Amongſt *Natural* Bodies, the principal are Air, Spunges, the Branches of green Trees, Wool, Cotton, Feathers, &c. 'Tis diſputed, whether or no Water have any *Elaſtic* Force: The moſt common Opinion is, that it has none of it ſelf; and that if it ſhew any, 'tis owing to the Air contain'd therein. See WATER.

The Word is form'd from the *Greek*, ελασης, of ελαυνειν, *to puſh, preſs*, &c. See SPRING.

The principal Phænomena obſerved to obtain in *Elaſtic Bodies*, are,

1. That an *Elaſtic Body*, (i. e. *a Body perfectly Elaſtic*, if any ſuch there be) endeavours to reſtore it ſelf with the ſame Force wherewith it is preſs'd or bent. Thus, whatever Force is applied to bend a Bow, with the ſame Force it ſtrives to unbend it ſelf, or return to its Natural State. For the Force, wherewith the String is drawn, is the ſame with that which reſiſts the Draught; the Bow being bent ſo long, till the Force applied, and that which reſiſts it, are in *Equilibrio*.

2. An *Elaſtic* Body exerts its Force equally towards all Sides; tho' the Effect is found chiefly on that Side where the Reſiſtance is weakeſt: As is evident in the Caſe of a Bow ſhooting out an Arrow; a Gun exploding a Ball, &c.

3. *Elaſtic Bodies*, in what Manner ſoever ſtruck, or impell'd, are inflected, and rebound after the ſame Manner. Thus a Bell yields the ſame Sound in what Manner, or on what Side ſoever ſtruck.

4. A Body perfectly Fluid, if any ſuch there be, cannot be *Elaſtic*; by Reaſon its Parts cannot be compreſs'd. See FLUID.

5. A Body perfectly Solid, if any ſuch there be, cannot be *Elaſtic*; in that having no Pores, it is incapable of being compreſs'd. See SOLID.

6. Hard, long, flexible Bodies, apt to acquire *Elaſticity*, do it chiefly in three Manners: Either by being extended, by being contracted, or by being bent.

7. Bodies, in dilating themſelves by their *Elaſtic* Power, exert a greater Force at the Beginning of their Dilatation, than towards the End thereof. By Reaſon the Bodies are more compreſs'd at firſt; and the Renitency is always equal to the Compreſſion.

8. The Motion, whereby compreſs'd Bodies reſtore themſelves, is uſually an accelerated Motion. See DILATATION.

*For the Laws of Motion and Percuſſion in* ELASTIC *Bodies, See* MOTION *and* PERCUSSION.

ELASTIC *Force*. See ELASTICITY.

ELASTICITY, or ELASTIC *Force*, in Phyſicks, a Property, or Power, in natural Bodies, which denominates them *Elaſtic*; and by which they are reſtored to the Figure, and Extenſion they had loſt from any External Cauſe. See ELASTIC *Bodies*.

The Cauſe, or Principle, of this important Property *Elaſticity*, or Springineſs, is variouſly aſſign'd: The *Carteſians* account for it from the *Materia ſubtilis* making an Effort to paſs thro' Pores that are too narrow for it. Thus, ſay they, in bending, or compreſſing, a hard, elaſtic Body, *e. gr.* a Bow, its Parts recede from each other on the *Convex* Side, and approach on the *Concave*: Conſequently the Pores are contracted or ſtreighten'd on the *Concave* Side; and if they were before round, are now, for Inſtance, Oval: So that the *Materia ſubtilis*, or Matter of the ſecond Element, endeavouring to paſs out at thoſe Pores, thus ſtreighten'd, muſt make an Effort, at the ſame Time, to reſtore the Body to the State it was in when the Pores were more patent and round, *i. e.* before the Bow was bent: And in this conſiſts its *Elaſticity*. See RESILITION.

Other later, and more wary Philoſophers, account for *Elaſticity* much after the ſame Manner as the *Carteſians*; with this only Difference, that in lieu of the ſubtile Matter of the *Carteſians*, theſe ſubſtitute *Ether*, or a fine Etherial Medium, that pervades all Bodies. See ÆTHER.

Others, ſetting aſide the precarious Notion of a *Materia ſubtilis*, account for *Elaſticity* from the great Law of Nature, *Attraction*, or the Cauſe of the Coheſion of the Parts of ſolid and firm Bodies. See COHESION.

Thus, ſay they, when a hard Body is ſtruck or bent, ſo as the component Parts are moved a little from each other, but not quite disjoyn'd, or broke off, or ſeparated ſo far as to be out of the Power of that attracting Force whereby they cohere; they muſt certainly, on the Ceſſation of the External Violence, *ſpring* back to their former natural State. See ATTRACTION.

Others reſolve *Elaſticity* into the Preſſure of the Atmoſphere: For a violent Tenſion, or Compreſſion, tho' not great enough to ſeparate the conſtituent Particles of Bodies far enough to let in any foreign Matter, muſt yet occaſion many little *Vacuola* between the ſeparated Surfaces; ſo that upon the Removal of the Force they will cloſe again, by the Preſſure of the Aerial Fluid upon the external Parts. See ATMOSPHERE.

Laſtly, Others attribute the *Elaſticity* of all hard Bodies to the Power of Reſilition in the Air included within 'em. And ſo make the *Elaſtic Force* of the Air, the Principle of *Elaſticity* in all other Bodies. See AIR.

*Laws of* ELASTICITY.

To enquire a little more expreſly into the Nature and Laws of *Elaſticity*, we ſhall conſider the Phænomena thereof. Let it be premiſed, then, that all the Bodies wherein this Power is obſerved do conſiſt, or may be conceived to conſiſt, of ſmall Threads, or Fibres, which, laid together, conſtitute ſuch Bodies. To examine *Elaſticity*, therefore, in its moſt ſimple Caſe, we had beſt conſider it in Muſical Strings, or Chords, and particularly thoſe of Metal; for thoſe of Cat-gut, having a ſpiral Twiſt, cannot be conſider'd as the Fibres whereof Bodies are form'd.

Now the *Eſtaſticity* of a Fibre, or Chord, conſiſts in this, that it may be ſtretch'd or extended; and that upon removing the Force whereby it was ſtretch'd, or lengthen'd, it returns to its former length. Fibres have no *Elaſticity*, unleſs they be extended with a certain Force; as appears in lax Chords, which may be moved a little out of their Poſition, without endeavouring to recover it. Tho' what the Degree of Tenſion is, neceſſary for *Elaſticity* to commence, is not yet determined by Experiment. Add, that when a Fibre is too far ſtretch'd, it loſes its *Elaſticity*; tho' here, too, the Degree of Tenſion that deſtroys *Elaſticity* is unknown. But 'tis certain, *Elaſticity* depends on Tenſion, and is confined within a certain Sphere, or Boundary thereof on either Side. See CHORD and FIBRE.

This, if it do not give us the proper adequate Cauſe of *Elaſticity*, yet ſhews us the Difference between *Elaſtic* and *Unelaſtic* Bodies; how it is a Body loſes its *Elaſticity*; and how a Body, deſtitute of any ſuch Force, comes to acquire it.

Thus, a Plate of Metal, by repeated Blows of a Hammer, becomes *Elaſtic*; and being heated, again loſes that Property.

Between the Limits of Tenſion, wherewith *Elaſticity* is terminated, there are different Forces required to give different Degrees of Tenſions, in order to ſtretch Chords to certain Lengths. What the Proportions of theſe Forces is, can only be determined by Experiment made with Chords of Metal. But as the Lengthenings of ſuch Chords is ſcarce ſenſible, the Proportions cannot be directly meaſured; but a particular Apparatus, and a Kind of Circuit are neceſſary to arrive thereat. Dr. *Graveſande* has taken a good deal of Pains, in order to fix theſe Laws; the Reſult of whoſe Experiments are as follow.

1. That the Weight, whereby a Fibre is increas'd a certain Length, by its Stretching, is in the different Degrees of Tenſion, as the Tenſion it ſelf: If, *e. gr.* there be three Fibres of the ſame Kind, Length and Thickneſs, whoſe Tenſions are as 1, 2, and 3; any Weights, in the ſame Proportion, will ſtretch them equally.

2. That the leaſt Lengthenings of the ſame Fibres are to one another, nearly as the Forces whereby the Fibres are lengthen'd. Which Property may likewiſe be applied to their Inflexion.

3. In Chords of the ſame Kind, Thickneſs, and which are equally ſtretch'd, but of different Lengths, the Lengthnings produced by ſuperadding equal Weights, are to one another as the Lengths of the Chords. Which is evident hence, that the Chord is lengthen'd in all its Parts: Conſequently the Lengthening of a whole Chord is double the Lenghthening of half of it, or a Chord of half the Length.

4. Fibres of the ſame Kind, but different Thickneſſes, may be compared together after the like Manner; only con-

conſidering them as conſiſting of a greater or leſs Number of fine Fibres of the ſame Thickneſs; the Number whereof muſt be taken in the Ratio of the Solidity of thoſe Fibres, *i. e.* as the Squares of the Diameters, or as the Weight of the Fibres, when their Lengths are equal. Such Fibres, of Conſequence, will be equally ſtretch'd by Forces that are in the ſame Ratio of the Squares of the Diameters; which ſame Ratio, is likewiſe required between the Forces whereby the Chords are inflected, that the *Sagittæ* may be equal in the given Fibres.

5. The Motion of a ſtretch'd Fibre agrees with the Motion of a Body vibrating in a Cycloid; and how unequal ſoever the Vibrations are, they are all perform'd in the ſame Time. See CYCLOID.

6. In two equal Chords, unequally ſtretch'd, unequal Forces are required to inflect them equally. Their Motions may be compared to thoſe of two Pendulums, deſcribing ſimilar Cycloids, by different Forces. Conſequently, the Squares of the Times of the Vibrations of the Fibres are to each other inverſely, as the Forces whereby they are equally inflected, which are as the Weights by which the Chords are ſtretch'd.

7. The Motions of ſimilar Chords, equally ſtretch'd, but of different Lengths, muſt be compared with that of Pendulums after another Manner; for as the Times of the Vibrations are to be conſider'd, the Celerities alſo, wherewith the Chords are moved, muſt be conſider'd. Now theſe Celerities are to one another directly as the Weights whereby the Chords are inflected, and inverſely as the Quantities of Matter in the Chords; that is, inverſely as their Lengths. The Celerities, therefore, are in an inverſe duplicate *Ratio* of thoſe Lengths; that is, inverſely as the Squares of the Lengths: And the Squares of the Times of the Vibrations, are likewiſe in the inverſe Ratio. Conſequently, the Lengths of the Chords will be as the Times of the Vibrations.

*Elaſtic Laminæ*, or Plates, may be conſider'd as Congeries's, or Bundles of *Elaſtic* Chords. When the Plate is inflected, ſome Fibres are lengthen'd; and there are unequal Lengthenings in ſeveral Points of the Plate.

The Curve form'd by the inflected Plate, is eaſily determined from what has been ſhewn concerning Chords. In Effect, in the Vibrations of ſuch Plate, or Spring, the Motion thereof is accelerated, after the ſame Manner as the Motion of a Chord, and of a Pendulum in a Cycloid, are accelerated. And the Vibrations of ſuch Springs are all perform'd in the ſame Time.

*Elaſtic Balls*, *Spheres*, &c. may be conſider'd as conſiſting of ſeveral *Elaſtic* Plates, or Springs; and the Introceſſions, or Yieldings inward of any Point thereof, are proportionable to the Forces wherewith the Body is compreſs'd.

*The* ELASTICITY *of Fluids* is accounted for, from their Particles being all endowed with a Centrifugal Force; whence Sir *Iſaac Newton*, Prop. 23. *Book* 2. demonſtrates, that Particles, which mutually avoid, or fly off from one another by ſuch Forces as are reciprocally proportional to the Diſtances of their Centre, will compoſe an *Elaſtic Fluid*, whoſe Denſity ſhall be proportional to its Compreſſion; and *vice verſa*, if any Fluid be compoſed of Particles, that fly off and avoid one another, and hath its Denſity proportional to its Compreſſion; then the Centrifugal Forces of thoſe Particles will be reciprocally, as the Diſtances of their Centres.

ELASTICITY *of the Air*, is the Force wherewith it dilates it ſelf, upon Removing the Force whereby it was compreſs'd. See AIR.

The *Elaſticity or Spring of the Air*, was firſt diſcover'd by the great *Galilæo*. Its Exiſtence is proved by this Experiment of that Philoſopher: That an extraordinary Quantity of Air, being intruded by Means of a Syringe into a Glaſs or Metal Ball, till ſuch Time as the Ball, with this Acceſſion of Air, weigh conſiderably more in the Balance than it did before; upon opening the Mouth thereof, the Air ruſhes out, till the Ball have ſunk to its former Weight.

For hence we argue, that there is juſt ſo much Air gone out, as compreſs'd Air had been crouded in. Air, therefore, returns to its former Degree of Expanſion, upon removing the Force that compreſs'd, or reſiſted its Expanſion; conſequently it is endued with an *Elaſtic Force*.

It muſt be added, that as the Air is found to ruſh out, in very Situation, or Direction of the Orifice; the *Elaſtic Force* of the Air acts every Way, or in every Direction.

The *Elaſticity of the Air* making a conſiderable Article in the new Pneumaticks; we ſhall here give the principal Laws thereof.

1. The *Elaſticity* of the lower Air, is equal to the Weight of all the upper incumbent Air. For the upper Air is eaſily proved to preſs on the lower. See PRESSURE.

And the *Elaſticity of the Air*, has already been ſhewn equal to the compreſſing Power: Whence it follows, that the *Elaſticity of the Air* is equal to the Weight of the whole incumbent Atmoſphere.

Hence, as the Weight of the upper Air, incumbent on the lower, is equal to the Weight of a Column of Water of the ſame Diameter with the Column of Air, and the Altitude of 31 Feet; or to a Column of Mercury 28 Inches high: The *Spring* of the lower Air is equal to the ſame Column of Water, or Mercury.

Hence, again, the *Spring* of the Air, included in a Veſſel, *&c.* is likewiſe equal to the Weight of the whole incumbent Atmoſphere. Conſequently the Air, included in a Veſſel, preſſes with the ſame Force, as the Weight of the Atmoſphere. And, therefore, the *Elaſticity* of the included Air, is able to ſuſtain Mercury to the Height of 28 Inches, and Water, to the Height of 31 Feet, in an empty Tube. See AIR-PUMP.

2. The *Elaſtic Force* of Air compreſs'd, is to that of the ſame Air dilated reciprocally, as the Bulk of the dilated Air to that of the compreſs'd Air.

For the *Elaſticity of Air* more compreſs'd, is to that of Air leſs compreſs'd; as the Weight incumbent on that, to the Weight incumbent on this. But the Bulks of more, and leſs compreſs'd Air, are in the ſame reciprocal Ratio of theſe Weights. Therefore the *Elaſtic Force*, &c.

Hence the *Elaſticity of Air* more compreſs'd, is ſtronger than that of Air leſs compreſs'd.

3. The *Elaſticity* of more compreſs'd Air, is to that of Air leſs compreſs'd, *Cæteris paribus*, as Maſs, or Quantity of more compreſs'd Air is to the Maſs of Air leſs compreſs'd, under the ſame Bulk.

4. The Ratio of the Space fill'd by Air preſs'd only by the Weight of the Atmoſphere, to the Space it is reduc'd into by further Compreſſion, being given; to determine the *Elaſtic Force* of the compreſs'd Air.

Since the Spring of the Air, preſs'd only by the Weight of the Atmoſphere, is equal to the Weight of a Column of Mercury of the ſame Baſe with the Column of Air, and of the Height of 28 Inches; to the Bulk of the compreſs'd Air, that of the Air not compreſs'd, and the Weight of the Column of Mercury; ſeek a fourth proportional: This will expreſs the Quantity of the *Elaſtic Force* in the compreſs'd Air.

Hence, ſubſtracting the Weight of the Column of Mercury from the Quantity of the *Elaſtic Force*, thus determined, the Remainder is the *Force of Elaſticity*, whereby it exceeds the Reſiſtance of the Weight of the Atmoſphere.

5. Heat increaſes the *Elaſticity of the Air*; and Cold diminiſhes it. See HEAT and COLD.

6. The *Elaſtic Force* of the Air, whereby it is expanded, in Rarefaction, is to the *Elaſticity of the Air* condenſed; as the Bulk of the rarified Air, to the Bulk of the condenſed Air.

ELATERIUM, in Pharmacy, a purgative Medicine, prepared from the wild Cucumber.

'Tis made of the Juice of the Plant, by ſtraining it thro' a Cloth, and evaporating the Moiſture thereof, till it come to the Conſiſtence of an Extract, or a Maſs for Pills.

*Elaterium* is a vigorous Purge, and is uſed in Lethargies, Palſies, and Hypochondriacal Melancholies.

The Word is form'd from the *Greek*, ἐλαύνω, *I repel.*

ELBOW, the outer Angle made by the Flexure, or Bend of the Arm: Or the Point to which the two Bones that form the Arm incline. See ARM.

That Eminence, whereon the Arm reſts, called by us *Elbow*, is by the *Latins* call'd *Cubitum*, and the *Greeks* ἀγκων, and by others ολεκρανες.

ELBOW, is alſo uſed by Architects, Maſons, *&c.* for an obtuſe Angle of a Wall, Building, Road, *&c.* which diverts it from its right Line. See CUBIT.

ELCESAITES, or ELCESAIANS, as *Theodoret* calls them, antient Hereticks thus call'd from the great Prophet *Elceſai*, or *Elxai*.

This *Elxai*, who lived in the Time of *Trajan*, gave into the Sentiments of the *Ebionites*, touching *Jeſus Chriſt*; tho' he alter'd and reform'd them in ſome Things, to denominate himſelf the Author of a Sect.

His Fundamental Doctrines were, that *Jeſus Chriſt*, who was born from the Beginning of the World, had appear'd from Time to Time under divers Bodies; that he was a celeſtial Power, or Virtue, call'd *the Chriſt*, whereof the Holy Spirit was Siſter; (Note, the *Hebrew* Word for Spirit, is *Feminine*) and that both of them had deſcended into *Jeſus* the Son of *Mary*.

The *Elceſaites*, according to St. *Epiphanius*, were alſo called *Samſeans*, from the *Hebrew* Word *Sames*, Sun.

*Scaliger* was notoriouſly miſtaken, in holding that *Elxai* was no more than *Eſſai*, or *Eſſean*; on which Suppoſition the *Elceſaites* were the ſame with the Sect of *Eſſeans*, which is contrary to all Antiquity.

*Origen*

*Origen* makes mention of the *Elceſaites*, in one of his Homilies, as a Hereſy newly riſen. The Retainers hereto, ſays he, don't admit all the Books of the Canon, but only ſome of them. They allow ſome Paſſages out of the Old Teſtament and the Evangeliſts, but reject all the Epiſtles of St. *Paul*. Add, that they have produced a Book, which they pretend to have deſcended to them from Heaven; and maintain, that whoever perform what is enjoyn'd therein, ſhall obtain Pardon of all their Sins. See *Euſebius*, Hiſt. *Lib.* VI. *C.* 38. who remarks, that this Hereſy became extinct almoſt aſſoon as it was found.

St. *Epiphanius* is very full on the Subject of this Sect, *Hær.* 19. where he obſerves, that *Elxai* was a *Jew* by Birth, and that not being able to live according to the Law of *Moſes*, he invented new Opinions, and got himſelf Followers. He was a profeſs'd Enemy of Virginity, and obliged all who profeſs'd his Doctrine, to marry. He tutor'd them to Hypocriſy in Times of Perſecution; pretending it was lawful to adore Idols, provided the Heart had no Share therein.

ELDERS, *Seniores*, *Primores*, in the *Jewiſh* Hiſtory, were the moſt conſiderable Perſons for Age, Experience, and Manners, among the antient People. Thus, *Moſes*, we read, aſſembled the *Elders* of the People together, and acquainted them with what the Lord had commanded.

Long afterwards, thoſe who held the firſt Rank in the Synagogues, were uſually call'd *Zekenum*, *Elders*, in Imitation of the 70 *Elders*, whom *Moſes* eſtabliſh'd for the Judges of the *Sanhedrim*. The Preſident, or Chief, had in a particular Manner the Appellation of *Elder*, being, as it were, *Decanus ſeniorum*, Dean of the *Elders*.

In the firſt Aſſemblies of the Primitive Chriſtians, thoſe who were of the firſt Place, or Rank, aſſumed the Denomination of *Presbyters*, *Prieſts*, or *Elders*.

The Word *Presbyteri*, which occurs ſo frequently in the Old Teſtament, and which includes alike both Biſhops and Prieſts, does likewiſe ſignifie *Elders*. See Monſ. *Simon's* Obſervations thereon, in his Supplement *aux Ceremonies des Juifs*.

The Preſident, or Biſhop, as being the chief of the *Elders*, did likewiſe aſſume the Denomination of *Elder*: Whence it is, that in the New Teſtament the Name Biſhop is frequently confounded with that of Prieſt. For the like Reaſon, the Council of the firſt Aſſemblies, or Churches, was called *Presbyterium*, or Council of the *Elders*, where the Biſhop preſided in Quality of firſt *Elder*, being ſeated in the middle of the other *Elders*. The Prieſts, or *Elders*, who ſate by him, had each his Judges Chair; for which Reaſon they are called by the Fathers, *Aſſeſſores Epiſcoporum*. Nothing of any Importance was done, till it had firſt been examined, and reſolved in this Aſſembly, where the Biſhop only made one Body with the other *Elders* or Prieſts; the Juriſdiction which we now call Epiſcopal, not being then Dependant on the Biſhop alone, but on all the *Elders*, over whom he was the Preſident. See BISHOP.

ELDERS, is alſo a Denomination ſtill retain'd in the Presbyterian Diſcipline.

The *Elders* are Officers, who, in Conjunction with the Paſtors, or Miniſters and Deacons, compoſe the Conſiſtories, or Kirk-Seſſions, meeting to conſider, inſpect and regulate Matters of Religion and Diſcipline. They are choſe from among the People, and receiv'd publickly with ſomewhat of Ceremony. In *Scotland*, there are an indefinite Number of *Elders* in each Pariſh, generally about Twelve.

*Chamberlain* makes mention of a *Ruling Elder* in each Pariſh, choſe by the Kirk-Seſſion; the Congregation afterwards approving the Choice, after a ſtrict Scrutiny into his Life and Manners. He adds, that the Miniſter ordains him; and that his Office is for Life: His Buſineſs being to aſſiſt the Miniſter in overſeeing and correcting the Manners of the People; to attend him in Viſiting, Catechiſing, Praying for the Sick, in private Admonitions, and at the Communion Table.

But this Account we apprehend to be a Miſtake; what that Author ſays of *Ruling Elders*, belonging properly to the *Simple Elders*. As to *Ruling Elders*, there are no ſuch Things, but in the General Aſſemblies, where they appear as Repreſentatives of the reſt. See *Kirk*-SESSIONS, SYNOD, GENERAL *Aſſembly*, PRESBYTERY, *&c.*

ELECT, *Choſen*. In Theology, particularly in the Scriptures, *Elect* is applied to the Saints, the Predeſtinated: In which Senſe, the *Elect* are thoſe Perſons God has choſe to beſtow the Glory of Heaven upon.

The Apoſtles alſo apply it to the Primitive Chriſtians: In which Senſe, the *Elect* are thoſe choſen to the Favour and Bleſſing of Chriſtianity. God, who has predeſtinated the *Elect* to Glory, has likewiſe predeſtinated them to Sanctification. See PREDESTINATION.

ELECT, is likewiſe applied to Archbiſhops, Biſhops, and other Officers, who are choſe, but are not yet conſecrated, or actually inveſted with their Office, or Juriſdiction.

*Emperor Elect*, before he is inaugarated and Crown'd: *Lord Mayor Elect*; before his Predeceſſor's Mayoralty is expired, or the Sword put in his Hands.

*Philip* of *Savoy* was five Years Archbiſhop of *Lyons*, without ever being ordain'd or conſecrated; after which he quitted his Archbiſhoprick to marry the Counteſs of *Burgundy*. All that Time he bore the Title and Quality of *Archbiſhop Elect of Lyons*, *Electus Lugdunenſis*.

ELECTION, a Choice made of any Thing, or Perſon, whereby it is prefer'd to ſome other. There is this Difference, however, between Choice and *Election*; that *Election* has uſually a Regard to a Company, or Community, that makes the Choice; whereas *Choice* is ſeldom uſed, but when a ſingle Perſon makes it.

The moſt ſolemn *Election* is that of a Pope; which is perform'd by the Cardinals, in four ſeveral Manners.

The firſt, as they call it, by the *Holy Spirit*; when the firſt Cardinal who ſpeaks, having given his Vote for any one, proceeds to the Adoration, and proclaims him Pope, as by a ſudden Inſpiration of the Holy Ghoſt. In which Caſe, he is deem'd duly *Elected*, if all, or at leaſt two Thirds of the Aſſembly be conſenting thereto.

The ſecond, by *Compromiſe*, when the whole College pitches on three Cardinals, to whom they give a Power of nominating the Pope; which Power expires upon the Burning out of a Candle lighted on that Occaſion.

The third, by Way of *Poll* or *Scrutiny*, which laſt is the moſt uſual; the Cardinals throwing ſeal'd Tickets, wherein their Votes are wrote, into a Chalice, or Cup, placed on the Altar. Two thirds of the Votes are required to determine an *Election* by Scrutiny. See CONCLAVE.

The fourth is by Way of *Acceſſion*; when, the Votes being too much divided to *Elect* any Body, ſome of the Cardinals deſiſt from their firſt Suffrage, and *Accedunt*; that is, give their Voices to him, who has already the Majority by Scrutiny.

The Way of Acceſſion, however, is always added to the Scrutiny; it being the conſtant Practice for all the Cardinals, to give their Voices, after the laſt Scrutiny, to him whom they find to have the Plurality already. So that all *Elections* of Popes are, with the unanimous Conſent of all the Cardinals. See CARDINAL.

*Election of Biſhops, of Members of Parliament*, &c. See BISHOP, PARLIAMENT, *&c.*

ELECTION, is alſo when a Perſon is left to his own free Will to take or do either one Thing, or another, which he pleaſes.

ELECTION, in Theology, the Choice which God, of his good Pleaſure, makes of Angels or Men, for the Deſigns of Mercy and Grace.

The *Election of the Jews*, was the Choice God made of that People to be more immediately attach'd to his Worſhip and Service, and for the Meſſiah to be born thereof.

*Election* alſo, ſometimes, ſignifies a Predeſtination to Grace and Glory; and ſometimes to Glory only. 'Tis an Article of Faith, that Predeſtination to Grace is gratuitous; merely and ſimply ſo: *Gratia quia gratis data*. But the Divines are divided as to the Point, whether *Election* to Glory be gratuitous, or whether it ſuppoſe Obedience and good Works, *i. e.* whether it be before, or after the Previſion of our Obedience.

Some hold that it is before, and after at the ſame Time: It is before the Previſion of our Obedience, as Glory is intended as antecedent to our Obedience: And it is after, as this Glory is intended us as a Reward, and of Conſequence, as a Sequel of our Obedience. See GRACE, PREDESTINATION, REPROBATION, *&c.*

ELECTION, is alſo a Part of Pharmacy; being that which teaches how to chuſe ſimple Medicaments, Drugs, *&c.* and to diſtinguiſh the Good from the Bad. See PHARMACY.

Some diſtinguiſh a general *Election*, which gives the Rules and Marks for all Medicines in general; and a particular one for each Medicine in particular.

ELECTIVE, what is done by Election. The Empire of *Germany* was Hereditary in the Time of *Charlemaign*; and did not become *Elective*, till after the Death of *Louis* the IIId. the laſt of the Race of *Charlemaign* in the Empire. Indeed, it was not entirely *Elective* till the Time of *Frederic* II, in 1210.

Some Benefices are *Elective*, others Collative. Municipal Offices in *England*, are generally *Elective*; in *Spain*, Venal; *Poland* is an *Elective* Kingdom. All Prelatures in *France* are *Elective*, ſince the *Concordat*.

ELECTOR, a Perſon who has a Right to *elect*, or chooſe another to an Office, Honour, *&c.*

The *Electors* of a Burgeſs, a Knight of the Shire, a Grand Maſter of an Order, *&c.*

The Word is form'd of the *Latin*, *Eligere*, to chooſe.

ELECTOR, is particularly, and by Way of Eminence, uſed for the Princes of *Germany*, in whom lyes the right of electing the Emperor; being all ſoveraign Princes, and the principal Members of the Empire. See COLLEGE *of Electors*.

The Origin of *Electors* is not well known: Some refer it to *Otho* III, in the Year 997; others to *Frederic* II, who died in 1250; and others, to *Raoul* of *Hapsburg*, Founder of the Family of *Auſtria*, in the Year 1280.

Their Number, however, was unſettled, at leaſt till the Time of *Frederic* II, in the 13th Century. The Golden Bull, publiſhed by *Charles* IV, in 1346, fix'd the Number of *Electors* to ſeven; three of them Eccleſiaſtics, *viz.* the Archbiſhops of *Mentz*, *Treves*, and *Cologne*; and four Seculars, *viz.* the King of *Bohemia*, the Count Palatine of the *Rhine*, the Duke of *Saxony*, and the Marqueſs of *Brandenburgh*. By the Treaty of *Munſter*, in 1648, this Order was changed: The Duke of *Bavaria* being put in the Place of the Count Palatine, and an eighth *Electorate* erected for the Count Palatine.

In the Year 1698, a ninth *Electorate* was created by the Emperor *Leopold*, in Favour of *Erneſt* Duke of *Hanover*, under the Title of *Elector* of *Brunſwick*. Some Oppoſition was made to this Erection; and the Princes of *Germany* ſtood out for ſome Time, and refuſed to acknowledge it. But they afterwards acquieſced in it, and it has been recogniſed by all the foreign Princes. The King of *France* did it at laſt by the Treaty of *Raſtad*.

The ſeveral Functions of the *Electors* are as follow: The *Elector* of *Mentz*, is Chancellor of *Germany*; convokes the States, and gives his Vote before any one of the reſt. The *Elector* of *Cologne*, is grand Chancellor of *Italy*, and conſecrates the Emperor. The *Elector* of *Treves*, is Grand Chancellor of the *Gauls*, and confers the Impoſition of Hands on the Emperor. The Count Palatine of the *Rhine* is Grand Maſter of the *Imperial* Palace, and preſents the Emperor with a Globe at his Coronation. The Marqueſs of *Brandenburgh* is grand Chamberlain, and puts the Ring on the Emperor's Finger. The Duke of *Saxony*, now King of *Poland*, is Grand Marſhal, and gives the Sword to the Emperor. The King of *Bohemia*, who was antiently only Duke, is Grand Butler, and puts *Charlemaign*'s Crown on the Emperor's Head. Laſtly, the Prince of *Hanover*, now King of *Great Britain*, is Arch-Treaſurer; tho' firſt erected under the Title of Standard-Bearer of the Empire.

ELECTORAL, ſomething relating, or belonging, to an *Elector*. See ELECTOR.

The *Electoral Prince* is the eldeſt Son of an *Elector*, and the preſumptive Heir of his Dignity.

Electors are addreſs'd under the Title of *Electoral Highneſſes*. See HIGHNESS.

The *Electoral* College, conſiſting of all the Electors of the Empire, is the moſt Illuſtrious and Auguſt Body in *Europe*. *Bellarmine* and *Baronius* attribute the Inſtitution of the *Electoral* College to Pope *Gregory* V. And the Emperor *Otho* III, in the Xth Century. Of which Opinion, are the Generality of Hiſtorians, and particularly the Canoniſts. But *Wicquefort* is of another Opinion; and endeavours to make it appear, from the Elections of the ſucceeding Princes, that the Number of Electors was not then fix'd; nor the *Electoral* Dignity annex'd to any particular Principalites, excluſive of the other Princes of *Germany*. He adds, that there was nothing ſettled with Regard hereto before *Charles* IV; and that the Publication of his Golden Bull, was only to prevent Schiſms, and ſecure the Repoſe of the Kingdom by a Regulation in Form.

'Twas the Golden Bull, therefore, publiſh'd in 1356, that conſtituted the *Electoral* College, and reduced the Number of Electors to ſeven. See COLLEGE.

ELECTORAL *Crown*, or *Coronet*, is a Scarlet Cap, turn'd up with Ermine, cloſed with a Semi-circle of Gold, all cover'd with Pearls. On the Top is a Globe with a Croſs thereon. See CROWN and CORONET.

ELECTORATE, the Dignity of an Elector, with the Territory, or Dominions, to which the Quality is annex'd. The *Electorate* of *Saxony*, of *Bavaria*, &c. The Emperor, of his own ſpecial Authority, in the Year 1692, erected a ninth *Electorate*, in Favour of the Houſe of *Lunenburgh*. The Princes, who diſputed the Validity of this Election, were called the *Oppoſers of the ninth Electorate*.

Tho' the Cuſtom ordinarily be, in *Germany*, for the Sons of Princes to ſhare their Father's Lands and Territories among them; thoſe whereto the *Electorate* is attach'd, are not uſed to be divided; but paſs entire to the eldeſt Son, who ſucceeds to the *Electorate*.

ELECTRICITY, or ELECTRIC *Force*, is that Power, or Property, whereby Amber, Jet, Sealing-Wax, Agat, Glaſs, and moſt Kinds of precious Stones, attract Straws, Paper, and other light Bodies to themſelves. See ATTRACTION.

*Electricity* differs from Magnetiſm in this, that the latter only attracts Iron, whereas the former indifferently attracts moſt Kinds of Bodies; tho' the Effect is only ſenſible in light ones. See MAGNETISM.

The *Peripateticks* hold this Power to conſiſt in I know not what Quality, or ſympathetick Power, ſubſiſting between the Amber, *e. gr.* and the Straw, and reſulting from the ſubſtantial Form of each. See QUALITY.

But the later Philoſophers generally agree to make it the Effect of a corporeal Effluvium, emitted from, and returning to, the Electrical Body. Tho' as to the Nature of theſe Effluvia, and the Manner of their acting, they are greatly divided. See EFFLUVIA.

Some, with *Cabæus*, ſuppoſe actual Steams to iſſue out of the *Electric* Body, when agitated by Attrition; and that theſe diſcuſs and repel the ambient Air, which, after it has been driven off a little Way, makes, as it were, a little Whirlwind, by the Reſiſtance it meets withal in the remoter Air, to which theſe *Electric* Steams did not reach: And that theſe Steams ſhrinking quickly back again to the attracting Body, do, in their Return, attract and bring along with them ſuch light and ſmall Bodies as they meet in their Way.

Others, with Dr. *Gilbert*, *Gaſſendus*, Sir *Kenelm Digby*, &c. hold, that on rubbing, or chafing, the *Electric* Body is made to emit Rays, or Fibres, of an unctuous Nature; which coming to be condenſed and cool'd by the ambient Air, do loſe their Agitation, and ſo ſhrink back again into the Body from which they ſallied; and by that Means carry along with them ſuch light and ſmall Bodies, as happen to be faſten'd, or ſticking to their further Ends. *Gaſſendus* adds, that theſe unctuous Effluvia being emitted all Manner of Ways, do frequently decuſſate, or croſs each other; and by that Means take the better hold of Straw, *&c.*

The *Carteſians*, not being able to imagine how ſo hard and brittle a Body as Glaſs, ſhould emit Effluvia; attribute *Electricity* to the Globules of the firſt Element; which breaking out thro' the Pores, or Chinks of the Body, like little Darts or Swords, and not meeting with proper Meatus's, or Paſſages in the Air, return whence they came, and carry the little Bodies, whoſe Pores they happen to enter, and be entangled in, along with them.

Mr. *Boyle*, Mr. *Hawksbee*, &c. have made a Number of Experiments, to aſcertain the Nature and Laws of *Electricity*; the Reſult whereof may be ſumm'd up under the following Articles.

1. That *Electrical* Bodies do not at all, or very rarely attract, except when warm'd, and thereby ſollicited to emit Effluvia more copiouſly.

Mr. *Hauksbee*, having heated a Glaſs Tube, of about an Inch Diameter, and 30 Inches long, by rubbing it vehemently on Paper; and then applying it to ſeveral Pieces of Leaf Braſs, found, that they were no ſooner within the Sphere of Activity of the Effluvia emitted by the Tube, than they began to be put into very briſk and ſurprizing Motions; would leap toward the Tube, even at the Diſtance of 12 or 14 Inches; would ſometimes adhere, and faſten to the Tube, ſettle on its Surface, and there remain quiet: and ſometimes be thrown off from it with a great Force. And thus would they be alternately attracted and repell'd, for ſeveral Times ſucceſſively. Sometimes, again, they would move ſlowly toward the Tube; ſometimes, would remain ſuſpended between the Tube and the Table they were firſt laid on; and ſometimes ſlide along in that Direction of the Side of the Tube, without touching it.

2. That Bodies, warm'd by Fire, don't attract ſo forcibly, as when heated by rubbing; tho' if they be firſt heated, and then rubb'd, they will attract the more ſtrongly.

Mr. *Hauksbee* aſſures us, that the hotter he made the Tube by rubbing, to the greater Diſtance did the attractive Force extend it ſelf: But that this would anſwer, in Proportion, to any Degree of Heat excited, he will not undertake. When the Tube was render'd the hotteſt by the ſtrongeſt Attrition, the Force of the Effluvia was render'd manifeſt to another Senſe, namely that of feeling, being plainly perceived on the Face, or any other tender Part, making Strokes or Impulſes on the Skin, much like thoſe made by puſhing a Number of limber Hairs againſt it.

3. That Terſion, or Wiping, is almoſt univerſally neceſſary, as well as Attrition, or rubbing, to produce *Electricity*; by Reaſon the Effluvia can more readily eſcape, when there is nothing to ſtop up, or choak the Pores.

4. That the Interpoſition of the fineſt Linnen, as Muſlin, Gauſe, or the like, will totally hinder the Operation of *Electrical* Bodies.

5. The Effect is leſs ſenſible in thick and cloudy Weather. For the Air being clogg'd with Vapours and Exhalations rais'd from below, the Reſiſtance the *Electric* Effluvia meet withal, muſt be greater than when the Air is free of any ſuch Impediments. Hence, alſo, in all Probability,

bability, ariſes the Neceſſity of Terſion; the watery Particles being apt to run together, and condenſe on the Surface of the Body, and ſo obſtruct the Paſſage of the Matter.

6. *Electrical* Bodies are more forcible, *Cæteris paribus*, in hot Weather than in cold; in Summer than in Winter; by Reaſon the more vigorous Action of the Solar Rays, does more effectually ſhake the Parts of Bodies, and unlock the Pores, and ſo make Room for a more plentiful Emiſſion of Effluvia. Beſide, that in warmer Weather, the Medium being rarer, makes leſs Oppoſition to the Paſſage of the Effluvia.

7. The Air being exhauſted out of the Tube, it loſes almoſt all its *Electricity*: So that tho' rubb'd, and heated more vehemently, and Leaf-Gold applied nearer than uſual, it ſcarce attracts at all. And what little Attraction remains, Mr. *Hauksbee* conjectures, may ariſe from the little Portion of Air remaining in the Tube: And ſo the Attraction may continue in Proportion to the Quantity of Air. When the Air is let into the Tube again, the attractive Power is immediately reſtor'd; and that before any new Attrition can be given the Tube, or e're it be removed from the Diſtance and Poſition it was in when exhauſted. Mr. *Boyle*, however, found that a Piece of Amber did ſenſibly attract when the Air was pump'd out of the Receiver.

8. *Electrical* Bodies attract all Things indifferently, whereas the Magnet draws only Iron and Steel.

9. A large Piece of very *Electrical* Amber being ſuſpended by a ſilken Thread, and one End of it rubb'd ſtrongly on a little Cuſhion; the Cuſhion being brought nearer, towards the Amber at reſt, will plainly make the Amber tend towards it, and follow it. Whence it appears that the *Electric* Body, is attracted by the other Bodies, as well as it attracts them. And that it is only by Accident that the ſmall attracted Bodies approach to the *Electric* ones.

