour for the first 40 kilowatt-hours or less used per kilowatt of active connected load per month.

Secondary: 10 cts. net or 11 cts. gross per kilowatt-hour for the next 60 kilowatt-hours, or portion thereof, used per kilowatt of active connected load per month.

Excess: 7 cts. net or 8 cts. gross per kilowatt-hour for all use in excess of 100 kilowatt-hours per month per kilowatt of active connected load.

Discount.—The difference between gross and net rates shall constitute a discount for prompt payment.

Active Load.—The following percentages of connected lighting load shall be deemed active:

For Class A, which shall include residences, dwellings, flats, private rooming houses, hotels, hospitals and clubs in which meals and rooms are furnished, 75 per cent of the first 500 watts connected and 50 per cent of all installation in excess of 500 watts shall be deemed active.

For Class B, which shall include banks, offices, stores, saloons, billiard and pool halls, depots, theaters, and establishments of a similar nature, 75 per cent of the first 2.5 kilowatts connected

and 60 per cent of all installation in excess of 2.5 kilowatts connected shall be deemed active.

For Class C, which shall include public buildings, public and parochial schools, churches, warehouses, stables, garages and establishments of a like nature, 55 per cent of the total connected load shall be deemed active.

The first 600 watts capacity of each incidental appliance, such as flat irons, fans, toasters, and percolators, connected to the lighting meter shall not be considered in determining the active load.

Minimum Bill.—The minimum monthly bill shall be \$1.10 gross of \$1.00 net.

Reconnection Charge.—The charge for reconnection of service for the same consumer on the same premises shall be \$1.00.

Lamp Inspection.—The company shall, upon request of the consumer, inspect the installation of lamps and advise the consumer of the efficiency thereof.

Commercial Power.

Demand Charge: 50 cts. per month per active horse power connected.

Energy Charge: 8 cts. net or 9 cts. gross for the first 50 kilowatt-hours used per month. 7 cts. net or 8 cts. gross for the next 50 kilowatt-hours so used. 6 cts. net or 7 cts. gross for the next 100 kilowatt-hours so used. 5 cts. net or 6 cts. gross for the next 100 kilowatt-hours so used. 4 cts. net or 5 cts. gross for the next 500 kilowatt-hours so used. 2 cts. net or 3 cts. gross for all use in excess of 800 kilowatt-hours per month.

Minimum Bill.—The minimum bill for power service shall remain at \$1.00 net or \$1.10 gross per month, as heretofore.

Maximum Limiting Rate for Power.—In all cases where the average monthly net rate per kilowatt hour for power shall exceed $9\frac{1}{2}$ cts. per kilowatt-hour, a flat rate of $9\frac{1}{2}$ cts. net or 10 cts. gross per kilowatt-hour shall prevail, excepting always that no bill shall be rendered for less than the minimum bill of \$1.00 net or \$1.10 gross.

Discount.—The difference between gross and net rates shall constitute a discount for prompt payment.

Computation of Active Power Load.—The following percentages of actual connected power load shall be deemed active:

First 10 h. p. connected,	90	per cent	active.
Next 10 h. p.	''	80	per cent ''
Next 30 h. p.	''	70	per cent ''

Reconnection Charge.—The charge for reconnection of service for the same consumer on the same premises shall be \$1.00.

Special Contracts.—The terms and conditions of all special contracts for installations of 50 h. p. or over shall be submitted to the Commission for approval.

Street Lighting.

Municipal Contract Lighting.—The rates for the present system of series arc lamps and 200 watt tungsten lamps shall remain as they are.

Corinthian Street Lighting System.—The rate for this metered service shall be 6½ cts. per kilowatt-hour under the existing conditions as to time, wattage of lamps, etc.

GAS DEPARTMENT.

The double meter system shall be abolished and all service to each consumer shall be made through a single meter. The rates for this service shall be:

First	2 M	cu. ft. per month	\$1.45	net or	\$1.55	gross per M	cu. ft.
Next	3 M	'' ''	1.20	''	1.30	''	''
Next	5 M	'' ''	.90	''	1.00	''	''
All over	10 M	'' ''	.80	''	.90	''	''

Minimum Bill.—The minimum monthly bill for gas service shall be 50 cts. net or 60 cts. gross per month.

Discount.—The difference between the net and gross rate shall constitute a discount for prompt payment.

In order to meet the temporary condition prevailing immediately following this order, the following rule shall be observed: Where two or more meters are installed on the same premises for the same consumer, the amount of gas supplied through all such meters shall be combined in arriving at the total charge, and the minimum bill shall be the same as though one meter were installed.

IT IS FURTHER ORDERED: That the respondent be and the same hereby is authorized to substitute for its present heating rates the following schedule of charges:

HEATING DEPARTMENT.

For Heating: 22 cts. net or 24 cts. gross per heating season per sq. ft. of radiation as required by rules appended hereto. The difference between the gross and net rates shall constitute a discount if bill is paid on or before the tenth day of the month in which payment is due. One-eighth of the total discount for the season shall be allowed on each payment.

For Hot Water Boiler:—Where hot water boilers are connected across the mains beyond the thermostat valve, such connection shall be regulated by the company to meet the size of the boiler and pressure at the point of distribution. This rule applies to boilers equipped with heating coils.

All hot water boilers shall be equipped with the following number of feet of one inch pipe and the rates per heating season shall be as follows:

Size of boiler, gals.	Feet of 1" pipe	Rate per season
30	10	\$10.00
30	20	8.00
40	25	10.00
40	15	12.00
52	30	12.25
63	35	14.50
82	36	18.50
100	40	23.00

All bills for heating service shall be due and payable at the company's office on the first day of each of the following months:

October 1	5	per cent of contract price
November 1	10	" " " "
December 1	15	" " " "
January 1	20	" " " "
February 1	20	" " " "
March 1	15	" " " "
April 1	10	" " " "
May 1	5	" " " "

IT IS FURTHER ORDERED, That the respondent shall apply the following rules and regulations filed by it to heating service furnished under either the existing or authorized schedule of heating rates.

The amount of radiation required is calculated as follows:

Radiation in square ft. = (Vol. in cu. ft. + E + W) x .011

E = Sq. ft. of walls x 7.5 for ordinary frame buildings.

E = Sq. ft. of walls x 6.8 for frame buildings, back plastered

E = Sq. ft. of walls x 6.3 for brick buildings.

Sq. ft. of walls means exposed walls.

W = Sq. ft. of windows x 75 for single windows.

W = Sq. ft. of windows x 37.5 for storm windows.

(Applied on doors, skylights, window exposures properly equipped with storm doors, and sash made securely fast for the season by Nov. 15 and remaining so until April 1. If not so equipped during said period buildings will be considered as being without storm protection and the full rate will be collected until such windows and doors are placed in service. No sash hung on hinges to swing open will be considered a storm sash. Storm sash may be equipped with two shutters 3 x 6 inches for ventilation.)

All consumers will be required to install the proper amount of radiation designated by the company.

Heating Season.—The period for which heat is to be furnished is from Sept. 15 to May 15, inclusive, when the outside temperature is below 58 degrees.

Equipment paid for by Consumer.—All services, radiators, thermostats, valves, piping and fittings are to be paid for and maintained by the consumer.

Water the Company's Property.—It is agreed by the consumer that the water in the pipes and radiators is the property of the company and the drawing off of said water for any purpose whatever shall be considered a violation of the company's rules. Any valves or cocks found on the system for the above purpose shall be removed and if found the second time the service may be discontinued by the company at its option.

Radiators.—All radiators shall be of the best screwed nipple make and guaranteed to stand 125 pounds working pressure and placed in the rooms as designated by the company.

Valves.—A suitable valve may be placed in the riser end of each radiator. The company recommends a valve for the return end as well. No valves are to be used less than one inch in any riser to a radiator of 85 ft. or less. Three-quarter inch valves may be used on the return in new installations.

Piping.—In all buildings having two or more separate apartments, whether on the same or different floors, each apartment shall be piped separately and in such a way as not to interfere with the equipment of any other apartment. Each apartment shall be provided with all the necessary thermostats, valves and

drains for controlling its hot water supply independent of, and without interference to, other apartments and equipment. All radiation must be installed with $\frac{1}{2}$ " by-pass pipe of the full length of the radiator with each end reamed to the full area of the pipe. All radiators of 85 sq. ft. or less must be connected with not less than one inch riser.

Five hundred feet of radiation shall be the maximum of any one series. Twin branch ells shall be used on all split circuits. All horizontal runs from feeder mains to risers must be taken from the top of each belt. All installations working under a pressure of fifteen pounds per sq. in. and up shall have a small piece of pipe of proper size and length placed in the return main, in proportion to the pressure at the building and the amount of radiation to be supplied in order to check the rapid flow of the water and give the thermostat a chance to control the heat.

All pipes in buildings, rooms, halls, or basements must be properly graded for drainage and supported by rigid hangers.

All pipes in such parts of buildings and basements that are not heated by the company and not paid for by the consumer are to be covered at the consumer's expense with magnesia or asbestos covering not less than one inch thick or such covering as may be approved by the company. If not covered, such piping will be charged for at the rate of 25 cts. per radiation-foot per year.

Not less than the following sized piping shall be used in the basements of buildings to which the riser pipe or series loops are to be connected:

250 ft. of radiation or less.....	1 inch pipe
Over 250 ft., 1" split loop with $1\frac{1}{4}$ " return.	

Service mains to be as follows:

500 to 1000 ft. of radiation.....	$1\frac{1}{4}$ "
1000 ft. and above.....	$1\frac{1}{2}$ "

Workmanship.—All work must be done in a strictly first class manner and the contractor shall correct any defective work on radiators, pipes, valves, fittings, or fixtures at his expense and deliver the job to the company in a perfect working condition before water will be turned on.

Inspection.—The installation must be inspected and approved

by the Berlin Public Service Company. If found to be within the specified rules, the company agrees to turn on the water.

The company shall, through its agents and workmen, have the right of free ingress to and egress from the premises supplied with heat at all reasonable hours for the purpose of inspecting valves, services and mains, and to examine the heating system, turn water on or off, adjust and care for thermostats and controlling valves and to make any and all such tests as may be necessary or desired by the company.

Thermostats.—The company reserves the right to furnish and install all thermostats connected to its heating system at or at as near cost to the consumer as they can be installed and to adjust and maintain same at all times, other than breakage by the consumer or worn out parts, which supplies and repairs shall be made by the company at cost to the consumer.

Service Lines.—All service mains shall be installed by the company and paid for by the consumer from the center of the street to the source of distribution in the building, at the cost of labor and material to the company, plus 10 per cent.

When one service line to serve two customers can be laid on the adjoining property line, the pipes are to be proportioned for two. If both parties are connected at a time a bill is rendered to each. In case the second party is not connected, the company is to render a bill to the connected consumer for one-half of the above cost, the company reserving the other half of the main, to be sold to the second consumer when the connections are made.

Requirements for House System.—The Company will not undertake to furnish adequate service to consumers using the gravity or so called "Home system" and recommends its system of heating which insures sufficient heat if the rules and regulations of the Company are followed and the proper amount of radiation is installed.

The company shall not be liable for damages incident to the breaking of radiators, pipes, valves, or equipment or for damages caused directly or indirectly by the shutting off of heat from causes beyond its control.

Reconnection Charge.—The charge for reconnection of service for the same consumer on the same premises shall be \$5.00.

F. S. PURTELL ET AL.

vs.

HUBERTUS TELEPHONE COMPANY.

Submitted Jan. 30, 1914. Decided Sept. 12, 1914.

The petitioners allege that the service rendered by the respondent is inadequate because of defective instruments, unrepaired lines and overloaded circuits and because repairs have been inefficiently made. Inspections made of the respondent's property on April 10 and Aug. 20, 1914, showed conditions to be unsatisfactory. The respondent admits that its service has been partially inadequate but promises to continue its efforts to improve the service.

Held: The present service is inadequate. The respondent's attention is directed to Rules 6 and 11 of the standards prescribed by the Commission for telephone service in its general order of August 13, 1914 (*In re Standards for Telephone Service*, 1914, 15 W. R. C. R. 1), which require reasonable provisions to be made for emergencies and for the elimination of interruptions and irregularities of service. The respondent is ordered (1) to employ a competent man to periodically inspect and repair its lines, instruments and other equipment and (2) to comply with the rules prescribed in the general order cited above.

The petition is signed by twenty-six subscribers of the Hubertus Telephone Company and requests the Commission to require that company to furnish better telephone service.

No formal answer was filed by the respondent.

A hearing was held at Hubertus on January 30, 1914, at which *F. S. Purtell* appeared on behalf of the petitioners and *N. J. Kiley* and *Geo. Meyer* for the respondent.

Numerous witnesses testified that they had experienced difficulty in calling the central operator and in securing connection with other parties and that subscribers had been unable to reach them. The opinion was expressed that these troubles resulted from defective instruments, unrepaired lines, and overloaded circuits. Men have been sent out to make repairs, according to witnesses, but have failed to remedy the trouble. Officials of the company admitted that the service has not been as good as it should have been, but asserted that they had

tried to the best of their ability to improve it, and would continue to do so.

An inspection by a member of the Commission's staff was made on April 10, 1914, from which it appeared that some improvements had been made in the service since the hearing. The matter was therefore held in abeyance and another inspection was made August 20, 1914, which showed that conditions were still somewhat unsatisfactory. In view of this fact, we deem it advisable at this time to render a decision in the matter and to point out specific improvements which, in the light of the testimony and subsequent investigation, appear to be essential for adequate service in addition to the standards of service required of all telephone utilities by our order of August 13, 1914 (*In re Investigation, on Motion of the Commission, of Standards for Telephone Service in the State of Wisconsin*, 15 W. R. C. R. 1). The company's attention is directed in particular to Rules 6 and 11 of that order which are as follows:

Rule 6. Reasonable provision shall be made against the failure of lighting or power service, fires and storms, sudden increases in traffic, the illness of operators, or other emergencies which would seriously impair the service if not promptly made.

Rule 11. Reasonable efforts shall be made to eliminate interruptions and irregularities, and to correct them promptly when they occur. Records shall be kept of all complaints or irregularities in the service, showing the day and time at which the trouble is reported, the nature of the trouble, its duration and final disposition.

In compliance with these rules the company should keep on hand a sufficient amount of repair equipment for the switchboard, instruments and lines, and should keep a complete record of complaints and irregularities in order that repairs may be quickly made, and that chronic trouble may be distinguished from occasional irregularities.

It appears that many of the complaints have arisen from a lack of experience on the part of linemen in repair work, rather than from willful neglect. In our judgment it is necessary that the company employ a competent telephone man to go over the entire system periodically and make such repairs in the lines and equipment as are required. An improvement can be effected by using one long ring to call central instead of three short rings as at present, and by adopting some signal, such

as one short ring, to inform the operator that a conversation is completed. The operator's room should not be open to visitors or loiterers. Subscribers should be encouraged to report trouble immediately to a designated official or employe in such detail as to make possible an accurate record; and they should also be encouraged to cooperate in maintaining good service on heavily loaded lines by refraining from "listening in" on conversations.

IT IS THEREFORE ORDERED, That the respondent, the Hubertus Telephone Company, employ a competent man to periodically inspect and repair its lines, instruments and other equipment, and comply with the rules prescribed in our general order of August 13, 1914. (*In re Investigation, on Motion of the Commission, of Standards for Telephone Service in the State of Wisconsin*, 15 W. R. C. R. 1.)

JACOB SENTY

vs.

CHICAGO, ST. PAUL, MINNEAPOLIS AND OMAHA RAILWAY COMPANY.

JACOB SENTY

vs.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY.

Submitted May 18, 1914. Decided Sept. 12, 1914.

The petitioner asks: (1) that the C. St. P. M. & O. Ry. Co. and the M. St. P. & S. S. M. Ry. Co. be required to establish flag stops at the junction point of the former's Park Falls line and the latter's Superior division and (2) that the M. St. P. & S. S. M. Ry. Co. be required to establish flag stops at the intersection of its Superior division and its line to Reserve. At both junction points the crossing is made by one railroad passing over the other on an elevated trestle and it would be necessary for the safety of passengers boarding or alighting from trains at these points to widen the embankments and construct suitable walks connecting the upper and lower grades.

Held: The present traffic is too slight to warrant the expenditure which would be necessitated by the establishment of the stops requested. The petitions are dismissed.

In two separate complaints the petitioner asks that the Chicago, St. Paul, Minneapolis & Omaha Railway Company and the Minneapolis, St. Paul & Sault Ste. Marie Railway Company be required to establish flag stops at the junction points of the former company's Park Falls line and the latter company's Superior division and that the Minneapolis, St. Paul & Sault Ste. Marie Railway Company be required to establish flag stops at the intersection of its Superior division and its line to Reserve.

Answering the first mentioned petition, the Chicago, St. Paul, Minneapolis & Omaha Railway Company alleges that at the junction point in question the grade of its line is 25 feet above that of the Minneapolis, St. Paul & Sault Ste. Marie Railway Company; that the intersection is located 13.3 miles east of Birchwood and 3.9 miles west of Couderay; that the

surrounding country is uninhabited; and that there is no traffic requirement for a flag stop.

The Minneapolis, St. Paul & Sault Ste. Marie Railway Company, in its answer, alleges that there is no justification for requiring flag stops at either junction point, and asks that the petition be dismissed.

A hearing was held at Birchwood on May 18, 1914, at which *Jacob Senty* appeared in his own behalf, *C. D. Stockwell* for the Chicago, St. Paul, Minneapolis & Omaha Railway Company and *Kenneth Taylor* for the Minneapolis, St. Paul & Sault Ste. Marie Railway Company.

The testimony shows that the Park Falls line of the Chicago, St. Paul, Minneapolis & Omaha Railway Company crosses the Superior division of the Minneapolis, St. Paul & Sault Ste. Marie Railway Company over a trestle at an elevation of approximately 25 feet above the latter company's track. At the ends of the trestle the track is on a high rock fill just wide enough for the road bed. This condition would make it necessary for passengers to climb down or up the steep embankment and board or alight from trains on a narrow strip at the top of this fill, if a stop should be established there without providing additional facilities. This practice was regarded as dangerous by the superintendent, especially for women and children. There is a highway about $\frac{1}{4}$ mile north of the crossing and another from $\frac{1}{4}$ to $\frac{3}{8}$ miles west. The country immediately surrounding the crossing is unsettled.

The situation at the crossing of the Superior division and Reserve branch of the Minneapolis, St. Paul & Sault Ste. Marie Railway Company is very similar to that described above, the Superior division crossing the branch line on a trestle about 25 feet above the level of the other line. It is possible for passengers to alight on the fill and walk down the embankment, but the respondent's train master and other witnesses agreed that such a practice would be dangerous for passengers, especially for women and children, unless additional facilities are provided. There is a highway close to the crossing paralleling the branch line, which intersects with an east and west highway about $\frac{1}{4}$ mile north of the crossing. The surrounding country is unsettled.

The petitioner stated that he would be satisfied if a flag stop were established at the crossing of the two lines of the Minneapo-

lis, St. Paul & Sault Ste. Marie Railway Company. He said that such stops would benefit residents of Birchwood who desire to travel to and from Gilman, Stone Lake, Ladysmith and other stations on the Superior division. To reach these points from Birchwood under the existing arrangements passengers are obliged to take a more roundabout route via Cameron. It was estimated by a witness that about ten trips in a month would be made from Birchwood to points on the Superior division via the junction point if flag stations were established there.

From an examination of the testimony it is our opinion that conditions do not warrant the establishment of flag stops at either of the junction points mentioned in the complaint. It is impracticable to establish such stops without widening the embankments to provide a place suitable for the use of passengers in boarding and alighting from trains, and constructing suitable walks connecting the upper and lower grades. The present traffic is obviously too slight to warrant the expenditure necessary for these improvements at both, or even one of the junctions, in addition to the cost of making the stops.

IT IS THEREFORE ORDERED, That the petitions herein be and the same is hereby dismissed.

CUMBERLAND FRUIT PACKAGE COMPANY

vs.

CHICAGO, ST. PAUL, MINNEAPOLIS AND OMAHA RAILWAY COMPANY.

Decided Sept. 14, 1914.

The petitioner alleges that the rate of 6 cts. per cwt. exacted by the respondent for the transportation of a carload of logs from Grandview to Cumberland was erroneous and asks for refund on the basis of a rate of \$2 per 1000 ft., minimum charge \$10 per car. The question here involved was passed upon in a previous case of the same title (1914, 14 W. R. C. R. 287), and the present claim should have been there included.

Held: The rate complained of was unusual, illegal and exorbitant. A rate of \$2 per 1000 feet, minimum charge \$10 per car, would have been reasonable and refund is ordered on this basis.

The petitioner is a corporation engaged in the manufacture of berry boxes, crates and baskets at Cumberland, Wis. It alleges that on January 7, 1914, it shipped a carload of logs from Grandview, Wis., to Cumberland, Wis., and paid the freight thereon at the rate of 6 cts. per cwt.; that the charge exacted of the petitioner for said shipment was erroneous for the reason that the respondent's tariff G. F. D. 2400-A, now in effect, item 275, names a rate of \$2.00 per thousand feet of logs, minimum charge \$10.00 per car from Dauby, Wis., to Stillwater, Minn., which rate is applicable to movements from Grandview, Wis., to Cumberland, Wis., as per intermediate clause provided on page 16 of said tariff; that the excess charge on said shipment amounts to \$39.70. The petitioner therefore prays that the respondent be authorized and directed to refund to it the said sum of \$39.70.

The identical question here involved was passed upon by the Commission in the case of the *Cumberland Fruit Pkg. Co. v. C. St. P. M. & O. R. Co.* 1914, 14 W. R. C. R. 287. It was there stated that the rate charged was the result of an error. The claim here presented should have been included in that case.

We find and determine that the rate of 6 cts. per cwt. charged the petitioner on the aforesaid shipment is unusual, illegal and

exorbitant, and that the reasonable charge is \$2.00 per thousand feet, minimum charge \$10.00 per car. The amount of the overcharge is, as alleged, \$39.70.

Now, THEREFORE, IT IS ORDERED, That the Chicago, St. Paul, Minneapolis & Omaha Railway Company be and the same is hereby authorized and directed to refund to the petitioner the said sum of \$39.70.

SUPERIOR MANUFACTURING COMPANY

vs.

CHICAGO, ST. PAUL, MINNEAPOLIS AND OMAHA RAILWAY COMPANY.

Decided Sept. 14, 1914.

The petitioner alleges that the rate of 8.3 cts. per cwt. charged by the respondent for the transportation of a carload of slaked lime from Superior to Washburn is exorbitant and prays for refund on the basis of a rate of 5 cts. per cwt., which is in effect on the N. P. Ry. between the points named.

Held: It would be impossible for the respondent to participate in traffic of the kind here involved upon a rate in excess of that in effect upon the competing line. The rate of 5 cts. is reasonable and the refund claimed is ordered.

The petitioner alleges that on March 28, 1914, it shipped from Superior, Wis., to Washburn, Wis., a car of slaked lime on which it was charged a rate of 8.3 cts. per cwt., subject to a minimum weight of 24,000 lb., making the charges aggregate \$19.92; that at the time of said shipment there was in effect on the Northern Pacific Railway a rate of 5 cts. on lime in carload lots, minimum weight 24,000 lb., from Superior to Washburn, that the charge of 8.3 cts. per cwt. is exorbitant, and that a charge not in excess of 5 cts. per cwt. is reasonable. The petitioner therefore prays that the respondent be required to refund to it the amount of \$7.92, the amount paid by it in excess of 5 cts. per cwt.

The respondent railway company admits the allegations of the complaint and expresses its willingness to make the reparation prayed for upon being authorized to do so.

The matter was submitted upon the pleadings, papers, schedules and documents on file.

It would be impossible for the respondent to participate in traffic of the kind here involved upon a rate in excess of that in effect upon a competing line. Furthermore, we are satisfied that the rate of 5 cts. per cwt. is a fair compensation for the services rendered.

Under the circumstances it is the judgment of the Commission that the rate of 8.3 cts. per cwt. exacted by the respondent is unusual, and that a rate of 5 cts. per cwt. would have been reasonable.

The difference between the amounts based upon a rate of 8.3 cts. and a rate of 5 cts. is \$7.92.

NOW, THEREFORE, IT IS ORDERED, That the respondent railway company be and the same is hereby directed and authorized to refund to the petitioner the sum of \$7.92.

FRANK B. FARGO

vs.

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Decided Sept. 14, 1914.

The petitioner alleges that the rate of 6.35 cts. per cwt., exacted by the respondent for the transportation of a shipment of pulverized stone from Waukesha to Merrill was excessive.

Held: The charge was unlawful. The lawful charge would have been 4.15 cts. per cwt., the rate recommended for such shipments in *Waukesha L. & S. Co. v. M. St. P. & S. S. M. R. Co. et al.* 1914, 13 W. R. C. R. 471, 473. Refund is ordered on this basis.

Unless the rates recommended by the Commission in the order cited are put into effect by the respondent it will be necessary to hold a hearing and issue a formal order in the matter.

In this case complaint is made of the charges on a shipment of pulverized stone made April 18, 1914, from Waukesha to Merrill. The shipment weighed 59,300 lb. and was charged a rate of 6.35 cts. per 100 lb., amounting to \$37.66.

The respondent, in its answer to the complaint, states that the rate properly applicable to the shipment involved is 9½ cts., the Class E rate from Waukesha to Merrill, as named in respondent's tariff G. F. D. No. 10000—A, and it denies that the charges made and assessed on the shipment involved were exorbitant, excessive, erroneous or otherwise irregular or unlawful.

The case was set for hearing July 7, 1914, but was submitted for determination upon the documents, correspondence, schedules, etc. on file with the Commission:

The matter of rates on stone was gone into fully in a number of cases more or less directly connected with and referred to in *Waukesha Lime & Stone Co. v. M. St. P. & S. S. M. R. Co. et al.* 1914, 13 W. R. C. R. 471, 473. It does not appear to be necessary to go into this matter again in the instant case. In the case cited the Commission suggested that local rates formerly ordered on stone for distances up to and including 200 miles be extended up to 360 miles as set forth in a schedule of rates prepared by the Commission. Following this suggestion the "Soo" and Chi-

icago & North Western railways voluntarily published the schedule of rates suggested. The Chicago, Milwaukee & St. Paul Railway, however, did not do so and therefore rates on stone via that line as originally promulgated by the Commission cover distances up to and including 200 miles only.

The distance between Waukesha and Merrill is 239 miles. The respondent's tariff G. F. D. No. 10000-A, as in force April 18, 1914, the date the shipment complained of in this case moved, and as still in force, names a rate of 5½ cts., per 100 lb. on pulverized stone for a distance of 240 miles. This rate is lawfully applicable to the shipment involved herein. It is not the Class E rate, which respondent in its answer states is the proper rate applicable, but is published in a regular schedule of distance rates, page 130 of supplement No. 13 of the tariff referred to. There is therefore an overcharge of \$5.04 on the shipment complained of. However, the rate found by the Commission to be reasonable in the case cited for a distance of 240 miles is 4.15 cts. per 100 lb. and there appears to be no reason why the shipment should not be given the benefit of this rate.

Inasmuch as the respondent in this case has neglected or refused to publish the schedule of rates recommended by the Commission in the case referred to above, it would seem to be advisable at this time to make a formal order requiring it to publish these rates, but as the case under investigation involves only the rate from Waukesha to Merrill it is deemed best to confine the order to that rate. Unless the suggestion of the Commission is accepted, it will be necessary to hold a formal hearing in order to make the same effective.

We therefore find and determine that the charge exacted upon the aforesaid shipment is unlawful and that the lawful charge that should have been in effect and applicable to said shipment is 4.15 cts. per 100 lb. The excess charge amounts to \$13.05.

NOW, THEREFORE, IT IS ORDERED, That the respondent, the Chicago, Milwaukee & St. Paul Railway Company, cease and desist from charging a rate in excess of 4.15 cts. per 100 lb. on pulverized stone in carloads from Waukesha to Merrill.

IT IS FURTHER ORDERED, That the said respondent be and the same is hereby authorized and directed to refund to the petitioner the said excessive charge of \$13.05.

INTERNATIONAL HARVESTER CORPORATION

vs.

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Decided Sept. 14, 1914.

The petitioner alleges that the rate of $2\frac{3}{4}$ cts. per cwt., exacted by the respondent for the transportation of certain carload shipments of burnt sand from Milwaukee to Horicon, was unusual and exorbitant and asks for refund upon the basis of a rate of 50 cts. per gross ton made effective for burnt sand after the shipments in question moved. The rate charged was the rate for sand and was applied in the absence of a tariff provision for burnt sand.

Held: The rate exacted was exorbitant. Burnt sand, being a commodity of low value, cannot be moved except at a very low rate. The reasonable charge would have been 50 cts. per gross ton and refund is ordered upon this basis.

The petitioner alleges that it has a great deal of material around its various plants and especially the one located at Milwaukee, Wis., which is refuse and of no commercial value, such as slag, burnt sand, broken brick, core oven cinders, etc.; that it caused to be shipped some three hundred cars of burnt sand, which was foundry refuse from Milwaukee, Wis., to Horicon, Wis.; that at the time such shipments moved there was no tariff provision covering burnt sand and therefore it was shipped as sand, taking a rate of $2\frac{3}{4}$ cts. per 100 lb.; that subsequent to such shipments the respondent established a rate as per its supplement No. 26 to tariff 2400-G, of 50 cts. per gross ton on foundry slag and foundry refuse; that such refuse is of no practical or commercial value, and that a rate of $2\frac{3}{4}$ cts. per 100 lb. under the circumstances is unusual and exorbitant. Wherefore petitioner prays that the respondent be required to refund to it the difference between the charges exacted and the amount computed upon a basis of 50 cts. per gross ton according to the tariff now in effect.

The respondent railway company, answering the petition, admits the material allegations thereof and submits the matter to the Commission upon the pleadings without a formal hearing.

It is very apparent from the investigation that it would be impossible to ship refuse of the character here in question, which has practically no commercial value, unless a very low rate were applicable. The respondent railway company appreciates this, and has accordingly established a rate upon which the commodity may be moved.

The difference between the amount exacted of the petitioner, computed on a rate of $2\frac{3}{4}$ cts. per 100 lb., and a charge based upon the rate of 50 cts. per gross ton for the shipments in question amounts to \$748.70.

We therefore find and determine that the rate of $2\frac{3}{4}$ cts. per 100 lb. exacted of the petitioner on the aforesaid shipments of burnt sand is exorbitant, and that a reasonable rate for the transportation services rendered is 50 cts. per gross ton as provided in the tariff now in effect.

It is THEREFORE ORDERED, That the respondent railway company be and the same is hereby authorized and directed to refund to the petitioner, the International Harvester Corporation, the aforesaid sum of \$748.70.

IN RE PROPOSED EXTENSION OF THE OAK RIDGE TELEPHONE COMPANY IN THE TOWN OF MUSCODA, GRANT COUNTY, WISCONSIN.

Submitted Sept. 3, 1914. Decided Sept. 14, 1914.

The Oak Ridge Tel. Co. filed notice with the Commission of its intention to extend its telephone line in the town of Muscoda, Grant county. The Muscoda Mutual Tel. Co. objects to the proposed extension, which would have the effect of practically paralleling its lines for several miles. The purpose of the extension is in part to secure certain present subscribers of the objector, who contend that the latter's service is inadequate and its management unsatisfactory and express the belief that the Oak Ridge Tel. Co. could provide service at lower rates.

Held: Public convenience and necessity do not require the extension proposed. Deficiencies of service or inefficient management are to be remedied by proper proceedings for that purpose before the Commission.

The Oak Ridge Telephone Company served a notice upon this Commission on August 25, 1914, of a proposed extension of its line in the town of Muscoda, Grant county, Wis. Notice was served upon the Muscoda Mutual Telephone Company, which operates telephone lines in the same town, and, objection to the extension being made by the latter company, a hearing was held at the village hall in the village of Muscoda on September 3, 1914. At the hearing *R. M. Orchard* appeared as attorney for the Oak Ridge Telephone Company and *A. W. James*, secretary of the Muscoda Mutual Telephone Company, appeared in behalf of the latter company.

The applicant operates a farmers' telephone line running out of the village of Blue River, at which place a central office is maintained in connection with several other farmers' lines. Until lately the Oak Ridge Telephone Company owned a line running from the village of Blue River to the village of Muscoda. The present ownership of three miles or thereabouts of this line just before reaching the village of Muscoda seems to be involved in some obscurity, but it is clear at least that some sort of a transfer of that portion of the line to certain individuals along its route had been made. Since these individuals now propose

to connect up this portion of the line with the Oak Ridge central and Blue River over the extension dealt with in this decision, it will be regarded as though it were still a portion of the Oak Ridge line.

To understand the situation dealt with, an explanation of the routes of travel between the two communities is necessary. The main Muscoda-Blue River road runs southwest from the village of Muscoda about a mile, thence west approximately two miles to a junction with a second road that comes from Blue River over a circuitous route to the south. From this point the main road turns in a northerly direction and extends across the track of the Chicago, Milwaukee & St. Paul Railway Company. North of the track it extends westward, with some deviations, to the village of Blue River.

The line of the Oak Ridge company runs out of Blue River on the south road above mentioned and reaches the main Muscoda-Blue River highway at the junction of the two roads. From that point on to Muscoda it occupies a pole line jointly with the Muscoda Mutual Telephone Company. It is this latter portion of the line of which the ownership seems somewhat confusing.

The Muscoda Mutual Telephone Company line from Muscoda to Blue River leaves the highway at their juncture and extends nearly due west across the fields to Blue River. This course is some distance north of the existing line of the Oak Ridge Telephone Company. It is proposed by the applicant to sever this existing line at a point some distance before reaching the juncture with the Muscoda Mutual line, leaving the Blue River end of the wire in operation, and to build a new line from Blue River along the main highway north of the railroad track (and thus north of the Muscoda Mutual Telephone Company's line) following the road to the point where the present lines of the two companies meet. This proposed extension would parallel the western end of the Muscoda Mutual Telephone Company's line for a distance of several miles. The latter company at present has some subscribers connected to its line who live along the main highway that the Oak Ridge company thus intends to traverse. Some of these subscribers the Oak Ridge Telephone Company frankly opposes to alienate, and there are several other residents along that road who are not now connected with any telephone line to whom it proposes to furnish service. Several of these prospective customers of the Oak

Ridge Telephone Company appeared at the hearing and offered testimony as to their reasons for desiring the service of that company. The reasons were, variously, dissatisfaction with the service now being given by the Muscoda Mutual Telephone Company, disagreement with the present management and control of the affairs of the company, and the belief that service could be obtained more cheaply from the Oak Ridge Telephone Company than it is now being obtained from the Muscoda Mutual Telephone Company. The latter reason appeared to be the predominant one.

It is the opinion of the Commission that the proposed extension is not one which is demanded by any well defined public need or convenience. The territory that the Oak Ridge Telephone Company plans to enter is already supplied with the line of the Muscoda Mutual Telephone Company. It is true that this line does not actually traverse the highway on which the Oak Ridge company proposes to build, but is a mile or so south of that highway, yet it is so conveniently near that it must be considered as offering service to all residents along the road who wish a telephone. In fact, it has several subscribers living along that highway, as stated above, to whom it has been giving service for a considerable length of time. The service is equally at the command of their neighbors who are at present unsupplied.

The contention is made that the necessity for the new line arises from the fact that the service given by the Muscoda Mutual Telephone Company is poor. This argument has been made before the Commission in previous cases of a similar nature and has been amply covered in prior decisions. It arises from the failure to choose the proper method with which to meet conditions of inadequate service. The law provides that where service is inadequate or defective complaint may be made to this Commission and upon investigation, if the complaint is found to be justified, the Commission will issue an order requiring the defects or deficiencies in the service to be corrected. Moreover, as a justification for the extension proposed in the present application, this contention falls particularly short, because it is within the knowledge of some of those interested in this proceeding that a service complaint was lately made against the Muscoda Mutual Telephone Company by certain of its subscribers and investigation of the justification for the complaint was held, and that if the service given by that company be in-

deed defective an order will be forthcoming shortly remedying its deficiencies.

Likewise, the construction of a rival parallel line is an improper method of dealing with disaffection among stockholders of any company. If the affairs of the company are improperly and wastefully managed, a complaint may be made to this Commission in a manner similar to that employed in making complaints of service, and similar action will be taken. For situations of this character, over which the Commission may have no control, a proper remedy doubtless exists in the courts. Certainly, deserting a company in which one is a stockholder and organizing a competitive enterprise in a field already well cared for could not be regarded as a reasonable way of meeting the difficulty.

The real impelling motive in the desire for the new line seems to be the impression that service can be furnished at a rate lower than the charge made by the Muscoda Mutual Telephone Company. It was stated that the Oak Ridge Telephone Company proposes to give service for \$6 a year. Without passing on the question of the reasonableness of the rates of the Muscoda Mutual Telephone Company, it may be said that the belief that good service can be given at a rate of \$6 per year does not ordinarily find justification when all the elements entering into the cost of rural telephone service are considered. It was not brought out at the hearing what the method of estimating the cost of operation of the new line may have been but we apprehend that some of the elements were omitted in the computation of what the charge should be. It may be said, however, that a rate of \$6 per year is somewhat lower than that usually required to furnish fairly good service on even the most economically constructed farmers' telephone systems. It is of course true within certain limits that the more extensive a telephone system becomes the more exacting are the demands for good service and the more difficulties there are in giving service. The costs may therefore creep up somewhat; yet, if the moment costs pass a certain point and the rates were therefore raised to cover them, those subscribers who were satisfied with the limited and cheaper service were allowed to sever their connection and build new lines, we would have a constantly recurring disintegration of old companies and the duplication of existing lines, with the ultimate result of an intolerably unsatisfactory telephone situa-

tion, both with respect to rates charged and service rendered. The better rule seems to be to so control the construction of telephone lines as to provide for such service as reasonably meets the requirements of the community in general at rates that are fairly adequate to the situation. It was doubtless with this end in view that the legislature saw fit to pass the act which requires the Commission to determine whether or not the extension of rural telephone lines is required by the public need.

We consider that public conveniences and necessity do not require the extension proposed by the Oak Ridge Telephone Company in its present application.

RHINELANDER PAPER COMPANY

vs.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY
COMPANY.

Submitted Sept. 8, 1914. Decided Sept. 16, 1914.

The petitioner alleges: (1) that the rate of 1.35 cts. per cwt. exacted by the respondent for the transportation of certain carload shipments of pulp wood from Robbin's Railway Transfer to Rhinelander, a distance of five miles, was exorbitant and illegal, as the service performed was in the nature of switching service, on which the proper charge would have been 1 cent per cwt., subject to a minimum weight of 50,000 lb., and (2) that the charge exacted by the respondent upon the basis of the local distance tariff rate, subject to a minimum weight of 40,000 lb. per carload, for the transportation of certain shipments of pulp wood from Tripoli, McCord and Brantwood to Rhinelander was excessive for the reason that the respondent failed to furnish cars of sufficient size and capacity to carry the minimum weight.

Held: The charges complained of were unreasonable, unlawful and exorbitant. A charge of 1 ct. for the switching service, and the regular tariff rate upon the actual weight of the shipments moved from Tripoli, McCord and Brantwood would have been reasonable charges. Refund is ordered upon this basis.

The petitioner is a corporation engaged in the business of manufacturing paper and wood pulp, at Rhinelander, Wis. It alleges that from August 6 to November 26, 1913, the respondent switched a number of carloads of pulp wood for the petitioner from a point on its line of railway known as Robbin's Railway Transfer, near Rhinelander, to the petitioner's mill at Rhinelander, a distance of less than five miles; that the respondent at that time had no switching tariff in force applicable to the service rendered and that the petitioner was charged for the service in accordance with the respondent's local pulp wood distance tariff then in force at the rate of \$1.35 cts. per 100 lb., subject to a minimum weight of 50,000 lb. per carload; that the service performed was of a character usually and ordinarily regarded and charged for as switching service, and that the charge on the basis of the local pulp wood distance tariff was exorbitant and illegal; that a proper rate of charge would have been 1 ct. per

100 lb. subject to a minimum weight of 50,000 lb. per carload and that the total amount actually charged exceeded the amount of the total charge computed at the rate last named by the sum of \$630.53.

The petitioner further alleges that from and after January 16, 1914, the respondent transported for it 204 carloads of pulp wood from Tripoli, Spur 187, McCord, Spur 182, and Brantwood, all in the state of Wisconsin, to Rhinelander, Wis., and charged and was paid therefor in accordance with the respondent's legal pulp wood distance tariff then in force and subject to a minimum weight of 40,000 lb. per carload; that the respondent failed and neglected to furnish cars of the size and capacity necessary to carry the minimum weight of 40,000 lb. as prescribed in the tariff; that the petitioner is entitled to be charged for the said shipments on the actual weight and at the tariff rate per 100 lb.; and that the charge made exceeded the rightful charge, computed as stated, by the sum of \$264.31. The petitioner therefore prays that the railway company be authorized to refund to it the amount charged in excess of the proper charges upon the shipments made.

A hearing was held at the office of the Railroad Commission in the city of Madison, on September 8, 1914. *Walter Drew* and *Henry Braeger* appeared for the petitioner, and *E. G. Clark* and *A. H. Lossow* for the respondent.

The respondent admitted the facts as stated in the petition and indicated its willingness to make reparation if authorized to do so. It appears that the movement of the pulp wood as set forth in the first allegation of the petition was a service of a character usually and ordinarily regarded in railway practice as switching service. To charge for the service, therefore, on the basis of the legal pulp wood distance tariff was unreasonable. The charge made for the entire minimum weight of 40,000 lb. upon those shipments in which it was impossible to include a quantity of lumber equal to the prescribed weight was likewise erroneous. The complainant was entitled to be charged for such shipments upon the actual weight and tariff at the tariff rate per 100 lb.

We find and determine that the charge exacted of the petitioner by the respondent for switching service and the charge for shipments of pulp wood in accordance with the tariff minimum of 40,000 lb., whereas the actual weight of such shipments was

less than said tariff minimum, was unreasonable, unlawful and exorbitant. The petitioner is therefore entitled to a refund of 0.35 cts. per 100 lb., subject to a minimum weight of 50,000 lb. on each shipment of pulp wood switched as above stated and for which the unlawful and unreasonable charge was made, being a total sum of \$630.53; and to a refund of the amount by which the charge exacted and collected of the petitioner upon shipments of pulp wood in which it was impossible to include the minimum weight of 40,000 lb. exceeded the amount that would have been chargeable thereon at the tariff rates, and upon the actual weight of said shipments, being the sum of \$264.31.

IT IS THEREFORE ORDERED, That the Minneapolis, St. Paul & Sault Ste. Marie Railway Company be and the same is hereby authorized to refund to the Rhinelander Paper Company \$894.84, such being the sum of the unlawful charges made in the instances dealt with in the above decision.

DAVID C. JONES

vs.

WISCONSIN RAILWAY, LIGHT AND POWER COMPANY.

Submitted July 28, 1914. Decided Sept. 16, 1914.

This is a rehearing of matters involved in an order issued on June 2, 1914, 14 W. R. C. R. 518, requiring the respondent to operate its cars over that portion of its Oak Hill-Cemetery line from 18th street to 25th street on La Crosse street in the city of La Crosse on the same schedule as that on which its cars are or may be operated on the remainder of its Oak Hill-Cemetery line. The respondent alleges in effect that the provisions of an ordinance which was adopted by the city of La Crosse in 1901 and submitted in evidence at the rehearing relieve it from the duty of complying with the terms of this order. The ordinance in question provides that the respondent shall not be required to operate its cars on La Crosse street east of 15½ street to exceed five months in each year and that it shall be required to operate cars then only when in its judgment the revenue derived therefrom will warrant it in doing so.

Held: Although prior to the enactment of the Railroad Commission Law the power of service regulation was vested in the common council and the regulative ordinance of 1901 was a valid exercise of that power, jurisdiction in the matter was subsequently conferred on the Commission and any prior act of the common council which conflicts with the exercise of the proper authority by the Commission cannot stand. The company has assumed the duty of rendering adequate street car service on the portion of the line under consideration and it is incumbent upon the Commission, upon complaint, to determine what constitutes adequate service and by order to require it to be rendered. In view, however, of the fact that the respondent would undoubtedly have refused to lay the track in question if the service requirements of the ordinance of 1893 had not been limited by the ordinance of 1901, it would be inequitable to require the respondent to supply service on this extension in addition to that contemplated by the ordinance of 1901 unless there is reason to believe that such additional operation will not result in a serious financial loss. As the evidence indicates conclusively that the operation of even a minimum service throughout the year on the track in question as prayed for would inevitably result in a considerable loss, and as there is little probability that such operation would be profitable for several years to come, the former order should be modified by restricting its operation to five months during each year.

The former order is rescinded and

THE RESPONDENT IS ORDERED To operate its cars on La Crosse street from 18th street to 25th street on the same schedule as that on which its cars are or may be operated on the remainder of its Oak Hill-Cemetery line during the five months from May to September, inclusive, each year.

An order was issued in the above entitled matter on June 2, 1914, (14 W. R. C. R. 518) requiring the Wisconsin Railway, Light & Power Company to operate its cars over that portion of its Oak Hill-Cemetery line from Eighteenth street to Twenty-fifth street on La Crosse street in the city of La Crosse on the same schedule under which its cars are or may be operated on the remainder of its Oak Hill-Cemetery line.

On July 13, 1914, respondent filed an application for a rehearing alleging among other things that the Commission based its former order upon a contractual relation between the city and the respondent which upon subsequent investigation has been shown to be erroneous. A rehearing was duly ordered and held at Madison on July 28, 1914, *David C. Jones* appearing in his own behalf and *George H. Gordon* for the respondent.

Prior to the issuance of our former order the respondent was asked to furnish the Commission with a copy of the franchise under which it operates its Oak Hill-Cemetery line, and in response to this request it submitted a copy of an ordinance passed on February 16, 1893, the salient portion of which granted the respondent's predecessor

“* * * the exclusive right to lay down, build, construct, use, operate and repair a single track electric railway * * * running thence by and along Forest avenue to La Crosse street, and thence on La Crosse street to such point as said company may determine”.

At the rehearing a subsequent ordinance, passed on July 5, 1901, was introduced, which is as follows:

“Whereas, the La Crosse City Railway Company has by virtue of said ordinance Number 215, passed by the Common Council February 16, 1893, the right and privilege of extending its line of railway on La Crosse street to Losey boulevard, and whereas the members of the La Crosse Country Club and others desired said company to operate a car on said La Crosse street from 15½ street to Losey boulevard during five months of the year,
“Now therefore, *be it Resolved:*

“That the La Crosse City Railway Company be and they are hereby authorized to extend their said line of railway from its present terminus on La Crosse street to Losey boulevard.

“Resolved further, that said La Crosse City Railway Company shall not be required to operate its cars on said La Crosse street east of 15½ street to exceed five months in each year, and then only when in their judgment the revenue derived therefrom will warrant them in so doing.

“Resolved further, that the privilege of laying and maintaining such tracks so granted be subject to the pleasure of the Common Council of the city of La Crosse.”

Counsel argues that the respondent is not operating under the permissive franchise of 1893, but rather under the provisions of the ordinance of 1901 which contemplated only the limited service therein specified. The claim is made that if the city regards this service as inadequate, its only recourse is to order the removal of the track, since the undertaking of the respondent extends only to the operation of the specified service.

The company was authorized to extend its line on La Crosse street by the ordinance of 1893; and the subsequent ordinance of 1901, quoted above, is apparently an attempt on the part of the common council to regulate the service to be rendered upon such an extension. Although the portion of the line involved in this proceeding was constructed subject to the latter ordinance, it is nevertheless a part of the system of street railway lines upon which the respondent is bound, under the common law and the Railroad Commission Law declaratory thereof, to render adequate service. Prior to the enactment of the Railroad Commission Law the power of service regulation was vested in the common council, and the regulative ordinance of 1901 was a valid exercise of that power. However, jurisdiction in the matter was subsequently conferred upon the Railroad Commission and any prior act of the common council of its proper authority which conflicts with the exercise by the Railroad Commission cannot stand. The company has assumed the duty of rendering adequate street car service on the portion of the line under consideration, and it is incumbent upon the Railroad Commission, upon complaint, to determine what constitutes adequate service and by order to require its operation.

However, the respondent laid the track in question to supply a special service desired by the city authorities, believing that by so doing it assumed the duty of rendering only the limited service specified in the ordinance of 1901. If it had realized that the regulative ordinance would later be made ineffective by the enactment of the Railroad Commission Law, and that its act would result in an acceptance of the conditions of the ordinance of 1893 with reference to the track so constructed, there can be little doubt that the respondent would have refused to make the extension. In view of this condition, it would be in-

equitable, in our judgment, to require the respondent to supply service on this extension in addition to that contemplated by the ordinance of 1901, unless there is reason to believe that such additional operation will not result in a serious financial loss. The traffic data submitted at the hearings and the data gathered by our engineering staff indicate conclusively that the operation of even a minimum service throughout the year on the track in question as prayed for would inevitably result in a considerable loss, and that there is little probability that such operation would be profitable for several years to come. Moreover, to extend the schedule now in force on other parts of the Oak Hill-Cemetery line during the five months of summer operation would necessitate an additional operating cost, and it is a matter of some doubt whether the additional traffic to be secured thereby would be sufficient to make the service remunerative. However, the respondent is under obligation to render street car service during the months when it operates, and such service is not adequate if no cars pass at hours convenient for the residents of the district served. We therefore feel that the operation of cars on the track in question under the schedule now in force on other portions of the line is justified by the equities in the case. If traffic conditions in this section should change so that a minimum service during the winter months can be rendered without loss to the company, the Commission will not hesitate to require its operation.

Our former order herein is therefore rescinded hereby and in lieu thereof

IT IS ORDERED, That the respondent, the Wisconsin Railway, Light and Power Company, operate its cars over that portion of its Oak Hill-Cemetery line from Eighteenth street to Twenty-fifth street on La Crosse street in the city of La Crosse under the same schedule under which its cars are or may be operated on the remainder of its Oak Hill-Cemetery line during five months each year, namely during May, June, July, August, and September.

OSHKOSH EXCELSIOR MANUFACTURING COMPANY

vs.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY
COMPANY.

Decided Sept. 16, 1914.

The petitioner alleges that the charges exacted by the respondent for the transportation of certain carload shipments of bolts from various points in Wisconsin to Oshkosh and Menasha were excessive, for the reason that they were assessed on the basis of minimum weights which were greater than the carrying capacity of the cars in which the shipments were made, and asks for refund on the basis of charges calculated upon the actual weight with a minimum loading requirement of 35,000 lb. Since the shipments moved the respondent has established the loading requirement mentioned for shipments loaded in box or stock cars to the full visible capacity. The respondent is willing to make refund.

Held: The charges exacted were unusual and exorbitant. The reasonable charges are those since established by the respondent. Refund is ordered upon this basis.

The petitioner alleges that on and between February 1 and November 31, 1913, it shipped forty-seven carloads of bolts over the respondent's lines from various points in Wisconsin to Oshkosh and Menasha; that charges were assessed on such shipments on the basis of minimum weights shown in respondent's tariff G. F. D. No. 17183, which minimum weights were greater than the carrying capacity of the cars in which the shipments were made; that such charges were excessive to the extent that they exceed the charges based on the actual weight with a minimum loading requirement of 35,000 lb.; that the excess charges on said shipments amount to \$124.31, which the petitioner prays that the respondent company be authorized to refund to it.

The respondent railway company admits all the allegations of the complaint and joins in the prayer thereof.

The claim was submitted upon the pleadings, schedules and documents on file.

It appears from the investigation that the marked capacity of each car employed in the transportation of the bolts under consideration was in excess of the actual weight placed in the

car, although the cars were loaded to their full carrying capacity. The respondent railway company, realizing the situation, published a tariff, G. F. D. 17895, effective February 2, 1914, providing a minimum weight on shipments loaded in box or stock cars, when loaded to full visible capacity, of 35,000 lb.

If the shipments in question had been charged at actual weight on all cars loaded beyond such minimum requirement, and at 35,000 lb. on all cars loaded at or less than such minimum requirement, the total charges would have amounted to \$124.31 less than was actually exacted from and paid by the petitioner.

“The proper principle to govern in fixing a minimum loading for a car, when used in the transportation of any commodity, is the ascertainment of the amount of the commodity that can be loaded when ordinary care is exercised and the establishing of the minimum within such limit.” *Merrill Woodenware Co. v. C. M. & St. P. R. Co.* 1908, 3 W. R. C. R. 54, 60.

Under the circumstances we find and determine that the charges exacted of the petitioner on the aforesaid shipments are unusual and exorbitant, and that the reasonable charges are those established in respondent's tariff G. F. D. No. 17895.

NOW, THEREFORE, IT IS ORDERED, That the Minneapolis, St. Paul & Sault Ste. Marie Railway Company be and the same is hereby authorized and directed to refund to the petitioner the aforesaid sum of \$124.31.

IN RE APPLICATION OF THE GLIDDEN TELEPHONE COMPANY
FOR AUTHORITY TO INCREASE RATES.

Submitted Sept. 16, 1914. Decided Sept. 17, 1914.

Application is made by the Glidden Tel. Co. for authority to increase the rates at its Glidden exchange. The applicant proposes to establish night service and asks for the increase to cover the additional cost of this service.

Held: Although it is impossible to measure the exact extent to which expenses will be increased by the rendering of night service, the proposed increase appears to be reasonable and the applicant is authorized to put it into effect.

Application in this matter was filed July 6, 1914. The applicant is a telephone utility engaged in the operation of telephone exchanges in Park Falls, Glidden and Butternut, Wis., and having its principal place of business at Park Falls. The application sets forth that the lawful rates of the applicant now in effect at its Glidden exchange are as follows:

\$1.50 per month for business telephones.

\$1.00 per month for residence telephones.

Service is given from 7 a. m. to 9 p. m. except on Sundays and holidays. On those days service is given for five hours only. Applicant states that subscribers wish continuous service and are willing to pay the additional cost of receiving such service. Authority is therefore asked to put into effect a rate of \$2.00 per month for business phones, and \$1.25 per month for residence phones.

Hearing was set for September 16, 1914, at Madison, Wis. A. Wood appeared for the applicant. No appearance was made in opposition.

The report of the applicant for its Glidden exchange for the year ended June 30, 1913, contains a statement of operating expenses which is so much at variance with what the experience of the Commission has shown to be the usual level of expenses for the smaller telephone companies that it is doubtful if any use can be made of the statement for the purposes of this case. It ap-

appears from this report, however, that the applicant was conducting in the village of Glidden on June 30, 1913, a telephone exchange serving 31 business subscribers and 26 residence subscribers, all on single party lines. It also appears from the report that all lines are metallic. Because of the fact that all service is furnished over single party lines and the fact that all lines are metallic, a comparison of the expenses of other small companies serving from 50 to 100 subscribers with the expenses of the Glidden Telephone Company at its Glidden exchange would hardly be a fair basis for estimating the normal expenses of the applicant, for the reason that relatively few of the small companies furnish a service similar to that in question.

There can be no question but that twenty-four hour service will involve some added expense. The exact extent of this we are not in a position to measure. An increase as asked for by the company, amounting to \$6.00 per year for each business phone and \$3.00 per year for each residence phone, would amount in total to about \$264 per year. Whether the added cost of night service will be as great as this will, of course, depend upon the extent to which the night service is used and the conditions under which an operator can be employed. These are facts which we do not have before us at this time. We do not believe, however, that a company as small as this can afford to give continuous service over single party metallic lines at the rates charged at present, and from such data as we have it appears that the increase asked for by the company is a reasonable one. In view of the fact that the furnishing of continuous service must be contingent upon an increase in the rates and that continuous service appears to be demanded by subscribers, we think that the application in this case should be granted.

IT IS THEREFORE ORDERED, That the applicant, the Glidden Telephone Company, be and the same hereby is authorized to discontinue its schedule of rates for single party service at its Glidden exchange and to substitute therefor a rate of \$2.00 per month for single party business phones and a rate of \$1.25 per month for single party residence phones.

IN RE APPLICATION OF THE MINERAL POINT TELEPHONE
COMPANY FOR AUTHORITY TO INCREASE RATES.

Submitted Nov. 18, 1913. Decided Sept. 17, 1914.

Application is made by the Mineral Point Tel. Co. for authority to increase its rates for local service within the city of Mineral Point on the ground that the present earnings are insufficient to meet the requirements of the business. The accounts of the utility are confused and an audit was made for the purpose of ascertaining the revenues and expenses as closely as is possible under the circumstances. The results of the audit show that the utility is receiving a net return of 7.25 per cent upon a valuation equal to the cost new.

Held: From the facts as shown it does not appear that the applicant should be authorized to increase rates at this time. When its records are kept in such manner that the information needed for passing upon an increase of rates can be procured, the matter may again be submitted. The application is dismissed.

This application was filed December 30, 1912. Applicant asks for authority to increase its rates for local service within the city of Mineral Point, increases to be as follows:

	Present monthly rate.	Proposed monthly rates.	
		Gross	Net.
One party business.....	\$2 00	\$2 50	\$2 25
One party residence.....	1 00	1 50	1 25

Other rates are referred to in the application but the rates for single party service are the only ones which the company seeks to change.

The application also sets forth in brief the reasons of the company for asking for authority to increase rates. These are that the earnings are now inadequate to meet the requirements of the business and that the increased labor costs will make this condition worse.

Hearing was held at Madison, November 18, 1913. *N. H.*

Snow and *W. S. Pedley* appeared for the applicant and no appearances were entered in opposition.

The only fact brought out at the hearing which need be noted here, is that the depreciation of open wire in a part of the city is unusually rapid, because of the action of the fumes from the plant of the Mineral Point Zinc Company where zinc ores are roasted. Because of this condition an allowance for depreciation somewhat higher than the Commission has generally found adequate must be made in this case. From such facts as are available it appears that an allowance of very nearly 10 per cent must be made for depreciation.

The annual report of the Mineral Point Telephone Company for the year ended June 30, 1913, shows operating revenues as follows:

Public exchange service.....	\$8,035.95
Switching service	773.45
Wisconsin Tel. Co. toll business.....	391.68
New Union Tel. Co.....	349.55
Farmers' lines	215.85
	<hr/>
	\$9,766.48

This classification of revenues as kept by the company is not sufficiently clear to enable us to identify certain portions of the revenue, such as the revenue from toll charges made on messages going^v onto rural lines.

A recent order of this Commission, issued August 31, 1914, (15 W. R. & C. R. 70) in connection with an application of the Mineral Point Telephone Company for authority to increase its rates for switching service, changed the conditions under which message rates shall be applied to messages going onto rural lines in such a way as will materially reduce the revenue from such business.

It is also a matter of record with the Commission, although not shown by the testimony in this proceeding, that a number of the rural lines for which the Mineral Point Telephone Company formerly performed switching service, have recently installed a switchboard and are no longer connected to the board of the Mineral Point company. The effect of these changes will be to reduce the revenues below what they would otherwise have been and if the 1912-1913 business had been done on the present basis the revenues for that year would have been much less than the amount reported, and probably not more than \$9,200.

Because it appeared that there were errors in the company's statement of operating expenses, the Commission had an examination of the records of the company made by a member of its accounting staff. His examination indicated that the expenses of the utility for the year ended June 30, 1913, were \$5,207.59, exclusive of taxes, depreciation and interest. The corresponding item reported by the company was \$6,465.44. In this connection it should be said that the records kept by the utility were not such as would enable the Commission's accountant to distinguish expenses of operation and maintenance absolutely from expenses of construction or renewals. Because of this condition it is quite possible that our accountant's figures are not entirely accurate and that if the records of the utility were such as would make an exact audit possible, expenses would be found to be somewhat different. Under the circumstances as they exist, however, there seems to be but one course to take. The result of the Commission's audit must be accepted until the company puts itself in a position to show positively and unmistakably the character of all obligations incurred or disbursements made.

With revenues of approximately \$9,200 to be considered, and expenses of \$5,207.59, or, including taxes, of \$5,453.74, the return for depreciation and interest would be about \$3,746.26 per year.

An allowance of 10 per cent for depreciation upon the depreciable portion of the property would be equivalent to not quite 9 per cent of the total plant, excluding materials and supplies.

The cost new, as shown by the Commission's valuation of October 1, 1913, was \$23,709 and the present value \$14,750. Exclusive of materials and supplies, these values were, respectively, \$22,515 and \$13,685.

An allowance of 9 per cent of the cost new for depreciation would be \$2,026.35, leaving \$1,719.91 for interest. This would be equivalent to a return of about 7.25 per cent upon a valuation equal to the cost new.

From what seem to be the facts, it does not appear that any increase in rates should be authorized at this time. If the utility's records are kept so that conditions can be definitely determined, it will be possible to obtain the needed information for passing upon this matter at some future time. Until then the application must be denied.

The application is therefore dismissed.

DIAMOND GROVE TELEPHONE COMPANY

vs.

MINERAL POINT TELEPHONE COMPANY.

Submitted Feb. 17, 1914. Decided Sept. 19, 1914.

The petitioner asks that physical connection be ordered between its line running from Mifflin to the city limits of Mineral Point and the lines of the respondent on the basis of free exchange of service between the two companies. Up to a few years ago the petitioner had a direct line extending from Mifflin to Mineral Point and connected at Mineral Point with the respondent's telephone system. Part of the subscribers on this line were connected directly to the Mineral Point telephone exchange, and part of them had to have their messages routed through a switch which was placed upon the line between Mifflin and Mineral Point. It appears that at the present time this line has been cut by the respondent between Mifflin and Mineral Point, leaving about eight subscribers so situated that they can receive service directly from the respondent. Subscribers between the point where the line is cut and Mifflin have to have their messages routed through the Powell central in order to reach Mineral Point. The parties connected to the end of the petitioner's line, which is still connected to the Mineral Point central, expressed their intention of building a line of their own to Mineral Point and giving up the line of the Diamond Grove Tel. Co. entirely. The actual dispute in the case seems to be between those of the petitioner's subscribers who are able to call Mineral Point directly and those on the Mifflin end of the line, who have to go through the Powell switch in order to receive Mineral Point service.

Held: An action against the respondent asking for physical connection is not warranted at this time. Nothing can be done toward securing connection between the two companies until the petitioner settles its own disputes and has its line or lines built to the city limits of Mineral Point ready to connect with the petitioner in accordance with the terms of the order issued June 7, 1912, *In re Appl. Mineral Point Tel. Co. for Authority to Increase its Rates for Switching Service*, 9 W. R. C. R. 285, 304. The petition is dismissed.

The respondent would be within its rights in treating this application for service as the application of an entirely new rural line and insisting that the requirements for a full metallic line with a limited number of subscribers and other requirements set forth in the order cited above, be met by the petitioner's line before service is furnished. If the subscribers on the Mineral Point end of the line carry out their intention of building their own line to Mineral Point, the respondent must furnish them service provided they have a metallic line with a limited number of subscribers. If the parties remaining on the Diamond

Grove line between Mifflin and Mineral Point desire connection with Mineral Point, it will be possible for them to obtain that connection by establishing a line upon the proper basis and with a proper number of subscribers to the city limits of Mineral Point.

The petitioner in this matter is an incorporated telephone utility operating in the territory between Mifflin and Mineral Point, Wis. The petitioner formerly had connection with the switchboard of the Mineral Point Telephone Company as line No. 11 on the Mineral Point switchboard. The petition sets forth that, some three years ago, fire practically destroyed the connection and the Mineral Point Telephone Company cut the connection formerly existing between the companies; and that the Diamond Grove Telephone Company is willing and ready to place poles and put up any and all lines necessary to make adequate provision for physical connection with the Mineral Point Telephone Company. The petitioner therefore asks for an order for physical connection between its line running from Mifflin to the city limits of Mineral Point and the lines of the Mineral Point Telephone Company on the basis of free exchange of service between said companies.

Hearing in this matter was held February 17, 1914, at Madison. For the Diamond Grove Telephone Company appearances were made by *Thomas Clark* and *Nicholas Kieffer*. The Mineral Point Telephone Company was represented by *N. H. Snow* and *W. S. Pedley*.

From the facts developed at the hearing, it appears that the situation existing between the two companies is somewhat different than the petition would indicate. It appears that up to a few years ago, there was a direct line of the Diamond Grove Telephone Company extending from Mifflin to Mineral Point and connected at Mineral Point with the telephone system of the Mineral Point Telephone Company. Part of the subscribers on this line were connected directly to the Mineral Point telephone exchange, and part of them had to have their messages routed through a switch which was placed upon the line between Mifflin and Mineral Point. It appears that at the present time this line has been cut by the Mineral Point Telephone Company between Mifflin and Mineral Point, leaving about eight subscribers so situated that they can receive service directly from the Mineral Point company. Subscribers between the point where the

line is cut and Mifflin have to have their messages routed through the Powell central in order to reach Mineral Point. The parties connected to the end of the Diamond Grove line, which is still connected to the Mineral Point central, expressed their intention of building a line of their own to Mineral Point and giving up the line of the Diamond Grove Telephone Company entirely.

The actual dispute in this case seems to be between those subscribers of the Diamond Grove Telephone Company who are able to call Mineral Point directly and those on the Mifflin end of the line, who have to go through the Powell switch in order to receive Mineral Point service. On June 7, 1912, (9 W. R. C. R. 285, 304) the Commission issued an order in the matter of the application of the Mineral Point Telephone Company for authority to increase its rates for switching service, specifying that the switching rate should be \$2.00 per year for each telephone directly connected to the Mineral Point exchange and providing that the Mineral Point Telephone Company need not furnish switching service to any additional lines except under certain specified conditions, among which were that the new lines should be full metallic and with a limited number of subscribers. While the actual intent of the Diamond Grove Telephone company does not seem to be very clearly explained, their purpose apparently is to have their line made continuous between Mifflin and Mineral Point and service furnished by the Mineral Point exchange. Inasmuch as the cutting of the line between Mifflin and Mineral Point appears to have arisen out of the dispute between the Diamond Grove subscribers, and possibly to some extent because of the neglect of that company in keeping its line in proper shape, it does not appear that an action against the Mineral Point Telephone Company asking for physical connection is warranted at this time. We believe that the Mineral Point Telephone Company would be within its rights in treating this application for service as the application of an entirely new rural line and insisting that the requirements made in the Commission's order above referred to be met by this line before service is furnished. If the subscribers on the Mineral Point end of the line carry out their intention of building their own line to Mineral Point, the Mineral Point Telephone Company must furnish them service, provided they have a metallic line with a limited number of subscribers. The disposition of the part of the Diamond Grove

line surrendered by these subscribers is a matter which concerns the Diamond Grove Telephone Company alone, and is not a proper matter for determination in this case. If the parties remaining on the Diamond Grove line between Mifflin and Mineral Point, who would be the parties on that line who are not now receiving direct service from Mineral Point, desire connection with Mineral Point, it will be possible for them to obtain that connection by establishing a line upon the proper basis and with a proper number of subscribers to the city limits of Mineral Point. When this is done, the Mineral Point Telephone Company must furnish them connection, but until the Diamond Grove Telephone Company settles its own disputes and has its line or lines built to the city limits of Mineral Point ready to connect with the Mineral Point Telephone Company, in accordance with the terms of the Commission's order of June 7, 1912, cited above, nothing can be done toward securing connection between these companies. Until such time, any action to compel the Mineral Point Telephone Company to furnish switching service will be premature and when the Diamond Grove Company fulfills the requirements made by the Commission's order above referred to, the Mineral Point Telephone Company should hold itself in readiness to furnish service without any further proceeding before the Commission.

As matters stand at present, no action can be taken. The case is therefore dismissed.

IN RE APPLICATION OF THE MUNICIPAL ELECTRIC UTILITY
OF SUN PRAIRIE FOR AUTHORITY TO ADJUST RATES.

I. C. NEWBY ET AL.

vs.

SUN PRARIE MUNICIPAL ELECTRIC PLANT.

Submitted March 26, 1914. Decided Sept. 21, 1914.

Two proceedings are involved in this case: (1) the Sun Prairie Municipal Electric Utility applies for an adjustment of rates, on the ground that its customers consider the present rates exorbitant and that it would be able to secure more business by a reduction of the present charges, and (2) complaint is filed by certain customers of the utility that its rates for electric service are discriminatory, that some of them do not conform to the rates as filed with the Commission, and that certain customers are furnished service at flat rates, while others are served through meters and charged on that basis, and that the revenue derived from the power business of the utility does not equal the cost of generation. The two proceedings are considered together. The utility appears to be placing all consumers on the meter basis as rapidly as possible and the complaint with respect to the use of flat rates therefore need not be considered. A valuation of the property of the utility was made and the revenues and expenses were investigated. The expenses were apportioned among the various classes of service and further apportioned between demand and output expenses. The utility has a number of power consumers, including the municipal water plant, but has no separate rates for this service.

As request is made for an interest allowance only large enough to pay interest on the bonded indebtedness of the plant, 5 per cent of the fair value of the plant is used in the computations as a reasonable rate of return.

Held: The rates of the utility should be revised. The utility is ordered to put into effect a schedule of rates fixed by the Commission.

An application for an adjustment of rates was filed by the Sun Prairie Municipal Electric Utility on February 16, 1914. It stated that the consumers considered the present rates too high, and that by a decrease in rates the plant would be able to get new customers as well as to sell more current to present customers for purposes of cooking and heating.

A complaint against the above utility was filed by I. C. Newby and others on February 18, 1914. It alleges that the rates applied by the respondent were discriminatory in that some of the larger lighting customers were furnished service under

flat rates, while other customers having smaller installations were furnished service through meters; that certain customers were given preferential rates which do not conform to the rates as filed with the Railroad Commission, and further that it appeared that the revenue derived from the power business is insufficient to meet the extra expense of operating the generator during the daylight hours.

A hearing was held March 26, 1914, at the office of the Commission in Madison. The following appearances were entered: *I. C. Newby*, *A. Kleiner*, *A. Reuth* and *Chas. Simpson*, petitioners; and *H. E. Ellingson*, superintendent of the lighting plant; *W. F. Miller*, secretary of the electric light board; *Albert H. Fuhrman*, president of the village, and *F. I. Connors*, village clerk.

The testimony dealt primarily with the causes of the complaint and tended to show that discrimination was due to the fact that certain consumers were placed on flat rates which were not high enough to meet the cost of supplying current and that certain other consumers were given preferential rates which were not authorized by or placed on file with this Commission. It appears that the utility is installing meters as fast as they can be procured, and at the present time has almost all of the consumers on a meter basis. This will eliminate one phase of the complaint. A change in the type of the rate schedule to the form generally ordered by the Commission was requested. This will bring the charges for all the different kinds of service closer to the cost, thereby placing all consumers and services on an equitable basis.

The utility began selling electricity October 1, 1910. The rate schedule under which it has been operating is as follows:

COMMERCIAL LIGHTING.

Meter Rates:

Minimum monthly bill, 50 cts.

First	5 kw-hr.	18	cts.	per	kw-hr.
Next	5 to 10 kw-hr.	17	"	"	"
Next	10 to 20 kw-hr.	14	"	"	"
Next	20 to 35 kw-hr.	12	"	"	"
Next	35 to 50 kw-hr.	11	"	"	"
Next	50 to 70 kw-hr.	10	"	"	"
Next	70 to 100 kw-hr.	9	"	"	"
Over	100 kw-hr.	8	"	"	"
Churches & Public Bldgs.		20	"	"	"

Exceptions: City Hall, 0 to 15 kw-hr., 18 cts.; 0 to 26 kw-hr., 17 cts.; 0 to 52 kw-hr., 16 cts.; 0 to 72 kw-hr., 15 cts.; over 72 kw-hr., 12 cts.

Canning factory and tobacco warehouses or similar class using large amount of light for short time of year, 18 cts. per kw-hr.

Catholic church, 25 cts. per kw-hr.; minimum bill 75 cts. per month.

Flat Rates:

Arcs \$8.00 per month.

16 c-p. incandescent carbon lamps \$1.10 per month.

32 " " " " " 1.75 " "

A valuation of the physical property of the utility as of March 1, 1914, was made by the Commission, a summary of which follows:

TABLE I.

Classification	Cost new	Present value
Land	\$200	\$200
Transmission and distribution	5,795	4,266
Buildings and miscellaneous structures.....	2,892	2,629
Plant equipment	12,216	10,473
General equipment	499	330
Total	\$21,602	\$17,898
Add 12 per cent (see note below).....	2,592	2,148
Total	\$24,194	\$20,046
Materials and supplies.....	2,802	2,580
Total	\$26,996	\$22,626

NOTE:—Addition of 12 per cent to cover engineering, superintendence, interest during construction, contingencies, etc.

The next table shows the balance sheet as it appears in the corrected annual report of the utility for the year ending June 30, 1913:

TABLE II.

Assets.		Liabilities.	
Property and plant.....	\$24,045 70	Funded debt.....	\$21,000 00
Cash	389 03	City equity.....	5,161 47
Materials and supplies.....	2,114 77	Surplus.....	388 03
Total	\$26,549 50	Total	\$26,549 50

The original cost of the property as shown in the above balance sheet was \$24,045.70, which is practically the same as the cost new, excluding materials and supplies, of \$24,194 shown in the summary of the physical appraisal. The present value, including materials and supplies, according to the appraisal is \$22,626. The bonded debt of the plant is \$21,000, and the city equity is \$5,161.47. Taking all the facts and circumstances into consideration, it seems that the fair value of this utility for rate-making purposes is about \$23,000. This figure has been used in our computations.

The next table shows the income account for the year ending June 30, 1913. The figures for 1914 were not available when this case was worked out. There is, however, so little difference in the two years that our conclusions would not be materially changed by basing our computations on the year 1914 instead of 1913.

TABLE III.

INCOME ACCOUNT.

Year ending June 30, 1913.

OPERATING REVENUES	
Commercial lighting earnings.....	\$4,185.10
Municipal contract lighting earnings.....	1,200.00
Commercial power earnings.....	461.82
Municipal power earnings.....	1,324.68
	<u>\$7,171.60</u>
OPERATING EXPENSES	
Steam power generation.....	\$4,365.00
Storage	315.51
Distribution	310.97
Consumption (municipal contract lighting).....	122.77
Consumption (commercial)	218.62
Commercial	244.78
General	74.78
Undistributed	106.44
Electric power pumping.....	52.03
	<u>\$5,810.90</u>
Total of above expenses.....	\$5,810.90
Net operating revenue.....	\$1,360.70
Non-operating revenue	340.58
	<u>\$1,701.28</u>
Gross income	\$1,701.28

A comparison of the unit operating expenses of this plant with those of other plants of a similar size shows that the expenses of this plant for 1913 are normal, consequently no adjustments are necessary.

In determining the amount to be set aside for depreciation, a computation was made showing that the depreciable property of the company has an average life of 17.5 years, and that \$963 placed each year in a fund bearing 4 per cent interest would be sufficient to replace this property as it is worn out. An allowance of 1 per cent of the fair value, or \$230, should be made for taxes in order to maintain an equitable relationship between consumers and taxpayers. In this instance, as a request was made for an interest allowance only large enough to pay interest on the bonded indebtedness of the plant, 5 per cent of the fair value has been used in our computations as a reasonable rate of return.

The operating expenses and the fixed charges, divided between the different classes of consumers, are summarized in the next table:

TABLE V.

	Total.	Commer- cial lighting.	Commer- cial power.	Municipal street lighting.	Municipal power.
Operating expenses.....	\$5,810 90	\$3,110 42	\$832 07	\$803 81	\$1,064 60
Interest, depreciation and taxes.....	2,343 00	1,254 21	335 52	324 04	429 23
Total.....	\$8,153 90	\$4,364 63	\$1,167 59	\$1,127 85	\$1,493 83

The present commercial lighting rate as stated above takes into consideration only the amount of current actually consumed. It is proposed to install a rate which takes into consideration also the connected load of the consumer. To that end the analysis shown in the following table was made:

TABLE VI.
ANALYSIS OF INSTALLATIONS AND CURRENT SOLD TO COMMERCIAL LIGHTING CONSUMERS.
SUN PRAIRIE MUNICIPAL ELECTRIC PLANT.

Rate class.	Consumer class.	No. consumers.	INSTALLATION IN KILOWATTS.			KILOWATT HOURS SOLD 1913.						Total.

	Schools.....	2	6.68	3.68	55	543.2	75.0	179.7	25.0	17.5	722.9
	Hotels.....	2	2.15	1.18	55	424.8	32.0	670.7	50.5	233.5	17.5	1,329.0
	Blacksmiths.....	4	1.38	.76	55	198.1	84.5	36.7	15.5	234.8
	Industry.....	6	8.26	4.55	55	1,281.2	83.0	207.4	13.4	57.5	3.6	1,546.1
	Barns and garages.....	5	3.27	1.79	55	519.2	57.5	332.5	36.9	50.6	5.6	902.3
	Public buildings.....	2	2.47	1.36	55	372.2	48.5	301.1	39.2	92.0	12.3	765.3
	Total "C".....	25	30.54	16.81	55	3,899.6	64.1	1,733.0	28.5	433.6	7.4	6,066.2
	Grand total.....	167	134.07	74.33	55.3	19,681.0	56.1	13,497.3	38.4	1,892.9	5.5	35,071.2

The apportioning of expenses between demand and output, as is ordinarily done, makes possible the presentation of the cost in such a manner as to show the decrease in cost with the increasing number of hours the plant is operated. From the above table it will be seen that the active load for commercial lighting is 74.33 kilowatts. This becomes the divisor of the demand cost. The consumption of this class amounts to 35,071 kilowatt-hours, which figure is used as the divisor of the output costs. Reducing the units obtained to the basis of varying hours daily operation of the plant, we have the following table of costs for the commercial lighting class:

TABLE VII.

	Demand	Output	Total			
1 hrs. daily	use = 9.75	+ 5.13	= 14.88	cts. per kw-hr.		
2 " "	" = 4.88	+ 5.13	= 10.01	"	"	"
3 " "	" = 3.25	+ 5.13	= 8.38	"	"	"
4 " "	" = 2.44	+ 5.13	= 7.57	"	"	"
5 " "	" = 1.95	+ 5.13	= 7.08	"	"	"
6 " "	" = 1.63	+ 5.13	= 6.76	"	"	"
8 " "	" = 1.22	+ 5.13	= 6.35	"	"	"
10 " "	" = .97	+ 5.13	= 6.10	"	"	"

The above table suggests a rate for commercial lighting of 14 cts. per kw-hr. for the primary class, 11 cts. per kw-hr. for the secondary class, and 8 cts. per kw-hr. for the excess class. The analysis of the current consumed (Table VI) shows that 19,681 kw-hr. fall in the primary group, 13,497 kw-hr. in the secondary and 1,892 kw-hr. in the excess. These amounts multiplied by the respective steps in the rate suggested shows (see Table VIII) that this rate should produce revenue sufficient to cover the expenses chargeable to commercial lighting.

At the present time the company has no special rate for power consumers, and to this may be attributed the complaint that the revenue from the power business is not sufficient to justify the operation of the plant throughout the twenty-four hours. It seems, however, that a rate for power users can be worked out which will make that phase of the business profitable and at the same time be reasonable. An analysis of the power consumers' records shows that there is a connected load of about 56 horse power consuming about 14,700 kw-hr. per year. A rate composed of a demand charge of 75 cts. per horse power of active connected load plus a graduated energy charge of 7 cts. per kw-hr. for the first 100 kw-hr., 5 cts. per kw-hr. for the next 100

kw-hr., and 4 cts. per kw-hr. for all over 200 kw-hr., with the further provision that in no instance shall the combined rate exceed 10 cts. per kw-hr., would yield revenue amounting to \$1,147.99. This, together with the \$60 which it is estimated will be received from the canning factory, for which a rate of 14 cts. per kw-hr. is recommended, will bring the total revenue for power up to \$1,207.99. By comparison with Table VIII it will be seen that the revenue from this source will be sufficient to cover the costs.

The electric light plant supplies power to the municipal water plant for pumping purposes. Two pumps are operated, and the records show a consumption of 25,465 kw-hr. during the year ending December 31, 1913. A rate of 5¾ cts. per kw-hr. would supply a revenue of \$1,464.24 for this service.

The street lights are operated on a moonlight-midnight schedule, with a connected load of 7.65 kilowatts. Heretofore a flat rate of \$100 per month has been charged the village for this service. In case the number of different sizes of lamps is changed it is advisable to have the rate stated separately for each size of lamp. A compilation of the costs suggests the following:

60 watt lamp moonlight midnight	\$12	per lamp per year
100 " " " "	\$15	" " " "
250 " " " "	\$30	" " " "

Any change in the minimum bill for commercial lighting would have a very small effect on the total revenues, and as the present rate of 50 cts. covers the expense which each additional consumer would occasion, it is deemed advisable to leave that as at present.

The next table shows the probable revenue from the rates that are suggested above:

TABLE VIII.
PROBABLE REVENUE AND COST PER SERVICE.

	Probable revenue.	Total cost.
COMMERCIAL LIGHTING.		
Primary..... 19,681 kw-hr. x 14 cts. = \$2,755 34		
Secondary..... 13,497 " " x 11 " = 1,484 67		
Excess..... 1,893 " " x 8 " = 151 44		
Revenue from minimum bill..... 35 00	\$4,426 45	\$4,364 63
COMMERCIAL POWER.		
Service charge 75 cts per active h. p..... \$410 58		
Primary 3,969 kw-hr. x 7 cts. = \$277 83		
Secondary 2,190 " " x 5 " = 109 50		
Excess 8,752 " " x 4 " = 350 08		
Energy charge..... 737 41		
Total charge..... \$1,147 99		
Sun Prairie Canning Factory..... 60 00	\$1,207 99	\$1,167 59
MUNICIPAL PUMPING.		
25,465 kw-hr. x .051 =	\$1,464 24	\$1,493 83
MUNICIPAL CONTRACT LIGHTING.		
5 - 60 watt lamps x \$12 = \$60		
34 - 100 " " x \$16 = 544		
17 - 250 " " x \$28 = 476	\$1,080 00	\$1,127 85
Grand total.....	\$8,178 68	\$8,153 90

It will be noted from the above table that on the basis of the operating conditions for the year ending June 30, 1913, the suggested rates will leave a surplus of \$24.78. This is about as near to the total cost as the probable revenue from any rate schedule can come.

From all the facts and circumstances, it would seem that the rate schedule worked out in this case is reasonable both to the consumers and to the plant.

IT IS THEREFORE ORDERED, That the Sun Prairie Municipal Electric Light Plant discontinue its present schedule of rates and place in effect the following:

Commercial Incandescent Lighting.

For all lighting service furnished residences and businesses (hereinafter specifically referred to as Classes A, B and C) including such incidental use of appliances for heating and power used on lighting circuits and passing through the same meter, and measured by a meter or meters owned and installed by the utility, a charge of

Primary Rate 14 cts. net or 15 cts. gross per kilowatt-hour for current used equivalent to or less than the first thirty hours' use per month of the active connected load.

Secondary Rate 11 cts. net or 12 cts gross per kilowatt-hour for additional current used equivalent to or less than the next sixty hours' use per month of the active connected load.

Excess Rate 8 cts. net or 9 cts. gross per kilowatt-hour for all additional current used in excess of the above ninety hours' use per month of the active connected load.

The active connected load shall in each case be a fixed percentage of the total connected load of the lamps installed on the consumers' premises, excluding appliances.

Class A includes residences, flats and private rooming houses. Where the total connected load is equal to or less than 500 watts nominal rated capacity, 60 per cent of such total connected load shall be deemed active; where the installation exceeds 500 watts nominal rated capacity, $33\frac{1}{3}$ per cent of such part of the total connected load which is over and above 500 watts shall be deemed active.

Class B includes stores, saloons, offices, banks, restaurants, lodges and halls, theaters, and all others not herein specifically provided for. In this class 70 per cent of the connected load shall be deemed active.

Class C includes churches, schools, hotels, industrial establishments, public buildings, barns and garages, and blacksmith shops. In this class 55 per cent of the connected load shall be deemed active.

Minimum Bill.—The minimum bill shall be 50 cts. per month. Where the utility is unable to read the meter after reasonable effort, the fact should be plainly indicated upon the monthly bill, the minimum charge of 50 cts. shall be assessed, and the difference adjusted with the consumer when the meter is again read.

Discount.—The utility shall bill all consumers at the gross rate and the difference between the gross and net rates above specified, or one cent per kilowatt-hour, shall constitute a discount for payment on or before the 15th of the month.

Reconnection of meters.—For the reconnection of a meter for the same consumer upon the same premises, a charge of \$1.00 is deemed reasonable.

Commercial Power.

For current used for power purposes and measured by meters owned and installed by the company, the rate shall be:

Demand charge: 75 cts. per month net or \$1.00 gross per active horse power of connected load.

The active connected power load shall be determined as follows:

First 10 h. p. connected	90	per cent	active.
Next 20 h. p.	75	"	"
Next 30 h. p.	60	"	"
All over 60 h. p.	50	"	"

Energy charge: 8 cts. gross or 7 cts. net per kilowatt-hour for current equal to or less than 100 hours' use of the active load; 6 cts. gross or 5 cts. net per kilowatt-hour for the next 100 hours' use of the active connected load; and 5 cts. gross or 4 cts. net per kilowatt-hour for all current in excess of that amount.

The maximum rate for power shall, however, not exceed 10 cts. per kilowatt-hour except when limited by the minimum monthly bill, which shall be \$1.00 per month.

The provisions for discount and reconnection of meters, as stated under the schedule for commercial lighting, shall also apply to power.

Short time users (light and power).—The rate for the short time users, such as the canning factory, shall be 14 cts. per kw-hr.

Municipal Street Lighting.

The rate for municipal street lighting shall be as follows:

\$12 per	60	watt lamp	per year.
\$16 per	100	" "	" "
\$28 per	250	" "	" "

All lamps burning on a moonlight-midnight schedule.

Municipal Power.

For current used by the water department for pumping water, the rate shall be 5.75 cts. per kilowatt-hour.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF THE MARINETTE AVENUE CROSSING ON THE LINE OF THE CHICAGO, MILWAUKEE AND SAINT PAUL RAILWAY COMPANY IN THE CITY OF MARINETTE.

Submitted June 2, 1914. Decided Sept. 25, 1914.

The Commission, on its own motion, investigated the adequacy, under existing conditions, of the bell protection formerly ordered by it at the Marinette avenue crossing in the city of Marinette. Prior to the hearing the respondent installed a flagman at the crossing in question. The city officials, however, expressed a preference for crossing gates. It appears that more than one track is crossed, that switching movements are frequent, and that many school children use the crossing, also that the crossing bell has caused complaint.

Held: Under circumstances like those of the present case the most effective crossing protection during the day is afforded by a flagman. The respondent is ordered to station a flagman at its Marinette avenue crossing in the city of Marinette from 6 a. m. to 6 p. m., and to install and maintain an automatic visual signal to be operated from 6 p. m. to 6 a. m., plans for track circuits to be submitted to the Commission for approval. Ninety days is considered a reasonable time within which to make the installation ordered.

On July 14, 1910, the Commission ordered the Chicago, Milwaukee & St. Paul Railway Company to "install automatic alarm bells in such a manner as to adequately protect the Marinette avenue crossing" in the city of Marinette. (*City of Marinette v. C. M. & St. P. R. Co.* 5 W. R. C. R. 455). Upon informal complaint from the mayor and after an investigation subsequent thereto, a hearing was ordered on motion of the Commission to determine whether the protection formerly ordered is adequate under the existing conditions.

The hearing was held at Marinette on June 2, 1914. The city of Marinette was represented by *Mayor Joseph Fisher, City Attorney J. O. Miller and City Engineer Alva L. Hillis.* *General Superintendent P. C. Eldredge* appeared for the Chicago, Milwaukee & St. Paul Railway Company.

Respondent admits that bell protection is inadequate and prior to the hearing installed a flagman at the crossing. However, it was deemed necessary to proceed with the hearing, inas-

much as the city officials had expressed a preference for crossing gates. The question for decision, therefore, is whether a flagman or gates would afford the better protection.

A traffic count for three days between the hours of 6 a. m. and 9 p. m., tabulated by hours, was introduced by the city engineer. The results are summarized in the following table:

Date	Railroad			Highway				
	Trains	Switching movements	Motor cars	Pedestrians	Bicycles	Motorcycles	Automobiles	Other vehicles
May 28, '14	10	18	3	776	192	18	122	217
" 29, "	11	36	2	800	193	47	106	229
" 30, "	6	21	4	944	242	54	142	230

The city engineer estimated that about one half of the pedestrians are school children. Traffic data were also submitted by the railway company as follows, covering the period from 7 a. m. to 6 p. m.:

Date	Trains	Automobiles	Teams	Motorcycles and bicycles	Pedestrians
May 21, '14	59	137	320	205	631
" 22, "					
May 23, '14	30	137	254	268	745
" 24, "					
May 25, '14	28	90	176	133	580
" 26, "	28	76	210	205	581
" 27, "	24	74	213	124	595
" 28, "	23	90	194	163	482
" 29, "	31	85	184	158	425
" 30, "	11	111	210	233	512
Total	234	800	1,761	1,489	4,551
Daily average	23	80	176	149	455

The mayor stated that he is of the opinion that gates are preferable to a flagman at Marinette avenue, and that there is a general demand for gates. The Commission's experience with various forms of crossing protection, however, has convinced it that at city grade crossings such as Marinette avenue, where more than one track is crossed, where switching movements are

frequent, and where many school children use the crossing, the most effective protection is to be found in the services of an alert flagman during the day.

There are few switching movements during the night and these may be reduced by changes in the track layout suggested by the superintendent. However, we deem it necessary that some protection should be afforded after dark. In view of the fact that the bell has caused complaint, it is probable that the installation of a visual signal to be operated during the absence of the flagman will best meet the situation. The flagman should be on duty from 6 a. m. to 6 p. m.

IT IS THEREFORE ORDERED, That the Chicago, Milwaukee & St. Paul Railway Company station a flagman at the crossing on its line at Marinette avenue in the city of Marinette who shall be on duty from 6 a. m. to 6 p. m., and install and maintain an automatic visual signal to be operated from 6 p. m. to 6 a. m., plans for track circuits to be submitted to the Commission for approval.

Ninety days is considered a sufficient time within which to make the installation herein ordered.

ELMER J. DENT ET AL.

VS.

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted April 20, 1914. Decided Sept. 25, 1914.

Complaint was made by various owners or lessees of farm land adjacent to respondent's North Lake branch that respondent was not properly maintaining its right of way fences and crossings, and the Commission was asked to require the respondent to build and maintain woven wire fences along its right of way, to properly plank and repair its grade crossings, and to build and maintain cattle guards at all crossings. It appears that subsequent to the filing of the complaint the respondent, in the matter of its fences, has made extensive repairs and replacements, so as to meet the conditions imposed by sec. 1797—120 of the statutes for the protection of live stock of adjacent owners, but has failed to place three crossings in satisfactory condition, and also two culverts.

It is ordered that the respondent properly plank and repair the highway crossing on its North Lake branch line at the east boundary of Waukesha county, and the two farm crossings located, respectively one, and one and one-tenth miles west of Menomonee Falls, and clean and maintain in proper condition the two culverts immediately west of the "wye" at Lannon. Sixty days is considered a reasonable time for compliance.

The petition is signed by twenty-nine owners or lessees of farm land adjacent to the North Lake branch of the Chicago, Milwaukee & St. Paul Railway Company, and asks that the Commission require the respondent to build and maintain woven wire fences along its right of way, to properly plank and repair its grade crossings so that they will be passable for loaded vehicles, and to build and maintain cattle guards at all crossings.

Respondent submitted, in lieu of a formal answer, a letter from the general manager which states that the company will renew about one-fifth of the fence posts, thus bringing the fences up to the standard required by the statutes, that it will place new cattle guards and wing fences at all regular highway crossings and that it will renew farm crossings as necessary.

A hearing was held at Menomonee Falls on April 20, 1914, at which *Elmer J. Dent* appeared for the petitioners and *J. N. Davis* for the respondent.

FENCES.

Numerous witnesses testified that the fences maintained by the respondent adjacent to their farms are in poor repair. Many posts were said to have rotted off, allowing the barbed wires to sag so that they do not prevent cattle from straying on to the right of way. Instances were cited of accidents to cattle on the railway right of way. Respondent's trainmaster stated the company would repair the fences where necessary to provide a reasonable and safe fence, and that this work would be accomplished within sixty days.

And inspection made during August, 1914, shows that extensive repairs have been made. Woven wire has been used at the request of certain property owners, and at other points the barbed wire fence has been so repaired as to effectively enclose any stock other than sheep or hogs, except along marshy stretches where no cattle can be pastured.

Petitioners ask that the respondent be required to build woven wire fences along its entire right of way in accordance with the provisions of sec. 1797—120 of the statutes which was enacted as ch. 383 of the laws of 1913. This statute is as follows:

“Whenever a complaint is lodged with the commission by the owner or occupant of any land contiguous to the right of way of any railroad line in this state, to the effect that the railroad company operating such line has failed to construct or keep in good repair suitable and proper fences along its right of way adjacent to such land, it shall be the duty of the commission to give notice to the railroad company in interest of the filing of such complaint, and to order a hearing thereon in the manner provided for hearings in sec. 1797—12. If upon such hearing it shall appear to the satisfaction of the commission that the lack of fences or the insufficiency of such fences as exist at the point mentioned in the complaint, subjects live stock which is or may be pastured on such land to injury from passing trains, said commission may order and direct said railroad company to repair such fence or fences so that the same shall be sufficient or to construct fences made of eleven strands or strong woven wire of at least No. 12 measurement; cross wires or meshes to be of not less than No. 16 wire. If cross wires are used, they are to be not more than six inches apart, and if meshes, no mesh shall exceed six inches square. The height of such woven wire fences shall not be less than forty-eight inches with the bottom wire close to the ground and the posts not more than sixteen feet apart. Fences of other material equivalent to the fences hereinbefore

described may be ordered by the commission to be constructed whenever the circumstances of any case may seem to so require. Any fence constructed pursuant to and in compliance with the order of the commission shall be deemed a good and sufficient fence within the requirements of sec. 1810 of the statutes."

It will be noted that when the commission finds that existing fences are not sufficient for the protection of live stock from trains, it is empowered to require the railway company to make the repairs necessary to adequately protect such live stock, or to construct new fences of specified materials or of other materials equivalent thereto. It is apparent that this statute contemplates the erection of new fences only when it is not possible to make the existing fences adequate for the protection of cattle by means of repairs. Wherever it becomes necessary to replace an existing fence the respondent should provide a fence conforming to the specifications enumerated in the statute; and such a fence should also be provided along the right of way adjacent to any property upon which the owner signifies his intention of pasturing hogs, sheep or other stock which would not be adequately protected from trains by the existing barbed wire fences. The repairs and replacements which have been made apparently meet these conditions, and it therefore seems inadvisable to issue any order with respect to fences at this time. If it should develop that any landowner along this line has failed to secure a suitable fence adjacent to fields in which he pastures small stock or intends to do so, such omissions should be called to the attention of the Commission.

OTHER MATTERS.

The complaint with respect to crossings is general. Several crossings were said to be in need of planking and improvement. Subsequent to the hearing some of these were improved by the respondent, but an inspection made in August 1914 shows that three crossings have not been placed in satisfactory condition. The crossing on the road which follows the east boundary of Waukesha county should be properly planked. The two farm crossings located, respectively, one mile and one and one-tenth miles west of Menomonee Falls should be planked and placed in proper repair. The question of cattle guards on farm crossings was not pressed by complainants, but two culverts immediately west of the "wye" at Lannon were said to be in poor condition.

Subsequent investigation showed that they should be thoroughly cleaned so as to provide proper drainage.

IT IS THEREFORE ORDERED, That the respondent, the Chicago, Milwaukee & St. Paul Railway Company, properly plank and repair the highway crossing on its North Lake branch line at the east boundary of Waukesha county and the two farm crossings located, respectively, one mile and one and one-tenth miles west of Menomonee Falls, and clean and maintain in proper condition the two culverts immediately west of the "wye" at Lannon.

Sixty days is considered a sufficient time within which to comply with this order.

TOWN OF MARSHFIELD

vs.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY
COMPANY.

Submitted Feb. 23, 1914. Decided Sept. 25, 1914.

Complaint was made that two highway crossings on respondent's line, located, respectively, at Main street near Hewitt station and one and three-fourths miles east of Marshfield, are dangerous to public travel and require further protection. At the hearing the Auburndale crossing, located about one mile east of Hewitt, was also mentioned, although respondent was not formally heard in that matter. It appeared that the three crossings in question could be rendered reasonably safe without the installation of protective devices, by grading and widening the approaches and removing certain obstructions.

Held: The three crossings in question are dangerous. The respondent is ordered, with respect to the main street crossing in the village of Hewitt, and the crossing one and three-fourths miles east of Marshfield, known as Denk's crossing, to alter the approaches in the manner specified. The growing of corn on the railway right of way at the Main street crossing is to be discontinued. With respect to the Auburndale crossing, it is recommended that the respondent alter the approaches and the town authorities remove certain obstructions to the view, both to be done as specified. Sixty days is considered a reasonable time for compliance with the order.

The petitioner, a regularly organized town in Wood county, alleges in substance that two highway crossings on the line of the Minneapolis, St. Paul & Sault Ste. Marie Railway Company located, respectively, at Main street near Hewitt station and one and three-fourth miles east of Marshfield, are dangerous to public travel and require some further protection. The Commission is asked to take such action as it deems proper in the premises.

No answer was filed by the respondent.

A hearing was held at Hewitt on February 23, 1914. *John Ulmer* appeared for the petitioner and *Kenneth Taylor* for the respondent.

Main Street Crossing.

The testimony shows that Main street crosses the respondent's single track line about two hundred feet west of Hewitt station and immediately west of the switch connecting two sidetracks and the main line. The highway runs north and south and the railway northwest and southeast. From the south highway approach the view of trains to the southeast is partially obstructed by buildings, and occasionally by cars standing on the sidetrack near the depot. From the north highway approach the view in both directions is limited by buildings on the street. However, the view in both directions is comparatively clear from either edge of the railway right of way which is two hundred feet wide at this point. A portion of the right of way is used for a garden, and a recent inspection shows that the corn grown there obstructs the view to a limited extent. The limits of vision as observed by our engineer on June 26, 1913, are as follows:

Distance of point of observation in highway from track.	View northwest.	View southeast.
South 50 feet.....	800 feet	1½ miles
“ 100 “.....	700 “	800 feet
“ 200 “.....	400 “	100 “
“ 300 “.....	900 “	60 “
North 50 “.....	1200 “	¼ mile
“ 100 “.....	1000 “	½ “
“ 200 “.....	150 “	¼ “
“ 300 “.....	75 “	80 feet

The daily traffic over the crossing is estimated at about twenty teams, six automobiles and fifty pedestrians. There are twenty regular train movements, of which seven occur at night.

Denk's Crossing.

The crossing one and three-quarters miles east of Marshfield is known locally as Denk's crossing. At this point two highways and the railway line intersect. The main road runs east and west, crossing the track at an angle of about 40 degrees. A north and south road joins the east and west road on each side of the track, there being but one crossing. At the crossing the railway is on a low fill and the west and north highway ap-

proaches ascend to the track. The approaches were said to be too narrow to allow a team to turn around safely. Southeast of the crossing the track curves through a cut which is about eight feet deep. The banks of this cut, on which weeds grow in summer and snow accumulates in winter, a building, some trees, and wing fences were said to obstruct the view to the southeast to such an extent that travelers must be within the railway right of way to see trains approaching from that direction. The view to the northwest is comparatively unobstructed. The limits of vision as observed by our engineer on June 26, 1913, are as follows:

Distance of point of observation in highway from tracks.		View southeast.	View northwest.
East	50 feet.....	500 feet	1½ miles
"	100 ".....	450 "	1½ "
"	200 ".....	450 "	¾ "
"	300 ".....	400 "	1 "
West	50 ".....	1000 "	1½ "
"	100 ".....	350 "	1½ "
"	200 ".....	350 "	1 "
"	300 ".....	300 "	1 "
North	50 ".....	600 "	1½ "
"	100 ".....	650 "	¾ "
"	200 ".....	400 "	¾ "
"	300 ".....	300 "	½ "
South	50 ".....	1000 "	1½ "
"	100 ".....	350 "	1½ "
"	200 ".....	30 "	1 "
"	300 ".....	0 "	¾ "

The east and west road is a main traveled highway leading from Marshfield to Stevens Point. One witness estimated that from twenty to thirty teams fairly represents the average traffic. Another said that as many as 75 vehicles use this road on some days and that it is traveled to a considerable extent by automobiles during the summer. The north and south road is less traveled, the traffic being estimated at ten or twelve teams a day. It leads from the city of Marshfield to points in the town of the same name. Train movements are the same as noted with reference to Main street crossing. A number of narrow escapes were described by witnesses.

Aburndale Crossing.

At the hearing witnesses called attention and described a crossing about one mile east of Hewitt, but respondent was not

formally heard in the matter. The situation is very similar to that at Denk's crossing, two roads and the railway intersecting at the same point. The east and west road is a continuation of the same road which intersects the railway at Denk's crossing and the traffic is substantially the same. The track lies in a cut from eight to twenty feet deep southeast of the crossing, and the view of trains in that direction is limited. Grain and corn growing on the high land adjacent to the cut further obstruct the view. At the crossing the track is on a fill and the east and west highway approaches ascend to the tracks. Witnesses stated that the approaches are too narrow for safety. It was suggested that conditions would be materially improved if the highway approaches were widened and made less steep. The superintendent expressed the opinion that such grading would make the crossing reasonably safe, and the town chairman admitted that it would result in affording a better view of trains.

In the light of the testimony and the reports of our engineering staff it is our judgment that each of the three crossings under consideration is more than ordinarily dangerous, but that each can be rendered reasonably safe without the installation of protective devices, by grading and widening the approaches and removing certain obstructions.

At the Main street crossing the approaches should have a crown available for travel twenty-six feet wide; the roadway should be level for at least four feet on each side of the track, and the grade of the approaches should not exceed 5 per cent. In widening the approaches the filling should be done on the west side of the highway. The surfacing should be strictly comparable in quality and compactness with the surface of adjacent portions of the highway. The grade of the approaches should be carried at a uniform rate to a junction with the existing roadway. Provision should be made for properly draining the approaches. The growing of corn on the railway right of way should be discontinued.

At Denk's crossing the approaches should have a crown available for travel twenty-four feet in width and the crossing should be planked with thirty foot planks on account of the acute angle of crossing. The roadway should be level for at least four feet on each side of the track, and the grade of the approaches should

not exceed 5 per cent. The grade of the approaches should be carried at a uniform rate to a junction with the existing highways. The surfacing should be strictly comparable in quality and compactness with the surface of adjacent portions of the highways. Provision should be made for properly draining the approaches.

At the Auburndale crossing the approaches should have a crown available for travel twenty-four feet wide and the planking should be twenty-four feet in length. The highway should be level for at least four feet on each side of the track and the grade of the approaches should not exceed 5 per cent. The surfacing should be strictly comparable in quality and compactness with the surface of adjacent portions of the highways. The grade of the approaches should be carried at a uniform rate to a junction with the existing highways. Provision should be made for properly draining the approaches. Trees and brush within the right of way lines for a distance of three hundred feet southeast of the crossing should be removed.

It is therefore recommended that the railway company improve the Auburndale crossing as indicated above, and that the town authorities remove the trees and brush within the highway limits which obstruct the view at the Auburndale crossing.

IT IS ORDERED, That the respondent, the Minneapolis, St. Paul & Sault Ste. Marie Railway Company, improve the Main street crossing in the village of Hewitt and Denk's crossing located one and three-fourths miles east of Marshfield in the manner specified above.

Sixty days is considered a sufficient time within which to comply with this order.

IN RE APPLICATION OF THE CITY OF MANITOWOC, AS OWNER
AND OPERATOR OF THE WATER AND ELECTRIC UTILITIES,
FOR AUTHORITY TO ADJUST ITS RATES.

Submitted Aug. 14, 1914. Decided Sept. 25, 1914.

Application was made by the city of Manitowoc for authority to put into effect, (1), a minimum of \$1 per month per horse power of motors, regardless of continuity of actual use, actual horse power to be determined as provided in the published schedule of the Manitowoc electric utility, or, in lieu of such rate, such other rate as the Commission shall deem just; (2), such rates for private hydrants or standpipes on private premises, and for hose connections inside buildings to be used only in case of fire, as the Commission shall deem just; and (3), a minimum charge for all sprinkler service of \$20 per year, and a further minimum of 5 cents additional for each sprinkler head in excess of 400 maintained by one patron, or, in lieu thereof, such rates as the Commission may deem just. It appeared that there are a considerable number of power consumers in Manitowoc and that their motors were installed with the understanding that the minimum rate would be \$1, regardless of the connected load. As regards the rates for different types of fire protection, it seems that when the city took over the water utility there were certain deviations from the schedule, and that a definite schedule is now desired in order to avoid confusion regarding a proper basis of charging.

Held: That, as regards a minimum charge for electric power service, under the circumstances of the present case, the minimum charge should increase with increases in the size of the connected load, but should carry with it a limiting rate to prevent extraordinary increases in power bills, and respondent is accordingly authorized to make a charge for electric power service of not less than \$1 per month, and also to charge \$1 per month for each horse power in excess of one, provided that, except for consumption billed under the \$1 minimum, the maximum rate shall be 10 cts. per kw-hr.; that the sprinkler system rates proposed by the city are reasonable and are authorized; that, under the circumstances of the present case, where the private hydrants may be properly assumed to have been installed at the expense of private parties, a rate of \$30 per hydrant per year is reasonable and is authorized; and that the present general rate of \$40 per year for two inch standpipes and \$60 for four inch is not uniform, but that rates of \$30 and \$60, respectively, are reasonable and are authorized.

This in an application of the city of Manitowoc asking for authority to put into effect the following rates for the electric and water utilities operated by it: First, a minimum rate of \$1 per

month per horse power of motors, regardless of continuity of actual use; actual horse power to be determined as provided in the published schedule of the Manitowoc electric utility; or such other rate as the Railroad Commission shall deem just. Second, such rates for private hydrants on private premises or stand-pipes on private premises, and for hose connections inside buildings to be used only in case of fire, as the Railroad Commission shall deem just. Third, a minimum charge for all sprinkler service of \$20 per year, and a further minimum of 5 cts. additional for each sprinkler head in excess of 400 maintained by one patron, or such rates as the Railroad Commission may deem just.

Hearing on this application was held at Madison, August 14, 1914. Appearances were as follows: For the city of Manitowoc, *Harry F. Kelley*, city attorney. In opposition, *R. G. Plumb*, of the Plumb & Nelson Company.

There is very little in the testimony offered at the hearing which need be reviewed at this time. Testimony dwelt mainly upon the number and nature of fixtures which would be affected by changes in the rates for water service, and upon the objections offered to the proposed rate of \$1 per horse power for electric power service.

It appears that at the time of the acquisition of the electric utility by the city there was some misunderstanding on the part of the city authorities with regard to the rates for power service. The city applied a minimum charge of \$1 per horse power until it learned that this rate was not legally filed with the Commission. Since that time it is understood that the only minimum which has been applied has been a minimum charge of \$1 per consumer, regardless of the amount of his connected load. In order to place the rate upon the basis which the city originally contemplated, this action relating to the electric rates is brought.

At the time of the hearing it was developed that there were a considerable number of power consumers in the city of Manitowoc and that their motors had been installed with the understanding that the minimum rate would be \$1, regardless of the connected load. It was pointed out that a minimum rate as asked for by the utility would greatly increase the bills of a number of these consumers, and consumers objected to any minimum as high as that proposed by the city. At the time of

the hearing, the city amended its application, without objection from opposing parties, to provide that the minimum charge should be \$1 per horse power of the actual demand instead of \$1 per horse power of the rated capacity of motors. The effect of this amendment would probably be to decrease the minimum charges for the greater number of the consumers, particularly in the case of consumers having a number of motors, not all of which would be in use at the same time. It was suggested by the Commission's representative at the time of the hearing that although it was undoubtedly true that the minimum charge should be made dependent to some extent upon the extent of the connected load, it might be fair to all parties concerned to provide that the minimum charge should be applied upon the basis of the horse power connected only in case a limiting rate were made a part of the power rate schedule. Upon the further consideration of the facts existing in Manitowoc, we are inclined to believe that this form of rate schedule should be adopted and that a minimum charge, increasing with increases in the size of the connected load but carrying with it a limiting rate to prevent extraordinary increases in power bills, should be authorized in this case. Authority will therefore be given to the city of Manitowoc, to put in effect a minimum charge of \$1 per horse power of active load, with a limiting rate of 10 cts. per kilowatt-hour. Active connected load will be as defined under the heading, "Commercial Power" on page 128 of PART I of the rates of public utilities in Wisconsin, as published by the Railroad Commission.

The various changes asked for in the rates for different types of fire protection appear to be such as should be authorized by the Commission. It seems that at the time the city took over the water utility there were certain charges being made for private fire protection and the city continued these charges in effect. As near as the authorities are in position to say, the basic rates for private fire protection were \$40 per hydrant, \$40 for a 2" standpipe, \$60 for a 4" standpipe, and 7.5 cts. per sprinkler head. It seems, however, that in some cases rates did not adhere strictly to this schedule. In a few instances, which were cited, a lump sum was charged for all fire protection furnished, which lump sum could not be reconciled with the scheduled rates. In other cases it appears that charges had been continued for one type of fire protection, although for all practical pur-

poses that had been superseded by a different type. It is therefore desired that clear and definite schedules be fixed for each type of private fire protection in order that there may be no confusion regarding the proper basis of charging.

With regard to private hydrants, it may be said that there are a great many factors which influence the proper charge for this service. In cases where the cities are paying their full share of the cost of operating the utility, that is, where the cities are paying the full cost of fire protection, there may be very little justification for any charge for private hydrants based on any cost analysis. This, of course, cannot be made as a general rule, because of differences of conditions in various cities. In the case of Manitowoc, the policy of the city is to make a charge to private consumers for this service. The reasonableness of this policy is not involved in this case. The only matter which we have to determine is what the charge should be. It appears that there is one case in the city of Manitowoc where the rate being charged is only \$30, and we are inclined to think that this rate is a reasonable one. Although the records do not show this fact directly, it is to be assumed that these private hydrants were installed at the expense of private parties and that the city is thereby relieved of the burden of interest and depreciation upon these hydrants and necessary connections. Under these circumstances, a rate of \$30 per year per hydrant appears to be a reasonable one.

The city asks for a minimum rate of \$20 per year for sprinkler systems, with a charge of 5 cts. per sprinkler head for each head in excess of 400. This rate seems to be entirely reasonable and will be authorized.

The city also asks that the Commission fix a rate for standpipes on private premises. It seems that the general rate for standpipes at present of \$40 for those two inches in diameter, and \$60 for four inch standpipes. Because of the confusion in the rates which were existing when the city took over the water utility and the fact that the city has applied the old rates as they stood, the rates for standpipes are not uniform. A rate of \$30 per year for two inch standpipes, and of \$60 per year for standpipes four inches in diameter, appears to be reasonable and will be authorized in this case. It should be said in connection with these rates for fire protection that the reasonableness of such rates is hard to measure on a cost basis. Some wa-

ter works men even go so far as to say that no charges should be made for any of these services, on the theory that the total fire risk of the city is decreased by the installation of private fire protection. Where the policy of the city, however, is not to bear the full cost of fire protection, it can hardly be expected that the utility is to furnish private fire protection free of charge, and the rates which will be authorized in this case represent the Commission's view of what will be reasonable rates for this service in Manitowoc.

IT IS THEREFORE ORDERED, That the city of Manitowoc be and the same hereby is authorized to amend its schedule of rates for electric and water service by the substitution of the following rates for any rates now existing for similar service:

I. Minimum Charge for Electric Power.

No minimum bill for electric power service shall be less than \$1 per month. For installations of more than one horse power the minimum bill shall be increased at the rate of \$1 per month for each horse power in excess of one, providing, however, that, except for consumption billed under the \$1 minimum which is applicable to power users, the maximum rate shall be 10 cts. per kilowatt-hour.

II. Private Fire Protection Rates.

a. The rate for hydrants for private fire protection shall be \$30 per hydrant per year.

b. The rate for sprinkler systems shall be a minimum charge of \$20 per year, and 5 cts. for each sprinkler head in excess of 400.

c. The rate for standpipes, shall be \$30 per year for standpipes of two inches in diameter, and \$60 per year for those four inches in diameter.

J. L. KRAFT & BROS. COMPANY

vs.

MINERAL POINT AND NORTHERN RAILWAY COMPANY,
CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

THE PLYMOUTH CHEESE COMPANY

vs.

MINERAL POINT AND NORTHERN RAILWAY COMPANY,
CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted April 14, 1914. Decided Sept. 30, 1914.

The petitions in substance request the Commission to order the respondent railway companies to make joint concentration rates on cheese to Mineral Point from points on the C. & N. W. Ry. in southwestern Wisconsin, reaching as far north as Madison. It appears that the latter railway company's line does not touch Mineral Point, but intersects, at Whitson Junction, the line of the M. P. & N. Ry. Co., which runs north from Mineral Point to Highland. While concentration rates have long been a recognized element in rate construction and find their justification on various grounds, as set forth in the opinion, they always involve the reimbursing of the carrier for the low initial rate by full rates for the outhaul of the product in question. The M. P. & N. Ry. Co. is willing to make joint concentration rates with the C. & N. W. Ry. Co., provided the rates be such as to secure it a fair return. However, it appears that it would be impractical for the C. & N. W. Ry. Co., against whom the petition is really directed, to get an equivalent outhaul at full rates, since the outhaul business would have to reach the C. & N. W. Ry. Co. through either the M. P. & N. Ry. Co. or the C. M. & St. P. Ry. Co. as the initial line. Thus at least 25 per cent of the rate received for the outhaul would go to the line originating the business, so that that portion of the outhaul rate would be lost to the C. & N. W. Ry. Co.

Held: Since under present conditions it appears impracticable for the C. & N. W. Ry. Co. to secure a compensating rate on the outhaul of the business it might deliver at concentration rates to the M. P. & N. Ry. Co. at Whitson Junction for Mineral Point, the petitions are dismissed. If either petitioners or respondents should work out any plan for joint rates whereby the benefits would equal the disadvantages, the Commission will be glad to reopen the case.

The two cases represented by the titles above involve the same questions and the same territory. For that reason they may be and will be considered as one case. The complaints filed differ slightly in wording, that of the Kraft company alleging that the

respondent railroad companies "refuse to apply concentration rates on shipments from territory adjacent to Mineral Point, which are intended for reshipment from that point via the same lines." The Plymouth company's complaint alleges that the "respondents have failed to inaugurate concentration rates on cheese into Mineral Point, although such rates are in effect on the Chicago, Milwaukee & St. Paul Railway Company's lines."

The complaints were both filed the same day, April 2, 1914, and after due notice a hearing was held in the capitol at Madison on April 14, 1914, at 10 o'clock a. m. There appeared at the hearing *J. M. Ostrander* for Kraft and Bros. Co., *P. W. Wagner* and *W. L. Huson* for the Plymouth Cheese Co., *W. D. Brown* for the Mineral Point & Northern Ry. Co., and *H. C. Cheyney* for the Chicago & North Western Ry. Co.

In substance, what the petitioners ask the Commission to do is to order the Chicago & North Western Railway Company and the Mineral Point & Northern Railway Company to make joint concentration rates on cheese to Mineral Point from points on the Chicago & North Western Railway in southwestern Wisconsin, reaching as far north as Madison.

The Chicago & North Western Railway does not touch Mineral Point. From Madison west it runs to Woodman on the Wisconsin river, in Grant county, with a spur south from Lancaster Junction to Lancaster, and a spur south from Montfort Junction to Galena, Ill. The Mineral Point & Northern Railway, running north from Mineral Point to Highland, in Iowa county, intersects the Chicago & North Western Railway at Whitson Junction, twenty-two miles from Mineral Point. The concentration rates are asked for in order that the two petitioners, which maintain concentrating facilities for cheese at Mineral Point, may enlarge their territory to cover points on the Chicago & North Western Railway without establishing other concentrating facilities.

Concentration rates on cheese have been granted by the railroads at certain points in Wisconsin for more than twenty years. The purpose underlying the making of them was to facilitate the economical handling of cheese between numerous small producers and the ultimate buyers. Having a central place in which to store the cheese, the dealers were enabled to ship more advantageously, and also, when necessary, to hold the cheese for curing. The making of low rates to the assembling point

proved quite as advantageous to the carriers as to the manufacturers and dealers. As expressed by the interstate commerce commission (vol. 16, page 85 of its reports), "Concentration rates by increasing the size and regularity of the interstate shipments seem to be to the advantage of the carriers as well as of the shippers."

As shown in the discussion of an early case which came before this Commission (1 W. R. C. R., 143) concentration rates were made by various methods, but in whatever manner they were effected they involved, as in lumber and tobacco concentration, and milling-in-transit privileges on other commodities, the reimbursing of the carrier for the low initial rate by full rates for the outhaul of the collected, sorted or milled product or its equivalent. Just as in the cotton-growing states concentration rates on the shipment in to the assembling point made possible the re-sorting, compressing and grading of cotton, and classified reshipment, so the concentration rates on cheese in this state were meant to and do furnish the opportunity for refrigerator storing, for curing when necessary, and for proper market assorting for reshipment in carload or less than carload lots of the product of a large territory.

Concentration rates on cheese were the natural outcome of a desire on the part of enterprising middlemen to enlarge the scope of their business, and the desire of the carriers to increase their traffic through meeting the needs of the middlemen. Like group or base rates, concentration rates, though long a recognized element in rate construction, are nevertheless abnormal and call for careful scrutiny in each case. They have not heretofore been considered by this Commission such a remedy for tariff injustice as would warrant their being ordered as a substitute. They are distinctly a creation of the carriers to meet certain exigencies. The relation of regulating bodies toward them, therefore, is chiefly what it would be toward any departure from ordinary rate making. They would be charged with seeing that such departure would not involve excessive charges or discrimination. It is not always the primary function of a regulating body to construct tariffs. It is often confined to correcting or remedying the evils in existing rate systems and thus protecting the public from excessive rates and unjust discrimination.

In the case before us the petitioners are not asking the Com-

mission to pass upon the reasonableness of a rate merely. They ask it to direct the Chicago & North Western Railway and the Mineral Point & Northern Railway to make joint rates to Mineral Point on a concentration basis on business originating on the lines of the Chicago & North Western Railway in southern Wisconsin. Inasmuch as the Mineral Point & Northern Railway already has concentration rates in effect, and has expressed a willingness to make joint rates with the Chicago & North Western Railway upon the condition only that the rates be such as to secure to it a fair return, the complaint of the petitioners is really directed against the Chicago & North Western Railway alone. Let us examine the situation as to the latter road.

As already stated, the Chicago & North Western Railway does not touch Mineral Point. At Whitson Junction in Iowa county it is intersected by the Mineral Point & Northern Railway. It is to Whitson Junction that the concentration rates on the Chicago & North Western Railway are asked. If this were granted, then the joint rates on cheese from any point on the Chicago & North Western Railway in southwestern Wisconsin to Mineral Point, would be the sum of two low concentration rates. We have seen that in the granting of concentration rates it was always contemplated that the carrier would be compensated for the unreasonably low rates on in-shipments to the assembling point, by getting full reasonable rates on the outhaul of the product, or its equivalent. Only upon condition that it should get the outhaul at full rates could any carrier be justified in charging less than cost-of-service rates on the shipment in. This principle underlies all milling-in-transit or concentration rates that the carriers have put in effect on dairy products, lumber, tobacco, cotton or other such commodities.

If we apply this principle to the case before us, we must determine whether it would be practicable for the Chicago & North Western Railway, should it grant the concentration rates to Whitson Junction, to secure the outhaul of the product thus brought in, or its equivalent, at full rates. In order to get an equivalent outhaul, the business would have to reach the Chicago & North Western Railway through either the Mineral Point & Northern Railway or the Chicago, Milwaukee & St. Paul Railway, as the initial line. This being the case, at least 25 per cent of the rate received for the outhaul would go to the line originating the business, so that portion of the outhaul rate

would be lost to the Chicago & North Western Railway. It would therefore seem to be impracticable under present conditions for the Chicago & North Western Railway to secure a compensating rate on the outhaul of the business it might deliver at concentration rates to the Mineral Point & Northern Railway at Whitson Junction for Mineral Point.

There is involved in this case not the simple question whether the concentration rate principle shall be extended to a new or larger field but a much more complicated proposition. A distinctly new departure is proposed. Up to this time the rates asked for have been in effect only upon the lines of a single company. No joint rates with their accompanying problems have been involved. It may well be that some method can be devised that will justify the disturbance of the present practice and compensate by benefits for the complications which would result from the change asked for, but the petitioners have not offered such method and the Commission has been unable to find any. If either the petitioners or the respondent companies should work out any plan for joint rates whereby the benefits would equal the disadvantages which would grow out of the change, the Commission will be very glad to reopen the case.

IT IS THEREFORE ORDERED, That both petitions be dismissed.

IN RE APPLICATION OF THE NORWALK INDEPENDENT TELEPHONE COMPANY FOR AUTHORITY TO INCREASE RATES.

Submitted March 18, 1914. Decided Sept. 30, 1914.

Application was made by the Norwalk Independent Tel. Co. for authority to put into effect a gross rate of \$1.25 per month, with a discount of 25 cts., for bills paid on or before the last day of the current month, in lieu of its present rate of \$0.75 per month. It appears that applicant under its present schedule is unable to fulfill the obligation imposed upon it by law of furnishing adequate service, and that the rate applied for is not unreasonable, and would enable the company to meet the requirements of the law.

Held: The applicant is authorized to substitute for its present rate the rate proposed by it.

Application in the above entitled matter was filed January 30, 1914. It is stated in the application that the company has established twenty-four hour service; that a regular lineman is now employed; that physical connection with other telephone companies has been obtained; and that owing to these improvements the operating expenses of the company have been materially increased. The lawful rate of the company at present is \$0.75 per month for all classes of telephones. The company desires to put into effect a gross rate of \$1.25 per month, with a discount of 25 cts. if the bill is paid on or before the last day of the current month.

Hearing was held March 18, 1914, at the office of the Commission in Madison. *Chas. H. Schulte*, secretary of the applicant company, appeared in its behalf. No appearances were entered in opposition to the application.

In the light of such information as the Commission has at hand, it appears that the Norwalk Independent Telephone Company, cannot, under its present schedule, fulfill the obligation placed upon it by law to furnish adequate service. The rate applied for in the application, namely \$1.25 gross or \$1.00 net per month, does not appear excessive, and would doubtless enable the company to meet the requirements of the law. At the hearing it was stated that the company has had considerable dif-

feulty in collecting its bills for service promptly, and therefore asks that a penalty be imposed upon such subscribers as do not pay their bills when due. Although the penalty suggested by the applicant may be slightly higher than would be required in some instances to induce the prompt payment of bills, we do not feel that it is unreasonable.

IT IS THEREFORE ORDERED, That the applicant, the Norwalk Independent Telephone Company, be and the same hereby is authorized to discontinue its present rate of 75 cts. per month for telephone service and substitute therefor the following schedule:

\$1.25 per month per telephone.

A discount of 25 cts. will be allowed if bill is paid on or before the last day of the current month.

IN RE APPLICATION OF THE WEST MENASHA TELEPHONE COMPANY FOR AUTHORITY TO INCREASE RATES.

Submitted Sept. 15, 1914. Decided Oct. 2, 1914.

Application was made by the West Menasha Tel. Co. for authority, (1) to make a charge of \$15 per phone per year to stockholders and nonstockholders alike, payable in advance in equal quarterly installments; (2) to require subscribers to sign yearly contracts if necessary for the protection of the company; and (3) to make a charge of \$1 for moving a telephone within a subscriber's house, and \$2 for moving a telephone from one building to another. The cost per phone exclusive of any allowance for interest, taxes, and depreciation was considered, but the cost of reproducing the plant, charging for labor at current prices, could not be fixed by the representatives of the utility.

Held: While under the circumstances of the present case, it is not possible to ascertain the exact cost of telephone service, from the facts before the Commission and from the experience of the Commission in other telephone cases where the service was comparable to that involved in the present case, it is evident that the rate applied for is not unreasonable. The respondent is authorized to put into effect the rates and practices proposed by it.

This application was filed with the Commission October 22, 1913. The applicant asks for authority to make a charge of \$15 per phone per year to stockholders and nonstockholders alike, payable in advance in equal quarterly installments. Applicant also asks for the privilege of requiring subscribers to sign yearly contracts if necessary for the protection of the company, and that a rate of \$1 be authorized for moving a telephone within a subscriber's house and a rate of \$2 for moving a telephone from one building to another.

The application sets forth in some detail the cost of operation per telephone which the applicant has to meet. As shown in the application, the actual expenditures per telephone per year amount to about \$6.60, exclusive of any allowance for taxes, interest, or depreciation. In addition to this expense of \$6.60 per telephone per year, it is estimated that work is given free by subscribers to the value of about \$2.17 per year, so that the total expense per telephone to cover the bare operating expenses

is \$8.77 per year. It is stated in the application that hereafter no work will be done free of charge by shareholders of the company. It is also stated that extensions of the service which must be made will materially increase the expenses of the company and that the increase in revenues which the company seeks to obtain would merely place it on the same basis with other companies in the vicinity which are furnishing an equal service.

Hearing was held at Madison; September 15, 1914. *Ruben Thompson* and *John Kofler* appeared for the applicant. No other appearances were entered.

The only facts developed at the hearing which are of importance in connection with the disposal of this case relate to the cost of the plant and to the extent of the service rendered. One of the representatives of the utility estimated the cost of the property owned by the applicant at \$314, but in arriving at this cost labor was computed at the rate of \$1 per day per man. The representatives of the utility were unable to state what the cost of reproducing the plant would be if labor were to be charged for at current prices, but they seem to have the impression that the cost might be as high as \$500.

Service is furnished, according to the testimony, over the Bell exchange in Neenah and Menasha, and over rural lines owned by the Wisconsin Telephone Company connected with Neenah and Menasha, so that the service furnished is the same in extent as that received by subscribers of the Wisconsin Telephone Company. There are a number of parties who intend to take the service of the West Menasha Telephone Company and representatives of the company testified that in order to furnish service to these subscribers another metallic circuit would be necessary.

The facts before the Commission in this case are so meager that it would be practically impossible to make an analysis of the costs of this company's operations which would show exactly the cost of telephone service, but from the experience which the Commission has had in other telephone cases where metallic service is furnished to exchanges comparable to the service received by this company, it appears to us that a rate of \$15 per year per telephone is reasonable, and such a rate will be authorized in this case.

IT IS THEREFORE ORDERED, That the applicant, the West Menasha Telephone Company, be and the same hereby is authorized (1) to establish a rate of \$15 per telephone per year for both stockholders and nonstockholders; (2) to require yearly contracts from subscribers if such procedure is necessary in the judgment of the officials of the company; (3) to make a charge of \$1 for an inside move and of \$2 for an outside move.

C. E. McMILLAN

vs.

CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

HOWARD TEASDALE

vs.

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY,
CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Decided October 5, 1914.

Application was made in the case of *McMillan et al. v. C. & N. W. R. Co. et al.* 1914, 13 W. R. C. R. 679, for a rehearing, and a suspension of that part of the order requiring the C. & N. W. Ry. Co. to erect a new passenger station. The case treated two separate proceedings as one, and part of the order dismissed a petition seeking to compel the C. & N. W. Ry. Co. and the C. M. & St. P. Ry. Co. to erect a union passenger station in the city of Sparta. It appears that the passenger transfer facilities in that city are far from convenient; that the present station buildings are antiquated structures; that Sparta is on the main line of the C. M. & St. P. Ry. Co.; that it is the junction point of that company's Viroqua branch, and also of two important branches of the C. & N. W. Ry. Co.; that it is the county seat of a populous and prosperous county; that it has a population of nearly 5,000 inhabitants, and that surrounding towns have petitioned the Commission for the union station in question. It seems that the combined passenger business for the year May, 1912, to May, 1913, amounts to over \$65,000, and the total business, passenger and freight, was placed at nearly \$700,000 a year. The intersection of South Water street by the tracks of the two companies affords a suitable location for either a union station or two new stations in close proximity. It is estimated that the total cost of a union station at that point and of necessary changes would not exceed \$32,000. As to the erection of new stations alone, the need for better facilities was conceded by the representatives of the C. & N. W. Ry. Co., and the situation of the C. M. & St. P. Ry. Co. differs but little.

Held: A union station would greatly add to the convenience of transfer from road to road in Sparta, as also of travel to and from that point, and the large volume of business transacted fully warrants a reasonable expenditure for new station facilities. However, as it is possible that two separate stations in close proximity would meet the needs of the situation as well as a union station, the respondent companies are given thirty days within which to present arguments, should they so desire, to show that separate stations in close proximity will better meet the requirements of the situation, whereupon the Commission will

consider the question of modifying its present order. The respondents are ordered to discontinue their passenger stations now in use in the city of Sparta, and to erect and put in use, within one year from the date of the order, a union passenger station at a point close to where South Water street in the city of Sparta is intersected by the tracks of the two companies. Plans and location are to be submitted to the Commission for approval within sixty days.

REHEARING.

The case represented by the first of the above titles came before the Commission in the form of a petition by C. E. McMillan, mayor of the city of Sparta, in Monroe county, alleging that the passenger station of the Chicago & North Western Railway Company at Sparta is in a bad state of repair, is old and small, and inadequate to accommodate the business of the road at that point, and praying that the said company be directed to build a new passenger station. At the hearing held in Sparta on this complaint on August 11, 1913, at which *Z. S. Rice*, city attorney of Sparta, represented Mayor McMillan, and *C. A. Vilas* the respondent company, the latter agreed to replace its present station with a modern one.

A few days before this hearing was held, Howard Teasdale of Sparta filed a petition with the Commission praying that the Chicago & North Western Railway Company and the Chicago, Milwaukee & St. Paul Railway Company be ordered to build a union passenger station at Sparta. Mr. Teasdale's complaint alleged, among other things, the antiquated style, the inadequate room, and the general unfitness of both stations. It further pointed out that the present stations were each about three-fourths of a mile from the business and residence center of the city; that they were about the same distance apart, one being directly south and the other southeast of the center of the city, and that this made the transfer of passengers from one road to another very difficult, there being no direct road or street from one station to the other. A hearing, after due notice given, was held in Sparta on September 25, 1913, *Mr. Teasdale* appearing for himself and *C. A. Vilas* for the Chicago & North Western Railway Company and *P. C. Eldredge* for the Chicago, Milwaukee & St. Paul Railroad Company.

At this hearing a great deal of testimony for and against the union station proposition was presented. The character and volume of railway business transacted at Sparta was thoroughly gone into. The general contention of the representatives of the

respondent companies was that neither the volume of business nor the number of the transfers between the roads was sufficient to warrant the expense that would be involved in the construction and maintenance of a union station.

On February 5, 1914, the Commission issued an order (13 W. R. C. R. 679), directing the Chicago & North Western Railway Company to build a modern passenger station at Sparta, to be completed by June 1, 1914, and dismissed the complaint of Howard Teasdale asking that the Commission issue an order directing the two companies to build a union station.

Mr. Teasdale immediately asked for a rehearing and a suspension of the order as to the Chicago & North Western Railway Company, and his request was granted.

Another hearing was held on April 4, 1914, this time in the office of the Railroad Commission at Madison, at which the appearances were *Howard Teasdale* and *Z. S. Rice*, city attorney of Sparta, for the petitioner and *C. A. Vilas* and *E. E. Nash* for the Chicago & North Western Railway Company, and *P. C. Eldredge* and *J. A. MacDonald* for the Chicago, Milwaukee & St. Paul Railway Company.

At this hearing no witnesses were called, but the testimony presented at the previous two hearings was reviewed in the form of arguments by those who appeared for the two sides. At the hearing upon his petition, Mr. Teasdale had suggested three possible sites for a union station, and the arguments centered around these, and the merits of the demand for a union station. A detailed statement of the volume of the passenger business at Sparta by months was presented, covering both roads. This statement follows as Table I. It shows that the combined passenger business for the year amounts to over \$65,000. Later the statement was made by Mr. Teasdale that the total passenger and freight business for both roads at Sparta aggregated about \$56,000 per month, or nearly \$700,000 a year.

TABLE I.

Month.	C. & N. W. Ry. Co.				C. M. & St. P. Ry. Co.			
	Total.	Local.	Coupon.	Other.	Total.	Local.	Coupon.	Other.

Apr. 1913	3,597 41	2,934 76	557 04	105 61	1,683 03	1,298 29	339 39	45 35
Total..	\$42,281 16	\$35,088 87	\$6,222 03	\$970 26	\$23,225 63	\$17,158 98	\$5,458 77	\$607 88

The three sites suggested for a union station by Mr. Teasdale were: (1) On Water street, about 300 feet south of the intersection of Oak street; (2) the site of the present station of the Chicago, Milwaukee & St. Paul Railway Company; (3) a point about 300 feet east of the intersection of South Water street by the tracks of the two respondent companies, and close to the site of the present Chicago & North Western Railway Company station. The latter is where the tracks of the two companies converge, and begin to parallel each other. The selection of site No. 1, it was shown by the respondent companies' representatives, would necessitate the backing of trains into the station and involve a large outlay for both companies. The selection of site No. 2 would require on the part of the Chicago & North Western Railway Company the purchase of a new right of way and expensive track moving. The companies' representatives alleged that the selection of site No. 3 also would involve track changes for both companies, and the relocating at a heavy expense of the station equipment of the Chicago, Milwaukee & St. Paul Railway Company. One representative of the latter company contended that the moving of the water tank and other equipment would cost \$12,250. This figure was disputed by both Mr. Teasdale and Mr. Rice, who held that the expense to the Chicago, Milwaukee & St. Paul Railway Company for relocating equipment, outside of its share of the cost of the new station, could not exceed \$6,000.

Out of the abundance of testimony and argument in the case, one conclusion may fairly be drawn, namely, that the passenger transfer facilities between the two roads at Sparta are far from being convenient, and that the present structures used as passenger stations are not of a character to meet the needs of a city of nearly 5,000 inhabitants, which is also the county seat of a populous and prosperous county. It isn't the question of mere adequacy of space that is involved. Barracks might have ample space and yet be unfit and inappropriate for a passenger station in such a city as Sparta. It is a question rather of station facilities as to space and accommodations, convenient of location, and fitting as to appearance. The passenger stations of both roads at Sparta are antiquated structures. The station of the Chicago, Milwaukee & St. Paul Railway Company has more modern conveniences than the other, but still it is out of keeping with the taste and generally prosperous character of the city in which it is located.

Neither station is near the heart of the city. That of the Chicago & North Western Railway Company is almost directly south, three-quarters of a mile from the business and residence center of the city, while that of the Chicago, Milwaukee & St. Paul Railway Company is about the same distance away to the southeast, the three points, the center of the city, and the two stations representing roughly a triangle with the stations at the base angles, and the city at the apex. So far as ease of access from the city is concerned, there is nothing to choose between the locations of the two stations.

One site suggested for a union station is within 300 feet of the business center of the city, near the corner of Oak and Water streets, but for a number of reasons such a location would be undesirable. There are a good many advantages in having railroads and their station equipment somewhat removed from the heart of a modern city. The real difficulty in Sparta, apart from the unfitness of the present station structures, is the fact that the two stations are so far apart with no direct street nor sidewalk between them. When it is remembered that Sparta is on the main double-track line of the Chicago, Milwaukee & St. Paul Railway Company to the northwest, and its junction with its Viroqua branch, and that it is now the junction point of two important branches of the Chicago & North Western Railway Company, the situation of the passenger stations in relation to

each other assumes importance. There was some conflict of testimony at the hearings concerning the volume of transfer business between the roads, but whether that be large or small, the facilities for it are very poor. About twenty-four passenger trains on both roads pass through Sparta daily. In the case of the through trains the respective arriving times on the two roads are close together.

While the traveling public of Sparta is perhaps entitled to the first consideration, attention should be paid to the other traveling public whose convenience and welfare are involved. Petitions from Wilton, Westby and Viroqua have been received by the Commission asking for a union station in Sparta. If these stand for nothing more, they at least indicate that in the opinion of those who must use Sparta as a transfer station, the facilities for transfer are not satisfactory.

Mr. Teasdale's petition for an order of the Commission directing the building of a union station at Sparta is brought under section 1797—9, sub. 2, being chapter 69, laws of 1913, amending the railroad laws. The amendment reads as follows:

“In every city, village or town in which two or more railroads enter and maintain passenger depots, it shall be the duty of such railroads to construct, maintain and use an adequate union passenger depot, whenever practicable and required by public convenience and necessity. If, after investigation, the commission shall determine that it is practicable and that public convenience and necessity require the construction, maintenance and use of a union passenger depot by two or more railroads, in any city, village or town, in which such railroads enter and maintain passenger depots, the commission may after notice and hearing, as provided in section 1797—12, order such railroads to construct, maintain and use an adequate union passenger depot, and shall also in such order fix the location of such depot. If the railroads shall be unable to agree upon an apportionment of the original cost of such union passenger depot, and the cost and expense of maintaining the same, within twenty days after the service of such order, the commission may, after a like hearing, issue a supplemental order declaring the apportionment of such original cost and the cost and expense of maintaining such depot.”

The wording of this, as will be seen, precludes an interpretation that would make it obligatory upon any two or more railroads entering a town or city to build a union station regardless of conditions; or a construction that would make it the ab-

solute duty of the Commission to order a union station. The law is clearly meant to give the Commission the power to order the building of a union station, when in its judgment conditions make it practicable or make it necessary for the convenience of the traveling public. It is the Commission's duty to exercise its discretion as to the practicability of or necessity for a union station.

It must be conceded that the arguments urged against the building of a union station by those called to testify at the hearing were far from strong. Outside the objections of the union plan presented by the respondent companies, the substance of these arguments is that the business interests of the city are not keen to secure a union station; that it would seriously affect the value of real estate in the vicinity of the Chicago, Milwaukee & St. Paul station, should that station be abandoned; that the proprietor of the transfer line would suffer a loss; and that the owner of one of the station hotels would lose heavily in the depreciation of his property should the present site of either station be abandoned. Not very convincing arguments, it must be said, if we except the first one, and that at its best is negative, against a proposition to improve the transfer conditions and the station accommodations for the traveling public.

The representatives of the respondent companies themselves, in their claim which was not refuted, that the expense of building and maintaining a union station in a city of Sparta's size would materially exceed the cost of building and maintaining separate stations, were more to the point. Assuming that the representatives are correct in their computations, a material excess of cost for the union station over that of separate stations might be a strong argument against the combining. When asked if there would be any serious objections to building together if the present stations were destroyed, Mr. Nash, division superintendent of the Chicago & North Western, thought that there would not be. Later, however, it developed from his testimony and that of Mr. Eldredge that it was believed by them that the exigencies of competition in a city of Sparta's size and the involved accounting, would make the work of a joint station organization complicated and difficult. None of the representatives of the respondent companies undertook to show explicitly how the cost of building and maintaining a joint station could exceed that of two stations; nor did they explain why the ordi-

nary business competition between the roads might not be as well carried on from a joint station as from separate ones. It is a fair deduction, therefore, from the testimony and arguments presented in opposition, that the obstacles in the way of union station are not insurmountable.

Coming back now to the original complaint, the inadequacy of the station and transfer facilities of Sparta, the question recurs, what is the best remedy and most practicable remedy for existing conditions?

Obviously, either a union station as centrally located as possible, or two new stations in close proximity. At a point but a few hundred feet to the west of the present Chicago & North Western station, the tracks of the two lines converge and run closely parallel out beyond the corporate limits. Mr. Vilas, representing the Chicago & North Western, in making his argument said: "The only possible place for it (a union station) is at the present intersection of the tracks, if such a thing could be considered for a moment, which I do not for a moment admit." This intersection is near the point where South Water street crosses the tracks of both lines. Conceding that the present location of the Chicago, Milwaukee & St. Paul is equally convenient to the city, the lines of the two companies diverge so widely at that point that either a union station or two stations in proximity to each other there would mean a large and unwarranted expense to the Chicago & North Western for track moving and the purchase of right of way. The other point, the intersection of South Water street by the tracks of the two lines, is virtually the same distance from the center of the city as the present Chicago, Milwaukee & St. Paul station. The Chicago & North Western would have to move its tracks but little, if any, and the Chicago, Milwaukee & St. Paul would be obliged to purchase but little land outside its right of way for station and platform ground.

The Chicago, Milwaukee & St. Paul freight department is carried on by a separate corps of employes, and is in no way dependent upon the passenger station. The latter and the freight yards might be several miles apart without involving additional inconvenience or expense in the maintenance of either office. Were the St. Paul station moved to the South Water street site, it would be a little over half a mile from the freight office and yards. The claim that it would involve an enormous expense

to the Chicago, Milwaukee & St. Paul to move its passenger station is hardly borne out by the probabilities. Assuming that a new passenger station is necessary for that company, or will be within a year or two, the additional cost of building new at the South Water street intersection over that of building new on the present site would not be serious.

There can be no question that it would add much to the convenience of travel to and from Sparta and of transfer there from one road to another if there were a union station or the two stations were close together. The testimony as to this was unanimous. Neither can there be any question, we believe, as to which is the most available site for either proposition. The South Water street intersection is quite as convenient as any, and the change would involve very much less expense. At the South Water street site, with a union station or with two stations but a few hundred feet apart, it would be possible for the two companies to combine in beautifying the adjoining and intervening grounds, thus providing an attractive setting that would give the traveler a most favorable impression both of the city and of the good taste of the companies.

The Commission has already in a previous order, which was suspended, directed the Chicago & North Western to erect a new passenger station. The need for better facilities there was conceded by the company's representatives. The situation as to the Chicago, Milwaukee & St. Paul differs but little. The large volume of business transacted fully warrants a reasonable expenditure for new station facilities, even if it be conceded that under certain conditions less favorable to the company, the present station would answer for a time. In view of the immediate necessity for a new station for the Chicago & North Western, it seems an opportune time for the Chicago, Milwaukee & St. Paul to improve its facilities. The large volume of railroad business at Sparta surely warrants commodious, attractive and convenient passenger stations.

Between the tracks of the two companies, immediately west of Water street, there is sufficient room for a union station. At the present time a transfer track crosses this tract of land, but this transfer can be easily moved to a point southwesterly, so that it will not interfere with the project. This contemplates the moving of the Viroqua branch of the Chicago, Milwaukee & St. Paul so that its center line would be a little south of the cen-

ter line of the next nearest tracks. It might be necessary under such a plan to throw the main line of the Chicago & North Western south of the present location, but that could be done at slight cost, even though it were necessary to buy a small amount of land for that purpose. A union station could probably be constructed at this point, together with the necessary shelter sheds, driveways and platforms, for \$22,000. The cost of the necessary track changes would not exceed \$4,000. A water supply for the Chicago, Milwaukee & St. Paul (assuming that arrangements could not be made for the joint use of the Chicago & North Western's new tank), would probably cost \$5,000. The total cost then of the union station and necessary changes would probably not exceed \$32,000.

It would also be feasible for each of the respondent companies to build a station near this point, that is, close to the South Water street crossing, and in close proximity each to the other, so that the conveniences of a union station could be substantially realized. This would mean the building of the Chicago & North Western's new structure a little west of the site of the present station, and the building of the Chicago, Milwaukee & St. Paul structure just west of the South Water street crossing and north of its own tracks. In addition to the building of its station it would cost the Chicago, Milwaukee & St. Paul \$2,000 or \$3,000 for platform, shelter-sheds, etc., and perhaps \$500 for the moving of the Viroqua track so as to give the necessary clearance. It is not certain that with its present water tank it would be necessary for the latter company to construct another at the new site.

It is quite possible that two separate stations in close proximity would meet the needs of the situation as fully as a union station, but a careful reconsideration of the whole subject leads to the belief that the obstacles urged against a union station are not so serious as they are made to appear. A union station near the site suggested is a feasible project and the respondent companies will be ordered to build one. If, however, the respondent companies, within thirty days of the date of the order, desire to present arguments showing that separate stations in close proximity will better meet the requirements of the situation, the Commission will consider the question of modifying the order.

IT IS THEREFORE ORDERED, That the Chicago & North Western Railway Company and the Chicago, Milwaukee & St. Paul Rail-

way Company discontinue their passenger stations in the city of Sparta at present in use, and erect a union passenger station at a point close to where South Water street in the said city of Sparta is intersected by the tracks of the two companies, said new union station to be completed and in use by both companies within one year from the date of this order.

IT IS FURTHER ORDERED, That the plans and location for said union station be submitted for approval to this Commission within sixty days of the date of this order.

IN RE DETERMINING AND FIXING A JUST COMPENSATION TO BE PAID TO THE UNITED HEAT, LIGHT & POWER COMPANY OF DELAVAN, BY THE VILLAGE OF SHARON, FOR THE TAKING OF THE PLANT OF SAID COMPANY IN ACCORDANCE WITH THE PROVISIONS OF CHAPTER 499 OF THE LAWS OF 1907 AND ACTS AMENDATORY THEREOF AND SUPPLEMENTARY THERETO.

Submitted Sept. 18, 1914. Decided Oct. 6 1914.

Notice was served on the Commission, by the village of Sharon, of its determination to acquire the plant, with the exception of the engine and generator, of the United Heat, Light and Power Company. The tentative valuation of the Commission's engineers fixed the reproduction cost at \$4,891, and reproduction cost less depreciation at \$3,052, and these figures were conceded by all the parties to be fair and reasonable. It was agreed between the parties that \$2,000 should be paid for that part of the property to be acquired by the village.

Held: The price agreed upon is reasonable. It is ordered that the village of Sharon pay the United Heat, Light and Power Company of Delavan the sum of \$2,000 within three months after the date of the order, with 6 per cent interest per annum after taking possession of the plant until the amount is fully paid, and that the United Heat, Light and Power Company transfer possession before November 1, 1914.

The village of Sharon, Wis., served on the United Heat, Light & Power Company of Delavan and on the Railroad Commission of Wisconsin a notice setting forth, among other things, that the United Heat, Light & Power Company was operating under an indeterminate permit; that on the 21st day of August, 1914, at a special election duly called therefor, the vote of a majority of the electors of said village voting thereon was cast in favor of the purchase and acquisition of the plant of the United Heat, Light & Power Company of Delavan, excepting the engine and generator of said company, by the said village of Sharon; and that said United Heat, Light & Power Company of Delavan has consented to the taking over of its plant by the municipality.

Due notice was given to the village of Sharon, the United Heat, Light & Power Company of Delavan, and all mortgagees, bondholders, and others having or claiming to have any lien or

interest in said property, and pursuant to the stipulation of the parties the public hearing in said matter was held at the office of the Railroad Commission of Wisconsin, in the capitol, in the city of Madison, Wis., on September 18, 1914. The village of Sharon was represented by *T. S. Nolan*, its attorney, and the United Heat, Light & Power Company by *G. M. Cantwell*.

The tentative valuation of the property of the United Heat, Light & Power Company made by the engineers of the Commission was submitted to the parties interested, prior to the hearing. The final summary of all the property of said company in the village of Sharon is as follows:

Classification.	Reproduction cost.	Reproduction cost less depreciation.
A. Land.....		
B. Transmission and distribution.....	\$1,892	\$1,698
C. Buildings and miscellaneous structures.....		
D. Plant equipment.....	2,475	1,027
E. General equipment.....		
Total.....	\$4,367	\$2,725
Add 12 per cent (see note below).....	5.4	327
Total.....	\$4,891	\$3,052
F. Paving.....		
H. Materials and supplies.....		
Total.....	\$4,891	\$3,052

NOTE: Addition of 12 per cent to cover engineering, superintendence, interest during construction, contingencies, etc.

It was conceded on the part of all the parties that such valuation was fair and reasonable. By agreement between the parties, certain of the property was to be retained by the United Heat, Light & Power Company and the remainder was to be acquired by the village of Sharon upon payment to the United Heat, Light & Power Company of the sum of \$2,000. The price thus agreed upon is reasonable. The village, in the judgment of the Commission, has made a good bargain, and it must be said that the United Heat, Light & Power Company was liberal in its proposition. Under the circumstances, we have no hesitation in finding and fixing the just compensation to be paid to the United Heat, Light & Power Company by the village of Sharon at the figure agreed upon.

NOW, THEREFORE, IT IS ORDERED, That the just compensation to be paid to the United Heat, Light & Power Company of Dela-

van for the taking of said property actually used and useful for the convenience of the public by the village of Sharon, as agreed upon by the parties, be and the same is hereby fixed at \$2,000.

IT IS FURTHER ORDERED, That the said village of Sharon pay to said United Heat, Light & Power Company of Delavan the compensation herein fixed within three months after the date hereof, with interest at the rate of 6 per cent per annum from the date of the taking possession of said plant by said village until the same is fully paid.

IT IS FURTHER ORDERED, That the United Heat, Light & Power Company transfer possession of said plant to the said village on or before November 1, 1914.

IN RE PROPOSED EXTENSION OF THE LINE OF THE ST. CROIX
TELEPHONE COMPANY IN THE TOWNS OF CYLON AND
EMERALD, ST. CROIX COUNTY, WISCONSIN.

Submitted Sept. 18, 1914. Decided Oct. 6, 1914.

Notice was served on the Commission of a proposed extension of the St. Croix Tel. Co. in the towns of Cylon and Emerald, St. Croix county, Wis. The purpose of the proposed extension is to afford free telephone communication between New Richmond and the vicinity thereof, and certain residents along the highway east of the village of Cylon. The latter propose to construct a new line into Cylon, there to connect with a circuit which the St. Croix Tel. Co. plans to add to its present line extending eastward from the city of New Richmond to the village of Cylon. The proposed line east of Cylon would parallel an existing line of the West Wisconsin Tel. Co., which has several subscribers among the parties proposing the line in question, and opposes its construction. It appears that the lack of physical connection between the two companies concerned is responsible for the fact that present facilities for communications between the territories involved are not all that could be desired.

Held: Public convenience and necessity do not require the construction of the proposed line east of Cylon, St. Croix county, insofar as such extension would reach residents along the highway, in the sections specified in the decision, in the towns of Cylon and Emerald. The difficulties of communication would be remedied by a physical connection, which the law provides a means of securing.

Notice was served upon the Commission of a proposed extension of the St. Croix Telephone Company in the towns of Cylon and Emerald, St. Croix county, Wis., and objection to the extension being made by the West Wisconsin Telephone Company, which operates lines for local service in the towns named, a hearing was held at New Richmond, Wis., on September 18, 1914. Representing the St. Croix Telephone Company there were present *F. S. Wade*, president, and *P. C. Harmon*, secretary. Representing the West Wisconsin Telephone Company was *H. H. Dean*, its attorney, and the officers of the company.

At the hearing it developed that the St. Croix Telephone Company has a line for local service extending eastward from the city of New Richmond to the village of Cylon, and that the lines

of the West Wisconsin Telephone Company also extend into the village of Cylon, approaching from the east. The St. Croix Telephone Company proposes to build an additional line to the village of Cylon. To the construction of the additional circuit no objection is made and none could legally be made, inasmuch as that company is already occupying the highway down which it proposes to string the additional wire. But the purpose of the added circuit is to connect at Cylon with a line which certain residents along the highway east of Cylon plan to construct into that village. The individuals proposing the construction of the new line into Cylon were represented in the hearing by *William Henry*.

