Its Charter is dated in the Year 1579. By the firſt Article the *Company* is erected into a Body Politick, under the Title of the *Company of Merchants of the Eaſt*; to conſiſt of *Engliſhmen*, all real Merchants, who have exercis'd the Buſineſs thereof, and traffick'd thro' the Sound, before the Year 1568, into *Norway*, *Sweden*, *Poland*, *Livonia*, *Pruſſia*, *Pomerania*, &c. as alſo *Revel*, *Coningsberg*, *Dantzic*, *Copenhagen*, &c. excepting *Narva*, *Muſcovy*, and its Dependencies. Moſt of the following Articles grant 'em the uſual Prerogatives of ſuch *Companies*; as a Seal, Governor, Courts, Laws, *&c.*

The Privileges peculiar to this *Company*, are, That none ſhall be admitted a Member, who is already a Member of any other *Company*; nor anyRetail-dealer at all. That noMerchant qualify'd, be admitted without paying 6 Pounds 13 Shillings 6 Pence. That a Member of another *Company*, deſiring to renounce the Privileges thereof, and to be receiv'd into that of the *Eaſt*, ſhall be admitted *gratis*: provided he procures the ſame Favour for a Merchant of the *Eaſt*, willing to fill his Place. That the Merchant-Adventurers who never dealt in the Eaſt, in the Places expreſs'd in the Charter, may be receiv'd as Members of the *Company* on paying 40 Marks: That notwithſtanding this Union of the *Adventurers of England*, with the *Company of the Eaſt*, each ſhall retain its Rights and Privileges. That they ſhall export no Cloths but what are dy'd and preſs'd; except 100 Pieces *per Ann.* which are allow'd 'em *gratis*.

This Charter was confirm'd by *Charles* II. in 1661, with this Addition; That no Perſon of what Quality ſoever, living in *London*, ſhould be admitted a Member unleſs he were free of the City.

*Turky* Company, or *Levant* Company. This *Company* is eſtabliſh'd on the Foot of the *Hamburgh Company*, *i. e.* there is no common Fund, wherein the Adventurers depoſit their Stock, to make one ſingle Commerce; but the Commerce thither is free, each Member trafficking for himſelf; but obſerving, withal, the Rules and Orders of the *Company*; and contributing, occaſionally, towards the common Expences.

This flouriſhing Body had its riſe under Queen *Elizabeth*: *James* I. confirm'd its Charter in 1606; adding new Privileges. During the Civil Wars, there happening ſome Innovations in the Government of the *Company*, many Perſons having been admitted Members, not qualified by the Charters of Queen *Elizabeth* and King *James*, or that did not conform to the Regulations preſcrib'd; *Charles* II. upon his Reſtoration, endeavour'd to ſet it upon its antient Baſis: to which End, he gave 'em a Charter, containing not only a Confirmation of their old one, but alſo ſeveral new Articles of Reformation.

By this, the *Company* is erected into a Body Politick, capable of making Laws, *&c.* under the Title of the *Company of Merchants of England trading to the Seas of the Levant*. The Number of Members is not limited but is ordinarily about three hundred. The principal Qualification requir'd, is, that the Candidate be a wholeſale Merchant, either by Family, or by ſerving an Apprenticeſhip of ſeven Years. Thoſe under 25 Years of Age, pay 25 *l.* Sterl. at their Admiſſion; thoſe above, twice as much. Each makes Oath, at his entrance, not to ſend any Merchandizes to the *Levant*, but on his own account; and not to conſign 'em to any but the *Companies* Agents, or Factors. The *Company* governs it ſelf by a plurality of Voices.

It has a Court, or Board at *London*, compos'd of a Governor, Sub-Governor, and twelve Directors, or Aſſiſtants; who are all actually to live in *London*, or the Suburbs. They have alſo a Deputy-Governor, in every City, and Port, where there are any Members of the *Company*. This Aſſembly at *London* ſends out the Veſſels, regulates the Tarif for the Price at which the *European* Merchandizes ſent to the *Levant* are to be ſold; and for the Quality of thoſe return'd. It raiſes Taxes on Merchandizes, to defray Impoſitions, and the common Expences of the *Company*; preſents the Embaſſador which the King is to keep at the Port, elects two Conſuls for *Smyrna* and *Conſtantinople*, &c. One of the beſt Regulations of the *Company*, is, not to leave the Conſuls, or even Embaſſador, to fix the Impoſitions on Veſſels for defraying the common Expences; (a thing fatal to the *Companies* of moſt other Nations) but to allow a Penſion to the Embaſſador and Conſuls, and even to the chief Officers; as Chancellor, Secretary, Chaplain, Interpreters, and Janiſaries; that there mayn't be any Pretence for their raiſing any Sum at all on the Merchants or Merchandizes: 'Tis true, the Embaſſador and Conſul may act alone on theſe occaſions; but the Penſion being allow'd 'em on condition of declining 'em, they chuſe rather to ſit ſtill.

In extraordinary Caſes, the Conſuls, and even Embaſſador himſelf, have recourſe to two Deputies of the *Company*, reſiding in the *Levant*: or, if the Affair be very important, aſſemble the whole Nation. Here are regulated the Preſents to be given, the Voyages to be made, and every thing to be deliberated: and on the Reſolutions here taken, the Deputies appoint the Treaſurer to furniſh the Monies, *&c.* requir'd. The ordinary Commerce of this *Company*, employs from 20 to 25 Veſſels, of between 25 and 30 Pieces of Cannon.

The Merchandizes exported thither, are Cloths of all Kinds and Colours, Pewter, Lead, Pepper, Cochineal, and a great deal of Silver, which they take up at *Cadix*: The Returns are in raw Silk, Galls, Camelots, Wools, Cottons, Maroquins, Aſhes for making Glaſs and Soap, and ſeveral Gums and medicinal Drugs.

The Commerce of this *Company* to *Smirna*, *Conſtantinople*, and *Scandaroon*, is not eſteem'd much leſs conſiderable than that of the *Eaſt-India Company*; but is, doubtleſs, much more advantageous to *England*; in regard, it takes off much more of the *Engliſh* Manufactures than the other, which is chiefly carried on in Money.

The Places reſerv'd for the Commerce of this *Company*, are all the States of *Venice*, in the Gulf of *Venice*; the State of *Raguſa*; all the States of the Grand Seignior, and the Ports of the *Levant* and *Mediterranean*; excepting *Carthagena*, *Alicant*, *Barcelona*, *Valencia*, *Marſeilles*, *Toulon*, *Genoa*, *Leghorn*, *Civita Vecchia*, *Palermo*, *Meſſina*, *Malta*, *Majorca*, *Minorca*, and *Corſica*; and other Places on the Coaſts of *France*, *Spain*, and *Italy*.

*South-Sea* Company. Many take this *Company*, eſtabliſh'd towards the Cloſe of the XVIIth Century, to have been originally intended, rather as a Political Contrivance for raiſing a Fund of Money, to ſerve in the preſſing Affairs of the State, than as a real Eſtabliſhment for the ſake of Commerce. For the Nation being exhauſted of Money by the

the long Wars with *France*, 'tis no wonder the Phantom of a new *Company* ſhould be rais'd, to bring in the Subſcriptions of the money'd Men; as the only Expedient to be ſupply'd with Money, without diſſatisfying the People, already wore out with Subſidies, &c.

Be this as it will, 'tis certain the Miniſtry never thought ſeriouſly, during the whole Courſe of the War, about making any Settlement on the Coaſts of *South America*; which was the Thing wherewith the People were firſt flatter'd: Beſides that, the Fund having been apparently perverted to defray the Expences of the War, its Value was ſo lower'd, that it muſt in all probability have ſunk outright, but for the unexpected Help it met with in 1713.

By the Treaty of *Utrecht*, the Buſineſs of the *French Aſſienta Company*, which was to furniſh the *Spaniſh Weſt-Indies* with Negroes, was reſign'd to the *Engliſh*, in favour of the *South-Sea Company*; which by this Turn reliev'd it ſelf from its languiſhing Condition, and put it in a Condition to vie with the moſt flouriſhing *Companies* of Commerce in *England*.

The Treaty of this *Company* with the *Spaniards*, commences from *May* 1713; and is to hold 30 Years; during which time, the *Company* is to furniſh the *Spaniſh America* with 144000 Negroes, of both Sexes, between fifteen and twenty five Years of Age, ſound, &c. and at the Rate of 4800 *per Annum*; and for all they furniſh beſides, only to pay half the Dues to the King of *Spain*, for the firſt 25 Years of the Farm, or *Aſſienta*. It may be added, that in conſideration of 200000 Piaſters, paid in Advance to the King of *Spain*, to be reimburs'd as the Dues riſe during the firſt ten Years, the *Company* is only to pay Dues for the 4000: The King's Due is 33 Piaſters $\frac{1}{3}$ *per* Head. See Assienta.

The chief Eſtabliſhment of the *French Aſſienta Company* was at *Buenos Ayres*, a Town of conſiderable Trade on the Coaſt of *South America*. The *South-Sea Company*, who without changing their Name, took on 'em the *Aſſienta*, or Farm of Negroes, preſerves the ſame Eſtabliſhment; and 'tis here their Veſſels diſembark their Negroes, which they had negotiated thro' all the Coaſts of *Africa* within their Grant.

The *Company*, 'tis certain, ſet out with good Succeſs; and there was room to hope ſtill better: ſince, beſides that the Value of their Stock the firſt five Years, roſe faſter, in proportion, than that of any other *Company*; his Majeſty, after purchaſing 10000 *l.* Sterling therein, was pleas'd to condeſcend to be their Governor, or firſt Director. For what remains of the Hiſtory of this *Company*, with that fatal Train of romantic *Companies* it drew after it, we chuſe to refer to the Article Bubble.

*Harborough* Company. This *Company* is yet, *Anno* 1722, only in Embryo: Its Deſign is to ſet on foot an immediate Commerce between the Subjects of *England*, and thoſe of his Majeſty's *German* Territories. The firſt Scheme was laid in 1717; a Charter obtain'd ſome time after: The reſt is *in futuro*.

*The Weſt-India* Companies, or thoſe of the *Engliſh Colonies* in *North America*, are of a lower Claſs than thoſe abovementioned; and too numerous to be here deſcrib'd.

Their Names are, the *Hudſon's Bay Company*, *Virginia Company*, *New England*, *New York*, *Penſylvania*, *New Scotland*, *Maſſachuſet*, *Connecticut*, *Bermudas*, *Tobago*, and *Carolina Companies*. See Colony, and Plantation.

*Scotch Darien* Company, was eſtabliſh'd with a good Proſpect at *Edinburgh*, in 1699, for the Commerce of *S. America*. They ſent an Armament and a Colony, which they endeavour'd to eſtabliſh in the Iſthmus of *Darien*, which parts *N.* and *S. America*: But the *Engliſh* Miniſtry not thinking proper to avow and ſupport the firſt Succeſſes of the *Company*, which had alarm'd *Spain*, ever jealous of this part of her Territories, the *Scotch* Colony was diſpers'd by the *Spaniards* in 1700: And thus vaniſh'd the beſt Project that ever was form'd, for diſputing with that Nation the Poſſeſſion of thoſe Countries, from which ſhe pretends to exclude all other Nations.

*Dutch* Companies.

*Dutch Eaſt-India* Company, had its riſe in the midſt of the Struggle that People had for their Liberty: For the *Spaniards* having forbid all Commerce with 'em, and ſhut up all their Ports; neceſſity inſpir'd ſome *Zealanders* to ſeek a new North-Eaſt Paſſage to *China*.

This Enterprize proving unſucceſsful to three ſeveral Armaments in 1594, 1595; a ſecond *Company* was form'd, under the Name of the *Company of remote Parts*; which, in 1595, took the ordinary Rout of the *Portugueze* to the *Indies*, and return'd in two Year and a half's time with little Gain, but good Hopes.

This *Company*, and a new one now juſt eſtabliſh'd at *Amſterdam*, being united, equipp'd other Fleets; and theſe occaſion'd other *Companies* at *Amſterdam*, *Rotterdam*, in *Zealand*, &c. inſomuch, that the States began to apprehend they might be prejudicial to each other: Under this Concern, they call'd all the Directors of the ſeveral *Companies* together, who all conſented to an Union, the Treaty whereof was confirmed by the States in 1602: A very remarkable Epocha, as being that of the moſt ſolid and celebrated Eſtabliſhment of Commerce that ever was in the World.

Its firſt Capital was ſix Millions ſix hundred thouſand Florins. It has 60 Directors divided into ſeveral Chambers; 20 in that of *Amſterdam*, 12 in that of *Zealand*, 14 in that of *Delpht* and *Rotterdam*, and a like Number in thoſe at *Sluys* and *Hor*. As each Grant expires, the *Company* is oblig'd to procure a new one, which it has already done four times ſince the firſt; *viz.* one in 1622, for 21 Years, like the firſt; another for 21 Years, commencing in 1647; and a third in 1665, for 25 Years; a fourth in Advance, commencing in 1698, to end in 1740. Each Grant coſts the *Company* a conſiderable Sum; that of 1647 coſt 1600000 Livres, and the two following ones more. The laſt of 1698 was confirm'd by a Placard of the States General, granting 'em a Privilege excluſive.

Their Factories, Reſidences, &c. in the *Eaſt-Indies*, are almoſt infinite; reaching from the *Perſian* Gulf to the Coaſts of *China*: the principal is that of *Batavia*, the Centre of their Commerce: Here reſides their General, with the State and Splendor of a ſovereign Prince; making War and Peace with the Eaſtern Kings and Emperors at pleaſure.

The other more conſiderable Factories, are *Taiounam* on the Coaſt of *China*, *Nangiſac* in *Japan*, *Malaca*, *Surat*, *Amboyna*, *Banda*, *Siam*, *Moluccos*, &c. Several on the Coaſt of *Coromandel*, and at *Iſpahan*, *Cape of Good Hope*, &c. In all, they number 40 Factories and 25 Fortreſſes. They have the whole Trade of the Spicery in their own Hands. See Spicery.

*Dutch Weſt-India* Company, eſtabliſh'd in 1621, with an excluſive Privilege to trade 24 Years along the Coaſts of *Africa*, between the Tropic of *Cancer*, and the *Cape of Good Hope*; and in *America*, from the South Point of *Newfoundland*, thro' the Streights of *Magellan*, that of *Maire*, or others, to the Streights of *Anian*, both in the North and South Sea.

The Directors are divided into five Chambers, (as in the *Eaſt-India Company*) out of which, 19 are choſen for the general Direction of Affairs. In 1647 the *Company* renew'd its Grant for 25 Years, but was ſcarce able to hold out the Term; by reaſon of its great Loſſes, and Expences in taking the Bay of *Todos los Santos*, *Fernambouc*, and the greateſt Part of *Braſil* from the *Portugueze*. The Weakneſs of this *Company*, which had ſeveral times in vain attempted to be join'd to that of the *Eaſt-Indies*, occaſion'd its Diſſolution at the Expiration of its Grant.

In 1674, a new *Company*, compos'd of the antient Proprietors and their Creditors, was ſettled in the ſame Rights and Eſtabliſhment with the former; and ſtill ſubſiſts with Honour: Their firſt Capital was about ſix Millions of Florins. Its principal Eſtabliſhments, are, one at *Cape Verd*, another in the Gold Coaſt of *Africa*, at *Tabago*, *Curaſſao*, &c. in *America*.

*Dutch North* Company has no excluſive Privilege; the Advantages of its Patent being of another kind, and very inconſiderable.

There are alſo in *Holland*, *Companies* for the *Baltic* Sea, the Fiſhery of *Nova Zembla*, *David's Streights*, and *Greenland*: yet, none of their Fiſheries are interdicted to private Traders; all the difference between theſe and the *Companies* conſiſting in this; that the former may not go aſhore to cut their Fiſh in pieces, and melt their Lard; but muſt bring their Luggage to *Holland*. See Fishery.

*Dutch Levant* Company. In ſtrictneſs, there is no *Levant Company* in *Holland*: but the Commerce of the private Traders is ſo conſiderable, that the State has taken the Regulation thereof on it ſelf.

To this End, they have eſtabliſh'd a Chamber of Direction at *Amſterdam*, compoſed of ſix Deputies and a Regiſter; who, under the Bourgomaſters, take care of every thing relating to the Commerce of the *Mediterranean*: eſpecially that of *Smirna* and *Conſtantinople*.

This *Company* names the Conſuls, appoints the Number and Strength of Convoys, terminates Differences among the Traders; and has a Right, on occaſion, to add new Regulations to the old ones; tho thoſe be of no force, till confirm'd by the States-General.

*French* Companies.

*French Eaſt-India* Company, was eſtabliſh'd in 1664, with an excluſive Privilege, to trade for 30 Years in all the Seas of the *Eaſt-Indies* and *South-Sea*: No Adventurer to be admitted without 1000 Livres in Stock; and Foreigners who had 20000 Livres in Stock, to be reputed *Regnicoles*.

The Patent grants 'em the Iſland of *S. Madagaſcar*; and the King to be at one fifth of the Expence of the three firſt Armaments, without Intereſt; the Principal to be refunded in ten Years: or, if the *Company* find it loſes on the whole, the Loſs to fall on the King's ſide.

The Capital Fund of the *Company*, which was moſtly furniſh'd by the King, was ſeven or eight Millions of Livres, but was to have been 15 Millions.

In effect, tho no means were wanting to ſupport the *Company*, yet it ſtill droop'd, and ſtill ſtruggled; till having ſubſiſted ten Years without any change in its Form, and being no longer able to diſcharge its Engagements, there were new Regulations concerted; but to little purpoſe. At length, Things not being diſpoſed for a new *Eaſt-India Company*, nor much good to be expected from the old one; in 1708, the Miniſtry allow'd the Directors to treat with the rich Traders of *S. Malo*, and reſign 'em their Privilege under certain Conditions. Under the Hands of theſe laſt, the *Company* began to flouriſh.

Its chief Factory is at *Ponichery*, or *Pondichery*, on the Coaſt of *Coromandel*: This is the Reſidence of the Director-General; the other Factories are inconſiderable. The Merchandizes the *Company* brings into *France*, are Silks, Cottons, Spices, Coffee, Rice, Salt-petre; ſeveral Kinds of Gums and Drugs, Woods, Wax, printed Callicos, Muſlins, *&c.*

*French Weſt India* COMPANY, eſtabliſh'd in 1664: their Charter gave 'em the Property and Seigniory of *Canada*, *Acadia*, *Antilles Iſlands*, *Iſle of Cayonne*, and the *Terra firma* of *America*, from the River of the *Amazons* to that of *Oroonoko*; with an excluſive Privilege for the Commerce of thoſe Places, as alſo of *Senegal* and the Coaſts of *Guinea*, for forty Years, only paying half the Duties.

The Stock of the *Company* was ſo conſiderable, that in leſs than 6 Months, 45 Veſſels were equipp'd; wherewith they took poſſeſſion of all the Places in their Grant, and ſettled a Commerce: yet it only ſubſiſted nine Years. In 1674 the Grant was revok'd, and the Countries above reunited to the King's Dominions, as before; the King reimburſing the Actions of the Adventurers. This Revocation was owing partly to the Poverty of the *Company*, occaſion'd by its Loſſes in the Wars with *England*, which had neceſſitated it to borrow above a Million; and even to alienate its excluſive Privilege for the Coaſts of *Guinea*: but alſo to its having in good meaſure anſwer'd its End; which was to recover the Commerce of the *Weſt-Indies* from the *Dutch*, who had tore it from 'em: For the *French* Merchants being now accuſtom'd to traffick to the *Antilles*, by permiſſion of the *Company*, were ſo attach'd to it, that it was not doubted they would ſupport the Commerce after the Diſſolution of the *Company*.

*French Miſſiſippi* COMPANY, was firſt eſtabliſh'd in 1684, in favour of the Chevalier *de la Salle*; who having projected it in 1660, and being appointed Governor of the Fort of *Frontignac*, at the Mouth of that River, travell'd over the Country in the Year 1683, and return'd to *France* to ſollicit the Eſtabliſhment. This obtain'd, he ſet ſail for his new Colony, with four Veſſels loaden with Inhabitants, *&c.* but entering the Gulf of *Mexico*, did not, it ſeems, know the River that had coſt him ſo much fatigue; but ſettled on another River, unknown; where his Colony periſh'd by degrees: ſo that in 1685 there were not 100 Perſons remaining. Making ſeveral Expeditions to find the *Miſſiſippi*, he was kill'd in one of 'em by a Party who mutiny'd againſt him: whereupon the Colony was diſpers'd and loſt. M. *Haberville* afterwards ſucceeded better; he found the *Miſſiſippi*, built a Fort, and ſettled a *French* Colony: But he being poiſon'd, 'tis ſaid, by the Intrigues of the *Spaniard*, who fear'd ſuch a Neighbour; in 1712, M. *Crouzat* had the whole Property of trading to the *French* Territories, call'd *Louiſiana*, granted him for 15 Years.

COMPANY *of the Weſt*. In 1717, the Sieur *Crouzat* ſurrender'd his Grant; and in the ſame Year a new *Company* was erected, under the Title of *Company of the Weſt*: To which, beſides every thing granted to the former *Company*, was added the Commerce of *Caſtor*, enjoy'd by the *Canada Company* from the Year 1706, but expiring in 1717. In this Eſtabliſhment, an equal View was had to the Finances, and the Commerce of the Nation: And accordingly, part of the Conditions of its Eſtabliſhment regarded the ſettling a Colony, a Trade, *&c.* the other the venting part of the Bills, call'd *Bills of State*; which could no longer ſubſiſt on their preſent Footing. The former are no more than are uſual in ſuch Eſtabliſhments: for the latter, the Actions are fix'd at five hundred Livres; each payable in Bills of State: The Actions to be eſteem'd as Merchandize; and in that Quality to be bought, ſold, and traffick'd. The Bills of State, which make the Fund of the Actions, to be converted into yearly Revenue. To put the finiſhing hand to the *Company*, in 1717 its Fund was fix'd at an hundred Million of Livres: which being fill'd, the Caſh was ſhut up.

*India* COMPANY. The Junction of the former *Company* with that of *Canada*, was immediately follow'd by its Union with that of *Senegal*; both, in the Year 1718, by an Arret of Council, which at the ſame time granted the new *Company* the Commerce of *Caſtor*, and made it Miſtreſs of the Negro, or *Guinea* Trade, to the *French* Colonies in *America*.

Nothing was now wanting to its Perfection, but an Union with the *Eaſt-India Company*, and with thoſe of *China* and *S. Domingo*, which were effected; the two firſt in 1719, and the third in 1720. This Union of the *Eaſt-India* and *China Company* with the *Company of the Weſt*, occaſion'd an Alteration of the Name, and it was henceforth call'd the *India Company*.

The Reaſons of the Union, were the Inability of the two former to carry on their Commerce, the immenſe Debts they had contracted in the *Indies*, eſpecially the *Eaſt-Company*; Complaints whereof had been ſent to Court by the *Indians*, which diſcredited the *Company* ſo, that they durſt not appear any longer at *Surat*: Laſtly, the little Care they took to diſcharge their Engagements; and their having transferr'd their Privilege to the private Traders of *S. Malo*, in conſideration of a tenth in the Profits of the Returns of their Ships.

The antient Actions of the *Company of the Weſt*, which were not at Par when this Engraftment was projected, ere it was compleated, were riſen to 300 *per Cent.* which unexpected Succeſs, gave occaſion to conclude the new Actions of the united *Companies* would not bear leſs Credit. The Concourſe of Subſcribers was ſo great, that in a Month's time there were above fifty Millions ſubſcrib'd for: The firſt twenty five Million Actions which were granted to the *India Company*, beyond the 100 Millions of Stock allow'd the *Company of the Weſt*, being fill'd as ſoon as the Books were open'd; to ſatisfy the Earneſtneſs of the Subſcribers, the Stock was increas'd by ſeveral Arrets to three hundred Millions. Credit ſtill increaſing, the new Actions roſe to 1200 *per Cent.* and thoſe of the antient *Company of the Weſt* to 1900 *per Cent.* an exorbitant Price, to which no other *Company* ever roſe.

Its Condition was now ſo flouriſhing, that in 1719 it offer'd the King to take a Leaſe of all his Farms for nine Years, at the Rate of three Millions five hundred thouſand Livres *per Annum*, more than had been given before; and to lend his Majeſty twelve hundred Millions to pay the Debts of the State: Theſe Offers were accepted: and the King, in conſideration hereof, granted 'em all the Privileges of the ſeveral Grants of the *Companies* united to that *Company*, to the Year 1770: On condition, however, of diſcharging all the Debts of the old *Eaſt-India Company*, without any Deduction at all. The Loan of twelve hundred Millions not being ſufficient for the Occaſions of the State, was augmented, three Months afterwards, with three hundred Million more; which, with the former Loan, and another of one hundred Million before, made ſixteen hundred Millions: for which the King was to pay Intereſt at the Rate of three *per Cent.*

The Duke of *Orleans*, in *February* 1720, did the *Company* the Honour to preſide in their Aſſembly, where he made ſeveral Propoſals to 'em on the Part of the King: the principal was, that they ſhould take on 'em the Charge and Adminiſtration of the Royal Bank. This was accepted of, and Mr. *Law*, Comptroller-General of the Finances, was named by the King, *Inſpector-General of the India-Company and Bank united.*

This Union, which, it was propoſed, would have been a mutual help to both thoſe famous Eſtabliſhments, proved the fatal Point from whence the Fall of both commenc'd: From this time, both the Bank-Bills and the Actions of the *Company* began to fall: in effect, the firſt periſh'd abſolutely, and the other had been drawn along with it, but for the prudent Precautions taken for its Support.

The firſt Precaution was the revoking the Office of Inſpector-General, and obliging Mr. *Law* to quit the Kingdom: The antient Directors were diſcarded, and new ones ſubſtituted; and, to find the bottom of the *Companies* Affairs, it was order'd, they ſhould give an account of what they had receiv'd, and diſburs'd; both on the account of the *Company*, and of the Bank, which they had had the Management of near a Year. Another Precaution to come at the State of the *Company*, was by endeavouring to diſtinguiſh the lawful Actionaries from the *Miſſiſippi* Extortioners; whoſe immenſe Riches, as well as their criminal Addreſs in realiſing their Actions, either into Species or Merchandize, were become ſo fatal to the State; in order, if poſſible, to ſecure the honeſt Adventurers their Stock. To this end, an Inquiſition was made into their Books, *&c.* by Perſons appointed by the King: And the new Directors, or, as they were called *Regiſſeurs*, began ſeriouſly to look about for their Commerce abroad.

The *French* have had ſeveral other *Companies*; ſome whereof have fallen of themſelves, the reſt upon the Expiration of their Grants: as, the

*Baſtion* COMPANY *of France*, which was, at firſt, a ſimple Aſſociation of two Merchants of *Marſeilles*, in the XVth Century, for fiſhing of Coral in the Gulf of *Stora-Courcoury* on the Coaſt of *Barbary*, on the Frontiers of *Algier* and *Tunis*. Having obtained leave of the Sultan *Solyman* II. to make an Eſtabliſhment, and having likewiſe treated with the *Mooriſh* Princes of the Country; in 1561 they built a little Fort, called the *Baſtion of France*, whence the *Company* took its Name.

The

The firſt Undertakers not being ſucceſsful, a new Grant was obtain'd of *Mahomet* III. in 1604, to new Undertakers: In 1628 it began to flouriſh, and the Colony conſiſted of 800 People: but the Death of their Governor in 1633, gave them a Blow they never recover'd.

Several of the *Companies* have ſince endeavour'd to ſet the fiſhing of Coral on its antient Foot, but hitherto in vain.

*Guinea* COMPANY, was eſtabliſh'd in 1685: Its Grant expir'd in 1705, but it continued its Trade of Negroes, by the King's Permiſſion, under the Name of *Aſſienta Company*, to the Year 1713; when, by the Treaty of *Utrecht*, that Trade was ſurrender'd to the *Engliſh South-Sea Company*; which ſee.

*Aſſienta* COMPANY. See *Guinea* COMPANY, and ASSIENTA.

*Cape Verd* COMPANY, the ſame with that of *Senegal*, under another Name: It was eſtabliſh'd in 1664, before the *Company of the Weſt*; but the Coaſts of *Africa* being included in the Grant of this laſt, we hear no more of the *Cape Verd Company* till the Year 1673, when it roſe afreſh under the Title of *Company of Senegal*.

*French South-Sea* COMPANY, the ſame with the *Aſſienta Company*; which ſee.

*Canada* COMPANY, eſtabliſh'd in 1628, for the Commerce of Caſtor-Skins, *&c.* Its Grant expiring in 1717, it was united to the *Company of the Weſt*; which ſee.

*Accadie* COMPANY, eſtabliſh'd in 1683. Its Grant expiring in 1703, and the War, *&c.* preventing a new one, the Colony was neglected; and was taken by the *Engliſh* in 1710, and confirm'd to 'em by the Treaty of *Utrecht*.

*French Levant* COMPANY, eſtabliſh'd in 1670; but its Privilege revok'd in 1684.

*French North* COMPANY, eſtabliſh'd in 1669, and expiring with its Grant in 1690.

*S. Domingo* COMPANY, eſtabliſh'd in 1698, for fifty Years; carry'd on with honour to the Year 1720, and then united to the *India Company*.

*Daniſh*, &c. COMPANIES.

*Daniſh North* COMPANY, was eſtabliſh'd at *Copenhagen*, in 1647: Its Eſtabliſhments are very conſiderable in *Norway*; beſides which, it ſends Veſſels to *Varanger*, whence they convey their Merchandizes by Land into the *Daniſh Lapland*; and by Sledges drawn by Rein-Deer, into the *Muſcovite Lapland*. It ſends others for *Borandai* and *Siberia*; where its Agents take 'em up, and convey 'em, in like manner, on Sledges, to *Panigorod*, the Capital of this Part of the *Muſcovite* Empire.

The Commodities it ſends thither are Rixdollars, Tobacco, and Linnens; it returns nothing but Furs and Skins.

*Daniſh Iſland* COMPANY, eſtabliſh'd in the ſame Year with the *North Company*: Its chief Factory is *Kirkebar*, a large Town in that Iſland.

*Daniſh Eaſt-India* COMPANY, eſtabliſh'd in the middle of the XVIIth Century; their chief Factory is at *Trinquebaſt*, whither they ſend two or three Veſſels every Year.

*Levant* COMPANY *of the Genoeſe*, eſtabliſh'd in 1664, and confirm'd by the Port; notwithſtanding the Oppoſition of the *French*.

Its chief Commerce was to be in Pieces of 5 Sols, which the *Genoeſe* had before furniſh'd the *Turks* withal; tho in the *French* Name, and under their Banner; they were now to do it under their own Banner: And accordingly, while the Humour of theſe Pieces laſted, as they ſerv'd not only for Money, but were likewiſe uſed by the *Greek* and *Turkiſh* Women of the Iſlands, as Ornaments in their Head-dreſs, at the bottom of their Veſts, or Petticoats, which were cover'd with 'em; the *Company* ſucceeded well enough: But that Money being decried in 1670, the *Company* has languiſh'd ever ſince; and can now ſcarce ſupport a miſerable Commerce.

COMPANY *of Ships*, is a ſort of Fleet of ſeveral Merchant-Veſſels, who make a kind of Charter-Party among themſelves; whereby, under ſeveral Clauſes and Conditions tending to their common Safety, they engage not to quit one another, but to defend each other reciprocally, during their Voyage.

Theſe Aſſociations, in the *Mediterranean*, are call'd *Conſerves*. See CONSERVE.

The chief Conditions of the Charter-Party, are, that ſuch and ſuch ſhall be own'd Admiral, Vice-Admiral, and Counter-Admiral. That thoſe which bear no Guns, ſhall pay ſo much *per Cent.* of their Cargo, for the Expences of the Admiral, *&c.* that ſuch and ſuch Signals ſhall be obſerved; that if they be attack'd, the Damages ſhall be reimburs'd by the *Company* in general, *&c.* See CHARTER-*Party*.

*Rule of* COMPANY, or *Fellowſhip*, in Arithmetick, is a Rule whereby we diſcover, or aſcertain the Share of the Profits, or Loſſes, belonging to the ſeveral Partners, or Aſſociates in any Enterprize, in proportion to the Stock each contributed thereto, and the time that Stock was in Bank. See FELLOWSHIP.

COMPANY, in War, is a little Body of Infantry, commanded by a Captain. See CAPTAIN.

The *French* uſe the Word indifferently for Horſe, or Foot; but the *Engliſh* appropriate the Term *Troop* to a Company of Horſe. See TROOP.

The Number of Men in a *Company* is uncertain; in the ordinary Regiments 'tis 50, in the Guards more. See REGIMENT, and GUARD.

In the *French* Guards the *Company* is 120, in the *Swiſs Guards* 200.

*Companies* not imbodied into Regiments, are called *Independent Companies*.

The *French* have their *Free Companies*, who never enter the Body of any Regiment; and *Companies of Ordonnance*, who in like manner never enter the Body of a Regiment, but conſiſt of the *Gens d'Armes* and Light-Horſe. They were inſtituted by *Charles* VII. who choſe out fifteen Captains, under each of whom was to be 100 Lances, or Men at Arms, each Man at Arms to receive Pay for ſix Perſons, himſelf among the Number; the reſt to three Archers on Horſeback, a Cutler, and a Servant.

COMPARATES, COMPARATA, in Logic, the Terms or Subjects of a *Compariſon*; or the two Things compared to each other. See COMPARISON.

COMPARATIVE *Anatomy*, is that Branch of Anatomy which conſiders the ſame Parts of different Animals, with relation to the particular Structure, and Formation which is moſt ſuited to the manner of living, and the Neceſſities of every Creature. See ANATOMY.

Thus, in the *Comparative Anatomy* of Stomachs, for inſtance, it is remarkable, that thoſe Creatures which have the Opportunities of frequent feeding, have their Stomachs very ſmall, in compariſon to ſome Creatures of prey, which, probably, may be under a neceſſity of faſting a long time; and therefore have Stomachs large enough to hold Food ſufficient for ſuch a time. See STOMACH, RUMINATION, *&c.*

However, in the common uſe of the Term, *Comparative Anatomy* is underſtood of any Anatomy of Brutes; whether with any immediate reference of their Structure to that of other Animals, or not.

COMPARATIVE *Degree*, in Grammar, is an Inflexion between the Poſitive and Superlative Degrees; whoſe effect is, to ſet a thing above or beneath the Level of another. See DEGREE.

The *Latins* expreſs'd their *Comparative Degree* by a particular Termination of their Adjectives, and Participles; wherein they are follow'd by the *Engliſh*, tho by few other of the modern Languages.

The *French* form moſt of their *Comparatives*, by adding the Participles *plus*, *moins*, and *auſſi*; the *Italians* by *piu*, *meno*, &c. as the Thing is to be rais'd, lower'd, or equall'd to another.

COMPARISON, *parallel*; the Relation of two Perſons or Things, conſider'd as oppoſed, or ſet before each other, in order to find wherein they agree or differ; or wherein one has the Advantage of the other.

COMPARISON, in Rhetorick, is a Figure, or rather Place, in Speech, whereby two Things are conſider'd with regard to ſome third, which is common to them both. See FIGURE, and PLACE.

Thus, *Cicer. Topic. Catoni licuit ſequi bellum civile, igitur & Ciceroni licebit.* *'Twas allow'd* Cato *to engage in the Civil Wars, therefore it may be allow'd* Cicero: where, to *engage in the Civil Wars* is common to both.

There are three Kinds of *Compariſon*; the firſt *à majori*, *i. e.* from the Major to the Minor, as that of *Cicero* againſt *Anthony*, *Quid feceris domi tuæ, cum alienæ tam ſis inſolens.* Or that of *Terence*; *Quem feret, ſi parentem non fert ſuum.* From the ſame Place, *Ovid* endeavours to appeaſe *Cæſar*.

*Cur ego poſſe negem leniri Cæſaris iras,*
*Cum videam mites hoſtibus eſſe Deos?*

The ſecond *à minori*, *i. e.* from the Minor to the Major: Thus *Cicero*, *Majores noſtri ſæpe mercatoribus, ac naviculatoribus injurioſius tractatis, bella geſſerunt; vos tot civium Romanorum millibus uno nuntio atque uno tempore necatis quo tandem animo eſſe debetis?*

The third *à pari*; as when we contend that what obtains in one Thing, ought to obtain in another of the ſame Kind: Thus, *'Twas a Law, that he who kill'd his Father ſhould be ſew'd up in a Sack and thrown into a River; therefore, he who kill'd his Mother deſerves the ſame Puniſhment.*

*Capto tuam, pudet heu, ſed capto, Maxime, cœnam*
*Tu captas alterius; jam ſumus ergo pares.*
*Mane ſalutatum venio, tu diceris eſſe,*
*Ante ſalutatum: jam ſumus ergo pares*, &c.
Mart. *Lib.* II.

COMPARISON *of Ideas*, an Act of the Mind, whereby it *compares* its Ideas one with another, in reſpect of Extent, Degree, Time, Place, or any other Circumſtances. See IDEA.

This Operation of the Mind is the Ground of *Relations*. See RELATION.

Brutes ſeem not to have this Faculty in any great degree: They have, probably, ſeveral Ideas diſtinct enough; but cannot *compare* them farther than as to ſome ſenſible Circumſtances annexed to the Objects themſelves: The Power of *comparing* general Ideas, which we obſerve in Men, we may probably conjecture they have not at all. See ABSTRACT, GENERAL *Terms*, &c.

COMPARTIMENT, or COMPARTMENT, a Deſign compos'd of ſeveral different Figures, diſpos'd with Symmetry; to adorn a Parterre, Plafond, Panes of Glaſs, or Pannels of Joinery, the Squares of a Cieling, *&c.*

*A Compartiment of Tiles*, is an Arrangement of white and red Tiles varniſh'd, for the Decoration of the Covering of a Roof.

The Term *Compartiment* is alſo uſed in Painting: Thus, we ſay, all the *Turkiſh* and *Mooriſh* Paintings are only *Compartiments*: The fine Bindings of Books are in *Compartiments*, &c.

COMPARTIMENT, in Heraldry. See PARTITION.

COMPARTITION, in Architecture, the uſeful and graceful *Diſtribution* of the whole Ground-Plot of an Ediſice, into Rooms of Office, of Reception, or Entertainment. See DISTRIBUTION, HOUSE, *&c.*

*Compartition* makes one of the great Diviſions of the Art of Building. See BUILDING.

COMPASS. The *Mariner's*, or *Nautical* COMPASS, is an Inſtrument uſed by Pilots, to direct the Courſe of their Ships. See COURSE, NAVIGATION, *&c.*

It conſiſts of a Box, which includes a magnetical Needle, that always turns to the North; excepting for a little Declination, which is various in various Places, and even at various Times, in the ſame Place. See NEEDLE, and VARIATION.

In the middle of the Box is fix'd a perpendicular Pivot, which bears a Card, or Paſtboard, on whoſe upper Surface are deſcrib'd ſeveral concentric Circles; the outmoſt of which is divided into 360 Degrees; the other into 32 Points, anſwering to the 32 Winds. See WIND.

In the Centre of this Card is fitted a Braſs Cone, or Cap, a little concave, which plays at liberty on the Pivot; and along, in the Thickneſs of the Card, is fitted the Needle, which is cover'd over with a Glaſs, that its Motions may be obſerv'd: The whole is inclos'd in another Box; where it is ſuſtain'd by braſs Hoops, to keep the Needle horizontal. See it repreſented, Tab. *Navigation*, Fig. 1.

The Needle, which is, as it were, the Soul of the *Compaſs*, is made of a thin Plate of Steel, in form of a Lozenge: the middle being cut out, ſo as to leave nothing but the Extremities and an Axis in the middle, to which the Cap is fitted. To animate, or touch it, it muſt be rubb'd on a good Loadſtone: that End intended for the North Point on the North Pole of the Stone, and that for the South Point on the South Pole. In rubbing it, care muſt be taken to begin firſt in the middle of the Lozenge, drawing it gently to the acute Angle of the Lozenge intended for the North; never ſuffering it to ſtay at the End when arrived there, nor drawing it back again from the End to the Middle, but rubbing it a ſecond, and even a third time, in the ſame manner as the firſt, only beginning a little further and further from the North Point: Some ſay, the Stone and Needle muſt be ſo diſpoſed as that the Line of the Rub be in the Direction of the Meridian. See MAGNET.

*The Invention of the* COMPASS is uſually aſcrib'd to *Flavio de Melphe*, or *Flavio Gioia* a *Neapolitan*, about the Year 1302: and hence it is, that the Territory of *Principato*, which makes a part of the Kingdom of *Naples*, where he was born, bears a *Compaſs* for its Arms.

Others ſay, that *Marcus Paulus* a *Venetian*, making a Journey to *China*, brought back the Invention with him in 1260: What confirms this Conjecture, is, that at firſt they uſed the *Compaſs* in the ſame manner as the *Chineſe* ſtill do; *i. e.* they let it float on a little piece of Cork, inſtead of ſuſpending it on a Pivot. 'Tis added, that their Emperor *Chiningus*, a celebrated Aſtrologer, had the Knowledge of it 1120 Years before Chriſt. The *Chineſe* only divide their *Compaſs* into 24 Points.

*Fauchet* relates ſome Verſes of *Guyot de Provence*, who lived in *France* about the Year 1200, which ſeem to make mention of the *Compaſs* under the Name of *Marrinette*, or *Mariner's Stone*; which ſhews it to have been uſed in *France* near 100 Years before either the *Melphite* or *Venetian*. The *French* even lay claim to the Invention from the Flower de Lis, wherewith all Nations ſtill diſtinguiſh the North Point of the Card.

With as much Reaſon Dr. *Wallis* aſcribes it to the *Engliſh*, from its Name *Compaſs*, whereby moſt Nations call it; and which he obſerves, is uſed in many Parts of *England* to ſignify a *Circle*.

*The Uſe of the Sea-*COMPASS *is obvious.* For, the Courſe a Ship is to ſail in, being known by the Chart; and the *Compaſs* ſo placed, as that the two parallel Sides of the ſquare Box be diſpos'd according to the length of the Ship, *i. e.* parallel to a Line drawn from the Head to the Stern; the Rudder is to be directed accordingly; *v. g.* If the Courſe be found on the Chart between the South-Weſt and South-South-Weſt, *i. e.* South-Weſt $\frac{1}{4}$ to the South: turn the Stern ſo as that a Line from the South-Weſt, $\frac{1}{4}$ South exactly, anſwer the Mark on the middle of the ſide of the Box. This is all that is requir'd. See SAILING, CHART, *&c.*

COMPASS is alſo an Inſtrument of conſiderable uſe in ſurveying Land, Dialling, *&c.* See SURVEYING, DIALLING, *&c.*

Its Structure, in the main, is the ſame with that of the *Mariner's Compaſs*; conſiſting, like that, of a *Box* and *Needle*: The principal difference conſiſts in this, that inſtead of the Needle's being fitted into the Card, and playing with it on a Pivot, it here plays alone; the Card being drawn on the bottom of the Box, and a Circle divided into 360 Degrees on the Limb. See Tab. *Surveying*, Fig. 15.

This Inſtrument is of obvious uſe to Travellers, to direct 'em in their Road; and to Miners, to ſhew them what way to dig, *&c.* But it has other Uſes, tho leſs eaſy, yet more conſiderable.

1. *To take the Declination of a Wall by the* COMPASS. Apply that ſide of the *Compaſs* whereon the North is mark'd along the ſide of the Wall; the Number of Degrees o'er which the North End of the Needle fixes will be the Declination of the Wall, and on that ſide: *v. g.* if the North Point of the Needle tends towards the Wall; that Wall may be ſhone on by the Sun at Noon; if it fix over 50 Degrees, counting from the North towards the Eaſt, the Declination is ſo many Degrees from South towards Eaſt.

But ſince the Needle it ſelf declines from the North towards the Weſt, with us, 13°; it muſt be noted, that to retrieve the Irregularity, 13° be always added to the Degrees ſhewn by the Needle, when the Declination of the Wall is towards the Eaſt: on the contrary, when the Declination is towards the Weſt, the Declination of the Needle to be ſubtracted. See DECLINATION.

2. *To take an Angle with the* COMPASS. Suppoſe the Angle requir'd be D A E, (Tab. *Surveying*, Fig. 11.) apply that ſide of the *Compaſs* whereon the North is mark'd to one of the Lines A D; when the Needle reſts, obſerve the Degrees at which its North Point ſtands, which ſuppoſe 80: ſo many Degrees does the Line decline from the Meridian.

In the ſame manner take the Declination of the Line AE, which ſuppoſe 215°; ſubtract 80° from 215, the Remainder is 135; which ſubtracted from 180, there will remain 45°; the quantity of the Angle requir'd.

But if the difference between the Declination of the two Lines exceed 180°; in that Caſe, 180° muſt be ſubtracted from that difference: the Remainder is the Angle requir'd.

For the Method of laying this down on Paper. See PLOTTING.

Note, In meaſuring Angles by the *Compaſs*, there needs not any regard be had to the Variation; that being ſuppos'd the ſame in all the Lines of the Angles.

3. *To take the Plot of a Field by the* COMPASS. Suppoſe the Field A, B, C, D, E, (Fig. 12.) for the greater accuracy let there be two Sights fitted to the Meridian Line of the *Compaſs*, place it horizontal, and thro' the Sights look along the Side A B, or a Line parallel to it; applying the Eye to the Sight at the South-Point of the *Compaſs*. Draw a rough Sketch of the Field by the Eye, and on the correſponding Line enter down the Degree to which the Needle points, which ſuppoſe 90; meaſure the length of the Side, and enter that too, which ſuppoſe 10 Chain.

In this manner proceed with all the reſt of the Sides of the Field; the Sides which ſuppoſe 70,65,70,50,94 Chains; and the Angles which ſuppoſe 30,100,130,240,300 Degrees.

To *protract* the Field, ſet down the ſeveral Angles obſerv'd, one after another, and ſubtract the leſſer from the next greater: thus will you have the quantity of the ſeveral Angles, and the length of the Lines that include them. For the reſt ſee PLOTTING, and PROTRACTING.

Note, All the Angles of the Figure taken together, muſt make twice as many right Angles, abating two; if no Miſtake have been committed.

*Azimuth* COMPASS, differs from the common Sea-*Compaſs* in this; that there is faſten'd, on the round Box wherein the Card is, a broad Circle A B, (Tab. *Navigation*, Fig. 12.) one half whereof is divided into 90 Degrees, and thoſe ſubdivided diagonally into Minutes: *b c* is an Index moveable on *b*, having a Sight, *b a*, erected thereon, and moving on a Hinge. From the upper part of the Sight, to the middle of the Index, is faſten'd a fine hypothenuſal Lute String *d e*, to give a Shadow on a Line in the middle of the Index. The Circle A B is croſs'd at right Angles with two Threads, from the Extremities whereof are drawn four Lines on the inſide of the round Box: there are alſo four Lines drawn at right Angles to each other on the Card. The round Box fitted with its Card, graduated Circle, and Index, is hung in the braſs Hoops B B, and thoſe Hoops faſten'd to the ſquare Box C C.

*The Uſe of the Azimuth* COMPASS, is for finding the Sun's magnetical Azimuth, or Amplitude; and thence the Variation of the *Compaſs*.

If the Obſervation be for an Amplitude at Sun-riſing, or an Azimuth before Noon, apply the Centre of the Index *b c* on the Weſt Point of the Card, within the Box; ſo that the four Lines on the Edge of the Card, and thoſe on the inſide of the Box may meet. If the Obſervation be for the Sun's Amplitude ſetting, or an Azimuth in the Afternoon, turn the Centre of the Index right againſt the Eaſt Point of the Card, and make the Lines within the Box concur with thoſe on the Card: The Inſtrument thus fitted for Obſervation, turn the Index *b c* towards the Sun, till the Shadow of the Thread *d e* fall directly on the Slit of the Sight, and on the Line that is along the middle of the Index; then will the inner Edge of the Index cut the Degree and Minute of the Sun's magnetical Azimuth from the North or South.

But note, that if, when the *Compaſs* is thus placed, the Azimuth is leſs than 45° from the South, and the Index *b c* turn'd towards the Sun, it will paſs off the Diviſions of the Limb: the Inſtrument, therefore, in this Caſe, muſt be turn'd juſt a quarter of the *Compaſs*; *i. e.* the Centre of the Index muſt be plac'd on the North or South Point of the Card, according as the Sun is from you; and then the Edge will cut the Degree of the magnetic Azimuth, or Sun's Azimuth from the North, as before. See AMPLITUDE.

The Sun's magnetical Amplitude thus found, the Variation of the Needle is thus determin'd.

Being out at Sea the 15th of *May* 1715, in 45° N. Lat. the Tables give me the Sun's Latitude 19° North, and his Eaſt Amplitude 27° 25′ North: By the *Azimuth Compaſs*, I find the Sun's magnetical Amplitude at his riſing and ſetting; and find he riſes, *v. g.* between the 62d and 63d Deg. reckoning from the North towards the Eaſt Point of the *Compaſs*, *i. e.* between the 27th and 28th Deg. reckoning from the Eaſt.

The magnetical Amplitude, therefore, being here equal to the true one, the Needle has no Variation: But if the Sun at his riſing ſhould have appear'd between the 52d and 53d Deg. from the North towards the Eaſt; his magnetical Amplitude would then be between 37 and 38 Deg. *i. e.* about 10 Deg. greater than the true Amplitude: therefore, the Needle would vary about 10 Deg. North-Eaſterly.

If the magnetical Eaſt Amplitude found by the Inſtrument, ſhould be leſs than the true Amplitude, their Difference would ſhew the Variation of the Needle Eaſterly.

If the true Eaſt-Amplitude be Southwardly, as alſo the magnetical Amplitude and this laſt be the greater; the Variation of the Needle will be North-Weſt, and *vice verſa*.

What has been ſaid of North-Eaſt Amplitudes, holds alſo of South-Weſt Amplitudes. And what of South-Eaſt Amplitudes, holds of North-Weſt Amplitudes. See AMPLITUDE.

Laſtly, if Amplitudes be found of different Denominations, *v. g.* if the true Amplitude be 6 Deg. North, and the magnetical Amplitude 5 Deg. South; the Variation, which in this Caſe is North-Weſt, will be equal to the Sum of the magnetical and true Amplitudes: Underſtand the ſame for Weſt Amplitudes.

The Variation may likewiſe be found from the Azimuth: but in that Caſe, the Sun's Declination, Latitude of the Place, and his Altitude muſt be given, that his true Azimuth may be found. See AZIMUTH.

COMPASS *of Proportion*. See SECTOR.

COMPASS-*Dials*, are ſmall Dials, fitted in Boxes, for the Pocket, to ſhew the Hour of the Day by direction of the Needle; which ſhews how to place them right by turning the Dial about, till the Cock or Style ſtand directly over the Needle, and point up to the Northward; but theſe can never be very exact, becauſe of the Variation of the Needle it ſelf. See DIAL.

COMPASSES, or *Pair of* COMPASSES, a Mathematical Inſtrument, uſed for the deſcribing of Circles, meaſuring the Diſtances of Points, Lines, *&c.* See CIRCLE, LINE, *&c.*

The common *Compaſſes* conſiſt of two *Branches* or *Legs*, of Iron, Braſs, or other Metal, pointed at bottom; and a-top join'd by a Rivet, whereon they move, as on a Centre.

The Invention of *Compaſſes* is aſcrib'd to *Calus*, Nephew of *Dædalus* by his Siſter, whom the Poets ſay, *Dædalus* kill'd out of envy.

We have *Compaſſes* now of various Kinds and Contrivances, accommodated to the various Uſes they are intended for: As,

*Hair*-COMPASSES, ſo contrived within-ſide, as to take an Extent to a Hair's-breadth.

*Geman* COMPASSES, whoſe Legs are a little bent outwards towards the top: ſo that when ſhut, only the Points meet.

The Points are uſually made to take off, and on; and other Points for particular occaſions put in their Places; as Drawing-pen Point, Dotting-wheel Point, Porte-crayon Point, *&c.*

*Spring*-COMPASSES, or *Dividers*, made of harden'd Steel, the Head arch'd; which, by its Spring, opens the *Compaſſes*; the opening being directed by a circular Screw, faſten'd to one Leg and let thro' the other, work'd with a Nut.

*Clock-makers* COMPASSES are very ſubſtantial, ſerving to cut Paſtboard, Braſs, *&c.* jointed like the common *Compaſſes* with a Quadrant, or Bow, as the *Spring Compaſſes*; only its uſe different; as ſerving here, to keep the Inſtrument firm at any opening.

*Turn-up* COMPASSES, a late Contrivance to ſave the trouble of changing the Points: The Body is like the common *Compaſſes*; towards the bottom of the Legs, without-ſide, are added two other Points, beſides the uſual ones; the one carrying a drawing Pen-point, the other a Porte Craion; both adjuſted ſo as to turn round, and ſo be in the way of uſe, or out of it, as occaſion requires.

The Points of ſmall *Compaſſes* are temper'd by a Lamp and Blow-pipe, heating 'em red-hot; when cold they are hard: The larger are temper'd by a charcoal Fire and a Blow-pipe, heating them to a Cherry-colour, then plunging them in Water. See TEMPERING.

COMPASSES *of three Branches*. Their Structure is like that of the common *Compaſſes*, ſetting aſide the Exceſs of a Leg: Their uſe is to take three Points at once; and ſo to form Triangles; to lay down three Poſitions of a Map to be copied at once, *&c.*

*Triſſecting* COMPASSES, the Invention of M. *Tarragon*, for the Triſſection of Angles, geometrically. See TRISSECTION.

The Inſtrument conſiſts of two central Rules, and an Arch of a Circle of 120 Deg. immoveable, with its Radius: The Radius is faſten'd with one of the central Rules, like the two Legs of a Sector, that the central Rule may be carried thro' all the Points of the Circumference of the Arch. The Radius and Rule to be as thin as poſſible, and the Rule faſten'd to the Radius hammer'd cold, to acquire an Elaſticity: The breadth of the other central Rule, to be triple the breadth of the Radius. In this Rule to be a Groove, with a Dove-tail, to be faſten'd on it, for its Motion: In the Centre of each Rule muſt likewiſe be a Hole. See the *Journ. de Scavans*, *Sept.* 1688.

*Beam* COMPASSES, conſiſt of a long Branch, or Beam, carrying two braſs *Curſors*; the one fix'd at one end, the other ſliding along the Beam, with a Screw to faſten it, on occaſion. To the Curſors may be ſcrew'd Points of any kind; whether Steel, for Pencils, or the like. It is uſed to draw large Circles, take great Extents, *&c.*

*Elliptick* COMPASSES. Their uſe is to draw Ellipſes, or Ovals of any kind: They conſiſt of a Beam A B, (Plate *Geom.* Fig. 2.) about a Foot long, bearing three Curſors; to one of which may be ſcrew'd Points of any kind: to the bottom of the other two are rivetted two ſliding Dove-tails, adjuſted in Grooves made in the croſs Branches of the Beam. The Dove-tails having a Motion every way, by turning about the long Branch, go backwards and forwards along the Croſs: ſo that when the Beam has gone half way about, one of theſe will have mov'd the whole length of one of the Branches; and when the Beam has got quite round, the ſame Dove-tail has got back the whole length of the Branch. Underſtand the ſame of the other Dove-tail.

Note, the Diſtance between the two ſliding Dove-tails, is the Diſtance between the two *Foci* of the Ellipſis; ſo that by changing that diſtance, the Ellipſis will be rounder or ſlenderer. Under the Ends of the Branches of the Croſs, are placed four Steel Points to keep it faſt.

The uſe of this *Compaſs* is eaſy; by turning round the long Branch, the Ink, Pencil, or other Point, will draw the Ellipſis requir'd. Its Figure ſhews both its Uſe and Conſtruction.

*Cylindrick and Spherick* COMPASSES, uſed in taking the Diameter, Thickneſs, or Calliber of round, or cylindrick Bodies; as, Cannons, Pipes, *&c.* They conſiſt of four Branches join'd in a Centre; two of 'em circular, two flat, a little bent at the Ends.

To uſe 'em, one of the flat Points is put within the Cannon, the other without: the two oppoſite Points ſhew the Thickneſs. See CALLIPER.

There are alſo *Spherical Compaſſes*, differing in nothing from the common ones, but that their Legs are arch'd; ſerving to take the Diameters of round Bodies, *&c.*

*Proportional* COMPASSES, conſiſt of two Branches, (Plate *Geom.* Fig. 3.) each pointed at either end with Steel: the length of the Branches is cut thro', for a Curſor to ſlide up and down; in the middle of which Curſor is a Screw, ſerving to join the Branches, and to fix 'em at any Point requir'd.

On the one Leg are Diviſions, ſerving to divide Lines into any number of equal Parts, for reducing of Figures, *&c.* On the other are Numbers, for the inſcribing any regular Polygon in a Circle propos'd.

*The Uſe of the firſt* is eaſy: Suppoſe, *v. g.* a right Line to be divided into three equal Parts; puſh the Curſor till the Screw be juſt on the Figure 3; where fixing it, take the length of the given Line between the longeſt Parts of the Legs: the diſtance between the two ſhorteſt, will be

one

one third of the given Line. In the ſame manner may the Line be divided into another number of Parts.

*For the Uſe of the Line of Polygons:* Suppoſe, *v. g.* a Pentagon requir'd to be inſcrib'd in a Circle; puſh the Curſor till the middle of the Screw be againſt 5, the number of Sides in a Pentagon; between the ſhorteſt Parts of the Legs take the Semidiameter of the Circle: the Legs thus open'd, the diſtance between the Points of the longeſt Parts, will be the ſide of the Pentagon to be inſcrib'd in the Circle. And thus for a Figure of any other number of Sides.

*Proportional* COMPASSES *with the Sector Lines.* The Structure of theſe is ſo like that of the common *Proportional Compaſſes*, only a little nicer, that it needs no particular Deſcription. See Plate *Geometry*, Fig. 4.

The Lines on the firſt Face, are the Line of Lines, mark'd *Lines:* it is divided into 100 unequal Parts, every tenth number'd: And the Line of Chords, which goes to 60°; and is mark'd *Chords.* On the other Face are a Line of Sines to 90°, and a Line of Tangents to 45°. On the firſt ſide are the Tangents from 45° to 71°.34′; on the other Secants from 0° to 70°.30′.

*For the Uſe of theſe Compaſſes.* 1. To divide a Line into any number of equal Parts, leſs than 100: Divide 100 by the number of Parts requir'd; ſlip the Curſor till the Line on the ſliding Dove-tail be againſt the Quotient on the Line of Lines: Then, the whole Line being taken between the Points of the *Compaſſes* moſt remote from the Centre; the Aperture of the other will be the Diviſion requir'd. 2. A right Line given, ſuppoſed to be divided into 100 Parts, to take any number of thoſe Parts: Slip the Line on the ſliding Dove-tail to the number of Parts requir'd: the whole Line being taken between the Points furtheſt from the Centre, the Aperture of the other two will include the number of Diviſions requir'd. 3. The Radius being given, to find the Chord of any Arch under 60°: Slip the Line on the ſliding Dove-tail to the Degrees requir'd on the Line of Chords: the Radius being taken between the Points furtheſt from the Centre of the Curſor; the Aperture of the other Line will be the Chord requir'd; provided the number of Degrees be greater than 29: if it be leſs, the Aperture taken from the Radius will leave the Chord requir'd. 4. If the Chord of an Arch under 60° be given, and the Radius requir'd; ſlip the Line on the Dove-tail to the Degrees given on the Line of Chords: the given Chord being taken between the two Points next the Curſor, the Aperture of the other will be the Radius requir'd. 5. The Radius being given, to find the Sine of any number of Degrees. Slip the Line on the Dove-tail to the Degree on the Line of Sines whoſe Sine is requir'd: The Radius taken between the Points furtheſt from the Curſor; the Aperture of the other will give the Sine of the Angle requir'd. But if the Sine ſought be leſs than 30°, the Difference of the Apertures of the oppoſite Points, will be the Sine requir'd. 6. The Radius being given, to find the Tangent of any number of Degrees under 71: If the Tangent requir'd be under 26°.30′, ſlip the Line on the Dove-tail to the Degree propoſed on the Tangent-Line: the Radius taken between the Points furtheſt from the Curſor; the Aperture of the others, will be the Tangent of the Degrees requir'd: If the Tangent requir'd be above 26°.30′, but under 45°; the Line on the Curſor muſt be ſlip'd to the Degrees given on the Tangent-Line: then the Radius being taken between the Points furtheſt from the Curſor; the Aperture of the others will be the Tangent. If the Tangent requir'd be greater than 45°, but leſs than 56°.20′; ſlip the Notch on the Tangent-ſide of the turn'd Cheek to the Degree 0 in the Tangent-line on the Side of the *Compaſs:* the Radius taken between the Points furtheſt from the Curſor; the difference between the Aperture of the other, and theſe, added together, will be the Tangent requir'd. Thus, for the Tangents of other Degrees under 71. After the like manner may the Secant of any number of Degrees under 71 be found.

*Lapidary's* COMPASSES, a piece of Wood in form of the Shaft of a Plane, cleft a-top, as far as half its length; wherewith they meaſure the Angles, *&c.* of the precious Stones as they cut 'em.

In the Cleft is a little braſs Rule, faſten'd there, at one end, by a Pin; but ſo as it may be mov'd in the manner of a Bevel: with this kind of Square they take the Angles of the Stones, laying 'em on the Shaft as they cut them.

COMPATIBLE, ſomething that may ſuit, or conſiſt with another. See INCOMPATIBLE.

COMPENDIUM, an Abſtract, Epitome, or Reduction of a large Matter into a little compaſs. See EPITOME.

COMPENSATION, an Action whereby any thing is admitted as a Parallel, or an Equivalent to another.

*Compenſation,* in the Civil Law, is a kind of Right, whereby a Debtor purſu'd by his Creditor, for the Payment of a Debt, demands that the Debt may be *compenſated* with what is owing him by the Creditor.

*Compenſation* is equivalent to Payment.

COMPETENCE, in Law, the Authority, or Right, of a Judge for taking Cognizance of any certain Matter. See JURISDICTION.

COMPITALITIA, Feaſts held among the Antients in honour of the *Lares.* See FEAST, and LARES.

The Word comes from the Latin *Compitum*, a Croſs-way; by reaſon the Feaſt was held in the Meetings of ſeveral Roads.

This Feaſt is more antient than the building of *Rome. Dionyſius Halicarnaſſæus* and *Pliny*, indeed, ſay, they were inſtituted by *Servius Tullius*; but this only ſignifies that they were then introduc'd into *Rome.*

Notwithſtanding what *Dion* relates, that the *Compitalitia* were celebrated a little after the *Saturnalia*; and that the *Roman* Calendar fixes 'em on the 12th of *January*; it appears that they had not any fix'd Day; at leaſt, not in the time of *Varro*, as is obſerv'd by *Caſaubon.*

The Feaſt being thus moveable, the Day whereon it was to be held, was proclaim'd every Year. It was ordinarily held on the 4th of the Nones of *February*, *i. e.* on the 2d of that Month.

*Macrobius* obſerves, that they were held not only in honour of the *Lares*, but alſo of *Mania*, Madneſs. The Prieſts who officiated at 'em were Slaves and *Liberti*; and the Sacrifice a Sow.

They were re-eſtabliſh'd, after a long neglect, by *Tarquin* the Proud; and on occaſion of an anſwer of the Oracle, *That they ſhould ſacrifice Heads for Heads, i. e.* for the Health and Proſperity of each Family, Children were ordain'd to be ſacrificed: But *Brutus*, after expelling the Kings, in lieu of thoſe barbarous Victims, ſubſtituted the Heads of Garlick and Poppy; thus ſatisfying the Oracle which had enjoin'd Heads, *Capita.*

During the Celebration of this Feaſt, each Family placed at the Door of their Houſe, the Statue of the Goddeſs *Mania:* They alſo hung up at their Doors Figures of Wool, repreſenting Men and Women; accompanying them with Supplications that the *Lares* and *Mania* would be contented with thoſe Figures, and ſpare the People of the Houſe.

As for Slaves, in lieu of the Figures of Men, they offer'd Balls, or Fleeces of Wool. *Servius Tullius* order'd, that the Slaves who aſſiſted at the *Compitalitia*, ſhould be free during the whole Time of the Feaſt. *Auguſtus* order'd the Statues of the *Lares*, placed in the Croſs-way, to be adorn'd with Flowers twice a Year.

COMPLAINANT, in Law, a Plaintiff, or one who prefers a *Complaint* againſt another, to be reliev'd by Juſtice, or Equity. See PLAINTIFF.

COMPLEMENT, in Geometry, is what remains of a Quadrant of a Circle, or of 90 Deg. after a certain Arch has been retrench'd from it. See ARCH.

Thus, if an Arch or an Angle be 30 Deg. we ſay its *Complement* is 60 Deg. ſince $60+30=90$.

The Arch and its *Complement* are Relatives; and are only uſed with regard to each other.

The Sine of the *Complement* of an Arch, is call'd the *Coſine*; of a Tangent, the *Co-tangent*, &c. See CO-SINE, CO-TANGENT, *&c.*

We ſometimes alſo ſay, the *Complement of an Angle*; meaning ſo much as it wants of a right Angle, or 90 Deg. See ANGLE.

COMPLEMENT *of the Courſe*, in Navigation, is the Number of Points the Courſe wants of 90 Deg. or 8 Points, *viz.* of a Quarter of the Compaſs. See COURSE.

COMPLEMENT, in Aſtronomy, is uſed for the diſtance of a Star from the Zenith; or the Arch comprehended between the Place of a Star above the Horizon, and the Zenith. See ZENITH, STAR, *&c.*

COMPLEMENT *of the Curtain*, in Fortification. The inner Polygon conſiſts of the Curtain and two Demigorges: The *Complement of the Curtain*, therefore, to the inner Polygon, is the Demigorges. See CURTAIN, and DEMIGORGE.

COMPLEMENT *of the Line of Defence*, is the Remainder of the Line of Defence, after you have taken away the Angle of the Flank. See DEFENCE.

COMPLEMENTS *of a Parallelogram*, are the two leſſer Parallelograms, made by drawing two right Lines parallel to each ſide of the Figure, thro' a given Point in the Diagonal.

Such are the Parallelograms C and M, (Plate *Geometry*, Fig. 5.)

'Tis demonſtrated, that in every Parallelogram, the *Complements* C and M are equal: For $Z+C+O=R+M+X$; as making up on each ſide the great Triangle, made $=$ by the Diagonal; of which, $Z=R$, and $O=X$, (becauſe the Diagonal makes them ſo;) wherefore, the remaining Parallelogram $C=M$.

COMPLEX, a Term ordinarily uſed as ſynonymous with *Compound*; tho, ſtrictly ſpeaking, there be ſome difference between 'em.

*Complex* may be applied where a thing contains divers others, or conſiſts of divers Parts, not really diſtinct from one another; but only imaginarily, or in our Conception.—

In

In this Senſe, the Soul may be ſaid to be *Complex*, in reſpect of the Underſtanding and Will, which are two things our Reaſon alone diſtinguiſhes in it. See COMPOUND.

A *Complex Term*, or *Idea*, is a Term or Idea compounded of ſeveral *ſimple*, or *incomplex* ones. See TERM, and IDEA.

Thus, in the Propoſition, *A juſt God cannot leave the Crime unpuniſh'd*; the Subject of this Propoſition, *viz. a juſt God*, is a *Complex Term*, or ſtands for a *Complex Idea*, compos'd of two ſimple, or *incomplex* ones, *viz. God* and *Juſt*.

A *Complex Propoſition*, is either that which has at leaſt one of its Terms *complex*, as that juſt mention'd; or ſuch a one as contains ſeveral Members, as cauſal Propoſitions.

Thus, *e.g. If God be almighty, the Wicked can never eſcape him.* See PROPOSITION.

Mr. *Locke* obſerves, that tho the Mind be perfectly paſſive in the Formation of ſimple Ideas; yet it exerts ſeveral Actions of its own about them, when once form'd: and that by this means it is, they become the Materials and Foundation out of which all our Knowledge is framed. See KNOWLEDGE.

Theſe Acts are chiefly three, *viz.* the combining of ſeveral ſimple Ideas into one compound one: And thus it is that all *Complex Ideas* are made.

2dly, It brings two Ideas, whether *ſimple* or *complex*, together; ſets 'em by each other, and ſo views 'em, without uniting 'em into one: And thus it gets its Ideas of Relation. See RELATION.

Laſtly, It ſeparates ſeveral Ideas from all other Ideas that accompany them in their real Exiſtence: And thus all its general Ideas are form'd. See GENERAL, and ABSTRACT.

As ſimple Ideas are obſerv'd to exiſt in ſeveral Combinations united together; ſo the Mind may conſider them as united, not only as they are really united in external Objects, but as it ſelf has join'd them: Ideas thus made up of ſeveral ones put together, we call *Complex*; as Man, Beauty, Army, Gratitude, *&c.* *Complex Ideas*, however compounded and decompounded, tho their Number be infinite, and their Variety endleſs, may be all reduc'd under theſe three Heads, *viz. Modes*, *Subſtances*, and *Relations*; *which ſee under their proper Heads*, MODE, SUBSTANCE, and RELATION.

COMPLEXIO, COMPLEXION, in Metaphyſicks, the Union or Coalition of ſeveral Things different from each other; either really, or only in our Conception. See COMPLEX.

COMPLEXIO, in Logicks, is ſometimes applied to the ſecond Operation of the Mind, *viz.* the Judgment; conſider'd as it affirms or denies any thing: ſuch Affirmation, *&c.* importing a Combination of ſeveral things.

COMPLEXIO, is ſometimes alſo uſed by Logicians in the Senſe of *Dilemma*. See DILEMMA.

COMPLEXIO, in Rhetorick, *&c.* is a Figure including a Repetition, and a Converſion at the ſame time; the Sentence both beginning and ending with the ſame Word.

Thus *Tully*, *Quis legem tulit? Rullus. Quis majorem partem populi ſuffragiis privavit? Rullus. Quis comitiis præficit? Rullus*, See CONVERSION, and REPETITION.

COMPLEXION, in Phyſicks, is uſed for the Temperature, Habitude, or natural Diſpoſition of the Body. See CONSTITUTION.

Some Philoſophers diſtinguiſh four general and principal *Complexions* in Man, *viz.* the *ſanguine Complexion*, which, according to them, anſwers to the Air; having the Qualities thereof, as being hot and moiſt. It takes its Name from *Sanguis*; becauſe the Blood is there ſuppos'd to be predominant. See SANGUINE.

The *phlegmatic Complexion* takes its Name from the *Pituita*, or *Phlegm*, in which it abounds, and correſponds to Water; being cold, and moiſt. See PHLEGMATIC.

The *bilious*, or *choleric Complexion*, takes its Name from the Bile, or Choler: it is ſuppos'd of the Nature of Fire, hot and dry. See CHOLERIC.

Laſtly, the *melancholy Complexion* partakes of the Nature of Earth, being cold and dry. See MELANCHOLY.

COMPLEXUS, or *Par* COMPLEXUM, in Anatomy, is a Pair of Muſcles, ariſing with ſix thin ſmall Tendons from the tranſverſe Proceſſes of the *Vertebræ* of the Neck and Thorax; growing fleſhy in its Aſcent; again becoming tendinous about the middle; and again fleſhy, where it is inſerted laterally into the upper Part of the *Os Occipitis*, and the hind Part of the *Proceſſus Maſtoides*.

When they act together, they pull the Head directly backwards, but either of 'em acting alone, draws it obliquely back.

COMPLICATION *of Diſeaſes*, a Mixture, or Junction of ſeveral Diſeaſes; eſpecially where they have any affinity to one another; as the Dropſy, Aſthma and Jaundice happening together. See DISEASE.

What perplexes the Phyſicians, is, when with a Fever there is a *Complication* of ſome other Diſorder. See FEVER.

COMPONE, or COMPONED, or *Gobony*, in Heraldry. A *Bordure Compone*, is that form'd or compos'd of a row of angular Parts, or Chequers of two Colours; as in the Figure adjoining.

COMPONED, or COMPOSED, is alſo uſed in the general for a Border, a Pale or a Feſs, compos'd of two different Colours, or Metals, diſpos'd alternately, ſeparated and divided by Fillets, excepting at the Corners; where the Junctures, are made in the form of a Goats-foot.

COMPOSITE *Order*, in Architecture, the laſt of the five Orders of Columns; ſo called, becauſe its Capital is *compos'd* out of thoſe of the other Columns. See ORDER.

It borrows a Quarter-round from the *Tuſcan*, and *Doric*; a double Row of Leaves, from the *Corinthian*; and Volutes from the *Ionic*: Its Cornice has ſimple Modillions or Dentils. See CAPITAL.

The *Compoſite* is alſo called the *Roman* and *Italic* Order; as having been invented by the *Romans*; conformably to the reſt, which are denominated from the People among whom they had their riſe. See its Figure in Tab. *Architecture*.

Moſt Authors rank this after the *Corinthian*; either as being the richeſt, or as the laſt that was invented: *Scamozzi* alone places it between the *Ionic* and *Corinthian*; out of a view to its delicacy and richneſs, which he eſteems inferior to that of the *Corinthian*; and therefore makes no ſcruple to uſe it under the *Corinthian*: wherein he is follow'd by M. *le Clerc*. See CORINTHIAN.

The Proportions of this Order are not fix'd by *Vitruvius*; he only marks its general Character, by obſerving that its Capital is compos'd of ſeveral Parts taken from the *Doric*, *Ionic*, and *Corinthian*: He does not ſeem to regard it as a particular Order; nor does he vary it at all from the *Corinthian*, except in its Capital. In effect, it was *Serlio* who firſt added the *Compoſite* Order to the four of *Vitruvius*, forming it from the Remains of the Temple of *Bacchus*, the Arches of *Titus*, *Septimius*, and the Goldſmiths: Till then, this Order was eſteem'd a Species of the *Corinthian*, only differing in its Capital.

The Order being thus left undetermin'd by the Antients, the Moderns have a kind of a Right to differ about its Proportions, *&c.* *Scamozzi*, and after him M. *le Clerc*, make its Column 19 Modules and an half; which is leſs by half a Module than that of the *Corinthian*: as, in effect, the Order is leſs delicate than the *Corinthian*. *Vignola* makes it 20; which is the ſame with that of his *Corinthian*: but *Serlio*, who firſt form'd it into an Order, by giving it a proper Entablature and Baſe, and after him M. *Perrault*, raiſe it ſtill higher than the *Corinthian*.

This laſt does not think different Ornaments and Characters ſufficient to conſtitute a different Order, unleſs it have a different Height too: Agreeably, therefore, to his Rule of augmenting the Heights of the ſeveral Columns by a Series of two Modules in each; he makes the *Compoſite* 20 Modules, and the *Corinthian* 18; which, it ſeems, is a Medium between the Porch of *Titus* and the Temple of *Bacchus*. See PROPORTION.

*For the Parts of the Order*, ſee COLUMN, ENTABLATURE, CAPITAL, BASE, *&c.*

M. *Perrault*, in his *Vitruvius*, diſtinguiſhes between the *Compoſite* and *Compoſed* Order.

The latter, he ſays, is any Compoſition whoſe Parts and Ornaments are extraordinary and unuſual; but have, withal, ſomewhat of Beauty; both on account of their Novelty, and in reſpect of the Manner or Genius of tho Architect: So that a *Compoſed* Order is an arbitrary, humourous Compoſition, whether regular, or irregular.

The ſame Author adds, that the *Corinthian* Order is the firſt *Compoſite* Order, as being compos'd of the *Doric* and *Ionic*; which is the Obſervation of *Vitruvius* himſelf, *Lib.* 4. cap. 1.

COMPOSITION, in a Phyſical Senſe, is the uniting or joining of ſeveral different Things, ſo as to form one whole, call'd a *Compound*. See COMPOUND.

The Schoolmen diſtinguiſh two Kinds of *Compoſition*; the one *Entitative*, which is between Things of the ſame Nature, *e.g.* two or more Drops of Water: the other *Eſſential*, when Things of different Kinds are join'd, and thus conſtitute new Things, or Eſſences, different from any of the Parts; and thus, ſay they, from the Matter and the Form of Wood, ariſes Wood; whoſe Eſſence is very different from either of thoſe Ingredients taken ſeparately.

COMPOSITION *of Ideas*, is an Operation of the Mind, whereby it combines ſeveral of its Simple Ideas into Complex ones. See COMPLEX *Idea*.

Under the ſame Operation may likewiſe be reckon'd that of enlarging; whereby we put ſeveral Ideas together of the ſame Kind, as ſeveral Unites to make a Dozen.

In this, as in others, Brutes come far ſhort of Men; for tho they take in and retain ſeveral Combinations of Simple

Ideas; as, poſſibly, a Dog does the Shape, Smell, and Voice of his Maſter: yet theſe are rather ſo many diſtinct Marks whereby he knows him, than one Complex Idea, made out of thoſe Simple ones.

COMPOSITION, in Grammar, the joining of two Words together; or prefixing a Particle to another Word, to augment, diminiſh, or change its Signification.

COMPOSITION, in Oratory, the proper Order of the Parts of a Diſcourſe, adhering to each other.

To *Compoſition* belongs both the artful joining of the Letters whereof the Style is form'd, and whereby it is render'd ſoft and ſmooth, gentle and flowing, or full and ſonorous; or the contrary. See STYLE.

And the *Order*, which requires the Grave to be placed after the Humble, and Things firſt in Nature and Dignity, before thoſe of inferior Conſideration. See PERIOD.

COMPOSITION, in Painting, includes the Invention and Diſpoſition of the Figures, the Choice of Attitudes, &c. *Compoſition*, therefore, conſiſts of two Parts; one of which finds out, by means of Hiſtory, proper Objects for a Picture; and the other diſpoſes 'em to advantage. See PAINTING.

COMPOSITION, in Muſick, the Art of diſpoſing muſical Sounds into Airs, Songs, &c. either in one, or more Parts; to be ſung with the Voice, or play'd on Inſtruments. See MUSICK, and SONG.

*Zarlin* defines it the Art of joining and combining Concords together, which are the Matter of Muſick: But this Definition is too ſcanty; in regard, Diſcords are always uſed with Concords in the *Compoſition* of Parts. See CONCORD, and DISCORD.

Under *Compoſition* are comprehended the Rules, firſt, of *Melody*, or the Art of making a ſingle Part; *i. e.* of contriving and diſpoſing the ſimple Sounds, ſo as that their Succeſſion and Progreſs may be agreeable. See MELODY.

2dly, Of *Harmony*, or the Art of diſpoſing and concerting ſeveral ſingle Parts ſo together, that they may make one agreeable Whole. See HARMONY.

It may be here obſerv'd, that Melody being chiefly the Buſineſs of the Imagination, the Rules of its *Compoſition* ſerve only to preſcribe certain Limits to it; beyond which, the Imagination, in ſearching out the Variety and Beauty of Airs, ought not to go: But Harmony, being the Work of Judgment, its Rules are more certain, extenſive, and more difficult in practice.

In the Variety and Elegancy of the Melody, the Invention labours a great deal more than the Judgment; ſo that Method has but little place: but in Harmony 'tis otherwiſe; the Invention, here, has nothing to do; and the *Compoſition* is conducted from a nice Obſervation of the Rules of Harmony, without any Aſſiſtance from the Imagination at all.

COMPOSITION, in Logic, is a Method of reaſoning, wherein we proceed from ſome general ſelf-evident Truth, to particular and ſingular ones. See METHOD.

The Method of *Compoſition*, call'd alſo *Syntheſis*, is juſt the reverſe of that of *Reſolution*, or *Analyſis*. See RESOLUTION.

Reſolution is the Method whereby we ordinarily ſearch after Truth; *Compoſition*, that whereby a Truth found, is diſcover'd and demonſtrated to others: Reſolution is the Method of Inveſtigation; *Compoſition* of Demonſtration.

The Method of *Compoſition* is that uſed by *Euclid*, and other Geometricians; Reſolution that uſed by Algebraiſts and Philoſophers. The two Methods differ, juſt as the Methods of ſearching a Genealogy; which are either by deſcend- from the Anceſtors to the Poſterity, or by aſcending from the Poſterity to their Anceſtors; each have this in common, that their Progreſſion is from a thing known, to another unknown.

The Method of *Compoſition* is beſt obſerv'd by the Mathematicians: The Rules hereof are, 1ſt, to offer nothing but what is couch'd in clear expreſs Terms; and to that End, to begin with Definition. 2dly, To build only on evident and clear Principles; to that End, to proceed from Axioms or Maxims. 3dly, To prove demonſtratively all the Concluſions they draw hence; and to this purpoſe, to make uſe of no Arguments or Proofs, but Definitions already laid down, Axioms already granted, and Propoſitions already proved; which ſerve as Principles to Things that follow.

COMPOSITION *of Motion*, is an Aſſemblage of ſeveral Directions of Motion, reſulting from Powers acting in different, tho not oppoſite Lines. See MOTION.

If a Point move or flow according to one and the ſame Direction; whether that Motion be equable or not, yet it will ſtill keep the ſame right Line; the Celerity alone being chang'd, *i. e.* increas'd, or diminiſh'd according to the Forces with which it is impell'd.

If the Directions be oppoſite, as one, *e. g.* directly downward, the other upward, &c. yet ſtill the Line of Motion will be the ſame.

But if the *compounding* Motions be not according to the ſame Line of Direction, the compound Motion will not be according to the Line of Direction of either of 'em, but a different one from them both; and this either ſtrait or crooked, according as the Directions or Celerities ſhall require.

If two *compounding* Motions be each of them equable, the Line of the compound Motion will ſtill be a ſtrait Line; and this, tho the Motions be neither at right Angles one to another, nor equally ſwift, nor (each to its ſelf) equable; provided that they be but ſimilar; that is, both accelerated and retarded alike.

Thus, if the Point *a*, (Tab. *Mechanics*, Fig. 4.) be impell'd equally with two Forces; *viz.* upwards towards *b*, and forwards towards *d*; 'Tis plain, that when it is gone forwards as far as *a e*, it muſt of neceſſity be gone upwards as far as *e e*; ſo that were the Motions both equable, it would always go on in the Diagonal *a e c*.

Nay, ſuppoſe the Motions unequal as to Celerity, ſo *v. g.* as that it move twice as faſt upwards as forwards, &c. yet ſtill it muſt go on in the Diagonal *a c*; becauſe the Triangles *a e e*, *a e c*, &c. and *a c d* will ſtill be ſimilar, being as the Motions are.

But, if the Motions be diſſimilar, then the compound Motion muſt be a Curve. See CIRCULAR *Motion*.

Thus, if a Body, as *b*, (Fig. 5.) be impell'd or drawn by three different Forces, in the three different Directions *b a*, *b c*, and *b d*, ſo that it yields to none of them, but continues *in Æquilibrio*: then will thoſe three Powers or Forces be to one another, as three right Lines drawn parallel to thoſe Lines, expreſſing the three different Directions, and terminated by their mutual Concourſes.

Let *b e* repreſent the Force by which the Body *b* is impell'd from *b* to *a*, then will the ſame right Line *b e*, repreſent alſo the contrary equal Force, by which it is impell'd from *b* to *e*; but by what hath been ſaid before, the Force *b e* is reſolvable into the two Forces acting according to the two Directions *b d* and *b c*, to which the other impelling from *b* to *e*, is as *b e* to *b d*, and *b c* or *d e*, reſpectively.

So likewiſe two Forces, acting without the Directions *b d*, *b c*, and being equipollent to the Force acting without the Direction *b e*, from *b* to *e*; will be to the Force acting according to the Direction *b e*, from *b* to *e*, as *b d*, *b c*, to *b d*: and therefore, the Forces acting in the Directions *b d*, *b c*, and equipollent to the Force acting in the Directions *b e*, are to the Force acting in the Direction, as *b d*, *b c*, or *d c* to *b e*: That is, if a Body be urg'd by three different equipollent Powers in the Directions *b a*, *b d*, and *b c*; theſe three Forces ſhall be to one another as *b e*, *b d*, and *d e*, reſpectively. *Q. E. D.*

This Theorem, with its Corollaries, Dr. *Keil* obſerves, is the Foundation of all the new Mechanicks of M. *Varignon*: By help hereof, may the Force of the Muſcles be computed, and moſt of the mechanick Theorems in *Borelli*, *de Motu Animalium*, be immediately deduced.

COMPOSITION *of Proportion*, ſignifies the comparing of the Sums of the Antecedent and Conſequent, with the Conſequent in two equal Ratios. See RATIO; ſee alſo COMPOUND *Ratio*.

Suppoſe 4 : 8 : : 3 : 6; by *Compoſition of Proportion* we ſay, 12 is to 8 : as 9 to 6.

There is, however, a great difference between *Compoſition of Proportion* by *Addition*, and by *Multiplication*: the Inſtance above is of *Compoſition* by *Addition*. If it had been 4 × 8, it would have been *Compoſition* by *Multiplication*.

In a word, *Compoſition of Proportion* by Addition, is by Addition of the Indices of the Ratios; but by Multiplication, it is when the Ratios are multiplied into one another.

COMPOSITION, in Pharmacy, the Art, or Act of mixing many Ingredients together into a Medicine; ſo as they may aſſiſt each other's Virtues, ſupply each others Defects, or correct any ill Qualities thereof. See PHARMACY.

COMPOSITION, in Printing, ordinarily call'd *Compoſing*, is the arranging of ſeveral Types, or Letters in the Compoſing-Stick, in order to form a Line; and of ſeveral Lines rang'd in order in the Galley, to make a Page; and of ſeveral of thoſe to make a Form. See PRINTING, PAGE, FORM, &c.

*The Compoſing-Stick* is made of Iron generally, ſometimes Braſs, or Wood; of more or leſs length and depth, according to the Page to be compos'd, or the Compoſer's Fancy: It hath two ſliding Pieces, to be faſten'd by means of a Nut and Screw, which are ſlipp'd forwards or backwards, at the Pleaſure of the Compoſitor, and according to the Space which the Lines, Notes, &c. are to take up.

The *Compoſing-Stick* ordinarily contains ſeven or eight Lines of a middle-ſiz'd Letter; which, when ſet, are taken out, by help of a thin ſlip of Braſs, term'd a Rule, and diſpos'd in the Galley; and others compos'd, till a Page be form'd. The Page being compos'd, is ty'd up, and ſet by; and the reſt of the Pages of the Sheet prepar'd in the ſame manner: When done, they are carry'd to the Impoſing or Correcting-Stone; there rang'd in order, and diſpos'd in a Chaſe, or Iron Frame, fitted with wooden Furniture; then, the Quoins being ſtruck in, 'tis carried to the Preſs to be printed. See PRESS, CASE, CHASE, &c.

COMPOSITION, in Commerce, a Contract between an insolvent Debtor and his Creditors; whereby the latter agree to accept of a Part of the Debt, in compensation for the Whole, and give a general Acquittance accordingly.

COMPOSSIBLES, *Compossibilia*, in Logick, such Things as are compatible, or capable of subsisting together.

COMPOST, in Agriculture and Gardening, a Compound, or Mixture of Earths, Dungs, &c. applied, by way of Manure, for the meliorating and improving of Soils, and assisting the natural Earth in the Work of Vegetation. See MANURE.

The Gardeners have Magazines, or Laystalls of *Composts*, adapted to the different sorts of Soil. Light loose Land requires a *Compost* of a heavy Nature; such as the scouring of Ditches, Ponds, &c. mix'd with Earth, Dung, &c. A heavy, clayey, or cloddy Land requires a *Compost* of a more sprightly and active Kind, to insinuate into the heavy, lumpy Clods; as Dungs, Sand, Ashes, and natural Mould.

Mr. *Bradley* prescribes seven different sorts of *Composts*, to forward the growth of Trees; *viz.* a quantity of stiff Soil, broke, and mix'd with sharp Sand, and Ashes of burnt Furzes, Weeds, &c. or stiff Soil with Sand and burnt Grass-turf, and rotten Wood; or stiff Soil with Sand and Rape-seed, after the Oil is press'd out, with burnt Turf; or stiff Soil with Sand and Malt-grains; or Sheeps Dung, with Wood Ashes and Loam, or Mother Earth. See SOIL.

The same Author recommends a Mixture or Preparation of Soils answering to Loam, or Mother Earth, as preferable for planting or sowing Forest-Trees in, to any of these richer *Composts*; which, tho they hasten the Growth of the Tree, will not make the Timber near so firm and durable. See TIMBER.

COMPOUND, the Result or Effect of a Composition of different Things; or that which arises therefrom. See COMPOSITION.

Strictly speaking, every new *Composition* does not produce a new natural *Compound*; but only that from which a new Essence arises. Thus, when one drop of Water is added to another, there does not arise a new physical *Compound*; the Essence being the same now, as before the Union.

COMPOUND *Flowers*, call'd also *Composite*, and *Aggregate*; are such as consist of many little Flowers, concurring to make up one whole one; each of which hath its Style, Stamina, and adhering Seed, but are all contained within one and the same Calyx, or Perianthium. See FLOWER.

This *compounded* Flower distinguishes a large Genus of Plants, which Mr. *Ray* divides thus:

Herbs of *compounded* or *aggregated* Flowers, are,

1st, Such as have a plain-leav'd Flower naturally, and for the most part full; and having their whole Body milky, (yielding a milky Juice on cutting them;) and these have their Seeds,

First, *Pappous*, or *Winged*; that is, having a little Lanugo adhering to each Seed, by which the Wind can easily carry it from place to place: Such as the *Lactuca*, *Tragopogon*, *Scorzonera*, *Dens Leonis*, *Hieracium*, and the *Piloſella*.

Secondly, Such as have a solid Seed, without any *Pappus* or Down upon them; as the *Eringium Luteum*, *Cichorium*, *Lampsana*.

2d, Such as have a *discous* Flower; *i. e.* one composed of many short, thick, compressed, small *Flosculi* (which some, by mistake, call *Stamina*) set together, so as to make one flat, or hollowish Superficies: And these are also either such as have their Seeds,

First, *Pappous*, as the *Tussilago*, *Petasites*, *Carlina*, *Helenium*, *Doronicum*, *Conyza*, *Aster*, *Virga Aurea*, *Jacobæa*, *Stœchas Citrini*, *Jacea*, *Senecio*, *Eupatorium Avicennæ*, *Cacalia Valgaris*, *Gnaphalium Maritimum*, and *Monspelienſium*.

Secondly, Such whose Seeds are solid, and not pappous; as the Corymbiferous Herbs.

COMPOUND *Motion*, that effected by several conspiring Powers. See POWER.

Now, Powers are said to conspire, if the Direction of the one ben't directly opposite to that of the other; as when the Radius of a Circle is conceiv'd to revolve about a Centre; and at the same time a Point to move strait along it.

All curvilinear Motion is *compound*.

'Tis a popular Theorem, in Mechanicks, that in an uniform *compound* Motion, the Velocity produc'd by the conspiring Powers, is to that of either of the Powers separately, as the Diagonal of a Parallelogram, according to the Direction of whose Sides, they act separately; to either of the Sides. See MOTION, and DIAGONAL.

COMPOUND *Pendulum*, in Mechanicks, that which consists of several Weights constantly keeping the same Distance, both from each other, and from the Centre about which they oscillate. See PENDULUM.

COMPOUND *Ratio*, or *Proportion*. A Proportion is said to be *compounded* of two or more others, which the *Factum* of two or more Antecedents of Ratios has to the *Factum* of their Consequents: Thus, 6 to 72 is in a Ratio *compounded* of 2 to 6, and 3 to 12. See PROPORTION.

COMPOUND *Quantities*, in Algebra, are such as are connected together by the Signs + and −; and are express'd by the same Letters equally or unequally repeated: Thus, $a+b-c$, and $bb-b$ are *compound Quantities*. See QUANTITY.

COMPOUND *Numbers*, are those which may be measur'd, or exactly divided, by some other Number beside Unity. See NUMBER.

Such is 15; which is measured by 3 and also by 5.

COMPOUND *Interest*, call'd also *Interest upon Interest*, is that which is reckon'd not only upon the Principal, but upon the Interest it self forborn; which hereby becomes a sort of secondary Principal. See INTEREST.

COMPOUND *Machine*. See MACHINE.

COMPOUND *Rule of Three*. See RULE *of Three*.

COMPREHENSION, in Metaphysicks, the Act of the Mind, whereby it apprehends or knows any Object presented to it, on all the Sides whereon it is capable of being apprehended, or known. See APPREHENSION, and KNOWLEDGE.

*To comprehend a thing*, is defined by the Schoolmen, *rem aliquam totam & totaliter cognoscere*: And, in this Sense, 'tis a popular Point of Controversy among the School-Divines, *whether the Blessed in Heaven* comprehend *God*? The more Orthodox maintain the Negative, by reason such Knowledge must be infinite.

COMPREHENSION, in Rhetorick, a Trope, or Figure whereby the Name of a Whole is put for a Part; or that of a Part for a Whole: or a definite number of any Thing for an indefinite. See METONYMIA.

COMPRESS, in Chirurgery, a *Bolster* of linen Cloth, folded in several Doubles, and laid under the Bandages, to prevent a Wound from bleeding or swelling; or to retain the Medicines applied thereto. See WOUND.

*Scultetus*, in his *Arsenal of Chirurgery*, observes, that the Antients compos'd their *Compresses* of carded Flax, or of Feathers, sew'd between two Linens; and called them *Pillows*, or *Plumages*.

The Word comes from *Comprimere*, to press hard.

COMPRESSION, the Act of pressing or squeezing something, so as to set its Parts nearer each other, and make it possess less space. See PRESSION.

*Compression* differs from *Condensation*, in that the latter is perform'd by the Action of Cold, the former by some external Violence. See CONDENSATION.

Thus, we say, that Pumps, which the Antients imagin'd to act by Suction, do, in reality, act by *Compression*; the *Embolus*, or Sucker, in going and returning in the narrow Pipe, *compresses* the Air inclos'd therein, so as to enable it by the Force of its Elasticity to raise the Valve, and make its escape: upon which, the Balance being destroy'd, the Pressure of the Atmosphere on the stagnant Surface, drives up the Water into the Pipe thus evacuated of its Air. See PUMP.

Water is incapable of *Compression*; after the Air has been purg'd out of it, no Art or Violence is able to bring its Parts closer, or make it take up less compass. In an Experiment made by the Academy *de el Cimento*, Water, when violently squeez'd, made its way thro' the infinitely fine Pores of a Ball of Gold, rather than undergo *Compression*. See WATER.

*The* COMPRESSION *of the Air*, by its own weight, is surprizingly great: It appears, by Calculation, that the common Air we breathe, near the Surface of the Earth, is *compress'd* by the Weight of the super-incumbent Atmosphere, into $\frac{1}{13789}$ part of the space it would take up were it at liberty. See ATMOSPHERE.

But the Air may be still further *compress'd* by Art; and it appears from Mr. *Boyle*'s Experiments, that the Space which the Air takes up, when at its utmost Dilatation, is to that it takes up when most *compress'd*, as five hundred and fifty thousand to one. See AIR.

This immense *Compression* and Dilatation, Sir *Isaac Newton* observes, cannot be accounted for from supposing the Particles of the Air elastick and branched, or in form of slender Twigs interwoven into Circles; nor any other way, but by a repelling Force, wherewith they are endued; by virtue whereof, when at liberty, they mutually fly each other. See ATTRACTION.

This repelling Power, he adds, is stronger and more sensible in Air, than in other Bodies; in regard Air is generated out of very fix'd Bodies, but not without great difficulty, and the help of Fermentation: Now those Particles always recede from each other with the greatest violence, and are *compress'd* with the greatest difficulty, which, when contiguous, cohere the most strongly. See LIGHT.

That there is such a *repelling Power*, appears from this; that Flies walk on the Water without wetting their Feet; that the Object-Glasses of Telescopes laid on each other do not touch; that dry Dust is not brought to touch or cohere

without difficulty, *v. g.* unleſs either liquify'd by Fire, or wet with Water; and that two poliſh'd Pieces of Marble, which as often as they touch cohere, are yet very hardly preſs'd ſo cloſely and join'd ſo aptly as to cohere. See REPELLING *Force*; ſee alſo COHESION, DILATATION, *&c.*

COMPROMISE, an *Arbitration*, or a Treaty, or Contract, whereby two contending Parties eſtabliſh one or more *Arbitrators*, to judge of and terminate their Differences in an amicable way. See ARBITRATOR.

The regular way of appointing a *Compromiſe*, is by a Writing, expreſſing the Names of the Arbitrators, the Power of chuſing a Super-Arbitrator in caſe of need, a Time limited for the Arbitrage, and a Penalty on the Party who does not abide by the Deciſion.

By the Civil Law, a Slave cannot make a *Compromiſe* without the Leave of his Maſter, nor a Pupil without the Authority of his Guardian, or a Wife without that of her Husband. So a Slave, a deaf or dumb Man, a Minor, and the Perſon who is a Party in the Cauſe, are incapable of being choſen Arbitrators in a *Compromiſe*.

The Occaſions on which a *Compromiſe* is not allow'd of, are Reſtitutions, Marriage Cauſes, Criminal Affairs, Queſtions of State; and, generally, any thing wherein the publick Intereſt is more concern'd than that of private Perſons.

In our Law, *Compromiſe* is not of ſo much extent: *Weſt* defines it the Faculty, or Power of pronouncing Sentence between Perſons at Controverſy, given to Arbitrators by the Parties mutual private Conſent, without publick Authority.

The Word is alſo uſed in Beneficiary Matters; where it ſignifies an Act, whereby thoſe who have the Right of Election, transfer it to one or more Perſons, to elect a Perſon capable of the Office or Dignity.

Thus, we have ſeen Members of Parliament elected by *Compromiſe*; when the Electors, not being able to agree among themſelves, give the Power of electing, at leaſt of nominating, to two Perſons; obliging them by Oath, or otherwiſe, to chuſe ſuch as they think the moſt capable, and beſt diſpos'd.

COMPTING, or COUNTING-*Houſe*, an Office in the Houſhold, under the Direction of the Lord Steward; ſo called, becauſe the Accompts for all Expences of the King's Houſhold are there taken daily, by the Lord Steward, Comptroller, Cofferer, Maſter of the Houſhold, the two Clerks of the Green-Cloth, and the two Clerks Comptrollers. See HOUSHOLD.

They alſo make Proviſion for the Houſhold, and make Payments, and Orders for the good Government thereof.

In the *Compting-Houſe* is the Board of *Green-Cloth*. See GREEN-*Cloth*.

COMPULSOR, an Officer under the *Roman* Emperors, diſpatch'd from Court into the Provinces, to force the Payments of Taxes, *&c.* not pay'd within the time preſcrib'd.

Theſe were charg'd with ſo many Exactions, under Colour of their Office, that *Honorius* caſhier'd 'em by a Law in 412.

The Laws of the *Viſigoths* mention Military *Compulſors*; which were Officers among the *Goths*, whoſe Buſineſs was to oblige the tardy Soldiers to go into the Fight, to run to an Attack, *&c.*

*Caſſian* mentions a kind of Monaſtick *Compulſors*, whoſe Buſineſs was to declare the Hours of Canonical Office, and to take care the Monks went to Church at thoſe Hours.

The Word is *Latin*, form'd of the Verb *Compellere*, to oblige, conſtrain.

COMPUNCTION, in Theology, an inward Grief in the Mind, for having offended God. See REPENTANCE.

The *Romaniſts* own their Confeſſion inſignificant, unleſs attended with *Compunction*, or pricking of Heart. See CONFESSION.

Among Spiritualiſts, *Compunction* carries a more extenſive Signification; and implies not only a Grief for having offended God, but alſo a pious Senſation of Grief, Sorrow, and Diſpleaſure on other Motives. Thus, the Miſeries of Life, the Danger of being loſt in the World, the Blindneſs of the Wicked, *&c.* are to pious People Motives of *Compunction*.

The Word comes from *pungere*, *compungere*, to prick.

COMPURGATOR, in Law, one that by Oath juſtifies or clears another's Innocence. See LAW, and OATH.

COMPUTATION, or *Supputation*, the manner of accounting and eſtimating Time, Weights, Meaſures, and Monies. See TIME, WEIGHT, MEASURE, MONEY, *&c.*

The Word is ſometimes alſo uſed among Mathematicians in the like Senſe as *Calculation*. See CALCULATION.

COMPUTATION is particularly uſed in Law, in reſpect of the true Account or Conſtruction of Time, ſo underſtood, as that neither Party do wrong to the other, nor the Determination of Time be left at large; ſo as to be taken otherwiſe than according to the Judgment and Intention of Law.

If Indentures of Demiſe be ingroſſed, bearing Date 11 *May* 1679, to have and to hold the Land in *S.* for three Years from henceforth; and the Indentures be deliver'd the 4th of *June* following: In this Caſe, *from henceforth* ſhall be accounted from the Day of the Delivery, and not from the Date. And if the Indenture be deliver'd at four of the Clock in the Afternoon, the ſaid 4th of *June*, the Leaſe ſhall end the third Day of *June* in the third Year: the Law, in ſuch *Computation*, rejecting all Fractions or Diviſions of the Day, on account of that uncertainty which is the Mother of Contention.——In Writings order'd by the Stat. 27 *Hen.* VIII. to be inroll'd within ſix Months; if ſuch Writings have Date, the ſix Months ſhall be accounted from the Date, and not from the Delivery: If they want Date, it ſhall be accounted from the Delivery. *Coke*, Lib. V.

If a Deed be ſhew'd to a Court at *Weſtminſter*, it ſhall remain in Court (by Judgment of Law) all the Term in which it is ſhew'd: for all the Term is but as one Day in Law. *Coke* Ibid.——If a Church be void, and the Patron does not preſent within ſix Months, the Biſhop of the Dioceſs may collate his Chaplain: But theſe *ſix Months* ſhall be *computed* according to twenty eight Days of the Month; and not according to the Calendar. See CALENDAR.

COMPUTO, a Writ, thus called from its Effect, which is to compel a Bailiff, Chamberlain, or Receiver to yield his Accompts.

The ſame lyes for Executors of Executors; and againſt the Guardian in Soccage, for Waſte made in the Minority of the Heir.

CONARION, or CONOIDES, called alſo *Glandula Pinealis*, is a ſmall Gland, about the bigneſs of a Pea, placed in the upper Part of that Hole in the third Ventricle of the Brain, called the *Anus*; and ty'd by ſome Fibres to the *Nates*. See GLAND, BRAIN, ANUS, and NATES.

It is compoſed of the ſame Subſtance as the reſt of the Brain; and has this peculiar, that it is ſingle; whereas all the other Parts are double: Hence, *Des Cartes* takes occaſion to ſuppoſe it the immediate Place, or Seat of the Soul. See PINEAL *Gland*, SENSORY, *&c.*

CONATUS, *Endeavour*, a Term frequently uſed in Philoſophical and Mathematical Writers; and ſometimes alſo called *Niſus*.

The *Conatus* ſeems to be the ſame, with reſpect to Motion, that a Point is with reſpect to a Line; at leaſt, the two have this in common, that as the Point is inceptive of the Line, or the Term from which it commences; ſo is the beginning of all Motion call'd the *Conatus*. Add, that as in Mathematical Demonſtrations, the Extenſion of the Point is conceiv'd as if it were nothing at all; ſo, in the *Conatus* of Motion, there is no regard to the Time wherein, or the length which it advances. See *Laws of* NATURE.

Hence, ſome define a *Conatus* to be a quantity of Motion, not capable of being expreſs'd by any time or length.—Accordingly, all Motion tends preciſely the ſame way wherein the moveable is acted on, or determined by the moving Power. See MOTION.

CONCATENATION, in Philoſophy, the connecting of Things, in manner of a *Chain*, *Catena*.

The *Concatenation* of Second Cauſes, is an Effect of Providence. See SECOND CAUSE, PROVIDENCE, *&c.*

CONCAVE, is applied to the inner Surface of a hollow Body; eſpecially if it be circular. See CONVEX.

*Concave* is particularly underſtood of Mirrors and Lenſes: *Concave* Lenſes, are either *concave* on both Sides, called *Concavo-Concave*; or *concave* on one ſide, and Plane on the other, called *Plano-Concave*; or *Concave* on one ſide, and convex on the other, call'd *Concavo-Convex*, or *Convexo-Concave*, as the one or the other Surface is a Portion of a leſs Sphere.

The Properties of all *concave* Lenſes are, that the Rays of Light, in paſſing thro' them are deflected, or made to recede from one another; as in *convex* Lenſes they are inflected towards each other; and that the more, as the *Concavity* or *Convexity* are Portions of leſs Circles. See LENS.

Hence, parallel Rays, as thoſe of the Sun, by paſſing thro' a *concave* Lens, become diverging; diverging Rays are made to diverge the more, and converging Rays either made to converge leſs, or become parallel, or go out diverging. See RAY.

Hence, Objects view'd thro' *concave* Lenſes, appear diminiſh'd; and the more ſo, as they are Portions of leſs Spheres; and this in oblique, as well as in direct Rays. See REFRACTION.

*Concave* Mirrors have the contrary Effect to Lenſes: They reflect the Rays which fall on 'em, ſo, as to make them approach more to, or recede leſs from each other than before; and that the more as the *Concavity* is greater, or the Spheres whereof they are Segments, leſs. See MIRROR.

Hence, *Concave* Mirrors magnify Objects preſented to them; and that in a greater proportion, as they are Portions of greater Spheres. See REFLECTION, MICROSCOPE, *&c.*

Hence alſo, *Concavé* Mirrors have the Effect of burning Objects, when plac'd in their *Focus*. See BURNING *Glaſs*.

CONCEALERS, in Law, ſuch as find out *conceal'd* Lands, *i. e.* Lands kept privily from the King, by common Perſons

Perſons ; having nothing to ſhew for their Title, or Eſtate therein.

They are thus called *per Antiphraſin, à concelando* ; as *Mons* is *à movendo*, &c. My Lord *Coke* calls 'em *turbidum hominum genus.*

CONCENTRATION, the retiring, or withdrawing of a thing inwards ; or driving toward the *Centre*, the Middle.

Thus, external Cold is ſaid to *concentrate* the Heat within Bodies. After Meals, the natural Warmth retires, and as it were *concentrates*, to promote the Digeſtion. See HEAT, and COLD.

CONCENTRATION is alſo uſed by Dr. *Grew* for the higheſt degree of Mixtion, *viz.* that wherein two or more Atoms or Particles touch, by a Reception, and Intruſion of the one within the other. See MIXTION.

This he takes to be the Caſe of all Fix'd Bodies without Taſte or Smell ; their Conſtitution being ſo firm, that till the Particles be detach'd from each other by ſome extraordinary means, they cannot affect thoſe Senſes. See SMELL, and TASTE.

CONCENTRIC, in Geometry and Aſtronomy, ſomething that has the ſame common Centre with another. See CENTRE.

The Word is principally uſed in ſpeaking of round Bodies, and Figures, *viz.* Circular, Elliptical ones, *&c.* but may be likewiſe uſed for Polygons, drawn parallel to each other, upon the ſame Centre. See CIRCLE, POLYGON, *&c.*

*Concentric* ſtands oppoſed to *excentric*. See ECCENTRIC, and ECCENTRICITY.

CONCEPTION, in Logicks, the ſimple Apprehenſion, Perception, or Idea which we have of any Thing, without proceeding to affirm or deny any thing about it. See PERCEPTION.

The Schoolmen uſually make two Kinds of *Conception* ; the one *formal*, the other *objective*.

The *firſt* is defined the immediate and actual Repreſentation of any thing propoſed, to the Mind ; on which footing, it ſhould be the ſame thing to the Underſtanding, that a Word or Voice is to the Ear: whence ſome call it *Verbum Mentis*. See NOTION.

The *ſecond* is the Thing it ſelf repreſented by a formal *Conception*. But others explode the Notion of an *objective Conception*, as being, in reality, no *Conception* at all ; excepting where the Mind contemplates its own Acts, *&c.*

*Formal*, or *proper Conceptions*, are ſubdivided into *Univocal*, where ſeveral Things are diſtinctly repreſented as under ſome common Ratio, or in the ſame degree of Perfection ; *Analogous*, where ſeveral Things are repreſented as under ſome proportional Likeneſs ; and *Equivocal*, where they are repreſented immediately as ſuch, without regard to any common Ratio or Likeneſs.

CONCEPTION, in Medicine, the firſt Formation of the Embryo, or *Fœtus*, in the Womb. See FOETUS, and EMBRYO.

*Conception* is no other than ſuch a Concourſe and Commixture of the prolific Seed of the Male, with that of the Female, in the *Cavity* of the *Uterus*, as immediately produces an Embryo. See EMBRYO.

The Symptoms of *Conception*, or Pregnancy, are, when in a few Days after the Conjugal Act, a ſmall Pain is perceiv'd about the Navel, attended with ſome gentle Commotions in the bottom of the Abdomen ; and within one, two, three, or even four Months, the Menſes ceaſe to flow, or prove in leſs quantity than uſual. Upon the firſt Failure of this kind, the Woman begins to count the Series of her Weeks, without taking any notice of the Time before elapſed: After this, or between the ſecond and third Months, but generally about the third, the Motions of the Embryo become perceivable to the Mother ; who hereupon becomes troubled with a *Nauſea*, Vomiting, Loathing, Longing, *&c.* About this time, the Breaſts begin to ſwell, grow hard and painful, and contain a little Milk ; the Nipples alſo become larger, firmer, and darker colour'd, a livid Circle appearing around 'em : The Eyes ſeem ſunk and hollow. During the two firſt Months pregnancy, the Woman grows thinner, and ſlenderer ; the Abdomen being alſo depreſs'd ; tho it afterwards diſtends, and grows gradually larger. See GESTATION.

*The Manner wherein Conception is effected*, is thus laid down by the modern Writers: In the Superficies of the *Ovaries* of Women, are found little pellucid Spherules, conſiſting of two concentric Membranes, fill'd with a lymphatic Humour, and connected to the Surface of the *Ovaria*, underneath the Tegument, by a thick Calix, contiguous to the Extremities of the minute Ramifications of the Fallopian Tubes. See OVARY.

Theſe Spherules, by the uſe of Venery, grow, ſwell, raiſe, and dilate the Membrane of the Ovary into the form of *Papillæ* ; till, the Head propending from the Stalk, it is at length ſeparated from it ; leaving behind it a hollow Cicatrix, in the broken Membrane of the Ovary ; which, however ſoon grows up again.

Now, in theſe Spherules, while ſtill adhering to the Ovary, *Fœtus*'s have been frequently found : whence it appears, that theſe are a kind of *Ova*, or *Eggs*, deriving their Structure from the Veſſels of the Ovary, and their Liquor from the Humours prepar'd therein. See EGG.

Hence, alſo, it appears, that the Fallopian Tubes being ſwell'd, and ſtiffen'd by the Act of Venery, with their muſcular *Fimbriæ*, like Fingers, may embrace the Ovaries, compreſs 'em, and by that Compreſſion expand their own Mouths : And thus the Eggs, now mature, and detach'd as before, may be forced into their Cavities ; and thence convey'd into the Cavity of the *Uterus* ; where they may either be cheriſh'd and retain'd, as when they meet with the Male Seed ; or, if they want that, again expell'd. See FALLOPIAN *Tube*.

Hence the Phænomena of *falſe Conceptions*, *Abortion*, *Fœtus*'s found in the Cavity of the Abdomen, the Fallopian Tubes, *&c.* See ABORTION, *&c.*

For, in Coition, the Male Seed, abounding with living *Animalculas*, agitated with a great Force, a briſk Heat, and, probably, with a great quantity of Animal Spirits, is violently impell'd thro' the Mouth of the *Uterus*, which on this occaſion is opener ; and thro' the Valves of the Neck of the *Uterus*, which on this occaſion are laxer than ordinary, into the *Uterus* it ſelf ; which now, in like manner, becomes more active, turgid, hot, inflam'd, moiſten'd with the Flux of its Lymph and Spirits, by means of the Titillation excited in the nervous *Papillæ* by the Attrition againſt the *Rugæ* of the *Vagina*. See SEED.

The Semen thus diſpos'd in the *Uterus*, is retain'd, heated, agitated by the convulſive Conſtriction of the *Uterus* it ſelf ; till meeting with the *Ova*, the fineſt and moſt animated Part enters thro' the dilated Pores of the *Membranula* of the *Ovum*, now become glandulous, is there retain'd, nouriſh'd, dilated, grows to its *Umbilicus*, or Navel ; ſtifles the other leſs lively *Animalculas :* and thus is *Conception* effected.

Hence, it appears, that *Conception* may happen in any Part where the Semen meets with an *Ovum :* Thus, whether it be carried thro' the Fallopian Tube to the Ovary, and there caſt upon the *Ovum* ; or whether it meet in ſome Receſs of the Tube it ſelf ; or, laſtly, whether it join it in the Cavity of the *Uterus*, it may ſtill have the ſame Effect ; as it appears from Obſervation it actually has. But 'tis probable that *Conception* is then moſt perfect, when the two, *viz.* the *Semen* and *Ovum*, are carried at the ſame time into the *Uterus*, and there mix'd, *&c.*

Other Anatomiſts chuſe to ſuppoſe the Male Seed taken up, ere it arrive in the *Uterus*, by the Veins which open into the *Vagina*, &c. and thus mix'd with the Blood ; by which, in the Courſe of Circulation, it is carried, duly prepared, into the Ovary, to impregnate the Eggs. See GENERATION.

*For the Progreſs of the* Fœtus *after* Conception, ſee NUTRITION, CIRCULATION, *&c.* ſee alſo UTERUS, UMBILICAL *Veſſels*, &c.

CONCEPTION *Immaculate* of the Holy Virgin, is a Feaſt in honour of the Holy Virgin ; particularly with regard to her having been conceiv'd and born *Immaculate*, *i. e.* without Original Sin ; held in the *Romiſh* Church on the 8th of *December*. *Allatius*, in his *Prologomena* on *Damaſcenus*, endeavours to prove this Feaſt to have been celebrated by ſeveral Churches in the *Eaſt*, as early as the VIIIth Century. See FEAST.

The *Immaculate Conception* is the great Head of Controverſy between the *Scotiſts* and *Thomiſts* ; the former maintaining, and the latter impugning it. See SCOTIST, and THOMIST.

The *Jacobins* eſpous'd the Party of S. *Thomas*, and held out a long time, in defence of the Virgin's being conceiv'd in Original Sin : They were condemn'd by Pope *Clement* VII. in 1308, at the Proſecution of the Univerſity of *Paris*, and oblig'd to retract.

The Council of *Trent*, Seſſ. V. in the Decree of *Original Sin*, declares it not to be the Intention of the Council to include the Virgin under it ; Her *Conception* it calls *Immaculate* ; and appoints the Conſtitutions of *Sixtus* IV. to be obſerv'd with regard thereto.

Some Authors have obſerv'd ſeveral Paſſages diſpers'd in the old Editions of S. *Thomas*'s Works, which aſſert the *Immaculate Conception* in expreſs Terms ; but many of them are corrupted in the later Editions, ſay ſome : tho others will have the Corruption lie on the ſide of the old ones.

In the three *Spaniſh* Military Orders of *S. James of the Sword*, *Calatrava*, and *Alcantara* ; the Knights take a Vow, at their Admiſſion, to defend the *Immaculate Conception*. This Reſolution was firſt taken in 1652. See CALATRAVA, *&c.*

*Peter d'Alva*, and *Aſtorga*, have publiſh'd 48 huge Volumes in Folio on the Myſteries of the *Conception*.

*For Religious of the Order of the* CONCEPTION, ſee THEATINES.

CONCERT, or CONCERTO, popularly CONSORT, a Number, or Company of Muſicians playing, or ſinging the ſame Song, or piece of Muſick together. See MUSICK.

The Word *Concert* may be applied where the Muſick is only Melody, *i. e.* the Performers are all in Uniſon; but it is more properly, as well as more uſually underſtood of Harmony, or where the Muſick conſiſts of divers Parts; as Baſs, Tenor, &c. See MELODY, HARMONY, PART, &c.

CONCESSI, a Term much uſed in Conveyances, &c. its Effect is to create a Covenant, as *Dedi* does a Warranty. See COVENANT.

CONCESSION, in Rhetorick, a Figure whereby ſomething is granted, or allow'd the Adverſary, either to prevent being detain'd by unneceſſary Incidents, or to make ſome Advantage of. *I will not conteſt with you the Reality of the Contract; what I plead for is relief againſt the Injuſtice of it.——True, ſhe is fair, but ought ſhe not to ſhew her Acknowledgments to Heaven for the Favour, by making a virtuous uſe of her Beauty?*

CONCHA, *Shell*, in Anatomy, a Name given the ſecond, or inward Cavity of the Auricle, or external Ear; reaching to the Entrance of the Auditory Duct. See EAR, and AURICLE.

Some alſo give the ſame Name to the firſt Cavity of the inward Ear, which others call the *Drum*; and others to the *Veſtibulum* of the Labyrinth, which is the ſecond Cavity of the internal Ear. See TYMPANUM, and VESTIBULUM.

The Name has its Origin from a reſemblance theſe Cavities bear to a *Concha*, or *Sea-ſhell*.

CONCHILIS, or CONCHOID, in Geometry, a Curve Line, which always approaches nearer a ſtrait Line to which it is inclined, but never meets it. See CURVE.

It is deſcrib'd thus: Draw a right Line B D, (Plate *Analyticks*, Fig. 1.) and another A C, perpendicular to it in E; draw any Number of right Lines, as C M, C M cutting B D in Q; make Q M = Q N = A E = E E; the Curve wherein the Points M M are found, is the *Conchilis*, or *Conchois prima*; ſo called by its Inventor *Nicomedes*.

The others, wherein the Points N N are found, is the *Conchois ſecunda*; the right Line B D the *Rule*, the Point C the *Pole*.

The Inventor alſo contriv'd an Inſtrument, whereby the firſt *Conchois* may be deſcribed mechanically: Thus, in the Rule A D, (Plate *Analyticks*, Fig. 2.) is a Channel or Groove cut, ſo as a ſmooth Nail, firmly fix'd in the moveable Rule C B, in the Point F, may ſlide freely within it: Into the Rule E G is fix'd another Nail in K, for the moveable Rule C B to ſlide upon.

If then the Rule B C be ſo mov'd, as that the Nail F paſſes along the Canal A D; the Style, or Point in C, will deſcribe the firſt *Conchoid*.

Now let A P = $x$, (Fig. 1.) A E = $a$; P E = M R = $a - x$; wherefore, as $x$ increaſes, $a - x$ or M R will decreaſe: and therefore the Curve continually approaches nearer to the Rule B D.

In the ſame manner it appears, that the right Line N O muſt continually decreaſe; and therefore, the ſecond *Conchoid*, alſo, muſt continually approach nearer the Rule.

But inaſmuch as between each *Conchoid* and the right Line B D, there will ſtill be the right Line Q M or Q N, equal to A E; neither of the *Conchoids* can concur with the right Line B D: conſequently, B is an Aſſymptote of each *Conchoid*. See ASSYMPTOTE.

There will be other Kinds of *Conchoids* produced, if C E: C Q:: Q M: A E, or indefinitely, if O $E^m$: C $Q^m$:: Q $M^m$: A $E^m$; wherefore, if C E = $b$, E A = $a$, C Q = $x$, Q M = $y$; then, $a^m b = x^m y$: and for infinite *Conchoids*, $a^m b^m = x^m y^m$.

CONCINNOUS *Intervals*, in Muſick. Diſcords are diſtinguiſh'd into *Concinnous* and *Inconcinnous* Intervals: The *Concinnous* are ſuch as are fit for Muſick, next to, and in Combination with Concords; being neither very agreeable nor diſagreeable in themſelves; but having a good Effect, as by their oppoſition they heighten the more eſſential Principles of Pleaſure; or as by their mixture and combination with 'em, they produce a Variety neceſſary to our being better pleaſed. See HARMONY.

The other Diſcords, that are never uſed in Muſick, are called *Inconcinnous*. See DISCORD.

Syſtems are alſo divided into *Concinnous* and *Inconcinnous*. A Syſtem is ſaid to be *concinnous*, or *concinnouſly* divided, when the Parts thereof, conſider'd as ſimple Intervals, are *concinnous*; and are, beſides, placed in ſuch an Order, between the Extremes, as that the Succeſſion of Sounds from one Extreme to the other, may have an agreeable Effect. See SYSTEM.

Where the ſimple Intervals are *inconcinnous*, or ill-diſpoſed between the Extremes, the Syſtem is ſaid to be *inconcinnous*.

CONCLAVE, an Aſſembly, or Meeting of all the Cardinals that are at *Rome*, for the Election of a Pope. See POPE, ELECTION, &c.

The *Conclave* had its riſe in the Year 1270, and on this occaſion: *Clement* IV. being dead at *Viterbo*, in 1268; the Cardinals were two Years without being able to agree on the Election of a Succeſſor: In effect, things were carried to that paſs, that they were upon the Point of breaking up, without coming to any Concluſion at all.

The Inhabitants of *Viterbo*, then, being appriz'd of their Deſign, by the Advice of S. *Bonaventure*, then at *Viterbo*, ſhut the Gates of their City, and lock'd up the Cardinals in the Pontifical Palace adjoining to the Cathedral, till they were brought to a better underſtanding.

Hence aroſe the Cuſtom which has ſince prevail'd, of ſhutting up the Cardinals in a ſingle Palace, till they have elected the Pope. Such was the Origin of the *Conclave*, as related by *Onuph. Panvinius*, *Ciaconius*, and *Papebroch*. See CARDINAL.

CONCLAVE is alſo uſed for the Place wherein the Election of the Pope is perform'd; which is, now, at St. *Peter's* in the Vatican; tho *Gregory* X. and *Clement* V. appointed it ſhould always be held in the Place where the laſt Pope ſhould die.

While the Affair is in hand, if it be in Winter, the Walls and Windows are all mured up, excepting a ſingle Pane, to give a little Light: In Summer the Windows are not cloſed; but the great Door of the Hall is ſecured with four Locks, and four Bolts; an Aperture being, however, left, to ſupply the impriſon'd Prelates with Victuals thro'.

In the Hall, which is very ample, there are Cells or Stalls erected for as many Cardinals as are to be preſent at the Election; the Cells being only ſeparated by Deal Boards.

The Cells are mark'd with Letters of the Alphabet, and are diſtributed to the Cardinals by Lot: Each Cardinal puts his Arms on the Cell that falls to his ſhare. See CELL.

After the Aſſembly has held three Days, they are only allow'd one Diſh for a Meal; after five Days, only Bread and Water: Tho this Rule is not over-religiouſly regarded.

Each Cardinal is allow'd two *Conclaviſts*, or Servants to attend him, and to be ſhut up with him.

*Mathew Paris* ſays, the Word *Conclave* antiently ſignify'd the Pope's Wardrobe.

'Tis a popular Proverb in *Italy*, *Chi entra Pape, eſce Cardinale*; He who enters Pope, comes out Cardinal; *q. d.* He who according to common Report will be elected Pope, ordinarily is not.

CONCLUSION, in Logick, the laſt Part of an Argument; or the Conſequence drawn from ſomething either aſſumed or proved before.

The *Concluſion* of an Argument contains two Parts; the *Conſequent*, which is the Matter of it; and the *Conſequence*, which is its Form; and which, of a ſimple abſolute Propoſition, renders the *Concluſion* relative to the Premiſes whence it is drawn. See CONSEQUENT.

The Queſtion, and *Concluſion*, ſay the Schoolmen, are the ſame Ideas, only conſider'd in different Views, or Relations: In the *Queſtion* they are conſider'd as doubtful; in the *Concluſion* as void of doubt.

CONCLUSION, in Oratory, conſiſts of two Parts; the *Recapitulation* or *Enumeration*, and the *Paſſions*. See RHETORICK.

The Recapitulation conſiſts in a Repetition of the principal Arguments. See RECAPITULATION; ſee alſo PASSION.

CONCOCTION, in Medicine, the Change which the Food undergoes in the Stomach, &c. to become Chyle. See CHYLIFICATION.

This Change conſiſts in deſtroying the Texture and Coheſion of the Parts of the Food; preparing part of it for ſome particular Service of the animal Frame, and the reſt to be carried off as Excrements, by proper Emunctories. See FOOD, EXCREMENT, &c.

The Antients gave the Term *Concoction*, to what we now ordinarily call *Digeſtion*; from a Notion of the Food's being, as it were, *boil'd* in the Stomach; and its nutritious Juice expreſs'd by the Heat of the adjacent Parts. See DIGESTION.

They aſſign'd two *Concoctions*, *viz.* one in the Stomach, and a ſecond in the ſmall Inteſtines, &c. which latter they attributed to the Admixture of the Bile and pancreatick Juice.

The ſeveral *Concoctions* in the Body, with regard to the Propagation of the Species, and the Preſervation of the Individual, have been ſince reduced to five; *Chyloſis* for Chyle, *Chymoſis* for Chyme, *Hematoſis* for Blood, *Pneumatoſis* for Spirits, and *Spermatoſis* for Seed. See CHYLOSIS, CHYMOSIS, HEMATOSIS, &c. ſee alſo COCTION.

CONCOMITANT, in Theology, ſomething that accompanies, or goes along with, another.

*Concomitant Grace*, is that which God affords us during the Courſe of our Actions to enable us to perform 'em; and as the *Romiſh* Schoolmen ſay, to render 'em meritorious. See GRACE.

*Concomitant Grace* differs, at leaſt with regard to its Effect, from preventing Grace: the latter is given us to prevent an Action, the former to accompany it.

According to the *Romiſh* Doctrine, the Blood of Jeſus Chriſt is under the Accidents of Bread, as his Body is under the Accidents of Wine, by *Concomitance*.

CONCORD, in Grammar, that part of Syntax, or Conſtruction, whereby the Words of a Sentence *agree* among themſelves, *i. e.* whereby Nouns are put in the ſame Caſe, Number, Gender, *&c.* and Verbs in the ſame Number and Perſon with Nouns and Pronouns. See SYNTAX.

The Rules of *Concord* are generally the ſame in all Languages, as being of the Nature of what is in uſe almoſt every where for the better diſtinguiſhing of Diſcourſe.

Thus, the Diſtinction of the two Numbers Singular and Plural, obliges us to make the Adjective agree with the Subſtantive in Number; that is, to put the one either in this or that Number, as the other is: For the Subſtantive being the Thing confuſedly, tho directly mark'd by the Adjective; if the Subſtantive Word mark ſeveral, there are ſeveral Subjects of the Form mark'd by the Adjective, and of conſequence it ſhould be in the Plural, *Homines Docti*, &c. See NUMBER.

Again, the Diſtinction of Maſculine and Feminine, renders it neceſſary to put the Subſtantive and Adjective in the ſame Degree. See DEGREE.

And Verbs ſhould have a *Concord* or Agreement with Nouns and Pronouns in Number and Perſon. See PERSON, PRONOUN, *&c.*

If any thing occur apparently contrary to thoſe Rules, 'tis by a Figure, *i. e.* ſomething is implied, or the Ideas are conſider'd more than the Words themſelves. See FIGURE.

CONCORD, in Law, is the Agreement between two Parties who intend the levying a Fine of Lands to one another, how and in what manner it ſhall paſs. See FINE.

CONCORD is alſo an Agreement made upon any Treſpaſs committed, (betwixt two, or more) and is divided into *Concord executory*, and *Concord executed*.

*Plowden* obſerves, that the firſt binds not, being imperfect; but the latter is perfect, and binds the Party.

Others are of Opinion, that *Concords executory* are perfect, and bind no leſs than thoſe *executed*.

CONCORD, in Muſick, is the Relation of two Sounds that are always agreeable to the Ear, whether applied in Succeſſion or Conſonance. See SOUND.

If two ſingle Sounds be in ſuch a Relation, or have ſuch a difference of Tune, as that being ſounded together, they make a Mixture, or compound Sound, which affects the Ear with pleaſure; that Relation is called *Concord*: and whatever two Sounds make an agreeable Compound in conſonance, thoſe ſame will always be pleaſing, in Succeſſion, or will follow each other agreeably. See TUNE.

The Reverſe of a *Concord*, is what we call a *Diſcord*; which is a Denomination of all the Relations or Differences of Tune that have a diſpleaſing Effect. See DISCORD.

*Concord* and Harmony are, in effect, the ſame thing; tho Cuſtom has applied them differently. As *Concord* expreſſes the agreeable Effect of two Sounds in Conſonance; ſo Harmony expreſſes that Agreement in a greater Number of Sounds in Conſonance: Add, that Harmony always implies Conſonance; but *Concord* is ſometimes applied to Succeſſion: tho never but when the Terms will make an agreeable Conſonance: whence it is that Dr. *Holder*, and ſome other Writers, uſe the Word *Conſonance* for what we call *Concord*. See CONSONANCE.

Uniſonance, then, being the Relation of Equality between the Tunes of two Sounds, all Uniſons are *Concords*, and in the firſt Degree: but an Interval being a Difference of Tune, or a Relation of Inequality between two Sounds, becomes a *Concord* or Diſcord, according to the Circumſtances of that particular Relation. Indeed, ſome reſtrain *Concord* to Intervals, and make a difference of Tune eſſential thereto; but that is precarious: and Mr. *Malcolm* thinks, that as the Word implies Agreement, 'tis applicable to Uniſon in the firſt degree. See UNISON.

'Tis not eaſy to aſſign the Reaſon or Foundation of *Concordance*: The differences of Tune, we have already obſerv'd, take their riſe from the different Proportions of the Vibrations of the ſonorous Body, *i. e.* of the Velocity of thoſe Vibrations in their recourſes; the frequenter thoſe recourſes are, the more acute being the Tune, and *vice verſa*. See GRAVITY, *&c.*

But the eſſential difference between *Concord* and Diſcord lies deeper: there does not appear any natural Aptitude in the two Sounds of a *Concord*, to determine it to give us a pleaſing Senſation, more than in the two Sounds of a Diſcord: Theſe different Effects are merely arbitrary, and muſt be reſolv'd into the divine good pleaſure. See SENSATION.

We know by experience what Proportions and Relations of Tune afford Pleaſure, what not; and we know alſo how to expreſs the Differences of Tune by the Proportion of Numbers; we know what it is pleaſes us, tho we don't know why: We know, *v. g.* that the Ratio of 1 : 2 conſtitutes *Concord*, and 6 : 7 Diſcord; but on what original Grounds agreeable or diſagreeable Ideas are connected with thoſe Relations, and the proper Influence of the one on the other, is above our reach.

By Experience, we know that the following Ratios of the Lengths of Chords are all *Concord*, *viz.* 2 : 1, 3 : 2, 4 : 3, 5 : 4, 6 : 5, 5 : 3, 8 : 5; that is, take any Chord for a Fundamental, which ſhall be repreſented by the Number 1, and the following Diviſions thereof will be all *Concord* with the whole, *viz.* $\frac{1}{2}\ \frac{2}{3}\ \frac{3}{4}\ \frac{4}{5}\ \frac{5}{3}\ \frac{3}{5}$ So that the diſtinguiſhing Character between *Concords* and Diſcords, muſt be look'd for in theſe Numbers, expreſſing the Intervals of Sound; not abſtractedly, and in themſelves, but as expreſſing the Number of Vibrations.

Now, Uniſons are in the firſt Degree of *Concord*, or have the moſt perfect Likeneſs or Agreement in Tune; and therefore have ſomething in 'em acceſſory to that Agreement, which is found, leſs or more, in every *Concord*: but 'tis not true, that the nearer two Sounds come to an Equality of Tune, the more Agreement they have; therefore, 'tis not in the Equality or Inequality of the Numbers that this Agreement lies.

Further, if we conſider the Number of Vibrations made in any given time by two Chords of equal Tune; on the Principle laid down, they are equal: And therefore, the Vibrations of the two Chords coincide, or commence together as frequently as poſſible, *i. e.* they coincide at every Vibration; in this frequency of which Coincidence, or united Mixture of the Motions of the two Chords, and of the Undulations of the Air occaſion'd thereby, it is, that the Difference of *Concord* and Diſcord muſt be ſought.

Now, the nearer the Vibrations of two Strings approach to a Coincidence as frequent as poſſible, the nearer they ſhould approach the Condition and, conſequently, the Agreement of Uniſons; which agrees with Experience.

For if we take the natural Series 1, 2, 3, 4, 5, 6, and compare each Number to the next, as expreſſing the Number of Vibrations in the ſame time of two Chords, whoſe Lengths are reciprocally as thoſe Numbers; the Rule will be found exact, for 1 : 2 is beſt, then 2 : 3; after 6 the Conſonance is unſufferable; the Coincidences being too rare: tho there are other Ratios that are agreeable, beſides thoſe found in that continued Order, *viz.* 3 : 5, and 5 : 8, which, with the preceding five are all the *concording* Intervals within, or leſs than an Octave, or 1 : 2; that is, whoſe acuteſt Term is greater than half the Fundamental.

On this Principle, 3 : 5 will be preferable to 4 : 5; becauſe being equal in the number of Vibrations of the acuter Term, there is an advantage on the Side of the Fundamental in the Ratio 3 : 5, where the Coincidence is made at every third Vibration of the Fundamental, and every fifth of the acute Term: So alſo the Ratio 5 : 8 is leſs perfect than 5 : 6; becauſe, tho the Vibrations of each Fundamental are equal; yet in the Ratio 5 : 6, the Coincidence is at every ſixth of the acute Term, and only at every eighth in the other Caſe.

Thus, we have a Rule for judging of the Preference of *Concords*, from the Coincidence of their Vibrations: agreeable to which Rule, they are diſpos'd into the Order of the following Table; to which the *Names of the Concords* in Practice, the *Ratio of their Vibrations*, the *Lengths of the Chords*, and the *Number of Coincidences* in the ſame, are expreſs'd.

*Table of* CONCORDS.

| | Ratio's, or Vibrations. | Coincid. |
|---|---|---|
| | *Grave Term.* : *Acute Term.* | |
| Uniſon —— | 1 : 1 | |
| Octave, 8ve —— | 2 : 1 | 60 |
| Fifth, 5th —— | 3 : 2 | 30 |
| Fourth, 4th —— | 4 : 3 | 20 |
| Sixth, gr. —— | 5 : 3 | 20 |
| Third, gr. —— | 5 : 4 | 15 |
| Third, leſſer —— | 6 : 5 | 12 |
| Sixth, leſſer — | 8 : 5 | 12 |
| | *Grave Lengths.* : *Acute Lengths.* | |

Tho this Order be ſettled by Reaſon, yet it is confirm'd by the Ear. On this bottom, *Concords* muſt ſtill be the more perfect, as they have the greateſt Number of Coincidences, with regard to the Number of Vibrations in both Chords; and where the Coincidences are equal, the Preference will fall on that Interval, whoſe acuteſt Term has feweſt Vibrations to each Coincidence; which Rule, however, is in ſome Caſes contrary to Experience; and yet it is the only Rule yet diſcover'd.

F. *Mer-*

F. *Merſenne*, indeed, after *Kircher*, gives us another Standard for ſettling the comparative Perfection of Intervals with regard to the Agreement of their Extremes in Tune: And 'tis this.

The Perception of *Concordance*, ſay they, is nothing but the comparing of two or more different Motions which in the ſame time affect the auditory Nerve: Now we can't make a certain Judgment of any Conſonance, till the Air be as oft ſtruck in the ſame time by two Chords, as there are Unites in each Member expreſſing the Ratio of that *Concord*, *v. g.* we can't perceive a Fifth, till two Vibrations of the one Chord, and three of the other are accompliſh'd together; which Chords are in length as 3 to 2: The Rule then is, that thoſe *Concords* are the moſt ſimple and agreeable, which are generated in the leaſt time; and thoſe, on the contrary, the moſt compound and harſh, which are generated in the longeſt time.

For inſtance, let 1, 2, 3, be the Lengths of 3 Chords 1:2 is an Octave; 2:3 a Fifth; and 1:3 an Octave and Fifth compounded, or a Twelfth. The Vibrations of Chords being reciprocally as their Lengths, the Chord 2 will vibrate once, while the Chord 1 vibrates twice, and then exiſts an Octave; but the Twelfth does not yet exiſt, becauſe the Chord 3 has not vibrated once, nor the Chord 1 thrice, which is neceſſary to form a Twelfth.

Again, for generating a Fifth, the Chord 2 muſt vibrate thrice, and the Chord 3 twice; in which time, the Chord 1 will have vibrated 6 times; and thus the Octave will be thrice produc'd, while the Twelfth is only produced twice; the Chord 2 uniting its Vibration ſooner with the Chord 1, than with the Chord 3; and they being ſooner conſonant than the Chord 1 or 2 with that 3.

Whence, that Author obſerves, many of the Myſteries of Harmony, relating to the Performance of Harmonious Intervals and their Succeſſion, are eaſily deduced.

But this Rule, upon examining it by other Inſtances, Mr. *Malcolm* has ſhewn defective, as it does not anſwer in all Poſitions of the Intervals with reſpect to each other; but a certain Order, wherein they are to be taken, being requir'd: and there being no Rule, with reſpect to the Order, that will make this Standard anſwer to Experience in every Caſe: So that at laſt we are left to determine the Degrees of *Concord* by Experience and the Ear.

Not but that the Degrees of *Concord* depend much on the more or leſs frequent uniting the Vibrations, and the Ear's being more or leſs uniformly mov'd, as above; for that this Mixture or Union of Motion, is the true Principle, or, at leaſt, the chief Ingredient in *Concord*, is evident: But becauſe there ſeems to be ſomething further in the Proportion of the two Motions, neceſſary to be known, in order to fix à catholick Rule for determining all the Degrees of *Concord*, agreeable to Senſe and Experience.

The Reſult of the whole Doctrine is ſumm'd up in this Definition.

*Concord* is the Reſult of a frequent Union, or Coincidence of the Vibrations of two ſonorous Bodies, and, by conſequence, of the undulating Motions of the Air, which, being caus'd by theſe Vibrations, are like and proportionable to 'em; which Coincidence, the more frequent it is, with regard to the number of Vibrations of both Bodies, perform'd in the ſame time, *cæteris paribus*, the more perfect is that *Concord*: till the Rarity of the Coincidence, in reſpect of one or both the Motions, commence *Diſcord*. *See ſome of the remarkable Phænomena of Sounds accounted for from this Theory, under the Word* UNISON; ſee alſo INTERVAL, *&c.*

*Concords* are divided into *ſimple*, or original, and *compound*.

A *ſimple*, or original *Concord*, is that whoſe Extremes are at a Diſtance leſs than the Sum of any two other *Concords*.

On the contrary, a compound *Concord* is equal to two or more *Concords*.

Other Muſical Writers ſtate the Diviſion thus: An Octave 1:2 and all the inferior *Concords* above expreſs'd are all ſimple and original *Concords*: and all greater than an Octave, are called *compound Concords*; as being compos'd of, and equal to the Sum of one or more Octaves, and ſome ſingle *Concord* leſs than an Octave, and are uſually, in practice, denominated from that *ſimple Concord*.

*As to the Compoſition and Relations of the original Concords*, by applying to them the Rules of the Addition and Subtraction of Intervals, they will be divided into *ſimple* and *compound*, according to the firſt and more general Notion; as in the following Table.

| Simple *Concords*. | Compound *Concords*. | |
|---|---|---|
| 5 : 6 a 3d leſſ. | 5th { 3d g. and 3d l. | 8ve. compos'd of { 5th 4 or 6th g. 3d l. or 3d g. 3d l: 4th. |
| 4 : 5 a 3d gr. | 6th l. { 4th 3d l. | |
| 3 : 4 a 4th. | 6th g. { 4th 3d g. | |

The Octave is not only the firſt *Concord* in point of Perfection, the Agreement of whoſe Extremes is greateſt, and the neareſt to Uniſon; inſomuch that when ſounded together, 'tis impoſſible to perceive two different Sounds; but 'tis alſo the greateſt Interval of the ſeven original *Concords*; and as ſuch, contains all the leſſer, which derive their ſweetneſs from it, as they ariſe more or leſs directly out of it; and which decreaſe gradually, from the Octave to the leſſer Sixth, which has but a ſmall degree of *Concord*. See OCTAVE.

What is very remarkable, is the manner wherein theſe leſſer *Concords* are found in the Octave, which ſhews their mutual Dependencies.

For, by taking both an Harmonical and Arithmetical Mean between the Extremes of the Octave, and then both an Harmonical and Arithmetical Mean betwixt each Extreme, and the moſt diſtant of the two Means laſt found, *viz.* betwixt the leſſer Extreme and the firſt Arithmetical Mean, and betwixt the greater Extreme and the firſt Harmonical Mean, we have all the leſſer *Concords*.

Thus, if betwixt 360 and 180 the Extremes of Octave, we take an Arithmetical Mean, it is 270; and an Harmonical Mean is 240: then, betwixt 360 the greateſt Extreme, and 240 the Harmonical Mean, take an Arithmetical Mean, it is 300; and an Harmonical Mean, is 288. Again, betwixt 180 the leſſer Extreme of the Octave, and 270 the firſt Arithmetical Mean, it is 225, and an Harmonical one 216.

Thus have we a Series of all the *Concords*, both aſcending towards Acuteneſs from a common Fundamental, 360; and deſcending towards Gravity from a common acute Term, 180: which Series has this Property, that taking the two Extremes, and any other two at equal Diſtances, the four will be in Geometrical Proportion.

The Octave, by immediate Diviſion, reſolves it ſelf into a Fourth and Fifth; the Fifth, again, by immediate Diviſion, produces the two Thirds; the two Thirds are therefore found by Diviſion, tho not by immediate Diviſion; and the ſame is true of the two Sixths. Thus do all the original *Concords* ariſe out of the Diviſion of the Octave; the Fifths and Fourths immediately and directly, the Thirds and Sixths mediately.

From the Perfection of the Octave ariſes this remarkable Property, that it may be doubled, tripled, *&c.* and yet ſtill perſevere a *Concord*, *i. e.* the Sum of two or more Octaves are *concord*; tho the more compound will be gradually leſs agreeable: But it is not ſo with any other *Concord* leſs than Octave; the Doubles, *&c.* whereof, are all Diſcords.

Again, whatever Sound is *concord* to one Extreme of the Octave is *concord* to the other alſo: and if we add any other ſimple *Concord* to an Octave, it agrees to both its Extremes; to the neareſt Extreme it is a ſimple *Concord*, and to the fartheſt a compound one.

Another thing obſervable in this Syſtem of *Concords*, is, that the greateſt Number of Vibrations of the Fundamental cannot exceed five; or that there is no *Concord* where the Fundamental makes more than five Vibrations, to one Coincidence with the acute Term. It may be added, that this Progreſs of the *Concords* may be carried on to greater degrees of Compoſition, even *in infinitum*; but the more compound, the leſs agreeable.

So a ſingle Octave is better than a double one, and that than a triple one; and ſo of Fifths, and other *Concords*. Three or four Octaves is the greateſt length we go in ordinary Practice: The old Scales went but to two; no Voice or Inſtrument will well go above four. See THIRD, FOURTH, FIFTH, *&c.*

CONCORDANCE, a Dictionary or Index to the Bible, wherein, all the Words, uſed in the Courſe of the inſpir'd Writings, are rang'd alphabetically; and the various Places where they occur referr'd to; to aſſiſt in finding out Paſſages, and comparing the ſeveral Significations of the ſame Word.

Cardinal *Hugbs* is ſaid to have employ'd 500 Monks at the ſame time in compiling a Latin *Concordance*: Beſide which, we have ſeveral other *Concordances* in the ſame Language; one, in particular, called the *Concordance of England*, compiled by *J. Darlington* of the Order of *Predicants*; another more accurate one, by *Zamora*.

R. *Mardochai Nathan* has furniſh'd us with a Hebrew *Concordance*, printed at *Baſil* in 1541; containing all the *Hebrew* Roots branch'd into their various Significations, and under each Signification all the Places in Scripture wherein it occurs: But the beſt and moſt uſeful Hebrew *Concordance* is that of *Buxtorf*.

The Greek *Concordances* are only for the New Teſtament: indeed we have one of *Kircher*'s on the Old; but this is rather a *concordantial* Dictionary than a *Concordance*; containing all the *Hebrew* Dictions in an alphabetical Order; and underneath, all the Interpretations or Senſes the Seventy give 'em; and in each Interpretation, all the Places where they occur in that Verſion.

*Calaſius*, an *Italian* Cordelier, has given us *Concordances* of the *Hebrew*, *Latin*, and *Greek*, in two Columns; the firſt, which is *Hebrew*, is that of R. *Mardochai*, word for word, and according to the Order of the Books and Chapters: On the other Column is a *Latin* Interpretation of each Paſſage of Scripture quoted by R. *Mardochai*: This Interpretation is *Calaſius*'s own; but in the Margin he adds that

of

of the Seventy and the Vulgate, when different from his. The Work is in four Volumes Folio, printed at *Rome* in 1621.

CONCORDANT *Verſes*, ſuch as have ſeveral Words in common; but which, by the addition of other Words, convey an oppoſite, at leaſt, a different Meaning. Such are thoſe,

*Et* { *Canis* / *Lupus* } *in ſilva* { *venatur* / *nutritur* } *& omnia* { *ſervat.* / *vaſtat.* }

CONCORDAT, in the Canon Law, a Covenant, or Agreement in ſome beneficiary Matter; as, relating to a Reſignation, Permutation, or other Eccleſiaſtical Cauſe.

The Council of *Trent*, Seſſ. VI. *de Reform.* Cap. 4. ſpeaking of *Concordats* made without the Authority and Approbation of the Pope, calls 'em *Concordias quæ tantum ſuos obligant Authores, non Succeſſores.* And the Congregation of Cardinals, who have explained this Decree, declares, that a *Concordat* cannot be real, or deſcend to the Succeſſors, unleſs confirm'd by the Pope.

CONCORDAT is uſed, abſolutely, among the *French*, for an Agreement concluded at *Boulogn* in 1516, between Pope *Leo* I. and *Francis* I. of *France*, for regulating the manner of nominating to Benefices.

The *Concordat* ſerves in lieu of the *Pragmatic Sanction*, which had been abrogated; or, rather, it is the *Pragmatic Sanction* ſoften'd and reform'd.

There is alſo a *German Concordat*, made between Pope *Nicholas* V. and the Emperor *Frederick* III. and the Princes of *Germany*, in 1448, relating to Beneficiary Matters.

CONCORDIÆ *Vaſa*. See VESSELS *of Concord*.

CONCOURSE, or CONCURRENCE, the reciprocal Action of divers Perſons or Things, co-operating toward the ſame Effect or End.

Divines generally hold, that the Actions and Operations of all Creatures are continually dependent on the immediate *Concurrence* of the divine Mind: For ſecond Cauſes to act, or produce Effects, God himſelf muſt *concur*, and by his Influence give 'em the Efficacy they themſelves are deſtitute of: If they did not need the immediate *Concurrence* of God to make 'em act, they would have a ſort of Independency, which muſt be injurious to the immediate Creator to ſuppoſe. See CAUSE.

The Schoolmen diſtinguiſh two Kinds of *Concurrence*, viz. *mediate*, which conſiſts in the giving a Power or Faculty to act; and *immediate*, which is a cotemporary Influence of one Cauſe along with another, to produce an Effect: Thus, the Grandfather *concurs* mediately to the Production of a Grandſon, as he gives the Power of generating to the Father: but the Father *concurs* immediately with the Mother to the Production of the ſame Child. Now 'tis allow'd that God *concurs* mediately with all his Creatures, to enable them to act: but whether this be ſufficient; or whether it be farther requir'd that he *concur* with 'em immediately by a new Influence, for the Production of every act, in the ſame manner as the Father *concurs* with the Mother toward producing the young, is controverted: The generality of Scholaſtic Writers are for the Affirmative; *Durandus* and his Followers maintain the Negative.

*Point of* CONCOURSE. See FOCUS.

CONCRETE, in the School Philoſophy, an Aſſemblage, or Compound. See COMPOUND.

A *Phyſical Concrete*, or *concrete Body*, may denote any *mix'd* Body, or Body compos'd of different Principles; and conſequently, all ſenſible Bodies whatever, as all Bodies ariſe from a Coalition of divers Elements, or at leaſt of divers Principles, Matter and Form. See BODY, ELEMENT, and PRINCIPLE.

But, in ſtrictneſs, *Concrete* is only uſed for thoſe Compounds wherein the Ingredients ſtill retain their diſtinct Natures, nor are wholly converted into any new common Nature. See MIXT.

Authors diſtinguiſh *Natural Concretes* and *Artificial* ones: Thus Antimony is a *natural Concrete*, and Soap a *factitious Concrete*.

A *Logical Concrete*, or *concrete Word*, called alſo *Paronymus*, is that which has a compound kind of Signification; as ſignifying both the Subject, and ſome Quantity or Accident of the Subject, which gives it its Denomination: As *Man*, *learned*, *white*: for Man ſignifies as much as *having human Nature*; *learned*, as much as *having learning*, &c.

Hence, the Word *Concrete* is chiefly uſed to expreſs the Union of Qualities or Quantities with the Bodies or Subjects, without ſeparating them in Idea. The oppoſite Term, whereby the Things are ſeparated in Thought, is *Abſtract*. *Concrete* properly ſignifies a Subject with its Form or its Quality; as a *pious Man*, *hard*, *white*: *Abſtract*, on the contrary, expreſſes the Form and Quality without the Subject, as, *Piety*, *Hardneſs*, *Whiteneſs*. See ABSTRACTION.

CONCRETE *Numbers*, are thoſe which are applied to expreſs or denote any particular Subject; as, two Men, three Pounds, two thirds of a Shilling, &c.

Whereas, if nothing be connected with a Number, it is taken abſtractly or univerſally: Thus, three ſignifies only an aggregate of three Unites; let thoſe Unites be Men, Pounds, or what you pleaſe.

CONCRETION, the Act whereby ſoft Bodies are render'd hard: Or, it is an inſenſible Motion of the Particles of a Fluid or ſoft Body, whereby they come to a Conſiſtence.

The Word is uſed indifferently for *Induration*, *Condenſation*, *Congelation*, and *Coagulation*. See INDURATION, CONDENSATION, COAGULATION, &c.

CONCRETION is alſo uſed for the Coalition of ſeveral little Particles into a ſenſible Maſs, called a *Concrete*; by virtue of which Union, the Body acquires this or that Figure, and theſe or them Properties. See CONCRETE.

CONCUBINAGE, ſometimes expreſſes a criminal or prohibited Commerce between the two Sexes; in which Senſe it comprehends *Adultery*, *Inceſt*, and *ſimple Fornication*. See ADULTERY, INCEST, and FORNICATION.

In its more reſtrain'd Senſe, *Concubinage* is uſed for a Man and a Maid's cohabiting together in the way of Marriage; without having paſs'd the Ceremony thereof. See CONCUBINE.

*Concubinage* was antiently tolerated: The *Roman* Law calls it an allowed Cuſtom, *licita conſuetudo*. When this Expreſſion occurs in the Conſtitutions of the Chriſtian Emperors, it ſignifies what we now call a *Marriage in Conſcience*.

The *Concubinage* tolerated among the *Romans* in the Time of the Republick, and of the Heathen Emperors, was that between Perſons not capable of contracting Marriage together: Nor did they even refuſe to let Inheritances deſcend to Children ſprung from ſuch a tolerated Cohabitance.

*Concubinage* between ſuch Perſons they look'd on as a kind of Marriage, and even allow'd it ſeveral Privileges: but then this *Concubinage* was confin'd to a ſingle Perſon, and was of perpetual Obligation, as Marriage it ſelf.

*Hottoman* obſerves, that the *Roman* Laws had allow'd of *Concubinage* long before *Julius Cæſar* made that Law whereby every one was allow'd to marry as many Wives as he pleas'd. The Emperor *Valentinian*, *Socrates* tells us, allow'd every Man two. See MARRIAGE.

CONCUBINAGE is alſo uſed for a Marriage perform'd with leſs Solemnity than the formal Marriage; or a Marriage with a Woman of inferior Condition, and to whom the Husband does not convey his Rank or Quality.

*Cujas* obſerves, that the antient Laws allow'd a Man to eſpouſe, under the Title of *Concubines*, certain Perſons, ſuch as were eſteem'd unequal to 'em, on account of the want of ſome Qualities requiſite to ſuſtain the full Honour of Marriage. He adds, that tho *Concubinage* was beneath Marriage, both as to Dignity and to Civil Effects; yet was *Concubine* a reputable Title, very different from that of Miſtreſs among us.

The Commerce was eſteem'd ſo lawful, that the *Concubine* might be accuſed of Adultery in the ſame manner as a Wife. See CONCUBINE.

This kind of *Concubinage* is ſtill in uſe in ſome Countries, particularly *Germany*, under the Title of a Half-Marriage, or Marriage with the left Hand; alluding to the manner of its being contracted, *viz.* the Man's giving the Woman his left Hand inſtead of the right. See MARRIAGE.

This is a real Marriage, tho without Solemnity: the Parties are both bound for ever; tho the Woman be thus excluded from the common rights of a Wife, for want of Quality or Fortune.

CONCUBINE, a Woman whom a Perſon takes to cohabit with him, in the manner, and under the Character of a Wife, without being authoriz'd thereto by a legal Marriage. See CONCUBINAGE.

CONCUBINE is alſo uſed for a real, legitimate, and only Wife, diſtinguiſh'd by no other Circumſtance, but a Diſparity of Birth or Condition, between her and the Husband.

*Du Cange* obſerves, that one may gather from ſeveral Paſſages in the Epiſtles of the Popes, that they antiently allow'd of ſuch *Concubines*. The XVIIth Canon of the firſt Council of *Toledo*, declares, that he who with a faithful Wife, keeps a *Concubine*, is excommunicated; but that if the *Concubine* ſerv'd him as Wife, ſo that he had only one Woman, under the Title of *Concubine*, he ſhould not be rejected from Communion: Which ſhews that there were legitimate Wives under the Title of *Concubines*.

In effect, the *Roman* Laws did not allow a Man to eſpouſe whom he pleas'd; there was requir'd a kind of parity, or proportion between their Conditions: but a Woman of inferior Condition, who could not be eſpouſed as a Wife, might be kept as a *Concubine*; and the Laws allow'd of it, provided he had no other Wife.

The Children of *Concubines* were not reputed either Legitimate or Baſtards, but Natural Children, and were capable only of Donations.

They were deem'd to retain the low Rank of the Mother; and were on this ground unqualify'd for inheriting the Effects of the Father.

'Tis certain the Patriarchs had a great Number of Wives, and that theſe did not all hold the ſame Rank; ſome being ſubaltern to the principal Wife; which were what we call *Concubines*, or Half-Wives. The *Romans* prohibited a plurality of *Concubines*, and only had regard to the Children iſſuing from a ſingle *Concubine*, becauſe ſhe might become a legitimate Wife. *Solomon* had 700 Wives and 300 *Concubines*: The Emperor of *China* has ſometimes two or three thouſand *Concubines* in his Palace. *Q. Curtius* obſerves, that *Darius* was follow'd in his Army by 365 *Concubines*, all in the Equipage of Queens.

CONCUPISCENCE, among Divines, an irregular Deſire, Appetite, or Luſt after divers Things, inherent in human Nature ever ſince the Fall.

F. *Malebranch* defines *Concupiſcence*, on his Syſtem, to be a natural Effort, which the Traces or Impreſſions of the Brain make on the Mind, to attach it to ſenſible Things. The Dominion or Prevalency of *Concupiſcence*, according to him, is what we call *Original Sin*. See ORIGINAL *Sin*.

The Origin of *Concupiſcence* he aſcribes to thoſe Impreſſions made on the Brain of our firſt Parents at their fall; which are ſtill tranſmitted and continued on thoſe of their Children: For as Animals produce their like, and with like Traces in the Brain; (whence the ſame Sympathies and Antipathies in the ſame Kind; and whence the ſame Conduct on the ſame Occaſions:) So our firſt Parents, after their fall, receiv'd ſuch deep Traces in the Brain, by the Impreſſion of ſenſible Objects, that they might well be ſuppoſed to communicate them to their Children.

The Schoolmen uſe the Term *Concupiſcible Appetite*, for the Deſire we have of enjoying any Good; in oppoſition to the *Iraſcible Appetite*, whereby we eſchew what is Evil. See APPETITE.

CONDEMNATION, the Act of paſſing or pronouncing Sentence, or giving Judgment againſt a Man; whereby he is ſubjected to ſome Penalty or Puniſhment; either in reſpect of Fortune, Reputation, or Life. See SENTENCE, and PUNISHMENT.

CONDENSATION, the Act whereby a Body is render'd more denſe, compact, and heavy. See DENSITY, *&c.*

*Condenſation* conſiſts in bringing the Parts cloſer to each other, and increaſing their Contact: in oppoſition to *Rarefaction*; which renders the Body lighter and looſer, by ſetting the Parts further aſunder, and diminiſhing their Contact, and of conſequence their Coheſion. See RAREFACTION.

*Wolfius*, and ſome of the more accurate Writers, reſtrain the uſe of the Word *Condenſation* to the Action of Cold: what is done by external Application, they call *Compreſſion*. See COMPRESSION.

Air eaſily *condenſes*, either by Cold, or by Art: Water congeals, but never *condenſes*; can never be brought into a leſs ſpace, but will penetrate the moſt ſolid Body, even Gold, rather than loſe of its bulk. See WATER.

A Syrup *condenſes* in Ebullition.

It was found, in the Obſervatory of *France*, during the great Cold of the Year 1670, that the hardeſt Bodies, even Metals, Glaſs, and Marble it ſelf, were ſenſibly *condens'd* by the Cold, and became much harſher and more brittle than before; till their former State was retriev'd by the enſuing Thaw. See FROST.

Water alone ſeems to expand by Cold; inaſmuch as when congeal'd, the Ice takes up more ſpace than the Water before. But this muſt be rather owing to the Intromiſſion of ſome foreign Matter; as the nitrous Particles of the ambient Air, than to proper Rarefaction of the Water by the Cold. See COLD, and FREEZING.

The *Carteſians*, indeed, taking it for granted there is no Vacuum, deny any ſuch thing as proper *Condenſation*, or Rarefaction. According to them, when a Body takes up more ſpace than it did before, its Parts are diſtended by the Intruſion of a ſubtil Matter thro' its Pores: And when its bulk, again, is reduced into leſs Space, this is owing to the Extruſion or Egreſs of that Matter thro' the ſame Pores; by virtue whereof, the Parts of the Body, tho not the Parts of Matter, come nearer each other. For as Extenſion and Matter, according to them, are the ſame thing; a Body can never take up more or leſs place, any otherwiſe than by the Acceſſion or Diminution of Matter: And thus they conclude there is no Vacuum.

Now, that, in the Rarefactions of groſs Bodies, their Parts are diſtended by the acceſſion of Air, is frequently manifeſt; but this does not follow from the Plenitude of the World, but from the fluid and elaſtick Nature of Air; or from its Gravity and Preſſure. See MATTER, VACUUM, *&c.*

That there is ſuch a thing as *Condenſation*, without the Loſs of any Matter, is evident from *Galileus*'s Experiment: A Cock, being with a female Screw fitted to a hollow braſs Ball, or Cylinder, ſo as a Syringe, by means of a male Screw, may be applied to it; by working the Syringe, the Air will be forc'd into the Ball, and turning the Cock, will be retain'd; inſomuch, that upon the examining the Veſſel by the Balance, its weight will be found increas'd. If the Cock be re-turn'd, the Air will burſt out with violence, and the Ball ſink to its former weight.

From the Experiment it follows, firſt, that Air may be crouded into a leſs Volume and Bulk than it ordinarily takes up, and is therefore compreſſible. *For the Quantity of its Compreſſion*, ſee COMPRESSION.

2dly, That from the Recovery of its weight, juſt ſo much Air is expell'd as was injected; and that, therefore, compreſs'd Air returns to its primitive Expanſion, if the compreſſing Force be removed; and has therefore an elaſtick Force. See ELASTICITY.

3dly, That 'tis a certain Sign of Compreſſion, if, upon opening the Orifice of a Veſſel, any portion of Air be obſerv'd to fly out.

4thly, That ſince the Weight of the Veſſel is increas'd by injecting Air; the aerial Maſs muſt have a *Niſus* downwards, in Lines perpendicular to the Horizon; and is therefore heavy, and preſſes ſubject Bodies in Lines perpendicular to the Horizon; according to the Conditions of Gravity. See GRAVITY.

*Condens'd* Air, has Effects juſt oppoſite to thoſe of rarefy'd Air; Birds, *&c.* appear briſker and more lively therein than in the common Air, *&c.* See VACUUM, RAREFACTION, *&c.*

CONDENSER, a pneumatick Engine, whereby an unuſual quantity of Air may be crouded into a given Space.

They can throw in 3, 4, 5, or 10 Atmoſpheres into the *Condenſer*, *i. e.* twice, thrice, four, *&c.* times as much Air as there is in the ſame compaſs without the Engine. See CONDENSATION.

CONDERS, or *Huers*, in our Cuſtoms, are Perſons who ſtand on high Places near the Sea Coaſt, in time of Herring-fiſhing, to make Signs with Boughs, *&c.* to the Fiſhers which way the Shoal of Herrings paſſes: their Courſe being more diſcernable to thoſe who ſtand on high Cliffs, by means of a blue Colour they cauſe in the Water, than to thoſe aboard the Veſſels. See *Herring*-FISHERY.

They are alſo called *Balkers*, *Directors*, &c.

CONDITION, in the Civil Law, an Article of a Treaty, or Contract; or a Clauſe, Charge, or Obligation, ſtipulated in a Contract; or added in a Donation, Legacy, Teſtament, *&c.*

The Donee does not loſe his Donative, if it be charg'd with any diſhoneſt or impoſſible *Conditions*. The Doctors diſtinguiſh three Kinds of *Conditions*, under which a Legacy or Donation may be made: the *Caſual*, which depends merely on chance; the *Poteſtative*, which is abſolutely in our Power; and the *Mixt Condition*, which is both Caſual and Poteſtative together.

CONDITION, in Common Law, is a Manner, Quality, or Reſtriction, annex'd to an Act; qualifying or ſuſpending the ſame; and making it precarious and uncertain, whether or no it ſhall it take effect.

In a Leaſe there may be two ſorts of *Conditions*, *Condition collateral*, and *Condition annex'd to the Rent*.

*Collateral Condition* is that annex'd to a *collateral* or foreign Act; as, *v. g.* that the Leſſee ſhall not go to *Paris*.

*Condition* is alſo divided into *Condition in Deed*, and *Condition implied*.

*Condition in Deed*, is that knit and annex'd by expreſs Words to the Feoffement, Leaſe, or Grant, either in writing or without: As if I infeoffe a Man in Lands, reſerving a Rent to be paid at ſuch a Feaſt; *upon Condition*, if the Feoffee fail of payment, it ſhall be lawful for me to re-enter.

*Condition implied*, call'd alſo *Condition in Law*, is when a Man grants to another the Office of a Steward, Bailiff, Keeper of a Park, *&c.* for Life: tho there be no *Condition* expreſs'd in the Grant, yet the Law makes one covertly; which is, if the Grantee do not juſtly execute all Things belonging to his Office, it ſhall be lawful for the Granter to diſcharge him.

*A* CONDITION *without which, ſine qua non*, is uſed in Philoſophy, in ſpeaking of ſome Accident or Circumſtance, which is not eſſential to the Thing, but is yet neceſſary to its Production.

Thus, Light is a *Condition without which* a Man can't ſee Objects, tho he have good Eyes; and thus Fire, tho conſider'd in it ſelf it may burn without Wood; yet is its Preſence a *Condition without which* the Wood can't be burnt.

CONDITIONAL, ſomething not abſolute, but ſubject to Charges and *Conditions*. See CONDITION.

Thus, we ſay, *Conditional* Legacies are not due till the *Conditions* are accompliſh'd. The Right of Conqueſt does not ſuppoſe any *conditional* Conſent on the Part of the People.

The *Arminian* Divines maintain, that all the Decrees of God, relating to the Salvation and Damnation of Man are *conditional*; and the *Calviniſts*, that they are abſolute. See DECREE.

In Logick, we ſay, *Conditional Propoſitions* admit all kinds of Contradictions, *v. g.* If my *Tranſalpin* Mule flew; my *Tranſalpin* Mule had Wings.

CONDI-

CONDITIONAL *Conjunctions*, in Grammar, are thoſe which ſerve to make Propoſitions *Conditional*; as, *if*, *unleſs*, *provided that*, *in caſe of*, &c.

CONDITIONAL *Propoſitions*, are ſuch as conſiſt of two Parts, connected together by the *conditional* Particle *if*. See PROPOSITION.

Of theſe, the firſt, wherein the *Condition* lies, is call'd the *Antecedent*, and the other the *Conſequent*. See ANTECEDENT, and CONSEQUENT.

Thus, if the Soul be ſpiritual, it is immortal; is a *conditional Propoſition*, wherein, *if the Soul*, &c. is the Antecedent, and *is immortal* the Conſequent.

In Theology, we call the *Knowledge of Conditionals*, *i. e.* of *conditional Truths*, that Knowledge which God has of Things, conſider'd, not according to their Eſſence, their Nature, or their real Exiſtence; but under a certain Suppoſition, which imports a Condition never to be accompliſh'd.

Thus, when *David* aſk'd of God whether the People of *Ceila* would deliver him up to his Enemies; God, who knew what would befal in caſe *David* ſhould continue at *Ceila*, told him they wou'd deliver him: which he knew by the *Knowledge of Conditionals*.

Some of the Schoolmen deny that God has the *Knowledge of Conditionals*: The *Thomiſts* maintain, that God's Knowledge of *Conditionals* depends on a predeterminating Decree: Others deny it.

F. *Daniel* obſerves, that the Truths which compoſe the Knowledge of *Conditionals*, being very different from thoſe which compoſe the Knowledge of Intuition, and that of Underſtanding; a third Claſs muſt be added, and the Knowledge of God be divided into *Intuitive*, *Intellective*, and *Conditional*. See KNOWLEDGE.

CONDORMANTES, Religious Sectaries, whereof there have been two Kinds: The firſt aroſe in *Germany*, in the XIIIth Century; their Leader a Native of *Toleda*. They held their Meetings near *Cologne*; where they are ſaid to have worſhip'd an Image of Lucifer, and to have receiv'd Anſwers and Oracles from him: The Legend adds, that an Eccleſiaſtick having brought the Euchariſt to it, the Idol broke into a thouſand Pieces; which put an end to the Worſhip.

They had their Name from their lying all together, Men and Women, young and old.

The other Species of *Condormantes*, were a Branch of *Anabaptiſts* in the XVIth Century; ſo called, becauſe they lay, ſeveral of both Sexes, in the ſame Chamber; on pretence of Evangelical Charity.

*Safe*-CONDUCT. See SAFE-*Conduct*.

CONDUCTOR, a Surgeon's Inſtrument, which being put up into the Bladder, ſerves to *conduct* the Knife, in the Operation of cutting for the Stone. See LITHOTOMY.

CONDUIT, a Canal, or Pipe, for the Conveyance of Water, or other fluid Matter. See TUBE, *&c.*

In the Earth are ſeveral ſubterraneous *Conduits*, thro' which the Waters paſs that form the Sources of Springs; and thro' which alſo paſs the Vapours, which form Metals and Minerals. See SPRING, METAL, *&c.*

*Artificial Conduits* for Water, are made of Lead, Stone, caſt Iron, Pottery, *&c.* See PIPE, and PLUMBERY.

In the Province of *New Mexico*, there is ſaid to be a ſubterraneous *Conduit*, in form of a Grotto, extending 600 Miles in length. See DUCT.

CONDYLOMA, in Anatomy, the knitting of the Bones together in a Jonćture or Articulation; from the *Greek* κόνδυλος, *Jonćture*, *Joining*.

The Word is particularly uſed for the Jonctures of the Fingers, popularly called *Knuckles*. See FINGER.

CONDYLOMA, in Medicine, is a ſoft, painleſs Tumor, of the Oedematous kind, ariſing on the internal Coat of the *Anus*, and the Muſcles of that Part, or in the Neck of the Matrix. See OEDEMA.

By long continuance it grows fleſhy, and ſhooting out as from a Stalk, takes the Denomination *Ficus*. See FICUS.

*Condolymata* are frequently the Effects of Venereal Ailments, and, if neglected, ſometimes prove Cancerous: Their Cure depends on Mercurial Unctions, and proper Eſcharoticks to conſume them; tho Extirpation either by Ligature or Inciſion, if the Nature of the Part will admit, is the moſt expeditious. A Salivation is often neceſſary, in order to facilitate and compleat the Cure.

The Word comes from κονδυλος; in regard the *Condyloma* has uſually *Rugæ*, or Wrinkles, like the Joints of the Body.

CONDYLUS, a Name Anatomiſts give to a little round Eminence or Protuberance at the Extremity of a Bone. See BONE.

Such is that of the lower Jaw, receiv'd within the Cavity of the *Os Petroſum*. See MAXILLA.

When this Eminence is large, 'tis called the *Head* of the Bone. See BONE.

The Word comes from the *Greek* κονδυλος, *Article*, *Joint*.

CONE, in Geometry, a ſolid Body, having a Circle for its Baſis, and terminated a top in a Point, or Vertex. See Tab. *Conicks*, Fig. 2. ſee alſo SOLID.

The *Cone* is generated by the Motion of a right Line, K L, round an immoveable Point K, called its *Vertex*, along the Circumference of a Plane, called its *Baſe*, M N: or it may be conceiv'd as generated by the Revolution of the Triangle K L M, about the right Line K L, which is call'd the *Axis* of the *Cone*; and K M its *Latus*, or Side.

If the Axis be perpendicular to the Baſe, it is ſaid to be a *right Cone*; and if inclined, or oblique, a *ſcalenous Cone*.

*Scalenous Cones* are again divided into *obtuſe-angled* and *acute-angled*.

*Euclid* defines a *Cone* a ſolid Figure, whoſe Baſe is a Circle, as C D, (Fig. 3.) and is produced by the entire Revolution of the Plane of a right-angled Triangle C A B, about the perpendicular Leg A B.

If this Leg, or Axis, be greater than C B, half the Baſe; the Solid produced is an *acute-angled Cone*: If leſs, an *obtuſe-angled Cone*; and, if equal a *right-angled Cone*.

But, *Euclid*'s Definition only extends to a *right Cone*: that is, a *Cone* whoſe Axis is at right Angles to the Baſe; and not to *oblique* ones, whoſe Axis is not at right Angles to the Baſe.

For a more general and comprehenſive Deſcription of a *Cone*, which may take in both right and oblique ones, Suppoſe, an immoveable Point A, (Fig. 4.) without the Plane of the Circle B D E C; and ſuppoſe a right Line A E, drawn thro' that Point, and produced infinitely both ways, to be mov'd quite about the Circumference of the Circle; the two Superficies that will ariſe from this Motion, are each called *Conic Superficies*; but, taken conjunctly, are called *Superficies vertically oppoſite*, or only *oppoſite Superficies*: The immoveable Point A, common to both the Superficies, is called the *Vertex*; the Circle B D E C the *Baſe*; the right Line A C, drawn thro' the Vertex A and C, the *Centre of the Baſe*; and if infinitely produced, the *Axis*; and the Solid comprehended under the *conical* Superficies and the Baſe, is a *Cone*.

### *Properties of the* CONE.

1. *The Area or Surface of every right* Cone, *excluſive of its Baſe, is equal to a Triangle whoſe Baſe is the Periphery, and its height the ſide of the* Cone. See TRIANGLE.

Or, the curve Superficies of a right *Cone*, is to the Area of its circular Baſe, as A C, (Fig. 5.) the length of the Hypothenuſe of the right-angled Triangle deſcribing it, to C B, the Baſe of the ſame Triangle: that is, as the ſlant height of the *Cone*, to the Semidiameter of the Baſe.

Hence, the Surface of a right *Cone* is equal to a Sector of a Circle deſcrib'd on the ſide of the *Cone*, as a Radius, whoſe Arch is equal to the Periphery of the *Cone*; and has therefore the ſame Proportion to its Periphery which the Diameter of the Baſe has to the Sides of the *Cone*. See CIRCLE.

Coroll. *Hence we have a Method of deſcribing a Rete or Cage that ſhall juſt cover a* Cone.

Thus, with the Diameter of the Baſe A B, (Plate *Conics*, Fig. 6.) deſcribe a Circle, and produce the Diameter to C, till A C be equal to the ſide of the *Cone*. To 2 A C and A B, determin'd in Numbers, and 360°, find a fourth proportional; and with the Radius C A, on the Centre C, deſcribe an Arch D E equal to the Number of Degrees found: the Sector C D E with the Circles A B will be a Rete for the right *Cone*.

If, then, the ſide of a truncated *Cone* be transferr'd from A to F, and an Arch G H be deſcrib'd with the Radius G F; by finding a fourth proportional to 360°, to the number of Degrees of the Arch G H, and to F C; and thence determining the Diameter of the Circle I F, we ſhall have a Net or Cover for the truncated *Cone*.

For C D B A E is a Net for the entire *Cone*; C G F I H for the *Cone* cut off; therefore, D B E H for the truncated *Cone*.

2. *Cones and Pyramids, having the ſame Baſes and Altitudes, are equal to each other.*

Now, 'tis ſhewn, that every triangular Priſm may be divided into three equal Pyramids; and therefore, that a triangular Pyramid is one third of a Priſm, ſtanding on the ſame Baſe, and having the ſame Altitude.

Hence, ſince every multangular Body may be reſolv'd into triangular ones, and every Pyramid is a third part of a Priſm, having the ſame Baſe and Altitude; ſince a *Cone* may be eſteem'd an infinite-angular Pyramid, and a Cylinder an infinite-angular Priſm; a *Cone* is a third part of a Cylinder, which has the ſame Baſe and Altitude.

Coroll. *Hence we have a Method of meaſuring the Surface and Solidity of a Cone and a Cylinder.*

Thus, *for the Solidity*: find the Solidity of a Priſm, or Cylinder, having the ſame Baſe with a *Cone*, or Pyramid. See PRISM, and CYLINDER.

Which found, divide by 3: the Quotient will be the Solidity of a *Cone*, or a Pyramid.

Thus, *v. g.* if the Solidity of a Cylinder be 605592960, the Solidity of the *Cone* will be found 201864320.

*For the Surfaces*; that of a right *Cone* is had by multiplying the Periphery of the Baſe into the Side, and adding the Product to the Baſe.

Suppoſe, *e. gr.* the Diameter of the *Cone* N M, (Fig. 2.) 56, its Periphery will be 17584, and the Baſe 246176. Suppoſe the Altitude of the Axis K L, 246; ſince L M = $\frac{1}{2}$ N M = 28, and K M$^2$ = K L$^2$ + L M$^2$ = 60516 + 784 = 61300, K M = 2474. Conſequently, the Superficies of the *Cone* excluſive of the Baſe is 4310 = 816,0; and the whole together 45564576o.

*As to the Meaſure of the Surface, and Solidity of a truncated* Cone, A B C D, (Fig. 7.) Its Altitude C H, and the Diameter of its Baſis A B and C D being given, find their Circumferences. To the Square of the Altitude C H, add the Square of the Semi-difference of the Radii A H, and from the Aggregate extract the ſquare Root, which will give the ſide A C: The Semi-ſum of the Peripheries, multiplied by that ſide, gives the Superficies of the *truncated Cone*.

*To find the Solidity*: As the difference of the Semidiameter A H is to the Altitude of the truncated *Cone* C H, ſo is the greater Semidiameter A F, to the Altitude of the entire *Cone* F E. This found, ſubtract the Altitude of the truncated *Cone* G F, which will leave that of the *Cone* taken off E G.

Find the Solidity of the *Cone* C E D and A E B; ſubtract the other from this; the Remainder will be the Solidity of the truncated *Cone* A C D B.

*For the Sections of the* Cone, ſee Conic *Section*.

*For the Ratio of* Cones *and Cylinders*, ſee Cylinder.

*For the Centres of Gravity and of Oſcillation of a* Cone, ſee Centre.

Cones *of the higher Kinds*, are thoſe whoſe Baſes are Circles of the higher Kinds; and are generated by ſuppoſing a right Line fix'd in a Point, on high, tho conceiv'd capable of being extended more or leſs, on occaſion; and moved or carried round a Circle. See Circle.

Cone *of Rays*, in Opticks, includes all the ſeveral Rays which fall from any Point of an Object, on the Surface of a Glaſs. See Ray.

Cone, or Conn, in the Sea Language, ſignifies to guide or conduct a Ship in her right Courſe. See Course.

He that *Conns* her, ſtands aloft with a Compaſs before him, and gives the Word of Direction to the Man at Helm how to ſteer. See Steerage.

If the Ship go before the Wind, or, as they call it, betwixt the Sheets, the Word is either *Starboard*, or *Port the Helm*; according as the *Conder* would have the Helm put to the right or left ſide of the Ship, upon which the Ship always goes the contrary way.

If he ſays, *Helm a Mid-ſhip*, he would have the Ship go right before the Wind, or directly between her two Sheets.

If the Ship ſail by a Wind, or on a quarter Wind, the Word is, *Aloof*, *Keep your Luff*, *fall not off*, *Veer no more*, *Keep her to*, *Touch the Wind*, *Have a care of the Lee-Latch*: All which Expreſſions are of the ſame import, and imply that the Steerſman ſhould keep the Ship near the Wind.

On the contrary, if he would have her ſail more large, or more before the Wind, the Word is, *Eaſe the Helm*, *No near*, *Hear up*.

If he cries *Steady*, it means, keep her from going in and out, or making Yaws, (as they call it) howſoever ſhe ſails, whether large by a Wind: and when he would have her go juſt as ſhe does, he cries, *Keep her thus*, *thus*, &c.

CONFARREATION, a Ceremony among the antient *Romans*, uſed in the Marriage of Perſons whoſe Children were deſtin'd for the Honour of the Prieſthood.

*Confarreation* was the moſt ſacred of the three manners of contracting Marriage among that People; and conſiſted, according to *Servius*, in this, that the *Pontifex Maximus* and *Flamen Dialis* join'd and contracted the Man and Woman, by making them eat of the ſame Cake of ſalt Bread.

*Ulpian* ſays, it conſiſted in the offering up of pure wheaten Bread; rehearſing, withal, a certain *Formula*, in preſence of ten Witneſſes. *Dionyſius Halicarnaſſæus* adds, that the Husband and Wife did eat of the ſame wheaten Bread, and threw part on the Victims.

CONFECTION, in Pharmacy, a kind of compound Remedy of the Conſiſtence of a ſoft Electuary.

There are four Electuaries, which bear the Name of *Confections*; three whereof, in the Phyſicians Language, are *corroborative*, and one *purgative*.

The corroborative *Confections* are thoſe of *Alkermes*, of *Hyacinth*, and the *Anacardine*: The purgative one is the *Confection Hamech*.

The *Confection of Alkermes* has its Name from the principal Ingredient therein; which is the *Kermes*, or *Alkermes*, or Scarlet-Grain. See Kermes, &c.

The other Ingredients are Pearls, Muſk, Cinnamon, Ambergris, Leaf Gold, Juice of Pippins, and Roſe-Water.

It is rank'd among the beſt Cardiacks, and is frequently uſed for the Palpitation of the Heart, or Syncope; ſometimes in the Small-Pox and Meaſles.

The *Confection of Hyacinth* has nearly the ſame Virtues with that of Alkermes; but, beſide, is frequently uſed as an Aſtringent. It conſiſts of near triple the Number of Drugs; whereof the precious Stone, called the *Hyacinth*, is the Baſe: the chief of the reſt are red Coral, Bole Armoniac, *Terra Sigillata*, Myrrh, the Santals, burnt Hartſhorn, Camphire, Saphire, Emerald, Topaz, and moſt of the Ingredients of the *Confection* of Alkermes.

The *Anacardine Confection*, now diſuſed in *England*, is compos'd chiefly of *Anacardines*, whence the Name: the other Drugs are Long Pepper, Black Pepper, moſt Kinds of Myrobalans, Caſtoreum, &c. It is uſed to purge the Blood, and is proper in cold Diſeaſes.

The *Confection Hamech* takes its Name from that of its Inventor, an *Arabian* Phyſician. Its Ingredients are Polypody, Myrabolans, Agaric, Senna, Tamarinds, red Roſes, Manna, Colocynth, &c. It is applied as a Draſtic for the purging of the groſſer Humors and Viſcidities; 'tis alſo of ſome reputation in Vertigoes and Cancers.

CONFECTOR, among the antient *Romans*, a ſort of Gladiator, hired to fight in the Amphitheatre againſt Beaſts; thence alſo denominated *Beſtiarius*. See Gladiator.

The *Confectores* were thus called *à conficiendis beſtiis*, from their diſpatching and killing Beaſts. See Bestiarii.

The *Greeks* call'd 'em Παραβολοι, *q. d.* daring, raſh, deſperate; whence the *Latins* borrow'd the Appellations *Parabolani*, and *Parabolarii*. See Parabolani.

CONFECTS, or CONFITS, a Denomination given to Fruits, Flowers, Herbs, Roots, and Juices, when boil'd and prepar'd with Sugar, or Honey, to diſpoſe them to keep; or render 'em more agreeable to the Taſte.

The Antients only *confited* with Honey; at preſent, Sugar is more frequently us'd.

*Confects half ſugar'd*, are thoſe cover'd with a little Sugar, to leave more of the natural Taſte of the Fruit.

*Confects* are reduced to eight Kinds, *viz. Liquid Confects*, *Marmalades*, *Jellies*, *Paſts*, *Dry Confects*, *Conſerves*, *Candies*, and *Dragees*.

*Liquid Confects*, are thoſe whoſe Fruits, either whole, in pieces, in grains, or in cluſters, are *confited* in a fluid tranſparent Syrup, which takes its colour from that of the Fruits boil'd in it.

There is a good deal of Art in preparing theſe well; if they be too little ſugar'd they turn; and if too much, candy. The moſt eſteem'd of the liquid *Confects* are Plums, eſpecially thoſe call'd Mirabels, Barberries, Quinces, Apricots, Cherries, Orange-Flowers, little green Citrons from *Madera*, green Caſſia from the *Levant*, Myrabolans, Ginger, Cloves, &c.

*Marmalades* are a kind of Paſts, half liquid, made of the Pulp of Fruits, or Flowers, that have ſome conſiſtence; as Apricots, Apples, Pears, Plumbs, Quinces, Orange-Flowers, and Ginger. Marmalade of Ginger is brought from the *Indies* by way of *Holland*: 'tis eſteem'd good to revive the natural Heat in old Men. See Marmalade.

*Jellies* are Juices of ſeveral Fruits, wherein Sugar has been diſſolv'd, and the whole, by boiling, reduced into a pretty thick Conſiſtence; ſo as, upon cooling, to reſemble a kind of thin tranſparent Glue, or Size. *Jellies* are made of various Kinds of Fruits, eſpecially Goosberries, Apples, and Quinces: There are other Jellies, made of Fleſh, Fiſh, Hartſhorn, &c. but they are not to be kept, being very ſubject to corrupt. See Jelly.

*Paſts* are a kind of Marmalades, thicken'd to that degree by boiling, as to aſſume any form, when put into little Molds and dried in the Oven. The moſt in uſe are thoſe of Gooſberries, Quinces, Apples, Apricots, and Orange-Flowers: Thoſe of Piſtaches are much eſteem'd; thoſe of Ginger are brought from the *Indies*. See Past.

*Dry Confects*, are thoſe whoſe Fruits, after having been boiled in the Syrup, are taken out again, drain'd, and put to dry in an Oven. Dry *Confits* are made of ſo many kind of Fruits, that it would be hard to explain 'em all: the moſt conſiderable are Citron and Orange-Peel, Plumbs, Pears, Cherries, Apricots, &c.

*Conſerves* are a kind of dry *Confects*, made with Sugar, and Paſts of Flowers or Fruits, &c. the moſt ordinary are thoſe of Betony, Mallows, Roſemary; of the Capillary Herbs; of Orange-Flowers, Violets, Jeſſamin, Piſtacho's, Citrons and Roſes.

Note, The Apothecaries, under the Title of *Conſerves*, comprehend all kind of *Confects*, both dry and liquid; whether of Flowers, Fruits, Seeds, Roots, Barks, Leaves, prepared with Sugar or Honey, to preſerve, &c. See Conserve.

*Candies* are ordinarily entire Fruits, candied over with Sugar, after having been boil'd in the Syrup; which renders 'em like little Rocks, cryſtalliz'd; of various Figures and Colours, according to the Fruits incloſed within 'em.

The beſt Candies are brought from *Italy*. See Candy.

*Dragees*, or *Sugar-Plumbs*, are a kind of little dry *Confects*, made

made of ſmall Fruits, or Grains, little Pieces of Bark, or odoriferous and aromatick Roots, &c. incruſtated and cover'd over with a very hard Sugar, ordinarily very white.

Of theſe there are various Kinds, diſtinguiſh'd by various Names: Some made of Rasberries, others of Barberries, Melon-Seeds, Piſtachoes, Filberds, Almonds, Cinnamon, Orange-Peel, Corianders, Aniſeed, Carroways, &c.

CONFEDERACY, an Alliance or League between divers Princes and States. See LEAGUE and ALLIANCE.

CONFEDERACY, in Law, is when two or more Perſons combine to do any damage to another, or to commit any unlawful Act.

*Confederacy* is puniſhable, tho nothing be put in execution: but then it muſt have theſe four Incidents; 1ſt, that it be declared by ſome matter of Proſecution; as by making of Bonds or Promiſes to one another: 2d, that it be malicious, as for unjuſt Revenge: 3d, that it be falſe, *i. e.* againſt the Innocent: and laſtly, that it be out of Court, voluntary.

CONFESSION, in a Civil Senſe, a Declaration, or Acknowledgment of ſome Truth, tho againſt the Intereſt of the Party who makes it; whether it be in a Court of Juſtice or out of it.

'Tis a Maxim, that in Civil Matters the *Confeſſion* is never to be divided; but always taken entire. A Criminal is never condemn'd on his ſimple *Confeſſion*, without other collateral Proofs: nor is a voluntary extrajudicial *Confeſſion* admitted as any Proof. A Perſon is not admitted to accuſe himſelf, according to that Rule in Law, *non auditur perire volens*.

CONFESSION, in a Theological Senſe, is a Declaration of a Perſon's Sins, made to a Prieſt, in order to obtain Abſolution for the ſame. See ABSOLUTION.

The *Romiſh* Church makes *Confeſſion* a part of the Sacrament of Penance. See PENANCE.

*Confeſſion* was antiently publick and general, in the Face of the Church; tho the *Romaniſts* have ſince alter'd it, and made it private, and *auricular*.

*Confeſſions* are to be buried in eternal ſilence, under Pain of the laſt Puniſhment to the Prieſt who reveals 'em.

*Bellarmin*, *Valentia*, and ſome other *Romiſh* Controverſy-Writers, endeavour to trace up auricular *Confeſſion* to the earlieſt Ages; and thus contend for a Point given up by the reſt. M. *Fleury* owns that the firſt Inſtance of auricular *Confeſſion* he can meet with, is that of S. *Eloi*, who being grown old, made a *Confeſſion* to a Prieſt of all his Sins from his youth upwards.

The *Indians*, according to *Tavernier*, have a kind of *Confeſſion*: and the ſame may be ſaid of the *Jews*; theſe laſt have *Formulas* for thoſe who are not capable of making a Detail of all their Sins: The ordinary Form is in an alphabetical Order, each Letter containing a Capital Sin; this they uſually rehearſe on Mondays and Thurſdays, and on Faſt Days and other occaſions: ſome, every Night and Morning. When any of 'em find themſelves near Death, he ſends for ten Perſons, more or leſs, one of 'em a Rabbin; and in their Preſence recites the *Confeſſion*. See *Leon de Modena*.

CONFESSION *of Faith*, is a Liſt, or Enumeration and Declaration of the ſeveral Articles of Belief, in a Church. See FAITH.

The *Augsburg Confeſſion* is that of the *Lutherans*, preſented to *Charles* V. in 1530.

In the Council of *Rimini*, the Catholick Biſhops found fault with Dates in a *Confeſſion of Faith*, and obſerv'd that the Church never us'd to date 'em.

CONFESSIONAL, or CONFESSIONARY, in Church-Hiſtory, a Place in Churches, uſually under the main Altar, wherein were depoſited the Bodies of deceas'd Saints, Martyrs, and Confeſſors.

*Confeſſional* is alſo uſed in the *Romiſh* Church for a little Bench, or Deſk in the Church, where the Confeſſor takes the Confeſſions of the Penitent.

CONFESSOR, a Chriſtian who has made a ſolemn and reſolute Profeſſion of the Faith, and has endured Torments in its defence.

A ſimple Saint is call'd a *Confeſſor*, to diſtinguiſh him from the Roll of dignify'd Saints; as, *Apoſtles*, *Martyrs*, *Prelates*, &c. See SAINT, MARTYR, &c.

In Eccleſiaſtical Hiſtory, we frequently find the Word *Confeſſors* uſed for Martyrs: In after-times, it was confin'd to thoſe, who after having been tormented by the Tyrants, came to live and die in Peace. At laſt it was alſo uſed for thoſe, who after having lived a good Life, died under an Opinion of Sanctity.

According to S. *Cyprian*, he who preſented himſelf to Torture, or even Martyrdom, without being call'd thereto, was not call'd a *Confeſſor*, but a *Profeſſor*: And if any out of a want of Courage abandon'd his Country, and became a voluntary Exile for the ſake of the Faith, he was call'd *Extorris*.

CONFESSOR is alſo a Prieſt, in the *Romiſh* Church, who has a Power to hear Sinners in the Sacrament of Penance, and to give 'em Abſolution. The Church calls him in *Latin Confeſſarius*, to diſtinguiſh him from *Confeſſor*, which is a Name conſecrated to Saints.

The *Confeſſors* of the Kings of *France*, from the Time of *Henry* IV. have been conſtantly Jeſuits: before him, the *Dominicans* and *Cordeliers* ſhar'd the Office between them. The *Confeſſors* of the Houſe of *Auſtria* have alſo, ordinarily, been *Dominicans* and *Cordeliers*, but the laſt Emperors have all taken Jeſuits.

CONFIGURATION, the exterior Surface, that bounds Bodies, and gives 'em their particular Figure. See FIGURE.

That which makes the ſpecifick Difference between Bodies, is the different *Configuration*, and the different Situation of their Parts. See BODY.

A ſhort, or a long Sight, depend on the different *Configuration* of the Cryſtalline. See CRYSTALLINE, SIGHT, &c.

CONFIGURATION, or *Aſpect of the Planets*, in Aſtrology, is a certain Diſtance, or Situation of the Planets in the Zodiack, whereby they are ſuppos'd to aid, or oppoſe each other. See ASPECT.

CONFIRMATION, the Act of ratifying, or rendering a Title, Claim, Pretenſion, Report, or the like, more ſure and indiſputable.

CONFIRMATION, in Law, is particularly uſed for the ſtrengthning or homologating an Eſtate of one already in poſſeſſion of it by a voidable Title.

Thus, if a Biſhop grant his Chancellorſhip by Patent, for term of the Patentee's Life; this is no void Grant: yet is it voidable by the Biſhop's Death, except it be ſtrengthen'd by the Dean and Chapter's *Confirmation*.

CONFIRMATION, in Rhetorick, is the third Part of an Oration, wherein the Orator undertakes to prove, by Laws, Reaſons, Authorities, and other means, the Truth of the Propoſitions advanc'd in his Narration. See ORATION.

*Confirmation* is either *direct*, or *indirect*; the firſt *confirms* what the Orator has to urge for ſtrengthning his own Cauſe: the ſecond, properly call'd *Confutation*, refels the oppoſite arguing of the Adverſaries. See CONFUTATION.

The two Parts together are ſometimes placed under the Head or Title of *Contention*. See CONTENTION.

The *Confirmation* is, as it were, the Life and Soul of the Oration: In this the main ſtreſs of the Argumentation lies. Whence *Ariſtotle*, properly enough, calls it πίστις, *fides*.

CONFIRMATION, in Theology, the Ceremony of laying on of Hands, for the Conveyance of the Holy Ghoſt.

The Antients call'd it *Chriſma* and *Unction*; among them it was conferr'd immediately after Baptiſm; and was eſteem'd, in ſome meaſure, a part thereof: whence the Fathers call it the *Accompliſhment* of Baptiſm. See CHRISMA.

Among the *Greeks*, and throughout the *Eaſt*, it ſtill accompanies Baptiſm; but the *Romaniſts* make it a diſtinct independent Sacrament. See SACRAMENT.

It appears that *Confirmation* has all along been ordinarily conferr'd by the Biſhop: S. *Cyprian*, and moſt of the Fathers, ſpeak of it in ſuch Terms as imply it to have been confin'd to the Biſhop alone; and *Fleury*, and moſt of the Moderns, from them, lay it down as a diſtinguiſhing Character between the Offices of a Prieſt or Deacon, and that of a Biſhop, that the former might baptize, but the latter alone might anoint and confirm; by virtue of their Succeſſion to the Apoſtles, to whom it originally belong'd.

But from ſome Paſſages in S. *Gregory*, &c. others gather, that the Prieſts, on occaſion, had likewiſe the Power of *confirming*. 'Tis certain, among the *Greeks*, the Prieſt who baptizes alſo *confirms*: Which Practice, *Lucas Holſtenius* ſhews, is of ſo old a ſtanding among them, that it is now generally look'd on, as belonging properly and of right to the Prieſt: tho ſome will have it to have been borrow'd by them from the Biſhops.

Hence, ſome of the *Latin* Divines acknowledge that tho the Biſhop be the ordinary Miniſter of *Confirmation*, yet, that the Prieſt, in his abſence, may alſo confer it, in quality of Miniſter Extraordinary.

The Council of *Rouen*, held in 1072, decrees, that *Confirmation* be confer'd faſting, both on the ſide of the Giver and Receiver.

CONFISCATE, in Law, is applied to Goods forfeited to the Exchequer, or publick Treaſury. The Word is deriv'd from *Fiſcus*, a Hamper, Panier, or Baſket, wherein the Emperor's Money uſed to be kept. See FISC.

The Title to thoſe Goods is given by the Law to the King, when they are not claimed by any other. If a Man indicted for ſtealing the Goods of another, in which Caſe they become, in effect, the proper Goods of him indicted, be aſk'd about 'em in Court, and diſclaim 'em; he thereby loſes the Goods, tho he be afterwards acquitted of the Theft, and the King ſhall have 'em as *Confiſcate*: but otherwiſe, had he not diſclaim'd them. See CONFISCATION.

CONFISCATION, a Legal Adjudication of Goods or Effects to the *Fiſc*, or Treaſury. See TREASURY.

Thus, the Bodies and Effects of Criminals, Traitors, &c. and Merchandizes that are contraband, prohibited, or brought

aboard or aſhore without paying the Duties, when ſeiz'd, are *confiſcated*.

'Tis an Axiom in Law, that he who *confiſcates* the Body *confiſcates* the Effects, to the Profits of the King, or the Lord of the Fee; *i. e.* he who is condemn'd to loſe his Life, muſt alſo loſe his Effects: Yet the Widows of Criminals don't loſe their Dowries, nor their ſhare in the Goods of the Community, by the Forfeiture of their Husbands.

CONFLAGRATION, a general burning of a City, or other conſiderable Place: In this Senſe, we ſay, *Nero* procured the Chriſtians to be accus'd of the *Conflagration*, or burning of *Rome*, which was done by his own order.

But the Word is ordinarily reſtrain'd to that grand Period, or Cataſtrophe of our World; wherein the Face of Nature, is to be chang'd by a deluge of Fire, as it was antiently by that of Water. See DELUGE.

The antient *Pythagoreans*, *Platoniſts*, *Epicureans*, and *Stoicks* appear to have had a Notion of the *Conflagration*; tho whence they ſhould derive it, unleſs from the ſacred Books, is difficult to conceive, unleſs, perhaps, from the *Phœnicians*, who themſelves had it from the *Jews*.

*Seneca* ſays expreſly, *Tempus advenerit quo ſidera ſideribus incurrent, & omni flagrante materia uno igne, quicquid nunc ex diſpoſito lucet, ardebit.* This general Diſſolution the *Stoicks* call ἐκπύρωσιν, *Ecpyroſin*. Mention of the *Conflagration* is alſo made in the Books of the *Sibyls*, *Sophocles*, *Hyſtaſpes*, *Ovid*, *Lucan*, &c.

Dr. *Burnet*, after F. *Tachard* and others, relates that the *Siameſe* believe that the Earth will at laſt be parch'd up with heat; the Mountains melted down; the Earth's whole Surface reduc'd to a Level, and then conſum'd with Fire. And the *Bramans* of *Siam* do not only hold that the World ſhall be deſtroy'd by Fire; but alſo, that a new Earth ſhall be made out of the Cinders of the old.

Various are the Sentiments of Authors on the Subject of *Conflagration*; the Cauſe whence it is to ariſe, and the Effects it is to produce.

The Divines ordinarily account for it Metaphyſically; and will have it take its riſe from a Miracle, as a Fire from Heaven.

The Philoſophers contend for its being produced from Natural Cauſes; and will have it effected according to Laws of Mechanicks: Some think an Eruption of the central Fire ſufficient for the Purpoſe; and add, that this may be occaſion'd ſeveral ways, *viz.* either by having its Intenſion increas'd; which, again, may be effected either by being driven into leſs Space by the Incroachments of the ſuperficial Cold, or an increaſe of the Inflammability of the Fuel whereon it is fed: or by having the Reſiſtance of the impriſoning Earth weaken'd; which may happen, either from the Diminution of its Matter, by the Conſumption of its central Parts, or by weakening the Coheſion of the conſtituent Parts of the Maſs by the Exceſs or the Defect of Moiſture.

Others look for the Cauſe of the *Conflagration* in the Atmoſphere; and ſuppoſe, that ſome of the Meteors there engender'd in unuſual Quantities, and exploded with unuſual Vehemence, from the Concurrency of various Circumſtances; may effect it, without ſeeking any further.

The Aſtrologers account for it from a Conjunction of all the Planets in the Sign *Cancer*; as the Deluge, ſay they, was occaſion'd by their Conjunction in *Capricorn*.

Laſtly, Others have recourſe to a ſtill more effectual and flaming Machine, and conclude the World is to undergo its *Conflagration* from the near approach of a *Comet*, in its return from the Sun.

Thoſe wandering Bodies do indeed ſeem to menace us a little; being able, both by their tranſverſe Motion acroſs the Earth's way, by the hugeneſs of their Size, and the intenſe Fire wherewith they glow in their receſs from the Perihelion, to produce the moſt ſignal Changes and Revolutions in the Syſtem of Things. See COMET.

Mr. *Whiſton* has ſhewn, that they are extremely well fitted to produce the Phænomena of the Deluge; and has gone a good way towards proving, that the Comet of 1668 was the very Body to which that Event was owing; as being then in its approach toward the Sun, and its Atmoſphere crouded with the watery Vapours it had gather'd in thoſe inconceivably cold Regions, into which it had fled off in its Aphelion. See DELUGE.

This ſame Comet, Sir *I. Newton* has calculated, when in its Perihelion, *December* the 8th, was heated by the Vicinity of the Sun, to a degree 2000 times more hot than red hot Iron: he ſhews, likewiſe, that it would ſcarce be cool again in 50000 Years. See HEAT.

This ſame Comet, again, Dr. *Halley* obſerv'd *November* 11. was not above a Semidiameter of the Earth from the Earth's Way: So that had the Earth at that time been in that Part of its Orbit, ſomething very extraordinary might have been apprehended: but whether in the way of Fire or Water, may, perhaps, to ſome, leave room to doubt: To us 'tis none; it being ſcarce conceivable the Comet ſhould bring any vehement degree of heat, out of thoſe bleak Regions it comes from, whatever heat it might carry thither.

CONFLUENCE, CONFLUX, the Place where two Rivers join, and mix their Waters. See RIVER.

CONFLUENT, in Medicine, an Epithet added to that Species of Small-Pox wherein the Puſtules run into one another. See SMALL-POX.

CONFORMATION, the particular Texture and Conſiſtence of the Parts of a Body, and their diſpoſition to make a Whole: Thus, we ſay, Light of different Colours is reflected from Bodies according to their different *Conformation*; in oppoſition to the *Carteſians*, who ſay, that reflected Light becomes of different Colours, according to the different *Conformation* of the Bodies that reflect it. See LIGHT, and COLOUR.

Again, we ſay, that the *Conformation* of the Members of an Embrio, is not perfect enough to allow of a Diſſection.

CONFORMATION, in Medicine, is uſed to expreſs that Make and Conſtruction of the Body which is peculiar to every Individual: Hence, a *mala Conformatio* ſignifies ſome Fault in the firſt Rudiments; whereby a Perſon comes into the World crook'd, or with ſome of the *Viſcera*, or Cavities unduly proportion'd.

Thus, many are ſubject to incurable Aſthma's, from too ſmall a Capacity of the Thorax, and the like vitious *Conformations*.

CONFORMIST. } See NONCONFORMISTS, and NON-
CONFORMITY. } CONFORMITY.

*Occaſional* CONFORMITY. See OCCASIONAL *Conformity*.

CONFORMITY, in the Schools, is the *Congruency*, or Relation of Agreement between one thing and another: as between the Meaſure and the Thing meaſur'd; the Object and the Underſtanding; the Thing and the Conception; the Thing and the Diviſion thereof, &c. See CONGRUENCY.

CONFRONTATION, the Action of ſetting two People in preſence of each other, to diſcover the Truth of ſome Fact which they relate differently.

The Word is chiefly uſed in criminal Matters; where, the Witneſſes are *confronted* with the Accuſed; the Accuſed with one another, or the Witneſſes with one another.

*Confrontation* of Witneſſes, by the Civil Law, is not to be out of Priſon.

CONFUSION, in its Metaphyſical Senſe, is oppoſed to *Order*; in a Perturbation whereof, *Confuſion* conſiſts, *e. g.* when things prior in Nature do not precede; or poſterior do not follow, &c.

In a Logical Senſe, *Confuſion* is oppoſed to Diſtinctneſs, or Perſpicuity; and may happen, either in *Words*, as when miſconſtru'd or miſapply'd; or in Ideas, as when the Idea of any thing preſents ſomething along with it, which does not properly belong to that thing. See IDEA, and NOTION.

In a Phyſical Senſe, *Confuſion* is a ſort of Union, or Mixture by mere Contiguity. Such is that between Fluids of contrary Nature, as Oil and Vinegar, &c.

CONFUTATION, in Rhetorick, &c. a Part of an Oration, wherein the Orator ſeconds his own Arguments, and ſtrengthens his Cauſe, by refelling and deſtroying the oppoſite Arguments of the Antagoniſt. See ORATION.

*Confutation* makes a Branch of what we call the *Confirmation*. See CONFIRMATION.

The *Confirmation* and *Confutation* are ſometimes call'd the Head of *Contention*.

CONGE, a Licence, or Permiſſion, granted by a Superior to an Inferior, which gives him a Diſpenſation from ſome Duty to which he was before oblig'd.

Thus, we ſay, a Woman cannot obligate her ſelf without the *Conge* or Licence of her Husband: A Monk cannot go out of his Convent, without the *Conge* of his Superiors.

The Word is *French*: *Menage* derives it from the *Latin Commiatum*, uſed for *Commeatum*, and *Commeare*, often ſeen among antient Writers: The *Italians* ſay *Congedo*.

CONGE *d'Elire*, is the King's Permiſſion Royal to a Dean and Chapter, in time of a Vacancy, to chuſe a Biſhop. See CHAPTER, CANON, and COLLATION.

*Gwin* obſerves, that the King of *England*, as Sovereign Patron of all Biſhopricks and other Benefices, had antiently the free Appointment of all Eccleſiaſtical Dignities; inveſting, firſt, *per Baculum & Annulum*; See INVESTITURE.

And afterwards by Letters Patent.

But that, in proceſs of Time, he made the Election over to others, under certain Forms and Conditions: As, that they ſhould at every Vacancy, ere they choſe, demand of the King *Conge d'Elire*, *i. e.* leave to proceed to Election; and after Election to crave his Royal Aſſent, &c.

He adds, that King *John* was the firſt who granted this; which was afterwards confirm'd by Stat. *Weſtm.* and again *Articuli Cleri*.

CONGE, in Architecture, a Moulding either in form of a Quarter-Round, or of a Cavetto; which ſerves to ſeparate two Members from one another.

Such is that which joins the Shaft of the Column to the Cincture, call'd alſo *Apophyge*; which, in *Greek*, ſignifies *Flight*; the Column ſeeming to ariſe hence: By the *Latins* it

it is called *Scapus*, the Shaft of the Column. See APOPHYGE.

CONGELATION, *Freezing*, the Act of fixing the Fluidity of any Liquid, by Cold, or the Application of cold Bodies; in which it differs from Coagulation, which is produced by other Cauſes. See COLD, &c.

Thus, Salt-petre *congeals* Water in Summer. See ICE.

Metals and Minerals are ſaid to be Juices *congeal'd* in the Veins of the Earth, by their intermixing with one another, or with other heterogeneous Bodies, or by the Conſumption and Evaporation of their fineſt Parts. See METAL.

Rock Cryſtal is uſually held to be nothing but Water *congeal'd* in the Mountains. See CRYSTAL.

The Bites of Aſpicks are mortal, by the ſudden *Congelation* which they induce on the Blood, which ſtops its Circulation. See POISON, BLOOD, &c.

CONGERIES, a *Latin* Word, ſometimes uſed for a collection, or heap of ſeveral Particles, or Bodies, united into one Maſs.

CONGESTION, in Medicine, a Maſs, or Collection of Humours, crouded together, and harden'd, in any Part of the Body; and there forming preternatural Tumors. See TUMOR.

*Congeſtion* is effected by little and little; in which it differs from a Defluxion, which is more ſudden. See DEFLUXION.

CONGIARIUM, CONGIARY, among Medaliſts, a Gift, or Donative repreſented, on a Medal.

The *Congiary* was properly a Preſent made by the Emperors to the People of *Rome*: Thoſe made the Soldiers were not called *Congiaries*, but *Donatives*. See DONATIVE.

*Tiberius* gave a *Congiary* of three hundred Pieces of Money to each Citizen: *Caligula* twice gave three hundred Seſterces a head: *Nero*, whoſe *Congiaries* are the firſt that we find repreſented on Medals, gave four hundred. See SESTERCE.

The Legend on Medals repreſenting *Congiaries* is CONGIARIUM, or LIBERALITAS.

The Word comes from the Latin *Congius*; in regard, the firſt Preſents made the People of *Rome* conſiſted in Wine and Oil, which were meaſur'd out to them in *Congii*.

CONGIUS, an antient *Roman* Meaſure for things Liquid; containing ſix Sextaries; equal to about a Gallon and a Pint *Engliſh* Meaſure. See MEASURE.

The *Congius* was uſed in *England*, as appears by a Charter of King *Edmund* in 946. See SEXTARY.

CONGLOBATE *Glands*, in Anatomy, thoſe Glands whoſe Subſtance is not divided, but firm, entire, and continu'd; and their Surface ſmooth and uniform. See GLAND.

They are thus call'd, in oppoſition to *conglomerate* Glands. See CONGLOMERATE.

*Conglobate* Glands have each of 'em an Artery which brings 'em Blood, a Vein which carries it back again, after the proper Juice has been filtrated; and ſeveral excretory Ducts.

Some of 'em have a Cavity in the middle, with Lymphatick Veſſels, which diſcharge themſelves into a common Reſervoir, or Canal. See LYMPHATICKS.

CONGLOMERATE *Glands*, are thoſe which are compos'd of ſeveral little ones; or they are glandulous Bodies join'd together under the ſame common Membrane. See GLAND.

Such are the Salival Glands, Lachrymal Glands, the Pancreas, &c. which ſee.

The *Conglomerate Glands*, beſides their Arteries, Veins, and Nerves, are alſo each furniſh'd with an excretory Veſſel, ramify'd throughout their own Subſtance; by means whereof they diſcharge the Liquors they have filtrated into Reſervoirs.

CONGLUTINATION, the Act of *gluing*, or faſtening two Bodies together, by the Intervention of ſome third, whoſe Parts are unctuous and tenaceous, in the Nature of a Glue, *Gluten*; from whence the Word is form'd. See GLUE.

Thus, in the Animal Oeconomy, the Parts of the Body are ſaid to be *conglutinated* by means of their natural Moiſture; by the help of Bandages, as in ſeveral Caſes of Surgery; or by the Supply of viſcid Particles. In which laſt Acceptation, *Conglutination* differs little from Accretion, or Nutrition. See NUTRITION.

CONGREGATION, an Aſſembly of ſeveral Eccleſiaſticks, united ſo as to conſtitute a Body.

The Term is principally uſed for Aſſemblies of Cardinals, appointed by the Pope, and diſtributed into ſeveral Chambers, to diſcharge ſeveral Offices, or Juriſdictions, after the manner of our Offices, or Courts. See CARDINAL.

The firſt, the *Congregation* of the *Holy Office*, or the *Inquiſition*: The ſecond, the Juriſdiction over *Biſhops* and *Regulars*: The third that of *Councils*; this has Power to interpret the Council of *Trent*: The fourth that of *Cuſtoms*, *Ceremonies*, *Precedences*, *Canonizations*; call'd the *Congregation* of *Rites*: The fifth that of *St.* Peter's *Fabrick*; which takes cognizance of all Cauſes relating to Piety and Charity part whereof, is due to the Church of St. *Peter*: The ſixth that of *Waters*, *Rivers*, *Roads*: The ſeventh of *Fountains*, *Streets*: The eighth that of the *Index*, which examines the Books to be printed or corrected: The ninth that of the Government of the whole *State of the Church*: The tenth *de bono Regimine*; of which two laſt, the Cardinal-Nephew is chief. The eleventh that of *Money*: The twelfth that of *Biſhops*; wherein thoſe who are to be promoted to Biſhopricks in *Italy* are examin'd: This is held before the Pope. The thirteenth that of *Conſiſtorial Matters*; the Chief whereof is the Cardinal-Dean. There is alſo a *Congregation* of *Alms*, which takes care of what relates to the Subſiſtence of *Rome*, and the State of the Church.

CONGREGATION is alſo uſed for a Company or Society of Religious; canton'd out of this or that Order; and making, as it were, an inferior Order, or a Subdiviſion of the Order it ſelf. See ORDER, and MONASTERY.

Such are the *Congregations* of the *Oratory* of *Cluny*, &c. among the *Benedictins*. See ORATORY, CLUNY, BENEDICTINS, &c.

Alſo for Aſſemblies of pious Perſons, in manner of Fraternities; frequent among the Jeſuits, in honour of the Virgin, &c. See FRATERNITY.

CONGREGATION, in Phyſicks, is uſed by Dr. *Grew* for the leaſt degree of Mixture; or that wherein the Parts of the Mixt do not conſiſt with, or adhere to each other, but only touch in one Point. See MIXTURE.

That Author declares himſelf of Opinion, that the Particles of all Fluids only touch in this manner; or that their Coheſion only amounts to a *Congregation*. See FLUID, and COHESION.

CONGRESS, *Congreſſus*, is uſed for an Aſſembly of Commiſſioners, Deputies, Envoys, &c. from ſeveral Courts, meeting to concert Matters for their common Good.

The *Congreſs* at the *Hague*, which held during the Courſe of the War, terminated in 1697, by the Treaty of *Reſwick*, was compoſed of the Envoys of all the Princes in the Confederacy againſt *France*.

CONGRESS is alſo uſed in an obſcene Senſe, for an Eſſay, or Trial, made by Appointment of a Lay or a Spiritual Judge, in the Preſence of Chirurgeons and Matrons, to prove whether or no a Man be impotent; in order for the diſſolving of a Marriage. See IMPOTENCE.

Neither the Civil nor Canon Law make any mention of this Trial of Virility by *Congreſs*: It had its Origin in *France*, from the Boldneſs of a young Fellow, who in open Court, being hard preſs'd by his Wife, demanded the *Congreſs*. The Judge, ſurpriz'd with the Novelty of the Demand, found it could not be deny'd, as being the ſureſt Evidence the Caſe could admit of.

In time it became a Branch in their Juriſprudence, and was authoriz'd by Decrees and Arrets. It obtain'd for about the Space of 120 Years, and was annull'd by an Arret of Parliament in 1677, as being found precarious; ſome having fail'd under the Experiment out of mere Modeſty and Shame, which is found to have the ſame Effect with actual Impotency.

CONGRUITY, or CONGRUENCY, in the Schools, a Suitableneſs or Relation between Things; whereby we come at a Knowledge of what is to come to paſs therein.

The Syſtem of *Congruity* in Matters of Grace conſiſts in this; that God, who knows perfectly the Nature of Grace, and the Diſpoſitions of the Will in all the Circumſtances that ſhall befal a Man, gives Graces, wherewith, by Virtue of their *Congruity* with the Will of Man, conſider'd in thoſe Circumſtances, Man will always infallibly, but not neceſſarily, do, what God would have him do: In regard, the Will, in the Language of the *Congruiſts*, does always infallibly, tho voluntarily, follow what appears beſt.

CONGRUITY, in Geometry, is applied to Figures, Lines, &c. which exactly correſpond when laid over one another; as having the ſame Terms, or Bounds.

Thoſe Things between which there is a *Congruity*, are equal and ſimilar. See EQUALITY, and SIMILAR.

*Euclid*, and by his Example, moſt other Geometricians, demonſtrate all their Elements from the ſole Principle of *Congruency*: M. *Leibnitz*, and after him *Wolfius*, ſubſtitute the Notion of Similitude in lieu of that of *Congruency*. See SIMILITUDE.

CONGRUITY, in a lax Senſe, is alſo us'd to expreſs an Aptitude in ſome Bodies, to unite, or incorporate, from ſome ſimilitude or fitneſs of their Figures: as *Incongruity* denotes an Unfitneſs of their Surfaces for joining together.

Thus, Quickſilver will unite with Gold, and many other Metals, but will roll off from Wood, Stone, Glaſs, &c. and Water, which will wet Salt and diſſolve it, will ſlip off from Tallow without adhering to it; as alſo from a duſty Surface, and from the Feathers of Water-Fowl.

Two drops of Water, or of Mercury, will, on contact, immediately join and coaleſce; but Oil of Tartar, pour'd upon Quickſilver, and Spirit of Wine and Oil of Turpentine on that, and Air over all, will remain in the ſame Veſſel without any manner of Union, or Mixture with each other.

And the Cauſe hereof, is, that the Figures of ſome Bodies will not admit other Bodies near enough to be within their Spheres of Attraction, whence they cannot join, and cohere;

cohere; but where their Fitneſs of Figure will let them approach near enough to feel each others attractive Power, then they cloſe and hold together. See COHESION.

CONIC *Section*, a curve Line ariſing from the Section of a *Cone*. See CONE, and SECTION.

The *Conic Sections* are three, *viz.* the *Ellipſis*, *Hyperbola*, and *Parabola*; beſide the *Circle*, which tho it ariſe from the Section of a Cone by a Plane parallel to the Baſe, is not uſually conſider'd in that Capacity. See CIRCLE.

Tho the Equations, Geneſis, and many of the Properties, with the Ratio's, Dimenſions, *&c.* of each of the *Conic Sections*, be ſeparately given under their reſpective Articles in this Work, ELLIPSIS, HYPERBOLA, and PARABOLA; yet, to make the Doctrine of *Conics*, which is ſo conſiderable a Part of the higher Geometry, and of ſuch frequent uſe in the new Aſtronomy, the Motion of Projectiles, *&c.* more complete, we ſhall here put the whole in a new Light, and bring it together into one contracted view.

The common Interſection, then, of any Plane with a *Conic* Superficies, we obſerve, is called a *Conic Section*: And this Section varies, and acquires a different Name, according to the different Inclinations of the cutting Plane. For,

1ſt, If ABC, (Tab. *Conics*, Fig. 12.) be a Cone any how cut by a Plane ADE, thro' the Vertex; and again by another Plane parallel to the former Plane ADE: then, the Section BFGH, made in the Superficies thereof, is called an *Hyperbola*; the Plane of which being produced to meet the oppoſite Superficies, will make the Section *fhg*; which is likewiſe call'd an *Hyperbola*: and both theſe, conjunctly, are called *oppoſite Sections*.

2dly, If thro' the Vertex A of a Cone, a Plane DAE, paſſes without the Superfices thereof, that is, neither cutting nor touching it; and the Cone be again cut by a Plane parallel to the Plane DAE, the Section FHG made in the Superficies thereof, is called an *Ellipſis*.

3dly, If a Plane ADE touches the Superficies of a Cone, and the Cone be cut by a Plane, the Section is a *Parabola*.

But inſtead of conſidering theſe Curves as ariſing by Section of the Cone it ſelf, their Deſcription, Nature, and Properties, are found more eaſy of Conception, when conſider'd as drawn on a Plane: For which Reaſon, after *Des Cartes* and moſt of the later Writers, we ſhall rather chuſe to lay 'em down in this ſecond manner.

*Geneſis, or Conſtruction of the* Ellipſis.

To conceive the Production and Nature of an Ellipſis, then, let H and I, (Fig. 13.) be two Points, Nails, or little Pegs, about which put a Thread BHI, then putting your Finger to the Thread, and keeping the ſame always in an equal Tenſion, move the Finger round from the Point B, till you return to the ſame Point B again.

By this Revolution of the Point B, is deſcrib'd the curve Line, called the *Ellipſis*; which differs from the Delineation of a Circle only in this, That a Circle hath only one Centre, but the Ellipſis two; which, if the Points H and I ſhould come together, into one, the elliptic Curve would become perfectly *circular*.

But by how much greater the diſtance is betwixt thoſe Points, the ſame length of the Thread ſtill remaining; ſo much the farther is this Figure removed from the Circular. So that according to the diverſe Proportion of the Diſtance HI to the Thread BHI, or to the Line DK, which is equal to the ſame Thread, divers Species of Ellipſes will be deſcrib'd.

But then, if the Length of the Thread be increas'd or diminiſh'd, in the ſame Proportion as the Diſtance of the Points H and I is increaſed, or diminiſh'd, there will indeed be deſcrib'd divers Ellipſes, but all of the ſame Species: whence it appears, that Ellipſes are not only innumerable in Magnitude, but in Species alſo; and reach from a Circle to a right Line: For, as when the Points H and I meet together, the Ellipſis becomes a Circle; ſo, when they are removed from each other half the length of the Thread, it becomes a right Line, both ſides meeting together.

Whence alſo it appears, that every Species of Ellipſes is no leſs different from any other, than the Extremes of them are different on this ſide from a Circle, and on that from a right Line. It alſo appears from this Delineation, that if from a Point taken at pleaſure in the Elliptick Periphery, as the Point B, you draw two Lines to the two central Points; theſe two Lines BH and BI, taken together, will be equal to the greateſt Diameter DK; and conſequently, that the Sum of them is always given.

In the Ellipſis DFKR, (Fig.14.) the Point C is call'd the *Centre*, the Points H and I the *Foci*, DK the *greater Axis*, or *tranſverſe Axis*, or the *principal Diameter*, or *Latus tranſverſum*; and FR is the *leſſer Axis*: All the right Lines paſſing through the Centre C are *Diameters*; and all right Lines terminated at the Periphery, and divided into two equal Parts by any Diameter, are called *Ordinates*. That Part of every Diameter intercepted betwixt the Vertex thereof, and the Ordinate as M$\mu$, is called the *Abſciſs* thereof. A Line drawn from the Vertex of the Diameter, parallel to the Ordinates thereof, as $\nu\theta$, is a *Tangent* to the Ellipſis in that Vertex. A Diameter parallel to the Ordinates of another Diameter, is term'd a *Conjugate Diameter*; and the Ordinate to the greater Axis, which paſſeth thro' either of the *Foci*, as MA is termed the *principal Latus Rectum*, or the *Parameter* of the greater Axis. See CENTRE, FOCUS, AXIS, DIAMETER, ORDINATE, PARAMETER, *&c.*

*Properties of the* Ellipſis.

1. The Ordinates of every Diameter are demonſtrated to be parallel to each other.

2. The Ordinates of the Diameters or Axes are perpendicular to the Axes themſelves; but the Ordinates of the reſt of the Diameters are oblique to their Diameters; and in Ellipſes of divers Species, ſo much the more oblique, at equal Diſtance from the Axis, by how much the Proportion of the greater Axis to the leſſer is the greater; but in the ſame Ellipſis, ſo much the more oblique, by how much the more remote the Diameters are from the Axes.

3. There are only two Conjugate Diameters, which are equal each to other; *viz.* thoſe whoſe Vertices are at equal Diſtances from the Vertices of the Axes: Thus, the Diameter VT is conjugate, and equal to that other GM; where VF is equal to MF, and VD equal to MK.

4. The obtuſe Angle VCM of theſe two Diameters, which are conjugate and equal, is greater and the acute Angle VCG is leſs than every other Angle contain'd by the reſt of the Diameters that are conjugate to each other.

5. If the Lines $\mu$P and $\nu$B be Semi-ordinates to any Diameter, as MG, the Square of the Semi-ordinate $\mu$P is to the Square of the Semi-ordinate $\nu$B, as is the Rectangle M$\mu\times\mu$G, to the Rectangle M$\nu\times\nu$G; that is, $\mu Pq$ is to the Rectangle comprehended under the two Parts, into which the Diameter is divided by the Ordinate KP, as $\nu Bq$ is to the Rectangle under the Parts of the Diameter made by the Ordinate AB.

6. The Parameter, or *Latus Rectum* of any Diameter, is a third Proportional to that Diameter and its conjugate: That is, (in Fig. 1.) if the Diameter DK is to its conjugate Diameter EF, as EF is to Y; then Y is the Parameter or *Latus Rectum* of the Diameter DK: whence AM, an Ordinate to the Axis thro' the *Focus* is, as above, equal to the principal Parameter, and is a third Proportional after the greater and leſſer Axis.

7. The Square of every Semi-ordinate, as MI, (Fig. 13.) is leſs than the Rectangle made of any Abſciſs whatever; as IK drawn into the *Latus Rectum* of its own Diameter, or than IK$\times y$. And in the other Figure, P$\mu q$ is leſs than the Rectangle made of the Abſciſs M$\mu$, and the *Latus Rectum* of MG: From which *Defect*, or ἔλλειψις, this Section hath its Name.

8. If from any Point, as B in the firſt Figure, you draw the right Lines BH and BI to the *Foci*, the Sum of them will be equal to the greater Axis, as was ſhew'd above: And if the Angle IBH, comprehended by thoſe Lines, be biſected by the right Line *ba*, the Line A is perpendicular to the Tangent VB in the Point B; that is, to the Curve in the Point of Contact.

9. The Diſtance of a Body turn'd round in an Ellipſis, about the *Focus* H, from the ſame *Focus*, is the greateſt of all in the Point K; leaſt of all in the Point D; and mean in the Points E and F; and that mean Diſtance HF is equal to the greater Half-Axis DC or CK; as is manifeſt from the Production of the Ellipſis.

10. The vaniſhing Subtenſe of the Angle of Contact, parallel to the Diſtance from the *Focus*, at an equal perpendicular Interval from that diſtance, always remains given and unvaried in the ſame Ellipſis, yea, and in the ſame Parabola, and Hyperbola too. Thus if *d*Z be always given, *gd* alſo will always remain given in a diſtance infinitely ſmall.

11. The Area of the Ellipſis is to the Area of the Circle circumſcrib'd, as the leſſer Axis is to the greater; and ſo are all correſpondent Parts whatſoever among themſelves, as MIK, *m*IK: and the Ordinates to the greater Axis, as *m*I, are divided by the elliptick Periphery always in the ſame Proportion, ſo that MI is to *m*I always in the ſame Proportion; to wit, that of the leſſer Axis to the greater. And we are to reaſon in the ſame manner concerning a Circle inſcrib'd in an Ellipſis.

12. All Parallelograms deſcrib'd about the conjugate Diameters of the Ellipſis, and comprehending the Ellipſis, are equal. Thus, the Parallelogram $\alpha\beta\gamma\delta$ is equal to the other $\varepsilon\zeta\eta\vartheta$: And thus it is every where.

13. If a right Line always paſſing thro' one of the *Foci* be ſo moved, that the Elliptic Area deſcrib'd by the ſame, is proportional to the Time; the angular Motion of a right Line drawn from the other *Focus* to the former Line, will be almoſt equable: Thus, in the former Figure, if the angular Motion of the Line HB be ſo attemper'd, that the ſame being according to the reciprocal proportion of the Diſtance accelerated or retarded, doth deſcribe the Area DHB,

D H B, proportional to the Time; the angular Motion K I B about the other *Focus* I, will be almoſt proportional to the Time, and conſequently without any notable Acceleration or Retardation, and nearly equable; that is to ſay, where the Ellipſis doth not differ much from a Circle.

*Geneſis of a* Parabola.

Let D I be an infinite right Line, and I L another perpendicular to it; (Fig. 15.) Then, taking, in the Line D I, any Point, F, let the Line F I be biſſected in the Point T; and let there be taken two Threads joined together in the Point T, one T I, the other T F: and let a Pin fixed to the Threads in the Point T be moved to the right and left, in ſuch a manner, that when the Pin is in any other Poſition, as in P, the Thread T I which here becomes P L, be always perpendicular to I L; or, which is the ſame thing, parallel to D I, but equal to the Thread T F; which in this caſe becomes P F, ever paſſing thro' the Point F.

The Curve thus generated by the Pin, infinitely produced both ways, is a *Parabola*: in which *g* P *i* T *s* R *o*, is called the *Periphery*; I D the *Axis*, or *principal Diameter*; F the *Focus*; the Point T the *principal Vertex*.

An Ordinate to the Axis thro' the *Focus*, is equal to the principal *Latus Rectum*: all right Lines *n i*, parallel to the Axis, are Diameters, as dividing the Lines P and K T, which are parallel to the Tangents at their Vertices, into two equal Parts; and they are call'd Diameters belonging to the Vertices in which they terminate, as *i*.

*Properties of a* Parabola.

1. Every Diameter, or right Line parallel to the Axis, biſſects all the Lines within the Figure, which are parallel to the Tangent of the Vertical Point: which biſſected Lines are call'd *Ordinates*.

2. The Ordinates of the Axis are perpendicular thereto; but the Ordinates of the reſt of the Diameters are oblique to their Diameters; and ſo much the more oblique, by how much the Vertex of the Diameter is further remov'd from the principal Vertex of the Parabola.

3. The *Latus Rectum*, or Parameter to every Diameter, is a third Geometrical Proportional after any Abſciſs, and its Semi-ordinate; that is, if the *Latus Rectum* of the Diameter *i n*, or that of the Vertex *i*, be *y*; then, as the Abſciſs *i q* is to the Semi-ordinate *q k*, ſo is that Semi-ordinate *q k* to *y*.

4. The principal *Latus Rectum*, or that belonging to the Axis, is equal to the Ordinate *h i* paſſing thro' the *Focus*; and quadruple of F T, the leaſt Diſtance of the *Focus* from the principal Vertex.

5. The *Latus Rectum* belonging to any Vertex or Diameter, is alſo quadruple of the diſtance of that Vertex from the *Focus*: Thus, the *Latus Rectum* of the Vertex *s* is quadruple F *s*, and ſo it is every where.

6. The Diſtance of any Vertex or Point in the Parabola whatever, from the *Focus*, is equal to the leaſt Diſtance of the ſame from the Line L L, which is perpendicular to the Axis; and is diſtant from the principal Vertex, by a quarter of the principal *Latus Rectum*.

7. The Square of every Semi-ordinate, as *q k*, is equal to a Rectangle made of the *Latus Rectum*, of the ſame Vertex as Y, and *i q* the Abſciſs of the Diameter of the Vertex. And from the Equality of the παραβολη, or Compariſon in the Figure, betwixt the Rectangle and the Square of the Semi-ordinate, without any Exceſs or Defect, the Name of the Section is derived.

8. Since therefore the *Latus Rectum* in any Diameter is given, the Abſciſſes are as the Squares, or in the duplicate Ratio of the Semi-ordinates. Thus, T F is to T G as *i* F *q* is to *g* G *q*, and ſo likewiſe is *i q* to *i r*, as the Square of *q* T is to the Square of *r l*: and thus every where. From whence, alſo, when the Abſciſs of the Axis is equal to the principal *Latus Rectum*, or fourfold of the Diſtance from the Vertex, it will be equal to its Semi-ordinate.

9. The Angle, comprehended by any Tangent whatever, and a Line from the *Focus*, is equal to an Angle comprehended by the ſame Tangent, and any Diameter, or the Axis. Thus, the Angles I *i* F, and *p i n* are equal: whence, by the way, all the Rays of Light which fall on the Concave part of the Surface, produced by the Convolution of the Parabola about the Axis; which fall, we ſay, on the ſame Parallel to the Axis; will be reflected from a concave paraboloid Figure to the *Focus* F, and there beget a moſt vehement burning: from which Property, the Point F has the Name *Focus*, and has communicated the ſame to the like Points in the Hyperbola and Ellipſis. See Focus.

10. A Parabola, like an Hyperbola, does not incloſe a Space, but ſtretches out *in infinitum*.

11. A Parabolic Curve always tends more and more, *in infinitum*, to a Parallelism with its Diameters; but can never arrive thereat.

12. If two Parabolas be deſcribed, with the ſame Axis and Vertex; the Ordinates to the common Axis will be cut off by the Parabola in a given proportion; and the Areas comprehended by the ſame Axis and Ordinate, and the reſpective Curves, will be in the ſame given Proportion to one another.

13. Every Parabolic Space comprehended betwixt the Curve and the Ordinate, is to the Parallelogram made of the ſame Baſe and Altitude in a ſubſeſquialteral Proportion; that is, as 2 is to 3; and to the external Space in a duplicate Proportion, or as 2 is to 1: So *q i* T is to *q i* I, as 2 is to 3; and to *i* I T as 2 is to 1. From whence it becomes eaſy to ſquare the Parabola. See QUADRATURE.

14. The Diſtance between the Vertex of the Axis, and the Point where any Tangent interſects it, as I, is equal to the Abſciſs of the Axis which belongs to the Ordinate applied from the Point of Contact: So T I is equal to T F; and thus it is every where.

15. All Parabolas are like, or of the ſame Species; as are alſo all Circles.

16. If a Diameter be continu'd thro' the Point of Concourſe of two Tangents; this Diameter will biſſect the Line that joins the Contacts: which Property of the Parabola may likewiſe be underſtood of the Ellipſis, and Hyperbola.

*Geneſis of an* Hyperbola.

Suppoſe a Staff or Rule of a ſufficient Length, as I B, (Fig. 16.) let I and H be two central Points, anſwering to the *Foci* of an Ellipſis, in which let Nails be faſten'd; then, there being tied to one end of the Stick, a Rope or Thread as long again as the Stick, let the other end thereof be bor'd thro', and ſo fix'd upon the Nail I; and fix the other end of the Rope, by a Knot, upon the other Nail H: which done, laying your Finger on the Point B, where the Rope and Staff are tied together, let your Finger deſcend ſo long, till you have thereby applied, and joined the whole Rope to the Staff, or Rule; the Staff having been in the mean while, as it needs muſt, wheel'd about the Centre I. Thus, with the Point B, the Vertex of the Angle H B I, you will have deſcribed a Curve Line X B D, which is part of an Hyperbola; the whole conſiſting of that Curve which will reſult from the Curve X B D; which hath added to it the Curve Y D, the Produce of the Rule and Work, as turn'd to the other Side.

Further, transferring the Hole, or Knot of the Rope to the Nail I, and faſtening the End of the Staff on the Nail H, you will deſcribe another Hyperbola, vertically oppoſite to the former, which is altogether like and equal thereto. But if, without changing any thing in the Rule and Nails, you only apply a longer Rope; you will have an Hyperbola of a different Species from the former: and if you ſtill lengthen the Rope, you will have ſtill other ſorts of Hyperbolas; till at length, making the Rope double the length of the Rule, you will have the Hyperbola chang'd into a right Line.

But if you alter the Diſtance of the Nails, in the very ſame proportion in which you change the Difference betwixt the Length of the Rope, and that of the Stick; in this Caſe you will have Hyperbolas mark'd out, which are altogether of the ſame Species, but have their ſimilar Parts differing in magnitude.

Laſtly, If the length of the Rope and Rule be equally increas'd, their Difference in the mean while, and the Interval of the Nails remaining the ſame; not a different Hyperbola, either as to Species or Magnitude, will be deſcrib'd, nor any other than a greater Part of the ſame Hyperbola.

It muſt be own'd, however, that many Properties of an Hyperbola are better known from another manner of generating the Figure, which is as follows: Let L L and M M, (Fig. 17.) be infinite right Lines interſecting each other at any Angle whatever, in the Point C: from any Point whatever, as D or *e*, let D *c* D *d* be drawn parallel to the firſt Lines; or *e c*, *e d*; which, with the Lines firſt drawn, make the Parallelograms, as D *c* C *d*, or *e c* C *d*. Now, conceive two ſides of the Parallelogram, as D *c* D *d*, or *e c* *e d*, to be ſo moved, this way and that way, that they always keep the ſame Parallelism; and that at the ſame time the Areas always remain equal; that is to ſay, that D *c* and *e c* remain always parallel to M M; and D *d* or *e d* always parallel to L L; and that the Area of every Parallelogram be equal to every other, one Side being increas'd in the ſame Proportion wherein the other is diminiſh'd: By this means, the Point D or *e* will deſcribe a Curve-Line within the Angle comprehended by the firſt Lines; which is altogether the ſame as that deſcrib'd above. So alſo in the Angle vertically oppoſite will be deſcrib'd a like and equal Hyperbola; if the Parallelogram C *c* K *d*, equal to the former, be ſuppoſed to be moved, in the ſame manner as before: which Hyperbolas are, as was ſaid before, called oppoſite *Sections*, or oppoſite Hyperbola's.

In each Figure, D K is the *tranſverſe Axis*, or *tranſverſe Diameter of the Hyperbola of the oppoſite Sections*; the Point C the *Centre*; H and I the *Foci*. In the latter Figure, all the Lines paſſing thro' the Centre C, as *i b*, are *Diameters*: but if Hyperbola's be deſcrib'd in the following Angles, as

LCM, MCL, thoſe Sections will be called the *following Sections*: And if the Diſtance of the primary Vertex of thoſe Hyperbola's from the common Centre C, as C $\beta$, or C $\gamma$, be equal to the Semi-tangent K $\nu$ or K $\omega$; at the primary Vertex of theſe, thoſe Sections are called *conjugate Sections*: And all the Figures together are named the *Hyperbolic Syſtem*.

Further, *i h* the Ordinate to the Axis thro' the *Focus*, is equal to the principal *Latus Rectum*, or the Parameter of the Axis; and an indeterminate Diameter, which is parallel to the Ordinates of any determinate Diameter, is called the *conjugate Diameter* of the ſame.

*Properties of the* Hyperbola.

1. Any Diameter or right Line paſſing thro' the Centre, biſſects all its Ordinates; that is, all the right Lines terminated on both Sides by the Hyperbolic Periphery.

2. The Ordinates of the Axis are perpendicular to the ſame; but the Ordinates of the reſt of the Diameters are oblique to their Diameters: and ſo much the more in divers Species, at equal Diſtances from the Axis, by how much the Difference of the Angles including the Hyperbola's is the greater: and in the ſame Hyperbola, ſo much the more oblique, by how much the Diameters are remov'd from the Axis.

3. If any Lines, as H *h* and Q *s*, be Semiordinates to any Diameter whatever, as K D; the Square of the Semi-ordinate H *h*, is to the Square of the Semi-ordinate Q *s*, as the Rectangle K H D H is to the Rectangle K Q D Q: and ſo the Square *b n* is to the Square *a* K, as the Rectangle *i b h b* is to the Rectangle *i a h a*: And thus every where.

4. The *Latus Rectum*, or Parameter of every Diameter, is a third Geometrical Proportional, after the Diameter, and the Conjugate thereof, (or its Tangent, which is equal to it:) That is, if the *Latus Rectum* of any Diameter, as D K, be *y*; then, as the Diameter D K is to its conjugate $\beta\nu$, or its equal $\omega\nu$; ſo that Conjugate $\beta\gamma$, or that Tangent $\omega\nu$ is to *y*. And as the Ordinate to the Axis thro' the *Focus* is the principal *Latus Rectum*, ſo it is more than double of the leaſt Diſtance of the *Focus* from the Vertex.

5. The Square of any Semi-ordinate, as Q *r*, is greater than a Rectangle made of the Abſciſs D Q, drawn into the *Latus Rectum* of its own Diameter, as *y*: And, in like manner, the Square of the Semi-ordinate *b n*, is greater than the Rectangle of the Abſciſs *i b*, into the *Latus Rectum* of the Diameter *h i*. From which ὑπερβολή, or Exceſs, this Section hath its Name.

6. If from any Point of the Hyperbola, as B, (Fig. 16.) there be drawn right Lines to both the *Foci*, as B H, B I, the Difference of theſe Lines will be equal to the Axis D K; as will eaſily appear from the Delineation it ſelf.

7. If the Angle B H I, comprehended by Lines drawn to the *Foci*, be biſſected by the right Line E B, that right Line will be a Tangent to the Hyperbola in the Point B.

8. The right Lines L L and M M, which incloſe the Hyperbola's, are Aſymptotes of the Hyperbola's; that is, they are ſuch, to which, on both ſides, the Curve approaches nearer and nearer, but is never able to touch or coincide therewith.

9. The Species of Hyperbola's are various, according to the different Magnitude of the Angle L C M, comprehended by the Aſymptotes: but that Angle remaining the ſame, the Species of the Hyperbola remains unchang'd; but according to the different Magnitudes of the Parallelograms, by which Hyperbola's are deſcrib'd, Hyperbola's of divers Magnitudes do ariſe: If the Angle contained by the Aſymptotes be a right Angle, the Hyperbola is called *Equilateral*, or *Rectangular*; and the *Latus Rectum* of all the Diameters will (as in a Circle) be equal to their Diameters. And, laſtly, if Hyperbola's be deſcrib'd about the ſame Axis in divers Angles of the Aſymptotes, the right Lines perpendicular to the Axis will be cut off in a given Proportion by them all; and the Spaces likewiſe incloſed by the right Lines, or Ordinates, the produced Axis, and the Curves, will be in the ſame given Proportion.

10. If the Diſtances from the Centre of the Hyperbola, be taken in a Geometrical Proportion in one of the Aſymptotes, ſo that C I, C II, C III, C IV, C V, C VI, be in continued Geometrical Proportion; and if from thoſe Points there be drawn parallel to the other Aſymptote the Lines, I 1, II 2, III 3, IV 4, V 5, VI 6, the Spaces I 2, II 3, III 4, IV 5, V 6, will be equal among themſelves. And conſequently, if that Aſymptote C M be ſuppoſed to be divided, according to the Proportion of Numbers exceeding one another in a natural Series, thoſe Spaces will be proportional to the Logarithms of all thoſe Numbers.

*Common Properties of all the* Conic Sections.

From the whole it may be gather'd, 1ſt, That the *Conic Sections* are in themſelves a Syſtem of regular Curves, allied to each other; and that one is chang'd into another perpetually, when it is either increas'd, or diminiſh'd, *in infinitum*.

Thus, the *Circle*, the Curvature thereof being never ſo little increas'd or diminiſh'd, paſſeth into an *Ellipſis*; and the Ellipſis, its Centre going away infinitely, and the Curvature being by that means diminiſh'd, is turn'd into a *Parabola*: And when the Curvature of the Parabola is never ſo little chang'd, there ariſeth the firſt of the *Hyperbola's*; the Species whereof, which are innumerable, will all of them ariſe orderly by a gradual Diminution of the Curvature; until the Curvature vaniſhing away, the laſt Hyperbola ends in a *right Line* perpendicular to the Axis. From whence it is manifeſt, that every regular Curvature, like to that of a Circle, from the Circle it ſelf into a right Line, is a *conical* Curvature, and is diſtinguiſh'd with its peculiar Name, according to the divers Degrees of that Curvature.

2dly, That the *Latus Rectum* of a Circle, is double to the Diſtance from the Vertex: That all the *Latera Recta* of the Ellipſes, are in all Proportions to that diſtance betwixt the Double and Quadruple, according to their different Species: That the *Latus Rectum* of the Parabola is juſt quadruple to that Diſtance; and, laſtly, that the *Latera Recta* of Hyperbola's are in all Proportions beyond the Quadruple, according to their various Kinds.

3dly, That all Diameters in a Circle and Ellipſis, interſect one another in the Centre of the Figure within the Section: That in the Parabola they are all parallel amongſt themſelves, and to the Axis; but that in the Hyperbola they interſect one another, but this without the Section, in the common Centre of the oppoſite Sections.

4thly, That the Curvature, with reſpect to the *Focus*, in all theſe Figures, is increas'd or diminiſh'd proportionably.

CONICKS, that Part of the higher Geometry, or Geometry of Curves, which conſiders the *Cone*, and the ſeveral Curve Lines ariſing from the *Sections* thereof. See Geometry; ſee alſo Cone, and Conic *Section*.

CONIFEROUS, a Term applied to ſuch Trees, Shrubs, or Herbs, as bear a ſquammous or ſcaly Fruit, of a woody Subſtance, and a Figure approaching to that of a Cone; in which there are many Seeds, and when they are ripe, the ſeveral Cells or Partitions in the Cone gape or open, and the Seed drops out: Of this kind are the Firr, the Pine, Beach, and the like. See Plant.

CONJOINT, *Conjunctus*, is applied in the antient Muſick, in the ſame Senſe as *Conſonant*, to two or more Sounds. See Consonance.

Conjoint *Degrees*, are two Notes which immediately follow each other in the Order of the Scale; as *Ut* and *Re*. See Degree.

Conjoint *Tetrachords*, are two Tetrachords, where the ſame Chord is the higheſt of the one, and the loweſt of the other. See Chord.

CONISOR, or COGNISOR, in Law, is uſed in the paſſing of Fines, for him that acknowledges the Fine. See Fine. He to whom the Fine is acknowledg'd, is called the *Cognizee*.

CONJUGATE *Diameter*, or *Axis*, in Conicks, or the Sections of the Cone, is a right Line biſſecting the tranſverſe Diameter. See Diameter, and Conic *Section*.

Conjugate *Diameter*, or *Axis*, of an Ellipſis, is the ſhorteſt Diameter, or Axis, biſſecting the longer, or tranſverſe Axis. See Ellipsis.

'Tis demonſtrated, 1ſt, That in an Ellipſis, the *Conjugate* Axis is a Mean Proportional between the Tranſverſe Axis and the Parameter. 2dly, The Square of the *Conjugate* Axis, is to that of the Tranſverſe, as the Square of the Semi-ordinate is to the Rectangle of the Segments of the Axis. 3dly, That a right Line drawn from the *Focus* to the Extremity of the Half-*conjugate* Axis, is equal to the tranſverſe Semi-axis.

Hence, the *Conjugate* Axes being given, the *Focus* is eaſily determin'd. See Focus. And the Ellipſis thence eaſily deſcrib'd.

Conjugate *Axis*, in an Hyperbola, is a Mean Proportional between the tranſverſe Axis and the Parameter. See Hyperbola.

It is thus called, becauſe the *Conjugate Axis* of an Ellipſis has the ſame Ratio.

In an Hyperbola, the Square of the *Conjugate Axis*, is to the Square of the Tranſverſe, as the Parameter to the tranſverſe Axis. See Parameter.

CONJUGATION, in Grammar, an orderly Diſtribution of the ſeveral Parts of Verbs; or, a different Inflection of Verbs, made according to their different Moods and Tenſes, to diſtinguiſh 'em from each other. See Verb.

The *Latins* have four *Conjugations*, diſtinguiſh'd by the Terminations of their Infinitive, *are*, *ere*, *ere*, *ire*; and moſt of the *French* Grammarians reduce the *Conjugations* of their Language to the ſame Number; ending in *er*, *re*, *ir*, and *oir*.

In *Engliſh*, where the Verbs have ſcarce any natural Inflections, but derive all their Variations from additional Particles, Pronouns, &c. we have ſcarce any ſuch thing as ſtrict *Conjugations*. See Mood, Tense, &c.

CONJUGATION, in Anatomy, is underſtood of a *Pair* of Nerves; or two Nerves, ariſing together, and ſerving for the ſame Operation, Senſation, or Motion; there being ſcarce any Nerve without its fellow. See NERVE.

The antient Phyſicians only knew of Seven Pairs, or *Conjugations* of Nerves; the Moderns have diſcover'd thirty new ones. See PAIR.

CONJUNCTION, in Aſtronomy, the Concourſe, or Coition of two Stars, or Planets, in the ſame optical Point of the Heavens, *i. e.* in the ſame degree of the Zodiack. See PLANET, PHASIS, *&c.*

If the two Bodies concur both in the ſame degree of Longitude and Latitude, a right Line drawn from the Eye thro' the Centre of one of them, paſſes thro' that of the other; and the *Conjunction* is ſaid to be *true:* if the lower hides the upper, the *Conjunction* is ſaid to be *corporal*; and if the ſame right Line, continu'd back from the two Centres thro' the Eye, do alſo paſs thro' the Centre of the Earth, the *Conjunction* is ſaid to be *central:* If the Line paſs wide of the Centre of the Earth, the *Conjunction* is ſaid to be *Partile:* And if the Bodies don't meet preciſely in the ſame Degree, but are join'd with ſome Latitude, the *Conjunction* is ſaid to be *apparent.*

*Conjunctions* are alſo divided into *great* and *greateſt: Great Conjunctions* are thoſe which only happen at conſiderable diſtances of Time from each other; as that of *Saturn* and *Jupiter*, which happens every 20 Years. *Greateſt*, are thoſe which happen in Times very remote; as that *Conjunction* of the three ſuperior Planets, *Mars*, *Jupiter*, and *Saturn*, which only returns once in 500 Years. But this Diviſion has little place in Aſtronomy; being founded on the Notion of the particular Influences, *&c.* of the heavenly Bodies in ſuch and ſuch Aſpects.

The Aſtrologers maintain, that the Deluge was owing to a *Conjunction* of all the Planets in *Capricorn*; and that the Conflagration will be occaſion'd by their *Conjunctions* in *Cancer:* whence they pretend to foretel the End of the World.

The *Conjunction* is the firſt, or the principal of all the Aſpects; and that whence the other Aſpects commence; as Oppoſition is the laſt, where they terminate. See ASPECT, and OPPOSITION.

The Moon is in *conjunction* with the Sun every Month. See MOON.

Her *Conjunctions* and Oppoſitions are called by a general Name, *Syzygies.* See SYZYGY.

The Eclipſes of the Sun never happen, but when there is a *Conjunction* of the Sun and Moon in the Nodes of the Ecliptic. See ECLIPSE.

CONJUNCTION, in Grammar, a Particle which expreſſes a Relation, or Dependance between Words and Phraſes; thus called, becauſe ſerving to *join*, or connect the Parts, or Members of a Diſcourſe. See PARTICLE, SENTENCE, *&c.*

The *Conjunction* is the ſixth of the eight vulgar Parts of Speech. See SPEECH.

*Conjunctions* render the Diſcourſe more ſmooth and fluent; and ſerve very good Purpoſes in the Argumentative and Narrative Style: but muſt ever be omitted where a Perſon ſpeaks with Emotion; as only ſerving to weaken and enervate it. *Boileau* obſerves, that nothing gives more heat and motion to a Diſcourſe, than to drop the *Conjunctions* or Copulatives: A Paſſion, adds he, embarraſs'd with *Conjunctions* and uſeleſs Particles, loſes all the Fire and Vehemence it would get in its progreſs.

*Conjunctions* are of various Kinds: *Copulative* or *conjunctive Conjunctions*, expreſs a Relation of Union, or Compariſon between Things; as *and*, *et*; *only*, *tantum*; *as much as*, *tantum quantum*; *in the ſame manner as*, *quemadmodum*; *neither more nor leſs*, *tantundem*; *inaſmuch as*, *quippe*; *not only*, *but alſo*, *&c. non modo*, *ſed etiam*, &c. See COPULATIVE.

*Conjunctions Disjunctive*, expreſs a Relation of Separation or Diviſion; as, *neither*, *nec*; *whether*, *ſive*; *or*, *vel.* See DISJUNCTIVE.

*Conjunctions Adverſative*, expreſs a Reſtriction, or Contrariety; as, *but*, *ſed*; *nevertheleſs*, *tamen*; *altho*, *etiamſi*; *far from*, *adeo non.*

*Conjunctions Conditional*, are, *if*, *ſi*; *if not*, *ſi minus*; *on Condition that*, *ea lege ut*; *provided that*, *dummodo*; *in caſe of*, *ſi vero.* See CONDITION.

*Conjunctions Continuative*, expreſs a Succeſſion, or Continuation of the Diſcourſe; as, *in effect*, *reipſa*; *even*, *etiam*; *whatever it be*, *quicquid ſit.*

*Conjunctions Cauſal*, ſhew that the Reaſon of ſomething is brought: *for*, *nam*; *becauſe*, *quia*; *ſeeing*, *quippe*; *the rather ſince*, *eo magis quo*; *inaſmuch as*, *quatenus.* See CAUSAL.

*Conjunctions Dubitative*, expreſs ſome Doubt, or Suſpenſion of Opinion; as, *if*; *that is to ſay*, *if*, &c.

*Exceptive Conjunctions*, are, *if it ben't*, *niſi ſi*; *unleſs that*, *niſi*, &c.

*Conjunctions Concluſive*, denote a Conſequence drawn; as, *for which reaſon*, *quapropter*; *but then*, *atqui*; *of conſequence*, *ideoque*; *ſo that*, *ita ut*, &c.

CONJUNCTIVA *Tunica*, or *Adnata*, in Anatomy, the firſt Coat, or Membrane of the Eye; ſo called, becauſe it incloſes all the reſt; or becauſe it faſtens the Eye in its Orbit. See ADNATA, and EYE.

It is very ſmooth, when ſound, of a white Colour, like Alabaſter; whence it is ordinarily called the *White of the Eye.*

It is ſaid to have its riſe from the *Pericranium*, and to be only a Continuation or Extenſion thereof. See PERICRANIUM.

The *Conjunctiva* does not inveſt the Globe of the Eye intire; but terminates at the Edge of the *Sclerotica.* See SCLEROTICA.

It is cover'd with a Million of fine Veins and Arteries, which never appear, unleſs when the Motion of the Blood is more than uſually rapid, as in Opthalmia's; or when the Veſſels are more full and diſtended than ordinary, as in Drunkenneſs.

CONJURATION, Magick Words Characters or Ceremonies, whereby evil Spirits, Tempeſts, *&c.* are ſuppos'd to be rais'd, and driven away. See MAGICK.

The *Romiſh* Prieſts pretend to expel Devils, by preparing Holy Water in a particular manner, and ſprinkling it over the poſſeſs'd, with a number of *Conjurations*, and Exorciſms. See EXORCISM.

Some Authors make the difference between *Conjuration* and *Witchcraft* to conſiſt in this; that the former effects its Ends by Prayers, and Invocation of God's Name, *&c.* to compel the Devil to do what is deſir'd; ſo that the *Conjurer* is ſuppos'd to be at War with the Devil, and that evil Spirit to act merely out of Conſtraint: whereas the latter attains its End by an immediate Application to the Devil himſelf; and the Devil's Complaiſance is ſuppos'd to be the Conſequence of ſome Agreement between 'em: So that the Devil and the Witch have a good Underſtanding between 'em. See WITCHCRAFT.

Both theſe, again, differ from *Enchantment* and *Sorcery*; in that theſe latter operate ſecretly, and ſlowly, by Spells, Charms, *&c.* without ever calling on the Devil, or having any conference with him. See CHARM, *&c.*

CONNECTION, or CONNEXION, *binding*, a Relation whereby one thing adheres to, or depends on another.

*Euclid*'s Propoſitions have ſuch a *Connection* among themſelves, that the latter cannot ſubſiſt without the former.

Philoſophers are at a loſs as to the Manner of the *Connection* between Soul and Body; between Cauſes and Effects *&c.* See SOUL, CAUSE, *&c.*

CONNECTION, in the Drama, conſiſts in the joining of the ſeveral Scenes together. See SCENE.

When the Scenes ſucceed one another immediately; and are ſo joined as that the Stage is never left empty, the *Connection* is ſaid to be obſerv'd. See TRAGEDY, *&c.*

CONNIVENTES *Valvulæ*, in Anatomy, are Wrinkles, or Corrugations in the inner Coat or Membrane of the two large Inteſtines, the *Jejunum* and *Ileum.* See INTESTINES.

They are formed as the *Rugæ* of the Stomach, *viz.* by the inner Coats being larger than the outer. See STOMACH.

Theſe Folds, or Corrugations, ſome Anatomiſts imagine in ſome meaſure to do the Office of Valves; by ſtraitning the Paſſages, and conſequently impeding the Motion of their Contents: by which means, the Lacteals have the more time to imbibe the Chyle. See LACTEAL, CHYLE, DIGESTION, *&c.*

CONNOISSEUR, a *French* Term, of late uſed in *Engliſh:* It literally denotes a Perſon well ſeen and verſed in any thing; being form'd of the Verb *Connoitre*, *to know*, *underſtand.*

Hence it comes to be uſed in our Language for a *Critick*, or a Perſon who is a thorow Judge or Maſter in any way; particularly in Matters of Painting, *&c.*

CONOID, CONOIDES, in Geometry, a ſolid Body, reſembling a *Cone*, except in this, that inſtead of a perfect Circle for its Baſe, it has an Ellipſis, or ſome other Curve approaching thereto. See CONE.

The *Conoid* is produced by the entire Circumvolution of a Conic Section around its Axis; and according to the Denomination of the Section from whence it is generated, it is differently denominated: If, *v. g.* the Solid be produced by the Motion of a Parabola, it is called a *Parabolic Conoid*; if by that of an Hyperbola, an *Hyperbolic Conoid*; and an *Elliptic Conoid*, or a *Spheroid*, when produced by the Rotation of an Ellipſis, around one of its Axes. See HYPERBOLIC, PARABOLIC, *&c.*

The famous Solid of the leaſt Reſiſtance, Sir *I. Newton*, M. *Fatio*, and the Marquis *de l'Hopital*, have demonſtrated to be a *Conoid*, whoſe Reſiſtance is only one 67th Part of that of the great Baſe.

Anatomiſts alſo give the Name *Conoid*, or *Conarium*, to a Gland found in the third Ventricle of the Brain, reſembling a Pine-

a Pine-Apple; whence M. *Des Cartes* call'd it *Pinealis*, and fix'd there the Seat of the Rational Soul. See PINEAL *Gland*.

CONSANGUINITY, the Relation of *Kinſhip*, between Perſons of the ſame Blood, or iſſu'd from the ſame Root.

Marriage is prohibited by the Church to the fourth Degree of *Conſanguinity*, incluſive; but by the Law of Nature, *Conſanguinity* is no obſtacle to Marriage, except in a direct Line. See AGNATION, and COGNATION.

*Conſanguinity* terminates in the ſixth or ſeventh Degree, excepting in the Succeſſion to the Crown; in which Caſe, *Conſanguinity* is continu'd to infinity.

The Civilians call *Fratres Conſanguinei*, thoſe born of the ſame Father; in oppoſition to *Fratres Uterini*, who are only born of the ſame Mother. See BROTHER.

According to the common Opinion, theſe, and Brothers-German were not allow'd to complain of an inofficious Teſtament, *i. e.* of being diſinherited without cauſe; excepting from the Turpitude of the Perſon appointed Heir in their place. But *Van Water* endeavours to ſhew the contrary; and urges, that the *Conſanguinei* might plead Inofficioſity, even where the Teſtament was not made in favour of a Perſon incapable.

CONSCIENCE, *Conſciouſneſs*, in Ethicks, a ſecret Teſtimony or Judgment of the Soul, whereby it gives its Approbation to Things it does that are naturally good; and reproaches it ſelf for thoſe that are evil. See JUDGMENT, GOOD, and EVIL.

Or, *Conſcience* is a Dictate of the underſtanding Power, concerning Moral Actions; conſider'd as it has the Knowledge of Laws; and conſequently as conſcious of what is to be done, or not done to the Legiſlator. See MORAL.

In the more popular Senſe of the Word, *Conſcience* is a Judgment, either true or falſe, whereby we pronounce a Thing good or evil. This makes what we call the *Inner Forum*, or Tribunal.

Some Divines maintain, that *Conſcience* is infallible; and hold it to be that immutable Law whereby God will judge Men: They deny that the Underſtanding can be the Source of Errors, and lay 'em all at the door of the Will. A Man, ſay they, may ſecure himſelf from Error, by forbearing to judge of Things till he have a clear and diſtinct Perception thereof. See LIBERTY.

Some of the Schoolmen diſtinguiſh between the *Conſcience* antecedent to an Action, and that conſequent thereto: The firſt, called *antecedent Conſcience*, determines what is good and what evil; and conſequently preſcribes what is to be done, and what avoided. *Conſequent Conſcience* is a kind of ſecondary or reflex Judgment, with regard to the Goodneſs, &c. of Things already done or committed.

The *Rule of Conſcience* is the Will of God; ſo far as it is made known to us, either by the Light of Nature, or by that of Revelation. See REASON, and REVELATION.

With reſpect to the Knowledge of this Rule, *Conſcience* is ſaid to be *rightly informed*, or *miſtaken*; *firm*, or *wavering*, or *ſcrupulous*, &c.

With reſpect to the Conformity of our Actions to this Rule when known, *Conſcience* is ſaid to be *good*, or *evil*, &c.

The Philoſophers, in lieu of the Word *Conſcience*, which ſeems appropriated to Theological Matters, ordinarily uſe that of *Conſciouſneſs*; whereby they mean an inner Sentiment of a Thing, whereof one may have a clear and diſtinct Notion. In this Senſe, they ſay, that we don't know our own Soul, nor are aſſur'd of the Exiſtence of our own Thoughts, otherwiſe than by *Self-conſciouſneſs*. See EXISTENCE.

CONSCRIPT, CONSCRIPTUS, a popular Term in the *Roman* Hiſtory, uſed in ſpeaking of Senators, who were called *Conſcript*-Fathers, *Patres-Conſcripti*; in regard their Names were written in the Regiſter, or Catalogue of the Senate. See SENATOR.

*Plutarch* obſerves, that thoſe only were properly denominated *Conſcript*, whoſe Names were added to thoſe of the Antients; as being new-created from among the Knights. See FATHER.

CONSECRATION, the Action of converting or ſetting apart any profane or common Thing, to a pious Purpoſe; with the Ceremonies, Prayers, Benedictions, &c. uſed therein.

*Conſecration* is the reverſe of Sacrilege; which conſiſts in the perverting a Thing ſet apart for a pious Purpoſe, to a profane and popular one. See SACRILEGE.

Thus, we ſay, the Biſhop *conſecrates* a Church, or a Chalice; the Pope *conſecrates* Medals, *Agnus Dei's*, Loaves, Cakes, *i. e.* he grants Indulgences to thoſe who bear 'em about 'em with Devotion.