10. After an *Electrical* Body has been well rubb'd, there is a certain Nick of Time in which the light Body, inſtead of being attracted, will be actually repell'd, or driven away from the *Electrical* one, by the Effluvia going briſkly out, and not returning again.

Mr. *Hauskbee* aſſures us, that the Pieces of Leaf Gold would be ſometimes thrown off from his Tube with a great Force, even to the Diſtance of ſix or ſeven Inches. And thus, not only when they adhered to the Surface of the Tube, would they be thus ſuddenly and precipitantly driven from it; but alſo in their Motion of Aſcent towards it.

11. A Glaſs Globe, being contrived to be whirled round, with its Axis parallel to the Horizon, and a Semi-circle of Wire fitted round the upper Hemiſphere thereof, at the Diſtance of 4 or 5 Inches, with ſeveral Pieces of Woollen Thread hung thereon, of ſuch Lengths, as that when extended in a Direction towards the Centre of the Glaſs, they would reach within an Inch of the Circumference thereof; but when left at Liberty, hang down in a parallel Poſition: Upon applying the Hand, and ſo adding an Attrition to the former Rotation, the Threads preſently began to change their Direction, and all harmoniouſly pointed to the Centre of the Globe; and to put it paſs Doubt, this Effect depended on the Attrition, the Experimentator, by ſhifting the Place of the Attrition hither and thither, cou'd draw the Threads towards this or that End of the Globe, tho' they all ſtill went uniformly converging towards ſome Centre, in the Axis thereof; and ſo form'd a Kind of Conical Surface.

The ſame Phænomena follow'd upon ſhifting the Wire, and putting it on the lower Hemiſphere. Add, that upon ſuſpending the Motion and Attrition, the Threads would continue in their ſtrait direct Poſture for the Space of four or five Minutes. And in the mean Time, if the Finger, or any other Body, were applied near the Extretremity, or Points of the Threads, they would avoid and fly from the ſame: But if applied about an Inch Diſtance from the End of ſuch Thread, the Thread would uſually be attracted towards it.

ELECTRUM, the ſame as *Amber*. See AMBER.

ELECTUARY, in Pharmacy, a Form of Medicine, compoſed of Powders and other Drugs, incorporated with Honey or Sugar; to be divided into Doſes, like Bolus's, when taken.

It is thus call'd, by Reaſon all the Parts, or Ingredients it conſiſts of, ſhould be well *choſen*; from the *Latin* Verb *Eligere*, to chuſe, whence *Electus*, choſen. Others derive it from *Lac*; and accordingly the *Greeks*, under the *Eaſtern* Empire, call'd it λακτυάριον. *Scaliger* derives it from λείχω, *to lick*; and calls it in *Latin*, *Elinctum*.

*Voſſius* obſerves, that all the Remedies preſcribed for the Sick, as well as the Confections taken by Way of Regale, were called by the *Greeks*, ἐκλείγματα and ἐλείκτα, of the Verb λείχω, *to lick*: Whence, ſays he, was form'd the Latin *Electarium*, and afterwards *Electuarium*. This Opinion he proves from the Laws of *Sicily*, where it is ordain'd, that *Electuaries*, Syrups, and other Remedies, be prepared lawfully. The *Bollandiſts*, who relate this Etymology, ſeem to confirm it. *Act. Sanct. Mart. F.* II. *p.* 131. See ECLEGMA.

*Electuaries* are either *ſoft*, or *ſolid*; and of each Kind, ſome are *Alterative*, others *Corroborative*, others *Purgative*, &c.

The ſoft are of the Conſiſtence of Honey, and conſiſt of 3 Ounces of Powders to a Pound of Honey or Sugar.

The ſolid are in Manner of *Tabellæ*, or Lozenges. The Purgative are uſually of the ſoft Kind: But the Corroborative only admit of an Ounce and half or two Ounces.

Among the ſoft *Electuaries* are reckon'd *Treacle*, *Mithridate*, the Confection of *Hamech*, that of *Alkermes*, the *Catholicon*, *Diaprunum*, *Diaphœnic*, Galens *Hiera picra*, &c. which ſee explain'd under their reſpective Articles.

Among the ſolid *Electuaries*, are reckon'd *Carthamum*, *Roſe Juice*, *Voilet Juice*, &c. Monſ. *Lemery* reckons up above 120 Sorts of *Electuaries*.

ELEEMOSINA *Carucarum*, or *pro Aratris*, or *Aratri*, in our antient Cuſtoms, a Penny which King *Ethelred* order'd to be paid for every Plough in *England*, towards the Support of the Poor.

Sometimes 'tis called *Eleemoſina Regis*, becauſe firſt appointed by the King.

*Eleemoſinæ* are alſo uſed for the Poſſeſſions belonging to Churches.

ELEEMOSINARIA. See AMBRY.

ELEGANCE, ELEGANCY, conſider'd in the general, is a Manner of doing or ſaying Things with Choice, Politeneſs and Agreeableneſs: With *Choice*, in going out of the common Ways: With *Politeneſs*, in giving the Thing a Turn which ſtrikes People of a delicate Taſte: And with *Agreeableneſs*, in diffuſing a Reliſh throughout which hits every Body.

*Elegantiæ poeticæ*, poetical *Elegancies*, are of Service to Scholars in making their Verſes. By being too regular in the Grammatical Conſtruction, we loſe certain Licences, wherein the *Elegance* of Language conſiſts. *Elegance*, tho' irregular, is better than Regularity without *Elegance*.

The *Elegance* of a Painting is not founded on the Correctneſs of the Deſign, as appears in *Raphael* and the *Antique*. It is moſt felt in Works otherwiſe careleſs and inaccurate; as in *Corregio*, where, maugre all the Defects as to Juſtneſs of Deſign, there is an *Elegance* even in the Manner of the Deſign it ſelf, as well as in the Turn of the Attitudes. *&c.*

The *Elegance* of a Deſign, is a Manner of Being, which Embeliſhes, and heightens Objects either as to their Form, or Colour, or both; without deſtroying or perverting the Truth.

ELEGIAC, in the *Latin* Poetry, ſomething that belongs to *Elegy*. See ELEGY.

*Elegiac* Verſes, *Elegi*, are alternately Hexameter and Pentameter. See VERSE.

*Quintilian* eſteems *Tibullus* the Top of the *Elegiac* Poets: But the younger *Pliny* gives the Preference to *Propertius*. They have each of them Reaſon on their Side; and one might make a third Choice, as true as either of them.

ELEGIT, in Law, a Writ judicial, which lies for him that has recover'd Debt, or Damages; or upon a Recognizance in any Court, againſt one not able in his Goods to ſatisfy; and directed to the Sheriff; commanding him to make Delivery of half the Party's Lands, and all his Goods, Oxen and Beaſts for the Plough, excepted.

The Creditor ſhall hold the Moiety of the ſaid Land ſo deliver'd to him, till his whole Debt and Damages are ſatisfied; and during that Time, he is Tenant by *Elegit*.

ELEGY, a Kind of Poem, or Poeſy, uſed on mournful, plaintive Occaſions. See POEM.

The firſt Inventor of the *Elegy* is not known: Some ſay 'twas one *Theocles* of *Naxi*, or, according to others, of *Etreria*; who, in the Heat of his Frenzy, firſt produced this Kind of Verſe. But, no Wonder we are in the Dark as to this Matter: *Horace* aſſures us, 'twas a Point not ſettled among the Grammarians even in his Time, who the Author was.

*Quis tamen exiguos Elegos emiſerit Auctor*
*Grammatici certant & adhuc ſub Judice lis eſt.*

The chief Writers of *Elegy* among the *Greeks*, are *Callimachus*, *Parthenius* and *Euphorion*: And among the *Latins*, *Ovid*, *Catullus*, *Tibullus*, and *Propertius*.

The *Flemiſh* have diſtinguiſh'd themſelves among the Moderns for this Kind of *Latin* Verſe: And the *Elegies* of *Biderman*, *Grotius*, and eſpecially *Sedronius* and *Vallius*, might become the pureſt Antiquity. The Counteſs

*de la*

*de la Suze*, has diſtinguiſh'd her ſelf for *Elegies* in the *French* Tongue.

In the *Engliſh*, we have nothing conſiderable of the *Elegiac* Kind, but what we have in *Milton*. The *Engliſh* and *French Elegies* are chiefly in *Alexandrine* Verſes.

In Proceſs of Time, *Elegy* degenerated from its Original Intention; and not only Matters of Grief, but alſo Joy, Wiſhes, and almoſt every Subject, became free of *Elegy*. Complaints, Expoſtulations, Prayers, Vows, Praiſes, Congratulations, Reproaches, *&c.*

The Office of the *Elegy* is well deliver'd by M. *Boileau*.

*La plaintive Elegie en longs habits de Deuil,*
*Scait les Cheveux epars gemir ſur un Circueil:*
*Elle peint des Amans la Joye, & la Triſteſſe;*
*Flatte, Menace, Irrite, appaiſe une Maitreſſe.*

In Mourning Weeds ſad *Elegy* appears,
Her Hair diſchevell'd, and her Eyes in Tears:
Her Theme, the Lover's Joys, but more his Pains;
By Turns ſhe ſings, ſooths, threatens and complains.

The Diction of *Elegy* is to be clean, eaſy, perſpicuous, expreſſive of the Manners, tender and pathetic; not debauch'd or oppreſs'd with Sentences, Points, *&c.* No Apoſtrophe's are allow'd; and the Senſe to be generally cloſed in every Diſtich or two Lines. At leaſt in the *Latin*.

ELEMENTARY, ſomething that relates to the *Elements*. See ELEMENT.

The Elements of a Body are alſo called the *Elementary Principles* thereof. See PRINCIPLE.

The whole Space, included within the Concave, or Orbit of the Moon, is called the *Elementary Region*, as being the Seat, or Sphere of the four Vulgar Elements, and the Bodies compounded thereof. See REGION.

The Author of the *Comte de Gabalis*, calls *Elementary People* a Kind of perfect Beings, which inhabit the Elements, and are only known by what they call the Philoſophers, or Sages. According to theſe Folks, who at beſt are great Fools, the *Element* of *Fire* is inhabited by Salamanders; *Water*, that is, the Sea and Rivers, by Nymphs, or Oridians; *Earth*, by Gnomes and Gnomides; and *Air*, by Sylphs and Sylphides.

ELEMENTS, in Phyſicks, the firſt Principles, or Ingredients of Things; whereof all Bodies are compounded; and into which they are all reſolvible. See BODY.

*Elements* are conceiv'd as the moſt ſimple, homogeneous Parts, or Corpuſcles; of an Aſſemblage, and Mixture whereof, all the Bodies we ſee, conſiſt. See CORPUSCLE, *&c.*

Authors generally talk very wildly and inconſiſtently of the *Elements*, and confound them with the *Principles* of Things: Yet is there a great deal of Difference. As we find, by Experience, that all Things cannot indifferently be made of all; that Stone, for Inſtance, and Marble, are not convertible into Fleſh, nor are fit to nouriſh or augment an animal Body: It ſeems to follow, that all the Variety of Bodies could never ariſe from the firſt ſimple Combination of the two Principles, Matter and Form; but only ſome infinitely ſimple Beings, or Corpuſcles, which being variouſly intermix'd, might conſtitute all other Bodies.

Now thoſe moſt ſimple of all Beings, thus form'd of the firſt Determination and Concretion of Principles, are what the Philoſophers properly call *Elements*: So that *Elements* and *Principles* have this Difference between them; that a *Principle*, as Matter, is a Kind of incompleat Nature; but an *Element*, a perfect or compleat one. See PRINCIPLE.

Hence it follows, that there muſt, of Neceſſity, be more *Elements* than one: Since otherwiſe all Things would be equally ſimple, and there would be no ſuch Thing as a Compound in Nature. Moſt of the Antients, not aware of this, confound *Element* with *Principle*: On this footing, the *Elements* are ſometimes held corruptible, and ſometimes incorruptible.

The Retainers to incorruptible *Elements*, mean preciſely by *Element* what we mean by the *firſt Matter*. In Effect, their *Elements* are their Atoms, or Corpuſcles, which are ſuppoſed indiviſible, incorruptible, *&c.* See ATOM and CORPUSCLE.

*Democritus* is held the firſt Author of this Tenet; which accordingly is adhered to by *Epicurus* and many of their Deſcendants, the *Epicurean* and *Corpuſcular* Philoſophers. See CORPUSCULAR, *&c.*

Among thoſe who hold them corruptible, ſome will only have one, and ſome ſeveral. Of the former, the Principal are *Heraclitus*, who held Fire; *Anaximenes*, Air; *Thales Mileſius*, Water; and *Heſiod*, Earth; as the only *Element*. *Heſiod* is follow'd by *Bernardin. Veleſius*; and *Thales*, by many of the Chymiſts. See WATER, *&c.*

Among thoſe who admit ſeveral corruptible *Elements*, the principal are the *Peripateticks*; who, after their Maſter *Ariſtotle*, contend for four *Elements*, viz. Fire, Air, Water, and Earth. *Ariſtotle* took the Notion from *Hippocrates*; *Hippocrates* from *Pythagoras*; and *Pythagoras* from *Ocellus Lucanus*, who ſeems to be the firſt Author of the *Dogma*.

But there is a ſtill further Variety of *Elements*: For the Philoſophers, not conſidering Matter in it ſelf, or in the general, but only ſome of the Senſations it excites in us; ſome of them refer all to the Senſe of Sight, and aſſert *lucid* and *obſcure*, or *pellucid* and *opake*, to be the *Elements* of all Things: And others, regarding only the Senſe of Touch, make *hard* and *liquid*, or *hot* and *cold*, the *Elements* of Things.

In this latter Claſs we are to reckon *Ariſtotle*; tho' his Way of Proceeding was ſomewhat different from the reſt. For, conſidering the four principal Qualities that fall under the Senſe of Touching, *Heat*, *Cold*, *Dryneſs* or *Hardneſs*, and *Humidity* or *Liquidity*: And obſerving that two of theſe Qualities might be one and the ſame Thing taken in two different Relations; and that they might be combined four Ways; he made four *Elements*; the firſt, *cold* and *dry*; the ſecond, *cold* and *moiſt*; the third, *hot* and *moiſt*; and the fourth, *hot* and *dry*.

Then, to give Names to theſe *Elements*, he enquired in what Things theſe ſeveral *Elements* ſeem'd chiefly to prevail. Accordingly, taking the Earth to be the coldeſt, and, at the ſame Time, drieſt of all Things, he call'd the firſt *Element*, *Earth*. See EARTH.

And *Water*, being the coldeſt and moiſteſt of all Things, he called his ſecond *Element*, *Water*. See WATER.

Again, judging *Air* the moiſteſt, and at the ſame Time hotteſt of all Things, his third *Element* he called *Air*. See AIR.

Laſtly, *Fire* being the hotteſt and drieſt of all Things, his fourth *Element* he denominated *Fire*. See FIRE.

Theſe Denominations gave Occaſion to ſome, impertinently enough, to miſtake his Meaning; and to take this habitable *Earth*, this potable *Water*, this *Air* we breath, and this *Fire* we burn on our Hearths, to be the four *Elements*; notwithſtanding that the Word *Element* denotes a moſt ſimple Thing; whereas the Bodies juſt mention'd, are all exceedingly compound. See PERIPATETICK.

The *Carteſians* only admit three *Elements*; which they pretend are all that could ariſe from the firſt Diviſion of Matter: To explain their Origin, they ſuppoſe the whole Maſs of Matter in the Univerſe, divided into an infinite Number of Particles of unequal Magnitudes, and of any Figure at Pleaſure. Theſe ſeveral Particles they ſuppoſe, further, to have been revolved, or whirled, in various Manners, each round its Centre; ſo as to become truly ſeparate and apart.

Thus much ſuppoſed, 'tis impoſſible but the Angular, Eminent, and Implicated Parts of the ſeveral Particles muſt be broke off; and thus, tho' little before, they muſt continue continually to grow leſs till they arrive at a perfect Rotundity. By this Means we get two Kinds of determinate Matter for the two firſt *Elements*: The firſt, a fine Duſt rubb'd, or broke off from the Angles of the Particles, till they are turn'd round; which is the Matter of the *firſt Element*, or the *Materia ſubtilis*. The other, the Parts themſelves thus turn'd round, and ſmooth, which makes the *ſecond Element*.

And, as 'tis probable ſome Particles of Matter may either ſeparately, or conjunctly, ſtill retain irregular, hooked, and intricate Forms; theſe conſtitute the *third Element*.

'Tis added, that the *Elements* are convertible into each other: For the *third Element*, by growing round, may become the *ſecond*; and the *ſecond*, by a continual Comminution and Subtilizing, the *firſt*. See CARTESIAN *Philoſophy*.

Our great Sir *Iſaac Newton*, conſiders the primary *Elements* of Bodies on the atomical Syſtem, thus: All Things conſider'd, it ſeems probable, that God in the Beginning form'd Matter in ſolid, maſſive, hard, impenetrable, moveable Particles of ſuch Sizes, and Figures, and with ſuch other Properties, and in ſuch Proportion to Space, as moſt conduced to the End for which he form'd them; and that theſe primitive Particles, being ſolids, are incomparably harder than any porous Bodies compounded of them; even ſo very hard as never to wear out: No ordinary Power being able to divide what God made one in the firſt Creation. While the Particles remain entire, they may compoſe Bodies of one and the ſame Nature and Texture in all Ages: But ſhould they wear away, or break in Pieces, the Nature of Things depending of them, would be changed. Water and Earth, compoſed of old worn Particles, and Fragments of Particles, would not be of the ſame Nature and Texture now, with Water and Earth compoſed of entire Particles in the Beginning. And, therefore, that Things

may

may be laſting, the Changes of corporeal Things are to be placed only in the various Separations, and new Aſſociations and Motions of thoſe permanent Particles: Compound Bodies being apt to break not in the midſt of ſolid Particles, but where thoſe Particles are laid together, and only touch in a few Points. It ſeems to me, likewiſe, that theſe Particles have not only a *Vis Inertiæ*, with the paſſive Laws of Motion reſulting therefrom, but are alſo moved by certain active Principles; ſuch as is Gravity, and that which cauſes Fermentation and the Coheſion of Bodies. See GRAVITY, FERMENTATION, and COHESION.

ELEMENTS, in Chymiſtry, are the Principles, or component Parts of Natural Bodies, into which they are reſolvible by Fire, *&c.*

The Effect of Chymiſtry is to analyze or reſolve Bodies into their *Elements*. See CHYMISTRY.

The Chymical *Elements* are divided into *Active* and *Paſſive*. See PRINCIPLE.

The Chymiſts are ſomewhat divided as to their *Elements*: The Generality of them to the Vulgar *Peripatetic Elements*; *Water*, which they call *Phlegm*; and *Earth*, which they call *Caput mortuum*; add three more, *viz. Salt*, *Sulphur*, and *Mercury*. *Salt*, they hold, the Principle of Taſte; and *Sulphur*, of Smell and Inflammation: As to *Mercury*, which they alſo call *Spirit*, ſome hold it the Principle of Colours, but others deny it; and, in Effect, they agree in nothing, but that 'tis the moſt ſubtle and ſpirituous Part. See SALT, SULPHUR, *&c.*

The *Elements* of Foſſils are, 1. *Mercury*, as the Baſe; 2. *Sulphur*, as the Coagulator, or Binder. 3. *Salt*. 4. *Earth*. The *Elements* of Metals, are *Sulphur* and *Mercury* alone; *Mercury* as the Baſe, or Matter, and *Sulphur* as the Binder, or Cement. The *Elements* of Foſſil Salts, are an inſipid acid Spirit and Earth. The *Elements* of Earths, are an Oil, a little acid Salt, and a Calx. The *Elements* of Sulphurs are an acid Spirit, an Oil, and an Earthy or Metallic Matter. *Boerhaave.*

But, after all, it muſt be added, that there is no aſſigning any preciſe Number of Chymical *Elements*; ſome Bodies yielding more, and others leſs. And even theſe very *Elements* themſelves are reducible, by a further Proceſs, into other *Elements*.

Thus, by repeated Diſtillations of Wine, we ſucceſſively get a Spirit of Wine, a vapid Water, a ſubacid Water, a more acid Water, Oil, bitter yellow Spirit, and a *Caput mortuum*, which is reſoluble into Earth, Oil, *&c.* Now, are theſe ſo many ſeveral *Elements*? Add, that what they account an *Element*, now that it is ſeparated, is very different from what it was when it exiſted in the mix'd; as appears hence, that upon remixing all the *Elements* a Body is reſolved into, the Mixture will bear no Reſemblance to the firſt Body.

In Effect, the *Elements* ſeem rather to be produced by the Fire, than ſeparated by it. Beſide, that they are convertible, or at leaſt reſolvible, into one another.

Thus, Spirit of Wine is found to yield an acid, an Oil, and a Water: And Salts yield either an Acid, or an Alcali, with Phlegm.

What makes the Notion of the Chymical *Elements* ſtill more precarious, is, that a Pot-Herb, and a poiſonous Herb, ſhall ſometimes yield *Elements* perfectly alike; more ſo, that the ſame Plant analyſed at two different Times. Monſ. *Homberg*, has conſider'd the Difficulties charged on *Elements*, with great Attention.

The Reſult of numerous Experiments made to aſcertain the Matter is: That the four Principles, Salt, Oil, Water, and Earth, are always found in all Plants, in what Manner ſoever analyſed: That theſe Principles are more or leſs Volatile, or fix'd according to the different Manners of Analyſing: That this Difference ariſes, not only from the different Force of Fire, but alſo from the Fermentation of the mixt, preceding the Analyſis: That a vehement Fire, rendering different *Elements* equally volatile, confounds them in the Analyſis: That the Fire evaporates, and abſolutely loſes ſeveral Parts: And that to have the *Elements* as pure as may be, only Fermentation and a gentle Fire muſt be uſed.

ELEMENTS, are alſo uſed figuratively, for the Principles and Foundations of Arts and Sciences.

Thus we ſay, Letters are the *Elements* of Speech: He does not know the firſt *Elements* of Grammar.

The *Elements of Mathematicks* have been deliver'd by ſeveral Authors in their Courſes, Syſtems, *&c.* The firſt Work of this Kind, is that of *Peter Herigon*, in *Latin* and *French*, publiſhed in 1664, in ten Tomes; wherein are contain'd the *Elements* of *Euclid*, *Euclids Data*, *Apollonius Pærgeus*, &c. with the *Elements* of Arithmetic, Algebra, Trigonometry, Architecture, Geography, Navigation, Opticks, Sphericks, Aſtronomy, Muſic, Perſpective, *&c.* The Work is remarkable for this, that throughout, a Kind of real and univerſal Characters are uſed; ſo that the Demonſtrations may be underſtood by ſuch as only remember the Characters, without any Language or Words at all. See CHARACTER.

Since *Herigon*, the *Elements* of the ſeveral Parts of Mathematicks have been laid down by others, particularly the Jeſuite *Schottus*, in his *Curſus Mathematicus*, in 1674; Sir *Jonas Moor*, in his *New Syſtem of Mathematicus*, in 1681; *De Chales*, in 1674; *Ozanam*, in his *Cours de Mathematique*, in 1699. And above all, *Chriſt. Wolfius*, in his *Elementa Matheſios Univerſæ*, in two Vols. Quarto. The firſt publiſhed in 1713, and the ſecond in 1715; a Work never enough to be commended.

The *Elements of Euclid*, are the firſt and beſt Syſtem of Geometry. We have Abundance of Editions, and Comments on the XV Books of *Euclid's Elements*. *Orontius Fineus*, firſt publiſhed the firſt VI Books in 1530; with Notes to explain *Euclid's* Senſe. The like did *Peletarius* in 1557. *Nic. Tartaglea*, made a Comment on all the XV Books about the ſame Time, with the Addition of ſome Things of his own: And the like did *Fran. Huſſates Candalla*, a noble *Frenchman*, in the Year 1578, with conſiderable Additions, as to the Compariſon, and Inſcriptions of ſolid Bodies; which Work was afterwards re-publiſh'd with a prolix Comment by *Clavius*, whoſe Edition has ſince been variouſly printed, at various Places and Times.

*De Chales*, *Herigon*, and *Commandinus*, have likewiſe done well upon *Euclid*; ſo has Dr. *Barrow*, who is remarkable for the Conciſeneſs and Strictneſs of his Demonſtrations. But as the whole XV Books do not ſeem neceſſary, eſpecially for young Mathematicians, ſome Authors have choſe only the firſt Six, with the Eleventh and Twelfth at moſt: It would be endleſs to relate the ſeveral Editions hereof: The two beſt are the *French* one of *Dechales*, and the *Latin* one of *And. Tacquet*: The beſt Edition of the former of which is that of *Paris* in 1709, by *Ozanam*; and of the latter, that of *Cambridge* in 1703, by Mr. *Whiſton*.

*Herlinus*, and *Daſypodius*, have thrown all *Euclid's* Demonſtrations into Syllogiſms; to ſhew how by a Concatenation of Syllogiſms, a compleat Demonſtration ariſes. *Pet. Ramus* diſliked *Euclid's* Order, as appears from his *Diſcourſe on the* XV *Books of Euclid*; and therefore he compiled 23 new Books of *Elements*, in the Order of the Schools, but unhappily: Tho' his Example was afterwards followed by others, particularly the Jeſuite *Gaſton Pardies*, in 1680; *Arnaud*, in 1667; and *Fa. Lamy*, in 1685: *Polynier*, a *French* Phyſician, in 1704, digeſted *Euclid* into a new Method: The like did *Angelus de Marchettis* of *Piſa*, in 1709, in his *Euclides Reformatus*.

ELEMENT *of an Area*, called alſo its *Differential*, is the Rectangle, P M R Q (*Tab. Analyſis Fig.* 11.) of the Semi-ordinate P M, into the Differential of the Aſciſs, P P. See DIFFERENTIAL.

ELEMI, or ELEMY, in Pharmacy, a pellucid Reſin, of a whitiſh Colour, intermix'd with yellowiſh Particles, which give it much of the Colour and Conſiſtence of Wax; of a pretty briſk, bitter, tho' not diſagreeable, Taſt; and a Smell like that of Fennel.

'Tis uſually called *Gum Elemi*, tho' very improperly, inaſmuch as it takes Fire readily enough, and diſſolves in oleaginous Liquors, which are the Characters of a Reſin. It flows from Inciſions made in the Trunk, and large Branches of a Kind of wild Olive Tree, growing in *Ethiopia*, and *Arabia fœlix*. It is alſo found in the *Pouille*, a Province of the Kingdom of *Naples*.

*Pomet*, in his Hiſtory, and *Lemery*, in his Treatiſe of *Drugs*, deſcribe *Elemi* as a white Reſin, bordering on green, odoriferous, and brought from *Ethiopia*, in Cakes of two or three Pounds a-piece, wrapp'd up in the Leaves of the *Indian* Cane.

It is excellent in Diſeaſes of the Head; and proper to digeſt, reſolve and ſuppurate. It is held a Kind of Natural Balſam; and ſoveraign in the Cure of all Kinds of Wounds.

The true *Gum Elemy* is that above deſcribed; but there are ſeveral ſpurious ones, ſome natural, and others factitious, frequently ſold for the ſame.

The factitious, or counterfeit, is made of Roſin waſh'd in Oil of Aſpic; tho' the ill Smell, and white Colour, might eaſily diſcover the Deceit. The natural Gums, obtruded for *Elemy*, are,

1. A Gum brought from the *American* Iſlands, in Barrels of divers Weight, cover'd up with the Leaves of a Plant unknown in *Europe*.

The 2d might be taken for Roſin, but for its Smell, which is ſomewhat ſweeter, and more aromatic.

The 3d is of an Aſh Colour, bordering on brown, brought over in large Pieces, very dry and friable.

*Pomet* does not take any of them for Natural; but rather ſuppoſes them to be originally *Elemy*, only impure

and coarſe, ſince melted down, and made up by the Fire.

ELENCHUS, in Logic, by the *Latins* call'd *Argumentum* and *Inquiſitio*, a vitious or fallacious Argument, which deceives under the Appearance of Truth; the ſame with *Sophiſm*. See SOPHISM.

ELEOSACHHARUM, from ἔλαιον, *Oleum*, and *Saccharum*, Sugar; a Mixture of Oil with Sugar, frequently added to diſtill'd Oils, to make them mix with aqueous Fluids for preſent Uſe.

ELEPHANT, gives the Denomination to a famous Military Order, conferr'd by the Kings of *Denmark*. See KNIGHT.

It is called the *Order of the Elephant*, from its Arms, which are an *Elephant*.

There are a deal of different Sentiments as to the Origin and Inſtitution of this Order: The firſt is that of *Mennenius* and *Hocpingius*, who attribute it to *Chriſtian* IV. who was elected King in 1584. The ſecond, that of *Selden* and *Imhof*, who derive it from *Frederic* II, elected in 1542. 3°. *Gregorio Leti* goes back as far as *Frederic* II, who reigned about the Year 1530. 4°. *Bernard Rebolledus*, will have King *John* to be the Author, who began to reign in 1478. 5°. *Anſhelmius*, *Roſærus*, and *Loeſcher*, hold it to have had its Riſe under *Chriſtian* I, Father of *Frederic* I. Laſtly, *Voightius*, *Bechman*, and *Bicherodius*, maintain *Canutus* VI. to have been the firſt Inſtitutor; and the Occaſion thereof to be the *Croiſades*. This Prince, according to the Chronology of *Swaning*, reign'd towards the Cloſe of the XIIth Century, from the Years 1168, to 1191.

This, at leaſt, we are certain of, that the Order was ſubſiſting in the Year 1494; there being a Painting ſtill extant, done that Year by Count *Reinden*, a Knight of this Order. And we have even authentic Evidences of the Marqueſs of *Mantua*'s being created Knight of the ſame Order by *Chriſtian* I, in 1474. There are Bulls of Pope *Pius* II, and *Sixtus* IV, confirming the Statutes of the Order, authorizing the holding of Aſſemblies, or Chapters, in the Chappel of *Boeſchil*, and ſettling the Privileges of the Knights.

The Order was at firſt called the *Order of St. Mary*, *Ordo S. Mariæ*: Tho' it ſeems to have had the Appellation of the *Elephant*, as early as *Chriſtian* I. Witneſs the Figure of an *Elephant*, ſo often ſtruck on his Coins, Medals, *&c.*

The Manner of its Inſtitution is thus related: King *Canutus* having ſent a Fleet againſt the *Sarazens*, in 1189, which took *Siluma* and *Ptolemais*; a Gentleman among the *Daniſh Croiſees*, kill'd an *Elephant*; in Memory of which extraordinary Accident, the Order was erected. This Account is render'd the more probable by this; that it is refer'd to an *Æra*, when nothing was more common than to take the Spoils of a vanquiſh'd Enemy for Armories, or Cognizances: And accordingly ſome of the principal Arms of the like Kind now on Foot, *e. gr.* the *Lions* of the *Low-Countries*, had their Riſe at the Time of the *Croiſades*; as is ſhewn by *Hoegerus* and *Hoepinguis*. Which Circumſtances greatly corroborate the Opinion of thoſe, who aſcribe the Order to King *Canutus*.

*Beſſarion* brought with him a very antient, and rare Coin from the *Eaſt* to *Rome*; whereon was ſeen the Image of the Holy Virgin, with an *Elephant*. *Caſſian* takes this to have been the Badge, or Symbol, of the *Danes*, engaged in the *Croiſades* againſt the *Sarazens*; and ſuppoſes it to relate to the Order of the *Elephant*. The Chancellour *Fruſius*, had another Coin of the like Kind, whereon was the Image of the Holy Virgin, an *Elephant*, and a *Creſcent*, which was antiently a Member in the Arms of this Order. *Boiſſeau* relates another antient Figure of the Arms of this Order, bearing the Image of the Holy Virgin with four *Elephants*, charged with Towers. And *Petra Sancta*, a fourth, wherein was the Virgin with three Keys, and four *Elephants*, and Spurs: Whence it appears, that the Order was under the Protection of the Virgin. Accordingly, the Order is ſtill called the *Order of St. Mary*. To the Collar of the Order hangs an *Elephant*, with a Silver Turret on its Back; and underneath the *Elephant*, an Image of the Holy Virgin, encircled with Rays. See the Abbot *Juſtiniani*, *Hiſt. de tutti gl. Ord. Milit. e Cavall.* T. II. *C.* 72.

The Chappel of *Roeſchild*, was founded by *Chriſtian* I. for the Aſſemblies, or Chapters, of the Order to be held in. It was at firſt called the Chappel of the three Kings, *Capella trium Regum*: Afterwards *Frederic* I. gave it the Name of the *Royal Chappel*.

The Order was retriev'd by *Frederic* II, who created Abundance of Knights at the Ceremony of his Coronation, which is the only Time when the *Daniſh* Kings make any of theſe Knights. *Chriſtian* V, augmented and enrich'd it very conſiderably. In the Year 1694, a grand Chapter of the Order was held at *Fredericsburg*, in the Chappel of the Knights, wherein ſix *German* Princes were admitted into the Order.

We have Abundance of Writings on the Subject of this Order; whereof that of *Janus Biſcherodius* may ſerve for all the reſt: 'Tis the lateſt, the moſt ample, and maſterly. It was publiſhed at *Copenhaguen*, in the Year 1705, under the Title of *Breviarium Equeſtre; ſeu de Illuſtriſſimo, & Inclitiſſimo Ordine Elephantino*, &c.

ELEPHANTIASIS, in Medicine, a Kind of *Leproſy*, called *Lepra Arabum*, in Contradiction to the *Lepra Græcorum*, which is another Diſeaſe. See LEPROSY.

The *Elephantiaſis* is thus call'd, by Reaſon thoſe ſeiz'd therewith, have their Arms, and Legs, big, ſwollen, and tuberous; the Skin bloated, yet rough to the Touch, all wrinkled and unequal like the Skin of an *Elephant*.

The *Elephantiaſis Græcorum*, or *Lepra Arabum*, is deſcribed by *Deodatus*, as a contagious Diſeaſe, infecting the Body with a Croud of Evils. The Skin of the Face, Knees, Elbows, Thighs, Hands and Feet is full of moveable, indolent Tubercles of a livid Colour, tending to Redneſs: In the Mouth, Palate, and Jaws, likewiſe, ariſe Tubercles, ſometimes yellow, and ſometimes livid: In the Intervals between the Toes, and on the Soles of the Feet, eſpecially the hard callous Parts thereof, as alſo in other Parts of the Limbs, break out Ulcers, which penetrate the Cutis, are very broad, and keep ſpreading with callous, and tumid Lips: Theſe, upon a little Violence yield Blood, and yet are indolent. Add, that Ulcers eat the Noſe, with Tumors about the Ears; the Lips thicken, and the Feet and Hands are wonderfully bloated.

Yet *Etmuller*, *Haly*, *Abbas*, and others, ſpeak of the *Elephantiaſis* as a ruddy, livid Swelling of the Feet and Legs, with Varices, and Ulcers; which make the Feet appear like *Elephants* Feet.

The *Elephantiaſis*, *Turner* obſerves, is a Diſeaſe unknown in our Parts of the World; at leaſt in theſe Days. Some Authors call it *Leontiaſis*, and others *Satyriaſis*. The *Greeks* call it ἐλεφαντίασις; and ſometimes ἐλέφας, *Elephant*, and ἐλεφαντιασμός.

ELEPHANTINE, ſomething that relates, or belongs to an *Elephant*.

The Term is chiefly applied to certain Books of the antient *Romans*, wherein were recorded the Actions of the Princes, and the Proceedings, Acts, *&c.* of the Senate. This we learn from *Pollio*, and *Vopiſcus*, in the Life of the Emperor *Tacitus*, where he obſerves that in the 6th Preſs of the *Ulpian* Library, was kept one of theſe *Libri Elephantini*; wherein, for a long Courſe of Time, were wrote down the Decrees, and Edicts of the Senate.

In ſome of theſe Books, were regiſtred all the Acts and Meaſures of the Senate, and the Magiſtrates of *Rome*; in others, the Proceedings and Events in Provinces, in War, *&c.*

There were above thirty five large Volumes of them, as many as there were Tribes: There being likewiſe contain'd in them the Births, and Degrees of the Citizens; the Enumerations and all Things belonging to the Cenſure. They were renew'd every five Years with the Cenſors; and were all antiently kept in the *Ærarium*, or public Treaſury, which was in the Temple of *Saturn*. *Vigenere on Tit. Livy*.

*Vigenere*, and ſeveral others, believe theſe Books to have been called *Elephantine*, by Reaſon of their enormous Bulk, *q. d.* as big as *Elephants*, or Bullocks. But *Loiſel* on the XVIIth Chapter of the XIth Book of *Aulus Gellius*, gives us a different Etymology; and aſſures us they were called *Elephantine*, becauſe made of Ivory Leaves, or Tablets, which every Body knows is a Production of the Elephant. And, accordingly, *Ulpian*, *L.* 52. *H. de Legat.* 3. makes mention of an Ivory Book. *Scaliger* and *Gerard Voſſius*, ſay they were made of the Inteſtines of an *Elephant*.

*Voſſius* does not deny, indeed, but that they might have been made of Ivory; but being there were ſeveral other Books, and Tablets, made of that Matter, as appears from *Martial*, L. XIV. *Epigr.* 3. and a hundred other antient Authors, and from what we have ſhewn under the Term DYPTIC: It does not appear, why the Name *Elephantine* ſhould be peculiarly appropriated to theſe.

*Martial* does not give the Name *Elephantinus*, but *Eboreus*, *of Ivory*, to the Tablets mention'd in the Place laſt quoted, *Eborei Pugillares*: *Alexander ab Alexandro Genial. Dier.* L. II. *C.* 2. makes mention of the *Libri Elephantini*: So does *Salmaſius*, on the Paſſage in *Vopiſcus*, juſt quoted; where he refutes *Scaliger*, maintains that theſe Books were of Ivory, and ſhews, that the Antients uſed the Word *Elephas*, for *Ivory*; witneſs *Virgil Æneid.* L. III. *v.* 464. and *Servius* on the ſame: And *Elephantinus*, for what was of Ivory; witneſs *Martianus Capella*,

*Capella*, and *Iſidore* in his Gloſſes. He ſhews further, that it was no impoſſible Thing to write on Ivory, as *Scaliger* had ſuggeſted; that they did not make uſe of a Gooſe Quill as we do, nor of Ink like ours: But Ruſhes, or Reeds, form'd after a different Manner from our Pens, and Ink fit to take upon Ivory. The Matter of Fact, in fine, he aſſerts, is clear from *Martial*, and *Plautus* in his *Moſtellaria*.

ELEVATION, *Altitude*, or *Height*, in Aſtronomy. The *Elevation of any Star*, or other Point, in the Sphere, is an Arch of the Verticle Circle, intercepted between his Star or other Point, and the Horizon.

And the ſame Definition ſerves for the *Depreſſion*, or Depth of any Point.

Hence, as the Meridian is a Vertical Circle; a Meridian Altitude, or *Elevation*, i. e. the *Elevation* of a Point in the Meridian, is an Arch of the Meridian, intercepted between the Point and the Horizon. See ALTITUDE.

ELEVATION *of the Pole*, is the Altitude of the Pole above the Horizon of any Place; or an Arch of the Meridian, intercepted between the Pole and the Horizon. See POLE.

Thus, in *Tab. Aſtronomy Fig.* 39. A Q being ſuppoſed the Equator, H R the Horizon, H Z P N the Meridian, and P the Pole; P R is the *Elevation of the Pole*.

The *Elevation of the Pole*, is always equal to the Latitude of the Place; that is, the Arch of the Meridian intercepted between the Pole, and the Horizon, is equal to the Arch of the ſame Meridian, intercepted between the Equator and the Zenith.

Thus the North Pole is elevated 51° 32′ above the Horizon of *London:* And there is the ſame Diſtance, or Number of Degrees between *London* and the Equator; ſo that *London* is likewiſe in 51° 32′ of Northern Latitude. See LATITUDE.

*To obſerve the Elevation of the Pole of any Place.* See POLE and LATITUDE.

ELEVATION *of the Equator* is an Arch of the Meridian, leſs than a Quadrant, intercepted between the Equator, and the Horizon of the Place. See EQUATOR.