The line that it is proposed to build would parallel an existing line of the West Wisconsin Telephone Company throughout its length. Moreover, several of the persons whose names are signed to the petition presented by Mr. Henry, requesting authority to construct the line, are subscribers of the West Wisconsin Telephone Company at the present time. Some of them have only lately installed the service of the latter company. The reason assigned for desiring to construct the proposed line is that friends and relatives of the proponents live to the westward in the vicinity of New Richmond with whom they could communicate free of charge were they permitted to build the proposed line. It was testified also that the proponents frequently transacted business in New Richmond for which purpose the line would be of considerable convenience, but that the present connections with Glenwood City over the lines of the West Wisconsin Telephone Company were not useful to the petitioners to any great extent for business purposes.

The present facilities for communication between residents east of Cylon and points in the neighborhood of New Richmond are not all that could be desired because of the lack of physical connection between the companies serving the respective territories. The law provides, however, for a means of securing the establishment of an interchange of service between the two companies upon application of patrons desiring it. If physical connection were instituted, the subscribers desiring to construct the line under consideration in this case would be able to converse with relatives and tradespeople in the vicinity of New Richmond as conveniently as they would be were the proposed line allowed to be built. It would seem, therefore, that the proposed

line is not one which is demanded by public convenience or necessity. All the requirements of the petitioners for telephone service to the neighborhoods served by the St. Croix Telephone Company would be met by a physical connection between that company and the company whose service is now at their command.

We therefore find and determine that public convenience and necessity do not require the construction of the line east of Cylon, St. Croix county, as proposed by the signers of the petition presented to the Commission so far as such extension would reach residents along the highway running between sections 33, 34, 35 and 36 in the town of Cylon and sections 5, 4, 3 and 2 in the town of Emerald.

STATE AID HIGHWAY COMMITTEE OF WOOD COUNTY
vs.
WISCONSIN TELEPHONE COMPANY,
LINDSEY FARMERS TELEPHONE COMPANY.

Submitted Aug. 24, 1914. Decided Oct. 6, 1914.

Complaint was made that there was need in Wood county of a physical connection between the Wis. Tel. Co. and the Lindsey Farmers Tel. Co. It appears that the complainant has many crews of men at work improving and building roads, and that the physical connection asked would be a convenience and facilitate its work. It developed, however, that, in order to give satisfactory service with the physical connection asked, extensive changes not warranted by the resulting increase in revenues would be necessary in the case of the Lindsey Farmers Tel. Co., and the complainants stated their willingness to withdraw their complaint.

Held: In the absence of a showing of a public demand, such as would warrant the finding that public convenience and necessity require the connection, leave to withdraw the complaint is granted and the proceeding is dismissed.

Complaint in the above entitled matter was filed with the Commission on July 20, 1914, alleging that the respondents, though requested to do so, refused to facilitate interchange of messages between their respective systems; that the complainant had many crews of men at work improving and building roads in Wood county, and that it would be a great convenience to the complainant and would facilitate its work if a physical connection were afforded between the two telephone companies, so that the foremen of the various crews could converse from rural regions where they were at work directly with persons located at points reached by the Wisconsin Telephone Company.

A hearing was held at the city of Marshfield on August 24, 1914. The appearance for the complainants was made by *G. W. Brown, Louis Schroeder* and *I. A. Tuttle*; for the Wisconsin Telephone Company by *J. F. Krizek*, and for the Lindsey Farmers Telephone Company by *E. L. Deming*.

It developed at the hearing that the Lindsey Farmers Telephone Company operates a grounded system, giving satisfactory

service to the stockholders, but that owing to the character of the construction it is reasonably certain that satisfactory service could not be given to persons desiring to communicate over the lines of the Wisconsin Telephone Company through the lines of the Lindsey Farmers Telephone Company, and vice versa, if physical connection was established between the two companies. To render satisfactory service of the nature described it was shown that it would be necessary to make extensive changes in the construction of the system of the Lindsey Farmers Telephone Company, and that such changes would not be warranted by the increase in revenues resulting from the physical connection if the latter were installed. In the light of the facts adduced the complainants stated that they did not wish to urge their demand and asked leave to withdraw the complaint.

There being no showing made of a public demand for physical connection between the Wisconsin Telephone Company and the Lindsey Farmers Telephone Company such as would warrant a finding that public convenience and necessity required the connection as requested by the complainants, it is considered that leave to withdraw the complaint should be granted.

IT IS THEREFORE ORDERED, That leave to withdraw the complaint is granted and that the proceeding in the above entitled matter be and the same is hereby dismissed.

FRANK B. FULLMER

vs.

WAUSAU STREET RAILROAD COMPANY.

Submitted April 27, 1914. Decided Oct. 10, 1914.

The petition asks the Commission to require the respondent to maintain lights at all stopping places in the village of Schofield; to stop its cars to receive and discharge passengers at all street crossings in the village except School street, and also to stop at Goff's alley; to receive and discharge passengers at all stopping places from the car door nearest the sidewalk; to establish a five cent fare from any point in the village of Schofield to the city of Wausau, and to substitute a discount of one cent per kw-hr. on payments made for electric lighting service prior to the fifteenth of the month in lieu of the existing service charge of 25 cts. Since the hearing a contract has been entered into between the village and respondent for the establishment of a lighting system for the village streets. With regard to increasing the number of stopping places, it appears that respondent intends to establish a stop in addition to those already made. As to boarding and alighting from cars on the side near the sidewalk, it seems that in part of the village respondent's track is laid near the east sidewalk, and in part near the west sidewalk; that respondent's cars are of the prepayment type with doors opening on the right hand side; that the traveling public has become accustomed to boarding and alighting from respondent's cars on that side, and that respondent offers to construct suitable landing places on both sides of the track when necessary for the reasonable convenience of the public. As far as transportation rates are concerned, these were adjusted by the Commission in *Fullmer v. Wausau St. R. Co.* 1909, 3 W. R. C. R. 520 and 555, and in 1910, 5 W. R. C. R. 114. and further adjustments both as to transportation rates and electric rates must necessarily require careful study, which will consume a considerable period of time.

Held: In view of the lighting contract entered into between the parties, further consideration of the lighting of stopping places is unnecessary at present. The number of stops now made with the additional stop planned by the respondent will be reasonably adequate, and the construction of landing places, as far as boarding and alighting are concerned, will render right hand side operation reasonably safe and convenient, and avoid the confusion a change would likely create. The petition as to service matters is dismissed, and as to rates is held in abeyance for necessary study and consideration.

The petitioner, who conducts a boat livery in Schofield, prays that the respondent be required to establish a five cent fare from

any point in the village of Schofield to the city of Wausau; to stop its cars to receive and discharge passengers at all street crossings in Schofield except School street, and also stop at Goff's alley; to maintain lights at all stopping places in said village; and to receive and discharge passengers at all stopping places from the car door nearest the sidewalk. The petition further prays that the respondent be required to substitute a discount of one cent per kw-hr. on payments made for electric lighting service prior to the fifteenth of the month, in lieu of the existing service charge of 25 cts.

No formal answer was filed by the respondent.

A hearing was held on April 27, 1914, at Schofield. *Frank B. Fullmer* appeared in his own behalf and *M. B. Rosenberry* represented the respondent.

The rates charged by the Wausau Street Railroad Company for transporting passengers over its system have been adjusted by order of this Commission (*Fullmer v. Wausau St. R. Co.* 3 W. R. C. R. 1909, 520 and 555, and 5 W. R. C. R. 114), the latest decision having been rendered on April 1, 1910. The testimony taken at both hearings in the previous proceeding was introduced in evidence without objection. Any further adjustment of transportation rates necessarily requires a careful study of the financial status of the respondent and of the existing traffic conditions, which study will consume a considerable period of time.

This is also true with respect to the adjustment of electric rates prayed for, which was considered at the hearing by stipulation, the complaint being accepted by the respondent as having the same weight as if signed by the number of persons required by law. We therefore deem it advisable to render a decision at this time with reference to the service matters submitted, reserving our decision in matters involving rate adjustments until a later date.

STOPPING PLACES IN SCHOFIELD.

At the time of the hearing respondent's interurban cars stopped at the following points in the village of Schofield:

Warheim's	Kelley road
Robb street	Eau Claire street
Eau Claire villa	Summer street
Radke street	Country Club
Cowley street	Smith's
Switch north of bridge	

In its brief the respondent declares its intention of establishing a stop at the Old Kelley road or what is known as Volkman's. From a careful examination of the testimony and the report of our engineer who made an examination of the conditions at Schofield, we are of the opinion that with the addition of a stop at Volkman's, the existing stops will be reasonably adequate for serving the residents of the village. From the north village limits to the bridge, the only stop dwelt upon at the hearing was Roosevelt street. This street, however, is in a swampy location and there appears to be no necessity for establishing a stop there. South of the bridge the first stop is at the Kelley road and the second at Eau Claire street, a distance of 1,250 feet. Petitioner asks for a stop at Goff's alley south of School street and only three hundred feet north of Eau Claire street. The proposed location is on a hill, and is within reasonable walking distance of Eau Claire street. The maintenance of stops at both places is not warranted by traffic conditions, and to move the stop from Eau Claire street to Goff's alley would inconvenience more people than it would benefit. Between Summer street and the Country Club there is one street at which no stop is made. This street, however, is only about six hundred feet south of Summer street and a stop there would accommodate too few people to justify its establishment. The stop at Volkman's, which the company has agreed to establish, appears to be necessary for the proper accommodation of the residents in that vicinity. In addition to the regular stops above mentioned the cars stop at two churches on Sundays and also make special stops for infirm or feeble persons in very inclement weather.

LIGHTS AT STOPPING PLACES.

Briefs of both parties in this proceeding state that subsequent to the hearing a contract was entered into between the village and the respondent, in its capacity as an electric utility, for the establishment of a lighting system for the streets of the village. Inasmuch as the installation of street lights will probably remove the cause of complaint as to the proper lighting of stopping places, that matter need receive no further consideration at this time.

FACILITIES FOR BOARDING AND ALIGHTING FROM CARS.

North of the bridge respondent's track is laid near the east sidewalk, and south of the bridge it is laid near the west sidewalk. The cars operated are of the prepayment type with doors opening on the right-hand side only. Thus southbound cars unload passengers on the street side at stops north of the bridge, and on the sidewalk side at stops south of the bridge. The reverse is true of northbound cars. Petitioner asks that all loading be done at the doors nearest the sidewalk. Respondent objects to this proposal on the ground that it will seriously interfere with operation. It has voluntarily agreed to provide suitable landing places on both sides of the track where necessary for the reasonable convenience of the public. Investigation shows that such landing places can be constructed in an unobjectionable manner. The traveling public has become accustomed to boarding and alighting from respondent's cars on the right-hand side, and any change in method is likely to create confusion. In general it is desirable in street car operation to load passengers on one side only, and such a rule should not be set aside except under peculiar conditions. In the present case the construction of landing places will render right-hand side operation reasonably safe and convenient for passengers. Under such circumstances the present method of operation should be continued.

IT IS THEREFORE ORDERED, That the complaint herein, insofar as it relates to matters of interurban railway service, be and the same is hereby dismissed.

CITY OF FORT ATKINSON

vs.

CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted July 22, 1914. Decided Oct. 10, 1914.

The Commission held a rehearing on the adequacy of the protection ordered by it at South Fifth street in the city of Fort Atkinson, Wis., *City of Fort Atkinson v. C. & N. W. R. Co.* 1913, 13 W. R. C. R. 69. In that case the Commission ordered the respondent to install and maintain an automatic electric bell with an illuminated sign for night indication, and stated that, should the railway officials fail to rigidly enforce the flagging of all switching movements over the crossing, it would modify its order and require the company to station a flagman there. It appears that at times the bell rings for unusually long periods, a fact causing complaint and diminishing its effectiveness as a protective device. It also appears that it is impossible to arrange the circuits of the bell so that ringing for unusually long periods can be entirely avoided, and that respondent has failed to rigidly enforce its rule with regard to the flagging of switching movements.

Held: Under the peculiar circumstances of the present case, the protection afforded by the bell and light is inadequate. The respondent is ordered, in lieu of the installation formerly prescribed, to station a flagman at the crossing in question, to be on duty from 7 a. m. to 7 p. m. and to install and maintain an automatic visual signal for night indication, to be operated from 7 p. m. to 7 a. m., plans for track circuits to be submitted to the Commission for approval. Thirty days is considered a reasonable time within which to make the installation ordered.

REHEARING.

Under date of November 14, 1913, an order (13 W. R. C. R. 69) was issued in the above entitled matter requiring the respondent, among other things, to install and maintain an automatic electric bell with an illuminated sign for night indication at South Fifth street in the city of Fort Atkinson. In the decision the following language was used with reference to south Fifth street:

“If all switching movements over the crossing are properly flagged by trainmen, we believe that the main track movements can be adequately safeguarded by the installation of a bell and light. The rule requiring trainmen to flag all movements has not

been strictly adhered to in the past, and if the railway officials do not enforce the rule rigidly, the Commission will modify this order and require the company to station a flagman there." *City of Fort Atkinson v. C. & N. W. R. Co.* 13 W. R. C. R. 69, 73.

Subsequently the Commission received several complaints that the bell installed in compliance with the order rings for long periods, thus being unreliable as a warning and objectionable to residents in the vicinity. It was therefore deemed necessary to hold another hearing in order to ascertain whether the protection ordered has proved to be adequate. This hearing was held at Fort Atkinson on July 22, 1914. *A. L. Stengel* appeared for the city of Fort Atkinson, and *D. E. Riordan* for the Chicago & North Western Railway Company.

Several witnesses testified that since the former order was issued many switching movements at South Fifth street have not been flagged by trainmen as suggested in the decision. Railway officials testified that instructions had been given to trainmen to flag all switching movements, and that as far as they knew these orders have been complied with.

Witnesses testified that the bell has rung frequently for unusual periods. A record kept by two men on June 9, 10, and 11, between the hours of 7 and 12 a. m. and 1 and 6 p. m. shows that the bell rang for periods varying from 5 seconds to 36 minutes. A number of periods of unusual length were noted on those days. Numerous other instances of the bell ringing for long periods were cited. No instance was reported where the bell failed to ring when a train was approaching. It was stated that travelers have ignored the bell because it sometimes rings when no train is about to cross. Respondent's signal engineer explained that the continuous ringing of the bell results from cars standing on portions of the main track during switching operations. He stated that the circuits work properly as installed, and that no failure of the bell to ring when a train is in the circuit had been reported to him.

A statement prepared by respondent's station agent and introduced by the superintendent shows the character of the switching movements of the two trains which handle most of the local traffic, as follows:

Date.	Train No.	Number of movements at crossing.	Number of times when a man was on car or on ground to protect crossing.	Number of times when only engineer was on lookout.
7-8-14.....	51	15	11	4
	Extra 775	17	17	0
7-9-14.....	51	24	17	7
	Extra 775	16	16	0
7-10-14.....	51	14	14	0
7-11-14.....	51	15	15	0
	Extra 775	20	20	0

Traffic data gathered by a member of the Commission's engineering staff and introduced at the hearing, covering the period from 7:30 a. m. to 5 p. m. with the exception of a half-hour at lunch time, are as follows:

Date.	Pedestrians.		Teams.	Auto-mobiles.	Bicycles.
	Children.	Adults.			
6-17-14.....	5	24	11	15	6
6-18-14.....	3	13	16	12	4

During the same period on June 17, the crossing bell rang fifteen separate times, the longest period being 11 minutes and 10 seconds, and the average period 2 minutes, 12 seconds. On June 18, the bell rang fifteen separate times, the longest period being 16 minutes, 55 seconds, and the average period 3 minutes, 52 seconds. While making these observations the engineer noted that in the greater number of cases there was no apparent protection other than the bell while switching was in progress. He testified that two teams crossed while the bell was ringing. His observations were made on days when school was not in session, and the pedestrian traffic noted is therefore less than normal, since a considerable number of school children use this crossing as shown at the first hearing.

After a careful consideration of the testimony and the report of our engineer, we are of the opinion that under the peculiar circumstances which exist at South Fifth street the protection afforded by the bell and light is inadequate. It seems impossible to arrange the circuits so that ringing for unusual periods can be entirely avoided, and such ringing seriously impairs the effect-

iveness of bell protection and unnecessarily annoys nearby residents. Moreover, it is clear from the testimony that respondent has failed to rigidly enforce its rule with regard to the flagging of switching movements. With these facts in mind we regard protection by flagmen as necessary. The greater portion of the switching movements occur during the day, but there are a number of train movements after dark. It appears, therefore, that some form of night protection should be provided. In view of the fact that the bell has caused some complaint because of occasional ringing for unusual periods at night, it is probable that the installation of an automatic visual signal to be operated during the absence of the flagman, will best meet the situation.

IT IS THEREFORE ORDERED, That, in lieu of the installation formerly ordered herein, the respondent, the Chicago & North Western Railway Company, station a flagman at the crossing on its line at South Fifth street in the city of Fort Atkinson who shall be on duty from 7 a. m. to 7 p. m., and install and maintain an automatic visual signal for night indication to be operated from 7 p. m. to 7 a. m., plans for track circuits to be submitted to the Commission for approval.

Thirty days is considered a sufficient time within which to make the installation ordered herein.

WEST SALEM CANNING COMPANY ET AL.

vs.

CHICAGO MILWAUKEE AND ST. PAUL RAILWAY COMPANY,
CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted May 13, 1914. Decided Oct. 12, 1914.

Complaint was made that, while respondents' tracks are about 100 feet apart in the village of West Salem, they maintain no track connection, and that the lack of such connection is inconvenient to shippers. The Commission is therefore asked to require the respondents to construct a cross-over track between their lines. It appears that the cost of drayage, which could be avoided by the use of a connecting track, amounts to approximately \$5 per carload in the case of lumber, and varies in amount for other kinds of freight; that, in addition to the loss on drayage, there are other losses and inconveniences due to the absence of a connecting track; that 216 carload shipments of freight were received at West Salem during 1913, and 69 forwarded, and that a cross-over track, which would not create a dangerous condition, could be constructed near the factory of the West Salem Creamery Company at an estimated cost of approximately \$1,384. The track estimated would be long enough to accommodate five cars and approximately one-half would lie on each company's right of way.

Held: Public convenience and necessity require the construction of a cross-over track between the lines of respondent companies at West Salem, and an equal division between the two companies of the cost of construction and maintenance is considered equitable. The respondents are ordered to construct, maintain and operate, in the manner specified, a connecting track between their respective lines in West Salem, plans to be submitted to the Commission for approval; the track to be completed within sixty days of the date of the order.

The petition is signed by the West Salem Canning Company, the West Salem Co-operative Creamery Company, and Frank I. Bolles, all engaged in business at West Salem and shipping and receiving freight in carload lots at that station. The petition alleges in substance that the tracks of the Chicago & North Western Railway Company and the Chicago, Milwaukee & St. Paul Railway Company are about one hundred feet apart in the village of West Salem, but that there is no track connection and that the lack of such connection is inconvenient to shippers. The Commission is therefore asked to require the respondent railway

companies to construct a cross-over track between their lines in the village of West Salem.

The Chicago, Milwaukee & St. Paul Railway Company, in its separate answer, states that it is willing to participate in the construction of a connecting track not exceeding a total cost of \$1,000, provided the Chicago & North Western Railway Company is likewise willing to do so, in proportion to the number of linear feet of such connecting track which will lie on its right of way as compared with the number of linear feet which would lie on the right of way of the Chicago & North Western Railway Company.

No answer was filed by the Chicago & North Western Railway Company.

A hearing was held at West Salem on May 13, 1914. *J. E. Highbee* appeared for the petitioners, *P. C. Eldredge* for the Chicago, Milwaukee & St. Paul Railway Company, and *E. E. Nash* and *D. E. Riordan* for the Chicago & North Western Railway Company.

Witnesses for the petitioners testified that shippers are subjected to inconveniences and loss by the failure of the two railway companies to maintain a track connection at West Salem. Shippers who have spur tracks to their factories from one line of railway are obliged to haul their goods by team from the loading track on the other railway company's line if it is necessary to receive or ship any goods via that company. Some freight is received from and shipped to local points which are not reached by the railway system upon which particular industries are located. In addition, cars which might have been routed by shippers over the more convenient line are occasionally sent by mistake on the less convenient line. The cost of drayage for lumber, which could be avoided by the use of a connecting track, amounts to approximately \$5 per carload, and varies in amount for other kinds of freight. It was also claimed that a lower rate is in effect on one railway line than on the other to certain points.

Data submitted by the West Salem Canning Company show that during the years 1912 and 1913 and up to June 1, 1914, 133 carloads were received or forwarded by that company. The West Salem Creamery Company submitted a record showing that in 1912 it forwarded 28 carloads and received 13 carloads, in addition to a large number of less than carload lots. In 1913 it shipped out 48 carloads and received 19 carloads. The Cull-

man Lumber and Supply Company reports that it received 92 carloads in 1912 and 103 carloads in 1913, forwarding 4 and 7 carloads, respectively, during the same years. F. I. Bolles submitted a statement showing that in 1912 he received 82 carloads at West Salem, in 1913 89 carloads, and up to June 1, 1914, 37 carloads. In 1912 he forwarded 11 carloads.

Respondents submitted statements of their total carload shipments in and out of West Salem during 1913, which have been summarized in the following tables:

FREIGHT RECEIVED AND FORWARDED AT WEST SALEM, 1913.

CONSIGNEE.	CARLOADS RECEIVED.		
	Over C. M. & St. P. Ry. Co.	Over C. & N. W. Ry. Co.	Total.
Cullman Lbr. & S. Co.....	6	66	72
West Salem Canning Co.....	4	16	20
West Salem Creamery Co.....	3	12	15
West Salem Cement Block Co.....	12	12

	Over C. M. & St. P. Ry. Co.	Over C. & N. W. Ry. Co.	Total.
Cullman Lbr. & S. Co.....	3	3
West Salem Canning Co.....	24	24
West Salem Creamery Co.....	32	32
F. I. Bolles.....	10	10
Total.....	10	59	69

An inspection of the physical situation at West Salem with reference to the location of a cross-over track was conducted by a member of our engineering staff in the company of representatives of both railway companies. Two possible locations were discussed at this conference, one in the vicinity of the West Salem Creamery Company's plant and one near the factory of the West Salem Canning Company. At the proposed site near the canning factory, it would be necessary to locate both switches in the main track which would require additional signal protec-

tion on the Chicago, Milwaukee & St. Paul Railway Company's line and the construction of a cross-over track between that company's two main tracks. It would also be necessary to place a facing point switch on the Chicago & North Western Railway Company's main track, and to cross a public street, thus introducing elements of danger. A cross-over track can be constructed near the creamery, however, without creating the dangerous condition above referred to. The switch on the Chicago, Milwaukee & St. Paul Railway Company's line would be located in the passing track and would not require signal protection. Furthermore, this location would permit the construction of a track of any length deemed desirable. Our engineer estimates that a track 580 feet in length, which would accommodate five cars, can be constructed for approximately \$1,384. Approximately one-half of the proposed track would lie on each company's right of way.

In the light of the testimony and the report of our engineer it is our opinion that the construction of a cross-over track at West Salem between the lines of the respondent railway companies is warranted by the traffic conditions and required by public convenience and necessity. We regard the location near the factory of the West Salem Creamery Company as the most desirable site for such a track. In our judgment an equal division of the cost of constructing and maintaining the connecting track herein ordered between the two respondent companies is an equitable apportionment.

IT IS THEREFORE ORDERED, That the respondents, the Chicago, Milwaukee & St. Paul Railway Company and the Chicago & North Western Railway Company, construct, maintain and operate a connecting track between their respective lines in West Salem, Wis., such track to be located near the factory of the West Salem Creamery Company, the switch on the line of the Chicago & North Western Railway Company to be approximately 50 feet east of the line of Mills street. Work to be completed within sixty days from the date hereof; plans for such track to be submitted to the Commission for approval.

IN RE DETERMINING AND FIXING A JUST COMPENSATION TO BE PAID TO THE GRAND RAPIDS ELECTRIC COMPANY BY THE CITY OF GRAND RAPIDS FOR THE TAKING OF THE PLANT OF SAID COMPANY IN ACCORDANCE WITH THE PROVISIONS OF CHAPTER 499 OF THE LAWS OF 1907 AND ACTS AMENDATORY THEREOF AND SUPPLEMENTAL THERETO.

Submitted Feb. 20, 1914. Decided Oct. 14, 1914.

Notice was served on the Commission by the city of Grand Rapids that it had determined to acquire the lighting plant and equipment of the Grand Rapids Electric Co. as provided in section 1797m-80, and that the company had consented to the taking over of its plant by the acceptance of an indeterminate permit as provided in the Public Utilities Law.

A preliminary objection to these proceedings was interposed by the company prior to the introduction of any testimony upon the hearing. It appears that, when the resolution submitting the question of the purchase of the plant of the company to the city was passed, the mayor and three members of the council were stockholders of the company; that one of these councilmen was absent at the meeting in question; that of the other two one voted for and one against the resolution, and that the mayor signed the resolution upon its passage. It is contended, on the basis of section 976t, which declares null and void any contract to which the city is a party and in which any city officer shall be interested directly or indirectly, that the proceedings of the council were void, the argument seeming to be that the passage of the resolution in question was in effect the making of a contract between the city and the company and therefore within the interdiction of the statute.

Held: The ground of objection does not come within the scope of the reason or the spirit of the statute. When the company voluntarily surrendered its franchise and received in lieu thereof an indeterminate permit by operation of law, the contract, if any resulted therefrom, was between the state and the company, and not between the city and the company, the consent of the latter not even being required to make the exchange effective. However, if the purchase and sale under the statutes may be construed as constituting a contract between the municipality and the company, it was the act of the electors, and not the resolution of the council that made the city a party to the contract. The statute in question is merely declaratory of the well recognized rule that "he who is intrusted with the business of others cannot be allowed to make such business an object of pecuniary profit to himself." In the instant case, the mayor and common council could not have taken any action in the matter by which they could personally benefit, and as the *sine qua non* of proceedings such as the present is the determination of the electorate to acquire the plant, the formal action of the common council in submitting the question at an

election in the first place, or notifying the Commission and the company of the result of the election subsequently, even if every member of the council were a stockholder, could not justly be held to vitiate and nullify such determination of the electorate.

A further objection is based on the fact that, while the election was held on April 1, 1913, notice of the determination by the municipality to acquire the plant was not given to the utility or the Commission until August 16, 1913, though section 1797m-81 provides that "speedy notice" of such determination shall be given.

Held: The objection is not tenable. The provision of the statute in question is not imperative as to the time of giving notice. No rights of the city or company were injuriously affected by the delay, and a new election to determine the question of purchase would cause great expense to the city without benefiting any one concerned.

The constitutionality of the present proceedings was challenged because the constitution prohibits a municipality from taking "private property for public use against the consent of the owner, without the necessity thereof being first established by the verdict of a jury."

Held: The right was waived by the utility by the acceptance of an indeterminate permit, as provided in section 1797m-78.

The city suggested that, under certain ordinances passed by the common council, it might acquire the property of the company by assuming all its indebtedness and paying to the stockholders the par value of their stock. It appears that the original franchise contained no such condition, and that, while subsequently the company made an application to the city for a franchise to contain the purchase clause here contended for by the city, none of the ordinances passed by the city after the original franchise accorded entirely with the company's propositions, or were accepted by it.

Held: The only contract between the city and the company respecting the matter of purchase was that contained in the original franchise, which does not stipulate the price to be paid. If it did, it would be inherent in, and part of the consideration of the franchise. Under the rulings of the court in the *City of La Crosse v. La Crosse G. & El. Co.* 145 Wis. 408, and *Calumet Service Co. v. Chilton*, 148 Wis. 334, such provision would become ineffective and non-existent upon the surrender of the franchise. In any event, it is to the interest of all concerned that the Commission fix the fair value of the property, as prescribed by statute, thus permitting the decision of the court, should an action be brought to set aside or modify the finding of the Commission, to terminate the matter without further hearing.

The value of the physical property of the company was fixed by the engineers of the Commission as of January 1, 1914. The value was placed at \$86,030 cost new, and \$63,488 present value, and, excluding materials and supplies and non-operating property at \$80,133 cost new, and \$58,602 present value. It was generally conceded that the valuation was fair and reasonable with the exception of the values given the item meters, which appear to be allowed for at somewhat too liberal a figure. It appeared from an investigation of the company's books, and from consideration of the average life of electric properties and the physical changes made yearly in the plant in question, that the cost new and present value determined by the engineers of the Commission were not far from the amounts which should

be considered proper in determining the fair value of the property. It was also evident, from the facts available, that the business had been a profitable enterprise. In reaching its award, the Commission follows the principles laid down as controlling, in proceedings like the present, in *Appleton Water Works Co. v. Railroad Commission*, 154 Wis. 129. Careful consideration was given to the cost of reproducing the plant and its present value, to the probable cost of establishing a new enterprise of similar character and equally remunerative, to the revenues derived from the business, and to the testimony upon the value of the property as a going concern.

Held: That the sum of \$72,000 constitutes a fair value and just compensation for the property, excluding materials and supplies on hand, or extensions and additions made since January 1, 1914. The latter are to be paid for at such price as may be agreed upon by the parties, or, in case of failure to agree, at such price as the Commission shall fix by supplemental order. The Grand Rapids El. Co. is to turn over the property to the city on January 2, 1915, and the city is to pay to the Grand Rapids El. Co. the compensation fixed, and the price of materials and supplies, and of the additions and extensions to the plant, within thirty days after the date of the transfer of the possession of the property to the city, with interest at 6 per cent per annum from such date until payment in full.

The city of Grand Rapids served on the Grand Rapids Electric Company and on the Railroad Commission of Wisconsin a notice setting forth, among other things, that the Grand Rapids Electric Company was operating under an indeterminate permit voluntarily acquired by said company pursuant to chapter 499 of the laws of 1907; that on March 4, 1913, the common council of said city adopted an ordinance submitting to the electors of the said city at the regular municipal election held on the first Tuesday of April, 1913, the question of purchasing and acquiring the lighting plant and equipment of the said company; that said ordinance was duly published as required by law; that at said municipal election the electors of said city, voting on the question of purchasing and acquiring the lighting plant and equipment of said company, voted as follows, to-wit: total number of votes cast, 964, of which number 514 were for the purchase and acquisition of said plant and 450 were against the purchase and acquisition of said plant; that on April 7, 1913, the said common council duly met and canvassed the returns of said election and declared the result as aforesaid; that said municipality has determined to acquire said existing plant in the manner described in sec. 1797m-80 of the Wisconsin statutes, as amended, and the said public utility owning such plant has consented to the taking over of such plant by said municipality by acceptance of an indeterminate permit, as provided in and by the

Public Utilities Law of this state, to-wit: sections 1797m-1 to 1797m-109, Wisconsin statutes, as amended.

Upon receipt of the foregoing notice, due notice was given to the city of Grand Rapids, the Grand Rapids Electric Company and all mortgagees, bondholders and others having or claiming to have any lien or interest in said property, that on February 20, 1914, at 10 o'clock in the forenoon of that day, at the office of the Railroad Commission of Wisconsin, in the capitol, in the city of Madison, Wis., the said Commission would proceed to hold a public hearing on the valuation of the plant of the Grand Rapids Electric Company, and following such hearing, would by order fix and determine the just compensation to be paid by the city of Grand Rapids for the property of the Grand Rapids Electric Company actually used and useful for the convenience of the public and the terms and conditions of such sale and purchase.

The matter came on for hearing at the time fixed as aforesaid. The city of Grand Rapids was represented by *George P. Hambrecht*, city attorney, and the respondent by *Goggins & Brazeau* and *D. D. Conway*, its counsel.

Prior to the introduction of any testimony upon the hearing, the company interposed a preliminary objection to the proceedings on several grounds. The questions thereby raised are judicial in character, but as they challenge the jurisdiction of the Commission they may properly be determined by the Commission in the first instance. We shall therefore briefly consider the objection before turning to the subject matter of the investigation.

It seems that the mayor and three members of the common council were stockholders of the company when the resolution submitting the question of the purchase of the plant of the company to the electors of the city was passed. One of such councilmen voted for and one against the resolution, the third being absent. The mayor signed the resolution upon its passage. It is contended that the proceedings of the council were void because of the interest of the mayor and these members of the council in the corporation. This contention is based upon sec. 976t of the statute declaring absolutely null and void any contract to which the city is a party, and in which any city officer shall be interested directly or indirectly. The argument advanced seems to be that the passage of the resolution was in effect the making

of a contract between the city and the company and hence within the interdiction of the statute. Under the Public Utilities Law a city may determine to acquire the plant of any public utility operating therein and in which the major part of its property is situated, by a vote of a majority of the electors voting thereon at any general or special election at which the question of acquisition of such plant has been submitted. In case the company is operating under a voluntary indeterminate permit, the city, after such determination by the electors, shall give notice to the utility and Commission, and upon receipt of such notice the Commission shall hold a public hearing and thereupon fix and determine the just compensation to be paid to the company by the city and the terms and conditions of the purchase and sale. Sec. 1797*m*—76, sec. 1797*m*—81.

The company voluntarily surrendered its franchise and received an indeterminate permit in lieu thereof by operation of law. This privilege was extended to the company by the legislature and not by the city. The consent of the latter was not even required to make the exchange effective. If a contract resulted from such exchange of franchises, it was one between the state and the company, and not one between the company and the city.

It would seem, under the circumstances, to require a great stretch of the imagination to hold that the common council, in submitting to the electors the question which the latter alone could determine, had entered into a contract with the company for the purchase of its plant. If the purchase and sale under the statutes may be construed as constituting a contract between the municipality and company, it was the act of the electors and not the resolution of the council that made the city a party to the contract.

The statute prohibiting city officials from entering into contracts on behalf of the city with themselves is but declaratory of a wholesome and well recognized rule of law. As JUDGE DILLON in his work on Municipal Corporations, sec. 772 (5th Ed.) well says:

“It is a well established and salutary doctrine that he who is intrusted with the business of others cannot be allowed to make such business an object of pecuniary profit to himself. This rule does not depend upon reason technical in character, and is not local in its application. It is based upon principles of reason, of

morality and of public polity. It has its foundation in the very constitution of our nature, for it has authoritatively been declared that a man cannot serve two masters, and is recognized and enforced wherever a well-regulated system of jurisprudence prevails. The law will in no case permit persons who have undertaken a character or a charge to change or invert that character by leaving it and acting for themselves in a business in which their character binds them to act for others."

But in the instant case the mayor and common council could not possibly have taken any action in the matter by which they could personally benefit. If any profits should result to them directly from a sale of the property to the city, that would be due to the action of a majority of the electors and not to any step taken by them under the statute. The most that these officials did or could do was to extend an opportunity to the voters to determine the question of the acquisition of the property by the municipality. Such formal action as the common council was required to take in submitting the question at an election in the first place, or notifying the Commission and company of the result of the election subsequently, even if every member of the council were a stockholder, could not justly be held to vitiate and nullify the determination of the electorate to acquire the plant, which determination is really the *sine qua non* of these proceedings. This ground of objection does not in our judgment come within the scope of the reason or the spirit of the statute.

The election was held on April 1, 1913, but notice of the determination by the municipality to acquire the plant was not given to the utility or the Commission until August 16, 1913. The statute provides that "speedy notice" of such determination shall be given to the utility and the Commission. Sec. 1797m—81. To justify the belated notice, evidence was introduced tending to show that the mayor and a committee of the council endeavored to negotiate at different times with officers and directors of the company for the acquisition of the plant upon terms mutually satisfactory, but failing in such negotiations the city officials caused the notice in question to be served. We fully agree with counsel for the company that the delay was not excused by anything that transpired subsequent to the election. The city could have treated with the company for terms after as well as before giving the notice. Nevertheless, no rights of the

city or company were injuriously affected by the delay, and it is not apparent that any injury could result to either party from a delay in giving such notice where there has been no change in the situation or interest of any of the parties to the proceedings before the Commission. If such negligence on the part of the city officials should be sufficient to defeat the purpose of the election and require the holding of a new election to determine the question of purchase, it would cause a great expense to the city without benefiting anyone concerned. This should not be held to be the consequence of the delay in giving the notice, unless the statutory provision relating to the time of giving the same is clearly mandatory. Although expedition seems to be the spirit as well as the letter of the law, yet, notwithstanding, the statute may be merely declaratory in effect. In *French v. Edwards*, 80 U. S. 511, it is said:

“There are undoubtedly many statutory requisitions intended for the guide of officers in the conduct of business developed upon them which do not limit their power or render its exercise in disregard of the requisitions ineffectual. Such generally are regulations designed to secure order, system, and dispatch in proceedings, and by a disregard of which the rights of parties interested cannot be injuriously affected. Provisions of this character are not usually regarded as mandatory unless accompanied by negative words importing that the acts required shall not be done in any other manner or time than that designated. But when the requisitions prescribed are intended for the protection of the citizen, and to prevent a sacrifice of his property, and by a disregard of which his rights might be and generally would be injuriously affected, they are not directory but mandatory. They must be followed or the acts done will be invalid. The power of the officer in all such cases is limited by the manner and conditions prescribed for its exercise.”

Although the proceedings prescribed for the taking of the property are special, the taking is not adverse or in derogation of private right, but with the full consent of the owner. Hence, it would seem that a literal and exact compliance with the provision of the statute relating to a jurisdictional requirement, such as the time of the notice here in question, cannot be regarded as essential to the protection of the rights of the owner, although it might possibly be in case of an adverse taking by eminent domain. While the cases upon the question of what are and what are not mandatory statutes are numerous, it is dif-

fault to deduce from them any clear and decisive rule applicable under all circumstances. The turning point in each case seems to have been the ultimate consequences to personal or property rights that might result from a liberal construction of the statute involved.

“But it is not to be denied that the practical inconveniences likely to result from insisting with literal severity on strict compliance with all the minute details which modern statutes contain, creates a pressure on the judiciary very difficult to be resisted by sagacious and practical men who desire to free the law from the reproach of hardships or absurdity. If it should be thought, on a review of these cases, that the judiciary have, in regard to the construction of statutes as directory, really infringed on the province of the legislature, the only practical remedy for it appears to be a more careful preparation of the statutes, and an habitual insertion of the precise consequence which the lawmaker intends to follow from the disregard of his directions.” (Sedgwick on the Construction of Statutory and Constitutional Law (2 Ed. 324).

Applying to the facts of the instant case the general principles established by the trend of the leading decisions of the courts, many of which are cited in the authorities above quoted, we incline to the view that the provision of the statute here under consideration is not imperative as to the time of giving the notice, and that the objection for this reason is not sustainable.

A further ground of objection urged is that the constitution prohibits a municipality from taking “private property for public use, against the consent of the owner, without the necessity thereof being first established by the verdict of a jury.” Sec. 2 Art. XI. But the answer to this in its application to the instant case is found in sec. 1797*m*—78 of the statutes, which provides that by the acceptance of an indeterminate permit a public utility waives its constitutional right of requiring the necessity of such taking to be thus established. The waiver of this right was not infrequent even prior to the enactment of the Public Utilities Law. Franchises containing terms and conditions upon which the grantees agree to sell to municipalities their property devoted to the public service are numerous in this and other states having like constitutional provisions, and after diligent search we have been unable to find any authority holding that as a condition precedent to the sale under any such con-

tract, the necessity of the taking of the property must first be determined by a jury. In fact, as we shall see later, the company's original franchise, which was surrendered under the statute for an indeterminate franchise, contained an agreement for the sale of the property to the city at the option of the latter. The contention that the proceedings are invalid because of the constitutional inhibition mentioned seems untenable.

The suggestion of the city that it may acquire the property of the company by assuming all its indebtedness and paying to the stockholders the par value of their stock, rests upon certain ordinances passed by the common council.

The original franchise, granted to the company in 1898 by the common council, contains the following provisions:

SECTION 5. Further, in consideration of the foregoing privileges herein granted, it is hereby demanded and made a condition, obligatory and binding on said Twin City Electric Company, that it shall never issue more shares of stock than the number of incandescent lights that it rents or its equivalent in arc lights of power (one share of stock being \$5.00 and twenty incandescent lights being equal to one arc light of 2,000 candle power or one horse power) and it shall always so regulate its stock that any citizen or corporation of this city shall have the right to purchase of said company, at par, as many shares of its stock as he or it rents incandescent lights or their equivalent in arc lights or power, and that it shall be ready to furnish lighting service to this city and its citizens within one year from the passage of this ordinance.

SECTION 6. The rate charged by said company for light and power shall be actual cost, actual cost to include besides current repair and expenses a reasonable reserve fund for future construction and reconstructions, not exceeding 7 per cent of its gross annual earnings, and a rate of interest or dividend on its capital stock not exceeding 12 per cent per annum.

SECTION 7. The city of Grand Rapids or its legal successor shall have the right or option to purchase the entire plant of said Twin City Electric Company, at any time after its completion at its fair cash value, the franchise herein granted to be thereby terminated and not be included in such cash value, the value to be determined on the motion of said city or its successor by the usual method of arbitration.

In 1901 the common council passed an ordinance known as "Ordinance No. 69," granting to the company the right to construct, maintain and operate a system of water works, and in addition thereto made certain modifications in the electric light

franchise granted in 1898. This ordinance does not seem to have been accepted by the company, as the project of constructing a water works was abandoned. The provision of the ordinance of 1901, relating to the purchase of the plant of the company is as follows: "said city of Grand Rapids may at any time purchase said Electric Light and Waterworks Plant, by assuming all indebtedness of said company and paying its stockholders the par value of their stock."

In 1909 the company applied to the common council for a new franchise which should contain the same terms respecting the purchase of the plant by the city as provided in the unaccepted ordinance of 1901. The council did not accept the proposition of the company, but passed an ordinance which did not conform to such proposition. The company refused to accept the ordinance. Two months subsequently the company made another application to the council for a new franchise, which proposition contained in substance the same condition respecting the purchase of the plant by the city as the previous proposition. The council thereupon passed an ordinance granting to the company a franchise which did not meet the approval of the company or accord with its proposition. This ordinance the company refused to accept, and thereupon surrendered its original franchise and received in lieu thereof an indeterminate permit by operation of law. It seems to us that the only contract that ever existed between the company and the city respecting the matter of the purchase of the plant by the city was that contained in the original franchise. The provision contained in such franchise does not stipulate the price to be paid by the city for the property, and even if it did we are inclined to the view that such provision was inherent in and formed a part of the consideration of the franchise and consequently under the rulings of the court in the *City of La Crosse v. La Crosse Gas & El. Co.* 145, Wis. 408, and *Calumet Service Co. v. Chilton*, 148 Wis. 334, became ineffective and non-existent upon the surrender of the franchise. But even if our conclusion in the matter should be wrong, it is to the interest of all parties concerned that the Commission follow the terms of the statute and fix the fair value of the property, regardless of any other consideration. By adopting such course the decision of the court, should an action be brought to set aside or modify the finding of the Commission, would terminate the matter without further hearing.

The engineers of the Commission made the customary valuation of the physical property of the company as of January 1, 1914. A final summary of the same, together with an itemized statement of the cost of reproduction and present value of each item of property, was submitted to the parties prior to the hearing. Upon the hearing the report formed the basis of the investigation pertaining to the physical property. The final summary is as follows:

Classification.	Cost new.	Present value.
A. Land.....	\$2,000	\$2,000
B. Transmission and distribution	43,078	32,434
C. Buildings and miscellaneous structures.....	8,025	5,229
D. Plant equipment.....	17,321	11,804
E. General equipment.....	1,123	856
Total	\$71,547	\$52,323
Add 12 per cent (see note below).....	8,586	6,279
Total	\$80,133	\$58,602
F. Material and supplies	3,247	3,090
G. Non-operating.....	2,650	1,796
Total	\$86,030	\$63,488

NOTE: Addition of 12 per cent to cover engineering, superintendence, interest during construction, contingencies, etc.

Little testimony was offered upon the hearing relative to the value of the physical units of the plant. It was generally conceded that the report of the engineers was fair and reasonable. However, the engineer for the city took exception to the item of meters. His contention is that the engineers have appraised the meters higher than their actual worth. In his opinion there should be a reduction of the value of meters of about \$1,700, as new meters of a better type may be purchased at less than was paid for the meters in use. In all other respects the report receives his approval. Upon a careful investigation we are inclined to believe that the meters may be valued in the report at somewhat more than their present value. However, when we take into consideration the actual investment in the meters, their present condition and serviceability, we do not believe that they may be justly depreciated because of obsolescence to the extent of \$1,700. A somewhat smaller reduction would be justified. However, the amount is negligible when the element of the value of the physical property is taken into consideration with the other elements included in the problem of determining the fair value of the property as a going concern.

In attempting to ascertain the financial history of the plant an examination was made of the books and records of the company. Unfortunately, the records and books, outside of the consumers ledger and cash book, were not kept in such form as to furnish accurate detailed information regarding the transactions of the company. At no time since the company began operations were the labor bills, material invoices and other obligations vouchered showing the nature of each obligation and the accounts affected by such obligations. This made a detailed audit impossible, such as would be desirable for the purposes of this case. In attempting to determine in a general way the status of the business, it was deemed advisable to analyze and classify as far as possible the accounts on the books of final entry. These records disclosed that the net charges to the property and plant accounts, January 1, 1914, excluding the arbitrary credit charges to depreciation, profit and loss, and items appreciated, amounted to \$94,726.46. Under the proper method of accounting for depreciation the total net charges to property and plant at any time should represent the original cost of the units in service. The original cost of the units in service, January 1, 1914, in this case, however, cannot be considered to be represented by the net charges to property and plant as appearing on the books of the company. This seems clear from the manner of accounting for depreciation. Instead of establishing a depreciation reserve and crediting property and plants for all units of equipment discarded and removed from service, at the original cost thereof, the policy has been to credit property and plant account each year for an arbitrary amount for depreciation. No record is therefore available to show the unit removed from service and the year during which such removals were made. As a natural consequence, it is possible to determine the items of property which have been acquired and charged, but on the other hand no record is available showing the units taken from service. The total charges up to January 1, 1914, as indicated above, amounted to \$94,727.46. The deductions by years which should be made from this amount for the removals of units during the period under consideration in order to arrive at a proper original cost, is a matter which it is impossible to determine. The cost new, according to the engineers' valuation, is \$86,030, or approximately \$8,500 less than the charges appearing on the books, indicating that the proper deductions were

not made on the books for the units removed. Upon considering the average life of electric properties and the changes made by years as appearing on the books of the company, the cost new and present value, as determined by engineers of the Commission, does not appear far from the amounts which should be considered proper in determining the fair value of the property.

Due to the manner of keeping the books, difficulties similar to those outlined above were encountered with reference to the operating records as distinct from property and plant items. From a general knowledge of the business and its growth, however, it is apparent that this was a profitable enterprise. The unreliability of the records of operating expenses made it impossible to draw up an accurate statement of the net yearly profits.

In view of the numerous discussions of the subject contained in former decisions of the Commission, it becomes unnecessary to again review the elements that must be considered in determining the fair value of the property of a public utility. In *Appleton Water Works Co. v. Railroad Commission*, 154 Wis. 129, the principles that must guide in determining the just compensation to which a public utility is entitled when its property is taken over by a municipality are very clearly stated and have been followed in arriving at an award in the instant case.

After a careful consideration of the cost of reproducing the plant and the present value thereof, as shown in the estimates of the engineers and the testimony relating to the same, the probable cost of establishing a new enterprise of similar character and equally remunerative, the revenues derived from the business and all the testimony upon the question of the value of the property as a going concern, we have reached the conclusion that \$72,000 is a fair value of the property and constitutes a just compensation for the taking of the same. This amount does not include materials and supplies on hand, or extensions and additions made since January 1, 1914. These must be added when the property is taken over by the city. If the parties can not agree upon the amount thus to be added for such materials and supplies or extensions and additions, the Commission will by subsequent order fix and determine the same.

IT IS THEREFORE ORDERED, That the just compensation to be paid to the Grand Rapids Electric Company for the taking of the property of said company actually used and useful for the

convenience of the public by the city of Grand Rapids, which property consists of the items generally described in the foregoing summary statement of the engineers of the Commission, excepting, as stated, the stock and materials on hand, and the additions to the plant that have been made since January 1, 1914, be and the same is hereby fixed at \$72,000.

IT IS FURTHER ORDERED, That in addition to the above compensation, the materials and supplies on hand at the time of the taking of the said plant, and the new additions and extensions to the plant that have been made since January 1, 1914, be paid for by the said city of Grand Rapids at such price as may be agreed upon by the parties themselves, or, in case the parties fail to agree upon the price, at such price as the Commission shall fix by supplemental order.

IT IS FURTHER ORDERED, That the said Grand Rapids Electric Company turn over said property to the city of Grand Rapids on January 2, 1915, and that the said city of Grand Rapids pay to the said Grand Rapids Electric Company the compensation herein fixed and the price of said materials and supplies and said additions and extensions to said plant within thirty days after the date of the transfer of the possession of the property to the said city as aforesaid, with interest at the rate of 6 per cent per annum from said date until the same is fully paid.

FRED VON RUEDEN

vs.

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted June 24, 1914. Decided Oct. 14, 1914.

Complaint was made that a certain farm crossing which is located about three miles west of Eagle is dangerous on account of the surrounding physical conditions, and that no wing fences or cattle guards are provided, and the Commission was asked to require the respondent to construct cattle guards and permit an open crossing. It appears that access is had to the crossing in question through gates in the right of way fence, which must be opened and closed in crossing; that the crossing is petitioner's only outlet to the public highway; that it is constantly used for driving cattle to and from the pasture north of the track, and that before complaining to the Commission, petitioner requested respondent's division superintendent to construct cattle guards at the crossing in question. Respondent contends that a railway company is not required by law to provide cattle guards and wing fences at farm crossings, and that the Commission is without authority to order improvements at farm crossings because of safety considerations. Sec. 1813 of the statutes, however, authorizes the farm owner to serve notice upon the railway company, in case the railway company fails to construct the farm crossings or cattle guards required by sec. 1810, to "construct the necessary farm crossings and cattle guards thereon," and fixes a penalty for the company's failure to do so. And sec. 1810 requires the railway company to provide "suitable and convenient farm crossings."

Held: That a crossing cannot be regarded as "suitable and convenient" unless reasonably safe for those whom it is intended to serve, and that sec. 1813 makes it obligatory upon a railway company to provide cattle guards and the wing fences necessary for their efficient use at farm crossings upon notice from a farm owner, but that the installation of cattle guards and wing fences does not necessitate the maintenance of an open crossing as prayed for; that the establishment of an open crossing on a farm road used for driving cattle from place to place, and upon which cattle may at times be allowed to stray, might prove dangerous both for the cattle and for trains, and that the prayer for an open crossing must be denied.

It is ordered, that the respondent install and maintain at the farm crossing, located about three miles west of Eagle and adjacent to petitioner's property, suitable cattle guards and wing fences. Thirty days is deemed a reasonable time within which to comply.

The petition alleges in substance that a farm crossing three miles west of Eagle is petitioner's only outlet to the public highway, that the crossing is dangerous on account of the surrounding physical conditions, and that no wing fences and cattle guards are provided. The Commission is therefore asked to require the respondent to construct cattle guards and permit an open crossing.

The respondent, in its answer, alleges in substance that the conditions at the crossing are not sufficiently hazardous to warrant maintaining an open crossing and constructing cattle guards, and that there is no necessity for changing the existing conditions. The dismissal of the complaint is therefore asked.

A hearing was held at Eagle on June 24, 1914. *Fred Von Rueden* appeared in his own behalf and *J. N. Davis* represented the respondent.

The testimony shows that petitioner's farm crossing, which is located about three miles west of Eagle, is without cattle guards or wing fences, but has gates in the right of way fence which must be opened and closed in crossing. About five hundred feet east of the crossing the railway track curves through a cut to the south, and trains are visible from the approaches when they emerge from the cut. The view to the east from the north approach is somewhat better than from the south approach. The view to the west is unobstructed.

Petitioner's farm consists of 120 acres, about 20 of which lie north of the track, being used as a pasture. The remainder of the farm, including all the farm buildings, is south of the railway line. The private road which connects the two portions of the farm was in use prior to the construction of the railway line. It is the petitioner's only outlet to the public highway and is constantly used for driving cattle to and from the pasture north of the track. Train movements at the crossing consist of eight regular passenger trains and four regular freight trains in addition to which one or two extra freight trains are usually operated. A whistle post is located east of the crossing, but trains do not always whistle when approaching.

The existing arrangement was said to be dangerous to both persons and live stock. Members of the petitioner's family testified that they had experienced narrow escapes from accident, when trains approached while they were adjusting the gates, having allowed their teams to stand without tying. It was as-

serted that there is not sufficient space between the gates and the track to permit a long vehicle such as a hay rack to stand there in safety while a train passes. The absence of cattle guards and wing fences makes it difficult to prevent cattle from straying onto the track while being driven over the crossing.

Counsel for the respondent argues that a railway company is not required by law to provide cattle guards and wing fences at farm crossings, and that the Commission is without authority to order improvements at farm crossings because of safety considerations.

This action is predicated upon secs. 1810 and 1813 of the statutes which are as follows:

“Fences, cattle guards. Section 1810. 1. Every railroad corporation operating any railroad shall erect and maintain on both sides of any portion of its road (depot grounds excepted) good and sufficient fences of the height of not less than forty-eight inches, with openings or gates or bars therein, and suitable and convenient farm crossings of the road for the use of the occupants of the lands adjoining, and shall construct and maintain cattle guards at all highway crossings and connect their fences therewith to prevent cattle and other domestic animals from going on such railroad; provided, that the provisions of this section requiring cattle guards shall not apply to any crossing located in a city or incorporated village.

2. All roads hereafter built shall be so fenced and such cattle guards be made within one month from the time of commencing to operate the same, so far as operated. Until such fences and cattle guards shall be duly made every railroad corporation owning or operating any such road shall be liable for all damages done to cattle, horses or other domestic animals, or persons thereon, occasioned in any manner, in whole or in part, by the want of such fences or cattle guards; but after such fences and cattle guards shall have been in good faith constructed such liability shall not extend to damages occasioned in part by contributory negligence, nor to defect existing without negligence on the part of the corporation or its agents.

3. Any fence heretofore or hereafter built in conformity with any of the subdivisions of section 1390a of the Wisconsin statutes, 1911, shall be deemed a good and sufficient fence. (Ch. 383, 1913.)

4. No fence shall be required in places where the proximity of ponds, lakes, water-courses, ditches, hills, embankments or other sufficient protections renders a fence unnecessary to protect cattle or other domestic animals from straying upon the right of way or track; provided, that nothing herein shall affect

or render unlawful any fence heretofore built by any railroad company pursuant to the requirements of any statute. (Ch. 383, 1913.)

Railroad to provide fences, farm crossings and cattle guards; penalty. Section 1813. 1. Whenever any railroad corporation shall operate a railroad over or through inclosed lands and shall fail to construct the fences, farm crossings or cattle guards required by section 1810, proper for the use of such lands, the owner or occupant thereof may give notice in writing signed by him to such corporation, to be served as a summons in a court of record is required to be served on such corporation, to fence its road so running through his inclosed lands, describing the same, and construct the necessary farm crossings and cattle guards thereon.

2. If such company, after being so notified, neglect for three months so to construct such fences, farm crossings and cattle guards, it shall be liable to pay to such owner or occupant ten dollars for each day after the expiration of said three months until so constructed.

3. But no time between any first day of November and the first day of April next succeeding shall be included in the three months aforesaid."

The testimony shows that petitioner requested respondent's division superintendent to construct cattle guards at the crossing in question before complaining to the Commission. Sec. 1813 is supplementary to sec. 1810, which specifically provides for the construction of cattle guards only at highway crossings. The farm owner is authorized by sec. 1813 to serve notice upon the railway company to "construct the necessary farm crossings and cattle guards thereon" and a penalty is fixed for the railway company's failure to do so. In our opinion sec. 1813 makes it obligatory upon a railway company to provide cattle guards and the wing fences necessary for their efficient use at farm crossings upon notice from a farm owner. This statute, while not a part of the Railroad Commission Act, relates to railroads, and its enforcement is within the jurisdiction of the Commission. (*In re Crossing on C. & N. W. R. Co. in Town of Gale*, 1914, 14 W. R. C. R. 445).

However, we do not understand that the installation of cattle guards and wing fences necessitates the maintenance of an open crossing as prayed for. Sec. 1810 evidently contemplates the maintenance of gates or bars at farm crossings, and sec. 1811 fixes a penalty for the failure of individuals using such crossings

to close the gates or bars. On a farm road used for driving cattle from place to place, and upon which cattle may at times be allowed to stray, the establishment of an open crossing might prove dangerous both for the cattle and for trains. For these reasons the prayer for an open crossing must be denied.

The statutes which empower the Commission to require the installation of protective devices and the alteration of crossings, refer only to highway crossings and the protection of public travel thereon. However, under sec. 1810 the railway company is required to provide "suitable and convenient farm crossings." A crossing can not be regarded as "suitable and convenient" unless it is reasonably safe for those persons whom it is intended to serve.

Therefore, in the enforcement of this statute, the Commission is justified in requiring reasonable safeguards at farm crossings. Moreover, if the lack of crossing protection endangers railway traffic, the Commission has authority to order such improvements as are necessary to conserve public safety.

In the instant case our order is predicated upon the obligation of the respondent to furnish cattle guards and wing fences at farm crossings under sec. 1813 of the statutes, and not upon safety considerations.

IT IS THEREFORE ORDERED, That the respondent, the Chicago, Milwaukee & St. Paul Railway Company, install and maintain at the farm crossing located about three miles west of Eagle, adjacent to petitioner's property, suitable cattle guards and wing fences.

Thirty days is considered a reasonable time within which to comply with this order.

IN RE INVESTIGATION AND HEARING, ON MOTION OF THE COMMISSION, IN RELATION TO THE ALLEGED REFUSAL AND NEGLECT OF THE OCONTO RURAL TELEPHONE COMPANY TO EXTEND SERVICE TO CHARLES EPAVIER.

Submitted Aug. 14, 1914. Decided Oct. 15, 1914.

The Commission, on its own motion, investigated the refusal of the Oconto Rural Tel. Co. to restore service to Charles Epavier. It appeared that the wife of the former subscriber here in question was responsible for an infringement of the company's rules, forbidding "listening in" and the use of coarse or abusive language on the lines; that as a result thereof and of alleged other similar incidents the company disconnected the service; that, in spite of the Epaviers' willingness to agree faithfully to observe all the rules and regulations of the utility if service were restored, the company rejected all propositions for reconnection conditionally or otherwise; and that nearly eight months' time had elapsed since the deprival of the service complained of. The company urged the fact that several subscribers threatened to withdraw their patronage if service should be restored to the Epaviers.

Held: The regulation of the company prohibiting subscribers on party lines from "listening in" except to ascertain whether the line is open or busy is reasonable. However, while persistent and gross infractions of telephone utility rules might warrant a permanent exclusion from the use of the utility service, the "listening in" and remarks following were not of a character, in the present case, to warrant depriving the Epaviers of telephone service indefinitely. After suspension of service for a reasonable time, reconnection should have been made voluntarily by the company. The threats of several subscribers to withdraw their patronage should be given little or no weight, as it is the duty of a utility to serve without discrimination, under reasonable rules and regulations, all people desiring service who subscribe to and abide by such regulations. The Oconto Rural Tel. Co. is ordered to forthwith reinstall telephone service for Charles Epavier.

Prior to February 21, 1914, Charles Epavier was a subscriber of and was receiving service from the Oconto Rural Telephone Company, hereinafter called the company. On or about that date a representative of the company disconnected the service. Informal application was made to the Commission by Epavier for assistance in adjusting the differences existing between him and the company. From the resulting correspondence between the Commission, the company and Epavier there appeared a substantial agreement as to certain facts.

It appears that on February 15, 1914, the wife of the subscriber permitted a non-subscriber to use the telephone; that other subscribers were using the party line at the time and were greatly annoyed by the "listening in" and by certain comments and remarks made at the time to and concerning the subscribers who were there using the line. "Listening in" and the use of coarse or abusive language on the lines is forbidden by the rules of the company and such rules provide for the discontinuation of service on breach of such regulation being proved against a subscriber. Three subscribers appeared personally before the manager of the company on February 21, urging that the Epavier service be discontinued from the party line on which they were located because of the incident of February 15 and alleged similar prior experiences. The telephone instrument was thereupon removed from the Epavier residence.

The following month Epavier brought the matter to the attention of the Commission. Subsequent correspondence with the company revealed a determined disinclination to reinstall the service, claiming that several subscribers would withdraw their patronage if Epavier was reinstated. The Epaviers were willing to agree faithfully to observe all the rules and regulations of the utility if service were restored, but the company rejected all propositions for reconnection conditionally or otherwise.

A hearing was ordered to be held at the office of the Commission at Madison, August 14, 1914. Neither party appeared.

The facts relevant to the issue being conceded, it remains for the Commission to determine the legal rights of the parties to the controversy.

The regulation of the company prohibiting subscribers on party lines from "listening in", except to ascertain whether the line is open or busy, is wholly reasonable and promotive of satisfactory service. The breach of such regulation, especially if repeated or accompanied by the use of violent, coarse or abusive language, merits prompt and decisive action by the company to prevent repetition of the offense. Disconnection of service is obviously the indicated punishment and remedy. Repeated, persistent and gross infractions of telephone utility rules might warrant a permanent exclusion from the use of the utility service.

The "listening in" and the remarks following were not of a character to warrant depriving the Epaviers of telephone service indefinitely. After suspension of service for a reasonable time

reconnection should have been made voluntarily by the company. Nearly eight months time has expired since the deprivation of service complained of. Surely this length of penal period might have duly impressed the subscriber in question and in fact the subscribers of the whole operating territory of the company of the advisability of conforming with reasonable fidelity to the regulations of the company.

The fact that several subscribers threaten to withdraw their patronage from the company if the Epaviers are placed in their former condition of service, as is urged by the company, should be given little or no weight. No subscriber of a utility nor any group or number of subscribers can be permitted to dictate or control the service, extensions, or connections. The duty of a utility is to serve without discrimination, under reasonable rules and regulations, all people desiring service who subscribe to and abide by such regulations. The call for service, though coming from an individual, partakes strongly of the character of a public demand.

We are of the opinion that the telephone service of Mr. Epavier should be reinstated.

IT IS ORDERED, That the Oconto Rural Telephone Company forthwith reinstall telephone service for Charles Epavier.

IN RE APPLICATION OF THE NEW LISBON MUTUAL TELEPHONE COMPANY FOR AUTHORITY TO READJUST ITS RATES, TOLLS AND CHARGES.

Submitted July 14, 1914. Decided Oct. 15, 1914.

Application was made by the New Lisbon Mutual Tel. Co. for authority to readjust its rates. It appears that the New Lisbon Mutual Tel. Co. has acquired the property of the Juneau Electric Co., with the exception of that company's Necedah exchange, and that it now proposes to operate as one system its original property and that acquired from the Juneau Electric Co. and thereby furnish an improved class of service. The value of the existing plant is approximately \$14,000, and the yearly operating expenses, including only a fair return upon the investment, will amount to about \$7,000, a figure which the revenues under the rates suggested by the applicant will not exceed.

Held: The schedule suggested by the applicant is on the whole reasonable. However, portions are somewhat ambiguous, and some of the charges are not properly adjusted to the corresponding class of service. In connection with defects in the schedule suggested, attention is called to charges for "party" line business service, the absence of a rate for single party residence service, and the failure to distinguish between rural and village or city service. Not more than four parties should be placed on one line in villages and cities, except where urban subscribers ask to be placed on rural lines. A rate should be fixed for single party residence service, and a toll rate should be specified for calls sent by a subscriber between exchanges owned by the company when such subscriber has not contracted for unlimited service over all exchanges owned by the company. A charge of 5 cts. per call is suggested as reasonable for such service. The applicant is authorized to discontinue its present schedule of rates and put into effect the schedule of rates proposed by the Commission.

It is suggested that subscribers desiring service over all exchanges owned by the company or over connecting lines, be required to contract for such service on a yearly basis, in order to avoid confusion as much as possible.

Application in this matter was filed June 11, 1914. The petition in substance sets forth that, through the purchase of the property of the Juneau Electric Company by the New Lisbon Mutual Telephone Company, the two telephone systems have become consolidated; that the schedules of rates applied by the two companies before consolidation materially differed; and that, in order to furnish adequate service under a single rate schedule and earn a reasonable return upon the investment, it is necessary to put into effect a new schedule of rates which in

some instances will be higher than the rates applied by the companies before consolidation of the systems. The rate schedules of the two companies, as filed with the Commission are as follows:

Juneau Electric Company.

Business telephones	\$1.50	per month
Residence telephones in cities or villages.....	.75	" "
Residence telephones in rural districts.....	1.00	" "
For calls sent to neighboring stations.....	15	cts.

New Lisbon Mutual Telephone Company.

\$1.00 per month for all classes of telephones.

The applicant, the New Lisbon Mutual Telephone Company, asks permission to put into effect the following schedule:

- \$1.50 per month for business places on single wire.
- \$1.25 per month for business places on party lines.
- \$2.25 per month for business places for service over company's entire system and all connecting toll lines, except long distance.
- \$1.00 per month for residences using one central only.
- \$1.10 per month for residences for service over the entire system owned by the company.
- \$2.00 per month for residences for service over company's entire system and all connecting toll lines, except long distance.
- \$0.25 per month additional to business places or residences for use of one outside station, where service over the entire system and connecting toll lines is not desired.
- \$0.15 for each call to Tomah, Elroy, Mauston and Necedah when not covered by any rate herein above.
- \$0.10 for each call over the company's system by a nonsubscriber.

Hearing was held July 14, 1914, at the office of the Commission in Madison. *Albert Klinker*, president of the applicant company, appeared in its behalf. No appearances were entered in opposition to the application.

According to testimony introduced at the hearing, the New Lisbon Mutual Telephone Company, on May 1, 1914, acquired the property of the Juneau Electric Company, with the exception of the Necedah exchange of the latter company. It also appears that, up to the time of the transfer, competition between the two companies existed at New Lisbon, Camp Douglas, and Hustler.

The New Lisbon Mutual Telephone Company now proposes to operate as one system its original property and that acquired from the Juneau Electric Company, and thereby furnish an improved class of service. It is obvious that a new schedule of rates must be fixed to meet the new conditions.

From such information as the Commission has at hand, it appears that the value of the existing plant is approximately \$14,000. Owing to the fact that the applicant has operated under present conditions for only a short time, it is necessary to estimate the yearly operating expenses. After making an allowance for only a fair return upon the investment, it appears that the total yearly operating expenses, plus the return upon the investment, will amount to about \$7,000.

The amount of revenue that would result from the application of the proposed schedule is exceedingly difficult of determination, in that it is impossible to say just what proportion of the subscribers will take the higher classes of service. However, we believe it proper to assume that a fairly large percentage of the subscribers will choose the cheaper classes of service. According to the last annual reports covering the telephone service now furnished by the New Lisbon Mutual Telephone Company, there are in use 88 business telephones, 125 residence telephones, and 259 rural telephones. In the light of these figures it is evident that, after a reasonable allowance is made for toll earnings, the revenues will not exceed the operating expenses as estimated above, plus a fair return upon the investment.

Although the schedule which the applicant desires to put into effect in general appears reasonable, it is necessary, in our opinion, to alter the same in some respects. As stated in its present form, portions of the schedule are somewhat ambiguous, and some of the charges are not properly adjusted to the corresponding class of service. We have particular reference to the charges for "party" line business service, the absence of a rate for single party residence service, and the failure to distinguish between rural and village or city service. We are of the opinion that not more than four parties should be placed on one line in the villages and cities, except in cases where urban subscribers ask to be placed on rural lines. We also feel that a rate for single party residence service should be established. Another defect in the proposed schedule is that no toll rate is specified for calls sent by a subscriber between exchanges owned by the

company when such subscriber has not contracted for unlimited service over all exchanges owned by the company. A charge of 5 cts. per call for this service would seem reasonable.

In order to avoid as much confusion as possible, we suggest that subscribers who desire service over all the exchanges owned by the company, or over connecting lines, be required to contract for such service on a yearly basis.

IT IS THEREFORE ORDERED, That the applicant, the New Lisbon Mutual Telephone Company, be and the same hereby is authorized to discontinue its present schedule of rates and to put into effect the following schedule:

BUSINESS SERVICE.

Single party business service over entire system owned by the company, \$1.50 per month.

Four party business service over entire system owned by the company \$1.25 per month.

For service over all connecting lines, except long distance, \$0.75 per month additional.

Where service over all connecting lines, except long distance, is not desired, a charge of \$0.25 per month is made for each outside exchange over which service is received.

RESIDENCE SERVICE.

Single party residence service over one exchange, \$1.15 per month.

Four party residence service over one exchange, \$1.00 per month.

Rural service over one exchange, \$1.00 per month.

\$0.10 per month additional for service over entire system owned by the company.

For service over all connecting lines, except long distance, \$0.75 per month additional.

Where service over all connecting lines, except long distance, is not desired, a charge of \$0.25 per month is made for each outside exchange over which service is received.

TOLL RATES.

\$0.15 for each call to Tomah, Elroy, Mauston, and Necedah when not covered by the rates above quoted.

\$0.10 for each call over the company's system by a nonsubscriber.

When a subscriber contracts for service over only one of the company's exchanges, a charge of 5 cts. will be made for each call sent to either of the other exchanges owned by the company.

IN RE APPLICATION OF THE PARK FALLS MUNICIPAL WATER WORKS FOR AUTHORITY TO ADJUST RATES.

Decided October 15, 1914.

Application was made by the Park Falls Mun. W. Wks. for authority to adjust its rate schedule, on the ground that its present schedule is not uniform or equitable. It appears that the schedule applied for, unlike the one now in effect, does not contain regressive and discriminatory features, provides for a uniform charge for tapping mains and laying service pipes, and definitely states matters which are not made clear in the present schedule. It also appears that the schedule asked for will not materially affect the revenues of the utility from general service.

Held: The schedule applied for is much more desirable than the one at present in effect. The respondent is authorized to put into effect the schedule proposed.

Application in this matter was filed with the Commission July 28, 1914. The application in substance states that the present rate schedule of the Park Falls Municipal Water Works is not uniform or equitable, and that the utility desires to put into effect a schedule which is free from the objectionable features of its present schedule.

The hearing was set for September 2, 1914, at the office of the Commission, but no appearances were entered.

The lawful schedule of the applicant now in effect is as follows:

Up to 3,000 gals. per month 25 cts. per M gals.
 3,000 to 15,000 gals. per month 20 cts. per M gals.
 15,000 to 30,000 gals. per month 15 cts. per M gals.
 30,000 to 150,000 gals. per month 12 cts. per M gals.
 All over 150,000 gals. per month 10 cts. per M gals.

Meter rental

$\frac{1}{2}$ " meter, 25 cts. per month.
 $\frac{3}{4}$ " meter, 35 cts. per month.
 1" meter, 50 cts. per month.

Tapping Mains

Charge of \$5.00 to consumers living on the side of the street near the main. Charge of \$1.00 to consumers living on the side of the street farther from the main. The utility furnishes the necessary connections for making the tap.

Application is made for authority to put into effect the following schedule:

Hydrant rental to be paid by the city for fire protection, \$72 per year per hydrant.

Meter Rates.

First 3,000 gallons per month, 35 cts. per M gallons.
Next 7,000 gallons per month, 18 cts. per M gallons.
Next 15,000 gallons per month 12 cts. per M gallons.
All above 25,000 gallons per month, 10 cts. per M gallons.
Minimum monthly bill 50 cts.

Building Purposes.

Brick work, per 1,000 brick, 10 cts.
Cement sidewalk, per 100 square feet, 10 cts.
Plastering, per 100 square yards, 15 cts.
Stone work, per cord, 15 cts.
Minimum charge, \$1.00.

All bills are payable monthly on the 10th day of the month succeeding that for which service was rendered.

A charge of \$5.00 is made for tapping mains. The city furnishes all connections for making the tap and all pipe for delivering the water from the mains to the customer's lot line; provided, however, that not more than 100 feet of service pipe will be furnished to any one consumer.

All meters are furnished, installed and maintained by the city and are to remain the property of the city.

The schedule applied for is much more desirable than the one in effect at present, in that it does not contain regressive and discriminatory features; provides for a uniform charge for tapping mains and laying service pipes; and definitely states matters which are not made clear in the present schedule.

So far as practically all of the consumers are concerned, the application of the proposed schedule would not materially affect the amount of the monthly bills. Owing to the removal of the discriminatory features, the bills of some of the consumers might be slightly increased, while on the other hand some bills would be slightly decreased. The apparent increase in the price per thousand gallons for the first step is offset by the abolishment of the meter rental.

Although it appears that in a few instances the bills of consumers might be somewhat increased, we are of the opinion that the applicant should be permitted to put into effect the schedule applied for, in that it will eliminate the undesirable features of the present schedule, and will not materially affect the revenues of the utility from general service.

IT IS THEREFORE ORDERED, That the applicant, the Park Falls Municipal Water Works, be and the same hereby is authorized to discontinue its present schedule of rates for water service and to substitute therefor the schedule asked for in the application as stated above.

FARMERS' UNION TELEPHONE COMPANY ET AL.

vs.

MT. VERNON TELEPHONE COMPANY.

Submitted July 16, 1914. Decided Oct. 16, 1914.

Application was made for a physical connection between the Farmers' Union Tel. Co. and the Mt. Vernon Tel. Co. in order to afford more direct communication between Middleton and Verona. It appears that at present it is necessary to call in a round-about route via Mt. Horeb. The Farmers' Union Tel. Co. has a party line running into Verona from Middleton and offers to convert this line into a toll line, if the Mt. Vernon company will operate and maintain the Verona end, the proposition being that each company own one-half the line. However, the Farmers' Union Tel. Co. desires free service over the line in question, while the Mt. Vernon Tel. Co. desires that calls be charged at the rate of 10 cts. each. The representative of the Farmers' Union Tel. Co. stated that he would rather use the service of the Wis. Tel. Co. between the points in question at the present rate, which is not greatly in excess of that proposed by the Mt. Vernon Tel. Co., than have the connection established on any other than a free basis. No inadequacy was shown in the present service between Middleton and Verona.

Held: That under the circumstances of the present case the Commission would not be warranted in ordering physical connection on a free basis. The application is dismissed.

Complaint in the above entitled matter was filed June 4, 1914, by Ferdinand Schulenberg, president of the Farmers' Union Telephone Company, for the signers of the petition who are farmers, business, and professional men having their residences or post-office addresses at Middleton, Verona, and Cross Plains.

The complaint is in the form of an application for a physical connection between the lines of the Farmers' Union Telephone Company and the Mt. Vernon Telephone Company to be operated between Middleton and Verona. Notices of investigation having been duly served, the matter came to hearing on July 16, 1914, at the village hall in the village of Verona. Appearances at this time were made by *Ferdinand Schulenberg* for the Farmers' Union Telephone Company and *Ferdinand Koch* for the Mt. Vernon Telephone Company.

The testimony showed that both companies were desirous of effecting the connection in order to do away with calling in a round-about route via Mt. Horeb. At present, the Farmers'

Union Telephone Company has a party line running into Verona from Middleton. It has offered to convert this line into a toll line if the Mt. Vernon company will operate and maintain the Verona end, the proposition being that each company own one-half of the line. However, the means of acquiring possession of a suitable toll line was less of an issue than the question of toll rates. On the one hand, the petitioner desires free service to be extended over this line, while the respondent has submitted its undertaking to build one-half of the toll line on condition that calls be charged at the rate of 10 cts each. The Farmers' Union Telephone Company maintains, however, that it can use the lines of the Wisconsin Telephone Company at a rate not greatly in excess of what the Mt. Vernon company proposes to charge. The toll rates of the Wisconsin Telephone Company, on file at the office of the Commission, show that the Middleton-Verona initial rate is 15 cts.

The situation, then, is that the petitioner has applied for an order providing physical connection *if service therefrom can be furnished free*. The Commission does not feel warranted in ordering the connection made when, as the representative of the petitioners declares, he had rather use the lines of the Wisconsin Telephone Company than have connection established on any other than a free basis. Neither does the Commission feel warranted in ordering such a connection, free service to be rendered, when the respondent company has declared against such service. If there were no present service between Middleton and Verona, the physical connection would be more imperatively needed. While the service as now rendered may be inadequate by reason of its round-about course, such inadequacy has not been shown, and it still serves its purpose. Further, as is suggested on behalf of petitioners, the lines of the Wisconsin Telephone Company may be used at slightly higher rates than those proposed by the respondent company. The latter company objects to free toll service and in this it is within its rights, such gratuitous service being rendered by many small companies only as an accommodation to the community.

Under the circumstances it appears that the application must be dismissed. The question raised has not been one of public necessity, but of the public necessity for free service, and in this case the Commission is unable to rule in favor of a physical connection under these conditions.

The case is therefore dismissed.

IN RE INVESTIGATION AND HEARING, ON MOTION OF THE COMMISSION, OF TOLL RATE AND DIVISION OF TOLLS ON THE LINE CONNECTING THE H. A. PRICE TELEPHONE COMPANY AT MARKESAN WITH THE KINGSTON TELEPHONE COMPANY AT KINGSTON.

Submitted May 4, 1914. Decided Oct. 21, 1914.

The Commission, on its own motion, investigated the toll rate and division of tolls on the line connecting the H. A. Price Tel. Co. at Markesan with the Kingston Tel. Co. at Kingston. It appears that on about Aug. 1, 1913, the H. A. Price Tel. Co. attempted to put into effect a 15 ct. toll charge to its subscribers in lieu of the unlimited service previously available at flat rates; that it attempted to persuade the Kingston Tel. Co. to make a like charge to its subscribers, failing in which it threatened to collect the toll charge in question from the Kingston Tel. Co's subscribers as well as its own, and that, following the protests resulting from this action, the Price company further threatened to discontinue the use of the line entirely, claiming that the Wis. Tel. Co. was already furnishing adequate toll line facilities between the villages involved, and that the line in question was needed for rural service. It also appears that up to the action of the H. A. Price Tel. Co. unlimited service over the toll line at a flat rate of 50 cts. per year in addition to the regular rate was available to subscribers of that company, and at no extra charge to subscribers of the Markesan Tel. Co. The length of the line in question is approximately 8 miles, of which the H. A. Price Tel. Co. owns $2\frac{1}{2}$ miles, and the Kingston Tel. Co. $5\frac{1}{2}$ miles. The H. A. Price Tel. Co. has lines extending in every direction into the rural territory from Markesan, and operates an exchange to which about 450 telephones are connected. The Kingston Tel. Co. operates a system in and around the village of Kingston, and serves about 275 subscribers. It was contended that unlimited service over the line at a flat rate should be continued, inasmuch as many subscribers of the Kingston Tel. Co. live within marketing distance of Markesan, and need and use the unlimited service to the Markesan exchange. It was also urged that to deprive these subscribers of the service in question would result in loss of business to the business men of Markesan, and would decrease the value of the total service to the subscribers affected, and it was stated by the business men of Markesan that they would prefer to pay a somewhat higher flat rate charge per year than submit to a toll charge per call.

Held: That in view of the nearness of the two exchanges, and the interlocking of the lines of the two companies, the position of subscribers in demanding a flat rate charge for the use of the line in question is well taken, and that, under the circumstances of the present case, to impose a toll charge upon calls with no flat rate alternative would be unfair.

A valuation of the toll line in question was made, and the values apportioned between the two companies. The cost of the service, in the absence of accurate data, was ascertained through consideration of expenses of other companies. The cost to each company will be nearly the same, the higher physical investment of the Kingston Tel. Co. in the toll line being offset by the larger central office expense of the H. A. Price Tel. Co., and from a study of the traffic over the line in question it appears probable that, with the same charge in effect at both ends of the line, the average traffic would be about the same in both directions.

Held: That the present rate will not cover the cost of service. A flat rate of \$2 per phone per year with an alternative of a toll rate of 10 cts. per message is considered reasonable.

It is ordered that the H. A. Price Tel. Co. and the Kingston Tel. Co. substitute for the present rates in effect over the toll line in question, an optional charge of \$2 per phone per year above the regular rental charge, or a toll charge of 10 cts. per message; that all messages be limited to five minutes; that election by subscribers of both companies of the flat rate be made one year in advance; that each company furnish the other and keep at its own exchange up-to-date lists of its subscribers electing the flat rate, and that the total revenue from the line arising from the imposition of both rates be divided equally between the two companies until both agree to some other basis of division.

This proceeding was instituted by the Commission to supplement a former proceeding when it became apparent that the jurisdiction covered by the former proceeding (*Card-McDonald & Co. v. H. A. Price Tel. Co.*) was not sufficient to make an order from the Commission binding upon all parties concerned. The hearing in the original proceedings was held at Madison on October 3, 1913, and in the second at Markesan on May 4, 1914. In addition to the evidence submitted at the hearings considerable correspondence has been had with both parties to the case, a brief has been filed by the attorney for the Price Telephone Company and an investigation has been made of the situation by one of the Commission's engineers. All of the evidence presented which is pertinent to the case has been considered in the conclusions arrived at.

Appearances at the second hearing were: *R. E. Reed* for Price Telephone Company, *W. R. Simms* for Kingston Telephone Company, and *J. F. Krizek* for Wisconsin Telephone Company.

The point at issue involves a jointly owned clear grounded line extending between the H. A. Price telephone exchange at Markesan and the Kingston Telephone Company's exchange at Kingston. It appears that the line in question was built in 1906, is approximately 8 miles in length, and is owned 2½ miles by the Price Telephone Company and 5½ miles by the Kingston

Telephone Company. The Price company filed with the Commission in 1907 a rate of 15 cts. per message for calls going over this line from their subscribers to subscribers of the Kingston exchange. Although this rate was on file no attempt was made to collect the amount regularly till August 1, 1913. In lieu of this charge those desiring unlimited service over the line up to this time had the option of paying for this extra service at the rate of 50 cts. per year above the regular telephone rental or of supplying the batteries for their telephones. It appears that about forty subscribers availed themselves of this rate. The Kingston Telephone Company filed with this Commission on December 12, 1907, a rate of 10 cts. per call from Kingston to Markesan. However, this charge, also, was never made and there seems to be some confusion as to just what charges have been made for the use of the line.

On about August 1, 1913, the Price company made an effort to put into effect its 15 ct. toll charge and further tried to persuade the Kingston Telephone Company to make a like charge, failing in which it began to record the names of all Kingston subscribers calling Markesan over the line in question and threatened to collect the 15 ct. toll charge from these subscribers as well as from its own subscribers. Following the protests which resulted from this action, the Price company further threatened to discontinue the use of the line entirely, claiming that the Wisconsin Telephone Company was already furnishing adequate toll line facilities between the villages and that the line in question was needed for rural service. The Price company operates an exchange at Markesan and vicinity to which there are connected directly approximately 450 telephones. All construction is grounded and the lines appear to be in fair condition. A 300 drop Burns Express switchboard is installed of which 87 drops are in use. The switchboard appears to be well protected and construction in general appears to be in such condition that fair service may be given. Rates for service are:

Residence \$12.00 per year.

Business \$18.00 per year.

Combined business & residence, \$27.00 per year.

Rural \$12.00 per year.

This company's lines extend in every direction into the rural territory from Markesan; however, aside from the Wisconsin

Telephone Company's toll lines this company connects directly with but the Kingston Telephone Company over the line in question in this case. The Kingston Telephone Company operates a grounded system in and around the inland village of Kingston and serves some 275 subscribers. They also have a small switchboard installed at Dalton, a small railroad station some six miles distant. The lines appear to be cheaply put up, mostly of oak poles and home-made cross-arms with knobs. In general, construction appears to be rather poor, and is not well maintained. Rates for service are:

- \$12.00 per year (company furnishes all equipment.)
- \$6.00 per year (subscriber furnishes poles and phone.)
- \$0.50 per year for phones equipped with Bell transmitter and receiver.

Considerable testimony was introduced at the hearings as to whether or not the line under consideration was originally intended to be a toll line or a flat rate line, and a good deal of confusion seems to exist on this point. It would seem that, although this question may affect the legality of the rates which were filed or which have been charged up to the present time, whatever disposition of the problem is made now must be based upon conditions as found at the present time, rather than upon the intentions of the builders of the line.

It was pointed out at the hearings in support of the proposition to continue the unlimited service over the line at a flat rate, that the lines of the Markesan company extended only a short distance toward Kingston from Markesan; in other words, that the dividing line between the two companies is much nearer Markesan than Kingston, hence, there are a large number of Kingston subscribers who reside within marketing distance of Markesan who need and use the unlimited service to the Markesan exchange; that to deprive these subscribers of this service would result in driving considerable of their trade to other places with the consequent loss of business to the merchants and other business men of Markesan, and would also result in decreasing the value of the total service to the rural subscribers affected. The business men contend that a toll charge for this service from the Markesan end of the line is very obnoxious and state that they would rather submit to a somewhat higher flat rate charge per year if it is found that the cost of the service warrants a higher charge than to submit to a toll charge per call.

Supplementing the testimony taken at the hearings, an investigation was made of the situation by one of the Commission's engineers and an inventory of the toll line in question was taken.

The apportioned valuation of the toll lines is as follows:

Markesan Telephone Co.	Cost of re-production.	Present value.
Markesan Telephone Co.	\$78	\$52
Kingston Telephone Co.	157	83
Total	\$235	\$135

Records of the traffic over the line in question for each day were secured from the Markesan company, the summarized results of which in average calls per day are as follows:

	Kingston to Markesan.	Markesan to King-ton.
August, 1913	32.9	5.45
September, 1913	24.2	4.83
October, 1913		5.96
November, 1913		5.43
December, 1913		4.79

The above record shows that for the months of August and September, 1913, calls from Kingston to Markesan outnumbered the calls in the opposite direction by approximately 6 to 1. It is a matter of testimony that previous to the effort on the part of the Markesan company to collect the 15 ct. toll that this ratio was about 2 to 1. It must be borne in mind, however, that during the period preceding August 1, 1913, the Kingston company was not making a special charge for this service, even at a flat rate, while the Markesan company was making the charge of 50 cts. per year. This fact would have a tendency to produce a distortion of traffic probably as great as is represented by the ratio 2 to 1, and it does not seem unlikely that with the same charge in effect at both ends of the line the average traffic would be about the same in both directions.

Accurate data upon which to base conclusions relative to the cost of furnishing the service in question are not available for

either company. However, computations of expense showing comparisons with other lines have been made which indicate that the cost to each company will be nearly the same and will be in the neighborhood of \$120 per year. The cost analysis shows that the higher physical investment in the toll line of the Kingston company is offset by the larger central office expense of the Price company.

The position of subscribers of the companies in demanding a flat rate charge for this line seems to be well taken in view of the nearness of the two exchanges and the interlocking of the lines of the two companies. Such a rate is in effect in a number of exchanges in this state and seems to be operating to the satisfaction of all parties concerned. Moreover, in this particular instance subscribers, especially on the boundary between the two companies, have probably been influenced to take the service through the knowledge that unlimited service could be obtained with the other exchanges and to impose a toll charge upon calls with no flat rate alternative would, at this time, appear to be unfair.

There would seem to be little question that the rate which has been in force will not cover the cost of the service. A flat rate of \$2 per phone per year with the alternative of a toll rate of 10 cts. per message would appear to be reasonable and it is believed will approximately recompense the companies for furnishing the service in question.

IT IS THEREFORE ORDERED, That the H. A. Price Telephone Company and the Kingston Telephone Company suspend the rates for service at present in effect over the joint through line between Markesan and Kingston and substitute therefor the following schedule of rates:

1. Subscribers of either company may have the option of having unlimited service over the line at a rate of \$2 per year per telephone above the regular rental charge or may pay a toll charge of 10 cents per message.

2. All messages shall be limited to five minutes.

3. Election by subscribers of both companies of the flat rate shall be made one year in advance.

4. Each company shall furnish to the other company and also keep at its exchange up-to-date lists of those of its subscribers who elect the unlimited service at the flat rate.

5. The total revenue from the line arising from the imposition of both rates shall be divided equally between the two companies until both companies shall agree to some other basis of division.

KENFIELD-LAMOREAUX COMPANY

vs.

CHICAGO, ST. PAUL, MINNEAPOLIS AND OMAHA RAILWAY
COMPANY.

Decided Oct. 24, 1914.

Complaint was made of excess charges on two cars of wooden bolts shipped over respondent's line from Beaver Spur to Washburn, Wis. It appears that a rate of $5\frac{1}{2}$ cts. per cwt. was exacted, and that at the time the shipment moved a rate of 2.6 cts. per cwt. was in effect on bolts in carload lots from Earl to Washburn, Wis., and from Beaver Spur to Bayfield, Wis. Beaver Spur is intermediate to Earl, and Washburn is intermediate to Bayfield. Refund is asked on the basis of a rate of 2.6 cts. per cwt.

Held: The rate exacted was excessive. A reasonable rate would have been 2.6 cts. per cwt. Refund on that basis.

The petitioner alleges that on April 13 and 23, 1914, there were shipped to it at Washburn over respondent's line, from Beaver Spur, Wis., two cars of wooden bolts, on which a rate of $5\frac{1}{2}$ cts. per cwt. was exacted, which is Class E rate, Wisconsin distance tariff, as provided in respondent's tariff G. F. D. No. 1555-C; that at the time said shipment moved there was in effect a rate of 2.6 cts. per cwt. on bolts in carload lots, minimum weight 50,000 lbs. from Earl, Wis., to Washburn, Wis., and a like rate from Beaver Spur, Wis., to Bayfield, Wis., as per respondent's tariffs G. F. D. 3438 and 2483, respectively, which tariffs applied rates to and from points named therein only; that Beaver Spur being intermediate to Earl, and Washburn being intermediate to Bayfield, the rate in excess of 2.6 cts. per cwt., minimum of 50,000 lbs., should not have been exacted on the shipments in question. That the amount of charges exacted in excess of 2.6 cts. per cwt. on the shipments in question is \$31.38, which the petitioner prays that the respondent company be authorized and directed to refund to it.

The respondent railway company, answering the petition, admits all the allegations thereof, and joins in the prayer asking relief.

The claim was submitted on the correspondence, papers, pleadings and documents on file.

The investigation disclosed that the allegations of the petition are correct. Doubtless the omission from the tariff of the rate of 2.6 cts per cwt. between the points in question was due to an oversight or to the fact that no such commodity had previously moved between such points.

We find and determine that the charge of $5\frac{1}{2}$ cts. per cwt., exacted of the petitioner by the respondent of the foregoing shipments, is unusual and exorbitant, and that the reasonable rate that should have been in effect and applicable to such shipments is 2.6 cts per cwt. The amount of the reparation that will be awarded is \$31.38.

Now, THEREFORE, IT IS ORDERED, That the Chicago, St. Paul, Minneapolis & Omaha Railway Company be and the same is hereby authorized and directed to refund to the Kenfield-Lamoreaoux Company, the petitioner, the said sum of \$31.38.

CITY OF BOSCOBEL

vs.

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted Aug. 10, 1914. Decided Oct. 26, 1914.

Complaint was made by the city of Boscobel that the highway crossings on respondent's line at Wisconsin avenue and Walnut street are dangerous for public travel, and the Commission was asked to take such action as it deems just in the premises. The protection of the crossings in question was aimed at by the Commission in a previous case, *City of Boscobel v. C. M. & St. P. R. Co.* 1912, 10 W. R. C. R. 423. The respondent in the present proceedings was ordered in that case to reduce the speed of all trains to twelve miles per hour when crossing the streets in question; to discontinue the practice of making "flying switches" where cars are run over such streets detached from an engine, and, before doing any switching on Wisconsin avenue, to station at the crossing some person to give signals and warning to travelers, and to see that the passage is clear at all times when switching is done over such highway. Both railway and highway traffic have increased materially since the former hearing, and it was alleged that the order frequently has not been complied with.

Held: That physical conditions are such that the installation of automatic bell protection would be of questionable value, and that some definite form of protection for which one individual will be responsible must be provided.

It is ordered that the respondent station a flagman at Wisconsin avenue, to be on duty daily from 8 a. m. until the train due at 7:28 p. m. has passed, and that it install and maintain an electric gong at Walnut street, to be operated by means of a manual switch by the flagman at Wisconsin avenue, and an annunciator so arranged as to give the flagman sufficient warning of the approach of eastbound trains, plans to be submitted to the Commission for approval. Sixty days is considered a reasonable time within which to make the required installation.

The petitioner alleges that the highway crossings on the line of the Chicago, Milwaukee & St. Paul Railway Company at Wisconsin avenue and Walnut street in the city of Boscobel are dangerous for public travel. The Commission is therefore asked to take such action as it deems just in the premises.

The respondent, in its answer, takes the position that the crossings referred to in the complaint are now adequately protected

in compliance with the order of the Commission in *City of Boscobel v. C. M. & St. P. R. Co.* 10 W. R. C. R. 423, issued on August 28, 1912

A hearing was held on August 10, 1914, at Boscobel. *J. J. Blaine* appeared for the petitioner and *J. N. Davis* for the respondent.

The order of the Commission relating to the crossings in question cited by the respondent in its answer, which was entered in accordance with the stipulations of the interested parties, is as follows:

“NOW, THEREFORE, IT IS ORDERED, That the respondent, the Chicago, Milwaukee & St. Paul Railway Company, at the intersection of its tracks with Wisconsin avenue, Park street, and Church and Walnut streets, in the city of Boscobel, reduce the speed of all trains to twelve miles per hour when crossing such streets and that it discontinue the practice of making ‘flying switches’ where cars are run over such streets detached from an engine. It is further ordered that before any switching is done on Wisconsin avenue, either on the main track or sidetracks, the respondent shall station at the crossing on Wisconsin avenue some person to give signals and warning to travelers on such street and the sidewalks thereon crossing the railroad tracks and to see that the passage is clear at all times when switching is done over such highway.”

The testimony taken at the hearing prior to that decision was introduced in evidence without objection.

Respondent’s superintendent introduced a copy of the operating order with reference to these crossings, which is as follows:

“All trains crossing Wisconsin avenue at Walnut street in the city of Boscobel will reduce speed to twelve miles an hour. The practice of making running switches at the east end of the yard at Boscobel must be discontinued. When switching over Wisconsin street, which is the first street east of the station, trainmen must be at the crossing at all times to see that the way is clear. The rate of twelve miles an hour should also cover Park street, which is the street east of Wisconsin avenue.”

Several witnesses testified that numerous flying switches have been made since August 1912, and that on numerous occasions switching movements over Wisconsin avenue have not been flagged as ordered. It was also asserted that since the order the speed of trains has exceeded twelve miles an hour. The superin-

tendent, however, stated that as far as he knew and as far as he had heard prior to the hearing, the order has been fully complied with.

The testimony indicates that both railway and highway traffic have increased materially since the former hearing. A count taken for the city from 7 a. m. to 6 p. m. on August 3, 1914, shows 315 teams, 47 automobiles and 1,365 pedestrians at Wisconsin avenue, and 123 teams, 11 automobiles and 225 pedestrians at Walnut street. A count submitted by the respondent shows that in the twenty-four hour period between 7 a. m., June 30, 1914, and 7 a. m. July 1, 1914, there crossed at Wisconsin avenue 228 teams, 59 automobiles and 997 pedestrians and at Walnut street 74 teams, 23 automobiles and 224 pedestrians. At the hearing in 1912 the superintendent testified that there were four regular passenger trains and two regular freight trains operated through Boscobel daily. The testimony in the more recent hearing shows six regular passenger train movements and five regular freight train movements, three of the former occurring after dark. A new creamery has been built in the northwest angle of the Wisconsin avenue crossing in such a position that it materially limits the view of trains. Otherwise the physical surroundings are substantially the same as at the time of the former hearing.

In the light of the testimony and the report of our engineer, it is our judgment that the regulations imposed by our former orders, if strictly adhered to by employes, would result in adequate protection for the public at these crossings, but in view of the fact that trainmen have failed to carry out the instructions of the company it is necessary to provide some definite form of protection for which one individual will be directly responsible. As pointed out by the superintendent at the hearing in 1912, the track layout and switching conditions are such that the installation of automatic bell protection at Wisconsin avenue would be of questionable value. In our opinion a flagman should be stationed at Wisconsin avenue, while Walnut street can be adequately protected by an electric gong controlled by the flagman at Wisconsin avenue by means of a manual switch. An annunciator should be installed so that the flagman will have sufficient warning of the approach of eastbound trains.

IT IS THEREFORE ORDERED, That the respondent, the Chicago, Milwaukee & St. Paul Railway Company, station a flagman at

Wisconsin avenue in the city of Boscobel who shall be on duty daily from 8 a. m. until such time as train No. 5, due at 7:28 p. m., has passed; and install and maintain an electric gong at Walnut street to be operated by means of a manual switch by the flagman at Wisconsin avenue, and an annunciator which shall be arranged to give the flagman sufficient warning of the approach of eastbound trains, plans to be submitted to the Commission for approval.

Sixty days is considered to be a reasonable time within which to make the required installation.

TOWN OF SUPERIOR

vs.

GREAT NORTHERN RAILWAY COMPANY

Submitted July 16, 1914. Decided Oct. 26, 1914.

Complaint was made that the respondent refuses to construct a crossing at the point where a public highway laid out by its town board intersects the line of the respondent. The petitioner alleges that the highway is laid out on the north and south quarter line of section 9, township 47, range 15 west, and that public safety requires the determination of the mode and manner of the proposed crossing, which it accordingly asks the Commission to do.

The contention was made by the respondent that it has provided an adequate crossing for the vicinity in question within about a quarter of a mile of the proposed location, and that public safety or convenience does not require the building of any other crossing or roadway in the vicinity. Objection was also made to the jurisdiction of the Commission in the premises on the ground that the highway in question was not legally laid out. Documents purporting to be copies of the original proceedings taken by the town board were submitted.

Held: The objections are not material to the present proceeding, as the Commission is directed to determine the mode and manner of crossing upon complaint from either the town or the railway company that public safety requires such determination with reference to a crossing which is laid out, or which it is proposed to lay out. *Town of Gillet v. C. & N. W. R. Co.* 9 W. R. C. R. 535, and *Town of Elcho v. C. & N. W. R. Co.* 14 W. R. C. R. 796.

It appears that the highway approaches the railway right of way on the quarter section line and is diverted west to the crossing for the purpose of avoiding a passing track. At the point in question the railway is on an embankment, which is about eleven feet above the level of the adjacent land. The respondent's engineer estimated that an under-crossing would cost between \$3,000 and \$3,500 and a grade crossing approximately \$1,200. He stated that a grade crossing in the present case would be dangerous. From an investigation of the situation it seems that the cost of a grade crossing would be substantially the amount estimated, and that present conditions do not warrant a grade separation.

Held: The proposed crossing should be constructed at grade, but in order to provide a clearer view of approaching trains the highway should be at an angle of 90 degrees with the tracks, and should extend on a straight line for a considerable distance south of the tracks before turning back to the quarter section line, and it is so recommended. It is also recommended that the earth for filling the approach at the new crossing be obtained at the

crossing one mile east of Dewey station, thus improving the view of trains and eliminating the cost of installing and maintaining some form of protection at that crossing.

It is ordered that the proposed crossing as laid out by the town board of the town of Superior across the railway right of way at a point 150 feet west of the quarter section line of section 9, town 47, range 15 west, be at grade, and that the respondent construct a suitable grade crossing at that point in the manner specified, and upon completion of the work furnish the Commission with an account of all expenses incurred by it; that the town of Superior pay the respondent 40 per cent of the cost as determined by the Commission, and that the respondent bear 60 per cent thereof.

The petitioner, a regularly organized town in Douglas county, alleges in substance that the town of Superior, by its town board, has laid out a public highway on the north and south quarter line of section 9, township 47, range 15 west, running south from what is known as the Dewey road across the tracks and right of way of the Great Northern Railway Company; that respondent's tracks are on a fill ten or twelve feet high at this point; that respondent has refused to construct a crossing there; and that public safety requires the determination of the mode and manner of the proposed crossing. The Commission is therefore asked to determine the same.

Respondent, in its answer, denies that the petitioner has laid out a public highway as specified, and alleges that within about a quarter of a mile of the proposed location at the so-called Dewey siding the railway company has provided a crossing which is adequate for that vicinity. It sets forth that public safety or convenience does not require the building of any other crossing or roadway in the vicinity. The dismissal of the complaint is therefore asked.

A hearing was held at Superior on July 16, 1914, at which *J. A. Little* appeared for the petitioner and *J. A. Murphy* for the respondent.

Much of the testimony relates to the proximity of other crossings to the site at which the town seeks to establish a new crossing, and to the public necessity of such a crossing. These matters are not material to the present proceeding, since the town board is vested with authority to determine whether a crossing is needed, and the function of the Commission in such a case relates solely to the determination of the mode and manner of crossing. Counsel contends that the highway in question has not been legally laid out and objects to the jurisdiction of the Commis-

sion in the premises. However, the chairman and clerk of the town board appeared and submitted documents purporting to be copies of the original proceedings taken by the town board to lay out this highway. It is unnecessary to consider the technical validity of these proceedings inasmuch as the Commission is directed to determine the mode and manner of crossing upon complaint from either the town or the railway company that public safety requires such determination with reference to a crossing which is laid out or which it is proposed to lay out. *Town of Gillett v. C. & N. W. R. Co.* 1912, 9 W. R. C. R. 535 and *Town of Elcho v. C. & N. W. R. Co.* 1914, 14 W. R. C. R. 796.

The testimony shows that the proposed crossing is located about 150 feet west of the quarter section line of section 9. The road approaches the railway right of way on the quarter section line and is diverted west to the crossing, for the purpose of avoiding the passing track. The original proposal was to make the crossing on the quarter section line, and the change in plan was the result of a suggestion from the respondent's roadmaster. Two main tracks are maintained at the proposed site and the railway is on an embankment which is about eleven feet above the level of the adjacent land. The embankment is sixty-three feet wide at the base and thirty-two feet wide at the top. Respondent's engineer estimated that an under-crossing would cost between \$3,000 and \$3,500 and expressed the opinion that satisfactory drainage could not be secured. He estimated that in order to provide a grade crossing with approaches not exceeding a grade of 5 per cent it will be necessary to fill for a distance of two-hundred feet on each side of the tracks, which, if a twenty foot crown is provided, would cost approximately \$1,200. He stated that such a grade crossing would be dangerous because of the steep grade and the heavy railway traffic.

Our engineer, after a careful investigation of the situation on the ground, reports that the construction of an under-crossing would cost somewhat more than the amount estimated by the respondent's engineer; but regards grade separation as unwarranted under present conditions.

With reference to the establishment of a grade crossing he reports as follows:

"At the point of the proposed crossing the Great Northern tracks are carried on a fill about 11 ft. high and the surrounding

country is generally low level cut-over land. Assuming a 5 per cent grade on the highway approaches I figure that the maximum fill on the approaches would be approximately 10 ft., and that each of the approaches would, in round numbers, be two-hundred ft. long, or, in other words, extend a distance of two-hundred ft. north and south of the respective shoulders of the railway embankment. It would be advisable to provide drainage under the approaches by means of culvert pipe of some description. As the soil in the vicinity of the crossing will not make an acceptable roadway surface, if a highway is to be built across the tracks at this point the roadway surface for a width of at least 16 ft. should be of gravel, having a depth of at least 18 inches. The roadway should be planked across the tracks and the estimate which follows is based upon the foregoing and an over-all crown width for approaches of 24 ft. Corrugated iron pipe 12 inches in diameter is assumed to be laid through the approaches. The first generally traveled crossing east of the proposed new crossing, and designated by standard highway crossing sign as provided by law, is about 1½ miles distant therefrom or approximately one mile east of Dewey station. This crossing is constructed through a cut on either side of the railway, the height of which cuts are increased by the fact that some of the material excavated in making the railway roadbed has been deposited or wasted along the right of way. It is my belief that the material for filling the approaches to the new crossing can be obtained from the waste banks above referred to, adjacent to the above mentioned crossing. By taking filling material from these waste banks the conditions at the crossing will be greatly improved, permitting a better view of approaching trains. Further material can be obtained by widening the highway approaches, and, in my opinion, this is absolutely necessary for the safety of the traveling public. I believe that this material can be loaded on freight cars by means of some sort of a dipper derrick arrangement and from there switched up to the proposed new location and slipped into place in the new approaches by means of horses and slip scrapers operated by means of a rope or cable. My estimate of the cost of these approaches, I think, is sufficiently liberal to cover all expenses incurred in connection therewith."

Estimate of Cost

Grading, 2,062 cu. yds., at \$0.42	\$866.00
Gravel, 475 cu. yds. at, \$0.45	214 00
Planking, 560 ft. B. M., at \$32.00	18 00
Culverts, 108 lin. ft. 12" galv. culv. pipe, at \$1.00	108 00

\$1,206 00

In the light of the testimony and the report of our engineer it is our determination that the proposed crossing be constructed at grade. In order to provide a clearer view of approaching trains, the highway should be at an angle of 90 degrees with the tracks, and should extend on a straight line for a considerable distance south of the tracks before turning back to the quarter section line. The details of construction should conform to the specifications enumerated in our engineer's report quoted above, and we recommend that the earth for filling the approaches at the new crossing be obtained at the crossing one mile east of Dewey station as suggested therein, thus improving the view of trains and eliminating the cost of installing and maintaining some form of protection at that crossing. We regard as equitable an apportionment of the total cost of constructing the crossing under which the town of Superior shall pay 40 per cent thereof and the Great Northern Railway Company, 60 per cent thereof.

IT IS THEREFORE ORDERED, That the proposed crossing as laid out by the town board of the town of Superior across the railway right of way at a point one hundred fifty feet west of the quarter section line of section 9, town 47, range 15 west, be at grade; and the respondent, the Great Northern Railway Company, is hereby directed to construct a suitable grade crossing at said point, which shall be properly planked to a width of twenty-four feet, and the approaches to which shall not exceed 5 per cent in grade, shall have an overall crown width of twenty-four feet, shall be surfaced with gravel to a width of sixteen feet and a depth of eighteen inches, and shall be properly drained by means of culvert pipe not less than twelve inches in diameter.

IT IS FURTHER ORDERED, That said respondent furnish all necessary material and labor and perform all necessary work in fulfilling the provisions of this order, and that upon the completion of the work said respondent furnish the Commission with a complete and detailed account of all expenses incurred by it therein, whereupon the Commission, with or without further hearing as may be deemed best, will determine the actual expense of constructing the crossing, and the town of Superior shall thereupon pay to the respondent 40 per cent of the cost as so determined by the Commission and 60 per cent thereof shall be borne by the respondent.

It is recommended that the town of Superior relocate its highway leading to the proposed crossing from the south so that it shall extend for a considerable distance from the railway right of way, at an angle of 90 degrees to the tracks.

Ninety days is considered a reasonable time within which to comply with this order.

MIDDLETON SAND AND CONCRETE COMPANY

vs.

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted June 11, 1914. Decided Oct. 26, 1914.

The petitioner alleges that respondent entered into a contract with it for the construction of a spur track, but subsequently insisted upon an additional payment to cover the expense of signal protection. The petitioner alleges that such signal protection is wholly unnecessary for safe operation, and requests the Commission to take such action as it deems just in the premises. It appears that petitioner is merely seeking the relocation of an existing spur track, and that the existing switch is not protected by an automatic signal of the type proposed by respondent. The suggested location of the new switch is not substantially different from the old, and it seems that in the same district there are several switches protected only by the ordinary switch targets. Respondent subsequently agreed to leave the matter of switch protection to the Commission, and constructed the spur track in question. The track is so located that a clear view is afforded enginemen approaching the facing point of the switch for a distance of 2,000 feet.

Held: The installation proposed by respondent is not justified in the present case. While automatic protection of switches is desirable as a general practice, to be effective such installations should be uniform, in order that enginemen may be assisted in making quick decisions.

The petition alleges in substance that the Middleton Sand & Concrete Company is engaged in the business of mining and shipping sand and gravel at Middleton; that it is indispensable to the proper conduct of its business that the respondent construct a spur track about 578 feet in length from its main line to petitioner's sand pit; that respondent entered into a contract with the petitioner for the construction of said track, but subsequently insisted upon an additional payment to cover the expense of signal protection, and that such signal protection is wholly unnecessary for safe operation. The Commission is therefore asked to take such action as it deems just in the premises.

No formal answer was filed by the respondent, but a letter from its general manager was submitted in which the position

is taken that advance signal protection at the proposed switch is necessary, and that the Commission should require its installation.

A hearing was held at Middleton on June 11, 1914. The petitioner was represented by *Wm. H. Pierstorff* and *John Hildres*, and *N. P. Thurber* appeared for the respondent.

The only question to be decided by the Commission is whether the signal protection insisted upon by the respondent at the switch of the proposed spur track is necessary for safe operation. Respondent is willing to install the track with signal protection, and has offered in that event to furnish a portion of the material free of charge, thereby reducing the total cost assessed to the petitioner to \$926.21, or only \$126.21 more than the original estimate which did not include the automatic signal.

Petitioner has enjoyed the services of a spur track and the present petition merely seeks the relocation of this spur at a point about 600 feet west and an extension of the track for a distance of 578 feet. The existing switch is not protected by an automatic signal of the type proposed by the respondent, and the suggested location of the new switch is not substantially different from the old site from an operating standpoint. The track is tangent for a distance of 2,000 feet east of the proposed location, so that a clear view of the switch would be afforded engineers approaching the facing point of the switch. Moreover, in this district there are several switches which are protected only by the ordinary switch targets. To install an advance automatic signal at this point without providing similar devices at the other switches in the vicinity would be likely to result in some confusion on the part of the engineers, and the value of such a device at this point as an operating precaution is questionable. If all other switches in the vicinity were protected by automatic signals, it would be entirely proper to require such protection at new spur tracks, but where this is not the case and where no peculiarly hazardous conditions are present, we do not feel that signal protection can be required on the ground of public safety. Automatic protection of switches is without question desirable as a general practice, and should be inaugurated wherever possible; but in order to be effective such installations must be uniform so that engineers will be assisted in making quick decisions by the similarity of signals upon which such decisions must depend.

In the light of the testimony and of the reports of our engineering staff, it is our judgment that the installation proposed by the company is not justified in the present case.

Respondent agreed to build the spur track and leave the matter of switch protection to the Commission, and subsequent investigation shows that the track has been constructed. It is therefore unnecessary to enter any order herein.

TOWN OF RICHMOND

vs.

WISCONSIN AND NORTHERN RAILWAY COMPANY.

Submitted Sept. 24, 1914. Decided Oct. 26, 1914.

A rehearing was applied for by the respondent in the case of *Town of Richmond v. W. & N. R. Co.* 1914, 14 W. R. C. R. 546. The parties in interest suggested that the order be modified, so as to require the raising of the tracks and the highway, and the removal of a part of the bank, in lieu of the installation of an automatic electric bell and light as ordered.

Held: The proposed changes will afford the public adequate protection, and the former order is modified as suggested. Ninety days is considered a sufficient time within which to comply.

REHEARING.

Under date of June 6, 1914, an order, 14 W. R. C. R. 546, was issued in the above entitled matter, requiring the Wisconsin & Northern Railroad Company to install and maintain at the highway crossing on its line one mile east of Thornton, an automatic electric bell supplemented by a visual signal for night indication, and allowing ninety days for compliance. Under date of September 1, 1914, respondent applied for a rehearing alleging that the crossing can be more satisfactorily protected by certain alterations than by the installation of bell protection as ordered. Accordingly a rehearing was ordered and held at Shawano on September 24, 1914. *Chas. Brockman* appeared for the petitioner and *C. H. Hartley* for the respondent.

At this hearing it was suggested by the parties in interest that the order be modified so as to require the raising of the tracks and highway and the removal of the top of the bank in the north-east angle of the crossing, so as to decrease the vertical obstruction by about four or five feet, instead of the installation of an automatic electric bell and light. Inasmuch as we regard the proposed changes as adequate for the protection of the public, our order will be modified accordingly.

IT IS THEREFORE ORDERED, That our former order herein be and the same is hereby modified, and in lieu of the installations therein required, the respondent, the Wisconsin & Northern Railroad Company, is hereby ordered to raise the level of its track and the highway and reduce the height of the bank east of the track and north of the highway, so as to decrease the vertical obstruction in the northeast angle of the crossing by four or five feet, subject to the approval of the Commission.

Ninety days is considered a sufficient time within which to comply with this order.

W. A. VON BERG ET AL.

VS.

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted July 22, 1914. Decided Oct. 26, 1914.

A rehearing was applied for in the case of *Von Berg et al. v. C. M. & St. P. R. Co.* 1914, 14 W. R. C. R. 553. The respondent contended that the order requires a new and different location for the depot ordered built than that formerly used, which is contrary to the laws of the state of Wisconsin and beyond the jurisdiction of the Commission.

Held: The jurisdiction of the Commission to require the relocation of a station in the interest of public safety was considered in the previous decision, and no reason is seen for withdrawing from the position there taken.

The objection was also raised that the location designated in the order increases instead of decreases the hazard in operation, and respondent regards the cost of the new station as ordered, in addition to the cost of track changes and other alterations, as excessive. It is contended that locating the station east of the track, as ordered, will place it on the inside of a curve, which is contrary to respondent's established policy, and will limit the view of the station platform for enginemen on an approaching southbound train to 500 or 600 feet, and on approaching northbound trains to 400 or 500 feet. It appears that the greater portion of the traffic in the instant case approaches from the east, that all passenger trains stop at Mosinee, and that track and other changes, as a result of the location on the east side, will not be as numerous or serious as alleged.

Held: A depot located east of the tracks at Mosinee, as ordered, will be safer for the traveling public than the existing site, and the cost of making the change should not be unreasonable. While it is safer, as a general practice, to locate a station on the outside rather than the inside of a curve, it is also a general practice to locate a station on that side of the track to which the greater portion of the traffic must approach. In the present case some curtailment of the view of the platform should not endanger operation, as trains should be under control when approaching the station.

A further objection was urged on the ground that the order requires the erection of a modern station without giving respondent the privilege of remodeling the existing depot to meet the present demands.

Held: Nothing in the order prevents respondent from utilizing such portions of its present structure as can be used to advantage in the construction of a modern station at the specified location.

It is ordered that the former order stand as of the date of the present decision. As necessary track changes may be impossible during the winter months, time for compliance is extended to June 1, 1915.

REHEARING.

An order was issued in the above entitled matter on June 6, 1914 (14 W. R. C. R. 553), requiring the Chicago, Milwaukee & St. Paul Railway Company to erect a modern station building east of its tracks at Mosinee in Marathon county, which shall be adequate for the freight and passenger service.

On June 20, 1914, respondent filed with the Commission an application for a rehearing, alleging as a basis for its request the following:

1. That the order requires a new and different location for the depot ordered built than that formerly used, which is contrary to the laws of the state of Wisconsin and beyond the jurisdiction of the Commission.

2. That the location designated in the order increases instead of decreases the hazard in operation.

3. That the order requires the erection of a modern station without giving respondent the privilege of remodeling the existing depot to meet the present demands and making it adequate for present requirements.

A rehearing was thereupon ordered and held at Mosinee on July 22, 1914. *B. E. Walter* appeared for the petitioner and *R. M. Trump* for the respondent.

The question of the jurisdiction of the Commission to require the relocation of a station in the interest of public safety was passed upon in our previous decision herein, and we see no reason for withdrawing from the position there taken.

With reference to safety considerations respondent's engineer testified that at present the station platform can be seen by an engineman on an approaching southbound train from 1,200 to 1,500 feet from the station; whereas if the station were located east of the track, as ordered, this view would be limited to from 500 to 600 feet. Similarly the view of the platform from approaching northbound trains would be reduced from 800 or 900 feet to 400 or 500 feet. He stated that with the location of the station on the inside of the curve, the view of opposing trains

would be more limited than at present. In his opinion it would be necessary to remove the stockyards and two potato warehouses in order to improve the view of the platform if the station should be located as ordered. He asserted that it is a well established policy of the respondent to avoid locating stations on the inside of curves wherever possible.

It was also claimed by the engineer and by operating officials that the proposed relocation of the station would necessitate the removal of the team track to the west side. This would require practically all teams loading or unloading carload consignments to cross and recross the tracks in so doing, whereas the present arrangement enables them to reach the cars without crossing the tracks at the depot. The station agent estimated that about four hundred teams would be thus obliged to cross and recross in a month. The opinion was expressed that the danger to this team traffic would be greater than the danger to passengers who are obliged to cross in order to reach the depot.

Respondent's engineer stated that the proposed relocation would require track changes costing \$3,488, the removal of the stockyards, and other buildings, at considerable expense, and the abandonment of the concrete platform and the existing structure, which, it is contended, could be used to advantage if the present site is retained. The cost of the new station as ordered, in addition to the cost of track changes and other alterations, is regarded as excessive by the company.

Having in mind the testimony adduced at both hearings, we are of the opinion that a depot located east of the tracks at Mosinee, as ordered, will be safer for the traveling public than at the existing site, and that the cost of making the change will not be unreasonable. If the station is located north of the highway it will not be necessary to move the stockyards or the potato warehouse. Moreover, the portion of a team track south of the highway may be utilized as a stub track and the portion north of the new station may be used as a stub track or reconnected with the main line immediately north of the station. It is also possible to move the team track east so that it will be behind the new station. Thus a considerable portion of the loading and unloading can be done east of the track in any case. However, if it were necessary for all loading to be done west of the track, as claimed by the respondent, the danger to such team traffic would not be so great as that to which passengers are now sub-

jected. As a general practice it is safer to locate a station on the outside of a curve if circumstances make it necessary to place it on a curve; but it is also a general practice to locate a station on that side of the tracks to which the greater portion of the traffic must approach. In this particular case the latter practice should be followed, since the location of the station on the inside of the curve will not, in our judgment, create an unusually dangerous operating condition. All passenger trains stop at Mosinee and should be under control when they approach the station, so that some curtailment of the view of the platform afforded the enginemen will not seriously endanger operation. The station semaphore can be located on the west side of the track so that its effectiveness will not be impaired.

With reference to the third contention of the respondent's application for a rehearing, there is nothing in the order which prevents the railway company from utilizing such portions of its present structure as can be used to advantage in the construction of a modern station at the specified location.

Our former order herein will therefore stand as of this date, but inasmuch as it may be impossible to make necessary track changes during the winter months, the time for compliance is hereby extended to June 1, 1915.

ARENA AND RIDGEWAY TELEPHONE COMPANY
 vs.
 TROY AND HONEY CREEK COMPANY,
 DODGEVILLE AND WYOMING TELEPHONE COMPANY,
 WEST SPRING GREEN LINE,
 BIG HOLLOW TELEPHONE COMPANY.

Submitted April 16, 1914. Decided Oct. 26, 1914.

A rehearing was applied for in the case of *Arena & Ridgeway Tel. Co. v. Troy & Honey Creek Tel. Co. et al.* 1914, 13 W. R. C. R. 763. In that case the respondents were ordered to pay the sum of \$27 per year to the petitioner for the use of the trunk line connecting the Spring Green and Fernan exchanges, and the petitioner was ordered to pay the respondents the sum of \$1 per telephone per year for such telephones as are connected to petitioner's rural lines, which enter the respondents' Spring Green exchange. The respondents contend that the Commission did not arrive at the proper decision and order in the previous case largely because certain facts which should have been considered were not brought to the attention of the Commission.

As regards the trunk line connecting the Spring Green and Fernan exchanges, and the sum to be paid by respondents for its use, respondents apparently argue that petitioner should furnish the trunk line in question without charge for the use of all parties connected with the Spring Green exchange, since in so doing it will be merely offering a fair exchange for the free toll service which its own subscribers can obtain through Spring Green with surrounding villages.

Held: The argument is not valid. Utilities have a right to make a reasonable charge for toll service when they furnish toll lines. The failure of various companies connected to the Spring Green exchange to make a charge for the use of their through lines places no obligation upon petitioner to furnish its line free of charge. Petitioner is also under no obligation to do so as an incident to receiving switching service at the Spring Green exchange since the matters are essentially different. In the absence of any facts to show that the amount arrived at as proper compensation is unreasonable, it must stand.

As regards the rate for switching service, it appears that peg counts submitted by respondent did not separate the number of calls passing over the loaded line between the points in question, from those passing over the trunk line; that, aside from that fact, they do not bear out respondents' contention that traffic considered by the Commission, when the traffic study was made, was abnormally light; that if complete expenses of the

Spring Green exchange were not before the Commission, the responsibility therefore rested upon respondents; that the total expense reached by the Commission through estimates and actual expenses was in fact somewhat in excess of the total actual expenses; and that the rate for general switching service to the heavily loaded lines connected to the Spring Green exchange is not properly comparable to the switching rate for the trunk service involved.

Held: Under the circumstances the establishment of a different rate has not been justified.

Respondents request that in case it is found that petitioner should receive payment for the use of its through line, the Commission establish a toll rate.

Held: No necessity for such a rate has been shown. Should it subsequently seem necessary, the matter can be considered upon proper application.

It is ordered that the previous order be affirmed except that a minimum switching charge of \$25 per year to petitioner be made, it appearing that the number of subscribers to whom the switching rate in the former order applied is slightly smaller than supposed.

REHEARING.

This proceeding results from a rehearing in the case above mentioned in which the Commission issued a decision under date of February 14, 1914, (13 W. R. C. R. 763) embodying the following orders:

1. That the owners of the Spring Green exchange, respondents in this case, pay to the Arena & Ridgeway Telephone Company the sum of \$27 per year for the use of the trunk line connecting the Spring Green and Fernan exchanges.

2. That the petitioner pay to the respondents the sum of \$1 per telephone per year for switching service for such telephones as are connected to petitioner's rural lines which enter the respondents' Spring Green exchange.

Application for rehearing was filed March 2, 1914. The grounds upon which the rehearing was asked may be best stated by quoting the application as filed. Following is the application for rehearing:

"It appears from the decision recently given in the above matter that certain facts that should have been considered were not called to the attention of the Commission. For instance, the attention of the Commission was not called to the fact that the Dodgeville & Wyoming Telephone Company maintained a trunk line from Spring Green to Dodgeville, the use of which they contribute to the parties using this exchange without charge; nor to the fact that the West Spring Green Line maintains a trunk line from Spring Green to Lone Rock exchange which they con-

tribute to the Spring Green exchange without charge; and that they also pay for their connection on the Lone Rock Exchange \$75, as we are informed; nor to the fact that the Spring Green Telephone Exchange Company who have succeeded the Troy & Honey Creek Telephone Company since these proceedings were instituted, maintain a trunk line from Spring Green to the Plain exchange, which they contribute to the Spring Green exchange without charge; nor to the fact that the Spring Green Telephone Exchange Company maintains a trunk line part way to Arena, there connecting with a trunk line maintained by Bestor to the Mazomanie exchange which service is contributed to the Spring Green exchange without charge; this last trunk line is a metallic circuit designed for long distance use, originally for messages to Madison. The connection with the Bestor exchange gives the Spring Green exchange without charge connection with all the exchanges available to the exchange at Mazomanie.

"For these reasons and others the undersigned, E. G. Hood, representing all of the respondent companies, asks that the order made in this matter on the 14th instant be suspended and that further hearing be granted."

Subsequent to the filing of this application for rehearing the Commission issued an order authorizing a rehearing and providing that the effectiveness of the Commission's order dated February 14, 1914, be postponed until further order of the Commission. The rehearing was held at Madison, April 16, 1914. The appearances were *William Fernan*, president of the Arena & Ridgeway Telephone Company, in its behalf; *T. W. King*, attorney on behalf of the respondents.

In order that we may judge of the necessity for an amendment to the Commission's order of February 14, 1914, it will be necessary to review the grounds upon which the rehearing was asked. The application for rehearing contains nothing bearing upon the charge for switching service which should be made by the Spring Green Telephone Exchange Company which at the present time operates the exchange in Spring Green to the Arena & Ridgeway Telephone Company. The application for rehearing quoted above merely calls attention to the fact that various of the lines entering the Spring Green exchange maintain trunk lines from Spring Green to neighboring villages without making any charge for messages going over these lines. Although the argument is not clearly stated at any point in the proceedings, it is to be implied that the respondents believe that the Arena & Ridgeway Telephone Company should furnish its trunk line between the

Spring Green and Fernan exchanges for the use of all parties connected with the Spring Green exchange without charge, and that in so doing it will be merely offering a fair exchange for the free toll service which its subscribers can obtain through Spring Green with surrounding villages. This argument we do not believe is valid.

For the convenience of all parties concerned it might be desirable that the Arena & Ridgeway company should furnish its through line free of charge, but the fact that other companies furnish their lines free of charge can hardly be considered a reason which would justify the Commission in compelling the Arena & Ridgeway Telephone Company to furnish its lines without charge if it does not choose to do so. Where toll lines are furnished by telephone utilities, such utilities undoubtedly have a right to make a reasonable charge for the use of such lines. In some cases this charge is covered by the regular exchange rates paid by subscribers. In cases where the through lines are available for the use of parties who are not subscribers, the only way of securing the revenue which the company is entitled to receive is to fix a toll message rate. The failure of the various companies connected to the Spring Green exchange and enumerated in the application for rehearing to make a charge for the use of their through lines does not place any obligation upon the Arena & Ridgeway Telephone Company to furnish its line free of charge. Neither can the Arena & Ridgeway Telephone Company be expected to furnish this line free of charge as an incident to receiving switching service at the Spring Green exchange. The two matters involved are essentially different. The switching service which the Arena & Ridgeway Telephone Company receives from the Spring Green Telephone Exchange Company bears no necessary relation to the toll service furnished over the through line hereinbefore referred to. The rate for switching service should be determined without any reference to the existence of this through line except as it may be affected by the cost of handling calls between the loaded lines of the Arena & Ridgeway company and its through line at the Spring Green central office.

In the case decided February 14, 1914, the Commission found that a reasonable payment by the companies comprising the Spring Green exchange to the Arena & Ridgeway Telephone

Company for the use of its toll line was \$27 per year. No facts have been introduced in the present proceeding which show that the conclusion reached in that case was erroneous so far as it related to the amount to be paid to the Arena & Ridgeway company for the use of its through line, and consequently we see no reason why that portion of the order should be modified in this case.

The rate for switching service furnished by the Spring Green Telephone Company exchange to the Arena & Ridgeway Telephone Company's loaded line which is connected to the Spring Green switchboard is the other matter involved in this proceeding. Testimony was introduced to show that \$3 per telephone per year is a customary rate for switching service, and the Commission realizes that such a rate is rather common. Testimony also showed that the other lines connected to the Spring Green central office pay \$3 per telephone per year for the maintenance of the central office. Some testimony was introduced to the effect that the service furnished to subscribers of the Arena & Ridgeway Telephone Company is practically the same as that furnished to rural subscribers on other lines connected to the Spring Green switchboard. The Commission's decision of February 14, 1914, relating to the rate of switching service, was based upon a traffic study made at the Spring Green exchange and an apportionment of expenses along the lines indicated by the traffic study.

Two points of criticism have arisen. The first is that the traffic study upon which the original order was based did not fairly represent traffic conditions and that as a result the charge made to the Arena & Ridgeway subscribers was smaller than it should have been. The second criticism is that the Commission did not have full information with regard to the expenses of conducting the Spring Green exchange. In support of the first criticism, respondents represented at the hearing exhibits showing the number of calls passing over the Arena & Ridgeway lines handled at the Spring Green switchboard. Unfortunately, the number of calls passing over the through line was not separated from the number passing over the loaded line, so that it is impossible to make any accurate comparison between the results of the Commissioner's study of the traffic to and from the loaded line and the traffic to and from this line at the time the respondents'

peg counts were taken. The peg counts submitted by the respondents, however, do not bear out the contention that the traffic considered by the Commission was abnormally light. The number of incoming calls from the two Arena & Ridgeway lines during a period of seven days covered by respondents' traffic study varied from 22 to 37, and the number of outgoing calls varied from 11 to 20. In addition to these, there was a maximum of 2 calls interchanged between the two Arena & Ridgeway lines at the Spring Green switchboard. The traffic study made by the Commission's representatives showed a total of 24 incoming calls from these lines during a day and 20 outgoing calls to these lines, besides two calls interchanged between them. This does not take into consideration "ring backs", which had to be supervised by the Spring Green operator. The number of outgoing calls to these lines was the same as the largest number found by the respondents during the seven days' traffic study. The number of incoming calls was somewhat less than the average. It should be stated, however, that the total number of calls handled through the Spring Green exchange during the time covered by the Commission's traffic study, and leaving out of consideration "ring backs" and incompleated calls, was somewhat less than the average number during the period covered by respondents' traffic study, so that the ratio of Arena & Ridgeway traffic to the total traffic through the Spring Green exchange which, when properly weighted, furnished the basis for apportioning the major part of the expenses involved, was little, if any, smaller than the ratio between these classes of traffic for the period covered by respondents' own traffic study. Of course, it is possible that the relations between the traffic over the Arena & Ridgeway loaded line and that company's through line during the period covered by respondents' traffic study was materially different than during the period covered by the Commission's traffic study, but if it was, there is nothing in the record to show that fact.

The testimony shows that during the first part of the Commission's traffic study the Arena & Ridgeway grounded line was out of order and that it was not repaired until several hours had elapsed. This fact, however, was given consideration in the original case, and we see no reason for altering our conclusions because of it at this time.

The second point is the criticism that the Commission did not have before it the complete expenses of the Spring Green ex-

change. It should be stated that this is true. The responsibility for this state of affairs must rest upon the respondents who had failed to render a good report to the Commission. It should be stated, however, as was stated in the original case, that where actual expenses were not obtainable estimated expenses were used and a total of \$1,025.25 was considered. The total expenses as stated at the hearing were even less than this amount, so that we fail to see whereby the consideration of the actual expenses would increase the charge to be made to the Arena & Ridgeway Telephone Company for switching service. Considerable stress was laid upon the fact that the service furnished to these subscribers was the same as that furnished to other subscribers on rural lines. In considering this, we need only cite the facts as shown by the traffic studies. It might be said that if this argument points to any definite conclusion, that conclusion is that the \$3.00 rate is probably high for general switching service but the conditions under which switching service is supplied to the very heavily loaded line of the Arena & Ridgeway company and to the other lines entering the Spring Green exchange are so different in our opinion, despite the contention that the service is the same, that a difference in the rates for switching is justifiable.

No criticism has been made of the Commission's methods of apportioning expenses, and after a careful review of the methods used, we fail to find any material changes which should be made in the methods of apportionment used. Consequently, we do not see how a different rate can be ordered at this time than was established in the original order.

Respondents ask that in case it is found that the Arena & Ridgeway company should receive payment for the use of its through line, the Commission establish a toll rate. No facts were introduced which would aid the Commission in establishing such a rate, and the necessity for it does not seem to have been shown. If at some later time it should appear that the proper handling of the telephone business over this line necessitates the establishing of a toll rate, the matter can be considered at that time if the proper application is made. Until then, we see no reason for modifying the order in the original case, with the possible exception that a minimum rate per year should be placed upon the switching service for the entire loaded line. In the original proceedings it was understood that there were 27 subscribers con-

nected to this line, and a rate of \$1 per subscriber seemed to be a proper one. It now appears that there are really only 24 subscribers connected to this line. In case the number should be reduced still further, the rate of \$1 per subscriber might not be adequate. It will therefore be ordered that the minimum charge for switching service for this entire line shall not be less than \$25 per year, in case the number of subscribers falls below 25.

It is understood that this line is to be divided, which of course would entirely change the conditions under which the subscribers are receiving service, and the minimum charge of \$25 per year would not apply in such case; but until such division is made, the rate which should be applied cannot be determined.

IT IS THEREFORE ORDERED, That the order of the Commission issued February 14, 1914, in this matter be and the same is hereby affirmed, with the exception that the minimum charge to be made by the Spring Green Telephone Exchange Company to the Arena & Ridgeway company for switching service for its loaded line shall be \$25 per year.

W. R. HOWARD & SONS ET AL.

vs.

GREENWOOD TELEPHONE COMPANY.

Submitted July 9, 1914. Decided Oct. 26, 1914.

Complaint was made that the respondent fails to render service between the hours of 10 p. m. and 7 a. m. and it was alleged that public needs require continuous telephone service, and the Commission was asked to require the respondent to render such service. Respondent takes the position that the additional expense which would be entailed is not warranted, and that it prefers to devote all of its available funds to improving its day service by installing full metallic circuits. It appears from investigation, however, that the privilege of making urgent night calls could be extended to the village, as well as rural lines, by dividing night calls between the manager and his son, who at present do answer night calls on rural lines.

Held: The service rendered by respondent is inadequate. Night service should be provided subject to a suitable rule of the company to prevent the abuse thereof. It is ordered that the respondent provide regular switchboard service for all its lines between the hours of 5 a. m. and 10 p. m., and handle calls of an urgent nature at all other times from any of its lines, or connecting lines, subject to rules to be submitted to the Commission for approval.

The petition, which is signed by twenty-eight patrons of the Greenwood Telephone Company, alleges that the respondent company does not render service between the hours of 10 p. m. and 7 a. m. and that public needs require continuous telephone service. The Commission is therefore asked to compel the respondent to render continuous telephone service.

No formal answer was filed by the respondent.

A hearing was held on July 9, 1914, at Marshfield, *W. R. Howard* appearing for the petitioners and *P. E. Peterson* for the respondent.

Witnesses stated that night service is needed in order to enable patrons to call a doctor in case of sickness or accident, to enable traveling men to call other villages and cities, and to make it possible to send or receive telegrams at night. The only out-

bound passenger train from Greenwood leaves at 5:45 a. m. and patrons frequently desire to make telephone calls before this train departs. Instances were cited in which patrons had been inconvenienced because of the lack of night service.

The representative of the respondent testified that the exchange is closed from 10 p. m. to 6:30 a. m. However, the rural lines operated by the Greenwood Telephone Company are connected with bells near the sleeping room of the switchboard attendant, who is supposed to answer night calls. In cases where night calls are expected from subscribers in the village, special arrangements are made so that the attendant can be awakened to answer such emergency calls.

Respondent takes the position that the additional expense entailed by the employment of a night operator is not warranted. It prefers to devote all of its available funds to improving its day service by installing full metallic circuits. All of its system now consists of grounded circuits except the through line connecting with the lines of the Badger State Telephone Company. The existing rate is \$1 per month or \$10 per year when paid in advance. The exchange serves eighty subscribers in the village, one hundred on its rural lines, and is connected with about one hundred other rural telephones on the line of the Black River Telephone Company and the Reseburg Mutual Telephone Company. Twenty-five cents per month per subscriber is charged for connecting the two rural companies. Long distance service is obtained over the lines of the Badger State Telephone Company which connects with the Bell lines at Marshfield, Owen, or Black River Falls.

An inspection of the conditions at Greenwood was made by a member of the Commission's engineering staff. From his report it appears that the building in which the exchange is located is being remodeled and that somewhat abnormal conditions prevail. A regular day operator is employed, and night calls on the rural lines are answered by the manager or his son, both of whom live in the house containing the exchange. The engineer reports that the privilege of making urgent night calls could be extended to the village lines without employing additional help, by dividing the night calls between the manager and his son, one answering the late evening calls and the other the early morning calls.

In the light of the testimony and the report of our engineer, we find that the telephone service rendered by the Greenwood

Telephone Company is inadequate. It is our judgment that the period of regular switchboard operation should extend from 5:00 a. m. to 10:00 p. m., and that from 10:00 p. m. to 5:00 a. m. all urgent calls should be answered. The company should formulate and file with this Commission a suitable rule for night calls which will prevent the abuse of the night service.

IT IS THEREFORE ORDERED, That the respondent, the Greenwood Telephone Company, provide regular switchboard service for all of its lines between the hours of 5:00 a. m. and 10:00 p. m., and handle calls of an urgent nature at all other times from any of its lines or its connecting lines, subject to rules to be submitted to the Commission for approval.

HENRY WUBKER, JR., ET AL.

vs.

CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted June 17, 1914. Decided Oct. 27, 1914.

Complaint was made that the station facilities furnished by the respondent at McNaughton are inadequate, and the Commission was asked to require the respondent to erect an adequate station building at that point and to maintain an agent there. It appears that McNaughton is respectively ten and eleven miles distant from the nearest points at which agents are maintained; that it is in a lake region; that not less than five hundred people are estimated to come to the vicinity to hunt and fish during the season from June 1 to December 1; that in excess of forty-two families live within a radius of six miles; that the surrounding country is being developed agriculturally, and that the failure of the company to install a telephone and station a representative at the point in question to look after its freight and passenger business results in serious inconvenience of various kinds to patrons. Freight earnings were given as \$1,763.44 for the year ending May 1, 1914, but no estimate of passenger earnings was offered. The present facilities consist of two box car bodies, one for the accommodation of passengers and one for storing freight, and a small cinder platform.

Held: The facilities at McNaughton are inadequate. A caretaker should be employed and a telephone should be installed in the station. In the absence, however, of any statistics of passenger earnings, an order requiring the erection of a more commodious building would not be warranted at the present time, but upon receipt of a complete record of freight and passenger traffic, which respondent is to keep from November 1, 1914, to September 1, 1915, the Commission will further consider this feature of the case.

It is ordered that respondent install a telephone in the station in question and employ a caretaker to keep the station clean, properly heated and lighted, and also to sell passenger tickets, make sleeping car reservations, sign freight receipts, and properly care for freight shipments. It is also ordered that respondent keep a complete record of all passenger and freight traffic at McNaughton from November 1, 1914, to September 1, 1915, and promptly submit such record to the Commission.

The petition, which is signed by twenty-nine residents of the town of Newbold in Oneida county, alleges in substance that the

station facilities furnished by the respondent at McNaughton are inadequate and asks that the respondent be required to erect an adequate station building and maintain an agent there.

The respondent, in its answer, alleges that its station facilities at McNaughton are ample for the needs of the settlers and that the present revenue will not warrant an additional expenditure. The dismissal of the complaint is therefore asked.

A hearing was held on June 17, 1914, at McNaughton. *H. F. Steele* appeared for the petitioner, and *C. A. Vilas* for the respondent.

The testimony shows that McNaughton is about six miles south of Tomahawk Lake and about eleven miles north of Rhinelander by rail, and about ten and eleven miles, respectively, by wagon road. These are the nearest points at which agents are maintained. At McNaughton the station facilities consist of two box car bodies, one for the accommodation of passengers and one for storing freight, and a small cinder platform. Earth closets are provided. These facilities are in the care of the section foreman who resides at Newbold, which is 3.2 miles south of McNaughton. Shipments of freight to McNaughton are expected to be prepaid before they are accepted from the consignor, and in cases where shipments are sent collect they are held at Rhinelander or Tomahawk Lake and notice is mailed to the consignee at McNaughton. Outbound shipments are received by the conductor and billed at Rhinelander or Tomahawk Lake. Persons leaving McNaughton usually pay cash fare to an open station, where they purchase a ticket to their final destination.

Witnesses complained that the passenger shelter is unsanitary and unfit for the accommodation of passengers. No lights are provided, and patrons must build a fire in the stove if they desire heat, which was said to be very unsatisfactory since considerable time is required to warm the shed. Patrons stated that freight is often piled up on the platform in such a way as to leave insufficient room for passengers in boarding and alighting from trains. Moreover, freight has been left in cars standing at some distance from the station, and consignees have been obliged to search for it, causing delay and inconvenience. Witnesses asserted that they are obliged to wait for the local freight trains, which are often very late, in order to secure receipts for outbound shipments and in order to protect inbound shipments from

exposure. Passenger trains are also late very frequently, and because of the lack of telephone facilities at the station patrons cannot ascertain when either freight or passengers will arrive. Complaint was also made that much annoyance to patrons results from their inability to make sleeping car reservations at McNaughton.

McNaughton is in the lake region and the station is considerably used by visitors at the nearby lake resorts. The surrounding country is being developed agriculturally, and a relatively large part of the freight shipments consists of agricultural products such as potatoes and hay. A study made by respondent's station agent at Rhinelander from records in the office of the register of deeds and from the post office at McNaughton shows 42 families comprising 178 persons living within a radius of six or seven miles of the station, who receive their mail there. This estimate does not include visitors at summer resorts nor those residents of the vicinity who receive their mail from other post-offices. There are four resorts in the vicinity which are open from June 1 to December 1. The proprietor of one of these stated that he had accommodated two hundred visitors during the season of 1913 and another estimated that about one hundred persons had stayed at his place. It was estimated that not less than five hundred persons come to the vicinity of McNaughton to fish and hunt during a single season. The Willow Grass Rug Company employs from forty to sixty men at the lake about ten miles from McNaughton, and a witness testified that he had driven about four hundred persons to the camp from McNaughton station during the past year.

Respondent's superintendent testified that for the year ending May 1, 1914, the total freight revenue at McNaughton, as compiled from the records kept at Rhinelander and Tomahawk, was \$1,763.44 of which \$676.60 was for freight forwarded and \$1,086.84 for freight received. He offered no estimate of the passenger earnings. He testified that other stations on his division of equal or greater importance than McNaughton do not enjoy better station facilities. In this connection he mentioned Cisco Lake, Ringle, Big Falls and Rib Falls. The cost of a station building was estimated at \$1,000 and the cost of maintaining an agent at \$800 per year. He expressed the opinion that the business transacted at McNaughton does not warrant any further expenditure.

In the light of the testimony we are of the opinion that the facilities furnished by the respondent at McNaughton are inadequate. McNaughton is a considerable distance from any open station and serves a district which is likely to increase in importance with the further development of the lake resorts and agriculture. Patrons are now subjected to unwarranted annoyance and inconvenience by the failure of the company to station a representative there to look after its freight and passenger business. The respondent should be able to employ, at a nominal compensation, a caretaker to keep the station buildings clean, and the passenger shelter properly heated and lighted and to sell passenger tickets, make sleeping car reservations, sign freight receipts and otherwise attend to respondent's interests and the traffic is apparently sufficient to justify such an expenditure. In this connection telephone service at the station is needed, so that reservations can be readily made, and patrons advised when trains are late. From the estimates of witnesses it appears that the passenger traffic is considerable, but in the absence of more complete data in this regard and of any statistics of passenger earnings, we do not feel justified in ordering the erection of a more commodious building at this time. A complete record of freight and passenger traffic should be kept from November 1, 1914, to September 1, 1915, so that a basis will be afforded for an equitable determination of this feature of the complaint, and upon the receipt of this record the matter will be further considered.

IT IS THEREFORE ORDERED, That the respondent, the Chicago & North Western Railway Company, install a telephone in its station at McNaughton, employ a caretaker who shall keep the station clean and properly heated and lighted, and who shall sell passenger tickets, make sleeping car reservations, sign freight receipts and properly care for freight shipments; and that said respondent keep a complete record of all passenger and freight traffic at McNaughton from November 1, 1914, to September 1, 1915, and promptly submit such record to the Commission.

VS.

THE MILWAUKEE ELECTRIC RAILWAY AND LIGHT COMPANY,
 MILWAUKEE LIGHT, HEAT AND TRACTION COMPANY.

Submitted Aug. 22, 1914. Decided Oct. 28, 1914.

Complaints were made against the suburban rates of fare of the respondents as authorized in the previous decision, *In re Milw. Suburban & Interurban Ry. Rates*, decided Jan. 2, 1914, 13 W. R. C. R. 475. In the main, the complaints stand for a reduction in suburban fares through the restoration of the fare schedule existing prior to the order, through additional single fare extensions, and through commutation tickets.

Held: That as to the old schedule, the position taken in the former decision has been, if anything, strengthened by the matters brought out in the present proceeding. The street railway traffic in and about Milwaukee has attained such volume and density that the application of a country five-cent zone with overlaps is unsatisfactory and impractical.

Changes in the Milwaukee city fare limit were requested by the majority of the suburbs. It appears that the suburban system, with the exception of a few lines, has not approached a fair return, and, from a careful consideration of respondents' income accounts for the last few years for the metropolitan area and of recent economic and financial conditions affecting revenue, it also appears that the immediate present is not a propitious time for any single fare extensions.

Held: That while other matters besides financial conditions must be considered when single fare extensions are in question, recent developments indicate the propriety from an economic as well as legal point of view of laying somewhat more emphasis upon the latter; that no consideration can be given to extensions on any one suburban line without considering the feasibility of extensions on similarly situated lines in the entire suburban system; that, under the circumstances of the present case, the metropolitan system as a whole must furnish, in a large de-

gree, the financial basis to determine the feasibility of extensions, and that a decision on single fare extensions must therefore be held in abeyance for the present.

The two-cent suburban zone tickets sold by the respondent were the subject of a general protest,—the main objection being that no reduction is offered in combination with the regular cash fare. It was urged that the commuters, who contribute the bulk of the traffic, are usually entitled to special rates over the transient or occasional rider. It appears that prior to the order in question (Jan. 2, 1914), the schedule of fares provided liberal commutation rates on nearly all suburban lines for a long period of years; that, unlike the case of commuters in other services rendered on the companies' lines, no general concession is granted the suburban commuter; that the lack of such a concession has been one of the potent causes to engender antagonism, and bring about a reduction in traffic, and that the payment of suburban fares in cash has had a bad effect upon the service.

Held: That no difference inhere in city, suburban, and interurban operation which warrant a single cash basis for the suburban schedule of fares when a double basis is in vogue for the other schedules; that petitioners' stand in this instance is supported by general practice; that a uniform commutation rate is essential to retain existing and develop future traffic, and that this defect in respondents' schedules, as authorized by the order in question, must be remedied. Due consideration being given to the traffic and financial conditions, it is considered that thirty tickets for fifty cents will be equitable and convenient. Cash fares are to remain as before with the exception of changes made on the South Milwaukee and Tippecanoe lines.

Complaints on the Whitefish Bay—Fox Point line were to the effect that the rates are discriminatory as compared with other suburbs; that the mileage books provided are practically no reduction; that for transient passengers the cash fare is reduced, while for the regular patrons it is increased, and that the zones established are in some instances less than a mile. A limited time mileage book, sold in large units, by which a passenger traveling continuously could ultimately secure a rate of one cent per zone was suggested.

Held: The commutation zone tickets ordered in the present proceeding will effect a reasonable reduction in fare for the regular patron. By their use a passenger will be enabled to ride through the greater part of the village for a nickel fare, while the through fares will still conform to the distance principle. Sold through the conductors in units small enough to be within the reach of all, they should be preferable to the system of mileage books suggested. However, the company is ordered to rearrange the zones of the line in question, so as to place the limits practically a mile apart, and cause the short zone to be at the end of the line.

Complaints as to the North Milwaukee line related to the five-cent minimum fare in the suburban zones on the lines in question, and the Commission was requested to establish a two-cent minimum in lieu thereof.

Held: The complaint is dismissed. To grant it would cause a decrease in the existing low net revenues, and, on account of uniformity, would require similar reductions for other suburbs, which,

under present circumstances, is inadvisable. Minimum fares find their justification in grounds of public policy and in transportation costs, and five cents is a logical minimum under existing conditions.

The city of Wauwatosa complained that respondent, under the order in question, may charge as much as nine cents for a ride within the corporate limits, while the franchise rate is but five cents, and that the former transfer privileges are denied as provided for by franchise. The petitioner requests that the urban single fare in Wauwatosa shall not exceed the present one in Milwaukee; that the fares in Wauwatosa and Milwaukee shall not be in excess of franchise fares; that the single fare limit in Wauwatosa be at the business center, and that the former transfer privileges at the junction of the Walnut and Webb lines be restored. The rates complained of are the result of the extension of the Milwaukee single fare limit westerly to 59th avenue by order of the Commission in 1912. *Koenig et al. v. T. M. E. R. & L. Co. et al.* 10 W. R. C. R 337. It appears that the interests of a large majority of the people of Wauwatosa lie in that city as a suburb rather than an isolated independent municipality, a fact responsible for the application for single fare extensions in both the *Koenig* and the present case.

Held: It is a hardship that those passengers riding locally between the section from the east corporate limits of Wauwatosa to 59 avenue and the rest of Wauwatosa should be compelled to pay a Milwaukee city fare, and in addition zone fares for a ride wholly within Wauwatosa. Under all the circumstances of the present case the section in question should be made a separate suburban zone so far as passengers riding locally between this section and the rest of Wauwatosa or transferring in Wauwatosa are concerned. Such charges will make the fare from this section to the business center of Wauwatosa the minimum of five cents cash, or six cents to any more distant point in the city, or with the zone tickets provided in the present order a fare of five cents for the three zones, thus practically securing a local corporate fare of five cents. As regards the extension of the Milwaukee single fare point, the inadvisability of any such extensions at the present time has already been set forth. As regards the request for extra transfer privileges, under all the circumstances such request must be denied, it appearing that there is no great need therefore.

The Wauwatosa Taxpayers' League contended for a minimum fare of two cents within the suburb, or a five cent minimum per zone with return transfer. Among others, the ground is taken that since the establishment of suburban zones there is no need for a compensating flat fare for long and short hauls, because a definite through charge based upon distances in the suburb is now in force.

Held: The request must be denied. The situations are not comparable when a passenger uses both the urban and suburban system, and when he uses only the suburban system. Inasmuch as the suburban system as a whole is not earning a fair return, the payment of a minimum of five cents for a ride can hardly be considered a hardship.

The city of West Allis and another one of the petitioners in the present proceeding complained of the present single fare limit on the Burnham line, and asked the extension of such limit from

51st and Burnham street to 62nd avenue and George street. Complaint was also made as to the hardship upon residents of West Allis, especially laborers, in paying eight or nine cents twice a day for a ride between 49th avenue or 51st avenue and their residences west of 78th avenue, such stretch being entirely within the corporate limits of West Allis.

Held: The reasons hereinbefore set forth against the advisability of single fare extensions under present conditions apply with greater force, if anything, to the present request, which is therefore denied. However, a fare of eight or nine cents for a ride wholly within the corporate limits of West Allis is unreasonable, and subsidiary zones are therefore established, so that no fare for a local ride in West Allis will exceed five cents when paid for by the reduced zone tickets ordered in the present proceeding.

The Tippecanoe line fare under the order in question was the subject of complaint on the ground that the single fare was changed to a combination of single fare and two suburban zones. Grounds of objection urged are that a single fare had permanently been fixed by franchise for fifty years in 1893, and that a bonus was paid for the construction of the line. It appears that the territory in question with its tributary traffic, even making due allowance for the bonus claimed, has not earned operating expenses since 1893, and that there is no indication at present that traffic will develop within the near future to the extent of attaining something like self support.

Held: Under the law bearing on discrimination those agreements or franchises establishing unusually low fares should be void in the same manner as those establishing unusually high fares. Taking into consideration uniformity for the entire suburban rate schedule, and the city system income accounts, a single fare to the terminus of the Tippecanoe line cannot be justified. However, in the light of the present circumstances, the increase complained of was somewhat excessive. The schedule is therefore revised so as to relocate the single fare point, and eliminate one zone, thereby establishing a one zone fare to the terminus of the line.

The St. Francis, Cudahy, and South Milwaukee rates were the subject of complaint. The removal of the single fare limit from St. Francis to Oklahoma avenue was objected to on the grounds that it interfered with franchise rights; injured the educational institutions at St. Francis, and placed a hardship upon the riding public going to and from St. Francis. Various residents of Cudahy complained that the rates are discriminatory compared with those in force between Milwaukee and West Allis, and the city of South Milwaukee protested against the rates ordered on the ground that they are contrary to those provided by franchise in 1901, that they disturb the industrial and social conditions established during the period of franchise rates, and that they are a hardship to many residents of South Milwaukee.

