TO THE HONORABLE MEMBERS  
OF THE WAUPACA COUNTY BOARD:

Gentlemen:

I wish to submit the following report of County Agricultural Extension work in Waupaca County for the twelve month period ending November 1, 1937.

Respectfully submitted,

GEO. F. MASSEY  
County Agricultural Agent

AGRICULTURAL COMMITTEE

# ANNUAL REPORT

Waupaca County Agricultural Agent

1937

## Agricultural Program

In consideration of the present trends in agriculture, the emergencies that exist, the needs of farms and farm families, and the co-operating with State and Federal Agricultural Agencies, the 1937 County Agricultural Program was planned.

Your Agricultural Committee in co-operation with a representative of the College of Agriculture and the United States Department of Agriculture upon careful consideration of all available facts outlined the work of your County Agricultural Agent for the past year.

The program outlined included the following projects on which educational, demonstrational, and promotional work was to be done:

- |                                      |  |
|--------------------------------------|--|
| (1) <u>4-H Club</u>                  | (5) <u>Agricultural Conservation</u>   |
| (2) <u>Livestock Improvement</u>     | (6) <u>Miscellaneous</u>               |
| - Bang's Testing                     | - Co-operate with Farm Credit Agencies |
| - Better Bull Program                | - Poultry                              |
| - Herd Improvement Associations      | - Home Economics                       |
| - Quality Milk                       | - Farm Management                      |
| (3) <u>Soil Improvement</u>          | - State Fair Exhibit                   |
| - Lime and Marl Production           | - Fur Farming                          |
| - Soil Testing                       | - Rural Electrification                |
| - Windbreak and Shelterbelt Planting | - Community Club Activities            |

| - Seed Grain Inspection              | - Farm Visits                          |
| - Alfalfa Promotion                  | - Correspondence                       |

#### 4-H CLUB

- 473 members--31 clubs.
- 71 leaders.
- 1104 exhibits made at County Fair.
- 450 attended Manawa Achievement Day.

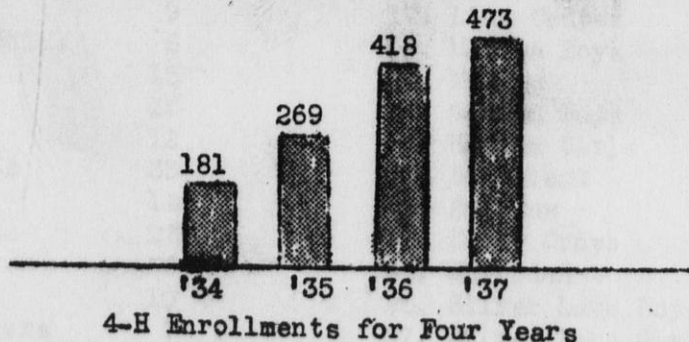

This has been one of the most successful 4-H club years. Our enrollment of 473 has exceeded all other years. In addition, there were a larger number of organizations and the quality of work done by the club members has been superior to previous years. Twenty different projects were carried by 4-H members with a total of 696 projects being carried in the County during the past year.

Exhibits of 4-H club work were made at the Waupaca County Fair at Weyauwega, at Scandinavia, and Rosholt. A total of 1104 exhibits were made at Weyauwega for which club members were paid \$721.45 in premiums. Glenn Householder of the State Board of Control, who judged at the Weyauwega Fair, indicated that the 4-H Guernsey calf exhibit was the best he had judged at any Fair during this season up to the time of our County Fair.

4-H members represented Waupaca County at the State Fair in the Dairy, Grain, and Home Economics Judging Contests. In addition, Eva Thompson, a member of the Wisdom Ridge Girls 4-H Club, took part in the State Dairy Queen Contest which also was held at the State Fair.