Thus A Q, as before, repreſenting the Equator, H R the Horizon, P the Pole, and H Z P N the Meridian; H A is the *Elevation of the Equator*. See EQUATOR.

The *Elevations* of the Equator, and of the Pole, together, are always equal to a Quadrant: Conſequently, the greater the *Elevation* of the Pole, the leſs the *Elevation* of the Equator, and *vice verſa*.

Thus in the Figure juſt cited P A, is ſuppoſed by the Conſtruction a Quadrant; and H A + A P + P R a Semi-circle: Conſequently H A + P R is a Quadrant.

*To obſerve the Elevation of the* EQUATOR.

Find the *Elevation* of the Pole, after the Manner already directed under the Article POLE.

Subſtract the *Elevation* found, from a Quadrant, or 90°. what remains is the *Elevation of the Equator*. Thus, the *Elevation* of the Pole 51° 32′, being ſubſtracted from 90°, leaves the *Elevation* of the Equator 38° 28′.

ELEVATION, in Architecture, a Draught, or Deſcription, of the principal Face, or Side of a Building; called alſo an *Upright*, or *Orthography*. See ORTHOGRAPHY.

ELEVATION, we alſo find uſed in ſome Writers of Perſpective, for the *Scenography*, or perſpective Repreſentation of the whole Body or Building. See SCENOGRAPHY.

ELEVATION, in the *Romiſh* Religion, is applied to that Part of the Maſs, wherein the Prieſt hoiſts, or raiſes the Hoſt, with the Cup, above his Head; for the People to adore it: After having conſecrated, and adored it himſelf.

The Prieſt, who aſſiſts at Maſs, rings a Bell at the *Elevation*; to apprize the People to caſt their Eyes upon their new form'd Saviour, and adore him.

St. *Louis* decreed, that they ſhould fall on their Knees at the *Elevation*, in Imitation of certain Religious whom he does not name. The *Chartreux*, and the Religious *de la Trape*, ſtill obſerve this Ceremony of proſtrating themſelves at the *Elevation*.

*Angle of* ELEVATION, in Mechanicks, is the Angle A R B, (*Tab. Mechanicks Fig.* 37.) comprehended between the Line of Direction of a Projectile A R, and the Horizontal Line A B. See PROJECTILE.

ELEVATION *of a Mortar Piece*, or Gun, is the Angle, which the Chaſe of the Piece, or the Axis of the hollow Cylinder, makes with the Plane of the Horizon. See MORTAR, *&c.*

ELEVATOR, in Chirurgery, an Inſtrument uſed to raiſe up Bones, as thoſe in Fractures of the Skull, when beaten, or cruſh'd in, with Blows, or the like.

There are dented *Elevators: Elevators* with three Feet, call'd *Elevatores Triploides*.

The *Elevator* made Lever wiſe, is a new Invention: Its Uſe is in drawing Teeth. One Extremity of it is flat, to reſt on the Gum, at the Bottom of the Tooth, and the other hooked, like one of the Branches of a *Pelican* to faſten hold of the Tooth.

ELEVATOR, in Anatomy, a Name common to ſeveral Muſcles, which do the Office of raiſing or lifting up of the Parts they belong to; of equal Import with *Attollens* and *Levator*. Such are the

ELEVATOR *Alæ Naſi*, a Muſcle, or Pair of Muſcles of the Noſe, of a Pyramidal Figure, very narrow, tho' fleſhy at its Origination on the fourth Bone of the upper Jaw; and very broad and thin at its Termination on the Side of the *Alæ Naſi*: Its Action is to pull the *Alæ* upwards, and turn it outwards. See NOSE.

ELEVATOR *Ani*. See LEVATOR *Ani*.

ELEVATOR *Auris*, or *Attollens Auriculam*, is in Reality no more than a Part of the Muſcle of the Scalp, with ſome fleſhy Fibres in it, as it deſcends over the temporal Muſcles to the upper Part of the *Concha*. Its Action is ſcarce viſible; the Auricles being ſcarce perceiv'd in Men to have ordinarily any Motion at all. See AURICLE.

ELEVATOR *Oculi*, one of the *Muſculi Recti* of the Eye, ſerving to draw it upwards. See RECTI.

ELEVATOR *Labiorum Communis*, a Muſcle of the Lips, ariſing from the fourth Bone of the upper Jaw, and terminating at the Angle of the Lips, under the *Zygomaticus*. See LIPS.

ELEVATOR *Labii inferioris*, is a Muſcle, that ariſes from the ſecond Bone of the under Jaw, below the Inciſions. It deſcends, and paſſes under the *Zygomaticus*, and is inſerted into the under Lip.

This, aſſiſted by a ſmall, but ſtrong Pair of Muſcles, ariſing from the Gum of the *Dentes Inciſivi*, and deſcending directly, is inſerted into the lower Part of the Skin of the Chin; and ſerves to pull the Skin of the Chin upwards, and conſequently thruſt up the Lip.

ELEVATOR *Labii Superioris*, ariſeth from the upper Part of the ſecond Bone of the upper Jaw; and deſcending obliquely, is inſerted into the upper Lip, above the *Dentes Inciſivi*. It draws up the Lip.

ELEVATOR *Scapulæ*. See LEVATOR.

ELEVE, a Term purely *French*; tho' of late uſed in our Language. Literally it ſignifies a Pupil, or Scholar, bred up under any one; from the Verb *elever*, to raiſe.

It was firſt uſed by the *French* Writers in ſpeaking of Painters: Such a Painter was an *Eleve* of *da Vinci*, of *Raphael*, &c. From Painting, it came to be applied to ſuch as ſtudied, or learned any other Art under a Maſter. In the Royal Academy of Sciences, there were 20 *Eleves*: And in that of Inſcriptions, 10 *Eleves*. The *Eleves* were to act in Concert with the Penſionaries.

We are not afraid, ſays Monſ. *Fontenelle*, to compare a ſimple *Eleve*, ſuch as Monſ. *Amontons* was, to one of the greateſt Members the Academy ever had. [M. *Mariotte*] The Name *Eleve*, with us, implies no Difference as to Merit; it only ſignifies ſomewhat of Seniority, and Survivance.

The Denomination *Eleve*, however, has been ſince ſuppreſs'd, and that of *Adjoint* ſubſtituted in its Room; by Reaſon every Body did not know the Senſe affix'd to it by the Academy. And now the Penſionary Academiſts have not, as formerly, each of them an *Eleve:* But the *Eleves* are become *Adjoints*, or Aſſociates to the Academy.

The Word is form'd of the *Italian*, *Allievo*, a Diſciple or Novice.

ELEUSINIA, in Antiquity, the Myſteries of the Goddeſs *Ceres*; or the religious Ceremonies perform'd in her Honour: Thus call'd from *Eleuſis*, a maritime Town of the *Athenians*, wherein was a Temple of that Goddeſs, famous for the Celebration of theſe Myſteries.

The *Eleuſinia* were the moſt ſolemn and ſacred Ceremonies in Uſe among the *Greeks*; for which Reaſon they were called *Myſteries* by Way of Eminence. They are ſaid to have been inſtituted by *Ceres* her ſelf, at *Eleuſis*, in Memory of the Zeal and Affection wherewith the *Athenians* receiv'd her.

This is the Account *Iſocrates* gives in his Panegyric; but *Diodorus Siculus* aſſures us, *L.* VI, that the *Eleuſinia* were inſtituted by the *Athenians*, in Gratitude to *Ceres*, for having inſtructed them to lead a leſs barbarous and ruſtic Life. Yet the ſame Author, in the firſt Book of his *Bibliotheca*, relates the Thing in another Manner.

A great Drought, ſays he, having occaſion'd a miſerable Famine throughout all *Greece*; *Egypt*, which had that Year reap'd a moſt plentiful Harveſt, beſtow'd Part of the Fruits thereof upon the *Athenians*. 'Twas *Erictheus* that brought this extraordinary Supply of Corn: In Commemoration of which Benefaction, *Erictheus* was created King of *Athens*, who inſtructed the *Athenians* in theſe Myſteries, and the Manner of celebrating them.

This Account comes near to what we are told by *Herodotus* and

and *Pauſanius*, viz. that the *Greeks* learn'd their Gods, and their Religion from the *Egyptians*.

*Theodoret*, *L.* I. *Græcanicar. Affection.* writes that it was *Orpheus*, not *Erictheus*, who made this Eſtabliſhment; and who inſtituted for *Ceres*, what the *Egyptians* practiſed for *Iſis*: Which Sentiment is confirmed by the Scholiaſt on the *Alceſtis* of *Euripedes*.

*Eleuſis*, the City where theſe Myſteries were celebrated, was ſo jealous of the Glory thereof, that when reduced to the laſt Extremities by the *Athenians*, it would not ſurrender but on this Condition, that the *Eleuſinia* ſhould not be taken from them; tho' theſe were no Religious Ceremonies peculiar to the Town, but were held common to all *Greece*.

The Matter of theſe Myſteries, as related by *Arnobius* and *Lactantius*, was an Imitation, or Repreſentation, of what the Fables teach of *Ceres*. They laſted ſeveral Days; during which, the People run about with burning Torches in their Hands; ſacrificed Abundance of Victims, not only to *Ceres*, but alſo to *Jupiter*; made Libations, from two Veſſels, one of them to the Eaſt, and the other to the Weſt; march'd in Pomp and Proceſſion to *Eleuſis*, making Pauſes from Time to Time, wherein they ſung Hymns, and ſacrificed Victims: And this they perform'd, not only in going to *Eleuſis*, but in returning back to *Athens*.

For the reſt, they were obliged to keep it as an inviolable Secret; and the Law condemn'd to Death any one who ſhould dare to divulge their Myſteries. *Tertullian* in his Book againſt the *Valentinians*, relates that the Figure ſhewn in the *Eleuſinia*, and which was ſo expreſly prohibited to be made public, was that of a Man's privy Parts: *Theodoret*, *Arnobius*, and *Clemens Alexandrinus*, likewiſe make mention of it; but ſay it was the Figure of a Woman's Privities.

The Day after the Feaſt, the Senate aſſembled at *Eleuſis*, apparently to examine whether every Thing had been managed according to Order.

There were two Kinds of *Eleuſinia*, the *great* and the *leſs*: Thoſe we have been hitherto ſpeaking of were the greater.

The *leſſer* were inſtituted in Favour of *Hercules*: For that Hero deſiring to be initiated into the former; and the *Athenians* not being able to gratify him therein, by Reaſon the Law prohibited any Stranger being admitted; being loth however to give him an abſolute Denial, they inſtituted new *Eleuſinia* whereat he aſſiſted.

The greater were held in the Month *Boedronicon*, which anſwer'd to our *Auguſt*; and the leſſer in the Month *Antheſterion*, which happen'd in our *January*.

People were only brought to partake of theſe Ceremonies by Degrees: At firſt, they were to be purified; then admitted to the little *Eleuſinia*: And at laſt initiated in the greater. Thoſe who were yet only at the leſſer, were called *Myſtes*; and thoſe admitted to the greater, *Epoptes*, or *Ephori*, i. e. Inſpectors. They were uſually to undergo a Probation of five Years, e're they paſs'd from the leſſer to the greater. Sometimes, indeed, they were contented with a ſingle Year; immediately after which, they were admitted to the moſt ſecret religious Parts of the Ceremony. *Meurſius* has an expreſs Treatiſe on the *Eleuſinia*, where moſt of theſe Points are proved.

Some Writers call the City, where the *Eleuſinia* were celebrated, *Eleuſina*, not *Eleuſis*: *Harpocration* confirms this Orthography, in deriving its Name from *Eleuſinus*, a Son of *Mercury*: To which Sentiment, *Pauſanias* likewiſe adheres in his *Atticks*. Others, who write it Ἔλευσις, *Advent*, ſuppoſe it thus called, by Reaſon *Ceres*, after running over the World in Search of her Daughter, ſtop'd here, and put an End to her Purſuit. *Diodorus Siculus*, *L.* V. will have the Name *Eleuſis* to have been given this City, as a Monument to Poſterity, that Corn, and the Art of cultivating it, were brought from Abroad into *Attica*.

ELEUTHERIUS, in Antiquity, a *Greek* Word, ſignifying *Liberator*, *Deliverer*; given by the *Greeks*, as a Surname, or Epithet to *Jupiter*, on Occaſion of his having gain'd them the Victory over *Mardonius*, General of the *Perſians*, and killed 300 Thouſand Men of his Army, and by that Means deliver'd them from the Danger they were under of being brought under the *Perſian* Yoke.

There were alſo Feaſts ſolemnized, on this Occaſion, in Honour of *Jupiter Eleutherius*, and call'd *Eleutheria*. They were held every five Years, with Courſes of armed Chariots, *&c.*

The *Scholiaſt* on *Pindar*, *Olymp. Od.* 7. ſays, they were celebrated at *Platea*, the Place where the Victory was obtain'd.

The Word is form'd from ἐλεύθερος, *free*.

ELICIT, or ELICITE, in Ethicks, is applied to an Act of the Will, immediately produced by, and of the Will, and received within the ſame.

Such is Willing, Nilling, Loving, Hating, *&c.* Such Acts are denominated *Elicit*, by Reaſon being before in the Power of the Will, they are now brought forth into Act. But theſe Acts are ſo far intrinſic, that ſome Authors conſider them as the Will it ſelf; and deny they ſhould be diſtinguiſhed from it any more than that Light is to be diſtinguiſhed from the Sun.

ELIGIBILITY, in the *Romiſh* Canon Law. A *Bull of Eligibility*, is a Bull granted by the Pope, to certain Perſons, to qualify them to be *choſen*, or inveſted with an Office, or Dignity, whereof they were before incapable, by Reaſon of Want of Age, Birth, or the like.

In ſeveral Churches in *Germany*, a Perſon who is not of the Chapter, cannot be elected Biſhop, without a Bull of *Eligibility*.

The Word is form'd of the *Latin*, *eligere*, to chuſe; whence the Word *Eligibilitas*, &c.

ELISION, in Grammar, the cutting off, or ſuppreſſing a Letter, at the End of a Word.

*Eliſions* are but little known in *Engliſh*: In *Latin*, *French*, &c. they are frequent; and conſiſt moſtly in Suppreſſions of the *e* final.

In Writing, it is mark'd by an Apoſtrophe; as *egon' quem quæram*, for *egone*. *Émin' ego te?* for *Emine*. *Veniſtin'* for *Veniſtine*, &c. *Cett' Eſperance*, for *Cette*: *l' homme*, for *le homme*.

In the Pronunciation we make frequent *Eliſions*, but don't mark them in Writing; thus we write *riſque it*, but pronounce *riſq' it*. So the *French* pronounce *un' ame*, but write *une ame*. In Effect, they never mark any *Eliſions* but at the End of the Monoſyllables *je ne le te ce que* and *la*. They never *elide* the *o*, nor *u*, nor *i*, but in the Conjunction *ſi* before *il*; nor *a* but in *la*.

In Poetry, the Syllable where there is a Vowel *Elided*, is never reckon'd: And great Care is taken to avoid the Concourſe of Syllables, where there is no *Eliſion*; this making what they call a *Hiatus*, or Chaſm.

ELIXATION, in Pharmacy, *&c.* the ſeething or boiling of any Medicine in a proper Liquor, gently and for a conſiderable Time; amounting to what, in the dreſſing of Meats, we properly call *Stewing*.

The Liquor ordinarily uſed in *Elixations*, is Spring or River Water: Tho' on ſome Occaſions they uſe Milk, Whey, Beer or the like.

The ordinary Purpoſe of *Elixation*, is to extract the Virtue out of the Medicine, and impart it to the Liquor. Tho' it is ſometimes alſo uſed to free the Parts of Animals, Plants, *&c.* of their Crudities, as well as to ſoften, and make them tender; to take away from Foods, or Medicaments, any diſagreeable Taſte, or other ill Quality; to ſeparate the earthy or groſſer Parts, and for other Intentions. See EXTRACTION.

The Word is form'd from the *Latin*, *lixare* to boil, or boil in Water. *Decoction* is a Sort of *Elixation*. See DECOCTION.

ELIXIR, in Medicine, a compound Extract, Tincture, or Eſſence, drawn from a Mixture of ſeveral Ingredients, by infuſing them in a proper Menſtruum. See EXTRACT.

Or it is a ſtrong, ſpirituous Liquor, or Juice, to be taken inwardly; containing the pureſt, and moſt efficacious Parts of ſeveral mix'd Bodies, communicated to it by Infuſion and Maceration.

Dr. *Quincy* defines it a ſtrong Infuſion in ſome Menſtruum, whereby the Ingredients themſelves are almoſt diſſolved, and a Juice thus acquired of a thicker Conſiſtence than an ordinary Tincture. See TINCTURE, INFUSION, *&c.*

*Boerhaave* takes an *Elixir* to be a compound Magiſtery, *i. e.* a compound of various Bodies, changed after the ſame Manner as a ſingle Body is in a Magiſtery. See MAGISTERY.

Spirits drawn from Vegetables, *i. e.* the ſtrong, or ſpirituous Waters of Vegetables, are uſually the Baſe of *Elixirs* and the Menſtruum, or Diſſolvent, whereby the Eſſence of the other Ingredients is drawn or ſeparated. Spirit of Wine is the beſt and moſt commodious Menſtruum of all.

The *Charletans* abuſe the Term *Elixir*, and apply it to Abundance of ſimple Extracts, or Tinctures; only to put them off at the higher Price. Some Authors, for *Elixir*, uſe the Word *Quinteſſence*. See QUINTESSENCE.

*Menage* derives the Word from the *Arabic*, *Elixir*; properly ſignifying *Fraction*, by Reaſon *Elixirs* have the Force of breaking Diſeaſes: Others, more naturally derive it from *Alecſiro*, an Artificial Extraction of ſome Eſſence. Others from the *Greek* ἔλαιον, *Oil*, and σύρω, *I draw*, q. d. an Extract of the Oil, which is the eſſential Part of Mixts. Others from the *Greek* Verb, ἀλεξέω, *to help*, *aſſiſt*, by Reaſon of the great Succours we receive from *Elixirs*. Laſtly, others from ἕλκω, *to draw*.

ELIXIR *Proprietatis*, is a Remedy firſt invented by *Paracelſus*. It is compoſed of Aloes, Myrrh, and Saffron; the Tincture, or Eſſence whereof, is drawn by putting them to diſſolve, or digeſt with Spirit of Sulphur. Some add Spirit of Wine to the Spirit of Sulphur.

*Crollius* takes this *Elixir* to be the Balm, or Balſam of the Antients; adding, that it contains all the Virtues of the Natural Balm. It comforts and fortifies the Heart and Stomach, aſſiſts Digeſtion, purifies the Blood, and promotes Sweat.

ELIXIR, among the Alchymiſts, is uſed for the *Philoſopher's Stone*, or the *Powder of Projection*; and ſometimes for an *Univerſal Medicine*, which ſhall cure all Diſeaſes, called by Way of Excellence the *Grand Elixir*.

Theſe two Things, moſt Alchymiſts take to coincide; ſo that what will make Gold, will cure all Diſeaſes. See PHILOSOPHERS-*Stone*.

The Notion of a *Grand Elixir* is of a long ſtanding. *Kircher* aſſures us, that the antient *Egyptians* had a Method of drawing an *Elixir* from the hardeſt and moſt precious Subſtances; which, on Account of its Subtilty and Perfection, they call'd *Heaven*. And this he takes to be that admirable, and celeſtial Water, capable of removing all Diſeaſes; called alſo the *Stone*, and the *Philoſopher's Stone*, as being drawn from precious Stones; and ſometimes, by the Hermetical Denominations, *Aqua Vitæ*, *Vegetable Seed of Nature*, *Solar Soul*, &c. Oed. Ægypt. *Tom.* II. p. 430.

ELKS *Claws*, in Pharmacy, a Drug, ſuppoſed to be good againſt the *Epilepſy*; known in the Shops by the Name of *Ungula Alcis*. See EPILEPSY.

The Animal that yields it, call'd by the *Latins*, *Alce*; by the *Germans*, *French*, &c. *Ellend*; and by us, *Elk*; is a wild Beaſt, found in the Foreſts of *Muſcovy*, *Sweden*, and *Pruſſia*; but more abundantly in *Canada*, and moſt Parts of North *America*.

'Tis about the Size and Figure of a Mule; only its Snout bigger, its Tail ſhort, its Feet cloven; and that it bears a large Ramage, or Horn, like that of a Deer, weighing three, and ſometimes four Hundred Weight. That anatomized in the Royal Academy of Sciences, was five Foot ſeven Inches long. Its Hair is brown, and about the Length of that of a Goat: Its Ears nine Inches long, and four broad; and its Tail not above two Inches: Its Neck ſhort and thick: Its Skin ſtrong and hard, tho' thin; its Fleſh very delicate, eſpecially that of the Female: And the Ligaments of its Joints exceeding ſtrong; which has occaſion'd ſome Authors to ſay, that its Legs had no Joints at all; and that it was this made it ſo ready at ſliding on the Ice, to ſave it ſelf from the Wolves.

It neither runs, nor bounds; but its Trot is almoſt equal to the ſwifteſt Running of a Deer.

*Pauſanias* ſays, that the Male has Horns: And *Cæſar*, that the Female hath none: But we find that both have.

The Hunting of the *Elk*, is one of the principal and moſt agreeable Employments of the Savages of *Canada*, *Accadie*, &c. They chuſe a Time when the Snow is on the Ground; in which the Beaſt is apt to ſink and ſtick. When they have kill'd enough with their Fire Arms, to feaſt for ſeveral Days; they flea them, and ſend the Skins to the *French*, who dreſs it in Oil, like the Buffelo Skin. See CHAMOIS.

The Savages likewiſe take care to cut off the left hind Foot of each Beaſt; eſpecially if it be a Female; the Hoof whereof is that applauded Remedy for the *Falling Sickneſs*.

Antient Authors tell us, that to catch the *Elk*, the *Northern* People watch the Occaſion when he falls down of the Epilepſy; which it frequently does; and that they lay hold of it e're it can recover Strength enough to put its left Foot in its Ear; which cures it immediately.

And hence it is, that the Notion of its Virtue, in the Cure of that Diſeaſe, had its Riſe. The *Germans* call it *Ellend*, that is, Miſery, by Reaſon of the Miſery it is reduc'd to in falling ſo often into the Epilepſy; tho' it has its Remedy always about it; which has given People reaſon to ſuſpect, that the Virtue attributed to it is fabulous.

Accordingly, *Olaus Magnus* ſays, 'tis the outer Hoof of the right Foot that the *Elk* puts in its Ear to cure the Epilepſy; which being impoſſible, it ſhould ſeem as if *Olaus* only ſpoke of it by Way of ſneer.

He adds, that the Blows it deals are ſo ſtrong, that with its hind Feet it will break the Trees like Muſhrooms; and with its fore Feet pierce the Hunters thro' and thro'.

*Pomet* gives us the Marks to diſtinguiſh the genuine *Elks Claws*; but as their Virtue is very equivocal, not to ſay abſolutely falſe, there is no great Harm in being deceiv'd: The Opinion alone may ſerve for the Reality.

ELL, *Ulna*, a Meaſure, which obtains under different Denominations in moſt Countries. See MEASURE.

The *Ell* is the Standard, or Meaſure, whereby Cloths, Stuffs, Linnens, Silks, &c. are uſually meaſur'd, or eſtimated; anſwering, in good Meaſure, to the *Yard* of *England*, the *Canna* of *Italy*, the *Varre* of *Spain*, the *Palm* of *Sicily*, &c. See YARD.

*Servius* will have the *Ell* to be the Space contain'd between the two Hands when ſtretch'd forth: But *Suetonius* makes it no more than a *Cubit*. See CUBIT.

The *Ells* which occur moſt frequently in *England*, are *Engliſh* and *Flemiſh*: The *Ell Engliſh* contains three Foot nine Inches; or one Yard one Quarter *Engliſh* Meaſure: The *Ell Flemiſh*, 27 Inches, or three Quarters of a Yard; ſo that the *Ell Engliſh* is to the *Flemiſh Ell* as five to three.

M. *Ricard*, in his Treatiſe *of Commerce*, reduces the *Ells* thus: An hundred *Ells* of *Amſterdam*, are equal to ninety eight, three Quarters, of *Brabant*, *Antwerp* and *Bruſſels*; to fifty eight and an half of *England* and *France*: To an hundred and twenty of *Hambourg*, *Francfort*, *Leipſic* and *Cologne*: An Hundred twenty five of *Breſlaw*: An Hundred and ten of *Bergen* and *Drontheim*: And an Hundred and ſeventeen of *Stockholm*. See MEASURE.

ELLEBORE, a Medicinal Plant. See HELLEBORE.

ELLIPSIS, in Geometry, one of the Conic Sections, popularly call'd an *Oval*, or *Oblong*. See CONIC.

The *Ellipſis*, to define it from its Form, is a regular, continued curve Line, including a Space that is longer than broad; wherein are two Points equally diſtant from the two Extremes of the Length; from which, two right Lines being drawn to any Point, aſſumed at Pleaſure in the *Ellipſis*, their Sum is equal to the Length of the *Ellipſis*.

Thus, in the *Ellipſis* A E B M D, &c. (*Tab. Conicks Fig.* 21.) the Lines Fa and fa drawn from the two Points F and f, equally diſtant from the two Extremes A and B, are equal to A B.

Or, taking the *Ellipſis*, as Geometricians frequently do, for the Space contain'd, or included within this Curve Line; it is defined a Figure, contain'd under one ſingle oblong Line, and having two unequal Axes or Diameters A B and D E.

The greater Axis of the *Ellipſis*, or the right Line repreſenting the Length of the *Ellipſis* A B, or of the Space included by the *Ellipſis*, is call'd the *Tranſverſe Axis*, or Diameter: And the leſſer Axis, repreſenting the Breadth of the *Ellipſis* D E, the *Conjugate*, or *ſecond Axis*. The two Axes always biſſect each other at right Angles. See AXIS.

The two Axes are the two greateſt Diameters of the *Ellipſis*, but there are an Infinity of other different Diameters. See CONJUGATE, TRANSVERSE, &c.

The *Centre of an* ELLIPSIS, is the Point C, wherein the two Axes interſect.

The two Points F and f, on the greater Axis, equally diſtant from the Extremes thereof A and B, are call'd the *Foci*, or *Umbilici of the Ellipſis*; from which two Lines, drawn to the Circumference of the *Ellipſis*, as already obſerved, are equal to the greater Axis. See FOCUS.

The *Ellipſis*, conſidering it as a Conic Section, that is, as a Curve ariſing from a Section of the Cone, is beſt defined from its Geneſis, or the Manner of its Production, thus: An *Ellipſis* is a Curve Line, produced by cutting the Cone A B C, (*Fig.* 21.) by a Plane, in ſuch Manner, as that the Axis of the Section D E, meets with the Diameter of the Baſe A B, produced in F.

Or, defining it from one of its known Properties aſſumed; an *Ellipſis* is a Curve Line, wherein the Square of the Semi-ordinate P M, (*Fig.* 22.) is to the Rectangle of the Axis A P and P B; as the Parameter, to the Axis.

Thus, if A B = a, the Parameter = b; P M = y; A P = $x$: Then will b : a :: $y^2$ : $ax - x^2$. Conſequently $ay^2 = abx - bx^2$. See CONIC *Section*.

Hence, 1. $y^2 = bx - \frac{bx^2}{a}$. That is, the Square of the Semi-ordinate, is equal to the Rectangle of the Parameter into the Abſciſs; abating another Rectangle of the ſame Abſciſs into a fourth proportional to the Axis, Parameter and Abſciſs.

And hence the Word *Ellipſis*, which is form'd from the *Greek*, ἔλλειψις, *Deficiency*, a Denomination the antient *Greek* Geometricians gave this Figure, by Reaſon, among other Properties, this is one, that the Squares of the Ordinates are leſs than, or *defective* of the Rectangles under the Parameters and Abſciſſes.

*To find the Axis, Parameter, and Semi-ordinate of an* ELLIPSIS.

Hence, alſo 2°. The Parameter, Abſciſs, and Semi-ordinates, in an *Ellipſis* being given; the Axis is found by making 1. $b : y :: y : \frac{y^2}{b}$, 2. $\frac{x - y^2}{b} = \frac{(bx - y^2)}{b} : x = x : a$.

3°. The Axis A B, the Abſciſs A P, (*Fig.* 23.) and the Semi-ordinate P M being given, the Parameter A G is thus found: Make A I = P M; and from A, thro' M, draw the right Line A L. In I erect a Perpendicular L I: Then, ſince A P : P M :: A N : L I; $LI = y^2 : x$. Produce P M to O, till $PO = LI = y^2 : x$ and from B, thro' O, draw a right Line B G. In A erect a Perpendicular $GA = ay^2 : (ax - x^2)$: This will be the Parameter A G.

4°. The Axis A B, and the Parameter A G being given, we can aſſign every Abſciſs, as B P, its Semi-ordinate P N; by drawing the Line G B to the Parameter A G, which is perpendicular to the Axis A B: Then, erecting a Perpendicular P N, make P L = P H. Laſtly, on A L deſcribe a Semi-circle.

*To find the Foci, conjugate Axis, Ratio of the Ordinates, &c. of an* ELLIPSIS.

1°. From B to L, (*Fig.* 22.) ſet off half the Parameter; then will $CL = \frac{1}{2}a - \frac{1}{2}b$. In the Centre C erect a Perpendicular C K, meeting the Semi-circle deſcribed on A L. Thus will $CK = \sqrt{(\frac{1}{4}a^2 - \frac{1}{4}ab)}$ Therefore, making C F = C K; F will be the *Focus*. The latter Equation furniſhes us this Theorem.

If the Axis A B, be cut in the Focus F, the Rectangle under the Segments of the Axis A F, F B will be ſubquadruple of the Rectangle under the Parameter and the Axis. See FOCUS.

2°. The Parameter, and Axis A B given, the Conjugate Axis is eaſily found; as being a mean proportional, between the Axis and Parameter. Conſequently, the Parameter is a third proportional to the greater and leſſer Axis. Add, that the Square of half the Conjugate Axis, is equal to the Rectangle, under the Diſtance of the Focus from the Vertex, and its Complement to the Axis.

3°. In an *Ellipſis*, the Squares of the Semi-ordinates P M, and p m, *&c.* are to each other as the Rectangles under the Segments of the Axis. Hence $DC^2 : PM^2 = CB^2 : AP\ PB$. Conſequently $DC^2 : CB^2 = PM^2 : AP\ PB$. That is, the Square of the leſs Axis is to the Square of the greater; as the Square of the Semi-ordinate, to the Rectangle under the Segments of the Axis.

4°. The right Line F D, (*Fig.* 24.) drawn from the Focus F, to the Extremity of the Conjugate Semi-Axis; is equal to half the tranſverſe Axis A C.

Hence, the Conjugate Axes being given, the Foci are eaſily determined. For, biſſecting the greater Axis A B in C; from C erect a Perpendicular C D, equal to the Conjugate Semi-Axis. Then, from D, with the Interval C A, the Foci F and f are determined.

*To deſcribe an* ELLIPSIS.

5°. The Sum of two right Lines F M, and f m drawn from each Focus of an *Ellipſis*, F and f to the ſame Point of the Periphery M, being equal to the greater Axis A B: The Conjugate Axes of an *Ellipſis* being given, the *Ellipſis* is eaſily deſcribed. For, determining the Foci F and f, as already directed; and fixing two Nails therein, and about theſe Nails tying a Thread F M f, equal to the Length of the greater Axis A B: The Thread being ſtretch'd, and a Style, or Pin, applied at its Extent, the Duct or Sweep of the Style or Thread about the Nails will deſcribe an *Ellipſis*.

6°. The Rectangle under the Segments of the Conjugate Axis, is to the Square of its Semi-ordinate, as the Square of the Conjugate Axis, to the Square of the greater Axis. Hence, the Co-ordinates to the Conjugate Axis, have the ſame Relation, as there is between the Co-ordinates to the greater Axis. Conſequently, the Parameter of the Conjugate Axis, is a third proportional to the Conjugate Axis, and the greater Axis.

*To determine the Subtangent* P T, (*Fig.* 25.) *and Subnormal* P R *in an* ELLIPSIS.

7°. As the firſt Axis, is to the Parameter; ſo is the Diſtance of the Semi-ordinate from the Centre, to the Subnormal. See SUBNORMAL.

8°. The Rectangle under the Segments of the Axis, is equal to the Rectangle, under the Diſtance of the Semi-ordinate from the Centre, into the Subtangent. See SUBTANGENT.

9°. As the Diſtance of the Semi-ordinate from the Centre, is to half of the Axis; ſo is the Abſciſs to the Portion of the Subtangent intercepted between the Vertex of the *Ellipſis* and the Tangent.

10°. The Rectangle under the ſubtangent P T, into the Abſciſs A P, is equal to the Rectangle under the Segments of the Axis. Hence, the Square of the Semi-Axis A C, is equal to the Rectangle of C T, into P C.

11°. The Rectangle under the Subtangent, and the Diſtance of the Ordinate from the Centre, is equal to the Difference of this Diſtance, and the Square of the Tranſverſe Semi-Axis.

12°. In an *Ellipſis*, the Square of the Semi-ordinate is to the Square of the Conjugate Semi-diameter; as the Rectangle under the Segments of the Diameter, to the Square of the Semi-diameter. Conſequently, the Relation of the Semi-ordinates to the Diameters, is the ſame as to the Axes: And the Parameter of the Diameter, is a third proportional to the Diameters.

*Infinite* ELLIPSES, are thoſe defined by the Equation $ay^{m+n} = bx^m (a - x^n)$ which ſome call *Elliptoides*, if m be greater than 1, and n greater than 1. See ELLIPTOIDES.

In Reſpect of theſe Curves, the *Ellipſis* of the firſt Kind is called the *Apollonian Ellipſis*.

*Quadrature of the* ELLIPSIS. See QUADRATURE.

ELLIPSIS, in Grammar, and Rhetoric, a figurative Way of ſpeaking, wherein ſomething is ſuppreſs'd, or left out in a Diſcourſe, and ſuppoſed or underſtood. See FIGURE.

This chiefly happens, when, being under the Tranſport of a violent Paſſion, a Man is not at Leiſure to ſay every Thing out at Length; the Tongue being too ſlow to keep Pace with the rapid Motions of the Mind. So that on theſe Occaſions we only bring forth broken, interrupted Words and Expreſſions; which expreſs the Violence of a Paſſion, better than any conſiſtent Diſcourſe.

*Fa. Boſſu* conſiders the *Ellipſis*, as a Way of diſguiſing Sentences; by ſuppreſſing the Word which ſhould make the particular Application, and leaving the whole in a Kind of ingenious Ambiguity. See SENTENCE.

Thus, the *Trojans*, in *Virgil*, being reduced by *Turnus* to the laſt Extremity, and ready to be deſtroy'd, ſpy *Æneas* coming to aſſiſt them: Upon which the Poet ſays, *Spes addita ſuſcitat Iras*. Which Expreſſion ſignifies either, in particular, that the Hope they conceive retrieves and augments their Courage: Or in general, that the Hope of Aſſiſtance at Hand naturally raiſes Courage, and gives new Strength.

If the Poet had added a Word, and ſaid, *Ollis ſpes addita ſuſcitat Iras*, the Paſſage had been expreſsly affected to the firſt Senſe; and it had ceaſed to be a Sentence, and commenced the Application of a Sentence. The Suppreſſion of that Word makes a Sentence in Form. See SENTENCE.

This, that excellent Critick looks on as one of the Fineſſes of the *Latin* Tongue; wherein it had vaſtly the Advantage of the Modern Tongues. *Traite du Poeme Epique*. Page 466, *&c.*

ELLIPTIC, or ELLIPTICAL, ſomething that belongs to an *Ellipſis*. See ELLIPSIS.

*Kepler* firſt maintain'd, that the Orbits of the Planets are not Circular, but *Elliptical*; which Hypotheſis was afterwards adhered to by M. *Bouillaud*. Mr. *Flamſtead*, Sir *Iſaac Newton*, Monſ. *Caſſini*, and others, of the later Aſtronomers, have confirm'd the ſame: So that this, which was once by Way of Contempt call'd the *Elliptic Hypotheſis*, is now the prevailing Doctrine. See ORBIT.

Dr. *Iſaac Newton* demonſtrates, that if any Body revolve round another in an *Elliptic* Orbit, its centrifugal Forces, or Gravities, will be in a duplicate Ratio; or as the Squares of its Diſtances from the Umbilicus, or Focus. See CENTRIPETAL.

*Serlio*, *Hartman*, &c. demonſtrated that the beſt Form for Arches, or Vaults, is the *Elliptical*. See ARCH.

ELLIPTIC *Space*, is the Area, contain'd within the Circumference, or Curve of the *Ellipſis*.

'Tis demonſtrated, 1°. That the *Elliptic Space* is to a Circle deſcribed on the tranſverſe Axis; as the Conjugate Diameter is to the tranſverſe Axis.

2°. That the *Elliptic Space* is a mean proportional between two Circles deſcribed on the tranſverſe and conjugate Axes. See CIRCLE.

ELLIPTIC *Conoid*, is the ſame with the *Spheroid*. See SPHEROID.

ELLIPTIC *Specula*, or *Mirrors*. See MIRROR.

ELLIPTICAL *Compaſſes*, is an Inſtrument, made uſually in Braſs; for the drawing any Ellipſis, or Oval, at one Revolution of an Index. See COMPASSES.

ELLIPTICAL *Dial*, is an Inſtrument, uſually of Braſs, with a Joint to fold together, and the Gnomen to fall flat; for the Sake of the Pocket.

By it are found the Meridian, Hour of the Day, Riſing and Setting of the Sun, *&c.* See DIAL.

ELLIPTOIDES, an Infinite *Ellipſis*, i. e. an *Ellipſis* defined by the Equation $ay^{m+n} = bx^m (a - x)^n$, wherein $m > 1$ and $n > 1$.

Of this there are ſeveral Kinds or Degrees: As the *Cubical Elliptoid*, wherein $ay^3 = bx^2 (a - x)$. A *Biquadratic* or

*Sur-*

*Surdesolidal Elliptoid*, or that of the third Order, wherein $ay^4 = bx^2 (a-x)^2$

If any other Ordinate be called $v$, and the correspondent Abscis $z$; there will be $av^{m+n} = bz^m (a-x)^n$. Consequently, $ay^{m+n} : av^{m+n} = bx^m (a-x)^n : bz^m (a-z)^n$ that is, $y^{m+n} : v^{m+n} = x^m (a-x)^n : z^m (a-z)^n$

ELOCUTION, is defined by *Tully*, the chusing and adapting of Words, and Sentences, to the Things, or Sentiments, to be expres'd. To the *Elocution* properly belongs the *Delectus Verborum*, the Choice of Words. See RHETORIC.

The Virtues of the *Elocution* consist chiefly in the Use of Figures, and figurative Dictions, in the Periods, and the Style. See FIGURE, PERIOD, and STYLE.

ELOGE, a Praise, or Panegyric, bestow'd on any Person, or Thing; in Consideration of its Merit. See PANEGYRIC.

The Term is principally used by the *French*; and from them borrow'd by the *English*. It is form'd of the *Greek*, ευλογια, *Commendation*, &c.

That fine Discourse of *Isocrates*, entitled πανήγυρις, is a historical *Eloge*, of the City of *Athens*. Fa. *Labbe*, has composed an historical *Eloge* of the City of *Bourges*; Fa. *Menestrier*, of the City of *Lions*; and M. *Martignac*, of the Bishops and Archbishops of *Paris*, for about a Century.

The Secretary of the Royal Academy of Sciences at *Paris*, makes the *Eloges* of such Members as die; and delivers them in public at the next Meeting of the Company. Funeral Orations are only *Eloges* of eminent Persons deceas'd.

Some Authors have wrote *Eloges* on despicable, and even pernicious Things. See ENCOMIUM.

ELONGATION, in Astronomy, the Digression, or Receding of a Planet from the Sun, with Respect to an Eye placed on our Earth. See PLANET.

The greatest Distance of the Planet, *&c.* from the Sun, is called the greatest *Elongation:* Which varies on two Accounts, *viz.* in that both the Earth and the Planet revolve, not in Circles, but in Ellipses.