Held: Reconsideration of all the facts of the case, since the authorization went into effect, shows that the present limit at Oklahoma avenue causes the fare to the suburbs upon the line in question to be excessive. The single fare limit is therefore placed at St. Francis, and the interurban fares from Milwaukee to points on the Racine-Kenosha line are necessarily recomputed on the distance from St. Francis avenue, as they had been computed

upon Oklahoma avenue as a base. With the single fare established at St. Francis, the line to the south limits of South Milwaukee is divided into six zones. The location of the first suburban zone limit at Cudahy depot gives Cudahy a fare approximately comparable with North Milwaukee and Wauwatosa. With the location of the southern limit of the fifth zone at Marquette avenue in South Milwaukee, on the basis of the reduced zone tickets ordered, the local fares within Cudahy and South Milwaukee, and between the two suburbs through three zones will be five cents, and on a cash basis six cents. On account of the short zone in the comparatively well settled area between Cudahy depot and Underwood avenue, and the unfavorable location of the present south limit of the fifth zone at Beach street, zone boundaries between Cudahy depot and Marquette avenue are relocated by placing zone limits at George, Colledge and Hawthorne avenues.

The previous order is amended so as to accord with the decisions in the present proceeding. The respondents are to draw up, in accordance with the amendments presented, rate sheets for the Milwaukee-Racine-Kenosha line, similar to those under the previous order. Blocks of 20 tickets for \$2.50 on cars operating between Milwaukee and South Milwaukee are to be discontinued, and in lieu thereof, on those cars and all other cars in suburban passenger service the zone tickets, 30 for 50 cents, herein proposed, are to be put on sale, subject to the minimum fare provisions prescribed. All complaints and petitions in the present proceeding, insofar as they are not satisfied or granted, and insofar only as they relate to rates of fare for suburban and interurban passenger service, are dismissed.

The ten petitioners given above filed separate complaints protesting against the suburban rates of fare of the respondents as authorized in the decision *In re Milwaukee Suburban & Interurban Ry. Rates*, Jan. 2, 1914, 13 W. R. C. R. 475. Hearings were held during March and April, 1914, in the city hall of Milwaukee. Oral argument was held on August 22, 1914. The petitioners were represented as follows *George P. Dravo* by himself and by *Theodore Kronshage, Jr.*; *E. J. Martel et al.* by *W. D. Corrigan*; *Wm. Bauernfeind et al.* by *Wm. Bauerfeind*; *City of Wauwatosa* by *Oscar Kroesing*; *City of West Allis and O. R. Tower et al.* by *F. C. Weed*; *Leon Howard et al.* by *F. X. Boden*; *John Paulu et al.* by *F. X. Boden*; *J. P. Beuscher et al.* by *J. P. Beuscher*; and the city of South Milwaukee by *W. J. Riley*. The above respondents were represented by *Clarke M. Rosecrantz*. Briefs were filed during July and August, 1914.

In the main, these complaints stand for a reduction in suburban fares through the restoration of the fare schedule existing prior to the order; through additional single fare extensions, and through commutation tickets.

Taking up the first proposal of the petitioners, it is deemed un-

necessary to repeat in detail the facts which were presented in the former decision regarding the unstable and discriminating features of the fares then in existence. The position taken against the nickel zone supplemented by numerous ticket fares in that decision has been, if anything, strengthened by the matters brought out in the rehearings. The street railway traffic in and about Milwaukee has attained such volume and density that the application of a country five-cent zone with overlaps is unsatisfactory and impractical. Either single fare extension, shorter zones or both are required to meet the situation. A reversion to the larger zone would, without a doubt, revive all the old complaints and would, in a short time, bring about many new complaints where the smaller zone has proven to be entirely acceptable. With the adjustments made in the present schedule of fares by the following order it is firmly believed that practical uniformity will be established and the causes of all past and present complaints will have been largely mitigated.

SINGLE FARE EXTENSION.

The majority of suburbs have asked for changes in the Milwaukee city fare limit. Two suburbs request that the limit be restored to its position prior to the order of January 2, 1914, while the other suburbs request extensions. The restoration of the fare limits drawn in under the order referred to will not be considered here as involving a question of extension but as a method of adjusting suburban rates of fare, and will be treated under the heads of the respective suburbs. Insofar as these extensions in single fare limits involve common points, they will be covered in the following discussion.

Facts and circumstances other than financial conditions, such as value of the service, uniformity, existing and future possible traffic, etc., must undoubtedly be considered when single fare extensions are in question. In the instant case no good reasons appear for abandoning the general basis employed in former cases. Recent developments, however, indicate that it is justifiable from an economic as well as from a legal point of view to lay somewhat more emphasis upon financial conditions.

In discussing the feasibility of extensions it is of first importance to analyze the income account of the city system. This

is obvious as extensions will not only eliminate the tributary suburban revenues but will cause the expenses heretofore borne by the suburban systems to be loaded upon the city system. Patrons who formerly paid a city fare plus a suburban fare for transportation will only pay a city fare after the extension, while the entire expense of conducting such transportation falls upon the city system without practically any compensating revenues unless from a slight increase in traffic. Those suburban lines having a relatively large amount of traffic necessarily cause a proportionately large amount of expenses to be charged to the city system in case of extension, while the opposite is true for those suburban lines having very little traffic. The argument could then be advanced that poorly paying suburban lines should be granted extensions. But in the first case, as a rule, when an extension is made there is sufficient indication that the traffic with its normal increase will soon be self-supporting, which is not the case with those suburban lines having light traffic and where no future substantial increases are at all probable. Nevertheless, the fact remains that in any case of extending Milwaukee single fare limits additional expenses and fixed charges are loaded more or less upon the city system, and no consideration can be given to any one suburban line without taking in the feasibility of extensions on similarly situated lines in the entire suburban system. Even though some of the separate city lines may show a high return, the metropolitan system composed of all lines, both profitable and unprofitable, as a whole must furnish in a large degree the financial basis to determine the feasibility of extensions, and this obviously precludes any consideration of urban-plus-suburban income accounts. Enough figures have been presented in these and other cases to show that the suburban system, with the exception of a few lines, has not approached a fair return. The question then presents itself as to the status of the margin now existing in the city income account to warrant extensions.

In the *Service Case (In re Service T. M. E. R. & L. Co. 1913, 13 W. R. C. R. 178, 239)*, the income accounts for the Milwaukee metropolitan area for the years 1908 to the close of the fiscal year June 30, 1913, were reviewed. It was here shown how the surpluses above a fair return had been decreasing during this period, due to certain causes enumerated. Explanations of the conditions shown there are unnecessary as they hold as true

now as they did then. There is need to add, however, those conditions which have developed subsequent to June 30, 1913. Income accounts prepared for the calendar year 1913 show that after making required allowances the margin above a return of 7.5 per cent has reached small proportions. The return upon the fair value of the property for this far is 8.17 per cent and upon the cost new is 7.18 per cent. An income account prepared for the fiscal year ending June 30, 1914, and for eight months ending September 30, 1914, shows much lower percentages. In addition to the causes, such as rise in prices and wages, increases in paving obligations, investment costs and service requirements, reductions in revenues due to single fare extensions and tickets ordered, 13 for 50 cts., discussed at length in the *Service Case*, other conditions have developed to change the complexion of the last income accounts. The general depression now on has not only arrested the normal increases of about 5 per cent in city revenues upon which expenses and property budgets have been based, but has brought about an actual decrease in revenues of over \$41,000 within the last eight months, thus causing a net decrease in excess of 6 per cent of the annual revenues. As stated in the *Service Case*, p. 233, the annual expenditures for paving construction was estimated at about \$200,000 for 1913 and \$125,000 for 1914. The actual paving costs in 1913 were approximately \$156,000, while during the fiscal year 1914 these costs exceeded \$565,000. The costs for the two years more than double the estimate. A contingency which must also be given some consideration is the decision of the United States supreme court regarding 13 tickets for 50 cts. If these reduced fares should become effective, the allowance made on the basis of the Commutation Ticket Coupon Redemption Reserve Fund would only cover about one-half of the reduction and a further reduction between \$70,000 and \$90,000 would take effect, which would appreciably lower the per cent returns cited previously.

The conditions outlined above in the aggregate have, and will for some time, render the financial aspect extremely unfavorable for any single fare limit extensions. If further increases in expenses occur and such increases are due to public requirement and economic conditions, accompanied by revenue reductions due to business depressions, adequate service must nevertheless still be rendered. The company's revenues, so far as they can be con-

trolled by the Commission, must first insure such service and all other matters should, it is believed, be held in abeyance for the time being. Public policy demands that this course be taken.

It is not the intention by what has been said to predict any extended unpropitious conditions. An examination of the company's revenues for a period of seventeen years since 1896 discloses that the annual increases averaged 7.29 per cent for the entire period, and 4.86 per cent for the last six fiscal years up to June 30, 1914. There has been no uniformity in the individual annual increases. The maximum increase of 13.26 per cent occurred during 1902 and the minimum of 0.06 per cent during 1908. The latter was caused by the general depression at that time. The year 1903 shows an increase of 11.14 per cent, the next year 1904, shows 5.45 per cent, while 1905 records an actual decrease of 0.93 per cent, followed by a 11.30 per cent increase during 1906. The last several years, however, show a steady decrease both absolutely and relatively. During the fiscal year 1912 the increase is 5.05 per cent, for 1913 2.46 per cent, and for 1914 only 0.7 per cent. There is every reason to believe, however, that the present unfavorable conditions will not continue indefinitely. This may be substantiated not only by the above fluctuations in increased revenues but by the increase in population. According to the United States census during the decade 1890 to 1900, the number of inhabitants in Milwaukee increased from 204,468 to 285,315, an increase of 80,847, while for the decade beginning with 1900, the absolute increase totaled 88,542; bringing the population up to 373,857 in 1910. Likewise in the suburbs, with the exception of Whitefish Bay, the last decade 1900 to 1910 shows extraordinary increases. The following table exemplifies this in a measure:

Suburb.	Population.	
	1900.	1910.
West Allis.....		6,645
South Milwaukee.....	3,392	6,092
Cudahy.....	1,366	3,691
Wauwatosa.....	2,842	3,346
North Milwaukee.....	1,049	1,860
Whitefish Bay.....	512	542
Total	9,161	22,176

These figures for both the city and suburbs indicate that, as far as population affects traffic, an unusual and extended decrease in patronage is not to be expected. On the other hand, it must be stated that the recent widespread use of the automobile and motorcycle have no doubt contributed in a degree to the decline in revenues.

With the facts outlined and taking the present economic situation as a whole, it is considered necessary to exercise caution and hold a decision on all single fare extensions, including those previously recommended, in abeyance until such time when conditions in general have again become normal. In fact, aside from economic considerations, it is no mere matter of conjecture to doubt that any extensions during this period could be defended in law or equity.

COMMUTATION TICKETS.

A general protest has been lodged by various petitioners in these cases against the two-cent suburban zone tickets sold by the respondent. The main objection seems to be that no reduction is offered in combination with the regular cash fare. It is urged that the commuters, who contribute the bulk of the traffic, are usually entitled to special rates over the transient or occasional rider. The stand of the petitioners in this instance is supported by general practice. Usually a concession is offered to regular traffic. An illustration is provided by the respondent's ticket fares within the city of Milwaukee, where ticket fares at 6 for 25 cts. and 25 for \$1.00 are sold at present in combination with the cash fare of five cents; by the mileage book, at 1.8 cents per mile, sold upon the interurban lines in combination with the cash fare of two cents per mile, and by the 6 for 25 ct. tickets, good morning and evening, sold in the city of Racine. Although the commuter is granted reductions in other services rendered on the companies' lines, no general concession is granted to the suburban commuter. This situation in the respondent's schedule of fares authorized by the Commission on January 2, 1914, now appears untenable. No differences inhere in city, suburban and interurban operation which warrant a single cash basis for the suburban schedule of fares when a double basis is in vogue for the other schedules. From the stand-

point of retaining existing traffic and developing future traffic a uniform commutation rate is unquestionably essential, especially when considering that the schedule of fares in force for over a long period of years, prior to the order of January 2, 1914, provided liberal commutation rates on nearly all suburban lines. There is hardly any doubt that the lack of reduced fares has been one of the potent causes to engender antagonism and bring about a reduction in traffic. Furthermore, the testimony and complaints to the Commission are replete with instances of the evil effect upon service by the payment of suburban fares in cash. It was presumably to avoid these evils that the present zone tickets were instituted, but passengers cannot be expected to advance money for tickets not sold at a reduction. The impairment of service due to the comparatively low percentage of zone ticket sales is a real evil at present.

To meet the conditions described above it is necessary to require suburban zone tickets to be sold at less than the cash fares. Taking into account the traffic and financial conditions; the number of zones on each suburban line; the minimum and maximum possible use of tickets per day per regular passenger; and the relation between the rates in force under the nickel zone system and the existing copper zone rates, it is deemed that thirty tickets for 50 cts., will be equitable and convenient. The fare per zone upon this basis will be one and two-thirds cents. The cash fares will remain as previously ordered excepting the changes made herein on the South Milwaukee and Tippecanoe lines. The applicability of this block of tickets given above to the specific suburban lines will be given under the discussions of the separate suburban lines.

Whitefish Bay-Fox Point. Acting for a committee of five appointed at a mass meeting of the citizens of Whitefish Bay and vicinity held January 19, 1914, the petitioner, E. J. Martel, makes complaint against the rates ordered in the Commission's decision of January 2, 1914, 13 W. R. C. R. 475, 500, subsection "e", on the ground that they are discriminatory as compared with other suburbs; that the zones established are, in some instances, less than a mile; that the mileage books provided are practically no reduction; and that for transient passengers the cash fare is reduced while for the regular patrons it is increased. A resolution filed by the village board on February 2, 1914, up-

holds the contentions in the petition above and in addition states that the results of the new rates will be to impair the growth of the village and injure real estate values. Prayer is made to have the old commutation rates reestablished.

Petition of George P. Dravo, filed January 30, 1914, alleges that the suburban rates ordered by the Commission in its order of January 2, 1914, 13 W. R. C. R. 475, work numerous hardships on people who have settled on the various suburban lines and a request is made that the Commission grant mileage books at reduced rates. It is alleged that the zones are discriminatory as established on the Whitefish Bay - Fox Point line, and that if Mineral road were made the city fare limit, the first zone placed at Bella Vista, the second zone at Silver Spring road, the third zone at the north limits of Whitefish Bay, the fifth and sixth zones becoming the fourth and fifth, the discrimination would be largely avoided.

A summary of the main points of complaint from the patrons on this line shows that the single fare point is not far enough out; that the zones in instances are short of a mile, and that commutation tickets, outside of the regular mileage books which are of little advantage to patrons of this line, were not provided. One prayer made for the reinstatement of the old commutation rates and one of the briefs suggests the establishment of limited time mileage books sold in large units by which a passenger traveling continuously could ultimately secure a rate of one cent per zone. An argument advanced in favor of these and the other commutation tickets is that the present difficulty in making small change for cash fares unreasonably delays cars and results in particularly poor service. Considerable emphasis was laid, at the hearings, on the existence of ill will which the present cash rates had brought about, and on the fact that former patrons were now walking considerable distances to obtain lower fares.

The company, in its brief, denies that a hardship is being worked upon the residents of the suburb, denies that building operations have been stopped, and contends that a differentiation in through fares between different portions of the suburb is necessary.

The arguments relating to the necessity of selling commutation tickets in order to preserve the adequacy of service and for other reasons have been previously reviewed as applied to all lines in common. Accordingly, the provision herein made for

commutation zone tickets to be sold at the rate of 30 for 50 cts. or $1\frac{2}{3}$ cts. per zone will effect a reasonable reduction in fare for the regular patron. Sold through the conductors in units small enough to be within the reach of all, they will facilitate collection, and it would seem are preferable to the system of mileage books suggested. Moreover, by the use of these zone tickets, a passenger will be enabled to ride through three zones for 5 cts., thus securing local transportation covering the greater part of the village for a nickel fare. Upon a ticket basis the through fares will still conform to the distance principle, which is considered highly essential and at the same time will meet the needs of the regular patron.

Considerable complaint is made of the fact that the first four zones comprise but 3.86 miles, and that consequently two of the zones are less than a mile. The total suburban part of the line divided into six zones comprises about an eighth of a mile less than 6 miles. The distance was so nearly six miles that it appeared reasonable to make a division into six zones and conform as far as practicable to political boundaries. The shortened zones fell within Whitefish Bay instead of at the end of the line as in some other instances. At least one zone limit might, it now seems, have been fixed at a more convenient point. However, in order to place the zone limits practically a mile apart and cause the short zone to be at the end of the line, the company has been ordered herein to rearrange the zones of the Whitefish Bay-Fox Point line upon this basis. These zones will be measured from the existing single fare point as no extension is deemed advisable under present conditions for the reasons given previously.

North Milwaukee. On February 17, 1914, the original petition of Wm. Bauernfeind was filed bearing the signatures of a large number of laboring men employed in North Milwaukee, and on February 24, 1914, a second petition was filed. Both petitions requested the Commission to establish a two-cent minimum fare in the suburban zones on the North Milwaukee line in place of the present five-cent minimum as ordered in the decision, 13 W. R. C. R. 475, 501. The contention made is that the five-cent minimum is excessive, especially for short rides, as laboring men cannot afford to pay it, and that if a two-cent minimum were established, a large number of laborers would ride short distances and produce additional revenue to the company.

At the hearing, no additional facts bearing upon the minimum fare were offered by the witnesses for petitioner. The matters contained in the petition were merely emphasized.

As the Commission's order of January 2, 1914, did not alter the existing conditions in respect to the minimum fare on the North Milwaukee line, the complaint presents a new question. Minimum fares have usually been justified on the grounds that a certain portion of the costs of railway transportation does not depend directly upon the distance, especially for short hauls. It does not cost just twice as much to haul a passenger one mile as one-half mile, in fact, the cost is not much different for comparatively short distances. A line must therefore be drawn at some point if every passenger is to pay as near as practical his own costs. Five cents appears to be the logical point under existing conditions. Complainant alleges that many persons now walk where they would ride if the minimum fare were reduced. These persons who walk do so probably mostly at rush periods when demands for service are at the maximum. If they rode it would most certainly require additional cars for a few hours operation, thus increasing the cost of service so that with a minimum fare of two cents a decrease in the existing low net revenues would result. Furthermore, to maintain uniformity a reduction of the minimum local fare for this suburb would require similar treatment for other suburbs and this, under present circumstances, is inadvisable. Additional discussion bearing upon a minimum fare of two cents is given in a following section relating to Wauwatosa. For the reasons given here and elsewhere the complaint is dismissed.

Wauwatosa. Objection is made in the petition of the common council of the city filed January 31, 1914, to subsections "b" and "h" of section 1 in the order of the Commission on January 2, 1914 (13 W. R. C. R. 475, 499, 501), relating to zone fares and the five cent minimum applicable to the city of Wauwatosa. The petition sets forth that the respondent under the above order may charge as high as nine cents for a ride within the corporate limits of the city while the franchise rate is but five cents, and that the former transfer privileges are denied as provided for by franchise. The prayer is made (1) to have the urban single fare in Wauwatosa not to exceed the one now in existence in Milwaukee; (2) to have the fares within Wauwa-

tosa and Milwaukee not in excess of franchise fares; (3) to have the single fare limit in Wauwatosa at the business center; (4) to have the former transfer privileges at the junction of the Walnut and Wells lines.

In addition to the facts alleged in the petition, witnesses for the petitioner called attention at the hearing to the difference in fares from the strip of the Wells street line lying between the east corporate limits of Wauwatosa and 59th avenue to Washington Park through Wauwatosa, and through the city of Milwaukee. Via the former route it was stated that the fare is from twelve to fourteen cents, depending upon the use of city tickets, while via the latter, four or five cents for a much longer distance. From this strip it was also shown that the fare to the business section of Wauwatosa is six or seven cents, while it is only four or five cents to the business section of Milwaukee. It was also claimed that this difference in fares discriminated against the Wauwatosa schools.

The fares of 6, 7, 8, and 9 cts. for a ride wholly within the corporate limits of Wauwatosa came about by the extension of the Milwaukee single fare limit westerly to 59th street by order of the Commission in 1912 (*Koenig et al. v. T. M. E. R. & L. Co. et al.* 10 W. R. C. R. 337, 351). Due to the numerous objections to a definite fare point for all rides, the company, pending a final adjudication of the matter, established a so-called overlap covering the territory between Hawley road, the old fare point, and 59th street. By means of this arrangement a passenger was enabled to ride for a flat fare between this section and either the rest of Wauwatosa or Milwaukee—a special privilege not enjoyed by the residents on most sections of the line or in any but small portions of the other suburbs. Such an arrangement is also confusing in the collection of fares and might lead to considerable abuse as traffic increased.

The original franchise, it is true, provided for a local fare of five cents, and it has been customary to have a flat fare within a municipal corporation. The interests of a large majority of the people of Wauwatosa, however, like those of the people of most other communities close to a large city, seem to lie rather in Wauwatosa as a suburb than as an isolated independent municipality. This appears to be the spirit of the original applications for single fare extensions passed on in 1912 (10 W. R. C. R.

337), and of the present demand for extending the single fare point to the center of the city of Wauwatosa, and in fact was the contention of counsel for petitioner in the case *Gillett v. T. M. E. R. & L. Co. et al.* 1907, 1 W. R. C. R. 689, 704. The desire for a five cent local fare could be satisfied by moving the single fare point on the Wells line back to the east city limits of Wauwatosa. This would be treating the suburb entirely as a separate community from a traffic standpoint. As indicated, however, it does not appear to the Commission that this solution would by any means benefit the greatest number of people. A traffic check made on August 29, 1914, and which we believe fairly represents the conditions, showed that 90 per cent of the passengers boarding or alighting in this overlap territory rode to or came from Milwaukee, and only 10 per cent rode between this section and the rest of Wauwatosa. The interests of this section, therefore, seem to be much more closely connected with Milwaukee than with the rest of Wauwatosa so far as street railway service is concerned, and in view of this fact the Commission deems it best to leave the single fare point at 59th avenue.

If the fare of five cents should be fixed for any ride in Wauwatosa, thus reestablishing the greater part of the old overlap, it would be an exception to the zone system and would permit a ride covering a distance really corresponding to three zones for five cents cash, when the residents of other suburbs would have to pay six cents cash. It does seem to be a hardship, however, on such passengers as do ride between this section and the rest of Wauwatosa to be compelled to pay a Milwaukee city fare and in addition zone fares for a ride wholly within Wauwatosa. It seems advisable, due to these special conditions, to make the section between 59th avenue and the east corporate limits of Wauwatosa a separate suburban zone so far as passengers riding locally, that is, between this section and the rest of Wauwatosa or transferring in Wauwatosa are concerned. This will make the fare from this section to the center of Wauwatosa the minimum of five cents cash for two zones, or from this section to any more distant point in Wauwatosa a cash fare of six cents, or with the zone tickets provided in the following order a fare of five cents for the three zones. With the anticipated wide use which we believe will be made of these zone tickets, a local corporate fare of five cents will practically be secured.

As previously mentioned, the prayer was made that the Mil-

waukee single fare point be extended on both the Wauwatosa lines to the center of that city. The inadvisability of such extension has been made clear in the preceding general discussion on single fare extensions.

An argument submitted on behalf of the Wauwatosa Taxpayer's League contends for a minimum fare of two cents within the suburb or a five cent minimum per zone with return transfer. The lower minimum is deemed just by the league upon the ground that since the establishment of suburban zones there is no need for compensating flat fare for long and short hauls, because a definite through charge based upon distances in the suburb is now in force. It is also stated in support of the lower minimum that upon the steam roads the fare is two cents per mile for any distance. Criticism is made of the fact that those patrons who burden the Milwaukee city system with a long haul of four miles or over receive a two cent rate per zone in the suburbs, while the local suburban rider, who does not burden the city system, must pay a five-cent minimum for one or two zones. In meeting the argument that the five-cent minimum is partly justified by the cost of stopping and starting a car, the league's brief contends that the free use of the public streets for right of way purposes is sufficient compensation for this cost and contends that the stops incident to local traffic due to a two cent minimum would hardly entail any additional stops than those made now.

Although some phases of the petitioner's contentions may seem tenable, there are, in the main, explanations and refutations necessary to place the entire argument in its proper perspective. That the conjunctual suburban fare per zone is only two cents for passengers using the city system can be defended in that those passengers ride "through", using both the urban and suburban system. This is scarcely to be construed as discriminatory against the patron paying the local minimum who uses only the suburban line, as the local traffic is only made possible by the entire urban-suburban traffic. Without the "through" traffic, it is obvious that no line could exist financially in the suburb. When a passenger passes from the suburb to the metropolitan area he occasions two stops, requires one fare collection, and uses the car in boarding and alighting. When a passenger rides locally to the limit of the suburban area and then in-

to the metropolitan area he occasions four stops, requires two fare collections, and uses the car twice in boarding and twice in alighting. Obviously in handling hundreds of thousands of passengers per year the first service would cost considerably less than the second with regard to time, wear, tear, and risk. To make more stops wears harder on track, car, electric equipment, and costs more power. To make more collections uses more of the conductor's time, requires greater use of tickets, fare boxes and punches. To board and alight more frequently takes more of the trainmen's time, both conductor and motorman, wears out car equipment used directly by the passenger and increases the injury and damage risk twofold. When these small and even some seemingly insignificant costs per passenger are multiplied by a half million passengers, we have a formidable item which must be considered. With this in mind it may be said that the urban and suburban "through" system can afford a two cent per zone system, but the purely local business with its light density of traffic can afford a five-cent minimum only after making due allowances for public policy. The flat fare in Milwaukee is justified mainly upon social grounds and is in fact self-supporting, due to the high density of traffic, while the flat fare within the suburb cannot be defended independently upon any basis of cost, nor are the social conditions such as to necessarily demand a lower minimum than five cents in any of the suburbs about Milwaukee. If the local lines in the suburb were publicly owned, the question of cost could be disregarded entirely if the municipality so wished and a lower minimum established, but when in making a rate it is a question of square deal between consumer and investor, the cost basis and business policy must both be given some consideration.

To say, as the petitioners do, that the so-called penalty is three cents on every minimum fare, does not hold when the ride extends over a distance of from one and a fraction to two zones, as here the so-called penalty is only one cent and this is removed when the second zone is crossed. The petitioner has also cited the two-cent-a-mile fare upon the steam roads, holding it up as an example bearing out the discrimination of the minimum fare. Section 1798a provides for a two-cent fare upon all steam roads with earnings per mile of \$3,500 or over, but adds, "no such corporation shall be compelled to accept a single fare of less than

five cents". Thus the legislature has sanctioned a minimum charge for extremely short hauls greater than the distance rate on the steam roads.

To say that the use of the streets for right-of-way purposes is sufficient payment for additional stops, is to place the entire finance of the respondents upon a hypothetical rather than upon an actual basis. Where actual outlays and incomes have been used to determine the rate of return, it does not seem prudent to add conditions which in no way enter into the existing financial income accounts directly. The use of the streets free without a direct license or rental payment, as is most likely inferred, is one of the conditions of operation, and to allow an additional credit for this use would be unrepresentative of existing conditions. It should, however, be borne in mind that the paving, sprinkling, removal of snow, and other obligations hardly permit the term "free streets" to be used when comparison is made with private right of way where these obligations do not exist at all, or only partially so.

There are many rights in respect to street railway rates and service to which the public is in justice entitled, regardless, in a measure, of the reasonableness in itself of the return which the investors in the serving company receive. That the right to a single fare of less than five cents for any ride is one of these rights seems untenable. No extreme hardship is placed upon the patrons in these suburbs by paying a minimum fare. It is difficult to see how further concessions in this respect could be granted unless those who have devoted their capital to the service of the public receive a fair return thereon. Such a return is not now being earned upon the suburban system as a whole. Additional concessions for minimum fare over those made for through fares and other purposes cannot be defended upon any basis. We must therefore deny, for the present at least, requests for a minimum fare of less than five cents.

Some complaint has been made that passengers transferring between the lines in Wauwatosa, unless paying to destination, have been compelled to pay the minimum fare of five cents upon boarding the car to which they desired to transfer. The small amount of transfers between the two lines; the fact that in most cases the line to destination, either direct or with a Milwaukee city transfer, is available; and the fact that transfers in Wauwatosa may be had upon paying the zone fare, seems to lead

to the conclusion that no *extra* transfer privileges should be added.

West Allis. The petition of O. R. Tower, signed by a large number of residents of West Allis, sets forth that the above named companies have refused to extend the single fare limits upon the Burnham line from 51st to 62nd avenue as recommended by the Commission in its order of January 2, 1914 (13 W. R. C. R. 475, 498, 513). The petition alleges that the present single fare limit on the Burnham street line is inaccessible to the patrons and that it does not accord with the zone uniformity established by the Commission in the above decision when compared with the single fare limit on the Wells and Fond du Lac lines at 62nd and Greenfield. Prayer is made that the Commission order the extension of the single fare limit on the Burnham street line from 51st and Burnham street to 62nd avenue and George street.

The complaint of the city of West Allis is accompanied by four petitions signed by residents of West Allis who endorse the action of their common council in bringing the complaint calling attention to the discrimination as to the Burnham single fare limit and the hardship upon the residents, especially laborers, of West Allis in paying eight or nine cents twice a day for a ride between 49th avenue or 51st avenue and their residences west of 78th avenue, a stretch entirely within the corporate limits of West Allis. It is petitioned that the Commission order the respondents to extend the single fare limits on the Burnham line and establish a single fare within the corporate limits of West Allis.

Under the preceding general discussion on "Single fare extensions" the inadvisability of making such extensions under existing conditions and with the present outlook is shown. The reasons given here apply with as great, if not greater, force to the Burnham line extension as to any other point upon the suburban system. For years this line has been one of the poorest revenue producing lines. The section between 51st and 52nd avenue is practically without any tributary traffic. An extension of the Milwaukee single fare limits over this stretch of track would load all its fixed charges and operating expenses upon the city system without any compensating revenues, and with no indication of such revenues within the immediate future. It is,

therefore, impossible under the present status of the city income account to make this extension.

Upon the question of a single fare for a ride wholly within the corporate limits of West Allis, the complaints set forth that such rides in certain cases now entail a charge of as much as seven or nine cents cash, or six or eight cents with a city ticket. From the standpoint of the local traffic only, this is unreasonable. The question of local fares and traffic has been discussed in connection with local fares in Wauwatosa and it seems advisable to take similar action here. Subsidiary zones will therefore be established between the present single fare points and the city limits, so that no fare for a local ride in West Allis will exceed five cents when paid for by the reduced zone tickets herein ordered, or six cents when paid in cash.

Tippecanoe. The petition of Leon Howard and others is directed against subsection "g", section 1, of the order contained in the Commission's decision of January 2, 1914 (13 W. R. C. R. 475, 500, 501), changing the single fare upon the Tippecanoe line to a combination of single fare and two suburban zones. The fare was thus increased by four cents to the terminus of the line and petitioners protest the collection of this increase upon the ground that the single fare had permanently been fixed for fifty years by franchise in 1893; that a bonus of about \$27,500 was paid for the construction of the line; that public and adjacent private property was donated to allow the constructing of the railway upon the highway and that the residents of Tippecanoe have done business and established their homes upon the basis of a single fare to the terminus at Bolivar avenue.

Respondent, in answering the petition, admits that certain moneys were contributed for the construction of the line described in the petition, but denies that the rate of fare was permanently fixed by franchise, alleging that the town board of the town of Lake had no authority to contract or fix a rate of fare. Respondent further contends that the life of the railway for which these moneys were paid has long since expired, requiring respondent to expend large sums for reconstruction and, consequently, the petitioners have contributed nothing for the railway now in existence. It is held that the operating revenues on the line as described in the petition have not provided an adequate return, and to grant petitioners' prayer would prevent the

respondent from earning an adequate return upon the investment used for a public purpose and require the respondent to discriminate, contrary to law, against persons using its other suburban lines similarly situated.

Petitioners' brief contends that the equities in the case make the increase unjust for the reason that a single fare has been guaranteed for fifty years by private contract and by franchise in 1893, in return for which a bonus was paid on other rights and property given.

Under the law bearing upon the discrimination it would seem that those agreements or franchises establishing unusually low fares should be void in the same manner as those establishing high fares in favor of the company. The law should be applied both ways. If a group of patrons, by some special advantage or under unusual conditions, have obtained rates of fare which, when enforced over a period of years, become discriminatory against other patrons similarly situated, such rates should be subject to modification the same as the franchise rates of a municipality which may subject the patrons to extortion in later years. One group of patrons should not have the right for a fixed term of years to receive services at the expense of another group or groups, but the spirit of the law seems to demand that equality be reestablished whenever changing conditions bring about inequality.

Upon this basis the single fare to Tippecanoe, which in other cases before this Commission has been repeatedly charged as discriminatory, was changed to a combination of city fare and two suburban zone fares in the decision, 13 W. R. C. R. 475. It is extremely difficult, when the uniformity of the entire suburban rate schedule and the city system income account are taken into consideration, to justify a single fare to the terminus of the Tippecanoe line. The territory here with its tributary traffic has not earned annual operating expenses since the building of the line in 1893. Income accounts prepared by the Commission with earnings based upon tributary population, rides per capita, average fare, etc., and with earnings divided 50 per cent to the suburban line and 50 per cent to the city system, show total annual deficits for the twenty years of \$145,699 and \$114,457 respectively. When allowing 6 per cent interest annually upon a bonus of \$27,000, the total deficit for the period still is \$111,679 upon the first basis and \$80,437 upon the second basis. Thus,

the single fare in force for twenty years has failed to develop sufficient patronage in this territory to approximate the cost of operation, and there is no indication at present that traffic will develop within the near future to the extent of attaining something like self-support.

Petitioners have contended that the full fare of all passengers riding upon this Tippecanoe section should be the basis for the computed revenues in the income account. This would mean that no compensation whatever should accrue to the city system for hauling these passengers even a greater distance on the average than they are hauled upon the Tippecanoe section. The division of revenues upon a 50 per cent basis is extremely liberal to the suburban line, and no greater amount can under any circumstances be reasonably credited to Tippecanoe. The apportionments in the income accounts cited above have in every respect been construed as liberally in the petitioners' favor as good practice permitted. This is evidenced to a certain extent by comparison with the results of the company's income account for this section. With revenues apportioned upon a car-mile basis and after allowing 5 per cent interest upon a bonus of \$20,298.75, the accumulated deficit according to the respondent for the twenty-year period aggregates \$159,135.05, or almost double the lower deficit given by the Commission.

Viewing the situation from the standpoint of the patron, the evidence now shows that the respondent's schedule of fares, as authorized on January 2, 1914, has worked a hardship upon a large per cent of the regular patrons. With an attitude of fairness to the parties concerned, an increase in the minimum fare of from four to eight cents to the terminus of the line must now, in the light of all circumstances, be considered excessive. A revision in the schedule is therefore necessary to the extent that the respondent relocate the single fare point and eliminate one zone, thereby establishing a one zone fare to the terminus of the line. This, it is believed, with the reduced zone tickets, will meet the needs of the patrons.

St. Francis, Cudahy, South Milwaukee. The petition of John Paulu et al. affects the rates authorized by this Commission in subsection "f", section 1, of the order of January 2, 1914 (13 W. R. C. R. 475, 500), which placed the single fare limits on the Public Service Building-South Milwaukee line at Kinnic-

kinnic and Oklahoma avenues. Petitioners claim that by removing the single fare limit from St. Francis to Oklahoma avenue the order has interfered with the franchise rights; has injured the educational institutions at St. Francis, and has placed a hardship upon the riding public going to and from St. Francis. Prayer is made that the original conditions be restored.

Petitions filed January 30, 1914, of J. P. Beuscher et al. alleges that the residents of Cudahy have not had a full and complete hearing regarding the change in rates authorized by this Commission in its decision of January 2, 1914, (13 W. R. C. R. 475, 500), and that these rates are discriminatory when compared with those in force between Milwaukee and West Allis. Prayer is made for relief. On January 6, 1914, the common council of Cudahy passed a resolution protesting against the nullifying of its franchise rates providing for a 7½ cent ticket fare between Cudahy and Milwaukee and a five cent fare between Cudahy and Kinnickinnic River in Milwaukee. On March 16, 1914, another resolution was filed by the council alleging that the present rates are discouraging industrial developments when considering the competition on the part of West Allis. Prayer is made that in comparison with the rates in force to West Allis, Cudahy should be granted a five cent fare to the Public Service Building and a seven and one-half cent commutation rate to anywhere within the city limits of Milwaukee.

Complaint was filed by the city of South Milwaukee on February 2, 1914, against subsection "f" of the Commission's order of January 2, 1914, (13 W. R. C. R. 475, 500), authorizing uniform two-cent zones upon the Public Service Building-South Milwaukee line of the respondents, and against the ticket fares, 20 for \$2.50 between Milwaukee and South Milwaukee authorized in the same order, page 516. In substance the complaint protested against the rates ordered upon the ground that they are contrary to those provided by franchise in 1901, that they disturb the industrial and social conditions established during the period of franchise rates, and that they are a hardship to many residents of South Milwaukee. Prayer is made that the former rates be reestablished or that relief be given by reducing the present rates to a level approximately equivalent to the franchise rates. Besides the complaint of the city, thirty-four petitions were filed by business and social organizations asking a reduction in rates over those established by this Commission,

The respondents filed no answer.

The testimony, miscellaneous petitions and letters reemphasize the matters presented in the complaints and point out that there are competitive fares in existence on the steam road lower than those now in force on the electric line. It is asserted that the making of small change required by the new rates unduly delays the operation of cars, and set forth that desirable inter-use of city parks, libraries, schools, museums, camping grounds, etc. is prevented by the higher fares.

In briefs for petitioners much emphasis is laid upon the equities of the case and on a contention that the single fare to St. Francis constituted part of the agreements by which property owners gave their consents for the operation of interurban cars upon the line. Emphasis is placed upon the contention that Cudahy is in competition with West Allis and other suburbs, both for labor and in products produced. It is maintained that with the present rates of fare the Cudahy industries will be unable to obtain the labor needed. With reference to South Milwaukee it is contended that this city largely depends upon the Bucyrus plant which intends to transfer much of its business to other localities if the new rates of fare continue. The 12½ cent commutation tickets are objected to because \$2.50 is too great an outlay; because the tickets are not transferable, are limited to a period of sixty days, and terminate at the end of one year.

The arrangement previous to the decision, 13 W. R. C. R. 475, on this line as to Milwaukee single fare limit was not a definite point at St. Francis but was an overlap, or dead zone, with one limit at St. Francis and one at Oklahoma avenue. In fixing a single fare point, the Commission authorized that it be fixed at Oklahoma avenue. There is every indication after reconsideration since the authorization went into effect that the present limit at Oklahoma causes the fares to the suburbs upon this line to be excessive. This is especially true of Cudahy. The ticket revenues of this suburb derived from the commutation, 20 for \$1.50, and the Kinnickinnic River tickets, for the past four calendar years have averaged considerably higher than the same revenues for North Milwaukee and approximately equaled those upon the two lines to Wauwatosa. For North Milwaukee the cash revenues averaged somewhat below 60 per cent per annum of the total revenues, while on the Wauwatosa-Wells and Walnut lines the percentage of cash revenues averaged about 60 and 74,

respectively. But allowing only 25 per cent for cash revenues upon the suburban section to Cudahy, which is relatively a very low estimate, the apportioned income accounts show that upon its own basis it is certainly comparable with Wauwatosa and North Milwaukee financially. Viewed from the standpoint of its proximity to Milwaukee on the basis of track distance, its position compares favorably. In character of traffic it resembles that of West Allis and North Milwaukee. All matters considered and properly weighted, Cudahy is entitled to a fare similar to that enjoyed by Wauwatosa and North Milwaukee.

As far as the change in single fare limit is demanded by conditions existing under the zone fares to South Milwaukee, there is no doubt that the present fares, both cash and commutation, are a decided hardship upon its traveling public. Its position as an industrial center places the burden of the increases of cash fares from ten to seventeen and nineteen cents largely upon the laboring population. While this condition was recognized by the company through the installation of the 12½ cent, 20 for \$2.50, special commutation ticket, these have proven inadequate to bring about the necessary relief. From the standpoint of South Milwaukee, therefore, the single fare limit should be placed at St. Francis.

As the interurban fares from Milwaukee to points on the Racine-Kenosha line are at present computed on the distance from Oklahoma avenue as a base, the extension of the fare point to St. Francis results in a discrepancy between the suburban and interurban fares. Thus the fare from Milwaukee to the south limits of South Milwaukee would be 16 cents cash with city ticket. To Puetz road, about half a mile further, the fare would be 19 cents cash. With suburban tickets and interurban mileage books, the fares would be 14 cents and 18 cents, respectively. Other difficulties which need not here be discussed would also arise. In order to avoid discriminations and these difficulties, it will be necessary to recompute the interurban fares upon St. Francis avenue as a base. In view of the competition to which this line is subjected and the fact that the recently increased fares have most likely added to the decrease occasioned in traffic and revenues on this line, it seems that the slight decrease in through rates which will be occasioned by this change will tend to aid in bettering the situation now existing.

With the single fare established at St. Francis, the line to the

south limits of South Milwaukee will be divided into six zones. In order to give Cudahy a fare approximately comparable with North Milwaukee and Wauwatosa, the first suburban zone limit must extend to Cudahy depot. The southern limit of the fifth zone will be located at Marquette avenue in South Milwaukee. With these changes, and a combination of city ticket and the reduced zone tickets provided for in the following order, the minimum fare from Milwaukee to Cudahy depot will be $5\frac{2}{3}$ cents and from Milwaukee to Marquette avenue in South Milwaukee it will be $12\frac{1}{3}$ cents. On the basis of the reduced zone tickets the local fares within Cudahy and South Milwaukee and between these two suburbs through three zones will be five cents, and on a cash basis six cents. Due to the short zone in the comparatively well settled area between Cudahy depot and Underwood avenue, and due to the unfavorable location of the present south limit of the fifth zone at Beech street, a relocation of zone boundaries is considered necessary between Cudahy depot and Marquette avenue by placing zone limits at Grange, College, and Hawthorne avenues. These arrangements, it is believed, will meet the shortcomings of the previous schedule and be fair to the parties concerned.

ORDER

IT IS THEREFORE ORDERED, in accordance with section 1797—14 of the statutes of Wisconsin, that the Railroad Commission's order of January 2, 1914, 13 W. R. C. R. 498—517, authorizing and ordering rates of fare for passenger service upon the suburban and interurban lines of respondent companies be amended by provisions deemed just and reasonable as provided in ch. 362, laws of 1905, and acts amendatory thereto, as follows:

To section 1; subsection *a*, the following shall be added:

Under Wells Street-West Allis: The distance from 62d and Greenfield to the north limits of the city of West Allis shall constitute a local suburban zone for transportation within the corporate limits of the city, and the charge for any distance within this zone shall be two cents.

Under National Avenue-West Allis: The distance from 62d and Greenfield to the east limits of the city of West Allis shall constitute a local suburban zone for transportation within the corporate limits of the city, and the charge for any distance within this zone shall be two cents.

Under Burnham-West Allis: The distance from 51st avenue and Burnham to the easternmost point at which this line touches the limits of the city of West Allis shall constitute a local suburban zone for transportation within the corporate limits of the city, and the charge for any distance within this zone shall be two cents.

The charges specified shall be subject to the minimum fare provisions stated elsewhere herein.

To section 1, subsection *b*, the following shall be added:

Under Wells-Wauwatosa: The distance from 59th avenue and Wells to the east limits of the city of Wauwatosa shall constitute a local suburban zone for transportation within the corporate limits of the city, and the charge for any distance within this zone shall be two cents, subject, however, to the minimum fare provisions stated elsewhere herein.

Section 1, subsection *e*, shall be amended to read as follows:

e. For suburban passenger service to and through Whitefish Bay and Fox Point.

Oakland Avenue-Fox Point. City fare from any point within the single fare limits of the city of Milwaukee to Oakland and Newton, plus two cents for each suburban zone to the terminus of the line. Zone limits to be practically one mile distant from each other, except the sixth zone, which shall constitute the remainder of the distance after five one-mile zones have been established. Limits to be submitted to the Commission for approval.

Section 1, subsection *f*, shall be amended to read as follows:

f. For suburban passenger service to and through South Milwaukee.

Public Service Building-South Milwaukee. City fare from any point within the single fare area of the city of Milwaukee to St. Francis avenue, plus two cents for any distance from this point to Cudahy depot, plus two cents for any distance from Cudahy depot to Grange avenue, or Cudahy south limits, plus two cents for any distance from Grange avenue to College avenue, or South Milwaukee, north limits, plus two cents for any distance from College avenue to Hawthorne avenue, plus two cents for any distance from Hawthorne avenue to Marquette avenue and Chicago road or Marquette avenue and 5th avenue, plus two cents for any distance from Marquette avenue to the present south city limits of South Milwaukee; and vice versa.

Section 1, subsection *g*, shall be amended to read as follows:
g. For suburban passenger service to and through Tippecanoe:

Howell Avenue-Tippecanoe. City fare from any point within the single fare limits to the city of Milwaukee to Howell avenue and Bradley avenue, plus two cents for any distance from Bradley avenue to the present terminus of the line; and vice versa.

Section 1, subsection *h*, the last sentence shall be amended as follows: The minimum fare for any such haul shall be five cents, or three suburban zone tickets, (30 for 50 cents).

Section 1, subsection *k*, shall be so construed as to permit the additional suburban zones for local suburban transportation as herein prescribed.

Section 2, subsection *c*, shall be amended to read, so far as the text thereof is concerned, as follows:

c. For "through interurban passenger service" upon the Milwaukee-Racine-Kenosha line, a uniform rate of two cents per mile computed to the nearest one cent for the actual mileage except the mileage included within the single fare limits of the city of Milwaukee to St. Francis avenue, for which the charge shall in every case be computed at four cents, and the distance between Gould street and 23d and Mead streets in the city of Racine, for which the charge shall in every case be computed at five cents.

"Through interurban passenger service" as here used is defined as passenger service between any point within the single fare limits of Milwaukee and points beyond South Limits, South Milwaukee.

For passengers riding locally between the city of Milwaukee and South Limits, South Milwaukee, the charge shall in every case be the same as the rate of fare for suburban service previously authorized herein.

The rates of fare per passenger for all interurban service between points without the single fare limits of the city of Milwaukee shall be the difference between the through rates to those points; provided, however, that if any such point lie between St. Francis avenue and South Milwaukee, South Limits, the rate of fare shall be computed as to the zone boundary next nearest to the city of Milwaukee.

The minimum fare for any haul shall be five cents.

The respondent companies shall draw up, in accordance with the amendments herein presented, rate sheets for the Milwaukee-Racine-Kenosha line similar in form to those now presented in section 1, subsection c, of the order of January 2, 1914. The rates of fare shall be computed on the distances from St. Francis avenue instead of from Oklahoma avenue, and shall be presented to the Commission for approval.

Section 3, relating to ticket fares, shall be amended by striking out the second paragraph thereof relating to special tickets to South Milwaukee which reads as follows:

“The Milwaukee Electric Railway and Light Company and the Milwaukee Light, Heat and Traction Company shall sell through their conductors on cars operating between Milwaukee and South Milwaukee tickets in packages of twenty for \$2.50, and each ticket shall entitle the purchaser to one continuous ride between any point within the single fare limits of Milwaukee and Marquette Boulevard in the city of South Milwaukee, with privileges of transfers within this distance. These tickets shall be non-transferable and shall be limited to sixty days from date of sale. Refunds for unused tickets shall be made to the extent of the difference between the full purchase price and the sum of the maximum cash fares for which tickets were substituted. Said tickets shall be sold for one year after date of installation.”

In place of this paragraph the following shall be substituted:

“The Milwaukee Electric Railway and Light Company and the Milwaukee Light, Heat and Traction Company shall sell through their conductors on cars in suburban passenger service tickets in packages of thirty for fifty cents, each of such tickets to be good for a continuous full fare ride through or into any suburban two-cent zone, subject, however, to the minimum fare provisions herein prescribed.”

IT IS FURTHER ORDERED, That all complaints and petitions herein named, insofar as they are not satisfied or granted herein, and insofar only as they relate to rates of fare for suburban and interurban passenger service, be and they hereby are dismissed.

IN RE DETERMINING AND FIXING A JUST COMPENSATION TO BE PAID TO THE PRAIRIE DU SAC MILL AND LIGHT COMPANY BY THE VILLAGE OF PRAIRIE DU SAC FOR THE PROPERTY OF SAID COMPANY ACTUALLY USED AND USEFUL FOR THE CONVENIENCE OF THE PUBLIC.

Submitted May 12, 1914. Decided Oct. 30, 1914.

Notice was served on the Commission by the village of Prairie du Sac that a majority of its electors had voted to acquire the property, rights and privileges of the Prairie du Sac Mill & Light Co., which was operating under an indeterminate permit granted pursuant to law.

A valuation was made by the Commission's engineers as of September 1, 1914. For the electric property the reproduction cost new was fixed at \$7,765, and the same less depreciation at \$3,384. For the mill property the corresponding values were fixed at \$9,475 and \$6,363, respectively. The engineer of the village, who based his estimate on the theory of disposing of the plant piecemeal, and not on the theory of the plant being in its entirety an operating unit rendering service, contended that the foregoing valuation was somewhat excessive.

Held: No valuation based on any theory other than that of the plant is being a going concern can be accepted under the rulings of the courts. Due consideration being given to all the circumstances of the case, the valuation in question is substantially correct.

It appears that, the enterprise being a joint one, there must be a separation of the electric property from the mill property, and that, while the mill can be operated independently at a profit, damage will result from the fact that the owner will have larger and more equipment than is necessary for the operation of the mill.

Held: The village must pay for the property it takes as a going concern, and damages must be included for the injury inflicted upon the owner of the property by the severance and sale of the electric business. *In re Cashton Light and Power Co.* 3 W. R. C. R. 67. Considering the fair value of the property, damages sustained by the owner, and the going value of the electric plant, the sum of \$5,100 is considered just compensation for the taking of such property by the village.

It is ordered that the amount to be paid by the village to the company for the taking of the property of the company actually used and useful for the convenience of the public be fixed at \$5,100. The award does not cover stock and materials on hand, and additions to the plant made since Sept. 1, 1914, which are to be paid for at such price as the parties may agree upon, or as may be fixed by the Commission in case of their failure to agree. The property is to be transferred Nov. 1, 1914, and the village is to pay the company the compensation fixed, and the

price of materials, supplies and additions to the plant, within 30 days after the transfer of possession, and delivery to the village of a satisfaction of any mortgage or other lien existing on the property at the time of the transfer. Compensation is to bear 6 per cent interest from the day of the transfer of possession to the village until fully paid.

On March 18, 1914, a notice was filed with the Commission by the authorities of the village of Prairie du Sac that a special election had been held in the village on February 20, 1914, to determine whether the said village should acquire the property, rights and privileges of the Prairie du Sac Mill & Light Company, which was operating under an indeterminate permit granted pursuant to the provisions of chapter 499 of the laws of 1907 and acts amendatory thereof and supplementary thereto, and that by a vote of more than a majority of the electors voting thereon the said village determined to acquire such property, rights and privileges.

Notice fixing the time and place of a public hearing was duly served upon all parties as required by law. The hearing was set for May 12, 1914, in the office of the Commission in the capitol. *J. B. Sanborn*, of the firm of *Sanborn & Blake*, appeared for the village of Prairie du Sac and *H. H. Thomas*, of the firm of *Grotophorst, Evans & Thomas*, for the Prairie du Sac Mill and Light Company.

It appears from the testimony that about eighteen years ago a grist mill was built at Prairie du Sac on the site now occupied by the property of the Prairie du Sac Mill & Light Company. Shortly after this, the electric light plant was installed. The mill and light plant are operated together. The original plant was burned, and thereupon the present buildings were erected for the accommodation of both enterprises. On January 1, 1913, one William Albers purchased the joint enterprises from the original owners for the sum of \$13,000. A part of this consideration was paid in cash and the balance secured by mortgage on the property. There is now outstanding a mortgage indebtedness of \$5,000. William Albers organized the Prairie du Sac Mill & Light Company with a capital stock of \$14,000, all of which is held by himself or members of his family.

There were three separate tentative valuations of the property made by the engineers of the Commission, on April 1, 1913, April 1, 1914, and September 1, 1914, respectively. In the valuation of 1913 the cost new of all the property of the company was es-

estimated at \$14,052 and the present value at \$11,572. In the valuation of April 1, 1914, which was made for the purposes of security issues, the reproduction new is given as \$15,479 and the same less depreciation at \$11,529. After the first hearing in the matter, because of differences of opinion, it was deemed advisable to have the engineers of the Commission accurately check up the property and make such corrections in the valuation as in their judgment the conditions required. A new inventory was made which disclosed some discrepancies in the former inventory. The only additions to the property made since the hearing were three new services added to the distribution system of the electric plant. The engineers discovered that some of the poles were smaller and in poorer condition than estimated in the previous inventory, also that the size of wire at different points in the distribution system was not correct, and a better grade of street lighting fixtures had been included than were in actual use. The village contended that the value of the physical property fixed by the engineers in their last inventory was somewhat excessive. The testimony of the engineer of the village, however, is not convincing. His estimate was based upon the theory of disposing of the plant piecemeal and not upon the theory of the plant being in its entirety an operating unit rendering service. Of course, no valuation based on any other theory than that of the plant being a going concern can be accepted under the ruling of the courts.

Weighing all the testimony carefully in the light of all the facts and circumstances disclosed upon the investigation, it must be conceded that the value placed upon the property by the engineers of the Commission in their inventory of September 1, 1914, is substantially correct. The final summary is as follows:

	Cost new.	Present value.
<i>Electric Property.</i>		
A. Land		
B. Transmission and distribution	\$5,353	\$1,912
C. Buildings and miscellaneous structures		
D. Plant equipment	805	502
E. General equipment	585	544
Total	\$6,743	\$2,958
Add 12 per cent (see note below)	809	355
Total	\$7,552	\$3,313
F. Paving		
H. Material and supplies	213	71
Total	\$7,765	\$3,384
<i>Mill Property.</i>		
Land	\$1,000	\$1,000
Buildings and miscellaneous structures	2,797	1,775
Plant equipment	3,876	2,425
Extra mill machinery	787	481
Total	\$8,460	\$5,681
Add 12 per cent (see note below)	1,015	682
Total	\$9,475	\$6,363

NOTE: Addition of 12 per cent to cover engineering, superintendence, interest during construction, contingencies, etc.

The difficulty that confronts us in this case is the fact that there must be a separation of the electric property from the mill property, and as such separation must necessarily result in leaving to the owners of the property certain units which are necessary and required for the operation of the mill as well as of the electric plant, damages must be included for the injury inflicted upon the owner of the property. (*In re Cashton Light & Power Co. 1908, 3 W. R. C. R. 67.*)

It appears from the record of the treasurer of the company that the receipts for the year 1913 for both enterprises were as follows:

Mill	\$2,384.64
Electric plant	2,242.66
Sale of globes	111.00
Total	\$4,738.30

During the same year the expenses of operation and supplies were as follows:

Mill: Burrs & rings	\$90.00
Belting	75.84
Total	\$165.84

<i>Electric Plant:</i> Wire	\$53.00
8 meters	80.00
1 test meter	75.00
1 meter	14.80
Globes	131.50
	<hr/>
Total	\$354.30

The joint operating expenses were as follows:

Coal	\$1,682.00
Drayage	63.00
Oil and waste	51.26
Boiler compound	24.60
Boiler feed pump	65.00
Labor	639.00
Miscellaneous	65.35
	<hr/>
Total	\$2,590.21

It will be seen from the foregoing statement of the result of the operation of the joint enterprises that the owner will suffer to some extent from the severance and sale of the electric business. However, we do not concur in the view that the mill can not to be operated independently at a profit. Eliminating the cost of operation occasioned by the electric plant, will leave a margin of profit sufficient to justify the continuation of the mill business. The damage will result from the fact that the owner will have larger and more equipment than is necessary for the operation of the mill.

It becomes unnecessary in the light of the decision of the supreme court of this state and the ruling of the Commission in former cases to again discuss the matter of going value. The village must pay for the property it takes as a going concern. Included in the award must also be the damages which the company will sustain because of the severance of the plants.

Only such physical property as is used exclusively for the electric business will be required to be taken by the village.

Considering the fair value of such property, the damages sustained by the owner by the severance of the dual properties, and the going value of the electric plant, we are of the opinion that \$5,100 will be just compensation for the taking of such property by the village.

IT IS THEREFORE ORDERED, That the just compensation to be paid to the Prairie du Sac Mill & Light Company for the taking of the property of said company actually used and useful for

the convenience of the public by the village of Prairie du Sac, which property consists of the items generally described in the foregoing summary statement of the engineers of the Commission, except stock and material on hand and the additions to the plant that have been made since September 1, 1914, be and the same is hereby fixed at \$5,100.

IT IS FURTHER ORDERED, That in addition to the above compensation the materials and supplies on hand, not included in the foregoing summary, at the time of the taking of said plant and any additions and extensions to the plant that have been made since said September 1, 1914, be paid for by the said village of Prairie du Sac at such price as may be agreed upon by the parties themselves, or, in case the parties fail to agree upon the price, at such price as the Commission shall fix by supplemental order.

IT IS FURTHER ORDERED, That the said Prairie du Sac Mill & Light Company transfer and give possession of said property to the village of Prairie du Sac on November 1, 1914, and that the said village of Prairie du Sac pay to the said Prairie du Sac Mill & Light Company the compensation herein fixed and the price of said materials and supplies and said additions to said plant within thirty days after the date of the transfer of the possession of the property to the said village as aforesaid, and the delivery to said village of a satisfaction of any mortgage or other lien existing on said property at the time of such transfer. Such compensation shall bear interest at the rate of 6 per cent per annum from the day of the transfer of said property to the village until the same is fully paid.

W. D. WILLIAMS

vs.

CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted July 23, 1914. Decided Oct. 31, 1914.

Complaint was made that culverts number 357 and 357½ on respondent's line, just north of Snells in Winnebago county, are so high that they back up water on petitioner's land, and that no ditch is provided between said culvert number 357 and the culvert on the line of the M. St. P. & S. S. M. R. Co. The Commission is asked to take such action as it deems proper in the premises. It appears that since the excavation of certain ditches by petitioner in an effort to improve the drainage of adjoining fields, the culverts are insufficient to allow the free and unobstructed flow and percolation of surface water from petitioner's land and to prevent such land from becoming flooded, or otherwise damaged. Respondent contends that the Commission is without jurisdiction in the premises.

Held: Section 1388b of the statutes (being chap. 159, laws of 1913) makes the provision, construction and maintenance of sufficient ditches, culverts or other outlets under such circumstances as the present mandatory. Respondent is ordered to reconstruct its culverts number 357 and 357½ near Snells station in the manner specified in the order, and to excavate from each end of its culverts to its right of way lines, ditches suitable for the outflow of surface water from the drainage ditches on petitioner's lands. June 1, 1915, is considered a reasonable date for the completion of the improvements ordered.

The petition alleges that culverts number 357 and 357½ on the line of the Chicago & North Western Railway Company, just north of Snells in Winnebago county, are so high that they back up water on petitioner's land, and that no ditch is provided between said culvert number 357 and the culvert on the line of the Minneapolis, St. Paul & Sault Ste. Marie Railway Company. The Commission is therefore asked to take such action as it deems proper in the premises.

The respondent, in its answer, alleges that the Commission is without jurisdiction to hear, try or determine any of the matters complained of, and therefore asks that the complaint be dismissed.

A hearing was held on July 23, 1914, at Snells. *W. D. Williams* appeared in his own behalf, and *D. E. Riordan* for the respondent.

The testimony shows that at the location of the culverts in question respondent's line runs north and south and parallels the line of the Minneapolis, St. Paul & Sault Ste. Marie Railway Company at a distance of about 83 feet east thereof. Petitioner owns a farm adjacent to the east right of way line. Culvert number 357, which is made of tile, was constructed about 1905, and the bottom of its east end is 1.25 feet below the natural surface of the adjacent ground. About three hundred feet south of culvert number 357 is a culvert under the Minneapolis, St. Paul & Sault Ste. Marie Railway Company's embankment, the bottom of which is 1.46 feet lower than the bottom of the east end of culvert number 357. In 1912 petitioner excavated a ditch for drainage purposes across his land and up to culvert number 357 on respondent's right of way. West of the culvert under the Minneapolis, St. Paul & Sault Ste. Marie Railway Company's line another ditch has been dug to carry the surface water to a slough. At the east end of culvert number 357 the bottom of the ditch is 0.41 feet below the bottom of the culvert.

Culvert number 357½ is north of culvert number 357, and was built about 1912 of wood. Its bottom is 0.34 feet below the natural surface of the surrounding ground. However, petitioner has excavated a ditch for drainage purposes on his land and up to this culvert at which point it is 0.71 feet lower than the bottom of the culvert. There is a culvert under the track of the Minneapolis, St. Paul & Sault Ste. Marie Railway Company about opposite culvert number 357½ and sufficient drainage west of that track. Petitioner and his brother testified that because the culverts are higher than the drainage ditches, the water backs up in the ditches, making the adjoining land difficult to till and seriously damaging crops. They stated that the natural drainage now runs into the ditches and that it can not flow through the culverts without rising to such a level as will interfere with farming and injure crops. Petitioner asks that the culverts be enlarged and lowered and that a ditch be dug connecting the culverts with the corresponding culverts on the other railway line, so that the drainage ditches will be effective at their present depth.

Counsel for the respondent objected to the consideration of the complaint by the Commission on the ground that the Commission is without jurisdiction in the premises. Sec. 1388b (chapter 159, laws of 1913) is as follows:

“Whenever any town, city, village or railway company shall have heretofore constructed and now maintains or hereafter shall construct and maintain any public highway or road grade through, over and across any marsh, lowland or other natural depression over or through which surface water naturally flows and percolates, and the stopping of the said flow and percolation of said water by said highway or road grade causes any crop or land to be flooded, watersoaked or otherwise damaged, such town, city, village or railway company shall construct, provide and at all times maintain a sufficient ditch or ditches, culverts or other outlets to allow the free and unobstructed flow and percolation of said water from said lands, and to prevent such lands from becoming flooded, watersoaked or otherwise damaged by said water. Provided, however, that the foregoing shall not apply to public highways or road grades now or hereafter used to hold and retain water for cranberry purposes.

“Any town, city, village or railway company which shall fail to provide such necessary ditches or culverts, or other outlets shall be liable for all damages caused by reason of such failure or neglect.”

Prior to the excavation of the ditches in question it is probable that the culverts referred to in the complaint were sufficiently low to provide an outlet for the natural surface water without material damage to the adjacent lands as then used. However, subsequent to the construction of the culverts an effort has been made to improve the drainage of adjoining fields by ditches and the culverts now appear to be insufficient to allow the free and unobstructed flow and percolation of surface water from petitioner's land and to prevent such land from becoming flooded, watersoaked, or otherwise damaged.

It is our judgment, therefore, that full compliance with the statute above quoted requires that the culverts in question be lowered so as to allow a free flow for the water in the drainage ditches on petitioner's land. It is also necessary to provide suitable ditches to carry off the water west of the embankment.

IT IS THEREFORE ORDERED, That the respondent, the Chicago & North Western Railway Company, reconstruct its culverts number 357 and 357½ near Snells station so that the bottom of

the east end of each culvert will be at approximately the same level as the bottom of the adjacent drainage ditch on petitioner's land, and excavate ditches from each end of said culverts to its right of way lines, suitable for the outflow of surface water from said drainage ditches on petitioner's land.

June 1, 1915, is considered a reasonable date at which the improvements herein ordered shall be completed.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF
THE CONVENIENCE AND NECESSITY OF AN EXTENSION
OF A WATER MAIN BY THE JANESVILLE WATER COMPANY.

Submitted Aug. 27, 1914. Decided Nov. 5, 1914.

Complaint was made by a resident of Janesville that respondent company refuses to make an extension of a water main along South Bluff street in that city to give service to a house lately constructed by the complainant. It appears that, while there is no main traversing the block of South Bluff street involved, six of the eight houses at present in this block receive service from mains not intended to serve houses on South Bluff street; that of the remaining two houses, one has a private system, the other being the house of complainant; that the existing service is afforded by the company by means of unusually long and expensive makeshift services installed as best could be to meet the existing demand and to obviate the necessity of laying a main in the block in question; that the existing service in the block logically should be made from Bluff street; that the earnings from the existing service in the block would be ample to justify the installation of the requested extension; that should the extension in question be made, certain vacant property in the block involved would doubtless be developed in the near future; and that, unless the extension is ordered, the house in question will be precluded from getting service at all.

Held: That the extension requested should properly be credited with the earnings from the other consumers on the street, and that the equities of the case and business policy require that it be made, even though there be only one taker in immediate prospect. A refusal would only postpone it, and would be a retarding influence on the development of the property in the block, a result to be avoided if possible, both in the interest of the city and the company.

Ordered: That the company extend its main on South Bluff street from the present terminus of the two inch main at the corner of South Bluff and Racine streets, southward to form a connection with the pipe extending northward in said block from the main on Clark street in substantially the manner described in the decision. Thirty days is considered sufficient time for compliance.

This case arose on the complaint of H. J. Cunningham of the city of Janesville, who stated that the respondent failed and refused, though often requested to do so, to make an extension of a water main along South Bluff street in that city to give serv-

ice to a house lately constructed by the complainant. It became apparent that to obtain a complete understanding of the matter a hearing was necessary, and the Commission thereupon issued its order for a hearing and notice of investigation.

The hearing was duly held at the city hall in the city of Janesville on August 27, 1914. The complainant appeared in his own behalf, and *M. G. Jeffris* and *C. S. Jackman* appeared for respondent.

The testimony revealed the state of facts to be as follows: The house to which service is desired is situated on South Bluff street approximately in the middle of the block lying between Racine street and Clark street. Each of the two latter streets is traversed by a six inch water main. There is no main whatever traversing the block of South Bluff street with which we are concerned, although beyond Racine street there is a two inch main running north on South Bluff street. On the east side of South Bluff street between Racine and Clark streets there are five houses facing on Bluff street. On the west side of South Bluff street there are three houses. Seven of the eight houses in the block are already supplied with water in one manner or another. For the sake of clearness we shall number the houses in the block in question, beginning with the residence on the southeast corner of Racine and South Bluff streets, which we shall call house No. 1.

This residence and houses Nos. 2 and 3 are supplied by services from the main on Racine street. These services run through the back yards of the residences and it appears from the testimony that to get the service it was necessary for two of the takers to buy a strip of land through which to run the service pipe. House No. 4 was recently built by the complainant and is the house to which service is now desired. House No. 5 is served from the main on Home Park avenue, the street at the rear of the block. House No. 6 which is on the west side of South Bluff street, is served from the main on Clark street, as is also house No. 7, the service pipe to the latter running up South Bluff street from Clark street to a point directly opposite the residence served. The owner of house No. 8, because of difficulties in the way of getting the desired service from the main on Racine street, installed his own water system and testified at the hearing that he would not now care to abandon his private system and become a taker of city water.

There are, therefore, at the present time six consumers within the block in question on South Bluff street who are now supplied by service coming from mains in streets other than Bluff street. Two of these, namely, house No. 1 and house No. 6, being situated on corners, are probably as easily supplied from the present sources as they could be from a main located on Bluff street. Disregarding these two residences, there remain five consumers within this block who could more readily be served from a main on South Bluff street, counting the prospective service with respect to which this controversy arose. This view of the situation omits consideration of the potential earning power of such a main, and is concerned merely with the present income that might be attributed to the extension.

In passing, however, it may be mentioned that there are unimproved lots on the west side of South Bluff street, which, considering the development of the property in this block, may reasonably be expected to have houses built upon them in the not distant future. The fact that all the houses in this block, with the exception of the house to which service is now requested, are already served in some manner, and that it is unlikely that any of the owners would want to change their present connection to the main on South Bluff street, is entitled to consideration.

Assuming that none of the present takers would care to change to the new extension, there would be but the service in controversy immediately connected to the Bluff street extension. Unless the extension be ordered, however, the house in question would be precluded from getting service at all, since, as was brought out in the testimony, to connect this house would require a long service pipe from the Home Park avenue main laid through certain terraces and in private property and at such cost to the owner as would be practically prohibitive. Excluding this alternative of service from Home Park avenue, therefore, the only source of service would be by the extension requested. The question resolves itself into a consideration of whether or not a main should be ordered installed to give service to one residence that otherwise would be totally without water service.

It has been shown in the earlier portion of this discussion that the residences already given service receive that service from mains not intended to serve houses on South Bluff street. In every instance the installation has been made with some diffi-

culty and at considerable inconvenience. The services are unusually long and hence unusually expensive. It is apparent from the circumstances that the services were what may be termed substitutional or makeshift services installed as best could be to meet the demand existing and to obviate the necessity of laying a main in this block on South Bluff street. With this view of the matter in mind, it is clear that the water company should not be heard to urge that the other residences in this block are already served and that it would not be fair to require an extension of a main of the length necessary in this instance to serve a single taker. It is more correct to say that the water company, which has previously been able to avoid putting in a main in this block on South Bluff street by making a substitutional or makeshift connection from the other streets, now finds it impossible to meet the demands for service from such substitutional source.

Considered in this light, would it be proper to hold that the water company should not be required to make the extension for the one taker in immediate prospect? We are of the opinion that such a holding would be unjust and inequitable. Though there be but the one customer to be served from the extension under discussion, yet this extension should properly be credited with the earnings from the other consumers on the street who, as demand arose, were given service from unusual sources so as to avoid temporarily the necessity of installing the main now sought. The earnings to be credited to the extension would be ample to justify its installation. That the extension now asked was not installed at a previous time is merely due to the fact that the houses built in the block were so situated and the streets lie in such a way that service could be given from other mains. Logically, the service should be made from Bluff street.

A further reason bearing strongly upon the advisability of making the extension at this time is the fact that there is vacant property on the west side of South Bluff street which will doubtless be developed at no distant date. The evidence introduced at the hearing indicated that this property might have been developed before this time had there been water available to the houses contemplated. In any event, in view of the development of the street, it seems likely that this vacant property would be built upon in the comparatively near future. To refuse the extension of the main at this time would only postpone the day

when urgent demand for water service would require its installation. It might also be a retarding influence on the development of the property in the block, which is a result to be avoided if possible, both in the interest of the municipality and of the water company itself.

In view of the equities of the case and the business policy involved, we consider that the extension should be made. It was testified upon the hearing that the cost of laying a main from the terminus of the present main on South Bluff street at the corner of Racine street to connect with the end of the pipe that extends from Clark street along South Bluff street to serve house No. 7, would be in the neighborhood of \$220, the distance being four hundred feet. In view of the advantage in the service to be derived from having a main connected with the pipe already laid from Clark street along South Bluff street to serve the residence of Dr. Thorne, it is deemed advisable that the extension be ordered to be made in that manner.

IT IS THEREFORE ORDERED, That the Janesville Water Company, without unnecessary delay, extend its main on South Bluff street from the present terminus of the two-inch main at the corner of South Bluff and Racine streets, southward to form a connection with the pipe extending northward in said block from the main on Clark street in substantially the manner described in the decision.

Thirty days is considered ample time in which to complete the work required.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF THE SERVICE OF THE DOOR COUNTY TELEPHONE COMPANY.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF THE SERVICE OVER THE TELEPHONE LINES OWNED AND OPERATED BY MATT PEFFER IN DOOR COUNTY.

Submitted July 3, 1914. Decided Nov. 5, 1914.

The Commission, on its own motion, investigated the adequacy of the service rendered by the Door County Tel. Co. and by Matt Peffer over the lines owned and operated by him in Door county. It appears that, while improvement has been made in the service rendered on both systems, some causes of complaint have not been eliminated. The existing grounded circuits of both systems, the fact that toll line No. 7 of the Door County Tel. Co. has 31 instruments attached to it, and the habit of subscribers of listening on the line while other subscribers are engaged in conversation, are causes responsible for the present poor service.

It is ordered that the Door County Tel. Co. establish full metallic circuits on all its telephones lines, and that Matt Peffer take similar action on all the lines owned and operated by him in Door county; that the Door County Tel. Co. install such new equipment as is necessary to divide its toll line No. 7 so that the number of instruments attached to the same circuit shall not exceed twelve; that both maintain in proper condition these lines, instruments and other equipment; that both keep an accurate record of all complaints and irregularities in the service, showing the day and time at which the trouble is reported, the nature of the trouble, its duration and final disposition, and otherwise fully comply with the general order fixing standards of telephone service, issued on August 13, 1914, 15 W. R. C. R. 1. The installation of full metallic circuits is to be carried forward as rapidly as possible, and monthly progress reports are to be filed with the Commission until the installation is complete, which shall not be later than November 1, 1915. Toll line No. 7 on the Door County Tel. Co.'s system is to be divided and made full metallic before June 1, 1915. All other requirements are to be complied with within 60 days.

The Commission, after due investigation, ordered a hearing with respect to the adequacy of the service rendered by the Door County Telephone Company and by Matt Peffer over the telephone lines which he owns and operates in Door county. The

hearing was held at Sturgeon Bay on July 3, 1914. *W. E. Wegener* appeared for the Door County Telephone Company and *Matt Peffer*. *H. M. Ferguson* represented the Sevastapol Farmers Telephone Company.

On February 24, 1914, a hearing was held upon the application of the Sevastapol Farmers Telephone Company for a certificate of public convenience and necessity authorizing it to extend its lines in Door county in competition with the lines of the Door County Telephone Company and those operated by Matt Peffer. The principal reason given for making the proposed extension was that the service over the lines now operated in the territory in question is not adequate. Considerable testimony was adduced with reference to the service over these lines. The Commission denied the application of the Sevastapol Farmers Telephone Company (1914, 14 W. R. C. R. 524) and instituted the present investigation. The testimony taken at the hearing on the application of the Sevastapol Farmers Telephone Company was introduced in the present case without objection.

The portion of this testimony having reference to the service rendered by the two telephone systems under investigation was discussed in some detail in our former decision above referred to, and need receive no further comment here. The additional testimony introduced at the later hearing does not show a material change of condition.

An inspection made by a member of the Commission's engineering staff during August 1914, shows that improvement has been made in the service rendered on both systems, but that some causes of complaint have not been eliminated. Both companies have expressed a willingness to make their lines full metallic as soon as possible. This improvement is necessary, in our judgment, since it is clear from the testimony that under the present arrangement the cross-talk and noise resulting from the existing ground circuits unreasonably interfere with the transmission of messages for ordinary distances. Compliance with Rule 1 of our order of August 13, 1914, prescribing standards for telephone service, therefore, in this particular case requires the installation of full metallic circuits. In making this improvement the entire line equipment should be placed in good repair. The toll line of the Door County Telephone Company, known as No. 7, has thirty-one instruments attached to it, and this condition appears to be responsible in a measure for the

poor service. Steps should be taken to divide this line so that fewer subscribers will be dependent upon a single circuit. Careful records should be kept of all complaints and irregularities in service as provided in Rule 11 of the *Standards of Telephone Service* above referred to. Efforts should be made to discourage the habit of listening on the line while other subscribers are engaged in conversation, since this practice materially interferes with the service.

IT IS THEREFORE ORDERED, That the Door County Telephone Company establish full metallic circuits on all of its telephone lines; install such new equipment as is necessary to divide its toll line No. 7 so that the number of instruments attached to the same circuit shall not exceed twelve; maintain in proper condition its lines, instruments and other equipment; keep an accurate record of all complaints or irregularities in the service showing the day and time at which the trouble is reported, the nature of the trouble, its duration and final disposition; and otherwise fully comply with the general order fixing standards of telephone service issued on August 13, 1914.

IT IS FURTHER ORDERED, That Matt Peffer establish full metallic circuits on all of the telephone lines owned and operated by him in Door County; maintain in proper condition his lines, instruments and other equipment; keep an accurate record of all complaints and irregularities in the service, showing the day and time at which the trouble is reported, the nature of the trouble, its duration and final disposition; and otherwise fully comply with the general order fixing standards of telephone service issued on August 13, 1914.

The work of installing full metallic circuits is to be prosecuted as rapidly as possible, and monthly reports are to be filed with the Commission until the installation is complete, which shall be not later than November 1, 1915. Toll line No. 7 on the Door County Telephone Company's system is to be divided and made full metallic before June 1, 1915. All other requirements of this order are to be complied with within sixty days of the date hereof.

E. D. MCGOWAN

vs.

ROCK COUNTY TELEPHONE COMPANY,
WISCONSIN TELEPHONE COMPANY.

Decided Nov. 6, 1914.

The Commission on June 3, 1914, made an order (14 W. R. C. R. 529) requiring the respondents to establish a physical connection of their lines in Janesville for the purpose of affording toll line and local, including rural, service to the subscribers of each company on the lines of the other company.

The constitutionality of the act on which the present proceeding rests was challenged and argued by counsel.

Held: It is not necessary to consider the question. As a general rule, administrative tribunals should assume the validity of acts submitted to them for administration. As the statute provides for judicial review of the orders of the Commission, the courts can determine if there is any infirmity in the statute in question without the order of the Commission causing injury to any one.

The question of charges which each company is entitled to for the use of its lines by the subscribers of the other company was the difficulty under the order in question, the companies conceding that the connection could be made without difficulty.

Held: That, while cost of the service is one of the primary considerations in determining the reasonableness of a charge, it is never the sole consideration. In the present case, any charge which would result in taking business from one company and giving it to its competitor could not be regarded as just. Under all the circumstances, five cents is considered adequate compensation for local service, such being the usual charge for such service at toll stations. As regards the question of toll charges, the rule laid down in the case of *Winter v. La Crosse Tel. Co. et al.* 15 W. R. C. R. 36, should control in the instant case.

It is ordered that each subscriber or patron of either company desiring service over the toll lines of the other company shall be charged for each message, in addition to that company's regular charge, as follows: For all distances not over 50 miles from the originating company's office, five cents; for all distances over 50 and not over 100 miles from such office, ten cents; and for all distances over 100 miles, fifteen cents. All distances are to be measured by air line. The charge for local or rural service to local or rural patrons is to be five cents. Neither company is to absorb the additional charges herein, but each company is to collect the additional charge for local service and for toll service from its subscribers, and is to be liable therefor to the other company to whom it is to pay the same. The order is necessarily experimental, and if it appear, after a fair trial, that its terms operate inequitably, it will be modified to obviate injustice to any of the parties.

SUPPLEMENTAL REPORT AND ORDER.

On June 3, 1914, the Commission made an order herein (14 W. R. C. R. 529) requiring the Wisconsin Telephone Company and the Rock County Telephone Company to make such physical connection or connections between their toll lines and between their local exchanges in the city of Janesville as is required for the furnishing of toll line and local service, including rural service, to the subscribers of each company, at the stations installed in their residences and places of business, over the toll lines and local lines, including rural lines, of the other company; and that the expense of making such physical connection or connections and the subsequent maintenance thereof should be divided equally between said companies.

On the 2nd of June, 1914, the Commission ordered a supplemental hearing in the matter to determine the manner of physical connection, the joint rates and toll charges and their apportionment, it appearing that the parties were unable to agree. Such hearing was held, pursuant to the above notice, July 23, 1914, in the office of the Commission at Madison. *E. S. Mack* appeared for the Wisconsin Telephone Company and *Wm. Ruger* for the Rock County Telephone Company.

The manner and method of making the connection is not in dispute. The companies concede that such connections can be made without difficulty. The difficulty, however, encountered is the matter of charges which each company is entitled to for the use of its lines by the subscribers of the other company.

The constitutionality of the act in question has been challenged and argued by counsel, but we do not deem it necessary to consider the question. Administrative tribunals, as a general rule, should assume the validity of acts submitted to them for administration. It is conceivable that in certain events, to prevent irreparable injury, even an administrative board should determine in the first instance the validity of an act with the administration of which it is charged, but generally it should refrain from passing upon the question as the judiciary alone can determine the validity of any act challenged. The statute provides for judicial review of the orders of the Commission. Consequently, if there is any infirmity in the statute here in question, that can be determined by the courts without the order of the Commission causing injury to anyone.

In the supplementary report in the *Winter* case (15 W. R. C. R. 36) we fully discussed the principles which should govern in prescribing terms and conditions for physical connections of telephone systems. Further consideration of such principles is therefore unnecessary.

We can not assent to the doctrine asserted that cost of service is the only consideration in fixing charges. The statute declaratory of the common law requires that charges shall be reasonable and just. It would seem that a charge which would result in taking business from one company and giving it to its competitor could not be regarded as a just charge from any viewpoint. Should the income of either company be increased to such an extent as to become excessive, because of the charges established for the use of its lines by the subscribers of the other company, its toll rates could be reduced without disturbing such additional charges.

Cost of service is never the sole consideration in determining the reasonableness of a charge. It is one of the primary considerations, but there are other considerations often as vital in reaching a conclusion.

As to the charges for toll service, we are of the opinion that the rule laid down in the *Winter* case should control here. There is nothing in the situation that would warrant any departure from such rule. However, as in the instant case physical connection of two local telephone utilities operating within a municipality is required for local service, we must fix a charge that will compensate each company for the use of its lines for local service by the subscribers of the other company. Where two local exchanges are thus connected, the station of each subscriber of one exchange becomes in effect a pay station of the other exchange, and therefore a charge in excess of the usual charge for such services established for toll stations could not be justified. Five cents seems to be generally regarded as adequate compensation for local service at toll stations. This seems to us reasonable and just, and sufficient to protect each company from the loss of subscribers to the other company. Any person requiring the local service of both companies at the present time would scarcely discontinue the service of either company if he were obliged to pay a toll of five cents for each message when talking to subscribers of the exchange with which he was not connected. The convenience served by physical connection for local service

is that of those subscribers of each exchange who occasionally desire to communicate with subscribers of the other exchange.

As was stated in the *Winter* case, "any order made must necessarily be experimental and subject to revision or rescission at any time either company may appear to suffer injury from the arrangement." If after a fair trial it should appear that the terms of the order operate inequitably the same will be modified to obviate any injustice to any of the parties interested.

NOW, THEREFORE, IT IS ORDERED, That each subscriber or patron of the Rock County Telephone Company desiring service over the toll lines of the Wisconsin Telephone Company shall be charged for each message, in addition to the regular charge of the Wisconsin Telephone Company, as follows:

For all distances not over fifty miles from the office of the Rock County Telephone Company, five cents; for all distances over fifty miles and not over one hundred miles from such office, ten cents; and for all distances over one hundred miles from such office, fifteen cents. All distances shall be measured by air line.

IT IS FURTHER ORDERED, That each subscriber or patron of the Wisconsin Telephone Company desiring service over the toll lines of the Rock County Telephone Company shall be charged for each message, in addition to the regular charge of the Rock County Telephone Company, as follows:

For all distances not over fifty miles from the office of the Wisconsin Telephone Company, five cents; for all distances over fifty miles and not over one hundred miles from such office, ten cents; and for all distances over one hundred miles from such office, fifteen cents. All distances shall be measured by air line.

IT IS FURTHER ORDERED, That each subscriber of the Rock County Telephone Company in the city of Janesville or on its rural lines running out of Janesville desiring service over the local lines of the Wisconsin Telephone Company in the city of Janesville or its rural lines running out of Janesville shall pay a fee of five cents for each message, and that each subscriber of the Wisconsin Telephone Company in the city of Janesville or on its rural lines running out of Janesville desiring service over the local lines of the Rock County Telephone Company in the city of Janesville or its rural lines running out of Janesville shall pay a fee of five cents for each message.

IT IS FURTHER ORDERED, That neither of the companies shall absorb any such additional charges for toll service, but each shall collect the same from its subscribers, and shall be liable to the other company and shall pay the other company the long distance tariff toll plus such additional charge.

IT IS FURTHER ORDERED, That neither of the companies shall absorb the five cent fee for local service, but each shall collect the same from its subscribers and shall be liable to the other company and shall pay to the other company such fee.

If such division of tolls and local fees, after a fair trial, shall be found to be inequitable, and the companies can not agree upon a proper division of the tolls, the Commission will by supplemental order establish such division.

Ten days is deemed a reasonable time within which to comply with this order.

J. W. FILBER ET AL.

vs.

ILLINOIS NORTHERN UTILITIES COMPANY.

Submitted May 29, 1914. Decided Nov. 6, 1914.

Complaint was made that the lighting service rendered by respondent at Walworth, Wis., and Fontana, Wis., is inadequate for the reason that current is now furnished during a limited period. It appears that such period is from 7 a. m. to 12 p. m.; that there is need for a more extended service; and that respondent is not fully complying with the *Standards of Electric Service* fixed by the Commission in its order of August 9, 1913, 12 W. R. C. R. 418. Respondent opposes continuous service on the ground of unwarranted cost. It was stated for respondent that the construction of transmission lines from a larger plant to Walworth and Fontana is planned for the near future, and that upon their completion continuous service would be provided. It appears that the period of operation can be somewhat extended without entailing serious additional cost.

Held: That the service rendered by respondent at Walworth and Fontana is inadequate, and that the period of operation should be increased, so that lighting service will be furnished from 5 a. m. to 12 midnight. Should the respondent fail to complete the proposed transmission lines and to render night service thereby before September 1, 1915, the Commission may further consider the question of the continuous operation of the Walworth plant.

It is ordered that the respondent extend its period of service for its patrons here involved so that lighting service will be rendered between 5 a. m. and 12 midnight. The respondent is also ordered to comply with the general order of the Commission fixing standards and rules for electric service.

The petition, which is signed by thirty-four patrons of the Illinois Northern Utilities Company, alleges that the electric lighting service rendered by that company at Walworth and Fontana is inadequate for the reason that current is now furnished during a limited period. The opinion is expressed that continuous service is needed, and the Commission is asked to investigate the situation and take such action as it deems proper in the premises.

No formal answer was filed by the respondent.

A hearing was held at Walworth on May 29, 1914, at which *J. W. Filber* appeared for the petitioners, and *K. D. Stevenson* for the respondent.

The testimony shows that respondent now furnishes electric lighting service in Walworth and Fontana from 7 a. m. to 12 p. m. It also supplies power to the electric railway line and to a factory in Walworth. Witnesses testified that hotel guests frequently arrive after 12 p. m. and that others rise in time to take the morning train which leaves Walworth at 6:15 a. m. It was also pointed out that in cases of sickness at night oil lamps have to be used, which are inconvenient and unhealthy for sick persons, and which handicap the work of physicians and druggists in attending to emergency calls. Some business places are open before 7 a. m. and need artificial light. Witnesses estimated the population of Walworth is approximately 900 and that of Fontana about 200.

Respondent's vicepresident in charge of operation testified that his company had controlled the electric plant at Walworth since December 1912. The operating force consists of two engineers, two firemen and a coal wielder who work in two shifts. He asserted that to provide continuous service would require the employment of an additional engineer and an additional fireman and an increase of about 25 per cent in the monthly coal bill which now ranges from \$515 to \$950. Summer business, he said, is greater than during the winter months, owing to the lake resorts in the vicinity. He submitted a statement which purports to show that from December 1912 to April 1914 respondent has sustained a net loss of \$2,560.21 from the operation of its Walworth plant. The company intends to build transmission lines from a larger plant to Walworth and Fontana and eventually close its Walworth plant. This will involve the construction of about twenty miles of high tension line at a cost of approximately \$35,000. The vicepresident stated that he hoped that this construction would be completed during the summer of 1914. In that event continuous service would be provided, since the larger plant is operated all night.

A recent inspection shows that the period of operation has not lengthened since the hearing, and that the proposed transmission lines have not been constructed. The inspection also indicates that the *Standards of Electric Service* fixed by the Commission

12 W. R. C. R. 418 are not being fully complied with. The required installation and meter tests have not been made. The distribution system is in poor condition, and the station instruments are not connected so as to measure the commercial load separate from the street lighting load. No copy of the Commission's rules was posted at the plant.

In the light of the testimony it is our opinion that the service rendered by the respondent at Walworth and Fontana is inadequate, and that the period of operation should be increased so that lighting service will be furnished from 5 a. m. to 12 midnight. This extension can be made without the employment of additional men or a material increase in the cost of fuel, and will eliminate most of the inconveniences of which complaint is made. If the transmission lines proposed by the respondent are not completed and all night service thereby provided before September 1, 1915, the Commission may consider further the question of the continuous operation of the Walworth plant.

IT IS THEREFORE ORDERED, That the respondent, the Illinois Northern Utilities Company, extend the period of electric lighting service for its patrons in Walworth and Fontana so that such service will be rendered between the hours of 5 a. m. and 12 midnight.

IT IS FURTHER ORDERED, That said respondent comply with our general order fixing standards and rules for electric service which was issued on August 9, 1913.

OSCAR TENNIE ET AL.

VS.

CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted July 15, 1914. Decided Nov. 6, 1914.

Complaint was made that station facilities at Greenville are inadequate and the Commission was asked to require the respondent to provide a proper depot building. It appears that at the hearing respondent offered to make improvements in the spring of 1915, and that these improvements will fulfill the requirements of adequate service.

It is ordered that the respondent provide a suitable station for freight and passenger traffic at Greenville to be completed and open for public use on or before June 1, 1915, plans to be submitted to the Commission for approval.

The petition, which is signed by 112 patrons of the Chicago & North Western Railway Company at Greenville in Outagamie county, alleges in substance that the station facilities at Greenville are inadequate, and asks that the respondent be required to provide a proper depot building.

The respondent in its answer states that it is willing to make temporary repairs and improvements in the station facilities at Greenville and that it intends to install a small station in the spring of 1915.

A hearing was held on July 15, 1914, at Greenville. *H. J. Fassbender* appeared for the petitioners and *C. A. Vilas* for the respondent.

At the hearing respondent agreed to build an adequate station in the spring of 1915 and to erect a suitable cover for the cream platform at once, which has since been done. Inasmuch as these improvements appear to be satisfactory to the petitioners who testified, it is unnecessary to review the testimony in detail. From an examination of the evidence submitted it is our judgment that these improvements will fulfill the requirements of adequate service and that June 1, 1915, is a reasonable date for the com-

pletion of the station building. An order will be entered accordingly.

IT IS THEREFORE ORDERED, That the respondent, the Chicago & North Western Railway Company, provide a station at Greenville which shall be adequate for the freight and passenger traffic, to be completed and open for public use on or before June 1, 1915; plans to be submitted to the Commission for approval.

MASON-DONALDSON LUMBER COMPANY

vs.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY
COMPANY.

Decided Nov. 6, 1914.

Complaint was made of excessive charges on two cars of lumber switched for petitioner from Robbins Railway Transfer, near Rhinelander, to the plant of the Rhinelander Refrigerator Co., and refund asked. Petitioner alleges that charges were assessed at the rate of 3 cts. per cwt., though the service performed was of a character usually regarded as switching service and that a proper charge would have been 1 ct. per cwt. Respondent admits the allegations of the petition.

Held: That the charge exacted of petitioner on the cars of lumber in question was excessive. A reasonable charge would have been 1 ct. per cwt., subject to a minimum loading weight of 50,000 lb. on each car. Refund ordered on that basis.

The petitioner alleges that on August 16, 1913, the respondent railway company switched for petitioner from Robbins Railway Transfer, near Rhinelander, to the plant of the Rhinelander Refrigerator Company, two cars of lumber on which charges were assessed at the rate of 3 cts. per cwt.; that at the time said cars moved the respondent had no switching rate in effect applicable to the same and therefore applied the regular distance rate for five-mile movements; that the service performed was of a character usually and ordinarily regarded and charged for as a switching service; and that a proper charge for this service would have been a rate of 1 ct. per cwt., subject to a minimum weight of 50,000 lb.; on which basis the total charges on the two cars would have amounted to \$10, as the actual weight in each car was less than 50,000 lb.; that such rate was established subsequent to the movements in question in Supplement No. 11 to respondent's Tariff G. F. D. No. 15,855, effective September 20, 1913. Wherefore, petitioner prays that an order be made authorizing the respondent to refund to it the sum of \$35.48.

The respondent railway company, answering the petition, ad-

mits the allegations thereof and consents to the making of the order awarding the reparation asked.

Notice of the hearing and investigation was waived and the claim submitted upon the papers, pleadings and documents on file.

The facts in this case are identical with those in *Rhinclander Paper Co. v. Minneapolis, St. Paul & Sault Ste. Marie Ry. Co.* 15 W. R. C. R. 171.

We therefore find and determine that the charge exacted of the petitioner by the respondent for moving the aforesaid cars of lumber was unusual and exorbitant, and that a reasonable charge for such services would have been 1 ct. per cwt., subject to a minimum loading weight of 50,000 lb. on each car.

The amount paid by the petitioner on said shipments was \$45.48. The petitioner is therefore entitled to a reparation in the sum of \$35.48.

NOW, THEREFORE, IT IS ORDERED, That the Minneapolis, St. Paul & Sault Ste. Marie Railway Company be and the same is hereby authorized and directed to refund to the Mason-Donaldson Lumber Company the sum of \$35.48.

ARENA AND RIDGEWAY TELEPHONE COMPANY

vs.

MAZOMANIE TELEPHONE COMPANY.

Submitted April 16, 1914. Decided Nov. 10, 1914.

The petition alleges that public convenience and necessity require physical connection for local service between the lines of the parties, and that such physical connection will not result in irreparable injury to either, nor in any substantial detriment to the service. It appears that certain sections of the two companies' systems are in competition; that in those sections petitioner has approximately 75 phones, and respondent approximately 25; that in a few cases parties have both phones; that subscribers living between Arena and Mazomanie have interests, business and social, in both places; that those living west and southwest of Arena also probably have frequent occasion to use Mazomanie service; that petitioner's rate is substantially lower than that of the respondent; that nearly all of petitioner's subscribers are also stockholders, and that the Wis. Tel. Co. has a toll line from Arena to Mazomanie, and that such toll line is connected at those places with the telephone systems of the parties to the case.

Held: That, while there is a necessity for a physical connection for the conduct of ordinary local business (even though the present long distance service may be adequate for emergency use), and while there is no ground for anticipating that such connection would result in substantial detriment to the service, as matters now stand, a physical connection on any basis which would make its use by petitioner's subscribers practical would result in irreparable injury to the respondent company. Should the petitioner, on proper application and authorization, raise its rate to \$12 per year, respondent's present rate, and probably a minimum for securing proper operation under the circumstances of the present case, or should it acquire those parts of respondent company's system in competitive territory, the present objection to requiring the physical connection would be obviated.

The petition is dismissed.

Petition in this matter was filed March 13, 1914. Petitioner is a public utility operating a telephone system in Arena, Wis., in a number of neighboring villages and in surrounding rural territory. Respondent is a public utility engaged in furnishing telephone service in Mazomanie, Wis., and vicinity.

The petitioner alleges:

1. That the lines of the companies run parallel and near to each other from Arena to Hyde; that some twelve or fifteen stockholders and subscribers of the Arena and Ridgeway Telephone Company are compelled to rent phones from the Mazomanie Telephone Company to secure connection with Mazomanie. A large number of subscribers of both companies desire and need interchange of service between said companies' lines, and public convenience and necessity require that physical connection for local service be established between said petitioner and respondent company.

2. That no irreparable injury will result to either company by such requested physical connection or to the facilities of such public utilities, nor will there be any substantial detriment to the service to be rendered by such utilities or other users of the equipment of said companies.

Hearing was held at Madison, April 16, 1914. *Wm. Fernan* appeared on behalf of the Arena and Ridgeway Telephone Company, and *T. W. King* on behalf of the Mazomanie Telephone Company.

Testimony offered at the hearing related mostly to previous attempts which had been made to secure physical connection between the companies and to competitive relations between them. It appears that some time during 1910 the Arena and Ridgeway company asked the Mazomanie company for connection, for the entire system of the Arena and Ridgeway company. This was refused but the Mazomanie company expressed its willingness to consider a proposition to furnish connection for a part of the Arena and Ridgeway subscribers.

In 1911 negotiations were resumed and the Mazomanie company offered to furnish connections for what are known as the Ray Valley, Coon Rock, and Mill Creek sections of the Arena company, for \$225 per year. This offer was afterward changed to \$200 per year. From data presented at the hearing it appears that there are approximately seventy-five subscribers with telephones on these sections. This offer was refused by the Arena company, which in turn made an offer of \$150 per year for this service. As no agreement could be reached, negotiations were discontinued.

At the hearing a diagram of the three sections was introduced in evidence which, it was agreed, shows with substantial correct-

ness the locations of subscribers of both companies in the sections referred to, and which also gives some idea of the extent to which competition exists in these sections. According to this diagram there are approximately seventy-five Arena and Ridgeway phones and twenty-five Mazomanie phones in those sections, and in a few cases parties have both phones. The Mazomanie phones are not confined to those portions of the territory immediately adjacent to Mazomanie but some of them are in the western end of the Coon Rock section, which lies west of Arena.

The testimony showed that the rate of the Arena and Ridgeway company is \$10 per year with the addition of a switching fee of 2 cts. in cases where messages are sent through various of its switches. The rate of the Mazomanie company for rural service is \$13 per year, gross, and \$12 net.

As in physical connections cases generally, this case must be decided with reference to the provisions of the statute authorizing the Commission to require physical connection under certain conditions. The facts in the case must be such as to show:

1. That public convenience and necessity require such physical connection or connections.
2. That such physical connection or connections will not result in irreparable injury to the owners or other users of the facilities of such public utilities.
3. That such physical connection or connections will not result in any substantial detriment to the service to be rendered by such public utilities.

To determine whether or not public convenience and necessity require that the connection sought should be made, it is necessary to review the situation carefully in the light of all available facts. It seems clear that there are a considerable number of Arena and Ridgeway subscribers so situated that connection with Mazomanie would be a convenience and, for practical purposes, a necessity. Subscribers living between Arena and Mazomanie have interests, business and social, in both places, and in many instances it is doubtless true that their failure to receive service at Mazomanie seriously restricts their use of the telephone. Even subscribers living west and southwest of Arena probably have frequent occasion to use Mazomanie service, as is evidenced by the existence of a number of Mazomanie phones in this locality.

The Wisconsin Telephone Company has a toll line from Arena to Mazomanie which, it is understood, is connected at those

places with the telephone systems of the parties to this case. The rate on file with the Commission is 15 cts. for the first two minutes and 5 cts. for each additional minute. For emergency use the long distance service is perhaps all that strict necessity requires, but it appears reasonable to hold that there may be a necessity for physical connection for the conduct of ordinary local business even though, for the purposes for which long distance service is generally used, existing means of communication may be adequate. We think there is clearly such a necessity as regards Arena and Ridgeway subscribers in the vicinity of Mazomanie, and it is not unlikely that such a necessity exists for the subscribers of the two companies generally, or at least for so many of them that it would be useless to draw any dividing line.

To predetermine that an order requiring physical connection will or will not result in irreparable injury to the owners or other users of the facilities of the utilities involved is not always easy. Probably it would be possible to have physical connection between almost any telephone systems without irreparable injury if the terms on which the connection were made were specified with no other aim than to protect the interests of the utilities, but in many cases such connection might be practically valueless to subscribers. Full protection of the utilities' rights and property may not always be practical if the service is to be of any value to the public.

Although the terms under which the Arena and Ridgeway subscribers would make use of the Mazomanie connection are not directly an issue in this case, it would be useless to order that a physical connection be made if the protection of the Mazomanie company from irreparable injury would make it necessary to fix terms for the use of the connection which would be virtually prohibitive of its use by the Arena and Ridgeway subscribers.

The fact that the Arena company has a rate of \$10 per year for rural service in competitive territory where the Mazomanie net rate is \$12 per year would give the Arena company a competitive advantage, if both companies offered the same extent of service, which might very easily result in the loss by the Mazomanie company of all of its subscribers in competitive territory, or of so many of them that remaining subscribers could be served only at a heavy loss. This would be especially likely if, as intimated at the hearing, the Arena company, as a whole, were to bear the expense of physical connection. If the rate were to be

very large, the Arena company might have to increase its general rate, but unless such increase were at least to the level of the Mazomanie rate and unless it were made prior to securing connection, the Mazomanie company would in the meantime be subjected to competition which could hardly fail to be destructive.

Where subscribers have two telephones, and the petitioner in this case alleges that there are twelve or fifteen of such subscribers, the service of one or the other company would almost certainly be discontinued if physical connection were secured upon a flat rate basis. Which service would be discontinued by these subscribers is, of course, problematical, but it is by no means certain that it would not be the Mazomanie service. Even if the general rate of the Arena company were increased to \$12 per year, so as to be equal to the Mazomanie rate, the Mazomanie company might suffer as a result of physical connection on a flat rate basis. If the Arena rates were placed at \$12 per year and an additional switching rate charged directly to subscribers connected to Mazomanie there might be very little loss to the Mazomanie company, and even if the switching fee were paid by the Arena company instead of by the individual subscribers, a switching rate which would be fair to the Arena company might compensate the Mazomanie company for any losses which it would sustain.

The third condition imposed by statute to requiring physical connection is that the connection should not result in substantial detriment to the service.

No testimony was introduced to show that physical connection would be injurious to the service and we see no reason to anticipate that there would be any such injury if connection were properly made. Consequently, the provision of the statute relating to impairment of service does not need to stand in the way of connecting the telephone systems as asked in this case.

The only vital objection to such connection, therefore, is that, as matters now stand, a physical connection on any basis which would make its use by Arena and Ridgeway subscribers practical would result in irreparable injury to the Mazomanie company. This objection, although sufficient to prevent the issuance of an order for physical connection in this case, is not necessarily insurmountable. At the hearing, after the probable effect which the low rate of the Arena and Ridgeway company would have

upon the Mazomanie company, in case of physical connection, had been pointed out, one of the officers of the former company expressed the opinion that the company would be willing to increase its rate to \$12 per year, so as to make it equal to the Mazomanie company's rate. Although this was offered merely as the individual opinion of the witness, there is a possibility that such an increase might be made. Inasmuch as nearly all subscribers of the Arena and Ridgeway company are stockholders, an increase in the rate of that company would not, in the long run, increase the net cost of their telephone service. Such an increase, if made, would probably make it possible for the Commission to require physical connection to be made on terms which would be reasonable to all parties concerned. Although the Commission is not in a position to pass definitely upon a matter of this kind prior to the filing of an application for authority to increase rates, it may be said that unless there are very extraordinary circumstances surrounding the operation and maintenance of the Arena and Ridgeway system, any rate less than \$12 per year would almost certainly be insufficient to meet the requirements of efficient operation to furnish adequate service, and provide for depreciation of the plant and equipment and a reasonable return to the owners of the system.

Another means of clearing up the difficulties in the way of physical connection, and one which in our opinion would be the best, would be for the Mazomanie company to sell to the Arena and Ridgeway company such parts of its system as are in competitive territory which would be affected by connection between the systems. Then a fair rate could be established for interchange of service without jeopardizing the interests of either of the parties.

Mention was made at the hearing of some suggestion which had been made by the Mazomanie company with this end in view. The exact extent of the proposition made by the Mazomanie company is unknown but it appears that the Arena and Ridgeway company refused to accept the proposal, on the ground that the portion of the system in question would be of no value to it. Although this may be true, the Arena and Ridgeway company must realize that the Mazomanie company is entitled to a reasonable degree of protection and that the elimination of competitive conditions would make physical connection possible on the most favor-

able terms, probably even more favorable than would be possible if rates were equalized but competitive relations continued.

It seems, therefore, that physical connection, on terms which would be of any practical benefit to Arena and Ridgeway subscribers, cannot be required until competitive conditions are discontinued or until rates are equalized, and we believe that the best solution of the difficulty will be for the Arena and Ridgeway company to take over such parts of the Mazomanie system as are in competitive territory. If this cannot be done the Commission will consider an application by the Arena and Ridgeway company for authority to increase rates. Until one or the other of these changes is made no connection can be required.

The case is therefore dismissed.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF
RATES, RULES, REGULATIONS, AND SERVICE OF THE EAGLE
TELEPHONE COMPANY.

Submitted May 19, 1914. Decided Nov. 11, 1914.

The Commission, on its own motion, investigated the rates, regulations, and service of the Eagle Tel. Co., which operates exchanges in Eagle, Mukwonago, Palmyra, Genesee, East Troy, Delafield and La Grange, and which also has rural lines in surrounding territory. It appears that on Dec. 5, 1913 the company filed an amendment to its schedule of rates, discontinuing its former practice of offering a certain amount of free toll service as an inducement for prompt payment, and amending its toll rate so as to fix a lower, but generally applicable charge per call for subscribers; that such amendment was accepted, subject to investigation if it should appear that subscribers had cause for complaint thereunder, and that, after the change became effective, a number of subscribers complained to the Commission. The company has also discontinued a former practice of treating two small exchanges as a single exchange, thus increasing rates for subscribers in the exchange areas affected, and causing a serious inconvenience to subscribers living near the edge of the area served by their exchange and not able to take care of their ordinary local needs with the service of only one exchange. While conditions were not normal during the six months immediately following the discontinuance of the old practice, the revenues from toll business were larger during the six months preceding under the old practice than the six months following under the lower, but generally applicable toll charge.

Held: That there is no evidence that the former practice was unreasonable, or unjustly discriminatory; that such practice resulted in an adjustment of business and social relations upon a different basis than would otherwise have prevailed, and that the usefulness of the service to subscribers located on the outskirts of exchange areas has been greatly diminished by the new practice; that the old practice should be restored at least until the company sees fit to ask the Commission for approval of some other method of handling the situation; and that some of the confusion under the old practice could be avoided by a rule granting free toll service only when service is paid for in January or July for the period following.

The company asked for a ruling on a charge for reconnecting telephones where service had been discontinued at the subscriber's direction.

Held: A charge for reconnection is reasonable, but should not be applied unless in effect at the time service was ordered discontinued.

Ordered: That the company restore its former practice of a certain number of free toll calls to subscribers paying in advance; that a rule may be adopted making payments as of Jan. 1, or July 1,

for a period of six months or a year, a condition precedent to such service, new subscribers to be entitled to a pro rata number of free toll calls upon payment in advance from the date of taking service to the first of January or July following; that the toll rates be restored as they were prior to Jan. 1, 1914; that the company may make a charge of \$2 for reconnection within one year after the discontinuance of service; and that the order take effect Jan. 1, 1915,

Notice of investigation in this matter was issued April 17, 1914, and hearing was held May 19, 1914. At the hearing *E. D. Walsh* appeared for the Eagle Telephone Company and a number of persons appeared in behalf of the subscribers.

The conditions which necessitated this investigation may well be reviewed briefly. The company operates telephone exchanges in Eagle, Mukwonago, Palmyra, Genesee, East Troy, Delafield, Dousman, and La Grange, and has rural lines in surrounding territory. Until December, 1913, it appears that the company had a provision that subscribers who paid their bills six months in advance would be entitled to fifty free calls per year to parties outside the limits of the exchange from which they were receiving service, and those paying one year in advance should be entitled to seventy-five such calls. Where subscribers did not pay in advance, a toll charge of 10 cts. for five minutes was made for messages between exchanges.

On December 5, 1913, the company filed an amendment to its schedule of rates, discontinuing the practice of offering free toll service as an inducement for prompt payment, and amending its toll rate so as to fix the charge at 5 cts. for each three minutes or fraction thereof for subscribers.

Inasmuch as this amendment was a reduction in the rates of such subscribers as had not been taking advantage of the free toll possibilities and the effect of the change in practices upon other subscribers was doubtful, the revised rate was filed, subject to investigation if it should appear that subscribers had cause for complaint.

After the change in rates and practices was made effective, on January 1, 1914, a number of subscribers complained to the Commission and this investigation was determined upon.

At the hearing it was made to appear that the company, in addition to placing a message rate on all messages between exchanges, discontinued a practice which it formerly had, of treating two small exchanges as a single exchange. How many of

the exchanges were affected by this change the testimony does not show, but as far as it was done, the effect was to increase rates of subscribers in the exchange areas affected.

At the hearing it was shown that a number of subscribers are situated near the edge of the area served by their exchange and that the service of one exchange only is not sufficient for their ordinary local needs. In some instances subscribers live near the intersection of three exchange areas and unlimited service through a single exchange by no means meets their needs. The fact that, up to January, 1914, the company gave a stated number of free toll connections as an inducement to secure prompt payment, has undoubtedly resulted in an adjustment of business and social relations upon a different basis than would have prevailed if toll rates had been levied. Most of the exchanges are small, the number of subscribers on April 1, 1914, having ranged from a minimum of 92 at Delafield to a maximum of 501 at East Troy, with six of the exchanges having less than 250 subscribers each.

That public convenience would be better served under the old schedule of rates than under that now in effect would seem to be unquestionable. The only objection to the former practice from an operating standpoint, appears to be that the free toll messages resulted in congestion on lines between exchanges, but it has not been shown that this was a serious handicap to the efficient conduct of the business. In some of the smaller exchanges, and especially in the case of subscribers living on the outskirts of the exchanges, the importance of more extensive telephone service than that afforded within the limits of the exchange is so great as to be almost, if not quite, a matter of public necessity.

We are cognizant of the fact that in some respects the former schedule was imperfect. The number of free calls furnished to patrons who paid in advance for service virtually constituted a heavy discount for prompt payment. We are unable to find, however, that the former practice was unreasonable or unjustly discriminatory because of the practice of furnishing free calls. It is true that any patron paying for toll calls on a message rate would have to pay more for a given amount of service than a patron who, by paying for service in advance, became entitled to make a limited number of toll calls without additional charge. As long as the opportunity was presented to all subscribers, how-

ever, to obtain free toll service by making payment in advance, there seems to have been no unjust discrimination.

The company has suggested no means of adjusting the matters complained of, and we do not believe that, at this time, the Commission should undertake to formulate a set of regulations for the final settlement of the difficulties. If it appears necessary in the future to make some changes in the rules and regulations of the utility, the matter can be brought up in the form of an application by the company.

The issue in this case is whether the present practice should be permitted to continue or whether the former practice should be restored. Although the financial condition of the utility is not the only consideration, it is important that the action taken should not seriously affect the earnings of the company.

The Commission's valuation as of June 30, 1914, showed a cost new of all the property of the company of \$81,650 and a present value of \$47,613. Operating revenues, less all proper deductions for the year ended June 30, 1914, as shown by an audit made by the Commission's accounting department, were \$30,066.16, and operating expenses, exclusive of interest and depreciation, were \$22,380.11, leaving \$7,686.05 for interest and depreciation, or about 9.4 per cent of the cost new of all the property. On the face of it, this appears to be an inadequate return, but it must be noted that the operating expenses of the utility appear to be unusually high. The number of telephones installed on April 1, 1914, was 1,731. As stated above, operating expenses were \$22,380.11, or, leaving taxes out of consideration, \$21,603.46, equivalent to \$12.48 per telephone.

This cost of operation is somewhat above the average for telephone utilities comparable in size to the Eagle company. Whether or not expenses are actually in excess of what they should be, so that they decrease the real net earnings of the company, has not been a matter for investigation in this case. If a return to the former practice of furnishing some free toll service were to materially reduce the revenue of the utility it would be necessary to investigate the operating expenses with a view of ascertaining what, if any, effect the apparently large expenses have upon the nominal rate of return. From the audit made by the Commission's accountant, however, it appears that the toll revenue from messages on lines of the Eagle Telephone Company was higher prior to January 1, 1914, than it was for the six months following. From July 1 to December 31, 1913, the auditor found the revenue shown on the books, from this toll business, to have

been \$1,842.05, and for the next six months, \$1,121.40. In January 1914, the amount was \$331.75, but during the next five months the maximum was \$186.75. This would seem to indicate that the reduction of the toll rate had resulted in an actual decline in charges, as concerns the entire body of subscribers. Conditions during these six months were far from normal, however, and it may be that such a decline would not be permanent. As to subscribers located on the outskirts of exchange areas, it is certain that the usefulness of their telephone service has been greatly diminished.

The company objects to a resumption of its former practice because of the confusion resulting from its application. This objection is not without weight, but it seems reasonable to have some regulation regarding payment which will relieve the company of some of the work which has been necessary in the past. With regard to confusion from an operating standpoint, there has been no evidence which shows that this was so serious that it should be allowed to stand in the way of a practice which is in the interest of public convenience. We believe, therefore, that the former practice should be restored. The company will be able to prevent some confusion by adopting a rule, which we think would be reasonable, providing that free toll calls will be allowed only when service is paid for in January or July for the period following, except that new subscribers may pay in advance from the time of taking service until January or July, as the case may be, and then pay for the regular periods. This will overcome the difficulty which has been encountered because of subscribers' periods of payment terminating at different times.

It is not certain that this decision will permanently clear up the situation, but it covers the complaints as filed by various subscribers and the possibility of any other final solution has not been presented. Until the company sees fit to ask the Commission for approval of some other methods of handling the situation the former practice will stand.

The company has asked for a ruling on a charge for reconnecting telephones where service had been discontinued at the subscriber's direction. Following the action of the company in changing its rates and regulations, a number of subscribers ordered their telephones taken out, and the company asks for authority to charge for reconnection. A charge for reconnection is reasonable, but we think that it should not be applied unless it was in effect at the time service was ordered discontinued.

IT IS THEREFORE ORDERED:

1. That the Eagle Telephone Company shall restore its former

practice of furnishing free toll calls to subscribers who pay in advance for service, provided that the company may adopt a rule that such service will be furnished only when payments are made in advance as of January 1 or July 1, for periods of six months or a year, except that new subscribers may be entitled to a pro rata number of free toll calls upon paying in advance from the date of taking service to the first of January or of July, following.

2. That the toll rates of the Eagle Telephone Company shall be restored as they were prior to January 1, 1914.

3. The company may adopt a rule providing for a charge of \$2.00 for reconnecting a telephone for the same subscriber upon the same premises within one year after service has been discontinued, but this rule shall not take effect until the time specified for the general application of this order.

This order shall be effective on and after January 1, 1915.

JOHN J. BLAINE

vs.

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted June 13, 1914. Decided Nov. 14, 1914.

Complaint was made that the station facilities furnished by respondent at Boscobel are inadequate, and the Commission was asked to require the respondent to install a proper system of water works and sewerage in its depot at Boscobel. It appears that the city has established a sewerage system and extended it to a point in the street adjacent to the railway station.

Held: That respondent's station facilities at Boscobel are inadequate. The respondent is ordered to install modern, sanitary toilet facilities in its station at Boscobel, plans to be submitted to the Commission for approval. June 1, 1915, is considered a reasonable date for the completion of the installation ordered.

The petition alleges in substance that the station facilities furnished by the Chicago, Milwaukee & St. Paul Railway Company at Boscobel are inadequate, and asks that the respondent be required to install a proper system of water works and sewerage in its depot at Boscobel.

The respondent, in its answer, takes the position that to install the facilities requested by the petition would either diminish the size of waiting rooms or require extensive changes in the building at an unwarranted cost. It asserts that the existing outside toilets can be kept clean and sanitary until conditions warrant the expense of better facilities. It therefore asks that the petition be dismissed.

A hearing was held at Boscobel on June 13, 1914, at which *J. J. Blaine* appeared in his own behalf and *J. N. Davis* for the respondent.

The testimony shows that Boscobel has a population of about 1,525 within its corporate limits. A sewer system was constructed during 1913 and since that time efforts have been made to eliminate outside earth closets wherever possible. The sewer is laid in the street adjacent to respondent's station and at the nearest point is approximately 119 feet therefrom. Respondent now maintains outside earth closets north of the track at a distance of about 275 feet from the station. The location is such

that persons are obliged to cross the tracks, over which considerable switching is done, in walking between the station and the closets. Witnesses testified that the closets are in an insanitary condition.

Respondent's district carpenter presented two plans for the installation of sanitary toilets. The first is to place them between the two existing waiting rooms, at a cost of approximately \$534. However, this arrangement would reduce the area of the waiting rooms, leaving them too small to properly care for the normal passenger traffic. The second plan is to remove the partition between the two waiting rooms, making a large general room, provide a smoking room west of the present office, and connect the two rooms by means of a passageway from which the doors to the toilet rooms would open, a portion of the existing office room being used for the passageway and toilet rooms. This arrangement would approximately double the seating capacity of the station, and the complete readjustment and new installation would cost approximately \$1,800. The adoption of either plan may necessitate the installation of a heating plant, according to the district carpenter's testimony. He said that a hot water system could be installed for about \$825.

Our engineer, after an inspection of the premises, estimates that the total cost of making the alterations suggested in the district carpenter's second plan, and of installing modern sanitary toilets and a steam heating plant, would be approximately \$2,000.

In the light of the testimony it is our opinion that the respondent's station facilities at Boscobel are inadequate. The city has established a sewerage system and extended it to a point in the street adjacent to the railway station, and it is not unreasonable to expect that respondent connect its station therewith. By following the second plan of installation suggested by respondent's district carpenter, the waiting rooms will be enlarged and suitably heated, thus making a permanent improvement in the building. We regard that arrangement with favor.

IT IS THEREFORE ORDERED, That the respondent, the Chicago, Milwaukee & St. Paul Railway Company, install modern, sanitary toilet facilities in its station at Boscobel, plans to be submitted to the Commission for approval.

June 1, 1915, is considered a reasonable date at which the installation ordered herein shall be completed.

F. N. BUCKMAN

vs.

CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted March 31, 1914. Decided Nov. 17, 1914.

Complaint was made that respondent's practice of requiring the removal of freight consignments from its station at Denmark within 48 hours, or the payment of a storage charge, works a hardship on the petitioner. It appears that while the petitioner's own situation is somewhat exceptional, the rule established for the purpose of inducing patrons to remove their freight from stations within a reasonable time, has greatly improved conditions.

Held: That the facts of the present case indicate the need of some modification of the practice complained of in order to allow persons living at a distance from a station additional free time within which to remove their freight, and also to provide for other unusual conditions, such as presented in the *Albright* case, 1914, 14 W. R. C. R. 763.

Recommended: That the respondent, and all other companies operating railroads in Wisconsin who are members of the Wisconsin Demurrage Bureau immediately publish and put into effect a reasonable rule, according to the schedule given in the decision, to allow additional free storage to patrons in proportion to the distance over which they are obliged to haul freight from railway stations.

The petition alleges in substance that the practice of the Chicago & North Western Railway Company in requiring a payment for the storage of consignments of freight which are not removed from the station at Denmark within forty-eight hours of their arrival is unreasonable. The Commission is therefore asked to take such action as it deems proper in the premises.

Respondent, in its answer, denies that its storage rules and regulations are unreasonable or discriminatory and asks that the complaint be dismissed.

A hearing was held on March 31, 1914, at Maribel. *F. N. Buckman* appeared in his own behalf and *C. A. Vilas* for the respondent.

Petitioner testified that he lives about seven miles from Denmark, at which station he receives less than carload consignments of freight over respondent's line. He complained that on ac-

count of the distance from his place to the station, it is a hardship to be required to remove consignments from the station within forty-eight hours or pay a storage charge. Prior to the establishment of this rule, on January 10, 1914, it was his custom to drive to the station about once a week, but since that time he has made more frequent trips. Five hours are consumed in driving from his place to the station and back. He is usually notified of the arrival of freight by post card which reaches him before noon on the day following such arrival. Occasionally notice is given by telephone, as petitioner is connected with the exchange which serves the depot at Denmark.

Another witness who conducts a general store at Stangelville, about eleven miles from Denmark, and who receives less than car-load freight at Denmark testified that it is a hardship for him to remove consignments from the station within forty-eight hours. He pointed out that mail reaches him by way of Green Bay and Luxemburg, which involves a transfer from the respondent's line to the line of the Green Bay & Western Railway Company. Thus a postal of notification mailed at Denmark in the morning would not reach him until the following day. A trip from his place to and from the station at Denmark consumes an entire day. He stated that he has arranged with a relative at Denmark to remove goods consigned to him from the station in order to avoid the payment of storage charges.

Witnesses for the respondent testified that the rule in question, which is contained in the Chicago & North Western Railway Company's tariff G. F. D. 14465a, was established on January 10, 1914 for the purpose of inducing patrons to remove their freight from stations within a reasonable time. It was pointed out that the free period of forty-eight hours begins at 7 a. m. on the day following the sending out of the notice to the consignee, the latter being determined by the date of receipt stamped on the postal card at the post office. The station agent said that notices are mailed at about 7:30 a. m. on the day following the arrival of the freight. Thus a consignment received on Monday would be called to the attention of the consignee by a postal card mailed Tuesday morning at 7:30 a. m., and the forty-eight hour free period would begin on Wednesday at 7 a. m. and extend to 7 a. m. Friday. Petitioner would receive this notice before noon on Tuesday and would have approximately sixty-seven hours to remove his freight after being notified of its arrival.

The other witness who testified would receive notice at about noon on Wednesday and have forty-three hours in which to remove his goods from the station.

The station agent testified that prior to the enforcement of the storage charge some patrons allowed their freight to remain at the station from one to six weeks, with the result that the freight room was congested, but that conditions have improved greatly in this respect since the rule has been in effect. According to the agent's records, petitioner paid 70 cts. and the other witness 90 cts. for storage between January 10, 1914, and the date of the hearing. The charge made is 5 cts. per ton or fraction of a ton for each separate consignment for each day in excess of the free forty-eight hours.

The tariff complained of has been approved by the Commission pursuant to sec. 1797—4 of the statutes. However, as stated in *Albright et al. v. C. St. P. M. & O. R. Co.* 1914, 14 W. R. C. R. 763, this approval was granted with the understanding that if investigation showed conditions which warrant exemptions, the Commission would provide therefore later. In that case the local conditions were found to warrant a modification of the tariff permitting a longer period of free storage under certain circumstances. The facts presented in the present proceedings also indicate the need of some modification which will allow persons living at a distance from a station additional free time within which to remove their freight. Respondent's tariff now provides that at stations on its line west of the Missouri river an additional five days free storage shall be allowed to patrons between five and ten miles from such station, and that an additional seven days free storage shall be allowed to patrons living between ten and twenty miles from such station, these periods being added to the forty-eight hours of free storage available for patrons living at the station or within five miles of it. The application of a tariff of a somewhat similar nature to Wisconsin stations will not defeat the purpose of storage limitation, and will, in a large measure, remove the handicap now placed upon shippers living at a distance from stations. The following schedule of free time, with the retention of the existing storage rates, will, in our judgment, be reasonable;

Distance of shipper from station		Period of free storage
0 miles to	5 miles	48 hours
5	10	48 " plus 2 days
10	15	48 " " 3 "
15	20	48 " " 4 "

However, this tariff will not meet the situation presented in the *Albright* case above referred to, and a further adjustment should be made to provide for unusual conditions such as prevail at Bayfield in connection with shipments to Madeline Island, as formally recommended in that case. This adjustment should be made by the Chicago, St. Paul, Minneapolis & Omaha Railway Company in addition to the adoption of the general rule herein recommended.

It is therefore recommended that the respondent, the Chicago & North Western Railway Company, and all other companies operating railroads in Wisconsin who are members of the Wisconsin Demurrage Bureau immediately publish and make effective, in connection with storage rules, a reasonable rule allowing additional free storage to patrons in proportion to the distance over which they are obliged to haul freight from railway stations, according to the schedule given above.

IN RE APPLICATION OF THE BURKHARDT MILLING AND ELECTRIC POWER COMPANY FOR AUTHORITY TO PUT INTO EFFECT A SCHEDULE OF RATES FOR TWENTY-FOUR HOUR SERVICE.

Submitted Nov. 12, 1914. Decided Nov. 18, 1914.

Application was made for authority to put into effect a schedule of rates proposed for 24 hour service at Baldwin, where the applicant is engaged in the operation of an electric light and power plant. It appears that until recently the electric plant at Baldwin was owned and operated by the Baldwin El. Lt. & Fuel Co.; that the power was generated by a steam plant at Baldwin, and that service was furnished only from dusk to midnight. Applicant now supplies power from its power plants on Willow river, and furnishes 24 hour service.

Held: That under the circumstances of the present case, action taken must be based more or less on what the experience of the Commission has shown to be reasonable in other places; that the minimum charge for lighting service should not exceed 75 cts. per month, but that for the sake of harmony with the general schedule a gross minimum of \$1.00 and a net minimum of 80 cts. is authorized; that the proposed rule that patrons not paying for service within a specified time shall have their service disconnected is disapproved (*In re Refusal of Service by Madison G. & El. Co.* 1914, 13 W. R. C. R. 518), but that respondent may require a reasonable deposit to guarantee payment; and that subject to the foregoing qualifications applicant's proposed schedule appears reasonable and is authorized.

The application of the above named Burkhardt Milling and Electric Power Company, which bears the date of September 22, 1914, shows that it is a corporation organized and doing business under the laws of the state of Wisconsin, with its principal place of business in Burkhardt, Wis., and that it is a public utility engaged in the management and operation of an electric light and power plant at Baldwin, Wis.

Applicant further shows that since September 20, 1914, it has been furnishing twenty-four hour service in Baldwin and it asks for authority to put in effect the following schedule of rates for such service:

Commercial Lighting

Current, 12½ cts. per kw-hr.

Minimum monthly charge: \$1.25 per month with a 20 per cent discount if paid before the first of the month.

Discounts, if bills are paid by the first of the month:

Monthly bills up to 40 kw-hr.	20 per cent
Monthly bills 40 to 60 kw-hr.	25 per cent
Monthly bills 60 to 100 kw-hr.	30 per cent
Monthly bills 100 to 150 kw-hr.	35 per cent
Monthly bills 150 kw-hr. or over	40 per cent

Commercial Power

Minimum monthly charge:

- \$1.35 per horse power for the first horse power.
- \$1.00 per horse power for each additional horse power.
- Current: 5 cts. per kw-hr.

Discounts:

- For motors using 50 kw-hr. per month per h. p., 20 per cent.
- 75 kw-hr. per month per h. p., 30 per cent.
- 100 kw-hr. per month per h. p., 40 per cent.
- 150 kw-hr. per month per h. p., 50 per cent.
- Service to be discontinued if bills are not paid within thirty days from date, and a charge of \$1.00 for reconnection.

Hearing was held at Madison, November 12, 1914. Appearances for the applicant were *Christian Burkhardt* and *Bertha A. Burkhardt*. There were no appearances in opposition.

In most respects decision in this case must be reached without any accurate knowledge of what the cost of service or the revenues will be. Until recently the electric plant at Baldwin has been owned and operated by the Baldwin Electric Light and Fuel Company, power being generated by a steam plant at Baldwin. The applicant took possession of the plant on September 15, 1914, and is now supplying power from its power plants on Willow river. Testimony indicates that prior to the acquisition of the property by applicant, service was furnished only from dusk to midnight, although the Commission's rate file indicates that for a short time before September 15, seventeen hour service has been furnished.

The only respect in which the power rates which applicant seeks to have authorized are higher than the rates filed for power service by the Baldwin Electric Light and Fuel Company is in the minimum charge for the first horse power of installation, which is \$1.35 instead of \$1.00. All other changes in the power rates constitute reductions. The power rate will be, in most particulars, the same as the rate for power service which petitioner has

in effect at Hudson, where it also operates an electric utility. We see no reason for refusing to accept the proposed power rate.

The net rates for lighting purposes likewise appear reasonable, although somewhat above the former rates at some points. Continuous service which will make lights available even at times when there is practically no load on the plant undoubtedly tends to make service more expensive than it would be if supplied only at times of considerable demand, and we think that, with the exception of the minimum charge, the lighting schedule may be accepted.

In a number of recent cases the Commission has concluded that 75 cts. per month is as large a minimum charge as should be authorized. Whether or not there are circumstances in the present case which would make a larger minimum charge reasonable we are unable to determine from available information. Inasmuch as the authorization of the entire schedule must be based more or less on what the experience of the Commission has shown to be reasonable in other places, it seems that the same rule may properly be applied to the minimum bill. In order that the minimum charge may not be out of line with the general schedule, a gross minimum of \$1.00 and a net minimum of 80 cents will be authorized.

The proposed rule that patrons not paying for service within a specified time shall have their service disconnected is open to the objection that it may be misconstrued. In the case *In re Refusal of Service by Madison Gas & El. Co.* 1914, 13 W. R. C. R. 518, it was held that a utility has no right to refuse to furnish service because of the patron's indebtedness to it, so long as the patron pays or guarantees payment for future service. The utility may, however, require a reasonable deposit to be made to guarantee payment of bills.

IT IS THEREFORE ORDERED, That the applicant, the Burkhardt Milling and Electric Power Company, may adopt the schedule of rates which it seeks to have authorized for the village of Baldwin, with the following exceptions:

1. The minimum charge for lighting service shall be \$1.00 with a discount of 20 per cent for prompt payment.
2. The proposed rule for disconnecting service where bills are unpaid is disapproved, but the utility may, if it chooses, file with the Commission a rule requiring consumers to make a deposit, which, if reasonable, will be approved.

MICHAEL DORM ET AL.

vs.

WALWORTH TELEPHONE COMPANY.

Submitted May 15, 1914. Decided Nov. 19, 1914.

Complaint was made by twenty-five residents of the village of Fontana that respondent's charges for service in Fontana are inequitable as compared with those for service in Walworth, and the request was made that the charges be either reduced or equalized. The request was also made that the present charge of 10 cts. per five minute message to nonsubscribers be reduced, and that a pay station be established at Fontana, and at what is known as "The Head of the Lake". It appears that Fontana receives its service through the Walworth exchange, from which it is approximately $2\frac{1}{4}$ miles distant, and that the respondent furnishes party line rural and suburban telephone service of a much higher quality than that usually furnished by telephone companies in the state, having equipped all its party lines with secret service equipment. The business rate, on its face disproportionately higher than the rate for residence service, is not bringing in revenues materially in excess of the cost of furnishing the service. As regards the matter of establishing pay stations at the points requested, it appears that no application to that effect has been made to respondent and that respondent would be willing to make arrangements with anyone who would look after the instrument and make the collections on a percentage basis.

Held: That, due consideration being given to the superior character of the service in the present case and to the distance to Fontana from Walworth, with consequently higher initial and maintenance cost of lines, the Fontana residence rates cannot be considered unduly high or inequitable as compared with those in Walworth; that, for the present at least, the rate for business service is not unreasonably high, and that, in fairness to the regular subscribers, the charge to nonsubscribers of 10 cts. per five minute message for the use of subscribers' telephones cannot be regarded as unreasonable.

The petition is dismissed.

Complaint in this case was filed by twenty-five residents of the village of Fontana on April 14, 1914. It is alleged that the exchange rates of the Walworth Telephone Company are inequitable in that the annual charges for telephone service in the village of Walworth are \$12 for residence service and \$18 for business service, while in Fontana the annual charges are \$16 and

\$25 respectively. The petitioners ask that the rates be reduced or equalized. The petitioners also ask that the present charge of 10 cts. per five minute message to nonsubscribers be reduced; and that a pay station be established at Fontana and what is known as "The Head of the Lake."

Hearing was held at the office of the Commission in Madison, May 15, 1914. *J. W. Page*, *W. D. Church*, and *W. C. Davis* appeared in behalf of the respondent. No appearances were entered by the petitioners.

The lawful exchange rates of the respondent company as filed with the Commission are as follows:

Village of Walworth

Business telephones	\$18 per annum.
Residence telephones	\$12 per annum.
All subscribers in the village have single party service.	

Outside the Village of Walworth

Business telephones	\$25 per annum.
Residence telephones:	
19 party line service	\$16 per annum.
10 party line service	\$25 per annum.

The schedule also contains the two following rules which are applicable to the entire system:

1. The use of any telephone for local service by or for a non-subscriber shall be charged for at the rate of 10 cts. for each conversation not exceeding five minutes.

2. The use of the lines of this company for local service shall be limited to periods of five minutes. A charge of 10 cts. shall be made for each additional five minutes or fraction thereof.

It should be stated at this point, since it may not be entirely clear, that the telephone company furnishes all its service, including that of Fontana, through one exchange located at Walworth.

At the hearing the manager of the telephone company stated that there were from five to six business telephones on a line in Fontana; that what is termed nineteen party residence service is really eleven or twelve party service; and that the so-called ten party service is in fact six party service. It is also shown that the Walworth Telephone Company has all of its party lines

equipped with what is known as the Baird secret service system. By means of this system it is possible for persons on party lines to converse without being overheard or disturbed by other persons on the same lines. The result is accomplished by what might be termed a "locking in" arrangement controlled by the operator at the switchboard. The rule of the telephone company limiting the use of the lines to five minutes operates to prevent one party from holding the line unreasonably. Owing to the fact that the operator has complete control of the lines under this system, the lines may be cleared at any time for emergency calls. The character of the equipment is such that it is necessary to keep the telephone lines in a comparatively high state of repair, giving particular attention to the resistance of the wires. It appears that the respondent keeps the system in good working order. In the light of these conditions it is clear that the Walworth Telephone Company is in a position to furnish party line, rural and suburban telephone service of a much higher quality than that usually furnished by telephone companies in the state.

According to the petition, the chief contention of the petitioners is that the rates applicable in Fontana are disproportionately higher than the rates charged for service in Walworth. In this connection it is well to call attention to the conditions under which the telephone service in general is furnished. The major portion of the expense incidental to the supplying of telephone service is occasioned by the cost and the maintenance of the lines. The portion of the expense properly chargeable to the switchboard and the handling of calls at the switchboard is comparatively a small part of the total operating expenses. It therefore follows that under normal conditions the subscribers who live some distance from the central station are responsible for a larger investment and a larger part of the consequent expenses than those subscribers who live nearer the central office. As Fontana is approximately two and one-fourth miles distant from Walworth, it appears reasonable to expect that subscribers in Fontana should pay proportionately higher rates than those applicable in the village of Walworth. Consideration must also be given to the fact that the respondent, by means of its so-called secret service system installed and maintained at an additional expense, furnishes a very high class of service to subscribers living outside the village of Walworth. In the light of the infor-

mation in the hands of the Commission, it appears that the annual rate of \$16 for so-called nineteen party line residence service, which is really eleven or twelve party service, is not unreasonable.

Although the rate of \$25 per year for five or six party business telephones in Fontana might at first sight seem to be disproportionately higher than the rate for residence service, we find that, for the present at least, this rate is not unreasonably high. According to computations made by the Commission's staff, the present rate does not bring in revenues which are materially in excess of the cost of furnishing the service. If the respondent were furnishing ordinary five or six party telephones without the secret service equipment, it would be possible to charge a somewhat lower rate. We believe, however, that the improvement effected by the secret service equipment more than offsets the difference between the present rate and the rate that could be charged if the additional equipment were not used. We are also of the opinion that if telephone service of as high a character as that which is being supplied at present were to be supplied by the use of ordinary telephone equipment by reducing the number of parties on a line, the rate would have to be materially higher than it is under present conditions.

The charge of 10 cts. per five minute message made to nonsubscribers for the use of subscribers' telephones does not appear unreasonable, in that the difficulty experienced by the telephone company in collecting charges of this kind in a large measure offsets the possible profits that might be secured. In fairness to the regular subscribers the rate charged to nonsubscribers should be high enough to prevent the cost of its collection from falling upon the regular subscribers in general.

According to the testimony introduced at the hearing, the matter of establishing telephone pay stations at Fontana and at what is known as "The Head of the Lake" can be disposed of without a formal order. The respondent's manager stated that no application had been made for pay stations, and that the company would be willing to make arrangements with anyone who would look after the instrument and make the collections on a percentage basis. It appears that the telephone company formerly had such an agreement with a party who kept a store.

IT IS THEREFORE ORDERED, That the complaint be and the same hereby is dismissed.

OSCEOLA MILL AND ELEVATOR COMPANY

vs.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY
COMPANY.

Submitted Sept. 29, 1914. Decided Nov. 19, 1914.

Complaint was made that the respondent had removed a spur track extending from its main line to petitioner's warehouse and mill, and that, as a result, the petitioner is without adequate and reasonable shipping facilities at its warehouse and mill. The petitioner prays that the respondent be required to furnish adequate and reasonable facilities by replacing the spur track. It appears that the construction of the track in question was pursuant to an agreement between respondent and a certain improvement company about to build a dam across the St. Croix river; that the agreement was that the respondent should build, from the railway station at St. Croix Falls to the dam site, a spur track over which the company might haul its material for the construction of the dam; that the track, when constructed, was laid upon the land of the improvement company, and not of the respondent; that under an indeterminate lease the petitioner leased of the improvement company the frame of a building which the company had erected close to the spur track here involved; that petitioner enclosed the frame of the building, which now forms the warehouse in question; that the mill involved, prior to its purchase by petitioner, was operated as a custom mill only; that prior to the purchase of the mill or the lease of the warehouse, petitioner secured permission from respondent's superintendent to use the sidetrack in question; and that the only agreement respondent had, respecting the track in question, was the one with the improvement company that the track should remain until the completion of the dam. The respondent assigned various reasons for removing the track.

Held: That the respondent can not be compelled to acquire a right of way and construct a new track to serve the industry which had been served by the prior track; that even if a patron is enjoying the privilege of having cars left on a siding for him and taken away when loaded, the railroad may discontinue such service on short notice (1 Wyman on Public Service Corporations, sec. 815), and that neither the legislature nor the Commission can compel a railroad company to construct sidings at its own expense (*N. W. Warehouse Co. v. Oregon Ry. & Navig. Co.* 32 Wash. 218, and other authorities cited).

The petition is dismissed.

The petitioner is a corporation engaged in the millng business at St. Croix Falls, Wis. It alleges that on March 5, 1914, the respondent railway company removed the spur track extending

from its main line to petitioner's warehouse and mill, and that, as a result, the petitioner is without adequate and reasonable shipping facilities at its warehouse and mill. Wherefore the petitioner prays that the respondent be required to furnish adequate and reasonable facilities by replacing the spur track.

The respondent, answering the petition, alleges that the track referred to was not a sidetrack, but a track laid some years ago under a contract with the St. Croix Falls Wisconsin Improvement Company, which was erecting a dam on the St. Croix river; that such spur was constructed upon a right of way belonging to the improvement company for the purpose of furnishing such company with the material used in the construction of the dam; that the track was in need of extensive repairs if it were to be made a permanent track, and, as the respondent did not own the right of way on which the spur track was laid, it deemed it best to remove the same; that the petitioner's mill was built and operated long before the said spur track was constructed and shipments from the same were made over respondent's line from its St. Croix Falls station or at some point near thereto; that petitioner's warehouse was not constructed under any promise of respondent that the spur track would be maintained permanently, but that the petitioner knew the purpose for and the circumstances under which the said spur track was constructed. Wherefore respondent prays that petition be dismissed.

The matter came on for hearing on September 29, 1914, at the office of the Railroad Commission in the capitol at Madison. *F. B. Dodge* appeared for the petitioner and *A. H. Bright* for the respondent.

From the testimony it appears that respondent railway company made an agreement with the St. Croix Falls Wisconsin Improvement Company, which at the time was about to erect a dam across the St. Croix river, to build a spur track from the railway station at St. Croix Falls to the dam site over which the Improvement Company might haul its material for the construction of the dam. The track was laid upon the land of the Improvement Company. During the construction of the dam the Improvement Company built, close to the spur track, the frame of a building which was later leased to the petitioner who enclosed it and used it for a warehouse. The lease was indeterminate and by its terms continued so long as the petitioner took power from the Improvement Company for the operation of its

mill. Prior to the purchase of the mill by the petitioner it was operated as a custom mill only. Before purchasing the mill or leasing the warehouse the petitioner, realizing that the warehouse would be of no use to it without sidetrack privileges, secured permission to use the sidetrack from the respondent's superintendent. Thereupon it remodeled the mill at an expense of \$15,000 and enclosed the frame of the building leased from the power company for a warehouse. Later the railway company constructed an additional spur for the use of the petitioner which was 314 feet in length, parallel to the existing spur, and connected therewith. In March 1913 the respondent's general manager informed petitioner that, owing to the condition of the spur in question, the railway company desired to remove it and inquired the cost of removing petitioner's mill to Osceola. The petitioner estimated the cost, which was considered excessive by the railway company. The latter then suggested that the petitioner remove its mill to Osceola as the expense of keeping up the track in question was great and furthermore the track was located upon the premises of the Improvement Company.

It appears that in January, 1914, the railway company desired to amend its tariff on grain and grain products by removing from Rice Lake and St. Croix Falls milling in transit privileges. Application was first made to this Commission, but upon investigation it appeared that all of the petitioner's shipments were interstate and therefore the withdrawal of milling in transit privileges from intrastate shipments was immaterial. The petitioner then complained to the interstate commerce commission, but before that tribunal passed upon the matter the railway company removed the track.

It assigned as its reason for removing the track that the same was not only very much out of repair and would require a large expenditure of money to put it into operating condition, but also that the heavy grade made it more or less unsafe from an operating standpoint. Furthermore, it did not own the right of way and would be compelled to acquire the same if it reconstructed the track. It appears that the only agreement that the railway company had respecting the track in question was the one with the Improvement Company, to the effect, as stated, that the track should remain until the completion of the dam.

The foregoing statement contains all the material facts essential to a determination of the controversy. Upon such state-

ment of facts the petitioner contends that it is the common law duty of the respondent as a common carrier to carry goods whenever tendered by any person at any appointed place and that its stations and warehouses are appointed places for the receipt and delivery of goods. The mere fact that the warehouse in this case is privately owned does not alter the situation or take it out of the class of railway stations. It is further contended that as the railway company permitted the use of its track for service to the mill and warehouse and that upon the grant of such permission the petitioner had made expenditures in remodeling the warehouse, the railway company should not be permitted to permanently remove the track and thereby deprive the petitioner of shipping facilities.

We are confronted with a somewhat peculiar situation in this case. The railway company, pursuant to a contract, built a spur track for a temporary purpose. It acquired no right to maintain the track for a longer period than that prescribed in the contract. Incidental to the use of the track for its primary purpose, service was given to an industry adjoining the track. Although the primary purpose for which the track was constructed has been completed, no objection on the part of the owner of the land on which the track was laid was interposed to the use of the track for service to such industry. The track was out of repair and required large expenditure to make the same serviceable and was therefore removed. Under the circumstances, the question is whether the railway company can be compelled to acquire a right of way and construct a new track to serve the industry which had been served by the prior track.

In this state industrial tracks may be constructed, first by the railway company, (sec. 1831*a*); second, by the industry (sec. 1802); and third, by the railway company at the expense of the industry (sec. 1797—11*m*). The first method is voluntary upon the railway company. It can not be compelled to provide private industrial tracks. The latter method is compulsory upon the railway company; but the expense of installing the track must be borne by the industry seeking the same. Under the first method most industrial tracks have been laid in the past, but in many instances the railway companies have required the shippers to bear a portion of the cost of installation. There are some purely private industrial tracks in existence which were constructed under the second method, or by virtue of agreements

entered into between owners of industries and railway companies. These are usually within yards or adjoining yards of manufacturing and other industries. The petitioner in this case has no contract with the railway company by which the latter is required to construct or maintain an industrial track for the service of its industry.

“At common law, no shipper or consignee of ordinary freight, no matter how large the business which he does with the railroad may be in the aggregate, has any right to have freight trains stopped at his premises or freight cars spotted at his siding, even if his premises abut upon the right of way or he has constructed a siding to the railroad grade ready for connection with the through tracks. Even if a patron is enjoying the privilege of having cars left on a siding for him and taken away when loaded, the railroad may discontinue this service on short notice.” 1 Wyman on Public Service Corporations, sec. 815.

It is also well settled that neither the legislature nor the Commission can compel a railroad company to construct sidings at its own expense. Any statute imposing such expense upon the railway company would be void. *N. W. Warehouse Co. v. Oregon Ry. & Navig. Co.* 32 Wash. 218; *Mays v. Seaboard Airline Ry. Co.* 75 So. Car. 455; *Mo. Pac. Ry. Co. v. Nebraska*, 164 U. S. 403; *Mo. Pac. Ry. Co. v. Nebraska*, 217 U. S. 196.

For the reasons given, we are of the opinion that the Commission is without power to compel the respondent railway company to construct the sidetrack prayed for in the petition.

NOW, THEREFORE, IT IS ORDERED, That the petition herein be and the same is hereby dismissed.

C. C. GRATIOT ET AL.

vs.

ILLINOIS CENTRAL RAILROAD COMPANY,
CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted July 21, 1914. Decided Nov. 24, 1914.

Complaint was made that the respondents do not maintain a track connection and proper facilities for the transfer of carload and less than carload freight at the intersection of their lines at Dill, Wis., and the Commission was asked to require the respondents to install a connecting track and proper facilities for handling and transferring less than carload and carload freight at Dill. It appears that less than carload freight between stations on the branch in question, or Dodgeville branch of the I. C. R. R. Co., and certain stations on the C. M. & St. P. Ry. Co. may be routed via Dill, but that practically all less than carload freight not moving between such points must be routed via Freeport, Ill., and that such routing has resulted in unnecessary delay. As regards carload shipments there was evidence that with the track connection there would be more stock shipments over the Dodgeville branch; that Milwaukee wholesale houses would ship a carload of small consignments to points on such branch every day or so, and that the connection would be a convenience to the merchants thereon. From consideration of the actual traffic involved, of the cost of such a connection, and the cost of the out-of-line haul made necessary by the lack thereof, it appeared that the saving would pay liberal interest upon the investment necessary for the installation of the connection.

Held: That the track connection at Dill is necessary for adequate service, and that an equal division of the cost thereof between respondents is equitable.

Ordered: That the respondents construct and maintain a track connection at Dill and readjust their tariffs so as to permit the routing of carload and less than carload freight via Dill to and from all Wisconsin points on the Dodgeville branch of the I. C. R. R. Co., and to and from all points on the entire system of the C. M. & St. P. Ry. Co. Plans for the connection are to be submitted for approval, and June 1, 1915, is considered a reasonable date for the completion of the installation ordered.

The petition, which is signed by the chairman of the county boards at La Fayette, Greene and Iowa counties, alleges in substance that the Illinois Central Railroad Company and the Chicago, Milwaukee & St. Paul Railway Company do not maintain a track connection and proper facilities for the transfer of car-

load and less than carload freight at the intersection of their lines at Dill and that such connecting track and transfer facilities are justified by the traffic conditions and necessary for adequate service. The Commission is therefor asked to require the respondents to install a connecting track and proper facilities for handling and transferring less than carload and carload freight at Dill.

The Illinois Central Railroad Company, in its separate answer, denies that conditions are such as reasonably to require the installation of a connecting track, and asks that the complaint be dismissed.

The Chicago, Milwaukee & St. Paul Railway Company, in its separate answer, alleges in substance that the amount of carload business at Dill is insufficient to warrant the installation and maintenance of a connecting track, and asks that the complaint be dismissed.

Hearings were held at Dodgeville on July 8, 1914, and at Madison on July 10 and July 21, 1914. *M. J. Cleary* appeared for the petitioners, *N. P. Thurber* for the Chicago, Milwaukee & St. Paul Railway Company and *Jones & Schubring*, by *E. J. B. Schubring*, for the Illinois Central Railroad Company.

The question of installing a track connection at Dill was considered by the Commission in *National Mfg. Co. v. I. C. R. Co. et al.* 9 W. R. C. R. 509, and a decision rendered on August 1, 1912, dismissing the complaint on the ground that traffic conditions did not then warrant the expense of a track connection. The testimony taken at that time was introduced into the present proceeding. As a result of that hearing certain changes were made in the tariffs with reference to the routing of less than carload freight via Dill. An examination of the tariffs now in effect shows that such routing is permitted as follows:

1. Between all stations on the Dodgeville branch of the I. C. R. R. Co. and stations from Dill to Janesville, inclusive, on the C. M. & St. P. Ry. Co.

2. Between stations Woodford to Jonesdale, inclusive, on the I. C. R. R. Co. and stations Janesville to Mineral Point and Platteville, inclusive, on the C. M. & St. P. Ry. Co., including branches therefrom.

3. Between Dodgeville and stations on and included in territory bounded by the lines from Chicago to Milwaukee, Milwaukee to Madison via Watertown, and Madison to Mineral Point

via Janesville, including branches of lines mentioned on the C. M. & St. P. Ry. Co. system.

Practically all other less than carload freight must be routed via Freeport, Illinois.

Witnesses testified that shipments of less than carload freight from Milwaukee and intermediate points are seriously delayed in transit to stations on the Dodgeville branch, and expressed the opinion that quicker service could be obtained by means of a routing via Dill. Freight bills placed in evidence show that it usually takes from four to six days for the movement of less than carload freight from Milwaukee and intermediate points via Freeport, Ill., to points on the Dodgeville branch. Railway officials testified that such shipments should make the same connections at Freeport as at Dill and that no time would be saved by a change. However, the time consumed in transit via Dill should not exceed three days, and it is apparent from the exhibits that the routing via Freeport has resulted in unnecessary delay. We see no valid reason why less than carload shipments between all points in Wisconsin on the Dodgeville branch of the Illinois Central Railroad Company and all points in Wisconsin on the system of the Chicago, Milwaukee & St. Paul Railway Company should not be transferred at Dill, since such a transfer offers the shortest route and should result in faster service than is now obtained with a transfer at Freeport, Ill.

With reference to the need of a track connection for the transfer of carload shipments at Dill, a stock dealer testified that he ships large numbers of Holstein blooded cattle from the district served by the Dodgeville branch. He buys the stock at various points and assembles it at Blanchardville for shipment. He stated that during the past year he had driven about seventy-five carloads to and from Mt. Horeb, New Glarus or Blue Mound for shipment, about 75 per cent of which would have been shipped over the Illinois Central Railroad Company's line via Dill had there been a connecting track at that point. He asserted that the business of raising blooded stock is rapidly increasing in this district. Merchants located on the Dodgeville branch testified they would be inconvenienced by such a track connection by reason of the quicker transit thereby made possible. Representatives of Milwaukee wholesale houses stated that if a connection were installed at Dill they would ship a carload of

small consignments for points on the Dodgeville branch every day or every other day.

The division freight agent of the Chicago, Milwaukee & St. Paul Railway Company submitted a statement which shows that from May, 1913, to March, 1914, inclusive, fifty-one carloads were received or forwarded at points on the Dodgeville branch to or from points on his company's system. He expressed the opinion that the traffic is insufficient to warrant the expense of constructing a physical connection. The assistant general freight agent of the Illinois Central Railroad Company stated that during the six months ending June 30, 1914, only eleven cars of dead freight were shipped from Milwaukee to points on the Dodgeville branch. He also expressed the opinion that the carload traffic is too slight to justify track connection at Dill.

Operating officials of both respondents testified that cars routed via Freeport for points on the Dodgeville branch from points east of Dill would reach their destination as quickly or even more quickly than if routed via Dill. Through trains are operated between Milwaukee and Freeport, whereas to reach Dill a transfer at Janesville would be necessary and for this reason it was claimed that cars would probably be delivered by the same train on the Illinois Central line in either case.

Estimates of the cost of track connection submitted by the respondents are as follows:

	Total cost
1. In southwest angle	
I. C. R. R. Co. clearance length 160 feet, total length 380 ft.	\$1,030.00
C. M. & St. P. clearance length 400 feet, total length 620 ft.	1,906.00
2. In northeast angle	
I. C. R. R. Co. clearance length 300 feet, total length 750 ft.	1,909.12
C. M. & St. P. total length 825 ft.....	2,966.00

The testimony above referred to shows that in eleven months fifty-one carloads of freight moved between points on the Dodgeville branch and points on the system of the Chicago, Milwaukee & St. Paul Railway Company and indicates that the carload traffic would be increased if a track connection at Dill were established. Under the existing arrangements the out-of-line haul from points east of Dill via Freeport is approximately 33 miles which probably involves a cost of not less than \$2.00 per car, while the out-of-line haul from points west of Dill via Freeport is approximately 120 miles, since routing via Warren is not provided for by the tariffs, which probably involves a cost of not

less than \$6.00 per car. The saving in haul, therefore, on seventy-five or even fifty carloads in a year would be sufficient to pay liberal interest upon the investment necessary for the installation of a track connection. Having in mind all of the testimony, it is our judgment that the track connection at Dill is necessary for adequate service. We regard as equitable an apportionment of the cost under which each company shall pay one-half thereof.