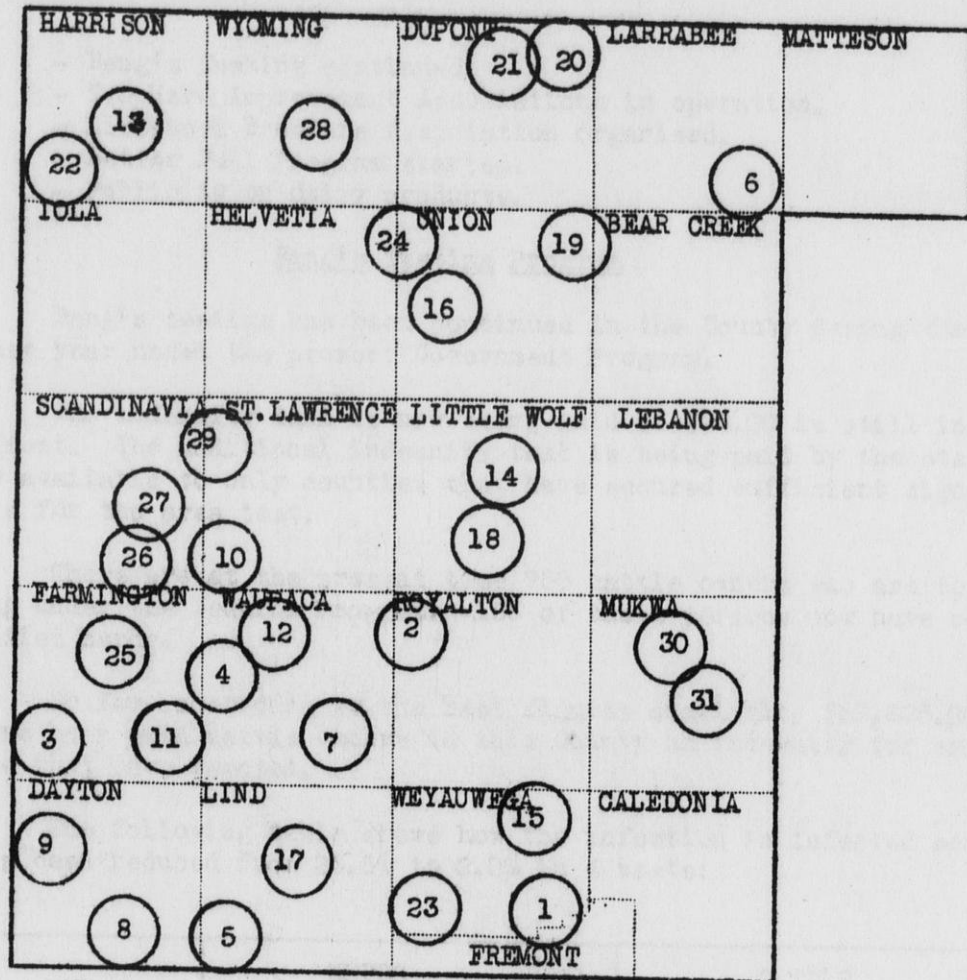

One of the best 4-H Achievement Days that we have had so far was held at Manawa on October 23. Over 450 4-H members and parents attended. 321 club members received achievement awards and 71 leaders were recognized for their services to club work. In addition, the Acorn 4-H Club, the Wisdom Ridge Boys 4-H Club, the Willing Workers 4-H Club, and the Shady Grove Girls 4-H Club received certificates for having 100% achievement of their projects.

There are close to 4500 rural boys and girls in Waupaca County of 4-H age. Therefore, there is a large field for expansion of club work providing the necessary leadership can be secured.

# LIVESTOCK IMPROVEMENT

- Bang's Testing continued.
- Two Herd Improvement Associations in operation.
- Livestock Breeders Association organized.
- Better Bull Program started.
- Publicity on dairy products.

## Bang's Testing Program

Bang's testing has been continued in the County during the past year under the present Government Program.

The indemnity that is now being paid of \$25.00 is still in effect. The additional indemnity that is being paid by the state is available to only counties that have secured sufficient signers for the area test.