The *Elongation* is chiefly considered in *Venus* and *Mercury:* The greatest *Elongation* of *Venus* is 45 Degrees, and that of *Mercury* 30 Degrees: That is, the former never recedes from the Sun, or is seen distant from him, above 45°; nor the latter above 30°. Whence it is that *Mercury* is so rarely seen; as being usually lost in the Light of the Sun. See MERCURY and VENUS.

ELONGATION, is also used, by some Authors, for the Difference in Motion, between the swiftest and the slowest of two Planets; or the Quantity of Space, whereby the one has overgone the other: Called also *Superation.*

The swiftest Motion of the Moon, with Regard to the Sun, is called the *Elongation* of the Moon from the Sun. See MOON and SUN.

We also say Diurnal *Elongation*, Horary *Elongation*, &c.

*Angle of* ELONGATION, or *Angle at the Earth*, is the Difference between the Sun's true Place, and the Geocentric Place of a Planet. Such is the Angle E T R (*Tab. Astronom. Fig.* 40.) between the Place of the Sun E, and that of the Planet R.

ELONGATION, in Chirurgery, is an imperfect Luxation; when the Ligament of any Joint is so extended, or relaxed, as to lengthen the Limb, but yet not to let the Bone go quite out of its Place. See LUXATION.

ELOPEMENT, in Law, is when a married Woman, of her own Accord, departs from her Husband, and dwells with an Adulterer; for which, without voluntary Reconcilement to the Husband, she shall lose her Dowry; nor shall the Husband, in such Case, be compelled to allow her any Alimony. See ALIMONY.

*Sponte Virum Mulier fugiens, & adultera facta,*
*Do te sua careat, nisi sponso sponte retracta.*

The Word is derived from the *Saxon*, Geleopan, *i. e.* to depart from one Place to dwell in another.

ELOQUENCE, the Art of speaking, or Writing well; or of touching and perswading. See RHETORIC and ORATORY.

*Demosthenes*, and *Cicero*, are the Princes of antient *Eloquence*; the one among the *Greeks*, the other among the *Romans*. Their Manner, however, was exceedingly different; the first being close, strong, nervous, concise, severe, so that a Word cou'd not be spared: The latter copious, florid, and rich, so that a Word could not be added.

It was objected to *Cicero*, that his *Eloquence* was *Asiatic*, that is, redundant, or stuffed with needless Words and Thoughts. See STYLE.

*Pericles* was call'd a *Torrent of Eloquence*, a *Thunderbolt of Eloquence*. Pedants don't distinguish *Eloquence* from the heaping up of Figures, the Use of big Words, and the Roundness of Periods.

True *Eloquence* depends principally on the Vivacity of the Imagination. In Strictness, 'tis not that which gives Grace and Ornament, but Life and Motion, to Discourse. Its Mien is that of an *Amazon*, not that of a *Coquette.*

The Authors of the *Art of Thinking* remark, that the Rules of *Eloquence* are observed in the Conversations of People naturally *Eloquent*, tho' they never think of them, while they practise them. They practise those Rules because they are *Eloquent*; they don't use them to be *Eloquent.*

The *Eloquence* of the Chair, and Pulpit, is much more difficult than that of the Bar. Sir *George Mackenzie* has a Treatise of the *Eloquence* of the Bar. *Idea Eloquentiæ forensis*, &c.

ELUDING, the Act of evading, or rendering a Thing vain, and of no Effect; a dextrous getting clear, or escaping out of an Affair, a Difficulty, an Embarras.

The Design of Chicanery is to *elude* the Force of the Laws: This Doctor has not resolved the Difficulty, but *Eluded* it. To *Elude* a Proposition, *&c.*

*Alexander*, says the Historian, in cutting the *Gordian* Knot, either *Eluded* the Oracle, or fulfill'd it: *Ille nequicquam luctatus cum latentibus Nodis, nihil, inquit, interest, quomodo solvatur; Gladioque ruptis omnibus loris, Oraculi sortem vel* elusit *vel implevit.* Q. Curt. 13.

ELYSIUM, or ELYSEAN, or ELISIAN *Fields*, in the antient Theology, or rather Mythology; a Place in the *Inferi*, i. e. in the lower World, or as we sometimes render it, in Hell; furnish'd with Fields, Meads, agreeable Woods, Groves, Shades, Rivers, &c. whither the Souls of good People went after this Life.

*Orpheus*, *Hercules*, and *Æneas*, are held to have descended into them, in their Life-time, and return'd again. *Virgil*, Lib. VI. *v.* 638, *&c.* And *Tibullus*, Lib. I. *Eleg.* 3. give us fine Descriptions of the *Elysean Fields.*

*Virgil*, opposes *Elysium* to *Tartara*; which was the Place where the Wicked underwent their Punishment.

*Heic Locus est, parteis ubi se via findit in ambas:*
*Dextera, quæ Ditis magni sub mœnia tendit:*
*Hac Iter* Elysium *nobis: at læva Malorum*
*Exercet Pœnas, & ad Impia tartara mittit.*

Some Authors take the Fable to have been borrowed from the *Phœnicians*; as imagining the Name *Elysium* form'd from the *Phœnician* עלז *alaz*, or עלע *alats*, or עלס *alas*, to rejoyce, or be in Joy; the Letter *a* being only changed into *e*, as we find done in many other Names; as in *Enakim*, for *Anakim*, &c. On which Footing *Elysian Fields* should signifie the same Thing as a Place of Pleasure, or:

——— *Locos lætos & Amœna virecta*
*Fortunatorum Nemorum, sedesque beatas.* Virg.

Others, derive the Word from the *Greek*, λυω, *solvo, I deliver, I set loose, disengage*; by Reason here Men's Souls are freed, or disencumber'd from the Fetters of the Body. *Beroaldus* and *Hornius*, Hist. Philosoph. *L.* III. *C.* 2. take the Place to have derived its Name from *Eliza*, one of the first who came into *Greece* after the Deluge, and the Author and Father of the *Ætolians*. *Ol. Rudbecks* contends, that it was in *Sweden* the *Elysian Fields* were placed. See ACHERON.

On the Subject of the *Elysian Fields*, see the Treatise of J. Windet, *de Vitâ functorum Statu.*

ELYTHROIDES, in Anatomy, one of the proper Coats, or Tunicks of the Testicles. See TESTICLE.

The *Elythroides* is the second proper Coat of the Testes: It resembles a Sheath, or *Vagina*, whence some have also call'd it *Vaginalis.*

It is form'd of a Dilatation, of the Production of the *Peritonœum:* Its inner Surface is smooth and equable; and the outer rough and unequal; which makes it adhere the more strongly to the first of the proper Coats, called *Erithroides.*

The Word is form'd of the *Greek*, ελυθρον, *Vagina*, a Sheath, and ειδος, *Form.*

EMANATION, the Act of flowing, or proceeding, from some Source, or Origin.

As, the *Emanation* of Light from the Sun; of Effluvia from odorous, *&c.* Bodies; of Wisdom, from God, *&c.*

The Word is also used for the Thing that proceeds, as well as the Act of Proceeding: As, the Power given a Judge, is an *Emanation* from the Regal Power: The reasonable Soul is an *Emanation* from the Divinity: The Holy Spirit is an *Emanation* from the Father and the Son, *&c.*

The Word is form'd of the *Latin e*, out, and *manare*, to flow.

Among

Among the School-men, *Emanation* is alſo uſed for the Production of ſome leſſer Thing, in Order to the Production of a greater, by Virtue of ſome natural Connection, or Dependance between them.

For, as when ſeveral Moveables are joyn'd together, the ſame Power that moves the firſt moves all the reſt (as in pulling up the Trunk, you pull up the Roots, Branches, *&c.* or in drawing one Link of a Chain, you bring forward all the reſt). The ſame is to be underſtood in all conjunct, natural Effects; *viz.* that the ſame Power whereby the firſt is produced, does alſo produce all the reſt, naturally connected to it: In that by Means of the Connection, the Action of the Agent is convey'd from one to the other; ſo that the firſt determines the Agent to the Production of all the reſt.

In this Senſe, they ſay an *Emanation* of Properties from the Eſſence, wherewith they have a natural Connection.

And hence that is call'd an *Emanative Cauſe*, (in Contradiſtinction to an Efficient Cauſe) which produces an Effect by its mere Preſence, without the Intervention of any Action; as a Roſe doth a Smell, *&c.* Others, and with good Reaſon, deny that there is any ſuch Thing as an *Emanative Cauſe*, to produce an Effect without any Action. See CAUSE.

EMANCHE, in Heraldry. See MANCHE.

EMANCIPATION, in the *Roman* Law, the Act of ſetting a Son free from the Power, and Subjection to his Father. See FREEDOM, ENFRANCHISING, *&c.*

The Effect of *Emancipation* was, that the Goods, and moveable Effects, which the Son ſhould thenceforth acquire, ſhould be his ſole Property, and not the Property of his Father; as they were before *Emancipation*. Beſide that, *Emancipation* put the Son in a Capacity of managing his own Affairs, and of marrying without his Father's Conſent, tho' a Minor, or Pupil, and leſs than 25 Years of Age. See PUPIL, *&c.*

There were two Kinds of *Emancipation*: The one *tacit*, which was by the Son's being promoted to ſome Dignity, or by his becoming of Age, or by Marriage: In all which Caſes, the Son became his own Maſter of Courſe.

The other *expreſs*, where the Father declared before the Judge, that he *emancipated* his Son. This was not perform'd without ſome Formality: The Father was firſt to ſell his Son imaginarily, to another Man, whom the Lawyers call *Pater Fiduciarius*, Father in Truſt; of whom being bought back again by the natural Father, he manumitted, or ſet him free by a Declaration before the Judge. See MANUMISSION.

That imaginary Sale was call'd *Mancipatio*; and the Manumiſſion, conſequent thereon, *Emancipatio*.

*Emancipation* ſtill obtains in *France*, chiefly, with Regard to Minors, or Pupils, who are hereby ſet at Liberty to manage their Effects, without the Advice, or Direction, of their Fathers or Tutors. It muſt be obſerved, however, that the *Emancipation* only extends to the ſelling of Moveables, and letting of Leaſes, *&c.* of Immoveables; not to the Selling or Mortgaging of Immoveables: Which are only done with the Conſent of a *Curator*, ordinarily appointed a Perſon when *emancipated*.

Formerly, *Emancipation* was perform'd in the ordinary Courts of Juſtice, when deſired by the Child; but if he were a Minor, the King's Letter was required. Tho' there were other Ways of *Emancipation*, as Marriage; the Age of 20 Years: And in ſome Provinces, the Death of the Mother, by Reaſon the Children were there under the Power of the Father and Mother conjointly, ſo that the Death of either of them *emancipated* the Child.

*Emancipation* by Marriage, in *France*, gives a Power of marrying again, without the Father's Conſent, tho' under Age: But among the *Romans*, *Cujas* tells us, a Widow, under 25 Years of Age, tho' *emancipated* by her former Marriage, return'd into the Power of her Father, and might not marry a ſecond Time without his Conſent.

*Du Cange* obſerves, that the Word *Emancipation* was alſo uſed in the Monaſteries, in ſpeaking of Monks, promoted to any Dignity, or removed from under the Power of their Superiours: As alſo in ſpeaking of Monaſteries, Chappels, *&c.* themſelves, when exempted by the Pope, from the Juriſdiction of the Ordinary.

The Word is form'd of the *Latin*, *ex*, of, and *Mancipium*, a Slave.

EMASCULATION, the taking from a Male thoſe Parts which make the Character of the Sex. See CASTRATION.

EMAUX *de l'Eſcu*, in Heraldry, the Metal and Colours of a Shield, or Scutcheon. See METAL and COLOUR.

EMBALMING, the Opening a dead Body, taking out the Inteſtines, and filling their Place with odoriferous and deſſicative Drugs, and Spices, to prevent its putrifying.

The Word is form'd from *Balm*, which was a principal Ingredient in the *Embalmings* of the antient *Egyptians*. See BALM.

The Body of *Jacob* was 40 Days in *Embalming* in *Egypt*. See *Geneſis* 50. v. 3. *Mary Magdalen*, and *Mary* the Mother of *James*, bought Perfumes to *Embalm* Jeſus. See S. *Mathew*, &c. *John* King of *France*, dying at *London* in 1364, his Body was *Embalmed*, and ſent to *France*, and there interr'd at St. *Dennis*. *Du. Tillet*. For the Manner of *Embalming* among the *Egyptians*, See *Thevenot*'s Collection, *Tome* I.

The *Peruvians* had likewiſe a Method of preſerving the Bodies of their *Incas*, or Kings, *Embalm'd*. *Garcilaſſo de la Vega*, takes their main Secret to have been the burying of the Corps in the Snow, to dry them; and afterwards applying a certain Bitumen, mention'd by *Acoſta*, which kept them as entire, as if they had been ſtill alive.

Dr. *Grew*, in his *Muſæum Regalis Societatis*, is of Opinion, that the *Egyptians* boil'd their Bodies in a large Caldron, with a certain Kind of liquid Balm: His Reaſon is, that in the Mummies preſerved in the Collection of the Royal Society, the Balm has penetrated not only the fleſhy and ſoft Parts, but even the very Bones; ſo, that they are all as black as if they had been burnt. See MUMMY.

EMBARCADERE, in Commerce, a *Spaniſh* Term, much uſed along the Coaſts of *America*, particularly thoſe on the Side of the South Sea.

The Word ſignifies a Place that ſerves ſome other conſiderable City further within Land, for a Port, or Place of Shipping, *i. e.* of *embarking and diſembarking Commodities*. Thus *Colao*, e. gr. is the *Embarcadere* of *Lima*, the Capital of *Peru*: And *Arica* the *Embarcadere* of *Potoſi*. There are *Embarcaderes* 40, 50, and even 60 Leagues off the City which they ſerve in that Capacity.

EMBARGO, a Reſtraint, or Prohibition, impoſed by a Soveraign, on Merchant Veſſels; to prevent their going out of Port; ſometimes their coming in; and ſometimes both, for a limited Time. *Embargo's* are uſual in Time of War; in Apprehenſions of Invaſions, *&c.*

One great Occaſion of *Embargo*'s is, that the Government may make Uſe of the Merchant Veſſels, with their Equipage, *&c.* in Armaments, Expeditions, Tranſporting of Soldiers, *&c.* *Embargo's* are of the worſt Conſequence to Commerce imaginable.

EMBARRAS, a *French* Term, tho' now naturalized. It ſignifies a Difficulty, or Obſtacle, which perplexes or confounds a Perſon, *&c.*

The *Embarras* was very great in the Road, by Reaſon of the Army which defiled therein. A Man lives more in two Days of Leiſure, and feels more of Life therein, than in two Years of Hurry and *Embarras*. *Chev. de M.* It diſcovers a Decay of the Paſſion, when the Lovers are under an *Embarras* to find themſelves alone. *La. Bruyere*.

The Majeſty, the Dignity of Kings, is *Embarraſſing*, *Embaraſſant*; by Reaſon it obliges them to have a certain Air, and certain Manners ſuitable to their Rank; which are ſcarce had without a continual Attention, which muſt needs fatigue, and *Embaraſſe* a Man.

The Majeſty of *Louis* XIV. is ſaid not to have been any wiſe *Embarraſſing*: It was natural to him.

EMBASSADOR, a public Miniſter, ſent from one Soveraign Prince, as a Repreſentative of his Perſon, to another. See MINISTER.

In *Latin*, we uſually call him *Legatus*, or *Orator*; tho' 'tis certain, the Word *Embaſſador*, with us, has a much more extenſive Signification, than that of *Legatus* among the *Romans*: And, excepting that they are both under the Protection of the Law of Nations, there is ſcarce any Thing in common between them. See LEGATUS.

*Embaſſadors* are either *Ordinary* or *Extraordinary*.

An *Embaſſador in Ordinary*, is he who reſides ſtatedly in the Court of another Prince, to maintain a mutual good Underſtanding, look to the Intereſts of his Prince, and tranſact ſuch Affairs as may occur.

*Embaſſadors in Ordinary*, are but of modern Invention: 'Tis not above 200 Years ago ſince they were firſt heard of: Till then, all *Embaſſadors* were *Extraordinary*, and retired aſſoon as they had diſpatched the Affair they were ſent upon. See ORDINARY.

An *Embaſſodor Extraordinary*, is he who is ſent to a Prince's Court on ſome particular, and emergent Occaſion; as to conclude a Peace, or Marriage; make a Complement, or the like. Indeed, there is no eſſential Difference between *Ordinary* and *Extraordinary*; their Errand is all: And they equally enjoy all the Privileges and Prerogatives which the Laws of Nations decrees.

At *Athens*, the *Embaſſadors* from foreign Princes and States, mounted the Tribune, or Pulpit, of the public Orators,

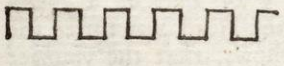
Orators, and there open'd their Commiſſion, and acquainted the People with their Buſineſs and Errand: At *Rome*, they were introduced to the Senate, and deliver'd their Commiſſion to them: Among us, they make their Addreſs immediately and ſolely to the King.

*Athens*, and *Sparta*, ſays M. *Tourreil*, when in all their Glory, were never ſo much delighted, as to ſee, and hear a Number of *Embaſſadors* in their Aſſemblies, ſuing for the Protection, or Alliance of the one or the other State. It ſeem'd to them the nobleſt Homage that could be paid them; and that State, which received the moſt Embaſſies, was judg'd to have the Advantage over the other.

The Name of *Embaſſador*, *Cicero* obſerves, is ſacred and inviolable; *Non modo inter Sociorum Jura, ſed etiam inter Hoſtium Tela incolume verſatur.* In Verr. Orat. VI. *David*, we read, made War againſt the *Ammonites*, to revenge the Injury done his *Embaſſadors*. Kings *L.* II. *C.* 29. *Alexander* put the Inhabitants of *Tyre* to the Sword, for having inſulted his *Embaſſadors*; and the Youth of *Rome*, for affronting the *Embaſſadors* of *Vallona*, were deliver'd up into their Hands, to be puniſhed at Diſcretion.

The *Embaſſadors* of Kings ſhould never attend at any public Aſſemblies, Marriages, Interments, or other Solemnities, unleſs their Maſters have ſome Intereſts therein; nor muſt they go into Mourning, or the like, on any Occaſions of their own, by Reaſon they repreſent the Perſons of their Princes, and muſt conform and keep Pace with him. *Scaliger in Verb. Embaſſador.*

The Word is derived from the corrupt Latin *Ambaſciator*, form'd of *Ambactus*, an old Word borrow'd from the *Gauliſh*, ſignifying Servant, Client, Domeſtic, or Officer: Such is the Origin given by *Borel*, *Menage*, and *Chiflet*, after *Salmaſius* and *Spelman*. But the Jeſuites of *Antwerp* reject this Opinion, in the *Acta Sanct. Mart.* Tom. II. *pag.* 128. by Reaſon the Gauliſh *Ambact* had been diſcontinued long enough e're the Latin *Ambaſcia* was ever thought of: Which, however, is not ſtrictly true; the Word *Ambaſcia* occurring in the *Salic* Law, *Tit.* 19. and being form'd of *Ambactia*, by pronouncing the *t* as in *actio*; and *Ambactia* came from *Ambactus*.



*Lindenbrock* derives the Word from the *German*, *Ambacht*, Work; as ſignifying a Perſon hired, to perform a Work, or Legation: And *Chorier*, meeting with the ſame Word in the Laws of the *Bourguignons*, gives into the Sentiment of *Lindenbrock*. *Alb. Acharisius* in his *Italian* Dictionary derives it from the Latin *Ambulare*, to walk, or travel.

And, laſtly, the Jeſuites of *Antwerp*, in the Place laſt cited, obſerving that the Word *Ambaſcia* occurs in the Laws of the *Bourguignons*, derive thence the Words *Ambaſſicatores*, and *Ambaſciatores*, as ſignifying Envoys, or Agents, from one Prince, or State, to another. Their Sentiment then is, that among the *Barbarians*, who overſpread *Europe*, *Ambaſcia* ſignified the Diſcourſe of a Perſon who ſtoops or humbles himſelf; being form'd from the ſame Root with *abaiſſer*, viz. of *an*, or *am*, and *bas*.

EMBASSY, *Legatio*, a Miſſion from one Soveraign Prince, or State, to another, of ſome able experienced Perſon, to negotiate ſome Affair, in Quality of *Embaſſador*.

*Fa. Daniel* obſerves, that under the antient *French* Kings, their *Embaſſies* conſiſted of a Body, or Number of Perſons, joyn'd together in Commiſſion, and who compoſed a Kind of Council: Something like which is ſtill retain'd at Treaties of Peace. Thus the *Embaſſy* of *Nimeguen*, for the Peace, conſiſted of three Plenipotentiaries; that of *Utrecht* of two, *&c.* See EMBASSADOR.

We likewiſe read of *Embaſſadreſſes:* Madam the Marechale *de Guebriant*, *Wicquefort* obſerves, was the firſt, and perhaps the only Woman, ſent by any Court in *Europe*, in Quality of *Embaſſadreſs*. *Matth. L.* IV. *Vie. d' Henry* IV. tells us, that the King of *Perſia* ſent a Lady of his Court on an *Embaſſy* to the Grand Signior, during the Troubles of the Empire.

EMBATTELED, a Term in Heraldry, when the Out-line of any Ordinary is of this Figure; which repreſents the Battlements of a Wall, or Caſtle.

EMBER- or EMBRE-*Weeks*, are thoſe wherein the *Ember-* or *Embring-Days* fall.

In the Laws of King *Alfred*, and thoſe of *Canute*, they are called *Ymbren*, that is, Circular Days, from whence they are corrupted into *Ember-Days:* By the Canoniſts they are called, *Quatuor Anni Tempora*, the four Cardinal Seaſons, on which the Circle of the Year turns.

They are the *Wedneſday*, *Friday*, and *Saturday*, after *Quadrageſima Sunday*, after *Whitſunday*, after *Holy-Rood* Day in *September*, and after St. *Lucies* Day in *December:* Which four Times anſwer well enough to the four Quarters of the Year, *Spring*, *Summer*, *Autumn*, and *Winter*.

Mr. *Somner* thinks they were Faſts, inſtituted to beg God's Bleſſings on the Fruits of the Earth.

Theſe *Ember-Weeks* are now chiefly taken Notice of, on Account of the Ordination of Prieſts and Deacons; becauſe the Canon now appoints the *Sundays*, next ſucceeding the *Ember Weeks*, for the ſolemn Times of Ordination. Though the Biſhops, if they pleaſe, may ordain on any *Sunday*, or Holiday. See ORDINATION.

EMBLEM, a Kind of painted Ænigma; which, repreſenting ſome obvious Hiſtory, with Reflections underneath, inſtructs us in ſome Moral Truth, or other Matter of Knowledge.

Such is that very ſignificant Image of *Scevola*, holding his Hand in the Fire: With the Words, *Agere & pati fortia Romanum eſt.* To do and ſuffer couragiouſly is *Roman.*

The *Emblem* is ſomewhat plainer, and more obvious than the *Ænigma*. See ÆNIGMA.

*Gale* defines it an ingenious Picture, repreſenting one Thing to the Eye, and another to the Underſtanding.

The *Emblems* of *Alciatus* have been in as much Reputation among the more learned, as thoſe of *Quarles* among the Vulgar.

The Word is pure *Greek*, ἔμβλημα, form'd of the Verb, ἐμβάλλειν, *to caſt in, to inſert. Suetonius* relates, that *Tiberius* made the Word be eraſed out of a Decree of the *Roman* Senate, becauſe borrow'd from another Language.

The *Greeks* gave the ſame Name ἐμβλήματα, *to inlaid*, or Moſaic Works, and even to all Kinds of Ornaments of Vaſes, Moveables, Garments, &c. And the *Latins* uſed *Emblema*, in the ſame Senſe: Accordingly, *Cicero* reproaching *Verres* with the Statues, and fine wrought Works he had plunder'd from the *Sicilians*, calls the Ornaments fix'd thereto (and which on Occaſion might be ſeparated from them) *Emblemata*. Add, that the *Latin* Authors frequently compare the Figures and Ornaments of Diſcourſe to theſe *Emblemata:* Thus, an antient *Latin* Poet, praiſing an Orator, ſays, that all his Words were ranged like the Pieces in Moſaic.

*Quam lepidè λέξεις compoſitæ, ut teſſerulæ omnes,*
*Endo pavimento, atque* Emblemate *Vermiculato.*

We don't uſe our *Engliſh* Word *Emblem* in this Senſe; tho' the antient *Juris conſulti*, always retain the Latin *Emblema* to expreſs ſuch Ornaments, by Reaſon the *Greek* ἔμβλημα, literally denotes any Thing applied, or added to a Body by Way of Enrichment.

With us, *Emblem* ordinarily ſignifies no more than a Painting, Baſſo Relievo, or other Repreſentation, intended to hold forth ſome Moral, Political, or Academical Inſtruction.

That which diſtinguiſhes an *Emblem* from a Deviſe, is, that the Words of an *Emblem* have a full compleat Senſe of themſelves; nay, all the Senſe and Signification which they have with the Figure.

But there is a yet further Difference between *Emblem* and Deviſe: For a Deviſe is a Symbol affected, or determined to ſome Perſon, or that expreſſes ſomething which concerns him particularly; whereas an *Emblem* is a Symbol that regards all the Word alike. Theſe Differences will be apparent, from comparing the *Emblem* juſt quoted, with the Deviſe of a Candle lighted; and the Words, *juvando conſumor*, I waſte my ſelf in doing good. See DEVISE.

EMBLEMENTS, a Term ſtrictly ſignifying the Profits of Lands ſown; tho' ſometimes uſed more largely for any Profits ariſing, and growing naturally from the Ground; as Graſs, Fruit, *&c.*

If a Tenant, for Life, ſow the Land, and die; his Executor ſhall have the *Emblements*, and not he in Reverſion. But if the Tenant, for Years, ſow the Land, and before Severance the Term expires, there the Leſſor, or he in Reverſion, ſhall have the *Emblements*, and not he the Leſſee.

EMBOLISM, in Chronology, *Intercalation.* As the *Greeks* made uſe of the Lunar Year, which is only 354 Days; in Order to bring it to the Solar, which is 365 Days; they had every two or three Years an *Emboliſm*, i. e. they added a thirteenth Lunar Month every two or three Years; which additional Month they called *Emboli-mæus*, becauſe inſerted or intercalated. See YEAR.

The Word *Emboliſm* comes from the *Greek*, ἐμβολεσμὸς, form'd of ἐμβαλλειν, *to inſert.* See EMBOLISMIC.

EMBOLISMIC, *Intercalary.* The Term is chiefly uſed for the additional Months, which the Chronologiſts inſert to form the Lunar Cycle of 19 Years. See INTERCALARY.

For the 19 Solar Years, conſiſting of 6939 Days, and 18 Hours; and the 19 Lunar Years, only making 6726

Days: It was found neceſſary, in order to render the 19 Lunar Years equal to the 19 Solar, which make the Lunar Cycle of 19 Years, to intercalate or inſert 7 Lunar Months, containing 209 Days; which, with the four Biſſextile Days, happening in that Interval, make 213 Days, and the whole, 6939 Days. See CYCLE.

By Means of theſe ſeven *Emboliſmic*, or additional Months, the whole 6939 Days and 18 Hours of the Solar Years, are employed in the Calendar. See MONTH.

In the Courſe of 19 Years, there are 228 common Moons, and ſeven *Emboliſmic* Moons. Their Diſtribution is thus: Every 3d, 6th, 9th, 11th, 14th, 17th, and 19th Year are *Emboliſmic*, and conſequently contain 384 Days a-piece. And this was the Method of computing Time among the *Greeks*; when they uſed the *Enneadecaeterides*, or Cycle of 19 Years. But they did not keep regularly to it, as the *Jews* ſeem to have done.

The *Emboliſmic* Months, like other Lunar Months, are ſometimes 30 Days, and ſometimes only 29. See YEAR.

The *Emboliſmic Epacts*, are thoſe between XIX and XXIX; which are thus called, by Reaſon with the Addition of Epact XI, they exceed the Number XXX: Or rather, becauſe the Years, which have theſe Epacts, are *Emboliſmic*; having thirteen Moons a-piece, whereof the 13th is the *Emboliſmic*. See EPACT.

EMBOLUS, the moveable Part of a Pump, or Syringe; called alſo the *Piſton*, and popularly the *Sucker*. See PISTON: See alſo PUMP and SYRINGE.

The Pipe, or Barrel of a Syringe, *&c.* being cloſe ſhut; the *Embolus* cannot be drawn up without a very conſiderable Force; which Force removed, the *Embolus* returns again with Violence. This Phænomenon the *Ariſtotelians* attribute to Nature's Abhorrence of a Vacuum. See VACUUM.

But the modern Philoſophers finding that in an exhauſted Receiver, the *Embolus* is eaſily drawn up, tho' the Orifice be ſtop'd; prove that 'tis the Preſſure of the Atmoſphere, on the external Parts of the *Embolus*, that makes the Difficulty of drawing it up. See AIR, ATMOSPHERE, SUCTION, *&c.*

EMBOSSING, or IMBOSSING, the Act of forming, or faſhioning Works in Relievo, whether they be caſt, or moulded, or cut with the Chiſſel, *&c.* See RELIEVO, STATUE, FOUNDERY, *&c.*

*Emboſſing* is one great Part of Sculpture; being that which has to do with Figures rais'd, or prominent from the Plane or Ground: The other Part, which makes Figures, *&c.* that are indented, or cut in below the Ground, is call'd *Engraving*. See SCULPTURE and ENGRAVING.

EMBRACEOR, he who, when a Matter is in Trial between Party and Party, comes to the Bar with one of the Parties, (having receiv'd ſome Reward ſo to do) and ſpeaks in the Caſe, or privately labours the Jury, or ſtands there to over-look, awe, or put them in Fear.

The Penalty hereof is 20 Pound, and Impriſonment at the Juſtices Diſcretion.

EMBRASURE, in Architecture, the Enlargement made of the Gap, or Aperture of a Door, or Window, on the inſide the Wall. See DOOR.

Its Uſe is to give the greater Play, for the opening of the Door, Wicket, Caſement, *&c.* or to take in the more Light.

The *Embraſure* coming ſloping inwards, makes the inner Angles obtuſe. When the Wall is very thick, they ſometimes makes *Embraſures* on the out-ſide.

EMBRASURES, in Fortification, are the Holes, or Apertures, thro' which the Canons are pointed; whether in Caſemattes, in Batteries not cover'd with Gabions, or in the Parapets of Walls.

The *Embraſures* are generally about 12 Foot a-part, from ſix to nine Foot wide without, and two or three within. Their Height from the Plat-form is uſually three Foot on the inſide, and a Foot and half on the outſide: That ſo the Muzzle, on Occaſion, may be ſunk, and the Piece brought to ſhoot low.

They are particularly called *Cannonieres*, when big enough to paſs the Mouth of a Canon through; and *Meurtrieres*, when only big enough for Muſkets.

When the Parapet is ſo low, that the Canon may ſhoot without *Embraſures*, it is ſaid to ſhoot *en barbe*.

EMBROCATION, in Pharmacy, is the applying of Remedies, as Oils, Spirits, Decoctions, and other Liquids, by ſprinkling, or even rubbing them on the Part affected; called alſo *Irrigation*.

*Embrocations* are only a Kind of Lotions. See LOTION.

*Embrocations* are now little uſed, except in Diſeaſes of the Head. If the Pain do not abate, make an *Embrocation* of Cows Milk, lukewarm, on the Head. *Degori.* Make an *Embrocation* on the Part with Unguent. Dialtheæ, or Oil of Lilly very hot. *Dionis.*

The Pumping uſed in Natural Baths is properly an *Embrocation*.

The Word is form'd from the *Greek* βρέχω, *Irrigo, madefacio*, I ſprinkle, wet, macerate.

EMBROIDERY, the Enriching of a Cloth, or Stuff, by Working divers Figures thereon, with Needle and Thread of Gold, or Silver. See BROCADE.

That done with Silk, Flax, or the like, is not now call'd *Embroidery*; tho' antiently, and properly, the Word denoted all Kinds of figuring, or flouriſhing.

The chief Uſe of *Embroidery* is in Church Veſtments, Cloaths, Houſings, Guidons, Standards, *&c.* The Invention of *Embroidery* is attributed to the *Phrygians*; whence the *Latins* call Embroiderers *Phrygiones*.

The Word *Embroidery* is derived from the French *Broiderie*, of *broider*, to *Embroider*; which ſome deduce, by Tranſpoſition from *Bordeur*, by Reaſon they formerly *Embroider'd* only the Edges of Stuffs; whence the *Latins* alſo call the Embroiderers *Limbularii*. *Du Cange* obſerves, that they antiently wrote *aurobruſtus*, for *Embroider'd* with Gold, or *Bruſtus brudatus*, and *Brodatus*; whence *Broderie*.

There are divers Kinds of *Embroidery*: Among the reſt, *Embroidery on both Sides*, that is, which appears on both Sides; only practicable on thin ſlight Stuffs, as Taffetas, Gawſe, Muſlins, *&c.* *Embroidery on the Stamp*, where the Figures are very high, and prominent, being ſupported on Wool, Cotton, Hair, *&c.* *Low Embroidery*, where the Figures are low, and without any Enrichment between them.

EMBRYO, in Medicine, *Fœtus*; the firſt Beginning, or Rudiments of the Body of an Animal, in its Mother's Womb, before it have received all the Diſpoſitions of Parts, neceſſary to become animated: Which is ſuppoſed to happen to a Man on the 42d Day; at which Time, the *Embryo* commences a perfect *Fœtus*. See FOETUS.

The Moderns have made Abundance of fine Diſcoveries on the Formation and Growth of the *Embryo*. See EGG, GENERATION, CONCEPTION, *&c.*

The Word is derived from the *Greek*, ἔμβρυον, which ſignifies the ſame Thing; form'd of the Prepoſition ἐν and βρύω, *ſcaturio, pullulo*, I ſpring out: From the Manner of the firſt Growth of the *Embryo*, which reſembles that of the firſt Shoots of a Plant, as being a Kind of *Zoophyte*, and having only a Vegetative Life. See ZOOPHYTE.

Monſ. *Dodart* having an *Embryo* of 21 Days Age put in his Hands, made a nice Examen thereof; to find the Order Nature obſerves in the Formation of the Parts, and the firſt Riſe of the Parts themſelves.

The *Placenta*, he found more than half of the whole; and thence concludes, that the nearer the *Embryo* is to the Moment of its Conception, the greater is the *Placenta* with Reſpect to the Secundines, and the *Fœtus*. Which Circumſtance furniſhes a Reaſon why Miſcarriages are more dangerous than regular Deliveries; notwithſtanding the *Fœtus* in the former Caſe is much leſs than in the latter. For tho' the *Embryo* have made a Way ſufficient for it ſelf, it may not for ſo great a *Placenta* as is to follow it. See ABORTION, PLACENTA, *&c.*

The *Embryo* it ſelf was only ſeven Lines long, from the Top of the Head to the Bottom of the *Spina dorſi*, where it terminated. The Thighs were not yet unfolded: They only appeared like two little Warts at the Bottom of the Trunk: The Arms made juſt the ſame Appearance on the Shoulders. The Head was $\frac{1}{3}$ of the Length of the whole ſeven Lines: On this were ſeen two little black Points, which would one Day have been Eyes. The Mouth was very big; which M. *Dodart* takes for an Indication that the *Fœtus* was fed by the Mouth. There was no Eminence for the Noſe; but two little, almoſt imperceptible, Pits for the Noſtrils.

The Painters uſually make the Head $\frac{1}{8}$ of the Height of a well proportion'd Man; and $\frac{1}{4}$ of that of a young Child: In the *Embryo* before us, the Head was thrice the Height of the Head; whence it follows, that the younger the *Embryo*, the bigger the Head in Proportion to the Body. The Parts nearer the Head are alſo bigger in Proportion to the reſt; and the Legs and Feet the ſmalleſt.

The *Embryo* was a little crooked forwards, and bore ſome Reſemblance to the Maggot of a Silk-Worm: It weighed leſs than ſeven Grains, which is an extraordinary Lightneſs for a Body ſeven Lines long. It was ſo ſoft, that no Part of it could be touch'd without making a Change in its Form.

Upon opening it, M. *Dodart* diſcover'd the Heart, and the right Auricle: All the other Parts in the *Thorax*, and lower *Venter*, were only ſimple Lineaments, or Contours, and all *Veſicular*, excepting a Part on the left Side, which may be ſuppoſed to be the Spleen. There was

no

no Appearance of any Thing on the right Side for a Liver. *Mem. de l'Acad.*

EMBRYO, is alſo uſed by Naturaliſts, to expreſs the Grain, or Seed of a Plant; or rather the Germ, or firſt Sprout appearing out of the Seed: By Reaſon the whole future Plant is ſuppoſed to be contain'd therein. Juſt as the whole Chick, is ſuppoſed contained in the Cicatricula, or Treddle of an Egg. See SEED, GRAIN, PLANT, PLUMULE, RADICLE, &c.

EMBRYOTHLASTES, from ἔμβρυον, *Fœtus*, and θλάω, *contundo*, I bruiſe or break; an Inſtrument to cruſh the Bones of an *Embryo*, or dead Child; ſo as to make it eaſier of Extraction, and prepare it for the *Embryulcus*, to draw it out of the Womb. See DELIVERY.

EMBRYOTOMY, in Chirurgery, the Operation of cutting off the *Funiculus Umbilicalis*, or Navel String, of a Child juſt born; and tying it up. See UMBILICUS.

The Word is form'd of the *Greek*, ἔμβρυον, and τέμνω, *I cut*.

EMBRYULKIA, or EMBRYOLKIA, in Chirurgery, the Operation of extracting the Child out of the Mother's Womb.

What the *Greeks* call *Embryolkia*, the *Latins* call *Cæſarean Section*. See CÆSAREUS.

This latter Name, M. *Dionis* obſerves, has taken Place, and prevail'd over the former; as being more eaſy of Pronunciation.

The Word is form'd of the *Greek*, ἔμβρυον, *Child*, and ἕλκειν, *to draw*.

EMENDALS, an old Term ſtill uſed in the Accounts of the inner Temple: Where, ſo much *in Emendals* at the Foot of an Account, ſignifies ſo much in the Bank, or Stock of the Houſe, for Reparation of Loſſes, and other Occaſions.

EMENDATIO *Panis & Cereviſiæ*, the Aſſize of Bread and Beer; or the Power of ſuperviſing and correcting the Weights and Meaſures belonging to them. See ASSIZE.

EMERALD, a pretious Stone, very green and tranſparent; and as to Hardneſs, the next after the Ruby. See PRETIOUS *Stone*.

*Pliny* reckons up twelve Kinds of *Emeralds*; and denominates each from the Provinces, or Kingdoms, where he ſuppoſed them to be found; as *Scythian*, *Bactrian*, *Egyptian*, *Perſian*, &c.

But the modern Naturaliſts, and Jewellers, only know of two Kinds, *viz. Oriental* and *Peruvian*. And if we may credit *Tavernier*, in his Treatiſe of *Colour'd Stones found in the Indies*, inſerted in the ſecond Volume of his Voyages, theſe two ſhould yet be reduced to one, *viz.* the *Peruvian*.

In Effect, he maintains that there is not, nor ever was, any Mine of *Emeralds* in the *Eaſt-Indies*; and that all that are there found, were brought from *Peru* by the Way of the *South Sea*; which was a Method of Commerce, carried on by the *Peruvians* before the Diſcovery of *America* by the *Spaniards*. But as the Point of ſuch Commerce is not ſufficiently proved, we muſt keep to the antient Diviſion.

The *Oriental Emerald* is harder, more brilliant, and tranſparent than the *Peruvian*; which has generally Clouds found in it, and ſparkles leſs. Beſide that, there are ſuch Quantities brought from *Peru*, by the Way of *Carthagena*, that they are much ſunk in Value and Reputation. They talk likewiſe of *Emeralds* found in *Cyprus*, and even in our own Iſland; but they are very inconſiderable; if, indeed, there be any true ones at all.

Some Authors hold *Emeralds* to be taken out of Iron Mines: And *Pomet* aſſures us, he had one to which the Iron Ore was ſtill ſticking. To which, all we have to ſay, is, that it could not be a *Peruvian*, by Reaſon there is no Iron Mine in the Country.