IT IS THEREFORE ORDERED, That the respondents, the Illinois Central Railroad Company and the Chicago, Milwaukee & St. Paul Railway Company, construct and maintain a suitable connecting track between their respective tracks at Dill, and readjust their tariffs so as to permit the routing of both carload and less than carload freight to and from all Wisconsin points on the Dodgeville branch of the Illinois Central Railroad Company and on the entire system of the Chicago, Milwaukee & St. Paul Railway Company via Dill, plans for the connecting track to be submitted to the Commission for approval.

In view of the fact that the movement will probably be small during the winter season and that satisfactory construction is difficult at such time of the year, we regard June 1, 1915, as a reasonable date for the completion of the installation herein ordered.

IN RE APPLICATION OF THE KENOSHA MUNICIPAL WATER
PLANT FOR AUTHORITY TO INCREASE ITS RATES.

Submitted Oct. 1, 1914. Decided Nov. 24, 1914.

Application was made by the city of Kenosha as a water utility to increase its rates in order to provide for needed extensions and changes, and to furnish the improved service demanded. It appears that the present water works system requires enlargement and improvement; that a proposal to issue bonds to finance such changes was defeated at the last election; that the city has been paying nothing for fire protection, but that the council of the city recently sanctioned the imposition in the future of a charge not to exceed \$10,000 per year for rental of fire hydrants, such rental to be paid by general taxation; that the improvements contemplated would cost from \$150,000 to \$200,000, and that the present revenues may be substantially increased without yielding an excessive return on the probable value of the plant.

Held: That the need for a greater supply of water and for purer water cannot be overlooked; that no other method of financing the improvements necessary than by a general bettering of the credit of the utility appears possible; that the revenues should be increased approximately \$10,000 per year to effect the desired ends; that as regards the question of fire protection, the correct principle is that the two classes of service furnished by water utilities, i. e. fire protection service and general service, are coördinate, and that each, as far as possible, should be self-supporting; that in justice to all classes of consumers the city should pay for fire protection service, and that in the present case \$10,000 is a conservative amount to pay for such service.

Ordered: That the rates for general water service in the city of Kenosha stand unchanged, and that the city pay its water department \$10,000 per year for fire protection.

Application in this matter was filed September 10, 1914, and sets forth that in order for the city of Kenosha to properly serve its patrons as a water utility, it is necessary to extend its water mains, to re-lay some of its mains in order to provide greater capacity, and to construct a new intake from Lake Michigan from a point in the lake farther out than its present intake, in order to furnish pure water. The application also sets forth that the rates in effect in Kenosha are much lower than rates in other cities in Wisconsin, and that in order to furnish the improved service demanded, it will be necessary to increase the water rates, and that following a petition from the board of wa-

ter commissioners, the common council of the city has enacted an ordinance increasing the rates on November 1, 1914, subject to approval by the Railroad Commission. Attached to the application for authority to increase rates was a statement of the present and proposed rates, showing also the percentage of increase of the proposed rate over the existing rate. In general, these increases amounted to from 20 to 25 per cent for various divisions of the flat rate schedule, although in a few cases and for certain classes of fixtures the increase would be much greater. An increase for the various steps of the meter schedule would be from 14 to 25 per cent, with an average of perhaps 20 per cent for the entire schedule.

Hearing in this matter was held at Kenosha October 1, 1914. Appearances on behalf of the city of Kenosha were *John C. Slater*, city attorney, *Frank Grassner*, president of the board of water commissioners, *John Hageman* and *Neathias Greenwald*, members of the board of water commissioners, and *B. C. Brennan*, superintendent of the water department and city engineer. No appearances were entered in opposition.

The testimony dealt principally with the necessity for extensions to the water works system and to the possible methods of financing such extensions. As far as the testimony goes, it appears that no objection to the proposed increase has been offered by anyone in Kenosha, but it should be borne in mind, of course, that no bills to consumers have been rendered under the new rate, and that consequently objections might be likely to develop later, even if none have been offered already. It appears clear from the testimony that in a number of ways the present water works system requires enlargement and improvement. The city of Kenosha has experienced an unusually rapid growth during the past ten or more years. As a result, water mains laid a number of years ago are now inadequate. Entirely new sections of the city have been built up for which there is at present no satisfactory means of water supply. The intake appears to be too small to meet the demands of industrial and domestic service and supply sufficient water for use in case of large fires. It is also understood that at times the quality of the water furnished is very poor. Although no evidence was introduced as to the bacteriological condition of the water supply, it was shown that at times the water is dirty and not suited for general use. In order to provide against this shortage of water for fire protec-

tion and to insure a supply of purer water, it is proposed by the board of water commissioners to build a much larger intake from a point farther out in Lake Michigan.

Testimony as to the value of the plant, while not entirely conclusive, indicates that the cost has been about \$348,000, although witnesses for the city expressed the opinion that the cost of reproducing the property would be about \$600,000. No thorough investigation as to the value of the property has appeared necessary in this case, but there seems to be no doubt that the value of the plant is considerably in excess of \$350,000. The improvements contemplated would, it appears, cost from \$150,000 to \$200,000. At the time the water utility was acquired by the city of Kenosha, there was an issue of \$137,000 of bonds against the city for utility purposes. While these bonds were outstanding, the city paid a hydrant rental for the purpose of providing for the interest on the bonds, and for retiring the bonds as they came due. Altogether, the city retired \$71,000 worth of the bonds and the revenues from general service were used to retire \$66,000 worth of bonds. All improvements of the water works system, as far as the records in this case show, have been made from the general revenues of the utility, so that the evidence indicates that the entire equity of the city in the plant is limited to the amount which it has paid for the retirement of bonds. As the plant stands to-day, therefore, the city has paid for about \$71,000 of the investment and the general consumers have paid for approximately \$270,000 of the investment. At the last municipal election in Kenosha, the proposal to issue bonds to finance extensions to the water plant was before the voters of the city and was defeated. Consequently, the water commission is confronted with the necessity of finding some other method of financing the needed improvements. It is not expected that the increase in rates asked for would immediately furnish the funds needed for the construction of the intake and the improvement of the distribution system, but it seems to have been the attitude of the city officials that some increase in revenues was necessary in order to improve the credit of the utility itself, so that money might be borrowed in other ways than as a general liability of the city.

At the time of the hearing, the commissioner in charge pointed out to the representatives of the city a number of objections to increasing the rates for general service and relieving the city

entirely from the necessity of paying for fire protection. After the hearing, a conference was held with the members of the water commission, the city attorney, and the city engineer by a representative to the Commission, and a later conference was held with members of the Commission, the city attorney, the city engineer, and about half of the members of the city council. At these conferences, the objections to increasing the rates for general service and relieving the city from payment of the cost of fire protection were thoroughly discussed, and the matter placed before the city council for such further action as it might see fit.

At the meeting of the Council held on November 16, 1914, the following resolution was adopted:

“Resolved, That it is the sense of the Common Council of the City of Kenosha, after conference with the Railroad Commission, that the burden for fire protection should in equity and justice be fairly distributed on all properties, and that a rental for fire hydrants not to exceed \$10,000 per year be charged the City of Kenosha for the fire protection accorded all property, and that the same be paid by general taxation against all taxable property, rather than to increase the water rates to the general consumers, and that the Railroad Commission be advised of the action of the Council in the premises.”

Consequently, the matter now before the Railroad Commission is, first, whether any increase in the revenues of the water department should be authorized, and, second, whether this increase should be obtained by higher charges for general service or by charging the city for fire protection. If it were not for the fact that the city has no other means available of financing improvements in its water plant except such as are dependent upon the earnings of the utility itself, it might not be necessary to authorize any increase in revenues at this time. An inspection of the books of the utility for the fiscal year last past shows that the revenues from general service were \$52,270.79. The total expenses were \$20,584.45, so that the net revenues from operation amounted to \$31,686.34, or about 9 per cent of the actual investment in the plant. With full provision made for depreciation and taxes, the net revenue would still be sufficient to pay at least 6 per cent upon the actual investment in the property, as testified to at the time of the hearing. In connection with this, of course, the claim of the city's representatives that the cost to reproduce the property would be in the neighborhood of \$600,000

must be considered. If the cost to reproduce the plant were as high as \$600,000, the net revenue after providing for taxes and depreciation would probably be between 3 and 4 per cent. If the utility were in the position to finance its extensions by making use of the general credit of the city, we hardly think that an increase in the rates would be required, although it would be difficult to say that an increase in the total revenues of the plant would be unreasonable. As matters stand, however, the city must have its water system extended. The need for a greater supply of water and for purer water cannot be overlooked. No other method of financing the improvements than by a general improvement of the credit of the utility appears possible. Consequently, we believe that the revenues of the utility should be increased by about \$10,000 per year, which is approximately the amount at which the increase asked for by the city has been estimated.

The Commission has generally held that in order for a water works plant to deal equitably with its consumers, a part of the revenue should be obtained from a charge for fire protection furnished by the utility. Practically every water utility furnishes service for the two purposes, of fire protection and of general consumption. In order to furnish these two classes of service, the plant must be equipped differently than would be necessary if only one of them were furnished. If a utility were to furnish water for fire protection only, there would be no requirement as to purity of the supply, neither would as extensive a distribution system be required, nor would it be necessary to have service pipes, meters, and other parts which are essential in a system furnishing both classes of service. If the utility were to furnish water only for general consumption and had no obligation to furnish fire protection, there would also be certain economies in construction and operation resulting from the restricted nature of the requirements imposed. If service were furnished only for the ordinary domestic and industrial uses, there would be no necessity usually for the water plant to be able to maintain a high pressure, neither would it be necessary to have as large capacity in intakes, pumping equipment, and distribution system. The extreme fluctuations caused by the demands for fire protection purposes would be eliminated, and consequently both construction and operating conditions could be adjusted to the more uniform demands for general service, usually with considerable

saving in expense. Some water works men have held that the only charge which should be paid for fire protection is the actual added cost of the service above what the cost would be for a system to furnish general service only. This seems to us no more logical than it would be to argue that the rates for general service should be only enough to cover the excess of the operating costs of a combined plant over the operating costs of a plant to furnish adequate fire protection only. The correct principle seems rather to be that the two classes of service furnished by water utilities are coordinate; that as far as possible each should be self-supporting, and that when this is not the case, there is to some extent an unfair discrimination either in favor of the city which uses fire protection or in favor of the general users who use water for culinary and sanitary purposes. In a general way, the Commission has found that from 40 to 60 per cent of the fixed charges upon the investment in water works plants is chargeable to the fire protection service, the amount in any particular case being dependent upon the extent of the fire service demand, the location of the area of greatest fire risk, the character of the water supply, the nature of the demand for general purposes, and a number of other items; also the fire protection service has generally been charged with a part of the operating expenses of the utility, varying roughly from one-fifth to one-third of the total expenses. If this principle were to be applied strictly in the city of Kenosha, a charge for fire protection would need to be made considerably above the amount of increased revenue required. It is important that each branch of the service bear its own cost. In the case of a municipal plant, a charge for hydrant rental does not amount, as some cities have argued, to taking money from one pocket and putting it in another. When the charge for fire protection is not made and the necessary revenue is secured from general consumers, the distribution of the cost of fire service is made according to the amount of water used by the various consumers, although there may not be and often will not be very much relation between the amount of water used and the contribution of each individual consumer to the general fire risk. For example, a large factory which materially affects the fire risk of a city, might use very little water, and consequently pay very little for its fire protection, if the cost of fire protection were to be borne by the general consumers. Residence users in areas not closely built up, that is, in ordinary residence

districts, do not usually cause a heavy fire risk. Such fire risk as there is can ordinarily be met without calling upon nearly all of the available capacity of a properly constructed water utility. Residence users, therefore, would probably be paying proportionately large amounts for fire protection if the cost of such protection is not borne by the city.

In order to secure justice to all classes of consumers, therefore, it seems that the city should pay a reasonable amount for fire protection, and that the amount of increased revenue necessary in Kenosha, or about \$10,000 per year, is a conservative amount for the city to pay for fire protection. In view of all these things and of the fact that the city council of Kenosha has passed a resolution expressive of its belief that a charge for fire protection is fair, we believe that such a charge should be ordered in this case.

IT IS THEREFORE ORDERED :

1. That the rates for general water service in the city of Kenosha shall stand unchanged.
2. That the city of Kenosha shall pay to its water department for fire protection \$10,000 per year.

J. C. McNAIGHT ET AL.

vs.

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted Aug. 11, 1914. Decided Nov. 24, 1914.

The petition alleges that the respondent has been receiving free telephone service at its Juda depot from the local telephone company, which threatens to discontinue the service unless the usual rental is paid. The Commission is asked to require the respondent to maintain telephone service at the station in question. The respondent is willing to install a pay station, but the telephone company declines to restore the pay station, which was at the depot until June 1914 and which was removed by the company because the revenue from tolls was insufficient, and because the respondent refused to pay the usual rental for a business telephone. The need for the service requested, and the freight revenues at the station in question were considered.

Held: That adequate service for respondent's patrons at the station in question necessitates the maintenance of telephone communication with the station and that under such circumstances the Commission is directed by statute to require adequate connection. Such connection is accordingly ordered. Since the local company is not willing to install a pay telephone, the installation of a business telephone is ordered.

The petition, which is signed by sixty persons, alleges that the Chicago, Milwaukee & St. Paul Railway Company has been receiving free telephone service at its Juda depot from the local telephone company which now threatens to discontinue the service unless the usual rental is paid, and that residents of the village of Juda and the towns of Oakley and Twin Grove are greatly in need of telephone connection with the Juda station. The Commission is therefore asked to require the respondent to maintain telephone service at its Juda station.

The respondent, in its answer, alleges that business conditions do not warrant the expense of renting a telephone at Juda, but that it is willing to have a pay telephone installed in the agent's office which will enable subscribers to call the depot and secure information regarding trains, shipments, etc. from the agent who will answer such calls. It therefore asks that the complaint be dismissed.

A hearing was held at Juda on August 11, 1914. *J. C. McNaight* appeared for the petitioners and *N. P. Thurber* for the respondent.

The testimony shows that Juda has a population of about three hundred and that each of the tributary villages of Oakley and Twin Grove has about one hundred inhabitants. The Jefferson Telephone Company, which operates in the vicinity of Juda, has 160 subscribers and about sixty miles of line extending as far as ten miles into the country. The rental charged is \$1.25 per month for a business telephone. Respondent's station is located about one-half mile from the village of Juda. A telephone pay station was maintained in the depot up to June 1914, but the service was discontinued because the revenue from tolls was insufficient and because respondent refused to pay the usual rental of a business telephone. The president of the Jefferson Telephone Company stated that his company would not restore the pay station at the depot, but that it would install a telephone for the customary rate of \$1.25 per month.

Witnesses testified that they need telephonic connection with the depot in order to ascertain whether consignments of freight have arrived, to arrange for cars without a trip to the station, to facilitate the shipment of stock, to ascertain whether passenger trains are late, and to receive and transmit telegraph messages. It was pointed out that many patrons live several miles from the station and that the village is about one-half mile distant therefrom, thus making it inconvenient to reach the depot in person.

Respondent's superintendent stated that freight forwarded at Juda yields an average revenue of \$520 per month and freight received an average of \$1,000 per month. He asserted that the telephone was not frequently used when installed and expressed the opinion that traffic conditions do not warrant its restoration by the railway company.

It is evident from the testimony that adequate service for the patrons of the railway company at Juda necessitates the maintenance of telephonic connection with the depot and under such circumstances the Commission is directed by the statutes to require adequate telephone connection. Inasmuch as the Jefferson Telephone Company is not willing to install a pay telephone station at the depot, a business telephone should be installed.

IT IS THEREFORE ORDERED, That the respondent, the Chicago, Milwaukee & St. Paul Railway Company, furnish adequate telephone connection between its depot at Juda and the telephone system of the Jefferson Telephone Company by installing a business telephone.

W. G. BISSELL

vs.

CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted Oct. 2, 1914. Decided Nov. 24, 1914.

Complaint was made that the passenger train service furnished by respondent at Devil's Lake, Wis., is inadequate, and the Commission was asked to require respondent to stop northbound train No. 505 and southbound train No. 510 at Devil's Lake to receive and discharge passengers during the period from June 1 to October 1 each year. It appears that Devil's Lake station is three miles south of Baraboo, at which all passenger trains stop; that at present three trains each way stop at Devil's Lake, and that train No. 505 is a heavy steel train operated for through traffic between Chicago and Minneapolis. Respondent offered to make Devil's Lake a regular stop for train No. 503, and a flag stop for train No. 510, such service to be afforded from June 1 to September 15.

Held: That with such additional accommodation the train service at the point in question will be reasonably adequate under existing conditions. The respondent is ordered to furnish such service.

The petitioner alleges in substance that the passenger train service furnished by the Chicago & North Western Railway Company at Devil's Lake is inadequate, and asks that respondent be required to stop its northbound train No. 505 and its southbound train No. 510 at Devil's Lake to receive and discharge passengers during the period from June 1 to October 1 each year.

Respondent, in its answer, alleges in substance that the existing passenger train service at Devil's Lake is adequate, and asks that the petition be dismissed.

A hearing was held at Milwaukee on October 2, 1914, at which *W. G. Bissell* appeared in his own behalf and *E. E. Nash* for the respondent.

Petitioner lives in Milwaukee and has a summer residence at Devil's Lake. He complained that in making the trip from Milwaukee to Devil's Lake in the evening one is obliged to wait at Madison from 10:20 p. m. to 12:05 a. m., arriving in Devil's Lake at 1:07 a. m., although two trains which pass through Devil's Lake leave Madison between those hours. If one of these trains,

preferably No. 505, which leaves Madison at 10:50 p. m., were stopped on signal at Devil's Lake, this portion of the complaint would be eliminated. Petitioner also complained that the morning southbound train, which leaves Devil's Lake at 8:00 a. m., does not make satisfactory connections for Milwaukee at Madison, it being necessary to wait from 9:05 a. m. to 1:05 p. m. If train No. 510 stopped at Devil's Lake after leaving Baraboo at 6:38 a. m., it would enable residents of Devil's Lake to reach Madison at 7:40 a. m., and connect with the 8:05 a. m. train for Milwaukee. It was not shown, however, that any considerable number of summer residents at Devil's Lake make frequent trips to points east of Madison.

Devil's Lake station is three miles south of Baraboo at which all passenger trains stop. On the shores of the lake are about forty cottages which accommodate about five persons each during the summer. There is also a hotel with connected cottages which can shelter about one hundred persons. Visitors are entertained for short periods and are constantly coming and going. The State Park Board has acquired property on the lake and is developing it as a state park.

Respondent's assistant general superintendent testified that the train service at Devil's Lake is as follows:

<i>Northbound</i>		<i>Southbound</i>	
Train No.	Arrive Devil's Lake	Train No.	Arrive Devil's Lake
507.....	8:42 a. m.	518.....	8:00 a. m.
517.....	2:15 p. m.	508.....	11:30 a. m.
513.....	6:42 p. m.	516.....	4:28 p. m.

He stated that the respondent is willing, in addition to the service described above, to make Devil's Lake a regular stop for train No. 503, due there northbound at 1:07 a. m., and to make Devil's Lake a flag stop for train No. 510, due there southbound at 6:47 a. m., for passengers ticketed east and west of Madison, but not including Madison, the service of these trains to be afforded from June 1 to September 15. He testified that train No. 505, which petitioner asked to have stopped at Devil's Lake, is the Northwestern Limited, a heavy steel train of eleven to fourteen coaches, operated for through traffic between Chicago and Minneapolis.

In the light of the testimony it is our opinion that with the additional accommodation afforded by stopping trains No. 503 and No. 510, train service at Devil's Lake will be reasonably adequate under the existing traffic conditions.

IT IS THEREFORE ORDERED, That the respondent, the Chicago & North Western Railway Company, make Devil's Lake a regular stop for its train No. 503, scheduled to arrive there at 1:07 a. m., and make Devil's Lake a flag stop for its train No. 510, scheduled to arrive there at 6:47 a. m., said service to be rendered from June 1 to September 15, each year.

IN RE DETERMINING THE HIGH WATER MARK TO BE ESTABLISHED ON THE REST LAKE RESERVOIR OPERATED BY THE CHIPPEWA AND FLAMBEAU IMPROVEMENT COMPANY.

Submitted June 19, 1914. Decided Nov. 24, 1914.

Complaint was made that the adoption of the high and low water marks suggested by the Chippewa and Flambeau Improvement Co. for its Rest Lake reservoir would result in injury to petitioners' property and to the fish of the lakes involved, and a further hearing was requested. It was alleged that a wide variation in the level is allowed at certain seasons of the year; that the variation in level causes property owners inconvenience and expense in adjusting their piers and boat houses to the changing conditions, that violent changes in the level are destructive to fish, especially during the spawning season, and that as a result of the very low stage in the winter many fish are trapped in bays and die there. Property owners urged the adoption of various maximum levels (as measured by the guage at the Rest Lake dam) ranging from 6 feet to 8 feet, and a minimum level not more than 2 feet lower than the maximum. The company suggested that a maximum of 10 feet be allowed in the spring, dropping to 6 feet 6 inches from June 1 to October 1, and running as low as possible during the fall and winter. It appears that the shore line affected by the stage of water maintained is approximately 60 miles in length, and that the number of people frequenting the lakes for fishing and hunting or for other purposes is rapidly increasing.

Held: That, due regard being had for the interests of property owners in the vicinity, of the state at large, and of the company, the level maintained at the Rest Lake dam should not exceed 8 feet on the guage, or 14 feet 6 inches below the top of the bench mark set by the Commission; that the level should not be allowed to fall below 5 feet 6 inches on the guage, or 17 feet below the top of the above bench mark; and that the Rest Lake dam is in poor physical condition and should be repaired in the near future.

Ordered: That the company maintain the level of the reservoir controlled by its Rest Lake dam with the least variation consistent with its proper use, and maintain the level between the maximum and minimum points stated in the decision.

Chapter 640, laws of 1911, authorizes the Chippewa and Flambeau Improvement Company to construct, acquire, maintain and operate a system of water reservoirs located on the headwaters of the Chippewa and Flambeau rivers and their tributaries, as described therein, for the purpose of producing a uniform flow of water in the Chippewa and Flambeau rivers and their tribu-

taries, and thereby improving the navigation and other uses of said streams and diminishing the injury to property both public and private. Sec. 6 of this chapter provides among other things the following:

“Such railroad commission shall cause the height to which the water may be raised by any dam to be indicated by permanent monuments and bench marks, and shall have supervision and control of the time and extent of the drawing of water from the reservoirs, and the power to compel the maintenance of all reservoirs established.”

The Chippewa and Flambeau Improvement Company having requested the Commission to authorize the adoption of certain high and low water marks, a hearing in the matter was duly ordered and held at Madison on December 9, 1912. On February 1, 1913, a petition signed by thirty residents of the area affected by the reservoirs of the Chippewa and Flambeau Improvement Company was filed with the Commission alleging that the adoption of the high and low water marks suggested by the company would result in injury to their property and to the fish in the lakes, and asking for a further hearing in the vicinity of the lakes affected. Hearings were therefore held on June 18 and 19, 1914, at George W. Buck's Spider Lake resort, and at numerous other points on the lakes tributary to the dam in question. At these hearings the Chippewa and Flambeau Improvement Company was represented by *W. L. Davis*, *Guy Waldo* and *C. B. Stewart*, and numerous property holders appeared in their own behalf.

The water area affected by the Rest Lake dam includes Rest Lake, Stone Lake, Spider Lake, Manitowish Lake, Star Lake, Island Lake, Alder Lake and Rice Lake and comprises approximately seven and three-tenths square miles. Twenty-one other lakes are tributary to the reservoir, but are not affected by the level maintained. The entire watershed which is drained through the Rest Lake dam covers about 225 square miles. The shore line affected by the stage of water maintained is approximately sixty miles in length. The dam in question was originally built by the Chippewa Lumber and Boom Company for the purpose of raising the water for floating logs, and was later acquired by the Chippewa and Flambeau Improvement Company. It is located in section 9, township 42 north, range 5 east.

The testimony shows that prior to the transfer of the dam to the Chippewa and Flambeau Improvement Company the water

was allowed to rise as high as 15 feet on the gauge at the Rest Lake dam during the winter months, with considerable variation throughout the year. In recent years, however, the maximum head has been somewhat lower. At the time of the hearings in June 18, 1914, the gauge reading was 9 feet 7½ inches and on September 16, 17 and 18, 1914, our engineer reports it as 8 feet 9½ inches, 8 feet 10 inches and 8 feet 10½ inches, respectively. Witnesses testified that a wide variation in level is allowed at certain seasons of the year.

For some years logging has practically ceased in the vicinity of the lakes affected by the Rest Lake dam, and the surrounding country is what is known as cut-over land. The shores are now principally used for summer homes and resorts, and the number of persons who frequent the lakes for fishing and hunting or for other purposes is rapidly increasing. Numerous witnesses who maintain resorts or summer homes on these lakes described the effect of the dam operation on their property and on the fish in lakes. It was claimed that at high water the banks are eaten away by the waves, and that property owners have incurred considerable expense in protecting their shores from erosion. Many specific instances of this sort were pointed out on the trip of inspection through the lakes during which testimony was taken. Witnesses also stated that the variation in level causes them inconvenience and expense in adjusting their piers and boat houses to the changing conditions. It was asserted by witnesses who have resided many years in the vicinity, that violent changes in the level are destructive to fish, especially during the spawning season, and that as a result of the very low stage in the winter many fish are trapped in bays and die there.

Various opinions were expressed as to the maximum and minimum levels which should be maintained. The company's representative suggested that a maximum of 10 feet be allowed in the spring, dropping to 6 feet 6 inches from June 1 to October 1, and running as low as possible during the fall and winter. Property holders urged the adoption of various maximum levels ranging from 6 feet to 8 feet and a minimum level not more than 2 feet lower than the maximum. They objected to any change of level during the spawning season for fish. The suggestion of the company, to allow the level to reach the natural flowage point during the winter, was objected to by witnesses, who claimed that many fish have been killed, and that the injury to boat

houses and piers caused by the breaking up of the ice has been increased because of the adoption of this policy in the past.

Our chief engineer and two other members of the staff have investigated the conditions at the Rest Lake dam and have set a permanent bench mark designated as "Railroad Commission Bench Mark Number 2" at a point due north from the east guard rail of the top of the dam and at a distance of 221.8 feet from the middle of the center sluice.

Having in mind the testimony and the report of our engineering staff and the interests of the owners of property in the vicinity, the state at large, and the Improvement Company, it is our opinion that the level maintained at the Rest Lake dam should not exceed 8 feet on the gauge, which is equivalent to 14 feet 6 inches below the top of the bench mark above referred to, and that the level should not be allowed to fall below 5 feet 6 inches on the gauge, which is equivalent to 17 feet below the top of the bench mark.

The Rest Lake dam is in poor physical condition and should be repaired in the near future. In order to properly maintain the level of the reservoir with the existing spillway it is essential that all of the gates be kept in proper condition for operation so that they can be raised or lowered at will, regardless of the head of water. Necessary repairs to the dam should be made immediately.

IT IS THEREFORE ORDERED, That the Chippewa and Flambeau Improvement Company maintain the level of the reservoir controlled by its Rest Lake dam, located in section 9, township 42 north, range 5 east, in the town of Flambeau, Vilas county, Wisconsin, with the least variation consistent with the proper use of said reservoir; and maintain said level between a minimum point 17 feet below the top or Railroad Commission Bench Mark Number 2, and a maximum point 14 feet 6 inches below the top of said bench mark.

VESPER WOOD MANUFACTURING COMPANY

vs.

GREEN BAY AND WESTERN RAILROAD COMPANY,
MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY
COMPANY.

Submitted Sept. 8, 1914. Decided Nov. 24, 1914.

Complaint was made of excessive charges on a carload of silos shipped over respondents' lines from Vesper, Wis., to La Crosse, Wis. The petitioner alleges that at the time the shipment in question moved there was in effect between the two points, over the line of the C. M. & St. P. Ry. Co., a rate of 7 cts. per cwt. applicable to such shipment, and that a reasonable rate for such shipment is 7 cts. per cwt. The Commission is asked to order refund on that basis and to require the respondents to meet the rate of the C. M. & St. P. Ry. Co. It appears that the distance between the two points is 155 miles over respondents' lines, and only 89 miles over the line of the C. M. & St. P. Ry. Co.; that at the time the shipment moved there was in effect no joint through rate embracing the commodity in question via respondents' lines from Vesper to La Crosse, and that therefore the sum of two locals, or 11.9 cts. per cwt., was applied; that the single line rate for the total distance involved at the time the shipment moved would have been 8½ cts. per cwt.; that subsequent to the shipment respondents provided for the application of their lumber rates to wooden silos; that the application of lumber rates on silos is now in force generally via all lines in Western Trunk Line territory, and that under such application the rate in question would have been 8 cts. per cwt. between Vesper and La Crosse, via respondents' lines, instead of 11.9 cts.

Held: That there is nothing in the Wisconsin law, or in any order of general application issued by the Commission, which requires competing lines of railroads to meet each other's rates on traffic moving between the same points; that a shipper, who does not ascertain, before making shipment, the rates, conditions, etc. in effect should not expect to escape responsibility for difficulties resulting from his own negligence; that the present rate of 8 cts. per cwt. for the service in question is reasonable, and that a reasonable rate at the time the shipment moved would have been 8½ cts. per cwt. Refund ordered on that basis.

The petitioner alleges that on August 14, 1912, it shipped a carload of silos over the respondent's lines of railroad from Vesper, Wis., to La Crosse, Wis., and was charged therefor at the rate of 12 cts. per cwt.; that at the time said shipment moved

there was in effect a rate over the lines of the Chicago, Milwaukee & St. Paul Railway of 7 cts. per cwt. applicable to such shipment; that the rate exacted by the respondents upon the aforesaid shipment was unusual and excessive, and that the reasonable rate for such shipment is 7 cts. per cwt. Wherefore, petitioner prays that the respondent railway companies be authorized and directed to refund to it the excess charge.

The matter came on for hearing September 8, 1914, and there was no appearance by petitioner. The respondents were represented by *A. H. Lossow*, commerce counsel of the Minneapolis, St. Paul & Sault Ste. Marie Railway Company.

The question involved in this case is the reasonableness of the rate on silos moving in carload lots from Vesper, Wis., to La Crosse, Wis., over the respondent's lines. It appears that on or about August 13, 1912, the petitioner shipped a carload of wooden silos from Vesper to La Crosse on which charges were assessed and paid at 12 cts. per cwt., amounting to \$43.20; that at the time the shipment moved the rate on wooden silos in carload lots locally over the line of the Chicago, Milwaukee & St. Paul Railway from Vesper to La Crosse was 7 cts. per cwt., subject to a minimum weight of 3,600 lb., which would make a charge on the shipment in question, if the same had been sent by such route, of \$25.50; that on or about March 1, 1914, respondents provided for the application of their lumber rates on wooden silos, which rate on August 13, 1912, from Vesper to La Crosse was 8 cts. per cwt. In the petition the request is made that the respondents be required to meet the rate over the line of the Chicago, Milwaukee & St. Paul Railway, and that a refund be authorized on such basis. Nevertheless, in a letter addressed to the Commission under date of May 29, 1914, the petitioner concedes that a rate of 8½ cts. would be reasonable and satisfactory, for the reason that the distance between Vesper and La Crosse over respondent's lines is 155 miles, for which distance the Class D local rate over respondent's lines is 8½ cts., while the distance over the line of the Chicago, Milwaukee & St. Paul Railway is only 89 miles.

An examination of tariffs on file with the Commission shows that the statements as to rates in force set forth above are correct, except that the rate via respondent lines from Vesper to La Crosse was 11.9 cts. instead of 12 cts.; that the rate of 8 cts. established March 1, 1914, on wooden silos, carloads, from Ves-

per to La Crosse via respondent lines is still in force; that the application of lumber rates on silos has been in force generally via all lines in Western Trunk Line territory, including respondent lines, since March 1, 1914, and via many of these lines since November 1, 1913, and that prior to November 1, 1913, this commodity was subject to Class D rates generally on Western Trunk Lines, including the respondent lines and all other important western lines.

There is nothing in the evidence submitted tending to show why the shipment complained of was made over the respondent lines instead of over the Chicago, Milwaukee & St. Paul Railway Company lines. It is assumed that shippers were not aware of the differences in rates, but took it for granted that the same rate would apply over each route. As a matter of fact, it is customary for railroads to meet each other's rates under conditions similar to those involved in this case. If, however, an established rate for a distance of 89 miles over a single line can be shown to be a reasonable one, its reasonableness for a distance of 155 miles over a two line haul would be rather difficult to maintain.

From the correspondence in connection with the claim under consideration and from correspondence between the Commission and other shippers throughout the state, it appears that many shippers are under the impression that competing lines of railroads are required by law to meet each other's rates on traffic moving between the same points. There is nothing in the Wisconsin law, however, or in any order of general application issued by the Commission, that requires railroads to do this. Rates that are the same between the same points over competitive railroads where there is a material difference in mileage are usually the result of voluntary action by the railroads. Where railroads do not meet each other's rates between the same points it is usually for the reason that the line having the greater mileage does not believe that the rates fixed by the line with shorter mileage are sufficiently compensatory for the greater distance. In such cases the longer line does not care to participate in the traffic and prefers to let the short line have it. And where railroads do not meet each other's rates between the same points, it would seem clear that a shipper who has made no effort to ascertain the rates, conditions, etc., in effect before making shipment, and as a result thereof has shipped his freight over the longer

line, at the higher rate, can not expect to escape responsibility for the difficulties resulting from his own negligence.

Prior to March 1, 1914, as stated, Class D rates applied on wooden silos in carloads. At the time shipment complained of moved, there was no joint through Class D rate in force via respondent lines from Vesper to La Crosse, therefore the sum of the local rates to and from Grand Rapids was applied. The sum of local rates, except for short hauls, generally results in through rates that are excessive when compared with joint through rates for like service between points where there are joint rates. Joint through rates, where established, are generally the same as local rates and especially so where there is a single line haul between the same points such as is involved in the case under investigation. If the distance on the Chicago, Milwaukee & St. Paul Railway between Vesper and La Crosse happened to be the same or nearly so as the distance via respondent lines, it is practically certain that rates would be the same over both lines and that these rates would be the single line rates. The single line Class D rate for distance of 155 miles is $8\frac{1}{2}$ cts. per cwt. Without going into the many further details that could be brought up in connection with this case, it appears that at the time shipment complained of moved a reasonable rate applicable thereto would have been $8\frac{1}{2}$ cts. per cwt., and that the charges collected in excess of this rate are excessive. The paid freight bill, which was filed with the petition, shows that charges amounting to \$43.20 were assessed and paid. At $8\frac{1}{2}$ cts. per cwt. the charges would amount to \$30.60, which is based on weight of 36,000 lb. shown on freight bill. There is therefore excessive charge of \$12.60. Inasmuch as the rate in force since March 1, 1914, has been 8 cts. per cwt., the order in this case will not effect a change in rate.

We therefore find and determine that the charge exacted of the petitioner on the aforesaid shipment is unusual and exorbitant and that the reasonable charge therefor is 8 cts. per cwt.

Now, THEREFORE, IT IS ORDERED, That the Green Bay & Western Railroad Company and the Minneapolis, St. Paul & Sault Ste. Marie Railway Company be and the same are hereby authorized and directed to refund to petitioner the said sum of \$12.60.

F. BOTTOMLEY ET AL.

vs.

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted Aug. 12, 1914. Decided Nov. 25, 1914.

The petition asks that the respondent be required to place a telephone connected with the system of the Darlington Farmers' Tel. Co. in its Darlington station. It appears that the La Fayette County Tel. Co. serves the larger portion of the city telephone users, and that the Darlington Farmers' Tel. Co.'s chief business is the performance of switching service for three rural systems which control it. The La Fayette County Tel. Co. has an instrument installed in respondent's station. A physical connection between the two systems involved was found not to be necessary in the case *Belmont & Pleasant View Tel. Co. et al. v. Wis. Tel. Co. et al.* 1914, 15 W. R. C. R. 92. However, while there is no direct connection between the two systems, it is possible for subscribers on one system to reach subscribers on the other indirectly over the toll lines of the Wis. Tel. Co.

Held: That under all the circumstances the installation of a second business telephone in the respondent's station at Darlington is not warranted, and that, if a more direct connection with the railway depot is desired by the Darlington Farmers' Tel. Co. and its patrons, a pay station may be installed in accordance with a previous ruling of the Commission.

Ordered: That the respondent permit the Darlington Farmers' Tel. Co. to install a pay station in accordance with the conditions set forth in Finding No. 3 of the Commission's former order, *In re Free and Reduced Rate Telephone Service*, 1908, 2 W. R. C. R. 521, 543.

The petition, which is signed by 55 persons, asks that the Chicago, Milwaukee & St. Paul Railway Company be required to place a telephone in its Darlington station connected with the system of the Darlington Farmers' Telephone Company.

Respondent filed no formal answer, but submitted a letter from its assistant general manager in which it is stated that a telephone is maintained in the depot at Darlington at a cost of \$30 per year, and that to install an additional telephone as requested by petitioner would cost \$18 per year, which expense is unwarranted.

A hearing was held at Darlington on August 12, 1914. *F. Bottomley* appeared for the petitioners, *F. A. Hinkins* for the Dar-

lington Farmers' Telephone Company, *H. H. Wright* and *Wm. Brecken* for the Willow Springs Telephone Company, and *N. P. Thurber* for the Chicago, Milwaukee & St. Paul Railway Company.

The testimony shows that the Darlington Farmers' Telephone Company is controlled by three rural systems known as the Belmont and Pleasant View Telephone Company, the Iowa and La Fayette County Telephone Company and the Willow Springs Telephone Company, and that its chief business is to perform the switching for these three systems which are connected by its exchange. It also has a number of local subscribers in the city of Darlington. The larger portion of the city telephone users are served by the La Fayette County Telephone Company which conducts a city exchange and has an instrument installed in respondent's station. There is no direct connection between the systems served by the exchange of the Darlington Farmers' Telephone Company and the system of the LaFayette County Telephone Company, but it is possible for subscribers on one system to reach subscribers on the other lines indirectly over the toll lines of the Wisconsin Telephone Company. Witnesses stated that if a direct physical connection between the two Darlington exchanges were provided, so that farmers connected with the exchange of the Darlington Farmers' Telephone Company could call the respondent's depot without extra charge, the present complaint would be satisfied. The question of a physical connection between the three rural lines served by the Darlington Farmers' Telephone Company's exchange and the system of the La Fayette County Telephone Company was brought before the Commission in a recent case. (*Belmont and Pleasant View Tel. Co. et al. vs. Wis. Tel. Co. and La Fayette Co. Tel. Co.* 1914, 15 W. R. C. R. 92.) In that proceeding the evidence did not show that such a connection was necessary, and the petition was accordingly dismissed.

The testimony in the present case shows that a large number of subscribers served by the Darlington Farmers' Telephone Company and its connecting companies forward and receive freight at Darlington and make use of passenger service there. Many of these patrons reside at points several miles distant from the station, and for such persons telephonic connection with the station is a great convenience. Darlington has a population of about 1,800.

In the light of the testimony it is our judgment that the installation of a second business telephone in the respondent's station at Darlington is not warranted. The railway company now maintains a telephone in its depot connected with the principal city exchange at an expense of \$30 per year. This exchange has a connection with the system of the Wisconsin Telephone Company and subscribers of the Darlington Farmers' Telephone Company can now reach the depot telephone over the toll lines of the Wisconsin Telephone Company by way of Belmont or Mineral Point. If a more direct connection with the railway depot is desired by the Darlington Farmers' Telephone Company and its patrons, a pay station may be installed in accordance with our ruling *In Re Free and Reduced Rate Telephone Service*, 1908, 2 W. R. C. R. 521, in which the following language is used at page 543:

"Where the telephone service in railway stations may be reasonably required under the provisions of ch. 614, laws of 1907, railway companies should pay the regular business rates. However, in stations at which the railway company can not reasonably be expected to pay for a telephone, or where it already pays for one or more instruments, it is permissible for telephone companies desiring, for the benefit of their subscribers, to have connection with such railway station, to place a "pay telephone" into the same. Under these conditions all subscribers of the telephone company in question can call up the station free of charge, but messages sent from the station to subscribers must be paid for, except that railway agents may convey official messages through such telephones to subscribers without charge.

"At larger railway stations, where the convenience of the public requires it and the volume of the business warrants it, telephone companies shall be permitted to install pay-station telephones with attendants, to be paid by the telephone companies."

The respondent will be directed to permit the installation of a pay telephone by the Darlington Farmers' Telephone Company in its depot under the conditions above set forth.

IT IS THEREFORE ORDERED, That the respondent, the Chicago, Milwaukee & St. Paul Railway Company, permit the Darlington Farmers' Telephone Company to install a pay telephone station in its depot at Darlington in accordance with the conditions set forth in Finding 3 of the Commission's order *In Re Free and Reduced Rate Telephone Service* 2 W. R. C. R. 521, as quoted herein.

H. O. WATRUD

vs.

ILLINOIS CENTRAL RAILROAD COMPANY.

Submitted July 10, 1914. Decided Nov. 27, 1914.

Complaint was made that the respondent was failing to operate certain trains on its Dodgeville branch so as to regularly connect at the junction at Dill with the trains of the C. M. & St. P. Ry. Co.; that the time available for the transaction of business at Dodgeville between the arrival of the morning train northbound, and the departure of the latest train southbound is insufficient, and that under the existing arrangement it is often necessary to carry less than carload freight from stations north of Dill to Dodgeville, and deliver it on the return trip, thereby causing delay and injury to less than carload freight. It appears that the trains complained of are frequently very late, so that connections at Dill are uncertain; that the morning northbound train is also frequently very late, so that persons living at points south of Dodgeville cannot depend on having more than a couple of hours for the transaction of business in Dodgeville if they return the same day; that about 18 per cent of the passenger traffic on the branch in question transfer at Dill, and that the number would be increased if surer connections were established at that point. The service involved was investigated in two previous cases, *Knapp v. I. C. R. Co.* 1910, 5 W. R. C. R. 176, and *In re Dodgeville Branch of the I. C. R. Co.* 1912, 10 W. R. C. R. 572. It was suggested that a later southbound train to connect with the westbound train at Dill would afford more time between trains at Dodgeville, and also more satisfactory service for persons wishing to travel west of Dill.

Held: That the quantity of service rendered by the respondent is sufficient, considering the traffic conditions, but that the quality has been very poor, owing to the lateness of trains; that the respondent has not complied with the order in the case, *In re Dodgeville Branch of the I. C. R. Co.* 10 W. R. C. R. 572; that the present complaint would apparently be satisfied if that order should be strictly complied with, and that unless the service is materially improved so as to comply with such order, the Commission will take the necessary steps to insure its enforcement.

The petition is dismissed.

The petition alleges in substance that the train service rendered by the Illinois Central Railroad Company on its Dodgeville branch is inadequate in that its train number 331, northbound, frequently fails to connect with the westbound train on the line of the Chicago, Milwaukee & St. Paul Railway Company,

both trains being scheduled to leave the junction at Dill at 8:53 p. m., in that its train number 362, southbound, frequently fails to connect with the eastbound train on the line of the Chicago, Milwaukee & St. Paul Railway Company which is scheduled to leave Dill at 5:40 p. m., and in that the time available for the transaction of business at Dodgeville between the arrival of the morning train northbound, and the departure of the latest train southbound is insufficient. It is also alleged that under the existing arrangement it is often necessary to carry less than carload freight from stations north of Dill to Dodgeville and deliver it on the return trip, thereby causing delay and injury to perishable freight. The Commission is therefore asked to take such action as it deems just in the premises.

No formal answer was filed.

Hearings were held at Dodgeville on July 8, 1914, and at Madison on July 10, 1914. *Simon Saucerman* appeared for the petitioner and *Jones & Schubring*, by *E. J. B. Schubring*, for the respondent. The Chicago, Milwaukee & St. Paul Railway Company was represented by *N. P. Thurber*.

The service on the Dodgeville branch of the Illinois Central Railroad Company has been investigated by the Commission in two former proceedings. *Knapp v. I. C. R. Co.* 1910, 5 W. R. C. R. 176, and *In re Dodgeville Branch of the I. C. R. Co.* 1912, 10 W. R. C. R. 572. In the latter case the order provides that the evening train north on the Illinois Central Railroad Company's line and the evening train west on the line of the Chicago, Milwaukee & St. Paul Railway Company be scheduled to arrive at Dill at 8:53 p. m., and that each wait not less than 15 minutes for the other in case of delay, and that the schedule of the northbound mixed train be arranged so that it will arrive at Dodgeville not later than 11:10 a. m., with an allowed variation of one hour, and leave for the return trip not earlier than 3 p. m.

Witnesses stated that the evening trains have failed to connect at Dill on several occasions since the order above referred to was issued, more frequently during the winter months, owing to the lateness of a main line train with which the Illinois Central train connects at Freeport, Illinois. Respondent submitted a record covering the period from April 14, 1914, to June 11, 1914, inclusive, which indicates that connection was made on 31 days and that it was missed once. However, on 19 days no record of con-

nection was kept. A statement submitted by the Chicago, Milwaukee & St. Paul Railway Company shows that during March, April and May 1914 its evening train waited from 5 to 20 minutes for the Illinois Central Railroad Company's train on 46 days.

The afternoon train south on the Illinois Central Railroad is scheduled to leave Dodgeville at 3 p. m. and to arrive at Dill at 5:25 p. m., connecting there with an eastbound train on the Chicago, Milwaukee & St. Paul Railway scheduled to leave at 5:40 p. m. Both trains are mixed freight and passenger trains and both are frequently behind schedule. Petitioner asserted that the Chicago, Milwaukee & St. Paul Railway Company's train almost always leaves before the southbound train arrives. A record submitted by the respondent shows that from April 14, 1914, to June 11, 1914, inclusive, this connection was made every day, although the southbound train was rarely on time, being more than 30 minutes late on 35 days and arriving at 7 p. m. on three days.

The morning train, northbound, on the Illinois Central line is scheduled to arrive at Dill at 8:20 a. m. and at Dodgeville at 11:10 a. m. Witnesses stated that this train usually arrives at Dill near its scheduled time, but that the westbound train on the Chicago, Milwaukee & St. Paul Railway Company's line is a mixed train which is rarely on time, making the connection very uncertain.

It was also pointed out that this morning northbound train is frequently late in arriving at Dodgeville. A statement submitted by respondent shows that from May 11, 1914, to July 9, 1914, inclusive, the train was on time only 3 times, that it arrived later than 12 noon 39 times and later than 1 p. m. 13 times. Since the afternoon train, southbound, is scheduled to leave Dodgeville at 3 p. m., persons living at points south of Dodgeville cannot depend on having more than a couple of hours for the transaction of business in Dodgeville if they return on the same day. Witnesses stated that a later southbound train to connect with the westbound train at Dill would remove this cause of complaint and would also provide more satisfactory service for persons wishing to travel west of Dill.

A statement submitted by the respondent shows that during May 1914, 367 tickets were sold at Dill for stations north on the Dodgeville branch and 89 for stations south on that branch, av-

eraging 18 tickets per day. The tickets sold to Dill from stations north thereof in the same month were 487 and from stations south thereof 98, averaging 23 per day. The Chicago, Milwaukee & St. Paul Railway Company submitted a statement which shows that in May 1914, 245 tickets were sold at Dill for points west of Dill on its system and 402 tickets for points east of Dill. During June 1914, 253 tickets westbound were sold and 573 tickets eastbound. Respondent submitted a table showing the number of paying passengers carried on each train on the Dodgeville branch for six months as follows:

	Train No. 331	Train No. 330	Train No. 353	Train No. 362	Total
January 1914.....	2,284	2,360	1,234	1,182	7,060
February ..	1,916	2,054	1,042	1,042	6,054
March ..	2,295	2,467	1,346	1,335	7,443
April ..	2,260	2,263	1,380	1,328	7,231
May ..	2,004	1,886	945	939	5,774
June ..	2,206	2,170	1,196	1,045	6,617
Total.....	12,965	13,200	7,143	6,871	40,179
Number of trips.....	155	155	155	155	620
Average per trip.....	83	85	46	44	64

Comparing the above table with the statistics of ticket sales at Dill for stations on the Illinois Central Railroad and to Dill from stations on the Illinois Central Railroad for the month of May 1914, it appears that about 18 per cent of the passenger traffic on the Dodgeville branch of the Illinois Central Railroad Company transfers at Dill. The testimony also indicates that this number would be increased if surer connections were established at Dill.

In the light of the testimony it appears that, considering the traffic conditions, the quantity of service rendered by the respondent on its Dodgeville branch is sufficient, and that additional service is not warranted at the present time. However, the quality of the service has apparently been very poor, owing to the lateness of trains and their consequent failure to make connections at Dill. The morning train north, according to the record submitted by the company, has been constantly late in arriving at Dodgeville and has often arrived more than an hour late, contrary to the order of the Commission above referred to (10 W. R. C. R. 572-583) which is as follows:

“That the Illinois Central Railroad Company operate its train No. 231 in such a manner as to arrive at Dill station at 8:53 p. m., and that the Chicago, Milwaukee & St. Paul Railway Company operate its train No. 7 in such a manner as to arrive at Dill station at 8:53 p. m., and that whenever either of these trains arrive at Dill before the other, on account of some unavoidable delay on the part of the latter, each company shall hold its train for such connection for a period of not less than fifteen minutes.

“That the Illinois Central Railroad Company so arrange its schedule as to furnish morning passenger, or mixed, service from Martintown north to Dodgeville, and afternoon passenger, or mixed, service from Dodgeville south of Martintown, this service to arrive at Dodgeville not later than 11:10 a. m. and leave not earlier than 5 p. m.

“That the Illinois Central Railroad Company operate its trains on the Dodgeville branch with regularity, on schedule time, barring accidents and other unusual contingencies.

“In the case of the schedules of the mixed trains on this branch a deviation not ordinarily exceeding an hour later than its published schedule will be considered as conforming with this order.”

The lateness of this train may in some cases be due to the necessity of waiting for a connection with the westbound train on the Chicago, Milwaukee & St. Paul Railway Company's line. It is also probable that the failure of the afternoon train, southbound, to make connection at Dill is in some cases due to the lateness of the connecting train, but witnesses asserted that respondent's train frequently arrives after the other train has pulled out. Unless the service is materially improved so as to comply with the order above referred to, the Commission will take the necessary steps to insure its enforcement. The present complaint will apparently be satisfied if that order is strictly complied with, and for this reason the petition will be dismissed.

IT IS THEREFORE ORDERED, That the petition herein be and the same is hereby dismissed.

IN RE PROPOSED CHANGE BY THE WISCONSIN TELEPHONE COMPANY OF ITS TOLL STATION AT EAGLE POINT INTO A RURAL STATION.

Submitted Oct. 20, 1914. Decided Dec. 2, 1914.

The Wis. Tel. Co. served notice upon the Commission that it proposed to change its toll station in the village of Eagle Point to a local subscribers' station, and the Chippewa County Tel. Co. filed objections to such proposed change. It appears that the Chippewa County Tel. Co. renders service in and around Eagle Point; that the Wis. Tel. Co. renders service in the district about Eagle Point, but not within the village, with the exception of the toll station in question; that Eagle Point is the natural and logical market for a considerable number of the Wis. Tel. Co's rural subscribers in the section in question; that at present they are unable to communicate with Eagle Point in order to get market quotations without calling the toll station and paying a long distance charge; that the patrons involved would be satisfied with a telephone located near the business center of the community so that ready information could be obtained by telephone as to market conditions and prices; that the conversion of the toll station into a local service station will not involve additional duplication of lines, and should not involve any great expense; that the Wis. Tel. Co. has no intention by means of its proposed change, to take on additional subscribers, and, under all the circumstances, is not in a position to do so, and that the toll station in question, which has been maintained for a number of years, has not brought the company sufficient revenue to warrant its continuance.

Held: That public convenience and necessity would be subserved by allowing the Wis. Tel. Co. to maintain a local service station in Eagle Point and that such finding under all the circumstances of the present case is not inconsistent with the Anti-duplication Law. The decision is not a precedent, however, for future cases where it may be desired to convert a toll line into a local line. Should other cases of such a nature arise, they will be dealt with on their individual merits.

The Wisconsin Telephone Company served notice upon the Commission that it proposed to change its toll station in the village of Eagle Point to a local subscribers' station. A similar notice of the company's intention was served upon the Chippewa County Telephone Company, pursuant to the requirement of sec. 1797m-74 of the statutes of 1913. The latter company filed its objections to the proposed change with the Commission and a hearing was held at the city hall in Chippewa Falls on October 20, 1914, to determine whether or not public convenience

and necessity would be best subserved by permitting the change to be made. The Wisconsin Telephone Company was represented by *J. F. Krizek* and *P. J. Skolsky*, and the Chippewa County Telephone Company by *P. J. Connor* and *E. I. Bates*.

The village of Eagle Point is a small community some few miles north of Chippewa Falls located a half a mile, or thereabouts, west of the north and south highway from Chippewa Falls to Eagleton. The Chippewa County Telephone Company is furnishing service to the residents and business establishments located in the village and has rural lines extending therefrom both east and west. The Wisconsin Telephone Company is also giving rather extensive local service in the rural district about Eagle Point, although it has no line operating for local service entering the village. Its nearest approach to the village with a line of this character is made on the north and south highway above mentioned, where it has a local line leaving the highway at a point about half a mile south of the corner at which a road branches to the west going to Eagle Point. This line runs eastward from the highway, giving service to a number of farmers residing within a radius of three miles of the village. A second line of the Wisconsin company leaves the main north and south road about one and one-half miles south of the Eagle Point corner and runs thence in a northwesterly direction, approaching the village of Eagle Point from the south. This line likewise gives service to a number of farmers who live within a few miles of the village.

The toll line of the Wisconsin Telephone Company runs north past the village of Eagle Point to the village of Eagleton. A branch of this toll line leaves the main highway at the Eagle Point corner and extends westward into the village, where the company has maintained a toll station for a number of years. This toll station has not brought the company sufficient revenue to warrant its continuance and it is now the proposal of the company to convert it into a local service station. With this object in view they had entered into a contract with the Farmers' Produce Company, a mercantile establishment located at Chippewa Falls and having a place of business at Eagle Point. Under the contract the company was to place a phone in the place of business of the Farmers' Produce Company. The contract was signed by the local manager of the Farmers' Produce Company but was repudiated by the directors when it came to their atten-

tion, on the ground that their company was already adequately supplied with telephone service, they having a phone of the Chippewa County Telephone Company.

It appeared that the rural subscribers of the Wisconsin Telephone Company residing near Eagle Point desired telephone connection with the Farmers' Produce Company or some connection through which they could get market quotations. A considerable number of farmers who are subscribers of the Wisconsin company reside in such proximity to the village that they regard the community as their natural and logical market. Under the present circumstances, if they desire to talk with dealers at Eagle Point, they must do so by calling the toll station and paying a long distance charge. It is true that conversation can be carried on with Chippewa Falls buyers through the exchange of the Wisconsin company at that place without any extra charge. Yet this alternative can scarcely be regarded as entirely satisfactory, as was explained at the hearing, because Chippewa Falls is not their market; because not dealing there, they would not feel entirely free to consult over the telephone with the dealers situated there; and because Chippewa Falls, being a city of considerable size, it is usually difficult to get immediate connection with the market places wanted on account of the greater activity of the buyers in that city. These are valid reasons and entitled to consideration. One can scarcely escape the conclusion that it would be of considerable importance to farmers having the Wisconsin Telephone Company's rural service to have some local connection with the village.

This conclusion is strengthened by the fact that the local manager of the Farmers' Produce Company considered that there was sufficient demand for the installation of one of the Wisconsin Telephone Company's phones in the establishment of which he has charge to warrant his entering into a contract with the company to secure one. That the directors of his company did not agree with him and ordered the contract canceled does not negative the influence of his conclusion since, being resident at Eagle Point, he was doubtless more familiar with local conditions, and it being shown at the hearing that the directors, or at least several of them, are stockholders in the Chippewa County Telephone Company. We feel that the conclusion is sound that public convenience and necessity would be subserved by allow-

ing the Wisconsin Telephone Company to maintain a local service station in Eagle Point.

It was testified at the hearing that the patrons of the company would be satisfied with a telephone located near the business center of the community so that ready information could be obtained by telephone as to market conditions and prices. It was not deemed imperative that the phone be located in the office of the Farmers' Produce Company.

To allow the conversion of the toll station at Eagle Point into a local station as contemplated in this decision will, of course, result in the paralleling of the rural service line of the Chippewa County Telephone Company from the point where the present local line of the Wisconsin Telephone Company leaves the main highway to the village. It was evidently the intention of the legislature to prevent such duplication of investments except in those instances in which peculiar local conditions create a definite public necessity for the extension of the paralleling line. Such instances are naturally but few in number. The danger of permitting paralleling lines lies in the economic waste of having two investments to perform a service that could be performed as well by one, and the troublesome disagreements that may arise between two telephone companies that are in competition on the same thoroughfare. Neither of these difficulties inheres in the paralleling permitted in this instance. The investment of the Wisconsin Telephone Company necessary to provide the local service line from the point at which its present local line leaves the highway to the village of Eagle Point is already made. All that will be necessary will be to cut over its present toll station at Eagle Point into a local station. If the Wisconsin Telephone Company be not permitted to make this change, it is probable that the investment already made in this line will remain dead, bringing the company no return and serving no useful purpose in the way of better accommodations to the company's present subscribers. The cut-over from a toll station to a local station should be effected without materially increasing the total of the investment. It was shown at the hearing that it was not the intention of the Wisconsin Telephone Company to take on additional subscribers; and, in fact, there are none to be taken on. The Chippewa County Telephone Company already has the field well covered within the village and there are no residents along the road followed by the pres-

ent toll line of the Wisconsin Telephone Company that might become local subscribers. The situation therefore is such that no harm will result to the Chippewa County Telephone Company by allowing the conversion of the Wisconsin company's toll line into a rural line for the short distance described and under the restrictions mentioned.

In making this decision we are not unmindful of the evasion of the law that might be accomplished by telephone companies that construct toll lines and then request that they be permitted to convert them into local lines. The Commission will, however, inquire carefully into the circumstances surrounding any application of that nature and it is not intended that the effect of this decision shall be to give the sanction of the Commission generally to such conversions. The weight that is accorded in this decision to the contention that the investment of the applying company in the existing toll line would become a dead one if the conversion were not permitted might not be accorded to a similar argument in another instance. Should other cases of this nature arise they will be dealt with on their individual merits.

In view of the advantage to the rural subscribers of the Wisconsin Telephone Company and of the other considerations dealt with in this decision, we are unable to find that public convenience and necessity do not require that the Wisconsin Telephone Company be authorized to cut over its toll station in the village of Eagle Point into a local service station.

GEO. KEUP ET AL.

vs.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY
COMPANY.

Submitted July 17, 1914. Decided Dec. 8, 1914.

Complaint was made that the respondent does not furnish adequate train service or station facilities at Sunnyside in Douglas county, and the Commission was asked to take such action as it deems proper in the premises. It appears that Sunnyside is about ten miles south of Superior; that its present service consists of a morning southbound mixed train, and an afternoon northbound mixed train; that the former is usually on time, but the latter very irregular; that there is no shelter for passengers or freight at the point in question and that persons while waiting are at times exposed to severe discomforts from rain and cold, and that, on account of the schedule of the two mixed trains, it is necessary for a resident of Sunnyside, when the northbound train is late, to spend two nights in Superior in order to be there during office hours for the transaction of business. It was urged that the northbound and southbound Chicago-Duluth Limited trains be stopped at Sunnyside for the convenience of passengers. It was also contended that with a more favorable service the milk and cream business would develop substantially and it was sought to have the northbound morning Chicago-Duluth Limited stopped for milk and cream. The traffic situation immediately involved was considered, and also the service afforded places of equal importance with that of Sunnyside on other lines of railroad in Douglas county, the inquiry in the latter having reference to time allowed patrons for the transaction of business in Superior.

Held: That the station facilities and train service are inadequate; that the latter gives rise to a condition which does not exist at any station of equal importance on other lines of railroad in Douglas county and that, even with the stopping of the northbound through train, the respondent's patrons at Sunnyside would not be as well served with reference to access to Superior as the patrons of other stations of similar importance in the county, but that the stopping of the latter to carry milk and cream would not be justified under the circumstances of the present case.

Ordered: That the respondent provide at the point in question a suitable building, which shall be adequate for freight and passenger traffic; that it submit plans to the Commission for approval; that it employ a competent caretaker for the building, and that it stop its northbound through train at Sunnyside on signal to receive and discharge passengers, or, at its option, provide other daily passenger service which will enable residents of Sunnyside to reach Superior before noon. Sixty days is considered a reasonable time for the erection of the building ordered.

The petition, which is signed by three farmers who live at Sunnyside in Douglas county, alleges in substance that the Minneapolis, St. Paul & Sault Ste. Marie Railway Company does not furnish adequate train service or station facilities at that station. The Commission is therefore asked to take such action as it deems proper in the premises.

No answer was filed by the respondent.

A hearing was held at Sunnyside on July 17, 1914, at which *R. J. Nye* appeared for the petitioners and *Kenneth Taylor* for the respondent.

The testimony shows that Sunnyside is about ten miles south of respondent's depot at Superior, and about five miles north of Way, which is a flag stop. A sidetrack has been constructed but no shelter for freight or passengers is provided. The existing train service consists of a southbound mixed freight and passenger train, number 902, scheduled to arrive at Sunnyside at 8:05 a. m., and a similar train northbound, No. 901, scheduled to arrive at 4:25 p. m. The northbound Chicago-Duluth Limited, No. 17, which passes Sunnyside about 9:07 a. m. and the southbound Duluth-Chicago Limited, No. 18, which passes Sunnyside at about 6:45 p. m., do not stop there.

Witnesses stated that train No. 902 is usually on time, but that train No. 901, is very irregular, frequently arriving from thirty minutes to four hours late. Persons desiring to board this train have no shelter while waiting and instances were cited where men, women and children have been subjected to severe discomfort from rain and cold. A photograph was introduced showing eighteen persons waiting, and a witness who was present when it was taken testified that the number was not unusual for week days, and that he has frequently seen from twenty to twenty-five passengers waiting for No. 901 on Sunday afternoons.

When this train is late it arrives in Superior after office hours, and since the morning train, southbound, leaves Superior at 7:30 a. m., it is necessary for a resident of Sunnyside to spend two nights in Superior in order to be there during office hours for the transaction of business. Witnesses stated that they usually walk about eight miles to the nearest street car line when they wish to reach Superior on business. They urged that trains Nos. 17 and 18 be stopped at Sunnyside for the convenience of passengers.

The afternoon mixed train, northbound, is now the only train available for shipping milk or cream to Superior. Owing to its irregular schedule such shipments cannot be delivered until the following day, and deteriorate on this account. Moreover, the cans of milk and cream would often be left exposed to the sun or cold for several hours at Sunnyside, since no shelter is provided. Witnesses seek to have train No. 17 stop for their milk and cream, thus making its delivery possible on the day of shipment.

It was estimated by witnesses that from four hundred to five hundred persons live within three miles of Sunnyside and that in addition about twenty-five families are tributary to it for train service. The surrounding country is subdivided into small farms and the chief products are small fruit, garden truck and butter, little cream or milk being shipped out on account of the inconvenient train service. Witnesses estimated that, if the morning train were stopped for milk and cream, from twenty-five to fifty cans a day would be immediately forthcoming, and that within a year the shipments would increase to two hundred cans a day. Herds would be rapidly increased if an outlet for the milk and cream were provided.

Respondent's superintendent testified that trains Nos. 17 and 18 are through trains competing with through trains on rival lines, and that they are now operated at an average speed of thirty-four miles an hour. He objected to stopping either of these trains at Sunnyside for milk or passengers, on the ground that if Sunnyside is entitled to this service other stations, such as Bennett, Hillcrest and Way, are equally entitled to it and that with stops at these stations the requisite schedule could not be maintained. He said that the respondent contemplates the erection of a shelter and the installation of a sidetrack at Way. Respondent's division freight agent stated that the rate from Sunnyside to Superior is 12½ cts. per eight-gallon can of cream and 9½ cts. for milk. He testified that he had investigated the situation at Sunnyside and expressed the opinion that the dairy shipments would be insufficient to justify the stopping of train No. 17.

According to respondent's exhibits the total freight earnings at Sunnyside for the year ending April 30, 1914, were \$174.85. During the same period 838 passengers paid cash fares from Sunnyside to Superior, yielding a total revenue of \$167.96. As-

suming that the same number make the return trip, the aggregate passenger traffic would be 1,676, or an average of five per day.

A record of the time of arrival of train No. 901 at 28th street in Superior, where it is due at 4:48 p. m., submitted by the respondent, has been summarized as follows:

Month	Total number of trips	Number of times when late		
		30 min. or over	1 hr. or over	2 hrs. or over
January 1914.....	31	22	18	9
February ".....	28	9	2	2
March ".....	31	8	3	0
April ".....	30	4	3	0
May ".....	31	15	9	5
June ".....	30	14	12	8
July ".....	13	2	0	0

The superintendent stated that the number of freight cars in this train has been limited to twenty and that with this restriction it is possible to maintain the schedule within reasonable limits.

From an examination of the testimony it is our judgment that station facilities and train service furnished by the respondent at Sunnyside are inadequate. A suitable building should be erected for the accommodation of passengers and freight, and a competent caretaker should be employed to keep the building clean and properly lighted and heated.

Under the existing train service it is impossible for a resident of Sunnyside to visit the county seat, Superior, by train for the transaction of business without spending two nights there. The only northbound train which now stops at Sunnyside is due in Superior at 5 p. m., but owing to its mixed character it is rarely on time and frequently arrives more than an hour late, so that no time is available after its arrival for the transaction of business. The only southbound train which stops at Sunnyside leaves Superior at 7:30 a. m., before the offices and many of the stores are open. Thus, a resident of Sunnyside must take the afternoon train, spend two nights in Superior, and take the early morning train out on the second day if he wishes to transact business in that city. This is a condition which does not exist at any station of the importance of Sunnyside on other lines of rail-

road in Douglas county. On the line of the Chicago, St. Paul, Minneapolis & Omaha Railway Company from Wascott to Superior all stations, except two, are accorded service which enables residents to spend more than three hours in Superior during office hours and return the same day. From the other two stations it is possible to reach Superior at 3:15 p. m. and return on a morning train the following day. On the line of the Duluth, South Shore & Atlantic Railway Company from four Douglas county stations it is possible to reach Superior and spend nine hours there returning the same day. From all other Douglas county stations it is possible to arrive in Superior at 5:10 p. m. and leave the following morning at 8:35 a. m. On the lines of the Northern Pacific Railway Company the service is such that patrons of all Douglas county stations can reach the county seat and return the same day, having from four to twelve hours for the transaction of business. On the line of the Great Northern Railway Company patrons of stations from Foxboro to Superior can arrive in the county seat at 6:10 a. m. and leave at 11:25 p. m. in the evening of the same day. From Dewey, on the same company's line, a patron can reach Superior and have two and one-half hours during office hours for the transaction of business. On respondent's line to Minneapolis, patrons of stations in Douglas county can arrive in Superior at 6 a. m. and return at 11:40 p. m.

Even with the service of the morning northbound train No. 17, patrons of the respondent at Sunnyside would not be as well served with reference to access to Superior as the patrons of other stations of similar importance in the county. It would still be necessary to spend the night in Superior or find some means of conveyance back to Sunnyside. It is recognized that train No. 17 is a through train competing for through traffic, which should not be burdened with local stops unnecessarily, and if respondent does not wish to interfere with its schedule, the provision of other morning northbound service for residents of Sunnyside will be satisfactory. It might be possible to operate passenger service in connection with a through freight during the morning, although no regular morning freight trains are now scheduled northbound. Such an arrangement would also make possible the handling of petitioners' milk and cream in a more satisfactory manner. We do not feel justified in requiring a through passen-

ger train to carry milk and cream under the circumstances which exist in the present case.

IT IS THEREFORE ORDERED, That the respondent, the Minneapolis, St. Paul & Sault Ste. Marie Railway Company, provide a suitable building at Sunnyside in Douglas county, which shall be adequate for the freight and passenger traffic, and employ a competent caretaker whose duty it shall be to keep said building clean and properly lighted and heated, plans to be submitted to the Commission for approval.

IT IS FURTHER ORDERED, That said respondent railway company stop its train No. 17, scheduled to arrive at Superior at 9:30 a. m., at Sunnyside on signal to receive and discharge passengers or, at its option, provide other daily passenger service which will enable residents of Sunnyside to reach Superior before noon.

Sixty days is considered a sufficient time for the erection of the station building herein ordered.

V. M. JENKS ET AL.

vs.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY COMPANY.

Submitted July 30, 1914. Decided Dec. 8, 1914.

Complaint was made that the station facilities at Joel are inadequate, and the Commission was asked to require the respondent to employ a regular station agent and install stock scales at that point. It appears that the station and stockyards were constructed in 1912; that the former is a prepaid station, and cared for by the proprietor of a general store located nearby, whose duties are to see that it is heated and open at train times, to sell passenger tickets, and to sign receipts for freight. It was contended that various inconveniences have resulted from the present arrangement; that few farmers in the vicinity ship a carload of stock at a time; that stock scales are necessary for smaller shipments, that Joel would be the most convenient point for stock shipping for a majority of the farmers in the vicinity, and would be used if stock scales were provided; and that approximately six hundred people would probably use the station if better facilities were provided. The revenues of the station, and the cost of making needed alterations in the stockyards, and of installing ten-ton stock scales were considered.

Held: That the station facilities at Joel are inadequate; that the present traffic is considerable and probably will increase if stock scales are installed and convenient arrangements made for receiving and shipping less than carload freight and live stock; that the duties of the present caretaker could be extended to the supervision of less than carload freight and stock shipments without great expense as a temporary expedient; that a year's trial will show whether the installation of stock scales and improvements in the service ordered have resulted in a material increase in the business transacted; and that, if they should, the employment of a regular agent may be warranted.

Ordered: That the respondent install suitable stock scales, provide proper access to its stockyards from the public highway, and employ a competent person to keep the station clean, properly lighted and heated, to sell passenger tickets, and to attend to the receiving and shipping of less than carload freight and live stock. May 1, 1915, is considered a reasonable date for the completion of the installation and alteration ordered.

The petition, which is signed by sixty-six patrons of the Minneapolis, St. Paul & Sault Ste. Marie Railway Company at Joel, alleges in substance that the station facilities at Joel are inadequate and asks that the Commission require the respondent to employ a regular station agent and install stock scales at Joel.

The respondent submitted a letter from its general manager in which the position is taken that the existing station service is adequate and that stock scales are not necessary for the business of transportation, since they are used entirely for the adjustment between the owner of stock and the shipper.

A hearing was held at Joel on July 30, 1914, at which *V. M. Jenks* appeared for the petitioners and *Kenneth Taylor* for the respondent.

The testimony shows that a new station building and stockyards were constructed at Joel in 1912. The station is cared for by the proprietor of the general store which is located nearby, his duties being to see that it is heated and open at train times, to sell passenger tickets, and to sign receipts for freight. Joel is a prepaid station, and unless special arrangements are made with the agents at the nearest open stations, consignments which have not been prepaid are held at Turtle Lake or Amery until the freight bill is collected. Prepaid freight is placed in the freight room or on the platform by the train crew, and is left there until called for by the consignee. No notice of the arrival of such freight is given to consignee. Baggage is accepted and discharged at Joel when requested by its owner on the train or about to board the train. If the owner of incoming baggage does not accompany it, such baggage is carried to the nearest open station and held there until called for. Witnesses complained that the station is not always properly heated, and that they are inconvenienced because they are unable to ascertain when passenger trains, which are often from fifteen to thirty minutes late, will arrive. Instances were cited in which baggage had been carried to Turtle Lake or Amery and serious inconvenience caused thereby. Shippers asserted that consignments of freight had been left on the open platform by train crews and damaged, and they also complained that they are obliged to make frequent trips to the station to see whether freight has arrived, which would be unnecessary if they received notice of its arrival from an agent.

Stockyards were constructed at Joel in 1912, but no stock scales were provided. The gate leading into the yards is so placed that it is necessary to cross private property to enter. Witnesses asserted that few farmers in the vicinity ship a carload of stock at a time, and that for smaller shipments stock scales are necessary in order to ascertain what should be the proper freight

charge, and to make adjustments between shipper and buyer. It was stated that it is feasible to place the stockyard gate on the west side and provide a roadway to such gate on the railway right of way.

Joel is located 5.3 miles southwest of Turtle Lake and 7.5 miles northeast of Amery which are the nearest open stations. By wagon road the distance from Joel to Turtle Lake is about ten miles. A witness estimated that about three hundred people live within three miles of Joel and that approximately six hundred people would probably use that station if better facilities were afforded. Another witness said that about five hundred people would come to Joel for train service, some traveling twelve or fourteen miles from Bunyan or Balsam Lake. A community known as Range, which is located about $5\frac{1}{2}$ miles from Joel, is tributary to that station. Stock is now shipped from Turtle Lake on the respondent's line or from Clayton on the line of the Chicago, St. Paul, Minneapolis & Omaha Railway Company, stock scales being provided at both of these stations. Witnesses stated that Joel would be the most convenient point for stock shipping for a majority of the farmers in the vicinity, and that it would be used if stock scales were provided. It was estimated that from twenty-five to thirty carloads of stock would be handled in a year at Joel if stock scales were available.

Exhibits offered by the respondent show that during the twelve months ending April, 30, 1914, no stock was shipped at Joel, and that in the same period the revenue at that station was as follows.

Passenger revenue	\$556.39
Freight revenue—carload	3,702.12
Freight revenue less than carload.....	1,533.01
	\$5,791.52
Total revenue	\$5,791.52

Our engineer has inspected the station facilities at Joel and estimates that the cost of altering the stockyards so as to permit an approach from the west, providing a suitable roadway on the railway right of way to the stockyards, and installing ten-ton stock scales as follows:

Ten-ton stock scale and timber foundation, in place.....	\$200.00
Alterations in stockyards.....	60.00
Grading, etc.....	40.00
	\$300.00
Total	\$300.00

In the light of the testimony it is our opinion that the station facilities furnished by the respondent at Joel are inadequate. The present traffic is considerable and it is probable that it will increase if stock scales are installed and convenient arrangements made for receiving and shipping less than carload freight and live stock. The stock scales should be located adjacent to the westerly side of the stockyards and a suitable roadway constructed to the scales and the stockpens from the public highway on the property of the railway company. This will make necessary some alteration in the sheltered portion of the stockyard enclosure. The shelter shed, if constructed along the northerly side of the yard and extended around the northwest corner, will afford better protection to stock from the prevailing cold winter winds than under the present arrangement. It would seem that the duties of the present caretaker could be extended to the supervision of less than carload freight and stock shipments without great expense as a temporary expedient. A year's trial will doubtless show whether the installation of stock scales and the improvements in service ordered herein have resulted in a material increase in the business transacted, and in that case the employment of a regular agent may be warranted.

IT IS THEREFORE ORDERED, That the respondent, the Minneapolis, St. Paul & Sault Ste. Marie Railway Company, install suitable stock scales and provide proper access to its stockyards from the public highway at Joel in Polk county, Wis., and employ at said station a competent person whose duty it shall be to keep the station clean and properly lighted and heated, to sell passenger tickets and to attend to the receiving and shipping of less than carload freight and live stock.

May 1, 1915, is considered a reasonable date at which the installation and alteration herein ordered shall be completed.

COLBY CHEESE BOX AND SILO COMPANY

vs.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY
COMPANY.

• *Decided Dec. 8, 1914.*

Complaint was made that the respondent furnished petitioner two cars of a capacity in excess of those ordered by it, and charged it on the basis of the capacity of the cars furnished, wherefore petitioner seeks refund of the additional charges thereby caused.

Held: That when a railroad company, for its own convenience or because of necessity, furnishes a car of greater capacity than that ordered by the shipper, its charges cannot exceed those based upon the capacity of the car actually ordered. The respondent is ordered to refund the additional charges.

The petitioner alleges that on May 5, 1913, it shipped from Unity, Wis., to Colby, Wis., two carloads of logs, each of which was originally billed at 40,000 lb. weight; that cars of 40,000 lb. capacity were ordered by the petitioner, but the carrier, at its convenience, furnished one car of 80,000 lb. capacity and one car of 50,000 lb. capacity; that in July, 1914, after payment of charges, the petitioner was obliged to pay additional charges on said shipment because the carrier did not provide in its tariff for protecting billing of advanced weight to the capacity of the cars used; that the additional charge so paid was \$4.40 on the car of 80,000 lb. capacity and \$1.10 on the one of 50,000 lb. capacity and that the additional charges thus exacted of the petitioner were unusual and excessive.

The respondent admits the allegations of the petition and joins in the prayer thereof.

Notice of hearing and investigation was waived, and the case submitted upon the pleadings, documents and vouchers on file.

It has been held by this Commission that when a railroad company for its own convenience or because of necessity furnishes a car of greater capacity than that ordered by the shipper, its charges can not exceed those based upon the capacity of the car actually ordered. Under the circumstances, we find and deter-

mine that the additional charges exacted of the petitioner on the aforesaid shipments were unusual and the same should be refunded.

Now, THEREFORE, IT IS ORDERED, That the Minneapolis, St. Paul & Sault Ste. Marie Railway Company be and the same is hereby authorized and directed to refund to the petitioner, the Colby Cheese Box & Silo Company, the sum of \$5.50.

IN RE APPLICATION OF WISCONSIN RIVER POWER COMPANY,
UNDER CHAPTER 591 OF THE LAWS OF WISCONSIN FOR 1911,
TO HAVE THE RESTRICTION AS TO THE HEIGHT OF THE
DAM AUTHORIZED BY CHAPTER 189 OF THE LAWS OF WIS-
CONSIN FOR 1907 ELIMINATED THEREFROM.

Submitted Nov. 24, 1914. Decided Dec. 8, 1914.

The application was considered in the light of the evidence and arguments offered in its support and in opposition, and it was, by virtue of ch. 591, laws of 1911,

Found and Determined: That the requirement of ch. 189, laws of 1907, as to the construction and maintenance of the dam in question at eighteen feet, was no longer necessary from the standpoint of navigation, or of the public safety, and should be dispensed with, until the Commission, upon investigation had, should require such restriction to be replaced.

WHEREAS, a public hearing was had before the Commission on the 24th day of November, A. D. 1914, on the matters and things of the petition on file herein, and it appearing that due and lawful notice of such hearing was served on and given to all persons entitled thereto; and the petitioners having appeared by *Jones & Schubring* and others, in support of the petition, and *Eli Smith* and others having appeared in their own behalf, and *Otto Hahn*, mayor, and *Robert Homberger*, city clerk, having appeared for Sauk City, in remonstrance; and the Commission having heard and considered the evidence and arguments offered in support and in opposition thereto, and being advised in the premises, finds as follows:

1. That the Wisconsin River Power Company, the petitioner, is the grantee of all the rights, powers and privileges of the original grantees designated in ch. 189 of the laws of Wisconsin for 1907.

2. That the restriction upon the height of the dam across the Wisconsin river near Prairie du Sac, as provided in ch. 189 of the laws of Wisconsin for 1907, by which the construction and maintenance of said dam was authorized, is no longer necessary to aid or protect the navigability of the waters in which said dam is located, or to aid or protect the public safety.

IT IS THEREFORE FOUND AND DETERMINED, by virtue of the provisions of ch. 591 of the laws of Wisconsin for 1911, that the requirement and restriction of ch. 189, laws of Wisconsin for 1907, as to the construction and maintenance of said dam at eighteen feet have ceased to be necessary, and are unnecessary to aid or protect the navigation involved or the public safety, and shall be dispensed with until the Railroad Commission, upon investigation had, may require such requirement and restriction to be replaced.

No extended opinion was considered necessary in the foregoing case, because the proceeding was measurably formal, and the petition was one to be granted as of course upon its being shown that the public interest and safety would be protected in the granting of the prayer thereof. It appeared at the hearing that the U. S. War Department had considered the proposals of the petitioner and had approved the plans changing the dam. The expert testimony offered as to the protection to public safety indicated very strongly that every precaution had been taken in planning the change, and that, owing to an improved system, the dam, if changed as proposed, would be fully as safe as the one originally contemplated and authorized by the statute.

A. S. PIERCE

vs.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY
COMPANY,
STANLEY, MERRILL AND PHILLIPS RAILWAY COMPANY.

Decided Dec. 9, 1914.

Complaint was made of excess charges on three carloads of lumber shipped from Cotton to Rhinelander, Wis., for manufacture and reshipment at that point. It was alleged that a reasonable rate for such shipments to be manufactured and reshipped would have been 6½ cts., the rate subsequently put into effect by respondent. Refund is asked on that basis.

Held: That the rate exacted was exorbitant and out of line with the rates generally applicable to shipments like the ones in question. A reasonable rate is 6½ cts. per cwt. Refund ordered on that basis.

The petitioner alleges that on and between December 2 and 4, 1913, it shipped three carloads of lumber from Cotton to Rhinelander, Wis., which was intended for manufacture into box shooks at Rhinelander and reshipment; that the respondent railway companies assessed on said shipments a rate of 10 cts. per cwt., pursuant to their Tariff G. F. D. No. 16300, which charges amounted to \$134.65; that the said rate was excessive and unreasonable for shipments of lumber which were to be manufactured and reshipped; that the reasonable rate for such shipments would have been 6½ cts. per cwt., which rate the respondents established in their Tariff G. F. D. No. 17810, effective December 27, 1913. That the overcharge on said shipments amounted to \$47.14. Wherefore, the petitioner prays that the respondents be authorized to refund to the petitioner the said sum of \$47.14.

The respondents, answering the petition, admit the allegations thereof and express a willingness to make the reparation asked for if authorized so to do.

Notice of investigation and hearing was waived and the claim submitted on the pleadings, papers and documents on file.

From the investigation it appears that the rate exacted of the petitioner was exorbitant and out of line with the rates generally applicable to such shipments for the distance the same moved.

We therefore find and determine that the charge of 10 cts. per cwt., exacted of the petitioner on the aforesaid shipments of lumber, was unusual and exorbitant; and that the reasonable charge therefor is $6\frac{1}{2}$ cts. per cwt. The excess charge amounts to \$47.14 for which reparation will be awarded.

NOW, THEREFORE, IT IS ORDERED, That the respondents, the Minneapolis, St. Paul & Sault Ste. Marie Railway Company and the Stanley, Merrill & Phillips Railway Company, be and the same are hereby authorized and directed to refund to the petitioner the said sum of \$47.14.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF
BRIDGED TELEPHONE SERVICE TO INDIVIDUAL SUB-
SCRIBERS AT THE CITY OF PRINCETON.

Submitted July 24, 1914. Decided Dec. 10, 1914.

The Commission, on its own motion, investigated the bridged telephone service at Princeton. Complaint was made that the Wis. Tel. Co. now charges single-party rates for the two-party line service for one subscriber which it formerly furnished by bridging at the central office; that the company should not be allowed to discontinue the former service, which the agent of the company had voluntarily offered as an inducement to secure patronage, and that the present practice is discriminatory, as certain subscribers have their business and residence telephones on the same circuit and pay two party rates. It appears that the bridging of circuits at the central office makes it possible for a business man to have his office telephone connected with the instrument at his residence, thus enabling him to answer calls made to his office at his home or vice versa, but that from the point of view of the cost of service two circuits bridged at the central office are substantially similar to two unconnected single party lines, and that, as regards the alleged discrimination, the practice has been to accommodate patrons by placing their two instruments on the same circuit, if they so desire, whenever the location of the station makes such an arrangement possible.

Held: That the existing classification of service is not discriminatory; that when two separate telephone circuits are bridged at the central office, they should be considered as two separate units, and that, if a patron's office and home are so located that it is feasible to connect them on a single two-party circuit, such action on the part of the company should not be regarded as discrimination, provided other subscribers similarly situated with reference to the distributing points of the cable distributing system are furnished the same service upon request. However, the company should take vigorous steps to prevent the repetition of the practice apparently indulged in by the local office in the present case, of soliciting patronage by making representations contrary to the provisions of the written contracts for service.

Complaint having been made to the Commission that the Wisconsin Telephone Company, which formerly furnished at Princeton a two-party line service for one subscriber by bridging at the central office, has discontinued such service and now charges single-party rates for each instrument so connected, a hearing was duly ordered on motion of the Commission and held at

Princeton on July 24, 1914. *J. F. Krizek* and *F. M. McEniry* appeared for the Wisconsin Telephone Company and seven subscribers appeared in their own behalf.

The testimony shows that for several years prior to the hearing the Wisconsin Telephone Company at Princeton has charged certain subscribers regular two-party rates for a business telephone and a residence telephone located on separate circuits and bridged at the central office so that the two stations ring simultaneously. The contracts signed reserve to the company the right to connect a second telephone to each leg of such bridged lines, but it appears that representations were made by the local manager to subscribers that two stations bridged at the central office would be regarded as a two-party line service. In the spring of 1914 the company required all subscribers having telephones on lines bridged at the central office to pay single-party rates for the service of each instrument or allow a second station to be connected on each leg of the bridged line.

Subscribers who had previously enjoyed such bridged service objected to its discontinuance on the ground that the agent of the company had voluntarily offered to render such service as an inducement to secure their patronage, and that the company should not be allowed to rescind such oral agreements. They also urged that the present practice is discriminatory, and cited specific instances where subscribers have their business and residence telephones on the same circuit and pay two-party rates for such service.

The commercial superintendent of the Wisconsin Telephone Company explained that in the cases cited by witnesses the two instruments are so located with reference to the distributing points in the cable system that it is possible to place them on the same circuit, thus making unnecessary the bridging at the central office. He said that it is customary to accommodate patrons by placing their two instruments on the same circuit if they so desire, whenever the location of the stations makes such an arrangement practicable. He pointed out that where the bridging is done at the central office the equipment of the two legs bridges is very similar in extent and cost to that of two single-party lines, and that the cost of maintenance is somewhat higher owing to the increased difficulty of locating "trouble" on such bridged lines. On a single line "trouble" can be easily located, but on a bridged line the bridge at the central office must be dis-

connected in order to ascertain which leg of the service is out of order. He asserted that the saving at the switchboard by reason of the central office bridging is not important. The former local manager of the company at Princeton testified that bridged service at the central office has been furnished by the company in years past at Fond du Lac and Neenah, but did not state at what rate such service was supplied. The commercial superintendent stated that the company regards every line which enters the central office as a separate unit, and that the practice of bridging two such lines in the central office and treating the combination as a single line for two party service has not been countenanced by the general office in Milwaukee, and that this practice was discontinued in Princeton as soon as its existence was called to the attention of the managing officials.

From a careful study of the testimony we are of the opinion that when two separate telephone circuits are bridged at the central office they should be considered as two separate units. The only saving to the company from such bridged service as opposed to the operation of two unconnected circuits is that the switchboard work is somewhat lessened; but this saving is offset in some measure by the additional cost of "trouble" finding and repairing on the bridged lines. Thus, from the point of view of the cost of service two circuits bridged at the central office are substantially similar to two unconnected single party lines. The bridging of circuits at the central office makes it possible for a business man to have his office telephone connected with the instrument at his residence, thus enabling him to answer calls made to his office at his home or vice versa. It is therefore, in a sense, more valuable to him than two separate single party lines. If a patron's office and home are so located that it is feasible to connect them on a single two-party circuit, such action on the part of the company should not be regarded as a discrimination, provided other subscribers similarly situated with reference to the distributing points are furnished the same service upon request. Cable distributing systems, such as are now used at Princeton, are in accord with good telephone practice, and distributing points are located with reference to the best service to the community. The result of such location upon individual subscribers must vary with their position, but such variation is obviously not a discrimination on the part of the company.

The practice of soliciting patronage by making representations contrary to the provisions of the written contracts for service has apparently been indulged in by the local office at Princeton. The company should take vigorous steps to prevent the repetition of this practice, since it is detrimental to the spirit of coöperation which must necessarily prevail between a telephone company and its subscribers if the best results are to be obtained. The fact that the service furnished to certain patrons in the past was of a grade different from that called for in their written contracts should not preclude a more equitable adjustment of classes of service.

It is therefore our opinion that the existing classification of service at Princeton is not discriminatory, and no order herein is necessary.

WAUKESHA LIME AND STONE COMPANY

vs.

CHICAGO AND NORTH WESTERN RAILWAY COMPANY ET AL.

Submitted June 2, 1914. Decided Dec. 14, 1914.

The Commission, on its own motion, investigated the refusal of the respondent named in the title to make the refund authorized in the case *Waukesha Lime & Stone Co. v. C. & N. W. R. Co. et al.* 1913, 13 W. R. C. R. 368. The rehearing was called for the purpose of developing the full facts as to respondent's refusal, and to put all the facts fully before the Commission, so that any defect found in the original proceedings could be remedied. The respondent alleged; (1) that the rates and charges as ordered by the Commission in *Waukesha Lime & Stone Co. v. C. M. & St. P. R. Co. et al.* 1912, 9 W. R. C. R. 87 and 347, did not justify the findings of the Commission in the original case; (2) that the findings of the Commission in the original case did not show a situation that warranted the authorization of a refund; and (3) that there was no evidence tending to show that petitioner sustained any damage. The findings of the Commission in the original case were to the effect that the 1912 orders (*supra*) established the marked capacity of car as the minimum weight. It appears that, as a matter of fact, the foregoing orders did not specify the minimum weight, but provided that the minimum weight then in force should apply in connection with the rates ordered. On the dates in question there were dual sets of like distance rates on stone between points on the respondent's line, with one of which the minimum weight applicable was 90 per cent of the marked capacity of the car, and with the other the marked capacity itself. The minimum weight in force at the time in question from and to the points involved in the original case, was 90 per cent of the marked capacity of the car, and the petitioner suffered an actual loss through the tariff making the marked capacity of the car apply as minimum weight instead of the former minimum weight of 90 per cent.

Held: That as the minimum weight in force from and to the points involved at the time the orders in question (*Waukesha Lime & Stone Co. v. C. M. & St. P. R. Co. et al.* 1912, 9 W. R. C. R. 87 and 347) went into effect was 90 per cent of the marked capacity of the car, the publication of marked capacity of the car as the minimum weight was not a compliance with the orders in question, and that there is no reason why the original order should not stand, the conflict between the findings and the facts in that case having been due to dual sets of like distance rates on stone with different minimum weights.

REHEARING.

This is a rehearing in the case of the above title decided December 5, 1913, 13 W. R. C. R. 368, the order which author-

ized the above named respondent to refund to the petitioner certain charges found to be excessive. The refusal of respondent to make the refund authorized and the position taken by it in defense of this refusal furnished the ground for the rehearing. The rehearing was called by the Commission, on its own motion, for the purpose of developing the full facts as to the respondent's refusal to make the refund authorized, so that any defect found in the original proceedings might be remedied.

The matter came on for a hearing pursuant to notice, June 2, 1914, in the offices of the city attorney, city hall, Milwaukee, Wis. *T. W. Praetorius* appeared for the petitioners and *C. C. Wright* for the respondent.

From certain letters received by the Commission from the general solicitor of the respondent line named in the title, which is the only line involved in these proceedings, and from the testimony taken at the rehearing, it appears that, briefly stated, the refusal to make the refund referred to above is based upon the allegations that (1) the rates and charges complained of were in fact the lawful rates and charges ordered by the Commission in *Waukesha Lime & Stone Company v. C. M. & St. P. Ry. Co.* and *C. & N. W. Ry. Co.*, decided April 25 and June 24, 1912, 9 W. R. C. R. 87 and 347; (2) the findings of the Commission in the original case did not show a situation that warranted the authorization of a refund; and (3) there is no evidence tending to show that petitioners sustained any damage.

As to the first allegation mentioned above, there appears to be some basis therefor. The findings of the Commission in the original case were to the effect that the orders of April 25 and June 25, 1912, referred to above, established the marked capacity of car as the minimum weight. These findings, however, were not in line with the testimony taken at the hearing and with the tariffs in force when the distance rates on stone were established by the orders of April 25 and June 24, 1912. The conflict between the findings and the facts appears to be due to the fact that on the dates mentioned there were dual sets of like distance rates on stone between points on the Chicago & North Western Railway, with one of which the minimum weight applicable was 90 per cent of the marked capacity of the car, and with the other the marked capacity of the car was the minimum weight. The former was carried in C. & N. W. G. F. D. No. 8110—D and the latter in C. & N. W. G. F. D. No. 11600—A.

For some reason that does not appear at this time, the findings referred to were based upon the minimum carried in G. F. D. No. 11600—A., although the testimony taken at the hearing shows that the minimum provided in G. F. D. No. 8110—D was applicable to and was used in connection with shipments of stone from Waukesha to the points involved in the order,—West Allis, Cudahy, Milwaukee, Racine, Racine Junction and Layton Park. The orders of April 25 and June 24, 1912, did not specify the minimum weight, but provided that the minimum weight then in force should apply in connection with the rates ordered. As the minimum weight in force at that time from and to the points named was 90 per cent of the marked capacity of the car, the publication of marked capacity of the car as the minimum weight was not a compliance with this order of the Commission. It would seem, therefore, that on this ground respondents are entitled to the refund authorized. This should dispose of the first and consequently the second allegation.

The third allegation brings up the question as to whether the petitioner, by reason of the charges complained of, sustained any actual damage or loss. This matter was gone into to a considerable extent at the rehearing. The testimony tended to show that the petitioner suffered an actual loss by reason of the tariff making the marked capacity of the car supply as a minimum weight instead of the former minimum weight of 90 per cent of the marked capacity of car, and that this loss was the amount of refund authorized in the original order, for the reason that, owing to the variation in weight of different sizes, grades, etc., of stone, gravel, etc., it was not practicable to load these commodities up to the marked capacity of cars without running the risk of overloading beyond the 10 per cent overload allowed. It further appears from the testimony that the petitioner had been warned by the respondent not to overload cars, and that if overloading was continued cars would be refused. These conditions show that the damage claimed, the refund of which was authorized in the former case, was actually sustained. There appears, therefore, no reason why the original order should not stand as issued.

IT IS THEREFORE ORDERED, That this case be dismissed and that it is hereby dismissed.

WAUPACA SAND AND GRAVEL COMPANY

vs.

WAUPACA-GREEN BAY RAILWAY COMPANY,
GREEN BAY AND WESTERN RAILROAD COMPANY.

Submitted Aug. 16, 1914. Decided Dec. 14, 1914.

Complaint was made of a new commodity rate on sand and gravel between the pits of the petitioner, located on the Waupaca-Green Bay Ry. Co., and Grand Rapids, and an investigation was made by the Commission, on its own motion, of the local rates charged on sand and gravel by the Waupaca-Green Bay Ry. Co. It appears that Granite is on the Waupaca-Green Bay Ry. Co.; that the termini of such railroad are Scandinavia to the north, and Waupaca to the south; that the former is the junction with the Green Bay & Western R. R. Co., and the latter the junction with the M. St. P. & S. S. M. Ry. Co.; that prior to May 20, 1914, the joint through rate from Granite to Grand Rapids was 2 cts. per 100 lb.; that May 20, 1914, a joint through rate of 2.5 cts. per 100 lb. was established; that the local rate from Granite to both Waupaca and Scandinavia is $\frac{1}{2}$ ct. per 100 lb.; that the local rate from Scandinavia to Grand Rapids is 1.8 cts. per 100 lb., and that as the sum of the two locals is only 2.3 cts. the effective through rate from Granite to Grand Rapids has been 2.3 cts. per 100 lb. since May 20, 1914, instead of 2.5 cts. as intended by the change. The respondents ask that distance rates be established on local shipments—an action which would increase the local rate from $\frac{1}{2}$ ct. per 100 lb. to 1.2 cts. per 100 lb. from the pits to Waupaca, and 1.3 cts. per 100 lb. from the pits to Scandinavia. The petitioner alleged that it is confronted with new competition which will virtually bar it out of the market at Grand Rapids with a rate of 2.5 cts. per 100 lb. and a switching rate in addition. It appears that the rate of 2.3 cts. affords a reasonable return, but that the change in local rates asked will result in an advance over the present rates from the pits to Waupaca and Scandinavia of about 100 to 200 per cent. The petitioner, while praying for the restoration of the 2 ct. commodity rate, testified that it could successfully meet the new competition at Grand Rapids under a 2.3 ct. rate.

Held: That the Commission cannot ignore established market conditions in determining the justice of rates which are called in question, although it is not its duty or province to undertake by rate-changing to equalize market conditions for the many commodities handled by carriers; that a rate which gives respondents a reasonable return, while retaining to them a heavy traffic would seem to be one, which would be to the advantage of both shippers and carriers to have continued in force, but that the rate should be published as a joint through rate in lieu of the joint through rate of $2\frac{1}{2}$ cts. rather than as a com-

ination of local rates; that the change in local rates asked is too radical, and not warranted; that a rate of $\frac{3}{4}$ cts. per 100 lb. would produce a revenue which would be adequate for the short haul from the pits to Waupaca; and that the rate to Scandinavia appears to be immaterial as there are practically no shipments to that point, and that in case any of the rates show an inadequate return, the Commission may be applied to for further relief.

Ordered: That the respondent lines establish a joint through rate of 2.3 cts. per 100 lb. subject to minimum weight of 90 per cent of the marked capacity of the car furnished, on sand and gravel, straight or mixed carloads, from Gravel Pits on the Waupaca-Green Bay Ry. Co. to Grand Rapids, and that the Waupaca-Green Bay Ry. Co. establish a rate of $\frac{3}{4}$ cts. per 100 lb. subject to minimum weight of 90 per cent of the marked capacity of the car furnished, except that when cars are not weighed, the marked capacity will govern as minimum weight on sand and gravel, straight or mixed carloads, between Gravel Pits on its line and Waupaca and Scandinavia.

This case comes before the Commission in the form of a complaint by the Waupaca Sand and Gravel Company against the two respondents named in the caption, on account of a new commodity rate on sand and gravel between the pits of the petitioner, located on the Waupaca-Green Bay Railway near Waupaca, and Grand Rapids, which rate became effective on May 20, 1914. Growing out of the complaint an investigation of the local rates charged on sand and gravel by the Waupaca-Green Bay Railway was made by the Commission on its own motion, and the testimony adduced at that hearing is made a part of the record in the case.

After due notice, hearings upon the complaint and in connection with the investigation were held upon the same date, August 6, 1914, at the office of the Commission at Madison. *R. F. Whale* appeared for the petitioning company and *J. B. Call* for both respondent companies.

The Green Bay & Western Railroad is a line extending westerly across the state from Green Bay to Winona, Minn. The Waupaca-Green Bay Railway is a tap line extending in a southerly direction from Scandinavia on the Green Bay & Western to Waupaca on the "Soo" line. On this tap line the petitioning company operates several sand and gravel pits from which it ships sand and gravel locally and for shipments beyond to Scandinavia, the junction with the Green Bay & Western, and to Waupaca, the junction with the "Soo."

Prior to May 20, 1914, there was in force via respondent lines a joint through rate of 2 cts. per 100 lb. from Granite to Grand

Rapids applying on sand and gravel, straight or mixed carloads, subject to minimum weight of 72,000 lb. when marked capacity of car was 80,000 lb. and to minimum weight of 80,000 lb. when marked capacity of car was 100,000 lb. There was also in force at the same time a local rate of $\frac{1}{2}$ ct. per 100 lb. applying on crushed stone and crushed granite, straight carloads, and sand and gravel, straight or mixed carloads, subject to marked capacity of car as minimum weight, between Granite and Waupaca and between Granite and Scandinavia; a local rate of 2 cts. per 100 lb. on sand, gravel and crushed stone, straight or mixed carloads, subject to minimum weights of 72,000 and 80,000 lb. when marked capacity of car was 80,000 and 100,000 lb., respectively, from Scandinavia to Green Bay, and a local rate of 1.8 cts. per 100 lb. applying on crushed stone, grout (broken stone) and crushed granite, straight carloads, and sand and gravel straight or mixed carloads, subject to a minimum weight of 90 per cent of the marked capacity of car between Scandinavia and Grand Rapids. Effective May 20, 1914, the joint through rate of 2 cts. from Granite to Grand Rapids was changed to $2\frac{1}{2}$ cts. and a joint through rate of $2\frac{1}{2}$ cts. established from both Waupaca and Granite to Green Bay, each rate subject to 90 per cent of the marked capacity of car as minimum weight, except cars of 100,000 lb. capacity on which minimum weight of 80,000 lb. applies.

The change in rates May 20, 1914, referred to above, was intended to advance the Granite to Grand Rapids rate from 2 to $2\frac{1}{2}$ cts. per 100 lb. This result does not appear to have been accomplished, for the reason that the sum of the local rate Granite to Scandinavia and Scandinavia to Grand Rapids, $\frac{1}{2}$ ct. and 1.8 cts. respectively, referred to above, were not changed. These rates are still in force, so that since May 20, 1914, the through rate Granite to Grand Rapids has been 2.3 cts. per 100 lb.

From the files of the Commission it appears that under date of February 3, 1914, respondent, the Waupaca-Green Bay Railway Company, by its general freight agent, A. M. Penny, applied to the Commission for authority to change the rates on sand, etc., between Granite and Waupaca and between Granite and Scandinavia from $\frac{1}{2}$ cts. per 100 lb. to a rate of \$4.00 per car when destined to points beyond Waupaca and Scandinavia, and to $\frac{3}{4}$ of a cent per 100 lb. on shipments between Waupaca and Scandinavia when not destined beyond these points. Although the Commission did not authorize these changes, tariffs

purporting to put them in effect March 3, 1914, were issued and copies thereof filed with the Commission. Under date of May 4, 1914, the same official wrote the Commission requesting authority to make changes in these tariffs that would make the proportional rate Granite to Scandinavia 1 ct. per 100 lb. instead of \$4.00 per car; the local rate Granite to Scandinavia 1.2 cts. per 100 lb. instead of $\frac{3}{4}$ cts. per 100 lbs.; the local rate between Granite and Waupaca 1.1 cts. per 100 lb. instead of $\frac{3}{4}$ cts. per 100 lb.; and the proportional rate from Granite to Waupaca \$5.00 per car of 80,000 lb. capacity and \$6.00 per car of 100,000 lb. capacity instead of \$4.00 per car. No approval of these changes was issued by the Commission, but, after making an investigation into the situation involved, a hearing and investigation was called on motion of the Commission as stated above.

At the hearings the respondent companies withdrew their request for an advance in switching rates on local shipments to Waupaca, and asked that distance rates be established as to those shipments, as well as to those destined to other points. It appears from the testimony that the distances involved are as follows:

Between Granite and Scandinavia.....	5.9 miles
“ “ “ Waupaca	4.1 “
“ Rasmussen's Pit and Scandinavia.....	7.4 “

Granite is the billing station for each sand and gravel pit.

In *Waukesha Lime & Stone Company, v. C. M. & St. P. R. Co. et al.* 9 W. R. C. R. 87 and 347, the Commission established a schedule of distance rates on crushed stone, sand and gravel. This schedule of rates is now in force not only on the lines on which established by the order, but also on other lines, including the respondent Green Bay & Western Railroad Company, that voluntarily published it. The rates named in the schedule for distances 5 miles and less is 1.2 cts. and for distances 10 miles and over 5 miles 1.3 cts. per 100 lb.

The petitioner at the hearings pointed out that it recognized that the 2 ct. per 100 lb. rate from Granite to Grand Rapids was low, but a rate materially higher would absolutely destroy the market for its sand and gravel beyond a few miles from its pits.

It is not an easy matter to adjust rates for a low-priced com-

modity like sand or gravel. At the very best the radius of distribution must be limited. A carload of sand can be carried at the lowest rates named but a short distance before the carrying charges equal the value of the load. At the same time the imperishable character of the commodity and the immunity of the carrier from claims growing out of its shipment, combine to make it reasonably profitable for the carriers to handle even at very low rates. The Commission in discussing these points in a decision rendered in a previous case (*Waukesha Lime & Stone Co. v. C. M. & St. P. R. Co.* 9 W. R. C. R. 350) said:

“In fact, all the circumstances surrounding this traffic are of the kind that ordinarily make for the establishment of very low rates. The value of these commodities is so low that only a short haul under the most favorable circumstances can be had before the transportation cost exceeds the intrinsic value of the shipment. The loading of the car is exceedingly heavy, averaging about 44 tons, and thus the amount of weight in the car paying a revenue to the railway company is much greater in proportion to the weight of the car itself than is the case with light loading commodities. The traffic is handled with a minimum of difficulty, and the commodities are practically immune from liability to damage in transit.”

At the hearing the petitioner alleged that, owing to the opening of new pits near Stevens Point from which sand and gravel of a high grade were being shipped over the “Soo” line to Grand Rapids at a rate of 2.3 cts. per 100 lb., it was virtually barred out of the market there with a rate of 2.5 cts. per 100 lb. and a switching rate added to that. It is not the duty or province of this Commission in its work of regulation to undertake by rate-changing to equalize market conditions for the many commodities handled by carriers. Nevertheless, in trying to determine upon the justice of rates which are called in question, it cannot ignore established market conditions.

The petitioner, though praying for a restoration of the 2 ct. commodity rate, testified at the hearing through its president, Mr. Whale, that under a 2.3 ct. rate it could successfully compete at Grand Rapids with the new sand and gravel pits near Stevens Point, the product of which is shipped a round-about way over the “Soo” line to Grand Rapids on a 2.3 ct. rate. Grand Rapids and other small towns near had furnished for several years a steadily increasing demand for the Waupaca product.

Of course, if it could not meet the competition from Stevens Point, the business at Grand Rapids and nearby towns would be lost to it, and this would mean the loss of the traffic to the respondent companies as well, for they could get no part of the business from Stevens Point to Grand Rapids.

In view of these facts, and taking into consideration further that the rate of 2.3 cts. per 100 lb. from the petitioner's pits to Grand Rapids appears to give the respondent companies a reasonable return while retaining to them a heavy traffic, it would seem to be to the advantage of both shippers and carriers that this rate be continued in force. However, the Commission believes that this rate should be published as a joint through rate in lieu of the joint through rate of $2\frac{1}{2}$ cts. rather than as a combination of local rates. This will give the respondents an opportunity of agreeing upon a division that may be a more equitable one than the local rates to and from Scandinavia. In case of failure to agree on the division, the matter may be submitted to the Commission.

As stated above, the local rate on sand, gravel, etc., between points on the Waupaca-Green Bay Railway is $\frac{1}{2}$ ct. per 100 lb. between all points and Waupaca and Scandinavia, and there is also a switching charge of \$4.00 per car between the "Gravel Pit" and the Minneapolis, St. Paul & Sault Ste. Marie Railway at Waupaca. Prior to June 1, 1914, the "Soo" line absorbed this switching or such part of it as did not reduce that line's revenue below \$15.00 per car in connection with local shipments. Effective January 1, 1914, the provision for this absorption was eliminated, resulting in a material advance in rates on shipments of sand, etc., from the pits on the Waupaca-Green Bay Railway to points on the "Soo" line. This advance, it seems, resulted in reducing the Waupaca Sand and Gravel Company's sales of sand, etc. at points on the "Soo" line so that comparatively few shipments now move under the \$4.00 switching rate from Gravel Pits to the "Soo" line at Waupaca. The local rates from the pits to Waupaca and Scandinavia are not of great importance as there is but little sand, etc. shipped from the pits for use locally at these points. The Waupaca-Green Bay Railway Company asks that the Commission approve a change in these rates that would result in a rate of 1.2 cts. per 100 lb. from the pits to Waupaca and 1.3 cts. per 100 lb. from the pits to Scandinavia, subject to minimum weight of 90 per

cent of the marked capacity of the car used. These are the rates ordered by the Commission for distances of 5 and 10 miles, respectively, in the cases cited above.

Statements submitted at the hearings show that the cars used in the traffic herein involved are quite uniformly of either 100,000 lb. or 80,000 lb. capacity. Shipments in such cars, at the rates proposed, would give a revenue of \$8.64 to \$10.80 from the pits to Waupaca and \$9.76 to \$11.70 from the pits to Scandinavia, or advances over the present rates of about 100 to 200 per cent. It is quite likely that conditions seldom exist that warrant advances of such magnitude in freight rates that are actually being used by shippers and that they cannot be made without utter disregard of shippers' interest therein. The Commission will not approve any such radical changes in this case. A rate of $\frac{3}{4}$ cts. per 100 lb. would produce a revenue from \$6.00 to \$7.50 per car. This should at least be adequate for the short hauls from the pits to Waupaca. The rate to Scandinavia appears to be immaterial, as there are practically no shipments at that point. As stated above, the respondent, in its tariff No. 22, purporting to take effect March 3, 1914, published a rate of $\frac{3}{4}$ cts. per 100 lb. between Waupaca and Scandinavia. This rate was intended for application to shipments from all pits to Waupaca and Scandinavia. It is perhaps a little too low for the hauls from pits to Scandinavia, nevertheless, under the circumstances related no greater advance appears to be warranted at this time. In case a fair trial of any or all of these rates shows an inadequate return for the service, the Commission may be applied to for further relief.

NOW, THEREFORE, IT IS ORDERED, That the respondent lines establish a joint through rate of 2.3 cts. per 100 lb. subject to minimum weight of 90 per cent of the marked capacity of the car furnished, on sand and gravel, straight or mixed carloads, from the gravel pits at or near Granite on the line of the Waupaca-Green Bay Railway Company to Grand Rapids.

IT IS FURTHER ORDERED, That the Waupaca-Green Bay Railway Company establish a rate of $\frac{3}{4}$ cts. per 100 lb. subject to minimum weight of 90 per cent of the marked capacity of the car furnished, except that when cars are not weighed the marked capacity will govern as minimum weight, on sand and gravel, straight or mixed carloads, between gravel pits on its line and Waupaca and Scandinavia.

AMERICAN SOCIETY OF EQUITY

vs.

CHICAGO, ST. PAUL, MINNEAPOLIS AND OMAHA RAILWAY
PANY.

Submitted Nov. 11, 1914. Decided Dec. 16, 1914.

Complaint was made that the station facilities at Lampson in Washburn county, on the line of the respondent, are inadequate and it was alleged that the location of the community and its business prospects warrant the construction of a depot, the employment of a freight agent, and the provision of other adequate accommodations and shipping facilities. Lampson is a prepaid station, the nearest open stations being 6.3 miles south, and 8.2 miles north. It appears that for about 8 months of the year Lampson is a block signal station and that a small shed has been provided there for sheltering the operator; that five passenger trains stop on signal daily; that the proprietor of a general store at Lampson sells tickets for respondent, but has no duties with reference to freight; that no means are provided for ascertaining when a train will arrive; that trains are frequently an hour late and rarely on time, and that men, women and children at times wait on the open platform in bitterly cold or rainy weather. The respondent contended that existing conditions are practically the same as they were when a similar petition was denied by the Commission in 1910, *Pischel v. C. St. P. M. & O. R. Co.* 4 W. R. C. R. 783. From a consideration of the testimony it appears that the district in question was originally a logging one with considerable timber shipments; that for a time its importance as a shipping station declined with the industrial transition from logging to agriculture, and that the business was too slight to warrant extensive station facilities, but that at present agricultural development is well under way, the population and the products showing a material increase.

Held: That under the circumstances the erection of a shelter for the protection of freight and passengers is warranted, but that under present traffic conditions the enlargement of the duties of the operator to cover those ordinarily performed by an agent during eight months of the year, and the employment of a competent person during the remaining four months, whose duty shall be to sell tickets, take care of freight and keep the building clean and properly lighted and heated at train times, is all that can be reasonably required of the respondent.

Ordered: That the respondent construct an adequate building for freight and passenger traffic at Lampson, in Washburn county, plans to be submitted to the Commission for approval, and employ a competent person to sell tickets, take care of freight, and keep the building clean and properly lighted and heated at train time. May 1, 1915, is considered a reasonable date at which the building shall be completed and opened for public use.

The petition alleges in substance that the station facilities at Lampson in Washburn county on the line of the Chicago, St. Paul, Minneapolis & Omaha Railway Company are inadequate, and that the location of the community and its business prospects warrant the construction of a depot, the employment of a freight agent, and the provision of other adequate accommodations and shipping facilities.

The respondent submitted for its answer a letter from its general manager in which the position is taken that existing conditions are practically the same as they were when a similar petition was denied by the Commission in 1910.

Hearings were held at Lampson on August 20, 1914, and November 11, 1914. At these hearings *Wm. Burdick* appeared for the petitioner and *C. C. Stockwell* for the respondent.

The proceedings referred to in respondent's answer is *Pischel v. C. St. P. M. & O. R. Co.* 4 W. R. C. R. 783, in which a decision was rendered on March 31, 1910, dismissing the petition, which was substantially similar to the present complaint.

The testimony shows that Lampson is 6.3 miles north of Trego and 8.2 miles south of Minong, these being the nearest open stations. A passing track is located at Lakeside 4.9 miles north of Lampson, but no passenger trains are scheduled to stop there. At Lampson respondent has provided a cinder platform, earth closets and a sidetrack. During about eight months of the year Lampson is a block signal station and a small shed has been provided for sheltering the operator. Five passenger trains stop on signal at Lampson daily. A general store is located about 150 feet east of the track on the opposite side from the platform, and the proprietor sells passenger tickets for the respondent. A second general store is located west of the track.

Witnesses stated that passengers wait in both stores, but more frequently in the one east of the track, since tickets are sold there. When the train is heard approaching passengers hurry from this store across the track in front of the train to the platform. This was said to be dangerous practice, especially in winter when the footing is not sure. No means are provided for ascertaining when a train will arrive, and trains are frequently an hour late and are rarely on time. Numerous witnesses testified that they had seen men, women and children waiting on the open platform in bitterly cold or rainy weather.

Lampson is a prepaid station and goods sent collect are held at Trego or Minong until the freight bill is paid. Freight prepaid and consigned to Lampson is unloaded on the platform by the train crews and must be cared for thereafter by the consignee. A box is provided in which shippers may place bills for the attention of the freight conductor, thus making it unnecessary for them to meet the train. The store keeper who sells passenger tickets has no duties with reference to freight. Witnesses asserted that a considerable amount of freight which is now hauled to or from Trego would be handled at Lampson if better facilities were provided. It was pointed out that the lumber now shipped from a spur track two miles north of Lampson, known as Young's Siding, would be credited to Lampson if an agent were stationed there to attend to such matters.

Méchants testified that people come to Lampson for their mail and to trade from a distance of six miles east and thirteen miles west. A statement was introduced by respondent's superintendent showing, upon the basis of a personal investigation, the location and number of the persons tributary to this station. The total is 61 families, comprising 259 persons. Witnesses pointed out that several settlers not included in the canvass are tributary to Lampson. A resident of the town of Chicog said that the construction of a bridge over the Namakogon river is contemplated, and that upon the completion a large territory will be made accessible to Lampson. It was asserted that the territory surrounding Lampson has increased rapidly in population and business since 1910. One witness stated that to his knowledge twelve new settlers had moved in on undeveloped farms within the past six months. The value of land was said to have doubled since 1910.

The statement of the respondent's freight and passenger earnings submitted subsequent to the hearing is compared with similar data, submitted in 1910, in the following table:

Period.	Freight revenue.	Passenger revenue.	Total revenue.	Average per month.
Year ending Nov. 30, 1906.....	\$1,958 79	\$887 29	\$2,846 08	\$237 15
" " Nov. 30, 1909.....	1,212 65	546 27	1,758 92	146 58
" " June 30 1914.	2,156 51	1,384 69	3,541 20	295 11

The statement for 1914 does not include carload shipments made from Young's spur two miles north of Lampson, which were said by a witness to be considerable, and which would doubtless have been billed at Lampson had an agent been stationed there. Moreover, it appears that some less than carload freight which is now forwarded or received at Trego would probably move via Lampson if it were an open station.

From an examination of the testimony it is evident that the community at Lampson has now reached that stage of agricultural development when additional railway facilities are necessary. It was originally a logging district and its timber shipments were considerable. For a time its importance as a shipping station declined with the industrial transition from logging to agriculture, and the business was too slight to warrant extensive station facilities. Now, however, the agricultural development is well under way and the population and products show material increase. Under such circumstances the erection of a shelter for the protection of freight and passengers is warranted. For about eight months of the year the company now maintains an operator at Lampson. It also employs the storekeeper to sell tickets. With a suitable building for the accommodation of freight and passengers in addition to the existing office of the operator, which can probably be utilized, it will be possible for the operator to perform the duties of an agent during such portion of the year as he is employed, without any material increase in the cost of operation. The expense connected with selling tickets under the existing arrangement would also be eliminated. In view of the fact that Lampson is 8.2 miles and 6.3 miles distant, respectively, from the nearest open stations, and considering the stage of development of the surrounding country, it appears that the employment of an agent throughout the year will eventually be necessary. However, under the present traffic conditions, the enlargement of the duties of the operator to cover those ordinarily performed by an agent during eight months of the year, and the employment of a competent person during the remaining four months, whose duty shall be to sell tickets, take care of freight and keep the building clean and properly lighted and heated at train times, is all that can be reasonably required of the respondent.

IT IS THEREFORE ORDERED, That the respondent, the Chicago, St. Paul, Minneapolis & Omaha Railway Company, construct a

building at Lampson in Washburn county which shall be adequate for the freight and passenger traffic, plans to be submitted to the Commission for approval, and employ a competent person whose duty it shall be to sell tickets, take care of freight, and to keep the building clean and properly lighted and heated at train times.

May 1, 1915, is considered a reasonable date at which the building shall be completed and open for public use.

TOWN OF AMHERST

vs.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY
COMPANY.

Submitted July 2, 1914. Decided Dec. 21, 1914.

Complaint was made that a highway crossing located on respondent's line about one-half mile west of Amherst Junction, is dangerous to public travel on account of the surrounding physical conditions, and the Commission was asked to take such action as it deems proper in the premises. It appears that at the crossing in question the track lies in a cut, the banks of which limit the view in both directions from each highway approach. The respondent's engineer testified that it was feasible to grade away a portion of the embankments, so as to provide an adequate view of approaching trains. The Commission's engineer was of the opinion that to render the crossing reasonably safe without some form of automatic protection, it would be necessary to remove the banks to such an extent that a traveler fifty feet from the center of the track or more could see an approaching train when 2,000 feet from the crossing.

Held: That the crossing in question is more than ordinarily dangerous, and that the installation of an electric bell and visual signal, plans to be submitted to the Commission for approval, or the removal of the obstruction in the manner proposed by the Commission's engineer, should provide reasonable protection for the public under the existing conditions of travel. Order entered in accordance with the foregoing opinion. May 1, 1915, is specified as a reasonable date for the completion of the alterations, or installations ordered.

The petitioner, a regularly organized town in Portage county, alleges that a highway crossing on the line of the Minneapolis, St. Paul & Sault Ste. Marie Railway Company, located about one-half mile west of Amherst Junction, is dangerous to public travel on account of the surrounding physical conditions. The Commission is therefore asked to take such action as it deems proper in the premises.

The respondent, in its answer, alleges that the dangerous condition of the crossing, if any, is due to the failure of adjacent land owners to clear their land of timber and other obstructions as required by sec. 1814a of the statutes. It therefore asks that the petition be dismissed.

A hearing was held at Amherst Junction on July 2, 1914. C. A. Smith appeared for the petitioner and *Kenneth Taylor* for the respondent.

The testimony shows that at the crossing in question, which is known as the "Bishop crossing", the highway runs north and south and the railway east and west, the angle of crossing being about 85 degrees. The track lies in a cut, the banks of which vary from five feet to about twelve feet in height. These banks limit the view in both directions from each highway approach and to the west trees and brush on private property on each side of the railway right of way further obscure approaching trains.

The limits of vision as observed by the Commission's engineer are as follows:

Distance of point of observation in highway from track.	View east.	View west.
North 50 feet.....	400 feet.	500 feet.
" 100	200 ..	230 ..
" 200 ..	100 ..	110 ..
" 300 ..	75 ..	75 ..
South 50 ..	30 ..	30 ..
" 100 ..	35 ..	600 ..
" 150 ..	30 ..	300 ..

The highway is not a main traveled road, but it connects with the Waupaca-Stevens Point road near the south side of the crossing. It is used regularly by a mail carrier and by a number of farmers for whom it is the only convenient outlet to their trading center. Formerly the railway was on a higher level and the view of trains was comparatively unobstructed, but about 1901 the alignment was changed and the grade lowered creating the embankments which now limit the vision. Respondent's time tables show ten regular passenger movements and seven regular freight movements at the crossing.

Respondent's engineer testified that it is feasible to grade away a portion of the embankments so as to provide an adequate view of approaching trains. He estimated that the desired results could be obtained by moving 1,200 yards of dirt which would cost less than the installation and maintenance of bell protection. In connection with this grading, he suggested that the obstructing trees and brush outside of the railway right of way be properly trimmed.

Our engineer has inspected the crossing and reported with reference to the feasibility of making the alterations suggested by respondent's engineer. He expressed the opinion that to render the crossing reasonably safe without some form of automatic protection would necessitate the removal of the banks to such an extent that a traveler 50 feet from the center of the track or nearer can see an approaching train when it is 2,000 feet from the crossing. Train number 3 is scheduled at forty-two miles an hour and probably attains a speed of sixty miles an hour occasionally at this crossing. Therefore, in order that travelers in vehicles may be able to see a train 20 seconds before it arrives, which would allow them time to cross after they were within 50 feet of the track, it is necessary that an unobstructed view of 2,000 feet along the track should be provided. He estimates that the cost of this grading would exceed the cost of an electric bell and visual signal.

In our judgment the crossing under consideration is more than ordinarily dangerous, and requires additional protection. The installation of an electric bell and visual signal, or the removal of the obstruction in the manner proposed by our engineer should provide reasonable protection for the public under the existing conditions of travel.

IT IS THEREFORE ORDERED, That the respondent, the Minneapolis, St. Paul & Sault Ste. Marie Railway Company, install and maintain at the highway crossing located on its lines about one-half miles west of Amherst Junction in the town of Amherst an automatic electric bell with a visual signal for night indication, plans to be submitted to the Commission for approval, or, at its option, grade away the banks of the cut at said crossing in such a manner that a traveler standing in the highway at a point 50 feet from the center of the railway track on either side thereof and at any point nearer thereto will be able to see an approaching train from either direction at a distance of 2,000 feet from the crossing.

May 1, 1915, is considered a reasonable date at which the alterations or installations herein ordered shall be completed.

IN RE APPLICATION OF THE MILWAUKEE LIGHT, HEAT AND TRACTION COMPANY FOR A DECLARATION OF PUBLIC CONVENIENCE AND NECESSITY FOR A SECOND PUBLIC UTILITY IN DELAFIELD.

Submitted Aug. 3, 1914. Decided Dec. 22, 1914.

Application was made by the M. H. L. & T. Co. for a declaration of public convenience and necessity authorizing it to operate a second utility in the village of Delafield for furnishing electricity for light, heat and power. The application was joined by thirty-three residents of Delafield. It appears that the present service is only a limited service furnished by the objector, and that continuous service could not be furnished by him upon the revenue which would be available from such service. The applicant already operates an electric transmission line within the town of Delafield, and through the unincorporated village of Delafield, and alleges its readiness and willingness to furnish continuous service at reasonable rates. It appears that there is a demand for such service.

Held: That under the circumstances the residents of Delafield should not be deprived of such service.

The application of the Milwaukee Light, Heat and Traction Company alleges, among other things, that on May 6, 1907, applicant procured the written consent from the board of supervisors of the town of Delafield authorizing it to construct an electric transmission line along and within the limits of the highways in said town, pursuant to which it constructed and now operates an electric transmission line in, along and upon certain highways and into and through the village of Delafield in said town, and is able and willing to supply the village of Delafield and its residents with an electric current for all purposes; and that a small amount of electric service in the village of Delafield is furnished by E. Humphrey, which service is inadequate in that it is furnished only from the early hours of the evening until 11 p. m., although many persons desire and require continuous electric service in greater amount than said E. Humphrey is able to supply. The Commission is therefore asked to issue to the applicant a declaration of public convenience and necessity authorizing it to operate a second utility in the village of Delafield for furnishing electricity for light, heat and power. The application is joined by thirty-three residents of Delafield.

A hearing was duly ordered and held at Delafield on August 3, 1914, at which *Van Dyke, Rosecrantz, Shaw & Van Dyke*, by *C. M. Rosecrantz*, appeared for the applicant, and *E. Humphrey* in opposition to the application.

The objector testified that he operates a power plant at Delafield, which is an unincorporated village, pursuant to a permit issued by the board of supervisors of the town of Delafield. Current is generated by water power which is used during the day for the operation of a mill rented by him to other parties. He also has a gasoline engine to run the motor in case of emergency. The peak load at the present time amounts to about 60 amperes, and the load at times is as low as 40 amperes. Service begins at 4:30 p. m. in the winter and later according to the season, and ordinarily continues until about 11 p. m. On special occasions current is furnished until a later hour. The objector asserted that continuous operation would make it necessary to shut down the mill or install additional equipment, and that patrons would be unwilling to pay rates which would justify such additional service. He expressed his willingness to make the necessary installations and render continuous service if a sufficient revenue will be available for such service. His service is now unmetered and is on a flat rate basis.

An engineer in the service of the applicant testified that the applicant has the equipment and ability to supply Delafield with electricity for light, heat and power continuously during the full twenty-four hour period. Current would be supplied from the Waukesha Beach substation which now has a capacity of 200 kw., but which could be increased in capacity to meet any demand that might be put on the system.

Numerous business men and residents of Delafield testified that they would use electric current for power during the day and for lighting during the early evening and early morning and during the night in cases of emergency. They asserted that this additional service is necessary. The objector asserts that he cannot increase his equipment so as to furnish continuous service upon the revenue which would be available from such service.

In view of this fact and the further fact that the applicant is ready and willing to furnish continuous service at reasonable rates, we do not feel that the residents of Delafield should be deprived of such service.

A declaration of public convenience and necessity will therefore be granted to the applicant.

G. O. BROOKS ET AL.

vs.

BARRON COUNTY TELEPHONE COMPANY.

Submitted July 31, 1914. Decided Dec. 22, 1914.

Complaint was made that the respondent refuses to install telephones for all its applicants along its line, upon request, at the usual rental, and the Commission was asked to take such action as it deems just in the premises. The respondent operates a toll line from Rice Lake to Birchwood, connected with the public toll station at Mikana and Angus, and also a rural line extending north from Rice Lake to a point about one and one-half miles south of Mikana. The petitioners live north of the last station on the rural line and wish to have local service connected directly with the Rice Lake exchange. Subsequent to the hearing respondent sold its Birchwood exchange to the Wise Tel. Co. under an agreement by the latter not to install any lines for local service within one mile of respondent's toll station at Mikana. It appears that a few patrons have been given service over respondent's toll line upon payment of a rental of \$5.00 per month, and that a similar connection has been offered other parties at the same rate. The respondent contended that to extend the rural line in question, or to construct an additional line for the service of petitioners would decrease the revenue derived from its toll stations at Mikana and Angus.

Held: That the fact that the extensions in question would probably decrease the number of toll calls made from Mikana is not entitled to consideration, since respondent can not limit the local service in order to increase the revenue derived from toll service; that a contract between two telephone companies dividing the territory in which they render service is valid, if such division is not contrary to public policy, *McKinley Tel. Co. v. Cumberland Tel. Co.* 152 Wis. 359; that the agreement between the Wise Tel. Co. and respondent is not inimical to adequate service; that those of the petitioners who live in the territory allotted to the Wise Tel. Co. in the agreement in question should apply to that company for service from its Birchwood exchange; and that if the rates now in effect prove unremunerative after the extensions have been made, the respondent has the privilege of making application to the Commission for a readjustment of rates.

Ordered: That the respondent extend its rural telephone service from its exchange at Rice Lake to all persons living within a reasonable distance of its toll line, and south of a line one mile north of its existing toll station, and who demand such service. Sixty days is considered a sufficient time for compliance with the order.

The petition, which is signed by twenty-six persons, alleges in substance that the Barron County Telephone Company will not install telephones for all applicants along its line upon request at the usual rental. The Commission is therefore asked to take such action as it deems just in the premises.

No answer was filed by the respondent.

A hearing was held on July 31, 1914, at Mikana. *G. O. Brooks* appeared for the petitioners and *J. E. Horsman, T. W. Borum* and *DeWitt Post* for the respondent.

The testimony shows that respondent operates a toll line from Rice Lake to Birchwood connected with the public toll stations at Mikana and Angus. A few patrons have been given service from this toll line upon payment of a rental of \$5.00 per month, and a similar connection has been offered other parties at the same rate. A rural line extending north from Rice Lake to a point about one and one-half miles south of Mikana is also operated by the respondent. This line has a total length, including a branch circuit, of 16½ miles, and serves fifteen subscribers. The five petitioners who testified live approximately one-fourth mile, two miles, 2½ miles, three miles and six miles, respectively, north of the last station on the rural line. They wish to have local service connected directly with the Rice Lake exchange, and estimated that at least twenty of the signers of the petition would install telephones at the usual rate for local service if such facilities were offered them.

Respondent's secretary and manager stated that to extend the rural line, or to construct an additional line for the service of petitioners would decrease the revenue derived from its toll stations at Mikana and Angus. He asserted that to install additional telephones on the existing rural line would overburden it and result in poor service; and that the maintenance of a new line extending almost twenty miles from the Rice Lake exchange would be difficult and expensive. He expressed the opinion that under such conditions the desired extensions prayed for are not warranted at the existing rates.

Subsequent to the hearing respondent advised the Commission that its Birchwood exchange has been purchased by the Wise Telephone Company and that it has entered into an agreement with that company whereby the Wise Telephone Company agrees not to install any lines for local service within one mile of respondent's toll station at Mikana.

The supreme court of Wisconsin has held that a contract between two telephone companies dividing the territory in which they render service is valid, provided such division of territory is not contrary to public policy. (*McKinley Tel. Co. v. Cumberland Tel. Co.* 152 Wis. 359.) In the present case the agreement between the companies is not in evidence, but the Commission has been apprised of its existence and its provisions do not appear to be inimical to adequate service. Had the Barron County Telephone Company retained its Birchwood exchange, we should have been disposed to order the extension of service from that exchange to the petitioners, since shorter lines could have been provided in this manner. However, the agreement above referred to limits the territory to be served locally by the Wise Telephone Company from its Birchwood exchange to a line one mile north of the existing toll station in Mikana. It will therefore be necessary for the Barron County Telephone Company to extend its rural lines from Rice Lake to serve such persons as live within the territory reserved by it. The fact that such extensions would probably decrease the number of toll calls made from Mikana should not receive consideration, since the respondent can not limit local service in order to increase the revenue derived from toll service. If the rates now in effect should prove to be unremunerative after the extension of lines is made, respondent has the privilege of making application to the Commission for an adjustment of rates. Those of the petitioners who live in the territory allotted to the Wise Telephone Company in the agreement above referred to should apply to that company for service from its Birchwood exchange.

IT IS THEREFORE ORDERED, That the respondent, the Barron County Telephone Company, extend its rural telephone service from its exchange at Rice Lake to all persons who live within a reasonable distance of its toll line and south of a line one mile north of its existing toll station in Mikana and who demand such service.

Sixty days is considered a sufficient time within which to comply with this order.

EAVER HARIU

vs.

CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted May 22, 1914. Decided Dec. 23, 1914.

The petition alleged that conditions warrant the establishment of a passenger stop at Hinkle on respondent's line between Kimball and Hurley in Iron county, and the Commission was asked to require the respondent to stop its trains known as numbers 19, 122, 24 and 23, daily except Sunday to receive and discharge passengers. Prior to 1910 a lumber camp was maintained in the vicinity of Hinkle, and, to take care of the traffic incident to the enterprise, a sidetrack was built, several trains stopped to receive and discharge passengers and a box car shelter provided. Upon the abandonment of the lumber camp, the train service was withdrawn and the shelter and sidetrack removed. It appears that the surrounding country is not heavily populated and that the trading center at Hurley is accessible by means of a newly constructed highway, and it does not appear that the petitioner and other residents of Hinkle are subjected to unreasonable hardships or compelled to travel an unusual distance to Kimball or Hurley for railway service.

Held: That under all the circumstances, the granting of the prayer of the petition would not be justified, and that the petition must be dismissed.

The petition alleges in substance that conditions warrant the establishment of a passenger stop at Hinkle on the line of the Chicago & North Western Railway Company between Kimball and Hurley, in Iron county. The Commission is asked to require the respondent to stop its trains known as Nos. 19, 122, 24 and 23 daily except Sundays to receive and discharge passengers.

The respondent, in its answer, denies that there is sufficient business at Hinkle to warrant stopping passenger trains and alleges that the physical conditions are unfavorable for making such stops. It therefore asks that the complaint be dismissed.

A hearing was held on May 22, 1914, at Hurley, *H. K. Bay* appearing for the petitioner and *C. A. Vilas* for the respondent.

The testimony shows that prior to 1910 a camp was main-

tained in the vicinity of Hinkle to supply forest products for the use of the Lake Superior Iron & Chemical Company of Ashland. This enterprise involved a considerable movement of supplies and forest products, and the transportation of a large number of workmen. To meet this condition a sidetrack was built and a box car shelter for passengers provided. Several trains were stopped to receive and discharge passengers. Upon the abandonment of the lumber camp the train service was withdrawn and the shelter and sidetrack removed. Petitioner now asks that passenger service at Hinkle be restored.

The only indication of a station at Hinkle at the present time is a mail crane which is located 2.73 miles from Kimball and 4.16 miles from Hurley, these being the nearest stations. The distance by wagon road to Hurley was said to be over six miles and to Kimball over three miles. Witnesses described the road as very poor, except during dry summer weather and when it is frozen. The chairman of the town of Vaughn, however, stated that a state aid road is being constructed from Hurley to Hinkle and that the road from Hinkle to Kimball will be improved. He said that these improvements would probably be completed as far as Hinkle during 1914, thus facilitating travel to Hurley.

One witness estimated that approximately two hundred people live within a mile of Hinkle. Another expressed the opinion that from one hundred to one hundred and twenty-five persons live within one and one-half miles of the proposed stopping place. Eighteen farmers who would patronize trains at Hinkle were present at the hearing, and a number of these testified that they would ship dairy products from that point if facilities for so doing were provided. Petitioner estimated that thirty-five or forty families are now living in the vicinity as opposed to fifteen, or twenty when the train service was discontinued. It was estimated that about ten persons go to Ironwood from Hinkle to attend dances on Saturday evenings and that fifteen or twenty people go there during the week for other entertainments. Witnesses stated that difficulty had been experienced in securing the services of doctors when needed on account of the lack of train facilities.

Respondent's superintendent testified that the grade at Hinkle is about 1.12 per cent, which is an unusually steep ascent, and that the proposed stop is within 100 feet of a 3 degree curve. In view of this condition he estimated that it would cost about

40 cts. every time a light passenger train is stopped southbound or on the upgrade. He and another operating official expressed the opinion that the stopping of trains at this point would be attended with more than ordinary danger because of the heavy traffic over this division, there being ten passenger trains and from eleven to eighteen freight trains.

An inspection made in September 1914 by our chief engineer shows that the new road referred to by the town chairman has been practically completed to a point about one-half mile distant from Hinkle. He reports that the old highways are poorly constructed and difficult to travel. The testimony given with reference to the grade and curvature of the track is substantiated by his observations.

In the light of the testimony and the report of our engineer we are of the opinion that conditions do not warrant the establishment of a passenger station at Hinkle at the present time. The surrounding country is not heavily populated and the trading center at Hurley is now accessible by means of a newly constructed highway. It does not appear that the petitioner and other residents of Hinkle are subjected to unreasonable hardship or that they are compelled to travel an unusual distance to Kimbal or Hurley for railway service. With these circumstances in mind, we do not feel justified in granting the prayer of the petition.

IT IS THEREFORE ORDERED, That the petition herein be and the same is hereby dismissed.

IN RE APPLICATION OF THE UNITED HEAT, LIGHT, AND
POWER COMPANY FOR ADJUSTMENT OF RATES.

DELAVAN COMMERCIAL CLUB

vs.

UNITED HEAT, LIGHT AND POWER CO.

CITY OF DELAVAN

vs.

UNITED HEAT, LIGHT AND POWER CO.

Decided Dec. 24, 1914.

Three proceedings are involved in the instant case: (1) the United Heat, Lt. & P. Co. and the city of Delavan jointly request that the Commission make an investigation and fix a rate for certain boulevard lights which the city has installed in Delavan in place of certain arc lights; (2) the Delavan Commercial Club complains that the rates charged by the United Heat, Lt. & P. Co. are unreasonable and excessive and that the service rendered by the utility is unsatisfactory and below the proper standard; and (3) the city of Delavan complains that the rate charged by the utility for boulevard lights is unreasonable and that the service rendered by the utility is unsatisfactory.

With respect to service, inspections made at Delavan from time to time from February 1909 to October 1914, show that the quality of service rendered is below the standard required by the Commission, although considerable improvement has been made during the past year or two. The chief defects appear to be fluctuations in the voltage and interruptions in the service. The last inspection shows that only a small portion of the meters have been tested as required by the rules of the Commission, and that meter records, station records and records of interruptions in service are not properly kept.

Held: The service rendered by the utility is inadequate. The utility is ordered: (1) to take such steps within sixty days as are necessary to bring the quality of its service up to the standard prescribed by the Commission and (2) to give continuous service.

With respect to the matter of rates, the Commission made a valuation and investigated the revenues and expenses of the utility. The value of the physical property was apportioned among the service in the village of Darien and the arc lighting and commercial service in the city of Delavan.

Held: The rates charged by the utility require revision to make them conform more closely to the cost of supplying service. The utility is ordered to discontinue its present schedule of rates and put into effect a schedule prescribed by the Commission. The new schedule includes, among other things, rates for power business which hitherto has been practically undeveloped at Delavan.

The application of the United Heat, Light and Power Company for adjustment of rates was filed September 11, 1913. This was a joint request by the company and the city of Delavan that the Commission make an investigation and fix a rate for certain boulevard lights which the city had installed in the place of certain arc lights.

On October 18, 1913, the Delavan Commercial Club filed a complaint signed by twenty-nine persons alleging that the charge of 25 cts. per month for meter maintenance made by the company was unreasonable and praying that an order be issued directing the company to discontinue this charge. On December 19, 1913, the Commercial Club filed an amended complaint charging that the rates of the company were unreasonable and excessive, and that the service rendered by the company was unsatisfactory and below the proper standard. The petition requested that the Commission make a thorough investigation and take such action as would fix a just and equitable rate for energy to the citizens of Delavan and which would at the same time yield a reasonable return on a fair value of the plant located in the city.

On December 18, 1913, the city of Delavan filed a separate complaint charging that the rate for boulevard lights was unreasonable and that the service was unsatisfactory. The prayer of the city was that the Commission take such action as it deemed just and reasonable in the premises.

A hearing on the joint application of the city and the company and the original complaint of the Commercial Club was set for November 18, 1913. At the request of the interested parties, this was postponed. After the other complaints were entered, a hearing was set and held on January 19, 1914, in the city of Madison, and on April 2, 1914, another hearing was held in the city of Delavan. The appearances were *Maurice Morrissey* and *H. B. Meyers* for the petitioners, and *Frederick Kull* for the United Heat, Light and Power Company.

At the hearings a great deal of testimony was offered by the petitioners which tended to show that the service of the company was generally unsatisfactory, due to violent fluctuations in the voltage and to frequent interruptions in the service. Respondent claimed in rebuttal that it had been doing all in its power to improve the service and that within the past two years there had been a decided improvement, particularly since No-

ember 1913, when an extra employe was put on at the plant. Neither party offered any evidence as to the fair value of the plant or as to what the earnings should be. Apparently both sides were satisfied to have the Commission base its findings entirely on its own investigation.

As the question of service was given practically exclusive attention at the hearings, it may be well to dispose of it first, though it need not detain us long. Regular inspections of the service at Delavan have been made from time to time since February 1909. The inspections made since the present management obtained control of the plant are as follows: May 26 and 27, 1910; November 10 to 12, 1910; June 14 and 15, 1911; February 9 to 12, 1912; July 2 and 3, 1912; June 27 and 28, 1913; November 10 to 13, 1913; and October 3 to 6, 1914. All of these inspections show that the quality of the service was below the standard required by the Commission. During the past year or two, however, considerable improvement has been made at the station, but the service is not up to what the consumers of Delavan are entitled to expect it to be. At the last inspection records were taken at seven localities, and in most of these places the record ran for two or more days, but in none of them did the voltage regulation come within the prescribed limits. The following summary shows the result of the voltage inspection, and the permissible variation at Delavan under the rules established by this Commission:

Location	Variation in voltage during lighting hours
Keef residence on Prairie St.....	109- $\frac{1}{2}$ to 121
Hotel Delavan	111- $\frac{1}{2}$ to 119- $\frac{1}{2}$
Walworth and 8th St.....	113- $\frac{1}{2}$ to 130
Gullickson's residence	113 to 129
Public Library	106 to 123
McCoy's tin shop	107 to 125
Langdon Bros. saloon at Darien	104- $\frac{1}{2}$ to 125- $\frac{1}{2}$
Permissible variation at Delavan ...	114- $\frac{1}{2}$ to 121- $\frac{1}{2}$

In order to correct the excessive voltage variation it will be necessary for the utility to make a complete and careful voltage survey, so that the system can be properly balanced up. Some transformers may need to be moved and others replaced by larger sizes, and a general rearrangement made in order to accomplish this end. It is entirely possible, however, to operate

within the requirements to this Commission with the station equipment and load conditions prevailing at Delavan, but it is necessary that the situation be carefully studied and followed up by the management. The management understands fully the necessity of improving the quality of the service and insists that it has already done much toward this end, and that it could not have done more during the past season because of the regular construction work and the additional work involved in changing the system from a frequency of 133 cycles to 60 cycles. While there is a great deal of merit in this contention, yet the fact remains that the quality of the service is not up to the standard, and it will be necessary for the management to take the proper steps to bring the quality of the service within the requirements of this Commission without delay.

The last inspection shows that of 280 meters only about 60 had been tested as required. The meter records are not kept according to requirements, nor are the station records as complete as they should be. The interruptions, also, are not carefully recorded. These matters are all covered by rules of this Commission, and we have had no satisfactory explanation from the company as to why these rules are not followed.

The rates being charged for electric service at Delavan are as follows:

Commercial Lighting

Minimum bill \$1.00 per month.

Meter rent 25 cts. per month.

Current 15 cts. per kw-hr. for the first 30 kw-hr. per month, excess 10 cts. per kw-hr.

Street Lighting

34—6.6 amp. 75 volt a. c. enclosed arcs burning on an all night moonlight schedule \$80.00 per lamp per year.

34—40 c-p. a. c. series incandescents burning on an all night moonlight schedule \$20.00 per lamp per year.

6—32 c-p. carbon incandescents burning all night every night \$24.00 per lamp per year.

A valuation of the physical property of the company was made as of date March 1, 1914, a summary of which follows:

APPRAISAL OF PHYSICAL PROPERTY.
UNITED HEAT, LIGHT AND POWER COMPANY.
March 1, 1914.

Total.....	\$5,520	\$4,885	\$12,447	\$8,372	\$31,031	\$21,263	\$49,204	\$34,607

NOTE:—Addition of 12% to cover engineering, superintendence, interest during construction, contingencies, etc.

The next table shows the balance sheet of the company as of date October 1, 1914:

ASSETS.		LIABILITIES.	
Property and plant.....	\$46,262.12	Capital stock.....	\$12,000.00
Accounts receivable.....	3,056.01	Bonds.....	13,000.00
Materials and supplies.....	526.98	Depreciation reserve.....	4,353.87
Prepaid insurance.....	162.22	Notes and bills payable.....	8,169.12
		Accounts payable.....	3,441.00
		Accrued liabilities.....	726.06
		Open accounts.....	7,434.63
		Surplus.....	882.65
Total assets.....	\$50,007.33	Total liabilities.....	\$50,007.33

The cost of the property and plant as shown in the balance sheet is \$46,262.12. The cost of reproducing the property new according to the appraisal made six months prior to the date of the balance sheet is \$47,246. We have no exact information as to the amount of construction done during the intervening six months, but from the records at hand it seems that it must have been upward of \$2,000. This indicates that the company has been efficient in its construction work and further that it has not sought

to overstate its property and plant cost as is done in so many instances. The present value, which is the cost new less depreciation, as shown in the appraisal, is \$32,770. The balance sheet of the company shows a depreciation reserve of \$4,353.87, but as the company has been accounting for depreciation only during the past three years this cannot represent the actual depreciation that the plant has suffered, and therefore the difference between the property and plant account and the depreciation reserve account in this instance is no indication of the present value of the plant.

It will be noted that an apportionment of the property has been made between Darien, arc and commercial—the latter two being in Delavan—according to which \$41,833 of the cost new and \$27,990 of the present value are charged at Delavan.

The village of Darien is located about six miles from Delavan. The company built a line over to Darien and began selling current there in February 1914. Up to October 1, 1914, only 15 customers had been connected. It is the contention of the petitioners that the investment necessary to supply the service at Darien should not be included in the valuation used in determining the rates for Delavan. Their position is that the Delavan consumers should not be burdened with the expense of developing business in another locality. Under the circumstances of this case, the contention of the petitioners seems reasonable; therefore only the property apportioned to Delavan will be included in the fair value used in making rates for that city.

Taking into consideration all the elements that have been discussed in different decisions of the Commission, it seems that the fair value for rate-making purposes of the property devoted to public service by the company in the city of Delavan is about \$32,000. This figure has accordingly been used to determine the reasonable return that the company should earn.

The next table shows the income account for each year that the present company has been operating this plant:

INCOME ACCOUNTS
UNITED HEAT LIGHT & POWER COMPANY
Delavan Only

	Year ending				
	June 30 1911	June 30 1912	June 30 1913	June 30 1914	Sept. 30 1914

Gross income.....	\$2,430.76	\$1,872.51	\$6,301.84	\$4,069.56	\$4,216.97

* Depreciation has not been included.

It will be noted that the cost of generating current during the year ending September 30, 1914, was \$8,316.65. An examination of the detailed accounts which make up this total discloses that the item fuel amounted to \$3,062.62. The records of the company show that during the period under consideration 1,745 tons of coal were used. On the basis of 165,000 kilowatt-hours generated this means a consumption of 21.1 pounds of coal per kilowatt-hour at the switchboard. When this inefficiency was called to the attention of the manager, he explained that a new engine had recently been installed and that he expected to reduce the fuel consumption considerably. A comparison of the equipment and load of the plant at Delavan with those of other plants of about the same size indicates that the number of pounds of coal per kilowatt-hour generated could be reduced by at least one-half. This the manager admitted. For the purposes of the case at hand, then, the fuel cost can be reduced to \$2,531.31, which in turn will bring the total operating expense, excluding depreciation, down to \$8,844.42. If to this is added 4.5 per cent on the

cost new of \$41,833, for depreciation and 7 per cent on the fair value of \$32,000 for interest, the total cost of the service would amount to \$12,967.

After making a study of the cost of supplying the different branches of service, the rates set forth in the order at the end of this decision were fixed upon. It will be noted that the type of the schedule for commercial lighting has been changed to the one usually prescribed by this Commission. In order to ascertain the revenue that the proposed schedule will probably produce, an analysis was made of current consumed by each customer in this class. A summary of the analysis follows:

Class.	No. of customers.	Connected load kw.	Active load kw.	KILOWATT-HOURS CONSUMED.			
				Primary	Secondary.	Excess.	Total.
A.....	226	149.7	76.9	19,459	7,960	3,373	30,792
B.....	75	57.8	40.5	11,414	11,141	7,465	30,020
C.....	29	85.3	46.8	5,033	3,966	2,650	11,649
Total.....	330	292.8	164.2	35,906	23,067	13,488	72,461

By multiplying the number of kilowatt-hours in each of the primary, secondary, and excess groups by the corresponding rate in the schedule the revenue to be derived from the sale of energy to commercial consumers can be determined. To this should be added the revenue to be obtained from the minimum bill and from consumers on flat rates. The probable revenue from these sources is shown in the next table.

At the present time the company has no power business of any importance established, aside from one customer with an installation of 60 horse power who is being served under a special contract. The reason no more power business has been developed is that it was not until last spring that the frequency of the energy produced by this plant was changed from 133 cycles to 60 cycles. Up until that time, also, the plant had operated only from dusk to dawn. After changing to 60 cycles, however, the plant began running a few hours in the daytime to accommodate the one power customer above mentioned. Now, we understand, arrangements have been made to give regular twenty-four hour service, which undoubtedly will make it possible to get considerable power business. In the table of probable revenues, however, only

the revenue actually received from power sales during the past year has been included. Because of the conditions under which energy is furnished to the customer with the special contract, that contract will be permitted to remain in force until it expires, but it shall not be renewed.

The charge for municipal street lighting has been changed so as to conform more closely to the cost of supplying the service, as has also the rate for energy supplied to the ornamental street lighting system, which at the present time is being billed at the regular commercial rate.

The next table shows the probable revenue that will be received from the different classes of service under the rates prescribed:

<i>Commercial Lighting</i>		
Primary	35,906 kw-hr. at 13 cts.	\$4,667.78
Secondary	23,067 " at 10 "	2,306.70
Excess	13,488 " at 7 "	944.16
Minimum bill	75 cts. per month.....	253.00
Flat rates	150.00
	Total commercial lighting.....	\$8,321.64
<i>Commercial Power</i>		375.00
<i>Municipal Street Lighting</i>		
34 arcs at \$62.00	\$2,108.00
34—40 c-p. incandescents at \$18.00	612.00
6—32 c-p. " at 24.00	144.00
	Total municipal street lighting.....	2,864.00
<i>Ornamental Street Lighting</i>		
5,272 kw-hr. at 7 cts. per kw-hr.	369.04
<i>Non-operating Revenue</i>		700.00
	Total probable revenue.....	\$12,629.68

It will be noted that the total probable revenue is \$337 less than the total cost of furnishing the service. This revenue, however, is based on the business done during the year ending September 30, 1914. Within the past year thirty-five new lighting customers have been attached. Next year, of course, these customers will contribute considerably more revenue than they did the past year. In addition there will be the natural increase in the lighting business which will be augmented somewhat by the decrease in rates effected by this decision. The greatest increase in revenue, however, is expected to come from the power business. This is an undeveloped field at Delavan. If other cities of the same size can be considered as indicative of the amount of power business available, it seems that the revenue from this

source should be between \$1,500 and \$2,000 at least. These various sources of additional revenue, together with the possibility of decreasing the operating expenses, seem to indicate that the rates we are establishing will be reasonable and just to all parties concerned.

IT IS THEREFORE ORDERED, That the United Heat, Light and Power Company discontinue its present schedule of rates and place in effect the following:

Commercial Lighting.

For all lighting service furnished residences and businesses (hereinafter specifically referred to as Classes A, B, and C) including the incidental use of appliances for heating and power used on lighting circuits and passing through the same meter a charge of

Primary rate: 13 cts. net, or 14 cts. gross, per kilowatt-hour for the first 30 kilowatt-hours per month per kilowatt of active load.

Secondary rate: 10 cts. net, or 11 cts. gross, per kilowatt-hour for the next 60 kilowatt-hours per month per kilowatt of active load.

Excess rate: 7 cts. net, or 8 cts. gross, per kilowatt-hour for all over 90 kilowatt-hours per month per kilowatt of active load.

The active load shall in each case be a fixed percentage of the total connected load of the lamps installed on the consumer's premises, excluding appliances.