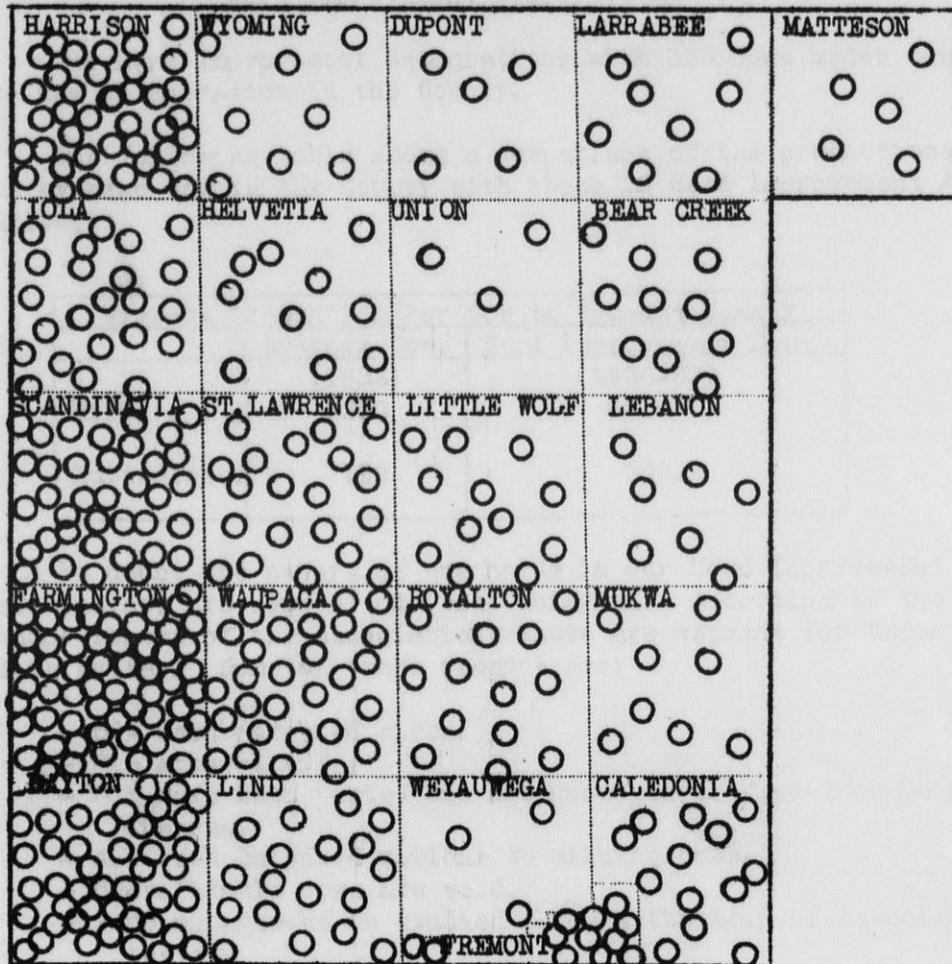

There are at the present time 755 cattle owners who are testing under the Federal Program. 156 of these persons now have certified herds.

So far, according to the best figures available, \$53,825.00 have been paid cattle owners in this County as indemnity for cattle that have reacted.

The following table shows how the infection in infected herds has been reduced from 25.6% to 2.0% in 4 tests:

TEST	HERDS			CATTLE		
	Total Herds	Reacting Herds	Per Cent Reacting	Total Cattle	Reacting Cattle	Per Cent Reacting
Initial Test..	329	339	100.0	6,505	1,664	25.6

HERD IMPROVEMENT ASSOCIATIONS  
POSITION OF

### Herd Improvement Associations

Two Herd Improvement Associations with 825 cows under test are now in operation in the County.

The following table shows a comparison of the productions of the average cow in the County with those in Herd Improvement Associations:

Average Production Per Cow in Waupaca County		
	Average Cows	Herd Improvement Cows
	(1933)	(1936-37)
Milk. . . .	5200	8514
Butterfat..	190	308.3

No doubt the owners of the herds in our Herd Improvement Associations are some of our best dairymen. According to the last annual report of the associations there are reasons for these herds being better. Some of these reasons are:

- 59% used purebred sires.
- 81% grow alfalfa.
- 50% have been tested and are known to be free from Bang's disease.
- All feed balanced rations to milking cows.
- Unprofitable cows are sold.
- Farm management is studied through the help of association tester.