The *Conſecration* or Dedication of a Church, is an Epiſcopal Ceremony, conſiſting in a great number of Benedictions, with Aſperſions, and Unctions of Chriſm, &c. on the Walls, both withinſide and without. See CHURCH.

The Cuſtom of *conſecrating* Perſons, Temples, Altars, Veſtments, Utenſils, &c. is very antient; and all the Ceremonies thereof are preſcrib'd under the Old Law. Under the New Law, when thoſe *Conſecrations* relate to Men, and are perform'd by appointment of Jeſus Chriſt, they are properly call'd *Ordinations*; excepting thoſe perform'd to Biſhops and Kings, which ſtill retain the Name of *Conſecration*. See BISHOP, and KING; ſee alſo ORDINATION.

Thoſe which only conſiſt in a Ceremony inſtituted by the Church, are more properly call'd *Benedictions*. See BENEDICTION.

When they regard Churches, Altars, Veſſels, &c. they are ſtrictly called *Dedications*. See DEDICATION.

CONSECRATION is particularly uſed for the Benediction of the Elements in the Euchariſt.

The *Romaniſts* define it the Converſion of the Bread and Wine into the real Body and Blood of Jeſus Chriſt; and that this is the Sentiment of that Church, is evident from the Prieſt's elevating the Hoſt immediately after *Conſecration*, for the People to adore it.

There is a great Controverſy between the *Latin* and *Greek* Churches, touching the Words of *Conſecration*: The common Opinion among the *Romaniſts*, agreeable to St. *Thomas* and the Schoolmen, is, that the *Conſecration* of the Bread and Wine conſiſts in theſe Words, *This is my Body*; *this is my Blood*. The *Greeks*, on the contrary, attribute the Change of the Elements to a certain Prayer which they call the *Invocation of the Holy Ghoſt*, rehears'd after the Words *This is my Body*, *this is my Blood*, which the *Greeks* maintain are only neceſſary in the Proceſs of the *Conſecration*, as they contain the Hiſtory of the Inſtitution; not as they contribute any thing to the Change.

CONSECRATION, among Medaliſts, is the Ceremony of the *Apotheoſis* of the Emperors; or their Tranſlation into Heaven, and Reception among the Gods: The Proceſs whereof, ſee under APOTHEOSIS.

On Medals, the *Apotheoſis* is thus repreſented; On one ſide is the Emperor's Head, crown'd with Laurel, ſometimes veil'd, and the Inſcription gives him the Title of *Divus*: on the Reverſe is a Temple, a *Buſtum*, an Altar, or an Eagle taking its Flight towards Heaven, either from off the Altar, or from a *Cippus*: At other times the Emperor is ſeen in the Air, bore up by the Eagle; the Inſcription always, *Conſecratio*.

Theſe are the uſual Symbols: yet on the Reverſe of that of *Antoninus*, is the *Anthonine* Column.

In the *Apotheoſis* of Empreſſes, inſtead of an Eagle is a Peacock.

For the Honours render'd them after Death, they were explain'd by the Words *Conſecratio*, *Pater*, *Divus*, and *Deus*. Sometimes, around the Temple or Altar are put, *Memoria felix*, or *Memoriæ Æternæ*: For Princeſſes, *Æternitas*, and *Sideribus recepta*; on the Side of the Head *Dea*, or Θέα.

CONSECTARY, is a Propoſition that follows, or is deduced from ſome preceding Definitions, *Lemmata*, Axioms, Concluſions, or the like: Whence ſome chuſe rather to call it a *Conſequence*; and others a *Corollary*, &c. See COROLLARY, and CONSEQUENT.

CONSECUTIVELY, CONSECUTIVE, in the School-Philoſophy, is ſometimes uſed in oppoſition to *antecedently*, and ſometimes to *effectively*, or *cauſally*.

Thus, ſay the Schoolmen, the Corruption of one Thing is the Generation of another, not *effectively*, but *conſecutively*: That is, ſince Matter cannot be without Form, 'tis neceſſary that the Generation of one Thing follow upon the Corruption of another.

CONSENT *of Parts*, in the Animal Oeconomy, a certain Agreement, or Sympathy, by means whereof, when one Part is immediately affected, another, at a diſtance, becomes affected in like manner. See SYMPATHY.

This mutual Accord, or *Conſent*, is doubtleſs effected by the Commerce of the Nerves, and their artful Diſtribution and Ramification throughout the Body. See NERVE.

The Effect is ſo ſenſible, as even to come under the Phyſicians cognizance: Thus, the Stone in the Bladder, by vellicating the Fibres there, will pain and draw them ſo much into Spaſms, as to affect the Coats of the Bowels in the ſame manner, by the Intermediation of nervous Threads, and make a Cholic there; and alſo extend their Twitches ſometimes ſo far as the Stomach, and occaſion grievous Vomitings: The Remedy therefore, in ſuch Caſes, is to regard the Part originally affected, how remote and grievous ſoever may be the Conſequences and Symptoms in other Places.

The fifth Conjugation of Nerves branch'd to the Parts of the Eye, the Ear, thoſe of the Mouth, Cheeks, *Præcordia*, and Parts adjacent, &c. are ſuppos'd by Naturaliſts to be the Inſtruments of that extraordinary *Conſent* between thoſe Parts. Hence it is, that a ſavoury Thing ſeen or ſmelt, excites the Appetite, and affects the Glands and Parts of the Mouth; that a ſhameful thing ſeen or heard, affects the Cheeks with Bluſhes; on the contrary, if it pleaſe, it affects the *Præcordia*, and excites the Muſcles of the Mouth and Face to laughter; if it grieve, affects the Glands of the Eyes, ſo as to occaſion

occaſion Tears, and the Muſcles of the Face, putting them into an Aſpect of crying.

Dr. *Willis*, quoted by the Reverend Mr. *Derham*, imputes the Pleaſure of Kiſſing, and its Effects in exciting Love, and even Lechery, to this Pair of Nerves; which being branch'd both to the Lips and the genital Parts, when the former are affected, an Irritation is occaſion'd in the latter: And Dr. *Sachs* judges it to be from the Conſent of the *Labia Uteri* with the *Labia Oris*, that a breeding Lady, frighted with the ſight of ſcabby Lips, had Puſtules of the like kind broke out in the *Labia Uteri*.

CONSEQUENCE, in Philoſophy, the Concluſion of a Reaſoning, or Argument. See CONCLUSION.

Thus, we ſay, two Premiſes of a Syllogiſm being granted, the *Conſequence* muſt alſo be granted. See SYLLOGISM.

In a more reſtrain'd Signification, *Conſequence* is uſed for the Relation or Connection between two Propoſitions, whereof one follows, or is infer'd from the other. Thus: *It is an Animal, and therefore perceives.*

CONSEQUENT, the laſt Propoſition of an Argument; being ſomething deduced or gather'd from a preceding Argumentation.

An *Enthymeme* only contains two Propoſitions, the *Antecedent*, and *Sequela*, or *Conſequent*: If the Antecedent be abſurd, the *Conſequent* muſt be ſo too. See ENTHYMEME.

CONSEQUENT, in a more preciſe Senſe, is uſed for the Propoſition which contains the Concluſion, conſider'd in it ſelf, and without any regard to the Antecedent: In which Senſe, the *Conſequent* may be true, tho the Conſequence be falſe.

For Inſtance; Virtue ought to be rewarded; therefore Temperance is a Virtue. See PROPOSITION.

CONSEQUENT *of a Ratio*, in Arithmetick, the latter of two Terms of a Ratio; or that to which the Antecedent is refer'd. See RATIO, and PROPORTION.

Thus, in *a* : *b*, or *a* to *b*, *b* is the *Conſequent*, *a* the Antecedent. See ANTECEDENT.

CONSERVATOR, an Officer eſtabliſh'd for the Security and Preſervation of the Privileges granted ſome Cities, Bodies, and Communities; or, a Perſon who has a Commiſſion to judge of and decide the Differences ariſing among them.

In moſt Catholick Univerſities, there are two *Conſervators*; the *Conſervator* of Royal Privileges, or thoſe granted by Kings; and the *Conſervator* of Apoſtolical Privileges, or thoſe granted by the Pope.

The firſt takes cognizance of Perſonal and Mixt Cauſes, between the Regents, Students, &c. and the latter of Spiritual Matters between Eccleſiaſticks.

Antiently, there were appointed *Conſervators* of Treaties of Peace between Princes; which *Conſervators* became Judges of the Infractions made on a Treaty, and were charg'd with the procuring Satisfaction to be made. Theſe were uſually Feudatories of each Prince.

In lieu of *Conſervators*, Princes now have recourſe to other indifferent Princes to Guarantee the Treaties. See GUARANTEE.

CONSERVATOR *of the Peace*, in our antient Cuſtoms, was a Perſon who had an eſpecial Charge, by Virtue of his Office, to ſee the King's Peace kept. See PEACE.

Till the Erection of Juſtices of the Peace by King *Edward* III. there were ſeveral Perſons, who by Common Law were intereſted in keeping the ſame: Some having that Charge as incident to other Offices; others ſimply, or of itſelf, called *Cuſtodes*, or *Conſervators of the Peace*. See JUSTICE.

The Chamberlain of *Cheſter* is ſtill a *Conſervator* in that County; and Petty Conſtables are, by the Common Law, *Conſervators*, &c. in the firſt Senſe.

CONSERVATORY, in Gardening. See GREEN-*Houſe*.

CONSERVE, in Pharmacy and Confectionry, a dry Confect, or Form of Medicine, or Food, contrived to preſerve the Flowers, Herbs, Roots, Peels, or Fruits of ſeveral Simples, as near as poſſible to what they were when freſh gather'd; and to give them an agreeable Taſte. See CONFECT.

*Conſerves* are made by beating up the Thing to be preſerv'd with a quantity of Sugar; *viz.* a triple Quantity thereof to thoſe which are moſt moiſt and corruptible, and a double Quantity to ſuch as are leaſt ſo.

The Phyſicians, under the Name of *Conſerves*, commonly comprehend all Kinds of Confects of Flowers, Fruits, Roots, Seeds, Barks, &c. both liquid and dry.

Thus, *e. gr.* to make *Conſerve* of Roſes, Roſemary Flowers, Sage Flowers, or the like; they pound 'em in a ſtone Mortar, and when pounded, put to 'em fine Sugar, in a Glaſs cloſe ſtop'd up.

For Fruits, as Currants, &c. they ſet 'em on the Fire to make 'em caſt their Juice, then drain and ſtrain 'em, and thicken what comes from 'em over the Fire, and add it to the Sugar. See PRESERVE.

CONSIDERATION, in Law, the Material Cauſe, the *quid pro quo* of any Contract, and without which no Contract binds. See CONTRACT, PACT, &c.

This *Conſideration* is either *expreſs'd*; as if a Man bargain to give ten Guineas for a Horſe: or *implied*, when the Law it ſelf enforces a *Conſideration*; as if a Man coming into an Inn, take Meat, Drink, and Lodging for himſelf and Horſe, the Law preſumes he intends to pay for 'em, tho there be no expreſs Contract between him and his Hoſt; and if he diſcharge not the Houſe, the Hoſt may ſtop his Horſe. See ASSUMPSIT.

CONSIGNMENT, or CONSIGNATION, the depoſiting any Sum in Money, Bills, Papers, or Commodities, in ſure Hands; either by order of a Court of Juſtice, in order to their being deliver'd to the Perſons to whom they are adjudg'd; or voluntarily, in order to their being remitted to the Perſons they belong to, or ſent to the Places they are deſtin'd for.

CONSIGNMENT *of Goods*, is the delivering or making them over: Thus, Goods are ſaid to be *conſign'd* to a Factor, when they are ſent to him to be ſold, &c. or when a Factor ſends back Goods to his Principal, they are ſaid to be *conſign'd* to him. See FACTOR.

CONSISTENCE, a State of Reſt, wherein Things capable of Growth, or Decreaſe, continue for ſome time at a ſtand, without either.

The Term is particularly uſed with regard to Trees, for the Age beyond which they don't grow, and yet at which they don't decline. See TREE, &c.

The *Conſiſtence* of the Age of an Oak, is from 50 to 160 Years: Some, however, hold that their *Conſiſtence* only commences from 100 Years; aſſerting that they grow till that time, and that they continue in that State of Perfection to 200 Years of Age.

Thus we diſtinguiſh three States or Stages of a Tree; its Growth, *Conſiſtence*, and Return: and theſe are common to all Trees, even Fruit-Trees.

CONSISTENCE, in Phyſicks, is that State of a Body wherein its component Particles are ſo connected, or intangled among themſelves, as not to ſeparate or recede from each other. See COHESION.

*Conſiſtence* only differs from Continuity in this, that *Conſiſtence* implies a regard to Motion or Reſt, which Continuity does not; it being ſufficient to denominate a thing continuous, that its Parts are contiguous to each other. See CONTINUITY.

*Conſiſtence* is particularly uſed with regard to Bodies, conſider'd as they are more ſoft or more hard, more liquid or more dry. See HARDNESS, SOFTNESS, FLUIDITY, &c.

Thus, Forms of Medicine, as Electuaries, Lambatives, Bolus's, Syrups, Unguents, &c. differ chiefly in *Conſiſtence*. See ELECTUARY, &c.

CONSISTENT *Bodies*, is a Term much uſed by Mr. *Boyle* for ſuch as we ordinarily call *firm*, or *fix'd Bodies*; in oppoſition to *fluid* ones. See FIXEDNESS, FIRMNESS, and FLUIDITY.

That Author has a particular Eſſay of the *Atmoſphere of Conſiſtent Bodies*; wherein he ſhews, that all, even ſolid, hard, ponderous, and fix'd Bodies, do exhale or emit *Effluvia* to a certain Space all around 'em. See ATMOSPHERE, EFFLUVIA, &c.

CONSISTORY, or *the Roman* CONSISTORY, is the College of Cardinals; or the Pope's Senate, and Council. See POPE.

The *Conſiſtory* is the firſt Court or Tribunal of *Rome*: it never meets but when the Pope pleaſes to convoke it: The Pope preſides in it in Perſon, mounted on a magnificent Throne, and habited in his *Pontificalia*; on the right are the Cardinal-Biſhops and Prieſts, and on the left the Cardinal-Deacons. See CARDINAL.

The Place where it is held, is a large Hall in the Apoſtolical Palace, where Princes and Embaſſadors of Kings are receiv'd.

The other Prelates, Protonotaries, Auditors of the *Rota*, and other Officers, are ſeated on the Steps of the Throne; the Courtiers ſit on the Ground; Embaſſadors on the right, and *Conſiſtorial* and Fiſcal Advocates behind the Cardinals.

Here are pleaded Judiciary Cauſes before the Pope.

Beſides the publick *Conſiſtory*, there is alſo a private one, held in a retir'd Chamber, call'd the Chamber of *Papegay*; the Pope's Throne here being only rais'd two Steps high.

No Body is here admitted but the Cardinals, whoſe Opinions are collected, and call'd *Sentences*. Here are firſt propos'd and paſs'd all Bulls for Biſhopricks, Abbies, &c. See BULL.

Hence, *Conſiſtorial* Biſhopricks and Abbies, are ſaid to be *Conſiſtorial Benefices*; in regard, they muſt be propos'd in the *Conſiſtory*, the Annates be paid to the Pope, and his Bulls taken. See BENEFICE.

Antiently they were Elective; but by the *Concordate*, which aboliſhes Elections, they are appointed to be collated by the Pope alone, on the Nomination of the Prince. See CONCORDATE.

*Du Cange* derives the Word from *Conſiſtorium*, i. e. *locus ubi conſiſtitur*; uſed chiefly for a Veſtibule, Gallery, or

Antichamber, where the Courtiers wait for Admiſſion; and called *à conſiſtente multitudine*.

Consistory was alſo the Name of a Court under *Conſtantine*, where he ſat in Perſon, and heard Cauſes: The Members of this Court were called *Comites*. See Count.

Consistory is alſo uſed among the Reform'd, for a Council or Aſſembly of Miniſters and Elders, to regulate their Affairs, their Diſcipline and Policy.

Consistory, or *Court Chriſtian*, in the *Engliſh* Laws, is a Council-houſe of Eccleſiaſtical Perſons, or the Place of Juſtice in the Eccleſiaſtical or Spiritual Court. See Court.

Every Archbiſhop and Biſhop has a *Conſiſtory* Court, held before his Chancellor or Commiſſary, either in his Cathedral, in ſome Chapel, Iſle, or Portico belonging thereto; or in ſome other convenient Place of his Dioceſs, for Eccleſiaſtical Cauſes. See Ecclesiastical.

The Spiritual Court was antiently, in the Time of the *Saxons*, joined with the County or Hundred Court: And the Original of the *Conſiſtory* Court, as divided from thoſe Courts, is found in a Law of the Conqueror, quoted by my Lord *Coke*.

CONSOLATION, is one of the Places in Rhetorick, whereby the Orator endeavours to abate and moderate the Grief or Concern of another. See Place.

In *Conſolation*, a principal Regard is to be had to the Circumſtances and Relations of the Parties. *Scaliger* conſiders this exceeding well, *de Arte Poetica*: 'The *Conſolator*, ſays he, is either a Superior, an Inferior, or an Equal; 'with regard, either to Preferment, Honour, Wealth, Wiſdom, or Age. Now, *Livia* is to comfort *Ovid*, in a manner very different from that wherein *Ovid* comforts *Livia*. 'Thus, as to Authority, a Father and Son, *Cicero* and *Pompey* are to conduct their *Conſolations* very differently: So 'in Wealth; as if a Client ſhould undertake to comfort *Craſſus*: In Wiſdom; as when *Seneca* comforts *Polybius* 'and his Mother: As to Age, there needs no Examples.

'A Superior may interpoſe his Authority, and may 'even chide: A wiſe Man may even diſpute; Sentences 'will become him. An Inferior is to ſhew Reſpect and Affection, and own he had this from ſome wiſe or learned 'Perſon: An Equal to appeal to their common Friendſhip.'

CONSOLE, in Architecture, or Joinery, a Part or Member projecting in manner of a Bracket, or Shoulder-piece; ſerving to ſupport a Corniche, Buſt, Vaſe, Beam, little Vault, &c. See Projecture.

Theſe are alſo, upon occaſion, call'd *Mutules*, *Modillions*, &c. according to their form. See Mutule, &c.

Some of them are ſtriated, or fluted; others in form of Cartouches; others have Drops, in the manner of Triglyphs.

*Vitruvius* calls all thoſe of Gates *Prothyrides*; of *Thyra*, Gate. See Prothyrides.

Thoſe made of the End of a Plank of Wood, cut triangular-wiſe, are called *Ancones*. See Anco.

*Conſoles* are frequently uſed as Keys of Arches, projecting out, to ſupport a Vaſe, or other Ornament. See Key.

The Word is deriv'd from the French *Conſolider*, to reunite, join, &c. agreeable to the Office of this Member.

CONSOLIDATION, in Law, the combining and uniting two Benefices into one. See Benefice.

The Term is borrow'd from the Civil Law; where it properly ſignifies an Union of the Poſſeſſion Occupation or Profit, with the Property.

Thus, if a Man have by Legacy *uſum-fructum fundi*, and afterwards buy the Property, or Fee-ſimple of the Heir; this is called a *Conſolidation*.

Consolidation, in Medicine, the Action of uniting ſtrongly the Fractures of broken Bones, or the Lips of a Wound, by means of *conſolidating Remedies*, as they are call'd; which cleanſing with a moderate heat and force, taking Corruption out of the Wounds, and preſerving the Temperature of the Parts, cauſe the Nouriſhment to be fitly applied to the Part affected. See Wound, and Fracture.

CONSONANCE, in Muſick, is ordinarily uſed in the ſame Senſe with *Concord*, *viz.* for the Union or Agreement of two Sounds produced at the ſame time, the one Grave, the other Acute; which mingling in the Air, in a certain Proportion, occaſion an Accord agreeable to the Ear. See Concord.

Dr. *Holder*, on this Principle, defines *Conſonancy*, 'A Paſſage of ſeveral tunable Sounds thro' the Medium, frequently mixing and uniting in their undulated Motions cauſed 'by the well-proportion'd commenſurate Vibrations of the 'ſonorous Bodies, and conſequently arriving ſmooth, and 'ſweet, and pleaſant to the Ear; as, on the contrary, *Diſſonancy*, he maintains to ariſe from diſproportionate Motions of Sounds, not mixing, but jarring and claſhing as 'they paſs, and arriving in the Ear grating and offenſive.'

Which Notion of a *Conſonance*, exactly quadrates with that we have already laid down for a *Concord*. Accordingly, moſt Authors confound the two together: Tho ſome of the more Accurate diſtinguiſh 'em; making *Conſonance* to be what the Word implies, a mere *ſounding of two or more Notes together*, or *in the ſame time*; in contradiſtinction to the Motion of thoſe Sounds *in Succeſſion*, or one after the other. See Succession.

In effect, the two Notions coincide; for two Notes, thus play'd in *conſonance*, conſtitute a Concord; And two Notes that pleaſe the Ear in *Conſonance*, will likewiſe pleaſe it in Succeſſion.

Notes in *Conſonance* conſtitute *Harmony*, as Notes in Succeſſion *Melody*. See Harmony, and Melody; ſee alſo Tune.

In the popular Senſe, *Conſonances* are either *Simple*, or *Compound*, &c. The moſt perfect *Conſonance* is Uniſon; tho many, both among the Antients and Moderns, diſcard it from the Number of *Conſonances*; as conceiving *Conſonance* an agreeable Mixture of different Sounds, grave and acute; not a Repetition of the ſame Sound. See Unison.

The ſecond *Conſonance* is the Octave; then the Fifth, the Fourth, the Thirds, and the Sixths: The reſt are Multiples, or Repetitions of theſe. See Octave, &c.

Consonance, in Grammar, is underſtood of like Cadences, or Cloſes of Words, Periods, &c.

*Conſonances* are ordinarily Faults in Diſcourſe, eſpecially in *Engliſh* Proſe: tho the *Latins* make a Figure of 'em, which they call ὁμοιοτέλευτον. Too great a *Conſonance* in the Rhymes has always an ill effect.

CONSONANT, a Letter which produces no Sound alone, or without ſome other Letter either Vowel or *Conſonant*, join'd along with it. See Letter.

And hence the Name *Con-ſonant*, q. d. *quæ ſonant cum alia*.

A *Conſonant*, conſidering it philoſophically, is nothing elſe but the Modification of a Sound, produc'd by means of the Organs of the Voice, not a Production of a Sound it ſelf: Thus, *v. g.* the Sounds ſignify'd by the Characters *a*, *e*, *i*, *o*, *u*, &c. are differently modify'd when we ſay *ab*, than when we ſay *ac* or *ca*, *ad* or *da*; and thoſe Modifications are call'd *Conſonants*.

The Letters of the Alphabet are divided into Vowels and *Conſonants*. See Vowel.

*Conſonants*, again, are divided into *ſingle*, as *b h m q*, &c. and *double*, as *x* in *axillary*, &c. correſponding to the ξ of the *Greeks*.

Again, they are divided into *liquid*, as *l r m n*; and *mute*, as *b*, *d*, and the reſt, which make no Sound at all without a Vowel. See Liquid, Mute, &c.

But the moſt natural Diviſion of *Conſonants* is that of the *Hebrew* Grammarians; who have been imitated therein by the Grammarians of the other Oriental Languages: Theſe divide the *Conſonants* into five Claſſes, with regard to the five principal Organs of the Voice; which all contribute, 'tis true, but one more notably than the reſt, to certain Modifications, which make five general Kinds of *Conſonants*. Each Kind, or Claſs, comprehends ſeveral *Conſonants*, which reſult from the different Degrees of the ſame Modification, or from the different Motions of the ſame Organs.

Theſe Organs are the *Throat*, *Palate*, *Tongue*, *Teeth*, and *Lips*; whence the five Claſſes of *Conſonants* are denominated *Guttural*, *Palatal*, *Lingual*, *Dental*, and *Labial*. See Guttural, Palatal, &c.

We account ſeventeen *Conſonants* in the *Engliſh* Alphabet, *viz. b*, *c*, *d*, *f*, *g*, *k*, *l*, *m*, *n*, *p*, *q*, *r*, *ſ*, *t*, *x*, *z*; to which there are three others to be added, *viz.* the *h*, the *j Conſonant*, and *v Conſonant*, which makes the whole Number of *Conſonants* twenty: one whereof is *Guttural*, *viz.* the Aſpirate *h*; five *Palatal*, *viz. c*, as when pronounced before *a*, *o*, and *u*, as in *Cavern*, *Corn*, *Curioſity*; *g*, as in *Geneva*; *j Conſonant*, in *Julep*; *k* in *kernel*, and *q* in *query*.

The four *Lingual Conſonants* are *d*, *l*, *n*, *t*; the four *Dental*, are *r*, *ſ*, *x*, *z*, the three laſt whereof are Hiſſers; and five *Labial*, *b*, *f*, *m*, *p*, and *v Conſonant*.

With regard to which Diviſion, it may be obſerv'd, that tho the *g* be modify'd in three different manners, as it comes before an *a*, an *o*, or a *u*; yet is it ſtill a *Conſonant* of the Palate; that the *j Conſonant* differs in nothing but its Figure from the *g* before *e* or *i*; that *k* has the ſame Pronunciation with the *c*; that *x* comprehends the Sound of two Letters in its Sound, *viz. c* or *k*, and *ſ* or another *c*, as in *Alexander*, and *Alexis*, which we pronounce as if wrote *Alecſander*, and *Aleccis*, or *Alecſis*; and that the *c* before an *e* or *i*, is no *Conſonant* of the Palate, becauſe in that Caſe it loſes its proper Sound, and aſſumes the hiſſing Sound of the *ſ*.

The Abbot *de Dangeau* thinks the Nature of the Diviſion of the *Hebrew* Grammarians very reaſonable; but does not acquieſce in the Diſtribution they have made of 'em: To find a natural and juſt Diviſion of the *Conſonants*, he obſerves, no regard muſt be had to the Character that repreſents 'em; nor any thing be conſider'd but their Sound, or the Modification they give the Sound.

On this Principle, the ſame Author finds five *Labial Conſonants*, *b*, *p*, *v*, *f*, and *m*; five *Palatal* ones, *d*, *ſ*, *g*, *k*, *n*; four *Hiſſers*, *i*, *z*, *j*, *ch*; two *Liquids*, *l* and *r*; two that run into and mix with each other, as *ll*, and *gn*; which laſt, however, is peculiar to the *French* Language, and the *h* Aſpirate.

He adds, 1ſt, that *m* and *n* are properly two Naſal *Conſonants*; the *m*, a *b* paſs'd thro' the Noſe, and the *n* a *d*, in like manner, pronounc'd thro' the Noſe; and in effect, People in a Cold pronounce *barket* for *market*, *deed* for *need*, &c.

2dly, That among the *Conſonants*, ſome are *weak*, others *ſtrong*; their difference conſiſting in this, That the former are preceded with a ſmall Emiſſion of the Voice which ſoftens 'em; which the latter have not. The weak are *b*, *c*, *d*, *g*, *z*, *i*; the ſtrong, *p*, *f*, *t*, *k*, *ſ*, *ch*.

It may be here obſerv'd, that when we ſpeak of a Perſon's talking thro' the Noſe; it muſt be underſtood in a Senſe quite different from what the Words ſeem naturally to import: Since the Noſe in this Caſe concurs leſs to the Pronunciation than if he did not ſpeak thro' the Noſe; in regard the Air not being able to make its way thro' the Noſe, is return'd into the Mouth, where it forms a dull obtuſe Sound, call'd *Naſal*. See VOICE.

From the whole we may conclude, that the Exceſs of *Conſonants* in one Language above another only conſiſts in this, that there are more Modifications of Sound receiv'd and eſtabliſh'd in the one than the other: For all Men having the ſame Organs, may form the ſame Modifications; ſo that 'tis entirely owing to Cuſtom, nothing to Nature, that the *Engliſh* have not the θ of the *Greeks*, the *Ain* and *Heth* of the *Hebrews*, the *ch* of the *Germans*, the *gn* of the *French*, the *gl* of the *Italians*, the *ll* of the *Welch*, &c.

That the *Chineſe* have no *r*, the *Iroquois* no Labial *Conſonants*, the *Huros* abundance of Aſpirates; and the *Arabs* and *Georgians* abundance of Double *Conſonants*: which laſt is owing to this, that they make ſeveral Organs concur ſtrongly and equally to the Modification of a Sound; whereas, in the reſt, only one Organ is moved very ſtrongly and ſenſibly, and the reſt weakly.

'Tis hence alſo viſible, that in all Languages the Aſpirates, or Guttural Letters, are real *Conſonants*; ſince the Throat modifies the Sound as much as the Palate, Tongue, or Lips. See ASPIRATE.

Laſtly, to find all the *Conſonants* that may be form'd in any Language; there needs nothing but to obſerve all the Modifications that the Sound of Speech will admit of, by which we ſhall have all the *Conſonants* practicable.

CONSORT, in Muſick. See CONCERT.

CONSPIRACY, in Law, is taken for a Combination or Confederacy to do ſomething evil, or illegal: tho in the original Senſe of the Word, and in its uſe in other Languages, it ſignifies an Agreement, either for good, bad, or Matters indifferent.

In our Statutes and Law-Books, *Conſpiracy*, in a general Senſe, is confounded with *Maintenance* and *Champarty*. See MAINTENANCE, and CHAMPARTY.

In its ſpecial Signification, it is uſed for a *Confederacy* of two, at leaſt, falſly to indict one, or procure one to be indicted of Felony. See INDICTMENT.

The Puniſhment of this Confederacy, at the King's Suit, antiently was: that the Party attainted loſe his Frank-Law; to the End that he mayn't be impannel'd on Juries, and the like; that his Lands, Goods, and Chattels be eſtreated; his Trees raſed, and his Body committed to Priſon.

Even *Conſpiracies* in Caſes of leſs moment, as thoſe of Victuallers, touching ſelling of Victual, ſhall be grievouſly puniſh'd 37 *Hen.* VIII.

CONSPIRING *Powers*, in Mechanicks, are all ſuch as act in Directions not oppoſite to one another. See POWER, and MOTION.

CONSTABLE, or *Lord High* CONSTABLE, an antient Officer of the Crown; now diſuſed in *England*, but ſtill ſubſiſting in *France*, where the *Conſtable* commands the Mareſchals, and is the firſt Officer in the Army.

Some derive the Word from the *Saxon*, and make it originally ſignify the Stay or Hold of the King. But others, with more probability, derive it from *Comes Stabuli*, the Maſter of the Stables, or perhaps of the Horſe, (ſee COUNT) and ſuppoſe that the Dignity which at firſt was Civil, in time became Military, and the Maſter of the Stables made General of the Army. See MASTER.

The Function of the *Conſtable* of *England*, conſiſted in the Care of the common Peace of the Land, in Deeds of Arms, and Matters of War. To the Court of the *Conſtable* and that of the Marſhals, belong'd the cognizance of Contracts, Deeds of Arms without the Realm, Combats, Blaſonry of Arms, &c. within it. See MARSHAL.

The firſt *Conſtable* of *England* was created by the Conqueror: The Office continu'd hereditary till the 13th of *Henry* VIII. when it was laid aſide, as being ſo powerful as to become troubleſom to the King. Since that time, the *Conſtable* is only created occaſionally.

From thoſe mighty Magiſtrates, the *Conſtables of England*, are derived thoſe inferior ones, ſince call'd the *Conſtables of Hundreds and Franchiſes*; firſt ordain'd in the 13th Year of *Edward* I. by the Statute of *Wincheſter*; which, for the Conſervation of the Peace, and View of Armour, appointed that two *Conſtables* ſhould be choſe in every Hundred and Franchiſe. See HUNDRED, and FRANCHISE.

Theſe are what we now call *Conſtabularii Capitales*, or *High Conſtables*; in regard, continuance of Time and increaſe of People, &c. have occaſion'd others of like nature, but inferior Authority, in every Town, call'd *Petty-Conſtables*, or *Sub-Conſtabularii*.

The appointing of a Petty-*Conſtable* belongs to the Lords of divers Mannors, *Jure Feudi*.

Beſides theſe, we have *Conſtables* denominated from particular Places, as *Conſtable of the Tower*, *of Dover Caſtle*, *of Windſor-Caſtle*, *of the Caſtle of Carnarvan*, and many other of the Caſtles of *Wales*; whoſe Office is the ſame with that of the *Caſtellani*, or Governors of Caſtles. See TOWER, &c.

CONSTAT, in Law, a Certificate given out of the Court of Exchequer, of all there is upon record relating to any Matter in queſtion.

It is alſo uſed for an Exemplification or Copy of the Inrolment of Letters Patent.

CONSTELLATION, in Aſtronomy, an Aſſemblage or Syſtem of ſeveral Stars, expreſs'd and repreſented under the Name and Figure of ſome Animal or other thing; call'd alſo an *Aſteriſm*. See STAR.

The Antients portion'd out the Firmament into ſeveral Parts, or *Conſtellations*; reducing a certain number of Stars under the Repreſentation of certain Images, in order to aid the Imagination and the Memory to conceive and retain their Number, Diſpoſition, and even to diſtinguiſh the Virtues which they attributed to 'em: In which Sence, a Man is ſaid to be born *under a happy Conſtellation*, *i. e.* under a happy Configuration of the heavenly Bodies.

The Diviſion of the Heavens into *Conſtellations* is very antient; and, for ought appears, as old as Aſtronomy it ſelf; at leaſt, it was known to the moſt antient Authors extant, whether ſacred or profane. In the moſt antient Book of *Job*, mention is made of the Names of ſome of 'em; witneſs that ſublime Expoſtulation, *Canſt thou reſtrain the ſweet Influence of the* Pleiades, *or looſen the Bands of* Orion? And the ſame may be obſerv'd of the oldeſt among the Heathen Writers *Homer* and *Heſiod*.

The Diviſion of the Antients only took in the viſible Firmament, or ſo much as came under their notice: This they diſtributed into 48 *Conſtellations*; twelve whereof took up the Zodiack: The Names they gave them are *Aries*, *Taurus*, *Gemini*, *Cancer*, *Leo*, *Virgo*, *Libra*, *Scorpius*, *Sagittarius*, *Aquarius*, *Capricornus*, *Piſces*; from whence the Signs of the Ecliptick and Zodiack take their Names; tho now no longer contiguous to the *Conſtellations* which denominate them. See SIGN.

The other Stars, on the Northern Side of the Zodiack, were diſpos'd into 21 *Conſtellations*, viz. *Urſa Major* and *Minor*, *Draco*, *Cepheus*, *Bootes*, *Corona Septentrionalis*, *Hercules*, *Lyra*, *Cygnus*, *Caſſiopeia*, *Perſeus*, *Andromeda*, *Triangulum*, *Auriga*, *Pegaſus*, *Equuleus*, *Delphinus*, *Sagitta*, *Aquila*, *Ophiuchus* or *Serpentarius* and *Serpens*: To which have been ſince added *Antinous*, and *Coma Berenices*.

The Stars on the South Side of the Zodiack, were diſtributed into fifteen *Conſtellations*; their Names, *Cetus*, *Eridanus Fluvius*, *Lepus*, *Orion*, *Canis Major* and *Minor*, *Argo*, *Hydra*, *Crater*, *Corvus*, *Centaurus*, *Lupus*, *Ara*, *Corona Meridionalis*, and *Piſcis Auſtralis*: To which have been ſince added twelve others; *viz.* *Phœnix*, *Grus*, *Indus*, *Pavo*, *Piſces Auſtralis*, *Piſces Volans*, *Toucan*, *Hydrus*, and *Xiphias*. *See each* Conſtellation, *and the Stars contain'd in it, under its proper Head.*

Of theſe *Conſtellations*, the fifteen laſt, with the greateſt Part of *Argo*, *Navis*, *Centaurus*, and *Lupus* are not viſible in our Horizon.

The other Stars, not comprehended under theſe *Conſtellations*, yet viſible to the naked Eye, the Antients called *Informes*, or *Sporades*, ſome whereof the modern Aſtronomers, have ſince reduced into new Figures, or *Conſtellations*. See INFORMES.

Thus, *Hevelius*, *v. g.* between *Leo* and *Urſa Major*, makes *Leo Minor*; and between *Urſa Minor* and *Auriga*, over *Gemini*, makes *Lynx*; under the Tail of *Urſa Major*, *Canes Venatici*, &c.

In theſe *Conſtellations*, the Stars are ordinarily diſtinguiſh'd by that Part of the Image wherein they are found. *Bayer* diſtinguiſhes 'em further by the Letters of the *Greek* Alphabet: And many of 'em, again, have peculiar Names, as *Arcturus*, between the Feet of *Bootes*; *Gemina*, or *Lucida*, in the *Corona Septentrionalis*; *Palilitium*, in the *Bull's* Eye,

Eye; *Pleiades* in the Back, and *Hyades* in the Forehead of the *Bull*: *Caſtor* and *Pollux* in the Heads of *Gemini*; *Capella*, with the *Hædi* in the Shoulder of *Auriga*; *Regulus*, or *Cor Leonis*; *Spica Virginis* in the Hand, and *Vindemiatrix* in the Shoulder of *Virgo*; *Antares*, or *Cor Scorpii*; *Fomahaut*, in the Mouth of *Piſcis Auſtralis*; *Regal*, in the Foot of *Orion*; *Sirius*, in the Mouth of *Canis Major*; and the *Pole-Star*, the laſt in the Tail of *Urſa Minor*.

The *Greek* and *Roman* Poets, out of the antient Theology, give us wild and romantick Fables about the Origin of the *Conſtellations*; which may be ſeen in *Hyginus*, *Natalis Comes*, and *Ricciolus*. Hence, ſome out of a vain Zeal, rather than any Love for the Science, have been mov'd to alter either the Figures of the *Conſtellations*, or at leaſt their Names.

Thus, Venerable *Bede*, inſtead of the profane Names and Figures of the twelve *Conſtellations* of the Zodiack, ſubſtituted thoſe of the twelve Apoſtles; whoſe Example being follow'd by *Julius Schillerus*, in 1627, he compleated the Reformation, and gave Scripture-Names to all the *Conſtellations* in the Heavens.

Thus, *Aries*, or the Ram, became converted into St. *Peter*; *Taurus*, or the Bull, into St. *Andrew*; *Andromeda* into the Sepulchre of Chriſt; *Lyra* into the Manger of Chriſt; *Hercules* into the Magi coming from the Eaſt; *Canis Major* into *David*, &c.

*Weigelius*, a Profeſſor of Mathematicks in the Univerſity of *Jena*, made a new order of *Conſtellations*; converting the Firmament into a *Cælum Heraldicum*; and introducing the Arms of all the Princes in *Europe*, by way of *Conſtellations*.

Thus, *Urſa Major*, he transform'd into the Elephant of the Kingdom of *Denmark*; the *Swan* into the Ruta with Swords of the Houſe of *Saxony*; *Ophiuchus* into the Croſs of *Cologne*; the *Triangle* into the Compaſſes, which he calls the *Symbol of Artificers*; and the *Pleiades* into the *Abacus Pythagoricus*, which he calls that of Merchants, &c.

But the more knowing among Aſtronomers never approv'd of theſe Innovations; as ſerving for no Purpoſe but to introduce Quarrels and Confuſion into Aſtronomy. The old *Conſtellations*, therefore, are ſtill retain'd; both becauſe better could not be ſubſtituted, and likewiſe to keep the greater Correſpondence and Uniformity between the old Aſtronomy and the new. See CATALOGUE.

CONSTIPATION, in Medicine, a hardneſs of the *Alvus*, or Belly, with a difficulty of diſcharging the ſame; otherwiſe call'd *Coſtiveneſs*. See COSTIVENESS.

Riding Poſt, eating of Medlars or Quinces, ſeveral Preparations of Milk, hard-roaſted Eggs, &c. *conſtipate* the Belly.

A *Conſtipation* of the Belly, if it continue long, ſometimes degenerates into the Iliac Paſſion. See ILIAC *Paſſion*.

Moſt Perſons of a hot and dry Conſtitution are afflicted with a Coſtiveneſs, or *Conſtipation*: But this is ſeldom attended with any ill Effect.

The proper Remedy for a *Conſtipation* is a Clyſter; if this fail, lenient Catharticks; and when they alſo fail, we muſt exhibit others of a more draſtick or powerful Effect. See CLYSTER, and PURGATIVE.

CONSTITUTION, an Eſtabliſhment, Ordinance, Deciſion, Regulation, or Law, made by Authority of a Prince or other Superior, Eccleſiaſtical or Civil. See LAW, &c.

The *Conſtitutions* of the *Roman* Emperors make a Part of the Civil Law. See CIVIL *Law*.

The *Conſtitutions* of the Church, part of the Canon Law. See CANON *Law*.

Some of the Papal *Conſtitutions* are in form of Bulls, others of Briefs. See BULL, BRIEF, &c.

*Apoſtolical* CONSTITUTIONS, are a Collection of Regulations attributed to the Apoſtles, and ſuppoſed to have been collected by S. *Clement*, whoſe Name they likewiſe bear.

They are divided into eight Books; conſiſting of a great Number of Rules and Precepts, relating to the Duties of Chriſtians, and particularly to the Ceremonies and Diſcipline of the Church.

Authors are divided about their Genuineneſs: The generality hold them ſpurious, and endeavour to prove them poſterior to the Apoſtolical Age, and maintain they were unknown till the fourth Century; which, if ſo, ſhews S. *Clement* had no hand in 'em.

Mr. *Whiſton* has ventur'd to oppoſe the general Opinion; and with ſome Reaſon, much Learning, and more Warmth, aſſerted the *Apoſtolical Conſtitutions* to be one of the Sacred Writings, dictated by the Apoſtles in their Meetings, written down from their Mouths by S. *Clement*, and intended as a Supplement to the New Teſtament; or, rather, as a Scheme and Syſtem of Chriſtian Faith and Polity. See his *Eſſay on the Apoſtolical Conſtitutions*, and his *Hiſtorical Preface*; wherein the ſeveral Steps he made in his fancied Diſcovery are traced.

What makes the *Conſtitutions* more ſuſpected by the Orthodox, is, that they ſeem to ſavour of *Arianiſm*.

CONSTITUTION, is alſo uſed in a phyſical Senſe, for the *Temperament* of the Body, or that Diſpoſition of the Whole ariſing from the Quality and Proportion of its Parts. See TEMPERAMENT.

Phyſicians have conſider'd the *Conſtitution*, as depending chiefly on the Humors or Juices of the Body; and hence, as this, or that Humour was ſuppoſed to predominate, the Bile, *e. gr.* or the Blood, Phlegm, Choler, or Mercury; the Perſon was denominated of a *Bilious*, *Sanguine*, *Phlegmatic*, *Choleric*, or *Mercurial Conſtitution*. See SANGUINE, CHOLERIC, &c. ſee alſo HUMOUR, BILE, CHOLER, BLOOD, &c.

CONSTRICTION, the Act of binding, or drawing the Parts of a Thing cloſe together. See CONSTRICTOR.

CONSTRICTOR *Labiorum*, or *Orbicularis*, a Muſcle proper to the Lips. See LIP.

Its Fibres make a kind of Ring about the Mouth; and ſerve to conſtringe and draw up the Lips, as in Kiſſing, &c. whence ſome call it *Baſiator*.

This, *Verheyen* will not have to be one Muſcle, but a Pair, whoſe Fibres meet and join at both Corners of the Mouth; each acting on one Lip only, tho concurrently.

Other Authors are unanimous in calling it one Muſcle; and will have it of the Sphincter kind; tho Dr. *Drake* thinks improperly: in regard, it is not like the other Sphincters in conſtant Action, but at the Command of the Will: The diſtinguiſhing Mark between a Sphincter and another Muſcle. See SPHINCTER.

CONSTRICTOR *Palpebrarum*. See ORBICULARIS.

CONSTRICTORES *Naſi*, a Pair of Muſcles common to the *Alæ* of the Noſe, and the upper Lip. See NOSE, &c.

They ariſe fleſhy from the Forepart of the fourth Bone of the upper Jaw; and after a ſtrait aſcent, are inſerted into the Roots of the *Alæ naſi*, and ſuperior Parts of the upper Lip.

Their uſe is to draw the *Alæ* downwards, nearer each other; and at the ſame time draw the upper Lip alſo downwards: an Action we uſe in taking of Snuff, or ſmelling of any thing.

CONSTRUCTION, in Geometry, the Art or Manner of drawing, or deſcribing a Figure, Scheme, the Lines of a Problem, or the like. See DESCRIPTION, FIGURE, &c.

The Equality of the Lines of ſuch a Triangle, &c. is demonſtrated from their *Conſtruction*. See PROBLEM.

CONSTRUCTION *of Equations*, is the Method of reducing a known Equation into Lines and Figures; whereby the Truth of the Rule, Canon, or Equation, may be demonſtrated geometrically. See EQUATION.

This Method of *conſtructing* Equations is different, according to the Diverſity of Equations. For *Simple* and *Quadratick* Equations the Methods ſhall be here ſubjoin'd; As to *Cubic* Equations, Geometrical *Conſtructions* are of no uſe, in Practice; their Intent being better anſwer'd by the Method of extracting Roots by Approximation.

*To Conſtruct a ſimple Equation*: The whole Myſtery conſiſts in this; that the Fractions, to which the unknown Quantity is equal, be reſolved into proportional Terms: The Method of which will be better ſhewn by Examples than taught by many Rules.

1. Suppoſe $x=\frac{ab}{c}$; then will $c:a::b:x$, to be determin'd by the Method of finding a fourth Proportional.

2. Suppoſe $x=\frac{abc}{dc}$; let $d:a::b:\frac{bc}{d}$. This fourth Proportional found, being call'd $g$; $x=\frac{gc}{e}$ which is therefore found as in the former Caſe.

3. Suppoſe $x=\frac{aa-bb}{c}$. Since $aa-bb=(a+b)(a-b)$; $c:a+b::a-b:x$.

4. Suppoſe $x=\frac{a^2b-bcc}{ad}$. By the firſt Caſe we find $g=\frac{ab}{d}=\frac{a^2b}{ad}$, and $h=\frac{bc}{d}$; Again, by Caſe 1, $i=\frac{hc}{d}$: and $x=g-i$, the Difference of the Lines $g$ and $i$.

5. Suppoſe $x=\frac{ab}{c}+\frac{adc}{bc}$. Find, as in the preceding Caſe, $g=\frac{ab}{c}$, and $f=\frac{adc}{bc}$. Then will $x=g+f$ be the Sum of the Lines $g$ and $f$.

6. Suppoſe $x=\frac{a^2b+bcd}{af+cg}$. Seek $\frac{cg}{a}$, and let $f+\frac{cg}{a}=h$; then will $af+cg=ah$; conſequently, $x=\frac{a^2b+bcd}{ab}$. Thus is the preſent Caſe brought to the preceding one.

7. Suppoſe $x=\frac{a^2b-bad}{af+bc}$. Find $\frac{af}{b}$, and make $\frac{af}{b}+c=h$; Then will $af+bc=bh$. Hence, $x=\frac{a^2b+bad=a^2-ad}{bh}{h}$. Conſequently, $h:a::a-d:x$.

8. Suppoſe $x=(a^2+b^2):c$. Conſtruct the Triangle ABC, (Plate *Algebra*, Fig. 1.) whoſe Side $AB=a$, $BC=b$;

$=b$; then will $AC=\sqrt{(a^2+b^2)}$. Let $AC=m$; then will $a^2+b^2=m^2$. And therefore $x=\frac{m^2}{c}$; consequently, $c:m::m:x$.

9. Suppose $x=\frac{a^2-b^2}{c}$. On AB, (Fig. 2.) describe a Semicircle, and therein set off $AC=b$. Since the Triangle ACB is rectangular; $CB=\sqrt{a^2-b^2}$. Let $CB=m$: then will $x=\frac{m^2}{c}$; consequently, $c:m::m:x$.

10. Suppose $x=\frac{a^2b+bcd}{af+bc}$. Say, $b:a::f:\frac{fa}{b}$; and let $fa+c=h$; Then will $bc+af=bh$. Hence, $x=\frac{a^2b+bcd}{bh}=(a^2+cd):h$. Find betwixt $AC=c$, (Fig. 3.) and $CB=d$, a Mean Proportional $CD=\sqrt{cd}$. Let $CE=a$; then will $DE=V(a^2-cd)$. Call this $m$; then will $x=\frac{m^2}{h}$; consequently, $h:m::m:x$.

*To Construct a quadratic Equation Geometrically.* Since Quadratick Equations may be reduced to simple ones, (see EQUATION;) those may likewise be *constructed* from the Methods already laid down: For if the Equation be pure, $x^2=ab$; then will $a:x::x:b$; wherefore, we shall find $x=\sqrt{ab}$; if between $AC=a$, (Fig. 4.) and $BC=b$, we find a Mean Proportional DC. If this Equation be adfected, $x^2.\ ax=b^2$; Then will $x=\frac{1}{2}a(\sqrt{\frac{1}{4}a^2b^2})$ that is, either $x=\frac{1}{2}a+\sqrt{(\frac{1}{4}a^2+b^2)}$ or, $x=\sqrt{(\frac{1}{4}a^2+b^2)}\frac{1}{2}a$, or $x=\frac{1}{2}a+\sqrt{(\frac{1}{4}a^2-b^2)}$ or $x=\frac{1}{2}a-\sqrt{(\frac{1}{4}a^2-b^2)}$.

The whole Mystery, therefore, of *constructing* Quadraticks comes to this; that the Value of $\sqrt{\frac{1}{4}a^2+b^2}$, and also the Value of $\sqrt{\frac{1}{4}a^2-b^2}$ be found; both of which are shewn in the preceding Article. For, if in the Rectangular Triangle, (Fig. 1.) $AB=\frac{1}{2}a$ and $BC=b$; then will $AC=\sqrt{\frac{1}{4}a^2+b^2}$. But if on $AB=\frac{1}{2}a$, (Fig. 2.) be described a Semicircle; and therein applied $AC=b$; $CB=\sqrt{\frac{1}{4}a^2-b^2}$, as was shewn in the Article preceding. See EQUATION.

CONSTRUCTION, or *Syntax*, in Grammar, the arranging and connecting the Words of a Sentence; according to the Rules of the Language. See GRAMMAR, WORD, SENTENCE, SYNTAX, &c.

The *Construction* is generally more simple, easy, and direct in the modern Tongues than in the antient: we have very few of those Inversions which occasion so much Embarras and Obscurity in the *Latin*; our Thoughts are usually deliver'd in the same Order wherein the Imagination conceives 'em: The Nominative Case, for Instance, always precedes the Verb, and the Verb goes before the oblique Cases it governs.

The *Greeks* and *Latins*, M. *St. Evremont* observes, usually end their Periods, where, in good Sense and Reason, they should have begun; and the Elegance of their Language consists, in some measure, in this capricious Arrangment, or rather in this transposal and disorder of the Words. See LANGUAGE.

*Construction* is either *Simple* or *Figurative*: Simple, is that wherein all the Terms, or Parts of the Discourse are placed in their natural Order.

Figurative *Construction*, is that wherein we recede from this Simplicity, and use certain Expressions, shorter, and more elegant than Nature affords. See FIGURE.

The Syntax, or *Construction* of Words, is distinguish'd into two Parts, *Concord*, and *Regimen*, or *Government*. See CONCORD, and REGIMEN.

CONSUALIA, Feasts held among the Antients, in honour of the God *Consus*, i. e. *Neptune*. See FEAST.

They were introduced with a magnificent Cavalcade, or Procession on Horseback; by reason *Neptune* was reputed to have first taught Men the use of Horses; whence his Sirname of Ἱππιος, *Equestris*.

*Evander* is said to have first instituted this Feast: It was re-establish'd by *Romulus*, under the Name of *Consus*; in regard it was some God under the Denomination of *Consus*, that suggested to him the Rape of the *Sabines*.

'Tis said, that it was with a View to this Rape, that he made that Establishment. This, however, is certain, that it was to this Feast all his Neighbours were invited; when, taking advantage of the Solemnities and Sacrifices, he seiz'd the Women. To draw the greater Concourse of People, he gave out, that he had found an Altar hid under Ground, which he intended to consecrate, with Sacrifices to the God to whom it had been originally erected.

Those who take on 'em to explain the Mysteries of the Heathen Theology, say, That the Altar hid under Ground is a Symbol of the secret Design of *Romulus* to seize his Neighbour's Wives.

The *Consualia* were of the Number of Feasts call'd *Sacred*; as being consecrated to a Divinity.

Originally, these Feasts and Games were not distinguish'd from those of the Circus: whence it is, *Valerius Maximus* says, that the Rape of the *Sabines* was effected at the Games of the Circus. See CIRCUS.

*Plutarch* observes, that during the Days of this Solemnity, Horses and Asses were left at rest, and were dress'd out with divers Crowns, &c. on account of its being the Feast of *Neptunus Equestris*. *Festus* says, the Cavalcade was perform'd with Mules; it being an Opinion, that this was the first Animal used to draw the Car.

*Servius* gives us to understand, that the *Consualia* fell on the 13th of *August*; but *Plutarch* and *Dionysius* place it in the Month of *March*.

The *Consualia* differ'd from other Feasts of the same Deity, call'd *Neptunalia*. See NEPTUNALIA.

CONSUBSTANTIAL, in Theology, a Term of equal import with *Co-essential*; denoting something of the same Substance with another. See SUBSTANCE.

Thus, the Orthodox believe, the Son of God to be *consubstantial* with the Father. See TRINITY, FATHER, &c.

The Term ὁμόουσιος, *Consubstantial*, was first adopted by the Fathers of the Council of *Nice*, to express the Orthodox Doctrine the more precisely, and to serve as a Barrier and Precaution against the Errors and Subtilties of the *Arians*; who own'd every thing excepting the *Consubstantiality*.

The *Arians* declared that the Word was God, as having been made God; but denied that he was the same God, and of the *same Substance* with the Father: Accordingly, they exerted themselves to the utmost to abolish the Use of the Word. The Emperor *Constantine* used all his Authority with the Bishops, to have it expung'd out of the Symbols; but it still maintain'd it self, and is at this Day, as it was then, the distinguishing Criterion between an *Athanasian* and an *Arian*.

*Sandius* will have it, the Word *Consubstantial* was unknown till the Time of the Council of *Nice*; but 'tis certain it had been before propos'd to the Council of *Antioch*, wherein *Paulus Samosatanus* had been before condemn'd; tho it had there the fortune to be rejected. *Courcel*, on the other hand, maintains, that it was an Innovation in Doctrine in the Council of *Nice*, to admit an Expression, the use whereof had been abolish'd by the Council of *Antioch*.

According to S. *Athanasius*, the Word *Consubstantial* was only condemn'd in the Council of *Antioch*; inasmuch as it contain'd the Idea of a pre-existent Matter, prior to the Things form'd thereof: Now, in this Sense, 'tis certain, the Father and the Son are not *Consubstantial*, there having been no pre-existent Matter.

CONSUBSTANTIATION, a Tenet of the *Lutheran* Church, with regard to the manner of the Change made in the Bread and Wine in the Eucharist. The Divines of that Profession maintain, that after Consecration, the Body and Blood of our Saviour are substantially present, together with the Substance of the Bread and Wine; which is call'd *Consubstantiation*, or *Impanation*. See IMPANATION, TRANSUBSTANTIATION, LUTHERANISM, &c.

CONSUETUDINIBUS & *Servitiis*, in Law, a Writ of Right, which lies against the Tenant that deforceth his Lord of the Rent or Service due to him.

CONSUL, the chief Magistrate of the *Roman* Commonwealth.

The *Consuls* were the chief of the Senate; they commanded the Armies of the Republick, and were supreme Judges of the Differences between the Citizens. In regard, however, they had made some abuse of this Power, it was allow'd, by the *Valerian Law*, for the Party aggriev'd to appeal from their Tribunal to the People; especially in Cases where the Life of a *Roman* Citizen was concern'd.

In progress of Time, the *Consuls* being too much taken up with the grand Affairs of State, or at the Heads of Armies, there were other Magistrates created for the Distribution of Justice to the People, in lieu of the *Consuls*. See PRÆTOR.

After the *Romans* had expell'd their Kings, they were govern'd by two *Consuls*, establish'd in the Year of *Rome* 240; having their Name *à consulendo*. *Brutus* and *Collatinus* were the first, elected by an Assembly of the People: Their Office was to hold a Year; and if either of 'em died in the Course of the Year of their *Consulate*, a new one was elected.

To be elected *Consul*, it was requir'd that the Candidate should be at least 43 Years old. The Election was held in the Month of *January*, in the *Campus Martius*; afterwards in the Capitol.

*Consuls* were even continu'd under the Emperors, after the Republick was destroy'd: But the Office of *Consul* was here little else but an honourable Title; which, however, the People were fond of keeping up; as esteeming it some Remain of their antient Liberty.

It dwindled for a long time; and at last, became absolutely extinct in the Time of *Justinian*: after whom, no Emperor either created any *Consul*, or assumed the Dignity himself.

*Basil* is the last in the Consular List, for the Year 541. By this time, the Dignity was depretiated to that degree, that it was confer'd on the meanest Persons: Indeed, *Justinian* endeavour'd to retrieve it 25 Years after, and created himself *Consul*, but without effect.

From the Establishment of the Republick, and the *Consulate* under *L. Jun. Brutus* and *L. Tarq. Collatinus*, to the *Consulate* of *Basil*, *i. e.* from the Year of *Rome* 244 or 245; 509 Years before Jesus Christ; to the Year of *Rome* 1293, the Space of 1049 the Years were accounted by the *Consuls*: But from the Time of *Basil*, in the Year of Christ 540, we find no mention made of *Consuls* or *Consulates*; but the Time was computed by the Years of the Emperors Reigns, and the Indictions.

Indeed, for some time after the *Consulate* of *Basil*, the Years are mark'd thus; *Post consulatum Basilii*, 1, 2, 3, &c. *See the* Fasti Consulares *of M.* d'Almelooven. That Author reckons 1060 *Consuls*, beside the substitute *Consuls*, *Suffecti*, elected to supply Vacancies by Death; and yet there were but 1049 Years, and consequently only so many *Consulates*. See FASTI.

The perpetual *Consulates* of the Eastern Emperors, which compose the *Fasti Bizantini*, commenced in the Year of Christ 567, and ended in 668, in the last Year of *Constans*.

*Constantine Pogonates* would have the *Consulate* inseparable from the Empire; which it continued to be till the Time of *Constantine Porphyrogenetes*.

In this form of Government, the Empire and *Consulate* were so closely united, that the Empress *Irene* would needs assume the *Consulate*, when she was only Regent of the Empire.

But the *French* Kings, those of *Italy*, and the *Sarazen* Princes who commanded in *Spain*, taking on 'em the Title of *Consuls*, as well as Emperors of *Constantinople*; these last despis'd it, and laid it aside: so that the Name was only continu'd to the Magistrates of some Cities, and certain other Officers, as is shewn by F. *Pagi*.

Under the Emperors there were *Ordinary Consuls*, *Honorary Consuls*, and *Suffecti*; which last were also on foot in the Time of the Republick.

In the middle Age, we find the Word *Consul* used for *Comes*, Count, and Proconsul or Viconsul, for Vicount; as is observ'd by *Spelman*, and M. *de Marca*. See COUNT.

CONSUL, at present, is used for an Officer establish'd by virtue of a Commission from the King, and other Princes, in the Ports and Factories of the *Levant*, on the Coasts of *Africa*, *Barbary*, *Spain*, and other foreign Countries of any considerable Trade; to facilitate and dispatch Business, and protect the Merchants of the Nation. See COMMERCE, and FACTORY.

These Commissions are never granted to Persons under the Age of 30 Years. When the *Consulate* is vacant, the most antient of the Deputies of the Nation are to discharge the Function thereof, till the Vacancy be filled up by the King.

The *Consuls* are to keep up a Correspondence with the Ministers of *England* residing in the Courts whereon their *Consulates* depend. Their Business is to support the Commerce, and the Interest of the Nation; to dispose of the Sums given, and the Presents made to the Lords and Principals of Places; to obtain their Protection, and prevent the Insults of the Natives on the Merchants of the Nation. See COMPANY.

There are *Consuls* of other Nations establish'd in the *Levant*, especially *French* and *Dutch*.

CONSULS are also Judges, elected among Merchants and Dealers, in Ports and trading Towns chiefly in *France*; to terminate, *gratis*, and on the Spot, without any Process, such Differences and Demands as shall arise relating to their Merchandizes, Bills of Exchange, and other Articles of Commerce.

The first Jurisdiction of *Consuls* establish'd in *France*, is that of *Tholouse*; the Edict of whose Establishment bears date 1549, under the Reign of King *Henry* II. that of *Paris* follow'd fourteen Years afterwards. By degrees, they were establish'd in most of the considerable trading Towns in that Kingdom.

CONSUL, in our Law-Books, signifies an *Earl* or *Count*, *Comes*. See EARL, and COUNT.

In the Laws of *Edward* the Confessor, Cap. 2. it is express'd, That what we now call a *County*, *Comitatus*, was by the antient *Britons* nam'd *Consultate*, *Consultatus*; and those now call'd *Vicounts*, *Vicecomites*, were then called *Viceconsuls*.

CONSULTATION, in Law, a Writ whereby a Cause formerly removed by Prohibition from the Ecclesiastical Court to the King's Court, is return'd thither again.

If the Judges of the King's Court, upon comparing the Libel with the Suggestion of the Party; find the Suggestion false, or not prov'd; and therefore the Cause to be wrongfully call'd from the Court-Christian: Then, upon such Deliberation, or *Consultation*, they decree it to be return'd again. And the Writ obtain'd hereon is call'd a *Consultation*.

CONSUMMATION, the End, Period, or Completion of any Work.

Thus, we say, the *Consummation* of all Things; meaning the End of the World. See CONFLAGRATION.

By the Incarnation, all the Prophesies are said to be *consummated*. See PROPHECY.

*Consummation* of a Marriage, is the last Act of Marriage, which makes its Accomplishment; or the most intimate Union between the married Pair. See MARRIAGE, DIVORCE, &c.

CONSUMPTION, *Tabes*, in Medicine, a Disease arising from a Defect of Nourishment; or, a preternatural Decay of the Body, and particularly by a gradual waste of muscular Flesh.

It is frequently attended with an Hectic Fever; and is divided by Physicians into several Kinds, according to the Variety of its Causes; as *Universal*, or *Scorbutic Consumption*, where it arises from a *Cacochymia*, or Scorbutic Habit; and a *Pulmonic Consumption*, or *Consumption of the Lungs*, where it arises from some Cause in the Lungs, properly call'd a *Phthisis*. See PHTHISIS, and SCORBUTUS.

A *Consumption* may either be *Accidental*, *Natural*, or *Hereditary*: *Accidental*, which may arise, 1st, from Ulcers, Chalky Stones, or Polypus's in the Lungs; caused by something that obstructs the Circulation in the Pulmonary Vessels, or renders the Blood viscid; as a Suppression of any natural Evacuations. 2d, From Intemperance, occasioning either a Cacochymia, or Plethora. 3d, From Peripneumonies, Pleurisies, Asthma's, Coughs, Catarrhs, Diarrhæas, Venereal Disorders, and Excess of Venery. 4th, From Grief, hard Study, &c.

A *Natural Consumption* may arise from the Straitness of the Thorax, or an ill Conformation of the Parts. An *Hereditary* one may be communicated from the Parents, without any other visible Cause.

A *Consumption* usually begins with flying Pains, and Stitches; Pain at the Pit of the Stomach, or in the Diaphragm; frequent Spitting, loss of Appetite, a quick Pulse, a Sweetness or Saltness in the Saliva, Heat and Flushings in the Face and Palms of the Hands after Meals, an Hectic Fever toward the Evening, Heaviness, Faintness, Night-Sweats; and where the Lungs are first disorder'd, a Cough, Catarrh, or Asthma usually precede it.

When these Symptoms are violent, 'tis confirm'd; and then comes on an Expectoration of purulent or bloody Matter, and the *Vomica Pulmonum*; at length, the Feet swell, the Expectoration stops, a Diarrhæa comes on; then the *Facies Hippocratica*, and Death.

The Cure of an *Universal*, or *Muscular Consumption*, depends principally upon Removal into a proper Air, and the using of a regular nourishing Diet: the Appetite is to be excited by proper Bitters, and other Stomachics.

In a *Pulmonary Consumption*, or *Phthisis*, Balsamicks, and oleaginous Medicines are to be added. See PHTHISIS.

Dr. *Wainwright*, indeed, takes the Particles of oily Medicines to be too gross and viscid to enter the small Orifices of the Lacteals; and thinks, that their Operation or Effect being confin'd to the first Passages, they are not only of no service in the Cure, but are apt to pall the Appetite, occasion Obstruction in the Mouths of the Lacteals, and Diarrhæas.

But this is contrary to common Experience: That their Particles are small enough to enter the Lacteals, is evident from the sudden relief Nephritic Persons find in violent Paroxysms of the Stone, by the Passages being relax'd soon after their Exhibition. That Diarrhæas, and blunting the Appetite, in some Constitutions, will be the Consequence of their Continuance, or Exhibition in too great Quantities, must be allow'd; but then this is either accidental to some Kinds of Constitutions, or from some Error in using 'em.

As to the Lacteals being obstructed by their use, 'tis a mere Notion, and as much unsupported by Experience as that other Hypothesis, which a late Author, Dr. *Quincy*, has been fond of asserting, *viz.* that the Use of Butter is apt to foul the Glands. See HECTIC.

CONTACT, the relative State of two Things that *touch* each other, or whose Surfaces join to each other without any Interstice.

Thus, we say, the *Contact* of two spherical Bodies, is only in one Point: and the same holds of the Tangent and the Circle.

Hence, because very few Surfaces are capable of touching in all Points, and the Cohesion of Bodies is in proportion to their *Contacts*, those Bodies will stick fastest together, which are capable of the most *Contact*. See COHESION.

*Angle of* CONTACT, is the Angle HLM, (Tab. *Geometry*, Fig. 43.) form'd by the Arch of a Circle ML, with the Tangent HL, at the place of their *Contact*.

*Euclid* demonstrates, that the right Line IL, standing perpendicularly on the Radius CL, cuts the Circle only in one Point: Nor can there be any other right Line drawn between the Tangent and the Circle.

Hence,

Hence, the Angle of *Contact* is leſs than any rectilinear one; and the Angle of the Semicircle between the Radius CL and the Arch ML, greater than any rectilinear acute Angle.

This Paradox of *Euclid* has exercis'd the Wits of Mathematicians: It was the Subject of a long Controverſy between *Peletarius* and *Clavius*; the firſt of whom maintain'd the *Angle of Contact* heterogeneous to a rectilinear one; as a Line is heterogeneous to a Surface: the latter maintain'd the contrary. Dr. *Wallis* has a formal Treatiſe on the *Angle of Contact*, and of the Semicircle; where, with other great Mathematicians, he approves of the Opinion of *Peletarius*. See TANGENT.

CONTAGION, or *Infection*, the communicating or tranſferring of a Diſeaſe from one Body to another. See DISEASE.

*Contagion*, in ſome Diſeaſes, is only effected by an immediate Contact, or Touch: as the Madneſs of a Dog, which is communicated by biting; and the Venom of the Pox, which is tranſmitted from the infected Perſon in the Act of Copulation. See HYDROPHOBIA, and VENEREAL *Diſeaſe*.

In others it is convey'd by infected Clothes; as the Itch. See ITCH.

In others the *Contagion* is tranſmitted thro' the Air to a great diſtance, by means of Steams or Effluvia expiring from the Sick; as in the Plague, and other peſtilential Diſtempers: in which Caſe, the Air is even ſaid to be *contagious*, *i. e.* full of *contagious* Particles. See PLAGUE, POISON, *&c.*

CONTEMPLATION, an Act of the Mind, whereby it applies it ſelf to conſider, reflect on, and admire the wonderful Works of God, Nature, *&c.*

*Contemplation*, among the myſtick Divines, is defin'd a ſimple, amorous View of God, as preſent. This *Contemplation* conſiſts in Acts ſo ſimple, ſo direct, ſo uniform and peaceful, that there is nothing for the Mind to take hold on, whereby to diſtinguiſh it. See MYSTICS.

In the *Contemplative* State, the Soul is to be entirely paſſive, with regard to God; to be in a continual Repoſe, without any Preturbation or Motion; free from the Activity of unequal Minds, which muſt agitate themſelves, to have their Operation ſenſible. Hence, ſome call *Contemplation* a Prayer of Silence and Quietude.

*Contemplation* is not a Raviſhment, or an extatick Suſpenſion of all the Faculties of the Soul; but 'tis ſomething paſſive, 'tis Peace and infinite Pliantneſs; leaving it perfectly diſpos'd to be mov'd by the Divine Impreſſions of Grace, and the better to follow the Divine Impulſe.

*Contemplation* is the height of Perfection of the myſtic Divines.

CONTEMPORARY, or COTEMPORARY, a Perſon, or Thing of the ſame Time, or that lives in the ſame Age with another.

Thus, we ſay, *Socrates*, *Plato*, and *Ariſtophanes* were *Contemporaries*: the beſt Hiſtories are thoſe of *contemporary* Authors.

CONTENEMENT, a Word in our antient Law-Books, about whoſe Signification Authors are not agreed. According to ſome, it ſhould ſignify the Countenance, Credit, or Reputation a Perſon has, with and by reaſon of his Freehold. And in ſuch Senſe is it uſed in the Stat. 1 *Edw.* III. *&c.* where it ſtands as ſynonymous with Countenance.

Others will have it ſignify what is neceſſary for the Support and Maintenance of Men according to their ſeveral Qualities, Conditions, or States of Life. Thus, *Spelman*, *Contenementum eſt Æſtimatio & Conditionis forma qua quis in Republica ſubſiſtit.*

CONTENT, a Term frequently uſed for the Capacity of a Veſſel, or the Area of a Space; or the Quantity of any Matter or Space included in certain Bounds. See AREA; ſee alſo SUPERFICIES, and SOLID.

The *Content* of a Tun of round Timber is 43 ſolid Feet. A Load of hewn Timber contains 50 Cubic Feet: In a Foot of Timber are *contain'd* 1728 cubic or ſquare Inches, and as often as 1728 Inches are *contain'd* in a Piece of Timber, be it round or ſquare; ſo many Foot of Timber are *contain'd* in the Piece. See TIMBER.

In Gaging, the Gallon for Beer and Ale is allow'd to *contain* 282 Cubic Inches, and the Wine Gallon 231: the Gallon of dry Meaſure 272. See GALLON; ſee alſo MEASURE.

Hence, as oft as 282 Cubic Inches are *contain'd* in any Veſſel round or ſquare, ſo many Gallons of Ale or Beer it holds, and the like may be obſerv'd of the other Meaſures.

Multiply, therefore, one ſide of a Square or Oblong into the other; and divide by one of thoſe Numbers, according to the Quality of the Liquor; the Quotient gives the Area in Gallons, upon an Inch deep.

Tho the Work may be ſhorten'd by only multiplying the Sides of Squares, or the Diameters of Rounds into themſelves; the Product is the Number of Gallons, and Parts the Veſſel *contains*, upon an Inch in Depth: and when that receives an Augmentation, by being 2, 3, or 4 Inches deep, it then commences a ſolid Body, and *contains* as many Gallons and Parts, as 'tis Inches and Parts deep.

A Cubic Foot *contains* 6 Gallons, and almoſt a Pint, of Ale and Beer; and 7 Gallons, 2 Quarts of Wine. A Cubic Foot of dry Meaſure *contains* 6 Gallons and a half, and ſomething more. A Buſhel of Salt *contains* 56 Pound Averdupoiſe.

CONTENTIOUS *Juriſdiction*, in Law, *Forum Contentioſum*, a Court, or Aſſembly, which has a Power to judge and determine Differences between contending Parties.

The Lords Chief Juſtices, Judges, *&c.* have a *Contentious Juriſdiction*: But the Lords of the Treaſury, the Commiſſioners of Cuſtoms, *&c.* have none; being merely Judges of Accompts.

CONTEXT, among Divines and Criticks, that Part of Scripture, or other Writing, which lies about the *Text*; before or after it, or both. See TEXT.

To take the full Senſe of the Text, the *Context* ſhou'd be regarded.

CONTIGNATION, in the antient Architecture, the Act of laying Rafters, *tigna*, together; and particularly, flooring. See FLOORING.

CONTIGUOUS, a Relative Term, underſtood of Things diſpos'd ſo near each other, that they join their Surfaces, or touch. See CONTACT.

The Houſes in antient *Rome* were not *contiguous* as ours are, but all inſolated.

CONTIGUOUS *Angles*, in Geometry, are ſuch as have one Leg common to each Angle; otherwiſe called *adjoining Angles*; in contradiſtinction to thoſe produced by continuing their Legs thro' the Point of Contact, which are called *oppoſite* or *vertical* Angles. See ANGLE, *&c.*

CONTINENT, in Geography, a *Terra firma*, Main-land, or large extent of Country, not interrupted by Seas; in oppoſition to *Iſland*, &c. See EARTH, OCEAN, *&c.*

Thus, *Sicily* is ſaid to have been antiently torn from the *Continent* of *Italy*; and 'tis an old Tradition, which ſome of our Antiquaries have ſtill a regard to, that *Britain* was antiently a part of the *Continent* of *France*.

The World is ordinarily divided into two grand *Continents*, the old and the new: The old comprehends *Europe*, *Aſia*, and *Africa*; the new the two *America's*, North and South.

The antient *Continent* is alſo called the *upper Continent*, from a vulgar Opinion, that it poſſeſſes the upper Part of the Globe. See TERRAQUEOUS *Globe*.

'Tis doubted whether *Japan* be an Iſland, or join'd to the *Continent*; the ſame may be ſaid of *California*.

Some Authors are of Opinion, the two grand *Continents* are in reality no more than one; imagining the Northern Parts of *Tartary* to run out and meet thoſe of N. *America*.

CONTINENT *Cauſe* of a Diſtemper, is that whereon the Diſeaſe depends ſo immediately, that it continues ſo long as that remains, and no longer. See DISEASE.

Thus, a Stone in the Bladder may be the *Continent Cauſe* of the Suppreſſion of Urine. See STONE, *&c.*

CONTINENT *Fever*, is that which goes on to a Criſis without any Intermiſſion, or Remiſſion. See FEVER.

CONTINGENT, ſomething caſual, or uncertain. See CHANCE.

*Future* CONTINGENT, in Logick, is a conditional Propoſition, which may or may not happen, according as Circumſtances fall.

The *Socinians* maintain, that God cannot ſee *future Contingents*, becauſe depending on the free Motion of the Will.

CONTINGENT is alſo a Term of Relation for the Quota that falls to any Perſon upon a Diviſion.

Thus, we ſay, each Prince of *Germany*, in time of War, is to furniſh ſo many Men, ſo much Money, and Munition for his *Contingent*. By the new Treaty of *Hanover* it is ſtipulated, that in caſe of a Rupture with the Emperor, the Kings of *Great Britain* and *Pruſſia* may furniſh their *Contingents*, as Fiefs of the Empire, at the ſame time they are at War therewith.

CONTINGENT *Uſe*, in Law, is an Uſe limited in a Conveyance of Land, which may or may not happen to veſt, according to the *Contingency* expreſs'd in the Limitation of ſuch Uſe.

CONTINGENT *Line*, or *Line of* CONTINGENCY, in Dialling, is a Line that croſſes the Subſtyle at right Angles. See SUBSTYLE, and DIALLING.

CONTINGENTS is ſometimes uſed by the Mathematicians in the ſame Senſe as *Tangents*. See TANGENT.

CONTINUAL *Claim*. See *Continual* CLAIM.

CONTINUANCE, in Law, the ſame as *Prorogation* among the Civilians. See PROROGATION.

CONTINUANCE *of a Writ*, or *Action*, is from one Term to another, in a Caſe where the Sheriff has not return'd or executed a former Writ iſſued out in the ſaid Action.

CONTINUANCE *of Aſſiſe*. If a Record in the Treaſury be alledg'd by one Party, and deny'd by the other; a *Certiorari* ſhall be ſued to the Treaſurer and Chamberlain of the Exchequer: who, if they certify not that the ſaid Record is there,

there, or likely to be in the Tower; the King ſhall ſend to the Juſtices, repeating the Certificate, and will them to continue the Aſſiſe.

CONTINUANDO, in Law, a Term uſed where a Plaintiff would recover Damages for ſeveral Treſpaſſes in the ſame Action.

For, to avoid multiplicity of Suits, a Man may in one Action of Treſpaſs recover Damages for forty or more Treſpaſſes; laying the firſt to be done, with a *Continuance* to the whole Time wherein the reſt of the Treſpaſſes were done; which is done in this form, *Continuando tranſgreſſionem prædictam*, &c. *a prædicto die*, &c. *uſque*, &c.

CONTINUED *Quantity*. } See CONTINUUM, and CONTINUITY.
CONTINUED *Body*, &c. }

CONTINUED *Fever*, is ſuch an one as does not *intermit*, or go intirely off, and return again, by Fits. See FEVER.

A *continued* Fever, may be defined the *Continuance* of an increas'd Velocity in the Circulation of the Blood, beyond what is natural to the Conſtitution.

If this Velocity often decreaſes, and riſes again to the ſame height, it is called a *Continued periodical Fever*.

And if it intirely ceaſe in the Space of a Day, or two, it is call'd an *Ephemeris*. See EPHEMERIS.

A *Continued Fever*, then, may *remit*, or abate and increaſe again, alternately; but not *intermit*, which would conſtitute it an intermitting Fever, or Ague. See REMITTING, and INTERMITTING *Fever*.

CONTINUED, or *Thorough Baſs*, in Muſick, is that which continues to play, conſtantly; both during the Recitatives, and to ſuſtain the Choir, or Chorus. See BASS.

CONTINUED *Proportion*, in Arithmetick, is that wherein the Conſequent of the firſt Ratio is the ſame with the Antecedent of the ſecond; as, 3 : 6 :: 6 : 12. See PROPORTION.

On the contrary, if the Conſequent of the firſt Ratio be different from the Antecedent of the ſecond, the Proportion is ſaid to be *diſcrete*; as, 3 : 6 :: 4 : 8. See DISCRETE.

CONTINUITY, is uſually defined among the Schoolmen, the immediate Coheſion of Parts in the ſame *Quantum*. Others define it a Mode of Body, whereby its Extremes become one. And others, a State of Body reſulting from the mutual Implication of its Parts. See PART.

There are two Kinds of *Continuity*, *Mathematical*, and *Phyſical*: The firſt is merely imaginary, and fictitious; ſince it ſuppoſes real or phyſical Parts where there are none.

*Phyſical Continuity*, is, ſtrictly, that State of two or more Parts, or Particles, whereby they appear to adhere, or conſtitute one uninterrupted Quantity, or *Continuum*; or between which we perceive no intermediate Space. See CONTINUUM.

The Schoolmen diſtinguiſh two other ſorts of *Continuity*, viz. *homogeneous* and *heterogeneous*. The firſt, where our Senſes do not perceive the Bounds, or Extremes of the Parts; and this agrees even to Air, Water, &c. The ſecond, where our Senſes do indeed perceive the Extremes of certain Parts, yet at the ſame time obſerve the ſame Parts cloſely link'd to each other; either in virtue of their Situation or Figure, &c. and this is chiefly attributed to the Bodies of Animals and Plants.

The *Continuity* of Bodies, is a State merely relative to our ſight and touch: *e. gr.* if the diſtance of two ſeparate Objects be ſuch, as that the viſual Angle they ſubtend is inſenſible to the Eye, which it will if leſs than 16 Seconds; the two ſeparate Bodies will appear *contiguous*.

Now, the Reſult of ſeveral *contiguous* Objects is a *Continuity*; ſo that any Number of viſible Objects, being plac'd ſo as that their Diſtances ſubtend an Angle of leſs than 16 Seconds, they will appear to form one *Continuum*.

And hence, as we can determine the Diſtance at which any given Magnitude becomes inviſible; 'tis eaſy finding at what diſtance any two Bodies, however remote from each other, will appear as contiguous; and ſeveral, as forming one *Continuum*. See CONTIGUOUS.

*For the Phyſical Cauſe of* Continuity, *or Coheſion*. See COHESION.

CONTINUUM, or *Continued Quantity*, in Phyſicks, a Quantity or Coextenſion, whoſe Parts are not divided, but join'd and connected together; ſo as to leave no room to determine where one begins and another ends. See CONTINUITY.

'Tis controverted among Philoſophers, whether a *Continuum* be infinitely diviſible, *i. e.* diviſible into infinite proportionable Parts. See DIVISIBILITY.

Mathematicians divide Quantity into *continued* and *diſcrete*. See QUANTITY.

*Continued Quantity* is that expreſs'd by Lines, and makes the Subject of Geometry. See LINE, and GEOMETRY.

*Diſcrete Quantities*, are thoſe expreſs'd by Numbers, which make the Subject of Arithmetick. See DISCRETE; ſee alſo NUMBER.

In Medicine and Chirurgery, Wounds, Ulcers, Fractures, &c. are expreſs'd by the Word *Solutio Continui*, or *Solution of Continuity*. See SOLUTIO.

In a critical Senſe, we ſay, there is to be a *Continuity*, i. e. a *Connection* between the Parts of a Diſcourſe.

In the *Epopæa*, particularly, the Action ſhould have a *Continuity* in the Narration; tho the Events or Incidents be not continued. As ſoon as ever the Poet has open'd his Subject, and brought his Perſons on the Stage, the Action is to be continu'd to the End: Every Character muſt be at work; and no ſuch thing as an idle Perſon to be ſeen. See ACTION.

F. *Boſſu* obſerves, that by retrenching dull languiſhing Incidents, and Intervals void of Action, which break the *Continuity*, the Poem acquires a *continu'd* Force, which makes it run equally throughout.

The Antients attributed the Riſe of Water in Pumps, to the love of *Continuity*, and the Abhorrence of a Vacuum; in regard the Weight and Preſſure of the Air was not then known.

CONTOBABDITES, a Sect of Hereticks in the VIth Century.

Their firſt Leader was *Severus* of *Antioch*, who was ſucceeded by *John* the Grammarian, ſirnam'd *Philoponus*, and one *Theodoſius*; whence their Followers were called *Agnoetes* and *Theodoſians*. See AGNOETES.

Part of them, who were willing to receive a Book compos'd by *Theodoſius* on the Trinity, made a ſeparate Body, and were called *Contobabdites*, from I know not what Place, which *Nicephorus* does not mention, but which muſt apparently have been the Place where they held their Aſſemblies.

The *Contobabdites* allow'd of no Biſhops; which is the only Circumſtance that Hiſtorian gives us of them.

CONTORSION, the Action of twiſting, or wreſting a Member of the Body out of its natural Situation.

Thus, we ſee Rope-Dancers accuſtom themſelves to *Contorſions* of their Limbs from their Youth, to render the Fibres of their Articulations lax, and ſupple to all Kinds of Poſtures. See POSTURE.

CONTORSION is alſo uſed paſſively for the State of a Thing, *v. g.* of a Member that is awry.

The *Contorſion of the Neck*, is occaſion'd, according to *Nucke*, by the Relaxation, or Paralyſis of one of the Maſtoidal Muſcles: for hence it happens, that its Antagoniſt, whoſe Power is now no longer balanced, contracting with its proper Force, draws the Head towards its ſide. See PALSY.

He adds, that this Diſorder cannot be remedied too ſpeedily; and preſcribes from the beginning, Liniments capable of relaxing and ſoftening the Fibres; to be uſed, not only to the Muſcle in Contraction, but alſo and principally to the relax'd paralytick Muſcle, which is the Seat of the Diſorder.

CONTOUR, the *Outline*, or that which terminates and defines a Figure. See FIGURE.

A great Part of the Skill of the Painter conſiſts in managing the *Contours* well. See PAINTING.

The *Contour* of a Figure, makes what we call the *Draught*, or *Deſign*. See DESIGN.

The *Contour* of a Face, the *Italian* Painters ordinarily call the *Lineaments* thereof.

CONTOURNE, in Heraldry, is uſed when a Beaſt is ſtanding or running with its Face to the Siniſter-ſide of the Eſcutcheon: they being always ſuppoſed to look to the Dexter-ſide, unleſs it be otherwiſe expreſs'd.

CONTOURNIATED, a Term uſed among Antiquaries for a kind of Medallions, ſtruck with a certain hollowneſs all around, which leaves a Circle on each ſide; and with Figures that have ſcarce any Relievo, in compariſon with the true Medallions. See MEDALLION.

They have their Name from their Edges, which appear as if turned in the Lathe.

All we have remaining of theſe *contourniated* Medals ſeem to have been made about the ſame time. F. *Hardouin* conjectures them to have been ſtruck about the XIIIth Century: other Antiquaries go back as far as the Vth.

The Manner of the Work ſeems to have had its Origin in *Greece*; and to have been appropriated to honour the Memories of great Men: principally, thoſe who had bore away the Prize at the Solemn Games: Such are thoſe remaining of *Homer*, *Solon*, *Euclid*, *Pythagoras*, *Socrates*, *Apollonius Thyaneus*, and ſeveral *Athletæ*, whoſe Victories are expreſs'd by Palms and Chariots, either *Bigæ* or *Quadrigæ*.

CONTRABAND, or CONTRABANDED *Commodity*, in Commerce, a *prohibited* Commodity; or a Merchandiſe bought or ſold, imported or exported, in prejudice and contrary to the Laws and Ordonnances of a State, or the publick Prohibitions of the Prince. See COMMERCE, MERCHANDISE, &c.

The Word comes from the Italian *Contrabando*, *i. e.* contrary to Edict, or Publication of Prohibition.

*Contraband* Goods are not only liable to Confiſcation themſelves; but do alſo ſubject thereto all other allowed Merchandiſes found with 'em in the ſame Box, or Bale, together with the Horſes, Waggons, &c. which conduct them to the ſame. See CONFISCATION.

There are *Contrabands*, which beſides Confiſcation, are prohibited on Pain of Death; as, *v. g.* in *France*, *India* and *China* Stuffs, Linens, &c.

In *England* there are two principal *Contrabands* for the *Export*, *v. g.* that of Wools and live Sheep, which all Strangers are prohibited from carrying out, on Pain of having the right Hand cut off; the other that of Sheep-ſkins and Calf-ſkins, which all Foreigners are in like manner prohibited from exporting, on Pain alſo of having the right Hand cut off: Yet, the Subjects of *England* are allow'd to tranſport the ſame from *France* to *England*. See WOOL, and WOOLLEN *Manufacture*.

The other *Contrabands* for Exportation are raw Horns, white Aſhes, Stocking Looms, or any Part thereof, Fullers-Earth, and all raw Hides, or Skins.

Of Goods *Contrabanded* as to the *Import*, there are above 50 in the Liſts made in 1662; and yet there are 25 of 'em which now ſtand in the Tariff; the Non-execution of the Acts of Parliament whereby they were impos'd, ſeeming to have reſtor'd 'em to the Freedom of Importation.

The chief of thoſe ſtill *contrabanded*, and not tariff'd, are woollen Caps, woollen Cloths, Saddles and Harneſs, Dice, Billiards, all ſorts of tann'd or dreſs'd Hides, dreſs'd Furs, all ſorts of Shoemakers Ware, Locks, and divers ſorts of Cutlers Ware; all painted Goods; except Paper, Wires, Buckles, Gold and Silver Leaf, and Horns for Lanthorns.

Since the Year 1662, ſeveral other Commodities have been made *contraband*; particularly Silk and Galloons, Laces, Embroideries, Fringes, Buttons, and other Silk and Thread Manufactures; black Taffaties, call'd *Alamodes*, or Luteſtring.

In 1719 and 1720, an Attempt was made in Parliament to paſs a Bill for putting Gold and Silver, whether in Species or otherwiſe, among the Number of *Contraband* Goods for Exportation; but in vain, by reaſon of the ſtrong Oppoſition made by thoſe who enrich themſelves by the Export of theſe Metals; which, by the Laws of the Kingdom, it has always been allow'd to ſend away, upon entering 'em, and paying the Duty of the Export.

It may be judg'd whether thoſe who promoted the Bill were well affected to the Nation, from this, that in the ſingle Month of *September* 1720, there were enter'd at the Cuſtomhouſe in *London* 468119 Ounces of Gold, and 28988 Ounces of Silver; *viz.* 34302 Ounces of Gold, and 4000 Ounces of Silver for *Holland*; 12320 Ounces of Gold for *France*; 197 Ounces of Gold, and 5648 Ounces of Silver for *Portugal*; and 19340 Ounces of Silver for the *Eaſt-Indies*, excluſive of what was exported fraudulently by private Perſons, without paying the Duties.

This ſhews, indeed, the abundance of Gold and Silver in *England*; but ſhews, at the ſame time, the danger it is in of being, at length, exhauſted.

In Heraldry, the Bar is called a *Contre-band*, or *Counter-band*; becauſe it cuts the Shield contrary, and oppoſite ways. See BAR.

They alſo ſay, *Contre-chevron*, *Contre-pal*, &c. when there are two Ordinaries of the ſame Nature oppoſite to each other; ſo as Colour be oppos'd to Metal, and Metal to Colour. And the Coat is ſaid to be *Contre* or *Counter-paled*, *Counter-banded*, *Counter-feſs'd*, *Counter-compon'd*, *Counter-barr'd* when ſo divided. See CONTRE-BANDE, &c.

*Counter-quarter'd*, when one of the Quarters is quarter'd again; as alſo *Counter-flower'd*, *Counter-colour'd*, &c.

Animals are ſaid to be *Counter-paſſant*, when one paſſes on one ſide, and another on another.

CONTRA *formam Collationis*, is a Writ that lays where a Man has given perpetual Alms to a Religious Houſe, Hoſpital, School, or the like, and the Governor or Managers, have alienated the Lands, contrary to the Intention of the Donor.

CONTRA *formam Feoffamenti*, is a Writ for a Tenant who is infeoffed by the Lord's Charter to make certain Suit and Service to his Court; and is afterwards diſtrain'd for more than is contain'd therein.

CONTRACT, a mutual Conſent of two or more Parties, who promiſe and oblige themſelves, voluntarily, to do ſomething, pay a certain Sum, or the like. See PACT, COVENANT, &c.

Sales, Exchanges, Donations, Leaſes, &c. are ſo many different Species of *Contracts*.

*Contract* is particularly uſed in Common Law, for an Agreement or Covenant between two, with a lawful Conſideration or Cauſe.

As, if I ſell my Horſe for Money, or Covenant, in Conſideration of 20 *l.* to make you a Leaſe of a Farm; theſe are good *Contracts*, becauſe there is *quid pro quo*.

*Uſurious* CONTRACT, is a *Contract* to pay more Intereſt for Money than the Laws allow. See USURY.

It is a Devaſtavit in Execution to pay a Debt upon an *Uſurious Contract*. See DEVASTAVIT.

In Marriage, the *Romaniſts* diſtinguiſh the Civil *Contract*, which is the Conſent of the Parties, from the Sacrament, which is the Benediction of the Prieſt. See MARRIAGE.

Thoſe *Contracts* are ſaid to be *null* which the Law prohibits the making of; ſuch are all *Contracts* between Perſons incapable of *contracting*, as Minors, Religious, Lunaticks, Wives without Conſent of their Husbands, &c.

The Word *Contract* is alſo uſed for the Inſtrument in Writing, which ſerves as a Proof of the Conſent granted, and the Obligation paſs'd between the Parties.

Among the antient *Romans*, *Contracts*, and all voluntary Acts, were wrote, either by the Parties themſelves, or by one of the Witneſſes, or by a Domeſtick Secretary of one of the Parties, whom they call'd a *Notary*; but who was no publick Perſon, as among us. See NOTARY.

The *Contract*, when finiſh'd was carry'd to the Magiſtrate, who gave it a publick Authority by receiving it *inter Acta*, into the Number of Acts under his Juriſdiction; giving each of the Parties a Copy thereof, tranſcrib'd by his Clerks or Domeſtick Regiſters, and ſealed with his Seal.

Which Practice paſs'd into *France*, where it obtain'd a long time.

CONTRACTILE *Force*, that Power or Property inherent in certain Bodies, whereby, when extended, they are enabled to draw themſelves up again, to their former Dimenſions.

*For the Cauſe of this Property*, which is of the utmoſt Conſequence to a right underſtanding of the Animal Oeconomy, ſee FIBRE.

CONTRACTION, in Logicks, is defined a Species of Reduction, wherein the Thing that reduces, *abridges*, or brings the Thing reduced into a leſſer compaſs. See REDUCTION, and ABRIDGMENT.

The deſign of ſuch *Contraction* is to bring Things, which before were too lax and diffuſive, nearer together; that ſo their mutual Relation may appear the more clearly, and may better ſtrengthen and ſupport each other.

Thus, 'following the Argumentation, From that Propoſition, *Therefore, now I am ſtanding*, follows this other, '*Therefore, now I am exiſting*;' may be thus *contracted*, *Exiſto ſequitur ſum*, from ſtanding we conclude exiſting.

To this Head are refer'd the Arguments, as they are called, of Poems and Orations; the Titles and Summaries of Chapters, &c.

CONTRACTION, in Phyſicks, is a diminiſhing of the Extent or Dimenſions of a Body; or a bringing of its Parts cloſer to each other: upon which it becomes heavier, harder, &c. See CONDENSATION.

*Contraction*, in this Senſe, ſtands oppoſed to *Dilatation*. See DILATATION, &c.

All Bodies *contract* by Cold, and dilate or rarefy by Heat. See COLD, HEAT, RAREFACTION, &c.

CONTRACTION *of the Heart*, *Arteries*, *Lungs*, &c. See SYSTOLE, HEART, ARTERY, PULSE, &c.

CONTRACTION, a Term in Medicine, frequently uſed by Anatomical Writers, to expreſs the ſhrinking up of a Fibre, or Aſſemblage of Fibres, when extended. See FIBRE.

Convulſions and Spaſms proceed from a preternatural *Contraction* of the Fibres of the Muſcles of the Part convuls'd. See CONVULSION.

On the contrary, Paralytic Diſorders generally proceed from a too great laxneſs of the Fibres of the Parts affected; or from the want of that degree of *Contraction* neceſſary to perform the natural Motion or Action of the Part.

In the firſt, therefore, the Animal Spirits are ſuppos'd to flow, either in too great a quantity, or irregularly; and in the laſt, the Animal Spirits are either deny'd a free Paſſage into the Part affected, or the Tenſion of the *Fibrillæ* is ſuppos'd inſufficient to promote the Circulation.

*Contraction* evidently appears to be the true natural State of all Muſcles: For if a Muſcle be at any time freed from the Power of its Antagoniſt, it is immediately found to *contract*; and is not by any Action of the Will or the Spirits, to be reduced to a State of Dilatation. See MUSCLE.

CONTRACTION, in Grammar, the Reduction of two Vowels or Syllables into one.

The *Greeks* abound in *Contractions*, both in their Verbs and their Nouns; as, ποιῶ of ποίεω, *facio*; βοῶ of βοάω, *clamo*; χρυσῶ of χρυσόω, *inauro*; παῖω of παίεω, *ambulo*; παῖς of παΐεις, *ambulas*; Δημοσθένης, of Δημοσθένεος.

The *French* have ſomething like it too, at leaſt in their Pronunciation; as in *ſaouler*, *baailler*, *paon*, which they pronounce *ſouler*, *bailer*, *pan*.

CONTRADICTION, is a Species of direct oppoſition, wherein one thing is diametrically oppoſed to another. See OPPOSITION; ſee alſo CONTRADICTORY.

The Schoolmen uſually define it, *Oppoſitio inter ens & non-ens medio carens*: where, by *Ens* and *Non-ens*, are underſtood any two Extremes, whereof one affirms and the other denies: and it is ſaid to be *medio carens*, to diſtinguiſh it from the other Species of Oppoſition; the Extremes, here, neither agreeing in Subject, as is the Caſe in Privation; nor in Eſſence and Kind, as in Contrariety. See PRIVATION, CONTRARIETY, &c.

CONTRADICTOR, in a Legal Senſe, a Perſon who has a Right or a Quality to *contradict*, or gainſay: Thus, an Inventory of the Effects of a Minor ought to be made in preſence of his Guardian, or Truſtee, who is the Legal *Contradictor*: A Decree againſt a Farmer has no Effect on the Landlord, the firſt not being the legitimate *Contradictor*.

CONTRADICTORY *Propoſitions*, are Oppoſites, one of which imports a mere and naked denial of the other. See OPPOSITE.

Of theſe, therefore, one muſt be poſitive, and the other negative; as, ſitting, and not ſitting; white, and not white.

*Contradictory Propoſitions* mutually deſtroy each other. See PROPOSITION.

To have two Propoſitions truly *contradictory*, they muſt be oppoſite both in Quantity and Quality, *i. e.* one muſt be univerſal and the other particular, which makes the Oppoſition of Quantity; and the one Affirmative and the other Negative, which makes the Oppoſition in Quality. See OPPOSITION.

Thus, *v. g. All uſe of Wine and Silver is evil*; 'tis falſe: *Some uſe of Wine and Silver is not evil*; 'tis true.

To this it is neceſſary that the one deny, and the other affirm the ſame thing, of the ſame Subject, conſider'd in the ſame Circumſtances; unleſs the Queſtion be about an eſſential Attribute; in which Caſe, no regard is had to Circumſtances; every thing having always its own Eſſence.

This the Logicians expreſs by *Affirmare & negare idem, de eodem, ſecundum idem.*

There may likewiſe be *Contradictory Propoſitions* on a particular Subject, *e. gr.* an individual: Theſe are called *ſingle Contradictory Propoſitions*; as, *Peter is juſt*; *Peter is not juſt*, or *is a Sinner*. Now, to have theſe Propoſitions *contradictory*, *Peter* muſt be conſider'd at the ſame Time; without which they may be both true: ſince there was a Time wherein *Peter* was juſt, and another wherein he was a Sinner.

CONTRA-FISSURE, in Medicine, a Term apply'd to that Species of Fracture in the Skull, where the Side oppoſite to that where the Blow was receiv'd, is crack'd. See FISSURE.

The uſual Symptoms attending a *Contra-fiſſure*, are a Delirium, ſometimes a bleeding at the Noſe and Mouth, Stupidity, an involuntary paſſing of the Urine and Excrements, Convulſions, *&c.*

If theſe happen, and after ſearch made in the Part where the Injury was receiv'd, no Fracture or Depreſſion of the Skull be found, there is ſuſpicion of a *Contra-fiſſure*; eſpecially if the Patient be apt to point to that Part.

If the Symptoms be by Intervals, and not to a great degree, or there be reaſon to believe the Fiſſure to have reach'd only thro' one of the Tables, 'tis ſufficient to denude the Bone, and uſe a Raſpatory; then to fill the *Rima*, or Crack with proper Pouders, of Iris, Gum, Myrrh, Pouder of Diapente, *&c.* and above all apply a Pledget dipp'd in Tincture of Euphorbium, or of equal Parts of Spirits of Wine, and Honey of Roſes.

If theſe fail, the Trepan muſt be had recourſe to. See TREPANNING.

CONTRA-HARMONICAL *Proportion*, that Relation of three Terms, wherein the Difference of the firſt and ſecond, is to the Differenee of the ſecond and third, as the third is to the firſt. See PROPORTION.

Thus, *e. g.* 3, 5, and 6, are Numbers *contra-harmonically* proportional; for 2 : 1 :: 6 : 3.

*To find a Mean* contraharmonically *proportional to two given Quantities.* The Rule is; Divide the Sum of the two ſquared Numbers by the Sum of the Roots; the Quotient is a *contraharmonically* mean Proportional between the Roots. See HARMONICAL *Proportion.*

CONTRA-INDICATION, is an Indication which forbids that to be done which the main ſcope of a Diſeaſe points out. See INDICATION.

Suppoſe, *e. g.* in the Cure of a Diſeaſe a Vomit were judg'd proper; if the Patient be ſubject to a vomiting of Blood, 'tis a ſufficient *Contra-Indication* as to its Exhibition.

CONTRAMANDATIO *Placiti*, in our antient Law-Books, ſignifies a reſpiting, or giving the Defendant farther time to anſwer: or, an Imparlance, or countermanding of what was formerly order'd.

*Contramandatum* is a lawful Excuſe, which the Defendant by his Attorney alledgeth for himſelf, to ſhew that the Plaintiff has no cauſe to complain; *Si dies placiti ſit contramandatus.* 11 *Hen.* I.

CONTRAMURE, in Building, an Out-wall, built about the Wall of a City. See WALL, RAMPART, *&c.*

CONTRAPOSITION, in Logicks. See CONVERSION.

CONTRARIETY, that which denominates two Things *contrary* to each other. See CONTRARY.

*Contrariety* conſiſts in this, that one of 'em imports a Negation of the other, either mediately or immediately; ſo that *Contrariety* may be ſaid to be the Contraſt or Oppoſition of two Things, one of which implies the abſence of the other. See OPPOSITION.

CONTRARY *Things*, or CONTRARIES, are poſitive *oppoſites*; which being of the ſame Kind, or ſame common Nature, and ſubſiſting by turns in the ſame Subject, are as remote from each other as poſſible, and mutually expel each other. See OPPOSITE.

Such are Whiteneſs and Blackneſs, Cold and Heat, *&c.*

Hence, properly ſpeaking, only Qualities can be *Contraries. Contrariety* only agrees to Qualities *per ſe*; to other things it agrees *per accidens*, or *in ordine ad Qualitatem.* See QUALITY.

*Contrary*, however, is often uſed in a more extenſive Signification, *viz.* for any inconſiſtence or difference between the Nature and Qualities of Things.

'Tis a popular Maxim in Philoſophy, that *contraria juxta ſe poſita magis eluceſcunt*; Contraries ſet off one another.

In this Senſe, the Word *Contrary* is uſed in the Schools; as, An Argument *à contrario*; *e. g.* If Bodies whoſe Surfaces are rugged don't reflect any Light, poliſh'd Bodies muſt, by the Rule of *Contraries*, reflect it.

This Method of proving Things *à contrario*, is much uſed, and with good Succeſs, by F. *Bourdaloue* in his Sermons.

The Schools uſe the Word *Contraries* in a ſtill more preciſe Signification, as implying two poſitive Things, which cannot ſubſiſt together in the ſame Subject, but deſtroy or expel each other; as Heat and Cold, Dryneſs and Moiſture.

CONTRARY, in Rhetorick. F. *de Colonia* lays down three Kinds of *Contraries* in Rhetorick, *viz. Adverſatives*, *Privatives*, and *Contradictories.*

*Adverſatives* are thoſe that differ much in the ſame Thing, as Virtue and Vice, War and Peace: Thus *Tully*, *Si ſtultitiam fugimus, ſapientiam ſequamur*; *& bonitatem, ſi malitiam.* Thus *Quintilian*, *Malorum cauſa bellum eſt, erit emendatio pax.* Thus *Drances* argues in *Virgil*, *Nulla ſalus bello: pacem te poſcimus omnes.*

*Privatives* are Habits, and their Privations. See PRIVATIVE.

*Contradictories* are thoſe, one whereof affirms, and the other denies the ſame Thing, of the ſame Subject. See CONTRADICTORY.

CONTRAST, in Painting and Sculpture, expreſſes an *Oppoſition*, or difference of Poſition, Attitude, *&c.* of two or more Figures; contriv'd to make Variety in a Painting. See DESIGN.

Thus, when in a Group of three Figures, one is ſhewn before, another behind, and a third ſidewiſe, there is ſaid to be a *Contraſt*. See GROUP.

M. *de Piles* defines *Contraſt* an Oppoſition between the Lines which form the Objects; by means whereof they ſet off one another.

A *Contraſt* well manag'd, is one of the greateſt Beauties of a Painting.

The *Contraſt* is not only to be obſerv'd in the Poſition of ſeveral Figures, but alſo in that of the ſeveral Members of the ſame Figure: Thus, if the right Arm advance the furtheſt, the right Leg is to be hindmoſt; if the Eye be directed one way, the right Arm to go the contrary way, *&c.* See FIGURE.

The *Contraſt* muſt be purſued even into the Drapery. See DRAPERY.

*To* CONTRAST, in Architecture, is to avoid the Repetition of the ſame Thing, in order to pleaſe by Variety; as is done in the great Gallery of the *Louvre*, where the Pediments are, alternately, arch'd and angular.

The Word comes from the Italian *Contraſtare*, to oppoſe, thwart; and that, according to M. *Huet*, from the Latin *Contraſtatio.*

CONTRAT-*Wheel*, in Clock-work. See WHEEL; ſee alſo CLOCK, and WATCH.

CONTRAVALLATION, or the *Line of* CONTRAVALLATION, in Fortification, is a Trench guarded with a Parapet; uſually cut round about a Place by the Beſiegers, to ſecure themſelves on that ſide, and to ſtop the Sallies of the Garriſon. See LINE.

It is without Muſket-ſhot of the Town; ſo that the Army forming a Siege, lies between the Lines of *Circumvallation* and *Contravallation*. See CIRCUMVALLATION.

CONTRAVENTION, a Man's failure of performing or diſcharging his Word, Obligation, Duty, or the Laws and Cuſtoms of the Place.

The Penalties impoſed in Caſes of *Contravention*, only paſs for Comminatory.

In a more limited Senſe, *Contravention* implies the Non-execution of an Ordinance, or Edict.

*Contravention* is ſuppos'd to be a degree below Prevarication; and to be only the Effect of Negligence, or Ignorance. See PREVARICATION.

CONTRA-YERVA, a Root brought from *Peru*; eſteem'd an Alexiterial, and a ſovereign Antidote againſt Poiſon.

It is ſaid to take its Name from *Yerva*; which in the *Spaniſh* ſignifies white Hellebore, a Plant whoſe Juice is a violent Poiſon, uſed by the *Peruvians* to poiſon their Arrows

rows withal; in which Senſe, *Contra-yerva* ſignifies *Counter-poiſon.*

The Root is ſmaller than that of the Iris, reddiſh without and white within, knotty, and fibrous. To be good, it muſt be new, heavy, and of a duſky red Colour.

In Smell it reſembles Fig-leaves; its Taſte is Aromatic, accompany'd with ſome Acrimony.

There is an Officinal Compoſition which takes its Name from this Root, prepar'd with the Teſtaceous Pouders, call'd *Lapis Contrayerva.* Both the Root and *Lapis Contrayerva* are of great efficacy in the Small Pox, Meaſles, Fevers, and all Caſes where either a Diaphoreſis or Perſpiration is requir'd: its Succeſs being more to be depended on than the *Gaſcons Pouder*; which, among the more knowing, begins to loſe ground.

It is agreed on, by the generality of Writers, that the *Contra-yerva* Root is one of the beſt Anti-epidemicks yet known. Dr. *Hodges*, in his Treatiſe of the laſt *London-Plague*, has a Receipt which he ſays was attended with great Succeſs, and of which this Root was one of the chief Ingredients. See PLAGUE.

There is another Kind of *Contra-yerva*, brought from *Virginia*, more ordinarily called *Viperine*, very aromatic; ſeldom preſcribed, tho ſaid to have the ſame Succeſs againſt Poiſons and Venoms with the *Contra-yerva* of *Peru.*

CONTRE-COMPONE. } in Heraldry. See { COUNTER-COMPONED.
CONTRE-CHANGED, { COUNTER-CHANGED.
CONTRE-BANDE, { COUNTER-BEND.
CONTRE-BARRE, { COUNTER-BARRED.
CONTRE-CHEVRONNE, { COUNTER-CHEVRON'D.
CONTRE-ERMINE, { COUNTER-ERMINE.
CONTRE-ESCARTELE, *&c.* { COUNTER-ESCARTELE, *&c.*

CONTRIBUTION, the Payment of each Perſon's Quota, or of the Part he is to bear in ſome Impoſition, or common Expence.

*Contributions* are either *Involuntary*, as thoſe of Taxes and Impoſts; or *Voluntary*, as thoſe of Expences for carrying on ſome Undertaking for the Intereſt of the Community.

In a Military Senſe, *Contributions* are particularly uſed for the Conventions between the Governors of the Frontier Places and the Enemy; in order to ſecure themſelves from being pillag'd and inſulted.

The Peaſants till their Ground under the Faith of *Contributions*, as ſecurely as in time of profound Peace.

CONTRIBUTIONE *facienda*, a Writ which lies where ſeveral Perſons are jointly bound to the ſame Thing, and one or more of 'em refuſe to *contribute* their ſhare.

*E. gr.* If Tenants in Common, or Joint, hold a Mill *pro indiviſo*, and equally ſhare the Profits thereof; the Mill falling to decay, and one or more of 'em refuſing to *contribute* to its Reparation, the reſt ſhall have this Writ to compel them.

And if there be three Coparceners of Land that owe Suit to the Lord's Court, and the Eldeſt performs the whole; then may ſhe have this Writ to compel the Refuſer to a *Contribution.*

CONTRITION, in Theology, a real Sorrow, reſulting from the Thought of having offended God; from the ſole Conſideration of his Goodneſs; without any regard to the Puniſhment the Sin is intitled to. See REPENTANCE.

Some of the *Romiſh* Doctors avow, notwithſtanding the Practice of their Church, that *Contrition* is valid, and carries with it every thing neceſſary to obtain Pardon, without the Ceremony, or as they call it, the *Sacrament* of Confeſſion and Abſolution. See CONFESSION, and ABSOLUTION.

And in this they make the difference between *Contrition* and Attrition to conſiſt. See ATTRITION.

This Doctrine was lately maintain'd by F. *Sequenot* upon S. *Auguſtin*; but was cenſur'd by the Faculty of *Paris.*

CONTROLL, COMPTROLL, or CONTROLE, is, properly, a double Regiſter, kept of Acts, Iſſues, *&c.* of the Officers or Commiſſioners in the Revenue, Army, *&c.* in order to perceive the true State thereof, and to aſſure the Truth, and the keeping of the Acts ſubject to that Enregiſterment. See REGISTER. Hence,

CONTROLLER, or COMPTROLLER, an Officer eſtabliſh'd to *controll*, or to keep the Regiſter called *Controll*; and to certify, on occaſion, whether the Things have been *controll'd* or not. Thus, we have,

CONTROLLER *of the King's Houſhold*, or *of the Accounts of the Board of Green-Cloth.* See HOUSHOLD, and GREEN-CLOTH.

CONTROLLER *General of the Cuſtoms.* See CUSTOMS.
CONTROLLER *of the Navy.* See NAVY.
CONTROLLER *of the Mint.* } See { MINT.
CONTROLLER *of the Exciſe.* } See { EXCISE.

CONTROLLER *of the Accompt of the Army*; *of the Chamber*, &c. See CHAMBER, *&c.*

CONTROLLER *of the Hamper*, is an Officer in Chancery, attending the Lord Chancellor daily in Term and Seal time. See CHANCERY.

This Officer is to take all Things ſeal'd from the Clerk of the Hamper, incloſ'd in Bags of Leather, and to note the juſt Number and Effect of all Things ſo receiv'd; and to enter 'em in a Book, with all the Duties belonging to the King and other Officers for the ſame, and ſo charge the Clerk of the Hamper with 'em. See HAMPER.

CONTROLLER *of the Pipe*, an Officer of the Exchequer, who writes out Summons twice a Year, to levy the Farms and Debts of the Pipe. See PIPE, and EXCHEQUER.

He was antiently called the *Duplex Ingroſſator.*

CONTROLLERS *of the Pell*, are Officers of the Exchequer, whereof there are two, *viz.* two Chamberlains Clerks, who keep a *Controll* of the Pell, of Receits, and Goings-out: Originally they took Notes of other Officers Accompts, in order to diſcover if they did amiſs. See PELL.

CONTROVER, in Law, he who of his own Head deviſes or invents falſe or feigned News.

CONTROVERSIAL *Divinity.* See POLEMICAL *Divinity.*

CONTUMACY, in Law, *Contempt*; or a Refuſal to appear in Court when legally ſummon'd.

The Word is uſed in Civil, as well as Criminal Matters; but more rarely in the firſt, wherein the Word *Defaut* ordinarily ſupplies its Place: The Refunding of the Charges of a Defaut judg'd at the hearing is alſo the Penalty of *Contumacy.*

In a Criminal Senſe, the *Contumacious* is condemn'd, not becauſe the Crime is proved on him, but becauſe he is abſent. By the *Roman* Laws, there was no Proceſs in caſe of *Contumacy*, during the firſt Year of abſence: they only took an Inventory of the Goods of the Fugitive, and if he died in the Year, he died *integri ſtatus*; but after the Year was expir'd he was deem'd culpable.

In *England*, *Contumacy* is proſecuted to Outlawry. See OUTLAWRY.

In *France*, all *Contumacies* are annull'd, if the Accuſed make his Appearance in five Years; if he die in that Time, his Relations are permitted to purge his Memory.

CONTUSION, *Bruiſe*, in Medicine, a Solution of Continuity, either in Fleſh or Bone, occaſion'd by a Fall, a Blow, or a violent Preſſure, whereby the Fleſh is broke, the Skin ſtill remaining entire; and an Effuſion of Blood enſues, from ſeveral little broken Veſſels, ſo as to diſcolour the Skin, tho it don't make its way thro' the Pores thereof.

Or, *Contuſions* may be defin'd a particular ſort of Tumors, attended with a Stagnation of the Blood in the Part affected; and, generally, with an Inflammation, Diſcolouration, and Pain. See TUMOUR.

*Contuſions* are either *internal*, or *external.* When from any external Injury, there proceeds an internal Diſorder, *e. gr.* an Aſthma, ſpitting of Blood, or the like, the *Contuſion* is ſaid to be *internal.* If only external Symptoms appear, as a Tumour, Blackneſs, *&c.* it is term'd *external.*

In caſe of inward *Contuſions*, bleeding the Patient is neceſſary, and balſamicks muſt be given internally, ſuch are Spermaceti, Pouder of Rhubarb, Iriſh Slate, oleaginous and pectoral Medicines, *&c.* Externals proper for *Contuſions*, are Liniments or Ointments of Marſhmallows, Oil of ſweet Almonds, Spirit of Wine with Camphire; proper Fomentations and ſtrengthning Emplaiſters; as that of Oxycraceum, *&c.* according as the Nature of the *Contuſion* and Part *contus'd* requires.

CONVENT, a Monaſtery of Religious, of the one or the other Sex. See MONASTERY.

The Word comes from the Latin *Conventus*, Meeting, of *Convenire.*

CONVENTICLE, a diminutive of *Convent*; denoting, properly, a Cabal or ſecret Aſſembly of a Part of the Monks of a *Convent*, to make a brigue in the Election of an Abbot.

From the ill Uſe of theſe Aſſemblies, the Word is come into diſrepute; and now ſtands for any ſeditious or irregular Aſſembly.

F. *Doucine* obſerves, the Occidentals always eſteem'd the Vth General Council an unlawful *Conventicle.*

The Term *Conventicle* is ſaid by ſome to have been firſt attributed, in *England*, to the Schools of *Wickliff*: Now it is apply'd to the Meetings of Nonconformiſts.

CONVENTION, a Treaty, Contract or Agreement between two or more Parties. See TREATY, *&c.*

Every *Convention* between Men, provided it be not contrary to Honeſty and good Manners, produces a natural Obligation, and makes the Performance a Point of Conſcience. See OBLIGATION.

Every *Convention* has either a Name, and a Cauſe or Conſideration, or it has none: In the firſt Caſe, it obliges civilly and naturally; in the latter only naturally. See CONTRACT.

CONVENTION is much uſed both in antient and modern Pleadings for an Agreement, or Covenant. See COVENANT.

Hence, *Conventione facienda*, a Writ that lies for breach of Covenant in writing.

In the Book of Rolls of the Manor of *Hatfield* in *Yorkſhire*, we have a Record of a pleaſant *Convention*, *Anno* 11. *Ed.* III. between *Robert de Roderham* and *John de Ithen*, the latter of whom ſold the Devil in a ſtring for three-pence halfpenny to the former, to be deliver'd on the fourth Day after the *Convention*: when, the Purchaſer making his demand, the Seller refus'd to give him livery; to the great Loſs (as the Record repreſents it) of forty Shillings to the Purchaſer, &c. But it appearing to the Court that ſuch a Plea does not lie among Chriſtians; the Parties were adjourn'd to Hell for Judgment.

CONVENTION is alſo the Name given to an extraordinary Aſſembly of Parliament, or of the States of the Realm, held without the King's Writ. See PARLIAMENT.

The *Convention* of Eſtates, in 1688, after the Retreat of K. *James* II. upon mature Deliberation, came to a Concluſion, that K. *James*, by his Practices here, and his Flight hence, had abdicated the Kingdom; and that the Throne was vacant; and therefore devolv'd upon King *William* and Queen *Mary*. See ABDICATION.

Upon this their Aſſembly expir'd, and a Parliament was ſummon'd in their ſtead.

There was a *Convention* of the like kind in *Scotland*, and with the like effect.

CONVENTIONE, in Law, is a Writ which lies for the Breach of any Covenant. See COVENANT.

*Fitzherbert* calls it a Writ of *Covenant*.

CONVENTUAL ſomething belonging to a Convent. See CONVENT.

CONVENTUAL, is particularly uſed for a Religious who actually reſides in a Convent; in contradiſtinction to thoſe who are only Hoſts, or are entertain'd there, or are in poſſeſſion of Benefices depending on the Houſe.

*Conventual Prior* differs from a *Clauſtral Prior*, in that the former has the full right and Authority of an Abbot; the only difference between 'em being in the Name: Whereas the Clauſtral Prior is a Dependant of the Abbot, and derives all his Authority from him. See PRIOR, and ABBOT.

The *Conventual* Prior is oblig'd to aſſume the Prieſthood in a Year, or at moſt in two Years, from the Day of his Admiſſion: in default whereof, the Benefice becomes vacant.

Some Priories are actually *Conventual*, *i. e.* are ſtock'd with Religious; others are only *Conventual* by habitude, *v. g.* where there have been no Religious during the ſpace of 40 Years: The Continuance of one ſingle Religious, keeps the Priory *Conventual Actu*; for in default of one the Priory becomes ſimple.

By a Declaration of the King of *France*, in 1680, 'tis decided, that a *Conventuality* never degenerates in any lapſe of time, while there are regular Places ſubſiſting in it for twelve Religious, with Revenues for their ſupport. See PRIORY.

CONVENTUAL *Church*. See PARISH.

CONVERGING, or CONVERGENT *Lines*, in Geometry, are thoſe which continually approximate, or whoſe diſtance becomes continually leſs and leſs. See LINE.

In oppoſition to *divergent Lines*, whoſe diſtance becomes continually greater. See DIVERGING.

Lines that *converge* one way, diverge the other.

CONVERGING *Rays*, in Dioptricks, are thoſe Rays which in their Paſſage out of one Medium, into another of a different Denſity, are refracted towards one another; ſo, as if far enough continu'd, they meet in a Point, or Focus. See RAY, REFRACTION, &c.

Thus, all convex Lenſes make the Rays *converge*, and concave ones to diverge, *i. e.* the one inflects 'em towards a Centre, and the other deflects 'em from it; and the more, as ſuch Lenſes are Portions of ſmaller Spheres. See CONCAVE, and CONVEX.

On which Properties, all the Effects of Lenſes, Microſcopes, Teleſcopes, &c. depend. See LENS, MICROSCOPE, &c.

Rays coming *converging* out of a denſer Medium into a rarer, become more *convergent*, and concur ſooner than if they were to continue their Motion thro' the firſt. See MEDIUM.

Rays coming *converging* out of a rarer into a denſer Medium, *converge* leſs, and concur later, than if they had continued their Motion thro' the firſt.

Parallel Rays, paſſing from a denſer into a rarer Medium, *v. g.* from Glaſs into Air, the Surface of the Glaſs being towards the Air, will become *convergent*, and concur in a *Focus*. See PARALLEL.

Diverging Rays, or Rays coming from a Point, under the ſame Circumſtances, become *converging*, and meet in a *Focus*; and as the radiant Point comes nearer, the *Focus* goes further off: If the Radiant be near, the *Focus* will be infinitely diſtant; *i. e.* the Rays will be parallel: And if the Point be brought nearer ſtill, the Rays will diverge. See DIVERGENT; ſee alſo CONVEXITY, CONCAVITY, and PARALLELISM.

CONVERGING *Series*, in Mathematicks, a Method of Approximation, or coming ſtill nearer and nearer towards the true Root of any Number, or Equation; even tho it be impoſſible to find any ſuch true Roots in Numbers. See APPROXIMATION; ſee alſo SERIES, QUADRATURE, &c.

CONVERSE, in Geometry, &c. A Propoſition is ſaid to be the *Converſe* of another, when, after drawing a Concluſion from ſomething firſt ſuppos'd, we proceed to ſuppoſe what had been before concluded, and to draw from it what had been ſuppos'd. See CONVERSION.

Thus, 'tis demonſtrated in Geometry, That if the two Sides of a Triangle be equal; the two Angles oppoſite to thoſe Sides are equal alſo: The *Converſe* of the Propoſition is, That if the two Angles of a Triangle be equal, the two Sides oppoſite to thoſe Angles are equal alſo.

In Aſtrology, *Converſe Direction* is uſed in oppoſition to *direct* Direction; *i. e.* by the latter, the Promoter is carried to the Significator, according to the Order of the Signs: by the former it is carried from Eaſt to Weſt, and contrary to the Order of the Signs.

CONVERSION, in a moral Senſe, a return from Evil to Good; reſulting from a Senſe, either of the natural Deformity of the one, and Amiableneſs of the other; or of the Advantages and Diſadvantages that await the one and the other.

Or, It is a Change of the Heart, with a regard to the Morals, Paſſions, Deſires, Purſuits; and of the Mind, with regard to the Sentiments, &c.

CONVERSION, CONVERSIO, in Logicks, a Circumſtance, or Affection of Propoſitions, wherein the Order of the Terms, or Extremes is changed; ſo that the Subject comes into the Place of the Prædicate, and the Prædicate into that of the Subject; without any Alteration in the Quality of either.

As, *No Virtue is Vice*, *No Vice is Virtue*: In which we ſee the Subject of the former, made the Prædicate of the latter, and the Prædicate the Subject; yet both true.

*Converſion* is uſually defined *a due Change of the Order of the Extremes*, *i. e.* under ſuch a Habitude and Coherence, with reſpect to each other, that the one is rightly infer'd from the other. Hence, in every legitimate *Converſion* two Things are requir'd; 1ſt, A Communication or Reciprocation of Terms; not in reſpect of Words but of Order. 2d, The Inference of one Propoſition out of the other.

*Ariſtotle* makes two Kinds of *Converſion*; the one *Simple*, by others call'd *Univerſal*; wherein nothing is chang'd beſide the Order of Extremes, *i. e.* the Terms are tranſpos'd, without altering either the Quality or Quantity thereof: As, *No Mind is Body*, *No Body is Mind*.

The 2d, *per Accidens*, called alſo *particular*; wherein, beſide changing the Places of the Terms, there is a Change of an univerſal Sign into a particular one: As, *Every good Man ſtudies the Welfare of his Country*, *Some Man that ſtudies the Welfare of his Country is good*.

To theſe, ſome of *Ariſtotle*'s Followers add a third Kind of *Converſion*, call'd *by Contrapoſition*: As, *Every Man is an Animal*, *Every no-Animal is no-Man*.

CONVERSION, in Rhetorick, &c. is underſtood of Arguments which are return'd, retorted, and ſhewn on oppoſite Sides, by changing the Subject into the Attribute, and the Attribute into the Subject.

There are *Converſions* of Arguments; from one Figure to another, and from general Propoſitions to particular ones.

Thus *Cicero* againſt *Anthony*; *Doletis tres exercitus* P. R. *interfectos*? *interfecit Anthonius*. *Deſideratis clariſſimos cives*? *eoſque vobis eripuit Anthonius*. *Auctoritas hujus ordinis afflicta eſt*? *afflixit Anthonius*.

CONVERSION, in War, is when the Soldiers are order'd to preſent their Arms to the Enemy, who attack 'em in Flank, whereas they were before ſuppos'd to be in Front: The Evolution neceſſary thereto is called *Converſion*, or *Quarter-wheeling*. See QUARTER-WHEELING.

CONVERSION *of Equations*, in Algebra, is when the Quantity ſought, or any Part thereof, being in Fractions, the Whole is reduc'd to one common Denomination; and then, omitting the Denominators, the Equation continued in the Numerators only. See EQUATION, and FRACTION.

Thus, ſuppoſe $a - b = \frac{aa+cc}{} + b + b$; multiply all by $d$, and it will ſtand thus, $da - db = aa + cc + db + db$.

In Arithmetick, we uſe the Term *Proportion by Converſion of Ratio*, for a Compariſon of the Antecedent, and Conſequent in two equal Ratios. See RATIO.

Thus, as there is the ſame Ratio between 2 and 3, as between 8 and 12; 'tis concluded there is the ſame Ratio between 2 and 1, as between 8 and 4.

CONVERSOS. See CONVERT.

CONVERT, a Perſon who has undergone a *Converſion*. See CONVERSION.

*Convert* is chiefly uſed in reſpect of Changes from one Religion or Religious Sect to another.

*Converts*, with relation to the Religion turn'd to; are denominated *Apoſtates*, with regard to that they have relinquiſh'd. See APOSTATE.

The *Jews* formerly *converted* to Chriſtianity in *England*, were called *Converſos*. *Henry* III. built 'em a Houſe in *London*, and allow'd 'em a competent Subſiſtence for their Lives; which Houſe was called *Domus Converſorum*. The Number afterwards increaſing, they grew a Burden to the Crown; upon which they were diſtributed among the Monaſteries: and after the Expulſion of the *Jews* under *Edward* III. the *Domus Converſorum* was given for keeping of the Rolls. See ROLLS.

CONVERTS, in a Monaſtick Senſe, are *Lay-Friers*, or *Brothers*, admitted for the Service of the Houſe; without Orders, and not allowed to ſing in the Choir. See LAY.

Till the XIth Century, the Word was us'd for Perſons who embrac'd the Monkiſh Life at the Age of Diſcretion, by which they were diſtinguiſh'd from thoſe devoted in their Childhood by their Parents, call'd *Oblati*. See OBLATI.

But in the XIth Century, when they began to receive into Monaſteries illiterate Perſons, incapable of being Clerks, and only deſtin'd for Bodily Labour; the Signification of the Word was chang'd. F. *Mabillon* obſerves, that it was *John* firſt Abbot of *Vallombroſa*, who firſt introduc'd theſe *Brothers-Converts*, diſtinguiſh'd by their State from the Monks of the Choir, who were then either Clerks, or capable of becoming ſo.

CONVEX. } See { CONVEXITY.
CONVEX *Mirror*. } See { MIRROR.
CONVEX *Lens*. } See { LENS.

CONVEXITY, the exterior Surface of a *Convex*, *i. e.* a gibbous and globular Thing; in oppoſition to *Concavity*, or the inner Surface, which is hollow or depreſs'd. See CONCAVITY.

The Word is of particular import in Catoptricks and Dioptricks; where 'tis apply'd to Mirrors and Lenſes. See MIRROR, and LENS.

A *Convex Mirror* repreſents its Images ſmaller than the Objects; as a concave one repreſents 'em larger: A *convex* Mirror reflects the Rays from it, diverging; and therefore diſperſes and weakens their Effect: as a concave one reflects them converging; ſo as they concur in a Point, and have their Effect increas'd; and by how much the Mirror is a Portion of a ſmaller Sphere, by ſo much does it diminiſh the Objects, and diſperſe the Rays the more. See MIRROR.

A *Convex Lens* is either *convex* on both ſides, called a *Convexo-Convex*; or 'tis plain on one Side and *convex* on the other, called a *Plano-Convex*: or concave on one ſide and *convex* on the other, called a *Convexo-Concave*, or *Concavo-Convex*, as the one or the other Surface prevails; *i. e.* as this or that is a Portion of a ſmaller Sphere.

All *Convex* Lenſes inflect the Rays of Light in their Paſſage, *i. e.* ſend them out from their *convex* Surface converging; ſo as that they concur in a Point, or *Focus*. See CONVERGENT.

Hence, all *Convex* Lenſes magnify, *i. e.* repreſent their Images larger than their Objects; and this the more, as they are Portions of ſmaller Spheres. See LENS, REFRACTION, *&c.*

CONVEYANCE, in Law, a Deed, or Inſtrument, by which Lands, *&c.* are *convey'd*, or made over by the Proprietor, or Owner thereof, to ſome other Perſon. See DEED.

CONVICT, in Common Law, is one that is found guilty of an Offence, by the Verdict of a Jury. See CRIMINAL, VERDICT, *&c.*

According to *Crompton*, a Perſon is alſo a *Convict*, or ſaid to be *convicted*, when, after having been outlawed, he appears and confeſſes. See OUTLAWRY.

*Conviction* and Attainder are frequently confounded. See ATTAINDER, and ATTAINTED.

A *Convict Recuſant*, is he who has been legally preſented, indicted, and *convict* for refuſing to come to Church to hear the Common Prayer, according to the Statutes 1 and 23 *Eliz.* and 3 *Jac.* I.

This is commonly underſtood to be a Popiſh Recuſant; tho any others that refuſe coming to Church on the ſame Account are as properly denominated Recuſants. See RECUSANT.

CONVICTION, in Theology, the firſt degree of Repentance; wherein the Sinner becomes ſenſible of his Guilt, of the evil Nature of Sin, and the danger of his own ways. See REPENTANCE.

CONVICTION, in Law. See CONVICT.

CONVIVIUM, *Banquet*, in our antient Cuſtoms and Law-Books, ſignifies the ſame Thing among the Laity, as *Procuratio* among the Clergy; *viz.* when the Tenant is oblig'd, in virtue of his Tenure, to provide Meat and Drink for his Lord once or oftner in the Year.

CONVOCATION, a *National Synod*, or general Aſſembly of the Clergy; ſummon'd by the King's Writ to conſult of the more weighty Affairs of the Church, as of as a Parliament is convok'd to conſult of thoſe of the State. See SYNOD, CLERGY, *&c.*

The King's Writ is directed to the Archbiſhop of each Province, requiring him to ſummon all Biſhops, Deans, Archdeacons, Cathedral and Collegiate Churches, *&c.*

Upon which, the Archbiſhop directs his Mandate to his Dean Provincial, firſt citing him peremptorily; then willing him, in like manner, to cite all the Biſhops, Deans, *&c.* and all the Clergy of his Province; but directing, withal, that one Proctor ſent for each Cathedral and Collegiate Church; and two for the Body of the inferior Clergy of each Dioceſs may ſuffice: Which the Dean accordingly does.

The Place where the *Convocation* of the Province of *Canterbury* has been uſually held is St. *Paul*'s Church; whence, of late, they have been prorogu'd to St. *Peter*'s in *Weſtminſter*, in the Chapel of *Henry* VII. or the *Jeruſalem-Chamber*, were there is an upper and lower Houſe.

The *higher* Houſe, in the Province of *Canterbury*, conſiſts of 22 Biſhops, whereof the Archbiſhop is Preſident; all, at the opening of a *Convocation*, in their ſcarlet Robes and Hoods.

The *lower* Houſe conſiſts of 22 Deans, 24 Prebendaries, 54 Archdeacons, and 44 Clerks, repreſenting the Dioceſan Clergy.

Things are firſt uſually propos'd in the upper Houſe; then communicated to the lower. All the Members of both Houſes have the ſame Privileges for themſelves and menial Servants as the Members of Parliament have. See PARLIAMENT.

The Archbiſhop of *York*, at the ſame Time, holds a *Convocation* of the Clergy of his Province, after the like manner, at *York*; and, by conſtant correſpondence, debates and concludes of the ſame Matters as are debated by that of *Canterbury*. Not that the Northern Province is oblig'd to follow what the Southern one does. See PROLOCUTOR.

The *Engliſh* Clergy, antiently, had their Repreſentatives in the lower Houſe of Parliament; as appears by the Record much priz'd by my Lord *Coke*.

CONVOLUTION, a winding or turning Motion, proper to the Trunks of ſome Plants; as the *Convolvulæ*, or Bindweeds, and the Claſpers of Vines, and Briony.

Dr. *Grew* thinks, that all thoſe Plants whoſe Roots are twiſted, have ſuch a *Convolution*: and he aſſigns two great efficient Cauſes of this winding Motion, the Sun and the Moon.

It is very eaſy to try whether there be any ſuch *Convolution* or not in the Trunks of Plants; which may be done, as he hints, by tying a little bit of Paper to any of the Branches which are exactly North, South, *&c.* and then ſeeing whether it will change its Poſition or not, in reſpect of the Point of the Compaſs.

CONVOY, *Eſcort*, a Sea Term, ſignifying one or more Veſſels of War, intruſted with the Conducting of a Fleet of Merchants; ſerving as a Watch, and a Shelter from the Inſults of the Enemies of the State, or of Pirates. See ESCORT, and CONSERVE.

The Word is alſo uſed in ſpeaking of Military Affairs by Land; where it ſignifies a Body of Forces ſent to guard a Supply of Proviſions, Arms, Ammunition, or the like, going to a Camp, or the like.

CONUSANCE. } See { COGNISANCE.
CONUSOR. } See { COGNISOR.

CONVULSION, *Spaſmus*, in Medicine, a continued involuntary Contraction of ſome Parts of the Body otherwiſe accuſtom'd to move according to the Direction of the Will. See SPASMUS.

It owes its Origin to a Contraction of the Muſcles of the Part, occaſion'd by a too copious and violent influx of the nervous Juice: Of theſe may be infinite Cauſes in the Blood, Arteries, Meninges, Brain, Nerves, Muſcles, Cranium, *&c.* See CONTRACTION.

If the *Convulſion* be univerſal, attended with violent Motions, foaming at the Mouth, and periodical; it is uſually called the *Epilepſy*. See EPILEPSY.

The uſual Evacuations and Medicines proper for the Cure of *Convulſions*, are *Phlebotomy*, *Emeticks*, *Catharticks*, *Epiſpaſticks*, and proper *Cephalicks*; as *Sal. Volat. Oleoſ. Spirit of Lavender*, *Spirit of Hartſhorn*, *Tincture of Caſtor*, *Cinnabar of Antimony*, *Caſſuminor Root*, *Valerian Root*, *Volatile Salt of Amber*, &c. given in different forms.

In periodical univerſal *Convulſions*, a Salivation ſometimes anſwers, after other Courſes have fail'd.

Women and Children are particularly liable to *Convulſions*: Women after Delivery; as upon a Stoppage of the *Lochia*, or a violent Extraction of the *Placenta*. See CONVULSIVE.

CONVULSIVE, in Medicine, is applied to thoſe Motions which, naturally, ſhould depend on the Will; but which, by ſome external Cauſe, become involuntary.

A *Convulsive* Motion, is a Contraction made by Fits and Intervals; wherein it differs from a *Convulsion*, which is a continued Contraction.

*Convulsive* Motions arise from a Disorder in the Origin of the Nerves. A *Convulsive* Tension of the Solids, is one of the principal Causes which destroy the *Æquilibrium* that should obtain between the Solids and the Fluids. *Journ. de Scav.*

Convulsive is also used for any Thing that occasions *Convulsion*, or a *Convulsive Motion*.

Thus, Wounds of Nerves are said to be *Convulsive*; white Hellebore is *Convulsive*.

Children are very liable to *Convulsive* Disorders from various Causes; as Repletion, curdling of the Blood in the Stomach or Intestines, Worms, Dentition, &c. See Children, Worms, Dentition, &c.

The Cramp is a *Convulsive* Contraction of some muscular Part of the Body. See Cramp.

COOK-ROOM, in a Ship, is where the Cook and the Mate dress and deliver out the Meat, &c.

COOLERS, in Medicine, Remedies so call'd; which may be consider'd under these two Divisions: 1st, Those which produce an immediate Sense of Cold; which are such as have their Parts in less Motion than those of the Organs of Feeling. See Cold.

2dly, Such as by a particular Viscidity, or Grossness of Parts, give a greater Consistency to the Animal Fluids than they had before; whereby they are disabled from moving so fast, and will therefore have less of that intestine Force on which their Heat depends. See Calidum.

Of the former Kind are Fruits, and acid Liquors; to the latter belong Cucumbers, and all Substances producing Viscidity.

COOM, a Term for Soot that gathers over an Oven's Mouth; and also for what works out of the Wheels of Carriages.

Soot is sometimes used in Medicine, infus'd in Wine with other Ingredients, as an Antihysterick, and against Palpitations of the Heart, &c. See Soot.

The Spirit of Soot is also used for the same Intentions, and in Cephalick Cases.

COOMB, or COMB *of Corn*, is a dry Measure, containing four Bushels, or half a Quarter. See Measure; see also Bushel, &c.

COORDINATE, something of equal Order, Rank, or Degree with another.

COORDINATION, in respect of Causes, is an Order of Causes, wherein several, of the same Kind, Order, and Tendency, concur to the Production of the same Effect. See Cause.

COPAL, a Gum, of an agreeable smell, resembling that of Incense; brought from *New Spain*, where it oozes out from Incisions made in the Bark of a large Tree; much after the manner in which the Vine yields its Water, when cut in the Spring. See Gum.

The *Indians* use it to burn on their Altars: Among the *Europeans*, it is used in Diseases of the Heart. 'Tis very rare: when good, 'tis of a fine transparent yellow; and melts easily, either in the Mouth or Fire.

In defect of this is brought another Kind from the *Antilles*, which is almost the only one known among the Druggists. Its chief Consumption is in the making of Varnish. See Varnish.

COPARCENERS, or *Parceners*, *vulgo* COPARTNERS, and *Partners*, are such as have equal Portions in the Inheritance of their Ancestor. See Parceners.

*Parceners* are so either by *Law* or *Custom*. *Parceners by Law*, are the Issue Female; which, in default of a Male Heir, come equally to the Lands of their Ancestor.

*Parceners by Custom*, are those who by some peculiar Custom of the Country, challenge equal Parts in such Lands; as in *Kent*, by the Custom of *Gavelkind*. See Gavelkind.

The Crown of *England* is not subject to *Coparceny*. See Crown.

COPARCENY, or COPARSENY, the Share or Quota of a *Coparcener*. See Coparcener.

COPE, an Ecclesiastical Ornament, usually wore by Chantors and Sub-Chantors, when they officiate in Solemnity. See Chantor.

'Tis also wore by the *Romish* Bishops and other Ordinaries: It reaches from the Shoulders to the Feet. The Antients called it *Pluvial*.

*S. Martin's* Cope, was a Relick, formerly in great Esteem among the *French* Kings; and carried with them to War as their Standard. See Chapel, and Chaplain.

COPERNICAN *System*, or *Hypothesis*, is the System of the World, wherein the Sun is suppos'd at rest in the Centre; and the Planets, with the Earth, to describe Ellipses round him. See System.

The Heavens and Stars are here suppos'd at rest; and that diurnal Motion which they appear to have from East to West, is imputed to the Earth's Motion from West to East. See Earth, Sun, Star, &c.

This System was asserted by many of the Antients; and particularly *Ecphantes*, *Seleucus*, *Aristarchus*, *Philolaus*, *Plato*, and *Pythagoras*; from whom it was antiently denominated the *Pythagoric System*. See Pythagorean.

It was also held by *Archimedes*, in his Book *de granorum arenæ numero*; but after him it became neglected, and even forgotten, for many Ages; till about 200 Years ago when *N. Copernicus* reviv'd it; from whom it took the Name of the *Copernican System*.

*Nich. Copernicus*, now a Name so popular, was born at *Thorn*, in *Polish Prussia*, in the Year 1472, according to *Junctinus*, or 1473 according to *Mæstlinus*. After the usual domestick Education, he was sent to the University of *Cracow*; where he applied himself to Philosophy and Physick, and at length commenced Doctor in Medicine. In the mean time, having a strong Propensity to Mathematicks, he diligently attended the Lectures of *Albert. Brudzevius*, and even learnt of him at home. After he had here attain'd to the Use of the Astrolabe, and was entering upon Astronomy, he took *Regiomontanus* for his Guide: Tho he run thro' all the Mathematicks of the Age, yet he seem'd most taken with Perspective; on occasion whereof he learnt Painting, in which he is said to have excell'd. When 23 Years of age, being at *Boulogn*, he became acquainted with that eminent Mathematician Dom. *Maria Ferrariensis*; and was admitted to share with him in making of Astronomical Observations. Here, in the Year 1497, *Copernicus* first observ'd an Occultation of *Palilicium* by the Moon. Going on to *Rome*, he taught publickly, and made some considerable Observations; and at his return to *Cracow*, was made Canon of the Church of *Wermelandt*, or *Ermeland*, and at length Vicar-General.

The Course he took in prosecuting Astronomy, which has render'd his Name immortal, is as follows: Observing how the Astronomers of those Times were gravell'd to make the Planets move equably in circular Orbits, *viz.* to suppose 'em to move, not about their own Centre, but that of the Equant; and that they could no way make out a tolerably regular System, out of all their Shifts and Hypotheses; He resolv'd to try what he could do. With this View he perus'd the Writings of all the Philosophers and Astronomers extant; and pick'd out of each what appear'd probable and elegant. In this Review he was chiefly taken with two almost similar Opinions; (the one attributed to *Martianus Capella*, the other to *Apollonius Pergæus*:) which give a very good Account of the Motions of *Venus* and *Mercury*; and explain the Cause of their Directions, Stations, and Retrogradations very happily: The latter, withal, performing the same in the three superior Planets. But, then, in both these Hypotheses, the Earth being suppos'd the Centre; *Copernicus* chose rather to adopt the Opinion of the *Pythagoreans*; to remove the Earth out of the Centre of the World, and to give it, not only a diurnal Motion round its own Axis; but also an annual one round the Sun.

On this Footing he began to observe, calculate, compare, &c. and at length, after a long solicitous Disquisition, found himself in a Condition to account for the Phænomena and Motions of all the Planets; and to make an orderly Arrangement, or Disposition of the whole Heavens; wherein nothing could be alter'd, or displac'd, without bringing the last Confusion into the whole.

These Things he began to write down about the Year 1507. He then proceeded to furnish himself with some new *Apparatus*; particularly a Parallactick Instrument, and some *Ptolemaic* Rulers, wherewith to observe the Altitude of the Stars, and determine the Periods of the Sun and Moon: And without other Means, compos'd his six Books *de Orbium Cælestium Revolutionibus*; containing the Whole of Astronomy, deliver'd after the Example of *Ptolemy*, in the Geometrical Method. We have already observ'd that he began it in 1507; He finish'd it in 1530. Five Years after he polish'd and improv'd it. He died of a Dysentery, and a Palsy on his right Side, in the Year 1543.

*See the Order, and Disposition of the heavenly Bodies*, as laid down by him, compar'd with those in the other Systems, under the Head System.

COPERNICUS, is the Name of an Astronomical Instrument, contriv'd by Mr. *Whiston*, for the Calculation and Exhibition of Eclipses, and of the Motions of the Planets, both Primary and Secondary, &c.

It was so call'd by the Inventor, as being built on the *Copernican* System; or as representing the Heavenly Bodies agreeably thereto.

It consists of several concentrical Circles of Wood; upon which are inscrib'd Numbers, transfer'd thither from the Astronomical Tables: By the various Disposition of these Circles, which are made so as to slide within each other, Questions are solv'd; and thus long Calculations are sav'd, and the Work of many Hours brought into a few Minutes.

For the Exhibition of Eclipſes, there is a peculiar *Apparatus*, conſiſting of a terreſtrial Globe, ſo diſpoſed, as that being turn'd round its Axis, the Light of the Sun, or a Candle, is projected thro' a glaſs Plane, mark'd out into concentrick Circles, expreſſing Digits of the Eclipſe; and thus is the Path of the Eclipſe, with its Degree or Quantity in every Part of its Path, agreeably and accurately repreſented.

The Inſtrument not being very common, a particular Deſcription were ſuperfluous. The Author has wrote a Volume to explain it.

COPHTI, or COPTI, a Name given to the Chriſtians of *Egypt*; who are of the Sect of *Jacobines*. See JACOBINES.

The Criticks are extremely divided about the Origin and Orthography of the Word: ſome write it *Gophti*, and others *Gophte*, *Cophtites*, *Cophtitæ*.

*Scaliger* derives the Name *Cophti* from *Cophtæ*, an antiently celebrated Town of *Egypt*, the Metropolis of the *Thebaide*: *Kircher* refutes this Opinion, and maintains, that the Word originally ſignifies *cut*, and *circumciſed*; and was given theſe People by the *Mahometans*, by way of Reproach, in regard of their Practice of Circumciſing: But *P. Sollier*, another Jeſuit, refutes this Opinion. *Scaliger* afterwards changed his Opinion, and deriv'd the Word from ΑΠΤΙΤΟΣ, the antient Name of *Egypt*, by retrenching the firſt Syllable: But this Opinion, too, *P. Sollier* diſputes. *John de Leo* and others ſay, that the *Egyptians* antiently called their Country *Elchibth* or *Chibth*, from *Chibth* their firſt King, whence *Cophtite*, &c. others ſay from *Cobtim* ſecond King of *Egypt*. *Vanſleb* derives the Word *Cophti* from *Copt* Son of *Miſraim*, Grandſon of *Noah*.

All theſe Etymologies *P. Sollier* rejects, on this Principle, that were they true, all the *Egyptians* ought equally to be called *Cophti*; whereas, in effect, none but the Chriſtians, and among thoſe none but the *Jacobines* bear the Name; the *Melchites* not being comprehended under it.

Hence he chuſes to derive the Word from the Name *Jacobite*, by retrenching the firſt Syllable; whence *Cobite*, *Cobta*, *Copta*, and *Cophta*.

As to the Hierarchy of the *Cophti*, they have a Patriarch, who reſides at *Cairo*, but takes his Title from *Alexandria*: He has no Archbiſhop under him, but 11 or 12 Biſhops. The reſt of the Clergy, whether Secular or Regular, is compos'd of the Orders of S. *Anthony*, S. *Paul*, and S. *Macarius*, who have each their Monaſteries.

Beſide the Order of Prieſts, Deacons, and Subdeacons, the *Cophti* have likewiſe *Igoumenes*, or *Archimandrites*, the Dignity whereof they confer with all the Prayers and Ceremonies of a ſtrict Ordination.

This makes a conſiderable Difference among the Prieſts; and beſides the Rank and Authority it gives them with regard to the Religious, comprehends the Degree and Functions of Arch-Prieſts. By a Cuſtom of 600 Years ſtanding, if a Prieſt elected Biſhop be not already *Archimandrite*, the Dignity muſt be confer'd on him before Epiſcopal Ordination.

The ſecond Perſon among the Clergy, after the Patriarch, is the Titular Patriarch of *Jeruſalem*, who alſo reſides at *Cairo*, by reaſon of the few *Cophti* at *Jeruſalem*; He is, in effect, little more than Biſhop of *Cairo*: only he goes to *Jeruſalem* every *Eaſter*, and viſits ſome other Places in *Paleſtine* near *Egypt*, which own his Juriſdiction. To him belongs the Government of the *Cophtic* Church, during the Vacancy of the Patriarchal See.

To be elected Patriarch, 'tis neceſſary the Perſon have lived all his Life in Continence; and even that he be a Virgin: 'Tis he confers the Biſhopricks. To be elected Biſhop, the Perſon muſt be in the Celibate; or, if he have been married, it muſt not be above once.

The Prieſts and inferior Miniſters are allow'd to be married before Ordination; but are not oblig'd to it, as *Ludolphus* miſtakenly obſerves. They have an Infinity of Deacons, and even confer the Dignity frequently on Children. None but the loweſt Rank among the People commence Eccleſiaſticks; whence ariſes that exceſſive Ignorance found among 'em: Yet the Reſpect of the Laity towards the Clergy is very extraordinary.

Their Office is longer than the *Roman* Office, and never changes in any thing: They have three Liturgies, which they vary occaſionally.

The Monaſtick Life is of great Eſteem among the *Cophti*: to be admitted into it, there is requir'd the Conſent of the Biſhop. The Religious *Cophti* make a Vow of perpetual Chaſtity; renounce the World, and live with great Auſterity in Deſarts: They are oblig'd to ſleep in their Cloths and their Girdle, on a Matt ſtretch'd on the Ground; and to proſtrate themſelves every Evening 150 times, with their Face and Breaſt on the Ground. They are all, both Men and Women, of the Scum of the People; and live on Alms. The Nunneries are properly Hoſpitals; and few enter but Widows reduc'd to Beggary.

F. *Roderic* reduces the Errors and Opinions of the *Cophti* to the following Heads: 1ſt, That they put away their Wives, and eſpouſe others while the firſt are living. 2d, That they have ſeven Sacraments, *viz.* Baptiſm, the Euchariſt, Confirmation, Ordination, Faith, Faſting, and Prayer. 3d, That they deny the Holy Spirit to proceed from the Son. 4th, That they only allow of three Oecumenical Councils; that of *Nice*, *Conſtantinople*, and *Epheſus*. 5th, That they only allow of one Nature, Will, and Action in Jeſus Chriſt after the Union of the Humanity with the Divinity.

For their Errors in Diſcipline, they may be reduced, firſt, To the Practice of circumciſing their Children before Baptiſm, which has obtain'd among 'em from the XIIth Century. 2d, To their ordaining Deacons at five Years of Age. 3d, To their allowing of Marriage in the ſecond Degree. 4th, To their forbearing to eat Blood: To which ſome add their Belief of a Baptiſm by Fire, which they confer by applying a hot Iron to their Forehead or Cheeks.

Others palliate theſe Errors, and ſhew that many of 'em are rather Abuſes of particular Perſons, than Doctrines of the Sect. This ſeems to be the Caſe with regard to their Polygamy, eating of Blood, marrying in the ſecond Degree, and the Baptiſm of Fire: For Circumciſion, it is not practis'd as a Ceremony of Religion; nor as of any divine Appointment, but merely as a Cuſtom which they derive from the *Iſhmaelites*; and which, perhaps, may have had its Origin from a View to Health and Decency in thoſe hot Countries. See CIRCUMCISION.

The *Cophti*, in different Times, have made ſeveral Reunions with the *Latins*; but always in Appearance only, and under ſome Neceſſity of their Affairs. In the Time of Pope *Paul* IV. a *Syrian* was diſpatch'd to *Rome* from the Patriarch of *Alexandria*, with Letters to that Pope; wherein he acknowledg'd his Authority, and promis'd Obedience; deſiring a Perſon might be diſpatch'd to *Alexandria*, to treat about a Re-union of his Church to that at *Rome*: purſuant to which, *Pius* IV. Succeſſor to *Paul*, choſe F. *Roderic*, a Jeſuit, whom he diſpatch'd in 1561, in Quality of Apoſtolical Nuntio.

But the Jeſuit, upon a Conference with two *Cophti* deputed for that Purpoſe by the Patriarch, was made to know, that the Titles of *Father of Fathers*, *Paſtor of Paſtors*, and *Maſter of all Churches*, which the Patriarch had beſtow'd on the Pope in his Letters, were mere Matters of Civility and Compliment; and that it was in this manner the Patriarch us'd to write to his Friends: They added, that ſince the Council of *Chalcedon*, and the Eſtabliſhment of different Patriarchs independent of one another; each was Chief and Maſter of his own Church. This was the Anſwer the Patriarch gave the Pope, after he had receiv'd a Sum of Money remitted to him from *Rome*, by the Hands of the *Venetian* Conſul.

COPHTIC, or COPTIC *Language*, the Language of the *Cophti*. This is the antient Language of the *Egyptians*, mix'd with a great deal of *Greek*; the Characters it is written in being all *Greek*. See COPHTI, and LANGUAGE.

F. *Kircher* is the firſt who publiſh'd a Grammar and Vocabulary thereof. There is not known any Book extant in the *Cophtic*, except Tranſlations of the Holy Scripture, or of Eccleſiaſtic Offices; or others that have relation thereto, as Dictionaries, *&c.* See BIBLE.

The antient *Cophtic* is now no longer found, but in their Books: The Language they now uſe throughout the Country is *Arabic*.

The old *Cophtic*, which *Kircher* maintains to be a Mother Tongue, and independent of all others, has been much alter'd by the *Greek*: For beſides that it retains all its Characters, with a very little Variation, a great number of the Words are pure *Greek*.

*Voſſius*, indeed, aſſerts that there was no *Cophtic* Language till *Egypt* became ſubject to the *Arabs*. The Language, according to him, is a Mixture of *Greek* and *Arabic*: the very Name thereof not being in the World till after the *Arabs* were Maſters of the Country. But this, M. *Simon* obſerves, proves nothing; except that what was antiently call'd *Egyptian*, has ſince by the *Arabs* been call'd *Cophtic*, by a Corruption of Speech. There are, 'tis true, *Arabic* Words in the *Cophtic*; yet this by no means proves but that there was a Language before that time, either *Cophtic* or *Egyptian*. *Pietro de la Valle* obſerves, that the *Cophti* have entirely loſt their antient Tongue; that 'tis now no longer underſtood among 'em; that they have nothing extant therein but ſome ſacred Books; and that they ſtill ſay Maſs in it, and *ſolo hanno in eſſa alcuni libri ſacri, dicendo ancora la maſſa in quella lingua.*

All their other Books have been tranſlated into the *Arabic*, which is their vulgar Tongue; which has occaſion'd the Originals to be loſt: 'Tis added, that they rehearſe the Epiſtles and Goſpels in the Maſs twice; once in *Arabic*, and once in *Cophtic*.

Indeed, if we believe F. *Vanſleb*, the *Cophti* ſay Maſs in *Arabic*, all but the Epiſtles and Goſpels, which they rehearſe both in that and *Cophtic*; *La Maſſa celebrano in lin-*

*gua*

*gua Arabica, eccetto l'Evangelio & alcune altre coſe che ſoſgliano leggere nella lingua Copta & Araba.*

COPIA *Libelli deliberanda*, a Writ which lies in Caſe where a Man cannot get the Copy of a Libel at the Hands of the Eccleſiaſtical Judge.

COPIATE, under the Weſtern Empire, a *Grave-digger*.

In the firſt Ages of the Church, there were Clerks deſtin'd for this Employment. In 357, *Conſtantine* made a Law in favour of the Prieſts *Copiates*, *i.e.* of thoſe who had the Care of Interrment; whereby he exempts 'em from the Luſtral Contribution which all other Traders paid.

It was under him that they firſt began to be called *Copiates*, *q. d.* Clerks deſtin'd for bodily labour, from κοπος, of κοπλω, *ſcindo*, *cædo*, *ferio*. Before that Time they were called *Decani* and *Lecticarii*; perhaps, becauſe they were divided by Decads or Tens, each whereof had a Bier or Littre for the Carriage of the dead Bodies. See DECANUS, and LECTICARIUS.

Their Place among the Clerks, was the next in order before the Chantors.

COPING *of a Wall*, the Top or Cover of a Wall, made ſloping to carry off the wet. See WALL.

COPING *over*, in Carpentry, a ſort of hanging over, not ſquare to its upright, but bevelling on its under Side till it end in an Edge.

COPIVI, CAPIVI, COPAYBA or CUPAYBA, a Balm or Balſam, oozing out of Inciſions made in a Tree of *Braſil*; not taken notice of but by very late Writers; at leaſt, not under this Name. See BALM.

It is of a thinner Conſiſtence than common Turpentine, but much more fragrant and deterſive. It is extremely quick in paſſing off by Urine, and mightily cleanſeth thoſe Paſſages; by which it has obtain'd very much in Gonorrhæas, Seminal Weakneſſes, the Whites, and all Obſtructions, and Ulcerations of thoſe Parts. It is likewiſe a powerful Balſamick, and good in many Diſtempers of the Breaſt, eſpecially Catarrhs, tickling Coughs, ſpitting of Blood, &c. In Dyſenteries and Diarrhæas of long continuance, where the *Mucus* that lines the Inteſtines is, by the Acrimony of the Humours abraded, it is of great ſervice in ſupplying its Place by its balſamick quality. It mixes intimately with the Yolk of an Egg.

The *Jews* uſe it to ſtop the Flux of Blood after Circumciſion.

COPPEL, COPEL, or CUPPEL, call'd alſo *Teſt*, a Veſſel uſed by Refiners and Eſſayiſts, to try and purify their Metals.

The *Coppel of Eſſay*, is a little flat Veſſel, compos'd of Vine Aſhes, and Bones of Sheeps Feet, calcin'd and lixiviated, to ſeparate the Salts, which would otherwiſe make it crackle. At the bottom of the Veſſel is a little Cavity fill'd with a kind of white Varniſh, compos'd of Hartſhorn or of Bones of Pike, calcin'd and diluted in Water: the Uſe of this Liquor is, that the Gold or Silver to be eſſay'd may be more conveniently lodg'd, and that the Button of the Eſſay may be ſeparated the more eaſily. See ESSAY.

*Note*, Tho Metals may be tried otherwiſe than by *Coppeling*: and tho the Touchſtone, Graver, &c. are of ſome ſervice to the Goldſmith in judging of their Purity; yet, 'tis certain, without the *Coppel* 'tis difficult, not to ſay impoſſible, to know their preciſe degree of Purity.

*The Refiner's Coppel*, is a large Free-ſtone Veſſel, lined withinſide with a kind of Plaſter made of Aſhes well lixiviated, cleans'd, dry'd, beaten and ſifted.

In this Kind of *Coppel* it is that the Refiners purify their Gold and Silver, by adding Lead to it, and expoſing the whole to a violent Fire. See REFINING.

COPPER, a hard, dry, heavy, ductile Metal; found in Mines, in ſeveral Parts of *Europe*, but moſt abundantly in *Sweden*. See METAL.

*Copper* is of all Metals the moſt ductile and malleable after Gold and Silver; and abounds much in Vitriol and Sulphur. See VITRIOL, &c.

The Chymiſts call it *Venus*; as ſuppoſing it to have ſome more immediate Relation to that Planet. See VENUS.

By an Analyſis it appears compos'd of a Sulphur ill digeſted, a yellowiſh Mercury, and a red Salt.

'Tis found both in Duſt and in Stones, each of which are firſt well waſh'd, to ſeparate 'em from the Earth wherewith they are mix'd. In this State 'tis call'd *Virgin Copper*.

After waſhing 'tis melted, and the melted Matter run into a kind of Molds, to form large Blocks, by ſome call'd *Salmons*, and by others *Pigs of Copper*. This is the ordinary *Copper*.

To render it more pure and beautiful, they melt it again once or twice; ſome of its coarſe earthy Parts being left at each Fuſion, and a Quantity of Tin and Antimony added in each. In this State 'tis call'd *Roſe Copper*, in Latin *Æs Peloſum*.

Of a Mixture of this and *Lapis Calaminaris*, is form'd Braſs, which the *French* call *yellow Copper*, in contradiſtinction to *Naturat Copper*, which they call *red Copper*. See BRASS.

*Copper* melted together with 22 or 23 Pounds of fine Tin *per* Quintal, makes Bell Metal. See BELL *Metal*.

*Copper* melted with Calamine, quantity for quantity, makes Braſs. See CALAMINE.

*Copper* and Braſs melted in equal Quantities, make what the *French* call *Bronze*, uſed for Figures, Statues, &c. See FOUNDERY.

*Copper* turns white by an Unction of Spirit of Wine and Orpiment. *Pliny* ſays there is a *Copper* naturally white, found underneath the Silver Mines.

*The Uſe of Copper* is very extenſive: Among other Works of *Copper* may be reckon'd thoſe of Braſs, Bell Metal, Pot Metal, &c. which are all Compoſitions where *Copper* makes the prevailing Ingredient.

The Chymiſts call *Saffron of Copper*, or *Crocus veneris*, a Preparation of *Copper* Plates ſtratify'd with decrepitated Salt, in a Crucible; after having extinguiſh'd 'em in Water, and ſcrap'd 'em with Iron Bruſhes. This Saffron is very red, and is uſed in Emplaiſters to mundify Wounds and Ulcers. See CROCUS.

Some Chymiſts have pretended that the Spirit of *Venus* was a real Alkaheſt, capable of diſſolving wholly Pearls, Corals, Crabs Eyes, &c. without any Diminution of its force; but Experience has ſhewn the contrary. See ALCAHEST.

The Calx of Braſs, called *Æs Uſtum*, and ſometimes alſo *Saffron of Venus*, is nothing but *Copper* calcin'd in a violent Fire. See Æs USTUM.

Verdigreaſe is a Ruſt of *Copper*. See VERDIGREASE.

M. *Becher* obſerves, that the drinking of acid Liquors, even out of common Silver Plate, is very unwholeſom, by reaſon of the Mixture of *Copper* therein; much more out of Veſſels of *Copper*.

The *Indian* Phyſicians are ſaid to ſet a great Value on Talc and yellow *Copper*; which, they ſay, conſumes the moſt viſcid Humours, and removes the moſt obſtinate Obſtructions.

COPPERAS, or COPERAS, a Mineral, form'd in *Copper*-Mines, and which is properly a Kind of Vitriol. See VITRIOL.

*Copperas* is purify'd and prepar'd in the ſame manner as Allum and Salt-petre, by paſſing thro' ſeveral Lixiviums, till it be wholly reduced to Cryſtal. See SALT.

Some make *Copperas* to be the Chalcitis of the Antients. See CHALCITIS.

But the more common Opinion is, that 'tis rather a Calcanthum, or Vitriol. See CALCANTHUM.

There is *Copperas* of *England*, of *Piſa*, *Germany*, *Cyprus*, *Hungary*, and *Italy*, which only differ from each other in Colour and Perfection; being all the ſame Mineral.

*White Copperas*, is the *Copperas* of *Germany*, calcin'd, laid in Water, thence filtrated, and reduced to Salt; whereof, as it coagulates, they form Cakes of 40 or 50 Pound each: ſuch are thoſe brought from *Goſlelar* in *Saxony*. This *Saxon Copperas*, ere it be whiten'd, is of a bluiſh green, clear and tranſparent.

The *Engliſh Copperas* is of a fine green; that of *Cyprus* and *Hungary* a ſky-blue, in Pieces cut like the Point of a Diamond. That of *Piſa* and *Italy* is likewiſe green; and the laſt as tranſparent as Glaſs.

*Copperas* is of conſiderable uſe in many Preparations; but eſpecially in Dying. The Hatters alſo uſe it in their dye; and this and Galls are the Ingredients that compoſe writing Ink. See INK, &c.

The ordinary *Engliſh Copperas* is made of a Kind of Stones found on the Sea-ſhore in *Eſſex*, *Hampſhire*, and ſo Weſtward, ordinarily called *Gold Stones*, from their Colour: they abound much with Iron.

To prepare the *Copperas* from them, they are laid in Heaps or Beds under ground. In proceſs of Time they ſwell and ferment; and, by degrees, a Humour diſtils out, which draining into a Ciſtern, and afterwards boil'd, in the boiling ſhoots into thoſe Cryſtals we ſee it in.

The Works at *Deptford* for making it, are known to moſt People.

Many Chymiſts diſſolve this, and ſhoot it again for the common Salt of Steel.

COPPICE, or COPSE, a little Wood, conſiſting of Under-woods; and may be rais'd both by ſowing and planting. See WOOD.

COPULA, in Logick, a Verb that connects any two Terms in a Propoſition, either Negative or Affirmative: As, *A Roſe is ſweet*; where *is* is the *Copula*.

COPULATION. See COITION.

COPULATIVE *Propoſitions*, are thoſe which include ſeveral Subjects, or ſeveral Attributes join'd together by an affirmative or negative Conjunction. See CONJUNCTION.

Thus, *v. g. Power and Riches don't make a Man happy.* Where *and* is the Conjunction that couples *Power* and *Riches*.

*Conjunction* COPULATIVE. See CONJUNCTION.

COPY, a Minute, Draught, or firſt Deſign of an Inſtrument, to be afterwards put into form.

The

The Word comes from the Latin *Copia*, which was uſed for the ſame thing.

COPY is alſo uſed for a Tranſcript of a Writing or Inſtrument, made for the Uſe and Satisfaction of ſome of the Parties concern'd; or in order to preſerve the Memory thereof.

Such a *Copy* was taken from the Original; has been collated with the Original. Antient Titles do now few of 'em ſubſiſt otherwiſe than in *Copies*.

COPY is alſo uſed for an Imitation of any original Work; particularly a Painting, Draught, Figure, &c. See ORIGINAL.

Among Printers, *Copy* is the Manuſcript, or Original of a Book given them to print from. In this Senſe, they ſay, The Preſs ſtands ſtill for want of *Copy*: Such an Author's *Copy* is good, *i. e.* fair, legible, orderly, &c. and ſuch another's, otherwiſe.—— In the Bookſellers Language, a *good Copy* is that which produces a ſaleable Book.——*To caſt off a Copy*, is to make a Computation of the Number of Sheets a Manuſcript will make in print.

COPY-HOLD, is a Tenure for which the Tenant has nothing to ſhew but the *Copy* of the Roll made by the Steward of the Lord's Court. See TENURE.

The Steward of the Court is, among other Things, to enroll and keep a Regiſter of all ſuch Tenants as are admitted to any Parcel of Land, or Tenement belonging to the Manor; and the Tranſcript is called the *Copy of the Court Roll*, which the Tenant keeps as his own Evidence. See ROLL.

This Tenure is called a *baſe Tenure*, becauſe the Tenant holds at the Will of the Lord. *Fitzherbert* ſays, it was formerly called *Tenure in Villenage*; and that *Copy-hold* is but a modern Name.

However, it is not ſimply at the Lord's Will, but according to the Cuſtom of the Manor; ſo that if the *Copy-holder* doth not break that Cuſtom, and forfeit his Tenure, he ſeems not to ſtand at the Lord's Courteſy.

Theſe Cuſtoms are infinite; varying in one Point or other almoſt in every Manor. See CUSTOM, and MANOR.

*Copy-holders* upon admittance pay a Fine to the Lord; which Fines are in ſome Manors certain, in others not; but yet, if the Lord exceeds two Years Value, the Court of Chancery, King's-Bench, &c. have, in their ſeveral Juriſdictions, Power to reduce the Fine. See FINE.

In many Places the *Copy-holds* are a kind of Inheritance, and term'd *Cuſtomary*, becauſe the Tenant dying, and the Hold becoming void, the next of Blood paying the cuſtomary Fine, as two Shillings an Acre, or the like, may not be denied his Admiſſion.

Some *Copy-holders* have by Cuſtom the Wood growing upon their own Land; ſome, again, hold by the Verge in antient Demeſne, ſo that tho they hold by *Copy*, they are yet accounted a kind of Free-holders: Laſtly, ſome others hold by common Tenure, called *mere Copy-hold*; whoſe Land, upon Felony committed, eſcheats to the Lord of the Manor.

This is the Land which the *Saxons* called *Folkland*, as being held *ſine ſcripto*; in contradiſtinction to *Bockland*, or Charter-Land, *Terra ex ſcripto*, and now Free-Land. See CHARTER-LAND, and FREE-HOLD.

COPY-HOLDER, is defined by *Weſt* to be a Perſon admitted Tenant of any Lands or Tenements within a Manor, which, Time out of Mind, by the Uſe and Cuſtom thereof, have been demiſable to ſuch as will take the ſame by *Copy* of Court Roll, according to the Cuſtom of the ſaid Manor.

COQ. *ad Med. Conſumpt.* an Abbreviature among Phyſicians, ſignifying that the Thing is to be boil'd till half of it be conſum'd.——*Coq. in S. Q. Aq.* implies it to be boil'd in a ſufficient Quantity of Water.

COR, in Anatomy. See HEART.

COR *Hydræ*, in Aſtronomy, a Star of the ſecond Magnitude, in the Heart of the Conſtellation *Hydra*; the 12th in Order in *Ptolemy*'s Catalogue; the 11th in *Tycho*'s; and the 25th in the *Britannic*. See STAR.

Its Longitude is 22° 57′ 59″. its Latitude 22° 24′ 32″ South. See HYDRA.

COR *Leonis*, or *Regulus*, a Fix'd Star of the firſt Magnitude, in the Conſtellation *Leo*. See LEO.

COR *Caroli*, in Aſtronomy, an extra-conſtellated Star in the Northern Hemiſphere, ſituated between the *Coma Berenices* and *Urſa Major*; ſo call'd by Dr. *Hally* in honour of King *Charles*. See STAR, and CONSTELLATION.

CORACOBRACHIALIS, a Muſcle which ariſeth from the *Proceſſus Coracoides* of the *Scapula*, by a tendinous beginning; and paſſing over the Articulation of the *Humerus*, is inſerted into the middle and internal Part of that Bone, and with the *Deltoides* and *Supra-ſpinatus*, lifts the Arm upwards; and alone, obliquely outwards.

CARACOHYOIDEUS, in Anatomy, a Muſcle which hath its Origin from the *Proceſſus Caracoides* of the *Omoplata*; or rather, according to *Keil*, from the upper Edge of the *Scapula*, near its Neck; whence aſcending obliquely under the *Maſtoidæus*, it is inſerted into the *Os Hyoides*; which it ſerves to pull obliquely downwards. See HYOIDES.

It is alſo called *Digaſtricus*, as having two Bellies at its two Extremities, and a Tendon in the middle, to give room for the Paſſage of the Carotid and inner Jugular Artery. See DIGASTRIC.

The Word is form'd from *Caracoides* and *Hyoides*, the two Parts.

CARACOIDES, in Anatomy, a Proceſs, ſo call'd from its reſembling a Crow's Bill. See PROCESS.

The *Caracoides* is plac'd in the upper Part of the Neck, and projects over the Head of the Bone of the Arm.

It ſerves to ſtrengthen the Articulation of the Shoulder; and gives Origin to one of the Muſcles of the Arm.

The Word comes from the *Greek* κόραξ, κόρακος, *corvus*, and εἶδος, *imago*.

CORAL, in Natural Hiſtory, a Production of the Sea, rank'd among the Number of Marine Plants. See PLANT.

This Opinion, which we received from the Antients, is now ſo well eſtabliſh'd, that all other Sentiments ſeem precluded. *P. Kircher*, that learned Naturaliſt, ſuppoſes entire Foreſts of it, at the bottom of the Sea; and M. *Tournefort*, that able Botaniſt, maintains that it evidently multiplies by Seed; tho neither its Flower nor Grain be known. However, the Count *de Marſigli* has diſcover'd ſome Parts therein which ſeem to ſerve the Purpoſe of Grains and Flowers. See SEED, &c.

*Coral*, then, being eſtabliſh'd a Plant, has, in that Quality, *Roots*, wherewith it is faſten'd to the Rock whereon it grows: theſe Roots are cover'd with a *Bark*, ſet with ſtarry Pores, which traverſe 'em from top to bottom. Above the Roots is the ligneous or *woody* Part of the Plant, if we may ſo call a Matter that rather ſeems to reſemble Stone than Wood. It is divided into Branches like other Plants; having white Streaks therein, which ſeem to repreſent a kind of Fibres. The Extremities of the Plant are ſoft, and rounded into little Bowls, ordinarily divided into ſix Cells, fill'd with a Humour ſomewhat like Milk, fatty, ſharp, and aſtringent.

Laſtly, that nothing may be wanting to conſtitute a real Tree, theſe Bowls are eſteem'd a kind of Pods, or *Capſulæ*, containing the Seed of the *Coral*. 'Tis even ſaid, that in what Place, or on what Matter ſoever this Juice be ſhed, it carries Fecundity with it, and produces a Plant of *Coral*: whence it is, that in the Cabinets of the Curious, we find ſome of it on dead Mens Skulls, Pieces of Earthen Ware, and other Kinds of ſolid Bodies, which Chance and the working of the Sea have thrown into ſome of F. *Kircher*'s Foreſts.

*Coral*, M. *le Comte de Marſigli* obſerves, grows chiefly in Grottos, whoſe Mouth or Aperture is towards the South, and the Vault, or concave Arch nearly parallel to the Surface of the Earth. For its Growth, 'tis neceſſary the Sea be as quiet as a Pond: It vegetates the contrary way to all other Plants; its Foot adhering to the top of the Grotto, and its Branches extending downwards. The Foot takes the exact form of the Solid it grows to, and even covers it, like a Plate, to a certain extent; which M. *de Marſigli* thinks a Proof that its Subſtance was originally fluid: And what confirms the Thought, is, that the ſame Subſtance ſhall ſometimes line the inſide of a Shell, which it could never enter but in form of a Fluid.

Upon a nice Examen of the ſeveral Parts of *Coral*, M. *de Marſigli* gathers, that all its Organiſm, with regard to Vegetation, conſiſts in its Bark, or Surface; that the Tubules of the Bark filtrate a Juice which fills the Cellules, and runs along the Canals as far as the Extremities of the Branches; and that this Juice being petrify'd, both in the Cells encompaſſing the *Coralline* Subſtance, and in thoſe of the Extremes of the Branches whoſe Subſtance is not yet form'd, makes the Plant grow both in height and bulk. See VEGETATION, &c.

The Antients believ'd that *Coral* was ſoft while it continu'd in the bottom of the Water; and that it only became hard and ſolid by the Impreſſion of the Air. But the Moderns are convinc'd of the contrary from Experience; and know that there was more of Imagination than Truth in the Name *Gorgonium*, which they gave it to ſhew that *Meduſa*'s Head did not convert Objects into Stone, more ſurely than *Coral* was converted as ſoon as it appear'd in the Air.

There are, properly, but three Kinds of *Coral*, *red*, *white*, and *black*: The white is the rareſt and moſt eſteem'd; but 'tis the red is ordinarily uſed in Medicine. It muſt be choſen thick, ſmooth, and ſhining, and of a beautiful red, not cover'd with any tartareous Matter.

There is a kind of white *Coral* pierc'd full of holes, and a black *Coral*, named *Antipathes*; appearing of a different Nature from the reſt: but theſe are of no uſe.

The Chymiſts draw a magiſterial Tincture from *Coral*, and a Salt.

It gives Title to an Officinal Compoſition, call'd *Syrup of Coral*, often preſcrib'd by Phyſicians; as is the Pouder of *Coral* finely ground, and after levigated on a Marble, and made up into a proper form. But there are few except thoſe who are fond of Medicines with Pearls in 'em that make uſe hereof. By means of its exceeding hardneſs, it is ſuſpected to take away with it a great deal of the levigating Stone.

The Virtues attributed to *Coral* and its Preparations, are that it is Cardiac, and therefore of uſe in Diarrhæas, too large Fluxes of the Menſtrua, and Floodings; of ſervice in the *Fluor Albus*, and to prevent Miſcarriages; beſide its uſe in common as a Teſtaceous Pouder in Childrens Diſeaſes, &c. See CHILDRENS *Diſeaſes*.

Some alſo attribute to *Coral* the immediate ſtopping of Blood, the ſecuring of Houſes from Thunderbolts, the keeping away of evil Spirits, and the promoting of Dentition. 'Tis added, that *Coral* appears redder wore on a Man than on a Woman; that it becomes pale and livid when wore by a ſick Perſon; and that the Changes in the Plant correſpond with thoſe in the Diſeaſe. But for theſe, and many more Fancies of the ſame kind, *Credat Judæus Apella*.—Its chief Uſe we know of, is in Chaplets, Beads, and other Toys.

CORAL *Fiſhery*. The Time for fiſhing *Coral* is from *April* to *July*: The Places are the *Perſian* Gulf, Red Sea, Coaſts of *Africa* towards the *Baſtion* of *France*, the Iſles of *Majorca* and *Corſica*, and the Coaſts of *Provence* and *Catalonia*.

The Method of fiſhing is nearly the ſame in all Places: That uſed at the *Baſtion* of *France*, where there is an eſtabliſh'd Fiſhery, under the Direction of a Company (ſee COMPANY) at *Marſeilles*, is as follows.

Seven or eight Men go in a Boat, commanded by the Patron or Proprietor; the Caſter throws his Net, if we may ſo call the Machine wherewith he uſes to tear up the *Coral* from the bottom of the Sea; and the other ſix manage the Boat. The Net is compos'd of two Beams tied acroſs, with a leaden Weight to preſs 'em down: To the Beams is faſten'd a great quantity of Hemp looſely twiſted round, among which they mix ſome ſtrong Nets.

In this Condition the Machine is let down into the Sea; and when the *Coral* is pretty ſtrongly embarraſs'd in the Hemp and the Nets, draw it out by a Rope; which they unwind according to the Depth, and which ſometimes requires half a dozen Boats to draw. If the Cord happen to break, the Fiſhermen are in great danger of drowning.

Before the Fiſhers go out, they agree on the Price of the *Coral*, which is ordinarily at the Rate of 4 *s.* 6 *d. per* Pound.

When the Fiſhery is over, which in a Seaſon uſually amounts to 25 Quintals of *Coral* each Boat; it is divided into 13 Parts; the Patron whereof, or Maſter *Coraller*, has four, the Caſter two, and each of the ſix Companions one: the 13th being reſerv'd for the Company, &c.

*Artificial* CORAL, is made of Cinnabar well beaten; a Lay whereof is applied on a piece of Wood well dried, and poliſh'd, firſt moiſten'd with Size: The whole is again poliſh'd; and for varniſh, rubb'd over with the White of an Egg.

CORALLINE, or *Sea Moſs*, a Plant found adhering to Rocks, Shells, and even to *Coral*.

It has no Stem, but its Branches ſhoot immediately out of the Root. Its Uſe in Medicine is not very conſiderable: yet 'tis ſuppos'd of ſome effect to deſtroy Worms in Children when taken in Pouder; and is alſo uſed as an Ornament in Rock-work. The beſt is greeniſh; the worſt aſh-colour'd; the red is not much better.

CORAM *non Judice*, in Law, is when a Cauſe is brought into a Court where the Judges have no Juriſdiction.

CORBAN, a Scripture Term, ſignifying an Oblation, or Offering to God on the Altar. See OFFERING, &c.

The Word is *Hebrew*, קרבן.

CORBAN is alſo a Ceremony in uſe among the *Mahometans*; yearly perform'd at the foot of Mount *Ararat* in *Arabia*, near *Mecca*. It conſiſts in ſlaying a great Number of Sheep, and diſtributing 'em among the Poor.

CORBEILS, in Fortification, little Baſkets, about a Foot and an half high, eight Inches broad at the bottom, and twelve at the top; which being fill'd with Earth, are frequently ſet one againſt another upon the Parapet, or elſewhere; leaving certain Port-holes, from whence to fire upon the Enemy under covert, without being ſeen by them.

CORBEL, in Architecture, the Repreſentation of a Baſket, ſometimes ſeen on the Heads of Cariatides. See CARIATIDES.

The Word is alſo uſed for the Vaſe or Tambour of the *Corinthian* Column; ſo call'd from its reſemblance of a Baſket; or becauſe it was firſt form'd on the Model of a Baſket. See CORINTHIAN *Order*.

CORBELL, CORBIL, or CORBEL, is alſo uſed in Building for a ſhort Piece of Timber placed in a Wall, with its End ſticking out ſix or eight Inches, as occaſion ſerves, in manner of a Shouldering-piece.

The under Part of the End thus ſticking out, is ſometimes cut into the form of a Boultin; ſometimes of an Ogive, and ſometimes of a Face, &c. according to the Workman's Fancy; the upper ſide being plain and flat.

Theſe *Corbels* are uſually placed for Strength immediately under the Semi-girders of a Platform, and ſometimes under the Ends of Chamber-Beams: in which latter Caſe, they are commonly placed a Foot or two below the Beam, and have a piece of Timber ſtanding upright cloſe to the Wall from the *Corbel* to the Beam.

CORBEL is alſo uſed by ſome Architects for the hollow Niches, or hollows left in Walls for Images, Figures, or Statues to ſtand in. See NICHE.

CORD, or CHORD, an Aſſemblage of ſeveral Threads of Hemp, cabled or twiſted together by means of a Wheel. See CORDAGE.

The Word comes from the *Greek* χορδὴ, which properly ſignifies an Inteſtine, or Gut, whereof *Cords* may be made. See CHORD.

CORD *of S.* Francis, a kind of Rope adorn'd with Knots, wore by the Brothers of the Fraternity inſtituted in honour of that Saint. See FRANCISCAN.

Some, as the Cordeliers, Capuchins, Minorites, and Recolets wear it white; others, as the Pique Puces, black.

Its deſign is to commemorate the Bonds wherewith Jeſus Chriſt was bound.

*The Society of the* CORD, includes a great Number of People beſide Religious. To obtain Indulgences, they are only oblig'd to ſay five *Paters*, five *Ave Marys* and *Gloria Patri*'s, and to wear this Rope, which muſt have been firſt bleſs'd by the Superiors of the Order.

CORD *of Wood*, a certain Quantity of Wood for burning; ſo called, becauſe formerly meaſur'd with a *Cord*. See MEASURE.

'Tis now meaſur'd between two Stakes of Wood, four Foot high, and eight Foot apart.

CORD-*Wood*, is properly new Wood; and when brought by Water comes aboard a Veſſel, in oppoſition to that which is floated. All burning Wood not exceeding 18 Inches in circumference, is deem'd *Cord-Wood*.

CORD, in Geometry, Muſick, &c. See CHORD.

CORDAGE, in the Sea Language, is uſed in general for all the Ropes and *Cords*, big and ſmall, uſed in the Rigging and fitting out of a Veſſel. See RIGGING.

The Word is alſo uſed for the Art of preparing and manufacturing the Ropes, &c.

The *Cordage* is ſaid to be *baked*, when having paſs'd a Stove or other hot Place, 'tis drain'd of all its Moiſture.

*White Cordage*, is that not yet pitch'd. *Cordage pitch'd in the Stove*, is that which is paſs'd thro' hot Pitch as it comes out of the Stove. Each Quintal of *Cordage* may take up about 20 Pounds of Pitch. The *Cordage* is ſometimes pitch'd in the Thread.

When a *Cordage* is ſaid to be of ſix Inches, 'tis underſtood of ſix Inches around, or in Circumference. The Commerce of *Cordage* is very conſiderable at *Amſterdam*: That made of *Coningsberg* Hemp is valued at 20 *per Cent.* more than that of *Muſcovy* Hemp. They are ſold by weight.

The Number of Ropes requir'd in fitting out of a Veſſel is almoſt inconceivable: Each has its particular Name and Uſe. See CABLE, HALSER, &c.

The *Spaniards* make a kind of Shoes of *Cordage*, which they call *Alpargates*, whereof they uſe great Quantities at home, and yet drive a very conſiderable Commerce to the *Indies*; ſo as to ſend away whole Ship-loads thereof.

The *Indians* make their *Cordage* of the Bark of *Cocao*, *Magnay*, and other Trees.

*As to the Strength of Ropes or Cordage*, M. *Reaumur* takes occaſion, in the Memoirs of the *French* Academy, to conſider the Queſtion, whether a Rope compos'd of ſeveral Twiſts or Strands interwoven, *v. g.* ten, have more force to ſuſtain a Weight, than the ten Twiſts would have ſeparately, placed parallel over one another: or, which is the ſame thing, whether if each Twiſt be capable of ſuſtaining the weight of a Pound, the whole *Cord* be able to ſuſtain more than ten?

There, indeed, appears no great difficulty in the Queſtion; the Evidence ſeems ſtrong on the ſide of the Affirmative: For, 1ſt, by Virtue of the Twiſting, the Diameter of the Rope is made larger than are thoſe of the ten Twiſts together; but, 'tis apparently by its thickneſs that a Rope ſuſtains a Weight or reſiſts a Fracture.

2d, Twiſted Strands have not all, as when parallel, a vertical Direction with regard to the Weight: Several of 'em, and even the greateſt Part, have oblique Directions, and of conſequence don't bear all the Share of the Burden they would otherwiſe bear. In effect, they are inclined Planes that are only preſs'd with a part of the Load.

Hence it would follow, that the Surplus of the Strength of the Twiſts, might be employ'd in raiſing a larger Weight.

On

On the other hand, 'tis true, that in twiſting the Strands, ſome are ſtretch'd, and others left more looſe; and the new Tenſion given the former, ſerves to weaken 'em, and has of it ſelf the effect of a Weight: Thus they become leſs able to ſuſtain one ſo large. Thoſe more lax, on the contrary, evade in ſome meaſure the Action of the Weight. For the Action is diſtributed equally on the ten ſuppoſedly equal Twiſts; and if ſome, by reaſon of their particular Diſpoſition, receive leſs than their Quota, the Weight will act more forcibly on the reſt, and will break them firſt, as being more tenſe; after which it will eaſily diſpatch the reſt, as not being in ſufficient Number to oppoſe it.

This is the Sum of what can be urg'd for and againſt the twiſting. To decide between 'em M. *Reaumur* had recourſe to Experiment. The Reſult was, that contrary to all Expectation, he ſtill found the twiſting diminiſh'd the Force of the Rope: whence it is eaſily infer'd, that it diminiſhes it the more, as the Rope is the thicker: For inaſmuch as the twiſting diminiſhes; the more Twiſting the more Diminution.

*The Reſiſtance or Friction of the Cordage* is very conſiderable; and by all means to be conſider'd in calculating the Force of Machines. M. *Amontons* obſerves, in the *French* Memoirs, that a Rope is ſo much the more difficult to bend, firſt, as it is ſtiffer, and more ſtretch'd by the Weight it draws. 2d, As it is thicker; and, 3d, as it is to be more bent; *i. e.* as it is to be roll'd, for inſtance, into a ſmaller Gyre.

The ſame Author has thought of ways to prove in what proportion theſe different Reſiſtances increaſe: That ariſing from the Stiffneſs or Rigidity occaſion'd by the Weight which draws the Rope, increaſes in proportion to the Weight; and that ariſing from its thickneſs in proportion to their Diameter. Laſtly, that ariſing from the ſmallneſs of the Gyres, or Pullies about which it is to be wound, is indeed greater for ſmaller Circumferences than great ones, but does not increaſe ſo much as in the Proportion of thoſe Circumferences.

On this footing, the Loſs a Machine ſuſtains by the *Cordage* being eſtimated in Pounds; becomes, as it were, a new Weight, added to that which the Machine is to raiſe. This Augmentation of weight will render the *Cords* ſtill the more ſtiff: which exceſs is to be computed as before.

Thus we ſhall have different Sums ſtill decreaſing; which are to be added together, as in the Article of Friction, and it will be ſurprizing to ſee what a Sum they will amount to. See FRICTION.

Where Ropes are us'd in a Machine, all the Reſiſtance reſulting from their ſtiffneſs is to be put together; and all that occaſion'd by the Friction; which will make ſo conſiderable an Augmentation to the difficulty of the Motion, that a Power which to raiſe a Weight of 3000 Pound, by means of a fix'd and a moveable Pully, needed only 1500 Pound; muſt, according to M. *Amontons* have 3942 Pounds, on account of the Frictions, and the Reſiſtance of the *Cordage*. See RESISTANCE.

CORDED, in Heraldry. *A Croſs corded*, ſome Authors take for a Croſs wound or wrench'd about with *Cords*: Tho others, with more probability, take it for a Croſs made of two Pieces of *Cord*. See CROSS.

CORDELIER, a *Franciſcan*, or Religious of the Order of S. *Francis*. See FRANCISCAN.

The *Cordeliers* are cloth'd in thick grey Cloth, with a little Cowl, a Chaperon, and Cloke of the ſame; having a Girdle of Rope or *Cord*, tied with three Knots, whence the Name. See CORD.

The *Cordeliers* are otherwiſe called *Minor Friers*, their original Name. The Name *Cordelier* is ſaid to have been firſt given 'em in the War of S. *Louis* againſt the Infidels; wherein the *Friers Minor* having repuls'd the *Barbarians*, and that King having enquir'd their Name; it was anſwer'd they were People *corde liez*, tied with Ropes.

The *Cordeliers* are, to a Man, profeſs'd *Scotiſts*. See SCOTIST.

CORDIAL, *Cardiac*, in Medicine, a comfortative or refreſhing Remedy, that gives a ſudden Strength and Chearfulneſs to the Spirits, by raiſing them when depreſs'd by too much Exerciſe, the Conſequence of ſome Diſeaſe, or the like Cauſe.

*Cordials* act by giving a Springineſs and Force to the Fibres, and by ſome of their fine Particles directly entering the *Tubuli*, or Pores of the Nerves and fine Veſſels, and ſo mixing directly with the Fluids.

Thus, ſome of the Particles of the Spirit of Lavender, when dropt into Sugar and taken, are ſuppos'd to enter the Nerves of the Palate directly. Spirituous Liquors, as Brandy, Cinnamon Water, *&c.* are ſuppos'd alſo to act immediately on the Palate; but eſpecially on the nervous Coat of the Stomach, and not by the common Current of the Circulation: by which means they often prove an immediate *Cordial*.

In Faintings, where the Circulation of the Blood is languid, Sal Volatile Oleoſum, or Spirit of Hartſhorn dropt in cold Water and drank immediately, occaſion a Contraction of the *Fibrillæ*, the laſt by its coldneſs, and the firſt by entering the ſmall Veſſels; and thus they inſtantly augment the Circulation, or in other Words, prove *Cordial*. In Officinal Compoſitions, the four *Cordial* Flowers are *Borrage*, *Bugloſs*, *Roſes* and *Violets*.

The four *Cordial* Waters are thoſe of *Borrage*, *Bugloſs*, *Endive*, and *Chicory*; ſome add thoſe of *Carduus Benedictus* and *Scorzonera*, *Scabioſa*, *Sorrel*, &c.

CORDON, in Fortification, a row of Stones jutting out between the Rampart and the Baſis of the Parapet.

The *Cordon* ranges round the whole Fortreſs; and ſerves to join the Rampart, which is aſlope, and the Parapet, which is perpendicular, more agreeably together.

In Fortifications rais'd of Earth, this Space is fill'd up with pointed Stakes inſtead of a *Cordon*.

CORDWAINERS, or CORDINERS, the Term whereby the Statutes denominate *Shoe-makers*; from the *French Cordonnier*, which *Menage* derives from *Cordouan*, a kind of Leather brought from *Cordoua*, whereof they formerly made the Upper-leathers of their Shoes.

Others derive it from *Corde*, Rope, becauſe antiently Shoes were made of Cords; as they ſtill are in ſome Parts of *Spain*, under the Name of *Alpargates*, vaſt Quantities whereof they export to *America*.

But the former Etymology is better warranted: for, in effect, the *French* Workmen who prepare the *Cordoua's* are ſtill call'd *Cordouanniers*.

In *Paris* they have two pious Societies, under the Titles of *Freres Cordonniers*, Brothers Shoemakers; eſtabliſh'd by Authority towards the middle of the XVIIth Century; the one under the Protection of S. *Criſpin*, the other of S. *Criſpianus*, two Saints who had formerly honour'd the Profeſſion. They live in Community, and under fix'd Statutes and Officers; by which they are directed both in their ſpiritual and ſecular Concerns.

The Produce of their Shoes goes into a common Stock, to furniſh Neceſſaries for their ſupport; the reſt to be diſtributed among the Poor.

*Bennet Baudouin*, a Native of *Amiens*, the Son of a *Cordwainer*, and himſelf a Workman in his Father's Shop, has among other learned Works publiſh'd a Treatiſe *de Calceo antiquo & myſtico*, to do honour, as he himſelf owns, to his antient Trade. *John Battiſta Gallo*, a Shoemaker of *Florence*, has given ſome fine Pieces in the *Italian* Language; and among others, Dialogues in Imitation of *Lucian*.

CORIANDER, the Seed of a Plant of the ſame Name. See SEED.

Both the Taſte and Smell of the Seed is very agreeable; yet both in the Plant extremely nauſeous. Beſides the Confections made of the *Coriander*-Seed, it is of uſe in Medicine as a Carminative, and a Corrective to ſome ſorts of Catharticks. It is much us'd by the Brewers both in *England* and *Holland*, to give a Flavour to their ſtrongeſt Beer. The Antients had a Notion that the Juice of *Coriander* would deprive People of their Senſes, and even of Life.

Some derive the Word from κόρις, on account of the ſtinking Quality of the Leaves; others from κόρη, *apple of the Eye*, and ἄνθρων, *hominum*, becauſe it is ſuppos'd to weaken the Sight.

CORINTHIAN *Order*, the fourth, or as *Scamozzi*, and M. *le Clerc* make it the fifth and laſt of the Orders of Architecture; being the nobleſt, richeſt, and moſt delicate of all others. See ORDER.

The Invention of this Order moſt of the Moderns, after *Vitruvius*, aſcribe to *Callimachus* a *Corinthian* Sculptor, who paſſing by the Tomb of a young Lady, over which her Nurſe had placed a Baſket with ſome of her Play-things, and cover'd it up from the Weather with a Tile; the whole having been plac'd on a Root of Acanthus; as it ſprung up, the Branches encompaſs'd the Baſket, and bending down atop under the Corners of the Tile, form'd a kind of Volutes.

Hence *Callimachus* took his hint: The Baſket he imitated in the Vaſe of his Column; the Leaves in the Volutes; and the Tile in the Abacus of his Order. See ABACUS, ACANTHUS, *&c.*

*Villalpandus* treats this Story of *Callimachus* as a Fable; and will have the *Corinthian* Capital to have taken its Origin from an Order in *Solomon*'s Temple, the Leaves whereof were thoſe of the Palm-Tree. See LEAVES.

The *Corinthian* Order has ſeveral Characters whereby it is diſtinguiſh'd from the reſt: Its Capital is adorn'd with two Rows of Leaves, between which riſe little Stalks, or Caulicoles, whereof the Volutes are form'd, which ſupport the Abacus, and which are in Number 16.

It has no Ovolo, nor even Abacus properly ſpeaking; for the Member which goes by that Name is quite different from the Abacus in the other Orders, being cut with a Sweep, in the middle of which is carved a Roſe, or other Ornament. See CAPITAL, VOLUTE, ABACUS, CAULICOLE, *&c.*

*Vitruvius* obſerves, that the *Corinthian* Order has no particular Ordonnance for its Cornice, or any of the other Ornaments of its Entablature; nor does he give it any other Proportions than thoſe of the *Ionic* Order: So that if it appears higher than the *Ionic*, 'tis purely owing to the Exceſs of the height of its Capital. See IONIC.

He alſo makes the reſt of the Entablature the ſame; and the *Attic* Baſe he uſes indifferently for the one and the other. See ATTIC.

But *Vitruvius* differs widely in this Order from all the Examples now remaining of Antiquity; the moſt beautiful whereof have a particular Baſe, and the whole Order 20 Modules high; whereas the *Ionic* has but 18. Again, its Capital is higher than that of *Vitruvius* by one third of a Module: and its Entablature, which has Modillions, and ſometimes Dentils together with Modillions, is very different from the *Ionic* Entablature.

Moſt of the modern Architects ſet aſide *Vitruvius*'s *Corinthian* Ordonnance, and follow that of the antient Buildings; ſelecting from them according to their ſeveral Taſtes: So that the modern *Corinthian* is a kind of *Compoſite*; differing from any of the antient Buildings, and much more from *Vitruvius*'s Rules.

*Vignola* and M. *le Clerc* make the *Corinthian* Order 20 Modules high: yet *Serlio* only makes it 18; and M. *Perrault* $18\frac{2}{3}$, retrenching ſomething from the 19 of *Vitruvius*.

The height of the Shaft M. *Perrault* makes leſs than that of the *Ionic*, by reaſon of the Exceſs of its Capital. See COLUMN; ſee alſo SHAFT, BASE, and ENTABLATURE.

CORINTHIAN *Braſs*. See BRASS.

CORK, the Bark of a Tree of the ſame Name, much reſembling the Holm-Tree. See BARK.

Its Leaves are green above, and white underneath; and its Fruit a real Acorn, which feeds much more than that of the Oak. It is found in great abundance in *Spain*, *Italy*, *France*, &c.

To take off the Bark they make an Inciſion from top to the bottom of the Tree, and at each Extremity another round the Tree, perpendicular to the firſt. When ſtripp'd from the Tree, which does not therefore die, 'tis pil'd up in a Pond or Ditch, and loaden with heavy Stones to flatten it, and reduce it into Tables: Hence it is taken, to be dry'd; and when ſufficiently dry put in Bales for Carriage.

If care ben't taken to ſtrip the Bark, it ſplits and peels off it ſelf; being puſh'd up by another Bark form'd underneath.

The Bark of *Cork*, as well as the Acorn, are of ſome uſe in Medicine; being both reputed Aſtringents, after being burnt and pouder'd, when us'd externally; but the chief employ of the former is to put under Slippers, *&c.* and to ſtop Bottles.

The *Spaniards* burn it to make that light kind of black we call *Spaniſh Black*, uſed by Painters. See BLACK.

CORN, a Plant, or Genus of Plants, that produce a Grain fit for Bread, the ordinary Food of Man. See BREAD.

*Corn* is alſo uſed for the Grain or Seed of that Plant, ſeparated from the *Spica*, or Ear.

In the Commerce of *Corns*, they only diſtinguiſh three Kinds, *viz. Corn*, properly ſo called, or *Wheat*; *Rye*, which is a Species very different, and of a Quality far inferior; and a third kind reſulting from a Mixture of the two, and called *Maſlin*.

The Farmers, indeed, rank among the Number of *Corns* ſeveral of the Grains ſow'd in *March*; as Barley, Oats, and even Pulſe, as Peas, Vetches, *&c.* which, however, they ſometimes diſtinguiſh by the *ſmaller Corn*. Maiſe and Sarraſin are number'd among the *Corns*; the firſt call'd *Turky* and *Indian Corn*, the ſecond *French*, or *black Corn*.

*Europe*, in every Part of it; *Egypt*, and ſome other Cantons of *Africa*, particularly the Coaſts of *Barbary*; and ſome Parts of *America* cultivated by the *Europeans*, particularly *New-England*, *New-France*, and *Acadia*, are the Places which produce *Corn*. Other Countries have Maiſe and Rice in lieu of it; and ſome Parts of *America*, both in the Iſlands and Continents, ſimple Roots, ſuch as Potatoes, and Manioc.

*Egypt* was antiently the moſt fertile of all other Countries in *Corn*; as appears both from ſacred and profane Hiſtory: It furniſh'd a good Part of the People ſubject to the *Roman* Empire, and was call'd the Dry Nurſe of *Rome* and *Italy*. *France* and *Poland* ſeem now in the place of *Egypt*, and with their Superfluities ſupport a good part of *Europe*.

*For the firſt Diſcovery and Culture of Corn*, Authors are much divided: The common Opinion is, that in the firſt Ages Men liv'd on the ſpontaneous Fruits of the Earth; as Acorns, and the Nut or Maſt produced by the Beech, which, they ſay, took its Name *Fagus* from the *Greek* φάγομαι, *I eat*. 'Tis added, that they had not either the Uſe of *Corn*, nor the Art of preparing or making it eatable.

*Ceres* has the Credit of being the firſt that ſhew'd the Uſe of *Corn*, on which account ſhe was placed among the Gods. Others give the Honour to *Triptolemus*: Others ſhare it between the two; making *Ceres* the firſt Diſcoverer, and *Triptolemus* the firſt Planter and Cultivater of *Corn*.

*Diodorus Siculus* aſcribes the Whole to *Iſis*; in which *Polydore Virgil* obſerves, he does not differ from the reſt; *Iſis* and *Ceres* being the ſame. The *Athenians* pretend it was among them the Art began, and the *Cretans* or *Candiots*, *Sicilians*, and *Egyptians* lay claim to the ſame. Some think the Title of the *Sicilians* beſt ſupported, that being the Country of *Ceres*: and Authors add, ſhe did not teach the Secret to the *Athenians*, till ſhe had firſt inſtructed her Country-men. Others ſay, *Ceres* paſs'd firſt into *Attica*, thence into *Crete*, and laſt of all into *Sicily*. Many of the Learned, however, maintain it was in *Egypt* the Art of cultivating *Corn* firſt began; and 'tis certain there was *Corn* in *Egypt* and the Eaſt, long before the Time of *Ceres*.

*For the Preſervation of Corn*: It muſt be well dried and clean'd; the Granary have its Openings to the North or Eaſt, and Vent-holes a-top. For the firſt ſix Months it muſt be well ſtirr'd every 15 Days; afterwards it will be ſufficient to ſift it once *per* Month: After two Years it heats no more; nor is there any thing to fear, but from the Air and foreign Moiſture.

A little time after the Siege of *Metz* under *Henry* II. of *France*, the Duke *d'Eſpernon* laid up vaſt Stores of *Corn* in the Citadel; which was preſerv'd in good plight to the Year 1707, when the *French* King and his Retinue paſſing that way eat Bread baked thereof.

The chief Thing that contributes to the Preſervation of *Corn*, is a Cruſt which forms on its Surface, by the Germination of the Grain underneath, to the thickneſs of an Inch and half. On that at *Metz* People walk'd, without its giving the leaſt way. At *Sedan* was a Granary cut in a Rock, wherein a heap of *Corn* was preſerv'd 110 Years: It was cover'd with a Cruſt a Foot thick.

At *Chalons* they have Granaries where they ſtill keep *Corn* 30 or 40 Years: Over the Heap they ſtrew Quick-lime, in fine Duſt, to the thickneſs of three Inches; and ſprinkle this over with Water, whence ariſes a Cruſt. The Grain near the Surface ſprouts to the height of a Foot and half: theſe the Winter kills; and the Heap is left untouch'd till Neceſſity obliges 'em to it.

CORNACHINE *Pouder*, a purging Pouder, call'd alſo *Earl of* Warwick's *Pouder*, and *Pulvis de Tribus*.

It is compos'd of equal Parts of *Antimonium Diaphoreticum*, *Diagridium*, and *Cream of Tartar*.

CORNAGE, an antient Tenure, the Service whereof was to blow a Horn, when any Invaſion of the *Scots* was perceiv'd. See SERVICE.

This Tenure was very frequent in the Northern Counties, near the *Picts* Wall. But by Stat. 12 *Car.* II. all Tenures are converted into free and common Soccage. See TENURE, and SOCCAGE.

An old Rental calls *Cornage*, *Nowtgeld*, q. d. *Neat-geld*. My Lord *Coke* ſays, in old Books it is called *Horngeld*.

CORNEA *Tunica*, in Anatomy, the third Coat of the Eye; ſo call'd from its Subſtance reſembling the Horn of a Lanthorn. See EYE.

It is ſituated in the Fore-part; and is ſurrounded by the White. It has a greater Convexity than the reſt of the Globe of the Eye, and is compoſed of ſeveral parallel *Laminæ*, which are nouriſh'd by many Blood-Veſſels, ſo fine, as not to hinder even the ſmalleſt Rays of Light from entering the Eye. It has a moſt exquiſite Senſe, to the end that upon the leaſt Pain, the Tears may be ſqueez'd out of the Lachrymal Gland, to waſh off any Filth, which, by ſticking to the *Cornea*, might render it cloudy or dim. See LACHRYMAL; ſee alſo TEAR, *&c.*

In the Memoirs of the *French* Academy, M. *Gandolphe* gives us an Inſtance of Inciſions deſignedly made in the *Cornea*, to diſcharge a quantity of Blood ſettled there by a violent Blow on the Eye, by means whereof the Sight had been almoſt entirely extinguiſh'd.

The extravaſated Blood, it ſeems, was in too great a quantity to be diſſipated by Topical Medicines; beſides that the Proceſs would have been ſo tedious, that the aqueous Humour would have been in danger of being quite ruin'd in the mean time.

The *Cornea*, therefore, was open'd by three Inciſions, all made acroſs; the Blood was diſcharg'd; the Eye bound up with Compreſſes ſteep'd in a Mixture of four Ounces of Plantain Water, and two of Vulnerary Water. In eight Days the Eye reſum'd its natural tranſparency; and there remain'd no Scar after the Inciſions.

After the Cure, the Pupil of that Eye continued dilated much beyond its natural Dimenſions.

CORNEA *Lunæ*. See LUNÆ *Cornea*.

CORNELIAN, otherwiſe called *Sardoin*, a precious Stone, ordinarily red, bordering on an Orange. See PRECIOUS *Stone*.

It is but little tranſparent, cuts eaſily; and we find moſt of the fine Gravings of Antiquity, whether in relievo or indented, on this Stone.

It

It bears the Fire admirably: The largeſt Pieces found don't exceed three Inches in height.

The fineſt *Cornelians* are thoſe brought from near *Babylon*; the next are thoſe of *Sardinia*; the laſt thoſe of the *Rhine*, *Bohemia*, and *Sileſia*.

To give theſe Stones the greater Luſtre, in ſetting them they lay a piece of Silver Leaf underneath.

The principal uſe made of *Cornelians* is in Seals; by reaſon they grave well, and take a fine poliſh. The Author of the Book uſually but falſely attributed to *Albertus Magnus*, gives the *Cornelian* Virtues which, were they real, would make it ineſtimable. See AGAT.

The *Cornelian* is otherwiſe call'd *Carneola* and *Corneola*: The *Italians* call it *Corniolos*; 'tis ſaid from *Corno*, Horn; on account of the reſemblance it bears to Horn.

CORNET, a Horn, or Muſical Inſtrument us'd by the Antients in their Wars. See MUSICK.

*Vegetius* informs us, that the Legions had Trumpets, *Cornets*, and Buccinæ: that when the *Cornets* ſounded, only the Enſigns regarded; none of the Soldiers: that when the Enſigns were to march alone without the Soldiers, the *Cornet* alone was ſounded: as, on the contrary, when the Soldiers were to move without the Enſigns, the Trumpets alone were ſounded: That the *Cornets* and *Buccinæ* ſounded the Charge and Retreat; and the *Cornets* and Trumpets during the Courſe of the Battle.

CORNET, in War, an Officer in the Cavalry, who bears the Enſign or Colours of the Company. See ENSIGN.

The *Cornet* is the third Officer in the Company, and commands in the Abſence of the Captain and Lieutenant. He takes his Title from his Enſign which is ſquare, and is ſuppoſed to be call'd by that Name, from *Cornu*; becauſe placed on the Wings, which form a kind of Points or Horns of the Army.

Others derive the Name from *Coronet*; it being the antient Cuſtom for theſe Officers to wear Coronets or Garlands on their Heads.

CORNICHE, or CORNICE, in Architecture, the uppermoſt Member of the Entablature of a Column; or that which crowns the Order. See ENTABLATURE, CROWNING, *&c.*

The *Cornice* is the third grand Diviſion of the Trabeation, commencing from the Frize and ending with the Cymatium. The Word is form'd from the Latin *Coronis*, a Crowning.

The *Cornice* is different in the different Orders: In the *Tuſcan* Order it is the moſt plain. *Vignola* makes it to conſiſt of an Ovum or Quarter-round, an Aſtragal or Baguette, the Reglet or Fillet, the Larmier, and the Talon. See TUSCAN.

In the *Doric*, he makes Capitals of the Triglyphs of the Frize with their Bandilettes, a Talon, Mutules or Dentils, a Larmier with its *Guttæ* underneath, a Talon, Fillet, Cavetto, and Reglet. See DORIC.

In the *Ionic*, the Members are in moſt reſpects the ſame as in the *Doric*; except that they are frequently enrich'd with carving, and there are always Dentils. See IONIC.

In the *Compoſite* there are Dentils; its Mouldings are carv'd, and there are Channels under the Soffit. See COMPOSITE.

The *Corinthian Cornice* is the richeſt; and is diſtinguiſh'd by having both Modillions and Dentils: contrary to the Opinion of *Vitruvius*, who looks on thoſe two Ornaments as incompatible; and of M. *le Clerc*, who regards the Dentils as peculiar to the *Ionic*. See MODILLION, DENTIL, *&c.* ſee alſo ORDER.

*For the Heights and Projectures of the Cornices* in the ſeveral Orders; *Goldman* makes the Height of the *Tuſcan* $1\frac{1}{3}$, and its Projecture $2\frac{2}{3}$ Modules: The Height of the *Doric* $1\frac{1}{3}$, its Projecture $2\frac{2}{5}$; Height of the *Ionic* $1\frac{1}{5}$, its Projecture $2\frac{2}{5}$; Height of the *Compoſite* $1\frac{3}{5}$, Projecture $2\frac{13}{30}$; Height of the *Corinthian* $1\frac{2}{5}$, Projecture $2\frac{13}{30}$.

CORNICE is uſed in the general for all little Projectures of Maſonry or Joinery; even where there are no Columns.

Thus, we ſay, the *Cornice* of a Chimney, a Buffet, *&c.*

*Architrave* CORNICE, is that immediately contiguous to the Architrave; the Frize being retrench'd.

*Mutilated* CORNICE, is that whoſe Projecture is cut or interrupted, to the right of the Larmier, or reduced into a Platband with a Cimaiſe.

*Cantaliver* CORNICE, a Term uſed by the Workmen for a *Cornice* that has Cantalivers underneath it. See CANTALIVER.

*Modillion* CORNICE, a *Cornice* with Modillions under it. See MODILLION.

*Coving* CORNICE, a *Cornice* which has a great Caſement or hollow in it; ordinarily lathed and plaiſter'd upon Compaſs, Sprockets, or Brackets.

CORNICE is alſo uſed for the Crownings of Pedeſtals. See PEDESTAL.

This *Cornice*, too, is different in the different Orders: In the *Tuſcan*, according to M. *Perrault*, it has a Platband which ſerves as a *Corona*, and a Cavetto with its Fillet: In the *Doric*, it has a Cavetto with a Fillet, which bears a Drip crown'd with a Square: In the *Ionic*, a Cavetto with its Fillet above, and a Drip or hanging Square crown'd with an Ogee and its Fillet: In the *Corinthian*, an Ogee with its Fillet, a Cymatium under the *Corona*, which it hollows to make a Drip, a *Corona*, and an Ogee with its Fillet: Laſtly, in the *Compoſite*, a Fillet with a Sweep over the Die, an Aſtragal, Cyma with its Fillet, *Corona*, and Ogee with its Fillet: *See each in its Place.*

CORNICE *Ring* of a Piece of Ordnance, is that which lies next the Trunnion Ring; or next from the Muzzle Ring backwarks. See ORDNANCE.

CORNICULARIS *Proceſſus*, the Proceſs or Knob of the Shoulder Bone; thus call'd, as reſembling the Figure of a Crow's Beak.

CORNICULARIUS, in Antiquity, an Officer in the *Roman* Army.

His Buſineſs was to aid and aſſiſt the Military Tribune in the exerciſe of his Poſt, in quality of Lieutenant.

The *Cornicularii* went the Rounds in lieu of the Tribune, viſited the Watch, and were nearly what the *Aids Major* are in the *French* Army.

The Name *Cornicularius* was given 'em from a little Horn, called *Corniculum*, which they uſed in giving Orders to the Soldiers: Tho *Salmaſius* derives it from *Corniculum*, the Creſt of an Headpiece; it being an Obſervation of *Pliny*, that they wore Iron or Braſs Horns on their Helmets; and that theſe were call'd *Cornicula*.

In the *Notitia Imperii*, we find a kind of Secretary or Regiſter of the ſame Name; his Buſineſs was to attend the Judge, and to enter down his Sentences and Deciſions.

The Criticks derive the Word, in this Senſe, from *Corniculum*, a little Horn to put Ink in.

CORNICULATE *Plants*, are ſuch as after they have blown into Flower, produce many diſtinct and horned Pods, or Seed-Veſſels, called *Siliquæ*; For which Reaſon, the Plants are alſo denominated *ſiliquous Plants*. See SILIQUOUS.

Such are the *Sedum* or *Sempervivum*, *Telephium*, *Juncus Floridus*, *Helleborus niger*, *Pæonia*, *Caltha Paluſtris*, *Althæa Lutea*, &c. See PLANT.

CORNU *Ammonis*, in Natural Hiſtory, an extraordinary kind of Stone, which in Vinegar, Juice of Lemons, *&c.* has a Motion like that of an Animal. See STONE.

'Tis rough, knotty, of an Aſh-colour, and crooked in manner of a Ram's-horn ſuch as thoſe wherewith the Antients repreſented *Jupiter Ammon*: whence its Name.

'Tis diſputed among Naturaliſts, whether it be a Foſſil, or a *Nautilus*, or a Rock-Plant. *Camerarius* maintains the firſt, urging that 'tis frequently dug out of the Tops of Mountains; and that 'tis ſeldom found near the Sea-ſhore.

Dr. *Woodward* aſſerts it a Shell, and of the Number of the Nautili, form'd in the Sea, and carried thence by the Waters of the Deluge into the Countries whence 'tis dug. He argues, that if it be rarely found on the Sea-Coaſts, 'tis becauſe Shells and other Bodies faſten'd to the bottom of the Sea, as moſt Kinds of the *Cornua Ammonis* muſt be, are only to be tore thence and driven aſhore by Tempeſts: but the moſt violent Tempeſts never move the Bottom of the Sea, as the Divers have put paſt doubt; ſo that 'tis no wonder if none of the *Cornua* be thrown up: But in the overturning of the Earth by the Deluge, theſe, with a thouſand more Productions of the Sea, might be thrown from the bottom of the Waters to the Places where they are now found. See SHELL.

The *Cornua Ammonis* are of different thickneſſes and lengths; ſome of 'em weigh about three Pounds. It is found in ſeveral Places in *Germany*. From ſome Experiments that have been made therewith, it's found to contain a little quantity of Gold; which ſinks to the bottom upon pounding it ſmall, and ſtirring it in a running Water, till all the earthy Parts were carried off.

'The Stone call'd *Cornu Ammonis* is frequent in the Clay 'wherein the Trochites and Entrochi are found: The lar'geſt I have is ſeven Inches in length, and four in circum'ference at the big End, and two and a half at the ſmaller; 'the Tip being broke off. Tracing its Origin, I find ſome 'of the firſt Buddings out of it about the bigneſs of a young 'Cock's Spur, and very much like it: I have ſome in raw 'Clay; and one growing of a white cawky Stone. They 'generally become at laſt a whitiſh Spar, and ſome milk'white, as ſome of the Trochites are.' See TROCHITÆ.

'There are of all intermediate Proportions between theſe 'two; tho very few of any bigneſs are to be found entire, 'but all broken and imperfect Pieces. The Texture of the 'Stone is thus: Some have a moſſy Spar in their inſides, 'which takes up three Parts of the Stone; then from the 'ſharp top there grows thin flat Cells, or ſmall Pipes of Spar 'ſet edgewiſe one cloſe to the other, which ſhoot towards 'the broad End, and appear outwardly like ſmall Ridges or 'Seams. There are likewiſe Rings running round it, tend'ing in their growth towards the broad End, as in a Ram's 'Horn. Moſt of the leſſer Stones have very little moſſy

'Spar within 'em, and ſome none, with Cells coming down 'inwardly from the top of the Stone, reſembling thoſe in 'the Flowers of Coral, that terminate its Branches. And 'doubtleſs, if taken from their Beds in a ſeaſonable time, 'would yield the like milky Juice.' *Mr.* Beaumont, *ap.* '*Philoſoph. Tranſact.* N° 129. See ROCK-*Plant.*

CORNU *Cervi*, *Hartſhorn*, in Medicine, one of the Teſtaceous Pouders. See TESTACEOUS.

Among Chymiſts, the ſame Name is uſed for the Mouth of an Alembic.

CORNUA *Uteri*. See UTERUS.

CORNUCOPIA, among the Poets, a Horn out of which proceeded all things in abundance, by a particular Privilege which *Jupiter* granted his Nurſe, ſuppoſed to be the Goat *Amalthea*.

The real Senſe of the Fable is this; that in *Lybia* there is a little Territory ſhaped not unlike a Bullock's Horn, exceedingly fertile, given by King *Ammon* to his Daughter *Amalthea*, whom the Poets feign to have been *Jupiter*'s Nurſe.

In Architecture and Sculpture, the *Cornucopia*, or Horn of Plenty, is repreſented under the Figure of a large Horn, out of which iſſue Fruits, Flowers, &c.

On Medals, F. *Jobert* obſerves, the *Cornucopia* is given to all Deities, Genii, and Heroes.

CORNUTUM *Argumentum*. See DILEMMA.

CORONA, *Crown*, or *Crowning*, in Architecture, a large flat ſtrong Member of the Cornice; ſo called, becauſe it crowns not only the Cornice, but the Entablature, and the whole Order. See ENTABLATURE.

The *French* call it the *Larmier*, our Workmen the *Drip*, as ſerving, by its great Projecture, to ſkreen the reſt of the Building from the Rain. See LARMIER.

Some *Latin* Authors call it *Supercilium*; but, as it ſhou'd ſeem, by miſtake for *Stillicidium*. Some *French* Authors call it *Mouchette*; ſome *Latin* ones *Mentum*, Chin; from its keeping off the Weather from the Parts underneath, as the Chin does the Sweat, &c. out of the Neck.

Some call it abſolutely the *Cornice*, as being the principal Member thereof. *Vitruvius* frequently uſes the Word *Corona* for the whole Corniche. See CORNICHE.

The *Corona* is it ſelf *crown'd* or finiſh'd with a Reglet, or Fillet.

There are ſometimes two *Corona's* in a Cornice; as in the *Corinthian* of the *Rotunda*.

CORONA *Borealis*, *Northern Crown*, in Aſtronomy, a Conſtellation of the Northern Hemiſphere. See CONSTELLATION.

The Stars in the Conſtellation of the *Northern Crown*, in *Ptolemy*'s Catalogue are 8; in *Tycho*'s as many; in the *Britannic Catalogue* 21. The Order, Names, Longitudes, Latitudes, Magnitudes, &c. are as follow.

*Stars in the Conſtellation* CORONA BOREALIS.

| *Names and Situations of the Stars.* | Signs. | Longitude. ° | ′ | ″ | Latitude. ° | ′ | ″ | Magn. |
|---|---|---|---|---|---|---|---|---|

| Another following 'em all | ♏ | 19 | 40 | 31 | 54 | 16 | 36 | 5 |

CORONA *Clericalis*. See CROWN; ſee alſo COIF.

CORONALE *Os*, in Anatomy, the Bone of the Forehead; called alſo *Os Frontis*, *Os Puppis*, and *Verecundum*. See *Os* FRONTIS.

CORONALIS, the firſt Suture of the *Cranium*, or Skull. See SUTURE.

The *Coronal* Suture reaches tranſverſly from one Temple to the other; and joins the *Os Frontis* with the *Oſſa Parietaria*.

It is open, the breadth of a Finger or two in the middle, in young Children, but grows cloſer with Age: tho ſometimes, by Convulſion-Fits, or a bad Conformation, it not only cloſes in Children, but the Edges ſhoot over one another; which is what the Women call *Head-mould-ſhot*; after which they ſeldom live long.

CORONARIA *Vaſa*, CORONARY *Veſſels*, the Arteries and Veins which ſurround the Heart, to nouriſh and ſupply it with Blood, &c. See CORONARY *Arteries*.

CORONARY *Arteries*, are two Arteries ſpringing out of the *Aorta*, ere it leaves the *Pericardium*; and ſerving to carry the Blood into the Subſtance of the Heart. See HEART.

At their riſe out of the *Aorta*, there is a Valve to hinder the Reflux of the Blood; firſt diſcover'd by *B. Euſtachio* a Native of *San Severino*. See VALVE.

They are call'd *Coronary*, becauſe of their ſpreading into Branches, and encompaſſing the Baſis of the Heart, in manner of a *Crown*, or Garland. In their progreſs, they ſend out ſeveral Branches lengthwiſe of the Heart; and, as *Ruyſch* obſerves, to the Auricles, and into the very Subſtance of the Heart: After incompaſſing the Baſis, and meeting again, they inoſculate with each other.

CORONARY *Vein*, is a Vein diffus'd over the exterior Surface of the Heart: It is form'd from ſeveral Branches ariſing from all Parts of the *Viſcus*, and terminates in the *Vena Cava*, whither it conveys the Remains of the Blood brought by the *Coronary* Arteries.

*Stomachic* CORONARY, is a Vein inſerted into the Trunk of the Splenic Vein; which by uniting with the *Meſenteric*, forms the *Vena Porta*.

CORONE, in Anatomy, a ſharp pointed Eminence, or Proceſs of a Bone. See BONE.

Of theſe there are ſeveral in the Body, diſtinguiſh'd, according to their Figures, by different Names; *e.g.* one of the *Os Petroſum*, called *Styloides*; as being ſlop'd like a Bodkin: Another call'd *Maſtoides*, from its reſembling a Nipple; another of the *Omoplata*, call'd *Coracoides*; as being in the Figure of a Crow's Bill: laſtly, another of the *Os Sphenoides*, called *Pterigoides*, from its ſhape, which reſembles the Wings of a Bat. See STYLOIDES, CORACOIDES, &c.

CORONER, an Officer, whereof there are two in every County, whoſe Buſineſs is to inquire, by a Jury of twelve Neighbours, how, and by whom any Perſon came by a violent Death; and to enter the ſame upon record. This, being Matter Criminal, and a Plea of the Crown, 'tis hence they are called *Crowners*, or *Coroners*.

They are choſen by the Freeholders of the County, by Virtue of a Writ out of Chancery.

This Officer, by the Statute of *Weſtminſter*, ought to be a Knight; and there is a Writ in the Regiſter *Niſi ſit Miles*, whereby it appears to be a ſufficient Cauſe for removal of a *Coroner* choſen, if he were not a Knight, and had not 100 Shillings *per Ann.* Freehold. Mention is made of this Officer as early as the Time of King *Athelſtan*, *Anno* 925.

The Lord Chief Juſtice of the King's-Bench is the Sovereign *Coroner* of the whole Realm, or whereſoever he abides.

There are alſo certain *Special Coroners* within divers Liberties, as well as the ordinary Officers in every County; and ſome Colleges and Corporations are impower'd by their Charters, to appoint their *Coroner* within their own Precincts.

CORPORA *Cavernoſa*, in Anatomy, two ſpongious Bodies, called alſo *Corpora Nervoſa*, and *Corpora Spongioſa*. See CAVERNOSA *Corpora*, &c.

CORPORA *Olivaria*. See OLIVARIA *Corpora*.

CORPORA *Pyramidalia*, are two Protuberances of the Under-part of the *Cerebellum*, about an Inch long; ſo called from their Reſemblance to a Pyramid. See PYRAMIDALIA.

CORPORA *Striata*, two Protuberances of the *Crura* of the *Medulla Oblongata*. See MEDULLA *Oblongata*.

CORPORAL, an inferior Officer in a Company of Foot, who hath charge over one of the Diviſions; places and relieves Centinels, and keeps good Order in the *Corps de Garde*; receiving, withal, the Word, of the inferior Rounds that paſs by his *Corps de Garde*.

There are uſually three *Corporals* in each Company. See COMPANY.

The Word comes from the Italian *Corporale*, which ſignifies the ſame thing; and that from *Caput*, Head, Chief; the *Corporal* being the firſt of the Company.

CORPORAL *of a Ship*, is an Officer who hath the Charge of ſetting the Watch and Centries, and relieving them; and who ſees that all the Soldiers and Sailors keep their Arms neat and clean: He alſo teaches them how to uſe their Arms, and hath a Mate under him.

CORPORAL *Oath*. See OATH.

CORPORAL, CORPORALE, is alſo an antient Church Term, ſignifying the Sacred Linen, ſpread under the Chalice in the Euchariſt and Maſs, to receive the Fragments of the Bread, if any chanced to fall.

Some ſay, it was Pope *Euſebius* who firſt enjoin'd the Uſe of the *Corporal*; others ſay S. *Silveſter*. It was the Cuſtom to carry *Corporals*, with ſome Solemnity, to Fires, and to raiſe 'em againſt the Flames, in order to extinguiſh 'em.

*Philip de Comines* ſays, the Pope made *Louis* XI. a Preſent of the *Corporale* wherein my Lord S. *Peter* ſung Maſs.

CORPORATION, a Body Politick, or *Incorporate*; ſo call'd, becauſe the ſeveral Members thereof are form'd into one Body; and are qualify'd to take, purchaſe, grant, have a common Seal, ſue and be ſued, *&c.* in their joint Capacity.

A *Corporation* may be eſtabliſh'd three ways, *viz.* by Preſcription, by Letters Patent, and by Act of Parliament.

*Corporations* are either *Eccleſiaſtical*, or *Lay*.

*Eccleſiaſtical* are either *Regular*, as Abbies, Priories, Chapters, *&c.* or *Secular*, as Biſhopricks, Deanaries, Archdeaconries, Parſonages, *&c.* Univerſities, Colleges, Hoſpitals. See ABBEY, PRIORY, CHAPTER, *&c.* ſee alſo HOSPITAL, *&c.*

*Lay*, as thoſe of Cities, Towns, Mayoralties, Bailliwicks, Companies or Communities of Commerce, *&c.* See COMPANY, *&c.*

Again, a *Corporation* is either *ſole*, or an aggregate of *many*; which laſt is what the Civilians call a *College*. See COLLEGE; ſee alſo COMMUNITY.

CORPOREITY, a School Term. Subſtance is uſually divided into *Corporeal* and *Spiritual*: Now *Corporeity* is the Quality of that which is *Corporeal*, or has Body; or that which conſtitutes or denominates it ſuch. See SUBSTANCE, and BODY.

The *Corporeity* of God was the capital Error of the *Anthropomorphites*. Some Authors reproach *Tertullian* with admitting a *Corporeity* in the Deity; but 'tis manifeſt, by *Body* he means no more than *Subſtance*.

The *Mahometans* reproach the *Samaritans* at this Day, with a Belief of the *Corporeity* of God. Many of the Antients believ'd the *Corporeity* of Angels.

CORPORIFICATION, or *Corporation*, in Chymiſtry, the Operation of recovering Spirits into the ſame Body, or at leaſt into a Body nearly the ſame, with that which they had before their Spiritualization. See SPIRIT.

CORPS *de Garde*, a Poſt in an Army, ſometimes under Covert, ſometimes in the open Air, to receive a Body of Soldiery, who are reliev'd from time to time, and who are to watch in their Turns, for the Security of a Quarter, a Camp, Station, *&c.*

The Word is alſo uſed for the Men who watch therein.

'Tis uſual to have, beſide the *great*, a *little Corps de Garde*, at a good diſtance before the Lines; to be the more readily advertis'd of the Approach of the Enemy.

CORPS, in Architecture, is a Term borrow'd from the *French*, ſignifying any Part that projects or advances beyond the Naked of a Wall; and which ſerves as a Ground for ſome Decoration. See PROJECTURE.

CORPS *de Bataille*, is the main Body of an Army, drawn up for Battle.

CORPULENCY. See OBESITY, and FATNESS.

CORPUS, and CORPORA, *Body*, *Bodies*, in Anatomy, Terms apply'd to ſeveral Parts in the Animal Structure; as the *Corpus Calloſum*, *Corpora Striata*, and *Olivaria* of the Brain; the *Corpora Cavernoſa* and *Nervoſa* of the Penis; *Corpus Glanduloſum*, *Corpus Reticulare*, &c. See CALLOSUM *Corpus*, OLIVARIA *Corpora*, &c.

CORPUS is alſo uſed in Matters of Learning, for ſeveral Works of the ſame Nature, collected, join'd, and bound together. Thus, *Gratian* made a Collection of the Canons of the Church, called *Corpus Canonum*. See CANON.

The *Corpus* of the Civil Law is compos'd of the Digeſt, Code, and Inſtitutes. See CIVIL *Law*; ſee alſo CODE, and DIGEST.

We have alſo a *Corpus* of the *Greek* Poets; and another of the *Latin* Poets. See BODY.

CORPUS *Calloſum*, is the Upper-part, or covering of the two lateral Ventricles of the Brain, appearing immediately under the Proceſs of the *Dura Mater*, below the Depth of all the Circumvolutions; being form'd by the Union of the Medullary Fibres of each ſide. See BRAIN.

CORPUS *Glanduloſum*. See PROSTRATÆ.

CORPUS *Reticulare*. See RETICULARE *Corpus*.

CORPUS *cum Cauſa*, in Law, a Writ iſſuing out of Chancery, to remove both the Body and Record touching the Cauſe of any Man lying in Execution upon a Judgment for Debt, into the King's-Bench, *&c.* there to lie till he has ſatisfy'd the Judgment.

CORPUSCLE, in Phyſicks, a Diminutive of *Corpus*, us'd to expreſs the minute Parts, or Particles that conſtitute Natural Bodies. See PARTICLE, and BODY.

*Corpuſcles* are the ſame with what the Antients call'd *Atoms*; and differ both from the Elementary and Hypoſtatical Parts of the Chymiſts, and the *Materia Subtilis* of the *Carteſians*. See ATOM, PRINCIPLE, SUBTLE, MATTER, *&c.*

Sir *Iſaac Newton* ſhews a Method of determining the Sizes of the *Corpuſcles* whereof the Particles that compoſe Natural Bodies conſiſt, from their Colours. See COLOUR.

CORPUSCULAR or *Atomical Philoſophy*, the Scheme or Syſtem of Phyſicks, wherein the Phænomena are accounted for, from the Motion, Reſt, Poſition, Arrangment, *&c.* of the minute *Corpuſcles*, or Atoms, whereof Bodies are compos'd.

The *Corpuſcular Philoſophy*, which now flouriſhes under the Title of the *Mechanical Philoſophy*, is exceedingly antient. *Leucippus* and *Democritus* were the firſt who taught it in *Greece*; from them *Epicurus* receiv'd it and improv'd it, inſomuch that it came at length to be denominated from him, and was call'd the *Epicurean Philoſophy*. See EPICUREAN.

*Leucippus*, again, is ſaid to have receiv'd it from *Mochus* a *Phenician* Phyſiologiſt and Phyſician, before the Time of the *Trojan* War, and the firſt who philoſophiz'd about Atoms: Tho *Gale*, who borrows all Profane Philoſophy from the Sacred Philoſophy in the Books of *Moſes*, is of Opinion he might take the Hint from the *Moſaic* Hiſtory of the Formation of Man out of the Duſt of the Earth.

Indeed, *Caſaubon* takes Μῶκον, or Μῶχον, to be the Name of a *Tyrian*, who among his own Countrymen was called משה *Moſche*, or according to the Method of writing which then obtain'd, *Moſes*: whence 'tis conjectur'd that the *Moſche*, or *Moſchus* of the *Tyrians*, was, in effect, the *Moſes* of the *Hebrews*.

This appears to be the Sentiment of *Selden*, *Arcerius*, &c. But the Opinion of *Bochart* is the more probable, who from *Poſidonius* and others, takes *Mochus* for an Inhabitant of *Sidon*, and his Philoſophy to be nothing elſe but a Phyſiological or Natural Hiſtory of the Creation.

After *Epicurus*, the *Corpuſcular Philoſophy* gave way to the *Peripatetic*, which became the popular Syſtem. See PERIPATETIC.

Thus, in lieu of Atoms, were introduc'd Specific and Subſtantial Forms, Qualities, Sympathies, *&c.* which amus'd the World till *Gaſſendus*, *Charleton*, *des Cartes*, *Boyle*, *Newton*, and others, retriev'd the old *Corpuſcularian* Hypotheſis; which is now become the Baſis of the Mechanical, and Experimental Philoſophy. See MECHANICAL, EXPERIMENTAL, and NEWTONIAN.

Mr. *Boyle* reduces the Principles of the *Corpuſcular* Philoſophy to the four following Heads:

1ſt, That there is but one Catholick, or Univerſal Matter, which is an extended, impenetrable, and diviſible Subſtance, common to all Bodies, and capable of all Forms. See MATTER.

This Sir *I. Newton* finely improves on: 'All Things conſider'd, *ſays that great Author*, it appears probable to me, 'that God, in the Beginning, created Matter in ſolid, hard, 'impenetrable, moveable Particles; of ſuch Sizes and Figures, and with ſuch other Properties, as moſt conduced to 'the End for which he form'd 'em: And that theſe primitive Particles, being Solids, are incomparably harder 'than any of the ſenſible porous Bodies compounded of 'em; even ſo hard as never to wear or break in pieces: 'no other Power being able to divide what God made one 'in the firſt Creation. While theſe *Corpuſcles* remain entire, they may compoſe Bodies of one and the ſame Nature and Texture in all Ages: but ſhould they wear away, 'or break in pieces, the Nature of things depending on 'em 'wou'd be chang'd: Water and Earth, compos'd of old 'worn Particles, and Fragments of Particles, wou'd not be 'of the ſame Nature and Texture now, with Water and 'Earth compos'd of entire Particles at the Beginning. And 'therefore, that Nature may be laſting, the Changes of *Corporeal* Things are to be plac'd only in the various Separations and new Aſſociations of theſe permanent *Corpuſcles*.' *Opticks*.

2d, That this Matter, in order to form the vaſt Variety of Natural Bodies, muſt have Motion, in ſome or all its aſſignable Parts; and that this Motion was given to Matter by God the Creator of all Things: and has all manner of Directions and Tendencies.

'Theſe *Corpuſcles*, *ſays Sir* I. Newton, have not only a '*Vis Inertiæ*, accompanied with ſuch paſſive Laws of Motion as naturally reſult from that Force; but alſo are 'moved by certain active Principles; ſuch as that of Gravity, and that which cauſes Fermentation, and the Coheſion 'of Bodies.' See GRAVITY, FERMENTATION, *&c.*

3d, That Matter muſt alſo be actually divided into Parts, and each of theſe primitive Particles, Fragments, or Atoms of Matter, muſt have its proper Magnitude, Figure, and Shape.

4th, That theſe differently fiz'd and ſhap'd Particles, have different Orders, Poſitions, Situations, and Poſtures; from whence all the Variety of Compound Bodies ariſes.

CORRECTION, in Printing, the Retrenching of the Faults in a Work; or the Reading which the Maſter, or in his Place the Corrector, give the firſt Proofs, to point out and correct the Faults, to be adjuſted, in the Forms, by the Compoſitor. See PRINTING.

The

The *Corrections* are plac'd on the Margin of each Page, right againſt the Line where the Faults are found. There are different Characters us'd to expreſs different *Corrections*, *v. g.* *D* or *ꝺ dele*, for any thing to be effaced, or left out. When any thing is to be inſerted, the Place is mark'd in the Line with a Caret ∧ and the Inſertion added in the Margin. When a Word, Syllable, *&c.* is to be alter'd, 'tis eras'd out of the Proof, and that to come in its room written in the Margin; always obſerving, if there be ſeveral in the ſame Line, that they be ſeparated by little Bars or Strokes, |. If a Space be omitted, its Place is mark'd with a Caret, and the Thing expreſs'd on the Margin with ⁂. If a Letter be inverted, 'tis expreſs'd on the Margin with ℈. If any thing be tranſpos'd, 'tis mark'd thus; *The ſhorteſt are the Follies beſt*; for, *The ſhorteſt Follies are the beſt*: and in the Margin is added *tr* in a Circle. If *Roman* Characters are to be chang'd for *Italic*, or *vice verſa*, a Line is drawn under them thus, and *Rom.* or *Ital.* added in the Margin. See COMPOSITION.

CORRECTION, in Rhetorick, a Figure, whereby a Perſon in a Paſſion fearing he has not expreſs'd a thing fully, or ſtrongly enough, calls it back again, as it were, by a ſtronger Phraſe, and *corrects* the Error. See FIGURE.

Thus *Cicero pro Cælio*; *O ſtultitia! ſtultitiam ne dicam an impudentiam ſingularem. O Folly! Folly do I call it, or rather Impudence.* And in the firſt *Catilinarian*; *Quanquam, quid loquor: te, ut ulla res frangat; tu, ut unquam te corrigas; tu, ut ullam fugam mediteris.* Thus *Terence*, in the *Heautontimorumenos*: *Filium unicum adoleſcentulum habeo: Ah! quid dixi, habere me; imo, habui Chreme; nunc habeam necne incertum eſt.*

CORRECTION, in Pharmacy, the Preparation of a Medicine, in order to moderate and qualify the too great Violence of its Action; as when Glaſs of Antimony is calcin'd with a little Salt-petre; or, to prevent its giving the Gripes, when Salt of Tartar is diſſolv'd in an Infuſion of Senna. Hence,

CORRECTORS, in Medicine, ſuch Ingredients in a Compoſition as guard againſt, or abate the Force of others.

Thus, the Lixivious Salts prevent the grievous Vellications of Reſinous Purges, by dividing their Particles, and preventing their Adheſions to the inteſtinal Membranes, whereby they ſometimes occaſion intolerable Gripings: And thus Spices, and carminative Seeds alſo, aſſiſt in the eaſier Operation of ſome Cathartics, by diſſipating Collections of Wind.

In the making a Medicine, likewiſe, ſuch Things are called *Correctors*, as deſtroy or diminiſh a Quality in it that could not otherwiſe diſpens'd with: Thus, Turpentine may be called the *Corrector* of Quickſilver, by deſtroying its Fluxility, and making it thereby capable of Mixture: and thus rectified Spirit of Wine breaks off the Points of ſome Acids, ſo as to make them become ſafe and good Remedies, which before were deſtructive.

CORRELATIVE, ſomething oppos'd to another in any certain Relation. See RELATIVE.

Thus, the Father and the Son are two *Correlatives*; *Pater & Filius ſibi mutuo reſpondent.* Light and Darkneſs, Motion and Reſt, are *correlative*, and oppoſite Terms.

CORRIDOR, in Fortification, a Road or Way along the Edge of the Ditch, withoutſide; incompaſſing the whole Fortification. See DITCH.

It is alſo called the *Covert way*; becauſe cover'd with a Glacis, or Eſplanade, ſerving it as a Parapet. See COVERT *Way*.

The *Corridor* is ordinarily about 20 Yards broad.

The Word comes from the Italian *Coridore*, or the Spaniſh *Coridor*.

CORRIDOR is alſo uſed in Architecture for a Gallery, or long Iſle, around a Building, leading to ſeveral Chambers at a diſtance from each other.

CORRIVAL, a Relative Term, ſignifying, originally, a Perſon who drew Water from the ſame Source or Spring with another; by means of ſome common Canal, which carried it to both their Lands; and which prov'd the Occaſion of frequent Diſputes.

Hence the Word came to be uſed for thoſe who have the ſame Pretenſions; whether to Glory, to Love, or the like: but uſe has abridg'd the Word; and we now both write and pronounce *Rival*.

CORROBORATIVE, in Medicine, any thing that increaſes the Strength, or gives a new Force. See STRENGTHNER.

The Word is likewiſe frequently apply'd to ſuch Medicines as are of uſe in particular Weakneſſes; as the *Fluor Albus*, Gonorrhæas, *&c.* Such are Terebinths, *&c.*

All Cardiacs are *Corroborative*. See CARDIAC.

CORROSION, the Action of *corroding*, or gnawing away, by little and little, the Continuity of the Parts of Bodies.

Thus, Acids *corrode* moſt Natural Bodies; and Arſenic only kills, becauſe it *corrodes* the Bowels with its ſharp, pointed Particles. See ARSENIC, POISON, *&c.*

*Corroſion* is uſed both in Chymiſtry, Medicine, and Natural Philoſophy; where it ſtands for a particular Species of Diſſolution, either by an Acid, or a ſaline Menſtruum. See DISSOLUTION.

What *Corroſion* has peculiar to it, is, that 'tis moſtly deſign'd for the Reſolution of Bodies the moſt ſtrongly compacted, as Bones and Metals; ſo that the Menſtruums imploy'd require an uncommon Moment, or Force.

Now the *Corroſive* Liquors, whether acid or urinous, are nothing but Salts diſſolv'd in a little Phlegm: Therefore, theſe being ſolid, and conſequently containing a conſiderable quantity of Matter, do both attract one another the more, and are alſo more attracted by the Particles of the Body, which is to be diſſolv'd. And as their Attractions at equal Diſtances are proportional to their Bulks, *cæteris paribus*; ſo when the more ſolid Bodies are put into ſaline Menſtruums, the Attraction is ſtronger than other Solutions; and the Motion, which is always proportional to the Attraction, more violent. See ATTRACTION.

Hence we eaſily conceive how they ſhould drive thoſe Salts, like ſo many Darts, into the Pores of the Bodies, and open and looſen the Coheſion of them, tho ever ſo firm. See ACID.

Again, we know, the more minute the Particles of the Menſtruum are, the ſooner they penetrate, and with the greater Force: The Motion produc'd by Attraction, being always greateſt in the leaſt Corpuſcles, next to nothing in the large ones.

Add to this another advantage gain'd by this minuteneſs of the Particles, *viz.* that they approach nearer the Body to be diſſolv'd; without which, the attractive Force wou'd be inſenſible. Hence, thoſe very Salts, which diſſolv'd in Water will hardly touch Metals, if once turn'd into acid Spirits, eaſily penetrate: For in Diſtillation, not only a greater Quantity of Water remains, but the ſaline Bodies are ſo minutely broken, and divided by the Fire, as to make them more readily capable of being mov'd by an attractive Force; and therefore ſuch a diſtill'd Menſtruum is much more efficacious than any Solution of Salt made with Water. See MENSTRUUM.

CORRUGATOR *Supercilii*, or CORRUGENT *Muſcle*, a Muſcle ariſing from the great Canthus of the Orbit of the Eye, and terminating in the Skin about the middle of the Eyebrows. See EYEBROWS.

Some reckon this Muſcle only a Prolongation of the *Frontales*. Its Name declares its Uſe; being form'd of *Con* and *Rugo*, to wrinkle up, and knit the Brows.

CORRUGENT *Muſcle*, the ſame as *Corrugator Supercilii*. See CORRUGATOR.

CORRUPTICOLÆ, a Sect of antient Hereticks, who aroſe out of the *Eutycheans* in *Egypt*, about the Year 531, under their Chief, *Severus*, the pretended Patriarch of *Alexandria*.

Their diſtinguiſhing Doctrine, whence they deriv'd their Name, was, that the Body of Jeſus Chriſt was *corruptible*; that the Father had own'd it; and that to deny it was to deny the Truth of our Saviour's Paſſion.

On the other hand, *Julian* of *Halicarnaſſeus*, another *Eutychean*, a Refugee as well as *Severus*, in *Alexandria*, maintain'd that the Body of Jeſus Chriſt had been always Incorruptible; that to ſay it was Corruptible, was to make a Diſtinction between Jeſus Chriſt and the Word, and by conſequence to make two Natures in Jeſus Chriſt.

The People of *Alexandria* were divided between the two Opinions; and the Partiſans of *Severus* were called *Corrupticolæ*, q. d. Worſhipers of ſomething *Corruptible*: Sometimes they were denominated *Corruptibiles*; and the Adherents of *Julian Incorruptibiles*, or *Phantaſiaſtes*.

The Clergy and Secular Powers favour'd the firſt; the Monks and the People the latter.

CORRUPTION, the Extinction of any thing; or the Action whereby it ceaſes to be what it was.

Thus, Wood is ſaid to be *corrupted*, when we don't ſee it remain Wood any longer, but find Fire in its ſtead. And thus the Egg is *corrupted*, when it ceaſes to be an Egg, and we find a Chicken in its room.

Hence that Axiom in Philoſophy, *The Corruption of one thing is the Generation of another.*

*Corruption*, in effect, differs from Generation, as two Contraries differ from each other. See GENERATION.

It differs from *Alteration* as the Leſs from a Greater, or a Part from the Whole; a Thing being ſaid to be *alter'd*, when it is not ſo far chang'd but it may be known, and ſtill keeps its old Name; both which it loſes by *Corruption*. See ALTERATION.

But, as in Generation, nothing of Matter is produced that did not before exiſt; ſo in *Corruption*, nothing more is loſt, than that particular Modification which was its Form, and made it to be of ſuch a Species. See FORM.

Dr. *Drake* accounts for *Corruption* in Animal and Vegetable Bodies, thus; 'The Principle of *Corruption* is, perhaps, the ſame which in a State of Circulation is the Principle of Life; *viz.* the Air, which is found mix'd in conſiderable Quantities with all ſorts of Fluids; as neceſſary to Vegetable, as to Animal Life. Now this Air has two Motions, *viz.* an expanſive one, from its natural Elaſticity, by means whereof it communicates that inteſtine Motion which all Juices have, and by which the containing Parts are gradually extended and grow; and a circulatory or progreſſive Motion, which is not eſſential to it, but is occaſion'd by that Reſiſtence of the ſolid Parts of thoſe Bodies, which obliges it to take that Courſe which is moſt free and open, which is thro' the Veſſels of Animals and Plants.

'Now, this Courſe being ſtop'd, the expanſive Motion ſtill remains, and continues to act, till by degrees it has ſo far overcome the including Bodies, as to bring it ſelf to an equal degree of Expanſion with the external Air; which it cannot do without deſtroying the Texture and Continuity, or ſpecifick degree of Coheſion of thoſe Solids; which is what we call a *State of Corruption*.

'This expanſive or deſtructive Quality of the Air in Bodies, may be promoted two ways; and therefore *Corruption* accelerated in as many, *viz.* either by weakning the Tone or Coheſion of the including Parts, and ſo facilitating the Work of the Air; as is the Caſe when Fruit is bruis'd, which is found to *corrupt* much ſooner there than in any other Part: or by intending the expanſive Force of the Air it ſelf, by Heat, or ſome other co-operating Circumſtance; and ſo helping it to overcome the Reſiſtance the ſooner.' See AIR.

CORRUPTION *of Blood*, in Law, an Infection accruing to a Man's State, attainted of Felony or Treaſon, and to his Iſſue. See TREASON, ATTAINTED, *&c.*

For, as he loſes all to the Prince, or other Lord of the Fee, ſo his Iſſue cannot be Heirs to him, or to any other Anceſtor by him: and if he were Noble, or a Gentleman, he and his Heirs are thereby ignobled and ungenteel'd.

The King's Pardon cleanſes the *Corruption of Blood* in thoſe Children born after the Pardon, not of thoſe born before it; theſe latter continuing ſtill incapable of inheriting the Land of their Father, purchas'd before the Time of the Pardon.

But note, there are ſeveral Offences now made Treaſon by Act of Parliament which don't *corrupt* the Blood, nor ſhall the Criminal forfeit any thing thereby beſide what he has for Life.

CORSAIR, a Pirate, or Perſon who ſcours the Seas, eſpecially the *Mediterranean*, with a Veſſel arm'd for War, without Commiſſion from any Prince or Power; to plunder Merchant Veſſels. See PIRATE.

The *Corſair* is diſtinguiſh'd from a Privateer in this, that the latter does it under a Commiſſion, and only attacks the Veſſels of thoſe at War with the State whence his Commiſſion is deriv'd. See PRIVATEER.

The Puniſhment of a *Corſair* is to be hang'd, without Remiſſion; whereas Privateers are to be treated as Priſoners of War. All *Corſair* Veſſels are good Prizes. See PRIZE.

The Word comes from the Italian *Corſaro*, of *Corſis*, or *à Curſibus*, or *à Caurſinis*, or *à Coryceelis*. *Menage*, &c.

CORSELET, a little *Cuiraſſe*, according to ſome, and according to others, a Coat, or Cover for the whole Trunk, antiently wore by the Pikemen, commonly plac'd in the Front and Flanks of the Battle, for the better Reſiſtance of the Enemy's Aſſaults, and the ſurer Guard of the Gunners plac'd behind or within them. See CUIRASSE.

*Vaugelas* obſerves, that the Seamen were antiently arm'd with *Corſelets*.

CORSEPRESENT, in our antient Authors, denotes a *Mortuary*. See MORTUARY.

The Word is form'd of the *French*, *Corps preſente*; and the Reaſon of the Denomination is probably this: that where a Mortuary after any Man's Death became due, the beſt or ſecond beſt Beaſt was offer'd or *preſented* to the Prieſt, and carried along with the *Corpſe*.

CORSNED *Bread*, a ſuperſtitious manner of Trial, uſed among our *Saxon* Anceſtors, by a piece of Barley-Bread, firſt execrated by the Prieſt, then offer'd the ſuſpected Criminal to be ſwallow'd, by way of Purgation; from an Opinion that a guilty Perſon could not ſwallow a piece of Bread ſo accurs'd, or if he did, it would choke him.

The Ceremony was accompanied with a Prayer, beſeeching God, 'That the Criminal's Jaws might be ſhut, his Throat ſo narrow that he might not ſwallow, and that he might caſt it out of his Mouth.'

CORTES, a Term purely *Spaniſh*, properly ſignifying the *Court*, *i.e.* the States, or Aſſembly of the States in *Madrid*. The Word is uſed in ſpeaking of the Affairs of *Spain*.

CORTEX, a *Latin* Name, denoting the Bark, or outer Cover of a Plant, or the like. See BARK.

CORTEX *Peruvianus*, call'd alſo *Quinquina*, *Kinkinna*, *Quinaquina*, *Pulvis Patrum*, and popularly the *Jeſuit's Bark*; is the Bark of a Tree growing in the *Weſt-Indies*, called by the *Spaniards Palo de Caſſenturas*, q. d. *Fever-Wood*; by reaſon of its extraordinary Virtue in removing all Kinds of intermitting Fevers and Agues. See FEVER.

The *Indians* commonly call it the *Fuddling Tree*, from the Property it has of intoxicating Fiſhes, when either its Wood or Bark is beaten, and ſteep'd in the Water where they are.

The Tree that yields this noble Specific, is only found in *Peru*; in the Province of *San Franceſco de Quitto*, or *Quinto*, near the City of *Loxe*: tho ſome ſay 'tis alſo found in that of *Potoſi*; and F. *Labat*, in the Iſland of *Guadeloupa*.

The Bark, while on the Tree, is ſtreak'd, of a whitiſh yellow withoutſide, and a pale tan-colour within.

'Tis about 70 Years ſince this noble Febrifuge was firſt known in *England*. It was firſt introduc'd into uſe by the Cardinal *de Lugo*; whence, in *France*, it was firſt called from the Name of that Cardinal. Afterwards it became known by the Name of the *Jeſuit's Pouder*, and the *Jeſuit's Bark*; becauſe ſold by the Jeſuits, to whom that Cardinal, who had been of their Society, left great Quantities of it.

When firſt introduc'd, it is ſaid to have been ſold for about eight Shillings Sterl. the Doſe; which great Price, with the little Effects found from it, by reaſon of their Ignorance of the manner of preparing and preſcribing it, occaſion'd its being diſus'd, till about the Year 1706, that Dr. *Talbot*, an *Engliſh* Phyſician, brought it into vogue again, by the great Number of Cures wrought about the Court and City of *Paris*, with this Pouder, prepar'd after his manner; the Secret whereof was ſoon after made publick by the Munificence of *Louis* XIV. who rewarded *Talbot* for the Communication.

The *Quinquina* is ſold either in Bark or in Pouder: thoſe who buy it in the Bark muſt chuſe it very dry and compact; ſuch as has never been moiſten'd, and which is not too eaſily reduc'd into Pouder by breaking. The ſmall, fine, blackiſh Barks, chagrin'd without and reddiſh within, of a bitter diſagreeable Taſte, are the moſt eſteem'd. For the Pouder, it muſt be well ſifted, and care be taken it be bought of Perſons that may be truſted; it being very eaſy to ſophiſticate it, and difficult to find it out.

The *Cortex* is a Bitter, Abſorbent, and Aſtringent or Styptic: From its bitterneſs, M. *Reneaume* obſerves, it becomes fit to ſoften ſour acrimonious Juices; for a ſour and a bitter make a ſweet. Again, as an Abſorbent it blunts the Points of Acids, and prevents their Action; and of conſequence keeps up the Fluidity of the Juices, which Acids would coagulate. As a Styptic, it muſt have earthy Parts to abſorb Seroſities, by which the Parts before moiſten'd and relax'd, will contract themſelves: and by this means, the *Cortex* augments the Spring and Tenſion of the Fibres. As a Bitter it heats; and it facilitates Perſpiration, by heating and augmenting the Fluidity of the Juices. On theſe Properties it is that its Medicinal Uſes are aſcertain'd.

But its chief uſe is in curing of Agues, and intermitting Fevers; it being us'd for theſe Purpoſes in all Ages, and moſt Conſtitutions. Dr. *Cockburn* ſays, it produces this Effect better than any other Medicine of the ſame Intention, in the Ratio of 365 to 1. It is uſual to give a gentle Emetic of *Ipecacuanha* before the Exhibition of the *Cortex*: by thus preparing the Paſſages, the *Cortex* has not only more Succeſs, but alſo is not ſubject to cauſe theſe Indiſpoſitions, *viz.* ſwelling in the Belly, Nauſea's, *&c.* which often ariſe when neglected.

The *Cortex* muſt never be exhibited in the Paroxyſm of an Ague, or intermitting Fever; but given in ſuch a Quantity at times between the Paroxyſms, as to prevent a Return of the Fit.

The *Cortex* exhibited in continual Fevers is dangerous; and care muſt be taken, that the Remiſſion of a continual Fever be not miſtaken for its Intermiſſion: When there is a Remiſſion, it uſually happens indifferently at any time; whereas an Intermiſſion happens at particular times.

The *Cortex* is given ſeveral ways, *viz.* in Pouder, in forms of Electuary, Bolus's, Infuſions, Tinctures, *&c.* The *Arcana Taboriana* is about two Ounces of the *Cortex* in Pouder, digeſted in Sand-heat, with about a Quart of red Wine: After Digeſtion, the Wine muſt be pour'd off, and two or three Ounces given every three or four Hours between the Paroxyſms, till the Intention is anſwer'd. If the Bark take downward, Venice Treacle, Diaſcordium, Conſerve of Roſes, Terra Japonica, Doſes of Laudanum, *&c.* muſt be added to its Preparations. When there happens to be an Obſtruction of the Menſes from the Exhibition of the *Cortex*, or to prevent it, it is adviſable to add to its Preparations the Black Hellebore, Æthiops Mineral, Cinnabar, *&c.* The *Cortex* is often us'd for young Children in Agues, by way of Clyſter; and alſo applied to the Wriſts, and Soles of

the Feet, wrought up into a ſtiff Maſs, with Turpentine, Venice Treacle, &c. which uſually anſwers the Purpoſe.

Dr. *Helvetius*, Phyſician to the King of *France* about 20 Years ago, wrote a Book entirely upon the Subject of curing Agues by giving the *Cortex* clyſterwiſe: In which he pretends, that this is more ſafe, and no leſs certain than the *Cortex* given internally. Dr. *Cockburn*, in his Treatiſe of *Sea Diſeaſes*, aſſerts the contrary; and proves that the *Cortex* given inwardly is as ſafe, and by much more certain and expeditious; and ſhews that we know how to remedy all the Inconveniencies the *Cortex* may occaſion.

Dr. *Sydenham*, and after him M. *Reneaume*, and others, have preſcrib'd it with Succeſs in Melancholic and Hyſteric Affections, commonly call'd *Vapours*.

CORTEX *Winteranus*, or *Winteri*, the Bark of a Tree brought from the Streights of *Magellan*, by Captain *Winter*, in his Voyage with Sir *Francis Drake*: *Cluſius* calls the Tree, *Magellanica Aromatica Arbor*.

The Bark is Aromatic, and found of good uſe at Sea againſt the Scurvy: Half a Dram of it, boil'd with other carminative Seeds, ſweats, and relieves ſcorbutic Patients. It has alſo prov'd an Antidote againſt a poiſonous ſort of Seal, call'd a *Sea Lion*, frequent in thoſe Parts.

The Bark ſold in the Shops under the Name of *Cortex Winteranus*, or Wild Cinnamon, Dr. *Sloane* obſerves, is not the true *Cortex Winteranus*; they grow on different Trees, and in different Countries, and their Appearance is very different; yet are they ſo like in Taſte, that he thinks they may be uſed as Succedaneums to each other. See COSTUS *Indicus*.

CORTEX *Caparis*. See CAPER.

CORTEX *Cerebri*, the *cortical* or cineritious Subſtance of the Brain. See CORTICAL, and BRAIN.

CORTICAL *Subſtance of the Brain*, in Anatomy, the exterior Part of the Brain and *Cerebellum*, or that Part immediately under the *Pia Mater*; ſo called, becauſe of its inveſting the inner or medullary Part, as a Bark does a Tree. See BRAIN.

The ſame is alſo call'd the *Cineritious Subſtance*, from its greyiſh or aſh-colour. See CINERITIOUS.

*Archangelo Piccholomini*, a *Ferrareſe*, firſt introduc'd this Diviſion of the Brain into *Cortical* or Cineritious, and Medullary or Fibrous Subſtance. See MEDULLA.

The *Cortical Subſtance* is more ſoft and moiſt than the Medullary; and follows or attends it thro' all its Prominences and Sinus's. It is form'd, from the minute Branches of the Carotid Arteries, interwove in the Meninges, and thence continued hither in infinitely fine Ramifications. See MENINX.

Moſt Anatomiſts, after *Malpighi*, agree in its being glandulous, and that the medullary Parts are only a Continuation thereof; *Ruyſch* alone excepted: who, from his admirable Skill in Injections, and the Diſcoveries he has made thereby, maintains that it has nothing glandular in it. See BRAIN, CEREBELLUM, and MEDULLA *Oblongata*; ſee alſo GLAND, CAROTID, &c.

CORTIN, in Fortification, ſignifies the Wall, or Diſtance, between the Flanks of two Baſtions.

CORVET, or CURVET, in the Manage, an Air, in which the Horſe's Legs are rais'd higher than in the Demivolt; being a kind of Leap up, and a little forwards, wherein the Horſe raiſeth both his fore-Legs at once, equally advanced, (when he is going ſtrait forward, and not in a Circle;) and as his fore-Legs are falling, he immediately raiſes his hind-Legs, equally advanc'd, and not one before the other; ſo that all his four Legs are in the Air at once; and as he ſets them down, he marks but twice with them. See AIR.

Horſes that are very dull, or very fiery, are improper for *Curvets*; this being the moſt difficult Air they can make, and requiring a great deal of Judgment in the Rider, as well as Patience in the Horſe, to perform it.

CORUSCATION, *Glittering*, a Gleam of Light emitted from any thing.

The Term is chiefly uſed for a flaſh of Lightning nimbly darting down from the Clouds, in time of Thunder. See THUNDER, and LIGHTNING.

CORVUS, *Crow*, in Aſtronomy, a Conſtellation of the Southern Hemiſphere. See CONSTELLATION.

The Stars in the Conſtellation *Corvus*, in *Ptolemy*'s Catalogue are 7; in *Tycho*'s as many; in the *Britannic Catalogue* 10. The Order, Names, Longitudes, Latitudes, Magnitudes, &c. whereof, are as follow.

*Stars in the Conſtellation* CORVUS.

| *Names and Situations of the Stars.* | Signs. | Longitude. ° ′ ″ | Latitude. South. ° ′ ″ | Magnit. |
|---|---|---|---|---|
| That in the Beak | ♍ | 7 55 35 | 21 44 26 | 4 |
| In the Neck nigh the Head | | 7 21 58 | 19 39 41 | 4 |
| Small one following theſe | | 8 0 16 | 20 27 40 | |
| In the preceding Wing | | 6 25 58 | 14 29 0 | 3 |
| In the Breaſt | | 9 29 58 | 10 16 48 | 5 |
| *Informis* over the Wings | | 5 54 35 | 10 21 48 | 6 |
| | | 11 16 15 | 20 23 42 | 6 |
| Preced. of two in the hind Wing | | 9 9 13 | 12 9 47 | 3 |
| Subſeq. | | 9 32 0 | 11 39 31 | 5 |
| In the Foot, common with *Hydra* | ♎ | 13 3 25 | 18 1 40 | 3 |

CORYBANTES, in Antiquity, Prieſts of *Cybele*, who danced and caper'd to the Sound of Flutes, and Drums.