Class A includes residences, dwellings, flats, private rooming houses, and hotels. Where the total connected load is equal to or less than 500 watts nominal rated capacity, 60 per cent of such total connected load shall be deemed active; where the installation exceeds 500 watts nominal rated capacity, $33\frac{1}{3}$ per cent of such a part of the total connected load over and above 500 watts shall be deemed active.

Class B includes banks, offices, stores, barber shops, saloons, halls and lodges, theaters, moving picture houses, restaurants, pop corn wagons, depots, photo studios, and all other consumers not herein otherwise specifically provided for. In this class 70 per cent of the connected load shall be deemed active.

Class C includes schools, churches, public buildings, small industrial establishments, blacksmith shops, stables, garages, and bowling alleys. In this class 55 per cent of the connected load shall be deemed active.

Minimum Bill. The minimum bill shall be 75 cts. per month. Where the utility is unable to read the meter after reasonable effort, the fact should be plainly indicated upon the monthly bill, the minimum charge of 75 cts. shall be assessed, and the difference adjusted with the consumer when the meter is again read.

Commercial Power.

Primary: 8 cts. net, or 9 cts. gross, per kilowatt-hour for the first 15 kilowatt-hours per month per kilowatt of active load.

Secondary: 6 cts. net, or 7 cts. gross, per kilowatt-hour for the next 30 kilowatt-hours per month per kilowatt of active load.

Excess: 4 cts. net, or 5 cts. gross, per kilowatt-hour for all over 45 kilowatt-hours per month per kilowatt of active load.

The active load shall be determined as follows:

90	per cent of the first 10 h. p. installed shall be deemed active.
75	" " " 20 " " " " "
60	" " " 30 " " " " "
50	" " " 60 " " " " "

The active kilowatts connected shall be determined by multiplying the active horse power rating by 0.746.

The minimum monthly bill shall be 75 cts. for the first horse power or fraction thereof and 25 cts. for each additional horse power of connected load.

Discount for Prompt Payment.

The utility shall bill all consumers at the gross rate and the difference between the gross and net rates above specified, or one cent per kilowatt-hour, shall constitute a discount for payment on or before the 15th of the month.

Reconnection of Meters.

For the reconnection of a meter for the same consumer upon the same premises, a charge of \$1.00 shall be made.

Special Contracts.

The special contract for power which the company has given shall remain in force until it expires, but it shall not be renewed.

Ornamental Street Lighting.

The rate for energy furnished the ornamental street lighting system shall be 7 cts. per kilowatt-hour.

Municipal Street Lighting.

The rates for municipal street lighting shall be as follows:

480 watt arcs burning on an all night moonlight schedule \$62.00 per year.

40 c-p., a. c. series incandescents burning on an all night moonlight schedule \$18.00 per year.

32 c-p. carbon incandescents burning on an all night every night schedules \$24.00 per year.

Rates to Become Effective.

The rates prescribed in this order shall take effect on and after January 1, 1915.

IT IS FURTHER ORDERED, That the United Heat, Light and Power Company shall take the necessary steps to bring the quality of its service up to the standard prescribed by this Commission. Sixty days is deemed a reasonable time within which to comply with this order.

IT IS FURTHER ORDERED, That the United Heat, Light and Power Company shall give continuous service.

IN RE APPLICATION OF THE WHITEWATER ELECTRIC LIGHT
COMPANY FOR AUTHORITY TO ADJUST RATES.

Submitted Dec. 15, 1914. Decided Dec. 26, 1914.

Application is made by the Whitewater El. Lt. Co. for authority to adjust its rates for electric service. The changes contemplated in general constitute reductions in rates and the only portion of the proposed schedule which it is necessary to question is the minimum charge of 75 cts. per month for residences, which would result in increases in the bills of consumers using 3 kw-hr. or less per month.

Held: The proposed minimum charge is reasonable. The utility is authorized to put the rates applied for into effect and is ordered to publish immediately a complete statement of the amendments in its rates as hereby authorized and to file with the Commission a statement of these amendments within twenty days from the date of this order.

Application in this matter was filed with the Commission November 14, 1914. The Whitewater Electric Light Company is a corporation organized and doing business under the laws of the state of Wisconsin with its principal place of business in Whitewater, and it is a public utility engaged in the management and operation of an electric light and power plant in said city. The application sets forth that the lawful rates of the applicant now in effect, as far as they are concerned with this application, are as follows:

Hotels having 100 lamps or more, 10 cts. per kw-hr. for the first 150 kw-hr. All over 150 kw-hr., 5 cts. per kw-hr. Minimum charge, 15.00 per month.

Hotels having 50 lamps and less than 100, 10 cts. per kw-hr. for the first 70 kw-hr. All over 70 kw-hr. at 5 cts. Minimum charge, \$7.00 per month.

Churches. 15 cts. per kw-hr. for 1 to 100 kw-hr. If more than 100 kw-hr. are used, 14 cts. per kw-hr. for 1 to 150 kw-hr. If more than 150 kw-hr. are used, 13 cts. per kw-hr. for 1 to 200 kw-hr. If more than 200 kw-hr. are used, 12 cts. per kw-hr. for the entire amount.

Schools. 15 cts. per kw-hr. for 1 to 200 kw-hr. If more than 200 kw-hr. are used, 14 cts. per kw-hr. from 1 to 250 kw-hr. If more than 250 kw-hr. are used, 13 cts. per kw-hr. for 1 to 300 kw-hr. If more than 300 kw-hr. are used, 12 cts. per kw-hr. for 1 to 350 kw-hr. If more than 350 kw-hr. are used, 10 cts. per kw-hr. for the entire amount.

Residences and lodge halls. 15 cts. per kw-hr. for 1 to 25 kw-hr. If more than 25 kw-hr. are used, 14 cts. for 1 to 50 kw-hr. If more than 50 kw-hr. are used, 13 cts. for 1 to 75 kw-hr. If more than 75 kw-hr.

are used, 12 cts. for 1 to 100 kw-hr. If more than 100 kw-hr. are used, 11 cts. for 1 to 125 kw-hr. If more than 125 kw-hr. are used, 10 cts. per kw-hr. for the entire amount.

Meter rent. 25 cts. per month if the consumers use less than 10 kw-hr. per month. If 10 kw-hr. or more are used per month, no meter rent is charged.

Application is made for authority to adjust the rates by putting into effect the following schedule:

Hotels having 100 lamps or more, 10 cts. per kw-hr. for the first 130 kw-hr.; 5 cts. per kw-hr. for all above this amount. Minimum charge, \$13.00 per month.

Hotels having 50 lamps and less than 100, 10 cts. per kw-hr. for the first 60 kw-hr. and 5 cts. per kw-hr. for the excess. Minimum charge \$6.00 per month.

Churches, schools, and lodge halls. First 100 kw-hr., 13 cts. per kw-hr. Next 100 kw-hr., 12 cts. per kw-hr. Next 300 kw-hr., 11 cts. per kw-hr. All over 500 kw-hr., 5 cts. per kw-hr.

Residences. First 25 kw-hr., 13 cts. per kw-hr. Next 25 kw-hr., 12 cts. per kw-hr. Next 25 kw-hr., 11 cts. per kw-hr. All over 75 kw-hr., 10 cts. per kw-hr. Minimum charge, 75 cts. per month except as otherwise stated in the schedule.

No meter rent.

Charge for reconnection. A charge of \$1.50 to be made for reconnection of a meter for the same consumer upon the same premises within one year of the date when service was discontinued.

Hearing in this matter was held at Madison December 15, 1914. C. J. Partridge appeared on behalf of the Whitewater Electric Light Company. There was no appearance in opposition.

For practical purposes, it appears that all of the changes which the company seeks to have authorized constitute reductions, with the exception of the application of the minimum charge. In some portions of its schedule which it has had in effect the company has applied the rates in a regressive manner. For example, when schools used more than 350 kw-hr. per month, the 10 ct. rate was applied to the entire amount. The result of this was to enable consumers in some instances to use a larger amount of current for a smaller price for the total than they would have had to pay for a smaller amount. This will be eliminated under the schedule which the company asks to have authorized. It is possible that there may be a few individual consumers who were so greatly benefited by the old regressive rate that the application of the new rate will not decrease their charges, but as applied to the general body of consumers, there will be a material decrease under the new schedule. The only portion of the schedule, therefore, which it becomes necessary to question in any way is the application of the minimum charge. The testimony indicates

that there have been a considerable number of consumers whose bills for service have been less than 75 cts. per month. That is, there have been consumers who used 3 kw-hr. or less of current per month. Under the schedule which the company asks to have superseded, a consumer using 3 kw-hr. per month would pay a bill of 70 cts., made up of a charge for meter rental of 25 cts. and a charge of 3 kw-hr. of current at 15 cts. per unit. For a consumer using 4 kw-hr., the charge would be 85 cts. Under the new rate, a consumer using 4 kw-hr. would pay the minimum charge of 75 cts. per month, and this minimum charge would be applied to all uses of current up to between $5\frac{1}{2}$ and 6 kw-hr. per month.

The only parties to be affected adversely by the minimum charge, therefore, will be those consumers who use 3 kw-hr. or less per month.

The Commission has had occasion in a number of cases to investigate the reasonableness of minimum charges for electric service, and in a general way it may be said that a minimum charge of 75 cts. per month has been found reasonable. It is true that in one or two cases which have come before the Commission a minimum charge of 50 cts. per month has been established, but we are inclined to believe that 75 cts. is reasonable in this case. The increase for the small consumers under the minimum charge will not be as great as might appear at first sight, because of the fact that all such consumers at present have to pay a meter rental of 25 cts. per month in addition to all charges for current, so that if a consumer used no current whatsoever, the greatest possible increase in his bill from the application of the minimum charge would be 50 cts. per month. If a consumer used but 1 kw-hr., the increase would be 35 cts. per month. If he used 2 kw-hr., it would be 20 cts. per month, and if used 3 kw-hr., the increase would be 5 cts. per month. We see no grounds for questioning the reasonableness of the proposed minimum charge in this case, particularly as it is accompanied by a general reduction in the charges for current, and the schedule asked for by the company will be authorized.

The company asks also that it be given authority to charge \$1.50 for reconnection of a meter for the same consumer upon the same premises within one year of the date when service was disconnected. This has been held to be a reasonable provision in

other cases before the Commission, and we see no reason for not authorizing such a practice in this case.

IT IS THEREFORE ORDERED, That the applicant, the Whitewater Electric Light Company, be and the same hereby is authorized to discontinue such portions of its present schedule as are covered by this application, and to substitute therefor the rates which it asks to have authorized. This amendment may be made effective January 1, 1915.

IT IS FURTHER ORDERED, That the company shall immediately publish a complete statement of the amendments in its rates as hereby authorized, and shall file with the Commission a statement of such amendments within twenty days from the date of this order.

CENTRAL WISCONSIN TRAFFIC BUREAU,
By B. F. WILSON,

vs.

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted Oct. 13, 1914. Decided Dec. 28, 1914.

The petitioner alleges that the rate of 8 cts. per cwt. exacted by the respondent for the transportation of certain shipments of lumber from Wausau to Minocqua was exorbitant and asks for refund. The rate in question is part of a group system of rates in force on lumber and sash, doors and blinds and other house trimmings from lumber and manufacturing centers, including Wausau and certain other points in the Wisconsin river valley.

Comparison with rates for the transportation of the same commodities between other points within the state indicates that the rate complained of is higher than the average rate for similar or greater distances. Group rates, however, are made as a rule with less regard for distance and transportation than for commercial conditions and the issue in the instant case is not whether other points farther away should have the same rate to Minocqua as Wausau, but whether this rate is of itself unreasonable.

Held: The rate is unreasonable. A rate of 6 cts. per cwt. would bring the respondent a reasonable return for the service rendered and the respondent is ordered to put it into effect. In view of the fact that the shipments upon which reparation is asked were made at the rate long published and in force, reparation will not be ordered and the petition, insofar as it asks for reparation, is dismissed.

This case involves a complaint of exorbitant rates and a demand for reparation. The petitioner is the Central Wisconsin Traffic Bureau, an organization made up of shippers of Wausau, Rhinelander and Merrill, with headquarters at Wausau. The specific complaint is signed also by B. F. Wilson, a member of the bureau, "by A. E. Solie, Traffic Manager for the Bureau". It relates to shipments of lumber from Wausau to Minocqua made by B. F. Wilson, on which the rates charged by the respondent company were "unjust and exorbitant, for which reparation is asked in the sum of \$33.75."

After due notice a hearing was held in the office of the Commission at Madison on October 13, 1914, at which A. E. Solie appeared for the petitioner and J. M. Davis and C. A. Lahey for the respondent company.

It appears from the complaint and the testimony given at the hearing that a group system of rates is in force on lumber and sash, doors and blinds and other house trimmings from lumber and manufacturing centers, including Wausau and some other points in the Wisconsin river valley, and that the rate complained of was a part of the group system. It also appears that very few shipments of lumber or manufactured lumber products are made from Wausau to Minocqua. One count in the complaint alleges discrimination because Grand Rapids and other points farther away from Minocqua than Wausau are given the same rates as Wausau. The petitioner submitted exhibits showing that Tomah, 161 miles from Minocqua, had the same rate, 8 cts. per cwt., to Minocqua as Wausau, only 72 miles distant; and that Pittsville, 141 miles away, had the same rate as Wausau. Other exhibits, made part of the record, give the rate per ton-mile on lumber and lumber products from other manufacturing points to Minocqua, and tend to support the claim of the petitioner that the rate charged him from Wausau to Minocqua was higher than the average rate for similar or greater distances between other points in the state.

Among other exhibits submitted at the hearing was one showing rates from six lumber manufacturing points to Green Bay, with an average distance of about 170 miles and a uniform rate of $7\frac{1}{2}$ cts. per cwt. The average rate per ton-mile in this group is a little less than 70 cts. Another group showed the rates to Green Bay from eleven points with an average haul of about 140 miles and an average rate of a fraction above 7 cts. per cwt.

The wide disparity in the rates quoted above to Green Bay and the Wausau-Minocqua rate of 8 cts. per cwt. may be in part accounted for on the grounds of the difference in competition and the volume of traffic, but it does not wholly explain why a rate so much above the cost of service should be in force between Wausau and Minocqua.

Group rates are made as a rule with less regard for distance and transportation conditions than for commercial conditions. "The chief justification for a zone system" (group rates) says the interstate commerce commission in *Ferguson Saw Mill Co. v. St. L. I. M. & S. R. Co.*, 1910, 18 I. C. C. R. 396, 398, "is that it places all producers on the same footing at the market." In another case, *Sawyer & Austin Lbr. Co. v. St. L. I. M. & S. R. Co.* 1911, 21 I. C. C. R. 464, 466, the interstate commerce

commission says: "In making a blanket adjustment the burden rests upon the carrier to provide rates that shall not be unreasonable from any point of origin."

In a case involving Wisconsin points, *Waukesha Lime & Stone Co. v. C. M. & St. P. R. Co.* 1913, 26 I. C. C. R. 515, 518-519, the interstate commerce commission held that where the rate complained of was not in itself unreasonable or exorbitant, the commission would not disturb a group rate system merely because as high a rate was charged for a short haul as for a longer haul.

The issue in the case before us is not whether other points farther away should have the same rate to Minocqua as Wausau, but whether the rate in force between Wausau and Minocqua, and of which complaint is made, is of itself unreasonable. That rate is 8 cts. and the distance is 72 miles. We believe that the rate is unreasonable and so find.

The petitioner asks that a rate of 5 cts. be established on lumber products between Wausau and Minocqua. In view of the small volume of traffic between the points, this seems rather low. A rate of 6 cts., however, would bring the respondent company a reasonable return.

IT IS THEREFORE ORDERED, That the Chicago, Milwaukee & St. Paul Railway Company withdraw its rate of 8 cts. per cwt. on lumber and on sash, doors, blinds, and other house trimmings between Wausau and Minocqua, and substitute therefor a rate of 6 cts. per cwt. on those commodities.

In view of the fact that the shipments upon which reparation is asked were made at a rate long published and in force, reparation will not be ordered and the petition, insofar as it asks for reparation, is dismissed.

S. L. STEVENS

vs.

CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted Oct. 13, 1914. Decided Dec. 28, 1914.

The petitioner alleges that the charge exacted by the respondent for the transportation of a shipment of rye from Nekoosa to Janesville and thence, as a reshipment, to Milwaukee, was excessive and asks for refund. The petitioner requested the respondent to furnish him a small car but was compelled to use a car of a capacity of 75,000 lb., although the actual weight of the shipment was 42,170 lb., and to pay charges on the basis of this capacity for the movement from Nekoosa to Janesville and the subsequent movement from Janesville to Milwaukee. The petitioner contends that he should have been charged only the full rate from Nekoosa to Milwaukee, plus \$2.00 charges for reshipment from Janesville, and that he should have been charged the rate upon the actual weight of the shipment instead of upon the car capacity.

Held: (1) The claim of the petitioner for reparation on the basis of the through rate from Nekoosa to Milwaukee cannot be granted, for the reconsignment of a shipment by the original consigner on a through rate plus a small additional charge, is allowed only where the point of diversion and reshipment is on the direct or authorized route between the initial shipping point and the final receiving point. (2) The claim of the petitioner for reparation upon the basis of the actual weight of the shipment is justified.

The respondent is ordered to refund to the petitioner the difference between the sum paid by the petitioner to the respondent and the sum which should have been paid at the tariff rates upon the actual weight of the shipment.

The petitioner in this case is a shipper of grain and other farm produce at Nekoosa. His complaint alleges that the respondent company made a charge for a shipment of rye on September 26, 1913, from Nekoosa to Janesville, reshipped to Milwaukee, that was "erroneous, illegal, unusual and exorbitant", and asks that the respondent company be ordered to refund to him the sum of \$91.54, the amount which he alleges he was overcharged.

A hearing upon the case was held, after due notice, in the office of the Commission in Madison on October 13, 1914, at which *Henry E. Fitch* appeared for the petitioner and *R. H. Widdicombe* for the respondent company.

The essential facts in the case are as follows: The petitioner, on or about September 26, 1913, notified the agent of the respondent company at Nekoosa, one E. M. Pesky, that he desired a small car for a shipment of rye "to load 30,000 lb., or as much more as I can load in two days." The petitioner had been in the habit of asking for a small car for his shipments, and the latter averaged about 40,000 lb. per car. At the end of two days, after a large car of the capacity of 75,000 lb. had been furnished, and while the petitioner was still loading, he was notified by the agent that if the car were held longer he would have to pay demurrage, whereupon he closed the car and ordered it forwarded, and ordered another small car for further shipment. The actual weight of the shipment in the first car as furnished to the agent was 42,170 lb. Up to that time the petitioner had never paid charges on the basis of car capacity, but always on the actual weight of his shipment.

The car of rye in question was billed to the Blodgett Milling Company of Janesville, but the milling company being unable to receive it upon its arrival, it was ordered by the petitioner reshipped from Janesville to E. P. Bacon & Co., Milwaukee. The freight charges demanded by the respondent company for the shipment in question and paid by the petitioner were \$146.65. This total charge, which the petitioner claims is \$91.54 in excess of a reasonable charge, was made up of the rate of 12½ cts. per cwt., the tariff rate from Nekoosa to Janesville, and 7 cts. per cwt., the tariff rate from Janesville to Milwaukee, on the full car capacity of 75,000 lb.

The petitioner claims that he should have been charged only the full rate from Nekoosa to Milwaukee, namely, 12½ cts. per cwt. plus \$2.00 charges for reshipment from Janesville; and that he should have been charged the rate upon the actual shipment of 42,170 lb. instead of upon the car capacity of 75,000 lb.

An examination of the published tariffs of the respondent company fails to reveal anything that would justify the petitioner in believing that he could make a shipment to Janesville, then reship from Janesville to Milwaukee at the through rate in force from Nekoosa to Milwaukee. Such a reconsignment of a shipment by the original consigner, on a through rate plus a small additional charge, is allowed only where the point of diversion and reshipment is on the direct or authorized route between the initial shipping point and the final receiving point.

A shipment from Nekoosa to Milwaukee via Janesville is too far out of the direct or authorized route to warrant the application of the through rate.

It is quite clear, however, that the petitioner should have been charged the tariff rates only upon the actual weight of rye shipped, and not upon the car capacity. The neglect of the agent to note on the bill of lading that a small car was ordered, and the neglect of the petitioner to note the neglect of the agent, even though such notation be formally required by the carrier, can hardly be held in such a case as this, where the petitioner was in the habit of asking for small cars and had up to this time paid only upon the actual weight of shipments and never upon a car capacity, to justify a charge in excess of the actual shipment.

IT IS THEREFORE ORDERED, That the Chicago & North Western Railway Company refund to S. L. Stevens of Nekoosa the sum of \$65.42, the difference between the sum paid to the respondent company and the sum which should have been paid at the tariff rates upon the actual weight of the shipment.

E. W. ELLIS LUMBER COMPANY

vs.

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted Aug. 4, 1914. Decided Dec. 28, 1914.

The petitioner alleges that the rate of 2 cts. per cwt. charged by the respondent for the transportation of mill refuse, commonly known as "hog fuel", in carload lots from the petitioner's mill in Grand Rapids to the Consolidated Water Power & Paper Co's plant in the same city and to Port Edwards, is unreasonable and asks that a reasonable charge be established and that refund be ordered on certain shipments. Since these shipments moved the respondent has reduced the rate in question to 1 ct. per cwt. and the petitioner accepts the new rate as satisfactory and asks merely for refund.

Held: In view of the low price of the commodity carried, the high minimum loading requirements and the short haul involved, the rate exacted was clearly excessive. Inasmuch as the respondent by its own action in reducing its rates has acknowledged a rate of 1 ct. per cwt. to be a reasonable rate, and inasmuch as the petitioner has expressed himself as satisfied with this rate, refund is ordered upon this basis without determining the reasonableness, in and of itself, of the new rate.

The petition in this case bears date of April 25, 1914. It alleges in substance that the rate of 2 cts. per cwt. carload lots on mill refuse, commonly known as "hog fuel", charged by the respondent company for the haul from the petitioner's mill in Grand Rapids, Wis., to the Consolidated Water Power & Paper Company's plant in the same city, and for the haul from the petitioner's mill in Grand Rapids to Port Edwards "is unjust, unreasonable, exorbitant and unlawful," and prays that the respondent company be ordered to establish a reasonable charge of, say, \$3 per car; and also that it be ordered to refund to the petitioner the excess paid by it over what shall be determined to be a reasonable rate on all shipments made from September 1, 1913, to April 29, 1914.

After due notice a hearing was held in the office of the Commission at Madison on August 4, 1914, at which *A. E. Solie* appeared for the petitioner and *J. M. Davis* for the respondent company.

At the opening of the hearing Mr. Solie, for the petitioner, made a statement to the effect that after the filing of the complaint and petition in the case the respondent company had issued a new tariff reducing the rates on the shipments named from 2 cts. per cwt. to 1 ct. per cwt. Mr. Solie stated further for the petitioner that, although he had asked for a rate of \$3 per car, he would withdraw that request and accept as satisfactory the new rate established by the respondent company, maintaining, however, that part of his petition which asked for a refund of the excess charges paid by him to the respondent company between September 1, 1913, and April 29, 1914.

It appears from the testimony that when the petitioner began shipping "hog fuel" to the points named, in September 1913, he supposed, as did the local agent of the respondent company at Grand Rapids, that the rate would be what is known as the reciprocal switching rate between the railroads of \$2 per car. This was what he paid up to February 1914, when he was called upon to pay on back shipments the difference between \$2 per car and 2 cts. per cwt. and was compelled to pay the 2 cts. per cwt. rate also on all shipments after that up to April 29, 1914, when the respondent company's 1 ct. per cwt. rate went into effect.

The "hog fuel" produced at the mill of the petitioner is a cheap product which brings in the market \$1 per ton. The shipments involved in this case were from the petitioner's mill to the plant of the Consolidated Water Power and Paper Company, a distance of about nine-tenths of a mile, and from the petitioner's mill to Port Edwards, a distance of about five miles. The cars used were mostly what are known as gondola cars, upon which the petitioner had at his own expense built racks in order that a proper load of the light material might be carried.

Considering the low price of "hog fuel" the minimum loading requirements—40,000, 50,000 and 60,000 lb., according to the kind of car used—and the short haul in each case, the rate of 2 cts. per cwt., which for the shorter haul of nine-tenths of a mile amounted to 40 per cent of the value of the commodity in the market, was clearly excessive. Whether the new rate of half that figure which the respondent company put into effect on April 29, 1914, is reasonable in and of itself, it is not necessary to determine in this case, inasmuch as the petitioner has expressed himself as satisfied with it.

A statement presented by the petitioner at the hearing as "Exhibit B", and which was not refuted, shows that between September 9, 1913, when the shipments under consideration began, and April 29, 1914, when the respondent company's new rate of 1 ct. per cwt. went into effect, the petitioner shipped 244 cars of "hog fuel" to the points named, upon which he paid freight charges of \$2,270.60. The amount he would have paid at a 1 ct. per cwt. rate is \$1,246.58. That is, the petitioner paid in excess of what the respondent company itself acknowledges is a reasonable rate, the sum of \$1,024.02, which he asks to have refunded to him.

IT IS THEREFORE ORDERED, That the Chicago, Milwaukee & St. Paul Railway Company refund to the E. W. Ellis Lumber Company the sum of \$1,024.02.

J. W. PURVES ET AL.

vs.

FRIENDSHIP TELEPHONE COMPANY.

Submitted Aug. 18, 1914. Decided Dec. 28, 1914.

The petition, signed by residents of the village of Friendship, alleges that the proposed removal of the central office of the respondent from the village of Friendship to the village of Adams will inconvenience a large number of patrons and result in an unnecessary expenditure for the respondent. A counter petition, signed by residents of the village of Adams, alleges that the public can be more adequately served than it is at present if the central office is located at Adams instead of at Friendship. It appears that the two villages are only about one-half mile apart and that the utility, being forced to vacate the building which it now occupies in the village of Friendship, has determined to construct a building for itself in the village of Adams for the reason that a cheaper site can be secured in Adams and the further reason that a less expensive cable between the two villages will be required if the exchange is located in Adams.

Held: It is practicable to render adequate service from an exchange located in either Adams or Friendship and the choice of either location will not involve the utility in unreasonable expenditure for construction or operation. The choice between the two locations is therefore the function of the utility and not of the Commission. The petition is dismissed.

The petition, which is signed by 28 residents of the village of Friendship, alleges in substance that the central office of the Friendship Telephone Company, from which the villages of Adams and Friendship are served, is now situated in the village of Friendship, but that respondent has determined by action of its board of directors to move its central office to the village of Adams, which action would result in inconvenience to a large number of patrons and an unnecessary expenditure for the respondent. The Commission is therefore asked to require the respondent to maintain its central office in the village of Friendship.

A counter petition, signed by 194 residents of the village of Adams, was also filed alleging in substance that the public can be more adequately served than it is at present with the central office located at Adams instead of Friendship.

No formal answer was filed by the respondent.

A hearing was held at Adams on August 18, 1914, at which *J. W. Purves* appeared for the petitioners and *E. J. Kileen* for the respondent.

The testimony shows that the Friendship Telephone Company has 278 subscribers of which 66 are in the village of Friendship, 54 on rural lines north of Adams, 41 in the village of Adams and 96 on rural lines south of Adams. The exact location of the remaining subscribers was not given. Respondent's secretary stated that 36 applications for service in Adams have been received. Friendship is an inland village and is the county seat of Adams county. Adams is a railway division point recently established, and was said to be growing rapidly. A witness stated that there are now 211 flats or houses in Adams as opposed to 123 in Friendship. The villages are about one-half mile apart.

The existing exchange is located in a dwelling house in Friendship, part of which is rented for telephone use. The owner has requested the telephone company to remove its central office. The company therefore proposes to construct a building for use as a central office, storeroom, etc., and determined to locate it in the village of Adams. The reasons given for making the change are that a cheaper site can be secured in Adams and that a less expensive cable between the two villages will be required if the exchange is located in Adams.

A witness for the petitioners stated that during court sessions at the county seat the frequent long distance calls are ordinarily made from the central office, because it is difficult to transmit such messages at other stations. He objected to the removal of the central office on account of such long distance calls, but admitted that if a standard of service is maintained which will enable subscribers to make use of long distance service at their own telephones, there would be no objection to the change on this account.

From an examination of the testimony it is apparent that it is practicable to render adequate service from an exchange located in either Adams or Friendship, and that the choice of either location will not involve the company in unreasonable expenditure for construction or operation. The choice between the two locations is therefore the function of the respondent company and not of the Commission.

IT IS THEREFORE ORDERED, That the complaint herein be and the same is hereby dismissed.

A. L. GREENGO

vs.

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted Aug. 4, 1914. Decided Dec. 29, 1914.

The petitioner complains that the rate charged by the respondent for the transportation of skimmed milk from Sussex to Milwaukee is the same as that charged for the transportation of unskimmed milk, although the value of the skimmed milk is but little more than one-third that of the unskimmed milk. It appears that little skimmed milk is shipped over the respondent's line between the points in question and that the cost of handling skimmed milk is the same as that of handling the unskimmed product. The petitioner does not question the reasonableness of the skimmed milk rate but objects to the fact that no higher rates are charged for the product of higher value.

Held: Although the difference in the value of the two kinds of milk might warrant, under certain circumstances and if the traffic were extensive enough, a difference in the rate, the quantity shipped in the instant case does not call for this. Moreover, when a rate is not complained of as being unreasonable in itself there can be no justification for advancing some other rate merely to establish a difference in the two rates on the basis of the differing values of the commodities carried.

The case is dismissed.

The petitioner in this case is a farmer living near Menomonee Falls, in Waukesha county, who ships milk from Sussex, a station on the Chicago, Milwaukee & St. Paul Railway, to Milwaukee. His complaint, filed March 12, 1914, alleges that the rate charged by the respondent company on skimmed milk from Sussex to Milwaukee, namely 13½ cts. per eight gallon can, is the same as that charged for unskimmed milk, while the value of the skimmed milk is but little over one-third that of unskimmed milk.

A hearing in the case was held at the office of the Railroad Commission in Madison on August 4, 1914, at which A. L. Grengo appeared in his own behalf and J. N. Davis for the respondent company.

It appears from the testimony that very little skimmed milk is shipped over the lines of the respondent company into Mil-

waukee and that the petitioner in the flush season does not ship over three cans per day. The cost of handling skimmed milk is the same as that of handling the unskimmed product. It is shipped in the same sized cans and is carried in the baggage cars of passenger trains, the empty cans being returned free of charge. The difference in the value of the two kinds of milk might, under certain conditions and if the traffic were extensive enough, warrant a difference in the rate, but the quantity shipped hardly calls for this. Moreover, the petitioner in his testimony stated that the objection made was not to the skimmed-milk rate, but to the fact that no higher rates were charged for the higher-valued product. In answer to a question, petitioner said he would be satisfied "if others were" with an advance of 15 cts. per gallon on the unskimmed milk shipments, the skimmed product to remain the same.

Where a given rate under consideration is not complained of as unreasonable, there can be no justification for advancing some other rate merely to establish a difference in the two rates on the basis of the differing values of the commodities carried.

IT IS THEREFORE ORDERED, That the case be dismissed.

IN RE INVESTIGATION, ON MOTION OF THE COMMISSION, OF THE RATES, SERVICE, MANAGEMENT AND ACCOUNTING OF THE MUNICIPAL WATER WORKS AND ELECTRIC LIGHTING PLANT IN THE VILLAGE OF WATERLOO, WISCONSIN.

Submitted May 20, 1914. Decided Dec. 30, 1914.

Petition was made requesting the Commission to investigate the Waterloo W. & Lt. Commission and its management of the municipal water and electric utilities of the village of Waterloo. A preliminary survey seemed to indicate the need for an investigation broader in scope than the one requested and the Commission decided to institute an investigation on its own motion, covering not only the management but also the rates, service and accounting practices of the two utilities.

The petitioners complained that no satisfactory statement showing the financial condition of the utilities and the results of operation was obtainable under the present methods of accounting procedure. It appeared upon examination of the books and accounts of the utilities that the inadequacy and incorrectness of the records were due chiefly to the lack of a scientific accounting system and the Commission has accordingly prescribed and installed a suitable system of accounts for the utilities.

The petitioners further complained that collections were made by the secretary of the W. & Lt. Commission instead of by the village treasurer as required by law. The accounting system prescribed by the Commission removes this cause of complaint by providing that collections shall be made by the village official upon whom the duty devolves according to statutory provisions.

The complaint of the petitioners with reference to the management of the joint utilities seems to be based in large measure on the practice followed in the sale of materials to consumers. Materials sold by a utility should be sold at a price high enough to cover at least the cost of handling in addition to the cost of the goods, and in the cost of handling should be included not only such items as freight and cartage, but also the losses due to breakage, necessary waste and other costs of a similar nature. In the instant case it appears that the recent change in the system of accounts and records used by the joint utilities and in the persons in charge of the system will eliminate the cause of complaint indicated.

With respect to electric rates, the petitioners complained that the village does not know whether it is paying the proper amount for street lighting, that the present rates for electrical energy used for power purposes are too low and that the entire rate schedule needs revision so that each class of consumers will pay its proper share of the cost of supplying the service. The value of the property of the electric utility was determined from the records of the utility and a computation of deprecia-

tion upon the 4 per cent sinking fund basis and a life of 18 years, and the revenues and expenses were investigated. The expense of steam generation and certain items of the general and undistributed expenses were apportioned between the electric utility and the water utility, which are jointly operated, and the expenses of the electric utility were apportioned between commercial lighting, commercial power, and street lighting expenses. It appears that the revenue from commercial lighting and the revenue from street lighting exceeds the cost of rendering the service while the revenue from power service is less than the cost of the service, and that the rates for commercial lighting and power are regressive.

Held: The electric rates should be revised.

With respect to the service rendered by the electric utility, it appears that there have been some variations in voltage slightly in excess of the allowable limits and that the meter testing practice of the utility has not been up to the standard. The officials in charge, however, have expressed a willingness to comply with the requirements of the Commission and no specific order is deemed necessary in the matter.

The petitioners complain that certain electric meters are owned by consumers. The Commission has held that the law contemplates that the divided ownership of parts of the equipment of public utilities shall cease and that both private and municipal plants must acquire, by purchase or lease, all meters used in connection with their respective works (*In re Investigation of the Hudson Water Works*, 1908, 3 W. R. C. R. 138, 141) and this position is affirmed in the instant case.

With respect to water rates the petitioners complained that no proper charge is made for water used for street sprinkling and that water used for construction purposes is furnished free. Because of the lack of sufficient record information and the fact that the business of the utility is not yet fully developed, it seems inadvisable to attempt a reconstruction of the rate schedule for general service. The investigation in the matter of water rates is therefore confined to the questions of the proper charge to make to the village for fire protection and the rates for water used for street sprinkling and for construction purposes. The value of the property of the water utility was determined from the records of the utility and a computation of depreciation upon the 4 per cent sinking fund basis and a life of about 50 years; the value so ascertained was apportioned between fire and general service; and the expenses were investigated and apportioned between fire and general service.

Held: (1) At least \$1,500 should be paid by the village for fire protection each year. (2) The rates for water used for street sprinkling and for construction purposes should be revised.

The village of Waterloo is ordered to discontinue its present schedules of electric and water rates and put into effect rates prescribed by the Commission.

This case arises through the filing on November 25, 1913, of a petition signed by twenty-five residents and taxpayers of the village of Waterloo requesting that the Commission make an investigation of the Waterloo Water and Light Commission and its management of the municipal water and electric utilities of the village. A preliminary survey seemed to indicate that an investigation broader in scope than the one requested by the pe-

tioners should be made; therefore the Commission decided to institute an investigation on its own motion covering not only the management, but also the rates, service, and accounting.

Pursuant to notice, a hearing was held at the office of the Commission in Madison on May 20, 1914. The appearances were *W. N. White*, one of the signers of the petition praying for an investigation, and *A. W. Reddeman*, secretary of the Water and Light Commission of the village.

From the testimony taken at the hearing and from evidence obtained from other sources, it seems that the main contentions of the petitioners are:

(1) That the affairs of the joint utilities are not economically and efficiently conducted, particularly with references to the waste of wire and other material.

(2) That no satisfactory statement showing the financial condition of the utilities and the results of operation is obtainable under the present methods of accounting procedure.

(3) That bills are collected irregularly and charges for meter rentals are not made for all consumers subject to such charge.

(4) That the collections are made by the secretary of the Water and Light Commission instead of by the village treasurer as provided by statute.

(5) That meters are owned by consumers, which is a violation of the Public Utilities Law.

(6) That no proper charge is made for water used for street sprinkling and that water for construction purposes is furnished free.

(7) That the village does not know whether it is paying the proper amount for street lighting.

(8) That the present rates for electrical energy used for power purposes are too low and that the entire rate schedule needs revision, so that each class of consumers will pay its proper share of the cost of supplying the service.

An examination of the books and accounts of the two utilities disclosed that the inadequacy and incorrectness of the records were due chiefly to the lack of a scientific accounting system. It was therefore deemed advisable to prescribe an accounting system for the department. This was accordingly done, and a suitable system was submitted to the Water and Light Commission on February 3, 1914. At the same time a report was submitted showing the financial conditions of both plants for each year that

they had been in operation. Due to the contemplated change in officers, the new books and forms were not ordered until May. In September they were obtained from the printer and the system was then installed by a representative of the Commission. If properly kept, this accounting system should enable the Water and Light Commission to submit regularly accurate statements showing the financial condition and the results of operation of the departments under their control. In addition, the Water and Light Commission will have a check on all material and supplies used and will thus be able to avoid another of the sources of complaint.

Under the method used formerly, as indicated in the complaint, all collections were made by the secretary of the Water and Light Commission. The statutes require that all collections of the village shall be made by the village treasurer. Also, from the standpoint of scientific accounting methods and sound business management, it is probably not advisable for any business organization either private or public to place the person who computes the bills in charge of the collections. Accordingly, the accounting system already prescribed provides that collections shall be made by the village official upon whom the duty devolves according to statutory provisions. A definite system of control and check is thus established.

It seems that much of the dissatisfaction among the petitioners arises from the fact that the rate schedule is not adjusted to the financial needs of the plant, and further to the fact that the petitioners are not satisfied that each class of consumers is paying the proper amount for the service rendered. We shall therefore first take up the question of rates. The other items in the complaint will be disposed of later.

The rates which are in force are as follows:

ELECTRIC RATES.

Commercial Lighting.

Minimum monthly charge 75 cts.	
First 50 kw-hr.,	12 cts. per kw-hr.
All over 50 " "	10 " "
Meter rent to non-owners, 25 cts. per month.	

Commercial Power.

From	1 to	50 kw-hr.,	10 cts. per kw-hr.
"	51 "	100 "	9 " "
"	101 "	150 "	8½ " "
"	151 "	300 "	8 " "
"	301 "	500 "	7 " "
"	501 "	1,000 "	5 " "
"	1,001 "	2,000 "	3½ " "
All over	2,000	"	special rate

Street Lighting.

55—32 c-p., 9—150 w., 3—250 w., 1—450 w., and an arch of 75—15 and 20 w. incandescent lamps burning on a moonlight schedule from dusk to midnight \$1,200 per year. The arch is lighted only on Saturday nights and on special occasions.

WATER RATES.

First	20,000 gallons	\$6.00 per year.
Second	10,000 "25 per M gals.
Third	10,000 "20 " "
Fourth	10,000 "15 " "
All over	50,000 "10 " "
Hydrant rental		\$1,000 per year.

No valuation of the physical property has been made in this case, as both plants have been built in recent years, and as we have a fairly complete statement of the amounts spent in their construction. The electric plant was purchased by the village for \$5,440 in October 1907, and the water plant was constructed in the year 1910 at a cost of \$27,849.75. Following is a summary showing the additions to property each year. For the years prior to 1914 materials and supplies to be used in construction were entered when received directly in the property and plant account. According to the new system of accounts such items will be entered in a separate account and will not be charged to property and plant until actually used in construction. In order, therefore, to have the total of the property and plant account, as shown below, agree with the total shown in the balance sheet as of June 30, 1914, which was made up according to the new accounting system, it was necessary to credit this account with the materials and supplies on hand. This treatment makes it appear that during the past year very little money was spent for construction purposes in the electric department and that more equipment in the water department was actually discarded than was put in. The foregoing explanation, however, clarifies the matter. The necessary data to show the actual construction each year were not available.

SUMMARY OF PROPERTY AND PLANT.

Year ending	Electric.	Water.	Total.
June 30, 1908.....	\$10,885 00		\$10,885 00
" 1909.....	4,562 05		4,562 05
" 1910.....	1,404 63		1,404 63
" 1911.....	1,019 35	\$27,849 75	28,869 10
" 1912.....	3,105 44	3,035 54	6,140 98
" 1913.....	598 57	848 81	1,447 38
" 1914.....	220 03	*232 48	*12 45
Total construction..	\$21,795 07	\$31,501 62	\$53,296 69

*Credit.

Following is the balance sheet as of June 30, 1914, made up according to the new system of accounts:

BALANCE SHEET OF THE WATERLOO WATER AND LIGHT DEPARTMENTS.

June 30, 1914.

Items.	Assets.	Liabilities.
ELECTRIC.		
Property and plant.....	\$21,795 07
Accounts receivable.....	1,756 51
Materials and supplies.....	1,209 45
Deficit.....	3,933 45
Funded debt.....	\$5,000 00
Depreciation reserve.....	6,148 44
Village equity.....	16,678 24
WATER.		
Property and plant.....	31,501 62
Accounts receivable.....	965 77
Materials and supplies.....	635 79
Deficit.....	1,142 77
Funded debt.....	28,000 00
Depreciation reserve.....	1,507 81
Village equity.....	1,241 10
JOINT.		
Steam generation app. acct. (coal).....	112 50
Cash in till.....	46 30
Accounts payable.....	199 12
Village treas. (overdraft).....	4,324 52
	\$63,099 23	\$63,099 23

The property and plant account of the electric department shows that the electric plant has cost \$21,795.07. As nearly all of this plant has been built in the last few years, this amount would not be far from the cost of reproduction new which an appraisal would show, provided, of course, that no serious mistakes had been made in construction. From the balance sheet, it will be seen that a depreciation reserve of \$6,148.44 has been set up. If the proper amount has been charged to depreciation each year, the difference between the total in the property account and the total in the depreciation reserve will represent the present value of the plant. The present value in this instance, then, would be \$15,646.63. Before accepting this as conclusive, it may be advisable to determine the present value in some other way. The electric plant was purchased in October 1907, but most of it has been built since that time. For the purpose at hand, it seems safe to assume that this plant has reached an age of about five years. Now the average life of electric plants in this section of the country is about eighteen years. On the basis of a 4 per cent sinking fund curve, this plant then would be in about a 79

per cent condition, which would make its present value \$17,218, or about \$1,500 more than obtained from the figures shown in the utility's balance sheet. The material and supplies usually kept on hand amount to about \$1,200. Adding this to the present value, we get about \$18,400 as the value of the physical property used by the electric department at the present time.

The accounts of the water department show that the water plant has cost \$31,501.62. A depreciation reserve of \$1,507.81 has been set up which leaves the present value of the plant about \$30,000. This plant is about four years old and will probably have a life of about fifty years. If a 4 per cent sinking fund curve is used in determining the extent of its depreciation, it will be found to be about a 97 per cent condition. On this basis, its present value would be \$30,557. On June 30 last, there were \$635.79 of materials and supplies on hand which would bring the present value of the physical property up to \$31,192.

For the purpose of rate making in this instance, we have included in the costs interest at the rate of 5 per cent on \$18,000 in the case of the electric plant and on \$30,500 in the case of the water plant. In order to maintain an equitable relation between taxpayers and consumers, taxes have also been included in the costs at the rate of 1 per cent on the above figures. Depreciation as usual has been figured on the cost new, which in this instance is taken to be the amounts shown in the property accounts. The rates of depreciation used in this instance are 5 per cent for the electric plant and 1 per cent for the water plant.

Following is a statement showing the operating expenses for the year ending June 30, 1914:

	Electric	Water
Power generation	\$364.34
Steam power pumping.....	\$209.48
Steam generation	4,167.71	1,389.23
Distribution	453.15	133.04
Commercial	229.19	40.00
General (direct)	78.55	15.02
General (joint)	37.50	12.50
Undistributed (joint)	54.19	18.06
	<hr/>	<hr/>
Total foregoing	\$5,384.63	\$1,817.33
Depreciation	1,089.75	315.02
Taxes	180.00	315.02
	<hr/>	<hr/>
Total	\$6,654.38	\$2,447.37

In preparing the above statement it was necessary to make an apportionment of the steam generation expenses between the two

departments, as these plants are jointly operated. No data relating to the operation of the water plant, however, were available; consequently, it was necessary to make the apportionment on the basis of similar operating conditions existing in other joint utilities for which we did have the necessary information, and on the basis of estimates made for this utility. Taking all the various factors into consideration, such as the amount of steam necessary to pump, the probable gallons pumped, the amount of coal necessary were the electric plant operated independently, the stand-by nature of the fuel that would be used in an independent water plant, we arrive at the conclusion that about 25 per cent of the cost of steam generation should be assessed to the water department and 75 per cent to the electric department. It was also necessary to apportion between the two departments certain items of the general and undistributed expenses. This apportionment was made overhead on the basis of the other operating expenses.

Next is shown the income account of the electric department for the year ending June 30, 1914:

Operating revenues	\$7,745.62
Operating expenses	6,654.38
	<hr/>
Net operating revenue.....	\$1,091.24
Non-operating deficit	1,208.44
	<hr/>
Gross deficit	\$117.20

It will be noted that the net operating revenue, after providing for operating expenses including taxes and depreciation, is \$1,091.24 which is equal to a return of 5.2 per cent on the cost of the plant as shown in the property account, or 6.1 per cent on a present value of \$18,000. From this it is evident that the revenues being received from the sale of electricity are sufficiently high to make the electric plant a success financially. This, however, does not tell us whether each class of consumers is paying its proper share of the total revenue; consequently, our inquiry must be directed toward that end.

The large non-operating deficit of \$1,208.44 which resulted in a net deficit of \$117.20 is more apparent than real. An examination of the accounts disclosed that a bill of over \$500 of materials sold previously to June 30, 1914, was not entered upon the ledger until after that date; hence it did not get into the

non-operating revenue in the same year that the cost of such materials was charged to that account. Then, too, a large part of this deficit is due to an adjustment of stock on hand to the actual inventory figures of July 1, 1914. Materials should be sold at a price high enough to cover at least the cost of handling in addition to the cost of the goods. In the cost of handling should be included not only such items as freight and cartage, but also the losses due to breakage, necessary waste, and other costs of a similar nature. If this is done, and if a careful check is kept on the goods sold and on hand, there is no reason why this account should show a deficit at the end of the year. It is in connection with the conduct of this part of the business that much of the criticism of the management of the plant has arisen. Fortunately, there has been a change of persons in charge of the accounts and records of the utility since the petition in this case was filed. This, together with the new system of accounts and records, we believe will correct this source of complaint.

In order to ascertain whether each class of consumers is paying its proper share of the total cost, it is necessary to make an apportionment of the expenses. For the purpose at hand, the expenses have been taken as shown above, and interest at the rate of 5 per cent on a present value of \$18,000 has also been included. The apportionment, a summary of which is shown below, was made in the manner usually followed by this Commission :

Classification	Total cost
Commercial lighting	\$4,645.94
Commercial power	2,054.80
Street lighting	853.64
Total	<u>\$7,554.38</u>

The revenue from commercial lighting during the past year was \$5,326.01, as compared with a cost of \$4,645.94. About \$300 of this revenue was reserved from meter rentals, which leaves the revenue from the sale of energy for lighting about \$380 more than the cost. The revenue from commercial power was \$1,219.61, or \$735.19 less than the cost as shown in the above apportionment. The revenue from street lighting was \$1,200.00, or \$346.36 more than the cost. From this it would seem that an adjustment in the rates is necessary, so that commercial lighting and street lighting will pay a little less and power a little more.

The present rate for commercial lighting is 12 cts. per kilowatt-hour for the first 50 kilowatt-hours and 10 cts. per kilowatt-hour for all over 50 kilowatt-hours. The manner in which this rate has been applied has made it regressive and hence objectionable. For instance, if a consumer used 50 kilowatt-hours he would pay \$6.00, but if he used 51 kilowatt-hours he would pay \$5.10. By taking a little more current he would save 90 cts. The rate for power is also regressive. It starts out with 10 cts. per kilowatt-hour when the consumption is up to 50 kilowatt-hours; when the consumption is between 50 and 100 kilowatt-hours the rate is 9 cts., and so on down through six steps until the rate reaches 3½ cts. per kilowatt-hour when the consumption is over 1,000 kilowatt-hours. If a power customer used 1,000 kilowatt-hours his bill would be \$50.00. If he used only one kilowatt-hour more his bill would be reduced to \$35.04. There is no justification for schedules of this kind, for besides being improperly constructed, they lead to waste; as customers in many instances can lower their bills by merely using more energy.

In order to correct the discriminatory features of the present system of charges it is necessary to change the type of the schedule. The question of the particular kind of rate schedule that should be adopted was submitted to the members of the village commission. After going over the matter quite thoroughly with us, they decided that a rate similar to the one usually prescribed by this Commission would be satisfactory. Following their decision a rate for commercial lighting was worked out which reads:

Primary—12 cts. net, or 13 cts. gross, for the first 30 hours' use per month of the active load.

Secondary—10 cts. net, or 11 cts. gross, for the next 60 hours' use per month of the active load.

Excess—8 cts. net, or 9 cts. gross, for all over 90 hours' use per month of the active load.

The details of this rate with respect to the classification of customers and the percentages to be used in determining the active load will be found in the order at end of this opinion.

For the purpose of determining the amount of revenue that this rate will produce, an analysis of the amount of electricity used by each customer during the past year was made. A summary of the analysis follows:

Class	Number customers	Connected load kw.	Active load kw.	Kilowatt Hours Consumed			
				Primary	Secondary	Excess	Total
A.....	132	74.8	39.9	11,757	5,643	784	18,184
B.....	58	36.6	25.5	6,464	7,017	4,302	17,783
C.....	26	39.8	21.9	3,460	2,986	1,095	7,541
Total.....	216	151.2	87.3	21,681	15,646	6,181	43,508

By multiplying the number of kilowatt-hours in each of the primary, secondary and excess groups by the corresponding rates the amount of revenue that will probably be received from each source can be determined. This computation is shown in the table of probable revenues given below. In this table is also shown the revenue that a minimum bill of 75 cts. per month for lighting customers should produce.

The schedule which has been worked out for commercial power reads as follows:

Demand charge: 50 cts. per month for the first horse power or fraction thereof, and 50 cts. for each additional horse power of connected load.

Energy charge:

- 7 cts. net, or 8 cts. gross, per kilowatt-hour for the first 50 kilowatt-hours consumed during the month.
- 6 cts. net, or 7 cts. gross, per kilowatt-hour for the next 100 kilowatt-hours consumed during the month.
- 5 cts. net, or 6 cts. gross, per kilowatt-hour for the next 350 kilowatt-hours consumed during the month.
- 3.5 cts. net, or 4.5 cts. gross, per kilowatt-hour for the next 1,000 kilowatt-hours consumed during the month.
- 3 cts. net, or 4 cts. gross, per kilowatt-hour for the next 3,500 kilowatt-hours consumed during the month.
- 2.5 cts. net, or 3.5 cts. gross, per kilowatt-hour for the next 5,000 kilowatt-hours consumed during the month.
- 2 cts. net, or 3 cts. gross, per kilowatt-hour for all over 10,000 kilowatt-hours consumed during the month.

The maximum rate for power shall, however, not exceed 10 cts. per kilowatt-hour, nor shall the minimum monthly bill be less than \$1.00 for the first horse power or fraction thereof and 25 cts. for each additional horse power of connected load.

The power rate which we are prescribing is somewhat higher than the old rate. This is particularly true for the plant's largest customer. In making an adjustment in the rate schedule of a utility, increasing the rate to large power consumers is a serious matter, because there is always the likelihood of such customers finding it advantageous to use some other source of power. In the instant case we have given this matter careful consideration, and we believe that the rate prescribed is low enough to retain the business that the utility now has, and at the same time high enough to pay the additional costs involved in furnishing the service.

In addition to the regular power schedule, it is necessary to fix a rate for emergency service and a rate for service furnished to customers who operate only a relatively short time each year. As yet no emergency service is being supplied, but a demand for it may arise in the near future, in which event it will be necessary to have such a rate. The rate usually established for this kind of service is similar to the regular power rate with the exception that the limiting rate does not apply, that is, the rate would be 50 cts. per horse power per month plus the regular charge for whatever energy is used. There seems to be nothing in this case which would make a departure from the usual practice either necessary or advisable. The rate outlined above will accordingly be prescribed for emergency service.

In establishing a rate for customers who take energy only a short time each year, the same difficulty is encountered as is met with in making rates for large power users who can readily find some other source of power. If this short time service can be supplied without increasing the capacity of the station or without making any investment other than stringing the regular service wire, it may be a source of considerable profit. In this connection, though, it should be borne in mind that every plant should have some reserve capacity, and that short time business of this nature should not be taken on if it makes use only of this reserve capacity, because if that is done it may become necessary to increase the size of the units in the station at some later time. In other words, this kind of business should come off the daily peak if it is supplied during the winter months, or it should come during the summer time when the daily peak is comparatively small. The operating conditions of each plant must, of course, determine in each instance the proper course to pursue,

The reason no new investment should be made for this kind of business, even though it could be had at the regular rates, is at once obvious. The regular rates are based on the assumption that the investment will be used twelve months of the year and there is therefore a larger area, so to speak, over which the fixed charges can be spread. In this case it seems that a straight rate of 12 cts. per kilowatt-hour would be reasonable both to the customers and to the utility.

The rates for street lighting suggested by the circumstances of this case are as follows: 32 c-p., \$12.00; 150 watt, \$18.00; 250 watt, \$26.00; 450 watt, \$40.00; and the arch of 15 and 20 watt lamps \$60.00 per year. The total revenue that will be received from these rates will be \$1,000, which is \$200 less than was formerly paid by the city for this service.

The next table shows the probable revenue that will be obtained from each class of service from the rates that have been outlined above.

Commercial Lighting

Primary	21,681 kw-hr. at 12 cts.	\$2,601.72
Secondary	15,046 " 10 "	1,504.60
Excess	6,181 " 8 "	494.48
Minimum bill,	75 cts. per month.....		115.19

Total commercial lighting..... \$4,715.99

Commercial Power

Regular power service.....	\$1,453.54
Special power service.....	159.60

Total commercial power..... 1,613.14

Street Lighting 1,000.00

Total probable revenue..... \$7,329.13

It will be noted that the total probable revenue is \$225.25 less than the total cost including interest at the rate of 5 per cent on the investment. It is expected, however, that the natural increase in the business will be sufficient to take care of this difference; consequently, it does not seem necessary to establish any higher rates at this time.

The investigation undertaken in this case also covers the matter of service. An inspection made on December 14 and 15, 1914, indicates that the quality of the service is fairly good. The voltage at three of the localities where records were taken varied, however, slightly in excess of the allowable limits. The meter test records show that the meter testing practice has not been

up to the standard, as some ten meters had been installed that had not received installation tests as required, and two meters on the system were reported to be creeping. When these matters were called to the attention of the officials in charge, they expressed a willingness to comply with the requirements of the Commission; consequently it does not seem necessary to make a specific order covering these points.

One of the complaints stated in the petition is that some of the electric meters are owned by consumers. In passing on the question of who should own the meters in *In re Investigation of the Hudson Water Works*, 1908, 3 W. R. C. R. 138, 141, this Commission says: "The law clearly contemplates that the divided ownership of parts of the equipment of public utilities shall cease, and that all responsibility for the installation and maintenance of the whole of the equipment shall be centered exclusively in the management. In practice, this undoubtedly means that private and municipal plants must acquire, by purchase or lease, all meters used in connection with their respective works." Undoubtedly, the best results are obtained when the utility owns the meters, as the utility can then see that they are properly tested and repaired. It will, therefore, be necessary for the village to take steps to acquire the meters now owned by consumers.

The financial data for the water plant are so meager that it is impossible to construct an income account for the last year. Nor is it possible to ascertain from the statistical data what the earnings have been. At the end of the last fiscal year the plant had ninety-eight customers, which indicates that its business has not as yet been fully developed. Under the circumstances, it seems inadvisable to attempt a reconstruction of the rate schedule for general service. The question of the amount that should be paid by the village for fire protection, however, can be gone into with the information that we have at hand.

Water plants in municipalities the size of Waterloo are usually constructed primarily for fire protection. Such being the case, it would seem that most of the investment should be charged to that branch of the service. In instances where a regular apportionment of the property has been made between fire protection and general service, it has been found that about 50 per cent should be charged to each. In these instances, however, the plants were not constructed chiefly for one branch of service,

but were constructed to do a general water utility business. With facts of this nature in mind, it seems reasonable to charge about 60 per cent of the investment in the Waterloo plant to fire protection. It will be remembered that the cost new of the plant was \$31,502 and the present value about \$30,500. Sixty per cent of each of these would be \$18,901 and \$18,300, respectively. The fixed charges to be used in determining the amount that should be paid each year are interest 5 per cent, taxes 1 per cent, and depreciation 1 per cent. Applying these percentages to the cost new and present value, we get \$1,323 and \$1,281, respectively, as the fixed charges to be borne by the fire protection service. In addition to the fixed charges, this service should also bear a portion of the operating expenses. It will be noticed from the statement of operating expenses given above that the cost of steam power pumping, including steam generation, amounted to \$1,599. Assuming that about 30 per cent of this should be charged to capacity and that 60 per cent of the capacity expenses should be charged to fire protection, we get \$288 as the portion of the operating expenses assignable to this service. The fixed charges based on the cost new plus the operating expenses gives \$1,611 as the total cost of this service, and the fixed charges based on the present value plus the operating expenses gives \$1,569 as the total cost. These computations seem to indicate that at least \$1,500 should be paid by the village for fire protection each year.

There still remain to be mentioned the rates for water used for street sprinkling and for construction purposes. What seem to be reasonable charges for these purposes have been worked out and incorporated as a part of the order in this case.

IT IS THEREFORE ORDERED, That the village of Waterloo discontinue its present schedule of rates and place in effect the following:

ELECTRIC RATES.

Commercial Lighting.

For all lighting service furnished residences and businesses (hereinafter specifically referred to as Classes A, B, and C) including the incidental use of appliances for heating and power used on lighting circuits and passing through the same meter, a charge of

Primary rate: 12 cts. net, or 13 cts. gross, per kilowatt-hour for the first 30 hours' use per month of the active load.

Secondary rate: 10 cts. net, or 11 cts. gross, per kilowatt-hour for the next 60 hours' use per month of the active load.

Excess rate: 8 cts. net, or 9 cts. gross, per kilowatt-hour for all over 90 hours' use per month of the active load.

The active load shall in each case be a fixed percentage of the total connected load of the lamps installed on the consumers' premises, excluding appliances.

Class A includes residences, dwellings, flats, and private rooming houses. Where the total connected load is equal to or less than 500 watts nominal rated capacity, 60 per cent of such total connected load shall be deemed active; where the installation exceeds 500 watts nominal rated capacity, $33\frac{1}{3}$ per cent of such a part of the total connected load over and above 500 watts shall be deemed active.

Class B includes banks, offices, stores, barber shops, saloons, halls and lodges, theaters, moving picture houses, restaurants, and all other consumers not herein otherwise specifically provided for. In this class 70 per cent of the connected load shall be deemed active.

Class C includes schools, churches, public buildings, hotels, small industrial establishments, blacksmith shops, stables, garages, bowling alleys and parks. In this class, 55 per cent of the connected load shall be deemed active.

Minimum Bill.—The minimum bill shall be 75 cts. per month. Where the utility is unable to read a meter after reasonable effort, the fact should be plainly indicated upon the monthly bill, the minimum charge assessed, and differences adjusted with the consumer when the meter is again read.

Commercial Power.

For current used for power purposes, the rate shall be:

Demand charge: 50 cts. per month for the first horse power or fraction thereof, and 50 cts. for each additional horse power of connected load.

Energy charge:

First	50 kw-hr. per mo.	7 cts. net	or	8 cts. gross	per kw-hr.
Next	100	6	"	7	"
"	350	5	"	6	"
"	1,000	3.5	"	4.5	"
"	3,500	3	"	4	"
"	5,000	2.5	"	3.5	"
Over 10,000		2	"	3	"

Limiting rates.—The maximum rate for power shall, however, not exceed 10 cts. per kilowatt-hour, nor shall the minimum monthly bill be less than \$1.00 for the first horse power or fraction thereof and 25 cts. for each additional horse power of connected load.

Emergency Service.

The rate for emergency service shall be the same as the regular power rate except that the limiting rates shall not apply.

Seasonal Service.

The rate for service furnished only during a part of each year shall be 12 cts. net, or 13 cts. gross, per kilowatt-hour.

Discount for Prompt Payment.

The utility shall bill all consumers at the gross rate, and the difference between the gross and net rates above specified, or 1 cent per kilowatt-hour, shall constitute a discount for payment on or before the 15th of the month.

In case bills are not paid by the end of the month the delinquent customers shall be required to make a deposit of not less than \$2.50 to insure the payment of any subsequent bill.

Reconnection of Meters.

For the reconnection of a meter for the same consumer upon the same premises a charge of \$1.00 shall be made.

Street Lighting.

The rate for street lights burning on a moonlight schedule from dusk to midnight shall be as follows:

32—c-p. lamps	\$12.00	per year
150 watt "	18.00	"
250 " "	26.00	"
450 " "	40.00	"
Arch of 15 and 20 watt lamps.....	60.00	"

WATER RATES.

The rates for regular metered service shall be as follows:

First	10,000 gallons per half year	\$3.00
Next	5,000 " "	25 cts. per M gals.
Next	5,000 " "	20 " "
Next	5,000 " "	15 " "
Next	25,000 " "	10 " "
All over	50,000 " "	7 " "

Water for construction purposes shall be charged as follows: •

Class of work.	Service charge.	Additional charge for water.
Brick laying.....	30 cts.	8 cts. per M
Stone laying.....	30 "	8 " " cord
Plastering.....	30 "	8 " " 100 sq. yds.
Concrete work.....	30 "	4.5 " " cu. yd.

The rate for street sprinkling shall be 10 cts. per M gallons. Unless the sprinkling wagon is metered, it will be necessary to determine its capacity and keep a record of the number of tanks filled. Thus the quantity of water used can be ascertained.

The charge to the village for fire protection shall be \$1,500 per year.

IT IS FURTHER ORDERED, That the village shall purchase those electric meters now owned by consumers.

IN RE APPLICATION OF THE MARION AND NORTHERN TELEPHONE COMPANY FOR AUTHORITY TO INCREASE RATES.

Submitted June 17, 1913. Decided Dec. 31, 1914.

The Marion & Northern Tel. Co. applies for authority to increase its rates for telephone service in the city of Clintonville, the villages of Marion, Tigerton and Gresham and the surrounding country. The utility is improving its system by the installation of a new switchboard at Clintonville and the changing of its wire plant from a grounded and common return system to a full metallic system and it desires to put the rates applied for into effect as soon as the improvements mentioned are completed. A valuation was made, the revenues and expenses were investigated, the operating expenses of each exchange were apportioned between local, rural, toll and switching expenses, and the probable effects of the rates applied for on the earnings of the utility were determined.

If, because of competition, the extent or the character of the territory covered, or for some other cause beyond the control of the Commission, it is impracticable to put one or more classes of service on a remunerative basis, it does not seem fair that the remaining classes of service should be required to make up the deficit.

Held: The rates of the utility should be revised. The utility is ordered to put into effect a schedule of rates prescribed by the Commission at such time as the local lines have been made full metallic. No change is to be made in the rates of any of the exchanges until all local lines of that exchange have been made metallic.

It appears that the rural and switching classes of service will probably fail to yield an adequate return, but inasmuch as these classes of service were not considered in the application, they are not covered in the instant order. It is recommended, however, that steps be taken to put the switching service on a proper basis.

Some complaint was made at the date of the application and at the hearing of the service rendered by the utility. The chief causes for complaint seem to have been the limited period of service and the alleged failure of the utility to manage and keep up its system properly. Since the date of application the service has been materially improved and it appears that a compliance with the standards of service established by the Commission in *In re Standards for Tel. Service, 1914, 15 W. R. C. R. 1*, will remove all present causes for complaint.

Application in the above matter was filed with the Commission May 31, 1913. A formal hearing was held at the office of the Commission in Madison on June 17, 1913, at which *John H.*

Spengler appeared for the applicant and *F. Y. King* in opposition.

The lawful rental rates in effect at the date of the application were as follows:

Exchange at Clintonville, Wis.

- \$1.75 per month for business telephones.
- \$1.00 per month for residence telephones.
(No distinction between party and single line service.)
- \$1.25 per month for rural residence telephones (metallic lines.)
- \$1.00 per month for rural residence telephones (grounded lines.)
- \$1.50 per month for rural business telephones.

Exchange at Marion, Tigerton, and Gresham, Wis.

- \$1.50 per month for business telephones.
- \$1.00 per month for residence telephones.
- \$1.25 per month for rural residence telephones (metallic lines.)
- \$1.00 per month for rural residence telephones (grounded lines.)
- \$1.50 per month for rural business telephones.

The application states that the Marion & Northern Telephone Company is now improving its system at Clintonville by the installation of a new switchboard, whereby selective ringing will be used. The application further states that the wire plant, heretofore a grounded and common return system, has already been partly changed to a full metallic system and will be entirely so changed as soon as possible. The same change has been made for party line exchange service as for single line exchange service, which condition applicant desires to adjust by establishing a separate charge for each class of service; that the systems at Marion, Tigerton, and Gresham are to be changed to full metallic systems as soon as convenient; and that as soon as the above changes have been completed the applicant desires to put into effect the following schedule of rates:

At the city of Clintonville, Wis.

- \$2.50 per month for single line business telephones.
- \$2.00 per month for four party business telephones.
- \$1.50 per month for single line residence telephones.
- \$1.00 per month for four party residence telephones.
- \$1.25 per month for rural farm telephones.
- \$1.50 per month for rural business telephones.
- \$1.00 per month for extension sets.

At Marion, Tigerton, and Gresham, Wis.

- \$2.00 per month for single line business telephones.
 \$1.50 per month for four party business telephones.
 \$1.25 per month for single line residence telephones.
 \$1.00 per month for four party residence telephones.
 \$1.00 per month for extension sets.
 \$1.25 per month for rural residence telephones.
 \$1.50 per month for rural business telephones.

At the hearing and through subsequent investigations by representatives of the Commission, the following facts have been disclosed:

The applicant, the Marion & Northern Telephone Company, is a public utility engaged in rendering telephone service in the city of Clintonville, the villages of Marion, Tigerton, and Gresham, and the surrounding country. The following table shows the number of subscribers connected to the various exchanges on November 19, 1914, distributed according to the class of service rendered:

SUMMARY OF SUBSCRIBERS AND LINES.
 MARION AND NORTHERN TEL. CO.

Class of Service.	Clintonville			Marion.			Tigerton.			Gresham.		
	No. of lines.	Business.	Residence.	No. of lines.	Business.	Residence.	No. of lines.	Business.	Residence.	No. of lines.	Business.	Residence.
<i>Local Lines:</i>												
One party.....	126	58	68	59	28	31	43	22	21	12	9	3

Pay stations.....	4			4			1			1		
Extension sets in addition.....	1			1			1					
Extension bells in addition.....	11			6						1		

The Marion & Northern Telephone Company has the following connections with other companies: Four toll lines connect the Clintonville exchange with the Wisconsin Telephone Co., 15 per cent of revenues from outgoing calls being retained by the Marion & Northern Telephone Company. Three loaded lines of the Matteson Telephone Co., with seven, sixteen and sixteen subscribers respectively, and two clear circuits connected with its exchange at Welcome are connected to the Clintonville exchange. The applicant has free use of the Matteson telephone lines and in return does the switching for the Matteson lines at Clintonville.

The Farmers' Independent Telephone Association of Caroline competes with the Marion company in the villages of Marion and Gresham and the surrounding country. One line of the Farmers' Independent Telephone Association with nine subscribers connects with the Marion exchange and one clear circuit from Caroline is connected to the Clintonville exchange. Five cents per call is paid the Marion & Northern Telephone Company for service between any subscriber within the exchange limits and all switching beyond is free. The Farmers' Independent Telephone Association receives a regular 10 ct. toll for the use of its lines. Commissions of 20 per cent are paid for collecting. Line No. 86 of the Dupont Farmers' Cheese Co. with seventeen subscribers also connects to the Marion exchange. This line pays a switching fee of 25 cts. per phone quarterly in advance and receives free service in the Marion exchange radius.

The Morris Telephone Co. has five loaded lines connecting at the Tigerton exchange, with fourteen, ten, fourteen, seventeen, and thirteen subscribers respectively. Free switching service and the free use of the Tigerton exchange area is given to this company in return for the use of its system.

Two lines of the Comet Telephone Co. connect with the Tigerton exchange. Free switching service and the free use of the Tigerton exchange is given to this company in return for the use of its system.

All calls to which a rural subscriber is a party are free over the entire system of the Marion & Northern Telephone Company. City and village subscribers have unlimited service to all local subscribers of the exchange to which they are connected and all of the rural subscribers on the system. Calls between

city and village subscribers of different exchanges carry a toll charge of 15 cts. Rural subscribers on grounded lines have only the free use of the exchange to which they are connected.

HISTORY OF THE COMPANY.

The Marion & Northern Telephone Company was organized in 1902 with a small exchange at Marion. The company extended its operations to Gresham, a distance of about eighteen miles, to Tigerton, about ten miles distant, and to Clintonville, nine miles distant. Exchanges have been established at these various points. Originally all lines were grounded, but the farm lines, with two exceptions, the connecting lines between the exchanges and about one-half of the exchange service at Clintonville has been made full metallic. The exchange at Clintonville has been recently rebuilt and a new switchboard installed at a cost of approximately \$3,000.

The original capitalization of the Marion & Northern Telephone Company was \$25,000, one-half cumulative 6 per cent stock preferred, and one-half cumulative 6 per cent common stock. Of this amount, \$12,500 has been subscribed for and on July 1, 1914, \$11,175 preferred stock and \$1,325 common stock was outstanding. All stock has been paid in in cash at par. The records of the company show that the accumulated dividends on both the common and preferred stock have been paid at the rate of 6 per cent since 1904.

Notes outstanding to the extent of \$1,200 were recorded in the balance sheet as of July 1, 1913. This amount was increased to \$2,700 prior to June 30, 1914, for the rebuilding of the Clintonville exchange. Thus, the total capital liabilities at the present time are \$15,200, whereas the valuation of the physical property shows a reproduction cost of \$27,410 and a reproduction cost less depreciation of \$18,504. The following is a balance sheet of the Marion & Northern Telephone Company as of June 30, 1914, with the reproduction cost as shown by the valuation inserted in place of the book value and the amount of depreciation as disclosed by the valuation included under this item:

BALANCE SHEET.

	Assets.	Liabilities.
Property and plant.....	\$27,410 00	
Preferred stock.....		\$11,175 00
Common stock.....		1,325 00
Notes payable.....		2,700 00
Tax reserve.....		114 40
Interest reserve.....		48 33
Depreciation reserve.....		8,906 00
Cash.....	435 35	
Accounts receivable.....	94 64	
Accounts payable.....		713 54
Surplus.....		2,957 72
Total.....	\$27,939 99	\$27,939 99

The above table indicates that the accumulated surplus and reserves have been reinvested in the property and plant rather than in other assets or outside investments.

EARNINGS.

An audit was made of the applicant's books for the year ending June 30, 1914, and a statement of revenues and expenses determined. The total rentals and tolls for the month were taken directly from the monthly reports rendered by each exchange. The item of tolls includes Bell tolls, own line tolls, and earnings from messenger service. The total rentals less the refunds and the total tolls less the amounts paid to the Wisconsin Telephone Company and less the amounts paid for messenger and postage expense are as follows:

	Clinton- ville exchange.	Marion exchange.	Tigerton exchange.	Gresham exchange.	Total.
Rentals.....	\$4,031 34	\$2,315 27	\$759 75	\$392 80	\$7,499 16
Tolls.....	584 12	530 32	271 21	26 58	1,412 23
Total earnings.....	\$4,615 46	\$2,845 59	\$1,030 96	419 38	\$8,911 39

EXPENSES.

A detailed analysis was made of the vouchers and journal entries covering labor and materials expenses for the year ending June 30, 1914. In most instances, the expenses could be di-

rectly apportioned to the various exchanges. Where this procedure was impossible, however, as in the case of manager's salary and general office expenses, the total amounts of such vouchers were distributed to the various exchanges on the overhead basis. "Labor expense" of \$508.97 could not be directly apportioned because no record had been kept indicating where this expense had been incurred. This represents the annual labor expense in straightening and fixing up the lines. A portion of this expense, estimated at \$60, was charged to construction for the building of new lines and work done for connecting lines. The remainder of this expense was apportioned to the various exchanges on the basis of the aerial wire mileage and the number of services.

The operating expenses by exchanges for the year ending June 30, 1914, excluding interest and depreciation, are as follows:

	Clintonville exchange.	Marion exchange.	Tigerton exchange.	Gresham exchange.	Total.
Central office.....	\$1,107 68	\$757 62	\$455 04	\$195 72	\$2,516 06
Wire plant.....	841 68	881 16	156 95	172 94	2,052 73
Substation.....	509 67	441 98	67 93	30 63	1,050 21
Commercial.....	89 40	69 72	10 98	25 29	195 39
General.....	528 45	418 71	137 27	79 19	1,163 62
Undistributed.....	28 63	16 05	7 83	3 23	55 74
Total of above.....	\$3,105 51	\$2,585 24	\$836 00	\$507 00	\$7,033 75
Taxes.....	114 00	64 53	27 96	8 60	215 09
Total.....	\$3,219 51	\$2,649 77	\$863 96	\$515 60	\$7,248 84

It was impossible to make a separation of the toll system expenses from the exchange expenses. Reconstruction expenses were somewhat confused with maintenance expenses, but these were excluded from operating expenses in the audit.

A comparison of the operating expenses of various exchanges is indicated in the following table. Fourteen exchanges of the Wisconsin Telephone Company and sixteen exchanges of independent telephone companies have been selected from exchanges of approximately the same size and operating under conditions somewhat similar to those under which the Marion & Northern Company operates. The following figures were secured from the annual reports of the above companies for the year ending June 30, 1913:

	Ratio of labor exp. to total exp. excl. taxes, dep. and int.	Ratio of mat. exp. to total exp.	Labor exp. per phone.	Mat. & other exp. per phone.	Total exp. per phone, excl. taxes, dep. & int.
Independent Tel. Co's.....	63.93%	36.07%	\$6 39	\$3 60	\$9 99
Wisconsin Tel. Co. exchanges.	71.24%	28.76%	8 41	3 39	11 80
Marion & Nor. Tel. Co.....	65.88%	34.12%	8 61	4 46	13 07

The total expense per phone of the Marion and Northern Telephone Company is somewhat above the general average. Likewise, the labor and the materials expenses per phone are somewhat high. A detailed analysis of the labor expense fails to reveal wherein this item of expense can be reduced to any appreciable extent. In fact, the wages paid central office operators are lower than are found in most localities. The ratio of materials expense to total expenses appears to be approximately in the same ratio as is found in the other exchanges, although the total expense is rather high. The extent of territory covered by the applicant is such that it is necessary to operate four exchanges, separated by distances of from nine to eighteen miles. The rural lines are correspondingly long. Furthermore, the existing competition makes a poor saturation of rural territory for the applicant. The Gresham exchange has only twenty-five subscribers. It would be practically impossible to put such a small exchange on a remunerative basis without charging such rates as to be almost prohibitive.

VALUATION.

A physical valuation of the property of the Marion & Northern Telephone Company was made by the Commission as of August 1, 1914. A summary of this valuation follows:

SUMMARY OF VALUATION

As of August 1, 1914.

Classification.	Local.		Rural.		Switching.		Toll.	
	Cost new.	Pres. val.	Cost new.	Pres. val.	Cost new.	Pres. val.	Cost new.	Pres. val.

NOTE: Addition of 12 per cent to cover engineering, superintendence, interest during construction, contingencies, etc. Plant occupied by Wisconsin Telephone Company in "D" has not been credited.

The total reproduction cost is \$27,410 and the reproduction cost less depreciation is \$18,504. Depreciation computed at 7 per cent on the reproduction cost would amount to \$1,918.70. In determining a fair value upon which to allow a rate of return, it is only fair to take into consideration an allowance for going value and the fact that the accumulated surplus and reserves have been reinvested in property and plant. With a present value of \$18,504 it seems adequate if a return is allowed on a property value of approximately \$23,000. A return at the rate of 7 per cent on the above sum would be \$1,610. Thus, the total operating expenses, including depreciation and a 7 per cent rate of return on the investment, are as follows:

Operating expenses (including taxes).....	\$7,248.84
Depreciation	1,918.70
Interest	1,610.00
Total expenses	\$10,777.54

With total operating revenues of \$8,911.39 and total operating expenses of \$10,777.54, the net deficit for the year covered by the audit is \$1,866.15.

SERVICE.

Some complaint was made at the date of application and at the hearing of the service rendered by the Marion & Northern Telephone Company. Particularly was this true of the subscribers of the Tigerton exchange. The chief causes for complaint were apparently the limited period of service and, to quote from the testimony at the hearing, "Not by defect in equipment but the mere fact that they are not using due care to properly manage and keep up their line."

Since the date of the application the remaining grounded rural lines, with two exceptions, have been made full metallic, and the Clintonville exchange has been entirely rebuilt. About one-half of the exchange service at Clintonville has been made full metallic. Similar changes are to be made at each of the other exchanges as soon as possible.

The applicant has under consideration the advisability of moving the Tigerton exchange to new quarters, providing additional operators and increasing the length of service.

Subscribers of this exchange are receiving day service during the week and Sunday service between the hours of 9 a. m. and 12 m. In view of the fact that the total number of subscribers connected to the Tigerton exchange is only 60, it is not deemed advisable to issue an order providing for continuous service at the present time.

From the facts brought out at the hearing and from subsequent investigations by representatives of the Commission, it is apparent that the service has been materially improved since the date of this application.

All causes for complaint with respect to the service will be removed by a compliance with the standards of service established by the Commission in *In re Invest. Standards for Tel. Service*, 1914, 15 W. R. C. R. 1.

SCHEDULE OF RATES.

The applicant desires to establish a one and four party business and a one and four party residence schedule of rates. Estimates of the probable revenues under such a schedule and of the probable revenues under a one, two, and four party business rate and a one and four party residence rate indicate that

the difference in revenues will be exceedingly small, and we believe that the interests of good service demand that a two party business rate be established.

It was also deemed advisable to ascertain if possible the class or classes of service, if any, which fail to yield an adequate return. Accordingly, the operating expenses of each exchange were separated as to local, rural, toll, and switching expenses. The apportionments were made on bases which, although perhaps not entirely accurate, were believed to yield results sufficiently accurate for the purposes of this case. The revenues for each of the above classes could be computed quite accurately.

The computation of probable revenues and expenses for the Clintonville exchange indicates that if the rates asked by the applicant are placed in effect, including a two party business rate at \$2.25, the total returns for this exchange will be slightly in excess of the actual requirements. Further investigation indicates that the returns from local subscribers may be somewhat in excess of needs, whereas the returns from the rural and switching service will be correspondingly inadequate. The computations show that business rates of \$2.25, \$2.00, and \$1.75 for one, two, and four parties, respectively, will yield adequate returns from the class of service.

The total revenues for the Marion exchange, as computed on the proposed schedule, are probably insufficient to cover total operating expenses including depreciation and a rate of return on the investment. Apparently the greatest deficit will result from the rural class of service. If because of competition, the extent or the character of the territory covered, or for some other cause beyond the control of the Commission, it is impracticable to put one or more classes of service on a remunerative basis, it does not seem fair that the remaining classes of service should be required to make up the deficit.

The probable deficit resulting from the operation of the Tigerton exchange is apparently due to the failure of the switching service to render a return sufficient to cover the expenses of conducting this class of service.

The limited development of the telephone service in Gresham and surrounding country makes it impossible to place this exchange at present on a remunerative basis. The rates proposed by the applicant for this exchange appear fair and just to all parties involved.

The above analysis indicates that the rural and switching classes of service will probably fail to yield an adequate return. The advisability of increasing the rates for rural subscribers was not taken into consideration in the application. The toll charges and connections which the Marion & Northern Telephone Company has with foreign companies were also omitted in this application and they will therefore not be covered by this order. It is recommended, however, that steps be taken to put the switching service on a proper basis.

The policy of collecting rentals monthly in advance is a legitimate practice which the applicant is authorized to continue. For failure to pay rental and tolls within 15 days after due, a penalty of 10 cts. per phone will be allowed. Bills should be sent to all the subscribers when they become due and provision made for receiving collections in Clintonville, Marion, Tigerton, and Gresham.

IT IS THEREFORE ORDERED, That the Marion and Northern Telephone Company be and the same hereby is authorized to suspend the present rates for telephone service and substitute therefor the following schedule. This schedule may be made effective when local lines are made full metallic and no change shall be made in the rates of any of the exchanges until all local lines of that exchange are made metallic.

Clintonville Exchange:

- \$2.25 per month for single line business telephones.
- \$2.00 per month for two party business telephones.
- \$1.75 per month for four party business telephones.
- \$1.50 per month for single line residence telephones.
- \$1.00 per month for four line residence telephones.
- \$1.25 per month for rural residence telephones.
- \$1.50 per month for rural business telephones.
- \$.60 per month for extension sets.
- \$.15 per month for extension bells.

Marion, Tigerton and Gresham Exchanges:

- \$2.00 per month for single business telephones.
- \$1.75 per month for two party business telephones
- \$1.50 per month for four party business telephones.
- \$1.25 per month for single residence telephones.
- \$1.00 per month for four party residence telephones.
- \$1.25 per month for rural residence telephones.
- \$1.50 per month for rural business telephones.
- \$.60 per month for extension sets
- \$.15 per month for extension bells.

KIECKHEFER BOX COMPANY

vs.

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted Sept. 6, 1914. Decided Jan. 2, 1915.

The petitioner complains of a charge of \$1.00 per car which is prescribed by the respondent's tariff for the movement of cars at the request of the petitioner between the petitioner's plant in Milwaukee and the track scale installed and used by the petitioner and asks for relief. This charge, the petitioner alleges, is contrary to the agreement with the respondent under which the track scale was installed and placed in operation. It appears (1) that the charge complained of is intended to apply only to cars handled to and from the scale for the private information of the petitioner and not to shipments to or from the petitioner's plant placed on the scale to obtain weights upon which to assess regular transportation charges; (2) that the charge has been applied only to interstate movements because of an order of the Commission suspending the tariff which applied the charge to intrastate movements; and (3) that the charge is provided for in the code of weighing rules now in effect generally in Wisconsin and throughout the country. The weighing on the petitioner's scale is done by a sworn weighmaster for the Western Weighing Association and the respondent uses the weights obtained for the purpose of assessing its freight charges.

While it is acknowledged that many track scale weights taken by railroad companies are erroneous this fact does not prove that track scale weights taken by shippers on their own scales are always likely to be correct. When there is a difference in weights taken separately under like conditions a further test of some kind is necessary in order to establish the correctness or error of either weight. Nothing in the evidence submitted in the instant case shows which, if any, of the weights mentioned are the correct ones nor whether the circumstances under which the weights were taken by the petitioner were such as to establish the absolute correctness of any of them.

Held: There do not appear, at present, to be sufficient grounds upon which to require the respondent to put into effect an exception to the general rule governing the charges for movements of the kind involved in the instant case. The rule is intended to apply generally throughout the country and its defects, if it has defects, should become generally apparent, and a single objection therefore can hardly justify the changing of a rule of so far-reaching application.

The petitioner alleges that during the months of September, October, November and December, 1913, it installed and placed

in operation a railroad track scale for the purpose of weighing, loaded and light, all carloads consigned to and from the petitioner; that it was mutually agreed between the officials of the respondent railway company and the petitioner that in return for certain concessions by the petitioner, the respondent would spot all such cars for weighing without extra charge; that such arrangement continued in operation from December 21, 1912, to February 19, 1913, on which date the respondent put into effect a tariff known as Supplement No. 31 to its Tariff G. F. D. 2543—A, which provided as follows:

“Between Kieckhefer Box Company’s plant and track scale used by that company, located on Plankinton right of way on Canal street, where request is made by Kieckhefer Box Company for such extra service—this charge covers each movement of car to or from scale, loaded or empty, per car \$1.00.”

The petitioner further alleges that said tariff has been in operation since February 19, 1913, to its detriment, and therefore requests relief from such provision of the tariff.

The respondent railway company, answering the petition, submits as its answer to the material allegations thereof, the following report of its general manager:

“Referring to notice of investigation served by the Wisconsin Railroad Commission in the case of the Kieckhefer Box Company, received with your letter of April 21st; will say that the Box Company made application in December 1911 for a location on our property at Milwaukee upon which to install a track scale with necessary track connection. Our Company agreed to lease them ground for the scale at a nominal rental; the Box Company to construct the scale foundations and install the scale at its own expense, the Railway Company to bear the expense for the 230 feet of live track across the scale and of an extension of 160 feet to one of our tracks that would be necessary.

“The Box Company then changed their plans and desired another location for the scale but still on our property. This new location made necessary the construction of 685 feet of new track at a large increase in expense over the cost to provide the 230 feet of live track and 160 feet extension. The Railway Company then agreed to install the necessary track on the basis of the beneficiary bearing all expense for the grading, ties, and labor, and the Railway Company the expense for the metal, such as rails, fastenings and switches. On condition that it should have the use of the scale for weighing business other than that of the Kieckhefer Box Company. The arrangement proposed

was that the weighmaster be under the jurisdiction of the Western Weighing and Inspection Bureau, and all such expense for such weighmaster's wages be prorated between Railway and the Box Company on the basis of the number of cars weighed for each.

"At the urgent solicitation of the Box Company and in view of the fact that the Railway Company would have use of the scales for the weighing of other than the Box Company's business, it was later agreed that the Railway Company would bear all expense for the new tracks except for the grade and ties.

"The Box Company was advised that it would be necessary to make a special switching charge for all cars handled to and from the scale for their private information, but that this rate would not apply to shipments to or from their industry that were being placed on the scale to obtain weights upon which to assess the regular transportation charge. Our Traffic Department applied to the Wisconsin Railroad Commission for authority to establish a rate of one dollar per car for each such movement made solely for the benefit and upon the request of Box Company, which authority was granted, and a tariff, to become effective February 19th, 1913, to cover said service was issued and filed with said Commission. The tariff, however, never went into effect as to intrastate movements, owing to the order of the Wisconsin Railroad Commission of February 17th, 1913, suspending it. The rate of one dollar is in effect as to an interstate movement and is covered by Supplement No. 42 to C. M. & St. P., G. F. D. No. 2543—A.

"The Railway Company holds that the service referred to in this action before the Wisconsin Railroad Commission is one not contemplated in any tariff covering the transportation of shipments to or from the Kieckhefer Box Company, and, therefore, it may not lawfully switch the cars to or from the scale except at a specified rate per car to be covered by tariff."

The matter came on for hearing on September 6, 1914. The petitioner was represented by *Robert J. Kieckhefer* and *P. J. Freeman*, and the respondent by *J. N. Davis*, its attorney.

From the testimony given upon the hearing and from the tariffs on file with the Commission, it appears that at the time the track scale in question was installed, the railway company had no published rate or rule covering the service necessary in order to place cars on the scale for weighing for the private information and benefit of the petitioner. This service, therefore, could not lawfully be performed without first providing therefor in lawfully published tariffs, and inasmuch as the service is not necessary, insofar as the conduct of the railway company's

business is concerned, there appears to be no good reason why it should be rendered or why it lawfully could be rendered without a reasonable compensation being paid by the petitioner therefor.

Certain weights taken by the petitioner appear to show that weights taken by the railroad company in the past were erroneous. Nothing in the evidence submitted, however, shows which, if any, of these weights may be the correct ones or whether in each instance either was made under circumstances that would tend to establish its absolute correctness. While it is acknowledged that many track scale weights, taken by railroad companies, are erroneous, such fact does not prove that track scale weights taken by shippers on their own scales are always likely to be correct. In case of a difference in weights taken separately under like conditions, it seems that a further test of some kind is necessary in order to establish the correctness or error of either. Railroads generally provide for an allowable difference or tolerance between weights taken on different track scales so that, unless there is a difference of a thousand pounds or more, no change from the first weight taken is made.

The matter of the reasonableness of the charge complained of in the instant case came before the Commission in January, 1913, on application of respondent for the approval of the charge. Approval was issued under date of January 16, 1913, but on further consideration and advice was rescinded and the effectiveness of the same, which, in the mean time, had been published by respondent in its Supplement No. 31 to G. F. D. No. 2543—A, effective February 19, 1913, was suspended pending formal hearing and investigation, which, for various reasons, did not take place until the time above indicated. In the meantime, growing out of an investigation of the weighing service generally throughout the country by the interstate commerce commission, the committee on relations between railroads, composed of representatives of railroads and shippers, had formulated a code of rules for the weighing and reweighing of carload freight which was tentatively approved by the interstate commerce commission and adopted by the American Railway Association. This code of rules was finally published throughout the country and went into effect in Wisconsin, and, as the Commission understands, generally, on December 1, 1914.

The code of weighing rules referred to above is at present published as Rule No. 1610—C in Western Trunk Lines' Circular No. 1—J I. C. C. No: A—340. Rule No. 9, sec. D of this code reads:

“When a loaded car is weighed or reweighed at the request of consignor or consignee, the charge for such service shall be \$2.00 for railroad company's scales, and \$1.00 for private scales, which charges shall include the weighing of the empty car.”

While there may be circumstances of an unusual character in connection with the particular weighing service herein involved, there is nothing in the evidence submitted that so indicates. From a letter received from the petitioner in reply to a letter from the Commission, it appears that the weighing on petitioner's scale is done by a sworn weighmaster for the Western Railway Weighing Association, and that respondent uses such weights for the purpose of assessing its freight charges. Under this condition, it would seem that the rule quoted above would permit respondent to perform some, if not all, of such weighing, at least all weighing in connection with outshipments for its own benefit, and without request from the petitioner. In such instances there should be no charge. There do not appear, at present, to be sufficient grounds upon which to require the respondent to put into effect an exception to this rule. The rule is intended to apply generally throughout the country, therefore, its defects, if there are defects, should develop at many points, as there are many points at which track scales are owned and maintained for the private use of the owners. If it should develop that there is need of any exception to the rule, the Commission will not hesitate to take whatever action may be necessary to bring about the change needed. At present, a single objection is not sufficient ground to change a rule of so far-reaching and general application. We would not be justified in disturbing the situation by making an exception until sufficient objections had been received, showing that an injustice is being done to shippers generally who are subject to the regulation involved. At present no general demand for any revision of the rule exists. Under the circumstances, the petition will be dismissed without prejudice.

NOW, THEREFORE, IT IS ORDERED, That the petition herein be and the same is hereby dismissed.

BROWN BROS. LUMBER COMPANY

vs.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY
COMPANY.

Decided Jan. 2, 1915.

The petitioner alleges that the minimum weights and the charges for excess weight on logs as applied by the respondent to shipments from various Wisconsin points to Rhinelander are unreasonable and asks for refund on certain shipments. It appears that the petitioner's difficulty in loading within the weight limits prescribed by the respondent is due not to any defects in the cars but to lack of facilities for ascertaining weights at loading points and that with more care in loading many instances of both overloading and underloading could have been avoided. The charge for excess weight is a safety measure designed to prevent shippers from endangering the respondent's equipment and the lives and limbs of the respondent's employees.

The fact that a shipper, through lack of facilities for ascertaining weights, cannot load cars just as he would like to do does not prove the unreasonableness of the rate or the minimum weight applicable.

The application of the charge for excess loading to saw logs and bolts only does not constitute unlawful discrimination if dangerous overloading of cars is prevalent only in the case of saw logs and bolts, as the testimony in the instant proceeding appears to show.

Held: The minimum weights complained of, taken in connection with the rates applying thereto, and the charge for excess loading, when used as a measure of safety to induce shippers not to overload, are not unreasonable. The petition is dismissed.

The petition herein alleges in substance that the minimum weights and the charges for excess weight on logs published by the respondent in its Tariff G. F. D. No. 18270, as applied to shipments from various points consigned to the petitioner at Rhinelander, Wis., are unreasonable. The petitioner asks for refund amounting to \$225.32, alleged to have been charged and paid in excess of charges that would have applied on 228 carloads of shipments of logs during the year 1914 from various points to Rhinelander, over respondent's line except for the alleged unreasonable minimum weights and charges for the

excess of which complaint is made. The minimum weights and charges for excess weight involved are as follows:

40,000 pounds capacity cars	10	per cent	less than	marked	capacity.
50,000	"	"	20	"	"
60,000	"	"	25	"	"
Over 60,000	"	"	30	"	"

Except where box or stock cars are loaded to full visible capacity, actual weight but not less than 35,000 pounds will govern.

Charge for excess weight.

An additional charge of 2 cents per 100 lbs., will be made on all weight loaded in cars in excess of 10 per cent over their marked capacity.

It is also alleged in the petition that it is not practicable in general, and more especially in loading cars of 40,000 and 50,000 pounds capacity, to load cars within the minimum and maximum weights provided in the tariff so as to avoid loading below the minimum weights and below 10 per cent of the marked capacity of the car, and that the respondent neglects and refuses to furnish cars of suitable size and capacity for loading within these minimum and maximum weights.

In its answer to the petition the respondent alleges that the charge for excess weight above 10 per cent over the marked capacity of cars is intended to prevent cars from being loaded above 10 per cent over their marked weight capacity; that this provision is just and reasonable in every respect and has for its purpose the protection of the respondent's equipment and the lives and limbs of its employes; and that the maximum and minimum weight tariff provisions permit sufficient leeway so that cars may, in all instances, be loaded within such limit.

The hearing was held October 13, 1914, and November 10, 1914. The petitioner was represented by *Walter Drew*, its attorney, and the respondent by *A. H. Lossow*, its commerce counsel.

There was considerable testimony, all of which is of more or less importance and has been carefully considered, but it does not appear essential to discuss or review the same at length. Stated briefly, the evidence on behalf of the petitioner tended to show that it is impracticable for the petitioner to make close enough estimate of the weight of its logs at the loading point so that cars may be loaded within the leeway between the minimum and maximum weights provided in the respondent's tariff, es-

pecially insofar as 40,000 and 50,000 lb. capacity cars are concerned, and that consequently many cars are underloaded and many others are overloaded. This underloading and overloading, it seems, is due, to a large extent at least, to the fact that many varieties of timber are shipped, each of which varies more or less in weight from every other variety, making it difficult for loaders to estimate the weights thereof. Furthermore, the loaders' weight estimate of logs of the same variety is an approximation that is not expected to bring about close results. No claim is made that the cars cannot be loaded within the leeway permitted between minimum and maximum weights on account of any defect in the cars. The difficulty is wholly due to lack of facilities for ascertaining weights at loading points.

In behalf of the respondent, the evidence tended to show the reasonableness of the minimum weights complained of and the necessity of the charge for excess loading in order to induce shippers not to overload. It was shown that these minimum weights have been in effect for many years, and that the charges for excess have been in effect for many years on the respondent's Wisconsin division, and for several years on its entire line in Wisconsin, without complaint other than the one here under consideration; and furthermore, that shippers other than the petitioner found no difficulty generally in loading loads up to minimum weights and below maximum weights. Attention was directed to several instances of loading the same car at different times, as shown on the petitioner's exhibits offered in evidence, wherein the amount loaded varied greatly.

The witness for the respondent, however, testified that these differences in weights loaded on the same car were due to differences in the length of logs, which resulted in one tier being loaded in some instances and two tiers in others, so that loads of the former would necessarily be lighter than loads of the latter for the reason that fewer logs could be loaded on cars in a single tier than in two tiers.

Full and careful consideration of all points involved in the case indicates that the minimum weights, taken in connection with the rates applying thereto and the charge for excess loading, when used as a measure of safety to induce shippers not to overload, are not unreasonable charges or regulations. The fact that a shipper, through lack of facilities for ascertaining weights, cannot load cars just as he would like to do does not

appear to indicate the unreasonableness of the rate or the minimum weight applicable. It appears that a number of shipments of logs in 40,000 lb. capacity cars weighed less than 30,000 lb., and a number of others weighed considerable over 50,000 lb., a difference of over 20,000 lb. in the load on the same class of cars, and that differences of about the same amount occurred in the case of 50,000 lb. capacity cars. If the run of weights shown on such exhibits indicates the shipper's best effort to load within the margin permitted by the minimum and maximum weight provisions of tariff, it is somewhat doubtful whether charges such as those here complained of could be avoided unless the minimum weight of 40,000 and 50,000 lb. capacity cars is fixed at about 24,000 and 34,000 lb., respectively. The rates in effect from the different points to Rhinelander, as listed in such exhibits, are: one and four-tenths, one and six-tenths, one and seven-tenths, one and eight-tenths and one and nine-tenths cts. per 100 lb., which are for hauls of from twenty to twenty-five miles. With minimum weights fixed at 24,000 and 34,000 lb. for 40,000 and 50,000 lb. capacity cars respectively, the minimum car earnings would vary from \$3.36 to \$4.56 on cars of 40,000 lb. capacity, and from \$4.76 to \$6.46 on cars of 50,000 lb. capacity. There appears to be no good reason for the establishment of such low rates in this instance.

In response to a letter addressed to the petitioner, the Commission was furnished with the log scale on 208 cars out of the total of 228 cars listed in the petition on which excessive charges, due either to overloading or underloading, are complained of. The total weight scale, etc., on such cars and the average loading thereof are as follows:

40,000 lb. capacity cars loaded in excess of 10% over marked capacity.

From	No. of cars.	Total No. of feet loaded.	Total track scale weight.	Average feet per car.	Average weight per 1,000 feet.	No. of cars listed in petition.

100,000 lb. capacity cars loaded below minimum weight.

Spur No. 245.....	1	3,780	56,500	3,780	14,940	1
-------------------	---	-------	--------	-------	--------	---

The foregoing tables indicate that with more care in loading many instances of both overloading and underloading could have been avoided. In some instances, cars overloaded contain a thousand feet of logs over and above what would seem to be a fair estimate of the amount that should have been loaded, and in other instances, cars were underloaded about an equal amount. With some allowance for probable errors in track scale weights and in the scale of the logs, neither the cars furnished nor the minimum and maximum weights thereon appear to be responsible to any great extent for the charges in question.

The charge for excess loading here challenged appears to have been determined upon as a safety measure only and it seems to accomplish the desired result to a considerable degree. Although this charge is not applicable in connection with shipments other than saw logs and bolts, there is nothing in these proceedings tending to show that any unlawful discrimination is thereby created. If the respondent found that dangerous overloading of cars with saw logs or bolts was prevalent and no such condition existed with other commodities, which according to the testimony appears to be the case, there would be no occasion to put the charge in effect in connection with rates on other commodities. A rule so wholesome in effect and essential to the safe operation of railroads should not be disturbed unless unreasonable and unjust in its application.

Under the circumstances, we are satisfied that the rule should remain in effect and, for this reason, the petition will be dismissed.

NOW, THEREFORE, IT IS ORDERED, That the petition herein be and the same is hereby dismissed.

MASON-DONALDSON LUMBER COMPANY

vs.

CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted Nov. 10, 1914. Decided Jan. 7, 1915.

Complaint was made that the rates charged on lumber from Odanah and from Rhinelander to Milwaukee, Racine and Kenosha are excessive and unreasonable, and that under an explanation clause in the respondent's published tariff the rates charged the petitioner are not only excessive, but illegal, and a reduction in rates was requested and a refund on certain shipments charged the rates complained of. It appears that Ashland and other upper lake ports have a rate of 10 cts. per cwt. to Milwaukee, Racine, Kenosha, and other points in the southern portion of the state; that the specific rates complained of are 12 cts. from Odanah, and 11 cts. from Rhinelander to the southern destinations named, and that Odanah and Rhinelander are directly intermediate between Ashland and such destinations. The rates from Ashland to the points in question were based entirely on water competition, and had to be granted by the carriers in order to obtain a share of the traffic. It also appears that the construction of the clause in question contended for by petitioner is not in accord with that given it by respondent and acquiesced in by shippers for a number of years.

Held: That that construction of the clause in question which has been accepted in actual practice for years is justified by the conditions in the present case; that the acceptance by carriers of competitive traffic, provided it can be had at rates that yield something above the additional cost of handling such traffic, and provided further that it does not result in unjust discrimination, is, as a rule, best for all concerned; that the question in the present case is whether the rates charged petitioner are in themselves excessive or unreasonable; that such rates under present conditions are not excessive nor discriminatory, and that the petition must be dismissed.

This case involves a request for a reduction in rates between certain points, for reparation upon shipments already made, and, incidentally, for the construing of a clause found in the published tariff of the respondent company. The petitioner alleges specifically in its complaint that the rates charged on lumber from Odanah and from Rhinelander to Milwaukee, Racine and Kenosha are excessive and unreasonable; that under an explanation clause in the respondent's published tariff the rates charged the petitioner are not only excessive but illegal.

After due notice a hearing was held in the office of the Railroad Commission in the Capitol at Madison on November 10, 1914. *R. B. Coapstick* appeared for the petitioner and *C. C. Wright* and *H. C. Cheyney* for the respondent.

It appears from the testimony given at the hearing and from the tariffs submitted and made part of the record, that a rate of 10 cts. per cwt. is charged by the respondent and other carriers from Ashland and other upper lake ports to Milwaukee, Racine, Kenosha and other points in the southern portion of the state. The specific rates complained of and which the petitioner has paid on shipments are 12 cts. from Odanah and 11 cts. from Rhinelander to the southern destinations named. Odanah and Rhinelander are directly intermediate between Ashland and the destinations named, the latter being more than one hundred miles nearer the points shipped to than Ashland.

The clause referred to as being part of the tariff issued by the respondent company and which has been in force for several years reads: "The rates authorized herein on intrastate traffic between stations in Minnesota or stations in Wisconsin will be the maximum rates to be applied to or from intermediate stations in Minnesota or Wisconsin."

The reparation asked for is the sum of \$137.19, being the excess over a 10 ct. rate charged the petitioner on certain shipments made.

The contention of the respondent company is that the 10 ct. rate from Ashland and other lake ports named was made to meet water competition; that the rates of 12 cts. from Odanah and 11 cts. from Rhinelander are not excessive or unreasonable; that both the lake port rates and the rates from the intermediate points named are parts of group systems which cannot be disturbed without disadvantage to shippers as well as to carriers, and that the clause quoted as fixing a 10 ct. rate for intermediate points refers only to intermediate points not specified, that being the natural and legal construction of the clause.

The group systems which include Ashland and other lake ports and Odanah and Rhinelander have been on the whole beneficial to both shippers and carriers. This Commission has made it a rule to scrutinize group rates closely because they are somewhat outside normal conditions, but it has also been careful not to disturb group rates where they did not operate to do injustice to any point or any shipper. In the case before us

the petitioner cannot claim to have been unjustly dealt with because longer hauls were made from other points at lower rates. The question here is whether the rates charged the petitioner from Odanah and from Rhinelander are in themselves excessive or unreasonable. In view of the fact that the explanatory note or clause in the respondent's published tariff has been construed not to refer to specified points like Odanah and Rhinelander, and that this construction has been acquiesced in by shippers for a number of years, the fact of it being somewhat ambiguous should not be held to have established a different interpretation.

The rates from Ashland to the destinations mentioned are based entirely on water competition, and in the past had to be granted by the carriers in order to obtain a share of this traffic. Competitive traffic of this kind cannot always be had at the regular rates. Such traffic, however, should not be neglected for this reason. For it is as a rule best for all concerned that it should be accepted by the carriers, provided it can be had at rates that yield something above the additional cost of handling such traffic, and provided further that it does not result in unjust discrimination.

The Commission has carefully investigated the cost to the carrier of the services involved in the complaint, as well as the cost of the services involved in transporting the logs into the mills from which the lumber in question is manufactured, which rates on the logs under the system of concentration rates on raw material which is in effect in this state become a part of the issue, and has found in this investigation that the existing rates under present conditions do not yield more than their fair share of the cost of the transportation or service involved and that no unjust discriminations have been discovered which would require any reductions in these rates. Nor has it been found that any different construction of the clause referred to than that which has been accepted in actual practice for years is justified by the conditions.

IT IS THEREFORE ORDERED, That the petition in this case should be dismissed and that it hereby is so dismissed.

FRANK POSPICHAL ET AL.

vs.

MUSCODA MUTUAL TELEPHONE COMPANY.

Submitted May 8, 1914. Decided Jan. 18, 1915.

Complaint was made that the secretary and treasurer of respondent company assumes to manage all its affairs without authority from the board of directors, and that the service rendered is inadequate. The Commission was asked to cause an audit of respondent's books to be made, and to take such further action as it deems proper in the premises, and also to consider certain matters having to do with different charges and rates, and certain alleged discriminations in collecting rent in advance. Decision in the rate matters is held in abeyance pending the gathering of and passing upon the data necessary for such determination.

As regards the alleged assumption of undue authority of the secretary and treasurer, it does not appear that such assumption has in itself impaired the service or created unreasonable rates.

Held: That the Commission has no jurisdiction over the relations between a utility official and the board of directors unless such relations impair the service or create unreasonable rates.

As regards questions of service, it appeared that serious cross-talk was found on certain through lines, and also on another line, operated but not owned by respondent, but that the lines were metallic circuits, and that the trouble could probably be satisfactorily eliminated by making necessary transpositions. Several of respondent's rural lines also serve more subscribers than is consistent with adequate service. It appeared that respondent's switchboard capacity and operating force are sufficient for existing traffic, but that subscribers have not always reported trouble or irregularities promptly to the proper official of the company.

Held: That, in order to comply with the rules of service set forth in the Commission's order of Aug. 13, 1914, 15 W. R. C. R. 1, the respondent should make necessary transpositions on certain of its lines, and also take steps as soon as practicable to increase the number of rural lines; that in thus making adjustments necessary for such relief of overloaded lines, care should be taken to avoid discrimination; that subscribers should be connected with lines geographically best adapted for their service, and that the company should make an effort to encourage its patrons to report trouble at once.

Ordered: That the respondent make such transpositions on its through metallic lines from Muscododa to Blue River, and from Muscododa to Avoca as are necessary to eliminate all objectionable cross-talk, and otherwise comply with the Commission's general order of Aug. 13, 1914, 15 W. R. C. R. 1. May 1, 1915, is considered a reasonable limit for the completion of the transpositions ordered.

The petition, which is signed by forty-six residents of the territory served by the Muscoda Mutual Telephone Company, alleges that the secretary and treasurer of that company assumes to manage all of its affairs without authority from the board of directors, and that the service rendered is inadequate. The Commission is therefore asked to cause an audit of respondent's books to be made, and to take such further action as it deems proper in the premises.

No formal answer was made by the respondent.

Hearings were held at Muscoda on April 9, 1914, and May 8, 1914. *R. M. Orchard* appeared for the petitioners and *J. L. Johns* for the respondent.

At the first hearing counsel for the petitioners asked that the following subjects be considered in addition to the original complaint:

1. The rate charged for business telephones on metallic circuits.
2. Messenger fees charged to patrons of the local company who use the long distance service when out of town and desire to talk to parties in Muscoda who have a telephone belonging to the local company.
3. The difference in rate charged to stockholders who own their own telephones and renters who own their own telephones.
4. The maintenance of telephones by the respondent for which no rent is paid.
5. Discrimination in collecting rent in advance.

These matters were considered and testimony taken thereon with the consent of the respondent, which was given an opportunity to cross-examine witnesses and introduce testimony in rebuttal at the second hearing.

Considerable testimony was introduced with reference to the official acts of the secretary and treasurer of the respondent company and as to whether such acts were duly authorized by the board of directors. The Commission has no jurisdiction over the relations between a utility official and the board of directors unless such relations impair the service or create unreasonable rates; and it does not appear that either condition exists in the present case.

Inasmuch as a considerable time may elapse before the data necessary for a determination of the question of the reasonableness of respondent's rates can be gathered and passed upon, it

is deemed advisable to render a decision at this time with reference to the service questions involved in the complaint. Our decision in the rate matters herein will therefore be held in abeyance.

Witnesses complained that they have experienced difficulty in calling the central operator; that the central operator sometimes breaks into a conversation before it is completed; that "trouble" is not always promptly eliminated and that certain lines are overloaded. One line was said to be about sixteen miles long, serving twenty-one subscribers. Several subscribers testified that their service is satisfactory and that it has materially improved under the present management.

Our engineer has investigated the service rendered by the respondent and reports that serious cross-talk was found on the through lines to Avoca and Blue River, and also on the line to Richland Center which is operated by the respondent, but not owned by it. These lines are metallic circuits and the objectionable cross-talk can probably be satisfactorily eliminated by making necessary transpositions. The company should take such action as is necessary to secure the necessary transpositions on its leased line from Muscoda to Richland Center. These changes are necessary for compliance with Rule 1 of the *Standards of Telephone Service* fixed in our order of August 13, 1914, 15 W. R. C. R. 1.

Rule 2 of the standards of service provides that the number of subscribers on any one line shall not be greater than that consistent with adequate service, and in the discussion subsequent thereto it is recommended that under ordinary circumstances rural lines be limited to ten or twelve subscribers. Several of respondent's rural lines serve more than twelve subscribers and the testimony shows that there is some complaint that the service on such lines is poor by reason of this condition. Steps should be taken as soon as practicable to rectify this condition by increasing the number of lines. In making the adjustments necessary for this relief of overloaded lines, care should be taken to avoid discrimination. Subscribers should be connected with the line which is geographically best adapted for their service.

Our engineer reports that the switchboard capacity and the operating force are sufficient to properly handle the existing traffic, and that all calls made by him were answered promptly by the central operator. It appears from the testimony that

subscribers have not always reported trouble or irregularities promptly to the proper official of the company. Failure to do so delays repair work, and the company should make an effort to encourage its patrons to report trouble at once.

IT IS THEREFORE ORDERED, That the respondent, the Muscoda Mutual Telephone Company, make such transpositions on its through metallic lines from Muscoda to Blue River and from Muscoda to Avoca as are necessary to eliminate all objectionable cross-talk, and otherwise comply with the rules of service set forth in our general order of August 13, 1914, 15 W. R. C. R. 1.

May 1, 1915, is considered a reasonable date at which the transpositions herein ordered shall be completed.

HENRY GRANTMAN ET AL.

vs.

THERESA UNION TELEPHONE COMPANY.

Submitted Aug. 17, 1914. Decided Jan. 18, 1915.

Complaint was made that the telephone service rendered by respondent in the village of Lomira is inadequate, and the Commission was asked to investigate the matter. Complaint was made both as to difficulty in long distance communication and as to local service within the village, especially with reference to "listening in" by other subscribers, and overloaded lines. It appears that sufficient regular tests and inspections of the line are not made; that the manager does not give his entire time to the affairs of the company; that his assistant is inexperienced in telephone work, and that complaints made to the manager are not always thoroughly investigated.

Held: That the service rendered by respondent is inadequate; that sufficient competent help should be employed for regular tests and inspections and the prompt location and elimination of trouble; that at least one through line, with few, if any, subscribers' instruments installed thereon, should be established between Lomira and Theresa, and that a toll station should be provided at Lomira, so situated that it will be convenient for local and transient toll patrons. Order entered in accordance with the foregoing conclusions. May 1, 1915, is considered a reasonable limit for the completion of the toll line, and public toll station.

The petition, which is signed by twenty-six residents of Lomira, alleges that the telephone service rendered by the Theresa Union Telephone Company in that village is inadequate, and requests the Commission to investigate the matter.

The respondent, in an informal letter, takes the position that its telephone service is sufficiently good, and that certain repairs and betterments are being made which will remove cause for complaint.

A hearing was held at Lomira on August 17, 1914, at which *Henry Grantman* appeared for the petitioners and *Christ Schmaltz* for the respondent.

Witnesses complained that it is difficult to communicate over respondent's telephone lines and the lines of connecting com-

panies, with Fond du Lac, Milwaukee or other distant points. Connection is obtained with reasonable promptness, but parties cannot hear each other distinctly. Patrons have frequently been obliged to telegraph from the railway station because a message could not be satisfactorily delivered over the telephone. It was stated that some of the lines are overloaded, and that through service is frequently interfered with by patrons who take down their receivers during the conversation. Some complaint was also made as to the local service within the village of Lomira, especially with reference to "listening in" by other subscribers, and overloaded lines.

The manager of the utility testified that since the complaint a new cable has been installed in Theresa and that a new circuit has been constructed between Theresa and Lomira, thus reducing the number of subscribers served by one line. He stated that the forty-two subscribers at Lomira are connected with the Theresa exchange by five metallic lines. Long distance calls from Lomira to Fond du Lac are routed via Theresa and over respondent's line to the Fond du Lac exchange of the Wisconsin Telephone Company. Calls to Milwaukee are routed via Theresa and Mayville. The manager said that the line between Theresa and Mayville parallels for a part of the distance a high voltage transmission line, and that this parallelism interferes with the service. Witnesses conceded that the service has improved since the complaint was filed with the Commission, but insisted that it is still unsatisfactory.

In the light of the testimony and upon investigation it is our opinion that the telephone service rendered by the respondent at Lomira is inadequate. The trouble complained of by witnesses is apparently due to conditions on respondent's system rather than to those on connecting lines. Complaints made to the manager are not always thoroughly investigated so that the "trouble" may be located and immediately eliminated, nor are sufficient regular tests and inspections of the lines made by the company. The manager does not give his entire time to the affairs of the telephone company, and his assistant is inexperienced in telephone work. Sufficient competent help should be employed so that regular tests and inspections can be made and trouble promptly located and eliminated. At least one through line, along which few, if any, subscribers' instruments are installed, should be established between Lomira and Theresa, and

a toll station provided at Lomira, so situated that it will be convenient for local and transient toll patrons. These improvements are necessary for compliance with the *Standards of Telephone Service* fixed in our order of August 13, 1914, 15 W. R. C. R. 1.

IT IS THEREFORE ORDERED, That the respondent, the Theresa Union Telephone Company, employ such additional help as it necessary to enable it to make regular tests and inspections of lines and apparatus, and to promptly investigate and remove all causes of complaint; construct and maintain a through line between Theresa and Lomira for toll service, and establish a conveniently located public toll station in Lomira; and otherwise comply with our general order of August 13, 1914, fixing standards of telephone service, 15 W. R. C. R. 1.

May 1, 1915, is deemed a reasonable time for the completion of the toll line and public toll station.

F. W. ZIESENIS ET AL.

vs.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY
COMPANY.

Submitted June 15, 1914. Decided Jan. 18, 1915.

Complaint was made that respondent's station at Lehigh is unsanitary and inadequate for the freight and passenger traffic.

The respondent contended that a point 2.3 miles east of Lehigh would be a more suitable location for a station on account of better operating conditions. It appears that respondent's contention attempts to reopen the question of the relative merits of Lehigh and Strickland as sites for a railway station, and that in the case of *Bowker et al. v. M. St. P. & S. S. M. R. Co.* 1908, 2 W. R. C. R. 514, the Commission decided in favor of the former.

Held: That the question before the Commission is the adequacy, for freight and passenger traffic, of existing station facilities at Lehigh, and that the Commission would not be justified in refusing to require adequate facilities at a long established station on the ground that a station at a point more than two miles distant might be more convenient to some patrons or satisfactory to the company for operating reasons.

The size of the station in question, its use, and the freight and passenger earnings at the point in question were considered. It appears that on some occasions the waiting room is so blocked with freight that only four or five people can obtain shelter.

Held: That the existing station is inadequate, and should be superseded by a suitable building with a somewhat larger seating capacity, and with ample storage room for freight.

Ordered: That respondent provide an adequate station building for freight and passenger traffic at Lehigh, plans to be submitted to the Commission for approval. June 1, 1915, is considered a reasonable limit for the completion and opening for public use of the building ordered.

The petition, which is signed by forty-four farmers residing at or near Lehigh on the line of the Minneapolis, St. Paul & Sault Ste. Marie Railway Company, alleges in substance that the station maintained by the respondent at Lehigh is unsanitary and inadequate for the freight and passenger traffic. The Commission is therefore asked to require the respondent to provide adequate station facilities at Lehigh.

In its answer the respondent states that it considers a point

2.3 miles east of Lehigh to be a more suitable location for a station on account of better operating conditions. It denies that the present facilities are inadequate and asks that the complaint be dismissed.

Hearings were held at Lehigh on May 19, 1914, and at Strickland on June 15, 1914. *H. G. Ellsworth* appeared for the petitioners, *Kenneth Taylor* for the respondent, and *J. H. Bowker* for the village of Strickland.

The answer of the respondent attempts to reopen the question as to whether Lehigh or Strickland is the better site for a railway station, which was passed upon in *Bowker v. M. St. P. & S. S. M. R. Co.* 2 W. R. C. R. 514. The decision in that case, which was issued on June 6, 1908, held that Lehigh was then a better location for the station than Strickland, and denied the prayer of the petition for a depot at Strickland on the ground that two stations between Canton and Weyerhauser were not justified at that time. In the present case voluminous testimony was introduced concerning the relative importance of the communities surrounding Lehigh and Strickland, and the convenience or inconvenience of either site. Inasmuch as the petition herein prays for the construction of an adequate depot at Lehigh it is not necessary to consider the feasibility or desirability of other locations. The question before the Commission is whether the existing station facilities at Lehigh are adequate for the freight and passenger traffic. If the residents of other localities desire the establishment of new stations they have the privilege of petitioning the Commission for such facilities and presenting their case. Similarly, if the railway company deems it advisable to establish new stations it is at liberty to do so. But the Commission would certainly not be justified in refusing to require adequate facilities at a long established station on the ground that a station at a point more than two miles distant might be more convenient to some patrons, or more satisfactory to the company for operating reasons.

The testimony shows that the existing station at Lehigh is a frame structure 12 feet wide and 30 feet long, containing a waiting room, an office and a freight room. The waiting room is 14 feet by 11 feet in dimension and is provided with seats for eight or ten persons. The dimensions of the agent's office and the freight room are 8 feet by 11 feet and 7 feet by 11 feet, respectively. Witnesses testified that the freight room is fre-

quently overcrowded and goods piled in the waiting room and on the platform. On some occasions the waiting room is so blocked with freight that only four or five people can obtain shelter. They asserted that the passenger traffic is such that all of the seats in the waiting room are often occupied so that some passengers are obliged to stand while waiting for trains. In a number of cases they have been compelled to wait on the open platform on account of the use of the waiting room as a store-room for freight. A witness made and approximate count of the passengers boarding and alighting from trains at Lehigh from May 20 to June 13, 1914, and testified that in this period 189 persons, or an average of about 9 per day, used this station. Respondent submitted data of its freight and passenger earnings at Lehigh, which have been summarized in the following table:

Year	Revenue derived from			
	Carload freight	Less than carload freight	Passenger ticket sales	Total revenue
1908	\$600.56	\$182.62	\$174.24	\$957.42
1909	828.78	237.72	220.40	1,286.90
1910	1,292.54	340.26	256.38	1,889.18
1911	1,009.32	882.70	258.27	2,150.29
1912	1,139.78	432.48	206.28	1,777.54
1913	536.06	395.18	233.27	1,164.51
Total	\$5,407.04	\$2,470.96	\$1,347.84	\$9,225.84
Average per year...	901.17	411.83	224.64	1,537.64
Average per month...	75.10	34.32	18.72	128.12

In the light of the testimony it is our judgment that the existing station at Lehigh is inadequate. It was apparently intended for purposes other than those of a railway station and is insufficient for the freight and passenger traffic as arranged at present. In our opinion it should be superseded by a suitable station building with a somewhat larger seating capacity, and with ample storage room for freight.

IT IS THEREFORE ORDERED, That the respondent, the Minneapolis, St. Paul & Sault Ste. Marie Railway Company, provide a station building at Lehigh which shall be adequate for the freight and passenger traffic, plans to be submitted to the Commission for approval.

June 1, 1915, is considered a reasonable date at which the building herein ordered shall be completed and open for the use of the public.

B. J. NOLAN ET AL.

vs.

CHICAGO AND NORTH WESTERN RAILWAY COMPANY,
GREEN BAY AND WESTERN RAILROAD COMPANY.

Submitted June 3, 1914. Decided Jan. 18, 1915.

Complaint was made that train No. 105, northbound, on the line of the C. & N. W. Ry. Co., and train No. 3, westbound, on the line of the G. B. & W. R. R. Co., fail to connect at New London Junction at the present time, though such connection was made prior to 1911, and it was alleged that the lack of such connection renders the service of the respondents unreasonable and unjustly discriminatory. Train No. 105, a strictly intrastate train, has been superseded, since the filing of the complaint, by train No. 153, an interstate train. The two trains involved are scheduled to arrive 26 minutes apart. Their failure to connect shortens the time that patrons of the G. B. & W. R. R. Co. west of New London Junction are able to spend in Appleton, their trading center, by about two hours, and necessitates their spending the night in Appleton, or returning via Green Bay at additional expense. The total population of the territory which might be benefited was estimated at between 16,000 and 20,000 people. Important connections, impracticability and danger of increasing the speed, interference with the proper maintenance of the schedule, and the interstate character of train No. 153 on the line of the C. & N. W. R. Co. were urged as reasons why the trains in question should not be required to connect.

Held: That it is entirely feasible to make the connection prayed for without breaking any important connections of either train, or creating unsafe operating conditions; that it is unreasonable that two trains scheduled to arrive at an important junction only 26 minutes apart should fail to make connection, unless such an arrangement would disrupt more important connections or create dangerous operating conditions; that adequate service requires that a connection be made at New London Junction between the two trains in question, and that the Commission will not hesitate to require an interstate train to stop, or make proper connections within the state when such changes are necessary for adequate service.

Ordered: That the respondents so operate the trains in question that they connect for the interchange of passengers at New London Junction at 6:47 p. m. On account of the difficulty in severe winter weather of maintaining a schedule ordinarily ample, April 1, 1915, is fixed as a reasonable date for the making of the connection ordered.

The petition herein, which is signed by a large number of residents of Manawa, Scandinavia, Iola, Ogdensburg and Royalton, alleges in substance that train No. 105, northbound, on the line of the Chicago & North Western Railway Company is scheduled to arrive at New London Junction at 7:34 p. m.; that train No. 3, westbound, on the line of the Green Bay & Western Railroad Company is scheduled to arrive at New London Junction at 6:40 p. m.; that these trains do not connect at the present time, but that prior to 1911 connection was made; and that the lack of such connection renders the service of the respondents unreasonable and unjustly discriminatory. The Commission is therefore asked to take such action as it deems proper in the premises.

The Chicago & North Western Railway Company, in its separate answer, alleges that the present schedule of the trains in question has been in effect since May 28, 1911, and that the running time of the trains can not be shortened nor the schedule changed without breaking connection with the Chicago train at Milwaukee for Sheboygan, Manitowoc, Wausau and Antigo, and also breaking connections from Fond du Lac, Oshkosh and local points through to Rhinelander. It therefore asks that the complaint be dismissed.

No formal answer was filed by the Green Bay & Western Railroad Company.

A hearing was held on June 3, 1914, at New London. *William N. Martin* appeared for the petitioners, *C. A. Vilas* for the Chicago & North Western Railway Company and *J. H. McGillen* for the Green Bay & Western Railroad Company.

The testimony shows that the Chicago and North Western Railway Company's train, which was formerly known as train No. 105, is now designated as train No. 153 and is scheduled to arrive at New London Junction at 6:59 p. m., northbound. The Green Bay and Western Railroad Company's train No. 3 is now scheduled to leave New London Junction at 6:35 p. m., no connection being made with train No. 153.

Much testimony was introduced with reference to the need of the connection prayed for. It was shown that patrons of the Green Bay & Western Railroad Company at stations west of New London Junction are unable to reach their trading center at Appleton until about 11 a. m. Owing to the failure of the trains in question to connect, such patrons are obliged to remain

in Appleton over night or return via Green Bay. This indirect trip makes it necessary to leave Appleton not later than 3:15 p. m. in order to connect with train No. 3 at Green Bay, thus shortening the time available for the transaction of business in Appleton about two hours. The additional cost of making the return trip via Green Bay is \$1.00. Witnesses stated that the connection prayed for would convenience residents of Royalton, Ogdensburg, Iola, Scandinavia, Manawa and the territory adjacent to these villages, and that the total population of the territory which might be benefited thereby is between 16,000 and 20,000. Many specific instances in which patrons have been inconvenienced by the lack of connection were cited.

Witnesses for the Green Bay & Western Railroad Company testified that train No. 3 is now scheduled to arrive at Grand Rapids at 9:05 p. m., and that it makes an important connection for mail and passengers with a train on the line of the Chicago, Milwaukee & St. Paul Railway Company scheduled to leave there at 9:41 p. m. This train in turn makes important connections at New Lisbon for Milwaukee, Minneapolis and intermediate points. The depot of the Chicago, Milwaukee & St. Paul Railway Company in Grand Rapids is located about one and one-fourth miles distant from the station of the Green Bay & Western Railroad Company, and witnesses for the latter company claimed that the 36 minutes now afforded between the arrival of one train and the departure of the other is necessary for transferring the mail and the passengers and their baggage. It was asserted that before the connection at New London Junction was broken, which occurred in 1911, train No. 3 was frequently delayed in waiting for train No. 105 and as a consequence frequently failed to make its connection at Grand Rapids. Train No. 3 is a mixed train carrying several freight cars through from Green Bay to Grand Rapids, and occasionally picking up other cars en route. The trainmaster stated that this train is now operated at an average speed of 22½ miles an hour, including stops, and that it is impracticable to increase its speed.

The division superintendent of the Chicago & North Western Railway Company testified that train No. 153 originated in Chicago, leaving there at 11 a. m. and is routed via Milwaukee, Manitowoc, Appleton Junction, New London Junction, terminating at Rhinelander. It makes important connections at Clintonville and Appleton Junction. He asserted that its average speed is

28.7 miles per hour, including stops, and that to place it on a faster run would be unsafe and would interfere with the proper maintenance of its schedule.

From a careful examination of the testimony, we are of the opinion that adequate service requires that a connection be made at New London Junction between the two trains under consideration. It is not reasonable for two trains which are scheduled at an important junction point only 26 minutes apart to fail to make connection, unless such an arrangement would disrupt more important connections or endanger the traveling public involved. A detailed study of the conditions under which those trains are operated considered with the testimony leads us to the belief that it is entirely feasible to make the connection prayed for without breaking any important connections of either train or creating unsafe operating conditions. It is practicable to shorten the schedule of train No. 153 so that it will arrive in Appleton Junction at 5:45 p. m., and New London Junction at 6:47 p. m., allowing 20 minutes for supper at Appleton Junction. It is also practicable for train No. 3 to connect with train No. 153 at New London Junction at 6:47 p. m. and, in case unusual conditions delay train No. 153, to wait 15 minutes for its arrival, without breaking the connection at Grand Rapids. If train No. 3 does not leave New London Junction until 7:05 p. m., it would be able to arrive at Grand Rapids at 9.10 p. m. by operating at an average speed of $27\frac{1}{2}$ miles an hour.

During severe winter weather it is often difficult to operate trains on schedule time, even though the running time is ample under ordinary conditions. The winter is therefore an inopportune time to order a shorter schedule involving close connections. For this reason April 1, 1915, will be fixed as the date upon which the change herein ordered shall become effective.

Counsel for the Chicago & North Western Railway Company has emphasized the fact that train No. 153 is an interstate train. However, this train has recently superseded a strictly intrastate train, No. 105, which was operated between Milwaukee and Rhinelander, and the change was made subsequent to the filing of the complaint herein. The Commission will not hesitate to require an interstate train to stop or to make proper connections within the state when such changes are necessary for adequate intrastate service.

IT IS THEREFORE ORDERED, That the respondents, the Chicago & North Western Railway Company and the Green Bay & Western Railroad Company, operate their trains No. 153 and No. 3, now scheduled to leave Milwaukee at 1.16 p. m. and Green Bay at 4:50 p. m., respectively, so that they shall connect for the interchange of passengers at New London Junction at 6:47 p. m.

April 1, 1915, is considered a reasonable date at which the connection herein ordered shall be made.

TWENTY-SECOND WARD ADVANCEMENT ASSOCIATION

vs.

THE MILWAUKEE ELECTRIC RAILWAY AND LIGHT COMPANY.

Submitted Sept. 2, 1914. Decided Jan. 19, 1915.

Application was made for a rehearing in the above entitled matter, an order in which was issued July 28, 1914, 14 W. R. C. R. 788. The order required the respondent to operate through cars from the north terminus of its 27th street line to the downtown district via State street, and from the west terminus of its North avenue line to the downtown district via 8th street during the morning and evening rush hours in accordance with the standards of rush hour service fixed in the general service order. (13 W. R. C. R. 178.)

It appears that additional track work is necessary at the intersection of North avenue and 8th street for the operation of through cars via North avenue as provided in the order in question, and that it is impracticable to operate trailers on 27th street north of Center street with the existing track layout.

Held: That through service between the district in question and the downtown district, during the rush hours, other than that now provided on 27th street, is necessary for adequate service; that the expense of additional track work at the intersection of North avenue and 8th street is not so great that it should be allowed to stand in the way of necessary service, but that the traffic north of Center street on 27th street is not such as to warrant a considerable expenditure to make the operation of trailers north of Center street possible, and that the order should be so modified, for the present, as to permit the downtown service on 27th street via State street to terminate at Center street.

Ordered: That the previous order be modified in effect as follows: that the respondent operate through cars between the intersection of Center street and 27th street and the downtown district via 27th street and State street, and between the intersection of 47th street, and North avenue and the downtown district via North avenue and 8th street, during the morning and evening rush hours, in accordance with the standard of rush hour service fixed in the Commission's general service order, 13 W. R. C. R. 178, and make such track and overhead connections as are necessary to furnish the service ordered. April 1, 1915, is considered a reasonable limit for the completion of the track and overhead connections and the putting into effect of the service ordered.

REHEARING.

Under date of July 28, 1914, an order was issued in the above entitled matter requiring The Milwaukee Electric Railway and

Light Company to operate through cars from the north terminus of its 27th street line to the down-town district via State street, and from the west terminus of its North avenue line to the down-town district via 8th street during the morning and evening rush hours in accordance with the standard of rush hour service fixed in the *General Service Order*, 13 W. R. C. R. 178, and fixing the date for compliance as September 1, 1914.

Under date of August 18, 1914, the respondent applied for a rehearing, alleging that the order requires the operation of cars in part over track which is not now in place, and that compliance with the order will prevent the proper allotment of car carrying capacity to the flow of passengers as intended by the general service order above referred to.

A rehearing was duly ordered and held at Milwaukee on September 2, 1914. *D. W. Hoan* appeared for the petitioner and *Miller, Mack & Fairchild*, by *J. B. Blake*, for the respondent.

At this hearing it was shown that at the intersection of North avenue and 8th street additional track work is necessary for the operation of through cars via North avenue as provided in the order. Respondent's assistant general manager testified that the required work would cost from \$5,172 to \$5,572, according to the character of the construction, and that to purchase and install such special work would require from 60 to 90 days.

He also stated that the through service on the 27th street line via State street, which was in operation prior to the previous hearing, terminated at Center street, and that to extend such service to the terminus of the 27th street line at Burleigh street, as specified in the order, is impracticable with the existing track layout on account of the use of trailers. He expressed the opinion that through service north of Center street is not justified by the traffic conditions.

Statistics relating to the existing transfer traffic at 8th street and North avenue and other intersections of the North avenue line and down-town lines were introduced. There were also offered data as to the financial ability of the respondent to comply with the order and in this connection reference was made to exhibits offered in the matter of the application of the respondent for an interpretation and modification of the *General Service Order*, 13 W. R. C. R. 178, now pending. These data have been given consideration. The capital expenditures necessary for the installation of track connections at the intersection of

North avenue and 8th street will not be so great as estimated by the assistant general manager, inasmuch as the evidence shows that respondent contemplates using material removed from another intersection. This expenditure, which is relatively small, should not stand in the way of necessary service.

In the light of the testimony and evidence and upon investigation we are of the opinion that through service between the district under consideration and the down-town district during the rush hours, other than that now provided on the 27th street line, is necessary for adequate service. Owing to the fact that it is impracticable to operate trailers north of Center street on 27th street with the existing track layout, and that the traffic north of Center street is not such as to warrant a considerable expenditure to make such operation possible, it appears reasonable, for the present at least, to so modify the order as to permit the down-town service on 27th street via State street to terminate at Center street. In our judgment the operation of through cars during the rush hours between 47th street and North avenue and the down-town district via North avenue and 8th street offers the best solution of the problem, and we still believe that when patrons become accustomed to the new arrangement, the traffic will fully justify the service.

IT IS THEREFORE ORDERED, That our former order herein be and the same is hereby modified to read as follows:

That the respondent, The Milwaukee Electric Railway and Light Company, operate through cars between the intersection of Center street and 27th street and the down-town district via 27th street and State street, and between the intersection of 47th street and North avenue and the down-town district via North avenue and 8th street, during the morning and evening rush hours, in accordance with the standard of rush hour service fixed in our *General Service Order* of November 25, 1913, 13 W. R. C. R. 178, and make such track and overhead connections as are necessary for operating the service herein ordered.

April 1, 1915, is considered a reasonable date at which the track and overhead connections shall be completed and the service herein ordered shall be in operation.

VILLAGE OF CADOTT

vs.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY
COMPANY.

Submitted Dec. 16, 1914. Decided Jan. 19, 1915.

Complaint was made that a highway crossing on respondent's line at Main street in the village of Cadott is dangerous to public travel on account of the surrounding physical conditions, and the Commission was asked to take such action as it deems proper in the premises. The physical conditions involved, the train movement over the crossing in question, and the highway traffic concerned were considered. It appears, among other things, that the street in question connects with main traveled highways leading to Chippewa Falls and Boyd, and is an important highway for traffic entering the village, and that there have been several fatal accidents at the crossing and numerous narrow escapes.

Held: That the crossing is unusually dangerous; that further protection is necessary, and that the installation of an electric bell and a visual signal for night indication will render the crossing reasonably safe under existing traffic conditions.

Ordered: That the respondent install and maintain at the crossing in question an automatic electric bell and a visual signal for night indication, plans to be submitted to the Commission for approval. Ninety days is considered a reasonable time within which to comply with the order.

The petitioner, a regularly incorporated village in Chippewa county, alleges that a highway crossing on the line of the Minneapolis, St. Paul & Sault Ste. Marie Railway Company at Main street in the village of Cadott is dangerous to public travel on account of the surrounding physical conditions. The Commission is therefore asked to take such action as it deems proper in the premises.

No answer was filed by the respondent.

A hearing was held at Cadott on December 16, 1914. *Chas. Wilhelm* and *Frank W. Filtz* appeared for the petitioner, and *Kenneth Taylor* for the respondent.

The testimony shows that at the crossing in question the highway runs north and south and the railway northeast and southwest, the angle of crossing being approximately 65 degrees. The

main track and a passing track are crossed at a point about 800 ft. northeast of Cadott station. To the northeast the view of trains is obstructed by the banks of a cut which are about 13 feet above the rail 300 feet from the crossing, and about 5 feet above the rail at the crossing. To the southwest the track is on a slight fill and the only obstructions to the view are buildings along Main street. Witnesses stated that from the north approach a clear view of trains to the northeast can not be secured until a traveler is within about 16 feet of the center of the main track or 11 feet from the side of a passing car. The northeast view from the south approach is such that a person must be within about 30 feet of the center of the main track in order to see an approaching train for a considerable distance. The view to the southwest is cut off by buildings at points about 50 feet north and 70 feet south of the center of the main track between which points a view southwest of about one-quarter of a mile is available. Our engineer's report which was placed in evidence shows the limits of vision as follows:

Distance of point of observation in highway from main track	View northeast	View southwest
North 25 feet	1,300 feet	1,200 feet
“ 50 “	*500 “	1,500 “
“ 75 “	*175 “	200 “
“ 100 “	*175 “	150 “
“ 200 “	70 “	63 “
South 25 “	1,300 “	1,300 “
“ 50 “	*400 “	1,300 “
“ 75 “	*350 “	250 “
“ 100 “	*300 “	120 “
“ 200 “	*250 “	75 “

* View of tops of cars only.

Witnesses pointed out that the track is on a down grade from the east and that trains often glide in without working steam.

Main street connects with main traveled highways leading to Chippewa Falls and Boyd, and is an important highway for traffic entering the village of Cadott. Witnesses estimated that from 50 to 150 teams cross in a day and that about 200 pedestrians normally use the crossing. Automobile traffic was said to be heavy, about 50 automobiles being owned in the village. Respondent submitted the results of a traffic count made from 7 a. m. to 7 p. m. on December 12, 13, and 14, as follows:

Date	Pedestrians	Teams	Automobiles
Dec. 12, 1914	612	168	10
" 13, "	389	63	6
" 14, "	447	109	1

Respondent's time-table shows that six passenger trains and six freight trains are scheduled over this line on week days and four passenger trains and five freight trains on Sundays. Some extra freight trains are operated. Five of the regular trains cross during the night.

Witnesses described three accidents at this crossing resulting in the death of three persons and the serious injury of two others. Numerous narrow escapes are also mentioned.

In the light of the testimony and upon investigation it is our opinion that the crossing in question is unusually dangerous and that further protection is necessary. The installation of an electric bell and a visual signal for night indication will, in our judgment, render the crossing reasonably safe under the existing traffic conditions.

IT IS THEREFORE ORDERED, That the respondent, the Minneapolis, St. Paul & Sault Ste. Marie Railway Company, install and maintain at the intersection of its line of railway and Main street in the village of Cadott, an automatic electric bell and a visual signal for night indication, plans to be submitted to the Commission for approval.

Ninety days is considered a reasonable time within which to comply with this order.

H. S. HUGHSON ET AL.

vs.

DULUTH, SOUTH SHORE AND ATLANTIC RAILWAY COMPANY.

Submitted Sept. 8, 1914. Decided Jan. 22, 1915.

Complaint was made that respondent's failure to operate its summer Sunday excursion train from Superior beyond Lake Nebagamon results in inadequate Sunday train service at Winnebijou, Campbell's Mill, and other points between Lake Nebagamon and Iron River or Bibon. The case is a continuation in substance of *Hughson v. D. S. S. & A. R. Co.* 1913, 13 W. R. C. R. 406, in which the Commission, after due consideration, issued an order requiring the respondent to stop the train in question, then operated to Bibon, at Winnebijou. In the summer of 1914, however, the train was operated only as far as Lake Nebagamon, 5½ miles west of Winnebijou, thereby depriving the latter place of the facilities of that train. It appears that it is now practically impossible to get from Superior to stations on respondent's line east of Lake Nebagamon, and back on Sunday. However, the villages of Winnebijou and Campbell's Mill receive the full quantum of train service required by statute, and also all that is warranted under present conditions, so that the question is not strictly one of adequacy of train service.

The respondent contended that the increased business resulting from an extension of the run of the train in question would not compensate the company for the increased cost of its operation, and that the Commission is without jurisdiction, because the train is interstate, and because, being a Sunday excursion train, it is a form of special service, which the Commission has no authority to order extended.

Held: That the Commission is without jurisdiction; that the reason is not the interstate character of the train; that, on the contrary, the Commission has jurisdiction over interstate trains with respect to adequacy of train service, so long as the jurisdiction is not so exercised as to be an unwarranted interference with interstate commerce; that the reason for the absence of jurisdiction is that excursion train service is a special form of service, which the railroad is not compelled to furnish and which, if it does furnish, is wholly within its discretion as to time and extent of service, subject only to the general police power of the state with respect to public health, safety, or equal rights; that when the respondent operated the train beyond Winnebijou, and failed to stop, the Commission's jurisdiction arose in its authority under the statute to prevent discrimination, but that as the respondent now sees fit to furnish the special service only as far as Lake Nebagamon, the Commission cannot intervene to compel it to be furnished to more distant stations.

The petition is dismissed.

The petitioners allege that the failure of the Duluth, South Shore & Atlantic Railway Company to operate its summer Sunday excursion train from Superior beyond Lake Nebagamon results in inadequate Sunday train service at Winnebijou, Campbell's Mill, and other points between Lake Nebagamon to Iron River or Bibon.

The respondent, in its answer, states that the present service is reasonably adequate; that the increased business resulting from an extension of the run of the train would not compensate the company for the increased cost of its operation; and finally the Commission has no jurisdiction in the matter for the reason that (1) the train is interstate, and (2) is a Sunday excursion train, and therefore a form of special service, which the Commission has no authority to order extended.

The respondent also denies the charges of the petitioner that the train in question was operated from Duluth and Superior only as far as to Lake Nebagamon during the summer of 1914 for the express purpose of evading the order of the Commission rendered December 12, 1913 (*Hughson v. D. S. S. & A. R. Co.* 13 W. R. C. R. 406), in which it was required to stop the train at Winnebijou.

Hearings were held at the city hall at Superior on July 29 and August 21, 1914, and at Madison on September 8, 1914. *J. A. Little* appeared for the petitioners and *Thos. S. Woods* for the respondent.

The case is in substance a continuation of the issues considered in *Hughson v. D. S. S. & A. R. Co.* 1913, 13 W. R. C. R. 406, and in order to get a thorough understanding of the situation a statement of the facts in that case will be here appropriate.

In the case referred to the petitioner, *Hughson*, complained that the Sunday excursion train of the respondent, running from Duluth and Superior to Bibon, did not stop at Winnebijou and after due consideration, the Commission issued an order requiring the respondent to stop the train at Winnebijou. As the train is operated only during the summer months it had been discontinued in the summer of 1913 before the order of the Commission was rendered. In the summer of 1914, as the testimony shows, a change was instituted by the respondent and the Sunday excursion train was operated only as far as Lake Nebagamon, five and one-half miles west of Winnebijou, thereby depriving the latter place of the facilities of that train.

The petitioners assert that part of the train, usually the engine and a baggage car, is run on to Iron River, passing through Winnebijou without stopping. The company's representative stated in reply that as there are no facilities at Lake Nebagamon necessary for turning the engine, it is run to Iron River for that purpose, but that facilities for turning the train are to be installed at Lake Nebagamon.

The testimony in the previous case was introduced in evidence.

The petitioner, Hughson, who lives in Superior and owns a farm near Winnebijou, testified that the failure of the respondent to operate the train in question beyond Lake Nebagamon results in great inconvenience to him. He stated that in order to get to his property on Sundays, he is now compelled to go on the Northern Pacific Railway from Superior to Brule and walk about two miles from that place, and can remain there only a few hours if he desires to get back to Superior Sunday night. If the respondent's Sunday excursion train were operated to or through Winnebijou, however, he could reach his property from that place by a walk of only three-quarters of a mile, could remain most of the day, and still get back to Superior Sunday night.

The other petitioner, Larry Brennan, is in about the same situation with respect to his property near Campbell's Mill. He stated that since the respondent's Sunday train has not been operated beyond Lake Nebagamon, he is compelled to go from Superior to Muskeg over the Northern Pacific Railway, and has the same walk of three miles and can make only a short stay as does Mr. Hughson.

Other witnesses testified to the same effect; that it is now practically impossible for them to get from Superior to the stations on the respondent's line east of Lake Nebagamon and back on Sunday. They state that they must either leave Superior Saturday evening and return Monday morning within business hours, or use the Northern Pacific train and walk across to Winnebijou or Campbell's Mill, in which latter event they can make a stay of only a few hours.

James Maney, general passenger agent of the Duluth, South Shore & Atlantic Railway Company, testified that the train in question was strictly a summer proposition, that its operation depended on weather conditions, and that the purpose

of the company in operating it at all was to develop, if possible, summer resorts at the various stations.

At the second hearing exhibits consisting of traffic data of the earnings of the respondent's Sunday excursion train were submitted by the attorney for the company. These show the amount of business done by the train during the season of 1913 from Duluth to Bibon and during the summer of 1914 up to August 16, from Duluth to Lake Nebagamon.

It is our opinion that the request of the petitioners can not be granted, due to a lack of jurisdiction by the Commission to compel the operation or extent of run of the train in question.

The fact that the train is interstate does not deprive the Commission of authority over it. The argument advanced by the respondent in this respect is not well grounded.

The Commission has jurisdiction over interstate trains with respect to adequacy of train service so long as this jurisdiction

is not so exercised as to be an unwarranted interference with interstate commerce. The primary duty of a railroad is to furnish reasonably adequate local service, and the question of adequacy in particular cases is, aside from statutory requirements, one for the Commission to determine. Thus, when a regulation by the Commission of an interstate train does not, under the circumstances, operate to interfere with interstate commerce, it is valid. (*Morris et al. v. C. M. & St. P. R. Co.* 1913, 12 W. R. C. R. 560; *Schlosstein v. C. B. & Q. R. Co.* 1911, 8 W. R. C. R. 242.) This doctrine has been upheld by the Wisconsin supreme court (*C. B. & Q. R. Co. v. R. R. Commission*, 1913, 152 Wis. 654) and the power of the states to make regulations of train service by statute or through their railroad commissions has been affirmed by the United States supreme court in numerous decisions. (*Diamond G. C. v. U. S. G. Co.* 187 U. S. 611; *Atl. C. Line R. Co. v. N. Car. Corp. Commission*, 206 U. S. 1.)

It is upon another point, one partly advanced by the respondent, that the Commission considers that it lacks jurisdiction in this case. The train is not one regularly operated by the the respondent and is not included in its list of trains giving regular service to stations on respondent's line, including Winnebijou and Campbell's Mill. As the testimony shows, it is operated only during the summer months, only on Sunday, and as an excursion train. It may be clearly considered as special service furnished in addition to the regular necessary train service, and as such the time and extent of its operation is subject only to the discretion of the company.

Excursion trains are a form of special service in addition to the number of trains regularly operated or required by statute. They have been defined as trains "which go from one place to another with a view to people getting to that other place on cheap terms, and very frequently upon the condition that the railway company is not to be delayed or inconvenienced by people taking baggage with them." (17 Cyc. 873—4.) While this definition could hardly be applied to the respondent's Sunday excursion trains running from Duluth and Superior to Lake Nebagamon, yet it is admitted on all sides that this train is additional to the regular train service of the company at the localities in question and as such it is our opinion that the details of its operation, the time or extent of run, should be left to the company. Excursion trains, as a special form of service furnished

by carriers and not subject to the same liabilities as the regular train service, have been so recognized by the courts. In *Crary v. Lehigh Valley R. Co.* 1902, 53 Atl. 363, and 29 Amer. & Eng. R. Cases 119, it was held that a passenger when riding on an excursion train and assuming all the risks of the journey, waives the common law rule making the carrier liable for his safety, and is in a similar position to a licensee, having to prove affirmatively negligence on the part of the carrier in order to recover for injuries sustained.

The special nature of excursion train service is further recognized by the attitude of the courts toward excursion tickets. They are considered as a special form of contract; their use and validity can be limited to a certain day or designated train, and may be refused by the carrier upon other days or other trains (*Nolan v. N. Y. N. H. & H. R. Co.* 1876, 41 N. Y. Super. Ct. 541; *State v. Campbell*, 1867, 32 N. J. Law 309). Railroads may designate the time limit in which such tickets will be good (*Pennington v. Phil. Wl. & B. R. Co.* 1883, 62 Md. 95), and when the terms of an excursion ticket provide for its exchange for another good at a later date, the original ticket is not good at the later date (*Howard v. C. St. L. & N. O. R. Co.* 1883, 61 Miss. 194).

These and many other cases support the view that the excursion train is a special form of service which the railroad is not compelled to furnish and which, if it does furnish, is wholly within its discretion as to time and extent of the service, subject only to the general police power of the state with respect to public health, safety, or equal rights. When the respondent operated the train to Bibon and failed to stop it at Winnebijou, the Commission's jurisdiction arose in its authority under the statute to prevent discrimination. However, as the company sees fit now to furnish this special service only as far as Lake Nebagamon, the Commission can not intervene to compel it to be furnished to more distant stations. It is, of course, recognized that the operation of this train as far as Iron River or Bibon would be a great convenience to the petitioners and to other residents of and visitors at Winnebijou, Campbell's Mill and other stations along the line, but inasmuch as the train is one of a special nature, an excursion train run on Sundays during the summer months only, the Commission considers that it

lacks jurisdiction and authority to compel the respondent to operate the train beyond Lake Nebagamon.

This consideration, it should be noted, is entirely aside from that of adequate train service at the points in question. At present, the villages of Winnebijou and Campbell's Mill receive the full quantum of train service as required by statute, and while this amount of service is not the maximum, and it is within the power to order further service if necessary, present conditions do not warrant such an order. The increased amount of business which the company would obtain from the operation of another train daily or on Sunday would fall short of the increased expense of operation, and further the service already furnished is adequate for the present needs of the communities.

IT IS THEREFORE ORDERED; That the complaint of the petitioners against the Duluth, South Shore & Atlantic Railway Company be and the same is hereby dismissed.

FOND DU LAC BUSINESS MEN'S ASSOCIATION

vs.

CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted Oct. 21, 1914. Decided Jan. 22, 1915.

Complaint was made that an arrangement by which a sleeping car is now set out at Oshkosh by respondent's train No. 224 at 10:27 p. m. daily, and is picked up by train No. 102 at 2:42 a. m. passing through Fond du Lac at 3:15 a. m., makes it necessary for patrons who live at Fond du Lac to await its arrival at an unusual hour, or travel to Oshkosh at an increased expense to board it, and it was alleged that to require train No. 224 to carry this sleeping car through to Fond du Lac arriving there at 11:20 p. m. would be more satisfactory to patrons at Fond du Lac, and would not seriously discommode patrons at Oshkosh. The Commission was therefore asked to require respondent to set out the sleeping car in question at Fond du Lac instead of Oshkosh. It appears that the sleeping car under consideration is operated primarily for the accommodation of persons in Appleton, Neenah, Oshkosh and Fond du Lac, and the territory tributary thereto, who desire to make the trip to Chicago during the night; that relatively few people use the sleeper to travel to Milwaukee or other Wisconsin points, and that the chief complaint is that residents of Fond du Lac who desire to make early train connections at Chicago are inconvenienced by reason of the fact that they are obliged to sit up until 3:15 a. m. or travel to Oshkosh to obtain accommodation on this sleeping car.

Held: That the Commission is without jurisdiction; that to grant the relief sought would necessitate the regulation of interstate passenger service, which is beyond the jurisdiction of the Commission, except where such regulation is necessary for adequate intrastate service, which is not the case in the present proceeding, and that the petition must therefore be dismissed. The petition is dismissed.

The petition alleges in substance that a sleeping car is now set out at Oshkosh by the Chicago & North Western Railway Company's train No. 224 at 10:27 p. m. daily, and is picked up by train No. 102 at 2:42 a. m., passing through Fond du Lac at 3:15 a. m. enroute for Chicago; that this arrangement makes it necessary for patrons who live at Fond du Lac to await its arrival at an unusual hour or travel to Oshkosh at an increased expense to board it, and that to require train No. 224 to carry this

sleeping car through to Fond du Lac, arriving there at 11:20 p. m., would be more satisfactory to patrons at Fond du Lac and would not seriously discommode patrons at Oshkosh. The Commission is therefore asked to require respondent to set out this sleeping car at Fond du Lac instead of Oshkosh.