The cost of membership in the association is paid by each member. Although the cost of testing is not high, this has been one of the reasons why more of our herds are not in similar associations. It is hoped that as improvement in conditions continue more herds will be included.

### Better Bull Program

One of the quickest ways, according to best authorities, to improve a herd is to use a good sire.

There is considerable information available which proves that herds that have been using a bred-for-production sire have a higher herd production than others that do not. For example, in our own County the average cow produces around 190 pounds of butterfat per year; whereas the herds in our Herd Improvement Associations in the County, many of which use sires from high producing cows, average 308 pounds of butterfat per cow.

(Better Bull Program, Cont.)

Some of the improved productions in Herd Improvement Association herds are, no doubt, due to other good dairy methods other than sires alone. However, the use of a good sire is one of the important factors that has contributed towards their high productions.

Through the co-operation of the Waupaca County Livestock Breeders Association, a plan was organized to aid herd owners who are unable to finance the purchase of a good sire. The plan in brief is as follows:

For bulls costing less than \$50.00 or for the first \$50.00 of bulls costing more.

- Banks will purchase bull and pay cash to the seller.
- Herd owner who secures bull will give a conditional sales contract with no down payment bearing 6% interest.
- Upon the payment of interest at the end of the year the contract will be renewable for two more one-year periods under the same plan.
- If interest is not paid when due, or the bull is not given at least ordinary care, the bank can repossess the bull. Repossessed bulls can then be sold. The herd owner who secured the bull will be paid the amount received from the sale less the balance on the principal plus interest due and handling costs.

For bulls costing more than \$50.00.

- The first \$50.00 will be financed under the above plan.
- The amount above \$50.00 will be financed in any way agreeable to both the bank and the person who secures the bull.

Several of the banks in the County have already accepted this plan and the program is in operation with a few bulls already placed.

Livestock Breeders Association

In order to better promote the interests of livestock breeders the Waupaca County Livestock Breeders Association was organized during the past year.

This organization has been incorporated under the laws of the State of Wisconsin.

(Livestock Breeders Association, Cont.)

Already considerable has been accomplished on two of the projects the organization has sponsored; namely, the better bull program that has already been described above and a program of parasite control in horses.

Recently eight meetings were held in the County at Farmington, Lind, Weyauwega, New London, Manawa, Bear Creek, Embarrass, and Marion to discuss the problems of controlling bots and worms in horses.

Seventy-five school districts are now being canvassed by local interested persons to secure the names of horse owners that are interested in getting their horses treated.

A substantial reduction in price of having this work done is being offered by the County Veterinarians where it is carried out on a community basis and a number of horses are treated in each school district.

In addition the Livestock Breeders Association has taken the initiative in co-operating with the County Agent's Office in designing and building a Dairy Float to take part in the Dairy Parade that was held in connection with the State Fair at Milwaukee this fall.

Funds for the Waupaca County Float were contributed by the County and Clintonville business men.

CROP IMPROVEMENT
------------------

- Potato growers secured seed from outside sources.
- Seed grain and corn inspections were made.
- Five farm institutes were held.
- Grasshopper and cutworm control.

Potatoes

Waupaca County potato growers have been submitted to unusual difficulties during the past few years.

High temperatures have been favorable for the development of diseases that have affected both the quality and the growing of potatoes. In addition, absence of necessary rainfall has greatly reduced yields.

"Yellow dwarf", which is a comparatively new disease, has

(Potatoes, Cont.)

made its appearance in a high percentage of the potato fields and it is the principal cause of the poor stands that have been so noticeable this year.

If such weather conditions continue it appears that in order to continue growing potatoes it will be necessary to secure seed from northern counties where "yellow dwarf" does not exist.