*Catullus*, in his Poem call'd *Atys*, gives a beautiful Deſcription of 'em; repreſenting them as Madmen. Accordingly, *Maximus Tyrius* ſays, that thoſe poſſeſs'd with the Spirit of *Corybantes*, as ſoon as they heard the Sound of a Flute, were ſeiz'd with an Enthuſiaſm, and loſt the uſe of their Reaſon.

Hence, the *Greeks* uſe the Word κορυβαντιᾶν, *Corybantiſing*, to ſignify a Perſon's being tranſported, or poſſeſs'd with a Devil.

Some ſay, the *Corybantes* were all Eunuchs; and that 'tis on this account that *Catullus*, in his *Atys*, always uſes feminine Epithets and Relatives.

*Diodorus Siculus* remarks, that *Corybas* Son of *Jaſon* and *Cybele*, paſſing into *Phrygia* with his Uncle *Dardanus*, there inſtituted the Worſhip of the Mother of the Gods, and gave his own Name to the Prieſts. *Strabo* relates it as the Opinion of ſome, that the *Corybantes* are Children of *Jupiter* and *Calliope*, and the ſame with the *Cabires*. Others ſay, the Word had its Origin from this, that the *Corybantes* always walk'd dancing, (if the Expreſſion may be allow'd) *quod* κορύπτοντες βαίνειν. *Voſſius*.

CORYMBIFEROUS *Plants*, are diſtinguiſh'd into ſuch as have a *radiate* Flower, as the *Flos Solis*, *Calendula*, &c. and ſuch as have a *naked* Flower, as the *Abrotanum Feminina*, *Eupatorium*, *Artemiſia*; to which are added the *Corymbiferous Affines*, or thoſe a-kin hereunto; ſuch as *Scabious*, *Dipſacus*, *Carduus*, and the like. See PLANT, and CORYMBUS.

CORYMBUS, in the general, ſignifies the Top, or Summet of any thing; but among the antient Botaniſts was particularly uſed to expreſs the Bunches or Cluſters of Ivy, Berries, &c.

Some alſo call the Top of the Stalk of a Plant, when ſo ſubdivided and adorn'd with Flowers or Fruits, as to make a round ſpherical Figure, by this Name; as the Tops of Leeks, Onions, and the like: and others confound the Word with *Umbella*, which expreſſeth the flowry Tops of ſuch Plants as have their Branches and Flowers ſpread round, into the Form of what the Women now call an *Umberella*.

But among the modern Botaniſts, *Corymbus* is chiefly uſed for a compound diſcous Flower, whoſe Seeds are not Pappous, or do not fly away in Down: Such are the Flowers of Daiſies, common Marigold, &c. See SEED.

Mr. *Ray*, therefore, makes one Genus of Plants to be ſuch as have a compound diſcous Flower, but without any downy Wings to carry off their Seeds; as the *Corymbiferous*. See CORYMBIFEROUS.

CORYPHÆUS, in the antient Tragedy, was the Chief or Leader of the Company that compos'd the Chorus. See CHORUS.

The *Coryphæus* ſpoke for all the reſt, whenever the Chorus took part in the Action, in quality of a Perſon of the Drama, during the Courſe of the Acts.

Hence, the Term has paſs'd into a general Name for the Chief or Principal of any Company, Corporation, Sect, Opinion, &c.

Thus, *Euſtachius* of *Antioch* is call'd the *Coryphæus* of the Council of *Nice*; and *Cicero* calls *Zeno* the *Coryphæus* of the *Stoicks*.

The Word in the original *Greek* ſignifies *Tip of the Head*.

CORYZA, in Medicine, a *running at the Noſe*; or a Defluxion of ſharp ſerous Humours from the Glands of the Head, ariſing upon a diminution of Perſpiration, or catching of Cold. See COLD.

Proper Evacuations, as Bleeding, Epiſpaſticks, Sternutatories, &c. are uſual in this Caſe.

COSCINOMANCY, or COSKINOMANCY, the Art of Divination by means of a Sieve or Riddle. See DIVINATION.

The Sieve or Riddle being ſuſpended; after rehearſing a *Formula* of Words, 'tis taken between two Fingers only; and the Names of the Parties ſuſpected, repeated: He at whoſe Name the Riddle turns, trembles, or ſhakes, is reputed guilty of the Evil in queſtion.

This muſt be a very antient Practice: *Theocritus*, in his third *Idyllion*, mentions a Woman very ſkilful in it. It was ſometimes alſo practis'd by ſuſpending the Riddle by a Thread, or fixing it to the Points of a Pair of Shears, giving it room to turn, and naming, as before, the Parties ſuſpected: In which laſt manner, *Coſcinomancy* is ſtill practis'd in ſome Parts of *England*.

It appears from *Theocritus*, that it was not only uſed to find out Perſons unknown; but alſo to diſcover the Secrets of thoſe that were known.

The Word comes from the *Greek* κόσκινον, *Riddle*, and μαντεία, *Divination*.

CO-SECANT, in Geometry, the Secant of an Arch, which Arch is the Complement of another Arch to 90 Degrees. See SECANT, and COMPLEMENT.

CO-SINE, is the right Sine of an Arch, which is the Complement of another to 90 Degrees. See SINE, and COMPLEMENT.

COSMETIC, a Term in Phyſick, uſed for any Medicine, Preparation, or Means uſed to beautify and embelliſh the Face, and preſerve or improve the Complexion; as Ceruſs, and the whole Tribe of Fucus's, Waſhes, Cold Creams, Lip-Salves, &c.

The *Indians* uſe the Water of green Cacao-Nuts as a grand *Coſmetic*, which wonderfully improves the Complexion.

COSMICAL, a *Greek* Term, κοσμικὸς, of κόσμος, *World*; denoting ſomething that refers, or has a relation to the World.

Thus, among Aſtrologers, *Coſmical Aſpect*, is the Aſpect of a Planet with reſpect to our Earth.

*Coſmical Qualities* are uſed by Mr. *Boyle* in the ſame Senſe with *Syſtematical* ones. Tho, in conſidering the Qualities of Natural Bodies, we uſually only take in the Powers any particular one has of acting on, or its Capacity of ſuffering from the Action of, another, wherewith it is obſerv'd to have ſome manifeſt Commerce, by a Communication of Impreſſions: yet there may be ſome Attributes belonging to a particular Body, and ſeveral Alterations to which it may be liable, not barely on account of thoſe Qualities preſum'd to be evidently inherent in it, nor of the Reſpects it bears to thoſe other particular Bodies whereto it ſeems manifeſtly related; but on account of a Syſtem conſtituted as our World is, of ſuch a Fabrick, that there may be many unheeded Agents, which by unperceiv'd means have great Operations on the Body we conſider, and work ſuch Changes in it, and enable it to work ſuch Changes on other Bodies, as are rather to be aſcrib'd to ſome unheeded Agents, than to thoſe other Bodies with which the Body propos'd is obſerv'd to be concern'd. So that if many Bodies that might be nam'd, were plac'd together in ſome imaginary Space, beyond the Bounds of our Syſtem; tho they would retain many of the Qualities they are now endow'd with, yet they could not poſſeſs 'em all: but by being reſtor'd to their former Places in this World, they wou'd regain a Set of Faculties and Diſpoſitions, depending on ſome unheeded Relations, and Impreſſions from the determinate Fabrick of the grand Syſtem, or World, whereof they are Parts. And theſe are what Mr. *Boyle* calls *Coſmical* or *Syſtematical Qualities*.

To account for theſe *Coſmical Qualities*, the ſame Author propoſes ſome *Coſmical Suſpicions*, as to ſome unobſerv'd Laws and Orders of Nature; and refers 'em principally to the Action of certain Effluvia hitherto unobſerv'd. See EFFLUVIA.

COSMICAL is alſo uſed in Aſtronomy, to expreſs one of the Poetical Riſings of a Star.

Thus, a Star is ſaid to riſe *Coſmically*, when it riſes together with the Sun; or with that degree of the Ecliptic wherein the Sun then abides. See RISING.

So, the *Coſmical Setting* is, when a Star ſets and goes down in the Weſt, at the ſame time the Sun riſes in the Eaſt. See SETTING.

But, according to *Kepler*, to *riſe* or *ſet Coſmically*, is only to aſcend above, or deſcend below the Horizon.

COSMOGRAPHY, the Deſcription of the World; or, the Art which teaches the Conſtruction, Figure, and the Diſpoſition and Relation of all its Parts; with the Manner of repreſenting them on a Plane.

*Coſmography* conſiſts of two Parts; Aſtronomy, which ſhews the Structure of the Heavens and the Diſpoſition of the Stars. See ASTRONOMY.

And Geography, which ſhews thoſe of the Earth. See GEOGRAPHY.

The Word comes from the *Greek* κόσμος, *Mundus*, World, and γράφω, *ſcribo*, I deſcribe.

COSMOLABE, an antient Mathematical Inſtrument, ſerving to meaſure Diſtances, both in the Heavens and on the Earth. See DISTANCE.

The *Coſmolabe* is in great meaſure the ſame with the *Aſtrolabe*. See ASTROLABE.

It is alſo called *Pantocoſm*, or *Univerſal Inſtrument*, by *L. Morgard*, in a Treatiſe expreſly thereon, printed in 1612.

COSMOPOLITAN, or COSMOPOLITE, a Term ſometimes uſed to ſignify a Perſon who has no fix'd living, or Place of abode; or a Man who is a Stranger no-where.

The Word comes from the *Greek* κόσμος, *Mundus*, and πόλις, *City*.

One of the antient Philoſophers being interrogated what Countryman he was; anſwer'd he was a *Coſmopolitan*, i. e. an Inhabitant or Citizen of the World.

COSTAL, in Anatomy. There are eight *Vertebræ* diſtinguiſh'd by the Name of *Coſtales*, or *Pleurites*; becauſe ſerving to articulate the Ribs, which are lin'd with the *Pleura*. See VERTEBRA.

Theſe *Vertebræ* are the eight which follow the ſecond, call'd the *Axillary*; and are therefore the third, fourth, fifth, and to the tenth incluſive.

COSTÆ, in Anatomy. See RIBS.

COSTIVENESS, in Medicine, a preternatural Detention of the Excrements, with an unuſual Hardneſs or Dryneſs thereof; and, thence, a difficulty of diſcharging 'em. See EXCREMENT.

This is the oppoſite to a Diarrhæa, or Looſeneſs. See DIARRHÆA.

In the *Philoſophical Tranſactions*, we have an uncommon Inſtance of *Coſtiveneſs* by Mr. *Sherman*: the Patient, one *Thomas Philips*, for ſeveral Years, never went to Stool in leſs than 19 or 20 Weeks: He generally eat and drank as well as his Neighbours; and did all the while the Office of a labouring Man: yet was not any of the other Evacuations ſenſibly greater than in other People. He died of it at 23 Years old.

In *Coſtiveneſs* the uſual Remedies are gentle Preparations of Senna, lenitive Electuaries, Cream of Tartar, laxative Clyſters, &c.

COSTUS *Arabicus*, the Root of a Tree reſembling Eldar, brought from *Arabia*; whence its Name.

Its chief uſe in Medicine, is to enter the Compoſition of Venice Treacle.

The beſt is heavy, of a cineritious Colour without-ſide, a reddiſh within, difficult to break, of a ſtrong Smell, and an aromatic Taſte.

This Root was formerly call'd *Coſtus Verus*, and was divided into two Kinds, the *ſweet* and the *bitter Coſtus*; both of which are now uncommon. M. *Charas*, and others, are of Opinion there is but one kind of *Coſtus*, which proves more or leſs ſweet or bitter, according to the Soil where it is fed.

COSTUS *Indicus*, an *American* Root, called alſo *Coſtus Blavo*, *Coſtus Corticoſus*, *Coſtus Corticus*, *White Cinnamon*, and *Winter's Bark*. The Iſlands of *Madagaſcar* in *Africa*, of *Domingo* and *Guadaloupa* in *America*, are the Places where the moſt and beſt is found. See CORTEX *Winteranus*.

COTAGE, or COTTAGE, a Houſe without Land belonging to it, Stat. 4 *Edw.* I. By a later Statute, 31 *Eliz.* no Man may build a Houſe without laying four Acres of Land to it: So that, properly, a *Cotage* now is a Houſe without four Acres of Land to it.

CO-TANGENT, is the Tangent of an Arch, which is the Complement of another Arch to 90 Degrees. See TANGENT.

COTHURNUS, *Buskin*, a very high Shoe, or a kind of Patten, rais'd on Soals of Cork; wore by the antient Actors in Tragedy, to make 'em appear the taller, and the more like the Heroes they repreſented; moſt of whom were ſuppos'd to be Giants. See TRAGEDY.

It cover'd the greateſt part of the Leg, and was tied beneath the Knee. *Sophocles* is ſaid to have invented the *Cothurnus*. See BUSKIN.

COTICE, or COTISE, in Heraldry, is the fourth Part of the Bend, which, with us, is ſeldom if ever born but in Couples, with a Bend between them; and whence, probably, the Name: from the French *Coté*, Side; they being born, as it were on the Sides of the Bend.

COTTON, or COTON, a ſort of Wool, or rather Flax, encompaſſing the Seed of a Tree of the ſame Name.

The Tree which produces this uſeful Merchandiſe, grows common in ſeveral Places of the *Levant*, and of the *Eaſt* and *Weſt-Indies*, eſpecially in the *Antilles*. Its Fruit is of an oval form, about the ſize of a Nut: As it ripens, it grows black without-ſide; and by the heat of the Sun opens in ſeveral Places, diſcovering the *Cotton* thro' the Clefts, which is of an admirable Whiteneſs. In each Fruit are found ſeveral little Beans, which are the Seed of the Tree.

There is another kind of *Cotton* Tree, which creeps along the Ground, as the Vine wou'd do if unſupported; the *Cotton* whereof is the moſt eſteem'd. And the late Relations from the South mention two other Kinds, the one in the *Terra firma* of *Braſil*, the other in the Iſle of *S. Catherine*.

The Seed of the *Cotton* being mix'd, in the Fruit, together with the *Cotton* it ſelf, they have invented little Machines, which being play'd by the Motion of a Wheel, the *Cotton* falls on one ſide, and the Seed on the other; and thus they are ſeparated.

*Cotton* makes a very conſiderable Article of Commerce: it is diſtinguiſh'd into *Cotton in the Wool*, and *Spun-Cotton*. The firſt us'd for various Purpoſes, as to put between two Stuffs, in Quilts, Night-Gowns, &c. but 'tis the latter is more general; furniſhing various Cloths, Muſlins, Callicoes, Dimitties, and Hangings; beſides that 'tis frequently join'd with Silk and Flax, in the Compoſition of other Stuffs.

The firſt kind is ordinarily brought from *Cyprus* and *Smyrna*: Near *Smyrna* its Produce is greater than any where elſe: they ſow the Seed in *June*, and gather it in *October*; and the

the Soil is ſo favourable that they can have three Crops in a Year. There are ordinarily brought from *Smyrna* 10000 Bales of *Cotton per Annum*; and yet there is, at leaſt, as much more ſpent in the Manufactures of the Country.

For the *Spun Cottons*, they are diſtinguiſh'd by various Names, the beſt are thoſe from *Jeruſalem*, call'd *Bazacs*; and thoſe of *Damaſcus*, call'd *Cottons of the Ounce*: others are *Demi-Bazacs*, *Baladins*, *Payas*, *Cottons Joſeph*, *Geneguinſo*, &c.

*Cotton* antiently only grew in *Egypt*, and was us'd by the Prieſts and Sacrificers for a very ſingular kind of Gowns, wore by them alone.

*Cotton*, applied to Wounds in lieu of Linen, produces an Inflammation: *Leewenhoeck*, examining into the Reaſon of this with a Microſcope, found its Fibres to have each two flat Sides; whence he concludes, that each of its minute Parts muſt have two acute Angles, or Edges; which acute Edges being not only thinner and more ſubtile than the Globules whereof the fleſhy Filaments conſiſt, but alſo more firm and ſtiff than any of the globulous Fleſh; it follows, that upon the Application of *Cotton* to a Wound, its Edges muſt not only hurt and wound the Globules of the Fleſh, but alſo cut inceſſantly the new Matter brought to 'em to produce new Fleſh; and that with the more eaſe, as this Matter, not having attain'd the Firmneſs and Conſiſtence of Fleſh, is the leſs able to reſiſt its Attacks: Whereas the Linen ordinarily uſed in Wounds, being compos'd of little round Parts, very cloſe to each other, form larger Maſſes, and are thus incapable of hurting the globous Parts of the Fleſh.

*Menage* derives the Word from the Latin *Cotonea*, the fine Moſs growing on Quinces, which reſembles *Cotton*: But *Nicod* ſays, the *Arabs* call it *Cotum* and *Bombaſum*; whence our *Cotton*, and *Bombazon*.

COTYLA, a liquid Meaſure, in uſe among the Antients. See MEASURE.

Some have computed the *Cotyla* to be equal to a *Roman* Semi-ſeptary. *Savot* adds, that the Roman *Cotyla* contain'd twelve Ounces of any Liquor. Upon which Principle, there muſt have been as many *Cotylæ* as there were Liquors ordinarily ſold; which is nothing ſtrange, ſince, in ſeveral Countries, we ſtill find Meaſures of different Capacity, call'd by the ſame Name, when they contain the ſame Weights, tho under different Bulks.

*Fannius* ſays, the *Cotyla* was the ſame thing with the *Hemina*, which was half a Sextary. See HEMINA.

*At* Cotylas, *quas*, *ſi placeat*, *dixiſſe licebit*
*Heminas*, *recipit Geminas ſextarius unus.*

*Chorier* obſerves, that the *Cotyla* was us'd as a dry Meaſure as well as a liquid one; from the Authority of *Thucydides*, who in one place mentions two *Cotylæ* of Wine, and in another two *Cotylæ* of Bread. The Word comes from the *Greek* κοτυλη.

COTYLA, or COTYLE, or COTYLOIDES, in Anatomy, a Name given the Cavities at the Extremities of large Bones, encompaſs'd with thick ſtrong Edges, which receive the Heads, or Apophyſes of other Bones articulated with them.

Such is the Cavity in the *Iſchion*, or Hip-Bone, which receives the Head of the Bone of the Thigh.

It is alſo called *Acetabulum*, *i. e.* Cup. See ACETABULUM.

COTYLEDONES, in Anatomy, little Glands diſpers'd throughout the outermoſt Membrane of the *Fœtus*, call'd *Chorion*, (ſee CHORION;) and ſuppos'd to ſeparate a nutritious Juice for the Subſiſtence of the *Fœtus*. But *Cotyledones*, in this Senſe of the Word, are only found in Sheep, Goats, and ſome other Animals; the *Placenta* in the Womb, ſupplying the Place thereof in Women. See PLACENTA.

Other Authors uſe *Cotyledones* for the Apertures of the Veins in the inner Surface of the Womb. See MATRIX.

In *Latin* they are call'd *Acetabula*, from their reſemblance of a Cup.

COWARD, in Heraldry. When a Lion is born in any Eſcutcheon, with his Tail doubled or turn'd in between his Legs, they call it a *Lion Coward*.

COUCH, in Painting, is uſed for each Lay or Impreſſion of Colour, whether in Oil or Water, wherewith the Painter covers his Canvas, Wall, Wainſcot, or other Matter to be painted. See PAINTING.

Thus, we ſay, A Painting has had its laſt *Couch*, or Lay; a Ceiling has had two *Couches*. There is a great deal of Art in *couching* the Colours well, one after another.

The Word is alſo us'd for a Lay or Impreſſion on any thing, to make it more firm and conſiſtent, or to ſkreen it from the Weather.

Thus, Paintings are cover'd with a *Couch* of Varniſh: A Canvas to be painted, muſt firſt have two *Couches* of Size ere the Colours be laid. Two or three *Couches* of white Lead, are laid on Wood ere the *Couch* of Gold be applied: The Leather-gilders lay a *Couch* of Water and Whites of Eggs on the Leather, ere they apply the Gold or Silver Leaf.

The Gold Wire-drawers uſe the Word *Couch* for the Gold or Silver Leaf wherewith they cover the Maſs to be gilded or ſilver'd, before they draw it thro' the Iron that is to give it its proper thickneſs. See WIRE-DRAWING.

The Gilders uſe *Couch* for the Quantity of Gold or Silver Leaves applied on the Metals in gilding or ſilvering. Each *Couch* of Gold is but one Leaf, or two at moſt, and each of Silver three; to gild: If the Gilding be hach'd, there are requir'd from eight to twelve *Couches*, and only three or four if it be without haching. To Silver there are requir'd from four to ten *Couches*, according to the Beauty of the Work. See GILDING.

COUCHANT, in Heraldry, is underſtood of a Lyon or other Beaſt, when lying down; but with his Head lifted up: which diſtinguiſhes the Poſture of *Couchant* from *Dormant*, when he is ſuppos'd quite ſtretch'd out and aſleep.

COUCHE', in Heraldry, denotes any thing laid all along: Thus, *Chevron Couchee*, is a Chevron lying ſidewiſe with the two Ends on one ſide of the Shield, which ſhould properly reſt on the Baſe.

COUCHING *of Cataracts*. See CATARACT.

COVENANT, the Conſent or Agreement of two or more Parties, to do or perform the ſame thing. See CONVENTION, and CONTRACT.

A *Covenant* ſeems to be much the ſame with a *Pactum*, or *Conventum* among the Civilians. See PACT.

*Covenant* is either *in Law*, or *in Fact*.

*Covenant in Law*, is that which the Law intends to be made, tho it be not expreſs'd in Terms: As, if the Leſſor demiſe, and grant a Tenement to the Leſſee for a certain Term; the Law intends a *Covenant* on the Leſſor's Part, that the Leſſee ſhall, during the Term, quietly enjoy the Leaſe againſt all lawful Incumbrances.

*Covenant in Fact*, is that which is expreſly agreed between the Parties.

There is alſo a *Covenant merely Perſonal*, and a *Covenant Real*. *Fitzherbert* defines a *Covenant Real* to be that whereby a Man ties himſelf to paſs a thing real, as Lands or Tenements, or to levy a Fine on Lands, &c.

*Covenant merely Perſonal*, is where a Man *covenants* with another by Deed to build him a Houſe, or to ſerve him, &c.

COVERING, in Architecture, one of the principal Parts of a Building. See ROOFING.

CO-VERSED *Sine*, a Term ſome People uſe for the remaining Part of the Diameter of a Circle, after the verſed Sine is taken from it. See SINE.

COVERT, in Law. *Feme Covert* denotes a Woman to be married, and ſo *cover'd* by, or under the Protection of, her Husband. See COVERTURE.

COVERT *Way*, in Fortification, a ſpace of Ground level with the Field, on the Edge of the Ditch, ranging quite round the Half-Moons, and other Works on the ſide of the Country.

It is otherwiſe call'd *Corridor*, and hath a Parapet rais'd on a Level, together with its *Banquets* and *Glacis*, which form the Height of the Parapet, and ought to follow the Parapet of the Place, till it is inſenſibly loſt in the Field. See PARAPET.

One of the greateſt Difficulties in a Siege, is to make a Lodgment on the *Covert-Way*; becauſe, uſually, the Beſieged palliſade it along the Middle, and undermine it on all Sides. This is ſometimes alſo called the *Counterſcarp*, becauſe it is on the Edge of the Scarp. See COUNTERSCARP.

COVERTURE, in Law, is particularly applied to the State and Condition of a married Woman; who, by the Laws of our Realm, is under *Covert-Baron*, or *ſub poteſtate viri*; and therefore diſabled to make Bargains with any, to the Prejudice of her ſelf or her Husband, without his Conſent and Privity; or at leaſt without his Allowance and Confirmation: And if the Husband alien the Wife's Lands, during the Marriage, ſhe cannot gainſay it during his Life. See FEME.

COUGH, in Medicine, &c. See TUSSIS.

COVINE, a deceitful Compact, or Agreement between two or more, to deceive or prejudice a third Perſon.

As, if a Tenant for Life conſpire with another, that this other ſhall recover the Land which the Tenant holds in prejudice of him in Reverſion.

Dr. *Skinner* takes the Word to be a Corruption of the Latin *Conventum*, and therefore writes it *Coven*. See CONSPIRACY.

COVING, in Building. When Houſes are built projecting over the Ground-plot, and the turn'd Projecture arch'd with Timber, lath'd and plaſter'd; the Work is call'd *Coving*. See ALCOVE.

COVING *Corniche*, is a Corniche with a great Caſement, or Hollow therein. See CORNICH.

COUL, or COWL, a Habit wore by the *Bernardins*, and *Benedictins*.

There are two Kinds of *Couls*; the one white, very large, wore in Ceremony, and when they assist at the Office: The other black, wore on ordinary Occasions, in the Streets, &c.

F. *Mabillon* maintains the *Coul* to be the same thing with the *Scapulary*. The Author of the Apology of the Emperor *Henry* IV. distinguishes two Forms of *Couls*; the one a Gown reaching to the Feet, having Sleeves and a Capuchin, used in Ceremonies; the other a kind of Hood to work in, called also *Scapulary*; because it only covers the Head and Shoulders. See SCAPULARY.

The Word is form'd from the Latin *Cuculla*, by confounding the two first Syllables into one, as being the same twice repeated. See COWL.

COUNCIL, or COUNSEL, an Assembly, or Meeting of divers considerable Persons, or Officers, to consider and concert Measures touching the Administration of publick Affairs, or for the rendring of Justice.

The *King's Privy-Council*, is the *Primum Mobile* of the Civil Government of *England*; and that from which all the inferior Orbs derive their Motion. See PRIVY-*Council*.

In the *French* Polity *Councils* are very numerous: They have their *Council of State*, *Council of the Finances*, *Council of Dispatches*, *Council of Directions*, *Grand Council*, *Council of the Regency*, *Council of Conscience*, &c.

COUNCIL, in Church-History and Policy, is a *Synod*, or Assembly of Prelates, and Doctors, met for the regulating of Matters relating to the Doctrine or Discipline of the Church. See SYNOD.

A *Provincial Council*, is an Assembly of the Prelates of a Province, under the Metropolitan. See PROVINCE.

A *National Council*, is an Assembly of the Prelates of a Nation, under their Primate or Patriarch. See PRIMATE.

An *Oecumenical or General Council*, is an Assembly of all the Prelates of *Christendom*. See OECUMENICAL.

Indeed, to constitute a *General Council*, 'tis not requir'd that all the Prelates should be actually present; 'tis sufficient that the *Council* be regularly appointed, and that they may be there, or are call'd thereto.

*General Councils* are frequently call'd by Ecclesiastical Authors *Plenary Councils*.

The *Romanists* reckon 18 *General Councils*; whereof only the four first are admitted by the Reformed. The Number is made out thus: two of *Nice*, four of *Constantinople*, one of *Ephesus*, one of *Chalcedon*, five of the *Lateran*, two of *Lyons*, one of *Vienna*, one of *Florence*, and the last of *Trent*, which held from 1545 to 1563.

The *Council* of *Trent* ordains *Provincial Councils* to be held every three Years; yet the last held in *France* is that of *Bourdeaux*, 100 Years ago.

The Word comes from the Latin *Concilium*, which signifies no more than an Assembly; for we say, *Concilium Deorum*, *Concilium Patrum*, *Concilium Martyrum*, &c.

There have been various Collections of *Councils*, as that of Dr. *Merlin* at *Paris* in 1524; one of F. *Crabe*, a *Franciscan*, in 1536; another of *Surius* in 1567; another at *Venice*, in 1585; another at *Rome* in 1608; one of *Binius* Canon of *Cologne*, in 1606, in 10 Volumes: Another of the *Louvre* in 1644, in 37 Volumes: Another of F. *l'Abbe* and F. *Cossart*, Jesuits, in 1672, in 17 Volumes, more ample than the rest. Lastly, another is shortly expected from F. *Hardouin*, another Jesuit.

COUNCIL *of War*, is an Assembly of the principal Officers of an Army, or Fleet, occasionally call'd by the General or Admiral, to consider of the present State of Things, and concert Measures for their Conduct, with regard to Sieges, Retreats, Engagements, &c.

The same Term is sometimes also used for an Assembly of the Officers of a Regiment, or Ship; met to try Soldiers or Sailors accused of any Crime.

*Common* COUNCIL, is a Court or Assembly, wherein are made all By-Laws which bind the Citizens of *London*: It consists, like the Parliament, of two Houses; an *upper*, consisting of the Lord Mayor and Aldermen; and a *lower*, of a Number of *Common-Council*-Men, chose by the several Wards, as Representatives of the Body of the Citizens.

COUNT, *Comes*, a Nobleman who possesses a Domain erected into a *County*. See COUNTY.

*English Counts* we distinguish by the Title of *Earls*, (see EARL;) foreign ones still retain their proper Name.

The Dignity of a *Count*, is a Medium between that of a Duke and a Baron. See NOBILITY.

According to the modern use, most Plenipotentiaries and Embassadors assume the Title of *Counts*; tho they have no County; as the *Count d'Avaux*, &c.

Antiently, all Generals, Councellors, Judges, and Secretaries of the Cities under *Charlemaign* were call'd *Counts*; the distinguishing Character of a Duke and a *Count* being this, that the latter had but one Town under him, but the former several. See DUKE.

A *Count* has a Right to bear on his Arms a Coronet, adorn'd with three precious Stones, and surmounted with three large Pearls, or a row of Pearls, whereof those in the Middle and Extremities of the *Coronet*, advance above the rest. See CORONET.

*Counts* were originally Lords of the Court, or of the Emperor's Retinue, and had their Name *Comites*, *à Comitando*, or *à Commeando*: Hence, those who were always in the Palace, or at the Emperor's Side, were called *Counts Palatine*, or *Comites à latere*. See PALATINE.

In the Times of the Commonwealth, *Comites*, among the *Romans*, was a general Name for all those who accompany'd the Proconsuls and Proprætors into the Provinces, there to serve the Commonwealth; as the Tribunes, Præfecti, Scribes, &c.

Under the Emperors, *Comites* were the Officers of the Palace. The Origin of what we now call *Counts*, seems owing to *Augustus*, who took several Senators to be his *Comites*, as *Dion* observes, *i. e.* to accompany him in his Voyages and Travels, and to assist him in hearing of Causes; which were here judg'd with the same Authority as in full Senate. *Gallian* seems to have abolish'd this Council, by forbidding the Senators being found in the Armies; and none of his Successors re-establish'd it.

These Counsellors of the Emperor, were really *Counts*, *Comites*, *i. e.* Companions of the Prince; and they sometimes took the Title thereof, but always with the Addition of the Emperor's Name whom they accompany'd: So that it was rather a Mark of their Office, than a Title of Dignity.

*Constantius* was the first who converted it into a Dignity; and under him it was, that the Name was first given absolutely.

The Name once establish'd, was in a little time indifferently confer'd, not only on those who follow'd the Court, and accompany'd the Emperor, but also to most Kinds of Officers; a long List whereof is given us by *Du Cange*.

*Eusebius* tells us, that *Constantine* divided the *Counts* into three Classes; the first bore the Title of *Illustres*, the second that of *Clarissimi*, and afterwards *Spectabiles*; the third were called *Perfectissimi*. See PERFECTISSIMATE, &c.

Of the two first Classes was the Senate composed; those of the third had no Place in the Senate, but enjoy'd several other of the Privileges of Senators. See SENATOR.

There were *Counts* who serv'd on Land, others at Sea; some in a Civil, some a Religious, and some in a Legal Capacity; as, *Comes Ærarii*, *Comes Sacrarum Largitionum*, *Comes Sacri Consistorii*, *Comes Curiæ*, *Comes Capellæ*, *Comes Archiatrorum*, *Comes Commerciorum*, *Comes Vestiarius*, *Comes Horreorum*, *Comes Opsoniorum aut Annonæ*, *Comes Domesticorum*, *Comes Equorum regiorum*, *aut Comes Stabuli*; *Comes Domorum*, *Comes Excubitorum*, *Comes Notariorum*, *Comes Legum*, *seu Professor in Jure*, *Comes Limitum*, *aut Marcarum*; *Comes Maritimæ*; *Comes Portus Romæ*; *Comes Patrimonii*.

The *Francs*, *Germans*, &c. passing into *Gaul* and *Germany*, did not abolish the Form of the *Roman* Government; and as the Governours of Cities and Provinces were called *Counts*, *Comites*, and *Dukes*, *Duces*, they continued to be call'd so. See DUKE.

These Governours commanded in time of War; and in time of Peace administer'd Justice. Thus, in the Time of *Chalemaign*, *Counts* were the ordinary Judges and Governours of the Cities, all under one.

These *Counts* of Cities were beneath the Dukes, and *Counts* who presided over Provinces; the first being constituted in the particular Cities under the Jurisdiction of the latter. The *Counts* of Provinces were in nothing inferior to Dukes, who themselves were only Governours of Provinces.

Under the last of the second Race of Kings, they got their Dignity render'd Hereditary; and even usurp'd the Sovereignty when *Hugh Capet* came to the Crown: His Authority was not sufficient to oppose their Encroachments; and hence it is they date the Privilege of wearing Coronets in their Arms: they assum'd it then, as enjoying the Rights of Sovereigns in their particular Districts, or *Counties*. But, by degrees, the *Counties* became reunited to the Crown.

The Quality of *Count* is now become very different from what it was antiently; being now no more than a Title, which a King grants upon erecting a Territory into a County, with the Reserve of Jurisdiction and Sovereignty to himself.

At first there was no Clause in the Patent of Erection, intimating the Reversion of the County to the Crown in default of Heirs Male; but *Charles* IX. to prevent their being too numerous, ordain'd that Duchies and Counties, in default of Heirs Male, should return to the Crown.

The Point of Precedence between *Counts* and Marquisses, has been formerly much controverted; the Reason was, that there are *Counts* who are Peers of *France*, but no Marquisses: But the Point is now given up, and Marquisses take place; tho antiently, when *Counts* were Governours of Provinces, they were on a Level even with Dukes. See PEER, and MARQUISS.

*William* the Conqueror, as is observ'd by *Camden*, gave the Dignity of *Counts* in Fee to his Nobles; annexing it to

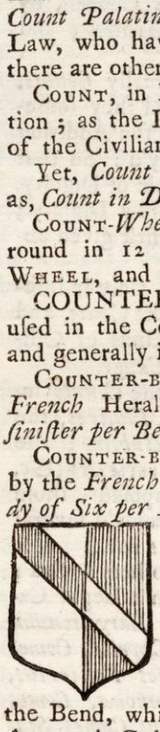
this or that County, or Province, and allotting for their Maintenance a certain Proportion of Money, arising from the Prince's Profits in the Pleadings and Forfeitures of the Provinces. To this Purpose he quotes an antient Record; thus, *Hen.* II. *Rex Angliæ his verbis* Comitem *creavit*; *sciatis nos feciſſe Hugonem Bigot* Comitem *de Norf. &c. de tertio Denario de Norwich & Northfolk ſicut aliquis* Comes Angliæ, *&c.* See EARL.

The *Germans* call a *Count*, *Graff*; which, according to a Modern Critick, properly ſignifies *Judge*; and is deriv'd from *Gravio*, or *Graffio*, of γεφω. They have ſeveral Kinds of theſe *Counts*, or *Graffs*; as *Landgraves*, *Marchgraves*, *Burgraves*, and *Palſgraves*, or *Counts Palatine*.

Theſe laſt are of two Kinds; the one are of the Number of Princes, and have the Inveſtiture of a Palatine; the others have only the Title of *Count Palatine*, without the Inveſtiture of any Palatinate. See PALATINATE.

Some aſſert, that by publickly profeſſing the Imperial Laws for 20 Years, the Perſon acquires the Dignity of a *Count Palatine*; and there are Inſtances of Profeſſors of Law, who have aſſum'd the Title accordingly; but there there are others who call the Right in doubt.

COUNT, in Law, the original Declaration in a Real Action; as the Declaration is in a Perſonal one: The *Libellus* of the Civilians comprehends both.

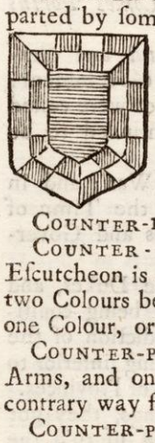


Yet, *Count* and Declaration are ſometimes confounded; as, *Count in Debt*, *Count in Appeal*, &c. See DECLARATION.

COUNT-*Wheel*, in Clock-work, a Wheel which moves round in 12 Hours; call'd alſo the *Locking-Wheel*. See WHEEL, and CLOCK.

COUNTER, of the *Latin* Prepoſition *contra*, againſt, is uſed in the Compoſition of divers Words in our Language; and generally implies the Relation of Oppoſition.

COUNTER-BARRY, or CONTRE-BARRE, is uſed by the *French* Heralds, for what we more ordinarily call *Bendy ſiniſter per Bend counterchang'd*. See BARRY.



COUNTER-BENDY, or CONTRE-BEND, in Heraldry, is uſed by the *French* to expreſs what we more ordinarily call *Bendy of Six per Bend ſiniſter counterchang'd*. See BENDY.

COUNTER-CHANG'D, in Heraldry, is when there is a mutual Changing of the Colours of the Field and Charge in an Eſcutcheon, by means of one or more Lines of Partition.

Thus, in the Coat of the famous *Chaucer*: He beareth, Party per Pale Argent and Gules, a bend *counterchang'd*; that is, that Part of the Bend, which is in that Side of the Eſcutcheon which is Argent, is Gules; and that Part of it which is on the other, is Argent.

COUNTER-CHEVRON'D, denotes a Shield *Chevronny*, or parted by ſome Line of Partition. See CHEVRON.

COUNTER-COMPONED, or CONTRE-COMPONE, or COUNTER-COMPONY, in Heraldry, is when a Bordure is compounded of two Ranks of Panes; as in the adjoining Figure. When it conſiſts but of one Rank, it is call'd *Componed*; and when of more than two, *Checky*. See CHECKY, *&c.*

COUNTER-ERMINE. See ERMINE.

COUNTER-PALED, or CONTRE-PALLE, is when the Eſcutcheon is divided into twelve Pales parted per Feſſe, the two Colours being *counter-chang'd*: ſo that the upper are of one Colour, or Metal, and the lower of another.

COUNTER-PASSANT, is when two Lions are in a Coat of Arms, and one appears to be paſſing or walking quite the contrary way from the other. See PASSANT.

COUNTER-POINTED, by the *French* call'd *Contre-pointe*, is when two Chevrons in one Eſcutcheon meet in the Points; the one riſing, as uſual, from the Baſe; and the other inverted, falling from the Chief: So that they are *counter*, or oppoſite to one another in the Points.

They may alſo be *counter-pointed* the other way; that is, when they are founded on the Sides of the Shield, and the Points meet that way; call'd *Counter-pointed in Feſſe*.

COUNTER-POTENT, or *Potent Counter-potent*, by the *French* Heralds call'd *Contre-potence*, is reckon'd a Fur, as well as Vair and Ermine; but compos'd of ſuch Pieces as repreſent the Tops of Crutches, call'd in French *Potences*, and in old *Engliſh*, *Potents*. See FUR.

COUNTER-QUARTER'D, by the *French* call'd *Contre-eſcartele*, denotes the Eſcutcheon, after being quarter'd, to have each quarter divided again into two: So that there are eight Quarters, or Diviſions. See QUARTER.

COUNTER-SALIENT, is when two Beaſts are borne in a Coat of Arms in a Poſture of leaping from each other, directly the contrary way. See SALIANT.

COUNTER-TRIPPING, is when two Beaſts are borne in a Coat of Arms tripping, *i.e.* in a walking Poſture, and the Head of the one to the Tail of the other. See TRIPPING.

COUNTER-CHANGE, a mutual Exchange between two Parties. See EXCHANGE.

COUNTER-BREAST-WORK, in Fortification, a *Falſe-Braye*. See FALSE BRAYE.

COUNTER-BOND, is a Bond given to ſave a Perſon harmleſs, who has given his Bond for another. See BOND.

This is alſo call'd *Counter-ſecurity*.

COUNTER-CHARGE, is a reciprocal Recrimination, or Charge, brought againſt an Accuſer. See CHARGE.

COUNTER-DEED, a ſecret Writing, or a private Act, either before a Notary, or under a private Seal; which deſtroys, changes, annuls or alters ſome more ſolemn and publick Act.

*Counter-Deeds*, are rather tolerated than permitted: in many Caſes they are actually prohibited; as being uſually no better than Frauds.

The Cuſtom of *Paris* annuls all *Counter-Deeds*, contrary to the Tenour of a Marriage.

COUNTER-PLEA, in Law, a Replication to a Prayer.

Thus, when a Tenant by Courteſy, in Dower, or other Real Action, prays the View or Aid of the King, or him in the Reverſion, for his better defence; or if a Stranger to the Action begun, deſire to be admitted, to ſay what he can for the Safeguard of his Eſtate: That which the Demandant alledges againſt this Requeſt, why it ſhould not be admitted, is call'd a *Counter-Plea*.

COUNTER-SIGNING, the Signing an Order, or Patent of a Superior, in quality of Secretary; to render the Thing more authentick.

Charters, *&c.* are ſign'd by the King, and *counter-ſign'd* by a Secretary of State or Ld.Chancellor. See SIGNATURE.

COUNTER-CHARM, a Charm or Spell, contrived to hinder the Effect of another. See CHARM, SPELL, LIGATURE, *&c.*

COUNTER-FOIL, or COUNTER-STOCK, is that Part of a Tally ſtruck in the Exchequer, which is kept by an Officer of the Court. See TALLY, and EXCHEQUER.

COUNTER-FUGUE, in Muſick, is when the Fugues proceed contrary to one another. See FUGUE.

COUNTER-PART, a Part of ſomething oppoſite to another Part. See PART.

Thus, in Muſick, the Baſs and Treble are two *Counterparts*, or oppoſite Parts.

COUNTER-POINT, in Muſick, the Art of compoſing Harmony; or of diſpoſing and concerting ſeveral Parts ſo together, as that they make an agreeable Whole. See COMPOSITION, and HARMONY.

*Counter-point* is divided into *ſimple*, and *figurative*; agreeably to the Diviſion of Harmony, into the Harmony of Concords, and that of Diſcords. See CONCORD.

*Counter-point* took its Name hence, when Muſick in Parts was firſt introduc'd, their Harmony being ſo ſimple they us'd no Notes of different Time, and mark'd their Conſonances by *Points* ſet *againſt* each other. Hence, in regard of the Equality of the Notes of Time, the Parts were made Concord in every Note.

This afterwards became denominated *ſimple* and *plain Counter-point*; to diſtinguiſh it from another Kind, wherein Notes of different Value were us'd, and Diſcords brought in betwixt the Parts, which they call *figurative Counter-point*.

*Simple Counter-point*, or the Harmony of Concords, conſiſts of the imperfect, as well as the perfect Concords; and may therefore be denominated *perfect*, or *imperfect*, according as the Concords are, whereof it is compos'd: Thus, the Harmony ariſing from a Conjunction of any Note with its Fifth and Octave, is perfect; but with its Third and Sixth imperfect.

Now, to diſpoſe the Concords or the Natural Notes and their Octaves in any Key in a ſimple *Counterpoint*, obſerve, with regard to the Diſtinction into perfect and imperfect Harmony, this general Rule, *viz.* to the Key *f*, to the 4th *f*, and to the 5th *f*, a perfect Harmony muſt be join'd; to the 2d *f*, the 3d *f*, and 7th, an imperfect Harmony is indiſpenſible; to the 6th *f*, either an imperfect or perfect Harmony.

In the Compoſition of two Parts, obſerve, that tho a third appears only in the Treble on the Key *f*, the 4th *f*, and the 5th *f*; yet the perfect Harmony of the Fifth, is always ſuppos'd, and muſt be ſupplied in the Accompanyments of the thorow Baſs to thoſe fundamental Notes.

More particularly, in the Compoſition of two Parts, the Rules are, That the Key *f* may either have its Octave, its Third, or its Fifth; the fourth *f* and fifth *f* may have either their reſpective Thirds or Fifths, and the firſt may have its Sixth; as, to favour a contrary Motion, the laſt may have its Octave.

The ſixth *f* may have either its 3d, its 5th, or its 6th.

The ſecond *f*, third *f*, and ſeventh *f*, may have either their reſpective 3ds or 6ths; and the laſt, on many occaſions, its falſe 5th. Which Rules hold the ſame both in flat and ſharp Keys.

For the Rules of *Counter-point*, with regard to the Succeſſion of Concords; it muſt be obſerv'd, That as much as can be in Parts, may proceed by a contrary Motion, *i. e.* the Baſs may aſcend when the Treble deſcends, and *vice verſa*. The Parts moving either upwards or downwards the ſame way; two Octaves or two Fifths never to follow one another immediately. Two Sixths never to ſucceed each other

other immediately. Whenever the Octave or Fifth is to be made uſe of, the Parts muſt proceed by a contrary Motion, except the Treble move into ſuch Octave or Fifth gradually. If in a Sharp Key, the Baſs deſcend gradually from the 5th *f* to the 4th *f*, the laſt, in that Caſe, muſt never have its proper Harmony applied to it; but the Notes that were Harmony in the preceding 5th *f*, muſt be continu'd on the 4th *f*. Thirds and Fifths may follow one another as often as one has a mind.

*Figurative Counter-point* is of two Kinds: In the one, Diſcords are introduc'd occaſionally; ſerving only as Tranſitions from Concord to Concord: In the other, the Diſcord bears a chief part in the Harmony. See DISCORD.

For the *firſt*; nothing but Concords are ever to be us'd on the accented Parts of the Meaſure: In the unaccented Parts, Diſcords may paſs tranſiently, without any Offence to the Ear. This the *French* call *Suppoſition*; becauſe the tranſient Diſcord always ſuppoſes a Concord immediately following it: Which is of infinite Service in Muſick. See SUPPOSITION.

For the *ſecond*, wherein the Diſcords are uſed as a ſolid and ſubſtantial Part of the Harmony; the Diſcords that have Place are the Fifth when join'd with the Sixth, to which it ſtands in the Relation of a Diſcord: the Fourth when join'd with the Fifth; the Ninth, which is in effect the Second; the Seventh, and the Second and Fourth.

Theſe Diſcords are introduc'd into the Harmony with due Preparation; and are to be ſucceeded by Concords: which is commonly call'd the *Reſolution of Diſcord*.

The Diſcord is prepar'd by firſt ſubſiſting in the Harmony in quality of a Concord; *i.e.* the ſame Note which becomes the Diſcord is firſt a Concord to the Baſs Note immediately preceding that to which it is a Diſcord. The Diſcord is reſolv'd by being immediately ſucceeded by a Concord deſcending from it by the Diſtance only of Second *g*, or Second *l*.

As the Diſcord makes a ſubſtantial Part of the Harmony, ſo it muſt always poſſeſs an accented Part of the Meaſure. Now to introduce the Diſcords into Harmony; it muſt be conſider'd what Concords may ſerve for their Preparation and Reſolution: The Fifth, then, may be prepar'd, either by being an Octave, Sixth, or Third. It may be reſolv'd either into the Sixth, or Third. The Fourth may be prepar'd in all the Concords, and may be reſolv'd into the Sixth, Third, or Octave. The Ninth may be prepar'd in all the Concords except the Octave; and may be reſolv'd into the Sixth, Third, or Octave. The Seventh may be prepar'd in all the Concords; and reſolv'd into the Third, Sixth, and Fifth. The Second and Fourth are uſed very differently from the reſt; being prepar'd and reſolv'd into the Baſs. See HARMONY, CONCORD, DISCORD, KEY, CLEF, MODULATION, *&c.*

COUNTER-PART, in Muſick, denotes a Part to be oppoſite to ſome other; as the Baſs is the *Counter-part* of the Treble. See PART.

COUNTER-TENOR, is one of the mean or middle Parts of Muſick; ſo call'd, as if it were oppoſite to the Tenor. See TENOR.

COUNTER-PART, in Law, is the Duplicate, or Copy of any Indenture, or Deed. See DUPLICATE.

COUNTER-PLOT, a Plot, or Intrigue contrived to thwart and overthrow another. See PLOT.

COUNTER-ROLL, a *Counterpart*, or Copy of the Rolls relating to Appeals, Inqueſts, *&c.* See ROLL.

COUNTER-ROUND, a Body of Officers going to viſit, and inſpect the Rounds, or the Sentinels. See ROUND.

COUNTER-SWALLOW-TAIL, an Outwork, in form of a ſingle Tenaille, wider at the Gorge than at the Head. See SWALLOW-TAIL.

COUNTER-TALLY, one of the two Tallies whereon any thing is ſcored. See TALLY.

COUNTER-LIGHT, or *Counter-jour*, a Window or Light oppoſite to any thing, which makes it appear to a diſadvantage. A ſingle *Counter-light* is ſufficient to take away all the Beauty of a fine Painting.

COUNTER-DRAWING, in Painting, *&c.* the copying a Deſign or Painting, by means of a fine linen Cloth, an oil'd Paper, or other tranſparent Matter; whereon the Strokes appearing thro', are follow'd and traced with a Pencil, with or without Colour. See DRAWING.

Sometimes they *counterdraw* on Glaſs, and with Frames or Nets divided into Squares, with Silk or with Thread; and alſo by means of Inſtruments invented for the Purpoſe; as the Parallelogram. See PARALLELOGRAM.

COUNTER-PROOF, in Rolling-Preſs Printing, a Print taken off from another freſh printed; which, by being paſs'd thro' the Preſs, gives the Figure of the former, but inverted. See PRINTING.

To *Counter-prove*, is alſo to paſs a Deſign in black Lead, or red Chalk thro' the Preſs, after having moiſten'd with a Sponge, both that, and the Paper on which the *Counter-Proof* is to be taken.

COUNTER-*Approaches*, in Fortification, Lines or Works made by the Beſieg'd, when their Trenches meet the Lines of Attack of the Beſiegers. See APPROACHES.

COUNTER-*Battery*, a Battery on the Side oppoſite to that of the Enemy; eſpecially that which aims to diſmount the Enemy's Cannon. See BATTERY.

COUNTER-GUARD, in Fortification, a triangular Work, in form of a large Parapet, placed beyond the Ditch, before the Point and Faces of the Baſtion.

It differs from the Demi-lune, in that it covers the whole Baſtion. The Engineers ordinarily call it the *Enveloppe*. See ENVELOPPE.

'Tis chiefly us'd when the Baſtion is on an Eminence; and 'tis by means hereof that Baſtions may be doubled and tripled. *Counter-guards* are very fit for covering the weak Parts of a Place.

COUNTER-MARCH, in War, a Change of the Face, or Wings of a Battalion; whereby the Men who were in the Front, come to be in the Rear.

This is an Expedient they have recourſe to when the Enemy attacks their Rear; or when they change their March for a Direction oppoſite to that wherein they had begun.

The *Counter-March* is either made by Files, or Ranks; by Files, when the Men in the Front of the Battalion go into the Rear: by Ranks, when the Wings or Flanks of the Battalion change Ground with one another.

The Term is alſo uſed at Sea, for the like Change of a Squadron.

COUNTER-MINE, in War, a ſubterraneous Vault, running the whole length of a Wall, three Foot broad, and ſix deep, with ſeveral Holes and Apertures therein; contriv'd to prevent the Effects of Mines, in caſe the Enemy ſhould make any to blow up the Wall. See MINE.

This Kind of *Counter-mine* is now little in uſe. The modern *Counter-mine* is a Well and a Gallery, ſunk on purpoſe till it meet the Enemy's Mine, and prevent its Effect: it being firſt pretty well known whereabouts it is.

COUNTER-MURE, or COUNTER-*Wall*, a little Wall built cloſe to another, to fortify and ſecure it, that it may not receive any Damages from Buildings made contiguous to it.

By the Cuſtom of *Paris*, If a Stable be erected againſt a Partition-Wall, there muſt be a *Counter-Wall* added, eight Inches thick. M. *Bullet* obſerves, that the *Counter-Wall* ought never to be bound, or connected with the proper Wall.

COUNTER-SCARP, in Fortification, the Slope, or Acclivity of the Ditch, looking towards the Campagne. See SCARP.

The Term ſometimes alſo takes in the Covert-way, and the Glacis.

*Counterſcarps* are ſometimes made of Stone, and without any Slope.

*To be lodg'd on the Counterſcarp*, is to be lodg'd on the Covert-way, or the Glacis. See COVERT-*Way*.

COUNTER-TRENCH, in Fortification, a Trench made againſt the Beſiegers, and which, of conſequence, has its Parapet turn'd towards 'em. See TRENCH.

There are uſually a great many Communications between this and the Place, to prevent the Enemy from making any uſe of it, in caſe they render themſelves Maſters thereof.

COUNTER-VALLATION, a *Counter*-Line, or Ditch, made around a Place beſieg'd; to prevent the Sallies and Excurſions of the Garriſon, when it is ſtrong.

Along its Edge, on the Side of the Place, runs a Parapet; and it is flank'd from Space to Space.

COUNTER-WORKING, in the Military Art, the raiſing of Works, in order to oppoſe thoſe of the Enemy. See WORK.

COUNTER-GAGE, in Carpentry, a Method uſed to meaſure the Joints, by transferring, *v. g.* the breadth of a Mortoiſe to the Place in the Timber where the Tenon is to be, in order to make 'em fit each other.

COUNTER-MARK, a ſecond or third Mark, put on any thing mark'd before.

The Word is us'd in Commerce, for the ſeveral Marks put on a Bale of Goods belonging to ſeveral Merchants; that it mayn't be open'd but in the Preſence of 'em all, or their Agents.

In Goldſmiths Works, *&c.* the *Counter-Mark* is the Mark or Punchion of the Hall, or Company, to ſhew the Metal is Standard, added to that of the Artificer that made it.

*Counter-Mark of a Horſe*, an Artificial Cavity, which the Jockeys make in the Teeth of Horſes that have out-grown the Natural Mark; to diſguiſe their Age, and make 'em appear as if they were not above ſix Years old. See MARK.

*Counter-Mark of a Medal*, is a Mark added to a Medal, a long time after its being ſtruck. See MEDAL.

The *Counter-Marks* appear to be Faults or Flaws in Medals, diſfiguring the Ground, ſometimes on the Side of the Head, and ſometimes on the Reverſe; particularly in the large and middle-ſiz'd Braſs: yet are they eſteem'd as Beauties among the Curious, who ſet a particular Value on ſuch Medals,

Medals, in regard they know the ſeveral Changes in Value they have undergone; which are expreſs'd by thoſe *Counter-Marks*.

Antiquaries, however, are not well agreed about the Signification of the Characters they find on 'em. On ſome, N.PROB. on others, N.CAPR. on others CAIR, RM, MT, AUG. SC. Some have for their *Counter-Mark* an Emperor's Head; ſome ſeveral; ſome a Cornucopia.

Care muſt be taken not to confound the Monograms with the *Countermarks*: The Method of diſtinguiſhing them is eaſy. The *Counter-Marks* being ſtruck after the Medal, are dented or ſunk in; whereas the Monograms being ſtruck at the ſame time with the Medals, have rather a little Relievo. See MONOGRAM.

COUNTER-POISON, an Antidote, or Remedy, which prevents the Effect of Poiſon. See ANTIDOTE, and POISON.

Of this Kind are Treacle, Mithridate, and Orvietan. See MITHRIDATE, &c.

*Counter-poiſons* are either *general*, or *ſpecific*: General *Counter-poiſons* are Angelica, Rice, Carduus Benedictus, the Vincetoxicum, Dittany, Scorzonera, Citrons, Bezoar, Hartſhorn, &c.

The Specificks are thoſe that follow; Citron-Bark, *v. g.* is a *Counter-poiſon* to Nux Vomica; Venice-Treacle to the Bite of a Viper; Oil of Scorpion, to the Bite of Scorpions; Oil of Pine-Apples, to Orpiment; Gentian, to the Cicuta, &c.

*Vander Linden*, in his Treatiſe *de Venenis*, ſays, that in every putrid Indiſpoſition, whether ariſing from the Bite of venomous Beaſts, or from an Alcali form'd by Putrefaction, Vinegar drank is ſovereign, either ſimple or diſtill'd; either with Honey in form of Oximel, or with Sea-Onion.

COUNTER-POISE, any thing ſerving to weigh againſt another; particularly a piece of Metal, ordinarily Braſs or Iron, making a Part of the *Statera Romana*, or Stilyard. See STATERA.

It is made to ſlide along the Beam; and from the Diviſion in which it keeps the Balance in Equilibrio, the Weight of the Body is determin'd. See BALANCE.

It is alſo call'd the *Pear*, on account of its Figure; and *Maſs*, by reaſon of its Weight.

Rope-Dancers uſe a Pole by way of *Counter-poiſe*, to keep their Bodies in Equilibrio.

COUNTERFORTS, *Buttreſſes*, *Spurs*, are Pillars of Maſonry, ſerving to prop or ſuſtain Walls or Terraſſes, ſubject to buldge, or be thrown down. See BUTTRESS.

Theſe Works are uſually bent into Arches, and placed at a diſtance from each other.

When any thing is built on the Deſcent of a Mountain, it muſt be ſtrengthen'd with *Counterforts* well bound to the Wall, and at the Diſtance of about twelve Yards from each other.

COUNTERMAND, a Revocation of an Order; or an Excuſe for ſetting aſide, or deferring a Conſignment.

A *Countermand* differs from an Eſſoign, firſt, in that in the *Countermand*, the Conſignment is propos'd to be defer'd to a Day certain, which is not in the Eſſoign. 2d, In the Eſſoign, the Cauſe of deferring the Conſignment is expreſs'd and affirm'd to be true, but in a *Countermand* that Affirmation is not requir'd. See ESSOIGN.

COUNTERMAND, is alſo where a thing formerly executed is afterward, by ſome Act or Ceremony, made void by the Party that firſt did it. As, if a Man make his Laſt Will, and deviſe his Land to *T. S.* and afterwards enfeoffs another of the ſame Land; this Feoffment is a *Countermand* of the Will, and the Will void as to the Diſpoſition of the Land.

COUNTING, or COMPTING-HOUSE, in the King's Houſhold, an Office wherein account is daily taken of the Expences, &c. of the Houſhold; Proviſions made for the ſame; as alſo Payments, and Orders for the well-governing of the Servants. See HOUSHOLD.

The principal Officer hereof, is the Lord Steward; under whom are the Treaſurer, Comptroller, Cofferer, Maſter of the Houſhold, Clerks of the Green-Cloth, and Clerks Controllers. See STEWARD, &c.

In the *Compting-Houſe*, is the Board of Green-Cloth, which is a Court of Juſtice. See GREEN-CLOTH.

COUNTY, originally ſignifies the Territory of a *Count*, or Earl. See COUNT.

But now it is uſed in the ſame Senſe with *Shire*; the one Word coming from the *French*, the other from the *Saxon*. See SHIRE.

In this View, a *County* is a Circuit, or Portion of the Realm, into 52 of which, the whole Land, *England* and *Wales*, is divided, for the better Government thereof, and more eaſy Adminiſtration of Juſtice therein.

Theſe *Counties* are ſubdivided into *Rapes*, *Lathes*, *Wapentakes*, *Hundreds*; and theſe again into *Tythings*. See RAPE, WAPENTAKE, HUNDRED, &c.

For the Execution of the Laws in the ſeveral Counties excepting *Cumberland*, *Weſtmorland*, and *Durham*, every *Michaelmas* Term, Officers are appointed, under the Denomination of *Sheriffs*. See SHERIFF.

This Officer has a double Function; firſt, *Miniſterial*, to execute all Proceſſes and Precepts of the Courts of Law directed to him: and ſecondly, *Judicial*; whereby he has Authority to hold two Courts, the one call'd the *Sheriff's-Turn*, the other the *County-Court*. See TURN, and COUNTY-*Court*.

Other Officers of the ſeveral *Counties*, are, *Lord Lieutenant*, who has the Command of the Militia of the *County*; *Cuſtodes Rotulorum*, *Juſtices of Peace*, *Bailiffs*, *High Conſtable*, and *Coroner*. See *Lord* LIEUTENANT, MILITIA, CUSTOS *Rotulorum*, JUSTICE *of the Peace*, *High* CONSTABLE, BAILIFF, CORONER, &c.

Of the 52 *Counties*, there are four of ſpecial Note, which are therefore term'd *Counties Palatine*; as, *Lancaſter*, *Cheſter*, *Durham*, and *Ely*: *Pembroke* alſo, and *Hexam* were antiently *Counties Palatine*; which laſt belong'd to the Archbiſhop of *York*, and was ſtripp'd of its Privilege in the Reign of Queen *Elizabeth*, and reduc'd to be a Part of the *County* of *Northumberland*. See PALATINE.

The Chief Governours of theſe *Counties Palatine*, heretofore, by a ſpecial Charter from the King, ſent out all Writs in their own Names; and, touching Juſtice, did all Things as abſolutely as the King himſelf in other *Counties*; only acknowledging him their Superior and Governour. But in *Henry* VIII's Time, the ſaid Power was much abridg'd.

COUNTY-*Corporate*, is a Title given to ſeveral Cities, or antient Boroughs, on which the *Engliſh* Monarchs have thought fit to beſtow extraordinary Privileges; annexing to them a particular Territory, Land, or Juriſdiction.

The Chief of theſe is the famous City of *London*; with *York*, *Canterbury*, *Briſtol*, *Cheſter*, *Norwich*; the Town of *Kingſton upon Hull*, *Newcaſtle upon Tine*, *Haverford-Weſt* in *Wales*, &c.

COUNTY-*Court*, is a Court of Juſtice held in each *County* by the Sheriff thereof, every Month. See SHERIFF.

This *County Court* had antiently the Cognizance of Matters of great Moment; but was much abridg'd by *Magna Charta*, and more 1 *Edw.* IV. but has ſtill the Determination of Debts and Treſpaſſes under forty Shillings.

In effect, till the Courts at *Weſtminſter* were erected, the *County-Courts* were the chief Courts of the Kingdom. See COURT.

Among the Laws of K. *Edgar* is this, *viz.* Let there be two *County-Courts* in a Year, and let there be preſent a Biſhop, and an Alderman or Earl; one whereof ſhall judge according to the Common Law, the other according to the Eccleſiaſtical Law. The Conjunction of theſe two Powers to aſſiſt each other, is as antient as the *Engliſh* Government it ſelf.

They were firſt ſeparated by *William* the Conqueror, who brought all the Eccleſiaſtical Buſineſs into a Conſiſtory, erected for that Purpoſe; (ſee CONSISTORY:) and the Law-Buſineſs into the King's-Bench. See KING'S-BENCH.

COUPED, *Coupe*, in Heraldry, expreſſes a Head, Limb, or other Thing in an Eſcutcheon which is borne as if cut, clear and even off, from the Trunk; in oppoſition to its being forcibly torn off, which they call *Eraſed*. See ERASED.

Thus, the Arms of *Ulſter*, which all Baronets carry, is a Dexter-Hand *couped*, or cut off at the Wriſt.

*Couped* is alſo uſed to denote ſuch Croſſes, Bars, Bends, Chevrons, &c. as do not touch the Sides of the Eſcutcheon, but are as it were cut off from 'em.

COUPEE, a Motion in Dancing, wherein one Leg is a little bent, and ſuſpended from the Ground; and with the other a Motion is made forwards.

The Word, in the original *French*, ſignifies a *Cut*.

COUPLE *Cloſe*, in Heraldry, the fourth Part of a Chevron. Theſe are never born but in Pairs, except a Chevron be between them, ſaith *Guillim*; tho *Bloom* gives an Inſtance to the contrary. See CHEVRON.

COUPLET, a Diviſion of an Hymn, an Ode, Song, &c. wherein, an equal Number, or an equal Meaſure of Verſes are found in each Part.

In Odes, theſe Diviſions are more ordinarily call'd *Strophes*. See STROPHE.

The Word is form'd from the Latin *Copula*.

By an Abuſe, *Couplet* is ſometimes uſed to ſignify a *Couple* of Verſes.

COURANT, a Term uſed to expreſs the preſent Time: Thus, the Year 1726 is the *Courant* Year; the 15th *Courant*, the 15th Day of the Month now running.

With regard to Commerce, the *Price Courant* of any Merchandize, is the known and ordinary Price accuſtom'd to be given for it.

The Word is alſo uſed for any thing that has Courſe, or is receiv'd in Commerce: In which Senſe, we ſay, *Courant* or *Current* Coin, &c. See CURRENT.

COURANT is alſo a Term in Muſick and Dancing; being uſed to expreſs both the Time or Air, and the Dance.

With regard to the firſt, *Courant* or *Currant* is a Piece of Muſick in triple Time: The Air of the *Courant* is ordinarily noted in Triples of Minims; the Parts to be repeated twice.

It

It begins and ends, when he who beats the Measure falls his Hand; in contradistinction from the Saraband, which ordinarily ends when the Hand is rais'd.

With regard to Dancing, the *Courant* is the most common of all the Dances practis'd in *England:* It consists, essentially, of a Time, a Step, a Balance, and a Coupee; tho it also admits of other Motions.

Formerly they leap'd their Steps; in which Point, the *Courant* differ'd from the low Dances and Pavades. There are *simple Courants*, and *figur'd Courants*, all danc'd by two Persons.

The Term is *French*, and properly signifies *running*. See CURRENT.

COURIER, or CURRIER, a Messenger sent Post, or Express, to carry Dispatches. See POST.

Antiquity, too, had its *Couriers*; we meet with three Kinds, *viz.* those who ran on foot, call'd by the *Greeks Hemerodromi*, q. d. *Couriers of a Day*. *Pliny*, *Corn. Nepos*, and *Cæsar*, mention some of these, who would run 20, 30, 36, and, in the Circus, even 40 Leagues *per* Day. And *Riding Couriers*, who chang'd Horses, as the modern *Couriers* do.

*Xenophon* attributes the first *Couriers* to *Cyrus*. *Herodotus* says, they were very ordinary among the *Persians*, and that there was nothing in the World more swift than these kind of Messengers. 'That Prince, *says* Xenophon, exa-'min'd how far a Horse would go in a Day; built Equeries, 'or Stables, at such Distances from each other, where he 'lodg'd Horses, and Persons to take care of 'em; and at 'each Place kept a Person always ready to take the Packet, 'mount a fresh Horse, and forward it to the next Stage: 'and this quite thro' his Empire.

But it does not appear, that either the *Greeks* or *Romans* had any regular fix'd *Couriers*, till the Time of *Augustus:* Under that Prince they travell'd in Cars; tho it appears from *Socrates*, they afterwards went on Horseback.

Under the Western Empire, they were call'd *Viatores*; and under that of *Constantinople*, *Cursores:* whence the modern Name.

COURSE, in Navigation, the Point of the Compass, or Coast of the Horizon, on which a Ship steers. See POINT, and COMPASS.

When a Vessel begins its *Course*, the Wind wherewith it is given makes a certain Angle with the Meridian of the Place; and, as 'tis here supposed, the Vessel follows exactly the Direction of the Wind, it makes the same Angle with the Meridian which the Wind makes. See WIND.

The Wind is further supposed always the same; and because each Point or Instant of a *Course* may be regarded as the first; every Moment of the *Course* it makes the same Angle with the Wind.

Now a Wind that is North-East, *v. g.* here, (and by consequence makes an Angle of 45 Degrees with our Meridian) is North-East wherever it blows, and makes the same Angle of 45 Degrees with all the Meridians it meets.

The *Course* of a Vessel therefore, driven by the same Wind, makes the same Angle with all the Meridians on the Surface of the Globe.

If the Vessel run North and South, it makes an Angle infinitely small with the Meridian, *i. e.* is parallel to it, or never goes from it: If it run East and West, it cuts all the Meridians at right Angles. In the first Case it describes a great Circle; in the second, either a great Circle, which is the Equator, or a Parallel. But if the Course be between the two, it does not then describe a Circle; because a Circle drawn in such a manner, would cut all the Meridians at unequal Angles. It describes, therefore, a Spiral or Curve, the essential Condition whereof, is to cut all the Meridians under the same Angle; call'd the *Loxodromic Curve*, or *Loxodromy*, popularly Rhumb. See RHUMB.

The Ship's *Course*, therefore, except in the two first Cases, is always a Loxodromic Curve; and the Hypothenuse of a Rectangle-Triangle; the two other Sides whereof, are the Ship's Way in Latitude and Longitude.

The Latitude is usually had by Observation. See LATITUDE.

The Rhumb, or Angle of the *Course*, is had by the Compass, together with the one or other of the two Sides; and what remains to be calculated in Sailing, is the Quantity of the Longitude, and of the Rhumb, or *Course*. See SAILING; see also CHART.

COURSE *of a River*. See RIVER.

COURSE, in Architecture, a continued Range of Stones, level, or of the same height, throughout the whole length of the Building; without being interrupted by any Aperture. See BUILDING, WALL, MASONRY, &c.

A *Course of Plinths*, is the Continuity of a Plinth of Stone, or Plaister, in the Face of a Building; to mark the Separation of the Stones. See PLINTH.

COURSE, is also us'd for a Collection, or Body of Laws, Canons, or the like. The *Civil Course*, is the Collection of the *Roman* Laws, compiled by Order of *Justinian*. See CIVIL *Law*.

The *Canonical Course*, is the Collection of the Canon Law, made by *Gratian*. See CANON.

COURSE, again, is used for the Time ordinarily spent in learning the Principles of a Science, or the usual Points and Questions therein.

Thus, a Student is said to have *finish'd his Course* in the Humanities, in Philosophy, &c.

Hence, *Course* is also us'd for the Elements of an Art exhibited and explain'd, either in Writing, or by actual Experiment: Hence our *Courses* of Philosophy, Anatomy, Chymistry, Mathematicks, &c. probably so call'd, as going throughout, or running the whole Length or *Course* of the Art, &c.

COURT, an Appendage to a House, or Habitation; consisting of a piece of Ground inclos'd with Walls, but open upwards. See HOUSE.

That before the House is properly call'd the *Avant-Court*; that behind, the *Arriere-Court:* That where Country-Affairs, &c. are manag'd, *i. e.* where Cattel, &c. come, the *Basse-Court*.

*Nicod* derives the Word from the Latin *Cohors*; *Menage* from *Cortis*. See COHORT.

COURT is also used for the *Palace*, or the Place where a King or Sovereign Prince resides; in which Sense, the Jesuit *Gratian* derives the Word from *Cortis*, or *Curtis*, of κόρτη, *Tent*; whence *Courtesy*, in the Sense of Civility. See PALACE.

In the Laws of the *Germans*, there is one Article, *de eo qui in* curte *Regis furtum commiserit*; and another, *de eo qui in* curte *ducis hominem occiderit*. Others derive it from the *Gallish Cors*, form'd of *Cohors*, and *Cohors* from χορὸς.

COURT, *Curia*, in a Law Sense, is the Place where the Judges distribute Justice, or exercise their Jurisdiction; as also, the Assembly of Judges, Jury, &c. in that Place.

In this Sense, *Courts* are divided into *Sovereign*, or *Superior*, and *Subaltern*, or *Inferior:* And, again, into *Courts of Record*, and *Base Courts*.

*Crompton* describes 32 *Courts* in *England*, most of 'em *Courts of Record*. See RECORD.

Again, *Courts* are either such as are held in the *King's Name*; as all the ordinary *Courts:* or those held by his Authority, where the Precepts are issu'd in the *Judge's Name*, *Virtute Magistratus sui*; as the Admiral's *Court*.

In *England* we have four principal *Courts* subsisting; all establish'd by antient Custom of the Realm, rather than by any Statute; tho their Establishments have been from time to time since confirm'd by Acts of Parliament. These are, the *Courts of King's-Bench*, the *Common-Bench* or *Pleas*, the *Exchequer*, and the *Court of Chancery*. See each in its Place, *King's*-BENCH, COMMON-*Pleas*, EXCHEQUER, and CHANCERY.

COURT *of Admiralty*, is a Court for the Decision of Maritime Controversies. See ADMIRALTY *Court*.

COURT *of Arches*. See ARCHES *Court*.

COURTS-*Baron*, are *Courts* that all Lords of Manors, who were antiently call'd *Barons*, have within their respective Precincts. See BARON.

This *Court* is twofold; as, if a Man having a Manor in a Town, grants the Inheritance of the Copyholds thereto belonging to another; this Grantee may keep a *Court* for the Customary Tenants, and accept Surrenders to the Use of others, and make both Admittances and Grants.

The other *Court* is of Freeholders, which is properly call'd a *Court-Baron*, wherein the Free-holders are Judges: whereas of the other, the Lord or his Steward is Judge. See PEER, FREEHOLDER, STEWARD, &c.

COURT *of Chivalry*, or the *Marshal's Court*; a *Court* whereof the Judges are the Lord High Constable, and the Earl Marshal of *England*. See CONSTABLE, and MARSHAL.

This *Court* is the Fountain of Martial Law; and the Earl Marshal is not only one of the Judges, but also to see Execution done. See CHIVALRY, MARTIAL, &c.

COURT *of Delegates*, is a *Court* where Delegates or Commissioners are appointed by the King's Commission, upon an Appeal to him, to sit in the *Court* of Chancery, or elsewhere. It is granted in three Cases; first, when a Sentence is given in an Ecclesiastical Cause, by the Archbishop, or his Official: Secondly, when a Sentence is given in an Ecclesiastical Cause, in Places exempt: Thirdly, when Sentence is given in the Admiralty Court, in Suits Civil or Marine, by Order of the Civil Law. See DELEGATES.

COURT *of Peculiars*, is a Spiritual *Court*, held in such Parishes as are exempt from the Jurisdiction of the Bishops, and are peculiarly belonging to the Archbishop of *Canterbury*. See PECULIARS.

COURT *of Pye-pouders*. See PYE-POUDERS.

COURT *of Prerogatives*. See PREROGATIVE *Court*.

COURT *of Requests*, was a Court of Equity, of the same Nature with the *Court* of Chancery, but inferior to it; being principally instituted for the Help of such Petitioners, as in conscionable Cases, deal by Supplication to his Majesty.

Of this *Court* the Lord Privy-Seal was chief Judge; assisted by the Masters of Requests. It had its Beginning about

9 *Hen.* VII. according to Sir *Julius Cæsar*'s Tract on this Subject. *Mich.* 40 and 41 *Eliz.* in a *Court* of Common Pleas, it was adjudg'd, upon ſolemn Argument, that this *Court of Requeſts*, or the *White-Hall*, was no *Court* that had the Power of Judicature, &c. *Coke Inſt.* fol. 97.

It had aſſum'd ſo great Power to it ſelf, that it grew burdenſome and grievous, and was therefore taken away, with ſome others, by a Statute made 16 and 17 *Car.* I. cap. 10.

COURT *of the Legate*, was a *Court* obtain'd by Cardinal *Wolſey* of Pope *Leo* X. in the ninth Year of *Henry* VIII. wherein he, as Legate of the Pope, had power to prove Wills, and diſpence with Offences againſt the Spiritual Laws, &c. It was but of ſhort continuance. See LEGATE.

COURT-*Leet*, a *Court* belonging to a Lord of a Manor, in which all Offences under High Treaſon are inquir'd into. See LEET.

COURT-*Days*, are Days when the *Courts* of Judicature are open, and Pleas held. See DAY, FASTUS, NEFASTUS, &c.

COURT-*Lands*, ſuch as the Lord of the Manor keeps in his own Hands, for the Uſe of his Family, and for Hoſpitality. See MANOR.

COURT-*Roll*, a Roll which contains an account of the Number, &c. of Lands, depending on the Lord of the Manor; with the Names of the Tenants, &c. See ROLL.

Tenants holding by Copy of this Roll, are denominated Copy-holders. See COPY-HOLDER.

COURTESY, or CURTESY *of England*, a Tenure, whereby a Man marrying an Inheritrix, a Woman ſeiz'd of Lands of Fee-ſimple, or Fee-tail general; or ſeized as Heir of the Tail-ſpecial, and getteth a Child by her, who cometh alive into the World, tho both Wife and Child die forthwith; yet, if ſhe were in Poſſeſſion, he ſhall keep the Land during his Life, and be called Tenant, by the *Courteſy* of *England*; this Privilege being not allow'd in any other Country, except *Scotland*, where it is call'd *Curialitas Scotiæ*.

This Tenure was introduc'd by the Conqueror, and borrow'd by him from his own Country, *Normandy*, where it obtain'd before, under the Name of *Veuveté*.

COURTIN, or COURTAIN, in Fortification, the Front of the Wall, or Rampart, lying between two Baſtions. See CURTIN.

COURTISAN, a Term of Infamy, given to Women who ſell their Perſons, and make a Trade of Proſtitution. See STEWS.

*Lais*, the famous *Theban Courtiſan*, ſtands on record for requiring no leſs than ten thouſand Crowns for a ſingle Night. Of all Places in the World, *Venice* is that where *Courtiſans* abound the moſt: 'Tis now 250 Years ſince the Senate, which had expell'd 'em, was oblig'd to recall 'em; to provide for the Security of Women of Honour, and to keep the Nobles employ'd, leſt they ſhould turn their Heads to make Innovations in the State.

COUSIN, a Term of Relation and Kinſhip, applied to thoſe who are iſſu'd from two Brothers, or two Siſters.

In the firſt Generation they are call'd *Couſin Germans*, *i. e.* next *Couſins*. See GERMAN.

In the ſecond, Iſſues of Germans, or ſecond *Couſins*; in the third and fourth, *Couſins* in the third and fourth Degrees.

In the Primitive Times, it was allow'd *Couſin*-Germans to marry, to prevent their making Alliances in Heathen Families; but *Theodoſius* the Great prohibited it under Pain of Death; on pretence that they were, in ſome ſort, Brothers and Siſters, with regard to each other.

The Word is ordinarily derived from *Conſanguineus*; tho *Menage* brings it from *Congenius*, or *Congeneus*, q. d. *ex eodem genere*.

*Paternal Couſins*, are thoſe iſſu'd from Relations on the Father's ſide; *Maternal*, thoſe on the Mother's.

COUSIN is alſo a Title of Honour, which Kings beſtow on Peers or Nobles, foreign Princes of the Blood, Cardinals, and the principal Perſons of their State; particularly Dukes.

COUSSINET, *Cuſhion*, in Architecture, the Stone that crowns a Piedroit, or Peer; or that lies immediately over the Capital of the Impoſt, and under the Sweep. See IMPOST, PIEDROIT, &c.

Its Bed, below, is level, and above, curved; receiving the firſt Riſe or Spring of the Arch, or Vault. See ARCH, &c.

COUSSINET is alſo uſed for the Ornament in the *Ionic* Capital between the Abacus, and Echinus, or Quarter-Round; and which ſerves to form the Volutes. See CAPITAL.

It is thus denominated from its repreſenting a Pillow or Cuſhion, preſs'd by the Weight over it, and bound with the Strap or Girdle, call'd by *Vitruvius*, *Baltheus*.

COUSU, in Heraldry, is uſed in the ſame Senſe as *Remply*, *viz.* for a Piece of another Colour or Metal, placed on the Ordinary, as if it were ſew'd on; which the Word in the *French* Language naturally implies.

This is generally of Colour on Colour, or Metal on Metal, contrary to the general Rule of Heraldry: Whence the Word denotes, that the Piece is not properly on the Field, but in the Nature of a thing ſew'd on.

COUTHUTLAUGH, from the Saxon *Couth*, *Sciens*, Knowing; and *Utlaugh*, *exlex*, Outlaw; is he that wittingly receives a Man outlaw'd, and cheriſhes or conceals him. See OUTLAW.

In which Caſe he was, in antient Time, ſubject to the ſame Puniſhment with the Outlaw himſelf. *Bracton*, l. 3.

COUVERT, in Heraldry, denotes ſomething like a Piece of Hanging, or a Pavilion falling over the Top of a Chief, or other Ordinary; ſo as not to hide, but only be a Covering thereto.

COWARD, in Heraldry, a Lion borne in an Eſcutcheon, with his Tail doubled or turn'd in between his Legs, is called a *Lion Coward*.

COWL, or COUL, *Cuculla*, a ſort of Hood, wore by certain Monks. See COUL.

COWRING, in Falconry, the quivering of young Hawks, which ſhake their Wings, in Sign of Obedience to the old ones.

COXÆ, or COCCIGIS *Os*, in Anatomy, a Bone join'd to the lower Bone of the *Os Sacrum*; conſiſting of three or four little Bones and two Cartilages. See SACRUM.

In form it reſembles a little Tail, the loweſt Bone growing gradually leſs and leſs than the upper, till it end in a cartilaginous Point, which is turn'd upwards for the Convenience of ſitting.

Theſe two Bones are but looſly fix'd; eſpecially in Women; in whom, at the Time of Parturition, they eaſily give way.

The Uſe of this Bone is to ſuſtain the *Inteſtinum Rectum*: It has Muſcles in common with the *Anus*, to draw it upwards, or inwards. See COCCIGIS *Muſculi*.

COXÆ, or COXENDICIS *Oſſa*, call'd alſo *Oſſa Innominata*, and in *Engliſh* the *Hip-Bones*, are two large Bones, ſituate on either ſide the *Os Sacrum*.

In Infants, each of theſe conſiſts of three diſtinct Bones, ſeparated by Cartilages; which, in Adults, grow up, and conſtitute one firm, ſolid Bone; whoſe Parts, however, retain three diſtinct Names, according to their former Diviſion, *viz.* the *Os Ilium*, *Os Iſchium*, by ſome peculiarly call'd *Os Coxendicis*, and *Os Pubis*; which ſee in their proper Places ILIUM, ISCHIUM, and PUBIS.

COXÆ *Muſculus*, according to Dr. *Drake*, a Pair of Muſcles ariſing fleſhy from the *Os Iſchium*, between the *Muſculi Marſupialis*, and *Pyriformis*, and deſcending obliquely, terminate on each ſide the *Os Coccygis*, and adjoining Part of the *Os Sacrum*, ſerving to draw the *Os Coccygis* upwards and inwards; as Antagoniſts to two Ligaments, ſpringing from the back Part of the *Os Sacrum*, and terminating in the external Surface of the *Os Coccygis*.

CRABS-EYES, *Oculi Cancrorum*, or *Lapides Cancrorum*, in Natural Hiſtory and Medicine, are little, white, round Stones, ordinarily flat; ſo call'd, becauſe taken out of the Craw-fiſh, or River Lobſter: and tho bearing no great reſemblance to Eyes, yet reſembling them more than any other Part. They are much uſed in Medicine, as a powerful Alcali, or Abſorbent. See ABSORBENT, ALCALI, &c.

The moſt able Naturaliſts imagine 'em form'd in the Brain of the Animal. *Vanhelmont* firſt found 'em in the Region of the Stomach: M. *Geoffroy* the younger has obſerv'd the manner of their Formation much more accurately.

According to him, we may lay down one Claſs of Animals, which have their Bones withoutſide; whereas the reſt have 'em withinſide: Of the firſt Kind are the Fiſhes we are ſpeaking of. See SHELL.

Thoſe of the Rivers diveſt themſelves every Year in *June* of the Bones wherewith they are cover'd and arm'd; a Membrane wherewith the Inſide of thoſe Scales is lin'd, takes their Place, and hardens, by degrees, into a new Scale.

Indeed, 'tis much leſs wonder an Animal ſhould caſt its Skin, or Covering; than that it ſhould diſcharge it ſelf of its Stomach, as the Craw-fiſh does; and even, as M. *Geoffroy* thinks, of its Inteſtines too: The exterior Membranes of thoſe *Viſcera* taking their place.

There is room to believe, that as they putrify and diſſolve, they ſerve for Food to the Animal; during the Time of the Reformation, the old Stomach is the firſt Food the new one digeſts.

'Tis only in this time that the Stones are found, called *Crabs-Eyes*: They begin to be form'd when the antient Stomach is deſtroy'd; and are afterwards wrap'd up in the new one, where they decreaſe by degrees till they diſappear entirely. See TESTACEOUS *Powder*.

CRAFT, a Sea Term, ſignifying all manner of Lines, Nets, Hooks, which ſerve for fiſhing.

Hence, as thoſe that uſe the Fiſhing Trade, uſe ſmall Veſſels, ſuch as Ketches, Hoys, Smacks, &c. they call ſuch little Veſſels *ſmall Craft*.

CRAMP, a kind of Numbneſs, or Convulſion, occaſion'd by a thick viſcid Vapour, entering the Membranes of the Muſcles which contracts or extends the Neck, Arms, Legs, &c. with a violent, but tranſitory Pain; being uſually driven off with Friction alone. See CONVULSION.

The

The Word comes from the German *Krampff*.

CRAMP-IRON, a Piece of Iron, bent at each Extreme, ſerving to bind together Pieces of Wood, Stones, or other Things.

Thus, we ſay, Theſe Stones are bound together by *Cramp-Irons* faſten'd in Lead, *&c.* Some derive the Word, by Corruption, from *Agrapon*, or the Italian *Rampone*, which ſignifies the ſame thing.

CRAMPONNEE, in Heraldry. A *Croſs Cramponee*, is that which at each End has a *Cramp*, or ſquare Piece coming from it; as in the Figure adjoining. See CROSS.

CRAMPOONS, CRAMPONS, pieces of Iron, hooked at the Ends; for the drawing or pulling up of Timber, Stones, *&c.*

CRANAGE, a Liberty to uſe a *Crane*, for drawing up Wares out of a Ship, or Hoy, *&c.* at a Wharf; and to make Profit thereof.

The Word alſo ſignifies the Money taken, or paid for that Grant.

CRANE, a Machine uſed in Building, for the raiſing large Stones and other Weights.

M. *Perrault*, in his *Notes on* Vitruvius, makes the *Crane* the ſame with the *Corvus*, *Crow* of the Antients. See CORVUS.

The modern *Crane* conſiſts of ſeveral Members, or Pieces, the principal whereof is a ſtrong perpendicular Beam, or Arbor, firmly fix'd in the Ground, and ſuſtain'd by eight Arms, coming from the Extremities of four Pieces of Wood laid acroſs, thro' the Middle whereof the Foot of the Beam paſſes. About the middle of the Arbor the Arms meet, and are mortais'd into it: its Top ends in an Iron Pivot, whereon is bore a tranſverſe Piece, advancing out to a good diſtance in manner of a *Crane*'s Neck; whence the Name.

The Middle and Extremity of this is again ſuſtain'd by Arms from the middle of the Arbor; and over it comes a Rope, or Cable, to one end whereof the Weight is fix'd; the other is wound round the Spindle of a Wheel, which turn'd, draws the Rope, and that heaves up the Weight; to be afterwards applied to any Side or Quarter, by the mobility of the tranſverſe Piece on the Pivot.

CRANE is alſo a popular Name for a Syphon. See SYPHON.

CRANE-*Lines*, in a Ship, are Lines going from the upper End of the Sprit-ſail-top-maſt, to the Middle of the Foreſtays.

CRANIUM, in Anatomy, an Aſſemblage of ſeveral Bones, which cover and encloſe the Brain and *Cerebellum*; popularly call'd the *Skull*. See BRAIN, *&c.*

It is divided into two Tables, or *Laminæ*, laid or applied over each other; between which is a thin ſpongious Subſtance, made of bony Fibres detach'd from each *Lamina*, and full of little Cells of different Bigneſſes, call'd *Diploe*, or *Meditullium*. See DIPLOE.

The Tables are hard and ſolid, the Fibres being cloſe to one another; the *Diploe* is ſoft, in regard of the bony Fibres being at a greater Diſtance: A Contrivance whereby the Skull is not only made lighter, but leſs liable to Fractures.

The external *Lamina* is ſmooth, and cover'd with the *Pericranium*; the internal is likewiſe ſmooth, abating the Furrows made by the Pulſation of the Arteries of the *Dura Mater*, ere the *Cranium* be arriv'd at its Conſiſtence.

It has ſeveral Holes, thro' which it gives paſſage to the Spinal Marrow, Nerves, Arteries, and Veins, for the Conveyance and Re-conveyance of the Blood, *&c.* between the Heart and the Brain.

Its Figure is round, which is an advantage to its Capacity; but a little depreſs'd, and longiſh; advancing out behind, and flatted on the two Sides, which form the Temples; which contribute to the Enlargement of the Sight and Hearing.

It is compoſed of eight Bones, ſix whereof are *proper*, and two *common*: The *proper* are, the Bone of the Forehead, *Os Frontis*, that of the back of the Head, *Os Occipitis*, the two *Oſſa Parietalia*, and the two of the Temples, *Oſſa Temporum*. See each in its Place, FRONTIS, OCCIPITIS, TEMPORIS, *&c.*

In the Eminences of the Bones of the Temples, is contain'd the Organ of Hearing, with the four little Bones belonging thereto, *viz.* the *Malleolus*, *Incus*, *Stapes*, and *Os Orbiculare*. See HEARING.

The *common* Bones are the *Os Sphenoides*, and *Ethmoides*. See SPHENOIDES, *&c.*

The *Cranium* has three *common* Sutures, which divide it from the Jaw: It has others *proper*, whereof there are three genuine, the *Coronalis*, *Sagittalis*, and *Lambdoides*; the reſt ſpurious, call'd *Squammoſæ*, or *Temporales*. See SUTURE, *&c.*

This Diviſion of the *Cranium* into Pieces by Sutures, is of good uſe, as it makes it leſs liable to break, gives paſſage to the Membranes which ſuſtain the *Pericranium*, and affords Vent to the Matter of inſenſible Perſpiration. See FRACTURE, *&c.*

The Word comes from the *Greek* κρανος, *Galea*, Helmet; in regard it ſerves to defend the Brain, like a Head-piece. *Pezron*, again, derives κρανιον from the Celtic *Cren*, from its roundneſs.

CRANK, a Contrivance in Machines, in manner of an Elbow, only of a ſquare form; projecting out from an Axis, or Spindle; and ſerving by its Rotation, to raiſe and fall the Piſtons of Engines for raiſing Water, *&c.*

CRANK, in the Sea Language. A Ship is ſaid to be *Crank*, when ſhe cannot bear her Sail, or can bear but a ſmall Part, for fear of overſetting. She is alſo ſaid to be *Crank by the Ground*, when her Floor is ſo narrow, that ſhe cannot be brought on ground without danger.

CRAPE, a light tranſparent Stuff, in manner of Gauze; made of raw Silk, gumm'd and twiſted on the Mill; wove without croſſing, and much uſed in Mourning.

*Crapes* are either *crap'd*, i. e. *criſp'd*, or *ſmooth*: the firſt *double*, expreſſing a cloſer Mourning; the latter *ſingle*, uſed for that more remote. Note, white is reſerv'd for young People, or thoſe devoted to Virginity.

The Silk deſtin'd for the firſt is more twiſted than that for the ſecond; it being the greater or leſs degree of twiſting, eſpecially of the Warp, which produces the Criſpage, given it when taken out of the Loom, ſteep'd in clear Water, and rubb'd with a piece of Wax for the Purpoſe.

They are all died raw. The Invention of *Crapes* comes from *Boulogne*: But the chief Manufacture hereof is at *Lyons*.

Hiſtory tells us, that S. *Bathilda*, Queen of *France*, made a fine *Crape*, *Crepam*, of Gold and Silver, to lay over the Body of S. *Eloy*. The *Bollandiſts* own they can't find what this *Crepa* was. *Binet* ſays it was a Frame to cover the Body of the Saint withal: But others, with reaſon, take it to be a tranſparent Stuff, thro' which the Body might be ſeen; and that this was the *Crepa* whence our *Crape* is form'd.

CRAPULA, a Surfeit by over-eating and drinking. See SURFEIT, and PLENITUDE.

CRASIS, in the Animal Oeconomy, a due Temperament or Conſtitution of the Blood; wherein the ſeveral Principles, *viz.* Salt and Oil, whereof it is compoſed, are found in their juſt Proportion and Purity: in contradiſtinction to a *Diſcraſy*, which conſiſts in an improper Union of the Principles, or in an unnatural State of ſome thereof. The chief Diſcraſies the Blood is ſuſceptible of, whence flow moſt of the Diſeaſes of the Body, are *Coagulation*, *Diſſolution*, an Exceſs of Oil, or of Salt. See BLOOD; ſee alſo COAGULATION, *&c.*

The Word is *Greek*, κρασις, ſignifying *Mixture*, *Temperament*.

CRASIS, in Grammar, a Figure, whereby we join two Syllables into one; call'd alſo *Syneræſis*. See SYNERÆSIS.

Thus, in *Virgil*'s fourth *Eclogue*,

*Orphei Calliopea lino formoſus Apollo.*

there is a *Craſis* in the Word *Orphei*, which here only conſiſts of two Syllables.

CRASSAMENTUM, a Term uſed by ſome Anatomiſts, for the Cruor of the Blood; or that Part which, upon ſtanding to cool and ſeparate, forms the *Coagulum*: In oppoſition to the Serum, or Whey, wherein it ſwims. See CRUOR.

Some Authors have ſuppoſed the *Craſſamentum* to be ſpecifically lighter than the Serum; but Dr. *Jurin* ſhews the contrary from repeated Experiments. See BLOOD.

CRATER, *Cup*, in Aſtronomy, a Conſtellation of the Southern Hemiſphere. See CONSTELLATION.

The Stars in the Conſtellation *Crater*, in *Ptolemy*'s Catalogue are 7; in *Tycho*'s 8; in the *Britannic Catalogue* 11. The Order, Names, Longitudes, Latitudes, *&c.* whereof, are as follow.

*Stars in the Conſtellation* CRATER.

| *Names and Situations of the Stars.* | Signs. | Longitude. ° ′ ″ | Latitude. ° ′ ″ | Magnit. |
|---|---|---|---|---|
| That in the Baſis | ♍ | 19 26 3 | 22 42 47 | 4 3 |
| Preced. of 3 in the Middle of the Cup | | 22 23 50 | 17 35 20 | 4 |
| South. in the Middle of the Cup | | 25 5 50 | 20 47 43 | 4 |
| Preced. in the North Part of the Circumference of the Mouth | | 21 55 59 | 13 28 28 | 4 |
| Middle of 3 in the Middle of the Cup 5 | | 24 56 16 | 19 39 22 | 4 |
| Subſ. in North Circumf. of the Mouth | | 23 9 20 | 14 35 16 | 6 |
| In the North Handle | | 24 16 26 | 11 18 33 | 4 |
| In the Middle of the Mouth | | 26 8 52 | 14 13 32 | 5 |
| In the South Circumf. of the Mouth | | 29 45 50 | 18 17 29 | 4 |
| In the South Handle 10 | ♎ | 1 47 42 | 16 4 46 | 4 |
| | ♎ | 3 58 41 | 17 52 59 | 5 6 |

CRATER, in Falconry, any Line on which Hawks are faſten'd when reclaimed. See RECLAIM.

CRAVEN, or CRAVENT, in our antient Cuſtoms, a Trial by Battle, upon a Writ of Right. See COMBAT.

The

The Law was, that the Victory ſhould be proclaim'd, and the Vanquiſh'd acknowledge his Fault in the Audience of the People; or pronounce the Word *Cravent* in the Name of *Recreantice*, or Cowardice, &c. and, preſently, Judgment to be given; and the Recreant, *amittere Legem terræ*, *i. e.* become infamous.

*Coke* obſerves, that if the Appellant join Battle, and cry *Craven*, he is to loſe, *liberam Legem*. If the Appellee cry *Craven*, he is to be hang'd.

CRAYON, a general Name for all colour'd Stones, Earths, or other Minerals; uſed in Deſigning, or Painting in Paſtel; whether they have been beaten and reduced to a Paſte, or are us'd in their Conſiſtence of a Stone, after ſawing or cutting them into long narrow Slips.

In this laſt manner are red *Crayons* made, of Blood-ſtone, or red Chalk; black ones, of Charcoal and black Lead. *Crayons* of all other Colours are Compoſitions of Earths reduc'd into Paſte.

CREAM, the thickeſt and fatteſt Part of Milk; being that whereof Butter is made. See MILK.

The Word is deriv'd from the Latin *Cremor*, which ſignifies the ſame thing; tho in the lower *Latin* we find *Crema lactis*.

CREAM *of Tartar*, in Pharmacy, a Preparation of Tartar, otherwiſe called *Cryſtal of Tartar*.

It is made by boiling Tartar in Water till it be diſſolved, and paſſing the Diſſolution thro' a Straining-Bag: Half the Liquor being evaporated, the Remainder is ſet in a cool Place; where it ſhoots into Cryſtals, Part of it ſwimming a-top, in form of *Cream*.

This latter is properly the *Cream of Tartar*, the reſt *Cryſtal of Tartar*, both of the ſame Nature and Uſe.

It is reputed a great Sweetner of the Blood; for which ſome take it in Whey or Water gruel in the Spring-time, to the Quantity of Half an Ounce every Morning, for three or four Weeks.

Its Operation is by Stool; and, by its ſaline Particles, pretty much alſo by Urine. It's generally mix'd with lenitive Electuaries, and other gentle Catharticks, in Nephritic and Antivenereal Caſes, where it often proves ſerviceable.

CREDENTIALS, Letters of Credit and Recommendation; eſpecially ſuch as are given to Embaſſadors, Plenipotentiaries, &c. ſent to foreign Courts. See EMBASSADOR, &c.

CREDIBILITY. See PROBABILITY, VERISIMILITUDE, EVIDENCE, OPINION, &c.

In the *Philoſophical Tranſactions*, we have a Mathematical Computation of the *Credibility* of Human Teſtimony. See TESTIMONY.

CREDIT, in Commerce, a mutual Loan, of Merchandizes or Silver, on the Reputation of the Probity and Solvability of a Negotiant. See LOAN.

*Letters of* CREDIT, are thoſe given to Perſons in whom a Merchant, &c. can truſt, to take Money of his Correſpondent abroad, in caſe he happens to need it. See LETTER.

*Credit* is alſo uſed for the Courſe which Papers, or Bills, &c. of Commerce, have in the Publick, and among Dealers.

In this Senſe, *Credit* is ſaid to *riſe*, when in negotiating the Actions of a Company, they are receiv'd and ſold at Prices above *Par*, or the Standard of their firſt Creation.

*Diſcredit* is oppos'd to *Credit*, and is uſed where Money, Bills, &c. fall below *Par*. See PAR.

CREDIT was alſo antiently a Right which Lords had over their Vaſſals; conſiſting in this, that during a certain time they might oblige 'em to lend them Money.

In this Senſe, the Duke of *Brittany* had *Credit* during fifteen Days on his own Subjects, and thoſe of the Biſhop of *Nants*; and the Biſhop had the ſame *Credit* or Right among his Subjects, and thoſe of that Prince.

CREDITOR, a Perſon to whom any Sum of Money is due, either by Obligation, Promiſe, or otherwiſe. See DEBT, and DEBTOR.

The Laws of the Twelve Tables, which were the Foundation of the *Roman* Juriſprudence, allow'd the *Creditor* to tear or cut his Debtor to pieces, in caſe he prov'd inſolvable.

CREDITOR, in Book-keeping. See BOOK-KEEPING.

CREED, CREDO, *Symbol*, a ſhort, or ſummary Account of the chief Articles of the Chriſtian Faith; thus called from the firſt Word thereof in Latin, *Credo*, I believe. See SYMBOL.

CREEK, Part of a Haven, where any thing is landed from the Sea. See HARBOUR.

So many Landing-Places as there are in a Harbour or Port, ſo many *Creeks* there are. *Crompt.*

CREMASTERS, in Anatomy, an Epithet given two Muſcles, otherwiſe called *Suſpenſores*; ſerving to keep the Teſticles ſuſpended. See SUSPENSORES.

The Word comes from the *Greek* κρεμαιν, *ſuſpendere*, to ſuſpend, hang.

CRENATED *Leaves*, a Term uſed by Botaniſts, for ſuch Leaves of Plants as are jagg'd, or notch'd. See LEAVES.

CRENELLE, or *Imbattled*, in Heraldry, is when any honourable Ordinary is dented, in reſemblance of the Battlements of a Wall. See BATTLEMENT.

The Uſe hereof is, doubtleſs, taken from the Figures of ſuch Walls being given, either for having been the firſt at mounting, or the chief in defending them.

The *French* Word comes from *Cren*, a Notch or Interval; the *Engliſh*, from its being a Place of Fighting, or Battle.

*Upton* in *Latin* calls this *Imbatallatum*, a Word forg'd from the *Engliſh*; but moſt others term it *Pinnatum*, from *Pinna*, a Battlement.

CREPITATION, that Noiſe which ſome Salts make over the Fire in Calcination; call'd alſo *Detonation*. See DETONATION.

CREPITUS *Lupi*, in Natural Hiſtory, a kind of *Fungus*, popularly call'd *Puff-ball*.

Mr. *Derham* obſerves, that upon examining the Pouder thereof with a Microſcope, he found the Seeds to be ſo many exceeding ſmall Puff-balls, with round Heads, and long, ſharp-pointed Stalks; as if made on purpoſe to prick into the Ground.

The Seeds are intermix'd with much duſty Matter, and become hurtful to the Eyes; probably by their ſharp Stalks pricking and wounding it.

CREPUSCULUM, in Aſtronomy, *Twilight*; or the Time from the firſt Dawn or Appearance of the Morning, to the riſing of the Sun; and, again, between the ſetting of the Sun, and the laſt Remains of Day. See DAY, RISING, SETTING, &c.

The *Crepuſculum* is uſually computed to begin and end when the Sun is about 18 Degrees below the Horizon.

The *Crepuſcula* are longer in the Solſtices than in the Equinoxes, longer in an oblique, than in a right Sphere.

*Papias* derives the Word from *Creperus*; which, he ſays antiently ſignify'd *uncertain*, *doubtful*, q. d. a *dubious Light*.

The *Crepuſcula* are occaſion'd by the Suns Rays refracted in our Atmoſphere, and reflected from the Particles thereof, to the Eye.

*Demonſt.* For ſuppoſe an Obſerver in O, (Tab. *Aſtronomy*, Fig. 41.) the ſenſible Horizon A B, and the Sun under the Horizon in H K; and let the Ray S E fall in the Atmoſphere below the Horizon. Since it paſſes out of a rarer into a thicker Medium, it will be refracted, (ſee REFRACTION;) and that towards the Perpendicular, *i. e.* towards the Semidiameter C E. It will not, therefore, proceed in T, but touching the Earth in D, will fall upon A, the Eaſtern Part of the ſenſible Horizon: Nor can any other Ray beſides A D, of all thoſe reflected from E, arrive at A. But now, ſince the Particles of the Atmoſphere reflect the Sun's Rays, (ſee REFLECTION;) and ſince the Angle DAC is equal to C A O; the Rays reflected in A will be carried to O, the Place of the Spectator; who will therefore ſee the Particle A ſhining in the ſenſible Horizon, and conſequently the beginning of the Morning *Crepuſculum*.

And in the ſame manner might be ſhewn the Refraction and Reflection of the Sun's Rays in the Atmoſphere, in the Evening *Crepuſculum*.

*Kepler*, indeed, aſſigns another Cauſe of the *Crepuſculum*, *viz.* the luminous Matter around the Sun; which ariſing near the Horizon, in a circular Figure, exhibits the *Crepuſculum*; in no wiſe, as he would ſhew, owing to the Refraction of the Atmoſphere.

*The Depth of the Sun below the Horizon, at the Beginning of the Morning* Crepuſculum, *or End of the Evening one*, is determin'd in the ſame manner as the Arch of Viſion; *viz.* by obſerving the Moment wherein the Air firſt begins to ſhine in the Morning *Crepuſculum*, and that wherein it ceaſes in the Evening; and finding the Sun's Place for that Moment.

*Alhazan* found it 19 Degrees; *Tycho* 17°; *Rothmannus* 24°; *Stevinus* 18°; *Caſſini* 15°; *Ricciolus*, in the Equinoxes in the Morning, 16°, in the Evening 20° 30′; in the Summer Solſtice in the Morning, 21° 25′; in the Winter Solſtice in the Morning 17° 25′.

Nor need we wonder at this Difference among Aſtronomers; the Cauſe of the *Crepuſculum* being inconſtant: For, if the Exhalations in the Atmoſphere be either more copious, or higher than ordinary; the Morning *Crepuſculum* will begin ſooner, and the Evening hold longer than ordinary: For the more copious the Exhalations are, the more Rays will they reflect, conſequently the more will they ſhine; and the higher they are, the ſooner they will be illumin'd by the Sun. To this it may be added, that in a denſer Air, the Refraction is greater; and that not only the Brightneſs of the Atmoſphere is variable, but alſo its Height from the Earth.

Hence, when the Difference between the Sun's Declination and the Depth of the Equator is leſs than 18°, and does not, in effect, exceed 15°; the *Crepuſculum* will continue the whole Night.

*The Elevation of the Pole* P R, (Fig. 42.) *and the Sum of Declination being given, to find the Beginning of the Morning*

*ing* Crepuſculum, *or End of the Evening.* Since in the Triangle PSZ the ſeveral Sides are given, *viz.* PZ the Elevation of the Pole, PR and PS the Complement of the Declination, OS and SZ the Aggregate; from the Quadrant ZD, and the Sun's Depth DS, find the Angle ZPS, whoſe Meaſure is the Arch AO. See TRIANGLE.

Convert AO into Solar Time: thus have you the Time elaps'd from the Beginning of the Morning *Crepuſculum*, to the Period of the Evening one. See TIME.

*To find the* Crepuſculum *by the Artificial Globe.* See GLOBE.

CRESCENT, the *New-Moon*, which, as it begins to recede from the Sun, ſhews a little Rim of Light, terminating in Points, or Horns, which are ſtill increaſing, till it become full, and round in the Oppoſition. See MOON.

The Term is alſo uſed for the ſame Figure of the Moon in its Wane, or Decreaſe; but improperly: in regard the Points or Horns are then turn'd towards the Weſt, whereas they look to the Eaſt in the juſt *Creſcent*.

The *Creſcent* is the *Turkiſh* Symbol; or rather, 'tis that of the City of *Byzantium*, which bore this Device from all Antiquity; as appears from Medals, ſtruck in honour of *Auguſtus*, *Trajan*, &c.

The Word comes from the Latin *Creſcere*, to increaſe.

CRESCENT is alſo a Military Order, inſtituted by *Renatus* of *Anjou*, King of *Sicily*, &c. in 1448; ſo call'd from the Badge, or Symbol thereof, a *Creſcent* of Gold enamell'd.

What gave occaſion to this Eſtabliſhment, was, that *Renatus* took for his Device a *Creſcent*, with the Word *Loz*, *Praiſe*; which, in the Stile of *Rebus*, makes *Loz in Creſcent*, q. d. *by advancing in Virtue, one merits Praiſe.*

CRESCENT, in Heraldry, is a Bearing in form of a Half-Moon.

The *Creſcent* is ſometimes *Montant*, *i. e.* its Points look towards the Top of the Chief, which is its moſt ordinary Repreſentation: whence ſome contend, that the *Creſcent*, abſolutely ſo call'd, implies that Situation; tho, ſome Authors blazon it *Montant*, when the Horns are towards the Dexter-ſide of the Eſcutcheon, when others call it *Increiſſant*.

The *Ottomans* bear Sinople, a *Creſcent Montant*, Argent.

*Creſcents* are ſaid to be *adoſs'd*, when their Backs or thickeſt Parts, are turn'd towards each other; their Points looking to the Side of the Shield.

*The Inverted Creſcent*, is that whoſe Points look towards the bottom: *Turn'd Creſcents* are plac'd like thoſe *adoſs'd*; the difference is, that all their Points look to the Dexter-ſide of the Shield: The *Conturn'd*, on the contrary, look to the Siniſter-ſide. The *affronted or appointed Creſcents*, are contrary to the *adoſs'd*, the Points looking towards each other.

The *Creſcent* is frequently us'd as a Difference in a Coat-Armour, to diſtinguiſh it for that of a ſecond Brother, or ſecond Family. See DIFFERENCE.

CREST, in Armoury, the uppermoſt Part of the defenſive Armour of the Head; riſing over the reſt, in manner of the Comb or Tuft of a Cock; to ſuſtain the Effort of very keen Scimitars, &c.

It has its Name from *Criſta*, Cock's Comb. Hence,

CREST, in Heraldry, the uppermoſt Part of an Armoury; or that Part over the Caſk, or Helmet. See CASK.

Next to the Mantle, ſays *Guillim*, the *Creſt* or *Cognizance* claims the higheſt Place, being ſeated on the moſt eminent Part of the Helmet; yet ſo, as to admit an Interpoſition of ſome Eſcrol, Wreath, Chapeau, Crown, &c. See COGNIZANCE.

The *Creſt* of the Arms of *England*, is a Lion Paſſant Gardant, crown'd with the like; that of *France*, a Flower-de-Lys ſquared.

In the antient Tournaments, the Cavaliers had Plumes of Feathers, eſpecially thoſe of Oſtriches and Herons, for their *Creſts*; theſe Tufts of Feathers they called *Plumarts*; and were placed in Tubes, on the Tops of high Caps, or Bonnets. Some had their *Creſts* of Leather; others of Parchment, Paſtboard, &c. painted or varniſh'd, to keep out the Weather; others of Steel, Wood, &c. on which were ſometimes repreſented a Member or Ordinary of the Coat; as, an Eagle, Flower-de-Lys, &c. but never any of thoſe called Honourable Ordinaries, as Pale, Feſſe, &c.

The *Creſts* were changeable at pleaſure; being reputed no other than as an arbitrary Device, or Ornament. See DEVICE.

*Herodotus* attributes the Riſe of *Creſts* to the *Carians*, who firſt bore Feathers on their Caſks, and painted Figures on their Bucklers; whence the *Perſians* call'd 'em *Cocks*.

The antienteſt of the Heathen Gods wore *Creſts*, even before Arms were made of Iron and Steel: *Jupiter Ammon* bore a Ram's Head for his *Creſt*; *Mars* that of a Lion, or a Tyger, caſting out Fire at his Mouth and Noſtrils. *Alexander* the Great wore for his *Creſt* a Ram's Head, to inculcate that he was the Son of *Jupiter Ammon*; *Julius Cæſar* ſometimes bore a Star, to denote that he was deſcended from *Venus*; and ſometimes the Head of a Bull, or an Elephant with his Trunk; and ſometimes the Wolf that ſuckled *Romulus* and *Remus*. The Chriſtians, in their firſt Religious Wars, were wont to wear a Croſs darting forth Rays, for their *Creſts*, as well as on their Shields and Banners, as *Prudentius* informs us;

*Clypeorum inſignia Chriſtus*
*Scripſerat, ardebat ſummis crux addita Criſtis.*

The antient Warriors bore *Creſts* to ſtrike Terror in their Enemies, at the Sight of the Spoils of Animals they had kill'd; or to give 'em the more formidable Mien, by making them appear taller, &c.

*Plutarch* obſerves, that the *Creſt* of *Pyrrhus* was a Bunch of Feathers, with a Stag's Horns; and *Diodorus Siculus*, that of the Kings of *Egypt*, Lion's Heads, Bulls, or Dragons.

The *Creſts* have given riſe to ſeveral Fables: The Antients, *v. g.* give *Serapis* the Head of a Sparrow Hawk; this being the *Creſt* of that Cavalier. *Geryon* they made a Monſter with three Heads, becauſe he bore a triple *Creſt*; and feign'd, that *Proteus* chang'd his form every Moment, becauſe, being King of *Egypt*, he frequently chang'd his *Creſt*; ſometimes bearing that of a Lion, ſometimes of a Dragon, &c.

The *Creſt* is eſteem'd a greater Mark of Nobility, than the Armoury, as being bore at Tournaments; to which none were admitted, till they had given Proof of their Nobility. Sometimes it ſerves to diſtinguiſh the ſeveral Branches of a Family. It has ſerv'd, on occaſion, as the diſtinguiſhing Badge of Factions.

Sometimes the *Creſt* is taken from the Device; but more uſually is form'd of ſome Piece of the Arms: Thus, the Emperor's *Creſt* is an Eagle; that of *Caſtile* a Caſtle, &c.

Families that exchange Arms, as have done the Houſes of *Brunſwic* and *Cologne*, do not change their *Creſts*; the firſt ſtill retain the Horſe, and the latter the Mermaid.

CREST, among Carvers, an Imagery, or carved Work, to adorn the Head, or Top of any thing; like our modern Corniſh. See CORNICHE.

CREST-FALLEN, of a Horſe, is when the upper Part of the Neck, on which the Mane grows, does not ſtand upright, but hangs either to one Side, or the other.

CREUX, a Term in Sculpture, much us'd by the *French*; tho not yet, that we know of, naturaliz'd among us: But the want of a Word of equal import in *Engliſh*, as it has frequently put us under a neceſſity of uſing this in the Courſe of the preſent Work; ſo it pleads ſtrongly for its Admiſſion into our Language.

The Word originally ſignifies a *Hollow*, *Cavity*, or *Pit*, out of which ſomething has been ſcoop'd, or dug: The Term is uſed particularly for that kind of Sculpture and Graving, where the Lines and Figures are cut, and form'd within the Face, or Plan of the Plate or Matter engraven: In which Senſe, it ſtands in oppoſition to *Relievo*; where the Lines and Figures are imboſs'd, and riſe prominent above the Face of the Matter. See ENGRAVING, and SCULPTURE.

CRIBRATION, in Pharmacy, a Separation of the finer Parts of a Medicine, whether dry, or humid, from the groſſer; the latter by means of a Pulping Sieve, the former by a fine Searce.

CRIBROSUM *Os*, or *Os* CRIBRIFORME, in Anatomy, a little Bone at the Top of the Noſe, pierced like a Sieve, to let paſs ſeveral little Fibres, ariſing from the Mamillary Productions, and terminating in the Membrane that lines the Cavity of the Noſtrils; call'd alſo *Os Ethmoides*. See ETHMOIDES.

CRICOARYTÆNOIDES, in Anatomy, a Name given two Pair of Muſcles, ſerving to open the Larynx. See LARYNX.

The *Cricoarytænoides* are either *Poſterior*, or *Lateral*: The firſt are the firſt Pair of Openers of the Larynx; the latter, the ſecond Pair.

The *Lateral* have their Origin in the Edge of the Lateral, and Superior of the Cartilage *Cricoides*, and are inſerted into the Lateral and Superior Part of the *Arytænoides*.

The *Poſterior* have their Origin in the poſterior and lower Part of the *Cricoides*: and hence the Reaſon and Etymology of the Name is evident.

CRICOIDES, in Anatomy, a Cartilage of the Larynx; ſo called, *q. d.* annular, as being round, like a Ring, and incompaſſing the whole Larynx. See LARYNX.

The *Cricoides* is the ſecond Cartilage of the Larynx: 'tis narrow before, thick behind; and ſerves as a Baſe to all the other Cartilages; and is, as it were, let into the *Tircides*.

'Tis by means of this that the other Cartilages are join'd to the *Trachea*; on which account it is immoveable.

The Word is form'd from κρίκος, uſed by Tranſpoſition for κιρκος, *Circle*, and εἶδος, *Form*.

CRICOTHYROIDÆUS, in Anatomy, a Name given to the firſt Pair of Muſcles proper to the Larynx. See LARYNX.

Their Name is derived hence, that they have their Origin in the lateral and anterior Part of the *Cricodes*; and are inſerted into the inferior Part of the *Ala Thyroides*.

Their Uſe is to dilate the Scutiform Cartilage. See Scutiform.

CRIME, a *Breach*, or *Tranſgreſſion* of a Law; or, an Action contrary to the Tenor of a Law, either Natural or Divine, Civil, or Eccleſiaſtick; to which a Penalty is annex'd. See Law.

The *Romans* diſtinguiſh'd two Kinds of *Crimes*, *viz. Private Crimes*, which only affected particular Perſons; the Proſecution whereof was not allowed by the Laws to any but thoſe intereſted therein; as *Adultery*, &c. And *Publick Crimes*; the Purſuit whereof was permitted to all Perſons, tho in no wiſe immediately intereſted.

With us, *Crimes* are diſtinguiſh'd into *Capital*, as *Treaſons*, *Murders*, *Robberies*, &c. and *Common*, as *Perjuries*, &c.

They are again divided into *Crimes* cognizable by the King's Judges; as thoſe abovemention'd; and ſuch as are only cognizable in the Spiritual Courts, as Simple *Fornication*, &c.

The Term *Crime* includes in it the Idea of a Determination, and a Deſign form'd to do an Injury. It is deriv'd from the Latin *Crimen*, of the *Greek* κρινω, *judico*.

CRIMSON, one of the ſeven red Colours of the Dyers. See Red.

The Stuffs to be dy'd in *Crimſon*, after they have been clear'd of their Soap, and ſtrongly allum'd, are put in a Bath of Cochineal, each according to its Colour. See Purple.

The Word comes from the *Arabic Kermiſi*, of *Kermes*, or *Hermes*, red. The *Bollandiſts* inſinuate, that *Crimſon* comes from *Cremona*, and is uſed for *Cremonois*. See Kermes, Cochineal, &c.

CRINONES, in Medicine, a ſort of Worms, ſometimes found under the Skin, in Children; reſembling ſhort thick Hairs, or Briſtles. See Worms, and Vermes.

They are alſo called *Comedones*, from the Latin *Comedere*, to eat; by reaſon they prey on the Subſtance of the Child, or conſume its Nouriſhment.

CRISIS, in Medicine, a Change, or Turn in acute Diſeaſes; wherein the Morbifick Matter is ſo alter'd, as determines the Patient either for Recovery or Death. See Critical.

The Cauſe of ſuch Change is owing to the remaining vital Force's being irritated by the Matter of the Diſeaſe ſo or ſo condition'd; *i. e.* fit either to be evacuated, or tranſlated, or to kill. See Disease.

If the Matter be diſpos'd for Evacuation or Tranſlation, but is not Salubrious, it produces a Change call'd a *Critical Perturbation*, or *Imperfect Criſis*.

If the Change become ſenſible, they are call'd *Critical Symptoms*, or *Signs of a Criſis*, either future or preſent.

The Symptoms of the *Criſis* are frequently confounded with thoſe ariſing from the Cauſes of the Diſeaſe, the Diſeaſe it ſelf, or the Matter of the Diſeaſe; whence the moſt unhappy Conſequences. See Symptom.

The Differences between theſe critical Symptoms and morbifick ones, are, that the firſt proceed from the vital Powers prevailing over the Force of the Diſeaſe; but the latter from the Diſeaſe's prevailing over the vital Faculty: that the firſt are preceded by a manifeſt Concoction, but the latter are form'd even in Crudities: that the former happen about the *critical Times*, but the latter at all Times of the Diſeaſe, chiefly during its Increaſe.

*The principal Symptoms of an approaching Criſis*, are, after Digeſtion, and about the critical Time, a ſudden Stupor, Drouſineſs, Waking, Delirium, Anxiety, Dyſpnœa, Grief, Redneſs, Titillation, Pricking, Heavineſs, Darkneſs, Light, ſpontaneous Tears, Nauſea, Heat, Thirſt, trembling of the lower Lip, &c.

*The Symptoms and Effects of a preſent Criſis*, are, after the preceding ones, a Vomiting, Salivation, Looſeneſs, thick Sediment in the Urine, bleeding at the Noſe, Hemorrhoids, Sweat, Abſceſſes, Puſtules, Tumors, Bubos, Parulis, Aphthæ, &c.

CRISTA *Galli*, in Anatomy, an Eminence in the middle of the *Os Ethmoides*, advancing within the Cavity of the *Cranium*; and to which is faſten'd that Part of the *Dura Mater* which divides the Brain, called *Falx*. See Brain.

It has its Name from its Figure, which reſembles that of a Cock's Comb.

In Adults, this Proceſs appears of a piece with the *Septum Narium*. See Nose, and Nostrils.

Cristæ is alſo a Term uſed by Anatomiſts for certain Excreſcences ariſing about the Fundament, reſembling Cocks Combs.

Theſe, M. *Dionis* ſays, are taken off either by Ligature, by Cauteriſation, or Amputation. When theſe Excreſcences have other Figures, they have other Names.

Crista is alſo uſed for a crook'd, twiſted, ſpiral Eminence, in the middle of the Spine of the *Omoplate*. See Omoplate.

CRITERIUM, or CRITERION, a Judgment made of the Truth, or Falſhood of a Propoſition, or the Nature and Qualities of any Effect. See Truth.

The Doctrine of *Criteria*, and the Characters and Rules thereof, make the firſt Part of the *Epicurean* Philoſophy. See Epicurean.

CRITHOMANCY, a kind of Divination, perform'd by conſidering the Dough, or Matter of the Cakes offer'd in Sacrifice; and the Meal ſtrew'd over the Victims to be kill'd.

Hence, in regard they ordinarily us'd Barley-Meal in theſe Ceremonies, this Kind of Divination was call'd *Crithomancy*; from κριθη, *Barley*, and μαντεια, *Divination*.

CRITICAL *Days*, *Symptoms*, &c. are certain Days, and Symptoms, uſually ariſing in the Courſe of acute Diſeaſes, as Fevers, Small Pox, &c. which indicate the Patient's State, and determine him either to recover or grow worſe. See Crisis.

The Criſes have been frequently obſerv'd to happen on the 7th, 14th, or 20th Day; whence thoſe have been denominated *Critical Days*.

The Word comes from the *Greek* κρινω, *judico*, I judge.

*For the Theory of Criſes*, it may be obſerv'd, that the Concoction of any morbifick Matter, and the Humour to be ſecern'd, is nothing elſe but a Change thereof into ſuch a due Magnitude, or Smallneſs, as it may be carried by the circulating Blood along the Canals, and excern'd by Veſſels deſtin'd for that Purpoſe. But if the morbifick Matter cannot be reduc'd to ſuch a Magnitude or Smallneſs as may correſpond to the Orifices of the Secretory Veſſels; then either an Abſceſs or a Hemorrhage will follow, if a Criſis be begun; for which Reaſon, Abſceſſes, &c. are accounted leſs perfect Criſes. But, that the morbifick Matter may be reduc'd to a due Magnitude, or Smallneſs, and its wiſh'd-for Diſcharge, there is requir'd a conſiderable Time, if the Quantity of Matter is large; that is, if the Diſtemper be great and ſevere: And ſince there are a great many Cauſes, and thoſe very conſtant, which may occaſion the Blood, and offending Humours therein, to be of a different Fluidity in the Inhabitants of different Climates; it is impoſſible but that different Spaces of Time ſhould be requir'd for the finiſhing Concoction: which makes it impoſſible to determine the *critical* Days in one Climate, from what they are found to be in another.

The Cauſes of real *Critical* Days, that is, ſuch on which happens the laſt Concoction of the morbifick Matter, which is always attended with its Expulſion, are all thoſe Things which occaſion the Humours to become of ſuch a certain Magnitude or Minuteneſs, and of a greater or leſſer Coheſion; but with any given Power, Bodies unequally large, or unequally cohering, cannot be concocted in an equal Time: Wherefore, it is to be found by the Obſervations made by all Nations among themſelves, which are the uſual Cauſes and Conditions of thoſe Diſeaſes, which require a certain Number of Days to finiſh ſuch a Concoction in.

CRITICISM, the Art of Judging. See Crisis, and Criterion.

Some define the Term more at large, thus; *Criticiſm* is the Art of judging of the Facts of a Hiſtory, or of a Work of Genius, with the various Incidents there met with, their Stile and their Authors: So that M. *le Clerc* may ſeem to have given a defective Idea of *Criticiſm*, when he defines it ſimply the Art of entering into the Meaning of antient Authors, and of making a juſt Diſcernment of their genuine Works.

We may diſtinguiſh divers Sorts, or Branches of this Art: As, *Philoſophical Criticiſm*, or the Art of judging of Opinions and Hypotheſes in Philoſophy: *Theological Criticiſm*, the Art of judging of the Explication of *Dogmata*, or Doctrines of Faith, &c. *Political Criticiſm*, the Art of judging of the Means of governing, acquiring, and preſerving States.

But the ordinary uſe of the Word is reſtrain'd to *Literary Criticiſm*; which, however, is of great extent, as it takes in the Art of judging of Facts: a Branch of *Criticiſm*, which regards not only Hiſtory, but alſo the Diſcernment of the real Works of an Author, the real Author of a Work, the genuine Reading of a Text; and the Art of diſcovering Suppoſititious Monuments, Charters, interpolated Paſſages, &c.

The other Parts of *Literary Criticiſm*, are, the Art of judging of Works of Genius, their Excellencies and Defects.

We have alſo *Grammatical Criticiſm*, or the Art of interpreting and diſcovering the Words and Meanings of an Author; *Criticiſm of Antiquities*, which conſiſts in diſtinguiſhing genuine Medals, and the different Taſte and Spirit found among 'em, according to the different People, the different Country, and the different Times wherein they were ſtruck; the diſtinguiſhing between what is caſt and what ſtruck; what has been retouch'd, and repair'd or added, from what is really antique; the genuine from the ſpurious, &c. and to decypher and explain 'em, &c.

*Sacred Criticiſm*, in general, is that employ'd in Eccleſiaſtick Matters, the Hiſtory of the Church, the Works of the Fathers, Councils, Lives of the Saints, &c. but more particularly

particularly what concerns the Books of the Holy Scriptures, and the Canon thereof.

*Ariſtotle*, if we believe *Halicarnaſſæus*, is the firſt Inventor of the Art of *Criticiſm*. *Ariſtarchus*, *Halicarnaſſæus* himſelf, *Varro* and *Longinus*, diſtinguiſh'd themſelves therein in their Days. Among the Chriſtians, *Dionyſius Alexandrinus*, *Heſychius*, *Euſebius*, *Tichonius*, S. *Jerom*, and *Theodoret*, were the greateſt Maſters in this Art. The Decree of Pope *Gelaſus* about the Apocryphal Books, requir'd a good ſhare of *Criticiſm*.

But the Art fell with the other Arts; and lay unknown till the Time of *Charlemaign*, when it was re-eſtabliſh'd under him and his Sons.

The Care which the Religious *Ciſtercians* took to correct the Manuſcripts of the Bible, ſhew that the Rules of *Criticiſm* were not entirely unknown in the XIth Century. The Works of *Johannes Sarisburienſis*, *Euſtathius*, and *Tzetzes*, make it evident, it was cultivated in the XIIth. The Manuſcripts of the Bible corrected by the *Dominicans* of *Paris*, and the Doctors of the *Sorbonne* in the XIIIth, ſhew it was ſubſiſting then. In the following Ages it was ſtill cultivated with more Earneſtneſs; eſpecially in the XVIth and XVIIth Centuries, when all the World made it their Study.

From the Whole, it follows, that *Criticiſm*, does, indeed, ſuppoſe an uncommon Stock of Knowledge of the Subject whereon it is employ'd: but *Criticiſm*, it ſelf, is nothing elſe but good Senſe perfected by Logick.

CROCHES, among Hunters, the little Buds about the Top of a Deer's Horns.

CROCI, among Botaniſts, the Apices, or ſmall Knobs on the Tops of Flowers. See APICES.

CROCIA, a Biſhop's or Abbot's *Croſier*, or Paſtoral Staff. See CROSIER.

CROCODILE, in Rhetorick, a captious and ſophiſtical Kind of Argumentation; diſpos'd to ſeduce the Unwary, and draw 'em ſpeciouſly into a Snare. See SOPHISM.

It has its Name, *Crocodile*, from the following Occaſion, invented by the Poets.

A poor Woman begging a *Crocodile* that had caught her Son walking by the River-ſide, to ſpare and reſtore him; was anſwer'd, that he wou'd reſtore, provided ſhe'd give a true Anſwer to a Queſtion he ſhou'd propoſe: The Queſtion was, *Will I reſtore thy Son or not?* To this the poor Woman, ſuſpecting a Deceit, ſorrowfully anſwer'd, *Thou wilt not*: and demanded to have him reſtor'd, becauſe ſhe had anſwer'd truly. Thou lieſt, ſays the *Crocodile*, for if I reſtore him thou haſt not anſwer'd truly: I can't therefore reſtore him, without making thy Anſwer falſe. See DILEMMA.

Under this Head may be reduc'd the Propoſitions call'd *Mentientes*, or *Inſolubiles*; which deſtroy themſelves. Such is that of the *Cretan* Poet; *Omnes ad unum Cretenſes ſemper mentiuntur*: All the *Cretans*, to a Man, always lie. Either, then, the Poet lies, when he aſſerts that the *Cretans* all lie; or the *Cretans* don't all lie.

CROCOMAGMA, in Pharmacy, Troches compos'd of Saffron, Myrrh, red Roſes, Starch, and Gum-Arabic: Thus call'd from the *Greek* κρόκος, *Saffron*, and μάγμα, a *Mark* impreſs'd on any thing.

CROCUS, a Term us'd for Saffron. See SAFFRON.

CROCUS, in Chymiſtry, is a Name given to ſeveral different Preparations; from their red, or ſaffron Colour.

*Crocus Martis*, is a Preparation of Iron; and is of two Kinds, *viz. Crocus Martis aperiens*, and *Crocus Martis aſtringens*. See SAFFRON *of Mars*.

*Crocus Martis aperiens*, *opening Saffron of Mars*, is a Preparation of Iron Plates, made by firſt waſhing them, then expoſing 'em to the Dew, till they have contracted a Ruſt; which Ruſt is ſcrap'd off, and the Plates expos'd for more. See MARS.

Others prepare it by calcining Iron Filings, with an equal Weight of Sulphur. Others by clapping a Bar of Iron, red, or rather white hot, between two Rolls of Brimſtone; in which Caſe, the Iron melts, and runs down into a Veſſel of Water below: which ſome call *Mars cum Sulphure præparatus*. Others have other Preparations.

M. *Lemery* endeavours to ſhew, that Iron taken in Subſtance, is much more ſalutary and efficacious than when thus prepar'd; the Proceſs tending to ſtrip it of its oily Part, wherein its chief Virtue reſides; leaving nothing behind but the more ferruginous Part. See CHALYBEAT.

*Crocus Martis aſtringens*, *binding Saffron of Iron*, is a Preparation of Iron Filings; wherein they are depriv'd of their more ſaline Parts, by waſhing them five or ſix times in ſtrong Vinegar, and calcining them five or ſix Hours.

*Crocus Metallorum*, a Kind of impure, opake, Glaſs of Antimony, of a liver Colour; hence frequently call'd *Liver of Antimony*; made by firing equal Parts of Pouder of Antimony and Salt-petre, well mix'd in an Iron Mortar, cover'd with a Tile. See ANTIMONY.

This is kindled by dropping in a Coal of Fire, upon which a great Detonation enſues; and the Mortar is ſtruck, to make the Matter fall to the bottom. The ſhining Part is the *Crocus*, or Liver, which is to be ſeparated from the Droſs, and reſerv'd for uſe.

Its chief uſe is in making the *Vinum Emeticum*, or *Benedictum*, by infuſing an Ounce or two of the *Crocus* pouder'd, in a Quart of Wine for 24 Hours.

CROFT, *Croſta*, a little Cloſe, or Pittle encloſed, near a Dwelling-houſe, either for Paſture or Tillage.—*Poſſunt etiam dicti Monachi de eiſdem mariſcis verſus occidentem jacentibus pro ſe & hominibus ſuis, includere* Croftos, *ſive pratum juxta pontem ſpecialiter quantum illis placuerit.* Ingulf.

In ſome antient Deeds, *Cruſta* occurs as the *Latin* Word for a *Croft*; but *cum Toftis & Croftis* is moſt frequent.

*Croft* is tranſlated by *Abba Floriacenſis*, *in prædium*, a *Farm*.

CROISADE, or CRUZADE, or CRUZADO, a *Holy War*, or an Expedition againſt Infidels and Hereticks; particularly againſt the *Turks*, for the Recovery of *Paleſtine*.

People antiently flock'd on theſe *Cruſades* out of Devotion; the Pope's Bulls, and the Preaching of the Prieſts of thoſe Days, making it appear a Point of Conſcience. Hence ſeveral Orders of Knighthood took their riſe. See TEMPLARS, *&c.*

Thoſe who meant to go on this Errand, diſtinguiſh'd themſelves by Croſſes of different Colours, wore on their Clothes; and were thence call'd *Croiſes*: The *Engliſh* wore 'em white; the *French*, red; the *Flemmiſh*, green; the *Germans*, black; and the *Italians* yellow. See CROISE.

They reckon eight *Croiſades* for the Conqueſt of the Holy Land: The firſt undertook in 1095, at the Council of *Clermont*; the ſecond in 1144, under *Louis* VII. the third in 1188, by *Henry* II. of *England*, and *Philip Auguſtus* of *France*; the fourth in 1195, by Pope *Celeſtin* III. and the Emperor *Henry* VI. the fifth publiſh'd in 1198, by Order of *Innocent* III. wherein the *French*, *Germans*, and *Venetians* engag'd; the ſixth under the ſame Pope, began tumultuarily, in 1213, and ended in the Rout of the Chriſtians; the ſeventh reſolv'd at the Council of *Lyons* in 1245, undertaken by S. *Louis*; the eighth, which was the ſecond of S. *Louis*, and the laſt of all, in 1268.

'Tis ſaid, it was the *Ciſtercian* Monks who firſt projected the *Croiſades*; *Philip Auguſtus* ſollicited the Execution thereof with the Holy See; and *Innocent* III. rais'd the firſt Standard of the Croſs.

It was the Council of *Clermont* who order'd that they ſhould bear the Croſs in their Banner; and that thoſe who enter'd themſelves into the Service, ſhould alſo wear it on their Clothes.

The Abbot *Juſtiniani* makes an Order of Knighthood of the *Croizes*, who ſerv'd in the *Croizades*.

Towards the middle of the XIIth Century, there was alſo a *Croizade* of the *Saxons* againſt the Pagans of the North; wherein the Archbiſhop of *Magdeburg*, the Biſhops of *Halberſtadt*, *Munſter*, *Mersburgh*, *Brandenburgh*, &c. with ſeveral Lay-Lords embark'd. And towards the Beginning of the ſame Century, under the Pontificate of *Innocent*, there was alſo a *Croiſade* undertaken againſt the *Albigenſes*; who were become powerful in *Languedoc*, &c. See ALBIGENSES.

CROISES, in our antient Cuſtoms, Pilgrims bound for the Holy Land, or who had already been there; ſo called from a Badge which they wore on their Garments, repreſenting a Croſs.

The Word *Croiſes* is alſo extended to the Knights of S. *John of Jeruſalem*; created for the Defence and Protection of Pilgrims; and all thoſe of the Nobility, Gentry, *&c.* who in the Reigns of King *Henry* II. *Richard* I. *Henry* III. and *Edward* I. were *Cruce Signati*, *i. e.* dedicated themſelves to the Wars, for the Recovery of the Holy Land. See CROISADE.

CROISIERS, *Corte-croix*, or *Crucigeri*, were a Religious Order, or a Congregation of Regular Canons, ſo call'd.

There are three Orders which have, or do ſtill bear this Name: one of *Italy*; another in the *Low Countries*; and a third in *Bohemia*.

The firſt pretend to be deriv'd from S. *Clot*; and add, that S. *Quiriacus* the *Jew*, who ſhew'd S. *Helena* the Place of the true Croſs, and was afterwards converted, reform'd them. All we know for certain, is, that they ſubſiſted in *Italy* before *Alexander* III. mounted the Chair; for that Pontiff, flying from *Frederick Barberoſſa*, found an Aſylum in the Monaſteries of the *Croiſiers*, which he afterwards, in 1169, took under his Protection, giving 'em the Rule of S. *Auguſtin*, &c.

They were confirm'd by *Pius* V. but the Diſcipline being much relax'd, they were ſuppreſs'd in 1656, by *Alexander* VII.

*Matt. Paris* ſays, that the *Croiſiers*, bearing Staffs with Croſſes at the End, came into *England* in 1244, and preſented themſelves to a Synod held by the Biſhop of *Rocheſter* to be admitted.

*Dodſworth*

*Dodſworth* and *Dugdale* mention two Monaſteries of this Order in *England*, the one at *London*, the other at *Rygate*; the firſt founded in 1245, the latter in 1298: ſome add a third at *Oxford*, where they were receiv'd in 1349. M. *Allemand* ſays, there were fourteen Monaſteries of *Croiſiers* in *England*; adding, that they came from *Italy*; thoſe of the *Low Countries* diſowning 'em.

The *Croiſiers* of the *Low-Countries* and *France*, were founded in 1211, by *Theodore de Celles* Son of *Boſon*, who having ſerv'd in a *Croiſade* in *Paleſtine*, in 1188, and there found ſome of the *Croiſiers* inſtituted by S. *Clot*, conceiv'd a Deſign of inſtituting another Congregation in his own Country. This is certain, that *Theodore*, in his return from *Paleſtine*, engag'd himſelf in the Eccleſiaſtick State; and went in quality of Miſſionary to the *Croiſade* againſt the *Albigenſes*: and that at his return in 1211, the Biſhop of *Liege* gave him the Church of S. *Thebault* near *Huy*; where, with four Companions, he laid the Foundation of his Order; which was confirm'd by *Innocent* III. and *Honorius* III. *Theodore* ſent his Religious to *Tholouſe*, to join thoſe of S. *Dominic*, and combat the *Albigenſes*; and the Congregation multiply'd in *France*. The Popes have endeavour'd to bring the *Croiſiers* of *Italy* under thoſe of *Flanders*.

The *Croiſiers*, or *Port-croix with a Star*, in *Bohemia*, derive their Origin from S. *Quiriacus*, and ſay they came from *Paleſtine* into *Europe*, where they embrac'd the Rule of S. *Auguſtine*, and built Monaſteries. They add, that S. *Agnes* of *Bohemia*, to diſtinguiſh 'em from other *Croiſiers*, obtain'd of *Innocent* IV. to add a Star to their Habit. But the Story of S. *Quiriacus* has no Foundation; and it was *Agnes* herſelf, Daughter of *Primiſlas* King of *Bohemia*, who inſtituted the Order at *Prague*, in 1234. They are very numerous; and have, now, two Generals.

CROISSANTEE, in Heraldry, *la Croix Croiſſante* is a Croſs creſcented; that is, having a Creſcent, or Half-Moon, fix'd on each end thereof. See CROSS.

CROSETTE, in Architecture, the Returns in the Corners of Chambranles, or Door-Caſes, or Window-Frames; call'd alſo *Ears*, *Elbows*, *Ancones*, *Prothyrides*.

*Croſette of a Luthern*, the Plaiſter or covering near a Luthern.

CROSIER, or CROZIER, a *Shepherd's Crook*; a Symbol of Paſtoral Authority, conſiſting of a Gold or Silver Staff, crook'd a-top, carried occaſionally before Biſhops and Abbots, and held in the Hand when they give ſolemn Benedictions. See BISHOP, and ABBOT.

At one End 'tis crook'd, at the other pointed; expreſs'd in the Verſe;

*Curva trahit mites, pars pungit acuta Rebelles.*

The Cuſtom of bearing a Paſtoral Staff before Biſhops is very antient, as appears from the Life of S. *Cæſarea* of *Arles*, who lived about the Year 500. Among the *Greeks*, none but the Patriarchs had a Right to the *Croſier*. See PATRIARCH.

The *Croſiers* were at firſt no more than ſimple wooden Staves, in form of a T, uſed to reſt and bear upon; by degrees they were made longer; and at length arrived at the form we now ſee them.

Regular Abbots are allow'd to officiate with a Mitre and a *Croſier*. See ABBOT, and MITRE.

*Du Cange* obſerves, that it was antiently call'd *Cambuca*, and *Cambuta*; and the Perſon who bore it, *Cambucarius*. *Papias* derives the Word *à ſimilitudine Crucis*. Others fetch it from the old Saxon *Camoc*, Crook.

CROSIER, in Aſtronomy, four Stars, in form of a Croſs; by help whereof, thoſe who ſail in the Southern Hemiſphere find the Antartick Pole. See STAR, and CONSTELLATION.

CROSS, *Crux*, a piece of Carpentry, compos'd of two Pieces of Wood, traverſing and cutting each other, ordinarily at right Angles.

It was uſed among the Antients, as a Puniſhment for Malefactors and Slaves; and was planted at ſeveral Places, *in terrorem*, as our Gallows, &c.

*Sozomen* obſerves, that it was *Conſtantine* who by Law firſt aboliſh'd the Puniſhment of the *Croſs*; which had obtain'd among the *Romans* till his Time.

*Pezron* derives the Word *Crux*, from the Celtic *Croug*, and *Croas*; tho, perhaps, *Croug* and *Croas* might with as much Juſtice be deriv'd from *Crux*.

*As to Crucifixion*, or the manner wherein the Puniſhment of the *Croſs* was effected, the Criticks, both antient and modern, are exceedingly divided: The Points in diſpute, are, Whether the Criminal was faſten'd with three Nails, or with four; whether the Feet were immediately faſten'd to the *Croſs*, or whether they reſted on a little piece of Wood, in manner of a Step or Reſt, *πηγμα*; whether the *Croſs* was planted in the Earth before the Patient was nail'd on, faſtening him afterwards by means of a Scaffold rais'd the height of the Place where the Feet were to be nail'd; or whether he was nail'd ere the *Croſs* was rais'd or planted, as the Painters repreſent it: or laſtly, whether the Patient was faſten'd quite naked, or cover'd: Queſtions that have all been occaſion'd by the *Crucifixion* of Jeſus Chriſt.

*Invention of the* CROSS, *Inventio Crucis*, is an antient Feaſt, ſolemniz'd on the third of *May*, in Memory of S. *Helena*'s (the Mother of *Conſtantine*) finding the true *Croſs* of Jeſus Chriſt deep in the Ground, on Mount *Calvary*; where ſhe erected a Church for the Preſervation of part of it: the reſt being brought to *Rome*, and repoſited in the Church of the *Holy Croſs* of *Jeruſalem*. See FEAST.

*Theodoret* mentions the finding of three *Croſſes*, that of Jeſus Chriſt, and thoſe of the two Thieves; and that they diſtinguiſh'd between 'em by means of a ſick Woman, who was immediately heal'd by touching the true *Croſs*.

The Place is ſaid to have been indicated to her by S. *Quiriacus*, then a *Jew*, afterwards converted and canoniz'd. See on the *Invention of the Croſs*, *Theodoret*, *Ruffin*. *Socrates*, *Sozom*. S. *Ambroſe*, S. *Cyril*, &c.

*Exaltation of the* CROSS, an antient Feaſt, held on the 14th of *September*, in Memory of this, that *Heraclius* reſtor'd to Mount *Calvary* the true *Croſs*, which had been carried off 14 Years before, by *Coſroes* King of *Perſia*; upon his taking *Jeruſalem* from the Emperor *Phocas*.

CROSS-*Bearer*, *Porte-croix*, *Cruciger*, in the *Romiſh* Church, the Almoner of an Archbiſhop, or a Primate; who bears a *Croſs* before him on ſolemn Occaſions.

The Pope has the *Croſs* bore before him every where; a Patriarch any where out of *Rome*; Primates, Metropolitans, and thoſe who have a Right to the *Pallium*, throughout their reſpective Juriſdictions.

*Gregory* XI. forbad all Patriarchs and Prelates to have it bore in Preſence of Cardinals. A Prelate bears a *ſingle Croſs*, a Patriarch a *double Croſs*, and the Pope a *triple* one on their Arms.

*Order of the* CROSS, or CROISADE, an Order of Ladies, inſtituted in 1668, by the Empreſs *Eleonora de Gonzagua*, Wife of the Emperor *Leopold*; on occaſion of the miraculous Recovery of a little golden *Croſs*, wherein were inclos'd two Pieces of the *true Croſs*; out of the Aſhes of part of the Palace.

It ſeems, the Fire had burnt the Caſe wherein it was inclos'd, and melted the Cryſtal; yet the Wood remain'd untouch'd.

CROSS, in Botany, is uſed to expreſs the Arrangment of the *Petala* of certain Flowers; call'd *Plantæ flore Cruciformi*. See PLANT, and FLOWER.

The Flowers are not to have either more or leſs than four *Petala*; and their Calix only to conſiſt of four Pieces. The Piſtil generally becomes a Fruit, call'd *Siliqua*. See SILIQUA.

CROSS, in Heraldry, is defin'd by *Guillim*, an Ordinary compos'd of four-fold Lines; whereof two are perpendicular, and the other two tranſverſe; for ſo we muſt conceive of them, tho they be not drawn throughout, but meet by Couples, in four right Angles, near the Feſs-Point of the Eſcutcheon. See ORDINARY.

The Content of a *Croſs* is not the ſame always: For when it is not Charg'd, Canton'd, nor Accompany'd, it has only the fifth Part of the Field; but if it be charg'd, it muſt contain the third Part thereof.

This Bearing was firſt beſtow'd on ſuch as had perform'd, or at leaſt undertaken, ſome Service for Chriſt, and the Chriſtian Profeſſion; and is held, by ſome, the moſt honourable Charge in all Heraldry. What brought it into ſuch frequent uſe, was the antient Expeditions into the Holy Land; and the Holy War Pilgrims, after their Pilgrimage, taking the *Croſs* for their Cognizance; and the Enſign of that War being the *Croſs*. See CROISADE.

In thoſe Wars, ſays *Mackenzy*, the *Scots* carry'd St. *Andrew*'s *Croſs*; the *French* a *Croſs* Argent; the *Engliſh* a *Croſs* Or; the *Germans* Sable, the *Italians* Azure, the *Spaniards* Gules.

St. *George*'s *Croſs*, or *the Red Croſs*, in a Field Argent, is now the Standard in *England*; that Saint being the reputed Patron of this Nation.

*Guillim* enumerates 39 different ſorts of *Croſſes* us'd in Heraldry, the ſeveral Names whereof here follow; the Deſcriptions are to be look'd for under proper Articles.

A *Croſs voided*, a *Croſs wavy-voided*, a *Croſs patee fimbriated*, a *Croſs patee fitched on the Foot*, a *Croſs patee on three Parts and fitched on the fourth*, a *Croſs engrailed*, a *Croſs patonee*, a *Croſs flory*, a *Croſs patonee voided*, a *Croſs avelane*, a *Croſs patee lambeaux*, a *Croſs furchee*, a *Croſs croſlet*, a *Croſs croſlet fitchee at the Point*, a *Croſs bottone*, a *Croſs pomel*, a *Croſs urdee*, a *Croſs degraded fitchee*, a *Croſs potent*, a *Croſs potent fitched*, a *Croſs calvary*, a *Croſs croſlet ſet in Degrees*, a *Croſs patriarchal*, a *Croſs anchor'd*, a *Croſs moline*, a *Croſs clechee*, a *Croſs flury*, or *fleury deliſee*, a *Croſs double fitchee*, a *Croſs a ſeize Points*, a *Croſs milrine*, a *Croſs raguled*, a *Croſs pointed voided*, a *Croſs pall*, a *Tau*, or S. Anthony's *Croſs*, a *Croſs voided* and

*and couped*, a *Croſs couped pierced*, a *Croſs moline pierced Lozenge-ways*, a *Croſs moline quarter-pierced*, a *Saltire, or S.* Andrew's *Croſs*, which muſt be diſtinctly ſpoken of under that Denomination; and ſo all the others may be found more particularly deſcrib'd under the Names of their ſeveral Difference.

*Colombiere* makes 72 diſtinct ſorts of *Croſſes*, of which we ſhall only mention thoſe that differ from ſuch as have been mention'd above; as, *La Croix remply*, which is only one *Croſs* charged with another: A *Croſs party*, that is, one half of one Colour, and the other of another: A *Croſs quarter'd*, that is, the oppoſite Quarters of ſeveral Colours: A *Croſs of five Pieces*, that is, of ſo many Colours; a *Croſs mouſſue*, and *abaiſee*; a *Croſs barbee*; a *Croſs croiſſantee*, or *creſcented*, that is, having a Creſcent at each End: A *Croſs forked of three Points*; a *Croſs pommetee of three Pieces*; a *Croſs reſſercelee*; a *Croſs pointed*; a *Croſs anker'd, and ſuranker'd*; a *Croſs anker'd with Snakes Heads*; a *Croſs orled*; a *high Croſs*; a *Croſs rayonnant*, or *caſting out Rays of Glory*; a *Croſs of* Malta; a *Croſs of the Holy Ghoſt*; a *Croſs forked*, like the antient Reſts for Muſkets; a *Croſs with eight Points*; a *Croſs bourdonnee*; a *Croſs cramponnee and tournee*; a *Croſs cablee*; a *Croſs inclining*; a *Croſs pater noſtree*, that is, made of Beads; a *Croſs fleuronnee*; a *Croſs vuidee, clechee, and pommetee*; a *Croſs crenellee and baſtilee*; a *Croſs with four Steps to every Arm*; a *Croſs rounded*; a *Croſs and an half*; a *Croſs eſtoilee*, or *ſtarways*; a *Croſs corded*; a *Croſs doubled*, of ſix Pieces ſet together; a *double Croſs ſplit in Pale*; a *long Croſs cut in pieces and diſmember'd*; a *Croſs couped*, or cut thro' in Feſſe of the two contrary Colours to the Field; a *Chevron ſurmounted by an half Croſs*: Four Tails of Ermin in a *Croſs*, the Tops of the Ermins oppoſite to each other in the middle: Four Pieces of Vair plac'd *croſs-ways*, and counterpointing in the Centre: The *Croſs* or Sword of S. *James*: *Potence cramponnee* on the dexter upper Arm, and a *Potence* about the middle of the Shaft.

Theſe are the various *Croſſes* we find in the aforeſaid Authors; which ſome may think too many, as not being all uſed in *England*: but Heraldry extends to all Countries; and all Terms us'd deſerve to be explain'd, that they may be underſtood. Nor is it only in *Croſſes* that the Variety is ſo great, it will appear in many other Bearings, and particularly in Lions, and the Parts of them; whereof the ſame *Colombiere* gives us no leſs than 96 diſtinct Varieties. *Leigh* mentions but 46 ſeveral *Croſſes*; *Sylvanus Morgan*, 26; *Upton*, 30; *Johannes de Bado Aureo*, 12; and ſo others, whom it is needleſs to mention. The aforeſaid *Upton* owns he dares not preſume to aſcertain all the various *Croſſes* uſed in Arms, for that they are at preſent almoſt innumerable: and therefore he only takes notice of ſuch as he had ſeen uſed in his own time.

Cross, in Surveying; or, the *Surveying-Croſs*, is an Inſtrument us'd in Surveying; conſiſting of a braſs Circle, divided into four equal Parts, by two Lines cutting each other in the Centre: At each Extremity of either Line is fix'd a Sight, perpendicularly over the Lines; with Holes below each Slit, for the better Diſcovery of diſtant Objects.

The *Croſs* is mounted on a Staff, or Stand, for uſe. Sometimes, inſtead of four Sights there are eight.

The *Surveying Croſs* is but little known or us'd among us; abroad it is of more account: The manner of applying it is as follows.

Suppoſe the Field A B C D E, (Tab. *Surveying*, Fig. 24.) to be ſurvey'd: Plant Poles at all the Angles; meaſure the Line A C, and the Perpendiculars let fall from the Angles to the Line: Take down the Dimenſions of each. Now, to find the Point F, plant Poles at pleaſure in the Line A C, and the Foot of the Inſtrument in the ſame Line, in ſuch manner, as that thro' two of the oppoſite Sights you may obſerve two of the Staffs; and thro' the other two, the Staff E. If in this Station E ben't thus viſible, remove the Inſtrument backwards or forwards, till the Lines A F, E F make a right Angle in F; by which means, the Plot of the Triangle A F E will be had. After the ſame manner is the Point H found, where the Perpendicular D H falls; whoſe length, together with that of G F, is meaſur'd, to have the Plot of the Trapezium E F H D.

Again, meaſure H C, making a right Angle with H D, and the Plot of the Triangle D H C will be had. All that now remains, is to find the Point G, where the perpendicular B G falls: Which being found after the ſame manner as the reſt, we have the Plot of the whole Field A,B,C,D,E. The Area whereof, is had by adding the Triangles and Trapeziums together. See Area; ſee alſo Surveying, Chain, Plain-*Table*, &c.

Cross *Multiplication*, the Method of multiplying Feet and Inches, by Feet and Inches, or the like; ſo call'd, becauſe the Numbers are multiply'd *croſs-wiſe*. *See the Method under* Multiplication.

Cross, in Dialling. See Dial.

Cross-staff, a Mathematical Inſtrument, otherwiſe call'd the *Foreſtaff*. *See its Deſcription and Uſe under* Forestaff.

Crosselet, *little Croſs*, a Diminutive of *Croſs*, uſed in Heraldry, where we frequently ſee the Shield cover'd with *Croſſelets*; Feſſes, or other honourable Pieces, charg'd or accompany'd with *Croſſelets*. Croſſes themſelves frequently terminate in *Croſſelets*, as in the Figure adjoining. See Cross.

Cross-grain'd *Stuff*, in Joinery. Wood is ſaid to be *croſs-grain'd*, when a Bough or Branch has ſhot out of it: for, the Grain of the Branch ſhooting forward, runs athwart that of the Trunk. In Wood well grown this Defect is ſcarce perceivable, except in working; but in Deal-Boards theſe Boughs make Knots. If the Bough grew up with the young Trunk, inſtead of a Knot is found a *curling in the Stuff*; very ſenſible under the Plane.

Crotalum, a kind of *Caſtagnetta*, or Muſical Inſtrument found on Medals, in the Hands of the Prieſts of *Cybele*. See Corybantes.

The *Crotalum* differ'd from the *Siſtrum*; tho Authors frequently confound the two. It conſiſted of two little braſs Plates, or Rods, which were ſhook in the Hand, and in ſtriking againſt each other made a Noiſe.

It was ſometimes alſo made of a Reed ſplit lengthwiſe; one Part whereof they ſtruck againſt the other: and as this made a Noiſe ſomewhat like that of a Crane's Bill, they call'd that Bird *Crotaliſtria*, *Player on Crotala*.

An Antient, in *Pauſanias*, ſays, that *Hercules* did not kill the Birds of the Lake *Stymphala*, but that he drove them away by playing on *Crotala*. On this footing, the *Crotala* muſt be exceedingly antient.

*Clemens Alexandrinus* attributes the Invention to the *Sicilians*; and forbids the Uſe thereof to the Chriſtians, becauſe of the indecent Motions and Geſtures that accompany it.

Crotaphytes, a Muſcle of the lower Jaw.

Its Fibres ſpring ſeverally from the Bones of the Forehead, the *Sinciput*, *Sphenoides*, and *Temporale*; which meeting, and as it were centering under the *Os Jugale*, whence alſo this Muſcle receives ſome Fibres, they proceed to the *Proceſſus Corone*, into which they are inſerted, and draw the lower Jaw upwards. See Maxilla.

Crotchet, in Muſick, one of the Notes, or Characters of Time, mark'd thus  equal to half a Minim, and double a Quaver. See Note, and Character.

'Tis not eaſy to conceive how this Character comes by the Name *Crotchet*: The Word is apparently borrow'd from the French *Crotchet*, of *Croc*, a Crook or Hook, uſed by them for what we call the *Quaver*, or *half Crotchet*; by reaſon of the additional Stroke at bottom, which gives it an Appearance of a Crook. See Quaver.

A Dot added to the *Crotchet*, thus  increaſes its Time by half; that is, makes it equal to a *Crotchet* and an half, or to three Quavers. See Time.

Crotchet, in Printing, a Term uſed for certain Strokes or Lines, ſometimes ſtrait, ſometimes waved, but always turn'd up at each Extreme; ſerving to bind or link together ſeveral Articles, that are to be read together, ere you proceed to the Subdiviſions, placed aſide of 'em with ſimilar or ſmaller *Crotchets*; much us'd in Genealogies, Analytical Tables, *&c.* for facilitating the Diviſion and Subdiviſion of any thing.

*Crotchet* is alſo uſed for two oppoſite Characters, ſerving to incloſe what we call a *Parentheſis*, or any other Part of a Diſcourſe, to be diſtinguiſh'd from the reſt of the Work; ſometimes in this form [ ] and ſometimes in this ( ). See Character.

Crow, in the Sea Language, a Machine with an Iron Hook, for the faſtning hold, and grappling with the Enemies Veſſel, in an Engagement.

The Name *Crow*, *Corvus*, was antiently given to ſeveral Machines of War, uſed in the Defence of Places: one invented by *Diades*; another by the *Tyrians*, mention'd by *Q. Curtius*; another by *Cn. Ovellius*.

*Vitruvius* calls the firſt the *Demoliſhing Crow*, *Corvus demolitor*, and alſo *deprædator*: others call it the Crane.

*Polybius* deſcribes another invented by *C. Duillius* uſed againſt the *Carthaginian* Fleet.

They were all a kind of Grappling-Hooks; ſerving to drag Things towards the Ingineer. That deſcrib'd by *Qu. Curtius* was thrown out of a Baliſta.

Crows-*Bill*, an Inſtrument us'd by Chirurgeons, in their Operations; eſpecially for the drawing Bullets and other foreign Bodies out of Wounds.

It has its Name from its Figure.

CROWS-FEET, in the Military Art, are Irons with four Points, of three or four Inches long; ſo that which way ſoever they fall, one Point will be uppermoſt.

CROWS-FEET, in a Ship, are ſmall Ropes, divided by the Hole of a little Block or Pully, called *the dead Man's Eye*, into ſix, ten, or more Parts.

CROWN, *Corona*, a Mark of Regal Dignity; or an Ornament wore on the Head by Kings and Sovereigns, as a Symbol of their Authority. See KING, *&c.*

In the remoteſt Antiquity, the *Crown* was only given to Gods: *Pliny* ſays, that *Bacchus* was the firſt who us'd it: *Pherycides*, cited by *Tertullian de Corona*, ſays *Saturn*: *Diodorus* aſcribes it to *Jupiter*, after his Victory over the *Titans*: *Q. Fabius Pictor.* aſcribes the Invention to *Janus*; adding, that it was an Ornament he us'd in Sacrificing: *Leo* the *Egyptian* ſays, it was *Iſis* who firſt wore a *Crown*; and that it conſiſted of Ears of Corn, the Uſe whereof ſhe firſt taught Men.

In this, moſt Authors agree, that the *Crown*, originally, was rather a Religious than a Civil Ornament; rather one of the *Pontificalia*, than the *Regalia*: that it only became common to Kings, as the antient Kings were Prieſts as well as Princes; and that the modern Princes are entitled to it, in their Eccleſiaſtical Capacity rather than their Temporal.

The firſt *Crowns* were no more than a *Bandelette*, or Headband, drawn round the Head, and tied behind; as we ſtill ſee it in *Jupiter*'s Heads on Medals, as alſo in the *Ptolemies*, and the Kings of *Syria*.

Afterwards they conſiſted of two *Bandelette's*; by degrees they took Branches of different Trees; at length they added Flowers; inſomuch that *Tertullian de Corona*, aſſures us, (from *Claudius Saturninus*, who had wrote expreſly on the Subject) there was not any Plant whereof *Crowns* had not been made.

The Woods and Groves were ſearch'd, to find ſeveral *Crowns* for the ſeveral Deities: Thus, on Medals, we find *Jupiter*'s *Crown* of Flowers, more frequently of Laurel; *Juno*'s of the Vine; that of *Bacchus*, Vine with Grapes, Vine-Leaves, and Branches of Ivy, with Flowers and Berries: Thoſe of *Caſtor*, *Pollux*, and the River-Gods, of Bulruſhes: That of *Apollo*, ſometimes of Laurel, ſometimes of Ruſhes; that of *Saturn*, new Figs; that of *Hercules*, Poplar; that of *Pan*, Pine or Aldar; that of *Lucina*, Dictamnus; that of *the Horæ*, the Fruits proper to each Seaſon; that of *the Graces*, Olive-Branches, as well as that of *Minerva*: That of *Venus*, Roſes: of *Ceres*, Ears of Corn, as well as that of *Iſis*: That of *the Lares*, Myrtle or Roſemary, *&c.*

*Crowns* were not only us'd for the Statues and Images of the Gods, for the Prieſts in Sacrificing, and for Kings and Emperors; but alſo for Altars, Temples, Doors of Houſes, ſacred Veſſels, Victims, Ships, *&c.*

The Poets *crown'd* thoſe who were Victors in the Solemn Games, Warriors, *&c.* See OLYMPIC, *&c.*

From ſome Paſſages in *Euſebius Cæſarienſis*, ſome Authors conclude, that Biſhops had antiently their *Crowns*.

The *Roman* Emperors had four Kinds of *Crowns*, ſtill ſeen on Medals; *viz.* a *Crown* of Laurel, a Radiating *Crown*, a *Crown* adorn'd with Pearls and Precious Stones; the fourth a kind of Bonnet, or Cap, ſomething like the Mortier.

The firſt was that ordinarily uſed from the Time of *Julius Cæſar*: The Right of bearing it was granted him by the Senate; ſome ſay, on account of his Baldneſs; and afterwards continued to his Succeſſors. *Juſtinian* was the firſt who took that of the Bonnet-kind.

The *Papal Crown*, is compos'd of a Tiara, and a triple *Crown* incompaſſing the Tiara; having two Pendants, like the Biſhops Mitres: Theſe three *Crowns* repreſent the pretended triple Capacity of the Pope, *viz.* as High Prieſt, Supreme Judge, and ſole Legiſlator of the Chriſtians. See POPE.

The *Imperial Crown* is a Bonnet, or Tiara, with a Semicircle of Gold, ſupporting a Globe with a Croſs a-top.

The *Engliſh Crown* is adorn'd with four Croſſes, in the manner of thoſe of *Malta*; between which are Flower-de-Lys's. It is cover'd with four Diadems, which meet at a little Globe ſupporting a Croſs.

The *French Crown* is a Circle of eight Flower-de-Lys's, incompaſs'd with ſix Diadems; bearing a-top a double Flower-de-Lys, which is the Creſt of *France*.

The *Spaniſh Crown* is adorn'd with large indented Leaves, cover'd with Diadems, bordering on a Globe, ſurmounted with a Croſs. See CORONET.

Among the *Romans*, there were various Kinds of *Crowns*, diſtributed as Rewards of Military Atchievements: The *Oval Crown* was the firſt, made of Myrtle; and was beſtow'd on Generals who had been victorious over Slaves, unworthy of the *Roman* Valour, and who were entitled to the Honours of the leſſer Triumph, call'd *Ovation*. See OVATION.

The ſecond was the *Naval* or *Roſtral Crown*, conſiſting of a Circle of Gold, rais'd with Prows and Poops of Ships; given to the Captain who firſt grappled, or the Soldier who firſt jump'd aboard, an Enemy's Ship. See ROSTRAL.

The third call'd *Vallaris*, or *Caſtrenſis*, was alſo a Circle of Gold, rais'd with Piles or Palliſades; given him who firſt leap'd into the Enemies Camp, or forced the Palliſades. See CASTRENSIS.

The fourth, call'd *Mural Crown*, was a Circle of Gold, indented or embattel'd; given him who firſt mounted the Wall of a Place beſieg'd, and there lodg'd a Standard: This *Crown* we alſo find given, on Medals, to the particular *Genii* and Guardians of Provinces and Places. See MURAL.

The fifth the *Civic Crown*; made of a Branch of green Oak: given a Citizen who had ſav'd the Life of another Citizen in a Battel or Aſſault. See CIVIC.

The ſixth was the *Triumphal Crown*, made of Branches of Laurel, given a General who had gain'd a Battle, or conquer'd a Province. This was afterwards given of Gold. See TRIUMPH.

The ſeventh the *Corona Obſidionalis*, or *Graminea*, made of Graſs or Herbs, found on the Ground; given to Generals who had deliver'd a *Roman* Army beſieg'd by the Enemy, and oblig'd him to decamp. See OBSIDIONAL.

The eighth was alſo a *Crown* of Laurel, given by the *Greeks* to their *Athletæ*; and by the *Romans*, to thoſe who had negotiated, or confirm'd a Peace with an Enemy: This was the leaſt eſteem'd.

Beſides theſe, in Antiquity, we meet with *Radial Crowns*, given to Princes at their Tranſlation among the Gods; whether before or after their Death.

*Caſaubon* ſays, this *Crown* was peculiar to Deities; yet, 'tis certain *Nero* took it in his Life-time.

*Athletic Crowns*, were deſtin'd to crown Victors at the Publick Games.

There are alſo *Sacerdotal Crowns* for the Prieſts.

In an Eccleſiaſtical Senſe, *Crown* is alſo uſed for the Clerical Tonſure; which is the Mark, or Character of the *Romiſh* Eccleſiaſticks. See TONSURE.

This is a little Circle of Hair, ſhav'd off from the *Crown* of the Head; more or leſs broad, according to the Quality of the Orders receiv'd. See ORDER.

That of a mere Clerk is the ſmalleſt; that of Prieſts and Monks the largeſt.

The *Clerical Crown*, was antiently a round Liſt of Hair, ſhav'd off around the Head, repreſenting a real *Crown*: This is eaſily obſerv'd in ſeveral antient Statues, *&c.* The Religious of S. *Dominic* and S. *Francis* ſtill uſe it.

Father *Daniel* ſays, that S. *Louis* ranſom'd the *Crown of Thorns* of our Saviour, which had been pawn'd by *Baldwin* Emperor of *Conſtantinople*, for an immenſe Sum of Money; and tranſported it, with great Ceremony, to *France*: where 'tis ſtill kept in the Holy Chapel. The Author of the Hiſtory of S. *Louis*, adds, that the Thorns were ſtill green in his Days. Some Writers, from *Clemens Alexandrinus*, hold that it was made of Bramble, *ex Rubo*; others of Black-Thorn, *ex Rhamno*; others of White-Thorn. Thoſe who ſee it in the Chapel, take it to be the *Juncus Marinus*.

*Galiot* derives the Word *Corona*, whence *Crown*, from the Latin *Cornu*, Horn; becauſe the antient *Crowns* were pointed in manner of Horns; which were antiently, both by *Jews* and *Gentiles*, eſteem'd as Marks of Power, Strength, Authority, and Empire.

Hence, in the Holy Scripture, Horns are us'd for the Regal Dignity: and accordingly, *Horn* and *Crown*, in the *Hebrew*, are expreſs'd by the ſame Word.

*Ch. Paſchal* has wrote expreſly *de Coronis*: *Baudelot* has made a good Number of curious Obſervations on the ſame Subject, that had eſcap'd *Paſchal*. *Du Cange* gives us a curious Diſſertation of *Crowns*; and *Schmeizell*, a *German*, a Treatiſe of *Royal Crowns*, both antient and modern.

CROWN, in Commerce, is a general Name for Coins, both Foreign or Domeſtick, of, or near, the Value of five Shillings Sterling. See MONEY, and COIN.

In its limited Senſe, *Crown* is only applicable to that popular *Engliſh* Coin which bears that Name, and which is equivalent to 60 *Engliſh* Pence, or five Shillings; or to 13 Livres 15 Sols *French* Money: But, in its extenſive Senſe, it takes in ſeveral others; as the *French Ecu*, which we call the *French Crown*, ſtruck in 1641 for 60 Sols, but now riſen to 5 Livres; the Patagon, Dollar, Ducatoon, Rixdollar, and Piaſtre or Piece of Eight. See ECU, DOLLAR, DUCATOON, RIXDOLLAR, PIASTRE, *&c.*

CROWN, in Architecture, the uppermoſt Member of the Cornice; call'd alſo *Corona* and *Larmier*. See CORONA, and LARMIER.

CROWN, in Aſtronomy, one of the Northern Conſtellations. See CORONA.

CROWN, or CORONET, in Heraldry, is us'd for the Repreſentation of that Ornament, in the Mantling of an Armoury; to expreſs the Dignity of the Perſon who bears it.

The *Crown* here is of more Antiquity even than the Helmet; and was us'd as a Symbol of Victory and Triumph.

*Radiated*, or *Pointed Crowns*, are thoſe of the antient Emperors, which had 12 Points; repreſenting, as ſome will have it, the twelve Months of the Year.

*Pearl'd*,

*Pearl'd*, or *Flower'd Crowns*, thoſe with Pearls, or Leaves of Smallage, Parſley, &c. ſuch as were antiently almoſt all *Crowns*, even thoſe of Sovereign Princes: Tho they were not us'd in their Armouries, till about 200 Years ago.

CROWN, in Geometry, a Plane included between two parallel or concentric Perimeters, of unequal Circles; generated by the Motion of ſome Part of a Right Line round a Centre, the moving Part not being contiguous to the Centre.

The Area of this is had, by multiplying its Breadth by the middle Perimeter; for a Series of Terms in Arithmetick Progreſſion being $n \times \frac{a+\omega}{2}$; that is, the Sum of the firſt and laſt multiply'd by half the Number of Terms, the middle Element muſt be $\frac{a+\omega}{2}$; wherefore, that multiply'd by the Breadth or Sum of all, the two Terms will give the *Crown*.

CROWN-*Office*, a Court or Office ſo called, becauſe the *Crown* is more immediately concern'd in what is therein tranſacted. See CROWN.

Tho none of the Officers under the Lord Chief Juſtice are employ'd in ſummoning a Parliament; yet, many of them have Buſineſs in other Matters, during the ſitting of the Parliament: As, in Caſes of Error, &c. but more eſpecially on Trials of Peers; wherein the Clerk of the *Crown* is chief Manager.

He hath likewiſe, out of Parliament, all Indictments in the *Crown*, Informations, Recognizances; and a multitude of other Buſineſs runs thro' his Hands, as the writing of all Pleadings, Declarations, and other Proceedings upon Records: but the executive Part is left to his Secondary or Deputy.

CROWN-GLASS, the fineſt ſort of Window-Glaſs. See GLASS.

CROWN-POST, in Architecture, a Poſt which in ſome Buildings ſtands upright in the middle, between two principal Rafters. See POST.

CROWN-WHEEL *of a Watch*, is the upper Part next the Balance, that drives it by its Motion. See WATCH.

CROWN-WORK, or CROWNING, in Fortification, Outworks running in the *Campagne*, to keep off the Enemy, to gain ſome Hill, or advantageous Poſt, and to cover the other Works of the Place. See OUTWORK.

It conſiſts of two Demi-Baſtions at the Extremes, and an entire Baſtion in the middle, with Courtines.

CROWNED *Horn-work*, is a Horn-work with a *Crown*-work before it. See HORN-WORK.

CROWNING, is underſtood, in the general, of any thing that terminates, or finiſhes a Decoration of Architecture: Thus, a Cornice, a Pediment, Acroteria, &c. are call'd *Crownings*. See ACROTER, &c.

Thus, alſo, the Abacus is ſaid to *crown* the Capital; and thus any Member or Moulding is ſaid to be *crown'd*, when it has a Fillet over; and a Niche is *crown'd*, when it is cover'd with a Capital. See MOULDING, NICHE, &c.

CROUPADE, or *Groupade*, in the Manage, a Leap, higher than the Corvet, wherein the fore and hind Part of a Horſe keep an equal height; his Legs being truſs'd under his Belly, without ſtretching 'em out, or ſhewing his Shoes.

CROUPER, or CRUPPER, the hind Part of a Horſe; comprehended between the Place of the Saddle, and the Tail.

The Word is form'd from the German *Grub*, thick, fat: *Du Cange* derives it from the Italian *Groppa*, Buttock.

CRUCIAL *Inciſion*, in Chirurgery, an Inciſion, or Cut into ſome fleſhy Parts, in form of a Croſs.

CRUCIBLE, a little Veſſel, ordinarily of Earth, ſometimes Iron, without any Handle; us'd by Chymiſts, Coiners, Goldſmiths, Glaſiers, and other Artificers; to melt and calcine Gold, Silver, or other Metals whereon they work. See FUSION, CALCINATION, &c.

Earthen *Crucibles* are made of glaz'd Earth, with Stone Potſherds pounded and ſifted: They are of various Sizes, but generally of the ſame Form, which reſembles that of an inverted Cone, or Pyramid.

'Tis theſe are chiefly us'd in Coinage, as being the only ones in which Gold will melt without irritating. Iron *Crucibles* are in form of little Pails without Handles, made of Iron well forg'd and beaten: In theſe they melt Silver, Copper, &c.

There are Earthen *Crucibles* that hold from 100 to 3 or 400 Marks; but thoſe ordinarily us'd are but of 100. The Iron ones are larger; ſome holding 12 or 1500 Marks: Theſe are not taken off the Furnaces when the Plates are to be run, but the Metal is laden out with an Iron Ladle. 'Tis a Rule never to put as much Metal in the *Crucible* as it will hold. See COINAGE.

The *Crucibles* uſed by Goldſmiths and Founders are like thoſe uſed in the Coinage: Thoſe of Chymiſts, &c. are of all Sizes, according to the Quantity and Quality of the Metal to be put in 'em.

The Word comes from the Hebrew *Keres*, *teſta*, *fictile*. *Du Cange* derives it from *Cruſelinum*; which, in the lower *Latin* ſignifies a little drinking Veſſel.

CRUCIFIX, a Croſs, whereon the Body of Jeſus Chriſt is faſten'd in Effigy; much us'd by the *Romaniſts* in their Churches, and other Places, to recognize the Paſſion of Jeſus Chriſt, and to ſerve them to direct their Prayers to. See CROSS.

There are ſome Chapters wherein Jeſus Chriſt is the firſt Canon, and the Fruits of the Prebend go to the Subſiſtence of the *Crucifix*.

CRUCIFIXION, an antient Form of Execution; by faſtening the Criminal to an erected Croſs. See CROSS.

CRUDE, ſomething that has not paſs'd the Fire, or has not had the degree of *Coction*, *i. e.* of Heat, requiſite to prepare it for eating, or ſome other Purpoſe. See COCTION.

*Crude* or Raw Silk, is that which has not been put in boiling Water, to unwind it from off the Cod; nor boil'd in Water and Soap, to fit it for dying. See SILK.

In Chymiſtry, they call *Crude Antimony* that which comes immediately from the Mines, without any Preparation. See ANTIMONY.

In Medicine, *Crude Humours* are thoſe which want of that Preparation and Elaboration which they ordinarily receive from Digeſtion. See CRUDITY.

The Retainers to the Doctrine of Trituration, hold that the *Crudity* of the Humours only conſiſts in this; that they are not broke and comminuted ſo much as they ſhould be by the ordinary Action of the Stomach. See TRITURATION.

CRUDITY, in Medicine, the State of a Diſeaſe, wherein the morbifick Matter is of ſuch Bulk, Figure, Coheſion, Mobility, or Inactivity, as denominates it *crude*, *i. e.* as creates or increaſes the Diſeaſe. See DISEASE.

A *Crudity* is diſcover'd, 1ſt, from the Diſeaſe's continuing its degree of Strength, or increaſing. 2d, From a continual Increaſe of Symptoms. 3d, From a diſorderly Exerciſe of the Functions. 4th, But chiefly from a Fault in the Quantity or Quality of the Humours; both thoſe ſtill circulating, and thoſe ſecreted, and evacuated: as of Sweat, Tears, Mucus of the Noſe, Saliva, Sputum, the Bile, Urine, Ichor, Pus, Blood, Menſes, Loches, Milk, Aphthæ, &c.

That State of the Diſeaſe, wherein the *crude* Matter is changed, and render'd leſs peccant, and laudable, is call'd Digeſtion, Concoction, or Maturation. See DIGESTION, CONCOCTION, &c.

CRUISE, from the German *Kruis*, a-croſs, ſignified to croſs to and fro, to ſail up an down for guard of the Seas, &c.

CRUOR, a Term uſed by Anatomiſts for the red Globules of the Blood; in contradiſtinction to the limpid or ſerous Part. See BLOOD.

Some Authors, Dr. *Keill* and Dr. *Woodward* for inſtance, ſuppoſe theſe Globules replete with an elaſtick Aura, or Air; and on this Principle account for ſome of the Phænomena of the Animal Oeconomy; particularly Muſcular Motion, &c. But Dr. *Jurin* has overturn'd that Suppoſition. See MUSCULAR *Motion*.

*Vanhelmont* uſes the Word *Cruor* for the Blood in the Veins; in contradiſtinction to the Blood in the Arteries, which he calls *ſanguis*. See VEIN, and ARTERY.

CRURA *Clitoridis*, in Anatomy. Between the *Corpora Nervoſa* of the *Clitoris*, runs a *Septum*, or membranous Partition, from the Glans to its Divarication at the *Os Pubis*; dividing the *Clitoris* into two Parts, call'd the *Crura of the Clitoris*.

Theſe are three times as long as the ordinary Trunk of the *Clitoris* it ſelf. See CLITORIS.

CRURA *of the Medulla Oblongata*, are two of the four Roots whence the *Medulla Oblongata* ſprings, in the Brain.

The *Crura* are the larger Roots; the two ſmaller are call'd *Pedunculi*. See MEDULLA *Oblongata*.

CRURAL, in Anatomy, an Epithet given to the large Artery and Vein of the Thigh. See THIGH.

The *Crural Artery* ariſes from the Iliac Artery; or rather, 'tis the Iliac it ſelf, under another Name; being call'd *Crural*, from the Place of its Entrance into the Thigh. See ILIAC.

It conveys Blood thro' all the Part, by means of a great Number of Branches diſſeminated thro' its Subſtance.

The *Crural Vein* is form'd of ſix other Veins, *viz.* the *great* and *little Sciatica*, the *Muſcula*, the *Poplitea*, the *Sural*, and the *Saphena*. See SCIATICA, &c.

CRURÆUS, in Anatomy, a Muſcle ariſing from the fore Part of the Thigh-Bone, between the leſſer and greater Trochanter, and lying cloſe upon the Bone, joins its Tendon with three others, which altogether make one broad Tendon, that paſſes over the *Patella*, and is inſerted into the little Tuberoſity on the upper and fore Part of the *Tibia*.

'Tis call'd *Cruræus*, as being faſten'd in the Thigh-Bone in the ſame manner as the *Brachiæus* to the Arm. Its uſe is to extend the Leg.

CRUS, among Anatomiſts, is all that Part of the Body which reacheth from the Buttocks to the Toes; and is divided into *Thigh*, *Leg*, and *Foot*. See each in its Place, THIGH, &c.

CRUSCA, an *Italian* Term, ſignifying *Bran*, or what remains of Meal after the Flower has been ſifted out.

It is only in uſe among us for that celebrated Academy call'd *Della Cruſca*, eſtabliſh'd at *Florence*, for the Purity and Perfection of the *Tuſcan* Language. See ACADEMY.

The Academy took its Name from its Office, and the End propos'd by it; which is, to purify the Language, and as it were to ſeparate it from the Bran. Accordingly, its Device is a Sieve, and its Motto, *Il piu bel fior ne coglie*; that is, *It gathers the fineſt Flower thereof.*

In the Hall or Apartment where the Academy meets, M. *Monconis* informs us, every thing bears an Alluſion to the Name and Device: the Seats are in form of a Baker's Baſket; their Backs like a Shovel for moving of Corn: The Cuſhions of gray Sattin in form of Sacks, or Wallets; and the Branches where the Lights are diſpos'd, likewiſe reſemble Sacks.

The Dictionary *Della Cruſca* is an excellent *Italian* Dictionary, compos'd by this Academy.

CRUSTA *Villoſa*, in Anatomy, the fourth Tunic, or Coat, of the Stomach. See STOMACH.

On the inner Surface of this Coat, are ſeen innumerable *Villi* or *Fibrillæ*, riſing every where perpendicularly from it; which ſome will have to ſerve for nothing but a Defenſative to the Stomach, to preſerve it from acrimonious Humours: but Dr. *Drake* rather takes 'em to be excretory Ducts to the ſubjacent Glands; which ſome Authors would have to be that now exploded thing a *Parenchyma*; but which are, indeed, the Organs by which moſt of that Humour which is diſcharg'd upon the Stomach, is ſeparated; and theſe *Villi* the immediate Channels thro' which it is convey'd. See STOMACH.

CRUSTACEOUS *Fiſhes*, in Natural Hiſtory, are thoſe cover'd with Shells, conſiſting of ſeveral Pieces, or Scales; as thoſe of Crabs, Lobſters, &c. See FISHES.

Theſe are uſually ſofter than thoſe of the Teſtaceous kind, which conſiſt of a ſingle piece, uſually much thicker and ſtronger than the former; ſuch as thoſe of the Oyſter, Scallop, Cockle, &c. See SHELL.

Dr. *Woodward* obſerves, in his Natural Hiſtory, that of all the Shells and Nautili found in Beds of all the different Matters dug out of the Earth, there are ſcarce any of the *Cruſtaceous* Kind: The Reaſon he gives for it is, that theſe being much lighter than the reſt, muſt have floated on the Surface at the time of the Deluge, when all the Strata were form'd; and there have corrupted and periſh'd. See DELUGE.

CRUZADO, in Commerce, is a *Portugueze* Coin, ſtruck under *Alphonſus* V. about the Year 1457, at the Time when Pope *Calixtus* ſent thither the Bull of a *Croiſade*, againſt the Infidels. See COIN.

It had its Name from a Croſs, which it bears on one ſide; the Arms of *Portugal* being on the other. A *Cruzade* is of the Value of 40 Sols. See SOL.

CRUZADO, or CROISADE, an Expedition to the Holy Land. See CROISADE.

CRYPTA, a ſubterraneous Place, or a Vault; eſpecially under a Church, for the Interment of particular Families, or Perſons. See TOMB.

S. *Ciampini*, deſcribing the Outſide of the *Vatican*, ſpeaks of the *Cryptæ* of St. *Andrew*, St. *Paul*, &c. See CATACOMB.

*Vitruvius* uſes the Word for a Part of a Building, anſwering nearly to our Cellar; *Juvenal*, for a *Cloaca*.

Hence, *Crypto-Portico*, a ſubterraneous Place, arch'd, or vaulted; us'd as an Underwork, or Paſſage in old Walls. The ſame is alſo us'd for the Decoration at the Entry of a Grotto. See GROTTO.

CRYPTA, is alſo uſed by ſome of our antient Writers, for a Chapel, or Oratory under ground: *Egreſſo toto conventu, accepta abſconſa ſi nox eſt vadit per* cryptam. *Du Cange.*

The Word is form'd of the *Greek* κρύπτω, *abſcondo*, I hide; whence κρυπτη, *Crypte*.

CRYPTOGRAPHY, the Art of *Secret Writing*, or writing in *Cipher*. See CIPHER, and DECIPHERING.

The Word is compounded of κρυπτω, *I hide*, and γραφω, *I deſcribe*.

CRYSTAL, in Natural Hiſtory, a Kind of Mineral; or rather, a tranſparent Stone, white, like a Diamond, but much inferior thereto in Luſtre and Hardneſs; uſed for Vaſes, Urns, Mirrors, &c.

The Antients were but little acquainted with the Nature of *Cryſtal*: *Pliny* ſpeaks of it as harden'd, petrified Water, which was the popular Opinion of thoſe Days; but Experience has ſhewn us the contrary: for by a Chymical Analyſis, inſtead of reſolving into Water, it yields nothing but a Calx, Earth, and Salts.

For the Places where 'tis found, *Pliny* adds, that he has ſeen it dug from off the higheſt and roughеſt Rocks of the *Alps*; whence, doubtleſs, its Name of *Rock-Cryſtal*. 'Tis ſometimes alſo found in Brooks and Rivers, but not form'd there; only waſh'd down thither from off the Mountains by the violent Rains.

Several Mountains of *Europe*, and ſome of *Aſia*, produce *Rock-Cryſtal*: If we may believe the *French* Relation of *Madagaſcar*, that Iſland yields more than all the World beſides.

Its Perfection conſiſts in its Luſtre and Tranſparency; that with Straws, Duſt, Clouds, &c. is little valued. It is frequently found Hexagonal; the Edges inimitably fine and accurate.

'Tis cut or engrav'd in the ſame manner, with the ſame Inſtruments, and by the ſame Workmen as Diamonds. See DIAMOND, and ENGRAVING.

*Cryſtal* is of ſome uſe in Medicine, being an Aſtringent; and as ſuch uſed in Diarrhæas and Dyſenteries: 'Tis alſo uſed to increaſe the Milk of Nurſes; and, further, is eſteem'd a good Antidote againſt Arſenic.

The Word comes from the *Greek* κρύσταλλος, *Glacies*; form'd of κρυος, *frigus*, and στέλλομαι, *concreſco*, becauſe of its reſembling Ice.

*The Formation of* CRYSTAL, is deliver'd by F. *Franciſco Lana* in the *Philoſophical Tranſactions*, to this Effect: 'In the *Val Sabbia* I obſerv'd a ſpacious round of a Meadow, ſome Parts whereof were bare of all Herbs; wherein, and no where elſe thereabout, *Cryſtals* are generated: all Sexangular; both Points terminating in a pyramidal Figure, likewiſe Sexangular. The Country-People told me, They were produc'd from the Dews; becauſe, forſooth, being gather'd over night, there would others ariſe, only in a ſerene and dewy Sky. But having obſerv'd that there was no mark of any Mine thereabout, I concluded it might be a plenty of Nitrous Steams; which at the ſame time might hinder the Vegetation on thoſe Places, and coagulate the Dew falling thereon: For Nitre is not only the natural Coagulum of Water, as is manifeſt in artificial Glaciations, but ever retains the aboveſaid Sexangular Figure; which, by the way, may be the Cauſe of the Sexangular Figure of Snow.

——'Since *Cryſtals* are only found in thoſe narrow Places, 'tis probable, thence are rais'd the Exhalations that concrete the Dew; after the ſame manner as the Vapour or Exhalation of Lead coagulates Quickſilver.'

*Rohault* ſhews, that *Cryſtal*, Diamond, &c. muſt have been originally liquid, from their Figure, which is ſuch as Drops of Water of the ſame Size muſt neceſſarily have; and ſuch as Globules of Meal or Flower, heap'd up and compreſs'd by their own weight, might have: For as each *Cryſtal* is encompaſs'd and cloſed round with ſix others; ſo it becomes modell'd into a hexangular Body, conſiſting of equal and ſquare Sides.

*Boerhaave* takes *Cryſtal* to be the proper Matter, or Baſis of all Gems or Precious Stones, which aſſume this or that Colour, &c. from the different Admixture of Mineral and Metalline Fumes, with the primitive *Cryſtalline* Matter. See STONE, GEM, &c.

CRYSTAL is alſo uſed for a factitious Body, caſt in the Glaſs-Houſes; called alſo *Cryſtal-Glaſs*. See GLASS.

It is, in effect, a Glaſs; but carried, in the Melting, and in the Matter whereof it is compos'd, to a degree of Perfection far beyond the common Glaſs; tho it comes far ſhort of the Whiteneſs and Vivacity of the Natural *Cryſtal*.

The beſt Artificial *Cryſtals* are thoſe made at *Mouran* near *Venice*; call'd *Venice Cryſtals*.

CRYSTALS, in Chymiſtry, expreſs Salts, or other Matters, ſhot, or congeal'd in manner of *Cryſtal*. See CRYSTALLIZATION. Thus,

CRYSTAL *of Allum*, is Allum purified, and reduced into *Cryſtals*, in the ſame manner as Tartar. In like manner are Vitriol, Nitre, and other Salts *cryſtalliz'd*.

*Cryſtals* of Allum are quadrangular, and brilliant like Diamonds; thoſe of Nitre, white, and oblong; thoſe of Vitriol, green, quadrangular, and ſhining. See SALT.

CRYSTAL, or *Cream of Tartar*, is that Drug purify'd and diſſolv'd, and again coagulated in form of *Cryſtals*. See TARTAR.

To prepare it, they boil Tartar in Water, ſkim it, and ſtrain it; when cool, there are form'd little white, ſhining *Cryſtals* at the Edges, as alſo a Pellicle, or Cream ſwimming a-top.

The Cream and *Cryſtals* were antiently ſuppos'd to be different; but are now found the ſame Thing. See CREAM.

*Cryſtal of Tartar* is eſteem'd Purgative, and Aperitive; proper in Hydropical and Aſthmatical Caſes, and Intermitting Fevers.

CRYSTAL *of Tartar chalybeated*, is when 'tis impregnated with the moſt diſſoluble Parts of Iron. See CHALYBEAT.

CRYSTAL *of Tartar emetic*, is when 'tis charg'd with the ſulphureous Parts of Antimony, to render it vomitive. See EMETIC.

CRYSTAL *Mineral*, call'd alſo *Mineral Anodyne*, and *Sal Prunella*, is Salt-petre prepar'd with Sulphur; thus: Put half a Pound of Salt-petre in a Crucible, and ſet that in a Furnace; and when the Salt-petre is in Fuſion, add, at ſeveral times, two Drachms of Flower of Sulphur. After the Flame is over, invert the Crucible in a flat Pewter Baſon, that the Salt may ſhoot.

This is eſteem'd good againſt the Squinancy, whence its Name of *Sal Prunella*; *Pruna*, or *Prunella*, expreſſing that Diſeaſe. See PRUNELLA.

CRYSTALS *of Silver*, or *of Luna*, is Silver, penetrated and reduced into the form of Salts, by the pointed Acids of Spirit of Nitre. See SILVER.

'Tis uſed for making Eſchars, by applying it to any Part: 'tis alſo of uſe internally, in Dropſies, and Diſeaſes of the Brain.

CRYSTALS *of Mars*, call'd alſo *Salt*, or *Vitriol of Mars*; is Iron reduced into Salts by an acid Liquor; uſed in Diſeaſes ariſing from Obſtructions. See MARS.

CRYSTALS *of Venus*, call'd alſo *Vitriol of Venus*; is Copper reduced into the form of Vitriol by the Spirit of Nitre; very cauſtick, and uſed to cut off proud Fleſh. See VITRIOL.

*Iſland* CRYSTAL, is a tranſparent fiſſile Stone, brought from *Iſland*; ſoft, as Talc; clear, as Rock-*Cryſtal*, and without Colour; famous among optic Writers for its unuſual Refractions. See REFRACTION.

It bears a red heat without loſing its Tranſparency; and, in a very intenſe heat, calcines without Fuſion: Steep'd a day or two in Water, it loſes its natural poliſh; rubb'd on Cloth it attracts Straws, *&c.* like Amber. In effect, it appears a kind of Talc; and is found in form of oblique Parallelopipeds with ſix parallelogram Sides, and eight ſolid Angles. See TALC.

The Phænomena of this Stone are very remarkable, and have been examin'd with great accuracy by M. *Huygens* and Sir *I. Newton*: For, firſt, whereas in other pellucid Bodies there is only one Refraction, in this there are two; ſo that Objects view'd thro' it appear double.

2dly, Whereas in other tranſparent Bodies, a Ray falling perpendicularly on the Surface, paſſes ſtrait thro', without ſuffering any Refraction; and an oblique Ray is always divided: In *Iſland Cryſtal*, every Ray, whether perpendicular or oblique, becomes divided into two, by means of the double Refraction. One of theſe Refractions is, according to the ordinary Rule, the Sine of Incidence out of Air into *Cryſtal*, being to the Sine of Refraction as five to three; but the other is perfectly new. The like double Refraction is alſo obſerv'd in *Cryſtal of the Rock*, tho much leſs ſenſibly.

When an incident Ray is thus divided, and each Moiety arrives at the further Surface; that, refracted in the firſt Surface after the uſual manner, is refracted entirely after the uſual manner at the ſecond; and that refracted in the unuſual manner in the firſt, is entirely refracted after the like manner in the ſecond: So that each emerges out of the ſecond Surface, parallel to the firſt incident Ray.

Again, if two pieces of this *Cryſtal* be plac'd over each other, ſo as the Surfaces of the one be parallel to the correſponding ones of the other; the Rays refracted in the uſual manner in the firſt Surface of the firſt, are refracted after the uſual manner in all the other Surfaces: And the ſame Uniformity appears in the Rays refracted after the unuſual manner; and this in any Inclination of the Surfaces; provided their Planes of perpendicular Refraction be parallel.

From theſe Phænomena, Sir *I. Newton* gathers, That there is an original Difference in the Rays of Light; by means whereof ſome are, here, conſtantly refracted after the uſual manner; and others in the unuſual manner. See RAY, and LIGHT.

Were not the difference original, and did it ariſe from any new Modifications impreſs'd on the Rays at their firſt Refraction, it would be alter'd by new Modifications in the three following ones; whereas, in fact, it ſuffers no Alteration at all.

Again, he hence takes occaſion to ſuſpect, that the Rays of Light have ſeveral Sides, endu'd with ſeveral original Properties: For, it appears from the Circumſtances, that there are not two ſorts of Rays differing in their Nature from each other, one conſtantly, and in all Poſitions, refracted in the uſual, and the other in the unuſual manner; the difference in the Experiment mention'd, being only in the Poſitions of the Sides of the Rays, to the Planes of perpendicular Refraction. For one and the ſame Ray is refracted ſometimes after the uſual, and ſometimes after the unuſual manner, according to the Poſition of its Sides to the *Cryſtal*: the Refraction being alike in both, when the Sides of the Rays are poſited the ſame way to both, but different when different.

Every Ray, therefore, may be conſider'd as having four Sides, or Quarters; two of which, oppoſite to each other, diſpoſe the Ray to be refracted after the unuſual manner; and the other two in the uſual. Theſe Diſpoſitions, being in the Rays before their Incidence on the ſecond, third, and fourth Surfaces; and ſuffering no Alterations, for what appears, in their paſſage thro' 'em; muſt be original and connate. See RAY, and LIGHT; ſee alſo REFRACTION.

CRYSTALLI, among Phyſicians, are Puſtules diſpers'd all over the Body; white, and of the bigneſs of a Lupine.

CRYSTALLINE *Humour*, is a thick, compact Humour of the Eye, in manner of a flattiſh convex Lens, ſituate in the middle of the Eye; ſerving to make that Refraction of the Rays of Light, neceſſary to have 'em meet in the *Retina*, and form an Image thereon, whereby Viſion may be perform'd. See EYE, HUMOUR, REFRACTION, VISION, RETINA, *&c.*

'Tis the Configuration of the *Cryſtalline* that occaſions Perſons to be either *Myopes*, or *Presbytæ*, *i. e.* to be either long or ſhort-ſighted. See MYOPES, and PRESBYTÆ.

The *Cryſtalline* being of two Conſiſtences; outwardly, like a Gelly; but toward the Centre as hard as Salt: Hence, ſome Authors think that its Figure may be varied; which Variation they ſuppoſe to be effected by the *Ligamentum Ciliare*. Hence Dr. *Grew*, and others, aſcribe to the Ciliary Ligament a Power of making the *Cryſtalline* more convex, as well as of moving it to or from the *Retina*: Accordingly, by the Laws of Opticks, ſomething of this Kind is abſolutely neceſſary to diſtinct Viſion: For, as the Rays from diſtant Objects diverge leſs than thoſe from nigh ones; either the *Cryſtalline Humour* muſt be capable of being made more convex, or more flat; or elſe there muſt be an Elongation of the Eye, or of the Diſtance between that and the *Retina*. See *Ligamentum* CILIARE, and SIGHT.

The *Cryſtalline Humour*, when dried, appears to conſiſt of a vaſt Number of thin, ſpherical *Laminæ*, or Scales, lying over one another: *Leewenhoeck* reckons there may be 2000 of 'em in one *Cryſtalline*; each of theſe, he ſays, he has diſcover'd to conſiſt of a ſingle Fibre, or fine Thread wound up in a ſtupendous manner, this way and that; ſo as to run ſeveral Courſes, and meet in as many Centres: and yet not interfere nor croſs in any Place. *Philoſ. Tranſact.* N° 165, and 293.

CRYSTALLINE *Heavens*, in the old Aſtronomy, two Orbs imagined between the *Primum Mobile* and the Firmament, in the *Ptolemaic* Syſtem, where the Heavens were ſuppos'd ſolid, and only ſuſceptible of a ſingle Motion. See HEAVEN.

King *Alphonſus* of *Arragon* is ſaid to have introduc'd the *Cryſtallines*, to explain what they call'd the *Motion of Trepidation*, or *Titubation*. See *Ptolemaic* SYSTEM.

The firſt *Cryſtalline*, according to *Regiomontanus*, &c. ſerves to account for the ſlow Motion of the fix'd Stars; which makes 'em advance a Degree in 70 Years, according to the Order of the Signs, *viz.* to the Eaſt; which occaſions the Preceſſion of the Equinox. See PRECESSION.

The ſecond ſerves to account for the Motion of Libration, or Trepidation; whereby the Celeſtial Sphere is carried from one Pole towards another, occaſioning a difference in the Sun's greateſt Declination. See TREPIDATION.

But the Moderns account for theſe Motions, in a much more natural and eaſy manner. See LIBRATION, *&c.*

CRYSTALLIZATION, in Chymiſtry, a Kind of Congelation, befalling Salts, both *eſſential*, *fix'd*, and *volatile*; when, being ſet free from the greateſt Part of their Humidity, they are left to harden, dry, and ſhoot into *Cryſtals*. See SALT.

The ordinary Method of *Cryſtallization*, is perform'd by diſſolving the ſaline Body in Water, filtering it, and letting it evaporate, till a Film appears at the top; and laſtly, letting it ſtand to ſhoot. See DISSOLUTION, and EVAPORATION.

This Shooting is accounted for, on Sir *I. Newton*'s Principles, from that attractive Force which is in all Bodies, and particularly in Salt, by reaſon of its Solidity; whereby, when the Menſtruum or Fluid in which ſuch Particles float, is ſated enough, or evaporated, (which brings it to the ſame) ſo that the ſaline Particles are within each other's attractive Powers, and can draw one another more than they are drawn by the Fluid, they will run into *Cryſtals*. See ATTRACTION.

This is peculiar to Salts, that let them be ever ſo much divided, and reduc'd into minute Particles; yet, when they are form'd into *Cryſtals*, they each of them reaſſume their proper Shapes: ſo that one might as eaſily diveſt and deprive 'em of their Saltneſs, as their Figure.

This being an immutable and perpetual Law, by knowing the Figure of the *Cryſtals*, we may underſtand what the Texture of the Particles ought to be, which can form thoſe *Cryſtals*: and, on the other hand, by knowing the Texture of the Particles, may be determin'd the Figures of the *Cryſtals*.

For, ſince the Figures of the moſt ſimple Parts remain always the ſame, it is evident that the Figures they run into, when compounded and united, muſt be uniform, and conſtant: and ſince the Force of Attraction may be ſtronger on one ſide of a Particle than on another; there will conſtantly be a greater Accretion of Salts upon thoſe Sides which attract more ſtrongly: From which it may eaſily be

demonſtrated, that the Figure of the leaſt Particles, is entirely different from that which appears in the *Cryſtal*. See PARTICLE.

CRYSTALOIDES, the *Cryſtalline* Coat of the Eye; a Coat, or Tunic, immediately encompaſſing, and containing the *Cryſtalline* Humour; and ſuppoſed to ſerve, by conſtringing or dilating that Humour, to vary the Place of its Focus. See CRYSTALLINE.

Anatomiſts are divided about the Reality of ſuch Tunic, which is alſo, from its fine Texture, called *Aranea Tunica*, or *Arachnoides*. See ARACHNOIDES.

CRYSTALOMANCY, the Art of divining, or foretelling future Events, by means of a Mirror; wherein the Things requir'd are repreſented. See MIRROR.

It is alſo call'd *Catoptromancy*: The firſt from χρύσαλλος, *congeal'd Water*, or *Cryſtal*; and the ſecond from κατόπτρον, *Mirror*, and μαντεία, *Divination*.

CUBATURE, or CUBATION, the *Cubing* of a Solid; or the meaſuring of the Space comprehended in a Solid; as in a *Cone*, *Pyramid*, *Cylinder*, &c. See CONE, PYRAMID, CYLINDER, &c.

The *Cubature* regards the Content of a Solid, as the Quadrature does the Superficies of a Figure; ſo that the *Cubature* of the Sphere turns on the ſame thing as the Quadrature of the Circle. See SOLIDITY, and QUADRATURE.

CUBE, in Geometry, a regular or ſolid Body, conſiſting of ſix ſquare and equal Faces, or Sides; and its Angles all right, and therefore equal. See SOLID, and REGULAR *Body*.

The *Cube* is alſo call'd *Hexaedron*, becauſe of its ſix Sides. The Word comes from the *Greek* κυβος, *Teſſara*, Die.

The *Cube* is ſuppos'd to be generated by the Motion of a ſquare Plane, along a Line equal to one of its Sides, and at right Angles thereto: whence it follows, that the Planes of all Sections parallel to the Baſe, are Squares equal thereto, and conſequently to one another.

*To deſcribe a Rete, or Net, whence any given* Cube *may be conſtructed, or wherewith it may be cover'd.* On the right Line AB, (Tab. *Geometry*, Fig. 49.) ſet off the Side of the *Cube*, four times; on A erect a Perpendicular, AC, equal to the Side of the *Cube* AI, and compleat the Parallelogram ACBD. With the Interval of the Side of the *Cube*, in the Line CD; determine the Points K, M and O: Laſtly, draw the right Lines IK, LM, NO, and BD; produce IK and LM, each way to E and F, and to G and H; till EL=IK=KF, and GL=LM=MH, and draw the right Lines EG, FH.

*To determine the Surface and Solidity of a* Cube: As the Surface of a *Cube* conſiſts of ſix equal Squares, a Side multiply'd by it ſelf, and the Product by ſix, will give the Superficies; and the ſame Product, again, multiply'd by the Side, the Solidity. See SURFACE, and SOLIDITY.

*Coroll.* Hence, If the Side of a *Cube* be 10, the Solidity will be 1000; if that be 12, this will be 1728: Wherefore, the Geometrical Perch being 10 Foot, and the Geometrical Foot 10 Digits, &c. the *Cubic* Perch is 1000 *Cubic* Feet, and a *Cubic* Foot 1000 *Cubic* Digits, &c.

Hence, alſo, *Cubes* are in a triplicate Ratio of their Sides; and are equal, if their Sides be ſo.

CUBE, or CUBIC *Number*, in Arithmetick, is a Number ariſing from the Multiplication of a ſquare Number by its Root. See NUMBER.

Thus, if the ſquare Number 4, be multiplied by its Root, 2, the *Factum* 8 is a *Cube* or *Cubic Number*; and the Number 2, with reſpect thereto, a *Cube*-Root. See ROOT.

Hence, ſince, as Unity is to the Root, ſo is the Root to the Square; and as Unity is to the Root, ſo is the Square to the *Cube*; the Root will, alſo, be to the Square as the Square to the *Cube*: that is, Unity, the Root, the Square, and the *Cube*, are in continual Proportion; and the *Cube*-Root is the firſt of two Numbers that are Mean Proportionals between Unity and the *Cube*. See POWER.

*For the Compoſition of* CUBIC *Numbers.* Every *Cubic* Number of a Binominal Root, is compos'd of the *Cubic* Numbers of the two Parts, of the *Factum* of thrice the Square of the firſt Part into the ſecond, and of the *Factum* of thrice the Square of the ſecond Part into the firſt.

*Demonſt.* For a *Cubic* Number is produced by multiplying the Square by the Root: But the Square of a Binomial Root, is compos'd of the Squares of the Parts, and the double *Factum* of one Part into the other. See SQUARE.

Wherefore, the *Cube* is compos'd of the *Cube* of the firſt Part, of the triple *Factum* of the Square of the firſt Part into the ſecond, and of the triple *Factum* of the Square of the ſecond Part into the firſt, and of the *Cube* of the ſecond Part. See ROOT.

An ocular Demonſtration of this we have in the following Example, where Multiplication alone is uſed. Suppoſe, *v. g.* the Root 24, or 20+4. Here,

$$24^2 = 20^2 + 2.4.20 + 4^2$$
$$\underline{\qquad\qquad 20 + 4^2}$$
$$+4.20^2 + 2.4^2.20 + 4^3$$
$$20^3 + 2.4.20^2 + 4^2.20$$
$$\underline{\qquad\qquad\qquad\qquad}$$
$$24^3 = 20^3 + 3.20^2.4 + 3.4^2.20 + 4^3$$
$$20^3 = 8000$$
$$3.20^2.4 = 4800$$
$$3.4^2.20 = 960$$
$$4^3 = 64$$
$$\underline{\qquad\qquad}$$
$$24^3 = 13824$$

*Coroll.* Hence, as the Part on the right Hand is placed among Units, and that on the left among Tens; the *Cubic* Number of the right hand Part muſt be put in the right Place; the *Factum* of its triple Square into the left, in the ſecond Place; and the *Factum* of the triple Square of the left into the right, in the third: laſtly, the *Cube* of the left-hand Part falls in the fourth Place.

If the Root be a Multinomial, two or more Characters on the right muſt be eſteem'd as one; that it may have the form of a Binomial.

'Tis obvious, that any *Cube* is compos'd of the *Cubes* of the ſeveral Parts of the Root, and of the *Factums* of the triple Square of any of the left-hand Characters into the next on the right; and alſo of the *Factums* of the triple Square of the right-hand Characters into all the left. Suppoſe, *v. g.* the Root 243: Take 240 for one Part of the Root, 3 will be the other Part; Conſequently,

$$240^3 = 13824000$$
$$3.240^2.3 = 518400$$
$$3.240.3^2 = 6480$$
$$3^3 = 27.$$
$$\underline{\qquad\qquad\qquad}$$
$$243^3 = 14348907$$

The Places of the ſeveral *Factums*, are determin'd from what was obſerv'd above: for regard muſt here, too, be had to the Ciphers to be added to the Numbers multiplied by each other, if they be placed alone.

This Compoſition of *Cubic Numbers* once well conceiv'd, the Extraction of *Cubic* Roots will be eaſy. See EXTRACTION.

CUBE *Root*, or CUBIC *Root*, the Origin of a *Cube* Number; or a Number by whoſe Multiplication into it ſelf, and again into the Product, any given Number is form'd. See CUBE *Number*.

The *Extraction of the Cube Root*, is the ſame thing as the finding any Number, *v. g.* 2; by whoſe Multiplication into it ſelf three times, a given Number, *v. g.* 8, is produced: The Proceſs whereof, ſee under the Article EXTRACTION.

CUBEBS, in Pharmacy, a Fruit brought from the Iſland of *Java*, in Grains reſembling Pepper, both in form and ſize; whence ſome call it *Wild Pepper*.

'Tis ſaid, the Natives of the Place boil it ere they allow it to be exported, to prevent its being ſown in other Countries.

*Cubebs* fortify the Stomach, Brain, and other *Viſcera*; and enter as an Ingredient in ſeveral Officinal Compoſitions.

CUBIC *Equation*, is an Equation wherein the unknown Quantity is of three Dimenſions, as $x^3 = a^3 - b^3$, &c. See EQUATION.

*For the Conſtruction of Cubic Equations*, ſee CONSTRUCTION. *For their Reſolution*, ſee RESOLUTION. *For its Root*, ſee ROOT.

CUBICAL *Parabolois*, a Term us'd by ſome Writers for a Parabola of the higher Kind, *v. g.* where $a^2 x = y^3$, &c. See CURVE; ſee alſo PARABOLA.

CUBIT, a long Meaſure, us'd by the Antients, eſpecially the *Hebrews*; taken from the ordinary length of a Man's Arm, from the Elbow to the Tip of the Hand. See MEASURE, ARM, and HAND.

In the Scripture, we find *Cubits* of two lengths, the one equal, according to Dr. *Arbuthnot*, to 1 Foot, 9 Inches, $\frac{888}{1000}$ of an Inch, our Meaſure; being the fourth Part of a Fathom, double the Span, and triple the Palm: The other equal to $1.\frac{824}{1000}$ Foot, or the four hundredth Part of a Stadium.

The *Romans*, too, had a *Cubit*, equal to 1 Foot, 5 Inches, $\frac{406}{1000}$ of an Inch.

F. *Merſenne* makes the *Hebrew Cubit* 1 Foot, 4 Digits, and 5 Lines, with regard to the Foot of the Capitol. According to *Hero*, the Geometrical *Cubit* is 24 Digits; and according to *Vitruvius*, the Foot is $\frac{3}{4}$ of the *Roman Cubit*, *i. e.* 16 Digits. See FOOT, DIGIT, &c.

CUBITÆUS *Externus*, or *Ulnaris*, in Anatomy, the firſt of the Extenſor Muſcles of the Fingers.

It has its Name, as being placed along the *Cubitus*, externally. It riſes from the external Extuberance of the *Humerus*, and paſſing its Tendon under the *Ligamentum Annulare*, is inſerted into the fourth Bone of the *Metacarpus*, that ſuſtains the little Finger.

CUBITÆUS *Internus*, the firſt of the *Flexores*, placed along the *Cubitus*, withinſide the Arm. It riſes from the internal Extuberance of the *Humerus*, and part of the *Ulna*; upon which it runs all along till paſſes under the *Ligamentum Annulare*, and is inſerted by a ſtrong and ſhort Tendon into the fourth of the firſt Order of the *Carpus*.

CUBITUS, in Anatomy, a Bone of the Arm, reaching from the Elbow to the Wriſt; otherwiſe called *Ulna*, or the *greater Focile*. See ULNA.

Some uſe the Word for all that Part of the Arm between the Elbow and the Wriſt; including the *Ulna*, or *Cubitus*, properly ſo call'd, and the *Radius*. See ARM, and RADIUS; ſee alſo FOCIL.

CUBO-CUBO-CUBUS. See CUBUS-CUBI.

CUBO-CUBUS, the Term whereby *Diophantus*, *Vieta*, &c. diſtinguiſh the ſixth Power; which the *Arabs* call *Quadratum-cubi*. See POWER.

CUBOIDES, or *Os* CUBIFORME, in Anatomy, the ſeventh Bone of the Foot; ſo called, from its being in form of a *Cube*, or Die. See FOOT.

Some alſo call it *Multiforme*: It is ſituate in the fore-Part of the *Calcaneum*, in the ſame Rank with the *Oſſa Cuneiformia*.

Behind, it is articulated to the *Os Calcis*; before, to the two outer Bones of the *Metatarſus*; and within, it is join'd to the third *Os Cuneiforme*. See BONE.

CUBUS-CUBI, a Name whereby the *Arab* Writers, and thoſe who follow 'em, denominate the ninth Power, or a Number multiplied eight times by it ſelf; which *Diophantes*, and after him *Vieta*, *Oughtred*, &c. call *Cubo-cubo-cubus*. See POWER.

CUCKING-STOOL, or COKESTOOL, antiently call'd *Tumbrel*, and *Trebuchet*; an Engine for the Puniſhment of Scolds and unquiet Women, by ducking them in the Water.

*Kitchen* ſays, 'Every one having View of Frank-Pledge, 'ought to have a Pillory and a Tumbrel.' This Machine was much in uſe, even among our *Saxon* Anceſtors, who call'd it *Scealding-ſtole*.

This Puniſhment was antiently inflicted on Brewers and Bakers, tranſgreſſing the Law; who were thereupon, in ſuch a Stool or Chair, to be ducked *in Stercore*, ſome muddy or ſtinking Pond. This was antiently written *Gagingſtole*: In *Domeſday* it is called *Cathedra Stercoris*.

CUCULLARIS, in Anatomy, a Muſcle, ſo called from the reſemblance it is ſuppos'd to bear to a Monk's Cowl; and *Trapezius*, from its reſemblance to a geometrical Figure, call'd a *Trapezium*. See TRAPEZIUS.

The Fibres of this Muſcle have various Originations and Actions: whence Dr. *Drake* thinks it may be more properly call'd three, than one Muſcle.

The upper Order of Fibres or Muſcles, ſprings from the *Os Occipitis*; the ſecond from the Spine of the *Vertebræ* of the Neck; and the third from the Spines of the eight upper *Vertebræ* of the Thorax, or Back: and are inſerted into the Spine, *Acromium*, and Baſis of the *Scapula*, and part of the *Claviculæ*.

From the different Diſpoſitions of theſe Fibres, the *Scapula* is drawn different ways; the firſt pulling obliquely upwards, the laſt obliquely downwards, and the middle backwards: When they act all three together, they are ſaid to draw backwards only; *i. e.* the two Extremes antagonizing, the middle one alone is at liberty to act.

CUCULLATE *Flowers*, among Botaniſts, are ſuch as reſemble a *Cucullus*, or Monk's Hood, or Helmet. See FLOWER.

CUCULLUS, was antiently a kind of Traveller's Cap; call'd alſo *Cowl*, *Goul*, or *Gula*: whence the Name paſs'd to the Monks, among whom it ſignify'd their Frock, and Cap. See COWL.

The Word aroſe hence, that antiently they wore their Clothes turn'd up at the Neck and Sleeves, with a kind of Skin call'd *Gulæ*, or *Gules*, *Caules*, and *Cuſcules*; from *Cuſculium*, Grain of Scarlet.

CUCUPHA, an antient Form of Medicine; being a Cap, or Cover for the Head, with Cephalic Spices quilted therein; wore in many nervous Diſtempers, and particularly ſuch as more immediately affect the Head: as againſt Catarrhs, Defluxions, &c. It is now almoſt out of uſe.

CUCURBITACEOUS *Plants*, a Kind of Plants, ſo called from their reſemblance to the Gourd, call'd by the Latins *Cucurbita*, which is the Head of this Family. See PLANT.

Plants of the *Cucurbitaceous* Kind, ſend out their Branches every way; which are ſoft, and generally ſet with *Urillæ*, by means whereof they cling to the Bodies that are near 'em.

Their Flowers are either Sterile, or Fertile: The laſt knit, and yield fleſhy Fruits of various Figures; containing within 'em ſeveral flat Seed placed in three or four Lodges, or even a greater Number.

Theſe Seeds have uſually a white ſweetiſh Kernel; the greateſt part of 'em being of thoſe call'd *Frigidæ Majores*, or greater Cold Seeds.

The Pumpion, Muſhroom, Melon, &c. are of the *Cucurbitaceous* Kind.

CUCURBIT, in Chymiſtry, an Earthen, or Glaſs Veſſel, call'd alſo *Body*; wherein are put the Matters to be diſtill'd. See DISTILLATION.

It is ſometimes alſo made of Tin, and ſometimes of Braſs, tinn'd. When a Diſtillation is to be made, they fit on to it a glaſs Head, with an Aperture, and a Neck proportional. See RETORT.

CUCURBITULA, in Chirurgery, a Cupping-Glaſs, or Inſtrument uſed in the Operation of Cupping. See CUPPING-*Glaſs*.

CUDDY, in a Firſt Rate Man of War, is a Place lying between the Captain's and the Lieutenant's Cabins, and the Poop; and divided into Partitions, for the Maſter and Secretary's Officers.

CUE, an Item, or Innuendo, given to the Actors on the Stage, what, or when to ſpeak.

CUERPO. *To walk in Cuerpo*, is a *Spaniſh* Phraſe, for going without a Cloke; or without all the Formalities of a full Dreſs.

CUI *ante Divortium*, a Writ, which a Woman divorc'd from her Husband, hath, to recover Lands or Tenements from him to whom her Husband did alienate them during Marriage; becauſe, during the Marriage, ſhe could not gainſay it.

CUI *in Vita*, is a Writ of Entry, which a Widow hath againſt him to whom her Husband alienated her Lands or Tenements in his Life-time; ſpecifying, that, during his Life, ſhe could not withſtand it.

CUIRASSE, a piece of defenſive Armour, made of an Iron Plate well hammer'd; ſerving to cover the Body, from the Neck to the Girdle, both before and behind.

Hence, *Cuiraſſiers*, the Cavaliers arm'd with *Cuiraſſes*.

The *Cuiraſſe* was not brought into uſe till about the Year 1300. The *French* have ſtill a Regiment of *Cuiraſſiers*; and a good Part of the *German* Cavalry, are *cuiraſs'd*.

In the *Roman* Calendar, we find the Name of S. *Dominic the cuiraſs'd*; a Title given a Saint of the XIth Century, from his conſtant wearing of an Iron *Cuiraſſe*, by way of Penance.

Some derive the Word, by Corruption, from *Cucuraſſe*; becauſe it covers the Body: Others from the French *Cuir*, or the Latin *Corium*, Leather; whence *Coriaceus*: by reaſon defenſive Arms were originally made of Leather.

CULINARY, an Epithet frequently added to Fire; determining it to be a common Fire, excited in Wood, Coals, or other ordinary Fuel: In contradiſtinction to Solar Fire, or that rais'd by the Action of a Burning-Glaſs; to Central Fire; to Animal Fire, &c. See FIRE.

*Culinary Fire*, according to *Boerhaave*, conſiſts of a Portion of pure Elementary, or Solar Fire, attracted by the oily, or ſulphureous Parts of the Fuel, with ſuch Velocity, as that it moves the ſame, agitates and whirls 'em violently about, and by degrees breaks and attenuates them; renders 'em volatile, and diſperſes 'em in Air. See FUEL.

The Effect of Air upon this Fire, is to make, as it were, a Vault around it, and by that means, reſtrain and keep it in, determine it upon the Sulphur, and thus prevent its too haſty Diſſipation. See AIR.

The Word is form'd from the Latin *Culina*, Kitchen; this being the chief place of ſuch Fires.

CUL *de Lamp*, a *French* Term, properly ſignifying the bottom of a Lamp; uſed in Architecture for ſeveral Decorations, both of Maſonry and Joinery, found in Vaults and Ceilings, to finiſh the bottom of Works, and wreath'd ſomewhat in manner of a *Teſtudo*; particularly a kind of Pendentive in *Gothic* Vaults.

CUL *de Four*, a ſort of low, ſpherical Vault, Oven-like. See VAULT.

*Cul de Four of a Niche*, the arch'd Roof of a Niche, on a circular Plan. See NICHE.

CULLIAGE, or CULLAGE, a Right uſurp'd by the antient Lords, and eſtabliſh'd by a fooliſh Cuſtom, which gave 'em the firſt Night with their Vaſſals Brides.

'Tis ſaid this Right was eſtabliſh'd by *Ewen* King of *Scotland*; and finally aboliſh'd by *Malcolm* III. a Compenſation being ſettled in its ſtead; as occaſioning frequent Revolts of the Vaſſals againſt their Lords.

The Word is form'd from the French *Cul*, Breech.

CULMIFEROUS, in Botany, a Term applied to ſuch Plants as have a ſmooth-jointed Stalk, uſually hollow; the Stalk wrap'd about, at each Joint, with ſingle, narrow, ſharp-pointed Leaves; and the Seeds contain'd in chaffy Huſks. See CULMUS, and PLANT.

*Culmiferous Plants* are divided into two Kinds; thoſe with a *greater*, and thoſe with a *ſmaller* Seed.

Thoſe with a larger Seed are called *Frumentaceous*, or *Cereales*; and are again divided into *Spicatæ*, as Wheat, Rye, Spelt, Barley, Rice, Peaſe, &c. and *Paniculatæ* or *Jubatæ*, as Oats, Scordium, Milium, and Maiſe. See FRUMENTACEOUS, &c.

CULMINATION, in Aſtronomy, the Tranſit of a Star or Planet over the Meridian; or that Point of its Orbit wherein it is at its greateſt Altitude. See STAR, ALTITUDE, ORBIT, &c.

Hence, a Star is ſaid to *culminate*, when it paſſes the Meridian. See MERIDIAN, and MID-HAVEN.

*To find the* Culmination *of a Star, or the Time wherein it paſſes the Meridian.* On a Meridian-Line AB, (Tab. *Aſtronomy*, Fig.48) ſtretch a Thread, DC, perpendicularly; and from D to E another, DE, cutting the Meridian obliquely, at any Angle: The triangular Thread, therefore, DCE, will cut the Plane of the Horizon in the Meridian-Line, at right Angles; and conſequently will be in the Plane of the Meridian.

The Eye, therefore, being ſo placed as that the Thread DE may cover the Thread DC; wait till the Star be biſſected by the Triangle DCE; for then the Eye and the Star will, together with the Triangle DCE, be in the ſame Plane: Conſequently the Star is in the Meridian. See MERIDIAN.

*To find the* Culmination *of a Star by the Globe.* See GLOBE.

*To find the Time when a Star* culminates, *from a given right Aſcenſion of the Meridian, the Sun, and the Star.* Subtract the right Aſcenſion of the Sun from that of the Star; if that of the latter be the leſs, add 360° to it, and ſubtract the former from the Sum; convert the Remainder into Solar Time: (ſee TIME.) Thus will you have the Time paſs'd ſince the Star's *Culmination*.

Hence, alſo, we have the Hour of the Night. See HOUR.

CULMUS, is properly the Stem or Stalk of Corn, or Graſs; which in other Plants is call'd *Caulis*. See STEM, and STALK.

Hence, *Culmiferous Plants*, are ſuch as have a ſmooth-jointed Stalk, and uſually hollow; and at each Joint the Stalk is wrap'd about with ſingle, narrow, long, ſharp-pointed Leaves, and their Seeds are contain'd in chaffy Huſks. See CULMIFEROUS.

CUL-PRIT, a Term us'd by the Clerk of the Arraignments, when a Perſon is indicted for a criminal Matter. See INDICTMENT.

After the Indictment is read in Court (which is the Crown's Charge) againſt the Priſoner at the Bar; he is aſk'd if Guilty, or Not Guilty?

If he anſwers *Not Guilty*, there is next a Replication from the Crown, by continuing the Charge of Guilt upon him; which is expreſs'd by pronouncing the Word *Cul-prit*; *Cul* being an Abbreviation of the *Latin* Word *Culpabilis*, Guilty, and *prit* (now *pret*) the old *French* Word for *ready*.

From theſe two Aſſertions, therefore, of the Clerk of the Arraignments, the Priſoner is deem'd guilty of the Crime charg'd on him; and that the Crown is ready to prove it upon him.

That this is the true Explanation of the Term, is evident from the Form of the Entry of the Record of the Trial, when drawn at large.

CULTELLATION, a Term ſome Authors uſe for the meaſuring of Heights, and Diſtances, by Piecemeal; that is, by Inſtruments which give us ſuch Heights and Diſtances by Parts, and not all at one Operation. See MEASURING, ALTIMETRY, DISTANCE, &c.

CULVERIN, a Piece of Ordnance or Artillery, ſerving to carry a great diſtance. See ORDNANCE.

Of theſe there are three Kinds, *viz.* the *Culverin extraordinary*, the *ordinary*, and the *leaſt ſiz'd*.

The *Culverin extraordinary* has $5\frac{1}{2}$ Inches bore; its length 32 Calibers, or 13 Foot; weighs 4800 Pound; its Load above 12 Pound; carries a Shot 5 Inches $\frac{1}{4}$ Diameter, weighing 20 Pound weight.

The *Ordinary Culverin* is 12 Foot long; carries a Ball of 17 Pound 5 Ounces; Caliber $5\frac{1}{2}$ Inches; its weight 4500 Pound.

The *Culverin* of the *leaſt ſize*, has its Diameter 5 Inches; is 12 Foot long; weighing about 4000 Pounds; carries a Shot 3 Inches $\frac{3}{4}$ Diameter, weighing 14 Pounds 9 Ounces. See DEMI-*Culverin*.

*Menage* derives the Word from the Latin *Colubrina*; others from *Coluber*, Snake; either from the Length of the Piece, or the Ravages it makes.

CUMMIN, the Grain of a Plant of the ſame Name, much like that of Fennel; growing abundantly in the Iſle of *Malta*, where 'tis ſown and cultivated after the manner of Corn.

The *French* frequently call it *Anis aigre*, ſharp or ſour Anis.

'Tis us'd with Succeſs in the Vertigo, Wind-Colics, Tympanies, &c. 'Tis eſteem'd excellent to retrieve the Natural Heat in Horſes, Bulls, &c. The Pidgeons are exceedingly fond of it; whence ſome make uſe of it to people their Dove-houſes, incorporating it with an Earth naturally ſaline, or ſome other Earth that has imbib'd Urine.

This Seed, as well as the common Anis, yields, by Expreſſion, a kind of Oil, eſteem'd ſovereign in Rheumatiſms; provided it be us'd with Precaution, and in ſmall Quantities.

CUNETTE, in Fortification, a deep Trench, about three or four Fathom wide, ſunk along the middle of a dry Moat, to lade out the Water; or to make the Paſſage more difficult to the Enemy. See TRENCH.

CUNEUS, one of the Mechanical Powers; more uſually, by *Engliſh* Writers, call'd the *Wedge*. See WEDGE.

CUNEIFORME *Os*, in Anatomy. See SPHÆNOIDES.

CUNEIFORMIA *Oſſa*, the fourth, fifth, and ſixth Bones of the Foot; thus called from their wedge-like Shape, being large above, and narrow below.

They lie all three a-ſide of one another, and are of different Sizes; their upper Side convex, and their under hollow: by which means, the Muſcles and Tendons in the bottom of the Foot are not hurt in walking.

At one End they have each a *Sinus*, which receives the *Os Naviculare*; and at the other End are join'd each to one of the three inner Bones of the *Metatarſus*.

CUP, *Calyx*, a Veſſel ſo call'd, of various Forms and Uſes. See CHALICE.

In the *Ephem. German.* we have a Deſcription of a *Cup* made of a common Pepper-Corn, by *Oſwald Nerlinger*; which holds 1200 other Ivory *Cups*, each having its ſeveral Handle; all gilt on the Edges, with room for 400 more.

CUPS, among Herbaliſts, are thoſe ſhort Huſks in which Flowers grow; ſome being pointed into two, three, four, five, or ſix Leaves. See CALYX.

CUPOLA, in Architecture, a ſpherical Vault; or the round Top of the Dome of a Church, in form of a *Cup* inverted. See DOME.

Some call it a *Lanthorn*. See LANTHORN.

The Word is *Italian*, form'd of the barbarous Latin *Cuppala*; otherwiſe call'd *Thola*, and *Fornix*.

CUPPEL, CUPEL, or COUPEL, among Chymiſts, a Veſſel or Utenſil, uſed in the trying and purifying of Gold and Silver; call'd alſo *Teſt*. See COUPEL, TEST, PURIFYING, and REFINING; ſee alſo ESSAY.

CUPPING, an Operation in Chirurgery, for the Diſcharge of Blood and other Humours by the Skin.

It is perform'd by collecting the Humours into a Tumor under the Cutis; and letting 'em out thence, by Scarification; *i. e.* by ſeveral Inciſions made with a Scarificator. See SCARIFICATION.

The Inſtruments uſed herein, are the *Cucurbitulæ*, or *Cupping-Glaſſes*, and *Scarificator*: The Deſcription of each whereof ſee under their proper Head.

*Cupping* is perform'd either *with* or *without* Fire.

*Cupping with Fire*, is the more uſual Proceſs; and is commonly, among us, thus effected: The Air in the Cavity of the *Cucurbitula* is heated, and ſo rarefy'd, by the Application of the Flame of a Lamp, or the like; and the Veſſel immediately apply'd to the Part to be *cupp'd*.

Others, eſpecially the *French*, proceed thus: A piece of Card is cut round, and a Lamp, or four little Wax Candles affix'd to it: This is placed after the manner of a Candleſtick to the Part whereon the Operation is to be perform'd, and cover'd with a *Cucurbitula*, or Cupping-Glaſs.

After the included Air has been well heated and rarefy'd with the Flames of the Candles, it is clap'd cloſe to the Skin; which it has no ſooner touch'd but the Candles are extinguiſh'd, and the Tumor rais'd.

In *Cupping without Fire*, inſtead of rarefying the Air included in the *Cupping*-Glaſs by heat; 'tis done by a Syringe applied to the Neck of the *Cupping*-Glaſs, fitted with a braſs Collar, Cap, and Valve: The *Cupping*-Glaſs being applied to the Skin, and the Syringe wrought, part of the Air is pump'd out of the *Cucurbitula*; and thus the Tumor riſes, as in the former Caſe. See SYRINGE.

The Reaſon of the Phænomenon is this: The Air included in the *Cupping*-Glaſs being rarefied, a great Part of the Load which before preſs'd it and kept it down, and which ſtill continues to preſs the reſt of the Body, is taken off; upon which the Air, known to be contain'd in the Veſſels of the Body, and mix'd with the Blood and Juices, expands it ſelf; and raiſes a Tumor, carrying with it the Fluids wherewith it is mingled.

The Operation is perform'd on the Breaſts and Thighs, to ſtop or promote the Menſes; on the Navel for the Cholick.

*Cupping* is alſo us'd for Defluxions on the Eyes, for venomous Wounds, and Buboes; on the Head, for Apoplexies, &c.

CUPPING-GLASS, *Cucurbitula*, in Chirurgery, a Glaſs Veſſel, applied to certain Parts of the Body, to draw the Blood and other Humours from within outwards; to be afterwards diſcharg'd, thro' ſeveral Inciſions made with a Scarificator. See CUPPING.

The Veſſel is of various Dimenſions: Sometimes, inſtead of Glaſs, 'tis made of Wood, Horn, Braſs, Silver, &c.

When the *Cupping* is to be perform'd with Fire; the Veſſel is heated with Candles, Tow, a Torch, Lamp, or the like; and in this State applied cloſe to the Part: The Air

in its Cavity being by this means rarefy'd, and brought near to the Condition of a Vacuum; that Part of the Body cover'd by it being leſs preſs'd by the Air than the reſt, its Juices are forc'd up with the Cutis, and raiſe a Bunch in the Cavity of the Veſſel: to which the Scarificator being apply'd, and ten or twelve Inciſions made at the ſame time, a plentiful Evacuation is effected.

To Cup without Fire, the Veſſel is fitted with a braſs Neck; to which a Syringe being apply'd, a Rarefaction is produc'd, by working it to and fro: (ſee SYRINGE.) The reſt as in the former Caſe.

CURATE, is properly a Parſon, or Vicar of a Pariſh, who hath the Charge or *Cure* of the Pariſhioners Souls. See CURE, PARSON, &c.

*Curate* is now more generally uſed for a Deputy or Subſtitute; or one who officiates in the Place of the Incumbent, or Beneficiary.

CURATIVE *Indication*, among Phyſicians, a Sign which has relation to the Diſeaſe to be cured. See SYMPTOM, and INDICATION.

CURATOR, in the Civil Law, a *Truſtee*, or Perſon elected or nominated to take care of the Affairs and Intereſts of a Perſon emancipated, or interdicted. See EMANCIPATION.

In Countries where the *Roman* Law prevails, between the Age of 14 and 24 Years, Minors have *Curators* aſſign'd 'em: Till 14, they have Tutors. See MINOR, and TUTOR.

CURATOR *of an Academy*, in the United Provinces, is an elective Office, to which belongs the Direction of the Affairs of the Academy; as, the Adminiſtration of the Revenues, the Inſpection of the Profeſſors, &c. The *Curators* are choſe by the States of each Province: The Academy of *Leyden* has three; the Bourgemaiſters of the City have a fourth.

CURDLING, the *coagulating*, or fixing of any fluid Body; particularly Milk. See COAGULATION.

*Pauſanias* ſays, *Ariſtæus* Son of *Apollo*, and *Cyrene* Daughter of the River *Peneus*, were the firſt who found the Secret of *curdling* Milk. See MILK.

At *Florence*, they *curdle* their Milk for the making of Cheeſe with Artichoke Flowers; in lieu of the Rennet us'd for the ſame Purpoſe among us. See CHEESE.

The *Biſaltes*, a People of *Macedonia*, *Rochfort* obſerves, live wholly of *curdled* Milk, *i. e.* of Curds. He adds, that Curds is the whole Food of the People of the upper *Auvergne* in *France*, and Whey their only drink.

Women newly deliver'd are ſubject to have their Milk *curdled*, or converted into little *Grumæ* in their Breaſts, which occaſions violent Pains, with a ſhivering in the back.

'Tis occaſion'd by the want of being ſuck'd, whence the Method of remedying and preventing it is apparent.

CURE *of Souls*, a Benefice, the Incumbent whereof has the Charge and Guidance of the Souls of the People within a certain extent of Ground, call'd a *Pariſh*. See BENEFICE, PARISH, &c.

Such is a Vicar, a Rector, &c. in contradiſtinction to a Prebend, a Dean, a Chantor, &c. See VICARAGE, &c.

CURE, in Falconry, a Remedy which the Falconers give their Birds, in form of little Balls or Pellets, of Hemp, Cotton, or Feathers, to imbibe and dry up their Phlegm.

The beſt *Cure* is that made of Feathers, or of little Bones of Birds, bruis'd; or of Hares, or Rabbets Feet. That of Cotton burns and conſumes the Lungs; eſpecially when given without waſhing.

From the Condition of the *Cure*, when evacuated, they Judge of the State of the Bird. See CASTING.

CURETES, in Antiquity, a ſort of People of the Iſle of *Crete*; call'd alſo *Corybantes*. See CORYBANTES.

The *Curetes* are ſaid to have been originally of Mount *Ida*, in *Phrygia*; for which reaſon they were alſo call'd *Idæi Dactyli*. See DACTYLI.

The Name *Curetes*, according to *Strabo*, was given 'em by reaſon of their cutting off the Hair before, to prevent the Enemy's taking hold thereof: the Word being *Greek*, κουρῆτες, of κουρά, the Act of cutting off the Hair; of κείρω, *tondo*. Others derive it from κουροτροφία, the feeding or educating of a Child; by reaſon they are ſaid to have educated *Jupiter*.

*Ovid* ſays, they aroſe from a huge Shower of Rain: *Lucian* and *Diodorus Siculus* repreſent them as very expert in caſting of Darts; tho other Authors give 'em no Weapons but Bucklers and Pikes: But all agree in furniſhing 'em with Tabours, and Caſtanetta's; and relate that they uſed to dance much to the Noiſe and claſhing thereof.

Some Authors, however, give a different Account of the *Curetes*: According to *Pezron*, and others, the *Curetes* were, in the Times of *Saturn*, &c. and in the Countries of *Crete* and *Phrygia*, what the Druids and Bards were afterwards among the *Gauls*, &c. *i. e.* they were Prieſts, and Sacrificers, who took care of what related to Religion, and the Worſhip of the Gods. See DRUIDS.

Hence, as in thoſe Days it was ſuppos'd there was no Communication with the Gods but by Divinations and Auguries, and the Operations of Magick; the *Curetes* paſs'd for Magicians and Enchanters: To theſe they added the Study of the Stars, of Nature, and Poeſy; and ſo were Philoſophers, Aſtronomers, &c.

Such were the *Curetes*, and after them the Druids; with this difference, that the *Curetes*, in the Time of the Flamens, went to the Wars; for which reaſon they were arm'd, and were wonderfully dextrous in dancing, Cap-a-pe, ſhaking their Bucklers and Javelins: From which Action, *Pezron* conjectures, they took their Name, *Curetes*; *Curo*, in the *Celtic*, being the ſame with the κείρω, of the *Greek*.

According to *Kircher*, the *Curetes* were what the *Spirits* are among the *Caballiſts*, the *Powers* in *Dionyſius*, the *Demons* among the *Platoniſts*, and the *Genii* among the *Egyptians*. See DÆMON, &c.

*Voſſius* diſtinguiſhes three Kinds of *Curetes*, thoſe of *Etolia*, thoſe of *Phrygia*, and thoſe of *Crete*, which were originally derived from the *Phrygians*.

The firſt, he ſays, took their Name from κουρά, *tonſure*; in regard, from the Time of a Combat wherein the Enemy ſeiz'd their long Hair, they always kept it cut: Thoſe of *Phrygia* and *Crete*, he ſuppoſes were ſo call'd from κοῦρος, *young Man*; in regard they were young; or becauſe they nurs'd *Jupiter* when he was young. *De Idololat.*

CURFEW, or COURFEU, q. d. *Couvre-feu*, a Signal of Retreat, given in Cities taken in War, &c. to advertiſe the Inhabitants to go to bed, and not to ſtir out any more.

The *Curfeu-Bell*, wherewith the Signal was given, was ſometimes hung up as a Puniſhment of Sedition. *Paſquier* ſays, it was call'd *Carfeu*, and *Garefeu*; as being intended to advertiſe the People to ſecure themſelves from the Robbers and Debauchees of the Night.

The moſt antient *Curfeu*, was that eſtabliſh'd in *England*, by *William* the Conqueror; who appointed, under ſevere Penalties, that at the ringing of a Bell, at eight a Clock in the Evening, every one ſhould put out their Lights, *cover*, or rake up their Fires, and go to bed.

Whence, to this Day, where a Bell is accuſtom'd to be rung about Bed-time, 'tis call'd *Curfeu-Bell*.

CURIA, in our antient Cuſtoms. It was uſual for the Kings of *England* to aſſemble the Biſhops, Peers, and great Men of the Kingdom, to ſome particular Place, at the chief Feſtivals in the Year; and this Aſſembly is call'd, by our Hiſtorians, *Curia*; becauſe there they conſulted about the weighty Affairs of the Nation: whence it was ſometimes alſo call'd, *Solennis Curia*, *Generalis Curia*, *Auguſtalis Curia*, and *Curia Publica*, &c. See COURT.

CURIA *adviſare vult*, in Law, is a Deliberation, which the Court ſometimes takes, before they give Judgment in a Cauſe wherein there ſeems to be any Point of difficulty.

CURIA *Baronum*. See COURT-*Baron*.

CURIA *Claudenda*, is a Writ that lies againſt him who ſhould fence and encloſe Ground, but refuſes or defers to do it.

CURIALITAS *Angliæ*. See COURTESY *of England*.

CURIA *Militum*, a Court ſo called; antiently held at *Carisbrook* Caſtle, in the Iſle of *Wight*. *Et idem Dominus Willielmus de inſula facere debet ſectam ad Curiam Domini caſtri de Crasbroc, de tribus ſeptimanis in tres ſeptimanas, in Curia quæ vocatur* Curia Militum.

CURIA, among the *Romans*, a Portion or Diviſion of a Tribe. See TRIBE.

In the Time of *Romulus*, a Tribe conſiſted of ten *Curiæ*, or a thouſand Men; each *Curia* being one hundred: That Legiſlator made the firſt Diviſion of his People into thirty *Curiæ*.

Afterwards, the Word *Curia*, *Curies*, or *Domus Curialis*, became uſed for the Place where each *Curia* held its Aſſemblies: Hence, *Curia* paſs'd to the Senate-houſe; and 'tis hence the Moderns come to uſe the Word *Curia*, Court, for a Place of Juſtice, and for the Judges, &c. there aſſembled. See COURT.

Some derive the Word *Curia* from *Cruor*; for what Reaſon we ſee not. *Varro* brings it from *Cura*, Care, *q. d.* an Aſſembly of People, charg'd with the Care of Publick Affairs. Others will have the Word come from the *Greeks*; maintaining, that at *Athens* they call'd κυρία the Place where the Magiſtrate held his Aſſizes, and the People uſed to aſſemble: κυρία, again, may come from κῦρος, *Authority*, *Power*; in regard, it was here the Laws were made. Hence alſo,

CURIO, the Chief, and Prieſt of a *Curia*.

*Romulus*, upon dividing the People into *Curiæ*, gave each Diviſion a Chief, who was to be Prieſt of that *Curia*, under the Title of *Curio*, *Curion*, and *Flamen Curialis*.

His Buſineſs was to provide and officiate at the Sacrifices of the *Curia*, which were call'd *Curionia*; the *Curia* furniſhing him with a Sum of Money on that Conſideration: which Penſion or Appointment was call'd *Curionium*.

Each Diviſion had the Election of its *Curio* ; but all theſe particular *Curio's*, were under the Direction of a Superior, or General, call'd *Curio Maximus* ; who was the Head of the Body ; and elected by all the *Curio's*, aſſembled in the *Comitia Curiata*.

All theſe Inſtitutions were ſet a-foot by *Romulus*, and confirm'd by *Numa*, as *Halicarnaſſæus* relates it. *Goodwin* will have two *Curio's* in each *Curia*.

CURIOSUS, *Curious*, an Officer of the *Roman* Empire, during the Emperors of the middle Age.

The *Curioſi* were Perſons appointed to have an Eye that there were no Frauds, and Malverſations committed ; particularly no Abuſes in what related to the Poſts, the Roads, *&c.* and to give Intelligence to the Court of what paſs'd in the Provinces.

This made them People of Importance ; and put 'em in a Condition of doing more harm than they prevented : on which account, *Honorius* caſhier'd 'em, at leaſt in ſome Parts of the Empire, *Anno* 415.

The *Curioſi* came pretty near to what we call Controllers : They had their Name from *Cura*, Care ; *Quod Curis agendis & erectionibus curſus publici inſpiciendis operam darent.*

CURLING *Stuff*, in Joinery. See CROSS-GRAIN'D *Stuff*.

CURNOCK, a Meaſure of Corn, containing four Buſhels. See MEASURE, and BUSHEL.

CURRANTS, a Kind of little Raiſins, or dried Grapes, of different Colours ; black, white, or red ; of the ſize of ordinary Gooſeberries, brought from ſeveral Places of the *Archipelago*, and among others, from the Iſthmus of *Corinth* ; whence their Name.

They muſt be choſen new, ſmall, and in large Maſſes ; and care be taken that the little *Spaniſh Currants* ben't foiſted in their room. When made up in Bales, they may keep two or three Years, without ſtirring, or giving 'em Air.

Their uſe is in ſeaſoning ſeveral Viands, and in ſome medicinal Compoſitions ; where they ſerve in lieu of Raiſins.

Sir *George Wheeler's* account of theſe Fruit, and the manner of preparing 'em is very curious.

The Iſland of *Zant*, he obſerves, is the chief Place whence the *Currants* are brought : the *Morea*, or the *Iſthmus* of *Corinth*, which was antiently the principal Plantation, and whence the *Latins* denominate 'em *Uvæ Corinthiacæ*, now, produces no more ; as having been much neglected : the Jealouſy of the *Turks* not allowing large Veſſels to enter the Gulf, to take 'em off their Hands.

They don't grow on Buſhes, like our Gooſeberries, tho that be the common Opinion ; but on Vines, like other Grapes ; except that the Leaves are ſomewhat thicker, and the Grapes ſomewhat ſmaller : They have no Stone ; and, in this Country, are all red, or rather black.

They gather 'em in *Auguſt*, diſpoſe 'em in Beds on the Ground till they be dry, clean 'em, and lay 'em up in Magazines, which the Natives call *Seraglio's* ; pouring them in at a Hole, till the Magazine be full. They cling ſo faſt together by their own weight, that they are forc'd to be dug out with Iron Inſtruments.

To barrel 'em for ſending abroad, they have People who greaſe their Feet and Legs, and tread 'em cloſe, that they may keep the better. They are ſold for about 12 Crowns the thouſand Weight ; and pay as much Cuſtom to the State of *Venice*.

*Zant* produces enough yearly to load five or ſix Veſſels ; *Cephalonia* three or four ; and the other Iſlands one. The *Engliſh* have a Factory at *Zant* ; the *Dutch* two or three Merchants, and the *French* one : the *Engliſh* conſuming more than ſix times the Quantity that both *France* and *Holland* do together.

Thoſe of *Zant* know but little of the uſe we make of 'em ; being perſuaded they only ſerve in dying of Cloth ; and being entirely ignorant of the Luxury of Chriſtmas Pyes, Puddings, *&c.*

CURRANT, or COURANT *Money*, good Money, or that which paſſes in Commerce from one to another. See COURANT.

CURRANT, *Curranto*, a ſort of running *French* Dance : Alſo a Muſical Air in triple Time. See COURANT.

CURRENT, in Hydrography, a Stream, or Flux of Water in any certain Direction. See RIVER, and WAVE.

*Currents*, in the Sea, are either *Natural* and *General*, as ariſing from the diurnal Rotation of the Earth on its Axis ; or *Accidental*, and *Particular*, caus'd by the Waters being driven againſt Promontories, or into Gulphs and Straights ; where, wanting room to ſpread, they are driven back, and thus diſturb the ordinary Flux of the Sea. See SEA, FLUX, *&c.*

The *Currents* are ſo violent under the Equator, where the Motion of the Earth is the greateſt, that they carry Veſſels very ſpeedily from *Africa* to *America* ; but abſolutely prevent their return the ſame way : ſo that Ships are forc'd to run as far as the 40th Degree of Latitude, to find a Paſſage into *Europe*.

In the Straights of *Gibraltar*, the *Currents* almoſt conſtantly drive to the Eaſtward, and carry Ships into the *Mediterranean* : They are uſually, too, found to drive the ſame way in St. *George's Channel*. The great Violence and dangerouſneſs of the Sea in the Straights of *Magellan*, is attributed to two contrary *Currents* ſetting in, one from the South, and the other from the North Sea.

CURRENTS, with reſpect to Navigation, may be defin'd, certain progreſſive Motions of the Water of the Sea, in ſeveral Places, either quite down to the Bottom, or to a certain determinate depth ; by which a Ship may happen to be carry'd forward more ſwiftly, or retarded in her Courſe, according to the Direction or Setting of the *Current*, in, with, or againſt the Courſe or Way of the Ship. See NAVIGATION.

The Buſineſs of *Currents* making a conſiderable Article in Navigation ; the way they ſet, together with their Strength, is to be carefully obſerv'd : this ſome do by the Ripplings of the Water, and by the driving of the Froth along the Shore, when in ſight of it : But the more uſual, as well as more accurate way, is thus :

They firſt fix their Boat, by throwing out a triangular piece of Wood, with a piece of Lead faſten'd to it and to the Stem of the Boat with a Cord ; and letting it ſink 60 Fathom, or more ; or, ſometimes, by a Kettle ty'd by the Bowl, and ſunk, as the other.

By either of theſe means, the Boat is brought to ride as at Anchor ; which done, the Log is caſt over, the Glaſs turn'd, and as the Log-line veers out, the Drift of the Log is ſet with the Compaſs. See LOG-LINE.

This ſhews whether there be any *Current*, or none ; and if any, which way it ſets, and at what rate it drives : obſerving, however, to add ſomething to the Drift, for the Boat's Drift ; for tho ſhe appear to ſtand ſtill, yet, in reality, ſhe is found to move. This Addition Experience has thus determin'd ; if the Line ſhe ride by be 60 Fathom, a third Part of the Drift to be added ; if 80 Fathom, a fourth ; if 100, a fifth.

If a Ship ſail along the Direction of a *Current*, 'tis evident the Velocity of the *Current* muſt be added to that of the Veſſel : If her Courſe be directly againſt the *Current*, it muſt be ſubtracted ; if ſhe ſail athwart the *Current*, her Motion will be compounded with that of the *Current* ; and her Velocity augmented or retarded, according to the Angle of her Direction, with that of the Direction of the *Current* ; *i. e.* ſhe will proceed in the Diagonal of the two Lines of Direction, and will deſcribe or paſs thro' that Diagonal in the ſame Time wherein ſhe would have deſcrib'd either of the Sides, by the ſeparate Forces. See COMPOSITION of *Motion*.

*To determine a Ship's Courſe and Diſtance, ſailing obliquely with, or againſt a* Current. Suppoſe, *v. g.* ſhe ſails N.E. 110 Miles, in a *Current* which ſets S.W. 30 Miles in the ſame Time : To ſolve the Problem geometrically ; ſet off 4 Points from N towards E, (Tab. *Navigation*, Fig. 15.) and draw A C equal to 110 Miles ; from C draw C B, parallel to the Line N N E, and equal to 30 Miles : Laſtly, draw A B, which will be the Ship's true Courſe and Diſtance.

*To find which Trigonometrically.* In the Triangle A B C, there are given A C 110, B C 30, and the Angle C, 22° 30′ ; then, $AC+:AC-BC::t,\frac{1}{2}A+B:t,\frac{1}{2}B-A$. That is, as the Sum of A C and B C, *viz.* 140, is to their Difference 80 : : ſo is the Tangent of 78° 45′ to the Tangent of 70° 49′. Hence her true Courſe appears to be N.E. 7°, 56′ Eaſterly. For her Diſtance ; as the Sine of the Angle A, 7° 56′, is to the Drift of the *Current* B C, 30, ſo is the Sine of the Angle at C 22° 30′, to the Diſtance run, 83, two Miles. See COURSE.

*Under*-CURRENTS. Dr. *Halley* makes it highly probable, that in the *Downs*, in the Straights of *Gibraltar*, &c. there is an *Under-Current*, whereby as much Water is carried out, as is brought in by the *upper Current*.

This he argues from the Offing between the North and South Foreland, where it runs Tide and Half-Tide, *i. e.* it is either Ebb or Flood in that Part of the *Downs*, three Hours ere it is ſo off at Sea : A certain Sign, that tho the Tide of Flood runs aloft, yet the Tide of Ebb runs under-foot, *i. e.* cloſe by the Ground ; and ſo at the Tide of Ebb it will flow under-foot.

This he confirms by an Experiment in the *Baltic* Sound, which he receiv'd from an able Seaman preſent at the making it : Being there, then, with one of the King's Frigates, they went with their Pinnace into the Mid-Stream, and were carried violently by the *Current*. Soon after that they ſunk a Baſket with a large Cannon-Bullet, to a certain depth of Water, which gave check to the Boat's Motion ; and ſinking it ſtill lower and lower, the Boat was driven a-head to the Windward, againſt the *upper Current* : the *Current* aloft, not being above four or five Fathom deep. He added, that the lower the Baſket was let down, the ſtronger the *Under-Current* was found.

From this Principle, 'tis eaſy to account for that vaſt Draught of Water continually pouring in with the *Current* out of the *Atlantic* into the *Mediterranean*, thro' the Straights of *Gibraltar* ; a Paſſage about 20 Miles broad : yet,

yet without any ſenſible riſing of the Water along the Coaſts of *Barbary*, &c. or any overflowing of the Lands, which there lie very low.

CURRICULUS, in our antient Writers, the *Year*, or Courſe of a Year. See YEAR.

*Actum eſt hoc annorum Dominicæ incarnationis quatuor quinquagenis & quinquies, quinis luſtris & tribus* curriculis, *i. e.* In the Year 1028; for four times fifty makes two hundred, and five times two hundred makes one thouſand; five *Luſtra* are twenty five Years, and three *Curriculi* are three Years.

CURRYING, or COURRYING, a Method of preparing Leather, with Oil or Tallow; which raiſes on the Hair, or Wool-ſide, a kind of Grain, not unlike that of *Morocco*, or *Maroquin*. Tho there is alſo a Kind of *curried* Leather without Grain. See LEATHER.

*Currying* is the laſt Preparation, and puts the Leather in a Condition to be us'd for Shoes, Saddles, Harneſs, &c. It is equally practis'd on Sheep, Calf, and Cows-Skins.

The Colours given in *Currying*, are, black, white, red, yellow, and green: The other Colours are given by the Skinners; who differ from the *Curriers* in this, That they apply their Colours on the Fleſh-ſide; the *Curriers* on the Hair-ſide.

*Manner of* currying *in black, with the Grain.*

Of Blacks there are four Caſes: Either the Skins are put in Tallow on both Sides; or Oil is us'd, in lieu of Tallow, and nothing on the other; or Tallow is us'd on both Sides, but no Grain rais'd.

The two firſt are us'd for Cows and Calves Leather; the ſecond is the only way uſed for Sheep; and the two laſt are uſed occaſionally for Cow and Bullock: For Calf and Sheep, they uſe Sumac on the Fleſh-ſide, which gives an Orange-caſt.

For *Neats-Skin* in black; The Skin, coming from the Tanner, is wet ſeveral times with a Broom, roll'd and trod under-foot to make it tractable, drain'd, and as much of the remaining Fleſh as poſſible taken off with the Knife; hung in the Air till half dry, then wet and trampled again, and again.

This done, 'tis rub'd over with a Pummel, or Call, having Niches in manner of Teeth, to render it ſtill more pliant; and ſing'd with Straw, to prepare it to receive the Tallow; which is applied, boiling hot, on both Sides.

The Skin is then ſing'd a ſecond time, laid four Hours in a Veſſel of freſh Water, trampled, and work'd a ſecond time with the Pummel on each ſide, and ſtoutly drain'd; ſmeer'd over with its firſt black, made of Galls and Ferailles, boil'd in Beer-agre, or ſour Beer; half dry'd, ſtretch'd on a Table, and the Grain beat down with a flat Iron Inſtrument, drawn over it from place to place.

It now receives its ſecond black, made of Galls, Copperas, and Gum Arabic; when dry, and ſtretch'd on a Table, 'tis ſmeer'd over with Beer-agre; then folded from Corner to Corner, and the Pummel drawn over it to cut the Grain, firſt on the Hair-ſide, then on the Fleſh-ſide; the laſt with a Pummel of Cork: The Beer hanging in it is taken out with a Hair Torch, boil'd in Hatter's Lie; and the Skin faſten'd to the Table, and clean'd with the Iron Inſtrument abovemention'd, and again wip'd with a piece of worſted Stocking. The Skin is now brighten'd, on the Hair-ſide, by a Luſtre of Barberries, to prepare it to receive its laſt Grain.

The Grain, we already obſerv'd, is begun, by folding the Skin, the Hair-ſide inwards, ſeveral ways: to finiſh it, 'tis again folded, after its firſt Luſtre, two ways; firſt from Corner to Corner, a little ſlanting; then a-croſs, *i. e.* firſt directly, or from Eye to Eye, then from Head to Tail.

The Grain thus effected, the laſt Luſtre, which makes its laſt Preparation, is given; compos'd of Gum Arabic, Garlick, Beer Vinegar, and *Flanders* Size, boil'd together, and applied cold. See LUSTRE.

*Calf-Skin*, in black, is prepared much after the ſame manner; tho begun differently. After wetting, taking off as much of the Fleſh remaining as poſſible, and drying; they pounce the Fleſh-ſide with a hard rough Pounce-Stone, which makes it more ſmooth and gentle; then give the Grain with the Pummel, put in the Tallow: the reſt as before.

*Sheep-Skins*, in black. What theſe have peculiar in their Preparation, is, that they are firſt ſtretch'd on a Table to get off the Bourre, or Tan wherewith they are loaden; then wet, trod under-foot, and Tallow added on the Hair-ſide: they are again wet, again trod, ſtretch'd on the Table, and the Water ſqueez'd out with the Pummel; then black'd, repaſs'd under the Pummel on each ſide, dried, and all the Roughneſs and Inequality par'd off with a flat, round, cutting Inſtrument: the reſt as before.

*Sleek Leather*, or that without any Grain, made of Cows or Bullocks Leather, differs a little in its Preparation from the former. The Skins being wet, trod, and paſs'd under the Pummel, the Fleſh is taken off; the reſt as in the firſt Article: Obſerving, that the Tallow be applied on both Sides as thick as poſſible: being now ſteep'd in Water, trod, friz'd, and black'd the firſt time; the ſecond black is laid on, till the Hair-ſide be quite ſmooth. After receiving their two Luſtres, they are preſs'd between two Tables; without having plaited or folded 'em in any manner during the whole Preparation.

CURSITOR, an Officer or Clerk belonging to the Court of Chancery, who maketh out original Writs. See CHANCERY, and WRIT.

Theſe are alſo called *Clerks of the Courſe*; and are 24 in Number: making a Corporation of themſelves. To each of 'em are allotted ſeveral Shires; in which Shires they make out ſuch original Writs as are by the Subject requir'd.

CURSOR, a Piece, little Ruler, or Label of Braſs, divided like a Line of Sines, and ſliding in a Groove, or Notch, along the middle of another Label, or Ruler, repreſenting the Horizon, and always at right Angles to it.

It is uſed in the *Analemma*. See ANALEMMA.

CURSOR is alſo uſed for a Point ſcrew'd on the Beam-Compaſs; and which may be moved, or ſlidden along the Beam thereof, for the ſtriking of greater or leſs Circles. See *Beam*-COMPASS.

CURTAILING, in the Manage, the *Docking*, or cutting off a Horſe's Tail. See DOCKING.

The Practice of *Curtailing* is no where in vogue ſo much as in *England*; it being a popular Opinion, that the cutting off the Tail renders the Horſe's Chine or Back the ſtronger, and more able to bear Burdens: which ſeems warranted by Experience.

The Amputation is uſually made between the fourth and fifth Joints of the Tail; a Ligature being firſt ty'd tight about the Place, to prevent the Flux of Blood; and the raw Stump afterwards ſear'd up with a hot Iron, till the Extremities of the Veſſels be all ſtop'd.

CURTAIN, or COURTINE, in Fortification, that Part of a Wall, or Rampart, which is between two Baſtions; or which joins the Flanks thereof. See RAMPART, and BASTION.

It is uſually border'd with a Parapet five Foot high; behind which the Soldiers ſtand to fire upon the Covert Way, and into the Moat.

Beſiegers ſeldom carry on their Attacks againſt the *Curtain*; becauſe it is the beſt flanked of any Part. See FLANK.

*Du Cange* derives the Word *Curtain* from the Latin *Cortina*, *quaſi minor Cortis*, a little Country Court, inclos'd with Walls: He ſays, it was in Imitation hereof, that they gave this Name to the Walls and Parapets of Cities, which incloſe 'em like *Courts*: He adds, that the *Curtains* of Beds take their Name from the ſame Origin; that *Cortis* was the Name of the General's, or Prince's Tent; and that thoſe who guarded it were call'd *Cortinarii* and *Curtiſani*.

CURTATE *Diſtance*, in Aſtronomy, the Diſtance of a Planet's Place from the Sun, reduced to the Ecliptick; or, the Interval between the Sun, and that Point where a Perpendicular let fall from the Planet, meets with the Ecliptic. See PLACE, and DISTANCE.

CURTATION, the Interval between a Planet's Diſtance from the Sun, and the *Curtate* Diſtance. See PLANET.

From the preceding Article, 'tis eaſy to find the *Curtate Diſtance*; whence the manner of conſtructing Tables of *Curtations* is obvious.

The Quantity of Inclination, Reduction, and *Curtation* of a Planet, depending on the Argument of the Latitude; *Kepler*, in his *Rhudolphin Tables*, reduces the Tables of 'em all into one, under the Title of *Tabulæ Latitudinariæ*.

CURTESY. See COURTESY.

CURTICONE, in Geometry, a Cone whoſe top is cut off by a Plane parallel to its Baſis; call'd alſo *Truncated Cone*. See TRUNCATED.

CURVATURE *of a Line*, is its Bending, or Flexure; whereby it becomes a Curve, of ſuch peculiar Properties. See LINE, and CURVE.

Thus, the *Curvature* of the Circle is ſuch, as that all Points of the Periphery are equally diſtant from one Point within, called the Centre.

The *Curvatures* of different Circles, are to one another reciprocally as their Radii. See CIRCLE.

CURVE, in Geometry, a Line, wherein the ſeveral Points it conſiſts of tend ſeveral ways, or are poſited towards different Quarters. See LINE.

In this Senſe, the Word is uſed in oppoſition to a *ſtrait* Line; whoſe ſeveral Points are poſited towards the ſame Quarter.

Hence, Figures terminated with Lines of the firſt Property, are called *Curvilinear* Figures; in oppoſition to thoſe terminated with the latter, call'd *Rectilinear* Figure. See RECTILINEAR, and FIGURE.

The Doctrine of *Curves*, and of the Figures and Solids generated from them, conſtitute what we call the *Higher Geometry*. See GEOMETRY.

In a *Curve*, the Line AD, (Tab. *Geometry*, Fig. 51.) biſſecting the parallel Lines MM, is call'd the *Diameter*:

If the Lines be equidiſtant, and it cut 'em at right Angles, it is call'd the *Axis*; and the Point A, whence the Diameter is drawn, is call'd the *Vertex*. See DIAMETER, AXIS, and VERTEX.

The equidiſtant Lines M M are call'd *Ordinates*, or *Applicates*; and their Halves, P M, *Semiordinates*. See ORDINATE, and SEMIORDINATE.

The Portion of the Diameter A P, between the Vertex, or other fix'd Point, and an Ordinate, is call'd the *Abſciſſe*. See ABSCISSE.