The respondent, in its answer, alleges that the sleeping car in question is set out at Oshkosh in order to accommodate not only the people of Oshkosh but the traveling public of the adjoining territory, totaling from 50,000 to 60,000 people, who would be seriously discommoded by the change prayed for, and that patrons at Fond du Lac can travel to Oshkosh by steam or inter-urban electric roads at a convenient hour to obtain accommodations in the sleeping car.

Hearings were held at Fond du Lac on October 7, 1914, at Oshkosh on October 20, 1914, and at Appleton on October 21, 1914. *Lester C. Busch* appeared for the petitioner and *W. G. Wheeler* for the respondent. At the Oshkosh hearing *R. A. Hollister* appeared for the city of Oshkosh and *E. H. Smith* for the Chamber of Commerce of that city.

The testimony shows that the sleeping car under consideration is operated primarily for the accommodation of persons in Appleton, Neenah, Oshkosh and Fond du Lac, and the territory tributary thereto, who desire to make the trip to Chicago during the night. It is set out at Oshkosh at 10:27 p. m. and picked up at 2:42 a. m., passing Fond du Lac at 3:15 a. m., Milwaukee at 5:10 a. m., arriving in Chicago at 7:45 a. m. It is apparent from the testimony that relatively few persons use this sleeper to travel to Milwaukee or other Wisconsin points, and that the chief complaint is that residents of Fond du Lac who desire to make early train connections at Chicago are inconvenienced by reason of the fact that they are obliged to sit up until 3:15 a. m. or travel to Oshkosh to obtain accommodations on this sleeping car.

To grant the relief sought would therefore necessitate the regulation of interstate passenger service, which is beyond the jurisdiction of the Commission, except where such regulation is necessary for adequate intrastate service. In the present case no such condition exists. The travel to Milwaukee on this sleeping car appears to be negligible. Moreover, other train service is provided with which it is possible to reach Milwaukee from Appleton and intermediate points in the early forenoon or

late in the evening; and from the testimony it seems unlikely that the operation of an intrastate sleeping car between Appleton and Milwaukee at approximately the same hour as the Chicago car would be justified by the traffic. The petition must therefore be dismissed for lack of jurisdiction.

IT IS THEREFORE ORDERED, That the petition herein be and the same is hereby dismissed.

TOWN OF REMINGTON

vs.

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted Sept. 10, 1914. Decided Jan. 22, 1915.

Complaint was made that respondent has refused to construct a proper crossing at the point where a highway which petitioner has duly laid out crosses respondent's tracks, and the Commission was asked to require respondent to construct a crossing in the mode and manner to be prescribed by the Commission under the authority conferred upon it in secs. 1797—12e and 1797—12 of the statutes.

The public necessity for a crossing at the point in question was challenged by respondent, and the contention was made by respondent that under sec. 1797—12e of the statutes, the Commission has authority to refuse to permit the establishment of a crossing on the ground that public necessity does not require it.

Held: That the question of the public necessity of a proposed crossing is to be determined by the municipality in interest and that the Commission is without jurisdiction in the matter, and that to hold otherwise would in effect place the Commission in the position of dictating a municipality's highway development.

It appears that the physical conditions at the crossing as laid out, and the traffic which would probably use it are not such as to make grade separation practicable.

Ordered: That the respondent construct a suitable grade crossing at the point in question, furnishing all necessary material and labor and performing all necessary work in fulfilling the provisions of the order. Upon the completion of the work the respondent is to furnish the Commission with an account of all expenses incurred therein, whereupon the Commission will determine the actual expense of construction, of which the petitioner is thereupon to pay the respondent 50 per cent, the respondent bearing 50 per cent. June 1, 1915, is considered a reasonable date for the completion and opening for public travel of the crossing ordered.

The petitioner, a regularly organized town in Wood county, alleges in substance that it has duly laid out a new highway which crosses the tracks of the Chicago, Milwaukee & St. Paul Railway Company in the unincorporated village of Babcock on the north and south quarter section line in section 14, township 21 north, range 3 east, and that respondent has refused to construct a proper crossing at this point. The Commission is therefore asked to require respondent to construct a crossing in the

mode and manner to be prescribed by the Commission under the authority conferred upon it in sec. 1797—12e and 1797—12 of of the statutes.

The respondent, in its answer, alleges in substance that there is no public necessity for a crossing at the point in question, and that such a crossing would be unsafe for the public and would cause great and unwarranted expense to the railway company. It therefore asks that the complaint be dismissed.

A hearing was held at Babcock on September 10, 1914, at which *Theodore W. Brazeau* appeared for the petitioner and *J. N. Davis* for the respondent.

At the hearing much testimony was introduced with reference to the public necessity of a highway crossing at the proposed site. Counsel for the respondent contends on brief that the Commission has authority under sec. 1797—12e of the statutes to refuse to permit the establishment of a crossing on the ground that public necessity does not require it. Counsel for petitioner maintains in his brief that the question of the public necessity of a proposed crossing is to be determined by the municipality in interest and that the Commission is without jurisdiction in the matter. The Commission has taken the latter position in similar cases (*Town of Elcho v. C. & N. W. R. Co.* 1914, 14 W. R. C. R. 796, and *Town of Superior v. G. N. R. Co.* 1914, 15 W. R. C. R. 300), and we see no reason for withdrawing from the position there taken. To hold otherwise would in effect place the Commission in the position of dictating a municipality's highway development.

The testimony shows that the physical conditions at the crossing as laid out, and the traffic which would probably use it, are not such as to make grade separation practicable. We find and determine therefore that the crossing as laid out by the town of Remington should be constructed at grade, and we regard as equitable an apportionment of the cost of such new crossing under which the Chicago, Milwaukee & St. Paul Railway Company shall pay 50 per cent thereof and the town of Remington 50 per cent thereof. It does not appear advisable to attempt to definitely pass upon the need of some form of protection at the new crossing until it shall have been completed and the actual conditions of travel determined.

IT IS THEREFORE ORDERED, That the proposed crossing of the new highway laid out by the town of Remington and the line

of the Chicago, Milwaukee & St. Paul Railway Company, located on the north and south quarter section line in section 14, township 21 north, range 3 east, in said town of Remington, be at grade; and the respondent, the Chicago Milwaukee & St. Paul Railway Company, is hereby directed to construct a suitable grade crossing at said point.

IT IS FURTHER ORDERED, That the said respondent furnish all necessary material and labor and perform all necessary work in fulfilling the provisions of this order, and that upon the completion of the work said respondent furnish the Commission with a complete and detailed account of all expenses incurred by it therein, whereupon the Commission, with or without further hearing as may be deemed best, will determine the actual expense of constructing the crossing, and the town of Remington shall thereupon pay to the respondent 50 per cent of the cost as so determined by the Commission, and 50 per cent thereof shall be borne by the respondent.

June 1, 1915, is considered a reasonable date at which the crossing herein ordered shall be completed and opened for public travel.

IN RE ALLEGED REFUSAL OF THE BLOOMER ELECTRIC LIGHT
AND POWER COMPANY TO REINSTATE POWER SERVICE
FOR L. P. MARTINY.

Submitted Nov. 12, 1914. Decided Jan. 23, 1915.

The Commission, on its own motion, investigated the complaint of L. P. Martiny that the Bloomer El. Lt. & P. Co. refuses to reinstate light and power service at his place. It appears that complainant's farm is about three-quarters of a mile distant from the Bloomer El. Lt. & P. Co's transmission line, which carries a high voltage; that light and power service was formerly furnished complainant by means of a transformer installed by the company near the road outside of complainant's yard, and by wiring constructed at the customer's expense; that the transformer is not located on the premises of the consumer; that the usual practice is to install a lightning arrester on the same pole as the transformer; that no lightning arresters were installed in the present case, the president of the company having assured complainant that such installations were unnecessary; that in June 1914 the transformer was burned out, presumably as a result of an electric storm, and that complainant has since been without service, the company insisting that he bear the cost of the new transformer and of lightning arresters.

Held: That such devices should be furnished by the utility and maintained by it; that it is the duty of a public utility supplying electricity for light and power to provide such devices as are necessary for the reasonable protection of its customers and the public, though in Wisconsin the duty does not extend to apparatus which is situated on the premises of the consumer, since sec. 1797m—90 of the statutes exempts utilities from the requirement of installing on consumers' premises any part of the facilities incident to service except meters and appliances for purposes of measurement; that had the lightning arresters been installed when the line was originally constructed, it is probable that the transformer would not have been burned out, and that under such circumstances it is unreasonable to require the consumer to bear the expense of installing a new transformer and the necessary lightning arresters.

Ordered: That the Bloomer El. Lt. & P. Co. reinstate electric service for lighting and power purposes to complainant, and furnish and maintain at its own expense such transformers, lightning arresters, and other equipment as are necessary to supply such service in a reasonably safe and reliable manner.

Upon complaint of L. P. Martiny that the Bloomer Electric Light and Power Company unreasonably refuses to reinstate light and power service at this place, and upon investigation, a

hearing in the matter was duly ordered on motion of the Commission and held at Bloomer on November 12, 1914. *L. P. Martiny* appeared in his own behalf and *Martin Rasmus* for the Bloomer Electric Light and Power Company.

The testimony shows that L. P. Martiny lives on a farm about four and a half miles north of Chippewa Falls and that his farm buildings are about three-quarters of a mile distant from the transmission line of the Bloomer Electric Light and Power Company which carries a high voltage. Light and power service was formerly furnished Mr. Martiny by means of a transformer installed by the company near the road just outside of Mr. Martiny's yard and by wiring constructed at the customer's expense. No lightning arresters were installed, the president of the company having assured Mr. Martiny that such installations were unnecessary. In June 1914 the transformer was burned out, presumably as a result of an electric storm, and Mr. Martiny has since been without service, the company insisting that he bear the cost of the new transformer and of lightning arresters. The question for decision, therefore, is whether this cost should be borne by the company or the consumer.

It is the duty of a public utility supplying electricity for light and power to provide such devices as are necessary for the reasonable protection of its customers and the public. In *Columbus R. Co. v. Kitchens* 1914, 83 S. E. 529, the supreme court of Georgia holds in substance that where an electric light company maintains overhead wires from its plant to a residence of one of its patrons for the purpose of supplying light to the house, the company is under duty to employ such approved apparatus in general use as will be reasonably necessary to prevent injury to the house or persons or property therein arising from electricity which may be engendered by a thunder storm and strike the wires and be conducted thereby into the residence. The same court in an earlier decision, *Heidt v. Southern Tel. Co.* 122 Ga. 474, 478, used the following language:

“Persons or companies operating telephone and electric light systems for the transmission of electricity upon and over public highways owe to the public the duty of properly constructing and maintaining their respective wires and poles; they are bound to provide such safeguards against danger as are best known and most extensively used, and all necessary protection must be afforded to avoid casualties which may be reasonably expected.”

In Wisconsin this duty does not extend to apparatus which is situated on the premises of the consumer, since sec. 1797m—90 of the statutes exempts utilities from the requirement of installing on consumers' premises any part of the facilities incident to service except meters and appliances for purposes of measurement.

The language of the statute is as follows:

“It shall be unlawful for any public utility to demand, charge, collect or receive from any person, firm or corporation less compensation for any service rendered or to be rendered by said public utility in consideration of the furnishing by said person, firm or corporation of any part of the facilities incident thereto; provided nothing herein shall be construed as prohibiting any public utility from renting any facilities incident to the production, transmission, delivery or furnishing of heat, light, water or power or the conveyance of telephone messages and paying a reasonable rental therefor, or as requiring any public utility to furnish any part of such appliances which are situated in and upon the premises of any consumer or user, except telephone station equipment upon the subscribers' premises, and unless otherwise ordered by the commission meters and appliances for measurements for any products or service.”

In the present case the transformer is not located on the premises of the consumer and it is the usual practice to install a lightning arrester on the same pole as the transformer. Such installations are necessary for the reasonable protection of the consumer and his property from electric storms and from the current carried by the high voltage transmission line. Had the lightning arresters been installed when the line was originally constructed, it is probable that the transformer would not have been burned out. Under such circumstances, it is unreasonable to require the consumer to bear the expense of installing a new transformer and the necessary lightning arresters. Such devices should be furnished by the utility and maintained by it.

IT IS THEREFORE ORDERED, That the Bloomer Electric Light and Power Company reinstate electric service for lighting and power purposes to L. P. Martiny and furnish and maintain, at its own expense, such transformers, lightning arresters, and other equipment as are necessary to supply such service in a reasonably safe and reliable manner.

CITY OF NEW RICHMOND

vs.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY
COMPANY.

Submitted Nov. 13, 1914. Decided Jan. 25, 1915.

Complaint was made that respondent's passenger station in the city of New Richmond is unclean, unsanitary, poorly lighted, and inadequate for the comfort and accommodation of the traveling public, and the Commission was asked to require the respondent to construct and maintain an adequate passenger station at the site of its existing depot in the city of New Richmond.

The respondent, while admitting the inadequacy of its station, alleges that the earnings and financial conditions of the Chicago division do not now and have not for some time past warranted the expenditure necessary for a new station. It was suggested that within two or three years the financial conditions would probably improve so as to permit the expense, and that in the meantime the company is willing to make temporary improvements.

Held: That it is not reasonable that petitioner should wait the length of time suggested by counsel, though it is recognized that respondent should not be unnecessarily burdened in its present financial condition; that the advisability of making temporary repairs on the existing station is also questionable; that under all the circumstances the replacement of the station in question should be given prior consideration over other station expenditures, and that one year is a reasonable time, in the present case, for the erection of the new station.

The site of the new station was a point of contention, the petitioner and respondent each favoring a different location.

Held: That the choice of the actual site for a station is properly a function of the management of a railway company and should not be interfered with unless it is established that adequate service or the safety of the public is endangered; that in the present case it does not appear that respondent's choice would render its service inadequate, and that the location will therefore not be specified.

Ordered: That the respondent erect a modern passenger station, to be adequate for passenger traffic, in the city of New Richmond, plans to be submitted to the Commission for approval. Feb. 1, 1916 is considered a reasonable date for the completion and opening for public use of the new station.

The petition alleges in substance that the passenger station maintained by the Minneapolis, St. Paul & Sault Ste. Marie

Railway Company in the city of New Richmond is unclean, unsanitary, poorly lighted and inadequate for the comfort and accommodation of the traveling public. The Commission is therefore asked to require the respondent to construct and maintain an adequate passenger station at the site of its existing depot in the city of New Richmond.

The answer of the respondent admits that its passenger station is inadequate, but alleges that the earnings and financial condition of the Chicago division do not now and have not for some time past warranted the expenditure necessary for a new station. It therefore asks that the complaint be dismissed or held in abeyance until the present financial conditions materially improve.

Hearings were held at New Richmond on October 15, 1914, and November 13, 1914. *W. T. Doar* appeared for the petitioner and *A. H. Bright* and *Kenneth Taylor* for the respondent.

Inasmuch as the respondent admits the inadequacy of its existing station facilities, it is unnecessary to comment upon the testimony tending to show such a condition.

The greater part of the testimony related to the advantages or disadvantages of two specific locations for the new station. The city contends that the existing site is more convenient for the city and adequate for railway purposes. The respondent prefers a location east and south of the Willow river at Green street, which it contends would in the long run be more advantageous for the city than the existing site, and which would make it possible to materially improve the conditions of railway operation. The city objects to this site primarily because its choice would probably result in a demand for an additional bridge over the Willow river and certain other improvements which would involve the city in considerable expense. Patrons who live north of the existing station would be obliged to travel, in reaching the Green street site, an additional distance of about 3,200 feet, which is only about 800 feet farther than they are now obliged to travel to reach the station of the Chicago, St. Paul, Minneapolis & Omaha Railway Company, which is in the southern section of the city about one-half mile from respondent's station. The distance traveled by patrons living west of Main street and south of the Willow river would likewise be increased by about 800 feet over the route to the existing site. For persons living east of Green street the proposed location

would be nearer than the present station. Although the existing site would probably be more convenient than the Green street location for a large number of citizens, we are not convinced that the choice of the latter would render the service of the respondent inadequate.

The choice of the actual site for a station is properly a function of the management of the railway company and should not be interfered with unless it is established that adequate service or the safety of the public is endangered. This is in substance the position taken in *City of Rhinelander v. M. St. P. & S. S. M. R. Co.* 1912, 8 W. R. C. R. 719, the following language being used on page 726:

“It seems, therefore, that the initial questions to be here determined is whether the new building will furnish reasonably adequate facilities for passengers at Rhinelander. Unless such facilities can be condemned as not reasonably adequate, a change of location could not be effected, for the power to command new or additional service or facilities rests upon the inadequacy or inefficiency of the existing service or facilities.”

Our order herein will therefore not attempt to specify the location of the new station.

The annual report of the respondent for the year ending June 30, 1914, was introduced in support of the allegation that the financial condition and earnings of the Chicago division do not warrant the expenditure necessary for the erection of a suitable station at the present time. Counsel suggested that within two or three years the financial condition would probably improve so as to permit this expense, and that in the meantime the company is willing to make temporary improvements. We recognize that the respondent should not be unnecessarily burdened in its present financial condition, but it does not appear reasonable to require the city of New Richmond to wait for the length of time named by counsel. The advisability of making temporary repairs on the existing station is questionable, and we believe that the people of New Richmond would prefer to wait an additional year for a new station rather than to have the existing station repaired. Inasmuch as respondent admits that the station has long been inadequate, its replacement should be given prior consideration over other station expenditures. Under

such circumstances, we regard one year as a reasonable time for its erection.

IT IS THEREFORE ORDERED, That the respondent, the Minneapolis, St. Paul & Sault Ste. Marie Railway Company, erect a modern passenger station in the city of New Richmond which shall be adequate for passenger traffic, plans to be submitted to the Commission for approval.

February 1, 1916, is considered a reasonable date at which the station herein ordered shall be completed and open for the use of the public.

EBENEZER TELEPHONE COMPANY

vs.

MILWAUKEE LIGHT, HEAT AND TRACTION COMPANY.

Submitted Aug. 17, 1914. Decided Jan. 26, 1915.

Complaint was made by petitioner, a corporation owning and operating a rural telephone system in the town of Watertown, Jefferson county, that respondent had built, on the same side of the highway on which petitioner's lines are located, a line carrying a current of 23,000 volts; that such voltage had greatly interfered with petitioner's service; that respondent had proceeded with the construction of the line in question, though requested prior thereto, by reason of the anticipated effect on petitioner's service and business, not to construct its lines on the same side of the highway on which petitioner's lines are located, and that respondent, although urged by the petitioner to remove its lines to the other side of the highway, has neglected and refused to do so. The Commission was therefore asked to require respondent to thus remove its poles and lines.

Held: That it would be much better if the high tension lines, or the telephone line were changed to opposite sides of the highway, but that the Commission is without jurisdiction in the matter; that it is the duty of the telephone company under the circumstances to render its service adequate at its own expense, if respondent is unwilling to bear the same, and that if it has any remedy, it must seek it in court.

The petition is dismissed.

The petitioner is a corporation owning and operating a rural telephone system in the town of Watertown, Jefferson county, Wis. The respondent is a public utility engaged in the transmission of high tension electric current for light and power.

The petitioner alleges that on August 5, 1913, it was informed that the respondent contemplated the construction of a high tension electric line in the territory in which petitioner's lines are constructed, and the petitioner thereupon notified the respondent not to construct its lines on the same side of the highway on which the petitioner's lines are located, as the construction of the high tension lines in such proximity to petitioner's lines would injure petitioner's service and occasion a loss of business and also increase the hazard to its employes and endanger the lives and property of its patrons; that, notwith-

standing such notice, the respondent built a line on the same side of the highway on which petitioner's lines are located, carrying a current of 23,000 volts or more, which voltage has greatly interfered with the petitioner's service; that, although the petitioner has urged the respondent to remove its lines to the other side of the highway, the latter has neglected and refused so to do. Wherefore, petitioner asks that an order be made by the Commission requiring the petitioner to remove the poles and lines as aforesaid.

The respondent, answering the petition, admits that petitioner's lines were constructed prior to the construction of respondent's line but denies that the petitioner notified it not to build its lines on the same side of the highway on which petitioner's lines were constructed, or that the construction or operation of its transmission lines would endanger the petitioner or its subscribers. It further alleges that the said lawful authority to construct its transmission lines in the manner in which they are constructed and which are maintained in conformity with the best electric practice, and that although it believes that the petitioner is not entitled to compensation by the respondent, it has offered to pay the petitioner a sum amply sufficient to enable petitioner to transfer its lines and poles and reconstruct same, so that respondent's transmission lines would in no way affect the operation of the petitioner's telephone lines. Wherefore, respondent asks that the petition be dismissed and such further relief as the Commission shall deem just.

The matter came on for hearing on August 17, 1914. The petitioner was represented by *Edward Wieman* and the respondent by *C. M. Rosecrantz*.

Upon the hearing it appeared that in the summer of 1910 the petitioner began the construction of its lines along the highway in question. In 1913 the respondent constructed a high tension transmission line from the city of Watertown through the town of Watertown and the village of Johnson Creek, extending to Lake Mills, Jefferson and Ft. Atkinson, which transmission line paralleled petitioner's line on the highway passing through the town of Watertown. Before the respondent erected its poles on the same side of the highway on which petitioner's poles are located, petitioner requested it not to do so, but to place them upon the opposite side of the highway, believing that the transmission lines overheading the telephone lines would interfere

with the telephone service. Priority of right to the side of the highway in question was claimed by petitioner. Notwithstanding such request, the respondent constructed its lines as planned and petitioner claims as a result that its telephone lines have been short-circuited and become grounded; that in damp weather the induction is so great at times that the telephones are put out of commission; that there is also danger from static current should the transmission wires break and fall upon the telephone lines. This interference, together with the fear of accident likely to happen, has caused some of petitioner's subscribers to discontinue their subscription.

Considerable testimony was introduced showing the efficiency of the construction of both the telephone and transmission lines. It is unnecessary to review this testimony. Doubtless, if petitioner's lines were transformed into complete metallic circuit the interference with its service would be greatly lessened, if not entirely eliminated. It would be much better if the high tension line or the telephone lines were changed to opposite sides of the highway. This would eliminate all grounds of complaint.

The confronting difficulty in the case is the want of jurisdiction in the Commission to compel either company to change the location of its lines. If the telephone company has suffered damage because of the interference with its service and business, it may possibly recover the same in an action in court. It is the duty of the telephone company under the circumstances to render its service adequate at its own expense if the respondent is unwilling to bear the same. If it has any remedy against the respondent it must seek the same in court. The situation here presented suggests the necessity of additional legislation, giving the Commission power to determine the location of high voltage transmission lines. Numerous cases are arising due to the interference of high voltage transmission lines with telephone lines. If, before the construction of a high tension line, it was incumbent upon the corporation constructing such line to apply to the Commission for authority as to route and location, the difficulty presented in the instant case and other cases pending before the Commission, would be obviated in the future. For the reasons stated the petition must be dismissed.

NOW, THEREFORE, IT IS ORDERED, That the petition be and the same is hereby dismissed.

PLATTEVILLE REWEY AND ELLENBORO TELEPHONE COMPANY

vs.

LANCASTER ELECTRIC LIGHT COMPANY.

FARMERS' TELEPHONE COMPANY

vs.

LANCASTER ELECTRIC LIGHT COMPANY.

Submitted Dec. 5, 1914. Decided Jan. 26, 1915.

The petitions allege in substance that respondent's construction of a high tension transmission line in close proximity to petitioners' telephone lines interferes with the furnishing of proper telephone service by petitioners and causes them damage, and the Commission is asked to take such action as it deems proper in the premises. It appears that the Platteville, Rewey & Ellenboro Tel. Co. maintains grounded lines along the Lancaster-Platteville highway from its central office at Platteville to Ellenboro, and thence to Lancaster; that the highway has been occupied for such purpose approximately eighteen years; that the highway between Ellenboro and Lancaster and between Lancaster and Fennimore is occupied by the lines of the Farmers' Tel. Co. of Beetown, all but one of which are grounded circuits; that respondent has constructed power transmission lines from Platteville to Lancaster, and from Lancaster to Fennimore, and that such lines which carry a voltage of 33,000 were placed in operation in October 1914 and are for the most part on the side of the highway occupied by petitioners. It also appears, from the reports of the Commission's engineer, that in order to secure adequate service, it is necessary that the lines of the petitioners, which now parallel respondent's transmission lines, be moved to the opposite side of the highway and made full metallic.

Held: That for the reasons stated in the case of *Ebenezer Tel. Co. v. Milwaukee Lt. H. & T. Co.*, decided as of the same date as the present case, the Commission is without jurisdiction and the petition must be dismissed.

The petition is dismissed.

The petition of the Platteville, Rewey & Ellenboro Telephone Company alleges in substance that during the summer of 1914 the Lancaster Electric Light Company constructed a high tension transmission line along the public highway from Platteville to Lancaster in close proximity to petitioner's telephone lines without right or authority; that petitioner has occupied

said highway with its telephone lines for more than twenty years; that the character of construction and operation of respondent's transmission lines is such as to render the telephone service rendered by the petitioner inadequate and to endanger the patrons and employes of petitioner. The Commission is therefore asked to take such action as it deems just in the premises.

The petition of the Farmers' Telephone Company of Beetown alleges that the respondent has constructed high tension transmission lines from Lancaster to Fennimore and from Lancaster to Platteville, parallel to petitioner's telephone lines and that the operation of said transmission lines interferes with the furnishing of proper telephone service and causes damage to petitioner. The Commission is asked to take such action as it deems proper in the premises.

Answering the petition of the Platteville, Rewey & Ellenboro Telephone Company, the Lancaster Electric Light Company alleges that it has constructed and is now maintaining a transmission line from Platteville to Lancaster for the transmission of electric energy from Platteville to Lancaster for the use of the Lancaster Electric Light Company in supplying its customers; that said transmission line was constructed and is maintained under the permission and authority of the township commissioners of each of the townships through which it passes in accordance with law; that said transmission line is properly constructed and maintained; that petitioner's telephone lines are constructed of iron wire and grounded circuits and are in poor physical condition; and that any inefficiency in petitioner's telephone service is largely the result of the condition of its lines. Respondent therefore asks that the petition be dismissed.

No formal answer to the complaint of the Farmers' Telephone Company of Beetown was filed.

A hearing, at which both complaints were considered, was held at Platteville on December 5, 1914. *Kopp & Brunckhorst*, by *A. W. Kopp*, appeared for the Platteville, Rewey & Ellenboro Telephone Company, *Anton Vogt* and *J. A. Jamison* for the Farmers' Telephone Company and *George Angus* and *E. A. Philips* for the Lancaster Electric Light Company.

The testimony shows that the Platteville, Rewey & Ellenboro Telephone Company maintains grounded telephone lines along the Lancaster-Platteville highway from its central office at

Platteville to Ellenboro and thence to Lancaster. The highway has been occupied for this purpose approximately eighteen years. The opposite side of the highway is occupied by the metallic lines of the Wisconsin Telephone Company. The highway between Ellenboro and Lancaster and between Lancaster and Fennimore is occupied by the telephone lines of the Farmers' Telephone Company of Beetown, all but one of which are grounded circuits.

Respondent has constructed power transmission lines from Platteville to Lancaster and from Lancaster to Fennimore, for the most part on the side of the highway occupied by petitioners, which are used for the transmission of electric current generated by the Interstate Light & Power Company at Galena, Illinois, for the use of the Lancaster Electric Light Company. These lines were placed in operation on October 10, 1914, and carry a voltage of 33,000. A witness for the respondent stated that the construction and operation of the transmission lines have been permitted and authorized by the proper municipal authorities, but no documentary evidence of such authority was introduced.

Patrons of both petitioning telephone companies testified that prior to the operation of respondent's transmission lines, the telephone service rendered by petitioners was entirely satisfactory, but that subsequent thereto it has been poor. The chief cause of complaint is a loud buzzing noise which seriously interferes with the transmission of messages, especially with long distance calls. It was stated that communication on the lines affected is practically impossible at present. Witnesses asserted that patrons and employes are endangered by the close proximity of the high voltage lines to the telephone lines, and that the fear of such danger is demoralizing to its service.

A lineman in the employ of the Platteville, Rewey & Ellenboro Telephone Company testified that to provide adequate and safe telephone service it will be necessary to make all of the lines metallic and to move them to the side of the highway opposite the transmission lines. Our engineer, after an inspection of the properties, reports that in order to secure adequate service in conformity with Rule 1 of the *Standards for Telephone Service* established in our order of August 13, 1914, 15 W. R. C. R. 1, it is necessary that the lines of the petitioners which now parallel respondent's transmission lines be moved to the oppo-

site side of the highway and made full metallic circuits, and that special precautions be taken at all points where it is necessary for the transmission lines to cross the telephone lines.

For the reason stated in the case of the *Ebenezer Telephone Company v. Milwaukee Light, Heat & Traction Company*, herewith decided, the petition herein will be dismissed for want of jurisdiction on the part of the Commission.

NOW, THEREFORE, IT IS ORDERED, That the petition be and the same is hereby dismissed.

CITY OF NEENAH

vs.

WISCONSIN TRACTION, LIGHT, HEAT AND POWER COMPANY.

Submitted Sept. 4, 1914. Decided Jan. 28, 1915.

Complaint was made that respondent's rates in the city of Neenah are unreasonable. The immediate remedy sought, however, is not a reduction in rates, but to put into effect a plan by which the city proposes to purchase from the respondent all of the current now used for any purpose within the city of Neenah, and to re-sell the same to the individual consumers, passing on to the latter the advantage of the low rate per kilowatt hour, which the city expects to secure through purchasing on an accumulative basis. The current distributed at Neenah is generated at Appleton. According to the city's plan, the company, if a satisfactory contract can be entered into, is to relinquish its claim to its present consumers and refrain hereafter from selling at retail within the city, and the city is to obligate itself to buy current from the respondent for a term of ten years only. Should the Commission decide adversely to the city's plan, it is stipulated that the rate investigation is to proceed.

Held: That in Wisconsin the right to do a public utility business is contingent upon the ownership of the physical property and that such right is itself property; that if the city acquires the right to sell directly to the consuming public at Neenah, it takes something of value from respondent; that under the Public Utilities Law a municipality can only terminate a franchise or indeterminate permit by determining to acquire the plant of the public utility, and paying just compensation for the property as a going concern; that it is not possible for the city to acquire the business of the respondent without purchasing all of the property used and useful for the convenience of the public involved, and that the arrangement in question, if lawful, would not be desirable, since the supposed economies would not follow.

The petition is dismissed.

Complaint in this matter was filed with this Commission by the city of Neenah, through its common council, on February 4, 1914.

Hearing was held at the office of the Commission in the Capitol, Madison, Wis., on September 4, 1914. *Mayhew Mott*, city attorney, appeared for the petitioner, and *James G. Shaw* of *Rosecrantz, Shaw & Van Dyke*, for respondent.

While the city alleges the unreasonableness of the respondent's rates, its immediate remedy is not sought in an action before this Commission for a reduction in the same. It appears that, preliminary to further proceedings in this matter, the city desires a ruling on several questions directly affecting the public utility business in that locality. In order that a clearer understanding may be had as to the exact character of the complaint, it has seemed advisable to describe the conditions surrounding the operations of the electric system at Neenah.

The current which is distributed at this place is generated by the hydraulic and steam plants of the respondent located at Appleton. It is transmitted to Neenah over a 2,200 volt line and carried through the local substation where potential regulation for the commercial circuits and constant current transformation for the arc lighting system are provided for.

The respondent company has a form of rate schedule on file which is commonly referred to by rate technicians as a Hopkinson demand rate. In addition to this rate, it has an increment or so-called limiting schedule which limits the price per unit of product. The latter rate is designed to insure non-prohibitory per unit charges to short hour users of electrical energy. The city wishes to purchase from the respondent all of the current now used for many purposes within the city of Neenah and to resell the same to the individual consumers of the respondent. In other words, the municipality proposes to act as a middleman between the individual consumers and the company. In this role it expects to secure a low rate per kilowatt hour by thus purchasing on an accumulative basis. This advantage it proposes to pass on to the individual electric consumers. The respondent, on the other hand, must relinquish its claims to its present consumers and refrain hereafter from selling at retail within the city. It appears that the Hopkinson demand schedule referred to above insures a lower unit rate than the increment schedule for energy taken in the quantities and under the conditions which would obtain if this arrangement could be effected. The city has asked this Commission to ratify this particular schedule as reasonable and equitable under the circumstances.

Incident to the application of such a form of rate schedule is the determination of the maximum demand. The city requests that this Commission define the method by which this demand is to be ascertained.

Inasmuch as the Hopkinson rate applies to current delivered to the customer's premises after transformation has taken place, the question immediately arises as to whether or not all of the costs have been included up to that point, and, if so, whether it will be necessary for the municipality to purchase the distribution system. The third ruling asked of the Commission relates to this point.

It will appear, from the explanations made above, that the only question of importance to be decided is that relating to the ownership of the distribution system. In other words, the question put squarely before the Commission in these proceedings is whether the right to do a public utility business in this state is a property right, and, if so, whether such right is contingent upon the ownership of the physical property. If the municipality is permitted to effect the arrangement which it desires, its action amounts to a virtual taking away of the respondent's franchise or right to do business, and the assertion of ownership over that business.

We cannot escape the conclusion that if the city acquires the right to sell directly to the consuming public at Neenah it has taken something of value from the respondent. Upon what basis such value is to be determined we do not deem it necessary to decide in these proceedings. This question becomes irrelevant when we have once settled as a fact that the right to do a public utility business in this state is contingent upon the ownership of the physical property.

That this right or franchise is property, is settled. See Joyce on Franchises, pp. 80 to 85. Also, *Louisville & Jeffersonville Ferry Co. v. Kentucky*, 188 U. S. 385, 394; *Central Pac. Rd. Co. v. California*, 162 U. S. 91, 127; *Metropolitan City R. Co. v. Chicago W. Div. R. Co.* 87 Ill. 317, 324; *People ex rel. Woodhaven Gas Co. v. Deehan*, 153 N. Y. 528; *Cauble v. Craig*, 94 Mo. App. 675. As to whether it is personal or real property, we need not concern ourselves. Nor need we enter upon a review of the findings of the courts in other states as to whether franchise value attaches itself to the physical property. (For such cases see Joyce on Franchises.) We have to deal here only with franchise rights in this state.

Before the present era of regulation of public service company rates the matter of the valuation of franchises was brought be-

fore the courts in taxation and condemnation proceedings. In a number of states, by statutory provision, taxes were assessed on franchises as separable items of property and such separation was held to be justifiable by the courts. Recognition of this distinct form of value was given, due, no doubt, to the large excess of the total value of the corporate property over the value of physical elements as such.

In Wisconsin, this distinction was never entered into by the legislature, and the supreme court, while recognizing the right of the legislature to so distinguish, has always held that the physical and intangible items of property should be considered as an entirety. This matter has been brought before the court in taxation cases and has been uniformly decided in the manner indicated above. See *State ex rel. Milwaukee St. R. Co. v. Anderson*, 90 Wis. 550; *State ex rel. Ashland Water Co. v. Wharton*, 115 Wis. 457; *Chicago & N. W. R. Co. v. State*, 128 Wis. 553; *Fond du Lac Water Co. v. Fond du Lac*, 82 Wis. 322; *Monroe Water Works Co. v. Monroe*, 110 Wis. 11; *Yellow R. Imp. Co. v. Wood Co. and another*, 81 Wis. 554. In the latter case, the question before the court was whether the value of the dam with attendant privileges was to be assessed in connection with the particular parcel of land upon which it rested or in connection with the entire corporate property, and the court held that the latter was the correct method of assessing such privileges. In *Chicago & N. W. R. Co. v. State*, 128 Wis., 553, the court decided that the value of railway property for taxation purposes was not to be considered as an addition of physical to intangible value, but the value of the property as a unit. In *Washburn v. Washburn W. W. Co.* 120 Wis. 575, 585, the court, after referring to a number of cases in which this question had been considered, said:

“ * * * An examination of these and other cases decided here, that might be referred to, shows that it has been as firmly established as anything can be by judicial determination, that all the property of a public service corporation, such as appellant, street and other railway companies, and public lighting companies, whether real, personal or mixed, in the ordinary sense of those terms, including franchises other than the mere right to be a corporation, is one entire indivisible thing; that all the parts partake of the nature of the franchise from which springs the public duty, and as that is deemed to be personalty, all

should be regarded as such. In that view it would be the height of absurdity to consider value and impose a tax upon one part of such entire thing separate from the rest. There can be no separation without destruction. Therefore, the separate value of the parts in the aggregate would not necessarily approximate to or be any legitimate measure of the value of all the parts, viewed as one complete machine, so to speak. The franchise by itself would be valueless. The plant in its parts as realty and personalty according to the character thereof, irrespective of the combination of all into one entire thing, might be of little value, and probably would be as compared to what they would represent in the new form produced by the union of many parts into one. * * *

This court has as uniformly held that the legislature might direct that a separation be made between tangible and intangible items of property. See *C. M. & St. P. R. Co. v. Janesville*, 137 Wis. 7, 10; *Yellow River Imp. Co. v. Wood County and another*, 81 Wis. 554, 560, 562.

The legislature, however, has expressed itself as favoring the treating of the property as an entirety. Sec. 1037a of the statutes enacted in 1898 gave expression to the legislative intent. When the tax statutes were revised in 1913 this policy was made applicable to all water, light, heat, and power companies. (See section 51.43 of the statutes of 1913 at page 845.) In both of these sections, the assessors are directed to treat all property rights and franchises "together with all real estate used in such business and necessary to the prosecution thereof" as personal property and to value and assess such property as a *single item*.

When the public utility statutes were enacted in 1907, this Commission was directed to ascertain, in both municipal purchase and rate cases, the actual value of all the property "used and useful for the convenience of the public."

The supreme court of the state has interpreted the intent of the legislature as expressed in the public utility statutes as against the separation of tangible and intangible elements in municipal purchase and other cases. In connection with the indeterminate feature of the law and the assignability of the same, that court said in *Calumet Service Co. v. Chilton*, 148 Wis. 334, on page 352:

"* * * The Wisconsin Electric Service Company, as found on the 21st day of December, 1907, became the owner

of a 'license, permit or franchise', call it what we may, from the state, characterized in the public utility law as an indeterminate permit, of the scope, as regards the privilege feature, of the Bink franchise, as herein determined. The physical things in use in connection therewith, and the existing business to which the privilege was referable, all became, by operation of law, merged in the single thing, the public utility property. The franchise, in such circumstances, is the principal thing and, in general, is inseparable from the rest. The latter really partakes of the nature of the former."

In the *Appleton Water Works Case*, which involved the matter of municipal acquisition, the same court, in connection with the allowance made by this Commission for the "Going value" of the plant, said:

"* * * The value of the plant and business is an indivisible gross amount. It is not obtained by adding up a number of separate items, but by taking a comprehensive view of each and all of the elements of property, tangible and intangible, including property rights, and considering them all not as separate things, but as inseparable parts of one harmonious entity and exercising the judgment as to the value of that entity. * * *"
Appleton W. W. Co. v. R. R. Comm. 154 Wis. 121, 148.

Under the Public Utilities Law a municipality can only terminate a franchise or indeterminate permit when it determines to acquire the plant of the public utility and then it must pay just compensation for the property as a going concern.

Even if the city could lawfully condemn the franchise of the company, it would not be benefited thereby to any material extent. As the franchise is essential to the operation of the property, any damage for taking such franchise separate and apart from the property would, under any valid law, result in requiring the municipality to pay the difference in the value of the property, including the franchise before and after the taking of the franchise.

The fundamental proposition is that something of value is being taken from the respondent. It has built up, at some expense no doubt, a somewhat profitable business in the locality under review. If the city acquires the business thus built up, what is to become of the so-called going value to which the respondent is entitled by the ruling of practically every court which has passed upon the question?

The city may argue that this will still attach itself to the physical property of the company and inasmuch as the city proposes to buy current at wholesale rates from the same utility its value will not be in any way affected. We do not see how such can be the case. The city, in its proposed action, will receive the business of the company in the way of an established retail market for the sale of current. It obligates itself to buy current from the respondent, in case a satisfactory contract can be entered into, only for a term of ten years according to its plans as represented in a letter under date of November 4, 1914. What becomes of this element of value at the end of the ten-year period should the city decide not to purchase from the respondent any longer? The respondent would have no right of action. It has relinquished all its rights to do business in the city of Neenah as soon as it has relinquished its franchise. Even its distribution system might be of little value for, apart from its franchise privileges, it has no right to the use of the streets of the city and could be ordered to remove its poles at great loss in value at the end of the ten-year period.

But even granting that such an arrangement could be effected, the city, in order to net the respondent a reasonable return on its Neenah business, would have to pay interest, taxes, and depreciation on all the property devoted to the public use in that city, plus the actual cost of delivering current to that place. No advantage would accrue to the city which could not be secured by filing with this Commission a request for an investigation into the reasonableness of the rates of the respondent.

The city in these proceedings has started with the wrong assumption. Merely because there are two rates on file, one of which gives a lower per unit charge for certain classes of business than does the other, the assumption is not warranted that either rate is reasonable for all classes of business. The reasonableness of any rate for any class of service must be tested according to the principles which have been explained many times by this Commission.

The most vital of these principles are that the utility furnishing the service shall receive an adequate return upon its property and that the consumer shall receive his service at a reasonable rate.

We do not deem it a part of these proceedings to test the rea-

sonableness of the respondent's rates at Neenah. We can only point out that the city, when computing the net revenue under the Hopkinson schedule, neglected the most important feature of public utility rate making—the diversity factor. The rate referred to makes a charge for the demand *at the consumer's premises* and is not designed for the accumulation of demands at the Neenah substation. Nor is the output feature of this schedule designed so as to permit of cumulative billing. The fact that the total of all of the consumer demands is larger than the demand at the substation will mean a considerable shrinkage in the respondent's revenues. Inasmuch as the question of rates is not up for consideration, we do not feel justified in arbitrarily enforcing such a decrease in the earnings of the company. Furthermore, it has always been the policy of this Commission to thoroughly investigate such matters before reaching any conclusions as to rate adjustments.

The consulting engineer who testified for the city at the time of the hearing seemed inclined to believe that because the rate schedule of the respondent had a demand and output feature that the full cost of service was included and that the rate was *ipso facto* reasonable. That the terms given to the component parts of rate schedules have nothing in common with the question of their reasonableness, is a matter which needs no proof. The proper basis for the determination of reasonable rates takes no cognizance of words or phrases, but indicates specifically the cost of service to each class. Looking at the matter in this light, the form of schedule is merely incidental. This view of the matter does not invalidate the contention often made by this Commission that some forms of rates are to be used to the exclusion of others. The justification for such schedules is to be found, however, in the injunction against unreasonable discrimination and not in the requirement that individual rates must bear their full proportion of the costs.

We do not consider it essential that we enter further into the matter of rate schedules. The principal thing to be decided in this case, as we pointed out in the early part of this decision, is the matter of the ownership of the physical property. When that has been decided the question of the reasonableness of the Hopkinson rate and the method of determining the demand thereunder need not be passed upon.

We conclude, then, that it is not possible for the city to acquire the business of the respondent without purchasing all of the property used and useful for the carrying on of the Neenah business. Neither does it appear advisable for the city to effect this arrangement, for no economies will result.

Time has not permitted us to go into the question of the difficulties which would be encountered by the separate ownership of plant and business. Needless to say, there would be many. Such an arrangement could only result in grave differences of opinion between city and company, principally in matters pertaining to extension of lines. Such differences usually result in constant litigation and, for this reason, should not be encouraged.

We have pointed out the limitations which will be imposed upon the city in the acquirement of the plant and business of the respondent. It will probably be in point to note what course of action is open to the city under the statutes. This matter may be quickly disposed of.

The Public Utilities Law provides these remedies for municipalities when dealing with public service corporations: 1. They may elect to purchase the property used and useful to the operation of these utilities; 2. they may apply to this Commission for a certificate of necessity and convenience to allow a second or competing utility to enter their boundaries; 3. they may apply to this Commission for an order prescribing reasonable rates.

Contrary to public opinion generally, these provisions of the statute afford as adequate remedies as were afforded to municipalities previous to its passage. The state policy has been shifted, however, so as to place more emphasis on the adjusting of rates than on the introduction of competition. The full intent of this feature of the statute is ably presented in *Calumet Service Co. v. Chilton*, 148 Wis. 334.

Stipulation was made at the time of the hearing that, if this Commission should decide adversely to the city, it should proceed immediately to an investigation of the reasonableness of respondent's rates. Accordingly, a notice of investigation of such rates is being sent to both parties in this case.

IT IS THEREFORE ORDERED, That the complaint in this matter be and the same is hereby dismissed.

R. W. MONK

vs.

CHICAGO, ST. PAUL, MINNEAPOLIS AND OMAHA RAILWAY COMPANY.

Submitted Nov. 10, 1914. Decided Jan. 28, 1915.

The petition alleges that the convenience, comfort and safety of passengers demand the erection of a shelter along the track opposite respondent's depot at Merrilan, and the Commission is asked to take such action as it deems just in the premises. It appears that under the existing station and track arrangements at Merrilan it is necessary for passengers on frequent occasions to wait for a considerable time on an exposed platform or walk around the rear coach of the train and across the tracks to the station.

Held: That the practice is one which should be discouraged, and that it is unreasonable to require passengers to wait five or ten minutes on an exposed platform in inclement weather; that the existing station facilities at Merrilan are inadequate, and that the erection of a suitable umbrella shed is necessary for adequate service.

Ordered: That respondent erect a suitable umbrella shed not less than 260 feet in length between its main line and branch line at Merrilan, plans to be submitted to the Commission for approval. May 1, 1915, is considered a reasonable time within which to comply with the order.

The petition alleges in substance that the convenience, comfort and safety of passengers demand the erection of a shelter along the track opposite the depot of the Chicago, St. Paul, Minneapolis & Omaha Railway Company at Merrilan. The Commission is therefore asked to take such action as it deems just in the premises.

The respondent, in its answer, enters a general denial that additional facilities are needed at Merrilan.

A hearing was held at Merrilan on November 10, 1914. *R. W. Monk* appeared in his own behalf, and *G. W. Power* for the respondent.

The testimony shows that Merrilan is a junction point between the main line of the respondent and its branch line to Neillsville, and the line of the Green Bay & Western Railroad Company. The main line is double tracked and runs northwest

and southeast. The Neillsville branch parallels the main line on the east at the station and turns eastward a short distance to the northwest. The passenger station is located on the west side of the main line near the junction point with the Green Bay & Western Railroad Company. Passengers on northbound main line trains and on branch line trains board or alight on a platform between the main tracks and the branch line. No shelter on this platform is provided.

Witnesses for the petitioner testified that passengers arriving on the main line from the south are frequently obliged to wait on this exposed platform after alighting until the train pulls out, or to go around the rear coach which often necessitates an additional walk of from fifty feet to three hundred feet in reaching the station. A similar condition exists with respect to passengers on those branch line trains which connect with northbound main line trains. It was also stated that when northbound or branch line trains are called at the station, waiting passengers are obliged to cross the tracks to the east platform and wait several minutes before the train can be boarded. Occasionally other trains on the west track block the way to the station. Witnesses testified that passengers frequently have to wait from five to fifteen minutes on the platform or walk around the rear coach. Respondent's assistant superintendent admitted that passengers arriving at Merrillan on the 5:30 northbound train must walk around from two to four coaches in order to reach the station or await the departure of the train. It was estimated that about thirty persons at a time, including men, women and children, use the east platform. Subsequent to the hearing the respondent submitted an estimate for the construction of an umbrella shed four hundred feet in length over the east platform, the total estimated cost being \$1,200.

Under the existing station and track arrangements at Merrillan it is necessary for passengers on frequent occasions to wait for a considerable time on an exposed platform or walk around the rear coach of the train and across the tracks to the station. The latter practice is one which should be discouraged, since the danger from trains approaching on the opposite track is much increased thereby. It is also unreasonable to require passengers to wait for five or ten minutes on an exposed platform in inclement weather. We are of the opinion, therefore, that the exist-

ing station facilities at Merrilan are inadequate and that the erection of a suitable umbrella shed is necessary for adequate service.

IT IS THEREFORE ORDERED, That the respondent, the Chicago, St. Paul, Minneapolis & Omaha Railway Company, erect a suitable umbrella shed not less than two hundred and sixty feet in length between its main line and its branch line at Merrilan, plans to be submitted to the Commission for approval.

May 1, 1915, is considered a reasonable time within which to comply with this order.

THE MILWAUKEE MILK AND CREAM SHIPPERS ASSOCIATION
OF CALHOUN

vs.

CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted Dec. 21, 1914. Decided Jan. 28, 1915.

Complaint was made that milk shippers at Calhoun are now obliged to have their shipments ready at what is an unreasonably early hour during the winter months, and that respondent's failure to furnish later service, as requested, is discriminatory as train No. 610 furnishes such service to towns west of Calhoun, but not to Calhoun itself. Train No. 610 leaves Jefferson Junction at 9:10 a. m. and serves milk shippers on the line between that point and Milwaukee, with the exception of those at Calhoun. It also served the latter until the summer of 1914, when the service was discontinued on the ground of the delay the stop occasioned. From an investigation it appears that the present service to Calhoun could be run at a later hour.

Held: That the service rendered to the shippers of milk and cream at Calhoun is unreasonably discriminatory, if it is practicable to give them later service similar to that accorded other shippers; that train No. 610 can probably continue to furnish the desired service, which was recently discontinued, without serious hindrance, but that if respondent prefers to furnish the shippers in question a service comparable with that accorded other shippers on the same line in some way other than by stopping train No. 610, such an arrangement will be satisfactory.

Ordered: That respondent stop train No. 610 at Calhoun to receive shipments of milk and cream during the period from December 15 to March 15 each year, or, at its option, provide other service during the forenoon, such service to leave Calhoun not later than 8:30 a. m.

The petition alleges in substance that milk shippers at Calhoun are now obliged to have their milk ready for shipment at 7:00 a. m. and that many farmers live from three to five miles from Calhoun and cannot conveniently haul their milk to the station at that hour during the winter when the roads are drifted with snow. It further alleges that the Chicago & North Western Railway Company has been requested to provide later milk service by special switching arrangements or by stopping train No. 610 which now handles milk at stations west of Calhoun, but that the company has refused to make the desired change, thereby discriminating against Calhoun. The Commission is therefore asked to take such action as it deems proper in the premises.

The respondent, in its answer, alleges that it has established a special delivery service from Calhoun to Milwaukee to take care of the milk and cream traffic, and that to stop train No. 610 for this purpose would result in a delay of from fifteen to twenty minutes and interfere with connections now made at Jefferson Junction and Milwaukee. It therefore asks that the complaint be dismissed.

A hearing was held at Milwaukee on December 21, 1914, at which *William Kern* appeared for the petitioner and *E. E. Nash* for the respondent.

The testimony shows that prior to July 3, 1914, milk and cream was accepted for shipment at Calhoun by train No. 610 which is scheduled to leave Madison at 8:05 a. m. and to arrive in Milwaukee at 10:55 a. m., passing Calhoun at about 10:10 a. m. On July 3, 1914, this train discontinued its stop at Calhoun, and a special delivery service was provided for carrying the milk and cream at that station, leaving at 7:00 a. m. Shippers are obliged, under this arrangement, to have their products at the station at 6:45 a. m. Witnesses complained that during the winter months it is a hardship to haul over drifted roads before daylight, and that they are unnecessarily compelled to milk at an unreasonably early hour. They testified that train No. 610 now stops at other stations between Jefferson Junction and Milwaukee for receiving shipments of milk and cream. The Milwaukee Milk and Cream Shippers Association of Calhoun consists of about forty farmers, who ship from 100 to 140 cans a day.

Witnesses for the respondent stated that the loading of milk and cream at Calhoun on train No. 610 was discontinued on account of the delay which it occasioned, which was estimated at from ten to fifteen minutes.

This train is scheduled to arrive in Milwaukee at 10:55 a. m. and connects with train No. 206 for Chicago leaving at 11:00 a. m. and train No. 113 for Escanaba leaving at 11:10 a. m. It also makes connections at Madison and Jefferson Junction. The assistant superintendent said that considerable difficulty has been experienced in making the Milwaukee connections and that complaints have been made by patrons on account of the lateness of the train in question. He stated that the existing service is operated in connection with other work being assigned to one

of the special crews, which is on duty at night and which works overtime in order to make the movement at Calhoun. The labor cost of this service was said to be about \$5.00 and the revenue from \$10 to \$15 per day. Officials asserted that to operate the special service at a later hour would necessitate the employment of an additional crew at a cost unwarranted by the revenue.

A member of our engineering staff has made a study of the operating conditions surrounding this complaint. He reports that at the present time the work at the Butler yards is such that it is necessary to employ extra crews occasionally in addition to the four special night crews regularly employed. He expresses the opinion that it is possible to arrange the work of the special crews so that the service to Calhoun can be run at a later hour as requested by the petitioner. He also reports that train No. 113, north from Milwaukee, is held for connection with train No. 610, and that train No. 206, south from Milwaukee, is not held for the connection, but that a second section is run if train No. 610 is late.

In the light of the testimony it is our judgment that the service rendered to the shippers of milk and cream at Calhoun is unreasonably discriminatory. Other milk shippers on the line between Jefferson Junction and Milwaukee are served by train No. 610, scheduled to leave Jefferson Junction at 9:10 a. m. Under such circumstances it seems unreasonable to require the shippers at Calhoun to haul their milk to the station by 6:45 a. m. during the winter months, if it is practicable to give them later service similar to that accorded other shippers. Train No. 610 has for many years rendered this service, and can probably continue to do so without serious interference with its schedule. However, if the company prefers to furnish the shippers at Calhoun a service comparable with that accorded to other shippers located on the same line in some way other than by stopping train No. 610, such an arrangement will be satisfactory.

IT IS THEREFORE ORDERED, That the respondent, the Chicago & North Western Railway Company, stop its train No. 610, now scheduled to leave Madison at 8:05 a. m. at Calhoun, to receive shipments of milk and cream during the period from December 15 to March 15 each year; or, at its option, provide other service in said period during the forenoon between Calhoun and Milwaukee for said shipments, leaving Calhoun not earlier than 8:30 a. m.

JOHN H. ALLEN SEED COMPANY

vs.

CHICAGO AND NORTH WESTERN RAILWAY COMPANY,
CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.*

Submitted Aug. 4, 1914. Decided Jan. 28, 1915.

Complaint was made that the rates charged petitioner on shipments of peas and beans are excessive. Petitioner is located at Sheboygan and its complaint applies to both carload and less than carload lots, to joint as well as one-line rates, and to both in and out shipments. Petitioner alleges that it has been engaged for a number of years in growing peas in considerable quantities at London, Lake Mills, and a number of other points within the state, some twenty in all. The business is carried on on a contract basis with the farmers, petitioner shipping the seed in, and, later, the crops out, to itself and to the canneries. Petitioner does not keep large stocks on hand in Sheboygan and its products are distinctly live commodities. It appears that petitioner's business has steadily increased for a number of years, but that the rates in question, with one exception, have remained unchanged for several years. The Commission is asked to establish local rates on a commodity basis, insofar as shipments moving entirely over the line of the C. & N. W. Ry. Co. are concerned, to order joint rates between Sheboygan and the points involved, and also to order reparation in such sum as the Commission shall find the charges paid to have been in excess of reasonable charges.

Held: That, due consideration being given to the cost of the service to the carriers and the commercial conditions affected by the traffic, both the one-line rates and the joint rates charged petitioner are higher than they should be, and that the rates shown in the opinion will more nearly meet the demand for just and reasonable rates.

That the greater expansion of business which would follow a moderate reduction would benefit the carriers as well as the score or more of communities named, but that petitioner's steady growth during the period in question leaves little ground upon which to base a claim for a refund, and that the request for reparation must be dismissed.

Ordered: That the C. & N. W. R. Co. substitute for the local rates in question those shown in the opinion, and that both respondents substitute the joint rates named for those now in force.

* As modified by supplementary order issued February 19, 1915, correcting the failure, through inadvertence, to explicitly set forth the rates intended to be ordered.

The petitioner in this case, the John H. Allen Seed Company, in its complaint alleges that it has been engaged for a number of years in growing peas in considerable quantities at London, Lake Mills, Belgium, Port Washington, Rockfield, St. Cloud, Sun Prairie, Deansville, Marshall, Waterloo, Poynette, Rio, Columbus, Cedarburg, Menomonee Falls, South Germantown, Thiensville, Chilton and New Holstein, all of which points are located in the state of Wisconsin, which product is brought into Sheboygan where the petitioner's place of business is located, by the respondent carriers, and that it has made various shipments of peas and beans for seeding purposes from Sheboygan to the points above named, and that the rates charged by the respondent companies on both in and out shipments are unreasonable, excessive and unjust. The charge made by the petitioner applies to both carload and less than carload shipments, and to joint as well as one-line rates. The Commission is asked to establish local rates on a commodity basis, insofar as shipments moving entirely over the line of the Chicago & North Western Railway are concerned, to be as low as those recently established from London to Sheboygan. The Commission is asked further to establish or cause to be established joint rates on such traffic as originates on the rails of the Chicago, Milwaukee & St. Paul Company and is destined to Sheboygan, and likewise to establish joint rates on such traffic as originates at Sheboygan and is destined to the various stations enumerated above. The petitioner also asks reparation in such sum as the Commission shall find the charges paid are in excess of reasonable charges.

After due notice a hearing was held in the case in the office of the Railroad Commission at Madison on August 4, 1914. *O. M. Rogers* appeared for the petitioner, *J. W. Davis* for the Chicago, Milwaukee & St. Paul Railway Company and *R. H. Widdecombe* for the Chicago & North Western Railway Company.

The testimony given at the hearing covered in detail the business and traffic methods of the petitioner. This business is rather unique in character. The petitioner company maintains its office in Sheboygan but contracts with farmers at the score or more points named as shipping and receiving points to raise peas; and on a smaller scale beans. The petitioner first ships to the farmers the necessary seed for the number of acres contracted to be planted or sown. When the crop begins to grow

the petitioner sends crews of men out to "rogue" the growing crops for the farmers—that is to clean out the weeds and abnormal growths in order to secure as clean a seed crop as possible. The farmers are paid so much per bushel for their crops, part of these being sold green to canning establishments by the petitioner and the balance shipped when harvested ripe to the petitioner. Then the same process with the farmers is gone over again. The shipping forth and back of the seed and the crop, beside the shipment to eastern and southern points of seed thus amounts to a large traffic.

The rates per 100 lb. charged the petitioner range from 7 cts. to 15 cts. on carload lots and these rates and joint rates charged are the ones complained of as being excessive and unreasonable. The substance of the petitioner's contention is that because of the large volume of business it gives the respondent carriers, and because the chief portion of the crop contracted for is shipped, first to Sheboygan for sorting and cleaning, therefore, it is entitled to commodity rates or something in the nature of concentration rates. The petitioner does not keep large stocks on hand in Sheboygan but in stead keeps the product moving forth and back from the farmers and out to the ultimate markets in the east and south. Its products are distinctly live commodities.

The business of the petitioner has been carried on for a number of years with a steady increase in its volume. The rates charged by the respondent companies have remained unchanged for several years, excepting a change noted in a recent Chicago & North Western tariff in the rate from London to Sheboygan.

These rates seem somewhat higher than the character and volume of the business call for, in view of the fact that the greater expansion which would follow a moderate reduction would benefit the carriers as well as the score or more of the communities named. The fact, however, that the petitioner's business shows a steady increase in volume, covering the period during which the rates complained of have been in force, leaves little ground upon which to base a claim for a refund to the petitioner.

After carefully considering both the cost of the service to the carriers and the commercial conditions affected by the traffic, the Commission is of the opinion that both the one-line rates and the joint rates charged the petitioner are higher than they should be, and that the rates shown in the following table will more nearly meet the demand for just and reasonable rates.

NOW, THEREFORE, IT IS ORDERED, That the local and joint rates named in the following table be substituted for the corresponding rates now in force:

CARLOAD AND LESS THAN CARLOAD RATES IN CENTS PER 100 POUNDS ON BEANS AND PEAS

Between Sheboygan and	Local Rates via C. & N. W. Ry.	
	Carload, min. 36,000 lb.	Less carloads
Belgium	6.	12.

* East-bound commodity rate 8.5 cents, at present in force to remain in force.

IT IS FURTHER ORDERED, That the request for reparation be dismissed.

BARKER-STEWART LUMBER COMPANY,
MOHR LUMBER COMPANY,
JACOB MORTENSEN COMPANY,
UNDERWOOD VENEER COMPANY,
WAUSAU BOX & LUMBER COMPANY

vs.

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted Sept. 8, 1914. Decided Jan. 28, 1915.

Complaint was made of overcharges on certain shipments of saw logs and bolts in carloads, and reparation asked. Petitioners made no effort to show that the rates complained of are unreasonable *per se*, but base their claim on the fact that the rates complained of have been maintained at a somewhat higher level than the schedule prepared by the Commission in the case of *Northern Hemlock & Hardwood Mfrs. Assn. v. C. & N. W. R. Co.* 1913, 12 W. R. C. R. 241.

Held: That the maintenance of differing schedules of rates by carriers of the same commodity does not necessarily involve unjust discrimination; that it is open to question whether rates for the transportation of logs have not reached as low a point in Wisconsin as justice will permit; that in the case relied upon the Commission's task was the prevention of an unwarranted increase in rates rather than the lowering of the general level of log rates; that the Commission is not warranted in finding that petitioners are suffering from unjust discrimination by reason of the rates complained of, and

That before further extensive changes are made in the rates upon the commodity in question, a thorough investigation should be made of the entire field of log transportation in Wisconsin in order that log rates may be equitable between shippers as well as reasonable in themselves.

The petition is dismissed.

The complaint by the above petitioners is in substance that the respondent company has exacted of each of them rates of transportation on certain shipment of saw logs and bolts in carloads, which are unjust and exorbitant and by reason thereof they have been overcharged on said shipments, for which reparation is asked.

More specifically the complaint alleges that the rates of the respondent company as carried in its tariff known as G. F. D. No. 6500—B and supplements thereto are excessive, discrimi-

natory and illegal "insofar as they exceed the rates found to be reasonable for the transportation of saw commodities between points in Wisconsin on the line of the Chicago & North Western Railway in the case *Northern Hemlock & Hardwood Manufacturers' Association v. Chicago & North Western Railway Company*, which was decided by this Commission July 11, 1913", 12 W. R. C. R. 241.

After due notice a hearing was held in the case in the office of the Railroad Commission at Madison on September 8, 1914, at which *A. E. Solie* appeared for the petitioners and *J. N. Davis* for the respondent company.

In 1913, as indicated by the petitioners, upon complaint of the Northern Hemlock & Hardwood Manufacturers Association that the Chicago & North Western Railway Company was about to withdraw its trainload rates on logs and leave in force only its carload rates which were much higher, this Commission made an investigation of the subject of the complaint. It found that the trainload rates which the North Western was about to withdraw were unreasonably low, and that their withdrawal was justified. It found also that the North Western carload rates, which would be the only available rate for shippers of logs after the withdrawal of the trainload rates, were about 75 per cent higher than the latter. Such an advance in rates at one stroke seemed to the Commission to be extreme, and it issued an order establishing a schedule of rates which were considerably higher than the former trainload rates but lower than the then existing carload rates. It is this schedule prepared by the Commission which the petitioners in the present case use as a standard to measure the rates which they complain of as being maintained by the respondent, the Chicago, Milwaukee & St. Paul Railway Company.

Though it is alleged in the petitioners' complaint that the respondent's rates are excessive, unreasonable and unlawful, no effort was made at the hearing or otherwise to prove that the rates were excessive or unreasonably high in themselves. The fact that they have been maintained at a somewhat higher level than the schedule prepared by the Commission for the North Western line seems to be the sole rock of offense.

Prima facie, the maintenance of differing schedules of rates by carriers of the same commodity under similar conditions does

give ground for question at least. And yet, the maintenance of two differing schedules may not involve unjust discrimination. Rates for the transportation of logs are low, exceedingly low, in Wisconsin. That they should be low, that logs should be transported at rates which bring to the carriers lower returns than brought by most other commodities, cannot be gainsaid, but it is open to question whether these rates have not reached as low a level as justice will permit—if indeed they have not in some instances gone below that.

When this Commission passed upon the case of the *Northern Hemlock & Hardwood Association v. Chicago & North Western Company, supra*, in 1913, the task before it was to save the shippers of logs from a sudden advance of 75 per cent in rates, such as the withdrawal of trainload rates would have brought about, rather than to lower the average level of the log schedule.

The Commission does not feel warranted in finding that the petitioners are suffering from unjust discrimination through the maintenance by the respondent company to its present rates on logs. But this is not the Commission's only reason for not granting at this time the petitioners' prayer for relief.

It is the Commission's belief that before any further extensive changes are made in the rates upon the commodity in question there should be made a thorough investigation of the entire field of log transportation in Wisconsin to the end that log rates may be made equitable as between the shippers as well as reasonable in and of themselves.

IT IS THEREFORE ORDERED, That the complaint and prayer of reparation be dismissed.

NORDBERG MANUFACTURING COMPANY

vs.

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Decided Jan. 28, 1915.

Complaint was made of overcharges on four carload shipments of sand made at varying times from Portage to Milwaukee. It appears that two of the shipments were made more than two years prior to the filing of the complaint, and that the charges on the other two were in excess of what they would have been, had the rates properly applicable, which were fixed by the Commission in the case of *Waukesha Lime & Stone Co. v. C. M. & St. P. R. Co. et al.* 1912, 9 W. R. C. R. 347, 353, been applied.

Held: That under sec. 1797—37m only the last two shipments can be considered, and that refund is due on such shipments.

Refund ordered on the basis of the rate made applicable in the former order of the Commission. (9 W. R. C. R. 347, 353.)*

The Nordberg Manufacturing Company of Milwaukee, in a complaint filed with the Commission on October 5, 1914, alleges that it has been overcharged on certain four shipments of sand from Portage to Milwaukee, carried by the respondent company, and asks that the said respondent be ordered to refund the amount of the overcharge.

More in detail, the complaint recites that the four shipments of sand were made a carload at a time, one on August 10, 1912, the charges on which were \$25.50; one on September 14 of the same year on which the charges were \$25.91; one on October 21 of the same year on which the charges were \$23.75; and the fourth on November 11 of the same year on which the charges were \$23.78.

Under sec. 1797—37m of the statutes of 1913, complaint as to overcharges for transportation must be made within two years from the time the exaction was made. The complaint in this case was received on October 5, 1914. The first two shipments complained of, therefore, those of August 10 and that of Sep-

* It was subsequently discovered that the claim on the first two shipments had also been brought to the attention of the Commission within the time prescribed by statute, and reparation was ordered on such shipments in a case of the same name issued February 17, 1915.

tember 14, cannot be given consideration by the Commission as more than two years elapsed between the date of shipment and the date when the complaint was filed.

On June 24, 1912, *Waukesha Lime & Stone Co. v. C. M. & St. P. R. Co. et al.* 9 W. R. C. R. 347, 353, the Commission applied crushed stone rates fixed by a previous order, *Waukesha Lime & Stone Co. v. C. M. & St. P. R. Co. et al.* 9 W. R. C. R. 87, 99, April 25, 1912, to shipments of sand. This rate was 2.62 cts. per cwt. for a 95 mile haul. As the distance from Portage to Milwaukee is 92.2 miles, the charge which should have been made on the shipments of October 21 and November 11, 1912, are respectively \$17.85 and \$17.88, instead of the amounts paid, namely \$23.75 and \$23.78. The Commission finds, therefore, that the complainant company has been overcharged in the sum of \$11.80.

IT IS THEREFORE ORDERED, That the Chicago, Milwaukee & St. Paul Railway Company refund to the Nordberg Manufacturing Company the sum of \$11.80.

WISCONSIN SUGAR COMPANY

vs.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY
COMPANY,

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Decided Jan. 28, 1915.

Complaint was made of overcharge on 8 carloads of sugar beets shipped from Honey Creek and Hamilton to Menomonee Falls. The C. M. & St. P. R. Co. denies any overcharge, but the M. St. P. & S. S. M. R. Co., on whose lines the shipments originated, admits the overcharge as claimed.

Ordered: That respondents refund to the petitioner the amount claimed.

The petitioner in this case asks for reparation in the sum of \$33.58, the amount of alleged overcharge on eight carloads of sugar beets, six from Honey Creek and two from Hamilton, to Menomonee Falls. It sets forth that according to the tariffs issued by the two respondent companies the rate in each case should have been 60 cts. per ton instead of 75 cts. per ton which it was obliged to pay. The difference in the total charges calculated at these rates is the amount of reparation asked.

Each of the respondent companies answered the complaint, the Minneapolis, St. Paul & Sault Ste. Marie Ry. Co. conceding that the rate should have been 60 cts. per ton by the shortest route possible, and alleging no knowledge of the reasons why the shipments were made over a longer route. The Chicago, Milwaukee & St. Paul Ry. Co., in its answer, alleged that the petitioner has not been charged any other than the lawful published rates at the time the shipments moved, and that the petitioner is not entitled to reparation in the amount claimed or any other amount.

In view of the admission of the Minneapolis, St. Paul & Sault Ste. Marie Ry. Co. upon which the business originated, that it has a 60 ct. rate on the traffic under consideration for distances

from twenty-six to fifty miles, inclusive, and that if these shipments moved by way of Templeton, the distance would be less than fifty miles, the Commission finds that the petitioner was overcharged upon the eight cars under consideration the sum of \$33.58.

It is therefore recommended that the respondent companies, the Minneapolis, St. Paul & Sault Ste. Marie Railway Company and the Chicago, Milwaukee & St. Paul Railway Company, refund to the petitioner the sum of \$33.58.

JOHN J. BLAINE

vs.

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.*

Submitted June 12, 1914. Decided Jan. 28, 1915.

Complaint was made that the Sunday passenger train service furnished by respondent between Prairie du Chien and Madison, with particular reference to the service west of Lone Rock, is inadequate and discriminatory, and the Commission was asked to require the respondent to render adequate service in this district. On week days passenger train service between Lone Rock and Prairie du Chien consists of three trains in each direction. On Sundays passenger train service is afforded only as far as Lone Rock, at which point it branches off to Richland Center. West of Lone Rock mixed service only is offered on Sunday, and complaint was made that the train in question is rarely on time. It appears that under the existing service, residents of Boscobel, Muscoda and other stations between Lone Rock and Prairie du Chien are unable to reach Madison, Milwaukee, or other points east for the transaction of business on Monday morning unless they leave Saturday evening and spend Sunday away from home. From an investigation of operating conditions on the division in question it appears that it would be feasible to utilize certain train crews, which now lie over at North McGregor, in the operation of a new train to Madison in the forenoon, returning to North McGregor in the evening, and that such a plan would not entail as great an expense as the plan suggested by respondent's superintendent.

Held: That the Sunday passenger train service furnished by respondent between Madison and Prairie du Chien is inadequate; that the operation of a passenger train in each direction between the points in question is necessary; that the plan of an eastbound morning train, returning in the evening, would be of more service to the community than other plans suggested, and that such service should prove remunerative after a fair trial, but that if it should not the case may be reopened on application.

Ordered: That respondent operate a Sunday passenger train in each direction between Prairie du Chien and Madison, scheduled to arrive in Madison not later than 10:30 a. m. and to leave not earlier than 2:30 p. m.

The petition alleges in substance that the Sunday passenger train service furnished by the Chicago, Milwaukee & St. Paul Railway Company between Prairie du Chien and Madison, with particular reference to the service west of Lone Rock, is inadequate.

* See also supplemental decision in same matter, issued March 12, 1915, vol. 16.

quate and discriminatory. The Commission is therefore asked to require the respondent to render adequate service in this district.

The respondent, in its answer, denies that its service is discriminatory and takes the position that Sunday service between Lone Rock and Prairie du Chien is not warranted under the existing traffic conditions. It therefore asks that the complaint be dismissed.

A hearing was held at Boscobel on June 12, 1914, at which *J. J. Blaine* appeared in his own behalf and *J. M. Davis* for the respondent.

The testimony shows that the passenger train service on the Prairie du Chien division in the territory between Lone Rock and Prairie du Chien on week days consists of three trains in each direction. On Sundays a passenger train known as No. 41 is operated between Milwaukee and Richland Center, leaving Milwaukee at 8 a. m., Madison at 10:55 a. m., and arriving at Richland Center at 1:10 p. m. This train returns as No. 40, connecting at Madison with a train for Chicago at 3:55 p. m., and also making important connections at Milwaukee. West of Lone Rock a mixed freight and passenger train, westbound, leaving Lone Rock at 12:45 p. m., and known as No. 61, is the sole Sunday service.

Witnesses complained that this train is rarely on time. Respondent's superintendent testified that since March 8, 1914, the tonnage of the train had been reduced and that since then its variation from schedule is slight. He introduced a record for March, April and May, 1914, which shows its time of arrival as follows:

Date	Depart Lone Rock	Arrive Boscobel	Arrive Wauzeka	Arrive Prairie du Chien
March 8, 1914	12:50	2:10	2:56	3:56
" 15, "	12:35	1:35	2:17	3:10
" 22, "	12:48	2:10	3:12	4:25
" 29, "	12:35	1:49	2:35	3:45
April 5, "	12:35	1:55	2:49	4:35
" 12, "	12:37	1:35	2:11	3:20
" 19, "	12:43	2:02	2:46	3:40
" 26, "	12:40	1:55	2:52	3:50
May 3, "	12:45	2:00	2:36	3:30
" 10, "	12:42	1:25	2:03	2:50
" 17, "	1:00	2:19	3:26	4:45
" 24, "	1:59	2:52	3:20	4:25
" 31, "	1:05	2:20	3:40	4:06
June 7, "	1:05	2:05	2:30	3:30

It appears from the testimony that under the existing service residents of Boscobel, Muscoda and other stations between Lone Rock and Prairie du Chien are unable to reach Madison, Milwaukee, or other points east for the transaction of business on Monday morning unless they leave on Saturday evening and spend Sunday away from home. Several witnesses stated that they have occasion to meet business appointments on Monday morning in Madison and elsewhere, and expressed the opinion that Sunday service, eastbound, would be used by a considerable number of people. It was urged that the present mixed train, westbound, is unsatisfactory and that a Sunday passenger train westbound is needed.

Witnesses also asserted that service which would enable residents of Boscobel, Muscoda and other stations on the Prairie du Chien division west of Lone Rock to reach Madison and return on Sunday would be considerably patronized. The nearest hospitals in this territory are at Madison and Prairie du Chien, and the lack of Sunday train service makes it impossible to secure immediate hospital treatment for a patient taken suddenly sick on that day.

Respondent's superintendent testified that to extend the run of train No. 41 to North MacGregor and return, with the additional service on the branch line from Lone Rock to Richland Center, would result in an increase of operating expenses of approximately \$100 per Sunday. He expressed the opinion that the additional revenue from such operation would not be sufficient to warrant its maintenance. He also pointed out that if train No. 40 should continue to start from Milwaukee at 8:00 a. m., it could not make the extended run and return in time to make its connections at Madison and Milwaukee. It is now started at 8:00 a. m. instead of 7:00 a. m. as on week-days, for the benefit of patrons of lake resorts who use the Sunday service extensively.

A statement was submitted showing that during fifteen days, May 28 to June 11, 1914, inclusive, a total of 918 passengers or an average of 70 per day on week-days were handled at Boscobel, apparently representing tickets sold.

The report of our engineering staff, based upon a study of the operating conditions on the Prairie du Chien division, shows that the crews of trains No. 5 and No. 1 lie over in North Mac-

Gregor, Iowa, where they arrive on Saturday, and return on Monday with trains No. 8 and No. 4, respectively. Our engineer is of the opinion that it is feasible for these crews to operate a train to Lone Rock and back from North MacGregor so as to arrive at Lone Rock just before train No. 41, westbound, and leave there just after the departure of train No. 40. In his opinion it is also practicable to utilize these crews in the operation of a new train from North MacGregor to Madison in the forenoon, returning to North MacGregor in the evening. Neither of the plans suggested above would entail an operating expense so great as that estimated by the superintendent for the plan suggested by him.

From an examination of the testimony it is our judgment that the Sunday passenger train service furnished by the respondent between Madison and Prairie du Chien is inadequate, and that the operation of a passenger train in each direction on Sundays between these stations is necessary. In our opinion a morning train, eastbound, between Prairie du Chien and Madison, returning in the evening, would be of more service to the community than the other plans suggested, and would consequently result in greater revenue to the company. It is impossible to predict with certainty the amount of traffic which such a service would create. However, we feel that after a reasonable period of trial the operation of such a train should prove remunerative. If experience should prove otherwise the case may be reopened upon application.

IT IS THEREFORE ORDERED, That the respondent, the Chicago, Milwaukee & St. Paul Railway Company, operate a Sunday passenger train in each direction between Prairie du Chien and Madison, said eastbound train to be scheduled to arrive in Madison not later than 10:30 a. m., and said westbound train to be scheduled to leave Madison not earlier than 2:30 p. m.

WISCONSIN VETERANS' HOME

vs.

WAUPACA ELECTRIC LIGHT AND RAILWAY COMPANY.
CITY OF WAUPACA, INTERVENOR.

Submitted Sept. 29, 1914. Decided Jan. 28, 1915.

Complaint was made that respondent, an electric railway operating from a point in the city of Waupaca, Waupaca county, to a point in the town of Farmington, Waupaca county, refuses to carry freight, though authorized to do so under the statutes of the state, its articles of association, and franchises granted by the municipalities involved, and the Commission was asked to require the respondent to transport over its line of road, petitioner's freight between the Wisconsin Veterans' Home and points reached by respondent railway. The petitioner is located in the town of Farmington. The city of Waupaca, intervenor, denies that the respondent has authority, under its franchise from the city, to carry freight within the city and contends that the Commission is without jurisdiction in the premises. It appears that the question involved in this proceeding has been before the common council of the city of Waupaca on several occasions and that respondent has never been granted authority to carry freight, if the authority was not contained in the first grant as alleged.

Held: That the Commission is without jurisdiction; that the carriage of freight through the city streets by respondent would cast an additional burden on the fee, for which abutting owners would be entitled to compensation; that in view of the reasonable doubt as to the existence of the authority contended for in the franchise in question, the authority cannot be inferred; that, in any event, the clause alleged to confer the requisite authority is permissive only and not mandatory, and that, respondent having never assumed any obligation under the same, the Commission can not order the respondent to assume such obligation in the first instance; that the fact that complainant is a semi-public institution and that respondent is operating under an indeterminate permit is not material in this proceeding, and that under all the circumstances the Commission is without power to make the desired order.

The petition is dismissed.

The petition alleges that the respondent has constructed, and is operating, as duly authorized, an electric railway from a point in the city of Waupaca, Waupaca county, to a point in the town of Farmington, Waupaca county, a distance of approximately four miles, of which about one mile is in the city of Waupaca,

and the remainder in the town of Farmington; that petitioner is located on the banks of one of what is known as the "Chain of Lakes" in the town of Farmington, Waupaca county, some four miles distant from the stations of the "Soo" railway and of the Green Bay railway in the city of Waupaca; that respondent's road is the only railway by which "said Wisconsin Veterans' Home can be reached or that comes nearer to said Home than said city of Waupaca;" that under the statutes of the state, respondent's articles of association and franchises granted by the city of Waupaca and the town of Farmington the respondent is authorized to transport freight and particularly the freight of the petitioner, required for the purposes of the Wisconsin Veterans' Home, but that the city of Waupaca denies that respondent is authorized to transport freight over its line within the limits of the city; that as a consequence respondent refuses to carry over its line freight consigned to or from Wisconsin Veterans' Home, and petitioner is compelled to, and has for many years had all its freight transported over the wagon roads of said city and town from the stations of the railways known as the "Soo" line, and the Green Bay & Waupaca line to its buildings in the town of Farmington; that among other items of freight necessarily so transported over the highways, with resulting injury thereto and expense to the town of Farmington, is coal to the amount of approximately 4,500 tons annually, and that petitioner is advised and believes it is required to expend much larger sums for transporting its freight than would be required were it transported by respondent railway, to the great detriment of petitioner, of the public at large, and of the state of Wisconsin, as the petitioner alleges that the expense of keeping, providing, and caring for the members and inmates of the Wisconsin Veterans' Home, and of paying and maintaining its employes falls principally upon, and is paid mainly by the state, under and pursuant to statute. The petitioner alleges that it is to the interests of the state of Wisconsin and the public at large that respondent be compelled to carry freight, as it is authorized to do under the statutes of the state, its articles of association and franchises. Wherefore, petitioner asks that respondent be required to transport over its line of road, its freight of all kinds between the Wisconsin Veterans' Home and points reached by respondent railway, and for such other relief as may be just and equitable.

The respondent, in its answer, admits all the allegations of the petition except that part alleging authority in it under the statutes, its articles of association and franchises to carry freight, as to which it enters neither an admission nor denial but joins with the petitioner in asking a judicial interpretation of its rights and privileges contained in such franchises. Wherefore, the respondent asks that the Commission duly consider the matters contained in the petition, and render its opinion and decision therein in due course.

The city of Waupaca, intervenor, filed a plea objecting to the jurisdiction of the Commission in the matter on the following grounds: First, because the franchise in question does not permit the carriage of freight through the streets; second, because the voters of the city and its common council have repeatedly refused such permission; third, because at the time of the granting of the franchise in question, the city had no power, under the laws of the state, to grant respondent company the right to carry freight upon its road; fourth, because the Railroad Commission has no authority to grant, in the first place, rights for the use of the streets of the city for street railway, interurban or commercial purposes, or to extend or decrease rights granted by any such franchise, such powers being vested solely in the common council of the city; and fifth, because the transportation of freight for petitioner, and not for other shippers, would be an unlawful discrimination in favor of complainant. Wherefore, the city of Waupaca asks that complainant's petition be dismissed.

The matter came on for a hearing, pursuant to notice, September 29, 1914, at the city hall at Waupaca. The petitioner appeared by *F. S. Veeder*, of *Veeder & Veeder*; the city of Waupaca, intervenor, by *L. D. Smith*, and the respondent by *Irving P. Lord*. A brief and reply brief were submitted for petitioner by *Veeder & Veeder*, and in behalf of city of Waupaca by *L. D. Smith*, city attorney, and *B. R. Goggins*, of counsel.

A preliminary objection was made at the hearing to the appearance of the intervenor to argue the question of the Commission's jurisdiction in the premises, because the petitioner had not been served with a copy of the plea. The plea was not filed until shortly after the hearing, however. But as the parties were given ample opportunity to file briefs, and as they notified the

Commission subsequent to the hearing that they did not desire to introduce further testimony in regard to the question of jurisdiction, it does not appear that the rights of any, including petitioners, were impaired, or that this objection is a very serious one.

The extent of the rights conferred on respondent by the city of Waupaca and the jurisdiction of the Commission in the premises are the matter in dispute. The merits of the requested order were not extensively gone into at the hearing or subsequently. If, under the franchise, the respondent is under the obligation to carry freight, it seems clear that the Commission has the power to issue the desired order. The question was considered by the Commission in the case of *Brown v. Janesville St. Ry. Co.* 1910, 4 W. R. C. R. 757. The Commission said (p. 760): “* * * we are petitioned in this proceeding to require the respondent to specifically perform its franchise obligations to maintain and operate the branch line in question,” and, as to its power in the premises, (p. 761) “we are convinced that power is vested in the Commission to enforce, in any proper case, the performance of the public functions of a railway company [street railway in this case] when the same have been once undertaken by the company * * *”

If, however, the respondent is under no obligations, franchise or otherwise, to carry freight, the Commission is without jurisdiction in the matter. The carriage of freight by street railways, in the absence of a duty imposed by franchise, has never, as far as we are aware, been held one of the duties inherent in that business, but rather the contrary. Such being the case, the matter rests exclusively with the city. “In cities the common councils are clothed with granting franchises, authorizing the construction or extension of electric railroads within their corporate limits,” such power being “vested exclusively in city councils.” *Lang v. City of La Crosse et al.* 1909, 3 W. R. C. R. 292, 297.

Before we can pass to the merits of the desired order, then, two questions must be answered affirmatively,—first, assuming that the franchise in question grants the respondent the requisite authority, is it free to transport freight over its line, as desired, as far as other considerations are concerned, and, second, granting that the authority is there, does the franchise also impose a positive duty, as well as grant a privilege?

A consideration of the cases, more or less analagous in principle, which have been passed upon by our supreme court, leads to the conviction that respondent could not lawfully render the services, even though ordered, without securing releases from, or making compensation to, abutting property owners. The proposed service would cast an additional burden upon the fee, and neither the city nor state could authorize or require the service without provision for compensation to or releases from abutting owners, since to do so would be contrary to the inhibition of the constitution against taking private property without paying just compensation therefor. Even should the city or state authorize the desired service, it seems clear it would not bind the abutting property owners in the absence of a settlement with them, though it might bind the public, that is, if, as seems clear, the carriage of freight would impose an additional servitude. *Penna. R. R. v. Montgomery Co. Pass. Ry.* 167 Pa. 62, 70. In that case township and not city authorities were concerned, but the principle seems the same, as it was held they could not impose an additional servitude on abutting owners, the additional servitude in this case being electric interurban transportation over *township* roads. As to the power of the state itself, the matter was put as follows in the case of *Street Railway v. Cumminsville*, 14 Ohio St. 523, 549, 550:

“We see nothing in the street railroad act which induces the belief that the legislature intended to authorize either companies or public authorities to grant to railway companies anything more than an interest in the public easement; nor do we see any reason to doubt that such a location may ordinarily be made as to bring the necessary structures for the use of these companies within that interest, and without any invasion of private rights. But if it were otherwise, and it were manifest that the legislature intended to allow these companies to occupy and impair the easements attached to improved lots, and that the necessary structures could not otherwise be constructed or used, we should still be of the opinion that it could not be done without compensation.”

The general principles above stated, leaving the question of carriage of freight out of consideration for the moment, have been enunciated in the following Wisconsin decisions: *Zehren v. The Milwaukee Electric R. & L. Co.*, *Robran v. Same*, 99 Wis. 83, that an electric interurban railway for the carriage of pas-

sengers, casts an additional burden upon a county highway for which abutting owners are entitled to compensation; *La Crosse City Ry. Co. v. Highbee*, 107 Wis. 389, that an urban electric street railway, as ordinarily constructed, does not impose an additional burden on the fee of the city street; and *Younkin v. Milwaukee L. H. & T. Co.* 120 Wis. 477, that the operation of interurban trains and cars over street railway tracks through the city imposes an additional burden upon the land of abutting owners. In *Schuster v. T. M. E. R. & L. Co.* 142 Wis. 578, where it appeared that the interurban cars were larger and heavier than street railway cars, run at greater speed, and sometimes in trains of two or more cars, the principle was conceded by counsel, the only mooted point being the character of relief to which plaintiffs were entitled.

The Commission recognized and applied the principles in the case of *City of Janesville v. Rockford & Interurban R. Co.* 1912, 9 W. R. C. R. 502. Complaint was made that the respondent had abandoned operation over a certain route, and began operation over another route contrary to the terms of its franchise. The Commission said (p. 507 and 508):

“The respondent’s franchises authorize the use of the two routes for both urban and interurban service. As interurban service would impose an additional servitude upon the highway, such franchise only gave it the right to occupy streets for interurban railway purposes as against the public. It had no right to use such streets without first having acquired the consent of the abutting property owners by mutual agreement, or secured the right through condemnation proceedings. When it operated its interurban cars, it invaded the right of the adjoining property owners.”

The Commission then held that the expense of acquiring the right of interurban operation over the route in question would be greater than would be justified, under the circumstances of the case, and, after considering one or two other matters involved, dismissed the petition.

The question of freight, as involved in the present proceeding, has apparently not been directly passed upon by our own court. However, in *Waszkiewicz v. T. M. E. R. & L. Co.* 147 Wis. 422, the court, sanctioning the carriage of freight in that particular instance, was careful to point out that defendant was “carrying material and supplies for the use of the company in maintain-

ing its railway system, and not acting as a common carrier of freight for hire" (p. 425). The court held that defendant had such a right, and cited *Caswell v. Boston E. R. Co.* 190 Mass. 527, which held to the same effect, though recognizing that the carriage of freight for hire might be unlawful.

In the present case, however it might be held as to city freight alone, it would seem clear that the carriage of freight not destined, chiefly at least, or at all in the last ordinance proposed (Int. Ex. 3), for the inhabitants of the city, could not be regarded as a proper urban servitude. In fact, the ordinance in question, which was to grant the present respondent, the applicant there, the right to carry freight for present petitioner and was referred to the board of public works, was opposed in that body's minority report on the ground, among others, that the company should first make settlement with at least 75 per cent of the abutting owners.

So it appears, for the foregoing reasons, that the Commission is without power to effectively order the desired service, even though there might be no other objection. However, there is at least one other serious difficulty, if not more, in the way of granting complainant's petition.

It is settled law that "the grant of a franchise, insofar as it is ambiguous, is to be strictly construed against the grantee and in favor of the public," and "that nothing will pass unless it is granted in clear and explicit terms." 19 Cyc. 1459, and authorities there cited. There is no clear, explicit grant in the ordinance in question of the right to carry freight, nor is such an obligation anywhere made a part of the consideration for the grant of the privilege for using the streets. The only suggestion of such a grant is contained in the following words: "Parcels other than hand baggage may be carried upon the cars used on said railway, for the carrying of which a compensation may be collected" (sec. 19). The Commission is of the opinion that to hold that the carriage of parcels means the carriage of freight, in the ordinarily accepted term at least, and as desired by the petitioner, would certainly not be warranted.

That the question was considered at least doubtful, seems clear from the testimony and exhibits in the case. The only grant or franchise of the city of Waupaca was adopted April 2, 1898. On April 28, 1899, the town of Farmington passed a

franchise granting the use of certain highways, subject to certain restrictions, and containing the same identical words as to the carriage of parcels, and no more on the question of freight. On November 17, 1913, the town board passed an ordinance expressly granting respondent the right and privilege for the carriage of passengers, express, mail and freight. In 1906, an ordinance was before the common council of the city of Waupaca to grant respondent the right to haul freight in carload or less than carload lots. In 1911, an application for authority to carry freight was made to the council by respondent's president and general manager. On December 2, 1913, a somewhat similar ordinance, granting authority to carry freight for complainant only, however, was finally passed. A popular vote was demanded on this ordinance. The ordinance was submitted by such a vote on April 2, 1914, and was defeated by a vote 238 for, 334 against. In view of the language of the franchise, and the subsequent history of the matter here at issue, it would be difficult to hold that there is not at least considerable ambiguity and doubt as to the power contended for having ever been conferred, so that on the basis of the commonly accepted rule of construction, stated above, the Commission's conclusion must be against the power existing in the grantee or respondent.

However, there is another ground on which the Commission's power to make the desired order may well be questioned. The words of the franchise, insofar as they directly by any possibility cover the carriage of freight in its ordinarily accepted term, are permissive, and not mandatory. From the testimony it appears that the respondent has never undertaken the transportation of freight for compensation under this clause. In other words, it has never assumed such an obligation. How, however, the law may be as to the performance of an obligation once undertaken under a merely permissive grant, it seems clear that the assumption of such an obligation, in the first instance, cannot be compelled. Such a view seems the only reasonable one. Wyman thus puts the matter in his work on Public Service Corporations: "The general doctrine now is that a permissive charter simply enables the company to build without making construction obligatory, although it will often be provided that the part of the franchise not used shall be forfeited for non-user. In establishing the present rule, the leading English case de-

clares that to say there is no difference between words of requirement and words of authority when found in such acts is simply to affirm that the legislature does not know the meaning of the commonest expressions, nor appreciate the various ways in which such a situation may be treated in different cases." I Wyman, sec. 304. In the foregoing, authority to build is spoken of, but the principle is the same in the matter under consideration. In either case authority is required. If, then, the words in question do grant requisite authority, as we very strongly doubt, they are permissive only, not mandatory, and the duty never having been undertaken, its assumption now rests with the respondent and not with the Commission.

It remains to consider two contentions of petitioner: (1) that under the words of the statute (sec. 1862) the city had no option and, (2) that the effect of the indeterminate permit, which respondent received for its old franchises, was to vest the Commission with the power to make the desired order.

Sec. 1862 provides "Corporations for constructing * * * street railways may be formed. * * * Any municipal corporation or county may grant to any such corporation * * * the use, upon such terms as the proper authorities shall determine, of any streets * * * within its limits for the purpose of laying * * * tracks and running cars thereon for the carriage of freight and passengers. * * *" It is petitioner's contention that the legislature therein manifested an intention of requiring that future franchises should be for the double purpose of transporting freight and passengers. This construction would hardly seem a reasonable one. If there were such an intention as to electric street railways, it would be natural to expect it to apply to interurban and suburban roads even more than to purely urban ones. But section 1863, which applies to such roads uses the words "freight or passengers." So that the more reasonable construction would seem to be that no such requirement was intended, but merely authority to the local body to grant both rights if it should see fit.

The constitutionality of sec. 1862 was challenged in the case of *Linden Land Co. et al. v. Milwaukee Electric Ry. and Light Co.* 107 Wis. 493. The ground of objection urged was that the legislature authorized the grant of the use of the street for the carriage of freight without providing for the payment of com-

pensation to abutting owners. The court, after conceding for the purposes of the case that a street railway created for the carriage of freight would impose an additional burden on the fee and after noting that the statutes contained no provision authorizing such companies to condemn private property in the streets of cities or villages, held as follows on the question (p. 512):

“It is not quite clear how this deficiency in the law affects the corporate character of defendant corporation. It may render it impossible for it to lay or operate a track for the transportation of *freight* without actually purchasing the right from private owners to cross their lands, but the legislatures certainly had power to authorize the formation of just such corporations; * * * We think it may reasonably be said that this law was only intended to authorize corporations to use streets with the consent of the city for carriage of freight as against the rights of the public, and not as against private owners, leaving such private owners in full possession of their rights to stop the construction, insist on compensation, or give their consent as they chose. * * * This construction seems to us to be entirely reasonable. * * *

“Furthermore, it will be noticed that the corporation does not obtain its right to use any given street from the terms of its charter. It might exist for a century, and if no municipality saw fit to grant it a franchise to use its streets, it could do no business. In the present case, the city has not chosen to grant it any right to carry freight upon a single street. All the franchises which it owns by purchase, as well as the franchise now in question, simply confer the right to carry passengers only, or, in other words, to build and maintain a street railroad in the usual and ordinary sense of the term; and we do not see how it can for a moment claim the power to carry freight over its lines in the city of Milwaukee, or do anything more than maintain a street railroad for the carriage of passengers only.”

Apparently it never seriously occurred to the court or parties to the action that the legislature intended to make the two grants inseparable. By every reasonable intendment the legislature must have known that such a requirement would make every municipal franchise granted under that section the source of litigation, and, in blocking the operation of the line for the carriage of freight, defeat the carriage of passengers.

It remains to consider the effect of the indeterminate permit

under which respondent now operates, insofar as petitioner's contention is concerned, that the Commission is thereby vested with power to order the desired service. The effect, in general, of an indeterminate permit has been so fully discussed in the decisions of the Commission, and in several decisions of our supreme court, that little need be said here.

In the view taken of the principal questions, it becomes unnecessary to consider other points raised. The fact that the complainant is a semi-public institution is believed immaterial as far as jurisdiction is concerned in this proceeding. The intervenor contends in its brief that there is no allegation of assignment to respondent of the franchise under which respondent assumes to operate, but that if such franchise was duly assigned, it was, for various reasons set forth, void in its inception. Upon this and other contentions urged by intervenor, it is unnecessary to express an opinion (except to note that the first difficulty complained of was remedied in petitioner's reply brief) since, for the reasons already stated, the Commission is without jurisdiction and the petition must therefore be dismissed.

Now, THEREFORE, IT IS ORDERED, That the petition herein be and the same hereby is dismissed.

TOWN OF WHEATON

vs.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY
COMPANY.

Submitted Jan. 7, 1915. Decided Jan. 29, 1915.

Complaint was made that a highway crossing on respondent's line, located on the town line between the towns of Wheaton and Tilden, in Chippewa county, is dangerous to public travel on account of surrounding physical conditions, and the Commission was asked to require the respondent to adequately safeguard the crossing in question. It appears, among other things, that the track lies in a cut about 20 feet deep at the deepest point; that the highway descends to the track from both sides; that a certain amount of traffic necessarily uses the crossing, and that after beginning the descent to the track a traveler must be within the right of way lines and very close to the track to obtain a clear view of trains.

Held: That the crossing is unusually dangerous, and that the saving of the expense necessarily incident to the installation of some safety device is no justification for subjecting the traffic necessarily using the highway to unusual danger, even though that traffic is not heavy.

Ordered: That respondent install and maintain, at the crossing in question, an automatic electric bell and a visual signal for night indication, plans to be submitted to the Commission for approval. Ninety days is considered a sufficient time within which to comply with the order.

The petition alleges in substance that a highway crossing on the line of the Minneapolis, St. Paul & Sault Ste. Marie Railway Company, located on the town line between the town of Wheaton and the town of Tilden, between section 6, township 28 north, range 9 west, and section 31, township 29 north, range 9 west, in Chippewa county, is dangerous to public travel on account of the surrounding physical conditions. The Commission is therefore asked to require the respondent to adequately safeguard this crossing.

No answer was filed by the respondent, but a general denial that the crossing is dangerous was made by counsel at the opening of the hearing.

The hearing was held at Howard Siding on January 7, 1915. *G. W. Cady* appeared for the town of Wheaton, *Wm. Meiner* for

the town of Tilden, *W. H. Gates* for the town of Howard, and *Kenneth Taylor* for the respondent.

The testimony shows that the crossing in question is known as the Cameron crossing and is located about three-quarters of a mile southeast of Howard Siding. The highway runs east and west and the railway northwest and southeast, curving to the west north of the crossing. The single track lies in a cut the banks of which are about twenty feet in height at the deepest point and the highway descends to the track from both sides. Witnesses stated that at points in the highway on either side of the railway, where the descent to the track begins, it is possible to see the smoke of trains approaching through the cut if weather conditions are favorable, but that under certain conditions the smoke hovers in the cut and is not visible. After beginning the descent to the track, a traveler must be within the right of way lines and very close to the track to obtain a clear view of trains. Respondent's engineer testified that he was able to see a pole $12\frac{1}{2}$ feet in height in the center of the track from points of observation in the highway as follows:

Point of observation in highway from track.	View northwest.	View southeast.
West 25 feet	700 feet	Unobstructed
West 50 feet	200 feet	500 feet
East 50 feet	1,300 feet	Not given
East 75 feet	1,300 feet	Not given

He asserted that at a point in the highway one hundred feet west of the track it is possible to see the smoke of a train approaching from the northwest for a mile, and that at a point one thousand feet west a portion of the track at Howard Siding is visible. The track is on a descending grade from the northwest and trains from this direction do not always work steam at the crossing, thus making little noise. Witnesses asserted that trains sometimes fail to whistle for the crossing. Several narrow escapes were described.

The highway is a main traveled road between Chippewa Falls and Albertville. Witnesses estimated that on the average from five to fifteen teams cross daily, but that in the fall as many as forty or fifty vehicles use the crossing in a day. The traffic con-

sists of farm vehicles and some automobiles. Two children are obliged to cross twice a day on their way to and from school. Daily consignments of milk and cream are hauled over this road, which is also regularly used by a rural mail carrier. There are ten regular train movements, three of which occur at night. In addition one extra freight in each direction is operated, ordinarily crossing after dark.

In the light of the testimony it is our opinion that the crossing in question is more than ordinarily dangerous. The traffic is not heavy, but it is necessary for a number of people to use the crossing in the course of their daily occupations. To subject these travelers constantly to unusual danger for the purpose of saving the expense necessitated by the installation of some safety device is certainly not justified. It is our judgment that the installation of an automatic electric bell and an illuminated sign for night indication will provide reasonable protection at this crossing under the existing traffic conditions.

IT IS THEREFORE ORDERED, That the respondent, the Minneapolis, St. Paul & Sault Ste. Marie Railway Company, install and maintain at the highway crossing on its line at the town line between the towns of Wheaton and Tilden, about three-quarters of a mile southeast of Howard Siding, an automatic electric bell and a visual signal for night indication, plans to be submitted to the Commission for approval.

Ninety days is considered a sufficient time within which to comply with this order.

A. E. FREDERICK

vs.

CHICAGO, ST. PAUL, MINNEAPOLIS AND OMAHA RAILWAY COMPANY,
CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY.

Submitted Oct. 1, 1914. Decided Jan. 29, 1915.

Complaint was made that the joint station maintained by respondents at Valley Junction in Monroe county is inadequate and the Commission was asked to take such action as it deems just in the premises. The size, accommodations, and use of the station in question were considered. It appears that the waiting room is usually filled beyond its seating capacity two or three times a week; that the freight to be stored exceeds the capacity of the freight room as often; that express and freight are occasionally placed in the waiting room, and that goods stored in the station have been damaged by rats and mice. Complaint was also made as to the driveway approaching the station, and the location of a telephone pole with respect to the driveway. Respondents offered to remedy the two latter conditions.

Held: That the station facilities at Valley Junction are inadequate; that the traffic warrants separate waiting rooms for men and women; that a more capacious room is needed for the storage of freight; that efforts should be made to protect goods stored in the station from rats and mice; and that the improvements in the approach to the station suggested by respondents should be made.

Ordered: That respondents provide a suitable building, to be adequate for freight and passenger traffic, at Valley Junction, plans to be submitted to the Commission for approval. June 1, 1915 is considered a reasonable date for the completion and opening for public use of the station ordered.

The petition alleges in substance that the joint station maintained by the Chicago, St. Paul, Minneapolis & Omaha Railway Company and the Chicago, Milwaukee & St. Paul Railway Company at Valley Junction in Monroe county is inadequate. The Commission is therefore asked to take such action as it deems just in the premises.

The Chicago, St. Paul, Minneapolis & Omaha Railway Company, in its separate answer, alleges that the joint station facilities at Valley Junction are adequate for the business offered.

The Chicago, Milwaukee & St. Paul Railway Company, in its separate answer, likewise alleges that the joint station facilities are adequate, and asks that the petition be dismissed.

A hearing was held at Valley Junction on October 1, 1914. *A. E. Frederick* appeared in his own behalf, *H. H. Ober* for the Chicago, Milwaukee & St. Paul Railway Company, and *F. E. Nicoles* for the Chicago, St. Paul, Minneapolis & Omaha Railway Company.

The testimony shows that the joint station is located in the southeast angle of the crossing of respondents' railway lines. The building contains a passenger waiting room in the shape of an L, the dimensions of the two rectangles being 7 feet, 4 inches by 19 feet, 4 inches and 7 feet by 9 feet, 7 inches, respectively. The ceiling is 11 feet, 10 inches high. The dimensions of the freight room are 9 feet, 7 inches by 18 feet, 7 inches. Seats for twelve persons are installed in the waiting room.

Witnesses for the petitioner stated that frequently all the seats are occupied and some passengers are obliged to stand, and that occasionally the room is so crowded that even standing room under shelter is not available. The latter condition rarely occurs except during August and September when cranberry pickers use the station in large numbers. It was said that freight and express are frequently placed in the passenger waiting room for shelter, owing to the insufficiency of the freight room. The station agent testified that on the average twenty to thirty people take the train at Valley Junction and that there are usually ten or fifteen persons during the day waiting to see friends off or meet them. He said that on special occasions he has seen eighty or ninety people waiting for a train at one time. The waiting room is usually filled beyond its seating capacity two or three times a week, and the freight to be stored exceeds the capacity of the freight room two or three times a week according to his testimony. He admitted that express and freight are occasionally placed in the waiting room, and that goods stored in the station have been damaged by rats and mice.

Witnesses for the petitioner also complained that the driveway to the station from the highway is narrow and too low as compared with the height of the platform upon which freight must be loaded, and that a telephone pole is so located as to

make it difficult to turn a wagon around after driving in. This testimony was substantially corroborated by the station agent.

Data with reference to traffic conditions which were submitted by the railway companies are summarized in the following table:

Month.	C. M. & St. P. Ry. Co.			C. St. P. M. & O. Ry. Co.			Total revenue both companies.
	No. of tickets sold.	Revenue from ticket sales.	Freight revenue.	No. of tickets sold.	Revenue from tickets sold.	Freight revenue.	
July1913	317	\$45.55	\$276.37	340	\$144.71	\$42.21	\$508.84
August1913	493	91.45	141.41	341	167.64	75.75	476.25
September1913	647	120.49	247.74	388	224.23	67.94	660.40
October1913	403	77.70	816.99	363	180.18	192.62	1,267.49
November1913	288	76.59	295.04	239	104.61	104.97	581.21
December1913	315	59.10	325.59	301	139.54	194.89	719.12
January1914	247	43.24	202.62	226	87.58	70.92	404.36
February1914	182	28.87	70.90	217	89.19	124.46	313.42
March1914	266	48.05	296.40	290	133.73	187.80	665.98
April1914	284	47.37	235.34	293	119.01	159.28	561.00
May1914	245	40.71	220.00	214	102.22	104.36	467.29
June1914	328	59.85	122.56	331	148.96	79.02	410.39
Total	4,015	\$788.97	\$3,250.96	3,543	\$1,641.60	\$1,404.22	\$7,035.75

These data indicate that a total of 7,558 tickets were sold during the year or an average of twenty-one per day. It is probable that as many passengers return as buy tickets out of Valley Junction and the average passenger traffic may therefore be estimated as about forty-two per day throughout the year.

The representatives of the railway companies stated that they are willing to remove the telephone pole of which complaint was made and to raise the grade of the roadway one and one-half or two feet so that the floor of wagons will be on the same level as the freight platform.

In the light of the testimony and upon investigation, it is our opinion that the station facilities at Valley Junction are inadequate. The traffic is sufficient to warrant separate waiting rooms for men and women, and a more capacious room is needed for the storage of freight. Efforts should be made to protect goods stored in the station from rats and mice. The improvements in the approach to the station suggested by the respondents should be made.

IT IS THEREFORE ORDERED, That the respondents, the Chicago, St. Paul, Minneapolis & Omaha Railway Company and the Chicago, Milwaukee & St. Paul Railway Company, provide a suitable building at Valley Junction which shall be adequate for freight and passenger traffic, plans to be submitted to the Commission for approval.

June 1, 1915, is considered a reasonable date at which the station shall be completed and open for the use of the public.

IN RE DETERMINING AND FIXING A JUST COMPENSATION TO BE PAID TO THE JANESVILLE WATER COMPANY BY THE CITY OF JANESVILLE FOR THE PROPERTY OF THE SAID COMPANY ACTUALLY USED AND USEFUL FOR THE CONVENIENCE OF THE PUBLIC.*

Submitted Jan. 4, 1915. Decided Jan. 30, 1915.

Notice was served on the Commission by the city of Janesville of its determination to acquire the plant of the Janesville Water Co., which operates under an indeterminate permit.

The physical value of the plant was considered with reference to the actual investment, and the reproduction cost and reproduction cost less depreciation. According to the company, the actual investment, excluding overhead, at the time of the hearing was \$262,730.

Held: That due allowance for certain matters of accounting makes it doubtful whether the actual original cost of property now in the system was much more than \$250,000.

In considering the cost of reproduction, matters in dispute were examined in detail. It appears that certain items in the valuation of the engineering department could perhaps properly be somewhat modified. The valuation in question fixed the reproduction cost at \$253,367 and reproduction cost less depreciation at \$217,775.

Held: The most liberal estimates which should be considered in arriving at the value of the property, making due allowance for the possible changes noted, would fix the reproduction cost at \$268,151, and reproduction cost less depreciation at \$233,734.

Whether the proper method of physical valuation represents the cost of replacing units identical with those in the existing system, or merely the cost of replacing the units in the existing system with equivalent units was a question involved in the proper value assignable to a number of items.

Held: That neither method is final, as determining the cost new or present value of the property; that both may be of evidentiary value in the determination of actual fair value of the property, and that when, as in the present case, there is nothing to indicate that the original investment was unwisely made, it seems only reasonable to accept as evidence bearing upon their value as a part of the plant to be transferred the actual cost of the items, or the cost of replacing them by identical units.

As regards the intangible values, the company claims that allowance should be made for discount on bonds, and going value. In the

* As modified by a supplementary order issued Feb. 20, 1915, which amended the third and fourth paragraphs of the order, so that, in accordance with the stipulation of the parties entered into subsequent to the order,—it appearing that such stipulation would be of mutual benefit to the parties, and in substantial compliance with the Commission's order—the plant could be transferred subject to the bonds outstanding at the time of the agreement, such bonds to continue a lien upon the plant.

latter connection the accumulated losses actually incurred in building up the business and the probable cost which would have to be incurred in an equivalent plant in building up the business to the point of a reasonable return were considered. The company, in arriving at its estimate of the fair value of the property, adds 20 per cent to the cost of reproduction to cover going value.

Held: That as regards the question of an allowance for discount on bonds, such allowance may be reasonable, when the discount is a normal and reasonable cost of getting money to finance a needed utility, and that, in the present case some weight must be given to the fact that the bonds in question were sold at a discount to provide money for an enterprise reasonably necessary for the public service;

That as regards the question of going value, the matter must be determined from the evidence in each particular case, and that there is nothing in the record in the present case to justify as large an allowance as claimed by the company;

That the company's contention that because the property is a continuous property which will probably never be entirely scrapped at one time, it should be considered that there has been no element of depreciation which should be deducted from the cost of reproduction is not tenable, and that the best evidence as to physical depreciation in the present case is the valuation made by the engineering staff with the modification noted; and

That the fair value of the property in the present case, due consideration being given to all the different elements which go to make up the final value of the property, is determined to be \$265,000, as of July 1, 1914, such value excluding materials and supplies, but including all records of the company reasonably necessary for the conduct of the business by the city.

Ordered: That the company transfer possession to the city on or before April 1, 1915, at the price fixed, less the now outstanding bonds (\$186,500) and accrued interest to April 1, 1915, the bond issue to remain a lien upon the plant, and to be taken by the city subject thereto. Materials and supplies, and additions made to the plant since July 1, 1914, are to be paid for by the city at such price as may be agreed upon by the parties, or fixed by the Commission by supplemental proceeding in case of their failure to agree, and the city is also to pay the company the amounts due on the transaction in question within six months after the date of this order, and with interest at the rate of 6 per cent from the date of taking possession of the plant until the amount due is fully paid.

This proceeding arises from a resolution passed by the city council of Janesville, Wis., May 15, 1914, of which a copy was filed with this Commission on May 18, 1914. The resolution recites that the majority of the electors of the city of Janesville, voting on such question at a special election held on May 12, 1914, had voted in favor of the purchase of the plant of the Janesville Water Company by the city of Janesville, and that the Janesville Water Company was at the time of the election operating under an indeterminate permit and had therefore consented to the purchase of its plant by the city of Janesville.

The resolution also instructed the city clerk to give notice of the determination to purchase the plant to the Janesville Water Company and to the Railroad Commission by service of copy of the resolution.

Notice of hearing was issued on May 20, 1914, and hearing was set for June 24, 1914. This was postponed to August 10, and hearings were held at Madison on that date and on August 25, August 26, October 9, October 28 and October 29, 1914. Appearances were: *W. J. Dougherty*, city attorney, for the city of Janesville; *Jeffries, Mouat, Oestreich & Avery*, by *Mr. Jeffries* and *Mr. Oestreich*, for the *Janesville Water Company*.

Argument in this matter was made orally before the Commission on January 4, 1915.

In reviewing the questions involved in this case, it may be well to give consideration first to the evidence before the Commission as it appears in the transcripts of testimony and in other available sources, and to give separate consideration to the arguments in the case. Consequently, the first part of the following discussion will deal with the case, exclusive of the arguments formally presented, and the latter part of the discussion will be reserved for consideration of the formal arguments.

In connection with the purchase of the property of the Janesville Water Company by the city of Janesville, it is necessary that the Commission give consideration to all lines of evidence which tend to show what is the fair value of the property. The value to be fixed must be the value of the going concern, and not the value of the physical plant, as an entity distinct from the business in which the company is engaged. To determine this fair value consideration must be given to such elements as the value of the physical property, the going value, the cost of securing money, etc.

As to the value of the physical property, there are several lines of evidence. Of these the actual investment, the cost of reproduction new and the cost of reproduction new less depreciation, are the most important. With regard to the actual investment the records of the company furnish the evidence before the Commission. The cost of reproduction has been reported upon on various occasions by the engineering staff of the Commission and the testimony of officers or employes of the company is also in evidence as to the cost of reproducing various parts of the

equipment. The last valuation of the engineering department was made as of August 10, 1914. Subsequent to the hearings which were held in this matter, supplementary reports were made by the department, increasing its estimates of the cost of reproducing certain portions of the system, which will be discussed at a later point. Although more than one estimate of the engineering department as to the cost of reproduction and cost of reproduction less depreciation of the plant were before the Commission at the various hearings, it is thought best to use the valuation of August 10, 1914, as a starting point, giving consideration of course to the points of difference between this valuation and earlier estimates.

ACTUAL INVESTMENT.

At the hearing on August 10, the president of the company stated that the actual physical cost of material and labor in constructing the plant had been \$262,730, up to the time of that hearing. At the hearings it was developed that in some negotiations between the water company and the city of Janesville, taking place in or about the year 1892, the actual investment in the plant up to January 1, 1892, had been determined at \$184,658.57. This statement of investment, to the extent at least that it pertains to investment made during the period of original construction, appears to have been taken from the vouchers of the Wisconsin Construction Company by which company the original plant was built. According to the testimony introduced on behalf of the Janesville Water Company, the additions to property from January 1, 1892, to the date of the hearing cost \$78,071.43, making the total actual investment \$262,730. This did not include any allowance, apart from the costs of material and labor, for such items as engineering, interest during the construction, etc.

An audit of the books and records of the Janesville Water Company by members of the Commission's accounting staff revealed a property and plant investment as of June 30, 1914, of \$263,947.94 less a total of salvage credits amounting to \$2,485.13, or a total investment of \$261,462.81. Property discarded appears to have been credited to property and plant at its salvage value only, instead of at its cost new. The effect of this practice

has been to keep the difference between the original cost and the amount received for salvage permanently charged to property and plant. This excess of the cost shown on the books over the cost of the property at present in the system applies to the cost as shown in the testimony of the president of the company and to the statement obtained by the Commission's auditor.

It has proved impracticable to obtain from the records of the company a statement of such excess, but the company's president testified that the only part of the plant that he knew of which had been replaced were pump foundations with an original cost of \$800 or \$900, the boilers, of which the original cost was not shown, and not more than ten hydrants.

The amount of salvage treated as a credit to property and plant in the auditor's report, \$2,485.13, would seem to indicate that the original cost of the property which had been discarded was a matter of several thousand dollars, although there is nothing to indicate the exact amount.

Aside from the items of discarded property mentioned in the testimony of the president of the company, it is understood that a river crossing of 8" pipe has been abandoned. This line was laid on a trestle bridge along the line of 4th and Race streets and was laid in a wooden box for frost protection. Notes taken by a member of the engineering staff in 1909 show that the cost of this 8" bridge crossing was \$2,267.07. The total possible salvage, even if all of the equipment had been sold when the crossing was discarded, would hardly be nearly as large as the original cost.

The auditor's report and field notes indicate that a considerable amount of property must have been discarded, although the original cost of such discarded equipment could not be determined.

In the detailed list of vouchered expenditures submitted by the auditor, amounts of a total of \$5,262.68 were marked with a star, as having been in his opinion improperly charged to construction. On this point the president of the company testified that of the amount mentioned the total of doubtful items was \$1,010.06, and that the remainder was undoubtedly properly charged to construction.

From his testimony it appears that in the construction account there is an item of \$665.46 for changing from small to

large pipe and one of \$656.76 for lowering pipe. He stated that it might be fair to consider two-thirds of these amounts as costs of reconstruction.

The two lines of evidence available as to the original cost of the property and plant, then show a cost of \$261,462.81, taken from the auditor's report, and \$262,730 as stated by the president of the company. To arrive at the actual investment in the existing property it would be necessary to exclude from these amounts all improper charges to construction and the margin between the original cost and the salvage value of property which has been discarded. As previously stated, the exact amount of this cannot be ascertained, but there seems to be no doubt that it would be large enough to reduce the original cost of existing property by a considerable amount, and we think that it is very doubtful whether the actual original cost of property now in the system was much more than \$250,000.

COST OF REPRODUCTION.

The testimony of the president of the company fixes the cost of reproduction at 10 per cent above the actual investment, or \$289,003. In this total are included the elements discussed above which are not properly a part of the cost of the existing plant. In addition to \$289,003 the witness added 15 per cent for overhead expenses during construction, which were not charged as distinct items in the construction of the original plant. This would bring the reproduction cost of the property and plant to \$332,353. The witness estimated that the cost of cutting through pavement in reproducing the plant would be approximately \$20,000, which would raise the cost of reproduction new to \$352,353. His estimate of depreciation accrued on the entire plant was 10 per cent of the cost new, or \$35,235, which would leave a present value of \$317,118. This is exclusive of non-physical elements of value which will be discussed later, and of materials and supplies amounting to \$3,000, which would raise the cost of reproduction, less depreciation, to \$320,118.

The accounting practice of the company appears to have been to charge construction materials to construction as purchased rather than as used. This being the case, the cost of materials

on hand for construction purposes should not be added to the value of the plant as determined by the witness, as this would result in a duplication of the charging of such materials to property and plant.

VALUATION.

There seems to be no necessity to consider in detail the various estimates of cost of reproduction which have been made by the engineering staff. Following is a copy of the final summary of the last valuation, made as of August 10, 1914:

Classification.	Reproduction cost.	Reproduction cost less depreciation.
A. Land	\$6,400	\$6,400
B. Transmission and distribution.....	146,293	130,387
C. Buildings and miscellaneous structures.....	38,446	32,000
D. Plant equipment	16,259	9,809
E. General equipment	3,977	2,740
F. Paving	6,257	5,507
Total	\$217,632	\$186,843
Add 15 per cent.....	32,645	28,026
Total	\$250,277	\$214,869
H. Materials and supplies.....	2,865	2,681
Total	\$253,142	\$217,550
J. Non-operating	225	225
Total	\$253,367	\$217,775

Note:—Addition of 15 per cent to cover engineering, superintendence, interest during construction, contingencies, etc.

Buildings and Land.

The objections raised to the engineers' estimate of the cost of buildings were relatively unimportant. Certain items, such as the interior trim of the station and certain costs of painting, were adjusted in the August 10 valuation. Although certain other estimates in connection with the cost of buildings were questioned, there has been no evidence presented which would lead us to make changes in the estimates of the engineering department. The only item which need be mentioned particularly at this point is that of brick work. The estimate on this did not include the same variety of brick as is now in the building, but the estimated cost of reproduction appears to be adequate.

Some question was raised with regard to the prices on land, but we see no reason for changing these. In an earlier valuation

higher prices were used, but we do not believe that the price placed on the land in the valuation now under consideration was in any way unfair.

A number of items of office equipment were enumerated which had not been listed in the engineer's inventory, but the total value of these is so small as to have little effect upon the value of the entire property. So far as the record shows, the total discrepancy here was only a matter of a few dollars.

Station Equipment.

The company questioned a number of items in the valuation of station equipment, but the only question of considerable importance had to do with the value placed upon the pumps. Others related principally to the estimated depreciation of various portions of the equipment. The allowance for depreciation on scales, steam piping, pumps, boilers, and a Sturdevant fan and engine were the only ones of importance which were questioned. No evidence was introduced to show what the company considers a fair allowance for depreciation on this equipment.

In the engineers' estimate of cost of reproduction less depreciation steam piping was depreciated on the basis of the average life allowed for boilers, which was a life of 25 years. Pumps were depreciated to 50 per cent on the basis of a 40 year life. This, according to the testimony of the engineer who inventoried this portion of the property, included some allowance for obsolescence. It is understood that the pumps were part of the original plant, which would indicate that a depreciation of 50 per cent is not too great.

The Sturdevant fan and engine have been in use 11 years and were secondhand at the time of their installation. A condition of 50 per cent seems ample for this equipment.

The most important items of station equipment are the pumps. The company claims an original cost of \$15,437.26 for these units, but this cost appears to include a number of items other than the pumps themselves. Among these are piping of which the engineers estimated the cost new to be \$1,770, a condenser at \$469, two boiler feed pumps at \$232, pipe covering at \$107, cast iron piping at \$155, breechings at about \$200, and suction and discharge piping which was valued by the engineers as part of the distribution system and estimated at about \$200. The original cost of the pumps appears to have included also the cost

of a heater and an air pump which were worth approximately \$500, but which are no longer part of the plant. The reproduction cost new, according to the engineers' estimates, of such property as was covered by the original cost of \$15,437.26, would therefore be approximately \$10,144, including \$6,500 for the pumps themselves. If the 15 per cent overhead is added to this there would still be a discrepancy between the original cost and the estimated cost of reproduction, of about \$4,000, and without the inclusion of the 15 per cent the difference would be more than \$5,000.

In estimating the cost of reproduction of this equipment, the cost of pumps equivalent to those actually in use was used by the engineers. To replace the existing pumps with others having the same specifications would cost, according to the testimony, \$3,500 more than the figure used by the engineers. With a depreciated condition of 50 per cent the difference in cost new less depreciation would be half of this amount. The point at issue with regard to the estimated cost of reproduction of the pumps is one of the theory upon which the valuation of the physical property is made. With one conception of what is meant by cost of reproduction, the engineer, in arriving at his estimates, would have to determine the cost of reproducing the identical property which he finds in the plant. With a different understanding of the meaning of the term, the engineer might estimate the cost of building an equivalent plant but not necessarily having the same details of construction as the existing plant.

In the present case, there is nothing to indicate that the original investment in the pumps was unwisely made nor that a reasonable degree of regard for the ultimate economy of construction would have required the installation of different pumping equipment. Consequently, it seems only reasonable to accept the actual cost of the pumps or the cost of replacing them by identical units as evidence bearing upon their value as a part of the plant to be transferred. What it would cost to replace them by equivalent units of equal capacity but perhaps of different design is also of evidential value in fixing the fair value of the plant.

Distribution System.

The most serious differences between the cost of reproduction and cost of reproduction less depreciation, as found by the engi-

neering staff, and the values which the company considers fair, are concerned with the distribution system. The objections offered to the estimates of the engineering department are of such importance as to merit very careful review. In what follows each objection of any importance has been given separate consideration.

Lengths of Pipe.

The lengths of pipe used in the valuation as of August 10, 1914, were the actual measured lengths determined by the company except that a certain length of main leading to the Institute for the Blind was excluded, as being the property of the state. It was suggested at the hearing that the state had been given a special rate for this service, but the testimony is not definite on this point. Certain small mains appear to have been constructed at the expense of private parties, but, in some instances at least, these were sold to the Janesville Water Company.

The testimony of the city engineer of the city of Janesville indicates that a number of extensions of small mains were made at the expense of consumers, of which there is no record of any transfer to the company. The total length of such extensions was not stated. Some of the larger extensions mentioned in his testimony have been transferred to the company. To state the cost of all extensions which appear not to have been transferred is impracticable, but the total would apparently be several hundred dollars. Undoubtedly an equitable handling of the situation requires that consideration be given to this situation. The view of the company is expressed in the testimony of its president to the effect that wherever consumers put in pipe in the streets the water company had given some consideration which made it proper to call all mains the property of the company.

Depreciation of Small Mains.

In the August 10 valuation the mains of sizes smaller than 4" were depreciated to 50 per cent. The member of the staff who handled this portion of the valuation testified that the physical depreciation of this pipe would amount to 50 per cent, that such pipe is not usually considered to have a life of more than 30 or 40 years and that he understood that there were places in Janesville where it had not lasted more than 10 years. The

valuation shows a total cost new of mains 2" or less in diameter of \$19,017, and a cost new less depreciation of \$9,508. The life of such mains is necessarily estimated, as there is no means of predetermining how long any main will last in service. In such cases as this the judgment of the engineer making the valuation must necessarily play an important part. Other engineers might draw different conclusions from the same set of facts. It is probably true that in the judgment of some engineers a longer life could be assigned to these small mains and we think it only fair to take cognizance of the fact that a somewhat different present value might be correct in the judgment of other engineers. The margin of \$9,509 between present value and cost new is so great that any material increase in the estimated percentage condition would have an important bearing upon the depreciated value of the entire plant.

Depreciation of 4" Mains.

In an earlier valuation the depreciated condition of 4" cast iron mains was placed at 98 per cent of cost new, but in the the August 10 valuation this was dropped to 85 per cent. The estimated length of life of such mains was assumed, in making the earlier valuation, to be 100 years, but in the last valuation a life of 50 years was assumed. Relatively little is definitely known of the life of cast iron mains. Various competent engineers have estimated the life at from 50 to 100 years. With an assumed life of 100 years the depreciated condition, on a 4 per cent sinking fund curve, would be about 97 or 98 per cent, but if a 50 year life is assumed the condition per cent would fall to 85. We feel that consideration should be given to the fact that Janesville is not a rapidly growing city, and that there is, therefore, no immediate prospect of the 4" distribution system becoming inadequate. If the 4" mains were considered to be in 90 per cent condition, the reproduction cost less depreciation of this item of property would be increased approximately \$120, including the cost of laying. Values on these mains should probably be given the same percentage condition as the mains on which they are placed.

Price of Cast Iron Mains.

In an earlier estimate by members of the engineering staff the price of 6" cast iron pipe was placed at \$28.30 per ton, but in

the August 10 valuation the estimated cost was reduced to \$26 per ton. The engineer in charge of this portion of the valuation testified that two considerations which caused him to conclude that \$26 per ton was a fair price were the lowering of the five-year average price of pipe since the date of the earlier valuation and the ability of water utilities to purchase pipe at lower prices than the trade journal quotations. With adequate allowance for cartage and for the excess of the Janesville freight rate over the Chicago rate from pipe shipping points the prices, based strictly on trade journal quotations, would be about \$2 per ton above the price included in the August 10 valuation. Applied to all cast iron pipe this would increase the cost of reproduction, at the weights included in that valuation, by a little over \$5,000, and the present value by over \$4,800.

Weights of Pipe.

In the earlier estimates of the cost of reproducing the distribution system the weights of cast iron pipe were assumed to be the scale of weights known as "American Water Works Association, Class B", with the customary 2 per cent total overweight allowed in the standard specifications governing payment for purchases. In making the August 10 valuation the engineer who made the estimate for the distribution system made use of the reported actual weights of the original pipe, including all of the 16", 12" and 10" pipe, about 60 per cent of the 8", half of 6" and two-thirds of the 4" pipe. The information on actual weights of pipe was obtained from papers in the possession of the company in 1909, sworn to by one Morton E. Cobb, in Boston, Feb. 26, 1895, purporting to be taken from vouchers and books used at the time of the construction of the plant.

The unit weights thus obtained were applied to the total amount of pipe. If the weights to be used were those of present Class B pipe, American Water Works Association specifications, with 2 per cent allowance for overweight and no deduction for length of specials, the excess of estimated weight over that used in the August 10 valuation would be 122.259 tons. At \$26 per ton, this would add \$3,179 to the cost new and at \$28 it would add \$3,423. Additions to present value would be \$100 less.

The question of what weight of pipe should be used is similar to that which has been raised with regard to the price to be

placed on pumps. If the valuation purports to represent the cost of replacing property identical with that in the existing system, the prices used should provide for replacing the pumps as they stand and the distribution system at the actual weights of pipe. This would mean that the weights of pipe used in the valuation were properly used and that the price placed upon pumps should be increased.

If, on the other hand, the valuation is assumed to represent the cost of replacing the existing system with an equivalent system, the correct method was used in valuing the pumps, but the weights of pipe should be such weights as would be used in a system to be constructed in accord with modern practice. Neither method is final as determining the cost new or present value of the property, but both may be of evidentiary value in the determination of actual fair value of the property.

Prices for Pipe Laying.

The prices used for estimating the cost of laying mains represented the judgment of the engineer in charge of this portion of the valuation after considerable study of local conditions, and the reasons for his use of the prices used were stated quite fully in his testimony. In other cases it is true that higher prices were used but this was explained as having been done because of differences in soil conditions, depths of pipe, and in other conditions. The cost of laying mains under conditions which would prevail in Janesville could be estimated more closely by an engineer after an actual inspection of conditions in that city than could be done from any facts presented at the hearings.

There is nothing in the record, aside from the testimony of the engineer who handled this portion of the valuation, sufficient to show what a fair allowance for laying mains would be. According to prices which in some measure represent the average cost of laying mains in a number of other places, an estimate of the cost of laying mains might place the cost of reproduction at about \$3,500 above the engineer's estimate. It does not appear, however, that such prices would give the proper weight to conditions prevailing in Janesville and the result of an estimate based on them is included merely to show what the effect would be of estimating the cost of laying mains on a somewhat different basis. The engineer's estimates, although more conservative than the company wishes to accept, are the best evi-

dence before the Commission on this point, and we believe they should be given considerable weight.

Depreciation of Meters.

Water meters were included at a minimum service value of 10 per cent, on the assumption that, as their average age was as great or greater than the usual life of such meters, there could not be much value remaining. It appears, however, that the meters are in fair condition and performing the service required of them, and there seems to be no reason to expect that they will have to be discarded for some time to come. Although there may be individual meters or even a considerable number of meters which will soon have to be discarded, we hardly think that a condition percentage as low as that fixed in the August 10 valuation will be adequate. At 25 per cent condition the present value of the meters would be increased \$82. Probably such an increase would not be unfair.

Depreciation of Reservoir.

The open reservoir, of which the cost of reproduction was estimated to be \$9,787, including valve house and accessories, was given a condition of 69 per cent, or a present value of \$6,753. This was depreciated on the basis of a 50 year life and in arriving at this basis the engineer in charge of this portion of the valuation took into consideration the element of obsolescence because ground waters are usually deteriorated by open storage. That this condition would be worse as the reservoir becomes older was not shown. In this connection we have to remember that Janesville has not been growing rapidly and that there is no immediate cause to expect that the reservoir will become inadequate or that it will be for some time to come any less satisfactory as a means of storing water than it has been.

The testimony indicates that the reservoir is of an uneconomical type which would probably not be constructed at the present time, and that a covered reservoir of proper design could be constructed for about the same amount as would be required to reproduce the existing reservoir. This fact should undoubtedly be considered. In the light of all available facts we believe that the cost of reproduction, less depreciation, of the reservoir should be placed at about \$8,000.

Paving.

After the hearings a correction in the estimates placed on paving was submitted by the engineering department. This places the cost new of paving at \$6,419, based upon the company's statement of amount of paving, but not including any allowance for streets repaired with crushed stone. If allowance were made for this the cost of reproduction of paving would be \$7,190, and with the same condition of depreciation as in the August 10 valuation the cost of reproduction less depreciation would be \$6,327. The record does not show that any of this paving has actually been cut through in laying water mains, and it is not clear therefrom just how much weight should be given to this item in the valuation.

Rock Excavation.

The engineer's estimates as to the cost of rock excavation were questioned by the company. These estimates were based upon as complete information as has been available, both as to the number of lineal feet of such trench and as to the width and depth. As far as the record shows, the engineer's estimate of the number of feet of rock excavation appears to be correct. The only serious question regarding rock excavation relates to the width of trenches. The testimony of the engineer in charge of this portion of the valuation indicates that his estimates were based upon records of the actual width of trenches in the original construction work. There is nothing to indicate that any different conditions would prevail if the distribution system were to be reconstructed at this time. It seems, therefore, that the estimate of the cost of rock excavation is substantially correct.

Possible Additions to Estimates of Cost of Reproduction.

From the foregoing analysis of the engineers' estimates, it appears that different conclusions as to cost of reproduction and cost of reproduction less depreciation might have been reached by the use of somewhat different methods of valuation, and different theories as to what the cost of reproduction should represent. Following is a summary of the cost new and present value additions which we think might be made by engineers under such different circumstances:

	Cost new.	Present value.
Pumps	\$3,500	\$1,750
4" mains, including laying.....		120
Cast iron pipe prices.....	5,000	4,800
Cast iron pipe weight at \$26.....	3,179	3,080
Cast iron pipe—addition to above item if \$28 price used....	244	240
Cost of laying mains	3,500	3,380
Meters		82
Reservoir		1,247
Paving	933	820
Total of above.....	\$16,356	\$15,519
Add 15 per cent.....	2,453	2,328
Total	\$18,809	\$17,847

Certain of the possible additions shown above seem to be inconsistent, although each item might, under different plans of valuation, be given weight, the total of additions contains items which, as previously pointed out, would not be included in a valuation based upon any one method. Additions to distribution system weights can be justified only on the assumption that the valuation is to represent the cost of putting in, not exactly such a plant as the original, but its present day equivalent. On the other hand, additions to pump values can be made only if it is assumed that the original property is to be exactly reproduced, and not equivalent but identical equipment used.

The greatest possible additions to the engineers' estimates which we think can be justified, therefore, are the amounts shown above less the items for pumps and a proportionate share of the 15 per cent overhead, or \$14,784 to cost new and \$16,009 to present value. That is, the most liberal estimates of cost of reproduction, new and less depreciation, which we think should be considered in arriving at the fair value of the property, are \$268,151 and \$233,784, respectively, with some possible further allowance for condition of small mains. These include paving costs of \$8,268, new, and \$7,276, present condition, with the proper proportion of overhead costs included. As previously stated, the record does not show that any of this was paid for by the company and it is equitable to give consideration to this condition. If the paving were to be excluded the cost new and present value would be, respectively, \$259,883 and \$226,508.

VALUE CLAIMED BY COMPANY.

The testimony of the president of the company is to the effect that the fair value of the property is about \$385,000. To obtain this amount he adds to his estimate of cost of reproduction less depreciation, as previously discussed, of \$317,118, and allowance of about 20 per cent for going value, and an allowance for materials and supplies which he estimates should be about \$3,000, making a total of very nearly \$385,000. At another point in his testimony the witnesses stated that the fair value of the property would be between \$380,000 and \$390,000.

INTANGIBLE VALUES.

The company claims that allowance should be made for various elements of intangible value, among which are going value and discount on bonds. Neither of these seem to require any very extended discussion at this point. With regard to discount on bonds, the Commission has taken the stand that it may be reasonable to recognize this element where the discount is a normal and reasonable cost of getting money to finance a utility where the utility is needed in the community, and where the money for financing it can be obtained on no better terms. In an earlier investigation of the Janesville Water Works, *City of Janesville v. Janesville Water Co.* 1911, 7 W. R. C. R. 628-639, the question of discount on bonds was considered by the Commission, and the conclusion was stated as follows: "Some allowance probably will have to be made in fixing the value of the plant for the discount on bonds, but it is questionable whether all of the \$19,600 accounted for should be considered as a plant investment".

There are no facts before us in the present case which would lead us to alter the conclusion above quoted. There seems to be no reason to question the propriety of issuing bonds under the circumstances under which those in question were issued. Authorities are not by any means agreed that the discount incurred in floating bonds should be permanently charged to capital. The difficulties which would be met with if this policy were pursued in the case of refunding issues are, of course, apparent, in that the amount of discount charged to capital might eventually be entirely out of proportion to the actual value of the property.

The total amount of discount on bonds which the company claims should be given consideration in this case is \$20,600, and we believe it fair to give some weight to the fact that bonds were sold at a discount to provide money for an enterprise which was reasonably necessary for the public service.

With regard to going value, two exhibits taken from the earlier decision mentioned above and appearing on pages 640 and 641 of that decision were filed on behalf of the company. It should be stated here that in the earlier decision no audit was made under the direction of the Commission to determine the accuracy of the company's reported statements of earnings and expenses, and the two exhibits mentioned were computed from the statements furnished by the company. At the present time, the Commission has available the information obtained by its auditor regarding the actual earnings and expenses of the company. Following is a table showing for the various years noted: 1. The amount available for return after depreciation had been provided for on a basis similar to that used in general by the engineering staff in arriving at the depreciated condition of the property, which seems to be an adequate allowance for depreciation for the purposes of this case; 2. The investment at the beginning of each of the years noted; and 3. The rate of return upon each investment for each year. Of course, if the average investment for the year had been used instead of the investment at the beginning of the year, the rates of return shown would have been slightly smaller, but not enough so to seriously affect the results obtained.

Year.	Available for return.	Investment beginning of year.	Rate of return. Per cent.
1892	\$7,972.09	\$184,658.57	4.3
1893	11,741.26	185,453.72	6.3
1894	13,430.82	192,624.50	7.0
1895	12,503.41	196,834.72	6.4
1896	14,688.29	208,291.14	7.0
1897	15,233.09	208,539.34	7.3
1898	14,835.98	212,317.64	7.0
1899	14,781.07	215,442.22	6.9
1900	13,328.88	217,347.17	8.4
1901	17,555.51	219,367.27	8.0
1902	16,680.25	226,638.92	7.4
1903	16,269.54	228,942.38	7.1
1904	16,443.88	241,628.90	6.8
1905	17,560.85	242,390.21	7.2
1906	20,085.02	243,197.80	8.2
1907	17,567.77	245,530.32	7.1
1908	22,354.04	254,746.49	8.8
1909	20,945.14	255,793.71	8.2
1910	23,321.25	257,407.12	8.0
1911	26,252.74	259,067.16	10.1
1912	20,534.83	260,746.66	7.9
1913	29,243.97	261,355.50	11.2
6 mo. 1914.....	14,313.56	261,440.31	11.0

There are various lines of evidence which should be considered in determining the allowance which should be made for going value, among which the more important are probably the extent of accumulated losses actually incurred in building up the business and the probable cost which would have to be incurred in an equivalent plant in building up the business to the point of a reasonable return. With regard to the financial history of the company since January 1, 1892, we have the records obtained by the Commission's auditor. In making his audit, he excluded from the operating expenses of the company salaries paid to such of its officers as were not directly concerned with the detailed administration of the plant's affairs, and these salaries were included as a deduction from gross income. The reason for using this procedure was that for a considerable period the company has been paying large salaries to certain of its officers, and in the case above cited, 7 W. R. C. R. 628-648, the Commission held that not more than \$2,000 of the salaries paid to such officers should be reasonably charged to operating expenses. In making a computation of accumulated gains or losses, therefore, the auditor's figures have been modified to the extent that \$2,000 per year have been included under operating expenses as constituting reasonable charges against the cost of conducting the business. The effect of this has been to reduce the gross income as shown by the auditor's report by \$2,000 for each year. Inasmuch as depreciation upon a basis similar to that used by the engineering staff in making its valuation was included among the operating expenses shown in the auditor's summary of income accounts, it is not necessary to include depreciation in a computation of accumulated losses or gains, neither is any allowance for depreciation included in the column headed "Available for interest".

There can be no question that it would cost a considerable amount to build up a business to the point where a reasonable return would be earned upon the investment under conditions similar to those prevailing in Janesville, except that a new utility was to be installed to meet a hitherto unsupplied demand for service. To determine how much this cost would be is a matter of estimate. From such information as is available on this subject, it seems that the cost of building up such a business would probably be between 5 per cent and 15 per cent of the total value of the physical plant, and consideration may well be given to this fact in fixing upon the final value of the property.

The company claims an allowance for going value of about 20 per cent of the actual investment with an overhead allowance of 15 per cent included in the investment. We see no reason for any extended discussion of this claim, as the amount of going value which should be allowed should be determined as largely as possible from the evidence presented in each particular case, and we find nothing in the record in this case which would justify as large an allowance as that claimed by the company.

ARGUMENTS PRESENTED RELATIVE TO VALUATION.

The matters involved in this case, the principal ones of which have been discussed above as far as the testimony and the facts in the Commission's files had a bearing upon the case, were argued before the Commission by attorneys for the water company and for the city of Janesville on January 4, 1915. The arguments presented will be briefly reviewed here, so far as they may influence the conclusions stated above, which were drawn from the records in the case. The argument for the water company dealt with a number of points, some of which should be reviewed in this connection.

The company seems to feel that the engineering staff of the Commission or certain members of it acted in this case in a partisan way, and that the case virtually resolved itself into a contest between the Janesville Water Company on the one hand and the Commission's engineers and the city of Janesville on the other. It is to be presumed that in the cross-examination of the various members of the engineering staff the Company's attorneys touched upon those points in the valuation at which they felt that the engineers had construed matters in favor of the city. Full consideration has been given to all of these points, and we do not believe that the claim that the engineering department or any members of the staff were biased in this matter has any foundation. It might be said that the attitude of the company in this case has been to reflect upon the fairness of the estimates made by the engineers at every possible point, and that if the proceedings were given the appearance of a contest between the company's attorneys and the members of the engineering staff, this was due, in our opinion, to the manner in

which the attorneys continually referred to the work of the engineering department. Certain phases of the valuation made by the engineering department have been reviewed and possible modifications suggested in what has gone before, but we do not feel that the company has shown that any partisan motive was responsible for any of the conclusions reached by the engineering department. The results of the engineers' work in connection with this case have also been criticised in the argument of the company's attorneys, because of the fact that the results obtained by the engineering department were admittedly estimates. The argument was that little if any consideration could be given to any estimate, because an estimate could not be based upon facts sufficiently reliable to justify the adoption by the Commission of the conclusions reached. Nevertheless, in their claim for a valuation of about \$360,000, which is the amount upon which the attorneys lay most stress in their argument, practically the only evidence of which they have made use in drawing their conclusions with regard to such important items as going value and the additional cost which would be involved in reproducing the property at the present time and under present prices, was the opinion or estimate of the president of the company. We do not consider it necessary to go into a detailed discussion of the elements making up the \$360,000 of value claimed in the argument, except to note that a somewhat smaller total is reached than in the testimony of the president of the company. The methods followed are not materially different from those which have already been discussed in connection with the claim that the fair value of the property would be from \$380,000 to \$390,000.

Mention was made in the argument of the fact that a number of years had been required to build the business up to the point of a reasonable return, and that during a considerable part of the elapsed life of the property earnings were less than what might be considered a fair return. It should be mentioned, however, that these conclusions were based upon certain exhibits which were before the Commission at the time of the earlier decision in regard to the rates of this company, and which the results obtained by the Commission's auditor show to have been incorrect. Under these conditions, we would hardly feel justified in accepting conclusions based upon data reported by the company which is not substantiated by a careful audit of its records.

With regard to depreciation, the argument on behalf of the company has been directed along two very different lines. In one portion of the argument, the attorneys showed that the "horizontal" depreciation in this case as fixed in the final valuation by the engineering staff amounted to about 14 per cent, and that this was greater than in any other of a list of cases cited by the attorneys, which had been before this Commission. Certain modifications of the present value as placed upon the physical property by the engineering staff have already been discussed. The effect of such changes as these in the present value would be to materially decrease what the attorneys for the company have termed the "horizontal" depreciation, and the Commission believes that full consideration should be given to the conditions pointed out above in regard to changes which might reasonably be made in the present value.

The other side of the company's argument regarding depreciation is that no such thing as depreciation should be recognized in this case. The argument is that the plant will constitute a continuous property to be kept up from year to year by expenditures for maintenance, and that because it is such a continuous property which probably will never be entirely scrapped at one time, it should be considered that there has been no element of depreciation which should be deducted from the cost of reproduction. Difficult as it may be to measure the extent to which the property of the water utility has depreciated in service, we cannot agree with the argument that there is no depreciation to be considered. Certainly, some of the units of property, if not all, have passed a portion of their useful life, and practically all will eventually have to be replaced. They have a smaller wearing value at the present time than new property of an equal grade would have. To be sure, it is difficult to determine the exact extent of depreciation. We do not know that anyone would undertake to fix a definite amount for depreciation and claim that this was the exact amount of the depreciation which had accrued. Because of this difficulty in arriving at the exact extent of the depreciation, the consideration which should be given to the fact of physical depreciation cannot be measured perhaps to a matter of dollars and cents with absolute accuracy. That some depreciation has occurred, however, is unquestionable. The general practice of the engineering profession appears to be to use methods similar to those followed by the Com-

mission's engineering staff, and all that is claimed for the results obtained is that they represent estimates made in the light of the best judgment of the engineers concerned in the valuation. With such modification as is involved in the changes in present value which have been discussed in an earlier part of this decision, we think that the fact of physical depreciation should be given consideration in determining the value of this plant, and that the best evidence as to the extent of such depreciation is the valuation made by the engineering staff with the modifications previously discussed. The president of the company in his testimony in this case stated that in his opinion the extent of depreciation would amount to about 10 per cent of the cost of the property. This seems to be at variance with the later argument on behalf of the company, but coincides rather closely with the amount of depreciation estimated by the engineering staff if the modifications suggested in the earlier part of this decision are adopted.

The argument on behalf of the city of Janesville calls attention to a number of matters in this case which it does not appear necessary to review at the present time. Consideration has been given in detail to both arguments, and we do not see that any good purpose would be fulfilled by elaborating further upon them in this discussion.

FAIR VALUE OF THE PLANT AND BUSINESS.

The fair value of the plant and business, as has been stated in many other cases, must be determined from the evidence bearing upon the value of the different elements which go to make up the final value of the property. In this case, the valuation as fixed represents what the Commission considers a fair value of the property as of July 1, 1914, exclusive of materials and supplies on hand, but inclusive of all records of the company reasonably necessary for the conduct of the business by the city of Janesville. The amount of materials and supplies on hand at the time of the transfer of the property can be determined by a separate inventory, as can also the extent of additions to the property and plant since July 1, 1914, and up to the date of the transfer. In the light of all the facts which have been available in this case, we conclude that the fair value of the property, limiting the term "fair value" as stated above, is \$265,000.

ORDER.

IT IS THEREFORE ORDERED, That the just compensation to be paid to the Janesville Water Company by the city of Janesville for the taking of the property of said company actually used and useful for the convenience of the public, which property consists of the items above mentioned, excepting, as stated, the material and supplies on hand on the 1st day of July, 1914, be and the same is hereby fixed at Two hundred Sixty-five Thousand Dollars (\$265,000.00).

IT IS FURTHER ORDERED, That in addition to the above compensation, the material and supplies on hand at the date of the taking of the said plant, and the new additions to the plant that have been made since July 1, 1914, be paid for by the said city of Janesville at such prices as may be agreed upon by the parties themselves, or, in case the parties fail to agree upon the price, at such price as the Commission shall fix by supplemental order.

IT IS FURTHER ORDERED, That the said Janesville Water Company transfer possession of said property to the said city of Janesville on or before the 1st day of April, 1915.

IT IS FURTHER ORDERED, That the said city of Janesville pay to the said Janesville Water Company at the time of said transfer the said sum of Two Hundred Sixty-five Thousand Dollars (\$265,000), plus the additional sums mentioned in paragraph 2 of the order herein, and less the sum of the now outstanding bonds, One Hundred Eighty-six Thousand Five Hundred Dollars (\$186,500), and accrued interest to April 1, 1915, which said bond issue is to remain a lien upon said plant and said plant is to be taken by said city of Janesville subject thereto.

IN RE REGULATION AND CONTROL, ON COMPLAINT OF WILLIAM J. KLIEFOTH ET AL., OF LEVEL AND FLOW OF WATER IN ROCK RIVER WITHIN THE CITY OF MAYVILLE, A MUNICIPAL CORPORATION, BETWEEN UPPER AND LOWER DAMS WITHIN SAID CITY, SAID UPPER AND LOWER DAMS BEING USED AND OPERATED BY THE NORTHWESTERN IRON COMPANY, A WISCONSIN CORPORATION.

Submitted Oct. 15, 1914. Decided Jan. 30, 1915.

Complaint was made that by reason of the height of the "lower dam" in the Rock river within the city of Mayville, and its lack of proper spillway or gateway, and also by reason of the construction of the "upper dam," the water in the river between the two dams at times rises higher than it should under the owner's flowage rights, and overflows large areas of land belonging to the petitioners and other property owners similarly situated; and that with present conditions existing and continuing to exist the owners of the property in question have good reason to believe that irreparable injury will result to them. The Commission was therefore asked to investigate the flow of water between the upper and lower dams, establish a maximum and minimum water level, determine the rights in the premises of the petitioners and of the Northwestern Iron Company, the owner of the two dams, and order the lower dam lowered and provided with spillway or floodgates capable of permitting the passage through or over the same of freshets or floods during all seasons of the year. It appears that during the spring of 1913 much damage was done to property in the city of Mayville, because of water backing up between the lower and upper dams, and that a recurrence of such event is likely unless a remedy is provided for disposing of the surplus water in case of flood.

Held: That the lower dam of the Northwestern Iron Co. is not capable of carrying off flood water without materially raising the water over the top of the spillway, and that the lower dam should be equipped with a gate that can be opened to a point five feet below the top of the present spillway for a total clear opening for water passage 27 feet in length, and that the bottom of the river on the up-stream side of the gate should be dredged out to a level at least as low as the bottom of the new gate;

That a highwater mark should be established, and that when the water reaches such height, the gates should be opened immediately, and,

That the present height of the dam is not dangerous, and that the crest of the present spillway should remain as it is.

Order: That the Northwestern Iron Co. construct a gate in the lower dam in question with a clear opening 27 feet in length, that the bottom of the river upon the upstream side of such gate be dredged out to a level at least as low as the bottom of the gate

to be constructed, and that the maximum height of the water permitted by the dam in question shall not exceed 6 inches above the top of the present spillway, and that when such height is reached the Northwestern Iron Co. shall open the gate to allow the water to escape. July 1, 1915, is deemed a reasonable time for the completion of the work ordered.

William T. Kliefoth and three other citizens and taxpayers of the city of Mayville complain that they are directly interested and damaged by the flow and level of water between the upper and lower dams within the city of Mayville; that it is necessary to protect the public right and for the public welfare and safety that the level and flow of the water between said dams within said city be regulated and a maximum and minimum level of water be maintained between said dams within said city; that the said lower dam which is used and operated by the Northwestern Iron Company was erected by said company in the year 1905 at a point immediately east of the bridge crossing Rock river on North Main street in said city and crosses said river from a southwesterly to a northeasterly direction; that for more than thirty years prior to said 1905 no dam of any kind was in existence at or near said point; that the present lower dam erected in the same year 1905 was at first erected with a fishway and open space for surplus waters to flow through, but that for more than three years no opening of any kind is or has been in said dam; that said lower dam spans said river at said point for a distance of about 95 feet and has a head of about 9 feet; that under and pursuant to chapter 29, private and local laws of 1854, the said Northwestern Iron Company obtained its power to construct a dam at said time, but that by long discontinuance and disuse the said Northwestern Iron Company has forfeited its right; that since said time certain flowage rights have been inserted in all deeds of premises sold along said river, but that no such flowage rights exist further up on said river than lot 7, block 13, of the original plat of the city of Mayville; that said terminal point of the flowage right reserved in deeds as aforesaid is at least 700 feet from the dam referred to herein as the upper dam; that the only other flowage rights of said Northwestern Iron Company permitted by said lower dam are contained in a certain lease dated May 3, 1848, in and by which it is expressly provided that "said dam so to be erected by said party of the second part, his executors, administrators and assigns, on the Rock river on any portion of said sections 14 and

13, shall not be raised so as to cause the water to flow or back up near to the flour or grist mill already erected by said party of the first part on the same stream more than 15 rods from or below said mill so as not to hinder or molest by flooding the operations of said mill"; that it was further provided in said lease that the parties of the second part were to so "erect their dam with waste gates or flash boards as to be able to draw off any surplus water in time of flood or freshets, with as little delay as the nature of the case will permit, and that they will not hinder or molest by flooding any operations for manufacturing purposes," etc.; that the mill was at that time located at least 500 feet below the present location of what is termed herein as the upper dam; that in the year 1908, after the completion of the cement dam herein referred to and known as the lower dam, the said Northwestern Iron Company purchased from the F. Paus-tian Milling Company a certain mill property and with it that certain dam described herein as the upper dam; that said upper dam spans said river for a distance of 150 feet, including a mill race, and crosses said river from west to east at a point which is about the west terminus of Horicon street in said city; that the construction of said dam is of wood and is such that in case of heavy spring freshets the same is apt to break and cause heavy floods along said river within said city; that the distance along said river between the upper and lower dams is about one mile; that at all times during the year the level of the water between said two dams is such that the lower dam backs up the water into the upper dam contrary to the flowage right hereinbefore referred to; that by reason of the foregoing and of the height of the lower dam large areas of land belonging to the petitioners and other property owners similarly situated are overflowed, contrary to the flowage rights of said Iron Company; that by reason of the premises the water raised at least two feet higher than it should under the flowage rights permitted as hereinbefore mentioned; that by reason of the height of said dam and the failure of said Iron Company to provide said lower dam with proper spillway or gateway and further by reason of the construction of the upper dam, during spring freshets the property along said river has been greatly damaged, and with present conditions existing and continuing to exist the owners of said property have good reason to believe that irreparable injury will result to them; that during the spring of 1913 all the basements along said

stream became filled with water, and many business houses suffered damage; that a foot bridge built across said stream by the said city was torn away; that by reason of the absence of a spillway on the lower dam the water backed up over the ice and created a very dangerous state of affairs; that repeated notices have been given to the Iron Company to remedy the situation but that said company has neglected and refused to take any steps to remedy the situation; wherefore, petitioners pray that the flow of water between said upper and lower dams be investigated, regulated and controlled; that a maximum and minimum water level be established and maintained; that the rights of said Iron Company and the petitioners herein be determined; that the said lower dam be lowered and provided with spillway or floodgates capable of permitting the passage through or over the same of freshets and floods during all seasons of the year, and for such other and further relief in the premises as may be just and proper.