During the past year some assistance has been given farmers in securing good seed. A small shipment of Irish Cobbler potatoes was brought in from Prince Edward Isle, Canada. These proved to be excellent seed potatoes. It is hoped that a plan can be worked out where farmers will be given assistance in securing the seed that they need and at a reasonable price.

A potato institute dealing with the present problems of potato production is being held at Scandinavia on November 19. This is one of four similar meetings that are being held in the State.

Continued assistance is being planned to assist potato growers to meet the present problems. No doubt some definite plan will be put into effect which will aid growers to secure new seed from northern counties.

#### Grasshopper and Cutworm Control

Grasshoppers and cutworms have been increasing in number for the last several years.

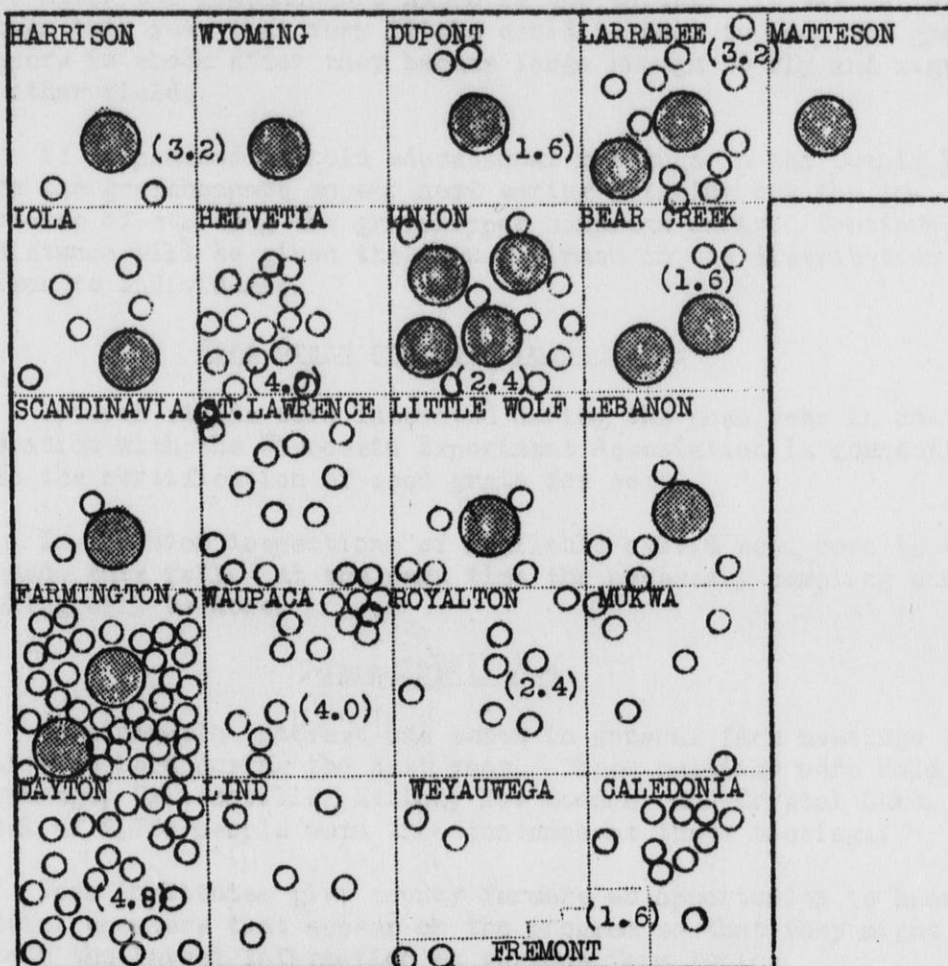

Special studies are now under way at the experiment stations in an effort to discover more about the habits of cutworms so that control measures might be more effective. Fall plowing and the use of poison bait are now the two recommended methods of control.

Efforts have been made to keep grasshoppers under control through the use of poisoned bait. However in past years control measures have not been put into effect soon enough in order to secure the maximum control.