The *Emerald* is ſuppoſed to grow more and more perfect in the Mine like the Ruby; and to arrive at its Greenneſs by ſlow Degrees, as the Fruit comes to Maturity by Degrees. 'Tis a common Opinion, that the *Emerald* grows in the Jaſper; and 'tis certain there are ſome Jaſpers ſo perfectly green, that many have taken them for *Emeralds*. See JASPER.

But the proper Matrix, or Marcaſite of this Stone is the *Preme*, which is held among the coarſer pretious Stones; being hard, tranſparent, half opake, and uſually intermix'd with yellow, green, white, blue, &c.

The Antients made Amulets of *Emeralds* againſt all Kinds of Sorcery; and ſuppoſed them effectual againſt a thouſand different Diſeaſes. At preſent; that we have more Experience, or leſs Credulity, they are valued for their Beauty, not their Virtue; tho' there are ſtill ſome who ſuppoſe, that when reduced into an impalpable Powder, and mix'd with Roſe Water, they may be of ſome Uſe in Medicine.

We read in Authors of ſeveral *Emeralds* of incredible Magnitude: *Roderigo de Toleda* tells us, that when the *Sarazens* took that Town, King *Tarik* had for his Share of the Plunder, a Table 365 Foot long, and all of a-piece, which he maintains to be an *Emerald*. After this, the Reader will not wonder at that ſeen by *Theophraſtus*, in a Temple in *Egypt*, four Cubits long, and three broad; nor even at an Obelisk of *Emerald* 40 Foot high.

The Word is form'd from the French *Eſmeraude*, and that from the Latin *Smaragdus*, which ſignifies the ſame Thing. Others derive it from the Italian *Smeraldo*, or the Arabic *Zomorrad*.

In the *Dictionnaire de Commerce*, we have a very curious and accurate Eſtimate of the Values of the different Kinds of *Peruvian Emeralds*; which the Reader will not be diſpleaſed to find tranſcribed hither.

*Rough* EMERALDS.

Thoſe of the firſt, and coarſeſt, Sort, called *Plaſmes*, for grinding, are worth 27 Shillings Sterling the Marc, or 8 Ounces. The *Demi-Morillons*, 8 Lib. Sterl. per Marc. Good *Morillons*, which are only little Pieces, but of fine Colour, from 13 *L.* to 15 *L.* per Marc. *Emeralds* larger than *Morillons*, and call'd *of the third Colour*, *or Sort*, are valued at from 50 *L.* to 60 *L.* the Marc. *Emeralds*, call'd *of the ſecond Sort*, which are in larger and finer Pieces than the preceding, are worth from 65 *L.* to 75 *L.* per Marc. Laſtly, thoſe of the *firſt Colour*, otherwiſe call'd *Negres Cartes*, are worth from 110 *Lib.* to 115 *Lib.*

EMERALDS *ready cut, or poliſhed, and not cut, being of good Stone, and a fine Colour, are worth,*

| | *Lib.* | *Sh.* |
|---|---|---|
| Thoſe weighing One Carat, or 4 Grains | 0 | 10 |
| Thoſe of Two Carats | 1 | 7 |
| Thoſe of Three Carats | 2 | 5 |
| Thoſe of Four Carats | 3 | 10 |
| Thoſe of Five Carats | 4 | 10 |
| Thoſe of Six Carats | 7 | 10 |
| Thoſe of Seven Carats | 15 | 0 |
| Thoſe of Eight Carats | 19 | 0 |
| Thoſe of Nine Carats | 23 | 0 |
| Thoſe of Ten Carats | 33 | 0 |

EMERALD, or EMERAUD, in Heraldry, is uſed in Lieu of *Vert*, or Green, in Blazoning the Arms of Dukes, Earls, &c. See BLAZONING.

EMERGE. See EMERSION and EMERGENT.

EMERGENT *Year*, in Chronology, is the *Epocha*, or Date, whence we begin to account our Time. See EPOCHA.

Thus, our *Emergent Year* is ſometimes the Year of the Creation: That of the *Jews*, is from the Deluge, or the *Exodus*, &c. The *Emergent Year* of the *Greeks*, was the Eſtabliſhment, or at leaſt the Reſtoration of the *Olympic* Games by *Iphitus*. The *Romans* accounted their Years from the Building of the City AB U. C. That is, AB URBE CONDITA.

EMERSION, in Phyſicks, the riſing of any Solid above the Surface of a Fluid ſpecifically lighter than it ſelf, into which it had been violently immerged or thruſt.

'Tis one of the known Laws of Hydroſtaticks, that a lighter Solid being forced down into a heavier Fluid, immediately endeavours to *emerge*; and that with a Force, or Moment, equal to the Exceſs of Weight of a Quantity of the Fluid, above that of an equal Bulk of the Solid.

Thus, if a Solid be immerged in a Fluid of double its ſpecific Gravity; it will *emerge* again, till half its Bulk, or Body, be above the Surface of the Fluid. See FLUID.

EMERSION, in Aſtronomy, is when the Sun, Moon, or other Planet, begins to re-appear, after having been eclipſed, or hid by the Interpoſition of the Moon, Earth, or other Body. See ECLIPSE.

The Difference of Longitudes is found by obſerving the Immerſions and *Emerſions* of the firſt of *Jupiter's Satellites*. See SATELLITES.

The Immerſions are obſerved from the Time of *Jupiter's* being in Conjunction with the Sun, to his Oppoſition; and the *Emerſions*, from the Oppoſition to the Conjunction. Which two Intervals are uſually ſix Months a-piece; and divide the Year between them.

But when *Jupiter* is in Conjunction with the Sun, and fifteen Days before and afterwards; there is nothing to be obſerved: That Planet, with his Satellites, being then loſt in the Light of the Sun. See JUPITER.

EMERSION, is alſo uſed when a Star, before hid by the Sun, as being too near him, begins to re-appear, and to get out of his Rays. See MERCURY.

*Scruples*, or *Minutes of* EMERSION, are an Arch of the Moon's Orbit, as TQ (*Tab. Aſtronom. Fig.* 46.) which the Moon's Centre paſſes over, from the Time ſhe begins to *Emerge* out of the Shadow of the Earth to the End of the Eclipſe.

EMERY,

EMERY, a Sort of Metallic Stone, found in moſt, or all Mines of Metals; but chiefly thoſe of Iron, Copper, and Gold. See STONE and MINE.

We uſually diſtinguiſh three Kinds of *Emery*; the *Spaniſh*, *Red*, and *Common Emery*.

The firſt is found in the Gold Mines of *Peru*, and other Provinces of the *Spaniſh America*: 'Tis judged a Kind of Marcaſſite of that rich Metal; being ſtreak'd with little Veins, and Specks of Gold. 'Tis for this Reaſon the King of *Spain* prohibits it being exported: Which renders it exceeding rare among us; to the great Regret of the Seekers of the Philoſopher's Stone, who build great Hopes in the Tranſmutation of this precious Mineral. The *Red Emery* is found in Copper Mines; the little we have of it comes from *Sweden* and *Denmark*.

The *Common Emery* is taken out of Iron Mines; and is almoſt the only Sort uſed among us. The Conſumption hereof is very conſiderable among the Armorers, Cutlers, Lockſmiths, Glaziers, Lapidaries, Maſons, *&c.* Some of whom uſe it to poliſh and burniſh Iron, and Steel Works; others, to cut and ſcollop Glaſs, Marble, and pretious Stones.

This *Emery* is of a browniſh Colour, bordering a little on *Red*; exceedingly hard, and of Conſequence difficult to pulverize. The *Engliſh* are the only People that have got the Art of making it into Powder; which they do chiefly by Means of certain Mills contrived for that Purpoſe: And thus ſend it in Powder to their Neighbours.

Pounding it in Mortars were in vain; it being ſo hard that it would pierce, or break the Mortar e're it would give Way.

Of the Powder, the moſt ſubtle and impalpable is the beſt: As to the Stone, it ſhould be choſe of a high Colour, and as free of the Rock as poſſible.

*Emery* fuſed with Lead, and Iron, hardens them. It increaſes and heightens the Weight and Colour of Gold. 'Tis uſual to mix a little of it with the Gold from *Madagaſcar*, which is naturally pale and ſoft. See GOLD.

*Putty of* EMERY, is a Kind of dirty Matter, found on the Lapidaries Wheels; containing Part of the Powder of *Emery*.

The Word *Emery* appears to be derived from the Latin *Smyris*, and that from the *Greek* σμύεις, which ſignifie the ſame Thing; and which Monſ. *Lemery* derives from the Verb σμάω, *I clean, ſcour*.

EMETIC, in Medicine, a Remedy that excites Vomiting; or that evacuates by Vomiting. See VOMITING and EVACUANTS.

Of theſe there are a great Variety; as *Ipecacuanha*, *Carduus Benedictus*, &c.

The Uſe of *Emeticks* is indicated by a Foulneſs of the Mouth in a Morning, rifting, loathing, gnawing of the Stomach, gradual Loſs of Appetite, ſpontaneous Vomiting, *&c.*

Vomiting is rais'd by irritating the Spirits with the Preſence of ſomething loath'd; by an unuſual Agitation, as Sailing, *&c.* by tickling the Fibres of the Jaws, and Pharynx with a Feather dipp'd in Oil; by drinking Quantities of warm Water, *&c.* by any Thing ſharp and viſcous; as the Flowers and Seeds of *Dill*, Leaves of *Cæſarum*, &c. Crocus and Glaſs of *Antimony*; the Flowers and Regulus thereof; *Mercurius Vitæ*, *Mineral Turbith*, and *Mercury* ſharpen'd with Acids.

The *Emetic* Wine, *Vinum Emeticum*, is only white Wine, wherein is infuſed ſome *Crocus Metallorum*, or Glaſs of Antimony.

The *Emetic Powder*, called alſo Powder of *Algareth*, from the Name of its Author, is a Precipitate of Antimony, or Butter of Antimony, ſweeten'd and ſoftned by repeated Lotions. See ANTIMONY.

*Emetic Tartar*, is Cream, or Cryſtal of Tartar, powder'd and mix'd with one fourth of *Crocus Metallorum*.

The Word is form'd from the *Greek*, ἐμέω, *I vomit*.

The Operation of *Emetic* Medicines is thus accounted for by Dr. *Quincy*: The Particles of the *Emetic* wedging themſelves into the Orifices of the Emiſſaries of the Glands, placed adjacent to the Surface of the Stomach, do dilate the ſame; (which by ſome extrinſic Cauſe had been contracted) and after the ſame Manner, do diſſolve (at leaſt in ſome Degree) the Coheſion of the ſtagnant morbifick Matter; rendering it more fluid, and conſequently making its Reſiſtance leſs.

Now the natural and conſtant Actions of the Glands being Secretion; and the Impediment (by the Dilatation of the Orifice, and the Attenuation of the Fluid) being taken away, or at leaſt made leſs than the natural Momentum of the Glands; the Matter muſt naturally flow into the Cavity of the Stomach, till it be heaped up in ſuch a Quantity, (which not being to be done in an Inſtant, muſt require ſome Time) as is ſufficient by its Stimulus to vellicate, and force the Fibres of the Stomach, Abdomen, and Diaphragm, by Communication of the firſt with the two laſt, into a violent Contraction; and thereby throw all out by the Oeſophagus: And this makes all quiet for a Time, till a new and ſufficient Quantity be excerned from theſe Glands to produce the aforeſaid Contraction.

Thus there happens Fits of Vomiting and Quiet alternately, till either all the morbific Matter be thrown out, or the Force of the *Emetic* be ſo diluted, that it is no longer able to draw out the morbific Matter from the Glands.

And the ſtrong Contraction in ſo many Muſcles, and muſcular Canals, as are at Work in the Action of Vomiting, and the violent Concuſſion which is produced all over the whole Body by a Power, which, by juſt Computation, is not inferior to 26000 *l.* Weight, may, and often does, take away the Obſtruction in many other Canals, beſides thoſe which are adjacent to the Stomach and Gullet; as we plainly ſee, by thoſe vaſt Sweats, which plentiful Fits of Vomiting occaſion.

*Emetic* and Purgative Medicines differ only in this, that the Particles of the latter do not immediately vellicate the Fibres of the Stomach, dilate the Orifices, and attenuate the Matter contain'd in the Glands of the Stomach; but act gently, and aſſiſt the natural Motion of Digeſtion, and ſo are carried down into the Guts: And how they operate there. See PURGATIVE.

EMINENCE, in Geography, a little Hillock, or Aſcent, above the Level of the Champagne. See MOUNT.

This Seat is built on an *Eminence*. The Enemies have taken Poſſeſſion of ſuch an *Eminence*, ſuch a Height, from which they can canonade our Rear.

EMINENCE, in Anatomy, is a Part of the Brain, call'd the *Annular Eminence*. See BRAIN.

The fifth Pair of Nerves ariſes from the Sides of the *Annular Eminence* of the Brain. See NERVE.

EMINENCE, is alſo a Title of Honour given to a Cardinal. See CARDINAL.

'Tis his *Eminence* the Cardinal *de* ——. The Decree of the Pope, whereby it was appointed, that the Cardinals ſhould be addreſs'd under the Quality of *Eminence*, bears Date the 10th of *January*, 1630. They then laid aſide the Titles of *Illuſtriſſimi*, and *Reverendiſſimi*, which they had bore before.

The Grand Maſter of *Malta*, is likewiſe addreſs'd under the Quality of *Eminence*. See MALTA.

The Popes *John* VIII, and *Gregory* VII, gave the ſame Title to the Kings of *France*. The Emperors have likewiſe bore it.

*Eminentiſſimus*, the ſuperlative of *Eminent*, has of late been attributed to the Cardinals. *L' Eminentiſſime Cardinal de* Richelieu.

EMINENTER, EMINENTLY, in the Schools, is uſed in Contradiſtinction to *Formaliter*; and in the ſame Senſe with *Virtualiter*: viz. when a Thing poſſeſſes, or contains any other Thing in a more perfect or higher Manner than is required to a formal Poſſeſſion thereof.

Thus an Angel is ſaid to have Prudence *Eminenter*; as he has it in a higher and more perfect Degree than it is in Man, in whom it is *Formaliter*. See FORMALITER and VIRTUALITER.

For one Thing to contain another *Eminenter*, there are uſually required two Things, 1. That the containing be of a more excellent Nature than the contain'd. 2. That the leſs Excellent be ſome Way contain'd in the more excellent, *viz.* either as in its productive Cauſe: Or by ſome Similitude: Or as to the Manner, and Order of Acting, *&c.*

EMINENTIAL *Equation*, is uſed by ſome Algebraiſts in the Inveſtigation of the Areas of Curvilinear Figures; for a Sort of Artificial Equation, containing another Equation *Eminently*. Hayes's *Fluxions*, p. 97.

EMIR, a Title of Dignity, or Quality, among the *Turks* and *Sarazens*; attributed to ſuch as are Relations, or Deſcendants of their great Prophet *Mahomet*.

The *Emirs* are held in high Veneration; and have alone the Privilege of wearing a *Green Turban*. See TURBAN.

On the Borders of the Holy Land were ſeveral *Emirs*, Soveraign Princes; as the *Emir* of *Gaza*, and the *Emir Terabea*, over whom the Grand Seignior had but little Authority.

The *Emir Haga*, or Prince Conductor of the Pilgrims to *Mecha*, is Baſhaw of *Jeruſalem*, &c.

This Title, at firſt, was only given to the Caliphs: In *Perſia* they were alſo call'd *Emir Zadeh*, q. d. Princes Son: Whence, by Abbreviation of *Emir*, they form'd Mir, and of *Emir Zadeh*, Mirza. See CALIPH.

In after Times, when the Caliphs had aſſumed the Title of Sultans; that of *Emir* remain'd to their Children, as that of *Cæſar* among the *Romans*. In Succeſſion of Time, the ſame Title of *Emir* came to be attributed to all, who were

were judg'd to deſcend from *Mahomet* by his Daughter *Fathimah*, and who wear the *Green Turban*. See TURBAN.

EMIR, is alſo a Title, which being joyn'd to ſome other Word, frequently denotes an Office, or Employ.

As the *Emir al Omera*, Commander of Commanders; who, in the Time of the Caliphs, was Chief of the Councils and Armies.

The Name *Emir* is alſo applied, by the *Turks*, to all Viziers, and Baſhaws or Governours of Provinces. See BASHAW, *&c.*

Add, that *Emir Akhor*, vulgarly *Imrahor*, is Maſter, or Chief of the Equeries to the Grand Seignior: *Emir Alem*, vulgarly *Miralem*, Standard-Bearer, and Director of all the Standards of the Empire, with the Muſic, &c. *Emir Bazar*, the Prevot, or Superintendant of the Markets, who regulates the Prices of Proviſions. *Emir al Moſlemin*, or *Emir al Monmenin*, i. e. Commander of the Faithful, or the Believers, was a Title aſſumed by the *Almoravides* and *Almohades*, who reign'd in *Africa* and *Spain*.

The Word *Emir* is *Arabic*, where it literally ſignifies *Prince*. It is form'd of the Verb אמר *Amar*, which is originally *Hebrew*, and in both theſe Languages ſignifies to *ſay*, and to *command*.

EMISSARY, a truſty, dextrous, able Perſon ſent, underhand, to ſound the Sentiments, and Views of another; to make him ſome Propoſal, or Overture: Or to ſpread Reports, watch the Actions, Motions, and Countenance of a contrary Party, or Perſon, in Order to make Advantages of them all.

The Leaders of Parties have Abundance of *Emiſſaries* employed in their Service, who inform them of what paſſes every where, that they may take their Meaſures accordingly. The Pope and the Chevalier have their *Emiſſaries* in *England*.

The Word is form'd of the *Latin e*, and *mitto*, I ſend out.

EMISSARY *of a Gland*, or its *excretory Duct*, is the common Conduit, Canal, or Pelvis, in which all the little ſecretory Canals of a Gland do terminate. See GLAND.

EMISSION, the Act of throwing or driving a Thing, particularly a Fluid, from within, outwards.

The Term is chiefly applied among us to the Expulſion, or Ejaculation of the Seed; See EJACULATION. Tho', we alſo ſay, the Antients took Viſion to be perform'd by the *Emiſſion* of Viſual Rays from the Eye. See VISION.

It is alſo uſed Morally: Thus, the Civil Death of a Religious is reckon'd from the Day of the ſolemn *Emiſſion* of Vows. See Vow.

EMMENAGOGUES, in Medicine, ſuch Remedies as promote the *Menſes*; thus call'd from εν, *in*, μην, *Month*, and αγω, *duco*, I lead; by Reaſon their natural Periods of flowing are once a Month. See MENSES.

*Emmenagogues* either act by giving a greater Force to the Blood in its Circulation, whereby its Momentum againſt the Veſſels is increas'd; or by making it thinner, whereby it will more eaſily paſs through any Outlets.

The former Intention is helped by Chalybeates, which give a greater Weight and Momentum to a languid, heavy Blood, and all other Subſtances of the like Gravity and Elaſticity. And ſuch is the Caſe of a Leuco-phlegmatic Habit, or as it is commonly called, the Green-Sickneſs, and its Cure.

But, in the latter Caſe, where the Blood is florid and too high; attenuating Alteratives and Detergents are the only Remedies, becauſe fitteſt to render the Blood more thin, and give it ſuch a Property, as will better carry it thro' thoſe little Apertures, deſtined for its Diſcharge into the *Uterus*.

EMOLLIENTS, in Medicine, and Pharmacy, Remedies uſed to ſoften, and looſen, Hardneſſes, or Conſtructions of the Belly; or thoſe of Tumors and Swellings.

Such are *Mallows*, *Mercurialis*, *Lilly Roots*, *Althæa*, *Lin-ſeed*, *Butter*, *Wax*, *Gum Ammoniac*, &c. See MALACTICKS.

The Term *Emollient* is not only applied to internal Remedies, but alſo to other Things: A Laxative, Anodyne, and *Emollient* Clyſter: An *Emollient* Emplaſter, made of reſolutive Unguents: An *Emollient Cataplaſm*: Freſh Cherries are an *Emollient* Food; tho', when dry, they rather conſtringe than relax; as wanting a great Part of the Phlegm, which render'd them *Emollient*. Ripe Grapes, of Aſtringent, which they were before, become Laxative and *Emollient*. Hog's Greaſe, applied externally, is reſolutive and *Emollient*.

Dr. *Quincy* defines *Emollients*, more ſcientifically, to be ſuch Things as ſheath and ſoften the Aſperites of the Humours, and relax and ſupple the Solids at the ſame Time.

For it is eaſy to conceive how theſe ſhould be both effected by the ſame Medicine; thus: By what Means ſoever, (whether in the Stomach, or any other Parts) the Juices have obtained a Sharpneſs, or Aſperity, ſo as to vellicate and render uneaſy the Fibres, and nervous Parts; which often happens; thoſe Things which are ſmooth, ſoft, and yielding, cannot but wrap up their Points, and render them imperceptible; whereby they may gradually, by the proper Courſe of Circulation, be brought to ſome convenient Emunctory, without doing any Injury by the Way.

Such Sharpneſs of Parts, likewiſe, draws the Fibres into Spaſms, keeps them too tenſe, and frequently thereby occaſions Obſtructions of the worſt Kind.

In all ſuch Caſes, therefore, *Emollients* lubricate, and moiſten the Fibres, ſo as to relax them into their proper Dimenſions, whereupon ſuch Diſorders ceaſe.

EMOLUMENT, is properly applied to the Profits ariſing daily from an Office, or Employ.

The Patent, or other Inſtrument, whereby a Perſon is preferr'd to an Office, gives him a right to enjoy all the Dues, Honours, Wages and *Emoluments* belonging thereto.

In our Law Books, &c. *Emolument* is uſed in a ſomewhat greater Latitude.

The Word is form'd of the Latin *Emolumentum*, which primarily ſignifies the Profits redounding to the Miller from his Mill, of *molo*, *molere*, to grind.

EMPALEMENT, or IMPALEMENT, a cruel kind of Puniſhment, wherein a ſharp *Pale*, or Stake, is run up the Fundament and thro' the Body.

We find mention of *Impaling* in *Juvenal*: It was frequently practiſed in the Time of *Nero*; and continues to be ſo in *Turkey*.

The Word comes from the French *Empaler*, or the Italian *Impalare*; or rather they come all alike, from the Latin *Palus*, a Stake, and the Prepoſition *in*, in, into.

EMPALEMENT, in Botany, the outmoſt Part of the Flower of a Plant, encompaſſing the Foliation of the Attire. See FLOWER.

It is compounded of the three general Parts of all Plants, the Skin, the Cortical, and the ligneous Bodies, each *Empaler* being (whether conſiſting of one or more Pieces) as another Leaf, and deſigned to be a Guard, and a Band to the Flower, where it is weak and tender; and therefore ſuch Plants as have Flowers, with a firm and ſtrong Baſis, as Tulips, *&c.* have no *Empalement*, nor need any. See CALYX.

EMPANELLING, in Law, ſignifies the Writing, and entring the Names of a Jury into a Parchment, Schedule, or Roll of Paper by the Sheriff, which he hath ſummoned to appear for the Performance of ſuch public Service, as Juries are employed in. See PANEL and JURY.

EMPARLANCE, in Law, a Deſire, or Petition in Court, of a Day to pauſe, or conſider what is beſt to be done.

The Civilians call it *Petitio Judiciarum*. *Kitchin* mentions Imparlance *general* and *ſpecial*: The firſt ſeems to be only that made in one Word, or in general Terms: *Emparlance Special*, is where the Party requires a Day to deliberate; adding theſe Words, *Salvis omnibus Advantagiis tam ad Juriſdictionem Curiæ, quam ad breve & Narrationem.*

*Briton* uſes it for the Conference of a Jury upon a Cauſe committed to them. See IMPARLANCE.

EMPASMA, in Pharmacy, a Powder thrown, or ſprinkled, over the Body, to correct ſome ill Smell thereof, or to prevent unneceſſary Sweats.

The Word is form'd from the *Greek*, εμπάσειν, *to ſprinkle.*

EMPASTING, a Term uſed in Painting, for the laying on of Colours, thick and bold; or applying ſeveral Lays of Colours, ſo as they may appear thick. See COLOURING.

A Painting is ſaid to be well *Empaſted* with Colours, when the Colours are beſtow'd plentifully, or it is well fed and ſaturated with Colours.

The Term is alſo uſed, when the Colours are laid diſtinct and aſunder; and not ſoften'd, or loſt in each other. This Head is not painted: It is only *Empaſted*.

It is form'd of the French *Empaſter*, which has the ſame Signification, of *Paſte*, or *Pâte*, Paſte.

EMPEROR, *Imperator*, a Title which, among the antient *Romans*, only ſignified a General of an Army: But, afterwards, it came to denote an abſolute Monarch, or a ſupreme Commander of an *Empire*; A *Roman Emperor*, &c.

In Strictneſs, the Title *Emperor* does not, cannot, add any Thing to the Rights of Soveraignty: Its Effect is, only to give Precedence, and Preheminence above other Soveraigns; and as ſuch, it raiſes thoſe inveſted with it, to the Top of all Human Greatneſs.

The *Emperors*, however, pretend, that the *Imperial* Dignity is more eminent than the Regal; but the Foundation of ſuch Prerogative does not appear: 'Tis certain the greateſt, moſt antient, and abſolute Monarchs, as thoſe of *Babylon*, *Perſia*, *Aſſyria*, *Egypt*, *Macedonia*, &c. were called by the Name of Kings in all Languages, both Antient and Modern. See KING.

'Tis diſputed whether or no *Emperors* have the Power of diſpoſing of the Regal Title: 'Tis true, they have ſometimes taken upon them to erect Kingdoms; and thus it is, that *Bohemia* and *Poland* are ſaid to have been rais'd to the Dignity: Thus, alſo, the Emperor *Charles the Bald*, in the Year 877, gave Provence to *Boſon*, putting the Diadem on his Head, and decreeing him to be called King; *Ut more priſcorum* Imperatorum *Regibus videretur Dominari.*

Add, that the late Emperor *Leopold*, erected the Ducal *Pruſſia* into a Kingdom, in Favour of the Elector of *Brandenburgh*; but ſeveral of the Kings of *Europe* refuſed, for ſome Time, to acknowledge him in that Capacity: Tho' by the Treaty of *Utrecht*, in 1712, they all came in.

In the *Eaſt*, the Title, and Quality of *Emperor* are more frequent than among us: Thus the Soveraign Princes of *China*, *Japon*, *Mogol*, *Perſia*, &c. are all *Emperors* of *China*, *Japon*, &c.

In the *Weſt*, the Title has been a long Time reſtrain'd to the Empire of *Germany*. The firſt who bore it was *Charlemagne*, who had the Title *Emperor* conferr'd on him by Pope *Leo* III, tho' he had all the Power before.

In the Year 1723, the Czar of *Muſcovy* aſſumed the Title of *Emperor of all Ruſſia*; and procured himſelf to be recognized as ſuch by moſt of the Princes and States of *Europe*.

The Authority of the *Emperor* of *Germany*, over the States of the Empire, conſiſts, 1°. In preſiding at the *Imperial* Dyets, and in having a negative Voice therein: So that his Vote alone can prevent all the Reſolutions of the Dyet. 2°. In that all the Princes, and States of *Germany*, are obliged to do him Homage, and ſwear Fidelity to him, 3°. That he, or his Generals, have a Right to command the Forces of all the Princes of the Empire, when united together. 4°. That he receives a Kind of Tribute from all the Princes and States of the Empire, call'd the *Roman Month*. For the reſt, there is not a Foot of Land, or Territory, affected to his Title.

The Kings of *France* were alſo call'd *Emperors* at the Time when they reign'd with their Sons, whom they aſſociated to the Crown: Thus, *Hugh Capet*, having aſſociated his Son *Robert*, took the Title of *Emperor*; and *Robert*, that of King. Under which Titles they are mention'd in the Hiſtory of the Council of *Rheims*, by *Gebert*, &c. King *Robert* is alſo called *Emperor* of the *French* by *Helgau* of *Fleury*. *Louis le Gros*, upon aſſociating his Son, did the ſame. In the firſt Regiſter of the King's Charters, *Fol.* 166. are found Letters of *Louis le Gros*, dated in 1116, in Favour of *Raymond* Biſhop of *Maguelonne*, wherein he ſtyles himſelf, *Ludovicus Dei Ordinante Providentia Francorum* Imperator *Auguſtus*.

The Kings of *England* had likewiſe, antiently, the Title of *Emperors*; as appears from a Charter of King *Edgar*: *Ego* Edgarus *Anglorum Baſileus Omniumque Regum Inſularum Oceani quæ* Britanniam *circumjacent*, &c. Imperator & *Dominus*.

Add, that we ſay, the King of *England*, *Omnem habet Poteſtatem in Regno ſuo quam* Imperator *vendicat in Imperio*: Whence the Crown of *England* has been long ago declared in Parliament to be an *Imperial* Crown.

EMPERESS, *Imperatrix*, the Feminine of *Emperor*; applied either to an *Emperor's* Wife, or to a Woman who rules ſingly over an Empire, with all the Authority of an *Emperor*: As at this Time the *Empereſs* of *Ruſſia*.

EMPERESS, is alſo uſed, in the antient *French* Poetry, for a particular Kind of Rhime, thus denominated by Way of Excellence. See RHIME.

The *Rime Emperiere* was a Sort of Crown'd Rime, wherein the Syllable that made the Rime, was immediately preceded by two other like Syllables, of the ſame Termination; which made a Kind of Echo, called the triple Crown; and which, to the Shame of the Nation, (as ſome of their late Authors expreſs it) their beſt antient Poets took for a wonderful Beauty and Excellence.

*Fa. Mourgues*, in his Treatiſe of *French* Poetry, gives us an Inſtance very proper to give us a Contempt of the miſerable Taſt of that Antiquity, which knew no Way of Expreſſing, that the World is impure, and ſubject to change, ſo admirable, as by ſaying,

*Qu' es tu qu'un* Immonde, Monde, onde.

EMPHASIS, in Rhetoric, &c. a Force, Streſs, or Energy, in Expreſſion, Action, Geſture, &c.

This Orator ſpeaks with a World of *Emphaſis*; all his Words have an *Emphaſis*. What greater Puniſhment, ſays *de la Bruyere*, than to hear indifferent Verſes rehears'd with all the *Emphaſis* of an ill Poet?

The Word is *Greek*, ἔμφασις.

EMPHATICAL, in Rhetoric. See EMPHASIS.

EMPHATICAL is alſo uſed by the antient Philoſophers, to expreſs thoſe apparent Colours, (as they call them) which are often ſeen in Clouds before the Riſing, or after the Setting of the Sun, or thoſe in the Rainbow, &c. See COLOUR.

Theſe, becauſe they are not permanent and laſting, they will not allow to be true Colours. But, ſince theſe *Emphatical* Colours are Light, modified chiefly by Refraction, and with a Concurrence of Reflections, and ſome other accidental Variations; and being the proper Objects of Sight, and capable as truly to affect it, as other permanent Colours are: There is no Reaſon for excluding them from the Number of true and genuine Colours; ſince all other Colours are only Modifications of Light as theſe are. See LIGHT.

EMPHRACTIC, in Pharmacy, the ſame with *Emplaſtic*. See EMPLASTIC.

The Word is form'd from the *Greek*, ἐμφράττω, *I ſtop*.

EMPHYSEMA, in Medicine, a windy ſwelling, or bloating of the whole outer Habit of the Body; like that in the Parts of divers Animals, when blown up, after they are kill'd. See TUMOR.

The Wind, or Air, which is the Matter of the *Emphyſema*, is lodged under the Cutis, and principally in the *Cellulæ Adipoſæ*.

Hence the Seat of the *Emphyſema*, or the Place wherein the Wind is chiefly lodg'd, is in the Adipoſe Cells, under the Skin, covering the Thorax: The ordinary Occaſion is ſome Wound in the Thorax.

Monſ. *Littre* accounts for it thus: When a Perſon is wounded in the Breaſt, there enters Air in at the Wound; now, it may happen, either from the Narrowneſs of the Wound, or the Fleſh's cloſing again readily, or ſome other Cauſe, that the Air thus admitted, cannot readily get out again, at leaſt not all of it: And thus Air comes to be incloſed in the Capacity of the Breaſt.

Now, at every Inſpiration, the Lungs are to fill this Capacity, by their ſwelling with the Air naturally received. But here they cannot ſwell without preſſing upon the other extraneous Air: The Conſequence of which is, that it obliges it to ſlip between the Interſtices of the fleſhy Fibres, and perhaps to enter the little Oſcula of the minuteſt Veins or Lymphaticks.

Immediately, another Force comes to take Place, contrary to that of Inſpiration; *viz.* Expiration: In this, the Breaſt contracting it ſelf, preſſes the extraneous Air ſtill more than the Lungs had done in their Dilatation: And the two oppoſite Moments or Actions conſpire to the ſame Effect.

The Air, thus continually impell'd, will be propagated along the Paſſages it firſt open'd it ſelf, till at Length it meets and becomes collected in ſome Place. Now this Place will be the *Cellules* of the fat, rather than any where elſe, by Reaſon of the Thinneſs, and Flexibility of their Membranes; and as the Air came from within the Cavity of the Breaſt, it will be in the Fat that covers the Breaſt, under the Skin, rather than elſewhere, that the windy Tumor, or *Emphyſema* will lie.

Now, ſuch Tumor cannot be very conſiderable, as only form'd by the Air receiv'd in at a Wound: But if we ſuppoſe the Wound to have pierced the Subſtance of the Lungs, then beſide the Air taken in by the Wound, there will be Part of that taken by Inſpiration; ſo much as was contain'd in the *Bronchiæ*, or *Veſiculæ*, thus perforated, or open'd, eſcaping into the Cavity of the Breaſt, and driven along with the former, into the Fleſh. And as a freſh Quantity of this is ſupplied every Moment, there will be a continual Acceſſion, ſo long as the Wound of the Lungs remains open.

Hence, an *Emphyſema* from a Wound in the Lungs, ſometimes poſſeſſes the whole Habit; the Air being carried to the ſeveral Parts of the Body by Circulation.

The Word is *Greek*, ἐμφύσημα, which ſignifies the ſame Thing.

EMPHYTEOSIS, or EMPHYTEUSIS, in the Civil and Canon Law, the letting out of poor barren Lands for ever, or at leaſt for a long Term of Years, on Condition of cultivating, meliorating, or mending them; and paying a certain yearly Conſideration.

*Emphyteoſes* are a Kind of Alienations, differing from Sales, in that they only transfer the *Dominum utile*, the Benefits of the Ground; not the Property, or Fee ſimple.

Among the *Romans* they were at firſt temporary; afterwards perpetual.

The

The Word is form'd of the *Greek*, ἐμφύτευσις, which ſignifies a *Graft*, and by Metaphor, a *Melioration*, Amendment: For as we only graft Trees to mend them; ſo a Man only alienates his Land by *Emphyteoſis*, on Condition of amending it.

The 20th Canon of the Council of *Carthage*, prohibits the Biſhops ſeizing the Church's *Emphyteoſes*, out of the Hands of private Perſons, unleſs they have been three Years without paying Rent.

EMPIRE, the Territory, or Extent of Land under the Command, and Juriſdiction of an *Emperor*. See EMPEROR.

The *Roman Empire*; the *Empire* of the *Eaſt*; the *Empire* of the *Weſt*, or the *Weſtern Empire*; the *Empire* of the Great Mogul, *&c.*

*Tacitus* obſerves of *Galba*, that all the World would have thought him worthy the *Empire*, had he never been Emperor.

Antiquaries diſtinguiſh between the Medals of the *upper* and *lower Empire*. The curious only value thoſe of the upper *Empire*, which commences with *Cæſar*, or *Auguſtus*; and ends in the Year of Chriſt 260.

The *lower Empire* comprehends near 1200 Years, reckoning as low as the Deſtruction of *Conſtantinople*, in 1453. They uſually diſtinguiſh two Ages, or Periods, of the lower *Empire*: The firſt beginning where the upper ends, *viz.* with *Aurelian*, and ending with *Anaſtaſius*, including 200 Years: The ſecond beginning with *Anaſtaſius*, and ending with the *Paleologi*, which is 1000 Years.

EMPIRE, uſed abſolutely, and without any Addition, or *The Empire*, ſignifies the *Empire* of *Germany*, call'd alſo, in Juridical Acts and Laws, the *Holy Roman Empire*; *S R I*, q. d. *Sacrum Imperium Romanum*; which is what we otherwiſe call the *Germanic* Body.

The *Empire* had its Beginning with the IXth Century; *Charlemaigne* being created firſt Emperor by Pope *Leo* III. who put the Crown on his Head in St. *Peters* on *Chriſtmas-Day* in the Year 800.

Authors are at a Loſs under what Form of Government to range the *Empire*: Some will have it a Monarchic State, by Reaſon all the Members thereof are obliged to aſk the Inveſtiture of their States of the Emperor, and to take an Oath of Fidelity to him.

Others, will have it a Republic, or Ariſtocratic State, by Reaſon the Emperor cannot reſolve, or determine any Thing, without the concurring Suffrages of the Princes: Adding, that if they require Inveſtiture from, and ſwear Fealty to, him, 'tis only as Head of the Republic, and in the Name of the Republic, and not in his own: Juſt, as at *Venice*, every Thing is tranſacted in the Name of the Doge. See DOGE.

Laſtly, others will have the *Empire* to be a Monarcho-Ariſtocratic State, *i. e.* a Mixture of Monarchy and Ariſtocracy; for that tho' the Emperor, in many Caſes, ſeems to act ſoveraignly; yet his Decrees and Reſolves have no Force, in Caſe the States refuſe to confirm them.

In fine, we ſhould rather chuſe to call it an Ariſto-Democratic State; by Reaſon the Dyet, wherein the Soveraignty is lodged, is compoſed of Princes, and the Deputies of Cities; and is divided into three Orders, or Bodies, call'd *Colleges*, viz. the College of Electors, the College of Princes, and the College of Cities. See COLLEGE.

We ſay *Diet* of the *Empire*, *Circles* of the *Empire*, *Fiefs* of the *Empire*, *Princes* of the *Empire*, *Eſtates* of the *Empire*, *Members* of the *Empire*, *Capitulations* of the *Empire*, *Receſſus* of the *Empire*, &c. See DIET, CIRCLE, FIEF, BAN, PRINCE, CAPITULATION, RECESSUS, *&c.*

The States of the *Empire* are of two Kinds, *Mediate* and *Immediate*.

The Immediate States are theſe who hold immediately of the *Empire*; whereof, again, there are two Kinds: The firſt, ſuch as have Seats, and Voices in the Imperial Diet; the ſecond, ſuch as have none.

The Mediate States are thoſe who hold of the Immediate.

The States which now compoſe the *Empire*, are the Princes of the *Empire*, the Counts of the *Empire*, the Free Barons of the *Empire*, the Prelates of the *Empire*, the Princeſſes, or Abbeſſes of the *Empire*, the Nobles of the *Empire*, and the *Imperial* Cities.

EMPIRIC, or EMPIRICK, a Name attributed, of all Antiquity, to ſuch Phyſicians as form'd themſelves Rules, and Methods, on their own Practice and Experience; and not on any Knowledge of Natural Cauſes, or the Study of good Authors; and who preſcribed, without enquiring into the Nature of the Diſeaſe, or the Properties and Virtues of their Medicines: depending wholly on the Authority of ſome general experienced Remedies. See PHYSICIAN.

Medicine was almoſt altogether in the Hands of *Empiricks*, till the Time of *Hippocrates*; who firſt introduced Reaſon and the Uſe of Theory therein: And hence aroſe a new Sect, call'd *Theoretici*. See THEORIST.

The Word is form'd of the *Greek*, ἐμπειρικὸς, and that of ἔμπειρ@, *knowing*, *able*; but, particularly, knowing and learned by Experience. The Root being πεῖρα, *Eſſay*, *Trial*.

*Pliny*, and *Celſus*, make mention of the *Empiricks*, and their Profeſſion, which the *Greeks*, and the *Latins* after them, call *Empirice*; as attributing all to Experience, and nothing to the Authority of the Maſters of the Art, or the Deductions of Reaſon. See MEDICINE.