And the Concourſe of all the Diameters, the *Centre*. See CENTRE.

*Curves* are diſtinguiſh'd into *Algebraic*, frequently with *Des Cartes* call'd *Geometrical*; and *Tranſcendental*, called by the ſame *Cartes*, &c. *Mechanical Curves*.

*Algebraical* CURVES, are thoſe wherein the Relation of the Abſciſſes A P, A P, AP, to the Semiordinates M P, M P, M P, may be expreſs'd by an Algebraical Equation. See EQUATION.

Suppoſe, *v. g.* in a Circle, (Fig. 52.) $AB=a$, $AP=x$, $PM=y$; then will $PB=a-x$; conſequently, as $PM^2=AP$, $PB\,y^2=ax-x^2$. Or, ſuppoſe $PC=x$, $AC=a$, $PM=y$; then will $MC^2=PC^2=PM^2$; that is, $a^2-x^2=y^2$.

*Note*, Thoſe are alſo call'd *Algebraic Curves*, which are of a determinate Order; ſo, as that the Equation always continues the ſame in the ſeveral Points of the *Curve*.

Moſt Authors, after *Des Cartes*, call Algebraic *Curves*, *Geometrical* ones; as admitting none elſe into the Conſtruction of Problems; nor, conſequently, into Geometry. But *Wolfius*, from Sir *I. Newton*, and M. *Leibnitz*, is of another Opinion; and thinks, that in the Conſtruction of a Problem, one *Curve* is not to be preferr'd to another, for its being defin'd by a more ſimple Equation, but for its being more eaſily deſcrib'd. See PROBLEM.

*A Tranſcendental* CURVE, is that which can't be defin'd by an Algebraic Equation.

Theſe *Curves*, *Des Cartes*, &c. call *Mechanical* ones; and under that Notion exclude 'em out of Geometry: But *Newton* and *Leibnitz*, for the Reaſon abovemention'd, are of another Opinion. Indeed, *Leibnitz* has found a new Kind of Equations, which he calls *Tranſcendental Equations*; whereby even *Tranſcendental Curves*, and thoſe which are not of any determinate Order, *i. e.* which don't continue the ſame in all the Points of the *Curve*, may be defin'd. *Act. Erudit. Leip.* A. 1684. p. 234.

*Algebraic* CURVES *of the ſame Kind or Order*, are thoſe whoſe Equations riſe to the ſame Dimenſion. See ORDER.

Geometrical Lines being defined by the Relation between the Ordinates and Abſciſſes, or (which is the ſame, by the Number of Points wherein they may be cut by a right Line) are well diſtinguiſh'd into *two Kinds* or *Orders*: In which view, Lines of the firſt Order will be right Lines; and thoſe of the ſecond or quadratic Order will be *Curves*, viz. *Conic Sections*.

Now, a *Curve* of the firſt Kind is the ſame with a Line of the ſecond, (a right Line not being number'd among *Curves*) and a *Curve* of the ſecond Kind, the ſame with a Line of the third. Thus, *Curves* of the firſt Kind, are thoſe whoſe Equation riſe to two Dimenſions; if they riſe to three, *the Curves are of the ſecond Kind*; if to four, of the third, &c.

Thus, *e. g.* the Equation for a Circle is, $y^2=ax-x^2$, or $a^2-x^2=y^2$. A Circle, therefore, is a *Curve* of the firſt Kind.

Again, *a Curve of the firſt Kind*, is that defined by the Equation $ax=y^2$; and a *Curve of the ſecond Kind*, that defined by the Equation $a^2x=y^3$. See CIRCLE.

*For the various* Curves *of the firſt Kind, and their Properties*, ſee CONIC *Sections*.

*For Curves of the ſecond Kind*, Sir *I. Newton* has a diſtinct Treatiſe, under the Title of *Enumeratio linearum tertii ordinis*.

*Curves of the ſecond and other higher Kinds*, he obſerves, have Parts, and Properties ſimilar to thoſe of the firſt: Thus, as the *Conic* Sections have Diameters and Axes; the Lines cut or biſſected by theſe, are call'd *Ordinates*; and the Interſection of the *Curve* and Diameter, the *Vertex*: So, in *Curves of the ſecond Kind*, any two parallel right Lines being drawn ſo as to meet the *Curve* in three Points; a right Line cutting theſe Parallels, ſo, as that the Sum of the two Parts between the Secant and the *Curve* on one ſide, is equal to the third Part terminated by the *Curve* on the other ſide, will cut, in the ſame manner, all other right Lines parallel to theſe, and that meet the *Curve* in three Points, *i. e.* ſo, as that the Sum of the two Parts on one ſide, will be ſtill equal to the third Part on the other ſide.

Theſe three Parts, therefore, thus equal, may be call'd *Ordinates*, or *Applicates*; the Secant the *Diameter*; and where it cuts the Ordinates at right Angles, the *Axis*: The Interſection of the Diameter and the *Curve*, the *Vertex*; and the Concourſe of the two Diameters, the *Centre*; and the Concourſe of all the Diameters, the *General Centre*.

Again, as a Hyperbola of the firſt Kind has two Aſymptotes; that of the ſecond has three, that of the third four, &c. and as the Parts of any right Line between the Conic Hyperbola and its two Aſymptotes are equal on either ſide; ſo, in Hyperbolas of the ſecond Kind, any right Line cutting the *Curve* and its three Aſymptotes in three Points; the Sum of the two Parts of that right Line, extended from any two Aſymptotes the ſame way to two Points of the *Curve*, is equal to the third Part, extended from the third Aſymptote, the contrary way to the third Point of the *Curve*. See ASYMPTOTE, HYBERBOLA, &c.

Again, as in other Conic Sections, not parabolical, the Square of the Ordinate, *i. e.* the Rectangle of the Ordinates, drawn to contrary Parts of the Diameter, is to the Rectangle of the Parts of the Diameter terminated at the Vertices of an Ellipſis or Hyperbola, as a given Line, call'd the *Latus Rectum*, is to that Part of the Diameter which lies between the Vertices, and is call'd the *Latus Tranſverſum*: So, in *Curves of the ſecond Kind*, not parabolical, the Parallelopiped under the three Ordinates, is to the Parallelopiped under the Parts of the Diameter cut off at the Ordinates and the three Vertices of the Figure, in a given Ratio: wherein, if there be taken three right Lines at the three Parts of the Diameter plac'd between the Vertices of the Figure, each to each; then thoſe three right Lines may be call'd the *Latera Recta* of the Figure, and the Parts of the Diameter between the Vertices, the *Latera Tranſverſa*.

And, as in a Conic Parabola, which has only one Vertex to one and the ſame Diameter, the Rectangle under the Ordinates, is equal to the Rectangle under the Part of the Diameter cut off at the Ordinates and Vertex, and a given right Line call'd the *Latus Rectum*: So, in *Curves of the ſecond Kind*, which have only two Vertices to the ſame Diameter; the Parallelopiped under three Ordinates, is equal to the Parallelopiped under two Parts of the Diameter cut off at the Ordinates and the two Vertices, and a given right Line, which may therefore be call'd the *Latus Tranſverſum*. See LATUS; ſee alſo PARABOLA.

Further, as in the Conic Sections, where two Parallels terminated on each ſide by a *Curve*, are cut by two Parallels, terminated on each ſide by a *Curve*; the firſt by the third, and the ſecond by the fourth: the Rectangle of the Parts of the firſt, is to the Rectangle of the Parts of the ſecond, as that of the ſecond is to that of the fourth: So, when four ſuch right Lines occur in a *Curve* of the ſecond Kind, each in three Points; the Parallelopiped of the Parts of the firſt, will be to that of the Parts of the ſecond, as that of the ſecond to the Parts of the fourth. See SECTION.

Laſtly, the Legs of *Curves*, both of the *firſt*, *ſecond*, and *higher Kinds*, are either of the Parabolic or Hyperbolic Kind: an Hyperbolic Leg, being that which approaches infinitely towards ſome Aſymptote; a Parabolic, that which has no Aſymptote. See ASYMPTOTE.

Theſe Legs are beſt diſtinguiſh'd by their Tangents; for, if the Point of Contact go off to an infinite Diſtance, the Tangent of the Hyperbolic Leg, will coincide with the Aſymptote; and that of the Parabolic Leg, recede infinitely, and vaniſh. The Aſymptote, therefore, of any Leg, is found by ſeeking the Tangent of that Leg to a Point infinitely diſtant; and the Bearing of an infinite Leg, is found by ſeeking the Poſition of a right Line parallel to the Tangent, when the Point of Contact is infinitely remote: for this Line tends the ſame way towards which the infinite Leg is directed.

*Reduction of* CURVES *of the ſecond Kind.*

Sir *I. Newton* reduces all *Curves* of the *ſecond Kind* to four Caſes of Equation: In the firſt, the Relation between the Ordinate and Abſciſſe, making the Abſciſſe $x$, and the Ordinate $y$, aſſumes this form $xyy+ey=ax^3+bxx+cx+d$. In the ſecond Caſe, the Equation aſſumes this form $xy=ax^3+bx^2+cx+d$. In the third Caſe, the Equation is $yy=ax^3+bx^2+cx+d$. In the fourth, the Equation is of this form, $y=ax^3+bx^2+cx+d$.

*Enumeration of the* CURVES *of the ſecond Kind.*

Under theſe four Caſes, the ſame Author brings a vaſt Number of different Forms of *Curves*, to which he gives different Names.

A Hyperbola lying wholly in the Angle of the Aſymptotes, like a Conic Hyperbola, he calls an *Inſcribed Hyperbola*; that which cuts the Aſymptotes, and contains the Parts cut off within its own Periphery, a *Circumſcrib'd Hyperbola*; that, one of whoſe infinite Legs is inſcrib'd, the other circumſcrib'd, he calls *Ambiginal*; that whoſe Legs look towards each other, and are directed the ſame way, *Converging*; that where they look contrary ways, *Diverging*; that where they are convex different ways, *Croſs-leg'd*; that applied to its Aſymptote, with a concave Vertex, and diverging Legs, *Conchoidal*; that which cuts its Aſymptote with contrary Flexures, and is produced each way into contrary Legs, *Anguineous*, or *Snake-like*; that which cuts its

Conjugate

Conjugate a-croſs, *Cruciform*; that which returning around cuts it ſelf, *Nodated*; that whoſe two Parts concur in the Angle of Contact, and there terminate, *Cuſpidated*; that whoſe Conjugate is oval, and infinitely ſmall, *i. e.* a Point, *Pointed*; and that which from the Impoſſibility of its two Roots, is without either Oval, Node, Cuſp, or Point *pure*: And in the ſame manner he denominates a Parabola, to be *converging*, *diverging*, *cruciform*, &c. Where the Number of Hyperbolic Legs, exceeds that of the Conic Hyperbola; he denominates the *Hyperbola redundant*.

Now, the various *Curves* which he enumerates under theſe four Caſes, are in Number 72; whereof nine are *redundant* Hyperbolas, without Diameters, having three Aſymptotes including a Triangle.

The firſt conſiſting of three Hyperbolas, one *inſcribed*, another *circumſcribed*, another *ambigonal*, with an *Oval*; the ſecond *Nodated*; the third *Cuſpidated*; the fourth *Pointed*; the fifth and ſixth *Pure*; the ſeventh and eighth *Cruciform*; the laſt *Anguineal*.

There are 12 *redundant* Hyperbolas, having only one Diameter: The firſt *Oval*, the ſecond *Nodated*, the third *Cuſpidated*, the fourth *Pointed*, the fifth, ſixth, ſeventh, and eighth, *Pure*; the ninth and tenth *Cruciform*; the eleventh and twelfth *Conchoidal*.

Two are *redundant* Hyperbolas with three Diameters.

Nine are *redundant* Hyperbolas, with three Aſymptotes converging to a common Point; the firſt form'd of the fifth and ſixth redundant Parabolas, whoſe Aſymptotes include a Triangle; the ſecond, of the ſeventh and eighth; the third and fourth, of the ninth; the fifth is form'd of the fifth and ſeventh of the redundant Hyperbolas, with one Diameter; the ſixth, of the ſixth and ſeventh; the ſeventh, of the eighth and ninth; the eighth, of the tenth and eleventh; the ninth, of the twelfth and thirteenth: All which Converſions are effected, by diſtinguiſhing the Triangle comprehended between the Aſymptotes, till it vaniſh into a Point.

Six are defective Parabolas, having no Diameters: The firſt *Oval*, the ſecond *Nodated*, the third *Cuſpidated*, the fourth *Pointed*, the fifth *Pure*.

Seven are defective Hyperbolas, having Diameters: The firſt and ſecond *Conchoidal*, with an *Oval*; the third *Nodated*, the fourth *Cuſpidated*, which is the Ciſſoid of the Antients; the fifth and ſixth, *Pointed*; the ſeventh *Pure*.

Seven are Parabolic Hyperbolas, having Diameters: The firſt *Oval*, the ſecond *Nodated*, the third *Cuſpidated*, the fourth *Pointed*, the fifth *Pure*, the ſixth *Cruciform*, the ſeventh *Anguineous*.

Four are Parabolic Hyperbolas. Four are Hyperboliſms of the Hyperbola. Three Hyperbolas of the Ellipſis. Two Hyperboliſms of the Parabola.

Five are diverging Parabolas: one, a *Trident*; the ſecond *Oval*, the third *Nodated*, the fourth *Pointed*, the fifth *Cuſpidated*; (this is *Neal*'s *Parabola*, uſually called the *Semicubic Parabola*:) the ſixth, *Pure*.

Laſtly, one commonly call'd the *Cubic Parabola*.

### *Organical Deſcription of theſe* Curves.

1ſt, If two Angles given in Magnitude, PAD, PBD, (Tab. *Analyſis*, Fig. 53.) revolve round Poles given in poſition, A and B; and their Legs, AP, BP, with their Point of Concourſe, P, paſs over another right Line: The other two Legs AD, BD, with their Point of Concourſe D, will deſcribe a Conic Section paſſing thro' the Poles AB: Unleſs that Line happen to paſs thro' either of the Poles A or B; or unleſs the Angles BAD and ABD vaniſh together: in which Caſes, the Point will deſcribe a right Line.

2dly, Now, if the Legs, AP, BP, by their Point of Concourſe, P, thus deſcribe a Conic Section paſſing thro' one of the Poles, A; the other two, AD, BD, with their Point of Concourſe D, will deſcribe a *Curve of the ſecond Kind*, paſſing thro' the other Pole B, and having a double Point in the firſt Pole A: Unleſs the Angle BAD, ABD, vaniſh together; in which Caſe, the Point D will deſcribe another Conic Section, paſſing thro' the Pole A.

3dly, If the Conic Section deſcrib'd by the Point P, paſs thro' neither of the Poles AB; the Point D will deſcribe a *Curve of the ſecond or third Kind*, having a double Point: which double Point will be found in the Concourſe of the deſcribing Legs AD, BD: When the two Angles BAP, ABP, vaniſh together, the *Curve* deſcribed will be of the *ſecond Kind*, when the Angles BAD, ABD, vaniſh together; otherwiſe of the *third Kind*, having two other double Points in the Poles A and B.

With regard to *double Points of Curves*: We have obſerv'd that *Curves* of the ſecond Kind may be cut by a right Line in thoſe Points: Now two of theſe ſometimes coincide, *v. g.* when the right Line paſſes thro' an infinitely ſmall Oval; or thro' the Concourſe of two Parts of a *Curve*, mutually cutting each other, and uniting in a Cuſp. Sometimes the right Line, even, only cuts the *Curve* in one Point; as in Ordinates of the *Carteſian* and *Cubic Parabola*, &c. In which Caſe, we muſt conceive the right Lines paſſing thro' two other Points of a *Curve*, placed, as it were, at an infinite diſtance: Now theſe coincident Interſections, whether at a finite or infinite Diſtance, make what we call *double* Point.

### *Geneſis of* Curves *of the* ſecond Order *by Shadows*.

If the Shadows of Figures be projected on an infinite Plane, illumin'd by a lucid Point; the Shadows of Conic Sections will ſtill be Conic Sections; thoſe of *Curves* of the ſecond Kind, will be *Curves* of the ſecond Kind; thoſe of the third Kind, *Curves* of the third Kind, *&c.*

And as a *Curve*, in projecting a Shadow, generates all the Conic Sections; ſo, the five diverging Parabolas, with their Shadows, generate and exhibit all other *Curves* of the ſecond Kind.

And in this manner may a Train of the *ſimple Curves* of other Kinds be found, which ſhall form all the other *Curves* of the ſame Kind, by their Shadows projected from a lucid Point, upon a Plane.

### *Deſcription of* Curves *of the* ſecond Order, *having double Points*.

Theſe are all deſcrib'd from ſeven given Points, whereof one is the double Point it ſelf: Thus, let there be given any ſeven Points of the *Curve* to be deſcribed; as, *v. g.* A, B, C, D, E, F, G, (Tab. *Analyſis*, Fig. 54.) whereof A is the double Point: join the Point A, and any other two Points, *v. g.* B and C; and let the Angle CAB of the Triangle ABC, revolve about its Vertex A; and another of the Angles ABC, about its Vertex B. And when the Point of Concourſe C, of the Legs AC, BC, is ſucceſſively applied to the four other Points D, E, F, G, let the Concourſe of the remaining Legs AB and BA, fall on the four Points P, Q, R, S.

Thro' thoſe four Points, and the fifth A, deſcribe a Conic Section; and let the foremention'd Angles CAB, CBA, ſo revolve, as that the Point of Concourſe of the Legs AB, BA, may paſs over that Conic Section; and the Concourſe of the other Legs AC, BC, will deſcribe the propoſed *Curve*.

### *Uſe of theſe* Curves *in the Conſtruction of Equations*.

The uſe of *Curves* in Geometry, is by means of the Interſections thereof, to ſolve Problems. See Construction.

Suppoſe, *v. g.* an Equation to be conſtructed of nine Dimenſions, as $x^9 + bx^7 + cx^6 + dx^5 + ex^4 + fx^3 + gx^2 + hx + r = o$; where *b*, *c*, *d*, &c. ſignify any given Quantities affected with the Signs + and −: aſſume an Equation to a Cubic Parabola $x^3 = y$; and the firſt Equation, writing *y* for $x^3$ will come out $y^3 + bxy^2 + cy^2 + dx^2y + exy + my + fx^3 + gx^2 + hx + k = o$; an Equation to another *Curve* of the ſecond Kind, where *m* or *f* may be aſſum'd or annulled. And by the Deſcriptions and Interſections of theſe *Curves* will be given the Roots of the Equation to be conſtructed. 'Tis ſufficient to deſcribe the Cubical Parabola once.

If the Equation to be conſtructed, by omitting the two laſt Terms *hx* and *k*, be reduced to ſeven Dimenſions; the other *Curve*, by expunging *m*, will have the double Point in the beginning of the Abſciſſe, and may be eaſily deſcrib'd as above: If it be reduced to ſix Dimenſions, by omitting the three laſt, taking $gx^2 + hx + k$; the other *Curve*, by expunging *f*, will become a Conic Section: and if, by omitting the three laſt Terms, the Equation be reduced to three Dimenſions, we ſhall fall on Dr. *Wallis*'s Conſtruction by the Cubic Parabola and right Line.

*Rectification of a* Curve, is the finding of a right Line equal to a *Curve*. *For the Praxis hereof*, ſee Rectification *of Curves*.

*Quadrature of a* Curve, the finding of the Area, or Space included by a *Curve*; or the aſſigning of a Square equal to a *Curvilinear Space*. See Quadrature.

*Family of* Curves, is an Aſſemblage of ſeveral *Curves* of different Kinds, all defined by the ſame Equation of an indeterminate Degree; but differently, according to the Diverſity of Kind.

*E. g.* Suppoſe an Equation of an indeterminate Degree, $a^{m-1}x = y^m$. If $m = 2$, then will $ax = y^2$; if $m = 3$, then will $a^2x = y^3$; if $m = 4$, then $a^3x = y^4$, *&c.* All which *Curves* are ſaid to be of the ſame *Family*, or *Tribe*.

The Equations whereby the Families of Curves are defined, are not to be confounded with the Tranſcendental ones: For tho, with regard to the whole Family, they be of an indeterminate degree, yet, with reſpect to each ſeveral *Curve* out of the Family, they are determinate; whereas tranſcendent Equations are of an indefinite Degree, with reſpect to the ſame *Curve*.

All Algebraic *Curves*, therefore, compoſe a certain Family, conſiſting of innumerable others; each whereof comprehends infinite Kinds. For ſince the Equations whereby the *Curves* are defined enter the *Facta*, either of the Powers

of the Abſciſſes and Semiordinates into the given Coefficients, or of the Powers of the Abſciſſes into the Powers of the Semiordinates, or of the mere given Quantities; and all Equations may be equal to nothing, (*v.g.* if $ax = y^2$, then $ax - y^2 = 0$); the Equation for all Algebraical *Curves* will be $a\,y^m + b\,x^n + c\,y^r x^s + d\,f = 0$.

*Exponential* CURVE, is that defined by an Exponential Equation; that is, by an Equation wherein is an Exponential Quantity, *v. g.* $x^x$, $a^x$. See EXPONENTIAL.

*The Symptoms, Properties, Geneſes, &c. of particular* Curves, v. g. *Cycloid, Logarithmic Curves, Conchoid, &c. ſee under their proper Heads,* CYCLOID, LOGARITHMIC, CONCHOID, *&c.*

CURVET, in the Manage. See COURVET.

CURVILINEAL *Figures*, in Geometry, are Spaces bounded by crooked Lines; as the Circle, Ellipſis, Spherical Triangle, *&c.* See CURVE, and FIGURE.

CURULE *Chair*, *Sella Curulis*, in Antiquity, an Ivory Seat, whereon certain of the *Roman* Magiſtrates had a Right to ſit.

The *Curule* Magiſtrates were the Ediles, Prætors, Cenſors, and Conſuls. See EDILE, *&c.*

The Senators who had bore theſe Charges, were carried to the Senate on *Curule Chairs*; as alſo thoſe who triumph'd: the Chair being fitted into a kind of Chariot, *Currus*; whence *Curules*. See TRIUMPH.

The *Curule Chair* is uſed on Medals, to expreſs a *Curule* Magiſtracy: When travers'd by a Haſta, 'tis the Symbol of *Juno*, and ſerves to expreſs the Conſervation of Princeſſes.

CUSP, *Cuſpis*, properly denotes the Point of a Spear.

It is particularly us'd in Aſtronomy, to expreſs the Points or Horns of the Moon, or other Luminary. See MOON, CRESCENT, ECLIPSE, *&c.*

In Aſtrology, *Cuſp* is uſed for the firſt Point of the twelve Houſes, in a Figure or Scheme of the Heavens.

CUSPIDATED, in Botany, is when the Leaves of a Flower end in a *Cuſp*, or Point, reſembling that of a Spear.

CUSPIDATED *Hyperbola*, &c. See HYPERBOLA.

CUSTODE *Admittendo*, and CUSTODE *Amovendo*, are Writs for the admitting, or removing of Guardians. See GUARDIAN.

CUSTODES *Libertatis Angliæ, authoritate Parliamenti*, was the Style or Title in which Writs, and other Judicial Proceedings, did run in the Rump Time; that is, from the Death of King *Charles* I. till *Oliver* was declared Protector, *&c.*

CUSTOM, the Manners, Ceremonies, or Ways of living of a People, which in time have turn'd into Habitude, and by Uſage, obtain'd the Force of Laws. See LAW.

In this Senſe, *Cuſtom* implies Things that were at firſt voluntary, but are become neceſſary by uſe: Thus, the Preſents made by Officers at their admiſſion into Poſts, are only due becauſe they have paſs'd into *Cuſtom*. See FEE.

The Word further ſignifies the doing or not doing certain Things, introduc'd by the greateſt Part of the People of a Country, or Province: If there be nothing evil in ſuch *Cuſtom*, it obliges, till it be either abrogated by a contrary *Cuſtom*, or a Law.

For a *Cuſtom* thus eſtabliſh'd to have the Force of a Law, 'tis neceſſary, ordinarily, that it be founded on ſome natural Equity, or ſome conſiderable Good; and that it have ſubſiſted *ultra tritavum*: but, as this is hard to prove, 'tis ſufficient if two or more Witneſſes depoſe they heard their Fathers ſay the ſame of their Time.

If it be Matter of Record, the Continuance of 100 Years is ſufficient. See RECORD.

The Effect of a *Cuſtom* thus circumſtantiated, is, that it has the ſame Force and Authority as a Law; making what we call *Lex non ſcripta*; and that in popular States and limited Monarchies, it ſerves to interpret the written Laws: for in abſolute Monarchies, 'tis the King alone has the Power of interpreting Laws.

Hence, the Word *Cuſtom* is ſtill retain'd, and ſerves to expreſs the particular Rights and Municipal Laws eſtabliſh'd by Uſage in particular Provinces, *&c.* after they are reduced into written Laws.

In this Senſe, moſt of the Common Law of *England* is *Lex non ſcripta*; being originally no more than the *Cuſtoms* of our Forefathers. See COMMON *Law*.

*Lex non ſcripta*, in this Senſe, is uſed in oppoſition to *Statutes* or *Acts of Parliament*; which commence Laws at once. See STATUTE.

*Cowel* diſtinguiſhes *Cuſtom* from Preſcription, in that the former is more general, and relates to ſeveral Perſons; whereas the latter is uſually confin'd to this or that Man. Five Years time, too, are ſufficient for Preſcription; whereas for *Cuſtom* there are requir'd 100. See PRESCRIPTION.

*Cuſtoms* are real Things, and are included within their Limits or Territories: They are either *Local*, *i. e.* reſtrain'd to this or that Place, or *General*.

The *Cuſtom of Paris*, ſerves as a Rule for all the other Places of *France*; where they have no Proviſions contrary thereto.

The *Romans* were govern'd by *Cuſtoms*, or unwritten Laws, after the Expulſion of their Kings. See CIVIL *Law*.

*Cæſar* obſerves, that the *Gauls* had their *Cuſtoms*, which they conſtantly retain'd; and that it was impoſſible for the *Romans* to govern 'em by any other Laws: So that it was only the Provinces bordering on *Italy* that receiv'd the *Roman* Laws.

CUSTOMS, in Commerce, the Dues, Duties, or Tolls, paid by Merchants to the King, for carrying out, and bringing in of Merchandizes. See EXPORTATION, and IMPORTATION.

The *Cuſtoms* of Goods exported and imported, throughout *England*, amount yearly to 1300000 Pounds; whereof thoſe of the Port of *London* make a third part. See COMMERCE.

The *Cuſtoms* in *England* are very numerous, and very high; beyond what any other trading Nation knows: The principal are Duties of *Tunnage* and *Poundage*, which are very antient, being the only ones in uſe before the Time of King *Charles* II. But that Prince, and his Succeſſors, have introduc'd divers others: At preſent, the *Cuſtoms* on Liquors are, *Tunnage*, the *Additional* Duty, the Duty of *Exciſe*, *Coinage*, Duty of the *old Impoſition*, Duty of the *additional Impoſition*, Duty of *Orphans Money*, Duty on *French Wines*, *New Subſidy*, $\frac{1}{3}$ and $\frac{2}{3}$ of *Subſidies*.

For other Merchandizes, the Duties are, *Poundage*, the *additional* Duty on Silks and Linens, *Exciſe* of the ſame Year, on *foreign* Species, *new Impoſition* of Poundage, another of $\frac{4}{5}$; a Duty of 25 *per Cent.* on *French* Commodities; the *new Subſidy* of Poundage, in 1697; an *additional Subſidy* of $\frac{2}{3}$ of Poundage, in 1703; a third in 1704; a Duty on *Fiſh Oils*, another on *Leather*, another on *Paper*, *Soap*, &c. *See theſe deſcrib'd more at large under the Article* DUTY.

CUSTOM-*Houſe*, an Office eſtabliſh'd on the Frontiers of a State, or in ſome chief City, for the Receit of the *Cuſtoms* and Duties of Importation and Exportation; impoſed on Merchandizes, by the Authority of the Prince, and regulated by Tariffs, or Books of Rates. See CUSTOMS, and DUTIES.

There are ſeveral *Cuſtom-houſes* in the ſeveral Ports of *England*: The moſt conſiderable is that of *London*.

It is under the Direction of ſeven Commiſſioners appointed by Patent; who have the Charge and Management of all the *Cuſtoms* (the Petty-Farms alone excepted) in all the Ports of *England*. See COMMISSIONER.

Other Officers are, a *Secretary*, *Sollicitor*, *Receiver-General*, *Comptroller* of the Iſſues and Payments of the Receiver-General; *Comptroller-General*; *Inſpector* of the Out-Port Collectors Accompts; *Inſpector-General* of the Exports and Imports; *Regiſter-General* of all Ships of *Great-Britain*; *Surveyor-General*; *Surveyor* of the Out-Ports, and *Regiſter* of the Seizures; all holding their Places by Patents: with other inferior Officers, appointed by Warrant from the Lord High Treaſurer.

CUSTOMARY *Tenants*, *Cuſtumarii*, *vel Tenentes per conſuetudinem*; are ſuch Tenants as hold by the *Cuſtom* of the Manor as their ſpecial Evidence. See MANOR.

Theſe were antiently Bondmen, or thoſe that held *Tenura Bondagii.—Et omnes illi qui tenuerint in Bondagii tenura, ſolebant vocari* Cuſtumarii. *MS. de Conſuetud. Man. de* Sutton Colfield, *de anno* 3 Edw. II.

CUSTOS *Brevium*, a Clerk, belonging to the Court of Common Pleas; whoſe Office is to receive, and keep all the Writs, and put 'em upon Files; every Return by it ſelf; and at the End of every Term to receive of the Prothonotaries all the Records of the *Niſi prius*, call'd the *Poſtea*. See WRIT, and POSTEA.

The Writs are firſt brought in by the *Clerks of Aſſize* of every County to the Prothonotary who enter'd the Iſſue in that Matter, to enter Judgment. Four Days after the Return, the Prothonotary enters the Verdict, and Judgment thereupon, into the Rolls of the Court; and then delivers them over to the *Cuſtos Brevium*.

He alſo makes Entry of the Writs of Covenant, and the Concord upon every Fine; and makes Copies and Exemplifications of all Writs and Records in his Office, and of all Fines levied: The Fines, when engroſſed, are divided between the *Cuſtos Brevium* and *Chirographer*; the former keeping the Writ of Covenant and the Note, the latter the Concord, and Foot of the Fine. See CHIROGRAPHER.

In the Court of the King's-Bench, there is likewiſe a *Cuſtos Brevium & Rotulorum*, who fileth ſuch Writs as are there uſed to be filed, and all Warrants of Attorney; and tranſcribes or makes out Records of *Niſi prius*, &c.

CUSTOS *Placitorum Coronæ*, in *Bracton*, ſeems to be the ſame with him now call'd *Cuſtos Rotulorum*. See CUSTOS *Rotulorum*.

CUSTOS *Rotulorum*, is he that hath the Cuſtody of the Rolls, or Records of the Seſſions of Peace; and ſome ſay, of the Commiſſions of Peace it ſelf. See PEACE.

He

He is always a Juſtice of Peace, and *Quorum*, in the County where he hath his Office; and by his Office is rather a Miniſter than a Judge. Becauſe the Commiſſion of the Peace, by expreſs Words, lays this ſpecial Charge upon him, *Quod ad dies & loca prædicta, brevia, præcepta, proceſſus, & judicamenta prædicta coram te & dictis ſociis tuis venire facias.*

Custos *Spiritualium*, is he who exerciſeth Spiritual or Eccleſiaſtical Juriſdiction in any Dioceſe, during the Vacancy of the See. See Diocese.

This, by the Canon Law, belongs to the Dean and Chapter; but in *England*, to the Archbiſhop of the Province, by Preſcription: Tho, divers Deans and Chapters do challenge it by antient Charters, from Kings of this Land.

Custos *Temporalium*, is the Perſon to whoſe Cuſtody a vacant See was committed by the King, as ſupreme Lord; who, as a Steward of the Goods and Profits, was to give an account to the Eſcheator, and he into the Exchequer.

His Truſt continued till the Vacancy was ſupply'd by a Succeſſor, who obtained the King's Writ *de Reſtitutione Temporalium*; which was commonly after *Conſecration*, but ſometimes before.

In the Canon Law, we meet with a *Cuſtodi nos*, *i. e.* a Confidentiary, or Incumbent of a Benefice, who borrows his Name of ſome other, to collect the Fruits thereof, and is to make a Reſignation whenever demanded.

CUT *a Feather*, in the Sea Language, is when a well-bow'd Ship ſo ſwiftly preſſes the Water, that it ſeems before her.——To *Cut the Sail*, is to unfurl it, and let it fall down.

Cut-*Water*, the Sharpneſs of a Ship, which is under the Beak-head.

CUTANEOUS, ſomething that concerns the Skin; whether in the way of Diſtemper, or Remedy. See Cutis.

Thus, we ſay, *Cutaneous* Eruptions; the Itch is a *Cutaneous* Diſeaſe.

The Word is form'd of the Latin *Cutis*, Skin.

CUTICULA, *Cuticle*, in Anatomy, a thin pellucid Membrane, void of Senſe; ſerving as a Cover to the *Cutis* or Skin. See Cutis.

The *Cuticula* is that firſt and outermoſt Covering of the Body, call'd alſo *Epidermis*, but more commonly the *Scarf-Skin*; or that ſoft Tegument which riſes in a Bliſter upon a Burn, or the Application of a Cautery.

It ſticks cloſe to the Surface of the Cutis, or true Skin, to which it is alſo tied by the Veſſels that nouriſh it; tho theſe are ſo ſmall as not to be ſeen.

When examin'd by a Microſcope, it appears to conſiſt of ſeveral Lays of exceeding ſmall Scales, which cover one another, more or leſs, according to its different thickneſs, in the ſeveral Parts of the Body; and in the Lips, where the Scales appear plaineſt becauſe the Skin is thinneſt, they do little more than barely touch.

Theſe Scales are either the excretory Ducts of the Glands of the Cutis; as is the Caſe apparently in Fiſhes: or elſe the Glands have their Tubes, opening between the Scales. See Milliary *Gland*.

*Leewenhoeck* reckons, that in one *cuticular* Scale there may be 500 excretory Ducts; and that a Grain of Sand will cover 250 Scales: ſo that one Grain of Sand will cover 102500 Pores or Orifices, thro' which we daily perſpire. See Perspiration, and Pore.

Yet, notwithſtanding the exceeding Porofity of the *Cuticula*, it obſtructs a great Part of the ſerous Humours which would otherwiſe be evacuated by the Glands of the *Cutis*; as is evident from that plentiful Diſcharge conſequent on the Application of a Bliſter, or other Accident, whereby the *Cuticula* is remov'd, and the Cutis bared. See Vesicatory.

The Scales are often glu'd together by the groſſer Parts of our inſenſible Tranſpiration hardening upon 'em by the heat of the Body, which carries off the more volatile Particles; and in this conſiſts that Indiſpoſition we popularly call a *Cold*.

The Humour which is thenceforward ſeparated by the Glands of the Skin, being pent in between the Scales, cauſeth frequent itching; and where the Matter has been long pent up, ſmall Pimples, and other Foulneſſes: for removing of which, Nature directs to thoſe wholeſom Remedies of frequent rubbing, waſhing, or bathing. See Leprosy.

Some imagine the *Cuticle* form'd from the groſſer Parts of the excrementitious ſerous Humour, eliminated thro' the Pores of the Cutis, and condens'd on the Surface; like the Pellicle which appears upon Evaporation on the Surface of the Serum of the Blood: But *Leewenhoeck*, with more probability, takes it to be from an Expanſion of the Excretory Ducts of the Glands of the Skin.

Its uſe is to defend the Nerves of the *Cutis*, which are the Origin of the Senſe of Feeling, from the Injuries of rough and hard Bodies, as well as the Air: for either of thoſe would make too exquiſite and painful an Impreſſion on the naked Nerves; or the Air would dry them, ſo as that they would be leſs ſuſceptible of the nicer Touches of Pleaſure. See Feeling.

*Riolanus*, and ſeveral others, maintain that the *Cuticula* of Women has no Pores: *Molinette* argues the contrary from their Sweating; but maintains, withal, that this is true of Dogs and Cats, which never ſweat, how much ſoever fatigued. See Sweat.

CUTIS, in Anatomy, *the Skin*; a Reticular Plexus, or Body of Veſſels, immediately under the *Cuticle*, or Scarf-Skin. See Skin, and Cuticula.

The Veſicles of the *Cutis* contain a mucous Liquor; from the Tincture of which, *Malpighi*, and others, take the Colour of the Skin to be derived; founded on this, that the *Cutis*, as well as *Cuticle* of Blacks is white, and the Blood red, *&c.* and that the only thing they have peculiar in this Part, is the Colour of this Liquor. See Negro.

The *Cutis* conſiſts of Fibres of its own; or, according to *Steno*, is form'd out of the Productions of the Tendons of the ſubjacent Parts: which terminate in an infinite Number of pyramidal *Papillæ*, interwoven with innumerable nervous Fibres, and other Veſicles, forming what we call a *Parenchyma*. See Parenchyma.

'Tis by means hereof that the *Cutis* becomes the Organ of Feeling. See Pyramidales *Papillæ*.

The *Cutis* is generally connected to the ſubjacent Parts by the *Membrana Adipoſa*, and its proper Veſſels, the Veins, Arteries, Nerves, *&c.* Its Uſe, is to wrap up and cover the whole Body; to be a general Emunctory for the Matter of Perſpiration; and to be the Organ of Feeling. See Perspiration, Feeling, *&c.*

The Diſeaſes of the *Cuticula* and *Cutis*, are the *Itch*, *Leproſy*, *Small-Pox*, *Meaſles*, *Scarlet Fever*, and *Eryſipelatous Inflammations*. See Itch, Pox, Leprosy, *&c.*

CUTTER *of the Tallies*, an Officer of the Exchequer, who provides Wood for the Tallies, and cuts the Sum paid upon them. See Tally.

CUTTING, a Term us'd in various Senſes, and various Arts; in the general, it implies a Diviſion or Separation.

Cutting is us'd in Heraldry, where the Shield is divided into two equal Parts, from right to left, parallel to the Horizon, or in the Feſſe-way. See Coupee.

The Word is alſo applied to the Honourable Ordinaries, and even to Animals, and Moveables, when they are divided equally the ſame way; ſo, however, as that one Moiety is Colour, the other Metal. The Ordinaries are alſo ſaid to be *cut*, *couped*, when they come full to the Extremities of the Shield.

Cutting, *Lithotomy*, in Chirurgery, the Operation of extracting the Stone out of the Bladder. See Stone.

It appears, that *Cutting* was in uſe for the Stone, even in the Time of *Hippocrates*; tho we are perfectly in the dark as to the manner in which they perform'd it: It was, however, wholly diſus'd in the after-Ages; inſomuch, that in the beginning of the XVIth Century, there was no body durſt practiſe it. The Faculty of Medicine at *Paris* were oblig'd to addreſs themſelves to the Parliament, to obtain Leave to make a Trial on a Criminal condemn'd to Death, who had the Stone in the Bladder: the Operation ſucceeding, the Practice became popular.

There are three principal Ways of performing the Operation; the *Apparatus minor*, *Apparatus major*, and *Apparatus altus*; or the *low*, *lateral*, and *high Operations*. *The Method of performing each, ſee under the Article* Lithotomy.

Cutting-*Glaſs*, in Chirurgery. See Cupping-*Glaſs*.

Cutting, in Coinage. When the *Laminæ*, or Plates of the Metal, be it Gold, Silver, or Copper, are brought to the thickneſs of the Species to be coin'd, pieces are *cut* out, of the Thickneſs, and nearly of the Weight of the intended Coin; which are now call'd *Planchets*, till the King's Image have been ſtamp'd on 'em. See Coining.

The Inſtrument wherewith they *cut*, conſiſts of two pieces of Steel, very ſharp, and placed over one another; the lower a little hollow, repreſenting a Mortar; the other a Peſtel.

The Metal being put between the two, is *cut* out in the manner deſcrib'd.

*Note*, Medallions, where the Relievo is to be great, are not *cut*, but caſt, or moulded. See Medal.

Cutting, in the Manage, is when the Horſe's Feet *interfere*; or when with the Shoe of one Foot he beats off the Skin from the paſtern Joint of another Foot. See Interfering.

This is more frequent in the hind Feet than the fore: The Cauſes are either Wearineſs, Weakneſs in the Reins, not knowing how to go, or ill ſhoeing.

Cutting, in Painting, the laying one ſtrong lively Colour over another, without any Shade or Softening. See Colouring.

The *Cutting* of Colours has always a diſagreeable Effect.

Cutting *in Wood*, a particular Kind of Sculpture, or Engraving; denominated from the Matter wherein it is employ'd. See Engraving.

It is us'd for various Purpoſes; as for initial or figured Letters, Head and Tail-pieces of Books; and even for

Schemes and other Figures; to ſave the Expences of engraving on Copper: and for Prints, and Stamps, for Paper, Callicoes, Linens, &c. See PRINTING.

The Invention of *Cutting in Wood*, as well as that in Copper, is aſcribed to a Goldſmith of *Florence*; but 'tis to *Albert Durer*, and *Lucas*, they are both owing for their Perfection.

One *Hugo de Carpi* invented a manner of *Cutting* in Wood, by means whereof, the Prints appear'd as if painted in Clair-Obſcure: In order to this, he made three Kinds of Stamps for the ſame Deſign; which were drawn, after one another, thro' the Preſs for the ſame Print: They were ſo conducted, as that one ſerv'd for the grand Lights, a ſecond for the Demi-Teints, and a third for the Outlines, and the deep Shadows.

The Art of *Cutting in Wood*, was certainly carried to a very great Pitch about 150 Years ago; and might even vie, for Beauty and Juſtneſs, with that of engraving in Copper: At preſent 'tis in a low Condition, as having been long neglected, and the Application of Artiſts wholly employ'd on Copper, as the more eaſy and promiſing Province: Not but that wooden *Cuts* have the Advantage of thoſe in Copper on many Accounts; chiefly for Figures and Devices in Books; as being printed at the ſame Time, and in the ſame Preſs as the Letters; whereas, for the other, there is requir'd a particular Impreſſion.

The *Cutters in Wood* begin with preparing a Plank or Block, of the ſize and thickneſs requir'd, and ever even and ſmooth on the Side to be *cut*: for this, they uſually take Pear-Tree, or Box; tho the latter is the beſt, as being the cloſeſt, and leaſt liable to be worm-eaten.

On this Block they make their Deſign with a Pen, or Pencil, juſt as they would have it printed. Thoſe who can't make their own Deſign, as many there are cannot, make uſe of a Deſign furniſh'd 'em by another; faſtening it upon the Block with Paſte of Flower and Water, with a little Vinegar; the Strokes or Lines turn'd towards the Wood.

When the Paper is dry, they waſh it gently over with a Sponge dip'd in Water; which done, they take off the Paper by little and little, ſtill rubbing it a little firſt, with the Tip of the Finger; till at length there be nothing left on the Block, but the Strokes of Ink that form the Deſign, which mark out ſo much of the Block as is to be ſpared, or left ſtanding.

The reſt they *cut* off, and take away very curiouſly with the Points of fine ſharp Knives, or little Chiſſels, or Gravers, according to the Bigneſs or Delicacy of the Work; for they need no other Inſtruments.

CUTTINGS, or *Slips*, in Gardening, the Branches or Sprigs of Trees, or Plants, *cut* or ſlipp'd off to ſet again; which is done in any moiſt, fine Earth. See PLANTING.

The beſt Seaſon is from *Auguſt* to *April*; but Care is to be taken, when 'tis done, the Sap be not too much in the Top, leſt it die ere that Part in the Earth have Root enough to ſupport it: nor yet muſt it be too dry, or ſcanty; the Sap in the Branches aſſiſting it to take Root.

In providing the *Cuttings*, ſuch Branches as have Joints, Knots, or Burrs, are to be *cut* off two or three Branches beneath them, and the Leaves to be ſtrip'd off ſo far as they are ſet in the Earth. Small Top-Branches, of two or three Years growth, are fitteſt for the Operation. See MANURING, GARDENING.

CYCLE, in Chronology, *Circle*; a certain Period, or Series of Numbers, proceeding orderly from firſt to laſt, and recurring again from laſt to firſt; ſucceſſively, and without interruption. See PERIOD.

The Origin of *Cycles* was thus: The apparent Revolution of the Sun round the Earth, has been divided, arbitrarily, into 24 Hours; the Baſis or Foundation of all our Menſuration of Time. Civil Uſe knows none but Hours; or rather, Multiples of Hours, as Days, and Years. But neither the annual Motion of the Sun, nor that of the other Heavenly Bodies, can be meaſur'd exactly, and without any Remainder, by Hours, or their multiples. That of the Sun, *v. g.* is 365 Days, 5 Hours, 49 Minutes, nearly; that of the Moon 29 Days, 12 Hours, 44 Minutes.

Hence, to ſwallow up theſe Fractions in whole Numbers, and yet in Numbers which only expreſs Days, and Years; *Cycles* have been invented: which comprehending ſeveral Revolutions of the ſame Body, replace it, after a certain Number of Years, in the ſame Points of the Heaven, whence it firſt departed; or, which is the ſame thing, in the ſame Place of the Civil Calendar. See CALENDAR.

Such is the famous *Cycle of 19 Years*, call'd alſo the

CYCLE *of the Moon*, or *Lunar* CYCLE, a Period of 19 Lunar Years, and ſeven Intercalary Months; equivalent to 19 Solar Years: in which Time, the New and Full Moons are ſuppoſed to return to the ſame Day of the *Julian* Year. See MOON.

This is alſo called the *Metonic Period*, from its Inventor *Meton*, the *Athenian*; and the *Golden Number*: tho, properly, the Golden Number is the particular Number which ſhews the Year of the Lunar *Cycle*, any given Year is in.

This *Cycle* of the Moon only holds true for 312 Years: For, tho the New Moons do return to the ſame Day after 19 Years; yet not to the ſame time of the Day, but near an Hour and a half ſooner: which Error, in 312 Years, amounts to an entire Day.

Yet, thoſe employ'd in reforming the Calendar, went on a Suppoſition of the Lunations returning preciſely from 19 Years to 19 Years, for ever. See GREGORIAN.

The Uſe of this *Cycle* in the antient Calendar, is to ſhew the New Moon of each Year, and the Time of Eaſter. See EASTER.

In the new one, it only ſerves to find the Epacts; which ſhew, in either Calendar, that the New Moons fall 11 Days too late. See EPACT.

As the Orientals began the Uſe of this *Cycle* at the Time of the Council of *Nice*; they aſſumed, for the firſt Year of the *Cycle*, the Paſchal New Moon to fall on the 13th of *March*: On which foot, the Lunar *Cycle* 3, fell on the 1ſt of *January*, in the third Year.

The Occidentals, on the contrary, put the Number 1 to the 1ſt of *January*, which occaſion'd a conſiderable Difference in the Time of *Eaſter*: Hence, *Dionyſius Exiguus*, upon framing a new Calendar, perſuaded the Chriſtians of the *Weſt* to ſalve the Difference, and come into the Practice of the Church of *Alexandria*.

*To find the Year of the Lunar* CYCLE, is to find the *Golden Number*. See GOLDEN *Number*.

CYCLE *of Indictions*, is a Series of 15 Years, returning conſtantly around, like the other *Cycles*; and commencing from the third Year before Chriſt. See INDICTION.

When this *Cycle* of Indictions was firſt ſet on foot among the *Romans*, and for what End; is much controverted among Chronologers. *Petavius* leaves it as a thing not to be aſcertain'd. The moſt probable Opinion is, that it was receiv'd about the Year 312, after the Time of *Conſtantine*.

*To find the* Cycle *of Indiction for any given Year*; add 3 to the given Year, and divide the Sum by 15, the Remainder is the *Cycle of Indiction*.

If there be no Remainder the *Cycle* is 15.

CYCLE *of the Sun*, or *Solar* CYCLE, a Revolution of 28 Years; beginning with 1, and ending with 28; which elapſed, the Dominical or Sunday-Letters, and thoſe that expreſs the other Feaſts, &c. return into their former Place, and proceed in the ſame Order as before. See DOMINICAL, &c.

'Tis called *Solar Cycle*, not with regard to the Sun's Courſe, which has nothing to do herein; but from Sunday, antiently call'd *Dies Solis*, *the Day of the Sun*: in regard, 'tis the Dominical Letter is principally ſought for from this Revolution; the Dominical Letters, which are the firſt in the Alphabet, having been ſubſtituted in lieu of the Nundinal Letters of the *Romans*.

The Reformation of the Calendar under Pope *Gregory*, occaſion'd a conſiderable Alteration of the *Cycle*: In the *Gregorian* Calendar, the *Solar Cycle* is not conſtant and perpetual; in regard, every fourth Secular Year is Common; whereas, in the *Julian* 'tis Biſſextile. The Epocha, or Beginning of the *Solar Cycle*, both *Julian* and *Gregorian*, is the 9th Year before Chriſt.

*To find the* Cycle *of the Sun for any given Year*; add 9 to the Number given, and divide the Sum by 28; the Number remaining will be the Number of the *Cycle*, and the Quotient the Number of Revolutions ſince Chriſt.

If there be no Remainder, it will be the 28th, or laſt Year of the *Cycle*.

CYCLE *of the Sun in the* Julian *Year.*

| | | | | | | | | | | | | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| 1 | G | F | 5 | B | A | 9 | D | C | 13 | F | E | 17 | A | G | 21 | C | B | 25 | E | D |
| 2 | | E | 6 | | G | 10 | | B | 14 | | D | 18 | | F | 22 | | A | 26 | | C |
| 3 | | D | 7 | | F | 11 | | A | 15 | | C | 19 | | E | 23 | | G | 27 | | B |
| 4 | | C | 8 | | E | 12 | | G | 16 | | B | 20 | | D | 24 | | F | 28 | | A |

CYCLE *of the Sun from the* Gregorian *Year* 1700, *to the Year* 1800.

| | | | | | | | | | | | | | | | | | | | | | | | |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| 1 | D | C | 5 | F | E | 9 | A | G | 12 | C | B | 17 | E | D | 21 | G | F | 25 | B | A |
| 2 | | B | 6 | | D | 10 | | F | 14 | | A | 18 | | C | 22 | | E | 26 | | G |
| 3 | | A | 7 | | C | 11 | | E | 15 | | G | 19 | | B | 23 | | D | 27 | | F |
| 4 | | G | 8 | | B | 12 | | D | 16 | | F | 20 | | A | 24 | | C | 28 | | E |

CYCLE, it may be obſerv'd, is not only us'd in the general, for all the Numbers that compoſe the Series; but for each Number in particular: Thus, we compute, that the ordinary Epocha from the Birth of Jeſus Chriſt, had the *Solar Cycle* 10; the *Lunar Cycle*, or the Golden Number 2; the Dominical Letter B, and the *Cycle of Indiction* 4.

CYCLISCUS, from κύκλος, *Circulus*; an Inſtrument in form of an Half-Moon; uſed by the Surgeons to ſcrape away Rottenneſs.

CYCLOID,

CYCLOID, in Geometry, one of the Mechanical, or, as others term 'em, the Tranſcendental Curves; called alſo the *Trochoid*. See CURVE, and TROCHOID.

It is deſcrib'd by the Motion of a Point A, (Tab. *Analyſis*, Fig. 55.) in the Periphery of a Circle; while the Circle makes a Revolution along the right Line A P.

Hence, *the Properties of this Curve, viz.* that the right Line A E is equal to the Periphery of the Circle A B C D; and A C to the Semi-periphery; and in any Situation of the generating Circle, the right Line A *d* is equal to the Arch D *d*.——Again, *a d* being parallel to A *c*; A *d* is equal to the Arch of the generating Circle *d* F.——Further, the whole length of the *Cycloid* is four times that of the Diameter of the generating Circle; and the *Cycloidal* Space comprehended between the Curve and the Subtenſe A E, triple the Area of the generating Circle.——Laſtly, any Part eſtimated from the Vertex, as F I, is every where double the Chord of the Circle F *b*; and the Tangent thereof G I, perpetually parallel to the ſame Chord F *b*.

*The Geneſis of the* CYCLOID, may be conceiv'd by imagining a Nail in the Circumference of a Wheel; the Line which the Nail deſcribes in the Area, while the Wheel revolves in a right Line, is the *Cycloid*.

The *Cycloid* is reputed a modern Curve, and its Invention aſcrib'd by ſome to *Merſenne*; by others to *Galileo*: but Dr. *Wallis* ſhews it of an older ſtanding, and to have been known to *Bovillus*, about the Year 1500; and even conſider'd by Cardinal *Cuſanus* much earlier, *viz.* before the Year 1451.

M. *Huygens* has demonſtrated, that from whatever Point, or Height, a heavy Body, oſcillating on a fix'd Centre, (*v.g.* a Pendulum) begins to deſcend; while it continues to move in a *Cycloid*, the Times of its Falls, or Oſcillations, will be equal to each other.

This Property M. *Fontenelle* ſtates thus: The Nature of the *Cycloid* is ſuch, that, if a Body which deſcribes it, fall from a greater height, and by that means acquire a certain Augmentation of Velocity, as in *Galileo*'s Theory; the greater *Cycloidal* Arch which it deſcribes, takes up preciſely that Exceſs of Velocity. So that the Body does not deſcribe it, either ſooner for its being accelerated, or later for having a greater Space to move: And hence ariſes an Equality in Time, notwithſtanding the Inequality of Arches.

On this Foundation it is, that the Pendulum-Clock is built: on the Subject whereof, the ſame M. *Huygens* has wrote a large Volume, under the Title of *Horologium Oſcillatorium*. See PENDULUM; ſee alſo OSCILLATION.

CYCLOIDAL *Space*, the Space contained between the *Cycloid*, and the Subtenſe thereof. See CYCLOID.

CYCLOMETRY, the Art of meaſuring Cycles, or Circles. See CYCLE, and CIRCLE.

CYCLOPÆDIA, the Circle, or Compaſs of Arts and Sciences; more ordinarily call'd *Encyclopædia*. See ENCYCLOPÆDIA.

CYGNUS, *the Swan*, in Aſtronomy, a Conſtellation of the Northern Hemiſphere. See CONSTELLATION.

Stars in the Conſtellation *Cygnus*, in *Ptolemy*'s Catalogue are 17; in *Tycho*'s 19; in the *Britannic Catalogue* 107. The Order, Names, Longitudes, Latitudes, Magnitudes, &c. whereof, are as follow.

### *Stars in the Conſtellation* CYGNUS.

CYLINDER, in Geometry, (from the *Greek* κύλινδρος, a *round long Stone*;) a ſolid Body, contain'd under three Surfaces; ſuppos'd to be generated by the Rotation of a Parallelogram, as C B E F, (Tab. *Geometry*, Fig. 56.) about one of its Sides, C F. See SOLID.

If the generating Parallelogram be Rectangular, as C B E F, the *Cylinder* it produces will be a *right Cylinder*, *i. e.* a *Cylinder* whoſe Axis is perpendicular to its Baſe.

If the Parallelogram be a *Rhombus*, or *Rhomboides*, the *Cylinder* will be *oblique*, or *ſcalenous*.

The Surface of a *right Cylinder*, excluſive of its Baſes, is demonſtrated to be equal to a Rectangle contain'd under the Periphery, and the Altitude of the *Cylinder*.

The Periphery, therefore, of the Baſe, and thence the Baſe it ſelf, being found, and multiply'd by two, and the Product added to the Rectangle of the Height, and Periphery of the *Cylinder*; the Sum will be the Area or Superficies of the *Cylinder*: multiply this by the Area of the Baſe; and the Product will be the Solidity of the *Cylinder*.

For it is demonſtrated, that a Circle is equal to a Triangle, whoſe Baſe is equal to the Periphery, and Height, to the Radius; and alſo, that a *Cylinder* is equal to a Triangular Priſm, having the ſame Baſe and Altitude with it ſelf: Its Solidity, therefore, muſt be had by multiplying the Superficies into the Baſe. See PRISM.

Again, ſince a Cone may be eſteem'd an infinite-angular Pyramid; and a *Cylinder* an infinite-angular Priſm: a Cone is one third Part of a *Cylinder*, upon an equal Baſe, and of the ſame height. See CONE.

Further, a *Cylinder* is to a Sphere of the ſame Baſe and Altitude as 3 to 2. See SPHERE.

Laſtly, It being demonſtrated in Mechanicks, that every Figure, whether Superficial or Solid, generated, either by the Motion of a Line, or of a Figure; is equal to the *Factum* of the generative Magnitude into the Way of its Centre of Gravity, or the Line its Centre of Gravity deſcribes: Hence, if the Rectangle A B C D, (Tab. *Mechanicks*, Fig. 43.) revolve about its Axis A D, it will deſcribe a *Cylinder*, and its Side B C the Surface of the *Cylinder*. But the Centre of Gravity of the right Line B C, is in the Middle F; and the Centre of Gravity of the generating Plane in the Middle G, of the right Line E F. The Way of this, therefore, is the Periphery of a Circle deſcrib'd by the Radius E G; and of that, the Periphery of a Circle deſcrib'd by E F. The Superficies, therefore, of the *Cylinder*, is the *Factum* of the Altitude B C, into the Periphery of the Circle deſcrib'd by the Radius E F, *i. e.* into the Baſe: But the Solidity of the *Cylinder*, is the *Factum* of the generating Rectangle A B C D, into the Periphery of the Circle deſcrib'd by the Radius E G; which is Subduple of E F, or the Semidiameter of the *Cylinder*.

Suppoſe, *v. g.* the Altitude of the deſcribing Plane, and therefore of the *Cylinder*, B C $= a$, the Semidiameter of the Baſe D C $= r$; then will E G $= \frac{1}{2}r$; and ſuppoſing the Ratio of the Semidiameter to the Periphery, $= 1 : m$; the Periphery deſcrib'd by the Radius, $\frac{1}{2}r$ will be equal to $mr$. Therefore, multiplying $\frac{1}{2}mr$ into the Area of the Rectangle A C $= ar$; the Solidity of the *Cylinder* $= \frac{1}{2}mar^2$: But $\frac{1}{2}mar^2 = \frac{1}{2}r.mr.a$, and $\frac{1}{2}r.mr$, the Area of the Circle deſcrib'd by the Radius D G. The Solidity of the *Cylinder*, therefore, is equal to the *Factum* of the Baſe, and the Altitude.

*For the Ratio of* CYLINDERS; as the *Radii* of all *Cylinders*, Cones, &c. are in a Ratio compos'd of their Baſes, and Altitudes: Hence, if their Baſes be equal, they will be in the Ratio of their Heights; if their Altitudes be equal, in the Ratio of their Baſes.

Hence, alſo, the Baſes of *Cylinders* and Cones being Circles; and Circles being in a duplicate Ratio of their Diameters; all *Cylinders* and Cones are in a Ratio compounded of the direct Ratio of the Altitudes, and the duplicate one of their Diameters: and, if they be equally high, as the Squares of the Diameters.

Hence, again, if in *Cylinders* the Altitude be equal to the Diameter of the Baſes, they will be in a triplicate Ratio of the Diameters of the Baſe. All *Cylinders*, Cones, &c. are in a triplicate Ratio of their homologous Sides; as alſo of their Altitudes.

Again, equal *Cylinders*, Cones, &c. reciprocate their Baſes and Altitudes.

Laſtly, a *Cylinder* whoſe Altitude is equal to the Diameter of the Baſe, is to the Cube of its Diameter, as 785 to 1000.

*To find a Circle equal to the Surface of a given* CYLINDER, we have this Theorem: The Surface of a *Cylinder* is equal to a Circle, whoſe Radius is a Mean Proportional between the Diameter and Height of the *Cylinder*. See SUPERFICIES.

*The Diameter of a Sphere, and Altitude of a* CYLINDER *equal thereto, being given; to find the Diameter of the* Cylinder: The Theorem is; The Square of the Diameter of the Sphere, is to the Square of the Diameter of the *Cylinder*, equal to it, nearly, as triple the Altitude of the *Cylinder*, to duple the Diameter of the Sphere. See SPHERE.

*To find a* Rete, *or Net, whence a* Cylinder *may be form'd, or wherewith any* Cylinder *may be cover'd.* With the Diameter of the Baſe, deſcribe two Circles; find their Peripheries: and upon a Line equal to the Altitude of the *Cylinder*, form a Rectangle, whoſe other Dimenſion is equal to the found Periphery. Thus may the *Cylinder* requir'd be form'd, or cover'd.

CYLINDER *charged*, in Gunnery, is the Chamber of a great Gun. See ORDNANCE.

CYLINDER *concave*, in Gunnery, is all the *Chace*, or hollow length of a Piece of Ordnance. See ORDNANCE.

CYLINDER *vacant*, in Gunnery, is that Part of the Hollow that remains empty, after the Gun is charg'd. See CANON.

CYLINDROID, in Geometry, a ſolid Body, approaching the Figure of a *Cylinder*; having, *v. g.* its Baſes elliptical, parallel, and equal.

The Word comes from the *Greek* κύλινδρος, *Cylinder*, and εἶδος, *Form*.

CYMA, in Botany, a Term ſignifying the Top of any Plant, or Herb.

CYMA, in Architecture. See CIMA, SIMA, and CYMATIUM.

CYMATIUM, CIMATIUM, or CIMA, in Architecture, (from the *Greek* κυμάτιον, *undula*;) a Member, or Moulding of the Cornice, whoſe Profile is waved, *i. e.* concave a-top, and convex at bottom; frequently alſo call'd *Doucine*, *Gorge*, or *Gula Recta*; eſpecially by the *French*: by the Italians *Goletta*, i. e. *parva Gula*; but more uſually, *Cymatium*, among us; as being the laſt, or uppermoſt Member, *q. d.* the *Cyma*, or Summet of the Corniche. See CORNICHE.

Some write it *Simaiſe*, from *Simus*, *Camus*, flat-nos'd; but this Etymology is unlucky: the Beauty of the Moulding conſiſting in its having its Projecture equal to its Height.

M. *Felibien*, indeed, will not allow this Etymology; contending, that the Moulding is not ſo denominated from its being the uppermoſt Member of the Corniche; but, according to the Sentiment of *Vitruvius*, from its being waved.

This is certain, that *Vitruvius* ſometimes uſes the Word *Unda* for *Cymatium*, and ſometimes *Lyſis*, i. e. *Solution*, *Separation*; in regard, Corniches, where the *Cymaiſes* are found, ſeparate one piece of Architecture from another; as the Pedeſtal from the Column, and the Frieze from the Corniche.

But, withal, it muſt be obſerved, that he does not confine *Cymatium* to the Corniche; but uſes it indifferently for any ſimilar Moulding, wheree'r he meets with it: in which he differs from the moſt accurate among the Moderns.

*Felibien* makes two Kinds of *Cymatiums*; the one *right*, the other *inverted*: In the firſt, that Part which projects the furtheſt is concave, and is otherwiſe call'd alſo *Gula Recta*, and *Doucine*. See DOUCINE.

In the other, the Part that projects furtheſt is convex, called *Gula Inverſa*, or *Talon*. See TALON.

Our Architects don't uſe to give the Name *Cymatium* to theſe Mouldings, except when found on the Tops of Cornices; but the Workmen apply the Name indifferently, wherever they find 'em.

*Palladio* diſtinguiſhes the *Cymatium* of the Corniche by the Name *Intavolatum*.

*Tuſcan* CYMATIUM, conſiſts of an Ovolo, or Quarter-Round. *Philander* makes two *Doric Cymatiums*, whereof this is one: *Baldus* calls this the *Lesbian Aſtragal*.

*Doric* CYMATIUM, is a Cavetto, or a Cavity leſs than a Semicircle, having its Projecture ſubduple its Height.

*Lesbian* CYMATIUM, according to *Vitruvius*, is what we otherwiſe call *Talon*, *viz.* a concavo-convex Member, having its Projecture ſubduple its Height. See TALON.

CYMBAL, a Muſical Inſtrument, uſed among the Antients; call'd by the *Greeks* κύμβαλον, and by the Latins *Cymbalum*.

It was of Braſs, like our Kettle-Drums; and ſome think in their Form, but ſmaller, and its Uſe different.

*Caſſiodorus*, and *Iſidore*, call it *Acetabulum*, the Name of a Cup or Cavity of a Bone wherein another is articulated; and *Xenophon* compares it to a Horſe's Hoof: whence it muſt have been hollow; which appears, too, from the Figure of ſeveral other Things, denominated from it, as a Baſon, Caldron, Goblet, Caſque; and even a Shoe, ſuch as thoſe of *Empedocles*, which were of Braſs.

In effect, the antient *Cymbals* appear to have been very different from our Kettle-Drums, and their Uſe of another Kind: To their exterior Cavity was faſten'd a Handle; whence *Pliny* takes occaſion to compare 'em to the upper Part of the Thigh, *Coxendicibus*; and *Rabban* to Phiols.

They were ſtruck againſt one another, in Cadence, and made a very acute Sound. Their Invention was attributed to *Cybele*; whence their uſe in Feaſts and Sacrifices: Setting

ting aſide this Occaſion, they were ſeldom uſed but by diſſolute and effeminate People.

Mr. *Lampe*, who has wrote expreſly on the Subject, attributes the Invention to the *Curetes*, or Inhabitants of Mount *Ida* in *Crete*: 'Tis certain, theſe, as well as the *Corybantes*, or Guards of the Kings of *Crete*; and thoſe of *Rhodes*, and *Samothracia*, were reputed to excel in the Muſick of the *Cymbal*. See CORYBANTES.

*Sylburgius* derives the Word κύμβαλον from three ſeveral *Greek* Roots, *viz.* from κυφος, *crooked*; from κυπελον, *Cup*; and from φωνη, *Voice*. *Iſidore* derives it from *cum*, and *ballematica*, an immodeſt Dance, uſed to accompany this Inſtrument. The real Etymology appears to be from κύμβος, *Cavity*.

The *Jews*, too, had their *Cymbals*, which they called צלצלים, or מצלתים; or at leaſt, Inſtruments that the *Greek*, *Latin*, and *Engliſh* Tranſlators render *Cymbals*; for as to their Matter, Form, &c. the Criticks are wholly in the dark.

The Modern *Cymbal* is a paltry Inſtrument, chiefly in uſe among Vagrants, Gypſies, &c. It conſiſts of ſteel Wire, in a triangular Form, whereon are paſs'd five Rings, which are touch'd and ſhifted along the Triangle with an Iron Rod held in the left Hand, while 'tis ſupported in the right by a Ring, to give it the freer Motion.

*Durandus* ſays, that the Monks us'd the Word *Cymbal* for the Bell hung in the Cloiſter, uſed to call 'em to the Refectory.

CYMBIFORME *Os*, in Anatomy. See NAVICULARE *Os*.

CYNEGETICS, *Cygnetica*, Books treating of the Art of Hunting. *Gratius Faliſcus* has wrote *Cynegetica* with Applauſe.

CYNICS, a Sect of antient Philoſophers, who valu'd themſelves on their Contempt of every thing, eſpecially Riches and State, Arts and Sciences; all excepting Morality.

The Founder of this Sect is ſaid to have been *Antiſthenes*, a Diſciple of *Socrates*; who, after his Maſter's Death, quitting the *Pyreum*, retir'd to *Cynoſarges*, a kind of Academy not far from the Gates of *Athens*.

Hence, ſome will have it, came the Name κυνικὸς, *Cynicus*, *viz.* from *Cynoſarge*. But others, with more probability, derive it from κύων, *Canis*, becauſe of their Severity and Importunity in reprehending Vice.

Thus, *Ariſtotle* obſerves, οι δ κυνικοὶ ὅπως ἐκλήθησαν διὰ τὸ παῤῥησιας πολὺν, &c. Cynicks *were ſo called, from their free way of rebuking*, &c.

Hence, *Diogenes* the *Cynic* ſaid of himſelf, πονηρὸς δάκνων, *I bite the Evil*; and *Antiſthenes* himſelf was called ἁπλωκύων, *an ingenious and ſincere Dog*: It being the diſtinguiſhing Character of the *Cynics*, to attack and bark at the Ill, and to defend and fawn on the Good.

*Arrian* praiſes the *cynical* Genius to the Skies: 'A *Cynic*, *ſays he*, is a Meſſenger ſent from *Jupiter*, to over-'look human Affairs;——a publick Doctor, and Tutor of 'Mankind; inſtructs, and chaſtiſes at the ſame time:—— 'An *Æſculapius*; a Lord and King, adorn'd with a Scep-'ter and Diadem,——who governs the People; and this 'voluntarily, without trembling, without Guards, &c. but 'by a good Conſcience.

The Ground of this Encomium, may be owing, in ſome meaſure, to that affinity between the *Stoicks* and *Cynicks*: the chief difference between 'em was, that the former were more modeſt and reſerv'd than the latter; who were ſaid to have baniſh'd all Shame, and were able to practiſe any Obſcenity without bluſhing.

Hence, *Laertius* obſerves of *Diogenes*, that he did every thing openly, whether it belong'd to *Ceres* or to *Venus*: Tho, the ſame *Laertius* adds, that he did it in imitation of the *Chorididaſcali*, *i. e.* he only ran to an Exceſs of Impudence, to put others out of conceit with it.

*Spaſmus* CYNICUS, a ſort of Spaſm, or Convulſion; whereby the Patient is brought to imitate the Geſtures, Snarlings, Howlings, &c. of a Dog. See SPASMUS.

Dr. *Freind*, in the *Philoſophical Tranſactions*, gives us an Account of a very extraordinary *Spaſmus* of this Kind, wherewith two Families, at *Blackthorn* in *Oxfordſhire*, were ſeiz'd.

The Novelty of the Thing drew abundance of Viſitors to the Village, and among the reſt Dr. *Willis*; who, a good while ere he reach'd the Place, heard a terrible Noiſe of barking and howling: upon his entering the Houſe, he was ſtrait ſaluted with five Girls, bawling, and anſwering each other by turns, with violent Motions of the Head. In their Face there was no Convulſion ſeen, beſide *Cynic* Diſtortions, and Oſcillations of the Mouth: Their Pulſe was pretty regular; their Noiſe was rather like that of the howling, than of the barking of Dogs; only that its Returns were more frequent, with deep Sighings between.

The *Spaſmus* had ſeiz'd 'em all equally; whereof the youngeſt was but ſix, and the eldeſt fifteen Years of Age: At Intervals they had their Reaſon and Senſes entire; but not long, ere one of 'em returning to her yelling, ſet on the reſt: till at length, all fainting, they fell like Epilepticks on a Bed laid in the middle of the Room to receive 'em.

A little while they would lie quietly and decently together; but upon a new Orgaſm of the Spirits, they began to beat and bruiſe each other. Two of the youngeſt awak'd while the Doctor ſtaid, and left their Siſters on the Bed: but the *Spaſmus* ſoon had hold on 'em again.

In *July*, 1700, Dr. *Freind* himſelf viſited another Family, in the ſame Village; where one Boy and three Girls had been ſeiz'd ten Weeks, without any apparent preceding Cauſe. A Girl had it firſt; and the reſt, as the Mother inform'd him, were ſo ſtruck with their Siſter's Diſorder, that they too were ſeiz'd.

At his Arrival, they were all at play, very briſkly and unconcernedly, before the Doors; at length the eldeſt Girl, about fourteen Years of Age, was ſeiz'd as uſual.

The only Symptom of its approach, was a Swelling of the Stomach; which riſing gradually up the Throat, ſet the Muſcles of the Larynx and the Head upon their uſual Convulſions: This Riſing was a certain Symptom of an approaching Paroxyſm in 'em all; and if they endeavour'd to ſtop it, it burſt out with the greater Violence, and held the longer.

The Noiſe they made was inceſſant, and diſagreeable; yet not ſo much like the barking or howling of Dogs, as had been given out, as a quaint kind of a Song, conſiſting of three Notes, or Tones, repeated twice over; and cloſed by deep Sighs, &c. accompany'd with extraordinary Geſtures and Nutations of the Head.

This Diſeaſe the Doctor takes to be natural; and to ariſe from the common Cauſe of all Convulſions, *viz.* from the Animal Spirits growing unruly in the Nerves, and driving the Muſcles into various Contractions, according to the Circumſtances of the Indiſpoſition. See CONVULSION.

CYNODESMUS, among Anatomiſts, the Band, or Ligament, which ties the Prepuce of the Yard to the Nut, or Glans. See PREPUCE, and GLANS.

CYNOREXY, an immoderate Appetite; to the Degree of a Diſeaſe; called alſo *Fames Canina*, and *Bulimy*. See BULIMY.

CYNOSURA, in Aſtronomy, a Name the *Greeks* have given to *Urſa Minor*, or the little Bear. See URSA.

This is the Conſtellation next our Pole, conſiſting of ſeven Stars; four whereof are diſpos'd like the four Wheels of a Chariot; and three lengthwiſe, repreſenting the Beam: whence ſome give it the Name of the *Chariot*, or *Charles's Wain*.

From theſe ſeven Stars it is the Pole takes its Name, *Septentrionalis*; and the reſt of the Hemiſphere, as far as the Line, *Septem Triones*. See POLE, NORTH, &c.

The Word *Cynoſura* is form'd of κυνοσουρα, q. d. *the Dog's-Tail*.

CYON, or CION, a Graft, Sprig, or Sucker. See CION, GRAFT, &c.

CYPHER. See CIPHER.

CYPHI, a Term in the *Arabian* Pharmacy, ſignifying a kind of ſtrengthning Perfume. See PERFUME.

*Mithridates* gives the Appellation *Cyphi* to the Troches wherewith the *Egyptian* Prieſts us'd to ſweeten their Gods, to make 'em grant what they requeſted. He uſed the ſame in the Compoſition of Mithridate, on account of their efficacy againſt Poiſons, Defluxions, &c. See MITHRIDATE.

The *Cyphi* are compos'd of Raiſins, or dry'd Grapes, Turpentine, Myrrh, Bdellium, Spica Nardi, Caſſia Lignea, Aſpalathum, Saffron, &c. temper'd into a Maſs with Honey and a little Wine.

CYPHONISM, CYPHONISMUS, a Kind of Torture, or Puniſhment, in uſe among the Antients.

The Learned are at a loſs to determine what it was: Some will have it to be that mention'd by S. *Jerom*, in his Life of *Paul the Hermit*, Ch. II. which conſiſted in ſmearing the Body over with Honey, and thus expoſing the Party, with his Hands ty'd, to the warm Sun, to invite the Flies and other Vermin to perſecute him.

CYPRESS, *Cupreſſus*, in Natural Hiſtory, a precious ſort of Wood, the Produce of a Tree of the ſame Name; frequent in the Iſland of *Cyprus*.

It is very compact, and heavy; and its Smell as agreeable as that of Santal. It ſcarce ever rots, decays, or is worm-eaten, no more than Cedar, or Ebony: For which Reaſon, the Antients uſed it to make the Statues of their Gods.

In *Candia*, and particularly about Mount *Ida*, the Plant is ſaid to riſe ſpontaneouſly, wherever the Earth is a little dug; but is exceeding difficult to raiſe by Art.

The Fruit of this Tree, call'd *Cones*, is us'd in aſtringent Decoctions, for Hernia's, Hemorrhages, &c.

CYPRUS, an Order of Knights, call'd alſo Knights of *Silence*, and Knights of *the Sword*; inſtituted by *Guy de Luſignan*, King of *Cyprus*, in 1192.

The

The Deſign of the Inſtitution was, to oppoſe the Deſcents and Irruptions of the Infidels in this Iſland: Accordingly, their Motto was *Securitas Regni*. See SWORD.

CYRENAICI, a Sect of antient Philoſophers; ſo called from their Chief, *Ariſtippus* of *Cyrene*, a Diſciple of *Socrates*.

Their leading Tenet was, that Man was born for Pleaſure; and that Vertue is only ſo far laudable, as it conduces thereto.

By Pleaſure, they meant, not only a Privation from Pain, and a Tranquillity of Mind like what *Epicurus* preach'd up; but an Aſſemblage of all the poſitive Pleaſures both of the Mind and the Senſes; eſpecially the laſt.

*Cicero* makes frequent mention of *Ariſtippus*'s School; and ſpeaks of it as if it yielded Debauchees.

Three Diſciples of *Ariſtippus*, after his Death, divided the Sect into three Branches; under which Diviſion it languiſh'd and ſunk: the firſt call'd the *Hegeſiac* School; the ſecond the *Annicerian*, and the third the *Theodorian*; from the Names of their Authors.

CYRTOMA, a Tumor in any Part of the Body. See TUMOR.

CYST-HEPATIC *Duct*, a Canal, by which the *Porus Bilarius* diſcharges part of its Bile into the Gall-Bladder. It was firſt deſcrib'd by Dr. *Gliſſon*, and long afterwards pretended to be diſcover'd by M. *Perrault*.

*Verhayen*, from the Courſe of the Bile, inverts the Name, and more properly calls it *Hepaticyſticus*. See HEPATICYSTICUS.

CYSTIC, an Epithet given to two Arteries and two Veins in the Gall-Bladder. See GALL-*Bladder*.

The *Cyſtic* Arteries, or *Cyſticæ Gemellæ*, are two Branches from the *Cæliac*, beſtow'd on the Gall-Bladder, and bringing Blood into the ſame: The *Cyſtic Veins* return the Remains of this Blood into the *Vena Porta*. See PORTA.

CYSTICS, are Medicines againſt Diſtempers in the Bladder. See LITHONTRIPTICS.

CYSTICUS *Meatus*, a Bilary Duct, about the bigneſs of a Gooſe's Quill; join'd to the *Meatus Hepaticus*, at about two Inches diſtance from the Gall-Bladder; the two together forming the *Ductus Communis*. See DUCTUS *Communis*.

CYSTIS, the ſame with *Veſica*, or *Bladder*. See VESICA, and BLADDER.

The Word is *Greek*, κύστις.

CYSTIS *Choledocha*, the ſame with *Folliculus Fellis*. See FOLLICULUS.

CYTHARA, an antient Muſical Inſtrument, by ſome ſuppoſed the ſame with the *Lyra*; at leaſt, a particular Species of the *Lyra*; by others different: Tho its preciſe Structure does not appear. See LYRE.

The Antients deſcribe it as triangular, in form of a *Greek Delta*, Δ: The Poets aſcribe the Invention to *Apollo*.

CYZICENES, *Cyzicena*, among the antient *Greeks*, were a ſort of magnificent Banquetting-Houſes, always expos'd to the North, and uſually opening upon Gardens.

They had their Name from *Cyzicus*, a City very conſiderable for the Grandeur of its Buildings; ſituate in an Iſland of the *Propontis* of the ſame Name.

Theſe *Cyzicenes* were among the *Greeks*, what the *Triclinia* and *Cœnacula* were among the *Romans*.

CZAR, a Title of Honour, aſſum'd by the Grand-Dukes, or, as they are now ſtyl'd, Emperors, of *Ruſſia*.

The Natives pronounce it *Tzar*, or *Zaar*; and this, by Corruption, from *Ceſar*, Emperor: they pretending to be deſcended from *Auguſtus*; and accordingly bearing the Eagle as a Symbol of their Empire. See CESAR.

The firſt who bore the Title of *Czar*, was *Baſil*, Son of *Baſilides*, who freed his Country from its Subjection to the *Tartars*, and firſt ſet it on its preſent Footing, about the Year 1470.

M. *Sperlingius*, in his Diſſertation on the Majeſty of the Name *Konning*, obſerves, that the *Ruſſian* Princes never bore the Name of *Czar*, till their People had embrac'd the *Greek* Faith: before that Time, he ſays, they were called *Konger*, King.

D, The 4th Letter of the Alphabet, and the 3d Conſonant. Grammarians generally rank it among the Lingual Letters, as ſuppoſing the Tongue to have the principal Share in the Pronunciation thereof: Tho' the Abbot *de Dangeau* ſeems to have Reaſon in making it a palatal Letter.

The Letter D is the 4th in the *Hebrew*, *Chaldee*, *Samaritan*, *Syriac*, *Greek* and *Latin* Alphabets; in the five firſt of which Languages it has the ſame Name, tho' ſomewhat differently ſpoke, *e. gr.* in *Hebrew* and Chaldee *Daleth*, in Syriac *Dolath*, and in Greek *Delta*. The *Arabians* have three D's in their Language, the 1ſt call'd *Dal*, which is the 8th of their 28 Letters; the 2d, call'd *Dhſal*, is only diſtinguiſh'd from the former by having a Point added over it; tho' its Sound is confounded with that of the Z: The 3d, which is their 17th Letter, is call'd *Da*, and pronounced like our D, tho' in Form it reſembles the Arabic *Ta*, all it differs in, being a Point added a-top.

The Form of our D, is the ſame with that of the *Latins*; as appears from all the ancient Medals and Inſcriptions. And the *Latin* D, is no other than the *Greek* Δ, rounded a little, by making it quicker, and at two Stroaks. The Δ of the *Greeks*, again, is borrow'd from the ancient Character of the Hebrew *Daleth*; which Form it ſtill retains on the *Samaritan* Medals, as is ſhewn by the Jeſuite *Souciet* in his Diſſertation on the *Samaritan* Medals. All the Alteration the *Greeks* have made in it, is the making it ſtoop a little, and taking away a little Line. Nor wou'd it be difficult to ſhew, that the Syriac *Dolath*, and the Arabic *Dal*, are both borrow'd from the ancient *Hebrew*, as well as the ד *Daleth* of the Modern or *Chaldee Hebrew*.

Some indeed will have it, that the *Greek* Δ *Delta* is borrow'd from the *Egyptians*, who made their D of three Stars diſpos'd in a Triangle; which was a Hieroglyphic that among them denoted God, the ſoveraign Being, as if they had had ſome Notion of a Trinity: But this is but poorly ſupported.

D is alſo a Numeral Letter, ſignifying *Five Hundred*; which ariſes hence, that in the *Gothic* Characters the D is half the M, which ſignifies a thouſand — Hence the Verſe

*Littera D velut A Quingentos ſignificabit.*

A *Daſh* added a-top, $\overline{D}$, denotes it to ſtand for *Five Thouſand*.

DABITIS, in Logic, one of the Modes of Syllogiſm. See Mode and Syllogism.

DACROIDES, in Medicine, a Term applied to Ulcers, which are continually yielding any putrid Matter. The Word is form'd from δάκρυον, Tear, and εἶδος, Form; denoting the Ulcers to weep or ſhed ſomewhat like Tears.

DACTYLI, in Antiquity, a Name attributed to the firſt Prieſts of the Goddeſs *Cybele*; who were particularly call'd *Dactyli Idæi*, on Account of the Goddeſs herſelf, who was call'd *Cybele Idæa*, becauſe principally honour'd on Mount *Ida* in *Phrygia*. The Name *Dactyli* is ſuppos'd to have been given them on this Occaſion; That to prevent *Saturn* from hearing the Cries of *Jupiter*, whom *Cybele* had committed to their Cuſtody, they uſed to ſing I know not what Verſes of their own Invention, which by their unequal Meaſures ſeem'd to reſemble the Foot call'd *Dactylos*. This is the Account of the Grammarian *Diomedes*. One *Sophocles*, quoted by *Strabo*, Lib. X. ſpeaks differently. They were call'd *Dactyli*, ſays he, from the *Greek* Word δάκτυλος, Finger, by Reaſon their Number was at firſt equal to that of the Fingers of the Hand, *viz.* Ten; five of them Boys, and as many Girls.— He adds, that 'tis to them we owe the Invention of Iron, and the Manner of Working it, with divers other uſeful Things. Others make their Number more, and others leſs than Ten. Some, again, make them Natives of *Phrygia* near the Foot of Mount *Ida*; and others bring them from elſewhere.

However, all the Authors *Strabo* had ſeen, agreed, That they were the firſt who wrought in Iron near Mount *Ida*; that they were Impoſtors; that they had been Miniſters of the Mother of the Gods, or *Cybele*; that they dwelt at the Foot of Mount *Ida*. 'Tis a Conjecture among them too, not that the *Curetes* and *Corybantes* were the ſame with the *Dactyli Idæi*, but that the *Curetes* and *Corybantes* were their Poſterity; That a hundred Men, born in *Creta*, were firſt call'd *Dactyli*; that each of theſe had nine Children, who were the *Curetes*; and that each of the *Curetes* had Ten Children, who were alſo call'd *Dactyli Idæi*. *Strabo* only gives us the Names of four of them, which are *Salaminus*, *Damnanæus*, *Hercules*, and *Acmon*. See Corybantes.

DACTYL, *Dactylus*, a Foot in the Latin Verſe, conſiſting of a long Syllable, follow'd by two ſhort ones, as *Carmine* &c. Hexameter Verſes uſually end with a *Dactyl* and Spondee. The *Dactyl* is ſaid to have been the Invention of *Dionyſius* or *Bacchus*, who deliver'd Oracles in this Meaſure at *Delphos*, before *Apollo*. The *Dactyl* and Spondee are the moſt conſiderable of the Poetical Feet; as being the Meaſures us'd in Heroic Verſe, by *Homer*, *Virgil*, &c. Theſe two are of equal Time, but not equal Motion. The Spondee has an even ſtrong and ſteady Pace like a Trot: But the *Dactyl* reſembles the nimbler Strokes of a Gallop. See Quantity, Measure, &c.

Dactyl was alſo a Sort of Dance among the ancient *Greeks*, chiefly perform'd, as *Heſychius* obſerves, by the *Athletæ*.

Dactyls are alſo the Fruits of the Tree, more uſually call'd *Dates*. See Date.

DACTYLIC, Something belonging, or that has a Relation to *Dactyls*: Anciently there were *Dactylic*, as well as Spondaic Flutes, *Tibiæ Dactylicæ*. The *Dactylic* Flutes conſiſted of unequal Intervals, as the *Dactylic* Foot does of unequal Meaſures.—*Dactylic Verſes* are Hexameter Verſes, ending in a *Dactyl*, inſtead of a Spondee; As Spondaic Verſes are thoſe, which have a Spondee in the 5th Foot inſtead of a *Dactyl*. An Inſtance of a *Dactyl* Verſe we have in *Virgil*, *Eneid* l. VII. 33.

*Bis Patriæ cecidere Manus: Quin Protinus omnia*
*Perlegerent Oculis.* —

DACTYLIOMANCY, *Dactyliomantia*, a Sort of Divination perform'd by means of a Ring. *Dactyliomancy* conſiſted principally in holding a Ring, ſuſpended by a fine Thread, over a round Table, on the Edge whereof were made divers Marks with the 24 Letters of the Alphabet. The Ring in ſhaking, or vibrating over the Table, ſtop'd over certain of the Letters, which being joyn'd together, compos'd the Anſwer required. But the Operation was preceded and accompanied by ſeveral Superſtitious Ceremonies: For firſt the Ring was to be conſecrated with a World of Myſtery; the Perſon who held it was to be clad in linnen Garments, to the very Shoes; his Head was to be ſhaved all around; and in his Hand he was to hold Vervain. Ere he proceeded on any Thing, the Gods were firſt to be appeas'd by a Formulary of Prayers, &c. compiled for the Purpoſe. *Ammianus Marcellinus* gives the Proceſs at large in his XXIXth Book. The Word is compos'd of the *Greek* δακτύλιος, Ring; of δάκτυλος, Finger, and μαντεία, Divination.

DACTYLOMANCY. See Dactyliomancy.

DACTYLONOMY, The Art of Accounting, or Numbering by the Fingers. The Rule is this: The left Thumb is reckond 1, the Index 2, and ſo on to the right Thumb, which is the tenth, and of Conſequence denoted by the Cypher o.

DADO, in Architecture, is by ſome Writers uſed for the *Dye*; which is the Part in the Middle of the Pedeſtal of a Column, between its Baſe and Cornice: It is of a Cubick Form, whence the Name of Dye. See Dye.

DADUCHI, in Antiquity, Prieſts of *Ceres*. That Goddeſs having loſt her Daughter *Proſerpine*, ſay the Fables, began to make Search for her at the Beginning of the Night. In Order to do this in the Dark, ſhe lighted a Torch, and thus ſet forth on her Travels throughout the World: For which Reaſon it is, that ſhe is always ſeen repreſented with a lighted Torch in her Hand. On this Account, and in Commemoration of this pretended Exploit, it became a Cuſtom for the Prieſts, at the Feaſts and Sacrifices of this Goddeſs, to run about, in the Temple, with Torches after this Manner: One of them took a lighted Torch from off the Altar, and holding it in his Hand, run with it to a certain Part of the Temple; where he gave it to another, ſaying to him, *Tibi trado*: This ſecond run after the like Manner to another Place of the Temple, and gave it to the third; and ſo of the reſt.

From this Ceremony, the Prieſts became denominated *Daduchi*, q. d. Torch-bearers; from δᾶς, an unctuous, and reſinous Wood, as Pine, fir, &c. whereof the Ancients made Torches; and ἔχω, I have, I hold.

DAILY, in Aſtronomy, &c. See Diurnal.

DAMAGE is generally taken to ſignify any Hurt or Hindrance, that a Man takes in his Eſtate; but particularly a Part of what the Jurors are to inquire of, in paſſing Verdict for the Plaintiff, or Defendant in a Civil Action, be it Perſonal or Real: for after Verdict given of the principal Cauſe, they are ask'd their Conſciences touching Coſts (which are the Charges of Suit, call'd by the Civilians *Expenſæ Litis*) and *Damages*, which contain the Hindrances that the Plaintiff or Demandant hath ſuffered by means of the wrong done him by the Defendant or Tenant. But the Word has two ſeveral Significations; the one properly and generally, the other ſtrictly and relatively: Properly, as it is in Caſes, where Damages are founded on the Statute of 2. *H.* 4. Cap. 1. and 8. *H.* 6. Cap. 9. where

Coſts are included within this Word *Damages*; for Damage, in its proper Signification, is ſaid a *Demendo*, when, by Diminution, a Thing becomes worſe; and in this Senſe Coſts of Suits are *Damages*, to the Plaintiff, for by it, his Subſtance is diminiſhed: But when the Plaintiff declares the Wrong done him to the *Damage* of ſuch a Sum, this is to be taken relatively, for the Wrong which paſſed, before the Writ brought, and is aſſeſs'd by Reaſon of the Treſpaſs aforeſaid; and cannot extend to the Coſts of Suit, which are future, and of another Nature.

DAMAGE *Feaſant*, or *Faiſant*, i. e. doing hurt, or *Damage*: As when a Stranger's Beaſts are doing hurt or ſpoiling the Graſs, Corn, Woods, &c. of another Man, without his Leave or Licenſe. In which Caſe, the Party whom they *damage* may diſtrain, and impound them, both by Night and by Day; tho' in other Caſes, as for Rent, Services, &c. none may diſtrain in the Night.

DAMASK, a Sort of Silk Stuff, having ſome Parts rais'd above the Ground, repreſenting Flowers, or other Figures. *Damask* is properly a Sort of Mohair and Satin intermix'd; in ſuch Manner as that what is not Satin on one Side, is on the other. The Elevation which the Satin makes on one Side, is the Ground on the other. The Flowers have a Satin Grain; and the Ground, a Grain of Taffetas. It has its Name from its being originally brought from *Damaſcus* in *Syria*.

DAMASKEENING, or *Damask-Work*, a kind of Moſaic Work; and accordingly, by the *Italians*, call'd by the ſame Name, *Tauſia*, as Moſaic.

DAMASKEENING, is properly the Art, or Act of adorning Iron, Steel, &c. by making Inciſions therein, and filling them up with Gold or Silver Wiar. It is chiefly us'd in Enriching Sword-blades, Guards and Gripes, Locks of Piſtols, &c. Its Name ſhews the Place of its Origin; or, at leaſt, the Place where it has been practiſed in the greateſt Perfection, *viz.* the City of *Damaſcus* in *Syria*. Tho' Monſr. *Felibien* attributes the Perfection of the Art to his Countryman *Curſinet*, who wrought under the Reign of King *Henry* IV.

DAMASKEENING, is partly Moſaic Work, partly Engraving, and partly Carving: As Moſaic Work, it conſiſts of Pieces *de Rapport*; as Engraving, the Metal is indented, or cut in *creux*; and as Carving, Gold and Silver are wrought therein, in *Relievo*.

There are two Manners of *Damaskeening*: In the firſt, which is the moſt beautiful, the Artiſt cuts into the Metal with a Graver, and other Tools proper for Engraving on Steel; and afterwards fills up the Inciſions, or Notches with a pretty thick Silver, or Gold Wiar. In the other, which is only ſuperficial, they content themſelves to make Hatches, or Strokes a-croſs the Iron, &c. with a cutting Knife, ſuch as is uſed in making of ſmall Files.

For the firſt, 'tis neceſſary the Gravings, or Inciſions be made in the dovetail Form; that the Gold or Silver Wiar, which is thruſt forcibly into them, may adhere the more ſtrongly.

For the ſecond, which is the more uſual, the Method is thus: Having heated the Steel till it changes to a Violet, or blue Colour; they hatch it over, and a-croſs with the Knife; then draw the Deſign, or Ornament intended, on this hatching, with a fine Braſs Point, or Bodkin. This done, they take fine Gold Wiar, and conducting or chaſing it according to the Figures already deſign'd, they ſink it carefully into the Hatches of the Metal with a Copper Tool.

DAMASCUS-*Steel*, a very fine kind of Steel, made in ſome Parts of the *Levant*, and particularly at *Damaſcus*, remarkable for its excellent Temper; and uſed chiefly in the making of Sword-Blades. See STEEL.

Some Authors aſſure us it comes from the Kingdom of *Golconda*, in the *Eaſt-Indies*; Where the Method of tempering with Alum, which the *Europeans* have never been able to imitate, was firſt invented.

DAMIANISTS, a Branch of the Ancients *Acephali Severitæ*. They agreed with the Catholics in admitting the IVth Council; but diſown'd any Diſtinction of Perſons in the Godhead, and profeſs'd one ſingle Nature incapable of any Difference. And yet they call'd God, the Father, Son, and Ghoſt. On which Account the *Severitæ Petritæ*, another Branch of *Acephali*, uſed to call them *Sabellianiſts*, and ſometimes *Tetraditæ*. Thus much we learn from *Nicephorus Calliſtes*, L. XVIII. C. 49. They took their Name from *Damianus* a Biſhop, who was their Leader.

DAMNATA *Terra*, in Chymiſtry, is the ſame with *Caput Mortuum*, that is, all the Earthy Part, or Maſs, remaining at the Bottom of the Retort, &c. after all the other Principles have been drawn out of the Body by Fire.

DAMPS, in Natural Hiſtory, are noxious Steams, or Exhalations, frequently found in cloſe, ſubterraneous Places, particularly Mines, Pitts, Cellars, &c. For the Rationale of the Effects of *Damps*, See POISONS and MEPHITES.

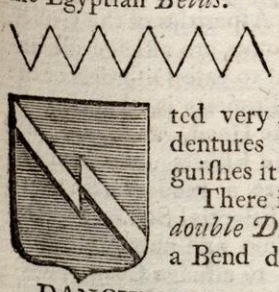
The *Damps* in Mines are of 4 Kinds: The firſt, which withal is the moſt ordinary, the Workmen apprehend in its Approach, by the Flame of the Candle's becoming orbicular, and leſſening by degrees, till it goes quiet out; as alſo by their Shortneſs or Difficulty of breathing: Thoſe who eſcape ſwooning, ſeldom ſuffer any great harm by it; but ſuch as ſwoon away, tho' they are not downright ſuffocated, yet on their firſt Recovery are tormented with very violent Convulſions: Their way of Cure is to lay the Perſon down on the Earth in a prone Poſture, with a Hole dug in the Ground under his Mouth; if this fail, they fill him full of good Ale; and if that will not do, they conclude him deſperate. The ſecond is the *Peaſe-Bloom-Damp*, which is called ſo from its Smell. This *Damp* always comes in the Summer-time, and hath not been known to be mortal: The Miners in the Peak of *Derby* fancy it ariſes there from the Multitude of red Treſoil-Flowers, called by them Honey-Suckles, with which the Lime-Stone Meadows of the Peake much abound; perhaps the Smell of this gives timely Notice to get out of the Way: The third is the moſt peſtilential, and moſt ſtrange of all, if what is ſaid of it be true: They, who pretend to have ſeen it, (for they ſay it is viſible) do thus deſcribe it: In the higheſt Part of the Roof of thoſe Paſſages in a Mine, which branch out from the main Grove, they ſee a round Thing hanging, about as big as a Foot-Ball, covered with a Skin of the Thickneſs and Colour of a Cob-web: If this Bag, by a Splinter, or any other Accident, become broken, the *Damp* immediately flies out, and ſuffocates all the Company: The Workmen, by Help of a Stick, and long Rope, have a way of breaking this at a Diſtance; and when they have done it, they purify the Place well with Fire: And they will have it, that it gathers from the Steam of their Bodies, and Candles, aſcends up into the higheſt Part of the Vault, and there condenſeth, and in Time has a Film grown over it, and then corrupts, and becomes Peſtilential. The fourth, is the Fulminating, or *Fire-Damp*, whoſe Vapour being touch'd by the Flame of the Candles, preſently takes Fire, and has all the Effects of Lightning, or fired Gun-powder. Theſe are found frequently in the Coal-Mines, and ſometimes, tho' rarely, in the Lead ones. How Mineral Steams may prove poiſonous, may be underſtood from Doctor *Mead's* Eſſay on Poiſons.

Naturaliſts furniſh us with very ſurprizing Inſtances of the Effects of *Damps*. In the *Hiſt. de l'Academie des Sciences An.* 1701; We read of a Well in the City of *Rennes*, into which a Maſon, at Work near its Brink, letting fall his Hammer, a Labourer, who was ſent down to recover it, e're he reach'd the Water, was ſtrangled. A ſecond ſent to fetch up the Corps, met with with the ſame Fate, and ſo a third: At laſt a fourth, half drunk, was let down, with Charge to call out aſſoon as he felt any Thing incommode him. He call'd accordingly, as ſoon as he came near the Water; and was inſtantly drawn out: yet he died 3 Days afterwards. The Information he brought them was, that he felt a Heat, which ſcorch'd up his Entrails. A Dog being let down, cried about the ſame Place; and died aſſoon as he came to Air; But throwing Water on him, he recover'd; as happens to thoſe thrown into the *Grotto del Cani* near *Naples*. See GROTTO. The three Carcaſſes being drawn up with Hooks, and open'd; there appear'd not any Cauſe of their Death. Now, what renders the Relation the more conſiderable, is, that the Water of this Well had been drawn and drunk ſeveral Years, without the leaſt ill Conſequence.

In the ſame Hiſtory, *An.* 1710. a Baker of *Chartres*, having carried 7 or 8 Buſhels of Brands out of his Oven into a Cellar 36 Stairs deep; his Son, a robuſt young Fellow, going with more, his Candle went out on the Middle of the Stairs. Having lighted it a-freſh, he was no ſooner got into the Cellar, than he cried out for Help; and they heard no more of him: His Brother, an able Youth, run immediately after him; cried out, he was dead; and was heard no more. He was follow'd by his Wife; and ſhe by a Maid, and ſtill 'twas the ſame. Such an Accident ſtruck the whole Nighbourhood with a Panic; and no body was forward to venture any further: till a Fellow more hardy and zealous than the reſt, perſwaded the four People were not dead, would go down to give them Help: He cried too, and was ſeen no more. Upon this, a 6th Man requiring a Hook to draw ſome of them forth without going to the Bottom; drew up the Maid: who, having taken the Air, fetch'd a Sigh and dyed. Next Day, the Baker's Friend, undertaking to get up all the Carcaſſes with a Hook, was let down with Ropes on a wooden Horſe, to be drawn up whenever he ſhould call. He ſoon call'd, but the Rope breaking, he fell back again; And tho' the Rope was ſoon piec'd again, he was drawn forth dead. Upon opening him, his Meninges were found extravagantly ſtretched; his Lungs ſpotted with black, his Inteſtines

ſwell'd

ſwell'd as big as one's Arm, inflamed and red as Blood; and what was moſt extraordinary, all the Muſcles of his Arms, Thighs and Legs, torn and ſeparated from their Parts. The Magiſtrate, at length, taking Cognizance of the Caſe, and the Phyſicians, being conſulted; they gave their Opinion, that the Brands had been but ill extinguiſh'd: the Conſequence of which muſt be, that as all the Cellars in *Chartres* abound with Saltpetre, the unuſual Heat in this, had rais'd a malignant Vapour, which had done the Miſchief: and that a good Quantity of Water muſt be thrown in to put out the Fire, and lay the Vapour. This perform'd, a Dog, and a lighted Candle were let down without Injury to either: An infallible Sign the Danger was over.



A third Hiſtory we ſhall add from Doctor *Connor*, in his *Diſſert. Med. Phyſ.* Some People digging in a Cellar at *Paris*, for ſuppoſed hidden Treaſure; after a few Hours working, the Maid going down to call her Maſter, found them all in their digging Poſtures: but ſtark dead. The Perſon who managed the Spade, and his Attendant who ſhovel'd off the Earth, were both on Foot, and ſeemingly intent on their ſeveral Offices: The Wife of one of them, as if a-weary, was ſat down on the Side of a Hopper, very thoughtful, and leaning her Head on her Arm: And a Boy, with his Breeches down, was evacuating on the Edge of the Pit; his Eyes fix'd on the Ground: All of them, in fine, in their natural Poſtures and Actions, with open Eyes, and Mouths that ſeem'd yet to breath; but ſtiff as Statues, and cold as Clay.

DAMSEL, from the French *Damoiſel*, or *Damoiſeau*, an Apellation anciently given to all young People of Genteel, or Noble Extraction of either Sex; As to the Sons and Daughters of Knights, Barons, and even Kings. Thus, in Hiſtory, we read of *Damſel Pepin*, *Damſel Louis le Gros*, *Damſel Richard*, Prince of *Wales*. *Paſquier* will have the the Word a Diminutive of *Dam*, an ancient Word for Lord; as in ſome Authors we read *Dam Dieu* for Lord God; *Dam* Chevalier, &c. Tho' in its feminine Senſe he takes it to come from *Dame*. Others derive the Word from *Domicellus*, or *Domnicellus*, a Diminutive of *Domnus*, *quaſi parvus Dominus*. Accordingly, *du Cange* obſerves, that it has been ſometimes wrote *Domenger*. — They who hold the Signory of *Commercy*, M. *de la Roque* tells us, anciently held it under the Title of *Damoiſeau*: And M. *de Marca* aſſures us, that the Nobleſſe of *Bearn* is ſtill divided into three Bodies or Claſſes; The Barons, the Cavers, and the *Damſels*, Domicellos, call'd in that Country *Domengers*. The Kings of *Denmark* and *Sweden* have here the ſame Title, as appears from *Pontanus*'s *Hiſt. of Denmark*, L. VII. and VIII. and *Henry of Upſals Hiſt. of Sweden*, L. III. From the Sons of Kings, the Apellation paſs'd to thoſe of Great Lords and Barons; and at length, to thoſe of Gentlemen who were not yet Knights.

At preſent *Damſel* is applied to all Maids, or Girls not yet married; provided they be not of the loweſt Claſs of People.

DAMSEL is ſometimes alſo applied to a kind of Utenſil put in Beds, to warm old Mens Feet withal. It conſiſts of a hot Iron incloſed in a hollow Cylinder, which is wrap'd round with linnen Cloth, and keeps its Warmth a long Time. Some call it a *Nun*.

DANAIDES, in the Ancient *Mythology*, the Daughters of *Danais*, or *Danaus*, IXth King of *Argos*, and Brother of *Egyptus*. They were 50 in Number, and were eſpous'd to the 50 Sons of their Uncle *Egyptus*. *Danaus* fearing the Accompliſhment of an Oracle, which had foretold that he ſhould be expell'd his Kingdom by a Son in Law, perſwaded his Daughters to murther, each of them, her Husband, the firſt Night; which they perform'd, all but *Hypermneſtre*, who ſpared her Husband *Lynceus*. In Vengeance for this Crime of the 49 *Danaides*, the Poets have condemn'd them to Hell, to be continually employ'd in filling a Cask perforated at Bottom. The *Danaides* are ſometimes alſo call'd *Belides*, from their Father, who was the Son of the Egyptian *Belus*.

DANCETTE, in Heraldry, is when the Out-line of any Bordure, or ordinary, is indented very largely; the Largeneſs of the Indentures being the only Thing that diſtinguiſhes it from *Indented*. See INDENTED.

There is alſo a bearing of a Bend, called *double Dancette*; thus, He beareth Azure, a Bend double *Dancette* Argent.

DANCHE', in Heraldry, the ſame with *Indented*; or, as others will have it, with *Dancette*. See INDENTED and DANCETTE.

DANCE, an agreeable Motion of the Body, adjuſted by Art to the Meaſures or Tune of a Violin, or Voice. Some diſtinguiſh the *high Dance*, conſiſting of Capers, Gambades, &c. from the *low Dance*, which is *Terra a Terra*, or cloſe to the Ground. In the *Carrouſel* of King *Louis* XIII. there were *Dances* of Horſes. The Invention of ſuch *Dances* is attributed to the *Sybarites*. The Word is French, *Dance*, form'd of the German *Dantz*, which ſignifies the ſame Thing. *Bochart* derives it from the Arabic *Tanza*, and *Guichart* from the *Hebrew* רוץ *doubts*, which have all the ſame Signification. *Menage*, after *Salmaſius*, derives the French *Danſer* to *dance*, from the Latin *denſare* to *condenſe* and *full*; as holding it a Practice among the ancient Fullers, to leap and *dance* as they full'd their Clothes.

*Dancing* has always been in Uſe among all Nations, both civilized and barbarous: Tho' held in Eſteem among ſome; and in Contempt among others. *Dancing*, of it ſelf, no doubt, is harmleſs. There is a Time, ſays the Preacher, to *dance*: And ſometimes it is even made an Act of Religion. Thus David *danced* before the Ark, to honour God, and expreſs his Exceſs of Joy for its Return into the City of *Sion*. *Socrates* learnt to *dance* of *Aſpaſia*. And the People of *Crete* and *Sparta* went to the Attack, *dancing*. On the other hand, *Cicero* reproaches *Gabinius*, a Conſular Man, with having *danced*. *Tiberius* expelled the *Dancers* out of *Rome*. And *Domitian* excluded ſeveral Members from the Senate, for having *danced*. *Caſtor* and *Pollux* are ſaid to be the firſt who taught the Art of *Dancing*; and that to the *Carcians*: Tho' others attribute the Invention to *Minerva*; who *danced* for Joy after the Defeat of the Giants.

The Ancients had three kinds of *Dances*: The firſt Grave, call'd *Emmelia*, anſwering to our *low Dances* and *Pavanes*. The ſecond Gay, call'd *Cordax*; anſwering to our *Courants*, *Galliards*, *Gavots* and *Vaults*. The third, call'd *Siccinnis*, was a Mixture of Gravity and Gayety. *Neoptolemus*, Son of *Achilles*, taught the *Cretans* a new Sort of *Dance*, call'd *Pyrrichia*, or the *Armed Dance*, to be uſed in going to War. But according to the Fable, the *Curetes* firſt invented this *Dance*, to amuſe and divert the little *Jupiter* with the Noiſe, and Claſh of their Swords, beating againſt their Bucklers. *Diodorus Siculus* in the IVth of his *Bibliotheca* aſſures us, that *Cybele*, Daughter of *Menon*, King of *Phrygia*, and *Dindymena* his Wife, invented divers Things, and among others the Flageolot of ſeveral Pipes, *Dancing*, the Tabour and the Cymbal. *Numa*, 'tis certain, inſtituted a Sort of *Dance* for the *Salii*, Prieſts of *Mars*, who made Uſe of Weapons therein. From theſe *Dances* was compoſed another, call'd *Saltatio Mimicorum*, or the *Buffoons Dance*; Wherein the *Dancers* were dreſs'd in little Corſlets, with Gilt Morions, Bells on their Legs, and Swords and Bucklers in their Hands. *Lucian* has an expreſs Treatiſe, and *Julius Pollux*, a Chapter on this Head; *Athenæus*, *Cælius Rhodiginus*, and *Scaliger*, alſo make mention of this *Dance*.

'Tis not many Years ago, ſince *Thoinot Arbeau*, a *Dancing*-Maſter of *Paris*, gave an *Orcheſography*, wherein all the Steps and Motions of a *Dance* are writ, or noted down; as the Sounds of a Song are ſcored in Muſic. Tho' the famous *Beauchamp* has ſome Pretenſions to be the Inventor of this Secret, and accordingly procured an *Arret* in his Favour.

*Dancing* is uſually an Effect, and Indication of Joy among moſt Nations: Tho' Mr. *Palleprat* aſſures us, that there are People in *South-America*, who *dance* to ſhow their Sorrow.

*Rope*-DANCER, *Schoenobates*. A Profeſſor of Philoſophy at *Dantzic*, publiſh'd a Diſſertation on *Rope-dancers*, de Funambulis; full of Learning, and an uncommon Knowledge of Antiquity. He defines a *Rope-dancer*, a Perſon who walks on a thick Rope faſten'd to two oppoſite Poſts; which is preciſely, what is expreſs'd by the *Latin* Word *Funambulus*, being a Compound of *Funis*, Rope, and *Ambulo*, I walk. But our *Rope-dancers* do more, for they not only walk, but *dance* and leap upon the Rope. The Ancients, 'tis certain, had their *Rope-dancers* as well as we. Witneſs the *Greek* Words *Neurobates*, *Schoenobates*, and the Latin *Funambulus*, which every where occur. They had likewiſe their *Cremnobates* and *Oribates*, that is, People who walk'd on the Brinks of Precipices. Nay more, *Suetonius in Galba* C. 6. *Seneca* in his 85th Epiſtle, and *Pliny* Lib. VIII. Cap. 2. make mention of Elephants that were taught to walk on the Rope. *Acron*, an ancient Grammarian and Commentator on *Horace*, takes Occaſion to obſerve on the Xth Satire of the firſt Book, that *Meſſala Corvinus* was the firſt, who uſed the Word *Funambulus*; and that *Terence* had it from him. But Mr. *Groddeck*, the learned Profeſſor above mentioned, ſhews that he is miſtaken, and that *Meſſala* liv'd after *Terence*. The Buſineſs is, *Acron* confounds *Valerius Meſſala*, who got the Sir-name *Corvinus* in the War againſt the Gauls about 200 Years before *Terence*, with one of his Deſcendants, who was a famous Orator in the Time of *Horace*.

Mr.

Mr. *Groddeck* coming from the Hiſtorical to the Moral Conſideration, maintains that the Profeſſion of a *Rope-dancer* is not allowable; that the Profeſſors are infamous, and their Art of no Uſe to Society; that they expoſe their Bodies to very great Dangers; and that they ought not to be tolerated in a well regulated State. But coming afterwards to temper the Severity of his Morals, he allows that there are ſometimes Reaſons for admitting them. That the People muſt have Shews; that one of the Secrets of Government is to furniſh them therewith, &c.

The ancient *Rope-dancers* had four ſeveral Ways of Exerciſing their Art; The firſt vaulted or turn'd round the Rope, like a Wheel round its Axis, and there hung by the Heels, or the Neck. The ſecond flew or ſlid from above, downwards, reſting on their Stomachs with the Arms and Legs extended. The third run along a Rope ſtretch'd in a right Line, or up and down. Laſtly, the fourth not only walk'd on a Rope, but made ſurprizing Leaps and Turns thereon. See SCHOENOBATES.

DANEGELT, or DANEGELD (*Gelt* in *Dutch* ſignifying Money) was an ancient Tribute or Contribution, which the *Danes* impoſed on the *Engliſh*, as the Arbitrary Terms of Peace and Departure. It was firſt impoſed as a ſtanding yearly Tax on the whole Nation under King *Ethelred*, *A. D.* 991. That Prince, ſays *Cambden*, *Britan.* 142. much diſtreſs'd by the continual Invaſion of the *Danes*; to procure his Peace, was compell'd to charge his People with heavy Payments, call'd *Danegelt*. At firſt he pay'd 10000 *lib.* then 16000 *l.* then 24000 *l.* after that 36000 *lib.* and laſtly 48000 *lib.* St. *Eduard* the Confeſſor releaſed the Nation from the *Danegelt*. *William* the I. and II. reaſſumed it. *Henry* the I. and after him King *Stephen*, releaſed them finally.

DANEGELT was alſo an annual Tax laid on our Anceſtors, firſt of 1 Sh. afterwards 2 Sh. for every Hide of Land through the Realm, for clearing the Seas of *Daniſh* Pyrates, which heretofore greatly annoy'd our Coaſts. *Eduard* the Confeſſor remitted this Tax. *William* I. and II. reaſſum'd it occaſionally. In the Reign of *Henry* I. it was accounted among the King's ſtanding Revenues; But King *Stephen*, on his Coronation Day, abrogated it for ever.

DANTELLE' in Heraldry, the ſame with *Danché*, or rather with *Dancette*, viz. a large, open Indenture. See DANCETTE.

DAPIFER, the Dignity, or Office of the Grand Maſter of the Emperor's and other Prince's Houſhold. The Word is pure *Latin*, compounded of *daps*, *dapis*, a Diſh of Meat ſerv'd on the Table, and *Fero*, I bear: So that *Dapifer* literally ſignifies a Diſh-carrier, or an Officer who ſerves the Meats upon the Table. The Title of *Dapifer* was given by the Emperor of *Conſtantinople* to the Czar of *Ruſſia*, as a Teſtimony of Favour. In *France*, the like Office was inſtituted by *Charlemain*, under the Title of *Dapiferat*, and *Senechauſſeé*; to which was affix'd the Superintendance over all the Officers of the Houſhold. In *England*, the Office of *Dapifer*, was leſs Eminent; being found in ſeveral of our ancient Charters named one of the Laſt of the Officers of the Houſhold. The Dignity of *Dapifer*, is ſtill ſubſiſting in *Germany*. Till the Year 1623. the Elector Palatin was *Dapifer* of the *Empire*: Since that Time the Elector of *Bavaria* has aſſumed the Title of Arch-*Dapifer* of the Empire. His Office is, at the Coronation of an Emperor, to carry the firſt Diſh of Meat to Table on Horſe-back. The ſeveral Functions of a *Dapifer* occaſion'd the Ancients to give him divers Names. Ἐιλεάτρος, and *Eleator*, *Dipnocletor*, *Convocator*, *Trapezopæus*, *Architritinus*, *Progeuſtla*, *Præguſtator*, *Domeſticus*, *Megadomeſticus*, *Oeconomus*, *Majordomus*, *Seneſchallus*, *Schalcus*, *Gaſtaldus*, *Aſſeſſor*, *Præfectus*, or *Præpoſitus Menſæ*, *Princeps Coquorum & Magyrus*.

DARAPTI, in Logic, one of the Modes of Syllogiſms. See MODE and SYLLOGISM.

DARDANARIUS, Uſurer, Monopoliſt, a Name anciently attributed to ſuch as caus'd a Scarcity and Dearneſs of Proviſions, particularly Corns, by buying and hoarding them up, to raiſe their Value, and ſell them again at an extravagant Rate. The Name *Dardanarius* was given them from one *Dardanus*, who made a Practice of ſpoiling and deſtroying the Fruits of the Earth by a Sort of Sorcery. The ſame People are alſo call'd *Æruſcatores*, *Directarii*, *Sitocapeli*, *Annonæ Flagellatores*, and *Seplaſiarii*.

DARII, in Logic, one of the Modes of Syllogiſms. See MODE and SYLLOGISM.

DARK-*Chamber*, See CAMERA OBSCURA.

DARK-*Tent*, a portable *Camera obſcura*, made not unlike a Desk, and fitted with Optic Glaſſes; to take Proſpects of Landſhips, Buildings, Fortifications, &c. See CAMERA OBSCURA.

DARREIN, in Law, a Corruption of the French *dernier* laſt, and uſed in the like Senſe, as — *Darrein Continuance*. See CONTINUANCE. — *Darrein* preſentment. See ASSIZE of *Darrein preſentment*.

DART, in Geometry, Aſtronomy, &c. See SAGITTA.

DARTOS, or DARTUS, in Anatomy, the inner Coat of the *Scrotum*, compoſed of a great Number of Muſcular, or Fleſhy Fibres; whence ſome call it a Cutaneous Muſcle. 'Tis by means hereof that the *Scrotum* is contracted; which is eſteem'd a Sign of Health. The *Dartos* was anciently taken to be a Continuation of the *Panniculus Carnoſus*; but miſtakenly. It has ſeveral Veins and Arteries. It inveſts the Teſticles, and ſhooting it ſelf between them, ſeparates them from each other. The Word is pure *Greek*, Δαρτὸς, *Excoriatus pelle*, *Nudatus*, of Δέρω, *excorio*, probably by Reaſon this Muſcle is cloſe under the Skin. See SCROTUM.

DATA, *Things given*, a Term uſed in Mathematicks, Philoſophy, &c. implying certain Things, or Quantities ſuppoſed to be given, or known, in Order, from them, to find out other Things or Quantities, which are unknown, or ſought for. A Problem or Queſtion generally conſiſts of two Parts; *Data* and *Quæſita*. See PROBLEM, &c.

*Euclid* has an expreſs Treatiſe of *Data*; Wherein he uſes the Word for ſuch Spaces, Lines and Angles as are given in Magnitude; or to which we can aſſign others equal. See GIVEN.

From the primary Uſe of the Word *Data* in Mathematicks, it has been tranſplanted into other Arts; as Philoſophy, Medicine, &c. where it expreſſes any Quantity, which, for the Sake of a preſent Calculation, is taken for granted to be ſuch, without requiring an immediate Proof for its Certainty; called alſo the *given* Quantity, Number, or Power: and ſuch Things as are known; from whence either in Natural Philoſophy, the animal Mechaniſm, or the Operation of Medicines, we come to the Knowledge of Things before unknown, are now frequently in Phyſical Writers call'd *Data*.

DATE, an Addition, or Appendage in Writings, Acts, Inſtruments, Letters, &c. expreſſing the Day and Month of the Year when the Act, or Letter, was paſs'd or ſign'd; together with the Place where the ſame was done. In Writings of Importance the *Date* ſhould be wrote in Words at length, *Dated* or given *at London* this twenty ſixth Day of *March* in the Year of our Lord one thouſand ſeven hundred twenty and five. In Letters, the *Date* is uſually in Figures. *London*, March the 26th 1725.— The Word is form'd from the Latin *Datum*, given, the Participle of *do*, I give. The *Latins* uſually ſay *dabam*, I gave.

An *Antidate* is a falſe *Date*, prior to the real Time when the Inſtrument was paſs'd or ſign'd: A *Poſt-date* is the poſterior to the real Time, &c.

Our ancient Deeds had no *Dates*, but only the Month and Year; to ſignify that they were not made in Haſt, or in the Space of a Day, but upon longer and more mature Deliberation. The Kings Grants began with the Words, *Præſentibus & futuris*, &c. but the Grants of private Perſons with, *Omnibus præſentes Literas inſpecturis*.—

DATE, *Dactyl*, the Fruit of the Palm-Tree. This Fruit is gather'd in Autumn, ere ripe; and bears a near reſemblance to our Bullace; being of a green Colour, very ſharp and aſtringent. When ripe, it becomes ruddy, having a hard, longiſh Stone, cloven at Bottom, encompaſs'd with a thin white Pellicle or Skin. The Bark or Covering of the *Date*, call'd by the Ancients *Elate* or *Spata*, when the Fruit is in its Flower, is various; having as many Changes of Colour as the Fig has: Some black, ſome white, ſome brown, ſome again are round like Apples, and very big. Ordinarily they are oblong, fleſhy, yellow, ſomewhat bigger than the Thumbs End, and very agreeable to the Taſte. Some are no bigger than a Chich-Pea, and others as big as a Pomegranate. The beſt are thoſe, call'd *Royal-Dates*. There is alſo another Sort, call'd *Carjotes*, which are very good. Some of them have Stones, and others none. *Dates* are principally uſed in Medicine: Their Qualities are, to ſoften the Aſperities of the Gullet, to ſtrengthen the Child in the Womb, to aſſuage all immoderate Fluxes of the Belly, and to eaſe Diſorders of the Reins and Bladder. Their bad Property is, that they digeſt difficultly, cauſe Pains in the Head, and produce a thick melancholic Blood.— Theſe Effects ariſe from the Principles they contain, which are a moderate Share of Oil, and a deal of Phlegm, and Eſſential Salt. The Oil and Phlegm render them moiſtening and nutritious, good againſt Acrimonies of the Breaſt, to aſſuage Coughs, &c. And the Phlegm and Salt render them deterſive and aſtringent, and good againſt Diſeaſes of the Throat. For the reſt; they are an heavy Food, full of an Earthy Juice, and occaſion Obſtructions in the *Viſcera*; for which Reaſon, People who live of *Dates* become Scorbutic, and loſe their Teeth betimes.

Our

Our *Dates* are brought us from *Egypt*, *Syria*, *Africa*, and the *Indies*. They never come to full Maturity in *Italy*, or the moſt Southern Parts of *Spain*. And yet there are tolerable *Dates* in *Provence*; only they don't keep, but breed Worms. Thoſe from *Perſia* exceed all others in Largeneſs, Colour, and Taſte. The Word is form'd of *Dacte*, and that of *Dactylus*, Finger; as being round and oblong, reſembling a Finger's End.

DATISI, in Logic, one of the Modes of Syllogiſms. See MODE and SYLLOGISM.

DATIVE, in Grammar, the third Caſe in the Declenſion of Nouns; expreſſing the State, or Relation of a Thing, to whoſe Profit or Loſs ſome other Thing is referr'd. See CASE.

'Tis call'd *Dative*, becauſe uſually govern'd by a Verb, implying ſomething to be *given* to ſome Perſon. As, *Commodare* Socrati, To lend to *Socrates*; *Utilis Republicæ*, Uſeful to the Common-wealth; *Perniciosus Eccleſiæ*, Pernicious to the Church; *Promittere Amico*, To promiſe a Friend; *Viſum eſt* Platoni, It ſeem'd good to *Plato*, &c.

In *Engliſh*, where we have properly no Caſes, this Relation is expreſs'd by the Sign *to*, or *for*; which are uſually either expreſs'd, or underſtood.

DAVIDISTS, or *Davidici*, a Sect of Hereticks, the Adherents of *David George* a Glazier, or, as others ſay, a Painter of *Ghant*; who in 1525. began to preach a new Doctrine. He publiſh'd himſelf to be the true *Meſſiah*, and that he was ſent hither to fill Heaven, which was quite empty for Want of People to deſerve it. He rejected Marriage, with the *Adamites*; denied the Reſurrection, with the *Sadducees*; held with *Manes*, that the Soul was not defiled by Sin; and laugh'd at the Self-Denial ſo much recommended by Jeſus Chriſt. Such were his principal Errors. He made his Eſcape from *Ghant*, and retired firſt into *Friſeland*, and then to *Baſil*, where he changed his Name, aſſuming that of *John Bruck*, and died in 1556. He left ſome Diſciples behind him, to whom he promis'd that he would riſe again at the End of three Years. Nor was he altogether a falſe Prophet herein, for the Magiſtrates of that City, being inform'd at the three Years End of what he had taught, had him dug up, and burnt, together with his Writings, by the common Hangman. There are ſtill ſome Remains of this ridiculous Sect in *Holſtein*, particularly about *Friderickſtadt*, where they are intermix'd with the *Armenians*.

DAVIS'S-*Quadrant*. See BACK-STAFF.

DAUGHTER. See FEMALE. The Sons and Daughters of the King of *England* are call'd the *Sons* and *Daughters* of *England*; becauſe all the Subjects of *England* have a ſpecial Intereſt in them. See PRINCES *of the Blood*.

DAUPHIN, *Dolphin*, in Aſtronomy. See DELPHIN.

DAUPHIN, a Title given the eldeſt Son of *France*, and preſumptive Heir of the Crown; On Account of the Province of *Dauphine*, which in 1343. was given to *Philip de Valois* on this Condition, by *Humbert*, *Dauphin* of the *Viennois*. *M.* the *Dauphin*, in his Letters Patents ſtyles himſelf, "By the Grace of God, "Eldeſt Son of *France*, and *Dauphin* of *Viennois*.

DAUPHIN was anciently the Title of the Prince of *Viennois* in *France*. Moſt Authors, who have ſought the Origin of the Name *Dauphin*, and *Dauphine*, ſeem to have given too much looſe to their Imagination. Some will have it deriv'd from the *Auffinates*, an ancient People mentioned by *Ptolomy* and *Pliny*; But thoſe Authors place the *Auffinates* on t'other Side of the *Alpes* in the *Gallia Ciſalpina*. Others wirte that the *Allobroges* brought the Name from *Delphos*; Others, that King *Boſon*'s Shield was diſtinguiſh'd by the Figure of a *Dolphin*, which he bore thereon. Others, that the Princes who reign'd in the *Viennois* after *Boſon*, pitch'd on theſe Arms as a Symbol of their Mildneſs and Humanity. Others, that it was given by an Emperor, who made War in *Italy*, but whom they do not name, to a Governour of this Province, who ſent him a powerful Supply with ſuch Expedition, that it deſerv'd to be compar'd with the Swiftneſs of a *Dolphin*. *Thabot* fancies the Word to be *Gothic*; as well as the Names, *Breſs*, *Savoy*, *Beaujeu*, &c. *Claud de Grange* believes the Word to be form'd of *Viennois*, the ancient Name of this Province. A Perſon of this Province, ſays he, being aſk'd what Countryman he was, anſwer'd, *do Viene*, and the Prince of the Province call'd himſelf the Prince *do Viene*, and afterwards, changing the *V*, after the common Cuſtom, into *F*, *do Fiene*; and at Length retrenching the two *e*'s, *Dofin*: The common Opinion that the Word was form'd from *Delphinus*, occaſion'd them to write *Dauphin*. But this appears to *Chorier* no better than an ingenious Anagram, or ridiculous Subtilty. Others will have it that *Guy* the *Fat*, having a Daughter that he was very fond of, he uſed to call her *Dauphine*; and to immortalize her when dead, gave her Name to his Country. Others are of Opinion, that the laſt Count *d'Albon*, whoſe Eſtate became incorporated with that of the Counts *de Greſivaudan*, by the Marriage of his only Daughter with the firſt *Guy*, was really named *Dauphin*; and that his eldeſt Grandſon, being oblig'd to take his Name, was call'd *Dauphin*, and bore the Figure of a *Dolphin* for his Arms. *Du Cheſne* is likewiſe of Opinion, that it was the Grandſon of *Guy* the *Fat*, who firſt bore the Name of *Dauphin*; tho' not for the Reaſon juſt alledg'd, but that it was given him at his Baptiſm; and added to that of *Guy*.

*Chorier* wont allow any Thing probable in any of theſe Opinions. He obſerves then, that *William*, Canon of *Notre Dame* at *Grenoble*, who has wrote the Life of *Margaret*, Daughter of *Stephen*, Earl of *Burgundy*, married with *Guy*, Son of *Guy* the *Fat*, calls the latter ſimply *Guy* the *Old*, and the former always Count *Dauphin*. And adds, that no Title, no Monument, ever attributes the Title of *Dauphin* to *Guy* the *Fat*, or any of his Predeceſſors; So that it muſt neceſſarily have taken its Riſe in his Son, all whoſe Succeſſors have ſo conſtantly aſſum'd it, that it is become the proper Name of the Family. He died in 1142. in the Flower of his Youth; So that it muſt be about the Year 1120, that that Title commenced; and without doubt, he adds, on ſome illuſtrious Occaſion. He obſerves further, that this Prince was of a military Diſpoſition, and delighted in nothing but War; And again, that it was the Cuſtom of the Cavaliers to charge their Caſks, Coats of Arms, and the Houſing of their Horſes, with ſome Figure or Device peculiar to themſelves, whereby they were diſtinguiſh'd from all others engag'd in the ſame Combat or Tournament. From all theſe Circumſtances he conjectures that this *Guy* choſe the *Dolphin* for his Signature; that this was the Creſt of his Helmet; and that he bore it on his Coat in ſome notable Tournament or Battel wherein he diſtinguiſh'd himſelf. And this, *Chorier* makes no doubt, is the real Origin of the Appellation.

Monſr. *le Preſident de Valbonnet* ſpeaks more juſtly on the Subject. *Guigues*, or *Guy* the *Fat*, Son of *Guy* the *Old*, married *Mathilda*, who has been ſuppoſed to be of the ſame Royal Family, as being call'd *Regina* in ſeveral ancient Charters. This Couple had a Son, who, in an Act paſs'd between him and *Hugh*, Biſhop of *Grenoble*, in 1140, is call'd *Delphinus*; *Guigo Comes*, *qui vocatur Delphinus*. This has occaſion'd ſome Hiſtorians to think to diſcover the Origin of the Name *Dauphin*. There was no Neceſſity for having Recourſe to Voyages beyond the Sea, where the Counts *de Greſivaudan* might take the *Dolphin* for their Arms, or Badge of Diſtinction. In Effect, that Conjecture does not ſtand on any Proof; Nor is it true, that the firſt and ſecond Race of thoſe Princes bore the *Dolphin* for their Arms; There being ſcarce any Signs thereof before *Humbert* I. who firſt bore it on his Shield. 'Tis more probable, that the Sirname *Dauphin*, which *Guy* firſt aſſumed, pleas'd his Succeſſors ſo much, that they added it to their own Name, and erected it into a Title, which has been retained ever ſince. Nothing is more common in thoſe Times, than to find proper Names become the Names of Families, or Dignities. Witneſs the *Ademars*, *Arthauds*, *Aynards*, *Atlemans*, *Berengers*, and infinite others, who all owe their Names to ſome one of their Anceſtors, from whom it has been tranſmitted throughout the Family.

The Seigneurs or Lords of *Auvergne* have likewiſe bore the Appellation of *Dauphin*; But the *Dauphins* of *Auvergne* had it not till a good while after thoſe of the *Viennois*, and even receiv'd it from them. The Manner was this: *Guy* the VIIIth *Dauphin* of the *Viennois*, had by his Wife *Margaret*, Daughter of *Stephen*, Earl of *Burgundy*, a Son and two Daughters. The Son was *Guy* the IXth, his Succeſſor. *Beatrix*, one of the Daughters, was married to the Count *d'Auvergne*, who, according to *Blondel*, was *William* the Vth, or rather, as *Chorier* and others hold, *Robert* the VIth, Father of *William* the Vth. This Prince

loſt the greateſt Part of the County *d'Auvergne*, which was taken from him by his Uncle *William*, aſſiſted by *Louis* the *Young*; and was only left Maſter of the little Canton whereof *Vodable* is the Capital. He had a Son whom he call'd *Dauphin*, on Account of *Guy*, or *Guigues*, his Uncle by the Mother's Side. From his Time his Succeſſors holding the ſame petty Canton of *Auvergne*, qualified themſelves *Dauphins* of *Auvergne*, and bore a *Dolphin* for their Arms.

DAY, a Diviſion of Time, drawn from the Appearance, and Diſappearance of the Sun. See SUN.

The *Day* is of two Kinds, *Artificial*; and *Natural*, or *Civil*.

*Artificial* DAY, which ſeems to be that primarily meant by the Word *Day*, is the Time of Light; determin'd by the Sun's Riſing and Setting. This is properly defined the Stay of the Sun above the Horizon: In Oppoſition to which, the Time of Darkneſs, or, the Sun's Stay below the Horizon from Setting to Riſing again, is call'd *Night*. See NIGHT.

*Natural* DAY, call'd alſo *Civil Day*, is the Space of Time wherein the Sun performs one Revolution round the Earth: Or, more juſtly, the Time wherein the Earth makes a Rotation on its Axis. Which the *Greeks* more properly expreſs by νυχθήμερον, *Nychthymeron*, q. d. Night-Day.

The *Epocha*, or *Beginning of the Civil Day*, is the Term from which one *Day* begins, and in which the preceeding *Day* concludes. The Fixing of this Term is of ſome Importance. 'Tis certain that for the more commodious diſtinguiſhing of *Days*, it ought to be fix'd in ſome Moment of Time wherein the Sun is in ſome diſcernible Part of the Heavens. The moſt eligible therefore ſhou'd be the Moments wherein the Sun paſſes either the Horizon or the Meridian. In Effect, as there is no Moment can be more accurately determined by Obſervation than that when the Sun paſſes through the upper Meridian: if Regard be had to the Exactneſs of the Meaſure, the Noon Tyde, has the beſt Pretenſions; the Riſing and Setting of the Sun being diſturb'd by the Refraction; beſide that, the Horizon is ſeldom clear of Clouds. But yet, as the *Artificial Day* does begin with the Sun's Riſe, and ends with the Setting; and beſides, the Sun's Paſſing the Horizon is a Thing eaſily obſerved, the Riſing or Setting of the Sun ſhou'd appear the moſt commodious *Epoch* or Beginning of the *Civil-Day*.

As then there are not wanting Reaſons for Beginning the *Natural Day*, both from the Sun's Paſſing the Meridian, and the Eaſtern, and Weſtern Side of the Horizon; 'tis no Wonder that different Nations ſhou'd begin their *Day* differently.

Accordingly, Firſt, The ancient *Babylonians*, *Perſians*, *Syrians*, and moſt other Eaſtern Nations, with the preſent Inhabitants of the *Balearick* Iſlands, the *Greeks*, &c. begin their *Day* with the Sun's Riſing. Secondly, The ancient *Athenians* and *Jews*, with the *Auſtrians*, *Bohemians*, *Marcomanni*, *Sileſians*, with the modern *Italians* and *Chineſes*, reckon it from the Sun's Setting. Thirdly, The ancient *Umbri* and *Arabians*, with the modern Aſtronomers, at Noon. And fourthly, The *Egyptians* and *Romans*, with the modern *Engliſh*, *French*, *Dutch*, *Germans*, *Spaniards*, and *Portugueſes*, at Midnight.

The *Day* is divided into *Hours*; and the Week, Month, &c. into *Days*. See HOUR, MONTH, WEEK.

For the different Lengths of the *Day* in different Climates. See CLIMATE, and GLOBE.

It has been a Matter of ſome Controverſy among Aſtronomers, whether or no the *Natural Days* are all equally long throughout the Year; and if not, what is their Difference. *M*.... Profeſſor of Mathematicks at *Sevil*, in *a Memoir in the Philoſophical Tranſact.* aſſerts, from a continued Series of Obſervations for three Years, that they are all equal. Mr. *Flamſteed*, in the ſame *Tranſactions*, refutes the Opinion; and ſhews, that one Day, when the Sun is in the Equinoctial, is ſhorter than when he is in the Tropicks, by 40 Seconds; and that 14 Tropical *Days* longer than ſo many Equinoctial ones, by $\frac{1}{6}$ of an Hour, or 10 Minutes. The Inequality of the Days flows from two ſeveral Principles: The one, the Excentricity of the Earth's Orbit; the other, the Obliquity of the Ecliptic with Regard to the Equator, which is the Meaſure of Time. As theſe two Cauſes happen to be combin'd, the Length of the *Day* is varied. See EXCENTRICITY and OBLIQUITY.

DAY, in Law, is frequently uſed for the *Day* of Appearance in Court, either originally, or upon Aſſignation; as, *He had a* Day *by the Rolls*, i. e. *He had a* Day *of Appearance aſſign'd him.* Sometimes, for the Returns of Writs; e. g. *Days in Bank* are *Days* ſet down by State or Order of the Court when Writs ſhall be returned, or when the Party ſhall appear on the Writ ſerved. To be diſmiſs'd *without* Day, *ſine Die*, is to be finally diſcharged the Court. *Days of Prefixion* in the Exchequer. See REMEMBRANCER.

DAYS *of Grace*, in Commerce, are a Number of *Days* allow'd by Cuſtom for the Payment of a Bill of Exchange, after the ſame becomes due, *i. e.* after the Time it was accepted for is expired. In *England*, 3 *Days of Grace* are allowed; So that a Bill accepted in Order to be pay'd, *e. gr.* 10 *Days* after Sight, is not to be pay'd till 13 *Days*. Throughout *France*, they allow 10 *Days of Grace*; as many at *Dantzic*; 8 at *Naples*; 6 at *Venice*, *Rotterdam*, and *Antwerp*; 4 at *Francfort*, and 3 at *Leipſic*.

*Dog*-DAYS, or *Dies Caniculares*. See DOG-*Days*.

*Critical* DAYS, *Dies Critici*. See CRITICAL *Days*.

*Intercalary*, or *Additional* DAYS. See INTERCALARY *Days*.

DEACON, *Diaconus*, a Perſon in the loweſt Degree of holy Orders, whoſe Buſineſs is to baptize, read in the Church, and aſſiſt at the Celebration of the Euchariſt. The Word is form'd from the Latin *Diaconus*, of the *Greek* διακόνος, Miniſter. See ORDERS and ORDINATION.

DEACONS were inſtituted ſeven in Number by the Apoſtles, *Acts* C. VI. which Number was retain'd a long Time in ſeveral Churches. Their Office was to ſerve in the *Agapæa*, and to diſtribute the Bread and Wine to the Communicants, and to diſpenſe the Alms. By the ancient Canons, Marriage was not incompatible with the State and Miniſtry of a *Deacon*. But 'tis now a long Time that the Romiſh Church has prohibited their Marrying; and the Pope only grants them Diſpenſations for very important Cauſes; and after Diſpenſation, they loſe the Rank and Functions of their Order, and return to a Lay State. The *Deacons* were formerly prohibited ſitting with the Prieſts. The Canons of Councils forbid *Deacons* to conſecrate; that being a ſacerdotal Office. They alſo prohibit a *Deacon* being ordain'd, unleſs he have a Title, or Call, and be at leaſt 25 Years of Age. The Emperor *Juſtinian*, in *Novel* 123. aſſigns the ſame Age of 25 Years for a *Deacon*. But this was the Cuſtom when Prieſts were not ordained at leſs than 30 Years of Age. At preſent 23 Years of Age ſufficies for a *Deacon*.

At *Rome*, under Pope *Sylveſter*, they had only one *Deacon*; then ſeven were appointed; then 14, and at laſt eighteen, who were call'd *Cardinal Deacons*, to diſtinguiſh them from thoſe of other Churches. See CARDINAL.

Their Office was to take Care of the Temporalities of the Church, look to the Rents and Charities, to provide for the Neceſſities of the Eccleſiaſticks, and even of the Pope. The Collecting of the Rents, Alms, &c. belong'd to the *Sub-Deacons*; the *Deacons* were the Depoſitaries and Diſtributers. Having thus the Management of the Revenues of the Church in their Hands; their Authority grew a-pace, as the Riches of the Church increaſed. Thoſe of *Rome*, as being Miniſters of the firſt Church, preceeded all others, and even at length took Place of the Prieſts themſelves. Doubtleſs, it was the Avarice of the Prieſts that made them give Place to the *Deacons*, who had the Diſpoſal of the Money. St. *Jerom* exclaims againſt this Attempt, and proves that a *Deacon* is inferior to a Prieſt.

The Council in *Trullo*, which is the IIId of *Conſtantinople*, *Ariſtinus* in his *Synopſis* of the Canons of that Council, *Zonaras* on the ſame Council, *Simeon Logothetes*, and *Oecumenius*, diſtinguiſh *Deacons* deſtin'd for Service at the Altar, from thoſe who had the Care of the Diſtribution of the Alms of the Faithful. Thus, the Cuſtom of conſtituting *Deacons*, without any other Office but to attend the Prieſt at the Altar, being once introduced, thoſe ſimple *Deacons* durſt no longer pretend to a Superiority over the Prieſts. As to the other *Deacons*, who had got the Adminiſtration of the Revenues, they would ſtill retain the Superiority; and for Diſtinction ſake, where there were ſeveral, the firſt took the Appellation of *Arch-Deacon*. See ARCH-*Deacon*.

The *Deacons* rehearſed certain Prayers at the holy Office, which were thence denominated *Diaconics*. See DIACONIC.

They took Care that the People at Church behaved themſelves with due Modeſty and Reſpect. They were not allowed to teach publickly; at leaſt

not

not in the Preſence of a Biſhop or Prieſt. They only inſtructed the *Catecumens*, and prepared them for Baptiſm. The Doors of the Church were likewiſe in their Cuſtody: Tho', in after Times, that Charge was commitred to the *Sub-Deacons*.

Among the *Maronites* of Mount *Libanon*, are two *Deacons*, who are mere Adminiſtrators of the Temporalities. *Fa. Dandini*, who calls them *li Signori Diaconi*, aſſures us, they are Secular Lords, who govern the People, ſit in Judgment on all their Differences, and treat with the *Turks* as to what concerns the Taxes and other Affairs. In this, the Patriarch of the *Maronites* ſeems to have aim'd to imitate the Apoſtles, who diſcharged all the temporal Concerns of the Church on the *Deacons*; *'Tis not well done*, ſay they, *to leave the Word of God, and ſerve at Tables*. And, in Effect, 'twas this gave Occaſion to their firſt Eſtabliſhment.

DEACONESS, an Office in Uſe in the Primitive Church, tho' now laid aſide. St. *Paul* makes mention thereof in his Epiſtle to the *Romans*: And the younger *Pliny*, in a Letter to *Trajan*, tells that Prince, he had order'd two *Deaconeſſes*, whom he calls *Miniſtræ*, to be tortured. The Name *Deaconeſs* was affected to certain devout Women, who conſecrated themſelves to the Service of the Church, and rendred thoſe Offices to the Women, which Men could not decently do; as, in Baptiſm, for Inſtance, which was conferr'd by Immerſion, on Women as well as Men. They were likewiſe to look to the Doors on the Side the Women were on, who were ſeparated from the Men, according to the Cuſtom of thoſe Times. They had the Care and Inſpection of the Poor, Sick, *&c.* And in Times of Perſecution, when a *Deacon* could not be ſent to the Women, to exhort and fortify them, a *Deaconeſs* was ſent. See *Balſamon on the* 11*th Canon of the Council of Laodicæa*; And the *Apoſtolical Conſtitutions*, L. II. C. 57. To ſay nothing of the Epiſtle of *Ignatius* to the People of *Antioch*; where, what is ſaid of *Deaconeſſes*, is ſaid to have been interpolated.

In the Commentaries on the Councils of *Chriſt. Lupus*, it is ſaid that they were ordain'd by the Impoſition of Hands: And the Council in *Trullo* uſes the Term χειροτονεῖν, *to impoſe Hands*, to expreſs the Conſecration of *Deaconeſſes*. *Baronius*, however, denies that Hands were laid on the *Deaconeſſes*; or that there was any Ceremony of Conſecration. Founding his Opinion on the 19th Canon of the Council of *Nice*, which places them in the Rank of Layety, and ſays expreſsly, they have had no Impoſition of Hands. And yet the Council of *Chalcedon* decrees they ſhould not be ordain'd till 40 Years of Age; whereas till then they had not been ordained before 60; as is preſcribed in the firſt Epiſtle to *Timothy*, C. V. v. 9. And as is ſeen in the *Nomocanon* of *John* of *Antioch*, in *Balſamon*, the *Nomocanon* of *Photius*, the *Theodoſian Code*, *Tertullian de Veland. Virgin.* &c. The ſame Author, *ad Uxorem*, L. I. C. 7. ſpeaks of Women who had receiv'd Ordination in the Church, and who, on that Account, were deprived of the Liberty of Marrying. For the *Deaconeſſes* were Widows, and might not remarry. Nor were they capable of being admitted to that Order, if they had been marry'd more than once. Tho' in After-times Virgins were alſo made *Deaconeſſes*, at leaſt if we may credit St. *Epiphanius*, *Zonaras*, *Balſamon* and *Ignatius*. The Council of *Nice* ranks *Deaconeſſes* among the Clergy. Tho' ſome hold that their Ordination was not Sacramental, but a mere Eccleſiaſtical Ceremony. However, it gave them a Preeminence above their Sex; for which Reaſon the Council of *Laodicæa* forbad the Ordaining of any more for the future. The firſt Council of *Orange*, held in 441, likewiſe forbids the Ordaining of *Deaconeſſes*, and enjoyns ſuch as had been ordained to receive the Benediction with the mere Layety.

'Tis hard to ſay when the Order of *Deaconeſſes* expired; by Reaſon they did not all ceaſe together. The 11th Canon of the Council of *Laodicæa*, 'tis true, ſeems to abrogate them; but 'tis certain they ſubſiſted in divers Places long afterwards. For the 26th Canon of the firſt Council of *Orange*, and the 21ſt of that of *Epauna*, held in 515, forbid the Ordination of *Deaconeſſes*; yet there were ſome at the Time of the Council in *Trullo*. *Atton* of *Verceil* in his VIIIth Letter gives the Reaſon of their being aboliſh'd. He obſerves that in the firſt Ages the Miniſtry of Women was neceſſary, in Order to the more eaſy Inſtructing of other Women, and Recovering them from Paganiſm; and that they likewiſe ſerved for the more decent Adminiſtration of Baptiſm to the ſame: But that it was not then neceſſary, by Reaſon none but Children were baptized; And it might now be added, by Reaſon Baptiſm is only conferr'd by Sprinkling. The Number of *Deaconeſſes* does not ſeem to have been fixed. The Emperor *Heraclius*, in his Letter to *Sergius*, Patriarch of *Conſtantinople*, orders that in the great Church of *Conſtantinople* there be forty *Deaconeſſes*, whereas there were only ſix in that of the Mother of God, in the Quarter of the *Blachernes*.

DEACONRY, *Diaconate*, the Order or Miniſtry of a Deacon, or Deaconeſs. See DEACON and DEACONESS.

DEACONRY, *Diaconia*, is alſo a Name ſtill reſerved to the Chappels, and Oratories in *Rome*, under the Direction of the ſeveral Deacons, in their reſpective Regions or Quarters. See REGION.

To the *Deaconries* were annex'd a Sort of Hoſpitals, or Boards, for the Diſtribution of Alms, govern'd by the Regionary Deacons, call'd Cardinal Deacons, of whom there were ſeven, anſwering to the ſeven Regions, their Chief being call'd the Arch-Deacon. See CARDINAL. The Hoſpital adjoyning to the Church of the *Deaconry*, had an Adminiſtrator for the temporal Concerns, call'd the Father of the *Deaconry*, who was ſometimes a Prieſt, and ſometimes a Lay-man. At preſent there are 14 of theſe *Deaconries* or Hoſpitals at *Rome*, which are affected to the Cardinals. *Du Cange* gives us their Names: As, the *Deaconry* of St. *Maria* in the broad Way; The *Deaconry* of St. *Euſtachio* near the *Pantheon*, &c.

DEADLY *Feud*, in our Law-Books, a Profeſſion of irreconcilable Enmity till we are revenged by the Death of our Enemy. The Word *Feud*, is derived from the German *Feed*, which, as *Hottoman* obſerves, ſignifies, *Modo bellum, modo capitales inimicitias*. Such Enmity and Revenge was allowed by our ancient Laws in the Time of the *Saxons*. viz. If any Man was kill'd, and a pecuniary Satisfaction were not made to the Kindred, it was lawful for them to take up Arms, and revenge themſelves on the Murtherer: which was call'd *Deadly Feud*. And this, probably, was the Original of an Appeal. See APPEAL.

DEAD-*Pledge*. See MORTGAGE.

DEAD-*Reckoning*, at Sea, is that Eſtimation, Judgment or Conjecture, which the Sea-men make of the Place where a Ship is, by keeping an Account of her Way by the Log, by knowing the Courſe they have ſteer'd by the Compaſs, and by Rectifying all, with Allowance, for Drift, Lee Way, *&c.* according to the Ship's Trim; ſo that this *Reckoning* is without any Obſervation of the Sun, Moon and Stars, and is to be rectified as often as any good Obſervation can be had. See LOG, and LOG-*Line*.

DEAD-*Water*, is the Eddy-Water juſt behind the Stern of a Ship; and if a Ship hath a great Eddy follows her Stern, they ſay, ſhe makes much *Dead-Water*: This is ſo call'd, becauſe it doth not paſs away ſo ſwiftly, as the Water running by her Sides doth.

DEAFFORESTED, in our Law-Books, the being diſcharged from being Foreſt; or freed and exempted from Foreſt-Laws. See FOREST.

*Johannes Dei Gratia, &c. Archiepiſcopis, Epiſcopis, &c. ſciatis nos omnino* Deafforeſtaſſe *Foreſtam de Brewood de omnibus quæ ad Foreſtam & Foreſtarios pertinent. Quare volumus & firmiter præcipimus, quod prædicta Foreſta & homines in illa manentes, & hæredes eorum, ſint* Deafforeſtati *in perpetuum*.

DEAFNESS, the State of a Perſon who wants the Senſe of Hearing: Or a Diſeaſe of the Ear, which prevents its due Reception of Sounds. See HEARING and EAR.

DEAFNESS generally ariſes either from an Obſtruction, or a Compreſſion of the auditory Nerve; or from ſome Collection of Matter in the Cavities of the inner Ear; or from the auditory Paſſage being ſtopp'd up by ſome harden'd Excrement; or, laſtly, from ſome Excreſcence; a ſwelling of the Glands, or ſome foreign Body introduced within it. Thoſe born *Deaf* are alſo dumb, as not being able to learn any Language; at leaſt in the common Way. However, as the Eyes, in ſome Meaſure, ſerve them for Ears, they may underſtand what is ſaid by obſerving the Motion of the Lips, Tongue, *&c.* of the Speaker; and even accuſtom themſelves to move their own, as they ſee other People do; and by this means learn to ſpeak. Thus it was that Dr. *Wallis* taught two young Gentlemen, born *deaf*, to hear what was ſaid to them, and to return pertinent Anſwers. *Digby* gives us another Inſtance of the ſame, within his own Knowledge. And there was a *Swiſs* Phyſician lately living at *Amſterdam*, one *Joh. Conrad Amman*, who effected the ſame in ſeveral Children born *deaf*, with

fur-

ſurprizing Succeſs. He has reduced the Thing to a fix'd Art or Method, which he has publiſh'd in his *Surdus Loquens*, Amſtellod. 1692. and *de Loquela*, ibid. 1700.

In the *Phil. Tranſact.* N. 312. we have an Account by Mr. *Waller*, R. S. Secr. of a Man and his Siſter, each about 50 Years old, born in the ſame Town with Mr. *Waller*, who had neither of them the leaſt Senſe of Hearing; yet both of them knew, by the Motion of the Lips only, whatever was ſaid to them, and would anſwer pertinently to the Queſtion propoſed. It ſeems they could both hear and ſpeak when Children; but loſt their Senſe afterwards; whence they retain'd their Speech, which, tho' uncouth, was yet intelligible.

Such another Inſtance is that of Mr. *Goddy*'s Daughter, Miniſter of St. *Gervais* in *Geneva*, related by Biſhop *Burnet*. At two Years old they perceiv'd ſhe had loſt her Hearing; and ever ſince, tho' ſhe hears great Noiſes, yet hears nothing of what is ſaid to her. But by obſerving the Motions of the Mouth and Lips of others, ſhe has acquired ſo many Words, that out of theſe ſhe has form'd a Sort of Jargon, in which ſhe can hold Converſation whole Days with thoſe that can ſpeak her Language. She knows nothing that is ſaid to her, unleſs ſhe ſee the Motion of their Mouths that ſpeak to her; So that in the Night, they are oblig'd to light Candles to ſpeak to her. One Thing will appear the ſtrangeſt Part of the whole Narration: She has a Siſter, with whom ſhe has practiſed her Language more than with any body elſe; and in the Night, by laying her Hand on her Siſter's Mouth, ſhe can perceive by that what ſhe ſaith, and ſo can diſcourſe with her in the Dark. *Burnet*'s *Let.* 4. p. 248.

'Tis obſerv'd by ſeveral Authors, that *deaf* Perſons, and thoſe thick of Hearing, hear better and more eaſily if a loud Noiſe be raiſed at the Time when you ſpeak to them. Which is owing, no doubt, to the greater Tenſion of the Ear-Drum, on that Occaſion. Dr. *Willis* mentions a *deaf* Woman, who, if a Drum were beat in the Room, could hear any Thing very clearly; ſo that her Husband hired a Drummer for a Servant, that by his Means he might hold Converſation with his Wife. The ſame Author mentions another, who, living near a Steeple, could always hear very well, if there was a Ringing of 3 or 4 Bells: But never elſe. See DRUM.

DEAN, a prime Dignitary in moſt Cathedral, and Collegiate Churches; being uſually the Preſident of the Chapter. See CHAPTER.

He is call'd DEAN, *Decanus*, of the *Greek* Δεκα, Ten, as being ſuppoſed to preſide over *ten* Canons or Prebendaries, at leaſt. See PREBENDARY, &c.

We diſtinguiſh between *Deans* of *Cathedral*, and thoſe of *Collegiate Churches*. The firſt, with their Chapter, are regularly ſubject to the Juriſdiction of the Biſhop. As to *Deans* of Collegiate Churches, they have uſually the contentious Juriſdiction in themſelves, that is, they exerciſe Juriſdiction over their Canons in all Civil or Criminal Matters; tho' ſometimes this belongs to them in common with the Chapter. See COLLEGIATE and CATHEDRAL.

The Word is form'd from the Latin *Decanus*, which was applied among the *Romans* to a Perſon who had the Command over ten Soldiers; and to a petty Judge of a Decury. In Imitation whereof, the Prelates eſtabliſh'd Judges to inſpect certain Parts of their Dioceſes, under the Denomination of *Archipresbyteri*, &c. who were ſucceeded by *Decani*, or *Deans*. See *Rural* DEAN.

In *England*, as there are two Foundations of Cathedral and Collegiate Churches, the *Old* and the *New*, (the latter being thoſe founded by *Henry* the VIIIth, on the Suppreſſion of the Abbots and Priors, when their Convents were turned into *Dean* and Chapter;) ſo there are two Ways of Creating the *Deans*; Thoſe of the old Foundation, are brought to their Dignity much like a Biſhop. The Prince firſt ſending out his *Conge d'Eſtire* to the Chapter; the Chapter there chuſing, the King yielding his Royal Aſſent, and the Biſhop confirming him, and giving his Mandate to inſtal him. Thoſe of the new Foundation are inſtall'd by a ſhorter Courſe; only by the King's Letters Patents, without either Election or Confirmation.

*Conſtantine*, we are told, erected an Office of 950 Perſons at *Conſtantinople*, taken out of divers Trades and Profeſſions, whom he exempted from all Impoſitions, and beſtowed them on the Cathedral Church, to render the Offices of Burial *gratis* to the Defunct, particularly to the Poor. Theſe he call'd *Decani* and *Lecticarii*, probably by Reaſon they were divided by Tens; Each whereof had a Bier or Litter to carry the Bodies in: 'Tis ſuppoſed to be theſe, who under *Conſtans* began to be call'd *Copiates*, i. e. Clerks deſtined for Labour. For they are uſually rank'd among the Clerks, and even before the Chantors. By a Law of the Year 357, it appears that there were of theſe *Copiates* at *Rome*. See LECTICARII.

The Word *Dean* is alſo applied among us to divers that are the Chief of ſome peculiar Churches, or Chappels; as, the *Dean* of the King's Chappel, of *Paul*'s, of the *Arches*, of *Battel*, of *Boking*, &c.

*Rural* DEAN, or *Urban* DEAN, was formerly an Eccleſiaſtical Perſon, who had a Diſtrict of ten Churches or Pariſhes, either in the Country or City, within which he exerciſed Juriſdiction. Theſe *Rural* DEANS were ſometimes call'd *Archipresbyteri*, and at firſt were both in Order, and Authority, above the Arch-Deacons. They were elected by the Clergy, and by their Votes depoſed; but afterwards they were appointed, and removed, at the Diſcretion of the Biſhop: And hence they were call'd *Decani Temporarii*, to diſtinguiſh them from the Cathedral *Deans*, who were call'd *Decani Perpetui*. See *Rural Dean*.

We meet with *Rural* DEANS as early as the IXth Century. *Hincmar*, in his Capitular to his Arch-Deacons, reſerves the Right of Electing them to himſelf; and only allows it to the Arch-Deacons, in Caſe he be abſent, and by Proviſion only. Some take the *Rural Deans* to hold the Rank and Place of the *Chorepiſcopi*. Be this as it will; 'tis certain they are very ancient in *France*, *Germany*, and *England*; tho' till the End of the XVIth Century they were unknown in *Italy*, in Regard the Biſhopricks being there exceeding ſmall, they were not needed. S. *Charles Borromeo* firſt introduced them there. See CHOREPISCOPUS.

DEAN, in the ancient Monaſteries, was a Superior eſtabliſh'd under the Abbot, to eaſe him in taking Care of *ten* Monks; whence he was call'd *Decanus*, in Imitation of thoſe Officers among the *Romans*, who had ten Soldiers under them. Till the Time of St. *Benedict*, there were uſually in each Monaſtery a Provoſt, *Præpoſitus*, and ſeveral *Deans*, *Decani*, under the Abbot. In ſome Abbies, there was but one *Dean*, and he, bleſs'd by the Biſhop, as well as the Abbot himſelf. This Privilege gave him Occaſion to think himſelf in ſome Meaſure the Abbot's equal; and to ſcruple Obedience to him. St. *Benedict* was ſenſible of this Inconvenience, and to prevent it in his Order, appointed that the Monaſteries ſhould be govern'd under the Abbot by ſeveral *Deans*, whoſe Authority being thus ſhared, they would be the leſs dangerous.

The Office of the *Deans*, we have obſerved, was to have the Inſpection of ten Monks, to look to their Working, and all their Exerciſes. They were not choſe by Seniority, but Merit; and might be depoſed after three Admonitions. The Monaſteries being now leſs numerous than they were in ancient Times, the Abbot, or Prior, don't ſtand in ſo much need of being eas'd; So that *Deans* are ſet a-ſide.

DEAN *and Chapter*; Anciently, Biſhops did not ordinarily tranſact Matters of Moment *ſine Concilio Presbyterorum principalium*, who were then call'd *Senatores Eccleſiæ*, and Collegues of the Biſhops; repreſented in ſome Meaſure by our Cathedrals, whereof the *Dean* and ſome of the Prebends are, upon the Biſhop's Summons, to aſſiſt him in Ordinations, Deprivations, Condemnations, Excommunications, and other weighty Concerns of the Church. See CHAPTER.

DEARTICULATION, in Anatomy. See DIARTHROSIS.

DEATH, *Mors*, is generally conſider'd as the Separation of the Soul from the Body; in which Senſe it ſtands oppoſed to *Life*, which conſiſts in the Union thereof. See LIFE.

The Phyſicians generally define *Death* by a total Stoppage of the Circulation of the Blood; and a Ceſſation of the animal, vital, &c. Functions conſequent thereon; As, Reſpiration, Senſation, &c.

An animal Body, by the Actions inſeparable from Life, undergoes a continual Change. Its ſmalleſt Fibres become rigid, its Minute Veſſels grow into ſolid Fibres no longer pervious to the Fluids, its greater Veſſels grow hard and narrow, and every Thing becomes contracted, cloſed and bound up; whence the Dryneſs, Immobility, and Extenuation obſerved in old Age. By ſuch Means the Offices of the minuter Veſ-

ſels

ſels are deſtroy'd, the Humors ſtagnate, harden, and at length coaleſce with the Solids. Thus are the ſubtileſt Fluids in the Body intercepted and loſt, the Concoction weaken'd, and the Reparation prevented; only the coarſer Juices continue to run ſlowly thro' the greater Veſſels, to the Preſervation of Life, after the animal Functions are deſtroy'd. At length, in the Proceſs of theſe Changes, *Death* it ſelf becomes inevitable, as the neceſſary Conſequence of Life.

But 'tis rare, that Life is thus long protracted, or that *Death* ſucceeds merely from the Decays and Impairments of old Age. Diſeaſes, a long and horrid Train, cut the Work ſhort. See DISEASE.

DEATH-*Watch*, in Natural Hiſtory, a little Inſect famous for a ticking Noiſe, like the Beat of a Watch, which the Populace have long took for a Preſage of Death, in the Family where 'tis heard; Whence it is alſo call'd *Pediculus Fatidicus*, *Mortiſaga*, *Pulſatorius*, &c.

There are two Kinds of *Death-Watches*: Of the firſt we have a good Account in the *Philoſoph. Tranſact.* by Mr. *Allen*. It is a ſmall Beetle $\frac{5}{16}$ of an Inch long, of a dark brown Colour, ſpotted; pelluced Wings under the *Vaginæ*, a large Cap or Helmet on the Head, and two *Antennæ* proceeding from beneath the Eyes, and doing the Office of Proboſcides. The Part it beats withal, he obſerved, was the extream Edge of the Face, which he chuſes to call the upper Lip, the Mouth being protracted by this bony Part, and lying underneath, out of View. Its Figure, as it appears in a Microſcope, ſee repreſented in *Tab. Natural Hiſtory Fig.* 1.

This Account is confirm'd by Mr. *Derham*, with this Difference, that inſtead of ticking with the upper Lip, he obſerv'd the Inſect to draw back its Mouth, and beat with its Fore-head. He had two, a Male and a Female, which he kept alive in a Box, ſeveral Months, and could bring one of them to beat whenever he pleas'd, by Imitating its Beating. By his ticking Noiſe he could frequently invite the Male to get up upon the other in the Way of Coition. When the Male found he got up in vain, he would get off again, beat very eagerly, and then up again: Whence the ingenious Author concludes, thoſe Pulſations to be the Way whereby theſe Inſects woo one another, and find out, and invite each other to Copulation.

The ſecond Kind of *Death-Watch* is an Inſect in Appearance quite different from the firſt. The former only beats 7 or 8 Strokes at a Time, and quicker; The latter will beat ſome Hours together, without Intermiſſion, and his Strokes are more leiſurely, and like the Beat of a Watch. This latter is a ſmall greyiſh Inſect, much like a Louſe when viewed with the naked Eye. Its Figure, as magnified, is ſeen in *Tab. Natur. Hiſt. Fig.* 2. It is very common in all Parts of the Houſe in the Summer-Months: Is very nimble in running to Shelter; and ſlie of Beating when diſturb'd. But will beat very freely before you, and alſo anſwer the Beating, if you can view it without giving it Diſturbance, or ſhaking the Place where it lies, *&c.* He cannot ſay, whether they beat in any other Thing, but never heard their Noiſe except in or near Paper. As to their Noiſe, the ſame Author is in doubt whether it be made by their Heads, or rather Snouts againſt the Paper; Or, whether it be not made after ſome ſuch Manner, as Graſhoppers and Crickets make their Noiſe. He inclines to the former Opinion: The Reaſon of his Doubt is, that he obſerved the Animal's Body to ſhake and give a Jirk at every Beat, but could ſcarce perceive any Part of its Body to touch the Paper. But its Body is ſo ſmall, and near the Paper, and its Motion in Ticking ſo quick, that he thinks it might be, yet he not perceive it.

The Ticking, as in the other, he judges to be a Wooing-Act; as having obſerved another, after much Beating, come and make Offers to the beating Inſect, who, after ſome Offers, left off Beating, and got upon the Back of the other. When they were joyn'd, he got off again, and they continued ſome Hours joyn'd Tail to Tail, like Dog and Bitch in Coition.

Whether this Inſect change its Shape, and become another Animal, or not, he cannot ſay; tho' he has ſome Cauſe to ſuſpect that it becomes a Sort of Fly. 'Tis at firſt a minute white Egg, much ſmaller than the Nits of Lice; tho' the Inſect is near as big as a Louſe. In *March* it is hatch'd, and creeps about with its Shell on. When it firſt leaves its Shell, 'tis even ſmaller than its Egg; tho' that be ſcarce diſcernible without a Microſcope. In this State 'tis perfectly like the Mites in Cheeſe: From the Mite State they grow gradually to their mature or perfect State. When they become like the old Ones, they are at firſt very ſmall; but run about much more ſwiftly than before.

DEBENTURE, a Kind of Writing, in the Nature of a Bond, firſt given in 1649, to charge the Common-wealth to ſecure the Soldier-Creditor, or his Aſſigns, the Sum due, upon Auditing the Accounts of his Arrears.

The Word is alſo uſed in the Exchequer, and in the King's Houſe, were *Debentures* are uſually given to the Servants for the Payment of their Wages, Board-Wages, and the like.

The Word is mention'd in the Act of Oblivion, 12. *Car.* II. *Cap.* II. and ſince the late Revolution, has been uſed in many Acts of Parliament, eſpecially in that which relates to the forfeited Eſtates in *Ireland*, out of which the Soldiers *Debentures* are appointed to be ſatisfied, 11. *W.* III.

DE *benè eſſe*, a *Latin* Phraſe uſed in our Law-Books: Doing, or to do a Thing, *De bene eſſe*, is to accept or allow it as well done for the preſent; But when it comes to be more fully examin'd, or tried, to ſtand or fall, to be allowed or diſallowed, according to the Merit, or Well-being of the Thing in its own Nature; or, as we ſay, *Valeat quantum valere poteſt.*

Thus, in Chancery, upon Motion to have one of the leſs principal Defendants in a Cauſe examin'd as a Witneſs, the Court (not then thoroughly examining the Juſtice of it, or not hearing what may be objected on the other Side) often orders ſuch a Defendant to be examin'd *De bene eſſe*, i. e. that his Depoſition ſhall be allowed or ſuppreſſed at the Hearing of the Cauſe upon a full Debate of the Matter, as the Court ſhall think fit; But for the preſent they have a Well-being or conditional Allowance.

DEBILITY, in a Medicinal Senſe, is a Relaxation of the Solids, which induces Weakneſs and Fainting.

DEBRUIZED, or DEBRUS'D, in Heraldry, is when we would imitate the grievous Reſtraint of any Animal, which is debarr'd its natural Freedom by any of the Ordinaries being laid over it.

Thus when a Pale, *&c.* is born upon a Beaſt in an Eſcutcheon, the Beaſt is ſaid to be *debruiſed* of the Pale.

DEBT, a Thing due, whether it conſiſt of Money, or Goods, or other Præſtations.

By our Law, *Debts* due to the King are to be ſatisfied in the firſt Place in all Caſes of Executorſhip, and Adminiſtratorſhip; and till the King's *Debt* be ſatisfied, he may protect the Debtor from the Arreſt of any other Creditor.

There are divers Kinds of *Debts*: *Active Debts*, are thoſe whereof a Perſon is Creditor: *Paſſive Debts*, thoſe whereof he is Debtor. There are alſo *Real Debts*, *Perſonal*, or *Mobiliary Debts*, and *Mixed Debts*.

*Chorographary Debt*, is that due by Virtue of Note, or Writing under one's Hand, and not proved in Judicature. *Hypothecary Debt*, is that due in Virtue of ſome Contract, or Condemnation. *Predicatory Debt*, is that ariſing from an Alienation of Lands, *&c.* the whole Purchaſe whereof has not been paid. *Privileged Debt*, is that which muſt be ſatisfied before all others; As, the King's Tax, *&c.*

DEBTOR, a Perſon who owes ſomething to another: In Oppoſition to Creditor, which is he to whom it is own. See CREDITOR.

DECAGON is a plain Figure in Geometry, having ten Sides and Angles.

If they be all equal to one another, it is then call'd a Regular *Decagon*, and may be inſcrib'd in a Circle.

Concerning this Figure, the chief Property is, that the Sides of a Regular *Decagon* are, in Power and Length, equal to the greateſt Segment of an Hexagon, inſcribed in the ſame Circle, and cut according to extream and mean Proportion. A Fortification alſo conſiſting of ten Baſtions, is ſometimes call'd a *Decagon*.

DECALOGUE, the ten Commandments of God, engraven on two Tables of Stone, and given to *Moſes*.

The Word is *Greek*, compos'd of δέκα, Ten, and λόγος, Word, *q. d.* Ten Words. Accordingly, the *Jews* call them עשרת הדברים *the Ten Words*, which Appellation is very ancient. Tho' the *Samaritans*, both in their *Hebrew* Text, and their Verſion, add after the 17th Verſe of the XXth Chapter of *Exodus*; and after the 21ſt Verſe of the Vth Chapter of *Deuteronomy*,

*nomy*, an eleventh Commandment, to build an Altar on Mount *Gerizim*, &c. But 'tis apparently an Interpolation, to authorize their having a Temple and an Altar on that Mountain, and to diſcredit, if poſſible, the Temple at *Jeruſalem*, and the Worſhip there perform'd. It muſt be added, however, that, tho' all, both Jews and Chriſtians, agree in the Number of ten Commandments; there is ſome Difference as to the Manner of dividing them.

The *Thalmudiſts*, and *Poſtellus* after them, in his Treatiſe, *de Phœnicum Literis*, ſay, that the *Decalogue*, or Ten Commandments, were engraven quite through the Tables which God gave to *Moſes*; and that notwithſtanding the Middle of the ם *Mem* final, and of the ס *Samech*, remain'd miraculouſly ſuſpended without adhering to any Thing. See the *Diſſertation on the Samaritan Medals*, printed at *Paris* in 1715. They add, that the *Decalogue* was wrote in Letters of Light, *i. e.* in Luminous, Shining Letters.

DECAMERIS, a Term ſignifying a tenth Part; us'd by Mr. *Sauveur*, and ſome other Authors, to mark and meaſure the Intervals of Sounds. The Word is form'd of δέκα, Ten, and μερὶς, Part.

DECAMERON, a Work containing the Actions, or Converſations of ten Days. *Boccaces Decameron* conſiſts of one hundred Novels related in ten Days.

DECAMP; when an Army raiſes its Camp, and departs from the Place where it lay before, they ſay, it is *decamped*.

DECANUS, among the *Romans*, an Officer who had ten other Officers, or Perſons, under his Charge; Whence our *Engliſh* Dean. See DEAN.

DECANTATION, in Chymiſtry, *&c.* the Act of pouring out a Liquor from off the *Fæces*, &c. by gently inclining the Lip or *Canthus* of the Veſſel; whence the Word is derived. See CANTHUS.

DECAPITE', in Heraldry. See DEFFAIT.

DECAPROTI, among the Ancients, were Officers who gather'd the Tributes or Taxes. The *Decaproti* were oblig'd to pay for the Dead; or, to anſwer to the Emperor for the *Quota* Parts of ſuch as died, out of their own Eſtates. *Cicero* in his Oration for *Roſcius*, calls them *Decemprimi*.

The Word comes from δέκα, Ten, and πρῶτος, firſt; probably by Reaſon the ten firſt, or principal Perſons of each Community, were choſe to make the Levies.

DECASTYLE, in the ancient Architecture, a Building with an Ordonnance of ten Columns in Front. The Temple of *Jupiter Olympius* was *Decaſtyle*. The Word is form'd of δέκα, Ten, and στύλος, Column.

DECEMBER, the laſt Month of the Year, wherein the Sun enters the Tropic of Capricorn, and makes the Winter-Solſtice. See MONTH.

In *Romulus*'s Year *December* was the 10th Month, whence the Name, *viz.* from *Decem*, Ten: For the *Romans* began their Year in *March*. The Month of *December* was under the Protection of *Veſta*. *Romulus* aſſign'd it 30 Days; *Numa* reduced it to 29, and *Julius Cæſar* to 31.

Under the Reign of *Commodus*, this Month was call'd out of Flattery *Amazonius*, in Honour of a Courtezan, whom that Prince paſſionately loved, and had got painted like an *Amazon*; but it kept that Name but during that Emperor's Life. At the latter End of the Month, they had the *Juveniles ludi*, and the Country-People kept the Feaſt of the Goddeſs *Vacuna* in the Field, having then gotten in their Fruits, and ſown their Corn; whence ſeems to be derived the Feſtival we make after Harveſt is in.

DECEMPEDA, an Inſtrument uſed by the Ancients in Meaſuring. The *Decempeda* was a Rule, or Rod divided into ten Feet; whence its Name from *Decem*, Ten, and *Pes pedis*, Foot. The Foot was ſubdivided into 12 Inches; and each Inch into 10 Digits. See FOOT. The *Greeks* call'd it δέκαπους.

It was greatly uſed both in Meaſuring of Land, like the Chain among us; and by Architects, to give the proper Dimenſions and Proportions to the Parts of their Building, which Uſe it ſtill retains. *Horace*, Lib. II. *Od.* 15. lamenting the Magnificence and Delicacy of the Buildings of his Time, obſerves, that it was otherwiſe in the Times of *Romulus* and *Cato*, that in the Houſes of private Perſons there were not then known any Portico's meaſur'd out with the *Decempeda*, nor turn'd to the *North*, to take the cool Air.

DECEMVIRI, Magiſtrates among the *Romans*, created with a ſoveraign Power, to draw up and make Laws for the People; Thus call'd by Reaſon the Power was committed to ten Perſons together.

To the *Decemviri* was given all the Legiſlative Authority ever held by the Kings, and after them by the Conſuls. One among them had all the Enſigns and Honours of the Function; and the reſt had the like in their Turn, during the Year of the *Decemvirat*. 'Twas the *Decemvirs* drew up the Law of the Twelve Tables, call'd thence the *Leges Decemvirales*, which for a conſiderable Time were the whole of the *Roman* Law. In the Year 302, the Conſuls *Appius Claudius Craſſinius*, and *T. Genucius Augurinus*, were oblig'd to abdicate; upon which the firſt *Decemviri* were created. The Year following ten new ones were appointed to ſucceed them, and in the Year 304 another Set were to have been choſen; but that the People roſe, made them lay down, and reſumed the Conſuls. The exceſſive Debauchery of *Appius Claudius Craſſinius*, one of the Conſuls, who was firſt oblig'd to abdicate, and who had been choſen firſt *Decemvir* three times, was the principal Cauſe. *Cicero de Finib.* Lib. I. *Livy*, Lib. III. *Halicarnaſſæus*, Lib. X. and *Florus*, Lib. C. 24. give the Hiſtory.

The *Decemviral* Adminiſtration, however, it is to be obſerved, had not its firſt Riſe at the Time when the Authority of the Conſuls was devolved into the Hands of the *Decemvirs*: For, during the *Interregnum* that enſued after the Death of *Romulus*, the Management of Affairs, which the Senate then took upon them, is call'd by *Halicarnaſſæus*, Lib. II. *Decemviral*, by Reaſon the Senators, divided into Tens, commanded each in their Turn: That is, one of each Ten, for 5 Days ſucceſſively, having the *Faſces*, *Lictors*, &c. like the Kings.

There were alſo military *Decemvirs*; and on divers Emergencies *Decemvirs* were created to manage and regulate certain Affairs, after the ſame Manner as Boards of Commiſſioners are now appointed. Thus, there were *Decemvirs* for Conducting Colonies; *Decemvirs* to prepare and preſide at Feaſts, in Honour of the Gods; *Decemvirs* to take Care of the Sacrifices; *Decemvirs* to keep the *Sybils* Books. Sometimes, in lieu of *Decemvirs*, they only created *Septemvirs*, or *Triumvirs*, or *Duumvirs*, &c. See QUINDECEMVIR, *&c.*

DECENNALIA, in Antiquity, Feaſts which the *Roman* Emperors held every tenth Year of their Reign, with Sacrifices, Games, Largeſſes to the People, *&c.* *Auguſtus* was the Author of this Cuſtom, which was afterwards imitated by his Succeſſors. At the ſame Time they likewiſe offer'd Vows for the Emperor, and the Perpetuity of his Empire, call'd *Vota Decennalia*. From the Time of *Anthoninus Pius*, we find theſe Ceremonies mark'd on Medals. PRIMI DECENNALES. SECVNDI DECENNALES. VOTA SOL. DECEN. II. VOTA SVSCEP. DECEN. III. Theſe Vows muſt have been made at the Beginning of every 10th Year; for on the Medal of *Pertinax*, who ſcarce reign'd 4 Months, we find VOTA DECENN. & VOTIS DECENNALIBVS.

*Struvius* in his *Antiq. Roman. Syntagma*, Cap. IV. is of Opinion, that theſe Vows took Place of thoſe which the Cenſor uſed to make in the Times of the Republic for the Proſperity and Preſervation thereof. In Effect, they were not only made for the Prince, but alſo for the State, as may be obſerv'd from *Dion.* Lib. VIII. and *Pliny* the Younger, *Lib.* X. *Ep.* 101.

*Auguſtus*'s Aim in Eſtabliſhing this Feaſt, was to preſerve the Empire, and the ſoveraign Power without Offence, or Reſtraint to the People. For during the Celebration of this Feaſt, that Prince uſed to ſurrender up all his Authority into the Hands of the People, who, fill'd with Joy, and charm'd with the Goodneſs of *Auguſtus*, immediately deliver'd it him back again.

DECIDUOUS, in the general, expreſſes ſomething apt and ready to *fall*: Thus Bothaniſts ſay, in ſome Plants the *Perianthium* or *Calyx* is *deciduous* with the Flower, that is, falls off from the Plant with it; in others not. See CALIX.

DECIES *Tantum*, a Writ that lies againſt a Juror, who hath taken Money for giving his Verdict; ſo call'd from its Effect, which is to recover ten times as much as he took. It lies alſo againſt Embracers that procure ſuch an Enqueſt.

DECIL, in Aſtronomy, an Aſpect or Poſition of two Planets, when they are diſtant from each other a tenth Part of the *Zodiac*. See ASPECT.

DECIMAL *Arithmetic*, the Art of Computing by *Decimal Fractions*, firſt invented by *Joh. Regiomontanus*, and uſed by him in the Conſtruction of his *Tables of Sines*, &c. See ARITHMETIC, and DECIMAL FRACTION.

DECIMAL *Fractions* are thoſe whoſe Denominator is one, with one or more Cyphers; as, 10, 100, 1000, 10000, *&c.* Thus $\frac{5}{10}$ $\frac{6}{100}$ $\frac{7}{1000}$ *&c.* are *Decimal Fractions*. See FRACTION.

In

In the Writing of *Decimal Fractions* we uſually omit the Denominator, as only conſiſting of Unity with Cyphers annex'd: And in lieu thereof, a Point, or Comma, is prefix'd to the Numerator. Thus, $\frac{5}{10}$ is wrote .5; $\frac{46}{100}$ ,46; and .125 expreſſes an Hundred Twenty-Five Parts of any Thing, ſuppoſed to be divided into 1000 Parts.

In *Decimals* it is chiefly to be noted, that as Cyphers on the right Hand of Integers, do increaſe their Value *decimally*; as, 2, 20, 200, *&c.* ſo when ſet on the left Hand of Fractions, they decreaſe the Value *decimally*; as, 5., 05., 005., *&c.* but ſet on the left Hand of Integers, or on the right Hand of Fractions, they ſignify nothing; but only to fill up Places; thus, ,5000, or 0005. is but five Units.

To *reduce any Vulgar Fraction*, of ſuppoſe $\frac{5}{8}$ to a *Decimal Fraction* of the ſame Value, whoſe Denominator ſhall be 1000; ſay by the Rule of three, as 8 the Denominator of the Vulgar Fraction, is to 5 its Numerator: So will 1000, the Denominator aſſign'd, be to a 4th Term, which by Working will be found to be ,625. and therefore, $\frac{625}{1000}$, or, 625. is a *Decimal* of the ſame Value with the former Fraction $\frac{5}{8}$.

The common Operations in *Decimals* are perform'd as in the Vulgar Rules, regard being had only to the particular Notation, to diſtinguiſh the Integral from the Fractional Part of a Sum.

In *Addition, and Subſtraction of Decimals*; The Points being all plac'd under each other, the Figures are to be added, and ſubſtracted as in common Arithmetic: And when the Operation is done, ſo many Figures of the Sum, or the Remainder, are to be noted for *Decimals*, as there are the moſt Places of *Decimals* in any of the given Numbers. An Example will make this clear.

| Addition of *Decimals*. | | Subſtraction. |
|---|---|---|
| 543791 | 59 ,271 | From 67 ,9 |
| 792 | 15 ,040 | Take 29 ,8754 |
| 6124 | 3 ,791 | Rem. 38 ,0246 |
| 053 | 12 ,009 | |
| 10 | 7 ,5 | From 25 ,1462 |
| 2 | 97 ,692 | Take 13 ,07 |
| 2;19531 | | Rem. 12 ,0762 |

For *Multiplication of Decimals*, obſerve to cut off juſt ſo many *Decimal* Parts from the Product as there are *Decimals* in both Factors. The Work is the ſame as in Integers. Thus,

Multiplication of *Decimals*.

| | | | |
|---|---|---|---|
| ,1472 | ,365 | 3, 650 | *Note*, In the ſecond Example, the Product only amounts to five Places; for which Reaſon a Cypher is prefix'd, to make up 6 *Decimal* Places; there being ſo many in the two Factors. |
| ,175 | ,122 | 6,21 | |
| 7360 | 730 | 3,650 | |
| 10304 | 730 | 7300 | |
| 1472 | ,365 | 21900 | |
| ,257560 | ,044530 | 2293,650 | |

In *Diviſion of Decimals*, proceed in all Reſpects as in Dividing of Integers; and when the Operation is done, mark as many Places in the Quotient for *Decimals*, as, with the Number of *Decimals* in the Diviſor are equal to the *Decimal* Places of the Dividend:

,22) ,8030 (3,65

But there are certain Caſes in Diviſion of *Decimals*, which require ſome further Management: As, firſt, where the Diviſor is a *Decimal Fraction*, and the Dividend an Integer; add, or annex at leaſt as many Cyphers to the Dividend, as there are Places in the Diviſor: Thus ,365) 22,0000 (60,2. For there being three Places of *Decimals* in the Diviſor, and four in the Dividend, there will be but one in the Quotient: Secondly, Where the Diviſor is a mixt Number, and the Dividend a whole Number, add as many Cyphers to the Dividend, as there are Places in the Diviſor. Thus, 3,65) 22,0000 (6,02. Thirdly, Wherever the Diviſor is bigger than the Dividend, annex Cyphers to the latter. Thus, ,365) 22,0000 (,602.

DECIMAL *Scales*, in the general, are any Scales divided *decimally*; But, particularly, certain Scales of Money, Weights, and Meaſures, made from Tables, ſo call'd, to expedite *Decimal* Arithmetic, by Shewing by Inſpection the *Decimal Fraction* of any Part of Money, Weight, or Meaſure.

DECIMATION, a Puniſhment which the *Romans* us'd to inflict on the Soldiers who had quitted their Poſt, or raiſed a Mutiny in the Camp, or behaved themſelves cowardly in the Fight; which was practiſed thus: The General aſſembled the whole Camp, then the Tribune brought to him thoſe that were guilty, and impeach'd, and reproach'd them, with their cowardly Actions and Baſeneſs in the Preſence of the whole Army: Then, putting their Names into an Urn, or Head-Piece, he drew five, ten, or twenty of them, according to their Number; and the Fifth, the Tenth, or the Twentieth, were put to the Sword, and the others ſaved. This was call'd *Decimare*, a Word of the ancient *Roman* Militia, who, to puniſh whole Legions, when they had failed in their Duty, made every tenth Soldier draw Lots, and put him to Death for an Example to the others.

DECINERS, or DECENNIERS, or DOZINERS, in the ancient Monuments of our Law, are ſuch as were wont to have the Overſight, and Check of the Friburghs, for Maintenance of the King's Peace; The Limits of whoſe Juriſdiction was call'd *Decenna*, and *Dozein*.

They ſeem to have had very large Authority in the *Saxon* Times; taking Cognizance of Cauſes within their Circuit, and redreſſing Wrongs by Way of Judgment. Thus *Briton*, "We will that all thoſe "who are fourteen Years old, ſhall make Oath, that "they will be ſufficient and Loyal to us; and neither "be Felons, nor aſſenting to Felons; and we will, that "all profeſs themſelves of this or that *Dozein*, and "make or offer Surety of their Behaviour by thoſe or "thoſe *Doziners*, except Religious Perſons, Clerks, "Knights eldeſt Sons, and Women."

A *Dozein* now ſeems only to extend ſo far as a Leet: For in Leets only this Oath is adminiſtred by the Steward, and taken by ſuch as are twelve Years old and upwards. See LEET.

DECK *of a Ship*, a Kind of planked Floor, whereon the Guns are laid, and the Men walk to and fro, ſerving as a Ceiling to ſeparate the Stories of the Ship, or other Veſſel.

Hence, a Ship is ſaid to have two or three *Decks*, when it contains 2 or 3 Stories in its Cavity. The Middling Sort of Veſſels have two *Decks*; the biggeſt three, diſtant from each other about 5 Feet. The Bottom-*Deck* is call'd the *firſt Deck*: The ſecond *Deck*, anſwering to the ſecond Story from the Ground in Houſes, to the Place of the ſecond Battery, contains an equal Number of Guns with the firſt, abating that there is none over the Stern, which is the Captain's Apartment. Before this *Deck* are the Kitchin-Offices, *&c.* In large Veſſels there is a third *Deck*, and a third Battery. Some Veſſels have likewiſe a *Half-Deck*, which reaches from the Main-Maſt to the Stern of the Ship. As alſo a *Quarter-Deck*, which is from the Steerage a-loft to the Maſter's Round-Houſe. Sometimes there is a *Spare-Deck*, which is the uppermoſt of all, being between the Main-Maſt and the Miſſen, call'd alſo the *Orlope*. A *Rope-Deck* is that made of Cordages interwove, and ſtretch'd over a Veſſel that has no *Deck*, through which 'tis eaſy to annoy the Enemy who comes to board her, and has leap'd thereon. Theſe are little uſed but in Merchant-Veſſels, to defend them from the Corſairs. See SHIP, and NAVY.

DECLAMATION, a feign'd Diſcourſe, or Speech made in public, and in the Tone and Manner of an Oration.

Among the Greeks, *Declamation* was become the Art of Speaking indifferently on all Subjects and all Sides of a Queſtion; of making a Thing appear juſt that was unjuſt, and triumphing over the beſt and ſoundeſt Reaſons. Such Sort of *Declamations* M. *de St. Evremond* obſerves, were very fit to corrupt the Mind by Accuſtoming it, to cultivate the Imagination rather than to form the Judgment, and to ſeek for Veriſimilitudes to impoſe upon, rather than ſolid Reaſons to convince.

Among us, *Declamation* is reſtrain'd to certain Exerciſes, which Scholars perform, to teach them to ſpeak in public. A *Declamation* againſt *Hannibal*, againſt *Pyrrhus*, the *Declamations* of *Quintilian*, &c. In the Colleges of the Jeſuites *Declamations* are little Theatrical or Dramatic

tic Performances, conſiſting of a few Scenes not divided into Acts, rehears'd by the Students by Way of Exerciſe, and to form them for Speaking in public. Such *Declamations* are the moſt uſeful Exerciſes perform'd in the Colleges.

DECLARATION, in Law, a Shewing in Writing the Grief and Complaint of the Demandant, or Plaintiff, againſt the Defendant, or Tenant, wherein he is ſuppoſed to have receiv'd ſome wrong. This ought to be plain and certain, both becauſe it impeacheth the Defendant, and alſo compels him to anſwer thereto.

DECLARATION is alſo us'd for a Confeſſion which the Quakers, who ſcruple taking the Oaths of Supremacy, *&c.* are oblig'd to make and ſubſcribe in lieu thereof. Its Tenor is a ſolemn Promiſe before God and the World, to be true to King *George*, with a Deteſtation and Horror of that damnable Poſition, that Princes, excommunicated by the Pope, or any other Power, may be depoſed or murther'd; and a Declaration, that no foreign Prince, or Power, has any Right, Juriſdiction, or Authority in this Kingdom.

DECLENSION, in Grammar, an Inflexion of Nouns, according to their divers Caſes; as *Nominative*, *Genitive*, &c. See CASE, NOMINATIVE, *&c.*

The *Declenſion* of Nouns is a different Thing in the modern Languages, which have not properly any Caſes; from what it is in the ancient *Greek* and *Latin*, which have.

*Declenſion*, with Reſpect to Languages, wherein the Nouns admit of Changes, whether in the Beginning, the Middle, or the Ending, is properly the Expreſſion of all thoſe Changes in a certain Order, and by certain Degrees, call'd *Caſes*: With Regard to Languages, wherein the Nouns do not admit of Changes in the ſame Number, *Declenſion* is the Expreſſion of the different States, or Habitudes a Noun is in, and the different Relations it has; which Difference of Relations is mark'd by Particles, call'd Articles; as, *a*, *the*, *of*, *to*, *from*, &c.

DECLENSION of a Diſeaſe, is when it is paſt its Height, and the Symptoms abate. See ACME.

DECLINATION, in Aſtronomy, the Diſtance of the Sun, a Star, Planet, or other Point of the Sphere of the World, from the Equator, either Northward, or Southward. See EQUATOR.

*Declination* is either *real* or *apparent*, according as the real or apparent Place of the Point is conſider'd. See PLACE.

Hence the *Declination* is an Arch of a great Circle, as GS, (*Tab. Aſtronomy Fig.* 4.) intercepted between a given Point, as S, and the Equator AQ, and perpendicular to the ſame. Conſequently, the Circle, by whoſe Arch the *Declination* GS is meaſured, paſſes through the Poles of the World. See CIRCLE of *Declination*.

The *Declination* of a Star, *&c.* is found by firſt obſerving the Altitude of the Pole as PR, (*Tab. Aſtronomy Fig.* 5.) This ſubſtracted from 90°. gives the Height of the Equator AH. Then, the Meridian Altitude of the Star, HD, being obſerved, if it be greater than the Altitude of the Equator, AH, the latter ſubſtracted from the former leaves the *Declination* Northward AD: Or, if the Altitude of the Star HT be leſs than that of the Equator HA, the former ſubſtracted from the latter leaves the *Declination* Southward TA. e. g. *Tycho* at *Vranisbourg* obſerv'd the Meridian Altitude of the *Cauda Leonis*

| | | | | |
|---|---|---|---|---|
| | HD | 50° | 59′ | 0″ |
| Altitude of Equat. | HA | 34 | 5 | 20 |
| *Declinat.* therefore, | AD | 16 | 53 | 40 |

If the Star be in the Quadrant ZR, then the leaſt Altitude MR ſubſtracted from the Altitude of the Pole PR, leaves the Diſtance from the Pole PM; which ſubſtracted again from the Quadrant PQ, leave the *Declination* MQ. e. g. *M. Couplet* obſerved PM 2° 18′ 50″ which ſubſtracted from 90° leaves MQ 87° 41′ 10″. And by this Method are conſtructed the Tables of *Declinations* of the fix'd Stars given us by *Ricciolus* and *Dechales*.

By comparing the ancient Obſervations with the modern, it appears, that the *Declination* of the fix'd Stars is variable; and that, differently, in different Stars. For in ſome it increaſes, and in others decreaſes, and that in different Quantities. The greateſt Increaſe or Decreaſe doth not exceed three Minutes and a half in 10 Years Time.

It has been greatly diſputed among the latter Mathematicians, whether or no the *Declination* and Obliquity of the Ecliptic be variable; but the Point ſeems now decided in Favour of the Immutability. See OBLIQUITY, and ECLIPTICK.

*Circle of* DECLINATION is a great Circle of the Sphere, paſſing through the Poles of the World: Such is PGDK, paſſing through the Poles T and K.

*Parallax of the* DECLINATION is an Arch of the Circle of *Declination*, whereby the Parallax of the Altitude increaſes or diminiſhes the *Declination* of the Star. See PARALLAX.

*Refraction of the* DECLINATION, an Arch of the Circle of the *Declination*, whereby the *Declination* of a Star is increaſed, or diminiſhed, by means of the Refraction. See REFRACTION.

DECLINATION *of the Needle*, or Compaſs, is the Variation from the true Meridian. See VARIATION *of the Needle*.

DECLINATION *of a Plane*, or Wall, in Dialling, is an Arch of the Horizon, comprehended either between the Plane, and the Prime Vertical Circle, if you account it from Eaſt to Weſt; or between the Meridian, and the Plane, if you account it from the North, or South. See DECLINER.

There are many Ways given by Authors for finding the *Declination* of Planes: The moſt handy and practical Way is by a *Declinator*. See DECLINATOR.

DECLINATOR, an Inſtrument in Dialling, whereby the Declination, Inclination, and Reclination of Planes is determined. Its Structure is as follows: On a ſquare wooden Board ABCD, (*Tab. Dialling Fig.* 1.) deſcribe a Semi-Circle AED, and divide the two Quadrants thereof AE and ED into 90 Degrees, each beginning from E, as in the Figure. Then, having fix'd a Pin in the Center F, fit a wooden Ruler HI upon the ſame, moveable thereon, with a Box and Needle K, as ſhewn under COMPASS.

Now, to apply this, in taking the Declination of a Plane, applying the Side AD of the Inſtrument to the Plane purpoſed, as MN *Fig.* 2. and move the Ruler FG, with the Compaſs G this Way and that, and about the Center F, till the Needle reſt upon the Line of the Magnetical Meridian of the Place. Now if the Ruler in this Situation cut the Quadrant in E, the Plane is either Northern or Southern: But if it cut between D and E, the Plane declines to the Weſt; or, if between AE, to the Eaſt by the Quantity of the Angle GFE.

The ſame Inſtrument will ſerve to take the Inclinations and Reclinations of Planes. To this End, inſtead of the Ruler and Needle, a Thread with a Plummet is fitted on a Pin in the Center E: Then the Side BC of the Declinator ABCD, being applied to the propoſed Plane, as IL *Fig.* 3. If the Plumb-Line FG cut the Semi-Circle AED in the Point E, the Plane is Horizontal; Or if it cut the Quadrant EL in any Point as G, then will EFG be the Angle of Inclination: Laſtly, if applying the Side AB to the Plane, the Plummet cut E, the Plane is Vertical.

Hence, if the Quantity of the Angle of Inclination be compared with the Elevation of the Pole, and Equator; it is eaſily known, whether the Plane be inclined, or reclined. See INCLINATION, and RECLINATION.

DECLINERS, or *Declining Dials*, are thoſe which cut either the Plane of the prime Vertical Circle, or the Plane of the Horizon obliquely. See DIAL.

If we conceive the Plane of the prime Vertical Circle to revolve a little upon a right Line drawn from *Zenith* to *Nadir*; The Plane will become *declining*; nor will it be any longer cut at right Angles by the Meridian, but by ſome Vertical Circle paſſing through the intermediate Points. After the like Manner a Horizontal Plane will be brought to *decline*, if revolving on the Meridian Line, one Part of it be raiſed a little towards the *Zenith*, and the other depreſs'd towards the *Nadir*.

The Uſe of *Declining* Vertical Dials is very frequent, in Regard the Walls of Houſes, whereon Dials are commonly drawn, do generally decline from the Cardinal Points. Incliners and Recliners, and eſpecially Deincliners, are very rare. See DIAL.

DECLINING, { Erect, Inclining, Reclining } *Dials*. See DIAL.

DECLIVIS, in Anatomy, a Muſcle of the Abdomen, call'd alſo *Obliquus Deſcendens*. See OBLIQUUS *Deſcendens*.

DECLIVITY. See ACLIVITY.

DECOCTION, the Act of Boiling one, or more Plants, or other Drugs, to extract the Juice out of the ſame for ſome medicinal Purpoſe.

*Decoctions* of Guaiac, and Sarſaparilla, are the common Drink in certain Diſeaſes. See APOZEM, and INFUSION.

Monſr.

Monſr. *Boulduc* aſſures us from his own Experience, that the Infuſions of Vegetable Purgatives act better, and produce better Effects, than their *Decoctions*; which he attributes to this, that the pureſt and moſt active Principles of thoſe Bodies are diſſipated and evaporated by Heat. *Memoires de l'Academie Royale des Sciences*, An. 1710.

DECOLLATION, *Beheading*, a Term ſeldom uſed, but in the Phraſe, *the* Decollation *of St.* John *Baptiſt*, ſignifying a Painting, wherein is repreſented the Baptiſt's Head, ſtruck off from his Trunk; Or, the Feaſt held in Honour of that Martyr.

A *French* Embaſſador at *Conſtantinople*, ſhewing the Grand Seignior a *Decollation* of St. *John*, admirably repreſented, except that the Painter had not obſerved, that when a Man is beheaded, the Skin ſhrinks back a little; The Emperor immediately ſpied the Fault in that exquiſite Performance; and to convince the Embaſſador thereof, ſent Orders for a Man to be immediately beheaded, and his Head to be brought for a Proof. *Catherinot Traite de la Peinture.*

DECOMPOSITION, in Chymiſtry and Pharmacy, the ſame Thing with *Analyſis*, or Reſolution, *viz.* the Reduction of a Body into the Principles, or component Parts it conſiſts of. See ANALYSIS, and RESOLUTION.

*Decompoſition*, is ſometimes taken for any Sort of Reſolution, or Separation of Parts: In Propriety, however, *Decompoſition* is a Proceſs of an Artiſt, in order to a Separation of the Heterogeneities, or Impurities from any Matter.

Tradition, founded on repeated Experiments, is a much ſurer Way of arriving at the Knowledge of the Properties of a Plant, than any chymical *Analyſis*, or *Decompoſition* of its Principles. See MEDICINE.

DECORATION, in Architecture, an Ornament in a Church, or other public Place: Or, what adorns, and enriches a Building, Triumphal Arch, *&c.* either without Side, or within. See ORNAMENT.

The Orders of Architecture contribute a great deal to the *Decoration*; but then the ſeveral Parts of thoſe Orders muſt have their juſt Proportions, Characters, and Ornaments; Otherwiſe the fineſt Order will bring Confuſion, rather than Richneſs. See ORDER.

*Decorations* in Churches, are Paintings, Vaſes, Feſtoons, *&c.* occaſionally applied to the Walls; and with ſo much Conduct and Diſcretion, as not to take off any Thing from the Form of the Architecture: As is much practiſed in *Italy*, at the ſolemn Feaſts.

DECORATION is particularly applied to the *Scenes* of Theatres. See SCENE.

In Opera's, and other Theatrical Performances, the *Decorations* muſt be frequently changed, in Conformity to the Subject. The Ancients had two Kinds of *Decorations* for their Theatres: The firſt, call'd *Verſatilis*, having three Sides, or Faces which were turned ſucceſſively to the Spectators: The other, call'd *Ductilis*, ſhewing a new *Decoration* by drawing, or ſliding another before it. This latter Sort of *Decoration* is ſtill uſed, and apparently with much greater Succeſs than among the Ancients, who were oblig'd to draw a Curtain whenever they made a Change in the *Decoration*; whereas on our Stage the Change is made in a Moment, and almoſt without being perceiv'd. See THEATRE.

DECORTICATION, the Peeling, or Unhuſking of Roots, Seeds, Fruits, Branches, *&c.* or the Freeing, of them from their Barks, Rinds, Huſks, or Shells. See BARK.

DECORUM, DECOR, *Decency*, is particularly uſed in Architecture, for the Suitableneſs of a Building, and the ſeveral Parts, and Ornaments thereof, to the Station, and Occaſion. *Vitruvius* is very ſevere in this Point; and gives expreſs Rules for the Appropriating, or Suiting the ſeveral Orders to their natural Characters. So, *e.g.* as a *Corinthian* Column ſhould not be ſet at the Entrance of a Priſon, or Gate-Houſe; Nor a *Tuſcan*, in the Portico of a Church; As ſome have done among us, in breach of *Decorum*. Even in the Diſpoſition of the Offices of our ordinary Houſes, we find grievous Offences againſt *Decorum*: The Kitchin being often where the Parlour ſhould be; and that in the firſt and beſt Story, which ſhould have been damned to the loweſt and worſt.

DECOUPLE, in Heraldry, the ſame as *Uncoupled*, i. e. parted, or ſever'd; Thus, a Chevron *Decouple*, is a Chevron wanting ſo much towards the Point, that the two Ends ſtand at a Diſtance from each other, or are parted, or uncoupled.

DECOURS, DECRESSANT, } in Heraldry. See DECREMENT.

DECOY, a Place made fit for Catching of wild Fowl: Hence, a *Decoy*-Duck is one that flies abroad, and lights into Company of wild ones, and being become acquainted with them, by her Allurement draws them into the *Decoy*-Place, where they become a Prey.

DECREE, a Reſolve made by a Superior Power, for the Regulating of an Inferior.

The Commerce between Soul and Body, *Fa. Mallebranch* obſerves, has no other *Vinculum*, or Connexion, but the Efficacy of the divine *Decrees*. Second Cauſes only execute the *Decrees* of Providence. The Doctrine of the *Calviniſts* infers, that God enters into Sin by a poſitive *Decree*; in that if Crimes were not ordain'd by an antecedent *Decree*, God could not foreſee the Events.

The *Decrees* of Councils, are the Laws made by them, to regulate the Doctrine and Policy of the Church. See CANON.

*Decree* was originally uſed by the Lawyers for any Thing ordain'd by the Prince, upon Cognizance of the Cauſe: But the Canoniſts now reſtrain the Word *Decree* to the Ordinances of Popes; as the Name *Canon* is to what is ordain'd by Councils.

The *Decrees* in Chancery, are the Determinations, or Sentences of the Lord Chancellor, upon full Hearing, and Weighing the Merits of the Cauſe. See CHANCERY.

DECREMENT, or DECRESSANT, in Heraldry, by the *French* Heralds uſually call'd *Decours*, or, *en Decours*, is the Wane, or Decreaſe of the Moon, when ſhe is receding from the Full towards the New.

In this State ſhe is call'd in Blazon, a *Moon-Decreſſant*, or, *en Decours*; Since to call it a *Creſcent*, would be improper, as that Term denotes an Increaſe. The Moon looking to the left Side of the Eſcutcheon, is always ſuppoſed to be *decreſſant*: When ſhe faces the right, ſhe is *Creſcent*, or in the *Increment*.

DECREPITATION, in Chymiſtry, a Drying, and Calcining of Salt over the Fire, continued till ſuch Time as it ceaſes to crackle. See SALT.

The Term is alſo applied to the Noiſe, or Crackling of the Salt during the Operation. The Deſign of this Operation is to free the Salt of its ſuperfluous Moiſture. But the Salt is hereby rendred ſoporous, and apt to imbate Moiſture, that unleſs it be kept very cloſe, it ſoon moiſtens again.

DECRETAL, a Reſcript, or Letter of a Pope, whereby ſome Point, or Queſtion in the Eccleſiaſtical Law is ſolved, or determined.

The *Decretals*, *Litteræ Decretales*, compoſe the ſecond Part of the Canon-Law. See CANON *Law*.

*Decretals*, are *Inſtituta proprie Papæ*, *Præcepta vero Regum*. They were firſt compiled into a Body by *Regino*, *Burchard*, *Anſelm*, and *Ivo*: Afterwards by *Gratian*, who lived in the Pontificate of *Eugenius* III; which latter, as being generally approv'd, is call'd, *The firſt Collection of the* Decretals. Twelve Years after, a ſecond Collection was made by *Gilbertus*, and *Alanus*, under the Name of *Volateranus*; which, beſide the *Decretals* of the former, contain'd thoſe of *Celeſtine* the IIId. The third Collection was begun by *James Major*, Arch-Deacon of *Compoſtella*, and collected out of the Regiſters of *Innocent* the IIId. It was call'd, *Romana Compilatio*; But, containing many Things not generally receiv'd, that Pope was perſuaded to employ ſome Perſon, to make a Collection by his Authority. Accordingly, *Petrus Beneventanus*, a Notary, or, as others ſay, *F. Raimond*, a Dominican, was appointed for that Work; Which is the only Collection authorized by the holy See to be read in the Schools. *Boniface* the VIIIth, in 1297, made a new Collection, under the Name of *Sextus*, containing 5 Books. *Clement* the IIId made a third, under the Title of *Clementines*; And *John* the XXIIth, under that of *Extravagantes*. See CLEMENTINES, and EXTRAVAGANTES.

All the *Decretals* attributed to the Popes before *Siricius*, in 318, are evidently ſuppoſititious. All the World allow them an Impoſture; and even ſuch as are moſt favourable to the Court of *Rome*, are oblig'd to abandon them: Tho' they have been one great means of Eſtabliſhing the Grandeur of *Rome*, and ruining the ancient Diſcipline, particularly as to Eccleſiaſtical Judgments, and the Rights of Biſhops. They are ſuppoſed by ſome, the ſpurious Off-ſpring of *Iſidore*, Arch-Biſhop of *Seville*, by Reaſon the Collection thereof bears the Name of *Iſidore Peccator*, or *Mercator*. They were firſt publiſh'd by *Riculph* Biſhop of *Mentz*, in the IXth Century.

DECUPLE, in Arithmetic, a Term of Relation, or Proportion, implying a Thing to be *ten* times as much as another. See RATIO.

DECURIO, the Chief, or Commander of a *Decury*, both in the *Roman* Army, and in the College, or Aſſembly of the People. See DECURY.

DECURIO *Municipalis*, was a Name given to the Senators of the *Roman* Colonies. See MUNICIPAL.

They were call'd *Decuriones*, by Reaſon their Court, or Company, conſiſted of *ten* Perſons. By means hereof the Cities of *Italy*, at leaſt ſuch as had Colonies, had a Share, under *Auguſtus*, in the Election of the *Roman* Magiſtrates; The *Decuriones*, or Senators of thoſe Cities, having Suffrages therein, which they ſent, ſeal'd up to *Rome*, a little before the Election.

DECURIO was alſo a Name given to certain Prieſts intended, as it ſhould ſeem, for ſome particular Sacrifices, or other religious Ceremonies; or for the Sacrifices of private Families and Houſes, as *Struvius* conjectures, who thence derives their Name. But be the Origin of the Name what it will, we have an Inſcription in *Gruter*, which confirms what we have ſaid of their Function. ANCHIALVS. CVB. AED. Q. TER. IN. AEDE. DECVRIO. ADLECTVS. EX. CONSENSV. DECVRIONVM. FAMILIAE. VOLVNTATE. Where we have a *Decurio* in the Houſe of a private Perſon, *Q. Terentius*.

DECURY, ten Perſons rang'd under one Chief, or Commander, call'd *Decurio*. See DECURIO.

The *Roman* Cavalry was divided into *Decuries*.

*Romulus* divided the whole *Roman* People into three *Tribes*; over each of which he appointed a Tribune: Each Tribe he ſubdivided into ten *Centuries*, with Centurions at their Heads: And each *Century* he ſubdivided further into ten *Decuries*, over each of which a Decurio commanded.

DECUSSATION, in Geometry, Opticks, Anatomy, *&c.* The Point wherein two Lines, Rays, or Nerves, *&c.* croſs, or interſect each other: Or the Action it ſelf, of Croſſing.

The Optic Nerves of both Eyes are commonly ſuppoſed to *decuſſate* e're they reach the Brain; to which *Decuſſation*, many Authors attribute it, that we ſee ſingle with two Eyes: Others deny any *Decuſſation*. See OPTIC *Nerve*, VISION, *&c.*

The Rays of Light *decuſſate* in the *Cryſtalline*, e're they reach the *Retina*. See CRYSTALLINE.

There are divers Muſcles, Membranes, *&c.* that *decuſſate*; their Fibres running over each other under greater or leſs Angles; and by that means giving both Strength and Conveniency of Motion different Ways.

DECUSSORIUM, is a Surgeon's Inſtrument, wherewith the *dura Mater* is preſſed down in the Operation of Trepanning, to ſave it from Damage.

DECYPHERING, the Art, or Act of finding the Alphabet of a Cypher, or of Explaining a Letter wrote in Cypher. See CYPHER.

Every Language has peculiar Rules of *Decyphering*. *Jaques Geſvry* has publiſhed the Principles of *Decyphering* the *French*; wherein the Rules proper to that Language are laid down. The principal, we ſhall here add as a Specimen in this Kind. As, firſt, that when a Character is found alone, it muſt either be an *A*, *Y*, or an *O*, theſe being the only Letters in the Alphabet that make Words ſingly. Secondly, the Character that occurs the oftenеſt in a Writing to be *decypher'd* is ordinarily an *E*; this being the moſt common Letter in that Language. Thirdly, To know the *U*, you muſt take the Character that is always preceeded by one certain other, which will be the *Q*. Fourthly, The *I* is alſo known by means of the *Q*, for ſince *QUE*, and *QUI*, are the only Syllables in the *French* Tongue that begin with *Q*; whenever you find a Word of three Characters, whereof the firſt is a *Q*, and the laſt is not an *E*, it muſt be an *I*. Fifthly, In all Words of two Letters, one of them is a Vowel. Sixthly, Of the three firſt Characters of a Word, one of them is a Vowel. Seventhly, The Vowels being once *decypher'd*; the Conſonants are readily found by the Connexion certain Conſonants uſually have with certain Vowels.

DEDI, in Law, a Warranty given to the Feoffee and his Heirs. See WARRANTY.

DEDICATION, the Act of Conſecrating a Temple, Altar, Statue, Place, *&c.* to the Honour of ſome Deity. See TEMPLE, ALTAR, CHURCH, *&c.*

The Uſe of *Dedications* is very ancient both among the Worſhippers of the true God, and among the Heathens. The *Hebrews* call it חנכה *hhanucha*, Initiation, which the *Greek* Tranſlators render Ἐγκαίνια, and Ἐγκαινισμὸς, *Renewing*. In the Scripture we meet with *Dedications* of the Tabernacle, of Altars, of the firſt and ſecond Temple, and even of the Houſes of private Perſons. *Numb.* VIII. 10, 11, 84, 88. *Deut.* XX. 5, 80, 88. 2d of *Kings* V. 63. 2d *Chronic.* VII. 5, 9. 1ſt *Eſdr.* VI. 16, 17. 2d *Eſdr.* XII. 27. *Pſalm.* XXIX. 1. *Hebr.* IX. 18. There are alſo *Dedications* of Veſſels and Garments of the Prieſts, and Levites, and even of the Men themſelves.

Under the Chriſtian Diſpenſation, we call thoſe Ceremonies *Conſecrations*, *Benedictions*, *Ordinations*, &c. and not *Dedications*, which is only applied to Places. See therefore, CONSECRATION, BENEDICTION, and ORDINATION.

The *Feaſt of the* DEDICATION, or rather the Feaſt-Day of the Saint, and Patron of a Church, call'd in our Law-Books, &c. *Dedicare*, was celebrated not only by the Inhabitants of the Place, but by thoſe of all the neighbouring Villages, who uſually reſorted thither. And ſuch Aſſemblies were authorized by the King. *Ad* Dedicationes, *ad Synodos*, *&c. venientes ſit ſumma Pax.*

The Cuſtom is ſtill retain'd in divers Places, under the Name of *Wakes*, or *Vigils*. See WAKE.

The Heathens had alſo *Dedications* of Temples, Altars, and Statues of their Gods, *&c.* *Nebuchodonoſar* had a *Dedication* of his Statue, *Daniel* III. 2. *Pilate dedicated* gilt Bucklers at *Jeruſalem* to *Tiberius*, *Philo de Legat.* *Petronius* would have *dedicated* a Statue to the Emperor in the ſame City. *ibid.* p. 791. *Lycophron* ſpeaks of the *Dedication* of the Temple of *Parthenope*. *Tacitus Hiſt.* Lib. IV. C. 53. mentions the *Dedication* of the Capitol, upon Rebuilding it by *Veſpaſian*, &c. Theſe *Dedications* were perform'd with Sacrifices proper to the Deity they were offer'd to; but were never practiſed without Permiſſion. Among the *Greeks*, it does not appear who gave the Permiſſion: But among the *Romans*, it was the Magiſtrate.

The Jews celebrated the *Dedication* of their Temple every Year for eight Days. This was firſt enjoyn'd by *Judas Maccabeus*, and the whole Synagogue, in the Year of the *Syromacedonian Æra* 148. *i.e.* 164. Years before Chriſt.

The Heathens had the like Anniverſaries, as that of the *Dedication* of the Temple of *Parthenope*, mention'd by *Lycophron*.

Under Chriſtianity, *Dedication* is only applied to a Church; and is properly the Conſecration thereof, perform'd by a Biſhop, with a Number of Ceremonies preſcrib'd by the Church. The Chriſtians finding themſelves at Liberty under *Conſtantine*, in lieu of their ruinous Churches, built new Ones in every Place; and *dedicated* them with a deal of Solemnity. The *Dedication* was uſually perform'd in a Synod; at leaſt they aſſembled a Number of Biſhops, to aſſiſt at the Service. We have the Deſcription of thoſe of the Churches at *Jeruſalem*, and *Tyre*, in *Euſebius*, and many others in later Writers. In the Sacramentany of *Gelaſus*, the *Dedication* of the Baptiſtery, is deliver'd ſeparately from that of the Church, which was perform'd with leſs Ceremony than at preſent.

DEDIMUS *Poteſtatem*, in Law, a Writ whereby Commiſſion is given to one, or more private Perſons for the Expedition of ſome Act belonging to a Judge. The Civilians call it *Delegatio*. It is granted moſt commonly upon Suggeſtion, that the Party, who is to do ſomething before a Judge, or in a Court, is ſo weak he cannot travel. Its Uſe is various; as, to take a perſonal Anſwer to a Bill in Chancery; to examine Witneſſes, levy a-fine, *&c.*

DEDUCTION, in Commerce, a ſubſtracting, or retrenching a little Sum payd from a greater remaining to pay. See SUBSTRACTION.

When you have made a Deduction of 300 l. which I ſent you, from the 500, which you lent me, there will only remain 200 due.

DEED, *Factum*, in Law, an Inſtrument written on Paper, or Parchment, conſiſting of three Things: *viz.* *Writing*, *Sealing*, and *Delivery*; and comprehending a Contract, or Bargain between Party and Party.

Of theſe there are two Sorts: *Deeds indented*, and *Deeds poll*; which Denominations ariſe from the Form and Faſhion thereof; the one being cut in, and out in the Top, or Side, call'd *Indented*; and the other *plain*.

A *Deed Indented*, or *Indenture*, conſiſts of two Parts, or more, (for there are *tripartite*, *quadripartite*, *ſeptempartite*, &c. *Deeds*) wherein it is expreſs'd, that the Parties thereto have to every Part thereof interchangeably ſet their ſeveral Seals. The Cauſe of their Indenting is, that, whereas the ſeveral Parties have each of them one, the *Indenture* may make it appear, that they belong to one and the ſame Contract, by their tallying. See INDENTURE.

A *Deed poll, or polled*, antiently call'd *Charta decima Parte*, or *Charta ſimplex*, is a plain *Deed*, without Indenting uſed, when the Vendor, for Example, only ſeals, and there is no need for the Vendee's Sealing a Conter-Part, by Reaſon the Nature of the Contract is ſuch, that it requires no Covenant from the Vendee. See POLL.

DEEMSTERS, or DEMSTERS. All Controverſies in the Iſle of *Man* are decided, without Proceſs-Writings, or any Charges, by certain Judges choſe from among themſelves, call'd *Deemſters*. *Cambd. Britan.* The Word is form'd from the Saxon *Dema*, Judge, or Umpire.

DEEP-*Sea Line*, in the Sea-Language, a ſmall Sea-Line to ſound withal when a Ship is in very *deep* Water at Sea.

At the End of this Line is a Piece of Lead, call'd the *deep Sea Lead*, at the Bottom of which is a Coat of white Tallow, to bring up Stones, Gravel, Shells, or the like, from the Bottom, in order to learn the Differences of the Ground; which being enter'd from Time to Time in their Books, by comparing of Obſervations, they gueſs by their Soundings, *&c.* what Coaſts they are on, tho' they cannot ſee Land. See SOUNDING.

DE *Expenſis Militum*, a Writ commanding the Sheriff to levy 4 Shillings *per* Day, to defray the Expences of a Knight of the Shire attending in Parliament. And there is a like Writ *de Expenſis Civium, & Burgenſium*, to levy 2 Shill. *per* Day for every Burgeſs in Parliament. See REPRESENTATIVE.

DE *facto*, ſomething actually done, or done indeed: In Contradiſtinction to *de Jure*, where a Thing is only ſo in Juſtice, or Equity, but not in Fact.

After the Revolution, the Retainers to the abdicated King talk'd much of the Difference between a King *de Jure*, and *de Facto*, a Prince in actual, but not legal Poſſeſſion of the Crown; and another who had the Right, but not the Poſſeſſion. The Non-Jurors ſtill hold the Chevalier for King *de Jure*; and only allow King *George* for King *de Facto*.

DEFAULT, in Law, an Offence, in omitting what a Perſon ought to do, particularly before a Court of Juſtice, at a Day aſſign'd, for which Judgment may be given againſt the *Defaulter*.

DEFECATE, a Term applied to ſome body that is purged, and clear'd of Feces, or Impurities. See FÆCES.

Diſtillations, and other Chymical Operations, are intended to ſeparate the moſt pure, and ſubtile Parts from the Feces, or Lees. See DISTILLATION.

Spirit of Wine well *defecate*, eaſily evaporates. See SPIRIT.

DEFECTION, the Act of Abandoning, or relinquiſhing of a Party, or Intereſt a Perſon had been engag'd in. The Word is form'd of the Latin *deficio*, to fail of.

DEFECTIVE, or DEFICIENT *Nouns*, in Grammar, are ſuch as want either a Number, a particular Caſe, or are indeclinable. See NOUN.

The Term *defective* is alſo applied to a Verb that has not all its Moods and Tenſes. See VERB, MOOD, *&c.*

DEFEISANCE, or DEFEIZANCE, in Law, a Condition relating to a Deed, as to an Obligation, Recognizance, or Statute, which being perform'd by the Obligor, or Recognizor, the Act is diſabled, or annulled, as if it had never been done.

The Difference between a *Proviſo*, or Condition in Deed, and a *Defeiſance*, is this, that a *Proviſo*, or Condition is annexed, or inſerted in the Deed of Grant, whereas a *Defeiſance* is uſually a Deed by it ſelf.

DEFENCE, in War, is uſed for any Thing that ſerves to preſerve, or ſcreen the Soldiers, or the Place.

The Parapets, Flanks, Caſemates, Ravelins, and Out-Works that cover the Place, are call'd the *Defences*, or Covers of the Place. See PARAPET, *&c.*

And when the Canon has beat down, or ruin'd theſe Works, ſo that the Men cannot fight under Covert, the *Defences* of the City are ſaid to be demoliſh'd.

*Line of* DEFENCE, is that which flanks a Baſtion, being drawn from the Flank oppoſite thereto. The *Line of Defence* ſhould not exceed a Muſket Shot, *i. e.* 120 Fathoms, or 720 Foot, or 60 *Rhinland* Perches. Indeed *Melder* allows 65; *Scheiter* 70; the Counts *de Pagan* and *Vauban* 75. There are greater *Lines of Defence*, and leſſer; call'd alſo *Raſant*, and *Fichant*.

*Line of* DEFENCE *greater*, or *fichant*, is a right Line, as EC, (*Tab. Fortification Fig.*3.) drawn from the Point, or Vertex of the Baſtion C to the Concourſe E of the oppoſite Flank LE, with the Courtine EA.

*Line of* DEFENCE *leſſer*, call'd alſo *Raſant*, and *Flanquant*, is the Face of the Baſtion continued to the Courtine, as CI.

DEFENDING is ordinarily ſynonimous with *Flanking*. Thus, we ſay, the Flank *defends* the Courtine, and the oppoſite Face of the Baſtion. This Demi-Lune Flank, or *defends* the Horn- or Crown-Work. The antient Fortifications are eaſily taken, there being nothing to *defend*, to flank them. When we ſay, Flank *defends* the Courtine, we mean, not only that it is a-ſide of the Courtine, but alſo, that it prevents the Approaches; that is, ſuch as are poſted on the Flank of a Baſtion, can ſee any that come to attack the Courtine, and can ſhoot them, or prevent their approaching it.

*Inner* DEFENDING-*Angle*, is the Angle CIE, made by the leſſer Line of Defence with the Courtine.

*Outer* DEFENDING-*Angle*, is the Angle COF, form'd by the two leſſer Lines of Defence CO, and FO.

The Lines, or Sides of the Rampart, or Wall, are *defended* by Muſkets, or Carbines, as more eaſy, cheap, and commodious than Canons.

To eſtimate how far the Fire-Arms plac'd in any Poſt will *defend*; From the Extremes of a Line, as AB (*Fig.*4.) draw Lines AC, and BD along, which the Fire-Arms are to be directed; then the Quantity of *Defence* is meaſur'd by a Perpendicular AE, intercepted between the Parallels: As is demonſtrated by Mathematicians.

Hence, firſt, If from the given Angle ABE, and right Line AB, you ſeek AE, by Trigonometry, and by Experience determine the Number of Feet anſwering to one Fire-Lock, or Soldier; the Quantity of *Defence* will be had. Secondly, The Quantities of the Lines of *Defence* are as their Lengths; provided the Lines of Direction be perpendicular thereto.

DEFENCE, in our Law-Books, is us'd for a *Prohibition*: as, in *Rot. Parl.* 21. *Edu.* III. *Cries and Defence was made throughout* England. i. e. Proclamation and Prohibition. *Salmones ponantur in* Defenſo. *Stat. Weſt.* 2. c. 47. Salmons are by that Act prohibited to be taken at certain Times. *Uſurarios* defendit *Rex* Eduardus *ne remanerent in Regno IL.* Edu. *Confeſſ.* In the Statutes of *Eduard* I. we have one, entitled, *Statutum de* Defenſione *portandi Arma*, &c. And 'tis *defended* by Law, to diſtrain on the High-Way.

The DEFENCE-*Month* is more uſually call'd *Fence-Month*. See FENCE-*Month*.

DEFENCES, in Heraldry, are the Weapons of any Beaſt; as, the Horns of a Stag, the Tuſks of a wild Boar, *&c.*

DEFENDANT, is a Term in Law, ſignifying him, who is ſued in an Action Perſonal; as Tenant is he, who is ſued in an Action Real. See PLAINTIFF.

DEFENDEMUS, in Law, a Term us'd in Feoffments, and Donations, having this Force, that it binds the Donor, and his Heirs, to *defend* the Donee, if any Man go about to lay any Servitude on the Thing given, other than is contained in the Donation. See WARRANTY.

DEFENDERS, were anciently notable Dignitaries both in the Church and State; whoſe Buſineſs was to look to the Preſervation of the public Weal, and to protect the Poor and Helpleſs, and maintain the Intereſts, and Cauſes of Churches.

About the Year 420 each Patriarchal Church began to have its *Defender*; which Cuſtom was afterwards introduced into other Churches, and continued to later Days under other Names, as thoſe of *Advocate*, and *Advouee*. See ADVOCATE, *&c.*

In the Year 407, we find the Council of *Carthage* aſking the Emperor for *Defenders* of the Number of *Scholaſtici*, i. e. Advocates who were in Office; and that it might be allowed them to enter, and ſearch the Cabinets and Papers of the Judges, and other Civil Magiſtrates, whenever it ſhould be found neceſſary for the Intereſt of the Church.

The Emperor ſtill retains the Quality of *Advocate of the Church*: And the Kings of *Great Britain* preſerve the Title of *Defender of the Faith*, granted to King *Henry* VIII. by Pope *Leo* X. on Occaſion of that Prince's Writing againſt *Luther*, and afterwards confirmed by *Clement* VII.

The Council of *Chalcedon*, *Can.* 2. calls the *Defender* of a Church Ἔκδικος. *Codin de Officiis Aulæ Conſt.* makes mention of *Defenders of the Palace*. So does *Bollandus*, *Act. S. Janu.* T. 1. p. 501. There was alſo a *Defender of the Kingdom*; Defenſor Regni; *Defenders of Cities*, Defenſores Civitatis; *Defenders of the People*; Defenſores Plebis; *Of the Poor*, *Fatherleſs*, *Widows*, &c.

DEFENDER *of the Faith*, a Title, or Quality attributed to the Kings of *England*, as that of *Catholicus* to the Kings of *Spain*, *Chriſtianiſſimus* to the Kings of *France*, and *Advocatus Eccleſiæ*, to the Emperor. See TITLE, QUALITY, KING, *&c.*

It was firſt granted by Pope *Leo* X. to King *Henry* VIII. on Account of his Writing againſt *Martin Luther*, in Defence of the Church of *Rome*: And the Bull for the ſame bears Date *quinto Idus Octobris* 1521. See TITLE.

DEFENSITIVE, in Medicine, and Chirurgery, a Bandage, Plaſter, or the like, uſed in the Cure of a Wound,

Wound, to moderate the Violence of the Pain, the Flux of Blood, and the Acceſs, and Impreſſion of the external Air.

The Cauterization perform'd, the Wound is cover'd with Lint ..... and the Eye with a *Defenſitive*, and a Triangular Compreſs. *Dionis*.

For the firſt dreſſing of the Entorſe, Mr. *Dionis* uſed a little *Defenſitive* made of the White of an Egg, *Oleum Roſatum*, and Alumn-Powder.

DEFERENS, *Deferentia*, in Anatomy, is applied to certain Veſſels of the Body, appointed for the Conveyance of Humours from one Place to another.

The *Vaſa* DEFERENTIA, are the Veſſels that convey the Seed as faſt as it is ſecreted, and prepar'd in the Teſticles, *&c.* into the *Veſiculæ ſeminales*, there to be depoſited, till an Emiſſion is requir'd. See SEED.

Some call them the *Ejaculatory Veſſels*. They are white, nervous, and round, ſituate partly in the *Scrotum*, and partly in the Abdomen. See GENERATION.

DEFERENT, or *Deferens*, in the ancient Aſtronomy, a Circle invented to account for the Excentricity, Perigee, and Apogee of the Planets.

As the Planets are found differently diſtant from the Earth at different Times, it was ſuppoſed, that their proper Motion was perform'd in a Circle, or Ellipſis, which is not concentric with the Earth; And this excentric Circle, or Ellipſis, they call'd the *Deferens*, becauſe paſſing through the Center of the Planet, it ſeem'd to ſupport, or ſuſtain it in its Orbit.

The *Deferens* is ſuppoſed differently inclin'd to the Ecliptic, but in none more than 8 Degrees, excepting that of the Sun, which is in the Plane of the Equator it ſelf, and is cut differently by the *Deferents* of the other Planets in two Places, call'd *Nodes*.

In the *Ptolomaic* Syſtem, the ſame *Deferent* is alſo call'd the *Deferent of the Epicycle*, becauſe it traverſes the Centre of the Epicycle, and ſeems to ſuſtain it. See EPICYCLE, PTOLEMAIC, &c.

DEFICIENT *Numbers*, are ſuch whoſe Parts added together make leſs than the Integer, whoſe Parts they are. *E. gr.* 8, whoſe Quota-Parts are 1, 2, and 4, which together only make 7. See ABUNDANT *Number*.

DEFICIENT *Hyperbola*, is a Curve of that Denomination, having only one Aſymptote, and two Hyperbolic Legs, running out infinitely towards the Side of the Aſſymptote, but contrary Ways. See CURVE.

DEFFAIT, or *Decapité*, a Term uſed by the *French* Heralds, to denote a Beaſt, whoſe Head is cut off ſmooth; in which it differs from *Eraſed*, where it is, as it were, torn off, and the Neck left ragged. See ERASED.

DEFILE, in Fortification, is a ſtreight narrow Lane, or Paſſage, through which a Company of Horſe, or Foot, can paſs only in File, by making a ſmall Front, ſo that the Enemy may take an Opportunity to ſtop their March, and to charge them with ſo much the more Advantage, in Regard that the Front and Rear cannot reciprocally come to the Relief of one another.

Hence, to go off File by File, is call'd *Defiling*. The Army began to *defile* on the left, and was forc'd to *defile* at each End of the Field, by Reaſon of the Moraſſes, and the Woods. The Word is form'd from the French *deffiler*, to unthread, or unſtring.

DEFINITE, in Grammar, is applied to an Article, or a Tenſe of a Verb, that has a preciſe, determinate Signification. See ARTICLE, TENSE, *&c.*

Such are, the Article *the* in Engliſh, *le* and *la* in French, *&c.* which fix, and aſcertain the Noun they belong to, to ſome particular; as, *the* King, *le* Roy; whereas in the Quality, *of* King, *de* Roy, the Articles *of*, *de*, mark nothing preciſe, and are therefore call'd *Indefinite*. *I have loved*, is a *Preter-Perfect Definite*. See VERB.

DEFINITION, in Philoſophy, Logic, *&c.* an Enumeration of the chief ſimple Idea's, whereof a compound Idea conſiſts; in order to aſcertain, or explain its Nature, and Character. See IDEA.

The Schoolmen give very imperfect Notions of *Definition*. Some define it the firſt Notion, or Conception, that ariſes of a Thing, whereby it is diſtinguiſh'd from every other, and from which, all the other Things that we conceive of it, are deduced. But the uſual Doctrine is, *Oratio explicans quod res eſt*, A Diſcourſe explaining what a Thing is: That is, as they further explain it, A Diſcourſe conveying thoſe Attributes which circumſcribe, and determine the Nature of a Thing. For to explain, is only to propoſe the Parts ſeparately, and expreſsly, which were before propos'd conjunctly, and implicitly; ſo that every Explication has regard to ſome Whole.

Hence, according to the divers Kinds of Parts in any Thing, *viz.* Phyſical Parts, Metaphyſical Parts, *&c.* ariſe ſo many divers Kinds of *Definitions* of the ſame Thing; Thus, *Man* is either *defined* an *Animal, conſiſting of Soul and Body*; Or, *a reaſonable Animal*, &c.

*Definitions* are of two Kinds; The one *Nominal*, or, *of the Name*: The other *Real*, or, *of the Thing*.

DEFINITION *of the Name*, or *Nominal Definition*, is that which explains the Senſe, or Signification affected to a Word: Or, as *Wolfius* more accurately conſiders it, an Enumeration of certain Marks, or Characters, ſufficient to diſtinguiſh the Thing *defined* from any other Thing; ſo to leave it out of doubt, what the Subject is intended, or denoted by the Name. Such is the *Definition* of a Square, when it is ſaid to be a quadrilateral, equilateral, rectangular Figure.

By *Definition of the Name*, is either meant a Declaration of the Idea's, and Characters affected to the Word in the common Uſage of the Language; or the peculiar Idea's, *&c.* which the Speaker thinks fit to denote by that Word; *i. e.* the ſpecial Senſe wherein he propoſes to uſe it, in his future Diſcourſe. For it may be obſerved, that the Significancy of any Word depends intirely on our Will; and we may affix what Idea we pleaſe to a Sound, which it ſelf ſignifies nothing at all. The *Definition* of the Name therefore, in the ſecond Senſe, is merely arbitrary; and ought never to be call'd in Queſtion; Only 'tis to be minded, that we keep inviolably to the ſame Signification. Hence, a *Definition* comes to ſtand, or to be made Uſe of, as an undoubted, or ſelf-evident Maxim, as it frequently does, and particularly among Geometricians, who, above all other People, make Uſe of ſuch *Definitions*.

Not that we mean, that after having *defined* a Thing ſo and ſo, there is nothing in our Idea affix'd to the *defined* Term, but muſt be granted to the Thing it ſelf: Thus, If any one ſhould define *Heat* to be a Quality in certain Bodies, like that which we feel upon the Application of Fire, or hot Bodies; no Man could find Fault with the *Definition*, as far as it expreſſes what he means by the Word *Heat*; but this does not hinder us from denying, that there is any Thing in the Body that warm us, like what we feel in our ſelves.

DEFINITION *of a Thing*, or *Real Definition*, is properly an Enumeration of the principal Attributes of a Thing, in order to convey, or explain its Nature. Thus a *Circle* is *defined* a *Figure, whoſe Circumference is every where equidiſtant from its Centre.*

A good Author, *Wolfius*, defines a *Real Definition* to be a diſtinct Notion explaining the *Geneſis* of a Thing, that is, the Manner wherein the Thing is made, or done: Such is that of a Circle, whereby 'tis ſaid *to be form'd by the Motion of a right Line round a fix'd Point*. On which footing, what was before inſtanc'd as a *Real Definition* of a Circle, amounts to no more than a nominal one.

This Notion of a *Real Definition* is very ſtrict and juſt; and affords a ſufficient Diſtinction between a *real*, and a *nominal* one. But, tho' it has the Advantages of Analogy, Diſtinctneſs, and Conveniency on its Side; yet, being only it ſelf a *Nominal Definition*, i. e. a *Definition* of the Term *Real Definition*, we muſt conſider it in that Light, that is, as an Idea affix'd arbitrarily to that Word, and which the Author always denotes by that Word in the Courſe of his Book. But, in Effect, 'tis not the uſual Senſe, or Acceptation of the Term; which is much leſs convenient and diſtinct. And 'tis to that uſual Acceptation we are here chiefly to have regard.

A *Definition* is uſually divided into *accurate*, and *inaccurate*; The firſt is what we ſtrictly call a *Definition*; The ſecond, we diſtinguiſh under the Name of *Deſcription*. See DESCRIPTION.

Of the Parts enumerated in a *Definition*, ſome are common to other Things beſide the Thing *defined*; Others peculiar thereto: The firſt are call'd the *Genus*, or *Kind*; and the ſecond, the *Difference*. Thus, in the former *Definition* of a Circle, by a Figure whoſe Circumference is every where equidiſtant from its Centre: The Word *Figure* is the *Kind*, as being a Name common to all other Figures, as well as the Circle: The reſt are the *Difference*, which ſpecify, or diſtinguiſh the Circle from every other Figure.

And hence ariſes that Recipe of *Fa. de Colonia*, for the making of a *Definition*. Take, ſays he, ſomething that is common to the Thing *defined* with other Things, and add to it ſomething that is proper, or peculiar to the Thing; and you will have a *Definition*. Thus, *e. gr.* Rhetoric is defin'd *the Art of Speaking well*; For that it is an *Art*, is common to it with ſeveral other Things; but that it is the Art of *Speaking well*, is peculiar to it alone.

There are three common Rules of a good *Definition*. Firſt, That it be *clear*, and more eaſy and obvious than the Thing *defined*. Secondly, That it be *univerſal*, or adequate to the Thing *defined*; That is, that it agree

to all the Things contain'd in the Species *defined*. And Thirdly, That it be proper to the Thing *defined*. The two ordinary Defects of *Definitions*, are, not to agree either to the *whole Thing*, or the *ſole Thing* defined: *Neque omni, neque ſoli*; than which nothing is more common, even among the beſt and juſteſt Authors.

My Lord *Bacon* obſerves of *Ariſtotle*'s *Definitions* in the general, that they are very much like that, whereby Man ſhould be *defined* an *Animal that tills the Ground*. Nor was his Maſter *Plato* leſs acceptionable. The Joke put upon him on that Account is famous: *Plato*, it ſeems, had *defined* Man, *Animal Bipes, & Implume*, A two-footed Animal without Feathers. Upon which, *Diogenes* the *Cynic*, a great Derider of the Academicks, threw a Cock ſtrip'd of his Feathers, and quite naked, into the Middle of *Plato*'s School; crying, *Here is* Plato's *Man*.

*Definition*, it muſt be obſerved, has not place every where: It has only to do with compound Ideas; as being no more than an Enumeration of the chief ſimple Ideas they are compounded of. Simple Ideas cannot be *defined*, as not allowing of an Enumeration. He who knows not what it is one calls *Heat*, will only learn it by Experience, or ſome ſynonymous Word, or ſome Word of an other Language, or by Circumlocution, whereby a Thing is ſhewn, not *defined*; As if we ſhould ſay, it was a *Senſation which we find when we ſit by the Fire, or in the Sun*, which ſhews nothing of the Nature of the Thing; nor would a Perſon that had never felt the Senſation, underſtand any more what is meant thereby, than a Man born blind would know what a green Colour was, by telling him it was the Senſation we have when we behold the Graſs in the Field.

Our *Definitions* of Subſtances, it muſt be added, are very defective. And as for Individuals, we have no *Definitions* at all. The Ideas of Subſtances are compounded of the various ſimple Ideas joyntly impreſs'd when they preſented themſelves; And all we can do to *define* them, is only to enumerate thoſe ſeveral ſenſible Ideas, as Colour, Denſity, Malleability, Weight, *&c.* Thus, Gold is *defined* by ſuch a peculiar Colour, Gravity, *&c.* Yet ſuch *Definitions* may raiſe an Idea clear enough of that Subſtance in the Mind of one who has ſeparately receiv'd, by his Senſes, all the ſimple Ideas that are in the Compoſition of the Complexion *defined*; Tho' the intimate Nature and Eſſence of Subſtance is unknown, and conſequently cannot be *defined*. Thus, 'tis only the Modes, or Attributes that can be explain'd by what we properly call a *Definition*. See SUBSTANCE, MODE, *&c.*

DEFINITION, in Rhetoric, is defined by *Tully*, a ſhort, comprehenſive Explanation of a Thing.

The *Definitions* of the Orator, it muſt be obſerv'd, differ much from thoſe of the Logician, and Philoſopher: Theſe latter *define* a Thing cloſely and driely by *Genus*, and Difference, e. gr. *Man is a reaſonable Animal*, &c. The Orators take a larger Compaſs, and *define* Things more ornamentally from the Places of Rhetoric; Thus: *Man is a curious Work of an Almighty Creator, fram'd after his own Image, endued with Reaſon, and born to Immortality*. But this Rhetorical *Definition*, in Strictneſs, comes nearer to the Nature of a Deſcription, than an accurate *Definition*.

There are divers Kinds thereof; As, firſt, That drawn from the Parts whereof a Thing conſiſts: Thus, *Oratory is an Art conſiſting of Invention, Diſpoſition, Elocution, and Pronunciation*. Secondly, From the Effects; As, *Sin is the Plague of the Soul, the Sting of Conſcience, the Scandal of Nature, the Ruin of the World, the Hatred of God*, &c. Thirdly, From Affirmation, and Negation, as when we firſt ſay what a Thing is not, that it may be the better conceiv'd what it is. Thus *Cicero*, by *Defining* the Conſulate, and ſhewing, that it does not conſiſt in Enſigns, Lictors, *&c.* but in Virtue, proves that *Piſo* was not Conſul. Fourthly, From the Adjuncts, as when Chymiſtry is *defined*, An *Art without Senſe, whoſe Beginning is Deceit; its Middle, Labour; and its End, Beggary*. And laſtly, From Similies, and Metaphors; as when Death is *defined*, A *Leap in the Dark*, &c.

To this laſt Claſs of Metaphorical *Definitions*, are reducible thoſe five not unelegant *Definitions of a Man* which we ſhall here ſubjoyn. The Poets feign, that the Sciences were once called together by *Minerva*'s Command, to form a *Definition* of Man. The firſt, *viz.* Logic, *defined* him, A *ſhort Enthymeme*; his Birth the Antecedent, and his Death the Conſequent. Aſtronomy *defined* him, A *changeable Moon*; which never continues in the ſame State. Geometry *defined* him, A *Spherical Figure*; which ends in the ſame Point where it begun. Laſtly, Rhetoric *defined* Man, An *Oration*; whoſe Exordium was to be born; Narration, *Trouble*; and Peroration, *Death*; the Figures of the Oration being Sighs, Tears, or Joy, worſe than Tears.

DEFINITOR, a Term uſed in ſeveral Religious Orders, for an Aſſeſſor, or Counſellor of a General, or Superior. See GENERAL.

In moſt Orders of Religious, the *Definitor* takes Place after the Superior of the Convent he lives in, when in the Convent itſelf; but out of the Convent, the *Definitor's* Place is before his own Superior.

*Definitors* are alſo ſubject, in the Convent they reſide in, to the immediate Superior of the Convent, as to Things relating to the Monaſtic Diſcipline; but in nothing elſe.

DEFINITIVE, is applied to ſomewhat that terminates or decides a Queſtion, or Proceſs.

*The Houſe of Lords have paſs'd a* Definitive *Sentence on ſuch a Cauſe. The Church has given a* Definitive *Judgment on ſuch an Article of Faith*. The Word is uſed in Oppoſition to *Proviſional*, and *Interlocutory*. See PROVISIONAL, *&c.*

DEFLAGRATION, in Chymiſtry, the Inkindling, or ſetting Fire to a Salt, a Mineral, or other Matter, mix'd for that Purpoſe with a ſulphureous one, in order to purify it; As is done in the Preparing of *Æthiops* Mineral, *Sal Prunellæ*, &c.

The Word is form'd of the Latin *de*, and *flagrare*, to burn.

DEFLECTION, is the turning any Thing a-ſide from its former Courſe, by ſome adventitious Cauſe; and is often apply'd to the Tendency of a Ship from her true Courſe, by the Reaſon of Currents, *&c.* which divert her, and turn her out of her right Way.

DEFLECTION *of the Rays* of Light, is a Property which Dr. *Hook* obſerved 167$\frac{4}{5}$, and read an Account of before the Royal Society, *March* 18. the ſame Year. He ſays, he found it different both from Reflection, and Refraction; and that it was made towards the Surface of the opacous Body perpendicularly.

This is the ſame Property which Sir *Iſaac Newton* calls *Inflection*. See INFLECTION.

DEFLORATION, or *Deflowering*, the Act of taking away a Woman's Virginity. Death, or Marriage, are decreed by the Civil Law in Caſe of *Defloration*. Many Anatomiſts make the *Hymen* a real Proof of Virginity, perſuaded that where it is not found, the Girl muſt have been *deflowered*. See HYMEN, and VIRGINITY.

The Ancients had ſo much Reſpect for Virgins, that they would not put them to Death, till they had firſt procured them to be *deflower'd*. The Natives of the Coaſt of *Malabar* pay Strangers to come and *deflower* their Brides.

Among the *Scots*, and the Northern Parts of *England*, it was a Privilege of the Lords of the Manour, granted them by King *Evenus*, that they ſhould have the firſt Nights Lodging with their Tenants Wives. King *Malcolm* allowed the Tenants to redeem this Service at a certain Rate, call'd *Marchetta*, conſiſting of a certain Number of Cows. *Buchanan* ſays, it was redeem'd with half a Mark of Silver. The ſame Cuſtom had Place in *Flanders, Friſeland*, and ſome Parts of *Germany*.

By the Cuſtom of *Anjou*, and *Maine*, a Maid after 25 Years of Age, may ſuffer herſelf to be *deflowered* without being diſinherited for it by her Father. *Du Cange* quotes an Arret of the 19th of *March* 1409, obtain'd by the Inhabitants of *Abbeville* againſt the Biſhop of *Amiens*, for taking Money to diſpenſe with an Injunction he had made, not to ſuffer them to get their Wives Maiden-Heads the three firſt Nights; The Injunction being founded on a Canon of the IVth Council of *Carthage*, which decrees the ſame, out of Reverence to the Matrimonial Benediction.

DEFLUXION, a Falling, or Flowing of a Humour on any Part of the Body; as of Rheum on the Trachea, and Oeſophagus in a Catarrh. See FLUXION, HUMOUR, *&c.*

DEFLUXIONS *on the Lungs* are very dangerous. See PHTHISIS.

DEFLUXIONS *on the Eyes* produce a Weakneſs of Sight, and frequently Blindneſs. See EYE.

The Word is form'd from the Latin *Defluo*, I flow down, the Humors falling upon ſome Part, where they are gather'd together.

DEFORCEMENT, in Law, a Withholding Lands, or Tenements, by Force, from the right Owner. See DEFORCEOR.

DEFORCEOR, or DEFORCIANT, one that overcomes, and caſts out another from his Lands, *&c.* by mere *Force*.

A *Deforceor* differs from *Diſſeiſor*, firſt, in this, that a Man may diſſeiſe without Force. Secondly, in that a Man may *deforce* another that never was in Poſſeſſion,

as where ſeveral Perſons have a Right to Lands, as common Heirs, and one entring firſt, keeps out the reſt. See DISSEISOR.

Again, a *Deforceor* differs from *Intruder*, in that a Man becomes *Intruder* by a wrongful Entry only into Lands void of a Poſſeſſor; whereas a *Deforceor* holds out the rightful Heir. See INTRUSION.

DEFORMITY, a diſpleaſing, or painful Idea excited in the Mind on Occaſion of ſome Object, which wants of that Uniformity, that conſtitutes *Beauty*. See BEAUTY.

'Tis an Inquiry of ſome Delicacy, and Importance, whether there be any ſuch Thing as *abſolute Deformity*. Our Perception of the Idea's of *Beauty*, and Harmony is juſtly reckon'd a *Senſe*; From its Affinity to the other Senſes, in this, that the Pleaſure does not ariſe from any Knowledge of Principles, Proportions, Cauſes, Uſes, &c. but ſtrikes at firſt View; as alſo in this, that the Ideas of Beauty, like other ſenſible Ideas, are neceſſarily pleaſant to us, as well as immediately. See SENSE.

But, as the other Senſes, which give us Pleaſure, do alſo give us Pain; does this Senſe of Beauty make any Objects diſagreeable to us, and the Occaſion of Pain?

That many Objects give no Pleaſure to our Senſe, is obvious; many are certainly void of Beauty: But then, ſays a late excellent Author, there is no Form which ſeems neceſſarily diſagreeable of it ſelf, when we dread no other Evil from it, and compare it with nothing better of the Kind. Many Objects are naturally diſpleaſing, and diſtaſteful to our external Senſes, as well as others pleaſing, and agreeable; as Smells, Taſtes, and ſome ſeparate Sounds: But for our Senſe of Beauty, no Compoſition of Objects, which give not unpleaſant ſimple Ideas, ſeems poſitively unpleaſant, or painful of it ſelf, had we never obſerv'd any Thing better of the Kind.

*Deformity*, then, is only the Abſence of Beauty, or a Deficiency in the Beauty expected in any Species: Thus bad Muſic pleaſes Ruſticks, who never heard any better; and the fineſt Ear is not offended with tuning of Inſtruments, if it be not too tedious, where no Harmony is expected: And yet much ſmaller Diſſonancy ſhall offend amidſt the Performance, where Harmony is expected. A rude Heap of Stones is no way offenſive to one who ſhall be diſpleaſed with Irregularity in Architecture, where Beauty was expected. And had there been a Species of the Form, which we now denominate *ugly*, or *deformed*, and had we never ſeen, or expected greater Beauty, we ſhould have receiv'd no Diſguſt from it. Tho' the Pleaſure would not have been ſo great in this Form as in thoſe we now admire. Our Senſe of Beauty ſeems deſign'd to give us poſitive Pleaſure; but not poſitive Pain, or Diſguſt, any further than what ariſes from Diſappointment.

There are indeed many Faces which at firſt View are apt to raiſe Diſlike. But this is generally not from any poſitive *Deformity*, which of it ſelf is poſitively diſpleaſing, but either from Want of expected Beauty, or from the carrying ſome natural Indications of morally bad Diſpoſitions, which we all acquire a Faculty of diſcerning in Countenances, Airs, and Geſtures. That this is not occaſion'd by any Form poſitively diſguſting, appears hence, that if upon long Acquaintance we are ſure of finding Sweetneſs of Temper, Humanity, and Cheerfulneſs, tho' the bodily Form continues, it ſhall give us no Diſguſt. There are Horrors rais'd by ſome Objects, which are only the Effect of Fear for our ſelves, or Compaſſion towards others, when either Reaſon, or ſome fooliſh Aſſociation of Ideas makes us apprehend Danger, and not the Effect of any Thing in the Form it ſelf. For we find, that moſt of thoſe Objects, which excite Horror at firſt, when Experience, or Reaſon has removed the Fear, may become the Occaſion of Pleaſure; as in ravenous Beaſts, a tempeſtuous Sea, a craggy Precipice, a dark ſhady Valley, &c.

This Aſſociation of Ideas makes many Objects beautiful and pleaſant. The Beauty of Trees, their cool Shades, and their Aptneſs to conceal from Obſervation, have made Groves, and Woods, the uſual Retreat of thoſe who love Solitude, eſpecially the Religious, the Penſive, the Melancholy, and the Amorous: And do not we find, that we have ſo joyn'd the Ideas of thoſe Diſpoſitions of Mind, with thoſe external Objects, that they always occur to us along with them? And according as the Habits, or Paſſions contracted, or gratified therein give us Pleaſure, or Pain, Remembrance is pleaſurable, or painful. The Dim Light in *Gothic* Buildings has had an Aſſociation of a very foreign Idea, which *Milton* expreſſes in his Epithet, *A dim religious Light*. After the like Manner, the caſual Conjunction of Ideas give us Diſguſts where there is nothing diſagreeable in the Form it ſelf. And this, in Effect, is the Cauſe of moſt of our fantaſtic Averſions to the Figures of divers Animals, &c. Thus Serpents of all Kinds, and many Inſects, really beautiful enough, are beheld with Averſion by many People, who have got ſome accidental Ideas aſſociated to them. See ASSOCIATION *of Ideas*.

DEFTARDAR, or DEFTERDER, the Treaſurer of the Revenues of the *Turkiſh*, and *Perſian* Empire. See TREASURER.

*Meninski* calls him *Supremus Theſaurarius*, High Treaſurer; and *Præſes Cameræ*, Preſident of the Exchequer; And *Caſtellus* makes him the Keeper, and Comptroller of the Books of Receipt, and Payment.

The *Deftardar*, or as *Vigenere* calls him, the *Dephterder*, has in his Charge the Rolls, and Accounts of the Militia, and the Treaſury; He receives all the Grand Seignior's Revenues, pays his Forces, and furniſhes the Expences of all public Affairs: In which, his Office differs from that of the *Chaznadar*, who is Treaſurer of the *Seraglio*, or Court, as the *Deftardar* is of the State.

*Ricaut* makes a *Deftardar* in each *Beglierbic*, or Government. *Vigenere* aſſures us, there are but two, the one for *Europe*, and the other for *Aſia*; The firſt reſides at *Conſtantinople*, and has under him two General Commiſſioners, or Deputies, one for *Hungary*, *Tranſylvania*, *Walachia*, *Croatia*, *Servia*, *Bulgaria*, *Boſnia*, &c. The other for *Greece*, and the *Morea*, with the Iſlands of the *Archipelago*.

Each of theſe has under him as many Sub-Commiſſioners, or Agents, as there are Saniaquats in his Province; which Sub-Commiſſioners have as many Clerks as there are Sabaſſi's in their Saniaquat, to keep the Account of the Timariots in their Diſtricts. The *Dephterder* of *Aſia* has two General Commiſſioners, the one for *Anotolia*, the other for *Syria*, *Arabia*, and *Egypt*; who have likewiſe their Sub-Commiſſioners, Clerks, &c. as thoſe of *Europe*.

The Word is compounded, firſt, of דפתר *defter*, a *Turkiſh* Name for a Book, Regiſter, Memoir, &c. which *Meninski* derives from the *Greek* διφθέρα, Skin, Parchment: The ſecond Word, whereof *Deftardar* is compounded, is דאר *dar*, a *Turkiſh*, and *Perſian* Word, ſignifying keeping, or holding, *q. d.* Book-keeper of the Monies receiv'd, and expended.

DEGENERATION, the Act of failing, or declining from a more perfect, or valuable Kind, or Condition, to a leſs.

'Tis a great Diſpute among Naturaliſts, whether or no Animals, Plants, &c. be capable of *degenerating* into other Species. The Affirmative being urged by many as a ſtrong Objection againſt the Plant, &c. being contain'd in the Seed; and the Doctrine of Generation, wherein that is ſuppoſed.

*Fortun. Licetus*, Lib. IV. *de Spont. vivent. ort.* expreſsly contends, that the Forms of Animals *degenerate* into other more imperfect ones: Thus, ſays he, the Soul of a Calf, after its Death, *degenerates* into the Souls of the Worms, Bees, &c. ariſing out of his Carcaſs; But the other School-Men laugh at the Notion.

Others hold, that in the ſame Matter there are divers Forms; and that *Degeneration* is only the putting off one Form, and calling forth another latent one: But it is impoſſible, the Form of a Worm, and that of a Calf, ſhould be actually exiſting together in the ſame Piece of Matter. See FORM.

Others hold, that the *Degeneration* only obtains in Vegetables, and define it the Change of a Plant of one Kind into that of another viler Kind. Thus, ſay they, Wheat *degenerates* into Tares; Oats into *Avena*, or wild Oats; *Ocymum* into *Serpyllus*; *Siſymbrium* into Mint; *Caulis* into *Rapa*, &c.

The Plantule, or *Stamen* of the future Vegetable, they hold to exiſt in the Seed; ſo as that to produce ſuch a *Plexus*, or Organiſm, a Matter ſo and ſo prepar'd is requir'd: And add, that the Matter in the Soil where the Seed is lodged being ſuch as is incapable of producing the ſaid *Plexus*, it muſt neceſſarily change into another of a different Nature from that of the Seed requir'd, tho' in ſome Reſpects alike, and approaching thereto: Thus, Tares and Wheat, in many Reſpects agree; ſo alſo *Serpyllus* and *Ocymum*, &c. They allow, however, that there is no *Degeneration* in the Root, but only in the Seed: In as much as the Root already ſuppoſes a perfect Organization.

But our lateſt and beſt Naturaliſts maintain ſuch a *Degeneration*, or Tranſmutation, to be a *Chimera*: Not but they allow, that a Plant, by being tranſplanted to an improper Soil, or Sun, may be depraved; ſo as a Florid *Caulis*, e. g. may produce only a *Braſſica Capitata*; and a *Dutch Roſe* of an hundred Leaves, another Roſe far ſhort thereof in Number of Leaves, Colour, Smell, &c. ſuch a Depravation is poſſible, and frequently happens, but

but a ſpecific Transformation ſeems out of the Power of Nature; a new Form ever ſuppoſing a new Generation, which again ſuppoſes a Corruption of the former Kind. See TRANSFORMATION, and SEED.

DEGLUTITION, in Medicine, the Act of ſwallowing the Food. See FOOD.

*Deglutition* is perform'd, in the firſt place, by means of the Tongue, driving the Aliment into the *Oeſophagus*, or Gullet; and then, by the Contraction of the Sphincter, and the fleſhy Fibres of the ſame *Oeſophagus*, which leſſening the Bore, or Aperture thereof, protrude the Contents downwards into the Stomach. See OESOPHAGUS, PHARYNX, DIGESTION, *&c.*

*Deglutition* ſucceeds *Maſtication*, and is followed by Concoction. See MASTICATION, and CONCOCTION.

DEGRADATION, in our Law-Books call'd DISGRADATION, and DEPOSITION, the Act of depriving, or ſtripping a Perſon for ever of a Dignity, or Degree of Honour, and taking away the Title, Badge, and Rights thereof. See DEPOSITION.

The *Degradation* of a Peer, a Prieſt, a Knight, a Gentleman, an Officer, *&c.* is perform'd with divers Ceremonies. That anciently obſerv'd in *degrading* a Perſon from his Nobility, is very curious, and deſerves to be rehearſed here, after *Geliot*, and *la Colombiere*. It was practis'd in the Time of *Francis* I. upon Captain *Fangel*, who had cowardly given up *Fontarabia*, whereof he was Governor.

On this Occaſion, twenty or thirty Cavaliers, without Imputation, or Reproach, were aſſembled, before whom the Gentleman was accuſed of Treaſon, and Breach of Faith, by a King at Arms. Two Scaffolds were erected, the one for the Judges, Heralds, and Purſuevants, and the other for the condemn'd Cavalier, who was arm'd at all Points, and his Shield placed on a Stake before him, reverſed with the Point upwards. On one Side aſſiſted twelve Prieſts, in Surplices, who ſung the Vigils of the Dead. At the Cloſe of each Pſalm they made a Pauſe, during which the Officers of Arms ſtripp'd the Condemn'd of ſome Piece of his Armour, beginning with the Helm, and proceeding thus, till he was quite diſarm'd: Which done, they broke his Shield in three Pieces with a Hammer. Then the King at Arms turn'd a Baſon of hot Water on the Criminal's Head; and the Judges, putting on Mourning Habits, went to the Church. This done, the *Degraded* was drawn from off the Scaffold, with a Rope tied under his Arm-Pits, laid on a Biere, and cover'd with Mortuary-Cloaths, the Prieſt ſinging ſome of the Prayers for the Dead; And then he was deliver'd to the Civil-Judge, and the Executioner of Juſtice.

Take a more Domeſtic Inſtance: Sir *Andrew Harcla*, Earl of *Carliſle*, being convicted, *degraded*, and attainted of Treaſon, 18°. *Edu.* IId. *coram Rege*; after Judgment was pronounc'd on him, his Sword was broke over his Head, and his Spurs hewn off his Heels; Sir *Anthony Lucy*, the Judge, ſaying to him, *Andrew, now art thou no Knight, but a Knave.* And by *Stat.* 13. *Caroli* II. *William*, Lord *Manſon*, Sir *Henry Mildmay*, and others, were *degraded* from all Titles of Honour, Dignities, and Preeminences, and none of them to bear, or uſe the Title of Lord, Knight, Eſquier, or Gentleman, or any Coat of Arms, for ever afterwards.

As to Eccleſiaſticks, we have an Inſtance of *Degradation* before Condemnation to Death, in the VIIIth Century, at *Conſtantinople*. It is in the Perſon of the Patriarch *Conſtantin*, whom *Conſtantin Copronymus* cauſed to be executed. He was made to aſcend the *Ambo*; the Patriarch *Nicetas* ſent ſome of his Biſhops to ſtrip him of the *Pallium*, and anathematized him. Then they made him go out of the Church backwards. But we have a much later Inſtance in our own Hiſtory. When *Cranmer*, Arch-Biſhop of *Canterbury*, was *degraded* by Order of Queen *Mary*; They dreſs'd him in Epiſcopal Robes, made only of Canvas, put the Mitre on his Head, and the Paſtoral Staff in his Hand: And in this Attire ſhew'd him to the People. Which done, they ſtripp'd him Piece by Piece.

At preſent, they don't ſtand ſo much on the Ceremony of *Degradation*, in order to the putting a Prieſt to Death; by Reaſon of the Delays, and Difficulties that it would occaſion. Pope *Boniface* pronounced, that ſix Biſhops were requir'd to *degrade* a Prieſt: But the Difficulty of aſſembling ſo many Biſhops, rendred the Puniſhment frequently impracticable. With us, a Prieſt, after having been deliver'd to his Ordinary, if he cannot purge himſelf of the Crime laid at his Door; his Gown, and other Robes are ſtripp'd over his Ears by the common Hangman, by which he is declar'd diveſted of his Orders. It is decided, however, that *Degradation* does not efface the Prieſtly Character.

*Degradation* only ſeems to differ from *Depoſition* in a few ignominious Ceremonies, which Cuſtom has added thereto. Accordingly, in the Buſineſs of *Arnoul*, Arch-Biſhop of *Rheims*, ſentenced in the Council of *Orleans*, in 991, it was deliberated, what Form they ſhould follow in the Depoſition, whether that of the Canons, that is, ſimple Depoſition; or that of Cuſtom, viz. *Degradation.* And it was declared, that he ſhould ſurrender the Ring, Paſtoral Staff, and Pallium; but that his Robes ſhould not be tore off him. In Effect, the Canons preſcribe no more than a mere reading of the Sentence. 'Tis the reſt, therefore, added hereto by Cuſtom, *viz.* the Stripping off the Ornaments, and the tearing the Pontifical Veſtments, that properly conſtitutes *Degradation.*

DEGRADATION, in Painting, expreſſes the leſſening, and rendring dim and confuſed, the Appearance of diſtant Objects in a Landſkip; ſo as they ſhall appear there, as they would do to an Eye placed at that Diſtance from them.

DEGRADED, in Heraldry. A *Croſs degraded*, is a Croſs mark'd, or divided into Steps at each End; diminiſhing as they aſcend towards the Middle, or Centre: by the *French* call'd *Perronnée*. See CROSS.