During the past year poison in drum lots was distributed to 12 townships. A number of these townships established mixing stations where the bait was mixed and distributed to persons within their township. In addition to this 174 persons called at the County Agent's Office for small quantities of poison that they mixed themselves.

The poison that was used has been secured without direct cost to the County through the State Department of Agriculture and Markets.

DISTRIBUTION  
of  
GRASSHOPPER POISON MATERIALS  
and  
RESULTS OF GRASSHOPPER EGG SURVEY

--- one drum of poison issued.

--- one office call to obtain poison bait.

( ) --- Egg survey--the numbers on the map indicate the number of egg pods per square foot that were found at the various locations in the County by a representative of the Department of Agriculture and Markets. (Each egg pod contains perhaps 25 to 30 eggs.)

(Grasshopper and Cutworm Control, Cont.)

Farmers in the County whose farms have been infested with grasshoppers are realizing more than ever before that if we are going to control grasshoppers, control measures must be started soon after the grasshoppers hatch in the spring. It was definitely proven this year that very little could be done to keep the grasshoppers in check after they became large enough to fly and migrate to other fields.

It is planned to hold educational meetings in the County before the grasshoppers appear next spring pointing out the importance of starting the grasshopper campaign early. Continued assistance will be given the town chairmen in the distribution of poison to individuals.

Seed Grain and Corn Inspections

Several fields were inspected during the past year in cooperation with the Wisconsin Experiment Association in connection with the certification of seed grain for seed.

In addition inspections of available hybrid seed corn is to be made this fall. At the same time the necessary sampling and sealing will be done.

Farm Institutes

Considerable interest was shown in general farm meetings that were held during the past year. These meetings were held at Weyauwega, Clintonville, Marion, New London, and Crystal Lake. A total of 2,750 people were in attendance at these meetings.

Farm institutes give county farmers an opportunity to hear special speakers that appear on the program so that they might obtain the latest information on various farm topics.

Already a number of similar meetings have been planned for the coming year in places where such meetings were not held previously.

SOIL IMPROVEMENT

- Marl and lime production continues.
- Soil tests are being made.
- 62,000 trees were distributed.

### Marl and Lime

Alfalfa has continued to prove that it is one of the best drought resisting crops and at the same time it is a valuable crop for the dairy farmer.

In spite of the large amount of lime and marl that has been produced in the last few years there is considerable land yet to be limed and it has been important that liming materials be continued to be made available for those persons who wish to fit soil for alfalfa growing.

The W.P.A. lime and marl program was discontinued in Waupaca County on February 15, 1937. Since that time lime and marl production and distribution has been continued on a private set-up.

Continued work has been done to encourage the use of lime and marl and co-operate with the organizations producing lime so that farmers in the County would be able to secure the liming material they need.

Continued work is planned on this project with the possibility of setting up soil testing stations throughout the County next year where farmers can bring in their soil and see it tested as they wait.

### Windbreaks and Shelterbelts

Since the original timber has been cut off a number of fields in the light soil areas have been exposed to wind damage. The reduction in the number of trees in the County has also exposed farm buildings to cold winds.

Through the windbreak and shelterbelt planting program it is hoped that protection can be given fields that need it and also provide windbreaks for farm buildings to protect them against cold winds and perhaps control the drifting of snow in farm yards.