*Pliny* relates, that the Sect of *Empiricks* had its Riſe in *Sicily*: The firſt who profeſs'd it, he ſays, were *Apollonius* and *Glaucias*; others ſay, *Acron Argentinus*. They, and their Followers, made great Oppoſition to the diſſecting of human Bodies; particularly to that practiſed by *Herophilus*, and *Eraſiſtratus* on living Bodies, of Criminals condemn'd to Death. See DISSECTION.

But the Word *Empiric* is now more odious than ever; being confounded with that of *Charletan*, or Quack, and applied to Perſons who practiſe Phyſic at Random, without a proper Education, or underſtanding any Thing of the Principles of the Art. See CHARLETAN.

Indeed, 'tis poſſible, the Word may be abuſed even on this Side of the Queſtion; for thoſe of the Phyſicians attached to the Train and Method of the Schools, the Reaſonings of *Hippocrates* and *Galen*, and the Statutes of the Faculty, we all know, have been ever forward to treat thoſe who think more freely, and are leſs ſtiffly devoted to Antiquity, Cuſtom, and the reigning Practice, or Mode, as *Empiricks*, *Charletans*, and *Quacks*.

EMPLASTER, popularly call'd PLASTER, a Medicine, of a ſtiff, glutinous Conſiſtence, compoſed of divers ſimple Ingredients, ſpread on Leather, or Linnen, and applied externally.

*Emplaſters* are made up in a ſtrong ſolid Body, that by remaining a long Time on the Part, the Medicinal Ingredients, they are chiefly compoſed of, may have Time enough to produce their Effect.

The Drugs, uſed to give a Body and Conſiſtence to *Emplaſters*, are uſually Wax, Pitch, Gums, Fats, Litharge, and other Preparations of Lead.

There are *Emplaſters* of divers Kinds, and uſed with divers Intentions: *Stomachic Emplaſters*; *Cephalic*, *Stiptic*, *Hepatic*, *Diaphoretic*, *Reſolutive*, *Deterſive*, *Emollient*, *Incarnative*, *Aſtringent*, *Conglutinative*, &c. *Emplaſters*.

The moſt uſual *Emplaſters*, are thoſe of *Diapalma*, and *Diachylon*: The *Emplaſtrum Polychreſton*, the *Divinum*, the *Manus Dei*, the *Magnetic*, of *Angelus Sala*, That of *Charpi*, of *Safran*, *de Ranis*, &c.

The Word is form'd from the *Greek*, ἐμπλαττ@, or ἐμπλάσσω, *to put in a Maſs*, or *to do over*: By Reaſon the *Emplaſter* is made of divers Kinds of ſimple Drugs, work'd up into a thick tenacious Maſs; or becauſe it covers over the Piece of Leather, or Linnen, to be applied on the Part affected.

EMPLASTICKS, in Pharmacy, are Salves, or Medicines, which ſtop up, and conſtipate the Pores of the Parts they are applied on.

Such are Fat's, Mucilages, Wax, the Whites of Eggs, *&c.* They are alſo call'd *Emphracticks*. The Plaſter is cover'd over with a very *Emplaſtic* Unguent, that it may ſtick the ſtronger to the Skin. *Dionis*.

The Word is form'd from the *Greek*, ἐμπλάσσειν, *to ſtop up*.

EMPROSTHOTONOS, in Medicine, a Kind of *Tonic Convulſion*, wherein the Head is drawn forwards, till the Chin touch the Breaſt. See CONVULSION.

Sometimes, too, 'tis ſo general, that the whole Body is bent forward, and makes a Bow; and even, ſometimes, a Kind of Circle, the Knees meeting the Head.

The Cauſe of this Diſorder is a Contraction of the Anterior Muſcles, particularly thoſe of the Head, call'd *Maſtoides*. See MASTOIDES.

The Word is *Greek*, compoſed of ἐμπροσθεν, *before*, and τόν@, *Tenſion*, *Stiffneſs*, of the Verb τείνω, *to ſtretch*.

EMPYEMA, in Medicine, a Collection of Pus, or purulent Matter, in the Cavity of the Breaſt; diſcharged thither upon the burſting of ſome Abſceſs, or Ulcer, in the Lungs, or Membranes, that incloſe the Breaſt.

The *Empyema* ſometimes ſucceeds a *Squinancy*, ſometimes a *Peripneumony*, but more uſually a *Pleuriſy*; as being ordinarily the Effect of a *Peripneumonic* or *Pleuritic* Abſceſs. See PLEURISY, PERIPNEUMONY, *&c.*

It uſually comes 15 or 20 Days after thoſe Diſeaſes. Sometimes, alſo, 'tis generated of extravaſated Blood, iſſued out of a burſten, broken, or putrified Vein: 'Tis diſtinguiſh'd by a Difficulty of Breathing, a dry Cough, a Heavineſs about the Diaphragm, a Noiſe, and fluctuating of the Matter upon moving; ſlow Fever, ruddy Cheeks, hollow

hollow Eyes, the Tips of the Fingers hot, and a Swelling of the Abdomen.

The Cure is difficult, from the Difficulty of abſorbing, or evacuating ſuch extravaſated Matter: If Nature ſhews any Endeavour to throw it off by Vomiting, or Urine, or the like, ſhe muſt be ſeconded, and aſſiſted therein. Thus, if the Urine be purulent, adminiſter Diureticks; if the Stools, Laxatives; if the Spitting, Expectorants, or even Emeticks; otherwiſe, Recourſe muſt be had to a Paracenteſis, or Tapping. See PARACENTESIS.

In Order to this, an Aperture muſt be made in the Thorax, by a proper Inſtrument, on the Side affected, between the *4th* and *5th*, or the *5th* and *6th* Ribs, reckoning from the loweſt; and thro' this, the Pus muſt be ſlowly drawn. See CANNULA.

There is alſo a Kind of *Spurious*, or *Baſtard Empyema*, proceeding from a pituitous, or ſerous Humour, brought by ſome Duct, or Paſſage, into the Thorax; where corrupting, it degenerates into a Matter like Pus.

An *Empyema*, in Courſe of Time, breeds a *Phthiſis*. See PHTHISIS.

The Word is form'd of the *Greek*, ἐν, *in*, and πῦον, *Pus*: The Letter *ν*, being here changed into *μ*. Which is a Thing often obſerved in other Languages, when the *n* happens to come, in Compoſition, before the Labials *b* and *p*. Witneſs the Latin *Embamma*, *Emblema*, *Emporium*, &c.

EMPYREUM, among Divines, is the higheſt of the Heavens, wherein the Bleſſed enjoy the beatific Viſion; call'd alſo the *Empyrean Heaven*, and *Paradiſe*.

Some of the Fathers take the *Empyreum* to have been created before the Heaven we ſee: St. *Baſil*, and *Euſtathius* of *Antioch*, maintain it in expreſs Terms. Being the Abode of God, they ſuppoſe it muſt be luminous in the higheſt Degree; and are in Pain to account for the Darkneſs, which our Part of the World was in, before the Creation of the Sun, &c. As judging that the infinitely vivid Luſtre of the *Empyreum*, muſt diffuſe it ſelf to the greateſt Depths of this lower World.

They have, therefore, Recourſe to an Hypotheſis; our viſible Heavens, according to them, did the Office of a Skreen, or Curtain, and ſhelter'd the Earth and Waters from the Light of the *Empyreum*. See *Fa. Souciet*, *Diſſert.* p. 171, 172.

The Word is form'd of ἐν, and πῦρ, *Fire*, by Reaſon of its Splendour.

EMPYREUMA, in Chymiſtry, &c. *Smell or Taſte of Burning*; a Quality, or Change, in Bodies that have been burnt, or much ſcorch'd with Fire, ſenſible to the Taſt and Smell; or, perhaps, it may be the foreign Matter impreſs'd, or added by the Fire, and remaining on the burnt or ſcorch'd Part, that gives the new offenſive Smell and Flavour.

The Term is chiefly uſed when in boiling, or diſtilling any Thing, it ſticks and burns to the Bottom of the Veſſel, or Alembic, the offenſive Smell and Taſt whereof are expreſs'd by the Word *Empyreuma*.

It is alſo uſed for the Heat remaining upon the Declenſion of a Fever.

The Word is form'd of the *Greek*, ἐμπυρεύειν, *to inflame*, *kindle*.

EMRODS, or rather *Hemorrhoids*. See HEMORRHOIDS.

EMULATION, a Noble Jealouſy, between Perſons of Virtue, or Learning, contending for the Superiority therein.

*Plato* obſerves of *Emulation*, that it is the Daughter of Envy; if ſo, there is a deal of Difference between the Mother and the Offspring: The one is a Virtue, and the other a Vice. *Emulation* admires great Actions, and ſtrives to imitate them; Envy refuſes them the Praiſes that are their Due: *Emulation* is generous, and only thinks of ſurpaſſing a Rival; Envy is low, and only ſeeks to leſſen him.

The Word comes originally from the *Greek*, ἅμιλλα, *Diſpute*, *Debate*; whence the Latin *Æmulus*, and thence our *Emulation*.

EMULGENT, in Anatomy, an Epithet beſtow'd on thoſe Arteries, which bring the Blood to the Kidneys; and thoſe Veins, which carry back what is ſuperfluous thereof. See KIDNEY.

The *Emulgent* Arteries ſpring from the deſcending Trunk of the *Aorta*; and the *Emulgent* Veins terminate in the aſcending Trunk of the *Cava*. See CAVA and AORTA.

EMULSION, in Medicine, a liquid, gentle Remedy, of a Colour, and Conſiſtence, reſembling Milk.

It is compoſed of Oleaginous Seeds, Kernels, or Fruits, pounded in a Mortar, and diſſolved in diſtill'd Waters, or light Decoctions; afterwards, expreſs'd, or ſtrain'd and ſweeten'd with Sugar, or Syrup.

*Emulſions* ſerve to temper, dilute, and ſoften Acrimonies of the Breaſt; to moderate the Heat of the Kidneys; ſoften the Sharpneſs of the Urine; and give the Patient Reſt and Eaſe.

The Seed of the Melon is one of the four greater cold Seeds, much uſed in *Emulſions*: The Seed of the great Gourd is alſo uſed in *Emulſions*, Broths, and Decoctions.

The Word is form'd from the Latin, *emulgere*, to milk.

EMUNCTORY, in Medicine and Anatomy, a Part of the Body deſtined for the Separation of ſome Humour, judg'd uſeleſs, or even hurtful to the Animal; after its having circulated ſome Time with the Blood. See EXCREMENT.

The Word alſo implies a Cavity, adjoyning to the Part that ſeparates; wherein the excrementitious Humour is collected and preſerved in Readineſs for Evacuation.

The Kidneys, urinary Bladder, and milliary Glands of the Skin, are *Emunctories*: The Parotides are not properly *Emunctories*, becauſe deſtined to ſeparate the Saliva, which is no uſeleſs, or excrementitious Humour, but neceſſary for the Digeſtion of the Food.

Some, without much Propriety, confine *Emunctory* to the Receptacle into which the ſecreted Excrement is diſcharged; as the pituitous Humour of the Brain into the Noſtrils; the Cerumen into the Ears; the Excrements into the Inteſtines, &c. Tho' this laſt has not undergone any Circulation.

The Word is form'd from the *Latin* Verb, *Emungere*, to wipe.

ENALLAGE, in Rhetoric, a Figure whereby we change, and invert the Order of the Terms in a Diſcourſe; againſt the common Rules of Language. See FIGURE.

The Grammarians, too, have a Kind of *Enallage*, whereby there is a Change either of a Pronoun, as when a Poſſeſſive is put for a Relative, e. gr. *ſuus* for *ejus*; or of a Verb, as when one Mood, or Tenſe, is put for another.

The Word is derived from the *Greek*, ἐναλλαγὴ, form'd of ἐναλλάττειν, which ſignifies *to change*, as well as the ſimple Verb ἀλλάττειν.

ENALURON, in Heraldry, is uſed by *Guillim*, to expreſs a Bordure charged with Birds; as, with an *Enaluron of Martlets*, &c. But *Mackenzy* charges this as a Miſtake on the Author, ariſing from Ignorance of the *French* Tongue: *Enaluron* properly ſignifies in Manner of *Orle*, or Bordure, and is applicable to a bearing of any Thing in that Form.

ENAMEL, popularly AMEL, a Kind of coloured Glaſs, by the *Latins* call'd *Encauſtum*, and by the French *Eſmail*; uſed in *Enamelling*, and Painting in *Enamel*. See ENAMELLING, and *Painting in Enamel*.

The Baſis of *Enamel* is the fineſt Cryſtal Glaſs, made of the beſt Kali from *Alicant*, and Sand vitrified together. See GLASS.

To this Glaſs are added Tin and Lead in equal Quantities, calcined by a reverbatory Fire. Such is the fundamental Compoſition of *Enamel*; to which are added other metallic or mineral Matters, to give it the Colour required: As *Æs Uſtum* for Green, *Crocus Martis* for Yellow, &c.

We may diſtinguiſh three Kinds of *Enamel*: The firſt intended for the counterfeiting and imitating of pretious Stones: The ſecond, for *Painting in Enamel*: And the third uſed by the *Enamellers*, Jewellers, and Goldſmiths, on Gold, Silver, and other Metals; with which laſt Kind, particularly the White, it is that the Makers of the *Dutch* Ware, give the Luſtre and Poliſh to their Works.

The *Enamel* uſed in imitating pretious Stones, and that for Painting, is prepared by the Workmen themſelves, employ'd in thoſe Arts: The reſt is brought from *Venice* and *Holland*. The Compoſition is the ſame, in the main, in all the three Kinds: All the Difference conſiſts in giving it the Colour, or Tranſparency.

For that uſed in imitating pretious Stones. See PRETIOUS *Stones*.

ENAMELS *for Painting*.

The *white Enamel*, or Colour, uſed by the Painters in *Enamel*, is the ſame with the common *Enamel*, uſed by *Enamellers*: Only, 'tis to be prepared by grinding, and cleanſing it with *Aqua fortis*. After which, waſhing it well in fair Water, 'tis ground, or pounded a-freſh in a Flint or Agat Mortar. The *ruddy brown*, is made with Feces of Vitriol, and Salt-Petre, or with Iron Ruſt, well ground on an Agat, with Oil of Aſpic. *Black*, is made of *Perigueux* well calcined, and ground with Oil of Aſpic; to which is added an equal Quantity of the Goldſmiths, or *Enamellers* black. *Yellow*, is the ſame with the Goldſmiths Yellow, the Compoſition whereof will be given hereafter. *Blue* is made of the *Azure*, or *Lapis*, uſed by the Painters in Oil, well purified and prepared with Brandy, and expoſed in a Bottle five or ſix Days to the Rays of the Sun. *Vermillion Red*, is made with Vitriol calcined between two Crucibles, luted together; then waſh'd in *Aqua fortis*, and afterwards in fair Water: The Fire to be moderate, and to remain about half an Hour.

*Lake*

*Lake Red*, is compoſed of fine Gold, diſſolved in *Aqua Regia*, with *Sal Armoniac*, or common Salt. The Diſſolution being compleated, 'tis put in a Cucurbit with Spring Water, and Mercury, o'er hot Sand for 24 Hours. The Powder remaining at the Bottom of the Cucurbit, when the Water is pour'd off, is ground up with double its Weight of Flower of Sulphur, and put in a Crucible over a gentle Fire. And when the Sulphur, which takes Fire, is exhaled, the red Powder remaining, is ground up with *Rocaille*. Laſtly, White Copperas calcined, makes a Colour much like the amber Colour uſed by the Limners.

Theſe ſeven or eight Colours, or *Enamels*, ſerve for the Compoſition of all the reſt, by a diſcrete Mixture and Combination thereof. Thus, blue and yellow make green; blue and red, Violet; and ſo of the reſt. See COLOUR.

ENAMELS *uſed by the Jewellers, Goldſmiths, and Enamellers.*

Theſe Kinds of *Enamel*, we have obſerved, come chiefly from *Venice* and *Holland*: They are in little thin Cakes of different Sizes; uſually four Inches in Diameter, and $\frac{1}{2}$ an Inch thick. Every Cake has the Maker's Mark ſtruck on it with a Punchion. The moſt uſual Marks are the Name *Jeſus*, a Syren, Monkey, Sun, *&c.*

Thoſe bought from *Venice* are chiefly white, Slate-Colour, ſky Blue, Carnation, Yellow, Green, and a deep Blue, call'd a falſe *Lapis*. Theſe ſeven are the Principles of all the others, which ariſe out of the Mixture of theſe. And the white, in particular, is, as it were, the Baſis of all the other ſix principal Colours.

White is made, as already obſerved, of Cryſtal Glaſs, Tin, and Lead calcined by a reverberatory Fire. And this *Enamel* is uſed not only by the Jewellers and *Enamellers* on Metal, but alſo by the Painters in *Enamel*, the Makers of *Dutch* Ware, *&c.* By adding Azures thereto, it becomes a Slate Colour; by adding Copper, and *Cyprus* Vitriol, it makes a ſky Blue. By *Perigueux*, a fleſh Colour; and by Iron-Ruſt, a yellow. To make a green, they add Copper-filings, *&c.*

ENAMELLING, by the Antients call'd *Encauſtice*, the Art, or Act of applying *Enamels* of various Colours, on Metals, *&c.* either in the Way of Painting, or by the Lamp. See ENAMEL.

*Painting in* ENAMEL, is a Method of Painting with *Enamels*, or Metal Colours, ground, reduc'd to Powder, and uſed, like other Colours, with a Pencil; then fuſed, baked again, and vitrified by Force of Fire.

The Art of *Painting in Enamel* is very antient; and appears to have been firſt practiſed on Earthen, or Potters-Ware. As early as the Age of *Porſenna* King of *Tuſcany*, we hear of beautiful Vaſes made in his Territories, *Enamell'd* with various Figures; though far ſhort of thoſe afterwards made at *Faenza*, and *Caſtel Durante*, in the Dutchy of *Urbino*, in the Time of *Raphael*, and *Michael Angelo*. There are ſtill ſome of thoſe Vaſes extant in the Cabinets of Antiquaries; in all which the Deſign, or Drawing of the Figures, is much better than the Colouring. For they were, at that Time, only acquainted with two Colours, *viz.* black and white; either for Earthen, or Metal Works: Excepting a faint Kind of Carnation in the Faces and other Parts.

In the Time of *Francis* I. of *France*, the Art was retriev'd in that Country, particularly at *Limoges*; where there were produced Abundance of very valuable Pieces, in the Manner of the Antients, that is, well perform'd as to the Draught, and the Clairobſcure, chiefly in two Colours.

There are two Ways of *Painting in Enamel*; the one with clear and tranſparent, and the other with thick and opake Colours.

To uſe the firſt, they are only ground up with Water: The ſecond are ground with Oil of Aſpic.

The firſt are laid on the Metal flat, and border'd, or edg'd, with a Rim of the Metal, to keep the Colours aſunder. Tho', we have ſeen Pieces laid on contiguous, and without any Partition; which is very difficult to practiſe, by Reaſon the tranſparent Colours, in Melting, are apt to run in each other; eſpecially in the little Works.

The Invention of opake Colours, is much later, and greatly preferable to that of tranſparent ones.

All Metals, however, will not equally admit both Kinds. Copper, for Inſtance, which bears all the opake Colours, will not bear the tranſparent ones: But to employ theſe latter upon Copper, they are forced, firſt, to cover it with a Lay, or Couch, of black *Enamel*, over which they lay a ſilver Leaf, and on this apply the other ſuitable Colours, that is, the Colours or *Enamels* proper for Silver, which it ſelf does not allow of all Kinds.

Thoſe which ſuit it beſt, are Purple, Green, Azure and Ague marin. But Gold receives all the Kinds, and Colours, both opake and tranſparent, perfectly well. It muſt be added, however, that only the fineſt Gold muſt be uſed herein. For the tranſparent Colours being laid on a baſe Gold, grows dim and livid; there being a Kind of Smoak that ſettles on it not unlike black Lead.

Of tranſparent *Enamels*, the hardeſt are the beſt; tho' there is a Difference even among theſe; ſome loſing their Colour in the Fire, and others retaining it. As to the reds, they are only red by Accident, being only yellow when made and applied on the Gold; and becoming red in the Furnace. The beſt tranſparent Reds are thoſe made of calcin'd Copper, Iron Ruſt, Orpiment, and calcin'd Gold, melted with the due Proportions of Glaſs.

But 'tis the Method of Painting with opake, or thick *Enamel*, to which we owe all our fine modern Pieces of *Enamel*; particularly thoſe curious ones on Gold, repreſenting Portraits to as much Perfection as the beſt Painting in Oil; and even ſome Hiſtory Pieces: With this great Advantage, that their Beauty and Luſtre never decays.

This Art we are indebted for to the *French*: Nothing of the Kind having been attempted before the Year 1630; when *Jean Toutin*, a Goldſmith of *Chaſteaudun*, and a great Maſter in the common Way of Painting with tranſparent *Enamel*, firſt applied himſelf to find a Way to uſe thick Colours of different Teints, which ſhould melt with Fire, yet retain their Luſtre, Purity, *&c.*

*Toutin* ſucceeded in his Attempt, and having got the Secret, communicated it to his Fellow Artiſts; who, in their Turns, contributed to the bringing it to Perfection: The firſt who diſtinguiſh'd himſelf was *Dubie*, a Goldſmith, who wrought in the Galleries of the *Louvre*. After him came *Mortiere*, a Native of *Orleans*, who applied himſelf chiefly to the Painting on Rings and Watch Caſes. His Diſciple, *Robert Vauquer* of *Blois*, exceeded them all both in his Deſigns and his Colours. After him *Pierre Chartier* of *Blois*, took himſelf to the Painting of Flowers, wherein he ſucceeded to Admiration.

By this Time, the *Engliſh* were fallen into the Way; who, as is allowed by Foreigners themſelves, ſeem to have been the firſt that applied it with Succeſs to the Painting of Portraits, which was now become mightily in Vogue, in Lieu of thoſe in Miniature.

M. *Felibien* obſerves, that the firſt, and moſt finiſh'd Portraits, and thoſe in the fineſt Colours, were brought into *France* by *Petitot*, and *Bordier* from *England*: This occaſion'd *Louis Hance*, and *Louis du Guernier*, two good Painters in Miniature, to attempt the like; in which the latter ſucceeded beyond every Body. He likewiſe invented ſeveral new Teints for the Carnations; and had he lived, had probably merited the Glory of carrying the Art to its laſt Perfection.

This Kind of Painting, to be in Perfection, muſt be on Plates of Gold: For Copper, beſide that it emits a Fume which tarniſhes the Colours, is apt to ſcale and crackle; and Silver turns the Whites, Yellow.

Theſe Plates are made a little hollow on one Side, and rais'd on the other, either in a circular or oval Manner, to prevent the Gold's fretting by the Fire, and making the Colours crack and fly: Nor muſt they be made too thick. 'Tis ſufficient they can bear the Colours; tho' 'tis uſual to ſtrengthen them all around with a Circle ſomewhat thicker.

The Plate being hammer'd very evenly throughout, they apply a white *Enamel* on both Sides, tho' the Deſign be only to paint on one. The Intent of this is to prevent any ſwelling and warping by the Fire: For otherwiſe, in large Pieces, and eſpecially if the Colours be laid on any Thing unequally, they are apt to riſe up in Puffs or Bliſters. Now, this firſt Lay, which is white, remaining ſmooth and uniform, ſerves as a Ground for all the other Colours. The Compoſition of the white *Enamel*, with the other opake Colours, is already delivered under the Article ENAMEL.

The Gold Plate thus *Enamell'd* in *white*; the Draught, or Deſign, to be painted, muſt be chalked thereon; and, afterwards, the whole accurately drawn out in a ruddy brown. The Draught, or Out-line, thus finiſh'd, the Piece is ſet to the Fire, and then painted with the Colours above preſcribed.

The white Ground they paint on, ſerves all the Colours for white. The Method being to ſpare the Ground from firſt to laſt, in the Places where the Lights are to be, after the ſame Manner as in Miniature: Tho' they have another white, to lay over the other Colours, when there is Occaſion to raiſe them.

Add, that as the Painters in Oil re-touch their Paintings ſeveral Times, and let them dry; ſo in this Sort of Painting, they touch the Piece as often as they pleaſe, ſetting it each Time to a reverberatory Fire, and taking it away again, aſſoon as they perceive the *Enamel* has got its full poliſh.

The reverberatory Fire is made in a little Furnace, wherein there is Fire both a-top and all around; only a

void Place in the middle, where the Piece is to be put for the *Enamels* to melt. The Colours are laid on with the Tip or Point of the Pencil, as in Mignature; with this only Difference, that they uſe Oil of Aſpic to dilute them inſtead of Gum Water. See MIGNATURE.

*Method of* ENAMELLING *by the Lamp.*

The Works of this Kind are all perform'd by the Fire of a Lamp; wherein, in Lieu of Oil, is put Horſes Greaſe, call'd Caballin Oil.

The Lamp is of Copper, or Tin, and conſiſts of two Parts, the Box and the Lamp: In the latter of theſe, which is a Kind of flat Oval, is put the Oil, and out of this riſes the Wick. All the Uſe of the Box is to receive the Oil, which the Ebullition, occaſion'd by the intenſe Heat, might throw abroad.

This Lamp, or even where two or three Artiſts work together, two or three more Lamps, are placed on a Table of a proper Height, *&c.* under which, about the middle of its Height, is a double Bellows like thoſe of an Organ, which one of the Workmen raiſes and falls with his Foot, to increaſe and quicken the Flame of the Lamps, which is by ſuch Means rais'd to a Degree of Vivacity almoſt incredible.

The Wind of the Bellows is convey'd to the ſeveral Lamps, tho' never ſo many, by Means of Grooves cut along the Thickneſs of the Table, and cover'd with Parchment, extending from the Bellows, to a Tube or Pipe placed before each Lamp. Theſe Tubes are of Glaſs, and that the *Enamellers* may not be incommoded with the Heat of the Lamp, each Tube is cover'd at about ſix Inches Diſtance with a Piece of Tin, call'd a Fan, fixed in a Hole of the Table. In Works that don't take up much Time, they content themſelves with a Glaſs Blow-Pipe, to heighten the Flame of the Lamp.

Applying their Cake of *Enamel* to the Flame of this Lamp, they draw it out into Threads inconceivably fine. Thoſe made uſe of in artificial Plumes of Feathers are ſo very ſlender, that they may be wound on a Reel, like Silk or Thread.

The factitious Jeats of divers Colours, ſometimes uſed in Embroideries, are alſo made of *Enamel*; and that with ſo much Art, that each Piece has its Hole to paſs the Silk thro', wherewith it is ſew'd. Theſe Holes are made by blowing them in long Pieces, which are afterwards cut off with a proper Tool.

*See the Proceſs of drawing out the* Enamel, *illuſtrated under the Article* DUCTILITY.

'Tis rare that the *Dutch*, or *Venetian* Enamels, are uſed pure: The common Way is to melt them in an Iron Ladle, with an equal Quantity of Glaſs or Cryſtal. And when the two Matters are in perfect Fuſion, they draw it out into Threads of different Sizes, as Occaſion requires, by taking a Quantity between two Pipe-Stopples, held in the two Hands, and removing them aſunder as far as the Arms will reach. If the Thread is to be longer than the Workman can ſtretch, a ſecond Perſon takes one of the Ends, and continues to draw it out while the firſt continues to keep the *Enamel* to the Flame. All the Threads drawn after this Manner are round; ſo that if the Nature of the Work require them to be flat, they are afterwards drawn thro' a Pair of Pinchers while yet hot. They have another Iron Inſtrument, in Manner of Plyers, to draw out the *Enamel* by the Lamp, when it is to be work'd, or diſpoſed in Figures, or otherwiſe. Laſtly, they have glaſs Tubes, of various Sizes, ſerving to blow the *Enamel* into various Figures, and preſerve the neceſſary Vacancies therein, as alſo to ſpare the Stuff, and form the Contours.

When the *Enameller* goes to Work, he ſeats himſelf before his Lamp, with his Foot on the Treddle; and holding in his left Hand the Piece of Work he has to *Enamel*, or the Braſs or Iron Wiars his Figures are to be form'd with; with his right Hand, he draws out the Thread from the *Enamel* held to the Lamp: And this with a Dexterity and Patience equally ſurprizing.

There is nothing but may be thus repreſented in *Enamel*; and there are Figures ſo finely finiſh'd of this Kind, that one would take them to have come out of the Hands of the ableſt Sculptors.

ENARTHROSIS, a Kind of *Jointing*, or *Articulation*, wherein the Cavity that receives is deep, and the Bone receiv'd oblong. See DIARTHROSIS.

Such is that of the Huckle-Bone, *&c.* See ARTICULATION.

ENCÆNIA, a *Greek* Term, ſignifying *Reſtauration*, *Renovation.*

*Encænia* was the Name of a Feaſt, celebrated by the *Jews*, on the 25*th* of the Ninth Month, in Memory of the Dedication, or rather Purification, of the Temple, by *Judas Machabæus*, after its being polluted and plunder'd by *Antiochus Epiphanes.*

They had alſo two other *Encænia*; the Dedication of the Temple by *Solomon*; and that by *Zorobabel*, after the Return from the Captivity. See DEDICATION.

The Word is wrote in the *Greek*, ἐγκαίνια, being form'd of the Prepoſition ἐν and καινὸς, *new.*

In the Fathers, and Church Hiſtory, we likewiſe meet with *Encænia*, for the Dedication of Chriſtian Churches: St. *Auguſtine* aſſures us, that in his Time, the Uſe of the Word *Encænia* was even transferr'd to profane Matters; and that they call'd it *Encæniare*, when they put on a new Suit of Cloaths.

Our Tranſlators of the Bible don't retain the Word *Encænia*, in St. *John* X. 22. where mention is made thereof: In lieu of that, they call it, *Feaſt of the Dedication*; which is much leſs proper. In Effect, it was not the Feaſt of the Dedication, but of the Purification, or Reconſecration of the Temple profaned.

ENCANTHIS, in Medicine, a Tumor of the *Caruncula Lachrymalis*, in the great *Canthus* or Angle of the Eye. See CARUNCLE.

It is oppoſed to *Rhyas*, which is a Diminution, or Conſumption of the ſame Caruncle. See RHYAS.

The *Encanthis* is occaſion'd by a Defluxion on that Part, or an Ulcer therein not readily enough dried.

The Word is *Greek*, ἐγκανθὶς, form'd of the Prepoſition ἐν and κανθὸς, *Corner of the Eye.*

ENCAUSTICE, the Art of *Enamelling*. See ENAMELLING.

ENCEPHALI, in Medicine, an Epithet applied to Worms generated in the Head; where they occaſion violent Pains, inſomuch as ſometimes to produce Diſtraction. See WORMS.

There are four Kinds of *Encephali*; thoſe properly ſo call'd, which are found in the Brain: The *Narinarii*, in the Noſe; *Auriculares*, in the Ears; and the *Dentales*, in the Teeth.

The *Encephali*, properly thus call'd, are rare: But there are certain Diſeaſes wherein they ſwarm; and we are told of peſtilential Fevers that aroſe wholly from them.

In one of theſe Fevers, the Phyſicians having open'd the Body of a Perſon it had carried off, they found a little, ſhort, red Worm in the Head. Hereupon, they tried various Medicines to find what might deſtroy it: But all in vain, till *Malmſey* Wine, wherein Horſe Radiſh had been boil'd, was applied: This was no ſooner thrown on the Worm than it died. The ſame Remedy was afterwards tried on the Sick; and it recover'd 'em almoſt all. *The like* have alſo been taken out by Trepanning, and the Patient recover. See VERMES.

The Word is compounded of the Prepoſition ἐν, *in*, and κεφαλὴ, *Head.*

ENCEPPE, in Heraldry, denotes chain'd, or girt round the middle; as is uſual with Monkeys, *&c.*

ENCHANTMENT. See MAGIC, SORCERY, and WITCHCRAFT.

ENCHASING, INCHASING, or CHASING, the Art of *Enriching*, and beautifying Gold, Silver, and other Metal Works, by ſome Deſign, or Figures repreſented thereon, in low Relievo.

*Chaſing* is only practiſed on Hollow, thin Works; as Watch-Caſes, Cane-Heads, Tweezer-Caſes, or the like.

'Tis perform'd by punching or driving out the Metal to form the Figures, from with-inſide, ſo, as there to ſtand out prominent from the Plane, or Surface of the Metal.

In order to this, they have a Number of fine Steel Blocks, or Puncheons, of divers Sizes: And, the Deſign being drawn on the Surface of the Metal, they apply the inſide upon the Heads, or Tips, of theſe Blocks, directly under the Lines or Parts of the Figures. Then, with a fine Hammer, ſtriking on the Metal, ſuſtain'd by the Block; the Metal yields, and the Block makes an Indenture, or Cavity on the inſide; correſpondent to which, there is a Prominence on the outſide, which is to ſtand for Part of the Figure.

Thus, the Workman proceeds to *Chaſe*, and finiſh all the Parts, by ſucceſſive Applications of the Block, and Hammer, to the ſeveral Parts of the Deſign.

And 'tis ſurprizing, with what Beauty, and Juſtneſs, by this ſimple Piece of Mechaniſm, the Artiſts in this Kind will repreſent Foliages, Grotteſques, Animals, Hiſtories, *&c.*

ENCHEIRESIS, in Anatomy, the ſame with *Diſſection*. See DISSECTION.

ENCLAVE, in Heraldry, is where one Thing is let into another; particularly where the Jointure is Square.

ENCLITICA, in the *Greek* Grammar, certain Particles which ſtick ſo cloſely to the preceding Word, that, as if united with it, they only ſeem to form one Word together.

Whence it happens, that the Word which ſuſtains them, does generally likewiſe bear the Accent that governs them, and eſpecially when the *Enclitic* is a Monoſyllable.

ENCROACH-

ENCROACHMENT, or ACCROACHMENT, an unlawful gathering upon another Man: As, if two Men's Grounds lying together, the one preſs too far on the other: Or, a Tenant owe Two Shillings Rent Service, and the Lord exacts Three.

ENCRATITÆ, antient Hereticks, thus call'd from their making Profeſſion of Continence, and abſolutely rejecting Marriage.

The Word is form'd from the *Greek*, ἐγκρατεία, *Continent*.

The Founder of this Sect was *Tatian*, a Diſciple of *Juſtin*, and one of the moſt learned Perſons of all Antiquity. After the Death of that Martyr, he made a Separation from the Church; and ſoon had his Followers; who, beſide the Dogma juſt mention'd, borrow'd a great many Things from *Saturnius*, and *Marcian*, beſide ſeveral Errors which they adhered to in common with the *Gnoſticks* and *Valentinians*.

They abſtain'd from eating any Thing that had Life; and denied that *Adam* was ſaved. They look'd on ſuch as drink Wine to be very great Sinners; and for this Reaſon, only made Uſe of Water in celebrating the Euchariſt: As holding that Wine came from the Devil. To maintain this Sentiment, they produced Paſſages out of Scripture, where mention is made of what befel *Noah* and *Lot* when they were drunk.

They only admitted ſuch of the Books of the Old Teſtament as they thought good: But in Lieu thereof, they own'd ſeveral ſpurious and Apocryphal Writings for Canonical and Divine. Such were the Acts of St. *Andrew*, *John* and *Thomas*.

ENCYCLOPÆDIA, the Circle, or Chain, of all Sciences and Arts. See ART and SCIENCE.

The Word is compounded of the Preposition ἐν, *in*, κύκλος, *Circle*, and παιδεία, *Science*, *Doctrine*, *Diſcipline*, *Learning*; the Root being παῖς, *Child*, *Infant*.

'Tis miſtakenly that ſome derive the Word from πέδη, *a Chain*, or *Fetter*, that holds by the Feet; it being wrote in *Greek* by an αι, not an ε: Εγκυκλοπαιδεία.

The *Greeks* uſed the Term for the Knowledge of the ſeven liberal Arts, and the Poſſeſſion of all Sciences. *Orbis ille Doctrinæ quem Græci* ἐγκυκλοπαιδείαν *vocant*; ſays *Quintilian*. They alſo call'd it κυκλοπαιδεία. *Vitruvius* ſomewhere calls it *Encyclios Diſciplina*.

ENDECAGON, or HENDECAGON, in Geometry, a Figure of eleven Angles, and conſequently eleven Sides. See POLYGON.

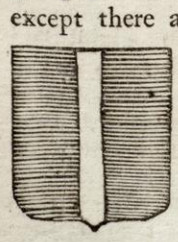
The Word is *Greek*, ενδεκαγωνος, form'd of ἕνδεκα, *Eleven*, and γωνία, *Angle*.

ENDECASYLLABUS, or HENDECASYLLABUS, a Verſe conſiſting of Eleven Syllables. See VERSE.

Of this we have Abundance of Inſtances in the *Greek* and *Latin*, and ſtill more in the *Italian* Poetry.

The *Greek* and Latin *Endecaſyllabus*, is alſo call'd *Phaleucus*, from the Name of its Author: Tho', in *Catullus*, we have *Phaleuci*, that only contain two Syllables. See PHALEUCUS.

ENDEMICK, ENDIMIAL, or ENDEMIOUS Diſeaſe, (thus call'd from ἐν, *in*, and δῆμος, *Populus*, People) is any Diſeaſe which affects many People together, in the ſame Country; as proceeding from ſome Cauſe, peculiar to the Country where it reigns. See DISEASE.



Such are the Scurvy to the *Northern* Climes, intermitting Fevers in marſhy Places, &c.

ENDENTED, ENDENCHE, DENTED, INDENTED, in Heraldry, is applied to a Feſs, a Pale, and other triangular Pieces, when divided alternately between two different Colours. *Coupe*, or *Endented*, with *Or* and *Azure*. See INDENTED.

ENDITEMENT, or INDICTMENT, in Common Law, is much the ſame as *Accuſatio* in the Civil Law; tho', in ſome Points, it differs.

It may be defined a Bill, or Declaration made, in Form of Law, (for the Benefit of the Common-Wealth) exhibited as an Accuſation of a Perſon, for ſome Offence, either Criminal, or Penal; unto the Jurors; and by their Verdict, found, and preſented to be true, before an Officer having Power to puniſh the ſaid Offence. See INDICTMENT.

It is always at the Suit of the King, and differs from an Accuſation in this, that the Preferer is no Way tied to the Proof thereof, upon any Penalty, if it be not proved; except there appear Conſpiracy. See JURY, &c.

ENDORSE, in Heraldry, an Ordinary, containing the eighth Part of a Pale. This, *Leigh* ſays, is never uſed but when a Pale is between two ſuch: Others hold, that an *Endorſe* may be bore between Birds, Fiſhes, Beaſts, &c. Sir *J. Ferne* adds, that it ſhews the ſame Coat has been ſometimes two Coats, and afterwards conjoyned within one Eſcutcheon, for ſome Myſtery of Arms. He bears *Azure* an *Endorſe Argent*.

ENDORSED, or ENDOSSE, in Heraldry, is where Things are bore back to back.

ENDORSING, or INDORSING, in Law, implies the Writing on the backſide of a Deed, Inſtrument, &c. ſomething relating to the Matters contain'd therein.

*Endorſement* is particularly uſed in Commerce for a Writing on the Back of a Bill of Exchange, by the Proprietor, or Bearer; either, thereby, to transfer it to ſome other, or to render it payable to the Order of ſome other; or to ſerve for an Aquittance or Receipt. The *Endorſement* is the ſimple Name of the Proprietor, or *Endorſer*.

Note, when the *Endorſement* of a Bill of Exchange is to render it payable to another, it is call'd an *Order*. See ORDER.

To an Order, 'tis neceſſary the *Endorſement* be dated; and contain the Name of him who paid the Value thereof: In which Caſe the Bill belongs to the Perſon with whoſe Name the Order is fill'd; without any other Transfer: Without theſe Conditions, the Bill is judg'd to belong to the Perſon who *Endorſed* it.

The Bearer of a Bill of Exchange proteſted, has a Remedy againſt the *Endorſers*, for the Payment of the Rechange of the Places where the Bill was negotiated by their Order. In Caſe a Bill or Note is refus'd to be paid, &c. the Bearer has a Remedy againſt any one of the *Endorſers*, where there are ſeveral. See BILL.