The matter came on for hearing on October 15, 1914. The petitioners were represented by *Emil H. Naber*, of *Naber & Wheeler*, and the respondent Northwestern Iron Company by *Elias H. Bottom*, of *Flanders, Bottom, Fawsett & Bottom*.

The evidence in this case shows that in the spring of 1913 much damage was done to property in the city of Mayville because of water backing up between the lower and upper dams. An ice gorge seems to have formed and prevented the water from flowing over the dam. A recurrence of such event is likely unless a remedy is provided for disposing of the surplus water in case of flood.

The engineer of the Commission was required to make an investigation of the situation. His report which was submitted upon the hearing is as follows:

“There are no floodgates in this dam, but a concrete spillway, 94 feet long, extends over the entire length of the dam between the retaining walls on either bank of the river. The distance from the top of the spillway to the top of the retaining walls is 3 feet. The height of this dam to the top of the spillway is 8 feet and 9 inches. The maximum discharge capacity of the dam, with water level with the top of the retaining walls, as computed from tables for discharge over weirs of various types, is 1,820 cubic feet per second, or about 2,065 cubic feet per second less than the maximum discharge capacity of the upper dam and plant.

“The banks of the river between the upper and lower dam in some places are low and swampy, while the remainder slope to

the river at the rate of about 10 feet in 100 feet. The river bottom is rocky.

“The flow or run-off of a stream depends upon several things, the most important of which are as follows, the first mentioned being the direct cause of run-off, while the remaining four are influences which affect the rate and manner in which this precipitation is carried away:

“1.—The amount and intensity of precipitation.

“2.—The character of soil and steepness of slopes.

“3.—The amount and distribution of the precipitation, over a period of days previous to the final rainfall which produces flood.

“4.—Natural and artificial storage features in the drainage basin.

“5.—The amount of snow on the ground which, in connection with certain temperatures and rainfall conditions on frozen ground, may produce flood.

“Another fact which must be given consideration is, that larger floods are possible on smaller drainage areas, because maximum rainfall conditions do not extend over large areas. On a watershed of 170 square miles a heavy rain is more apt to cover the entire area, while with a drainage area of 500 or 1,000 square miles, heavy rainfall usually covers only a part of the area, so that run-off conditions will be somewhat modified.

“The Rock river above Mayville has a drainage area of about 170 square miles. This land is practically all under cultivation and free from timber. There are not many swamps on this portion of the Rock River watershed, and those which do exist there are not very extensive. Land in this vicinity is mostly high and rolling. The presence of extensive swamps and marshes, such as the Horicon marsh, on the west fork of the Rock river, indicates natural storage reservoirs, while absence of swamps, such as on the east branch of the Rock river, indicates small natural storage to rainfall. The result is that with conditions such as those existing above Mayville on the Rock river, there is a rapid run-off in freshet time or in time of precipitation which has lasted for from ten to fifteen days and is terminated by a heavy rain. This produces flood.

“The drainage area of the Wisconsin river between Tomahawk and Merrill is about 700 square miles. There is a very rapid drainage area. Floods of 40 cubic feet per second per square mile have existed at Merrill due to run-off from this area. Measurements of stream flow on the Spirit river at Spirit Falls show that floods of 27.5 cubic feet per second per square mile have occurred. The drainage area of this river above the dam at Spirit Falls is 96 square miles. This drainage area is a very rapid one. The banks are mostly steep and rocky. The topography of the water shed is steep, so that for even moderate rain-falls this river rises to a flood stage. The drainage area of this stream is somewhat smaller than that of the Rock river above Mayville, but there is not as much of the former watershed under

cultivation as of the Rock river. On the Wisconsin river above Tomahawk, and especially above Rhinelander, flood conditions are somewhat different. The gradual slopes of the river, together with the many inland lakes, swamps and depressions which have their outlet to the river only by seepage through the ground, modify the flood peaks considerably. The Wisconsin river, in part, flows over pervious beds of sandstone and a considerable amount of the water falling on its drainage area is undoubtedly lost through absorption by the underlying strata. These losses undoubtedly affect the flow of the stream to a considerable extent. The bed of the Rock river, on the other hand, is less pervious and very little water is lost on account of absorption.

"No records of rainfall on the watershed of the upper Rock river are available, but existing rainfall records at stations located at Appleton, Fond du Lac, Manitowoc, Oshkosh, Ripon, Baraboo, Lake Mills, Portage and Watertown show that precipitation in the past has been a little heavier in this vicinity than on the upper Wisconsin. Although the precipitation at these various places does not affect the flow of the Rock river, they are indicative of the rainfall which does affect the flow on the Rock river watershed.

"By making comparisons with the run-off conditions of various other rivers in Wisconsin with which the writer is personally acquainted, and after making a study of the rainfall and topographic conditions on the watershed of the Rock river above Mayville, the writer has concluded that it is reasonable to expect a run-off on the Rock river at Mayville of 20 cubic feet per second per square mile. This figure is considered by the writer as being a conservative estimate of the maximum run-off, and it is estimated that it is possible in extreme flood conditions to obtain a flood as high as 25 cubic feet per second per square mile. With a run-off of 20 second-feet per square mile, the discharge in the river at Mayville would amount to 3,400 cubic feet per second. With a run-off of 25 second-feet per square mile, the discharge at Mayville would be 4,250 second-feet, or about 365 second-feet in excess of the discharge capacity of the upper dam with all stop-planking removed from the gates. With this last condition the flood peak would perhaps last for only a few hours.

"A survey of the Rock river in Mayville was made on March 10, 1914. On the date of this survey the water on the spillway of the lower dam was 0.2 feet deep. The map of this survey is attached.* It shows the shore lines of the river with water 0.2 feet deep on the spillway of the lower dam, and the topography along both sides of the river banks between the upper and lower dams, and the land which is flooded for each foot rise of water above the spillway of the lower dam. The flooded lands for each foot rise are indicated by contours, having a one foot interval. A study of hydrographs of various river shows that in time of

* Maps and plates mentioned in this report are not reproduced here.

flood the river rises from its low stage to the flood stage and then drops back again to the low stage. The time required for the water to rise from its low stage to the peak of flood and then down again to normal is controlled by so many factors that the actual time for flood duration can not be computed for special places, but can only be obtained by actual experiment.

“Where drainage area is large the length of time for flood duration is usually greater than where the drainage area is small. The flood peak is highest in the vicinity of heavy rain and is gradually flattened out as it is carried down stream.

“An attached blue print, Plate 4, shows a typical gage height curve. This curve shows the flood periods, their general length of duration and general fluctuations of gage height, on Kinzua creek at Dewdrop, Pa. The drainage area of this stream above Dewdrop is 162 square miles. According to the report of the Pennsylvania Flood Commission in 1911, the greatest range in gage height was 11 feet. This stream has a steep drainage area, topography being heavy, so that floods rise to a greater height than could be expected on the Rock river above Mayville, but they do not last as long on Kinzua creek as they do on the Rock river, so that this hydrograph can only be used comparatively to show length of flood duration on the Rock river.

“The upper dam of the Northwestern Iron Company in the village of Mayville, with water level with the tops of dykes and all stop-planking removed from the gateways, can discharge 3,885 cubic feet per second, or about 23 cubic feet per second per square mile, so that, should a flood of 20 cubic feet per second per square mile occur, the upper dam would discharge the water as fast as it carried from the various creeks and streams tributary to the Rock river above that point; the lower dam would accordingly have to pass the same amount of water over it in order to prevent a washout below.

“The following table gives the discharge capacity for the lower dam for various depths of water on the spillway:

Depth on spillway in feet.	Discharge capacity— cu. ft. per sec.	Discharge capacity— cu. ft. per sec. per sq. mi.
0.2	31	0.18
1.0	320	1.8
2.0	890	5.2
3.0	1,820	10.7
4.0	2,524	14.8

“From the above table it can be seen that when the water is 0.2 of a foot deep on the spillway of the lower dam the flow of the river is very close to 31 second-feet or 0.18 of a second-foot per square mile. It is estimated that, should the flow be increased to 320 cubic feet per second, the water would rise to a

depth of one foot on the spillway. This would cause the water to rise one foot between the two dams and flood all land shown below the 101 ft. contour on the attached blue print. A depth of 2, 3, and 4 feet on the lower dam would cause a rise of 2, 3 and 4 feet on the pond between the two dams. If ice jams were to occur above the dam the water above the jam would rise without raising the head of water at the lower dam.

“The following table gives, in minutes, the time required for water to rise from the top of the spillway of the lower dam to various contours, with a flow of 10 and 20 second-feet per square mile, assuming the river to be free from ice jam between the dams:

“Assumed flood flow in:

Contour.	Sec.-ft.	Cu. ft. per sec. per sq. mile.	Time in minutes.
101	1,700	10	12
	3,400	20	5
102	1,700	10	32
	3,400	20	13
103	1,700	10
	3,400	20	25
104	1,700	10
	3,400	20	45

“From the foregoing table it can be seen that, should a flood of 10 second-feet occur, the back water from the lower dam would flood considerable land between the two dams. Such a flood may occur every year. Elevations were taken at various points to determine the elevation of the high water of last spring. This elevation was 104.3 or about 0.3 of a foot above the 104 foot contour. With a flood flow of 20 cubic feet per second per square mile the water would rise to elevation 104.3 in about an hour. If ice jams were to form between the two dams the water would rise to this height in a shorter time. According to Mr. Means of the Northwestern Iron Company, this is what occurred during the spring of 1913. As already stated, these floods do not come up immediately, but require considerable time, depending upon the condition of the ground and intensity of the rain.

“On the date of this investigation, March 10, the water in the spillway of the lower dam was 0.2 of a foot deep. This dam is narrower than the river at any point between the two dams. Soundings were taken at various places along the river bottom by chopping holes through the ice and measuring from the surface of the water to the bottom of the river. In every case the river was found to be over two and one-half feet deep. These measurements were taken near the middle of the stream. The smallest cross-section area of water was on the spillway, where

the length of the section was only 94 feet long and 0.2 of a foot deep. At all other places the cross-section area was much greater, in fact the river was much wider at every other place.

"Levels were run on the ice, beginning with the top of the spillway of the lower dam, the elevation of which was taken as 100.0 feet. The elevation of the water about 10 feet upstream from the lower dam was 100.3 feet. The surface of the water from this point to the upper dam was found to be practically level, so that, if the depth of water on spillway of the lower dam were increased by 0.2 of a foot, the water between the two dams and just below the upper dam would be raised a little more than 0.2 of a foot, and further, since the cross-section area of the river between the two dams is so much greater than the cross-section area of the water on the lower dam when the water on the spillway is only 0.2 of a foot deep, if the head of water is lowered a foot the depth of water between the two dams will be decreased a foot.

"According to Mr. Kliefoth and Mr. Naber of Mayville, rights of the Northwestern Iron Company to back water extend to a point 15 rods north of a point where an old grist mill at one time existed. This grist mill was just north of a grist mill now existing and marked "Power House" on the attached blue print.

"The water at this point near the middle of the stream varies in depth from three to three and a half feet so that, if the head at the dam were lowered a foot, the water at the site of the old grist mill would be lowered a foot, indicating that backwater at that place was at least a foot deep."

From observations and study of the situation we are satisfied that the lower dam of the Northwestern Iron Company is not capable of carrying off flood water without materially raising the water over the top of the spillway. According to the testimony given, the water at one time rose to a depth of 33 inches on the top of the spillway of the lower dam, or within three inches from the top of the concrete retaining walls on either end of the dam. For a rise of 33 inches at the dam there would be a rise of almost 36 inches in the neighborhood of Mr. Kliefoth's house. With a rise of 33 inches at the dam it would be necessary for Mr. Kliefoth and several other property owners on the east side of the river to use a boat to pass in and out of various buildings on their lands. A rise of 16 inches or two feet at the dam would cause considerable land upstream to be flooded.

When the gates at the upper dam are opened the water between the two dams begins to rise, as the gates at the upper dam have a greater capacity than the spillway of the lower dam, and the water on the spillway must rise to a considerable depth before it can discharge any great amount of water. It is a mistake

to think that because the spillway begins to act as soon as the water rises to such a height that it will flow over it, that the water will stay at that level. We believe that the lower dam should be equipped, according to the best engineering practice, with a gate or gates that can be opened to a point five feet below the top of the present spillway, and for a total clear opening for water passage of 27 feet in length. It is considered advisable to have only one gate, with a clear opening 27 feet long, rather than several gates of shorter length. A single long gate will make it easier to dispose of ice flow, for ice is less apt to jam in the gates. The bottom of the river on the upstream side of this gate should be dredged out to a level at least as low as the bottom of the new gate which is to be constructed. The objection raised by the Northwestern Iron Company that there might be a possibility of not being able to close the gate after it has been opened is negligible, as the gate should be so constructed that it can be closed. A high water mark should be established and when the water reaches this height the gates should be opened immediately. After giving the matter careful consideration we are of the opinion that a limit of six inches above the top of the present spillway is the point which should be the highest stage at which the water should be held in flood time, and that the gates should be opened when this elevation is reached. This we believe allows sufficient variation between the top of the spillway and the high water mark, so that the dam operators will be obliged to open and close the gates very frequently. The present height of the dam is not dangerous, and we believe that the crest of the present spillway should remain the same as it is.

NOW, THEREFORE, IT IS ORDERED, That the Northwestern Iron Company be and the same is hereby ordered to construct one gate in said lower dam with a clear opening of 27 feet in length, *and of sufficient width so that said gate may be opened five feet below the top of the present spillway,** and that the bottom of the river on the upstream side of such gate shall be dredged out to a level at least as low as the bottom of the gate to be constructed.

IT IS FURTHER ORDERED, That the maximum height of the water permitted by said dam shall not exceed six inches above the top of the present spillway, and that when the water shall reach such height the said Northwestern Iron Company shall open said gate to allow said water to escape.

July 1, 1915, is deemed a reasonable time within which to complete the work herein ordered.

*Matter in italics omitted from original order through inadvertence and inserted by supplemental order dated May 13, 1915.

IN RE APPLICATION OF THE LONG LAKE IMPROVEMENT ASSOCIATION FOR AN ORDER REQUIRING THE WISCONSIN-MINNESOTA LIGHT AND POWER COMPANY TO MAINTAIN A MAXIMUM AND MINIMUM LEVEL OF WATER ON LONG LAKE, WASHBURN COUNTY, WISCONSIN, AND FOR OTHER PURPOSES.

Submitted Sept. 22, 1914. Decided Jan. 30, 1915.

Application was made to the Commission by the Long Lake Improvement Association to determine maximum and minimum levels of water in Long Lake, Washburn county. The petitioner alleged that the dam at present maintained at the foot of the lake by the Wisconsin-Minnesota L. & P. Co. is so used as to cause great variation in the level. Testimony was given to the effect, among others, that during high water springs and boat houses along the border of the lake are flooded, while during low water marshes are created, fish-spawn killed, and boat landing places made inaccessible. The lake is used by the owner of the dam as a storage reservoir so as to provide it with sufficient water for the operation of its power plants further down the waterways. The constant raising and lowering of the level was said to erode islands in the lake, carrying away much desirable private land, and destroying scenic effects. The company claimed unreserved flowage rights to most of the land surrounding the lake, and prescriptive rights for the land not so covered. The latter rights, however, were denied by the petitioner.

Held: That the lands bordering Long Lake are being affected by the existence of the dam and the raising and lowering of the waters;

That in the absence of sufficient proof, the prescriptive rights alleged cannot be presumed to exist; that the lands not burdened with flowage rights are entitled to protection, and that the claim that the majority of the land is so burdened does not impair the right of the other to protection; and

That a maximum level of 6 feet at the gage board with a maximum variation of 12 inches, with an additional permissible variation of 3 inches over the maximum height in case of flood, will provide protection from flooding for border structures and afford the company sufficient storage capacity for power purposes.

Order: That the Wisconsin-Minnesota L. & P. Co. maintain the level of Long Lake between a maximum of 6 feet and a minimum of 5 feet on the gage board, provided that in case of flood the maximum may be raised three inches.

The application in this matter was filed with the Commission on July 14, 1914. Hearings were held on August 6, 1914, and September 22, 1914. The former hearing was held in the town hall at Long Lake, while the latter was held at Madison.

Appearances were *Elmore T. Elver* for the petitioner and *A. E. Pierce* and *Charles McPherson* for the respondent.

This action was brought by residents on the borders of Long Lake in Washburn county, Wis. In their testimony and their application they allege that the dam which is at present maintained at the foot of Long Lake by the Wisconsin-Minnesota Light and Power Company is so used by this company as to cause great variations in the level of that lake. As a result of this variation great damage has been done to the property of the applicant. Testimony was introduced to show that during periods of high water springs and boat houses along the border of the lake were flooded, while during periods of low water it was not possible for the boats to reach their landing places. Islands in the lake, it is claimed, are being eroded due to the great variations in the level of the water and as a consequence much desirable private land is being carried away. The scenic effects are also being destroyed by the constant raising and lowering of the lake level. Witnesses pointed out that fish spawn were being killed during the low stages of the water due to the insufficient depth of the same. During periods of low water it was also claimed that marshes were created along the lake which permitted the breeding of mosquitos and also cause noxious odors to exist. Evidence was introduced to show that crops along the lake were destroyed due to flooding. The applicant on the ground of the existence of these facts asks that this Commission determine maximum and minimum levels for the lake and to direct that permanent bench marks be erected.

The owner of the dam through assignment, the present Wisconsin-Minnesota Light and Power Company, in its testimony denied a number of the allegations of the applicant and stated that it had unreserved flowage rights to most of the land surrounding the lake. Prescriptive rights were also claimed for the flooding of all of the other land around the lake because of the fact that this land had been flooded since the existence of the dam.

It appears from the testimony that Long Lake is used as a storage reservoir by the respondent in this case so as to provide it with sufficient water for the operation of its power plants farther down the waterways. During periods of low water at the power plants the water from the lake is released, thus causing the low stages complained of. When additional water is

not needed for the operation of these plants the water is stored at Long Lake with resulting increases in the lake level.

The evidence in this case clearly shows that the lands bordering Long Lake are being affected by the existence of the dam and the raising and lowering of the water. The existence of prescriptive rights to flood the land upon which reserved rights to affect this result are not held; is disputed by the applicant and in the absence of sufficient proof we must presume that such rights do not exist. Where some lands bordering bodies of water are burdened with flowage rights while other lands are not, the latter parcels are entitled to protection from flooding and the claim that the majority of the land is burdened with flowage privileges does not impair the right to such protection.

In the light of the above statement it is important that some protection be afforded the applicant.

At the hearing it was pointed out that the level of the lake at the time of the building of most of the bordering structures was about eighteen inches below the existing level. It seems to be general opinion that the maximum limit should be placed at this point.

Our engineer made some observations as to the level of the lake at the time of the hearing. These observations were checked by the engineer for the complainants. The result of running levels showed that the reading at the gage board should have been 7.54 while the actual reading was 7.55. For all practical purposes either figure can be accepted as correct.

From the point of view of the applicant it is highly desirable that the level of the lake shall be as constant as is consistent with conditions. The respondent, however, desires sufficient storage capacity to provide water for its lighting and power business. In fulfilling the latter requirement our engineer states that it will not be very material at which height the maximum is placed when once the amount of variation is decided upon, i. e., the amount of water which can be drawn off with a given permissible variation will be approximately the same at various maximum levels. It is highly desirable, on the other hand, that border structures now existing on the lake should be protected from flooding. From the testimony it would appear that at a maximum height of 6 feet at the gage board such protection will be provided for. A maximum variation of 12 inches will probably afford to the respondent sufficient storage capacity for

power purposes. In cases of flood it may be difficult to immediately reduce the level to the maximum permissible level. In such cases an additional variation of three inches for a limited period of time might reasonably be provided for.

IT IS THEREFORE ORDERED, That the Wisconsin-Minnesota Light and Power Company maintain the level of Long Lake, located in Washburn county, Wis., between the maximum level of 6 feet and the minimum level of 5 feet as represented by the readings on the gage board which was in place at the time of the hearing. The maximum set forth represents an elevation of 101.07 feet when referred to the center of the steel bridge on the upstream side, such bridge being located about 300 feet below the dam. The minimum permissible level when referred to this bench mark shall be 100.07 feet.

In cases of flood due to rain or rapidly melting snow, the maximum level may for a period of not to exceed twenty-four hours be raised to three inches.

Permanent bench marks will be set by this Commission early in the spring.

IN RE APPLICATION OF THE NEW RICHMOND ROLLER MILLS COMPANY FOR A FRANCHISE TO MAINTAIN A DAM TO DEVELOP HYDRO-ELECTRIC POWER NOT IN EXCESS OF 250 HORSE POWER IN APPLE RIVER IN THE NORTHEAST QUARTER OF THE NORTHWEST QUARTER OF SECTION 14, TOWNSHIP 31 NORTH, RANGE 18 WEST, IN ST. CROIX COUNTY, WISCONSIN.

IN RE APPLICATION OF C. W. ARNQUIST, J. M. ARNQUIST, AND KATE THOLIEN OF NEW RICHMOND, ST. CROIX COUNTY, WISCONSIN, FOR A FRANCHISE TO CONSTRUCT, MAINTAIN AND OPERATE A DAM AND HYDRAULIC PLANT AND FOR OTHER PURPOSES ON APPLE RIVER IN THE TOWN OF STAR PRAIRIE, SAID COUNTY.

Submitted May 28, 1914. Decided Jan. 30, 1915.

This proceeding involves two independent applications for a franchise under the 1913 Water Power Act,—secs. 1596—50 to 1596—79, inclusive, of the statutes. The New Richmond Roller Mills Co. desires a franchise to maintain and operate its "McClure dam," which it constructed on the Apple river in St. Croix county prior to the taking effect of the 1913 Water Power Act and which it desires to operate in conjunction with its previously constructed "Huntington dam," in order to use the combined energy of the two in generating power for the city of New Richmond and for other purposes. The other applicants, C. W. Arnquist, J. M. Arnquist, and Kate Tholien, desire a franchise to construct, maintain and operate a dam and hydraulic plant on the same river somewhat below the McClure dam. They propose two sites for a location, one of which, "site B", if adopted, would make impossible the continuance of the McClure dam, as the pondage contemplated for the dam there planned includes that now belonging to the former. The other, "site A," would not interfere with the McClure dam. Site "B," however, is favored by the applicants on account of the greater development possible at that point. They oppose the granting of a franchise to the New Richmond Roller Mills Co. on the grounds that the McClure dam was constructed without legislative authority and is thereby a public nuisance; that the dam is not a safe nor substantial structure; and that the dam they propose and favor is adapted to the service of furnishing variable power during 24 hours of the day, and that such is not the case with the McClure dam. Two other questions involved were the propriety of the company's application under subsec. 2 of sec. 1596—60, which relates to future developments of not more than 250 horse power, and whether, in view of the provisions of subsec. 6 of sec. 1596—69, the company can apply for the franchise in question, intending to couple up the water power to be developed by its McClure dam with that already

developed by its Huntington dam, thereby completing a development of more than 250 horse power without incorporating under the Water Power Act.

The physical situation involved was considered. The flowage of the river in question was investigated, and a study made of the efficiency and possibilities of the several projects concerned. The provisions of the Water Power Act involved were also examined with respect to the individual applicants' contentions.

Held: That the company need not incorporate under the Water Power Act in order to apply for a franchise, since it is not a "grantee" of a franchise under the section in question and therefore not embraced within its terms, and that, as it does not appear from an investigation that the development for which the franchise is desired can consistently generate more than 250 horse power of useful energy, the application was properly made under subsec. 2 rather than subsec. 1 of sec. 1596—60;

That the construction and operation of the McClure dam without authority from the legislature or the Commission, as contended by the individual applicants, is not, under the circumstances of the present case, a nuisance under the Water Power Act, since the dam was completed prior to the taking effect of the act and the act does not make the obtaining of a franchise essential to maintenance and operation until six months after its passage and publication;

That the McClure dam is safe, and that the total horse power, which could be furnished by it, and the smaller dam at "site A," suggested but not favored by the other applicants, would exceed that furnished by the single high head dam favored by the latter, except during the peak period, and that such period is not of sufficient length to justify the destruction of the McClure plant on account of the superior efficiency of the higher head dam;

That, all things considered, the company should be granted a franchise to operate the McClure dam under subsec. 2 of sec. 1596—60 of the Water Power Act as long as the power there generated does not exceed 250 horse power, and that there is nothing in the statute to prevent the joint operation of the two dams, as the Huntington dam was a legal structure before the passage of the Water Power Act, and is not within the purview of the act nor under the jurisdiction of the Commission; that the McClure dam, however, should be supplied with fishways; and,

That the other applicants, C. W. Arnquist, J. M. Arnquist, and Kate Tholien, be granted authority to organize and incorporate under the Water Power Act, and that they also be granted a franchise to construct and operate a dam under subsec. 1 of sec. 1596—60, provided that such dam and pondage shall in no manner interfere with the New Richmond Roller Mills Co's McClure plant.

Order: That the New Richmond Roller Mills Co. be granted a franchise under subsec. 2 of sec. 1596—60, to operate a dam and plant at the so-called McClure site on the Apple river in St. Croix county, and that such company provide the dam with an adequate fishway, sixty days being deemed a reasonable time for such construction;*

That the other applicants be granted permission to incorporate under the Water Power Act, and that such corporation be granted a

*Application on file with the Commission for relief from that part of the order requiring the construction of fishways, action on which is pending.

franchise to construct and operate a dam for the generation of more than 250 horse power of energy at site "A", or any other site on the Apple river, at which, when the dam is completed, there will be no impairment of the riparian rights under franchise of the New Richmond Roller Mills Co., or any other grantee, either by virtue of legislative enactment or under the Water Power Act; that if such a dam is constructed, it shall be a stable structure and equipped with adequate ways or chutes for the passage of fish, and

That all grants in the order are made subject to all of the restrictions and provisions applicable under the Water Power Act (sec. 1596—50 to 1596—79, inclusive).

There are two applications for franchise under the Water Power Act of 1913, chapter 755, laws of 1913, being secs. 1596—50 to 1596—79, inclusive, of the statutes involved in this case, one by the New Richmond Roller Mills Company for a franchise to maintain and operate a dam already constructed by it on the Apple river in section 14, township 31 north, range 18 west, of St. Croix county, and the other by C. W. Arnquist, J. M. Arnquist, and Kate Tholien to construct, maintain and operate a dam and hydraulic plant in the town of Star Prairie, St. Croix county, at a site about one mile below the dam of the first petitioners. As the situs of the now constructed dam of the first petitioner is included in the proposed situs and pondage of the other, it will, of course, be impossible to grant both petitions according to their original terms. Therefore, the objectors to the application of the New Richmond Roller Mills Company, the second applicants, become in turn applicants in the second case, to which the New Richmond Roller Mills Company appears as objector. As the same parties are interested in both applications, but in reversed positions in the two, the two cases were heard together in order to settle the conflicting claims.

The application of the New Richmond Roller Mills Company to operate the dam in question, commonly known as the McClure dam, was made under the provisions of sec. 1596—60, subsec. 2 of the statutes, which provides that franchises authorizing the construction, maintenance and operation of dams on other power sites on which there cannot be developed more than two hundred and fifty horse power of hydraulic or hydro-electric power may be granted to any person, firm, or corporation organized under the laws of Wisconsin. The applicants state that they do not believe that the Apple river is navigable for any purpose, but that they waive this question in making their application. After due publication of notice of such application, a hearing was held

at the office of the Commission in Madison on December 18, 1913, at which there appeared the other applicants, C. W. Arnquist, J. M. Arnquist, and Kate Tholien, objecting to the grant of the application of the New Richmond Roller Mills Company and at the same time filing a petition for a franchise to form a corporation for the purpose of constructing and operating a dam and hydro-electric power plant one mile below said McClure dam.

A second hearing was held at the city hall at New Richmond on May, 28, 1914. The appearances for both hearings were *W. F. McNally* for the New Richmond Roller Mills Company, and *N. O. Varnum* for the objectors. *Hon. W. C. Owen*, attorney-general of Wisconsin, appeared on behalf of the state.

The reasons advanced by the objectors against granting the franchises prayed for to the petitioner were

1. That the McClure dam was constructed without legislative authority and is thereby a public nuisance;
2. That the petitioner now operates another dam about three-fourths of a mile above the one in question, known as the Huntington dam, which supplies the petitioner with power sufficient for its purposes;
3. That the said dam is not a safe or substantial structure and
4. That its position and that of the pondage above it operates as an obstruction to navigation upon the Apple river.

It appears from the testimony that the New Richmond Roller Mills Company acquired the franchise to construct the Huntington dam on the Apple river through legislative enactment, and having constructed the McClure dam before the Water Power Law of 1913 went into effect, now desires to operate it in conjunction with the Huntington dam to effect a "coupling up" according to the terms of the statutes. The petitioner's Huntington dam is not, however, further concerned in the present case.

The petitioner's McClure dam is about three-fourths of a mile below the Huntington dam, has a head of 13 feet and pondage of approximately 35 acres. It consists of a timber framework with a filling of rock, and according to testimony of those acquainted with it and the opinion of our engineers, it is sufficiently stable to withstand the pressure upon it, so the argument of the objectors as to its lack of stability will be dismissed without further consideration.

Two sites for location of their dam and power house are proposed by the Arnquists and Tholien in their counter-petition. C.

B. Stewart, a consulting engineer in their employ, filed a report in connection with their application, in which the two plans are discussed. The plan found in the Stewart report to be the most favorable and hereinafter referred to as plan No. 1, is for the construction of a dam at Arnquist site "B", as indicated on the map, three-fourths of a mile downstream from the McClure dam, at which there will be a headway of 22.9 feet and pondage of 210 acres. It is also tentatively considered in this connection to locate the power house some distance below the dam on a body of water known as Heron Lake, and conducting the water from the pond to the power house by means of an artificial canal, by which an additional headway of 1.5 feet could be obtained, making a total of 24.4 feet, and a possible development of 600 horse power.

The 210 acres of pondage contemplated in this plan includes the 35 acres of pondage of the McClure dam site and if constructed would, of course, operate to entirely destroy the latter. The petition of the Arnquists and Tholien would justify this procedure upon the arguments set forth in the "Summary and Conclusions" of the Stewart report, which asserts that a plant with 13 feet head and pondage of 35 acres, namely, the McClure plant, is not adapted to the service of furnishing variable power during twenty-four hours of the day, as there would thereby be a loss of power of from 5 per cent to 22 per cent, but states that a plant with a 22.9 foot or 24.4 foot head and pondage of 210 acres is so adapted, being capable of furnishing approximately 600 horse power normally and a peak load for a four-hour period of 1,600 horse power, with a loss of only about 0.8 per cent.

The second plan proposed, and hereinafter referred to as plan No. 2, is for the location of a dam and power house at the possible site "A", farther downstream from site "B". This would make possible a head of 12.5 feet and a pondage of 240 acres extending to near the foot of the McClure dam, but this plan contemplates no disturbance of the pondage or power of the McClure plant; but it is argued by the counter-petitioners, based on the "Summary and Conclusion" of the Stewart report, that this would not be an efficient arrangement as with an average stream flow of 300 second-feet a 22.9 foot head dam could furnish a peak load for a four-hour period of probably 1,600 horse power, while the combined peak loads of the 13 foot head dam, i. e., the McClure dam, and of the 12.3 foot dam, as contemplated in plan No. 2, would amount to only about 1,125 horse power. Another

argument advanced by the counter-petitioners in favor of plan No. 1 is the economy with relation to pondage. The total pondage of the two dams considered in plan No. 2, that of the McClure dam and of the dam at Arnquist site "A", is about 275 acres, while that of the 22.9 foot head as proposed in plan No. 1 would be only 210 acres. Thus, aside from the greater amount of power available with a single dam, there is a saving of some 65 acres in pondage, which, it is argued, means a saving of some \$2,000 and allows the land not thus taken up in pondage, to be used for other and more profitable purposes. No value is given by the counter-petitioner to the 35 acres of pondage above the McClure dam for adjusting the pressure of the streams to the variable demands for power, although its area is one-sixth of that contemplated in the first Arnquist plan.

As either of the plans contemplated by the Arnquists and Tholien would result in the development of more than 250 horse power, their petition to be granted a franchise to form a corporation under sec. 1596—60, subsec. 1 of the Water Power Act is properly made. The propriety of the petition of the New Richmond Roller Mills Company under sec. 1596—60, subsec. 2, has been the subject of some discussion and should be here considered. The charter of the New Richmond Roller Mills Company states that it is incorporated for the purpose of manufacturing and selling flour, feed and mill products, buying and selling grain, etc., and as it was not, of course, organized as a corporation under the Water Power Act, the principal point involved in considering the validity of its petition for a franchise under sec. 1596—60, subsec. 2, is that as to the amount of power which can be developed at the ordinary stage of water at the McClure dam. If more than 250 horse power can be developed under the foregoing conditions, a franchise under sec. 1596—60, subsec. 2, could not be granted to the New Richmond Roller Mills Company under its present organization and charter. This question is therefore of vital importance in this proceeding.

There are various factors involved in the determination of the amount of power available at any dam site, the chief of which are:

1. Fall or head available;
2. Quantity of water flowing at ordinary stage of the river, i. e. feet per second flowage;
3. Possible efficiency of the mechanical and electrical equipment.

The amount of water flowing in the Apple river varies widely from month to month and year to year, rendering the "ordinary stage" as prescribed by statute very difficult of exact determination. In order to make such determination, reliable measurements of the flow taken at short intervals throughout a long period, and at the point in question, must be available, and no record of such measurements is obtainable.

There is available, however, and the engineers of the Commission have made use of some valuable data of this nature taken at the hydro-electric plant of the St. Croix Power Company, which is located about three miles above the mouth of the river or ten miles below the McClure dam. It is the opinion of the Commission's engineers that the flow at the McClure dam can be approximated with sufficient accuracy for the purposes of this case by applying a factor determined from the drainage areas above the two sites. The drainage area above the McClure dam has been estimated at about 9 per cent of that above the St. Croix Power Company's plant, at which place the flow of the stream has been measured daily and even hourly for at least part of the time for several years.

The monthly and yearly averages of the flow of the stream as measured at the St. Croix plant near Somerset are shown in the following table, the figures having been furnished by the St. Paul Gas Light Company, and the latest figures having been verified by the Commission's engineers:

TABLE I.

AVERAGE FLOW OF APPLE RIVER, WISCONSIN.

Cubic Feet per Second at St. Croix Power Company's Plant near Somerset.

From the relative drainage areas above the two points mentioned, it must be assumed that for every cubic foot of water flowing past the St. Croix Power Company's plant there is 0.9 cu. ft. flowing at the McClure dam where it has a fall of 13 feet. This 0.9 cubic feet produces, therefore, theoretically 1.33 horse power. On account of the losses incident to the operation of the waterwheels and generators, the power actually available at the station switchboard per cubic foot of water flowing per second at the St. Croix dam will be 1.33 horse power multiplied by the combined efficiency of the waterwheels and generators. This efficiency factor is not a very definite or certain one, but the results obtained elsewhere seem to fall generally within the limits of 65 per cent to 80 per cent. In his report on the over-all efficiency of the proposed Arnquist site, Mr. Stewart estimates it to be 72.25 per cent. Using the same efficiency factor as assumed by Mr. Stewart, we find that for each cubic foot per second flowing at the St. Croix dam there is 0.96 horse power of actually usable energy developed at the McClure dam. This, of course, does not apply to abnormally large flows, nor to any beyond the quantity of water which may be available with sufficient continuity to render justifiable any provision for its utilization.

During the last five years (60 months) for which we have flow measurements at the St. Croix dam, it is found from the foregoing table that there were 35 months, or 58.3 per cent of the time, in which the average monthly flow was less than 250 cubic feet per second, limiting the actual horse-power available at the McClure dam to 240 horse power for the same proportion of the five year period. During several of these same 35 months, less than 200 horse power of useful energy was available.

In view of the foregoing facts it does not appear that there can consistently be generated at the McClure plant more than 250 horse power of useful energy, nor is it clear that there is 250 theoretical horse power available with sufficient continuity to put the McClure site in the class of plants contemplated in subsec. 1 of sec. 1596—60 of the Water Power Act. The New Richmond Roller Mills Company is therefore eligible under the provisions of its present charter to apply for a franchise under the foregoing section.

The arguments of the counter-petitioners as to the greater economy in both cost of operation of and amount of power ob-

tainable from one 22.9 or 24.4 ft. head dam instead of two dams with headways of 12.3 ft. and 13 ft., respectively, should be here considered.

Irrespective of pondage the total horse power furnished by the two small head dams is greater than that of one large head. The dam at Arnquist site "B" with the power house on Lake Heron, giving a head of 24.4 ft. will furnish 600 horse power with a stream flow of 300 cubic feet per second, according to the Stewart report, while the two 12.3 ft. and 13 ft. head dams would together furnish 622 horse power with the same flowage.

Thus the power furnished by the single high head dam exceeds that of the two lower head dams only at the peak, which is when a draught is made upon the pondage. As the peak period is only four hours per day, we are unable to recognize the claim of superior efficiency of the higher head dam to the extent of destroying the petitioners' McClure plant.

Again, as the McClure and Huntington plants are to be operated in conjunction with each other; as they are drawn upon for the same purpose, they are very largely drawing for the same peak load, and as a result the pondage of the latter supplements that of the former. The McClure plant, then, has the advantage of the pondage area of the Huntington plant when the two are operated together, which makes possible a higher peak power at the lower plant.

Thus the peak superiority of the single high head plant does not exceed that of the two low head plants as much as might be thought, and the counter-petitioners do not, in their estimates of the relative efficiency of the plants, allow for the increased peak capacity of the McClure plant due to the coöperation of it with the other plant.

As before stated, it is the desire of the New Richmond Roller Mills Company to couple up its Huntington and McClure dams in order to use the combined energy of the two in generating power for the city of New Richmond and for other purposes.

The counter-petitioners argue that in order to do this the New Richmond Roller Mills Company must incorporate under the Water Power Act in order to be eligible to apply for such franchise. They base their argument upon the provisions of subsec. 6 of sec. 1596—69, which reads as follows:

"If the grantee of a franchise under this section, other than a municipality, shall desire to increase the development capacity

of any dam owned and operated by it beyond two hundred and fifty horse power, or if any such grantee shall desire to couple up any developed water power with any other water power or water powers, developed or undeveloped, thereby completing a development of more than two hundred and fifty horse power, application shall be made for a charter and franchise as provided in section 1596—62.”

The provisions of this section do not apply to the New Richmond Roller Mills Company, for neither is it a “grantee” within the meaning of the term as used throughout the Water Power Act, nor is the Huntington dam included within the terms of the section quoted. The “coupling up” referred to applies to dams of less than 250 horse power and to dams for which a franchise has been granted under the Water Power Act, and the Huntington dam is neither of these, and as no franchise has as yet been granted to the petitioner to operate the McClure dam, it is in no sense a grantee.

It is not obligatory, therefore, that the petitioner organize under the provisions of sec. 1596—62 of the statutes in order to become eligible for a franchise under the Water Power Act.

It is contended by the counter-petitioners that the petitioners’ McClure dam is an illegal structure, being constructed and operated with no authority from either the legislature or the Commission. Sec. 1596—59 of the Water Power Act allows a period of six months after which a dam operated without authority shall become a public nuisance. As the dam in question was finished a few days prior to the date at which the Water Power Act went into effect, and even if its construction had not been completed until after the act went into effect, the petitioner could have operated it without a franchise for the period of six months allowed by statute, so that the dam cannot be said to be in any sense a nuisance under the Water Power Act.

After full consideration of the locus and capacity of the McClure dam and also of the dam sites proposed by the counter-petitioners, and in further consideration of all of the equities of the case, we find no reason why the petitioner should not be granted a franchise to operate the McClure dam under subsec. 2 of sec. 1596—60 of the Water Power Act as long as the power generated at this plant does not exceed 250 horse power. There seems also under the statute nothing to prevent the joint operation of the two dams, as the Huntington dam, which was a legal

structure before the passage of ch. 755, laws of 1913, does not come within the purview of the Water Power Act and the Commission has, therefore, no jurisdiction over it.

It appears from the testimony that there are at present no fishways or logways at the McClure dam. There is, perhaps, no need for a chute for the passage of logs, as logs have not been floated down the Apple river for many years and there is little likelihood of their being sent down the river in any appreciable quantities in the future. Fishways, however, are a necessity and the petitioner must construct proper chutes or slides for the passage of fish past its dam.

With regard to the Arnquist-Tholien petition, the Commission will grant to the counter-petitioners the authority to organize and incorporate under ch. 755, laws of 1913, secs. 1596—50 to 1596—79, inclusive, of the statutes and will also grant them a franchise to construct and operate a dam under subsec. 1 of sec. 1596—60, with the condition that such dam and pondage shall in no manner interfere with the New Richmond Roller Mills Company's McClure plant.

Under the foregoing stipulations, the counter-petitioners' proposed plan No. 1 providing for a dam at site "B" with a 22.9 foot head or the 24.4 foot head with the power house on Lake Heron must be dismissed from consideration. As the 210 acres of pondage considered in this plan includes the 35 acres of pondage connected with the McClure dam, the result would be a complete "drowning out" of that plant, and an impairment of the rights of the petitioner which cannot be countenanced by the Commission.

A 9.8 foot head at site "B" will cause a back water up to the foot of the McClure dam, and as this will not interfere with the flowage or fall at that plant, the Commission is ready to grant a franchise to the counter-petitioners for a dam of 9.8 foot headway at site "A". It is also willing to grant a franchise for a dam with a head of 12.3 feet at site "A" as proposed in the Arnquist plan No. 2, as there is under this plan, no interference with the flowage or fall at the McClure dam.

Any other location at which the counter-petitioners wish to construct a dam, the operation of which will not impair the rights of the petitioners and which complies with the requirements in other respects, will be approved by the Commission.

IT IS THEREFORE ORDERED:

That the New Richmond Roller Mills Company be granted a franchise under subsec. 2 of sec. 1596—60 of the statutes to operate a dam and plant at the so-called McClure site on the Apple river on the north half of the northwest quarter of section 14 in township 31 north in the town of Star Prairie, St. Croix county, Wis.

That the New Richmond Roller Mills Company construct a proper and adequate chute or way for the passage of fish past the McClure dam. Sixty days is considered a reasonable time in which to comply with this part of the order.*

That C. W. Arnquist, J. M. Arnquist and Kate Tholien be granted permission to incorporate under the provisions of ch. 755, laws of 1913, and further that the corporation so organized be granted a franchise to construct and operate a dam for the generation of more than 250 horse power of energy at the proposed site "A" as hereinbefore mentioned and described and indicated on the accompanying map,** or at any other dam site or location on the Apple river at which, when such dam is constructed and operated, there shall be no impairment of the riparian rights under franchise of the New Richmond Roller Mills Company or any other grantee, either by virtue of legislative enactment or under ch. 755, laws of 1913.

That if the counter-petitioners construct a dam complying with the specifications mentioned, such shall be a stable structure and shall be equipped with adequate ways or chutes for the passage of fish.

That any and all grants in this order shall be subject to all of the restrictions and provisions applicable under ch. 755, laws of 1913.

* Application on file with the Commission for relief from this paragraph of the order, action on which is pending.

CHRIST WOEHNSNER

vs.

CITY OF MILWAUKEE,
THE MILWAUKEE ELECTRIC RAILWAY AND LIGHT COMPANY,
MILWAUKEE LIGHT, HEAT AND TRACTION COMPANY.

Submitted Jan. 5, 1915. Decided Jan. 30, 1915.

The petition alleges that the order of the Commission in the case of *City of Milwaukee v. T. M. E. R. & L. Co.* Aug. 23, 1912, 10 W. R. C. R. 1, 305, is unreasonable in that it deprives and prevents the respondent from securing a fair return upon its capital invested and in that it provides that the earnings of the suburban railway company should not be considered a part of the earnings of the city railway operated in the city of Milwaukee. The Commission is asked to give consideration to the earnings of the suburban and interurban railways leading from the city as well as to those of the city railways, and in the light of such consideration to so modify its former order that the respondents will have a fair and reasonable return. The order in question directed the T. M. E. R. & L. Co. to discontinue its former rate of 25 tickets for \$1 and to substitute therefor a rate of 13 tickets for 50 cts. The propriety of the requested modification must be determined by consideration of changes affecting the company's financial condition which have occurred since December 31, 1911, as the Commission's order was based upon conditions then existing and knowledge then at hand, and the Commission still is of the opinion that, in the light of such knowledge and conditions, its order was justified.

In passing upon the merits of the desired modification, the present situation is analyzed in detail, and significant changes in the last three years are considered. Such factors in the question as increase in the value of the physical property, increase in maintenance costs, and in labor, materials, and supplies are taken up. Partly on account of the city's recent requirements as to paving the track zone, and also partly on account of its increased needs and demands of various kinds the physical property used for railway purposes has increased 50 per cent since 1910. On the other hand, the 1914 revenues showed an increase over the 1911 revenue of only 3.7 per cent, whereas to maintain the business on the same profitable basis as that of 1911, assuming the same operating ratio, the increase should have been 43 per cent. The percentage of operating expenses, taxes and depreciation to revenues increased from approximately 65 per cent in 1908 to 78 per cent in 1914. The decrease of cash fare passengers, who pay 5 cts. each, since 1900, the more extended transfer privileges and use thereof, the use of automobiles, cycle cars and motor cycles, and the effect of the order in question are other factors which have had an unfavor-

able effect on net revenues. The returns on the cost of reproduction new, including the suburban with the city plants, and making all allowances necessary for adequate service in the city and suburbs and for the full effect of the fare order, show a decrease from 7.38 per cent in 1912 to 3.48 per cent in 1914.

Held: That suburban system earnings and expenses can seldom, if ever, when as closely connected with the city system activities as in Milwaukee, be considered independently in the adjustment of fares or modification of service, and that this principle was recognized in the decision in question, and in the subsidiary cases;

That as a rule, and in the present case, no such intimate relation exists between the activities of interurban cities and the terminal city as between suburbs and their urban center, and that the contention that in the present case the interurban railways leading from the city should be considered in connection with a distribution of the profits of urban operation is not tenable;

That the riding habit in Milwaukee is approaching a more complete saturation than ever before in the company's history, and that since 1910 a new epoch in the local traffic situation has begun, and that the present unfavorable condition can by no means be held to be temporary;

That while the percentage returns for the last two calendar years are not final, no possible adjustments will prevent the conclusion that the revenues during that period have not been sufficient to cover all legitimate demands for the adequate transportation of passengers in the city of Milwaukee and the adjacent suburban territory;

That the increases in the operating expenses and fixed charges of respondents, and the failure of their gross and net revenues to maintain their ordinary annual growth during the past few years, are due to causes wholly beyond respondents' control, and have resulted in net earnings which are now, and for some time have been, considerably lower on the investments than the rates or costs at which it is well known new capital for similar undertakings can in the long run be had;

That justice and the law demand that the rates charged by public utilities for the services they render shall be reasonable to the utilities as well as to their patrons; that had it been foreseen, at the time the order complained of was made, that the tendencies and changes in expenses and earnings involved in the present proceeding were permanent rather than temporary, the order would not have been made; and

That the best interest of the greatest number in matters of this kind can as a rule be best promoted by allowing rates that are high enough to cover the cost of reasonably adequate service, and that, as the rates provided by the order complained of fall short of this, the order in question must be held unreasonable and repealed or abrogated.

Order: That the order in question, *City of Milwaukee v. T. M. E. R. & L. Co.* 10 W. R. C. R. 1, 305, is rescinded, and also (through supplemental order of February 17, 1915, which is published with, and immediately following the principal case, and which so declares the intent thereof) such part of any orders of the Commission entered in the cases of *Cusick et al. v. T. M. E. R. & L. Co.* 1912, 10 W. R. C. R. 314, 336, *Koenig et al. v. T. M. E. R. & L. Co. et al.* 1912, 10 W. R. C. R. 337, 351, and *Village of East Milwaukee v. T. M. E. R. & L. Co.* 1912, 10 W. R. C. R. 358,

369, as might otherwise require the T. M. E. R. & L. Co. or the M. L. H. & T. Co. to discontinue the ticket rate for fare within the single fare limits of the city of Milwaukee existing on August 23, 1912, or to sell tickets in packages of 13 for 50 cts.

The petition in the above matter, filed on December 7, 1914, reads as follows:

“The petition of Christ Woehsner, respectfully shows:

“1. That he is a resident of the city of Cudahy, Milwaukee county, Wis., and is mayor of said city of Cudahy, Wis.

“2. That petitioner is a frequent passenger on the suburban electric railway, owned and operated by the Milwaukee Light, Heat & Traction Company, duly organized and existing under the laws of the state of Wisconsin, conducting street and suburban railway business.

“3. That petitioner is a frequent passenger on The Milwaukee Electric Railway & Light Company, a corporation duly organized and existing under and by virtue of the laws of the state of Wisconsin, conducting street railway business and owns and operates nearly all of the street railway business in the city of Milwaukee.

“4. That on the 23d day of August, 1912, an order [*City of Milwaukee v. T. M. E. R. & L. Co.* 10 W. R. C. R. 1, 305] was made by the Railroad Commission of Wisconsin, upon the application of the City of Milwaukee, ordering The Milwaukee Electric Railway & Light Company to sell 13 tickets for 50 cts. and 26 tickets for \$1; that your petitioner is informed and verily believes that this order is unreasonable and unjust in that it deprives and prevents The Milwaukee Electric Railway & Light Company from getting a fair return upon its capital invested; that in the same order it was provided that the earnings of the suburban railway company should not be considered a part of the earnings of the city railway operated in the city of Milwaukee, and that your petitioner is informed and verily believes that this part of the order is unreasonable and unjust.

“5. That on January 2, 1914, the Railroad Commission of Wisconsin, made an order [*In re Milw. Suburban & Interurban Ry. Rates*, 13 W. R. C. R. 475, 498] authorizing the Milwaukee Light, Heat & Traction Company to charge two cents per mile on its suburban and interurban railway business; that this order was, upon application duly made, amended by the order of October 28, 1914 [*In Re Milwaukee Suburban & Interurban Ry. Rates*, 15 W. R. C. R. 330, 356], ordering the Milwaukee Light, Heat & Traction Company to sell 30 zone tickets for 50 cts. and making other amendments; that the original order of October 28, 1914, is on file with the Railroad Commission of Wisconsin, and petitioner refers to said order so on file; that petitioner believes that the order made on October 28, 1914, is reasonable and just.

"6. That on the 5th day of December, 1914, the Milwaukee Light, Heat & Traction Company brought an action in the circuit court in and for Dane county, Wis., the title being: "*The Milwaukee Light, Heat & Traction Company, plaintiff, v. Railroad Commission of Wisconsin, defendant*"; that in the complaint served upon said Railroad Commission of Wisconsin plaintiff alleges that the order made on October 28, 1914, is unlawful and unreasonable, in that it does not provide for a fair and equitable return upon the capital invested by the plaintiff.

"7. That your petitioner makes this petition for the purpose of asking that the order made on the 23d day of August, 1912, providing for the sale of 13 tickets for 50 cts. and 26 tickets for \$1, be so modified as to provide that the earnings of the suburban railway system owned by the Milwaukee Light, Heat & Traction Company shall be considered in connection with the earnings of The Milwaukee Electric Railway & Light Company, and that the order be so modified that the earnings of the suburban street railway and the city railway shall be combined and considered as a whole; that upon such earnings The Milwaukee Electric Railway and Light Company and the Milwaukee Light, Heat & Traction Company have a fair and reasonable return, and for such other order and relief as the Commission may deem reasonable."

Counsel for the city of Milwaukee stated the objections to the petition in behalf of the city at the hearing held upon January 5, 1915. In substance, counsel stated that the complaint should be dismissed on the ground that under the Railroad Commission Law an individual does not have the right to complain as to the amount of earnings which are made by a corporation under an order of the Commission; that the proper method to test the validity of these orders is through the right of appeal provided in the statutes and that if the method used in the instant case to change the orders of the Commission be tolerated there will never be such a thing as *res adjudicata*. Counsel also stated its position on the right of the respondent, Milwaukee Light, Heat and Traction Company, to operate within the city limits of Milwaukee, holding that this company has no franchise to do business in the city.

The respondent company, The Milwaukee Electric Railway and Light Company, in its answer to the petition, states as follows:

"Now comes the above named respondent, The Milwaukee Electric Railway and Light Company, and answering the petition of said Christ Woehsner, respectfully shows:

"1. Said respondent admits that said petitioner is mayor of the City of Cudahy and a resident of said city and is frequently a passenger on the suburban electric railway system operated by the Milwaukee Light, Heat & Traction Company and on the street railway of the respondent, The Milwaukee Electric Railway & Light Company;

"2. Said respondent admits that on August 23, 1912, the Railroad Commission of Wisconsin entered an order purporting to require the Milwaukee Electric Railway & Light Company to sell 13 tickets for 50 cts. and 26 tickets for \$1, which order, together with the decision on which it is based, is printed in the reports of decisions of said Railroad Commission (10 W. R. C. R. 1 *et seq.*);

"3. Said respondent further admits that said order is unreasonable and unjust in that it deprives and prevents said respondent from getting a fair return upon its capital invested and joins in making such allegation;

"4. Said respondent further admits that on January 2, 1914, the Railroad Commission of Wisconsin made an order providing for uniform rates of fare over the lines of the respondent and said Milwaukee Light, Heat & Traction Company, which order is printed in the advance sheets of the decisions of said Railroad Commission (13 W. R. C. R. 475 *et seq.*);

"5. Said respondent also admits that on October 28, 1914, said Railroad Commission entered an order purporting to modify said order of January 2, 1914; said respondent further alleges that said order unjustly and improperly extends fare limits and reduces rates of fare of said respondent and said Milwaukee Light, Heat & Traction Company;

"6. Said respondent admits that on December 5, 1914, the Milwaukee Light, Heat & Traction Company instituted an action in the circuit court of Dane county against the Railroad Commission of Wisconsin as defendant, in which action it is alleged, among other matters, that said order of October 28, 1914, does not provide a fair and equitable return upon the property of said Milwaukee Light, Heat & Traction Company used and useful in its railway business, and in which suit, among other relief, it is prayed that said order entered October 28, 1914, be vacated and set aside; and said respondent further alleges that said order of October 28, 1914, is unreasonable, unlawful and improper by reason, among other things, of being based on an undervaluation of the property of the respondent and said M. L. H. & T. Co., and by reason of improperly reducing the income and return of said respondent and said M. L. H. & T. Co. and also by reason of depriving said respondent of property without due process of law, denying said respondent the equal protection of the law, violating justice and fundamental principles and being in violation of the constitution of the United States and the constitution of the state of Wisconsin;

"7. Said respondent further denies each and every allegation of fact in said petition set forth and not herein otherwise admitted, qualified or denied;

"8. Said respondent further alleges that divers franchises granted to your respondent and its predecessors by the state of Wisconsin and the city of Milwaukee, and particularly a franchise embodying an ordinance adopted January 2, 1900, all of which were accepted by the grantees, and were and are being performed, constitute contracts under and by virtue of which your said respondent acquired and has the right to charge a cash fare of five cents to each and every passenger on its street railway system and to sell commutation tickets, good for one fare each, in packages of 25 for \$1 or 6 for 25 cts. and that said respondent could not and cannot be required to sell tickets at the rate of 13 for 50 cts. or 26 for \$1 or at any less rate than that of 25 for \$1 or 6 for 25 cts.; and that copies of said franchise were offered in evidence before said Railroad Commission in said proceeding instituted by the *City of Milwaukee v. The Milwaukee Electric Railway & Light Company*, the decision in which was made August 23, 1912, as aforesaid, and which is printed in 10 W. R. C. R., page 1, and said respondent refers to said franchises, and particularly to said ordinance of January 2, 1900, and makes the same a part hereof as fully as if the same were herein set forth at length;

"9. Said respondent further alleges that the return which said respondent for many years has earned and is now earning on its street railway system is less than 5 per cent per annum, whether based on the proper investment therein or on the fair value of the property of the plaintiff used and useful in the conduct of its railway, and that the rate of return which would be earned by said respondent under the rates of fare existing prior to the entry of said order of August 23, 1912, at all times has been and would be less than 6 per cent per annum, whether based on the investment in the street railway property of said respondent or on the fair value thereof, and that said order of August 23, 1912, requires reductions in the fares which will diminish the revenues and return of the said respondent over \$170,000 per year;

"10. Said respondent further alleges that the rates of fare provided for in said order of August 23, 1912, and said order impair the obligations of the contracts belonging to said respondent and deprive the respondent of property without due process of law and deny to said respondent the equal protection of the law, and are in violation of justice and of fundamental principles, and are in violation of the constitution of the United States and in violation of the constitution of the state of Wisconsin."

The respondent company, Milwaukee Light, Heat and Traction Company, filed an answer which admits, denies and alleges

all matters set forth in paragraphs one to seven, inclusive, contained in the answer of The Milwaukee Electric Railway and Light Company just cited. It further alleges that the return which it is now earning and has earned for many years on its railway system is less than 5 per cent per annum, whether based upon the proper investment or the fair value of the property used and useful for railway purposes.

Hearing in the matter was held on January 5, 1915, in the city hall at Milwaukee. *J. P. Beuscher* appeared for the petitioner. *Daniel W. Hoan* and *Clifton Williams* represented the city of Milwaukee. The respondent companies were represented by *Edwin S. Mack* of *Miller, Mack & Fairchild*, and by *James D. Shaw* of *Van Dyke, Shaw, Muskat & Van Dyke*.

Before entering into the merits of this case, it appears necessary to modify certain statements which were made in the petition and repeated in the answers thereto. A reading of the foregoing instruments quoted conveys the impression that the order of August 23, 1912, referred to, intended to establish twenty-six tickets for \$1 as part of the rates of fare. We wish to quote the order before giving an interpretation:

“IT IS THEREFORE ORDERED, That The Milwaukee Electric Railway and Light Company shall discontinue the present ticket rate of twenty-five for \$1 and shall sell through its conductors tickets in packages of thirteen for 50 cts., and each ticket shall entitle the bearer to one continuous passage in the same general direction, with privilege of usual transfers between the single fare points upon the city lines of the respondent. Thirty days is deemed sufficient time to comply with the above order.” *City of Milwaukee v. The Milwaukee Electric Railway & Light Co.* 10 W. R. C. R. 1, 305.

Presumably the intent of this order was to abolish the 25 tickets for \$1 and establish the 13 for 50 cts. ticket in connection with the 6 for 25 cts. ticket then and now in existence. This interpretation was the basis for all computations pertaining to the probable effect of the order in the decision leading up to the order in question, and has also been made the basis of the computation given subsequently in this decision.

Another matter which merits attention pertains to the statement made in the petition that the decision of August 23, 1912, “provided that the earnings of the suburban railway company

should not be considered a part of the earnings of the city railway operated in the city of Milwaukee, and that your petitioner is informed and verily believes that this part of the order is unreasonable and unjust." From this statement included in paragraph 4, and a supplementary statement included in paragraph 7, of the petition, it is apparent that the intention is to establish the allegation that the decision of this Commission (10 W. R. C. R. 1, 305) deemed it untenable to consider the suburban system income accounts in connection with the Milwaukee urban income accounts as a basis for rates of fare. A re-reading of these essential parts of this decision and the suburban decisions issued in conjunction with it, upon the same date, leads us to believe that the allegation contained in the petition is not supported by the content of the text.

For instance, in discussing the feasibility of a 3½ mile central zone within Milwaukee the decision (10 W. R. C. R. 299) says:

"These facts are significant and indicate that some stimulation is necessary to promote the *movement* of population to and from the city to these outlying districts."

In closing, on page 305, the following deduction is made in the opinion due to an analysis of the entire situation within the city of Milwaukee:

"From these and other facts it further appears to us that the extension of the single fare limit into West Allis, Wauwatosa, and to East Milwaukee, as provided in the other orders referred to, should be made."

However, the full meaning of the two short quotations from the city *Three-Cent Fare Case* given above is clearly defined in the suburban decision, *Cusick et al v. T. M. E. R. & L. Co. et al.* (1912, 10 W. R. C. R. 314-336). As to the feasibility of extending the single fare limits to West Allis and reducing the rate of fare, the decision stated on pages 332-333 as follows:

"In determining the cost of service the operating expenses of both companies treated together and separately and the operating expenses of the separate lines carrying traffic to and from West Allis, are all elements to be given due consideration, depending upon their relation to West Allis service.

"From an examination of net earnings by lines contained in the case *City of Milwaukee v. T. M. E. R. & L. Co.* 1912, 10 W. R. C. R. 1, and from a study of the traffic demands by lines contained in the report submitted by the engineer of the Commis-

sion, it appears that the service in question [suburban] is a continuation of city business and more closely allied to urban rather than interurban traffic. City lines having suburban outlets are as a rule upon a better paying basis than city lines without such an outlet. Generally speaking, increased density of traffic in the suburbs is accompanied by increased density of traffic within the city. The number of persons riding upon the car, it appears, is closely related to the population per tributary quarter square mile, and just as increased density of population within the city means a related increase at the outskirts, so it appears that the demand for service within the city is proportionately increased by the demand for service at the suburbs. The suburban or second fare zone is undoubtedly entitled to share the benefits of the increased traffic it occasions upon city lines.

“The basis suggested by the company and upon which it has submitted calculations of estimated net earnings assumes that the traffic between first and second fare points shall be considered as a separate unit. It is difficult to see the justice of this assumption. No line is equally well paying upon each portion of the distance it covers and it is manifestly unfair to expect the farthest extremity to be self-sustaining. It seems clear from the relative traffic contributed by the city and the West Allis suburbs that the net earnings obtained by a separation of revenues and expenses of the first-to-second-fare-zone section are no definite criterion of the value of that traffic to the entire system of which the suburban outlet is a part.

“The limit of any extension must be measured by the paying haul per passenger and per car for the entire line and for the system as a whole. Few suburban extensions are paying at the start and the reasonableness of making additions to the present trackage must be determined largely by the profitableness of urban traffic.”

Particular emphasis in this decision is placed upon the fact that the city system should not only share the expense of the suburban service, but should share the greater proportion (p. 336):

“A consideration of all the factors affecting cost of service, geographical location and traffic conditions, leads to the conclusion that an extension of the single fare line to 62nd avenue is reasonable and would yield both companies combined a fair return upon their investment. Such a change will necessitate an extension of 1.611 miles upon the Wells-Farwell line and 0.44 miles upon the Fond du Lac-National line.

“Upon the assumption that the companies are separate and distinct, the burden of the change in fares can be equitably prorated. By far the greater portion of the terminal expenses or the cost per passenger should be borne by the city company. Only

that part of the movement or passenger-mile costs occasioned upon traction company's property should be charged to the traction company. Such a basis of division would considerably lighten the burden now sustained by the traction company under the present car-hour basis of dividing costs."

In regard to the single fare extension to the suburb Wauwatosa, the decision in the matter, *Koenig et al. v. T. M. E. R. & Co. et al.* (1912, 10 W. R. C. R. 337, 351) states as follows:

"These results indicate that, when the city business is considered, some extension of the single fare limits can be made and the company still be able to earn a reasonable return upon the investment. It is obvious, however, that the suburban business itself is not upon a paying basis, but that an extension must be largely determined on the basis of the paying haul or urban business, and that any reasonable extension cannot comprise the most populated portion of Wauwatosa."

Again, in making the extension to East Milwaukee, the Commission's holdings are in point, *Village of East Milwaukee v. T. M. E. R. & L. Co. et al.* (1912, 10 W. R. C. R. 358, 366, 369):

"The fact that under company's present traffic conditions the suburban line, or that portion extending from the first to second fare points, is not upon a paying basis, is no indication that the traffic contributed by the East Milwaukee patrons is not a profitable addition to the entire Wells-Farwell system. As has been pointed out in that case, one of the elements properly considered in determining the limit of an extension of the single fare limit is the paying haul per passenger and per car.* * *

"In case the proposed rate is continued as a joint rate between the city and traction company, the burden of the expense of the latter can be materially reduced by a reapportionment of costs upon a more equitable basis."

Considering the intent of these quotations, it is hard to see where the allegation in the petition finds any support.

The service within the suburbs adjacent to Milwaukee is in most cases merely an extension of the city service. With few exceptions the same cars operating in the city render the service in the suburbs. There are no doubt instances when the suburban system earnings and expenses are given more or less weight according to the nature of the case, but it is certain that seldom, if ever, can such earnings and expenses, when as closely connected with the city system activities as in Milwaukee, be considered as absolute criteria for the adjustment of fares or

modification of service rendered. This is the doctrine which seems to have been established in the *Three-Cent Fare Case* and the subsidiary cases; and was also considered in the *Suburban and Interurban Fare Cases* decided January 2, 1914, (13 W. R. C. R. 475) and in the amendment of this order on October 28, 1914 (15 W. R. C. R. 330).

In the testimony it was maintained that the interurban railways leading from the city as well as the suburban system should be considered in connection with a distribution of the profits of urban operation. The practicability of such a plan to include the interurban lines seems beset with difficulty. As a rule, no such intimate relation exists between the activities of interurban cities and the terminal city as between suburbs and their urban center. In this case, as in most cases, the high degree of dependency obtaining in the urban and suburban daily life cannot be attributed to urban and interurban conditions. It is obvious that the activities of rural communities, and even of the municipalities tributary to interurban lines, are not as dependent upon urban activities as the suburban.

The only remaining demand of the petition which requires attention in this decision pertains to the abolition of the tickets at 13 for 50 cts. ordered to be sold by the respondent company, The Milwaukee Electric Railway and Light Company, on August 23, 1912. And the basis for such abolition cannot lie in any misinterpretation of the data submitted and considered in the *Fare Case* (10 W. R. C. R. 1), inasmuch as the Commission still believes that under the existing conditions and the knowledge at hand up to December 31, 1911, the above rate was fair to the contending parties. Although the decision was issued in the eighth month of the year 1912, no definite nor comprehensive consideration was given to the operations of the respondent company during that year. The basis for abolition, then, must lie in the changes that have occurred since December 31, 1911, and their effect upon the future.

Physical Property. A number of factors have contributed to the changed conditions which exist at the present writing in the street railway business of the respondent city company. By far the most significant of these have been the additions to physical property. In the *Three Cent Fare Case* the Commission's engineers placed the cost of reproduction new for city railway as of January 1, 1910, at \$9,802,807 which was later adjusted,

due to inclusions for non-operating property, to the amount of \$139,318, bringing the corrected cost new on this date up to \$9,942,125. In computing the last year's income account of 1911, considered in the *Three Cent Fare Case*, the cost new as of January 1, 1911, \$10,514,201, was used as the basis for obtaining the per cent of returns. During the following three years from January 1, 1911, to January 1, 1914, the additions, including \$347,765 in adjustments, amounted to \$4,512,818, or an increase of over 43 per cent of the property existing on January 1, 1911. The additions during the four years ending January 1, 1915, foot up to \$4,691,843, resulting in a total cost new of \$15,206,044, or an increase of 44.6 per cent over the property of January 1, 1911. Taking the entire period from the date of the engineers' appraisal up to the first of this year, the additions together with adjustments aggregate \$5,403,237 or 54.3 per cent of the corrected appraisal of \$9,942,125. In round numbers it may be stated that the physical property used for railway purposes by the respondent in Milwaukee increased from approximately ten million in 1910 to fifteen million at the beginning of 1915, or a total addition amounting to 50 per cent of the 1910 property.

The relative importance of these increases in plant is properly emphasized when the investment ratios are taken into account. In 1910 the revenues amounted to \$3,787,323, producing an investment ratio of 38.1 per cent. For 1911, the revenues of \$3,963,072, resulted in a slightly lower ratio of 37.7 per cent, while for 1914 with property at fifteen million and revenues at a little above four million, \$4,110,717, the ratio is 27.35 per cent, or a decrease of over 10 per cent. In other words, in 1911 there existed \$2.65 of property for every dollar of revenue, which increased to \$3.66 of property for every dollar of revenue in 1914. To place the year 1914 upon the same profitable basis as that of 1911, it is significant to show that the revenues should have totaled \$5,665,186, or a necessary increase in 1914 over 1911, assuming the same operating ratio, of \$1,702,114, or 43 per cent. This last figure compared with the actual increase in revenues of 1914 over 1911, \$147,645, or 3.7 per cent, brings out the difference in conditions admirably. It may be contended that this comparison would be affected by the depressed business conditions during the latter half of 1914, but the maximum revenues

collected by the company during its entire history occurred in 1913, and were only greater by \$110,592 than those of 1914.

Space will not permit a detailed analysis of the additions to property during the past four years as cited previously, but an enumeration of the principal expenditures which have taken place during this period will undoubtedly throw some light upon the situation. Extensions and additions to track totaled \$430,433. Of this amount \$62,373 was expended for 7.585 miles of crosstown lines; \$277,025 for 4.169 miles of extensions to existing lines; and 91,035 for double tracking, etc., involving a little over 2.2 miles. By years these outlays amounted to \$156,615 for 1911, \$60,526 for 1912, \$210,435 for 1913, and \$2,857 for 1914. The additions under the head of "Buildings, fixtures and grounds" occasioned during this period totaled \$444,797, of which may be itemized as follows: Cold Spring shops, \$246,260; Fond du Lac avenue car station, \$132,265; addition to Commerce street power plant buildings, \$27,689; new Twentieth street substation, \$30,449; and the Cold Spring avenue stable and garage, \$8,134. For equipment in the various power plants and substations there was expended \$875,531. Commerce street power plant equipment required \$708,092 of this total; Oneida street power plant \$17,386, and the substations on Clinton street and 20th street required the balance of \$150,053. For "Rolling stock and equipment" a total of \$466,540 was spent, divided up into \$385,561 for 60 new Pay-As-You-Enter cars and \$80,979 for 8 snow sweepers, 100 Hunter signs, 150 hot air heaters, and miscellaneous new equipment. Under the head of "shop equipment" approximately \$80,000 was spent upon the Cold Spring avenue shops. The list of capital charges enumerated up to this point does not include the expenditures for overhead distribution and transmission systems; for underground conduit, cable, etc., and for the numerous smaller additions to track, buildings, cars, power plant, shop and utility equipment.

An important item, however, which should be mentioned in this connection as a cause for decreasing net earnings is that of paving. Due to the city's recent requirement that the company pave the track zone, the annual expenditures have become considerable. The expenditures for 1911 amounted to \$58,430, for 1912 \$91,611, for 1913 \$358,758, and for 1914 \$85,072, or a total for the four years of \$593,871. During this period the en-

tire additions to property, exclusive of paving, amounted to \$4,097,972, which places the additions due to paving at 14.5 per cent, or over one-seventh of the total other additions.

Exclusive of paving these additions to physical property have been due, among other things, to increasing demands for car and power plant capacity, especially during the rush hours; to the increased needs of a growing city in the form of line extensions; to the demand for more crosstown lines; and to the adoption of a better policy of maintenance as exemplified in the construction of the Cold Spring avenue shops. When viewed from the standpoint of the income accounts, these additions have not only caused a large increase in the amounts necessary for returns, but have also occasioned considerable advances in depreciation charges and outlays for taxes, insurance and maintenance, which have made serious inroads upon the relatively static revenues. Allowing about 14 per cent to cover returns, depreciation, taxes, and insurance upon the additions for this period, the deduction from the revenues amounts to \$658,000, or approximately one-sixth of the entire revenues for 1914.

Maintenance. The factor of maintenance has, no doubt, changed the complexion of the income accounts to some extent. Maintenance at present requires higher relative charges than the charges prevailing during the period covered by the *Three-Cent Fare Case*. This is due to several reasons, namely: that there was an element of deferred maintenance from 1908 to 1911, inclusive, and that the new physical property installed since 1911 has caused additional maintenance to cover new property and has caused the maintenance per unit to increase, and finally, that the nation-wide increases in prices of materials and wages has affected the urban transportation business very materially.

As to the matter of deferred maintenance and examination of the table given, for instance, on page 219, of the *Service Case* (13 W. R. C. R. 178) shows that the charges for maintenance of equipment per car-mile ranged from 1.1371 cts. to 1.5089 cts. during the four years, 1908-1911. The maximum cost of 1.5089 cts. occurred in 1910. A comparison with the next three figures of 1.9022 cts., 2.3568 cts., and 2.1455 cts. for 1912 and 1913, supports the contention. After a careful analysis the Commission reached the conclusion that at least 1.8 cts. per car-mile would be required to keep the equipment in proper repair (13 W. R. C. R. 219-225). The respondent company in this proceeding con-

tended for, and still contends for, 2.006 cts. per car-mile as an adequate allowance. Whatever the final cost per car-mile necessary, it is certain to be from 0.5 cts. to 0.7 cts. per car-mile higher than the average prevailing during the period 1908-1911, or an approximate addition to expenses of from \$70,000 to \$100,000. The high figures per car-mile given above for 1912 and 1913 indicate, in a measure, what amounts above the average should have been properly charged to expenses during the years from 1908 to 1911, while the final average of 1.8 cts. per car-mile or higher, indicates the amount of additional maintenance which will be required to cover the Pay-As-You-Enter mechanism, air brakes, sign and signal systems, etc. added to the old equipment.

Taking up the increases in maintenance due to other new property, there is no doubt that if no appreciable increases have appeared up to the present these will certainly occur within several years when the newness of these additions has worn off. Such charges will be occasioned, for example, by the new power plant buildings, boilers, turbines, generators, converters, etc.; by new track and overhead of the extensions, crosstown lines and special work to meet demands for service; by the track added due to single fare extensions ordered, and by new shop equipment. New paving will not only cause increased maintenance, but due to changes in street grades and the removal of tracks the company has been compelled to charge considerable amounts into maintenance because the depreciation reservations established were not sufficient to cover the premature removal of this property. These charges due to public requirement amounted to \$24,249 in 1914.

Operation. Certain increases in wages of labor, expense of supervision and general overhead charges have been due to larger power plant and repair shop capacity, to additional crosstown lines, to single fare extensions, to additional car house accommodations, and other developments. There have been deductions from the operating revenues due to these conditions enumerated and also to change of company's policy and public requirement. As an example of the latter the trend of trainmen's wages may be mentioned. The annual wage bill for these employes for the city and traction companies combined increased from \$896,886 in 1911, to \$1,062,804 in 1914. For the city company this charge amounted to \$795,600 in 1911, \$842,200 for 1912, \$893,100 for 1913, and \$949,100 for 1914. On a car-hour basis the increase

is shown for the same years is 49 cts., 49.8 cts., 51.5 cts., and 53.8 cts., respectively. A partial explanation of these increases may be attributed to the fact that in February of 1913 the company adopted the policy of a minimum wage and a reduction in the spread of duty from sixteen hours to fourteen hours in the interest of the welfare of its employes; to the fact that on June 12 an increase of one cent per hour was made in the wages of trainmen and a similar increase was made on August 1, 1913, and to the fact that since September 1913 fare box collectors were placed at important intersections where heavy loading occurs during the rush hour periods. During 1914 an increase of \$83,400 took place over 1911, due to these conditions, of which about \$24,000 is traceable to the spread of duty and minimum wage policy, \$2,700 to collectors, and \$58,000 to wage increases.

Revenues. Under the discussion on physical property additions it was shown that the revenues have not kept pace with the relative increases in investment. Considering the status of the revenues without reference to any other phase of the financial operations of the city company, an analysis shows highly unfavorable conditions. The following table has been prepared to indicate the conditions since 1909, by exhibiting the total and percentage variations in revenues from year to year:

ANALYSIS OF OPERATING REVENUES.
THE MILWAUKEE ELECTRIC RAILWAY AND LIGHT COMPANY.
1909-1914.

Year	Total operating revenues	Difference over preceding year	
		Amount	Per cent
1909	\$3,466,685	\$243,505	7.6
1910	3,787,323	320,638	9.2
1911	3,963,072	175,749	4.7
1912	4,131,811	168,739	4.3
1913	4,221,311	89,500	2.2
1914	4,110,718	*110,593	*2.6

* Decrease.

Taking up the two three-year periods, namely: 1909-1911, and 1912-14, a comparative analysis will bring out the fact that there has been an appreciable decrease in the increase of revenues, both in absolute amounts and percentages. A total of the annual increases for the first three-year period from 1909 to 1911, inclusive, amounts to \$739,892, producing an annual average increase

of \$246,631. The total increases for the later three-year period foot up to \$147,646, with an annual average of \$49,215. The decrease in the total increases for the two periods equals \$592,246, with a decrease in the annual average increase of \$197,416, or 80 per cent. On the basis of the percentage increases year by year, as shown in the table the first three-year period, shows a total of 21.5 per cent, and an annual average increase of approximately 7.2 per cent, while in the second period the total per cent is 3.9, with an annual increase of 1.3 per cent or a decrease in the annual per cent of increase by 5.9 per cent. These figures are important in that the average annual percentage increase from 1897 to 1911, inclusive, is approximately 7.5 per cent, emphasizing that the first three-year period is representative of the entire history of the trend in revenues up to 1912, while the last three-year period shows a decided change. In fact, taking the increases for the four years 1911 to 1914, a glance at the entire history of the company's revenues since 1897 does not disclose a similar period of protracted low increases. The only four-year period approaching such a condition is that from 1905 to 1908, inclusive, when, due to the unlimited hours of use given the 1900 franchise rates and due to the depression during 1908, the average annual increase reached \$131,385, as compared with the 1911-1914 average annual increase of \$80,874. This seems to indicate that since the close of 1910 a new epoch, never experienced before, has begun and that in view of the foregoing analysis, together with the subsequent discussion on this subject, the unfavorable condition can by no means be held to be temporary.

Before entering upon the causes which have brought about such conditions in annual receipts, it is considered essential to make a brief statement regarding the operating ratio. For the first year's detailed income account included in the *Fare Case*, namely 1908, the percentage of operating expenses, taxes and depreciation to revenues was approximately 65 per cent. In 1913 this ratio had reached 75 per cent and in 1914, 78 per cent. Viewed in another way, the relative increases in expenses has been greater than the relative increase in revenues by about 13 per cent within the last seven years. There seems to be no indication, when the intermediate years are considered, that the revenues can overcome, within the next few years, this difference and establish the lower ratios again.

There are numerous causes both tangible and intangible which have contributed and are at present contributing to this relative and direct decrease in revenues. Some of the relative developments have been covered previously and it will be the purpose in the remaining discussion of this subject to enumerate and explain certain of the causes contributing to the more direct recession.

The rides per capita increased from 100 in 1897 to 250 in 1913. Recent indications point to the tendency that the present growth in rides per capita is not keeping pace with its former growth nor with the population curve. Expressing this development in another way, we find that the revenues per capita increased from \$5.39 in 1897 to \$10.43 in 1913. The same tendency, just stated, is of course true with the per capita earnings, modified to some extent by the decrease in average fare. Taking the situation as represented by these unit figures for the last few years as a whole, the solution seems to be that the riding habit is approaching a more complete saturation than ever before in the company's history of eighteen years. By this it is not meant that there will be no increase in the riding habit, but rather that the increase, if any, will be relatively slower than in previous years.

Another fact which has caused a direct decline in the increase of revenues may be found in the decreasing average fare, or revenues per revenue passenger. Up to 1900 the fare was five cents cash. In this year a franchise was accepted by the company stipulating that ticket fares at 6 for 25 cts. and 25 for \$1, good from 5:30 to 8:00 a. m., and from 5:00 to 7:00 p. m., should be sold in conjunction with the cash fare of 5 cts. About 1905, these tickets, through another franchise, were made valid at all hours. The result has been that the number of passengers using cash fares decreased from 100 per cent prior to 1900, to 83.6 per cent in that year, and to 27.67 per cent when the tickets were sold unlimited in 1905. From the latter per cent there has been a gradual decrease in this class of fares down to 15.68 per cent in 1914. In round numbers, the cash fare passengers dropped from 84 per cent of the total revenue passengers in 1900 to 16 per cent in 1914, or, stating the same phenomena reciprocally, the ticket passengers increased from 16 per cent in 1900 to 84 per cent in 1914. The effect of this upon the average fare is shown in that it has reached as low as 4.2 cts. for 1914, whereas, prior to 1900, it was approximately 5 cts. Proportionately, the

revenues have decreased year by year, and although these reductions have occurred in the earlier periods, they have, however, not been of such relative importance for two reasons: First, that as the number of revenue passengers has grown larger the reductions have also increased. For instance, in the earlier years when the company carried about 30,000,000 revenue passengers per annum, the total reduction caused by a four-cent fare in place of a five-cent fare would have been in the neighborhood of \$300,000, while at present, when the revenue passengers carried amount to 100,000,000, the reduction is about \$1,000,000. Viewing the situation from the standpoint of totals, the company would be collecting \$5,000,000 at present instead of approximately \$4,000,000. Secondly, the reductions due to this constant increase in ticket passengers makes itself felt all the more at present because it is coupled with the other causes here enumerated affecting revenues adversely.

Another important cause which has prevented the normal increase in revenues established up to 1911, is the extended use of transfers. This is another factor which has operated upon the revenues throughout the entire history since 1897, but whose relative effect has become greater in recent years. The per cent of revenue passengers using transfers increased from 25.52 in 1897, to 36.94 in 1913, and within the last year the unprecedented rise took place in this ratio of 2.72 per cent, bringing the total for 1914 up to 39.66 per cent.

The revenue passengers decreased from 100,073,659 in 1913 to 97,874,919 in 1914, or a difference of 2,198,740, while the transfer passengers increased from 37,402,570 in 1913 to 39,263,919 in 1914, or a difference of 1,861,349. The most important causes for an increase in the transfer ratio within the last year and since 1911, were the installation of crosstown lines and extended transfer privileges. The following crosstown lines have been established since 1911:

<i>Line.</i>	<i>Opened.</i>
12th st.—16 st. viaduct	June 3, 1911
8th st.—16 st. viaduct	Dec. 16, 1911
27th st.—North ave. to Fond du Lac ave.....	Dec. 16, 1911
27th st.—National ave. to Burleigh ave.....	Oct. 21, 1913

A conservative estimate of the annual loss occasioned by the use of these privileges has been placed in the neighborhood of \$80,000 for 1914 alone.

Among the causes of more recent origin which are affecting revenues adversely in Milwaukee may be mentioned automobiles, cycle cars and motor cycles. Estimates of the depressing effect of this vehicle traffic upon urban transportation revenues has been made within the past year for several cities in the United States, and the results have been substantial decreases. No check on this traffic has been made in Milwaukee as far as we know, but an idea of what the probable effects are may be placed upon the basis of the total machines owned in the city. The state license reports show that 8,602 machines were owned in Milwaukee county last year, of which about seven-eighths are estimated to be owned in the city. Taking the number of machines in use there at 8,000, it may be estimated that on the basis of two passengers per day for 365 days, the reduction in revenues on all urban lines would approximate \$245,000 per annum at the average of 4.2 cts. for 1914. Assuming only one passenger per day, the reduction would total \$122,500 per annum. In consideration of these figures and those for other cities there is sufficient ground to hold an estimable percentage of the decrease in revenues of the city company may be attributable to this traffic.

Another and more tangible cause in this connection is the order of the Commission here in question. The 13 for 50 cts. tickets have been sold since September 23, 1913, at 12 for 50 cts. with a redemption coupon attached by order of the circuit court of Dane county to represent the thirteenth ticket. The entire matter is now pending in the United States supreme court. These tickets have, therefore, not been sold under the full effect of the order and an estimate is necessary as to the probable annual reduction. In the *Fare Case* this reduction was estimated at \$171,784 for 1911 (10 W. R. C. R. 247). The basis used here was a reduction of 0.1538 of a cent per passenger for the 25-for-\$1 class and 0.3025 of a cent per passenger for the six-for-a-quarter class. As the order discontinued the 25-for-\$1 tickets, the entire 28,129,581 passengers of this class were estimated to purchase the new ticket, while about 40,000,000 of the 47,095,515 six-for-a-quarter passengers were estimated to purchase it. In the light of the actual sales of these tickets since September 23, 1912, amounting to a reduction of \$24,278.97 for the few months in 1912; to \$81,915.87 and \$77,354.48 for the years 1913 and 1914, respectively, it seems that the estimate in the *Fare*

Case expresses the final maximum reduction which these tickets would incur and not the figure that would apply within the next few years. Although the actual total reduction of \$183,549.32, taking place under the coupon sales for the period of two years and three months up to January 1, 1915, is not to be considered an absolute criterion, it nevertheless has enough influence to lead us to believe that a more conservative estimate would range from \$130,000 to \$140,000. The probable full effect of these tickets would tend, therefore, to have reduced the revenues for 1912 by an additional amount of \$116,000, and those for 1913 and 1914 by additional amounts of about \$58,000 and \$63,000, respectively, when \$140,000 is used for the total reduction.

Finally, the general trend of industrial and financial conditions has been such as to materially increase the prices of material, labor and capital, and to in many ways considerably alter economic conditions. During the past eighteen years, for instance, prices on commodities generally appear to have increased not far from 50 per cent, while labor in practically all lines also commands much higher prices. The increase in the latter case, however, seems to be somewhat less than in the former, and to the extent to which this is true real wages of the purchasing power of the workers has diminished. Conditions of this nature affect the cost of furnishing utility service as well as the power to utilize the same. Such conditions are also of far-reaching importance and cannot be safely disregarded in such cases as the one before us.

The marked decrease in the annual increase of revenues since 1911, as analyzed previously, may certainly be partly attributed to the status of real wages. The years 1912, 1913, and 1914 have fallen far short of producing a normal increase in revenues. Assuming a normal increase of only 5 per cent for the later years, 1913, for instance, has failed to reach this required quota by approximately \$35,000, when excluding the redemption fund as a factor, while 1914, on this basis, shows a shortage of \$244,000.

With an analysis of the history of the city company's revenues as outlined in the preceding paragraphs, the conclusion must be reached that no encouragement can be found here that the revenues can, for a considerable time to come, recoup their own losses due to both permanent and temporary causes, and also make up the relative differences which now exist in the investment and

operating ratios due to the large additions to physical property with the attendant outlays; to the increased costs in maintenance charges and operation, and to the constantly increasing demands upon the revenues on account of public requirements.

Income Accounts. To reflect the entire financial conditions discussed in the foregoing analyses income accounts have been prepared for the calendar years 1912, 1913 and 1914. Part of the expenses in these statements have been subjected to apportionment, while others have been accepted as per the respondents' books. Some minor modifications in the allowances made for certain reserve accounts, including taxes, injuries and damages, depreciation and other reserves, and deductions for excesses in the railway special accounts have not been considered necessary for the purposes of this decision. The cost of reproduction new given in the table is based upon the engineers' appraisal of January 1, 1910 (10 W. R. C. R. 113, 114), with annual additions (excluding bond discount) and reported property adjustments. No allowances have been made for working capital or going value as it has not been deemed essential for the general conclusions reached in this decision to determine a final value on the basis of the depreciated cost new, depreciation reserve, liability and the allowances mentioned. The income statements for the city and traction company separately and combined follow:

SUMMARY INCOME ACCOUNTS.

THE MILWAUKEE ELECTRIC RAILWAY AND LIGHT COMPANY
MILWAUKEE LIGHT, HEAT, AND TRACTION COMPANY
Calendar Years 1912, 1913 and 1914.

	1912	1913	1914
<i>The Milwaukee Electric Railway and Light Company.</i>			
Operating revenues	\$4,131,811.34	\$4,221,310.50	\$4,110,717.78
Total expenses	2,930,170.80	3,239,658.18	3,291,013.02
Surplus available for returns.....	\$1,201,640.54	\$981,652.32	\$819,704.76
Cost of reproduction new as of January 1	\$12,171,369.00	\$13,463,859.00	\$15,027,019.00
Per cent return upon cost of reproduction new as of January 1.....	9.87	7.29	5.45
<i>Milwaukee Light, Heat and Traction Company.</i>			
Operating revenues	\$923,383.43	\$1,074,521.97	\$1,041,258.59
Total expenses	784,768.14	828,290.03	887,200.39
Surplus available for returns.....	\$138,615.29	\$246,231.94	\$154,058.20
Cost of reproduction new as of January 1	\$6,422,007.60	\$6,531,337.00	\$6,765,329.00
Per cent return upon cost of reproduction new as of January 1.....	2.16	3.77	2.28
<i>The Milwaukee Electric Railway and Light Company and Milwaukee Light, Heat and Traction Company combined.</i>			
Operating revenue	\$5,055,194.77	\$5,295,832.47	\$5,151,976.37
Total expenses	3,714,938.94	4,067,948.21	4,178,213.41
Surplus available for returns.....	\$1,340,255.83	\$1,227,884.26	\$973,762.96
Cost of reproduction new as of January 1	\$18,593,376.00	\$19,995,196.00	\$21,792,348.00
Per cent return upon cost of reproduction new as of January 1.....	7.21	6.14	4.47

¹ Excluding \$24,278.97, \$81,915.87, and \$77,354.48, amounts in the "Redemption reserve fund" for 1912, 1913, and 1914, respectively.

² Includes \$99,641.31 rental for M. L. H. & T. Co. track used by T. M. E. R. & L. Co.; and a small amount for track rented from the city of Milwaukee.

³ Includes \$100,199.28 rental for M. L. H. & T. Co. track used by T. M. E. R. & L. Co.; and a small amount for track rented from the city of Milwaukee.

It will be noted that in the preceding table, the per cent returns upon the cost of reproduction new as of January 1 are 9.87, 7.29, and 5.45 for the city company during the years 1912, 1913, and 1914, respectively. For the traction company, the returns for these years are 2.16, 3.77, 2.28. When taking the two companies combined, the per cent return is 7.21, 6.14, and 4.47 for the same years.

The city company's income account, as shown in the above table, does not reflect the actual condition of the finances. As stated previously, the amount of revenues deducted on the basis

of the coupon redemption reserve fund have not equaled the probable reduction in revenues when the 13 for 50 ct. tickets will be sold as originally ordered. To place the income account for the three years subject to the estimated effect would require a deduction of \$116,000 in 1912, \$58,000 in 1913, and \$63,000 in 1914, resulting in a per cent return on the cost new given in the previous table for these years of 8.92, 6.86 and 4.79. The condition of the income account as analyzed up to this point does not make any allowance for additional service improvement. Although an improvement in the street railway service in the city of Milwaukee has taken place, there is still a considerable amount of money necessary to place the standard of service upon a more satisfactory basis, allowing sufficient cars during the non-rush, rush, and transitory periods to facilitate the transportation of passengers. It has been estimated that an additional amount for this improvement in the service will no doubt aggregate approximately \$100,000. When this allowance is incorporated in the income account, together with an allowance for reduction in revenues on the basis of the full effect of 13 for 50 ct. tickets, the per cent returns for the year 1912 are reduced to 8.10, for 1913 to 6.12, and for 1914 to 3.7.

Another burden which falls upon the city company income account and which has been discussed fully in the fore part of this decision is the deficits occurring in the suburban territory adjacent to the Milwaukee city system. In the *Fare Case*, it has been shown that this system earned an average of about 1 per cent on the cost new during the period 1908 to 1911, inclusive. The conditions during the period 1912 to 1914 do not indicate that the suburban lines are in a more favorable condition, but are only approximately meeting the ordinary operating expenses, taxes, and depreciation. It therefore falls upon the city system income account to produce sufficient net earnings so as to provide something like fair returns upon the suburban plant values. When these plant values are included in the income account of the city company, together with the allowance made above for the additional reduction due to the 13 for 50 ct. tickets and for service requirements, the per cent returns foot up to 7.38 in 1912, 5.61 in 1913, and 3.48 in 1914. Although these per cent returns are not final, and adjustments that can possibly be made will not prevent the conclusion that during the last two calendar years the revenues have not been sufficient to cover all

legitimate demands for the adequate transportation of passengers in the city of Milwaukee and the adjacent suburban territory.

Exhibits were introduced by the respondent companies containing income accounts basing the per cent returns upon an alleged cash investment, upon a computed Railroad Commission's earning value, and upon the assessment value used by the Wisconsin Tax Commission. The cash investment value for the city company is obtained by taking the cash investment, \$8,885,644.17, placed upon the property as of January 1, 1897, in the decision, *Milwaukee Electric Railway & Light Co. v. City of Milwaukee*, (87 Fed. 577, 584), by adding the additions up to January 1, 1910, as accepted by this Commission in the *Three Cent Fare Case*, and by adding the annual additions, excluding bond discount, as per books for the remaining years. The earning value for the city company has been obtained by accepting the earning value as of January, 1910, \$10,300,000, placed upon the property in the *Three Cent Fare Case* and adding thereto the annual additions, excluding bond discount, as per books with adjustments, and allowing for the differences in accrued depreciation and property replacements. The Tax Commission value requires no explanation. The cash investment for the traction company is based upon this Commission's findings in its decision (*Cusick et al. v. T. M. E. R. & L. Co. et al.* 10 W. R. C. R. 314, 326) plus the additions recorded in the books, excluding bond discount. The earning value for this company is obtained upon the same basis as that given for the city company. Although the values included in these income accounts can hardly be accepted by this Commission in their entirety, nevertheless, these income accounts, which represent the respondents' points of view, contain certain merits which warrant a summary representation in this decision. The summary of the values and returns of these income accounts follow:

SUMMARY OF THE MILWAUKEE ELECTRIC RAILWAY AND LIGHT COMPANY
INCOME ACCOUNTS, 1912-1914.

RESPONDENT'S BASES.

	1912	1913	1914
Cash investment	\$16,563,559	\$17,508,234	\$19,246,548

Per cent return.....	3.769	3.324	4.289

¹ Year ending June 30.

Note:—Values as of January 1.

Conclusion. The increases in the operating expenses and fixed charges of the respondent companies and the failure of their gross and net revenues to maintain their ordinary annual growth during the past few years, that have thus been described, are due to causes that are wholly beyond the control of the respondent companies. These changes, however, as the facts herein clearly show, have resulted in this, that the net earnings of the respondent now are and for some time have been considerably lower on the investment than the rates or costs at which it is well known new capital for similar undertakings can in the long run be had. The conditions in this respect are also considerably aggravated by the fact that in this case, as in nearly all large and growing cities, there is a constantly growing demand for improvements in, and extensions to, the local street railway service. The tendencies and changes in the expenses and earnings in question were seen when the order complained of herein was made, but it

was not then thought that they were permanent but rather temporary in their nature. Had the nature of these changes then been better understood, it is very certain that the order in question would not have been made. Justice and the law demand that the rates charged by public utilities for the services they render shall be reasonable to the utilities as well as to their patrons. The best interest of the greatest number in matters of this kind can as a rule be best promoted by allowing rates that are high enough to cover the cost of reasonably adequate service. As the rates provided by the order complained of fall short of this, we are, in fairness to the petitioner and in the interest to its patrons, compelled to find that this order is unreasonable and that it should be repealed or abrogated.

IT IS THEREFORE ORDERED, That the order of this Commission on August 23, 1912, (10 W. R. C. R. 1, 305) to The Milwaukee Electric Railway and Light Company, discontinuing the ticket rate of twenty-five for \$1.00 and substituting therefor a ticket rate of thirteen for 50 cts., is hereby rescinded.

SUPPLEMENTARY ORDER.

Issued Feb. 17, 1915.

Under date of January 30, 1915, an order was entered in the above entitled matter as follows:

“IT IS THEREFORE ORDERED, That the order of this Commission on August 23, 1912, (10 W. R. C. R. 1, 305) to The Milwaukee Electric Railway and Light Company, discontinuing the ticket rate of twenty-five for \$1.00 and substituting therefor a ticket rate of thirteen for 50 cts., is hereby rescinded.”

It was the intention of the Commission in entering this order to rescind the requirement of The Milwaukee Electric Railway and Light Company selling tickets in packages of 13 for 50 cts., and to put into effect the ticket rate of 25 for \$1 which was ordered to be discontinued by the order of August 23, 1912. Simultaneously with the entry of the order in the case of *City of Milwaukee v. The Milwaukee Electric Railway and Light Company* (10 W. R. C. R. 1, 305) there were also entered orders in the case of *Cusick v. The Milwaukee Electric Railway and Light Company et al.* (10 W. R. C. R. 314, 336), *Koenig v. The Milwaukee Electric Railway and Light Company* (10 W. R. C. R.

337, 351), and *Village of East Milwaukee v. The Milwaukee Electric Railway and Light Company* (10 W. R. C. R. 358, 369). In each of these orders provision was made similar to that in the *City of Milwaukee Case*, that the respondent company should discontinue the then ticket rate and sell tickets in packages of 13 for 50 cts. These orders have already become subject to the later order of the Commission made *In re Milwaukee Suburban and Interurban Railway Rates* (13 W. R. C. R. 475). It was the purpose of the Commission that so much of any previous order as might contravene the effect of the aforesaid order of January 30, 1915, should be rescinded thereby. Therefore, to avoid any possible misinterpretation:

IT IS ORDERED, That it was and is the intent and purpose by the order entered in the above entitled matter on January 30, 1915, also to rescind such part of any orders of the Commission entered in the case of *Cusick et al. v. The Milwaukee Electric Railway and Light Company* (10 W. R. C. R. 314, 336), *Koenig et al. v. The Milwaukee Electric Railway and Light Company et al.* (10 W. R. C. R. 337, 351), and *Village of East Milwaukee v. The Milwaukee Electric Railway and Light Company* (10 W. R. C. R. 358, 369), as might otherwise require The Milwaukee Electric Railway and Light Company or the Milwaukee Light, Heat and Traction Company to discontinue the ticket rate for fare within the single fare limits of the city of Milwaukee existing on August 23, 1912, or to sell tickets in packages of 13 for 50 cts. The order herein entered shall be effective and in force upon the same date as the original order of January 30, 1915.

CITY OF NEW RICHMOND

vs.

CHICAGO, ST. PAUL, MINNEAPOLIS AND OMAHA RAILWAY
COMPANY.

Submitted Nov. 13, 1914. Decided Jan. 30, 1915.

Complaint was made that two highway crossings on respondent's line at Second street and Third street in the city of New Richmond are dangerous for public travel on account of the surrounding physical conditions, and the Commission was asked to require the respondent to protect the crossings in question by gates or by flagmen. The surrounding physical conditions, the highway traffic using the crossing, and the movement of trains over the crossings were investigated. Petitioner objects to the installation of electric bells, alleging that they will not furnish adequate protection, and that the noise of ringing will be objectionable in such a thickly settled community.

Held: That the crossings are unusually dangerous, but that it is feasible to install train operated visual signals, with lights for night indication, and that such signals should provide adequate protection under existing traffic conditions without annoying residents of the vicinity with ringing.

Order: That respondent install at each of the crossings in question an electric train-operated visual signal, plans to be submitted to the Commission for approval, or, at its option, maintain a flagman at each of the crossings, such flagmen to be on duty daily from 7 a. m. to 7 p. m. Ninety days is considered a sufficient time within which to install the safety devices ordered.

The petition alleges in substance that two highway crossings on the line of the Chicago, St. Paul Minneapolis & Omaha Railway Company at Second street and Third street in the city of New Richmond are dangerous for public travel on account of the surrounding physical conditions. The Commission is therefore asked to require the respondent to protect these crossings by gates or by flagmen.

The respondent, in its answer, alleges that the physical conditions and the traffic do not warrant the installation of gates or the employment of flagmen, but that the situation is peculiarly suitable for the installation of electric crossing bells. It therefore asks permission to install, maintain and operate electric bells at these crossings subject to the order of the Commission in the premises.

A hearing was held at New Richmond on November 13, 1914. *W. T. Doar* appeared for the petitioner and *R. L. Kennedy* for the respondent.

The testimony and evidence show that the view of trains is seriously obstructed at both the crossings under consideration, by buildings, by trees and shrubbery, and by freight cars standing on the sidetrack. No protection is now provided other than standard crossing signs.

A traffic count, introduced by the petitioner, which was taken on two days in September, 1914, between 6 a. m. and 9 p. m., resulted as follows:

	Automobiles.	Teams.	Bicycles and motorcycles.	Persons including those a-foot and in vehicles.
Second street (Thursday)...	104	70	30	1,434
Third street (Friday).....	167	275	34	2,045

A traffic count was made for the respondent at both crossings for three days in October, 1914, from 6 a. m. to 9 p. m., and introduced in evidence as follows:

	Automobiles.	Teams.	Pedestrians.
Second street:			
October 8.....	99	90	873
October 9.....	109	86	941
October 10.....	63	84	785
Third street:			
October 8.....	90	176	964
October 9.....	114	184	994
October 10.....	74	190	912

According to a statement offered by the respondent, covering the period from September 1, 1914, to September 15, 1914, inclusive, the daily train movements at the crossings in question varied from 12 to 19, the average daily movement being 16. During this period 34 per cent of the trains crossed between 7 p. m. and 7 a. m. In addition to the regular trains a number of switching movements occur at the crossings. A fatal accident at 2nd street and two fatal accidents at 3rd street were described.

Witnesses for the city objected to the installation of electric

bells as proposed in the answer of the respondent, alleging that they would not furnish adequate protection and that in such a thickly settled community the noise of ringing would be objectionable. Witnesses for the respondent asserted that it is practicable to install electric bells and expressed the opinion that such installation would result in better protection than would be afforded by gates or flagmen.

In the light of the testimony and upon investigation it is our opinion that each of the crossings under consideration is unusually dangerous. It is feasible to install at these crossings train-operated visual signals which will not annoy residents of the vicinity with ringing and which should provide adequate protection under the existing traffic conditions. Such devices which indicate danger by waving arms or disks supplemented with lights for night indication are now installed at a number of points in this state, and, during their relatively short period of operation, have apparently proved satisfactory. If the respondent prefers to employ a flagman at each crossing instead of providing visual signals, such a course will be satisfactory to the Commission.

IT IS THEREFORE ORDERED, That the respondent, the Chicago, St. Paul, Minneapolis & Omaha Railway Company, install and maintain at each of the two crossings on its line at 2nd street and 3rd street in the city of New Richmond an electric, train-operated visual signal, plans to be submitted to the Commission for approval, or, at its option, maintain a flagman at each of said crossings who shall be on duty daily from 7 a. m. to 7 p. m.

Ninety days is regarded as a sufficient time within which to install the safety devices herein ordered.

TOWN OF FAIRCHILD

vs.

CHICAGO, ST. PAUL, MINNEAPOLIS AND OMAHA RAILWAY COMPANY.

Submitted Aug. 19, 1914. Decided Jan. 30, 1915.

Complaint was made that the first highway crossing west of Fairchild on respondent's line in Eau Claire county is dangerous to public travel on account of the surrounding physical conditions, and the Commission was asked to take such action as it deems proper in the premises. The surrounding physical conditions, the highway traffic, and train movement involved, were investigated. It appears that on account of the height of the banks of the cut in which the track lies, and on account of the presence of brush on the right of way and on adjacent private property, the view of trains is seriously obstructed.

Held: That the crossing in question is unusually dangerous and that some form of protection is necessary; that respondent should keep the brush on its right of way cut for a distance of at least 1,000 feet on each side of the crossing, and should remove the earth which has been heaped up on its right of way on the natural surface of the ground for a distance of 500 feet southeast of the crossing, and that with such improvements, and with the installation of an automatic electric bell and a visual signal for night indication, the crossing should be reasonably safe under the existing traffic conditions.

Order entered in accordance with the foregoing conclusions. June 1, 1915, is considered a reasonable date for the completion of the installation and improvements ordered.

The petitioner, a regularly organized town in Eau Claire county, alleges that the first highway crossing west of Fairchild on the line of the Chicago, St. Paul, Minneapolis & Omaha Railway Company is dangerous to public travel on account of the surrounding physical conditions. The Commission is therefore asked to take such action as it deems proper in the premises.

The respondent, in its answer, denies that the crossing in question is dangerous to public travel.

A hearing was held at Fairchild on August 19, 1914. *Chas. Pettis* appeared for the petitioner and *G. W. Tower* for the respondent.

The testimony shows that at the crossing in question the railway runs northwest and southeast and the highway north and

south. The single track line lies in a cut, the natural depth of which is about eleven feet. In 1895 the level of the track was lowered and some of the dirt wasted along the banks of the cut adding from three to eight feet to the height of the banks. The highway descends from the north to the track on about a 9 per cent grade, and from the south on about a 4 per cent grade. In 1912 an overhead bridge was constructed at the crossing of respondent's line with the Fairchild & Northeastern Railway Company which is located about 960 feet southeast of the highway crossing. Witnesses testified that prior to the lowering of the grade, the crossing was almost level and the view comparatively unobstructed.

Owing to the height of the banks of the cut, the proximity of the overhead bridge above referred to, and the presence of brush on the right of way and on private property adjacent thereto, the view of approaching trains is seriously obstructed. Witnesses for the petitioner testified that a traveler must be very close to the track in order to see clearly a train approaching from either direction. It is possible at a number of points to see the tops of the cars or the smoke of the engine. Respondent's assistant superintendent stated that the following view of trains is afforded:

Distance of point of observation in highway from track.	View southeast.	View northwest.
Between 165 and 200 ft. south.....	960 ft.	600 ft.
Between 50 and 75 ft. north.....	960 ft.	Unobstructed.

The highway is a main traveled road between Augusta and Fairchild, and is being improved with state and county aid. The traffic is considerable and includes numerous automobiles. A number of children cross at least twice a day in traveling to and from school. Sixteen passenger trains and ten freight trains are scheduled to cross this highway, and in addition occasional extra trains are operated. Of the twenty-six regular trains twelve cross between 6 a. m. and 6 p. m. Several narrow escapes from accident were described.

In the light of the testimony and upon investigation it is our opinion that the crossing in question is unusually dangerous and that some form of protection is necessary. The railway com-

pany should keep the brush on its right of way cut for a distance of at least 1,000 feet on each side of the crossing, and should remove the earth which has been heaped up on its right of way on the natural surface of the ground for a distance of 500 feet southeast of the crossing. With these improvements and with the installation of an automatic electric bell and a visual signal for night indication the crossing should be reasonably safe under the existing traffic conditions.

IT IS THEREFORE ORDERED, That the respondent, the Chicago, St. Paul, Minneapolis & Omaha Railway Company, install and maintain at the highway crossing on its line, 960 feet northwest of the intersection of its line with that of the Fairchild & Northeastern Railway Company in the town of Fairchild, an automatic electric bell and a visual signal for night indication, plans to be submitted to the Commission for approval.

IT IS FURTHER ORDERED, That said respondent remove the earth which is heaped up on its right of way in the northeast angle of said crossing to the natural surface of the ground for a distance of 500 feet from the crossing, and keep its right of way clear of brush for a distance of 1,000 feet on each side of said crossing.

June 1, 1915, is considered a reasonable date on which the installations and improvements herein ordered shall be completed.

JOHN P. SCHMITT ET AL.

vs.

CHICAGO AND NORTH WESTERN RAILWAY COMPANY.

Submitted Oct. 23, 1914. Decided Jan. 30, 1915.

The petitioners request that the respondent be required to operate an additional passenger train in each direction daily between Green Bay and Laona. The present service consists of a passenger train in each direction, and freight train service, said to be generally late, over part of the branch. The difficulty complained of is the inconvenience, and time necessarily lost by patrons of this line in transacting business under the existing arrangements in Green Bay, and also in doing so at Laona and points north. The population of the district concerned, the passenger revenues therefrom, and the cost of operating the additional service prayed for, were considered. It appears that though the territory is in process of industrial transition and agricultural products are considerable, forest products still predominate in the business of the branch line in question.

Held: That, while the service in question is poor as compared with that of more densely populated communities, it cannot be classed as inadequate in the present case, all things considered, and that, while with the further development of the country some additional service will probably be warranted, an order would not be justified at the present time requiring respondent to operate a new train in each direction at a considerable loss.

The petition is dismissed.

The petitions herein are signed by a large number of residents of Townsend, Wabeno, Breed, Soperton, Logan and Carter and ask that the Chicago & North Western Railway Company be required to operate an additional passenger train in each direction daily between Green Bay and Laona.

The respondent, in its answer, alleges in substance that the existing train service between Green Bay and Laona is adequate and that the traffic does not warrant the operation of an additional train. The dismissal of the complaint is therefore asked.

Hearings were held at Wabeno on May 23, 1914, and October 23, 1914. *Jos. T. Sims* appeared for the petitioners, *J. M. Parmentier* for the Green Bay Commercial Club on behalf of the petitioners and *E. M. Smart*, *C. A. Vilas* and *E. E. Nash* for the respondent.

The existing passenger train service on the line between Green Bay and Laona consists of a train northbound, No. 117, daily except Sunday, leaving Green Bay at 10:15 a. m. and arriving in Laona at 1:50 p. m., a Sunday train northbound, leaving Green Bay at 7:00 a. m. and arriving at Laona at 10:20 a. m., and a daily train southbound, No. 112, leaving Laona at 3:30 p. m. and arriving at Green Bay at 7:35 p. m. In addition to the passenger trains, a northbound freight train leaving Gillett at 8:00 a. m. and a southbound freight train leaving Saunders at 7:30 a. m. carry passengers between Gillett and Saunders. These freight trains were said to be generally late.

Witnesses complained that under the existing arrangements patrons of the respondent at stations from Gillett to Laona are inconvenienced in making trips to Green Bay for the transaction of business. They are obliged to start in the afternoon arriving after stores and offices are closed. They can return the following morning unless their business is of such a nature that it cannot be completed before 10:15 a. m., in which case they are compelled to spend two nights in Green Bay and return the third day. They expressed the opinion that the traffic to Green Bay would materially increase if more convenient train service were established. Patrons of this line are also unable to travel to Laona and points north and return the same day having a sufficient time for the transaction of business. When the passenger trains are on time only one hour and forty-eight minutes elapse between the arrival of one and the departure of the other and witnesses stated that they occasionally meet at Laona. A commercial traveler representing the Green Bay Council of the United Commercial Travelers of America stated that under the existing schedule it is extremely difficult for traveling men to canvass this district, and estimated that if more favorable train service were established the number of traveling men visiting the territory would be doubled. Witnesses asserted that there would be considerable travel to and from schools in Wabeno and Green Bay and that more wide-spread social intercourse would give rise to additional passenger traffic. The territory served by the branch line in question was described as being in the process of industrial transition. Formerly the products were almost entirely from the forests, but now a large number of farms have been cleared or partially cleared, and the agricultural products are considerable. However, forest products

still predominate in the business of the branch line. The population of the interested villages was estimated by witnesses as follows:

Gillett	610	Townsend	250
Suring	575	Carter	400
Breed	100	Wabeno	775
Mountain	200	Padus	50
Lakewood	100	Laona	350

Total population 3,410

In addition to the above the surrounding settlement was said to be considerable. Data from the U. S. census of 1910 and the state census of 1905, as given in the 1913 Blue Book, show the population of the various townships through which this branch line passes as follows:

Town.	Population 1905.	Population 1910.
Gillett, Oconto county.....	1,121	1,300
Maple Valley, Oconto county.....	982	1,163
Howe, Oconto county.....	973	965
Breed, Oconto county.....	303	327
Armstrong, Oconto county.....	614	625
Wheeler, Oconto county.....	142	215
Wabeno, Forest county.....	1,676	1,877
Laona, Forest county.....	1,008	1,178
Total	6,819	7,650

Respondent's division superintendent testified that the distance from Green Bay to Laona is 87.7 miles and that under the operating agreement with its employes, two crews would be required to operate the service prayed for. He said that the run from Green Bay to Carter or Townsend and return could be made by a single crew. The assistant general superintendent stated that the average cost of operating a passenger train is \$0.90 per mile, but that the cost of operating a light train on this division would be somewhat less than the average. On the basis of the average cost, the new service prayed for would, according to his estimate, involve an expense of \$159 per day, or approximately \$49,000 per year. Both officials expressed the opinion that traffic conditions do not warrant any additional service.

Respondent introduced a statement of ticket sales from stations between Green Bay and Saunders for the year ending

March 31, 1914, which shows a total of 78,121 tickets and a revenue of \$52,124.73. It also submitted a statement showing the cash fares collected on trains out of each station between Green Bay and Laona during the same period, the total being \$5,351.10 received from 15,951 passengers. Data were also offered showing the number of passengers boarding and leaving trains at each station between Green Bay and Iron River from May 16 to 21, 1914, inclusive.

From a careful examination of the testimony and after investigations we are of the opinion that the train service rendered by the respondent between Green Bay and Laona cannot be classed as inadequate. As compared with more densely populated communities, the service is poor and the petitioners are subjected to considerable inconvenience. With the further development of the country some additional service will probably be warranted, but we do not feel justified at the present time in ordering the respondent to operate a new train in each direction in this territory at a considerable loss.

IT IS THEREFORE ORDERED, That the petitions herein be and the same are hereby dismissed.

CITY OF MILWAUKEE

vs.

CHICAGO, MILWAUKEE AND ST. PAUL RAILWAY COMPANY,
THE MILWAUKEE ELECTRIC RAILWAY AND LIGHT COMPANY.

Decided Jan. 30, 1915.

The petitioner requests the Commission to order the respondent, the C. M. & St. P. Ry. Co., to separate the grades of the tracks of its Northern division from the grades of the public thoroughfares of all streets between 38th street and Fond du Lac avenue. The matters involved were given extended study and were the subject of numerous conferences and investigations with the various parties interested. The Manufacturers' and Shippers' Association objects to grade separation if it is to involve either temporary or permanent interference with the facilities for industrial tracks and sidings as now enjoyed, and on the whole favors street depression. The city favors track depression and no disturbance of most of the streets, while the railway company appears to favor leaving the tracks in their present position and elevating or depressing most of the streets in question. However, both the Manufacturers' and Shippers' Association and the railway company ultimately offered plans calling for some track elevation, but greater street depression. The city requests the separation of grades at the expense of the respondents according to their respective interests.

Held: That public safety and convenience demand a separation of grades of the tracks of the Northern division of the C. M. & St. P. Ry. Co. in the city of Milwaukee from the grades of 35th to Center streets, inclusive, and that the movement of traffic on the steam railroad tracks, electric street railway tracks, and street roadway and sidewalks are all contributing factors in creating conditions calling for such a separation of grades;

That no separation of grades is possible without interference in the use of side and switch track facilities unless all the changes required are made in the streets, and that to change the streets here in question, either by raising them over or depressing them under the tracks in their present position, would be unwarranted and unduly detrimental to the welfare of the city, and a large proportion of its citizens;

That, while the advantage of grade separation by track elevation, as compared with track depression, both from the standpoint of cost and of the furnishing of switching facilities, is recognized, in the present case it seems advisable to effect the desired separation by means of track depression, as the topographical and physical conditions render a track elevation scheme impracticable;

That it is recognized that in some cases it will be impracticable to leave switching facilities as they now exist; that in all such cases it will be necessary to accept such service at a level more or less depressed from existing elevation, or from team tracks located elsewhere; that the manner of furnishing switching service must of necessity be decided for each individual case desiring such service and should be decided by the parties directly interested, i. e. the industry and the railway company, and that in view of the mutual benefits to both it is expected that the railway company will use its best efforts to meet the different needs for such service in the most advantageous manner possible; and

That, in view of the benefits of grade separation to all three parties it is considered proper that each pay its fair portion of the cost of the improvement, and that the division of the expense can best be made on a percentage basis as practically all of the work will be confined to the right of way of the railway company.

Order: The plans of the main tracks of the Northern division of the C. M. & St. P. Ry. Co. are ordered depressed from some point southwest of the crossing of the tracks with Western avenue or 25th street, in the city of Milwaukee, to a point at or near Clark street, and from such point the tracks are ordered elevated to some point at or near Fond du Lac avenue, in such a manner as to permit the streets involved to be carried over or under the tracks of the railway company, as specified in the order. All of the streets are to be carried over except Clark street, which is to be closed to vehicular traffic, but provided with a pedestrian subway under the tracks, and Center street, which is to be carried under through a subway. The manner of construction and the distribution of the work between the parties is covered in detail, and various collateral matters necessary to the carrying out of the order are provided for. The work is to be started on or before May 1, 1917, and to be completed on or before December 31, 1919, subject to extension of time for certain specified contingencies. As a condition precedent to the commencement of the work the city shall make provision, prior thereto, for the payment of the cost of construction apportioned to it, provided that the C. M. & St. P. Ry. Co., not later than six months prior to the time fixed for the commencement of the work, submits to the city plans and specifications of the work to be performed under the order, and an estimated cost of such work. The matters which shall make up the total cost to be apportioned among the parties are specified, and such cost is apportioned 70 per cent to the C. M. & St. P. Ry. Co., 25 per cent to the city of Milwaukee, and 5 per cent to T. M. E. R. & L. Co. Should the C. M. & St. P. Ry. Co. desire, while depressing its two main tracks, to construct passing or storage tracks, one on either side of the main tracks, the cost thereof will be apportioned 70 per cent to the railway company, and 30 per cent to the city. Should the C. M. & St. P. Ry. Co. be legally responsible for any costs in replacing or furnishing industry switching facilities within the limits of the order, such costs will be apportioned 50 per cent to the company, and 50 per cent to the city. The distribution of the cost of maintenance of the work, when completed, is provided for, and it is also provided that upon completion all the provisions of the city ordinances relating to the operation of engines and trains, and the maintenance of crossing protec-

tions, or regulations of any kind pertaining thereto, shall cease to be applicable to the railway within the limits of the order, though the foregoing provision is not to be construed as a waiver or surrender by the city of Milwaukee of any of its police powers or the right to exercise the same.

The city of Milwaukee, in a petition by its common council, dated November 3, 1909, prays this Commission for an order directing the Chicago, Milwaukee & St. Paul Railway Company to separate the grades of the tracks of its Northern division from the grades of the public thoroughfares at all streets between 38th street and Fond du Lac avenue, all lying within the corporate limits, alleging that public safety requires an alteration in said crossings and the separation of the grades of the several streets from the grades of the tracks.

Also there was filed with this Commission a petition on behalf of the Northwestern Protective Association praying that separation of grades be denied unless the facilities for industry tracks and sidings, as now enjoyed, be neither temporarily nor permanently interfered with. This association further prayed that it might intervene and be interpleaded as a party defendant.

Due notice of the filing of this petition of the city of Milwaukee having been given to the parties in interest, a hearing was held in the city of Milwaukee on January 19, 1910, and continued on May 16, 17, 18, 19, 20, and also on May 31 and June 1, 1910. At these hearings the city of Milwaukee was represented by its city attorney. *John T. Kelley* was city attorney at the time of the first hearing, since which time *Daniel W. Hoan* has been city attorney and has represented the city in this matter on all subsequent occasions. The Chicago, Milwaukee & St. Paul Railway Company was represented by *H. J. Killilea*; the Northwest Protective Association (later known as the Northwest Side Manufacturers' and Shippers' Association) by *C. A. McGee*; the Northwest Side Track Depression Association by *M. T. Halphide*; and The Milwaukee Electric Railway & Light Company by *C. M. Rosecrantz*.

At these hearings testimony was introduced tending to show the dangerous condition of the crossings in question, as well as the delay caused to street car, vehicular, and pedestrian traffic, by reason of the great number of train and switching movements on these tracks. Also pro and con on the impracticability of furnishing adequate switching facilities to the industries now

existing in this territory with a separation of street and track grades, particularly if accomplished by depression of tracks.

The petition of the city alleges that its population at that time was 360,000, of which 100,000 resided in this northwest section. Plans and profiles submitted show the tracks to ascend northward from the Grand Avenue junction with the La Crosse division on a heavy grade with a maximum or a little over 1 per cent to a summit between Brown street and North avenue, a distance of some two miles; thence descending for some two miles towards North Milwaukee with grades having a maximum of about 0.7 per cent. The city streets to be affected by this proposed grade separation are:

- 1—35th street or Western avenue with double track street car line.
- 2—Vliet street with double track street car line.
- 3—33rd street.
- 4—Cherry street, proposed to be closed.
- 5—Galena street.
- 6—Walnut street, proposed to be closed.
- 7—Lisbon avenue with double track street car line.
- 8—Brown street.
- 9—North avenue with double track street car line.
- 10—Meinecke avenue, proposed to be closed.
- 11—Clark street, proposed pedestrian subway.
- 12—Center street.

All of the above streets under consideration, except 35th and 33rd streets, extend in an easterly and westerly direction, with quite light and uniform grades for several blocks on either side of the tracks. For this reason it is not possible to change the said street grades any considerable amount at the track crossings in question without

- (a) introducing artificial street grades much steeper than naturally exist on said streets in this vicinity; or,
- (b) requiring such long approaches as to call for long side approaches on the cross streets for from one to three streets either side of the tracks, and more particularly west of the tracks.

For over two years following said hearing this Commission, together with its engineers, studied the plans and profiles submitted to it, and held numerous conferences with various interests to be affected, looking toward a solution of the problem. The plans suggested by the city would leave most of the streets un-

disturbed and depress the tracks, while the railway company held to the plan of leaving the tracks in their present position, and elevating or depressing most of the streets in question. Finally, the Commission's engineers took the field in January, 1913, to obtain information and data not as yet furnished by either the railway company or the city.

In the meanwhile the city submitted a plan under date of January, 1913, tending to show how the existing sidetrack facilities might be retained under a track depression scheme.

The conflicting interests involved made it apparent that considerable time must elapse before the actual separation of grades could be accomplished, and so this Commission, on its own examination, declared that public safety required additional temporary protection, pending separation of grades, on Cherry, Walnut, Brown, Clark, and Center streets and provided for same under an order dated January 25, 1913. *City of Milwaukee v. C. M. & St. P. R. Co. et al.* 11 W. R. C. R. 350. After the above mentioned field survey and further study, the engineers of this Commission sent out a plan under date of May 14, 1913, calling for a track depression scheme. This did not change the conflicting attitudes of the different interests involved; in fact, in December 1913 the railway company reiterated its stand for non-interference with its tracks, and submitted a condensed plan marked "Scheme No. 4" D-5372, together with condensed plans showing the proposed schemes of the city and this Commission. So, under date of February 28, 1914, the Commission's chief engineer sent out another plan, showing some changes from the plan of May 14, 1913, but still calling for track depression, and asking for another conference on March 6, 1914. At this time representatives of the several interests, including several of the railway company's officials, went together over the entire section of tracks involved.

On March 24, 1914, this Commission issued a tentative order calling for a depression of the tracks, but differing in some details from both of its previous plans. A formal hearing was held in the city hall on May 14, 1914, to give those interested an opportunity to discuss this tentative order, at which time the following appearances were made: For the city, *Daniel W. Hoan*; for the Chicago, Milwaukee & St. Paul Railway, *H. J. Killilea* and *C. F. Loweth*; for the Milwaukee Electric Railway & Light Company, *C. M. Rosecrantz*; for the Northwest Side Manufac-

turers' & Shippers' Association (known at the first hearing as the Northwest Protection Association) *L. M. Yaeger*; for the Northwest Side Track Depression Association, *M. T. Halphide*.

Representatives of the Manufacturers' & Shippers' Association offered the most objections to this order, for the reason stated in their original petition together with the possible financial burden to be imposed upon them. Following this hearing the Manufacturers' & Shippers' Association held a meeting on May 27, 1914, at which meeting representatives of the city, railway company, and the Commission's engineering staff were present upon request. At this time this association took action to ask for a stay in the tentative order to permit it to employ expert engineering service and submit its plan for grade separation to this Commission. Such plans were submitted under date of July 24, 1914, and the same date a formal hearing was held in the city hall with the following appearances: for the city, *Daniel W. Hoan*; for the Northwest Side Manufacturers' & Shippers' Association, *C. N. Bainbridge*, consulting engineer; for the Chicago, Milwaukee & St. Paul Railway Company, *Chas. Lapham*; for the 22nd Ward property owners, *W. C. Wehr*.

These plans called for a slight track elevation, but greater street depression. After the plans had been explained and commented upon and the said association had presented a petition signed by its directors, asking for (a) an order adopting its plan just offered; or (b) an order for the depression of streets instead of tracks, the hearing closed with the understanding that the engineers representing the various interests should hold a conference to ascertain what might be done towards solving the problem by an elevation of the tracks. Also at this hearing the city attorney filed notice of a request to amend the city's petition so as to pray for a separation of grades at the expense of the Chicago, Milwaukee & St. Paul Railway Company and The Milwaukee Electric Railway & Light Company, according to their respective interests.

These engineers met in conference in the city hall on August 24 and 25, 1914. The Commission's engineers offered a semi-track elevation and semi-street depression scheme as representing about the maximum track elevation that could be given consideration, due to the practical necessity of keeping any proposed track elevation north of the junction with the La Crosse division at Grand avenue. The Chicago, Milwaukee & St. Paul Railway

Company offered a plan dated August 28, 1914, showing a scheme for elevation of the tracks somewhat less than that shown on the plan offered by the Commission's engineers, but more than the plan of the Manufacturers' & Shippers' Association.

Following the hearing of July 24, and the petition of the Manufacturers' & Shippers' Association presented at that time, it was suggested that the common council, as representing all the citizens of Milwaukee, including the various differing factions among its constituency, express its preference as to track or street depression.

August 31, 1914, the Manufacturers' & Shippers' Association offered plans showing separate assessed values for real estate and improvements on most of the trackage and adjoining property between Cherry street and Meinecke avenue which would seem to sustain their statement that trackage property was assessed higher than the adjacent non-trackage property.

September 23, 1914, a mass meeting of northwest side citizens wired a protest against street depression, followed by a resolution in favor of the tentative order. This was followed on the 24th by a letter from the Manufacturers' & Shippers' Association protesting against consideration of resolutions passed by mass meetings of citizens, most of whom are neither directly nor financially interested in the mode and manner of securing a separation of grades.

September 25, 1914, the Washington Park Advancement Association, in special meeting, adopted a resolution protesting against any change in the tentative order.

A brief was also submitted by City Attorney Hoan on "Shippers' Rights to Maintain Switch Tracks," and on October 3, 1914, he also wrote asking that if a change from the tentative order was contemplated looking towards street depression that the city be given further opportunity to oppose the same, and quoting from a written protest from the chief engineer of the city fire department against street depression and closing of 33rd street from the standpoint of danger to and efficiency of the equipment and service of the fire department.

October 6, 1914, the Vliet Street Advancement Association, through its attorney, asked to be heard in argument against depression of Vliet street, if same were contemplated by this Commission,

October 20, 1914, the Northwest Side Anti-Street Depression Association in a mass meeting passed a resolution favoring the tentative order.

October 21, 1914, the railroad and buildings committee of the common council met with the various interests on the ground to view the situation and on October 26, 1914, the common council, by a unanimous vote, passed a resolution favoring the depression of the tracks of the Chicago, Milwaukee & St. Paul Railway on its Northern division on the northwest side of the city of Milwaukee, and the preservation of the public streets at their present grade, as far as possible.

A second tentative order was issued by this Commission on December 24, 1914, and a hearing was held in Madison on January 15, 1915, to discuss same, with the following appearances, namely: *D. W. Hoan*, appearing on behalf of the city of Milwaukee. *H. J. Killilea*, *C. F. Loweth*, appearing on behalf of the Chicago, Milwaukee & St. Paul Railway Company. *M. T. Halphide*, appearing on behalf of the Northwest Side Track Depression Association, and Northwest Side Anti-Street Depression Association. *James D. Shaw*, of *Van Dyke, Shaw, Muskat & Van Dyke*, appearing on behalf of The Milwaukee Electric Railway & Light Company. *Louis G. Bohmrich*, appearing on behalf of the Northwest Side Manufacturers' & Shippers' Association and *William Von Baumbach*. The hearing continued on January 25, 26, and 28.

The testimony submitted and investigations made show, in the opinion of this Commission, that public safety and convenience demand a separation of grades of the tracks of the Northern division of the Chicago, Milwaukee & St. Paul Railway in the city of Milwaukee from the grades of 35th to Center streets, inclusive. The movement of traffic on the steam railroad tracks, electric street railway tracks and street roadway and sidewalks are all contributing factors in creating conditions calling for such a separation of grades.

Recognizing this necessity, this Commission is directly concerned in the mode and manner only of affecting such a separation of grades, but insofar as is possible, it desires to recognize and minimize the temporary as well as permanent inconvenience to and the financial burden to be imposed upon the various interest involved.

No separation of grades is possible without interference in the use of side and switch track facilities unless all the changes required are made in the streets. To so change these streets, either by raising them over or depressing them under the tracks in their present position, seems unwarranted and unduly detrimental to the welfare of the city and a large proportion of its citizens.

It is recognized that a separation of grades by the elevation of tracks minimizes the physical separation required; that tracks can be elevated at a less cost than they can be depressed; and that switching facilities can be better and more safely furnished from an elevation rather than a depression of tracks. In the case in question the topographical and physical conditions render a track elevation scheme impracticable for various reasons. The tracks involved are now on a hill, as described above, and any elevation of same is, in effect, to build a hill upon and over an existing hill, and thus increasing both the grades and the summit of same. It seems necessary that no track changes be considered south of the La Crosse division junction at Grand avenue, and these two reasons in particular show that any track elevation would increase, instead of decrease, the operating burden of the railway company.

It seems advisable to effect the desired separation of grades mainly by means of track depression. It is recognized that in some cases it will be impracticable to leave switching facilities as they now exist, more particularly the teaming tracks on the right of way, and in all such cases it will be necessary to accept such service at a level more or less depressed from existing elevations, or from team tracks located elsewhere. It is considered possible to serve many industries by means of inclined tracks leading to surface industry spurs outside of the Chicago, Milwaukee & St. Paul Railway Company right of way line. The manner of furnishing switching service must of necessity be decided for each individual case desiring such service, and should be decided by the parties directly interested, viz: the industry and the railroad company.

Switching and sidetrack service is of mutual benefit to both railroad and shipper, and it is expected that the railway company will use its best efforts to meet the different needs for such service in the most advantageous manner possible. Separation of grades will result in benefit to the Chicago, Milwaukee & St.

Paul Railway, the city of Milwaukee and The Milwaukee Electric Railway & Light Company. The railway company will be relieved of operating restrictions, danger of crossing accidents with resultant damages, maintenance of crossing protection, etc. The street railway company will be relieved of a serious cause of delays to and interference with the efficient movement of its cars. It will also be relieved of the cost of maintenance of crossing appliances and facilities as well as liability of accidents at the crossings. The city will be benefited by relief from delays to street traffic and accidents to persons or property which are the direct results of grade crossings. It also benefits by reason of the slight changes to be made in its streets. It is therefore considered proper that each pay its fair portion of the cost of the improvement. It appears in this case that a division of the expense may best be made on a percentage basis, as practically all of the work will be confined to the right of way of the railway company.

The question of safety and convenience to the public is of paramount importance in this case. Being convinced of the necessity for the elimination of grade crossings from Western avenue, 35th street, to Center street, inclusive, and having in mind the contentions of the various interested parties, it is our opinion that the plans of the tracks of the Chicago, Milwaukee & St. Paul Railway Company should be altered and certain streets carried across them as provided in the following order.

IT IS THEREFORE ORDERED:

SECTION 1, *Paragraph 1.* That the plans of the main tracks of the Northern division of the Chicago, Milwaukee & St. Paul Railway Company be depressed from some point southwest of the crossing of the tracks with Western avenue, or 25th street, in the city of Milwaukee, to a point at or near Clark street, and from said point that the tracks be elevated to some point at or near Fond du Lac avenue, in such a manner as to permit the streets to be carried over or under the tracks of the railway company as described in the following section.

Paragraph 2. All elevations mentioned refer to city datum which shall be taken as 54.83 feet below the permanent bench mark upon a stone monument located in the court house square, near the northeast corner thereof, same being the bench mark designated in sec. 1 of chapter 12 of the general ordinance of the city of Milwaukee.

Paragraph 3. All street elevations herein mentioned refer to elevation of crown of roadway.

SECTION 2, *Paragraph 1.* Western avenue, or 35th street, shall be carried over the Chicago, Milwaukee & St. Paul Railway tracks on a bridge at an elevation of 92.8 feet. The south approach shall extend, with vertical curves and a uniform grade of 3 per cent to an intersection with the existing street grade. The north approach shall extend with vertical curves and a uniform grade to the south line of Vliet street. The bridge and approaches shall have a clear roadway of 38 feet, and two sidewalks of 10 feet each except for space actually required for girders and hand rails.

There shall be no approach on McKinley Boulevard now on the alley in block 1.

Paragraph 2. Vliet street shall be carried over the Chicago, Milwaukee & St. Paul Railway tracks on a bridge at an elevation of not more than 93.5 feet. The east approach shall extend with vertical curves and a uniform grade to the west line of 32nd street. The west approach shall extend with vertical curves and a uniform grade to an elevation of 92.5 at the east line of 34th street, and from the same elevation of 92.5 feet at the west line of said 34th street it shall descend with vertical curves and a uniform grade of 2 per cent to an intersection with the existing street grade. The bridge and approaches shall have a clear roadway of 45 feet, and two sidewalks of 10 feet each except for the space actually required for hand rails.

There shall be a side approach on 34th street to the north, extending with vertical curves and a uniform grade from the north line of Vliet street at an elevation of 92.5 feet to the south line of the east and west alleys of blocks 16 and 17. There shall be no approach on 34th street south of Vliet street.

Paragraph 3. Thirty-third street shall be carried over the Chicago, Milwaukee & St. Paul Railway tracks on a bridge at an elevation of not more than 93.5 feet. The south approach shall extend with vertical curves and a uniform grade to the north line of the east and west alleys of blocks 6 and 7. The north approach shall extend with vertical curves and a uniform grade to the south line of the alley in block 15. The bridge and approaches shall have a clear roadway of 36 feet, and two sidewalks of 12 feet each except for space actually required for hand rails.

There shall be side approaches on the most northerly east and

west alley of block 6 and on the east and west alley of block 16. These two approaches shall be made without vertical curves and with 4 per cent grades. The road surface shall be of broken stone.

Paragraph 4. Galena street shall be carried over the Chicago, Milwaukee & St. Paul Railway tracks on a bridge at an elevation of not more than 99.5 feet. The east approach, with vertical curves, shall extend to a point 115 feet west of the west line of 30th street. The west approach may extend to the east line of 31st street. The bridge and approaches shall have a clear roadway of 36 feet, and two sidewalks of 12 feet each except for space actually required for girders and hand rails.

Paragraph 5. Lisbon avenue shall be carried over the Chicago, Milwaukee & St. Paul Railway tracks on a bridge at an elevation of not more than 105.8 feet. The east approach shall extend to the west line of 30th street. The west approach shall not extend beyond 20 feet from the Chicago, Milwaukee & St. Paul Railway right of way line. The bridge and approaches shall have a clear roadway of 44 feet, and two sidewalks of 11 feet each except for space actually required for girders and hand rails.

Paragraph 6. Brown street shall be carried over the Chicago, Milwaukee & St. Paul Railway tracks on a bridge at an elevation of not more than 111.0 feet. The east and west approaches shall not extend more than 80 feet east and 20 feet west, respectively, of the railway right of way lines. The bridge and approaches shall have a clear roadway of 36 feet, and two sidewalks of 12 feet each except for space actually required for girders and hand rails.

Paragraph 7. North avenue shall be carried over the Chicago, Milwaukee & St. Paul Railway tracks on a bridge at an elevation of not more than 111.9 feet. The east approach shall extend with vertical curves and a uniform grade to the most westerly line of 30th street. No approach to the west will be required. The bridge and approaches shall have a clear roadway of 44 feet, and two sidewalks of 11 feet each except for space actually required for girders and hand rails.

Paragraph 8. Clark street shall be closed to vehicular traffic, but shall be provided with a pedestrian subway under the tracks of the Chicago, Milwaukee & St. Paul Railway. The floor of the subway shall be not less than 90.8 feet in elevation, with

suitable stops contending from the portals to the street surface. There shall be a clear width of not less than 15 feet and a clear height of not less than 8 feet in the subway. Suitable provision shall be made to drain the same, and to prevent water, oil, dirt, or other substances from dripping into the subway.

Paragraph 9. Center street shall be carried under the Chicago, Milwaukee & St. Paul Railway tracks through a subway at an elevation of not less than 89.5 feet at the west portal. The west approach, with vertical curves and a uniform grade, shall extend to the east line of 32d street. The east approach shall extend to the west line of 30th street and shall have a uniform grade from the west portal to said street line. The roof shall be suitably protected against leakage of water, oil, dirt or any other substance into said subway. The width between subway walls shall be 66 feet. There shall be a clear roadway on approaches and through the subway of 40 feet. The subway and west approach shall have two sidewalks of 13 feet each. The east approach shall have two sidewalks of 14 feet each. There may be two lines of supporting columns in the subway at the curb lines, and inside thereof. A vertical clearance of 13.5 feet shall be provided therein. There shall be a side approach on the alley in block 8 with 5 per cent grade, no vertical curves, and macadam surface.

SECTION 3. At the various streets, avenues, etc., where grades are to be changed, the grades shall be connected by vertical curves wherever the difference in the rate of grades exceeds 0.5 feet in 100 feet except as otherwise stipulated in sec. 2. The vertical curve shall have a total length of not less than 40 feet, extending at least 20 feet on each side of the point of intersection of said grades.

The grades of curbs and sidewalks shall be the same as the grade of the crown of the roadway, unless otherwise specified by the commissioner of public works of the city of Milwaukee to meet special conditions.

Should the city desire to make any of the approaches longer than is specified in sec. 2, it may make the additional improvement in connection with the work herein ordered, provided it submits plans and estimates therefor before work is started on the approach in question, together with an estimate of cost for the approach as ordered herein.

In this event the Chicago, Milwaukee & St. Paul Railway Company shall not be responsible for any item of expense in connection with such work beyond the limits of the approach as herein ordered, and, if necessary, this Commission will decide as to what sum shall be chargeable by the city to the cost of the work herein ordered, for apportionment among the several interests involved.

The right is reserved to the city of Milwaukee to erect in the future, if it so desired, and at its own expense, such overhead bridges on the right of way of the Chicago, Milwaukee & St. Paul Railway Company at Cherry and Walnut streets as may be deemed necessary by the common council. A vertical clearance over top of rail of said railroad tracks of not less than that existing at adjoining street bridges shall be provided. Horizontal clearances similar to said adjoining bridges shall also be provided.

SECTION 4. The pavement on the bridges, in the subway, and all approaches thereto, except where noted for alleys, shall be of brick upon a concrete foundation, and curbs and sidewalks shall be of concrete, all according to the standard specifications of the city of Milwaukee. Or, such other material and construction may be used as may be mutually agreed upon by the railway company and city and approved by the commissioner of public works of said city. Suitable hand rails shall be provided at the outer edge of sidewalks over all bridges, and at such places on the approaches thereto as may be necessary for the safety of pedestrians using said walks.

The sidewalks on the street approaches to the bridges may be narrowed if agreeable to the commissioner of public works of the city of Milwaukee to permit of a parking strip adjoining the curb, but the total width of the approach shall not be less than that specified on the various paragraphs of sec. 2.

SECTION 5. The material to be used in the superstructures of the subway and bridges shall be of iron, steel, concrete or combination of same.

All bridges carrying streets or roadways over the tracks shall be of the girder type.

SECTION 6. All bridges carrying streets over the tracks shall be designed to carry, in addition to the dead loads, live loads as follows, viz.:

A 15 ton roller, on any part of the roadway, with 10,000 pounds on each of two rear wheels having 20 inch faces, and 58

inches center to center, and 10,000 pounds on one front wheel with 40 inch face, with axles 10 feet apart. The space not actually occupied by roller, including the sidewalk areas, shall be considered to be loaded with a live load of 100 pounds per square foot.

Those bridges carrying street car traffic shall be designed for an alternative loading consisting of a continuous string of fully loaded street cars on each track, together with 100 pounds per square foot of remaining area, as specified above, and using that loading which will produce the maximum stresses in the different members. The typical car will be 8 feet 6 inches wide, 53 feet 6 inches long over all, truck centers 28 feet 4 inches and truck wheel base 6 feet 6 inches, with a dead weight of 44 tons and seating 76 passengers.

SECTION 7. The work required to be done under this order shall be performed as follows: The Chicago, Milwaukee & St. Paul Railway Company shall execute all such work within the limits of its right of way except for work in connection with the water mains and pipes appertaining to the water department, and the wires, poles and conduits appertaining to the police and fire departments of the city of Milwaukee; and further excepting the gas mains and the wires, poles and conduits of any private utility companies not specifically mentioned herein, and wires, poles, conduits, track, etc. of The Milwaukee Electric Railway & Light Company, unless it becomes necessary to remove the property of these three private utilities as being obstructions as stipulated below.

The Milwaukee Electric Railway & Light Company shall perform all work, except as otherwise provided for herein, necessary to alter its property to permit of the separation of street and track grades as herein ordered and the city of Milwaukee, by the exercise of its police powers, shall order any other private utility company whose property may interfere with this work to make the necessary changes or alterations called for.

The city of Milwaukee shall perform all work required by this order in connection with its streets and alleys outside the Chicago, Milwaukee & St. Paul Railway right of way lines, except as provided for just above. It shall also do all work required in connection with its water mains and pipes, and police and fire wires, poles and conduits within said rights of way lines.

In the erection and maintenance of such temporary structures as may be needed for carrying street traffic over the work herein ordered, the Chicago, Milwaukee & St. Paul Railway Company shall be responsible for the same within its right of way lines, excepting only the ties, rails, poles, trolley wire, and their appurtenances belonging to The Milwaukee Electric Railway & Light Company; The Milwaukee Electric Railway & Light Company shall be responsible for those portions of such structures outside the right of way lines of said railroad company as may be needed to support its track and poles; and the city shall be responsible for the remaining portions.

Provided, however, that such other distribution of work may be made by the various parties in interest as may be mutually agreed upon.

All the work required to be done under this order by the Chicago, Milwaukee & St. Paul Railway Company or by private utility companies upon or in connection with the public streets or alleys shall be done under the superintendence, and subject to the inspection and approval of the commissioner of public works of the city of Milwaukee.

At least ten days prior to the proposed commencement of any part of such work, the detail plans and specifications therefor shall be submitted to said commissioner of public works for his examination, and if found to be in accordance with the provisions of this order, insofar as this order contains specific provisions, and in the absence of such specific provisions if they shall be satisfactory to said commissioner of public works in regard to matters and details which by this order are left to his discretion and judgment, such plans shall be approved by him, and after such approval all of the work outlined and included therein shall be executed in strict conformity therewith.

If same are not thus satisfactory said commissioner of public works shall promptly advise the interested party or parties, stating specifically the reasons for objection thereto.

SECTION 8. When it shall be necessary in the performance of the work herein ordered to disturb, remove, deflect or relay any conduits, pipes, poles, wires, tracks, or other property belonging to The Milwaukee Electric Railway and Light Company, or their assigns or successors, the said company shall be notified to that effect by the Chicago, Milwaukee & St. Paul Railway Company, or the city as the case may be, and within ten days after

receipt of such notice, and at its own expense, it shall proceed to make the actual physical changes required. If such company fails so to do, the Chicago, Milwaukee & St. Paul Railway Company, or the city as the case may be, may, after expiration of the ten days' notice, remove said obstructions to its work.

When it shall be necessary in the execution of this order to disturb, remove, deflect, or relay any conduits, pipes, poles, wires, tracks, or other property belonging to any private utility company, other than The Milwaukee Electric Railway and Light Company, the said company shall be notified in writing by the city, acting under its police powers, to make the required changes, and at said utility's own expense. The Chicago, Milwaukee & St. Paul Railway Company may, in writing, ask the city attorney of Milwaukee to issue such order or orders in connection with the execution of the work herein delegated to it, and the city attorney shall promptly cause such order to be issued. Should such utility company fail to start the actual physical work called for within ten days after receipt of such notice, the city or railroad company, as the case may be, shall proceed to remove obstructions to its work.

SECTION 9. The city of Milwaukee shall assume, subject to the final apportionment herein provided, all responsibility for damages to property for which the city will be primarily liable, caused by the issuance or enforcement of this order, or by the proper prosecution of the work herein ordered, provided, however, that the Chicago, Milwaukee and St. Paul Railway and The Milwaukee Electric Railway and Light Companies shall have the right to intervene in all proceedings which may be commenced for the recovery of any such damages.

SECTION 10. Whenever it shall be necessary, in the prosecution of the work herein required, the railway company may temporarily obstruct any street or alley to such extent and for such length of time as may be approved by the commissioner of public works. However, when street car traffic will thereby be interrupted, at least twenty-four hours' advance notice shall be given to said street railway company by the railway company. And it may, whenever the same shall be necessary, erect and maintain temporary structures and falsework in said streets and alleys, subject to like approval of said commissioner of public works.

SECTION 11. As a condition precedent to the obligations of the railway company or other parties under this order, the city of Milwaukee shall by appropriate action of its common council, and by all other required proceedings to that end, make the necessary changes in the grades of the streets and alleys to comply with the provisions of this order. And also to vacate such portions of all streets and alleys within the limits of the railway company's right of way from and including 35th street to Fond du Lac avenue which are not specifically mentioned in sec. 2 above. Subject, however, to the provisions for future bridges at Cherry and Walnut streets as described in sec. 3 of this order. The railway company is hereby authorized and required to provide suitable walls or fences at or near its right of way lines to effectively close off traffic from such streets and alleys as are thus vacated.

It is understood, however, that the vacation of Clark street between said right of way lines is subject to the provisions for the subway for pedestrians hereinabove described.

SECTION 12. When the Chicago, Milwaukee and St. Paul Railway Company shall have completed the work herein specified, in accordance with this order, then and thereupon all the provisions of the ordinances of the city of Milwaukee relating to the operation of engines and trains and the maintenance of crossing protections or regulations of any kind appertaining thereto, shall cease to be applicable to the railway within the limits of this order. Provided, however, that nothing herein contained shall be construed as a waiver or surrender by the city of Milwaukee of any of its police powers or its right to exercise the same.

SECTION 13. The work herein ordered is assumed to require two working seasons, and shall be started on or before May 1, 1917, and completed on or before December 31, 1919, unless prevented by strikes or riots, or restrained by injunction or other order of a court of competent jurisdiction, or delayed by any action brought to determine the rights of any person affected by this order, in which case the date for completion, as given above, shall be extended for a period equal to the actual delay caused thereby, provided, the railway company give immediate written notice to the city attorney of Milwaukee of such strike, etc., and more particularly of the institution of said legal proceedings. The city of Milwaukee shall thereupon have the right to inter-

vene in any suit or proceeding brought by any person or persons seeking to enjoin or restrain or in any manner interfere with or claim damages because of the prosecution of said work, and to move for a dissolution of such injunction, or restraining order, and for any other proper order in such suit.

If said railway company shall be delayed in the prosecution of said work required to be done under the provisions of this order by reason of the obstruction of pipes, conduits, wires, or other property of private corporations or individuals, or by reason of any delay on the part of the city of Milwaukee or any of its officers in the performance of the duties imposed upon the city and its officers by this order, then, and in that case, and after written notice duly given by the railway company to the city attorney of Milwaukee, the length of time which said railway company shall have been so delayed shall be added to the time allowed herein for the completion of said work.

In case time shall be consumed by any of the parties hereto in litigating questions of apportionment of amount of costs which shall be borne, it is not intended by the Railroad Commission that such time shall be considered as extending the date for completion of the work as herein ordered.

SECTION 14. This Commission reserves the right to decide any matters about which there may be a difference of opinion between various parties affected by this order. Any such party or parties may at any time refer to this Commission, for its consideration, any questions that may arise during the progress of the work.

SECTION 15. Upon completion of the work herein ordered the same shall be maintained as follows, viz.:

All permanent work herein ordered to be done by the Chicago, Milwaukee & St. Paul Railway Company within its right of way lines shall be maintained by it, excepting the roadway and sidewalk pavements on the bridges and in the subways and the tracks, poles and wires of The Milwaukee Electric Railway and Light Company. These excepted items just mentioned, together with all changes made off the right of way of said Chicago, Milwaukee & St. Paul Railway Company, shall be maintained by the city of Milwaukee and The Milwaukee Electric Railway & Light Company in accordance with their customary agreements or regulations in such matters.

SECTION 16. The work to be considered in apportioning costs between the Chicago, Milwaukee & St. Paul Railway Company, the city of Milwaukee and The Milwaukee Electric Railway and Light Company shall be considered to be all work required to be done by any and all of the three parties in question to change the grades of the streets across the right of way of the Chicago, Milwaukee and St. Paul Railway Company and approaches thereto within limits, all as set forth in sec. 2 of this order; to pave the same as set forth in sec. 4, except for such pavement as may legally be assessed against abutting property; to make required changes in the city's water pipes, sewers, conduits, poles, wires, etc.; to change tracks and appurtenances of The Milwaukee Electric Railway and Light Company; to depress the two main tracks of the Chicago, Milwaukee and St. Paul Railway Company, and to construct and maintain temporary structures and tracks as may be necessary to handle traffic of the city, The Milwaukee Electric Railway and Light Company and Chicago, Milwaukee & St. Paul Railway Company during the period of construction. In addition to the cost and expense of performing the work herein ordered to be done, all damages to property that may be caused because of the separation of grades herein ordered, shall be a part of the entire cost and expense of the undertaking. Any losses of revenue which may be attributed to the disturbances due to construction shall not be considered a part of the total cost for distribution as herein ordered. Increased operating expenses during said period of construction, except that caused by shifting and maintaining temporary running tracks, shall also not be considered as part of the total cost for distribution.

Upon the completion of the work as herein outlined and ordered, the Chicago, Milwaukee & St. Paul Railway Company, the city of Milwaukee, and The Milwaukee Electric Railway & Light Company shall each submit to this Commission separate, complete, itemized and sworn statements showing the actual cost to each of each part of the work completed pursuant to this order, and such total proper costs are hereby apportioned between the parties interested on the following basis:

Chicago, Milwaukee & St. Paul Railway Co.....	70 per cent
City of Milwaukee.....	25 "
The Milwaukee Electric Railway & Light Co.....	5 "

If while the Chicago, Milwaukee & St. Paul Railway is depressing its two main tracks it desires to construct passing or storage tracks one on either side of the main tracks, said company shall submit proper, itemized statements of the costs for this portion of the work after completion as called for above, and such costs shall be apportioned as follows:

Chicago, Milwaukee & St. Paul Railway.....	70 per cent
City of Milwaukee.....	30 “

If the Chicago, Milwaukee & St. Paul Railway Company is found to be legally responsible for any costs in replacing or furnishing industry switching facilities within the limits of this order, then said company may submit to this Commission statements of any such costs incurred as called for above and such costs shall be apportioned as follows:

Chicago, Milwaukee & St. Paul Railway Co.....	50 per cent
City of Milwaukee.....	50 “

It shall be incumbent upon the city of Milwaukee to have made such provision for the payment of the cost of the construction of the work herein ordered apportioned to it and prior to the starting of the construction of such work, and such provision shall be a condition precedent to the commencement of the work, provided that the Chicago, Milwaukee & St. Paul Railway Company shall, not later than six months prior to the time herein fixed for the commencement of the work, submit to the city plans and specifications of the work to be performed under this order, and an estimated cost of such work.