DEJECTION, in Medicine, properly ſignifies the Act of *Ejecting*, or Evacuating the Excrements, by means of the Periſtaltic Motion of the Guts; In which Senſe it comes nearly to the Signification of *Excretion*. See EXCRETION.

But the Term is alſo, and that more ordinarily, applied to the Excrements themſelves, thus evacuated; in which Senſe it is of the ſame import with *Stool*. See STOOL, and EXCREMENT.

Viſcid, glutinous, or, as they call them, *unguinous Dejections*, frequent in Scorbutic Diſeaſes, indicate a Colliquation of the Solids of the Body. See UNGUINOUS.

DEJECTION, *Fall*, in Aſtrology, is applied to the Planets, when in their Detriment, *i. e.* when they have loſt of their Force, or Influence, by reaſon of their being in Oppoſition to ſome others, which check, and counteract them. Or it is uſed when a Planet is in a Sign oppoſite to that wherein it has its greateſt Effect, or Influence, which is call'd its *Exaltation*. Thus, the Sign *Aries* being the Exaltation of the Sun, the Sign *Libra* is its *Dejection*. See EXALTATION.

DEICIDE, *Deicida*, a Term only us'd in ſpeaking of the Condemnation, and Execution of the Saviour of the World, by *Pontius Pilate*, and the Jews; which was an horrible *Deicide*.

The Jews, an ingenious Author obſerves, were never more remote from Idolatry than at preſent; Never more inviolably attach'd to the Law of *Moſes*, than at preſent: Whence then that Load of Evils and Misfortunes they have ſo many Ages groan'd under, Evils imcomparably greater and more laſting than all the Chaſtiſements wherewith God anciently avenged their moſt heinous Idolatries? Whence do they ariſe, but from the *Deicide* they committed in the Perſon of Jeſus Chriſt.

DEIFICATION, in the *Pagan* Theology, the Act, or Ceremony of *deifying* their Emperors, *i. e.* of placing them among the Gods, and decreeing divine Honours to be rendred them. See GOD.

The *Deification* is the ſame with *Apotheoſis*. See APOTHEOSIS.

DEINCLINERS, or DEINCLINING *Dials*, are ſuch as both decline; and incline, or recline at the ſame Time. See DIAL.

Suppoſe, for Inſtance, a Plane to cut the prime Vertical Circle at an Angle of 30 Degrees; and the Horizontal Plane under an Angle of 24 Degrees; the Elevation of the Pole being 52 Degrees; a Dial drawn on this Plane, is call'd a *Deincliner*. See DECLINER.

DEISM, the Doctrine, or Belief of ſuch as hold the Exiſtence of a God, as the whole of their Religion. The Word is form'd from *Deus*, God. See DEISTS.

DEISTS, a Claſs of People, known alſo under the Denomination of *Free-thinkers*, whoſe Character is, not to profeſs any particular Form, or Syſtem of Religion; but only to acknowledge the Exiſtence of a God, without rendring him any external Worſhip, or Service.

The *Deiſts* hold, that, conſidering the Multiplicity of Religions, the numerous Pretences to Revelation, and the obſcure, precarious Arguments advanced in Proof thereof; the beſt and ſureſt Way is, to return to the Simplicity of Nature, and the Belief of one God, which is the only Truth agreed to by all Nations.

They complain, that the Liberty of thinking, and reaſoning, is oppreſs'd under the Yoke of Religion, and that the Minds of Men are ridden, and tyranniz'd over by the Neceſſity impos'd on them of believing inconceivable Myſteries; And contend, that nothing ſhould be requir'd to be aſſented to, or believed, but what their Reaſon clearly conceive.

The Appellation *Deiſt* is more particularly given to ſuch as are not altogether without Religion, but reject all Revelation as an Impoſition, and believe no more than what natural Light diſcovers to them; as that there is a God, a Providence, a future State, with Rewards and Puniſh-

ments

ments for the Good and the Bad; That God must be honour'd; and his Will, so far as we can learn it, perform'd; but that each Person is to do this after his own Manner, and as his own Conscience suggests.

The Number of *Deists* is daily increasing. In *England*, a great Part of the Men of Speculation, and Letters, are pretended to incline that Way. And the like is observ'd in some of our Neighbour Nations, where Freedom of Speaking, Writing, and Thinking are indulged. See REVELATION.

DEITY, a common Appellation given by the Poets to the Heathen Gods, and Goddesses. See GOD.

DEIVIRILE, a Term in the School-Theology, signifying something divine and human at the same Time.

The *Eutychians* held, that the same Jesus Christ, and the same Son, produces both divine and human Operations at once, by one single Theandric, or *Deivirile* Operation: So that all the Distinction depends on our manner of Understanding. See THEANDRIC, *&c.*

The Word is a Compound of *Deus*, God, and *Virilis*, of *Vir*, Man. It was first invented by the *Monophysites*, to express their Error by: For as they taught, that there were not two distinct Natures in Jesus Christ, but that the human and the divine Nature were, by the Hypostatical Union, confounded together, and render'd one Nature, which was neither the one nor the other, but a Compound of both; It follow'd, that the Operations of this third Nature, *i. e.* of Jesus Christ, were neither purely divine, nor purely human; and that there were not two Sorts, the one divine, and the other human, but that they were all of one Sort, *viz.* Theandric, or *Deivirile*.

DELEGATES, a Number of Commissioners, *delegated*, or appointed by the King's Commission, under the great Seal, to sit upon an Appeal to the King, in the Court of Chancery, in three Cases: First, Upon a Sentence given in any Ecclesiastical Cause, by the Arch-Bishop, or his Official. Secondly, Upon a Sentence given in an Ecclesiastical Cause in Places exempt. Thirdly, Upon a Sentence given in the Admiral Court in Suits Civil and Marine, by Order of the Civil Law.

*Court of* DELEGATES: This is the highest Court for Civil Affairs, concerning the Church; For the Jurisdiction whereof it was provided 25 *H.* 8. That it shall be lawful for the Subject, in Case of Defect of Justice in the Ecclesiastical Courts, to appeal to the Sovereign in his Courts of Chancery, whence a Commission is directed under the great Seal to particular Persons therein mentioned, for Redress of Judgment; so that from the highest Ecclesiastical Court there lies no Appeal, but to the Court of *Delegates*, and beyond this to no other, except to the House of Lords. But the King, of his Free-will, may grant a Commission of Review under the great Seal. The Citations run all under the King's Name.

DELEGATION, a Commission extraordinary, given a Judge to take Cognizance of, and determine some Cause which ordinarily did not come before him. See DELEGATES.

Sovereign Courts have frequently Inferior Judges to sit in Judgment on certain Affairs.

In the Civil Law, *Delegation* is also a Sort of Surrender, whereby a Person substitutes another Debtor in his Place. See *Ulpian.* l. 11. ff. *de Novationibus*, & *Delegationibus*.

*Delegation* differs from Transferring, or *Translation*, in that three Persons intervene in a *Delegation*; viz. the Creditor, the Debtor, and a third, who himself is indebted to the Debtor, and on whom the Debtor transfers the Obligation he was under to pay the Creditor, *delegating* him, as it were, for that Purpose. But in a simple Transfer, 'tis enough the Transferrer and the Transferree be present.

DELETERIOUS, probably from Δηλέω, *noceo*, to hurt, a Term sometimes us'd among Naturalists for such Things as are of a pernicious, and poisonous Nature. See POISON.

DELF, is a Quarry, or Mine, where Stone, or Coal is digged: from the *Saxon* Word *Delivan*, to *delf*, or dig; *Delf of Coal*, is Coal lying in Veins under-ground, before it is dug up; and a *Delve of Coals* is a certain Quantity dug out of the Mine, or Pit. See COAL.

DELF, is also us'd in Heraldry for one of the Abatements of Honour; being a Square in the Middle of the Escutcheon. See ABATEMENT.

A *Delf* Tenne is due to him that revokes from his own Challenge, or any way recedes from his Parole, or Word. If there be two, or more *Delfs* in an Escutcheon, it is then no longer an Abatement: So also, if it be of Metal, or charged upon it, then becomes it a Charge of perfect bearing.

DELIA, in Antiquity, Feasts celebrated by the *Athenians*, in Honour of *Apollo*, whom they surnamed *Delius*.

The principal Ceremony in this Feast, was an Embassy, or rather a Pilgrimage to *Apollo* of *Delos*, perform'd every five Year, by a certain Number of Citizens deputed for that Purpose, and call'd *Deliastæ*, Δηλιάδαι, or *Theoræ*, Θεωραὶ, *q. d.* the Seers; and the first Person of the Embassy, or Deputation, *Architheorus*, Ἀρχιθέωρος. To him were added four more of the Family of the *Ceryci* Priests, descended from *Mercury*, who resided all the Year at *Delos*, to assist in the Temple. The whole Deputation set out on five Vessels, carrying with them every Thing necessary for the Feast, and the Sacrifices.

The Vessel that carried the *Deliasts*, or *Theores*, was call'd Δηλὰς, *Delias*; the four others were the *Parale*, *Antigonid*, *Ptolomaid*, and *Ammonid*. Tho' this is a Circumstance there is some Dispute about.

The *Deliasts*, who went a-board, were crown'd with Laurel. At their Arrival, they immediately offer'd a Sacrifice to *Apollo*: And after the Sacrifice, a Number of young Maids danced round the Altar, a Dance call'd in *Greek* Γέρανον; wherein, by their various Motions, and Directions, they represented the Turnings and Windings of a Labyrinth. When the *Deliasts* returned to *Athens*, the People went out to meet them, and received them with all the Joy and Acclamation imaginable. They never laid a-side their Crown till their Commission was fully completed; and then they consecrated it to some God in his Temple.

The whole Time of their going and returning, with all the Ceremonies thereof, was call'd the *Delia*; during which Time no Criminal might be executed; which was a peculiar Privilege of this Feast, not allowed to any other, not even those of *Jupiter*. Thus, *Plutarch* observes, it was a Day consecrated to *Jupiter* when *Phocian* was made to take the Poison he was condemn'd to; whereas they waited thirty Days to give it to *Socrates*, by Reason of the *Delia*.

According to *Thucidides*, the *Delia* were first instituted in the 6th Year of the *Peloponesian* War, after the *Athenians* had expiated the Isle of *Delos*, removed all the Tombs out of it, and ordain'd, that no body should either be born, or die in it; but that all their sick People should be removed into a little Island, call'd *Rhenia*. Tho' the *Ionians*, and the neighbouring Islanders of *Ionia*, had long before that Time held a Sort of *Delia*, that is, Feasts, and Games, like those the *Athenians* celebrated afterwards.

DELIAC, or *Deliacus*, among the Ancients, was a Poulterer, or a Merchant who sold Fowls, fatted Capons, *&c.*

The Traders in this Way were call'd *Deliaci*, by reason it was the People of the Isle of *Delos* who first bethought themselves thereof. They also sold Eggs; as appears from *Cicero* in his Academic Questions, Lib. IV. *Pliny* Lib. X. C. 30. and *Columella*, Lib. VIII. C. 8. likewise mention the *Deliaci*.

DELIACAL *Problem*, *Problema Deliacum*, a famous Problem among the Ancients, about the Duplication of the Cube. See DUPLICATION.

DELIBERATIVE, is applied to that Kind of Rhetoric employ'd in proving a Thing; or convincing an Assembly thereof; in order to oblige them to put it in Execution. See RHETORIC.

The *Deliverative* Kind was much in Vogue among the *Greeks* and *Romans*, when the Orators harangued the People. To have *deliberative Voice* in an Assembly, is when a Person has a Right to give his Advice, and his Vote therein. In Councils, the Bishops have *deliberative Voices*; Those beneath them have only consultative Voices.

DELINEATING. See DESIGNING.

DELINQUENT, a Person who has committed some Fault. It is the Business of a Magistrate to be severe in punishing *Delinquents*.

DELIQUIUM, in Medicine, or *Deliquium Animi*, a swooning, or fainting away; call'd also SYNCOPE, LIPOTHYMIA, LIPOPSYCHIA, ECTHLIPSIS, and ASPHYXEA, which see.

DELIQUIUM, in Chymistry, is a Dissolution, or melting of a Salt, or *Calx*, by suspending it in a moist Cellar. Thus Salt of *Tartar*, or any fix'd *Alcali*, in a Cellar, or other cool moist Place, and an open Vessel, resolves, or runs into a Kind of Water, call'd by the Chymists, Oil of Tartar *per Deliquium*.

DELIQUIUM, is also used in some Authors for a Distillation by Force of Fire. See DISTILLATION.

DELIRIUM, *Doating*, in Medicine, a Symptom, frequently befalling in Fevers, caused by internal Inflammations, Wounds, *&c.* whereby the Mind is disorder'd to a Degree of Folly, or Phrenzy.

*Deliriums* also frequently arise from immoderate Losses of Blood, whereby the Brain is too much weaken'd; from

from the Stings of venomous Beasts; from the Seed, or Menses retain'd in the Womb; from the Rotting of a gangreen'd Member, &c.

A Disorder in the Diaphragm commonly produces a *Delirium*.

Some derive the Word from *De* and *Lira*, which among the Ancients signified, Furrows drawn in right Lines; Whence, *delirare*, *a recto aberrare*.

There are various Species and Degrees of *Deliriums*. In some, the Patient is fierce, and outrageous; In others, more mild, and easy, offering no Violence to any body, but only indulging idle, ridiculous Discourse; Some laugh and sing; others cry, and are sullen, &c. See MELANCHOLY, and MANIA.

DELIVERY, *Parturition*, or Birth, in Medicine, the bringing forth of a perfect *Fœtus*, or Child out of its Mother's Womb, whether it be living, or dead. See FŒTUS, BIRTH, &c.

To a *Natural Delivery*, according to the Physicians, are required three Conditions: First, That both the Mother and the Child strive alike, the one to *deliver*, and the other to be *deliver'd*: The second, That it come into the World head-fore-most, which is its natural Posture: And the third, That it be quick, and easy, without Accidents.

When the Child presents its Feet foremost, or comes a-cross, or double, 'tis no natural *Delivery*; And the *Latins* call such Children *Agrippæ*, q.d. *Ægre Parti*.

A *Legitimate Delivery*, is that which happens at the just Term, *i. e.* in the 10th Lunar Month. And an *Illegitimate*, that which comes either sooner, or later, as in the 8th Month.

Women are *deliver'd* at 7, 8, 9, 10, and 11 Months, and not later. Tho' there are some Physicians, who hold, that a *Delivery* may be *legitimate* in the 14th Month.

It has been observ'd, that *Deliveries* are more happy in the 7th Month, than in the 8th, *i.e.* that the Child is easier saved, and more frequently lives, when it comes in the 7th, than when in the 8th Month.

Monsr. *Peyssonel*, a Physician of *Lyons*, has a *Latin* Treatise expressly on the Term of *Delivery*; wherein he undertakes to reconcile all the apparent Contradictions of *Hippocrates*, with Respect thereto. He holds, that the shortest Term of a *legitimate* Birth, according to *Hippocrates*, is 182 Days, or six compleat Months, and the longest 280 Days, or nine Months and 10 Days. And that Children, who come earlier, or later, than those Terms, do not live, or are not *legitimate*.

*Bartholine* has composed a Book, *de insolitis partus Viis*, on the extraordinary Passages of the *Fœtus*; where he gives divers Instances of very extraordinary *Deliveries*. There have some come out by the Mouth; and others by the *Anus*. See *Salmuth. Obs.* 94. *Cent.* 3. In the Year 1686, at *Leckerkerck*, 8 or 10 Leagues from the *Hague*, the Wife of one *Christian Claes*, was deliver'd of 5 Children. The first was a Boy, who liv'd 2 Months; 17 Hours afterwards, came a second Son, which was dead; 24 Hours after a third Son was born, who liv'd about two Hours. In 24 Hours more she had a 4th, dead. Lastly, she died in bringing forth the 5th; which died in the Birth.

DELIVERY, in Law. See REPLEGIARE.

DELPHINUS, the *Dolphin*, in Astronomy, a Constellation of the Northern Hemisphere. See CONSTELLATION.

The Number of Stars in this Constellation, according to *Ptolomy*, are 10; according to *Tycho* 10; and according to Mr. *Flamsteed* 18.

The Longitudes, Latitudes, Magnitudes, &c. whereof are as follows.

*Stars in the Constellation* DELPHINUS.

| *Names and Situations of the Stars.* | Sign. | Longit. ° ′ ″ | Latitude. North. ° ′ ″ | Magnit. |
|---|---|---|---|---|
| | ♒ | 8 49 50 | 28 54 38 | 6 |

DELTOIDES, in Anatomy, a triangular Muscle, thus call'd from the Greek *Delta* Δ, and εἶδος, *Forma*. See MUSCLE.

It arises exactly opposite to the *Trapezius*, from one third Part of the *Clavicula*, from the *Acromium*, and Spine of the *Scapula*, and is inserted tendinous into the Middle of the *Os Humeri*, which Bone it lifts up directly; and it assists with the *supra Spinatus*, and *Coracobrachialis*, in all the Actions of the *Humerus*, except the Depression; it being convenient, that the Arm should be raised, and sustained, in order to its moving on any Side.

DELUGE, *Cataclysmus*, *Diluvium*, in Natural History, a Flood, or Inundation of Water, covering the Earth either in whole, or in Part. See INUNDATION.

We meet with divers of these *Deluges* in ancient History, both sacred and profane. That which happen'd in *Greece*, in the Time of *Deucalion*, call'd the *Diluvium Deucalidoneum*, is famous. This *Deluge* only overflowed *Thessaly*; Its Date is fix'd to the Year before Christ 1529; being the third Year before the *Israelites* coming out of *Egypt*, according to the Computation of *Petavius*, *Rat. Temp.* P. I. L. I. C. 7. P. II. C. 9.

The *Deluge* of *Ogyges* happen'd near 300 Years before that of *Deucalion*, 1020 Years before the first *Olympiad*, and 1796 before Jesus Christ, according to the same Author, *Rat. Temp.* P. I. L. I. C. 4. P. II. L. II. C. 5. This only ravaged *Attica*. These two are frequently mention'd in ancient *Greek* Authors, under the Denomination of *Cataclysmus prior*, and *posterior*.

Of the like Kind were those Inundations in the *Netherlands*, which in 1277 overwhelmed, and cover'd with Sea all that Part, now call'd the *Gulph Dollart* in the united *Netherlands*; and in 1421, all that Part between *Brabant* and *Holland*.

But the most memorable *Deluge* is that which we particularly, and by way of Eminence, call the *Deluge*, or the *Universal Deluge*, or *Noah*'s *Flood*; being a general Inundation sent by God, to punish the Corruption of the then World, by destroying every living Thing, (*Noah*, and his Family, and what was shut up with him in the Ark, only excepted) from off the Face of the Earth.

This *Flood* makes one of the most considerable Events in all History; and one of the greatest Epocha's in Chronology. Its History is given us by *Moses*, *Gen.* C. VI. and VII. Its Time is fix'd by the best Chronologers to the Year from the Creation 1656, answering to the Year before Christ 2293. From this *Flood*, the State of the World is divided into *Diluvian*, and *Antediluvian*.

The *Deluge* has been, and remains a mighty Subject of Inquiry, and Dispute among the Naturalists, Criticks, &c. The Points chiefly controverted, may be reduced to three: First, Its Extent, *viz.* whether *General*, or *Partial*. Secondly, Its *natural Cause*. And thirdly, Its *Effects*.

I. The immense Quantity of Water requisite to furnish an *Universal Deluge*, has occasion'd several Authors to suspect it only *Partial*. An *Universal Deluge*, they think, had been unnecessary, considering the End for which it was brought, *viz.* to extirpate the wicked Inhabitants. The World was then but new, and the People not very many; the Holy Scriptures only making 8 Generations from *Adam* to *Noah*. 'Twas but a small Part of the Earth that could be yet inhabited: The Country about the *Euphrates*, which is supposed to have been the Scene of the first Antediluvian Inhabitants, was sufficient to bear them all. Now, Providence, say they, which ever acts wisely, and frugally, would never have disproportion'd the Means to the End so far as to overflow the whole Globe, only to drown a little Corner of it. They add, that, in the Scripture Language, the *whole Earth*, expresses no more than *all the Inhabitants*. And on this Principle advance, that an Overflowing of the *Euphrates*, and *Tigris*, with a vehement Rain, &c. might answer the *Phænomena* of the *Deluge*.

But the *Deluge* was *universal*. God declared to *Noah*, *Gen.* VI. 17. that he was resolved to destroy every Thing that had Breath under Heaven, or had Life on the Earth, by a Flood of Waters. Such was the Menace: See the Execution. The Waters, *Moses* assures us, cover'd the whole Earth, buried all the Mountains, and were no less than 15 Cubits above the highest of them: Every Thing perish'd therein, Birds, Beasts, Men, and all that had Life, excepting *Noah*, and those with him in the Ark, *Gen.* VII. 19. Can an *Universal Deluge* be more clearly express'd? If the *Deluge* had only been *Partial*, there had been no Necessity to spend 100 Years in the Building of an Ark, and shutting up all the Sorts of Animals therein, in order to re-stock the World; they had been easily, and readily brought from those Parts of the World not overflown, into those that had been. At

leaſt, all the Birds would never have been deſtroy'd; as *Moſes* ſays they were; ſo long as they had Wings to bear them to thoſe Parts where the *Flood* did not reach. If the Waters had only overflowed the Neighbourhood of the *Euphrates* and *Tigris*, they could not be fifteen Cubits above the higheſt Mountains; There was no Riſing to that Height, but they muſt ſpread themſelves, by the Laws of Gravity, over the reſt of the Earth: Unleſs, perhaps, they had been retain'd there by a Miracle; And in that Caſe, *Moſes*, no doubt, would have related the Miracle, as he did that of the Waters of the *Red-Sea*, and the River *Jordan*, which were ſuſtain'd in a Heap, to give Paſſage to the *Iſraelites*. *Exod.* XIV. 22. and *Joſ.* III. 16. Add, that in Regions far remote from the *Euphrates*, and *Tigris*, viz. in *Italy*, *France*, *Switzerland*, *Germany*, *England*, &c. there are frequently found in Places, many ſcores of Leagues from any Sea, and even in the Tops of high Mountains, whole Trees ſunk deep under Ground, as alſo Teeth, and Bones of Animals, Fiſhes entire, Sea-Shells, Ears of Corn, &c. petrified; Which, the beſt Naturaliſts are agreed, could never have come there but by the *Deluge*.

II. The *Deluge* allowed *Univerſal*, the Philoſophers are ſollicitous to find Water to effect it.

*Moſes* brings it from two Funds: *The Fountains of the great Deep were broken up; and the Windows of Heaven were open'd.*

Dr. *Burnet*, in his *Telluris Theoria Sacra*, ſhews, that all the Waters in the Ocean were not near enough to cover the Earth 15 Cubits above the Tops of the higheſt Mountains. According to his Computation, no leſs than 8 Oceans were required. Now, ſuppoſing the Sea, therefore, drain'd quite dry, and all the Clouds of the Atmoſphere diſſolv'd into Rain, we ſhould ſtill want much the greateſt Part of the Water of a *Deluge*.

To get clear of this Embarraſs, many of our beſt Naturaliſts, as *Steno*, *Burnet*, *Woodward*, *Scheuchzer*, &c. adopt *des Cartes*'s Syſtem of the Formation of the Earth. That Philoſopher will have the primitive World to have been perfectly round and equal, without Mountains, or Vales; And accounts for its Formation on Mechanical Principles, by ſuppoſing it at firſt in the Condition of a thick turbid Fluid, replete with divers Heterogeneous Matters, which ſubſiding by ſlow Degrees, form'd themſelves into different concentric *Strata*, or Beds, by the Laws of Gravity: And thus, at length, left a dry, ſolid Earth.

Dr. *Burnet* improves on this Theory: He ſuppoſes the primitive Earth to have been no more than an Orbicular Cruſt, inveſting the Face of the Abyſs, or Deep, which grew chinky, clave, burſt, and fell down into the Water, and ſo drown'd its Inhabitants.

The ſame Theoriſt adds, That by this Cataſtrophe, the Globe of the Earth was not only ſhook, and broke in a thouſand Places, but that the Violence of the Shock it then underwent ſhifted its Situation, ſo that the Earth, which before was placed directly under the Zodiac, became thenceforth oblique to the ſame. Whence aroſe the Difference of Seaſons, which the Antediluvian Earth was not expoſed to.

But how all this conſiſts with the ſacred Text above cited, which expreſsly mentions Mountains as the Standard of the Height of the Water; Or, with that other Paſſage, *Gen.* VIII. 22. where God, promiſing not to bring any more *Deluges*, but that every Thing ſhould be reſtor'd on its ancient footing, ſays, that *Seed-Time and Harveſt, and Cold and Heat, and Summer and Winter, and Day and Night ſhall ceaſe no more*; we do not ſee.

Other Authors, ſuppoſing a ſufficient Fund of Water in the Abyſs, or Sea, are only concern'd for an Expedient to bring it forth; Accordingly, ſome have Recourſe to a Shifting of the Earth's Centre, which, drawing after it the Water out of its Channel, overwhelm'd the ſeveral Parts of the Earth ſucceſſively.

The very learned Mr. *Whiſton*, in his *New Theory of the Earth*, has a very ingenious *Hypotheſis*, perfectly new. He ſhews from ſeveral remarkable Co-incidences, that a Comet deſcending in the Plane of the Ecliptic towards its *Perihelion*, paſs'd juſt before the Earth on the firſt Day of the *Deluge*; The Conſequences whereof would be, Firſt, That this Comet, when it came below the Moon, would raiſe a prodigious, vaſt, and ſtrong Tide, both in the ſmall Seas, which, according to his *Hypotheſis*, were in the Antidiluvian Earth, for he allows no great Ocean there, as in ours; and alſo in the Abyſs, which was under the upper Cruſt of the Earth. And this Tide would riſe, and increaſe all the Time of the Approach of the Comet towards the Earth; and would be at its greateſt Height when the Comet was at its leaſt Diſtance from it. By the Force of which Tide, as alſo by the Attraction of the Comet, he judges, that the Abyſs muſt put on an Eliptic Figure, whoſe Surface being conſiderably larger than the former Spherical one; the outward Cruſt of the Earth, incumbent on the Abyſs, muſt accommodate it ſelf to the Figure, which it could not do while it held ſolid, and conjoyned together. He concludes, therefore, that it muſt of Neceſſity be extended, and at laſt broke by the Violence of the ſaid Tides, and Attraction; out of which, the included Water iſſuing, was a great Means of the *Deluge*: This anſwering to what *Moſes* ſpeaks of the *Fountains of the great Deep being broke up.*

Again, the ſame Comet, he ſhews, in its Deſcent towards the Sun, paſſed ſo cloſe by the Body of the Earth, as to involve it in its Atmoſphere, and Tail, for a conſiderable Time; and of Conſequence, left a vaſt Quantity of its Vapours, both expanded and condenſed on its Surface; a great Part of which being afterwards rarified by the ſolar Heat, would be drawn up again into the Atmoſphere, and afterwards return again in violent Rains; And this he takes to be what *Moſes* intimates *by the Windows of Heaven being open'd*; and particularly by the *fourty Days Rain.* For as to the following Rain, which with this made the whole Time of Raining 150 Days; Mr. *Whiſton* attributes it to the Earth coming a ſecond Time within the Atmoſphere of the Comet, as the Comet was on its Return from the Sun. Laſtly, to remove this vaſt Orb of Waters again, he ſuppoſes a mighty Wind to have aroſe, which dried up ſome, and forced the reſt into the Abyſs again through the Clefts by which it came up: Only a good Quantity remain'd in the *Alveus* of the great Ocean, now firſt made, and in leſſer Seas, Lakes, &c.

To the Credit of this Theory, it muſt be obſerved, that it was at firſt only propoſed Hypothetically: That is, the Author only ſuppoſed ſuch a Comet, merely, as it would account well, and Philoſophically for the *Phænomena* of the *Deluge*: without any Aſſurance, that there really was any Comet ſo near the Earth at that Time: And the *Hypotheſis* pleas'd even under ſuch Circumſtances: But, upon further Conſideration, he has ſince proved, that there actually was a Comet near the Earth at that Time; *viz.* the ſame great Comet, which appear'd again in 1688. The Author no longer, therefore, looks upon it as an *Hypotheſis*, but has republiſh'd it in a particular Tract, entituled, *The Cauſe of the Deluge demonſtrated.*

III. But the great Difficulty is yet behind. The orderly *Strata*, or Layers of the Earth, with the *Exuviæ*, or Remains of Fiſhes, as their Teeth, Bones, Shells, &c. both Marine, and Fluviatile, found in the Bodies, even of the moſt ſolid *Strata*, as thoſe of Flints, Marbles, &c. are not yet diſpatch'd. Thoſe who adhere to *Des Cartes*'s Syſtem, as *Steno*, &c. take the finding of the Parts of Terreſtrial, and Aquatic Animals, Branches of Trees, Leaves, &c. in the Beds, or *Strata* of Stone, to be a direct Proof of the primitive Fluidity of the Earth. But then they are oblig'd to have Recourſe to a ſecond Formation of *Strata*, much later than the firſt; by Reaſon at the Time of the firſt there was neither Plant nor Animal. *Steno*, therefore, holds for ſecond Formations, occaſion'd at different Times by extraordinary Inundations, Earth-quakes, Volcano's, &c. But *Burnet*, *Woodward*, *Scheuchzer*, &c. chuſe rather to attribute a ſecond general Formation to the *Deluge*; without Excluding, however, the particular ones of *Steno*. But the great Objection againſt this Syſtem of Fluidity, is Mountains; For the whole Globe being liquid, whence ſhould ſuch Inequalities ariſe? Mr. *Scheuchzer*, rather than part with a Syſtem, which looks ſo promiſing, gives into the Opinion of thoſe, who hold, that, after the *Deluge*, God, to remit the Waters into their ſubterranean Reſervoirs, broke, and diſplaced, with his own Almighty Hand, a great Number of *Strata*, that were before horizontal, and raiſed them above the Surface of the Earth; whence it is, that the *Strata* in Mountains, tho' concentrical, are never horizontal. See MOUNTAIN, &c.

Dr. *Woodward*, taking the ſeveral *Strata* for the Sediments of a *Deluge*; and conſidering the Circumſtances of thoſe Fiſhes, Shells, and other *Exuviæ*, draws ſeveral Inferences, which very much illuſtrate the Effects of the *Deluge*. As firſt, That theſe Marine Bodies, and other Spoils of freſh Water Fiſhes, were born forth of the Sea, by the *univerſal Deluge*; and on Return of the Water back again, were left behind at Land. Secondly, That while the Flood cover'd the Globe, all the ſolid Matters, as Stones, Metals, Minerals, and Foſſils, were totally diſſolved, and the Coheſion of their Corpuſcles deſtroyed; and that theſe Corpuſcles, with thoſe of the leſs ſolid Bodies, as Earth, Fleſh of Animals, and Vegetables, were ſuſtain'd promiſcuouſly in the Water, and made one common Maſs. Thirdly, That all the Maſs thus ſuſtain'd, was at length precipitated to the Bottom; and that, according to the Laws of Gravity, the heavieſt Settling firſt,

firſt, and the reſt in order. And that the Matters thus ſubſiding, conſtituted the ſeveral *Strata* of Stone, Earth, Coal, *&c.* Fourthly, That theſe *Strata* were originally all parallel, even, and regular; and rendred the Surface of the Earth perfectly Spherical; and that the whole Maſs of Water lay upon them, and conſtituted a fluid Sphere encompaſſing the Globe. Fifthly, That after ſome Time, by the Force of an Agent ſeated within the Earth, theſe *Strata* were broken on all Sides the Globe, and their Situation varied; being elevated in ſome Places, and repreſs'd in others; whence Mountains, Valleys, Grotto's, *&c.* with the Channel of the Sea-Iſlands, *&c.* In one Word, the whole Terraqueous Globe was put, by this Diſruption, and Diſlocation of the *Strata*, into the Condition we now behold it in. Sixthly, That upon the Diſruption of the *Strata*, and the Depreſſion of ſome, and Elevation of other Parts, which happen'd towards the End of the *Deluge*; the Maſs of Water fell back again into the depreſs'd, and loweſt Parts of the Earth, into Lakes, and other Cavities, and the Channel of the Ocean; and through the Fiſſures, whereby this communicates with the Abyſs, which it fill'd till it came to an *Equilibrium* with the Ocean. *Nat. Hiſt. of Earth*, P. I. and II. See FOSSILE.

But of all the Syſtems yet advanced, there ſeems none better calculated to ſolve the *Phænomena* of thoſe petrified *Exuviæ*, than that of Mr. *de la Pryme*. The Antediluvian World, according to this ingenious Author, had an external Sea, as well as Land, with Mountains, Rivers, *&c.* and the *Deluge* was effected by breaking the ſubterraneous Caverns, and Pillars thereof, with dreadful Earthquakes, and cauſing the ſame to be for the moſt Part, if not wholly, abſorbed and ſwallowed up, and cover'd by the Seas that we now have. Laſtly, this Earth of ours aroſe out of the Bottom of the Antediluvian Sea, and in its Room; juſt as many Iſlands are ſwallowed up, and others thruſt up in their ſtead. From this Syſtem, which is very agreeable to Scripture, the great Difficulties that clog all the other Syſtems, are eaſily ſolved. It is no longer a Wonder, that Shells, and Shell-Fiſh, and the Bones of Fiſhes, and four-footed Creatures, with Fruits, *&c.* ſhould be found in Beds, and Quarries, in Mountains, and Valleys, and the very Bowels of the Earth: For here they bred in the Antediluvian Sea, thither they were elevated with the Hills and Mountains, in the Time of the *Deluge*; there they fell into, were abſorbed, and buried in Chaſms, and Holes, and Clefts, that would neceſſarily happen in the Extraſion of the Earth. *Lowth. Abridg. Philoſoph. Tranſact.* V. III. p. 428.

DEMAIN, or DEMEAN, or DEMEASN, or DEMESNE, in the Popular Senſe of the Word, is the Lord's Manour Place, with the Lands thereto belonging; which he, and his Anceſtors have from Time to Time kept in their own Manual Occupation. See MANOUR.

DEMAIN, or DEMESNE, in a Law-Senſe, otherwiſe written *Domain*, ſignifies, according to *Hottoman*, *Patrimonium Domini*, the Lord's Patrimony, call'd alſo by the Civilians, *Dominicum*; The ſame Author proves thoſe Lands to be *Demain*, which a Man holdeth originally of himſelf, and thoſe to be *Feodum*, which he holdeth of a ſuperior Lord.

In *England*, no common Perſon has any *Demain*, ſimply underſtood, for all depends either mediately, or immediately on the Crown; For when a Man in Pleading, would ſignify his Land to be his own, he ſaith, That he is, or was ſeiz'd thereof in his *Demain*, as of Fee; whereby he means, that, although his Land be to him, and his Heirs for ever, yet it is no true *Demain*, but depends upon a ſuperior Lord, and he holdeth by Service, or Rent, in lieu of Service, or by both Service and Rent.

The Word is ſometimes alſo taken more largely for Lands, and Tenements, held for Life, *&c.* and ſometimes more ſtrictly, for ſuch only as are generally held in Fee.

It is ſometimes again uſed for a Diſtinction between thoſe Lands that the Lord of a Manour has in his own Hands, or in the Hands of his Leſſee, demiſed upon a Rent, for Term of Years, or Life; and ſuch other Lands, pertaining to the ſaid Manour, which belongs to the Free, or Copy-holders. And the Reaſon why the Copy-hold is accounted *Demain*, is, that becauſe they, who are Tenants to it, are judged in Law to have no other Right, but at the Will of the Lord; ſo that it is reputed ſtill, after a Sort, to be in the Lord's Hands: And yet in common Speech that is ordinarily call'd *Demain*, that is, neither Fee, nor Copy.

DEMAIN, again, is us'd in a more ſpecial Signification, in Oppoſition to *Frank-Fee*: Thus, Thoſe Lands, which were in the Poſſeſſion of *Eduard the Confeſſor*, are call'd, *Ancient Demain*, and others are call'd, *Frank-Fee*; and the Tenants, which hold any of thoſe Lands, are call'd, *Tenants in ancient Demain*, and the others, *Tenants in Frank-Fee*, and alſo, *Tenants of the Common-Law*; the Reaſon is, becauſe *Tenants in Ancient Demain* cannot be ſued out of the Lord's Court.

DEMAND, in its Popular Senſe, is a calling for, or requiring one's due. But it has alſo a ſpecial Signification in Law, as contra-diſtinguiſh'd from *Plaint*: For all Civil Actions are purſued, either by *Demands*, or *Plaints*; according to which the Purſuer is call'd either *Demandant*, or *Plaintiff*; *viz.* in Real Actions, *Demandant*: and in Perſonal Actions, *Plaintiff*. Add, that where the Party purſuing is call'd *Demandant*, the Party purſued is call'd *Tenant*; and where *Plaintiff*, *Defendant*.

There are two Kinds of *Demands*, the one in *Deed*, *de Facto*, as in every Precipe; The other in *Law*, *de Jure*; ſuch is Entry in Land, Diſtreſs for Rent, *&c.*

If a Man releaſe another *from all Demands*, it is the beſt Releaſe the Releaſee can have, and ſhall redound moſt to his Advantage. A Releaſe of Facts is more large, than of Quarrels, or Actions; and a Releaſe of *Demands*, more large, and beneficial than either: By a Releaſe of all *Demands* to the Diſſeiſor, the Right of Entry into the Land, and all contain'd therein, is releaſed: And he that releaſeth all *Demands*, excludes himſelf from all Actions, Entries, and Seizures. But it is no Bar in a Writ of Error to releaſe an Outlawry.

DEMANDANT, *Petens*, is he who is Actor, or Plaintiff in a real Action; Thus call'd, becauſe he *demands* Lands, *&c.* See DEMAND.

DEMARCHUS, a Magiſtrate, or Chief of a People, that is, of a Region, or Diſtrict in the Country.

The *Athenians* divided their Country into certain Regions, or Diſtricts, which they call'd Δημοὶ, *Demi*, i. e. People; and eſtabliſh'd a Magiſtrate at the Head of each, under the Denomination of Δήμαρχος, *Demarchos*, of δῆμος, and ἀρχὴ.

DEMEMBREE, in Heraldry, is when an Animal is diſmember'd, *i. e.* the Limbs cut off its Body. See DISMEMBER'D.

DEMI, a Word of the ſame Uſe and Effect in the *French* Language, with *Semi*, in the *Latin* and *Engliſh*; being form'd from *dimidium*, and uſed in Compoſition with other Words, to ſignifie *half*.

In Words borrowed from the *Latins*, we uſe *Semi*, and in thoſe from the *French*, we retain their *Demi*. See SEMI.

DEMI, or DEMY, in Heraldry, ſignifies the *half* of any Thing; as, a *Demy-Lion*, &c. *Colombiere* has what he calls *Croiz & demy*, a Croſs and an half; being a Shaft croſs'd in the upper Part like the *Calvary* Croſs, and having but one Arm at the lower Part. See CROSS.

DEMI-*Air*, or *Demi-Volt*, in Horſemanſhip, is one of the ſeven artificial Motions of an Horſe, being an Air, in which its Fore-parts are more raiſed than in *Terra a Terra*, but the Motion of the Horſes Legs is more quick in the latter, than in the *Demi-Volt*.

DEMI-*Baſtion*, is a Kind of Fortification, that has only one Face, and one Flank. See BASTION.

DEMI-*Canon*, a Piece of Ordnance, uſually about 6 Inches bore, and 5400 Pound Weight; 10 or 11 Foot long, and carrying a Shot of 30 Pound Weight. See CANON, and ORDNANCE.

It carries Point blank 150 Paces; its Charge of Powder is 14 Pound Weight.

There are alſo two Sizes of *Demi-Canon* above this, which are ſomething larger, as the ordinary *Demi-Canon*, which is 6 Inches $\frac{1}{6}$ bore, 12 Foot long, weighs 5600 Pound; its Charge of Powder is 17 Pound 8 Ounces, carries a Shot 6 Inches and a half Diameter, and whoſe Weight is 32 Pound, and this Piece ſhoots blank 162 Paces.

*Demi-Canon* of the largeſt Size, is 6 Inches $\frac{6}{8}$ bore, 12 Foot long, of 6000 Pound Weight; its Charge is 18 Pound of Powder, and it carries 180 Paces.

DEMI-*Culvering*, is a Piece of Ordnance, commonly $4\frac{1}{2}$ Inches bore, 10 Foot long, of 2700 Pound Weight; its Charge is 7 Pound 4 Ounces of Powder; and it carries a Shot of 10 Pound, 11 Ounces; and ſhoots Point blank 175 Paces: *Demi-Culvering* of the leaſt Size, is $4\frac{1}{4}$ Inches bore, 10 Foot long, of 2000 Pound Weight; it carries a Ball of 4 Inches Diameter, its Charge is 6 Pound 4 Ounces of Powder, and its level Range is 174 Paces. *Demi-Culvering* of the elder Sort, is 4 Inches $\frac{5}{8}$ bore, 10 Foot long, its Charge of Powder is 8 Pound, and 8 Ounces, the Ball is $4\frac{1}{2}$ Inches Diameter, weighs 12 Pound 11 Ounces, and the Point blank ſhoots 178 Paces. See ORDNANCE, and CULVERING.

DEMI-*God*, &c. See SEMI-*God*.

DEMI-*Gorge*, in Fortification, is half the Gorge, or Entrance into the Baſtion; not taken directly from Angle to Angle, where the Baſtion joins to the Courtine, but from the Angle of the Flank, to the Centre of the Baſtion, or

or the Angle the two Courtins would make, were they thus protracted to meet in the Baſtion. See GORGE.

DEMI-*Lune*, *Half-Moon*, in Fortification, an Outwork, as EFGHK (*Tab. Fortific. Fig.*5.) conſiſting of Faces, and Flanks; frequently built before the Angle of a Baſtion, and ſometimes alſo before the Courtine, tho' now much diſuſed. See OUTWORK.

DEMI-*Quaver*, is a Note in Muſick; two of which are equal to the Quaver. See QUAVER, and NOTE.

DEMISE, in Law, is applied to an Eſtate, either in Fee-ſimple, Fee-tail, or for Term of Life, and ſo it is commonly taken in many Writs: The King's Death is in Law termed, *The Demiſe of the King*.

DEMOCRACY, a Form of Government, wherein the Soveraignty, or ſupreme Authority, is lodged in the People, who exerciſe the ſame by Perſons of their own Order, deputed for that Purpoſe. This is the moſt ancient Form of Government.

The moſt flouriſhing *Democracies* were thoſe of *Rome* and *Athens*. The modern Republicks, as *Venice*, and the *United Provinces*, are rather *Ariſtocracies* than *Democracies*. The Government of *Baſil*, however, is a *Democracy*; ſo are ſome of the free Cities in *Germany*.

The Word is form'd of the *Greek* δημος, *People*, and κρατεῖν, *command*.

DEMON, or DÆMON, a Name the Ancients gave to certain Spirits, or *Genii*, which appeared to Men, either to do them Service, or to hurt them. See GENIUS.

The firſt Notion of *Demons* was brought from *Chaldæa*; Whence it ſpread it ſelf among the *Perſians*, *Egyptians*, and *Greeks*. *Pythagoras* and *Thales* were the firſt, who introduced *Demons* into *Greece*. *Plato* fell in with the Notion, and explain'd it more diſtinctly, and fully, than any of the former Philoſophers had done. By *Demons*, he underſtood Spirits inferior to Gods, and yet ſuperior to Men; which inhabiting the middle Region of the Air, kept up the Communication between Gods and Men, carrying the Offerings and Prayers of Men to the Gods, and bringing the Will of the Gods to Men. But he allowed of none but good, and beneficent Ones. Tho' his Diſciples, afterwards, finding themſelves unable to give the Reaſon of Evil, adopted another Sort of *Demons*, who were Enemies to Men.

There is nothing more common in the Heathen Theology, than theſe good, and evil *Genii*. And the ſame ſuperſtitious Notion got footing among the *Iſraelites*, by their Commerce with the *Chaldæans*. But by *Demons*, they did not mean the Devil, or a wicked Spirit: They never took the Word *Demon* in that Senſe, nor was it ever uſed in ſuch a Signification, but by the Evangeliſts, and ſome modern Jews. The Word is *Greek*, δαίμων.

*Gale* endeavours to ſhew, that the Origin, and Inſtitution of *Demons*, was an Imitation of the *Meſſiah*. The *Phœnicians* call'd them בעלים *Baalim*. For they had one ſupreme Being, whom they call'd *Baal* and *Moloch*, and various inferior Deities, call'd *Baalim*, whereof we find frequent mention in the Old Teſtament. The firſt *Demon* of the *Egyptians* was *Mercury*, or *Theut*. The ſame Author finds ſome Reſemblance between the ſeveral Offices aſcribed to the *Demons*, and thoſe of the *Meſſiah*.

DEMONIAC, or DÆMONIAC, is applied to a Perſon poſſeſs'd with a Spirit, or *Demon*.

In the *Romiſh* Church, there is a particular Office for the Exorciſm of *Demoniacs*. See EXORCISM.

DEMONIACS, are alſo a Party, or Branch of the *Anabaptiſts*, whoſe diſtinguiſhing Tenet it is, that the Devils ſhall be ſaved at the End of the World.

DEMONSTRABLE, a Term chiefly uſed in the Schools, ſignifying ſomewhat that may be clearly and evidently proved. It is *demonſtrable*, that the Side of a Square is incommenſurable with the Diagonal. The Problem of the Motion, or Reſt of the Earth, is not *demonſtrable*, by reaſon the ſame Appearances reſult from either Suppoſition.

DEMONSTRATION, in Philoſophy, a Syllogiſm in Form, containing a clear and invincible Proof of a Propoſition: Or, a convincing Argument, the two firſt Propoſitions whereof are certain, clear, and evident; whence of Neceſſity ariſes an infallible Concluſion. See SYLLOGISM.

A *Demonſtration* uſually conſiſts of 3 Parts: The *Explication*, *Preparation*, and *Concluſion*. The *Explication* is the laying down the Things ſuppoſed to be given, or granted; from which the Demonſtration is to be made. The *Preparation* is a Suppoſition to be made, according to the Nature of the Demonſtration intended. The *Concluſion* is a Propoſition that concludes the Thing to be *demonſtrated*, fully perſwading, and convincing the Mind. See CONCLUSION.

The Method of *demonſtrating* Things in Mathematicks, is the ſame with that of drawing Concluſions from Principles in Logicks. In Effect, the *Demonſtrations* of Mathematicians, are no other than a *Series* of *Enthymemes*; ſo that every Thing is concluded by Force of Syllogiſm, only omitting the Premiſſes, which either occur of their own Accord, or are recollected by means of Quotations. To have the *Demonſtration* perfect, the Premiſſes of the Syllogiſms ſhould be proved by new Syllogiſms, till at length you arrive at a Syllogiſm wherein the Premiſſes are either Definitions, or Identic Propoſitions.

Indeed it might be demonſtrated, that there cannot be a genuine *Demonſtration*, i. e. ſuch a one as ſhall give full Conviction, unleſs the Thoughts be directed therein according to the Rules of Syllogiſm. *Clavius*, 'tis known to every body, reſolved the *Demonſtration* of the firſt Propoſition of *Euclid* into Syllogiſm: *Herlinus*, and *Daſipodius*, demonſtrated the whole ſix firſt Books of *Euclid*, and *Heniſchius*, all Arithmetic, in the Syllogiſtic Form.

Yet People, and even Mathematicians, uſually imagined, that Mathematical *Demonſtrations* are concluded in a Manner far remote from the Laws of Syllogiſm; ſo far are they from allowing, that thoſe derive all their Force and Conviction from theſe. But we have Men of the firſt Rank on our Side the Queſtion. Mr. *Leibnitz*, for Inſtance, declares that *Demonſtration* to be firm and valid, which retains that Form preſcribed by Logic. And Dr. *Wallis* confeſſes, that what is propoſed to be proved in Mathematicks, is deduced by means of one, or more Syllogiſms. The great *Huygens* too obſerves, that Paralogiſms frequently happen in Mathematicks, through Want of obſerving the Syllogiſtic Form. See SYLLOGISM.

Problems conſiſt of three Parts: A *Propoſition*, *Reſolution*, and *Demonſtration*.

In the *Propoſition* is indicated the Thing to be done. See PROPOSITION.

In the *Reſolution*, the ſeveral Steps are orderly rehearſed, whereby the Thing propoſed is perform'd. See RESOLUTION.

Laſtly, in the *Demonſtration* it is ſhewed, that the Things injoyned by the *Reſolution* being done, that required in the Propoſition is effected. As often, therefore, as a Problem is to be demonſtrated, it is converted into a *Theorem*, the *Reſolution* being the *Hypotheſis*, and the *Propoſition* the *Theſis*: For the general Tenor of all Problems to be demonſtrated is this, that the Thing preſcrib'd in the *Reſolution* being perform'd, the Thing required is done. See PROBLEM.

The School-Men make two Kinds of *Demonſtration*: The one διοτι, or, *propter quod*; wherein an Effect is proved by the next Cauſe: As when it is prov'd, that the Moon is eclypſed, *by reaſon the Earth is then between the Sun and Moon*. The ſecond ὅτι, or, *quia*; wherein the Cauſe is proved from a remote Effect: As when it is proved, *that Fire is hot*, becauſe *it burns*; Or, *that Plants don't breath*, becauſe *they are not Animals*.

*Affirmative* DEMONSTRATION, is that, which proceeding by affirmative and evident Propoſition, dependent on each other, ends in the Thing to be demonſtrated.

A *Negative* DEMONSTRATION, is that, whereby we ſhew a Thing to be ſuch from ſome Abſurdity that would follow if it were otherwiſe. This we alſo call a *Demonſtration ab impoſſibili*.

A *Geometrical* DEMONSTRATION, is that, framed of Reaſoning drawn from the Elements of *Euclid*.

A *Mechanical* DEMONSTRATION, is that, the Reaſonings whereof are drawn from the Rules of Mechanicks.

A DEMONSTRATION *A priori*, is that, whereby an Effect is proved from a Cauſe, either a next, or remote one; or a Concluſion proved by ſomething previous, whether it be a Cauſe, or only an Antecedent.

A DEMONSTRATION *A poſteriori*, is that, whereby either a Cauſe is proved from an Effect; or a Concluſion is proved by ſomething poſterior, whether it be an Effect, or only a Conſequent.

DEMONSTRATIVE, in Rhetoric, one of the *Genera*, or Kinds of Eloquence; being that uſed in the Compoſing of Panegyricks, Invectives, &c. See PANEGYRIC.

Rhetoric is divided into three Parts; Deliberative, *Demonſtrative*, and Judiciary. See RHETORIC.

DEMONSTRATIVE, in Grammar, is applied to Pronouns that ſerve to ſhew, point out, or indicate a Thing; As, *This here*, *That there*, *Thoſe yonder*, &c. See PRONOUN.

DEMURRAGE, in Traffick, is an Allowance to the Maſter of a Ship, by the Merchants, for ſtaying in a Port longer than the Time firſt appointed for his Departure.

DEMURRER, in Law, from the French *Demeurer*, to ſtay, or dwell, is a Kind of Pauſe, or Stop, put to the Proceeding of any Action, upon ſome difficult Point, which muſt be determin'd by the Court, 'ere any further Proceedings can be had therein.

In

In every Action, the Controverſy is either as to Fact, or to Law: The firſt, decided by the Jury; the ſecond, by the Judge. Now if any Thing turn up in the Cauſe ſo rare and difficult, that the Judge cannot pronounce upon it, a *Demurrer*, or Stop is made, and a Time taken, either for the Court to conſider, and agree of it among themſelves; or otherwiſe for the Judges, to meet in the Exchequer-Chamber, there, after hearing Council on both Sides, to determine what is Law. This *Demurrer* is expreſs'd in our Records by *Moratur in Lege*. See MORATUR *in Lege*.

In Common Law, the Defendant ſometimes *demurreth* to the Plaintiff's Count, or Declaration; And ſometimes the Plaintiff *demurreth* to the Defendant's Plea, by averring, that it is not a ſufficient Plea in Law, *&c.*

In Chancery, the Defendant *demurreth* to the Plaintiff's Bill, averring it to be defective in ſuch and ſuch a Point; and demands the Judgment of the Court thereupon, whether he ſhall be compell'd to make any farther, or other Anſwer thereunto.

DENARIATUS *Terræ*, in our ancient Law-Books, as much Land as is worth a Penny by the Year. *Sibylla Bartholot tenet unam Acram, & 5 Denariatos Terræ in eodem Tenemento.* Du Cange.

DENARIUS, in Antiquity, the *Roman Penny*; a Silver Coin, equivalent to, from ſix to ſeven Pence Half-Penny Sterling. See COIN, MONEY, PENNY, *&c.*

The *Romans* having for a long Time uſed Braſs Money, which they call *As*, quaſi *Æs*; or *Libra* and *Pondo*, becauſe it was a Pound Weight, began in the Year of *Rome* 585 to coin Silver; and coin'd firſt the *Denarius*, which was mark'd with the Letter X, becauſe it was worth Ten *Aſſes*, and divided into two *Quinarii*, mark'd with V, which was ſubdivided into two *Seſtertia*, mark'd with theſe three Letters, IIS.

The firſt, or *Conſular Denarius*, was worth more than the after, or *Imperial*. The firſt weigh'd a juſt Drachm, or an 8th Part of an Ounce, and was worth about 7 Pence half Penny of our Money. The ſecond was only the 7th Part of an Ounce, and worth 6 Pence, or 6 Pence half Penny.

Mr. *Tillemont* obſerves, that the *Denarius* was held ſufficient to keep a Perſon handſomely for a Day; and upon the whole ſeems to intimate, that it was equal to 12 *French Sous*, or 11 *Engliſh* Pence. But this is to over-rate it. *Budæus* ſhews, that the *Denarius* current in our Saviour's Time, was only worth about 3 Pence half Penny Sterling. *Jeſus Chriſt* was ſold for thirty *Denarii*, which were afterwards ſpent in purchaſing a Field.

The Impreſſion on the firſt *Denarius* was on one Side a Figure of *Janus*; and on the other, the Veſſel that brought him to *Italy*. Afterwards, the Reverſe was a *Caſtor* and *Pollux*, and ſometimes a Victory, driving a Chariot with two or 4 Horſes; whence the *Denarii* were call'd *Bigati*, or *Quadrigati*, or *Ratiti*.

DENARIUS is alſo uſed in our Law-Books for an *Engliſh* Penny. See PENNY.

*Denarius Angliæ, qui nominatur* Sterlingus *rotundus, ſine Tonſura, ponderabit* 32 *Grana Frumenti in medio Spicæ*; *&* 20 Denarii *facient* Unciam; *&* 12 *Unciæ facient* Libram. Stat. Edu. I. de Menſuris. See MEASURE, POUND, *&c.*

DENARIUS *Dei*, *Earneſt Money*, call'd alſo *Argentum Dei*, and by the French *Deniers de Dieu*, and in ſome Parts of our Country, *Arles*, or *Earls*. *Ita quod neuter Mercatorum ab illo Contractu poſſe diſcedere, vel reſilire poſtquam* Denarius Dei *inter Perſonas contrahentes datus fuerit & receptus.* Charta Eduardi I.

DENATES, in Antiquity, Domeſtic Gods, call'd alſo *Penates*. See PENATES.

*Dionyſius Halicarnaſſæus*, Lib. I. ſpeaking of the *Dii Penates*, tells us, that the Hiſtorian *Timæus* has wrote, that the Figure, Statue, or Effigy of the *Denates*, or *Penates*, was nothing but a crooked Iron, or Copper Rod, and a *Trojan* Veſſel of Potters Ware: And that this was all *Æneas* brought from *Troy*. But, for himſelf, he aſſures us, he had ſeen a Temple at *Rome*, near the *Forum*, where thoſe Gods were repreſented ſitting, under the Form of two young Men, having each of them a Dart in his Hand: He adds, that the Inſcription was DENATES, for that the Ancients, before the Invention of the Letter P, uſed a D inſtead thereof. But *Dionyſius* might be miſtaken: For the Bottom of the P is frequently ſo very ſmall on Medals, that there is no ſenſible Difference between a P, and a D; which might be the Caſe in the Inſcription that Author mentions; For that the ancient Inhabitants of *Italy* had no P, is a Miſtake ſufficiently refuted by many proper Names ſtill remaining of the moſt early Ages, *e.gr. Capys, Capetus, Picus, Pallas.* Nor were the *Trojans* without the ſame, witneſs *Palinurus, Paris, Priamus*, &c.

DENCHEE, or DENCHED, or ENDENCHEE, in Heraldry, is applied to the Ordinaries in a Shield, when they are edg'd with Teeth, or indented.

They make this Difference between what is *denched*, and what is engrail'd, that in the former, the Points, or Teeth, are pretty large, and cut ſtraight, like the Teeth of a Saw; whereas in the latter, the Teeth are ſmall, and the Intervals hollow, and a little rounded. See ENGRAILED.

DENDRITES, in natural Hiſtory, a Sort of whitiſh, or aſh-colour'd Stones, whereon are ſeen Trees, Shrubs, and other ruſtic Figures, repreſented in Miniature in blackiſh, or yellowiſh Figures. See FIGURED *Stone*.

Some rank the *Dendrites* in the Claſs of Stone-Plants: But againſt this it is urged; Firſt, That the Branches of Trees, *&c.* painted in Miniature on the *Dendrites*, are never confounded together, nor ſhoot a-croſs each other, as thoſe of Stone-Plants uſually are. Secondly, That the Fire ſtrips the *Dendrites* of all its Figures, without deſtroying the Stone, and reducing it to Aſhes; which does not hold of any Stone-Plant. From hence it appears, that the Figures of the *Dendrites* are external, and the Effect of a Colour applied on the Stone not Artificially, but by Nature. Two poliſh'd Marbles being applied on each other with Oil between; upon parting them again, the Oil running into certain Tracks, its Impreſſion exhibits divers Figures like thoſe on the *Dendrites*; the Ramification always beginning on the Side the Marbles are begun to be ſeparated of. So that it appears, the Figures of the *Dendrites* are form'd by ſome bituminous Liquor inſinuating between the Beds, or *Strata* of the Stones; and accordingly, we actually find, that the *Dendrites* being expoſed to the Fire, yields a bituminous Smell. This ſame Liquor ouzes out of the Stone it ſelf, filtrating through its Pores, as, in all Probability, it is the Cold, and Preſſure of the upper Beds, that brings it forth.

In ſome *Dendrites*, the Figures penetrate quite through, in others they go but to the Middle, and in others not ſo deep.

DENDROPHORIA, in Antiquity, a Heathen Ceremony, conſiſting in the carrying of one or more Trees through a City, in certain Sacrifices, and in Honour of certain Deities.

The *Dendrophoria* was perform'd in the Sacrifices of *Bacchus*, *Cybele*, and the God *Sylvanus*. *Arnobius*, Lib. V. makes mention of that perform'd in the Sacrifices of the Mother of the Gods. It conſiſted in carrying a Pine in Proceſſion through the City; which Pine was afterwards planted in Memory of that, where under *Atys*, the Favourite of the Goddeſs, mutilated himſelf. The Branches of this Tree they crown'd, in Memory of *Cybele*'s doing the ſame; and they cover'd its Trunk with Wool, by reaſon the Goddeſs cover'd *Atys*'s Breaſt with the ſame.

The Perſons who perform'd the Office of Carrying the Tree, were call'd *Dendrophori*.

In the *Roman* Hiſtory we find mention made of a Company, or College of *Dendrophori*, who attended the Army: And the Criticks have been in great Pain to aſſign their Office. Some hold, that they hew'd, and form'd the Wood for the Tents: Others, that they provided the Wood neceſſary for the Military Works, Machines of War, *&c.* *Salmaſius* in his Notes on the Life of *Caracalla* by *Spartian*, owns this the general Opinion of all the Learned Men of his Time; but aſſures with his uſual Modeſty, that they were all miſtaken, and that the *Dendrophori* of the Army were the ſame with thoſe of the Sacrifices.

The Word is form'd of δένδρον, Tree, and φέρω, I bear.

DENEB, in Aſtronomy, a fix'd Star, call'd alſo *Cauda Lucida*, or the *Lion's Tail*; Its Longitude, Latitude, *&c.* ſee under LEO.

DENELAGE, or DANELAGE, the Law made by the *Danes* in *England*. See MERCHENLAGE.

DENIER, the *French* Penny; a ſmall Copper Coin, 12 whereof make a *Sol*, or *French* Shilling. See SOL, SHILLING, PENNY, COIN, *&c.*

The French *Denier* is about $\frac{1}{13}$th Part of the *Engliſh* Penny. It is ſubdivided into two *Mailles*, and the *Maille* into two *Oboles*.

Anciently, *Denier* was a general Name for all Sorts of Monies in *France*; as *Nummus* was for thoſe in *Rome*. Thus, a Piece of Gold Money, was call'd *Denier d'Or*; Silver Money, *Denier d'Argent*: After the ſame Manner as the *Romans* ſaid, *Nummus Aureus*, and *Nummus Argenteus*. There were two Kinds of *Deniers*, the one *Tournois*, the other *Pariſis*; whereof the latter was worth a fourth Part more than the former, and was call'd *Monnoye Royale*, or *Forte Monnoye*, and ſometimes *Denier d'Or*, and *Denier a Valeur d'Or*.

DENIZEN, in Law, (from the French *Donaiſon*, i. e. Donation) an Alien that is Enfranchiſed here in *England* by the King's Charter, and Donation; and thereby enabled, in many Reſpects, to do as the King's Native Subjects do, namely, to purchaſe, and poſſeſs Lands, to hold any Office, or Dignity, *&c.* Yet is *Denizenſhip* ſhort of *Naturalization* by Parliament. For a Stranger naturalized, may inherit Lands by Deſcent; which a *Denizen* cannot. Beſides that, in the Charter, whereby a Perſon is made a *Denizen*,

there is usually some Clause, or other, which abridges him of that full Benefit, which natural Subjects enjoy.

When a Man is thus Enfranchised, he is said to be, *Ad Fidem Regis Angliæ*, or, *under the King's Protection*; till such Time his Goods may be seiz'd to the King's Use.

DENOMINATION, that whereby one Thing takes a Name, from the Name of another, on Account of some Relation between the two: or, more strictly, it is a Name whereby something is call'd, in Consequence of some Form, or Property thereof. See NAME.

Hence, as the Form is of two Kinds, *viz. Internal*, and *External*; *Denomination* becomes two-fold.

*Internal* DENOMINATION, is that founded on the inner Form, or arising from the Intrinsic Form; thus *Peter* is denominated *Learned*, on Account of his Learning, which is something Intrinsic.

*External* DENOMINATION, is that founded, or arising from the external Form. Thus, a Wall is said to be *seen*, and *known* from the Vision, and Cognition employ'd upon it; and thus *Peter* is denominated, *honoured*, by reason of Honour, which is not in the Person honoured, but in him that honours.

DENOMINATOR, in Arithmetic, a Term only used in speaking of Fractions, or broken Numbers. See FRACTION.

The *Denominator of a Fraction* is the lower Number; or that below the Line; shewing into how many Parts the Integer is supposed to be divided by the Fraction. Thus in the Fraction $\frac{7}{12}$, *seven twelfths*, the Number 12 is the *Denominator*; and shews, that the Integer is here divided into 12 Parts. The *Denominator* always represents an Integer.

The Number above the Line 7, is call'd the *Numerator*. See NUMERATOR.

DENOMINATOR *of a Ratio*, is the Quotient arising from the Division of the greater Term by the less. Thus 6 is the *Denominator* of the Proportion 30: 5. because 5) 30 (6. The *Denominator* is what we otherwise call the *Exponent of the Ratio*. See EXPONENT.

DENSITY, that Property, or Habitude of Bodies, whereby they contain such a Quantity of Matter, under such a Bulk. Accordingly, a Body that contains more Matter than another, under the same Bulk, is said to be *denser* than the other. *Density* stands in Opposition to *Rarity*. See RARITY, and CONDENSATION.

Hence, since the Mass is proportional to the Gravity, a *denser* Body is specifically heavier than a *rarer*; and a specifically heavier is *denser* than a specifically lighter. See WEIGHT, and GRAVITY.

The *Densities*, and Bulks of Bodies, are the two great Points, whereon all Mechanicks, or Laws of Motion turn: 'tis an Axiom, that Bodies of the same *Density* contain equal Masses, under equal Bulks. If the Bulks of two Bodies be equal, their *Densities* are as their Masses: Consequently, the *Densities* of equal Bodies, are as their Gravities. If two Bodies have the same *Density*, their Masses are as their Bulks: And hence, the Gravities of Bodies of the same *Density*, are in the *Ratio* of their Bulks. The Masses of two Bodies are in a *Ratio* compounded of their *Densities*, and Bulks; consequently, their Gravities are in the same *Ratio*: And if their Masses, or Gravities be equal, their *Densities* are reciprocally as their Bulks. The *Densities* of any two Bodies are in a *Ratio* compounded of the direct *Ratio* of their Masses, and the reciprocal one of their Bulks.

The Peripateticks define *Density*, a secondary Quality, whereby a Body is full of it self; its Parts cohering without any Interstice. So that the Form of *Density* consists in the immediate Coherence of Parts. Hence *Porphyry* in his Predicaments defines a *dense* Body, that whose Parts are placed so near each other, that no other Body can come between them; as Gold. The efficient Cause of *Density* they usually attribute to cold: *Scaliger*, and some others, attribute it to Moisture. Many of the Moderns take the Smalness of the Parts of Bodies, to contribute much to their *Density*; as by this means the Pores are left the smaller. Tho' 'tis added, that the *Density* of Bodies does not only depend on the Smalness of the Pores, but also on their Fewness; Far are we from having any Body absolutely *dense*, in the Sense of the Ancients: Gold it self, the *densest*, and heaviest of all natural Bodies, Sir *Is. Newton* observes, does contain a great deal more Pore, or Vacuity, than Substance. See PORE.

When the Pressures of two Liquids are equal, the Quantities of Matter in Columns which have equal Bases, do not differ; wherefore the Bulks, that is, the Heights of the Columns are inversely as the *Densities*; whence may be deduced the Method of comparing them together: After this Manner: pour Mercury into a curb Tube A, so as to fill the lower Part of the Tube from B to C; (*Tab. Hydrostaticks Fig.* 1.) pour in Water in one Leg from B to E; in the other Leg pour in Oil of Turpentine, till both the Surfaces of the Mercury B C, be in the same Horizontal Line, and the Height of the Oil be CD: These Heights will be as 87 to 100, which is the inverse *Ratio*, that the *Density* of Water has to the *Density* of Oil of Turpentine; and therefore those *Densities* are to each other as 100 to 87. The Mercury is poured in, lest the Liquids should be mixed in the Bottom of the Tube.

The *Densities* of Liquids are also compared together by immerging a Solid into them; for if a Solid lighter than the Liquids to be compared together, be immersed successively into different Liquids, the immersed Parts will be inversely as the *Densities* of the Liquids; for, because the same Solid is made Use of, the Portions of the different Liquors, which in every Case would fill the Space taken up by the immersed Parts, are of the same Weight; therefore the Bulks of those Portions, that is the immersed Parts themselves are inversely as the *Densities*. See further under SOLIDS *immersed in Liquids*.

The DENSITY *of the Air*, is a Property that has much imploy'd the later Philosophers, since the Discovery of the Torricellian Experiment, and the Air-pump. See RAREFACTION, and CONDENSATION.

'Tis demonstrated, that in the same Vessel, or even in Vessels communicating with each other, at the same Distance from the Centre, the Air has every where the same *Density*. The *Density of the Air* always increases in Proportion to the Compression, or the compressing Powers. See PRESSURE.

And hence, the lower Air is always *denser* than the upper: Yet the *Density* of the lower Air is not proportional to the Weight of the Atmosphere, by reason of Heat and Cold, which make notable Alterations as to Rarity, and *Density*. If the Air be rendred *denser*, the Weight of Bodies therein is diminish'd; and if rarer, increased; by reason Bodies lose more in heavier than in lighter *Medium's*. See SPECIFIC GRAVITY.

And hence, if the *Density of the Air* be sensibly alter'd, Bodies equally heavy in a lighter Air, if their specific Gravities be considerably different, will have their *Equilibrium* taken away in a *denser* Air, and the specifically heavier will preponderate; which is the Foundation of the *Manoscope*, an Instrument for measuring the Alterations in the *Density* of the Air. See MANOSCOPE.

DENTAL, *Dentalis*, is applied to Letters, in the Pronunciation whereof the Teeth have a principal Share. See LETTER.

Grammarians, and especially the *Hebrew* ones, distinguish the Letters into *Dental*, *Labial*, *Guttural*, *Lingual*, *Palatal*, &c. See GUTTURAL, *&c.*

DENTALIS *Lapis*, or *Dentalium*, is a Kind of Shell, which the Apothecaries pulverize, and use in several Medicaments, as an excellent *Alcali*. The genuine *Dentalis*, described by Mr. *Tournefort*, is of a tubular, or Conical Form, about 3 Inches long; of a shining, greenish white; hollow; light, and divided lengthwise by Parallel Lines, running from Top to Bottom. It is about the Thickness of a Feather, and bears some Resemblance to a Dog's Tooth. 'Tis very scarce; and therefore in lieu of it, they usually substitute a Shell of divers Colours found among the Sand when the Sea is withdrawn; but not channel'd, or fluted like the *Dentalis*.

D. *Lister*, in the *Philosoph. Transact.* makes mention of two Species of *Dentalia*; the first commonly enough found about the Island of *Guernsey*, &c. being a long, slender, round Pipe, a little bending, and tapering, and hollow at both Ends; whence it is also call'd, *the Dog-like-tooth*: The other properly call'd *Entalium*, longer, and thicker than the former; and besides, streak'd with Ridges; whence the *Italian* Term *Intaglia*. See ENTALIUM.

DENTED, *Indented*, Tooth'd. See INDENTED.

DENTED *Verge*, among Botanists, is applied to such Leaves of Plants as are notched, or jagged about the Edge, or Brim; whereof some are *fine dented*; others *large*, or *deep dented*, i. e. cut into the Leaf. See LEAF.

DENTED *Wheel*, *Rota Dentata*. See WHEEL.

DENTES, in Anatomy. See TEETH.

DENTICLES, or DENTILS, in Architecture, an Ornament in Corniches, bearing some Resemblance to Teeth; particularly affected in the *Ionic*, and *Corinthian* Orders.

They are cut on a little square Member, properly call'd *Denticulus*; and the Notches, or Ornaments themselves, *Dentes*, from *Dens*; as having the Appearance of a Set of Teeth.

Anciently, *Dentils* were never used but in the *Ionic* Cornich: Yet we find them in the Remains of the Theatre of *Marcellus*; which is an Argument with some, that *Vitruvius* had not the Direction of that Building. *Vitruvius* prescribes the Breadth of each *Dentil*, or Tooth, to be half its Height; and the Indenture, or Interval between each two, he orders to be $\frac{2}{3}$ of the Breadth of the *Dentil*.

The same Author, *C.* 2. of his IVth Book, observes, that the *Greeks* never used *Dentils* underneath Modillions; by reason Modillions represent Forces; and *Dentils* represent Ends of Rafters, which can never be plac'd underneath Forces. See MODILLION.

The

The *Romans* were not ſo ſcrupulous as to this *Decorum*; excepting in the *Pantheon*, where there are no *Dentils* under the Modillions, neither in the *Portico*, nor in the Inſide of the Building. The *Italians* call them *Dentelli*, and *Denticoli*.

DENTIFORMIS *Proceſſus*, the ſame as *Pyrenoides*. See PYRENOIDES.

DENTIFRICE, in Medicine, Tooth-Powder; a Remedy to rub the Teeth withal, in order to cleanſe, or faſten them. See TOOTH.

There are *Dentifrices* of divers Kinds, and Forms: Some in Form of a Powder, compoſed of Corals, Pumice-Stone, Salt, Alumn, Egg-Shells, Lobſters, Harts-Horn, Cuttle-Bone, Tartar vitriolated, *&c.* Others in Form of an Electuary, or Opiate, conſiſting of the ſame Powders, mix'd up with Honey.

There are others, prepar'd with Roots boil'd with Alum, and dried in the Oven. Others in Form of a Liqnor, drawn by Diſtillation from drying Herbs, and aſtringent Medicines.

The *Dutch* hold Butter the beſt *Dentifrice*, to keep the Teeth white and ſound; And the *Spaniards*, Urine.

DENTITION, the Act of breeding, or cutting the Teeth. The Time of *Dentition*, is uſually from about 7 Months old, to 17. The *Inciſores* come firſt; then the *Maxillares*; and laſtly the *Canini*, or Eye-Teeth. See TEETH.

*Dentition*, *Hippocrates* obſerves, is uſually proceeded with an Itching of the Gums, Convulſions, Fevers, and Looſeneſs; eſpecially when the Canine-Teeth are cut.

The like Symptoms, Dr. *Liſter*, on this Paſſage of *Hippocrates*, obſerves, happen to Birds upon Moulting, or Caſting their Feathers, on which Occaſion they become mute, and ſullen. See MOULTING.

The Germen, or Seed of the Tooth, ſays *Dolæus*, is a ſlender, mucous Matter, like the White of an Egg, contain'd in the Cells, or *Alveoli* of the Jaw-bone, which grows harder and bigger every Day, till it be fit to break through the Gum. In this Rupture the poor Child is afflicted with terrible Symptoms, Inflammations of the Jaws, Gripes, Waking, Inquietude, Terrours, Dejections, Vomiting, Salivation, Epilepſy, Abſceſſes, and frequently Death.

There are two Terms, or Periods of *Dentition*; The one, when the Tooth makes its firſt Endeavour to get out of the Maxillary Bone, and wherein the outer, and upper Part of the Gum uſes to be incompaſſed with a whitiſh Circle. The other, when the Tooth, conſiderably enlarged in Bulk, renders the Gum tumid, and ſtrives with all its Force to break its Way through the ſame. The Remedies againſt the Symptoms of *Dentition* are Abſorbents, and gentle Purgatives.

DENUNCIATION, a ſolemn Publication, or Promulgation of any Thing.

All Veſſels are lawful Prize after *Denunciation*, or Proclamation of War. See PRIZE.

The *Denunciation* of excommunicated Perſons, is, that the Sentence may be the more fully executed, that the Perſons may be known, the Entrance into the Church refuſed them, and that other People may be warned, not to have any Communication with them. See EXCOMMUNICATION.

DEOBSTRUENTS are ſuch Medicines as open Obſtructions. See OBSTRUCTION, and DETERGENT.

It muſt be obſerv'd, however, that there is ſomething further intimated by *Deobſtruent*, than by *Detergent*: For a Medicine may be *deobſtruent*, that is not in the ſtricteſt Senſe *detergent*; as, in Effect, are moſt made of metalline Subſtances; ſuch as Steel, and Mercury; which obtain this Appellation from their Acting by their natural Weight, whereby they increaſe the *Momentum* of their circulating Fluid, and make it ſtrike againſt the ſecretory Outlet with greater Force; becauſe the *Momenta*, or *Vis Percuſſionis* of all Projectils, of which Kind is a circulating Fluid, is as their Solidities, ſuppoſing their Velocities equal. The more therefore the Animal Fluids are ſaturated with denſe, and ſolid Particles, with the greater Force they diſtend the Veſſels, and more eaſily break through, where the Structure favours their Eſcape; and upon that Account are Medicines, which add to theſe Qualities in the Fluids, call'd *Deobſtruents*.

DEODAND, in our Cuſtoms, a Thing given, or forfeited, as it were, to God, for the Pacification of his Wrath in a Caſe of Miſadventure, whereby a Chriſtian Soul comes to a violent End, without the Fault of any reaſonable Creature: As if a Horſe ſtrike his Keeper, and kill him; If a Man, in driving a Cart, falls ſo as the Cart-Wheel runs over him, and preſſes him to death; If one be felling a Tree, and gives Warning to the Standers by, to look to themſelves; yet a Man is kill'd by the Fall thereof: In the firſt Place the Horſe; in the ſecond, the Cart-Wheel, Cart, and Horſes; and in the third, the Tree, is, *Deo dandus*, q. d. *to be given to God*, that is, to the King, to be diſtributed to the Poor by his Almoner, for Expiation of this dreadful Event; tho' effected by unreaſonable, nay ſenſeleſs, and dead Creatures.

*Omnia quæ movent ad Mortem ſunt* Deodanda.
What moves to Death; or kills him dead,
Is *Deodand*, and forfeited.

This Law ſeems to be an Imitation of that in *Exodus*, Chap. XXI. *If an Ox gore a Man, or a Woman, with his Horn, ſo as they die; the Ox ſhall be ſton'd to Death; and his Fleſh not be eat; So ſhall his Owner be innocent.*

*Fleta* ſays, the *Deodand* is to be ſold, and the Price diſtributed to the Poor, for the Soul of the King, his Anceſtors, and all faithful People departed this Life.

DEOPPILATIVE, a Remedy proper to ſoften, reſolve, and remove Obſtructions. See OBSTRUCTION.

*Deoppilatives* are the ſame with what we otherwiſe call *Deobſtruents*. See DEOBSTRUENT.

DEPART, a Method of refining, or purifying Gold by means of *Aqua fortis*. See GOLD.

There are three Ways of refining Gold; The firſt by *Antimony*: The ſecond by *Sublimate*: and the third, which is the moſt uſual, by *Aqua fortis*. The two former, ſee under the Article REFINING.

For the Operation of the *Depart*, they take at the Rate of 1 Pound of impure Gold, and 2 of Silver; theſe they fuſe together in a Crucible, and when fuſed, caſt them into cold Water, where they become divided into Grains of the Bigneſs of Peas. Theſe Grains taken out, and dried by the Fire, are put in a *departing* Veſſel, which is a Stone Matraſs, and to the Metal is added 4 Pounds of *Aqua fortis*. Then taking the Veſſel, they ſet it on the Coals, and in about an Hours Space, the refining is done. For upon opening the Veſſel, they find nothing therein but the *Aqua fortis*, and the Gold reduced into a *Calx*, or Sand: The Silver being all diſſolv'd, and imbibed by the Water.

To raiſe the Gold to its due Fineneſs, they uſually give it the *Aqua fortis* again, and again; uſing for the firſt Time, half a Pound; and for the ſecond, a Quarter of a Pound of the Water, to 8 Ounces of Metal. If the third Water be found good, and clear, the Operation is ended: And the *Calx* of the Gold being waſh'd in repeated Water, is melted down again in a Crucible, firſt by a gentle, and afterwards a vehement Fire, to be caſt into Ingots, or Wedges.

It muſt be added, that the Silver, with the Impurities of the Gold, are ſo throughly incorporated with the Water, that to the Eye there does not appear any Thing beſide the pure Liquid; yet is not this Silver loſt. To recover it again out of the *Menſtruum*, they divide their Stock of *Aqua fortis* into ſeveral Stone Veſſels, which they fill up with Spring Water, obſerving to put 7 or 8 times as much of this, as that. This done, in each Veſſel they put a Quantity of Copper; and leaving the whole for 24 Hours, at the End thereof they find the Spirits of the *Aqua fortis* have quitted the Silver, and are incorporated with the Copper, leaving the former in Form of a *Calx*, or Aſhes at Bottom. This *Calx* being dried, is melted into an Ingot, with a little Salt-petre.

To husband the *Aquæ fortes*, and make them ſerve again for a ſecond Operation; they diſtil them in an Earthen, or Glaſs Alembic; and when the Diſtillation is about a third over, change the Recipient. The Water of the firſt Recipient, ſerves for the firſt Operation of *Depart*, and the reſt for the ſubſequent ones.

If the *Aqua fortis*, having quitted the Silver, and being united with the Copper, be then filtrated, it is call'd, *Aqua ſecunda*; In which if you ſteep an Iron-Plate ſome Hours, you will have another *Depart*. For the *Menſtruum* will let go the Copper, and prey on the Iron, leaving the Copper in Powder on the Iron-Plate. And filtrating this *Diſſolution*, you may get the Iron out of it by laying in it a Piece of *Lapis Calaminaris*; for the Iron in that Caſe will *depart* to the Bottom, and the *Lapis* be diſſolv'd. And if you again filtrate this Water, and pour on it the Liquor of fix'd Nitre, you will have another *Depart*; the *Lapis* precipitating to the Bottom. And laſtly, filtrating this Water, as before, and evaporating Part of it, you will have Cryſtals of Salt-petre.

DEPARTURE, or DEPARTER, in Law, a Term properly applied to a Perſon, who firſt pleading one Thing in Bar of an Action, that being replied to, he waves it, and inſiſts on ſomething different from his firſt Plea. Or it may be applied to a Plaintiff, who in his Replication ſhews a new Matter from his Declaration. So if a Man plead a general Agreement in Bar; and in his Rejoynder alledge a ſpecial one; it ſhall be adjudged a *Departure* in Pleading. *The Defendant hereupon demurred, becauſe it was a* Departure *from the Declaration.* Coke II. Part, fol. 147.

DEPARTURE *in Deſpight of the Court*, is when the Tenant, or Defendant appears to the Action brought againſt him, and has a Day over in the ſame Term; he not appearing, but making a Default, it is a *Departure in Deſpight of the Court*, and therefore he ſhall be condemn'd. The *Departure* is always on the Part of the Tenant, or Defendant; and its Entry is, *quod prædictus A, licet ſolemniter Exactus, non revenit, ſed* in contemptum Curiæ receſſit.

DE-

DEPARTURE, in Navigation, is the Eaſting, or Weſting of a Ship, with reſpect to the Meridian it *departed*, or ſail'd from. See MERIDIAN.

Or 'tis the Difference of Longitude, either Eaſt or Weſt, between the preſent Meridian the Ship is under, and that where the laſt Reckoning, or Obſervation was made. See LONGITUDE.

This *Departure* any where, but under the Equator, muſt be accounted according to the Number of Miles in a Degree proper to the Parallel the Ship is under. See *Mercators*-SAILING.

DEPHLEGMATED, in Chymiſtry, an Epithet applied to Spirits that are well clear'd of Water, or Phlegm. See SPIRIT, and PHLEGM.

To effect which, they *rectify* them, *i.e.* diſtil them over and over, till they be left quite pure. See DISTILLATION, and RECTIFICATION.

DEPHLEGMATION, in Chymiſtry, is the Act of purifying, or clearing a Fluid of its Phlegm, or Water.

This is perform'd by diſtilling the Spirit, or other Fluid over and over; by which means, the ſpirituous Part all riſes, and leaves the Phlegm, or Water behind. When the Spirit is thus diſengag'd of all its Phlegm, or, at leaſt, as much as it can be, it's call'd, a *dephlegmated Spirit*. See PHLEGM.

DEPILATORY, or DEPILATIVE, in Medicine, a Plaſter, or Medicine, applied on any hairy Place, in order to bring off the Hair. See HAIR.

*Depilatories* are principally compoſed of Orpiment, which is a very cauſtic, and even a dangerous Mineral. For Hairs growing on the Fore-head of a young Girl, I preſcribed the following *Dropax*, or *Depilative Liniment*, *Degori*.

The Word is form'd of the Particle *De*, and *Pilus*, Hair.

DEPONENT, in the *Latin* Grammar, a Term applied to Verbs, which have Active Significations, but Paſſive Terminations, or Conjugations, and want one of their Participles Paſſive: As, *Minor*, I threaten, which has for Participles, *Minans*, *Minaturus*, and *Minatus*, but no *Minandus*, which ſhould be the Participle Paſſive. See VERB.

They are call'd *Deponents*, as having *depoſited*, or laid a-ſide their Paſſive Signification.

DEPOPULATION, a Waſting, Pilling, Deſtroying, Deſolating, or *Unpeopling* any Place. *Cokes Inſtit. Part* III. *fol.* 204.

Hence; *Depopulatores Agrorum. Stat.* 4. *Henr.* IV.

DEPORTATION, a Sort of Baniſhment in Uſe among the *Romans*, whereby ſome Iſland, or other Place was allotted a Criminal for the Place of his Abode, with a Prohibition not to ſtir out of the ſame on Pain of Death. See BANISHMENT.

*Ulpian* makes this Difference between *Deportation*, and Relegation, that the former confined the Party to one certain Place for ever; whereas Relegation was frequently revoked, and allowed a little more Liberty. By *Deportation* that Perſon loſt the Rights of a *Roman* Citizen. See RELEGATION.

DEPOSITION, in Law, a Teſtimony given in Court by a Witneſs upon Oath. In Chancery, *Depoſition* is a Teſtimony ſet down in Writing, by Way of Anſwer to the Interrogatories exhibited in Chancery, where ſuch Witneſs is call'd *Deponent*. When ſuch Witneſs is examin'd in open Court, he is ſaid to be examin'd *viva Voce*.

DEPOSITION is alſo uſed for the ſequeſtring, or depriving a Perſon of his Dignity, and Office.

*Depoſition* only differs from Abdication, in that the latter is ſuppoſed voluntary, and the Act of the Dignitary, or Officer himſelf; and the former of Compulſion, being the Act of a ſuperior Power, whoſe Authority extends thereto.

Some ſay the *Depoſition*, and ſome the Abdication of King *James* II. See ABDICATION.

The Pope pretends to a Power of *depoſing* Kings. *Gregory* VII. we are aſſured by *Onuphrius Pavinius*, and *Otho de Friſinga*, was the firſt, who ever attempted the *Depoſition* of Kings.

*Depoſition* does not differ from Deprivation: We ſay indifferently a *depoſed*, or deprived Biſhop, Official, *&c.* See DEPRIVATION.

*Depoſition* differs from Suſpenſion, in that it abſolutely and for ever ſtrips, or diveſts a Prieſt, *&c.* of all Dignity, Office, *&c.* whereas Suſpenſion only exhibits, or reſtrains the Exerciſe thereof. See SUSPENSION.

*Depoſition* only differs from Degradation, that the latter is more formal, and attended with a few more Circumſtances than the former: But in Effect and Subſtance they are the ſame; thoſe additional Circumſtances being only Matter of Shew, firſt ſet on foot out of Zeal, and Indignation, and kept up by Cuſtom, but not warranted by the Laws, or Canons. See DEGRADATION.

DEPOSITORY, in Law, a Perſon entruſted as Keeper, or Guardian of any Thing. See DEPOST.

*Ordinary Depoſitories* are not to warrant the Thing left with them, in Caſe it be loſt, or ſtolen. They are only to anſwer for a Fraud, or Breach of Faith, not for Negligence. But a *Neceſſary Depoſitory*, as an Inn-keeper, is accountable for a Theft, or Robbery, if there have been any Negligence in the Caſe.

DEPOST, *Depoſitum*, a Thing put in the Hands of another to be kept *gratis*. See DEPOSITORY.

The Civilians divide a *Depoſitum* into Simple, and Judiciary.

*Judiciary*, is that conteſted between ſeveral Perſons, and *depoſited* in the Hands of ſome third Perſon, by Decree of a Judge.

*Simple* is either Voluntary, or Neceſſary. *Neceſſary* is that done in Caſe of Hoſtility, Shipwrack, Fire, *&c.*

Inn-holders are reſponſable for the Baggage brought to them, as being a *Neceſſary Depoſt*.

DEPRECATION, in Rhetoric, a Figure whereby the Orator invokes the Aid, or Aſſiſtance of ſome one; or prays for ſome great Evil, or Puniſhment to befal him who ſpeaks falſely; either himſelf, or his Adverſary.

DEPRECATIVE, in Theology, a Term only uſed in the Phraſe, *Deprecative Form*, which is applied with regard to the Manner of performing ſome Ceremonies in the Form of Prayer.

Among the *Greeks*, the Form of Abſolution is *deprecative*, being conceiv'd in theſe Terms, *May God abſolve you*; Whereas in the *Latin*, and even ſome of the Reformed Churches, it is in the declarative Form, *I abſolve you*.

DEPRESSION *of Equation*. See EQUATION.

DEPRESSION *of the Pole*: So many Degrees as you ſail, or travel towards the Zenith; ſo many you are ſaid to *depreſs* the Pole, becauſe it becomes, reſpectively, ſo much lower, or nearer to the Horizon. See ELEVATION *of the Pole*.

DEPRESSOR, in Anatomy, a Name common to divers Muſcles, from their Office in Lowering, or bringing down the Parts they are faſten'd to. See MUSCLE.

DEPRESSOR *Labii ſuperioris*, in Anatomy, a Muſcle call'd alſo *Conſtrictor Alæ Naſi*. See CONSTRICTOR *Alæ Naſi*.

DEPRESSOR *Labii inferioris proprius*, a Muſcle placed between the *Depreſſores Labiorum communes*, on the Part call'd the *Chin*. It appears to be but one Muſcle, aſcending with a twofold Order of fleſhy Fibres, and terminating in the lower Lip. Its Office is ſhewn by its Name; To let fall the lower Lip.

DEPRESSOR *Labiorum communis*, by ſome call'd *Depreſſor Labii ſuperioris*, is common to both Lips. It ariſes with a broad Origin from the lower Margin of the under Jaw, by the Side of the Chin, and is inſerted with a narrow Tail into each Lip near their Coalition; ſerving to draw them obliquely down.

DEPRESSOR *Maxillæ inferioris*. See DIGASTRICUS.

DEPRESSOR *Oculi*, a Pair of Muſcles ſpringing from each Corner of the Eye, and anſwered by another of like Figure and Structure in the lower Eye-lid. Theſe are often conſider'd together by Anatomiſts as one Orbicular Muſcle; the Fibres invironing the Eye-lids, and inſerted into them, not unlike the Sphincters of other Parts.

DEPRIMENS, in Anatomy. See DEPRESSOR.

DEPRIVATION, in the Canon Law, the Act of bereaving, diveſting, or taking away a ſpiritual Promotion, or Dignity: As when a Biſhop, Vicar, Prebend, or the like, is depoſed, or deprived of his Preferment for ſome Matter, or Fault in Fact, or in Law.

*Deprivation* is of two Kinds; *A Beneficio*, *& ab Officio*.

DEPRIVATION *a Beneficio*, is when for ſome great Crime, a Miniſter is wholly, and for ever *deprived* of his Living, or Preferment: which differs from Suſpenſion, in that the latter is only a temporary *Deprivation*. See SUSPENSION.

DEPRIVATION *ab Officio*, is when a Miniſter is for ever *deprived* of his Orders; Which is the ſame in Reality, with what we otherwiſe call *Depoſition*, and *Degradation*; and is uſually for ſome heinous Crime, deſerving Death, and perform'd by the Biſhop, in a ſolemn Manner. See DEGRADATION.

DEPTH, in Geometry, *&c.* See ALTITUDE, HEIGHT, *&c.*

DEPTH *of a Squadron*, or Battallion, is the Number of Men in a File; which in a Squadron is three, and in a Battallion generally ſix. See SQUADRON, FILE, *&c.*

The Enemies Horſe were drawn up 5 *deep*.

DEPURATION, in Pharmacy, the ſame as *Clarification*, or *Purification*, viz. the purging a Body of all the Lees, Fæces, and other craſs, coarſe, and excrementitious Parts adhering therein. See CLARIFICATION, PURIFICATION, *&c.*

Fermentation ſerves to *depurate* Liquors: Syrups, Juices, *&c.* are *depurated* by paſſing them through the *Manica Hippocratis*, or Straining-Bag. See FILTER, *&c.*

DE-

DEPUTATION, a Miſſion of certain ſelect Perſons out of a Company, or Body, to a Prince, or Aſſembly, to treat of Matters in their Name; or to proſecute ſome Affair therein. See DEPUTY.

*Deputations* are more or leſs ſolemn, according to the Quality of thoſe who ſend them, and the Buſineſs they are ſent upon.

*Deputation* is not properly applied where a ſingle Perſon ſends another with ſuch Commiſſion; but only where a Body are concern'd. The Parliament *deputed* the Speaker, and 6 Members, to preſent their Addreſs to his Majeſty. The Chapter *deputed* two Canons, to ſollicit their Affair in Council.

DEPUTY, a Perſon ſent, or *deputed* by ſome Community, in their Name, and Behalf. See DEPUTATION.

The ſeveral Provinces of the *French* Dominions ſend *Deputies* to the King every Year, to preſent him the *Cayer des Etats:* There are always three *Deputies*, one from each Order. 'Tis the *Deputy* of the firſt Order, that makes the Compliment to the King.

In the Cities of *Turky*, there are always *Deputies*, to treat with the Grand Seignior's Officers, as to Taxes, and other Concerns. Theſe *Deputies* are three or four of the richeſt, and moſt conſiderable among the Burgeſſes.

DEPUTY, is alſo frequently uſed among us, for an Office, or Employ; not a Dignity; and ſtands indifferently for a Vice, or Lieutenant. See LIEUTENANT, and VICE.

Among the Ancients, *Deputatus* was applied, Firſt, to Armorers, or Workmen employ'd in the making of Armour in the Forges, &c. And ſecondly, to a Sort of buſie People, who followed the Army, and in Engagements were charged to bring off, and take Care of the Wounded.

DEPUTATUS, ἀπόστατος, was alſo an inferior Officer in the Church of *Conſtantinople*, whoſe Buſineſs was to call Perſons of Condition the Patriarch had a Mind to ſpeak withal, and to keep off the Crowd where the Prelate walk'd. This *Deputy* appears to have been a Sort of *Uſher*, or Tip-Staff. But he had likewiſe the Care of the ſacred Veſtments; in which he approach'd the Office of a Sacriſtan.

DERELICTS, in the Civil-Law, are ſuch Goods as are wilfully thrown away, or relinquiſh'd by the Owner. The Term is alſo uſed for ſuch Lands, as the Sea receding from leaves dry, and fit for Cultivation.

DERIVATION, in Grammar, the Connexion, or Affinity one Word has with another, by having been originally form'd from it. See ETYMOLOGY.

DERIVATION, in Medicine, the diverting a Humour, which flows on ſome noble Part, and drawing it to ſome other neighbouring Part, where it is leſs dangerous. See HUMOUR.

Thus, in Defluxions upon the Eyes, or Teeth, they apply a Bliſter behind the Neck to draw the Matter thither: And in a Squinancy, they preſcribe Bleeding in the *Ranulæ*, or Veins under the Tongue, to divert the Humour from falling on the Throat. See DEFLUXION, and FLUXION.

DERIVATIVE, in Grammar, a Word, or Diction, which takes its Origin from another Word, call'd its *Primitive*. See PRIMITIVE.

Such is the Word *Derivative*, which takes its Origin from the Primitive *Rivus*, a Rivulet, or Channel, out of which leſſer Streams are drawn; and thus *Manhood*, *Deity*, *Lawyer*, &c. are *derived* from *Man*, *Deus*, *Law*, &c.

DERMA, in Anatomy, the *Cutis*, or Skin of an Animal; or the Tegument inveſting the whole Body immediately under the Cuticle, or Scarf-Skin. See CUTIS.

The *Derma* conſiſts of two Parts, the *Corpus reticulare*, and the *Papillæ pyramidales*. See SKIN, RETICULARE, and PAPILLÆ.

The Word comes from the *Greek* δέρειν, *to flea*, or *excoriate*.

DERNIER *Reſſort*. See RESSORT.

Whatever Power is committed by the King to any other, the *Dernier Reſſort* is ſtill remaining in himſelf; ſo that he may ſit in Court, and take Cognizance of Cauſes; except in Felonies, Treaſons, and other Caſes, where he himſelf is a Party.

DEROGATION, an Act contrary to a preceeding one, and that annuls, deſtroys, and revokes it.

*Derogations*, in general Terms, are not regarded in Judicature; they muſt be in ſpecific, and in formal Terms.

A new Law imports a *Derogation* of a former one: A ſecond Teſtament is a *Derogation* of a firſt.

DEROGATORY, a Clauſe importing *Derogation*. If a Perſon own himſelf indebted in a certain Sum; notwithſtanding any Quittance he has obtain'd for the ſame, the Act is *derogatory*.

DERVIS, or DERVICHES, a Sort of Monks among the *Turks*, who lead a very auſtere Life, and profeſs extream Poverty; tho' allowed to marry.

The *Dervis*, call'd alſo *Mevelavites*, are a *Mahometan* Order of Religious; the Chief, or Founder whereof was one *Mevelava*. They are now very numerous. Their firſt Monaſtery is that near *Cogni* in *Natolia*; where the General makes his Reſidence; and where all the Aſſemblies of the Order are held: the other Houſes being all dependent of this; which Privilege *Ottoman* I. granted this Monaſtery.

The *Dervis* effect a World of Modeſty, Patience, Humility, and Charity. They always go bare-legged, and open-breaſted, and frequently burn themſelves with hot Iron, to enure themſelves to Patience. They always faſt on Wedneſdays, eating nothing on thoſe Days till after Sun-ſet. Tueſdays and Fridays they hold Meetings, at which the Superior of the Houſe preſides. One of them plays all the while on a Flute, and the reſt dance, turning their Bodies round and round with the greateſt Swiftneſs imaginable. Long Cuſtom to this Exerciſe from their Youth, has brought them to ſuch paſs, that it does not maze, or diſcompoſe them at all. This Practice they obſerve with great Strictneſs, in Memory of *Mevelava* their Patriarch's turning miraculously round, for the Space of four Days, without any Food, or Refreſhment; his Companion *Hamſa* playing all the while on the Flute; after which he fell into an Extaſy, and therein receiv'd wonderful Revelations for the Eſtabliſhment of his Order. They believe the Flute an Inſtrument conſecrated by *Jacob*, and the Shepherds of the Old Teſtament; by reaſon they ſang the Praiſes of God thereon. They profeſs Poverty, Chaſtity, and Obedience, and really keep it while they remain *Derviſes*; But if they chuſe to go out, and marry, they are always allowed.

The Generality of *Derviſes* are Charletans: Some apply themſelves to Legerdemain, Poſtures, &c. to amuſe the People; Others give into Sorcery, and Magic: But all of them, contrary to *Mahomet*'s Precept, drink Wine, Brandy, and other fuddling Liquors, to give them the Degree of Gayety their Order requires.

Beſide their great Saint *Mevelava*; there are particular Saints honour'd in ſome particular Monaſteries: As *Kederle*, greatly rever'd in the Monaſteries of *Egypt*, and held by ſome to be St. *George*, and by others, with more Probability, the Prophet *Elias*. The *Derviſes* are great Travellers; And under Pretence of preaching, and propagating their Faith, are continually paſſing from one Place to another: On which Account they have been frequently uſed as Spies.

There are alſo *Derviches* in *Perſia*, call'd in that Country *Abdals*, q. d. *Servants of God*. They lead a very penurious, auſtere Life, and preach the Alcoran in the Streets, Coffee-Houſes, and wherever they can meet with Auditors. The Perſian *Derviches* retail little but Fables to the People, and are in the laſt Contempt among the Men of Wit, and Letters.

The Word is originally *Perſian* דרויש, ſignifying a *Beggar*, or Perſon who has nothing. And by reaſon the Religious, and particularly the Followers of *Mevelava*, profeſs not to poſſeſs any Thing; they call both the Religious in general, and the *Mevelavites* in particular, *Dervis*, or *Derviches*.

DESCANT, in Muſic, the Art of Compoſing in ſeveral Parts. See COMPOSITION.

*Deſcant* is three-fold; viz. *Plain*, *Figurate*, and *Double*.

*Plain* DESCANT, is the Ground-work, or Foundation of Muſical Compoſition, and conſiſts altogether in the orderly Placing of many Concords; anſwering to *ſimple Counter-point*.

*Figurate*, or *Florid* DESCANT, is that wherein Diſcords are concern'd as well, tho' not ſo much, as Concords. This may be well term'd, the Ornamental, or Rhetorical Part of Muſick; in Regard that in this are introduced all the Varieties of Points, Figures, Syncopes, Diverſities of Meaſures, and whatſoever elſe is capable of adorning the Compoſition.

*Double* DESCANT, is when the Parts are ſo contrived, that the Treble may be made the Baſs; and on the contrary, the Baſs the Treble. See HARMONY, COUNTER-POINT, &c.

DESCENDANT, in Genealogy, a Term relative to *Aſcendant*, and applied to a Perſon, who is born, or iſſued from ſome other here referr'd to. See ASCENDANT.

*Adam* infected all his *Deſcendants* with Original Sin. See ORIGINAL *Sin*.

The *Deſcendants* from the Brothers of the Maid of *Orleans*, are confirm'd in their Exemption from all Taxes, and Impoſts, by a Regulation of the Year 1634.

DESCENDING, ſomething that falls, or moves from above, downwards. There are *Aſcending*, and *Deſcending Stars*: *Aſcending*, and *Deſcending Degrees*. See ASCENDING, &c.

DESCENDING *Latitude*, is the Latitude of a Planet in its Return from the *Nodes* to the *Equator*. See LATITUDE.

There are *Aſcending*, and *Deſcending* Veins, ſpringing out of the *Cava*: *Aſcending*, and *Deſcending* Arteries, riſing out of the *Aorta*. See CAVA, and AORTA.

DESCENSION, in Aſtronomy, is either *Right*, or *Oblique*.

*Right* DESCENSION *of a Star*, or *Sign*, is a Point, or Arch of the Equator, which *deſcends* with the Star, or Sign below the Horizon, in a right Sphere. See *Right* SPHERE.

*Oblique* DESCENSION, is a Point, or Arch of the Equator, which deſcends at the ſame Time with a Star, or Sign below the Horizon, in an oblique Sphere. See *oblique* SPHERE.

*Deſcenſions*, both *Right*, and *Oblique*, are accounted from the firſt Point of *Aries*, or the Vernal Interſection; according to the Order of the Signs; that is, from Weſt to Eaſt. And as they are unequal, when it happens that they anſwer to equal Arches of the Ecliptick, as *e. gr.* to the 12 Signs of the Zodiack, it follows, that ſometimes a greater Part of the Equator riſes, or *deſcends* with a Sign, in which Caſe the Sign is ſaid to aſcend, or *deſcend rightly*: And ſometimes again a leſs Part of the Equator riſes, or ſets with the ſame Sign; in which Caſe it is ſaid to aſcend, and *deſcend* obliquely. See ASCENSION.

*Refraction of the* DESCENSION, *&c.* See REFRACTION.

DESCENSIONAL *Difference*, is the Difference between the *Right*, and *Oblique Deſcenſion* of the ſame Star, *&c.* See DIFFERENCE.

DESCENT, or DISCENT, in Law, an Order, or Manner wherein Lands and Tenements are derived to any Man from his Anceſtors.

Thus, to *make his Deſcent* from his Anceſtors, is to ſhew how, and by what particular Degrees, the Land in Queſtion came to him from his Anceſtors.

*Deſcent* is either *Lineal*, or *Collateral*.

*Lineal* DESCENT, is that convey'd down in a right Line from the Grand-Father to the Father, and from the Father to the Son, from the Son to the Grand-Son, *&c.*

*Collateral* DESCENT, is that ſpringing out of the Side of the Line, or Blood, as from a Man to his Brother, Nephew, or the like. See COLLATERAL, and DEGREE.

If one dies ſeiſed of Land, wherein another has Right to enter, and it *deſcends* to his Heir, ſuch *Deſcent* ſhall take away the other's Right of Entry, and put him to his Action for Recovery thereof. *Stat.* 32. *Hen.* VIII.

DESCENT, in Genealogy, and Heraldry, the Order, or Succeſſion of *Deſcendants* in a Line, or Family. See DESCENDANT.

One *Deſcent*, two *Deſcents*, &c. A Gentleman is of perfect Blood, who has four *Deſcents* of Gentility, both by his Father, and Mother's Side, *i. e.* whoſe Great-Grand-Father, Grand-Father, and Father, on both Sides, were all Gentlemen. See GENTLEMAN.

DESCENT, is alſo uſed in Heraldry, to expreſs the coming down of any Thing from above.

Thus a *Lyon en Deſcent*, is a Lion with his Head to one of the baſe Points, and his Heels towards one of the Corners of the Chief; as if he were leaping from ſome high Place.

DESCENT, *Fall*, in Mechanicks, *&c.* is the Motion, or Tendency of a Body towards the Center of the Earth, either directly, or obliquely. See CENTER, and MOTION.

It is to be here obſerv'd, Firſt, That a Body cannot *deſcend*, unleſs it can divide, and ſeparate the *Medium*; which it cannot do, unleſs it be ſpecifically heavier than the *Medium*. For ſince Bodies cannot penetrate each other, one muſt give Way 'ere the other can move: And again, Tho' a *Medium*, e. gr. *Water* be diviſible, yet if it be ſpecifically heavier than another, e. gr. *Wood*, it is only heavier as it contains more Particles of Matter in the ſame Bulk; all which have an Impulſe downwards, and conſequently in Water there is a greater Impulſe than in the ſame Bulk of Wood. See SPECIFIC *Gravity*.

Secondly, The *Deſcending* Body loſes as much of its Weight, as is the Weight of the *Medium*, with the Force of its Coheſion. See MEDIUM.

Thirdly, The leſs the Bulk of the *Deſcending* Body is, the more of its Gravity does it loſe in the ſame *Medium*. For tho' the Proportion of the ſpecific Gravity of the one to the other be ſtill the ſame in a greater, or leſs Bulk, yet the leſs the Body, the more the Surface, in Proportion to the Maſs; and the more the Surface, the more the Friction, or Reſiſtance. See FRICTION, and RESISTANCE.

The *Cauſe* of this *Deſcent*, or Tendency downwards, has been greatly controverted. There are two oppoſite *Hypotheſes* advanced; the one holding it to proceed from an internal, and the other from an external Principle. The firſt maintained by the Peripateticks, and *Epicureans*, and *Newtonians*; and the latter by the *Carteſians*, and *Gaſſendiſts*.

The Peripateticks teach, that heavy Bodies fall by certain motive Powers, flowing from their Forms towards the Centre of the Earth, as their proper Element, or Place in the Univerſe. Theſe Powers they call *Impetus's*; and will have them to have been impreſs'd on the ſeveral Parts of the Earth, at the Creation; being a Tendency of the Parts to the whole. And they ſuppoſe, that it is by means hereof, that the whole is ſtill preſerved in its Integral State. Adding, that if there were a perfect Vacuity in any Part of the Air round us, a Stone placed therein would not at all fall, or tend towards the Earth, as being no longer a Part thereof, nor having the natural *Impetus*.

The ancient *Epicureans*, or *Atomiſts*, with the modern *Newtonian* Philoſophers, hold, that all Bodies gravitate, or tend downwards, and that the more ſtrongly, as they contain the more Matter; conſequently perfectly ſolid Bodies, ſuch as they ſuppoſe Atoms, or primitive Corpuſcles to be, the moſt of all. See GRAVITY.

The *Carteſians* aſcribe the *Cauſe of Deſcent* of Bodies to a circular Motion of the *Æther*, which they feign for this very Purpoſe. According to them, all circular Motion is unnatural; and therefore is continually endeavouring to recede from its Center, and to change into a Recti-linear Motion; conſequently ſuch as have the more Motion, recede the more, and in receding, depreſs, or thruſt down ſuch as have leſs Motion. And thus the Air being moved with the moſt vehement Velocity, recedes more than ſolid Bodies, and by that means drives them towards the Center.

The *Gaſſendiſts* account for the *Deſcent* of heavy Bodies, by ſuppoſing certain magnetick Rays proceeding out of the Earth, and conſiſting of contiguous Particles, which by their continual Emiſſion retain the Rigidity of Rods, or ſtretched Cords. Theſe Rays being diffuſed every way from the Earth, as a Center, ſtrike, or impinge on what ſolid Bodies they meet withal in their Progreſs, and penetrate the ſame, ſome directly, and others obliquely, and refractedly, after the Manner of Rays of Light. Theſe Rays, ſay they, are a Kind of Arms; and the Defections, and Curvatures of their Extreams, as it were Fingers, or Hooks, which pull, or draw Bodies from above towards the Earth. And they add, that theſe Rays being the more rare, as they are more remote from the Center; their Effect is the more feeble; and the *Deſcent* of Bodies is the more ſlow, in Proportion as they are higher.

*Laws of the* DESCENT *of Bodies.*

I. Heavy Bodies in an unreſiſting *Medium* fall with an uniformly accelerated Motion. See the *Laws of uniformly accelerated Motion* under the Articles ACCELERATION, and MOTION.

Hence, 1. The Spaces *deſcended* are in duplicate *Ratio* of the Times, and Velocities; and increaſe according to the uneven Numbers 1, 3, 5, 7, 9, *&c.* 2. The Times, and Velocities, are in a ſubduplicate *Ratio* of the Spaces. 3. The Velocities of *deſcending* Bodies, are proportionate to the Times from the Beginning of their Falls. 4. The Spaces deſcribed by a falling Body, are as the Squares of the Times from the Beginning of the Fall.

A Body ſpecifically heavier *deſcends* in a fluid *Medium*, ſpecifically lighter, (*e.gr.* the Air,) with a Force equal to the Exceſs of the Weight of the Body above an equal Bulk of the *Medium*. For a Body only deſcends in a *Medium* with the Force remaining, after a Part has been ſpent in overcoming the Reſiſtance of the *Medium*. And this Reſiſtance is equal to the Weight of an equal Bulk of the *Medium*: Conſequently the Body only falls with the Exceſs of its Weight above that of an equal Bulk of the *Medium*.

Hence, the Power that ſuſtains a Body in a ſpecifically lighter *Medium*, is equal to the Exceſs of the abſolute Weight of the Body above an equal Bulk of the *Medium*. Thus $47\frac{1}{3}$ Pound of Copper in Water loſe $5\frac{1}{3}$ of their Weight. A Power, therefore, of 42 Pounds is able to ſuſtain them.

In ſuppoſing heavy Bodies to *deſcend* in an unreſiſting *Medium*, we conceive them free of all external Impediments, from what Cauſe ſoever. So that we even ſet a-ſide that oblique Impulſe given to Bodies while in falling, by the Rotation of the Earth, tho' this produce no ſenſible Irregularity in a little Diſtance.

*Galilæus*, who firſt diſcover'd the *Law of the Deſcent* of heavy Bodies by Reaſoning, afterwards confirm'd the ſame by Experiments; the Reſult of which, repeated an hundred times over, was, that the *Deſcent* was as the Square of the Times.

*Grimaldo* and *Ricciolus* made Experiments to the ſame Effect, tho' in a different Manner, by letting fall a Number of Balls, weighing 8 Ounces a Piece, from the Tops of ſeveral Towers, and meaſuring the Times of falling by a *Pendulum*. Theſe Experiments are exhibited in the following Table.

| Vibrations of the *Pendulum*. | Time. | | Space at the End of the Time. | Space *deſcended* each Time. |
|---|---|---|---|---|
| | ″ | ‴ | Rom. Foot. | Rom. Foot. |
| 5 | 0 | 50 | 10 | 10 |
| 10 | 1 | 40 | 40 | 30 |
| 15 | 2 | 30 | 90 | 50 |
| 20 | 3 | 20 | 160 | 70 |
| 25 | 4 | 10 | 250 | 90 |
| 6 | 1 | 0 | 15 | 15 |
| 12 | 2 | 0 | 60 | 45 |
| 18 | 3 | 0 | 135 | 75 |
| 24 | 4 | 0 | 240 | 105 |

Since

Since then the Experiments of *Ricciolus*, made in ſuch conſiderable Diſtances, agree ſo well to the Theory, 'tis ſcarce worth taking Notice of what is urged to the contrary by *Dechales*, in his *Mund. Math.* who writes, that he had found by Experiment, that heavy Bodies in half a Second of Time *deſcend* $4\frac{1}{4}$ Feet; in two $16\frac{1}{2}$; in three 36; in four 60; in five 90; in ſix 123. 'Tis ſufficient, that he deduces the Irregularity from the Reſiſtance of the Air, which we ſuppoſe out of the Queſtion.

II. If a heavy Body *deſcend* in an unreſiſting *Medium* through an Interval not over-large, the Space it deſcribes is ſubduple of that which it would deſcribe in the ſame Time with the Velocity acquired at the End of the Fall.

III. The Time wherein a Body falls from a given Height being given, to determine the Spaces it fell in the ſeveral Parts of that Time.

Suppoſe the given Altitude $=a$ the Time $=t$ and the Space it fell in 1 Part of Time $x$: Then

$$\frac{1 : x = t^2 : a}{t^2 x = a}$$
$$x = a : t^2$$

Therefore the Space paſs'd over in the firſt Part of Time is $a : t^2$; Conſequently that paſs'd over in the ſecond Time $= 3^a : t^2$; That in the third $= 5^a : t^2$ *&c.*

*E. gr.* In the Experiments of *Ricciolus* above deliver'd; the Ball fell 240 Feet in 4 Seconds. Therefore the Space fell the firſt ſecond was $= 240 : 16 = 15$. The Space in the ſecond was $= 15.3 = 45$. That in the third $= 15.5 = 75$. And that in the fourth $15.7 = 105$.

IV. The Time wherein a Body falls a given Space, being given; to determine the Time wherein it will fall any other given Space in the ſame *Medium*.

Since the Spaces are as the Squares of the Times: To the Space which the Body falls in the given Time, the Space in the Queſtion, and the Square of the given Time find a fourth Proportional, which will be the Square of the Time ſought. The Square-Root, therefore, being extracted therefrom, the Problem is ſolved.

For Example, one of *Ricciolus*'s Balls in 4 Minutes Time falling 240 Foot, it is required in what Time it would fall 135 Foot? The Anſwer will be found $= \sqrt{}(135 : 16 : 240) = \sqrt{}(135 : 15) = \sqrt{}9 = 3$.

V. The Space a Body falls in a given Time, being given, to determine the Space it will fall in any other given Time.

To the Square of the Time wherein the Body falls the given Space, the Square of the Time wherein it ſhould fall the Space required, and the given Space, ſeek a fourth Proportional; This will be the Space required.

For Inſtance, *Ricciolus*'s Ball falling 60 Foot in 2 Seconds, 'tis aſk'd what Space it will fall in 4 Seconds? The Anſwer is, $16.60 : 4 = 4.60 = 240$.

For the *Laws of the* Deſcent *of Bodies on inclined Planes*. See *Inclined* PLANE.

For the *Laws of* Deſcent *in Cycloids*. See CYCLOID, and PENDULUM.

*Line of quickeſt* DESCENT, is that which a Body falling by the Action of Gravity deſcribes in the ſhorteſt Time; which is prov'd by Geometricians to be the *Cycloid*. See CYCLOID, and alſo CELERRIMI *Deſcenſus* LINEA.

DESCENTS, in Fortification, ſignify the Holes, Vaults, and hollow Places, made by undermining the Ground: ſuch as the Counter-ſcarps, or Covert-way.

A *Deſcent* into the Moat, or Ditch, is a deep digging into the Earth of the Covert-way, in Form of a Trench; of which the upper Part is cover'd with Madriers, or Clays againſt Fires, to ſecure the Paſſage into the Moat.

DESCRIBENT, is a Term in Geometry, expreſſing ſome Line, or Surface, which by its Motion produces a Plane Figure, or a Solid.

DESCRIPTION, a ſuperficial, imperfect, or unaccurate Definition of a Thing; giving a Sort of Knowledge thereof from ſome Accidents, and Circumſtances peculiar to it, which determine it enough to give an Idea that may diſtinguiſh it from other Things; but without explaining its Nature, or Eſſence.

Grammarians content themſelves with *Deſcriptions:* but Philoſophers require exact Definitions of Things. See DEFINITION.

DESCRIPTION, in Philoſophy, Logic, *&c.* is an Enumeration of divers Attributes of a Thing, moſt of which are only accidental: As when a Perſon is *deſcribed* by his Deeds, his Sayings, his Writings, his Honours, *&c.* See DEFINITION.

A *Deſcription*, as to its outward Appearance, reſembles a *Definition*; and is even convertible with the Thing *deſcribed*; but does not explain it. For inſtead of bringing ſeveral Things eſſential to the Thing *deſcribed*, it only brings a Number of Accidents belonging thereto. *E. gr.* Peter *is the tall, young Man who lives on the Green, wears black Clothes, frequents the College, Courts N. . . . &c.* where it is evident, we do not give any Explication of *Peter*, as not bringing Things that are in *Peter*, but only Circumſtances, or Things about him, *Tall, Young, Living, Wearing, Frequenting, Courting*, &c. a *Deſcription*, therefore, is no proper Anſwer to the Queſtion, *Quid* eſt, *What* is he? but to that, *Quis* eſt? *Who* is he?

*Deſcriptions*, in Effect, are principally uſed for Singulars, or Individuals: For Things of the ſame Species do not differ in Eſſence, but only as to *Hic*, and *Ille*, which Difference contains nothing very notable, or diſtinguiſhable. But Individuals of the ſame Kind, differ much in Accidents; *E. gr.* George *is King, and* William *a Citizen*; Charles *is a Male, and* Anne *a Female*; Henry *is wiſe, and* John *a Blockhead*, &c. Thus, a *Deſcription* is an Accumulation of Accidents, whereby Things are notably diſtinguiſh'd from each other, tho' they ſcarce differ at all in Eſſence.

Some Authors call a *Deſcription* a *Quaſi*-Definition; As Body *is a Thing diviſible, moveable, ſolid, extended*, &c. only wanting of a Definition in this, that inſtead of the Form, or Eſſence of a Thing, it gives one, or more Properties ariſing from the Form, or Eſſence. See DEFINITION, ESSENCE, FORM, *&c.*

DESCRIPTION, in Rhetoric. See DEFINITION.

DESCRIPTION, in Geometry. To *deſcribe* a Circle, Ellipſis, Parabola, *&c.* is to conſtruct, or form thoſe Figures, with Rules, Compaſſes, *&c.* See CONSTRUCTION, and FIGURE.

DESERT, or DESART, a Wilderneſs; or wild, uncultivated, uninhabited Place: As the *Deſerts* of *Lybia*, of the *Thebaide*.

Geographers uſe the Word in the general for all Countries little, or not at all inhabited. See WILDERNESS.

In Scripture, we find ſeveral Places in the *Holy Land*, or Places adjoyning thereto, call'd *Deſarts*. The *Deſart*, or Wilderneſs, ſimply, is that Part of *Arabia* on the South of the *Holy Land*, wherein the *Iſraelites* wandred forty Years, from the Time of their Evacuating *Egypt* to their Entry into the promis'd Land. The *Deſart* of *Berſabea* was that Part of the *Deſart* juſt mention'd, which border'd on the *Holy Land*, running towards the *Mediterranean*. The *Deſart* of *Idumea*, is *Idumea* it ſelf, a barren, mountainous Country. The *Deſarts* of *Betharen, Bethſaide, Cadeſh, Damaſcus, Dibla, Engaddi, Ethom, Gibeon, Horeb, Jernel, Juda, Moab, Pharan, Sin, Sinai, Sur, Ziph*, &c. are ſo many dry, uncultivated, and frequently mountainous Places, like our Downs, *&c.* where there are few, or no Habitations, or Inhabitants; whence the *Hebrews* call'd them by *Antiphraſis* מדבר, which properly ſignifies *human Word*, or *Speech*, by reaſon there was none heard there.

DESERTER, in War, a Soldier on the Muſter-roll, who quits his Company without Leave; or liſts himſelf under another Officer.

All Soldiers found half a League from a Garriſon, or Army, going towards an Enemies Country, or Quarters, without a Paſs, are deem'd, and treated as *Deſerters*.

The Puniſhment of *Deſertion*, is Death.

The ancient Church excommunicated *Deſerters*, as having violated their Oath.

DESHABILLE, a *French* Term, naturalized of late. It properly ſignifies a Toilette, Night-Gown, and other Neceſſaries, made uſe of in dreſſing, or undreſſing. Mr. . . . is not to be ſpoke withal; he is yet in his *Deſhabille*, i. e. undreſs'd, or in his Night-Gown.

The Word is a Compound of the Privative *de*, and *s'habiller*, to dreſs.

DESHACHEE, in Heraldry, is when a Beaſt has its Limbs ſeparated from the Body, ſo as they ſtill remain on the Eſcutcheon, with only a ſmall Separation from their natural Places.

DESIGN, or *Draught*, with regard to the Arts and Sciences, ſignifies the Thought, Plan, Geometrical Repreſentation, Diſtribution, and Conſtruction of a Painting, Poem Book, or Building.

This Painter has ſhewn the firſt *Deſign* of his Piece, in which the Figures are well diſpoſed. The *Deſign* of that Poem or Book is artfully laid.

*Claudian* never ſees his whole *Deſign* together: When he compoſes a Part, he thinks of nothing elſe; and works up every Member, as if it were ſeparate from all the reſt.

In Building, one may uſe the Term *Ichnography*, when by *Deſign* is only meant the Plan of a Building, or a flat Figure drawn on Paper. See ICHNOGRAPHY.

*Orthography*, when ſome Face, or Side of the Building is rais'd from the Ground. See ORTHOGRAPHY.

And *Scenography*, when both Front and Sides are ſeen in Perſpective. See SCENOGRAPHY.

DESIGN, in the Manufactories, the Figures wherewith the Workman enriches his Stuff, or Silk; and which he copies after ſome Painter.

In undertaking ſuch Kinds of figured Stuffs, 'tis neceſſary, that before the firſt Stroak of the Shuttle, the whole *Deſign* be repreſented on the Threads of the Warp; we don't mean

mean in Colours, but with an infinite Number of little Pack-threads, which being diſpoſed ſo as to raiſe the Threads of the Warp, let the Painter ſee from Time to Time what Kind of Silk is to be put in the Eye of the Shuttle, for Woof.

This Method of preparing the Work, is call'd *reading the Deſign*, or reading the Figure; which is perform'd after the following Manner.

A Paper is provided conſiderably broader than the Stuff, and of a Length proportionate to what is intended to be repreſented thereon. This they divide length-wiſe by as many black Lines as there are intended to be Threads in the Warp; and croſs theſe Lines, by others drawn breadth-wiſe; which with the former make little equal Squares. On the Paper thus ſquared, the Painter *deſigns* his Figures, and heightens them with Colours as he ſees fit. When the *Deſign* is finiſh'd, a Workman reads it, while another lays it on the Simblot.

Now, to read the *Deſign*, is to tell the Perſon, who manages the Loom, the Number of Squares, or Threads comprized in the Space he is reading; intimating at the ſame Time, whether it is Ground, or Figure.

To put what is read on the Simblot, is to faſten little Strings to the ſeveral Pack-Threads, which are to raiſe the Threads named. And thus they continue to do, till the whole *Deſign* is read.

Every Piece being compoſed of ſeveral Repetitions of the ſame *Deſign*; when the whole *Deſign* is drawn, the Drawer, to re-begin, as I may ſay, the *Deſign* a-freſh, has nothing to do, but raiſe the little Strings with Slip-knots to the Top of the Simblot, which he had let down to the Bottom. And this he is to repeat as often as is neceſſary, till the Whole be manufactured.

The Ribbond-Weavers have likewiſe a *Deſign*, but much more ſimple than that now deſcribed. 'Tis drawn on Paper, with Lines, and Squares, repreſenting the Threads of the Warp, and Woof. But in lieu of Lines, whereof the Figures of the former conſiſt, theſe only conſiſt of Points, or Dotts, placed in certain of the little Squares, form'd by the Interſection of the Lines. Theſe Points mark the Threads of the Warp that are to be raiſed; and the Spaces left blank, *deſign* the Threads that are to keep their Situation. The reſt is manag'd as in the former.

DESIGN, is particularly uſed in Painting, for the firſt Idea of a large Work drawn roughly, and in little; with Intention to be executed, and finiſh'd in large. See PAINTING.

In this ſimple Senſe, the *Deſign* is the ſimple *Contour*, or *Outline* of the Figures, or Things intended to be repreſented; or the Lines that terminate, and circumſcribe them. See CONTOUR, and DESIGNING.

Such *Deſign* is ſometimes drawn in Crayons, or Ink, without any Shadows at all: Sometimes it is *hatch'd*, that is, the Shadows are expreſs'd by ſenſible Lines, uſually drawn a-croſs each other with the Pen, Crayon, or Graver. Sometimes, again, the Shadows are done with the Crayon rub'd, ſo as there does not appear any Lines: Sometimes, the Grain, or Strokes of the Crayon appear, as not being rubb'd: Sometimes the *Deſign* is *waſh'd*, that is, the Shadows are done with a Pencil, in *Indian* Ink, or ſome other Liquor: And ſometimes the *Deſign* is *colour'd*, that is, Colours are laid on, much like thoſe intended for the Grand Work.

The Qualities, or Parts required in a *Deſign*, are *Correctneſs*, *Good Taſte*, *Elegance*, *Character*, *Diverſity*, *Expreſſion*, and *Perſpective*.

*Correctneſs* depends principally on the Juſtneſs of the Proportions, and a Knowledge of Anatomy. *Taſte* is an Idea, or Manner of *Deſigning*, which ariſes either from the Complexion and natural Diſpoſition, or from Education, the Maſters, Studies, *&c.* *Elegance* gives the Figures a Kind of Delicacy, which ſtrikes People of Judgment, and a certain Agreeableneſs, which pleaſes every body. The *Character* is what is peculiar to each Thing; In which there muſt be a *Diverſity*; in as much as every Thing has its particular Character, to diſtinguiſh it. The *Expreſſion* is the Repreſentation of an Object according to its Character, and the ſeveral Circumſtances it is ſuppoſed to be in. The *Perſpective* is the Repreſentation of the Parts of a Painting, or Figure, according to the Situation they are in, with reſpect to the Point of Sight.

The *Deſign*, or *Draught*, is a Part of the greateſt Import, and Extent in Painting. 'Tis acquired chiefly by Habit, and Application; Rules being of leſs Avail here than in any of the other Branches of the Art, as *Colouring*, *Clair-Obſcure*, *Expreſſion*, &c.

*The principal Rules that regard the Deſign*, are: That Novices accuſtom themſelves to copy good Originals at firſt Sight: Not to uſe Squares in drawing; for Fear of ſtinting and confining their Judgment: To ſtay till they can *deſign* well after the Life 'ere they begin the Practice of Perſpective Rules: In *Deſigning* after the Life, to learn to adjuſt the Bigneſs of their Figures to the viſual Angle, and the Diſtance of the Eye, from the Model or Object: To mark out all the Parts of their *Deſign*, before they begin to ſhadow: To make their Contours in great Pieces, without taking Notice of the little Muſcles, and other Breaks: To make themſelves Maſters of the Rules of Perſpective: To obſerve every Stroak as to its perpendicular Parallel, and Diſtance; and particularly ſo to compare, and oppoſe the Parts that meet upon, and traverſe the Perpendicular, ſo to form a Kind of Square, in the Mind; which is the great, and almoſt the only Rule of *Deſigning* juſtly: To have a regard not only to the Model, but alſo to the Part already *deſign'd*; there being no ſuch Thing as *deſigning* with ſtrict Juſtneſs, but by comparing, and proportioning every Part to the firſt.

The reſt relates to *Perſpective*: As, that thoſe Objects are ſeen at one View, whoſe Rays meet in a Point: That the Eye and Object be always conceiv'd as immoveable: That the Space, or *Medium* between them, be conceiv'd tranſparent: And that the Eye, Object, and Picture, be at a juſt Diſtance; which is uſually double the Bigneſs of the Subject, or Picture. See PERSPECTIVE.

DESIGNING, the Art of Delineating, or Drawing the Appearance of natural Objects, by Lines, on a Plane. See DESIGN.

To *deſign* according to the Rules of Mathematicks, makes the Subject of perſpective. See PERSPECTIVE, and SCENOGRAPHY.

To *deſign* by the *Camera Obſcura*. See CAMERA *Obſcura*.

*A Mechanical Method of* DESIGNING *Objects.*

Provide a ſquare Piece of Glaſs fitted into a Frame, ABDC, (*Tab. Perſpective Fig. 9.*) and waſh, or ſmeer it over with Water, wherein a little Gum has been diſſolved. When 'tis well dried again, turn it towards the Object, or Objects to be *deſign'd*, ſo as that the Whole thereof may be ſeen through a *Dioptra*, or Sight GH, fix'd thereto. Then proceed to work; and applying the Eye to the Sight, with a Pen and Ink draw every Thing on the Glaſs, as you ſee it appear thereon. Having finiſh'd the Draught, lay a fair, moiſt Paper thereon; and preſſing it pretty tight down, the whole will be transferr'd from the Glaſs to the Paper. The Method is very good, eaſy, and exact; and deſerves to be more uſed by Painters.

DESIGNATION, the Act of marking, or making a Thing known. The *Deſignation* of ſuch an Eſtate is made by the Tenants, Butments, and Boundings.

Among the *Romans* there were *Deſignations* of the Conſuls, and other Magiſtrates, ſome Time before their Election.

DESIGNATOR, a *Roman* Officer, who aſſigned, and mark'd each Perſon his Place, and Rank in publick Ceremonies: Or, a *Maſter of the Ceremonies*, who regulated the Seats, March, Order, *&c.*

There were *Deſignators* at funeral Solemnities, at the Games, Theatres, and Shews, who not only aſſign'd every body his Place, but alſo led him to it; as appears from the Prologue to the *Pœnulus* of *Plautus*.

The Word is form'd from the Verb *deſignare*.

DESPOT, a Title, or Quality given to the Princes of *Walachia*, *Servia*, and ſome of the neighbouring Countries.

The Word in its firſt Origin ſignifies the ſame with the Latin *Herus*, and the Engliſh *Maſter*. But in Time it underwent the ſame Fate on Medals, as, among the Latins, *Cæſar* did with regard to *Auguſtus*; ΒΑΣΙΛΕΥΣ, anſwering to *Auguſtus*; and ΔΕΣΠΟΤΗΣ, *Deſpotes*, to *Cæſar*. Thus, *Nicephorus*, having order'd his Son *Stauracius* to be crown'd; the Son, out of Reſpect, would only take the Name ΔΕΣΠΟΤΗΣ; leaving to his Father that of ΒΑΣΙΛΕΥΣ. For it is to be noted, that it was juſt about the Time that the Emperors began to ceaſe to uſe *Latin* Inſcriptions. This Delicacy, however, did not laſt long; For the following Emperors prefer'd the Quality of ΔΕΣΠΟΤΗΣ to that of ΒΑΣΙΛΕΥΣ, particularly *Conſtantin*, *Michael Ducas*, *Nicephorus Botoniates*, *Romanus Diogenes*, the *Commenii*, and ſome others. In Imitation of the Princes, the Princeſſes likewiſe aſſumed the Title of ΔΕΣΠΟΙΝΑ.

'Twas the Emperor *Alexis*, ſurnamed the *Angel*, that firſt created the Dignity of *Deſpot*; and made it the firſt after that of *Emperor*, above that of *Auguſtus*, or *Sebaſtocrator*, and *Cæſar*. The *Deſpots* were uſually the Emperors Sons, or Sons in Law, and their Collegues, or Co-partners in the Empire, as well as their preſumptive Heirs. The *Deſpots* that were Sons of the Emperors, had more Privileges and Authority, than thoſe that were only Sons in Law. *Codin*, p. 38. deſcribes the Habit, and Ornaments of the *Deſpot*. See the Notes of *Fa. Goar* on that Author.

Under the Succeſſors of *Conſtantin* the *Great*, the Title, *Deſpot of Sparta*, was given to the Emperor's Son, or Brother, who had the City of *Sparta*, or *Lacedemon*, by Way of Apannage.

DESPOTISM, or DESPOTIC *Government*, a Form of Government wherein the Prince is abſolute and arbitrary, doing whatever he liſts, without being check'd by any other

other Power. Such are moſt of the Eaſtern Governments, as thoſe of the *Mogol*, *Grand Seignior*, *Sophi*, &c.

DESPOUILLE, in Heraldry, is the whole Caſe, Skin, or Slough of a Beaſt, with the Head, Feet, Tail, and all Appurtenances; ſo as being filled, or ſtuffed, it looks like the entire Creature.

DESPUMATION, is the *Clarification* of any Liquor, by throwing up its Foulneſs in a Froth, and taking that off. See FROTH, CLARIFICATION, &c.

DESQUAMATION expreſſes the cleanſing carious bones, which flake off like Scales. See SCALES, SQUAMMÆ, &c.

DESSERT, the laſt Service brought on the Tables of People of Quality; when the Meats are all taken off. The *Deſſert* conſiſts of Fruits, Paſtry-Works, Confections, &c.

DESSICATIVE, or DESICCATIVE, in Medicine, Chirurgy, and Pharmacy, a Remedy that has the Virtue of *drying* up ſuperfluous Moiſture; uſed to ſkin over old Sores, &c. A *Deſſicative* Unguent, &c. Pimprenella, &c. is held very deterſive, *deſſiccative*, and vulnerary. *Lemery*.

DESTILLATION, or *Diſtillation* in Chymiſtry. See DISTILLATION.

DESTINY, the Order, Diſpoſition, or Chain of ſecond Cauſes, appointed by Providence; and importing, or carrying with it a Neceſſity of the Event. See FATE.

According to many of the Heathen Philoſophers, *Deſtiny* was a ſecret, and inviſible Power, or Virtue, which with incomprehenſible Wiſdom, conducts what to us appears irregular, and fortuitous: Which amounts to what we call *God*. See GOD,

The *Stoicks* by *Deſtiny* underſtood a certain Concatenation of all Things, which from all Eternity follow each other of abſolute Neceſſity; there being no Power able to interrupt their Connexion; which is our Idea of *Providence*. See PROVIDENCE.

But the *Stoicks* made even the Gods themſelves ſubject to the Neceſſity of this *Deſtiny*. The Truth is, the *Stoicks* rather define what the Word *Deſtiny* ſhould ſignify, than what it did ſignify in common Language: For they had no diſtinct Idea of this Power to whom they attributed thoſe Events. They had only a vague, confuſed Idea of I know not what *Chimera*, or unknown Cauſe, to which they referr'd that invariable Diſpoſition, and the eternal Concatenation of all Things. There is no real Being that the Name *Deſtiny* can agree to. The Heathen Philoſophers, who had fram'd an Idea thereof, ſuppoſed it to exiſt without knowing preciſely what they meant by it. But Men, not daring on the one Side, to impute to Providence the Evils and Misfortunes that befel them, as they imagined undeſervedly; and on the other Side, not being willing to allow that it was their own Fault, form'd this Phantom of *Deſtiny*, to bear the Weight of all the Evil. *Thomaſſin*.

DESTINIES, in Mythology. See PARCÆ.

DESTRUCTION, paſſively taken, is the Corruption, or Annihilation of ſomething before Exiſting. A Thing paſſes *ab Eſſe ad Non-eſſe*; either by *Corruption*, when nothing of the Subſtance is loſt, but only the Accidents, *viz.* Diſpoſition of Parts. See CORRUPTION.

Or, by *Annihilation*, when both Subſtance and Accidents are loſt. See ANNIHILATION.

DESUDATION, expreſſes a profuſe, and inordinate Sweating; from what Cauſe ſoever. See SWEAT.

DESULTOR, in Antiquity, a Vaulter, or Leaper; who jumps off one Horſe upon another.

Among the *Scythians*, *Indians*, and *Numidians*, the Cavaliers, or Horſe-men, who ſerved in the Wars, were very expert *Deſultores*; that is, they always carried with them at leaſt two Horſes, and when that they were mounted on grew weary, or wanted Breath, they leap'd with great Agility and Addreſs upon the other, which they led in the Hand. The *Greeks* and *Romans* borrow'd the Practice from thoſe barbarous Nations; but they only uſed it in their Games, Courſes, and funeral Solemnities, and never, that we read of, in War. The *Deſultores*, therefore, were among the People of *Aſia*, and *Africa*, Soldiers; but among the *Romans*, &c. they were no more than Tumblers, and Poſture-Maſters. *Euſtatheus* on *Homer*'s *Iliad*, Lib. IV. aſſures us, that inſtead of two, they had ſometimes four, or ſix Horſes, all a-breaſt, and would jump from the firſt to the fourth, or ſixth, which was the Maſter-piece of their Art.

DETACH'D *Pieces*, in Fortification, are Demi-Lunes, Ravelins, Horn- and Crown-Works, and even Baſtions, when ſeparated, or at a Diſtance from the Body of the Place.

In Painting, the Figures are ſaid to be well *detach'd*, or looſen'd, when they ſtand free, and diſengag'd from each other, are no where confounded together, but ſtand out with a ſtrong *Relievo* from the Ground, and each other.

DETACHMENT, a Military Term, ſignifying a certain Number of Soldiers, taken out of a greater Body, on Purpoſe to be employ'd in the Undertaking of ſome particular Enterprize; as to form a Kind of flying Camp, to relieve a Party already engag'd in Battel, to joyn a ſeparate Army, to aſſiſt at the Siege of a Place, or enter into ſome Garriſon, &c.

DETENTION, a Poſſeſſion, or Holding of an Heritage, or the like, from ſome other Claimant.

The Word is chiefly uſed in an ill Senſe, for an unjuſt Holding, &c. The Canons condemn a Perſon who has intruded into a Benefice, to make Reſtitution of all the Fruits thereof, during the Time of his *unjuſt Detention*. See BENEFICE.

DETERIORATION, an Act whereby a Thing is rendred worſe.

When the *Deterioration* of a Commodity, ſeiz'd by an Officer, ariſes from the Fault of the Keeper, he is anſwerable for the ſame. *J. Frideric Mayer*, Profeſſor at *Leipſic*, printed a Treatiſe of *Deterioration*, in the Year 1695. under the Title of, *Tractatus de Deterioratione*.

DETERGENT, in Medicine, is applied to Remedies that cleanſe, mundify, and carry off viſcid, and glutinous Humours adhering to Bodies.

The Plant, call'd *Harts-Horn*, *deterges*, and conſolidates Wounds. *Rhaponticum* is aperitive, and good againſt the Gravel and Stone; It alſo *deterges*, and expels Poyſon.

*Detergents* are not only ſoftening, and adheſive, but alſo, by a peculiar Activity, or Diſpoſition to Motion, joyn'd with a ſuitable Configuration of Parts, are apt to abrade, and carry along with them ſuch Particles as they lay hold on in their Paſſage. All Medicines of this Intention are ſuppoſed to cleanſe, and heal, that is, incarnate, or fill up with new Fleſh all Ulcerations, and Foulneſſes, occaſioned thereby, whether internal, or external.

To do this, in all internal Caſes eſpecially, the Medicine muſt be ſuppoſed to maintain its primary Properties, until it arrives at the Place of Action, and there it does what entitles it to the Appellation of a *Detergent*, and a *Vulnerary*, firſt by its adheſive Quality, which conſiſts in the comparative Largeneſs of Surface, and Flexibility of its component Parts: For by this it very readily falls into Contact with, and adheres to the Slough of ulcerous Exudations, which by their looſe Situations are eaſily carried along with the Medicine, and when ſuch Matter is ſo carried away, which is the cleanſing, and *deterging* Part, what was inſtrumental in this Office, will afterwards ſtick to, and adhere with the cutaneous Filaments, until by their Addition, and the Protruſion of proper Nouriſhment *ab interno* to the ſame Place, the Waſte is made up, that is, the Ulcer is healed.

After the ſame Manner is the Operation of ſuch Subſtances to be accounted for in external Application. By the Warmth of their Parts they rarify, and by their adheſive Quality, they joyn with, and take off along with them, in every dreſſing, what is thrown upon the Place to which they are applied, until a more convenient Matter is brought thither by the circulating Juices, which it aſſiſts in adhering to, and incarnating the eroded Cavities. Only this may be taken Notice of, that internally, whatſoever of this Kind is mixed with the Animal Fluids, by the known Laws of Circulation, they will be firſt ſeparated, and left behind. For all thoſe Parts, which are ſpecifically heavieſt, will move neareſt the Axis of the Canals, becauſe their Moments are the greateſt, and will carry them as near as can be in ſtreight Lines; but the lighter Parts will always be joſtled in the Sides, where they ſooneſt meet with Outlets to get quite off, or are ſtruck into ſuch Cavities, we are here ſpeaking of, in which they adhere, and make Part of the Subſtance.

This is underſtood of the milder Degree of *Detergents*; and it is eaſy to conceive from hence, how an Increaſe of thoſe Qualities of Activity and Adheſion conjointly, may make a Medicine ariſe to the greateſt Efficacy in this reſpect. And it is upon this Foot, that all thoſe Medicines operate, which are given to cleanſe Obſtructions, or Foulneſſes in any of the *Viſcera*, or Paſſages; and which may be increaſed in Efficacy ſo far, as to fetch off even the Membranes, and Capillary Veſſels.

DETERMINATE, or DETERMINED *Problem*, in Geometry, is that which has but one, or at leaſt but a certain, definite Number of Solutions; in Contra-diſtinction to an *Indeterminate* Problem, which admits of infinite Solutions.

Such, *e. gr.* is the Problem, *To deſcribe an Iſoſceles Triangle on a given Line, whoſe Angles at the Baſe ſhall be double that at the Vertix:* which has only one Solution; as that which follows has two, viz. *To find an Iſoſceles Triangle, whoſe Area and Perimeter are given.* See PROBLEM.

A *Determinate* Problem may either be *Simple*, or *Linear*, *Plane*, *Solid*, or *Surſolid*. See PLANE, SOLID, &c.

DETERMINATION, in Phyſicks, the Diſpoſition, or Tendency of a Body towards one Way, rather than another.

Heavy Bodies have a *Determination* towards their Centre. See CENTRE.

DETERMINATION *of Motion*. See MOTION.

DETERMINATION, in Philoſophy, the Action whereby a Cauſe is limited, or reſtrained to act, or not act, this, or that, and in this, or that Manner.

Hence, we ſay, by a *Determination*, an Agent indifferent to ſeveral Things, is in ſome Meaſure actuated.

This, ſay the School-men, proceeds either from an *Efficient* Cauſe, in which Caſe the *Determination* is call'd *Effective*; as when an Artiſt *determines* an Inſtrument to a certain Action: Or from the *Form*, as that *determines* the Indifferency of the Matter; And thus our Senſes are ſaid to be *Determinations*, to have Ideas upon the Preſence of external Objects.

A *Determination* to be pleas'd with certain Forms, or Ideas, a late excellent Author calls, *an Internal Senſe*; and a *Determination* to be pleas'd with virtuous Actions, Characters, Manners, *&c. a Moral Senſe*: Or, the *Determination* is from the *Matter*, or Subject that receives the Action; And thus, the *Heating* of Fire upon Clay *determines* it to harden, upon Wax to ſoften, *&c.* Or it is from the *Object*; as when we ſay, *Colour determines the Viſive Power*: Or laſtly, it is from the *End*; as *the End* determines *the Deſire*.

*Determination* is either *Moral*, or *Phyſical*: A *Moral Determination* is that proceeding from a Cauſe, which operates *Morally*, i. e. by Commanding, Perſuading, or Adviſing ſome Effect. *Phyſical Determination*, is an Act whereby God excites, and applies a ſecond Cauſe to act antecedently to all Operation of the Creature. Such a *Determination*, the *Thomiſts* and *Dominicans* maintain neceſſary to all, and ſingular Action of every Creature. The *Jeſuits*, on the contrary, deny that God thus *determines* even ſecond Cauſes; and hold, that God has no Influence on the ſecond Cauſes, but only with the ſecond Cauſe on the Action. And thus they exclude a *Phyſical Determination* both from natural Cauſes, as ſuppoſing them already *determin'd* by Nature to act; ſo that there needs no other external *Determination* from God to the ſeveral Actions; and from free Cauſes, as ſuppoſing ſuch a *Prædetermination* contrary to our Natural Liberty. See CAUSE, THOMISTS, *&c.*

DETERSIVE, in Medicine, the ſame with *Detergent*. See DETERGENT.

A Clyſter is a *deterſive* Medicine, which cleanſes the lower Venter. *Deterſive* Unguents are uſually call'd *Mondificatives*. See MONDIFICATIVE.

The Leaves, and Summets of the Straw-berry are *deterſive*, and aſtringent.

DETINET, in Law. See DEBITO, and DEBET and *Solet*.

DETINUE, a Writ that lies againſt a Man, who having Goods or Chattels deliver'd to keep, refuſes to re-deliver them: anſwering, in great Meaſure, to the *Actio Depoſiti* of the Civilians.

He takes his *Action of Detinue*, to recover the Thing *detain'd*, not the Damages ſuſtain'd by the *Detinue*.

DETONATION, or *Fulmination*, in Chymiſtry, the Noiſe which Minerals make when they begin to heat in Crucibles; by the volatile Parts ruſhing out with Impetuoſity, and the Humidity eſcaping.

*Detonation* is much the ſame with *Decrepitation*, only its Action more forcible, and the Noiſe greater. Thus, *Aurum fulminans* heated, *&c.* goes off with a violent Crack, *i. e.* makes a great *Detonation*.

*Detonation* takes away the impure, volatile Sulphur from Bodies.

The Word is form'd of *de*, and *tono*, I thunder.

In the Chymical Senſe, *Detonation* is the Act, or Operation of expelling the impure, volatile, and ſulphureous Parts out of Bodies, and leaving behind the fix'd, and internal Parts. It is perform'd by means of Salt-petre, *&c.*

DETRANCHEE, among the *French* Heralds, ſignifies a Line bend-wiſe, which does not come from the very Angle, but either from ſome Part of the upper Edge, and thence falling a-thwart, or Diagonally; or from Part of the Dexter-Side.

They ſay, *Tranchee*, *Detranchee*, and *Retranchee*, to denote, that there are two Diagonal Lines, making two Partitions in the Eſcutcheon, and coming from the Angles, and a third from ſome of the other Parts abovementioned.

DEVASTAVERUNT *Bona Teſtatoris*, a Writ lying againſt Executors, for paſſing Legacies, and Debts, without Specialties, to the Prejudice of the Creditors that have Specialties before the Debts on the ſaid Specialties are due. In which Caſe the Executors are as liable to Actions, as if they had notoriouſly waſted the Goods of the Teſtator, or converted them to their own Uſe; and are compellable to pay ſuch Debts by Specialty out of their own Goods.

DEVENERUNT, a Writ anciently directed to the Eſcheator, after the Death of a Tenant of the King holding in *Capite*; And that, of his Son, and Heir, within Age, and in the King's Cuſtody; commanding the Eſcheator to enquire, upon the Oaths of good and lawful Men, what Lands and Tenements, by the Death of the Tenant, come to the King.

DEVIATION, in the old Aſtronomy, a Motion of the Deferent, or Excentric, whereby it advances to, or recedes from the Ecliptic. See DEFERENT.

The greateſt *Deviation* of *Mercury* is 16 Minutes: that of *Venus* only ten. See EXCENTRICITY.

DEVIL, *Diabolus*, an evil Angel; and one of thoſe celeſtial Spirits caſt down from Heaven, for pretending to equal himſelf with God. See DÆMON.

We find no mention of the *Devil* in the Old Teſtament, but only *Satan*. See SATAN.

Nor do we meet with the Word *Devil* in any Heathen Authors, in the Signification attach'd to it among Chriſtians, that is, as a Creature revolted from God; their Theology went no further than to evil *Genii*, or *Dæmons* who harraſſed, and perſecuted Mankind. Thus, the *Chaldæans* believed both a good Principle, and an evil Principle, which was an Enemy of Mankind.

The Relations we have of the Religion of the *Americans*, aſſure us of ſome idolatrous Nations, who worſhip the *Devil*: But the Term *Devil* muſt not here be taken in the Scripture Senſe: Thoſe People have an Idea of two Collateral Independent Beings, one whereof is good, and the other evil. And they place the Earth under the Guidance, and Direction of the evil Being; which our Authors, with ſome Impropriety, call the *Devil*.

The Word is form'd from the Latin *Diabolus*, which comes from the *Greek* Διάβολος, *Accuſer*, or *Calumniator*. The *Æthiopians* paint the *Devil* white, to be even with the *Europeans*, who repreſent him black. *Ludolph.*

DEVISE, in Heraldry, a Name common to all Figures, Cyphers, Characters, Rebus's, Motto's, Sentences, Proverbs, *&c.* which, by Alluſion to the Names of Perſons, or Families, denote their Nobility, or Qualities. See CYPHER, CHARACTER, BADGE, MOTTO, PROVERB, REBUS, *&c.*

*Deviſe*, in this Senſe, is of a much older Standing, than Heraldry it ſelf; being that which gave the firſt Riſe to Armories: Thus, the *Eagle* was the *Deviſe* of the *Roman* Empire: Thus S P Q R was the *Deviſe* of the *Roman* People; and ſtill continues to be what they call the Eſcutcheon of the City of *Rome*. See ARMS.

The firſt *Deviſes* were ſimple Letters diſtributed on the Borders of the Liveries, Houſings, and Banners, and at length on the Shields. Thus the K. was the *Deviſe* of the *French* Kings of the Name of *Charles*, from *Charles* V. to *Charles* IX.

There were alſo *Deviſes* by Rebus's, Equivocals, or Alluſions, both to Names, and Arms. The Dukes of *Guiſe* took for their *Deviſe* an A in an O, to ſignifie *each in his Turn*. And the Houſe of *Senecai*, *In Virtute & Honore Seneſces*. Some that had Towers in their Arms, *Turris mea Deus*, &c. See REBUS.

There are alſo Enigmatical *Deviſes*: As that of the *Golden Fleece*, with *Autre n'aurai*; Intimating that *Philip the Good*, who inſtituted that Order, renounced every other Woman, but *Iſabella* of *Portugal*, whom he then married. See ENIGMA.

*Deviſes* ſometimes contain entire Proverbs; As that of *Cæſar Borgia*, *aut Cæſar aut Nihil*. See PROVERB.

The Word *Deviſe* is form'd from the Latin *dividere*, and was applied to the Things juſt mentioned, as well as thoſe hereafter mentioned, by reaſon they ſerved to divide, ſeparate, and diſtinguiſh Perſons, Parties, *&c.* *Fa. Menetrier* obſerves, that there as many different Kinds of *Deviſes*, as there are different Manners of diſtinguiſhing one another, or as there are ſimple Figures, or Words, capable of expreſſing Qualities, Offices, Virtues, Actions, *&c.* of Perſons, and of notifying, or diſtinguiſhing them from others.

DEVISE, is now taken in a more reſtrain'd Senſe, for an Emblem; or a Repreſentation of ſome natural Body, with a Motto, or Sentence applied in a figurative Senſe to the Advantage of ſome Perſon. See EMBLEM.

In this Senſe, the Figure, or Image, is call'd the *Body*, and the Motto the *Soul* of the *Deviſe*.

A *Deviſe* is a Sort of Metaphor, repreſenting one Object by another wherewith it has ſome Reſemblance. So that a *Deviſe* is only true, when it contains a Metaphorical Similitude, and may it ſelf be reduced into a Compariſon. Laſtly, it is a Metaphor painted, and viſible, and that ſtrikes the Eye. All theſe Circumſtances are required to a *Deviſe*; and without them, a Figure only makes a Hieroglyphic, and the Word, only a Diction, or Sentence. See ALLUSION, METAPHOR, HIEROGLYPHIC, SIMILE, *&c.*

*Fa. Bouhours* gives a clean and accurate Explication of the Word *Deviſe*, in an Extract inſerted in the *Journal de Trevoux*. A *Deviſe*, ſays he, is a Compoſition, or Aſſemblage of Figures drawn from Nature and Art, call'd the *Body*; and of a few Words adapted to the Figure, and call'd the *Soul*. Such a Compound, adds he, we make uſe of to denote our Thought, or Intention by Compariſon; for the Eſſence of the *Deviſe* conſiſts in a Compariſon taken from Nature, or Art, and founded on a Metaphor. This he illuſtrates in the following Inſtance: A young Nobleman of great Courage, and Ambition, bore for his *Deviſe*, in the laſt Carrouſel at the Court of *France*, a Rocket mounted in the Air, with this *Italian* Motto, *Poco duri purche m'inalzi*, I would laſt little, provided I might riſe high; which ſeems to hold forth the following Diſcourſe: As

the

the Rocket riſes a great Pitch, tho' it only endures a little while; ſo it does not concern me to live long, provided I attain to Glory, and Eminence: which is a juſt Compariſon. See COMPARISON.

On this footing, a *Deviſe*, to define it rightly, is a painted Metaphor; or rather, an Enigma inverted: For, whereas Enigma's repreſent Nature, or Art, by the Events of Hiſtory, and the Adventures of Fables, a *Deviſe* is a Repreſentation of human Qualities by natural, or artificial Bodies. Thus, to expreſs the Character of *Louis* XIV. a Sun was painted, which yet, luminous as it is, has more Virtue than Luſtre. And the better to determine the Senſe of the Painting to this Signification, the *Caſtillian* Motto is added, *Mas virtud que Luz*. The perſonal Merit of *Mary*, Queen of *Scots*, was repreſented by a Pomegranate, with theſe Words, *Mon Prix n'eſt pas de ma Couronne*. And the Talent of an Apoſtolical Perſon, who became all Things to all Men, by a Looking-Glaſs, with thoſe Words of St. *Paul*, *Omnibus Omnia*.

*Deviſes* are uſed on Coins, Counters, Seals, Shields, Triumphal Arches, Artificial Fire-Works, and other Solemnities. They are a Sort of Images, very pertinently, and artfully repreſenting the Enterprizes, and Intrigues of War, Love, Piety, Study, Fortune, *&c.*

The *French* have diſtinguiſh'd themſelves in this Way, eſpecially ſince the Time of Cardinal *Mazarin*, who had a wonderful Fancy for them.

The *Italians* have reduced the Making of *Deviſes* into an Art, and laid down the Laws, and Rules thereof. Some of the principal are, 1. That there be nothing monſtrous, or extravagant in the Figures; nothing contrary to the Nature of Things, or to the common Opinion of Mankind. 2. That Figures be not joyn'd which have no Affinity, or Relation to each other; the Metaphor being to be founded on ſomething real, and not on Hazard, or Imagination; excepting ſome whimſical Unions eſtabliſh'd in Fables, which Cuſtom, and the Authority of the Poets have made paſs for Natural. 3. That the human Body be never taken into *Deviſes*; as this would be to compare a Man with himſelf. 4. That there be a Sort of Unity in the Figures that make the Body: We don't mean, that there muſt only be a ſimple Figure; but that, if there be ſeveral, they have a Relation, and Subordination to each other: So that there be one principal Figure, whereon all the reſt depend. Tho' ſtill the fewer Figures there are in the Body of the *Deviſe*, and the leſs they are confuſed, the more perfect and elegant is the *Deviſe*. 5. The Motto, which is to animate the Figure, muſt agree ſo accurately thereto, as that it could not ſerve for any other. 6. Nothing to be named that appears to the Eye, and which the bare Inſpection may make known. 7. The Motto not to have a compleat Senſe of it ſelf; for being to make a Compound with the Figure, it muſt only be a Part, and conſequently muſt not ſignify the whole. If the Words alone have a compleat Signification, you have a full, and diſtinct Notion independently of the Figure; whereas the Signification ſhould reſult from both. 8. The ſhorter the Motto, the more beautiful: and a Suſpenſion of the Senſe, which leaves ſomewhat to gueſs, is one of the principal Graces of the *Deviſe*. Laſtly, it is accounted a Happineſs, where the Words of a Poet are applied in a Senſe which he never dream'd of, and yet ſo pertinently, that it ſhould ſeem they had been intended for the ſame.

DEVISE, or DIVISE, in common Law, the Act whereby a Teſtator gives, or bequeaths his Lands, or Goods, by his laſt Will in Writing: He who makes the *Deviſe* being call'd the *Deviſor*, and he, to whom it is made, the *Deviſee*.

The Words of a *Will*, the Law interprets in a larger, and more favourable Senſe, than thoſe of a *Deed*: For if Land be *deviſed* to a Man to have to him for ever, or to have to him, and his Aſſigns; In thoſe Caſes the *Deviſee* ſhall have a Fee ſimple. Yet if given in the ſame Manner by Feoffment, he has but an Eſtate for Life. So, if one *deviſe* Land to an Infant in his Mother's Belly; it is a good and valid *Deviſe*; tho' 'tis otherwiſe by Feoffment, Grant, or Gift: for in thoſe Caſes there ought to be one of Ability, to receive preſently, otherwiſe it is void. See WILL, and DEED.

DEUNX, a Diviſion of the Roman *Libra*, or Pound; containing 11 Ounces; or eleven *Twelfths* of any Thing. See As, and LIBRA.

DEVOLVED, ſomething acquired by Right of *Devolution*. See DEVOLUTION.

*Such a Right is* devolved *to the Crown. Such a Succeſſion* devolved *to N.... by the Death of N....*

The Word is alſo uſed for a Right acquired by a Superior of conferring a Benefice, when the Inferior, and Ordinary Collator, has neglected to confer, or has conferr'd it on an unqualified Perſon. If a Patron neglects to preſent to a Benefice in ſix Months, the Preſentation *devolves* upon the Biſhop, and from thence to the Primate.

DEVOLUTION, a Right acquired by Succeſſion, from one Degree to another.

*Devolution* in general, is an Impediment provided by the Cuſtoms of ſeveral Nations, whereby the Husband who ſurvives his Wife, or the Wife ſurviving her Husband, is prohibited to alienate the real, and immoveable Effects of the deceaſed, and obliged to preſerve them for the Children iſſued from that Marriage. So that they ſucceed thereto in Excluſion of thoſe born of a ſecond Marriage.

DEVOTION, a ſincere, ardent Worſhip of God.

Monſr. *Jurieu* defines *Devotion* a Softening, and Yielding of Heart, with an inward Conſolation, which the Soul of the Faithful feels in the Exerciſes of Piety.

Under the Name of *Devotions*, are uſually underſtood certain Religious Practices, which a Perſon makes it a Law with him to diſcharge regularly; and with Reaſon; this Exactitude be founded on ſolid Piety; otherwiſe 'tis Vanity, or Superſtition.

Among the *Romans*, *Devotion* was a Sort of Sacrifice, or Ceremony, whereby they conſecrated themſelves to the Service of ſome Perſon. The Ancients had a Notion, that the Life of one might be redeem'd by the Death of another: And hence were thoſe *Devotions* ſo frequent for the Lives of the Emperors. See VOTA.

The *Devotion* of *Decius*, who, after *devoting* himſelf to his Country, threw himſelf into the Hands of his Enemies, and was kill'd, is ſaid to have gain'd the *Romans* the Victory.

But *Devotion* to any particular Perſon was not known till *Auguſtus*. The Day after the Title *Auguſtus* had been given *Octavius*; *Pacuvius*, a Tribune of the People, began to ſay, he would *devote*, and conſecrate himſelf to him, as was practiſed among the barbarous Nations, to obey him even at the Expence of Life, if he were commanded. His Example was immediately followed by all the reſt; and it came at length to be eſtabliſh'd into a Cuſtom, never to go to ſalute the Emperor, without declaring they were *devoted* to him. *Auguſtus*, tho' ſeeming to oppoſe this vile and infamous Flattery, yet rewarded the Author.

DEVOURING, in Heraldry. When Fiſhes are born in an Eſcutcheon in a feeding Poſture, the Heralds denominate it by *devouring*; by reaſon Fiſhes ſwallow all their Food whole. See FISHES.

DEUTERONONICAL, in the School-Theology, a Term applied to certain Books of Holy Scripture, which were added to the Canon after the reſt; either by reaſon they were not wrote till after the Compilation of the Canon, or by reaſon of ſome Diſpute as to their Canonicity. See CANON.

The Jews, 'tis certain, acknowledge ſeveral Books in their Canon, which were put there later than the reſt. They ſay, that under *Eſdras*, a great Aſſembly of their Doctors, which they call by Way of Eminence, the *Great Synagogue*, made the Collection of the Sacred Books, which we now have in the Old *Hebrew* Teſtament. And they agree, that they put Books therein which had not been ſo before the *Babyloniſh* Captivity; ſuch are thoſe of *Daniel*, *Ezekiel*, *Haggai*, &c. and thoſe of *Eſdras*, and *Nehemia*.

And the Church has ſince added others to the *Canon*, that were not, nor could not be in the *Canon* of the Jews; by reaſon ſome of them were not compoſed till after. Such is the Book of *Eccleſiaſticus*; with ſeveral of the *Apocryphal* Books, admitted by the *Romaniſts*, as the *Macchabees*, *Wiſdom*, &c. Others were added ſtill later, by reaſon their Canonicity had not been yet examin'd: And till ſuch Examen, and Judgment they might be ſet a-ſide at Pleaſure.

But ſince ſhe has pronounced as to the Canonicity of theſe Books, there is no more room now to doubt of them, than there was for the Jews to doubt of thoſe of the Canon of *Eſdras*. And the *Deuterononical* Books are as Canonical, as the Proto-canonical. The only Difference between them conſiſting in this, that the Canonicity of the one was not generally known, examin'd, and ſettled ſo ſoon as that of the others.

The *Deuterononical* Books in our Canon, are the Book of *Eſther*, either the whole, or at leaſt the ſeven laſt Chapters thereof. The Epiſtle to the *Hebrews*; that of *James*; and that of *Jude*; the ſecond of St. *Peter*; the ſecond, and third of St. *John*; and the *Revelation*. The *Deuterononical* Parts of Books, are, in *Daniel*, the Hymn of the three Children; the Prayer of *Azariah*; the Hiſtories of *Suſannah*, of *Bel*, and the *Dragon*; the laſt Chapter of St. *Mark*; the bloody Sweat, and the Appearance of the Angel, related in St. *Luke* Chapter XXII; and the Hiſtory of the adulterous Woman in St. *John*, Chapter VIII.

The Word is *Greek*, being compounded of δεύτερος, *Second*, and κανονικὸς, *Canonical*.

DEUTERONOMY, one of the Sacred Books of the Old Teſtament; being the laſt of thoſe wrote by *Moſes*. See PENTATEUCH.

It does not appear, that *Moſes* made any Diviſion of what he wrote into Books; or that he gave different Names and Titles to the different Parts of his Work; nor do the Jews, even at this Day, diſtinguiſh them in the Copies they uſe in the Synagogues; but write them all running as one ſingle Work, without any other Diſtinction beſide

ſide that of little and great Paraſches. 'Tis true, in the other Copies, uſed by private Perſons, they are divided into five Parts, as among us; But they give them no other Name, but the firſt Word wherewith each Diviſion begins: much as we do in quoting a Decree, or Chapter of the Canon-Law.

Thus, the firſt Part of *Moſes*'s Work they call בראשית *Bereſchit*, becauſe beginning with that Diction. The ſecond they call ואלה שמות *Ve Elleh Schemot*: The third, ויקרא *Vajickrah*; The fourth, וידבר *Vajiedabber*; and the fifth, אלה הדבריכם *Elleh haddebarim*; which is one of the firſt Words thereof. This Cuſtom is very ancient among the *Rabbins*, as appears from the ancient Commentaries on thoſe Books, call'd, בראשית רבה *Bereſchit Rabba*, ואלה שמות רברה *Veelleh Schemot Rabba*, &c. and from the *Prologus Galeatus* of St. *Jerom*.

It was the *Greeks*, when they firſt tranſlated the Law, that gave the five Parts, into which it was divided, the Names of *Geneſis*, *Exodus*, *Leviticus*, *Numbers*, and *Deuteronomy*. Accordingly the Names are *Greek*; excepting that of *Leviticus*, which is *Hebrew*. And they expreſs what is contain'd in thoſe Books, or at leaſt the moſt remarkable Things contain'd therein; which is the *Greek* Manner of giving Titles.

The Book of *Deuteronomy* was ſo call'd, becauſe this laſt Part of the Work of *Moſes* comprehends the Repetition, or Recapitulation, which that Legiſlator made to the *Iſraelites* before his Death, of the Law he had before deliver'd them at length. And hence *Deuteronomy* is ſtill call'd by the *Rabbins* משנה *Miſchneh*, Repetition, משנה תורה *Repetition of the Law*; *ſecond Law*. They likewiſe call it ספר תוכחות *the Books of Reprimands*, on Account of the XXVIIIth Chapter, which is full of Bleſſings promiſed to ſuch as keep the Law; and of Curſes threaten'd ſuch as tranſgreſs it.

*Deuteronomy* was wrote the fortieth Year after the Delivery from *Egypt*, in the Country of the *Moabites* beyond *Jordan*: *Moſes* being then in the 120th Year of his Age. It contains in *Hebrew* eleven Paraſches, tho' only Ten in the Edition of the *Rabbins* at *Venice*; XX Chapters, and 955 Verſes. In the *Greek* and *Latin* Verſions it contains XXXIV Chapters. The laſt is not of *Moſes*. Some ſay it was added by *Joſhua* immediately after *Moſes*'s Death; which is the moſt probable Opinion. Others will have it added by *Eſdras*.

The Word is *Greek*, compounded of δεύτερος, *Second*, and νόμος, *Law*.

DEW, *Ros*, a thin, light, inſenſible Miſt, or Rain, falling while the Sun is below the Horizon.

Naturaliſts uſually rank *Dews* among the Number of Meteors of the watery Kind. Some define it a Vapour liquified, and let fall in Drops. Others a Vapour having a like Relation to Froſt, as Rain has to Snow, *&c.* Among the Diſſertations of Monſr. *Huet* is a Letter, to ſhew that *Dew* does not fall, but riſes.

To us, *Dew* appears only to differ from Rain as more, and leſs. Its Origin, and Matter, no doubt, is from the Vapour, and Exhalation of the Earth and Water, rais'd, as ſhewn under the Article VAPOUR. The thin *Veſiculæ*, whereof Vapours conſiſt, being once detach'd from their Bodies, we all know, keep riſing in the Atmoſphere, till they arrive at ſuch a Stage of the Air, as is of the ſame ſpecific Gravity with themſelves: Then their Riſe is ſtopp'd. Now, as 'tis the Warmth, or Fire, that, dilating the Parts of Water, forms the *Veſiculæ* ſpecifically lighter than Air, and capable of aſcending therein; So when that Heat declines, or is loſt, as by the Approach, or Contiguity of any colder Body, the *Veſiculæ* condenſe, become heavier, and deſcend. In the Day-time, therefore, the Sun warming the Atmoſphere by a continual Influx of his Rays, the Vapours once rais'd, continue their Progreſs, as meeting with nothing to increaſe their Gravity, till ſuch Time as they are got far out of the Reach of the reflected Warmth of the Earth, in the middle Region of the Atmoſphere. Here condenſing, they form *Clouds*, from which ariſe *Rain*, as ſhewn under CLOUDS, and RAIN.

But when the Sun is below the Horizon, the Caſe is ſomewhat different: For the Atmoſphere then cooling, the Vapours rais'd by the Warmth of the Earth, and of the Rays of the Sun, lodg'd therein the preceeding Day, begin to condenſe a-pace, as ſoon as they are got out of the Air, ſpending their Stock of Fire and Heat on the cold, moiſt Air they paſs through. Their Aſcent, therefore, becomes ſhort; and by that Time they are got a few Fathoms high, being exhauſted of their Fire, and reſtor'd to the natural Dimenſions, and Gravity of their conſtituent Water; they precipitate, and fall back again in little Spherules, or Drops, as ſhewn of *Rain*.

From theſe Principles the other Phœnomena of *Dews* are eaſily accounted for. Hence, *e.gr.* it is, that *Dews* are more copious in the Spring, than in the other Seaſons; there being then a greater Stock of Vapour in Readineſs, through the ſmall Expence thereof in the Winter's Cold and Froſt, than at other Times. Hence, what *Pliny* relates of *Egypt*, that it abounds in *Dews* throughout all the Heats of Summer; For the Air there being too hot to conſtipate the Vapours in the Day-time, they never gather into Clouds, and hence they have no Rain; But we know, that in Climates where the Days are exceſſive hot, the Nights are remarkably cold; So that the Vapours raiſed after Sunſet, are readily condenſed into *Dews*. Or, perhaps, that notable Coldneſs is rather the Effect, than the Cauſe of the Quantity of *Dews*. For a deal of Vapour being raiſed by the great Heat of the Earth, and the Stock of Fire ſpent on it in the Day-time, the Influx of ſuch a Quantity of cold Moiſture muſt greatly chill the Air.

*May*-DEW whitens Linen, and Wax; The *Dew* of Autumn is converted into a white Froſt. Out of *Dew* putrified by the Sun, ariſe divers Inſects, which change a-pace out of one Species into another: what remains is converted into a fine, white Salt, with Angles like thoſe of Salt-peter, after a Number of Evaporations, Calcinations, and Fixations.

There is a Spirit drawn from *May-Dew*, which has wonderful Virtues attributed to it. The Method of gathering, and preparing it, is preſcribed by *Hanneman*, Phyſician at *Kiel*. 'Tis to be gather'd in clean linen Cloths expoſed to the Sun in cloſe Vials; then diſtill'd, and the Spirit thrown upon the *Caput Mortuum*; this is to be repeated till the Earth unite with the Spirit, and become liquid; which happens about the 7th, or 8th Cohobation, or Diſtillation. By ſuch means you gain a very red, odoriferous Spirit. *Stolterfolth*, a Phyſician of *Lubec*, thinks *May-Dew* may be gather'd in Glaſs-Plates, eſpecially in ſtill Weather, and before Sun-riſe. And *Etmuller* is of the ſame Sentiment. It might likewiſe be gather'd with a Glaſs-Funnel, expoſed to the Air, having a crooked Neck to bring the *Dew* into a Vial in a Chamber. See *Philoſ. Tranſact.* 1665. *May*. *Hoffmann*, and others. 'Tis apparently from the Preparation of this *Dew*, that the Brothers of the *Roſy-Croſs* took their Denomination. See ROSYCRUCIANS.

In the *Philoſoph. Tranſact.* we have an Account of a very extraordinary Kind of *Dew*. For a good Part of the Winter 1695, ſays the Biſhop of *Cloyne*, there fell in many Parts of the Provinces of *Munſter*, and *Leimſter*; a Kind of thick *Dew*, which the Country-People call'd *Butter*, from its Conſiſtency and Colour; being ſoft, clammy, and of a dark yellow. It fell always in the Night, and chiefly in low, mooriſh Places, on the Top of the Graſs, and oft on the Thatch of Cabbins. 'Twas ſeldom obſerv'd in the ſame Place twice. It commonly lay on the Earth a fortnight without changing Colour, but then died, and turn'd black. It fell in Lumps; and had a ſtrong Smell like that of Graves. Mr. *R. Vans*, in the ſame *Tranſactions*, gives an Account of the like at the ſame Time, in *Limeric*, and *Tipperary*; adding, that if one rubb'd it with the Hand, it melted; but laying it by the Fire, it dried, and grew hard.

DEXTANS, in Antiquity. See As.

DEXTER, in Heraldry, is applied to the *Right* Side, as *Sinister* is to the *Left*. See ESCUTCHEON.

DEXTER-*Point*. See POINT.

DEXTER-*Baſe* is the right Side of the Baſe. See BASE.

DEXTER-*Chief*, the Angle on the right Hand of the Chief. See CHIEF.

The Word is pure *Latin*, ſignifying *Right-hand*; whence the Word *Dexterity* for Addreſs, and Ability in the performing of any Thing.

DEXTROCHERE, or DESTROCHERE, in Heraldry, is applied to the right Arm, which is painted in a Shield, ſometimes naked, ſometimes cloath'd, or adorn'd with a Bracelet, and ſometimes arm'd, or holding ſome Moveable, or Member uſed in the Arms.

The *Dextrochere* is ſometimes placed as the Creſt.

The Word is form'd from the Latin *Dextrocherium*, which ſignifies a Bracelet wore on the right Wriſt, mention'd in the Acts of the Martyrdom of St. *Agnes*, and the Life of the Emperor *Maximus*.

DIA, the Beginning of divers Terms in Medicine, Chirurgery, Pharmacy, *&c.*

Where theſe three Letters begin the Name of a Remedy, Unguent, Plaſter, Cataplaſm, *&c.* they ſignify *Compoſition*, and *Mixture*; as in *Diaplaſm*, *Diachylon*, &c. See DIAPLASM, DIACHYLON, *&c.*

*Dia* is likewiſe the Beginning of many Terms in the other Arts, and even in common Uſe; As, *Diameter*, *Dialogue*, &c. on all which Occaſions, *Dia*, which is an inſeparable Particle, or Prepoſition, is borrowed from the *Greek* διὰ, *ex*, or *cum*; which begins the ſame Words in the *Greek*.

Indeed we have Words wherein *Dia* is no Prepoſition borrowed from a foreign Language, tho' 'tis poſſible, the Words themſelves may; as in *Diamant*, *Dial*, *Diana*, &c.

DIABETES, in Medicine, a haſty, and profuſe Evacuation of the Drink by the Urinary Paſſages; accompanied with

with an ardent Thirſt, and a Leanneſs of the whole Body. See URINE.

The Drink thus diſcharged, is uſually a little alter'd from what it was when taken down, and turn'd chilous, and milky; but ſometimes not at all. See DRINK.

The *Diabetes* ſeems owing to a too great Laxity of the Fibres of the Arteries of the Kidneys; or too great Quantity of ſharp Salts in the Blood, which diſſolve the Maſs of Blood, or diſunite the Parts thereof; So that the Seroſity is eaſily ſeparated from the ſame.

According to Dr. *Quincy*, the Evident, and moſt common Cauſe of the *Diabetes* is the too great Uſe of ſpirituous Liquors, wherewith the *Serum* becomes ſo impregnated, that it will not attract, and joyn with the *Cruor*, or Globules of the Blood, but runs off through the Kidneys ſweet, or inſipid.

There is another Kind of *Diabetes*, wherein the Perſon affected renders a great deal more by Urine, than he drinks, nay, ſometimes more than he both eats and drinks. Some Phyſicians attribute this exceſſive Quantity of Liquor to the Air he reſpires, which, they ſuppoſe, becomes converted into Water; Or, at leaſt, the Water in the Air reſpired is here abſorbed, and collected. But others, with more Probability, attribute it to a Colliquation of the Blood, fat, and even the ſolid Parts of the Body.

The Word *Diabetes* is derived from the *Greek* διαβαίνειν, *to paſs quick.*

DIABETES, in Hydraulicks, is applied to a Syphon, the two Leggs, or Branches whereof are incloſed in one another; As in the Glaſs deſcribed by *Hero*, which runs it ſelf quite empty, without being inverted, as ſoon as the Water is arrived at the Height of the upper Branch of the Syphon.

DIABOTANUM, in Pharmacy, and Chirurgery, a Plaſter, wherewith Wens, *&c.* are reſolved and diſcuſs'd.

The *Diabotanum* is ſoveraign for the *Hydatides.*

DIABROSIS, in Medicine, a Solution of the Continuity of a Part, cauſed by ſharp, corroſive Humors gnawing, and devouring the ſame.

The Word is *Greek*, compounded of διὰ, *per*, through, and βρώσκειν, *to eat.*

DIACALCITEOS, in Chirurgery, and Pharmacy, a Plaſter applied after the Amputation of a Cancer.

The *Emplaſtrum Diacalciteos* is compoſed of Oil, *Axungia*, and *Chalcitis*; from the laſt of which Drugs it derives its Name.

DIACARYON, or *Dianucum*, in Pharmacy. See DIANUCUM.

*Galen* is ſaid to have prepar'd his *Diacaryon* with the Juice of Walnuts, mix'd with as much Honey as ſufficed to render it an agreeable Compoſition.

The Word is form'd from καρύα, *Wal-nut.*

DIACARTAMI, in Pharmacy, an Electuary compoſed of Turbit, Manna, Scammony, Hermodactyls, and other Purgatives; with the Addition of the Medulla, or Seed of the *Carthamus*, which gives it the Denomination. See CARTHAMI.

*Diacartami* chiefly purges *pituita.* It is preſcribed in Diſeaſes of the Brain; and is frequently mix'd in Medicines along with other Purgatives.

DIACAUSTIC *Curve*, or the *Cauſtic by Refraction*, is a Species of *Cauſtic Curves*, thus conceiv'd: Imagine an infinite Number of Rays; as BA, BM, BD, *&c.* (*Tab. Geom. Fig.* 23.) iſſuing from the ſame Luminous Point B, to be refracted from, or to the Perpendicular MC, in the Curve AMD; and ſo, as that CE the Sines of the Angles of Incidence CME be always to CG, the Sines of the refracted Angles CMG, in a given *Ratio*: Then the Curve-Line, which touches all the refracted Rays, is call'd the *Diacauſtic.* See CAUSTIC.

DIACHYLON, in Pharmacy, a Name given to divers Plaſters, on Account of the Mucilages mix'd therein, which are viſcid Juices, call'd by the *Greeks* χυλοὶ; drawn from certain Plants. See MUCILAGE.

*White*, or *Simple* DIACHYLON, is compounded of common Oil, Litharge of Gold, and Mucilages, drawn from the Root of the *Althæa*, and the Seeds of Line, and Fenigreck. It is proper to ſoften, digeſt, ripen, and reſolve.

The DIACHYLON, call'd *Direatum*, has for its *Baſis* the common *white Diachylon*, with a Pound of which, an Ounce of Powder of *Iris* is mix'd. This Plaſter digeſts, incides, and ripens with more Force than the *ſimple Diachylon.*

There is alſo the *Great* DIACHYLON, *Diachylon magnum*, compoſed of Litharge of Gold, Oils of *Iris*, Camomile, and Aneth, Turpentine, Reſin of the Pine, yellow Wax, and Mucilages, of Line, and Fenigreck, with new Figs, Raiſins of *Damaſcus*, *Icthyocolla*, Juices of *Iris*, *Squillæ*, and Hyſſop. This *Diachylon* ſoftens Schirrus's, and reſolves, and diſſipates Tumors. 'Tis call'd, *the Great*, not only on Account of its extraordinary Virtues, but alſo becauſe compounded of a greater Number of Ingredients, than the reſt.

The *Diachylon Gummatum*, is the *great Diachylon*, with the Addition of Gum Ammoniac, *Galbanum*, and *Sagapenum*, diſſolv'd with Wine, and boil'd to a Conſiſtence of Honey. This Plaſter is the moſt powerful of all for digeſting, ripening, and reſolving.

DIACODIUM, in Pharmacy, a Medicine prepared from Poppies Heads.

There are two Kinds: *Simple*, and *Compound.*

*Simple* DIACODIUM, is a Kind of Opiate, made of the Juice expreſs'd from the Heads of Poppies, both white, and black; and made up with the *Sapa*, or Sugar. It is preſcribed to ſoften ſharp, ſerous Humours, to appeaſe Coughs, and to provoke Sleep. This Preparation was of great Uſe among the Ancients; but is now laid a-ſide, ſince it has been found, that the Syrup of white Poppies, which is what we now call *Diacodium*, produces the ſame Effect.

*Compound* DIACODIUM is made of the *ſimple*, with the Addition of the Troches of Ramich, *Hypociſtis*, Myrrh, Saffron, and Balauſtes. It is good to ſtop, and ſoften Catarrhs, Hemorrhoids, and Fluxes of the Belly.

The Word is form'd from the *Greek* διὰ, *per*, and κώδεια, *Poppies Head.*

DIACONESSE, and DIACONATE. See DEACON, and DEACONRY.

DIACONI, in Antiquity, was the Name of a Faction at *Athens.*

That City, we read, was divided into two Parties: The one Favourers of an Oligarchy, who would only have a few Perſons employ'd in the Government. The other conſiſted of ſuch as were for a Democratical, or Popular Government, wherein the whole People ſhould have a Share. The firſt were call'd *Diaconi*, and the latter *Pediaci*; the latter inhabiting the lower, and the former the upper Quarter, or Part of the City.

The Laws of *Solon* imported, that *Piſiſtratus* ſhould be Chief of the *Diaconi*. Tho' the Scholiaſt on *Ariſtophanes*'s Comedy, *the Waſps*, affirms, that *Pandion* diſtributed the Quarter of the *Diaconi* among his Sons, and put *Lycus* at their Head.

DIACONICON, Sacriſty, a Place about the ancient Churches, where the ſacred Veſtments, with the Veſſels, and other Ornaments of the Altar were preſerv'd.

The firſt Council of *Laodicea*, in the 21ſt Canon, forbids the Prieſts living in the *Diaconicon*, ἐν τῷ διακονικῷ; or touching the holy Utenſils. An ancient *Latin* Verſion of thoſe Canons renders it, *In Secretario:* But the Copy at *Rome*, as well as *Dionyſius Exiguus*, retain the Word *Diaconicon* in *Latin.* 'Tis true, *Zonarus* and *Balſamon* underſtand that Expreſſion in the 21ſt *Canon* of the Order of a Deacon, and not of a Building, to which Opinion *Leo Allatius* alſo adheres in his Treatiſe, *De Templis Græcorum:* But all the other Interpreters are agreed as to its being a Sacriſty. Beſide the Ornaments of the Prieſt-hood, and the Altar, there were likewiſe here depoſited the Relicks of the Church.

The Word is *Greek*, and form'd from διακονέω, *I ſerve*, by reaſon here were kept every Thing belonging to Divine Service. It was alſo call'd Ασπασόριον, and in Latin *Salutatorium:* becauſe it was here the Biſhop received, and ſaluted Strangers. Sometimes, too, it was call'd Μετατώριον, or Μιτατώριον, *Menſa*, by reaſon of the Tables therein, for diſpoſing the ſacred Ornaments on; or rather from Μιτάτον, an *Inn.*

DIACOUSTICKS, or DIAPHONICKS, is the Conſideration of the Properties of Sound refracted in paſſing through different Mediums; that is, out of a denſer into a more ſubtile, or out of a more ſubtile into a denſer *Medium.* See SOUND, and REFRACTION. See alſo ACONSTICKS, and PHONICKS.

The Word is form'd from the *Greek* διὰ, *per*, through, which intimates a Paſſage; and ἀκούω, *I hear*, q. d. the Conſideration of the Paſſages of the Sounds we hear.

DIACYDONITES, in Pharmacy, is applied to Things, and Remedies, wherein Quinces are an Ingredient: Thus the Confection *Diacydonites* is a Confection of Quinces, or wherein Quinces have a Share.

The Word comes from διὰ, and κυδώνιον, *Quince.*

DIADEM, in Antiquity, a Royal Head-band, or Fillet, wore by Kings as a Badge of their Royalty; while the Crown was left to the Gods. See CROWN.

The *Diadem* was a Sort of Ribbon, or Band wove of Silk, Thread, or Wool, more or leſs broad. It was tied round the Temples, and Fore-head; the two Ends being knotted behind, and let fall on the Neck.

It was uſually white, and quite plain, tho' ſometimes embroider'd with Gold, and ſet with Pearls, and precious Stones. In latter Times it likewiſe came to be twiſted round Crowns, Laurels, *&c.* and appears to have been wore in divers Parts of the Body: Thus *Phavorinus* obſerves, that *Pompey* was ſuſpected of aſpiring to the Royalty, becauſe of his wearing a white Garter, which was no other than a

Ligature for an Ulcer he had on his Leg, but which the People conſtrued a *Diadem*.

*Pliny* Lib. VII. C. 5. obſerves, that *Bacchus* was the firſt Inventor of the *Diadem*: *Athenæus* aſſures us, that it was the Topers, and good Fellows, who firſt made Uſe of it, to preſerve themſelves from the Fumes of Wine, by tying it right round their Heads; and that it afterwards came to be a Royal Ornament.

The *Diadem* remain'd a long Time the peculiar Badge of Kings; At length it was aſſumed by the *Roman* Emperors, as the Mark of Empire.

Authors are not agreed about the Time when the *Roman* Emperors firſt aſſum'd the *Diadem*. Some refer it to *Caligula*, others to *Aurelian*, and others to *Conſtantine* the *Great*. The younger *Victor* ſays poſitively, that *Aurelian* took the *Diadem*, which no Emperor had dared to do before him. For tho' it ſhould ſeem from the ſame Writer, that *Caligula* had done the like, yet *Suetonius* aſſures us, he had it only in View, and that he never executed it. *Heliogabalus*, indeed, took a *Diadem*, but it was only in the Palace he wore it, and never appear'd with it in publick. *Jornandus* even goes as low as *Dioclesian* for the Introduction of the *Diadem*; But 'tis certain, there is a Medal of *Aurelian*, with a Crown like one of our Ducal Crowns, which is ſuſtain'd by a Border of Pearls, that bears a very great Affinity to a *Diadem*. And the Authors, who have explain'd that Medal, are all agreed it is one. Mr. *Spanheim* alſo allows *Aurelian* to have taken it: His Succeſſors imitated him therein; And yet the Ornament did not become common till the Time of *Conſtantine*. After him the Empreſſes were allowed to wear it: accordingly we find them repreſented therewith on Medals: Tho' till then, we have no Inſtance either of Crown, or *Diadem* on a Woman's Head, in all the *Roman* Empire.

An Author of the Vth Century quoted by *Bollandus*, pretends, that *Conſtantine* firſt wore the *Diadem*, and that he only took it to bind his Hair, and keep it in Order. But this is not very probable; and 'tis certain, that at leaſt ſome Emperors had wore it before him, as *Aurelius*, and *Carinus*. *Euſebius* attributes it to *Conſtantius Chlorus*, when only *Cæſar*; which is confirm'd by one of his Medals, wherein he is repreſented with a *Diadem*, adorn'd with Rays; Tho' even after *Conſtantine*, when the *Diadem* was become the uſual Ornament of the *Auguſti*, it was not always given to the *Cæſars*. Indeed, we ſee it on ſome of the Medals of *Julian*, while only *Cæſar*; tho' 'tis pretty certain, he did not wear it till he became *Auguſtus*. *Du Cange* will not maintain, that *Conſtantine* firſt took the *Diadem*; but only, that he firſt made it into a Kind of Caſk, or Cloſe-Crown, as is ſeen in ſome of his Medals, and thoſe of his Succeſſors.

The Word comes from the Latin *Diadema*, of the *Greek* διάδημα, *a little Band encompaſſing the Head*, of the Verb διαδέω, *Alligo*, I tye.

DIADEM, in Heraldry, is applied to certain Circles, or Rims, ſerving to bind, or incloſe the Crowns of Soveraign Princes; and to bear the Globe, and Croſs, or the Flower *de Lis* for their Creſt.

The Crowns of Soveraigns differ in this, that ſome are bound with a greater, and ſome with a leſs Number of *Diadems*.

Prelates likewiſe appear to have anciently wore a Sort of *Diadem*: Thus *Baronius* writes, that St. *James* the Apoſtle wore a gold Plate on his Fore-head, as a Mark of his Epiſcopal Dignity.

In Blazoning, the Bandage about the Heads of *Moors*, on Shields, is ſometimes alſo call'd *Diadem*.

DIAGLYPHICE, the Art of Engraving, Cutting, or otherwiſe working hallow, or concave Figures, in Metals; Such as Seals Intaglia's, the Matrices, or Coins for Medals, &c. See ENGRAVING, and SCULPTURE.

DIAGNOSTIC, in Medicine, a Term applied to thoſe Signs, or Symptoms, which indicate, or diſcover the preſent State of a Diſeaſe, its Nature, and Cauſe. See SIGN, and INDICATION.

The Phyſicians have *Diagnoſtic*, and *Prognoſtic* Signs; the firſt with regard to the preſent State of the Diſeaſe, and the Patient; and the ſecond to the future. See PROGNOSTIC.

The Word is compounded of the *Greek* διὰ, *per*, through, or by; and γίνωσκω, *I know*.

DIAGONAL, in Geometry, a right Line drawn a-croſs a Figure of ſeveral Sides, from the Vertex of one Angle to that of another: Such is the Line PN (*Tab. Geometr. Fig.* 24.) drawn from the Angle P, to N. See FIGURE.

Some Authors call it *Diameter*, and others *Diametral* of the Figure. See DIAMETER.

It is demonſtrated, 1. That every *Diagonal* divides a Parallelogram into two equal Parts. 2. Two *Diagonals* drawn in any Parallelogram, biſſect each other. 3. The *Diagonal* of a Square is incommenſurable with one of its Sides. See PARALLELOGRAM, SQUARE, &c.

Add 4. A very noble Theorem, in Elementary Geometry, firſt demonſtrated by Mr. *Lagny*, in the *Memoires de l'Academie Royale des Sciences*, An. 1706. That *the Sum of the Squares of the two Diagonals of every Parallelogram, is equal to the Sum of the Squares of the four Sides.*

'Tis evident, at firſt Sight, that the famed 47th Propoſition of *Euclid*, ſo richly worth the Hecatomb it coſt its Author, is only a particular Caſe of this Propoſition: For if the Parallelogram be rectangled, it follows of Courſe, that the two *Diagonals* are equal; and, of Conſequence, that the Square of a *Diagonal*, or, which is the ſame Thing, the Square of the Hypothenuſe of a right Angle, is equal to the Squares of the two Sides. If a Parallelogram be oblique-angled, and of Conſequence, the two *Diagonals* unequal, as is the more uſual Caſe; the Propoſition becomes of more extenſive Uſe.

The Demonſtration in oblique-angled Parallelograms is thus: Suppoſe the oblique-angled Parallelogram ABCD, (*Tab. Geometry Fig.* 25.) whereof BD is the greater *Diagonal*, and AC the leſſer: From the Point A, of the obtuſe Angle DAB, let fall a Perpendicular AE, to the Side CD; and from the Point B another Perpendicular BF to the Side DC. Then are the Triangles ADE, BCF equal, and ſimilar, as AD is equal to BC, and the Angles ADE, BCF, as well as AED, BCF, are alſo equal; conſequently DE is equal to CF. Now, by *Euclid*, Prop. 12. Lib. II. in the obtuſe-angled Triangle BDC, the Square of the Side BD is equal to the Sum of the Squares of BC, and CD, and over and above, to double the Rectangle of CF by CD; and by 13th, Lib. II. In the Triangle DAC, the Square of the Side AC is equal to the Sum of the Squares of AD, and CD, abating double the Rectangle of the ſame CD, by DE, equal to CF. Conſequently, the former Exceſs preciſely compenſating this Defect; the Sum of the Squares of the two *Diagonals* is equal to the Sum of the Squares of the four Sides QED.

Hence, In every *Rhombus*, or Lozange, knowing one Side, and a *Diagonal*; the other *Diagonal* will likewiſe be known: For as the four Sides are equal; ſubſtracting the Square of the given *Diagonal* from Quadruple the Square of the given Side; the Remainder is the Square of the *Diagonal* required.

The Propoſition is likewiſe of great Uſe in the Theory of compound Motions: For in an oblique-angled Parallelogram, the greater *Diagonal* being the Subtenſe of an obtuſe; and the leſſer, of an acute Angle, which is the Complement of the former; the greater will be the greater, and the leſs, the leſs, as the obtuſe Angle is the greater: So that if the obtuſe Angle be conceiv'd to grow till it be infinitely great with regard to the acute one, or, which amounts to the ſame Thing, if the two contiguous Sides of the Parallelogram be extended directly, End to End in a right Line; the great *Diagonal* becomes the Sum of the two Sides, and the leſſer one, nothing. Now, two contiguous Sides of a Parallelogram being known, together with the Angle they include, 'tis eaſy to find, the Subtenſe of that Angle, *i.e.* one of the *Diagonals* of the Parallelogram, in Numbers; which done, Mr. *de Lagny*'s Propoſition gives the other. Which ſecond *Diagonal* thus found, is the Line that would be deſcribed by a Body impell'd at the ſame Time by two Forces, which ſhould have the ſame *Ratio* to each other, as the contiguous Sides have, and act on thoſe two Directions; which *Diagonal*, the Body would deſcribe in the ſame Time, as it would have deſcribed either of the contiguous Sides in, if only impell'd by the Force correſponding thereto. This is one of the great Uſes of the Propoſition: For the *Ratio* of two Forces, and the Angle they make, being given, it is frequently neceſſary to determine, in Numbers, the Line a Body impell'd by the two Forces would deſcribe in a certain Time. See *Compound* MOTION.

All the Sides of a recti-linear Figure, as AB, BC, CD, DE, (*Fig.* 26.) excepting one EA, and the Angles O, and Y, being given; to find the *Diagonals*.

In the Triangle ABE, the Sides AB, and AE being given, the Angle O is eaſily found by Trigonometry; and from this, the *Diagonal* BS. And after the like Manner the Triangle BCD is reſolved, and the *Diagonal* BD found.

Since Ichnographies, or Plans, are beſt taken by having all the Sides, and *Diagonals*; The Uſe of this Problem in Planimetry is of ſome Importance; eſpecially to ſuch as are willing to have their Work accurate, tho' at the Expence of Calculation. See ICHNOGRAPHY, &c.

DIAGRAM, in the ancient Muſic, was what we call the *Scale*, or *Gammut* in the modern. See SCALE, and GAMMUT.

The Extent of the *Diagramma*, which they alſo call'd, *Syſtema perfectum*, was a *Diſdiapaſon*, or two Octaves in the *Ratio* 1:4. In that Space they had eighteen Chords, tho' theſe had not all different Sounds. See CHORD.

To explain it, they repreſent to us eighteen Chords, or Strings of an Inſtrument, as the Lyre, ſuppoſed to be tuned according to the Proportions in any of the *Genera*, viz.

*Dia-*

Diatonic, Enharmonic, or Chromatic. See GENERA, DIATONIC, &c.

As the Lyre was improv'd, and more Chords added to it; ſo was the *Diagramma:* By ſuch means it came from 4 Chords to 7, then 8, then 10, then 14, and at laſt 18. See LYRE.

To each of theſe Chords, or Sounds, they gave a particular Name, taken from its Situation in the *Diagramma*, or the Lyre. Their Names, and Order, commencing from the loweſt, are as follows: *Proſtambanomenos, Hypate-Hypaton, Parhypate-Hypaton, Lychanos-Hypaton, Hypate-Meſon, Parhypate-Meſon, Lychanos-Meſon, Meſe, Trite-Synem, Trite-Synem-menon, Paranete-Synem-menon, Nete-Synem-menon, Para-Meſe, Trite-Diezeugmenon, Paranete-diezeugmenon, Nete-Diezeugmenon, Trite-Hyperbolæon, Paranete-Hyperbolæon, Nete-Hyperbolæon.*

*Guido Aretine* improved this Scale, or *Diagram*, very greatly. Finding it of too ſmall Extent, he added five more Chords, or Notes to it; lay'd them all down on a Staff of 5 Lines; and inſtead of the long *Greek* Names abovementioned, named all his Notes by *Gregory*'s ſeven Letters. See NOTE, and GAMMUT.

The firſt, or loweſt Note of his Scale, he marked Γ, and call'd *Gamma*; whence the whole Scale came to be denominated *Gammut.*

DIAGRAM, in Geometry, &c. a Scheme, for the Explanation, or Demonſtration of any Figure, or the Properties thereto belonging. See FIGURE.

DIAGRYDIUM, in Pharmacy, is prepar'd Scammony. See SCAMMONY.

The Preparation is ordinarily perform'd by boiling the Scammony in a Quince. Others make it receive the Fumes of lighted Sulphur, whence it is call'd, *Sulphurated, Diagrydium ſulphuratum.* Some incorporate it with a Quantity of Spirit of *Vitriol roſat.* ſufficient to make a Sort of Liquid paſt, which is afterwards ſet to dry in the Sun, or by a gentle Fire. And this Preparation they call *Diagrydium Roſatum.* The End of all theſe Preparations is to correct the Scammony; But many more are of Opinion, it has nothing that needs Correction, and that it may be uſed in its natural State. See SCAMMONY.

The Word *Diagrydium* is form'd, by Corruption, from διακρύδιον, *little Tear.*

DIAHEXAPTA, or DIAHEXAPTE, among Farriers, a Drink made for Horſes, denominated from the ſix Ingredients it conſiſts of; *viz.* Birthwort, and Gentian Roots, Juniper Berries, Bayberries, Drops of Myrrh, and Ivory Shavings, mix'd together. It is an excellent Counter-Poiſon, cures Bites of venomous Beaſts, Colds, Conſumptions, &c.

DIAL, or *Sun*-DIAL, an Inſtrument ſerving to meaſure Time, by means of the Shadow of the Sun. See TIME, and SHADOW.

The Word is form'd from the Latin *Dies*, Day, becauſe indicating the *Hour of the Day.* See HOUR.

The *Greeks* call it *Sciatericum*, from its doing it by the *Shadow.* See SCIATERICUM.

*Dial* is more accurately defin'd, a Draught, or Deſcription of certain Lines on a Plane, or Surface of a Body given, ſo contriv'd, as that the Shadow of a Style, or a *Gnomon*, or a Ray of the Sun paſs'd through a Hole therein, ſhall touch certain Points at certain Hours. See STYLE.

The Diverſity of *Sun-Dials* ariſes from the different Situation of the Planes, and the different Figure of the Surfaces whereon they are deſcribed; whence they become denominated *Equinoctial, Horizontal, Vertical, Polar, Direct, Erect, Declining, Inclining, Reclining, Cylindrical*, &c. See DIALLING.

*Dials* are ſometimes diſtinguiſh'd into *Primary*, and *Secundary.*

*Primary* DIALS, are thoſe, either drawn on the Plane of the Horizon, call'd *Horizontal Dials*; or perpendicular thereto, on the Planes either of the Meridian, or Prime Vertical, call'd *Vertical Dials*; to which Number are uſually added thoſe drawn on the Polar, and Equinoctial Planes, tho' neither Horizontal, nor Vertical. See PLANE.

*Equinoctial* DIAL, is that deſcrib'd on the Equinoctial Plane, or a Plane repreſenting that of the Equinoctial. See EQUINOCTIAL.

A Plane oblique to the Horizon, either hangs over towards it, and makes an acute Angle with the Plane of the Horizon; or it falls off backwards from it, and makes an obtuſe Angle therewith. This latter is call'd a *Reclining Plane*; which, if it recline back equal to the Complement of the Latitude of the Place, it lies in the Plane of the Equinoctial; and a *Dial* drawn thereon, is denominated an *Equinoctial Dial.*

*Equinoctial Dials* are uſually diſtinguiſh'd into *Upper*, which look towards the *Zenith*; and *Lower*, which reſpect the *Nadir.*

Now, as the Sun only illumines the upper Surface of an Equinoctial Plane, while he is in our *Hemiſphere*, or on the Northern Side of the Equator, an *Upper Equinoctial Dial* will only ſhew the Hour during the Spring, and Summer-Seaſon.

And again, as the Sun only illumines the lower Surface of an Equinoctial Plane, while he is in the Southern *Hemiſphere*, or on the other Side the Equator; a *Lower Equinoctial Dial* will only ſhew the Hour in Autumn, and Winter.

To have an *Equinoctial Dial*, therefore, that ſhall ſerve all the Year round, the *Upper* and *Lower* muſt be joyned together; that is, it muſt be drawn on each Side of the Plane.

And ſince the Sun ſhines on one Side or other of an Equinoctial Plane the whole Day; ſuch a *Dial* will ſhew all the Hours of an Artificial Day.

*To deſcribe an* Equinoctial DIAL *Geometrically.*

The *Equinoctial* is the firſt, eaſieſt, and moſt natural of all *Dials:* But the Neceſſity of drawing it double, prevents its being much in Uſe. However, as its Structure ſhews the reaſon of the other Kinds; and as it even furniſhes a good Mechanical Method of drawing all the other Kinds of *Dials*, it ſhall be here laid down.

Firſt, then, *to deſcribe an Upper* Equinoctial DIAL: From a Center C (*Tab. Dialling, Fig.* 4.) deſcribe a Circle ABDE, and by two Diameters AD, and BE, interſecting each other at right Angles, divide it into Quadrants AB, BD, DE, and ER. Subdivide each Quadrant into ſix equal Parts by their right Lines C 1, C 2, C 3, &c. which Lines will be Hour-Lines. Through the Centre C drive a Style, or Pin, perpendicular to the Plane ABDE.

The *Dial* thus deſcrib'd, being raiſed ſo as to be in the Plane of the Equator, the Line C 12, in the Plane of the Meridian, and the Point A looking towards the South; the Shadow of the Style will ſhew the Hours both of the Fore-noon and After-noon.

For, Horary Circles include Arches of the Equator of fifteen Degrees each. (See HORARY *Circle.*) Conſequently the Plane of ABDE being ſuppoſed in the Plane of the Equator, the Horary Circle will likewiſe include Arches of 15 Degrees of the Circle ABDE. Wherefore, ſince the Angles 12 C 11, 11 C 10, 10 C 9, &c. are each here ſuppoſed 15 Degrees, the Line C 12, C 11, C 10, C 9, &c. are Interſections of Horary Circles, with the Plane of the Equinoctial.

Again, ſince the Style paſſing through the Centre C, is the Axis of the World; its Diſtance from the Centre of the Earth being inconſiderable, and it being the common Diameter of the Horary Circles; its Shadow will cover the Hour C 12, when the Sun is in the Meridian, or Circle of 12 a-Clock; C 11, when in the Circle of 11 a-Clock; C 10, when in the Circle of 10 a-Clock, &c.

Secondly, *To deſcribe a Lower* Equinoctial DIAL: The Method is the ſame as that for the Upper *Dial* already deſcribed; except that no Hour-Lines are to be drawn beyond that of 6 a-Clock.

Thirdly, *To deſcribe an Univerſal* Equinoctial DIAL: Joyn two Metal, or Ivory Planes ABCD, and CDEF, (*Fig.* 5.) ſo as to be moveable at the Joynt. On the upper Surface of the Plane ABCD, deſcribe an *Upper Equinoctial Dial*, and upon the lower a *Lower*, as already directed; and through the Center I drive a Style. In the Plane DEFC cut a Box, and put a Magnetical Needle G therein; fit on the ſame Plane a Braſs Quadrant nicely graduated, and paſſing through a Hole cut in the Plane ABCD. Now, ſince this may be ſo plac'd, by means of the Needle, as that the Line I 12, ſhall be in the Plane of the Meridian: And, by means of the Quadrant, may be ſo raiſed, as that the Angle BCE ſhall be equal to the Elevation of the Equator; it will ſerve as a *Dial* in any Part of the World.

*Horizontal* DIAL, is that deſcribed on a Horizontal Plane, or a Plane Parallel to the Horizon. See HORIZON.

Since the Sun may illumine a Horizontal Plane at all Times of the Year, while he is above the Horizon; a *Horizontal Dial* may ſhew all the Hours of the Artificial Day, throughout the Year: So that a more perfect *Dial* cannot be requir'd.

*To deſcribe an* Horizontal DIAL *Geometrically.*

Draw a Meridian Line B, (*Fig.* 6.) on the given immoveable Plane; or aſſume it, at Pleaſure, on a moveable one. See MERIDIAN *Line.*

From a Point taken at Pleaſure, as C, erect a Perpendicular CD, and make the Angle CAD equal to the Elevation of the Pole. In D make another Angle CDE equal likewiſe to the Elevation of the Pole, and draw the right Line DC meeting AB in E. Then make EB equal to ED, and from the Centre B with the *Radius* EB, deſcribe a Quadrant EBF, which divide into 6 equal Parts. Through E draw the right Line GH, cutting AB at right Angles. From the Centre B through the ſeveral Diviſions of the Quadrant EF draw right Lines B a, B b, B c, B d, BH, meet-

meeting the Line GH, in the Point a BC d H. From E upon the right Line EG set off the Intervals E a, E b, &c. *viz.* E a from E to e, E b from E to f, E c from E to g, &c. From the Centre A describe a little Circle, and applying a little Ruler to A, and the several Points of Division a, b, c, d, H and e, f, g, h, G, draw the Lines A 11, A 10, A 9, A 8, A 7, and A 1, A 2, A 3, A 4, A 5. Through A draw a right Line 6,6 perpendicular to AB. Continue the right Line A 7, beyond the little Circle to 7, A 8 to 8, A 5 to 5, and A 4 to 4. Round the whole Scheme draw a Square, Circle, or Oval Figure. And lastly in A fix an Index, making an Angle DAC with the Meridian AB equal to the Elevation of the Pole: Or in C erect a perpendicular Style equal to CD; or at AE fix a Triangular Plate ADE perpendicular to the Plane of the *Dial*.

Now, the Lines A 11, A 10, A 9, &c. are the Hour-Lines of the Fore-noon; and A 1, A 2, A 3, &c. those of the After-noon: and the Shadow of any of the *Gnomon's*, or Styles above mention'd, at the several Hours, will fall on the respective Hour-Lines.

*A* Horizontal DIAL, *Trigonometrically.*

In large *Dials*, where the utmost Accuracy is required, Geometrical Lines are best set a-side; and in lieu thereof, the Lines of the *Dial* to be determin'd by Trigonometrical Calculation. Monsr. *Clapies*, in the *Memoires de l'Academie Royale des Sciences*, An. 1707, has done us good Service herein; having render'd the Calculation of the Hour-Lines, which before had been operose enough, exceeding easy and expeditious: His Canons, or Analogies we shall lay down under the respective Kinds of *Dials*.

And, first, For a *Horizontal Dial*: The Elevation of the Pole of the Place being given, to find the Angles, which the Hour-Lines make with the Meridian, in the Centre of the *Dial*.

*Analogy*, or *Canon*.

As the whole Sine is to the Sine of the Elevation of the Pole of the Place; so is the Tangent of the Sun's Distance from the Meridian, for the Hour required; to the Tangent of the Angle requir'd. That is, As the Side FC (*Fig.* 7.) is to DC: So is the Tangent of FDC; to the Tangent FC of the Angle FAC. See TANGENT, &c.

*Vertical* DIAL, is that drawn on the Plane of a Vertical Circle. See VERTICAL.

Of these there are several Varieties, according to the Vertical pitcht upon. The Verticals chiefly used are the Prime Vertical, and the Meridian; from which respectively arise *South*, *North*, *East*, and *West Dials*.

*Dials*, which respect the Cardinal Points of the Horizon, are particularly call'd *Direct Dials*. See DIRECT.

If any other Vertical be chose, the *Dial* is said to *Decline*. See DECLINER.

Further, If the Circle, whose Plane is used, be perpendicular to the Horizon, as is supposed to be the Case in all those now mention'd, the *Dials* are particular denominated *Erect*. E. gr. *Erect South*; *Direct North*, &c. See ERECT, &c.

Otherwise, the Plane being oblique to the Horizon, they are said either to *Incline*, or *Recline*. See INCLINER, RECLINER, &c.

*South* DIAL, or more particular an *Erect Direct South* DIAL, is that described on the Surface of the Prime Vertical Circle, looking to the South. See SOUTH.

Since the Sun then illumines the Plane of the Prime Vertical, looking to the South, when, in its Progress he passes from the Prime Vertical to the Meridian, or returns back from this to that; in which he is employ'd six Hours before, and six after Noon; A *South Dial* shews the Hours from six in the Morning to six at Night.

*To draw a Vertical South* DIAL.

On the Plane of the Prime Vertical looking Southwards, draw a Meridian Line AB (*Fig.* 8.) and taking the Interval AC at Pleasure for the Magnitude of the future *Dial*; In C erect a Perpendicular of an indefinite Length CD, and making an Angle CAD equal to the Elevation of the Equator, draw a right Line AD meeting the Perpendicular CD in D. Then in the Point D make the Angle CDE likewise equal to the Elevation of the Equator, and draw the right Line DE cutting the Meridian in E. Through E draw the right Line GH, cutting the Meridian AB at right Angles. Take EB equal to ED, and with this *Radius* describe a Quadrant EF. The rest is perform'd as in a *Horizontal Dial*; except that the Hours of the After-noon are to be wrote on the right Hand, and those of the Fore-noon on the left, as in the Figure. Lastly, in the Point A fix an oblique Style in an Angle equal to the Elevation of the Equator: Or in C erect a perpendicular Style equal to CD: Or, lastly, a Triangular Plate ADE upon AE, so as to be perpendicular to the Plane of the *Dial*.

Then will the Shadow of any of these Indexes touch the several Hour-Lines at their respective Hours.

*North* DIAL, *or Erect Direct North* DIAL, is that described on the Surface of the Prime Vertical, looking Northward. See NORTH.

Since the Sun only illumines this Surface, while he advances from the East to the Prime Vertical, and proceeds from the same Vertical to the West; and since he is in the Prime Vertical at six a-Clock in the Morning, and six in the Evening; a *North Dial* shews the Hours before six in the Morning, and those after six in the Evening. And hence, as in Autumn, and Winter Time, the Sun does not rise before six, and yet sets before six in the Evening; a *North Dial* is of no Use all that Time. But being joyn'd with a *South Dial*, it supplies the Defects thereof.

*To describe a Vertical North* DIAL.

Draw a Meridian Line EB (*Fig.* 9.) and from A describe a little Circle at Pleasure. At A make the Angle DAC equal to the Elevation of the Equator, and from the Point C taken at Pleasure, erect a Perpendicular CD meeting AD in D. Make another Angle CDE likewise equal to the Elevation of the Equator, and draw likewise a Line DE meeting AE in E. Then take IB equal to ED. And through I draw GH, cutting SB at right Angles. And from the Centre B with the *Radius* IB describe a Quadrant; which divide into six equal Parts. Through the two extream Divisions draw Lines from the Centre B, *viz.* B d, and BH, meeting GH in little d, and H, and make I h equal to I d, and IG equal to IH. Then applying a Ruler to A and d, and H; and again to A and h, and G, draw the right Lines A 5, A 4, A 7, and A 8. Lastly, in A fix an oblique Index AD, making an Angle DAE with the Meridian Line in the Plane of the Meridian, equal to the Elevation of the Equator: Or a perpendicular Index in C equal to CD: Or, instead of an Index, a Triangular Plate EDA on the Meridian Line EA, perpendicular to the Plane of the *Dial*.

Then will A 4, A 5, A 6, be the Hours of the Fore-noon; and A 6, A 7, A 8, those of the After-noon; and accordingly will be pointed out by the Shadow of the several Indexes.

Or thus: In a *South Dial* (*Fig.* 10.) If the Hour-Lines 4 and 5, as also 7 and 8, be continued beyond the Line 6 A 6; and the Triangle ADE turned about its Pole A till AE fall directly against A 12; it is evident, a *North Dial* is hereby had: only observing what has been said about writing the Hours.

*A Vertical North*, or *South* DIAL *Trigonometrically.*

These only differ from the *Horizontal Dial*, in that the Angle CAB is equal to the Complement of the Elevation of the Pole of the Place; so that the same Analogy serves as for the Horizontal one: Only making the second Term the Complement of the Elevation of the Pole of the Place.

*East* DIAL, or *Erect Direct East* DIAL, is that drawn on the Plane of the Meridian, looking to the East. See EAST.

Since the Sun only illumines the Plane of the Meridian, looking Eastward before Noon; an *East Dial* can only shew the Hours till Noon.

*To describe an East* DIAL.

On the Eastern Side of the Plane of the Meridian draw a right Line AB (*Fig.* 11.) parallel to the Horizon, and to this joyn AK, making with it an Angle KAB, equal to the Elevation of the Equator. Then with the *Radius* DE describe a Circle, and through the Centre D draw AC perpendicular to AK; by which means the Circle will be divided into 4 Quadrants. Each of these Quadrants subdivide into six equal Parts. And from the Centre D thro' the several Divisions draw right Lines, D 4, D 5, D 6, D 7, D 8, D 9, D 10, D 11. Lastly, in D erect a Style equal to the *Radius* DE, perpendicular to the Plane; or, on two little Pieces perpendicular fix'd in EC, and equal to the same *Radius* DE, fit an Iron Rod parallel to AC.

Thus will each Index at the several Hours project a Shadow to the respective Hour-Lines 4, 4 5, 5 6, 6 &c.

*West* DIAL, or *Erect Direct West*-DIAL, is that described on the Western Side of the Meridian. See WEST.

As the Sun only illumines that Side of the Plane of the Meridian, looking to the West after Noon, a *West-Dial* can only shew the Hours from Noon to Night.

This, therefore, joyn'd with an *East-Dial* shews all Hours of the Day.

*To draw a West* DIAL.

The Construction is perfectly the same as that of an *East Dial*: Only that its Situation is inverted, and the Hours wrote accordingly.

*Polar* DIAL, is that described on a Plane passing through the Poles of the World, and the East, and West Points of the Horizon. It is of two Kinds: The first, looking up towards the *Zenith*, and call'd *Upper*; the latter down to the *Nadir*, call'd *Lower*.

The *Polar Dial*, therefore, is inclin'd to the Horizon in an Angle equal to the Elevation of the Pole.

Since

Since the Polar Plane POQS (*Fig.*12.) passes through the East and West Points O and S, a Quadrant of the Equator is intercepted between it, and the Meridian: Consequently the *Upper* Surface is illumined by the Sun from six in the Morning to six at Night; and the *Lower* from the Sun's Rise to six in the Morning, and from six in the Evening to Sun-set. A *Lower Polar Dial*, therefore, shews the Hour of the Morning from Sun-Rise to six a-Clock, and that of the Evening from six to Sun-set; And an *Upper*, the Hours from six in the Morning to six in the Evening.

*To draw an Upper Polar* DIAL.

Draw a right Line AB (*Fig.*13.) parallel to the Horizon, and if the Plane be immoveable, find the Meridian Line CE. Divide CE into two equal Parts, and through C draw a right Line FG parallel to AB. Then from the Centre D with the Interval DE, describe a Quadrant, which divide into six equal Parts. And from the same Centre D through the several Points of Division draw right Lines D 1, D 2, D 3, D 4, D 5; and the Intervals E 1, E 2, E 3, E 4, E 5, set off the contrary Way from E 11, 10, 9, 8, and 7. From the Points 5, 4, 3, 2, 1, *&c.* raise Perpendiculars meeting the Line FG in the correspondent Points. Lastly, in D erect a perpendicular Style equal to DE; or on two equal Pieces E and C, fix a cross Iron Rod.

Then will 12, 12, 1, 1, 2, 2, 3, 3, *&c.* be Hour-Lines, to be pointed out at the proper times by the Shadow of the Indices.

An *Upper Polar* DIAL only differs in Situation, and the Manner of writing in the Hours, from *East*, and *West Dials* joyn'd together in the Line of six a-Clock.

A *Lower Polar Dial* is had by putting out the Hours of the Fore-noon 9, 10, and 11, and those of the After-noon 1, 2. and 3, with the Noon-hour 12 it self: and only leaving the Hours 7 and 8 of the Morning, and 4 and 5 in the Evening.

*To draw all the Primary* DIALS *on the same Block, or Post.*

1. Let the Plane ABCD (*Fig.*14.) in the proper Position of the Block be supposed Horizontal; And thereon describe a *Horizontal Dial*. See *Horizontal* DIAL.

2. Draw the right Lines EM, and FL parallel to DC, which accordingly, in the proper Position of the Block, will be parallel to the Horizon. Then let the Plane BNMC make an Angle with EM, equal to the Elevation of the Pole, CME: and thereon describe an *Upper Polar Dial*. See *Polar* DIAL.

3. Let the Opposite Plane ADE make with EM an Angle DEM, equal to the Elevation of the Equator: And on this draw an *Upper Equinoctial Dial*. See *Equinoctial* DIAL.

4. Let the Plane KLHI make with FL an Angle HLF: And on this inscribe a *Lower Equinoctial Dial*. See *Equinoctial* DIAL.

5. Let the opposite Plane FG make with FL an Angle FGL equal to the Elevation of the Pole: And here draw a *Lower Polar Dial*. See *Polar* DIAL.

6. Let the Plane MNKL, and the opposite one EE be perpendicular to FL: And on that draw a *South Dial*, and on this a *North Dial*. See *South North* and DIAL.

7. In the Plane EMLF describe a *West Dial*; and on the opposite Plane an *East Dial*. See *East* and *West* DIALS.

If then the Block be so placed, as that the Plane MNKL looks to the South, and the Plane of the Meridian bisect it by the Line of 12 a-Clock in the Horizontal *Dial* ABCD, and South *Dial* MNKL; They will all tell the Hour of the Day.

*Secundary* DIALS.

*Secundary* DIALS are all those drawn on the Planes of other Circles, beside the *Horizont*, *prime Vertical*, *Equinoctial*, and *Polar Circles*: Or those, which either *Decline*, *Incline*, *Recline*, or *Deincline*.

*Declining* DIALS are *Erect*, or *Vertical Dials*, which *decline* from any of the Cardinal Points; Or, more strictly, which cut either the Plane of the Prime Vertical, or of the Horizon at oblique Angles.

The Use of *Declining Dials* is very frequent; as the Walls of Houses, whereon *Dials* are usually drawn, commonly deviate from the Cardinal Points. See DECLINER.

Of *Declining Dials* there are several Kinds, denominated from the Cardinal Points, which they seem most to respect, but from which they have a real *Declination*: *Decliners from the South*, and *from the North*, and even *from the Zenith*.

*Vertical Declining* DIALS, *Trigonometrically*.

*Prob.* 1. The *Declination* of the Plane, and the Elevation of the Pole of the Plane, being given: To find the Angle form'd in the Centre of the *Dial*, by the Meridian, and Substyle.

*Analogy*: As the whole Sine is to the Tangent of the Complement of the Height of the Pole of the Place GF; (*Fig.*15.) so is the Sine of the *Declination* of the Plane GFD to the Tangent GD, of the Angle required, GAD.

*Prob.* 2. The *Declination* of the Plane being given, and the Elevation of the Pole of the Place; to find the Angle form'd in the Centre of a *Vertical Declining Dial*, by the Substyle and Axis.

*Analogy*: As the whole Sine is to the Sine of the Complement of the Elevation of the Pole GF; so is the Sine of the Complement of the *Declination* of the Plane DGF, to the Side DF, the Sine of the Angle DAB required.

*Prob.* 3. The *Declination* of the Plane, and the Elevation of the Pole, given; to find the Difference of Longitudes, that is, the Arch of the Equator comprehended between the Meridian of the Place, and the Meridian of the Plane.

*Analogy*: As the whole Sine is to the Sine of the Height of the Pole; so is the Tangent of the Complement of the *Declination* of the Plane, to the Tangent of the Complement of the Difference of Longitudes.

*Prob.* 4. The Angle of the Difference of Longitudes, and that of the Axis, with the Substyle, being given; to find the Angles form'd in the Centre of a *Vertical Declining Dial*, between the Substyle and Hour-Lines.

This *Problem* admits of three Cases. For the Hour-Lines, whose Angles are sought, may be, either, 1. Between the Meridian, and Substyle; or, 2. Beyond the Substyle; or, 3. On that Side the Meridian the Substyle is not. In the two first Cases, the Difference is to be taken between the Sun's Distance from the Meridian that Hour, and the Angle of the Difference of Longitudes found by the last *Problem*: And in the third Case, the Sum of those two Angles is to be taken; and the following *Analogy* used.

*Analogy*: As the whole Sine is to the Sine of the Angle between the Axis and Substyle, CM; so is the Tangent of the Difference of the Sun's Distance from the Meridian, and the Difference of Longitudes, or of the Sum of those two Angles; to the Tangent of the Angle required.

*Prob.* 5. The Angle form'd by the Substyle, with the Hour-Lines, and that of the Substyle, with the Meridian, given; to find the Angles form'd between the Meridian, and Hour-Lines in the Centre of *Vertical Declining Dials*.

1. The Angles of the Hour-Lines between the Meridian, and Substyle, are found by substracting the Angle form'd by the Substyle, with the Hour-Line, from the Angle form'd by the Substyle, with the Meridian.

2. The Angles beyond the Substyle, and on the Side opposite to that of the Meridian, are found by adding those two Angles.

3. Those on the other Side the Meridian, are found by taking their Difference.

*To describe a Vertical* DIAL, *declining from the South to the East*, or *West*, Geometrically.

Find the *Declination* of the Plane, as already taught under the Article DECLINATION, and DECLINER.

Then draw upon Paper a *Horizontal Dial*, supposing the Line of Contingency of the Horizontal, with the Equinoctial Plane to be GH, (*Fig.*16.) Through the Point E, wherein the Meridian Line AE cuts the same, draw a right Line IK, making with GH an Angle HEK equal to the *Declination* of the given Plane. Thus, as GH represents the Intersection of the Prime Vertical, with the Horizon; IK will be the Intersection of the Inclining Plane, and the Horizon; Whence we also conceive, that the Part IE must be raised above GE, in Case the given Plane *decline* to the West: Or be depress'd below the same GE, in Case it *decline* to the East. Draw a right Line parallel to the Horizon on the given Plane, or Wall, to answer to IK, and assuming a Point therein, answering to E set off from the right Line IK on the Paper, the several Horary Distances E 1, E 2, E 3, *&c.* Then from the Point E erect a Perpendicular EC, equal to the Distance of the Centre of the *Horizontal Dial*, from its Line of Contingency. Draw Lines thence to the several Points of the Hour-Lines E 1, E 2, E 3, *&c.* let fall a Perpendicular AD from the Centre of the *Horizontal Dial* A to the Line of Contingency IK, and transfer the Distance ED from the Point E upon the Wall; then will CD be the Substylar Line. See SUBSTYLE.

Wherefore, joyning AD and DC at right Angles; the Hypothenuse AC will be an oblique Index to be fasten'd on the Wall in the Point C, according to the Angle DCA.

*To draw a Vertical* DIAL *declining from the North towards the East, and West.*

Take the *Declination* of the Plane, as already taught: Then, as *North Dials* are only *South Dials* inverted, draw a *Vertical Dial declining from the South*, and invert it in such manner, as that the Centre C look to the Horizon, and the Point E to the *Zenith*; and the Hours on the right

Hand ſet off towards the Left, and contrarywiſe; Omitting all Hour-Lines, which in ſuch a Plane cannot be ſhewn.

For the Practice the beſt Way is, after drawing a *South Decliner* upon Paper, to prick the ſeveral Points thereof through with a Pin; Then applying the Face of the Paper to the Wall, the Back-ſide thereof will ſhew you all the Points neceſſary for the *North Declining Dial*.

*Inclined* DIALS, are thoſe drawn on Planes not *Erect*, but *Inclining*, or leaning forward towards the South, or Southern Side of the Horizon, in an Angle, either greater or leſs than the Equinoctial Plane. See INCLINATION.

Such an *Inclined* Plane is conceived by ſuppoſing one Part of the Plane of the Equator lifted up toward the *Zenith*, and the other depreſs'd toward the *Nadir*; and thus to revolve upon a Line drawn from the Eaſt to the Weſt Points of the Horizon.

*To draw an Inclined* DIAL.

1. The *Inclination* of the Plane, as DC (*Fig.* 17.) being found by a *Decliner*, as taught under INCLINATION; If it fall between the Equinoctial Plane CE, and the Vertical one CB, in ſuch manner, as that the Angle of *Inclination* DCA is greater than the Elevation of the Equator ECA: On the Upper Side draw a *North Dial*; and on the Lower a *South Dial* to the Elevation of the Equator, which is equal to the Aggregate of the Elevation of the Equator of the given Place, and the Complement of the *Inclination* to a Quadrant.

2. If the *Inclined* Plane CF fall between the Horizontal one CA, and the Equinoctial CE, ſo that as the Angle of *Inclination* FCA is leſs than the Elevation of the Equator ECA: deſcribe an Horizontal *Dial* to an Elevation of the Pole, equal to the Aggregate of the Elevation of the Pole of the given Place, and the *Inclination* of the Plane.

*Dials* thus *inclined*, are drawn after the ſame manner as *Primary Dials*, except, that the Index in the former Caſe muſt be fitted under the Angle ADC, and in the latter under the Angle DFC: And that the Diſtance of the Centre of the *Dial* from the Line of Contingency in the former Caſe is DC, and in the latter FC.

*Reclining* DIALS, are thoſe drawn on Planes not *Erect*, but *Reclined*, or leaning backwards from the *Zenith* towards the North, in an Angle greater, or leſs than the Polar Plane.

A *Reclined* Plane is conceived by ſuppoſing one Part of the Polar Plane raiſed toward the *Zenith*, and the other depreſſed towards the *Nadir*: And thus revolving about a Line drawn from Eaſt to Weſt. To find the *Reclination* of a Plane. See RECLINATION.

*To draw a Reclining* DIAL.

1. If the *Reclined* Plane HC fall between the Vertical Plane BC, and the Polar Plane IC; ſo as that the Angle of *Reclination* BCH is leſs than the Diſtance of the Pole from the *Zenith* BCI: Deſcribe two Vertical *South* and *North Dials* to an Elevation of the Equator, equal to the Difference between the Elevation of the Equator of the given Place, and the Angle of *Reclination*.

2. If the *Reclined* Plane, as KC fall between the Polar Plane IC, and the Horizontal one CL; ſo as that the Angle of *Reclination* BCK is greater than the Diſtance of the Pole from the *Zenith* ICB: Deſcribe a Horizontal *Dial* thereon to the Elevation of the Pole, equal to the Difference between the Angle of *Reclination*, and the Elevation of the Equator in the given Place.

*Inclining, and Reclining* DIALS, *Trigonometrically.*

The *Inclination*, or *Reclination* of the Plane, and the Elevation of the Pole being known; to find the Angles made in the Centre of an *Inclining*, or *Reclining Dial*, by the Meridian, and Hour-Lines.

Such *Dial* is properly a *Horizontal Dial*, for a Latitude equal to the particular Elevation of the Pole on the Plane of the *Dial*. Its Angles, therefore, are found by the Analogy laid down for *Horizontal Dials*.

As to the Elevation of the Pole, on the *Dial* Plane, 'tis thus found: The Plane being *inclined*; Either its *Inclination* is greater than the Elevation of the Pole of the Place; or leſs; or equal thereto. In the two firſt Caſes, for Upper *South*, or Lower *North Dials*, the particular Elevation of the Pole on the Plane, is had by taking the Difference between the Elevation of the Pole of the Place, and the *Inclination* of the Plane: And in the latter Caſe, the *Dial* is a *Polar Dial*, wherein the Hour-Lines will be parallel, by reaſon the Plane being *inclined* on the Axis of the World, neither of the Poles can be repreſented thereon.

For Upper *North*, and Lower *South Dials*: 1. If the *Inclination* be greater than the Elevation, the Complement of the *Inclination* muſt be added to the Complement of the Elevation. 2. If it be leſs, the *Inclination* muſt be added to the Elevation. 3. If it be equal, the *Dial* will be an *Equinoctial Dial*, wherein the Angles at the Centre will be equal to the Sun's Diſtance from the Meridian.

*Deinclined* DIALS, are thoſe which both *decline*, and *incline*, or *recline*. See DEINCLINED.

The Uſe of *Inclined*, *Reclined*, and eſpecially *Deinclined Dials*, is very rare: The Geometrical, and Trigonometrical Conſtruction of theſe laſt, therefore, as being ſomewhat intricate withal, we here chuſe to omit, and refer ſuch as may have a Fancy for ſuch a *Dial*, to an Univerſal Mechanical Method of drawing all Kinds of *Dials* here ſubjoyn'd.

*An eaſy Method, to deſcribe a* DIAL, *on any Kind of Plane, by means of an* Equinoctial Dial, *or Circle.*

Suppoſe, *e. gr.* A *Dial* requir'd on a Horizontal Plane: If the Plane be immoveable, as ABDC (*Fig.* 18.) find a Meridian Line GF: Or if moveable, aſſume the Meridian at Pleaſure. Then by means of the Triangle EKF, whoſe Baſe is applied on the Meridian Line raiſe the Equinoctial *Dial* H, till ſuch Time as the Index GI becomes parallel to the Axis of the World, (which is had, if the Angle KEF be equal to the Elevation of the Pole) and the 12 Clock Line on the *Dial* hang over the Meridian Line of the Plane, or the Baſe of the Triangle. If then in the Night-time a lighted Candle being ſucceſſively applied to Axis GI, ſo as the Shadow of the Index, or Style GI fall upon one Hour-Line after another; The ſame Shadow will mark out the ſeveral Hour-Lines on the Plane ABCD.

Noting the Points, therefore, on the Shadow, draw Lines through them to G: Then an Index being fix'd in G, according to the Angle IGF, its Shadow will point out the ſeveral Hours by the Light of the Sun.

If a *Dial* were requir'd *on a Vertical Plane*; having raiſed the Equinoctial Circle, as above directed, puſh forward the Index GI, till the Tip thereof I, touch the Plane.

If the Plane be *Inclined* to the Horizon, the Elevation of the Pole ſhould be found on the ſame; and the Angle of the Triangle KEF made equal thereto.

Note, Beſide the ſeveral Species of *Dials*, abovemention'd, which are ſaid to be *with Centres*, there are others, call'd *Dials without Centres*.

DIALS *without Centres*, are thoſe whoſe Hour-Lines do really converge, but ſo ſlowly that the Centre they converge towards, cannot be expreſs'd on the given Plane.

*Horizontal* DIALS *without Centres* are to be made for Places the Elevation of whoſe Pole is very ſmall; or very great.

*Vertical* DIALS *without Centres* for Places the Elevation of whoſe Pole is very great.

*For the Furniture of* Dials. See FURNITURE.

*Ring*-DIAL. } See { RING *Dial.*
*Portable* DIAL. } See { RING *Dial.*
*Quadrantal* DIAL. } See { *Horodictic* QUADRANT.
*Reflecting* DIAL. } See { REFLECTING *Dial.*

*Nocturnal*, or *Night*-DIAL, is that which ſhews the Hours of the Night.

Of this there are two Kinds, *Lunar*, and *Siderial*.

*Moon*-DIAL, or *Lunar* DIAL, is that which ſhews the Hour of the Night, by means of the Light, or Shadow of the Moon projected thereon from an Index.

*To deſcribe a Moon*-DIAL.

Suppoſe, *e. gr.* A Horizontal *Moon-Dial* required: Draw firſt a Horizontal *Sun-Dial*: Then erect two Perpendiculars AB, and CD, (*Fig.* 19.) to the Line of 12 a Clock, and dividing the Interval GF into 12 equal Parts; Through the ſeveral Points of Diviſion draw Lines parallel thereto. Now, appropriating the firſt Line CD to the Day of the New Moon, and the ſecond to the Day, when the Moon comes an Hour later to the Meridian than the Sun, their Interſections with the Hour-Lines will give Points, through which to draw a Curve Line 12, 12, for the Meridian Line of the Moon. After the like manner determine the other Hour-Lines 11, 22, 33, *&c.* which the Shadow of the Moon projected from the Style of the *Dial* interſects at the reſpective Hours. Blot out the Hour-Lines of the *Sun-Dial*, together with the Perpendiculars, whereby the Lunar-Hours were drawn, and divide the Interval GF, by other Parallel Lines into 15 equal Parts, anſwering to the 15 Days between New and Full Moon. Laſtly, to theſe Lines write the ſeveral Days of the Moon's Ages.

Now, the Moon's Age being learnt from a Calendar; the Interſection of the Lines of the Moon's Age, with the Lunar Hour-Lines, will give the Hour of the Night.

After the ſame manner may any other *Sun-Dial* be converted into a *Moon-Dial*.

*To draw a Portable Moon*-DIAL.

On a Plane that may be raiſed according to the Elevation of the Equator deſcribe a Circle AB (*Fig.* 20.) and divide its Circumference into 29 equal Parts. From the ſame Centre C deſcribe another moveable Circle DE, which divide into 24 equal Parts, or Hours. In the Centre C erect an Index, as for an Equinoctial *Dial*.

The

This *Dial* being duly plac'd after the manner of an Equinoctial *Dial*, and the 12 a-Clock Line brought to the Day of the Moon's Age: The Shadow of the Index will give the Hour.

*To uſe a Solar, as a Lunar-Dial, i. e. to find the Hour of the Night by a Sun-Dial.*

Obſerve the Hour, which the Shadow of the Index points at by Moon-Light: Find the Moon's Age in the Calendar, and multiply the Number of Day by $\frac{3}{4}$, the Product is the Number of Hours to be added to the Hour ſhewn by the Shadow, to give the Hour required.

DIALECT, the peculiar Language of ſome Province, or Part of a Nation, form'd by Corruption of the general, or national Language. See LANGUAGE.

*Homer* could ſpeak 5 different Languages in one Verſe, *i. e.* five *Dialects*, viz. the *Attic*, *Jonic*, *Æolic*, *Doric*, and the common Language of the *Greeks*. See GREEK, ATTIC, JONIC, *&c.*

The *Bolonneſe*, *Bergamas*, *Toſcan*, &c. are the *Dialects* of the *Italian*. See ITALIAN.

The *Gaſcon*, and *Piccard*, are the *Dialects* of the *French*. See FRENCH, *&c.*

DIALECTICA, the Art of Logic; or, of Thinking, and Reaſoning juſtly. See LOGIC.

*Zeno Eleates* was the firſt who diſcover'd the natural Series of Principles, and Concluſions, obſerved in Reaſoning, and form'd an Art thereof, in Form of Dialogue, which for this reaſon was call'd *Dialectica*.

The Word comes from the *Greek* διαλεκτικὴ, of the very διαλέγεσθαι, *diſſerere*, to diſcourſe, reaſon.

The *Dialectica* of the Ancients is uſually divided into ſeveral Kinds: The firſt was the *Eleatica*, that of *Zeno Eleates*; which was threefold: viz. *Conſecutionum*, *Colloquutionum*, and *Contentiarum*. The firſt conſiſting of Rules for deducing, or drawing Concluſions: The ſecond, the Art of *Dialogue*, which became of ſuch univerſal Uſe in Philoſophy, that all Reaſoning was call'd *Interrogation*. Then, Syllogiſm being laid a-ſide, the Philoſophers did all by *Dialogue*; it lying on the Reſpondent, to conclude, and argue from the ſeveral Conceſſions made. See DIALOGUE.

The laſt Part of *Zeno*'s *Dialecticks*, ἐριστικὴ, was Contentious, or the Art of Diſputing, and Contradicting; tho' ſome, particularly *Laertius*, aſcribe this Part to *Protagoras*, a Diſciple of *Zeno*.

The ſecond is the *Dialectica Megarica*, whoſe Author is *Euclid*, not the Mathematician, but another, of *Megara*. He gave much into the Method of *Zeno*, and *Protagoras*: Tho' there are two Things appropriated to him: The firſt, that he impugned the Demonſtrations of others, not by Aſſumptions, but Concluſions; continually making Illations, and throwing in *Ergo*, *Ergo*, *Ergo*. The ſecond, that he ſet a-ſide all Arguments drawn from Compariſon, or Similitude, as invalid.

He was ſucceeded by *Eubulides*, from whom the Sophiſtic Way of Reaſoning is ſaid to be deriv'd. In his Time the Art is deſcribed as manifold: *Mentiens*, *Fallens*, *Electra*, *Obvelata*, *Acervalis*, *Cornuta*, and *Calva*. See SOPHISM.

The third is the *Dialectica* of *Plato*, which he propoſes as a Kind of *Analyſis*, to direct the human Mind, by dividing, defining, and bringing Things to the firſt Truth; where being arrived, and ſtopping there a little, it applies it ſelf to explain ſenſible Things; but with a View to return to the firſt Truth, where alone it can reſt. Such is the Idea of *Plato*'s Analyſis. See ANALYSIS, PLATONISM, ACADEMIC, *&c.*

The fourth is *Ariſtotle*'s *Dialectica*, containing the Doctrine of ſimple Words, deliver'd in his Book of *Prædicaments*: The Doctrine of Propoſitions, in his Book, *de Interpretatione*: That of the ſeveral Kinds of Syllogiſms, in his Books of Analyticks, Topicks, and Elenchus's. See SYLLOGISM, TOPIC, ELENCHUS, PROPOSITION, *&c.*

The fifth is the *Dialectica* of the *Stoicks*, which they call a Part of Philoſophy, and divide into *Rhetoric*, and *Dialectic*: to which ſome add *Oric*, or Definitive, whereby Things are juſtly defin'd; comprehending likewiſe the Canons, or Criterions of Truth. See CRITERION, *&c.*

The *Stoicks*, ere they come to treat of Syllogiſms, have two principal Places, the one about the Word ſignifying; the other about the Thing ſignified. On Occaſion of the firſt, they conſider Abundance of Things belonging to the Grammarians Province, what, and how many Letters, what is a Word, Diction, Speech, *&c.* On Occaſion of the latter, they conſider Things themſelves, not as without the Mind, but as in it, receiv'd in by means of the Senſes. Accordingly, they firſt teach, that, *Nil ſit in Intellectu, quod non prius fuerit in Senſu*, Whatever is in the Mind, paſſes thither by the Senſes; and that, *Aut Incurſione ſui*, as *Plato*, who meets the Sight; *Aut Similitudine*, as *Cæſar* by his Effigy; *Aut Proportione*, either by Enlarging, as a Giant, or by Diminiſhing, as a Pigmy; *Aut Tranſlatione*, as a Cyclops; *Aut Compoſitione*, as a Centaur; *Aut Contrario*, as Death; *Aut Privatione*, as a blind Man. See STOICKS.

The ſixth is *Epicurus*'s *Dialectic*. For tho' he ſeems to have deſpiſed *Dialectic*, he cultivated it with Vigour: He was only averſe to that of the *Stoicks*, who, he thought, attributed too much thereto; as pronouncing him alone wiſe, who was well verſed in *Dialecticks*. For this Reaſon *Epicurus* ſeeming to ſet a-ſide the common *Dialecticks*, had recourſe to another Way, *viz.* to certain Canons, which he ſubſtituted in their ſtead, the Collection whereof he call'd *Canonica*. And as all Queſtions in Philoſophy are either, *de Re*, or *de Voce*; he gave ſeparate Rules for each. See CANONICA.

DIALECTICAL *Arguments*, in Logick, are ſuch as are barely probable, and do not convince, or determine the Mind to either Side of the Queſtion. See PROBABILITY.

DIALLING, the Art of drawing *Sun*, *Moon*, and *Star-Dials* on any given Plane, or the Surface of any given Body. See DIAL.

The *Greeks* and *Latins* call it *Gnomonica*, and *Sciaterica*, by reaſon it diſtinguiſhes the Hours by the *Shadow* of a *Gnomon*. Some call it *Photo-ſciaterica*, by reaſon the Hours are ſometimes ſhewn hy the Light of the Sun. Laſtly, others call it *Horologiography*. See GNOMONICA, SCIATERICA, *&c.*

The Antiquity of *Dials* is beyond doubt. Some attribute their Invention to *Anaxemenes Mileſius*; and others to *Thales*. *Vitruvius* mentions one made by the ancient *Chaldee* Hiſtorian *Beroſus*, on a Reclining Plane, almoſt parallel to the Equinoctial, call'd *Hemicyclus*. *Ariſtarchus Samius* invented the Hemiſphere Dial. And there were ſome Spherical ones, with a Needle for a *Gnomon*. The *Diſcus* of *Ariſtarchus* was an Horizontal Dial, with its Limb raiſed up all a-round, to prevent the Shadows ſtretching too far.

But it was late 'ere the *Romans* became acquainted with Dials. The firſt Sun-Dial at *Rome* was ſet up by *Papyrius Curſo*, about the Year of the City 447, before which Time, ſays *Pliny*, there is no mention of any Account of Time but by the Sun's Riſing, and Setting: It was ſet up in the Temple of *Quirinus*, but went ill: About 30 Years after, *M. Valerius Meſſala* being Conſul, brought out off *Sicily* another Dial, which he ſet up on a Pillar near the *Roſtrum*; but for Want of its being made for that Latitude, it could not go true. They made uſe of it 11 Years; till *Martius Philippus* ſet up another more exact.

But there ſeem to have been *Dials* among the *Jews* much earlier than any of theſe. Witneſs the *Dial* of *Ahaz*, who liv'd 400 Years before *Alexander*, and within 12 Years of the Building of *Rome*; mentioned by *Iſaiah* Chap. XXXVIII. Verſe 8.

*Dialling* is wholly founded on the firſt Motion of the heavenly Bodies, and chiefly the Sun; or rather on the Diurnal Rotation of the Earth; So that the Elements of Sphericks, and the Spherical Aſtronomy ſhould be maſter'd, 'ere a Perſon advances to the Doctrine of *Dialling*. The Doctrine, or Theory, we ſay, for as to the Practice, or the Operations themſelves, diſtinct from the Demonſtrations, nothing is more eaſy, and obvious.

The firſt profeſs'd Writer on *Dialling*, is *Clavius*; who demonſtrates all, both the Theory, and the Operations, after the rigid Manner of the ancient Mathematicians; But ſo intricately, that no body, we dare ſay, ever read them all. *Dechales*, and *Ozanam*, give much eaſier in their *Courſes*, and *Wolfius* in his *Elements*. Mr. *Picard* has given a new Method of making large Dials, by calculating the Hour-Lines; And Mr. *de la Hire*, in his *Dialling*, printed in 1683. a Geometrical Method of drawing Hour-Lines from certain Points determin'd by Obſervation. *Eberhardus Welperus*, in 1625. publiſh'd his *Dialling*, wherein he lays down a Method of drawing the Primary Dials on a very eaſy Foundation. The ſame Foundation is deſcrib'd at length by *Sebaſtian Munſter*, in his *Rudimenta Mathematica*, publiſh'd in 1551. *Sturmius*, in 1672. publiſh'd a new Edition of *Welperus*'s *Dialling*, with the Addition of a whole ſecond Part, about Inclining, and Declining Dials, *&c.* In 1708. the ſame Work, with *Sturmius*'s Additions, was republiſh'd with the Addition of a fourth Part, containing *Picard*'s, and *de la Hire*'s Methods of drawing large Dials, which makes much the beſt, and fulleſt Book on the Subject. *Peterſon*, *Michael*, and *Muller*, have each wrote on *Dialling*, in the *German* Tongue; *Coetſius*, in his *Horologiographia plana*, printed in 1689. *Gauppenius*, in his *Gnomonica Mechanica*, and *Bion*, in his *Uſe of Mathematical Inſtruments*.

DIALLING-*Globe*, is an Inſtrument made of Braſs, or Wood, with a Plane fitted to the Horizon, and an Index; particularly contrived to draw all Sorts of Dials, and to give a clear Exhibition of the Principles of that Art.

DIAL-

DIALLING-*Sphere*, is an Inſtrument made of Braſs, with ſeveral Semi-Circles ſliding over one another, on a moving Horizon, to demonſtrate the Nature of the Doctrine of Spherical Triangles, and to give the true Idea of drawing Dials on all manner of Planes.

DIALLING-*Lines*, or *Scales*, are graduated Lines, placed on Rules, or the Edges of Quadrants, and other Inſtruments, to expedite the Conſtruction of Dials. See SCALE.

The principal of theſe Lines are, 1. A *Scale of ſix Hours*, which is only a double Tangent, or two Lines of Tangents each of 45 Degrees, joyn'd together in the Middle, and equal to the whole Line of Sines, with the Declination ſet againſt the Meridian Altitudes in the Latitude of *London*, ſuppoſe, or whatever Place it is made for. The *Radius* of which Line of Sines is equal to the *Dialling-Scale of ſix Hours*. 2. A *Line of Latitudes*, which is fitted to the Hour-Scale, and is made by this Canon; As *Rad.* to the Chord of 90 Degrees: So are the Tangents of each reſpective Degree of the Line of Latitudes to the Tangents of other Arcs. And then the natural Sines of thoſe Arcs are the Numbers, which taken from a Diagonal Scale of equal Parts, ſhall graduate the Diviſions of the Line of Latitudes to any *Radius*. The Line of Hours, and Latitudes is general for pricking down all Dials with Centres.

DIALLING, in a Mine, call'd alſo *Plumming*, is the uſing of a Compaſs, (which they call *Dial*) and a long Line, to know which Way the Load, or Vein of Oar inclines, or where to ſhift an Air-Shaft, or bring an Adit to a deſir'd Place. See MINE.

The Manner thereof, See under the Article TIN.

DIALIA, in Antiquity, Sacrifices perform'd by the *Flamen Dialis*. See DIALIS.

'Twas not, however, of ſuch abſolute Neceſſity, that the *Dialia* were perform'd by the *Flamen Dialis*; but that others might officiate. We find in *Tacitus Annal.* Lib. III. Cap. 58. that if he were ſick, or detain'd by any other public Employ, the Pontifices took his Place.

DIALIS, in Antiquity, a *Latin* Term, ſignifying ſomewhat that belongs to *Jupiter*, to Ζεὺς Διὸς.

The *Flamen Dialis*, then, was a Prieſt of *Jupiter*. He was never permitted to ſwear. See FLAMEN.

DIALOGUE, a Converſation of two or more Perſons, either by Word of Mouth, or in Writing.

The Word is form'd from the Latin *Dialogus*, of the *Greek* Διάλογος, which ſignifies the ſame Thing.

*Dialogue*, is the moſt ancient Form of Writing. See DIALECTIC.

The firſt Authors wrote moſt of their Treatiſes therein. The Arch-Biſhop of *Cambray* gives an admirable Painting of the Advantages of *Dialogue*, at the Head of his Paſtoral Inſtruction. See the Word DRAMATIC.

The Holy Spirit himſelf has not diſdain'd to teach us in *Dialogue*, viz. Patience, in the Book of *Job*, and Love of God, in the *Canticles*. *Juſtin Martyr* open'd this Way, in his Controverſy againſt the Jews; and *Minutius Felix* follow'd it in his againſt the Idolaters. 'Tis in this Form, that *Origen* jug'd he could beſt refute the Error of *Marcion*. The great *Athanaſius* thought it no Diminution to the Majeſty of Myſteries of Faith, to maintain them by the Familiarity of *Dialogue*. This Way of Writing St. *Baſil* choſe as the moſt proper to convey thoſe Rules, which have ſince illumined all the Eaſt. The Arts of *Dialogue* were admirably put in Practice by *Gregory Nazianzen*, and his Brother *Cæſarius*, for conveying the ſublimeſt Truths. *Sulpitius Severus* could not do better, than publiſh the Wonders of Solitude in a Kind of Converſations. A Volume of St. *Cyril* of *Alexandria*, is almoſt fill'd with *Dialogues*, wherein he explains the moſt Dogmatical Truths, relating to the Incarnation. The Myſtery of *Jeſus Chriſt* is treated of in the ſame manner, by the Learned *Theodoret*. St. *Chryſoſtom* found no Method more promiſing to expreſs the Eminence, and Danger of the Prieſthood. Who is not acquainted with the beautiful *Dialogue* of St. *Jerom*, wherein he refutes the *Luciferians*? Who does not admire St. *Auguſtine*'s *Dialogues*, and eſpecially thoſe on free Will, where he goes back to the Origin of Sin; againſt the *Manichees*? The Tradition of the Solitaries in the Deſert, is finely illuſtrated in the Conferences of *Caſſian*, which have ſpread the ſame Light through the Weſt, that the Eaſt receiv'd from St. *Baſil*. *Gregory* the *Great* deem'd *Dialogue* worthy the Gravity of the Apoſtolic See. The *Dialogues* of St. *Maximus*, on the Subject of the Trinity, are famous throughout all the Church. St. *Anſelm* ſhew'd the Force of his *Genius* in his *Dialogues* on the Fundamentals of Religion. Profane Antiquity likewiſe made Uſe of the *Art of Dialogue*, and that, not only on humourous, and comical Subjects, as *Lucian* did, but alſo on the moſt ſerious, and abſtract; Such are the *Dialogues* of *Plato*, and thoſe of *Cicero*, which turn altogether on Subjects of Philoſophy, or Politick. Among the Moderns, the principal *Dialogiſts*, are Monſr. *de Fenelon*, Arch-Biſhop of *Cambray*; Mr. *Paſchal*, in his *Provincial Letters*; *F. Bouhours*, in his *Entretiens d'Ariſte, & Eugene*; Monſr. *Fontenelle*, in his *Dialogues* on the Dead, and Plurality of Words, *&c.*

DIALOGUE, in Muſic, is a Compoſition for at leaſt two Voices, or two Inſtruments, which anſwer each other; and which frequently uniting make a *Trio* with the Thoro'-Baſs.

There are Abundance of *Dialogues* in the *Italian* Opera's.

DIALTHÆA, in Pharmacy, an Unguent thus call'd from its *Baſis*, which is the Root of the *Althæa*.

It conſiſts of Mucilages drawn from that Root, and from the Seeds of Line, *Squillæ*, and Fennigreek. The other Ingredients are common Oil, yellow Wax, Reſin, Turpentine, *Galbanum*, and Ivy-Gum.

It is eſteem'd proper to ſoften, and reſolve; aſſwages Pains of the Side, ſoftens Callus's, and ſtrengthens the Nerves. 'Tis applied, by rubbing it on the Parts affected.

DIALYSIS, in Grammar, a Character conſiſting of two Points .. placed over two Vowels of a Word, which would otherwiſe make a Diphthong; but are here parted into two Syllables. See VOWEL, and DIPHTHONG.

DIAMARGARITON, in Pharmacy, a Medicine denominated from Pearls, call'd in Latin *Margaritæ*; which are a principal Ingredient therein. See PEARL.

There are two Kinds: The *Hot*, and the *Cold*.

The *Hot Diamargariton*, is a Powder compoſed of Pearls, Pellitory, Ginger, Nutmeg, Cinnamon, and divers other hot Ingredients. It is reputed Hyſteric, ſtrengthens the Womb, promotes the *Menſes*, and aſſiſts in Digeſtion.

*Cold Diamargariton*, is a ſolid Electuary, compoſed of Pearls ground-fine, and white Sugar diſſolved in Roſe-Water, or Buglos, and boil'd to a Conſiſtence. It ſtrengthens the Stomach, moderates the too abundant Acids, ſtops the ſpitting of Blood, and Looſeneſs of the Belly.

*Compound Cold Diamargariton*, is a Powder made of Pearls, red Roſes, Flowers of Nenuphar, and Violet, *Lignum Aloes*, red and Citron Santal, Tormentle Root, Seeds of Melon, Endive, *&c.* It is applied to give Vigour, facilitate Reſpiration, and reſiſt the Malignity of Humours.

DIAMASTIGOSIS, in Antiquity. It was a Cuſtom among the *Lacedemonians*, for the Children of the moſt diſtinguiſh'd Families, to flaſh and tear each others Bodies with Rods before the Altars of the Gods: The Fathers, and Mothers, who were preſent at the Spectacle, animating and exciting them all the while, not to give the leaſt Sign of Pain, or Concern.

This they call'd *Diamaſtigoſis*, a *Greek* Term, derived from Διαμαστιγοῦν, *to whip, cudgel*.

The Deſign hereof, apparently, was no other than to harden their Youth, and enure them betimes to Blows, Wounds, *&c.* that they might deſpiſe them when they came to War.

DIAMETER, in Geometry, a right Line paſſing thro' the Centre of a Circle, and terminating on each Side by the Circumference thereof. See CIRCLE.

Or, the *Diameter* may be defined a Chord paſſing thro' the Centre of a Circle: Such is the Line A E (*Tab. Geometry Fig.* 27.) paſſing through the Centre C. See CHORD.

Half a *Diameter*, as CD, drawn from the Centre C to the Circumference, is call'd the *Semi-Diameter*, or *Radius*. See RADIUS, *&c.*

*The Properties of the* DIAMETER.

1. The *Diameter* divides the Circumference into equal Parts. And hence we have a Method of deſcribing a Semi-Circle upon any Line; aſſuming a Point therein for the Centre. See SEMICIRCLE.

2. The *Diameter* is the greateſt of all the Chords.

3. *To find the Ratio of the* Diameter *to the Circumference.*

This *Ratio* has been greatly ſought for by the Mathematicians: And no wonder: in as much as if this were juſtly given, the Quadrature of the Circle where atchiev'd. See QUADRATURE.

*Archimedes* firſt propoſed a Method of finding it by Regular Polygons, inſcrib'd in a Circle; till arriving at a Side ſubtending an exceeding ſmall Arch, and then ſeeking the Side of a Similar Polygon circumſcrib'd: Each of theſe being multiplied by the Number of Sides of the Polygon, gave the Perimeter of the Polygon both inſcrib'd, and circumſcrib'd. In which Caſe the *Ratio* of the *Diameter* to the Circumference of the Circle was greater than that of the ſame *Diameter* to the Perimeter of the circumſcrib'd Polygon, but leſs than that of the *Diameter* to the Perimeter of the Polygon inſcrib'd. The Difference between both gives the *Ratio* of the *Diameter* to the Circumference in Numbers nearly true.

That Divine Author, as already obſerved, by Polygons of 96 Sides, found the *Ratio* of the *Diameter* to the Circumference to be as 7 to 22. *viz.* Suppoſing the *Diameter* 1, the

the Perimeter of the inſcribed Polygon is found $3\frac{10}{71}$, and that of the circumſcribed $3\frac{1}{7}$.

After his Example, later Authors have found out *Ratio's* nearer Truth; but none ſpent ſo much Time on it as *Van Ceulen*, who, after immenſe Pains, found, that ſuppoſing the *Diameter* 1, the Circumference is leſs than 3. 1 41592653589793238462643383879 50, and yet greater than the ſame Number with the laſt Figure o changed into 1. But as ſuch prolix Numbers are too unweildy for Practice, many of our preſent practical Geometricians aſſume the *Diameter* to be to the Circumference as 100 to 3145 or in greater Circles as 10000 to 31415, in which Proportion *Ptolomy*, *Vieta*, and *Huygens* agree with *Van Ceulen*.

*Ad. Metius* gives us the *Ratio* 113 to 355, which is the moſt accurate of all thoſe expreſs'd in ſmall Numbers; as not erring 3 in 100000000.

4. The *Diameter* of a Circle given, to find the Circumference, and *Area*; and the Circumference given, to find the *Diameter*.

The *Ratio* of the *Diameter* to the Circumference being had, as in the laſt Article, that of the Circumference to the *Diameter* is had likewiſe. Then the Circumference being multiplied into the fourth Part of the *Diameter*, gives the *Area* of the Circle. Thus, if the *Diameter* be 100, the Circumference will be 314, and the *Area* of the Circle 7850. But the Square of the *Diameter* is 10000: Therefore, this is to the *Area* of the Circle as 10000 to 7850, that as 1000 to 785 nearly.

5. The *Area* of a Circle being given, to find the *Diameter*. To 785, 1000, and the given *Area* of the Circle 246176 find a fourth Proportional, *viz.* 3113 6000, which is the Square of the *Diameter*. Out of this extract the Square-Root, and it is the *Diameter* it ſelf.

DIAMETER *of a Curve*, or *Conick Section*, is a right Line, as AD, (*Tab. Conicks Fig.* 5.) biſſecting all the Ordinates MM, *&c.* in P, *&c.* This, when it cuts the ſaid Lines at right Angles, is particularly call'd the *Axis of the Curve*, or *Section*.

A *Tranſverſe* DIAMETER, is a right Line, as AB (*Tab. Conicks Fig.* 6.) which being continued each Way between two Curves, biſſects parallel right Lines between the ſame, as MM. See TRANSVERSE.

*Conjugate* DIAMETER, is a right Line, biſſecting Lines drawn parallel to the *Tranſverſe Diameter*. See CONJUGATE.

DIAMETER *of a Sphere*, is the *Diameter* of the Semi-Circle, by whoſe Rotation the Sphere is generated; call'd alſo *Axis of the Sphere*. See SPHERE.

DIAMETER *of Gravity*, is a right Line paſſing through the Centre of Gravity. See CENTRE *of Gravity*.

DIAMETER, in Aſtronomy. The *Diameters* of the heavenly Bodies, are either *Apparent*, i. e. ſuch as they appear to the Eye; or *Real*, i. e. ſuch as they are in themſelves.

The *Apparent Diameters* meaſur'd with a Micrometer, are found different, in different Circumſtances and Parts of their Orbits.

| | Greateſt | Mean. | Leaſt. |
|---|---|---|---|
| | ′ ″ | | |
| *Appar.* DIAM. *of the* Sun *accord. to Ptolomy.* | 33 20 | 32 18 | 31 20 |
| *to Tycho* | 32 0 | 31 0 | 30 0 |
| *Kepler* | 31 4 | 30 30 | 30 0 |
| *Ricciolus* | 32 8 | 31 40 | 31 0 |
| *Caſſini* | 32 10 | 31 40 | 31 8 |

| *of the* Moon *accord. to Ptolomy* | 35 20 | —— | 31 20 |
| *Tycho in the* Conjunct. | 28 48 | —— | 25 36 |
| *in the* Oppoſ. | 36 0 | —— | 32 0 |
| *Kepler* | 32 44 | —— | 30 0 |
| *de la Hire* | 30 33 | —— | 29 30 |
| *of* Jupiter *according to Tycho* | 2 12 | 1 50 | 1 34 |
| *Hevelius* | 0 19 | 0 16 | 0 14 |
| *Huygens* | —— | —— | 30 0 |
| *of* Saturn *according to Tycho* | 3 59 | 2 45 | 2 14 |
| *Hevelius* | 0 24 | 0 18 | 0 14 |
| *Huygens* | —— | —— | 1 14 |
| *of* Mars *according to Tycho* | 6 46 | 1 40 | 0 57 |
| *Hevelius* | 0 20 | 0 5 | 0 2 |
| *Huygens* | —— | —— | 30 0 |
| *of* Venus *according to Tycho* | 4 40 | 3 15 | 1 52 |
| *Hevelius* | 1 5 | 0 16 | 0 9 |
| *Huygens* | —— | —— | 1 25 |
| *of* Mercury *accord. to Tycho* | 3 57 | 2 10 | 1 29 |
| *Hevelius* | 0 11 | 0 6 | 0 4 |

That notable Difference between *Tycho*, and the other two Aſtronomers, is owing to this, that *Tycho*, in Imitation of the Ancients, meaſured the *Diameters* as they appear to the naked Eye; whereas *Hevelius* and *Huygens* uſed Teleſcopes, whereby a deal of ſpurious Luſtre, which otherwiſe makes them appear bigger than they are, is ſhaven off.

For the true *Diameters* of the Sun, and Planets, and their Proportion to each other. See SEMIDIAMETER.

DIAMETER *of a Column*, is that taken juſt above the Baſes. From this the Module is taken, which meaſures all the other Parts of the Column. See MODULE.

DIAMETER *of the Swelling*, is that taken at the Height of one Third from the Baſe.

DIAMETER *of the Diminution*, is that taken from the Top of the Shafts. See DIMINUTION.

DIAMOND, in Natural Hiſtory, by the Ancients call'd *Adamant*, a pretious Stone, the firſt in Rank, Value, Hardneſs, and Luſtre, of all Gems. See PRECIOUS *Stone*.

The Goodneſs of *Diamonds* conſiſts in their Water or Colour, Luſtre, and Weight: The moſt perfect Colour is the White. Their Defects are Veins, Flaws, Specks of red or black Sand, and a bluiſh, or yellowiſh Caſt. In *Europe*, the Lapidaries examine the Goodneſs of their rough *Diamonds*, their Water, Points, *&c.* by Day-Light: In the *Indies*, they do it by Night; In order to which, a Hole is made in a Wall, a foot-ſquare, and therein a Lamp placed, with a thick Wick, by the Light whereof they judge of the Stone, holding it in their Fingers. The Water, call'd *Cæleſtis*, is the worſt of all, and yet is ſomewhat difficult to diſcover in a rough *Diamond*. The only infallible Way is to examine it in the Shade of ſome tufted Tree.