ENDOWMENT, the giving, or aſſigning, of a Dower to a Woman. See DOWER.

The Word is alſo uſed figuratively for the ſetting forth, or ſevering, of a ſufficient Portion for a Vicar, towards his perpetual Maintenance, when the Benefice is appropriated: Whence ſuch a Vicarage, is called a Vicarage *endowed*. See VICARAGE.

ENEMA, from ἐνίημι, *immitto*, I ſend in; is ſometimes uſed to expreſs a *Clyſter*. See CLYSTER.

ENÆMON, according to *Blanchard*, is a Medicine which ſtops or ſtanches the Blood: Or which, by binding, cooling, or drying, cloſes the Paſſages of the Veſſels before open; or diminiſhes the Fluidity and Motion of the Blood. See STYPTIC.

ENÆOREMA, from ἐναείρω, *I lift up, or float*; expreſſes ſuch Contents of the Urine, as float about in the middle, reſembling a Cloud; and thence alſo call'd *Nubecula Hypoſtaſis*. See NUBECULA and URINE.

ENERGUMENUS, a Term uſed by Divines, and Schoolmen, to ſignifie a Perſon *poſſeſs'd* with a Devil, or an Evil Spirit. See POSSESSION.

Tho' *Papias* ſays, the *Energumeni* were ſuch as counterfeited the Actions of the Devil, performing Things which ſeem'd ſupernatural. The Council of *Orange* debars, or deprives, the *Energumeni* of the Functions of the Prieſthood.

The Word is form'd from the *Greek*, ἐνεργεῖσθαι, *to be agitated, work'd*, of ἐν and ἔργον, *Opus*.

ENERGY, an uncommon Force, or Strength, in a Diſcourſe, a Sentence, or a Word. Thus, we ſay, the Words of Holy Scripture are full of *Energy*.

The Word is *Greek*, ἐνέργεια, form'd of the Preposition ἐν and ἔργον, *Work*, *Labour*.

We alſo ſay *Energic*, as *Energic* Style, *Energic* Terms, &c.

The ſame Appellation *Energici*, has been given to a religious Sect, of the Sixteenth Century, by Reaſon they held that the Euchariſt was the *Energy*, and Virtue of Jeſus Chriſt, not his Body, nor a Repreſentation thereof.

ENERVATE, to deſtroy the Force, Uſe, or Office of the Nerves; either by cutting them, by weakening them with Debauchery, or by ſome other Violence.

Exceſs of Wine, and other ſtrong, hot, ſpirituous Liquors, *enervate*, weaken the Nerves. When they would render a Horſe uſeleſs, they *Enervate* him, or cut his Nerve.

In the Manage, *Enervating* is particularly uſed for the cutting two Tendons in the Side of a Horſe's Head, under the Eyes, which meet on the Tip of the Noſe: They *Enervate* Horſes to make their Head ſmall and lean.

The Word is alſo uſed figuratively: 'Tis no ſmall Artifice in diſputing, to be able to *Enervate*, and extenuate the Allegations of one's Antagoniſt. This Author has a weak, *Enervate* Style. See NERVE.

ENERVATION, a Term in the antient Anatomy, applied to the Tendons of the Recti, or direct Muſcles, of the Abdomen.

The Fibres of the Recti of the Abdomen, do not go from one Extreme of the Muſcle to the other, but are interſected by ſeveral Nervous Places, called by the Antients *Enervations*; tho' they be real Tendons.

Their Number is not alike in all: Some having three, others four, &c. See RECTI.

ENFANS *Perdus*, a *French* Phraſe, literally implying *loſt Children*, and by a little Extenſion, *Perſons forlorn*; uſed

uſed in War, to ſignifie the Soldiers who march at the Head of a Body of Forces appointed to ſuſtain them; in Order to begin an Attack, make an Aſſault, or force a Poſt. At preſent 'tis the Grenadiers that uſually begin ſuch Attacks. See PERDUS.

ENFILADE, a *French* Term, ſometimes uſed in *Engliſh*. It ſignifies a Series, or Continuation, of ſeveral Things, diſpoſed, as it were, in the ſame *Thread* or Line.

As an *Enfilade* of Rooms, of Doors, of Buildings, &c.

It is alſo uſed figuratively; as a long *Enfilade* of Stories, Examples, Narrations, &c.

The Word is form'd of the *French* Verb *Enfiler*, to *ſtring* a Thing, which is compounded of *en*, in, and *fil*, or *filum*, Thread: *q. d.* a *Thread*, or *String*, of any Thing.

ENFILADE, in War, is applied to Trenches, and other Lines, which are *Enfiled*, i. e. in a Line, and ſo may be ſcour'd, or ſwept, by the Canon length-wiſe, or in the Direction of the Line, and render'd almoſt defenceleſs.

Care muſt be taken that the Lines be not *Enfiled*: On the contrary, the Covert Line muſt be *Enfiled*, that the Enemy may be driven out of it.

The laſt *Boyau*, or Gut of the Trenches, is ſubject to the *Enfilade*; that is, to be ſcour'd according to its Length.

A *Battery d'Enfilade*, is that where the Canon raſe a right Line. A *Poſt*, or *Command d'Enfilade*, is a Height from which one may ſweep a whole right Line at once. The Cannon play on the *Foſſe* by *Enfilade*. The Trenches are to be driven out of the *Enfilade*, i. e. are to be carried winding.

ENFRANCHISEMENT, the Incorporating any Man into a Society, or Body politic.

For Example: He that by Charter is made Denizen of *England*, is ſaid to be *Enfranchiſed*: The like underſtood of a Perſon made a Citizen of *London*, or other City, or corporate Town; by Reaſon he is thereby made Partaker of the Liberties appertaining to the Corporation whereof he is *Enfranchiſed*.

ENGASTRIMYTHUS, or ENGASTRIMANDER, a Perſon who ſpeaks from, or with, the Belly; without opening the Mouth; or, if open, without ſtirring the Lips.

Thus call'd by the *Greeks*, from ἐν, γαστρ, *Belly*, and μῦθος, *Speech*; and by the Latins *Ventriloquus*, *quaſi ex ventre Loquens*. See VENTRILOQUOUS.

The antient Philoſphers, &c. are divided on the Subject of the *Engaſtrimythi*: *Hippocrates* mentions it as a Diſeaſe. Others will have it a Kind of Divination, and aſcribe the Origin, and firſt Diſcipline thereof, to one *Euryclus*, whom no Body knows any Thing of.

Others attribute it to the Operation, or Poſſeſſion, of an Evil Spirit: And others to Art, and Mechaniſm.

The moſt eminent *Engaſtrimythi*, were the *Pythia's*, or Prieſteſſes of *Apollo*, who deliver'd Oracles from within, without any Action of the Mouth or Lips. See PYTHIA.

St. *Chryſoſtom* and *Oecumenius*, make expreſs Mention of a Sort of Divine Men, call'd by the Greeks *Engaſtrimandri*, whoſe prophetic Bellies pronounced famous Oracles. See ORACLE.

M. *Schottus*, Library-Keeper to the King of *Pruſſia*, in a Diſſertation on the Apotheoſis of *Homer*, maintains, that the *Engaſtrimythi* of the Antients, were only Poets, who, when the Prieſteſs could not ſpeak in Verſe, ſupplied the Defect, by explaining, or delivering, in Verſe, what *Apollo* dictated in the Cavity, or Belly, of the Baſon, that ſtood on the ſacred *Tripod*. See TRIPOD.

*Leo Allatius* has an expreſs Treatiſe of *Engaſtrimythi*, entitled, *de Engaſtrimytho, Syntagma*.

ENGENDRING, the Act of begetting, or producing the Kind, by Way of Generation. See GENERATION.

The Term is likewiſe applied to other Productions of Nature: Thus, *Meteors* are ſaid to be *Engender'd* in the middle Region of the Air. See METEOR.

Crude Fruits *Engender* Worms. See WORMS.

The Antients believ'd that Inſects were *Engender'd* of Putrefaction. See INSECT.

ENGINE, a compound Machine, or Inſtrument; conſiſting of ſeveral ſimple ones, as Wheels, Screws, Levers, or the like, combined together; in Order to lift, caſt, or ſuſtain a Weight, or produce ſome other conſiderable Effect, ſo as to ſave either Time, or Force. See MACHINE.

The Word is form'd of the French *Engin*, of the Latin *Ingenium*, Wit, Ingenuity; by Reaſon there is Ingenuity required in the Contrivance of *Engines*, to augment the Effect of moving Powers. See POWERS.

The Kinds of *Engines* are infinite: Some for War, as the *Baliſta*, *Catapulta*, *Scorpio*, *Aries*, &c. Others for the Arts of Peace, as *Mills*, *Cranes*, *Preſſes*, *Clocks*, *Watches*, *Engines* to raiſe Water, to extinguiſh Fire, &c. which ſee under their reſpective Articles MILL, CLOCK, WHEEL, PRESS, FIRE-*Engine*, &c. See alſo INSTRUMENT.

ENGINEER, in its general Senſe, is applied to a Contriver, or Maker, of any Kind of uſeful Engines, or Machines. But, in its proper Senſe, it denotes an Officer in an Army, or fortified Place, whoſe Office is to concert, and inſpect Attacks, Defences, Works, &c.

An *Engineer* ſhould be an able and expert Mathematician, particularly verſed in Military Architecture and Gunnery; being often ſent to view and examine the Places intended to be attack'd, to chuſe out and ſhew the General the weakeſt Place, to draw the Trenches, aſſign the Places of Arms, Galleries, Lodgments on the Counterſcarp, and half Moon; conduct the Works, Saps, Mines, &c. and appoint the Workmen their nightly Taſk: He alſo makes the Lines of Countervallation, with the Redoubts, &c. from Space to Space.

Under the new Eſtabliſhment of the Office of his Majeſty's Ordnance, are ſix *Engineers*, and four *Sub-Engineers*. See ORDNANCE.

ENGLECERIE, ENGLECHERIE, or ENGLESCHYRE, a Term of great Import to our Anceſtors; tho' now obſolete: It properly ſignified the Quality of an *Engliſhman*.

Thus, if a Man were privily ſlain, or murther'd, he was, antiently, accounted *Francigena*, (which comprehended every Alien, eſpecially *Danes*) till *Englecerie* was proved: *i. e.* till it was made appear that he was an *Engliſhman*. Bracton *Lib.* 3.

The Origin of the Cuſtom was thus: King *Canutus* having conquer'd *England*, at the Requeſt of the Nobles, he ſent back his Army into *Denmark*; only reſerving a Guard of *Danes* for his Perſon: And made a Law, that if any *Engliſhman* kill'd a *Dane*, he ſhould be tried for the Murther; or, if he eſcaped, the Village where the Man was ſlain ſhould be charged to pay 66 Marks into the Exchequer. After this Law, whenever a Murther was committed, it was neceſſary to prove the Party ſlain an *Engliſhman*, that the Penalty of 66 Marks might not be charged on the Village.

ENGLISH, or the ENGLISH *Tongue*, the Language ſpoke by the People of *England*; and, with ſome Variation, by thoſe of *Scotland*. See LANGUAGE.

The *Engliſh* is of *Gothic*, or *Teutonic* Extraction: This was the Root, or Stock, upon which ſeveral other Dialects have been ſince grafted; particularly the *Latin*, and *French*. See TEUTONIC, &c.

The Language antiently ſpoke in our Iſland was the *Britiſh*, or *Welch*, which was common to the *Britains* and *Gauls*; and which ſtill ſubſiſts, in more or leſs Purity, in the Principality of *Wales*, the County of *Cornwal*, the Iſlands and Highlands of *Scotland*, *Ireland*, and ſome Provinces of *France*, particularly *Bretagne*. See WELCH.

As the *Roman* Empire, extending it ſelf towards the *Weſtern* Parts of *Europe*, came to take in *Gaul* and *Britain*; the *Roman* Tongue became propagated therewith; all the Edicts, &c. relating to the publick Affairs, being deſignedly wrote in that Language.

The *Latin*, however, 'tis certain, never got ſo much Ground, or prevail'd ſo far in *England*, as in *Lombardy*, *Spain*, and the *Gauls*; partly on Account of its great Diſtance from *Rome*, and the ſmall Reſort of *Romans* hither; and partly, for that the entire Reduction of the Kingdom was not effected, till ſo late as the Empire of *Claudius*, when the Empire was on the declining Hand; and the new Province was forced to be ſoon deſerted by its Conquerors, call'd to defend their Territories nearer Home. See LATIN.

*Britain* thus left naked, became an eaſy Prey to the *Angli*, or, *Anglo Saxons*, a ſtrolling Nation from *Jutland* and *Norway*, who took an eaſy Poſſeſſion thereof; much about the Time that the *Franks*, another *German* Nation, enter'd *Gaul*. The *Gauls* and *Franks*, it ſeems, at length, came to Terms; found Means to unite into one Nation: And thus the antient *Gauliſh*, with its Mixture of *Latin*, continued the prevailing Tongue, only further intermix'd with *Francia*, or *Lingua Franca*, of their new Inmates: But the *Britains* were more conſtant, and determined abſolutely to refuſe any ſuch Coalition; they had embraced Chriſtianity, and their Competitors were Heathens: Rather than admit of ſuch an Union, therefore, they choſe to be ſhut up, with their Language, in the mountainous Parts of *Cambria*, or *Wales*.

The *Engliſh Saxons* thus left abſolute Lords, changed every Thing; their own Language was now fully eſtabliſh'd, and the very Name of the Country was henceforth to be *Anglo Saxon*.

The new Language remain'd, in good meaſure, pure and unmix'd till the *Norman* Invaſion: The Attempts of the *Danes*, and the Neighbourhood of the *Britains*, indeed wrought ſome leſſer Innovations therein; but, in the main, it preſerv'd it ſelf; for, as to the *Danes*, their Language was not much different therefrom. *Edward*

*the*

*the Confeſſor*, however, who had lived long in *France*, might, poſſibly, bring in a little Mixture of the Dialect of that Country.

But *William* I, and his *Normans*, having got Poſſeſſion of *England*, an Alteration was ſoon attempted: The Conqueſt was not compleat, unleſs the Conqueror's Language, the *French*, or *Franco Gallic*, were introduced; and accordingly all his Acts, Diploma's, Edicts, Pleadings, and other Judicial Matters, were written, *&c.* in that Tongue. See FRENCH.

But his Attempts prov'd unſucceſsful; the Number of *Normans* he brought over, being very ſmall, in compariſon of the *Engliſh* with whom they were incorporated, they loſt or forgot their own Language, ſooner than they could make any Change in the *Engliſh*. This, however, did not hinder, but by the Endeavours of the Conqueror, Abundance of *French* Words, tho' many of them of *Latin* Original, crept into the *Engliſh*: And many *Engliſh* Words by degrees grew out of Uſe.

Hence, as to the Origin and Etymology of many of our Words, Dr. *Wallis* lays it down, that ſuch Words of *German* Original as we have in common with the *French*, are to be reckoned on as our own, rather than borrowed from them; and that the old *Gauliſh* Words, common to the *French* and the *Welch*, which are found in our Language, have been likewiſe taken from the *Welch* rather the *French*. See ETYMOLOGY.

Hence, alſo, the ſame Author accounts, why the Names of the divers Sorts of Cattle are *Saxon*, as Ox, Cow, Calf, Sheep, Hog, Boar, Deer, *&c.* And yet that their Fleſh, when prepared for Food, is *French*; as Beef, Veal, Mutton, Pork, Brawn, Veniſon, *&c.* The *Norman* Soldiers, forſooth, not concerning themſelves with Paſtures, Parks, and the like Places, where ſuch Creatures are fed and kept; ſo much as with Markets, Kitchins, Feaſts, and Entertainments, where the Food was either prepared, ſold, or eaten.

Under *Henry* II. Dr. *Swift* obſerves, the *French* made a ſtill greater Progreſs; by reaſon of the large Territories he poſſeſſed on that Continent, both from his Father and his Wife, which occaſioned frequent Journies thither, with numerous Retinues, *&c.* And for ſome Centuries after, there was a conſtant Intercourſe between *France* and *England*, by the Dominions we poſſeſs'd there, and the Conqueſts we made; ſo that the Language, two or three hundred Years ago, ſeems to have had more *French* than at preſent.

Beſides this Alteration from the Conquerors, the Language, in Proceſs of Time, underwent divers others; and came to have numerous Words and Phraſes of foreign Dialects, ingrafted into it; in lieu whereof the antient *Saxon* ones gave Way: particularly by means of Negotiations, and Commerce with other Nations; by the Marriages of Royal Families; by the Affectation of many Writers in moſt Ages, who are fond of coining new Words and altering the uſual Forms of Speech, for the greater Delicacy; and by the Neceſſity of framing or borrowing new Words, according as new Things and Inventions turn up. And by ſuch Means was the old *Anglo Saxon* converted into the preſent *Engliſh* Tongue.

Having traced the Riſe and Progreſs of our Language hiſtorically; we think it may be no uncurious Amuſement o repreſent, by actual Examples, the ſeveral ſucceſſive Changes and Stages it has paſs'd thro', to arrive at its preſent Perfection: In order to which we ſhall make Uſe of the Collections of the ingenious Mr. *Greenwood*.

From the *Saxon* Invaſion in 440, we have no Memorial extant of the Language for 250 Years: The oldeſt *Saxon* Writing extant, is a Gloſs on the Evangeliſts, written in the Year 700, by *Eadfride* Biſhop of *Holy Iſland*: In which the three firſt Articles of the Lord's Prayer run thus.

‘ Uren Fader thic arth in Heofnas, ſic gehalgud
*Our Father who art in Heaven, be hallowed*
‘ thin Noma, ſo cymeth thin Ric. Sic thin Willa
*thy Name, come thy Kingdom, be thy Will*
‘ ſue is Heofnas, and in Eortho, *&c.*
*ſo as in Heaven, and in Earth.*

200 Years after, in the Year 900, the ſame was render'd thus:

‘ Thu ure Fader the Eart on Heofenum, ſi thin Nama
‘ gehalgod Cume, thin Rice, ſi thin Willa on Eorthen
‘ ſwa, ſwa on Heofenum.

In the following Age it was turn'd thus in the *Saxon* Homilies, ſaid to be tranſlated by King *Alfred*.

‘ Fæder ure thu the Earth on Heofenum, ſi thin
‘ nama Gehalgod to be come thin Rice, Gewurthe
‘ thin willa on Eorthan ſwa ſwa on Heofnum, *&c.*

About the Year 1160, under *Henry* II. it was thus render'd by Pope *Adrian*, an *Engliſhman*, in Rhime.

‘ Ure fadyr in Heaven rich,
‘ Thy Name be halyed every lich,
‘ Thou bring us thy michell bliſſe:
‘ Als hit in Heaven y-doe
‘ Evar in Yearth be it alſo, *&c.*

About 100 Years after, in the Time of *Henry* III. it was turn'd thus:

‘ Fadir that art in Heaven bliſſe,
‘ Thin Helge nam it wurth the bliſs,
‘ Cumen & mot thy Kingdom,
‘ Thin Holy Will be it all don
‘ In Heaven and in Erdh alſo, *&c.*

200 Years after, under *Henry* VI. it was render'd thus:

‘ Our Fadir that art in Hevenes, halewid be thi
‘ Name, thi Kingdom come to thee, be thi Will done
‘ in Eerthe, as in Hevene ----

An extraordinary Specimen of the *Engliſh*, as ſpoke in the Year 1385, Dr. *Hicks* furniſhes us withal, in his *Theſaur. Liter. Septen.* which we ſhall the rather entertain the Reader withal, as it is on this very Subject the *Engliſh* Tongue, and contains not only the Hiſtory, but the Reaſons, of the Changes and Differences therein.

‘ As it is knowe how meny maner people beeth in this ‘ Lond; there beeth alſo ſo many dyvers Longages and ‘ Tonges. Notheles *Walſche* Men and *Scots* that beeth ‘ nought medled with other Nations, holdeth wel nyh hir ‘ firſte Longage and Speche; but yif the *Scottes* that ‘ were ſometime confederat and woned with the *Pictes* ‘ drawe ſomewhat after hir Speche; but the *Flemynges* ‘ that woneth in the *Weſte* Side of *Wales*, haveth left her ‘ ſtrange Spech, and ſpeketh Sexonliche now. Alſo *Engliſhe* Men, they had from the bygynnynge thre maner ‘ Speche: Northerne, Sowtherne, and middel Speche in ‘ the middel of the Londe, as they come of three maner ‘ of Peple of *Germania*: Notheles by Commyxtion and ‘ mellynge firſt with *Danes*, and afterwards with *Normans*, in meny the contrary Longage is apayred [corrupted]. This appayrynge of the burthe of the Tunge ‘ is becauſe of tweie Thynges, oon is for Children in ‘ Scole agenſt the Uſage and Maner of all other Nations, ‘ beeth compelled for to leve hire own Longage, and for ‘ to conſtrue hir Leſſons and here Things in *French*, and ‘ ſo they haveth ſethe *Normans* come firſt into *Engelond*. ‘ Alſo Gentlemen Children beeth taught to ſpeke *Frenſche* ‘ from the Tyme that they beeth rokked in here Cradel, ‘ and kunneth ſpeke and play with a Childes Broche; ‘ and uplondiſsche Men will likne himſelf to Gentilmen, ‘ and fondeth with great Beſyneſſe for to ſpeake *Frenſche* ‘ to be told of. ----- Hit ſeemeth a greet Wonder how ‘ *Engliſche* Men and her own Longage and Tonge, is ſo ‘ dyverſe of Sown in this oon Ilond; and the Langage ‘ of *Normandie* is comlynge of another Land, and hath ‘ oon manner ſoun amonge alle Men that ſpeketh hit ‘ arigt in *Engelond*. ---- Alſo of the foreſaid *Saxon* Tonge ‘ that is deled [divided] a three, and is abide ſcarceliche ‘ with fewe uplondiſsche Men is greet Wonder. For Men ‘ of the *Eſt*, with Men of the *Weſt*, is, as it were, under ‘ the ſame Partie of Hevene acordeth more in ſownynge ‘ of Speche, than Men of the *North*, with Men of the ‘ *South*. Therefore it is that *Mercii*, that beeth Men of ‘ myddel *Engelond*, as it were Parteners of the Endes, ‘ underſtondeth bettre the Side Longages *Northerne* and ‘ *Southerne*, than *Northerne* or *Southerne* underſtondeth ‘ either other. ---- All the Longage of the *Northumbers*, ‘ and ſpecialliche at *York*, is ſo ſcharp, ſlitting and ‘ frotynge, and unſchape, that we *Southerne* Men may that ‘ Langage unnethe underſtonde. I trow that that is by ‘ cauſe that they beeth nyh to ſtrange Men and Nations, ‘ that ſpeketh ſtrongliche, and alſo bycauſe that the ‘ Kinges of *Engelond* wonneth alwey fer from that Cuntry, *&c.*

How the *Engliſh* ſtood about the Year 1400, may be ſeen in *Chaucer*, who refined and improved it very conſiderably; tho' he is charged with the Affectation of mixing too many *French*, and *Latin* Words with his *Engliſh*, and by that Means altering and corrupting the primitive Language.

In the Year 1537, the Lord's Prayer was printed according to the following Verſion:

‘ O Oure Father which arte in Heven, halowed be thy
‘ Name: Let thy Kingdome come, thy Will be fulfiled
‘ as well in Erth as it is in Heven, *&c.*

Where the Reader will obſerve the Diction almoſt brought to the preſent Standard; the Variations being principally in the Orthography.

*Spencer*, who lived in the ſame Age, contributed not a little to the Improvement and refining of the Tongue: He threw aſide Abundance of the outlandiſh Ornaments, and wrote a purer *Engliſh*, yet with more Elegance and Variety, than had been known before. He was ſucceeded in order, by *Shakeſpear*, *Ben. Johnſon*, Lord *Bacon*, *Milton*, *Cowley*, *Waller*, *Tillotſon*, and *Dryden*, whoſe Works are in every body's Hands; by whom the Language has been tranſmitted to us under all its preſent Advantages.

The Perfections aſcribed to the *Engliſh*, and that in a degree ſuperior to any of the other Modern Tongues, are,

1°. That it is Strong and *ſignificant:* to which our finely compounded Words, form'd on the Model of the *Greeks*, do not a little contribute.

2°. *Copious:* of which Mr. *Greenwood* gives us Inſtances in the Word *Striking:* which we have above 30 different, ſynonomous Expreſſions for; as, to ſmite, bang, beat, baſt, buffet, cuff, hit, thump, thwack, ſlap, rap, tap, kick, ſpurn, box, yerke, pummel, punch, *&c.* And the Word *Anger*, for which he enumerates above 40.

So we ſay, *to ſeeth* or *boil* Fleſh, *ſtew* Prunes, *poche* Eggs, *coddle* Apples, *bake* Bread; for which Expreſſions to ſeeth, ſtew, poche, coddle, and bake, the *Latins*, with all the boaſted *Copia* of the Tongue, have only one Word, *coquere*; and the *French*, as much as they abound with Terms of Cookery, not many more; the Word *Cuire*, ſerving indifferently for ſeething, boiling, baking, ſtewing and codling.

3°. Muſical and *harmonious*; in which Reſpect Mr. *Dennis* makes no Scruple to aſſert it ſuperior even to the *French*. This, which ſome may think ſtrange, he proves hence, that we have blank Verſe which is harmonious by mere Force of Numbers, and Quantity; whereas the *French* have long ago deſiſted from all Pretenſions to poetical Numbers, without the Aſſiſtance of Rhime. See QUANTITY, NUMBERS, *&c.*

It may be added on this laſt Head, from Mr. *Welſtead*, that the *Engliſh* has many Meaſures, the *Jambic* and *Trochee* for Inſtance, in common with the *Greek* and *Latin*; an Advantage ariſing from the Variation of the Accent. And that Rhime is peculiarly natural to it, varying it ſelf to the Ear with exceſſive Sweatneſs; not to mention the Cæſuras, Pauſes, Tranſpoſitions, and numberleſs other Graces, which the *Engliſh* Verſification is capable of, beyond any other living Language. See RHIME, *&c.*

Some object to the *Engliſh*, its conſiſting too much of Monoſyllables; which others make a Piece of Merit, as it argues the greater *Antiquity*, if what *Salmaſius* ſays be true: *Certum quippe eſt, linguas omnes quæ monoſyllabis conſtant cæteris eſſe antiquiores*; adding, that the *antient* Greek *abounded herein, as appears from the antient Poets, and ſuch as affected Antiquity. De Re Helleniſt.* But we have a further Advantage from our Monoſyllables; *viz. Conciſeneſs*, we being hereby enabled to expreſs more Matter in the ſame Compaſs of Letters, than any other Modern Tongue. The only Thing we ſuffer by it, is, ſomething in Point of Softneſs and Numbers; and yet we have Verſes compoſed wholly of Monoſyllables, that do not want Harmony; as that of *Creech* "Nor could the World have born ſo fierce a Flame." See MONOSYLLABLE.

Some of our later, and politer Writers, however, find wherewithal to find Fault in our Language: It ſeems it does not come up to the Softneſs, the Delicacy of the more *Southern* Languages, *France*, *Spain*, and *Italy*. It retains ſomewhat of the *Gothic* Roughneſs, of the People who framed, and introduced it; the Soil and the Climate it was planted in, not tending much to mellow and refine it.

To this Purpoſe does Dr. *Swift* talk, who accounts for the Thing hence, that the *Latin* Tongue was never in its Purity in our Iſland; and beſide, ſuch as it was, was call'd away ere it could have Time to incorporate with the Language of the Country, and ſubdue, and ſoften it: as it did in the other Provinces of *France* and *Spain*, &c. But it is to be obſerved, that, upon the whole, this, ſuppoſing it true, does not fall as an Objection againſt the Language, but the People: Our Manners are alſo leſs poliſh'd, than ſome of our Neighbours; we are not yet arrived, and may we never hereafter arrive, at that Pitch of Molleſſe, of Delicateſſe, of Soupleſſe, which we cenſure in them; and 'tis but juſt our Language correſpond with the reſt of our Character. We have ſomewhat more of the rough Virtues of human Nature unſubdued, unpoliſh'd away by Art; and when theſe are gone, we may talk as ſoftly, and as prettily, as the Diſſolute, Enervate, [Effeminate, I would have ſaid, but for the *Catachreſis*] Nations on the other Side the *Alps*, where you ſee Politeneſs in its Perfection.

But the Revd. Doctor ventures further: 'Our Language, "he affirms," is extremely imperfect; its Improvements in 'no proportion to its Corruptions; and in many Inſtances 'it offends againſt every Part of Grammar." What this ingenious Author means by offending againſt Grammar, we don't apprehend: Is it, that the *Engliſh* Tongue offends againſt the Grammar of the ſame Tongue? That were abſurd: A Language is not to be judg'd of and regulated, by any pre-conceiv'd Forms or Rules of Grammar, but the Grammar to be taken from the Language: 'Tis the Language directs the Grammar, not *vice verſa*; So that if there be any Diſagreement between them, the Fault muſt be charged on the Grammar, which is ſo far deficient. Does he mean, that it offends againſt the Grammar of the *Latin*, or *Greek*? That may well be, without any Fault; for the Grammars of all Languages widely differ.

Mr. *Welſtead* is fully of Opinion, that the *Engliſh* Language is not capable of a much greater Perfection, than it has already attain'd: We have trafficked, he obſerves, with every Country for the enriching it: The Ancients and Moderns have both contributed to the giving it Splendor and Magnificence; the faireſt Scyons that could be had from the Gardens of *France* and *Italy*, have been grafted on our old Stocks, to refine the Savageneſs of the Breed; we have laid aſide moſt of our harſh, antique Words, and retain'd few but thoſe of good Sound and Energy: The moſt beautiful Poliſh is at length given our Tongue that it will bear, without deſtroying, and altering the very Baſis and Ground-work of it: Its *Teutonick* Ruſt is worn away; and little or nothing is wanting, either of Copiouſneſs, or Harmony. He goes on to argue the Maturity and Perfection of the *Engliſh*, from another very extrinſic Principle; *viz.* By comparing the Time, and Circumſtances of the Improvements, made ſince the firſt Refiners of it; with thoſe of the *Greek*, *Latin*, *French*, and other Tongues, that confeſſedly have riſen to their Height.

Every civilized Nation, that applauded Author thinks, has its Claſſical Age; and he ſuggeſts, that the *Engliſh* are not far from it. So that what remains to be done for the *Engliſh* Tongue, ſhould not be to advance, but to fix it where it is, and prevent its Declining. There is in Effect, a Point of Perfection, which when a Language has once arrived at, it cannot exceed, tho' it may degenerate from it; and thus it happen'd to the two fineſt Languages the World has known.

It may ſeem odd to talk, with Dr. *Swift*, of fixing ſo unſtable a Thing as Language: The *Greek* Liturgies of St. *Baſil*, and St. *Chryſoſtom*, ſtill uſed in that Church, the one for Solemn, the other for Common Days, have been a long Time unintelligible to the People: So much is the vulgar *Greek* degenerated from its original Purity. *Polybius* teſtifies, that the Articles of Truce between the *Romans* and *Carthaginians*, cou'd ſcarce be underſtood by the moſt learned *Roman* Antiquaries, 350 Years after the Time of their Making. In Effect, from the Days of *Romulus*, to thoſe of *Julius Cæſar*, the *Latin* was perpetually changing; and what was wrote three hundred Years before *Tully*, was as unintelligible in his Time, as the *Engliſh* and *French* of the ſame Period are now: And theſe two have changed as much ſince *William the Conqueror*, in about 700 Years, as the *Latin* appears to have done in the like Term.

Whether our Language will decline as faſt as the *Roman* did, may admit of ſome Debate; there being many Circumſtances in the Affairs of the Nation, which contributed to that Corruption, that may not, in all Probability, find Place among us. The *French*, for theſe 50 Years paſt, has been poliſhing as much as it will bear; and appears to be now declining, by the natural Inconſtancy of that People, and the Affectation of ſome late Authors, to introduce Cant Words, which is the moſt ruinous Corruption in any Language. But without ſome ſuch Conſideration, there does not ſeem any abſolute Neceſſity, why a Language ſhou'd be perpetually changing.

We find Examples to the contrary: From *Homer* to *Plutarch*, are above a thouſand Years; and ſo long, at leaſt, Dr. *Swift* thinks, we may allow the Purity of the *Greek:* The *Grecians* ſpread their Colonies round all the Coaſts and Iſlands of *Aſia minor*, and the *Egean* Sea, where the Language was preſerv'd entire for many Ages after they themſelves became Colonies to *Rome*, and were over-run by the barbarous Nations. The *Chineſe* have Books in their Language above 2000 Years old; neither have the frequent Conqueſts of the *Tartars* been able to alter it. And the *German*, *Spaniſh*, and *Italian*, have admitted few or no Changes for ſome Ages paſt.

On

On ſuch Conſiderations, that Author, with the conſpiring Wiſhes of Numbers of others, moved the then prime Miniſter, the Earl of *Oxford*, to eſtabliſh a Society, or Academy, for the ſettling, and aſcertaining, the Purity of our Tongue; to ſet a Mark on the Improprieties which Cuſtom has made familiar, to throw out vitious Phraſes and Words, to correct others, and perhaps retrieve ſome others now grown obſolete, and to adjuſt the Orthography, Pointing, *&c.* See ACADEMY.

Without ſome ſuch Means, he complains, that the Fame any Writer can expect will be ſo ſhort and ſcanty, as by no Means to be a ſufficient Motive to call forth, and engage a Man to exert his Genius. Our Language is chiefly confined to theſe two Iſlands; and it is hard our Authors Fame ſhould be limited in Time as well as Place. Were it not for the Bible and Common-Prayer, we ſhould hardly have been able to underſtand any Thing written a hundred Years ago.

'Tis a melancholy Reflection, that *Petrarch* ſtill ſpeaks good *Italian*; whereas *Chaucer*, who lived an hundred Year later, is not to be underſtood without a *Saxon* and *French* Gloſſary. And what Security has *Dryden* himſelf, while Things continue on their preſent Footing, that he ſhall not in a like Space of Time become as obſolete as *Chaucer* is?

Grammars, and Dictionaries, with whatever Care and Judgment they are compoſed, will prove but a feeble Stay to a fleeting Language, unleſs they have ſome extraordinary Sanction, and Authority. And what is to be lamented, ſuch Writings have contributed to the Corruption almoſt as much as the Perfection of our Tongue. See GRAMMAR and DICTIONARY.

Dr. *Gill*, *Ben Johnſon*, and *Hexham*, 'tis certain, by forcing the *Engliſh* Tongue to the *Latin* Method, have clog'd, and perplex'd it with Abundance of uſeleſs Precepts concerning Caſes, Genders, and Declenſions of Nouns, Tenſes, Moods and Conjugations of Verbs, and other Things which our Language has nothing to do withal. Nor have even Dr. *Wallis*, *Greenwood*, &c. tho' ſenſible of the Fault in thoſe others, been able wholly to keep clear of it themſelves. See CASE, GENDER, NUMBER, *&c.*

ENGONASIS, in Aſtronomy, *Hercules*; one of the Northern Conſtellations. See HERCULES.

ENGRAFTING, GRAFTING, or GRAFFING, in Agriculture and Gardening, the Art, or Act, of inſerting, or fixing, a Cyon, Shoot, or Bud, of one Tree, in the Stock of another; in order to correct and improve its Fruit. See FRUIT-*Tree*.

Or it is the Art of applying a *Graft*, or Shoot, of one Plant, to the Stock of another; in ſuch Manner, as that the Sap paſſing freely thro' both, the Tree *grafted* on may produce the ſame Kind of Fruit with that whence the *Graft* is taken. See GRAFT.

*Engrafting* only differs from *Inoculation*, in that the latter is perform'd when the Sap is at the higheſt, in Summer; and the former e're it riſes, at leaſt, in any Quantity. See INOCULATION.

*Engrafting* is one of the principal Operations in Gardening, and that whereon the Goodneſs of the Fruit greatly depends. See GARDEN.

'Tis very extraordinary that the Seeds, or Kirnels, or Stones of a Fruit, as an Apple, Pear, Peach, Plumb, Cherry, *&c.* being ſown, degenerate in the Ground; ſo, that the Tree ariſing from it is of another Kind, a Sort of wilding, harſher, ſourer and coarſer than that of the Parent Tree. To correct this, Trees thus rear'd, muſt be *grafted* from other better Kinds. See SEMINARY, ORCHARD, NURSERY, *&c.*

*Apples* are commonly rais'd by *Engrafting* the intended Kinds on Crab Stocks, procured by ſowing the Kirnels: So are *Pears*, procured by *grafting* on the wild Pear Stock: Tho' for Dwarf, or Wall Trees, they generally chuſe to *Engraft* on the Quince Stock. See DWARF, *&c.*

They will alſo do if *grafted* on the white Thorn. *Peaches* are produced by *graffing* on an Almond or Plum-Stock. Indeed, in this Fruit, it ſometimes happens that the Stone ſown, produces better Fruit than that from which it was taken: But this is not common; beſide that the Tree in ſuch Caſe, is long e're it comes to bear. *Plums* are rais'd by *Engrafting* on a Damſon, or wild Plum-Stock: And *Cherries*, on the Black-Cherry, or Merry Stock, rais'd from Stones.

Our beſt Gardeners, likewiſe, *Engraft* their leſs kindly Trees ſtom other better of the ſame Sort, to mend them; as, alſo, the ſmaller and ſingle Flowers, as Gilliflowers, *&c.* from the larger and finer. *To produce Stocks for Engrafting on.* See STOCK.

The Curious furniſh us with other extraordinary and anomolous Inſtances of *Engrafting*: As of Apples on Plane, Elder, Thorn, Cabbage-Stalk, *&c.* and the like of Pears, *&c.* Pears on Apple Trees, on Elms, *&c.* Cherries on the Lawrel; Coral Berries on the Plum: Beech on the Cheſſnut, Oak on the Elm, Gooſeberry on the Currant, the Vine on the Cherry Tree, *&c.*

Inſeritur Lauro Ceraſus, *partuque Coacto*
*Tingit adoptivus virginis Ora pudor.* Auſonius.

Even *Daphne*'s Coyneſs thou doſt mock,
And *weds* the *Cherry* to her Stock. *Cowley* to Mr. *Evelyn.*

*Flore* Pyri; Glandemque *Sues fregere ſub ulmis.* Id. ibid.

The Origin, and Invention of *Engrafting*, is differently related by Naturaliſts: *Theophraſtus* tells us, that a Bird having ſwallow'd a Fruit whole, caſt it forth into a Cleft, or Cavity, of a rotten Tree; where mixing with ſome of the putrified Parts of the Wood, and being waſh'd with the Rains, it budded, and produced within this Tree, another Tree of a different Kind. This lead the Husbandman to certain Reflections, from which, ſoon afterwards, aroſe the Art of *Engrafting*.

*Pliny* ſets the Thing in a different Light: A Countryman having a Mind to make a Paliſſade in his Grounds; that it might endure the longer, he bethought himſelf to fill up, and ſtrengthen the Bottom of the Paliſſade by running, or wattling it with the Trunks of Ivy. The Effect of this was, that the Stakes of the Paliſſades taking Root, became *Engrafted* into the Trunks, and produced large Trees; which ſuggeſted to the Husbandman the Art of *Engrafting*.

The Reaſon, or Philoſophy, of *Engrafting*, is ſomewhat obſcure; and had not Hazard given the firſt Hint, all our Knowledge of Nature would never have led us to it. The Effect is ordinarily attributed to the Diverſity of the Pores, or Ducts, of the *Graft*, from thoſe of the Stock, which change the Figure of the Particles of the Juices in paſſing thro' them to the reſt of the Tree.