During the progress of the work this Commission may receive or call for detailed statements of cost for different periods of time, preferably for not less than three months, from the different parties affected. This for the purpose of authorizing approximate adjustments of the financial burden between said parties from time to time in case satisfactory adjustments cannot be effected between said parties in question without recourse to this Commission.

IN RE APPLICATION OF THE RHINELANDER POWER COMPANY
FOR AUTHORITY TO ESTABLISH AN AMENDED SCHEDULE
OF RATES.*

Submitted Sept. 21, 1914. Decided Jan. 30, 1915.

Application was made by the Rhinelander Power Co., a company owning a water power on the Wisconsin river near Rhinelander, for the Commission, after due investigation, to fix a schedule of rates for the furnishing by applicant of electric current at and in the vicinity of Rhinelander. The applicant, approximately ten years ago, entered into several contracts which still have about ten years to run. Under these contracts the larger part of the product goes to a purely private concern at the rates stipulated, and the balance chiefly to the lighting and power customers of the Rhinelander Lighting Co. The applicant complains that unless it is enabled to derive more income from the generation and sale of current, it will be unable to continue to furnish adequate service to the public and its individual customers, and will be unable to meet and perform its obligations and duties as a public utility.

The proceeding involves the following questions:

1. the jurisdiction of the Commission in the premises;
2. the validity of the contracts in question at their inception, which are alleged to be void, on the theory that contracts entered into between a public service company and a customer thereof, and made on such a price basis as to be grossly discriminatory and below the cost of service, are illegal;
3. the adequacy of the rates at which the applicant is now furnishing service; and,
4. the power of the Commission to authorize the changing of the contract rates, if the present rates are inadequate.

The applicant was organized as a public utility, its letterheads from the first advertising that it would sell current up to its capacity to any customer. The company was given the right in its charter to use the streets for poles and wires, and did so use them, being a holder of a franchise from the city authorizing such use. Its articles of incorporation give as one of its purposes to produce and convey electric power to any place where it may be desired and to engage in the business of electric lighting. The entire matter at present is specifically covered by sec. 1797m—1 of the statutes.

Held: That sec. 1797m—1 of the statutes makes the applicant a public utility at present, and that the applicant was also a public utility within the meaning of the law when the contracts involved were entered into prior to the enactment of the statute in question.

* As modified by supplemental order of February 10, 1915, eliminating three phases appearing in the original through inadvertence and not necessary to the decision nor properly a part thereof.

In passing upon the question of rates, the revenues and expenses, and the value properly assignable to the property, including due allowance for value of the water power rights, were investigated and considered in some detail. The value is fixed at approximately \$200,000 for purposes of this case.

Held: That it does not appear that the contracts in question were grossly discriminatory or unreasonably low, and that in any event sec. 1797m—91 of the statutes exempts from the operation of the Public Utilities Law, as far as discrimination is concerned, contracts executed prior to April 1, 1907;

That the rate of return upon the investment in physical property in the present case is low in comparison with the usual earnings of many other electric plants, and that any additional value on account of water power rights still further reduces the rate of return, and that the petitioner is entitled to a larger earning and to a higher rate of return upon its investment, but that the schedule proposed by the Commission is only a maximum, as the marketableness of the petitioner's supply at rates much higher than those now charged has not been demonstrated before the Commission, and,

That the Commission has the power to authorize the changing of the contract rates in the state, such power being implied in every contract touching rates by a public utility.

Ordered: That applicant is authorized to put into effect the schedule of rates proposed by the Commission.

This is an application by a company owning a water power on the Wisconsin river near Rhinelander, used chiefly for the production of electricity, for authority to advance its rates. In the formal application it is stated that the company has heretofore filed with the Commission its schedule of rates and charges for electric current generated by it, and that such schedule of rates includes the rates set forth in three certain contracts, and also the rates charged for current sold by the applicant and not covered by the said contracts.

The application sets forth at some length the terms of the contracts in force under which the applicant company disposes of the greater part of its product. From the Rhinelander Paper Company under one contract it receives \$12 per horse power per year; under a contract made with E. A. Edmonds, which was transferred later to the Rhinelander Paper Company, it receives for additional current \$15 per horse power per year, while for a less amount furnished to the Rhinelander Lighting Company it receives \$15 per horse power for the first 28 horse power, and \$20 per horse power for an additional 50 horse power.

The total capacity of the plant is given at 1,600 horse power, or, reduced to electrical terms, about 1,200 kilowatts. Under the contracts referred to above, then, the applicant obligated it-

self a number of years ago to sell to the Rhinelander Paper Company 500 horse power, or 374 kilowatts; to E. A. Edmonds, under certain conditions, available amounts up to one-third of the capacity of the plant operated at full rated capacity, and in any event all available power up to 500 horse power, or 374 kilowatts; and to the Rhinelander Lighting Company, 310 horse power or about 231½ kilowatts. It thus appears that the applicant contracted, for long terms, to dispose of an aggregate of 1,310 horse power out of its rated capacity of 1,600 horse power, leaving available for sale to other customers about 290 horse power or about 216 kilowatts. These contracts have each about ten years to run.

The application further recites that during the year 1913 the applicant's plant generated and transmitted approximately 5,000,000 kilowatt-hours; that of this amount approximately 700,000 kw-hr. was consumed by the lighting and power customers of the Rhinelander Lighting Company and about 4,300,000 kw-hr. by the Rhinelander Paper Company. The applicant received for this current sold during the year 1913, \$14,100. The applicant alleges also that the value of the property used and useful in the business of generating and selling the above amount of electricity exceeds the sum of \$110,000. Also, that the annual income needed to meet proper operating expenses of the plant, including maintenance and repairs, make adequate provision for depreciation, provide for the payment of taxes and interest upon its bonded and other indebtedness and secure a reasonable return upon the fair value of the property used in the business, is at least \$25,000; and that even this sum would not provide for additions and betterments of which the plant now stands in need.

It is further alleged in the application that unless the applicant is enabled to derive more income from the generation and sale of current it will be unable to continue to furnish adequate service to the public and its individual customers, and it will be unable to meet and perform its obligations and duties as a public utility.

The relief asked for is "that the Railroad Commission will, after giving due notice thereof, proceed to investigate the matters and things in this petition contained and fix a schedule of rates and charges which it may authorize your petitioner to put into force and effect for the furnishing by it of electric current at and in the vicinity of Rhinelander."

After due notice a hearing was held in the office of the Railroad Commission at Madison on September 21, 1914. *Edwin S. Mack* and *James B. Blake* appeared for the applicant; no one appeared in opposition.

At the hearing the time was taken up mainly by three witnesses, all of whose testimony had reference to the character and equipment of the plant of the applicant company, and the cost of producing and disposing of the current, and all tending to prove that the contracts for the product, now in force and which take by far the larger part of the current generated, are bringing the applicant returns inadequate even to pay the cost of operation and the maintenance of the plant at a proper standard of efficiency, to say nothing of paying the fixed charges such as interest, depreciation, taxes, etc. The witnesses, Prof. H. J. Thorkelson, C. A. Wixson and E. A. Forbes, were examined at length, the first as to the mechanical efficiency, and the cost of producing, and the latter two as to the business management, the nature of the contracts in force and the outlook for getting additional business for the plant. The testimony also went to show that the power company was organized as a public utility, it being understood by its first contract patrons that the company would sell current up to its capacity to any customer, and its letterheads from the beginning so advertising.

The arguments in the brief submitted by the applicant's attorneys cover two points, one being the question of jurisdiction, the other that of the validity of the contracts under which the applicant company disposes of a large part of its product. As to the first, the law under which the Railroad Commission acts is very explicit in specifying what shall be considered public utilities. It says (sec. 1797m—1, sub. 1):

“The term ‘public utility’ as used in sections 1797m—1 to 1797m—109, inclusive, shall mean and embrace every corporation, company, individual, association of individuals, their lessees, trustees, or receivers appointed by any court whatsoever, and every town, village, or city that now or hereafter may own, operate, manage or control any plant or equipment or any part of a plant or equipment within the state, for the conveyance of telephone messages or for the production, transmission, delivery, or furnishing of heat, light, water or power, either directly or indirectly to or for the public or that now or hereafter may own, operate, manage or control any toll bridge wholly within the state” (Ch. 449, 1907; ch. 48, 1911; ch. 663, s. 359, 1911.)

In *Clark v. Nash*, 198 U. S. 361, and in *Strickley v. Highland Boy Mining Co.* 200 U. S. 527, the United States supreme court gives clear recognition to the right of a state to declare by legislative enactment, in matters pertaining to its own peculiar conditions, what constitutes a "public use".

So far as the present status of the Rhinelander Power Company is concerned, therefore, the law, as the courts have upheld it, clearly settles it. The company operates a plant for the production, transmission and delivery or furnishing of power, both directly and indirectly, to the public.

But we are here dealing with a situation existing prior to the enactment of the Wisconsin Utilities Law in 1907.

Was the Rhinelander Power Company a public utility when the contracts now in existence and having approximately ten years yet to run, namely, the contracts with the Rhinelander Paper Company, with E. A. Edmonds, and with the Rhinelander Lighting Company, were entered into almost ten years ago?

If we had to consider only the last named contract there would be no question as to either the past or the present status of the applicant company. The question that does arise grows out of the fact that by far the larger part of the product of the applicant goes to a purely private concern.

The weight of judicial decision is apparently on the side of the proposition that the applicant was and is a public utility, and yet there are some cases pointedly against that conclusion. In an early Wisconsin case, *Attorney-General v. the City of Eau Claire and others*, 37 Wis. 400, 435, the city of Eau Claire had been authorized by the legislature to build a dam across the Chippewa river, to construct water works, to construct sewers, etc. The city voted to issue bonds to carry out the purposes named, and the attorney-general asked for an injunction to restrain the city from levying taxes to meet the bond issue on the ground that it being the declared purpose of the city to lease some of the power from the dam for private purposes, the proposed tax levy was not for a "public use". A number of points were covered by the opinion handed down by CHIEF JUSTICE RYAN, but the following touched the principles involved in the present case:

"The dam so authorized might well produce an excess of power * * *. In such case * * * the surplus water need not

run to waste. The Legislature might well grant and the city take the power to lease it. The power to construct and maintain the dam would still rest on the public municipal use; not on the disposition of the accidental excess." (P. 435).

" * * * The maintenance of a dam for the purpose of leasing the water to private persons for private use is not a municipal or public purpose for which a municipal corporation can be authorized to exercise the power of borrowing money and levying taxes." (Syllabus).

In other words, the court held that if the dam were to be built to operate water works, the fact that some surplus power were leased to private persons for private use would not destroy its public use character but that if the paramount purpose was to lease power to private persons for private use it could not be considered a "public use".

Another case bearing some resemblance to the one before us is a Maine case, *Brown v. Gerald et al.* 100 Me. 351. A corporation was duly chartered to build a dam and install a plant for the manufacture of electricity. It was empowered specifically to transmit electric power for lease or sale within certain towns "in such manner as may be expedient", and subject to the general laws, to erect poles and string wires for that purpose. After the plant was completed the company contracted to deliver to a paper mill several miles away all of its product of electricity, though by a supplemental agreement it reserved the right to take from the wires sufficient current to enable it to perform its duties in the towns as a public lighting company. The proposed transmission line designed to deliver the current to the contracting manufacturing concern was six miles long. It did not follow the highway, but by right of eminent domain property was taken across twelve farms. Injunction was asked by one of the farmers on the ground that the electrical company proposed to take the land for a private rather than a public use. The court held among other things that:

"Under the circumstances of the case, whatever may have been the purposes of the corporation elsewhere, the court finds that the land of the plaintiff was actually taken for the transmission of an electric current generated by the defendant corporation and sold by it to another for manufacturing or power purposes, and not for electric lighting or other purposes.

Substantially the court held here that the defendant corporation lacked one of the essential conditions of a public service en-

terprise, namely, the right of the public or so much of it as has occasion, to be served as a matter of right and not of grace.

A comparatively recent Minnesota case is the *Minnesota Canal & Power Co. v. Koochiching Co.* 97 Minn. 429, decided in 1906, prior to the enactment of the Public Utilities Law in this state. In this case an order was made in the trial court dismissing a petition in condemnation proceedings in which the petitioner sought to take private property to create a water power, construct and maintain a water power plant, supply water power direct from the wheels to other concerns, generate and distribute electricity for heat, light and power purposes, and further to construct and maintain canals and waterways on which to operate barges and be otherwise used for navigation purposes.

The court held that the creation of a water power and water power plant for the purpose of "supplying water power from the wheels thereof to the public is a private enterprise in aid of which the power of eminent domain can not be exercised". (Syllabus).

It was said further by the court "that the generation of electricity by water power for distribution and sale to the general public on equal terms, subject to governmental control, is a public enterprise, and property so used is devoted to 'public use'". (Syllabus).

Also "that when the purposes stated in the petition are part public and part private the right to proceed [that is, to exercise power of eminent domain] must be denied". (Syllabus).

Also "that a use is not public unless under proper regulations the public has the right to resort to the property for the use for which it was acquired, independently of the will or caprice of the corporation in which the title of the property vests upon condemnation". (Syllabus).

In the *Cawker Case*, 147 Wis. 320, where it was sought to bring under the jurisdiction of the Railroad Commission the executors of the Cawker estate who were operating a lighting plant for the benefit of the tenants of a building owned by the estate from which they supplied the surplus current to two or three adjoining buildings, in the opinion, holding that the executors were not operating a utility, the court said:

"It was not the furnishing of light, heat or power to tenants or incidentally to a few neighbors that the legislature sought to

regulate, but the furnishing of those commodities to the public, that is, to whoever might require the same. *Wis. River Imp. Co. v. Pier*, 137 Wis. 325, 118 N. W. 857. The use to which the plant, equipment, or some portion thereof is put must be for the public in order to constitute it a public utility. But whether or not, the use for the public does not necessarily depend upon the number of consumers; for there may be only one, and yet the use be for the public—as where a plant is built and operated for furnishing power to the public generally, and for a time finds one consumer who uses it all.”

In *Avery v. Vermont Electric Co. et al.* 75 Vt. 235, decided in 1904, a dam owner desired to raise the height of his dam, which would cause the overflow of lands, which he sought to condemn on the ground that he proposed to generate electricity to operate a railroad. The court held that this was not a “public use”, because while the railroad was obliged to serve the public the dam power was not obliged to serve the railroad.

On the other side, and holding that a water power is in itself a public service enterprise, and that if it generate electricity for sale to the public it is a public utility within the meaning of the Wisconsin law, and that its professed intention rather than the number of consumers it may have is what determines the character of the enterprise, there are numerous cases, which bear directly upon the case in hand.

Wyman, whose work on Public Service Corporations is a recognized authority, says:

(Sec. 72). “The improvement of navigable waters furnishes one of the most striking illustrations of the use of public highways in enterprises designed to promote the service of the public.”

The court in a New Hampshire case decided in 1904 (*Light & Power Co. v. Hobbs*, 72 N. H. 531) says:

“Where a company engaged in generating and selling electricity locates wires in the highways and procures and attempts to exercise the right of eminent domain, it takes upon itself the obligations of a quasi public corporation and is bound to supply electricity at reasonable rates and without discrimination to all persons so far as it has the capacity to do so; and the use of land by such corporation for constructing and maintaining a line of wires in furtherance of its business is a ‘public use.’” (Syllabus).

The Rhinelander Power Company was not only given the right in its charter to use the streets for poles and wires to

transmit its electricity, but it constructed such transmission lines and at various times used them for public lighting.

In a Maine case, *Weymouth v. Penobscot Log Driving Co.* 71 Me. 29, decided in 1880, the court says, establishing the public service character of a water power (p. 39):

“In this case the charter conferred the privilege of driving, not a part, not such a portion as the company might choose, but ‘all’ the logs to be driven. This right having been accepted by the company it becomes a vested and also an exclusive right.”

That is to say, applying this reasoning to the case in hand, the Rhineland Power Company having accepted the grant of power to serve the public, the right of the public to be served by it up to the limit of its capacity was established.

Even in the Minnesota case cited above, in opposition, the court declared that the generation of electrical power for distribution and sale to the general public on equal terms is a public enterprise and that property so used is devoted to a “public use”. It denied the right of the water power company to exercise the right of eminent domain on the ground that some of its power was leased direct from the wheels, which was not a “public use”. The Minnesota court elsewhere in the same case makes a distinction between “a use which is public, and an interest which is public”.

In *Shasta Power Co. v. Walker*, 149 Fed. 568, a California case, the defendant attempted to prevent the plaintiff organized with a franchise for the manufacture and distribution of electricity from exercising the right of eminent domain, on the ground that plaintiff was a private rather than a public corporation. In holding for the plaintiff the court said (p. 572):

“The community might be large or small, or the service might be limited to a few, or extended to many; but within the compass of the proposed service every individual similarly situated should be entitled to it as of right upon like conditions; otherwise it is hardly conceivable how such an institution could be considered a public service corporation.”

In *Sammons v. Kearney Power & Irrigation Co.* 110 N. W. 308, cited in the applicant’s brief, the court holds:

“A corporation formed for the purpose of supplying water or water power is a quasi public corporation.” (Syllabus).

From the articles of incorporation of the Rhinelander Power Company the business and purpose of the corporation is given as:

“The improvement of that part of the Wisconsin river between the North line of Lots 4 and 7 or section 6, Town 36 North, Range 9 East, in Oneida county, Wis.” and etc.—; “the storing, sorting and delivering thereon saw logs and square and round and other timber; the driving, holding, handling, sorting and booming of logs in said part of the Wisconsin river; the acquiring by proper assignment of E. S. Shepard and A. W. Shelton of the rights and franchises granted to said Shepard and Shelton,” etc., “the building of the dam therein provided for and the carrying out of the provisions of said chapter 239; the use of the hydraulic power created by said dam for manufacturing purposes; to manufacture and produce power electrically developed and to convey such power to any place or places where it may be desired to use the same; to lease such electrically developed power and to engage in the business of electric lighting; to produce and lease hydraulic power,” etc.

From the testimony at the hearing it appears that the applicant company holds a franchise from the city of Rhinelander for the use of the city's streets whereon to erect poles and string wires for the distribution to customers of electric power.

There would seem to be no doubt, therefore, that the Rhinelander Power Company was a public utility within the meaning of the law when the contracts in question were entered into, and is now a public utility, and this Commission so finds.

The second question, that of the validity of the contracts made by the applicant for the disposal of the current, is more specifically a question of law for determination by the courts than is the first question. The applicant company being a public utility, however, and this Commission being asked by it for permission to establish a new schedule of rates, and a change in rates necessarily involving the question of the validity of the existing contracts, whether it grant or refuse the permission asked for, the Commission should give its reasons for considering or refusing to consider the contracts void as against public policy.

The substance of the contention of the applicant's attorneys is that the existing contracts, that with the Rhinelander Paper Company, that with E. A. Edmonds, afterward transferred to the Rhinelander Paper Company, and that with the Rhinelander Lighting Company, all of which contracts were entered

into prior to the enactment of the Public Utilities Law in 1907, were each and all for unreasonably low and inadequate consideration and the applicant company, being a public utility, said contracts are void; for the reason, first, that they involve gross discrimination against other possible consumers; and, secondly, the rates in the contract being below cost of service they are void as against public policy.

Much of the testimony given at the hearing by H. J. Thorkelson, an engineering expert, went to show that at the very beginning of the contracts the rates named in them were unreasonably low and were never sufficient to meet the operating expenses of the plant and give a reasonable return. The testimony of the other two witnesses, Mr. Forbes and Mr. Wixson, who operate its plant for the applicant company, confirms the statement of the engineer, that the income of the company has always been inadequate, and that the remaining current not used under the contracts named cannot be sold at a price sufficient to bring the income up to the point of meeting the necessary operating expenses of the plant, to say nothing of paying a return upon the property used and useful in carrying on the business. It appears, indeed, that the applicant has never been able, except for a short time to the city, to dispose of any of its current above what is used under the contracts.

Whether the plant of the applicant was a paying concern at its inception or not, it seems reasonably clear that for several years last past, at least, it has not had an adequate income.

In the brief submitted by the applicant it is alleged that the contracts call for 1,310 of the total rated capacity of the plant of 1,600 horse power, so there remains unsold or not contracted for 290 horse power or 216 kilowatts. "The contracts in question", says the brief, "were a gross and therefore an unjust and illegal discrimination in favor of the parties thereto as against the interests of the public in general, and as against such particular members of the public as might thereafter become customers of the Rhinelander Power Company for any part of the available generating capacity in excess of the amount of energy disposed of under those contracts".

More to the point is the contention in the applicant's brief that the existing contracts being made on a price basis grossly inadequate from the beginning were illegal and are void as against public policy.

“Contracts,” says the brief, “which would lead to such results as these contracts—and it must have been apparent they would lead to such results at the time they were executed—are not legitimate contracts within the public utility field. It was therefore an assured fact from the inception of these contracts that performances under them would necessarily result in the ruin of the Rhinelander Power Company and in its inability to furnish service to all members of the public desiring it at reasonable cost; that its property and plant must necessarily be allowed to depreciate and run down, and that ultimately it might have to pass through a receivership, bankruptcy, or a reorganization, and that thereafter the public service to be rendered by it or its successor could be made adequate only through the investment of additional capital, which would in turn necessarily increase the rates which the public would be obliged to pay.

“* * * Thus it would appear that in order for the Rhinelander Power Company to continue to exist and to furnish adequate service, within its generating capacity to the public demanding it, it would be obliged to charge such customers as it might secure for its electrical energy, generated but not sold under the three contracts referred to, a substantial excess over the actual cost of the service rendered so as to make up for the deficiency between the income derived from and the cost of service incident to, the performance of those three contracts. The Company’s subsequent failure to secure additional customers, for the available twenty per cent of its generating capacity, who should continue to use its service permanently, may be accounted for by this situation.

“* * * The situation just outlined was such that in view of it the contracts made by the Power Company with the Paper Company, Edmonds and the Lighting Company were illegal at their inception. There are two reasons for reaching such a conclusion. First, the contracts in question were a gross and therefore an unjust and illegal discrimination in favor of the parties thereto as against the interests of the public in general and as against such particular members of the public as might thereafter become customers of the Rhinelander Paper Company for any part of the available generating capacity in excess of the amount of energy disposed of under those contracts. Second, the contracts were against public policy for the reason that they threatened from the outset the success of the project undertaken by Rhinelander Power Company to serve the public as a utility furnishing electric power at Rhinelander and vicinity in that they created a condition which, from the outset, made it impossible for the Rhinelander Power Company to successfully conduct its business, as that company would find it impossible to dispose of twenty per cent of its generating capacity, even in small lots, at prices sufficiently high to make up the deficit on eighty per cent of the generating capacity sold at less than cost.”

We have copied freely from the applicant's brief because there is more clearly presented than in the application or the records of the hearing the real contention of the applicant and the grounds upon which it asks that it be given authority to disregard its apparent contract obligations and establish a revised schedule. In substance the Railroad Commission is asked to assume as a basis for important action on its part a certain conclusion of law, namely, that the contracts are void. Is there warrant for this? Let us examine the situation as to the contracts a little more closely.

The contracts were entered into, the one with the paper company on April 29, 1904; the one with E. A. Edmonds—afterward assigned to the paper company—on April 5, 1905; the one with the lighting company on August 30, 1904. They have all been in force, therefore, approximately ten years.

As has already been indicated, the two grounds upon which the petitioner bases his claim that the contracts are illegal and void are (1) that the applicant being a public utility the contract rates are grossly and illegally discriminatory as against any consumer or consumers which might desire to contract for the surplus current, that this surplus current if sold to consumers at a price which would bring legitimate returns would be much higher than the contract prices; (2) that the applicant being a public utility and the rates being much below cost of service, were illegal from their inception and therefore void as against public policy.

From the application it appears that for a time several years ago the power company sold its surplus current, or a portion of it to the city of Rhineland for public lighting. The rates named in that contract are not in evidence. There was no testimony introduced at the hearing to show that any possible customer was lost because of unduly high rates asked for the surplus current, nor to prove that there had been any opportunity to dispose of the surplus current at any rate. If there was in fact during the history of the contracts under consideration any unfavorable effect upon the business of the power company, such as would naturally result from discriminatory practices, they were not made to appear.

There are contracts by public service corporations void through being grossly discriminatory in intent and effect. The case of *Handy v. Cleveland & M. R. Co.* 31 Fed. 689 is an illus-

tration: The Standard Oil Company threatened to store its oil until it could lay a pipe line, unless its oil was carried by the defendant railway company at 10 cts. a barrel, and all other oil producers charged for the same shipment 35 cts. a barrel of which latter rate 25 cts per barrel was to be turned over to the Standard Oil Company. The receiver of the road, fearing to lose the business of the Standard Oil Company, acceded to the demand of the shipper. The court held that such a contract was a gross and wanton discrimination against the competitors of the Standard Oil Company. "The receiver of an insolvent railroad company cannot unjustly discriminate in the charges imposed on rival shippers over his road in order to increase his service."

Another of a similar character is *Sammons v. Kearney Power & Irrigation Co.* 77 Neb. 580. The defendant in this case was a public service corporation in the business of digging and operating irrigating canals and ditches and selling water rights. In 1889 it mortgaged a ditch, right of way, and other property near Kearney, Nebraska, to secure a loan of \$150,000. A year later the mortgagor company entered into a contract with the Northwestern Electric, Heat & Power Company giving the latter a fifteen-year right to take water from the canal, the contract containing a renewal option for a second fifteen years. The contract also contained this provision: "The party of the first part further agrees not to sell water for power to any person or corporation intending to compete with the party of the second part." The irrigation company having defaulted on its interest, one Sammons, for the bondholders, brought suit to foreclose the mortgage in 1903. The Heat & Power Company intervened. The lower court ordered the mortgaged property sold, subject to the contract rights of the intervenor but held that the contract with the Heat & Power Company was illegal because unjustly discriminatory. Appeal was taken to the supreme court of the state, and the lower court's order was affirmed. The supreme court said in reviewing the lower court's ruling as to the validity of the contract (p. 591): "Here there was an attempt to give the intervenor an exclusive right for a term of years to use water which under the law the irrigation company was bound to furnish to the public on equal terms, * * * and is contrary to public policy and illegal." In this case discrimination was deliberately planned and carried out and was not merely incidental to the operation of the contract. Discussing this point the court

said (p. 590): "It [the utility] has no right or power to bind itself by contract which, if enforced, would render it unable to serve the public on those terms or carry out its main purpose."

And, finally, sec. 1797m—91 disposes definitely of the charges of discrimination as follows:

"The furnishing by any public utility, of any product or service at the rates and upon the terms and conditions provided for in any existing contract executed prior to April 1, 1907, shall not constitute a discrimination within the meaning specified."

In view of the foregoing the Commission finds that the charge that the contract rates *are grossly discriminatory is not sustained.*

The contention that the contracts were void at their inception as against public policy leads us to the consideration of what is meant by public policy as affecting the validity of contracts, and the judicial construction placed upon it.

Greenhood, a writer of recognized authority upon the subject, says in his work on Public Policy:

"A contract whose object is to secure to the obligee a monopoly in business controlled by a public corporation or quasi public corporation, or which gives to one an exclusive use for public purposes of lands held by such corporation, or by private owner, if subject to right of eminent domain is void." p. 672.

"Agreements which secure to one an interest in all the business of a particular character done by a public corporation, but in no wise depriving others of the benefit of the business, are valid." p. 676.

"If a contract be reasonable when made the fact that it subsequently becomes * * * burdensome upon the obligor * * * does not affect it." p. 739.

"It is the tendency of the class of contracts to which an agreement belongs which determines its validity, and not the fact whether in the particular case it had any judicial effect." p. 5.

"By public policy is intended that principle of the law which holds that no subject can lawfully do that which has a tendency to be injurious to the public or against the public good, which may be termed the policy of the law, or public policy in relation to the administration of the law." p. 2.

The trend of court decisions is to the effect that when it is sought to annul a contract on the grounds of public policy it must be made very clear that the contract is not only opposed to

the practices and customs of orderly society, but that it is antagonistic to the general policy of the law of the country.

“The public policy of a state must be ascertained from the constitution, laws and decisions of the state and not from general considerations of the supposed public interests and policy of the state beyond what such sources of information make known to the state.” *Vidal v. Philadelphia*, 2 Howard 127. Digest U. S. Sup. Ct. Rep. Vol. 5; p. 4939.

“But the very meaning of public policy is the interest of others than the parties, and that interest is not to be at the mercy of the defendant alone.” *Beasley v. Texas & Pacific R. Co.* 191 U. S. 492, 498.

“The term public policy may indeed be used only in the sense of the policy of the law, and in that sense it forms a just ground of judicial decision. It amounts to no more than that a contract or condition is illegal which is against the principles of the established law.” *Edgerton v. Brownlow*, 4 H. of L. Cases, 1, 123.

“Public policy as bearing upon the validity or in other words the judicial enforceability of contracts is that principle which maintains that a person cannot rightfully do or bind himself to do that which is inimical to the public good.” *Superior v. Douglas County Tel. Co.* 141 Wis. 363, 369.

“This means no more, we take it, than that it should be made to appear clearly, that it is beyond reasonable controversy, that the contract is void, as contrary to law or sound morals, else it should be sustained.” *Houlton v. Nichol*, 93 Wis. 393, 398.

“In case of the contract being between a private corporation and the state or other public corporation, whatever advantage the particular customer has over general customers, obviously inures to the benefit of the latter in the aggregate. In other words, in the ultimate there is no discrimination which is inimical to the public good, and hence no violation of public policy.” *Superior v. Douglas County Tel. Co.* 141 Wis. 363, 370.

“The public policy of the government is to be found in its statutes, and when they have not directly spoken, then in the decisions of the courts, and the constant practice of the government officials; but when the law-making power speaks on a particular subject over which it has constitutional power to legislate, public policy in such a case is what the statute enacts.” *United States v. Freight Association*, 166 U. S. 290, 340.

“* * * It must not be forgotten that the right of private contract is no small part of the liberty of the citizen, and that the usual and most important function of courts of justice is rather to maintain and enforce contracts than to enable parties thereto to escape from their obligation on the pretext of public policy, unless it clearly appears that they contravene the public right or public welfare.” *Baltimore & Ohio etc. Railway v. Voigt*, 176 U. S. 498, 505.

“The paramount public policy * * * is that men of full age and of competent understanding shall have the utmost liberty of contracting, and that their contracts when entered into freely and voluntarily shall be held sacred and shall be enforced by the courts of justice; and that you are not lightly to interfere with this freedom of contract.” SIR GEORGE JESSEL, M. R., in *Printing etc. Co. v. Sampson*, L. R. 19 Eq. 462, 465.

In *Walla Walla v. Walla Walla Water Company*, 172 U. S. 1, the city of Walla Walla, after having made a contract with the water company, which contract had been in force six years and faithfully carried out on the part of the water company, set up the contention that the contract was not a valid and binding one so far as it bound the city by stipulation not to maintain or become interested in another system of water works. The city contended that the contract it had itself made was in contravention of public policy. The court held that “Where a contract * * * is innocuous in itself and is carried out with due regard to the good order of the city and the health of its inhabitants, the aid of the police power cannot be invoked to abrogate or impair it.” (p. 17).

In *Los Angeles v. Los Angeles City Water Co.* 177 U. S. 558, where the city had leased a private company its water works and in the contract it was stipulated that the city should regulate the rates charged by the lessees, providing only that the rates fixed should never be lower than those in force when the lease was made, and the city later undertook to make a new schedule of rates fixing them below those in force when the lease was made, the court held that it was “not within the power of the city authorities, by ordinance or otherwise, afterward to impose additional burdens as a condition to the exercise of the rights and privileges granted.”

In *Vicksburg Waterworks Co. v. Vicksburg*, 185 U. S. 65, where the city proposed to disregard its contract with the waterworks company on the ground that the city acted in excess of its powers, the court says (pp. 81-82); “After the lapse of that long period and the continuous acquiescence of the city in the contract as a valid and subsisting one, the city * * * now insists that the said contract was invalid because in excess of its power to contract.” * * * Subsequent legislation, state and municipal * * * cannot impair the contract rights of the water company within the protection of the constitution of the United

States "unless the city can point to some inherent want of legal validity in the contract."

In citing the *Manitowoc Street Railway Case* the applicants' attorneys would seem to fail to distinguish between utility contracts to which a municipality is a party and those in which two utilities or one utility and one private corporation are the parties. In 145 Wis. 13, the Manitowoc & Northern Transportation Company undertook to advance the rates between Manitowoc and Two Rivers from 10 cts. to 15 cts., notwithstanding that the company had contracted with the city, on consideration of the right to enter the city, to maintain a 10 ct. rate. In that case the city was a party. The court held that the contract was valid until such time as the state decided to intervene and change conditions. That is, the city having no specific authority granted to it to enter into such a contract could only enter as the agent of the state, the latter being the principal. The state, through the Railroad Commission or otherwise, might at any time therefore substitute itself for the city and if it found the rate unreasonably low could with the acquiescence of the other party to the contract, the street railway company, abrogate the contract. This principle is also involved in the case of *Worcester City v. Street Railway Co.* 196 U. S. 539, wherein MR. JUSTICE PECKHAM, who wrote the opinion of the court, says (p. 548) :

"In the view we take of this subject, it may be assumed, for the purpose of argument, that the city of Worcester had power, under the legislation of the state, to grant the right to extend the location of the railway company's tracks upon the restrictions or conditions already mentioned. It may also be assumed, but only for the purpose of argument, that the restrictions or conditions contained in the orders or decrees of the board of aldermen, upon their acceptance by the company, became contracts between the city and the company.

"The question then arising is whether the legislature in the exercise of its power could abrogate the provisions of the contract between the city and the railway company with the assent of the latter, and provide another and a different method for the paving and repairing of the streets through which the tracks of the railway company were laid under the permit of their extended location. We have no doubt that the legislature had that power. A municipal corporation is simply a political subdivision of the state and exists by virtue of the exercise of the power of the state through its legislative department,"

Applying the principles laid down by the courts and the text writers as cited above, we have to determine first, whether the contracts under consideration were void from the beginning because the rates named were unreasonably low. The Commission does not feel warranted in so finding.

Are the rates named in the contracts so low at the present time as to be unreasonable and to jeopardize the utility's ability to serve the public? And if they are, has the state by its agent, the Railroad Commission, the power to authorize the raising of them? These are the really vital questions raised in the case.

First, are the rates named in the contract unreasonably low at this time? We can determine this in a satisfactory manner only by ascertaining what it is costing the utility to produce and furnish the service; or rather, what should it cost the utility to produce its commodity under reasonably efficient operation. This leads to a consideration of the costs involved somewhat in detail.

Most of the evidence presented at the hearing relative to the valuation of the property and the earnings and expenses of the Rhinelander Power Company was submitted by Professor H. J. Thorkelson, who appeared as witness for the petitioner. Professor Thorkelson's testimony tended to bring out the following points:

(1) That the actual money received by the power company for current sold during the calendar year 1913 was \$14,000.

(2) That the company could claim for service during that period a maximum income of \$20,000, based upon its several contracts and the amount of current delivered in excess of the contract requirements.

(3) That the company's expenditures for 1913 and the proper expenses which have not actually resulted in expenditures amounted to \$22,637, and exceeded both the actual money received and the maximum income that the company could claim.

(4) That the cost of producing the same electric power under like circumstances by means of a steam power plant would exceed the costs for the petitioner's hydro-electric plant by \$29,200 per year, and that hence there exists a value in the water power rights in addition to the physical value, which should be considered in fixing the rates for service now being furnished.

The amount of income received from the several sources to make up the total of \$14,100 referred to by the witness was not shown, but presumably it was divided as follows:

Rhinelanders Lighting Company.....	\$5,100
Rhinelanders Paper Company, Contract of Aug. 29, 1904.....	6,000
Contract of April 5, 1905.....	<u>3,000</u>
Total	\$14,100

The maximum income that the applicant could claim was shown by the testimony to be divided as follows:

Rhinelanders Lighting Company.....	\$5,100
Rhinelanders Paper Company, Contract of Aug. 29, 1904.....	\$6,000
Contract of April 5, 1905.....	7,500
Excess current	1,255
Wis. River Valley Improvement Co., dividends.....	<u>150</u>
Total	\$20,005

The amount claimed under the provisions of the contract of April 5, 1905, is based upon 500 horse power at a rate of \$15 per horse power per year and the excess amount is based upon the quantity of current which Professor Thorkelson estimates or computes was delivered to the paper company at various times during 1913 in excess of that to which the paper company was entitled under the two contracts. There is no evidence to show whether or not the power company has attempted and failed to collect the difference between the actual receipts and the amount claimed, nor to show whether any difference of opinion exists relative to the interpretation of the contract provisions. Consequently, it appears that the figures for the maximum income claimable were submitted to furnish a side light on the general circumstances in this matter and not as a point requiring the Commission's interpretation.

The figures which Professor Thorkelson introduced as the cost of producing and delivering power from the present hydro-electric plant of the Rhinelanders Power Company are shown in Table I:

TABLE I.

*Summary of Prof. Thorkelson's Estimate of Hydraulic Power Costs
Calendar Year, 1913.*

Labor	\$3,620
Repairs	602
Supplies for equipment.....	59
Supplies for general office.....	180
Tolls, Wis. River Valley Imp. Co.....	1,600
<hr/>	
Total above	\$6,061
General	3,000
<hr/>	
Total operating expense.....	\$9,061
Fixed charges:	
Interest 8%	\$8,355
Depreciation 4%	4,177
Taxes 1%	1,044
<hr/>	
Total cost of power.....	\$22,637

In order that the items of Table I may be fully understood some explanation will be added at this point. The amount for labor \$3,620, is the sum paid by the power company to the co-partnership of Forbes & Wixson for the operating of the plant. The testimony of Mr. Wixson shows that by agreement this amount is paid annually for "labor involved in generation, transmission, distribution and superintendance * * * together with the furnishing of oil and waste used in the operation of the plant." "Repairs," "Supplies for equipment," and "Supplies for general office" are items of expense taken from the books of the company. It was asserted that the amount spent for repairs was a mere trifle compared with what should have been expended for maintenance of the power plant and transmission line, because the company's income has been insufficient to provide funds for this purpose. The toll paid to the Wisconsin Valley Improvement Company is an assessment for the maintenance and operation of a reservoir system in the northern part of the state, tributary to the Wisconsin river, which reservoir system would in all probability be maintained by the individual users. The item of \$3,000 for "General expenses" is not an actual expense but is, according to Professor Thorkelson, a comparative allowance for salaries and general expenses. Interest, depreciation and taxes are fixed charges based upon the Commission's appraisal of the physical property, as shown in Table II. No objection was raised to the valuation of the physical property, but the petitioner asserted that further allowance should be made on account of the

value of the water power, and the need of additional material and supplies and cash capital. But in arriving at his figure for fixed charges, the witness employed the Commission's figures for the cost new, amounting to \$104,433.

TABLE II.

Commission's Appraisal of Physical Property of Rhjneland Power Company.

As of May 1, 1914.

	Cost new.	Present or depreciated value.
Land	\$11,834	\$11,834
Transmission and distribution.....	8,619	6,072
Building and miscellaneous structures.....	19,184	17,649

General equipment	100	50
Total	\$92,271	\$74,156
Add 12 per cent (see note below).....	11,073	8,899
Total	\$103,344	\$83,055
Material and supplies.....	470	470
Total	\$103,814	\$83,525
Non-operating plus 12 per cent.....	619	358
Total	\$104,433	\$83,883

Note:—Addition of 12 per cent to cover engineering, superintendence, interest during construction, contingencies, etc.

Coming now to a consideration of the hypothetical steam plant we find that Professor Thorkelson has estimated the investment necessary for a plant of 1,200 kw. capacity, the main units being three 400 kw. turbo-generators. A summary of this estimate is shown in Table III:

TABLE III.

Summary of Prof. Thorkelson's Estimate of Investment in Steam Turbo-Generator Plant.

3—400 kw. steam turbo-generators.....	\$33,600
3—400 h. p. boilers with stokers and settings.....	18,000
2—Exciters	1,000
3—Condensers with piping.....	10,800
Switchboard	4,800
Steam piping	3,000
Condenser intake	2,000
Heater and pumps	1,200
Building with stack.....	13,000
Power house wiring.....	2,000
Transformers	3,000
Distribution	7,000
Land	1,000
Total	\$100,400
Add 15 per cent for engineering, interest during construction, contingencies, etc.	15,060

\$115,460

After deducting from the total of Table III the amount allowed for transformers and distribution, the remainder, \$104,000, is equal to an investment of \$86.60 per kw. of station capacity. An investment of this amount would hardly be considered excessive.

The total estimated investment was placed, in round numbers, at \$116,000 and upon this were computed the fixed charges consisting of interest, 8 per cent; depreciation, 5 per cent; and taxes, 1 per cent. The fixed charges thus determined amount to \$16,240.

The quantity of coal that would be required by the assumed plant was determined by allowing $2\frac{1}{2}$ lb. of coal per kw-hr. for an annual output of 5,000,000 kw-hr., which amount Professor Thorkelson determined was delivered to the customers of the power company during the year 1913. This allowance of $2\frac{1}{2}$ lb. of coal per kw-hr., appears to be very low although it was brought out at the hearing that the rate of fuel consumption was purposely assumed to be low because of the unusually good load factor of the plant. The load factor mentioned at the hearing was 80 per cent, but upon examination of the figures then presented we find that this is the load factor for an average day and not the annual load factor. The highest load on the station during the year is not on record, but by taking the station capacity in lieu of the actual peak load, it is found that the load factor (or station factor, it might be called) is about 47.5 or 48 per cent. Even this figure represents an unusually good load factor, but still it appears doubtful that the coal consumption would run lower than 2.75 or 3 lb. per kw-hr. The allowance for labor and general expenses, on the other hand, seems to be somewhat more than would be required, considering the character of the plant and the conditions under which it would operate. The applicant's estimate of operating costs for the assumed steam plant are summarized in Table IV:

TABLE IV.

Summary of Prof. Thorkelson's Estimate of Steam Power Costs.

Fuel 5,000,000 kw-hr. at 2½ lb. coal (6,250 T at \$4.00)....		\$25,000
Labor: 3 engineers	\$2,700	
3 firemen	2,160	
2 repair men	1,200	6,060
Misc. supplies and expenses (oil, waste, etc.).....		1,500
		<hr/>
Total station expense.....		\$32,560
General		3,000
		<hr/>
Total operating expense.....		\$35,560
Fixed Charges:		
Interest 8 per cent	\$9,280	
Depreciation 5 per cent.....	5,800	
Taxes 1 per cent	1,160	16,240
		<hr/>
Total cost of power.....		\$51,800

The theoretical saving produced by the operation of the applicant's hydro-electric plant in lieu of a steam plant was shown by Professor Thorkelson to be the difference between the total of Table IV, \$51,800, and the total of Table I, \$22,637, which is \$29,163 per year. The testimony with reference to these matters does not proceed beyond the determination of the theoretical saving. What valuation should be placed upon the water power rights on account of the alleged saving and what rates would yield a fair return were matters not brought out by the applicant.

However, before proceeding further, let us see what will result from some revision of the figures so far brought forth. In Table V is shown a revised estimate of the cost of furnishing power from the hydro-electric plant:

TABLE V.

Revised Estimate for Hydraulic Power Costs.

Operating expenses reported.....	\$6,061
Taxes reported	1,338
Depreciation at 2.5 per cent.....	2,600
General expense (additional allowance).....	2,000
Interest 8 per cent on \$104,433.....	8,355
	<hr/>
Total power cost	\$20,354

It will be observed that instead of 4 per cent for depreciation, 2.5 per cent is employed in the foregoing table. The rate of depreciation of hydro-electric properties with transmission lines

is ordinarily less than that of steam stations with extensive distribution systems. The rate of depreciation for the latter is often about 4.5 per cent, computed on a straight line basis. On a sinking fund basis, the reserve chargeable to operating expense is, of course, somewhat lower.

The additional allowance for "General expense" is placed at \$2,000 instead of \$3,000. This appears to be ample considering the amount already paid to Forbes & Wixson for operating the plant and the amount already included in the expense accounts for general office supplies and expenses.

Some changes, likewise, have been made in the estimate of the steam power costs, as may be seen in Table VI:

TABLE VI.

Revised Estimate of Power Costs for a Hypothetical Steam Plant Similar to the Plant Assumed by Professor Thorkelson.

Fuel, 5,000,000 kw-hr. 2.75 lb. coal (6,875 T. at \$4.00).....	\$27,500
Steam supplies and expenses.....	400
Misc. power plant, supplies and expenses.....	600
Maintenance	1,750
Labor: Chief engineer	\$900
2 assistant engineers.....	1,440
3 firemen	1,800
	4,140
Total station expense.....	\$34,390
General	2,000
	\$36,390
Total operating expenses.....	\$36,390
Fixed charges:	
Interest 8 per cent.....	\$9,280
Depreciation 3 per cent.....	3,480
Taxes and insurance 1½ per cent.....	1,740
	14,500
Total cost of power.....	\$50,890

In the foregoing table, fuel consumption has been placed at 2.75 lb. of coal per kw-hr. This brings the cost to \$27,500 instead of \$25,000 per year. While, at first, it may appear that a considerable reduction has been made in the estimate of labor cost, it will be found that this is largely compensated for by a separate allowance for maintenance. Depreciation, which the petitioner's witness placed at 5 per cent, has been reduced to 3 per cent. On a sinking fund basis, 3 per cent of the investment per year should be a sufficient charge to the depreciation account for a well built steam power plant. An allowance of 1½ per cent for taxes and insurance takes the place of the witness' allowance of 1 per cent for taxes alone. In the Commission's estimate

general expenses are placed at \$2,000 instead of \$3,000. It is possible that Professor Thorkelson's figure of \$3,000 includes allowance for insurance, in which case the difference between the figures for general expenses is not as much as it appears to be.

The theoretical saving found as a result of the Commission's revision of Professor Thorelksen's estimate is \$30,545. This is so close to the theoretical saving found by the witness himself that it appears that his estimates, as a whole, are not unreasonable as far as they go. However, there are other matters not touched upon at the hearing, which seem to have a vital bearing and should be considered in fixing a value of the water power. For example, the present hydraulic plant is operated without a steam auxiliary plant and the consumers receive power subject to the vicissitudes of the water supply. Since it is necessary for the disposal of the applicant's power to establish terms and conditions upon the availability of water, which varies from time to time, it seems quite evident that the hydraulic power has not, in this instance at least, an equal value with steam power continuously supplied.

In order to arrive at a condition under which the service rendered by the hydraulic power plant would be equal in value to that which the hypothetical steam plant could furnish, it is necessary to assume a situation in which the former would be assisted by an auxiliary plant of some kind capable of eliminating the risks of incomplete service on account of an inadequate water supply. The facts necessary for a detailed estimate on that subject have not been placed before the Commission, but we have attempted, nevertheless, to show in Table VII, about what additional costs might be expected for a steam plant serving in an auxiliary capacity to the applicant's hydraulic plant:

TABLE VII.

Estimated Additional Costs for an Auxiliary Steam System Plant.

Fuel for 500,000 kw-hr. at 8 lb. coal per kw-hr.....	\$8,000
Supplies and expenses.....	300
Maintenance	750
Labor	1,000
	<hr/>
Total expenses	\$10,050
General	750
	<hr/>
Total operating expenses.....	\$10,800
Fixed charges: Interest, depreciation, taxes, insurance, 12½ per cent on \$90,000.....	11,250
	<hr/>
Total cost of reserve power.....	\$22,050

The theoretical saving of \$30,000 for the hydraulic plant is very greatly reduced when allowance is made for the costs of the assumed auxiliary steam plant. Deducting \$22,000 on account of operating and steam auxiliary, the saving which remains is only about \$8,000 per year. A value of some \$80,000 might be claimed because of this estimated saving, except for the fact that other circumstances cast further doubt upon its worth. First, the company does not possess an auxiliary or reserve power of any kind and consequently the value which would exist in power continuously supplied is now more or less dormant. Secondly, the saving which has been determined by means of the foregoing estimates presupposes that the applicant would be able to dispose of a large quantity of steam-electric power or of hydro-electric power aided by steam service under a schedule of rates based on costs for such service; but there is nothing in evidence to demonstrate the marketableness of the power under those conditions. With these facts in mind it appears that \$80,000 is about the maximum value that could be fairly allowed for the water power rights under present conditions. This amount added to the value of physical property, working capital and going value, would bring the total valuation to approximately \$200,000.

COST OF SERVICE PER UNIT.

In order to arrive at a theoretical unit cost of service, some computations have been made wherein were employed the actual operating expenses for the year 1913; depreciation, \$2,600; additional general expense \$2,000; and interest on \$200,000 or \$16,000. These figures are summarized in Table VIII:

TABLE VIII.

Theoretical Power Costs for Applicant's Business.

Operating expenses as reported.....	\$6,061
Taxes	1,338
Depreciation	2,600
General expense (additional allowance).....	2,000
Interest	16,000
	\$27,999
Total power costs.....	\$27,999

For the purpose of illustration the total power costs, amounting to \$28,000, may be divided equally between demand and output costs in which case there would be an expense of \$14,000 for the demand and \$14,000 for the output.

It has already been said that the witness for the applicant has determined that the amount of current sold in 1913 was approximately 5,000,000 kw-hr. The output cost per unit would therefore be 0.28 cts. per kw-hr.

Making due allowance for power factor and losses, it appears that the amount of power that the applicant could deliver to consumers is about 1,000 kw. or 1,340 horse power, which corresponds closely to the aggregate horse power mentioned in the several contracts. Dividing the demand cost, \$14,000, by these figures, it is found that the demand cost per unit is \$14.00 per kw. or \$10.40 per h. p. per year. By applying these units to the service furnished, the division of the cost between the customers of the company may be readily ascertained, as shown below:

Cost of Service for Paper Company.

1,000 h. p. at \$10.40 per h. p. per year.....	\$10,400
4,410,000 kw-hr. per year at 0.28 cts. per kw-hr.....	12,348
Total for paper company.....	<u>\$22,748</u>

Cost of Service for Lighting Company.

310 h. p. at \$10.40 per h. p. per year.....	\$3,224
590,000 kw-hr. per year at 0.28 cts. per kw-hr.....	1,652
Total for lighting company.....	<u>\$4,876</u>
Total for both companies.....	<u>\$27,624</u>

These figures reduced to a flat rate per h. p. reveal considerable differences between the paper company and the lighting company. For the former the cost is \$22.75 per h. p., while for the latter it is \$15.70. However, if a comparison be made of the use of the power contracted for, it will be found that the load factor of the service delivered to the paper company is about 67.5 per cent and to the lighting company, about 29 per cent. In other words, the amount of current consumed by the paper company represents an average of 16.2 hours' daily use of its contract load, while the consumption of the lighting company is equivalent to only 7 hours' use.

The foregoing computations of the cost are based on the theory that the sale of electric current to the lighting company should receive the same treatment as that to the paper company, but since the lighting company has preference to the supply,

to the extent of 280 horse power, it is not unreasonable to assume that this service should bear a somewhat greater proportion of the cost and a higher rate of charge.

Another way of dealing with the rate question is to construct a "cost curve" or tabulation representing the variation of the cost per kw-hr. with the length of use of the load. This may be done by reducing the demand cost to a unit per day and adding to it the output cost. It has been shown hitherto that the demand cost is equal to \$14.00 per kw. per year. This is also equal to 3.84 cts. per kw. per day. The output unit cost is 0.28 cts. per kw-hr. Consequently, the cost per kw-hr. is 4.11 cts. when the load is used one hour per day. The variation in cost is shown in Table IX:

TABLE IX.

Variation in the Cost of Power with Variation in the Length of Use.

Hours use of load daily.	Output cost at 0.28 cts. per kw-hr.	Demand cost.	Total cost.	Total cost per kw-hr.
	cts.	cts.	cts.	cts.
1	0.28	3.84	4.11	4.11
2	0.56	3.84	4.40	2.20
3	0.84	3.84	4.68	1.56
4	1.12	3.84	4.96	1.24
5	1.40	3.84	5.24	1.05
6	1.68	3.84	5.52	.92
8	2.24	3.84	6.08	.76
10	2.80	3.84	6.64	.66
12	3.36	3.84	7.20	.60
14	3.92	3.84	7.76	.55
16	4.48	3.84	8.32	.52
18	5.04	3.84	8.88	.49
20	5.60	3.84	9.44	.47
22	6.16	3.84	10.00	.45
24	6.72	3.84	10.56	.44

The foregoing table indicates that the cost of service for the paper company is about 0.5 cts. per kw-hr. and, considering the preference given to the lighting company, about 0.95 cts. per kw-hr. for the latter. The earnings estimated on this basis are as follows:

Estimated Earnings on Kw-hr. Basis.

Paper company 4,410,000 kw-hr. at 0.5 cts. per kw-hr.....	\$22,050
Lighting company 590,000 kw-hr. at 0.95 cts. per kw-hr.....	5,605
Total estimated earnings.....	\$27,655

In order to adjust the variation in the charge to both the amount of the demand and the quantity of current used, the following schedule has been suggested and upon applying it to the service furnished to the paper and lighting companies it is found to agree very well with costs which have already been shown.

SUGGESTED SCHEDULE OF RATES.

Demand charge:

\$30.00 per year for each kw. of the first 10 kw. of demand.

\$20.00 " " " " " " " " next 40 " " "

\$10.00 " " " " " " in excess of 50 " " "

Energy charge:

0.6 cts. per kw-hr. for current used up to an amount equivalent to 20 per cent of the continuous use of the maximum demand.

0.2 cts. per kw-hr. for all current in excess of 20 per cent of the continuous use of the maximum demand.

ESTIMATE OF REVENUES UNDER PROPOSED SCHEDULE.

Rhineland Paper Company:

Estimated peak 231.5 kw.
" consumption 590,000 kw-hr.

Demand charge:

10 kw. at \$30 \$300

40 " " 20 800

181.5 " " 10 1,815 \$2,915

Energy charge:

450,588 kw-hr. at 6 cts. \$2,434

184,412 " at 0.2 cts. 369 2,803

Total for lighting company \$5,718

Rhineland Paper Company:

Estimated peak 746 kw.

" consumption 4,410,000 kw-hr.

Demand charge

10 kw. at \$30 \$300

40 " " 20 800

696 " " 10 6,960 \$8,060

Energy charge

1,306,192 kw-hr. at 0.6 cts. \$7,837

3,103,808 " 0.2 " 6,208 14,045

Total for paper company \$22,105

Total estimated revenue \$27,823

The revenue received for current for the calendar year 1913, was \$14,100, as shown heretofore, although the total earning, to which the applicant believes it was probably entitled under the terms of the several contracts, was \$20,005. During that period, the operating expenses, including an allowance for depreciation,

was \$9,999. The gross income, was, therefore, only \$4,101, which is 3.9 per cent on the cost new and 2.0 per cent on a valuation of \$200,000. The revenues received for the year ending June 30, 1914, increased to \$15,399. The operating expenses remained about the same, namely, \$9,888. For this period the gross income was \$5,551, which is 5.3 per cent on the cost new and 2.8 per cent on \$200,000. Further allowance for general expenses, which now appear to be low, would consume a part of this return. These facts show that the rate of return upon the investment in physical property is low in comparison with the usual earnings of many other electric plants and, of course, that any additional value on account of water power rights still further reduces the rate of return. While these circumstances seem to furnish a strong argument for an increase in the applicant's rates, it must be said, on the other hand, that the market-ability of the applicant's supply of power at rates much higher than those now charged has not been demonstrated before the Commission, and, since ability to dispose of power in a somewhat limited market constitutes as influential a force upon the value of the supply as any other factor, the establishment of rates regardless of such circumstances is a delicate and difficult task which should, however, be limited by a reasonable maximum based upon the facts brought out in this case.

Has the Commission the power to authorize the changing of the contract rates?

The power to regulate rates of public service corporations is a power belonging exclusively to sovereignty. Under our form of government it inheres in the state and is given expression by the legislature. In the case of municipality the legislature may and does sometimes divest itself temporarily of the right to interpose to fix or change rates by giving the municipality the power to act for it in regulating rates. But the legislature never divests itself of that power by conferring it upon a public service corporation. Any rates named, therefore, by a public service corporation in any contract are always subject to change by the legislature, if it so choose. This power of the state to regulate rates is implied in every contract touching rates made by a public utility.

For the state, through the Commission, to interpose in the present case or in any such case to change or authorize a change in the rates named in a contract, is not such an impairment of

contract obligations as comes within the inhibition of the constitution, but instead is carrying out one of the terms or provisions of the contract (*Manitowoc v. Manitowoc & Northern Tr. Co.* 145 Wis. 13). A case decided by the supreme court of Wisconsin as late as December 1914 (*M. St. P. & S. S. M. R. Co. appellant v. Menasha Wooden Ware Co.* 150 N. W. 411) makes very clear this principle.

The defendant company had made contracts with the "Soo" railway company prior to the enactment of the Railroad Commission Law in 1905 for the transportation of certain lumber products. Some time after the passage of the law referred to and acting under the authority of the law the railroad company filed a new schedule of rates much higher than those named in the contracts which were to run as long as the defendant company maintained a factory at a certain point. The defendant refused to pay the higher rates and action was brought by the railway to compel the payment of amounts due, calculated on the new rates. The lower court held for the defendant. The supreme court held for the railroad company, on the ground that the contract entered into, so far as it related to rates, was subject at all times to the paramount right of the state to regulate and the approval by the Railroad Commission of the new schedule of rates filed by the railroad company was a proper exercise of that paramount right of the legislature.

The court in the case cited refers to the case of *Superior v. Douglas County Tel. Co.* 141 Wis. 363, where the opposite principle seems to be upheld, but says that the contract was held in the *Superior* case to be valid and binding because of it coming under the exemption of sec. 1797m—91 as to discrimination.

The right of the legislature through the Railroad Commission to change or authorize a change in rates named in contracts made by public service corporations is well established.

We have seen from the detailed analysis of the power company's business that it is not earning and cannot hope to earn at any time under the contract rates a reasonable return. So wide is the discrepancy between what would be a reasonable return and the amount actually received for its service that the ability of the utility to maintain its service is threatened, if indeed the very existence of the enterprise is not in danger.

Do considerations of public policy require that the power company be permitted to rearrange its schedule in order to secure

more nearly a reasonable return? The Commission believes they do.

The applicant is in all reason entitled to a larger earning and a higher rate of return upon its investment. The Commission believes that it is necessary and right to permit the applicant to secure more reasonable compensation for its services. A new schedule, however, should be limited by a reasonable maximum based upon the facts brought out in this case.

IT IS THEREFORE ORDERED, That the applicant, the Rhinelander Power Company, be and hereby is authorized to make a new schedule of rates for its electrical power, which rates shall not exceed the following charges:

Demand charge (payable in monthly installments)

- \$30.00 per year for each kw. of the first 10 kw. of demand.
- 20.00 " " " " " " " next 40 kw. of demand.
- 10.00 " " " " " " in excess of 50 kw. of demand.

Energy charge.

- 0.6 cts per kw-hr. for current used up to an amount equivalent to 20 per cent of the continuous use of the maximum demand.
- 0.2 cents per kw-hr. for all current in excess of 20 per cent of the continuous use of the maximum demand.

The demand shall be the maximum rate at which energy is used for any continuous fifteen consecutive minutes and may be determined by the constant or periodic use of any suitable recording or graphic type of demand meter.

CITY OF ASHLAND

vs.

MINNEAPOLIS, ST. PAUL AND SAULT STE. MARIE RAILWAY
COMPANY.

Submitted June 9, 1914. Decided Jan. 30, 1915.

Complaint was made that respondent has refused to compel the Central Coal & Dock Co., the lessee of its commercial dock at Ashland, to keep the same in proper repair and open for public use. It appears that the dock in question and a warehouse thereon were built by the respondent at the end of its railroad, which it extended some 1,500 feet out into Chequamagon Bay at the time it entered the city; that a trestle approach was also constructed by respondent, from the foot of Ellis ave. out to the dock and railroad tracks; that the dock in question was used for many years for the interchange of traffic between lake and rail carriers; that passenger boats and boats handling freight were permitted to land at the dock, and that for some thirty years the trestle approach to the dock was held open for the passage of pedestrians to and from the boats, and for the use of drays and vehicles carrying freight and baggage to and fro; that in course of time the volume of traffic handled by the respondent diminished; that some five years ago the Wisconsin Central Ry. Co., the then owner, leased the dock and warehouse in question to the Central Coal & Dock Co., which now controls and operates it as a coal dock, and that the latter recently concluded to close the trestle approach to the dock to the public, and so notified the petitioner. The Commission is asked to compel the respondent to keep the dock in repair and to permit the approach to the dock to remain open for public traffic.

The application to the Commission is made upon the theory that the respondent in closing its dock is in some manner changing its route and operations within the city without following the statutory method of securing the authority of the city council to make such change, and also on the theory that the right to use the dock by the public had been acquired by prescription and uninterrupted use during a long series of years. Sec. 1797—58, which makes the approval of the Railroad Commission necessary in order to change the original termini or the route in any city or village, is relied upon. It is not contended that the termini provided by the respondent in Ashland are inadequate nor that respondent contemplates withdrawing the usual freight service to and from the dock in question so as to fail to adequately provide for traffic coming to it from the lake.

Held: That there does not appear to be any effort on the part of the respondent to change its route or the character of the termini offered in the city of Ashland, and that under such circumstances the Commission has no jurisdiction in the premises by reason of the section relied upon;

That the statutes do not confer authority upon the Commission to require facilities for the interchange of traffic between land and water carriers, but that were such the case, and assuming that respondent's contemplated action involves the abandonment of one of its public functions, it is unlikely that the instant situation would demand positive action of the Commission; *Brown v. Janesville Street Railway Co.* 4 W. R. C. R. 757, 761; *Jack v. Williams*, 113 Fed. 823; *Covington etc. Turnpike Co. v. Sanford*, 164 U. S. 578;

That a railway company should not be required to maintain and offer its facilities to the public as a gratuity, the maintenance of the dock and wharf being desired solely for the purpose of accommodating the public irrespective of its necessities in reaching the property of the company to obtain railroad service;

That the property in question is essentially private in character, and subject to the control of the company; and that the company is not required to permit the continued use of its dock or wharf simply because the public had heretofore been allowed the use of the dock as a licensee (*Transportation Co. v. Parkersburg*, 107 U. S. 691), and

That as neither the statutory provisions specially applicable, nor the general powers of supervision and control vested in the Commission confer the necessary authority, the Commission is without jurisdiction.

The petition is dismissed.

A complaint is made by the city of Ashland that the respondent has refused to compel the Central Coal & Dock Company, its lessee, to keep its commercial dock in Ashland, Wis., in proper repair and open for public use. Specific complaint is made of the failure of the respondent to keep the trestle approach to the dock open for traffic. The substance of the case, as set forth by the city's complaint, is that the city is a terminal of a number of railroads, including the line of the respondent, the latter having control of what was formerly known as the Wisconsin Central Railway Company's property. The latter railway built a line from Chicago to the city of Ashland some time during the late seventies. This line of railroad entered the city from the southerly side and extended through it until it reached the shore of Chequamegon Bay and extended out into the bay a distance of some fifteen hundred feet. A dock and warehouse were built at the end of the line and a trestle approach from the foot of Ellis avenue, the main north and south street of the city, out to and connecting with the dock and the railroad tracks. This approach was used by both teams and pedestrians for the purpose of reaching the dock and warehouse. Some five years ago the Wisconsin Central Railway Company leased the dock and warehouse to the Central Coal & Dock Company which now controls and operates it as a coal dock.

It is alleged that during all the time the property was owned and operated by the railway company, the dock in question had been used for commercial purposes, and goods and merchandise had been received and handled at the same and large amounts of coal had been unloaded there and shipped from the dock over the railroad connecting with it. It appears that passenger boats and boats that handle freight were permitted to land at the dock and that the public was permitted to use the approach and the dock for the purpose of going to and from boats that landed there.

During the year 1912 the lessee, the Central Coal & Dock Company, allowed the merchandise warehouse that had been located on the dock to be removed, no notice of such removal being given to the city or permission to make the removal obtained from the latter, and that now notice has been given to the city of Ashland that the Central Coal & Dock Company would close the trestle approach to the dock, and that it was thereafter to be operated solely as a private dock. It is alleged that the dock company has refused and neglected to keep the dock in repair, or to rebuild thereon the warehouse for the storage of goods and merchandise.

A request is made for a temporary order compelling the respondent and its lessee to keep open and maintain the approach to the dock until a final decision can be had upon the questions raised, and a prayer is made for an order of the Commission compelling the respondent to keep the dock in repair and to permit the approach to the dock to remain open for public traffic.

It is the contention of the respondent railway company that it has adequate freight and passenger terminals at the city of Ashland; that it still maintains freight service to and from the dock in question; that the railway company is under no obligations to put in repair and maintain the wharf and trestle approach for use as a boat line terminal, and that the Commission has no jurisdiction to determine or enforce such an obligation should it exist.

The matter came on for hearing on May 20 and on June 9, 1914. The petitioner appeared by *M. E. Dillon*, city attorney, and *T. H. Gill* of *Gill & Barry*, counsel. Appearances for the respondent were made by *E. F. Potter*, and *Kenneth Taylor*, its attorney.

The testimony shows that the dock in question was used for

many years for the interchange of traffic between lake and rail carriers, and as a means of intercommunication between boats and the city. For some thirty years the trestle approach to the dock was held open for the passage of pedestrians to and from the boats, and for the use of drays and vehicles carrying freight and baggage to and fro. In course of time the volume of traffic handled by the respondent diminished and recently the lessee of the respondent concluded to close the trestle approach to the dock to the public, and so notified the petitioner.

The application to this Commission is made upon the theory that the respondent railway company entered into the business of conducting a dock at this location under authority of its charter; that the extension of the tracks into the bay formed a part of the original route of the railroad; that the closing of the dock constituted in some manner a change by the railroad company of its route and its operations within the city, and that the statutory method of securing authority of the city counsel to make such change had not been followed, and further, that the right to the use of the dock by the public had been acquired by prescription and uninterrupted use during a long series of years. The petitioner seeks to base its application to this Commission for relief upon the provisions of section 1797—58 of the statutes, which state that a railroad company may alter or change its route upon a two-thirds vote of its directors by making and filing with this Commission a map and certificate of the proposed alterations, provided "that such alteration or change shall not deviate from the original route of such railroad as approved by the Railroad Commission for a greater distance than one mile * * * and also provided that the original termini or route in any city or village shall not be changed by such alteration * * * without the approval of the Railroad Commission." There is no contention made that the termini provided by the respondent company in the city of Ashland are inadequate. It is shown in the testimony that at least two other terminal facilities are provided by the company for the accommodation of the freight and passenger traffic of the city. Nor is it contended that the railway company contemplates withdrawing the usual freight service to and from the dock in question so as to fail to adequately provide for traffic coming to it from the lake. The sole difficulty seems to be that the dock and the trestle approach thereto are to be withdrawn by the respondent, or its lessee, as a terminal

for the various boat lines operating to and from the city of Ashland. It would seem that the question presented for consideration is whether or not this Commission has power and authority to require that the railway company shall continue to offer its property for public use for purposes other than giving the public access to its railroad facilities. There does not appear to be any effort on the part of the railway company to change its route or the character of the termini that it has offered in the city of Ashland. For this reason it is difficult to see how the statute to which reference is above made may be considered as giving this Commission jurisdiction over the matters involved in this case. We are of the opinion that the statutes do not give the Commission such jurisdiction.

Nor can we conclude that the Commission has authority under other provisions of the statutes to grant the relief for which prayer is made. While the legislature has conferred authority upon the Commission to compel railway companies to provide reasonable facilities for the interchange of traffic between their respective lines (Wisconsin statutes, sec. 1797—11 and sec. 1802c) at the present time there is no statutory provision empowering the Commission to require facilities for the interchange of traffic between land and water carriers. Indeed, were such authority given under the statute it is unlikely that the present case would present a situation demanding positive action of the Commission. The facts do not indicate that the railway company is about to abandon the performance of any of its public functions, unless it be construed that the maintenance and operation of the dock for general public use during a series of years has imposed upon the railway company a duty to continue to do so. Even if this construction be adopted it is doubtful whether or not an order of the Commission would properly be issued to require the continuation of that service. If it could be shown that the service given were unprofitable and that its abandonment did not impair the general service given by the railway company, it would be unlikely that the railway company would be required to continue that service. *Brown v. Janesville Street Railway Co.* 4 W. R. C. R. 757, 761; *Jack v. Williams*, 113 Fed. 823; *Covington etc. Turnpike Co. v. Sanford*, 164 U. S. 578.

Much less would it seem that a railway company should be required to maintain and offer its facilities to the public as a gratuity. It is shown that in this case the maintenance of the

dock and wharf is desired for the sole purpose of accommodating the public, irrespective of the necessities of the public in reaching the property of the company to obtain railroad service. Property not devoted to the purpose of giving the service that the railway company holds itself out as offering, is essentially private in character and subject to the control of the railway company. It has been held that a railway company is not required to maintain a dock for the purpose of allowing any competing carriers to load and discharge goods. Such a dock or wharf is the company's private property to which it has the sole right of occupancy and the power of regulation thereof. *Louisville & Nashville R. R. Co. v. West Coast Naval Stores Co.* 198 U. S. 483. The right of a railway company to control its private property goes even to the extent of permitting some to use it while at the same time excluding others to whom it is not willing to grant that privilege. *Weems Steamboat Co. v. People's Steamboat Co.* 141 Fed. 454. It is clear from the statements of law that have been made that the railway company is not required to permit the continued use of its dock or wharf by the public simply because the public had heretofore been allowed the use of the dock as a licensee. *Transportation Co. v. Parkersburg*, 107 U. S. 691.

Neither in the statutory provisions applicable to such cases, therefore, nor in the general powers of supervision and control vested in the Commission by the law, does there seem to be authority by which the Commission may enter an order requiring the railway company in this case to continue to leave the dock property in question open to the public use. Since the Commission is limited to the exercise of the powers specifically granted or necessarily implied, it is without power to afford relief from the conditions presented in the petitioner's complaint. Accordingly, the petition will be dismissed.

NOW, THEREFORE, IT IS ORDERED, That the petition herein be and the same is hereby dismissed without prejudice.

IN RE APPLICATION OF CLARK COUNTY TELEPHONE COMPANY
FOR AUTHORITY TO INCREASE RATES.*

Submitted Jan. 8, 1915. Decided Feb. 4, 1915.

Application was made to the Commission for authority to increase rates for the reason that the present rates are considered insufficient to meet the required demands for adequate service, and to provide a satisfactory return upon the investment. Applicant specifically desires authority to put into effect the schedule of rates, and rules affecting rates, which it proposes. A protest was filed, some of the signers alleging unsatisfactory service, and all objecting to an increase in rates. The rate protest appears to have been due to a misapprehension as to the actual amount of the proposed increase in rural rates. The revenues and expenses were investigated, and a valuation of the property was made. It appears that the applicant company was formed by the consolidation of a number of companies and exchanges operating within the territory now served by it; that the level of rates charged by the applicant is substantially that charged by its predecessors for a service covering only part of the territory; that it furnishes unlimited service to four cities and villages, making an exchange of approximately 850 telephones; that at the present time all rural lines are full metallic; that most of them are of standard construction; that the number of phones on such lines range from 8 to 13; that continuous night and day service is furnished; and that subscribers have the free use of all lines and all exchanges.

Held: That as far as the requirements of the applicant are concerned, the increase asked is reasonable; that the Commission knows of no company furnishing telephone service of a standard grade over metallic lines with a limited number of subscribers per line, and with lines as long as those of the applicant, which has been able to furnish service at a lower rate than the one suggested by the applicant; and

That the charge that service has been poor is largely unfounded, except that reconstruction work done during the past year may have interfered with service to some extent, and that it is only reasonable to assume that service has been improved by the improved facilities installed by the applicant.

Order: That the applicant is authorized to discontinue its present schedule of rates, and rules affecting rates, and substitute therefor the schedule and rules proposed by it, with the modifications informally applied for, and that such rates and rules may be made effective March 1, 1915.

*Decision signed by Commissioner Carl D. Jackson in place of Commissioner John H. Roemer, resigned, whom he succeeded.

Application in this matter was filed with the Commission July 30, 1914. The application shows that the Clark County Telephone Company is a public utility engaged in the management and operation of a telephone exchange and toll system in Clark and Marathon counties, and that the lawful rates of the applicant in effect at the time of the filing of the application were as follows:

Business telephones, 1 party	\$18.00	per year
Residence " 1 "	12.00	" "
Rural telephones	12.00	" "

The rules of the company, so far as they affected the rates charged, were as follows:

"1. Phones are installed by the company with the understanding that service will be retained for a period of one year.

"2. Local rural line service is free to subscribers only. If a nonsubscriber uses this service, a fee of ten cents must be collected. Nonsubscribers should pay a fee of ten cents for local service. There will be a charge of one dollar for an outside move and fifty cents for an inside move. All accounts must be settled at the office once every month.

"3. Subscribers are responsible for all toll originating at their stations.

"4. Subscribers may have the use of toll lines three minutes only."

Application is made to the Commission for authority to increase rates for the reason that the present rates are considered insufficient to meet the required demands for adequate service, and to provide a satisfactory return upon the investment. The company, therefore, asks for authority to put into effect the following schedule of rates and rules affecting the rates to be charged:

"The exchange limits shall be the village or city where exchanges are operated, viz: villages of Loyal, Spencer and Unity, and the city of Colby.

"Business Telephones.

Magneto, one party, unlimited service.....	\$24.00	per annum
Extension sets in same building, and for business service only, without listing....	9.00	" "
Extension bells, in same building, ordinary...	1.80	" "
Joint user with consent of subscriber and com- pany	12.00	" "
Extra listing in directory, same firm and busi- ness	1.20	" "

“Residence Telephones.

Magneto, one party, unlimited service \$15.00 per annum
 Extension sets, in same building for residence service only, without listing 6.00 ” ”
 Extension bells, same as quoted above.

“Rural Telephones.

“The rate for rural service shall be \$15.00 per annum.

“Service over trunk lines between central offices is free to subscribers only.

“If nonsubscribers use this service the regular toll fee must be collected.

“If nonsubscribers use the rural line service a fee of 10 cts. must be collected.

“A charge of \$18.00 per annum will be made on all rural telephones that are ten miles or more distant from the central office where switched.

“Penalties.

“The rates for local and rural service shall apply when payments are made on or before the 20th of the month following the month for which service is rendered. There shall be a penalty of 25 cents per month for delinquent payments for said service.

“Extra Equipment.

Extra long cord for desk sets 10 cts. per foot.
 Auxiliary receivers 10 cts. per month.

“Institutions not Operated for Profit.

“Charitable institutions, public and parochial schools, armory, public library, churches and fraternal societies will be classed as and carry rates and privileges of individual line residences except as to joint user privileges.

“Contract Periods.

“Rates are quoted for service extending over a period of one year.

“Short term contracts will be entered into on the following basis:

Service for 3 months or less,	50	per	ct.	of	annual	rate.
” ” 6 ” ” ” ”	75	”	”	”	”	”
” ” 9 ” ” ” ”	90	”	”	”	”	”

For service over 9 months 100 ” ” ” ” ”

“The above rates are offered with the understanding that the company has facilities to provide the service at the location desired.

“Rules Affecting Rates.

“Subscribers who may wish to suspend service for a portion of the year during absence from the community may do so upon payment of one-half the regular net rate for the period of suspension, but in no case shall an allowance be made for a period of less than one month.

“In all cases the instrument shall remain in place without service or hold its original listing in the directory.

“Joint user shall include any and all service not specified by the main line listing. One main and one joint user may be served on one main line unless the main line subscriber should desire the joint user rate to cover his own additional business.

“In order to obtain the rate allowed charitable and public institutions the applicant must occupy the entire premises and use the service exclusively for the purpose intended. The institution may be required to furnish a written guarantee to cover the above. No joint user rate will be allowed on this class of service.

“Extension sets and bells located outside premises will be furnished for regular service at the above rates with a mileage charge of \$3.00 per annum for each $\frac{1}{8}$ mile or fraction thereof, without listing. Extension sets and bells located out of doors or in the open sheds will be charged for at double the regular price.

“The company pays the initial expense of installation. The subscriber must pay the expense of any subsequent change in the location of the telephone instrument.

“Rules.

“Subscriber must pay for all careless breakage of material at h's station.

“Each main, party and rural telephone shall be entitled to one listing in the directory.

“Notice of removal of the telephone instrument shall be in writing.

“A deposit or properly signed guarantee will be required from parties who are not known to the company to be responsible for the payment of service charges.”

In this statement of proposed rates, the statement that “the exchange limits shall be the village or city limits where exchanges are operated” is taken to mean, not that the company contemplates charging the toll between the various cities and villages, but merely that it intends that the city or village limits shall mark the division between local and rural service.

Hearing in this case was held at Madison, January 8, 1915. Appearances for the company were *H. H. Christofferson* and *C. H. Brown*, and no appearances were entered in opposition.

Following the date of the hearing, the Company submitted an amendment to its proposed rate schedule by which it proposes to offer local residence rates as follows:

“Single party \$1.25 per month
 “Two party 1.15 ” ”

and to provide for discounts on its rural rates as follows:

“\$7.25 for six months if bills are paid six months in advance.
 “\$14.25 for a year if bills are paid one year in advance.”

In connection with the local rates, the company asks for authority to charge a penalty of ten cents if bills are not paid by the 20th of the following month.

At the time of the hearing, the representatives of the company presented an argument setting forth the financial condition of the utility and giving in some detail the reasons for asking for increased earnings. Although it is not considered necessary to review in detail the argument of the company, consideration must be given to the financial condition in determining what are reasonable rates. As evidence of the financial situation, we have before us two statements, one prepared by a representative of the Commission's statistical department and covering a period of nine months ended May 31, 1914. According to this statement the operating earnings for the nine months in question were \$7,065.23 and expenses, exclusive of taxes, interest, and depreciation, were \$4,751.66. The report of the utility for the year ended December 31, 1914, shows a total operating revenue of \$10,171.62, and operating expenses, exclusive of taxes, interest, and depreciation, amounting to \$6,639.46. Assuming that rates would be finally adjusted as asked for in the original application of the company without giving consideration to the reductions agreed to by the company after the time of the hearing, and basing our estimates upon the number of subscribers of each class connected as of December 31, 1914, we find that the probable annual increase of revenues would be as follows:

100 business phones at \$6.00 increase	\$600.00
216 local residence phones at \$3.00 increase	648.00
321 rural phones at \$3.00 increase	963.00
	<hr/>
Total increase	\$2,211.00

This, added to the revenues reported by the company for the last year, would show a total probable revenue of \$12,382.62. In the statements which follow, the probable increase of revenue has been based upon the number of telephones installed at the close of the year, while the expenses used have been based upon actual conditions for the year, except as otherwise noted, with the result that the excess of revenues over expenses appears to be somewhat greater than should actually be expected in practical operation. However, using these figures in the light of this condition, we find the excess of total probable revenues above expenses, including in expenses the amount of taxes, but not including interest and depreciation, to be \$5,548.37. The valuation made by the Commission as of October 1, 1914, showed the cost of the physical property to be \$32,450, with a present value of \$27,868. Without attempting to fix definitely upon the fair value of this property, it appears reasonable in this case, in view of the apparently excellent condition in which the system is at present, to provide for interest and depreciation an amount equal to about 14 per cent of the cost new of the property, or \$4,543. It would appear from this that the probable revenues to be obtained are slightly more than \$1,000 above the revenue requirements. However, the modification of rates suggested by the company by which a discount will be offered for prompt payment of rural rates and by which a two-party residence rate will be offered for local subscribers, will probably reduce the revenues by \$300 or \$400 from the amount assumed. Probably it will be fair to assume a reduction of \$350, so that the amount available for interest and depreciation, instead of being \$5,548.37, will be about \$5,198.37. In this statement, no allowance has been given to the increased salary requirements of the company. At the time of the hearing, the representatives of the applicant submitted a statement to show that the salary requirements would be approximately \$120 per month greater than the general level of salaries had been during the past year. It was also shown that increases amounting to \$30 a month had already been made, which were not included in the statement of operating expenses. Whether or not the salary increases will actually amount to as much as \$120 per month without a corresponding increase in sources of revenue, we are not in a position to state, but there seems to be no reason to doubt the necessity for some increases in salaries. If these should be as much as \$500 per year, the total

amount available for interest and depreciation would be decreased to \$4,698.37, or only \$155.37 more than the amount required to allow 14 per cent upon a tentative value equal to the cost new of the property. It should be borne in mind, as previously mentioned, that the operating expenses, with the exception of such allowances as have been made for increases in salaries, have been the expenses of operating the number of phones actually connected during the past year, and cannot be accepted as the expense of operating the number of telephones in use at the close of the year upon which the estimates of increased revenues were based.

Consequently, as far as the financial requirements of the company are concerned, the increase asked for appears to be reasonable. The Commission has on file a protest signed by a large number of subscribers, some of whom state that the service rendered has not been satisfactory, and all of whom agree in objecting to an increase in the rates for telephone service. However, it is claimed by the company, and apparently with some justification, that these remonstrances have resulted from a circular letter sent out by an individual interested in the situation, in which he stated that he understood that the company had filed an application for authority to increase its rates from \$1.00 to \$1.50 per month, this relating apparently to rates for rural service. As the actual increase for patrons who pay their bills one year in advance will be \$2.25 per year, and for patrons who pay their bills six months in advance \$2.50 per year for rural telephones, it appears that objections based upon the assumption that an increase of \$6.00 per year was asked for would hardly apply with much force to an increase of from \$2.25 to \$2.50 per year. Furthermore, it is a matter of record that a number of these rural lines are long lines, and that the company proposes to furnish service at the rates above mentioned to all subscribers situated within ten miles of the central office to which they are connected. Beyond the ten mile limit the proposed rate is \$1.50 per phone.

It appears from the record that at the present time all rural lines are full metallic and most of them are of standard construction, being built on cedar poles, averaging about thirty-five to the mile. The statement of the company, which is undisputed, is that the number of phones on such lines ranges from eight to thirteen. Continuous night and day service is furnished, and

~~THE~~

subscribers have the free use of all lines and all exchanges. We know of no company furnishing telephone service of a standard grade over metallic lines with a limited number of subscribers per line and with lines as long as those of the applicant which has been able to furnish rural service at a lower rate than the one suggested by the applicant. The charge that service has been poor appears to be largely unfounded. At the time of the hearing, the trouble records of lines serving subscribers who had entered the most vigorous objections on the score of service were read into the record in this case. Line 119 at the Loyal exchange, according to the testimony presented, is the line serving the individual who circulated the letter previously referred to. During the month of October, there were eighteen phones connected to this line. It was then being reconstructed and changed from a grounded to a metallic line. The records of the company show the following with regard to trouble on that line:

Miller Bros., unable to get central; trouble reported at 7:40 a. m., cleared at 9 a. m.

Mary Schultz, unable to get central; reported at 6:10 a. m., cleared at 3:30 p. m.

Ben Dritchie, poor ringing; cleared in four hours.

Miller Bros., bells do not ring. Time of clearing not stated.

The testimony is to the effect that this includes all the trouble reported from this line during the month of October. During the month of November, trouble was reported from only one subscriber whose bells were out of order on three occasions. Bells were removed and new bells installed. For the month of December, no trouble whatever was reported on this line. Since October, the line has been made full metallic, and the number of phones reduced. The testimony indicates that this line occasioned more trouble than most of the rural lines because of its being a long line with a large number of telephones attached up until late in the fall of 1914. As far as the charge that the service has been poor is concerned, there is nothing in the record to substantiate it aside from the admission that the reconstruction work done during the past year may have interfered with service to some extent. Neither does it appear reasonable that service would not have been improved by the improved facilities installed by the company.

Clark County Telephone Company was formed by the consolidation of a number of companies and exchanges operating with-

in the territory now served by it. The level of rates which has been charged by this company is substantially the same as that which was charged by its predecessors for a service covering only part of the territory. This company furnishes unlimited service to four cities and villages, about 320 rural telephones on its own lines, and about 235 rural telephones on connecting lines, making an exchange of approximately 850 telephones. The rules and regulations proposed by the company as bearing upon the rates to be charged appear to be reasonable. In some respects they are different than the rules and regulations previously applied, but are not out of line with what is generally considered good telephone practice, and we believe they should be approved in this case.

IT IS THEREFORE ORDERED, That the applicant, the Clark County Telephone Company, is hereby authorized to discontinue its present schedule of rates and its present rules affecting rates, and to substitute therefor the schedule of rates and the rules respecting rates applied for in this case and quoted in this decision, with the modifications informally applied for by the applicant, which provide that there shall be a two-party residence rate for local service of \$1.15 per month and a discount for rural service of 75 cts. per year where payments are made one year in advance and of 25 cts. per half year where payments are made a half year in advance. These rates and rules may be made effective March 1, 1915.

JOHN COADY ET AL.

vs.

LA CROSSE TELEPHONE COMPANY.*

Submitted June 5, 1914. Decided Feb. 4, 1915.

Complaint was made that the rate paid for telephone service on respondent's Onalaska rural lines is excessive, that the service on one of the lines is insufficient, and that respondent refuses to install any telephone, save a pay telephone similar to those located in other business places, in the hardware store of the Onalaska Hardware Co.

The rural rate complained of is \$1.50 per month, and the complaint originated upon a line purchased by respondent from another company upon which the rate up to the time of purchase was \$1.25, when it was raised to \$1.50 to conform to respondent's existing schedule. Onalaska rural subscribers receive free service to La Crosse as well as to Onalaska.

Held: That observation has shown that a good quality of service to rural subscribers can seldom be furnished at less than \$1.25 per month; that when free exchange service is furnished to a large number of subscribers, \$1.50 per month is not usually unreasonable, and that in the present case, considering the service to which a subscriber is entitled, the rate of \$1.50 per month is not thought unreasonable and should remain;

That the only solution appears to be an alternative or optional monthly rate of \$1.25 per phone for Onalaska service with a toll charge of 5 cts. for all calls into La Crosse, and a corresponding toll charge for La Crosse subscribers calling Onalaska rural lines having this form of service, such schedule to be adopted by a majority vote of the subscribers on any one line, and, when so elected, to stand as an election for the ensuing six months; and that, while such an election might seem an imposition upon minority subscribers whose business demands frequent calls to La Crosse, on such a rural line as those involved, the service which gives the greatest benefit to the greatest number should prevail.

The pay phones were installed some two years ago in various business houses because of the respondent's belief that business phones in Onalaska generated more than a reasonable amount of traffic on account of use by nonsubscribers. The arrangement was that at the end of the month the amount of tolls collected would be refunded to the subscriber of the phone in question, whose regular rate was to continue the same. From a traffic study it appears, among other things, that, during the busy hour, 10 per cent of the calls for trunks to La Crosse were not

*Decision signed by Commissioner Carl D. Jackson in place of Commissioner John H. Roemer, resigned, whom he succeeded.

completed on account of "lines busy"; that only 8 of the 24 Onalaska business phones are equipped with coin boxes; that none of the La Crosse business phones are so equipped, and that service furnished to pay stations is somewhat hindered due to the fact that the operator gets the called party on the phone before the connection is made.

Held: That the testimony shows no general complaint against rural lines out of Onalaska, but rather some complaint against occasional delays in repairing break-downs; that the testimony does not bear heavily on this point, and that it must be remembered that an equal standard of maintenance of rural lines is more expensive than for urban lines;

That trunking conditions are becoming inadequate for good service, and that, irrespective of the pay-station problem, an additional trunk line is required between Onalaska and La Crosse;

That either all the business houses should have pay-station service or that it should be abolished altogether; that the cost of installing the additional stations would exceed the cost of another trunk line to La Crosse; that troubles usually encountered with nickel phones tend to condemn their use in a small town; that their abolition in the present case would effect economies, and that they should be abolished, and,

That while the company is under no obligation to serve nonsubscribers free, the toll rate now in force for nonsubscribers' calls is ample protection if properly enforced, and that some of the calling by nonsubscribers can probably be eliminated by the coöperation of subscribers with the company.

Order: That respondent put into effect an optional rate for rural subscribers on its Onalaska exchange with toll charge for each completed call to La Crosse, the rate to be \$15.00 per phone per year, the toll rate to be 5 cts. per message; that the rate go into effect at the election of a majority of the subscribers on any rural line; that the service be limited in such case to Onalaska local and rural connections; that respondent charge La Crosse subscribers 5 cts. per completed call for each call terminating at rural phones having limited Onalaska service, and that the election in question may be made at the beginning of any quarter, to be effective for at least two quarters thereafter, when it may in the same manner be abrogated;

That the complaint regarding rural Onalaska service be dismissed;

That respondent abolish pay stations in business places in Onalaska except when such subscribers especially desire their retention or installation;

That respondent construct and maintain one additional trunk line between Onalaska and La Crosse, and

That the order be complied with not later than April 1, 1915.

On March 7, 1914, a complaint was filed against the La Crosse Telephone Company, signed by subscribers resident upon rural lines of the respondent company located at Onalaska. The allegations set forth by the complaint were that the rate paid for telephone service on these Onalaska rural lines was excessive and that the service rendered on one of the lines was insufficient.

Preliminary notices having been duly served, the matter came to hearing on June 5, 1914, at the city hall in La Crosse. Ap-

pearances were *John Coady* as a petitioner and *W. F. Goodrich* for the La Crosse Telephone Company.

The answer of the La Crosse Telephone Company to the complaint was read into the record at the hearing. It set forth in substance the nature of the exchange at Onalaska, showed that the rates in effect were for unlimited service in La Crosse and Onalaska, that the cause of complaint against the rate lay in the fact that the first complaining subscribers, the Sand Lake Coulee subscribers, were located upon a line which was purchased from the La Crosse Interurban Company and upon which the rate of the latter company had been \$1.25 per month until raised by the purchasing company, the La Crosse Telephone Company, to \$1.50 per month in order to conform with their existing schedule. The answer also showed that a meeting of the subscribers affected had been called at the instance of the company at which, no understanding having been reached, the company asked that the whole matter be laid before the Commission.

The testimony of John Coady and other interested petitioners at the hearing went to the point of rates and service; the contention being that the \$1.50 rate was too high and that, should the \$1.25 rate be restored, a number of former subscribers would be regained, to the benefit of the company. The complaint against service seemed to be against occasional break-downs along the line rather than against the general quality of the service.

Another matter not covered by the complaint was heard by consent of the parties at the hearing. This matter related to the refusal of the La Crosse Telephone Company to install any telephone save a pay telephone, similar to those located in other business places, in the hardware store of the Onalaska Hardware Company, A. B. Robbins, proprietor. The latter party appeared in person to protest this action. The situation developed by the testimony showed that the company had installed these pay phones in some of the business places in order to regulate the excessive number of calls for La Crosse, coming in over subscribers' phones by nonsubscribers. The device imposed no extra cost upon the subscriber, indeed cheapened his service, as the calls paid for 5 cts. each went toward the \$2.50 monthly phone rent. The company maintains three trunk lines into La Crosse, but these had been found inadequate to handle the La Crosse-Onalaska business.

THE COMPLAINT OF RURAL ONALASKA SUBSCRIBERS.

Rural Rates at Onalaska.

An attempt to solve the problem through numerical computations would, in this case, be almost futile, because of the fact that the financial operations of the exchanges at La Crosse and Onalaska are not reported separately. Unlimited service has hitherto been rendered to all the subscribers, both La Crosse and Onalaska, through all the exchanges of the company, and for this reason the company has been excused from reporting the two exchanges separately. Observation has shown, however, that a good quality of service to rural subscribers can seldom be furnished at less than \$1.25 per month, and that when free exchange service to a large number of subscribers is furnished, \$1.50 per month is not usually unreasonable. The Onalaska rural subscribers receive free service to La Crosse, as well as to Onalaska. As there are some 3,300 installations on the line of the La Crosse Telephone Company, the rate of \$1.50 per month is not thought unreasonable, considering the service to which a subscriber is entitled.

It may so happen that certain of the rural lines would do without La Crosse service if the rate for local service were thereby reduced. This situation is not indicated, however, by traffic studies made at different times by representatives of the Commission and by the company. These studies indicate that the average number of calls per phone from the Onalaska rural lines to La Crosse is seldom less than one per day and often averages two. Hence it is doubtful if a reduction in the monthly rate with an added toll rate of 5 cts. per call to La Crosse would be favored by a majority of the subscribers on any rural line. This alternative or optional rate appears, notwithstanding, to be the only solution available for the subscribers. Such an optional rate would provide a monthly charge of \$1.25 per phone for Onalaska service with a toll charge of 5 cts. for all calls into La Crosse and a corresponding toll charge for La Crosse subscribers calling Onalaska rural lines having this form of service.

This form of schedule could only be adopted by a majority vote of the subscribers on any one line, and, when so elected, it ought to stand as an election for the ensuing six months.

It may be argued that the election of such a rate would be an unjust imposition upon the rights of a minority subscriber whose

business demanded frequent calls to La Crosse, but on such a rural line the service which gives the greatest benefit to the greatest number of subscribers probably should prevail.

The standard rate for this service will remain at \$18.00 per year. As before stated, this is not considered an unreasonable rate for such service as is now offered. The alternative rate suggested will merely open a way for those groups of rural subscribers who do not care for the unlimited La Crosse service.

Service.

The testimony taken at the hearing indicates no general complaint against the service rendered on these rural lines out of Onalaska. There is some complaint against occasional delays in repairing break-downs but the weight of testimony does not bear heavily on this point. It must be borne in mind that an equal standard of maintenance of rural lines is more expensive than for urban lines.

THE ONALASKA PAY-STATION COMPLAINT.

Some mention of this situation has been made in an opening paragraph. A few additional facts will be necessary to clearly explain the matter.

The situation was investigated by a representative of the Commission and the following is quoted from a report made of that investigation:

“About two years ago, complaints were filed with the La Crosse Telephone Company relative to the poor class of service provided between Onalaska and La Crosse. A traffic study was made by the company and it appears that the number of calls outgoing Onalaska for La Crosse were excessive. These calls were handled over three clear metallic trunk lines between the two exchanges. Further observations seemed to convince the telephone officials that the business phones in Onalaska generated more than a reasonable amount of traffic. Figures of this traffic study were not available.

“The La Crosse Telephone Company officials, in order to provide adequate service and restrict the use of phones to subscribers only, solicited the business men of Onalaska and obtained their consent to install nickel telephones. The contention was that the abnormal traffic conditions were due to the use of the phones by nonsubscribers, who usually stopped in some store and used the phone free. The arrangement agreed upon

between the telephone company and the business men was that every call to La Crosse would cost a nickel, which at the end of the month would be refunded to the subscriber of the phone. The regular rate of \$2.50 was to apply the same as before. The installation of the phones decreased the Onalaska outgoing calls 50 per cent according to the statement of the telephone officials."

Eight of these phones were installed at that time. The state of affairs as outlined above continued without disagreements until the refusal of Mr. Robbins to accept a pay station in his store. This refusal occurred in the early part of May, 1914, and the matter was taken up at the hearing. Subsequently, the investigation mentioned above was ordered and made.

Again quoting therefrom:

"On July 28, 1914, a traffic study was made of the calls entering and leaving the Onalaska switchboard. This study embraced a period of twenty-four consecutive hours, and was made under normal conditions of weather and trend of affairs. The results of this study may be summed up as follows:

1.	Total number of calls handled (24 hours).....	906
2.	" " " " completed (24 hours).....	805
3.	" " " toll calls completed (24 hours).....	6
4.	" " " calls completed (busy hour).....	81
5.	" " " trunk calls completed (busy hour).....	54
6.	" " busy backs (busy hour).....	6
7.	" " calls from La Crosse (24 hours).....	227
8.	" " calls to La Crosse (24 hours).....	192
9.	" " " Onalaska (business) to La Crosse (24 hrs.)	53
10.	" " " La Crosse to Onalaska (business) (24 hrs.)	49
11.	" " " Onalaska (residence & rural) to La Crosse	137
12.	" " " La Crosse to Onalaska (residence & rural)	148

"From this study and accompanying observations, the following facts are established:

"1. 54 per cent of the completed trunk calls were incoming Onalaska and 46 per cent outgoing.

"2. 52 per cent of the completed calls involved the use of trunk lines.

"3. 19 per cent of the business calls outgoing Onalaska came from pay stations. This is only 5 per cent of the total calls outgoing Onalaska.

"4. 81 per cent of the business calls outgoing Onalaska came from stations not supplied with nickel boxes. This amounts to 22 per cent of the total outgoing calls.

"5. Approximately 73 per cent of the total outgoing calls are chargeable to rural and residence phones.

"6. Trunk lines are used to transmit toll messages.

"7. During the busy hour 10 per cent of the calls for trunks to La Crosse were not completed on account of "lines busy".

"8. Service furnished by Onalaska exchange is adequate.

"9. Service furnished to pay stations is somewhat hindered due to the fact that the operator gets the called party on the phone before the connection is made. This is one of the complaints made by the subscribers having pay stations.

"10. *Only 8 of the 24 business phones are equipped with coin boxes.*

"11. La Crosse business phones are not equipped with coin collectors.

"12. Discrimination exists between business phones in Onalaska and also between La Crosse and Onalaska business phones.

"The result of the traffic study shows that the trunking conditions are becoming inadequate for good service at the present time. During the busy hour 10 per cent of the calls were busy-backs in Onalaska, and it is only fair and logical to assume that the same number or more existed in the La Crosse exchange.

"Therefore, regardless of the disposition of the nickel phone case, this department would recommend that an additional trunk circuit be erected to accommodate existing traffic and the natural increase of traffic developing with the growth of the exchange. At the present time there are only three circuits which must accommodate all the traffic including toll messages."

From the foregoing report it seems that either all business houses should have pay-station service, or that it should be abolished altogether.

Against the first proposition it may be argued that pay-station service is slower and more inconvenient than other service. Another point against it is the cost of installing the additional stations. The cost would exceed the cost of another trunk line into La Crosse. This latter expense would be approximately \$150. The use of pay stations leads to a feeling of dissatisfaction among subscribers, and the net result is that troubles usually encountered with nickel phones tend to condemn their use in a small town.

The abolition of all pay stations would in this case eliminate discrimination among subscribers, reduce the amount of time necessarily spent by the operator in supervising these calls and save an investment in equipment which does not in this case return any revenue to the company.

It is quite true that the company is under no obligation to serve nonsubscribers free, and the toll rate now in force for nonsubscribers' calls between Onalaska and La Crosse is ample pro-

tection if properly enforced. Some of the calling by nonsubscribers can probably be eliminated by the coöperation of subscribers with the company.

It is the opinion of the Commission that the La Crosse Telephone Company should abolish these pay stations.

SERVICE: ONALASKA—LACROSSE.

The traffic study, the results of which are tabulated on a preceding page, shows that an additional trunk line is required between Onalaska and La Crosse. As already stated, 10 per cent of trunk calls outgoing from Onalaska were not completed during the busy hour on account of busy trunk lines. This additional line is required irrespective of the pay-station problem, and it is believed that with some care the company can eliminate this problem.

IT IS THEREFORE ORDERED: That the La Crosse Telephone Company shall put into affect the following optional rate for rural subscribers of its Onalaska exchange:

Optional Rate for Rural Subscribers on the Onalaska Exchange of the La Crosse Telephone Company.

The subscribers of any rural line on the Onalaska exchange may, if a majority of such subscribers shall so agree, elect to take service at \$15 per phone per year; such service to be limited to Onalaska local and rural connections. With such service, a toll of 5 cts. per message shall be charged for each completed call to La Crosse for any subscriber who has previously come under the provisions of the above rate for limited Onalaska service.

The La Crosse Telephone Company is further authorized to charge La Crosse subscribers 5 cts. per completed call for each call terminating at rural phones having limited Onalaska service.

An election to take the limited Onalaska service may be made at the beginning of any quarter and shall be effective for at least two quarters following, after which, upon a majority vote of the subscribers of the rural line, it may be abrogated at the beginning of any quarter.

IT IS FURTHER ORDERED, That the complaint regarding rural Onalaska service be and the same hereby is dismissed.

IT IS FURTHER ORDERED, That the La Crosse Telephone Company abolish pay stations in business places in Onalaska, except when such subscribers specifically desire that they be retained or installed.

IT IS FURTHER ORDERED, That the La Crosse Telephone Company construct and maintain one additional trunk line between Onalaska and La Crosse.

This order shall be complied with not later than April 1, 1915.

INDEX-DIGEST

Every point taken by the Commission has been included in the INDEX-DIGEST, whether essential to the decision or not. Wherever feasible the exact language used by the Commission, both in the *dicta* and in the decisions, has been embodied in the digest, so that for practical purposes reference back to the decision will in most cases be unnecessary.

ABSORPTION OF CHARGES.

Telephone toll charges, neither company is to absorb the additional charges, *see* RATES—TELEPHONE, 29.

ACCOUNTING.

COST ACCOUNTING—ELECTRIC UTILITIES.

Determination of unit costs—Apportionment of expenses over output, capacity and consumer expenses.

1. Expenses were apportioned over output and capacity expenses. *In re Appl. Mun. El. Utility of Sun Prairie*, 189, 195.

2. Expenses were apportioned equally between output and capacity expenses. *In re Appl. Rhinelander Power Co. to Amend its Rates*, 783, 809.

Determination of unit costs—Apportionment of expenses over output, capacity and consumer expenses—Further apportionment among the different departments of the service.

3. Operating expenses were apportioned between power and lighting service. Owing to the fact that the capacity required for power service is about four times the capacity for lighting, it was deemed advisable to predicate the rates upon the normal expenses of the several classes of service. *Jones et al. v. Berlin Public Service Co.*, 121, 134.

4. An apportionment of expenses was made over output and capacity expenses and a further apportionment was made among the different departments of service. *In re Appl. Mun. El. Utility of Sun Prairie*, 189, 193.

5. Expenses were apportioned over output and capacity expenses and a further apportionment was made among the different departments of service. *In re Appl. United Heat Lt. & P. Co. of Delavan*, 505, 512.

6. Expenses were apportioned among the different departments of service. *In re Invest. Waterloo Mun. W. & El. Plant*, 534, 542.

Determination of unit costs—Apportionment of expenses over output, capacity and consumer expenses—Further apportionment among the different departments of the service—Depreciation.

7. Allowance for depreciation was based upon the reserve required for the renewal of each item of equipment. *Jones et al. v. Berlin Public Service Co.*, 121, 129, 130.

Determination of unit costs—Apportionment of expenses over output, capacity and consumer expenses—Further apportionment among the different departments of the service—Undistributed and general expenses and taxes.

8. Undistributed and general expenses and taxes were redivided in proportion to the division of the direct expense. *Jones et al. v. Berlin Public Service Co.*, 121, 129.

Determination of unit costs—Apportionment of value of physical property among the different departments or branches of the service.

9. The value of the property was apportioned as between Darien and Delavan, and a further apportionment as between arc and commercial lighting was made for Delavan. *In re Appl. United Heat Lt. & P. Co. of Delavan*, 505, 510.

COST ACCOUNTING—GAS UTILITIES.

Determination of unit costs—Apportionment of expenses over output, capacity and consumer expenses—Further apportionment among the different departments of the service—Depreciation.

10. Allowance for depreciation was based upon the reserve for the renewal of each item of equipment. *Jones et al. v. Berlin Public Service Co.*, 121, 129, 130.

Determination of unit costs—Apportionment of expenses over output, capacity and consumer expenses—Further apportionment among the different departments of the service—Undistributed and general expenses and taxes.

11. Undistributed and general expenses and taxes were redivided in proportion to the division of the direct expenses. *Jones et al. v. Berlin Public Service Co.*, 121, 129.

COST ACCOUNTING—HEATING UTILITIES.

Determination of unit costs—Apportionment of expenses over output and consumer expenses.

12. Expenses were apportioned over output and consumer expenses. *Jones et al. v. Berlin Public Service Co.*, 121, 141, 142.

Determination of unit costs—Apportionment of expenses over output, capacity and consumer expenses—Further apportionment among the different departments of the service—Depreciation.

13. Allowance for depreciation was based upon the reserve required for the renewal of each item of equipment. *Jones et al. v. Berlin Public Service Co.*, 121, 129, 130.

Determination of unit costs—Apportionment of expenses over output, capacity and consumer expenses—Further apportionment among the different departments of the service—Undistributed and general expenses and taxes.

14. Undistributed and general expenses and taxes were redivided in proportion to the division of the direct expenses. *Jones et al. v. Berlin Public Service Co.*, 121, 129.

COST ACCOUNTING—JOINT UTILITIES.

Determination of unit costs—Apportionment of expenses among different plants—(Electric, gas and heating utilities).

15. Expenses were apportioned among the different plants. *Jones et al. v. Berlin Public Service Co.*, 121, 127.

Determination of unit costs—Apportionment of expenses among different plants—(Electric and water utilities).

16. Expenses were apportioned between the electric and water departments. *In re Invest. Waterloo Mun. W. & El. Plant*, 534, 540, 541.

Determination of unit costs—Apportionment of physical property among the different plants—(Electric, gas and heating utilities).

17. The value of the physical property was apportioned among the different plants. *Jones et al. v. Berlin Public Service Co.*, 121, 125.

COST ACCOUNTING—STREET RAILWAYS.

Determination of unit costs—Apportionment of expenses among the different departments or branches of the service (urban, suburban and interurban).

18. Suburban system earnings and expenses can seldom, if ever, when as closely connected with the city system activities as in Milwaukee, be considered independently in the adjustment of fares or modification of service, and this principle was recognized in the decision in question, and in the subsidiary cases. As a rule, and in the present case, no such intimate relation exists between the activities of interurban cities and the terminal city as between suburbs and their urban center, and the contention that in the present case the interurban railways leading from the city should be considered in connection with a distribution of the profits of urban operation is not tenable. *In re Modification Milwaukee Urban Fare Decision*, 724, 733, 734.

COST ACCOUNTING—TELEPHONE UTILITIES.

Determination of unit costs—Apportionment of expenses among the various exchanges.

19. Expenses were apportioned among the various exchanges owned by the company. *In re Appl. Marion & Northern Tel. Co.*, 552, 557, 558.

Determination of unit costs—Apportionment of value of physical property among the different departments of service.

20. The value of the physical property was apportioned among local, rural, switching and toll service. *In re Appl. Marion & Northern Tel. Co.*, 552, 560.

Determination of unit costs—Apportionment of value of toll line between connecting companies.

21. The value of the toll line was apportioned between the Kingston Tel. Co. and the H. A. Price Tel. Co. *In re Tel. Toll Rates Markesan to Kingston*, 288, 292.

COST ACCOUNTING—WATER UTILITIES.

Determination of unit costs—Apportionment of expenses over output, capacity and consumer expenses—Further apportionment among the different departments of the service.

22. Expenses were apportioned between fire and general service. *In re Invest. Waterloo Mun. W. & El. Plant*, 534, 548.

Determination of unit costs—Apportionment of the value of physical property among the different departments or branches of the service.

23. The physical property was apportioned 60 per cent to fire protection and 40 per cent to general service. *In re Invest. Waterloo Mun. W. & El. Plant*, 534, 548.

CERTIFICATE OF PUBLIC CONVENIENCE AND NECESSITY.

For electric utilities—When granted.

1. Application was made by the M. H. L. & T. Co. for a declaration of public convenience and necessity authorizing it to operate a second utility in the village of Delafield for furnishing electricity for light, heat and power. The application was joined by thirty-three residents

of Delafield. It appears that the present service is only a limited service furnished by the objector, and that continuous service could not be furnished by him upon the revenue which would be available from such service. The applicant already operates an electric transmission line within the town of Delafield, and through the unincorporated village of Delafield, and alleges its readiness and willingness to furnish continuous service at reasonable rates. It appears that there is a demand for such service. *Held*: That under the circumstances the residents of Delafield should not be deprived of such service. *In re Appl. M. L. H. & T. Co. El. Plant at Delafield*, 497, 498.

As element considered in making rates for electric utilities, *see* RATES-ELECTRIC, 7-8.

for gas utilities, *see* RATES-GAS, 2.

for telephone utilities, *see* RATES-TELEPHONE, 7.

for water utilities, *see* RATES-WATER, 5.

As element considered in valuation of public utilities, *see* VALUATION, 6.

IN GENERAL.

Failure to make allowance for depreciation.

1. The company's contention that because the property is a continuous property which will probably never be entirely scrapped at one time, it should be considered that there has been no element of depreciation which should be deducted from the cost of reproduction is not tenable, and the best evidence as to physical depreciation in the present case is the valuation made by the engineering staff with the modification noted. *In re Purchase Janesville Water Works Plant*, 674, 695.

DEPRECIATION RESERVE.

Establishment of reserve.

2. Allowance for depreciation was based upon the reserve required for the renewal of each item of equipment and the total so found, replaces the company's charges for depreciation reserve. *Jones et al. v. Berlin Public Service Co.*, 121, 129, 130.

RATE OF DEPRECIATION.

Rate of depreciation of electric plant.

3. In determining the amount to be set aside for depreciation, a computation was made showing that the depreciable property of the company has an average life of 17.5 years, and that \$963 placed each

year in a fund bearing 4 per cent interest would be sufficient to replace this property as it is worn out. *In re Appl. Mun. El. Utility of Sun Prairie*, 189, 193.

4. The rates of depreciation used in this instance are 5 per cent for the electric and 1 per cent for the water plant. *In re Invest. Waterloo Mun. W. & El. Plant*, 534, 540.

5. The rate of depreciation of hydro-electric properties with transmission lines is ordinarily less than that of steam stations with extensive distribution systems. The rate of depreciation for the latter is often about 4.5 per cent, computed on a straight line basis. On a sinking fund basis, the reserve chargeable to operating expense is, of course, somewhat lower. In the instant case depreciation is computed at 2.5 per cent. *In re Appl. Rhinelander Power Co. to Amend its Rates*, 783, 806, 807.

Rate of depreciation of telephone plant.

6. The only fact brought out at the hearing which need be noted here, is that the depreciation of open wire in a part of the city is unusually rapid, because of the action of the fumes from the plant of the Mineral Point Zinc Company where zinc ores are roasted. Because of this condition an allowance for depreciation somewhat higher than the Commission has generally found adequate must be made in this case. From such facts as are available it appears that an allowance of very nearly 10 per cent must be made for depreciation. An allowance of 10 per cent for depreciation upon the depreciable portion of the property would be equivalent to not quite 9 per cent of the total plant, excluding materials and supplies. *In re Appl. Mineral Point Tel. Co.*, 182, 184.

7. Without attempting to fix definitely upon the fair value of this property, it appears reasonable in this case, in view of the apparently excellent condition in which the system is at present, to provide for interest and depreciation an amount equal to about 14 per cent of the cost new of the property. *In re Appl. Clark County Tel. Co. to Increase Rates*, 822, 827.

Rate of depreciation of water plant.

8. The rates of depreciation used in this instance are 5 per cent for the electric plant and 1 per cent for the water plant. *In re Invest. Waterloo Mun. W. & El. Plant*, 534, 540.

Discounts on rates to insure prompt payment of bills for electric service, *see* RATES-ELECTRIC, 3-5.

for gas service, *see* RATES-GAS, 1.

for telephone service, *see* RATES-TELEPHONE, 4, 15.

DISCRIMINATION.

AS BETWEEN CUSTOMERS.

Electric rates—Discrimination due to charging dissimilar rates for similar service.

1. Under the existing rates, the charge for residence lighting is 16 cts. per kw-hr., for some business places 10 cts. per kw-hr., and for other business places 10 cts. per kw-hr. with the discounts dependent upon the quantity of current consumed. This practice, which is unjustly discriminatory, will be remedied by the new rates. *Jones et al. v. Berlin Public Service Co.*, 121, 135.

Electric rates—Discrimination due to preferential rate to employes of utility.

2. Although the Commission has no present knowledge of the practice now followed by the company in charging its employes for electric service, there is found in the schedule on file with the Commission the following preferential rate: Employes of company, 50 per cent of regular meter rate. The granting of such rates is in violation of the Public Utilities Law and the practice should be discontinued at once if it is being indulged in by the company. *Jones et al. v. Berlin Public Service Co.*, 121, 135.

AS BETWEEN PATRONS OF STREET RAILWAY.

Discrimination due to low fares fixed by agreements or franchises.

3. Under the law bearing upon the discrimination it would seem that those agreements or franchises establishing unusually low fares should be void in the same manner as those establishing high fares in favor of the company. The law should be applied both ways. If a group of patrons, by some special advantage or under unusual conditions, have obtained rates of fare which, when enforced over a period of years, become discriminatory against other patrons similarly situated, such rates should be subject to modification the same as the franchise rates of a municipality which may subject the patrons to extortion in later years. One group of patrons should not have the right for a fixed term of years to receive services at the expense of another group or groups, but the spirit of the law seems to demand that equality be re-established whenever changing conditions bring about inequality. *In re Milwaukee Suburban & Interurban Ry. Rates*, 330, 351.

AS BETWEEN SHIPPERS.

Commodity rates.

4. The maintenance of differing schedules of rates by carriers of the same commodity does not necessarily involve unjust discrimination. *Barker-Stewart Lbr. Co. et al. v. C. M. & St. P. R. Co.*, 645, 647.

Facilities for shipping milk and cream.

5. In the light of the testimony it is our judgment that the service rendered to the shippers of milk and cream at Calhoun is unreasonably discriminatory. Other milk shippers on the line between Jefferson Junction and Milwaukee are served by train No. 610, scheduled to leave Jefferson Junction at 9:10 a. m. Under such circumstances it seems unreasonable to require the shippers at Calhoun to haul their milk to the station by 6:45 a. m. during the winter months, if it is practicable to give them later service similar to that accorded other shippers. *Milw. Milk & C. Shippers of Calhoun v. C. & N. W. R. Co.*, 638, 640.

AS BETWEEN SUBSCRIBERS.

Telephone service—Withdrawal of service for "Listening in".

6. The regulation of the company prohibiting subscribers on party lines from "listening in" except to ascertain whether the line is open or busy is reasonable. However, while persistent and gross infractions of telephone utility rules might warrant a permanent exclusion from the use of the utility service, the "listening in" and remarks following were not of a character, in the present case, to warrant depriving the Epaviers of telephone service indefinitely. After suspension of service for a reasonable time, reconnection should have been made voluntarily by the company. The threats of several subscribers to withdraw their patronage should be given little or no weight, as it is the duty of a utility to serve without discrimination, under reasonable rules and regulations, all people desiring service who subscribe to and abide by such regulations. The Oconto Rural Tel. Co. is ordered to forthwith reinstall telephone service for Charles Epavier. *In re Refusal Oconto Rural Tel. Co. to Extend Service*, 277, 279.

DIVISION OF TERRITORY.

Contract between two telephone companies dividing the territory in which they render service is valid, if such division is not contrary to public policy, *see* TELEPHONE UTILITIES, 36.

DIVISION OF TOLLS.

Equal division of total revenue from the line arising from imposition of toll rates, *see* RATES—TELEPHONE, 27.

DOCK.

Petition for use of a private commercial dock for public use, dismissed, *see* STATION FACILITIES, 19.

DREDGING.

Dredging of streams to facilitate operation of flood gates in water power dams, *see* NAVIGABLE WATERS, 1.

DUPLICATION OF EQUIPMENT.

Telephone utilities, duplication of equipment of established utility not ordinarily the remedy for excessive rates or inadequate service, *see* TELEPHONE UTILITIES, 2, 5.
of established utility, when permitted, *see* TELEPHONE UTILITIES, 3-4.

ELECTRIC RAILWAYS.

MUNICIPAL ACQUISITION—TERMS AND CONDITIONS OF SALE AND PURCHASE.

Compensation for property—Compensation determined by Commission in particular cases.

1. Notice was served on the Commission, by the village of Sharon, of its determination to acquire the plant, with the exception of the engine and generator, of the United Heat, Light and Power Company. The tentative valuation of the Commission's engineers fixed the reproduction cost at \$4,891, and reproduction cost less depreciation at \$3,052, and these figures were conceded by all the parties to be fair and reasonable. It was agreed between the parties that \$2,000 should be paid for that part of the property to be acquired by the village. *Held*: The price agreed upon is reasonable. It is ordered that the village of Sharon pay the United Heat, Light and Power Company of Delavan the sum of \$2,000 within three months after the date of the order, with 6 per cent interest per annum after taking possession of the plant until the amount is fully paid, and that the United Heat, Light and Power Company transfer possession before November 1, 1914. *In re Purchase of El. Plant by the Vill. of Sharon*, 238, 240.

2. Notice was served on the Commission by the city of Grand Rapids that it had determined to acquire the lighting plant and equipment of the Grand Rapids Electric Co. as provided in section 1797m-80, and that the company had consented to the taking over of its plant by the acceptance of an indeterminate permit as provided in the Public Utilities Law. The value of the physical property of the company was fixed by the engineers of the Commission as of January 1, 1914. The value was placed at \$86,030, cost new, and \$63,488 present value, and, excluding materials and supplies and non-operating property at \$80,133 cost new, and \$58,602 present value. It was generally conceded that the valuation was fair and reasonable with the exception of the values given the item meters, which appear to be allowed for at somewhat too liberal a figure. It appeared from an investigation of the company's books, and from consideration of the average life of electric properties and the physical changes made yearly in the plant in question, that the cost new and present value determined by the engineers of the Commission were not far from the amounts which should be considered proper in determining the fair value of the property. It was also evident, from the facts available, that the business had been a profitable enterprise. In reaching its award, the Commission follows the principles laid down as controlling, in proceedings like the present, in *Appleton Water Works Co. v. Railroad Commission*, 154 Wis. 129. Careful consideration was given to the cost of reproducing the plant and its present value, to the probable cost of establishing a new enterprise of similar character and equally remunerative, to the revenues derived

from the business, and to the testimony upon the value of the property as a going concern. *Held*: That the sum of \$72,000 constitutes a fair value and just compensation for the property, excluding materials and supplies on hand, or extensions and additions made since January 1, 1914. The latter are to be paid for at such price as may be agreed upon by the parties, or, in case of failure to agree, at such price as the Commission shall fix by supplemental order. The Grand Rapids El. Co. is to turn over the property to the city on January 2, 1915, and the city is to pay to the Grand Rapids El. Co. the compensation fixed, and the price of materials and supplies, and of the additions and extensions to the plant, within thirty days after the date of the transfer of the possession of the property to the city, with interest at 6 per cent per annum from such date until payment in full. *In re Purchase of Grand Rapids El. Co.*, 258, 271.

3. Notice was served on the Commission by the village of Prairie du Sac that a majority of its electors had voted to acquire the property, rights and privileges of the Prairie du Sac Mill & Light Co., which was operating under an indeterminate permit granted pursuant to law. A valuation was made by the Commission's engineers as of September 1, 1914. For the electric property the reproduction cost new was fixed at \$7,765, and the same less depreciation at \$3,384. For the mill property the corresponding values were fixed at \$9,475 and \$6,363, respectively. The engineer of the village, who based his estimate on the theory of disposing of the plant piecemeal, and not on the theory of the plant being in its entirety an operating unit rendering service, contended that the foregoing valuation was somewhat excessive. *Held*: No valuation based on any theory other than that of the plant as being a going concern can be accepted under the rulings of the courts. Due consideration being given to all the circumstances of the case, the valuation in question is substantially correct. It appears that, the enterprise being a joint one, there must be a separation of the electric property from the mill property, and that, while the mill can be operated independently at a profit, damage will result from the fact that the owner will have larger and more equipment than is necessary for the operation of the mill. *Held*: The village must pay for the property it takes as a going concern, and damages must be included for the injury inflicted upon the owner of the property by the severance and sale of the electric business. *In re Cashton Light and Power Co.* 3 W. R. C. R. 67. Considering the fair value of the property, damages sustained by the owner, and the going value of the electric plant, the sum of \$5,100 is considered just compensation for the taking of such property by the village. It is ordered that the amount to be paid by the village to the company for the taking of the property of the company actually used and useful for the convenience of the public be fixed at \$5,100. The award does not cover stock and materials on hand, and additions to the plant made since Sept. 1, 1914, which are to be paid for at such price as the parties may agree upon, or as may be fixed by the Commission in case of their failure to agree. The property is to be transferred Nov. 1, 1914, and the village is to pay the company the compensation fixed, and the price of materials, supplies and additions to the plant, within 30 days after the transfer of possession and delivery to the village of a satisfaction of any mortgage or other lien existing on the property at the time of the transfer. Compensation is to bear 6 per cent interest from the day of the transfer of possession to the village until fully paid. *In re Purchase El. Pl. of Prairie du Sac Mill & Lt. Co.*, 360, 365.

Power of municipality to acquire public utility—Action by municipal council—Regularity—Constitutionality.

4. The constitutionality of the present proceedings was challenged because the constitution prohibits a municipality from taking "private

property for public use against the consent of the owner, without the necessity thereof being first established by the verdict of a jury." *Held*: The right was waived by the utility by the acceptance of an indeterminate permit, as provided in section 1797m—78. *In re Purchase of Grand Rapids El. Co.*, 258, 265, 266.

Power of municipality to acquire public utility—Action by municipal council—Regularity—Contract contained in franchise.

5. The city suggested that, under certain ordinances passed by the common council, it might acquire the property of the company by assuming all its indebtedness and paying to the stockholders the par value of their stock. It appears that the original franchise contained no such condition, and that, while subsequently the company made an application to the city for a franchise to contain the purchase clause here contended for by the city, none of the ordinances passed by the city after the original franchise accorded entirely with the company's propositions, or were accepted by it. *Held*: The only contract between the city and the company respecting the matter of purchase was that contained in the original franchise, which does not stipulate the price to be paid. If it did, it would be inherent in, and part of the consideration of the franchise. Under the rulings of the court in *City of La Crosse v. La Crosse G. & El. Co.* 145 Wis. 408, and *Calumet Service Co. v. Chilton*, 148 Wis. 334, such provision would become ineffective and non-existent upon the surrender of the franchise. In any event, it is to the interest of all concerned that the Commission fix the fair value of the property, as prescribed by statute, thus permitting the decision of the court, should an action be brought to set aside or modify the finding of the Commission, to terminate the matter without further hearing. *In re Purchase of Grand Rapids El. Co.*, 258, 266, 267.

Power of municipality to acquire public utility—Action by municipal council—Regularity—Councilmen and Mayor stockholders in utility.

6. A preliminary objection to these proceedings was interposed by the company prior to the introduction of any testimony upon the hearing. It appears that, when the resolution submitting the question of the purchase of the plant of the company to the city was passed, the mayor and three members of the council were stockholders of the company; that one of these councilmen was absent at the meeting in question; that of the other two one voted for and one against the resolution, and that the mayor signed the resolution upon its passage. It is contended, on the basis of section 976t, which declares null and void any contract to which the city is a party and in which any city officer shall be interested directly or indirectly, that the proceedings of the council were void, the argument seeming to be that the passage of the resolution in question was in effect the making of a contract between the city and the company and therefore within the interdiction of the statute. *Held*: The ground of objection does not come within the scope of the reason or the spirit of the statute. When the company voluntarily surrendered its franchise and received in lieu thereof an indeterminate permit by operation of law, the contract, if any resulted therefrom, was between the state and the company, and not between the company and the city, the consent of the latter not even being required to make the exchange effective. However, if the purchase and sale under the statutes may be construed as constituting a contract between the municipality and the company, it was the act of the electors, and not the resolution of the council that made the city a party to the contract. The statute in ques-

tion is merely declaratory of the well recognized rule that "he who is intrusted with the business to others cannot be allowed to make such business an object of pecuniary profit to himself." In the instant case, the mayor and common council could not have taken any action in the matter by which they could personally benefit, and as the *sine qua non* of proceedings such as the present is the determination of the electorate to acquire the plant, the formal action of the common council in submitting the question at an election in the first place, or notifying the Commission and the company of the result of the election subsequently, even if every member of the council were a stockholder, could not justly be held to vitiate and nullify such determination of the electorate. *In re Purchase of Grand Rapids El. Co.*, 258, 271.

Power of municipality to acquire public utility—Action by municipal council—Regularity—Time of giving notice to utility or Commission.

7. A further objection is based on the fact that, while the election was held on April 1, 1913, notice of the determination by the municipality to acquire the plant was not given to the utility or the Commission until August 16, 1913, though section 1797m—81 provides that "speedy notice" of such determination shall be given. *Held*: The objection is not tenable. The provision of the statute in question is not imperative as to the time of giving notice. No rights of the city or company were injuriously affected by the delay, and a new election to determine the question of purchase would cause great expense to the city without benefiting any one concerned. *In re Purchase of Grand Rapids El. Co.*, 258, 263, 264.

OPERATION.

Management—Financial transactions.

8. Petition was made requesting the Commission to investigate the Waterloo W. & Lt. Commission and its management of the municipal water and electric utilities of the village of Waterloo. A preliminary survey seemed to indicate the need for an investigation broader in scope than the one requested and the Commission decided to institute an investigation on its own motion, covering not only the management but also the rates, service and accounting practices of the two utilities. The petitioners complained that no satisfactory statement showing the financial condition of the utilities and the results of operation was obtainable under the present methods of accounting procedure. It appeared upon examination of the books and accounts of the utilities that the inadequacy and incorrectness of the records were due chiefly to the lack of a scientific accounting system and the Commission has accordingly prescribed and installed a suitable system of accounts for the utilities. The petitioners further complained that collections were made by the secretary of the W. & Lt. Commission instead of by the village treasurer as required by law. The accounting system prescribed by the Commission removes this cause of complaint by providing that collections shall be made by the village official upon whom the duty devolves according to statutory provisions. The complaint of the petitioners with reference to the management of the joint utilities seems to be based in large measure on the practice followed in the sale of materials to consumers. Materials sold by a utility should be sold at a price high enough to cover at least the cost of handling in addition to the cost of the goods, and in the cost of handling should be included not only such items as freight and cartage, but also the losses due to breakage, necessary waste and other costs of a similar nature. In the instant case it appears that the recent change in the system of accounts and records used by the joint utilities and in the persons in charge of

the system will eliminate the cause of complaint indicated. *In re Invest. Waterloo Mun. W. & El. Plant*, 534, 551.

Requirements as to service and facilities—Adequacy of service.

9. Investigation of the facts does not disclose that the capacity is in excess of that which is required. The capacity of the electric plant is indeed much larger than is usually required for the ordinary lighting and power service of a city of this size but the reason for this is that the company has three, or at least two, customers with unusually large power installations. These are a feed mill with 50 horse power capacity, a flour mill with 225 horse power, and a quarry with 215 horse power. The consequence is that the capacity required to take care of the power business during the day time exceeds very much the capacity required at night. It is not surprising under the circumstances that the petitioners discovered that the capacity of the electric plant does not closely correspond to the size of the city. They may be assured, however, that the size is not greater than the amount of the business warrants. *Jones et al. v. Berlin Public Service Co.*, 121, 126.

10. Complaint was made that the lighting service rendered by respondent at Walworth, Wis., and Fontana, Wis., is inadequate for the reason that current is now furnished during a limited period. It appears that such period is from 7 a. m. to 12 p. m.; that there is need for a more extended service; and that respondent is not fully complying with the *Standards of Electric Service* fixed by the Commission in its order of August 9, 1913, 12 W. R. C. R. 418. Respondent opposes continuous service on the ground of unwarranted cost. It was stated for respondent that the construction of transmission lines from a larger plant to Walworth and Fontana is planned for the near future, and that upon their completion continuous service would be provided. It appears that the period of operation can be somewhat extended without entailing serious additional cost. *Held*: That the service rendered by respondent at Walworth and Fontana is inadequate, and that the period of operation should be increased, so that lighting service will be furnished from 5 a. m. to 12 midnight. Should the respondent fail to complete the proposed transmission lines and to render night service thereby before September 1, 1915, the Commission may further consider the question of the continuous operation of the Walworth plant. It is ordered that the respondent extend its period of service for its patrons here involved so that lighting service will be rendered between 5 a. m. and 12 midnight. The respondent is also ordered to comply with the general order of the Commission fixing standards and rules for electric service. *Filber et al. v. Ill. Northern Utilities Co.* 383, 385.

11. Three proceedings are involved in the instant case: (1) the United Heat, Lt. & P. Co. and the city of Delavan jointly request that the Commission make an investigation and fix a rate for certain boulevard lights which the city has installed in Delavan in place of certain arc lights; (2) the Delavan Commercial Club complains that the rates charged by the United Heat, Lt. & P. Co. are unreasonable and excessive and that the service rendered by the utility is unsatisfactory and below the proper standard; and (3) the city of Delavan complains that the rate charged by the utility for boulevard lights is unreasonable and that the service rendered by the utility is unsatisfactory. With respect to service, inspections made at Delavan from time to time from February 1909 to October 1914, show that the quality of service rendered is below the standard required by the Commission, although considerable improvement has been made during the past year or two. The chief defects appear to be fluctuations in the voltage and interruptions in the service. The last inspection shows that only a small portion of the meters have been tested as required by the rules of

the Commission, and that meter records, station records and records of interruptions in service are not properly kept. *Held*: The service rendered by the utility is inadequate. The utility is ordered: (1) to take such steps within sixty days as are necessary to bring the quality of its service up to the standard prescribed by the Commission and (2) to give continuous service. *In re Appl. United Heat Lt. & P. Co. of Delavan*, 505, 516.

12. With respect to the service rendered by the electric utility, it appears that there have been some variations in voltage slightly in excess of the allowable limits and that the meter testing practice of the utility has not been up to the standard. The officials in charge, however, have expressed a willingness to comply with the requirements of the Commission and no specific order is deemed necessary in the matter. *In re Invest. Waterloo Mun. W. & El. Plant*, 534, 546, 547.

*Requirements as to service and facilities—Adequacy of service—
Inspection of consumers' installations.*

13. The rules of electric service formulated by the Commission do not make periodic inspections of all installations compulsory, for the reason that some consumers object to the inspection of their installations as an unnecessary interference, but the rules are designed to secure lamp inspection service for such consumers as desire it. (Rule 27, *In re Standards for Gas and Electric Service*, 1913, 12 W. R. C. R. 418.) *Jones et al. v. Berlin Public Service Co.*, 121, 135.

Requirements as to service and facilities—Appliances for furnishing service—Duty of utility to provide meters.

14. One of the complaints stated in the petition is that some of the electric meters are owned by consumers. In passing on the question of who should own the meters in *In re Investigation of the Hudson Water Works*, 1908, 3 W. R. C. R. 138, 141, this Commission says: "The law clearly contemplates that the divided ownership of parts of the equipment of public utilities shall cease, and that all responsibility for the installation and maintenance of the whole of the equipment shall be centered exclusively in the management. In practice, this undoubtedly means that private and municipal plants must acquire, by purchase or lease, all meters used in connection with their respective works." Undoubtedly, the best results are obtained when the utility owns the meters, as the utility can then see that they are properly tested and repaired. It will, therefore, be necessary for the village to take steps to acquire the meters now owned by consumers. *In re Invest. Waterloo Mun. W. & El. Plant*, 534, 547.

Requirements as to service and facilities—Appliances for furnishing service—Duty of utility to provide transformers and lightning arresters.

15. It is the duty of a public utility supplying electricity for light and power to provide such devices as are necessary for the reasonable protection of its customers and the public. In *Columbus R. Co. v. Kitchens*, 1914, 83 S. E. 529, the supreme court of Georgia holds in substance that where an electric light company maintains overhead wires from its plant to a residence of one of its patrons for the purpose of supplying light to the house, the company is under duty to employ such approved apparatus in general use as will be reasonably necessary to prevent injury to the house or persons or property therein arising from electricity which may be engendered by a thunder storm and strike the wires and be conducted thereby into the residence. The

same court in an earlier decision, *Heidt v. Southern Tel. Co.* 122 Ga. 474, 478, used the following language: "Persons or companies operating telephone and electric light systems for the transmission of electricity upon and over public highways owe to the public the duty of properly constructing and maintaining their respective wires and poles; they are bound to provide such safeguards against danger as are best known and most extensively used, and all necessary protection must be afforded to avoid casualties which may be reasonably expected." In Wisconsin this duty does not extend to apparatus which is situated on the premises of the consumer, since sec. 1797m—90 of the statutes exempts utilities from the requirement of installing on consumers' premises any part of the facilities incident to service except meters and appliances for purposes of measurement. In the present case the transformer is not located on the premises of the consumer and it is the usual practice to install a lightning arrester on the same pole as the transformer. Such installations are necessary for the reasonable protection of the consumer and his property from electric storms and from the current carried by the high voltage transmission line. Had the lightning arresters been installed when the line was originally constructed, it is probable that the transformer would not have been burned out. Under such circumstances, it is unreasonable to require the consumer to bear the expense of installing a new transformer and the necessary lightning arresters. Such devices should be furnished by the utility and maintained by it. *In re Refusal of Service by Bloomer El. Lt. & P. Co.*, 612, 613, 614.

Requirements as to service and facilities—Refusal of service for failure of customer to replace burned out transformer.

16. The Commission, on its own motion, investigated the complaint of L. P. Martiny that the Bloomer El. Lt. & P. Co. refuses to reinstate light and power service at his place. It appears that complainant's farm is about three-quarters of a mile distant from the Bloomer El. Lt. & P. Co.'s transmission line, which carries a high voltage; that light and power service was formerly furnished complainant by means of a transformer installed by the company near the road outside of complainant's yard, and by wiring constructed at the customer's expense; that the transformer is not located on the premises of the consumer; that the usual practice is to install a lightning arrester on the same pole as the transformer; that no lightning arresters were installed in the present case, the president of the company having assured complainant that such installations were unnecessary; that in June 1914 the transformer was burned out, presumably as a result of an electric storm, and that complainant has since been without service, the company insisting that he bear the cost of the new transformer and of lightning arresters. *Held*: That such devices should be furnished by the utility and maintained by it; that it is the duty of a public utility supplying electricity for light and power to provide such devices as are necessary for the reasonable protection of its customers and the public, though in Wisconsin the duty does not extend to apparatus which is situated on the premises of the consumer, since sec. 1797m—90 of the statutes exempts utilities from the requirement of installing on consumers' premises any part of the facilities incident to service except meters and appliances for purposes of measurement; that had the lightning arresters been installed when the line was originally constructed, it is probable that the transformer would not have been burned out, and that under such circumstances it is unreasonable to require the consumer to bear the expense of installing a new transformer and the necessary lightning arresters. *Ordered*: That the Bloomer El. Lt. & P. Co. reinstate electric service for lighting and power purposes to complainant, and furnish and maintain at its own

expense such transformers, lightning arresters, and other equipment as are necessary to supply such service in a reasonably safe and reliable manner. *In re Refusal of Service by Bloomer El. Lt. & P. Co.* 612, 614.

RATES.

See RATES-ELECTRIC.

VALUATION.

See VALUATION.

EMERGENCIES.

Provision for emergencies in telephone service, *see* TELEPHONE UTILITIES, 39.

EMERGENCY OR "STAND-BY" SERVICE.

See RATES-ELECTRIC, 20.

EXCESS LOADING.

Charge for excess loading, when used as a measure of safety to induce shippers not to overload, is not unreasonable, *see* RATES-RAILWAY, 18; REPARATION, 15.

EXCHANGE SERVICE.

Telephone switching rates for exchange service, free exchange of service, *see* RATES-TELEPHONE, 11, 12, 18.

EXCURSION TRAIN.

Excursion train service is a special form of service which a railroad is not compelled to furnish, *see* TRAIN SERVICE, 12.

EXORBITANT RATES.

See RATES.

EXPENSES.

Apportionment of expenses, *see* ACCOUNTING, 1-8, 10, 11, 12-16, 18, 19, 22.

EXTENSIONS.

Extension of telephone lines, *see* TELEPHONE UTILITIES, 1-7.

Extension of water mains, *see* WATER UTILITIES, 1.

FARES.

See RATES-RAILWAY; RATES-STREET RAILWAY.

FENCES.

Installation of wing fences for protection of farm crossing, *see* RAILROADS, 19.

FINANCIAL CONDITIONS.

As matter considered in determining reasonableness of telephone rates, *see* RATES-TELEPHONE, 8.

As element considered in making rates for street railways, *see* RATES-STREET RAILWAY, 5.

FINANCIAL MANAGEMENT.

Financial transactions in the management of electric utilities, *see* ELECTRIC UTILITIES, 8.

FINANCING.

Methods of financing water utility as element considered in making rates, *see* RATES-WATER, 8.

FIRE PROTECTION.

Necessity of making a charge for fire protection, *see* RATES-WATER, 1.

FIRE PROTECTION RATES.

Fire protection rates for water utilities, *see* RATES-WATER, 1-4.

FISHWAYS.

Necessity for providing fishways at water power dams.

1. It appears from the testimony that there are at present no fishways or logways at the McClure dam. There is, perhaps, no need for a chute for the passage of logs, as logs have not been floated down the Apple river for many years and there is little likelihood of their being sent down the river in any appreciable quantities in the future. Fishways, however, are a necessity and the petitioner must construct proper chutes or slides for the passage of fish past its dam. *In re Appls. for W. P. Franchise on Apple River*, 712, 722.

FIXED EXPENSES.

Apportionment of fixed or capacity expenses, *see* ACCOUNTING, 1-8, 10-14, 22.

FLAG STOPS.

See TRAIN SERVICE.

FLAGMAN.

Flagman, for protection of railroad crossing, *see* RAILROADS, 9-11, 13.

FLAT RATES.

Election of flat toll rate by telephone subscribers, to be made one year in advance, *see* RATES-TELEPHONE, 14, 27.

Optional charge of flat rate, or toll charge, *see* RATES-TELEPHONE, 14, 27.

FLOOD GATES.

See GATES.

FLOW OF WATER.

See LEVEL AND FLOW.

FLOWAGE RIGHTS.

In absence of proof of prescriptive rights, lands not burdened with flowage rights are entitled to protection against flooding, *see* PRESCRIPTIVE RIGHTS, 1.

FORMULA.

Formula for computing radiation, *see* RATES-HEATING, 1.

FRANCHISES.

By acceptance of indeterminate permit a utility waives the right to have established by the verdict of a jury the necessity of the taking over of its property by the municipality, *see* ELECTRIC UTILITIES, 4.

Franchises so far as they are ambiguous are to be strictly construed against the grantee and in favor of the public, *see* RAILROAD COMMISSION, 8.

Voluntary surrender of franchise, *see* ELECTRIC UTILITIES, 6.

Nature of indeterminate permit.

1. Under the Public Utilities Law a municipality can only terminate a franchise or indeterminate permit by determining to acquire the plant of the public utility, and paying just compensation for the property as a going concern. It is not possible for the city to acquire the business of the respondent without purchasing all of the property used and useful for the convenience of the public involved. *City of Neenah v. Wis. Tr. Lt. H. & P. Co.*, 626, 631.

FREE EXCHANGE OF SERVICE.

As matter considered in determining reasonableness of telephone rates, *see* RATES-TELEPHONE, 19.

FREE OR REDUCED RATE SERVICE.

Free service for telephone utility, upon establishment of physical connection, not warranted, *see* TELEPHONE UTILITIES, 16.

FREE STORAGE.

Additional free storage allowed patrons in proportion to distance from station, *see* STATION FACILITIES, 4.

FREE TELEPHONE COMMUNICATION.

Extension of telephone line to afford free telephone communication between New Richmond and the vicinity thereof, *see* TELEPHONE UTILITIES, 7.

FREE TELEPHONE SERVICE.

Free service discontinued at Juda railway station, *see* STATION FACILITIES, 18.

FREIGHT.

Electric railway not authorized to carry freight unless franchise specifically provides for such service, *see* RAILROAD COMMISSION, 8.

FREIGHT ACCOMMODATIONS.

See STATION FACILITIES.

Allowance for free storage to patrons in proportion to distance from station, *see* STATION FACILITIES, 4.

FREIGHT RATES.

See RATES-RAILWAY.

FREIGHT SERVICE.

See TRAIN SERVICE.

GAS RATES.

See RATES GAS.

GAS UTILITIES.

RATES.

See RATES—GAS.

VALUATION.

See VALUATION.

GATES.

Flood gates in water power dams to control level and flow of water, *see* NAVIGABLE WATERS, 1.

GOING CONCERN.

As element considered in the valuation of public utilities, *see* VALUATION, 2-3.

GOING VALUE.

As element considered in determining value of public utilities, *see* VALUATION, 4-5.

GRADE CROSSINGS.

See INTERURBAN RAILWAYS; RAILROADS.

GRAVEL.

See SAND AND GRAVEL.

GRAVEL AND CRUSHED STONE.

Refusal to make refund ordered by Commission, *see* RATES—RAILWAY, 10; REPAIRATION, 1.

GROUP OR BLANKET RATES.

Extent of rate zones for railway group rates, *see* RATES—RAILWAY, 4.
Nature of railway group rates, *see* RATES—RAILWAY, 4.

HEATING UTILITIES.*Thermostats.*

1. The company reserves the right to furnish and install all thermostats connected to its heating system at or at as near cost to the consumer as they can be installed and to adjust and maintain same at all times, other than breakage by the consumer or worn out parts, which supplies and repairs shall be made by the company at cost to the consumer. *Jones et al. v. Berlin Public Service Co.*, 121, 151.

HIGH VOLTAGE TRANSMISSION LINES.

Railroad Commission without authority to compel a change in location of high voltage transmission lines when they interfere with telephone lines, *see* RAILROAD COMMISSION, 5-6.

HIGH WATER MARK.

Establishment of high water mark on dams in navigable waters, *see* NAVIGABLE WATERS, 1, 2.

HIGHWAYS.

Improvement of highways at railway crossings, *see* RAILROADS, 12, 15, 17.

“HOG FUEL.”

Refund on shipment, Grand Rapids, and Grand Rapids to Port Edwards, *see* RATES—RAILWAY, 11; REPARATION, 21.

HYDRANT RENTALS.

See RATES—WATER.

HYDRAULIC POWER.

Saving from operation of electric plant by hydraulic power as element considered in determining value of electric utility, *see* VALUATION, 8.

ILLUMINATED SIGN.

Installation of, for protection of railway crossing, *see* RAILROADS, 10—14, 16, 20—22.

INCIDENTAL OR SMALL POWER APPLIANCES.

See SMALL POWER OR INCIDENTAL APPLIANCES.

INDETERMINATE PERMIT.

See FRANCHISES.

INDUSTRIAL TRACKS.

See SWITCH CONNECTIONS.

INSPECTION.

Inspection of consumers' electrical installations, *see* ELECTRIC UTILITIES, 13.

INTANGIBLE VALUE.

See VALUATION.

INTERCHANGE OF TRAFFIC.

Commission can compel railway companies to provide reasonable facilities for the interchange of traffic between their respective lines, but has no authority to compel interchange of traffic between land and water carriers, *see* RAILROAD COMMISSION, 11.

INTEREST.

Allowance for interest only large enough to pay interest on bonded indebtedness of electric plant, *see* RATES—ELECTRIC, 10.

As element considered in making rates for telephone utilities, *see* RATES—TELEPHONE, 7.

Compensation paid by village of Prairie du Sac to a utility for its property, to bear 6 per cent interest from day of transfer of possession to the village until fully paid for, *see* ELECTRIC UTILITIES, 3.

INTERSTATE TRAINS.

Jurisdiction of Railroad Commission over interstate trains, *see* RAILROAD COMMISSION, 12-14.

Required to stop or to make proper connections when such changes are necessary for adequate service, *see* TRAIN SERVICE, 5.

INTERURBAN RAILWAYS.

See STREET RAILWAYS.

INTERURBAN RATES.

See RATES-INTERURBAN.

JOINT OPERATION.

Joint operation of water power dams, when permitted, *see* WATER POWERS, 2.

JOINT RATES.

See RATES-RAILWAY.

JURISDICTION.

See RAILROAD COMMISSION.

LANDING PLACES.

Landing places for street railway passengers provided by company, *see* STREET RAILWAYS, 4.

LESS THAN CARLOAD FREIGHT.

Inadequate track facilities for the transfer of carload and less than carload freight, *see* SWITCH CONNECTIONS, 3.

LEVEL AND FLOW.

Regulation of level and flow of navigable waters, *see* NAVIGABLE WATERS, 1-4.

LEVEL OF WATER.

Regulation of maximum and minimum level and flow of navigable waters, *see* NAVIGABLE WATERS, 1, 2, 4.

LIGHTNING ARRESTERS.

Duty of electric utility to provide suitable lightning arresters and transformers, *see* ELECTRIC UTILITIES, 15.

LIGHTS AT STOPPING PLACES.

Lights at stopping places of street cars, *see* STREET RAILWAYS, 4.

LIFE OF PUBLIC UTILITY PLANT.

Of electric plant, *see* DEPRECIATION, 3-5.

Of telephone plant, *see* DEPRECIATION, 6-7.

Of water plant, *see* DEPRECIATION, 8.

LIME.

Refund on shipment of slaked lime, Superior to Washburn, *see* RATES-RAILWAY, 12; REPARATION, 12.

"LISTENING IN."

"Listening in" on telephone lines prohibited, except to ascertain whether line is open or busy, *see* TELEPHONE UTILITIES, 35.

LOADING.

Minimum carload weights, *see* WEIGHTS.

LOCAL RATES.

See RATES—RAILWAY.

LOCATION OF RAILWAY STATION.

Location of station properly function of management of railway company, *see* STATION FACILITIES, 5.

LOGS.

Refund on shipment.

Brown's Spur to Peshtigo, *see* RATES—RAILWAY, 14; REPARATION, 23.

Madras to Stevens Point, *see* RATES—RAILWAY, 16; REPARATION, 17.

Grandview to Cumberland, *see* RATES—RAILWAY, 15; REPARATION, 20.

Unity to Colby, *see* RATES—RAILWAY, 17; REPARATION, 2.

Wisconsin points on the C. M. & St. P. R., *see* RATES—RAILWAY, 13; REPARATION, 8.

Petition for refund on shipment from Wis., points to Rhinelander, dismissed, *see* RATES—RAILWAY, 18; REPARATION, 15.

LONG DISTANCE RATES.

See RATES—TELEPHONE.

LUMBER.

Refund on shipment.

Cotten to Rhinelander, *see* RATES—RAILWAY, 19; REPARATION, 24.

Robbin's Railway Transfer to Rhinelander, *see* RATES—RAILWAY, 21; REPARATION, 7.

Petition for refund on shipment from Odanah and from Rhinelander to Milwaukee, Racine and Kenosha, dismissed, *see* RATES—RAILWAY, 20; REPARATION, 10.

Refund denied on shipment, Wausau to Minocqua, *see* RATES—RAILWAY, 22; REPARATION, 16.

MAINS.

Charge for tapping water mains, *see* RATES—WATER, 15.

Extension of water mains, extension ordered on street where several consumers were already served through long makeshift services, *see* WATER UTILITIES, 1.

MAINTENANCE.

As element considered in making rates for telephone utilities, *see* RATES—TELEPHONE, 7.

MAKING RATES.

See RATES.

MAPS.

Map showing complete telephone system, to be filed with the Commission, *see* TELEPHONE UTILITIES, 39.

MARKED CAPACITY OF CAR.

Refusal to make refund because of findings of the Commission as to marked capacity of the car and minimum weight, *see* RATES-RAILWAY, 10; REPARATION, 1.

MARKET CONDITIONS.

Established market conditions as matter considered in determining reasonableness of railway rates, *see* RATES-RAILWAY, 28.

MATERIALS AND SUPPLIES.

Materials sold by utility should be sold at price high enough to cover cost of handling, breakage, waste, etc., *see* ELECTRIC UTILITIES, 8; WATER UTILITIES, 3.

MAXIMUM RATES.

See RATES-ELECTRIC.

MAXIMUM WATER LEVEL.

Establishment of maximum and minimum water level, *see* NAVIGABLE WATERS, 1, 2, 4.

MESSAGES.

Telephone messages, limited to five minutes, *see* RATES-TELEPHONE, 27.

METERS.

Duty of utility to provide meters, *see* ELECTRIC UTILITIES, 14.

MILK.

Adequacy of train service for shipment of milk and cream, *see* TRAIN SERVICE, 4.

Reasonableness of rates on skimmed milk from Sussex to Milwaukee, compared with rates on unskimmed milk, *see* RATES-RAILWAY, 23.

MILL PROPERTY.

Mill property used jointly with electric property, *see* ELECTRIC UTILITIES, 3.

MILL REFUSE.

See "HOG FUEL".

MINIMUM CARLOAD WEIGHTS.

See WEIGHTS.

MINIMUM CHARGES.

ELECTRIC UTILITIES.

Reasonableness of advance in electric rates in particular cases, minimum charges, *see* RATES—ELECTRIC, 21–23.

Establishment of minimum charges in particular cases.

1. The petitioners have suggested that a provision for a minimum bill should be made in the electric lighting schedule. The Commission has always held this to be a fair practice, and will order that the minimum monthly bill hereafter be \$1.00. *Jones et al v. Berlin Public Service Co.*, 121, 135.

2. In a number of recent cases the Commission has concluded that 75 cts. per month is as large a minimum charge as should be authorized. Whether or not there are circumstances in the present case which would make a larger minimum charge reasonable we are unable to determine from available information. Inasmuch as the authorization of the entire schedule must be based more or less on what the experience of the Commission has shown to be reasonable in other places, it seems that the same rule may properly be applied to the minimum bill. In order that the minimum charge may not be out of line with the general schedule, a gross minimum of \$1.00 and a net minimum of 80 cents will be authorized. *In re Appl. Burkhardt Milling & El. P. Co.*, 409, 411.

3. Application is made by the Whitewater El. Lt. Co. for authority to adjust its rates for electric service. The changes contemplated in general constitute reductions in rates and the only portion of the proposed schedule which it is necessary to question is the minimum charge of 75 cts. per month for residences, which would result in increases in the bills of consumers using 3 kw-hr. or less per month. *Held*: The proposed minimum charge is reasonable. The utility is authorized to put the rates applied for into effect and is ordered to publish immediately a complete statement of the amendments in its rates as hereby authorized and to file with the Commission a statement of these amendments within twenty days from the date of this order. *In re Appl. Whitewater El. Lt. Co.*, 517, 520.

Reasonableness of minimum charge.

4. The Commission has had occasion in a number of cases to investigate the reasonableness of minimum charges for electric service, and in a general way it may be said that a minimum charge of 75 cts. per month has been found reasonable. It is true that in one or two cases which have come before the Commission a minimum charge of 50 cts. per month has been established, but we are inclined to believe that 75 cts. is reasonable in this case. *In re Appl. Whitewater El. Lt. Co.*, 517, 519.

GAS UTILITIES.

Reasonableness of minimum charge.

5. The minimum bill now in effect is a charge of 25 cts. per month, which is inadequate to meet a reasonable portion of the consumer expenses which continue even when the consumer uses little or no gas. It appears under the circumstances that the minimum charge should be increased to 50 cts. per month. *Jones et al. v. Berlin Public Service Co.*, 121, 140.

MINIMUM FARES.