As to the Diſtinguiſhing *Diamonds* from other Stones, Dr. *Wall*, in our *Philoſophical Tranſactions*, ſeems to have found an infallible Method: A *Diamond*, with an eaſy, ſlight Friction in the Dark, with any ſoft, animal Subſtance, as the Finger, Woollen, Silk, *&c.* appears luminous in its whole Body: Nay, if you keep rubbing for ſome Time, and then expoſe it to the Eye, 'twill remain ſo for ſome Time. If the Sun be 18 Degrees below the Horizon; holding up a Piece of Bays, or Flannel ſtretch'd right between both Hands, at ſome Diſtance from the Eye; and another rubbing the other Side of the Bays, or Flannel, pretty briſkly with a *Diamond*; the Light is much more vivid and pleaſant than any other Way. But what he judges moſt ſurprizing is, that a *Diamond* being expoſed to the open Air, in View of the Sky, gives almoſt the ſame Light of it ſelf, without rubbing, as if rubb'd in a dark Room: But, if in the open Air, you put the Hand, or any Thing a little over it, to prevent its immediate Communication with the Sky; it gives no Light; which is a diſtinguiſhing Criterion of a *Diamond*.

A *Rough* DIAMOND, is that not yet cut, but juſt as it comes out of the Mine.

A *Facet* DIAMOND, is that cut in Faces both a-top, and Bottom, and whoſe Table, or principal Face a-top is flat.

A *Roſe* DIAMOND, is that quite flat underneath, but its upper Part cut in divers little Faces, uſually Triangles, the uppermoſt whereof terminate in a Point.

A *Table* DIAMOND, is that which has a large ſquare Face a-top, encompaſs'd with four leſſer.

*Diamonds* are only found in the *Eaſt-Indies*, and that only in the Kingdoms of *Golconda*, *Viſapour*, *Bengale*, and the Iſland of *Borneo*. There are four Mines, or rather two Mines, and two Rivers, whence *Diamonds* are drawn. The Mines are, 1. That of *Raolconda*, in the Province of *Carnatica*, five Days Journey from *Golconda*, and 8 from *Viſapour*. It has been diſcover'd about 200 Years. 2. That of *Gani*, or *Coulour*, 7 Days Journey from *Golconda*, Eaſtwardly. It was diſcover'd 120 Years ago by a Peaſant, who digging in the Ground found a natural Fragment of 25 Carats. 3. That of *Soumelpour*, a large Town in the Kingdom of *Bengale*, near the *Diamond-Mine*. This is the moſt ancient of them all. It ſhould rather be call'd that of *Goual*, which is the Name of the River, in the Sand whereof theſe Stones are found. Laſtly, the 4th Mine, or rather the ſecond River, is that of *Succudan*, in the Iſle of *Borneo*.

### DIAMOND-*Mine of* Raolconda.

In the Neighbourhood of this Mine, the Earth is ſandy, and full of Rocks, and Copſe. In theſe Rocks are found ſeveral little Veins, of half, and ſometimes a whole Inch broad, out of which the Miners, with a Kind of hooked Irons, draw the Sand, or Earth, wherein the *Diamonds* are; breaking the Rocks, when the Vein terminates, that the Track may be found again, and continued. When a ſufficient Quantity of Earth, or Sand is drawn forth, they waſh it two or three times, to ſeparate the Stones therefrom. The Miners work quite naked, except for a thin linnen Cloth before them, and beſides this Precaution, have likewiſe Inſpectors, to prevent their Concealing of Stones: which, however, maugre all this Care, they frequently find means to do; by watching Opportunities when they are not obſerved, and ſwallowing them down.

### DIAMOND-*Mine of* Gani, *or* Coulour.

In this Mine are found a great Number of Stones from 10 to 40 Carats, and even more; And it was here that famous *Diamond* of *Aureng-Zeb*, the *Great Mogul*, which before it was cut, weighed 780 Carats, was found.

The Stones of this Mine are not very clear, and their Water is uſually tinged with the Quality of the Soil, being black where that its Marſhy, red where it partakes of red, and ſometimes green, and yellow, if the Ground happen to be of thoſe Colours. Another Defect of ſome Conſequence is a Kind of fat Appearing on the *Diamond*, when cut, which takes off Part of its Luſtre. There are uſually no leſs than 60000 Perſons, Men, Women, and Children at Work in this Mine. When the Miners have found a Place where they intend to dig, they level another ſomewhat bigger in the Neighbourhood thereof, and incloſe it with Walls about 2 Foot high, only leaving Apertures from Space to Space, to give Paſſage to the Water. After a few ſuperſtitious Ceremonies, and a Kind of Feaſt, which the Maſter of the Mine makes the Workmen, to encourage them, every one goes to his Buſineſs, the Men digging the Earth in the Place firſt diſcover'd, and the Women and Children carrying it off into the Wall round. They dig 12, or 14 Foot deep, and till ſuch Time as they find Water. Then they ceaſe digging, and the Water thus found ſerves to waſh the Earth two or three times, after which it is let out at the Aperture reſerv'd for that End. This Earth being well waſh'd, and well dryed, they ſift it in a Kind of open Sieve, or Riddle, much as we do Corn in *Europe*; then thraſh it, and ſift it a-freſh; And laſtly ſearch it well with the Hands to find the *Diamonds*. They work naked as in the Mine of *Raolconda*, and are watch'd after the like manner by Inſpectors.

DIAMOND-*Mine of* Soumelpour, *or River of* Goual.

*Soumelpour* is a large Town built all of Earth, and cover'd with Branches of Cacao-Trees, and the River of *Goual* runs by the Foot thereof, in its paſſing from the high Mountains towards the South to the *Ganges*, where it loſes its Name. 'Tis from this River are brought all our fine *Diamond* Points, or Sparks, call'd *Natural Sparks*. They never begin to ſeek for *Diamonds* in this River till after the great Rains are over, that is, after the Month of *December*; And they uſually even wait till the Water is grown clear, which is not before *January*. The Seaſon at hand, 8, or 10000 Perſons of all Ages, and Sexes, come out of *Soumelpour*, and the neighbouring Villages. The moſt Experienced among them ſearch, and examine the Sand of the River, going up it from *Soumelpour* to the very Mountains whence it ſprings. A great Sign that there are *Diamonds* in it, is, the Finding of thoſe Stones which we *Europeans* call *Thunder-Stones*. When all the Sand of the River, which at that Time is very low, has been well examin'd, they proceed to take up that wherein they judge *Diamonds* likely to be found; which is done after the following manner: They dam the Place round with Stones, Earth, and Faſcines, and lading out the Water, dig about 2 Foot deep: the Sand thus got is carried into a Place wall'd round on the Bank of the River. The reſt is perform'd after the ſame manner as at *Coulour*, and the Workmen watch'd with equal Strictneſs.

DIAMOND-*Mine in the Iſland of* Borneo, *or River of* Succudan.

We are but little acquainted with this Mine; The Queen who reigns in that Part of the Iſland not allowing Strangers to have any Commerce in theſe Stones: Tho' there are very fine Ones to be bought at *Batavia*, brought thither by Stealth. They were anciently imagin'd to be ſofter than thoſe of the other Mines, but Experience ſhews, they are in no reſpect inferior to them. Beſide theſe four *Diamond-Mines*, there have been two others diſcover'd; one of them between *Coulour* and *Raolconda*, and the other in the Province of *Carnatica*; but they were both cloſed up almoſt as ſoon as diſcover'd: That of *Carnatica*, by reaſon the Water of the *Diamonds* was always either black, or yellow; and the other, on Account of their cracking, and flying in Pieces when cut, and ground.

The *Diamond*, we have already obſerv'd, is the hardeſt of all precious Stones. It can only be cut, and ground by it ſelf, and its own Subſtance. To bring it to that Perfection, which augments its Price ſo conſiderably, they begin by rubbing ſeveral againſt each other, while rough; after having firſt glued them to the Ends of two Sticks, or Blocks, thick enough to be held in the Hand. 'Tis this Powder thus rubb'd off the Stones, and receiv'd in a little Box for the Purpoſe, that ſerves to grind, and poliſh the Stones.

*Diamonds* are cut, and poliſh'd by means of a Mill, which turns a Wheel of ſoft Iron ſprinkled over with *Diamond* Duſt mixt with Oil of Olives. The ſame Duſt well ground, and diluted with Water and Vinegar, is uſed in the ſawing of *Diamonds*; which is perform'd with an Iron, or Braſs Wiar, as fine as a Hair. Sometimes in lieu of ſawing the *Diamonds* they cleave them, eſpecially if there be any large Shivers therein. But the *Europeans* are not daring, or expert enough to run the Riſque of cleaving, for fear of breaking.

A *Rough* DIAMOND muſt be choſen uniform, of a good Shape, tranſparent, not quite white, and free of Flaws, and Shivers. Black, rugged, dirty, flawing, veiny Stones, and all ſuch as are not fit for cutting, they uſe to pound in a Steel Mortar made for that Purpoſe; and when pulverized, they ſerve to ſaw, cut, and poliſh the reſt. Shivers are occaſion'd in *Diamonds* by this, that the Miners, to get them more eaſy out of the Vein; which winds between two Rocks; break the Rocks with huge Iron Leavers, which ſhakes, and fills the Stone with Shivers.

The Ancients had two miſtaken Notions with regard to the *Diamond*: The firſt, That it became ſoft, by ſteeping it in hot Goat's Blood. And the ſecond, That it is malleable, and bears the Hammer. Experience ſhews us the contrary; there being nothing capable of mollifying the Hardneſs of this Stone; tho' its Hardneſs be not ſuch, that it will endure being ſtruck at Pleaſure with the Hammer.

The fineſt *Diamonds* now in the World are that of the *Great Mogul*, weighing 279 Carats; that of the Great Duke of *Toſcany*, weighing 139 Carats; and that known in *France* under the Name of *Grand Sancy*, which is one of the Crown Jewels, weighing 106 Carats, whence its Name *Sancy*, which is a Corruption of *Cent ſix*, that is 106. *Tavernier*, by a Rule which he had made for Eſtimating the Value of *Diamonds*, computes that of the *Great Mogul* at a 110000072328 *French* Livres, equivalent to 879244 Pound Sterling; and that of the Duke of *Toſcany*, at 2618335 Livres, or 195374 Pound Sterling.

The following is a Rate, or Manner of Eſtimating the Value of *Diamonds*, drawn up by a Perſon exceedingly well verſed in ſuch Matters, and which, for its Curioſity, as well as the Uſe it may be of, to Perſons who deal in precious Stones, we judge, will be highly acceptable.

It muſt be obſerv'd, however, that Defects in the Water, or Shape; red, or black Spots; Shivers, and other Failings, frequently found in theſe Stones, reduce the Price by one third, and ſometimes more.

As to *Brillant*, or *Roſe*-DIAMONDS, the Price is always leſs by one third, than that of *Table-Diamonds*; tho' the Weights be the ſame; the reaſon is, that the latter ſhew themſelves a great deal more when ſet in their Collets, than the former.

Attempts have been made to produce *Artificial Diamonds*, but with no great Succeſs.

The

The *Factitious* DIAMONDS made in *France*, call'd *Temple Diamonds*, on Account of the *Temple* at *Paris*, where the beſt of them are made, are vaſtly ſhort of the genuine Ones; accordingly they are but little valued, tho' the Conſumption thereof is pretty conſiderable for the Habits of the Actors on the Stage, *&c.*

DIAMOND. The *Diamond* is of conſiderable Uſe in the Glaſs-Manufacture, for ſquaring the large Plates, or Pieces; and among Glaziers, for cutting their Glaſs.

Theſe *Diamonds* are differently fitted up. That uſed for Looking-Glaſſes, and other large Pieces, is ſet in an Iron Ferril two Inches long, and a Quarter of an Inch Diameter. The reſt of the Cavity of the Ferril is filled with melted Lead, which keeps the *Diamond* firm in its Place.

The Glaziers have a Handle of Box, or Ebony, fitted into the Ferril to hold it by. In the former there is a little Piece of Box croſſing the Ferril, in Form of a little Plane, cover'd at Bottom with a thin Copper-Plate.

DIAMOND, in Heraldry, is uſed to expreſs the black Colour in the Atchievements of Noblemen. *Gwillim* diſlikes the Way of Blazoning the Coats of Peers by precious Stones, inſtead of Metals, or Colour. But Practice allows it. See COLOUR.

DIAMOND *Glaſs.* } See { GLASS.
DIAMOND *Pavement.* } See { PAVEMENT.

DIAMORUM, a Compoſition in Pharmacy, either *Simple*, or *Compound*.

*Simple* DIAMORUM, is the common Syrup of Mulberries, made of Mulberry-Juice, and Sugar. It is good againſt Diſeaſes of the Throat, and to ſtop Dyſſenteries. There is alſo a Sort of *Simple Diamorum* made of Mulberry Juice and Honey, call'd alſo *Mulberry Rob*.

*Compound* DIAMORUM is made with Mulberry Juice, Sapa, Verjuice, Myrrh, and Saffron. It is uſed to deterge Phlegm from the Stomach, and Breaſt, and eaſe Reſpiration.

The Word is form'd from *Morus*, Mulberry.

DIANA'S *Tree*, *Arbor Dianæ*, a very curious Phænomenon in Chymiſtry, being the juſt Figure of a Tree, with Branches, Leaves, Fruit, *&c.* ſhooting up in a Diſſolution of Silver in an Acid Spirit.

There are divers Manners of procuring *Diana's Tree*; but moſt of them exceeding tedious, except the following one of Monſr. *Homberg*, which may be done in a Quarter of an Hours time. Take four Drachms of Filings of fine Silver, with which make an *Amalgama*, without Heat, with two Drams of Quickſilver. Diſſolve the *Amalgama* in 4 Ounces of *Aqua fortis*; and pour the Solution into 3 Gallons of common Water; ſtir it about a while to mingle it well together; and then keep it in a Glaſs Veſſel well ſtopp'd.

When you would make the Experiment, take about an Ounce of it, and put it in a ſmall Viol, wherein likewiſe put the Quantity of a ſmall Pea of the ordinary *Amalgama* of Gold, or Silver; which ſhould be as ſoft as Butter; and ſet the Viol at reſt for 2 or 3 Minutes. Immediately after this you will ſee ſeveral ſmall Threads, or Filaments, ariſing perpendicularly from the little Bulb of the newly put in *Amalgama*, which will ſenſibly grow, and thruſt out, on the Sides, ſmall Branches in Form of a Tree. The Bulb, or Ball of the *Amalgama* will grow hard, and be like a Pellet of white Earth; and the little Tree of the Colour of bright Silver.

The Form of this Metalline Tree may be varied almoſt at Pleaſure. The ſtronger you make the firſt deſcribed Water, the thicker will the little Tree be in Branches, and the ſooner form'd. The ſame Author ſhews, how divers other Kinds of Trees may be produced by Cryſtallization, and Digeſtion. See MARTIS *Arbor*.

DIANUCUM, in Pharmacy, a Kind of Rob, made of the Juice of green Walnuts, and Sugar, boil'd together by a moderate Fire, to the Conſiſtence of Honey.

It is good to ſtrengthen the Stomach, promote Sweat, and reſiſt Poiſon.

The Word is form'd from *Nux*, *Nucis*; Nut.

DIAPALMA, in Pharmacy, a Deſiccative, or drying Plaſter, denominated from the Wood of the Palm-Tree, whereof the *Spatula* is made, that is to ſtir it while boiling.

It is compoſed of common Oil, Hogs-fat, and Litharge of Gold.

It is good to dry, reſolve, deterge, and cicatrize: And is the Plaſter moſt uſed for Wounds, and Ulcers.

DIAPASMA, a common Name for all Perfumes applied on the Body, of what Form ſoever they be, whether Powders, Eſſences, Pomatum's, or the like.

The Word comes from the *Greek* διαπάσσειν, *to water*.

DIAPASON, in Muſic, a Muſical Interval, by which moſt Authors, who have wrote on the Theory of Muſic, uſe to expreſs the Octave of the *Greeks*; as they uſe *Diapente*, *Diateſſaron*, *Hexachord*, and *Tetrachord*, to expreſs *Fifths*, *Fourths*, *Thirds*, and *Sixths*. See OCTAVE.

The *Diapaſon* is the firſt, and moſt perfect of the Concords: If conſider'd *Simply*, it is but one Harmonical Interval; tho' if conſider'd *Diatonically*, by Tones and Semi-tones, it contains ſeven Degrees, *viz.* three greater Tones, two leſſer Tones, and two greater Semi-tones. See DEGREE.

The Interval of a *Diapaſon*, that is, the Proportion of its grave Sound to its acute, is *duplicate*, that is, as 2 to 1. See INTERVAL.

DIAPASON, among the Muſical Inſtrument-makers, is a Kind of Rule, or Scale, whereby they adjuſt the Pipes of their Organs, and cut the Holes of their Flutes, Haut-Bois, *&c.* in due Proportion, for performing the Tones, Semi-tones, and Concords juſt.

A Square being divided into eight equal Parallelograms; the Points wherein a Diagonal interſects all theſe Parallelograms, expreſs all the uſual Intervals in Muſic: And on this Principle it is, that the *Diapaſon* is founded.

There is a particular Kind of *Diapaſon* for Trumpets; ſerving as a Standard, or Meaſure, for the different Magnitudes, they muſt have to perform the four Parts of Muſic. See TRUMPET.

There is another for Sack-buts, and Serpets, ſhewing how far they are to be lengthen'd, or ſhorten'd, to riſe or fall from one Tone or Interval to another.

The Bell-founders have likewiſe a *Diapaſon*, or Scale, ſerving to regulate the Size, Thickneſs, Weight, *&c.* of their Bells. See *Bell*-FOUNDERY.

DIAPASONDIAEX, in Muſic, a Kind of compound Concord; whereof there are two Sorts: The greater, which is in the Proportion of 10 to 3; and the leſs, in that of 16 to 5. See CONCORD.

DIAPASONDIAPENTE, in Muſic, a compound Conſonance, in the Triple Ratio, or as 3 to 9. See CONCORD.

The *Diapaſon-diapente* is a Symphony made when the Voice proceeds from the 1ſt to the 12th Tone.

The Word is properly a Term in the *Greek* Muſic: We ſhould now call it a *Twelfth*.

DIAPASONDIATESSARON, in Muſic, a compound Concord, founded on the Proportion of 8 to 3.

The *Diapaſon-diateſſaron* is a Symphony, wherein the Voice proceeds from its firſt Tone to its eleventh. This the Moderns would rather call the *Eleventh*.

DIAPASONDITONE, in Muſic, a Concord, whoſe Terms are in the Proportion of 10 to 4, or 5 to 2.

DIAPASONSEMIDITONE, a Concord, whoſe Terms are in the Proportion of 12 to 5.

DIAPEDESIS, in Medicine, an Eruption, or oozing of Blood through the Coats of the Veins, or Arteries; occaſioned either by the Bloods becoming too much diſſolved, or attenuated; or by the Pores of the Veſſels becoming too patent, and open. See BLOOD.

There are ſome able Phyſicians who deny there can be any ſuch a Tenuity of Blood, as that it ſhall exude thro' the Veſſels, without any Apperture made therein.

The Word is compounded of διὰ, *through*; and πηδάω, *I leap*.

DIAPENTE, in the ancient Muſic, an Interval making the Second of the Concords; and with the *Diateſſaron*, an Octave.

This is what in the modern Muſic we more uſually call a *Fifth*. See FIFTH.

The *Diapente* is a ſimple Concord; yet if conſider'd Diatonically, it contains four Terms, two greater Tones, a leſſer Tone, and a greater Semi-tone. The *Diapente* is the greateſt Part of the Diapaſon, or Octave, harmonically divided. It is produced when the Voice paſſes from its firſt Tone to its fifth.

DIAPENTE, is alſo uſed in Pharmacy, for a Compound of five ſeveral Drugs, or Ingredients.

The Word is form'd of διὰ, and πέντε, *five*.

DIAPHANOUS, in Philoſophy, *Tranſparent*, or *Pellucid*, is ſomewhat that gives Paſſage to the Rays of Light; as Water, Air, Glaſs, Talc, fine Porcelane, *&c.* See TRANSPARENT.

The Word is form'd of διὰ, *three*, and φαίνω, *luceo*, I ſhine.

DIAPHANEITY, in the Schools, the Quality of a tranſparent Body; or that which denominates it ſuch. See TRANSPARENCY.

The *Carteſians* hold the *Diaphaneity* of a Body to conſiſt in the Rectitude of its Pores; that is, in their being ſituate in right Lines; ſo as that there is no intermediate Subſtance to prevent the Paſſage of the Rays. And hence argue, that the rendring Glaſs malleable is an Impoſſibility: For aſſoon as it becomes malleable, its Pores will ceaſe to be ſituate directly againſt each other; and of Conſequence it will loſe its *Diaphoneity*, the principal Character of Glaſs. See GLASS.

Sir

Sir *Iſaac Newton* accounts for *Diaphaneity* from another Principle, *viz.* from the Homogeneity, and Similarity between the *Medium*, wherewith the Pores are filled, and the Matter of the Body it ſelf. For the Refractions the Rays undergo in paſſing thus out of the Matter into the Pores, *i. e.* out of one *Medium* into another, being but ſmall, the Progreſs of the Ray is not ſo much interrupted, but that it can make its Way through the Body. See OPACITY, REFRACTION, *&c.*

DIAPHOENIC, in Pharmacy, a ſoft Purgative Electuary, thus call'd from the Dates, which make its *Baſis*; the Palm-Tree, whoſe Fruit they are, being call'd by the *Greeks* φοίνιξ. See DATE.

The other Ingredients are the Penides, Almonds, Turbith, Ginger, white Pepper, Mace, Cinnamon, Rice, Fennel, *Daucus*, and Honey.

*Diaphœnic* purges chiefly Seroſities, and excites the Menſes. It is alſo uſed in Dropſies, Lethargies, Apoplexies, and Palſies.

DIAPHORESIS, in Medicine, includes all Diſcharges made through the Skin; but chiefly that by inſenſible Perſpiration, and Sweat: Whence *Diaphoretic*, &c.

DIAPHORETIC, in Medicine, is applied to Remedies that promote the Expulſion of Humours by inſenſible Perſpiration. See PERSPIRATION.

*Diaphoretic* is much of the ſame Import as *Sudorific*: Except that the latter promote ſenſible, and the former inſenſible Perſpiration. Their only Difference, therefore, is in the Degree of Action. See SUDORIFICKS, *&c.*

DIAPHORETIC *Antimony*, or *Mineral Diaphoretic*, is a Preparation of Antimony, the Proceſs whereof ſee under the Article ANTIMONY.

DIAPHRAGM, in Anatomy, popularly call'd *Midriff*, and by Anatomiſts, likewiſe, *Septum*, or *Medium Tranſverſum*, is a nervous Muſcle, ſeparating the Breaſt, or *Thorax*, from the *Abdomen*, or lower Venter; and ſerving as a Partition between the Natural, and the Vital Parts. See VENTER.

Its Figure is round, reſembling a Ray, or Thornback. It conſiſts of two Circles, the one Membranous, the other fleſhy; tho' others will have both of them Muſcular: of two Arteries; and two Veins, call'd *Phrenicæ*; and ſeveral Branches of Nerves.

The firſt, or ſuperior Circle ariſes from the *Sternum*, and the Ends of the laſt Ribs: The ſecond, or inferior, comes from the *Vertebræ* of the Loins. The upper is cover'd a-top with a Membrane deriv'd from the *Pleura*; and the lower lined at bottom with another from the *Peritoneum*. Its Situation is oblique; being extended from the *Cartilago Xiphoides*, by the Extremes of the Ribs, to the Region of the Loins.

It is pierced in the middle for the Paſſage of the *Vena Cava*; and in its lower Part for the *Oeſophagus*; and between the Productions of the inferior Circle paſs the *Aorta*, *Thoracic Duct*. and *Vena Azygos*. In its natural Diſpoſition it is convex on the upper Side towards the Breaſt, and concave on the lower towards the Belly. Hence it has two Motions; the one of Contraction, the other of Relaxation. By the Contraction, or Swelling of the Fibres, the *Diaphragm* becomes flat on each Side; the Conſequence of which is, that the Cavity of the Breaſt is enlarged, to give Liberty for the Lungs to receive the Air in Inſpiration; and the Cavity of the *Abdomen* leſſen'd, and conſequently the Stomach and Inteſtines preſs'd, for the Diſtribution of the Chyle. In its Relaxation, whereby it reſumes its natural Situation, the Cavity of the Breaſt is diminiſh'd, and the Lungs preſs'd for the Expulſion of the Air in Exſpiration. See RESPIRATION.

It was *Plato*, as *Galen* informs us, that firſt call'd it *Diaphragm*, from the Verb διαφράτ]ειν, *to ſeparate*, or be between two. Till his Time it had been call'd φρένες, *Underſtanding*; from a Notion, that an Inflammation of this Part produced Phrenzy: which is not at all warranted by Experience, no more than that other Tradition, that a tranſverſe Section of the *Diaphragm* with a Sword cauſes the Patient to die laughing. The *Latins* call it *Septum tranſverſum*, q. d. *Partition laid a-croſs*.

Dr. *Hook* obſerves, that an Animal may be kept alive, without *Thorax*, or *Diaphragm*, by blowing Air into the Lungs with a Bellows: Of which he had made the Experiment.

DIAPHRAGM is alſo a general Name, among the Learned, for all Partitions, or Separations between two Parts of a Thing; As the little perforated Partitions in the Tubes of long Teleſcopes. See TUBE, *&c.*

DIAPHRAGMATIC, is applied to the Arteries, Veins, and Nerves diſtributed through the Diaphragm.

They are alſo call'd *Phrenic*, or *Phrenetic*. See PHRENIC.

DIAPRE, or DIAPER, in Heraldry, a Dividing of a Field into Planes, or Compartiments, in the manner of Fret-work; and filling the ſame with Variety of Figures. See FRET.

This chiefly obtains on Bordures, which are *diaper'd*, or fretted over, and the Frets charg'd with Things proper to Bordures: As in the adjoyning Figure.

DIAPRUNUM, in Pharmacy, a ſoft, purgative Electuary, thus call'd from the Pulp of *Damaſcus* Prunes, which is its Baſe.

*Diaprunum* is either *Simple*, or *Compound*.

*Simple* DIAPRUNUM conſiſts of the Pulp afore-mentioned, with *Caſſia*, Tamarinds, Rhubarb, red Roſes, Violet Seeds, Santals both red and Citron, Scrapings of Ivory, Liquorice Juice, and the four cold Seeds. It is good to prepare, and ſoften the Humours.

*Compound*, or *Solutive* DIAPRUNUM, is only the Simple, with the Addition of half an Ounce of Scammony to every Pound of the Electuary, to render it more purgative.

DIARRHÆA, in Medicine, a *Looſeneſs*, or Flux of the Belly; or a profuſe Evacuation of liquid Excrements by Stool. See EVACUATION, and STOOL.

The Word, in the general, is uſed for any Kind of *Flux* of the Belly; but properly for that wherein the Humour, or Excrement flows out either pure, or mix'd; with, or without Pain, in a fluid State. See FLUX.

*Diarrhœa's* are of divers Kinds, according to the Diverſity of the Excrements: Some being bilious; ſome ſerous; ſome pituitous; and ſome purulent. The Purulent always ariſes from ſome Abſceſs open'd in the Body; the reſt either from morbid Humours irritating the Inteſtines, and expreſſing the Juices out of the adjacent Parts; or from a Laxneſs of the Inteſtinal Fibres; or an extraordinary Fermentation in the Blood, whereby it diſcharges its Excrements into the Inteſtines.

There are alſo *Diarrhœa's* ariſing from unwholeſome Foods, and Stoppage of the other Excretions, particularly Perſpiration.

It is a ſtanding Obſervation, that ſuch as perſpire but little, are ever ſubject to a *Diarrhœa*; and on the contrary, People who perſpire much, are commonly bound.

*Baglivi* mentions *Diarrhœa's* as one uſual great Effect of Grief; as likewiſe of immoderate Anger; without which a Fever would be produced.

In the Cure of *Diarrhœa's*, from whatever Cauſe they ariſe, the Stomach muſt be corroborated, and Sudorificks to be mix'd with Abſorbents. The Patient to drink ſparingly. Quince and Wine burnt with Aromaticks is good. *Wainwright* obſerves, that a Flannel Shirt contributes much to the Cure of an habitual *Diarrhœa*.

*Stolterfoth*, a Phyſician of *Lubeck*, relates, that a Mechanic of that City had a continual *Diarrhœa* from 30, to the Age of 65 Years, which always gave him 5 or 6 Stools a Day, yet he was in good Health all the while, having a good Appetite, and ſufficient Strength and Vigour. But in his 65th Year taking ſome aſtringent Medicines, he ſtopp'd his Flux; upon which he was immediately ſeiz'd with a violent Pain in the Kidneys, Difficulty of Breathing, Loſs of Digeſtion; He gave up his Food as he took it, grew cold at the Extremes of the Body, ſwell'd in the Thighs, had an inſupportable Thirſt, and more Appetite, and urined, with much Difficulty, a thin watery Humour, deſtitute of all Sulphur.

The Word is form'd of the *Greek* διὰ, *through*, and ῥέειν, *to flow*.

DIARRHODON, in Pharmacy, a Name given to divers Compoſitions, wherein red Roſes are an Ingredient.

DIARRHODON *Abbatis*, is a Cordial Powder, denominated from the Abbot who invented it. It conſiſts of red Roſes; red, and Citron Santals, *Lignum Aloes*, Cinnamon, Rhapontic, Spikenard, Ivory, Harts-horn, Saffron, Maſtic, Pearls, Amber-gris, Musk, *&c.* It is uſed to ſtrengthen the Heart, Stomach, and Liver, to aſſiſt in Digeſtion, and prevent Vomiting.

There are alſo *Trochiſci* DIARRHODON, compoſed of red Roſes, Scrapings of Ivory, the Santals, Liquorice, Maſtic, Saffron, Camphor, and Roſe-Water. They are good to fortify the Heart, Stomach, and Liver, and to ſtop Diſſenteries, and other Fluxes of the Belly.

*Pillulæ* DIARRHODON are compoſed of Aloes, *Trochiſci Diarrhodon*, Wormwood Leaves, Maſtic, and Rock-Salt. They purge, then fortify the Stomach, promote Digeſtion, and prevent a ſtinking Breath.

The Word is form'd of διὰ, and ῥόδον, *Roſe*.

DIARTHROSIS, in Anatomy, a Kind of Articulation, or Juncture of the Bones, which being pretty lax, affords room for a manifeſt Motion. See ARTICULATION.

It is oppoſed to *Synarthroſis*, wherein the Articulation is ſo cloſe, that there is no ſenſible Motion at all. See SYNARTHROSIS.

*Diarthroſis* is of three Kinds: 1. When the Head of the Bone is big, and long, and the Cavity that receives it, deep; it is call'd *Enarthroſis:* Such is that of the Thigh, with the Hip. 2. When the Head of the Bone is flat, and the Cavity that receives it ſuperficial, it is call'd *Arthrodia:* ſuch is that of the Jaws, with the Bones of the Temples. 3. When two Bones receive each other reciprocally, and are moveable in each other, it is call'd *Ginglymus:* Thus the *Cubitus* receives the *Radius*, at the ſame Time that the *Radius* receives the *Cubitus*. See ENARTHROSIS, GINGLYMUS, *&c.*

DIARTHROSIS *Synarthroidalis*, call'd alſo *Amphiarthroſis*, is a Kind of neutral, or dubious Articulation; being neither abſolutely *Diarthroſis*, as not having a manifeſt Motion; nor abſolutely *Synarthroſis*, as not being quite immoveable.

Thus the Articulations of the Ribs, with the *Vertebræ*, and thoſe of the Bones of the *Carpus*, and *Tarſus*, among each other, are *Synarthroidal Diarthroſes*. See RIBS, *&c.*

The Word comes from διὰ, and ἄρθρον, *Junƈture, Aſſemblage.*

DIARY *Fever*, is a Fever of one Day. See EPHEMERA.

DIASCORDIUM, in Pharmacy, a Kind of Electuary, or Opiate, firſt deſcribed by *Fracaſtorius*, and denominated from *Scordium*, which is an Ingredient therein. See SCORDIUM.

The other Ingredients are red Roſes, Bole, Storax, Cinnamon, *Caſſia Lignea*, *Dittany*, Tormentille Roots, Biſtort, Gentian, *Galbanum*, Amber, *Terra Sigillata*, *Opium*, Long Pepper, Ginger, *Mel Roſatum*, and Malmſey.

It is uſed againſt malignant Fevers, the Plague, Worms, the Colic, to provoke Sleep, and reſiſt Putrefaction.

DIASEBESTEN, in Pharmacy, a ſoft, purgative Electuary, whereof *Sebeſtes* are the *Baſis*. See SEBESTES.

The other Ingredients are Prunes, Tamarinds, Juices of Iris, *Anguria*, and *Mercurialis*, *Penidia*, *ſimple Diaprunum*, Violet Seed, the four cold Seeds, and *Diagrydium*. It is good in intermitting, and continued Fevers, appeaſes Thirſt, promotes Sleep, and expels the morbid Humors by Urine.

DIASENNA, in Pharmacy, a ſoft, purgative Electuary, thus call'd from *Senna*, which is its Baſe. See SENNA.

The other Ingredients are Sugar Candy, Cinnamon, *Lapis Lazuli*, Silk, Cloves, *Galanga Minor*, black Pepper, *Nardus Indicus*, Seed of the *Baſilica*, Leaves of Cloves, *Cardamomum*, Saffron, Ginger, Zedoary, Roſemary Flowers, Long Pepper, *Lapis Armenius*, and Honey.

*Diaſenna* eaſes and comforts the Melancholic, and Splenetic; and is good againſt all Diſeaſes ariſing from an *Atrabilis*.

DIASTEM, in Muſick, a Name the Ancients gave to a ſimple Interval; in Contra-diſtinction to a compound Interval, which they call'd a *Syſtem*. See INTERVAL.

Muſicians divide Intervals into two Kinds: One of them call'd *Syſtem*, which is to contain at leaſt two Intervals in any Kind of Muſic whatever; but many, contain more.

The other, call'd *Diaſtem*, is a mere, or ſingle Interval; The proper Signification of the *Greek* διάστημα being *Interval*. See SYSTEM.

DIASTOLE, in Anatomy, *Dilatation*, or *Diſtention*; a Term expreſſing that Motion of the Heart, and Arteries, whereby thoſe Parts dilate, or diſtend themſelves: The other oppoſite Motion is call'd the *Syſtole*, and *Artery*; wherein they contract themſelves. See HEART.

The *Diaſtole* of the Heart is properly the Receſs of the Parietes of the two Ventricles from each other; the Enlargement of their Cavities and Diminution of their Lengths, or their Approximation to a Spherical Form. See SYSTOLE.

The *Diaſtole*, or Dilatation of the Heart, ariſes from the Blood brought, by the Veins, into its Ventricles; and that of the Arteries, from the Blood thrown into their Cavities by the Contraction of the Heart. So that the *Diaſtole* of the Heart, and Arteries, is not effected at the ſame Time; the *Diaſtole* of the Heart happening when the Arteries are contracted, and that of the Arteries when the Heart is contracted.

What we call the Beating of the Pulſe, is only the *Diaſtole* of the Arteries. See PULSE.

The Lungs and Breaſt have likewiſe their *Syſtole*, and *Diaſtole*; ſo has the Brain. See LUNGS, *&c.*

The Word is *Greek*, form'd from the Verb διαστέλλειν, *to ſeparate, open.*

The true Cauſe of the *Diaſtole* of the Heart was but lamely accounted for before Dr. *Drake*. That the Heart is a Muſcle, is made evident beyond all doubt by Dr. *Lower*; and that the Motion of all Muſcles conſiſts in Conſtriction, is not to be doubted. By ſuch means the *Syſtole* is eaſily accounted for. But in as much as the Heart has no Antagoniſt Muſcle, the *Diaſtole* has puzzled the greateſt Wits. Dr. *Lower* unhappily attributes it to a *Motion of Reſtitution*. As the Motion of the Heart, ſays he, is perform'd by Contraction; and as the Fibres of the Heart are alone form'd for Conſtriction; it is evident, all the Motion of the Heart lies in its *Syſtole*; And that the Fibres, in the ſeveral Contractions, being ſtretch'd beyond their Tone, aſſoon as the *Niſus* is over, the Heart relaxes again by a Motion of Reſtitution, *A nullo enim Cordis Motu, niſi Tenſionem ejus remittente, & ab irruente Sanguine*, Diaſtole *ejus libratis Vicibus ſuccedit.* de Corde, p. 75. Mr. *Cowper* accounts for the *Diaſtole* from the Analogy the Heart of an Animal bears to the *Pendulum's* of thoſe Artificial *Automata*, Clocks and Watches: its Motion is perform'd like that of other Muſcles, the Blood doing the Office of a *Pondus*, or Weight. Both theſe Notions Dr. *Drake* refutes; and with great Reaſon and Probability maintains the Weight of the Atmoſphere to be the *Pondus*, or Counterpoiſe to the contractive Force of the Heart. See HEART.

It has long been known, that the *dura Mater* has a *Syſtole* and *Diaſtole*, exactly correſponding to thoſe of the Heart. But its Cauſe was not ſo well known. Dr. *Ridley*, in the *Philoſoph. Tranſact*, having bored a Hole in the upper Part of the *Bregma* of a Dog, firſt perceived the alternate Vibrations of the *dura Mater*; then, continuing the Hole to the Brain, he found both by his Eye, and even afterwards by Touch, very ſenſibly, that there was a like briſk *Syſtole* and *Diaſtole* of the Brain. See BRAIN.

DIASTOLE, in Grammar, a Figure whereby a Syllable naturally ſhort, is made long. Thus it is, that *Virgil* begins a Verſe with the Word *Italus*, the firſt Syllable whereof is ſhort.

DIASTYLE, in the ancient Architecture, an Edifice, where the Columns ſtand at ſuch Diſtance one from another, that eight Modules, or four Diameters, are allowed for the Intercolumniation. See INTERCOLUMNIATION.

DIASYRMIS, in Rhetoric, a kind of Hyperbole; or an Exaggeration of ſome low ridiculous Thing. See HYPERBOLE.

DIATESSARON, in Pharmacy, a Sort of Treacle, thus call'd becauſe conſiſting of four Ingredients, which are Roots of *Ariſtolochia*, and Gentian, Laurel-berries, and Myrrh. See TREACLE.

It is alſo call'd *Theriaca Pauperum*, becauſe made at a very eaſy Expence, and in a ſhort Time. It is good againſt Stingings of venomous Beaſts, Epilepſies, Convulſions, Colicks, to ſtrengthen the Stomach, and promote the Menſes.

The Word is *Greek*, and ſignifies a Compoſition of *four* Drugs.

DIATESSARON, in the ancient Muſic, was a Concord or harmonical Interval, compoſed of one greater Tone, one leſſer, and one greater Semi-tone; Its Proportion being as 4 to 3. See CONCORD.

In the modern Muſic, it is call'd a perfect *Fourth*. See FOURTH.

DIATHESIS, a Term uſed by ſome Writers, in the ſame Senſe with *Conſtitution*. See CONSTITUTION.

DIATONIC, an Epithet given the common Muſic, as it proceeds by different Tones, or Degrees, both aſcending, and deſcending. See MUSIC, and GENERA.

Authors divide the Sorts of Muſic into *Diatonic*, *Chromatic*, and *Enharmonic*.

DIATONIC *Muſic* only allows of three Degrees; the greater and leſſer Tone, and the greater Semi-tone. See TONE, and DEGREE.

Hence *Diatonic Muſic* appears the moſt natural, and of Conſequence is the moſt ancient. The *Genus*, or Kind, which makes the Character of the *Diatonic Muſic*, is call'd the *Diatonic Kind*, or *Genus*.

In the *Diatonic Muſic* there is a Tone between every two Notes, except between *Mi* and *Fa*, and *Si* and *Ut*, where there is only a greater Semi-tone. See SCALE.

DIATRAGACANTH, in Pharmacy, is applied to certain Powders, whereof Gum Adraganth is the Baſe. There are two Kinds, *Cold* and *Hot*.

Powder of *Cold Diatragacanth* is compoſed of the Gums Adraganth and Arabic, Liquorice, Starch, white Poppy Seed, and the four great cold Seeds. It is good to thicken, and ſoften the too ſharp, and ſubtile ſerous Humours falling on the Breaſt, to aſſuage Coughs, and promote Spitting.

Powder of *Hot Diatragacanth* is compoſed of Gum Adraganth, Cinnamon, Hyſſop, Almonds, Lin-Seed, and Fennegreek, Liquorice, Juice of Liquorice, and Ginger. It is good againſt Aſthma's, to promote Expectoration, ſtrengthen the Stomach, and aſſiſt Digeſtion.

DIAZEUTIC *Tone*, in the ancient *Greek* Muſic, was that which disjoyn'd two Fourths, one on each Side of it, and which being joyn'd to either, made a Fifth. This, in their Muſic was from *Meſe* to *Parameſe*; that is, in ours, from A to B: Suppoſing *Mi* to ſtand in B *ſub Mi*. They allowed to this *Diazeutic Tone*, which is our *La, Mi*, the

Proportion of 9 to 8, as being the unalterable Difference of *Diapente* and *Diateſſaron*.

DICHOTOMY, *Biſſection*, a Term uſed by Aſtronomers for that *Phaſis*, or Appearance of the Moon, wherein ſhe is biſſected, or ſhews juſt half her Diſk, or Circle. See PHASIS.

The Time of the Moon's *Dichotomy*, is of conſiderable Uſe in fixing the Sun's Diſtance from the Earth. But 'tis very difficult to fix the preciſe Moment when the Moon is biſſected, or in her true *Dichotomy*. Obſervation informs us, that when ſhe is 30 Minutes diſtant from the Quadratures, ſhe appears biſſected; but ſhe appears ſo too in the Quadratures themſelves, and ſome time afterwards, as *Ricciolus* acknowledges in his *Almageſt*. So that ſhe appears *Dichotomized* at leaſt for the Space of a whole Hour: In which Time, any Moment may be taken for the true Point of the *Dichotomy*, as well as any other. But the infinite Number of Moments of Time give an infinite Diverſity of Diſtances. The Moment in which the true *Dichotomy* happens, being thus uncertain; but it being granted withal that it happens before the Quadrature, *Ricciolus* takes the middle Point between the Quadrature, and the Time when it is firſt dubious, whether the Moon be *Dichotomized*, or not, for the true *Dichotomy*, Keill.

The Word is *Greek*, form'd of Διχοτομέω, *I biſſect*, or cut in two, of δὶς, *twice*; and τέμνω, τέτομα, *I cut*.

DICTAMNUM, *Dittany*, a Medicinal Plant, much valued among the Ancients, and particularly applauded by their Poets.

It was eſteemed a Specific for Wounds of Arrows, which it drew out with wonderful Eaſe, and according to them, only grew in the Iſland of *Crete*, and even only in a little obſcure Corner thereof; whence its Appellation *Dictamnus Creticus*. At preſent we ſcarce know whether there be any Remains thereof in that Iſland.

The modern *Dictamnus*, call'd alſo *White Dittany*, or *Fraxinella*, from its Leaves, which reſemble thoſe of the Aſh, call'd by the Latins *Fraxinus*, is ſcarce in leſs Eſteem than that of the Ancients. Its Root, wherein all its Virtue is lodged, is about the Thickneſs of a Finger, and is frequently divided into a Number of little Branches; its Colour is white, its Taſte bitter, its Smell ſtrong, ſomewhat like that of a He-goat, its Stem is about two Foot high, reddiſh, and full of Leaves; at the Top of the Stem is a Flower not unlike a *Spica*, or Ear; in the Middle of the Flower is a Piſtil with five little Pieces wherein the Seed is contain'd, which is black, ſhining, and oval. The Root is excellent againſt the Bite of venomous Beaſts, as alſo againſt Worms, the Colick, *&c.* It muſt be choſen white, both Inſide and Outſide, not fibrous, and well cleaned.

There are ſeveral other Kinds of *Dittany*, but all of leſs Value: As the *Baſtard Dittany*, whoſe Leaves are much leſs; the *Wild Dittany*, which neither bears Flowers, nor Fruit.

The Ancients have a Tradition, that the wounded Deer firſt diſcover'd the Virtue of the *Dictamnus Creticus*, which being eaten, preſently drew out the Arrows ſticking in 'em. Thus *Pliny* Lib. VIII. C. 27. And the like Account we have from *Cicero de Natur. Deor.* Lib. II. *Virgil. Æneid.* Lib. XII. v. 412. *Tertull. de Pœnit.* C. XI. Tho' *Cicero*, more prudent and reſerved than *Pliny*, is contented to ſpeak of it as by hear-ſay. *Ariſtotle* Lib. *de Mirabilib. Auſcult.* relates it of the Roe-buck. *Pliny* ſays expreſsly, that the Juice of this Plant taken inwardly, expels Arrows, and cures Wounds made with other Arms: He adds, that it ſtops Suppurations, provokes the Menſes, and Delivery, and is good in Frictions and Fumigations.

DICTATE, *Dictamen*, in the Schools, a Suggeſtion, Motion, or Sentiment of a Man's Conſcience.

A good Action becomes evil if done contrary to the *Dictates* of one's own Conſcience.

DICTATE, *Dictata*, is likewiſe uſed in the Schools for a Leſſon, or Exerciſe, wherein the Maſter reading, or ſpeaking ſomething, the Scholars take it down in Writing after him. Here the Act of the Maſter is likewiſe call'd *Dictating*.

DICTATOR, a *Roman* Magiſtrate, created by the Senate, or People, on ſome extraordinary, and eminent Occaſion, to command, with ſoveraign Authority, for a certain Time never exceeding ſix Months.

Recourſe was never had to ſuch an Officer, but in dangerous, and difficult Times; as in ſudden Wars, Popular Factions, *&c.*

He had abſolute, and Monarchic Power while his *Dictature* laſted: And ſome will even have it, his Power went beyond that of the Kings. He was Arbiter of Peace and War, and had Command of Life and Death, without any Appeals lying to the People. 24 Axes were bore before him, whereas only 12 before the Conſul. See FASCES.

*T. Largius Flavius* was the firſt *Dictator*, appointed in the Year of *Rome* 255. *Sylla* was the firſt perpetual *Dictator*, and *Cæſar* the next. After *Cæſar* there were no more *Dictators*. The firſt *Dictator* choſe from among the People, was *Marcus Rutilius*, created in 399.

*Dionyſius Halicarnaſſæus* derives the Word *ab Edicendo*, becauſe they ordained, and appointed what they pleaſed. But *Varro* will have the Word taken hence, that the Conſul named him, which the *Latins* call *dicere*, L. IV. *de Lingua Latina*. Dictator *quod a Conſule dicebatur, cujus dicto audientes omnes eſſent.*

DICTION, the Phraſe, Elocution, or Style of a Writer, or Speaker. See STYLE.

The *Diction* of a Tragedy, *&c.* is that which expreſſes the Sentiments. See SENTIMENT.

The *Diction* of an Orator ſhould be pure, proper to the Subject, rich without Affectation, ſtrong and cloſe without Dryneſs, and ſuitable to the Perſon, Time, Place, and Audience. The *Diction*, or Language of *Tragedy* is accounted the fourth of the Eſſential Parts thereof. It is of the leaſt Importance of any; yet muſt peculiar Care be taken herein to make every Paſſion ſpeak its proper Language. See TRAGEDY, *&c.*

DICTIONARY, a Collection, or Catalogue of all the Words of a Language, or an Art, with their Significations; rang'd in Order of Alphabet. See ALPHABET.

What the *Latins*, and we after them, call *Dictionary*, the *Greeks* call *Lexicon*. See LEXICON.

For the proper Character, Nature, Office, *&c.* of a *Dictionary*, ſee the Preface to this Work. See alſo the Article VOCABULARY.

The moſt ancient *Dictionaries* for the *Latin* Tongue, are, that call'd *Papias*, compiled by *Solomon*, Abbot of St. *Gall*, Biſhop of *Conſtance*, who liv'd about the Year 1409: Another was made in 1469, call'd *Gemma Vocabularum*: And a third in 1502, call'd *Gemma Gemmarum*: Another by *Dionyſius Neſtor*, a Cordelier.

But the moſt celebrated one was that of *Ambroſe Calepine*, a Hermit of St. *Auguſtin* at *Bergamo*, and Son of the Count of *Calepin*. *Conrad Geſsner* is ſaid to have augmented it with four thouſand Words. *Paulus Manutius* increaſed it ſtill more; and *Paſſerat* after him; and yet *Matthias Martinus* made two Volumes of their Omiſſions.

There is another noted Latin *Dictionary* of *Criſpinus*; To ſay nothing of *Cowper*, *Holyoke*, *Goldman*, *Littleton*, and numerous others of leſs Conſideration.

For the *Greek*, we have thoſe of *Henry Stephens*, and *Scapula*: For the *Spaniſh*, that of *Covarruvias*: For the *Italian*, that of the Academy *della Cruſca*: For the *French*, thoſe of *Nicod. Fa. Monet*, *Fa. Gaudin*, *Trevoux*, and that of the *French* Academy: For the *Engliſh*, we have ſcarce any worth the Mentioning, unleſs perhaps that of *Philipps*: Tho' we are in Expectation of one from a good Hand, on the Model of that of the *French* Academy.

*Junius* has a *Dictionary*, or Alphabet of the *Gothic*, *Runic*, and *Anglo-Saxon*. There is another in the *Malaya* Language, which is a dead Language, famous throughout the *Eaſt Indies*, where it ſtands the ſtead of the *Latin* among us.

There are alſo *Hiſtorical*, and *Geographical Dictionaries*, as that of *Charles Stephens*, which is tranſlated into *French*, and augmented by *Morery*: Another of *Hoffmann*, printed at *Baſil*, in 1677. in two Volumes *Folio*; which were followed by a Continuation of as many Volumes in 1683. Another of Mr. *Bayle*, under the Title of *Hiſtorical*, and *Critical Dictionary*, printed at *Rotterdam*, in 1697. in two large Volumes. A *Philoſophical Dictionary* of Mr. *Chauvin*, of *Berlin*; *Law Dictionaries*; *Phyſical Dictionaries*, *Family Dictionaries*, *Dictionaries of Arts*, *of Commerce*, &c.

DIDACTIC, in the Shools, ſignifies the manner of ſpeaking, *&c.* adapted to teach, or explain the Nature of Things. There are many Words that are only uſed in the *Didactic*, and Dogmatick Way. The Word is form'd from the *Greek* Μανθάνω, *diſco*, I learn.

DIDYMI, the ſame with *Gemelli*, or *Twins*. See GEMINI.

DIEM *clauſit Extremum*, a Writ iſſued out of Chancery to the Eſcheator of the County, upon the Death of any of the King's Tenants *in Capite*, to enquire by a Jury of what Lands he died ſeiz'd, and of what Value, and who was the next Heir to him.

DIÆRESIS, *Section*, *Diſſection*, in Chirurgery, an Operation ſerving to divide, and ſeparate the Parts whoſe Union and Continuity were an Obſtacle to the Cure; or which were joyn'd, and conglutinated contrary to the Order of Nature. See SECTION.

There

There are four manners of performing the *Diæresis*: viz. by *Cutting*, *Pricking*, *Tearing*, *Drawing*, and *Burning*. See CUTTING, BURNING, TAPPING, CAUTERY, &c.

The Word in its Original *Greek* Διαίρεσις, ſignifies *Diviſion*.

DIÆRESIS, Διαίρεσις, is alſo uſed in Medicine for the Eating out, or Conſuming of the Veſſels, or Canals of an Animal Body: when, from ſome cutting, or corroding Cauſe certain Paſſages are made, which naturally ought not to have been, or certain natural Paſſages are dilated beyond ordinary; So that the Juices which ſhould have been contain'd therein, extravaſate, or run over. *Blanchard*.

DIÆRESIS, in Grammar, a Figure whereby a Diphthong is divided into two Syllables. As *Aulæ* into *Aulai*. See DIPHTHONG.

DIÆRESIS, is alſo uſed in the general for any Diviſion of one Syllable into two; as in that Verſe of *Tibullus*, *Stamina non ulli diſſolüenda Deo*, for *diſſolvenda*.

This is uſually noted by two Points placed over a Letter, to ſhew that it is founded by it ſelf, and not joyn'd with any other, ſo as to make a Diphthong: Thus *Aëra*, by the Points over the *e*, is diſtinguiſh'd from *Æra*.

It is alſo a Kind of *Metaplaſm*, or Addition to a Word, by dividing one Syllable into two; as *Aulae*, by a *Diæreſis*, is of three Syllables, inſtead of *Aulæ*.

DIES. See DAY.

DIES, in common Law. There are two Kinds of *Days*: *Juridici*, & *Non Juridici*.

DIES *Juridici*, or *Faſti*, are all Days wherein Juſtice is adminiſter'd in Court. See FASTI.

DIES *Non Juridici*, or *Nefaſti*, are all Sundays in the Year; and in Eaſter Term, the Feaſt of the Aſcenſion of our Lord; In Trinity Term, the Nativity of St. *John* the Baptiſt; In Michaelmas Term, the Feaſt of All Saints, and All Souls; And in Hillary Term, the Purification of the Bleſſed Virgin.

The ſame Diſtinction holds not only as to Legal Proceedings in Court, &c. but alſo as to Contracts.

In ſome ancient Authors, *Dies* is alſo uſed for daily Proviſion. *Et reddebat dimidium Diem Mellis*, q.d. as much Honey as ſerv'd the King's Family half a Day.

DIES *datus*, is a Day, or Time of Reſpite given to the Tenant, or Defendant by the Court. See DEPARTURE.

DIESIS, in Muſic, a Diviſion of a Tone, leſſer than a Semi-tone; or an Interval conſiſting of a leſſer, or imperfect Semi-tone. See TONE.

The *Dieſis* is the ſmalleſt, and ſofteſt Change, or Inflexion of the Voice imaginable. It is alſo call'd a *Feint*, and expreſs'd by a St. *Andrew*'s Croſs, or Saltier.

*Ariſtotle* calls *Dieſes* the Elements of Voice, as Letters are thoſe of Diſcourſe. Indeed, *Ariſtotle*'s *Dieſes* were apparently different from ours: And we find *Vitruvius* expreſsly making the *Dieſis* a fourth Part of a Tone. But the *Pythagoreans*, who are held the Inventors of the Name *Dieſis*, did not make it ſo ſmall; they only divided the Tone into two unequal Parts, and call'd the leſſer *Dieſis*, which we call the leſſer Semi-tone; and the greater, which we call the greater Semi-tone, they call'd *Anatome*. See SEMITONE.

But in After-times, when the Tone came to be divided into three and four Parts, the Name *Dieſis* was retain'd to them all. And hence thoſe different Accounts we meet withal in Authors, of the Quantity of the *Dieſis*.

The *Enharmonical* DIESIS is the Difference between a greater, and leſſer Semi-tone.

*Dieſes* are divided into three Kinds: The *Leſſer Enharmonical Dieſis*, or *Simple Dieſis*, denoted by a ſingle Croſs, raiſes the Note following by two Comma's, or about $\frac{1}{4}$ of a Tone: The *Chromatic*, or *double Dieſis*, denoted by a double Croſs, raiſes the following Note by a leſſer Semi-tone, or about 4 Comma's; which is the common *Dieſis*: The *Greater Enharmonical Dieſis*, denoted by a triple Croſs, raiſes the Note by 6, or 7 Comma's, or about $\frac{3}{4}$ of a Tone. None but the *double Dieſis* is uſed in Muſic. A Flat is frequently uſed to take away the *Dieſis*, and a *Dieſis* to take away a Flat.

When Semi-tones are placed where regular Tones ſhould be; or a Tone where there ſhould be a Semi-tone, it is call'd a *Dieſis*, or a *Feint*.

DIESPITER, in Antiquity, a Name given to *Jupiter*. Some Authors will have it the ſame with *Dios pater*, *Jupiter*, Father, *Jupiter* being call'd in *Greek* Ζεὺς, or Δεὺς; whence the oblique Caſes Διὸς, Δῒ, &c. Others hold *Dieſpiter* to ſignifie *Diei pater*, Father of the Day. St. *Auguſtin* derives the Name from *Dies*, Day; and *Partus*, Production, Bringing forth; it being *Jupiter* that brings forth the Day. Of which Sentiment are *Servius*, and *Macrobius*; the former adding, that in the Language of the *Oſci*, they call'd him *Lucentius*; and *Dieſpiter* in *Latin*. *Struvius Antiq. Rom. Synt.* C. I. ſeems to intimate, that *Dieſpiter* is *Pluto*; But if that be his meaning, he is apparently miſtaken: For both in *Cicero*, and in the Inſcription he quotes from *Gruter* XXI. 8. we have only *Diſpater*, and not *Dieſpater*.

DIET, in Medicine, &c. a ſpare Regimen or Courſe of living, out of regard to Health. See REGIMEN, and HEALTH.

*Diet* is a ſoveraign Remedy againſt all Diſeaſes ariſing from Repletion. See DISEASE, REPLETION, &c.

*Diet* is founded on this, that Nature ought not to be buſied, and diſtracted in the Concocting of Food, but left wholly to her Work of digeſting, and expelling the morbific Matter. See FOOD.

The Word is form'd from the *Greek* Δίαιτα, which ſignifies *Regimen*, or *Rule of Life*, preſcribed by Phyſicians. And as the Phyſicians uſually order a ſpare, ſcanty *Modicum*, leſs than is uſually taken; *Diet* has paſs'd into a Name for this Retrenchement, or Diminution of the ordinary Quantity of Food, whether it be by Advice of a Phyſician, or by a Perſon's own Choice: provided it be to remove, or prevent ſome Diſorder.

For the Advantages of a *ſpare ſimple Diet*, ſee ABSTINENCE, and FASTING.

Dr. *Cheyne* ſhews, how one may ſupply the Place of Medicines by *Diet*: Any one, ſays he, may loſe a Pound of Blood, take a Purge, or a Sweat, by dropping the great Meal, or Abſtaining from Animal Food, and ſtrong Liquors for four or five Days, in Chronical Caſes, as effectually as by opening a Vein, ſwallowing a Doſe of Pills, or taking a Sudorific *Bolus*. He adviſes therefore all Gentlemen of a ſedentary Life, and of learned Profeſſions, to uſe as much Abſtinence as poſſibly they can, conſiſtently with the Preſervation of their Strength, and Freedom of Spirits. This they ought to have recourſe to, aſſoon as they find any Heavineſs, Inquietudes, reſtleſs Nights, or Averſion to Application: Either by leſſening one half their uſual Quantity of Animal Food, and ſtrong Liquors, till ſuch Time as they regain their wonted Freedom, and Indolence; Or by living a due Time wholly on *Vegetable Diets*, as Sago, Rice, Pudding, and the like, and drinking only Wine and Water. *Eſſay on Health*, &c.

DIET, or DYET, is alſo uſed for an Aſſembly of the States, or Circles of the Empire, or *Poland*, to deliberate, and concert Meaſures for the public Good. See STATE, PARLIAMENT, &c.

The *Diets* of the Empire are ordinarily held at *Ratisbon*. See COLLEGE, EMPIRE, ELECTOR, &c.

The *General Diet* of *Poland* is by the Laws only to be held every two Years. But preſſing Occaſions convene them every Year. The Laws confine their Sitting to 15 Days; but they frequently protract it to ſix Weeks. Its uſual Place is at *Warſaw*, the Capital of the Kingdom; tho' it has been often held at other Places: In Effect, as by the Laws every third *Diet* is to be convened at *Grodno*, in *Lithuania*; whenever for particular Reaſons it is judg'd meet to baulk the Turn, and hold it elſewhere, the Nobility of the Grand Dutchy muſt conſent to it. 'Tis the King fixes the Time, and ſummons it by Circular Letters ſent to all the Palatins. In an *Interregnum*, the Arch-Biſhop of *Gneſen* calls the *Diet*. The ſeveral *Particular Diets*, which are held ſix Weeks before the *General* One, do each ſend three Deputies choſe out of the Members thereof. In *Poland* there are likewiſe *Diets* on Horſe-back, held in the Campagne, or Country. Such are thoſe wherein they chuſe their King. They are call'd *Poſpolites*.

There are likewiſe *Diets* held in *Switzerland*: *Diets* of the Proteſtant Cantons; *Diets* of the Catholick Cantons; and *General Diets*. The firſt aſſemble at *Arau*, and are convoked by the Canton of *Zurich*: The ſecond at *Lucern*, convoked by the Canton of that Name. The third, compoſed of the Deputies of all the Cantons, both Proteſtant and Catholick, is held twice a Year, at the End of *June*, and the Beginning of *December*, and meets at *Baden*. 'Tis the Canton of *Zurich* has the Right of convening it.

The Word *Diet* in this Senſe comes from *Diæta*, which originally ſignified a *Hall*, or *Banquetting Room*; and at length an Aſſembly of the States, by reaſon the *Germans* held moſt of their Councils at Table.

DIETA, in our old Law-Books, denotes a Journey, or Days-Journey: *Omnis Rationabilis* Dieta *conſtat ex viginti Miliaribus*. Fleta.

DIETETIC, or *Diætetica*, that Part of Phyſic, which conſiders the way of living with Relation to Food, or *Diet*, ſuitable to particular Caſes. See FOOD, and DIET.

DIEU & *mon Droit*, q. d. *God and my Right*, the Motto of the Arms of *England*, firſt given by King *Richard* I. to intimate, that he held not his Empire in Vaſſalage of any Mortal. See MOTTO.

It was afterwards taken up by *Edward* III. when he firſt claim'd the Crown of *France*; and was continued without Interruption to the Time of King *William* III. who uſed the Motto, *Je maintiendray*; tho'

ſho' he commanded the former to be retain'd on the great Seal. The ſame is to be underſtood of the late Queen *Anne*, who uſed the Motto, *Semper Eadem*; which had been before uſed by Queen *Elizabeth*.

DIFFAMATORY, a Term chiefly uſed in the Phraſe *Diffamatory Libel*, ſignifying a Writing intended to ſcandalize, or diſcredit a Perſon, *&c.* See LIBEL.

By the *Roman* Law, and the ancient Ordonnances of *France*, the Makers of *diffamatory Libels* were puniſh'd with Death. See *Balduin. Commentarius ad Leges de Libellis famoſis.*

The Hiſtorian tells us, that Cardinal *Ximenes* was inſenſible to all *Diffamatory Libels*. He found it but reaſonable, to leave Inferiours the Liberty of venting their Grief by Writings, which only laſt while the Perſon is offended at them, and loſe all their Spirit and Malignity when deſpis'd, or diſregarded.

DIFFAREATION, among the *Romans*, a Ceremony whereby the Divorce of their Prieſts was ſolemnized. See DIVORCE.

*Diffareation* was properly the diſſolving of Marriages contracted by Confarreation; which were thoſe of the Pontifices. *Feſtus* ſays, it was perform'd with a wheaten Cake; and that it was call'd *Diffarreation* from *Far*, Wheat. *Vigenere* will have Confarreation and *Diffareation* to be the ſame Thing. See CONFARREATION.

The Word comes from the Prepoſition *Dis*, which is uſed in Compoſition for Diviſion, or Separation; and *Fareation*, a Ceremony with Wheat, of *Far*, Wheat.

DIFFERENCE, in Logic, an Eſſential Attribute belonging to ſome Species, and not found in the *Genus*; being the univerſal Idea that defines the Species. See GENUS, and SPECIES.

Thus, Body and Spirit are the two Species of Subſtance, which in their Ideas include ſomething more than is included in the Idea of Subſtance. In Body, for Inſtance, is found Impenetrability, and Extention; In Spirit, a Power of Thinking, and Reaſoning. So that the *Difference* of Body is *impenetrable Extenſion*; and the *Difference* of a Spirit is *Cogitation*. See DEFINITION.

DIFFERENCE, in Mathematicks, the Exceſs of one Quantity above another.

This Angle is 60 Degrees, and that 90; Their Difference is 30. See ANGLE.

When a leſs Quantity is ſubſtracted from a greater, what remains is call'd the *Difference*. See SUBSTRACTION.

DIFFERENCE *of Longitude* of two Places, is an Arch of the Equator intercepted between the Meridians of the Places. See LONGITUDE.

*Aſcenſional* DIFFERENCE, in Aſtronomy, is an Arch of the Equator comprehended between the Circle of ſix a-Clock, and the Horary Circle of the Sun. See ASCENSIONAL.

DIFFERENCES in Heraldry, are certain Additaments to Coat Armour, whereby ſomething is alter'd, or added to diſtinguiſh the younger Families from the elder, or ſhew how far they are removed from the principal Houſe. They are call'd in Latin *Diminutiones*, and *Diſcernicula Armorum*, and by the French *Briſures*. See DIMINUTION.

Of theſe Differences *Sylv. Morgan* gives us nine, which obtain principally among us: *viz.* the *Label*, which denotes the firſt, or eldeſt Son: The *Creſcent*, the ſecond: The *Mullet*, the Third: The *Martlet*, the fourth: The *Annulet*, the fifth: The *Flower de Lis*, the ſixth: The *Roſe*, the ſeventh: The *Eight foil*, the eighth: And the *Croſs Moline*, the ninth. See each under its proper Article, LABEL, *&c.*

Again, as the firſt *Differences* are ſingle for the Sons of the firſt Houſe, or Deſcent; the Sons of the younger Houſes are differ'd by combining or putting the ſaid *Differences* upon each other. As the firſt *Differences* are the *Label*, *Creſcent*, &c. for the firſt Houſe; the *Difference* for the ſecond Houſe is the *Label* on a *Creſcent*, for the firſt of that Houſe: For the third Brother of the ſecond Houſe a *Mullet* on a *Creſcent*, &c.

The Original of *Differences* is controverted. *Cambden* will have them to have begun about the Time of King *Richard*. *Paradin* aſſigns *Differences* wore as early as the Year 870. The Preſident *Fauchet* obſerves *Differences* to have been hereditary in the *French* Families before the Time of *Louis le Gros*, who came to the Crown in the Year 1110. *Moreau* refers them to the Time of St. *Louis*; and *Lallonette*, *Belle-foreſt*, &c. to that of *Philip Auguſtus*. The Occaſion of their Riſe is well accounted for by *Colombiere*.

All Nations, ſays he, prefer the elder Brothers to the younger; whence thoſe, in a direct Line, ſucceeding their Fathers, and becoming Maſters of their Lands, took on them their Coat Armour, without any Change, or Alteration; and tranſmitted the ſame again to their eldeſt Sons; the younger Brothers, or Baſtards not being allowed to bear the ſame Arms, without ſome additional Mark, to diſtinguiſh them from the elder. Hence ſome Heralds, he goes on, have endeavour'd to confine them to certain fix'd, and determinate Figures, for diſtinguiſhing the ſecond from the firſt, the third from the ſecond; and ſo on to the ſixth: Aſſigning the ſecond a *Label*, the third a *Bordure*, the fourth an *Orle*, the fifth a *Battoon*, and the ſixth a *Bend*, or *Cottice*.

And the Deſcendents of theſe to bear double *Differences*, or *Differences* charg'd on one another, *viz.* the eldeſt Son of the ſecond Son to retain his paternal Coat, with the *Difference* of the *Label* of 3 Points; the ſecond the *Label* of 4 Points; the third ſuch a *Label* on a Chief; the fourth a *Label* charged with certain Figures, as *Eaglets*, *Lioncels*, *Martlets*, *Creſcents*, *Roſes*, &c. And for the ſame reaſon, the ſecond Son of the third Son ſhall bear a *Bordure* engrailed, the third a *Bordure* charged with Bezants, or Tourteaux, *&c.*

But the ſame Author judges the fixing any certain invariable *Differences* at all an Abuſe; by reaſon they may happen not to be agreeable to the paternal Coat, but very much deface, and blemiſh it. He adds, that many other Figures beſide thoſe abovementioned, may be uſed as *Differences*; As Shells, Bezants, Cinque-foils, and a thouſand more. Some younger Families have made the *Difference* in their Arms by only diminiſhing the Ordinaries, or changing the Poſture; And others by only changing the Metal, or Colour.

It muſt be added, that the *Differences* may be of Metal on Metal, or Colour on Colour; which in other Caſes is falſe Heraldry.

DIFFERENTIAL, *Differentiale*, in the higher Geometry, an infinitely ſmall Quantity, or a Particle of a Quantity ſo ſmall as to be incommenſurable thereto, or leſs than any aſſignable one. See QUANTITY.

It is call'd a *Differential*, or *Differential Quantity*, becauſe frequently conſider'd as the Difference of two Quantities; and as ſuch is the Foundation of the *Differential Calculus*: Sir *Iſaac Newton*, and the *Engliſh*, call it a *Fluxion*, as being conſider'd as the momentary Increaſe of a Quantity. See FLUXION.

Mr. *Leibnitz*, and others, call it an *Infiniteſimal*. See INFINITESIMAL.

DIFFERENTIAL *of the firſt, ſecond*, &c. *Degree*. See DIFFERENTIO-DIFFERENTIAL.

DIFFERENTIAL *Calculus*, or *Methodus*, is a Method of *differencing* Quantities; that is, of finding a *differential*, or infinitely ſmall Quantity, which taken an infinite Number of Times, is equal to a given Quantity.

This Method is one of the fineſt, and ſubtileſt in all Mathematicks, Mr. *Leibnitz*, who claims the Invention thereof to himſelf, calls it *Differentialis Calculus*, as conſidering the infinitely ſmall Quantities found hereby as the *Differences* of the Quantities; and accordingly expreſſing them by the Letter *d* prefix'd: as the *differential* of *x*, by $dx$; that of *y* by $dy$, &c.

Sir *Iſaac Newton*, who has a better Title to the Diſcovery, calls it the *Method of Fluxions*, as conſidering the infinitely little Quantities rather as Fluxions, or momentary Increments, *e. gr.* of a Line, generated by the Fluxion of a Point; of a Surface, by the Flux of a Line; or a Solid, by the Flux of a Surface; and inſtead of *d* notes 'em by a *dot*; e. gr. the Fluxion of *x*, inſtead of $dx$ he writes $\dot{x}$; that of *y*, $\dot{y}$, &c. which is the only Difference between the *Differential Calculus*, and the *Method of Fluxions*.

For the *Hiſtory*, *Doctrine*, *Uſe*, &c. thereof, ſee FLUXIONS.

DIFFERENTIO-DIFFERENTIAL *Calculus*, is a Method of differencing Differential Quantities.

As the Sign of a *Differential* is the Letter *d*; that of a *Differential* of $dx$, is $ddx$; and the *Differential* of $ddx$, $dddx$, or $d^2x$, $d^3x$, &c; or $\ddot{x}$, $\dddot{x}$, &c.

Thus, we have *Powers*, or *Degrees of Differentials*.

The *Differential* of an ordinary Quantity is call'd a DIFFERENTIAL *of the firſt Power*, or *Degree*; as $dx$.

A DIFFERENTIAL *of the ſecond Power*, or *Degree*, is an *Infiniteſimal* of a *Differential* Quantity of the firſt Degree; as $ddx$, or $dxdx$, or $dx^2$, $dxdy$, &c.

A DIFFERENTIAL *of the third Degree*, is an *Infiniteſimal* of a *Differential* Quantity of the ſecond Degree; as $dddx$, $dx^3$, $dxdydz$, and ſo on.

The *Powers of Differentials*, as $dx^2$, are *differenced* after the ſame Manner, as the Powers of ordinary Quantities. And again, as Compound *Differentials* either multiply, or divide each other, or are Powers of *Differentials* of the firſt Degree; *Differentials* are *differenced* after the ſame manner as ordinary Quantities. And, therefore, the *Differentio-Differential Calculus*, is the ſame, in Effect, with the *Differential*.

DIFFERENTIAL, in the Doctrine of Logarithms. *Kepler* calls the Logarithms of Tangents, *Differentiales*; which we uſually call *Artificial Tangents*. See LOGARITHM and TANGENT.

DIF-

DIFFORM, is a Word uſed in Oppoſition to *Uniform*, and ſignifies, that there is no manner of Regularity in the Form, or Appearance of a Thing. See UNIFORMITY.

The Botaniſts uſe it as a Diſtinction of the Flowers of Plants. See FLOWER.

DIFFUSE, *Diffuſive*, is chiefly uſed for a prolix, ſpecious Manner of Writing, *&c.* See PROLIX.

A Dictionary cannot be too *diffuſive:* For a Man is never too much inform'd of the Word he wanted; and he is not oblig'd to read the reſt.

A *Diffuſe* Style is proper for Diſcourſes in the demonſtrative Kind. *Demoſthenes* is cloſe, and conciſe; *Cicero* on the contrary *diffuſive*, &c. See STYLE.

DIFFUSION, a *Quaſi-fuſion*, or Diſperſion of any Thing, upon ſeveral Bodies, or Parts of Space.

The School-men make 3 Kinds of *Diffuſion:* The firſt that whereby a pure Quality is *diffuſed*; as *Cold*, *Force*, &c. This they diſtinguiſh into *Equal*, whereby equal Portions, or Degrees of the Quality are diſtributed upon equal Parts of the *Medium:* Thus, when a direct Motion is impreſs'd on a moveable, all the Parts of the moveable receive an equal *Impetus*: And *Unequal*, when unequal Degrees of the Quality are diſtributed on different Parts of the Subject; Thus it is, that *Force* is impreſs'd on a Lever, and *Cold* propagated thro' a *Medium*.

The ſecond Kind of *Diffuſion* is that perform'd by the Motion of Bodies; Such is the *Diffuſion* of *Light*, *Sound*, *Smell*, *Magnetick*, *Electric Virtues*, &c.

The third is perform'd partly by the Motion of Corpuſcles, and partly by the *Diffuſion* of a Quality; and thus they hold Fire to be *diffuſed*.

But the modern Philoſophers reject the Notion of Qualities, and their *Diffuſion*. According to them, there is no other *Diffuſion*, but that of Corporal Subſtance, emitted in minute *Effluvia*, or Particles, into a Kind of Atmoſphere all a-round the Body; which *Diffuſion* of Corpuſcles ſome call *Atmoſpherical*, as being ſuppoſed to be terminated by a Circle, whereof the *diffuſing* Body is the Centre. Every Body, it is now proved, has its Sphere of Activity, or *Diffuſion*, within which the Particles, or Corpuſcles, torn from it, and flying away, have a ſenſible Effect, as we ſee in odorous, ſonorous, *&c.* Bodies: See QUALITY; where the Phyſical Law of the *Diffuſion* of Qualities is laid down. See alſo SPHERE *of Activity*, ATMOSPHERE, EFFLUVIA, *&c.*

DIGAMY the ſame with *Bigamy*. See BIGAMY.

DIGASTRICUS, in Anatomy, a Muſcle thus call'd, as having a double Belly; from δὶς, *bis*, twice; and γάστηρ, *Belly*. See MUSCLE.

It ariſes fleſhy from the upper Part of the *Proceſſus Maſtoidæus*, and deſcending, contracts into a round *Tendon*, which paſſes thro' the *Stilohyoidæus*, and an annular Ligament, which is faſten'd to the *Os Hyoides*; then it grows fleſhy again, and aſcends towards the Middle of the Edge of the lower Jaw, where it is inſerted. When it acts, it pulleth the lower Jaw down, by the Help of an annular Pully, which alters its Direction.

DIGEST, a Collection of the *Roman* Laws, rang'd and digeſted under proper Titles, by Order of the Emperor *Juſtinian*.

That Prince gave his Chancellor *Tribonianus* a Commiſſion for this Purpoſe; who, in Conſequence thereof, choſe 16 *Juriſconſulti*, or Lawyers, to work upon the ſame. Theſe, accordingly, took out the beſt, and fineſt *Deciſions* from the two thouſand Volumes of the ancient *Juriſconſulti*, and reduced them all into one Body; which was publiſh'd in the Year 533, under the Name of *Digeſt*. This the Emperor gave the Force of a Law, by a Letter at the Head of the Work, which ſerves it as a Preface. See JURISCONSULTI.

The *Digeſt* makes the firſt Part of the *Roman* Law, and the firſt Volume of the *Corpus*, or Body of the Civil-Law. See CIVIL-*Law*.

It was tranſlated into *Greek* under the ſame Emperor, and call'd *Pandecta*. See PANDECT.

The Method of quoting it is by a double *ff*, on Account of the *Greek* Name *Pandect*, which being firſt abbreviated by a Figure of two ΠΠ; to abbreviate it yet further, the two Characters were joyn'd into one ΠΙ, which the *Latin* Copiſts miſtook for *ff*.

*Cujas* ſays, that *Digeſt* is a common Name for all Books diſpoſed in a good Order, and Oeconomy: And hence it is, that *Tertullian* calls the Goſpel of St. *Luke*, *Digeſt*.

DIGESTER, or *Digeſtor*, an Artificial Means, or Inſtrument, ſerving to *digeſt*, or diſſolve Meats out of the Stomach, by a Way analogous to that of Animal Digeſtion.

Mr. *Leigh*, in the *Philoſoph. Tranſact.* gives us an Artificial *Digeſtor* to illuſtrate the Natural one: It is prepared from Spirit of Sulphur, Spirit of Harts-horn, the Chyle of a Dog, and its *Saliva*. A Piece of Veal, Mutton, Beef, or the like, of the Bigneſs of a Nut, being put in a Dram of this Preparation, and ſet on a Digeſting Furnace two Hours, drew from the Fleſh a Juice, that had the Colour and Taſte of Chyle, and left the Meat light, dry, and inſipid. Dr. *Havers* prepares a *Digeſtor* of Oil of Turpentine, mix'd with Oil of Vitriol; in which, raw Fleſh, and Crums of Bread being put, and the whole committed for four Hours to *digeſt* in *Balneo Mariæ*, the Meat is found diſſolv'd, and the whole together forms a thickiſh Pulp: Hence, thoſe Authors, each of 'em, conclude the Food in the Stomach to be *digeſted* by ſome ſuch *Menſtruum's*. See DIGESTION.

But the moſt noted *Digeſtor* is *Papin's Digeſtor*, the Effect whereof bears a more near Reſemblance to the Operation of the Stomach. It is a Sort of Veſſel, wherein Meat being put, together with ſo much Water as ſerves exactly to fill it, a Lid is ſcrew'd cloſe on, ſo as to admit of no external Air. Then, by the Application of two, or three lighted Char-Coals, or even a ſingle ſmall Lamp-flame, the Meat is in a few Minutes (ſix or eight) reduced into a perfect Pulp, or rather Liquor. By a little Increaſe of the Fire, or the Addition of a few Minutes in time, the hardeſt Bones themſelves are brought into a Pulp, or Gelly.

The Effect is accounted for from the ſtrict Cloſure of the Engine, which excluding the Intervention, or Eſcape of Air, the Succuſſions occaſion'd by the Expanſions, and Oſcillations of Air included in the Fleſh, are equable and ſtrong, and ſo reſolve the whole into one ſeemingly homogeneous Body, and mix the aqueous, ſaline, oleous, and other Particles, ſo ſtrongly together, as ſcarce to be ſeparable; but while hot, to appear one Liquor, and when cold a Gelly, of a Strength proportionate to the Quantity of Fleſh, or Bones diſſolved in the Water.

This Experiment ſeems to hold a cloſe Analogy with the Operation of the Stomach. For tho' the Stomach do not ordinarily diſſolve, either ſo ſtrongly, or ſo quick; yet in Proportion to its Heat and Conſtriction, Dr. *Drake* takes it to do the ſame Thing: Thereby breaking and reſolving into ſmall, the Bodies which it included, ſo mix'd, *inter Minima*, with its Humours. Theſe, thus reduced into a Fluor, and intimately mix'd with the Liquids of the Drink, and Juices of the Stomach, compoſe that lacteſcent Liquor, call'd *Chyle*, or *Chyme*. See CHYLE.

DIGESTION, in Medicine, call'd alſo *Concoction*, that Change of the Food taken in at the Mouth, which it undergoes in the Stomach, in order to afford fit Matter to compoſe or diſtend an Animal, till it arrives at its deſtined Bulk; and to repair the Loſs of thoſe Particles, which the Body, in its natural State, neceſſarily undergoes. See CONCOCTION.

The Operation of *Digeſtion* ſucceeds to *Maſtication*, and *Deglutition*. See MASTICATION, and DEGLUTITION.

It includes *Chylification*, and is ſucceeded by *Sanguification*, and *Nutrition*. See SANGUIFICATION, and NUTRITION.

The Cauſe, Manner, and means of *Digeſtion*, have been infinitely controverted: It would be endleſs to enter into all the Syſtems, and Hypotheſes, that have been fram'd by Philoſophers, and Phyſicians, to account for this important Operation. Some contend, that it is done by a Kind of *Elixation*, or boiling of the ſolid, and groſſer Parts of the Food, in the liquid, by the Heat of the Stomach, and the adjacent Parts, the Liver, Spleen, *&c.* See ELIXATION.

Others, by *Attrition*; as if the Stomach by thoſe repeated Motions, which are the Effects of Reſpiration, rubb'd, or ground off the minuter Particles from the groſſer Matters; and agitating, and driving the reſt againſt each other, attenuated, and diſſolved them. See TRITURATION.

Others think the *Bilious* Juice; Others the Spirits, *&c.* chiefly concern'd in the Affair.

Others will have the Food diſſolved by a *Menſtruum*, or *Diſſolvent:* But theſe are greatly divided, as to the Nature, and Origin of this *Menſtruum*; Some ſuppoſing it an *Acid*, furniſh'd by the Glands of the Stomach; Others a *Nitro-aereous* Spirit, which by penetrating the Maſs of Food, breaks the Connexion of the moſt ſolid Parts; And others, a *Saline* Juice, which divide, and volatilize the Parts of the Food. See MENSTRUUM.

Others again ſuppoſe *Digeſtion* to be perform'd by means of a *Ferment*, or *Leaven*; which, mixing with the Aliment, excites an inteſtine Motion in the Parts thereof, by whoſe mutual Fractions, and Colliſions, the Parts are attenuated, and diſſolved. See FERMENT.

But theſe, too, differ in their Opinions of this *Ferment*; Some taking it to be the Remains of the Food laſt *digeſted*, which by its Continuance in the Stomach, has contracted an Acid Quality, which conſtitutes it a *Ferment*: Others take the *Ferment*, or Principles of Fermentation to be contain'd in the Aliment it ſelf; which when incloſed in the Stomach, and heated thereby, being put in Motion, enters on its Office of Fermentation: But theſe, too, are divided; Some taking it to be the ſpirituous Part; and ſome the Air in Foods. See DIGESTER.

Others ſuppoſe this Ferment ſupplied by the Glands of the Stomach: And laſtly, others contend for the *Saliva*,

and make that the Ferment ſerving principally for the *Digeſtion* of the Food.

All theſe Syſtems are now reduced to three principal Ones; which we ſtill find explain'd, and defended in the ſeveral Writings on that Subject: The firſt holding *Digeſtion* to be perform'd by *Fermentation*; The ſecond by *Trituration*; And the third by *Fermentation*, and *Trituration* together.

The *firſt* Opinion was for a long Time the only one. The Retainers hereto hold, that the Food, after it is receiv'd into the Stomach, is there impregnated with certain menſtruous Juices, which being aſſiſted by the natural Heat of the Stomach, raiſes a Fermentation in the Foods, which diſſolves, attenuates, and converts them into Chyle.

This was the Syſtem of the Ancients; who, tho' they only expreſs themſelves in general Terms, as diſſolving, ſoftening, ſubduing, Concretion, Qualities, *&c.* yet ſeem to have had the Notion of what we call *Fermentation*. Thus *Empedocles* and *Hippocrates* teach, that *Digeſtion* is perform'd by a Putrefaction of the Foods, after the like manner as the ſame *Empedocles* holds Water to be converted by Putrefaction into Wine. *Hippocrates*, and *Ariſtotle* uſe the Term *Concoction*, which we likewiſe find in *Erotian*, *Plutarch*, and *Actuarius*, to expreſs the manner of Fruits ripening, the Muſt's changing into Wine, and Paſt's riſing. *Hippocrates* expreſsly names *Effervescence*, and *Fermentation*, *de vetere Medicina*, C. 5. and *Galen* likewiſe, *L. de Conſuetudine*, C. 2. And in another Place he aſſerts, that a certain Seroſity of the Stomach concurs with the Bile and Spirits to effect *Digeſtion*. To ſay nothing of *Cicero*, who, according to the prevailing Opinion of his Time, attributes *Digeſtion* to the Heat of the Stomach. *Lib.* II. *de Nat. Deor.*

The Juices, or Ferments in the Stomach, to whoſe Action *Digeſtion* is ſuppoſed owing, are, the Saliva, Bile, and Pancreatic Juice. This is ſo true, that in certain voracious Animals, which eat, and *digeſt* faſt, particularly Wolves, Oſtriches, and Porcupines, the Bile diſcharges it ſelf immediately into the Cavity of the Stomach; And we have obſerved a Diſpoſition analogous thereto in a Man that had been a great Eater.

There are only three Marks to know the Fermentation of Dough and Muſt by: Firſt, In that the Dough riſes, and ſwells; and the Muſt boils, and rarifies. Secondly, In that the Bread and Wine made by theſe Fermentations, have different Taſts and Qualities from thoſe the Flower and Muſt had before. Thirdly, In that the Bread, and Wine, by Diſtillation, yield Principles that differ in thoſe reſpects from thoſe drawn from Flower and Muſt. Now, all theſe Characters are found in the Change made in the Food by *Digeſtion*.

Againſt this Syſtem it is objected by Mr. *Hecquet*, and others, that in every 24 Hours there is prepared a Pound of Saliva, half a Pound of Bile, and at leaſt two Ounces of Pancreatic Juice; to which is to be added that Stomach-Liquor, reſembling Saliva; the whole amounting to about 2 Pounds, or 13824 Grains of Ferment. Now, ſay they, it is allowed by the Chymiſts, that one Grain of Ferment is ſufficient for 803 Grains of Matter to be fermented; conſequently 2 Pounds of Ferment would ſuffice for 1200 Pounds of Food: Whereas a Man ordinarily does not take above 4 Pounds in a Day.

Now, this, ſay they, is an Argument, that Fermentation is not the only, or principal Intention of theſe Juices; ſince, if it had, they would have been better proportioned to the Occaſion. And, further, it furniſhes an Objection, ſince ſuch a Quantity of ſaline, menſtruous Humour, having ſo little Buſineſs to employ it in fermenting the Food, muſt act on the Stomach, corrode and deſtroy the fine Membrane it is lined withal, and do other Miſchiefs.

But to this it is anſwered, 1. That, according to Mr. *Hecquet* himſelf, the Faculty of fermenting only belongs to the Salts, and that, by his own Computation, half a Pound of Bile only contains 30 Grains of Salt; and a Pound of Saliva, with two Ounces of Pancreatic Juice, and the Stomach-Liquor, contain but 14 Grains more: So that the Ferment of the Stomach produced each Day, only amounts to about 44 Grains, which were ſcarce enough for 2 Pounds of Food. But Mr. *Hecquet* diminiſhes the Quantity of theſe Salts too much, which *Verheyen*, and others, make a deal more. To which is to be added the volatile Salt, mix'd with the Phlegm and Spirits. 2. It is not true, that there is always required a Grain, and only a Grain of Leaven for 800 Grains of Matter. Experience contradicts this Rule. In ſome Fermentations there is no need of any Leaven at all, and in others a deal leſs. As to the Ferment's acting on the Membranes of the Stomach; 'tis certain, it does act on, and vellicate the ſame when there is no Food to employ it; and this it is, that occaſions the Senſation of Hunger. But as faſt as they are corroded, they are repair'd again by the Nouriſhment proper to them. The Stomach is ſometimes gnawed, and incommoded by the *Menſtruum*; but ordinarily it is preſerv'd by a viſcid Matter, wherewith its inner Coat is lined.

Another Objection againſt this Doctrine, is, that the Chyle yields no inflammable Spirit; which it ſhould, were it the Effect of Fermentation: But Monſr. *Aſtruc* anſwers, that all Fermentations don't produce any ſuch Spirit: That of Dough, for Inſtance, affords none, nor that of rotten Fruits, nor of Acids, or pure Alcali's. The inflammable Spirit, in Effect, requires a fine attenuated Sulphur, which is not found in all Fermentations.

The *ſecond* Syſtem was invented, or at leaſt renewed in the preſent Age; and has been maintain'd with a deal of Zeal, and Vivacity, as is commonly the Caſe in any Thing that has the Appearance of Novelty. Thoſe who eſpouſe this Opinion, contend, that 'tis a mere continual Attrition, or Grinding, that breaks, attenuates, and reduces the Food, and with the Addition of a proper Fluid, forms it into that whitiſh Subſtance, call'd *Chyle*; much as Corn is ground between the Stones of a Mill. Which Opinion ſeems to be confirm'd by ſomething obſerv'd in Birds: Their Gizzard, or Crop, is compoſed of two ſtrong, ſolid, compact Muſcles, which rubbing againſt each other, and being aſſiſted by little angular Stones, or Grains of Sand ſwallow'd by the Birds, break and grind the dry Food thoſe Animals live on: And when the Sand is grown ſmooth, they caſt them off with their other Excrements, and ſwallow freſh ones.

This Sentiment is thus explain'd by an able Aſſertor thereof, Mr. *Hecquet*, in his Treatiſe of *Digeſtion*. Every thing in the Body is Veſſel, conſequently, every thing therein is hollow. Every thing therein lives, after its Manner; conſequently, every thing is in Motion; Animal Life being nothing but Motion; and conſequently all the Veſſels are in Motion. Now, the Parts of a Body that are to move, will move towards thoſe Sides, where they find the leaſt Reſiſtance. But the Place of the leaſt Reſiſtance in Tubes is the Cavity; conſequently, the Motion of the Parts of Veſſels is towards their Axes. The Parts of Veſſels that are to move, are the Parietes, or Sides, becauſe flexible, and elaſtic; and this Motion can only be effected by an Approximation of thoſe Parts: Conſequently, the Motion of the Veſſels conſiſts in an Approximation of their Parietes; It is, therefore, a Sort of Contraction, Preſſion, or Coarctation: Hence, as all the Parts of the Body are only Veſſels, they all undergo a Syſtole, Preſſion, or Contraction. Further, all theſe Veſſels contain Juices in their Cavities; And, therefore, all the Juices, or Liquids in the Body are continually compreſs'd. This Preſſion is the Action of an Elaſtic Force; conſequently the Preſſion will be ſuch as is the Force; and, therefore, alternative: Conſequently, it is a Pulſe, or Palpitation; and therefore the Juices are continually beaten. Now, theſe Juices are exceedingly diviſible; and conſequently are continually attenuated, and divided: And a Diviſion effected by a Pulſation, or Beating, is a *Trituration*; and conſequently, the Juices in the Body are continually triturated, or ground. The reaſon why the compreſſive Force ſhould be alternative, is, that the Membranes, which compoſe the Veſſels, conſiſt of two Plans, or Series of Fibres; the one longitudinal, the other circular, cutting the longitudinal at right Angles: The Longitudinal are tendinous, and Elaſtic; the Circular are muſcular, or motive, like Sphincters, which compreſs. The Circular are over the Longitudinal, and embrace, or gird them round. The former, we have already obſerved, are Elaſtic; and their Elaſticity oppoſes the Compreſſion of the latter. From this Oppoſition, or Reſiſtance, ariſes a reciprocal Action, and Reaction, which is the alternative grinding Force required.

To ſuch as account for *Digeſtion* from a Ferment, theſe Philoſophers object, that *Digeſtion* is a Diſſolution; that to prepare the Matters for this Diſſolution, they muſt be ſoften'd; that the proper Effect of acid Ferments, is, to gnaw, or tear the hardeſt Matters, and to harden the ſofter, to thicken the fluid, fix the fat, and coagulate the milky: Conſequently, that an acid Ferment ſhould rather impede, than promote *Digeſtion*. Add, that beſide the Force to grind the Juices, and the Veſſels to compreſs them, there are likewiſe Liquors to dilute, and temper them, *viz.* the Saliva, and Stomach-Liquor. And Mineral Matters, which the Stomach-Liquor cannot diſſolve, are found to be worn, and poliſh'd after having ſtay'd ſome time in the Stomach. Now poliſhing is the Effect of Triture, or grinding, not of corroding. Accordingly we find Pelotoons, or Balls of Hairs, or Threads in the Stomach of Cattel, very ſmooth, and ſhining, and far from any Marks of Corroſion.

The Authors of Trituration require three Things for *Digeſtion* to proceed: A Liquor, to wet and dilute the Food, which they find in the Saliva, and Stomach-Liquor: A Veſſel, which is the Stomach: And a moving Power to grind, which they imagine to have found in the Muſcles of the Stomach, Diaphragm, and Abdomen. The moving Force in the Muſcles of the Stomach they maintain to be equivalent to a Weight of 248235 Pounds; and the Force of the Stomach alone, to a Weight of 12951 Pounds: A Power more than equal to that of one of the ableſt Mill-ſtones. See *Traite de la Digeſtion par Monſr.* Hecquet.

*Borelli*, on the footing of the *Equilibrium* of Fluids, has demonſtrated, that the Force of the Flexor of the loſt Articulation of the Thumb is equal to 3720 Pounds: Whence *Pitcairn* deduces, that the Force of the Fibres of the Stomach is equal to 12951, and that of the Diaphragm, and Muſcles of the lower Venter, to 248235 Pounds. His Way of Eſtimating is this: The Flexor only weighs 122 Grains, and yet may ſuſtain 3720 Pounds: Conſequently, the Fibres of the Stomach weighing 8 Ounces, and the Diaphragm with the Muſcles of the lower Venter, weighing together 8223 Grains, have the Force abovemention'd. But this Argumentation ſeems founded on a Miſtake; for 'tis not in Virtue of its Weight of 122 Grains, that the Flexor Muſcle is equivalent to 3720 Pounds: Beſides that it would follow hence, that the heavier the Muſcles of the Stomach, Diaphragm, and Abdomen, are, the more Force they would have, and conſequently the more eaſy, and expedite would the *Digeſtion* be: which is falſe.

The Patrons of this Syſtem compare the Brain to the Arbor, or Screw of a Preſs, the Heart to a Piſton, the Lungs to Bellows, the Mouth to a Mill-ſtone or Peſtle, the Stomach to a Preſs, and the Inteſtines to a Receiver, or Vat. They contend, that *Caſtellus*, a Phyſician of *Meſſina*, was the firſt of the Moderns, who expreſsly eſpouſed the Syſtem of Ferments, and that he was followed by *Van Helmont*, and *Willis*.

But even the Partiſans of Trituration are not perfectly agreed among themſelves: *Pitcairn* will have it perform'd by a total Contraction of the Stomach: And Mr. *Hecquet*, by a ſucceſſive, periſtaltic, or vermicular Contraction.

*Aſtruc*, in his Treatiſe, *de la Cauſe de la Digeſtion*, refutes this Syſtem of Trituration at length. He makes a ſtrong Oppoſition to the *Calculus*, which raiſes the moving Force of the Stomach, &c. ſo very high. The Contraction of the Fibres of the Stomach, to compreſs the Food, he ſhews, cannot exceed three Ounces; and 'tis even *gratis* that he allows ſo much: That of the Diaphragm, and Abdomen, he computes at about 4 Pounds. He obſerves, that *Pitcairn*, ſurprized, in all Probability, with what he had aſſerted of this Force, durſt not purſue the Proportion whereon his *Calculus* was founded, and according to which, one of the Forces would be found equivalent to 117088 Pounds, and the other to 250734; which together make 367822 Pounds. The Diaphragm in its Motion has two Forces; the one direct, which is that, whereby its Muſcles draw from the Centre to the Circumference: the other lateral, whereby it reſts, or preſſes on the Stomach; The latter very ſmall in Compariſon of the former. Now, what has deceiv'd *Meſs. Pitcairn* and *Hecquet*, is, their taking the direct for the lateral Force; the Contraction of Fibres for their Preſſure on the Stomach. And the ſame Overſight they are guilty of in the Muſcles of the Abdomen, whoſe Preſſure againſt the Abdomen is only lateral. Add, that there are voracious Animals without any Diaphragm at all; as Fiſhes, which reſpire through their Gills: and others that have only a ſingle Membrane; as Birds, in whom the Muſcles of the lower Venter are very ſmall, and feeble, and in a Situation that incapacitates them from acting at all on the Stomach.

The Membranes of the Stomach being very ſoft, and having only a ſlender Motion, ſeem very unfit for the Office of a Mill-ſtone. 'Tis true, in certain Fowls the Stomach conſiſts of a cloſe, compact, fleſhy Muſcle exceeding ſtrong, ſo as to break little Stones, and Bits of Glaſs. But to this it is urged, that it is no *Digeſtion*, which in theſe Animals is effected in the Inteſtines. And the Structure of our Stomach compared with the Gizzard, or Crop of granivorous Birds, does, on the contrary, furniſh a very cogent Argument againſt Trituration. The Gizzard is provided on the Out-ſide with four fleſhy Muſcles, the Tendons whereof meet in two oppoſite Points: The Inſide is lined with a hard, thick, cartilagenous Membrane; eſpecially in the Places where the Tendons meet. By this Mechaniſm Nature plainly intimates the Office of the Gizzard to be the Grinding of the Grain by the Friction of its Parietes, or Sides: Whereas, the Membrane in the Stomach of a Man is exceedingly thin and fine, furniſh'd with a few fleſhy Fibres, cover'd with a tender, ſenſible Kind of Down; and the Stomach it ſelf is of a great Capacity. And the Stomach in rapacious Birds, who devour huge Pieces of raw Fleſh without chewing, is a ſtill finer Membrane. Laſtly, on the Syſtem of Trituration there ſeems no accounting for Hunger, Nauſea's, Indigeſtions, Crudities, &c.

In the Syſtem of Trituration it ſeems impoſſible to explain, why certain Things eaſy to grind, *e. gr.* Cabbage Flowers, cannot be *digeſted* in certain Stomachs, which yet find no Difficulty in *digeſting* more hard, and ſolid Meats, as Beef, and Mutton: Whereas, the Difference of Diſſolvents gives a natural, and eaſy Solution. Hydropic People continue to *digeſt*, notwithſtanding the Fibres of the Stomach, as well as the reſt of the Body, are extreamly relax'd through the Abundance of Humour. And the total, prompt Change of Nature induced in Foods can be the Effect of nothing elſe but Fermentation; which even diſcovers it ſelf by Belches, &c. while it goes on. The Iron, Needles, Pins, &c. ſometimes found undiſſolved in the Stomach, are no Objection to the Syſtem of Fermentation; it being notorious, that no Diſſolvent diſſolves all Bodies. In Birds, which feed on Grain, the Fermentation is manifeſt, firſt, in the Crop where the Grain is prepar'd for *Digeſtion*, by being macerated in a Liquor like Saliva; and afterwards in the Gizzard, where the *Digeſtion* is perfected by a Diſſolvent pour'd into it by a conglomerate Gland. But the Thing is ſtill more apparent in Ruminating Animals, which are provided with four Stomachs; the two firſt whereof, tho' form'd of a nervous Membrane, make but little Alteration in the Aliment, for Want of a Ferment, or *Menſtruum*; So that it returns to be chew'd again; and only becomes well *digeſted* in the fourth Stomach, whither a Diſſolvent is pour'd from a conglomerate Gland.

The Partiſans of the *third* Opinion allow it inconteſtable, that there are Acids in the Stomach, which mix with the Foods, and act on them; and hold likewiſe, that their Action is aided, and promoted by the Motion of the Syſtole, and Diaſtole in the *Viſcera*: They add, that the Acids produce a Fermentation; and the Oſcillatory Motion of the *Viſcera* a Trituration; and that thus *Digeſtion* is the Effect of Fermentation, and Trituration at the ſame Time.

Be it as it will with each of the three Syſtems; thus much we may venture to lay down from 'em all, as the real Proceſs of *Digeſtion*: The End of this Operation being to prepare the Foods, ſo as they may ſerve for Nutrition; thoſe Foods muſt be conſider'd from the Time the Man takes them in, till being converted into Chyle, they mix with the Blood, which conveys them into all Parts of the Body. The Foods then we take, are either crude, as Oiſters, Fruits, certain Pulſe, &c. or dreſs'd, as Fleſh, and Fiſh, which are roaſted, boil'd, fried, &c. and ſeaſon'd a thouſand divers Ways with Salt, Pepper, and other Spices, Vinegar, Wine, &c. to heighten and enrich the Taſte as much as to aſſiſt *Digeſtion*. See Food, Dressing, &c.

Further, there are ſome Foods we ſwallow without chewing, as Liquids; and others, which we break and comminute by chewing, as Bread, Fleſh, &c. 'Tis of theſe laſt we ſhall here ſpeak, as undergoing more Preparations, and more Changes to fit them for Food, than the others.

The Food, then, is firſt broke, and divided by the Teeth, and, at the ſame Time, moiſten'd with a Liquor ſupplied by the Salival Glands, and thus form'd into a Kind of Paſte. See Mastication.

Thus prepar'd, it is paſs'd through the *Oeſophagus* into the Stomach, there to ferment. See Deglutition.

This Fermentation is cauſed, 1. By the Salival Juice, which is a Ferment, and has the ſame Effect on the Aliment, that Leaven, or Barm has on Paſte. 2. By the Heat of the Stomach, *Viſcera* of the Abdomen, and even Excrements; which here has nearly the ſame Effect on Foods, as the Dunghill has on Matters laid by the Chymiſts to *digeſt* therein. 3. By the Remains of Foods left adhering in the *Rugæ*, or Folds of the Stomach, and there turn'd ſour, and acrimonious. 4. By the Compreſſion of the Muſcles of the Abdomen, and Diaphragm. 5. By the Liquor which the repeated Compreſſion of thoſe Muſcles occaſions to drip from the Glands of the Stomach. 6. According to the Sentiment of ſome modern Phyſicians, by the Air it ſelf, which being mix'd, and embaraſs'd in the Aliments, dilates by the Heat of the Stomach, and ſeparates the Parts of the Foods. Theſe Cauſes all contribute to attenuate, and divide the Food, ſo as to convert them into a cineritious Matter, call'd *Chyle*. See Chyle.

From the Stomach the Chyle deſcends into the *Ducodenum*, where it is further perfected by the Pancreatic Juice, and the Bile, which thin it, precipitate its groſſer Parts, and render it more fluid. The Chyle thus perfected and attenuated, enters the Lacteal Veins, which convey it into the Receptacle, where it is further diluted by the *Lympha*, which is brought hither in Abundance. Hence it riſes into the Thoracic Duct, and enters the Subclavian Vein; where being taken up by the aſcending *Cava*, it is pour'd into the right Ventricle of the Heart.

The Chyle thus mixing with the Blood, embaraſſes the Globules thereof, and thus abates its Motion: And hence that Inclination to go to ſleep after Meals. But, by Degrees, the Blood communicates its Motion to the Chyle; and by its volatile, and exalted Parts, together with the Saline and Nitrous Parts of the Air, ſubtilizes, and gives it its laſt Perfection. Then the *Digeſtion* is finiſh'd: and the Foods being by ſo many Changes render'd the immediate Matter of Nutrition, are carried by the Blood into all Parts of the Body, to repair, and fill the Vacancies of ſuch as are continually diſſipating, and exhaling; or even to add new ones. See Nutrition.

As to the groſſer Parts of the Foods ſeparated from the Chyle by the Bile and Pancreatic Juice, they aſſume the Colour of Excrements from the Bile; and that rank Smell, they derive from the coarſer Sulphurs thereof. Theſe Sulphurs, and Salts of the Excrements, ſerve, after they have paſſed through the Inteſtines, and are arrived at the laſt, which is the

the *Rectum*, to vellicate the Muſcles thereof, and diſpoſe 'em to relax, and thus to apprize Nature of a Neceſſity to diſcharge. See EXCREMENT.

The Separation of the Urine from the Blood, may be eſteem'd a Part of perfect *Digeſtion*; the Deſign of ſuch Separation being to render the Blood more pure and balſamic, and of Conſequence more fit for Nutrition; which the Salts the Urine abounds withal, greatly prevented. This Separation is thus perform'd: The Branches of the emulgent Arteries, which terminate in the Glands, whereof the Subſtance of the Kidneys is compoſed, carry the Blood thither; where a Seroſity is ſeparated from the Blood, by means of the Pores in the Glands of the Kidneys; thoſe Pores repreſenting the Holes in a Sieve, which only let paſs ſuch Things as are of a leſs Diameter than themſelves. This Seroſity, call'd Urine, is diſcharged hence into ſeveral little Tubes, which joyning into a Kind of Pyramids, yield their Humour into the *Pelvis*, whence it runs through the Ureters into the Bladder. See URINE.

DIGESTION, in Chymiſtry, is a Preparation of Plants, Minerals, Metals, and other Bodies beaten, or ground, by putting 'em in a Veſſel, and heating them gradually over a gentle Fire, like the Heat of an Animal Body. See FIRE.

*Digeſtion* is a previous Kind of Diſpoſition to a perfect Diſſolution of a Body, made by means of Fire, or fiery Particles, beating and looſening the Pores of the Body, and attenuating the Parts of the Fluids, that their Connexion with the harder Matter may be more eaſily, and perfectly diſſolved. *Bohnius* ſeems to deſcribe it pretty adequately by an inſenſible Action and Reaction of the Particles of a Maſs, moving together by ſome ſubtile, ambient Fluid, to which it was expoſed for *Digeſtion*. By calling *Digeſtion* a reciprocal Action, their Motion is intimated, by means whereof they are torn from the contiguous Ones; and in a Word, differently modified: So that the Motion ended, the digeſted Maſs, differs either wholly, or in Part, from the ſame Maſs before *Digeſtion*; ſometimes in Colour, ſometimes in Smell, ſometimes in Tranſparency, ſometimes in Taſte, ſometimes in Conſiſtence, and other Affections. That *Digeſtion* is effected by Motion, is evident from an Obſervation of Dr. *Grew*; who bringing a Mixture of Salt of Tartar, and Oil of Turpentine, ſeveral Days Journey with him in a Coach to *London*, found it had undergone a more intimate Mixion, than if it had been expoſed to a long *Digeſtion*.

*Digeſtion* is ordinarily confounded with *Maceration*; but the two Things differ, in that there is Heat required to *Digeſtion*; whereas *Maceration* is done in the Cold. See MACERATION.

*Digeſtion* is uſually perform'd with the Addition of ſome *Menſtruum* ſuitable to the Matter: Thus, Roſes and Poppies Heads are put to *digeſt* in Oil, or Water, to make Unguents, or Syrups; Calcined Lead, and Ceruſs, are *digeſted* in diſtill'd Vinegar, to make the Magiſtery thereof, or the *Sal Saturni*. Hence Dr. *Quincy* defines *Digeſtion* to be the Solution of Bodies, made by *Menſtruum's*, with the Aſſiſtance of Fire.

To conceive the Nature of Chymical *Digeſtion*, it may be neceſſary to ſhew, how the Particles of Bodies can by this Proceſs be diffuſed every Way, and ſuſtain'd in the *Menſtruum*; which deſerves the more to be accounted for, becauſe thoſe ſolid Particles have not the ſame ſpecific Gravity, as the Liquors have in which they ſwim. Tho' the Nature of a perfectly fluid Body be ſuch, as that the Particles, which conſtitute it, do very readily give Way upon the ſmalleſt Impulſe, and recede from one another; yet there is found in moſt Liquors ſome Degree of Tenacity; and from hence ariſes ſuch a Coheſion of Parts, as cannot be broken without ſome Force. And tho' indeed this Force of Coheſion in Liquors ſeems to be but little, or none at all, when compared with what we experience in Solids, yet we find, it can make ſome Reſiſtance. And as the Force in Liquors is either ſtronger or weaker, ſo it produces a Variety of Effects, differing more or leſs from the Phenomena, which would naturally flow from a perfect Fluid; So that, tho' by the Laws of Hydroſtaticks, every Corpuſcle, how ſubtil ſoever, if put into a Fluid, which is ſpecifically lighter, muſt neceſſarily ſink to the Bottom; yet we find ſome heavy Bodies, ſuch as Gold, *&c.* when reduced into thin Plates, will be ſuſtained in Spirit of Wine. This Force, therefore, of Tenacity, which reſiſts the Motion of Bodies in a Fluid, is proportional to the Number of Parts, which are to be ſeparated, or to the Surface of the Body, which we would have move in the Fluid. Hence it is, that ſince the Surface of a Body may be enlarged, without altering any Thing of its Gravity, the Reſiſtance of a Fluid may be ſo augmented, as to equal the Force of Gravity, which carries the Body downwards. And a Body, tho' ſpecifically heavier than a Fluid, in which it is immerſed, may be very well ſuſtained in that Fluid, provided it be reduced into very ſmall Particles; becauſe the Gravity of a Body thus reduced into ſmall Particles, decreaſes in a much greater Proportion, than the Surface does, or, which is proportional to it, the Tenacity of the Fluid: So that at length the Reſiſtance ariſing from its Tenacity, will be equal to the Gravity of the Particle, and ſo hinder its Deſcent. And, therefore, both in Solution, and *Digeſtion*, it is a general Rule, that if the Gravity of a Body be to the Tenacity of the Fluid, as P to 1; and if the Body be then ſubdivided, ſo that the Diameters of the Parts be to that of the whole, as 1 to P; the Reſiſtance which the Particles will meet with in their Deſcent, will be equal to their Gravity: for ſince their Weight is $\frac{1}{P^3}$, but their Surface $\frac{1}{P^2}$, the Gravity will be to the Reſiſtance as $\frac{P}{P^3}$, to $\frac{1}{P^2}$, or as 1 to 1. So that by this we may underſtand, how the Corpuſcles of Metals ſwim in *Menſtruum's*, which are ſpecifically lighter, as Gold in the Spirit of Nitre, which is drawn off from Bezoar Mineral, tho' the Gravity of Gold be 15 times greater. And in the ſame manner we may underſtand, how Corpuſcles ſpecifically heavier, are ſuſpended in any other *Menſtruum*. And it is for the ſame Reaſon, that ſuch as are lighter, cannot riſe up to the Surface: for the Preſſure of Fluids being equal every Way, the ſuperior Parts act reciprocally on the inferior; ſo that the ſame Force, which keeps the heavy Particles from ſinking, will not permit thoſe, which are lighter, to aſcend.

The Uſe of *Digeſtion*, in Pharmacy, is, to extract the Particles, which are more volatile, by a certain *Menſtruum*, and to mix them intimately with it. To this End a gentle Fire is commonly uſed, that the Corpuſcles, which are moſt volatile, may ſeparate, as it were of their own Accord: for a fierce Fire forces out the Fæces, as well as the finer Particles; and if it does not abate the Strength of the Liquor, it will not fail of ſpoiling its Clearneſs.

DIGESTION, in Chirurgery, is applied to Impoſthumes, or Abſceſſes; and expreſſes their Diſpoſition to ripen, and come to Suppuration. See DIGESTIVE.

Tumors ariſing on the Parotides of Children, are of eaſy *Digeſtion*: They ripen in a little Time. *Dionis.*

DIGESTION is alſo uſed for *Maturation*, or that State of a Diſeaſe, wherein the morbific Matter is ſo changed in Bulk, Figure, Coheſion, Mobility, *&c.* by the Uſe of proper Medicines, or even by the Force of Nature, as to be leſs noxious and hurtful, and conſequently to abate the Violence of the Diſtemper. See MATURATION.

The *Greeks* call it πεπάσμος. The Matter of the Diſeaſe ſo far *digeſted*, as to become next a-kin to ſalubrious, or healthy Matter, is ſaid to be *reſolved*. See CRUDITY, and CRISIS.

DIGESTIVE. The ancient Philoſophers admitted a *Digeſtive Faculty*, or *Quality* in the Body; as not knowing how otherwiſe to account for the Act of *Digeſtion*. See FACULTY, and DIGESTION.

DIGESTIVE is alſo uſed in Medicine for ſuch Remedies as ſtrengthen, and increaſe the Tone of the Stomach, and aſſiſt in the Digeſtion of Foods. To this Claſs belong all *Stomachicks*, and *Strengtheners*, or Corroborants. See STOMACHIC, and STRENGTHENER.

DIGESTIVE, in Chirurgery, is a Sort of Unguent, Plaſter, or the like, that ripens, and prepares the Matter of Wounds, *&c.* for Suppuration. It is uſually compoſed of Turpentine, Yolk of Eggs, Oil of *Hypericum*, *Unguentum Baſilicum*, and Tincture of Aloes. The Wound muſt be dreſs'd the firſt Day with a *Digeſtive*, to bring it to Suppuration.

DIGITATED, among Botaniſts, is applied to the Leaf of a Plant, which is either compoſed of many ſimple Leaves ſet together upon one Foot-Stalk, as in the Cinque-foil, Vetches, *&c.* or elſe when there are many deep Gaſhes, or Cuts in the Leaf, as in thoſe of Straw-berries, Hops, *&c.* See LEAF.

DIGIT, *Digitus*, in Anatomy. See FINGER.

DIGIT, in Aſtronomy, is the Meaſure whereby we eſtimate Eclipſes; amounting to the 12th Part of the Diameter of the Luminary eclipſed.

The Diameter of the Body, or Diſk of the Sun, or Moon, is divided into 12 Parts, call'd *Digits*; and an Eclipſe is ſaid to be of ten *Digits*, when ten of thoſe Parts are hid. See ECLIPSE.

Theſe *Digits*, *Wolfius*, and ſome others, call *Digiti Eclyptici*.

DIGIT, in Arithmetick, ſignifies any Integer under Ten, as 1, 2, 3, 4, 5, 6, 7, 8, 9. See UNITS.

DIGIT, is alſo a Meaſure taken from the Breadth of the Finger.

A *Digit* is properly 3 Fourths of an Inch, and contains 4 Grains of Barley, laid breadth-wiſe ſo as to touch each other. See MEASURE.

DIGLYPH, a Kind of imperfect Triglyph, conſole, or the like, with only two Channels, or Engravings. See TRIGLYPH.

DIGNITARY, in the Canon Law, and particularly in Chapters, a Perſon who holds a *Dignity*, that is, a Benefice, which gives him Pre-eminence in the Choir above mere Prieſts, and Canons. Such is a *Dean*, and *Arch-deacon*; tho' the Word

Word is alſo abuſively applied to a mere Prebend, or Canon.

*Dignities* are ſometimes ſimple, ſometimes with Cure of Souls, and ſometimes with Juriſdiction and Adminiſtration of ſacred Things. The Canoniſts even define *Dignity*, *Adminiſtratio cum Juriſdictione & Poteſtate conjuncta.* If the *Dignity* have no Contentious, or Exterior Juriſdiction, 'tis a ſimple *Parſonage*, and only gives Pre-eminence.

Of *Dignities*, including Prebends, *Cambden* reckons in *England* 544 in Number.

DIHELIOS, in the Elliptical Aſtronomy, a Name *Kepler* gives to that Ordinate of the Ellipſis, which paſſes through the *Focus*, wherein the Sun is ſuppoſed to be placed. See ELLIPSIS.

DIJAMBUS, a Foot of *Latin* Verſe, of four Syllables; compounded of two Jambics; ſo that the firſt and laſt are ſhort, and the two middle long. See JAMBUS.

DIKE, or *Dam*, a Work of Stone, Timber, or Faſcines, raiſed to oppoſe the Entrance, or Paſſage of the Waters.

*Dikes* are uſually Elevations of Earth, with Hurdles of Stakes, Stones, and other Matters.

The *Dike* of *Rochel* is made with Veſſels faſten'd to the Bottom. The *Dikes* of *Holland* are frequently broke thro', and drown large Tracts of Land.

The Word comes from the Flemiſh *Dyk*, a Heap of Earth to bound, or ſtem the Water. *Salmaſius*, and *Menage* take them to have borrowed the Word from the *Greek* τεῖχος. *Guichard* derives it from the Hebrew *Daghah.*

DILAPIDATION, is a waſtful Deſtroying, or letting Buildings run to Ruin, and Decay, for Want of neceſſary Reparation: 13 *Eliz. Cap.* 13.

The Money recover'd for *Dilapidations*, by 14 *Eliz.* 11. ſhall be employed in the Repair of the ſame Houſes.

DILATATION, in Medicine, *&c.* is the laying open any Orifice, or the Lips of a Wound wider; or the Extenſion of any Veſſel: whence *Dilatorium.*

DILATATION, in Phyſicks, a Motion of the Parts of a Body, whereby it expands, or opens it ſelf to a greater Space. See EXPANSION.

The Generality of our Authors confound *Dilatation* with Rarefaction; but the more accurate, eſpecially the Foreigners, diſtinguiſh between them; defining *Dilatation* to be the Expanſion of a Body into a greater Bulk, by its own Elaſtic Power: And Rarefaction, the ſame Expanſion produced by means of Heat. See RAREFACTION.

The Moderns have obſerved, that Bodies, which, after being compreſs'd, and again left at Liberty, reſtore themſelves perfectly, do endeavour to *dilate* themſelves with the ſame Force whereby they are compreſs'd; and accordingly, they ſuſtain a Force, and raiſe a Weight equal to that whereby they are compreſſed.

Again, Bodies, in *dilating* by their Elaſtic Power, exert a greater Force at the Beginning of their *Dilatation*, than towards the End; as being at firſt more compreſs'd; and the greater the Compreſſion, the greater the Elaſtic Power, and endeavour to *dilate*. So that theſe three, the Compreſſing Power, the Compreſſion, and the Elaſtic Power, are always equal. See ELASTICITY.

Again, The Motion whereby compreſſed Bodies reſtore themſelves, is uſually accelerated: Thus, when compreſſed Air begins to reſtore it ſelf, and *dilate* into a greater Space, it is ſtill compreſſed; and conſequently, a new *Impetus* is impreſſed thereon, from the *dilatative* Cauſe, and the former remaining, with the Increaſe of the Cauſe, the Effect; that is, the Motion and Velocity muſt be increaſed likewiſe: Thus an Arrow ſhot from a Bow, does not quit the String, till after that be perfectly reſtored to its Natural State; Nor does the Arrow move a whit ſwifter than the String; And if the String, 'ere it have perfectly reſtored it ſelf to its right Line, be ſtopp'd, the Arrow will not go its full Length: Which is a Proof, that it is continually acquiring a new *Impetus* from the String. And ſince Projects at the Beginning of their Motion, are little, or nothing retarded, but rather accelerated, it is evident, that the Motion of a String reſtoring it ſelf, is likewiſe accelerated. Indeed it may happen, that where the Compreſſion is only partial, the Motion of *Dilatation* ſhall not be accelerated, but retarded. As is evident in the Compreſſion of a Spunge, ſoft Bread, Gawze, *&c.*

DILATORES *Alæ Naſi*, in Anatomy, a Pair of Muſcles common to the *Alæ Naſi*, and Upper Lip. See MUSCLE.

They ariſe thin, broad, and fleſhy, from the Cheek-bones under the Orbits of the Eyes, and deſcend obliquely with a two-fold Order of fleſhy Fibres in each Muſcle, which partly terminate in the Upper Lip, and partly in the *Alæ Naſi*. They draw the *Alæ* from each other, and widen the External Openings of the Noſtrils.

DILEMMA, in Logic, an Argument conſiſting of four or more Propoſitions, ſo diſpoſed, that grant which you will of them, you will be preſs'd by the Concluſion. See SYLLOGISM.

Or *Dilemma* is an Argument conſiſting of two contrary Parts, or Sides, either of which catches the Adverſary. And hence it is alſo call'd *Syllogiſmus cornutus*, a horned Syllogiſm, its Horns being ſo diſpoſed, that if you avoid the one, you run upon the other.

It is alſo call'd *Crocodilinus*, by reaſon, that as the Crocodile leads ſuch as follow it, into the *Nile*, and purſues ſuch as fly it, to deſtroy them; ſo, whatever the Adverſary either affirms, or denies in this Kind of Syllogiſm, is turned to his Diſadvantage. See CROCODILUS.

Take an Example: A Philoſopher once diſſwaded a Man from marrying, by this Argument: *Either the Woman you marry will be handſome, or ugly: If handſome, ſhe will give you Jealouſy; if ugly, Diſpleaſure.*

*Cicero* uſes this fine *Dilemma*, to prove, that all Pain is to be bore with Patience: *Omnis Dolor aut eſt vehemens, aut levis: Si levis, facile feretur; Si vehemens, certe brevis futurus eſt.*

The ſame *Cicero*, by another *Dilemma*, proves, that no Meſſengers ſhall be ſent to *Anthony*: *Legatos decernitis; Si ut deprecentur, contemnet: Si ut Imperetis, non audiet.* Nor muſt we here omit that beautiful *Dilemma* of *Tertullian*, whereby he clears the Chriſtians, and accuſes *Trajan*, who had forbad the ſeeking them out, and yet order'd them to be puniſh'd, when found: *O Sententiam Neceſſitate confuſam! Negat inquirendos, ut Innocentes; & mandat puniendos, ut Nocentes: parcit & ſævit, diſſimulat & animadvertit. Quid temetipſum Cenſura circumvenis? Si damnas, cur non & inquiris? Si non inquiris, cur non & abſolvis?*

For a *Dilemma* to be legitimate, there are two Things required: 1. A full Enumeration of Parts: Thus that of *Ariſtippus* abovementioned, whereby he diſſwades from Marriage, is invalid, as being defective in the Enumeration; there being a middle Degree, or Form between *handſome* and *ugly*.

2. That the *Dilemma* preſs the Adverſary alone, and that the Perſon, who makes it, be not liable to have it retorted upon him. This was the Caſe in that celebrated *Dilemma* of the Sophiſt *Protagoras*, which the *Areopagites*, with all their Wiſdom, were not able to ſettle.

A Youth named *Evathlus*, put himſelf to *Protagoras*, to learn Dialectic, upon this Condition, that he ſhould pay him a large Sum of Money, the firſt Cauſe he pleaded, in Caſe he gain'd the ſame. *Evathlus*, when fully inſtructed, refuſing to pay the Condition; *Protagoras* brings his Action, arguing thus: You muſt pay the Money, however the Cauſe go; for if I gain, you muſt pay in Conſequence of the Sentence, as being caſt in the Cauſe: And if you gain it, you muſt pay in Purſuance of our Covenant. Nay, retorts *Evathlus*, which Way ſoever the Cauſe go, you'll have nothing: For if I prevail, the Sentence gives it, that nothing is due to you; and if I loſe, then there is nothing due by the Covenant.

After the like Manner, an ancient Prieſteſs diſſwading her Son from Haranguing the People, by this *Dilemma: Nam ſi injuſta ſuaſeris*, ſays ſhe, *habebis Deos iratos: Sin vero juſta, Iratos habebis homines:* The Youth thus returned the *Dilemma* on his Mother; *Imo*, ſays he, *expedit ad Populum Verba facere, nam ſi juſta dixero Dii me ababunt; ſi injuſta Homines.*

The Word *Dilemma* is form'd from the *Greek* δὶς, *bis*, twice, and λῆμμα, *Sumptio.*

DILUTE. To *dilute* a Body, is to render it liquid; or, if it were liquid before, to render it more ſo, by the Addition of a thinner thereto.

Thoſe Things thus added, are call'd *Diluents*, or *Dilutors*; ſuch are common Wheys, Ptiſans, and Juleps, which in reſpect of the Blood in a State of Viſcidity are thinner, and therefore are ſaid to thin, or *dilute* it.

Flower muſt be well *diluted*, to make it into Paſte. Oker is *diluted* with Oil, to paint Beams, Doors, *&c.*

DIMENSION, is the Extenſion of a Body, conſider'd as meaſurable. See EXTENSION, and MEASURE.

Hence, as we conceive a Body extended, and meaſurable both in Length, Breadth, and Depth; we conceive a *Trine Dimenſion*, viz. *Length*, *Breadth*, and *Thickneſs*. The firſt call'd a *Line*, the ſecond a *Surface*, the third a *Solid*. See LINE, SURFACE, and SOLID.

DIMENSION, is particularly uſed with regard to the Powers of the unknown Quantity of an Equation, which are call'd the *Dimenſions* of thoſe Quantities.

Thus in a ſimple Equation, the unknown Quantity is only of *one Dimenſion*, as $x=a+b$: 2. In a quadradic Equation it is of *two Dimenſions*, as $x^2=a^2+b^2$. In a Cubic, of *three*, as $x^3+a^3-b^3$. &c. See EQUATION, POWER, *&c.*

DIMINISH'D *Column*, in Architecture. See COLUMN, and DIMINUTION.

DIMINISH'D *Interval*, in Muſic, is a defective Interval, or an Interval which is ſhort of its juſt Quantity by a leſſer Semi-tone. See INTERVAL, and SEMI-TONE.

A *diminiſh'd Interval* is mark'd with a flat, or a double *Dieſis*.

DIMINUTION, in Rhetoric, is the Augmenting, and Exaggerating what you have to ſay, by an Expreſſion that ſeems to weaken, and *diminiſh* it.

As, for Inſtance, when a Man ſays with a certain Tone, *This Woman is not ugly*; meaning, ſhe is very handſome.

Some Authors take *Diminution* in a ſtricter Senſe, *viz.* for ſaying leſs than a Man really means, as: *You are not indeed to be commended*; where a greater Reproach is ſecretly meant.

DIMINUTION, in Muſic, is when there are a Number of Words, which are to make Tones and ſeveral quick Motions in the Space of a Cadence; ſeveral Quavers, and Semiquavers, correſponding to a Crochet, or Minim.

DIMINUTIONS, in Heraldry, a Term uſed by the *Latins* for what we more uſually call *Differences*, and the French *Briſures*. See DIFFERENCES.

DIMINUTION, in Architecture, a Contraction of the upper Part of a Column, whereby its Diameter is made leſs than that of the lower Part. See COLUMN.

To attain thoſe two important Points in Architecture, Strength, and the Appearance of Strength, all Architects have made their Columns leſſer above than below; which is call'd their *Diminution*. Some have likewiſe made them a little bigger towards the middle than at the Bottom, which is call'd their *Swelling*. The *Gothic* Architects, indeed, obſerve neither *Diminution*, nor *Swelling*: Their Columns are perfectly Cylindrical; for which reaſon they are properly call'd *Pillars*, in Contra-diſtinction to *Columns*. See PILLAR.

The *Diminution* generally commences from one Third of the Height of the Column. Some make it begin from the very *Baſis*, and hold tapering to the Capital; but this has not ſo good an Effect. *Vitruvius* would have the *Diminution* of Columns differ according to their Height, and not according to their Diameter. Thus, a Column 15 Foot high, he *diminiſhes* a ſixth Part of its Diameter, and another of 50 Foot, only an 8th Part; but we don't find this Rule obſerv'd in the Antique.

The Difference of Orders, Mr. *Perrault* obſerves, does not infer a Difference of *Diminution*; there being ſmall and great *Diminutions* in different Works of the ſame Order: Excepting, however, the *Tuſcan*, which *Vitruvius* diminiſhes by a 4th Part; tho' *Vignola* only makes it a 5th, and the *Trajan* Column a 9th. The *Diminutions* are very differently adjuſted in the different antique Buildings, as well as in the different modern Authors.

DIMINUTIVE, in Grammar, a Word form'd from ſome other, to ſoften, or *diminiſh* the Force, and Effect thereof: Or, to ſignify a Thing that is little in its Kind.

Thus Bullock is a *Diminutive* of *Bull*; *Cellule* of *Cell*.

The *Italians* abound in *Diminutives*; Every Author being at Liberty to make as many as he pleaſes. The *French* are a good deal more reſerved in that reſpect; tho' their old Authors were every whit as licentious as the *Italians*, witneſs *Belleau*, &c.

In *Engliſh* we have very few; not that our Language is hard, and incapable of the ſofteſt Expreſſions, but by reaſon we lay all our Tenderneſs in our Sentiments: Or rather, our Language is tender like a Perſon of Diſcretion, who always ſpeaks Senſe, even in ſpeaking of his Paſſion.

In *Latin*, *Italian*, *Engliſh*, and moſt other Tongues, *Diminutives* are form'd from Primitives, by the Addition of a few Letters, or Syllables: In *French*, the Caſe is frequently otherwiſe, the *Diminutive* being ſometimes ſhorter than the Primitive, ſometimes the ſame Length.

Some Grammarians call *at leaſt* a *diminutive* Conjunction, as ſerving to leſſen, or *diminiſh* the Force of what went before. See CONJUNCTION.

DIMISSORY *Letters*, *Dimiſſoriæ Literæ*, in the Canon Law, a Letter given by a Biſhop to a Candidate for holy Orders, born, or inhabiting in his Dioceſe; directed to ſome other Biſhop, and giving Leave for the Bearer to be ordain'd by him. See ORDINATION.

When a Perſon produces Letters of Ordination, or Tonſure conferr'd by any other than his own Dioceſan, he muſt at the ſame Time produce the *Letters Dimiſſory* given by his own Biſhop, on Pain of Nullity.

*Letters Dimiſſory* cannot be given by the Chapter *Sede vacante*; This being deem'd an Act of voluntary Juriſdiction, which ought to be reſerv'd to the Succeſſor.

DIMOCRITÆ, a Name given the *Apollinariſts*. Thoſe Hereticks at firſt held, that the Word only aſſum'd a human Body, without taking a reaſonable Soul like to ours. But being at length convinc'd by formal Texts of Scripture, they allowed, that he did aſſume a Soul, but without Underſtanding; the Word ſupplying the Want of that Faculty. From this Way of ſeparating the Underſtanding from the Soul, they became denominated *Dimocrites*, q. d. Dividers, Separaters, of δια, and μείρω, *I divide*. See APOLLINARIST.

DINNER, the great Meal, or that taken about the Middle of the Day. See MEAL.

Monks are ſaid to *dine* at eleven o' Clock, the common People about 12, and the Men of Buſineſs about 2. The *Grand Tartar*, Emperor of *China*, after he has *dined*, makes Publication by his Heralds, that he gives Leave to all the other Kings and Potentates of the Earth, to go to *Dinner*; as if they waited for his Leave.

The Word is form'd from the French *Diſner*, which *du Cange* derives from the barbarous Latin *diſnare*. *Henry Stephens* derives it from the *Greek* δειπνειν; and will have it wrote *Dipner*. *Menage* deduces it from *deſinare*, uſed for *deſinere*, as the *Italians* ſtill ſpeak it.

In the general, 'tis agreed to be the moſt ſalutary, to make a ſpare Supper, and to eat the more plentifully at *Dinner*; eſpecially for tender, valetudinary People. This is the Sentiment of the *Schola Salernitana*:

*Ex magna Cœna Stomacho fit maxima Pœna:*
*Ut ſis Nocte levis, ſit tibi Cœna brevis.*

Yet *Bernardinus Paternus*, an eminent *Italian* Phyſician, maintains the contrary in a Treatiſe expreſs. See FOOD.

The *Romans*, we are aſſur'd, never minded *Dinner*; but deferr'd their good Cheer to the Evening, which they made their grand Meal. *Dacier*.

DIOCESE, the Circuit, or Extent of the Juriſdiction of a Biſhop, or Arch-Biſhop. See BISHOP.

*Dioceſe* is alſo uſed in ancient Authors, &c. for the Province of a Metropolitan. See PROVINCE, and METROPOLITAN.

The Word is form'd from the *Greek* Διοίκησις, *Government*, *Adminiſtration*, form'd of διοικέω, which the ancient Gloſſaries render *adminiſtro*, *moderor*, *ordino*; Hence διοίκησις τῆς πόλεως, the *Adminiſtration*, or *Government of a City*.

Διοίκησις, *Diœceſis*, was originally a Civil Government, or Prefecture compoſed of divers Provinces. The firſt Diviſion of the Empire into *Dioceſes* is ordinarily aſcribed to *Conſtantine*; who diſtributed the whole *Roman* State into four, viz. the *Dioceſe* of *Italy*, the *Dioceſe* of *Illyria*, that of the *Eaſt*, and that of *Africa*. And yet long time before *Conſtantine*, *Strabo*, who wrote under *Tiberius*, takes Notice *Lib.* XIII. *p.* 432. that the *Romans* had divided *Aſia* into *Dioceſes*, and complains of the Confuſion ſuch a Diviſion occaſioned in Geography, *Aſia* being no longer divided by Peoples, but by *Dioceſes*, each whereof had a *Tribunal*, or Court where Juſtice was adminiſter'd. *Conſtantine*, then, was only the Inſtitutor of thoſe large *Dioceſes*, which comprehended ſeveral Metropoles, and Governments; the former *Dioceſes* only comprehending one Juriſdiction, or Diſtrict, or the Country that had Reſort to one Judge, as appears from this Paſſage in *Strabo*, and before *Strabo*, from *Cicero* himſelf, *Lib.* III. *Epiſt. ad famil. ep.* 9. and *Lib.* XIII. *ep.* 67.

Thus, at firſt, a Province included divers *Dioceſes*; and afterwards a *Dioceſe* came to comprize divers Provinces. In After-times the *Roman* Empire became divided into XIII. *Dioceſes*, or Prefectures; tho' including *Rome*, and the ſuburbicury Regions, there were XIV. Theſe XIV *Dioceſes* comprehended 120 Provinces: Each Province had a Proconſul, who reſided in the Capital, or *Metropolis*; And each *Dioceſe* of the Empire had a Conſul, who reſided in the principal City of the Diſtrict.

On this Civil Conſtitution, the Eccleſiaſtical one was afterwards regulated: Each *Dioceſe* had an Eccleſiaſtical Vicar or Primate, who judg'd finally of all the Concerns of the Church within his Territory. See ECCLESIASTICAL.

At preſent there is ſome further Alteration: For *Dioceſe* does not now ſignify an Aſſemblage of divers Provinces; but is limitted to a ſingle Province under a Metropolitan, or even to the ſingle Juriſdiction of a Biſhop. *Gul. Brito* affirms *Dioceſe* to be properly the Territory, and Extent of a Baptiſmal, or Parochial Church; whence divers Authors uſe the Word to ſignifie a ſimple Pariſh. See PARISH.

DIOCLETIAN *Epocha*. See EPOCHA.

DIONYSIAN *Period*. See PERIOD.

DIONYSIACA, Feaſts held among the Ancients, in Honour of *Bacchus*, on the third Day of *September*. See FEAST.

The *Latins* call'd them *Liberalia*, and the *Feaſt of Vintages*, by reaſon *Bacchus*, *Liber* in the Heathen Syſtem is reputed the God of Wine; ſee *Varro* Lib. 5. See LIBERALIA.

The Word is form'd from the *Greek* Διονύσια, of Διονύσιος, *Bacchus*; and that of Διὸς, the Genitive of Ζεὺς, *Jupiter*, and *Nyſa*, a City in *Egypt* on the Frontiers of *Arabia*, where *Bacchus* is ſaid to have been educated by the Nymphs.

Others derive Διονύσιος from *Du*, and *Dy*, *Lord*; and *Niſa*, put by *Metatheſis*, or Tranſpoſition, for *Sina*; So that,

that, according to *Tzetzes*, Διονύσιος signifies no more than Δεῦνος καὶ ἄναξ Νύσσης, *Lord and King of Nyſſa.*

DIOPTER, or *Dioptra*, in the Writers of Aſtronomy, is frequently uſed for the Holes pierced in the *Pinnulæ*, or Sights of an Alhidade. See SIGHTS.

DIOPTRA, among Surgeons, is an Inſtrument whereby one may ſee into the *Matrix*, and inſpect any Ulcers therein, call'd alſo SPECULUM *Matricis*, and DILATATORIUM.

DIOPTRICKS, the Doctrine of refracted Viſion, call'd alſo *Anaclaſticks*. See VISION.

*Dioptricks* is properly the third Branch of Opticks; Its Office being to conſider, and explain the Effects of Light refracted by paſſing through different *Mediums*, as Air, Water, Glaſs, &c. and eſpecially *Lens's*. See OPTICKS.

The Word *Dioptricks* is originally *Greek*, being form'd of διὰ, *per*, through, and ὄπτομαι, *I ſee*; whence διόπτρομαι ſhould be to *ſee through any Thing.*

*The Laws of* Dioptricks, *ſee deliver'd under the Articles* REFRACTION, LENS, &c. *and the Application thereof, in the Conſtruction of Teleſcopes, Microſcopes, and other* Dioptrical *Inſtruments, under the Articles* TELESCOPE, MICROSCOPE, &c.

DIPHRYGES, in Pharmacy, the *Scoria*, Sediment, or Calx of melted Copper gather'd in the Furnace, when the Metal is run out. See SCORIA.

*Dioſcorides* makes three Kinds of *Diphryges*: One call'd *Natural*, tho' made of a Kind of Clay, or Bole dried in the Sun: That made of Marcaſſite, or Pyrites burnt; and that of the *Fæces* of Copper. See COPPER.

It is moderately ſharp, and aſtringent, and is reputed good for Ulcers that cicatrize with Difficulty.

The Word is form'd from the *Greek* δὶς, *twice*, and φρύγειν, *to roaſt.*

DIPLOE, in Anatomy, a ſpongy, medullary Subſtance, ſeparating the two Tables of the *Cranium*, and together with them conſtituting the Skull. See CRANIUM.

The Subſtance of the *Diploe* being ſpongeous, eaſily imbibes the Blood, and is found ſeparated into an infinite Number of little Cells of different Magnitudes, which receive little Branches of Arteries from the Brain, and give Paſſage to little Veins that proceed to the *Sinus's* of the *dura Mater.*

DIPLOMA, an Inſtrument given by ſome Colleges, and Societies, on Commencement to any Degrees, or paſſing Examination, as a Proof of Qualification for any Advancement to Title, or Power.

DIPPING-*Needle*, or *Inclinatory-Needle*, a Magnetical Needle, ſo hung, as that inſtead of playing horizontally, and pointing out North and South, one End *dips*, or inclines to the Horizon, and the other Points to a certain Degree of Elevation above it. See NEEDLE, and MAGNET.

Or, a *Dipping-Needle* may be defined with Mr. *Whiſton*, to be a long ſtaight Piece of Steel, (repreſented *Tab. Navigation Fig.* 11.) every way equally pois'd on its Centre, and afterwards touch'd with a Load-ſtone; but ſo contriv'd, as not to play on the Point of a Pin, as does the common horizontal Needle, but to ſwing in a Vertical Plane, about an Axis parallel to the Horizon: And this in Order to diſcover the exact Tendency of the Power of Magnetiſm. See MAGNETISM.

The Inventor of the *Dipping-Needle*, Mr. *Whiſton* obſerves, was, without all Queſtion, an *Engliſhman*, *Robert Norman* by Name, a Compaſs-maker at *Wapping*, about the Year 1576; which is not only teſtified by his own Account, in his *New Attractive*; but was allow'd by Dr. *Gilbert*, and other Writers of that Time. The Occaſion of the Diſcovery he himſelf relates: *viz.* that it being his Cuſtom to finiſh, and hang the Needles of his Compaſſes, before he touch'd 'em; he always found, that immediately after the Touch, the North-Point would bend, or decline downward, under the Horizon; Inſomuch, that to balance the Needle again, he was always forc'd to put a Piece of Wax on the South End, as a Counter-poize.

The Conſtancy of this Effect led him at Length to obſerve the preciſe Quantity of the *Dip*, or to meaſure the greateſt Angle which the Needle would make with the Horizon.

This in the Year 1576 he found at *London* to be 71° 50′. But the *Dip* varies as well as the Horizontal Direction; and is now found, at the ſame Place, to be 75° 10′.

*Burrows*, *Gilbert*, *Ridley*, *Bond*, &c. endeavour'd to apply this Diſcovery of the *Dip*, to the finding of the Latitude; and the laſt Author, going further, likewiſe propoſed the finding of the Longitude thereby: but for Want of Obſervations, and Experiments, he could go no length.

Mr. *Whiſton*, being furniſh'd with the further Obſervations of Col. *Windham*, Dr. *Halley*, Mr. *Pound*, Mr. *Cunningham*, *Pere Noel*, Mr. *Feuillee*, and his own, has improved very much on the Doctrine, and Uſe of the *Dipping-Needle*, brought it to more certain Rules, and endeavour'd in good Earneſt to find the Longitude thereby.

In Order to this, he obſerves, I. That the true Tendency of the North, or South End of every Magnetic Needle is not to that Point in the Horizon to which the Horizontal Needle points, but towards another directly under it in the ſame Vertical; and in different Degrees under it, in different Ages, and at different Places.

II. That the Power by which a Horizontal Needle is govern'd, and all our Navigation ordinarily directed, is prov'd to be but one Quarter of the Power, by which the *Dipping-Needle* is moved; which ſhould render the latter far the more effectual, and accurate Inſtrument.

III. That a *Dipping-Needle* a Foot long, will plainly ſhew an Alteration of the Angle of Inclination in theſe Parts of the World in half a Quarter of a Degree, or $7\frac{1}{2}$ Geographical Miles; *i. e.* ſuppoſing that Diſtance taken along, or near a Meridian. And a Needle of 4 Foot, in two or three Miles.

IV. A *Dipping-Needle* 4 Foot long, in theſe Parts of the World, will ſhew an equal Alteration along a Parallel; As one of a Foot long will ſhew along a Meridian, *i. e.* this will with equal Exactneſs ſhew the Longitude, as that the Latitude.

This depends on the Poſition of the *Lines of equal Dip*, in theſe Parts of the World, which are found to lye about 14 or 15 Degrees from the Parallels.

Hence he argues, that as we can have Needles of 5, 6, 7, 8, or more Feet long, which will move with Strength ſufficient for exact Obſervation; And ſince Microſcopes may be applied to the Viewing the ſmalleſt Diviſions of Degrees on the Limb of the Inſtrument, it is evident, the Longitude at Land may be found thereby to leſs than four Miles.

And as there have been many Obſervations made at Sea with the ſame Inſtrument by *Noel*, *Feuillee*, &c. which have determin'd the *Dip* uſually within a Degree, ſometimes within $\frac{1}{2}$ or $\frac{1}{3}$ of a Degree, and this with ſmall Needles of 5, or 6, or at the moſt 9 Inches long; 'tis evident, the Longitude may be found even at Sea, to leſs than half a Quarter of a Degree.

Thus much premis'd, the Obſervation it ſelf follows.

*To find the Longitude, or Latitude by the* DIPPING-*Needle:*

If the Lines of equal *Dip* below the Horizon be drawn on Maps, or Sea-Charts, from good Obſervations, it will be eaſy from the Longitude known to find the Latitude; and from the Latitude known to find the Longitude, either at Sea, or Land.

Suppoſe, *e. gr.* you were travelling, or ſailing along the Meridian of *London*, and found the Angle of *Dip*, with a Needle of one Foot to be 75°; the Chart will ſhew, that this Meridian, and the Line of *Dip* meet in the Latitude of 53° 11′; which, therefore, is the Latitude ſought. See LATITUDE.

Or, ſuppoſe you were travelling, or ſailing along the Parallel of *London*, i. e. in 51° 32′ North Latitude, and you find the Angle of *Dip* to be 74°. This Parallel, and the Line of this *Dip* will meet in the Map in 1° 46′ of Eaſt Longitude from *London*; which is, therefore, the Longitude ſought. See LONGITUDE.

DIPTERE, or DIPTERON, in the ancient Architecture, a Temple ſurrounded with two Rows of Columns, which from a Sort of Portico's, call'd *Wings*, or *Iſles*. See TEMPLE.

The Word is *Greek*, form'd from δὶς, *twice*, and πτέρον, *Ala*, Wing.

DIPTHONG, in Grammar, a *double Vowel*, or the Union, or Mixture of two Vowels pronounced together, ſo as only to make one Syllable; as the Latin *ae*, or æ, *oe*, or œ; the *Greek* ει, the Engliſh *ai*, *au*, &c. See VOWEL, and SYLLABLE.

The *Latins* pronounced the two Vowels in their *Dipthongs* much as we do; with this Exception, that the two were not heard equally, but the one was ſomewhat weaker than the other, tho' the Diviſion was made with all the Delicacy imaginable.

Among us, moſt of the Latin *Dipthongs* are loſt in the Pronunciation: Their æ and œ are only ſpoke as *e*'s; So alſo the Engliſh *ea*, *oa*, &c. tho' wrote with two Characters, are pronounced as ſimple Sounds.

In *Engliſh*, *French*, and divers other Languages, one may diſtinguiſh *Dipthongs* with regard to the Eyes, from *Dipthongs* with regard to the Ears.

A *Dipthong* with regard to the Eye, is form'd of two Vowels meeting in the ſame Syllable, whether the particular Sound of each of them be heard in the Pronunciation, whether the Sound of one of them be drown'd; or laſtly, whether a new Sound different from either of them reſult from both. In the two latter Occaſions, 'tis with ſome Impropriety, that we call them *Dipthongs*. The firſt only are real *Dipthongs*, as being ſuch both to the Eye, and Ear.

*Dipthongs* with regard to the Ear, are either form'd of two Vowels, meeting in the ſame Syllable, or whoſe Sounds

are

are ſeverally heard; Or of three Vowels in the ſame Syllable, which only afford two Sounds in the Pronunciation.

On this laſt Occaſion, *Dipthongs* with regard to the Ear, are Tripthongs with regard to the Eye.

Engliſh *Dipthongs*, with regard both to the Eye and Ear, call'd *Proper Dipthongs*, are *ai*, as in *fair*; *au*, in *Laud*; *ee*, in *bleed*; *oi*, in *void*; *oo*, in *Food*; and *ou*, in *Houſe*.

Engliſh *Improper Dipthongs*, or *Dipthongs* with regard to the Eye, are *aa*, pronounced only like *a*; as in *Aaron*; *ea*, like *a*, as in *Swear*, *Heart*; or like *e*, as *already*; or like *ee*, as *Veal*: *eo*, like *e*, in *Feoffee*; or like *o*, in *George*: *eu*, or *ew*, like *u*, as *Deuteronomy*: *ie*, like *e*, as *Cieling*, *Field*: *ei*, like *a*, in *feign*, or like *e*, in *Deceit*: *oa*, as in *Cloak*, *Doat*: *oe*, as in *Doe*, *Oeconomy*: *ue*, as in *gueſs*: And *ui*, as *guile*, *recruit*.

The Word is form'd from the Latin *Diphthongus*, and that from the *Greek* Διφθόγγος, which ſignifies the ſame Thing.

DIPTOTES, in Grammar, a Kind of irregular Nouns, having no more but two Caſes: As, *Suppetiæ*, *Suppetias*, &c. See CASE.

DIRECT, in Opticks. *Direct Viſion* is that perform'd by *direct* Rays; in Contra-diſtinction to Viſion by refracted, or reflected Rays. See VISION.

*Direct Viſion*, is the Subject of Opticks, which preſcribes the Laws, and Rules thereof. See OPTICKS.

DIRECT *Rays* are thoſe which paſs in right Lines from the Luminary to the Eye, without being turn'd out of their Rectilinear Direction by any intermediate Body, either opake, or pellucid. See RAY.

DIRECT, in Arithmetic. The Rule of three *Direct* is that oppoſite to the *Inverſe*. In the *Direct*, the 4th Number required increaſes the Proportion; and in the Inverſe diminiſhes it. See RULE *of Proportion*.

DIRECT, in Aſtronomy. We conſider the Planets in three States, viz. *direct*, *ſtationary*, and *retrograde*. See PLANET.

They are ſaid to be *direct*, when they appear to move forward, according to the Succeſſion of the Signs; and *retrograde*, when they go the contrary Way. See RETROGRADATION, and STATION.

DIRECT, in Matters of Genealogy, is underſtood of the principal Line, or the Line of Aſcendants, and Deſcendants; in Contra-diſtinction to the Collateral-Line. See LINE.

Thus the Houſe of *Bourbon* is ſaid to deſcend in a *direct* Line from St. *Louis*.

The Heirs in a *direct* Line always precede thoſe in the Collateral Lines. See COLLATERAL.

A very good Hiſtorian uſes the Phraſe DIRECT *Speech*, or *Harangue*, when he introduces any one ſpeaking, or haranguing of himſelf; And he calls it *Indirect*, when the Hiſtorian ſpeaks, and only rehearſes the chief Points of the Perſon mentioned.

DIRECT { *Erect* / *Eaſt* / *Weſt* } *Dials* are thoſe whoſe Planes lye directly open to the Eaſt, or Weſt-Points of the Heavens, or parallel to the Meridian of the Place. See DIAL.

DIRECT *South*, or *North* { *Inclining* / *Reclining* } *Dials*. See DIAL.

DIRECT *Sphere*. See RIGHT *Sphere*.

DIRECTION, in Aſtronomy, the Motion, and other Phænomena of a Planet, when *direct*. See STATION, and RETROGRADATION.

DIRECTION, in Aſtrology, is a Kind of *Calculus*, whereby they pretend to find the Time wherein any notable Accident ſhall befal the Perſon whoſe Horoſcope is drawn. See HOROSCOPE.

For Inſtance, having eſtabliſh'd the Sun, Moon, or Aſcendant, as Maſters, or Significators of Life; and Mars, or Saturn, as Promiſers, or Portenders of Death; *Direction* is a Calculation of the Time wherein the Significator ſhall meet the Portender.

The Significator they likewiſe call *Aphetes*, or Giver of Life; and the Promiſer, *Anereteſ*, *Promiſſor*, or Giver of Death.

They work the *Directions* of all the principal Points of the Heavens, and Stars, as the Aſcendant, Mid-heaven, Sun, Moon, and Part of Fortune. The like is done for the Planets, and fix'd Stars, but all differently, according to the different Authors.

DIRECTION, or *Line of Direction*, in Mechanicks, is particularly uſed for a Line paſſing from the Centre of the Earth thro' the Centre of Gravity of a Body, and the Support or *Fulcrum* that bears it. A Man muſt neceſſary fall down as ſoon as the Centre of his Gravity is out of the *Line of Direction*. See CENTRE, &c.

DIRECTION *of the Load-ſtone*, that Property whereby the Magnet always preſents one of its Sides towards one of the Poles of the World, and the oppoſite Side to the other Pole. See MAGNET, and POLE.

The Attractive Property of the Magnet was ſhewn long before its *Directive*; and the *Directive* long before the Inclinatory. See NEEDLE, COMPASS, &c.

DIRECTION *Magnetical*, is alſo uſed in the general for the Tendency, or Turning of the Earth, and all Magnetical Bodies to certain Points. See MAGNET, and MAGNETISM.

The Situation of our Earth, we know, is ſuch, that its Axis is in the Axis of the Univerſe; and therefore its Poles, and Cardinal Points, exactly correſpond to thoſe thereof. This Situation ſome account for hence, that it is the moſt commodious with regard to the Aſpects, and Influences of the heavenly Bodies, and renders it the fitteſt Habitation for Man. Others hold this Poſition of the Earth an Effect of a Magnetic Virtue; and ſuppoſe a Celeſtial Pole, endued with a like Magnetic Virtue; which extending as far as our Earth, draws the correſpondent Part thereof, the Pole, towards it ſelf. See EARTH, and POLE.

*Line of* DIRECTION, in Mechanicks, that wherein a Body moves, or endeavours to proceed. See LINE.

*Angle of* DIRECTION, in Mechanicks, is that comprehended between the Lines of *Direction* of two conſpiring Powers. See ANGLE.

DIRECTLY. In Geometry, we ſay, two Lines lie *directly* againſt each other, when they are Parts of the ſame right Line.

In Mechanicks, a Body is ſaid to ſtrike, or impinge *directly* againſt another, if it ſtrike in a right Line perpendicular to the Point of Contact.

A Sphere, particularly, ſtrikes *directly* againſt another, when the Line of *Direction* paſſes through both their Centres. See PERCUSSION.

DIRECTOR *Penis*, in Anatomy, a Muſcle of the Penis, call'd more uſually *Erector*. See ERECTOR.

DIRIGENT, a Term in Geometry, expreſſing the Line of Motion, along which the deſcribent Line, or Surface is carried in the *Geneſis* of any Plane, or ſolid Figure. See GENESIS.

Thus, if the Line AB (*Tab. Geometry Fig.* 33.) move parallel to it ſelf, and along the Line AC, ſo that the Point A always keeps in the Line AC, a *Parallelogram*, as ABCD, will be form'd, of which the Side AB is the Deſcribent, and the Line AC the *Dirigent*: So alſo, if the Surface ABCD be ſuppoſed to be carried along the Line CE, in a Poſition always parallel to it ſelf in its firſt Situation, the Solid ADFH will be form'd, where the Surface AD is the Deſcribent, and the Line CE is the *Dirigent*.

DIS, a Particle inſeparable from divers Words; the Effect whereof is, either to give them a Signification contrary to what the ſimple Words had; As in *Diſgrace*, *Diſparity*, *Diſproportion*, &c. Or to intimate a Separation, Detachment, Diſtribution, &c. as in *diſcerning*, *diſcourſing*, *diſtracting*, *diſpoſing*, &c.

DISABILITY, in Law, is when a Man is *diſabled*, i. e. made incapable to inherit, or take the Benefit, which otherwiſe he might do; which may happen four Ways, *viz.* by the Act of the Anceſtor; by the Act of the Party; by the Act of Law; and by the Act of God.

DISABILITY *by the Act of the Anceſtor* is, if a Man be attainted of Treaſon, or Felony; by this Attainder his Blood is corrupted, and thereby himſelf and his Children are *diſabled* to inherit.

DISABILITY *by the Act of the Party* himſelf, as if one Man make a Feoffment to another, who then is ſole, upon Condition, that he ſhall enfeoff a Third before N, and when ſuch Feoffment is made, the Feoffee takes a Wife; he has by that *diſabled* himſelf to perform the Condition, according to the Truſt in him repoſed, and therefore the Feoffer may enter, and out him. Alſo, if a Man be excommunicated, he cannot, during that Time, ſue any Action, but ſhall be thereby *diſabled*, and ſo in other Caſes.

DISABILITY *in Act of Law*, is properly, when a Man by the ſole Act of Law is *diſabled*; Thus is an Alien born; and therefore, if a Man born out of the King's Ligeance, will ſue an Action, the Tenant, or Defendant, may ſay, he was born in ſuch a Country out of the King's Ligeance, and demand Judgment, if he be anſwered; for the Law is our Birth-Right, to which an Alien is a Stranger, and therefore *diſabled* from taking any Benefit thereby.

DISABILITY *by the Act of God*, as when the Party is *Non Compos Mentis*, or, *Non ſanæ Memoriæ*, which ſo *diſables* him, that in all Caſes, where he gives, or paſſes any Thing, or Eſtate out of him, after his Death it may be diſannull'd, and voided.

DISC, DISK, or *Diſcus*, in Antiquity, a Kind of round *Quoit*, or Palet of Stone, or Metal, about a Foot over, uſed by the Ancients in their Exerciſes. See EXERCISE.

The *Diſcus* of the Ancients was flat and round, reſembling the apparent Figure of the Sun.

The

The Exercise of the *Discus* was one of those practised in the Solemnities of their public Games: It consisted in pitching, or throwing a *Discus* either upward, or straight forward; and he who threw it highest, or furthest, bore away the Prize.

Those who practis'd at this Game, were call'd *Discoboli*, i. e. Throwers of the *Discus*.

*Hyacinth*, a Favourite of *Apollo*, playing at the *Discus* with that God, was kill'd by a Blow of *Apollo*'s *Discus*, which his Rival *Zephyrus* diverted from its Course, and cast on the Boy's Head.

The *Discus* was thrown by means of a little Cord made of Hair, as appears from *Claudian* Lib. II. in *Eutrop. Carm.* 20. v. 359. *& seq.* *Ovid* describes this Sport *Metam.* Lib. X. v. 175. The *Romans* learnt the Game of the *Discus* of the *Greeks*, and practis'd it among themselves.

*Dempster*, *Parallip. in Rosini Antiq. Rom.* L. V. C. I. and *Pet. Faber. Agonisticon* L. II. C. I. treat of the Diversion of the *Discus*.

DISC, DISK, or *Discus*, in Astronomy, the Body, or Face of the Sun, or Moon; such as it appears to us. See SUN, *&c.*

In a total Eclipse of either of those Luminaries, the whole *Disk* is obscured, or darken'd; In a partial Eclipse, only Part of them. See ECLIPSE.

Half the Moon's *Disk* was immerged in the Shadow of the Earth in such an Eclipse.

The *Disc* is conceiv'd to be divided into twelve equal Parts, call'd *Digits*; by means whereof it is, that the Magnitude of an Eclipse is measur'd, or estimated. Such an Eclipse was so many Digits, or Parts of the Sun, or Moon's *Disk*. Mercury and Venus are sometimes seen in the Sun's *Disk*, transiting the Sun's *Disk*. See TRANSIT.

DISC, in Opticks, the Magnitude of Telescope Glasses; or the Width of their Apertures, whatever their Figure be, whether Plain, Convex, Menisicus, &c.

DISC, *Discus*, in Botany, is applied to the central, or middle Part of radiated Flowers; as being round and plain like a Quoit. See DISCOUS *Flower*.

This is sometimes also call'd the *Pelvis*, or *Bason*.

The *Disc* is composed of several Fleurons perpendicularly placed.

DISC, in the *Greek* Liturgy, is the same Thing with the *Patena* in the *Latin*.

In the *Greek* Church the consecrated Bread is laid on a *Discus*, as in the *Latin* Church it is on a *Patina*. The *Discus* only differs from the *Patina*, in that it is bigger, and deeper; as resembling a Plate, which was the proper Signification of the Word *Discus* among the Ancients.

DISCENT. See DESCENT.

DISCERNING, an Act of the Mind whereby it distinguishes between Idea's. See IDEA.

On this Faculty of *Discerning*, depends the Evidence and Certainty of several, even general Propositions, which pass for innate Truths; and which in Reality flow from this clear *discerning* Faculty of the Mind, whereby it perceives two Idea's to be the same, or different.

In being able nicely to distinguish one Thing from another, where there is the least Difference, consists in great Measure the Exactness of Judgment, and Clearness of Reason, which is to be observ'd in one Man above another; which is quite opposite to Wit, which consists most in the Assemblage of Idea's, and putting those together with Quickness and Variety, which have the least Resemblance to form agreeable Visions: whereas Judgment separates carefully those Idea's, wherein can be found the least Difference, to prevent Error, and Delusion. To the well-distinguishing our Idea's, it chiefly contributes, that they be clear, and determinate; and when they are so, there will not arise any Confusion, or Mistake about them, tho' the Senses should convey them from the same Object differently on different Occasions. See JUDGMENT.

DISCIPLINE, primarily signifies Instruction and Government; But is figuratively applied to a stated Method of living, according to the Rules of some Profession.

Thus we say the *Military Discipline*, the *Ecclesiastic*, or *Church Discipline*, the *Regular*, or *Monastic Discipline*, *&c.*

We don't say *Civil Discipline*, but instead thereof, *Policy*. See POLICY.

DISCIPLINE, is also used in a peculiar Sense, for the Chastisement, or bodily Punishment inflicted on a Religious, who has been caught delinquent; Or even for that they voluntarily undergo, or inflict on themselves by way of Mortification. See PENANCE.

Among all the Austerities practised by the ancient Monks and Solitaries, *Dupin* observes, there is no mention made of *Discipline*: In Effect, it does not appear to have been in Use in Antiquity, unless to punish the Monks, who had been taken tripping.

'Tis commonly said to be St. *Dominic*, and *Peter Damian*, who first introduced the Use of *Discipline*: But *Fa. Mabillon* notes, that *Guy*, Abbot of *Pomposia*, and others, had practised it before them. 'Tis pretty certain, the Practice was first establish'd in the eleventh Century, with Design to redeem the Penances the Canons impos'd on divers Offences; and at length, they came not only to redeem for themselves, but also for others. See *Fa. Mabillon*.

DISCIPLINE, is also frequently used for the Instrument, wherewith a Monk chastises, or mortifies himself; which is usually made of Ropes, knotted Hair, or twisted Parchment. St. *Jerom* is painted with *Disciplines* of Iron Chains, with Spur Rowels, *&c.*

DISCLAIMER, in Law, a Plea, containing an express Denial, renouncing, or disclaiming of a Thing alledged: As if the Tenant sue a Replevin upon a Distress taken by the Lord, and the Lord avow, saying, that he holds of him as his Lord, and that he destrained for Rent not pay'd, or Service not perform'd; then the Tenant denying to hold of such Lord, is said to *disclaim*: And the Lord proving the Tenant to hold of him, the Tenant loses his Land.

Also, a Man denying himself to be of the Blood, or Kindred of another in his Plea, is said to *disclaim* his Blood. If a Man arraign'd of Felony, *disclaim* Goods; being clear'd, he loses 'em.

DISCONTINUANCE, an Interruption, Intermission, or Cessation of the Course of a Thing: As, *Discontinuance of Possession*; *of a Plea*; *Process*, &c.

The Effect of a *Discontinuance of Possession*, is this, that a Man may not enter on his own Land, or Tenement alienated, whatever his Right be to it, of himself, or by his own Authority; but must bring his Writ, and seek to recover Possession by Law. As if a Man alien the Lands he holdeth in Right of his Wife; Or if a Tenant in Tail make any Feoffment, or Lease for Life not warranted by the *Stat.* 32. *Hen.* VIII. by Fine, or Livery of Seisin; Such Alienations are call'd *Discontinuances*. See POSSESSION.

The Effect of *Discontinuance of Plea*, is, that the Opportunity of Prosecution is lost, and not recoverable, but by beginning a new Suit. For to be *discontinued*, and to be put off without a Day, are the same Thing; and nothing less than to be finally dismiss'd the Court.

If a Justice-Seat be *discontinued* by the not coming of the Justices, the King commonly renews the same by his Writ, *&c.* *Crompton Jurisd.* See PLEA.

DISCORD, in Music, the Relation of two Sounds which are always, and of themselves, disagreeable, whether applied in Succession, or Consonance. See SOUND.

If two simple Sounds are in such a Relation of Tune, that is, have such a Difference of Tune, as that being sounded together, they make a Mixture, or compound Sound, which the Ear receives with Displeasure, it is call'd a *Discord*; As, on the contrary, if it receive it with Pleasure, it is call'd a *Concord*: And whatever two Sounds make an agreeable, or disagreeable Compound, they will have the same Effects respectively, if they be applied in Succession. See TUNE, CONCORD.

As Concords are denominated *Harmonical Intervals*; so may *Discords* be denominated *Unharmonical Intervals*. See INTERVAL.

*Discords* are distinguish'd into *Concinnous*, and *Inconcinnous Intervals*.

The *Concinnous*, by the Ancients call'd *Emmeli*, are such as are apt, or fit for Music, next to, and in Combination with Concords. These are Relations, which in themselves are neither very agreeable, nor disagreeable; and have only a good Effect in Music by their Opposition, as they heighten, and illustrate the more natural and essential Principles of the Pleasure we seek for; or, as by their Mixture, and Combination with them, they produce a Variety necessary to our being better pleas'd.

Notwithstanding this they are still call'd *Discords*; as the Bitterness of some Things may help to set off the Sweetness of others, and yet still be bitter.

The *Inconcinnous Discords*, by the Ancients call'd *Ecmeli*, are such as are never chosen in Music; as having too great a Harshness in them: Tho' even the greatest *Discord* is not without its Use. See CONCINNOUS, *&c.*

The Essential Principles of Harmony, Harmonical Intervals, or Concords, are but few, in Number only eight; the indefinite Number of other *Ratio's* are all *Discords*. Hence Mr. *Malcolm* shews the Necessity of taking some of the less untoward of these *Discords* into the System of Music: In order to this, he considers the Effect of having none but harmonical Intervals in the System of Music.

1. With respect to a single Voice; If that should move always from one Degree of Tune to another, so as every Note, or Sound to the next were in the *Ratio* of some Concord; the Variety, which is Life of Music, would soon be exhausted,

ſted. For to move by no other, than Harmonical Intervals, would not only want Variety, and ſo weary us with a tedious Repetition of the ſame Things, but the very Perfection of ſuch Relations of Sounds would cloy the Ear in the ſame Manner as ſweet and luſcious Things do the Taſte, which for that reaſon are artfully ſeaſon'd with the Mixture of Sower and Bitter. See DEGREES.

2. With reſpect to Muſic in Parts, *i. e.* when two, or more Voices joyn in Conſonance, the general Rule is, that the ſucceſſive Sounds of each be ſo order'd, that the ſeveral Voices ſhall be all Concords. Now there ought to be a Variety in the Choice of thoſe ſucceſſive Concords, and alſo in the Method of their Succeſſions; all which depends on the Movement of the ſingle Parts. So that, if theſe could only move in an agreeable Manner by harmonical Diſtances, there are but a few different Ways wherein they could move from Concord to Concord; and hereby we ſhould loſe much of the Raviſhment of Sounds in Conſonance. As to this Part then, the Thing demanded is a Variety of Ways whereby each ſingle Voice, or more in Conſonance, may move agreeably in the ſucceſſive Sounds, ſo as to paſs from Concord to Concord, and meet at every Note in the ſame, or a different Concord, from what they ſtood in at the laſt Note.

In what Caſes, and for what Reaſons *Diſcords* are allow'd, the Rules of Compoſition muſt teach; But only joyning theſe two Conſiderations, *&c.* we ſee how imperfect Muſic would be without any other Intervals than Concords. See COMPOSITION.

Beſide the *Concinnous Diſcords* uſed deſignedly in Muſic; there are ſeveral other *Diſcord* Relations, which happen unavoidably, in a Kind of accidental, and indirect Manner. Thus in the Succeſſion of ſeveral Notes there are to be conſider'd not only the Relations of thoſe which ſucceed others immediately, but alſo of thoſe betwixt which other Notes intervene. Now the inmediate Succeſſion may be conducted ſo as to produce good Melody; yet among the diſtant Notes there may be very groſs *Diſcords*, that would not be tolerable in immediate Succeſſion, and far leſs in Conſonance. And ſuch *Diſcords* are actually contain'd in the Scale of Muſic. Thus, taking any one Species, *e. gr.* that with the greater Third, and marking the Degrees betwixt each Term and the next; and tho' the Progreſſion be melodious, as the Terms refer to one common Fundamental, yet there are ſeveral *Diſcords* among the mutual Relations of the Terms, *e. gr.* from 4th to 7th *g* is 32 : 45; and from 2d *g* to 6th *g*, is 27 : 40; and from 2d *g* to 4th is 27 : 32 all *Diſcords*.

The Species of Counterpoint, wherein there is a Mixture of *Diſcords*, is call'd *Figurative Counterpoint*; Of which there are two Kinds: That wherein the *Diſcords* are introduced occaſionally, to ſerve as Tranſitions from Concord to Concord; and that wherein the *Diſcord* bears a chief Part in the Harmony. See FIGURATIVE *Counterpoint*.

Upon the unaccented Parts of the Meaſure, *Diſcords* may tranſiently paſs without any Offence to the Ear: This is call'd *Suppoſition*, by reaſon the tranſient *Diſcord* ſuppoſes a Concord immediately following. See SUPPOSITION.

The *Harmony of Diſcords* is that wherein the *Diſcords* are made Uſe of as the ſolid and ſubſtantial Part of the Harmony. For by a proper Interpoſition of a *Diſcord*, the ſucceeding Concords receive an additional Luſtre. Thus the *Diſcords* are in Muſic what the ſtrong Shades are in Painting. See HARMONY.

The *Diſcords* are the 5th when joyn'd with the 6th; the 4th joyn'd with the 5th, the 9th is of its own Nature a *Diſcord*; ſo is the 7th.

The *Diſcords* are introduced into the Harmony with due Preparation, and muſt be ſucceeded by Concords; which is commonly call'd the *Reſolution of the Diſcord*. The *Diſcord* is prepar'd by ſubſiſting firſt in the Harmony in the Quality of a Concord; that is, the ſame Note which becomes the *Diſcord* is firſt a Concord to the Baſs-Note immediately preceding that to which it is a *Diſcord*.

The *Diſcord* is *reſolved* by being immediately ſucceeded by a Concord deſcending from it by the Diſtance only of greater 2d, or leſſer 2d.

*Apple of* DISCORD, *Pomum Diſcordiæ*, a Phraſe uſed to ſignify the Subject, or Occaſion of ſome Miſunderſtanding in a Society.

It is borrow'd from Mythology: The Poets feign, that at the Marriage of *Thetis* and *Peleus*, the Goddeſs of *Diſcord* threw a golden Apple whereon were wrote theſe Words, *To the Faireſt*, which immediately ſtirr'd up a Diſſention betwen *Juno*, *Pallas*, and *Venus*, each pretending a Title to the Apple.

DISCOVERY, in Dramatic Poetry, a Manner of Unravelling a Plot, or Fable, very frequent in Tragedies, Comedies, and Romances; wherein, by ſome unforeſeen Accident, a *Diſcovery* is made of the Name, Fortune, Quality, and other Circumſtances of a principal Perſon, before unknown. See UNRAVELLING, FABLE, *&c.*

A late Author defines the *Diſcovery* by a Change, which bringing us from Ignorance to Knowledge, produces either Love or Hatred in thoſe whom the Poet has a Deſign to make either happy, or miſerable. For a *Diſcovery* ſhould never be in vain, by leaving thoſe who thus *diſcover* one another in the ſame Sentiments they were in before: In Effect, thoſe *Diſcoveries*, which are immediately follow'd by a *Peripetia*, or Change of Fortune of ſome principal Character, whereon the Unravelling depends, are the moſt beautiful. See PERIPATIA.

One of the fineſt *Diſcoveries* ever brought upon the Stage, is that of *Oedipus* in *Socrates*; For the minute he finds himſelf the Son of that *Jocaſta*, who was then his Wife, he becomes of the moſt happy, the moſt miſerable of all Men.

There are three Sorts of *Diſcoveries*: The firſt by certain Marks in the Body, either natural, or accidental; Such is that of *Ulyſſes*, who having receiv'd a Wound in the Thigh by a Boar, before the *Trojan* War, is *diſcover'd* by the old Nurſe, upon waſhing his Legs after his Return home *incognito*.

The ſecond by Tokens; as the Caſket of Things, which the Prieſts found with *Ion* when he was expoſed, *diſcovers Creuſa*, whom he was a-going to kill, to be his Mother.

The third is made by Remembrance, that is, when the Sight, or Hearing of any Thing occaſions us to recollect our Misfortunes. Thus, when *Ulyſſes* heard *Domodocus* ſing his Actions at *Troy*, the Memory of them ſtruck him, and drew Tears from his Eyes, which *diſcover'd* him to *Alcinous*.

But the fineſt Sort is that, which ariſes from the Subject, or Incidents of the Fable; as that of *Oedipus* from his exceſſive Curioſity; and the Letter that *Iphigenia* ſent by *Pylades*. See FABLE.

DISCOUNT, in Commerce, a Sum deducted, or retain'd in Hand, upon paying a greater. It is much uſed among Mechanics, and Manufactures, who keep Workmen, Journymen, Labourers, *&c.* for the Sums advanced them before hand, which are *diſcounted* when the Payments are made in Courſe.

DISCOUNT, is particularly uſed for an Allowance made on a Bill of Exchange, or any other Debt not yet become due; to induce the Acceptor, or Debtor, to advance the Money. See EXCHANGE.

*Diſcounts* are alſo frequently made for the Payment of dubious, or bad Debts. See REBATE.

DISCOUNT is alſo us'd among Merchants when they buy Commodities on Truſt, with a Condition, that the Seller ſhall *diſcount* ſo much with him *per Cent.* for each Payment made before the Time expir'd. See PROMPT *Payment*.

The *Sieur de la Porte* diſtinguiſhes between theſe two Kinds of *Diſcount*: The firſt, or that upon Bills of Exchange, is reckon'd like the Exchange, at the Rate of ſo much *per Cent.* e. gr. at 2 *per Cent. Diſcount* on an hundred, there is only ninety eight Pound to pay: whereas that on Commodities, is not only laid on the hundred Pound, but on the hundred and *Diſcount* added together. So that *diſcounting* for Goods at 10 *per Cent.* there is only 8 abated on an hundred and eight, and not on the hundred. This laſt, he ſays, is the true *Diſcount*.

DISCOUNT, is alſo us'd for the Tare, or Waſte of any Commodity, Sum, *&c.* There are 12 Shillings *Diſcount* in this Bag.

The Cag of Oil ſent me from *Spain* leaks; there are fifty Pints *Diſcount*. See TARE, *&c.*

DISCOURSE, an Operation of the human Mind, whereby it paſſes, or procedes from one Thing to another; that is, from a known Thing to an unknown. See REASONING.

The School-men define it an Act of Cognition, whereby the Mind deduces one Thing from another: This it does, when in Conſequence of an Aſſent given to one Propoſition, is gives Aſſent to another; So that *Diſcourſe* conſiſts in a Dependancy of Aſſents; and ſuppoſes ſuch an Order betwen the Acts, that that belonging to the Conſequent ariſes from that belonging to the Antecedent. So that the Intellect is then ſaid, *diſcurrere*, to diſcourſe, when from an Aſſent to one, or more Propoſitions, it draws an Aſſent to another.

The Object of *Diſcourſe*, therefore, or that about which the Intellect is employ'd in *Diſcourſing*, is the Connexion of Extreams conſider'd with regard to ſome Third, or *Medium*: Thus, when it judges, that every reaſonable Animal is riſible, affirming, that there is a Connexion between Riſibility, and Rationality; and then finds, there is likewiſe a Connexion betwixt Man and reaſonable Animal; And afterwards gathering from the Connexion found between Riſible and Man, with Rational, that Man and Riſible have likewiſe a Connexion, as both are connected with Rational: it is ſaid to *diſcourſe*.

Hence it appears, that *Diſcourſe*, whereof Men uſe to value themſelves, does really betray the Infirmity of the human Underſtanding; as it denotes a Chain or Scale of ſeveral

ral ſucceſſive Acts of Cognition neceſſary to arrive at a Truth. So that there is no *Diſcourſe* in God, who underſtands all Things truly. See KNOWLEDGE.

DISCOUS *Flower*. Botaniſts reckon two Kinds of Plants with a *Diſcous Flower*: 1. Such as have the Flower compounded, and the Seed pappous, but the Leaves and Stalks not milky, when broken. 2. The *Corymbiferous* Plants, whoſe Flowers are compounded into a *Diſcous* Figure, but their Seeds are not pappous.

Of the former Kind, are the Flea-Banes, Ragweeds, Groundſels, *&c.* and of the latter, are Daiſies, Chamomile, Tanſy, Wormwood, *&c.*

DISCRETE, or *Disjunct Proportion*, is, when the *Ratio* between two Pairs of Numbers, or Quantities is the ſame, and yet there is not the ſame Proportion between all the four Numbers. See RATIO, and PROPORTION.

Thus if the Numbers 6 : 8 : : 3 : 4, are conſider'd, the *Ratio* between the firſt Pair, 6 and 8, is the ſame as that between 3 and 4, and therefore theſe Numbers are *Proportional*; but it is only *diſcretely*, or *disjunctly*, for 6 is not to 8, as 8 to 3; that is, the Proportion is broken off between 8 and 3, and is not continued all along, as it is in theſe following, which are call'd *Continual Proportionals*, viz. 3 : 6 : : 12 : 24.

DISCRETE *Quantity*, is ſuch, as is not continued, and joyn'd together. See QUANTITY.

Such is a Number, whoſe Parts being diſtinct Units, cannot be united into one *Continuum*; for in a *Continuum* there are no actual determinate Parts before Diviſion, but they are potentially infinite; wherefore it is uſually and truly ſaid, that Continued Quantity is diviſible in *Infinitum*. See CONTINUITY.

DISCRETIVE *Propoſitions*, are thoſe, where various Judgments are made, and denoted by the Particles *but*, *notwithſtanding*, or Words of the like Nature either expreſs'd, or underſtood. See PROPOSITION.

Thus, Fortune may deprive me of my Wealth, *but* not of my Virtue; They who croſs the Seas change their Climate, *but* not their Diſpoſition, are call'd *Diſcretive Propoſitions*.

DISCUS, among the Ancients, a Name which was given to a round Shield, conſecrated to the Memory of ſome famous *Hero*; and hung up in the Temples of their Gods, as a Trophy of ſome great Action. From the Figure of this *Diſcus*, or rather of that, which the *Greeks* and *Romans* uſed to divert themſelves with, eſpecially at their public Games, and which is a round Quoit of Braſs, comes the Word ſo much in Uſe among Aſtronomers, *viz.* the *Disk* of the Sun, or Moon. See DISC.

DISCUSSION, in Matters of Literature, ſignifies a clear Treating, or Handling of any Point, or Problem; where the Word imports a *Shaking off* the Difficulties with which it was embarraſs'd. In which Senſe we ſay, ſuch a Point was well *diſcuſs'd*, when it was well treated of, and clear'd up.

DISCUSSION, is alſo uſed in a Medicinal Senſe, for a Diſperſing the Matter of any Tumor, or Swelling in the Body.

In which Senſe the Surgeons define it an Evacuation of ſome thin Matter gather'd in any Part, by inſenſible Perſpiration. See DISCUTIENTS.

DISCUTIENTS, or DISCUSSIVES, in Medicine, are Remedies proper to open the Pores, and evacuate the redundant Humours of the Body, by inſenſible Perſpiration; or to diſcharge Flatulencies, Swellings, *&c.* by ſhaking, jumbling, *&c.*

*Diſcutients* are the ſame with what we otherwiſe call *Diaphoreticks*, and *Reſolvents*. See DIAPHORETICK, CARMINATIVE, *&c.*

DISDIAPASON, in Muſic, a compound Concord, deſcribed by *Fa. Parran* as Quadruple of 4 to 1, or of 8 to 2. See CONCORD.

The *Diſdiapaſon* is produced when the Voice goes from the firſt Tone to the 15th, and may be call'd a *Fifteenth*.

The Voice ordinarily does not go further than from its firſt Tone, to the *Diſdiapaſon*, i. e. it does not go beyond the Compaſs of a double Octave, for the *Diſdiapaſon* is an Octave doubled. See OCTAVE.

The Voice may ſometimes riſe ſeveral Tones above a *Diſdiapaſon*, but the Effort or Struggle diſfigures it, and makes it falſe.

The antient Scale, or Diagramma, only extended to a *Diſdiapaſon*. See DIAGRAMMA.

DISDIAPASON-*Diapente*, in Muſic, a Concord in a Sextuple *Ratio* of 1 to 6.

DISDIAPASON-*Diateſſaron*, a compound Concord in the Proportion of 16 to 3.

DISDIAPASON-*Diton*, a compound Conſonance in the Proportion of 10 to 2.

DISDIAPASON-*Semi-diton*, a compound Concord in the Proportion of 24 to 5.

DISEASE, in Medicine, that State of a living Body, wherein it is prevented the Exerciſe of any of its Functions, whether Vital, Natural, or Animal: Or, *Diſeaſe* is an Indiſpoſition contrary to Nature, whereby the Action of ſome Part is immediately injured. See FUNCTION.

An ingenious Author of a late *Latin* Treatiſe, *de Purgatione*, holds the Eſſence of a *Diſeaſe* to conſiſt in a Want of that *Equilibrium* between the ſolid, and fluid Parts, which is neceſſary to the Maintenance of Health: Others add, that all *Diſeaſes* ariſe either from too lax, or too ſtrict a Tenſion of the Fibres. See HEALTH.

Of all Animals, Man is ſubject to the moſt *Diſeaſes*; and of them, the ſtudious and ſpeculative are moſt expoſe dhereto. Other Animals have their *Diſeaſes*; but they are in ſmall Number: Nor are Plants without them; tho' their Maladies ſcarce exceed half a ſcore.

The Antients deified their *Diſeaſes*: *Voſſius de Idolol. Lib.* VIII. *C.* V.

Several Authors have given us very compendious Theories of *Diſeaſes*; reducing 'em all to ſome one general Diſaffection: Thus, *du Broue* deduces all the *Diſeaſes* of the human Frame from the *Scorbutus*; *Muſgrave* from the *Arthritis*; and Dr. *Woodward* from the *Bile*: Others imagine them the Effects of a *Pocky Virus*, which has lurk'd in the Seed ever ſince the Sin of *Adam*: *Helmont*, and *Serreinus* the *Dane*, take 'em to depend on ſome extraneous *Ferment*, form'd in, or out of us. Laſtly, it appearing from the Obſervations of *Pliny*, *Kircher*, *Langius*, and *Bononio*, that there are little Worms in feveriſh Blood, Puſtules, Carbo's, and the Itch; divers Phyſicians have took Occaſion to ſuſpect, that all the *Diſeaſes* ariſe from *Worms*. See WORMS, ITCH, *&c.*

A *Diſeaſe* is well deſcrib'd to be a deprav'd, and diſorderly State of the ſolid, and fluid Parts, whereby all, or ſome of the Functions either of the Body, or Mind, or both, are either aboliſh'd, or impair'd.

For ſome *Diſeaſes* only impair the Uſe of the Part, as the *Ophthalmia*, *Gout*, &c. Others deſtroy it entirely; as the *Gutta ſerena*, *Palſy*, &c. Some affect the whole Body, as the *Fever*, *Apoplexy*, *Epilepſy*, &c. Others only impair a Part, as the *Aſthma*, *Colic*, *Dropſy*, &c. Some only affect the Body, as the *Palſy*; Others diſturb the Mind, as *Melancholy*, *Delirium*, &c. Laſtly, others affect both the Body and Mind, as the *Mania*, *Phrenzy*, *Pains*, &c.

As the Actions, or Conditions of the Body, ſo alſo the *Diſeaſes*, or Defects thereof, may be reduced to three general Heads: *viz.* 1. *Diſeaſes of the Solid Parts*: 2. *Thoſe of the fluid Parts*: And 3. *Diſeaſes compounded* of both.

A Popular *Syllabus* of *Diſeaſes* may be given, as follows: The Solid Parts, *i. e.* the Bones and Fleſh may be diſorder'd five Ways: *viz.* Render'd turgid, by *Tumors*; Cut, with *Wounds*; Corroded by *Ulcers*, or *Caries's*; Removed out of their Places, as in *Hernia's*, *Deſcents*, and *Diſlocations*; Or *diſcontinued* by *Fractures*, and *Contuſions*.

*Diſeaſes* of the Fluids are either in the Maſs of the *Blood*, or the *Spirits*: Thoſe of the Blood are reducible to two Kinds; thoſe that thicken, and inſpiſſate, or which amounts to the ſame, retard its Motion; and thoſe which attenuate, and diſſolve, and of Conſequence accelerate it.

To this latter Kind belong *Fevers*, and feveriſh Affections alone: All the other *Diſeaſes* of the Blood belong to the former. See FEVER.

In too thick a State of the Blood, its Principles are too craſs, and its Molecules too big, whence a *Lentor*, lazy Motion, and even Stoppage, particularly in the ſinous Paſſages of the Glands: Hence *Obſtructions*, *Inflammations*, *Schirrhus's*, *Sarcoma's*, *Verrucæ*, *Puſtules*, *Oedemata*, *Impetigines*, and other *Tumors*, and *Congeſtions* both in the *Viſcera*, and *Habit* of the Body: And hence, again, *Drowſineſs*, *Melancholy*, *Hypochondriacal* Affections, *&c.* If this thick Blood be too much replete with ſharp acid Salts, it will deſtroy the Texture of the Parts, and break out in *Ulcers*, as in *Phthyſical*, *Scrophulous*, *Scorbutic*, and *Venereal* Diſeaſes, *Gangrenes*, *Carbo's*, *Cancers*, and other Eroſive Tumors, according to the Quality and Degree of Saltneſs and Acrimony. And from the ſame Source ariſe *Cephaalgia's*, *Cardialgia's*, *Colicks*, *Gouts*, *Rheumatiſms*, *Pleuriſies*, &c. which by abrading the ſolid Subſtance, frequently emaciate the Body.

The *Diſeaſes* of the Animal Spirits, ariſe either, 1. from an Intermiſſion, or Retardation of their Motion; or a Diminution of Quantity; or, 2. from a Diſorder in their Organiſm, or Quality.

To the firſt Claſs are reduced the *Catalepſis*, *Apoplexy*, *Coma*, *Carus*, *Palſy*, *Stupor*, *Tremor*, &c. To the ſecond, belong the *Mania*, *Phrenſy*, *Delirium*, *Fooliſhneſs*, *Melancholy*, *Vertigo*, *Spaſms*, *Epilepſy*, *Hyſteric* Affections, *Horror*, &c. Add, that as all *Diſeaſes* of the *Blood* ariſe from external Cauſes, *viz.* ſome one or more of the Non-Naturals, as Food, Air, Evacuation, *&c.* ſo thoſe of the *Spirits* generally proceed from Diſorders of the Blood.

Laſtly, the *Diſeaſes* of the Fluids, whether thoſe in the Blood, or Spirits, are ſeldom confin'd long thereto; but preſently come to diſturb, and impede ſome of the Functions affected to the ſolid Parts; and at laſt corrupt the Subſtance of the Solids themſelves. Hence *Compound Diſeaſes*; which are infinitely various.

But

But the Learned *Boerhaave* furniſhes us a much more accurate, and ſcientifical Diviſion of *Diſeaſes*.

Diseases *of the Solids*, he conſiders, either as of the ſimple, and *Similar* Parts; Or of the *Organical*.

I. *Similar Diſeaſes*, are, 1. Thoſe of the laſt, and ſmalleſt *Fibres*; which are reducible to too great *Tenſion*, and *Laxneſs*, too great *Strength*, or *Weakneſs*, and a *Solution of their Continuity*. See Fibre, *&c.*

2. Thoſe of the *Membranes*, which being only Aſſemblages of the Fibres juſt mention'd, are ſubject to the ſame Diſorders. See Membrane.

3. Thoſe of the laſt, and *ſmalleſt Canals*, which are formed of ſuch Membranes.

4. Of the *Membranes* compoſed of ſuch Canals.

5. Of *Canals* compoſed of ſuch Membranes, which are all the greater Veſſels of the Body.

6. Of the *ſolid Parts*, which are compoſed of Canals compreſs'd, and grown together, ſo as to be void of Humour to diſtend 'em; Or Canals growing into one conſiſtent Part, the Humour hardening together with the Veſſel that contain'd it.

Laſtly, Suppoſing theſe Parts all ſound, *Diſeaſes* may befal them with reſpect to their Structure, from a Vice, or vicious Application of the Matter of Nutrition. See Solid.

II. *Organical Diſeaſes*. An Organical Part conſiſting of the ſeveral ſimple Parts abovemention'd, and fitted to perform any Office by means of ſome Humour contain'd in it; may be conſider'd, either in it ſelf, as a ſolid Part, or with reſpect to the Humour it contains: In the firſt View, *Organical Diſeaſes* are reducible to four Claſſes.

1. *Diſorders* in the *Figure*, and the Circumſtances thereof, as Roughneſs, Solidity, Cavity, *&c.* To this belong the ἀναγόμωσις, when one Veſſel opens into another; the Διαπύησις, when a Rupture is made; and Διαιρέσις, when a Breach is occaſion'd by Corroſion; the ἐμφράξις, which is a total Obſtruction of the Cavity, by a viſcous, grumous Matter; the γενοχωρία, or Narrowneſs of the Paſſage; the θλίψις, or Compreſſion of the Sides of the Cavity; συμφύσις, when the Sides are quite cloſed up; and συνίζησις, when the Veſſel is ſo emptied, that the Sides falling together, the Cavity is loſt.

2. In the *Number*, where 'tis either deficient or redundant: But the Parts ſeldom err in this reſpect, ſo as to occaſion a *Diſeaſe*.

3. In *Magnitude*; to which belong *Nodes*, *Exoſtoſes*, and *Callus's*.

4. In the *Situation*, and *Connexion*; as when the *Ligaments* are too long, or too ſhort, when broke, or deprav'd; alſo *Diſtortions*, *Luxations*, *Subluxations*, *Herniæ*, or Ruptures in the Groin, Scrotum, Bladder; *Procidentiæ* of the Womb, Bladder, and Rectum; Diſorders of the Tendons, and Muſcles, particularly their flying out of their Places; the Relaxation, or Rupture of the Membranous Ligament that ſhould retain 'em.

Laſtly, there is a *Diſeaſe* common both to *Similar*, and *Organical* Parts, call'd *Solution of Continuity*.

Diseases *of the Fluids*, conſidering thoſe Fluids ſimply, and in themſelves, may be reduced to Diſorders in reſpect of Quantity, and Quality: But conſidering them as contain'd in Solids, they may err, too, in Place and Proportion.

As to the firſt, ſuch an Abundance of the Humours, as diſturbs the Animal Functions, is call'd a *Plethora*: *Diſeaſes* from the Defect of Humours, we ſcarce know of any.

As to the ſecond, ſuch Quality of the Humours, as diſturbs the Animal Functions, is call'd *Cacochymia*. Now, this is either in the Fluids conſider'd in themſelves, their own Parts, and Compoſition; Or conſider'd as they concur towards conſtituting ſome Part of the Body.

If the Morbid Quality be conſider'd in the Particles of the Humour, it muſt either conſiſt in an Augmentation of *Bulk*, whence the *Emphraxis*, *Atrophy*, *Symphyſis*, and *Synezeſis*; or in the Diminution thereof, as in the *Diapnoe*, and *Ceneangeia*: Or an Increaſe of *Solidity*, whence too great an *Attenuation*; or a Decay thereof, whence a *Lentor*, *Stagnation*, and *Coheſion*: Or in the *Figure*, as when of Spherical it becomes Angular, and conſequently, with reſpect to the Part 'tis applied to, ſharp; whence *Acrimonies*, both acid, alcaline, muriatic, ammoniac, ſaponaceous, vitriolic, *&c.* and *Oleoſities*: Or in *Rigidity*, and *Flexibility*: Or in *Elaſticity*: Or in *Coheſion*, and Diviſibility.

Again, all the Juices conſider'd together, the principal Diſorders they are ſubject to, are too great *Fluidity*, or Tenacity: too much *Velocity* in their Veſſels, or too little.

Laſtly, conſidering the Fluids as contain'd in the Solids, there ariſe divers *Diſeaſes* merely from their changing of Place; which may be reduced to two Claſſes, *viz.* the groſſer Humours *intruding* themſelves into the finer Canals; and the Humours *extravaſating*, or getting out among the ſolid Parts; whence *Inflammations*, *Aneuriſma's*, *Varices*, *Enchymoſes*, *Oedema's*, *Puſtules*, *Dropſy*, *ſpungeous Membranes* of the Head, Breaſt, Abdomen, and Uterus; and *Empkyſema's*.

Add, that the Humours collected, and ſtagnating among the Parts, grow *putrid*, *purulent*, *ichorous*, *eroſive*, and *ſharp*; and thus deſtroy the tender Stamina, or Solids; whence *Sinus's*, *Fiſtula's*, *Ulcers*, *Gangrenes*, *Sphacelus's*, *Cancers*, and the like.

Theſe are the prime Differences of the *Diſeaſes* of the Body; and from theſe ariſe moſt of the reſt: So that they may be regarded, not only as *Diſeaſes*, but as the Cauſes of *Diſeaſes*. *See each further explain'd under its reſpective Article in this Work.*

There is another Diviſion of *Diſeaſes*, in Uſe among Phyſicians, taken from certain external Accidents, which are common to a great many different *Diſeaſes*: which Diſtinction, too, has its Uſe; tho' they generally run it too far. *Diſeaſes*, then, are diſtinguiſh'd, 1. With reſpect to their *Cauſe*, into *Idiopathy*, *Sympathy*, *Protopathy*, *Deuteropathy*, *Hereditary*, *Connate*, and *Acquired*. 2. With reſpect to their *Subject*, into *Diſeaſes* of *old Age*, *Children*, *Adults*, *Men*, *Women*, *Maids*, *Pregnant*, *Parturient*, *Endemical*, *Epidemical*, &c. 3. With reſpect to *Duration*, into *moſt acute*, which terminate in four Days; *Acute*, in twenty; and *Chronical*, which are all thoſe of longer Continuance. 4. With reſpect to *Seaſons*, into *Vernal*, *Autumnal*, *Continued*, and *Intermitting*. 5. With reſpect to their *Effects*, into *Benign*, *Malignant*, *Curable*, *Incurable*, *Mortal*, and *Contagious*. And 6. With reſpect to their *State*, into *Beginning*, *Progreſs*, *State*, *Declenſion*, and *End*.

Diseases *of Plants*. Monſr. *Tournefort*, in an expreſs Diſſertation on this Subject, in the *Memoires de l'Academie des Sciences*, refers all the *Diſeaſes of Plants* to the following Cauſes:

1. The too great Abundance of the Nutritious Juice. 2. The Defect, or Want of this Juice. 3. Some ill Qualities it acquires. 4. Its unequal Diſtribution in different Parts of the Plant. And 5. External Accidents.

The *Diſeaſes* principally obſerved by our Gardeners, are, 1. *Barrenneſs*, when the Tree, tho' outwardly freſh and healthy, bears no Bloſſoms; or if it does, they fall; or if they ſet, the Fruit drops e're it come to Maturity. See Barrenness.

2. *Blaſting of the Buds*, occaſion'd by a Froſt happening when the Leaves and Bloſſoms are wet. By this means the Pores are ſhut, and the vital Juices ſuffocated; when, if the Sun break out on a ſudden, they turn yellow, with round fiery Specks growing on them; whence frequently procede Tumours like Warts, which rotting, grow full of Maggots. Mr. *Mortimer* adds, that the Want of Rain at Bloſſoming Time, often occaſions the Dropping off of the Bloſſoms for Want of Sap; he, therefore, recommends the watering 'em.

3. *Conſumption*, proceeding from a Want of Suſtenance, through the Failure of the nouriſhing Juices; or from Obſtructions of the Veins, and Roots; or ill Digeſtion, and Secretion of Humours, *&c.*

4. The *Moſs*; an Account of which, ſee under the Article Moss. See alſo Parasite.

5. The *Jaundice*, which, tho' it does not hinder the Tree from appearing ſound, yet when it begins to ſprout, the Leaves become of a whitiſh green, and as they grow bigger, turn yellow. It frequently ariſes from external Cauſes, as the Mildew; but chiefly from a ſtony, or chalky Soil, impregnated with an acid Salt.

6. *Mildew*, a Kind of Epidemical *Diſeaſe*, moſt frequent and fatal in the Spring Seaſon. It is properly a corroſive, and nipping Dew, proceeding from pent up Vapours now exhaled, and returned back on the tender opening Buds, which infects 'em by its Acrimony, and obſtructs the Circulation of the nutritive Juices. By which means the Leaves begin to fade, and wither, and both the Bloſſoms and Fruit are much prejudiced. See Mildew.

7. A *thick Fog*, or too abundant Dew, *Agricola* aſſures us, occaſions the ſame *Diſeaſe* as the Mildew, only in a leſs Degree.

8. *Falling of the Leaves*, which happens when the Trees ſprouting too ſoon, are either ſurprized by exceſſive Heat, or Cold.

9. *Uredo*, or *Scorching*, of which there are two Kinds; the firſt happening upon the Fall of a ſubtil Dew, or ſmall Rain, immediately followed by the piercing Beams of the Sun, which ſuddenly cloſes the Pores before dilated, and burns up the Leaves: The ſecond happening from the like Fervour in the internal Parts of the Tree, *viz.* in the Pith; occaſion'd by ſome inner Failing. *Agricola* imputes it to the Fault of the Gardeners, who in tranſplanting Trees, frequently cut off the leſſer Filaments, and Roots, as alſo the greater Roots, without covering the Wounds with Wax, or the like.

10. *Scurf*, or *Leproſy*, a *Diſeaſe* chiefly of the Bark, cauſed by a too great Dilatation of the Pores, whereby too much perſpirable Matter tranſuding it, hangs and hardens on the Bark, which by this means chaps, and cracks, and thus

a Sort

a Sort of Lepra is form'd, Perſpiration obſtructed, &c. Add, that this ſcurfy Skin proves a Harbour for Vermine, which live both on the Bark and Tree.

11. The *Worm*, a little Animal generated in the corrupted Subſtance of the Bark, Bloſſoms, Fruit-Leaves, Pith, and Roots. Mr. *Gentil* mentions another Kind, call'd *Cockchaffers*, which ſtick to the Roots of young tender Trees, and Bark, and kill them. There is a third Sort, call'd *Breezes*, or Gad-flies, which gnaw the Roots. The Worm is a very frequent *Diſeaſe*; whereby young hopeful Trees are all of a ſudden brought to languiſh, and decay.

12. *Rotten Roots*, occaſion'd chiefly by their being planted too deep. This *Diſeaſe* is incurable.

13. *Blights*. A particular Account whereof, ſee under Blight.

DISEMBOGUE. When a Ship paſſeth out of the Mouth of ſome Gulph, they call it *diſemboguing*: They ſay alſo of a River, that at ſuch a Place, or after it has run ſo many Leagues, it *diſembogues* it ſelf into the Sea.

DISFRANCHISE, the contrary to *Enfranchiſe*; ſignifying the taking away one's Freedom, or Privilege. See Enfranchise.

DISHERISON, an old Word of the ſame Import as *Diſinheriting*.

*Our Lord the King, conſidering his own Damage, and* Diſheriſon *of the Crown*, &c. *Stat.* 8. *Rich.* II. *Hen.* IV.

DISHERITOR, a Perſon who *diſinherits*, or puts another out of his Inheritance.

*The Sheriff ſhall forthwith be puniſh'd as a* Diſheritor *of our Lord the King, and his Crown.* Stat. 3. *Edu.* I.

DISJUNCT *Proportion*. See Discrete *Proportion*.

DISJUNCTIVE, ſomething that ſeparates, or *disjoyns*. Thus *Or* and *Neither* are call'd *Disjunctive Conjunctions*, which, in binding a Diſcourſe, do yet ſeparate the Parts thereof. See Conjunction.

*Aut Cæſar, aut Nullus*; Either *Cæſar*, or nothing. He neither advanced, nor gave back.

*Disjunctive Conjunctions* may alſo be call'd *Partitive*, *Diſtributive*, and *Alternative*.

Disjunctive *Propoſitions*, in Logic, are compound Propoſitions conſiſting of two Members, or Parts connected by a *Disjunctive Conjunction*. See Proposition.

The firſt Propoſition of a *Dilemma* is always a *Disjunctive Propoſition*:

*You muſt either obey the King, or be a Rebel.*
*But you muſt not be a Rebel,*
*Therefore you muſt obey the King.*

DISK. See Disc.

DISLOCATION, the putting a Bone out of Joint, by ſome Violence; uſually call'd by the Phyſicians, *Luxation*. See Luxation.

DISMEMBER'D, in Heraldry, is applied to Birds that have neither Feet, nor Legs: As alſo to Lions, and other Animals, whoſe Members are ſeparated.

DISMES, *Decimæ*, in our Law-Books, *Tiths*. See Tith.

DISMOUNTING, in the Military Art, the Act of *Unhorſing*.

Thus, to *diſmount* the Cavalry, is to make 'em a-light. They alſo ſay to *diſmount* the Canon, when they are thrown off the Carriages, and broken; Horſes are alſo *diſmounted* when they are render'd unfit for Service.

DISORIENTATED, a Term applied to a Thing that is turned from the Eaſt, or ſome other of the Cardinal Points. See Cardinal *Point*.

The Dials drawn on this Stone, do not go well, by reaſon it has been moved, and *diſorientated*: It no longer looks Eaſt and Weſt.

But the Word is moſt frequently us'd in a figurative Senſe, for the *Diſconcerting*, or putting a Man out of his Way, or Element. Speak of Law to a Phyſician, or of Phyſic to a Lawyer, and they will all be *diſorientated*.

*An. Marvel* uſes the Word *diſoccidentated*, inſtead of *diſorientated*.

Geneva had *diſoccidentated* our Geographer.

The Word is form'd of the privative Particle *de*, and *Oriens*, Eaſt.

DISPARAGEMENT, is properly uſed for the Matching an Heir, &c. in Marriage, below his, or her Degree, or Condition; or againſt the Rules of Decency.

The Word is a Compound of the privative Particle *Dis*, and *Par*, equal.

DISPATCH, a Letter on ſome Affair of State, or other Buſineſs of Importance, ſent, with Care and Expedition, by a Courier expreſs.

The Buſineſs of *Diſpatches* lies on the Secretaries of State, and their Clerks. The King gives Directions to his Miniſters abroad by *Diſpatches*.

The Word is alſo us'd for the Packet, or Mail containing ſuch Letters. *The Courier has deliver'd his* Diſpatches.

The *French*, during the Reign of the late *Louis* XIV. had a *Conſeil des Depeches*, Council of Diſpatches, held in the King's Preſence, at which the *Dauphin*, the Duke of *Orleans*, the Chancellour, and four Secretaries of State aſſiſted.

DISPAUPER. When any Perſon, by reaſon of his Poverty, (atteſted by his own Oath, of not being worth 5 Pound, his Debts being pay'd) is admitted to ſue *in Forma Pauperis*; If afterwards, before the Suit be ended, the ſame Party have any Land, or perſonal Eſtate fall to him; or that the Court, wherein his Suit is depending, thinks fit, for that, or other reaſon, to take away the Privilege from him; he is then ſaid to be *diſpauper'd*. See Forma *Pauperis*.

DISPENSARY, or, as ſome write it, DISPENSATORY, a Name given to divers Collections of compound Medicines, wherein are ſpecified the Ingredients, Proportions, and the chief Circumſtances of the Preparation and Mixture; the ſame with what we otherwiſe call a *Pharmacopœia*, or *Antidotary*.

Such are the *Diſpenſaries* of *Meſue*, *Cordus*, the College of Phyſicians at *London*, *Quincy*, &c.

The Apothecaries, in and about *London*, are oblig'd to make up their compound Medicines according to the Formules preſcrib'd in the *College Diſpenſary*; and are enjoyn'd to keep always ready in their Shops all the Medicines there enumerated.

Dispensary, is likewiſe uſed for a Magazin, or Office of Medicines kept ready to be *diſpenſed* at the prime Coſt of the Ingredients, for the Benefit of the ſick Poor.

Of which Kind we have two or three in *London* maintain'd by the College of Phyſicians. One at the College it ſelf, firſt begun in the Year 1696; another in St. *Peter*'s Alley, *Cornhill*; and a third in St. *Martin*'s Lane: where the beſt Medicines are ſold for their intrinſic Value, and Patients are adviſed every Day, but Sunday, at one of the three Places. See College.

DISPENSATION, in Law, &c. a Permiſſion to do ſomething contrary to the ſtanding Laws: Or a Relaxation, or Suſpenſion of a Law on ſome juſt Occaſion.

Some confound *Diſpenſation* with *Equity*; but they are very different Things: For Equity is only the Correction, or Modification of a Law, which is too general; But a *Diſpenſation* ſuſpends the Obligation of the Law it ſelf, and can, therefore, be only given by the Legiſlative Power. See Equity.

The King grants *Diſpenſations* of Age to ſome Officers, to be admitted before the Legal Age.

But the greateſt Dealer in *Diſpenſations* is the Pope, who claims the Office *Jure divino*, and extends it to every Thing. Indeed, the more ſober of the *Romaniſts* themſelves deny, that he can give a *Diſpenſation* for a Thing contrary either to the divine Law, or the Law of Nature; and confine him to what is contrary to poſitive Laws, as to Things relating to Faſts, Marriages, holding ſeveral Benefices, &c. And even in theſe Things they put Bounds: Thus, ſay they, a *Diſpenſation* in the firſt Degree of Affinity, as of Father and Daughter, Brother and Siſter, would be abuſive, and null. But 'tis certain, the Papal See does not apprehend it ſelf under any ſuch ſevere Reſtrictions.

The Right of giving *Diſpenſations*, they thus argue: 'Tis certain, the Church has a Power to make Laws; A Power, which the Apoſtles themſelves exerciſed, and which their Succeſſors have continued to exerciſe after them. Whoever can make a Law, can annul it; and much more can he *diſpenſe* with it in certain Caſes: The Church, then, may *diſpenſe* with the Laws it ſelf has made; And we find it to have done accordingly, in all Ages. In the firſt Times, it left it to the Judgment of the Biſhops to *diſpenſe* with the Length of the Penance enjoyn'd by the Canons; And the IV Council of *Carthage* allows of the Tranſlation of Biſhops, and Prieſts, when the Churches Occaſion ſhould require it.

The Author of a Treatiſe of *Diſpenſations*, printed in 1713, reduces all the Cauſes of *Diſpenſation* to the Neceſſity and public Service of the Church, and not to the private Advantages of the Perſons who ſollicit the *Diſpenſation*; otherwiſe, Cauſes, he obſerves, will never be wanting.

The ſame Author maintains, that *Diſpenſations* ſhould be diſpatch'd *gratis*: *Marcellus* II. he obſerves, was reſolv'd to have it ſo. That Pope uſed to ſay, that if *Diſpenſations* were juſt, they ſhould be granted *gratis*; and if unjuſt, they were to be refuſed. And Pope *Pius* V. refuſed a large Sum of Money offer'd by a *Spaniſh* Lord for a *Diſpenſation*, which that Pope granted, becauſe he judg'd it juſt. The 9 Prelates, whom *Paul* III. conſulted for the Reformation of the Court of *Rome*, recommended the ſame Thing; Except for *Diſpenſations* of Marriages contracted malgre ſome known Impediment.

Dispensation, in Pharmacy, the Diſpoſition, and Arrangement of ſeveral Medicines, either ſimple or compound,

all weigh'd in their proper Doſes, or Quantities; in order to be employ'd in the making a Compoſition.

DISPERSION, in Dioptricks. *Point of Diſperſion* is a Point from which refracted Rays begin to diverge, when their Refraction renders them divergent. See DIVERGENT.

It is call'd *Point of Diſperſion*, in Oppoſition to the *Point of Concourſe*, which is the Point wherein converging Rays concur after Refraction. See CONCOURSE.

But the latter is more uſually call'd *Focus*, and the former *Virtual Focus*. See VIRTUAL, and FOCUS.

DISPLAYED, in Heraldry, is underſtood of the Poſition of an Eagle, or other Bird, when it is erect, with its Wings expanded, or ſpread forth. See EAGLE.

DISPONDEE, in the *Greek*, and *Latin* Poetry, a double Spondee; or a Foot conſiſting of four long Syllables; as *Juramentum*, *Mœcenates*. See SPONDEE.

DISPOSITION, in Rhetoric, is defined by *Cicero*, the Diſtribution of the Things, or Arguments invented, or found out, into a proper Order; Or a due placing, or ranging the ſeveral Parts of a Speech, or Diſcourſe. See DISTRIBUTION.

The *Diſpoſition* is one of the grand Parts, or Diviſions of Rhetoric. See RHETORIC.

The *Diſpoſition* is of the ſame Neceſſity in Oratory, as the marſhalling an Army, in order to a Battel; or a beautiful Compoſition in Architecture, Painting, *&c.* *Horace* enjoyns it expreſsly in Poetry. *Singula quæque Locum tenant ſortita decenter.*

The *Diſpoſition*, then, is the Order, or Arrangement of the Parts of an Oration: which Parts are uſually reckon'd four, *viz.* the *Exordium*, or Beginning; the *Narration*; the *Confirmation*; and the *Peroration*, or *Concluſion*.

Tho' ſome make 'em ſix: *viz.* the *Exordium*, *Diviſion*, *Narration*, *Confirmation*, *Confutation*, and *Peroration*; as indicated in that Popular Verſe,

*Exorſus, narro, ſeco, firmo, refuto, peroro.*

But the Diviſion is more naturally referr'd to the Exordium; and the Confutation to the Confirmation.

The *Diſpoſition* is either *Natural*, or *Artificial*. *Natural*, is the Order the Parts are above rehearſed in. *Artificial*, is, when for ſome particular reaſon we recede from the Order of Nature. See each Part under its proper Article, EXORDIUM, *&c.*

DISPOSITION, in Architecture, is the juſt placing of all the ſeveral Parts of an Edifice, according to their proper Order.

DISPROPORTION, a Term of Relation, implying a Want of Proportion, or Suitableneſs. See PROPORTION, DEFORMITY, *&c.*

DISPUTE, or DISPUTATION, in the Schools, *&c.* a Conteſt, or Combat, either by Word or Writing, on ſome Point of Learning, or Religion, for a Degree, Prize, Exerciſe, or even for the mere ſake of Truth, or Advantage of a Party, or the Honour of a Triumph.

The *Port Royaliſts* take Occaſion to obſerve, that nothing gives ſo many different Lights, and Openings for diſcovering the Truth, as *Diſputing*. The Movements of a Mind employ'd ſingly in the Examination of any Subject, are uſually too cool, and languid: It needs a certain Degree of Heat, to wake its Idea's. Now, by the Oppoſitions in a Diſpute, we come to find wherein the Difficulty lies, and the *Impetus* the Mind has acquired, enables it to ſurmount it.

DISQUISITION, an Enquiry into the Nature, Kinds, and Circumſtances of any Problem, Queſtion, or Topick; in order to gain a right Notion of it, and to diſcourſe clearly about it.

DISSECTION, in Anatomy, the Operation of cutting, and dividing the Parts of an Animal Body, with a Knife, Sciſſers, *&c.* in order to ſee, and conſider each of them a-part. See ANATOMY.

The Ancients made *Diſſections* of living Men; as we read of *Herophilus*, and *Eriſiſtratus*, and in our own Times, of *Carpus*, and *Veſalius*.

Yet, *le Gendre* obſerves, that the *Diſſection* of a human Body, even dead, was held a Sacrilege till the Time of *Francis* I; And the ſame Author aſſures us, he has ſeen a Conſultation held by the Divines of *Salamanca*, at the Requeſt of *Charles* V. to ſettle, whether or no it were lawful, in Point of Conſcience, to *diſſect* a human Body, in order to learn the Structure thereof.

DISSEISIN, in Law, an unlawful Diſpoſſeſſing a Man of his Land, Tenement, or other immoveable, and incorporeal Right.

Hence, the Aſſiſes are call'd *Writs of Diſſeiſin*, which lie againſt *Diſſeiſors* in any Caſe: Whereof ſome are term'd *little Writs of Diſſeiſin*, as being Vicontial, that is, ſuable before the Sheriff in the County Court, becauſe determinable by him without Aſſiſe. See ASSISE.

*Diſſeiſin* is of three Sorts; viz. *Simple Diſſeiſin*, committed by Day, without Force, and Arms: and *Diſſeiſin by Force*; for which ſee DEFORCEOR; and FRESH *Diſſeiſin*. See alſo RE-DISSEISIN, and POST-DISSEISIN. *Wrongful Diſſeiſin* is no Deſcent in Law.

DISSEISOR, he who *diſſeiſeth*, or puts another out of his Land: As *Diſſeiſee*, is he who is ſo put out.

For the Difference between *Diſſeiſor*, and Intruder, and Deforceor, ſee INTRUDER, and DEFORCEOR.

DISSEMINATE *Vaccum*. See VACUUM *Diſſeminatum*.

DISSENTERS, a general Denomination, of equal Import with *Non-conformiſts*.

It expreſſes certain Sects, or Parties in *England*, who in Matters of Religion, Church Diſcipline, and Ceremonies, *diſſent* from, or diſagree with the Church of *England*, and have a Toleration by Law for the ſame. See TOLERATION.

Such, particularly, are the *Presbyterians*, *Independents*, *Anabaptiſts*, and *Quakers*. See PRESBYTERIANS, INDEPENDENTS, *&c.*

DISSIMILAR *Leaves*, are the two firſt Leaves of any Plant at its firſt ſhooting out of the Ground. See LEAVES.

They are thus call'd, becauſe they uſually are of different Form from the common Leaves of the grown Plant.

Theſe Dr. *Grew* obſerves to be nothing but the very Lobes of the Seed expanded, and thus advanced. See GERMINATION.

Their Uſe is for Protection of the Plume; which, being young, and tender, is thus guarded on each Side, and has alſo ſome Rain, and Dew gradually convey'd down to it by this means. See PLUMULA.

DISSIMILAR, in Anatomy. Authors divide the Parts of the Body into *Similar*, and *Diſſimilar*.

*Diſſimilar* Parts, by ſome call'd *Compound*, and *Organical*, are ſuch as may be divided into various Parts of different Structure, *&c.* Thus the Hand is diviſible into Veins, Muſcles, Bones, *&c.* whoſe Diviſions are neither of the ſame Nature, nor Denomination. See SIMILAR.

DISSIMILITUDE, in Geometry, *&c.* See SIMILITUDE.

DISSIMILITUDE, or, *a Diſſimili*, in Rhetoric, *&c.* an Argument, wherein, from *diſſimilar*, or unlike Things, other *diſſimilars* are deduced.

Thus *Cicero*, *Si barbarorum eſt in diem vivere*; *Noſtra Concilia ſempiternum tempus ſpectare debent*. *Catullus* furniſhes a very beautiful Argument from *Diſſimilitude*:

*Soles occidere & redire poſſunt,*
*Nobis cum ſemel occidit brevis Lux,*
*Nox eſt perpetua una dormienda.*

DISSIPATION, in Phyſicks, an inſenſible Loſs, or Conſumption of the minute Parts of a Body; or, properly, the Flux whereby they fly off, and are loſt. See EFFLUVIA.

Thus, we don't ſay *Diſſipation*, but *Loſs* of Blood, in ſpeaking of the Blood loſt at a Wound, or in any other ſenſible Manner: On the contrary, we ſay with Mr. *Lemery*, the *Diſſipation* of the Spirits is in greater Abundance than that of the ſolid Parts, conſequently the Reparation thereof muſt be more frequent and copious.

DISSOLVENT, ſomething that *diſſolves*, i. e. divides, and reduces a Body into its ſmalleſt Parts. See DISSOLUTION.

Thus, *Aqua Regia* is the *Diſſolvent* of Gold; *Aqua fortis* of Silver, and other Metals; Water, of Salts and Gums; Spirit of Wine, of Reſins; Spirit of Vinegar, of Pearls, Corals, *&c.*

Sea-Salt is found the proper *Diſſolvent* of Gold: This, in almoſt any Form, whether as a Fluid, or a Solid, or a Spirit, does the Buſineſs: Accordingly, this is the *Baſis*, or fundamental Ingredient of *Aqua Regia*. See GOLD, and *Aqua* REGIA.

So Nitre is the proper *Diſſolvent* of Silver; and has that Effect, in whatever Form applied: and accordingly is the *Baſis* of *Aqua fortis*. See SILVER, and *Aqua* FORTIS.

Spirit of Nitre added to that of Sea-Salt, makes it *diſſolve* Gold the better: But Spirit of Sea-Salt added to Spirit of Nitre, diſables it from having any Effect on Silver.

Mr. *Homberg*, however, in the Memoirs of the *French* Academy, furniſhes an Inſtance of a *Diſſolution* of Silver, made by the *Diſſolvent* of Gold. An *Aqua Regia* may be compoſed of Spirit of Salt, and Spirit of Nitre, only in ſuch ſmall Quantity each, that they may float ſeparately in a third Liquor, and not meet often enough to unite, at leaſt not in any Quantity. This Water may be made ſo weak, as not to *diſſolve* Gold, but only extract a ſlight yellow Tincture from it, that ſcarce takes off any thing of the Weight of the Metal: Nor will it *diſſolve* Silver; as being too weak: So that both Metals are ſafe from it. But this *Aqua Regia*, after it has *diſſolved* Gold as far as it can do, that is, after it has extracted a yellowiſh Tincture from it, is in a Condition to *diſſolve* Silver. This Phænomenon Mr. *Homberg* accounts for hence: That Spirit of Salt, whether alone, or joyn'd with Spirit of Nitre, being employ'd in keeping thoſe few Particles of Gold diſſolved; will not meddle with the Silver: Which, by this means,

receiving

receiving the Impreſſion of the greater Quantity of Spirit of Nitre alone, is *diſſolved* thereby. But the Experiment cannot be inverted, i. e. *Aqua Regia* cannot begin with *diſſolving* Silver lightly firſt, and afterwards *diſſolve* Gold; by reaſon Spirit of Nitre does not hinder Spirit of Salt from acting on Gold; as Spirit of Salt does Spirit of Nitre from acting on Silver. See GOLD, and SILVER.

*Diſſolvents* are uſually call'd by the Chymiſts *Menſtruums*. See MENSTRUUM.

*Univerſal* DISSOLVENT. See ALCAHEST.

DISSOLUTION, in Phyſicks, a Diſcontinuation, or *Analyſis* of the Structure of a mixt Body; whereby, what was one, and contiguous, is divided into little Parts, either homogeneous, or heterogeneous.

*Diſſolution*, then, is a general Name for all Reductions of concrete Bodies into their ſmalleſt Parts, without any regard either to Solidity, or Fluidity: Tho' in the uſual Acceptation of the Word among Authors, it is reſtrained to the Reduction of ſolid Bodies into a State of Fluidity; which is more properly expreſſed by *Solution*, as a Branch of *Diſſolution*. See SOLUTION.

According to the Opinion of *Fr. Tertius de Lanis*, now confirm'd by that of the Learned *Boerhaave*, in his Chymiſtry, the Power, or Faculty of *Diſſolving*, is lodged in Fire alone. See FIRE.

Other Fluids, commonly ſuppoſed *Diſſolvents*, only produce their Effect by means of the fiery *Spiculi* they abound withal. Even Air, which is judg'd a powerful *Menſtruum*, owes all its Force to the Rays of Light diffuſed therein. See AIR, and MENSTRUUM.

Sir *Iſaac Newton* accounts for all *Diſſolutions*, and the ſeveral Phænomena thereof, from the great Principle of *Attraction*; And, in Effect, the Phænomena of *Diſſolution* furniſh a great Part of the Arguments, and Conſiderations, whereby he proves the Reality of that Principle. See ATTRACTION.

A Specimen of that great Author's Way of Philoſophizing on the Subject of *Diſſolution* take as follows:

When Salt of Tartar *diſſolves* by lying in a moiſt Place, is not this done by an Attraction between the Particles of the Salt of Tartar, and thoſe of the Water, which float in the Air in Form of Vapours? And why does not common Salt, or Salt-petre, or Vitriol do the like; but for Want of ſuch an Attraction. And when *Aqua fortis*, or Spirit of Vitriol, pour'd on Steel-filings, *diſſolves* the Filings, with a great Heat, and Ebullition; is not this Heat and Ebullition effected by a violent Motion of the Parts? And does not that Motion argue, that the acid Parts of the Liquor ruſh towards the Parts of the Metal with Violence, and run forcibly into its Pores; till getting between the outmoſt Particles, and the main Maſs of Metal, they looſen 'em therefrom, and ſet 'em at Liberty to float off into the Water? When a Solution of Iron in *Aqua fortis* diſſolves *Lapis Calaminaris*, and lets go the Iron; Or a Solution of Copper *diſſolves* Iron immerſed in, and lets go the Copper; Or a Solution of Mercury in *Aqua fortis* pour'd on Iron, Copper, Tin, or Lead, *diſſolves* the Metal, and lets go the Mercury; does not this argue, that the acid Particles of the *Aqua fortis* are attracted more ſtrongly by the *Lapis Calaminaris*, than by Iron; by Iron than by Copper; by Copper than by Silver; and by Iron, Copper, Tin, and Lead, than by Mercury? And is it not for the ſame reaſon, that Iron requires more *Aqua fortis* to *diſſolve* it, than Copper; and Copper more than the other Metals; And that of all Metals Iron is *diſſolved* moſt eaſily, and is moſt apt to ruſt; and next after Iron, Copper? When *Aqua fortis* diſſolves Silver, and not Gold; and *Aqua Regia* diſſolves Gold, and not Silver; may it not be ſaid, that *Aqua fortis* is ſubtile enough to penetrate the Pores of Gold as well as of Silver, but wants the attractive Force to give it Entrance; and the ſame of *Aqua Regia*, and Silver? And when Metals are *diſſolved* in acid *Menſtruums*, and the Acids in Conjunction with the Metal, act after a different Manner; So as that the Taſte of the Compound is milder than that of the Simples, and ſometimes a ſweet one; is it not becauſe the Acids adhere to the Metallic Particles, and thereby loſe much of their Activity? And if the Acid be in too ſmall a Proportion to make the Compound diſſoluble in Water; will it not, by adhering ſtrongly to the Metal, become unactive, and loſe its Taſte; and the Compound become a taſteleſs Earth? For ſuch Things as are not diſſoluble by the Moiſture of the Tongue, are inſipid. *Newt. Opt. in Calce.*

Monſr. *Geoffroy* furniſhes ſome curious Experiments on *Cold Diſſolutions*, in the *Memoires de l'Academie Royale des Sciences*; which have been tranſlated in the *Philoſophical Tranſactions*: 'Tis nothing ſurprizing, that a ſimple *Diſſolution* ſhould be cold; that common Water, for Inſtance, wherein Sea-Salt, or *Sal Ammoniac*, or Vitriol, has been caſt, ſhould become the colder, by the Mixture of ſuch Salts; It being obvious, that the Salts, being of themſelves deſtitute of Motion, and coming to ſhare that which the Fluidity gives the Water, muſt diminiſh it, when they become intimately mix'd therewith by *Diſſolution*; And it is generally agreed among Philoſophers, that Heat is a Motion, and Cold a Ceſſation, or at leaſt a Diminution of Motion.

Yet, notwithſtanding this general Principle; 'tis no great Wonder all *Diſſolutions* are not Cold, as thoſe are of all volatile Alcalies in common Water; But that ſome are Hot, as thoſe of all fix'd Alcalies. The Difference may be accounted for hence, that all fix'd Alcalies having been calcined by a vehement Fire, they have impriſon'd, and retain'd in their Pores ſome of the Particles thereof.

But it is ſurprizing, that *Diſſolutions* accompanied with Fermentation, *i. e.* where the Matters boil, and ſwell, and that with a great Noiſe, ſhould be cold, and make the Thermometer fall, when immerged therein.

This Coldneſs, with ſo conſiderable an Augmentation of Motion, is ſomewhat extraordinary. But this is not all: For, of theſe cold Fermentations, there are ſome that emit hot Vapours. Thus it is, with a Mixture of Oil of Vitriol, and *Sal Ammoniac*; for a Thermometer being plunged in the Mixture, and another a little higher, to receive only the Fumes thereof; the firſt Thermometer is ſeen to fall very haſtily, through the Coldneſs of the Fermentation, and the latter to riſe through the Heat of the Vapours. Monſr. *Geoffroy* adds an Experiment, ſhewing that cold Water is render'd ſtill colder for a few Moments, by throwing a large Quantity of live Coals therein.

DISSOLUTION, in Chymiſtry, Pharmacy, *&c.* the Reduction of a compact, hard, or ſolid Body into a fluid State, by the Action of ſome fluid *Menſtruum*, or *Diſſolvent*. See MENSTRUUM, and DISSOLVENT.

Dr. *Quincy* gives us a Mechanical Account of *Diſſolution*, in the Inſtance of Salt *diſſolved* in Water, which is the moſt ſimple Operation that falls under this Head. This Motion he aſcribes to that attractive Force, which is ſo very extenſive in Natural Philoſophy, that there is no Kind of Matter, but what is under its Influence. It may be obſerved, that the Corpuſcles of Salts, which are the moſt ſimple of any, are withal very minute, and for their Bulk very ſolid, and, therefore, exert a very ſtrong attractive Force, which, *cæteris Paribus*, is proportional to the Quantity of Matter. Hence it comes to paſs, that the Particles of Water are more ſtrongly attracted by the ſaline Particles, than they are by one another: The Particles of Water, therefore, cohering but looſely, and being eaſily moveable, approach the Corpuſcles of Salts, and run, as it were, into their Embraces; and the Motion of them is quicker, or ſlower, according to their leſs, or greater Diſtances; the attractive Force in all Bodies being ſtrongeſt, at the Point of Contact. Therefore, if Salt be thrown into the middle of a Diſh full of Water, we ſhall find the aqueous Particles, which are in the middle of the Diſh, ſharp, and pungent to the Taſte; but the Water upon the Sides of the Veſſel almoſt inſipid; ſo that, when ſuch a Motion once ariſes, the aqueous Particles are carried with the ſame Force towards the Salts; and the Moment of them is to be eſtimated from the *Ratio* of their Weight, and Celerity, conjunctly. By the Force of this Impulſe, they open to themſelves a Paſſage into the Pores of the Salts, which are very numerous; and at length break, and divide their Texture, that all Coheſion of their Parts is deſtroyed: Hereupon, being ſeparated, and removed to a convenient Diſtance from one another, they are diſperſed, and float here and there about the Water. See FUSION, SALT, SOLUTION, *&c.*

DISSOLUTION of Metals, *&c.* by Fire, is particularly call'd *Fuſion*. See FUSION.

DISSOLUTION *of the Blood*, is an Affection of that Humor, directly oppoſite to *Coagulation*. See COAGULATION.

The *Diſſolution* is ſuch a Comminution of the fibrous Parts of the Blood, as indiſpoſes it for that Separation of the *Craſſamentum* from the ſerous Part, which always enſues in healthy Blood on its cooling out of the Body. See BLOOD.

This *Diſſolution* is frequently the Conſequence of malignant, and peſtilential Fevers, and ſhews it ſelf in *Petechiæ*, or Purple Spots; alſo of certain Poiſons, particularly the Bites of venomous Beaſts, *&c.* See FEVER, POISON, *&c.*

DISSOLUTION *of Parliament*. See PARLIAMENT, and PROROGATION.

DISSONANCE, or DISCORD, in Muſic, a falſe Conſonance, or Concord. See CONCORD, and CONSONANCE.

A *Diſſonance* is properly the Reſult of a Mixture, or Meeting of two Sounds, which are diſagreeable to the Ear: Such are *Ditones*, *Tritones*, *Falſe Fifth*, *Redundant Fourth*, *Seventh*, &c.

*Diſſonances* are uſed in Muſic, and have a good Effect therein; tho' it be only by Accident. See DISCORD.

DISSUASION, in Rhetoric. See PERSUASION.

DISSYLLABLE, a Word of two Syllables; as *Fortune*, *Lament*, &c. See FOOT.

The Spondee, Trochee, Jambus, and Pyrrhichius, are *diſſyllabic* Feet. See SPONDEE.

DI-

DISTANCE, is properly the ſhorteſt Line between two Points, Objects, &c.

The Word is alſo us'd figuratively for an Interval, not only in reſpect of Place, but alſo of Time, and Quality.

Thus, we ſay the *Diſtance* of the Creation of the World from the Nativity of *Jeſus Chriſt* is upwards of 4000 Years: The *Diſtance* between the Creator and Creature, is infinite.

*For the Viſion of* DISTANCE, or the manner wherein we come by the Idea of *Diſtance* in Objects. See VISION.

DISTANCES, in Geometry, are meaſur'd by the *Chain*, *Decempeda*, &c. See CHAIN, &c.

*Inacceſſible* DISTANCES are found by taking Bearings thereto from the two Extremes of a Line whoſe Length is given. See PLAIN TABLE, THEODOLITE, &c.

DISTANCE, in Geography, is the Arch of a great Circle interſected between two Places.

To find the *Diſtance* of two Places A and B, (*Tab. Geography Fig.* 4.) far remote from each other: Aſſume two Stations C and D, from which both the Places A and B may be ſeen, and with a proper Inſtrument find the Angles ADC CDB ACD and DCB, and meaſure the *Diſtance* CD.

Then in the Triangle ACD we have two Angles given ACD and ADC, together with a Side, from which, by an eaſy Rule in Trigonometry, found under the Article TRIANGLE, we find AD.

So alſo in the Triangle CBD the Baſe DC, and the Angles at the ſame being given, DB is found.

Laſtly, in the Triangle ADB, having the Sides AD and DB, together with the included Angle ADB, the *Diſtance* required AB is found by the Rules given for the Reſolution of Triangles. See TRIANGLE.

The Height of a remote Object being known, to find its *Diſtance*, when the Eye firſt deſcries it; And again, the Height of the Eye given, to find the *Diſtance* to which the Eye can reach on the Surface of the Sea, or Land: Add the Height of the Eye AB, (*Fig.* 5.) to the Semi-Diameter of the Earth BC, by which you have AC: And ſince in the Rectangle Triangle ADC, the Sides AC and DC are given, the Angle DCA is found by the common Rule for Reſolution of Triangles; the Quantity of which Angle forms the Arch DB; which Arch converted into Feet, or the like, gives the *Diſtance* required.

Suppoſe, *E. gr.* the Height of the Eye AB; which is ſomewhat leſs than in a Man of ordinary Stature. Since BC is 19695539, AC will be 19695544, and the Angle DAB will be found 89° 57″ Minutes, 43 Seconds. Conſequently DCB, or the Arch DB is 2′ 17″ or 137″: And, therefore, ſince 1° or 3600″ make 343752 *Paris* Feet, DB 13081$\frac{2}{3}$ of a Foot. After the ſame manner we find the *Diſtance* AB, to which an Object of a given Altitude DB may be ſeen, and conſequently we know what *Diſtance* we are off from an Object of a given Altitude, when we firſt diſcover the Top thereof.

DISTANCE, in Navigation, is the Number of Degrees, or Leagues, &c. that a Ship has ſail'd from any Point. See SAILING.

DISTANCE, in Aſtronomy. The *Diſtance* of the Sun, Planets, and Comets, is found from their *Parallax*. See PARALLAX.

That of the fix'd Stars, as having no ſenſible *Parallax*, we can little more gueſs at. See FIXED STAR.

The *Diſtances* of the Planets from the Sun and Earth, in Semi-diameter of the Earth, ſuppoſing the greateſt Horizontal *Parallax* 6″; and the Dimenſions of the Orbits, as aſſign'd by *Kepler*, are as follow.

| *Diſt.* from the Sun. | Greateſt. | Mean. | Leaſt. | *Diſt.* from the Earth. | Greateſt. | Mean | Leaſt. |
|---|---|---|---|---|---|---|---|
| Jupiter | 346601 | 326925 | 308290 | ♄ | 380556 | 327544 | 274532 |
| Saturn | 187254 | 178640 | 170026 | ♃ | 222250 | 179259 | 136268 |
| Mars | 57226 | 52326 | 47426 | ♂ | 92221 | 52944 | 13668 |
| Earth | 34995 | 34377 | 33758 | ☉ | 34996 | 34377 | 33759 |
| Venus | 25061 | 24889 | 24718 | ♀ | 60056 | 34548 | 9041 |
| Mercury | 16142 | 13340 | 10537 | ☿ | 51138 | 37179 | 23221 |
| | | | | ☽ | | | |

Mr. *Caſſini* makes the *Diſtances* ſomewhat leſs; as ſuppoſing the Sun's *Parallax* a little greater.

| *Diſt.* from the Earth. | Greateſt. | Mean. | Leaſt. | *Diſt.* from the Earth. | Greateſt. | Mean | Leaſt. |
|---|---|---|---|---|---|---|---|
| Jupiter | 244000 | 210000 | 176000 | Venus | 38000 | 22000 | 6000 |
| Saturn | 143000 | 155000 | 87000 | Mercury | 33000 | 22000 | 11000 |
| Mars | 59000 | 33500 | 8000 | Moon | 61 | 57 | 53 |
| Sun | 22374 | 22000 | 21626 | | | | |

Dr. *Hook*, by exact Obſervations with a Teleſcope of 16 Foot, perpendicularly placed, firſt diſcover'd, that the *Diſtances of the Stars from the Zenith* is not the ſame at all Times of the Year; Particularly the bright Star in the Dragon's-head he found 27, or 30 Seconds nearer the Zenith of *Greſham* College, in the Brumal Solſtice, than in the Eſtival. And after him Mr. *Flamſteed* obſerved the like Variations in the Pole-Star.

DISTANCE *of the Sun from the Moon's Node, or Apogee*, is an Arch of the Ecliptic, intercepted between the Sun's true Place, and the Moon's Node, or Apogee. See NODE.

*Curtate* DISTANCE, is the *Diſtance* of the Planets Place from the Sun, reduced to the Ecliptic. See CURTATE.

*Line of* DISTANCE, in Perſpective, is a right Line drawn from the Eye to the principal Point: Such is the Line OF, (*Tab. Perſpective Fig.* 10.) drawn between the Eye O, and the principal Point F.

This, as it is perpendicular to the Plane, or Table, can only be the *Diſtance* of the Eye from the Table.

*Point of* DISTANCE, in Perſpective, is a Point in the Horizontal Line at ſuch *Diſtance* from the principal Point, as is that of the Eye from the ſame. See POINT.

Such is the Point P, or Q, (*Tab. Perſpective Fig.* 11.) in the horizontal Line PQ; whoſe *Diſtance* from the principal Point F, is equal to that of the Eye from the ſame F.

DISTANCE *of the Baſtions*, in Fortification, is the Side of the exterior Polygon. See BASTION.

DISTASTE, or DISGUST, a Loſs of Appetite, or an Averſion, or Repugnance to Foods which are commonly eaten. See NAUSEA.

*Diſtaſte* is held by Phyſicians one of the principal Diſorders of the Stomach. It ariſes from a Want of Senſation in the Upper Orifice of the Ventricle; which may be occaſioned various Ways: as, by a too great Abundance of Food; thick, heavy Humors in the Stomach; fat, viſcid Aliment; Obſtructions of the Lacteals; Suppreſſions of the uſual Evacuations; Intermiſſions of the ordinary Exerciſes; a Defect in the Nerves, in having their natural Faculty aboliſh'd, or ſuſpended, as in a Lethargy, and Apoplexy; and, according to *Silvius*, by a groſs, viſcid Saliva, or a thick Bile, aſcending out of the ſmall Guts into the Stomach.

DISTEMPER, in Medicine. See DISEASE.

DISTEMPER, is alſo us'd in Painting, for the working up of Colours with ſomething elſe beſides bare Water, or Oil. See COLOUR.

If the Colours are prepar'd with the former of theſe, that Kind of Painting is call'd *Limning*; and if with Oil, it is call'd *Painting in Oil*, and ſimply *Painting*. See LIMNING, and PAINTING.

If the Colours are mix'd with Size, Whites of Eggs, or any ſuch proper glutinous, or unctuous Subſtance, and not with Oil, they then ſay, it is done in *Diſtemper*; as the admirable Cartons at *Hampton-Court*.

DISTENSION, the Act of ſtretching a Thing; alſo the State of a Thing violently ſtretch'd, and *diſtended*.

The *Calculus* is a hard, ſolid, &c. Body, cauſing a Stupor, Obſtructions, and *Diſtentions*. Degori.

DISTICH, a Piece of Poetry, the Senſe whereof is comprehended in two Lines.

There are excellent Morals in *Cato*'s *Diſtichs*. See *Vigneul de Marville on the* Diſtichs *of* Cato, *T.* 1. *p.* 54, 55.

Hexameter, and Pentameter Verſes, otherwiſe call'd Elegiacks, are diſpoſed in *Diſtichs*. See VERSE.

DISTICHIASIS, in Medicine, a Diſorder of the Eye-lids, wherein, inſtead of one, they have two Rows of *Cilia*, or Hairs. See CILIA.

In the *Diſtichiaſis*, over the common, and natural Hairs, there grows another extraordinary Row, which frequently eradicates, and tears up the former, and pricking the Membrane, immediately inveſting the Eye, occaſions Pain, and draws Defluxions upon it.

'Tis cur'd, by plucking up the ſecond Row of Hairs with Nippers, and burning the Pores, out of which they iſſued.

The Word is form'd of δὶς, *twice*, and στίχος, or στοῖχος, *Order*, *Rank*.

DISTILLATION, or DESTILLATION, in Chymiſtry, and Pharmacy, the Art, or Act of ſeparating, or drawing off the ſpirituous, aqueous, oleaginous, or ſaline Parts of a mix'd Body from the groſſer, and more terreſtrial Parts, by means of Fire; and collecting, and condenſing them again by Cold. See HEAT, &c.

The Uſe of *Diſtillation* is very great; it being by means hereof, that Waters, Spirits, Eſſences, and Extracts are chiefly made. See WATER, SPIRIT, &c.

*Diſtillation* is uſually perform'd by means of Fire rais'd to a greater, or leſſer Degree, as Circumſtance leaſt require. See FIRE.

The Fire is either applied immediately to the Veſſels wherein the Matters are to be *diſtilled*; or it is applied mediately, by means of Water, Sand, Iron-filings, &c. Theſe different Methods of applying the Fire, are call'd *Baths*, *Balnei*;

*Bal-*

*Balneum Mariæ* or *Maris*, *Balneum Arenoſum*, &c. See BALNEUM.

They are alſo call'd *Heats*; as *Sand-heat*, *Water-heat*, &c. See HEAT.

*Diſtillation* is two-fold, 1. *Per Aſcenſum*, by *Aſcent*; when the Matter to be *diſtill'd* is above the Fire, and the Spirit, or other Principle, is raiſed from it.

2. *Per Deſcenſum*, by *Deſcent*; when the Matter which is to be *diſtill'd* is below the Fire, and the Vapour drawn from it, precipitated to the Bottom of the Veſſel.

DISTILLATION *by Aſcent*, is either *Right*, or *Oblique*.

*Right* DISTILLATION, is perform'd with a common Alembick, or Cucurbite, wherein the Liquor is rais'd, and deſcends again, in Form of Drops, into a Receiver: And is chiefly us'd when the Texture of the Body is ſuch as allows of an eaſy Aſcent, as in Vegetables. See ALEMBICK.

*Oblique* DISTILLATION, is perform'd ſide-ways, and in crooked Veſſels, as *Retorts*. Its Uſe is for ſuch Bodies as conſiſt of heavier Particles, and which cannot be raiſed without a ſtrong Impulſe, nor even by the ſtrongeſt ſo high as the Top of the Alembick; of which Kind are almoſt all Minerals, and Metals. See RETORT.

DISTILLATION *by Deſcent*, is where the Fire is apply'd on the Top, and all around the Veſſel, whoſe Orifice is at the Bottom; and conſequently, the Vapour not being able to riſe upwards, it is forc'd to precipitate, and *diſtil* down to the Bottom.

There is a ſecond Kind of *Diſtillation by Deſcent*, call'd *Per Deliquium*; which is a Natural Liquifying, or Reſolving of Salts into a Liquor, by means of Moiſture. See DELIQUIUM.

In the Reſolution of Simples, an excellent Method to preſerve their Virtues, is, in lieu of Fire, or any other foreign Heat, which might alter, or deſtroy theſe Virtues, to make Uſe of the Heat of a Dunghil made of putrified Herbs of the ſame Kind with thoſe to be *diſtilled*.

The Proceſs, and Meaſures of *Diſtillation*, are very different, according to the different Subjects to be *diſtill'd*.

*Acid Spirits* are uſually drawn in a Reverberatory Furnace, and with a vehement Fire: *Ponderous Woods*, as Guaiacum, Box, Amber, &c. are *diſtill'd* in a Retort, after the ſame Manner. In theſe, firſt comes a little Phlegm, and then, the Fire increaſing, the Spirits fly out in white Clouds. When they ceaſe to come, the Matter in the Receiver is filtrated through a Tunnel, which lets paſs the Spirits, leaving a black fetid Oil behind.

*Odoriferous Plants*, as Balm, Wormwood, Sage, Hyſſop, &c. are *diſtill'd* by the Cucurbite, or *Veſica*; firſt pouring a ſtrong Decoction of the ſame Plant hot, upon the Plant it ſelf bruis'd, and letting the whole digeſt in a cloſe Veſſel two Days. Then about half the Water, or Spirit is drawn away by *Diſtillation*; and what remains, being preſs'd, filtrated, and evaporated to the Conſiſtence of Honey, is the *Extract* of the Plant. Laſtly, drying what remain'd in the Cloth after Expreſſion, and burning it, they make a *Lixivium* of its Aſhes; which being filtrated, and evaporated to Dryneſs, what remains is the fix'd Salt of the Plant.

*Plants not odoriferous*, are generally manag'd thus: The Plant being pounded, and two Thirds of the Alembic, or Retort fill'd with it, they pour a good Quantity of the expreſs'd Juice of the ſame Plant upon it, ſo as the bruis'd Matter may float therein, without ſticking any where to the Veſſel. Then they draw off about half as much Water, as there was Juice, which is the *diſtill'd* Water of that Plant. What remains, being preſs'd in a Cloth, and the Juice ſettled, they filtrate, and evaporate it to two Thirds, and ſetting it in a cool Place, the *Eſſential Salt* ſhoots into Cryſtals.

There is alſo a Method of Diſtilling *Cold*; which is thus perform'd: They take, for Inſtance, 4 Pounds of Flowers, more or leſs, and put 'em in 3 or 4 Pints of Water, and the whole in a Capital, which they lute exactly; then they place the Alembick in a Veſſel half fill'd with Ice, beaten and ſalted, as if they meant to freeze the Water; then fit on a Receiver, and lute it well; Then wetting a linnen Cloth in hot Water, they cover the Capital therewith, repeating this ſeveral times: by which means the fineſt Parts are raiſed from the Flowers. But Care muſt be taken, that all the ſuperfluous Water have been firſt emptied out of the Capital.

Dr. *Beal*, in the *Philoſophical Tranſactions*, mentions an extraordinary Kind of *Cold Diſtillations*, viz. made by Froſt and cold Air: His Thermometer being expoſed out of Doors, during the ſevere Froſts of 1665; fine clear Drops, like Dew, aſcended to the Top of the Tube, which afterwards, in time, re-deſcended into the Stem, and fill'd the Space of half an Inch; which, tho' the Spirit of Wine it ſelf was tinged very deep, yet this ſecond Spirit was clearer and brighter than any Cryſtal. The like he did by Expoſing his Thermometer to the hot Air in the middle of Summer. And hence takes Occaſion to recommend a further Proſecution of this *Pſychrotechnia*.

The Aſcent of Fluids, we are taught by Philoſophy, is effected two Ways: 1. On Account of their Specific Gravity; and 2. By Impulſe.

The firſt Way of *Elevation* is manifeſt from this *Lemma*, viz. That Particles of Bodies which ſwim in any Fluid, if they are ſpecifically lighter, muſt be born upwards by that Fluid. Hence, as *diſtilled* Liquors are carried upwards thro' the Air, it is to be inquired, how they come to be ſpecifically lighter than Air.

Now, a Fluid will be ſpecifically lighter than another, when, under a larger Surface, it has an equal, or a leſs Gravity: According to this Proportion, the Bulk of the Fluid ought to be increaſed in *Diſtillation*; and how eaſily, by the Help of Fire, it may be increaſed, or, which is the ſame Thing, rarefied, will appear from what we have ſaid under the Articles RAREFACTION, HEAT, &c.

It is known by Computation, that the Proportion of the ſpecific Gravity of Water to that of Air, is ſomething more than 800 to 1. Since, therefore, ſimilar Spheres, or Solids, are as the Cubes of their Diameters, and the ſpecific Gravity decreaſes reciprocally, in the very ſame Proportion, as the Cubes of their Diameters increaſe: In order to make a Particle of Water lighter than a Particle of Air, no more is neceſſary than to rarefy it, till its Diameter becomes ten times greater, which in this Caſe is but a very ſmall Degree of Rarefaction: for the Cube of the Diameter in a Particle ſo rarefied, is 1000. If the Diameter be made 11 times greater, the Cube will be 1331; and if twelve, 1728. So that Water, when rarefied but 12 Degrees, will be above double lighter than Air. And if the Rarefaction be carried on farther, it may eaſily be collected from the Increaſe of the Numbers, that a Particle of Water may be render'd almoſt infinitely lighter than Air. Now, the Elevation of Bodies equally fluid, and heavy, is always proportionable to their different Aptitude to be rarefied; that is, they aſcend quicker, upon the Application of any Force, the more ſuſceptible they are of Rarefaction: but in Bodies, whoſe Aptitude to rarefy is equal, the Time of Aſcent is to be determined by their ſpecific Gravity.

But 'tis not only ſpecific Gravity that ſerves to elevate Bodies in *Diſtillation*, but an external Impulſe may alſo cauſe their Aſcent: The Impulſe, we have here to do with, comes from the Fire, whoſe Particles, tho' extreamly ſmall and light, yet may raiſe Bodies much heavier than themſelves, by acting upon them with a certain Degree of Force: For ſince the Moment of a Body, or that Force, by which it acts upon another, is in a compound *Ratio* of the Quantity of Matter, and Celerity; the Celerity may be ſo increaſed, as to give a ſufficient Force to the Body, tho' the Quantity of Matter in it be ever ſo ſmall. Let ſome heavy Body, therefore, be ſuppoſed to deſcend, with no other Moment than what it receives from its own Gravity; in this Caſe, then, the Air, which is much lighter, may be moved with ſuch Celerity, as not only to ſuſtain that Body, but to mount it up higher; and the more rapid the *Impetus* of the Air is, or the Surface of the Body more diffuſed, the higher and ſwifter will the Elevation be.

So Fire, tho' it be a Body of the minuteſt Size, may be moved with that Rapidity, as to acquire, and communicate what Force can be deſired towards removing any Obſtacles. When, therefore, the Moment of Fire is augmented in the manner explain'd, ſo as to exceed the Force of the *diſtill'd* Body, it will remove it from its former Situation; or what is here the ſame Thing, becauſe the Direction of its Motion tends upwards, will carry it up. And thus, Particles ſpecifically heavier than the Air contain'd in the Retort, as thoſe of acid Spirits are, aſcend by a more violent Impulſe of the Fire us'd in *Diſtillation*.

Another Thing, to be noted, is, That the ſame Quantity of Matter is elevated ſo much the eaſier, in Proportion, as the Surface is enlarged; for the more this is diffuſed, the more Particles of Fire it receives: having, therefore, this united Force to drive it up, it more eaſily aſcends; ſo that, by the ſame Degree of Fire, Bodies will not equally ariſe, tho' they are equally heavy, if there be that Difference in their Surfaces already ſuppoſed.

The Air alſo has no ſmall Share in the Buſineſs of Impulſe; for being rarefied by the Fire, it is not only impelled upwards it ſelf, but carries other Particles up with it: and it may be learned by many very familiar Experiments, what *Impetus* Bodies ſo rarefied exert. Whoſoever, therefore, well conſiders theſe three Things, *viz.* Specific Levity; an Impelling Force; and the Extent of Surface; and what may be effected by them, and how many Ways, and in what Proportions all of them may be changed, will very eaſily account for all the Variety, which is found in the ſeveral Proceſſes of *Diſtillation*.

DISTINCT *Notion*, or *Idea*, according to Mr. *Leibnitz*, is, when we can enumerate Marks and Characters enough whereby to recollect a Thing. *E. gr.* That a Circle is a Figure bounded with a Curve Line that returns into it ſelf; all the Points whereof are equally diſtant from one middle Point. See NOTION, and IDEA.

DISTINCT *Baſe*, in Opticks, is that preciſe Diſtance from the Pole of a convex Glaſs, in which Objects, beheld through

it, appear *diſtinct*, and well defin'd; So that the *Diſtinct Baſe* coincides with what we otherwiſe call the *Focus*. See Focus.

The *Diſtinct Baſe* is caus'd by the Collection of the Rays proceeding from a ſingle Point in the Object, into a ſingle Point in the Repreſentation; and, therefore, Concave Glaſſes, which do not unite, but ſcatter, and diſſipate the Rays, can have no real *Diſtinct Baſe*. See Concave.

DISTINCTION, a Diverſity of Things, or Conceptions: Or, as Logicians define it, an Aſſemblage of two, or more Words, whereby deſparate Things, or their Conceptions, are denoted.

Hence it is evident, that *Diſtinction* ariſes out of Diviſion. See Division.

A *Metaphyſical* Distinction, call'd alſo by the Schoolmen *Alietas*, *Alteritas*, and *Diverſitas*, is a Non-agreement of being, whereby this Entity is not that, or one is not another.

There are three Kinds of *Diſtinctions* taken from the three different Modes of Exiſtence; the firſt *Real*, the ſecond *Model*, and the laſt *Rational*.

A *Real* Distinction, is that between Things which may exiſt, or be conceiv'd to exiſt a-part from each other; ſuch is that between two Subſtances, or the Modes of two Subſtances.

A *Modal* Distinction, is that between ſeveral Things, one whereof may exiſt without the other, but not *vice verſa*, the other without that; ſuch is that between the Mind, and an Act of Will; between Wax, and its Hardneſs; Water, and its Freezing, *&c.*

A Distinctio *Rationis*, or *Rational Diſtinction*, is that between ſeveral Things, which are really one and the ſame, and whereof one cannot exiſt without the other, nor *vice verſa* the other without this: Such is that between a Thing, and its Eſſence; between the Eſſence, and Properties, *&c.*

Of this *Diſtinction* ſome Authors admit two Kinds; the one *Founded*, barbarouſly call'd *Rationis Ratiocinatæ*, and having ſome Foundation in Things; as when we diſtinguiſh the Juſtice of God from his Mercy: The other *Not-founded*, call'd *Rationis Ratiocinantis*, which has no Foundation at all, and therefore is by many quite rejected.

Tho' others contend, that there is no *Diſtinctio Rationis*, but is at the ſame Time a *Real Diſtinction*: Thus, ſay they, God, and juſt God, are to each other as Milk and white Milk; and a juſt God, and merciful God, as white Milk and ſweet Milk. But when I ſay, Milk is diſtinguiſh'd from white Milk, or white Milk from ſweet Milk, the *Diſtinction* falls between Whiteneſs and Sweetneſs, which is a *Real Diſtinction*. See Abstraction.

Distinction, or Distinguo, in the Schools, an Expedient to evade an Argument, or to clear up, and unfold an ambiguous Propoſition, which may be true in one Senſe, and falſe in another.

*The Reſpondent was hard preſs'd, but he diſengag'd himſelf by a* Diſtinguo.

*Moliere* makes *T. D.* ſay to his Miſtreſs, who had told him, he muſt ſubmit to the Will of a Perſon he loved: Diſtinguo, *Madamoiſelle*; *pour l'Intereſt de ſon Amour*, Concedo: *Contre ſa Paſſion*, Nego.

DISTORTION, in Medicine. *Diſtortio Oris*, or *Diſtortion of the Mouth*, is a Contraction, or Shortening of one Side of the Mouth, occaſion'd by a Convulſion, or a Palſy of the Muſcles of one Side the Face. See Convulsion.

When the *Diſtortion* ariſes from a Convulſion, it is on the ſame Side with the Convulſion, the Force of the convulſed Part being ſuperior to that of the ſound Part: On the contrary, when it ariſes from a Palſy, it is on the oppoſite Side, the paralytic Part being here ſurmounted by the ſound. See Palsy.

In a *Diſtortion of the Mouth* the Patient can only ſpit on one Side; and if you make him laugh, or oblige him to pronounce the Letter O, you'll eaſily perceive, that he only moves one Side of his Mouth.

The *Greeks* call this Diſorder σπασμος κυνικὸς. See Spasmus.

There is alſo a *Diſtortion of the Eye*, call'd *Squinting*, or *Strabiſmus*. See Strabismus.

DISTORTOR *Oris*, in Anatomy, a Muſcle of the Mouth, call'd alſo *Zygomaticus*. See Zygomaticus.

DISTRACTION, in Medicine, the Act of pulling a Fibre, Membrane, or the like, beyond its natural Extent; and what is capable of this Enlargement, is ſaid to be *diſtractible*. See Fibre.

DISTRAIN, in Law. To *diſtrain* is to attach, or ſeize on one's Goods, for the Satisfaction of a Debt. See Distress.

DISTRESS, in Law, ſignifies a Compulſion in certain real Actions, whereby to bring a Man to appear in Court, or to pay Rent, or other Duty denied.

The uſual Effect of *Diſtreſs* is to drive the Party *diſtrained* to replevy the *Diſtreſs*, and ſo take his Action of Treſpaſs againſt the *Diſtrainer*; or elſe to compound with him for the Debt, or Duty, for which *Diſtreſs* was made.

*Diſtreſs* is divided by *Briton* into *Real*, and *Perſonal*.

*Perſonal* Distress is made by *diſtraining* a Man's moveable Goods, and ſeiſing all the Profits of his Lands, and Tenements from the Teſte, or Date of his Writ; for the Defendant's Contempt in not appearing to an Action brought againſt him, when he was ſummoned, or attach'd: And the Iſſues ſo return'd by the Sheriffs, are forfeited to the King, and eſtreated into the Exchequer.

*Real* Distress is made on immoveable Goods. It differs from an Attachment in this, that it cannot be taken by any common Perſon, without the Compaſs of his own Fee; except it be preſently after the Cattel, or other Things, are driven, or bore off the Ground, on Purpoſe to avoid *Diſtreſs*. See Attachment.

*Diſtreſs* is alſo divided into *Finite*, and *Infinite*.

*Finite* Distress, is that limited by Law, how often it ſhall be made to bring the Party to Trial of the Action, *viz.* once, twice, *&c.*

*Infinite* Distress, is, without Limitation, till the Party come; as againſt a Jury, which refuſes to appear upon Certificate of Aſſiſe, the Proceſs is *Venire facias*, *Habeas Corpus*, and *Diſtreſs Infinite*.

Laſtly, *Diſtreſs* is again divided into *Grand Diſtreſs*, by *Fitzherbert* call'd *Magna Diſtrictio*; and *Ordinary Diſtreſs*.

*Grand* Distress, is that made of all the Goods and Chattels the Party hath within the County. See Grand *Diſtreſs*.

There are ſeveral Things not *diſtrainable*: For a *Diſtreſs* muſt be of a Thing, whereof a valuable Property is in ſome body; and, therefore, Dogs, Bucks, Coneys, *&c.* that are *feræ Naturæ*, cannot be *diſtrained*.

Again, altho' it be of a valuable Property, as an Horſe, (yet when a Man, or Woman is riding on him) or an Ax (in a Man's Hand cutting Wood) and the like, are for that Time privileged, and cannot be *diſtrained*.

Again, valuable Things ſhall not be *diſtrained* for Rent, which are for the Benefit, and Maintenance of Trades, and which, by Conſequence, are for the Common-Wealth, and are by Authority of the Law there; as an Horſe in a Smith's Shop; Materials in the Weaver's Shop for making Cloth; Cloth, or Garments in the Taylor's Shop; Sacks of Corn, or Meal in a Mill, or a Market; nor any Thing *diſtrained* for Damage-feaſant, for it is in *Cuſtodia Legis*.

Again, nothing ſhall be *diſtrained* for Rent, which cannot be render'd again in as good a Plight, as it was at the Time of the *Diſtreſs* taken; as Sheaves, or Shocks of Corn cannot be *diſtrained* for Rent, but for Damage-feaſant they may. Again, Beaſts belonging to the Plow ſhall not be *diſtrained*.

Laſtly, Furnaces, Cauldrons, or the like, fix'd to the Freeholds, or Doors, or Windows of an Houſe, or the like, cannot be *diſtrained*: When a *Diſtreſs* is taken, that has Life in it, it muſt be brought into the common Pound, or kept in an open Place, where the Owner may give it Food.

DISTRIBUTION, the Act of dividing a Thing into ſeveral Parts, in order to the diſpoſing each in its proper Place. See Division.

A Dramatic Poet ſhould have *diſtributed* his Subject into Acts and Scenes, ere he proceed to the Verſification, *&c.* See Act, *&c.*

Orators *diſtribute* their Harangues into *Exordium*, *Narration*, *Confirmation*, &c.

The *Jewiſh* Nation was *diſtributed* into 12 Tribes. See Tribe.

The *Digeſt* is *diſtributed* into 50 Books. See Digest.

The *Diſtribution* of the Food throughout all the Parts of the Body, is one of the greateſt Wonders in Nature. See Digestion, and Nutrition.

*Manual*, and *Quotidian* Distributions, are certain ſmall Sums of Money, appointed by the Donors, or Founders thereof, to be *diſtributed* to ſuch of the Canons of a Chapter as are actually preſent, and aſſiſtant at certain Obits, and Offices.

Distribution, in Rhetoric, a Kind of *Deſcription*; or a Figure, whereby an orderly Diviſion, and Enumeration is made of the principal Qualities of a Subject.

For Example, *He has the Light to ſee our Faults, the Juſtice to reſtrain 'em, and the Authority to puniſh 'em. Their Throat is an open Sepulchre, they flatter with their Tongues; the Poiſon of Aſps is under their Lips; their Mouth is full of Curſing, and Lyes; and their Feet ſwift to ſhed Blood.*

Distribution, in Printing, the taking a Form a-ſunder, ſeparating the Letters, and diſpoſing 'em in the Caſes again, each in its proper Cell. See Printing.

Di-

DISTRIBUTION, in Architecture. *Diſtribution of the Plan*, is the dividing, and diſpenſing the ſeveral Parts, and Pieces, which compoſe the Plan of a Building. See BUILDING.

DISTRIBUTION *of Ornaments*, is an equal, orderly placing of the Ornaments in any Member of Architecture. See ORNAMENT.

DISTRIBUTIVE *Juſtice*, is that whereby we give every Perſon what belongs to him. See JUSTICE.

DISTRICT, the Territory, or Extent of Juriſdiction of a Judge. See JURISDICTION.

A Judge, or Officer cannot judge, or act out of his own *Diſtrict*. See JUDGE.

DISTRICT, is properly the Place wherein a Man has the Power of diſtraining; or, the Circuit, or Territory, wherein one may be compell'd to appear.

Where we ſay, *Hors de ſon Fee*; others ſay, *Extra Diſtrictum ſuum*.

DISTRINGAS, a Writ directed to the Sheriff, or other Officer, commanding him to diſtrain one for a Debt to the King; or for his Appearance at a certain Day. See DISTRESS.

DISVELLOPED, in Heraldry, is uſed much in the ſame Senſe with *Diſplay'd*. Thus Colours ſaid in an Army to be *flying*, are in Heraldry ſaid to be *diſvelloped*.

DITCH, in Fortification, call'd alſo *Foſs*, and *Moat*, a Trench dug round the Rampart, or Wall of a fortified Place between the Scarp and Counterſcarp. See MOAT.

Some *Ditches* are *dry*; others *full of Water*: Each whereof have their Advantages.

The Earth dug out of the *Ditch* ſerves to form the Rampart. See RAMPART.

The *Ditch* ſhould be of ſuch Breadth as that the Talleſt Tree may not reach over it, *i. e.* from 15 to 20 Fathoms; Tho' the Rule others give for the Dimenſions of the *Ditch*, is, that it afford Earth enough to build the Rampart of due Magnitude.

The Space between the Rampart and *Ditch*, being about 6 Foot, is call'd the *Berm*, or *Liſt*. See BERM.

DITHYRAMBIC, belonging to the *Dithyrambus*; as *Dithyrambic* Verſe, *Dithyrambic* Poet, *Dithyrambic* Heat, *&c.*

A Compound, *Dithyrambic* Word, Mr. *Dacier* obſerves, has ſometimes its Beauty and Force. Some Moderns call Compoſitions in the Taſte of the Ode, only not diſtinguiſh'd into Strophes, and conſiſting of all Kinds of Verſe indifferently, *Dithyrambic Odes*. See DITHYRAMBUS.

*Dithyrambic Poetry* owes its Birth to *Greece*, and the Tranſports of Wine. It ſavours ſtrongly of its Original; as admitting of no Rules, but the Sallies of a fiery Imagination. And yet Art is not quite excluded; but delicately applied, to guide and reſtrain the *Dithyrambic* Impetuoſity, and only indulge it in Flights that are pleaſing. In effect, what our Poets ſay of the Ode, is more true of the *Dithyrambus*, than of the Ode, that its Diſorder is an Effect of Art. See PINDARIC.

DITHYRAMBUS, in the ancient Poetry, a Hymn in Honour of *Bacchus*, full of Tranſport, and Poetical Rage.

The Meaſure, which is what diſtinguiſhes this Kind of Poetry, is ſaid to have been invented by *Dithyrambus*, a *Theban*; but *Pindar* attributes it to the *Corinthians*; and the modern Etymologiſts furniſh us with another Origin of the Word.