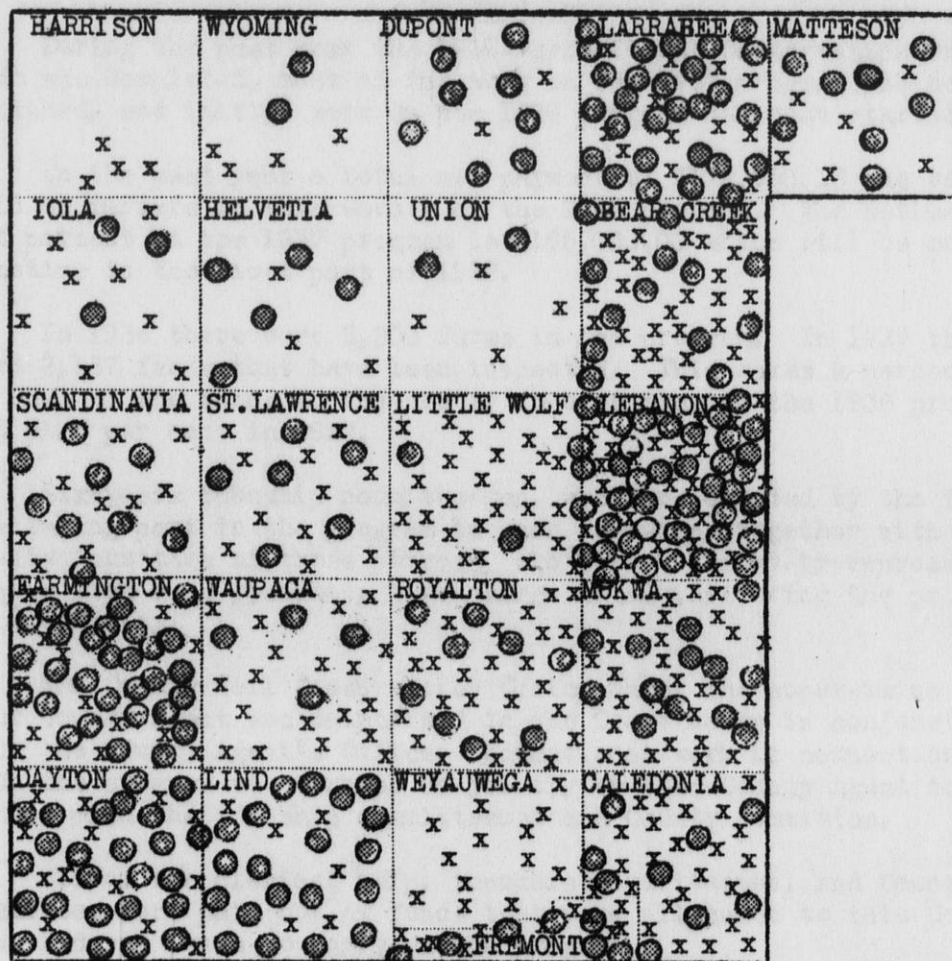

62,000 trees were distributed during the past year for windbreak and shelterbelt planting. We have now orders for 29,000 Norway Spruce trees that will be used for this purpose when they are distributed next spring.

In addition, there will be further trees available through the Wisconsin Conservation Department for distribution next spring under the same plan that we secured the trees during the past year.

It is hoped that in a few years time windbreaks and shelterbelts will be planted in all places where this protection is needed.

The following table shows the distribution of evergreen trees in the various sections of the State of Wisconsin for the year 1937. The figures are based on the reports of the various sections of the State of Wisconsin for the year 1937. The figures are based on the reports of the various sections of the State of Wisconsin for the year 1937.

- -- persons receiving trees in spring, 1937.

DEPARTMENT OF AGRICULTURE  
BUREAU OF SOIL CONSERVATION  
WASHINGTON, D. C.

SOIL CONSERVATION

- 3,200 farmers co-operated in 1936.
- 3,167 farmers are co-operating in 1937.
- \$172,950.13 net payment on the 1936 program.
- \$165,000.00 estimated payment for the 1937 program.

During the past year the 1936 Agricultural Conservation Program was completed, most of the work on the 1937 program has been finished, and initial work on the 1938 program has been started.

In the past year a total net payment of \$172,950.13 has been paid to farmers in this County on the 1936 program. The estimated net payment on the 1937 program is \$165,000.00 which will be made sometime in the first part of 1938.

In 1936 there were 3,200 farms in the program. In 1937 there were 3,167 farms that have been inspected. This makes a percentage of 82.1 of the farms in the county co-operating in the 1936 program and 81.3 per cent in 1937.

Sixty-six township committeemen, who were elected by the farmers taking part in the program in each township, together with the County Committee of three persons, who were selected by representatives from each township, have charge of administering the program in the County.