In effect, the Verſe might be call'd thus from the God it was conſecrated to, who himſelf was call'd *Dithyrambus*; Either on Account of his having been brought twice into the World, according to the Fable of *Semele* and *Jupiter*, or on Account of his having triumph'd twice; the Word being a Compound of Δὶς, *twice*, and θρίαμβος, *Triumph*.

Be this as it will, the Ancients, as we are told by *Ariſtotle* and *Horace*, gave the Appellation *Dithyrambus* to thoſe Verſes wherein none of the common Rules, or Meaſures were obſerv'd, much like thoſe call'd by the French *Vers Libres*, by the Italians *Verſi Sciolti*, and by the modern Greeks, *Politici*, a Name they give to Proſe, which theſe Verſes reſemble more than Poetry. See PINDARIC.

We have now no Remains of the *Dithyrambi* of the ancient Poets, ſo that we cannot ſay preciſely what their Meaſure was: All we know is, that it was very bold, and irregular. The Poets not only took the Liberty to forge new Words for the Purpoſe, but made double, and compound Words, which contributed very much to the Magnificence of the *Dithyrambus*.

*Horace* has ſometimes imitated 'em. *Dacier*, *Fa. Commire*, and ſome other modern Writers, have compoſed *Latin* Pieces of all Kinds of Verſe indifferently, according as the Subject, and Words preſented themſelves, without any Order, or Diſtribution into Strophes, and call 'em *Dithyrambi*.

DITONE, *Ditonum*, in Muſic, an Interval comprehending two Tones. See INTERVAL, and TONE.

The Proportion of the Sounds that form the *Ditone* is 4 to 5; and that of the *Semi-ditone*, as 5 to 6. *Fa. Parran* makes the *Ditone* the 4th Kind of ſimple Concords, as comprehending two Tones, a greater, and a leſſer: Others make it the firſt Diſcord; dividing the *Ditone* into 18 equal Parts, or Comma's, the Nine on the acute Side make the greater Tone, as aſſerted by *Salomon de Caux*.

The Word is form'd of Δὶς, *twice*, and τόνος, *Tone*.

DITRIGLYPH, in Architecture, the Space between two Triglyphs. See TRIGLYPH.

DIVAL, in Heraldry, the Herb *Night-ſhade*, uſed by ſuch as blazon with Flowers and Herbs, inſtead of Colours and Metals, for *Sable*, or Black. See SABLE.

DIVALIA, in Antiquity, a Feaſt held among the ancient *Romans* on the 21ſt of *December*, in Honour of the Goddeſs *Angerona*; whence the *Divalia* were alſo call'd *Angeronalia*.

This Feaſt was eſtabliſh'd on Occaſion of a Diſeaſe which deſtroyed Man and Beaſt: That Diſeaſe was a Kind of Squinancy, or Inflammation and Swelling of the Throat, call'd in Latin *Angina*; whence the Appellation *Angeronalia*, as *Macrobius* relates *Lib.* I. *Saturn. C.* 12. See ANGERONALIA.

On the Day of this Feaſt, the Pontifices perform'd Sacrifice in the Temple of *Volupia*, or the Goddeſs of Joy and Pleaſure, who was the ſame with *Angerona*; and ſuppoſed to drive away all the Sorrows and Chagrins of Life.

DIVAN, a Council-Chamber, or Court wherein Juſtice is adminiſtred, in the Eaſtern Nations, particularly among the *Turks*.

Travellers relate Wonders of the Silence, and Expedition of the *Divans* of the Eaſt.

We ſay, *The Grand Vizier has held a* Divan; meaning, he has aſſembled the Grandees of the Port, to deliberate of the Affairs of the Empire.

*Divan* is an *Arabic* Word, ſignifying an *Eſtrade*, or the ſame with *Sofa* in the *Turkiſh* Dialect. See SOFA.

The Word is alſo us'd for a *Hall*, in the private Houſes of the Orientals: The Cuſtom of *China* does not allow the receiving of Viſits in the inner Parts of the Houſe, but only at the Entry, in a *Divan* contriv'd on Purpoſe for Ceremonies. *Le Compte*.

DIVAN-*Begui*, or *Beghi*, one of the Miniſters of State in *Perſia*. The *Divan-Begui* is the Controller of Juſtice: His Place is the laſt of the ſix Miniſters of the ſecond Rank, who are all under the *Etmadauler*, or firſt Miniſter.

To the Tribunal of the *Divan-Begui* Appeals lye from Sentences paſs'd by the Governours. He has a fix'd Stipend, or Appointment of 50000 Crowns, that he may render Juſtice *gratis*. All the Sergeants, Uſhers, *&c.* of the Court, are in the Service of the *Divan-Begui*. He takes Cognizance of the Criminal Cauſes of the *Cams*, Governours, and other great Lords of *Perſia*, when accuſed of any Fault, and receives Appeals from the *Daruga*.

There are *Divan-Beghi's* not only at Court, and in the Capital, but alſo in the Provinces, and other Cities of the Empire. He is not confin'd by any other Law, or Rule in the Adminiſtration of Juſtice, but the Alcoran; which, too, he interprets at Pleaſure. He only takes Cognizance of Criminal Cauſes.

DIVERGENT, or DIVERGING *Lines*, in Geometry, are ſuch whoſe Diſtance is continually increaſing. See LINE.

Lines which converge one Way, *diverge* the oppoſite Way. See CONVERGING.

DIVERGENT, or DIVERGING, in Opticks, is particularly applied to Rays, which iſſuing from a radiant Point, or having in their Paſſage undergone a Refraction, or Reflection, do continually recede further from each other. See RAY.

In which Senſe the Word is oppoſed to *Convergent*, which implies the Rays to approach each other; or to tend to a Centre, where being arrived, they interſect, and if continued further, become *diverging*. See CONVERGING.

Concave Glaſſes render the Rays *diverging*; and Convex ones, converging. See LENS.

Concave Mirrors make the Rays converge; and Convex ones, *diverge*. See MIRROR, and alſo CONVEXITY, CONCAVITY, RAY, REFRACTION, and REFLEXION.

'Tis demonſtrated, in Opticks, that as the Diameter of a pretty large Pupil does not exceed 2″ or $\frac{1}{5}$ of a Digit; *Diverging* Rays, flowing from a radiant Point, will enter the Pupil, parallel, to all Intents and Purpoſes, if the Diſtance of the radiant from the Eye be 40000 Feet. See LIGHT.

DIVERGING *Hyperbola*, is one whoſe Legs turn their Convexities towards one another, and run towards quite contrary Ways. See HYPERBOLA.

DIVERSION, in War, is when you attack an Ennemy in one Place, where he is weak, and unprovided, with Deſign to make him call his Forces from another Place, where he was going to make an Irruption.

The *Romans* had no Way to drive *Hannibal* out of *Italy*, but to make a *Diverſion*, by attacking *Carthage*.

DI-

DIVERSION, in Medicine, is the turning of the Courſe, or Flux of Humours from one Part to another, by proper Applications. See REVULSION, and DERIVATION.

DIVERSITY differs from *Diſtinction* in this, that the latter is the Work of the Mind; but the former is in Things themſelves, antecedent to any Operation of the Mind. For Things that are ſeveral, are *different*; even tho I do not conceive 'em. See DISTINCTION, and DIFFERENCE.

The *Diverſity*, or *Difference* of Things, therefore, ariſes from their eſſential Attributes.

DIVESTING, properly ſignifies *Undreſſing*, or ſtripping off one's Garments, in Contra-diſtinction to *Inveſting*. See INVESTITURE.

In Law, it is us'd for the Act of ſurrendring, or relinquiſhing one's Effects. By a Contract of Donation, or Sale, the Donor, or Seller are ſaid to be *diſſeiſed*, and *diveſted* of their Property in ſuch a Commodity, and the Donee, or Purchaſer becomes *inveſted* therewith.

Demiſſion is a general *Diveſtiture*, which the Fathers and Mothers make of all their Effects, in Favour of their Children.

DIVIDEND, in Arithmetick, the Number given to be *divided*; Or that whereof the *Diviſion* is made. See DIVISION.

The *Dividend* muſt always be greater than the Diviſor. The Quotient always contains as many Unites, as the *Dividend* contains the Diviſor times. See DIVISION.

DIVINATION, the Art of foretelling future Events. See PROPHESY.

*Divination* is divided by the Ancients into *Artificial* and *Natural*.

*Artificial* is that, which proceeds by reaſoning upon certain external Signs, which it conſiders as Indications of Futurity: *Natural* is that, which preſages Things from a mere internal Senſe, and Perſuaſion of the Mind, without any Aſſiſtance of Signs.

*Natural* DIVINATION is of two Kinds: the one *Native*; the other by *Influx*.

The firſt is founded on this Suppoſition, that the Soul, collected within it ſelf, and not diffuſed among the Organs of the Body, has, from its own Nature and Eſſence ſome Fore-knowledge of future Things; Witneſs what is ſeen in Dreams, Extaſies, the Confines of Death, *&c.*

The ſecond is founded on this, that the Soul receives, after the Manner of a Mirror, ſome ſecundary Illumination from the Preſence of God, and other Spirits.

*Artificial* DIVINATION is alſo of two Kinds: the one arguing from *Natural Cauſes*; ſuch are the Predictions of Phyſicians about the Events of Diſeaſes, from the Pulſe, Urine, *&c.* ſuch alſo are thoſe of the Politician, *Oh Venalem Urbem, & cito perituram ſi Emptorem Inveneris.*

The ſecond proceeds from Experiment and Obſervations arbitrarily inſtituted; and is moſtly ſuperſtitious.

Infinite are the Syſtems of *Divination* reducible to this Head: By *Birds*, the Entrails of *Beaſts*, *Dreams*, *Lines* of the Hand, *Points* mark'd at Random, *Numbers*, *Names*, the Motion of a *Sieve*, the *Air*, *Fire*, the *Sortes Præneſtinæ*, *Virgilianæ*, and *Homericæ*; Numerous others, with the principal Species whereof, with their Names, are:

*Pſychomancy*, or *Sciomancy*, which conſiſts in calling up the Souls, or Shades of the Deceas'd, to learn of 'em ſomething required. *Dactylomancy*, perform'd by means of one, or more Rings. *Hydromancy*, perform'd with Sea-Water. *Pegomancy*, with Spring-Water. *Ornithomancy*, which was the Buſineſs of the Augurs. *Clidomancy*, perform'd with Keys. *Coskiromancy*, with a Riddle, or Sieve. *Cledoniſm*, by Words, or Voice. *Extiſpicina*, by the Entrails of Victims. *Alphitomancy*, or *Aleuromancy*, by Flower. *Kerannoſcopia*, by the Conſideration of Thunder-bolts. *Capnomancy*, by Smoak. *Alectriomancy*, by Cocks. *Pyromancy*, by Fire. *Lithomancy*, by Stones. *Lychnomancy*, by Lamps. *Necromancy*, by the Dead, or their Bones, *&c.* *Oncrocritica*, by Dreams. *Oroſcopy*, by Eggs. *Lecanomancy*, by a Baſon of Water. *Gaſtromancy*, by the Belly, or by Vials. *Palpitation*, *Saliſſatio*, πάλμὸς, by the Pulſation, or Motion of ſome Member. *Axinomancy*, by a Hatchet, or Cleaver. *Catoptromancy*, or *Cryſtallomancy*, by a Mirror. *Chiromancy*, by the Lines of the Hand. *Geomancy*, by the Earth. *Ceromancy*, by Figures of Wax. *Arithmomancy*, by Numbers. *Belomancy*, by Arrows. *Sycomancy*, &c. all deſcribed by *Cardan* in his IVth Book, *de Sapientia*; and under their proper Articles in this Dictionary. See PSYCHOMANCY, DACTYLOMANCY, SORTES, *&c.*

*Flud* has ſeveral particular Treatiſes of the ſeveral Species of *Divination*: *Cicero* has two Books of the *Divination* of the Ancients, wherein he refutes the whole Syſtem. All theſe Kinds of *Divination* have been condemn'd by the Fathers, and Councils, as ſuppoſing ſome Compact with the Devil.

In Holy Scripture we find mention made of nine different Kinds of *Divination*.

The firſt perform'd by the Inſpection of Planets, Stars, and Clouds: 'Tis ſuppoſed to be the Practicers of this, whom *Moſes* calls מעונן *Meonen*, of ענן *Anan*, Clouds, *Deuter.* C. XVIII. v. 10. 2. Thoſe, whom the Prophet calls in the ſame Place מנחש *Menacheſeh*, which the Vulgate, and Generality of Interpreters render *Augur*. 3. Thoſe, who in the ſame Place are call'd מוכשף *Mecaſcheph*, which the Septuagint, and Vulgate tranſlate, *A Man given to ill Practices*. 4. Such Authors, whom *Moſes* in the ſame Chapter, *v.* 11. calls חובר *Hhober*. 5. Thoſe, who conſult Spirits, call'd *Python*; or, as *Moſes* expreſſes it in the ſame Book, שאל אוב, thoſe who ask Queſtions of *Python*. 6. Witches, or Magicians, whom *Moſes* calls ידעני *Judeoni*. 7. Thoſe, who conſult the Dead, *Necromancers*. 8. The Prophet *Hoſeah*, C. IV. 12. mentions ſuch as conſult Rods, שאל בקלי, which Kind of *Divination* may be call'd *Rabdomancy*. 9. The laſt Kind of *Divination* mention'd in Scripture, is *Hepatoſcopy*, or the Conſideration of the Liver.

DIVINE, ſomething that comes from, or relates to a God. See GOD.

The Word is alſo us'd, figuratively, for any thing that is excellent, extraordinary, and that ſeems to go beyond the Power of Nature, and the Capacity of Mankind: In this Senſe, the Compaſs, Teleſcope, Clocks, *&c.* are ſaid to be *divine* Inventions. *Plato* is call'd the *divine Author*, the *Divine Plato*; and the ſame Appellation is given to *Seneca*: *Hippocrates* is call'd, *the divine old Man*, Divinus Senex, *&c.*

The *Arabs* give the Appellation of *Divines*, אלהיון *Elahioun*, to their ſecond Sect of Philoſophers, which conſiſts of ſuch as admit a firſt Mover of all Things, a ſpiritual Subſtance free from all Kind of Matter, in a Word, a *God*. By this Name they diſtinguiſh 'em from their firſt Sect, whom they call *Deherioun*, or *Thabaioun*, i. e. Worldly, or Natural, or rather, Worldlings, and Naturaliſts, as admitting of no Principles beyond the Material World, and Nature.

The Word אלהיון *Elahioun*, is deriv'd from אלא *Alla*, God: So that the *Elahioun* are the *Divines*, or Theologues, as *Caſtellus* renders it; or, ſuch as own a God.

DIVINITY, the Nature, and Eſſence of God. See GOD.

*Divinity* and Humanity are joyn'd together in *Jeſus Chriſt*. 'Tis falſly, that the Atheiſts hold the Notion of a *Divinity* to be a Political Invention of the ancient Legiſlators, to ſecure and warrant the Obſervation of their Laws: On the contrary, 'tis certain, the Legiſlators made Uſe of the Opinion, which they found already impreſs'd on the Minds of the People.

The *Heathen Divinities* may be reduced to three Claſſes: The firſt, *Theological*, repreſenting the Divine Nature under divers Attributes; Thus *Jupiter* denotes the abſolute Power of God, *Juno* his Juſtice, *&c.*

The ſecond Claſs of *Divinities* are *Phyſical*: Thus *Eolus* is that Power in Nature, whereby Vapours and Exhalations are collected to form Winds, *&c.*

The laſt are *Moral Divinities*. Thus the *Furies* are only the ſecret Reproaches and Stings of Conſcience.

DIVINITY is alſo us'd in the ſame Senſe with Theology. See THEOLOGY.

DIVING, the Art, or Act of deſcending under Water to conſiderable Depths, and abiding there a competent Time.

The Uſes of *Diving* are very conſiderable, particularly in the Fiſhing for Pearls, Corals, Spunges, *&c.* See PEARL-*Fiſhing*, SPUNGE, *&c.*

There have been divers Methods propoſed, and Engines contriv'd, to render the Buſineſs of *Diving* more ſafe and eaſy. The great Point is to furniſh the *Diver* with freſh Air, without which, he muſt either make a ſhort Stay, or periſh.

Thoſe who *dive* for Spunges in the Mediterranean, help themſelves by carrying down Spunges dipt in Oil in their Mouths. But conſidering the ſmall Quantity of Air that can be contain'd in the Pores of a Spunge, and how much that little will be contracted by the Preſſure of the incumbent Air, ſuch a Supply cannot long ſubſiſt the *Diver*. For it is found by Experiment, that a Gallon of Air included in a Bladder, and by a Pipe reciprocally inſpired and expired by the Lungs, becomes unfit for Reſpiration in little more than one Minute of Time. For tho' its Elaſticity be but little alter'd in paſſing the Lungs, yet it loſes its vivifying Spirit, and is render'd effete.

In effect, a naked *Diver*, Dr. *Halley* aſſures us, without a Spunge, cannot remain above a couple of Minutes encloſed in Water; nor much longer with one, without Suffocating; nor, without long Practice, near ſo long; ordinary Perſons beginning to ſtifle in about half a Minute. Beſides that, if the Depth be conſiderable, the Preſſure of the Water in the Veſſels makes the Eyes Blood-ſhot, and frequently occaſions a Spitting of Blood.

Hence,

Hence, where there has been Occaſion to continue long at the Bottom, ſome have contriv'd double flexible Pipes, to circulate Air down into a Cavity encloſing the *Diver*, as with Armour, both to furniſh Air, and to bear off the Preſſure of the Water, and give leave to his Breaſt to dilate upon Inſpiration; The freſh Air being forced down one of the Pipes with Bellows, and returning by the other of 'em, not unlike to an Artery, and Vein.

But this Method is inpracticable when the Depth ſurpaſſes 3 Fathoms; the Water embracing the bare Limbs ſo cloſely as to obſtruct the Circulation of the Blood in 'em; and withal preſſing ſo ſtrongly on all the Junctures where the Armour is made tight with Leather; that if there be the leaſt Defect in any of them, the Water ruſhes in, and inſtantly fills the whole Engine, to the great Danger of the *Diver's* Life.

The DIVING-*Bell*, is a Machine contriv'd to remedy all theſe Inconveniencies. In this the *Diver* is ſafely convey'd to any reaſonable Depth, and may ſtay more or leſs Time under Water, as the Bell is greater or leſs.

'Tis moſt conveniently made in Form of a truncated Cone, the ſmaller Baſe being cloſed, and the larger open. It is to be pois'd with Lead, and ſo ſuſpended, that the Veſſel may ſink full of Air, with its open Baſis downward, and as near as may be in a Situation parallel to the Horizon, ſo as to cloſe with the Surface of the Water all at once.

Under this Couvercle the *Diver* ſitting, ſinks down with the included Air into the Depth deſired: And if the Cavity of the Veſſel may contain a Tun of Water, a ſingle Man may remain a full Hour, without much Inconvenience, at 5 or 6 Fathoms deep.

But the lower you go, ſtill, the included Air contracts itſelf, according to the Weight of the Water that compreſſes it; So as at 33 Foot deep, the *Bell* becomes half full of Water; the Preſſure of the incumbent Water being then equal to that of the Atmoſphere: And at all other Depths the Space occupied by the compreſſed Air in the upper Part of the *Bell* will be to the under Part of its Capacity fill'd with Water as 33 Feet to the Depth of the Surface of Water in the *Bell* below the common Surface thereof. And this condenſed Air being taken in with the Breath ſoon inſinuates it ſelf into all the Cavities of the Body, and has no ill Effect, provided the *Bell* be permitted to deſcend ſo ſlowly as to allow Time for that Purpoſe.

One Inconvenience that attends it, is found in the Ears, within which there are Cavities which open only outwards, and that by Pores ſo ſmall as not to give Admiſſion even to the Air it ſelf, unleſs they be dilated, and diſtended by a conſiderable Force. Hence, on the firſt Deſcent of the *Bell*, a Preſſure begins to be felt on each Ear, which, by Degrees, grows painful, till, the Force overcoming the Obſtacle, what conſtringe theſe Pores, yields to the Preſſure, and letting ſome condenſed Air ſlip in, preſently Eaſe enſues. The *Bell* deſcending lower, the Pain is renewed, and again eaſed in the ſame Manner.

But the greateſt Inconvenience of this Engine, is, that the Water entring it, contracts the Bulk of Air into ſo ſmall a Compaſs, that it ſoon heats, and becomes unfit for Reſpiration: So that there is a Neceſſity for its being drawn up to recruit it; beſides the uncomfortable Abiding of the *Diver* almoſt cover'd with Water.

To obviate theſe Difficulties of the *Diving-Bell*, Dr. *Halley*, to whom we owe the preceding Account, contriv'd ſome further Apparatus, whereby not only to recruit and refreſh the Air from Time to Time, but alſo to keep the Water wholly out of it at any Depth: which he effected after the following Manner:

His *Diving-Bell* was of Wood about 60 Cubic Feet in its Concavity, coated externally with Lead ſo heavy that it would ſink empty; a particular Weight being diſtributed about its Bottom, to make it deſcend perpendicularly, and no otherwiſe. In the Top was fix'd a Glaſs like a Window, to let in Light from above; with a Cock, to let out the hot Air: And below, about a Yard under the *Bell*, was a Stage ſuſpended from it by three Ropes, each charg'd with an hundred Weight, to keep it ſteady.

To ſupply Air to this *Bell* when under Water, he had a couple of Barrels, holding 36 Gallons a-piece, caſed with Lead, ſo as to ſink empty, each having a Bung-hole at Bottom, to let in the Water as they deſcended, and let it out again, as they were drawn up again. In the Top of the Barrels was another Hole, to which was fix'd a leathern Pipe, or Hoſe, long enough to hang below the Bung-hole; being kept down by a Weight appended. So that the Air driven to the upper Part of the Barrel by the Encroachment of the Water, in the Deſcent, could not eſcape up this Pipe, unleſs the lower End were lifted up.

Theſe Air-Barrels were fitted with Tackle, to make 'em riſe and fall alternately, like two Buckets; being directed in their Deſcent by Lines faſten'd to the under Edge of the *Bell*: So that they came readily to the Hand of a Man plac'd on the Stage, to receive 'em; and who taking up the Ends of the Pipes, aſſoon as they came above the Surface of the Water in the Barrels, all the Air included in the upper Part thereof was blown forcibly into the *Bell*; the Water taking its Place.

One Barrel thus receiv'd, and emptied; upon a Signal given, it was drawn up, and at the ſame time the other let down: By which alternate Succeſſion freſh Air was furniſh'd ſo plentifully, that the Learned Doctor himſelf was one of five, who were all together in 9 or 10 Fathoms deep of Water for above an Hour and a half, without the leaſt Inconvenience; the whole Cavity of the Bell being perfectly dry.

All the Precaution he obſerved, was to be let down gradually about 12 Foot at a Time, and then to ſtop, and drive out the Water that had enter'd by taking in 4 or 5 Barrels of freſh Air before he deſcended further. And being arrived at the Depth intended, he let out as much of the hot Air that had been breath'd, as each Barrel would repleniſh with cold, by means of the Cock at the Top of the Bell; thro' whoſe Aperture, tho' very ſmall, the Air would ruſh with ſo much Violence, as to make the Surface of the Sea boil.

Thus, he found, any thing could be done that was required to be done underneath. And by taking off the Stage, he could, for a Space as wide as the Circuit of the Bell, lay the Bottom of the Sea ſo far dry as not to be over Shoes therein. Beſides, that by the Glaſs Window ſo much Light was tranſmitted, that, when the Sea was clear, and eſpecially when the Sun ſhone, he could ſee perfectly well to write, or read, much more to faſten, or lay hold of any thing under him that was to be taken up. And by the Return of the Air Barrels he often ſent up Orders written with an Iron Pen on a Plate of Lead, directing how he would be mov'd from Place to Place.

At other times, when the Water was troubled and thick, it would be as dark as Night below; But in ſuch Caſes he was able to keep a Candle burning in the *Bell*.

The ſame Author intimates, that by an additional Contrivance, he has found it practicable for a *Diver* to go out of the *Bell* to a good Diſtance from it; the Air being convey'd to him in a continued Stream by ſmall flexible Pipes, which ſerve him as a Clew to direct him back again to the *Bell*. So that there ſeems little further wanting to the Perfection of *Diving*.

Yet, the famous *Corn. Drebell*, had an Expedient in ſome reſpects ſuperior even to this; if what is related of it, be true. He contrived not only a Veſſel to be row'd under Water, but alſo a Liquor to be carried in the Veſſel, which ſupplied the Place of freſh Air.

The Veſſel was made for King *James* I; carrying 12 Rowers, beſide the Paſſengers. It was tried in the River *Thames*, and one of the Perſons in that ſubmarine Navigation, then living, told it one from whom Mr. *Boyle* had the Relation.

As to the Liquor, Mr. *Boyle* aſſures us, he diſcover'd by a Phyſician, who married *Drebell's* Daughter, that it was us'd from Time to Time, when the Air in the ſubmarine Boat was clogg'd by the Breath of the Company, and unfitted for Reſpiration: At which Time, by unſtopping the Veſſel full of this Liquor, he could ſpeedily reſtore to the troubled Air ſuch a Proportion of vital Parts, as would make it ſerve again a good while. The Secret of this Liquor *Drebell* would never diſcloſe to above one Perſon, who himſelf aſſured Mr. *Boyle* what it was. *Boyl. Exp. Phyſ. Mech. of the Spring of the Air.*

DIVISIBILITY, a paſſive Power, or Property in Quantity, whereby it becomes ſeparable into Parts; either actually, or at leaſt mentally. See QUANTITY, and MATTER.

The School-men define *Diviſibility*, *Capacitas Coextenſionis cum pluribus*, a Capacity of Coextending with ſeveral Things: Thus, a Staff 4 Foot long is *diviſible*, becauſe it may be coextended with 4 Feet, or 48 Inches, *&c.*

This, the Peripateticks, and *Carteſians*, univerſally hold an Affection, or Property of all Matter, or Body: The *Carteſians*, as holding the Eſſence of Matter to conſiſt in Extenſion; For every Part, or Corpuſcle of the Body being extended, has Parts without Parts, and conſequently is *diviſible*. See EXTENSION.

The *Epicureans*, again, hold *Diviſibility* to agree to every Phyſical Continuum, as, without Parts adjacent to Parts, there can be no Continuity, and wherever there are Parts ſo adjacent, there muſt be *Diviſibility*. But they deny, that this Affection agrees to all Bodies: For the primary Corpuſcles, or Atoms they hold perfectly inſecable, and indiviſible. See ATOM.

The principal Argument they alledge, is, that from the *Diviſibility* of all Body, and of every aſſignable Particle of Body, even after any repeated Number of Diviſions, it follows, that the ſmalleſt Corpuſcle is infinitely *diviſible*, which with them is an Abſurdity. For a Body can only be divided into ſuch Parts as it actually contains. But to ſuppoſe infinite Parts

in the ſmalleſt Corpuſcle, ſay they, is to ſuppoſe it infinitely extended: For infinite Parts placed externally to each other, as the Parts of Bodies doubtleſs are, muſt make an infinite Extenſion.

They add, that there is a World of Difference between the *Diviſibility* of Phyſical, and Mathematical Quantities. For every Mathematical Quantity, or Dimenſion, they grant, may be increas'd and diminiſh'd infinitely: But Phyſical Quantity, neither the one nor the other.

An Artiſt, dividing a continued Body, arrives at certain minute Parts, beyond which he cannot go; which we may call *Minima Artis*. In like manner Nature, which may begin where Art ends, will find Bounds; which we may call *Minima Naturæ*: And God, whoſe Power is infinite, beginning where Nature ends, may ſubdivide the *Minima Naturæ*, but he will at length come at certain Parts, to which there being no other Parts continuous, they cannot be taken away. Theſe minute Parts are Atoms.

All we can ſay to the Point, is, that on the one hand 'tis certain, every extended Corpuſcle muſt have two Sides, and conſequently is *diviſible*; for if it had not two Sides, it were not extended; and if it had no Extenſion, an Aſſemblage of divers ſuch Corpuſcles would not compoſe a Body. And on the other hand, the infinite *Diviſibility* ſuppoſes an Infinity of Parts in the minuteſt Corpuſcle: whence it follows, that there is no Body, how ſmall ſoever, but may furniſh as many Surfaces, or Parts, as the whole Globe of the Earth can; nay, and infinitely more; which, to ſay no worſe, is a violent Paradox.

The infinite *Diviſibility* of Mathematical Quantity is thus prov'd, and illuſtrated by the Mathematicians: Suppoſe a Line AD (*Tab. Geometry Fig.* 35.) perpendicular to BF, and another, as GH, at a ſmall Diſtance from A, alſo perpendicular to the ſame Line; with the Centres CCC, &c. and Diſtances CA, CA, &c. deſcribe Circles cutting the Line GH in the Points e, e, &c. Now, the greater the Radius AC is, the leſs is the Part e G: But the Radius may be augmented in *Infinitum*, and therefore the Part e G may be diminiſh'd in the ſame manner; and yet it can never be reduced to nothing; becauſe the Circle can never coincide with the right Line BF. Conſequently, the Parts of any Magnitude may be diminiſh'd in *Infinitum*.

The chief Objections againſt the Doctrine, are: That an Infinite cannot be contain'd by a Finite; That it follows from a *Diviſibility in Infinitum*, either that all Bodies are equal, or, that one Infinite is greater than another: To which it is anſwer'd, that to an Infinite may be attributed the Properties of a finite, and determined Quantity. And who has ever proved, that there could not be an infinite Number of Parts infinitely ſmall in a finite Quantity; or that all Infinites are equal: The contrary is demonſtrated by Mathematicians in innumerable Inſtances. We are not here contending for the Poſſibility of an actual Diviſion in *Infinitum*, we only aſſert, that however ſmall a Body is, it may be ſtill farther divided; which we imagine may be call'd, a Diviſion in *Infinitum*, becauſe what has no Limits, is call'd infinite. See Infinite.

True, there are no ſuch Things as Parts infinitely ſmall; yet the Subtilty of the Particles of ſeveral Bodies is ſuch, that they very much ſurpaſs our Conception; and there are innumerable Inſtances in Nature of ſuch Parts actually ſeparated from one another.

Mr. *Boyle* gives us ſeveral Inſtances. He ſpeaks of a ſilken Thread 300 Yards long, that weigh'd but two Grains and an half. He meaſured Leaf-Gold, and found by weighing it, that 50 ſquare Inches weigh'd but one Grain: If the Length of an Inch be divided into 200 Parts, the Eye may diſtinguiſh 'em all; therefore there are in one ſquare Inch 40000 viſible Parts; and in one Grain of Gold there are 2000000 of ſuch Parts; which viſible Parts no one will deny to be farther *diviſible*.

A whole Ounce of Silver may be gilt with eight Grains of Gold, which is afterwards drawn into a Wire thirteen thouſand Foot long. See Gold, and Ductility.

In Odoriferous Bodies we can ſtill perceive a greater Subtilty of Parts, and even of ſuch actually ſeparated from one another; ſeveral Bodies ſcarce loſe any ſenſible Part of their Weight in a long Time, and yet continually fill a very large Space with odoriferous Particles. See Effluvia.

By Help of Microſcopes, ſuch Objects as would otherwiſe eſcape our Sight, appear very large: There are ſome ſmall Animals ſcarce viſible with the beſt Microſcopes; and yet theſe have all the Parts neceſſary for Life, as Blood, and other Liquors: How wonderful muſt the Subtility of ſuch Parts be, which make up ſuch Fluids! whence is deducible the following Theorem:

Any Particle of Matter, how ſmall ſoever, and any finite Space, how large ſoever, being given; it is poſſible for that ſmall Sand, or Particle of Matter, to be diffuſed through all that great Space, and fill it in ſuch manner, as that there ſhall be no Pore in it, whoſe Diameter ſhall exceed any given Line; as is demonſtrated by Dr. *Keil. Introduct. ad Ver. Phyſ.*

DIVISION, the Act of ſeparating a Whole into the Parts it contains. See Part.

If the whole be compoſed of Parts really diſtinct, call'd Integral Parts, the *Diviſion* made thereof is properly call'd *Partition*: As when a Houſe is *divided* into its Apartments. See Partition.

If the Whole be compoſed of Parts, call'd *Subjective*, that is, if the Whole be only one common Term, the Subjects comprized in the Extent whereof are the Parts, the *Diviſion* thereof is what we properly call *Diviſion*: Such is the *Diviſion* of a Genus into its Species, &c.

Division, in Phyſicks, or *Diviſio Continui*, is the Partition, or Separation of the Parts of a Quantity; whereby, what before was one, is now reduced into ſeveral. See Continuity.

This *Diviſion* is effected by means of Motion, without which there can be no Separation of any Continuum, or even Contiguum.

This Motion is perform'd divers Ways, by *Fraction*, *Sciſſion*, *Section*, *Fiſſion*, *Reſolution*, *Dilution*, *Maceration*, *Diſperſion*, *Effuſion*, *Diſtraction*, &c. See Divisibility.

Division, in Logic, is the ſeparating any Thing into divers Parts, or Idea's: or more ſtrictly, it is the Diſtribution of a Whole into all it contains. See Distribution.

The School-men define it a Diſcourſe, explaining a Thing by its Parts: In which it approaches near to the Nature of a *Definition*, whoſe Character is to define a Thing by its Parts. See Definition, Part, &c.

*Diviſion*, we have ſaid, is a Diſtribution of a Whole, &c. But the Whole has two Significations, whence two Kinds of *Diviſion*.

A *Whole* is properly what conſiſts of integral Parts; as the Human Body, which contains divers Members: And a Diſtribution into ſuch Parts, is properly call'd *Partition*: Such is that of a Houſe into its Parts. See Partition.

But there is another Sort of Whole, which is properly no other than an abſtract Idea common to more Things than one, as the *Univerſals*: Or a compound Idea comprehending the Subſtance, and its Accidents, or at leaſt moſt of its Accidents.

This Whole admits of a triple *Diviſion*. 1. When the Genus, or Kind, is *divided* by its Species, or Differences; as when Subſtance is *divided* into Body and Spirit; or into Extended, and Thinking. The ſecond, when any Thing is *divided* into ſeveral Claſſes, by oppoſite Accidents; as when the Stars are *divided* into thoſe which ſhine by their own Light, and thoſe that only reflect a borrowed Light. 3. When the Accidents themſelves are *divided* according to the Subjects in which they inhere; as when Goods are *divided* into thoſe of the Body, the Mind, and Fortune.

The Laws of *Diviſion* are, 1. That it be full, and adequate, that is, that the Members of the *Diviſion* entirely exhauſt the whole Thing *divided*: As when all Numbers are *divided* into *Equal*, and *Unequal*. 2. That the Members of the *Diviſion* be oppoſite; as *Equal*, and *Unequal*; *Corporeal*, and *Not Corporeal*; *Extended*, and *Thinking*. 3. That one Member of the *Diviſion* be not contain'd in another, ſo as the other may be affirm'd of it. Tho', in other reſpects, it might be included without any Fault in the *Diviſion*: Thus Extenſion, Geometrically conſider'd, may be *divided* into a *Line*, *Surface*, and *Solid*; tho' the Line be included in the Surface, and the Surface in the Solid. 4. The *Diviſion* not to be made into too many, or too general Parts. Laſtly, the Members, unleſs the Subject require it, not to be too unequal; as if the Univerſe were *divided* into Heaven, and Earth.

The Division *of a Word*, is a Diſcourſe explaining the Latitude, or Comprehenſion of a Word: The *Latitude*, when the Word is univerſal; as when the Genus is *divided* into Species, and Differences: The *Comprehenſion*, when the Word is ambiguous, as *Taurus*, Bull; which ſometimes denotes a Conſtellation, ſometimes a Beaſt, and ſometimes a Mountain.

The Division *of a Mode*, *divides* a Quality into its Degrees. The Philoſophers, after the Phyſicians, ſuppoſe 8 Degrees of every Quality: Hence when a Quality is ſaid to be in the 8th Degree, it marks, that it can be no further intended, or heighten'd. See Degree, and Quality.

Division, in Arithmetick, is the laſt of the four great Rules; being that whereby we find how often a leſs Quantity is contain'd in a greater; and the Overplus.

*Diviſion*, in Reality, is only a compendious Method of Subſtraction; Its Effect being to take a leſs Number from another greater, as often as poſſible; that is, as oft as 'tis contain'd therein. There are, therefore, three Numbers concern'd in *Diviſion*: 1. That given to be divided, call'd the

Di-

*Dividend*. 2. That whereby the Dividend is to be divided, call'd the *Diviſor*. 3. That which expreſſes how often the Diviſor is contain'd in the Dividend; or the Number reſulting from the *Diviſion* of the Dividend by the Diviſor, call'd the *Quotient*. See QUOTIENT, *&c.*

There are divers Ways of performing *Diviſion*, one call'd the *Engliſh*, another the *Flemiſh*, another the *Italian*, another the *Spaniſh*, another the *German*, and another the *Indian* Way, all equally good, and juſt, as finding the Quotient with the ſame Certainty, and only differing in the manner of arranging, and diſpoſing the Numbers.

We have likewiſe *Diviſion* in Integers; *Diviſion* in Fractions; and *Diviſion* in Species, or *Algebra*.

*Diviſion* is perform'd by ſeeking how often the Diviſor is contain'd in the Dividend; and when the latter conſiſts of a greater Number of Figures than the former, the Dividend muſt be taken into Parts, beginning from the left, and proceeding to the Right, and ſeeking how often the Diviſor is found in each of thoſe Parts. For Example, 'tis required to divide 6759 by 3: I firſt ſeek how oft 3 is contain'd in 6, *viz.* twice; then, how oft in 7, which is likewiſe twice, with one remaining. This 1, therefore, is joyn'd to the next Figure 5, which makes 15, and I ſeek how oft 3 in 15; and laſtly, how oft 3 in 9. All the Numbers expreſſing how oft 3 is contain'd in each of thoſe Parts, I write down according to the Order of the Parts of the Dividend, that is, from Left to Right, and ſeparate 'em from the Dividend it ſelf, by a Line, thus.

Diviſor. Dividend. Quotient.
3) 6759 (2253.

It appears, therefore, that 3 is contain'd 2253 times in 6759; or that 6759 being divided into 3, each Part will be 2253. If there be any Remainder, that is, if the Diviſor repeated a certain Number of times is not equal to the Dividend, what remains is wrote over the Diviſor fraction-wiſe. Thus, if inſtead of 6759 the Dividend were only 6758, the Quotient will be the ſame as in the former Caſe, except for the laſt Figure 8; for 3 being only contain'd twice in 8, the laſt Number in the Quotient will be 2; and as twice 3 is only 6, there remains 2 of the Dividend; which I write after the Quotient, with the Diviſor underneath it, and a Line to ſeparate the two; thus,

$$3)\ 6758\ (2252\ \tfrac{2}{3}$$

*Proof of* DIVISION.

*Diviſion* is proved by multiplying the Quotient by the Diviſor, or the Diviſor by the Quotient; and adding what remains of the *Diviſion*, if there be any thing. If the Sum be found equal to the Dividend, the Operation is juſt, otherwiſe there is a Miſtake.

DIVISION { *in Decimal Fractions.* / *in Vulgar Fractions.* / *of Proportion.* } See { DECIMAL. / FRACTION. / PROPORTION. }

DIVISION, in Species, or *Algebra*, is perform'd by reducing the Dividend and Diviſor into the Form of a Fraction: This Fraction being the Quotient.

Thus, if $ab$ were to be divided by $cd$, it muſt be placed thus, $\frac{ab}{cd}$, and that Fraction is the Quotient: tho' others chuſe to write it thus, $cd)\ ab$, or $cd:ab$, or $ab \div cd$, which laſt Mark $\div$ is the moſt common Character for *Diviſion*. See CHARACTER.

To perform the Work of *Diviſion* algebraically, theſe Rules are to be obſerved: 1. When the Dividend is equal to the Diviſor, the Quotient is Unity, and muſt be placed in the Quotient, becauſe every Thing contains it ſelf once.

2. When the Quotient is expreſs'd Fraction-wiſe (as in ſimple *Diviſion*) if the ſame Letters are found equally repeated in each Member of the Numerator, and Denominator; caſt away thoſe Letters, and the Remainder is the Quotient: Thus, $\frac{ab}{b}$ (*a*, and $\frac{abc}{ab}$ (*c*, &c.

3. When there are any Co-efficients, divide them as in common Arithmetic, and to the Quotients annex the Quantities expreſs'd by Letters: Thus, $\frac{360\ ab}{24\ b}$ (= 15 *a*.

4. The general Way of *Diviſion* of compound Quantities, is like the ordinary Way in common Arithmetic, reſpect being had to the Rules of Algebraic Addition, Subſtaction, and Multiplication; as alſo that like Signs give +, and unlike — in the Quotient: taking Care to divide every Part of the Dividend by its correſponding Diviſor, (that is, that whoſe Letters ſhew it of the ſame Kind with the other) to prevent a Fraction, which would otherwiſe ariſe: Thus,

$a+b)\ aa+ab-ca-cb\ (a-c.$

$$\begin{array}{r} aa+ab \\ \hline 0 \qquad 0-ca-cb \\ \qquad\quad -ca-cb \\ \hline \qquad\quad 0 \end{array}$$

That for the ſame reaſon like Signs giving a Poſitive, and unlike a Negative Quotient, do hold in *Diviſion*, as well as in Multiplication, is clear from conſidering the Nature of *Diviſion*; (which is only reſolving the Thing into its Parts) conſequently, ſince every Dividend is nothing elſe but the Product of the Diviſor, and Quotient multiplied by each other, the Quotient muſt conſiſt of ſuch Signs, which could produce the Dividend; therefore, if the Dividend be divided by a Quantity, that has a ſimilar Sign with it, the Quotient muſt be poſitive; if by a Quantity having a diſſimilar Sign, the Quotient muſt be negative. It may be a general Rule in compound *Diviſion* in Algebra, always to place ſuch a Letter in the Quotient, as will, when multiplied into the Diviſor, produce the Dividend, for that is always a Rect-angle under the Diviſor, and the Quotient: As for Example,

$zz-16)\ z^6-8z^4-124\,zz-64\ (z^4+8zz+4.$

$$\begin{array}{r} z^6-16z^4 \\ \hline 8z^4-124\,zz \\ 8z^4-128\,zz \\ \hline 4zz-64 \\ 4zz-64 \\ \hline 0 \end{array}$$

DIVISION *by* { *Nepairs Bones.* / *Logarithms.* } See { NEPAIRS *Bones.* / LOGARITHM. }

DIVISION, in Lines, or *Geometrical* DIVISION, is alſo call'd *Application*; the Deſign of which, when it is employ'd about the Conſtruction of plain Problems, is this, *viz.* a Rectangle being given; as alſo a right Line; to find another right Line, the Rectangle contain'd under which with the right Line given, ſhall be equal to the Rectangle firſt given: Such Effection, or Conſtruction is call'd the *Application* of a given Rectangle to a right Line given; and the right Line ariſing by ſuch Application, is call'd the *Parabola*, or *Geometrical Quotient*.

This is found by the Rule of Three, by making, As the Line given: is to one Side of the Rect-angle :: ſo is the other Side: to the Line ſought. Not unlike to which is *des Cartes*'s Way of working *Diviſion* in Lines, by Scale, and Compaſs: Thus ſuppoſe $ac$ (=6) were to be divided by $ad$ (=3) make any Angle at Pleaſure, and therein ſet off firſt $ad$ (=3) the Diviſor, and then on the ſame Leg $au$ = to Unity: Then on the other Leg of the Angle ſet $ac$ (=6) the Dividend, and joyn $dc$, and to it, through $u$, draw $ub$ parallel to $dc$, which ſhall cut off $ab$ the Quotient ſought; for as $ad:au::ac:ab$; that is, as the Diviſor: is to Unity :: ſo is the Dividend: to the Quotient; on which Reaſon depends all *Diviſion*.

DIVISION, in Muſic, the dividing of the Interval of an Octave into a Number of leſſer Intervals. See OCTAVE, and SYSTEM.

The 4th, and 5th, each of 'em, divide, or meaſure the Octave perfectly, tho' differently. When the 5th is below, and ſerves as a Baſe to the 4th, the *Diviſion* is call'd *Harmonical*; When the 4th is below, the *Diviſion* is call'd *Authentic*. See SCALE. See alſo CONCINNOUS.

DIVISION, in War, is a Batallion, or other Body of Forces in March.

The Lieutenant commanded the firſt *Diviſion* of Muſqueteers; and the ſecond Lieutenant, the ſecond *Diviſion*.

DIVISION, in Sea-Language, the third Part of a Naval Army, or Fleet, or of one of the Squadrons thereof, under the Command of ſome General Officer.

Naval Battals are uſually rang'd in three Lines, according to their three *Diviſions*.

DIVISOR, is the dividing Number; or that which ſhews how many Parts the Dividend is to be divided into. See DIVIDEND, *&c.*

DIVORCE, a Breach, or Diſſolution of the Bond of Marriage. See MARRIAGE.

In our Law *Divorce* is of two Kinds: The one, *a Vinculo Matrimonii*; which alone is properly *Divorce*: The other, *a Menſa & Thoro*; a Separation from Bed and Board.

The Woman divorced *a Vinculo Matrimonii*, receives all again that ſhe brought with her: The other has a ſuitable ſeparate Maintenance allow'd her out of her Husband's Effects.

The firſt only happens through ſome eſſential Impediment, as Conſanguinity or Affinity within the Degrees forbidden, precontract, Impotency, Adultery, *&c.* Of which Impediments the Canon Law allows fourteen, comprehended in theſe Verſes:

*Error, Conditio, Votum, Cognatio, Crimen,*
*Cultus, Diſparitas, Vis, Ordo, Ligamen, Honeſtas,*
*Si ſis affinis, ſi forte coire nequibis,*
*Si parochi & duplicis deſit præſentia Teſtis,*
*Raptave ſit Mulier, nec parti reddita tutæ.*

*Divorce* is a Spiritual Judgment, and, therefore, is paſs'd in the Spiritual Court. Under the old Law, the Woman *divorced* was to have of her Husband a Writing, as St. *Jerom* and *Joſephus* teſtify, to this Effect: *I promiſe, that hereafter I will lay no Claim to thee*; which was call'd a *Bill of Divorce*.

Di-

*Divorce* was allow'd of in great Latitude both among the *Pagans* and *Jews*. At *Rome*, Barrenneſs, Oldneſs, Diſeaſe, Madneſs, and Baniſhment, were the ordinary Cauſes of *Divorce*. *Carvilius*, 500, or 600 Year after the Building of *Rome*, was the firſt who put away his Wife becauſe ſhe was barren.

*Juſtinian* afterwards added Impotence, a Vow of Chaſtity, and the Profeſſion of a Monaſtic Life, as valid Reaſons of *Divorce*.

Among the *Jews*, Uglineſs, old Age, or ill Humour in a Wife, were ſufficient Reaſons for giving her a Bill of *Divorce*. Even the Man's own Pleaſure, or his repenting of his Match, were admitted as good Reaſons.

Some hold, that *Jeſus Chriſt* allow'd of *Divorce* in the ſingle Caſe of Adultery. But we take it for a Miſtake: *Divorce* is no where permitted in the New Teſtament for Adultery; but only a Separation. See *Matth.* XIX. 9. *Mark* X. 11. *Paul* 1. *Cor.* X. 39. See alſo the Council of *Florence*; at the End, after the Queſtions propoſed to the *Greeks*. *Tertull. de Monogam.* C. 9. and 10. *Auguſtin. de Bono Conjugio*, & *de Adult. Conjug.* See alſo what we have deliver'd under the Article ADULTERY.

Pope *Innocent* I. in his Decretal to *Exuperus*, declares ſuch as contract a new Marriage after *Divorce*, Adulterers; as well as the Perſons they marry withal. The Occaſion of this Decree was, that ſuch Marriages were then allow'd of by the *Roman* Laws. There is an Exception, however, in the Caſe of Marriage between two Heathens, which the Decrees allow to be diſſolved after the Converſion of one of the Parties. And St. *Paul* ſays the ſame, 1. *Cor.* VII. 15. Yet even in this Caſe, 1. The Marriage is not immediately diſſolv'd by the Converſion of one of the Parties, but they may ſtill live together, and even on ſome Occaſions ought to do ſo. Nor is it even diſſolv'd by the Separation of the infidel Party; for if ſhe be afterwards converted, he is obliged to take back his Wife: as *Innocent* himſelf decides it *L.* IV. *Decret. de Divort. C. Gaudemus.* But the Marriage is diſſolved by a ſecond Marriage of the converted Party with another Perſon.

2. Tho' the Party converted to the Faith, may, the Minute of his Converſion, legally ſeparate himſelf, and contract with another; a Liberty the *Chriſtian* Law allows him; as in Juſtice he is not deem'd to owe any Thing to an Infidel; yet Charity frequently forbids ſuch *Divorce* and Separation: As, *e. gr.* if the Infidel conſent to live with him, and not moleſt him in his Religion; if his Faith be not at all in Danger; if there be any Hopes of converting her; or of gaining the Children; if the Separation would prove a Scandal to the Heathens, and render Chriſtianity odious, &c. See St. *Paul* 1. *Cor.* VII. 13, 14. St. *Auguſtin* L. I. *de adult. Conjug. ad Pollent.*

The 4th Council of *Toledo* decrees, that in a Country where Chriſtianity is the prevailing Religion, the Infidel Party muſt be advertized to become Chriſtian, which if ſhe refuſe, the Marriage to be diſſolv'd.

The Council of *Trent* prohibits *Divorce* on any Occaſion whatever. The Papal Diſpenſations, however, are a *Salvo* for this Piece of Rigor.

In England *Divorces* can only be had by Conſent of Parliament. *Milton* has an expreſs Treatiſe of the Doctrine and Diſcipline of *Divorce*, where he maintains, that *Divorce* ought to be permitted for a mere Incompatibility of Humors.

DIURESIS, from διά, *per*, through, and ῥέω, *fluo*, to flow; is us'd to expreſs that Separation which is made of the Urine by the Kidneys: whence *Diuretic*. See DIURETICKS.

DIURETICKS, in Medicine, are ſuch Remedies as provoke, or promote the Diſcharge of Urine. See URINE.

Such is Water drank plentifully, white Wine drank in a Morning; Alcali Salts of all Kinds; Sea-Salt, *Sal Gemmæ*, Nitre, Borax, Alumn, Tartar, Ammoniac, Whey, ſour Milk, Lemmon Juice, &c.

Aqueous Liquors are generally *Diuretic*, eſpecially if mix'd with Salt, and drunk cold. Fermented Liquors are the leaſt *Diuretic* of all; and the leſs as they are the fatter. Sharp thin ſour Wines, *Rheniſh*, &c. as alſo acid Spirits of Vinegar, Salt, Sulphur, Alumn, Vitriol, &c. Aſparagus, bitter Almonds, Smallage, Eryngium, Eupatorium, Saſſafraſs, &c. do the ſame.

DIURNAL, in Aſtronomy, ſomething relating to the *Day*: In Oppoſition to *Nocturnal*, which regards the *Night*. See DAY, and NIGHT.

DIURNAL *Circle*, is an immoveable Circle, in which any Star, or Point in the Surface of the mundane Sphere, moves by a *Diurnal* Motion. See CIRCLE.

Thus, if a right Line be conceiv'd to be continued from the Centre of a Star, perpendicular to the Axis of the World, as far as the Surface of the Sphere of the World; it will deſcribe a *Diurnal Circle* thereon, in making one Revolution about its Axis.

DIURNAL *Arch*, is the Arch, or Number of Degrees, that the Sun, Moon, or Stars deſcribe between their Riſing, and Setting.

DIURNAL *Motion* of a Planet is ſo many Degrees and Minutes, &c. as any Planet moves in 24 Hours. See MOTION.

The Motion of the Earth about its Axis (in the Copernican Syſtem) is call'd its *Diurnal Motion*, which cauſes the Viciſſitudes of Days and Nights.

The DIURNAL *Motion* of the Earth is its Rotation round its Axis, the Space whereof conſtitutes the Natural *Day*. See DAY.

The *Diurnal Rotation* of the Earth is now paſt all Diſpute. See EARTH.

DIURNAL is alſo us'd in ſpeaking of what belongs to the *Nycthemeron*, or Natural Day of 24 Hours, in which Senſe it ſtands oppoſed to *Annual*, *Menſtrual*, &c. as *Diurnal Motion*, *Diurnal Rotation*, &c.

The *Diurnal* Phænomena of the heavenly Bodies are ſolv'd from the *Diurnal* Revolution of the Earth; that is, from one Revolution of the Earth round its own Axis in 24 Hours. To illuſtrate this: Suppoſe the Circle PRTH, (*Tab. Aſtronomy Fig.* 13.) to denote the Earth; C the Centre of the Earth, through which its Axis is conceiv'd to paſs, a-round which, its *Diurnal* Revolution is perform'd: B denotes any Place on the Earth; the Line EW the viſible Horizon of the Place; E the Eaſt Point of the ſaid Horizon, W the Weſt: the Circle a b c d e f the Circumference of the Heavens; the Circle S the Sun in the Heavens, the Semi-Circle PRT, the enlighten'd Hemiſphere of the Earth, or that Half of it, oppoſite to the Sun; and laſtly, the Semi-Circle PHT the darken'd Hemiſphere of the Earth.

Now, the Earth ſuppoſed in this Situation, and moving round its Axis towards the Sun; it is evident, the Place P of the Earth, will then juſt begin to be enlighten'd by the Sun, and ſo the Sun will appear there to be juſt *riſing*, or aſcending the Horizon at E the Eaſt Point of it. The Earth being moved round its own Axis, ſo as the Place P of the Earth, which afore was under the Point a in the Heavens, is now under the Point b; it is evident, the Horizon of the ſaid Place P, will be now ſo ſituated, as that the Sun will appear to a Spectator at P, as deſcended conſiderably above E the Eaſt End of the Horizon. And while by the Revolution of the Earth round its Axis, the Place P paſſes from under the Point b in the Heavens, to the Point c, the Horizon of the Place P will continually ſink lower and lower in reſpect of the Sun, and ſo the Sun will appear to aſcend higher and higher, till P is come under c, where the Sun will appear in its greateſt Height above the Horizon for that Day; and ſo it will be *Noon*, or *Mid-Day*, at the Place P. The Earth moving on, as the Place P paſſes from under c to d, the Weſt Point of its Horizon will aſcend higher and higher, and ſo the Sun will appear more and more to deſcend, as is repreſented by the Horizon at the Point of the Earth under d. The Place P being carried by the *Diurnal* Revolution of the Earth from under d to under e, the Sun will then appear juſt on W, the Weſt Point of the Horizon, and ſo will appear to be juſt *ſetting*. The Place P being come under f, it will be then *Mid-night* there. Laſtly, the Place P being come round again under a, it will be there *Sun-Riſing* again. The ſame holds good as to any other of the Celeſtial Lights, and the Earth; as is obvious from the Figure: the Circle repreſenting the Sun being taken to denote any other Star, Planet, &c.

It remains to obſerve, that whereas by the *Diurnal* Revolution of the Earth, all the ſeveral Celeſtial Lights ſeem to move in the Heavens from Eaſt to Weſt, hence this ſeeming *Diurnal* Motion of the Celeſtial Lights is call'd their *common Motion*, as being common to all of them. Beſides which all the Celeſtial Lights, but the Sun, have a proper Motion; from which ariſe their proper Phænomena: As for the proper Phænomena of the Sun, they likewiſe ſeem to ariſe from the proper Motion of the Sun; but are really produc'd by another Motion, which the Earth has, and whereby it moves round the Sun once every Year, whence it is call'd the *Annual Motion of the Earth*. See SUN.

DIURNARY, *Diurnarius*, an Officer in the *Greek* Empire, who wrote down in a Book for that Purpoſe, whatever the Prince did, order'd, regulated, &c. every Day. See the 8th Law of the *Theodoſian* Code, *de Cohort.*

DIVUS, DIVA, in Antiquity, Names attributed to Men and Women, who had been deified, or placed in the Number of the Gods. See GOD, DEIFICATION, &c.

Hence it is, that on Medals ſtruck for the Conſecration of an Emperor, or Empreſs, they give 'em the Title of *Divus*, or *Diva*: For Example, DIVUS JULIUS. DIVO ANTONINO PIO. DIVO PIO. DIVO CLAUDIO. DIVA FAUSTINA AUG. &c.

DIZZINESS. See VERTIGO.

DOCK, DOCKING, in Law, a Means, or Expedient for cutting off an Eſtate Tail in Lands, or Tenements; that the Owner may be enabled to ſell, give, or bequeath them. See TAIL.

To effect this, a feigned Writ of Entry *ſur Diſſeiſin in le Poſt* is brought of the Lands whereof he intends to *dock* the Entail; and in a feigned Declaration made thereon, 'tis pretended he was diſſeis'd by a Perſon, who by a feigned Fine, or Deed of Bargain, and Sale, is named, and ſuppoſed to be Tenant of the Lands.

The feigned Tenant, if it be a ſingle Recovery, is made to appear, and vouch the Bag-bearer of Writs for the *Cuſtos Brevium* in the Court of Common Pleas; who making Default, a Judgment is by ſuch Fiction of Law enter'd, that the Demandant ſhall recover, and have a Writ of Seiſin for the Poſſeſſion of the Lands demanded; and that the Tenant ſhall recover the Value of the Lands, againſt the Lands of the Vouchee Bag-bearer, a poor, unlanded, illiterate Perſon; which is feigned to be a Satisfaction to the Heir in Law; tho' he never be to expect it. See RECOVERY.

DOCK, in the Sea Language, a Pit, great Pond, or Creek by the Side of an Harbour, made convenient to work in, in order to build, or repair Ships.

This is of two Sorts: 1. A *Dry Dock*, where the Water is kept out by great Flood-gates, till the Ship is built, or repaired, but afterwards can be eaſily let into it again to float, and launch her.

2. A *Wet Dock*, is any Place in the Ouze, out of the Tide's Way, where a Ship may be haled in, and ſo *dock* herſelf, or ſink herſelf a Place to lie in.

DOCKET, a little Bill tied to Wares, or Goods, and directed to the Perſon, and Place they are to be ſent to.

DOCTOR, a Perſon who has paſs'd all the Degrees of a Faculty, and is impower'd to teach, or practiſe the ſame. See DEGREE.

The Title of *Doctor* was firſt created towards the Middle of the XIIth Century; to ſucceed to that of *Maſter*, which was become too common, and familiar. See MASTER.

The Eſtabliſhment of *Doctorates*, ſuch as now in Uſe among us, is ordinarily attributed to *Irnerius*, who himſelf drew up the Formulary. The firſt Ceremony of this Kind was perform'd at *Boulogne*, in the Perſon of *Bulgarus*, who began to profeſs the *Roman* Law, and on that Occaſion was ſolemnly promoted to the Doctorate, *i. e.* inſtall'd *Juris utriuſque Doctor*.

But the Cuſtom was ſoon borrow'd from the Faculty of Law to that of Theology: The firſt Inſtance whereof was given in the Univerſity of *Paris*, where *Peter Lombard*, and *Gilbert de la Porree*, the two top Divines of thoſe Days, were created *Doctors* in Theology, *Sacræ Theologiæ Doctores*.

*Spelman* gives another Turn to the Thing: He takes the Title *Doctor* not to have commenced till after the Publication of *Lombard*'s Sentences, about the Year 1140, and affirms, that ſuch as explain'd that Work to their Scholars, were the firſt that had the Appellation of *Doctors*.

Others go much higher, and hold *Bede* to have been the firſt *Doctor* at *Cambridge*, and *John de Beverley* at *Oxford*, which latter died in the Year 721. But *Spelman* will not allow *Doctor* to have been the Name of any Title, or Degree in *England*, till the Reign of King *John*, about the Year 1207.

To paſs *Doctor of Divinity* at *Oxford*, 'tis neceſſary the Candidate have been 4 Years Batchelor of Divinity. For *Doctor of Laws*, he muſt have been 7 Years in the Univerſity to commence Batchelor of Law; 5 Years after which he may be admitted *Doctor of Laws*. Otherwiſe, in three Years after taking the Degree of Maſter of Arts, he may take the Degree of Batchelor in Law; and in four Years more, that of *LL.D.* which ſame Method and Time are likewiſe required to paſs the Degree of *Doctor in Phyſic*.

At *Cambridge*, to take the Degree of *Doctor in Divinity*, 'tis required the Candidate have been 7 Years Batchelor of Divinity. Tho' in ſeveral of the Colleges, the taking of the Batchelor of Divinity's Degree is diſpenſed with, and they may go out *per Saltum*. To commence *Doctor in Laws*, the Candidate muſt have been five Years Batchelor of Law, or ſeven Years Maſter of Arts. To paſs *Doctor in Phyſic*, he muſt have been Batchelor in Phyſic 5 Years, or 7 Years Maſter of Arts.

DOCTOR *of the Law*, was a Title of Honour, or Dignity among the *Jews*.

The *Jews*, 'tis certain, had *Doctors* long before *Jeſus Chriſt*. The Inveſtiture, if we may ſo ſay, of this Order, was perform'd by putting a Key, and a Table-Book in their Hands; which is what ſome Authors imagine our Saviour had in View, *Luke* XI. 52. where, ſpeaking of the *Doctors of the Law*, he ſays, *Woe unto you* Doctors of the Law, *for you have taken away the Key of Knowledge; you enter'd not in your ſelves, and them that were enter'd, you hinder'd.*

The *Greek* Text of St. *Luke* calls 'em Νομικοὶ; and the Vulgate *Legisperiti*; agreeably to which our *Engliſh* Tranſlators call 'em *Lawyers*. But the *French* Verſion of *Docteurs de la Loi*, ſeems the moſt adequate. In effect, the Word *Legisperitus* is only found in St. *Luke*, and St. *Paul*, *Titus* III. 13. and Νόμικος in St. *Matthew*, XXII. 35. is render'd by the Vulgate, *Legis Doctor*; tho' the *Engliſh* Verſion ſtill retains, *Lawyer*.

Theſe *Jewiſh Doctors* are the ſame whom they otherwiſe call *Rabbins*. See RABBIN.

DOCTOR *of the Church*, a Title given to certain of the Fathers who have publiſh'd Books, and whoſe Doctrines and Opinions have been the moſt generally followed, and authorized by the Church.

We uſually reckon four *Doctors* of the *Greek* Church, and four of the *Latin*. The firſt are St. *Athanaſius*, St. *Baſil*, St. *Gregory Nazianzen*, and St. *Chryſoſtom*. The latter are St. *Ambroſe*, St. *Jerom*, St. *Auguſtin*, and *Gregory* the *Great*.

In the *Romiſh* Breviary there is a particular Office for the *Doctors*. It only differs from that of the Confeſſors by the Anthem of the *Magnificat*, and the Leſſons.

The Appellation *Doctor* has ſince been adjoyn'd to ſeveral ſpecific Epithets, expreſſing wherein the Merit of ſuch as the Schools own'd for their Maſters, conſiſted.

Thus *Alexander Hales* is call'd the *Irrefragable Doctor*, and the *Fountain of Life*, as mention'd in *Poſſevinus*. *Thomas Aquinas* is call'd the *Angelical Doctor*; St. *Bonaventure* the *Seraphic Doctor*; *John Duns* Scotus, the *Subtile Doctor*; *Raimond Lully* the *Illuminated Doctor*; *Roger Bacon* the *Admirable Doctor*; *William Ocham* the *Singular Doctor*: *John Gerſon*, and *Card. Cuſa* the *Moſt Chriſtian Doctors*; *Dionyſius* the *Carthuſian*, the *Extatic Doctor*; and an Infinity of others to be met withal in Eccleſiaſtical Writers.

DOCTOR, διδάσκαλος, in the *Greek* Church, is a particular Officer, appointed to interpret Part of the Scriptures. He who interprets the Goſpels, is call'd *Doctor of the Goſpels*: He who interprets St. *Paul*'s Epiſtles, *Doctor of the Apoſtle*: He who interprets the Pſalms, *Doctor of the Pſalter*.

DOCUMENT, in Law, a Proof given of any Fact aſſerted; but chiefly with regard to ancient Matters.

Thus we ſay, The Antiquity of the Foundation of ſuch a Church is proved by a Number of authentic Titles and *Documents*.

DODECAEDRON, in Geometry, one of the regular Bodies, comprehended under twelve equal Sides each whereof is a Pentagon. See REGULAR *Body*.

Or a *Dodecaedron* may be conceiv'd to conſiſt of twelve Quinquangular Pyramids, whoſe Vertices, or Tops meet in the Centre of a Sphere conceiv'd to circumſcribe the Solid; conſequently they have their Baſes and Altitudes equal.

*To find the Solidity of the Dodecaedron*; find that of one of the Pyramids, and multiply it by the Number of Baſes, *viz.* 12, the Product is the Solidity of the whole Body. Or its Solidity is found by multiplying the Baſe into $\frac{1}{3}$ of its Diſtance from the Centre, 12 times: And to find this Diſtance, take the Diſtance of two parallel Faces: the Half is the Height. See SOLID, and SOLIDITY.

The Diameter of the Sphere being given, the Side of the *Dodecaedron* is found by this Theorem: *The Square of the Diameter of the Sphere is equal to the Rectangle under the Aggregate of the Sides of a Dodecaedron* and *Hexaedron* inſcribed in the ſame, and triple the Side of the *Dodecaedron*. Thus, if the Diameter of the Sphere be 1, the Side of the *Dodecaedron* inſcribed will be $(\sqrt{\frac{5}{3}} - \sqrt{\frac{1}{3}}) : 2$; Conſequently, that, is to this, as 2 to $(\sqrt{\frac{5}{3}} - \sqrt{\frac{1}{3}})$ and the Square of that, to the Square of this, as 4 to $5 - \sqrt{3}$. Therefore the Diameter of the Sphere is incommenſurable to the Side of an inſcribed *Dodecaedron* both in it ſelf, and its Power.

DODECAGON, a regular Polygon, or Figure with twelve equal Sides and Angles. See POLYGON.

Dials are ſometimes drawn on all the Sides of a *Dodecagon*. See DIAL.

In Fortification, a Place ſurrounded with twelve Baſtions, is call'd a *Dodecagon*: Such is *Palma Nova*, in *Friuli*, &c.

DODECATEMORY, in Aſtronomy, the 12th Part of a Circle. See CIRCLE, ARCH, &c.

The Term is chiefly applied to the twelve Parts of the Zodiac of the *Primum Mobile*, to diſtinguiſh 'em from the 12 Signs.

DODECATEMORY, is alſo a Denomination ſome Authors give to each of the twelve Signs of the Zodiac, by reaſon they contain a twelfth Part of the Zodiac a-piece. See SIGN.

DODONÆUS, DODONIAN, in Antiquity, an Epithet given to *Jupiter*, as adored, or worſhipp'd in the Temple of *Dodona*, in *Dodona*'s Grove, or Foreſt.

*Dodona*, whence the Appellation ariſes, is an ancient City of *Epirus*, celebrated on divers Accounts, as the *Foreſt of Dodona*, the *Oracle of Dodona*, and the *Fountain of Dodona*,

*Dodona's Foreſt*, was a Wood, or Grove of Oaks, all conſecrated to *Jupiter*. In this Wood was a Temple of that God, wherein was the moſt famous, and as 'tis ſaid, the moſt ancient Oracle of all *Greece*. See ORACLE.

Indeed, 'twas not in the Temple only, that Oracles were deliver'd; The Pidgeons that inhabited the Wood, are ſaid to have done the ſame.

The Origin, and Occaſion of this Fable, we have from *Herodotus*, who obſerves, it was founded on this, that Πελειάδες, which in the *Theſſalian* Language ſignifies a Pidgeon, does likewiſe ſignify a Witch, or Propheteſs. But what is more extraordinary, is, another Tradition among the Poets, as if the very Oaks of the *Foreſt of Dodona* ſpoke, and deliver'd Oracles.

This Fable is eaſily deduced from the former: The Pidgeons in the Oaks being ſuppoſed to ſpeak, 'twas no great Flight of a Poetical Fancy, to introduce the Trees themſelves ſpeaking, &c. See *Voſſius de Idolol.* L. I. 7. p. 27.

The *Fountain of Dodona*, was in the Temple of *Jupiter*. The ancient Naturaliſts aſſure us, it had a Property of rekindling Torches, &c. newly extinguiſh'd. This, no doubt, it did by means of the ſulphureous Fumes exhaling from it; as we ſtill find a Fountain in *Dauphine*, call'd the *Burning Fountain*, Do. 'Tis alſo ſaid, to have extinguiſh'd lighted Torches; which is no great Miracle, ſince plunging them into a Place where the Sulphur was too denſe, *i. e.* into the Water, muſt have that Effect.

DODRANS, in Antiquity, a Diviſion of the As. See As.

DOG, in Aſtronomy, a Name common to two Conſtellations, call'd the *Great*, and *Little Dog*; but among Aſtronomers, more uſually, *Canis Major*, & *Minor*. See CANIS *Major & Minor*.

DOG-*Draw*, in the Foreſt-Law, a manifeſt Deprehenſion of an Offender againſt Veniſon in a Foreſt; when he is found *drawing* after a Deer by the Scent of a Hound, led in his Hand.

There are four of theſe Offences noted by *Manwood*, viz. *Stable-Stand*, *Dog-draw*, *Back-bear*, and *Bloody hand*. See STABLE-*Stand*, &c.

DOG-*Days*, *Dies Caniculares*, are certain Days, in which the Dog-Star riſes, and ſets with the Sun; the Weather being exceſſive hot, and ſultry.

They begin about *July* 24th, and end about *Auguſt* 28th. See CANICULAR *Days*.

*Bite of a Mad* DOG. See HYDROPHOBIA.

DOGE, the chief Magiſtrate in the Republicks of *Venice*, and *Genoa*.

The Word properly ſignified *Duke*, being form'd from the Latin *Dux*; as *Dogate*, and *Dogado*, from *Ducatus*, Dutchy.

The *Dogate*, or Office and Dignity of *Doge*, is elective: At *Venice*, the *Doge* is elected for Life; at *Genoa*, only for two Years: He is addreſs'd under the Title of *Serenity*, which among the *Venetians* is ſuperior to that of Highneſs. See SERENITY.

The *Doge* is the Chief of the Council, and the Mouth of the Republic; he being always to anſwer for her. Yet the *Venetians* do not go into Mourning at his Death, as not being their Soveraign, but only their firſt Miniſter. In effect, the *Doge* of *Venice* is no more than the Fantom, or Shadow of the Majeſty of a Prince; all the Authority thereof being reſerv'd to the Republic. He only lends his Name to the Senate: The Power is diffuſed throughout the whole Body, tho' the Anſwers be all made in the Name of the *Doge*. If he give any Anſwers on his own Bottom, they muſt be very cautiouſly expreſs'd, and in general Terms, otherwiſe he is ſure to meet with a Reprimand. So that 'tis abſolutely neceſſary he be of an eaſy, pliable Diſpoſition.

Anciently, the *Doges* were Soveraigns; but Things are much alter'd; and at preſent, all the Prerogatives affected to the Quality of *Doge*, are theſe which follow. He gives Audience to Embaſſadors; but does not give 'em any Anſwer on his own Head, in Matters of any Importance: Only, he is allowed to anſwer as he judges good, to the Compliments they make to the Signory; ſuch Anſwers being of no Conſequence. The *Doge*, as being firſt Magiſtrate, is Head of all the Councils; and the Credentials which the Senate furniſhes its Miniſters in foreign Courts, are wrote in his Name; and yet he does not ſign 'em, but a Secretary of State ſigns them, and ſeals 'em with the Arms of the Republic. The Embaſſadors direct their Diſpatches to the *Doge*; and yet he may not open 'em, but in Preſence of the Councellors. The Money is ſtruck in the *Doge's* Name, but not with his Stamp, or Arms. All the Magiſtrates riſe, and ſalute the *Doge*, when he comes into Council; and the *Doge* riſes to none, but foreign Embaſſadors.

The *Doge* nominates to all the Benefices in the Church of St. *Mark*; He is Protector of the Monaſtery *delle Virgine*; and beſtows certain petty Offices of Uſhers of the Houſhold, call'd *Commanders* of the Palace. His Family is not under the Juriſdiction of the Maſter of the Ceremonies; and his Children may have Staff-Officers, and Gondoliers in Livery.

His Grandeur, at the ſame Time, is temper'd with Abundance of Things, which render it burdenſome. He may not go out of *Venice*, without Leave of the Councellors; and if he does go out, he is liable to receive Affronts, without being entitled to demand Satisfaction; and if any Diſorder ſhould happen where he was, it belongs to the *Podeſta*, as being inveſted with the public Authority, to compoſe it.

The Children, and Brothers of the *Doge*, are excluded from all the chief Offices of State. They may not receive any Benefice from the Court of *Rome*; but are allowed to accept of the Cardinalate, as being no Benefice, nor including any Juriſdiction. The *Doge* may not diveſt himſelf of his Dignity, for his Eaſe; and after his Death, his Conduct is examined by three Inquiſitors, and five Correctors, who ſift it with a deal of Severity.

DOGGER, a ſmall Ship, built after the *Dutch* Faſhion, with a narrow Stern, and commonly but one Maſt; us'd in fiſhing on the *Doggers* Bank. See FLOATING *Veſſel*.

DOGMA, a Maxim, Axiom, Tenet, ſettled Propoſition, or Principle; particularly in Matters of Religion, and Philoſophy.

Thus we ſay, the *Dogmata of Faith*: Such a *Dogma* was condemn'd by ſuch a Council. The *Dogmata* of the *Stoicks* were moſt of 'em Paradoxes. Speculative *Dogmata*, which do not lay any reſtraint on Men, appear to them more eſſential to Religion, than Virtues, which reſtrain, and confine 'em; nay, they often perſuade themſelves, that it is allowable to maintain thoſe *Dogmata*, at the Expence of the Virtues.

DOGMATICAL, originally ſignifies Inſtructive, Scientific, or ſomething relating to an Opinion, or Science.

In common Uſe, a *Dogmatical* Philoſopher is ſuch a one as aſſerts Things poſitively; in Oppoſition to a *Sceptic*, who doubts of every Thing.

And a *Dogmatical Phyſician*, he, who, on the Principles of the School Philoſophy, rejects all Medicinal Virtues not reducible to manifeſt Qualities. See DOGMATIST.

DOGMATICI, DOGMATISTS, a Sect of ancient Phyſicians, call'd alſo *Logici*, Logicians, from their uſing of the Rules of Logic in Subjects of their Profeſſion. See MEDICINE.

They laid down Definitions, and Diviſions, reducing Diſeaſes to certain *Genera*, thoſe *Genera* to Species, and furniſhing Remedies for 'em all; ſuppoſing Principles, drawing Conſequences, and applying thoſe Principles and Conſequences to the particular Diſeaſes under Conſideration. In which Senſe the *Dogmatiſts* ſtand contra-diſtinguiſh'd to *Empericks*, and *Methodiſts*. See EMPERICI, &c.

Others define *Dogmatiſts* to be thoſe who brought Phyſic into a Form, and Arrangement, like thoſe of other ſpeculative Sciences; defining, dividing, laying down Principles, and drawing Concluſions: And hence alſo the Appellation of *Logici*.

They alſo applied themſelves to ſeek the Cauſes of Diſeaſes, the Nature of Remedies, &c.

*Eriſiſtratus*, a famous *Dogmatiſt*, went ſo far, that not contented to diſſect Dogs, and other brute Animals, he begg'd condemn'd Criminals of the Magiſtrates, open'd them while alive, and ſearch'd in their Entrails. See PHYSICIANS.

DOLE, in the *Saxon* Tongue, ſignifies a Part, or Portion, moſt commonly, of a Meadow. The Word ſtill ſignifies a *Share*; a diſtributing, or dealing of Alms, or a liberal Gift made by a great Man to the People.

Hence alſo *Dole-Meadow*, is a Meadow wherein ſeveral Perſons have Shares.

DOLIMAN, a Kind of long Soutanne, wore by the Turks, hanging down to the Feet, with narrow Sleeves, button'd at the Wriſt.

The *Turks*, both Men and Women, wear Drawers next the Skin; over that a Shift, or Shirt; and over the Shirt a *Doliman*. In Summer it is Linnen, or Muſſelin; in Winter, Sattin, or Stuff.

DOLLAR, or DALLER, a Silver Coin nearly of the Value of the Piece of Eight, or *French* Crown. See COIN.

*Dollars* are coin'd in divers Parts of *Germany*, and *Holland*; and have their Diminutions, as *Semi-Dollars*, *Quarter-Dollars*, &c.

They are not all of the ſame Fineneſs, nor Weight. The *Dutch Dollars* are the moſt frequent. In the *Levant* they are call'd *Aſlani*, from the Impreſſion of a Lion thereon.

DOLPHIN, *Delphinus*, in Aſtronomy. See DELPHINUS.

DOM, or DON, a Title of Honour, originally *Spaniſh*, tho' us'd occaſionally in ſome other Countries. See TITLE.

It is equivalent to *Maſter*, *Sir*, or *Lord*, *Monſieur*, *Sieur*, *Mynheer*, &c. See SIR, MONSIEUR, &c.

*Gollut* in his *Memoires de Bourg.* L. V. C. 11. assures us, that the first, on whom the *Spaniards* conferr'd the Title, was *Dom Pelayo*; when, upon their being routed, and driven out by the *Sarazens*, at the Beginning of the VIIIth Century, they rallied again on the *Pyrenians*, and made him King. In *Portugal*, no body is allow'd to assume the Title of *Dom*, which is a Badge or Token of Nobility, without the King's Leave.

The Word is likewise us'd in *France* among some Orders of Religious, as the *Chartreux*, *Benedictins*, &c. The Reverend Father *Dom Calmet*, *Dom Alexis*, *Dom Balthasar*, &c. In the Plural they write *Doms*, with an *s*, in speaking of several RR PP. *Doms Claude du Ruble*, and *Jacques Douceur*.

It is form'd from the Latin *Dominus*; of which it is an Abbreviature. *Domnus* is found in divers Authors of the corrupter *Latin*. *Onuphrius* assures us, it was a Title first given the Pope alone; then to the Bishops, Abbots, and others, who held any Ecclesiastical Dignity, or were eminent for Virtue, and Religion. At length it was usurp'd by the mere Monks.

Some say, they declined the Title *Dominus* out of Humility, as belonging to God alone; and assuming that of *Domnus*, as expressing Inferiority, *quasi minor Dominus*. Indeed, the Appellation *Domnus* for *Dominus* appears very ancient, if we consider the Surname of *Julia*, Wife of the Emperor *Septimus Severus*, who is call'd on Medals, JVLIA DOMNA, for JVLIA DOMINA.

DOMAIN, the Inheritance, Estate, Habitation, or Possession of any one.

*Of how much Evil was Cause, not thy Conversion, but those rich* Domains. *Milton.*

*Menage* derives the Word from *Domanium*, wrote in the barbarous *Latin* for *Dominium*.

DOM-*Book*. See DOMES-*Day*.

DOME, or DOOM, by the *Saxons* call'd *Dom*, signifies Judgment, Sentence, Ordnance, or Decree.

The Homagers Oath in the Black-Book of *Hereford* ends thus: *So help me God at his Holy* Dome, *and by my Trowthe*.

DOME, in Architecture, a spherical Roof; or a Work of a Spherical Form rais'd over the Middle of a Building, as Church, Hall, Pavillion, Vestible, Stair-Case, &c. by Way of Crowning, or Acroter. See ROOF, and CROWNING.

*Domes* are the same with what the *Italians* call *Couppolas*; and we frequently *Cupola's*: The *Latins*, according to *Vitruvius*, *Tholi*. See CUPOLA.

They are usually made round; tho' we have Instances of square Ones; as those of the *Louvre*: and others, that are Polygons, as that in the Jesuites Church in the *Rue* St. *Anthoine* at *Paris*. They have usually Columns rang'd around their Out-sides, both by Way of Ornament, and to support the Vault.

A *Flat* DOME is that whose Sweep, or Contour, is less than a Hemisphere.

The Word is form'd from the Latin *Doma*, which among the Ancients signified a *Roof*, or *Open Porch*; as is observ'd by *Papias*. 'Tis frequent in the corrupt *Latin* Authors, who borrowed it from the *Greeks*, among whom *Trullus*, or *Trullum*, is a common Name for any round Building, such as the Palace of *Constantinople*, wherein was held the Council; thence call'd *in Trullo*. See TRULLUS.

DOME, in Chymistry, the arched Cover of a Reverberatory Furnace. See REVERBERATORY.

DOMES-*Day*, or DOOMS-*Day-Book*, denominated *Liber Judiciarius*, *vel Censualis Angliæ*, i. e. the Judicial Book, or Book of the Survey of *England*, is a most ancient Record made in the Time of *William* the *Conqueror*; upon a Survey, or Inquisition of the several Counties, Hundreds, Tithings, &c. Its Name is form'd from *Dom*, Doom, Judgment, Sentence; and *Day*, which has the same Force: So that *Dome-Day* is no more than a Reduplicative, sounding, *Judgment Judgment*.

The Stress, or Design of the Book, is to be a Register, by which Sentence may be given in the Tenures of Estates; and from which that noted Question, whether Lands be ancient Demesne, or not, is still decided. Its Contents are summ'd up in the following Verses.

*Quid deberent fisco, quæ, quanta Tributa,*
*Nomine quid Census, quæ Vectigalia, quantum*
*Quisque teneretur feodali solvere Jure.*
*Qui sunt Exempti, vel quos Angaria damnat,*
*Qui sunt vel Glebæ Servi, vel Conditionis,*
*Quove Manumissus Patrono Jure ligatur.*

This Book is still remaining in the Exchequer, fair and legible; consisting of two Volumes, a Greater, and a Less; the Greater comprehending all the Counties of *England*, except *Northumberland*, *Cumberland*, *Westmoreland*, *Durham*, and Part of *Lancashire*; which were never survey'd; And except *Essex*, *Suffolk*, and *Norfolk*, which are comprehended in the Lesser Volumn, which concludes with these Words: *Anno Millesimo Octogesimo Sexto ab Incarnatione Domini, vigesimo vero Regis Wilhelmi, facta est ista Descriptio non solum per hos tres Comitatus, sed etiam alios.*

It is call'd *Liber Judicialis*, by reason a just, and accurate Description of the whole Kingdom is contain'd therein; with the Value of the several Inheritances, &c.

It was begun by five Justices, assign'd for the Purpose in each County, in the Year 1081. and finish'd in 1086. *Cambden* calls it, *Guilielmi Librum Censualem*, King *William*'s Tax-Book.

Our Ancestors had many *Dome-Books*. We are told by *Ingulphus*, that King *Alfred* made a like Register, with that of *William* the *Conqueror*. It was begun upon that Prince's dividing his Kingdom into Counties, Hundreds, Tithings, &c. when an Inquisition being taken of the several Districts, it was digested into a Register, call'd *Domboc*, q. d. the Judgment-Book, and reposited in the Church of *Winchester*; whence it is also call'd the *Winchester Book*, and *Magna Rolla Winton*. And upon the Model of this Domboc it is, that the *Doom-Day* of the Conqueror was form'd.

That of King *Alfred* referr'd to the Time of King *Ethelred*.

And that of the *Conqueror*, to the Time of *Eduard* the *Confessor*: The Entries being thus made, *C. tenet Rex Guilielmus in Dominico, & valet*, &c. *ibi ducatæ*, &c. T. R. E. *valebat*; q. d. It was worth so much *Tempore Regis Eduardi*, in the Time of King *Eduard*.

There is a third *Dom-Boc*, or *Domes-Day-Book* in 4°. differing from the other in *Folio*, rather in Form, than Matter. It was made by order of the same Conqueror; and seems to be the more ancient of the two.

A fourth Book there is in the Exchequer, call'd *Domes-Day*; which, tho' a very large Volume, is only an Abridgment of the other two. It has Abundance of Pictures, and gilt Letters at the Beginning, which refer to the Time of *Eduard* the *Confessor*.

DOMESTIC, a Term of somewhat more extent than that of *Servant*; The latter only signifying such as serve for Wages, as Footmen, Lacqueys, Porters, &c. Whereas *Domestic* comprehends all who act under a Man, compose his Family, and live with him, or are supposed to live with him. Such are Secretaries, Chaplains, &c.

Sometimes, *Domestic* goes further, being applied to the Wife and Children.

DOMESTIC, *Domesticos*, Δομέσικος, in Antiquity, was a particular Officer in the Court of the Emperors of *Constantinople*.

*Fabrot* in his Glossary on *Theophilax Simocatta*, defines *Domestic*, in the general, to be any Person intrusted with the Management of Affairs of Importance; a Councellour *cujus fidei graviores alicujus Terræ, & Sollicitudinis committuntur*.

Others hold, that the *Greeks* call'd *Domestici* those who at *Rome* were call'd *Comites*; particularly, that they began to use the Name *Domesticus*, when that of Count was become a Name of Dignity, and ceas'd to be the Name of an Officer in the Prince's Family. See COUNT.

*Domestici*, therefore, were such as were in the Serviee of the Prince; and assisted him in the Administration of Affairs, both those of his Family, those of Justice, and of the Church.

The *Grand Domestic*, or *Megadomesticus*, call'd also by Way of Eminence the *Domesticus*, served at the Emperor's Table, in Quality of what we Occidentals call *Dapifer*. Others say, he was rather what we call *Majordomo*.

The *Domesticus Mensæ* did the Office of Grand Seneshal, or Steward.

The *Domesticus Rei Domesticæ* acted as Master of the Houshold.

*Domesticus Scholarum*, or *Legionum*, had the Command of the reserved Forces, call'd *Scholæ Palatinæ*, whose Office was to execute the immediate Orders of the Empire. See SCHOLA.

*Domesticus Murorum*, had the Superintendance of all the Fortifications.

*Domesticus Regionum*, that is, of the East and West, had the Care of public Affairs, much like our Attorney or Solicitor General.

*Domesticus Icanatorum*, or of the Military Cohorts.

There were divers other Officers of the Army, who bore the Name *Domesticus*, which signified no more than Commander, or Colonel. Thus, the *Domestic of the Legion*, call'd *Optimates*, was the Commander thereof. See LEGION.

*Domesticus Statorum*.

*Domesticus Chori*, or *Chantor*, whereof there were two in the Church of *Constantinople*; the one on the right Side of the Church, and the other on the left. They were also call'd *Protopsalptes*, ἀρχωδὸς. *Dom. Macri* distinguishes three Kinds of *Domestici* in the Church. *Domestic of the Patriarchal Clergy*, The *Domestic of the Imperial Clergy*, that is, the Master of the Empresses Chappel: And the *Domesticus Despinicus*, or of the Empress. There was another

Order

Order of *Domeſticks*, inferior to any of thoſe abovemention'd, call'd *Patriarchal Domeſticks*.

DOMESTICI was alſo a Body of Forces in the *Roman* Empire. *Pancirollus* takes 'em to have been the ſame with thoſe call'd *Protectores*; who had the chief Guard of the Emperor's Perſon, in a Degree above the *Pretorians*; and who under the Chriſtian Emperors had the Privilege to bear the Grand Standard of the Croſs.

They are ſuppoſed to have been 3500 before *Juſtinian*'s Time, who added 2000 more to the Number. They were divided into ſeveral Companies, or Bands, which the *Latins* call'd *Scholas*, ſome whereof are ſaid to have been inſtituted by *Gordian*. Some of 'em were Cavalry, and ſome Infantry. Their Commander was call'd *Comes Domeſticorum*. See COUNT.

DOMIFYING, *Domification*, in Aſtrology, the dividing or diſtributing the Heavens into twelve Houſes; to erect a Theme, or Horoſcope; by means of ſix great Circles, call'd *Circles of Poſition*. See HOROSCOPE.

There are divers Ways of *Domifying*, according to divers Authors. That of *Regiomontanus*, which is the moſt uſual, makes the Circles of Poſition paſs through the Interſections of the Meridian, and Horizon. Others make 'em paſs thro' the Poles of the World, or the Equator; and others through the Poles of the Zodiac.

DOMINATION, in Theology, the 4th Order of Angels, or bleſſed Spirits, in the Hierarchy; reckoning from the Seraphim. See HIERARCHY, and SERAPH.

DOMINICAL *Letter*, in Chronology, popularly call'd *Sunday-Letter*, one of the ſeven Letters of the Alphabet, A B C D E F G, us'd in Almanacks, Ephemerides, *&c.* to denote the Sundays throughout the Year. See SUNDAY.

The *Dominical Letters* were introduced into the Calendar by the Primitive Chriſtians, in lieu of the *Nundinal Letters* in the *Roman* Calendar. See LETTER.

The Word is form'd from *Dominica*, or *Dominicus Dies*, Lord's-Day, Sunday.

Theſe Letters, we have obſerved, are ſeven: And, that in a common Year, the ſame Letter ſhould mark all the Sundays, will eaſily appear; In as much as all the Sundays are ſeven Days a-part; and the ſame Letter only returns in every ſeventh Place.

But in Biſſextile, or Leap-Year, the Caſe is otherwiſe: For by means of the Intercalary Day, either the Letters muſt be thruſt out of their Places, for the whole Year afterwards, ſo, *e.gr.* as that the Letter, which anſwers to the firſt of *March*, ſhall likewiſe anſwer to the ſecond, *&c.* or elſe the Intercalary Day muſt be denoted by the ſame Letter as the preceeding one. This latter Expedient has been judg'd the better, and accordingly the Sundays after the intercalary Day have another *Dominical Letter*.

Hence, 1. As the common *Julian*, and *Gregorian* Year conſiſts of 365 Days, *i.e.* of 52 Weeks, and one Day. The Beginning of the Year, every common Year, goes backwards by one Day; thus, *e.gr.* if this Year the Beginning, or firſt Day fall on a Sunday, the next Year it will fall on Saturday, the next on Friday, *&c.* Conſequently, if A be the *Dominical Letter* of the preſent Year, G will be that of the next Year.

2. As the *Julian*, and *Gregorian* Biſſextile, or Leap-Year, conſiſts of 366 Days, *i.e.* 52 Weeks, and 2 Days, the Beginning of the next Year after Biſſextile goes back 2 Days. Whence, if in the Beginning of the Biſſextile Year, the *Dominical Letter* were A, that of the following Year will be F.

3. Since in Leap-Years the Intercalary Day falls on the 24th of *February*, in which Caſe the 23d, and 24th Days are denoted by the ſame Letter; After the 24th Day of *February* the *Dominical Letter* goes back by one Place: Thus, if in the Beginning of the Year the *Dominical Letter* be A, it will afterwards be G.

4. As every fourth Year is Biſſextile, or Leap-year, and as the Number of Letters is 7; The ſame Order of *Dominical Letters* only returns in 28 Years; which, without the Interruption of Biſſextiles, would return in 4 Years. See BISSEXTILE.

5. Hence the Invention of the Solar Cycle of 28 Years; upon the Expiration whereof the *Dominical Letters* are reſtored ſucceſſively to the ſame Days of the Month, or the ſame Order of the Letters returns. See CYCLE *of the Sun*.

*To find the* DOMINICAL *Letter of any given Year.*

Seek the Cycle of the Sun for that Year; as directed under CYCLE: And the *Dominical Letter* is found correſponding thereto. Where there are two; the propoſed Year is Biſſextile; and the firſt obtains to the 24th of *February*; and the laſt for the reſt of the Year.

By the Reformation of the Calendar under Pope *Gregory*, the Order of the *Dominical Letters* was again diſturbed in the *Gregorian* Year: For the Year 1582, which at the Beginning had G for its *Dominical Letter*; by the Retrenchment of 10 Days after the 4th of *October*, came to have C for its *Dominical Letter*; by which means the *Dominical Letter* of the ancient *Julian* Calendar is four Places before that of the *Gregorian*: The Letter A in the former anſwering to D in the latter.

DOMINICAL, in Church-Hiſtory. The Council of *Auxerre* held in 578, decrees, that Women communicate with their *Dominical*. Some Authors contend, that this *Dominical* was a linnen Cloth, wherein they receiv'd the Species; as not being allowed to receive 'em in the bare Hand. Others will have it a Kind of Veil, wherewith they cover'd the Head. The moſt probable Account is, that it was a Kind of linnen Cloth, or Handkerchief, wherein they receiv'd, and preſerv'd the Euchariſt in Times of Perſecution, to be taken on Occaſion.

DOMINICANS, an Order of Religious, call'd in ſome Places *Jacobins*, and in others, *Prædicants*, or *Preaching Fryars*. See JACOBINS, PRÆDICANTS, *&c.*

The *Dominicans* take their Name from their Founder *Dominic de Guſman*, a *Spaniſh* Gentleman, born in 1170, at *Calarvega*, in Old *Caſtile*. He was firſt Canon and Arch-Deacon of *Oſma*; and afterwards preach'd with a deal of Zeal, and Vehemence againſt the *Albigenſes* in *Languedoc*, where he laid the firſt Foundation of his Order. It was approv'd of in 1215, by *Innocent* III. and confirm'd in 1216, by a Bull of *Honorius* III. under the Rule of St. *Auguſtin*, and the Title of *Preaching Fryars*.

The firſt Convent was founded at *Tholouſe*, by the Biſhop thereof, and *Simon de Montfort*. Two Years afterwards they had another at *Paris* near the Biſhop's Houſe, and ſome time after, a third in the *Rue* St. *Jacques*, St. *James*'s Street, whence the Denomination of *Jacobins*.

St. *Dominic*, at firſt, only took the Habit of the Regular Canons, that is, a black Soutanne, and Rochet; But this he quitted in 1219, for that which they now wear, which, 'tis pretended, was ſhewn by the bleſſed Virgin herſelf to *Renaud* at *Orleans*.

This Order is diffuſed throughout the whole Earth. It has 45 Provinces under the General, who reſides at *Rome*; and 12 particular Congregations, or Reforms, govern'd by Vicars General.

They reckon three Popes of this Order, above 60 Cardinals, ſeveral Patriarchs, 150 Arch-Biſhops, and about 800 Biſhops. Beſide Maſters of the ſacred Palace, whoſe Office has been conſtantly diſcharg'd by a Religious of this Order, ever ſince St. *Dominic*, who held it under *Honorius* III. in 1218.

The *Dominicans* are alſo Inquiſitors in many Places. See INQUISITION.

The Dogma's of the *Dominicans* are uſually oppoſite to thoſe of the *Franciſcans*. See FRANCISCAN.

There are alſo Nuns, or Siſters of this Order, call'd in ſome Places, *Preaching Siſters*. Theſe are even more ancient than the Fryars; St. *Dominic* having founded a Society of Religious Maids, at *Prouilles*, ſome Years before the Inſtitution of his Order of Men, *viz.* in 1206.

There is alſo a *Third Order* of *Dominicans*, both for Men and Women. See THIRD *Order*.

DOMINIUM, DOMINION, or DOMAINE, in ancient Cuſtoms, is a Rent due to the Lord, where the Property is not his. With reſpect to Signory, he who pays Rent, has the *Dominium utile* of the Lands; and the Lord he pays it to the *Dominium directum*.

*Directum Dominium* is the Title alone of *Dominium*; And *Dominium utile*, the Profit redounding from it.

The Wife retains the *Dominium directum* of her Jointure, and the *Dominium utile* paſſes to her Husband.

DOMINUS, in ancient Times, being prefix'd to a Name, uſually denoted the Perſon to be either a Knight, or a Clergyman. Tho' the Title was ſometimes given to a Gentleman not dubb'd; eſpecially, if he were a Lord of a Manour. See DOM, SIR, and GENTLEMAN.

DONATION, a public Act, or Contract, whereby a Man transfers to another, either the Property, or the Uſe of the Whole, or a Part of his Effects.

A *Donation* to be valid, and compleat, ſuppoſes a Capacity both in the Donor, and the Donatory; and requires Conſent, Acceptance, Regiſtring, and Delivery.

DONATISTS, ancient Schiſmaticks in *Africa*, denominated from their Leader, *Donatus*.

They had their Origin in the Year 311; when, in the room of *Menſurius*, who died the preceeding Year, on his Return to *Rome*, *Cecilian* was elected, whom the People refuſed to acknowledge, and to whom they oppoſed *Majorinus*, who, accordingly, was ordain'd by *Donatus*, Biſhop of *Caſis nigris*. They were condemn'd in a Council held at *Rome*, two Years after their Separation, and afterwards in another at *Arles*, the Year following.

The Errors of the *Donatiſts*, beſide their Schiſm, were 1. That Baptiſm conferr'd out of the Church, that is, out of their Sect, was null. 2. That there was no Church but in *Africa*: All the reſt of the Churches they held as proſtitute, and

and fallen. *Donatus* ſeems likewiſe to have given into the Doctrine of the *Arians*, with whom he was cloſely allied; And accordingly, St. *Epiphanius*, *Theodoret*, and ſome others, accuſe the *Donatiſts* of *Arianiſm*. But St. *Auguſtin Ep.* 185. to Count *Boniface*, affirms, that the *Donatiſts*, in this Point, kept clear of the Errors of their Leader.

In 344, under the Empire of *Theodoſius* the *Great*, there aroſe a Schiſm among the *Donatiſts* themſelves, by which they were broke into two Parties. For *Parmenian*, their Biſhop, being dead, ſome elected *Primian*, and were call'd *Primianiſts*; and others, *Maximian*, call'd *Maximianiſts*. The *Donatiſts* had likewiſe other Appellations, as *Circumcelliones*, *Montenſes*, or *Mountaineers*, *Campites*, *Rupites*, &c.

They held three Councils, or *Conciliabules*; that of *Cirta* in *Numidia*, and two at *Carthage*. *Conſtantine* decreed Exile, and even Death, againſt the *Donatiſts*. *Conſtans*, and *Honorius*, made Laws for their Baniſhment: And *Theodoſius*, and *Honorius*, condemn'd 'em to grievous Mulcts.

DONATIVE, *Donativum*; a Preſent made any Perſon, call'd alſo GRATUITY.

The *Romans* made large *Donatives* to their Soldiers. *Julia Pia*, Wife of the Emperor *Severus*, is call'd on certain Medals, MATER CASTRORVM, by reaſon of the Care ſhe took of the Soldiery, by Interpoſing for the Augmentation of their *Donatives*, &c.

The *Donative* was properly the Gift made the Forces in the Army; as the *Congiarius* was that made the People.

*Salmaſius* in his Notes on *Lampridius*, in the Life of *Heliogabalus*, mentioning a *Donative* that Emperor gave of three Pieces of Gold *per* Head, obſerves, that this was the common, and legitimate Rate of a *Donative*. *Caſaubon* in his Notes on the Life of *Pertinax*, by *Capitolinus*, obſerves, that *Pertinax* made a Promiſe of three thouſand *Denarii* to each Soldier; which amounted to upwards of 97 Pounds Sterling. See COIN.

The ſame Author writes, that the legal *Donative* was 20000 *Denarii*; and that it was not cuſtomary to give leſs, eſpecially to the *Pretorian* Soldiers; that the Centurions had double, and the Tribunes, *&c.* more in Proportion.

DONATIVE, in the Cannon Law, a Benefice given, and collated to a Perſon, by the Founder, or Patron; without either Preſentation, Inſtitution, or Induction by the Ordinary. See BENEFICE.

If Chappels founded by Laymen, be not approv'd by the Dioceſan, and, as 'tis call'd, *ſpiritualized*, they are not accounted proper Benefices, neither can they be conferr'd by the Biſhop, but remain to the pious Diſpoſition of the Founders: So that the Founders, and their Heirs, may give ſuch Chappels without the Biſhop. *Gregorius de Beneficiis.* See CHAPPEL.

*Gwin* obſerves, that the King might of ancient Time found a free Chappel, and exempt it from the Juriſdiction of the Dioceſan. So may he by Letters Patents give Liberty to a common Perſon to found ſuch a Chappel, and make it *Donative* Not-preſentable. And the Chaplain, or Beneficiary, ſhall be deprivable by the Founder, or his Heir, and not by the Biſhop. And this ſeems to be the Original of *Donatives* in *England*.

All Biſhopricks in ancient Time were *Donative* by the King.

Again, where a Biſhop has the Gift of a Benefice, it is properly call'd a *Donative*, becauſe he cannot preſent to himſelf. See BENEFICE, PATRON, PRESENTATION, COLLATION, *&c.*

DONJON. See DUNGEON.

DONJON, in Fortification, is generally taken for a large Tower, or Redoubt of a Fortreſs, where the Garriſon may retreat in Caſe of Neceſſity, and capitulate with greater Advantage.

DONOR, in Law, he who gives Lands, or Tenements to another in Tail: And *Donee*, is he to whom the ſame are given. See DONATION, *&c.*

DOOR, in Architecture, an Aperture in a Wall, to give Entrance, and Exit in, and out of the Building, or an Apartment thereof. See HOUSE, BUILDING, APERTURE, *&c.*

It ought to be a Rule, that the *Doors* of a Houſe be as few in Number, and as moderate in Dimenſions, as poſſible: For, in a Word, all *Openings are Weakenings*. 2. That they do not approach too near the Angles of the Walls; It being a moſt glaring Solleciſm to weaken that Part, which muſt weaken all the reſt: A Precept, well recorded, but ill practiſed by the *Italians* themſelves, particularly at *Venice*. 3. That the *Doors*, if poſſible, be right over one another; that void may be over void, and full over full. 4. That, if poſſible, they be oppoſite to each other, ſo as that one may ſee from one End of the Houſe to another; which will not only be graceful, but alſo convenient; as it affords a Means of cooling the Houſe in Summer, by letting in Air; and of keeping out the Wind in Winter, which Way ſoever it ſit. 5. 'Tis not only Ornamental, but ſecure, to turn Arches over *Doors*; as it diſcharges 'em in great Meaſure of the ſuperincumbent Weight.

The Proportions of *Doors* are adjuſted by thoſe of a Man: In larger Buildings they muſt always be larger than in ſmaller; but in none ſhould they be leſs than 6 Foot high, to admit a Man of juſt Stature, erect; And as the Breadth of a Man, with his Arms placed a-kimbo, is nearly ſubduple his Height, the Width ſhould never be leſs than 3 Foot.

Some Architects give us theſe Dimenſions: In ſmall Buildings the Breadth of the *Door* 4 Foot, or 4 and a half; in middling Buildings, 5 or 6; in large Ones, 7 or 8: In Chambers of the firſt, 3 and a half, $3\frac{3}{4}$, or 4; of the ſecond, 4, or 4 and a half; and of the third, 5, or 6; in Churches, 7 or 8; in Gates, 9, 10, or 12: hence their Height is eaſy determin'd; except for the Gates of Cities, which ſhould only be $\frac{4}{5}$ of their Breadth.

'Tis an Obſervation of the excellent *Palladio*, that the principal *Door*, or Entrance of a Houſe, muſt never be regulated by any certain Dimenſions, but by the Dignity of the Perſon that is to live in it: yet, to exceed rather in the more, than the leſs, is a Mark of Generoſity; and may be excuſed with ſome noble Emblem, or Inſcription, as that of the Conte *di Bevilacqua* over his large Gate at *Verona*, where had been committed a like Diſproportion, *Patet Janua, Cor magis.*

DORIC, in Grammar. The *Doric Dialect* is one of the five *Dialects*, or Manners of ſpeaking which obtain'd among the *Greeks*. See DIALECT.

It was firſt us'd by the *Lacedemonians*, and particularly thoſe of *Argos*; thence it paſs'd into *Epirus*, *Lybia*, *Sicily*, the Iſlands of *Rhodes*, and *Crete*.

In this *Dialect*, *Archimedes* and *Theocritus* wrote, who were both of *Syracuſe*; and likewiſe *Pindar*. Port Royal.

In Strictneſs, however, we ſhould rather define *Doric* the Manner of ſpeaking peculiar to the *Dorians*, after their Receſs near *Parnaſſus*, and *Aſopus*; and which afterwards came to obtain among the *Lacedemonians*, &c.

Some even diſtinguiſh between the *Lacedemonian*, and *Doric*; but in Reality they were the ſame; ſetting aſide a few Particularities in the Language of the *Lacedemonians*; as is ſhewn by *Rulandus* in his excellent Treatiſe, *de Lingua Græca, ejuſque Dialectis*, L. V.

Beſide the Authors already mention'd to have wrote in the *Doric* Dialect, we might add *Architas* of *Tarentum*, *Bion*, *Callinus*, *Simonides*, *Bacchylides*, *Cypſelas*, *Alcman*, and *Sophron*.

Moſt of the Medals of the Greater *Greece* and *Sicily* favour of the ſame Dialect in their Inſcriptions; Witneſs, AMBRAKIΩTAN, ΑΠΟΛΛΩΝΙΑΤΑΝ, ΑΧΕΡΟΝΤΑΝ, ΑΧΤΡΙΤΑΝ, ΗΡΑΚΛΕΩΤΑΝ, ΤΡΑΧΙΝΙΩΝ ΘΕΡΜΙΤΑΝ, ΚΑΤΑΟΝΙΑΤΑΝ, ΚΟΠΙΑΤΑΝ, ΤΑΤΡΟΜΕΝΙΤΑΝ, *&c.* Which ſhews the Countries wherein the *Doric* Dialect was uſed.

The general Rules of this Dialect are thus given by the *Port Royaliſts*.

*D'ᵓΗτα, d'ω grand, d'ε d'ο & d'ᵓ la fait le Dore.*
*D'ει fait ῆτα. d'ᵓ, ω, & d'ω αυ fait Encore.*
*Oſte ι de l Infini: & pour le Singulier*
*Se ſert au Feminin du Nombre Plurier.*

But they are much better explain'd in the IVth Book of *Rulandus*; where he even notes the minuter Differences of the Dialects of *Sicily*, *Crete*, *Tarentum*, *Rhodes*, *Lacedemon*, *Laconia*, *Macedonia*, and *Theſſaly*.

DORIC, in Architecture, is the ſecond of the five Orders; being that between the *Tuſcan* and *Ionic*. See ORDER.

The *Doric* Order ſeems the moſt natural, and beſt proportioned of all the Orders; all its Parts being founded on the natural Poſition of ſolid Bodies. Accordingly, the *Doric* is the firſt, and moſt ancient of the Orders of Architecture, and is what gave the firſt Idea of regular Building. See ARCHITECTURE.

At its firſt Invention it was more ſimple than at preſent; and when in After-times they came to adorn, and enrich it more, the Appellation *Doric* was reſtrain'd to this richer Manner, and the primitive ſimple Manner they call'd by a new Name the *Tuſcan* Order. See TUSCAN.

The Tradition is, that *Dorus*, King of *Achaia*, having firſt built a Temple of this Order at *Argos*, which he dedicated to *Juno*, occaſion'd it to be call'd *Doric*: Tho' others derive its Name, I know not how, from its being invented, or us'd by the *Dorians*.

Some time after its Invention they reduced it to the Proportions, Strength, and Beauty of the Body of a Man. Hence, as the Foot of a Man was judg'd the 6th Part of his Height, they made the *Doric* Column, including the Capital, 6 Diameters high, *i.e.* ſix times as high as thick. Afterwards they added another Diameter to the Height, and made it 7 Diameters; with which Augmentation it might be ſaid to be nearer the Proportion of a Man: The human Foot, at leaſt in our Days, not being a 6th, but nearly a 7th Part of the Body. See COLUMN.

The Characters of the *Doric* Order, as now manag'd, are, the Height of its Column, which is 8 Diameters; its Frize, which is enrich'd with Triglyphs, Drops, and Metopes; its Capital, which is without Volutes; and its admitting of Cymatiums. See TRIGLYPH, CYMATIUM, *&c.*

The Ancients, we have already obſerv'd, had two *Doric* Orders: The firſt, which was the more Simple and Maſſive, they us'd chiefly in Temples; The ſecond, which was the more light and delicate, ſerv'd in Portico's, and Theatres.

*Vitruvius*, indeed, complains of the *Doric* as very troubleſome, and perplexing, on Account of the Triglyphs, and Metopes, ſo as ſcarce to be capable of being us'd, except in the Pycnoſtyle, by putting a Triglyph between each two Columns, or in the Araeoſtyle, by putting 3 Triglyphs between each two Columns. See INTERCOLUMINATION.

The Moderns, on Account of its Solidity, uſe it in large ſtrong Buildings; as in the Gates of Cities, and Citadels, the Outſides of Churches, and other maſſy Works, where Delicacy of Ornaments would be unſuitable.

The moſt conſiderable ancient Monument of this Order, is the Theatre of *Marcellus*, at *Rome*, wherein the Capital, the Height of the Frize, and its Projecture, are much ſmaller than in the modern Architecture.

*Vignola* adjuſts the Proportions of the *Doric* Order thus: The whole Height of the Order, without Pedeſtal, he divides into 20 Parts, or Models; one of which he allows the Baſe, 14 to the Shaft, or Fuſt, one to the Capital, and 4 to the Entablature.

The particular Proportions, *&c.* of the ſeveral Parts, and Members, ſee under their reſpective Articles, SHAFT, CAPITAL, ENTABLATURE, PEDESTAL, BASE, ARCHITRAVE, FRIZE, and CORNICH.

DORIC *Cymatium*. See CYMATIUM.

DORIC, in Muſic. The *Doric Mode* is the firſt of the authentic Modes of the Ancients.

Its Character is to be ſevere, temper'd with Gravity, and Joy; And it is proper for Occaſions of Religion, and War. It begins with *D*, *Sol*, *Re*. See MODE.

*Plato* admires the Muſic of the *Doric* Mode; and judges it proper, to preſerve good Manners, as being Maſculine. And on this Account allows of it in his Common-wealth.

The Ancients had likewiſe their *Subdoric Mode*, which was one of their Plagal Modes. Its Character was to be very grave, and ſolemn. It began with *G Ut*, a Diateſſaron lower than the *Doric* Mode.

DORMANT, is the Herald's Term for the Poſture of a Lyon born *ſleeping*, in a Coat of Arms.

DORMANT-*Tree*, in Building, a Name the Workmen frequently give to a great Beam lying a-croſs the Houſe; uſually call'd a *Summer*. See SUMMER.

DORMANT-*Tyles*. See TYLE.

DORMER, or DORMANT, in Architecture, is a Window made in the Roof of an Houſe, or above the Entablature; being rais'd upon the Rafters. The *Latins* call it *Lucerna*, whence the French *Lucerne*, and our *Luthern*.

There are divers Kinds; Square, Round, *&c.* See LUTHERN.

DORMITORY, a Gallery in Convents, or Religious Houſes, divided into ſeveral Cells, wherein the Religious lodge, or lye, *&c.* See CONVENT.

'Tis deem'd a Crime in a Religious to lye out of the *Dormitory*. By Chap. XXII. of *The Rule* of St. *Benedict*, it appears, that the ancient *Dormitories* were not divided into Cells, but were a Kind of large open Halls, fill'd with Beds, as in our Hoſpitals. See CELL.

The Word is form'd from the Latin *Dormitorium*, of *dormire*, to ſleep.

DORSAL *Nerves*. See NERVES.

DORSALIS *Tabes*. See CONSUMPTION, and PHTHYSIS.

DORSI *Latiſſimus*, in Anatomy. See LATISSIMUS *Dorſi*.

DORSI *Longiſſimus*, a Muſcle common to the Loins, and the Back: It riſes from the upper Part of the *Os ſacrum*, *Ilium*, and firſt *Vertebræ* of the Loins, and in its Beginning is confounded, if not the ſame with the *Sacro Lumbalis*. It runs upwards along the whole Tract of the Back, and is connected to every tranſverſe Proceſs in its Way; ending ſometimes in the firſt *Vertebra* of the Back, and ſometimes in the firſt of the Neck.

DORSIFEROUS, or DORSIPAROUS *Plants*, are thoſe of the Capillary Kind; which are without Stem, and bear their Seeds on the Backſide of their Leaves. See CAPILLARY.

DORSUM, in Anatomy, is the hind Part of the *Thorax*; tho' commonly tranſlated, *Back*.

It includes the Loins. See LOINS.

DORSUM *Manus*, and *Pedis*, is the Outſide of the Hand, and Foot; Or that Part oppoſite to the *Palm*, and *Sole*. See PALM, and SOLE; as alſo HAND, and FOOT.

DORSUM *Naſi*, is the *Ridge* of the Noſe, which runs the whole Length of that Part. See NOSE.

In thoſe we call *Roman* Noſes, the *Dorſum* is higher, and more prominent about the Middle, than in the reſt; which Part is call'd the *Spina*. See SPINA.

DOSE, in Pharmacy, *&c.* the Quantity of any Medicine to be taken at one Time: Or the Weight, or Meaſure of the ſeveral Ingredients in a medicinal Compoſition. See MEDICINE.

A Secret in Phyſic is nothing, unleſs the *Doſe* be known. Authors, and Diſpenſatories, that deſcribe the ſame Remedy, frequently the *Doſe* is different; which occaſions a great Difference in its Effect.

The Word is form'd from the *Greek* Δόσις, which ſignifies the ſame Thing.

Dr. *Cockburn* has given us an Eſſay towards determining the *Doſes* of purgative Medicines, on Mechanical Principles. See PURGATIVE.

DOSITHEANS, an ancient Sect among the *Samaritans*. See SAMARITAN.

Mention is made in *Origen*, *Epiphanius*, *Jerom*, and divers other *Greek* and *Latin* Fathers, of one *Doſitheus*, the Chief of a Faction among the *Samaritans*; But the Learned are not at all agreed, as to the Time wherein he lived. St. *Jerom* in his Dialogue againſt the *Luciferians*, makes him before our Saviour; wherein he is followed by *Druſius*, who in his Anſwer to *Serrarius*, places him about the Time of *Senaccherib*, King of *Aſſyria*. But *Scaliger* will have him ſince our Saviour's Time. And, in effect, *Origen* intimates him to have been contemporary with the Apoſtles; in obſerving, that he endeavour'd to perſuade the *Samaritans*, that he was the *Meſſiah* foretold by *Moſes*.

He had many Followers; and his Sect was ſtill ſubſiſting at *Alexandria* in the Time of the Patriarch *Eulogius*; as appears from a Decree of that Patriarch, publiſh'd by *Photius*. In that Decree *Eulogius* accuſes *Doſitheus* of injuriouſly treating the ancient Patriarchs, and Prophets; and attributing to himſelf the Spirit of Prophecy. He makes him cotemporary with *Simon Magus*; and accuſes him of corrupting the Pentateuch in divers Places, and of compoſing ſeveral Books, directly contrary to the Law of God.

Arch-Biſhop *Uſher* takes *Doſitheus* for the Author of all the Changes made in the *Samaritan* Pentateuch; which he proves by the Authority of *Eulogius*. But all we can juſtly gather from the Teſtimony of *Eulogius*, is, that *Doſitheus* corrupted the *Samaritan* Copies ſince us'd in that Sect. But that Corruption did not paſs into all the Copies of the *Samaritan* Pentateuch, now in Uſe among us, which vary but little from the *Jewiſh* Pentateuch. See PENTATEUCH.

And in this Senſe we are to underſtand that Paſſage in a *Samaritan* Chronicle, where it is ſaid, that *Douſis*, i. e. *Doſitheus*, altered ſeveral Things in the Law of *Moſes*.

The Author of that Chronicle, who was a *Samaritan* by Religion, adds, that their High-prieſt ſent ſeveral *Samaritans*, to ſeize *Douſis*, and his corrupted Copy of the Pentateuch. *Epiphanius* takes him to have been a *Jew* by Birth, and to have abandon'd the *Jewiſh* Party for that of the *Samaritans*.

He imagines him likewiſe to have been the Author of the Sect of *Sadducees*; which is inconſiſtent with his being later than our Saviour. And yet the Jeſuit *Serrarius* agrees to make *Doſitheus* the Maſter of *Sadoc*, from whom the *Sadducees* are derived. See SADDUCEES.

*Tertullian*, making mention of the ſame *Doſitheus*, obſerves, that he was the firſt who dared to reject the Authority of the Prophets, by denying their Inſpiration. But he makes that a Crime peculiar to this Sectary, which, in Reality, is common to the whole Sect, who have never allowed any but the five Books of *Moſes* for divine.

DOUBLE *Plea*, in Law, is that wherein the Defendant alledges for himſelf two ſeveral Matters in Bar of the Action; whereof, either is ſufficient to effect his Deſire, in debarring the Plaintiff. See PLEA.

This is not admitted in the Common Law: for which reaſon it is to be well obſerv'd, when a Plea is *double*, and when not; for if a Man alledge ſeveral Matters, one nothing dependant on another, the Plea is accounted *Double*; But if they be mutually depending on each other, then it is accounted but *Single*.

DOUBLE *Quarrel*, *Duplex Querela*, a Complaint made by a Clerk, or other, to the Arch-Biſhop of the Province, againſt an inferior Ordinary, for delaying Juſtice in ſome Eccleſiaſtical Cauſe; as to give Sentence, inſtitute a Clerk preſented, or the like.

Its Denomination ſeems owing to this, that it is commonly made both againſt the Judge, and him, at whoſe Suit Juſtice is delay'd.

DOUBLE *Ratio*. See DUPLE.

DOUBLE *Veſſel*, in Chymiſtry, is when the Neck of one Bolt-Head, or Matraſs, is put, and well luted into the Neck of another.

It is alſo call'd a *Pellican*. See PELLICAN, and MATRASS.

Of

Of these there are divers Kinds and Forms, us'd in the Circulation of Spirits, in order to their being exalted, and refin'd as high as can be. See CIRCULATION, COHOBATION, RECTIFICATION, &c.

DOUBLE *Letter*, in Grammar, a Letter, which has the Force and Effect of two; as the Hebrew *Tſade*, which is equivalent to the Latin *T* and *S*; the *Greek* Ξ, &c. See LETTER.

These Letters are evidently equal to two; And even, when we pronounce the Latin *Axis*, or the Engliſh *Axillary*, we give the *x* the ſame Sound, as if it were wrote with two *cc*, *Accis*, *Accillary*, or a *c* and *s*, *Acſis*, *Acſillary*. *Double Letters*, along with the σ, or *s*, include one of the Mutes.

The *Greeks* have three Ζ Ξ Ψ: The *Latins* only two *X*, and Z. And moſt of the modern Languages have the ſame.

DOUBLE { *Deſcant*, in Muſic. / *Feaſt*. / *Fever*. / *Tenaille*. / *Time*, in Muſic. } See { DESCANT. / FEAST. / FEVER. / TENAILLE. / TIME. }

Inſtances of DOUBLE *Children*, DOUBLE *Cats*, DOUBLE *Pears*, &c. are frequent in the *Philoſoph. Tranſact.* and elſewhere. See MONSTER.

Sir *John Floyer*, in the ſame *Tranſactions*, giving an Account of a *Double Turkey*, furniſhes ſome Reflections on the Production of *Double* Animals in general. Two Turkies, he relates, were taken out of an Egg of the common Size, when the reſt were well hatch'd, which grew together by the Fleſh of the Breaſt-Bone; but in all other Parts were diſtinct. They ſeem'd leſs than the ordinary Size, as wanting Bulk, Nutriment, and Room for their Growth; which latter, too, was apparently the Occaſion of their Coheſion.

For, having two diſtinct Cavities in their Bodies, and two Hearts; they muſt have aroſe from two Cicatricula's; and conſequently, the Egg had two Yolks; which is no uncommon Accident. He has a dried *Double Chicken*, he aſſures us, that, tho' it has four Legs, four Wings, &c. it has but one Cavity in the Body, one Heart, and one Head; and conſequently, was produced from one Cicatricula.

So, *Paræus* mentions a *Double Infant*, with only one Heart: In which Caſe, the Original, or *Stamen* of the Infant was one, and the Veſſels regular; only, the Nerves, and Arteries towards the Extremities dividing into more Branches than ordinary, produced *double* Parts.

The ſame is the Caſe in the *Double Flowers* of Plants, occaſion'd by the Richneſs of the Soil. So it is in the Eggs of Quadrupeds, &c.

There are, therefore, two Reaſons of *Duplicity* in Embryo's: 1. The Conjoyning, or Connexion of two perfect Animals; And, 2. An extraordinary Diviſion, and Ramification of the Original Veſſels, Nerves, Arteries, &c.

DOUBLE-*Fichee*, in Heraldry. A Croſs is denominated *Double-Fichee*, when the Extremities are pointed at each Angle; that is, each Extremity has two Points: In Contradiſtinction to *Fichee*, where the Extremity is ſharpen'd away to one Point. See CROSS.

*Leigh* calls it *Double Pitchy*, which ſeems to be a Miſtake. *Gibbon* expreſſes it by an *Octagonal Croſs*, the two Points whereof at each Extremity are parted inwards by a ſmall Space of a Line. By which it is diſtinguiſh'd from the Croſs of *Malta*; the two Points whereof proceed from a third Point; or acute Angle between 'em.

DOUBLE *Point*, in the higher Geometry. When all the right Lines tending the ſame Way, with the infinite Leg of any Curve, do cut it in one only Point, (as happens in the Ordinates of the *Carteſian*, and in the Cubical Parabola, and in the right Lines which are parallel to the Abſciſſes of Hyperboliſm-Hyperbola's, and Parabola's;) then you are to conceive, that thoſe right Lines paſs through two other Points of the Curve, placed (as I may ſay) at an infinite Diſtance. Which coincident Interſection, whether it be at a finite, or an infinite Diſtance, Sir *Iſaac Newton* calls the *Double Point*. See CURVE.

DOUBLINGS, in Heraldry, are the Linings of Robes, or Mantles of State; or of the Mantlings in Atchievements. See MANTLE, and FUR.

DOUBLING, in a Military Senſe, is the putting two Ranks, or Files of Soldiers, into one. See RANK, and FILE.

When the Word of Command is, *Double your Ranks*, then the ſecond, fourth, and ſixth Ranks are to march up into the firſt, third, and fifth; ſo that of ſix Ranks they make but three, leaving double the Interval there was between them before: But it is not ſo when they *double the half Files*, becauſe then three Ranks ſtand together, and the three others come up to *double* them; that is, the firſt, ſecond, and third, are *doubled* by the fourth, fifth, and ſixth; or on the contrary.

*Double your Files*, directs each other to march to that next to it on the Right, or Left, according to the Word of Command; In which Caſe the ſix Ranks are turned into twelve, the Men ſtanding twelve deep; the Diſtance between the Files being now *double* of what it was before.

DOUBLING *a Cape*, or *Point*, in Navigation, ſignifies the coming up with it, paſſing by it, and leaving it behind the Ship.

The *Portugueze* pretend to be the firſt that ever *doubled* the *Cape of good Hope*, under their Admiral *Vaſquez de Gama*: But we have Accounts in Hiſtory, particularly in *Herodotus*, of the *Egyptians*, *Carthagenians*, &c. having done the ſame long before them.

DOUBLON, DUBLOON, a *Spaniſh* Coin, being the *Double* of a Piſtole. See PISTOLE.

DOUBTING, the Act of Withholding a full Aſſent from any Propoſition; on Suſpicion, that we are not thoroughly appriz'd of the Merits thereof; Or from our not being able peremptorily to decide between the Reaſons for, and againſt it. See FAITH, LIBERTY, &c.

The *Scepticks*, and *Pyrrhonians*, *doubt* of every Thing: The Character of their Philoſophy is, not to allow any Thing for true; but to withhold the Aſſent, and keep the Mind free, and in Suſpence. See SCEPTICKS.

The *Epicureans* truſt their Senſes, and *doubt* of their Reaſon: Their leading Principle is, that our Senſes always tell Truth; That they are the firſt, and only Criterions of Truth; and that go ever ſo little from them, and that you come within the proper Province of *Doubting*. See EPICUREANS.

The *Carteſians*, on the contrary, of all Things bid us *doubt* our Senſes; They are perpetually inculcating the Deceitfulneſs of our Senſes; and we are to *doubt* of every one of their Reports, till they have been examined, and confirm'd by Reaſon. See CARTESIANS; as alſo TRUTH, FALLACY, &c.

DOUBTING, in Rhetoric, a Figure wherein the Orator appears ſome time fluctuating, and undetermined what to do, or ſay. *What ſhall I do? Shall I apply to thoſe I once neglected, or implore thoſe who now forſake me.*

*Tacitus* furniſhes us a famous Inſtance of *Doubting*, in thoſe Words of *Tiberius*, wrote to the Senate. *Quid ſcribam, P. S. aut quomodo ſcribam, aut quid omnino non ſcribam hoc Tempore, Dii me Deæque pejus perdant, quam perire quotidie ſentio, ſi ſcio.*

DOUCINE, in Architecture, a Moulding, or Ornament on the higheſt Part of the Cornice, in Form of a Wave, half convex, and half concave. See CORNICHE.

The *Doucine* is the ſame with a *Cymatium*, or *Gula*. See CYMATIUM, and GULA *Recta*, and *Inverſa*.

DOVE-*Tail*, in Carpentry, the ſtrongeſt of the Kinds of Jointings, or Aſſemblages; wherein the *Tenon*, or Piece of Wood that enters the other, goes widening to the Extreme, and ſo cannot be drawn out again, by reaſon the Tip, or Extreme is bigger than the Hole.

It has its Denomination from the Reſemblance the Tenon bears to a *Dove's* Tail.

The *French* call it *Queue d'Aronde*, Swallow's Tail; which Name the *Engliſh* themſelves retain in Fortification. See QUEUE *d'Aronde*.

DOVETAILING, in Architecture, is a Way of faſtening Boards, or Timbers together, by letting one Piece into another indentedly, with a *Dove-tail* Joint, or with a Joint in the Form of a *Dove's* Tail.

DOWAGER, *Dotiſſa*, (*q. d.* a Widow *endowed*, or that has a Jointure) a Title, or Addition applied to the Widows of Princes, Dukes, Earls, and Perſons of Honour only. *Queen Dowager*. See QUEEN.

DOWER, or DOWRY, by the *Latins* call'd *Dos*, is properly the Money, or Fortune, which the Wife brings her Huſband in Marriage, to have the Uſe of it, during her Marriage, towards ſupporting the Charge thereof. See MARRIAGE.

It is otherwiſe call'd *Maritagium*, Marriage Goods. See MARITAGIUM.

Among the *Germans* it was anciently cuſtomary for the Husband, to bring a *Dowry* to his Wife. *Romanis non in Uſu fuit Uxoribus* Dotes *retribuere*; *ideo Verbo genuino carent quo hoc dignoſcitur*; *& Rem ipſam in Germanorum Moribus Miratur Tacitus*: Dotem, *inquit*, *non Uxor Marito*, *ſed Uxori Maritus affert*. Spelman.

At preſent, in *Germany*, the Women of Quality have but very moderate Fortunes. For Inſtance, the Princeſſes of the Electoral Houſe of *Saxony*, have only 30000 Crowns: Thoſe of other Branches of the ſame Family, 20000 Florins: Thoſe of *Brunſwic*, and *Baden*, only 1500 Florins; beſides a Sum for Cloaths, Toys, and Equipages.

DOWER, is alſo us'd in a Monaſtic Senſe, for a Sum of Money given along with a Maid, upon entering her in ſome Religious Order.

In *France*, the *Dowry* of Perſons entering a Monaſtery, to make Profeſſion of a Religious Life, is limited by Law. That, *e. gr.* given upon entering a Monaſtery of *Carmelites*, *Urſelines*, and others, not regularly founded, but eſtabliſh'd ſince the Year 1600, by Letters Patents, muſt not exceed the

Sum

Sum of 8000 Livres, in Towns where Parliaments are held; nor 6000, in other Places.

Dower, by the Latins *Dotarium*, or *Doarium*, is alſo a Portion of Lands, or Tenements, which the Wife enjoys for Term of Life, from her Husband, in Caſe ſhe ſurvives him; and which at her Death, deſcends to their Children.

Among the *Goths*, the *Dower* was only the tenth Part of the Husband's Eſtate: Among the *Lombards*, a fourth; among the *Romans*, and *Sicilians*, a third: which is the Rate that ſtill obtains among us, and moſt other Nations.

Our Law-Book diſtinguiſh five Kinds of *Dower*: viz. *Dower per Legem communem*: *Dower per Conſuetudinem*: *Dower ex Aſſenſu Patris*: *Dower ad Oſtium Eccleſiæ*: And *Dower de la plus belle*.

Dower *by the common Law*, is a third Part of ſuch Lands, as the Husband was ſole ſeiz'd of in Fee, during the Marriage; which the Wife is to enjoy during her Life, and for which there lies a *Writ of Dower*.

Dower *by Cuſtom*, gives the Wife, in ſome Places, half her Husband's Lands, ſo long as ſhe lives ſingle; as in Gavelkind. And as Cuſtom may enlarge, ſo may it abridge *Dower*, and reſtrain it to a fourth Part.

In Dower *ex Aſſenſu Patris*; and *ad Oſtium Eccleſiæ*, the Wife may have ſo much *Dower*, as ſhall be aſſign'd, or agreed upon; but it ought not to exceed the third Part of the Husband's Lands. If this be done before Marriage, it is call'd a *Jointure*.

Dower *de la plus belle*. By this ſhe is endowed with the faireſt, and beſt Part of her Husband's Eſtate.

DOWNS, an Elevation of Stone, or Sand, which the Sea gathers, and forms along its Banks; and which ſerves it as a Barrier.

The Word is form'd from the French *Dune*, or the German *Duins*. *Charles de Viſch* in his *Compend. Chronolog. Exord. & Progreſſ. Abbat. Clariſſ. B. Mariæ, de* Dunis, ſays, *Vallem reperit Arenarum Collibus* (*quos Incolæ* Duynen *vocant*) *undique cinctam*.

Downs are particularly uſed for a famous Road for Ships, along the Eaſtern Coaſt of the County of *Kent*; from *Dover*, to the North Foreland.

This Road has excellent Anchorage, and is well defended by the Caſtles of *Sandwich*, *Deal*, and *Dover*.

Here it is, the *Engliſh* Fleets uſually meet. *The Fleet is yet in the* Downs: *Sail'd from the* Downs.

The Word is form'd from the French *Dune*, of the Celtic *Dun*, a Mountain, or Eminence.

DOXOLOGY, a Church Term, applied by the *Greeks* to the 14th Verſe of the ſecond Chapter of St. *Luke*, *Glory be to God on High*, &c. becauſe beginning with the *Greek* Word δόξα, *Glory*.

This they diſtinguiſh by the Name of *Great Doxology*: The *Gloria Patri*; *Glory be to the Father*, they call the *Leſs Doxology*, as beginning with the ſame Word δόξα. See Gloria *Patri*.

*Philoſtorgius*, *L.* III. *N.* 13. gives three Formula's of the *Leſſer Doxology*. The firſt is, *Glory be to the Father, and to the Son, and to the Holy Ghoſt*. The ſecond, *Glory be to the Father, by the Son, in the Holy Ghoſt*. And the third, *Glory be to the Father, in the Son, and the Holy Ghoſt*.

*Sozoman*, and *Nicephorus*, give a fourth, viz. *Glory be to the Father, and the Son, in the Holy Ghoſt*.

The firſt of theſe *Doxologies*, is that in common Uſe throughout the Weſtern Church. It was firſt inſtituted about the Year 350, by the Catholicks of *Antioch*, then call'd *Euſtathians*.

The three others were compoſed by the *Arians*: The ſecond was that of *Eunomius*, and *Eudoxus*, and which was approv'd by *Philoſtorgius*. The three were all made about the Year 341, in the Council of *Antioch*, when they firſt began to diſagree among themſelves: *Philoſtorgius* aſures us, that *Flavian*, afterward Patriarch of *Antioch*, was the Author of the firſt, or *Catholic Doxology*; but *Sozoman*, and *Theodoret*, ſay nothing of it; and *Philoſtorgius*, an *Arian* Author, ſcarce deſerves to be credited on his ſingle Word.

There were anciently very great Diſputes, and principally at *Antioch*, as to the Form of *Doxology*: That moſtly us'd among the Orthodox, was the ſame as ſtill obtains; the reſt were affected by the *Arians*, and other Antitrinitarians: Yet, St. *Baſil*, in his Book, *on the Holy Spirit*, defends the ſecond as orthodox, and legitimate, See Eustathian.

Some Authors write *Hymnology*, as ſynonymous with *Doxology*: But there is a Difference; *Hymnology* is applied to Pſalms, or the Recitation of Pſalms; and *Doxology* only to the little Verſe, *Glory be to the Father*, &c. repeated at the End of each Pſalm. See Hymnology.

DOZEIN. See Decennier.

DRACHM, DRACHMA, an ancient Silver Coin, uſed among the *Greeks*. See Coin.

The *Drachma* is ſuppoſed by moſt Authors to have been the ſame among the *Greeks*, with *Denarius*, or Penny, among the *Romans*, which was equivalent to four Seſterces. See Denarius.

Of this Opinion is *Budæus*, *de Aſſe*; who confirms it from the Authorities of *Pliny*, *Plutarch*, *Strabo*, and *Valerius Maximus*, with whom δραχμη is ſynonymous with *Denarius*.

But this is no ſtrong Conviction, that the two Monies were preciſely of the ſame Value: Thoſe Authors, in not treating expreſsly of Coins, might eaſily render the one by the other, provided there were no conſiderable Difference between 'em.

*Scaliger*, in his Diſſertation, *de Re Nummaria*, does not ſay abſolutely, that the *Denarius* and *Drachma* were the ſame Thing; but from a *Greek* Paſſage *of the Lawyer*, *C.* XXVI. *Mandati*, where the *Drachma* is ſaid to be compoſed of ſix *Oboli*, he concludes, that in the Age of *Severus*, at leaſt, the *Denarius* and *Drachma* were the ſame.

But *Agricola*, *de Menſ. & Ponder. L.* IV. proves from *Pliny*, *Celſus*, and *Scribonius Largus*, that the *Denarius* only contain'd 7 Ounces; and from *Livy*, *Appian*, *Cleopatra*, &c. that the *Drachma* contain'd 8: And maintains, that when ſome *Greek* Authors ſpeak of the Ounce as only containing 7 *Drachms*; they don't mean the *Attic Drachm*, but the *Roman* Denarius, which the *Greek* Authors render by δραχμη.

*Gronovius* agrees with *Agricola*, viz. that the *Drachma* was the 8th Part of an Ounce. The Opinion is confirm'd by *Iſidore*, *L.* XIV. *C.* 24. by *Fannius*, who ſays as much in expreſs Terms; and by *Voluſius*, who divides the Ounce into 24 *Scriptuli*, or Scruples, whereof the *Drachm* comprehended three.

Thus much ſuppoſed, and ſuppoſing likewiſe the ancient *Roman* Ounce equal to the modern one, and of Conſequence 40 Grains leſs than ours, it follows, that the ancient *Roman* Ounce weigh'd 536 of our Grains, and the *Attic Drachma* 67 Grains. Laſtly, ſuppoſing the Silver at *Athens* of the ſame Fineneſs with ours; and taking ours at the Price it now bears, the *Attic Drachma* will be found equivalent to about 7 Pence 3 Farthings Sterling. See Money.

The *Grecian* Way of accounting Sums of Money, was by *Drachmæ*: 10 of which were equal to 6 Shillings, 5 Pence ½ Penny; and 100 equal to a *Mina*. See Mina.

Drachm, is alſo a Weight, us'd by our Phyſicians; containing juſt ſixty Grains; or 3 Scruples; or the 8th Part of an Ounce. See Grain, and Ounce.

In Averdupois Weight, the *Drachm* is an 8th Part of an Ounce. See Weight.

Drachma was likewiſe an ancient *Jewiſh* Money, having on one Side a Harp, and on the other a Bunch of Grapes.

This Coin was a *half Shekel*; and was ſo call'd by the *Jews*. 'Tis only the *Greeks* call'd it δραχμη. It was equal to 2 *Attic Drachmæ*. See Shekel.

DRACO, *Dragon*, in Aſtronomy, a Conſtellation of the Northern Hemiſphere. See Constellation.

The Stars in the Conſtellation *Draco*, according to *Ptolomy*, are 31; according to *Tycho*, 32; according to *Bayer*, 33; and according to Mr. *Flamſteed*, 49.

The Longitudes, Latitudes, Magnitudes, &c. whereof are as follows.

*Stars in the Conſtellation* Draco.

| *Names and Situations of the Stars.* | Sign | Longit. ° ′ ″ | Latitude. North. ° ′ ″ | Magnit. |
|---|---|---|---|---|
| Laſt of the Tail. | ♌ | 5 59 05 | 57 13 24 | 4 |
| Another Subſeq. and Contiguous. | | 6 29 10 | 57 30 55 | 6 |
| | | 12 33 10 | 61 10 10 | 6 |
| Laſt but one of the Tail. | | 11 51 58 | 61 43 40 | 4 |
| That follows this. | ♌ | 11 35 15 | 61 57 45 | 5 |
| 15 | | | | |
| Preceding the Antepenultimate. | ♍ | 0 31 19 | 65 21 50 | 5 |

Draco *Volans*, with the Meteorologists, is a fat, Heterogeneous, Earthy Meteor, appearing long, and sinous, something in the Shape of a flying Dragon. See Meteor.

This Shape they will have to arise from the latter Part of the Matter of this Meteor, being fired with greater Impetuosity, than what comes first out of the Cloud; and they suppose the broken Parts of the Cloud, and the sulphureous Matter which adheres to them, forms the apparent Wings of this imaginary Dragon.

DRACONARIUS, in Antiquity, *Dragon-bearer*.

Several Nations, as the *Persians*, *Parthians*, *Scythians*, &c. bore Dragons on their Standards; whence the Standards themselves were call'd *Dracones*, Dragons. The *Romans* borrowed the Custom from the *Parthians*; or, as *Casaubon* has it, from the *Dacæ*; or, as *Codin*, from the *Assyrians*.

Among the *Romans*, they were Figures of Dragons painted in red, on their Flags; as appears from *Ammian Marcellinus*: But among the *Persians*, and *Parthians*, they were like the *Roman* Eagles, Figures in full *Relievo*; So that the *Romans* were frequently deceiv'd, and took 'em for real Dragons.

The Soldier, who bore the Dragon, or Standard, was call'd by the Romans *Draconarius*; and by the *Greeks* Δρακοναριος, and Δρακοντειοφορος; for the Emperors carried the Custom with them to *Constantinople*.

*Pet. Diaconus Chron. Casin. L.* IV. *C.* 39. observes, that the *Bajuli*, *Cercostraarii*, *Staurophori*, *Aquiliferi*, *Leoniferi*, and *Draconarii*, all march'd before King *Henry* when he went into *Rome*.

DRACONTIC *Month*, the Space of Time wherein the Moon going from her ascending Node, call'd *Caput Draconis*, returns to the same. See Dragon's *Head*, and Month.

DRACUNCULI, in Medicine, a Disease in Children, wherein they feel a vehement Itching; supposed to arise from little Worms, call'd *Dracunculi*, generated from a viscid Humour under the Skin, about the Back, Shoulders, and Arms. See Worms.

Children seiz'd with the *Dracunculi*, become hectic, and scarce receive any Nourishment at all, tho' they eat plentifully.

The Disease, however, is not so peculiar to Children, but that grown Persons have been sometimes affected with it. The Emperor *Henry* V. is said, to have died of it; having had it from his Birth.

The Women in *Poland* cure their Children of the *Dracunculi*, after the following Manner: The Child is wash'd, and bathed in hot Water, wherein a Quantity of crum'd Bread, and a handful of Ashes have been cast. The Water being pour'd off, and the Bread gather'd into a Mass; when they come to break it again the next Day, they find in it an infinite Quantity of fine Hairs, which some call *Dog's Hairs*, and others, *Worms*; and 'tis those Hairs, or Worms, are supposed to be the Cause of the Disease.

After thus bathing the Children, they rub their Shoulders, and Arms, with Flower steep'd in Vinegar, or Honey; upon which immediately arises on the Skin a great Number of Tubercles, like Poppy-Seed; supposed to be the Heads of Worms. These they scrape off as fast as they appear; otherwise they withdraw beneath the Skin again. The Operation is repeated till such Time as no more Tubercles arise.

The *Dracunculi* is a Disease little known in *England*. The Editors of the *Leipsic* Acts, speaking of it, in the Tome for the Month of *October* 1682, call the Bodies, which put forth at the Pores after bathing, thick Hairs, *Corpuscula Pilorum crassiorum instar densa & spissa*, and not *fine slender Hair*, as *Degori* calls 'em. They add, that these little Corpuscles are hence call'd *Crinones*; and by reason of their devouring the Food, which should nourish the Children, *Comedones*.

*Velchius*, in a curious Dissertation on the Subject, calls 'em *Capillary Worms*. *Exercitatio de Vermibus Capillaribus Infantum*.

As to the Nature and Figure of these little Bodies, the same Editors observe, that the Microscope has put it past doubt, they are real living Animals, of an Ash Colour, having two long Horns, two large round Eyes, and a long Tail terminated with a Tuft of Hair; that 'tis difficult to draw them out whole, by scraping the Child's Body, in that being very soft, the least rubbing bruises 'em, and breaks 'em. See Vermes.

DRAG, in Building. A Door is said to *drag*, when in Opening and Shutting it hangs, or grates upon the Floor. See Door.

DRAGOMAN, a Term of general Use through the East, for an *Interpreter* whose Office is to facilitate Commerce between the Orientals, and Occidentals. See Interpreter.

The Word is form'd from the Arabic *Tergeman*, or *Tergiman*, of the Verb *Taragem*, *he has interpreted*. From *Dragoman*, the *Italians* have form'd *Dragomano*, and, with a nearer Relation to its *Arabic* Etymology, *Turcimanno*; whence our *Truchеman*, as well as *Dragoman*, and *Drogman*.

DRAGON, in Astronomy, *Dragon's Head*, and *Tail*, or *Caput & Cauda Draconis*, are the Nodes of the Planets; or the two Points, wherein the Ecliptic is intersected by the Orbits of the Planets; and particularly that of the Moon; making with it Angles of 5 Degrees. See Planet, Orbit, and Node.

One of these Points tends Northward; the Moon beginning then to have Northern Latitude: and the other Southward; where she commences South. See Moon.

This her Deviation from the Ecliptic seems (according to the Fancy of some) to make a Figure like to that of a *Dragon*, whose Belly is, where she has the greatest Latitude; the Intersections representing the *Head* and *Tail*, from which Resemblance the Denomination arises.

But note, that these Points abide not always in one Place, but have a Motion of their own, in the Zodiac, and retrogradewise almost 3 Minutes a Day; compleating their Circle in about 19 Years; so that the Moon can be but twice in the Ecliptic, during her Menstrual Period, but at all other Times will have *Latitude*, as they call it. See Latitude.

'Tis in these Points of Intersection that all Eclipses happen. See Eclipse.

They are usually denoted by the Characters ☊ *Dragon's Head*, and ☋ *Dragon's Tail*. See Head, and Tail.

Dragon's *Blood*, *Sanguis Draconis*, call'd also *Lapathum rubrum*, in Medicine. See Blood.

The Ancients had a Notion, that the *Dragon* fighting with the Elephant, suck'd all its Blood through its Eyes and Ears; that the Elephant falling down dead, crush'd the *Dragon*; and that from their Blood, thus mix'd on the Ground, arose what they call'd *Dragon's Blood*, which they held in high Esteem.

This is the Account given by *Solinus*, *Pliny*, *Isidore*, and others after them; but this Combat is a mere Fable, invented by the Merchants.

*Avicenna*, and *Serapion* likewise give the Appellation *Dragon's Blood* to Cinnabar. See Cinnabar.

But the genuine *Dragon's Blood* is the Juice, or Resin of a large Tree, call'd *Draco*, *Dragon*, growing in *Africa*, and *America*. The Resin is of a dark red, and easily dissolves when brought towards the Fire: if cast into the Fire, it flames: But dissolves with much Difficulty in any Liquor.

It is a good Astringent; and is us'd in Hæmorrhages, and Dysenteries, to fasten the Teeth, and strengthen the Gums.

There is also a counterfeit *Dragon's Blood*, made of the Gum of the Cherry, or Almond-tree, dissolved, and boil'd in a Tincture of *Brazil* Wood; but this is of no Use, except for outward Diseases of Horses.

It derives its Name *Dragon's Blood* from the Redness of its Colour, and gives its Name *Dragon* to the Tree that yields it. Some Botanists talk of the Figure of a *Dragon*, finely represented under the Rind of the Fruit of that Tree. But this is a mere Fiction.

DRAGONNEE, in Heraldry. A *Lyon Dragonne*, is where the upper Half resembles a Lyon; the other Half going off like the hind Part of a *Dragon*.

The ſame may be ſaid of any other Beaſt as well as the Lyon.

DRAGOON, in War, a Kind of Soldier who marches on Horſe-back, but without Boots; and fights on Foot, tho' ſometimes, too, on Horſe-back. See GUARDS.

The *Dragoons* are uſually poſted in the Front of the Camp, and march firſt to the Charge, like a Kind of *Enfans Perdus*.

They are uſually reputed as belonging to the Infantry, and in that Quality have Colonels, and Serjeants; but they have Cornets, too, like Cavalry.

Their Arms are a Sword, Fire-Lock, and Bagonet. When they march on Foot, their Officers bear the Pike, and the Serjeants the Halbert.

*Menage* derives the Word *Dragoon* from the Latin *Draconarius:* which in *Vegetius* is us'd to ſignify Soldiers. But it is more probably derived from the German *Tragen*, or *Draghen*, which ſignifies *to carry*; as being Infantry carried on Horſe-back.

DRAMS. See CORDIALS.

DRAMA, in Poetry, a Piece compoſed for the Theatre; Or a Piece of Dramatic Poetry. See THEATRE.

A *Drama*, or as we popularly call it, a *Play*, is a Compoſition either in Proſe, or Verſe, conſiſting, not in the ſimple Recitation, but in the actual Repreſentation of an Action.

Our *Drama's*, are Tragedies, Comedies, and Farces: For thoſe Groteſque Entertainments, lately introduced upon the Stage, ſcarce deſerve the Appellation. See TRAGEDY, COMEDY, FARCE, *&c.*

Some Criticks take the Book of *Canticles* for a *Drama*. See CANTICLES.

The Word is *Greek*, Δρᾶμα, which literally ſignifies *Action*; by reaſon, in *Drama's*, or Dramatic Poems, they act, or repreſent *Actions*, as if they really paſſed.

Some ſcrupulous Authors would reſtrain *Drama* to ſerious Pieces; as Tragedies: But with reſpect to the Etymology, a Comedy is as much a *Drama*, as a Tragedy.

DRAMATIC, in Poetry, is an Epithet given to Pieces wrote for the Stage. See STAGE, and DRAMA.

For the Laws of *Dramatic* Poetry. See UNITY, ACTION, CHARACTER, FABLE, *&c.*

DRAPERY, in Painting, and Sculpture, the Repreſentation of the Garments, or Cloathing of human Figures. See FIGURE.

In the general Senſe, *Drapery* includes not only the Garments, but alſo the Tapiſtry, Linings, and moſt other Things that are not *Carnations*, nor Landſkips. See PAINTING.

The Art of *Drapery* conſiſts chiefly in three Points, *viz.* The Order of the Folds, or Plates: The different Quality of the Stuffs: And the Variety of their Colours.

As to the *Folds*, they ſhould be ſo manag'd, that you may eaſily perceive what it is that they cover, and diſtinguiſh it from any Thing elſe. For Inſtance, that you ſee 'tis an Arm that is under the *Drapery*, and not a Leg, *&c.* The Folds, again, muſt be large, as breaking, and dividing the Sight the leſs. There ſhould likewiſe be a Contreaſt between 'em, otherwiſe the *Drapery* will be ſtiff.

The *Quality of the Stuffs* ſhould likewiſe be well conſider'd; ſome making their Folds abrupt, and harſh, and others more ſoft, and eaſy. The Surface of ſome, again, has a Luſtre, others are dead: Some are fine, and tranſparent, others firm, and ſolid.

The Variety of *Colours*, when well manag'd, makes the great Beauty of a Painting; all being not equally amicable, and friendly, with reſpect to each other; and ſome never to be placed near certain others. See COLOURING.

Mr. *de Piles* gives Abundance of good Obſervations, as to *Drapery*. Their firſt Effect, he obſerves, and that which the Painter ought to have principally in View, is, that they expreſs the Thing they are ſuppoſed to cover: They muſt never be made to adhere, and ſtick to the Parts of the Body: A great Lightneſs, and Motion of the *Drapery*, are only proper for Figures in great Agitation, or expoſed to the Mind. The Nudities of the Figures ſhould always be deſign'd, 'ere the Painter proceed to the *Draperies*. *Paolo Veroneſe* excell'd in *Draperies*.

The Word is French, *Drapperie*, form'd from *Drap*, Cloth.

DRASTIC, from Δραστικος, *activus*, briſk; a purgative Medicine that works with Speed, and Vigour; as *Jalap*, *Scammony*, and the ſtronger Catharticks. See PURGATIVE.

DRAUGHT, in Medicine. See POTION.

DRAUGHT, in Trade, is an Allowance made in the weighing of Commodities; the ſame as *Clough*. See CLOUGH.

DRAUGHT, in Painting, *&c.* See DESIGN.

DRAUGHT, or, as 'tis pronounced, DRAFT, in Architecture, the Figure of an intended Building deſcribed on Paper; wherein is laid down, by Scale, and Compaſs, the ſeveral Diviſions, and Partitions of the Apartments, Rooms, Doors, Paſſages, Conveniencies, *&c.* in their due Proportion. See BUILDING.

'Tis uſual, and even exceedingly convenient, 'ere a Building is begun to be rais'd, to have *Draughts* of the *Ichnography*, or Ground-plot of each Floor, or Story; As alſo of the Form and Faſhion of each Front, with the Windows, Doors, Ornaments, *&c.* in an *Orthography*, or Upright. See ICHNOGRAPHY, and ORTHOGRAPHY.

Sometimes the ſeveral Fronts, *&c.* are taken, and repreſented in the ſame *Draught*, to ſhew the Effect of the whole Building, call'd a *Scenography*, or *Perſpective*. See SCENOGRAPHY.

DRAW. A Ship is ſaid to *draw* ſo much Water, according to the Number of Feet ſhe ſinks into it.

Thus, if fifteen Foot from the Bottom of her be under Water, or if ſhe ſinks into the Water fifteen Foot perpendicularly, ſhe is ſaid to *draw* fifteen Foot Water; according as ſhe *draws* more, or leſs, ſhe is ſaid to be of more, or leſs *Draught*.

DRAW-*back*, in Commerce, a *Rebate*, or *Diſcount*, upon the Price of Commodities, purchaſed on certain Conditions. See REBATE, and DISCOUNT.

DRAW-*Bridge*, a Bridge made after the manner of a Floor, to be *drawn* up, or let down, as Occaſion ſerves, before the Gate of a Town, or Caſtle. See BRIDGE.

DRAWING *Medicines*, or DRAWERS. See EPISPASTICKS, and RIPENERS.

DRAWING *of Gold*, or *Silver*, is the paſſing it through a Number of Holes in an Iron, each leſs than other, to bring it into a Wiar. See WIAR *drawing*.

DRAWING *of a Bill of Exchange*, is the Writing, ſigning, and giving it to the Perſon who has already pay'd the Value, or Content thereof, to receive it in another Place. A Perſon ſhould never *draw* a Bill of Exchange, unleſs he be well aſſured, it will be accepted, and pay'd. See BILL *of Exchange*.

DRAWING, in Painting, *&c.* See DESIGNING.

DRAWING, among Hunters, is when they beat the Buſhes after a Fox.

*Drawing amiſs*, is when the Hounds, or Beagles hit the Scent of their Chace contrary, ſo as to hit it up the Wind, whereas they ſhould have done it down the Wind.

*Drawing on the Slot*, is when the Hounds touch the Scent, and *draw* on till they hit on the ſame Scent.

DRENCH, among Farriers, a Phyſical Draught, or Potion given a Horſe, by Way of Purge. See POTION.

DRENCHES, or DRENGES, in our old Cuſtoms, a Term about which the Lawyers and Antiquaries are a little divided.

*Drenges*, ſays an ancient Manuſcript, were *Tenentes in Capite*. *Spelman* ſays, they were *e Genere Vaſſallorum non Ignobilium, cum ſinguli qui in* Domes-day *nominantur ſingula poſſiderent Maneria*. Such, as at the coming in of the Conqueror, being put out off their Eſtates, were afterwards upon Complaint reſtored thereto; for that, they, being before Owners thereof, were neither in *Auxilio*, nor *Concilio* againſt him.

DRESSING *of Meats*, the preparing 'em for Food, by means of Culinary Fire. See MEAT, and FOOD.

The Deſign of *Dreſſing*, is to looſen the Compages, or Texture of the Fleſh, and diſpoſe it for Diſſolution, and Digeſtion in the Stomach. Fleſh not being a proper Food without *Dreſſing*, is alledg'd as an Argument, that Man was not intended by Nature for a Carnivorous Animal. See CARNIVOROUS.

The uſual Operations are *Roaſting*, *Boiling*, and *Stewing*.

In *Roaſting*, it is obſerved, Meat will bear a much greater and longer Heat than either in *Boiling*, or *Stewing*; and in *Boiling*, greater, and longer than in *Stewing*. The reaſon is, that *Roaſting* being perform'd in the open Air, as the Parts begin externally to warm, they extend, and dilate, and ſo gradually let out Part of the rarified included Air, by which means the internal Succuſſions, on which the Diſſolution depends, are much weaken'd, and abated; *Boiling* being perform'd in Water, the Preſſure is greater, and conſequently, the Succuſſions to lift up the Weight, are proportionably ſtrong; by which means the Coction is haſten'd: And even in this Way there are great Differences; for the greater the Weight of Water, the ſooner is the Buſineſs done.

In *Stewing*, tho' the Heat be infinitely ſhort of what is employ'd in the other Ways, the Operation is much more quick, becauſe perform'd in a cloſe Veſſel, and full, by which means the Succuſſions are more often repeated, and more ſtrongly reverberated. Hence the Force of *Papin's Digeſtor*; and hence an *Illuſtration of the Operation of Digeſtion*. See DIGESTOR, and DIGESTION.

*Boiling*, Dr. *Cheyne* obſerves, draws more of the Rank, ſtrong Juices from Meat, and leaves it leſs nutritive, more diluted, lighter, and eaſier of Digeſtion: *Roaſting*, on the other hand, leaves it fuller of the ſtrong, nutritive Juices, harder to digeſt, and needing more Dilution. Strong, grown, and adult Animal Food, therefore, ſhould be *boil'd*; and the younger, and tenderer, *roaſted*.

DRIE *Exchange*, *Cambium Siccum*, a ſoft Appellation, anciently us'd to diſguiſe Uſury under; intimating ſomething to paſs on both Sides, whereas, in Truth, nothing paſs'd but

but on one: In which reſpect it might be call'd *Dry*. See USURY.

*Cambium ſiccum*, ſays *Lud. Lopes*, *de Contract. & Negot. eſt Cambium non habens Exiſtentiam Cambii, ſed Apparentiam ad Inſtar Arboris Exſiccatæ*, &c.

DRIE *Rent*. See RENT *Sec.*

DRIFT *of the Foreſt*, an exact View, or Examination of what Cattel are in the Foreſt, that it may be known, whether it be overcharg'd, or not, and whoſe the Beaſts are; and whether they are commonable Beaſts, or not. See FOREST, and COMMON.

DRIFT-*Sail*, in a Ship, is a Sail us'd under Water; it is veer'd out right a-head, upon the Sea in a Storm, having Sheets faſten'd to it as other Sails have; its Uſe being to keep the Ship's Head right upon the Sea.

It is alſo uſeful, to hinder a Ship's driving with a Current, and with that View generally us'd by Fiſher-men, eſpecially in the North-Sea.

DRINK, a Part of our ordinary Food, in a liquid Form, ſerving to dilute, and moiſten the dry Meat. See FOOD.

The *Drinks*, in different Countries, are different. Thoſe, ordinarily us'd among us, are, *Water*, *Malt-Liquors*, and *Wine*. See WATER, MALT-*Liquor*, and WINE.

The Extraordinaries, are, *Cyder*, *Punch*, *Brandy*, *Tea*, *Strong Waters*, &c. which ſee.

The *Malt-Drink* brew'd in *England*, in one Year, *Chamberlayne* aſſures us, amounts to very near 2 Millions of Barrels of ſtrong, and ſmall. See EXCISE.

Water, Dr. *Cheyne* obſerves, was without all Diſpute the primitive original Beverage, as it is the only ſimple Fluid (for there are but three more in Nature, Mercury, Light, and Air, none of which is fit for human *Drink*) fitted for diluting, moiſtening and cooling, the Ends of *Drink* appointed by Nature: And happy had it been for the Race of Mankind, had other mixt, and artificial Liquors never been invented. Water alone is ſufficient, and effectual for all the Purpoſes of human Wants in *Drink*. Strong Liquors were never deſign'd for common Uſe. They were formerly kept, here in *England*, as other Medicines are, in Apothecaries Shops, and preſcribed by Phyſicians, as they do *Diaſcordium*, and *Venice* Treacle, to refreſh the Weary, ſtrengthen the Weak, and raiſe the low-ſpirited. The Effect of the ordinary Uſe of Wine, and ſpirituous Liquors, as natural Cauſes will always produce their Effects, is to inflame the Blood into Gout, Stone, and Rheumatiſm, Fevers, Pleuriſies, Small-Pox, *&c.* to dry up the Juices, and ſcorch and ſhrivel the Solids. Thoſe, whoſe Appetite, and Digeſtion is good, and entire, never want ſtrong Liquors to ſupply 'em with Spirits: Such Spirits are too volatile, and fugitive for any ſolid, or uſeful Purpoſes of Life. Two Ounces of Fleſh Meat, well digeſted, beget a greater Stock of more durable, and uſeful Spirits, than ten times as much ſtrong Liquors.

All ſtrong Liquors are as hard to digeſt, and require as much Labour of the Concoctive Powers, as ſtrong Food it ſelf. Water is the only univerſal Diſſolvent, or Menſtruum, and the moſt certain Diluter of all Bodies proper for Food. There are a great many ſpirituous Liquors, which not only will not diſſolve, but will harden, and make more indigeſtible, eſpecially the Salts of Bodies, wherein their active Qualities, that is, thoſe which can do moſt harm to human Conſtitutions, conſiſt. And we have known Perſons of tender Conſtitutions, who could neither eat, nor digeſt, upon drinking Wine, who, by drinking at Meals common Water, heated, have recover'd their Appetites, and Digeſtion, have thriven, and grown plump. 'Tis true, ſtrong Liquors by their Heat and Stimulation on the Organs of Concoction, by increaſing the Velocity of the Motion of the Fluids, and thereby quickening the other Animal Functions, will carry off the Load that lies upon the Stomach, with more preſent Chearfulneſs. But then, beſide the future Damages of ſuch a Quantity of Wine to the Stomach, and the Fluids by its Heat, and Inflammation, the Food is hurried into the Habit unconcocted, and lays a Foundation for a Fever, fit of the Colic, or ſome Chronical Diſeaſe. *Eſſay on Health*, &c. *p.* 47, 48, *&c.*

DRIP, in Architecture. See LARMIER.

DRIPS, are alſo us'd in Building for a Kind of Steps, on flat Roofs, to walk upon. This Way of Building is much us'd in *Italy*: where the Roof is not made quite flat, but a little raiſed in the Middle; with *Drips*, or Steps, lying a little inclining to the Horizon. See ROOF.

DRIVE, in the Sea-Language. A Ship is ſaid to *drive* when an Anchor being let fall, it will not hold her faſt, but that ſhe ſails away with the Tide, or Wind. See ANCHOR.

The beſt Way to prevent this, is to veer out more Cable; for the more Cable ſhe has, the ſurer, and ſafer ſhe rides; or elſe to let fall more Anchors.

Alſo when a Ship is a *Hull*, or a *Trye*, we ſay, ſhe *drives to Leeward*, or in *with the Shore*, according to the Way ſhe makes.

DROGMAN. See DRAGOMAN.

DROIT, *Jus*, in our Law-Books, ſignifies *Right*, or *Law*: whereof our Lawyers make ſix Kinds, *viz.* 1. *Jus Recuperandi*, Right of Recovering: 2. *Jus Entrandi*, Right of Entring: 3. *Jus Habendi*, Right of Having: 4. *Jus Retinendi*, Right of Retaining: 5. *Jus Percipiendi*, Right of Receiving: 6. *Jus Poſſidendi*, Right of Poſſeſſing. See LAW, and RIGHT; as alſo RECTUM.

DROPAX, in Pharmacy, an external Medicine, in Form of a Plaſter, us'd to take off the Hairs from any Part.

The *Dropax* is of two Kinds, *Simple*, and *Compound*.

The *Simple* is made of an Ounce of dry Pitch, and two Drachms of Oil.

The *Compound* is made with Pitch, Wax, Colophony, common Bitumen, *Sulphur vivum*, Pepper, Euphorbium, Cantharides, and Caſtor. There are alſo other Ways of making it.

It was anciently much in Uſe to warm the Parts, to draw the Blood and Spirits to them, and to cure Atrophies. It was applied hot on the Part affected, after firſt ſhaving it, and was pull'd off again 'ere quite cold, then heated a-freſh, and applied again; and the Operation thus repeated, till the Part were render'd very red.

The Word is form'd from the *Greek* Δρεπειν, *to pluck, to tear*.

DROPPING, or *Dripping*, is a Term us'd among Falconers, when a Hawk mutes directly downwards in ſeveral *Drops*, not yerking her Dung ſtraight forwards.

DROPS, in Meteorology. See RAIN.

The Spherical Form, into which the *Drops* of Fluids conform themſelves, is a Phænomenon that has a little perplex'd the Philoſophers.

The Solution commonly given, was, that the equable, uniform Preſſure of the ambient, or incumbent Atmoſphere cloſed 'em into this Form: But this Account will no longer paſs, now that we find the Phænomenon holds in *Vacuo* as well as in Air.

The *Newtonian* Philoſophers, therefore, aſcribe it to their *Attraction*, which being greater between the ſeveral Particles of the Fluids, than between them, and thoſe of the Medium, they are, as it were concentrated, and brought as near each other, and into as little Compaſs, as may be: which cannot be, without their being ſpherical.

Thus, Sir *Iſaac Newton*: *Guttæ enim Corporis cujuſque fluvei, ut figuram globoſam inducere conentur, facit mutua partium ſuarum Attractio; Eodem modo quo Terra Mariaque in Rotunditatem undique conglobantur, Partium ſuarum Attractione mutua, quæ eſt Gravitas.* Opt. p. 338. See ATTRACTION.

DROPS, in Medicine, a liquid Medicine, whoſe Doſe is eſtimated by a certain Number of *Drops*.

A little Lowneſs of Spirits, ſays Dr. *Cheyne*, ſpeaking of the ſofter Sex under Fits of the Vapours, *&c.* requires *Drops*, which paſs readily down under the Notion of Phyſic: *Drops* beget Drams, and Drams beget more Drams, till they come to be without Weight, and without Meaſure. Higher, and more ſevere Fits, begot by theſe, bring forth farther Neceſſity upon Neceſſity of *Drops*, Drams, and Gills, till at laſt, *&c. Eſſay on Health.*

*Engliſh* DROPS, or *Volatile Engliſh* DROPS, or *Guttæ Anglicanæ*, is a Liquor drawn by Fire from a great Number of Ingredients, and found a powerful Remedy againſt Coagulations of the Blood, Obſtructions, Apoplexies, malignant Fevers, Small-pox, *&c.*

Its Inventor was Dr. *Goddard*, a Phyſician of *London*. King *Charles* II. had much ado to purchaſe the Secret of him, tho' he offer'd him 5000 Pounds for the ſame. However, he prevail'd at length; but the Phyſician look'd on it as a Favour done the Prince, to impart it to him on ſuch Terms.

Hence it is, that the Remedy took the Name of *Guttæ Anglicanæ*. See GUTTÆ *Anglicanæ*.

DROPS, *Guttæ*, in Architecture, an Ornament in the Doric Entablature, repreſenting *Drops*, or little Bells, immediately under the Triglyphs. See TRIGLYPH.

DROPSY, *Hydrops*, in Medicine, a Diſeaſe occaſion'd by a præter-natural Collection of Serum, or Water, in ſome Part of the Body; Or a too great Proportion thereof in the Blood. See DISEASE.

The Word is derived from the *Greek* ὕδωρ, *Water*, and ὤψ, *Facies*, Face.

The *Dropſy* acquires different Names from the different Parts it afflicts, or the different Parts the Waters are collected in. That of the *Abdomen*, or lower Belly, call'd ſimply, and abſolutely *Dropſy*, is particularly denominated *Aſcites*: That of the whole Habit of the Body, *Anaſarca*, or *Leucophlegmatia*: That of the Head, *Hydrocephalus*: That of the Scrotum, *Hydrocele*. See ASCITES, ANASARCHA, *&c.*

There is alſo a Species of this Diſeaſe cauſed, inſtead of Water, by a Collection of Wind, call'd *Tympanites*, and by *Hippocrates*, the *Dry Dropſy*. See TYMPANITES.

There

There are alſo *Dropſies of the Breaſt*, *Pericardium*, *Uterus*, *Ovaries*, &c.

The Cauſes of *Dropſies*, in general, are whatever may obſtruct the ſerous Part of the Blood, ſo as to make it ſtagnate in the Veſſels; Or bruſt the Veſſels themſelves, ſo as to let the Blood out among the Membranes; Or weaken, and relax the Tone of the Veſſels; Or thin the Blood, and make it watery; or leſſen Perſpiration.

Theſe Cauſes are various, *viz.* ſometimes acute Diſeaſes, ſchirrous Tumors of any of the more noble Viſcera, exceſſive Evacuations, particularly Hæmorrhages, hard Drinking, *&c.*

The *Aſcites*, or *Water-Dropſy* of the Abdomen, is the moſt uſual Caſe, and what we particularly call the *Dropſy*: Its Symptoms are Tumors, firſt of the Feet, and Legs, and afterwards of the Abdomen, which keep continually growing; and if the Belly be ſtruck, or ſhook, there is heard a Quaſhing of Water. Add to this three other Attendants, *viz.* a *Dyſpnœa*; intenſe Thirſt; and ſparing Urine: with which may be number'd Heavineſs, Liſtleſneſs, Coſtiveneſs, a light Fever, and an Emaciation of the Body.

The Curative Indications are two, *viz.* The Evacuation of the Water; and the Strengthening of the Blood, and Viſcera. The firſt is effected by ſtrong Purgatives, particularly *Elaterium*, and *Crocus Metallorum*. For ſuch as are too weak to bear Purgatives, Dr. *Sydenham* recommends Emeticks, whereof the beſt are thoſe made of Lixivial Salts. *Etmuller* prefers Diureticks to either Kind. Along with the Evacuants are to be uſed Stomachicks, eſpecially *Abſynthium*, *Marrhubium*, &c.

Where other means fail for Evacuating the Water, Recourſe is had to the *Paracentæſis*, or Operation of Tapping. See PARACENTÆSIS.

*Mayerne* recommends *Mercurius dulcis*, and Nitre, and Ants Eggs, for the promoting of Urine, and draining the Tumour. As for the Viſcera, they are reſtored by Chalybeats, and Strengtheners.

*Baglivi* notes, that in a *Dropſy* ariſing from a morbid Liver, there is always a vehement dry Cough: which is never obſerved in the other Species. *Tycho Brahe* obſerves, that Hydropic Perſons uſually die about full Moon. *Wainwright* extols an Infuſion of Green Tea in *Rheniſh* Wine; as alſo Briony Juice, as excellent in this Diſeaſe.

DROWNING, the Act of Suffocating, or being ſuffocated by Water. See SUFFOCATION.

People not accuſtom'd to diving, Dr. *Halley* obſerves, begin to *drown* in about half a Minute's Time. See DIVING.

*Drowning* was anciently a Kind of Puniſhment: In the Time of *Louis* XI. of *France*, the Chronicles aſſure us, that they frequently *drown'd* their Criminals, inſtead of hanging them. *Chron. Scand.* See PUNISHMENT.

Natural Hiſtorians, and Phyſicians, furniſh us with divers well atteſted Inſtances of ſurprizing Recoveries of Perſons *drown'd*: Which, if maturely conſider'd, might perhaps let a little Light into the dark Notion of Life, and Death.

*Pechlin, de Aer. & Alim. def.* C. 10. gives us the Hiſtory of a Gardener of *Tronningholm*, then living, ag'd 65 Years, who 18 Years before ſlipt under the Ice to the Depth of 18 Ells, where he ſtood at the Bottom, upright, as it were, for 16 Hours; when, being drawn out with a Crook ſtruck into his Head, and wrapp'd up in Clothes, from the common Perſuaſion of thoſe People, that he would recover; he was afterwards ſtroak'd, rubb'd with linnen Swaths, and Air blown up his Noſtrils for ſeveral Hours; till the Blood began to move. Laſtly, plying him with Antapoplectic, and Genial Liquors, he was reſtored to Life. In Memory of this Accident, the Queen Mother ſettled a yearly Stipend upon him, *&c.*

*Tilaſius*, Keeper of the King's Library, gives us the Hiſtory of a Woman he himſelf knew, who was under the Water 3 whole Days, yet brought to Life again after the ſame Manner as the *Tronningham* Gardener: and was ſtill alive.

Laſtly, *Burmannus* aſſures us, that being in the Village *Boneſs*, of the Pariſh of *Pithou*, he aſſiſted at the Funeral Sermon of one *Laur. Jona*, an old Man of ſeventy; where the Preacher related, that when a Youth of 17, he had been buried 7 Weeks under Water, and at length drawn forth, and brought again to Life. *Pechlin. ubi ſup.*

DRUG, in Commerce, a general Name for all Spices, and other Commodities, brought from diſtant Countries, and uſed in the Buſineſs of Medicine, Dying, and the Mechanic Arts.

The *Drugs* us'd in Medicine, are very numerous, and make the greateſt Part of the Commerce of our *Druggiſts*. Some of 'em grow in *England*, *France*, &c. But the greateſt Part are brought from the *Levant*, and the *Eaſt Indies*.

A Liſt of 'em would be endleſs. Some of the Principal, are, *Aloes*, *Amber-gris*, *Amber*, *Aſſa fœtida*, *Antimony*, *Balſams*, *Bezoar*, *Borax*, *Benjoin*, *Camphor*, *Cantharides*, *Cardamum*, *Caſſia*, *Caſtoreum*, *Colloquintis*, *Civet*, *Coral*, *Cubebs*, *Coffee*, *Cocao*, *Gums Animæ Armoniac Adraganth*, *Elemi Galbanum Gutta Labdanum Opoponax Sagapenum Sandarac Lacca*, *Jalap*, *Manna*, *Maſtic*, *Mirrh*, *Muſc*, *Opium*, *Pearls*, *Quinquina*, *Hellebore*, *Galanga*, *Zedoary*, *Rhubarb*, *Sarſaparilla*, *Storax*, *Sanguis Draconis*, *Senna*, *Sperma Ceti*, *Spica Nardi*, *Scammony*, *Sal Ammoniac*, *Sublimate*, *Tamarinds*, *Tea*, *Turpentine*, *Turbith*, *Tutia*, *Tartar Vitriol*, &c. The Natural Hiſtory, *&c.* whereof, ſee under their reſpective Articles.

The *Drugs* uſed by Dyers, are of two Kinds; *Colouring*, which give the Dye, or Colour; And *Not-Colouring*, which only diſpoſe the Stuffs to take the Colours the better, or to render the Colours more ſhining. See DYING.

Of the firſt Kind, are, *Paſtels*, *Wood*, *Indigo*, *Kermes*, *Cochineel*, *Madder*, *Turmeric*, &c.

Of the ſecond Kind, are, *Alumn*, *Tartar*, *Arſenic*, *Realgal*, *Saltpetre*, *Common Salt*, *Sal Gemmæ*, *Sal Ammoniac*, *Cryſtal of Tartar*, *Agaric*, *Spirit of Wine*, *Urine*, *Tin*, *Wheat-or Peaſe-Flower*, *Starch*, *Lime*, *Aſhes*, &c.

There is a third Sort of *Drugs*, that anſwer both Intentions; As the *Root*, *Bark*, and *Leaf of the Walnut-tree*, *Galls*, *Copperoſe*, &c. An Account of each of theſe *Drugs*, ſee under their proper Articles.

DRUGGET, in Commerce, a Sort of cheap Stuff, very thin, and narrow, uſually all Wool, and ſometimes half Wool and half Thread: Sometimes croſs'd; but uſually without Croſſing.

Thoſe croſs'd, are wove on a Loom with two Treddles, after the ſame Manner as Linnen, Camelot, *&c.*

Mr. *Savary* invented a Kind of Gold, and Silver *Druggets*; the Warp being partly Gold- and Silver-thread, and the Woof Thread.

DRUIDS, the Prieſts, or Miniſters of Religion, among the ancient *Celtæ*, or *Gauls*, *Britains*, and *Germans*.

Some Authors derive the Word *Druid*, and *Drus*, from the *Hebrew* דרוש'ם *Deruſſim*, *Druſſim*, or *Driſſim*, which they tranſlate, *Contemplators*.

The *Druids* were the firſt, and moſt diſtinguiſh'd Order among the *Gauls*, and *Britains*: They were choſe out of the beſt Families; and the Honours of their Birth, joyn'd with thoſe of their Function, procured 'em the higheſt Veneration among the People. They were verſed in Aſtrology, Geometry, Natural Philoſophy, Politicks, and Geography; and had the Adminiſtration of all ſacred Things; were the Interpreters of Religion, and the Judges of all Affairs indifferently. Whoever refuſed Obedience to them, was declared impious, and accurſed.

We know but little as to their peculiar Doctrines; only that they believed the Immortality of the Soul, and the *Metempſychoſis*.

They were divided into ſeveral Claſſes, or Branches; *viz.* the *Vacerri*, *Bardi*, *Eubages*, *Semothii*, or *Semnothei*, and *Saronidæ*.

The *Vacerri* are held to have been the Prieſts; the *Bardi* the Poets; the *Eubages*, the Augurs; and the *Saronides*, the Civil Judges, and Inſtructors of Youth. As to the *Semothei*, who are ſaid to have been immediately devoted to the Service of Religion, 'tis probable, they were the ſame with the *Vacerri*. See BARDI, *&c.*

*Strabo*, however, *L.* IV. *p.* 197. and *Picard* after him, in his *Celtopædia*, do not comprehend all theſe different Orders under the Denomination of *Druids*, as Species under their Genus, or Parts under the Whole; but make 'em quite different Conditions, or Orders.

*Strabo*, again, only diſtinguiſhes three Kinds; *Bardi*, *Vates*, and *Druids*. The *Bardi* were the Poets; the *Vates*, Οὐάτεις, (apparently the ſame with the *Vacerri*) were the Sacrificers, and Naturaliſts; and the *Druids*, beſide the Study of Nature, applied themſelves likewiſe to Morality. See VATES.

*Diogenes Laertius* aſſures us in his Prologue, that the *Druids* were the ſame among the ancient *Britains*, with the *Sophi*, or *Philoſophers* among the *Greeks*, the *Magi* among the *Perſians*, the *Gymnoſophiſts* among the *Indians*, and the *Chaldeans* among the *Aſſyrians*. See MAGI, GYMNOSOPHIST, *&c.*

The *Druids* had one Chief, or *Arch-Druid* in every Nation, who acted as High-prieſt, or *Pontifex Maximus*. He had abſolute Authority over all the reſt; and commanded, decreed, puniſh'd, *&c.* at Pleaſure. At his Death he was ſucceeded by the moſt conſiderable among the Survivors; and if there were ſeveral Pretenders, the Matter was ended by an Election, or put to the Deciſion of Arms.

The *Druids*, we have obſerv'd, were in the higheſt Eſteem. They preſided at Sacrifices, and other Ceremonies, and had the Direction of every Thing relating to Religion. The *Britiſh*, and *Gauliſh* Youth flock'd to 'em in Crouds, to be inſtructed by 'em. The Children of the Nobleſſe, *Mela* tells us, they retired withal into Caves, or the moſt deſolate Parts of Foreſts; and kept 'em there, ſometimes for 20 Years, under their Diſcipline.

Beſide the Immortality, and *Metempſychoſis*, they inſtructed in the Motion of the Heavens, and the Courſe of

the

the Stars, the Magnitude of the World, and the Earth, the Nature of Things, the Power and Wiſdom of the Gods, &c. They preſerved the Memory and Actions of great Men in their Verſes, which they never allowed to be wrote down, but made their Pupils get 'em off by Heart. In their common Courſe of Learning, they are ſaid to have taught 'em 24000 ſuch Verſes. They had the *Miſletoe* in ſingular Veneration. *Pliny* relates the Ceremony wherewith they gather'd it every Year. *L.* XV. *C.* 44. They placed a World of Confidence in Serpents Eggs gather'd after a peculiar Manner, and under a certain Diſpoſition of the Moon, deſcribed by *Pliny*; and imagin'd 'em effectual Means for the gaining of Law-Suits, and procuring the good Graces of Princes. And hence, the ſame Author concludes, it is, that the *Caduceus*, or Rod encompaſs'd with two Serpents interwove, has been aſſum'd as a Symbol of Peace. *Suetonius*, in his Life of *Claudius*, aſſures us, they ſacrificed Men; and *Mercury* is ſaid to be the God they made theſe inhuman Sacrifices to. *Diod. Siculus L.* VI. obſerves, it was only upon extraordinary Occaſions they made ſuch Victims; as to conſult what Meaſures to take, to learn what ſhould befal 'em, &c. by the Fall of the Victim, the tearing of his Members, and the manner of his Blood guſhing out. *Auguſtus* condemn'd the Cuſtom: *Tiberius*, and *Claudius*, puniſh'd, and aboliſh'd it. See *Cæſar L.* VI. and *Mela L.* III. *C.* 2.

We learn from *Cæſar*, that they were the Judges, and Arbiters of all Differences and Diſputes, both public and private, took Cognizance of Murders, Succeſſions, Boundaries, and Limits; and decreed Rewards, and Puniſhments. Such as diſobey'd their Deciſions, they excommunicated, which was their principal Puniſhment: the Criminal being hereby excluded from all public Aſſemblies, and avoided by all the World; no body daring to ſpeak to them, for fear of being polluted.

*Strabo* obſerves, they had ſometimes Intereſt and Authority enough to ſtop Armies, upon the Point of Engaging; and accommodate their Differences.

They held an Aſſembly every Year at a certain Seaſon about the Middle of the Country, and there in a Place conſecrated for the Purpoſe, kept their Aſſizes, and terminated the Differences of the People, who flock'd thither from all Parts.

*Cæſar*, who had ſeen of the *Druids* in *Britain*, was of Opinion, they had come thence into *Gaul:* But the more able among the Moderns, generally take this for a Miſtake, and believe the very contrary. In effect, it appears pretty probable, that the ancient *Britons* were originally *Gauls*; that the *Celtæ*, or *Belgæ*, *Gauliſh* Nations, were the firſt that enter'd our Iſland, and peopled it. And that the *Druids* went along with 'em.

*Picard Celtopæd. L.* II. *p.* 58. believes the *Druids* to have been thus call'd from *Druis*, or *Dryuis*, their Leader, the 4th, or 5th King of the *Gauls*, and Father of *Saron*, or *Naumes*. *Pliny*, *Salmaſius*, *Vigenere*, &c. derive the Name from Δρῦς, *Oak*; on Account of their inhabiting, or at leaſt frequenting, and teaching in *Foreſts*; or perhaps, by reaſon, as *Pliny* ſays, they never ſacrificed but under the *Oak*. But 'tis hard to imagine, how the *Druids* ſhould come to ſpeak *Greek*. *Menage* derives the Word from the old Britiſh *Drus*, Demon, Magician. *Borel* from the Saxon *Dry*, Magician; or rather the old Britiſh *Dru*, Oak; whence he takes δρυὺς to be derived. *Gorop. Becanus L.* I. takes *Druis* to be an old *Celtic*, and *German* Word, form'd from *Trowis*, or *Truwis*, a Doctor of the Truth, and the Faith. This Etymology *Voſſius* acquieſces in.

*Hornius*, in his Hiſtory of Philoſophy, *L.* II. *C.* 12. believes all the Learning and Philoſophy of the *Druids* to have been derived from the Aſſyrian *Magi*, who are ſtill call'd in *Germany*, *Trutten*, or *Truttner:* And that, as *Magus* has loſt its ancient Signification, which was honourable, and now ſignifies a Magician, or Sorcerer; *Druid*, which had the ſame Senſe, has likewiſe degenerated, and now ſignifies no other, than a Perſon who has Commerce with the Devil, or is addicted to Magic. And accordingly, in *Friſeland*, where there anciently were *Druids*, ſuch People are call'd *Druis*. *Gale*, *Dickenſon*, and others, contend, that the *Druids* borrowed all their Philoſophy, as well as Religion, from the *Jews*.

DRUIDE. There were alſo Women, call'd *Druids*, or *Druides*, among the *Gauls*, &c. The Authors of the *Hiſtoria Auguſta*, particularly *Lampridius*, and *Vopiſcus*, make mention thereof.

A *Druide*, ſays *Lampridius*, *p.* 135. told *Alexander Severus* ſomething which denoted he ſhould be unhappy.

*Vopiſcus*, in the Life of *Aurelian*, relates, that having conſulted the Gauliſh *Druids*, whether or no the Empire ſhould remain in his Family; they gave him for Anſwer, that no Name ſhould be more glorious in the Empire, than that of the Deſcendants of *Claudius*. On which the Hiſtorian takes Occaſion to obſerve, that *Conſtantius*, the Father of *Conſtantine*, was a *Claudius*.

Laſtly, the ſame *Vopiſcus*, in his Life of *Numerianus*, relates, that a *Druide* had foretold *Dioclesian*, he ſhould be Emperor, when he ſhould have kill'd *Aper*, which ſignifies a Boar, and which was the Name of a *Præfectus Prætorii*, whom he kill'd with his own Hand.

*Salmaſius*, in his Notes on *Lampridius*, is a little in doubt who theſe Women were: But he gives into the moſt eaſy, and plauſible Opinion, that they were either the Wives, or the Children of the *Druids*.

DRUM, *Tympanum*, a Military, Muſical Inſtrument, of Uſe principally among the Foot, ſerving to call the Soldiers together, to direct their March, Attack, Retreat, &c.

The Body of the *Drum* is made of a very thin Oak bent into a Cylinder, and cover'd at each End with Parchment, which is ſtrain'd, or braced more or leſs, according to the Height, or Depth of the Sound required, by Strings; and ſtruck with Sticks. The Height of the *Drum* is equal to its Breadth, which does not exceed two Foot and a half, by reaſon, no Skins can be had to cover bigger. There are alſo *Drums*, whoſe Body is of Braſs.

DRUM, or DRUMMER, is alſo a Soldier deſtined to beat the *Drum*.

In each Company of Infantry there is at leaſt one *Drum*, and a *Drum-Major* in every Regiment.

There are divers Beats of the *Drum*: As the *March*, *Double March*, *Aſſembly*, *Charge*, *Retreat*, *Alarm*, *Chamade*, &c.

DRUM, in Anatomy, or *Ear*-DRUM, a Cavity in the Inner Ear, thus call'd from the Reſemblance it bears to the Figure of a *War-Drum*. See EAR.

Its outer Extreme is cover'd with a Membrane, by Anatomiſts more uſually call'd *Tympanum*, or more properly, *Membrana Tympani*. See TYMPANUM.

The Office of the *Membrana Tympani*, or *Drum of the Ear*, has been greatly controverted among Anatomiſts. The Account beſt warranted, is, that being a *Medium* for the Conveyance of the Sound to the Auditory Nerve, by its different Degrees of Tenſion, it ſerves to modify the Sound, and propagate it to the Nerve well proportioned, and commenſurate thereto.

The ingenious Dr. *Holder* has improved on this Theory. He conceives, that the Action of the Muſcle, whereby the *Drum* is ſtretch'd, and relax'd, does ordinarily, and conſtantly draw it to a moderate Tenſion; but when we have Occaſion to liſten, and give a particular Attention to any Sound, the Action of that Muſcle is then more intenſe, and the *Drum* is drawn to a more than ordinary Tenſion, to facilitate the Paſſage of the Sound. See ATTENTION.

Upon theſe Conſiderations, that Author having a young Gentleman, who was born deaf, put into his Hands; and perceiving the great Defect to lye in the Want of a due Tenſion of the *Tympanum*, he adviſed his Mother to conſult with Phyſicians, whether by ſome aſtringent Fumes, or otherwiſe, it might not be reſtored to a due Tenſion.

In the mean Time he thought of a temporary Way, by the Impulſe of any vehement Sound; as of a *Drum* beaten near him: Which Sound, during its Continuance, muſt needs give the *Tympanum* a Tenſion, by driving and ſwelling it outwards, as a freſh Gale of Wind fills the Sails of a Ship. And the Experiment ſucceeded according to Expectation. For ſo long as he beat a Drum faſt, and loud by him, he could hear thoſe that ſtood by him call him gently by his Name. But when the Drum ceaſed, he could no longer hear the ſame Perſons calling him very loudly. See DEAFNESS.

DRUM, in Architecture. See TAMBOUR.

DRUNGUS, a Body, or Company of Forces, thus call'd, under the *Roman* Empire.

The Name *Drungus*, as appears from *Vegetius*, *L.* III. *C.* 16. was at firſt only applied to foreign, and even hoſtile Troops; but under the Eaſtern Empire, it came in Uſe for the Troops of the Empire it ſelf. On which Occaſion, the Word Δρουγγος was form'd.

It amounts pretty nearly to what we call a *Regiment*, or *Brigade*. *Leunclavius* obſerves, that the *Drungus* was not leſs than 1000 Men, nor more than 4000.

The ſame *Leunclavius* obſerves, that Δρεγγος among the modern *Greeks* ſignifies a *Staff*, or *Rod*, the Badge of a Dignity, or Office, as *Agla* among the *Turks*; and thinks, that the Name may be form'd from the Latin *Truncus*. But it appears from *Vegetius*, that *Drungus* is a Barbarous, not a *Latin* Word.

*Spelman* takes it for *Saxon*, becauſe at this Day, *Trong*, or *Throng*, in *Engliſh* ſignifies a Multitude. *Salmaſius* derives it from Πυγχος, Beak; on Account of the Battallion's being diſpoſed beak-wiſe, or terminating in a Point.

DRUNKENNESS, phyſically conſider'd, conſiſts in a præter-natural Compreſſion of the Brain, and a Diſcompoſure of its Fibres; occaſion'd by the Fumes, or ſpirituous Parts of Liquors. 'Tis accounted for thus: An immoderate

Quantity of Wine taken into the Stomach, is there heated, and undergoes a Kind of Effervescence; which happens the more readily, as the Liquor abounds the more in Sulphur. By this Action it becomes attenuated, and rarified; So that the grosser Parts being left behind, its finer Parts are fitted to penetrate, and shoot through the Veins to the Brain; or are convey'd through the Veins to the Heart, whence, after a further Heat, and Rarefaction, they are sent through the caroted Arteries, *&c.* to the Brain. Hence necessarily arises a Repletion of the Meninges of the Brain; and a Compression of the Fibres of the Brain it self, from the fresh Stock of rarefied Sulphur, continually exploded into them: Hence also an Obstruction of the Pores, or Passages of the Brain; a frequent, and disorderly Pulsation of the Fibres, and the other Symptoms of this Disease.

Hence it is, that all Liquors will not give *Drunkenness*; but only such as by their Sulphur, or Spirit, are disposed for an Effervescence in the Stomach, and Heart, to diffuse their subtle attenuated Parts plentifully to the Brain. See BRAIN, NERVE, MUSCULAR *Motion*, DELIRIUM, *&c.*

'Tis a popular Mistake, that the only Remedy for Gluttony, is *Drunkenness*; or that the Cure of a Surfeit of Meat, is a Surfeit of Wine: Than which nothing can be more contrary to Nature. *Cheyne.* See DRINK.

The ancient *Lacedemonians* used to make their Slaves frequently *Drunk*, to give their Children an Aversion, and Horror for the same. The *Indians* hold *Drunkenness* a Species of Madness; and in their Language, the same Term *Ramjan*, that signifies a *Drunkard*, signifies also a Phrenetic.

DRY *Measure.* See MEASURE.

DRYADES, in the Heathen Theology, the Nymphs of the Woods; a Sort of imaginary Deities, which the Ancients believed to inhabit the Woods, and Groves; and to hide themselves under the Bark of the Oak, call'd by the *Greeks* Δρυς. See GODDESS.

The *Dryades* differ'd from the *Hamadryades*, in that these latter were attach'd to some particular Tree, with which they were born, and with which they died; whereas the *Dryades* were the Goddesses of the Trees, and Woods in general, and liv'd at large in the Middle thereof. For tho' Δρυς properly signifies an *Oak*; it was also used in the general for *Tree*.

We likewise find mention made in divers Authors of a Kind of Prophetesses, or Witches, among the *Gauls*, call'd *Dryades*, or *Druides*. See DRUIDES.

DUCAL *Coronet.* See CORONET.

DUCAL. The Letters Patents granted by the Senate of *Venice* are call'd *Ducals*: So are the Letters wrote in the Name of the Senate, to foreign Princes. See DOGE.

A Courier was dispatch'd with a *Ducal* to the Emperor, returning him Thanks for renewing the Treaty of Alliance (in 1716) against the *Turk*, with the Republic of *Venice*.

The Name *Ducal* is derived hence, that at the Beginning of such Patents the Name of the *Duke*, or *Doge*, is wrote in Capitals, thus: *N . . . . Dei Gratia Dux Venetiarum*, &c. See DUKE.

The Date of *Ducals* is usually in *Latin*; but the Body *Italian*.

DUCAT, a foreign Coin, either of Gold, or Silver, struck in the Dominions of a *Duke*; being about the same Value with a Piece of Eight, or a *French* Crown, or 4 Shillings and 6 Pence Sterling, when of Silver: and twice as much, when of Gold. See COIN.

The Origin of *Ducats* is referr'd to one *Longinus*, Governour of *Italy*; who revolting against the Emperor *Justin* the Younger, made himself Duke of *Ravenna*, and call'd himself *Exarcha*, i. e. *without Lord*, or *Ruler*. And to shew his Independance, struck Pieces of Money of very pure Gold in his own Name, and with his own Stamp; which were call'd *Ducats:* as *Procopius* relates the Story.

After him, the first who struck *Ducats*, were the *Venetians*, who likewise call'd 'em *Cecchins*, or *Seguins*, from *Zecca*, the Place, where they first were struck. This was about the Year 1280, in the Time of *John Dandulo:* But we have pretty good Evidence, that *Roger*, King of *Sicily*, had coin'd *Ducats* as early as 1240. And *du Cange* scruples not to affirm, that the first *Ducats* were struck in the Dutchy of *Pouille*, in *Calabria*.

The chief Gold *Ducats* now currant, are the single, and double *Ducats* of *Venice*, *Florence*, *Genoa*, *Germany*, *Hungary*, *Poland*, *Sweeden*, *Denmark*, *Flanders*, *Holland*, and *Zurich*. The heaviest of 'em weighs 5 Penny weight 17 Grains, and the lightest 5 Penny weight 10 Grains; which is to be understood of the double *Ducats*, and of the single, in Proportion.

The *Spaniards* have no *Ducats* of Gold, but in lieu thereof make Use of Silver Ones. Not that the Silver *Ducat* is a real Species, but only a Money of Account like our Pound. It is equivalent to 11 Rials. See RIAL.

The Silver *Ducats* of *Florence* serve there for Piasters, or Crowns. See CROWN.

DUCATOON, a Silver Coin, struck chiefly in *Italy*, particularly at *Milan*, *Venice*, *Florence*, *Genoa*, *Lucca*, *Mantua*, and *Parma*; Tho' there are also *Dutch*, and *Flemish Ducatoons*.

They are all nearly on the same footing; and being a little both finer and heavier than the *French* Crown, are valued at 2 Pence, or 3 Pence more; *viz.* at about 4 Shill. 8 Pence Sterl. See COIN.

There is also a Gold *Ducatoon*, struck, and current chiefly in *Holland*. It is equivalent to 20 Florins, or Guldens; on the footing of 1 Shilling, 11 Pence, half Penny, the Florin. See FLORIN.

DUCES *Tecum*, a Writ commanding one to appear at a Day in Chancery, and *to bring with him* some Evidences, or other Things, which the Court would view.

The same is also granted, where a Sheriff having in his Custody a Prisoner, in a personal Action, returns upon a *Habeas Corpus*, that he is *adeo languidus*, that without Danger of Death he cannot have his Body before the Justices.

DUCENARIUS, in Antiquity, an Officer in the *Roman* Army, who had the Command of *two hundred Men*.

The Emperors had also *Ducenarii* among their Procurators, or Intendants, call'd *Procuratores Ducenarii*. Some say, that these were such whose Salary was 200 Sesterces; as, in the Games of the *Circus*, Horses hir'd for two hundred Sesterces, were call'd *Ducenarii*.

Others hold, that *Ducenarii* were such as levied the two hundredth Penny; Or the Officers appointed to inspect the Raising of that Tribute.

The Inscriptions at *Palmyra* have frequently the Word *Ducenarius*, in *Greek* Διακενάριος.

DUCKING-*Stool*, in our Customs. See CUCKING-*Stool*.

DUCKING, or plunging in Water, *Olaus Magnus* tells us, was a Diversion anciently practised among the *Goths*, by Way of Exercise: But among the *Celtæ*, and *Franks*, a Sort of Punishment. *Tacitus* likewise assures us, that it was used among the ancient *Germans* for the Lazy, and Infamous. At *Marseilles*, and *Bourbon*, their Men and Women of scandalous Life are condemn'd to the *Cale*, as they call it, that is, to be shut up naked to the Shift, in an Iron Cage fasten'd to the Yard of a Chaloupe, and *duck'd* several times in the River. The same is done at *Tholouse*, to Blasphemers. It is also a Punishment for the Sea-men; who are thrown into the Sea from the Top of the Yard of a Main-Mast into the Sea, several times, according to the Quality of their Offence. Sometimes a Canon-Ball is fasten'd to their Feet, to make the Fall the more rapid. They have also a Kind of *Dry Ducking*, wherein the Patient is only suspended by a Cord, a few Yards above the Surface of the Water. This is a Kind of *Strapada*. The Punishment is made public by the Discharge of a Canon. See BAPTISING.

DUCT, *Ductus*, in Anatomy, a Term, in its general Sense, applied to all the Canals, or Tubes of a Body, as Veins, Arteries, *&c.* through which the Humors, Spirits, *&c.* are convey'd. See CANAL, TUBE, *&c.*

The Word has also a more immediate Application to several particular Vessels; as the

DUCTUS *Thoracicus.* See *Ductus* THORACICUS.

DUCTUS *Communis Choledochus*, a large Canal form'd by an Union of the *Ductus Cysticus*, and *Hepaticus*. This *Duct* descending about 4 Inches, discharges it self into the *Duodenum*, by an oblique Insertion, which does the Office of a Valve, in preventing the Regress of the Bile convey'd hereby into the Intestines. See BILE.

It sometimes opens into the *Duodenum* at the same Aperture with the *Pancreatic Duct*.

DUCTUS *Hepaticus*, call'd also *Meatus Hepaticus*, and *Bilary Pore*. See PORUS *Bilarius*.

DUCTUS *Cysticus*, or *Meatus Cysticus*, a Canal about the Bigness of a Goose-quill, which arising from the Neck of the Gall-bladder, about 2 Inches Distance therefrom, joyns the *Porus Bilarius*, and together with it constitutes the *Ductus Communis*. See CYSTIC *Duct*.

DUCTUS *Cysti-hepaticus*, or *Hepaticysticus*. See CYST-*Hepatic*.

DUCTUS *Adiposi*, are little Vascules in the *Omentum*, which either receive the Fat separated from the Adipose Loculi, or Cells, or else brings it to them: For the extream Fineness of these Vessels renders it extream difficult to trace their Origin, or Course.

Indeed it remains somewhat doubtful, whether they be hollow, and real *Ducts*; or whether they be not solid Fibres, such as are observed in the Spleen, along which the liquid Fat does, as Dr. *Drake* expresses it, drill its Way, as the easiest it can find. *Malpighi*, their first Discoverer, inclines to the former Opinion. All we know for certain, is, that they terminate in little Globules of Fat, concerning the Use and Progress whereof much remains to be discover'd. See FAT.

DUCTUS *Pancreaticus*, a little Canal arising from the *Pancreas*, and opening into the *Duodenum*, ſerving to diſcharge the Pancreatic Juice into the Inteſtines. See PANCREAS, and PANCREATIC *Juice*.

This *Duct* being firſt diſcover'd by *Virtſungus*, is frequently call'd *Ductus Virtſungianus*.

DUCTUS *Salivales*, the excretory Tubes of the Salival Glands; ſerving to diſcharge the ſecreted *Saliva* into the Mouth. See SALIVAL *Ducts*.

DUCTUS *Lachrymales*, the excretory Veſſels of the *Glandulæ Lachrymales*, ſerving for the Effuſion of Tears. See LACHRYMAL *Ducts*.

DUCTUS *Alimentalis*, a Name that accurate Anatomiſt, Dr. *Tyſon*, gives the Gula, Stomach, and Inteſtines; all which make but one continued Canal, or *Duct*. This *Duct* he makes the proper Characteriſtic of an Animal.

DUCTUS *Urinarius*, the ſame as the *Urethra*. See URETHRA.

DUCTUS *Umbilicalis*. See FUNICULUS *Umbilicalis*.

DUCTUS *Chyliferus*, } the ſame as *Ductus Thoracicus*.
DUCTUS *Roriferus*, }
See THORACIC *Duct*.

DUCTUS *Thoracicus*. See THORACIC *Duct*.

The *Thoracic Duct*, Dr. *Wharton* aſſures us, was obſerved by *Barthol. Euſtachio* in 1563; but its Uſe, and Communication with the *Receptaculum Chyli*, was unknown. And hence *Pecquet*, a Phyſician of *Dieppe*, is commonly ſuppoſed to have firſt diſcover'd it in 1651; whence its Denomination *Ductus Pecquetianus*: Tho' the Deſcription he gives of its Inſertion is faulty. *Van Horne* confounds it with the *Receptaculum*, or as he calls it, *Ciſterna Chyli*.

DUCTILITY, in Phyſicks, a Property of certain Bodies, whereby they become capable of being beaten, preſs'd, drawn, or ſtretch'd forth, without breaking; Or, whereby they are capable of great Alterations in their Figure, and Dimenſions; and of loſing in one Way, as they gain in another. See MATTER, BODY, *&c.*

Such are Metals, which being urg'd by the Hammer, gain in Length and Breadth what they loſe in Thickneſs; or being drawn into Wiar through Iron, grow longer as they become ſlenderer. See METAL.

Such, alſo, are Gums, Glues, Reſins, and ſome other Bodies, which, tho' not malleable, yet may be denominated *Ductile*, in as much as when ſoften'd by Water, Fire, or ſome other Menſtruum, they may be drawn into Threads. See MALLEABLE.

So that we have two Claſſes of *Ductile* Bodies. The one *Hard*, and the other *Soft*: Each of which we ſhall beſtow ſome Conſiderations upon.

The Cauſe of *Ductility* is very obſcure; as depending in great Meaſure on *Hardneſs*, than which there is nothing in Nature we know leſs of. 'Tis true, we uſually account for *Hardneſs* from the Force of Attraction between the Particles of the hard Body; and for *Ductility* from the Particles of the *ductile* Body, being, as it were, joynted, and entangled within each other. See HARDNESS, COHÆSION, *&c.*

Inſtead of fanciful Hypotheſes to account for *Ductility*; we ſhall here entertain the Reader with ſome truly amazing Circumſtances and Phænomena thereof.

One of the Properties of Gold, is to be the moſt *ductile* of all Bodies. See GOLD.

Of this, the Gold-beaters, and Gold Wiar-drawers, furniſh us with abundant Proof. *Fa. Merſenne*, Monſr. *Rohault*, Dr. *Halley*, &c. have made Computations thereof: But they truſted to the Reports of the Workmen. Monſr. *Reaumur*, in the *Memoires de l'Academie Royale des Sciences An.* 1713. took a ſurer Way: He made the Experiment himſelf. A ſingle Grain of Gold, he found, even in the common Gold-Leafs, us'd in moſt of our Gildings, is extended into 36 and a half, ſquare Inches; and an Ounce of Gold, which in Form of a Cube is not half an Inch either high, broad, or long, is beat under the Hammer into a Surface of 146 and a half ſquare Feet: An Extent almoſt double what could be done 90 Years ago. In *Fa. Merſennes* time, it was deem'd prodigious, that an Ounce of Gold ſhould form 1600 Leaves; which together only made a Surface of 105 ſquare Feet. See GOLD-*Beating*.

But the Diſtention of Gold under the Hammer (how conſiderable ſoever) is nothing to that it undergoes in the Drawing Iron. There are Gold-Leaves, in ſome Parts, ſcarce $\frac{1}{360000}$ Part of an Inch thick; but $\frac{1}{360000}$ Part of an Inch is a notable Thickneſs, in Compariſon of that of the Gold ſpun on Silk in our Gold-Thread.

To conceive this prodigious *Ductility*, it is neceſſary, to have ſome Idea of the Manner wherein the Wiar-drawers proceed. The Wiar, and Thread we commonly call *Gold-Thread*, &c. which every body knows is only Silver-Wiar gilt, or cover'd over with Gold, is drawn from a large Ingot of Silver, uſually about 30 Pound Weight. This they round into a Cylinder, or Roll, about an Inch and a half in Diameter, and 22 Inches long; and cover it over with the Leaves prepared by the Gold-beater, laying one over another, till the Cover is a good deal thicker than that in our ordinary Gilding. And yet even then 'tis very thin; as will be eaſily conceiv'd from the Quantity of Gold that goes to gild the 30 Pound of Silver. Two Ounces, ordinarily, do the Buſineſs; and frequently little more than one. In effect, the full Thickneſs of the Gold on the Ingot rarely exceeds $\frac{1}{400}$ or $\frac{1}{300}$ Part, and ſometimes not $\frac{1}{1000}$ Part of an Inch.

But this thin Coat of Gold muſt be yet much thinner: The Ingot is ſucceſſively drawn through the Holes of ſeveral Irons each leſs than other, till it be as fine, or finer than a Hair. Every new Hole leſſens its Diameter; but it gains in Length what it loſes in Thickneſs, and of Conſequence increaſes in Surface. Yet the Gold ſtill covers it; It follows the Silver in all its Extenſion; and never leaves the minuteſt Part bare, not even to the Microſcope. Yet, how inconceivable muſt it be attenuated while the Ingot is drawn into a Thread, whoſe Diameter is 9000 times leſs than that of the Ingot.

Mr. *Reaumur*, by exact weighing, and rigorous Calculation, found, that one Ounce of the Thread was 3232 Feet long, and the whole Ingot 1163520 Feet, *Paris* Meaſure, or 96 *French* Leagues; equal to 1264400 *Engliſh* Feet, or 240 Miles *Engliſh*: An Extent which far ſurpaſſes what *Fa. Merſenne*, *Furetiere*, Dr. *Halley*, &c. ever dreamt of.

*Merſenne* ſays, that half an Ounce of the Thread is 100 Toiſes, or Fathoms long; on which footing, an Ounce would only be 1200 Foot: whereas Monſr. *Reaumur* finds it 3232. Dr. *Halley* makes 6 Foot of the Wiar one Grain in Weight, and one Grain of the Gold, 98 Yards, and conſequently the ten thouſandth Part of a Grain above one Third of an Inch. The Diameter of the Wiar he found one 186th Part of an Inch; and the Thickneſs of the Gold one 154500th Part of an Inch. But this, too, comes ſhort of Monſr. *Reaumur*: For on this Principle, the Ounce of Wiar would only be 2680 Feet.

But the Ingot is not yet got to its full Length. The greateſt Part of our Gold-Thread is ſpun, or wound on Silk; and before they ſpin it, they flat it, by paſſing it between two Rolls, or Wheels of exceedingly poliſh'd Steel; which Wheels, in flatting it, lengthen it by above one Seventh. So that our 240 Miles are now got to 274. The Breadth, now, of theſe *Laminæ*, or Plates, Monſr. *Reaumur* finds, is only one 8th of a Line, or one 96th of an Inch, and their Thickneſs one 3072th. The Ounce of Gold, then, is here extended to a Surface of 1190 ſquare Feet; whereas, the utmoſt the Gold-beaters can do, we have obſerved, is, to extend it to 146 ſquare Feet.

But the Gold, thus exceedingly extended, how thin muſt it be? From Monſr. *Reaumur*'s Calculus it is found to be one 1750000th of a Line, or one 21000000th of an Inch; which is ſcarce one 13th of the Thickneſs of Dr. *Halley*'s Gold. But he adds, that this ſuppoſes the Thickneſs of the Gold every where equal; which is no ways probable: For in beating the Gold-leaves, whatever Care they can beſtow, 'tis impoſſible to beat 'em equally. This we eaſily find by the greater Opacity of ſome Parts than others. And where the Leaf is thickeſt, it will gild the Wiar the thickeſt.

Monſr. *Reaumur* computing what the Thickneſs of the Gold muſt be where thinneſt, finds it only one 315000000th of an Inch. But what is the one 315000000th Part of an Inch? Yet this is not the utmoſt *Ductility* of Gold: For inſtead of two Ounces of Gold to the Ingot, which we have here computed upon, a ſingle one might have been uſed; And then the Thickneſs of the Gold, in the thinneſt Places, would only be the 630000000th Part of an Inch.

And yet, as thin as the Plates are, they might be made twice as thin, yet ſtill be gilt; by only preſſing 'em more between the Wheels, they are extended to double the Breadth, and proportionably in Length. So that their Thickneſs at laſt will be reduced to one thirteenth, or fourteenth Millionth Part of an Inch.

Yet with this amazing Thinneſs of the Gold, 'tis ſtill a perfect Cover for the Silver. The beſt Eye, nor even the beſt Microſcope, cannot diſcover the leaſt Chaſm, or Diſcontinuity. There is not an Aperture to admit Alcohol of Wine, the ſubtileſt Fluid in Nature, nor even Light it ſelf. Add, that if a Piece of this Gold-Thread, or Gold-plate, be laid to diſſolve in *Aqua fortis*, the Silver will be all excavated, or eat out, and the Gold left entire in little Tubules.

As to the *Ductility of Soft Bodies*, it is not yet carried to that Pitch. The Reader, however, muſt not be ſurprized, that among the *ductile* Bodies of this Claſs, we give the firſt Place to the moſt brittle of all others, *Glaſs*. We all know, that when well penetrated with the Heat of the Fire, the Workmen can figure, and manage it like ſoft Wax. But what is moſt remarkable, is, that it may be drawn, or ſpun out into Threads exceedingly fine, and long.

Our ordinary Spinners don't form their Threads of Silk, Flax, or the like, with half the Eaſe, and Expedition, as the Glaſs-Spinners do Threads of this brittle Matter. We have

of

of 'em us'd in Plumes on Childrens Heads, and divers other Works, much finer than any Hair; and which bend, and wave like them with every Wind.

Nothing is more ſimple and eaſy than the Method of making them: There are two Workmen employ'd: The firſt holds one End of a Piece of Glaſs over the Flame of a Lamp; and when the Heat has ſoften'd it, a ſecond Workman applies a Glaſs-hook to the Metal thus in Fuſion; and withdrawing the Hook again, it brings with it a Thread of Glaſs, which ſtill adheres to the Maſs. Then, fitting his Hook on the Circumference of a Wheel about 2 Feet and a half in Diameter, he turns the Wheel as faſt as he pleaſes; which drawing out the Threads, winds it on its Rim; till after a certain Number of Revolutions it is cover'd with a Skain of Glaſs-Thread.

The Maſs in Fuſion over the Lamp, diminiſhes inſenſibly, being wound out, as it were, like a Pelotoon, or Clue upon the Wheel; and the Parts, as they recede from the Flame, cooling, become more coherent with thoſe next to 'em; and this by Degrees: The Parts neareſt the Fire, are always the leaſt connected together, and of Conſequence muſt give Way to the Effort the reſt make to draw 'em towards the Wheel.

The Contour of theſe Threads is uſually a flat Oval, being three or four times as broad as thick. Some of 'em ſcarce ſeem bigger than the Thread of a Silk-Worm; and are flexible to a Miracle. If the two Ends of ſuch Threads be knotted together, they may be drawn and bent, till the Aperture, or Space in the Middle of the Knot don't exceed one 4th of a Line, or one 48th of an Inch in Diameter.

Hence, Mr. *Reaumur* advances, that as the Flexibility of Glaſs increaſes in Proportion to the Fineneſs of the Threads; had we but the Art of drawing Threads as fine as thoſe of a Spider's Web, we might weave Stuffs, and Cloaths hereof, for Wear.

Mr. *Reaumur* made ſome Experiments this Way: He could make Threads fine enough, as fine, in his Judgment, as any Spider's web, but could never make 'em long enough, to do any Thing with 'em.

The ſame ingenious Author obſerves, that the Matter whereof Spiders and Silk-worms form their Threads, is brittle, when in the Maſs, like dry Gums. As 'tis drawn out of their Bodies, it aſſumes a Conſiſtence, much as Glaſs-threads become hard, as they recede from the Lamp; tho' from a different Cauſe. The *Ductility* of this Matter, and the Apparatus thereto being much more extraordinary in Spiders, than in Silk-worms; we ſhall here only conſider the former. Something has already been ſaid of each under the Article SILK, which ſee.

Near the Anus of the Spider are ſix *Papillæ*, or Teats, repreſented in *Tab. Nat. Hiſtory Fig.* 6. The Extremities of the ſeveral *Papillæ* are furniſh'd with Holes, that do the Buſineſs of Wiar-drawers, in forming the Threads. Of theſe Holes, M. *Reaumur* obſerves, there are enough in the Compaſs of the ſmalleſt Pins-head, to yield a prodigious Quantity of diſtinct Threads. The Holes are perceiv'd by their Effects: Take a large Garden-Spider ready to lay its Eggs, and applying the Finger on a Part of its *Papillæ*, as you withdraw that Finger, it will take with it an amazing Quantity of different Threads.

Monſr. *Reaumur* has often told 70, or 80, with a Microſcope, but has perceiv'd, that there were infinitely more than he could tell. In effect, if he ſhould ſay, that each Tip of a *Papilla* furniſh'd a thouſand, he is perſuaded, he ſhould ſay vaſtly too little. The Part is divided into an Infinity of little Prominences, like the Eyes of a Butter-fly, *&c.* Each Prominence, no doubt, makes its ſeveral Thread; or rather, between the ſeveral Protuberances, are Holes that give Vent to Threads; the Uſe of the Protuberances, in all probability, being to keep the Threads at their firſt Exit, 'ere yet harden'd by the Air, a-part. In ſome Spiders theſe Protuberances are not ſo ſenſible; but in lieu thereof there are Tufts of Hair, which may ſerve the ſame Office, *viz.* to keep the Threads a-part. Be this as it will, there may Threads come out at above a thouſand different Places in every *Papilla*; conſequently, the Spider having ſix *Papillæ*, has Holes for above 6000 Threads. 'Tis not enough, that theſe Apertures are not only immenſely ſmall: The Threads are already form'd 'ere they arrive at the *Papilla*, each of 'em having its little Sheath, or Duct, in which it is brought to the *Papilla* from a good Diſtance.

Monſr. *Reaumur* traces 'em up to their Source, and ſhews the Mechaniſm by which they are made. Near the Origin of the Belly, he finds two little ſoft Bodies, which are the firſt Source of the Silk. Their Form and Tranſparency reſemble thoſe of Glaſs-beads, (ſee *Fig.* 7.) by which Name we ſhall hereafter denote them. The Tip of each Bead, as R, goes winding, and makes an Infinity of Turns, and Returns towards the *Papilla*. From the Baſe, or Root of the Bead, proceeds another Branch much thicker; which winding variouſly, forms ſeveral Knots, and takes its Courſe like the other, towards the Hind-part of the Spider. In theſe Beads, and their Branches, is contain'd a Matter proper to form the Silk, only that it is too ſoft. The Body of the Bead is a Kind of Reſervoir, and the two Branches two Canals proceeding from it. A little further backward, there are two other leſſer Beads, which only ſend forth one Branch a-piece, and that from the Tip. Beſide theſe, there are three other larger Veſſels on each Side the Spider, which Mr. *Reaumur* takes for the laſt Reſervoir, where the Liquor is collected. They are repreſented (*Fig.* 8.) The biggeſt is near the Head of the Inſect, and the leaſt near the Anus. They all terminate in a Point; and from the three Points of theſe three Reſervoirs it is, that the Threads, at leaſt the greateſt Part of the Threads, drawn out at the three *Papillæ*, proceed. Each Reſervoir ſupplies one *Papilla*. Laſtly, at the Roots of the *Papillæ*, are diſcern'd ſeveral fleſhy Tubes: probably, as many as there are *Papillæ*. Upon lifting up the Membrane, or Pellicle, that ſeems to cover theſe Tubes, they appear full of Threads, all diſtinct from each other, and which, of Conſequence, under a common Cover, have each their particular One; being kept like Knives in Sheaths. The immenſe Quantity of Threads contain'd here, Monſr. *Reaumur* concludes, upon tracing their Courſe, do not all come from the Points of the Reſervoirs; but ſome from all the Turns, and Angles; nay probably, from every Part thereof. But by what Conveyances the Liquor comes into the Beads, and out of the Beads into the Reſervoirs, remains yet to be diſcover'd.

We have already obſerv'd, that the Tip of each *Papilla* may give Paſſage to above a thouſand Threads; yet the Diameter of that *Papilla* does not exceed a ſmall Pins-head: But we were there only conſidering the largeſt Spiders.

If we examine the young, riſing Spiders, produced by thoſe; we ſhall find, that they no ſooner quit their Egg, than they begin to ſpin. Indeed their Threads can ſcarce be perceiv'd; but their Webs, form'd thereof, may. They are frequently as thick, and cloſe, as thoſe of Houſe-Spiders; And no Wonder: there being often 4, or 500 little Spiders concuring to the ſame Work. How minute muſt their Holes be? The Imagination can ſcarce conceive that of their *Papillæ*. The whole Spider is perhaps leſs than a *Papilla* of that which produced it.

This is eaſily ſeen: Each big Spider lays 4 or 500 Eggs; theſe Eggs are all wrapp'd up in a Bag; and as ſoon as the young Ones have broke through the Bag, they begin to ſpin. How fine muſt their Threads be?

Yet is not this the utmoſt Nature does: There are ſome Kinds of Spiders ſo ſmall at their Birth, that they are not viſible without a Microſcope. There are uſually found an Infinity of 'em in a Cluſter, and they only appear like a Number of red Points. And yet there are Webs found under them, tho' well nigh imperceptible. What muſt be the Tenuity of one of theſe Threads? The ſmalleſt Hair muſt be to one of theſe what the moſt maſſive Bar is to the fineſt Gold-wiar above mentioned.

The Matter whereof the Threads are form'd, we have obſerved, is a viſcid Matter. The Beads are the firſt Receptacles where it is gather'd, and the Place where it has the leaſt Conſiſtence. 'Tis much harder when got into the ſix great Reſervoirs, whither 'tis carried by Canals from the former: This Conſiſtence it acquires in good Meaſure in its Paſſage; Part of the Humidity being diſſipated in the Way; or ſeparated by Parts deſtined for that Purpoſe.

Laſtly, the Liquor is dried ſtill further, and becomes Thread, in its Progreſs through the reſpective Canals to the *Papillæ*. When theſe firſt appear out at the Holes, they are ſtill glutinous; ſo that ſuch as ſpring out of neighbouring Holes, ſtick together. The Air compleats the drying.

By boiling the Spider, more, or leſs, the Liquor is brought to a greater or leſs Conſiſtence, fit to draw out into Threads, for 'tis too fluid for that Purpoſe, while yet incloſed in its Reſervoirs.

The Matter contain'd in theſe Reſervoirs, when well dried, appears a tranſparent Gum, or Glue, which breaks when much bent: Like Glaſs, it only becomes flexible by being divided into the fineſt Threads. And probably 'twas on this Account Nature made the Number of Holes ſo immenſe. The Matter of the Silk form'd in the Bodies of Spiders being much brittler than that form'd in Silk-worms, needed to be wound ſmaller. Otherwiſe we don't conceive, why ſhe ſhould form a great Number of Threads, which were afterwards to be reunited: a ſingle Canal might have done. See DIVISIBILITY.

DUEL, a ſingle Combat, at a Time and Place appointed, in Conſequence of a Cartel, or Challenge. See CHALLENGE, *&c.*

*Duels* were anciently allowed by common Law, in Caſes where Proof could not be had. In which Senſe *Fleta* defines *Duel, Singularis Pugna inter duos ad probandam Veritatem Litis, & qui vicit, probaſſe intelligitur.* Stat. de Finib. Levat. 27. *Edu.* I. See COMBAT.

This

This *Duelling* was ſo general a Method of terminating Differences among the Nobles; that even Eccleſiaſticks, Prieſts, and Monks were not excuſed from the ſame. Only, to prevent their being ſtain'd with Blood, they oblig'd 'em to procure Champions to fight in their ſtead; as is ſhewn at large by Father *Dacheri*, in the VIIIth Tome of his *Spicilegium*. See CHAMPION.

None were excepted but Women, ſick People, and Cripples, and ſuch as were under 21 Years of Age, or above 60.

The Cuſtom was for the two Champions to enter a Liſt, or ſmall Encloſure, by the Authority of the ordinary Judge, not only on Criminal Occaſions, but on ſome Civil Ones, for the Maintenance of their Right.

The Monk *Sigebert* even relates, that a Queſtion on a Point of Law being preſented to the Emperor *Otho* I. *viz.* whether the Repreſentation had Place in direct Succeſſion: And the Doctors finding themſelves embarraſs'd in the Reſolution thereof; the Emperor remitted the Deciſion of ſo critical a Point to the Judgment of Arms; and pitch'd on two bold Fellows to maintain the *pro* and the *contra*. The Victory fell to him who contended for the Repreſentation; In Favour of whom a Law was ſtraightway made, which is in Force to this Day.

This Cuſtom came originally from the Northern Nations; among whom it was a Cuſtom to end all their Differences by Arms; as we are aſſured by *Paterculus*. It afterwards paſſed as a Law among the *Germans*, *Danes*, and *Franks*; eſpecially after *Gondebault*, King of the *Burgundians*, admitted it inſtead of Swearing. Mr. *Godeau*, in his Hiſtory of the Church, VII. Cent. ſays, it was the *Lumbards* who firſt introduced into *Italy* the Barbarity of ſingle Combats, whence the Cuſtom ſpread throughout the reſt of *Europe*.

The Form of the Combat was this: The Accuſer and Accuſed giving Pledges to the Judge, on their reſpective Behalf; the Judge took firſt up that of the Defendant, and next that of the Demandant. They were then both clap'd up in ſafe Priſon; and the Chief Juſtice was to furniſh 'em with ſuitable Arms. Such as fought on Foot had only a Sword and Buckler. The Horſe-men were arm'd at all Points, as well as their Horſes.

The Day of Combat being come, they made Choice of four Cavaliers, to guard the Field; and perform'd divers Ceremonies, Prayers, Oaths, *&c.* deſcrib'd by *Paſquier*, and other Authors, quoted by *du Cange*, who mentions an Ordonnance of King *Philip* the *Fair* in 1306, preſcribing the ſeveral Rules, Conditions, and Ceremonies, which are curious to ſee.

The Vanquiſh'd, whether Accuſer, or Accuſed, was puniſh'd with Death, or Mutilation of Members, and ignominiouſly drag'd out of the Camp, hung on a Gibbet, or burnt, according to the Circumſtances of the Caſe.

This Way of trying by *Duel*, was inſtituted as a Method of conſulting Providence, to learn who was the Criminal; and it was imagined, that God thus interrogated, would not fail to declare himſelf in Favour of the Innocent. But it happen'd ſo often, that the unjuſt Accuſer came off victorious; that they began to be convinced, they muſt not preſcribe to his Wiſdom, the Neceſſity of Interrupting the Courſe of ſecond Cauſes. This was giving Rules to Murther, and diſguiſing Aſſaſſinations under Method and Meaſure. See SORTES.

*Saxo Grammaticus* obſerves, that as early as the Year 981, the Kings of *Denmark* had abrogated the Proof by *Duel*; and in lieu thereof, appointed the Proof by red hot Iron, which was annull'd in its Turn. See ORDEAL.

But *Duels* were condemn'd before by a Council held at *Valence* in 855; where the Perſon who kill'd his Enemy, was excommunicated; and the Perſon kill'd, pronounced unworthy of Burial. Afterwards, the Popes *Nicholas* I. *Celeſtin* III. and *Alexander* III. likewiſe interpoſed; and *Frederic* I. and II. prohibited 'em in *Germany*. St. *Louis* did what he could to aboliſh 'em in *France*; But his Ordonnance only took Place on his own Lands, and not on thoſe of his Vaſſals. After his Example, the Counts *d'Auvergne* and *Poictou*, and ſeveral other Lords, forbad 'em likewiſe. *Philip* the *Fair*, following the Foot-ſteps of his Grand-father, St. *Louis*, forbad all Gages, or Pledges of Battel; and yet he permitted 'em in four Caſes, in the Ordonnance abovementioned of the Year 1306. The laſt *Duel* of Note was in the Year 1547, before King *Henry* II. between *Jarnac* and *Chataigneraye*, mention'd by *Thuanus*, and *de Serres*.

In *England*, the Trial by *Duel* is diſus'd; tho' the Law on which it is founded be ſtill in Force. The laſt Trial of this Kind admitted, was in the 6th Year of King *Charles* I. between *Donnald*, Lord *Rey*, or *Rhee*, Appellant, and *David Ramſey* Eſquire, Defendant, in the painted Chamber at *Weſtminſter*.— *Stephanus de Nerbona omnibus — ſciatis me dediſſe Wilhelmo filio Radulphi de Filungele pro Homagio & Servitio ſuo, & propter* Duellum *quod fecit pro me — duas virgatas Terræ.*

DUEL is alſo uſed for a ſingle Combat on ſome private Quarrel, or Occaſion.

The *Duel* muſt be premeditated; otherwiſe 'tis only a *Rencounter*. See RENCOUNTER.

The Folly, or rather Madneſs of *Duelling* reign'd for ſome Ages in *France*; where the Flower of the Nobleſſe periſh'd thereby. 'Tis one of the Glories of the late *Louis* XIV. to have uſed all his Power and Authority towards aboliſhing *Duels*. The ſevere Edicts and Laws he made againſt *Duelliſts* put a Stop to the Cuſtom.

The Word is form'd from *Duellum*, uſed by the barbarous *Latin* Writers, *quaſi duorum bellum*.

DUKE, a ſoveraign Prince, without the Title, or Quality of King: Such are the *Duke* of *Savoy*; *Duke* of *Parma*, &c. See PRINCE.

There are alſo two Soveraigns, that have the Title of *Great-Duke*: The *Grand-Duke* of *Tuſcany*, and the *Grand-Duke* of *Muſcovy*, now call'd the *Czar*, or Emperor of *Ruſſia*. The Emperor of *Germany* is *Arch-Duke* of *Auſtria*.

The Word is borrowed from the modern *Greeks*, who call *Doucas*, what the *Latins* call *Dux*.

DUKE is alſo a Title of Honour, or Nobility, the next below *Princes*. See NOBILITY, PRINCE, *&c.*

The *Ducate*, or Dignity of *Duke*, is a *Roman* Dignity, denominated *a Ducendo*.

The firſt *Dukes*, *Duces*, were the *Ductores Exercituum*, Commanders of Armies. Under the later Emperors, the Governours of Provinces were entitled *Duces*. In latter Times the ſame Denomination was given to the Governours of Provinces in Time of Peace.

The firſt Governour in Quality of *Duke*, was a *Duke* of the *Marchia Rhetica*, or Griſons, whereof mention is made in *Caſſiodorus*. The *Goths*, and *Vandals*, upon their overrunning the Provinces of the Weſtern Empire, aboliſh'd the *Roman* Dignities wherever they ſettled. But the *Franks*, &c. to pleaſe the *Gauliſh* People, who had long been us'd to that Form of Government, made it a Point of Politicks, not to change any Thing therein; and accordingly divided all *Gaul* into *Dutchies*, and Counties; and gave the Names ſometimes of *Dukes*, and ſometimes of Counts, *Comites*, to the Governours thereof. See COUNT.

In *England*, during the *Saxons* Time, *Cambden* obſerves, the Officers and Commanders of Armies were call'd *Dukes*, *Duces*, after the ancient *Roman* Manner, without any Addition. After the *Conqueror* came in, the Title lay dormant, till the Reign of King *Eduard* III. who created his Son *Eduard*, firſt call'd the *black Prince*, *Duke* of *Cornwall*. After whom, there were more made in ſuch a Manner as that their Titles deſcended to their Poſterity.

They were created with much Solemnity, *per Cincturam Gladii, Cappæque, & Circuli Aurei in Capite Impoſitionem.*

Tho' the *French* retain'd the Names, and Form of the Ducal Government, yet under their ſecond Race of Kings, there was ſcarce any ſuch Thing as *Dukes*; But all the great Lords were call'd *Counts*, *Peers*, or *Barons*. Excepting, however, the *Dukes* of *Burgundy*, and *Aquitaine*; and a *Duke of France*, which was a Dignity, *Hugh Capet* himſelf held, correſponding to the modern Dignity of *Maire de Palais*, or the King's Lieutenant.

By the Weakneſs of the Kings, the *Dukes*, or Governours made themſelves Soveraigns of the Provinces truſted to their Adminiſtration. This Change happen'd chiefly about the Time of *Hugues Capet*; when the great Lords began to diſmember the Kingdom; ſo that that Prince found more Competitors among 'em than Subjects. 'Twas even with a deal of Difficulty they could be brought to own him their Superior, and to hold of him by Faith, and Homage.

By Degrees, what with Force, and what by Marriages, theſe Provinces, both Dutchies, and Counties, which had been rent from the Crown, were re-united. But the Title *Duke* was no longer given to the Governours of Provinces.

From that Time *Duke* became a mere Title of Dignity, affected to a Perſon, and his Heirs Male, without giving him any Domaine, Territory, or Juriſdiction over the Place whereof he is *Duke*. All the Advantages thereof conſiſt in the Name, and the Precedence it gives 'em.

The *Dukes* of our Days retain nothing of their ancient Power, but the Coronet on their Eſcutcheon; which is the only Mark of their departed Soveraignty.

They are created by Patent, Cincture of the Sword, Mantle of State, Impoſition of a Cap, and Coronet of Gold on the Head, and a Verge of Gold in their Hand. See CORONET, GRACE, *&c.*

The eldeſt Sons of *Dukes* are by the Courteſy of *England* ſtyled *Marquiſes*, and the younger Sons, *Lords*, with the Addition of their Chriſtian Name, as Lord *James*, Lord *Thomas*, &c. and take Place of Viſcounts, tho' not ſo privileged by the Laws of the Land. A *Duke* has the Title of *Grace*; and being writ to, is ſtiled, in the Heralds Language, *Moſt high, potent, and Noble Prince*. *Dukes* of the Blood

Royal, are ſtiled, *Moſt high, moſt mighty, and Illuſtrious Princes.*

DUKE-DUKE, a Quality given in *Spain* to a Grandee of the Houſe of *Sylva*, on Account of his having ſeveral Dutchies, by the uniting of two conſiderable Houſes in his Perſon.

Don *Rodrigo de Sylva*, eldeſt Son of Don *Ruy Gomez de Sylva*, and Heir of his Dutchies, and Principalities, married the eldeſt Daughter of the *Duke de l'Infantado*; In Vertue of which Marriage, the preſent *Duke de Paſtrana*, who is deſcended therefrom, and is Grand-ſon of Don *Rodrigo de Sylva*, has added to his other great Titles, that of *Duke-Duke*, to diſtinguiſh himſelf from the other *Dukes*, ſome whereof may enjoy ſeveral Dutchies, but none ſo conſiderable Ones, nor the Titles of ſuch eminent Families.

DULCIFYING, the *Sweetening* of any Thing: a Term uſed in Phyſick, for rendering a Fluid leſs acid, and rough, either by taking away its Salts, or breaking their Points, or covering 'em with ſomething ſmooth, and ſoft.

DUMBNESS, the State of a Perſon who wants the natural Uſe of Speech. People born deaf, are ſaid to be all naturally *dumb*, as not being able to learn Words. See DEAFNESS.

*Dumbneſs* is ſometimes the Reſult of the Want, or even the ill Conformation, of the Tongue. See TONGUE.

Yet in the 3d Tome of the *Ephem. German.* we have an Account of a Book, entitled, *Jac. Rolandi Agloſſoſtomographia, ſive Deſcriptio Oris ſine Lingua, quod perfecte loquitur*, &c. See MUTE.

DUNG, in Agriculture, and Gardening. See MANURE, and COMPOST.

DUNGEON, DONGEON, or DONJON, the moſt elevated Part of a Caſtle built after the ancient Mode; ſerving as a Watch-Tower, or Place of Obſervation. See CASTLE.

In ſome Caſtles, as that of *Vincennes*, &c. the *Dungeon*, or Donjon, ſerves as a Priſon for Perſons they would have the moſt ſecurely kept; whence our Word *Dungeon*.

*Fauchet* derives *Dungeon* from *Domicilium*, in that the *Dungeon* being the ſtrongeſt Part of the Caſtle, was uſually the Lord's Apartment. *Menage* derives it from *Domnionus*, which in ſome ancient Writings we find us'd in the ſame Senſe. Others derive it from *Domus Julii Cæſaris*, or *Domus Jugi*; And others from *Domus Juliani*, the Emperor *Julian* having built ſeveral ſuch Caſtles in the *Gauls*, whereof there is one ſtill ſtanding in *Lorraine*, call'd *Dom Julien*. *Du Cange* derives the Appellation from *Duno aut Colle Ædificatum*, which the barbarous Writers have alter'd into *Dunjo*, *Dungeo*, *Dongio*, *Dangio*, *Domgio*, and *Domnio*.

DUO, in Muſic, a Song, or Compoſition to be perform'd in two Parts only; the one ſung, and the other play'd on an Inſtrument; or by two Voices alone.

It is alſo call'd a *Duo*, when two Voices ſing different Parts, accompanied with a Third, which is a thorough Baſs. Uniſons and Octaves muſt rarely be uſed in *Duo's*, except at the Beginning and End.

DUODENA *Arteria*, and *Vena*, a Branch of an Artery, which the *Duodenum* receives from the Cœliac; to which anſwers a Vein of the ſame Name, returning the Blood to the *Porta*. See VEIN, and ARTERY.

DUODENUM, in Anatomy, the firſt of the *Inteſtina tenua*, or ſmall Guts; being that which receives the Food half chylified from the Stomach. See INTESTINES.

It has its Name *Duodenum*, as being about *twelve* Fingers Breadth, long: On which Account, ſome alſo call it *Dodecadactylum*.

The *Duodenum* ariſes from the *Pylorus*, or right Orifice of the Stomach; whence deſcending towards the Spine, from Right to Left, quite ſtraight, it terminates where the Circumvolutions of the reſt begin.

Its Coats are thicker, and its Cavity, or Canal leſs than any of the other Inteſtines. At its lower End are two Canals, opening into its Cavity, one from the Liver, and Gall-Bladder, call'd the *Ductus Communis Cholidicus*; and the other from the *Pancreas*, call'd *Pancreaticus*. See CHOLIDICUS, and PANCREATICUS.

The *Duodenum* is quite ſtraight; but the *Inteſtinum Jejunum* makes divers Windings, and Inflexions: The reaſon is, that the Bile, and Pancreatic Juice mixing at the Beginning thereof, or at the End of the *Duodenum*, would otherwiſe precipitate not only the groſs Parts of the Excrements, but alſo the Chyle it ſelf, too haſtily. See BILE, EXCREMENT, *&c.*

DUPLA, DUPLE, DOUBLE *Ratio*, is where the Antecedent Term is *double* the Conſequent; Or, where the Exponent of the *Ratio* is 2; Thus 6 : 3 is in a *Duple Ratio*. See RATIO.

*Sub*-DUPLE, *Sub*-DOUBLE *Ratio*, is where the Conſequent Term is *double* the Antecedent; Or, the Exponent of the *Ratio* is $\frac{1}{2}$. Thus, 3 : 6 is in a *Sub-duple Ratio*. See RATIO.

DUPLA-*Seſquialtera* } *Ratio*. { See RATIO.
DUPLA-*Superbipartiens tertias* }

DUPLICATE, a ſecond Inſtrument, or Act, in Writing; as a Brief, Writ, Diſpatch, *&c.* Or a Tranſcript, or Copy of another.

'Tis uſual to write a *Duplicate*, when it is apprehended the firſt Diſpatch, *&c.* is loſt.

In Chancery, *Duplicate* is particularly us'd for ſecond Letters Patent granted by the Lord Chancellour, in a Caſe where he had formerly done the ſame.

The Word is form'd from the Latin *Duploma*, or *Duplum*.

DUPLICATE *Ratio* muſt be well diſtinguiſh'd from *Duple*.

In a Series of Geometrical Proportions, the firſt Term to the third is ſaid to be in a *Duplicate Ratio* of the firſt to the ſecond; or as its Square is to the Square of the ſecond: Thus, in 2, 4, 8, 16, the *Ratio* of 2 to 8, is *Duplicate* of that of 2 to 4; or as the Square of 2 to the Square of 4; wherefore *Duplicate Ratio* is the Proportion of Squares, as Triplicate is of Cubes, *&c.* and the *Ratio* of 2 to 8, is ſaid to be compounded of that of 2 to 4, and of 4 to 8. See RATIO, *&c.*

DUPLICATION, *Doubling*, in Arithmetic, and Geometry, the multiplying a Quantity, either diſcrete, or continued, by *two*. See MULTIPLICATION.

The Term is chiefly us'd in the Phraſe, *Duplication of the Cube*, which is a famous Problem ſought by the Geometricians theſe two thouſand Years. See CUBE.

It was firſt propoſed by the Oracle of *Apollo* at *Delphos*; which, being conſulted about the Manner of ſtopping a Plague then raging at *Athens*, return'd for Anſwer, that the Plague ſhould ceaſe *when his Altar*, which was Cubical, *ſhould be doubled*. Upon this, they applied themſelves, in good Earneſt, to ſeek the *Duplicature* of the Cube, which hence forwards was call'd the *Delian Problem*. See PROBLEM.

The Problem is only to be ſolv'd by finding two mean Proportionals between the Side of the Cube, and double that Side; the firſt whereof will be the Side of the Cube *doubled*: as was firſt obſerv'd by *Hippocrates Chius*. See PROPORTIONAL.

*Eutochius*, in his Comments on *Archimedes*, gives ſeveral Ways of performing it by the Meſolabe. *Pappus Alexandrinus*, and his Commentator *Commandin*, give three Ways: The firſt, according to *Archimedes*; the ſecond, according to *Hero*; and the third, by an Inſtrument invented by *Pappus*, which gives all the Proportions required.

The Sieur *de Comiers* has likewiſe publiſh'd an elegant Demonſtration of the ſame Problem, by means of a Compaſs with three Legs: But theſe Methods are all Mechanical.

DUPLICATURE, in Anatomy, a Doubling, or Folding of the Membranes, or other like Parts; as the *Duplicatures of the Peritonæum, of the Omentum, of the Pleura*, &c. See PERITONÆUM, OMENTUM, PLEURA, *&c.*

In the Hiſtory of the *French* Academy for the Year 1714. an Account is given of a young Man, who died at the Age of 27 Years, in the *Duplicature* of whoſe Meninges were found little Bones, that ſeem'd to proceed out of the inner Surface of the *dura Mater*, and with their acute Points ſtimulated the *pia Mater*.

That *Duplicature* of the *Peritonæum*, wherein the Ancients placed the Bladder, is not found by the modern Anatomiſts. *Dionis*.

*Fabricius ab Aquapendente* firſt diſcover'd the *Duplicature* of the *Cuticula*. See CUTICLE.

DUPONDIUS, in Antiquity, a Weight of two Pounds: Or a Money of the Value of two As's. See AS.

As the *As*, at firſt, weigh'd a juſt *Pondo*, or *Libra*; the *Dupondius*, then, weigh'd two. And hence the Name.

And tho' the Weight of the As was afterwards diminiſh'd, and of Conſequence that of the *Dupondius* alſo; they ſtill retain'd the Denomination. See POUND, and LIBRA.

DURESSE, *Hardſhip*, in Law, is, where a Perſon is kept in Priſon, or reſtrain'd of his Liberty, contrary to Order of Law; or threaten'd to be kill'd, maim'd, or beaten.

In which Caſe, if a Perſon ſo in Priſon, or in Fear of ſuch Threats, make any Specialty, or Obligation, by reaſon of ſuch Impriſonment, or Threats; ſuch Deed is void in Law: And in an Action brought on ſuch Specialty, the Party may plead, that it was brought by *Dureſſe*.

*Brook*, in his Abridgment, joyns *Dureſſe* and *Manaſſe* together, *i. e. Duritiam & Minas*, Hardſhip, and Threatnings.

DURA *Mater*, or DURA *Meninx*, a ſtrong, thick Membrane, which lines, or covers all the inner Cavity of the *Cranium*, and includes the whole Brain; being it ſelf lined on its inner, or concave Side by the *pia Mater*, or *Meninx tenuis*. See MENINGES.

The *dura Mater* ſticks very cloſe to the Baſis of the Skull, and its Sutures by the Fibres, and Veſſels it ſends to the *Pericranium*. See BRAIN, and CRANIUM.

It is faſten'd to the *pia Mater*, and the Brain, by the Veſſels which paſs from one to the other. It gives a Coat, or Covering to all the Nerves which riſe from the Brain; and

and to the *Medulla Spinalis*, and all the Nerves, which riſe from it. See NERVE.

Its Surface is rough towards the Skull, and ſmooth towards the Brain. It is a double Membrane, woven of ſtrong Fibres, which may be plainly ſeen on its Inſide, but very little on its Outſide next the Skull: It has three Proceſſes made by the Doubling of its inner Membrane. See DUPLICATURE.

The firſt reſembles a Sickle, and is therefore call'd *Falx*. See FALX.

The ſecond ſeparates the *Cerebrum* from the *Cerebellum*, down to the *Medulla Oblongata*, that the Weight of the *Cerebrum* may not offend the *Cerebellum*, which lies under it. This Proceſs is very ſtrong, and thick, and in ravenous Beaſts it is for the moſt Part bony, becauſe of the violent Motion of their Brain.

The third is the ſmalleſt, and ſeparates the External Subſtance of the hind Part of the *Cerebellum* into two Protuberances. See CEREBELLUM.

In the *dura Mater* are ſeveral Sinus's, or Channels, which run between its internal and external Membrane: The four principal Ones, are, the *Sinus Longitudinalis*; the ſecond and third Sinus's are call'd the *Laterales*; and the fourth, the *Torcular*. See SINUS, LONGITUDINALIS, *&c.*

Beſides theſe there are more of inferior Note, mention'd by Anatomiſts, as *du Verney*, Dr. *Ridley*, &c. Their Uſe is, to receive the Blood of the adjacent Parts from the Veins, to which they are as ſo many Trunks, and diſcharge the Blood into the internal Jugulars. See JUGULAR.

The Veſſels of the *dura Mater*, are, firſt, a Branch from the Carotidal, while it is in its long Canal, which is diſperſed in its Fore- and lower Part of the *dura Mater*; ſecondly, an Artery, which enters the Hole of the Skull, call'd, *Foramen Arteriæ duræ Matris*: It is diſperſed on the Sides of this Membrane, and runs as high as the *Sinus Longitudinalis*: The Vein which accompanies the Branches of this Artery, goes out of the Skull, by the *Foramen Lacerum*. Thirdly, a Branch of the Vertebral Artery, and Vein, which laſt paſſes through the Hole behind the Occipital *Apophyſis*, where they are diſperſed in the Hind-part of the *dura Mater*. It has alſo Nerves from the Branches of the fifth Pair, which give it an exquiſite Senſe.

It has a Motion of Syſtole, and Diaſtole, which is cauſed by the Arteries, which enter the Skull. No doubt, the great Number of Arteries in the Brain contribute more to it, than thoſe few proper to it ſelf, which may aſſiſt a little, tho' not very ſenſibly, becauſe of their Smallneſs, and Paucity.

The Uſe of the *dura Mater* is to cover the Brain, the Spinal Marrow, and all the Nerves; to divide the *Cerebrum* in two, and to hinder it from preſſing the *Cerebellum*.

DURATION, an Idea we get by attending to the fleeting, and perpetually periſhing Parts of Succeſſion. See SUCCESSION.

The Idea of Succeſſion we get by reflecting on that Train of Ideas, which continually follow one another in our Minds, while awake. The Diſtance between any Parts of this Succeſſion is what we call *Duration*: And the Continuation of the Exiſtence of our ſelves, or any Thing elſe commenſurate to the Succeſſion of Ideas in the Mind, is call'd our *own Duration*, or that of the Thing coexiſting with our Thinking. So that we have no Perception of *Duration*, when that Succeſſion of Ideas ceaſes. See IDEA, and EXISTENCE.

*Duration*, in Mr. *Lock*'s Philoſophy, is a Mode, or Modification of Space. See SPACE, and MODE.

The ſimple Modes of *Duration*, are any Lengths, or Parts thereof, whereof we have diſtant Ideas; as *Hours*, *Days*, *Weeks*, *Months*, *Years*, *Time*, and *Eternity*, &c. See HOUR, DAY, WEEK, MONTH, YEAR, *&c.*

*Duration*, as mark'd by certain Periods, and Meaſures, is what we properly call *Time*. See TIME.

1. By obſerving certain Appearances, at regular, and ſeemingly equi-diſtant Periods, we get the Ideas of certain Lengths, and Meaſures of *Duration*, as Minutes, Hours, *&c.* 2. By being able to repeat thoſe Meaſures of Time, as often as we will, we come to imagine *Duration* where nothing really endures, or exiſts: Thus, we imagine, *to morrow*, *next Year*, *yeſterday*, &c. 3. By being able to repeat ſuch Idea of any Length of Time, as of a *Minute*, *Year*, &c. as often as we will, and add 'em to one another, without ever coming to an End, we get the Idea of *Eternity*. See ETERNITY.

Time is to *Duration*, as Place is to Space, or Expanſion. They are ſo much of thoſe boundleſs Oceans of Eternity, and Immenſity, as is ſet out, and diſtinguiſh'd from the reſt; and thus ſerve to denote the Poſition of finite, real Beings, in reſpect of each other in thoſe infinite Oceans of *Duration*, and Space.

DUTCHY-*Court*, a Court wherein all Matters belonging to the *Dutchy*, or County Palatine of *Lancaſter*, are decided by Decree of the Chancellour of that Court. See PALATINE.

The Original of this Court was in *Henry* the IVth Time; who obtaining the Crown by Depoſition of *Richard* II. and having the *Dutchy* of *Lancaſter*, by Deſcent, in Right of his Mother, became ſeiz'd thereof as King, not as Duke. So that all the Liberties, Franchiſes, and Juriſdictions of the ſaid County paſs'd from the King, by his great Seal, and not by Livery, or Attornment; as the Earldom of *March*, and other Poſſeſſions, which deſcended to him by other Anceſtors than the King's, did.

*Henry* IV. by Authority of Parliament, ſever'd the Poſſeſſions, Liberties, *&c.* of the ſaid *Dutchy* from the Crown: But *Eduard* IV. reſtored 'em to their former Nature.

The Officers belonging to this Court, are the Chancellour, Attorney, Receiver General, Clerk of the Court, and Meſſenger; beſide the Aſſiſtants: as an Attorney in the Exchequer; another in Chancery, and four Councellors. See CHANCELLOR *of the Dutchy*.

The *Dutchy* of *Lancaſter*, ſays *Gwin*, grew out of the Grant of *Eduard* III. who gave that *Dutchy* to his Son *John* of *Gaunt*, and endowed it with Royal Rights, equal to thoſe of the County Palatine of *Cheſter*. And foraſmuch as it came afterwards to be extinct in the Perſon of King *Henry* IV. by reaſon of its Union with the Crown; the ſame King ſuſpecting himſelf more rightfully Duke of *Lancaſter*, than King of *England*, determined to ſave his Right in the *Dutchy*, whatever ſhould befal the Kingdom. Accordingly, he ſeparated the *Dutchy* from the Crown; and ſettled it ſo in his own Perſon, and Heirs, as if he had been no King, or Politic Body at all: In which Condition it continued during the Reigns of *Henry* V. and VI. who deſcended from him; till *Eduard* IV. who, by Recovery of the Crown, recontinuing the Right of the Houſe of *York*, appropriated the *Dutchy* to the Crown again. Yet ſo, as he ſuffer'd the Court, and Officers to remain as he found 'em. In this Manner, it came, together with the Crown, to *Henry* VII. who taking *Henry* IV. Policy, (by whoſe Right, indeed, he obtain'd the Kingdom) re-ſeparated the *Dutchy*, and ſo left it to his Poſterity, who ſtill enjoy it.

DUTY, in Policy, and Commerce, an Impoſt, laid by Authority of a Prince, *&c.* on Merchandizes, and Commodities, either of his own Country, or brought from abroad; towards ſupporting the Expences of the Government. See CUSTOMS.

The *Duties* on various Kinds of Commodities are infinite. The principal are, the

DUTIES *of Exportation*, and *Importation*, pay'd upon the bringing in, or carrying out of the divers Kinds of Goods, Animals, and even Perſons; agreeable to the Tariſs ſettled between the ſeveral Nations. See IMPORTATION, and EXPORTATION.

There is no State in *Europe*, or perhaps in the World, where the *Duties* of Exportation and Importation, are ſo many, and ſo conſiderable, as in *England*. The two principal, are, the *Duties of Tunnage*, and *Poundage*. The firſt charged on Liquors, in Proportion to their Meaſure, and Content. See TUNNAGE.

The ſecond on the other Commodities, and paid according to their Value, ſettled in a Tarif. See POUNDAGE.

Theſe two *Duties*, which have a long Time been on foot in *England*, were re-eſtabliſh'd at the Reſtoration of King *Charles* II. in 1660, upon the Parliament's annulling all the Laws made under *Cromwell*, and decreeing the Execution of the ancient Ordonnances.

To theſe there have been eighteen new *Duties* added ſince that Time: Ten of 'em for Liquids, and the other eight on other Kinds of Commodities.

The *Duties on Liquids*, are the ancient *Duty of Tunnage*, or *old Subſidy*: the *Additional Duty*; *Duty of Exciſe*, *Duty of Coinage*, the *old Impoſition*, the *Additional Impoſition*, the *Orphan's Money*, the *Duty on* French *Wines*, the *New Subſidy*, the *Duty on* Hungary *Wines*, and the *one Third*, *and two Thirds of Subſidies*.

The *Duties* on other Commodities, are the *Ancient Duty of Poundage*: the *Additional Duty of* 1660, *on Linens*, *and Silks*: the *new Impoſition of Poundage*, call'd the *Impoſt of* 1690: Another *Impoſition of four Fifths in* 1693: the *Duty of* 25 *per Cent on* French *Goods*, *impoſed in* 1695: the *new Subſidy of Poundage in* 1697: Another *Additional Subſidy of a Third of Poundage in* 1703: Another *Third in* 1704: *A Duty on Fiſh*, *Oils*, *and Whale Fins*, *in* 1709: Another *on Leather*, *Velom*, *and Parchment*, *in* 1711: A ſecond *on the ſame Goods*, *in* 1712: And laſtly, in the ſame Year, *A Duty on Paper*, *Paſte-Board*, *and Soap*.

We ſhall here enter into a more particular Detail of the *Duties on Liquids*; as *Wines*, *Brandies*, *Vinegars*, *Cyders*, &c.

Firſt, then, the *Duty of Tunnage*, or the *Old Subſidy*, we have already obſerv'd, was eſtabliſh'd in the twelfth Year of King *Charles* II. It was at firſt only granted him for Life; but afterwards continued in the firſt Year of King *James* II. during the Life likewiſe of that Prince. And laſtly, by ſeveral Acts, in the Reign of Queen *Anne*, it was again continued for 96 Years, ending in the Year 1808.

This

This first *Duty of Tunnage*, is 4 Pound 10 Shillings Sterl. *per* Tun, on all *French* Wines brought by *Engliſh* Veſſels into the Port of *London*; and only 3 Pound, into the reſt. The ſame Wine brought by foreign Veſſels into the Port of *London*, pays 6 Pound; and into the other Ports, 4 Pound 10 Shillings Sterl. *French* Vinegar made of Wine, pays 4 Pound 10 Shillings, brought by *Engliſh* Veſſels; and 6 Pound, by foreigns. *French* Cyder, and Perry, and Vinegar made of thoſe Liquors, pay as in the preceeding Article. *Rheniſh* Wine brought into any Port of *England*, pays 1 Pound Sterl. *per* Awine, a Meaſure amounting to the Sixth of a Tun, ſo that the *Duty per* Tun is about 7 Pound 10 Shillings, which is a Fourth more than that of *French* Wine. *Spaniſh*, and *Portugueze* Wines, *Muſcadines*, *Malmſeys*, and other *Greek* Wines, pay the ſame as *French* Wines; and the like is to be underſtood of Vinegars made thereof.

*Additional Duty of the old Subſidy.* This firſt Augmentation of the old Tunnage, was made in 1660, and continued like the Subſidy itſelf to 1808.

For this *Duty*, *French* Wines pay 3 Pound Sterl. *per* Tun. *Rheniſh* Wines pay as *French* Wines. *Spaniſh* Wines pay 4 Pound; *Portugal* Wines, 3 Pound; *Muſcadines*, *Malmſeys*, and other *Greek* Wines, pay the ſame as *Spaniſh* Wines. Vinegar, Cyder, and Perry, are exempt from this *Duty*. See SUBSIDY.

*Duty of Exciſe*, is not laid on Wines, but only on Malt-Liquors, *&c.* See EXCISE.

*Duty of Coinage* was impoſed in the 18th Year of King *Charles* II. to detray the Expence of Coining of the Money. It has been continued by divers Acts to the Year 1715, and even ſince that Time.

Wines of all Kinds pay equally 10 Shilling Sterl. *per* Tun on this *Duty*. See COINAGE.

*Duty of old Impoſition of Tunnage* was eſtabliſh'd in the Year 1685, and continued by divers Acts; that of 1711 made it perpetual.

By this *Duty*, *French* Wines pay 8 Pound Sterl. *per* Tun in all the Ports of *England*; *Spaniſh*, *Portugal*, *Muſcadine*, and other *Greek* Wines, 12 Pound: Vinegars 8 Pound.

*Duty of Additional Impoſition* was eſtabliſh'd in 1690, continued by divers Acts to 1720, and in 1712 made perpetual. This *Duty* none but the *French* pay, the other Nations being exempt from it.

Each Tun of *French* Wine pays for this *Duty* 8 Pound Sterl. in any Port of *England*: Vinegar, Cyder, and Perry pay 25 *per Cent.* of their Value.

*Orphans-Duty* is only charg'd on Wines brought into the Port of *London*. Its Name expreſſes the pious Office it is intended for.

It had its Riſe in the 6th Year of King *William* III. It is fix'd at 4 Shillings *per* Tun on all Wines indifferently. See ORPHANS.

*Additional Duty on French Wines*, is one of the *Duties* to which *French* Wines alone are ſubject. It was eſtabliſh'd in the Year 1695, for 20 Years, and ſince continued.

It is rated at 25 Pound Sterl. *per* Tun: And Vinegars at 15 Pound.

*New Subſidy* was granted to King *William* III. in 1695, for his Life, and ſince continued to Queen *Anne* for her Life.

This is properly a Duplicate of the *Duty* of Tunnage, to which *French*, and other Wines are equally ſubject, whether brought in *Engliſh*, or foreign Veſſels; tho' there are ſome Differences, as to Vinegars, Cyders, and Perry.

*Duty on Hungary Wines*, is very late, only eſtabliſh'd in the firſt Year of Queen *Anne*. It is the ſame with that pay'd by *Rheniſh* Wines.

*Duty*, call'd *Third Subſidy*, is a Third of the old Subſidy, firſt eſtabliſh'd in 1703, and ſince continued by divers Acts, to expire in 1805.

*Duty*, call'd *Two Third Subſidy*, is likewiſe a new *Duty*, firſt eſtabliſh'd in 1704, to laſt only for a certain Time, tho' ſince made perpetual.

It conſiſts in two other Thirds of the old Subſidy, ſo that theſe two *Duties* of 1703, and 1704, are equal to the whole Subſidy.

Beſides theſe *Duties* impoſed on all Wines imported, both by Natives, and Foreigners; there are likewiſe the *Duty of Butlerage*, another *Duty* call'd *Foreign*, another of *Briſtol*, and another of *Southampton*, amounting together to about 40 Shillings *per* Tun; but as theſe *Duties* are only levied on Wines imported in foreign Veſſels, 'tis but rarely they are paid; moſt of the Wine-Trade being manag'd by *Engliſh* Veſſels.

From this State of the *Duties* paid by Wines and other Liquors brought into *England*, it appears that *French* Wines imported by *Engliſhmen* into the Port of *England*, pay 55 Pound, 16 Shill. 8 Pence Sterl. *per* Tun. Thoſe imported by the ſame into the other Ports, 51 Pound, 13 Shillings, and 6 Pence: Thoſe brought by Foreigners into the Port of *London*, 61 Pound, 15 Shillings, and 10 Pence; and into the other Ports, 57 Pound, 12 Shilling, and 8 Pence.

*Spaniſh*, *Italian*, *Muſcadine*, *Malmſey*, and other *Greek* Wines, imported by the *Engliſh* into the Port of *London*, pay 27 Pound, 7 Shilling, and 10 Pence Sterling; and brought by the ſame into the other Ports, 23 Pound, 4 Shillings, and 9 Pence. The ſame Wines brought to *London* by Foreigners, pay 33 Pound, 7 Shillings, 3 Fourths.

*Portugal*, *Rheniſh*, and *Hungary* Wines brought to *London* by *Engliſh* Veſſels, pay 26 Pounds, 10 Shillings, and 3 Pence; into the other Ports, 22 Pound, 7 Shillings, and 2 Pence: The ſame Wines imported to *London* by Foreigners, pay 32 Pound, 9 Shilling, and 5 Pence; and into the other, 28 Pound, 6 Shilling, 3 Pence.

*French* Vinegars imported to *London* by the *Engliſh*, pay 27 Pound, 10 Shillings, 11 Pence; and into the other Ports, 26 Pound, 4 Shilling, 6 Pence: Imported by Foreigners into *London*, they pay 28 Pound, 17 Shillings, 3 Pence; and in the other Ports, 27 Pound, 10 Shillings, 11 Pence.

*Spaniſh* and *Portugal* Vinegars, imported to *London* by *Engliſh* Veſſels, pay 12 Pound, 10 Shillings, 11 Pence; in the other Ports, 11 Pound, 4 Shillings, 6 Pence: The ſame Vinegars imported to *London* by foreign Veſſels, pay 13 Pound, 17 Shillings, 3 Pence; and in the other Ports, 12 Pound, 10 Shillings, 1 Penny. As to Cyders, and Perries, the Importation is not conſiderable.

*French* Brandies imported by any Veſſel into any Port, pay 78 Pound, 4 Shillings Sterl. *per* Tun; and Brandies from any other Countries, except *France*, only 48 Pound, 4 Shillings: All other foreign Brandies being exempted from *Duties* of 30 Pound Sterling, charged on *French* Brandies by Acts of Parliament, under the Reign of King *William* III.

The *Engliſh* Merchants, it is to be obſerved, are not oblig'd to pay theſe ſeveral *Duties* before 12 Months; nor Foreigners before 9: giving Security for the ſame. Or, if they pay ready Money, there is a Deduction made 'em of 5 *per Cent.* on the *old New Third*, and *two Third Subſidy*, and on the other *Duties* 6, and one Fourth *per Cent.* Add, that if theſe Merchandizes be again exported into other Countries, after they have been enter'd in *England*, the *Duties* are return'd; tho' this only within the Compaſs of a Year to Natives, and of 9 Months to Foreigners.

In *Spain*, the *Duties* of Export, and Import, are call'd, *Duties of Alcavala*, and amount to about 5 *per Cent.* of the Value of the Goods: For Inſtance, the Piece of Velvet of 40 *Spaniſh* Varres, or Yards, pays 20 Reals: Hats of *Vigone*, 5 Reals a Piece: Linnens, 224 Reals *per* 100 Varres: Gold and Silver Laces, 2 Reals 3 Quarters, the Mark Weight. The *Duties* of Exportation are nearly on the ſame footing.

In *Portugal*, the *Duties* of Importation were anciently the ſame on all Kinds of Goods; *viz.* 18 *per Cent.* of the Value. But ſince the Year 1667, Silks have been excepted out of the general Tarif, and reduced to 13 *per Cent.* For Exportation the *Duties* are only 6 *per Cent.*

In *Holland*, the *Duties of Exportation*, and *Importation*, are nearly alike; both of 'em being about the Rate of 5 *per Cent.* of the Value of the Goods. At *Hambourg*, and *Bremen*, the *Duties* are but 1 *per Cent.* At *Lubeck*, three 4ths *per Cent.* In *Muſcovy*, 5 *per Cent.* At *Venice*, 6 and three 4ths *per Cent.* for what the Natives import; and 10 and a half to Strangers: The *Duties of Exportation* are 9 *per Cent.* At *Leghorn*, the *Duties of Exportation*, and *Importation* are very inconſiderable; but with the Addition of a Number of petty Dues, become as great as at *Venice*. In the Ports of the *Levant*, *Conſtantinople*, *Smirna*, *Aleppo*, &c. the *Duties of Exportation*, and *Importation* are nearly on an equal footing, *viz.* 3 *per Cent.* except to the *Venetians*, and *Jews*, who pay 5 *per Cent.*

The Conſuls *Duties* are likewiſe to be added for *Smirna*, &c. which are about 2 *per Cent.* At *Cairo*, *Alexandria*, and ſome other Cities of *Egypt*, the *Duties* are of two Kinds: One for Goods brought in Ships from *Europe*; the other, for thoſe brought by the Caravans from *Aſia*. The firſt are fix'd at 20 *per Cent.* The ſecond are arbitrary, but always very high. Beſide the ordinary *Duty*, they here pay the *Golden Duty*, which is the tenth Part of what is paid for the firſt *Duty*. As to *Duties of Exportation*, they may be ſaid to pay none, the 1 and a half *per Cent.* being rather the Cuſtom-houſe Fee, than any *Duty* of the Soveraign.

DUUMVIR, a general Name among the ancient *Romans*, for ſeveral Magiſtrates, Commiſſioners, and Officers, where *two* were joyn'd together in the ſame Function. So that they had almoſt as many *Duumvirs*, as they had Officers joyn'd two by two in Commiſſion.

There were *Duumvirs* to direct the Building, Repairing, and Conſecrating of Temples, and Altars; *Capital Duumvirs*, who took Cognizance of Crimes, and condemn'd to Death. *Duumvirs* of the Marine, or Navy, *&c.* But the moſt conſiderable *Duumvirs*, and thoſe uſually thus call'd by Way of Eminence, were the

DUUMVIRI *Sacrorum*, which were created by *Tarquin*, for the Performance of Sacrifice, and Keeping of the Sybils Books.

Books. They were chose out of the Nobility, or *Patricii*; and held their Office for Life. They were exempted from serving in War, and from the Offices imposed on the other Citizens: Without them the Oracles of the Sybils could not be consulted.

The Commission held till the Year of *Rome* 388; when, at the Request of *C. Licinius*, and *L. Sexius*, Tribunes of the People, they were chang'd into *Decemviri*; that is, in lieu of *two* Persons, the Trust was committed to *ten*, half Patricians, half Plebeians. See DECEMVIRI.

*Sylla* added five to their Number, upon which they became denominated *Quindecemvirs*. Their Body was afterwards much increased, and at length amounted to sixty; yet still retain'd the Denomination of *Quindecemviri*. See QUINDECEMVIR.

They were entirely abolish'd under the Emperor *Theodosius*, along with the rest of the Heathen Superstitions. See SYBILS.

The *Capital* DUUMVIRS, *Duumviri Perduellionis*, were not ordinary Magistrates; but created on certain Occurrances. The first *Duumvirs* of this Kind were those appointed to judge the surviving *Horatius*, for killing his Sister, after vanquishing the *Curiatii*.

The Word is composed of *duo*, two, and *Vir*, Man.

There were also *Duumvirs* in the *Roman* Colonies; who held the same Rank and Authority in their respective Colonies, that the Consuls held at *Rome*. They were chose out of the Body of *Decuriones*, and wore the *Prætexta*, or Robe border'd with Purple.

There were also *Municipal Duumvirs*, whom *Vigenere* compares to our Sheriffs, or rather Mayors of Towns.

DUUMVIRATE, *Duumviratus*, the Magistrature, Office, or Dignity of the *Duumvirs*. See DUUMVIR.

The *Duumvirate* lasted till the Year of *Rome* 388; when it was chang'd into a *Decemvirate*. See DECEMVIRATE.

DWAL, in Heraldry, the Herb *Night-shade*; used by such as blazon with Flowers and Herbs, instead of Colours and Metals, for Sable, or Black. See SABLE, *&c.*

DWARF. See GYANT, PIGMY, and STATURE.

DWARF-*Trees*, are Fruit-Trees, thus call'd from the Lowness of their Stature; frequently planted in the Borders of Gardens. See FRUIT-*Tree*.

They seldom grow above 4 or 5 Foot high; and have usually a Hoop tied within the Middle of the Branches, to make 'em spread a-round.

*Dwarf-Trees* are of especial Advantage for Table-Fruit, whether Pears, Apples, Plums, or Cherries; The Fruit they yield is usually of the finest, and best; and as such they make a considerable Article in the Gardeners Province.

There are divers *Ways of Producing Dwarfs*.

*Dwarf-Pears* are usually produced by Inoculating on Quince-Stocks, which grow the *Dwarf's* Height.

As for *Dwarf-Apples*, the Stocks they chuse to graft on are those raised of the Cuttings of the Apple.

In order to provide Stocks of each Kind, they chuse such Stems, and Branches, as grow straighteſt; in the Month of *October*; from Trees whose Cuttings will grow, or which in the Places they are to be grafted in are at least an Inch thick: Cut 'em off an Hand's Breadth below the Knots, or Burs, which are the Places where they usually put forth their Roots; and cut off the Top, that they may not be above a Yard long. If they cannot be got so long of Quinces, shorter must do. Cut off all Side-Branches close to the Body, except one small Twig near the Top for the Sap to vent it self at. Set them in Beds, as Seed-plants are: and keep 'em a Foot above Ground.

It being somewhat difficult, to get enough of such Branches as have Burs and Knots on 'em; a particular Method has been invented to bring those Knots, and Burs, artificially, call'd *Circumposition*. It is perform'd by tying some Earth in a Piece of old Hat, a Foot long, about the Place where you intend to cut, in the Month of *February*; and in *October* it will have shot Roots therein.

Such Trees alone, as are apt to put forth Roots, are proper for *Dwarf* Stocks; as the *Kentish* Codlin, Gennet Moil, some Sorts of sweet Apple, Bitter Sweets, Quince-tree, Mulberry-tree, and the Paradise Apple Tree.

Stocks for *Dwarf Apple-Trees* are likewise rais'd by cutting down an old Tree, which is apt to cast forth good Suckers from the old Roots; which at two Years Age may be transplanted, or else inoculated where they stand.

As for *Dwarf Pear-Trees*, Stocks may be rais'd for them from the Suckers of old Pear-trees. Else, cut off the Top of some old ill Pear-tree, and the Roots will cast forth Suckers.

For *Dwarf Cherries* and *Plums*, Suckers of the common red Cherry, and ordinary Plum-tree, are the best.

As to the *Grafting*, or *Inoculating of Dwarf-Stocks*, it must be done as low as may be, with two Cyons, and those longer than in Grafting for long Standards; that they may spread from the Ground. See ENGRAFTING.

As to the *Planting of Dwarf-Trees*, 'tis best in a light, hot Earth, from the Middle of *October*, to the End of *November*. In cold, wet Soil, 'tis best in *March* and *April*. The Stem of the Tree to be cut off seven or eight Inches above the Graft; and remember to cut off half the Length of the Roots, and hairy Fibres; To turn the Cut of the three towards the North; to let the Graft always be two or three Inches above the Ground, lest it take Root; To plant 'em shallow, as being apt of themselves, in light Ground, to sink a Foot deep, which is sufficient; and to cover the Ground, when they are planted, with Horse-Litter.

DYE, in Architecture, is the Middle of the Pedestal; or that Part which lies between the Base and the Cornice: being so nam'd, because it is frequently made in the Form of a Cube, or *Dye*. It is also call'd *Dado*, by the *Italians*; and by *Vitruvius*, *Truncus*. See PEDESTAL.

DYE, is also us'd for a Cube of Stone, placed under the Feet of a Statue, and over its Pedestal; to raise it, and shew it the more.

DYNASTY, a Term in History, signifying a Race, or Succession of Kings of the same Line, or Family. See RACE.

We find frequent Mention in ancient History of *Dynasties* of *Persians*, *Assyrians*, *Medes*, &c.

*Manetho* has left an Historical Chronology of *Egypt*, divided into 30 *Dynasties*.

The Word is form'd from the *Greek* Δυναστεία, of Δυνασθαι, *to be powerful, to be King*.

DYPTYCHA, or rather DIPTYCHA, in Antiquity, a public Register, wherein were wrote the Names of the Consuls, and other Magistrates, among the Heathens; and of Bishops, and defunct, as well as surviving Brethren among the Christians.

*Justinian*, offended at Pope *Vigil*, for refusing to subscribe the Condemnation of the three Chapters, gave Orders for his Name to be erased out of the *Diptycha*. *Du Pin*. The Emperor commanded the Name of the new Patriarch to be enter'd in the *Diptycha Sacra*.

'Tis certain, there were prophane *Diptycha's* in the *Greek* Empire, as well as sacred Ones in the *Greek* Church. The former were the *Matricula*, or Register, wherein the Names of the Magistrates were enter'd: In which Sense *Diptycha* is a Term in the *Greek* Chancery.

*Sacred* DIPTYCHA. The Word is plural; *Diptycha* being a double Catalogue, in one whereof was wrote the Names of the Living, and in the other those of the Dead, which were to be rehears'd during the Office. We meet with something not unlike the *Sacred Diptychs* of the *Greeks*, in the Canon of the Mass, according to the *Latin* Usage; where the People are enjoyn'd to pray once for the Living, and once for the Dead; several Saints are invoked in different Times, *&c.*

*Gentian Hervet* explains the Word *Diptychs*, Δίπτυχα, by *Altar-Cloths*: *Meursius*, by that of *Libelli Ecclesiastici*, Church-Books; But neither of those Authors, tho' in other respects of great Abilities, and well versed in the *Greek* Antiquity, has given the genuine Signification of the Word. The *Diptycha* were neither Altar-Cloths, nor Church-Books, but a Sort of Tables, or Tablets, alike in Figure to the two Tables of Stone given to *Moses*; On one of these Tables was wrote the Names of the Deceas'd, and on the other those of the Living, for whom Prayers were to be offer'd; which the Deacon read over, while the Mass was celebrated.

In these *Diptycha* were enter'd the Names of Bishops, who had govern'd their Flocks a-right; and were never expung'd out of the same, unless they were convicted of Heresy, or some other gross Crime. In the *Diptycha* were likewise enter'd the Names of such as had done any signal Service to the Church, whether they were living, or dead, and mention was made of 'em in the Celebration of the Liturgy.

The Jesuite *Rosweyd* affirms, that few Names were enter'd in the *Sacred Diptychs*, but those of Bishops and Patriarchs; and doubts very much, whether the Sacred *Delta*, mention'd by the pretended St. *Dionysius*, *Eccles. Hierarch. C.* II. wherein were enter'd the Names of the new baptized, with their God-fathers and God-mothers, were the same with the *Diptycha*. He allows, however, that the Names of the Emperors, and other great Persons, distinguish'd by their Faith, and their Merits, or Benefactions, were us'd to be enter'd.

*Meursius*, in his *Glossarium Græco-Barbarum*, imagines 'em to have wrote the Term *Diptycha*, by reason there were *two* Books, in one of which were wrote the Living, and in the other the Dead. But *Fa. Rosweyd* shews, he is mistaken: For in effect, there was but one, the Living being enter'd on one Side thereof, and the Dead on the other. And if the Living, and Dead, were each wrote in a several Book, each of 'em was call'd *Diptycha*, and not both together.

*Casaubon*, in his Observations on *Athenæus*, *L.* VI. *C.* 14. supposes the Christians to have borrowed the Custom of writing Names in a Book, and rehearsing 'em at Mass, from the Heathens, who enter'd the Names of Persons they would do any signal Honour to, in the Verses of the *Salii*; as was done to *Germanicus*, and *Verus*, Sons of the Emperor *Mar-*

cus *Aurelius*, and long Time before, during the Age of the Republic, to *Mamurcus Veturius*, and *Lucia Volumnia*, as we are told by *Tacitus*, *L.* II. *Spartian*, *Ovid*, *Feſtus*, *Plutarch*, &c.

But *Fa. Roſweyd* does not approve this Notion of *Caſaubon*. The pretended St. *Dionyſius*, a very ancient Author, ſays the contrary, and aſſerts the firſt Eſtabliſhment of this Uſage to have been founded on Scripture. 2 *Tim.* II. 19. *Pſal.* CXV. 15. *Roſweyd* adds *Eccl.* XLIV. 1. and takes theſe to have been the Paſſages the ancient Church had a View to, rather than the *Salian* Verſes.

The *Prophane Diptycha* were frequently ſent as Preſents to Princes, &c. On which Occaſion they were finely gilt, and embelliſh'd; as appears from *Symmachus*, *L.* II. *Ep.* 81. Thoſe preſented were uſually of Ivory. The firſt Law, *de Expenſ. Ludor. C. Theod.* forbids all Magiſtrates below Conſuls, to make Preſents of *Diptycha* of Ivory, in the public Ceremonies.

*Fa. Roſweyd* owns himſelf at a Loſs for the Origin of this Cuſtom of making Preſents of *Diptycha's*. *Lud. Carrion*, *L.* II. *Emendat. C. 6.* ſuppoſes it to have aroſe hence, that ſuch Preſents were at firſt made to the Perſons who had been nominated *Queſtores*, to whom they were to be of Uſe. Many imagine the *Diptycha* to have originally been a Kind of Table-Books us'd by Lovers. Thus *Papias* defines 'em, *Tabellæ in quibus Amores ſcribebantur*.

The Word *Diptycha* is form'd from the *Greek* Δίπτυχον and Δίπτυχα, and that from Δίπτυξ, a Maſculine Noun derived from πτύσσω, *I fold*, or *plait*. From its Future πτύξω is form'd πτυξ, *a Fold*, or *Plait*, to which adding δὶς, *twice*, we have Δίπτυξ, in the Genitive Δίπτυχος, whence the Nominative Neuter Δίπτυχον, q.d. *a Book folded in two Leaves*: Tho' there were ſome in 3, and others in 4, or 5 Leaves.

An ingenious Author imagines this Name to have been firſt given 'em to diſtinguiſh 'em from the Books that were roll'd, call'd *Volumina*. See VOLUMES.

DYSCRASY, from δὺς, *malus*, bad, and κρασὶς, or κρᾶσια, *Temperamentum*, Conſtitution, is an ill Habit of Body; as in a Jaundice, or the like.

DYSENTERY, or DYSSENTERY, in Medicine, a bloody *Diarrhœa*; or a Flux of Blood by Stool; attended with Pains and Griping. See FLUX.

The Word *Dyſentery* is form'd from the *Greek* δὺς, *difficultly*, and ἔντερον, *Inteſtine*; and properly ſignifies that Kind of Flux of the Belly, characterized by the Frequency of Stools, or Dejections, mix'd with Blood, and accompanied with Gripes: The Fever, Ulcer, &c. which attend it, are not eſſential to the Diſeaſe; tho' many, both of the Ancients and Moderns, think the Ulcer is.

The *Dyſentery*, *Sydenham* obſerves, begins with a Chilneſs, and Shivering; which is followed by a Heat; then Gripings of the Belly enſue, with mucous, or ſanious Stools, which in Progreſs of Time are found interſpers'd with Streaks of Blood, with vehement Pain.

The Stools are ſometimes void of Blood; and yet, if they be frequent, and attended with Gripes, and a mucous *Colluvies*, the ſame Author ſays, it is a proper *Dyſentery*.

Along with the Excrements, beſide a whitiſh Mucoſity, frequently come Scrapings of the Guts, in Form of little Skins. If pure Blood be evacuated, the Patient's Life is in great Danger.

*Etmuller* makes three Kinds of *Dyſenteries*: 1. When a laudable Blood is evacuated, from a mere *Plethora*, or Plenitude, without any Diſorder of the Inteſtines; as in the *Hemorrhoidal Flux*. See HEMORRHOIDS.

2. When a thin, watery Blood is evacuated, call'd the *Hepatic Flux*, tho' really ariſing from the Hemorrhoidal Veſſels.

The third Kind, which is that we properly call *Dyſentery*, is, when Blood is caſt out mix'd with a purulent Matter in the Excrements.

This is either *benign*, i. e. without a Fever, and not contageous; Or *malignant*, which is attended with a peſtilential Fever; and frequently ravages whole Cities, and Provinces: Happening moſt commonly in Armies. In the laſt Stage, a Sort of Caruncles are frequently ejected along with the purulent Matter, which are difficult to be accounted for, unleſs from an Excoriation, and Ulceration of the Inteſtines. Sometimes the Inteſtines are even gangreen'd.

The next Cauſe of the *Dyſentery*, as aſſign'd by ſome Phyſicians, is a ſerous, or other morbid Humour, mix'd with the Maſs of Blood; the Conſequence of which is a too great Fermentation in the Blood, and a Diſſolution of its Parts, which are thus render'd too liquid. The ſecond Cauſe is a Vellication, and Irritation of the nervous Fibres of the Inteſtines, occaſion'd by ſharp, acid Humours ſeparated from the Blood; which occaſion the Spiral Fibres, that produce the Periſtaltic Motion of the Guts, to move too faſt, and thus to expel the Matters too haſtily out of the Inteſtines. The Mediate Cauſe, in the Phyſicians Language, is ſome foreign Body adhering ſtrongly to the Inteſtines, and by its ſharp Points, vellicating the nervous Fibres of the Inteſtines, and at length ulcerating 'em. The Remote Cauſes are any Thing that corrupts the Maſs of Blood, as viſcid, and crude, ſharp Juices; ill Foods; Autumnal Fruits; Grapes; new Wine drunk in Exceſs; Poiſons; violent Medicines; Waters convey'd through leaden Pipes; Rainy Weather in the Spring, with a dry Winter, and a hot Summer, and Autumn.

The Seat of the Diſeaſe is in the Inteſtines, either the big, or the ſmall, or both: When the Diſeaſe is in the ſmall Ones, the Gripes begin long before the Stools, and are felt about the Navel; and the Blood, and Excrements, are more blended; as being longer together. When the larger Inteſtines are ſeiz'd, the Pain is leſs vehement, and is felt lower, &c.

Purgatives have rarely any good Effect in *Dyſenteries*; as increaſing the Fermentation of the Blood, and irritating the Fibres of the Inteſtines more and more. Nor are Emeticks much better; as tending to draw the peccant Humours into the Stomach, or at leaſt into the higher Inteſtines, and cauſe more frequent Stools.

*Ipecacuanha*, however, is excellent on this Occaſion: Not ſo much as a Vomitory, Dr. *Friend* obſerves, as a Sudorific; having this Faculty, beyond all other Emeticks, that it corrects the *Dyſenteric* Ferment, in Proportion as it evacuates it. In the *Philoſophical Tranſactions* we have an expreſs Diſcourſe on the Subject; where it is aſſerted to be infallible in all *Dyſenteries*, and Looſeneſſes, how dangerous and inveterate ſoever; except in Pulmonic and Hydropic Patients, whoſe Fluxes are Indications of approaching Death.

*Sydenham* commends Phlebotomy: But *Willis* ſays, no Evacuation is good: and preſcribes hot Cardiacks, as Spirit of Wine a little burnt, &c.

Balſamic, and Styptic Medicines are alſo to be uſed, according to the divers Cauſes, and Symptoms of the Diſeaſe.

*Borre*, in a Letter to *Bartholin*, affirms, there is no better Medicament in *Dyſenteries* than Roſe-Water wherein Gold has been extinguiſh'd.

*Dotæus* relates, that he cured above an hundred Perſons with Oil of ſweet Almonds, mix'd with Orange Juice.

DYSPEPSY, in Medicine, a Difficulty, or Weakneſs of Digeſtion. See DIGESTION.

The *Dyſpepſy* may ariſe from the Softneſs of the Ferment of the Stomach, or its being ſparing in Quantity; from a Relaxation of the Fibres of the Stomach; the Want of a proper Heat in the Stomach, &c.

Bitters, and Sub-aſtringents, are its proper Remedy.

The Word is form'd from the *Greek* δὺς, *difficultly*, and πέπτειν, *coquere*, to concoct.

DYSPNOEA, in Medicine, a Difficulty of breathing. See RESPIRATION.

The *Diſpnœa* admits of three Degrees: A *Short-Breath*; an *Aſthma*; and an *Orthophnæa*.

The *Short-Breath*, is the firſt, and lighteſt Degree.

The *Aſthma* is more violent, accompanied with a wheezing. See ASTHMA.

The *Orthophnæa* is the higheſt of all; the Patient affected therewith not being able to lye down, but oblig'd to keep erect, without which he could not reſpire.

The moſt uſual Cauſes of *Dyſpnœa's* are Phlegms contain'd in the *Bronchia*; or the too ſtrong Conſtitution of the *Bronchia* themſelves, which prevent the eaſy Ingreſs of the Air into the Lungs.

The Word is form'd from the *Greek* δὺς, *difficultly*, and πνέω, *I breath*.

DYSURIA, in Medicine, a Difficulty of making Urine, accompanied with Pain, and a Senſe of Heat.

It is alſo call'd *Ardor Urinæ*, by reaſon the Urine ſeems to burn the *Urethra*, as it iſſues forth. See URINE.

The *Dyſuria* differs chiefly from the *Strangury* in this, that in the Strangury, the Urine only oozes out, as it were, Drop by Drop; whereas in the *Dyſuria* it ſtreams out without Interruption, and frequently in the proper Quantity. See STRANGURY.

The ordinary Cauſes of the *Dyſuria*, are the Acrimony, or Sharpneſs of the Urine; and the Excoriation, or Exulceration of the Neck of the Bladder, or the Urinary Paſſage.

The Word is form'd from the *Greek* δὺς, *difficultly*, and οὖρεῖν, *to make Urine*.

E, The 5th Letter of the Alphabet, and the 2d Vowel. See LETTER and VOWEL.

E, is a Letter that admits of ſome Variety in the Pronunciation, in moſt Languages; whence *Grammarians* uſually conſtitute ſo many different E's, or Kinds of E. The *Greeks*, e. gr. have their *long* and *ſhort* e, *viz.* ε, and η, *Epſilon* and *Eta*.

The *Latins* have an opener e, called *vaſtius*; ſuch was the laſt in the Word *Here* Maſter; and another cloſer, as that in the Adverb *Here* Yeſterday. This latter e and i, were frequently uſed for each other: Thus for *here*, they wrote *heri*: And in divers Places we meet with *ſibe*, *quaſe*, &c. for *ſibi*, *quaſi*, &c.

The *Roman* e, was likewiſe ſometimes wrote æ: For which Reaſon, there are ſome Antiquaries, who take that Medal of *Gallian*, GALLIANÆ AUGUSTÆ, not to be any Satyrical Medal, as the reſt have imagined; nor to be a *Dative* Feminine, but a *Vocative* Maſculine, *Galliane Auguſte*, wrote with an æ.

In *Engliſh* we eaſily diſtinguiſh three E's, or Sounds of E: The Firſt, Mute, and not heard at all; as in *Amſterdam*, *Senſe*, *Blue*, &c. The Second, cloſe or ſhort, pronounced with the Lips near ſhut; as in *Equity*, *Nettle*, &c. The Third, open or long; as in *Fear*, *Eaſe*, &c.

The *French* have, at leaſt, ſix Kinds of E; the Firſt, pronounced like A; as in *emporter*, *Orient*, &c. The Second, a final Mute, in the laſt Syllable of divers Words not pronounced at all; as in *bonne*, *donne*, &c. The Third, an imperfect Mute, pronounced much like the Diphthong *ea*, &c. as in *Je*, *de*, *te*. The Fourth, e *ferme*, or e maſculine, marked at the Ends of Words with an Accent é. The Fifth, is e *ouvert*, or long e, having the ſame Sound with *ai*, as in *mer*, *feſte*, &c. In the middle of Words it is ſometimes mark'd with a Circumflex, and in the End, with an Accent è. The Sixth, is an Intermediate e, between the *ouvert* and *ferme*; as in *Cabaret*, *Lettre*, &c. Some add a Seventh Kind of e, not reducible to any of the former, as that in *Grammarien*, *Hiſtorien*, &c. And others admit of only three Kinds, *viz.* the Mute, open, and ſhut; but they make Variation therein; which amounts to the ſame thing.

As to the Form of the Letter E, we borrow it from the *Latins*, who had it from the *Greeks*, and they from the *Phœnicians*, by *Cadmus*, who firſt brought it them. Now the *Phœnicians* had the ſame Characters with the *Hebrews*. Accordingly, the Form of the Antient Hebrew *He*, was the ſame with that of our E, as may be ſeen in the *Hebrew* Medals, and the Jeſuite *Souciet*'s Diſſertation thereon, *p.* 143. All the Difference between them conſiſts in this, that the *Hebrews* reading from Right to Left, turn their Letters that Way; whereas the Moderns, reading from Left to Right, write their Letters accordingly.

The little *e*, was form'd of the great one, in writing it faſt, and making the croſs Strokes at Top and Bottom without taking Pen off Paper, and then adding the Stroke in the Middle E.

The *Greek* η, H, *Eta*, was no original Letter; but added to the Alphabet in after Times. Of this we have Proofs ſtill extant in the ancient Monuments; particularly, the *Farneſe* Columns, brought to *Rome* from the *Via Appia*, where the *Epſilon* E, is uſed in lieu of the H. *e. gr.* DEMETPOΣ KOPEΣ, for DHMETPOΣ KORHΣ. 'Tis ſaid to have been added by *Simonides*. *Bibliand. de Ration. Commun. Linguar. p.* 40.

The Pronunciation of the η, ſeems to have been varied: *Terentianus* informs us, that it was pronounced like the *Latin* e; but the *Greeks* themſelves, for ſeveral Ages, pronounced it like an *ι*. 'Tis diſputed how the *Latins* render it in their Language. The common Opinion is, that they render it by an e: As in ΔημήτειΘ, βητα, Ημερα, Θησευς, ΘησαυρΘ, &c. which they rendred *Demetrius*, *Beta*, *Hemera*, *Theſeus*, *Theſaurus*, &c. Tho' there are Perſons, exceedingly well verſed in Antiquity, who hold that they pronounced it like an i.

*Lud. de Dieu*, one of the moſt Learned *Grammarians* of his Age, obſerves as much in his Animadverſions on *Geneſis* VI. 24. Adding, that 'tis for this Reaſon, that the *Hebrews*, e. gr. the Paraphraſt *Jonathan*, expreſs it by a *Hhirik*; as, μήσως, מסטור.

*J. Rod. Wetſten* proves the ſame in his Learned Orations on the true Pronunciation of the *Greek* Tongue, from an Infinity of Inſtances. Citing to this Purpoſe a M. S. Pſalter of the VIIIth Century, where all the *H's* are expreſſed by *i's*. In Effect, *Wetſten* proves, not only that the *Latins* pronounced and wrote it as an *i*, which might happen from its being ſo eaſily confounded with an *ι*; but alſo that they rendred it by an æ and *ia*; that it was often uſed for Υ and EI; and that in the Time of *Plato*, this Letter had a Kind of intermediate Sound between the ε and *ι*. See that Author. See alſo *Voſſus de Idolol. L.* II. *C.* 16.

E on the Keys of an Organ, or Harpſichord, denotes the Tones *E*, *mi*, *la*.

On the Compaſs, in Sea-Charts, &c. it marks the Eaſt Point, or Wind. E. Eaſt. E S E. Eaſt South Eaſt. N E. North Eaſt, &c. See WINDS and COMPASS.

In Calendars, E is the 5th of the Dominical Letters. See DOMINICAL-*Letters*.

Among Authors, *E. gr.* ſtands for *Exempla gratia*; for Inſtance. See CHARACTER.

In ſeveral Dictionaries, we find it noted, that the Letter E, among the Antients, was a Numeral Letter, ſignifying 250, according to the Verſe

E *quoque Ducentos & Quinquaginta tenebit.*

But it has already been obſerved, that this Uſe of Numeral Letters was unknown among the Antients. *Iſidore Hiſpallenſis*, an Author of the VIIth Century, ſays as much in expreſs Terms, in the firſt Book of his *Origines*, *Cap.* III. In Effect, it was firſt introduced in the Times of Barbariſm and Ignorance.

EAGLE, *Aquila*, Αετὸς, in Natural Hiſtory, the largeſt, ſtrongeſt, and ſwifteſt of all the Birds that live by Prey. See BIRD.

It has a long, hooked Beak; yellow, ſcaly Legs; thick, crooked Talons; and a ſhort Tail. Its Plumage is cheſſnut, brown, ruddy and white. Its Beak, black at the Tip; and in the middle, blue, tho' in ſome yellow.

Its *Airy*, or Neſt, is uſually on the higheſt Rocks, ſometimes on the Tops of old Trees. It feeds its young till ſuch Time as they are able to fly, and then drives them out of the Neſts. Its Food is Birds, Hares, Lambs, Kids and Fawns; nay, Sir *Robert Sibbald* aſſures us, Children too, when it can catch them, of which he gives an Inſtance in the *Orcades* Iſlands. *Prod.* Nat. Hiſt. *Scot.* L. III. *p.* 2, & 14.

*Ray* mentions an *Eagle*'s Neſt, found near the River *Derwent*, in 1668. It conſiſted of large ſtrong Sticks, one End whereof was laid on the Crag of a Rock, and the other on two Beech-Trees: It was two Yards Square: In it were found one *Eaglet*, with the Carcaſſes of one Lamb, one Hare, and three Grygalli. *Synops. Method. Av. p.* 6. The *Eagle* frequently watches the fiſhing Hawk, and aſſoon as it perceives it to have ſtruck a Fiſh, takes Wing, purſues the Bird till it lets fall its Prey, and often catches it ere it reaches the Earth or Water. *Philoſ. Tranſact.* No. 201.

It lives very long, and as Naturaliſts aſſure us, rarely dies but of Hunger; the upper Part of its crooked Beak growing ſo long, with Age, that it cloſes up the lower, and ſo diſables it from opening and taking in Food.

Its Sight is quick, ſtrong and piercing to a Proverb. The Reaſon why the *Eagle*, the Fibres of whoſe Optic Nerves are not ſtronger than thoſe of other Animals, is able to face the Sun, and endure its brighteſt Rays, the Jeſuite *Angelus*, in his *Opticks*, aſſures us, is, that it has two Sets of Eyelids, the one thick and cloſe, and the other thinner and finer, which laſt it draws over the Eye, when it looks at any luminous Body, and thus breaks the Force of its Rays.

The Falconers have train'd up *Eagles* to the Game; but they only ſucceed in Mountainous Countries. On Plains they can't keep any time on the Wing, and when they ſtoop, or light, are weak, ſo that the Saker beats them. See FALCON.

*Ariſtotle*, and *Pliny*, reckon up Six Kinds of *Eagles*, to which they give Names correſponding to the Difference of their Plumage: As the *Eagle-Royal*, called by *Ariſtotle*, γνήσιΘ and αγνείας, from the ruddy, golden Colour of its Feathers, which are likewiſe ſpotted as it were with Stars. The *Black-Eagle*, *Valeria*, the ſmalleſt and moſt vigorous of all. The *White-tail'd Eagle*, or *Pygargus*. The *middle ſized Eagle*, with a large Tail, living in *Moraſſes*; *Morphnus*: The *Sea-Eagle*, *Haliæetus*: And the *bearded Eagle*, *Offifraga*.

EAGLE, in *Heraldry*, is the Symbol of Royalty, as being, according to *Philoſtratus*, the King of Birds; and for that Reaſon dedicated, by the Antients, to *Jupiter*.

The *Eagle*, is the Arms of the Emperor, and the King of *Poland*. It is accounted one of the moſt Noble bearings in *Heraldry*, and, according to the Learned in that Art, ought never to be given, but in Conſideration of ſingular Bravery, Generoſity, &c. On which Occaſions, either a whole *Eagle*, or an *Eagle Naiſſant*, or only the Head, or other Parts, agreeable to the Exploit, may be granted.

The *Eagle* is ſometimes repreſented with one Head, and ſometimes with two, tho' never more than one Body, two Legs, and two Wings open'd, or ſtretch'd out, in which Poſture, it is ſaid to be *ſpread* or *diſplay'd*: Such is that of the Empire, which is blazon'd a *ſpread Eagle*, *Sable*, *diadem'd*, *langued*, *beak'd and membred*, *Gules*.

The

The Reaſon why *Eagles* are generally given in *Heraldry* diſplay'd, is partly, becauſe in that Poſture they fill up the Eſcutcheon better, and partly, becauſe 'tis imagined a Poſture natural to the *Eagle*, when it plumes its Feathers, or faces the Sun. However, there are *Eagles* born in other Poſtures: Some monſtrous ones, with Human or Wolves Heads, *&c.*

The late Authors only ſay *diſplay'd*, to expreſs the two Heads; and ſay an *Eagle*, without any Addition, when it has but one. The Kingdom of *Poland* bears *Gules*, an *Eagle argent, crown'd and member'd Or.*

The *Eagle* has been bore, by Way of Enſign, or Standard, by ſeveral Nations. The firſt who ſeem to have bore the *Eagle*, are the *Perſians*; according to the Teſtimony of *Xenophon*. Afterwards, it was aſſumed by the *Romans*; who, after a great Variety of Standards, at length fix'd on the *Eagle*, in the 2d Year of the Conſulate of *C. Marius*: Till that Time, they uſed indifferently Wolves, Leopards, and *Eagles*, according to the Humour of the Commander.

Several among the Learned maintain, that the *Romans* borrowed this Cuſtom from *Jupiter*, who had appropriated the *Eagle* as his own Badge, in Commemoration of its ſupplying him with Nectar, while he lay conceal'd in *Crete*, for Fear of being devour'd by his Father *Saturn*. Others hold that they borrow'd it from the *Tuſcans*, and others from the *Epirots*.

The *Roman Eagles*, it muſt be obſerved, were not painted on a Cloth, or Flag; but were Figures in *Relievo*, of Silver or Gold, bore on the Top of Pikes; the Wings being diſplay'd, and frequently a Thunder-bolt in their Talons. Under the *Eagle* were filed on the Pike, Bucklers, and ſometimes Crowns. Thus much we learn from the Medals. See *Feſchius* in his *Diſſert. de Inſignibus*. And *Lipſius*, *de Militia Romana*, *L.* IV. *Dict.* 5.

*Conſtantine* is ſaid to have firſt introduced the *Eagle* with two Heads, to intimate, that tho' the Empire ſeem'd divided, it was yet only one Body. Others ſay, that it was *Charlemaign*, who reſuming the *Eagle*, as the *Roman* Enſign, added to it a ſecond Head: But that Opinion is deſtroy'd, by an Eagle with two Heads, noted by *Lipſius*, on the *Anthonine* Column; as alſo by the *Eagle's* only having one Head on the Seal of the *Golden-Bull*, of the Emperor *Charles* IV. The Conjecture, therefore, of *F. Meneſtrier*, appears more probable, who maintains, that as the Emperors of the *Eaſt*, when there were two on the Throne at the ſame Time, ſtruck their Coins with the Impreſſion of a Croſs, with a double Traverſe, which each of them held in one Hand, as being the Symbol of the Chriſtians; the like they did with the *Eagle* in their Enſigns; and inſtead of doubling their *Eagles*, joyn'd them together, and repreſented them with two Heads. In which they were followed by the Emperors of the *Weſt*.

*Fa. Papebroch*, wiſhes that this Conjecture of *Meneſtrier* were confirm'd by ancient Coins; without which, he rather inclines to think the Uſe of the *Eagle* with two Heads, to be merely arbitrary: Tho' he grants it probable, that it was firſt introduced on Occaſion of two Emperors in the ſame Throne.

EAGLE, *Aquila*, in Aſtronomy, is a Conſtellation of the *Northern* Hemiſphere, having its right Wing contiguous to the Equinoctial. See CONSTELLATION.

For the Stars in this Conſtellation, their Number, Longitude, Latitude, *&c.* See AQUILA.

There are alſo three ſeveral Stars, particularly denominated among the *Arab* Aſtronomers, *Eagles*. The 1ſt, *Naſr Sohail*, the *Eagle* of *Canopus*, called alſo *Sitareh Jemen*, the Star of *Arabia fœlix*, over which it is ſuppoſed to preſide: The 2d, call'd *Naſr Althair*, the flying *Eagle*; and the 3d, *Naſr Alvake*, the reſting *Eagle*,

*White*-EAGLE, is a *Poliſh* Order of Knighthood, inſtituted in 1325, by *Uladiſlaus* V. on Marrying his Son *Caſimir*, with a Daughter of the Great Duke of *Lithuania*.

The Cavaliers of this Order were diſtinguiſhed by a Gold Chain, which they wore on the Stomach, whereon hung a Silver *Eagle* crown'd.

*Black*-EAGLE, was a like Order, inſtituted in 1701. by the Elector of *Brandenburgh*, on his being crown'd King of *Pruſſia*.

EAGLE, in Architecture, a Figure of that Bird antiently uſed, as an Attribute, or Cognizance of *Jupiter*, in the Capitals and Friezes of the Columns of Temples, conſecrated to that God.

EAGLES-*Stone*, in Natural Hiſtory, a Stone, by the *Greeks*, call'd *Ætites*, and the *Italians*, *pietra de Aquila*; as being ſometimes found in the *Eagle's* Neſt; of famous traditionary Virtue, either for the forwarding, or preventing the Delivery of Women in Labour, according as it is applied above, or below the Womb.

*Matthiolus* obſerves that the Birds of Prey, could never hatch their Young without it, and that they go in Search for it as far as the *Eaſt-Indies*. *Bauſch.* has an expreſs *Latin* Treatiſe on the Subject. See ÆTITES.

The *Eagle* on Medals, is, according to M. *Spanheim*, a Symbol of Divinity and Providence, and according to all other Antiquaries, of Empire. The Princes on whoſe Medals 'tis moſt uſually found, are the *Ptolomies* and the *Seleucides* of *Syria*. An *Eagle* with the Word CONSECRATIO, expreſſes the Apotheoſis of an Emperor.

EAGLET, or EAGLON, diminutives of *Eagle*, properly ſignifying young *Eagle*. The *Eagle* is ſaid to prove his *Eaglets* in the Brightneſs of the Sun; if they ſhut their Eye-lids, he diſowns them.

In Heraldry, when there are ſeveral *Eagles* on the ſame Eſcutcheon, they are called *Eaglets*.

EALDERMAN, or EALDORMAN, among the *Saxons*, was of like Import with an Earl among the *Danes*. *Camb. Britan.* p. 107. Alſo an Elder, Senator, or States-man.

Hence, at this Day, we call thoſe *Aldermen*, who are Aſſociates to the chief Officer in the Common-Council of a City, or Corporate Town. See ALDERMAN.

EAR, the Organ of Hearing; or the Part whereby Animals receive the Impreſſion of Sounds. See HEARING and SOUND.

The Ear is generally divided into *Internal*, and *External*.

The External, or outer Ear, in moſt Animals, conſiſts of two grand Parts, *viz.* that which appears prominent from the Head, called the *Auricle*; and an inner Part, which enters the Scull by a narrow Paſſage, called the *Meatus Auditorius*, and leads to the *Auris*, or *Ear*, properly ſo call'd.

The *Auricle*, or outer Part of the External Ear, is ſemicircular, and contains divers Sinuoſities. Its upper Part, which is the broadeſt, is called the *Pinna*, and ſometimes the *Ala*; and the lower, which is narrower, ſofter and pendant, the *Lobe*, or *Fibra*, being that to which Ladies hang their Rings, *&c.* The outer *Area*, or Extent of the *Auricle*, is called the *Helix*; and the inner, oppoſite thereto, the *Anthelix*: The little Protuberance of the Side next the Face, is called the *Tragus*, or *Hircus*; and the Ridge juſt above, and oppoſite to it, *Antitragus*: And the Cavity, leading to the Beginning of the *Meatus*, the *Concha*. See each Part deſcribed under its proper Article; HELIX, TRAGUS, CONCHA, *&c.*

The *Auricle* ſtands out from the Head, and is furrowed with divers winding Canals, which receive and collect the wandring circumambient Impreſſions, and Undulations of Sound, and modify and forward them to the inner Ear. It is form'd of a thin *Cartilage*, cover'd with a Skin. It has two Muſcles, which in Men are very ſmall, whence ſome Anatomiſts deny there are any at all, tho' others increaſe their Number to three, one *Attollent*, and two *Retrahent*; and others to four. But in Brutes, which move and prick the Ears, as Horſes, Aſſes, *&c.* they are very large and conſiderable. Thoſe who have loſt their *Auricles*, M. *Dionis* obſerves, have but a confuſed Way of Hearing; and are obliged either to form a Cavity round the Ear with their Hands; or to make uſe of a Horn, applying the End of it to the *Meatus Auditorius*. See AURICLE.

The inner Part of the External Ear, is poſſeſs'd by the *Meatus Auditorius*, or Auditory Paſſage, which commences from the Bottom of the *Concha*, called the *Alvearium*, and is continued in a winding Direction, turning ſometimes this Way, and ſometimes that, to the *Membrana Tympani*. The *Meatus* is dug out of the *Os Temporis*, and lined with a Skin, or *Membrane*, which is furniſh'd with divers little Glands, that ſeparate a thick, yellow, glutinous Humor, call'd *Cerumen*, or Ear-wax, ſerving to defend the Ear from the Ingreſs of Vermine, and other extraneous Bodies. This *Meatus* is all the External Ear in divers Animals, as Reptiles, Birds, Moles, divers Fiſhes, *&c.* The further End thereof is cloſed by a thin, dry, round, tranſparent Membrane, called the *Membrana Tympani*; and improperly, *Tympanum*, or Drum, which ſeparates the External Ear from the Internal. See MEATUS *Auditorius*, and TYMPANUM.

Behind the *Membrana Tympani*, is a Cavity call'd, by different Authors, the *Tympanum*, *Cavitas Tympani*, *Concha Interna*, and *Meatus Auditorius Internus*. In this Cavity are five conſiderable Parts, *viz.* four little Bones, two Apertures, called *Foramina*, or *Feneſtræ*, as many *Meatus's* or Paſſages; four *Muſcles*, and a Branch of a *Nerve*.

The 1ſt of the Bones, or Oſſelets, is the *Malleolus*, or Hammer, thus call'd from the Figure, which is bigger at one End, call'd the *Head*, than at the other, called the *Helve*, or Handle: The 2d, is called the *Incus*, or Anvil: The 3d, the *Stapes*, or Stirrop: And the 4th, the *Orbiculare*. Theſe Bones are nearly of the ſame Bigneſs at the Birth of the Child, as when it is arrived at Maturity; ſo that all that Age does is to harden them.

To give Motion to theſe Bones, is the Office of the four Muſcles of this Cavity; three of them belonging to the *Malleus*, viz. the *Externus*, *Obliquus*, and *Internus*; and the 4th to the *Stapes*, called the *Muſculus Stapedis*.

The

The two *Meatus's* are ſituate at the Sides of the Cavity; the one opening into the Palate, called *Aquæductus*, not only on Account of its Form, but becauſe it may ſerve for the Diſcharge of any heterogeneous Matters: By other Authors it is call'd from its Diſcoverer, *Tuba Euſtachiana*. 'Tis by Means hereof, that Perſons, thick of hearing, aſſiſt the Senſe, by opening their Mouths. The other is ſhorter and bigger, opening into the *Sinus* in the Mamillary Proceſs.

The two Apertures, or *Feneſtræ*, of the *Tympanum*, are in the Surface of the *Os petroſum*, which is oppoſite to the Membrane of the *Tympanum*. The firſt, called *Feneſtra Ovalis*, by Reaſon of its Figure, is ſituate a little higher than the other, and receives the Baſis of the *Stapes*. The other call'd *Rotunda*, notwithſtanding its Figure, is oval like the former, and cloſed by a thin, dry, tranſparent Membrane, reſembling that of the *Tympanum*.

The laſt Thing to be conſider'd in the Cavity of the *Tympanum*, is a fine Chord which runs over the inner Surface of the Membrane; called *Chorda Tympani*. Anatomiſts have long diſputed, whether it was an Artery, a Vein, a Nerve, or the *Tendon* of one of the Muſcles of the *Malleus*: But 'tis now diſcover'd to be a Branch of the fifth Pair of Nerves, which meets the *Portio dura* of the Auditory Nerve.

The two *Feneſtræ* abovemention'd, open into a Cavity dug out of the *Os petroſum*, called the *Labyrinth*, as being perplex'd with divers *detours* and *Meanders*. In this Cavity is ſuppoſed to be contain'd the innate Air. It is divided into three Parts; the firſt called the *Veſtible*, by Reaſon it leads into the other two: In it are obſerv'd nine Apertures, or *Foramina*. The ſecond, comprehends three round Canals, diſpoſed in a ſemicircular Form, and thence call'd *Canales Semicirculares*. The third is the *Cochlea*, which conſiſts of two Parts, *viz.* a ſpiral Semi-oval Canal; and a *Lamina*, form'd into a ſpiral Flight. The Canal makes two Turns and an half round a *Newel*, or Axis, ſtill growing leſs as it aſcends. The ſpiral *Lamina* divides this Cavity into two, being faſten'd by its Baſe to this *Newel*, and by its other Extremity, to the Surface of the Canal, oppoſite to the *Newel*, by Means of a very fine Membrane. The Cavity of the *Cochlea* thus divided, forms, as it were, two winding Stair Caſes, both built on the ſame *Newel*, one over t'other, but without any Communication between them.

*Laſtly*, There is the Auditory Nerve, which conſiſts of two Branches, or Parts, the one ſoft, call'd *Portio mollis*; and the other harder, *Portio dura*: The ſoft Part is ſpent on the Organ of Hearing, being divided into five Branches, which form a delicate Web, that lines the *Veſtibulum*, *Cochlea*, &c. The hard Part, paſſing out of the *Cranium*, is diſtributed among the Parts of the External *Ear*, &c.

The other Veſſels of the Internal *Ear*, are Arteries and Veins from the Carotieds and Jugulars.

*Particular Deſcriptions of each Part of the* Ear *above recited, ſee under the proper Articles*; TYMPANUM, FENESTRA, MALLEOLUS, STAPES, INCUS, ORBICULARIS, LABYRINTH, VESTIBLE, COCHLEA, *Canalis* SEMICIRCULARIS, AUDITORY NERVE, *&c.*

The immediate Organ of Hearing, has been generally ſuppoſed to be the Membrane of the *Tympanum*: But later Anatomiſts ſhew this to be a Miſtake, from divers Inſtances wherein that Membrane has been abſolutely deſtroy'd, and broke, without the leaſt Diminution of the Sence of Hearing.

The Parts that bid the faireſt for the Prerogative are thoſe which compoſe the *Labyrinth*, viz. the *Cochlea*, *Lamina Spiralis*, *Veſtible*, and *Semicircular Canals*: The *Portio mollis* of the Auditory Nerve, ramified and diffuſed through theſe Parts, receives the Impreſſion of Sounds, and propagates it to the Brain. See HEARING.

Behind, and under, the External *Ear*, are a Number of large Glands, called *Parotides*, wherein is ſeparated a great deal of *Saliva*, which is convey'd by the excretory Ducts into the Mouth. See PAROTIDES.

The comparative Anatomy of the *Ear* furniſhes abundant Inſtances of the Creator's Wiſdom.

In *Birds*, the outer *Ear* is of a Form proper for Flight; not protuberant, as that would obſtruct their Progreſs, but cloſe and cover'd. See BIRD.

In *Quadrupeds*, its Form is agreeable to the Poſture and Motion of the Body, but admirably varied, according to their various Occaſions: In ſome, as the Hare, 'tis large, open and erect; by which Means, that timorous, defenceleſs Creature, is warn'd of the leaſt Approach of Danger: In others, 'tis cover'd, to keep out noxious Bodies. In the ſubterraneous *Quadrupeds*, who are forced to mine and dig for their Food and Habitation, as a protuberant *Ear* would obſtruct 'em, and be liable to Injuries, their *Ears* are very ſhort, lodged deep and backwards in the Head.

Thus Moles have no *Auricle* at all, but only a round Hole, between the Neck and Shoulder. Some Authors obſerve, that the *Meatus*, or Paſſage, is cloſed with a little Skin, which opens and ſhuts like an Eye-lid. The Sea-Calf, and the ſeveral Species of Lizards and Serpents, are likewiſe without any External *Ear*. And the Tortoiſe, Cameleon, and Generality of Fiſhes, have the Paſſage of the *Ear* quite ſtop'd, or cover'd over. There is a Sort of Whale, which has the Aperture of the *Ear* under the Shoulders.

Among all the Varieties in the Structure of this Organ, none, Dr. *Grew* obſerves, are more remarkable than thoſe in the Paſſage into the *Os petroſum*. For in an Owl, which perches on a Tree, or Beam, and hearkens after the Prey beneath her, it is produced further out above, than below, for the better Reception of the leaſt Sound: In a Fox, which ſcouts underneath the Prey at Rooſt, it is for the ſame Reaſon produced further out below: In a Pole-Cat, which hearkens ſtrait forwards, it is produced behind, for the taking of a forward Sound: Whereas in a Hare, which is very quick of Hearing, and thinks of nothing but being purſued, it is ſupplied with a bony Tube, directed backwards, ſo as to receive the ſmalleſt, and moſt diſtant Sound that comes behind her.

*Schelhammer* denies the Exiſtence of the innate Air, ſo much talk'd of, in the *Labyrinth*; and with good Reaſon, as there is a Paſſage out of the *Labyrinth* into the Throat, thro' which the innate Air might eſcape. This is paſt doubt: Since by ſtopping the Breath, and ſtraining, we can force the External Air into the *Ear*, and even hear it ruſhing in. When the Paſſage is any Way ſtopp'd, as by a Cold, *&c.* the Hearing thereby becomes dull and obtuſe: And when by ſtrong Swallowing, or other Motion of the Throat, the Paſſage is open'd, we perceive it by a ſudden Crack, and immediately hear very clearly; the Load of feculent Air being then diſcharged from the inner *Ear*. See SOUND, DEAFNESS, WHISPERING-*Place*, SPEAKING-*Trumpet*, BELLOWING-*Cave*.

Several Naturaliſts and Phyſicians have held, that cutting off the *Ears* render'd Perſons barren, and unprolific; which Notion was what firſt occaſion'd the Legiſlators to order the Ears of Thieves, *&c.* to be cut off, leſt they ſhould produce their like.

The *Ear* has its Beauties, which a good Painter ought by no Means to diſregard: Where it is well form'd, it wou'd be an Injury to the Head to be hidden. *Suetonius* inſiſts particularly on the Beauties of *Auguſtus*'s Ears; and *Ælian*, deſcribing the Beauties of *Aſpaſia*, obſerves ſhe had ſhort Ears. *Martial* ranks large Ears among the Number of Deformities. *Felibien*.

Among the *Athenians*, it was a Mark of Nobility to have the Ears bored or perforated. Among the *Hebrews* and *Romans*, it was a Mark of Servitude.

EAR, in Muſic, a kind of internal Senſe, whereby we perceive and judge of Harmony, and muſical Sounds.

In Muſic, we ſeem univerſally to acknowledge ſomething like a diſtinct Senſe from the external one of hearing; and call it a *good Ear*. And the like Diſtinction we ſhould probably acknowledge in other Affairs, had we got diſtinct Names to denote thoſe Powers of Perception by. See SENSE.

Thus, a greater Capacity of perceiving the Beauties of Painting, Architecture, *&c.* is called to a *fine Taſt*. See TAST.

EAR-*Wax*, EAR-*Ring*, See CERUMEN. PENDANT.

EAR, is alſo applied to a long Cluſter of Flowers, or Seeds, produced by certain Plants; uſually called by Botaniſts, *Spica*. See SPICA.

The Flowers and Seeds of Wheat, Rye, Barley, *&c.* grow in *Ears*. The ſame holds of the Flowers of Lavender, *&c.* We ſay the Stem of the *Ear*, i. e. its Tube or Straw: The Knot of the *Ear*: the Lobes, or Cells, wherein the Grains are encloſed: The Beard of the *Ear*, *&c.* we have known 80 *Ears* of Wheat from the ſame Root.

EARL, an *Engliſh* Title of Honour, or Degree of Nobility, next below a *Marquis*, and above a *Viſcount*. See NOBILITY, MARQUIS, VISCOUNT, *&c.*

*Earls*, were anciently Attendants, or Aſſociates, of the King in his Councils, and Martial Expeditions; much as *Comites*, Counts, were of the Magiſtrates of *Rome*, in Quality of Deputies, to execute their Offices for them. See COUNT.

Hence alſo *Earls* are called in *Latin*, *Comites*; in *French*, *Comtes*, Counts, &c. The *Germans* call them *Graves*, as Langrave, Margrave, Palſgrave, *&c.* The *Saxons*, *Eoldormen*; the *Danes*, *Eorlas*; and the *Engliſh*, *Earls*.

At firſt the Title *Earl* always died with the Man: *William* the *Conqueror* firſt made it Hereditary; giving it in Fee to his Nobles; and annexing it to this or that Shire or County: For the Support of the State thereof, he allotted the third Peny out of the Sheriffs Court, iſſuing out of all Pleas of the Shire from which the *Earl* took his Title. But of later Days the Matter is much alter'd.

*Earls* are now created by Charter, without any Authority over, or particular Relation to, their Counties; and without any Profit arising thence, except ſome annual Stipend out of the Exchequer for Honours Sake. The Number of *Earls* being of late much increaſed, and no more Counties being left for them; ſeveral of them have made Choice of ſome eminent Part of a County, as *Lindſey*, *Holland*, *Craven*, &c. Others, of ſome Towns; as *Marborough*, *Exeter*, *Briſtol*, &c. And others of ſome Village, or their own Seat, Park, &c. as *Godolphin*, *Bolton*, *Danby*, *Wharton*, &c.

Two Earls we have which are not local, *i. e.* not dignified from any Places, but from Noble Families; *viz.* Earl *Rivers*, and Earl *Poulet*. A third is denominated from his Office, *viz.* the *Earl-Marſhal*. See MARSHAL.

*Earls* are created by Cincture of Sword, Mantle, a Cap and a Coronet on his Head, and a Charter in his Hand. They are ſtyled by the King, *Conſanguinei noſtri*, our Couſins. Their Title is, *Moſt potent and Noble Lord*. Their Coronet has the Pearls rais'd on Points, with Leaves between. See CORONET.

*Earl* was a mighty Title among the *Saxons:* It is obſerved to be the moſt ancient of any of the Peerage; and that there is no other Title of Honour in Uſe among the preſent Nobility, which was likewiſe uſed among the *Saxons*, beſide it.

The Original Titles of Honour among the *Saxons*, were ſeðeling, ealðerman, and ðeyen or ðane. The firſt was appropriated to thoſe of the Royal Family. The other two to the reſt of the Nobility. Only the *Thani* were afterwards diſtinguiſhed into *Majores* and *Minores*. See THANE.

EARL-*Marſhal*, is a great Officer, who had antiently ſeveral Courts under his Juriſdiction, as the *Court of Chivalry*, now almoſt forgotten; and the *Court of Honour*, now quite laid aſide: But he hath ſtill ſome Preheminence in the *Court of Marſhalſea*; where he may ſit in Judgment againſt Criminals offending within the Verge of the Court; whence the chief Officer under him is called *Knight-Marſhal*. See MARSHAL, and MARSHALSEA.

Under him is alſo the Herald's Office, or College of Arms. See HERALD, and COLLEGE *of Arms*.

The Office of *Earl-Marſhal* is Hereditary in the moſt Noble Family of *Howard*; and enjoy'd by the Duke of *Norfolk*, the principal Branch thereof; tho' now, for Reaſons of State, it is diſcharged by Deputation: But yet it is to be obſerved, it is not given out of the Name and Family of *Howard*.

EARNEST, called alſo *Arrhes*, Money advanced to compleat, or aſſure, a verbal Bargain, and bind the Parties to the Performance thereof.

By the Civil Law, he who recedes from his Bargain, loſes his *Earneſt:* Or, if the Perſon, who receiv'd the *Earneſt*, give back, he is to return the *Earneſt* double. But, with us, the Effect of *Earneſt* is more. The Perſon who gave it, is in Strictneſs obliged thereby to abide by his Bargain; and in Caſe he decline it, is not diſcharged upon forfeiting his *Earneſt*; but may be ſued for the whole Money ſtipulated.

EARTH, *Terra*, in Natural Philoſophy, one of the four Vulgar, or Peripatetical Elements; defined, a ſimple, dry and cold Subſtance; and as ſuch, an Ingredient in the Compoſition of all Natural Bodies. See ELEMENT.

It ſhould be well obſerved, that the Element *Earth* is a very different Matter from the *Earth* whereon we tread: *Ariſtotle* having laid down *cold* and *dry* as his firſt Element; to give it a ſuitable Name, look'd among the divers Bodies, for that which ſhould come the neareſt thereto; which being *Earth*, he gave his firſt Element that Denomination: Tho', thus borrowing a Word, that had been uſed for a different Thing, occaſioned a great Part of his Followers to run into an extravagant Error, and to ſuppoſe, that this habitable foſſil *Earth*, was an Element. See PRINCIPLE.

EARTH, in Chymiſtry, is the fourth of the Chymical Elements, or Principles, into which all Bodies are reſolvible by Fire. See PRINCIPLE.

After drawing off the Spirit, Sulphur and Phlegm, *e. gr.* of Wine, what remains in the Retort, is a taſteleſs, ſmelleſs, duſty Matter, not capable either of being rais'd by Diſtillation, or diſſolved by Solution, and called *Earth*, or *Terra damnata*, or *Caput Mortuum*. See CAPUT *Mortuum* and TERRA *damnata*.

This *Earth* is ſuppoſed to be the Baſis, or Subſtratum of all Bodies; and that, wherein the other Principles reſide. 'Tis all that is ſolid, *e. gr.* in an Animal or Vegetable Body, *i. e.* all the Vaſcular Part; the reſt being Juices. See SOLID, VESSEL, VEGETABLE, &c.

EARTH, in Natural Hiſtory, is a foſſil, or terreſtrial Matter, whereof our Globe principally conſiſts; whoſe Character is to be neither diſſoluble by Fire, Water, nor Air; not tranſparent, more fuſible than Stone, and generally containing ſome Degree of Fatneſs. See FOSSIL.

Of ſuch *Earth*, ſome is Simple, and Immutable; other, Compound and Fatty. Of the firſt Kind is *Chalk*, *Pumice*, and *Rotten-ſtone*; of the Second, or Compound *Earths*, are *Boles* of all Kinds, red, white and brown; *Fullers Earth*, the divers Kinds of *Medicinal Earth*, as the *Cretica*, *Hungarica*, *Turcica*, *Suecica*, *Lemnian Earth*, *Malta Earth*, *Terra Sigillata*, &c. To this Claſs are likewiſe referred *Argillæ*, or *Clay Earth*, form'd into Potters Ware.

Theſe *Earths* are all reſolvible into an Oil, a little acid Salt, &c. and a *Calx*, which is the Baſis, or the *Earth* properly ſo call'd. *See the divers Kinds of Earths deſcribed under their proper Articles:* CHALK, PUMICE, BOLE, SIGILLATA-*Terra*, &c.

Naturaliſts generally rank *Sand* as a Species of *Earth*; tho' with no great Propriety. Sands being, in Strictneſs, a Sort of Cryſtals, or little tranſparent Pebbles, calcinable, and by the Addition of a fix'd alcaline Salt, fuſible, and convertible into Glaſs: And therefore properly reducible to the Claſs of Stones. See STONE.

By Means of Sand it is, that the fatty *Earth* is render'd fertile, and fit to feed Vegetables, &c. For pure Earth is liable to coaleſce into a hard coherent Maſs, as in Clay; and Earth thus imbodied, and as it were glued together, would be very unfit to nouriſh Plants. But if with ſuch Earth, Sand, *i. e.* hard Cryſtals which are indiſſoluble in Water, and ſtill retain their Figure, be intermix'd, they will keep the Pores of the Earth open, and the Earth it ſelf looſe and incompact, and by that Means give room for the Juices to move, aſcend, &c. and for Plants to be nouriſhed thereby. Thus a Vegetable, planted either in the Sand alone, or in the fat Glebe and *Earth* alone, receives no Growth or Increaſe; but is either ſtarved or ſuffocated: But mix the two, and the Maſs becomes fertile. In Effect, by Means of Sand, the Earth is render'd in ſome Meaſure Organical; by preſerving a Sort of Pores, and Interſtices therein, ſomewhat analagous to Veſſels is effected; by which the Juices of the *Earth* may be convey'd, prepared, digeſted, circulated, and at length excreted and thrown off into the Roots of Plants. See WATER and VEGETATION.

EARTH, in Geography, this terraquerous Globe, or Ball, whereon we inhabit, conſiſting of Land and Sea. See TERRAQUEOUS *Globe*; See alſo OCEAN.

The *Earth*, conſider'd in different Relations, or Habitudes, makes the Subject of Geography and Geometry. See GEOGRAPHY, &c.

The *Figure of the Earth* is demonſtrated to be nearly Spherical. Thus: the Moon is frequently ſeen eclipſed by the Shadow of the *Earth*; and in all Eclipſes, that Shadow appears circular, what Way ſoever it be projected, whether towards Eaſt, Weſt, North or South, howſoever its Diameter vary, according to the greater or leſs Diſtance from the Earth.

Hence it follows, that the Shadow of the *Earth*, in all Situations, is really Conical; and conſequently the Body that projects it, *i. e.* the *Earth*, is nearly Spherical. See SHADOW.

The Natural Cauſe of this Sphericity of the Globe is, according to Sir *Iſaac Newton*, the great Principle of Attraction, which the Creator has ſtamp'd on all the Matter of the Univerſe; whereby all Bodies, and all the Parts of Bodies, mutually attract one another. See ATTRACTION.

The ſame is the Cauſe of the Sphericity of the Drops of Rain, Quickſilver, &c. See DROP, SPHERICITY, &c.

We ſay 'tis *nearly* Spherical; for the Inequalities on its Surface prevent its being perfectly ſo. Beſides that, *Huygens* and Sir *Iſaac Newton* have ſhewn, that the *Earth* is higher and bigger under the Equator, than at the Poles: So that its Figure, nearly, is that of an oblate Spheroid, ſwelling out towards the Equatorial Parts, and flatted or contracted towards the Poles. The *Ratio* of the greater Diameter to the leſs, *Huygens* determines to be as 578 to 577. See MOUNTAIN, SPHEROID, PENDULUM, &c.

The Reaſon of this Inequality is deduced from the Diurnal Rotation of the *Earth* on its Axis; as is already ſhewn in that of the Sun. See SUN.

This Roundneſs of the *Earth* is further confirm'd by its having been frequently ſail'd round: The firſt Time was in the Year 1519, when *Ferd. Magellan* made the Tour of the whole Globe in 1124 Days. In the Year 1557, our Countryman *Drake* performed the ſame in 1056 Days: In the Year 1586, Sir *Thomas Cavendiſh* made the ſame Voyage in 777 Days; *Simon Cordes*, of *Rotterdam*, in the Year 1590; and in the Year 1598, *Oliver Noort*, a *Hollander*, in 1077 Days; *Will. Corn. Van Schouten*, in the Year 1615, in 749 Days; *Jam. Heremit* and *Joh. Huygens*, in the Year 1623, in 802 Days: All of whom ſailing continually from Eaſt to Weſt, at length arrived in *Europe*, whence they ſet forth; and in the Courſe of their Voyage obſerved all the

the *Phænomena*, both of the Heavens and Earth, to correſpond to and confeſs this ſpherical Figure.

What the *Earth* loſes of its Sphericity by Mountains and Vallies, is nothing conſiderable; the higheſt Eminence being ſcarce Equivalent to the minuteſt Protuberance on the Surface of a Lemon: What it loſes by the Swelling of the Equatorial Parts is more ſenſible. See MOUNTAIN.

Sir *Iſaac Newton* makes the greateſt Diameter 34 Miles bigger than the leſs, fixing the *Ratio*, as 692 to 688. If the *Earth* were in a fluid State, its Revolution round its Axis would neceſſarily make it put on ſuch a Figure, by Reaſon the Centrifugal Force being greateſt towards the Equator, the Fluid would there riſe, and ſwell moſt: and that it ſhould be ſo now, ſeems neceſſary to keep the Sea in the Equinoctial Regions from overflowing the *Earth* thereabouts.

Add, that Experiments made on Pendulums, which muſt be of different Lengths, to ſwing equal Times here and at the Equator, evince the ſame Thing. See PENDULUM.

Monſr. *de la Hire* and M. *Derham*, indeed, have ſhewn, in the *Memoirs of the* French *Academy*, and *Philoſoph. Tranſact.* that this Diverſity may ariſe either from the greater Heat, or the greater Rarity of the Air there than here; as having obſerved a like Variation between Pendulums when heated and cold, and when in *Vacuo* and open Air. But, beſide that Sir *Iſaac Newton* and Monſ. *Bernoulli*, have ſet aſide theſe Cauſes as inſufficient; Monſ. *Caſſini* has found, that the Degrees of a Meridian grow larger, the further we go towards the Line by one Eight hundredth Part of every Degree; which puts the Spheroidiſm of the *Earth* paſt Queſtion.

The Antients had various Opinions as to the Figure of the *Earth*: Some, as *Anaximander*, held it Cylindrical; and others, as *Leucippus*, in Form of a Drum. But the principal Opinion was, that it was flat; that the viſible Horizon was the Bounds of the Earth, and the Ocean the Bounds of the Horizon; that the Heavens and Earth above this Ocean was the whole viſible Univerſe; and that all beneath the Ocean was *Hades*. Of which Opinion were not only divers of the ancient Poets and Philoſophers, but alſo ſome of the Chriſtian Fathers, as *Lactantius*, St. *Auguſtine*, &c.

*Fa. Tacquet* draws ſome pretty Concluſions from the Spherical Figure of the *Earth*; as, 1. That if any Part of the Surface of the Earth were quite plain; a Man cou'd no more walk upright thereon, than on the Side of a Mountain: 2. That the Traveller's Head goes a greater Space than his Feet; and a Horſeman than a Footman, as moving equal Arches of greater Circles: 3. That a Veſſel full of Water being rais'd perpendicularly, ſome of the Water will be continually flowing out, yet the Veſſel ſtill remain full; and on the contrary, if a Veſſel full of Water be let perpendicularly down, tho' nothing flow out, yet it will ceaſe to be full: Conſequently there is more Water contain'd in the ſame Veſſel at the Foot of a Mountain, than on the Top; by Reaſon the Surface of the Water is compreſs'd into a Segment of a leſs Sphere below than above. *Tacq. Aſtronom. L.* I. *C.* 2.

The *Magnitude of the Earth*, and the Number of Miles its Diameter contains, has been variouſly determined by various Authors, ancient and modern. The Way to arrive at it, is, by finding the Quantity of a Degree of a great Circle of the Earth. But this Degree is found very different, according to the different Methods and Inſtruments made uſe of, as well as the different Obſervers. See DEGREE.

The Method obſerved by Mr. *Norwood*, and the *French* Aſtronomers *Picard*, *Caſſini*, &c. viz. by meaſuring the Diſtance between two remote Places on the ſame Meridian, is undoubtedly the beſt; and was performed with ſuch exceeding Accuracy, eſpecially by Monſ. *Caſſini*, that hardly any thing further or better can be expected. According to that Author, the Ambit or Circumference of the *Earth* is 123750720 *Paris* Feet; or, 134650777 *Engliſh* Feet; or, 25031½ of our Statute Miles: Whence, ſuppoſing the *Earth* ſpherical, its Diameter muſt be 7967 Statute Miles; and conſequently its Radius, or Semi-diameter, may be taken in a round Number for 200000000 Feet: Its Surface will be 199444206 Miles; which being multiplied into ⅓ of its Semidiameter, gives the ſolid Content of the Globe of the *Earth* 264856000000 Cubic Miles.

On the Surface of the *Earth* are conceiv'd the ſame Circles, as on the Surface of the *Mundane* Sphere already deſcribed; *viz.* an EQUATOR, ECLIPTIC, TROPICKS, POLAR-*Circles*, MERIDIANS, HORIZON, PARALLELS, *&c.* which See, as alſo SPHERE and GLOBE.

The *Terraqueous* Globe is now generally granted to have two Motions, the one *Diurnal*, around its own Axis, in the Space of 24 Hours, which conſtitutes the Natural Day, or *Nycthemeron*. See DIURNAL-*Motion*.

The other *Annual*, round the Sun, in an Elliptical Orbit, or Track, in 365 Days 6 Hours, conſtituting the Year. See ANNUAL-*Motion* and YEAR.

From the former we derive the Diverſities of *Night* and *Day*: See NIGHT and DAY. And from the latter, the Viciſſitudes of Seaſons, Spring, Summer, &c. See SEASON, SPRING, SUMMER, WATER, *&c.*

*See the Motion of the Earth proved under the Article* EARTH *in Aſtronomy.*

In the *Terraqueous* Globe we diſtinguiſh three Parts, or Regions, *viz.* 1. The *External* Part, or Cruſt, which is that from which Vegetables ariſe, and Animals are nouriſhed. 2. The *Middle*, or intermediate Part, which is poſſeſſed by Foſſils, extending further than human Labour ever yet penetrated. 3. The *Internal*, or *Central* Part, which is unknown to us, tho' by many Authors ſuppoſed of a magnetic Nature; by others, a Maſs, or Sphere of Fire; by others, an Abyſs, or Collection of Waters, ſurrounded by the Strata of *Earth*; and by others, a hollow, empty Space, inhabited by Animals, who have their Sun, Moon, Plants, and other Conveniencies within the ſame.

Others divide the Body of the Globe into two Parts, *viz.* the *External* Part, which they call the *Cortex*, including the whole Depth or Maſs of the Strata of the *Earth*: And the *Internal*, which they call the *Nucleus*, being of a different Nature from the former, and poſſeſs'd by Fire, Water, or the like. See CORTEX and NUCLEUS.

The External Part of the Globe either exhibits Inequalities, as *Mountains* and *Vallies*; or it is plain and level; or dug in Channels, Fiſſures, Beds, *&c.* for *Rivers*, *Lakes*, *Seas*, &c. See RIVER, LAKE, OCEAN, *&c.*

Theſe Inequalities in the Face of the *Earth*, are by moſt Naturaliſts ſuppoſed to have aroſe from a Rupture, or Subverſion of the Earth, by the Force either of the ſubterraneous Fires or Waters. The Earth in its Natural and Original State, *Des Cartes*, and after him *Burnet*, *Steno*, *Woodward*, *Whiſton*, and others, ſuppoſe to have been perfectly round, ſmooth, and equable; and accounts for its preſent rude and irregular Form, principally from the great Deluge. See DELUGE, EARTHQUAKE, *&c.*

In the External, or Cortical Part of the Earth, we meet with various *Strata*, which are ſuppoſed to be the Sediments of various Floods, the Waters whereof being replete with Matters of divers Kinds, as they dried up, or oozed through, depoſited theſe different Matters, which in Time harden'd into *Strata* of Stone, Sand, Coal, Clay, *&c.* See STRATA, COAL, *&c.*

Dr. *Woodward* has conſider'd the Buſineſs of *Strata* with great Attention, *viz.* their Order, Number, Situation with reſpect to the Horizon, Depth, Interſections, Fiſſures, Colour, Conſiſtence, *&c.* and aſcribes the Origin and Formation of them all, to the great Flood, or *Cataclyſmus*. At that terrible Revolution, he ſuppoſes all the terreſtrial Bodies of all Kinds to have been diſſolved and mix'd with the Waters, and ſuſtain'd therein, ſo as only to conſtitute one common Maſs therewith. This Maſs of terreſtrial Particles, intermix'd with Water, he ſuppoſes to have been at length precipitated to the Bottom, and that, according to the Laws of Gravity; the heavieſt ſinking firſt, and the lighter in their Order. By ſuch Means were the *Strata* form'd, whereof the *Earth* conſiſts, which attaining their Solidity and Hardneſs by Degrees, have continu'd ſo ever ſince. Theſe Sediments, he further concludes to have been at firſt all parallel and concentrical, and the Surface of the *Earth* form'd thereby, perfectly ſmooth and regular: But in Courſe of Time, divers Changes happening from *Earthquakes*, *Vulcano's*, &c. the Order and Regularity of the *Strata* was diſturbed and broke, and the Surface of the *Earth*, by ſuch Means, brought to the irregular Form in which it now appears. See further Particulars under FOSSIL, VOLCANO, SPRING, ATMOSPHERE, *&c.*

EARTH, in Aſtronomy, is one of the primary Planets, according to the Syſtem of *Copernicus*. Its Character is ♁. See PLANET, *&c.*

In the Hypotheſis of *Ptolomy*, the *Earth* is the Centre of the *Syſtem*. See SYSTEM.

Whether the *Earth* move, or remain at Reſt, *i. e.* Whether it be fixed in the Centre, with the Sun Heavens and Stars moving round the ſame from Eaſt to Weſt; or whether, the Heavens and Stars being at Reſt, the *Earth* move from Weſt to Eaſt, is the great Article that diſtinguiſhes the *Ptolemaic* from the *Copernican* Syſtem. See COPERNICAN, and PTOLEMAIC *Syſtem.*

*Motion of the* EARTH.

The happy Induſtry of the Aſtronomers of our Age, has put the Motion of the *Earth* beyond all reaſonable doubt: On which Account, the Names of *Copernicus*, *Gaſſendus*, *Kepler*, *Hook*, *Flamſtead*, &c. will ever be mentioned with the higheſt Honour.

Indeed, the ſame Motion had been held by many of the ancient Philoſophers. *Cicero*, in his *Tuſc. Queſt.* aſſures us, that *Nicetas* of *Syracuſe* firſt diſcover'd that the *Earth* had a diurnal Motion, by which it revolved round its Axis in the Space of 24 Hours: And *Plutarch*, *de Placit. Philoſoph.*

*Philoſoph.* tells us, that *Philolaus* diſcover'd its Annual Motion round the Sun. About 100 Years after *Philolaus*, *Ariſtarchus* the *Samian*, propoſed the Motion of the *Earth* in ſtronger and clearer Terms, as we are aſſured by *Archimedes*, in *Arenar.*

But the Religious Opinions of the *Heathen* World, prevented the Doctrine's becoming more cultivated. For *Ariſtarchus*, being accuſed of Sacrilege by *Cleanthes* for moving *Veſta*, and the tutelary Deities of the Univerſe out of their Place; the Philoſophers began to lay aſide ſo perilous a Poſition.

Many Ages afterwards, *Nic. Cuſanus* revived the ancient Syſtem, in his *Doct. de Ignorant.*; and aſſerted the Motion of the *Earth*: But the *Dogma* got but little Ground till the Time of *Copernicus*, who ſhew'd its great Uſe and Advantages in Aſtronomy; and who had, immediately, all the Philoſophers and Aſtronomers, that durſt think differently from the Croud, and were not afraid of Eccleſiaſtical Cenſures, on his Side. So that *Kepler*, his Contemporary, made no Scruple to cry: *Hoderno tempore præſtantiſſimi quique Philoſophorum & Aſtronomorum Copernico adſtipulantur: ſæcta eſt hæc Glacies; vincimus ſuffragiis melioribus: Cæteris pene ſola obſtat Superſtitio aut Metus a Cleanthibus.*

The Arguments alledg'd againſt the Motion of the *Earth*, are vain and frivolous. The Principal are,

1. That it is a heavy Body, and very unfit for Motion.

2. That if the *Earth* were to move round its Axis in 24 Hours, all our Houſes, Buildings, *&c.* would tumble down.

3. That Bodies wou'd not fall upon the Places perpendicularly under them: Nor a Bullet, *e. gr.* ſhot perpendicularly from the Ground, fall back again upon the ſame Spot.

4. That it is contrary to the Words of Scripture: And,

5. That it is repugnant to our Senſes, which repreſent the *Earth* at Reſt, and the Sun in Motion.

The Arguments for the Motion of the *Earth* are of another Kind, and carry other-guiſe Evidence with them; being deduced from actual Obſervation and Phænomena, and not from the fanciful Surmiſes of timorous Zealots. They are theſe:

1. The Sun will equally appear in Motion, and the *Earth*, as ſtanding ſtill, to a Spectator on the *Earth*; whether the Sun really move round the *Earth* at Reſt; or the *Earth* move round the Sun at Reſt.

For ſuppoſe the *Earth* in T, (*Tab. Aſtronom. Fig.* 14.) and the Sun in 1; the Sun will then appear in 0♈. And ſuppoſe the Sun to proceed in an Orbit, ſurrounding the *Earth*, from 1 to 2, he will then appear in 0♉; and if he proceed further to 3, he will be ſeen in 0♊; and thus will he appear to go on, according to the Order of the Signs in the Ecliptic.

Suppoſe again the *Earth* in 1; (*Fig.* 15.) the Sun, S, will be ſeen in ♈: Let the *Earth* go on from 1 to 2, the Sun will appear to the Inhabitants of the *Earth* to have proceeded from ♈ to ♉; and if the *Earth* proceed to 3, the Sun will appear to have advanced further from ♉ to ♊; and ſo on, according to the Succeſſions of the Sign of the Ecliptic.

Thus does the Sun appear alike to move, whether it really move, or ſtand ſtill; ſo that the Objection from Senſe is of no Force. See Vision. But again,

2. If one of the Planets be ſuppoſed to have moved a certain Space, from Weſt to Eaſt; the Sun, *Earth*, and other Planets, together with the fixed Stars, will all ſeem to an Inhabitant of that Planet, to have moved juſt ſo far round it the contrary Way.

For ſuppoſe a Star M, (*Fig.* 16.) in the *Zenith* of an Inhabitant of a Planet plac'd in T; and ſuppoſe the Planet to have revolved on its Axis from Weſt to Eaſt; in a certain Space of Time, the Sun S, will have arrived at the *Zenith* of T; then the Star I, then N, then the *Earth* L, and at length the Star M again. To the Inhabitant of the Planet therefore, the Sun S, with the *Earth* L, and the Stars I, N, M, *&c.* will appear to have moved round the Planet a contrary Way.

Thus, to the Inhabitants of the Planets, if any ſuch there be, the *Mundane* Sphere, with the Sun, Stars, and all the other Planets, will, as to us, appear to move round them from Eaſt to Weſt. And accordingly, the Inhabitants of our Planet the *Earth*, are only liable to the ſame deluſive Appearances with thoſe of the reſt.

3. The Orbits of all the Planets include the Sun, as the common Centre of them all: But 'tis only the Orbits of the ſuperiour Planets that include the *Earth*, which however is not in the Centre of any of them, as we have already ſhewn under the Articles, Sun and Planet.

4. The *Earth's* Orbit being proved to be between thoſe of *Venus* and *Mars*; it follows, that the *Earth* muſt turn round the Sun: for, as it lies within the Orbits of the ſuperiour Planets, their Motions would indeed appear unequal and irregular; but they would never either be ſtationary or retrograde. See Station and Retrogradation.

5. From the Orbits and Periods of the ſeveral Planets about the Sun; and of the Moon and the Satellites round the *Earth*, *Jupiter* and *Saturn*; it is evident, that the Law of Gravitation is the ſame towards the *Earth*, *Jupiter* and *Saturn*, as towards the Sun; and the periodical Times of the ſeveral Bodies moving around each, are in the ſame *Ratio* to their ſeveral Diſtances from them. See Period.

Now, it is certain, that on the Hypotheſis of the *Earth's* annual Motion, her periodical Time exactly ſuits this Law, bearing ſuch a Proportion between thoſe of *Mars* and *Venus*, as the ſeveral other Bodies directed by the ſame Law do bear, *i. e.* the Squares of the Periods are in all, as the Cubes of the Diſtances from the Centre of their Orbits. But ſuppoſing the *Earth* to be at Reſt, this Law is broke moſt exorbitantly.

For if the *Earth* don't move round the Sun, the Sun muſt move with the Moon round the *Earth*: Now the Diſtance of the Sun to that of the Moon, being as 10000 to 46; and the Moon's Period being leſs than 28 Days, the Sun's Period ſhould be found no leſs than 242 Years, whereas in Fact it is but one Year. Which ſingle Conſideration, Mr. *Whiſton* thinks of Weight enough to determine the Controverſy between the two Syſtems, and to eſtabliſh the Motion of the *Earth* for ever. See Revolution.

Whereas, ſuppoſing our *Earth* to have once revolved about the Sun in a circular Orbit, whoſe ſemi-diameter were equal to the *Earth's* original Diſtance from the Sun ſix Degrees paſt its Perihelion, the annual Period would be found exactly and ſurprizingly equal to the *Lunar* or the ancient *Solar* Year, which were exactly commenſurate; containing 12 Synodical, or 13 Periodical Months, *i. e.* 355 Days, 4 Hours, 19 Minutes. See Month.

6. The Diſtances of certain of the fix'd Stars from the *Zenith*, have been obſerved to be various at various Times of the Year. That, particularly, of the *Pole-ſtar* from the Pole, has been diſcover'd by Mr. *Flamſtead* from repeated Obſervations, for 7 Years ſucceſſively; to be greater about the Summer Solſtice, than about the Winter, by about 40 Seconds. Whence it appears, that the *Earth* changes its Situation; receding from the *Pole-Star*, and returning back to it again Annually. See Parallax *of the Earth's Orbit.*

Which Argument is further confirm'd from this, that the *Earth* is nearer the Sun at *Chriſtmas*, than at *Midſummer*; as appears both from its apparent Diameter being greater in *December* than in *June*; and from its Motion being ſwifter by one 25th Part in the former Seaſon, than the latter: Whence it is that there are about 8 Days more in the Summer half Year, *viz.* from *March* to *September*, than in the Winter, from *September* to *March*. See Solstice and Equinox.

7. Either the heavenly Bodies revolve round the *Earth* in 24 Hours, or the *Earth* revolves round its Axis in that Time. Now the Planets, revolving round the Sun, perform their Revolutions in greater or leſs Times, as their Orbits are greater or leſs, *i. e.* as they are more or leſs remote from the Sun. Of Conſequence, if the Stars and Planets revolved round the *Earth*, they would perform their Revolutions in unequal Times, according as their Orbits, or their Diſtances, were unequally big. At leaſt, the fix'd Stars, which are at ſuch prodigious Diſtances from the *Earth*, wou'd never move round it in 24 Hours, as the neareſt Planet is ſuppoſed to do. See Revolution.

This is an Inelegancy, which is avoided in the Syſtem where the *Earth* is ſuppoſed to move; and where every Planet is ſo much the longer in deſcribing its annual Orbit round the Sun, as the Orbit is greater. See Orbit.

8. In all the Works of Nature we are acquainted withal, the Creator appears to act by the ſhorteſt, eaſieſt, and ſimpleſt Means. Now, if the *Earth* be at Reſt, and the Stars move, the Velocity of theſe latter muſt be immenſe, and yet all the Purpoſes thereof, might have been anſwer'd by a moderate Motion of the *Earth* alone.

For the Moon's mean Diſtance from the *Earth*, is 57 Semi-diameters of the *Earth*; which, ſuppoſing a Semi-diameter of the *Earth* 3440 Geographical Miles, amounts to 196080 Miles. Hence, the Circumference of the Moon's diurnal Circle, being 1231380 ſuch Miles, the Moon's horary Motion muſt be 483308 Miles: Conſequently in each Second, a Space leſs than that of the Pulſe of an Artery, the Moon, tho' the ſloweſt of all the heavenly Bodies, muſt move 3 Miles and five 9ths. See Moon. Again, the Sun's mean Diſtance from the *Earth* is 22000 Semi-diameters of the *Earth*, or 75680000 Geographical Miles; conſequently the Sun's diurnal Progreſs, when in the Equator, muſt be 475270400 Miles: And therefore in the Space of one Second, *i. e.* in the twinkling of an Eye, he muſt move 5480 Miles.

Again, the Diſtance of the Sun from the *Earth*, is to that of *Mars* nearly as one and a half; to that of *Jupiter*, as one to five and a Quarter; and to that of *Saturn*, as one to nine: Wherefore as the diurnal Spaces, and all other Things deſcribed in the ſame Time, are in the ſame *Ratio*; *Mars*, in

one

one twinkling of an Eye, muſt fly 8222; *Jupiter* 28688; and *Saturn* 52060 Miles. Laſtly, the fix'd Stars being yet vaſtly more remote from the *Earth* than *Saturn*, their Motion in, or near the Equator, muſt be vaſtly ſwifter than that of *Saturn*.

9. If the *Earth* be at Reſt, and the Stars move by any common Motion, the ſeveral Planets muſt each Day deſcribe ſeveral Spirals running forth to a certain Term towards the North, and thence returning to the oppoſite Term towards the South; ſometimes narrower, and ſometimes broader.

For the Diſtances of the ſeveral Planets from the *Zenith* alter every Day; increaſing to a certain Point towards the North, and thence decreaſing again towards the South: Conſequently, the Altitude of the Pole, being always found the ſame, and the Planets not returning to the ſame Point of the Meridian; they do not deſcribe Circles but Spirals. Add, that as the ſeveral Planets do not retain the ſame Diſtance from the *Earth*, but are ſometimes nearer, and ſometimes recede further from it; at a greater Diſtance, a greater Spiral, and at a leſs, a leſs is deſcribed.

Further, as their Motion is ſlower, when the Planet is further from the *Earth*; the greater Spirals are deſcribed in leſſer Times than the leſſer. And as the greateſt and leaſt Diſtance of the Planets from the *Earth* is not affix'd to the ſame Point of the Heavens, the Planets have moved in different Tracts every Day from the Beginning.

10. Bodies let fall from any conſiderable Height, are found by Experiment not to fall upon the Spot perpendicularly under them, but to the South-Eaſt thereof. See DESCENT.

The Experiment was propoſed to Dr. *Hook*, in the Year 1679, by a Perſon, who ſuggeſted, that if the *Earth* had any diurnal Motion, the Body would fall to the Eaſt of the perpendicular. Dr. *Hook*, on that Occaſion, read a Diſcourſe before the Royal Society, wherein he endeavour'd, *a priori*, to aſſign what Curve a falling Body would deſcribe; aſſerting particularly, that the Fall of the Body would not be directly Eaſt, but South Eaſt: Which was confirm'd by divers actual Trials.

11. The Power of Gravity is found to decreaſe as you approach nearer to the Equator: Which is a Circumſtance that agrees to all Bodies, which have a Motion on their Axis; and them only, as being really the neceſſary Reſult of ſuch Motions. See GRAVITY.

For a Body, revolving on its Axis, the Parts, or Appendages thereof, are continually endeavouring to recede from the Centre. Conſequently, the Equator being a great Circle, and the Parallels all decreaſing towards the Poles, the Centrifugal Force is greateſt in the Equator, and decreaſes towards the Poles, in the *Ratio* of the Diameters of the Parallels to that of the Equator. Now the Power of Gravity determines the ſeveral Parts or Appendages towards the Centre of the whole: Conſequently the Centrifugal Force acting contrary to the Power of Gravity, retards the Deſcent of Bodies, and that moſt where it is greateſt.

Dr. *Keil* computes, that the Force of Gravity to the Centrifugal Force at the Equator is as 289 to 1; conſequently, a Body placed there, would loſe one 289th Part of the Weight it would have, were the *Earth* at Reſt. Conſequently, the Centrifugal Force, at the Poles, being infinitely ſmall, a Body will there weigh 289 Pounds, which at the Equator only weighs 288.

12. The following is an actual Demonſtration of the *Earth's* Motion, drawn from Phyſical Cauſes, for which we are indebted to the Diſcoveries of Sir *Iſaac Newton*; and which Dr. *Keil* takes for concluſive, and unanſwerable.

All the Planets, 'tis demonſtrated, gravitate towards the Sun: And Obſervations teſtify to us, either that the *Earth* turns round the Sun, or the Sun round the *Earth*, in ſuch Manner, as to deſcribe equal, Areas in equal Times. But 'tis demonſtrated further, that whenever Bodies turn round each other, and regulate their Motion by ſuch Law, the one muſt of Neceſſity gravitate to the other: Conſequently, if the Sun in its Motion do gravitate to the *Earth*; Action or Re-action being equal and contrary, the *Earth* muſt likewiſe gravitate towards the Sun. Again, the ſame Author has demonſtrated, that when two Bodies gravitate to one another, without directly approaching one another in right Lines; they muſt both of them turn round their common Centre of Gravity: The Sun and *Earth*, therefore, do both turn round their common Centre of Gravity; but the Sun is ſo great a Body in Reſpect of our *Earth*, which is, as it were, but a Point; that the common Centre of Gravity of the two Bodies, will lie within the Body of the Sun it ſelf, and not far from the Centre of the Sun. The *Earth*, therefore, turns round a Point, which is in the Body of the Sun; and therefore turns round the Sun. Q. E. D.

To ſay no more, to ſuppoſe the *Earth* at Reſt, confounds and deſtroys all the Order and Harmony of the Univerſe, annuls its Laws, and ſets every Part at Variance with other, robs the Creator of half the Praiſe of his Work, and Mankind of the Pleaſure of the Contemplation thereof. In Effect, it renders the Motions of the Planets inextricable and uſeleſs, which otherwiſe are plain and ſimple. So that ſuch of the later Aſtronomers, as have aſſerted it with the moſt Zeal, have been forced to ſet it aſide, when they came to compute the Motions of the Planets. None of them would ever attempt to compute theſe Motions in variable Spirals; but in all their Theories they tacitly ſuppoſe the *Earth* to move on its Axis, ſo as to turn the diurnal Spirals into Circles.

Thus, the Jeſuite *Ricciolus*, who, at the Pope's Command, oppoſed the Motion of the *Earth* with all his Might, as ſomething contrary to Holy Scripture; yet, to frame Aſtronomical Tables, which ſhould any thing tolerably agree to Obſervation, he was forced to have Recourſe to the Motion of the *Earth*, as his only Refuge.

This, *De Chales*, another of the ſame Fraternity, frankly confeſſes: '*P. Ricciolus* —— *nullas Tabulas aptare potuit* '*quæ vel mediocriter Obſervationibus reſponderent; Niſi* '*ſecundum Syſtema terræ motæ*; notwithſtanding, that he 'called in all the foreign and forced Aſſiſtances of move-'able Epicycles: So that in his *Aſtronomia reformata*, 'where he undertakes to give accurate Tables of the 'Cœleſtial Motions, he gives in to the Hypotheſis of the 'Motion of the *Earth*.' *De Chales Aſtron. Reformat. L.* X. *C.* 1.

The Syſtem, then, which ſuppoſes the *Earth* at Reſt, is, of it ſelf, of no Uſe, or Significancy in Aſtronomy; Nor does it avail more in Phyſicks: for the principal Phænomena are no Way deducible from it; but the Retainers thereto are either forced to fly to the immediate Agency of the Deity, (which in Phyſicks is the ſame as the *Reductio ad Abſurdum* in Geometry) or to Reaſons and Principles unknown.

Some oppoſe the Motion of the *Earth*, as contrary to Revelation; there being mention made, in Holy Scripture, of the Sun's riſing and ſetting; of his ſtanding ſtill in the Time of *Joſhua*; and his going back in that of *Hezekiah*.

Now, to take the genuine Senſe of theſe Paſſages, the Laws of Interpretation muſt be ſettled. 1. Then, we ſuppoſe, that the ſeveral Words of Scripture have their ſeveral Ideas correſponding to them; and that a Man takes their Senſe, in whom thoſe Ideas are excited by the reading. 2. That the Words of Scripture, attentively read, are ſufficient to excite thoſe Ideas in a Mind not prepoſſeſs'd. Hence, 3. It follows, that either God muſt have exhibited the Definitions of the Words that occur in Scripture; or, that he ſuppoſes prior Notions, and leaves us to take their Senſe the ordinary Way. Hence, 4. We argue, that no other Ideas are to be affix'd to the Words of Scripture, but ſuch as occur to a Perſon who looks or attends to the Things 'emſelves ſpoke of. See DEFINITION.

By the *Sun's Riſing*, therefore, is meant no more than his Re-appearance in the Horizon, after he had been hid below it: And by his *Setting*, an Occultation of the Sun, before viſible in the Horizon. When the Preacher therefore ſays, *Eccleſ.* I. 5. *The Sun riſes, and ſets, and returns to his Place*; he means, doubtleſs, no more than the Sun, which before was hid, is now ſeen in the Horizon; and after being there conſpicuous, is hid again, and at length re-appears in the Eaſt. For thus much only appears to a Perſon who views the Sun; and therefore thus much, and no more, is expreſs'd by the ſacred Writers.

In like Manner, when in *Joſh.* X. 12, 13. the Sun and Moon are ſaid to have *ſtood ſtill*; all meant by Station is, that they did not change their Place, with Reſpect to the *Earth*. For that General, by *Sun ſtand thou ſtill over Gibeon, and thou Moon, over the Valley of Ajalon*; required no more, than that the Sun, which then appeared over that City, ſhould not change its Situation. And from his bidding the Sun to keep his Situation, it would be unjuſt to infer, that it moves round the *Earth* at Reſt.

*Gaſſendus*, very pertinently to the preſent Purpoſe, diſtinguiſhes 'two ſacred Volumes, the one written, called 'the *Bible*; the other, Nature, or the *World*; God 'having manifeſted himſelf by two Lights: the one of 'Revelation, and the other of Demonſtration. Accordingly, 'the Interpreters of the former are Divines; of the latter, 'Mathematicians. As to Matters of Natural Knowledge, 'the Mathematicians are to be conſulted; and as to the 'Objects of Faith, the Prophets; the former, being no leſs 'Interpreters, or Apoſtles, from God to Men, than the latter. 'And as the Mathematician would be judg'd to wander out 'of his Province, if he ſhould pretend to controvert, or 'ſet aſide any Article of Faith from Principles of Geometry; 'ſo it muſt be granted, the Divines are no leſs out of 'their Limits, when they venture to pronounce on a Point 'of Natural Knowledge, beyond the Reach of any not 'verſed in Geometry and Opticks, merely from Holy Scrip-

ture, which does not pretend to teach any thing of the Matter.

'For Inſtances, we may quote *Lactantius*, and *Auguſtine*; the firſt of whom render'd himſelf ridiculous by diſputing, from Scripture, againſt the Roundneſs of the *Earth*; and the latter, againſt the *Antipodes*.' See ANTIPODES.

The *Earth*, thus proved to move, it is to be further obſerved, that the Altitude of the Pole being found at all Times of the Year, *i. e.* in all Points of its Annual Orbit, (the Ecliptic,) to be the ſame; it follows, that the *Earth* proceeds in ſuch Manner along its Orbit, as that its Axis is conſtantly parallel to the Axis of the World, and of Conſequence parallel to it ſelf. See AXIS.

This Motion, which *Copernicus* calls the *Motion of Libration*, may be well enough illuſtrated, by ſuppoſing a Globe, with its Axis parallel to that of the *Earth*, painted on the Flag, or Antient of a Maſt, moveable on its Axis, and continually driven by the Weſt Wind, while it makes the Tour of an Iſland: 'Tis evident, that in every Situation of the Ship, the Axis of the painted Globe will continue Parallel to the Axis of the World. See LIBRATION, and PARALLELISM.

According to Sir *Iſaac Newton*'s Principles, the *Earth*'s Axis does, in every annual Revolution, incline twice towards the Ecliptic, and twice return to its former Poſition. On which *Nutation* it is, that the Preceſſion of the Equinoctial Points is ſuppoſed to depend; and as Mr. *Famſtead* likewiſe imagines, the annual Parallax of the fix'd Stars likewiſe. See NUTATION, PRÆCESSION, PARALLAX, &c.

EARTH, in Agriculture and Gardening. See SOIL.

*Untried Earth*, i. e. the Soil, or *Earth* 6 or 7 Inches deep, where neither Spade nor Plow has reach'd, is greatly recommended by Mr. *Lawrence*, for Amendments and Improvements, both in the Fruit and Kitchen Garden. He aſſures us, from his own Experience, that no Kind of Compoſt, made with Art, exceeds it. And adds, that if the choiceſt Fruit-Trees be planted herein, they preſently diſcover an uncommon Healthfulneſs and Vigour: And that if any tender Sorts of Annuals be diſcreetly ſown in this *Earth*, made fine by ſifting, their Looks, Colour, &c. ſoon diſcover that they like the Soil. Melons and Cucumbers, need no other Compoſt but this *Untried Earth*: And Aſparagus it ſelf will proſper, at leaſt, as well in this *Untried Earth*, if laid a Foot and a half deep, as with all the uſual Expence of Dung. Tho' for the tenderer Flowers, and Exoticks, this *Earth* is not found to have any extraordinary Excellencies. For annual Plants, produced from Seed, a Coat of this *Untried Earth*, 2 Inches deep, may ſuffice: On other Occaſions, a greater Depth is required.

EARTHING, in Agriculture and Gardening, the Covering of Vines, Sellery, and other Trees and Plants with Earth.

EARTHQUAKE, in Natural Hiſtory, a vehement Shake, or Agitation of ſome conſiderable Place, or Part of the Earth; from Natural Cauſes; attended with a huge Noiſe like Thunder, and frequently with an Eruption of Water, or Fire, or Smoak, or Winds, &c.

*Earthquakes* are the greateſt, and moſt formidable Phænomena of Nature. *Ariſtotle*, and *Pliny*, diſtinguiſh two Kinds, with Reſpect to the Manner of the Shake, *viz.* a *Tremor* and a *Pulſe*; the firſt being horizontal, in alternate Vibrations, compared to the ſhaking of a Perſon in an Ague. The 2d, perpendicular, up and down: Which latter Kind are alſo called by *Ariſtotle* βεμασι, from the Reſemblance of their Motion to that of Boiling.

*Agricola* increaſes the Number, and makes four Kinds; which *Alb. Magnus*, again reduces to three, *viz. Inclination*, when the Earth librates alternately from right to left; by which Mountains have been ſometimes brought to meet, and claſh againſt each other: *Pulſation*, when it beats up and down like an Artery: And *Trembling*, when it ſhakes and totters every Way, like a Flame.

*Phænomena of* EARTHQUAKES.

The *Philoſoph. Tranſact.* furniſh us with Abundance of Hiſtories of *Earthquakes*; Particularly, one at *Oxford*, in 1665, by Dr. *Wallis* and Mr. *Boyle*. Another, at the ſame Place, in 1683, by Mr. *Pigot*. And another in *Sicily*, in 1692-3, by Mr. *Hartop*, *Fa. Alleſſandro Burgos*, and *Vin. Bonajutus*; which laſt, is one of the moſt terrible Ones in all Hiſtory.

It ſhook the whole Iſland; and not only that, but *Naples* and *Malta* ſhared in the Shock. It was of the ſecond Kind mention'd by *Ariſtotle* and *Pliny*, viz. a perpendicular Pulſation, or Succuſſion. It was impoſſible, ſays the Noble *Bonajutus*, for any Body, in this Country, to keep on their Legs, on the dancing *Earth*; nay, thoſe that lay on the Ground, were toſs'd from Side to Side, as on a rolling Billow: High Walls leapt from their Foundations ſeveral Paces, &c. *Phil. Tranſ.* N°. 207.

The Miſchief it did is amazing: almoſt all the Buildings in the Countries were thrown down. Fifty four Cities and Towns, beſide an incredible Number of Villages, were either deſtroyed or greatly damaged. We ſhall only inſtance the Fate of *Catanea*, one of the moſt famous, antient, and flouriſhing Cities in the Kingdom; the Reſidence of ſeveral Monarchs, and an Univerſity. This once famous, now unhappy *Catanea*, to uſe the Words of *Fa. Burgos*, had the greateſt Share in the Tragedy. *Fa. Anthon. Serrovita*, being on his Way thither, and at the Diſtance of a few Miles; obſerved a black Cloud, like Night, hovering over the City; and there aroſe from the Mouth of *Mongibello*, great Spires of Flame, which ſpread all around. The Sea all of a ſudden begun to roar, and riſe in Billows; and there was a Blow, as if all the Artillery in the World had been at once diſcharged. The Birds flew about aſtoniſh'd, the Cattle in the Fields ran crying, &c. His and his Companions Horſes ſtop'd ſhort, trembling; ſo that they were forced to alight. They were no ſooner off, but they were lifted from the Ground above two Palms; when caſting his Eyes towards *Catanea*, he with Amazement ſaw nothing but a thick Cloud of Duſt in the Air. This was the Scene of their Calamity: For of the magnificent *Catanea*, there is not the leaſt Footſtep to be ſeen. *S. Bonajutus* aſſures us, that of 18914 Inhabitants, 18000 periſh'd therein. The ſame Author, from a Computation of the Inhabitants, before and after the *Earthquake*, in the ſeveral Cities and Towns, finds that near 60000 periſh'd out of 254900. *Ibid.* N°. 202.

*Jamaica* is remarkable for *Earthquakes*. The Inhabitants, Dr. *Sloan* informs us, expect one every Year. That Author gives us the Hiſtory of one in 1687: Another horrible one in 1692, is deſcribed by ſeveral anonymous Authors. In two Minutes Time it ſhook down and drown'd nine 10ths of the Town of *Port-Royal*. The Houſes ſunk out-right, 30 or 40 Fathoms deep. *Phil. Tranſact.* No. 209. The Earth opening, ſwallowed up People; and they roſe in other Streets; ſome in the middle of the Harbour, and yet were ſaved; Tho', there were 2000 People loſt, and 1000 Acres of Land ſunk. All the Houſes were thrown down thtoughout the Iſland. One *Hopkins*, had his Plantation removed half a Mile from its Place. Of all Wells, from one Fathom to ſix or ſeven, the Water flew out at the Top with a vehement Motion. *Ibid.* While the Houſes, on one Side of the Street were ſwallow'd up, on the other they were thrown on Heaps; and the Sand in the Street roſe like Waves in the Sea, lifting up every Body that ſtood on it, and immediately dropping down into Pits; and at the ſame Inſtant, a Flood of Water breaking in, roll'd them over and over; ſome catching hold of Beams and Rafters, &c. Ships and Sloops in the Harbour were overſet and loſt; the *Swan* Frigate particularly, by the Motion of the Sea, and ſinking of the Wharf, was driven over the Tops of many Houſes, *Ibid.* It was attended with a hollow rumbling Noiſe like that of Thunder. In leſs than a Minute, three Quarters of the Houſes, and the Ground they ſtood on, with the Inhabitants, were all ſunk quite under Water; and the little Part, left behind, was no better than a Heap of Rubbiſh. The Shake was ſo violent, that it threw People down on their Knees, or their Faces, as they were running about for Shelter. The Ground heav'd and ſwell'd like a rolling Sea; and ſeveral Houſes, ſtill ſtanding, were ſhuffled and moved ſome Yards out of their Places. A whole Street is ſaid to be twice as broad now as before; and in many Places, the Earth would crack, and open, and ſhut, quick and faſt. Of which Openings, two or three Hundred might be ſeen at a Time; in ſome whereof, the People were ſwallow'd up; others, the cloſing Earth caught by the middle, and preſs'd to Death; in others, the Heads only appear'd. The larger Openings ſwallow'd up Houſes; and out of ſome would iſſue whole Rivers of Waters, ſpouted up a great Height into the Air, and threat'ning a Deluge to that Part the *Earthquake* ſpared. The whole was attended with Stenches and offenſive Smells, the Noiſe of falling Mountains at a Diſtance, &c. and the Sky, in a Minutes Time, was turned dull and reddiſh, like a glowing Oven. Yet, a great Sufferer as *Port-Royal* was, more Houſes were left ſtanding thereon, than on the whole Iſland beſide. Scarce a Planting Houſe, or Sugar Work was left ſtanding in all *Jamaica*. A great Part of them were ſwallow'd up, Houſes, People, Trees and all at one Gape: In Lieu of which afterwards, appear'd great Pools of Water, which when dried up, left nothing but Sand, without any

Mark

Mark that ever Tree, or Plant, had been thereon. Above 12 Miles from the Sea, the Earth gaped and ſpouted out, with a prodigious Force, vaſt Quantities of Water into the Air: Yet the greateſt Violences were among the Mountains and Rocks; and 'tis a general Opinion, that the nearer the Mountains, the greater the Shake; and that the Cauſe thereof lay there. Moſt of the Rivers were ſtop'd up for 24 Hours, by the falling of the Mountains; till ſwelling up, they found themſelves new Tracks and Channels; tearing up in their Paſſage Trees, *&c.* After the great Shake, thoſe People who eſcaped, got on board Ships in the Harbour, where many continued above two Months; the Shakes all that Time being ſo violent, and coming ſo thick, ſometimes two or three in an Hour, accompanied with frightful Noiſes like a ruffling Wind, or a hollow rumbling Thunder, with Brimſtone Blaſts, that they durſt not come a Shore. The Conſequences of the *Earthquake* was a general Sickneſs, from the noiſome Vapours belched forth, which ſwept away above 3000 Perſons. *Ibid.*

After the Detail of theſe horrible Convulſions, the Reader will have but little Curioſity left, for the leſt conſiderable Phænomena of the *Earthquake* at *Lima*, in 1687, deſcribed by *Fa. Alvarez de Toledo*, wherein above 5000 Perſons were deſtroy'd; this being of the *Vitratory* Kind, ſo that the Bells in the Church rung of themſelves: Or that at *Batavia* in 1699, by *Witzen:* That in the *North* of *England* in 1703, by Mr. *Thoresby*: Or, laſtly, thoſe in *New-England* in 1663 and 1670, by Dr. *Mather*. We will therefore relieve him with ſome Attempts towards a Theory of *Earthquakes.*

### *Cauſes of* Earthquakes.

Naturaliſts are here divided. Some aſcribe *Earthquakes* to Water, others to Fire, and others to Air; and all of 'em with ſome Reaſon. To conceive which, it is to be obſerved, that the Earth every where abounds in huge ſubterraneous Caverns, Veins and Canals; particularly about the Roots of Mountains: That of theſe Cavities, Veins, *&c.* ſome are full of Water, whence are compoſed Gulphs, Abyſſes, Springs, Rivulets; and others full of Exhalations: And that ſome Parts of the Earth are replete with Nitre, Sulphur, Bitumen, Vitriol, *&c.* See Abyss, Stratum, *&c.*

This premiſed, 1. The Earth it ſelf may be the Cauſe of its own ſhaking; when the Roots, or Baſis, of ſome large Maſs being diſſolved, or wore away by a Fluid underneath, it ſinks into the ſame; and with its Weight, occaſions a Tremor of the adjacent Parts; produces a Noiſe; and frequently an Inundation of Water.

2. The ſubterraneous Waters may occaſion *Earthquakes*, by their overflowing, cutting out new Courſes, *&c.* Add, that the Water being heated, and rarified by the ſubterraneous Fires, may emit Fumes, Blaſts, *&c.* which by their Action, either on the Water, or immediately on the Earth it ſelf, may occaſion great Succuſſions.

3. The Air may be the Cauſe of *Earthquakes:* For Air, being a Collection of Fumes, and Vapours rais'd from the Earth and Water; if it be pent up in the too narrow Viſcera of the Earth, the ſubterraneous, or its own native Heat, rarifying and expanding it, the Force wherewith it endeavours to eſcape, may ſhake the Earth: Hence there ariſe divers Species of *Earthquakes*, according to the different Poſition, Quantity, *&c.* of the impriſon'd *Aura.*

*Laſtly*, Fire is a principal Cauſe of *Earthquakes*; both as it produces the aforeſaid ſubterraneous *Aura*, or Vapours; and as this *Aura*, or Spirit, from the different Matter and Compoſition whereof ariſe Sulphur, Bitumen, and other inflammable Matters, takes Fire either from ſome other Fire it meets withal, or from its Colliſion againſt hard Bodies, or its Intermixture with other Fluids; by which Means burſting out into a greater Compaſs, the Place becomes too narrow for it; ſo that preſſing againſt it on all Sides, the adjoyning Parts are ſhaken; till having made it ſelf a Paſſage, it ſpends it ſelf in a *Volcano*, or burning Mountain. See Volcano, Eruption, *&c.*

But to come nearer to the Point: Dr. *Liſter*, in *Philoſoph. Tranſact.* N. 157. is of Opinion, that the material Cauſe of Thunder, Lightning, and *Earthquakes*, is one and the ſame, *viz.* the inflammable Breath of the Pyrites, which is a ſubſtantial Sulphur, and takes Fire of it ſelf. See Pyrites, Thunder, *&c.*

The Difference between theſe three terrible Phænomena, he takes only to conſiſt in this; that this Sulphur, in the former, is fired in the Air; and in the latter, under Ground. Which is a Notion that *Pliny* had long before him: *Quid enim*, ſays he, *aliud eſt in Terra Tremor, quam in Nube Tonitru?*

This he thinks abundantly indicated by the ſame ſulphureous Smell being found in any Thing burnt with Lightning; and in the Waters, *&c.* caſt up in *Earthquakes*, and even in the Air before and after them.

Add, that they agree in the Manner of the Noiſe; which is carried on, as in a Train, fired; the one rowling and ratling through the Air, takes Fire as the Vapours chance to drive; as the other fired under Ground, in like Manner, moves with deſultory Noiſe.

Thunder, which is the Effect of the Trembling of the Air, cauſed by the ſame Vapours diſperſed through it, has Force enough to ſhake our Houſes; and why may not there be Thunder and Lightning under Ground, in ſome vaſt Repoſitories there, I ſee no Reaſon. Eſpecially if we reflect, that the Matter which compoſes the noiſy Vapour above us, is in much larger Quantities under Ground. *Philoſoph. Tranſact.* No. 202.

That the Earth abounds in Cavities, every Body allows; and that theſe ſubterraneous Cavities are, at certain Times, and in certain Seaſons, full of inflammable Vapours, the Damps in our Mines ſufficiently Witneſs, which fired, do every thing as in an *Earthquake*, ſave in a leſſer Degree.

Add, that the *Pyrites* alone, of all the known Minerals, yields this inflammable Vapour, is highly probable: For that no Mineral, or Ore whatſoever, is ſulphureous, but as it is wholly, or in Part, a *Pyrites*; and that there is but one Species of Brimſtone, at leaſt with us in *England*, which the *Pyrites* naturally, and only yields. The Sulphur *Vive*, of natural Brimſtone, which is found in and about the burning Mountains, is certainly the Effects of Sublimation; and thoſe great Quantities of it ſaid to be found about the Skirts of *Volcano's*, is only an Argument of the long Duration and Vehemence of thoſe Fires: Poſſibly, the *Pyrites* of the *Volcano's*, or burning Mountains, may be more ſulphureous than ours: And, indeed it is plain, that ſome of ours in *England* are very lean, and hold but little Sulphur; others again very much: Which may be one Reaſon, why *England* is ſo little troubled with *Earthquakes*; and *Italy*, and almoſt round the *Mediterranean* Sea, ſo very much: tho' another Reaſon is, the Paucity of *Pyrites* in *England.*

Comparing our *Earthquakes*, Thunder and Lightning, with theirs, it is obſerved, that there it lightens almoſt daily, eſpecially in Summer Time, here ſeldom; there Thunder and Lightning is of long Duration, here it is ſoon over; there the *Earthquakes* are frequent, long, and terrible, with many Paroxyſms in a Day, and that for many Days; here very ſhort, a few Minutes, and ſcarce perceptible. To this Purpoſe, the Subterraneous Cavities in *England* are ſmall, and few, compared to the vaſt Vaults in thoſe Parts of the World; which is evident, from the ſudden Diſappearance of whole Mountains and Iſlands.

Dr. *Woodward* gives us another Theory of *Earthquakes.* He endeavours to ſhew, that the ſubtereaneous Heat, or Fire, (which is continually elevating Water out of the Abyſs, to furniſh the Earth with Rain, Dew, Springs and Rivers) being ſtopped in any Part of the Earth, and ſo diverted from its ordinary Courſe, by ſome accidental Glut, or Obſtruction, in the Pores or Paſſages, through which it uſed to aſcend to the Surface; becomes, by ſuch Means, preternaturally aſſembled, in a greater Quantity than uſual, into one Place; and therefore cauſeth a great Rarefaction, and Intumeſcence of the Water of the Abyſs; putting it into great Commotions, and Diſorders, and at the ſame Time making the like Effort on the Earth; Which being expanded upon the Face of the Abyſs, occaſions that Agitation and Concuſſion we call an *Earthquake.*

This Effort, in ſome *Earthquakes*, he obſerves, is ſo vehement, that it ſplits and tears the Earth, making Cracks and Chaſms in it, ſome Miles in length, which open at the Inſtant of the Shock, and cloſe again in the Intervals betwixt them; nay, it is ſometimes ſo violent, that it forces the ſuper-incumbent *Strata*, breaks them all throughout, and thereby perfectly undermines, and ruins the Foundation of them; ſo that theſe failing, the whole Tract, as ſoon as the Shock is over, ſinks down into the Abyſs, and is ſwallow'd up by it; the Water thereof immediately riſing up, and forming a Lake in the Place, where the ſaid Tract before was. That this Effort being made in all Directions indifferently, the Fire dilating and expanding on all Hands, and endeavouring to get room, and make its Way through all Obſtacles, falls as foul on the Water of the Abyſs beneath, as on the Earth above, forcing it forth, which Way ſoever it can find Vent, or Paſſage, as well through its ordinary Exits, Wells, Springs, and the Outlets of Rivers, as through the Chaſms then newly open'd; through the *Camini*, or Spiracles of *Ætna*, or other neighbouring *Vulcano's*; and thoſe *Hiatus's* at the Bottom of the Sea, whereby the Abyſs below opens into it, and communicates with it. That as the Water, reſident in the Abyſs, is, in all Parts of it, ſtored with a conſiderable Quantity of Heat, and more eſpecially in thoſe, where theſe extraordinary Aggregations of this Fire happen; ſo likewiſe is the Water, which is thus forced out of it; inſomuch, that when thrown forth, and mixed with the

Waters

Waters of Wells, or Springs of Rivers, and the Sea, it renders them very ſenſibly hot.

He adds, that though the Abyſs be liable to theſe Commotions in all Parts; yet the Effects are no where very remarkable, except in thoſe Countries, which are Mountainous, and conſequently ſtony and cavernous underneath; and eſpecially where the Diſpoſition of the *Strata* is ſuch, that thoſe Caverns open into the Abyſs, and ſo freely admit, and entertain the Fire; which aſſembling therein, is the Cauſe of the Shock; it naturally ſteering its Courſe that Way, where it finds the readieſt Reception, which is towards thoſe Caverns. Beſides, that thoſe Parts of the Earth, which abound with *Strata* of Stone, or Marble, making the ſtrongeſt Oppoſition to this Effort, are the moſt furiouſly ſhatter'd; and ſuffer much more by it, than thoſe which conſiſt of Gravel, Sand, and the like laxer Matter, which more eaſily give Way, and make not ſo great Reſiſtance; but above all, thoſe Countries which yield great Store of Sulphur, and Nitre, are, by far, the moſt injured and incommoded by *Earthquakes*; thoſe Minerals conſtituting in the Earth a kind of natural Gunpowder, which taking Fire upon this Aſſemblage, and Approach of it, occaſions that murmuring Noiſe, that ſubterraneous Thunder, which is heard rumbling in the Bowels of the Earth during *Earthquakes*, and by the Aſſiſtance of its exploſive Power, renders the Shock much more greater; ſo as ſometimes to make miſerable Havock and Deſtruction.

And it is for this Reaſon, that *Italy*, *Sicily*, *Anatolia*, and ſome Parts of *Greece*, have been ſo long, and ſo often alarm'd and haraſs'd by *Earthquakes*; theſe Countries being all Mountainous and Cavernous, abounding with Stone, and Marble, and affording Sulphur and Nitre in great Plenty.

Further, that *Ætna*, *Veſuvius*, *Hæcla*, and the other *Vulcano's*, are only ſo many Spiracles, ſerving for the Diſcharge of this ſubterraneous Fire, when it is thus preternaturally aſſembled. That where there happens to be ſuch a Structure and Conformation of the interior Parts of the Earth, as that the Fire may paſs freely, and without Impediment from the Caverns, wherein it aſſembles unto thoſe Spiracles; it then readily and eaſily gets out, from Time to Time, without ſhaking, or diſturbing the Earth: But where ſuch Communication is wanting, or Paſſage not ſufficiently large and open, ſo that it cannot come at the Spiracles, it heaves up and ſhocks the Earth, with greater or leſſer Impetuoſity, according to the Quantity of Fire thus aſſembled, till it has made its Way to the Mouth of the *Vulcano*. That therefore there are ſcarce any Countries much annoyed with *Earthquakes*, but have one of theſe fiery Vents; which are conſtantly in Flames, when any *Earthquake* happens; as diſgorging that Fire, which, whilſt underneath, was the Cauſe of the Diſaſter. Laſtly, that were it not for theſe *Diverticula*, it would rage in the Bowels of the Earth much more furiouſly, and make greater Havock than it doth.

We have ſeen what Fire and Water may do; and that either of them, in good Hands, are ſufficient for all the Phænomena of *Earthquakes*: If they ſhould both fail, we have a third Agent, ſcarce inferior to either of them: The Reader muſt not be ſurprized when we tell him it is Air.

Monſ. *Amontons*, in the *Memoires de l'Acad. des Sciences*, *An.* 1703. has an expreſs Diſcourſe to prove, *That on the Foot of the new Experiments of the Weight and Spring of the Air, a moderate Degree of Heat may bring the Air into a Condition, capable of cauſing Earthquakes.* It is ſhewn, that at the Depth of 43528 Fathoms below the Surface of the Earth, Air is only one fourth leſs heavy than Mercury. Now, this Depth of 43528 Fathoms is only a 74th Part of the Semidiameter of the Earth. And the vaſt Sphere beyond this Depth, in Diameter 6451538 Fathoms, may probably be only filled with Air; which will be here greatly condenſed, and much heavier than the heavieſt Bodies we know of in Nature. But it is found by Experiment, that the more Air is compreſs'd, the more does the ſame Degree of Heat increaſe its Spring, and the more capable does it render it of a violent Effect: And that, for Inſtance, the Degree of Heat of boiling Water increaſes the Spring of the Air above what it has in its natural State, in our Climate, by a Quantity equal to a third of the Weight wherewith it is preſs'd. Whence we may conclude, that a Degree of Heat, which on the Surface of the Earth will only have a moderate Effect, may be capable of a very violent one below. And as we are aſſured, that there are in Nature, Degrees of Heat, much more conſiderable than that of boiling Water: 'Tis very poſſible there may be ſome, whoſe Violence, further aſſiſted by the exceeding Weight of the Air, may be more than ſufficient to break and overturn this ſolid Orb of 43528 Fathoms; whoſe Weight, compared to that of the included Air, would be but a Trifle.

*Artificial* EARTHQUAKES. Chymiſtry furniſhes us a Method of making *Artificial Earthquakes*, which ſhall have all the great Effects of natural ones: Which, as it may illuſtrate the Proceſs of Nature in the Production of theſe terrible Phænomena under Ground, we ſhall here add.

To twenty Pounds of Iron Filings, add as many of Sulphur: Mix, work, and temper the whole together with a little Water, ſo as to form a Maſs, half moiſt, and half dry. This being buried three or four Foot under Ground, in ſix or ſeven Hours Time, will have a prodigious Effect: The Earth will begin to tremble, crack and ſmoak, and Fire and Flame burſt through.

Such is the Effect even of two cold Bodies, in the cold Ground: There only wants a ſufficient Quantity of this Mixture to produce a true *Ætna*. See VOLCANO. If it were ſuppoſed to burſt out under the Sea, it would produce a Spout. See SPOUT. And if it were in the Clouds, the Effect would be Thunder and Lightning. See THUNDER, *&c.*

EASE, in the Sea-Language, is the ſame as let go ſlacker; thus they ſay, *Eaſe* the Bowling, *Eaſe* the Sheet, that is, let it go ſlacker.

EASEL-*Pieces*, among Painters, ſuch ſmall Pieces, either Portraits, or Landſkips, as are painted on the *Eaſel*, i. e. the Frame whereon the Canvas is ſtrain'd.

They are thus called, to diſtinguiſh them from larger Pictures drawn on Walls, Ceilings, *&c.*

EASEMENT, in Law, a Service, or Convenience, which one Neighbour has of another by Charter, or Preſcription, without Profit: As a way through his Ground, a Sink or the like. In the Civil Law, theſe are call'd *Servitus prædii*.

EAST, in Aſtronomy, Geography, *&c.* one of the Cardinal Points of the Horizon, being the Point wherein the prime Vertical interſects that Quarter of the Horizon the Sun riſes in. See ORIENT, CARDINAL-*Point*, HORIZON, *&c.*

To find the *Eaſt* and *Weſt* Line, Points, *&c.* See MERIDIAN *Line*.

EAST-*Wind*, is that which blows from the *Eaſt Point*. See WIND.

The Word *Eaſt* is *German*. In *Italy*, and throughout the *Mediterranean*, the *Eaſt Wind* is called the *Levante*. In *Greek*, ἀπηλιώτης, becauſe it comes from the Side of the Sun, ἀπ' ἠλίου. In *Latin*, *Eurus*.

EAST-*Dials*, EASTERN, } See { DIAL. ORIENTAL.

EAST-*Indies*. See INDIES.

EAST-*India Company*. See COMPANY.

EASTER, a Feaſt of the Church, held in Memory of our Saviour's Reſurrection. See FEAST, *&c.*

The *Latins*, &c. call it *Paſcha*, A *Hebrew* Word, ſignifying *Paſſage*; applied to the Feaſt of the *Paſſover*, which is held among the *Jews*, much about the ſame Time. See PASSOVER.

In *Engliſh* it is called *Eaſter*, from the *Saxon* Eastre, a Goddeſs, worſhip'd with peculiar Ceremony in the Month of *April*.

*Eaſter* is one of the moſt conſiderable Feſtivals in the Chriſtian Calendar; being that which regulates and determines the Time of all the other moveable Feaſts.

The Rule for the Celebration of *Eaſter*, fix'd by the Council of *Nice*, in the Year 325, is, that it be held on the Sunday after the Full Moon, next after the 21ſt of *March*, i. e. the Sunday following the firſt full Moon after the Vernal Equinox: So that if the full Moon next after the Vernal Equinox, happen on a Sunday; *Eaſter* Sunday is deferr'd eight Days longer, *viz.* to the Sunday following.

The Reaſon of which Decree was, that the Chriſtians might avoid the celebrating their *Eaſter*, at the ſame Time with the *Jewiſh Paſſover*, which, according to the Inſtitution of *Moſes*, was held the very Day of the full Moon. See EQUINOX,

To find *Eaſter*, agreeably to this Rule, the Method that obtain'd throughout all the Church, from the Time of *Dionyſius exiguus*, to that of the Reformation of the Calendar under Pope *Gregory*; and which ſtill obtains in *England*, *Sweden*, and among the *Greeks*, where the *Gregorian* Correction is not admitted; is, by Means of the Golden Numbers, duly diſtributed throughout the *Julian* Calendar. See CALENDAR.

The Vernal Equinox, at the Time of the *Nicene* Council, happening on the 21ſt of *March*, has been, upon *Dionyſius's* Authority, affix'd to the ſame Day of the *Julian* Year ever ſince; ſo that in the *Julian* Way of computing, no full Moon is *Paſchal*, but that immediately after the 21ſt of *March*. Therefore *Eaſter* can never happen earlier than the 22d of *March*, Now, by finding the full Moons, next after the 21ſt of *March*, for the ſeveral Golden

Golden Numbers, or Years of the Lunar Cycle, we ſhall have a Table for the finding of *Eaſter* for ever.

Such Table being of notable Uſe in the *Julian* Computation, we ſhall here ſubjoyn it.

| *Gold. Numb.* | Full Moons next after Ver. Equin. | | *Gold. Numb.* | Full Moons next after Ver. Equin. | |
|---|---|---|---|---|---|
| I | 5 *April*, | D | XI | 15 *April*, | G |
| II | 25 *March*, | G | XII | 4 *April*, | C |
| III | 13 *April*, | E | XIII | 24 *March*, | F |
| IV | 2 *April*, | A | XIV | 12 *April*, | D |
| V | 22 *March*, | D | XV | 1 *April*, | G |
| VI | 10 *April*, | B | XVI | 21 *March*, | C |
| VII | 30 *March*, | E | XVII | 9 *April*, | A |
| VIII | 18 *April*, | C | XVIII | 29 *March*, | D |
| IX | 7 *April*, | F | XIX | 17 *April*, | B |
| X | 27 *March*, | B | | | |

Now to find *Eaſter*, for any given Year, find the Dominical Letter, and the Golden Number of the given Year, as directed under DOMINICAL *Letter* and GOLDEN *Number*.

Then, in the Table, ſeeking the Dominical Letter, with the Day of the Paſchal full Moon, and the *Sunday* Letter annex'd thereto; Compare this Letter with the Dominical Letter of the given Year; that it may appear how many Days are to be added to the Day of the Paſchal full Moon, to give *Eaſter*-Day.

*E. gr.* In the Year 1715, the Dominical Letter is B, and the Golden Number VI; conſequently, the Paſchal full Moon, is fixed, by the Table, to the 10th of *April*; whoſe *Sunday* Letter being B, the Dominical Letter given, it ſelf is a *Sunday*: and, therefore, *Eaſter* will fall on the Eighth Day following, *viz.* the 17th of *April*.

But in this Computation, the Vernal Equinox is ſuppoſed affix'd to the 21ſt of *March*; and the Cycle of 19 Years, or Golden Numbers, is ſuppoſed to point out the Places of the new and full Moons exactly: Both which are Erroneous. Whence it follows, that the *Julian Eaſter* never happens at its due Time, unleſs by Accident.

For an Inſtanee of the Error, it may be obſerved, that in the Year 1715, the Vernal Equinox falls on the 10th of *March*; 11 Days e're the Rule ſuppoſes it: And the Paſchal full Moon on the 7th of *April*, 3 Days earlier than was ſuppoſed. *Eaſter*-Day, therefore, which is held on the 17th of *April*, ſhould be held on the 10th.

This Error was grown to ſuch a Pitch, in Courſe of Time, that Pope *Gregory* XIII. thought neceſſary to correct it. And accordingly, in the Year 1582, by the Advice of *Aloyſius Lilius*, he order'd 10 Days to be thrown out of *October*; ſo to bring back the Vernal Equinox to its old Place, *viz.* the 21ſt of *March*. And hence the *Gregorian Calendar*, *Gregorian Year*, &c. See GREGORIAN.

In the New, or *Gregorian* Computation, in lieu of Golden Numbers, the Time of *Eaſter* is found by Means of Epacts, contrived for that Purpoſe. See EPACT.

The following Table renders the finding of *Eaſter* in the *Gregorian* Year, from the Year 1700, to the Year 1900, very eaſy.

| *Epacts.* | Paſchal full Moons. | | *Epacts.* | Paſchal full Moons. | |
|---|---|---|---|---|---|
| X | 13 *April*, | E | IX | 4 *April*, | C |
| XI | 2 *April*, | A | XX | 24 *March*, | F |
| XXII | 22 *March*, | D | I | 12 *April*, | D |
| III | 10 *April*, | B | XII | 1 *April*, | G |
| XIV | 30 *March*, | E | XXIII | 21 *March*, | C |
| XXV | 18 *April*, | C | IV | 9 *April*, | A |
| VI | 7 *April*, | F | XV | 29 *March*, | D |
| XVII | 27 *March*, | B | XXVI | 17 *April*, | B |
| XXVIII | 15 *April*, | G | VII | 6 *April*, | E |
| | | | XXVIII | 26 *March*, | A |

Now, to find *Eaſter* for any given *Gregorian* Year. Seek the Dominical Letter, and the *Gregorian* Epact; as ſhewn under EPACT, *&c.* Find the Epact in the Table, and note the Paſchal full Moon, with the weekly Letter, correſponding to the ſame. The reſt is perform'd, as already taught for the *Julian Eaſter*.

*E. gr.* The Dominical Letter of the Year 1715, is F, and the Epact XXV; conſequently, the Paſchal Moon falls on the 18th of *April*, C: And therefore *Eaſter*-Day is the 21ſt of *April*.

Tho' the *Gregorian* Calendar be, doubtleſs, preferable to the *Julian*; yet it has its Defects. It cannot, for Inſtance, keep the Equinox fix'd to the 21ſt of *March*; but it will ſometimes fall on the 19th, and ſometimes on the 23d. Add, that the full Moon happening on the 20th of *March*, might ſometimes be Paſchal; yet is it not allowed as ſuch, in the *Gregorian* Computation: As, on the contrary, the full Moon of the 22d of *March*, may be allow'd for Paſchal, which yet it is not. *Scaliger* and *Calviſius* have proved other Inaccuracies on this *Calendar*. See CALENDAR.

EAVES, the Margin, or Edge, of the Roof of a Houſe; being the loweſt Tiles, Slate, or the like, which hang over the Walls, to throw off the Waters to a Diſtance from the Wall. See ROOF.

EAVES-*lath*, is a thick feather-edge Board, generally nail'd round the *Eaves* of a Houſe for the lowermoſt Tiles, Slate, or Shingles to reſt upon.

EBIONITES, antient Hereticks, who roſe in the Church, from the very Beginning thereof. See HERETICKS.

*Origen* takes them to have been ſo called from the *Hebrew* Word *Ebion*, which in that Language ſignifies *Poor*; becauſe, ſays he, they were Poor in Senſe, and wanted Underſtanding. *Euſebius*, with a View to the ſame Etymology, is of Opinion they were thus called, as having poor Thoughts of *Jeſus Chriſt*; taking him for no more than a mere Man. But all this, ſays Monſ. *Simon*, in his Critical Hiſtory, is no more than a ſorry Alluſion to the Name of theſe Sectaries, which in the *Hebrew* Tongue ſignifies *Poor*.

'Tis more probable, the *Jews* gave this Appellation to the *Chriſtians* in general, out of Contempt; becauſe in the firſt Times there were few but *poor* People, that embraced the *Chriſtian* Religion.

This Opinion *Origen* himſelf ſeems to give into, in his Book againſt *Celſus*; where he ſays, that they called *Ebionites*, ſuch among the *Jews*, as believed that *Jeſus* was truly the expected *Meſſiah*. It might even be urged, with ſome Probability, that the Primitive *Chriſtians* aſſumed the Name of themſelves, in Conformity to their Profeſſion. 'Tis certain, *Epiphanius* obſerves, they valued themſelves on being *Poor*, in Imitation of the *Apoſtles*.

The ſame *Epiphanius*, however, is of Opinion, that there had been a Man of the Name *Ebion*, the Chief, and Founder of the Sect of *Ebionites*; being contemporary with the *Nazarenes* and *Cerinthians*. He gives a long and exact Account of the Origin of the *Ebionites*, making 'em to have aroſe after the Deſtruction of *Jeruſalem*; when the firſt *Chriſtians*, called *Nazarites*, went out of the ſame to live at *Pella*. See NAZARITE.

The *Ebionites*, then, are little elſe than a Branch of *Nazarites*; only, that they alter'd and corrupted, in many Things, the Purity of the Faith, held among thoſe firſt Adherents to Chriſtianity. For this Reaſon, *Origen* diſtinguiſhes two Kinds of *Ebionites*, in his Anſwer to *Celſus*; the one believ'd that *Jeſus Chriſt* was born of a Virgin; and the others, that he was born after the Manner of other Men.

The firſt were Orthodox in every Thing, except that to the *Chriſtian* Doctrine, they joyn'd the Ceremonies of the *Jewiſh* Law, with the *Jews*, *Samaritans*, and *Nazarites*: They differed from the *Nazarites* however, in ſeveral Things, chiefly as to what regards the Authority of the ſacred Writings: For the *Nazarites* received all for Scripture, contain'd in the *Jewiſh* Canon; whereas the *Ebionites* rejected all the Prophets; and held the very Names of *David*, *Solomon*, *Iſaiah*, *Jeremiah* and *Ezekiel*, in Abhorrence. See PENTATEUCH.

They receiv'd nothing of the *Old Teſtament* but the *Pentateuch*; which ſhould intimate them to have deſcended rather from the *Samaritans* than the *Jews*. They agreed with the *Nazarites* in uſing the *Hebrew* Goſpel of St. *Matthew*, otherwiſe called the Goſpel of the twelve Apoſtles: But had corrupted their Copy in Abundance of Places. And, particularly, had left out the Genealogy of our Saviour, which was preſerv'd entire in that of the *Nazarites*, and even thoſe uſed by the *Cerinthians*. See GOSPEL.

Theſe laſt, whoſe Sentiments, as to the Birth of our Saviour, were the ſame with thoſe of the *Ebionites*, built their Error on this very Genealogy. See CERINTHIANS.

Beſide the *Hebrew* Goſpel of St. *Matthew*, the *Ebionites* had adopted ſeveral other Books under the Names of St. *James*, *John*, and the other Apoſtles. They alſo made uſe of the *Travels of St.* Peter, which are ſuppoſed to have been written by S. *Clement*; but had alter'd them ſo, that there was ſcarce any Thing of Truth left in them. They made that Saint tell a World of Falſhoods, the better to authorize their own Practices. See S. *Epiphanius*, who is very diffuſive on the antient Hereſy of the *Ebionites*, Hær. 30.

EBONY, in Natural Hiſtory, a Kind of *Wood*, brought from the *Indies*, exceedingly hard and heavy, and taking a very fine Poliſh; and on that Account, uſed in *Moſaic* and Inlaid Works, Toys, *&c.* See WOOD, MOSAIC, *&c.*

There are divers Kinds of *Ebony*; the moſt uſual among us are *black*, *red* and *green*; all of them the Product of the Iſland of *Madagaſcar*, where the Natives call them indifferently, *Hazon Mainthi*, q. d. *black Wood*. The Iſland

of St. *Maurice*, belonging to the *Dutch*, likewiſe furniſhes Part of the *Ebonies* uſed in *Europe*.

Authors, and Travellers, give very different Accounts of the Tree that yields the *black Ebony*: By ſome of their Deſcriptions it ſhould be a Sort of Palm Tree, by others a *Cytiſus*, &c. The moſt authentick of them, is that of Monſ. *Flacourt*, who reſided many Years in *Madagaſcar* as Governour thereof. He aſſures us that it grows very high, and big; its Bark black, and its Leaves reſembling thoſe of our Myrtle, of a deep, dusky, green Colour.

*Tavernier* aſſures us, that the Iſlanders take Care to bury their Trees, when cut down, to make them the blacker. *F. Plumier* mentions another *black Ebony* Tree, diſcovered by him at St. *Domingo*, which he calls *Spartium portulacæ foliis aculeatum Ebeni materiæ*. *Candia* alſo bears a little Shrub, known to the Botaniſts, under the Name of *Ebenus Cretica*.

*Pliny* and *Diaſcorides* ſay, the beſt *Ebony* comes from *Ethiopia*, and the worſt from *India*; but *Theophraſtus* prefers that of *India*. *Black Ebony* is much preferr'd to the other Colours. The beſt is a jet black, free of Veins and Rind, very maſſive, aſtringent, and of a ſharp pungent Taſte.

Its Rind infuſed in Water, is ſaid to purge pituita, and cure Venereal Diſorders; whence *Matthiolus* took *Guaiacum* for a Sort of *Ebony*. It yields an agreeable Perfume, when laid on the Coals: When green, it readily takes Fire, from the Abundance of its Fat. If rubbed againſt a Stone, it becomes brown. The *Indians* make Statues of their Gods, and Scepters for their Princes, of this Wood. It was firſt brought to *Rome* by *Pompey*, after his ſubduing *Mithridates*. 'Tis now much leſs uſed among us, than antiently; ſince the Diſcovery of ſo many Ways of giving other hard Woods a black Colour. See MARQUETRY.

As to *green Ebony*, beſides *Madagaſcar*, and St. *Maurice*, it likewiſe grows in the *Antilles*, and eſpecially in the Iſle of *Tobago*. The Tree that yields it is very buſhy, its Leaves ſmooth, and of a fine green Colour. Beneath its Bark is a white Rind about two Inches thick; all beneath which, to the very Heart, is a deep green, approaching towards a black; tho', ſometimes, ſtreak'd with yellow Veins. Its Uſe is not confined to Moſaic Work: 'Tis likewiſe good in dying, as yielding a fine green Tincture.

As to *red Ebony*, called alſo *Grenadilla*, we know little of it more than the Name.

The Cabinet-Makers, Inlayers, *&c.* make *Pear Tree*, and other Woods, paſs for *Ebony*, by *Ebomiſing*, or giving it the black Colour thereof. This, ſome do, by a few Waſhes of a hot Decoction of Galls, and when dry, adding Writing Ink thereon, and poliſhing it with a ſtiff Bruſh, and a little hot Wax.

Others heat, or burn their Wood black.

EBRBUHARITES, a Sect, or Order of Religious among the *Mahometans*; thus call'd from their Founder *Ebrbuhard*, a Diſciple of *Nacſchi bendi*.

The *Ebrbuharites*, notwithſtanding the extraordinary Sanctity they make Profeſſion of, with an abſolute Dereliction of all worldly Things, are regarded by the *Muſſelmans*, as no better than Hereticks; by Reaſon they don't eſteem themſelves obliged to go in Pilgrimage to *Mecca*. To excuſe themſelves herefrom, they urge that the Pureneſs of their Souls, their ſublime Contemplations, Extaſies, *&c.* ſhew them *Mecca* and *Mahomet*'s Tomb, without ſtirring out of their Cells.

EBULLITION, in Phyſicks, the Act of *Boiling*; or, a vehement Agitation of the Parts of a Fluid, produced by Fire. See BOILING.

Philoſophers are diſagreed about the Cauſe and Manner of *Ebullition*. Some account for it from an Attenuation of the Particles of the Fluid, at the Bottom of the Veſſel; which, by being attenuated, become lighter, and heave upwards againſt the ſuper-incumbent Load: Others, from the Particles of Fire mixing with, and dilating the Particles of the Fluid, and ſo rendering them ſpecifically lighter: And others, not from any Attenuation, nor even Rarefaction of the Particles of the Fluid by the Action of Heat; but from a Rarefaction of the Air pent up, and intermix'd with the Fluid; which coming to expand, tends upwards againſt the Preſſure of the leſs heated, leſs rarified Part of the Fluid. See HEAT, AIR, *&c.*

*A more preciſe Account of the Proceſs under the foreſaid Article* BOILING.

EBULLITION, in Chymiſtry, *&c.* is alſo uſed for a violent inteſtine Motion, or Colluctation of Parts, occaſion'd by the Mixture of Salts of different Natures.

Dr. *Harris* will have it properly, and immediately, to ſignifie that particular Struggle, or Effervescence, ariſing upon the mingling together of an acid and alcaliſate Liquor. See ACID and ALCALI.

Mr. *Boyle* has an Experiment to ſhew, that a conſiderable *Ebullition* may be produced by ſuch a Mixture, without the Bodies acquiring any Heat; nay, that a Degree of Cold may be produced greater than was in either of the Bodies ſingly; tho' accompanied with a great Struggle, Tumult, Noiſe and Froth. For having ſhook one Part of Oil of Vitriol, into 12 Parts of common Water, the Mixture was at firſt ſenſibly warm: Then, the Ball of a Thermometer was placed in it, till the included Spirit had gain'd the Temperament of the Mixture; but then a convenient Quantity of Volatile Salt of *Sal Armoniac*, being gradually put in to ſatiate the acid Spirits of the Mixture, the Spirit in the Thermometer deſcended above an Inch. See EFFERVESCENCE.

ECARTELE, in Heraldry. See QUARTERLY.

ECCANTHIS, or ECKANTIS, in Medicine, is a Diſeaſe of the Eyes.

The *Eccanthis*, or *Eckantis*, is properly a fleſhy Excreſcence, in the *Canthus*, or Angle of the Eye; thus call'd from the *Greek*, ἐγκανθὶς, which ſignifies the ſame Thing.

ECCE-*Homo*, among Painters, a Name given a Painting, wherein our Saviour is repreſented in a Purple Robe, with a Crown on his Head, and a Reed in his Hand; ſuch as he was preſented before *Pilate* by the *Jews*.

The Phraſe is *Latin*, borrow'd from the Words of the *Jews* themſelves, *q. d. This is the Man.*

He has a fine *Ecce homo*.

ECCENTRIC, or EXCENTRICK, in Geometry, is applied where two Circles, or Spheres, tho' contain'd, in ſome Meaſure, within each other, yet have not the ſame Centre; and conſequently are not parallel: In Oppoſition to *Concentric*; where they are parallel, have one and the ſame common Centre. See CONCENTRIC.

The Sun's Orbit is *Eccentric*, with regard to the Globe of our Earth; *Mars* is very *Eccentric*, with regard to the Sun, that is, his Motion is about a very different Centre. See EARTH, *&c.*

ECCENTRIC, in the New Aſtronomy, or *Eccentric Circle*, is a Circle, as P D A E, (*Tab. Aſtronom. Fig.* 17.) deſcribed from the Centre of the Orbit of a Planet C, with half the Axis C E, as a Radius. See ECCENTRICITY.

ECCENTRIC, or *Eccentric Circle*, in the Antient *Ptolomaic* Aſtronomy, was the very Orbit of the Planet it ſelf, which it was ſuppoſed to deſcribe about the Earth; and which was conceiv'd *Eccentric* thereto; called alſo the *Deferent*. See DEFERENT.

In Lieu of *Eccentric Circles* round the Earth; the Moderns make the Planets deſcribe Elliptic Orbits round the Sun; which accounts for all the Irregularities of the Motions of the Planets, and their different Diſtances from the Earth, *&c.* more juſtly and naturally. See ORBIT.

*Anomoly of the* ECCENTRIC, is an Arch of the *Eccentric Circle* as A K, intercepted between the Aphelion A, and the right Line K L, which paſſing thro' the Centre of the Planet K, is drawn perpendicularly to the Line of the Apſides A P. See ANOMOLY.

ECCENTRIC *Equation*, in the Old Aſtromony, is an Angle made by a Line drawn from the Centre of the Earth, with another drawn from the Centre of the *Eccentric*, to the Body or Place of any Planet; the ſame with the *Proſtaphæreſis*; and is equal to the Difference, (accounted in an Arch of the *Ecliptic*) between the Sun's, or a Planet's, real, and apparent Place. See PROSTAPHÆRESIS.

ECCENTRIC *Place* of a Planet, in its Orbit, is the Place wherein the Planet is ſeen from the Sun. See PLACE.

ECCENTRIC *Place*, in the Ecliptic, is the Point of the Ecliptic, to which the Planet viewed from the Sun, is referr'd. This coincides with the *Heliocentric Place*. See HELIOCENTRIC.

ECCENTRICITY, the Diſtance between the Centres of two Circles, or Spheres, which have not the ſame Centre. See ECCENTRIC.

ECCENTRICITY, in the old Aſtronomy, is the Diſtance of the Centre of the Orbit of a Planet, from the Centre of the Earth. See PLANET.

That the five Planets have ſuch an *Eccentricity*, is allow'd on all Sides, and may be evinced from ſeveral Conſiderations; chiefly this, that *Saturn*, *Jupiter*, *Mars*, *Venus* and *Mercury*, at ſometimes appear greater, and at others leſs; which can only proceed from hence, that their Orbits being Eccentric to the Earth, in ſome Parts thereof they are nearer us, and in others more remote: But as to the *Eccentricities* of the Sun and Moon, ſome Diſpute has been made.

The Moderns many of them hold, that the Sun and Moon appear ſometimes larger, and ſometimes leſs; not that they are nearer us at one Time than another, but becauſe they are view'd through different Columns of Air, which producing a Difference in the Refraction of their Light, may occaſion thoſe different Appearances. Accordingly, we find very ſudden Alterations of the apparent Magnitude of the Moon; where nothing but a Change in the Air can take Place. See MOON and SUN.

Thus

Thus *Kepler*, on the 2d of *March*, in the Year 1588, found the Moon's apparent Diameter 31 Minutes, preſently after 32′ 2″, then 30′ 3″; and the preceding Day it had been 33. And again, on the 22d of *February*, 1591, he obſerved the Moon's Diameter twice 31′, ſix Times 32, ſeven Times 33, and ſix Times 34′. See DIAMETER.

They add, that when the Sun and Moon are in the Southern Signs, and conſequently lower, being then ſeen thro' a longer Column of denſe Air, they muſt appear bigger: Conſequently, in the Winter Time, when the Sun is in *Capricorn*, being ſeen thro' a greater Quantity of Air, he muſt appear larger than in Summer, when, being nearer our *Zenith*, the Quantity of Air he is ſeen thro' is leſſer. And the like may be ſaid of the Moon. See SUN, *&c.*

But others take the *Eccentricities* of the Sun and Moon to be ſufficiently proved, both from Eclipſes; from the Moons greater and leſs Parallax, at the ſame Diſtance from the *Zenith*; and from the Sun's being obſerved to continue longer in the Northern Hemiſphere, than in the Southern, *viz.* 186 or 187 Days in the firſt, and only 178 or 179 Days in the latter. See DISTANCE, HEMISPHERE, EARTH, *&c.*

ECCENTRICITY, in the new Aſtronomy, is the Diſtance of the Centre of the Orbit of a Planet, as C, from the Sun S, *i. e.* the Diſtance between the Centre of the Ellipſis and the Focus thereof: called alſo *ſimple*, or *ſingle Eccentricity*.

*Double* ECCENTRICITY, is the Diſtance between the two Foci in the Ellipſis; which is equal to twice the *ſingle Eccentricity*. See FOCUS, ELLIPSIS, *&c.*

To find the *Eccentricity* of a Planet, *e. gr.* the Earth: Since the Sun's greateſt apparent Diameter is to his leaſt, as 32′ 43″ to 31′ 38″, or as 1963″ to 1898″; the Sun's greateſt Diſtance from the Earth will be to his leaſt, as 1963 to 1898. Since then, PS + SA = PA = 3861; the Radius of the Eccentric CP, will be found 1930: And conſequently SC = PC − PS = 32. Wherefore, CP being 100000, CS will be found = 1658.

Hence, as the Earth's *Eccentricity* SC, is ſcarce the Sixteenth Part of the Radius of the Eccentric CP; the Earth's elliptic Orbit does not deviate much from a circular one. So that 'tis no Wonder a *Calculus*, made on the Foot of an Eccentric Circle, ſhould anſwer near enough to Obſervation. And ſince the *Eccentricity*, determin'd from the Difference of the apparent Diameters, (in obſerving which, an Error of ſome Minutes could not eaſily be avoided) does not ſeem exact enough; nothing hinders but that the *Eccentricity*, and the Place of the Apogee, may be determined on the Hypotheſis of the Excentric Circle.

ECCHO, or rather *Echo*. See ECHO.

ECCHYMOSIS, from ἐκχῶ, *effundo*, to pour out, and αἷμα, *Sanguis*, Blood, ſignifies thoſe livid Spots, or Blotches, in the Skin, which are made by extravaſated Blood: The ſame with *Ecchymoma*. See EXANTHEMATA.

ECCLESIA, a *Latin* Term ſignifying *Church*. See CHURCH.

In our antient Law-Books, *Fitz-Herbert* obſerves, *Eccleſia* properly ſignifies a *Parſonage*. Whence, if a Preſentation were made to a Chappel, as to a Church, by the Name of *Eccleſia*, it changed the Name thereof, and it preſently commenced a Church.

When the Queſtion was, Whether it were, *Eccleſia, aut Capella pertinens ad Eccleſiam*? The Iſſue was, Whether it had *Baptiſterium & Sepulturam*? For if it had the Adminiſtration of the Sacraments, and Sepulture, it was in Law judg'd a Church. See CHAPPEL.

ECCLESIANS, ECCESIANI, in Church Hiſtory. Upon any falling out, or Miſunderſtanding, between the Emperors and the Church Men, the Adherents to the Emperor called ſuch as ſtuck to the Intereſts of the Church, and Churchmen, *Eccleſiani*; a Term of Reproach, anſwering to our *High-Churchmen*.

ECCLESIASTES, one of the Books of the Old Teſtament; Thus call'd, by a *Greek* Word, ſignifying *Preacher*. By Reaſon the Author declares, or *preaches*, againſt the Vices and Vanities of the World.

This is *Mariana*'s Judgment; *Grotius* thinks otherwiſe: He takes it to derive its Appellation from its being a *Collection* of fine Sentences, and Reflexions on the Vanity of the Things of our Earth, *&c.* For the Word קהל ſignifies to *amaſs* or *collect* συναθροίζειν.

Some *Hebrew* Doctors take its Name to ariſe from *amaſſing* a deal of Wiſdom: Others, becauſe the Author's Aim is to *aſſemble*, and *call* together, all ſuch as are willing to conſult their Safety, and avoid the Dangers of the World; which is the Opinion of *Gejerus*: Laſtly, others, with *Calovius*, deduce it from his *aſſembling* them about him, as a Preacher aſſembles his Auditory.

There are different Sentiments as to the Author of this Book: The moſt common is, that it is *Solomon*'s, who is ſuppoſed to have wrote it towards the Cloſe of his Life, to give Tokens of his Penitence to Poſterity.

*Grotius*, indeed, takes the Work to be poſterior to *Solomon*; and to have been wrote after his Death by I know not what Authors, ſix in Number; who, to give their Book the greater Authority, put *Solomon*'s Name to it, and repreſented him as Repentant. What he founds ſo many poſitive Facts on, is, that we meet with Words in this Book, which are no where elſe ſeen, but in *Daniel*, *Eſdras*, and the *Chaldee* Paraphraſes.

But, 'tis certain, all, both *Hebrews*, *Greeks* and *Latins*, have always ſpoke of it as a Work of *Solomon*. Indeed, there are Authors, who have attributed all the Books of *Solomon* to *Iſaiah*; but theſe are only to be underſtood as if that Prophet had collected them. If it be true, that there are *Chaldee* Words in the *Eccleſiaſtes*, 'tis eaſier to ſuppoſe *Solomon* underſtood that Language, than to deny him the Author of the Book.

If the Book is not *Solomon*'s, becauſe *Grotius* has found four or five Dictions, which are only to be explain'd by the *Chaldee* and *Arabic*; we are not ſure of the Author of any Book in the Bible. *Moſes* muſt not be the Author of *Geneſis*; For even in the very firſt Verſe of that Book, we meet with two or three Words, that are only deducible from *Arabic* Roots. How many Authors attribute to *Solomon*, or to *Moſes*, the Book of *Job*; which is that of all the Books of the Old Teſtament, where there is the moſt *Arabic*, *Chaldee*, or *Syriac*.

In fine, *Calovius* aſſures us, that the true Reaſon why *Grotius* would not allow *Solomon* the Author of the Book of *Eccleſiaſtes*, is, that it ſpeaks too clearly, and preciſely for his Time, of the Univerſal Judgment, Eternal Life, and the Pains of Hell, which yet are Truths eſtabliſhed before *Solomon* in the *Pſalms*, the *Pentateuch*, and *Job*.

There appear no Reaſons, therefore, for denying this Book to *Solomon*; But ſeveral for aſcribing it to him. The 1. The Title of the Book, which aſſerts its Author to be the Son of *David*, and King of *Jeruſalem*. 2. Several Paſſages in the Book, which agree to no Body but that Prince, as *C.* I. v. 12. *C.* VII. v. 24. *C.* XII. v. 9, *&c.* 3. Conſtant Tradition of the antient *Jews* and *Chriſtians*.

The *Thalmudiſts*, and other Rabbins, however, note that the Book of *Eccleſiaſtes*, was ſome Time e're it was put in the Canon. See the *Gemara* on *Pirke Abhoth f.* 1. col. 1. *Maſſech Schabbath C.* II. *fol.* 30. col. 2. *Aben Ezra* on the *Eccleſiaſtes* VII. 4. *Maimonides*, *Moreh Nebochim*, *L.* III. *C.* 28. *Mercerus*, *Calovius*, and *Gejerus* on this Book.

ECCLESIASTIC, or ECCLESIASTICAL, ſomething belonging to, or ſet apart for the *Church*; in Contradiſtinction to *Civil*, or *Secular*, which regard the World. See CIVIL, *&c.*

There are *Eccleſiaſtical* Things and Perſons: *Eccleſiaſtical Law*, *Juriſdiction*, *Hiſtory*, *Ceremonies*, *Diſcipline*, *Preferments*, &c. See LAW, JURISDICTION, HISTORY, CEREMONY, *&c.*

*Eccleſiaſtical* Perſons, are either *Regular* or *Secular*. See REGULAR and SECULAR.

In the Empire there are three *Eccleſiaſtical* Electors, *viz.* the Archbiſhops of *Mentz*, *Treves*, and *Cologne*. See ELECTOR.

In *France*, they have *Eccleſiaſtical Peers*, &c. See PEER.

ECCLESIASTICAL *Courts*, are the *Convocation*, *Court of Delegates*, *Of Arches*, *Of Audience*, *Prerogative Court*, *Court of Peculiars*, *Biſhops Court*, and *Archdeacons Court*. See each under its proper Article, CONVOCATION, AUDIENCE, ARCHES, *&c.*

*Eccleſiaſtical Cenſures* and *Puniſhments*, are *Excommunication*, *Penance*, *Suſpenſion*, *Deprivation*, and *Depoſition*, or *Degradation*. See EXCOMMUNICATION, PENANCE, SUSPENSION, DEGRADATION, *&c.*

ECCLESIASTICUS, an Apochryphal Book, compoſed by *Jeſus* the Son of *Sirach*, and admitted, by the *Romiſh* Church, in the Canon of the Old Teſtament. See APOCHRYPHA.

It is frequently wrote by an Abbreviation, *Eccli.* to diſtinguiſh it from the *Eccleſiaſtes*, which is wrote *Eccle.*

*Iſidore*, *L.* VI. *Etym. C.* 2. and among the Moderns, *Grotius*, and *Druſius*, deny the Author of the *Eccleſiaſticus* to be *Jeſus* the Son of *Sirach*, Grandſon of the High Prieſt *Jeſus*, who return'd from *Babylon* with *Zorobabel*; but it appears pretty certain, they are deceiv'd. See the *Preface* of the Author, that XLth Chapter, v. 29. and the *Title* of the LIXth, with the whole Chapter.

*Genebrard* aſſerts, that *Jeſus* the Son of *Sirach* was of the Race of *Jeſus* Son of *Joſedech*. But this does not appear.

St. *Jerome* aſſures us, in his Preface to the Books of *Solomon*, that he had ſeen this Book in *Hebrew*; and that the *Hebrews* intitled it *Parables*: From which the Jeſuite *Mariana* concludes, that the High Prieſt *Jeſus* wrote this Book in *Hebrew*; as it appears likewiſe from the Prologue

to

to the Book it ſelf; and that his Grandſon tranſlated it into *Greek*, which likewiſe appears from the Prologue: that he made this Tranſlation in *Egypt*, where the Author lived in his 38th Year; that it was done under the Reign of *Ptolomy Evergetes*, Succeſſor of *Ptolomy Philadelphus*, who began to reign in the Year of *Rome* 512, 240 Years before Chriſt; that the Grandfather had intitled it *Parables*, which the Grandſon changed into *Eccleſiaſticus*, q. d. *Preacher*: Laſtly, that the Book, however, is attributed to the Tranſlator, by Reaſon he changed, and added many Things to the Original.

*Fa. Calmet* takes the Book of *Eccleſiaſticus* to have been compoſed under the Pontificate of *Onias* III. Son of *Simon*, and the Reign of *Antiochus Epiphanes*, King of *Syria*. He adds, that neither the Author of the *Latin* Tranſlation, nor the Time when it was made, is known; but being quoted regularly by all the Antient Fathers, there is no doubt of its being very Antient. He takes it to have been done by the Tranſlator of the Book of *Wiſdom*.

ECCOPE, *Amputation*, in Chirurgery, a dividing of a fleſhy Part, and cutting off that which is gangreen'd, cancer'd, or the like: As alſo an *Amputation* of an Excreſcence, *&c.* See AMPUTATION.

ECCOPE, is likewiſe uſed for a Kind of Fracture, or Solution of Continuity of the Skull, by a ſimple Inciſion. See FRACTURE.

The Word is form'd from the *Greek*, ἐκκοπὴν, *to cut*.

ECCOPROTICKS, in Medicine, *Laxative*, or *looſening* Remedies, which purge gently, by ſoftening the Humours and Excrements, and fitting them for Expulſion. See EVACUANTS, PURGATIVES, *&c.*

The Word is compoſed of the *Greek* Particle ἐκ, and κόπρος, *Excrement*.

ECHINATE *Seeds*, are ſuch as are prickly and rough like the Coat of a Cheſſnut; or, as ſome ſay, like the Skin of a Hedge-hog. See SEED.

ECHINUS, in Architecture, a Member, or Ornament, near the Bottom of the *Ionic*, *Corinthian*, and *Compoſite* Capitals; which, from its circular Form or Contour, is called by the *French*, *Quart de Rond*, and by the *Engliſh*, *Quarter round*, or *Boultin*; and from its being uſually carved, or cut with Figures of Eggs, *&c.* is called alſo by the *Latins*, *Ovum*, by the *Italians*, *Ovolo*, the *French*, *Ove*, and the *Engliſh*, *Eggs* and *Anchors*. See QUARTER-ROUND and OVOLO.

Laſtly, The Eggs being encompaſſed with a Cover, and thus bearing ſome Reſemblance to a Cheſſnut cut open; The *Greeks* have call'd it ἔχινος, *Echinus*, that is, *Cheſſnut*. See BOULTIN, *&c.*

ECHINUS, among Botaniſts, is uſed for the prickly Head, or Top of any Plant; thus called from its Likeneſs to an Hedge-hog or Cheſſnut.

ECHIQUITE, in Heraldry. See CHECKY.

ECHO, or ECCHO, a Sound reflected, or reverberated, from a ſolid, concave Body, and ſo repeated to the Ear. See SOUND and REFLECTION.

The *Peripateticks*, who took Sound for I know not what Species, or Image of the ſonorous Body, impreſſed on the adjoyning Air; account for *Echo* from a Reſilition of the Species, occaſion'd by its meeting ſome Obſtacle in the Way. But the Moderns, who know Sound to conſiſt in a certain Tremor, or Vibration, in the ſonorous Body, communicated to the contiguous Air, and by that Means to the Ear; give a more conſiſtent Account of *Echo*.

For a tremulous Body, ſtriking on another ſolid Body, 'tis evident, may be repelled without deſtroying or diminiſhing its Tremor; and conſequently a Sound may be redoubled by the Reſilition of the tremulous Body, or Air. See SOUND.

But a ſimple Reflexion of the ſonorous Air, is not enough to ſolve the *Echo*: For then every plain Surface of a ſolid hard Body, as being fit to reflect a Voice or Sound, would redouble it; which we find does not hold.

To produce an *Echo*, therefore, it ſhould ſeem that a Kind of Concameration, or Vaulting were neceſſary, in order to collect, and by collecting, to heighten and increaſe, and afterwards reflect the Sound; as we find is the Caſe in reflecting the Rays of Light, where a concave Mirror is required.

In Effect, as often as a Sound ſtrikes perpendicularly on a Wall, behind which is any Thing of a Vault, or Arch, or even another Parallel Wall; ſo oft will it be reverberated in the ſame Line, or other adjacent ones.

For an *Echo* to be heard, therefore, 'tis neceſſary the Ear be in the Line of Reflexion: For the Perſon who made the Sound to hear its *Echo*, 'tis neceſſary he be perpendicular to the Place which reflects it: And for a manifold or Tautological *Echo*, 'tis neceſſary there be a Number of Walls and Vaults, or Cavities, either placed behind each other, or fronting each other.

A ſingle Arch, or Concavity, *&c.* can ſcarce ever ſtop and reflect all the Sound; but if there be a convenient Diſpoſition behind it, Part of the Sound, propagated thither, being collected and reflected, as before, will preſent another *Echo*: Or if there be another Concavity, oppoſed at a due Diſtance to the former; the Sound reflected from the one upon the other will be toſs'd back again by this latter, *&c.*

Many of the Phænomena of *Echo's*, are well conſider'd by the Biſhop of *Leighs*, &c. Who remarks, that any Sound, falling either directly, or obliquely, on any denſe Body, of a ſmooth, whether plain or arched, Superficies, is reflected, or *Echoes* more or leſs. The Surface, ſays he, muſt be *ſmooth*, otherwiſe the Air, by Reverberation, will be put out of its Regular Motion; and the Sound thereby broke and extinguiſhed. He adds, that it *Eccho's more or leſs*, to ſhew, that when all Things are, as before deſcribed, there is ſtill an *Echoing*; tho' it be not always heard; either becauſe the direct Sound is too weak to be beat quite back again to him that made it, or that it does return to him, but ſo weak, that it cannot be diſcern'd; or that he ſtands in a wrong Place to receive the reflected Sound, which paſſes over his Head, under his Feet, or on one Side of him, and which therefore may be heard by a Man ſtanding in the Place where the reflected Sound will come, provided no interpoſed Body intercept it; but not by him that firſt made it.

*Echo's* may be produced with different Circumſtances: For,

1. A *Plane* Obſtacle reflects the Sound back in its due Tone and Loudneſs; Allowance being made for the proportionable Decreaſe of the Sound, according to its Diſtance. See PLANE.

2. A *Convex* Obſtacle reflects the Sound ſomewhat ſmaller, and ſomewhat quicker, tho' weaker, than it otherwiſe would be. See CONVEX.

3. A *Concave* Obſtacle, *echo's* back the Sound, bigger, ſlower, and alſo inverted; but never according to the Order of Words. See CONCAVE.

Nor does it ſeem poſſible to contrive any ſingle *Echo*, that ſhall invert the Sound, and repeat backwards: Becauſe, in ſuch Caſe, the Word laſt ſpoken, that is, which laſt occurs to the Obſtacle muſt be repell'd firſt, which cannot be. For where in the mean Time ſhould the firſt Words hang and be conceal'd; or how, after ſuch a Pauſe, be revived, and animated again into Motion.

From the determinate Concavity, or Archedneſs of the reflecting Bodies, it may happen that ſome of them ſhall only *echo* back one determinate Note, and only from one Place.

4. The *Echoing* Body being removed farther off, it reflects more of the Sound than when nearer; which is the Reaſon why ſome *Echo's* repeat but one Syllable, ſome one Word, and ſome many.

5. *Echoing* Bodies may be ſo contrived, and placed, as that reflecting the Sound from one to the other, either directly and mutually, or obliquely and by Succeſſion, out of one Sound, ſhall a *multiple Echo*, or many *Echo's* ariſe.

Add, that a *multiple Echo* may be made, by ſo placing the *Echoing* Bodies, at unequal Diſtances, as that they may reflect all one Way, and not one on the other; by which Means, a manifold ſucceſſive Sound will be heard; one Clap of the Hands like many; one Ha like a Laughter; one ſingle Word like many of the ſame Tone and Accent; and ſo one Viol, like many of the ſame Kind, imitating each other.

Laſtly, *Echoing* Bodies may be ſo order'd, that from any one Sound given, they ſhall produce many *Echo's*, different both as to Tone and Intenſion. By which Means a Muſical Room may be ſo contrived, that not only one Inſtrument playing therein, ſhall ſeem many of the ſame Sort and Size, but even a Conſort of different Ones; only by placing certain *Echoing* Bodies ſo, as that any Note play'd, ſhall be return'd by them in 3ds, 5ths, and 8ths.

ECHO, is alſo uſed for the Place where the Repetition of the Sound is produced, or heard.

The Word is form'd of the *Greek*, ἦχος, *Sonus*, of the Verb ἠχέω, *Sono*, *I ſound*,

*Echo's* are diſtinguiſhed into divers Kinds, *viz.*

1. *Single*, which return the Voice but once; whereof ſome are *Tonical*, which only return a Voice when modulated into ſome particular Muſical Tone. Others, *Polyſyllabical*, which return many Syllables, Words and Sentences.

2. *Multiple*, or *Tautological*, which return Syllables and Words the ſame oftentimes repeated.

In *Echo's*, the Place where the Speaker ſtands, is called the *Centrum Phonicum*; and the Object, or Place, that returns the Voice, the *Centrum Phonocampticum*. See CENTRUM.

At the Sepulchre of *Metella*, Wife of *Craſſus*, was an *Echo*, which repeated what a Man ſaid, five Times. Authors mention a Tower at *Cyzicus*, where the *Echo* repeated ſeven Times.

But

But the fineſt *Echo* we read of, is that mention'd by *Barthius*, in his Notes on *Statius*'s *Thebais*, *L.* VI. v. 30. which repeated the Words a Man utter'd ſeventeen Times: It was on the Banks of the *Nile*, between *Coblents* and *Bingen*. *Barthius* aſſures us, he had proved what he writes; and had told ſeventeen Repetitions. And whereas, in common *Echo's*, the Repetition is not heard till ſome Time after hearing the Words ſpoke, or the Notes ſung; in this, the Perſon who ſpeaks, or ſings, is ſcarce heard at all; but the Repetition moſt clearly, and always in ſurprizing Varieties; the *Echo* ſeeming, ſometimes to approach nearer, and ſometimes to be further off. Sometimes the Voice is heard very diſtinctly, and ſometimes ſcarce at all. One hears only one Voice, and another ſeveral: One hears the *Echo* on the right, and the other on the left, *&c.*

ECHO, in Architecture, is applied to certain Kinds of Vaults, and Arches, moſt commonly of Elliptical, or Parabolical Figures; uſed to redouble Sounds, and produce *Artificial Echo's*.

The Method of making an *Artificial Echo*, is taught by the Jeſuite *Blancani*, in his Echometry, at the End of his Book on *the Sphere*. *Vitruvius* tells us, that in divers Parts of *Greece*, and *Italy*, there were brazen Veſſels, artfully ranged under the Seats of the Theatres, to render the Sound of the Actors Voices more clear, and make a Kind of *Echo*; by which Means, of the prodigious Multitude of Perſons, who aſſiſted at the Spectacles, every Body might hear with Eaſe and Pleaſure.

ECHO, in Poetry, *&c.* a Kind of Compoſition, wherein the laſt Words, or Syllables, of each Verſe, contain ſome meaning, which being repeated a-part, anſwers to ſome Queſtion, or other Matter, contain'd in the Verſe.

Such is that famous *Echo* of *Eraſmus*, — *Decem annos conſumpſi in legendo Cicerone ... one*, i. e. ουη, *Aſine*.

The firſt *Echo*, in Verſe, according to *Paſquier*, is that in the *Sylvæ* of *Johannes Secundus*: But *Paſquier* is miſtaken; for the antient *Greek* and *Latin* Poets have wrote *Echo's*. This *Martial* intimates plainly enough, when laughing at ſuch Sorts of Baubles, he ſays, there is nothing like them among his Poems. *Nuſquam Græcula quod recantat Echo*: By which, on the one Side, he ſhews there were *Latin* Poets in his Time, who made *Echo's*; and on the other, that the Invention came from the *Greeks*.

*Ariſtophanes*, in his Comedy, intitled Θεσμοφοριαζουσαι, introduces *Euripedes* in the Perſon of *Echo*. And *Callimachus*, in the Epigram, Εχθαιρω το πινημα το κυκλικον, ſeems to have intended a Kind of *Echo*.

ECHOMETRE, in Muſic, a Kind of Scale, or Rule, with ſeveral Lines divided thereon, ſerving to meaſure the Duration, or Length, of Sounds, and to find their Intervals and Ratio's.

The Word is form'd of the *Greek*, ηχος, *Sound*, and μετρον, *Meaſure*.

ECHYMOSIS, or ECCHYMOSIS, in Medicine, *Suffuſio*, a Diſeaſe of the Eye; wherein the Blood, extravaſated by ſome Blow, or Contuſion, upon its Arrival between the Cutis, and the Fleſh or Muſcles, ſtops there, without any Appearance of a Wound.

The *Echymoſis* is either *ſimple*, or with *Abſceſs*.

The Word is form'd of the *Greek*, εκχυμωσις, *Effuſion of Humours*, των χυμων.

ECLECTIC, ECLECTICI, a Name given to ſome antient Philoſophers. See PHILOSOPHER.

*Diogenes Laertius*, *L.* I. and *Suidas* ſay, that the *Eclectici* were ſuch, as without attaching themſelves to any particular Sect, took what they judg'd good and ſolid from each. And hence their Denomination; which, in the Original *Greek*, ſignifies, that *may be choſen*, or that *chuſes*, of the Verb εκλεγω, *I chuſe*.

*Laertius*, in the ſame Place, notes, that they were alſo, for the ſame Reaſon, denominated *Analogetici*, but that they called themſelves *Philalethes*, i. e. Lovers of Truth.

The Chief, or Founder of the *Eclectici*, was one *Potamon*, of *Alexandria*, who lived under *Auguſtus*, and *Tiberius*; and who, weary of doubting of all Things with the *Scepticks* and *Pyrrhonians*, form'd the *Eclectic* Sect; which *Voſſius* calls the *Eclective*.

ECLEGMA, in Medicine, a Pectoral Remedy, of the Conſiſtence of a thick Syrup; called alſo *Lohoch*, *Linctus*, and *Lambative*. See LOHOCH, *&c.*

The Word is form'd of the *Greek* εν, and λειχειν, *to lick*; by Reaſon the Patient is to take it by *licking* it off the End of a Liquorice Stick dipt therein: To the End that being taken thus by little and little, it may remain the longer in the Paſſage, and moiſten the Breaſt the better.

There are *Eclegma's* of Poppy, others of Lentils, others of Squillæ, *&c.* The Intention is to heal, or eaſe the Lungs in Coughs, Peripneumonies, *&c.* and are uſually compoſed of Oils, incorporated with Syrups.

ECLIPSE, in Aſtronomy, a Privation of the Light of one of the Luminaries, by the Interpoſition of ſome opake Body, either between it and the Eye; or between it and the Sun. See SUN, MOON, and SATELLITE.

The Word is derived from the *Greek*, εκλειψις, of εκλειπω, *deficio*, *I fail*.

The Antients had frightful Ideas of *Eclipſes*, as Preſages of the moſt diſmal Events: *Plutarch* aſſures us, that at *Rome*, it was not allow'd to talk publickly of any natural Cauſes of *Eclipſes*. They made a huge Noiſe with Brazen Inſtruments, and rais'd loud Shouts, during *Eclipſes* of the Moon, as thinking thereby to eaſe her in her Labour: Whence *Juvenal*, ſpeaking of a talkative Woman, ſays; *Una Laboranti poterit ſuccurrere Lunæ*. Others attributed the *Eclipſe* of the Moon to the Arts of Magicians, who by their Inchantments, pluck'd her out of Heaven, and made her skim over the Graſs. The Natives of *Mexico* kept Faſt, during the *Eclipſe*; and, particularly, their Women, who beat and abuſed themſelves, drawing Blood from their Arms, *&c.* They imagined the Moon had been wounded by the Sun in ſome Quarrel between them.

*The Duration of an Eclipſe*, is the the Time between the *Immerſion* and *Emerſion*.

The *Immerſion*, or *Incidence* of an *Eclipſe*, is the Moment when Part of the Sun or Moon's Diſk firſt begins to be hid. See IMMERSION.

The *Emerſion*, or *Expurgation*, is the Time when the Eclipſed Luminary begins to re-appear, or emerge out of the Shadow. See EMERSION.

To determine the Duration of *Eclipſes*, they uſually divide the Diameter of the Luminary *Eclipſed*, into 12 equal Parts, called *Digits*, or *Digiti Ecliptici*. See DIGIT.

*Eclipſes*, are divided with Reſpect to the Luminary *Eclipſed*, into *Eclipſes of the Sun*, *of the Moon*, and *of the Satellites*: And with Reſpect to the Circumſtances, into *Total Eclipſes*, *partial*, *annual*, &c. *Eclipſes*.

ECLIPSE *of the Moon*, is a Deficiency of Light in the Moon, occaſion'd by a Diametrical Oppoſition of the Earth between the Sun and Moon. See MOON.

The Manner of this *Eclipſe* is exhibited in *Tab. Aſtronom. Fig.* 34. where A repreſents the Earth, and B or C the Moon.

When all the Light of the Moon is intercepted, *i. e.* when her whole Diſk is cover'd, the *Eclipſe* is ſaid to be *Total*; when only Part, *Partial*. When the *Total Eclipſe* laſts for ſome Time, it is ſaid to be *Totalis cum Mora*, Total with Continuance; when only Inſtantaneous, *Totalis ſine Mora*, Total without Continuance.

*Eclipſes of the Moon*, only happen in the Time of full Moon; by Reaſon 'tis only then the Earth is between the Sun and Moon. Nor do they happen every full Moon, by Reaſon of the Obliquity of the Moon's Way with Reſpect to the Sun's; but only in thoſe full Moons, which happen either in the Nodes, or very near them, where the Aggregate of the apparent Semi-diameters of the Moon and the Earth's Shadow, is greater than the Latitude of the Moon, or the Diſtance between their Centres. See NODE.

*The moſt conſiderable Circumſtances in the Eclipſes of the Moon*, are,

1. That as the Sum of the Semi-diameters of the Moon, and Earth's Shadow, is greater than the Aggregate of the Semi-diameters of the Sun and Moon, (that when leaſt, being $5\frac{1}{3}$, and this, when greateſt, ſcarce $3\frac{1}{3}$.) 'Tis evident, *Lunar Eclipſes* may happen in a greater Latitude of the Moon, and at a greater Diſtance from the Nodes, and conſequently are more often obſerv'd in any one Part of the Earth, than *Solar* ones; tho', with Reſpect to the whole Earth, the latter are as frequent as the former.

2. *Total Eclipſes*, and thoſe of the longeſt Duration, happen in the very Nodes of the Ecliptic; by Reaſon the Section of the Earth's Shadow, then falling on the Moon, is conſiderably greater then her Diſk. There may likewiſe be *Total Eclipſes*, within a little Diſtance off the Nodes; but the further, the leſs their Duration; further off ſtill, there are only Partial ones, and at length none at all: As the Latitude and the Semi-diameter of the Moon together, are either leſs, equal, or greater than the Semi-diameter of the Shadow.

3. All *Lunar Eclipſes* are univerſal, *i. e.* are viſible in all Parts of the Globe, which have the Moon above their Horizon; and are every where of the ſame Magnitude, and begin and end together.

4. In all *Lunar Eclipſes*, the Eaſtern Side is what firſt Immerges, and alſo Emerges; for that tho' at firſt ſhe be more Weſterly than the Earth's Shadow, yet her proper Motion being ſwifter than the ſame, ſhe overtakes and outgoes it.

5. The Moon, even in the Middle of an *Eclipſe*, has uſually a faint Appearance of Light; which *Gaſſendus*,

*Ricciolus*, *Kepler*, &c. attribute to the Light of the Earth's Atmoſphere tranſmitted thither. See ATMOSPHERE.

*Laſtly*, She grows ſenſibly paler and dimmer, before ever ſhe enters within the Earth's Shadow, which is attributed to the Earth's *Penumtra*. See PENUMTRA.

*Aſtronomy of Lunar* ECLIPSES, *or the Method of calculating their Times, Places, Magnitudes, and other Phænomena.*

Preliminary 1. *To find the Length of the Earth's ſhadowy Cone.* Find the Sun's Diſtance from the Earth for the given Time; See SUN and DISTANCE. Then, as the Sun's Diameter is known in Semi-diameters of the Earth, the Length of the Cone will be found from the Rules given under SHADOW.

Suppoſe, *e. gr.* the Sun's greateſt Diſtance from the Earth, 34996 Semi-diameters of the Earth; and the Sun's Semi-diameter to be to that of the Earth as 153 to 1. Then will the Length of the ſhadowy Cone be found $230\frac{4}{7}$.

Hence, as the Moon's leaſt Diſtance from the Earth, is ſcarce 64 Semi-diameters; the Moon, when in Oppoſition to the Sun, in or near the Nodes, will fall into the Earth's Shadow, tho' the Sun and Moon be in their Apogees. And much more, if they be in or near their Perigees, by Reaſon the Shadow is then longer; and the Moon nearer the Baſe of the Cone.

2. *To find the apparent Semi-diameter of the Earth's Shadow, in the Place of the Moon's Paſſage, for any given Time.* Find the Sun and Moon's Diſtance from the Earth; and thence, their Horizontal Parallaxes: Add the Parallaxes together, and from the Sum, ſubſtract the apparent Semi-diameter of the Sun. The Remainder is the apparent Semi-diameter of the Shadow.

Thus, ſuppoſe the Moon's Parallax 56′ 48″, the Sun's 6″: The Sum is 56′ 24″; from which the Sun's apparent Semi-diameter 16′ 5″ ſubſtracted, leaves 40′ 19″ for the Semi-diameter of the Shadow.

Note, M. *de la Hire* omits the Sun's Parallax, as of no Conſideration; but increaſes the apparent Semi-diameter of the Shadow by a whole Minute, for the Shadow of the Atmoſphere; which would give the Semi-diameter of the Shadow, in our Inſtance, 41′ 13″.

3. *The Moon's Latitude*, AL, *at the Time of her Oppoſition, together with the Angle at the Node* B, *being given; to find the Arch between the Centres* AI, *and the Arch* IL. (*Fig.* 35.) Since in the ſpherical Triangle AIL, Rectangular at A; the Side AL is given, as alſo the Angle ALI, as being the Complement of LAI, or B to a right Angle; the Arch between the Centres AI, is found by ſpherical Trigonometry: And ſince the Angle LAI, is equal to B, each of them, with IAB, making a right Angle: And the Moon's Latitude AL is given; the Arch LI will likewiſe be found by ſpherical Trigonometry. See SPHERICAL *Triangle*.

*To determine the Bounds of an* ECLIPSE *of the Moon.*

Since there is no *Eclipſe* poſſible, but when the Aggregate of the Semi-diameters of the Shadow, and the Moon is greater than the Moon's Latitude, (for without this, the Moon will not come in the Shadow) add the apparent Semi-diameters of the Moon in *Perigæo*, and of the Shadow, ſuppoſing the Sun in *Apogæo*; by which you will have the Side MO. Then, in the ſpherical Triangle MNO, (*Fig.* 36.) having given the Angle at the Node, whoſe Quantity is the Moon's greateſt Latitude in the Conjunctions; the right Angle E; and the Leg MO; find the Moon's Diſtance from the Node NO: Which is the utmoſt Bound, beyond which the *Eclipſe* cannot reach. After the ſame Manner, adding the apparent Semi-diameters of the Moon in *Apogæo*, and of the Shadow of the Sun in *Perigæo*, for the Sake of having the LH, in the Triangle NLH; the Diſtance of the Moon, from the aſcending Node HN, will be found by ſpherical Trigonometry; which is the Bound within which the Moon will neceſſarily be *Eclipſed*.

Thus, *e. gr.* the Semi-diameter of the Shadow, when the Sun is in *Apogæo*, and the Moon in *Perigæo*, according to *Kepler*, is 49′ 40″. And the apparent Semi-diameter of the Moon in *Perigæo* 16′ 22″. Conſequently MO 66′, or 1° 6′; and therefore there will be no *Eclipſe* at all, if the Moon's Latitude be greater than 1° 6′. Now, as the ſame Angle N is ſuppoſed by *Kepler* to be 5° 18′.

| | |
|---|---|
| Log. Sin. N | 89655337 |
| Sin. MO | 82832433 |
| Whole Sine | 100000000 |

Log. of Sine ON 93177096. The Number correſponding to which in the Tables is 11° 59′ 50″. If, therefore, the Moon's Diſtance from the aſcending Node be greater than 12°; no *Eclipſe* can happen. And, in like Manner, the Semi-diameter of the Shadow in the Sun's Perigee, and the Moon's Apogee is 43′ 50″, and the Moon's Semi-diameter in her Apogee 15′. Conſequently, LH is 58′ 50″. And, therefore, there will be an *Eclipſe*, if the Moon's Latitude don't exceed 58′ 50″. But here, as before, the Argument of the Latitude is found 10° 40′.

*To determine the Quantity of an Eclipſe, or the Number of Digits Eclipſed.*

Add the Moon's Semi-diameter IK, (*Fig.* 35.) to the Semi-diameter of the Shadow AM; then will AM + IK = IM + IK = AI + MK. From this Sum, therefore, ſubſtract the Arch between the Centres AI, the Remainder gives the Scruples, or Parts of the Diameter *Eclipſed* MK. Say, therefore, as the Diameter KH, is to the Scruples, or Parts thereof *Eclipſed* MK; ſo is 12, to the Digits *Eclipſed*.

Thus, ſuppoſing KH, 30′ 44″, and conſequently IK, 15′ 22″; AM, 41′ 13″; and AL, 43′ 14″: The Moon's Semi-diameter will be 15′ 22″, and that of the Shadow 41′ 13″; the Sum whereof, is 56′ 35″. From which the Arch between the Centres 43′ 14″, being ſubſtracted, leaves 13 21 Scruples, or 801 Seconds. Then as 1844 : 801 :: 12 : $5\frac{28}{461}$ Dig. or 5 Dig. 13′.

*To find the Scruples of half Duration of an Eclipſe, or the Arch of the Lunar Orbit, which her Centre deſcribes from the Beginning of the Eclipſe to the middle thereof.*

Add the Semi-diameters of the Shadow AP, and the Moon PN together; the Sum gives AN. From the Square of AN, ſubſtract the Square of AI; the Remainder is the Square of IN, the Square Root of this Reſidue is the Arch IN required.

*To find the Scruples of half Duration of a Total Darkneſs, in a Total Eclipſe.*

Subſtract the Moon's Semi-diameter SV, (*Fig.* 37.) from the Semi-diameter of the Shadow AV; the Remainder is AS: In the Triangle AIS, which is Rectangular at I, therefore, we have the Arch AS given by the laſt Method; and the Arch between the Centres AI: Whence the Arch IS is found, as in the laſt Problem.

*To find the Beginning, Middle, and End of a Lunar Eclipſe.*

Say, as the Moon's Horary Motion from the Sun, (See HORARY) is to 3600 Horary Seconds; ſo are the Seconds of the Arch LI, (*Fig.* 35.) to the Horary Seconds equivalent thereto. Subſtract theſe Scruples, or Seconds, in the firſt and third Quadrant of the Anomoly, from the Time of full Moon, and add it to the ſame in the ſecond and fourth; the Reſult is the Time of the middle of the *Eclipſe*. Then ſay, as the Moon's Horary Motion from the Sun is to 3600 Scruples, or Seconds, ſo are the Seconds of half Duration IN, to the Time of half Duration: The double of which gives the whole Duration. Laſtly, ſubſtract the Time of half the Duration, from the Time of the middle of the *Eclipſe*, the Remainder will be the Beginning of the *Eclipſe*. And add the ſame to the ſame, the Sum will be its End.

Suppoſe, *e. gr.* LI = 4′ 5″ = 245″, IN 2530″, Time of Full Moon 9ʰ 23′ 49″, Horary Motion of the Moon from the Sun, 30″ 12′, or 1812″, then will

*To draw a Type, or Figure of a Lunar Eclipſe on a Plane.*

1. Let C D, (*Fig.* 38.) repreſent the Ecliptic; and let the Centre of the Shadow be in A: Thro' which draw a right Line G A, perpendicular to D C: And ſuppoſe D the Eaſt, C the Weſt, A the South, and G the North.

2. From A, with the Interval of the Aggregate A N, of the Semi-diameter of the Shadow A P, and of the Moon P N, deſcribe a Circle D G C Q; and with the Interval of the Semi-diameter of the Shadow A P, draw another Concentric Circle E M F R, which will exhibit the Section of the Shadow in the Paſſage of the Moon.

3. Let A L be equal to the Latitude of the Moon at the Beginning of the *Eclipſe*; and in L erect a perpendicular L N, meeting the greater Circle in N, towards the Weſt. Then will the Centre of the Moon, at the Beginning of the *Eclipſe*, be in N.

4. After like Manner, make A S equal to the Latitude of the Moon at the End of the *Eclipſe*; and in S, erect a perpendicular O S, parallel to D C: Then will the Centre of the Moon be in O, at the End of the *Eclipſe*.

5. Connect the Points O and N by a right Line: O N will be the Arch of the Orbit, which the Centre of the Moon deſcribes during the *Eclipſe*.

6. From O and N, with the Interval of the Moon's Semi-diameter, deſcribe Circles P V and T X, which will exhibit the Moon at the Beginning and End of the *Eclipſe*.

7. Then, from A, letting fall a perpendicular A I to O N; the Centre of the Moon will be in I, in the Middle of the Darkneſs.

Wherefore, laſtly, from I, with the Interval of the Moon's Semi-diameter, deſcribe a Circle H K: This will repreſent the Moon in its greateſt Obſcurity, and at the ſame Time the Quantity of the *Eclipſe*: The Circle P N T, &c. terminating the Shade.

Eclipse *of the Sun*, is an Occultation of the Sun's Body, occaſion'd by a diametrical Interpoſition of the Moon between the Sun and the Earth. See Sun.

It is diſtinguiſhed, like that of the Moon, into *Total* and *Partial*, &c. to which muſt be added a third Species called *Annular*.

*Eclipſes of the Sun*, ſome Authors obſerve, ſhould in Propriety be called *Eclipſes of the Earth*. See Earth.

As the Moon is found to have a Parallax of Latitude; *Eclipſes* of the Sun only happen when the Latitude of the Moon, viewed from the Sun, is leſs than the Aggregate of the apparent Semi-diameter of the Sun and Moon. *Solar Eclipſes*, therefore, happen when the Moon is in Conjunction with the Sun, in, or near the Nodes, *i. e.* at the new Moons. Conſequently, the memorable *Eclipſe of the Sun*, at our Saviour's Paſſion, happening at the Time of full Moon, when the Sun and Moon are in Oppoſition, was preternatural. See Conjunction, Opposition, &c.

Tho' the New Moon cover the Sun from the Earth, yet is not there an *Eclipſe* every new Moon; by Reaſon the Moon's Way is not preciſely under the Ecliptic, but placed obliquely thereto; only interſecting it twice in every Period. So that *Eclipſes* can only be occaſion'd in ſuch new Moons, as happen in theſe Interſections or *Nodes*, or very near them.

In the *Nodes*, when the Moon has no viſible Latitude, the Occultation is *Total*: and with *ſome Continuance*, when the Diſk of the Moon, in *Perigæo*, appears greater than that of the Sun in *Apogæo*, and its Shadow is extended beyond the Surface of the Earth; and, *without Continuance*, at moderate Diſtances, when the Cuſp, or Point of the Moon's Shadow, barely touches the Earth. Laſtly, out of the Nodes, but near them, the *Eclipſes* are partial.

Further, when the Moon, being in her Apogee, appears much leſs than the Sun; as happens moſt ſenſibly, when he is in *Perigæo*: the Cuſp of the Lunar Shadow not reaching the Earth, ſhe becomes in a Central Conjunction with the Sun, yet not able to cover his Diſk; but lets his whole Limb appear like a lucid Ring or Bracelet: hence called an *Annular Eclipſe*.

The other Circumſtances of *Solar Eclipſes*, are,

1. That none of them are univerſal; that is, none of them are ſeen throughout the whole Hemiſphere, which the Sun is then above; the Moon's Diſk being much too little, and much too near the Earth, to hide the Sun from the Diſk of the Earth, which is fifteen Times bigger than it.

2. Nor does the *Eclipſe* appear the ſame in all Parts of the Earth, where it is ſeen; but when in one Place it is Total, in another it is Partial.

3. It does not happen at the ſame Time, in all Places where it is ſeen; but appears more early to the Weſtern Parts, and later to the Eaſtern.

4. Its Beginning is always on the Weſtern Side the Sun, and on the ſame Side it ends.

5. In moſt *Solar Eclipſes*, the Moon's darken'd Diſk is cover'd with a faint, dawning Light; which is commonly attributed to the Reflexion of the Light, from the illuminated Part of the Earth.

*Laſtly*, In Total *Eclipſes* of the Sun, the Moon's Limb is ſeen ſurrounded by a pale Circle of Light; which the late Aſtronomers take for a manifeſt Indication of a *Lunar* Atmoſphere. See Atmosphere.

*The Aſtronomy of* Eclipses *of the Sun.*

To determine the Bounds of a *Solar Eclipſe*.

If the Moon's Parallax were inſenſible, the Bounds of a *Solar Eclipſe* would be determined after the ſame Manner as thoſe of a *Lunar*: But by Reaſon here is a ſenſible Parallax, we muſt alter our Meaſures a little, *viz.*

1. Add the apparent Semi-diameters of the Luminaries both in *Apogæo* and *Perigæo* together.

2. Since the Parallax diminiſhes the Northern Latitude; to the former Sum, add the greateſt Parallax of Latitude poſſible: And ſince the Parallax augments the Southern Latitude, from the ſame Sum, ſubſtract the greateſt Parallax of Latitude. Thus, in each Caſe, will you have the true Latitude, beyond which there can be no *Eclipſe*.

This Latitude given, the Moon's Diſtance from the Nodes, beyond which *Eclipſes* cannot happen, is found, as already directed for *Lunar Eclipſes*.

As different Authors follow very different Hypotheſes, with Regard to the apparent Diameters of the Luminaries, and the greateſt Parallax of Latitude; they differ much in aſſigning the Bounds at which *Solar Eclipſes* happen. *Ptolomy*, makes the utmoſt Bound of *Eclipſes* at $19°\ 25'$, Diſtance from the Node; *Copernicus*, at $19°\ 12'$; *Tycho*, at $18°\ 25'$; *Kepler*, at $17°\ 16'$; *Ricciolus*, at $18°\ 49'$. Tho' *Ptolomy*, in other Places, judges $16°\ 42'$ Minutes diſtance from the Node, neceſſary; *Copernicus*, $16°\ 25'$; *Tycho*, $17°\ 9'$; *Kepler*, $15°\ 55'$; and *Ricciolus*, $15°\ 58'$.

*To find the Digits Eclipſed.*

Add the apparent Semi-diameters of the Luminaries into one Sum: From which ſubſtract the Moon's apparent Latitude, the Remainder is the Scruples, or Parts of the Diameter *Eclipſed*. Then ſay, as the Semi-diameter of the Sun is to the Scruples *Eclipſed*; ſo are 6 Digits reduced into Scruples, or 360 Scruples, to the Digits *Eclipſed*.

*To find the Scruples of half Duration, or the Line of Immerſion.*

The Method is the ſame as that deliver'd for *Lunar Eclipſes*.

To

*To determine the Duration of a Solar Eclipſe.*

Find the Horary Motion of the Moon from the Sun, for one Hour before the Conjunction, and another Hour after: Then ſay, as the former Horary Motion is to the Seconds in an Hour, ſo are the Scruples of half Duration to the Time of Immerſion: And as the latter Horary Motion is to the ſame Seconds, ſo are the ſame Scruples of half Duration to the Time of Emerſion. Laſtly, adding the Time of Immerſion to that of Emerſion; the Aggregate is Total Duration.

*To determine the Beginning, Middle, and End of a Solar Eclipſe.*

From the Moon's Latitude, for the Time of Conjunction; find the Arch I L, (*Fig.* 35.) or the Diſtance of the greateſt Obſcurity. Then ſay, as the Horary Motion of the Moon from the Sun, before the Conjunction, is to 3600 Seconds of an Hour; ſo is the Diſtance of the greateſt Darkneſs, to the Interval of Time between the greateſt Darkneſs and the Conjunction.

Subſtract this Interval, in the firſt and third Quarter of the Anomoly, from the Time of the Conjunction; and in the other Quarters, add it to the ſame; the Reſult is the Time of the greateſt Darkneſs. Laſtly, from the Time of the greateſt Darkneſs, ſubſtract the Time of Incidence, and add it to the Time of Emerſion; the Difference, in the firſt Caſe, will be the Beginning; and the Sum, in the latter Caſe, the End of the *Eclipſe*.

Indeed, as the Interval between the Conjunction, and the greateſt Obſcurity is very ſmall, and exceedingly precarious; 'tis ſcarce worth while to be ſo very preciſe; and, accordingly, many Authors uſe the Time of the apparent Conjunction for that of the greateſt Darkneſs.

| | | | |
|---|---|---|---|
| *E. gr.* in our Caſe, | | | |
| Time of Conjunction | 21$^h$ | 36′ | 59″ |
| Time of Incidence | 1 | 2 | 36 |
| Beginning of *Eclipſe* | 20 | 34 | 23 |
| Or | 8$^h$ Morn. | 34 | 23 |
| Time of Conjunction | 21 | 36 | 59 |
| Time of Emergence | 1 | 5 | 47 |
| End of *Eclipſe* | 22$^h$ | 42 | 46 |
| Or | 10 Morn. | 42 | 46 |

Or, if you wou'd determine it with more Accuracy, ſubſtract about two Minutes for the Diſtance between the Conjunction ſeen, and the Time of the greateſt Obſcurity.

*To find the Moon's apparent Latitude at the Beginning and End of an Eclipſe.*

From the Argument of the Moon's Latitude, computed for the Time of the apparent Conjunction, Subſtract the Scruples of half Duration, together with the Motion of the Sun, anſwering to the Time of Incidence: The Remainder, is the Argument of Latitude, at the Beginning of the *Eclipſe*.

To the ſame Sum add the ſame Scruples, together with the Sun's Motion anſwering to the Time of Emergence: The Aggregate is the Argument of Latitude, at the End of the *Eclipſe*. The Argument of the Latitude given; the Moon's true Latitude is found after the common Manner. (See LATITUDE.) And from the true Latitude, the apparent one.

*The apparent Latitude of the Moon, at the Beginning and End of a Solar Eclipſe, given; to draw a Type or Figure thereof.*

This is perform'd, as already taught for *Eclipſes* of the Moon.

*To calculate an* ECLIPSE *of the Sun.*

1. Find the mean New Moon, and thence the true one; together with the Place of the Luminaries for the apparent Time of the true one.

2. For the apparent Time of the true new Moon, compute the apparent Time of the new Moon obſerved.

3. For the apparent Time of the new Moon ſeen, compute the Latitude ſeen.

4. Thence, determine the Digits *Eclipſed*.

5. Find the Time of the greateſt Darkneſs, Immerſion, and Emerſion.

6. Thence determine the Beginning, and Ending of the *Eclipſe*.

From the preceding Problems, it is evident, that all the Trouble, and Fatigue of the Calculus, ariſes from the Parallaxes of Longitude and Latitude; without which, the Calculation of *Solar Eclipſes* would be the ſame with that of *Lunar* ones.

ECLIPSES *of the Satellites.* See SATELLITES *of Jupiter.*

The chief Circumſtances here obſerved are,

1. That the Satellites of *Jupiter* undergo two or three Kinds of *Eclipſes*; whereof, the firſt are proper, being ſuch as happen when *Jupiter*'s Body is directly interpoſed between them and the Sun: Theſe happen almoſt every Day. Mr. *Flamſteed* and *Caſſini*, give us Tables, wherein their Immerſions into *Jupiter*'s Shadow, and Emerſions again, are computed to Hours and Minutes.

The 2d are Occultations, rather than Obſcurations; wherein the ſame Satellites, coming too near to *Jupiter*'s Body, are loſt in his Light: Which *Ricciolus* calls *occidere Zeuſiace*, ſetting Jovially. In which Caſe, *Jupiters* neareſt Satellite exhibits a third Kind of *Eclipſe*; being obſerved like a Macula, or dark round Spot, tranſiting *Jupiter*'s Diſk, with a Motion contrary to that of the Satellite: Juſt as the Moon's Shadow projected on the Earth, will appear to do, to the Lunar Inhabitants.

The *Eclipſes* of *Jupiter*'s Satellites furniſh the beſt Means of finding the Longitude at Sea. Thoſe, particularly, of the firſt Satellite, are much ſurer than the *Eclipſes* of the Moon; and withal happen much oftener: Beſide that, the Manner of applying them is very eaſie. See LONGITUDE.

ECLIPTIC, *Eclipticus*, ſomething belonging to *Eclipſes*. See ECLIPSE.

All new and full Moons are not *Ecliptic*, i. e. Eclipſes don't happen every new and full Moon, tho' there be then an Interpoſition, either of the Earth between the Sun and Moon, or of the Moon between the Sun and Earth. The Reaſon is, that the Interpoſition is only as to Longitude, and not as to Latitude. The Sun is always in the *Ecliptic*, but the Moon is not; ſhe deviates from it about five Degrees, ſometimes on the North Side, and ſometimes on the South. But every five Months, or thereabouts, ſhe cuts the *Ecliptic*; and 'tis only about thoſe Times, that there can be Eclipſes either of the Moon or Sun.

The Places, wherein ſhe cuts the *Ecliptic*, are called the *Nodes* of the Moon. See NODES.

ECLIPTIC *Bounds*, or *Terms*, *Termini Ecliptici*; is the Space of about 15 Degrees from the Nodes of the *Ecliptic*; within which, if the Moon be, at the Time of a Conjunction or Oppoſition with the Sun, there may be an *Eclipſe* of the Sun, or Moon, tho' ſhe be not preciſely in the Nodes. See ECLIPSE.

ECLIPTIC Digits, *Digiti Ecliptici*. See DIGITS.

ECLIPTIC, in Aſtronomy, is particularly uſed for a Line, or Circle, on the Surface of the Sphere of the World, under which the Centre of the Sun proceeds in its proper Motion: Or a Line, with the Sun's Centre, deſcribes in his annual Progreſs. See CIRCLE, SUN, *&c.*

It has its Name *Ecliptic*, by Reaſon all Eclipſes happen when the two Planets are in or near the Nodes, or Interſections of the *Ecliptic*. See ECLIPSE.

It is alſo called the *Sun's Orbit*, and *Sun's Way*, by Reaſon the Sun never deviates from it, in his annual Motion from Eaſt to Weſt. See ORBIT.

The North, or aſcending Node of the *Ecliptic*, is called the *Dragons-Head*, and the South, or deſcending Node, the *Dragons-Tail*. See DRAGON, *&c.*

The *Ecliptic* is placed obliquely with Reſpect to the Equator, and cuts it in two Points, *viz.* the Beginnings of *Aries* and *Libra*, or into two equal Parts; and, accordingly, we find the Sun twice every Year in the Equator: And all the reſt of the Year, either on the North or South Side thereof. See EQUINOCTIAL.

The *Ecliptic* is a great Circle of the Sphere, biſſected by the Horizon; conſequently, the Arch of the *Ecliptic*, intercepted between the Horizon and the Meridian, is a Quadrant. And again, the *Solſtitial Points* of the *Ecliptic*, i. e. thoſe moſt remote from the Equator, are a Quadrant diſtant from the Equinoctial ones. Laſtly, as the greateſt Declination of the *Ecliptic*, from the Equator, is an Arch of a great Circle diſtant by a Quadrant from the Equinoctial Points; it will be the Meaſure, or Quantity of the *Obliquity of the Ecliptic*, i. e. of the Angle form'd by the Interſection of the Equator with the *Ecliptic*. See SPHERE.

*The Obliquity of the Ecliptic*, or the Angle wherein it cuts the Equator, is uſually fix'd at 23° 30′; which, therefore, is the greateſt Declination of the *Ecliptic* from the Equator: The Points of which greateſt Declination on each Side, are called the *Solſtitial Points*; thro' which are drawn the two Tropicks. See SOLSTITIAL and TROPIC.

The Method of obſerving the greateſt Declination of the *Ecliptic* is thus: About the Time of one of the Solſtices obſerve the Sun's Meridian Altitude with the utmoſt Care, for ſeveral Days ſucceſſively: From the greateſt Altitude obſerv'd, ſubſtract the Height of the Equator. The Remainder is the greateſt Declination in the Solſtitial Point.

*Ricciolus*, e. gr. at *Boulogne*, in the Year 1646, obſerved the Sun's Meridian Altitude, on the 20th of *June*, to

be

be 68° 59′ 55″; on the 21ſt, 69° 0′ 10″; and on the 22d, 68° 59 55″. The greateſt then was, 69° 0′ 10″; from which the Height of the Equator 45° 29′ 50″, being ſubſtracted, left 23° 30′ 20″ for the greateſt Declination.

It has been Matter of great Diſpute among the late Aſtronomers, whether the *Obliquity of the Ecliptic* be fix'd or moveable.

'Tis certain, the Obſervations of the antient Aſtronomers repreſent it conſiderably greater, than thoſe of the Moderns: Whence *Purbachius*, *Reinholdus*, *Regiomontanus*, *Copernicus*, *Rheticus*, *Longomontanus*, *Tycho*, *Snellius*, *Lanſbergius*, *Bullialdus*, and others, have concluded it variable.

To determine the Point, the Obſervations of the Aſtronomers of all Ages, have been collected together; the chief of which are: That of *Pytheas*, in the Year before Chriſt 324, which makes it 23° 52′ 41″: That of *Eratoſthenes*, in 230, 23° 51′ 20″: And that of *Hipparchus*, in the Year before Chriſt 140, 23° 51′ 20″: That of *Ptolomy*, in the Year after Chriſt 140, 23° 51′ 20″: Of *Albategnius* in 880, 23° 25′: *Regiomontanus*, in 1460, 23° 30′: *Waltherus*, in 1476, 23° 30′: *Copernicus*, in 1525, 23° 28′ 24″: *Rothmannus* and *Byrgius*, in 1570, 23° 30′ 20″: *Tycho*, in 1587, 23° 30′ 22″: *Kepler*, in 1627, 23° 30′ 30″: *Gaſſendus*, in 1636, 23° 31′: *Ricciolus*, in 1646, 23° 30′ 20″: *Hevelius*, 23° 30′ 20″: *Mouton*, 23° 30′: And *De la Hire*, in 1702, 23° 29′.

Upon the whole, tho' the oldeſt Obſervations make the Obliquity the greateſt, yet it appears to be immutable: For it was by Miſtake that *Eratoſthenes* concluded, from his Obſervations, the greateſt Declination to be 23° 51′ 20″: From the ſame Obſervations he ſhould only have made it 23° 31′ 5″; as is ſhewn by *Ricciolus*. And the like overſight has been found by *Gaſſendus* and *Peireſcius* in the Obſervations of *Pythias*; which Miſtakes of *Eratoſthenes* and *Pythias* were retain'd by *Hipparchus* and *Ptolomy*: And gave Occaſion to the forementioned Authors to conclude that the Obliquity was continually decreaſing.

Yet Monſ. *le Chevalier de Louville*, who has conſider'd the Merits of the Cauſe with infinite Attention, is of another Sentiment: The Reſult of his Reſearches, he gives us in the Memoirs of the Royal Academy, for the Year 1717, *viz.* that the Obliquity of the *Ecliptic* diminiſhes at the Rate of a Minute in 100 Years. The Antients, we know, had no Regard to any Refractions in their Obſervations: And beſides, made the Sun's Horizontal Parallax 3′; whereas the modern Aſtronomers ſcarce make it 10″. Theſe two Inaccuracies have a very ill Effect on their Obſervations; which M. *de Louville* is obliged to free them of, e're he can build on them.

According to an antient Tradition of the *Egyptians*, mention'd by *Herodotus*, the *Ecliptic* had antiently been perpendicular to the Equator: This Notion they were led into, by obſerving, for a long Series of Years, that the Obliquity was continually diminiſhing; or which amounts to the ſame, that the *Ecliptic* was continually approaching to the Equator. For hence they took Occaſion to ſuſpect that thoſe two Circles, in the Beginning, had been as far off each other as poſſible. *Diod. Siculus* relates, that the *Chaldeans* reckon'd 403000 Years from their firſt Obſervations to the Time of *Alexander*'s entring *Babylon*. This enormous Account, may have ſome Foundation, ſuppoſing the *Chaldeans* to have built on the Diminution of the Obliquity of the *Ecliptic* of a Minute in 100 Years. M. *de Louville*, taking the Obliquity ſuch as it muſt have been at the Time of *Alexander*'s Entrance into *Babylon*, and going back to the Time when the *Ecliptic*, at that Rate, muſt have been perpendicular to the Equator, actually finds 402942 *Egyptian*, or *Chaldean* Years, which is only 58 Years ſhort of the former *Epocha*. In the general, there is no Way of accounting for the fabulous Antiquity of the *Egyptians*, *Chaldeans*, &c. ſo probable, as by long Periods of very ſlow Cœleſtial Motions, whereof they had obſerved a little Part, and thence calculated the Beginning of the Period; making the World and their own Nation to commence together. If M. *de Louvilles* Syſtem be true, in 140000 Years more, the *Ecliptic* and Equator muſt coincide and mix in one.

The *Ecliptic* is divided into twelve Parts, called *Signs*. See SIGN.

ECLIPTIC, in Geography, &c. is a great Circle of the Globe, cutting the Equator under an Angle of 23° 29′. See GLOBE.

The *Terreſtrial Ecliptic*, therefore, is in the Plane of the *Cœleſtial Ecliptic*; Like which it has its *Equinoctial* and *Solſtitial* Points, and is bounded by *Tropicks*. See EQUATOR, SOLSTITIAL, EQUINOCTIAL, TROPIC, &c.

ECLOGUE, in Poetry, a Kind of paſtoral Compoſition, wherein Shepherds are introduced converſing together. See PASTORAL.

The *Eclogue* is properly an Image of the Paſtoral Life: Nor do we ſee what Fineſſe it was that determined *Sannazarius* to put Fiſhermen in lieu of Shepherds, who had been Time out of Mind in Poſſeſſion of the *Eclogue*.

The Beauty of the *Eclogue*, Monſ. *Fontenelle* obſerves, is not attach'd to Rural Things, but rather to what is calm and eaſy in the Country Life. Shepherds being agreeable Perſonages, the Poets abuſe them; and provided they do but talk a little about Reeds, and Herbage, they conclude on Courſe 'tis an *Eclogue*.

There are *Eclogues* in *Theocritus* of a lofty Character; and *Virgil* has ſome in the ſublime Style. The *Eclogue*, therefore, occaſionally raiſes its Voice. Yet M. *Fontenelle* eſteems it a Fault in ſome modern Poets, to have put Matters of high Concern in their *Eclogues*; and to have made their Shepherds ſing the Praiſes of Kings and Heroes. *Ronſard*, in particular, has made himſelf ridiculous, by making the Eloge of *Budeus* and *Vatable* in his firſt *Eclogue*, by the Shepherd *Margot*. Such Folks ſhould have been above the Knowledge of ſimple *Margot*.

The Sentiments, whereof *Eclogues* conſiſt, the ſame Author obſerves, ſhould be finer and more delicate than thoſe of real Shepherds: Only, their Form ſhould be as ſimple, and Country-like as can be. But this Simplicity excludes none but glaring and exceſſive Ornaments.

Since the Eſtabliſhment of the Academy, or Aſſembly of *Arcadians* at *Rome*, about the Year 1690; the Taſt for *Eclogues* has been greatly improved among the *Italians*. Thoſe Gentlemen, who are the Flower of the Wits of *Italy*, take the Name of the Shepherds of *Arcadia*; and will not allow their Aſſembly to be treated as an Academy. They have each of them a poetical Name, which is always that of ſome Shepherd; and apply themſelves particularly to *Eclogues*, as Pieces moſt proper to their Profeſſion.

The learned *Sig. Creſcentini*, one of the Founders of the Aſſembly, who had long been Cuſtos, *i. e.* the Preſident thereof, and bore the Name of *Alpheſibæo Cario*, has wrote the Laws and Eſtabliſhment of the Society, with the Names of all who had been admitted thereof, at the End of his Book, entitled, *la Bellezza de la Volgar Poeſie*.

The Word *Eclogue*, is form'd from the *Greek* ἐκλογή, *Choice*. According to the Etymology of the Word, therefore, *Eclogue* ſhould be no more than a choice Piece; but Cuſtom has determined it to a farther Signification, *viz.* a little, elegant Compoſition in a ſimple, natural Style and Manner.

*Idyll* and *Eclogue*, in their primary Intention, are the ſame Thing: Thus, the *Idylls*, εἰδύλλια of *Theocritus*, are Pieces wrote perfectly in the ſame Vein with the *Eclogæ* of *Virgil*.

But Cuſtom has made a Difference between them, and affected the Name *Eclogue*, to Pieces wherein Shepherds are introduced ſpeaking; *Idyll*, to thoſe wrote like the *Eclogue*, in a ſimple, natural Style, but without any Shepherds in them. See IDYLL.

Some imagine the Name *Eclogue*, to have been originally attributed to ſuch Poems, as were wrote in Imitation of others; ſuch as the *Eclogues* of *Virgil*, which are only Imitations of *Theocritus*.

Others are of Opinion, the Word was firſt form'd from αἴξ αἰγός, *Goat*, and λογός, *Diſcourſe*, q. d. a Converſation or *Diſcourſe* of *Goats*, or *Goat-herds*. But *Fa. Ruæus*, in his Comments on *Virgil*, thinks, they would then have made it Αἰγολογία, *Ægology*, rather than *Eclogue*; or, at leaſt, the Word would have been wrote in *Greek* by αι, and in *Latin* by æ, not e.

*Barthius* advances another Opinion, *viz.* that the Name *Eclogue*, was given to all Poetical Compoſitions that were of a moderate Length, tho' too ſhort to give them the Name of *Books*; and hence it is, that *Statius*, in the Epiſtle at the Head of the IIId Book of his *Sylvæ*, and in the Preface to his fourth Book, calls his Poems *Eclogues*; tho' he had not call'd them ſo in the Title.

*Auſonius*, in the Preface to his *Cupid crucified*, calls alſo his *Idylls*, *Eclogues*. Add, that *Crucius*, in his Comment on *Horace*, declares to have ſeen very antient Manuſcripts, wherein the Satyrs of the Poet are called *Eclogues*; in which he is ſeconded by our learned Countryman Mr. *Baxter*.

ECLOGUE, is alſo applied to other Compoſitions beſide thoſe of Poetry.

Thus, we ſometimes read of the *Eclogues* of *Diodorus*, of *Polybius*, of *Cteſius*, *Theophraſtus*, *Strabo*, &c. In which Senſe it only ſignifies *Extract*, or *Collection*; whence the Name.

ECLOGARIUS, *Eclogary*, a learned Man, who has made Abundance of Extracts from Authors. *Juſtus Lipſius*, the Jeſuite *Petavius*, *Voſſius*, *Selden*, and *Grotius*, muſt have been great *Eclogaries*.

ECPHORA, *Projecture*, in Architecture, is uſually the Line, or Diſtance, between the Extremity of a Member, or Moulding, and the Naked of the Column, or other Part it projects from.

Some Authors, however, account the *Ecphora* from the Axis of the Column; and define it to be the right Line intercepted between the Axis, and the outermoſt Surface of a Member or Moulding. See PROJECTURE.

ECPHRACTICKS, in Medicine, ſuch Remedies as have a Faculty of opening, and unſtopping the Veſſels, through which the Humours are to paſs: Or which incide, and attenuate tough, viſcid Humours, and thereby promote their Diſcharge. The ſame with APPERIENTS and DEOBSTRUENTS.

The chief ſimple *Ecphracticks*, are the little *Centaureum*, *Wormwood*, *Agremony*, *Hyſſop*, *Chamædris*, Bark of *Tamariſk*, Roots of *Capers*, *Scolopendrium*, &c.

The Word is form'd from the *Greek* εκφραττειν, *to free from Obſtruction*; of εκ and φραττω, *obſtruo*, *ſepio*.

ECPIESMA, in Chirurgery, a Kind of Fracture of the Skull, &c. wherein there are ſeveral Splinters, that preſs and diſorder the inner Membranes. See FRACTURE.

The Word is pure *Greek*, εκπιεσμα.

ECTHESIS, in Church Hiſtory, a Name the Emperor *Heraclius* gave to a Confeſſion of Faith publiſh'd by him in 639. See FAITH.

The *Ectheſis* favour'd the Error of the *Monothelites*; and eſtabliſh'd only one Will in *Jeſus Chriſt*. *Heraclius* publiſh'd it at the Inſtigation of *Athanaſius*, Chief of the *Jacobites*, *Cyrus*, Patriarch of *Alexandria*, and *Sergius*, Patriarch of *Conſtantinople*: But finding that the *Roman* Church eſteem'd it Heretical, he diſown'd it, and declared by another Edict, which he ſpread throughout the Eaſt and Weſt, that *Sergius* was the Author of the *Ectheſis*.

The Word is *Greek*, εκθεσις, and ſignifies *Expoſition*.

ECTHLIPSIS, *Elliſion*, in Grammar, a Figure whereby an *m* is retrench'd, or cut off, at the End of a Word; for the Sake of the Meaſure of the Verſe. See FIGURE.

The Word is *Greek*, εκθλιψις, which ſignifies *Eliſion*.

Thus, in *multum ille*, &c. In ſcanning the Verſe, we drop the *m*, at the End of *multum*, and only make three Syllables in the two Words.

Some account the *Ecthlipſis*, a Poetical Licence in the *Latin* Verſification: But, in Reality, the *Elliſion* of an *m* final, when the following Word, in the ſame Verſe, begins with a Vowel, is of Neceſſity, not of Licence.

Antiently, the *s* was likewiſe retrenched before a Conſonant; as *facundu ſuoque*, for *facundus*, &c. In Effect, the *m* and *s*, were peculiarly rough and harſh in the *Latin* Pronunciation; as appears from *Quintilian*. And 'twas this led the Poets to retrench them at the Ends of their Words; as the like Cauſe did the *French*, to drop their *e* Feminine before a Word, beginning with a Vowel, and us to avoid a Hiatus, or Concourſe of Vowels.

ECTHYMOSIS, in Medicine, a vehement Agitation and Dilatation of the Blood; ſuch as happens in extraordinary Emotions of Joy.

The Word is form'd of ἐκ *ex*, and θύμος, *Animus*, *Mind*.

ECTROPIUM, in Medicine, a Diſeaſe of the Eyes, conſiſting in a Sort of Inverſion of the lower Eye-lid, which diſables it from covering its Part of the Eye. See PALPEBRÆ.

The Word is *Greek*, εκτροπιον.

ECTYLOTICKS, Remedies proper to conſume, and eat off Callus's, Warts, and other Excreſcences, form'd on the Fleſh. See CALLUS, &c.

The Word is form'd of ἐκ and τυλος, *Callus*.

ECTYPE, ECTYPUS, among Medalliſts, an Impreſſion of a Seal, Ring, or Medal; or a figured Copy of an Inſcription, or other ancient Monument.

In the Books of Travels, we find Abundance of *Ectypes* of antient Inſcriptions, of the *Trajan* Column, of *Chilminar*, &c.

The Word is *Greek* αρχετυπον, is the Original, or Model, εντυπον, the Copy, or Image, moulded or ſtruck in *Creux*: And ἔκτυπον, *Ectypon*, the Image *in relievo*, or emboſs'd. See TYPE.

ECU, the *French* Crown. See CROWN.

ECUSSON, in Heraldry, an Ineſcutcheon, or little Eſcutcheon. See ESCUTCHEON.

EDDISH, or EADISH, is the latter Paſture, or Graſs, that comes after mowing, or reaping; and is otherwiſe called *Eagraſs*, *Earſh*, and *Etch*.

EDDY, in Natural Hiſtory, is when the Water, at any Place, runs back, contrary to the Tide, or Stream, and ſo falls into the Current again.

The Sea-men call that *Eddy-Water* which falls back, as it were, on the Rudder of a Ship under Sail, the *Dead Water*. An *Eddy Wind*, is that which returns, or is beat back from any Sail, &c.

EDGINGS, in Gardening, Rows of Shrubs, or Plants, placed by Way of Borders, around Beds, Compartiments, &c.

For the *Edgings* of Compartiments, Box ſeems the moſt proper. But they are frequently made of Aromatic Plants, as Sage, Sweet Marjoram, Thyme, Lavender, Hyſſop, &c.

EDHILING, *Edhilingus*, an ancient Name of the Nobleſſe among the *Anglo-Saxons*.

The *Saxon* Nation, ſays *Nithard*, *Hiſt. L.* IV. is divided into three Orders, or Claſſes of People; the *Edilingi*, the *Frilingi*, and the *Lazzi*: Which ſignifie the Nobility, the Freemen, and the Vaſſals or Slaves.

Inſtead of *Edhiling*, we ſometimes meet with *Adeling*; which Appellation is likewiſe given to the King's Son, and the preſumptive Heir of the Crown.

EDICT, an Inſtrument ſign'd and ſeal'd by a Prince, to ſerve as a Law to his Subjects. See LAW.

*Edicts* have no Room in *England*, where the enacting of Laws is not lodg'd in the King, but in the Parliament.

In the *Roman* Law, we find frequent mention of the *Edict of the Prætor*, *quod Prætor edixit*, which was a Phraſe conſecrated to the Ordinances of the Prætor; tho' it was uſed on other Occaſions. See PRÆTOR.

In the *French* Law, Edicts, *Edits*, make a great Figure: They are of various Kinds; ſome importing a new Law, or Regulation, as the *Edict* of Duels, of ſecond Marriages, &c. Others the Erection of new Offices, Eſtabliſhments of Duties, Rents, &c. Sometimes Articles of Pacification, as the *Edict* of *Nantz*, &c.

*Edicts* are all ſeal'd with green Wax, to ſhew that they are perpetual and irrevocable.

*Edicts* with them, are much the ſame as Proclamations with us; but with this Difference, that the former hath ſolely the Authority of a Law in it ſelf, from the Power iſſuing it forth; whereas the latter is only the Declaration of a Law, to which it refers, and hath no Power in it ſelf.

EDIFICE, a *Building*. See BUILDING.

The Word is form'd of the *Latin*, *Ædes*.

EDILE, or ÆDILE, ÆDILIS, in Antiquity, a *Roman* Officer, whoſe Function came near to that of our Mayors.

The *Ædiles* had the Care and Superintendence of public and private Buildings, of Baths, Aquæducts, Roads, Bridges, Cauſeways, &c. The Weights, and Meaſures, were likewiſe under their Direction.

They fix'd the Rates of Proviſions, and took Care the People were not exacted on therein. The Inquiry and Cognizance of Debauches, and Diſorders in public Houſes, likewiſe belong'd to them: They were to reviſe Comedies; and it belong'd to them to treat the People with grand Games and Spectacles at their own Expence.

All theſe Functions, which render'd the *Edility* ſo conderable, belong'd at firſt to the *Ediles* of the People, *Ædiles Plebeii*, or *Minores*. Theſe were only two in Number; and were firſt created in the ſame Year as the Tribunes: For the Tribunes, finding themſelves oppreſs'd with the Multiplicity of Affairs, demanded of the Senate to have Officers, whereon they might diſcharge themſelves of Affairs of leſs Importance; and, accordingly, two *Ediles* were created. And hence it was, that the *Ediles* were elected every Year, at the ſame Aſſembly as the Tribunes. See TRIBUNE.

But theſe *Plebeian Ediles*, having refuſed, on a ſignal Occaſion, to treat the People with Shews; as pleading themſelves unable to ſupport the Expence thereof: The *Patricians* made an Offer to do it, provided they would admit them to the Honours of the *Edility*.

On this Occaſion, there were two new *Ediles* created, of the Number of the *Patricians*, in the Year of *Rome* 388. They were called *Ædiles Curules*, or *Majores*, as having a right to ſit on a *Curule* Chair, enrich'd with Ivory, when they gave Audience; whereas the *Plebeian Ediles*, only ſat on Benches. See CURULE.

Beſide that the *Curule Ediles* ſhared all the ordinary Functions with the *Plebeians*, their chief Employ was, to procure the Celebration of the grand *Roman* Games, and to exhibit Comedies, Shews of Gladiators, &c. to the People.

To eaſe theſe four firſt *Ediles*, *Cæſar* created a new Kind, called *Ediles Cereales*, as being deputed chiefly to take Care of Corns, which were called *Dona Cereris*; for the Heathens honour'd *Ceres* as the Goddeſs who preſided over Corn, and attributed to her the Invention of Agriculture. Theſe *Ædiles Cereales*, were alſo taken out of the Order of *Patricians*.

In the Municipal Cities there were *Ediles*, with the ſame Authority as at *Rome*.

The Word is form'd of *Ædes*, on Account of their having the Care of Temples, Houſes, &c.

EDITOR, in the Common-wealth of Learning, a Perſon who takes the Care of publiſhing the Work of another Author;

Author; uſually, of an antient Author: For *Editor* is neither properly applied to a working Printer, nor to an Author who prints his own Works.

*Eraſmus*, was a mighty *Editor* of antient Writings. The *Lovain* Doctors, *Scaliger*, *Petavius*, *Fa. Sirmond*, Biſhop *Walton*, Mr. *Hearn*, &c. are learned *Editors*.

EDUCATION, the Art of bringing up, forming, and inſtructing Children.

The Follies of a too delicate *Education*, are well expreſs'd in that Deviſe of an Ape, which by over careſſing and hugging its young ones, ſtrangles them; with the Motto, *Complectendo necat*.

*Octavius Ferrarius*, has a very good *Latin* Treatiſe on the Subject of *Education*, entitled *Chiron*; the Name of the Centaur who was *Achilles*'s Tutor.

Mr. *Lock*'s excellent Treatiſe of *Education*, is known to every Body. *Quintillian* employs the ſecond Chapter of his firſt Book, in enquiring whether a Domeſtic, or a College *Education*, be preferable, *i. e.* whether it be better to bring up ones Children at Home, or to ſend them to the Colleges, and public Schools. After urging all that can be ſaid on either Side, he concludes for a College, or School *Education*.

EDULCORATION, in Pharmacy, is the *dulcifying*, or *ſweetening* of any Remedy, by Means of Sugar, or Syrups. See DULCIFYING.

EDULCORATION, in Chymiſtry, is the *ſweetening*, or purging any Thing of its Salts, *&c.* by repeated Lotions, or Waſhings in cold Water: *E. gr.* the freeing of Precipitates of Mercury, Metals, *&c.* of the ſharp Salts by Means whereof they had been diſſolved; or which had been mingled with them, to effect a Diſſolution. See ABLUTION.

EFFARE, or EFFRAYE, in Heraldry, a Term applied to a Beaſt, when rearing on its hind Legs, as if it were affrighted.

EFFECT, the Reſult, or Conſequence, of the Application of a Cauſe, or Agent, on ſome Subject. See CAUSE.

'Tis one of the great Axioms of Philoſophy, that *Effectus pleni*, whole or adequate *Effects*, are always proportionable to the Powers of their Cauſes.

The Term is alſo of ſomewhat further Import in the Arts: As when we ſay, in Painting and Architecture, that ſuch a Contraſt, or ſuch a Drapery, or ſuch an Attitude, have a *fine*, or an *ill Effect*, i. e. are beautiful, or noble, *&c.* Too many Breaks, and little Enrichments in a Building, have a pitiful *Effect*, i. e. give it a mean Aſpect.

In the Manage, *Effect* is applied to the Motions of the Hand, which direct the Horſe.

They diſtinguiſh four *Effects* of the Hand, *viz.* in uſing the Bridle to put a Horſe forwards, draw him backwards, and ſhifting it out of the right Hand into the left, or *vice verſa*.

EFFECTS, in Commerce, *&c.* are the Goods poſſeſs'd by any Perſon, whether moveable or immoveable: particularly thoſe which Merchants and Dealers, acquire by Trade. The *Effects* of Merchants are uſually diſtinguiſhed into three Claſſes, good, bad and doubtful. By an Ordonnance of the *French* Court in 1673, every Merchant is obliged to take an Inventory, or Review, every Year, of all his *Effects* of all Kinds.

EFFECTIONS, in Geometry, the Geometrical Conſtructions of Propoſitions. See CONSTRUCTION.

The Term is alſo uſed in Reference to Problems and Practices; which when they are deducible from, or founded upon, ſome general Propoſitions, are called the *Geometrical Effections* thereto belonging.

EFFERVESCENCE, is popularly uſed for a light *Ebullition*, or a ſtrong inteſtine Motion, produced in a Liquor, by the firſt Action of Heat, without any notable Separation of its Parts. See EBULLITION.

Such a Liquor muſt be heated to a ſlight *Effervescence*.

EFFERVESCENCE, in Phyſicks, Chymiſtry, &c. is not applied to any Ebullitions, or Motions produced by Fire; but only to thoſe reſulting from the Mixture of Bodies of different Natures, which by their acting on one another, occaſion a Heat, or at leaſt an Agitation of Parts, reſembling the Ebullition, or boiling produced by Fire.

Acids mix'd with Alkalies, *e. gr.* Oil of Tartar, and Spirit of Vitriol, produce an *Effervescence*, &c.

*Chawvin* defines *Effervescence* more ſcientifically, to be a violent Expulſion of the Air, out of the Pores of the Particles of one Body, by the Intruſion of the Particles of another Body mix'd therewith, into thoſe Pores before poſſeſs'd by Air.

In Order for *Effervescence* to take Place, the Particles of the latter Body muſt be ſuppoſed conformable, both in Bulk and Figure, to the Pores of the other; ſo as they may enter, and fill the ſame, like Wedges: And beſide, a ſtrong Degree of Attraction between the Particles of the two Bodies, ſtronger than the Attraction, or Force of Coheſion, between the Particles of either of the Bodies alone. See ATTRACTION.

Hence it ſhould ſeem, that *Effervescence* only differs from Fermentation, in the Degree of Exploſion; which in *Effervescences*, by Reaſon of the greater Purity and Freedom of the Acid and Alkali, is greater than in Fermentations. See FERMENTATION.

Of *Effervescences*, ſome are *hot*, and others *cold*. Of the firſt Kind, are thoſe produced by the Mixture of Oil of Tartar *per deliquium*, with Spirit of Vitriol; Quicklime with cold Water; all acid Spirits, with alcaline, or earthy Bodies; *Aqua fortis*, Spirit of Vitriol, Spirit of Nitre, *Aqua Regia*, &c. with all Metallic Bodies, Marcaſites and Minerals; Coral, with Lemon, or Orange Juice; Marble with Spirit of Salt; Hartſhorn, Chalk, Boars Tooth, Crabs Eyes, Mother of Pearl, and all Shells with Acids. In all which, the *Effervescences* are attended with a pretty intenſe Heat. Oil of Vitriol, and Oil of Turpentine, particularly, mix'd together, produce ſuch a vehement Heat, that unleſs they be mix'd Drop by Drop, they are apt to burſt forth into Flame, and break the Vial.

On the contrary, Silver-filings being diſſolved in Spirit of Nitre, produce a cold *Effervescence*, which, inſtead of Heating, cools the Glaſs, ſo as to render it painful to the Senſe of feeling.

This different Effect is aſcribed to this, that in the former Caſe, the mix'd Bodies, one or both of them, abound with Sulphur; but not in the latter. Not but ſome attribute the Heat, uſual in *Effervescences*, to the vehement Friction, and Colliſion of the Particles againſt each other.

Powder'd Coral, mix'd with diſtill'd Vinegar, produces a cold *Effervescence*, which the ſame Philoſophers account for hence, that the Pores of the Coral being very great, it may be eaſily diſſolved in the acid Spirit, without any great Friction, or Colliſion of the Parts, ſuch as would be neceſſary to generate any conſiderate Heat.

An *Effervescence* may alſo be produced by the Mixture of two cold Liquors. See DISSOLUTION.

EFFICACIOUS, EFFECTUAL, in Theology. Within theſe 150 Years there have been very great Diſputes on the the Subject of *Efficacious Grace*. Grace is uſually divided into ſufficient and *Efficacious*; tho' the *Janſeniſts* hold, that there is no Grace ſufficient, but what is *Efficacious*, i. e. but what effectually determines the Will to act. See SUFFICIENT.

*Efficacious Grace*, is defined to be that which enlightens the Mind, and touches the Heart, in ſuch Manner, as always to produce its Effect, however it be oppoſed, or reſiſted by the Will. See GRACE.

Some Divines maintain that *Efficacious Grace* is *Efficacious* of it ſelf. *Efficacious Grace of it ſelf*, if there be any ſuch Thing, is that which produces its Effect merely of it ſelf, and not in Vertue of any Conſent of the Will. *Calvin*, is the firſt that ever uſed the Term *Gratia Efficax per ſe*, Grace *Efficacious* of it ſelf.

A late Divine holds the *Efficacy* of Grace in it ſelf to conſiſt in this, that *Efficacious* Grace is always joyn'd with a Moral Neceſſity of doing the Thing it inclines to; and ſufficient Grace, joyn'd with a moral Impotence of doing it. See SUFFICIENT.

The *Armenian* and *Popiſh* Way of conceiving the Neceſſity of *Efficacious* Grace, is to hold that this Grace is never wanting, at leaſt to the Righteous, except thro' their own Default; that they always ſtand in Need of other inner Graces, truly and properly ſufficient, in Order to draw down this *Efficacious* Grace; and that they do infallibly draw it down, when it is not rejected, tho' they often remain without Effect, thro' a Reſiſtance, inſtead of a Conſent thereto.

*Fa. Malebranch* maintains, that the mutual Commerce between Soul and Body, *i. e.* Life, has no other *Vinculum*, or Principle, but the *Efficacy* of God's Decrees: That ſecond Cauſes have no proper *Efficacy*, *&c.* See SECOND *Cauſe*.

EFFICIENT, in Philoſophy. An *Efficient Cauſe* is that which produces an *Effect*. See CAUSE and EFFECT.

Philoſophers uſually diſtinguiſh four Kinds of Cauſes in Nature: The *Efficient*, a *final*, a *formal*, and a *material*. See each under its proper Article.

The School Philoſophers are exceedingly divided as to the Nature and Eſſence of an *Efficient Cauſe*.

*Ariſtotle* defines an *Efficient* to be, *id unde, that from which*: Or, *the firſt Principle of Change and Reſt*, i. e. of Production and Conſervation: The *Efficient*, called *id unde*, that from which; as the End or final Cauſe, is that proper, *quod*, for which; the Exemplar, *ad quod*, that to which; the Matter, *ex quo*, that of which; and the Form, *per quod*, that by which. And it is call'd the firſt Principle, not in Reſpect of Priority of Time, for the End exerts its Cauſality before the *Efficient*, but of

Dig-

Dignity: The *Efficient* being the Physically active Principle; and the End only acting objectively.

Others of the Shoolmen define *Efficient* to be *Principium per se influens in aliud sine Mutatione sui* —. The *Ramists*, after *Plato* and *Cicero*, define an *Efficient* to be that, *a qua res est*, from which a Thing is: To which a great Author, objecting that a Thing may also be from its End; adds, that an *Efficient* is that, *a qua res vera causalitate proficiscitur*.

Others define *Efficient* to be, *quæ per Actionem causat*, that which causes by acting: For to effect, every Body knows, is to act; and hence, neither a Procatarctic, nor an Exemplary Cause, are properly *Efficients*, tho' usually rank'd among the same.

*Lastly*, others define an *Efficient* to be a Cause, *a qua aliud producatur*, from which something is produced; Consequently, what arises from such a Cause, is called an *Effect*: And thus God is the *Efficient* Cause of the World; and the World the *Effect* of God. To which Definition of an *Efficient*, all the former Definitions are reducible.

An *Efficient* Cause then, is either *Physical*, as Fire is the *Efficient* Cause of Heat; or *Moral*, as an Adviser is the Cause of a Murther: Or *Universal*, which in various Circumstances produce various Effects, as God and the Sun; or *particular*, as a Horse, which produces a Horse: Or *Univocal*, which produces an Effect like it self; as a Horse begets a Horse: Or *Equivocal*, as the Sun producing a Frog: Or *Natural*, which acts not only without Precept, in Opposition to Artificial, but also from within, and according to its own Inclination, in Opposition to violent, as Fire acts when it warms: Or *Spontaneous*, as a Dog eating: Or *Voluntary* and *free*. See LIBERTY.

Others consider *Efficient* Causes, either as *Principal*, or as *Instrumental*. Others, either as *next*, or *remote*; or *Mediate* or *Immediate*. Others, in fine, divide *Efficient* Causes, among all the Kinds of Beings, natural and supernatural; spiritual and corporeal; substantial and accidental; vital and not vital, *&c.*

But the most celebrated Division of *Efficients*, is that into *first* and *second*.

A *first Cause* is that, between which and the Effect there is some necessary Connection. Of which Kind there is none but God alone.

A *second Cause* is that from which an Effect follows in Consequence of the Will, or Constitution of the Creator; and which the *Cartesians* call an *Occasional Cause*. But these precarious, or Occasional Causes are, in Reality, no Causes at all, but only antecedent Effects.

This is easily shewn: For 1. All Action, at least all corporeal Action, is contain'd in Motion; but Motion can only result from the first Cause: It being an allow'd Principle, that Body of it self is inert and inactive. The true Cause of Motion, therefore, is a spiritual, not a corporeal Nature. But neither can a finite, spiritual Nature, be the chief Cause of Motion; for there is no necessary Connection between the Will, *e. gr.* of an Angel, and the Motion of a Body, nor between that of any other Being except God. Thus, when an Angel wills, a Stone moves; by Reason God has constituted such a Law between the Will of the Angel, and the Motion of the Stone: And thus, we move our Hands when we please. Not that the Soul is the principal Cause of such Motion, but only the *Occasional* Cause. See OCCASIONAL.

Others have a different Notion of first and second Causes. A *first Cause*, say they, is that which is independent of every other, as God alone. A *second Cause* is that depending on some other, as every Creature.

EFFICIENTS, in Arithmetic, the Numbers given for an Operation of Multiplication, called also *Factors*. See FACTOR.

The *Efficients* are the Multiplicand and Multiplyer. See MULTIPLICATION.

EFFIGY, EFFIGIES, a Portrait, Figure, or Representation of a Person to the Life. Kings are shewn in *Effigy* in their State Beds.

EFFIGY, is also used for the Print, or Impression of a Coin, representing the Prince's Head who struck it.

To *execute or degrade in Effigy*, is the Execution, or Degradation of a condemn'd, contumacious Criminal, who cannot be apprehended, or seiz'd. In *France* they hang a Picture on a Gallows, or Gibbet, wherein is represented the Criminal, with the Quality or Manner of the Punishment: At Bottom is wrote the Sentence, or Condemnation. 'Tis only Condemnations of Death, that are executed in *Effigy*.

EFFLORESCENCE, a breaking out of some Humours in the Skin; as in the Measles, and the like. See EXANTHEMA.

EFFLUVIUM, a Flux, or Exhalation of minute Particles from any Body: Or an Emanation of subtle Corpuscles, from a mix'd, sensible Body, by a Kind of Motion of *Transpiration*. See TRANSPIRATION.

That there are such *Effluvia*, continually emitted from all Bodies, is pretty certain: Thus, if a Body be immerged in Water, or any other humid Matter, there are little Bubbles continually transmitted therefrom to the Surface of the Water; which are supposed to be nothing else but little Particles, detach'd from the solid Body; and which, when they arrive at the Surface, emerge in Form of Bubbles. And thus a Body, placed in the Receiver of an Air-Pump, is seen, as it were, in a Kind of Effervescence, by Reason of the external Particles continually flowing from the same.

Odoriferous Bodies, every Body knows, are continually emitting substantial *Effluvia*; by Means whereof it is, that they excite in us the Sense of *Smelling*. These minute *Effluvia* are sometimes perceived by the Eye, in Fumes and Vapours. See SMELLING.

The School Philosophers hold these *Effluvia* to be intentional Qualities, as they call them, and nothing substantial; but the Moderns laugh at the Notion, as finding that these *Effluvia* refresh and nourish both the Animal and Vital Spirits.

Some Bodies are found to emit *Effluvia* for a great Number of Years, without any considerable Loss, either as to Bulk or Weight; as Magnets, Electrical Bodies, Ambers, divers odorous Bodies, *&c.* The Tenuity of whose emanant Corpuscles is incredible: Not but that the Loss they sustain by the continual Emission of *Effluvia*, may be made up to them by the Reception of other similar *Effluvia* of the same Kinds of Bodies, diffused thro' the Air.

'Tis added, that these *Effluvia* are emitted in Manner of *Radii*, Rays, *in Orbem*, and that the Circumference or Bound of the Activity of the Radiation, exhibits the same Figure as is that of the Radiant. This the Astronomers sufficiently prove, from the Ratio of the Refraction of the Atmosphere. For the Law of the Emission of these *Effluvia*. See QUALITY.

That *Effluvia* may considerably operate upon, and have great Effects on Bodies within the Sphere of their Activity, is proved by Mr. *Boyle*, in an express Treatise on the *Subtility of Effluvia*; where he shews, 1. That the Number of Corpuscles, emitted by Way of *Effluvia*, is immensely great. 2. That they are of a very penetrating Nature. 3. That they move with vast Celerity, and in all Manner of Directions. 4. That there is frequently a very wonderful Congruity, or Incongruity in the Bulk and Shape of these *Effluvia*, with the Pores of the Bodies they penetrate into and act upon. 5. That in animal and organical Bodies, particularly, these *Effluvia* may excite great Motions of one Part of the Frame upon another, and thereby produce very considerable Changes in the Oeconomy. Lastly, That they have sometimes a Power of procuring Assistance in their Operations by the more Catholic Agents of the Universe, such as Gravity, Light, Magnetism, the Pressure of the Atmosphere, *&c.*

That *Effluvia* are emitted to very great Distances, we have a notable Proof in this: That our Wines grow turbid in the Hogshead, precisely at the same Time when the Grapes are at their Maturity in other remote Countries, whence the Wine was imported. Beside that, Odoriferous *Effluvia* are, in many Cases, perceived at the Distance of many Leagues. Again, that the Generality of *Effluvia* retain the proper Colour, Smell, Taste, and other Properties, and Effects of the Bodies whence they proceeded, and this even after they have pass'd thro' the Pores of other solid Bodies, we have abundant Proof: Thus, magnetical *Effluvia* penetrate all, even the most solid Bodies, without any Change of their Nature, or Loss of Force. And the same we see confirm'd in *Sympathetic Inks*, and Powders, the Sagacity of *Blood-hounds*, &c. See DIVISIBILTY.

EFFUSION, the Pouring out of any liquid Thing with some Degree of Force.

In the antient Heathen Sacrifices, there were divers *Effusions* of Wine, and other Liquors; called *Libations*. See LIBATION.

When Princes conclude a Treaty of Peace, they usually pretend 'tis to prevent the *Effusion* of Christian Blood.

EFFUSION, or FUSION, *Aquarius*, in Astronomy, is that Part of the Sign *Aquarius*, represented on celestial Globes and Planispheres, by the Water issuing out of the Urn of the Water-Bearer. See AQUARIUS.

EGG, in Natural History, a Part form'd in the Females of certain Animals; which, under a Shell, or Cortex, includes an Embryo, or Fœtus, of the same Species; the Parts whereof are afterwards display'd, and dilated, either by Incubation, or by the Accession of a nutritious Juice.

The Species of Animals that produce *Eggs*, are particularly denominated *Oviparous*; and the Part wherein the *Egg* is form'd, the *Ovary*. See OVARY and OVIPAROUS.

Of

Of the various Kinds of *Eggs*, thoſe of Hens, or Pullets, being the moſt uſual, and which have been the moſt obſerved; we ſhall ſay ſomewhat of the Structure thereof, and the Generation of the Chick therein.

The Exterior Part, then, of a Hen's *Egg* is the *Shell*; a white, thin, friable Cortex, including all the other Parts, and defending them from Injuries. Immediately under the Shell lies the *Membrana communis*, which lines the whole Cavity of the Shell, adhering pretty cloſely to it, except at the bigger End, where a little Cavity is left between them, which with Age grows bigger. Under this Membrane are contain'd two *Albumina*, or Whites, each wrapp'd up in its own Membrane. In the middle of the inner White, is the *Vitellus*, or Yelk incloſed likewiſe, in its ſeparate *Involucrum*, or Cover. The outer Albumen is oblong or oval, accommodated to the Figure of the Shell: The inner is ſpherical, and of a more craſs, and viſcid Subſtance; and the Yelk is of the ſame Figure. See ALBUMEN and YELK.

At each End is a *Chalazza*, or Treddle, which are, as it were, the Poles of this *Microcoſm*: Theſe are white, denſe Bodies, conſiſting each of three little Globules like Hail connected together: In theſe not only the ſeveral Membranes are connected, or knit together; by which Means the ſeveral Liquors are kept in their proper Place and Poſition to each other; but they ſerve alſo to keep one and the ſame Part of the Yolk uppermoſt; let the *Egg* be turn'd which Way it will. See CHALAZZA.

About the Middle, between the *Chalazzæ*, on the Side of the Yelk, and in the Membrane thereof, is a little Veſica or Bladder, not unlike a Vetch, or Lentil, called the *Cicatricula*, and by ſome the Eye of the *Egg*. In this Veſicle is contain'd a Humour, in, and of which the Chick is generated. See CICATRICULA.

All theſe Parts of a Pullet's *Egg*, are found in all other *Eggs* to which the Definition of an *Egg* properly and ſtrictly agrees: Such *Egg* being that, of a Part whereof the Animal is form'd, the reſt ſerving for its Food. Accordingly, the firſt Seed, or Stamen of the Chick, is in the *Cicatricula*.

The *Albumen* is the Nutritious Juice, whereof it is diſtended and nouriſhed till it become big; and the Yolk ſerves it for Food after it is well grown, and partly alſo after it is hatch'd. For, a good Part of the Yolk remains after Excluſion; being receiv'd into the Chicken's Belly, as a Store-houſe, and convey'd thence by the *Appendicula*, or *Ductus Inteſtinalis*, as by a Funnel, into the Guts, ſerving inſtead of Milk. See INCUBATION, and PUNCTUM SALIENS.

An *Egg*, *improperly ſo call'd*, is that of the whole whereof the Animal is form'd; ſuch are the *Eggs* of Flies, Butterflies, *&c.* which *Ariſtotle* calls *Vermiculi*.

The Two have this further Difference, that whereas the former, after they are excluded from the Female, need no External Nutriment, nor any Thing but Warmth and Incubation, to bring the Fœtus to Perfection: The latter, after they are fallen out of the Ovary into the Uterus, require the Nutritious Juices of the Uterus to diſtend and enlarge them; whence they remain much longer in the Uterus than the other.

The principal Differences among *Eggs*, properly ſo call'd, are, that ſome are *perfect*, i. e. have all the Parts above deſcribed, while in the Ovary, or Uterus: And others, *Imperfect*, as not having all thoſe Parts till after they are excreted or laid; ſuch are the *Eggs* of Fiſhes, which after they are brought forth, aſſume an *Albumen* to themſelves from the Water.

Another Difference is, that ſome are fœcundated, and others not: The firſt are thoſe which contain a Sperm, injected by Coition of the Male, to diſpoſe them for Conception: The reſt, not impregnated with this Sperm, never breed young by any Incubation, but always putrify. An *Egg* fœcundified, contains the Rudiments of the Chick, e're ever the Hen have ſate upon it. By the Microſcope we ſee, in the middle of the *Cicatricula*, the plain *Carina* of the Chick, ſwimming in the *Liquamen* or Humour; it conſiſts of fine white *Zones*, or Threads, which the Warmth of future Incubation enlarges, by rarifying and liquifying the Matter firſt of the *Albumen*, and then of the *Vitellus*, and preſſing them into the Veſſels of the *Cicatricula*, for a further Preparation, Digeſtion, Aſſimulation, and Accretion; till the Chick, too big for its Covercle, breaks the Shell, and is deliver'd.

'Twas antiently thought that none but Birds and Fiſhes, with ſome other Animals, were produced, *ab Ovo*, from *Eggs*; but the Generality of the Moderns incline to think, that all Animals, even Man himſelf, are generated the ſame Way. *Harvey*, *Graaf*, *Kerchringius*, and ſeveral other great Anatomiſts, have ſo ſtrenuouſly aſſerted this Opinion, that it now generally obtains.

In the *Teſtes* of Women, are found little Veſicles, about the Size of green Peas, which are accounted as *Eggs*; for which Reaſon, theſe Parts, which the Antients call'd *Teſticles*, the Moderns call *Ovaries*. Theſe *Eggs*, fœcundified by the moſt volatile and ſpirituous Part of the Seed of the Male, are detach'd from the *Ovary*, and fall down the *Fallopian* Tubes into the *Uterus*, where they grow and increaſe. See CONCEPTION and GENERATION.

This Syſtem is countenanced and confirm'd by Abundance of Obſervations and Experiments. Monſ. *de S. Maurice*, upon opening a Woman at *Paris*, in 1682, found a Fœtus perfectly form'd in the Teſticle.

M. *Olivier*, a Phyſician at *Breſt*, atteſts, that in the Year 1684, a Woman, pregnant ſeven Months, was brought to Bed of a whole Plate full of *Eggs*, faſten'd together like a Bunch of Grapes, and of various Sizes, from that of a Lentil, to that of a Pigeon's *Egg*. *Wormius* aſſures us, that he had himſelf ſeen a Woman who had lain an *Egg*. And *Bartholin* confirms him, *Cent.* I. *Hiſt. Anatom.* IV. *p.* 11. The ſame Author tells us, he knew a Woman at *Copenhagen*, who, after twelve Weeks Conception, was deliver'd of an *Egg* wrapp'd up in a thin Shell. *Lauzonus*, *Dec.* II. *An.* ix. Obſ. 38. *p.* 73. of the *Curioſi Naturæ*, relates the ſame Thing of another Woman ſeven Weeks gone: The *Egg* ſhe brought forth was of a Size between that of a Hen and a Pigeon; and was cover'd with Membranes inſtead of a Shell. The outer Membrane, or *Chorion*, was thick and bloody; and the inner, or *Amnios*, thin and tranſparent, including a whitiſh Humour, wherein the Embryo ſwam faſten'd by Umbilical Veſſels, like Threads of Silk.

*Bonetus*, in a Letter to *Zuingerus*, publiſhed in the Ephemerides of the *Curioſi Naturæ*, *Dec.* II. *An.* 2. Obſ. 186. *p.* 417. relates, that a young Maid had caſt forth a great Number of little *Eggs*. *Con. Virdungius* obſerves, that in diſſecting a Woman who had a Rupture, or Deſcent, he found *Eggs* of divers Sizes in the Cornu of the Womb. Laſtly, we meet with divers Inſtances of the ſame Thing in *Rhodius*, *Cent.* III. Obſ. 57. and in ſeveral Places of the Memoirs of the *Curioſi Naturæ*. Inſomuch that *Berger*, in his Treatiſe *de Natura humana*, *L.* II. *C.* I. *p.* 461. makes no Scruple to ſettle it as his Opinion, that the only Difference between Animals, called *Oviparous*, and thoſe denominated *Viviporous*, conſiſts in this; that the former caſts their *Eggs* out of the Body, and lay them in Neſts; and that their *Eggs* contain all the Nouriſhment requiſite for the Fruit, or Fœtus: Whereas in the latter, the *Eggs* are only lay'd from the Ovary into the Uterus; that they have but little Juice; and that the Mother furniſhes the reſt.

There is not ſo much as a Plant, whoſe Generation, according to the Sentiment of *Empedocles*, and ſince him of *Malpighi*, *Rallius*, *Fabric. ab Aquapendente*, *Grew*, and others, is not effected by the Way of *Eggs*. See PLANT, *&c.*

On the other Hand, we have numerous Inſtances of *Oviparous* Animals, producing their young abſolutely alive, and without *Eggs*. Such Inſtances we have of a Crow, a Hen, Serpents, Fiſhes, Eels, *&c.* See *Iſibord. ab Amelanxen*, *Breviar. Memorabil. N.* 28. *in Append. M. Curios. Nat. Dec.* II. *An.* 4. *p.* 201. Lyſerus, *Obſ.* VI. Aldrovand. *Hiſt. Serp. & Dracon. p.* 309. Seb. Nuremberg, *De Mirac. Natur. in Europ. C.* 41. Franc. Paullin *de Anguilla*, *S.* I. *C.* 2. *&c.*

But this is not all: Natural Hiſtory abounds with Inſtances of Males, and even Men caſting out *Eggs* by the Fundament. The Thing will look ſo odd to an *Engliſh* Reader, that we might be cenſured, were we to relate the various Accounts of this Kind in Form. We ſhall, therefore, content our ſelves to refer the Reader, who has Curioſity enough that Way, to the Authors and Places where he may meet with them; *viz.* Chriſt. Paulin. *Cynograph. Curioſ. Sect.* I. *L.* 3. § 56. *M. Curioſ. Nat. Dec.* II. *A.* 8. *Obſ.* 117. *p.* 261. and *Dec.* I. *An.* 2. *Obſ.* 250. and *Dec.* II. *An.* 4. *Append. p.* 199. Scheuch. *Hiſt. Monſt. p.* 129, *&c.*

M. *Stolterforth* is of Opinion, that at leaſt, in ſome of theſe Caſes, what was taken for *Eggs* might be no more than certain Aliments ill digeſted, and coagulated; an Inſtance of which he himſelf had ſeen. As to thoſe of Women, *Wormius* and *Formanus*, L. III. *de Faſcinat*, P. VI. *C.* 20. § 9. *p.* 882. take it for the Effect of the Devil: But *Bartholin* and *Solterforth* treat the Notion, as it deſerves, with Deriſion.

*Gouſſet*, *de Cauſis Linguæ Hebraicæ*, explodes the modern Syſtem of Generation *ab Ovo*, as contrary to Scripture: And others imagine they have ſeen the Animal alive, and form'd in the Seed of the Male. See ANIMALCULI and SEED.

*Malpighi*, has made very curious Obſervations with the Miſcroſcope, of all the Changes that happen in the *Egg*, every half Hour of Incubation. *Voſſius*, and divers other Authors, are very ſollicitous about ſettling the Queſtion, which was form'd firſt, the *Egg* or the Pullet, *de Idolol.* L. III. *C.* 78.

In *Egypt*, they hatch their *Eggs* by the Heat of a Furnace, or Oven; and frequently have ſeven or eight Thouſand Chickens come forth at a Time. An Account of the Method hereof we have in the *Philoſoph. Tranſact.* See HATCHING.

At *Tunquin*, they are ſaid to keep *Eggs* entire for the Space of three Years, by covering them up in a Paſt made of Aſhes and Brine. The Tortoiſe is ſaid to lay no leſs than fifteen Hundred *Eggs*, which ſhe covers in the Sand, and leaves the Sun to hatch them; and the *Eggs* of the Oſtrich are hatch'd after the ſame Manner. *Willough. Ornithol. L.* II. *C.* 8. §. 1.

In the *Acta Erudit. Lipſ.* An. 1683. *p.* 221. mention is made of a Hen's *Egg*, in all Reſpects like the common Ones, in the middle whereof was found another, of the Size of a Pigeon's *Egg*. See SUPERFETATION.

*Eggs* with double Shells, are no unuſual Phænomenon. *Harvey* is very large on the Rationale of theſe Appearances, in his Treatiſe *de Generation. Animal.* Among the Antients, the *Egg* was the Symbol of the World; it being a Tradition among them, that the World was made of an *Egg*: Whence *Eggs* became of ſingular Veneration, in the Sacrifices of *Cybele*, the Mother of the Gods.

Some of their Deities were likewiſe form'd of *Eggs*. See OOLOGY

EGG, in Architecture, an Ornament in that Form, cut in the Echinus, or Quarter-round, of the *Ionic* and *Compoſite* Capitals. The Profile, or Contour of the Echinus, is enrich'd with *Eggs* and Anchors, alternately placed. See ECHINUS, OVOLO, *&c.*

COWS-EGG, is a Name ſome Authors give to a Kind of *Bezoard*, frequently found in the Stomach of that Beaſt. See BEZOARD.

EGIS, or ÆGIS, in the antient Mythology, the Shield, or Buckler of *Jupiter* and *Pallas*.

The Goat *Amalthea*, which had ſuckled *Jupiter*, being dead; that God cover'd his Buckler with the Skin thereof: Whence the Appellation *Ægis*, from αιξ, αιγὸς, *She-Goat*.

*Jupiter*, afterwards reſtoring the Beaſt to Life again, cover'd it with a new Skin, and placed it among the Stars.

As to his Buckler, he made a Preſent of it to *Minerva*; whence that Goddeſs's Buckler is alſo called *Ægis*, in *Virgil*, *Æneid L.* VIII. *v.* 354, and 435, and other Authors.

*Minerva*, having kill'd the Gorgon *Meduſa*, nailed her Head in the Middle of the *Ægis*, which henceforth had the Faculty of converting into Stone all thoſe who look'd thereon; as *Meduſa* her ſelf had done during her Life. See *Homer*, *Iliad. L.* V.

Others take the *Ægis* not to have been a Buckler, but a *Cuiraſs*, or rather a *Plaſtron*. And 'tis certain, the *Ægis* of *Pallas*, deſcribed by *Virgil*, *Æneid L.* VIII. *v.* 435, muſt have been a *Cuiraſs*; ſince the Poet ſays expreſly, that *Meduſa*'s Head was on the Breaſt of the Goddeſs. But the *Ægis* of *Jupiter*, mention'd a little higher, *v.* 354, ſeems to have been a Buckler. The Word

*Cum ſæpe nigrantem*
*Egida concuteret dextra.*

agreeing very well to a Buckler, but not at all to a *Cuiraſs*, or Breaſt-Plate.

*Servius* makes the ſame Diſtinction on the two Paſſages of *Virgil*; for in *v.* 354, he takes the *Ægis* for the Buckler of *Jupiter*, made as abovementioned of the Skin of the Goat *Amalthea*: And in Verſe 435, he deſcribes the *Ægis* as the Armour which covers the Breaſt; and which in ſpeaking of Men is called *Cuiraſs*, and *Ægis* in ſpeaking of the Gods. Abundance of Authors have overlooked theſe Diſtinctions for Want of going up to the Sources.

EGYPTIANS, in our Statutes, a counterfeit Kind of Rogues, who, being *Engliſh* or *Welſh* People, diſguiſe themſelves in uncouth Habits, ſmearing their Faces and Bodies; and framing to themſelves an unknown, canting Language, wander up and down; and under Pretence of telling Fortunes, curing Diſeaſes, *&c.* abuſe the common People, tricking them of their Money, and ſtealing all that is not too hot, or too heavy for them.

*See ſeveral Statutes made againſt them*; *An.* 1 *&* 2 *Phil. &* *Mar.* Ch. 11. 5 *Eliz.* &c.

The Origin of this Tribe of Vagabonds called *Egyptians*, and popularly *Gypſies*, is ſomewhat obſcure; at leaſt, the Reaſon of the Denomination is ſo. 'Tis certain, the antient *Egyptians* had the Character of great Cheats, and were famous for the Cleanlineſs of their Impoſtures; whence the Name might afterwards paſs proverbially into other Languages; as 'tis pretty certain it did into the *Greek* and *Latin*. Or elſe, the ancient *Egyptians*, being much verſed in Aſtronomy, which in thoſe Days was little elſe but Aſtrology, the Name was on that Score aſſumed by theſe *Diſeurs de bonne Avanture*, as the *French* call them, or good Fortune-tellers.

Be this as it will, there is ſcarce any Country of *Europe* but has its *Egyptians*, tho' not all of them under that Denomination.

The *Latins* call them *Egyptii*; the *Italians*, *Ciani* and *Cingari*; the *Germans*, *Zigenner*; the *French*, *Bohemiens*; others, *Saraſens*; and others, *Tartars*, &c.

*Munſter*, *Geogr. L.* III. C. 5. relates, that they made their firſt Appearance in *Germany*, in 1417, exceedingly tawny and ſun-burnt, and in pitiful Array; tho' they affected Quality, and travell'd with a Train of Hunting Dogs after them, like Nobles. He adds, that they had Paſſports from King *Sigiſmond* of *Bohemia*, and other Princes. Ten Years afterwards they came into *France*, and thence paſs'd into *England*.

*Paſquier*, in his *Recherch. L.* IV. C. 19. relates the Origin of the *Gypſies*, thus: On the 17th of *April* 1427, there came to *Paris* twelve Penitents, or Perſons, as they ſaid, adjudged to Penance, *viz.* one Duke, one Count, and ten Cavaliers, or Perſons on Horſeback: They took on themſelves the Character of *Chriſtians of the lower Egypt*, expell'd by the *Sarazens*, who having made Application to the Pope, and confeſs'd their Sins, receiv'd for Penance, that they ſhould travel thro' the World for ſeven Years, without ever lying in a Bed. Their Train conſiſted of 120 Perſons, Men, Women and Children, which were all that were left of 1200, who came together out of *Egypt*. They had Lodgings aſſign'd them in the Chappel, and People went in Crouds to ſee them. Their Ears were perforated, and Silver Buckles hung to them. Their Hair was exceedingly black and frizzled; their Women ugly, thieviſh, and Pretenders to telling of Fortunes. The Biſhop ſoon afterwards obliged them to retire; and excommunicated ſuch as had ſhewn them their Hands.

By an Ordonnance of the Eſtates of *Orleans*, in the Year 1560, it was enjoyned all theſe Impoſtors, under the Name of *Bohemians* and *Egyptians*, to quit the Kingdom on Penalty of the Galleys. Upon this they diſperſed into leſſer Companies, and ſpread themſelves over *Europe*. The firſt Time we hear of them in *England*, was three Years afterwards, *viz.* Anno 1563. *Raph. Volaterranus* making mention of them, affirms that they firſt proceeded or ſtroll'd from among the *Euxians*, a People of the Perſide in *Egypt*.

EGYPTIAN-*Year*. See YEAR.

EJACULATION, in Medicine, the Act of emitting Seed; from the Latin *ejaculari*, to caſt upwards. See EMISSION.

To evince a Man's Virility, in a Court of Juſtice, where he is accuſed of Impotency, 'tis required he give Evidence of Erection, Intromiſſion, and *Ejaculation*. See CONGRESS, *&c.*

EJACULATOR, in Anatomy, a Name applied to two Muſcles, from their Office in the Ejaculation of the Seed. See SEED.

The *Ejaculatores* ariſe from the Sphincter of the Anus, and advance along the Urethra, as far as the middle thereof; where they are inſerted laterally.

The ſame Denomination is likewiſe given two Muſcles of the *Clitoris*, which ariſing from the Sphincter *Ani*, advance laterally along the *Labia*, and are inſerted aſide of the *Clitoris*. See GENERATION.

EJACULATORY, in Anatomy, is a Term applied to two little Ducts, or Canals, ariſing from the *Veſiculæ ſeminales*.

The *Ejaculatory* Ducts are about an Inch in length: towards the *Veſiculæ*, they are pretty wide; but contract themſelves as they approach towards the *Urethra*, which they penetrate together.

Some Authors apply the ſame Name to the *Vaſa deferentia*; but *mal a propos*. See DEFERENTIA *Vaſa*.

EICETES, called alſo HEICETES, Hereticks of the VIIth Century, who made Profeſſion of the Monaſtic Life.

From that Paſſage in *Exodus*, where *Moſes* and the Children of *Iſrael* are ſaid to have ſung a Song in Praiſe of the Lord, after they had paſs'd the *Red Sea* wherein their Enemies had periſh'd; the *Eicetes* concluded, that they muſt ſing and dance, to praiſe God aright: And as *Mary* the Propheteſs, Siſter of *Moſes* and *Aaron*, took a Drum in her Hand, on the ſame Occaſion; and all the Women did the like, to teſtify their Joy, by playing, beating and dancing; the *Eicetes*, the better to imitate their Conduct herein, endeavour'd to draw Women to them to make Profeſſion of the Monaſtic Life, and aſſiſt in their Mirth.

EJECTION, the Act of throwing out, or diſcharging any Thing, at ſome of the Emunctories; as by Stool, Vomiting, *&c.* See EXCRETION, EVACUATION, EMISSION, *&c.*

EJECTIONE *firmæ*, a Writ which lies for the *Leſſee* for Years, who is ejected before the Expiration of his Term, either by the *Leſſor*, or a Stranger.

EIRE, in Law. See EYRE.

ELABO-

ELABORATION, the Act of finiſhing or perfecting any Thing with Labour and Time.

The Term is chiefly uſed in Medicine, where the Chyle, Blood and Semen, are ſaid to be *well Elaborated*, when they are well condition'd, have undergone all the Secretions, Mixions, Impregnations and Circulations neceſſary to bring them to Perfection. See CHYLE, BLOOD, and SEED.

If the Chyle went directly from its *Receptaculum* to the Breaſts, it would not be ſufficiently *Elaborated* to afford good Milk. See MILK.

ELABORATORY. See LABORATORY.

ELASTIC *Body* is that, which by being ſtruck, or ſtretch'd, has its Figure alter'd; but endeavours, by its own Force, to reſume the ſame. Or, it is a ſpringy Body, which when compreſs'd, condenſed, or the like, makes an Effort to ſet it ſelf at Liberty; and to repel the Body that conſtrain'd it. Such is a Sword-Blade, a Bow, &c. which are eaſily bent, but preſently return to their former Figure and Extenſion. See ELASTICITY.

*Elaſtic Bodies* are either *Natural*, or *Artificial*: Thoſe moſt eminent for their *Elaſtic* Power among *Artificial* Bodies, are Steel Bows; Braſs, Ivory, and Marble Balls; Leathers, Skins, Membranes; Braſs, Silver, Iron, and Steel Chords or Wiars; Nerves, Guts, Hemp and Flax Strings, &c.