The County Soil Conservation Office under the supervision of your County Agent was maintained in the Court House in conjunction with the County Agent's Office. Educational work in connection with the program was carried on jointly by your County Agent together with the township committeemen and County Committee.

All of the clerical help, township committeemen, and County Committee were paid out of funds that were allocated to this County from Federal funds to carry on the program.

The elections for the 1938 committeemen have already been held in each township. It is expected that some of the field work for next year's program will be under way at an early date. The work of completing the summaries for this year is now being rushed in order that the payments will be made at the earliest date possible.

It is expected that, as soon as definite details are known, a number of meetings will be held during the winter on the 1938 Soil Program.

1931 VOUCHER FOR 1931

## MISCELLANEOUS

### Home Economics

Through the request of a number of farm and village women the Home Economics extension work that was started three years ago was continued.

This activity consists of a representative of the College of Agriculture meeting with leaders from women's organizations at some designated place at regular intervals. The leaders in turn present the subject matter and the demonstrations that were given them to members of their own organization.

During the past year one of these meeting places was in Harrison near Norske, the other in Iola. Miss Elizabeth Birong of the College of Agriculture was the person who came here to conduct this work. The subject was "Clothing Construction".

We have already organized this work for another year and some meetings have already been held.

This Home Economics assistance is being secured without direct cost to the County. Continued assistance will be given County Homemakers who are interested in taking advantage of this special help.

### State Fair

The County Agent's Office co-operated with the State Fair Committee of the County Board in erecting the State Fair exhibit. The Waupaca County exhibit ranked among the highest and was given a special premium which was awarded to the best exhibits.

It has been thought advisable to continue on one project for a few years because of the advertising that can be built up in this way rather than changing each year.

The Waupaca County exhibit which has featured Conservation and Recreation for the last several years most likely will be changed to some other project for next year.

### Rural Electrification

Activity has been maintained on this project in an effort to secure the necessary funds to assist in the building of electric lines in the area now requesting this service.

-  -- Farmers Institutes
-  -- Bot Control Meetings
-  -- Herd Improvement Members, 1937-38

(Rural Electrification, Cont.)

A number of meetings were held in the territory where an R.E.A. project is being set up during the past year. No definite announcement has been made concerning whether or not the necessary funds will be received.

Meetings were held in other townships where rural lines have been extended by private companies.

Seed Loans

Seed loan applications through the Farm Credit Administration were received at the County Agent's Office. A total of 82 applications were completed. About half of these were approved.

Community Club Activities

Two folk dancing schools were held during the past year as a continuation of this activity that was started last year.

Three community clubs presented plays in the County Drama Festival that was held at New London. The play "Out of the Night" presented by the Bear Creek Community Club represented Waupaca County at the State Drama Festival held in connection with Farm and Home Week at the College of Agriculture last February.

CONCLUSION

The success of the County Agent Program in Waupaca County is not due to an individual effort, but because of the co-operation from many sources.

The Agricultural Committee and your County Agent at this time wish to acknowledge such help from the following:

- Waupaca County Board of Supervisors
- Waupaca County Newspapers
- 4-H Leaders
- Agricultural Conservation Committeemen, Board of Directors, and County Committee
- Waupaca County Lions Clubs
- Waupaca County Fair
- Waupaca County Granges and Community Clubs
- Waupaca County Livestock Breeders Association
- United States Department of Agriculture
- Ben F. Rusy, District Supervisor, College of Agriculture
- Wisconsin College of Agriculture
- Wisconsin Department of Agriculture and Markets

(Conclusion, Cont.)

- Works Progress Administration
- State 4-H Club Department
- Wisconsin Conservation Commission
- Agricultural Adjustment Administration
- Waupaca County Highway Department and other County Officers
- Agricultural Instructors in Clintonville, Manawa, Marion,  
New London, Waupaca, and Weyauwega High Schools
- Waupaca County Asylum and Poor Farm
- The many men and women who helped as individuals or on  
committees with the various County Agent Projects