Mr. *Bradley*, on Occaſion of ſome Obſervations of *Agricola*, ſuggeſts ſomething new on this Head: The Stock *grafted* on, he thinks, is only to be conſider'd as a Fund of vegetable Matter, which is to be filter'd thro' the Cyon, and digeſted, and brought to Maturity, as the Time of Growth in the Veſſels of the Cyon directs. A Cyon, therefore, of one Kind, *grafted* on a Tree of another, may be rather ſaid to take Root in the Tree 'tis *grafted* in, than to unite it ſelf with it: For it is viſible that the Cyon preſerves its natural Purity and Intent, tho' it be fed and nouriſh'd with a mere Crab; which is, without doubt, occaſion'd by the Difference of the Veſſels in the Cyon from thoſe of the Stock: So that *Grafting* may be juſtly compared to Planting.

In Proſecution of this View of that ingenious Author, we add, that the natural Juices of the Earth, by their Secretion and Comminution, in paſſing thro' the Roots, *&c.* e're they arrive at the Cyon, muſt doubtleſs arrive there half elaborated and concocted; and ſo diſpoſed for a more eaſy, plentiful, and perfect Aſſimulation and Nutrition; whence the Cyon muſt neceſſarily grow and thrive better and faſter than if it were put immediately in the Ground, there to live on coarſe Diet and harder of Digeſtion: And the Fruit produced, by this further Preparation in the Cyon, muſt be finer and further exalted, than if fed immediately from the more imperfectly prepared and alter'd Juices of the Stock.

The Cyon, to ſay no more, is ſomewhat in the Condition of the *Fœtus in Utero*, fed from the Mother's Blood: At leaſt, 'tis in that of the Infant after Excluſion, fed with the Mother's Milk.

The Methods, or Kinds of *Engrafting* are various; as *Grafting in the Cleft*, *Grafting in the Rind*, *Whip-Grafting*, *Grafting* by Approach, *Scutcheon Grafting*, *Root Grafting*, *Re-iterated Grafting*, *Grafting on Branches*, &c.

The Apparatus, or Inſtruments uſed herein, are Saws to cut off the Head of Stocks; Knives to make Clefts; a Chiſſel to pare away the Wood; Clay, mix'd with Horſe-Dung, to prevent freezing, and with Tanners Hair to prevent cracking; Baſs Strings, or Woollen Yarn, to tie the *Grafts* with, and *Grafting* Wax. See WAX.

GRAFTING, *in the Cleft*, or *Stock*, call'd alſo *Slit*-GRAFTING, is the moſt antient, and ordinary Way. We have a very beautiful Deſcription of it in *Virgil*, II. *Georg. v.* 78. it is chiefly uſed for middle ſized Stocks, from one to two Inches Diameter. Its Seaſon is the Months of *January*, *Febru-*

*February*, and *March*. The Method, as now practiſed, is thus:

The Head of the Stock being ſawn, or cut off, ſmooth and clean; a perpendicular Cleft is made therein, nearly two Inches deep, with a ſtrong Knife, or Chiſſel, as near the Pith as may be to miſs it. In this Cleft, the *grafting* Chiſſel, or Wedge, is put to keep it open. The *Graft*, or Cyon, is prepared by cutting it a-ſlope, in Form of a Wedge, to ſuit the Cleft, only leaving a ſmall Shoulder on each Side: And, when cut, is to be placed exactly in the Cleft, ſo, as that the inner Bark of the Cyon may aptly, and cloſely, joyn to the inner Part of the Bark, or Rind of the Stock; in the dexterous Performance of which, the chief Secret conſiſts. If the Cleft pinch too tight, a ſmall Wedge may be left in it to bear the Streſs. And, laſtly, the Cleft is cover'd over with Clay: Or rather, as M. *Gentil* adviſes, with Moſs, or the freſh Bark of a Tree bound on with *Oſier*.

The Reader, who would have this in more elegant Terms, may be furniſh'd from *Virgil*.

*Aut rurſum Enodes Trunci reſecantur, & alte*
*Finditur in ſolidum Cuneis via: deinde feraces*
*Plantæ Immittuntur: nec longum Tempus, & Ingens*
*Exiit ad Cœlum ramis felicibus Arbos,*
*Miraturque novas frondeis, & non ſua poma.*

GRAFTING *in the Rind*, or *Shoulder*-GRAFTING, called alſo *Slicing* and *Packing*; is practiſed in the latter End of *April*, or Beginning of *May*. The Method is as follows:

The Top of the Stock is cut off in a ſmooth, ſtraight Place: Then the Cyon, or *Graft*, is prepared by cutting it on one Side from the Joynt, or Seam down ſlopewiſe, making the Slope about an Inch long; and obſerving its Bent, that ſo, when the Cyon is fixed to the Stock, it may ſtand nearly upright. At the Top of the Slope, they make a *Shoulder*, whereby it is to reſt on the Stop of the Stock. The whole Slope to be plain and ſmooth, that it may lie even to the Side of the Stock. As to the Length of the Cyon, for a Standard Tree, it may lie about four Inches from the Shoulder; but for a Dwarf, or Wall Tree, ſix Inches. The Cyon prepared; the outſide is applied to the Weſt, or South Weſt Side of the Stock, and its Length and Breadth meaſured thereon; which done, the Bark of the Stock is cut away to thoſe Dimenſions, that the cut Part of the Cyon may fit it. Wherein, Regard is to be had to the Bigneſs of the Stock, and the Thickneſs of the Bark, to proportion the length and breadth of the Chip thereto; otherwiſe the Paſſages of the Juice in the Stock and Cyon will not meet. Laſtly, laying the Cut-Part of the Cyon on that of the Stock, they bind them together with Woollen Yarn, and cover the whole with Clay an Inch above, and as far below the Stocks Head: Working it round the Cyon, till it become ſharp at Top, that the Rain may run down it.

This Method has ſeveral Advantages beyond the former: As that the Wound heals up ſooner; and that, in the mean Time, it is in leſs Danger from the Weather; that it does leſs Injury to the Stocks and *Grafts*, as avoiding thoſe ſevere Splittings and Pinchings: That the Bark is more eaſily placed in the Paſſage of the Sap here, than in the Cleft: That the *Graft* thrives and ſhoots with greater Vigour, and bears ſooner in this Way than in that: And that it is practicable on ſmaller Stocks than the other, which muſt have a good Body, and Conſiſtence, e're they can bear Cleaving.

GRAFTING *in the Bark*, is perform'd thus:

Prepare the Stock, and Cyon, as in *Grafting in the Rind*; but, inſtead of cutting the *Bark* of the Stock, ſlit the ſame on the South Weſt Side, from the Top, almoſt as long as the ſloap'd Part of the Cyon; and at the Top of the Slit looſen the *Bark*, with the Top of your Knife. Thruſt your Inſtrument, made of Ivory, Silver, or the like, and form'd at the End like the ſlope End of the Cyon but much leſs, down, between the *Bark* and Wood, to make Room for the Cyon; which being put in the *Bark*, is to be ſo managed, as that it may fall cloſe to the Stock, and Edges of the Cyon.

GRAFTING *by Approach*, call'd alſo *Inarching*, and *Ablactation*. See the Method thereof under the Article ABLACTATION.

*Whip*-GRAFTING, or *Tongue*-GRAFTING, is a Sort of *Grafting* in the Rind, proper for ſmall Stocks, from an Inch Diameter to a Quarter of an Inch. Mr. *London* ſpeaks of it as the moſt effectual Way of any, and that moſt in Uſe.

In this, the Stock and Cyon are to be of the ſame Bigneſs. The Cyon to be ſlop'd off a full Inch, or more; and the like to be done to the Stock; and ſo the one to be tied to the other. Otherwiſe, the Top of the Stock being cut off, a Shoulder is to be made in the *Graft*: And the reſt to be performed as already ſhewn under *Grafting in the Rind*.

This Method is alſo improved by what they call *tipping*, or *tonguing*; which is, the making a Slit with a Knife in the bare Part of the Stock, downwards; and the like in the ſloped Face of the Cyon, upwards: And then, joyning them, by thruſting one Slice into the other, till the bare Place of the Cyon cover that of the Stock.

*Side*-GRAFTING. In this, the Cyon is prepared as in *Whip-Grafting*, but the Head of the Stock is not cut off. Only, from a ſmooth Part on the Weſt Side, ſo much of the Bark is pared off as the Cyon will cover; then ſlitting both Cyon and Stock, as in the laſt Article, they bind the two together, and cloſe them up with Clay. At the Year's End, the Top of the Stock is cut off at the *grafted* Place, ſlopewiſe, and the Place cover'd with Clay.

*Scutcheon*-GRAFTING, is another Method of *Grafting in the Rind*, practiſed in *June*, *July* and *Auguſt*; when the Bark will not part from the Stock. 'Tis perform'd, by ſlitting the Bark of the Stock in Form of the Capital Letter T, looſening it with the Point of a Knife, and clapping in a Cyon, prepared as above. See SCUTCHEON.

*Crown*-GRAFTING, is when four or more *Grafts*, are placed round the Stock, between the Bark and the Rind, ſomewhat in the Manner of a *Crown*. This is only practiſed in the larger Trees, which are capable of receiving a Number of *Grafts*, and are too big to be cloven. The Method is in all Reſpects the ſame as that already deliver'd for *Grafting in the Rind*.

*Root*-GRAFTING, is a modern Invention, treated on at large by *Agricola*: Its Intention is ſomewhat different from the former, being for the Propagation, or Multiplication of Plants.

To perform this, take a *Graft*, or Sprig of a young Tree, which you intend to propagate; and a ſmall Piece of the Root of another Tree of the ſame Kind, or very like it; or elſe Pieces of Roots cut off of other Trees, in tranſplanting; and *Whip-Graft* them together: Obſerving, that the two But-Ends of the *Graft* and Root be united, and that the Rind of the Root joyn that of the *Graft*. Theſe may, afterwards, be planted out at Pleaſure, and the Piece of Root will draw the Sap, and feed the *Graft*, as the Stock does the other Way.

This Way of Propagation is very eaſy and expeditious; Roots being more plentiful than Stocks: By this Method the Pieces of Roots of one Crab-ſtock, or Apple-ſtock, will ſerve for 20 or 30 Apple *Graffs*, and the like of other Trees. The ſame is an excellent Way for raiſing of tender Trees, that will hardly bear being *grafted* in the Stock. Add, that Trees thus *grafted*, bear ſooner, and are more eaſily dwarfed, than thoſe done any other Way. See DWARF.

*Re-iterated* GRAFTING, or *Grafting by a double*, or *triple Inciſion*, is another Method mention'd by *Agricola*. To perform this, firſt *graft* a good Cyon on a Stock, and cut it away to one half, or a third Part; then fix another *Graft* to it, of a better Kind; and a third to that: For ſtill, the oftener a Tree is *engrafted*, the finer Fruit it produces.

By this Method, that Author aſſures us, he produced Muſcat Pears, that were admirable; making, at firſt, uſe of a Stock *grafted* with a Pound Pear, on which he *grafted* a Summer *Bon Chretien*; and when the Branch of this latter had ſhot, he *grafted* on it a Cyon of *Bergamot*; which he alſo cut, and *grafted* on it a Cyon of a *Muſcat* Pear.

ENGRAFTING *of Branches*, *Agricola* mentions as a very certain and profitable Operation, beſt practiſed on large, full grown, and even old Trees.

To do this, half or more of the Branches muſt be lopp'd off, and *Grafts* of three or four Years old be applied to them; taking Care to have Stakes, or other Things, to ſupport them againſt the Wind, *&c.*

He adds, that by this Method, you will have, perhaps, the ſame Year, at leaſt, the ſecond or third, ſuch a Quantity of Fruit, as the youngeſt and ſoundeſt Tree would hardly produce.

ENGRAFTING *of the Small-Pox*. See INOCULATION.

ENGRAIL'D, or INGRAIL'D, in Heraldry, (from the French *Greſle*, Hail) is when a Thing is repreſented with its Edges ragged, or with half rounds ſtruck thereon, as if broke by ſomething falling on it; as in the adjoyning Figure.

It differs from *Indented*, in that the Breaches there are all in ſtrait Lines; but here Semi-circular: And from *Invected*, in that the Points of the little Arches are turn'd inwards towards the middle of the Field; which in *Invected*, are turn'd outwards. See INDENTED and INVECTED.

*Spelman* calls it in Latin *Imbricatus*, others *Ingrediatus*, and others *Striatus*.

EN-

ENGRAVING, or GRAVING, the Art, or Act of cutting Metals and precious Stones, and repreſenting Figures, Letters, and other Matters thereon.

The Word is a Compound of the Prepoſition *in*, and the *Greek* γεάφω, *I write*. Tho' *Menage*, after *Salmaſius*, derives it from *cavare*, to hollow; others from the *Latin*, *graphiare*; and others from the *German*, *graben*, q. d. *Effodere*, to dig out. In *Latin* it is called *Sculptura* and *Cœlatura*.

*Engraving* is properly a Branch of Sculpture; tho', with us, it generally ſtands contra-diſtinguiſhed from Sculpture; As the latter, popularly call'd *Carving*, expreſſes the forming of Figures, *&c.* Emboſs'd, or in Relievo; and the latter, thoſe indented, or *in Creux*. See RELIEVO and CREUX.

Among the *French*, the Term *Engraving*, *Graveure*, is of more Extent. It includes all Sculpture, both that perform'd with the Chiſſel and Knife, on Marbles and Woods, in Relievo; and that in Metals, Stones, *&c.* with the Graver, indented. See SCULPTURE.

*Engraving* is divided into ſeveral Branches, according to the Matters it is practiſed on, and the Manner of performing it. The Original Way of *Engraving* on Wood is now diſtinguiſhed by the Name of *Cutting in Wood*; that on Metals with *Aqua Fortis*, is called *Etching*; that by the Knife, Burniſher, Punch, and Scraper, *Mezzotinto*; that on Stones, for Tombs, *&c. Carving* or *Stone cutting*; and laſtly, that perform'd with the Graver on Metals, as Copper, Braſs, Steel, Silver, *&c.* as alſo on precious Stones, Cryſtals, *&c.* retain alone the primitive Denomination of *Engraving*. See CUTTING *in Wood*, ETCHING, CARVING, and MEZZO TINTO.

*Engraving* is an Art, for the greateſt Part, of Modern Invention; having its Riſe no earlier than the *16th* Century. The Antients, 'tis true, practiſed *Engraving* on pretious Stones and Cryſtals, with very good Succeſs; and there are ſtill ſome of their Works remaining, equal to any Production of the later Ages. But the Art of *Engraving* on Plates, or Blocks of Wood, to afford Prints, or Impreſſions, was not known till after the Invention of painting in Oil.

The Diſcovery is aſcribed to *Maſo Finiguerra*, a Goldſmith of *Florence*; who having uſed to take Impreſſions of every thing he cut, in Clay; and to caſt melted Sulphur in this Mould; at length hit on a Way of taking the Impreſſions thereof on Paper, by ſmearing this Figure of Sulphur with Oil and Lamp-black.

The Secret ſoon got Abroad, and coming to the Hands of *Albert Durer* and *Lucas*, they greatly improved it, and began to *Engrave* on Wood and Copper, in which they ſucceeded to Admiration. See PRINT.

ENGRAVING *in Copper*, is employ'd in repreſenting divers Subjects, as Portraits, Hiſtories, Landskips, Foliages, Figures, Buildings, *&c.* either after Paintings, or Deſigns made for the Purpoſe.

It is perform'd either with the *Graver*, or with *Aqua Fortis*.

For the firſt, there needs but little *Apparatus*, and few Inſtruments. The Plate you work on being well poliſh'd, is cover'd over with a thin Skin of Virgins Wax, and on this, the Draught, or Deſign, done in black Lead, red Chalk, or other ungum'd Matter is laid; and rubb'd down for the Wax to take off. The Deſign thus transferr'd upon the Wax, is traced thro' on the Copper, with a Point or Needle: Then heating the Plate, and taking off the Wax, the Strokes remain; to be follow'd, heighten'd, *&c.* according to the Tenor of the Deſign, with the *Graver*, which is to be very ſharp, and well temper'd.

In the Conduct of the *Graver*, conſiſts all the Art; for which there are no Rules to be given; all depending on the Habitude, Diſpoſition, and Genius of the Artiſt.

The other Inſtruments are, a *Cuſhion*, or Sand-Bag, to lay the Plate on, to give it the neceſſary Turns and Motions: A *Burniſher*, round at one End, and uſually flattiſh at the other, to rub out Slips and Failures, ſoften the Stroaks, *&c.* A *Scraper*, to pare off the Surface, on Occaſion: And a *Rubber* of black Cloth, or Hat, to fill up the Strokes, that it may appear how the Work proceeds.

ENGRAVING *in Copper with* Aqua Fortis. See ETCHING.

ENGRAVING *on precious Stones*, conſiſts in repreſenting Figures or Devices, either in Relievo, or Indented, on divers Kinds of hard, poliſh'd Stones. See PRECIOUS *Stones*.

The Art of *Engraving* on precious Stones, is one of thoſe wherein the Ancients excell'd; there being divers antique Agats, Cornelians, and Onyx's, which ſurpaſs any Thing of that Kind the Moderns have produced. *Pyrgoteles* among the *Greeks*, and *Dioſcorides* under the firſt Emperors of *Rome*, are the moſt eminent Engravers we read of: The former was ſo eſteem'd by *Alexander*, that he forbad any body elſe to *Engrave* his Head: And *Auguſtus*'s Head, *Engraven* by the latter, was found ſo beautiful, that the ſucceeding Emperors choſe it for their Seal.

All the polite Arts having been buried under the Ruins of the *Roman* Empire, the Art of *Engraving* on Stones met the ſame Fate. It was retriev'd in *Italy*, at the Beginning of the *15th* Century; when one *John* of *Florence*, and after him *Dominic* of *Milan*, perform'd Works of this Kind no Way to be deſpiſed.

From that Time, ſuch Sculptures became common enough in *Europe*, and particularly in *Germany*, whence great Numbers were ſent into other Countries; but they came ſhort of the Beauty of thoſe of the Ancients; eſpecially thoſe on precious Stones; for as to thoſe on Cryſtal, the *Germans*, and after their Example, the *French*, &c. have ſucceeded well enough.

In this Branch of *Engraving*, they make Uſe either of the Diamond, or Emery. The Diamond, which is the hardeſt, and moſt perfect of all precious Stones, is only cut by it ſelf, or with its own Matter. See DIAMOND, *&c.*

The firſt Thing, is to cement two rough Diamonds to the Ends of two Sticks, big enough to hold them ſteady by, in the Hands; and to rub or grind 'em againſt each other, till they be brought to the Figure deſired. The Duſt, or Powder, rub'd off, ſerves afterwards to poliſh 'em; which is perform'd with a Kind of Mill, that turns a Wheel of ſoft Iron. See LAPIDARY.

The Diamond is fix'd in a Braſs Diſh, and thus apply'd to the Wheel, which is cover'd with Diamond Duſt, mix'd up with Oil of Olives: And when the Diamond is to be cut facet-wiſe, they apply firſt one Face, than another, to the Wheel.

Rubies, Saphirs, and Topazes, are cut and form'd the ſame Way, on a Copper Wheel; and poliſh'd with *Tripoli*, diluted in Water. See EMERY.

As to Rubies, Emeralds, Hyacinths, Amethiſts, Grenats, Agats, and other of the ſofter Stones, they are cut on a Leaden Wheel, moiſten'd with Emery and Water, and poliſh'd with *Tripoli*, on a Pewter-Wheel. *Lapis*, Opal, *&c.* are poliſh'd on a Wooden Wheel. See WHEEL.

To faſhion and *Engrave* Vaſes of Agat, Cryſtal, *Lapis*, or the like, they have a Kind of Lathe, like that of the Pewterers; excepting, that whereas the latter is to hold the Veſſels, which are to be wrought with proper Tools; the former generally holds the Tools, which are turn'd by a Wheel, and the Veſſels held to 'em to be cut and *Engraved*, either in Relievo, or otherwiſe: Remembring from Time to Time, to moiſten the Tools with Diamond Duſt and Oil; or, at leaſt, Emery and Water.

To *Engrave* the ſmaller Works of any of theſe Stones, when poliſh'd; ſuch as Medals, or Seals, *&c.* they uſe a little Iron Wheel, the two Ends of whoſe Axes are receiv'd within two Pieces of Iron placed upright, as in the Turners Lathe; to be brought cloſer, or ſet further apart, at Pleaſure. At one End of one of the Axes, are fitted the proper Tools, being kept tight by a Skrew. Laſtly, the Wheel is turn'd by the Foot; and the Stone applied by the Hand to the Tool; and thus ſhifted and conducted as Occaſion re u ires.

The Tools are generally of Iron, ſometimes of Braſs. As to their Form, it is various, but generally bears ſome Reſemblance to Chiſſels, Gouges, *&c.* Some have ſmall round Heads like Buttons; others, like Ferrels, to take the Pieces out; others, flat, *&c.* Theſe Tools are not applied directly againſt the Stone; but, as it were, ſidewiſe; thus wearing, and, as it were, grinding off the Subſtance. And ſtill, whether it be Figures, or Letters, or Characters, the Manner of Application is the ſame. The Tools, as above obſerved, are to be frequently moiſten'd with Diamond Duſt, and Oil of Olives. When the Stone is *Engraven*, they poliſh it on Wheels of Bruſhes, made of Hogs Briſtles and *Tripoli*. For the larger, and leſs delicate Works, they have Copper, or Pewter Tools, on purpoſe to poliſh the Ground, or plain Parts, with *Tripoli*, &c. which they apply after the ſame Manner, as thoſe wherewith the *Graving* is perform'd.

ENGRAVING *on Steel*, is chiefly employ'd in cutting Punches, Matrices, and Dies, proper to ſtrike Coins, Medals, and Counters. See COINAGE.

The Method of *Engraving*, with the Inſtruments, *&c.* are the ſame for Coins, as for Medals and Counters: All the Difference conſiſts in their greater, or leſs Relievo; the Relievo of Coins being much leſs conſiderable than that of Medals; and that of Counters ſtill leſs than that of Coins. See MEDAL.

The *Engraver* in Steel uſually begins with Punches, which are in Relievo, and ſerve for making the Creux, or Cavities of the Matrices, and Dies. Tho', ſometimes, he begins immediately with the Creux; but 'tis only when the intended Work is to be cut very ſhallow. The firſt

Thing is to design his Figures; then he moulds 'em in white Wax, of the Size and Depth required: And from this Wax he graves his Punch.

This Punch, is a Piece of Steel, or at least of Iron and Steel mix'd; on which, ere they temper, or harden it, the intended Figure, whether a Head, or a Reverse, is cut, or chissel'd in Relievo. The Instruments used in this *Graving* in Relievo, which are much the same as those wherewith the finishing of the Work, in Creux, is effected, are of Steel. The Principal are *Gravers* of divers Kinds, Chissels, Flatters, *&c.* When the Punch is finish'd, they give it a very high Temper; that it may the better bear the Blows of the Hammer, wherewith it is struck, to give the Impression to the Matrice. See PUNCHION.

What they call *Matrice*, or *Matrix*, is a Piece of good Steel of a Cubic Form, call'd also *Dye*; whereon, the Relievo of the Punch is struck in Creux. It is call'd Matrix, because in the Cavities or Indentures thereof, the Coins, or Medals, seem form'd, or generated, as Animals are in the Matrix of their Mother. To soften this Steel, that it may more easily take the Impression of the Punch, they make it red-hot; and after striking the Punch thereon in this State, they proceed to touch up, or finish the Strokes and Lines, where, by Reason of their Fineness, or the too great Relievo, they are any Thing defective; with some of the Tools abovementioned. See MATRIX.

The Figure thus finished, they proceed to *Engrave* the rest of the Medals, as the Mouldings of the Border, the engrail'd Ring, Letters, *&c.* All which, particularly the Letters and Engrailment, are perform'd with little Steel Punches, well temper'd, and very sharp. Add, that as they sometimes make Use of Punchions, to *Engrave* the Creux of the Matrix; so, on some Occasions, they make Use of the Creux of the Matrix, to *Engrave* the Relievo of the Punch.

To see, and judge of the *Engraving* in Creux; divers Means have been devised to take the Impressions therefrom, as the Work proceeds. Sometimes they make Use of a Composition of common Wax, Turpentine, and Lamp-black; which always retaining its Softness, easily takes the Impression of the Part of the *Graving* it is applied to. But this only serving to shew the Work piece-meal, they have had Recourse to other Ways, to shew the whole Figure. The first, by pouring melted Lead on a Piece of Paper, and clapping the Matrice thereon: The second, with melted Sulphur, managed the same Way: And the third, proper only where the *Graving* is shallow, by laying a Piece of soft Paper on the *Graving*, and over the Paper a Leaf of Lead; when, giving two or three Blows with a Hammer on the Lead, the Paper takes the Impression of the Work.

When the Matrix is quite finish'd, they temper it, rub it well with Pumice-stone, and clean out the Stone again with a Hair-Brush; and lastly, polish it with Oil and Emery. In this Condition it is fit for the Mill, to be used to strike Coins, Medals, *&c.* See COINING.

After the like Manner, are the Matrices for casting of Printing Letters, *Engraven.* See *Letter* FOUNDERY.

ENGRAVING *of Seals, Stamps, Punchions, Marking Irons, Gilding Irons*, and other Matters, for Goldsmiths, Pewterers, Book-binders, *&c.* either in Relievo, or Indenture, is perform'd after the Manner last described. See SEAL, *&c.*

ENGRAVING *in Wood.* See CUTTING *in Wood.*

ENGROSSING, the Writing a Deed over fair, and in proper Characters.

In the Way of Trade, *Engrossing* signifies the Buying up any Commodity in the Gross; Forestalling the Market. See FORESTAL and MONOPOLY.

ENGUICHE, in Heraldry; is applied to the great Mouth of a hunting Horn, when it has a Rim of a different Colour from the Horn it self.

ENGYSCOPE, a Machine, better known under the Name of *Microscope.* See MICROSCOPE.

ENHARMONIC, the last of the three *Genera*, or Kinds of Music. See GENERA.

The *Enharmonic* Genus, is said to have been thus called by Reason of its superior Excellence; Tho' wherein that consists, says Mr. *Malcolm*, we don't see. It was by all acknowledged so difficult, that few could practise it.

The several *Genera* are divided into Diastems, upon which the Differences depend: Those of the *Enharmonic* are the *Diesis* and *Ditonum*: Those of the *Chromatic*, the *Hemitonium* and *Triemitonium*; and in the *Diatonic*, the *Hemitonium*, or *Limma*, and the *Tonus*.

But under these general Names, which distinguish the *Genera*, there are several different Intervals, or Ratio's, which constitute the *Chroai*, or *Colores Generum*, or Species of *Enharmonic*, *Chromatic*, and *Diatonic.* See DIATONIC, and CHROMATIC.

ENHERITANCE. See INHERITANCE.

ENIGMA, or ÆNIGMA, *Riddle*, a Proposition put in obscure, ambiguous, and generally contradictory Terms, to puzzle, or exercise the Wit, in finding out its meaning. Or, an obscure Discourse, covering some common, and well known Thing, under remote and uncommon Terms.

The Word is *Greek*, Αινιγμα, literally importing *dark, knotty Discourse*, form'd of αινιτεσθαι, *obscure innuere*, to hint a Thing darkly. The *Latins* call it *Scirpus:* The *Hebrews*, חידה.

*Fran. Junius* defines an *Ænigma* to be an obscure Parable, or Allegory; and makes two Kinds: The one *greater*, rendering the Sentence more intricate and knotty, by a Multitude of Words; the other *lesser*, consisting of only one or two remote Words, or Allusions; as in *Isaiah*, C. XI. 1. where *Jesus Christ* is call'd נצר, *surculus*, Rod, Branch. See PARABLE.

*Fa. Bouhours*, in the Memoirs of *Trevoux*, defines an *Enigma*, a Discourse, or Painting, including some hidden meaning, which is proposed to be guess'd. *Painted Enigma's*, are Representations of the Works of Nature, or Art, conceal'd under human Figures, drawn from History, or Fable. Thus *Jesus Christ*, in the middle of the Doctors, represents the Bible, *&c.* A *Verbal Enigma* is a witty, artful and abstruse Description of any Thing. *Bouhours.*

*Fa. Menestrier*, has given us a learned Treatise of *Enigma's* and *Enigmatical* Figures.

The Use of *Enigma's* was very great among the *Egyptians.* That People, *Gale* observes, cover'd their Doctrines, both of divine, human, and natural Things, under such Disguises: Thus some of the Stars, *Clemens Alexand. Strom.* 5. notes were, on Account of their oblique Motions, liken'd to Serpents, the Sun to a Crocodile, a Ship, *&c.*

*Gale* thinks they might borrow the Customs from the *Hebrews*, among whom, 'tis certain, the *Enigmatic* Way was not less in Use. Witness *Samson*'s Riddle, *Judg.* XIV. 12, 13. *I will now put forth a Riddle to you*, &c. חידה *i. e.* according to *Vatable*, an *Enigmatical* Problem. The LXX render it, προβλημα. *Out of the Eater came forth Meat, and out of the Strong came forth Sweetness.* Whereby *Eater* and *Strong*, is meant a Lion; and by *Meat*, Honey. *Solomon* is said to have been particularly skilful in the Solution of *Ænigma's.* Joseph. *Antiq. Lib.* V. *C.* 2. *Clemens* assures us, that the *Egyptians* placed Sphynges before their Temples; to intimate that the Doctrines of God and Religion were *Ænigmatical* and Obscure. See PARABLE, HIEORGLYPHIC, EMBLEM, SYMBOL, FABLE, *&c.*

ENIXUM *Sal*, among the Chymists, a Kind of Neutral Salt, being neither Acid nor Alcalious, but participating of both.

Such is common Salt, Nitre, Allum, Vitriol, *&c.* See SAL.

ENMANCHE, in Heraldry, is when a Chief has two Lines drawn from the middle of the upper Edge, to the Sides, the Depth of half the Chief; The two Lines including an obtuse Angle, the Point whereof, is the Centre of the Top of the Chief.

The Heralds conceive this, as bearing some Resemblance to *Sleeves*; whence the Etymology of the Word, from the French *Manche*, Sleeve. It differs from *Chappe*, where the Lines come from the Top to the Bottom of the Chief.

ENNEADECAETERIS, in Chronology, a Cycle, or Period of Nineteen Solar Years. See CYCLE.

Such is the Lunar Cycle invented by *Meton*, at the End whereof the Moon returns to the same Point, from which it departed. Whence the *Jews*, *Athenians*, and other Nations, who were minded to accommodate the Lunar Months to the Solar Year, made Use of the *Enneadecaeteris*; allowing to seven of the Years 13 Months a piece, and to the rest 12.

The *Jewish* ENNEADECAETERIS is properly a Cycle of 19 Lunar Years, beginning from *Molad Tohu*, and returning again and again; whereof, every 3$^{d}$, 6$^{th}$, 8$^{th}$, 11$^{th}$, 14$^{th}$, 17$^{th}$, and 19$^{th}$, are Embolismic, or of 383 Days, 21 Hours a-piece; the rest common, or of 354 Days, 8 Hours a-piece. See YEAR.

Consequently, the *Jewish Enneadecaeteris* is 6939 Days. See EMBOLISMIC.

The Word is *Greek*, ἐννεαδεκαετηρις, form'd of ἐννέα *nine*, δέκα *ten*, and ἔτος *Year.*

ENNEAGON, in Geometry, a Figure of Nine Angles, and Nine Sides. See POLYGON.

The Word is form'd of ἐννέα *Nine*, and γωνία *Angle.*

In Fortification, *Enneagon* is a Place with Nine Bastions. See FORTIFIED *Place.*

ENNEATICAL *Days*, are every Ninth Day of a Sickness; which some imagine naturally occasions a great Alteration, either for better or worse. See CRITICAL *Days.*

ENNEATICAL *Years*, are every Ninth Year of a Man's Life. See CLIMACTERIC.

ENORMOUS, ſomething exceſſively, or immenſely, big. Thus we ſay, the *Coloſſus* of *Rhodes* was of an *Enormous* Stature.

The Word is form'd of the Privative *e* and *norma*; Rule q. d. void of, or contrary to Rule, or Meaſure, *contra normam*. In the corrupt Ages of Latinity, they uſed *innormis* and *inormis*.

In the Civil *Juriſprudence*, *Leſio Enormis*, *Enormous* Damage, is that whichexceeds half the Value of the Thing ſold. And this gave Room for the Reſciſſion of the Contract. See RESCISSION.

ENQUEST, or INQUEST, is taken for an Inquiſition of a Jury, by hearing of Witneſſes. See INQUEST.

This is the moſt uſual Trial, in all Cauſes, both Civil and Criminal, within this Realm. In Civil Cauſes, after Proof is made on either Side, of ſo much as each Party thinks good for himſelf; if the Doubt be in the Fact, it is referr'd to the Diſcretion of Twelve indifferent Men, impanelled by the Sheriff for that Purpoſe; and as they bring in their Verdict, ſo Judgment paſſeth; for the Judge ſaith, *The Jury findeth the Fact thus.*

For the *Enqueſt* in Criminal Cauſes. See JURY.

ENS, *Being*, in Metaphyſicks, is applied, in its moſt general Senſe, to every Thing that the Mind any Way apprehends, and whereof it affirms, denies, proves, or diſproves any Thing.

This, other Philoſophers call *Cogitabile*, and *Intelligibile*; and the Logicians, *Thema*.

ENS, in a leſs general Senſe, ſignifies ſomething that is, or exiſts, ſome Way further than in being conceiv'd, or being capable of being conceiv'd in the Mind.

This is particularly call'd, *Ens poſitivum*, or *reale*, poſitive, or real Being. In Oppoſition to which ſtands *Non Ens*.

ENS, in its proper, or reſtrain'd Senſe, is that to which there are real Attributes belonging; or that which has a Reality, not only out of the Intellect, but in it ſelf.

This is what is properly meant by *Res*, *Thing*; and what we otherwiſe call *Ens reale*, and alſo *Subſtance*. See SUBSTANCE.

ENS *rationis*, is that which depends on the Mind; or which exiſts only in the Imagination.

Of this they diſtinguiſh three Kinds: *Ens rationis effectivum*, which is done, or produced by the Mind; as Knowledge: *Ens rationis ſubjectivum*, which is received into the Mind; as Science: And *Ens rationis objectivum*, which is repreſented by the Mind; as a Golden Mountain.

Which laſt, if it have no other Manner of Being, *i. e.* if it be repreſented ſo as it does not, or cannot be, it is what we moſt properly call *Ens rationis*.

The Generality of School Philoſophers, and the Peripateticks among the reſt, aſſert, that there are of theſe *Entia rationis objectiva*. Others deny, there are, or can be any ſuch Thing.

ENS, or *ens primum*, among the Chymiſts, is the efficacious Part of any natural mixt Body, whether Animal, Vegetable, or Foſſile; wherein, all the Qualities or Virtues of the Ingredients of the mixt, are comprehended in a little Compaſs. See ESSENCE.

*Paracelſus* pretends to have been able to ſeparate the *Ens primum* from Bodies, and with it to effect prodigious Things towards the Renovation, and Reſtoration of Youth: But his Proceſſes are ſo obſcurely deliver'd, that Nobody has been induced to try 'em.

Mr. *Boyle* gives us a Proceſs from M. *le Fevre*, whereby the *Ens primum*, or Eſſence of Balm, is eaſily obtain'd: He adds, that the Effects of an *Ens* of Balm, thus drawn, are no Ways inferior to thoſe of *Paracelſus*; and inſtances in a ſpecial Friend of his, who, upon taking it only for a Fortnight, the Nails of his Hands and Feet fell off, and were ſucceeded by a Set of new ones; Which convinced him ſo far of its Efficacy, that he left off taking it himſelf: But giving ſome of it to an old Woman of 70 Years of Age, who ſerved in the Houſe, it produced the *Menſes* again; and that ſo copiouſly, as wonderfully to ſtartle the Woman.

Upon giving a little of it to an old Hen, her Feathers began to moult on the ſixth Day, and ſhe grew ſtark naked; but ere a Fortnight was over, ſhe had others in their Room, fairer, and better colour'd than the former.

The Relation is odd enough; yet conſidering the Hands we have it from, and how eaſily the Thing is tried, 'tis much no body has yet attempted to proſecute it. The Proceſs is thus:

Having gather'd, *e. gr.* ſome Balm, or other fitting Plant, at the proper Seaſon and Time; beat it into a Pulp in a Marble Mortar, and putting it into a Bolt-Head hermetically ſeal'd, digeſt it 40 Days in a Dunghill, or other analogous Heat. This done, take out the Matter which will now be more liquid than before, and ſeparating from it the Dregs, or groſſer Parts, digeſt it anew in a gentle Bath; that the remaining groſſer Parts may alſo ſubſide: Filtrate it, and add to it the fix'd Salt, drawn from the former Dregs, dried and calcined. To the Liquor thus prepared, add equal Parts of the Liquor of good Sea-Salt well purified, and melted, and then let it run *per deliquium*. Laſtly, ſeal up the Mixture in a Bolt-Head; and expoſe it to the Sun ſix Weeks longer. At the End of which Term, the *Ens primum* of the Plant will be found ſwimming on the Liquor, in a liquid, tranſparent Form, ſometimes of a green, and ſometimes a reddiſh Colour, according to the Plant uſed.

ENS *Veneris*, or *Flower of Venus*, a chymical Preparation from Vitriol, firſt publiſhed by Mr. *Boyle*. See VITRIOL.

It is held a Specific in the Rickets, and is much commended in nervous Caſes, obſtinate Cachexies, Loſs of Appetite, and Obſtructions of all Kinds.

It is had by ſubliming equal Parts of the Powder of *Cyprus* Vitriol, (calcined till it is of a dark Colour) and of Sal Ammoniac, into the Form of yellow Flower.

It has its Name from the Particles of Copper therein, carried away from the Vitriol.

ENSCONCED. See INSCONCED.

ENSEMBLE, a *French* Term, ſometimes uſed in our Language. The Word is an Adverb, and literally ſignifies *together*, or *one with another*; being form'd of *in* and *ſimul*.

Hence, in Architecture, we ſay *the Enſemble*, or, *tout Enſemble*, of a Building, to ſignifie the whole Work, or Compoſition, conſider'd together, and not in parts; and ſometimes alſo to ſignifie the relative Proportion of the Parts to the whole. All theſe Pieces of Building make a fine *Enſemble*.

In Sculpture, we ſay, To judge well of a Work, a Statue, *&c.* one muſt firſt examine, whether the *Enſemble* be good.

In Painting, we frequently uſe the Phraſe, *tout Enſemble*: The *tout Enſemble* of a Painting, is the Harmony reſulting from the Diſtribution of the ſeveral Objects or Figures, whereof it is compoſed. This Painting is very good, taking it ſeparately: But the *tout Enſemble* is naught.

ENSIFORMIS *Cartilago*. See CARTILAGO *Enſiformis*.

ENSIGN, in the Military Art, a *Banner*, or *Colours*, under which the Soldiers are ranged, according to the different Companies, or the different Parties they are of. See BANNER.

The *Chineſe Enſigns*, are Horſes Tails: Thoſe of the *Europeans*, are Pieces of Taffaty, with divers Figures, Colours, Arms, and Deviſes. *Xenophon* tells us, that the *Enſign*, bore by the *Perſians*, was a Golden Eagle on a white Flag: The *Corinthians* bore the winged Horſe, or *Pegaſus*, in theirs: The *Athenians* an Owl: The *Meſſenians*, the *Greek* Letter M: The *Lacedemonians* the A.

The *Romans* had a great Diverſity of *Enſigns*; the Wolf, Minotaur, Horſe, Boar, and at length the Eagle, where they ſtopp'd: This they firſt aſſumed under the ſecond Year of the Conſulate of *Marius*. See EAGLE.

A Military *Enſign*, on a Medal of a *Roman* Colony, denotes it a Colony peopled with old Soldiers.

ENSIGN, is alſo uſed for an Officer in the Infantry, who bears the *Enſign*, or Colours; by the *Latins* call'd *Signifer*, and *Vexillifer*.

He has the Charge of the *Enſign* in Combats; and if he be kill'd, the Captain is to take it in his Stead. The *Enſign* is under the Command of the Lieutenant, and in his Abſence ſupplies his Poſt.

ENTABLATURE, or ENTABLAMENT, in Architecture, by *Vitruvius* and *Vignola* call'd *Ornament*, is that Part of an Order of Column which is over the Capital; comprehending the *Architrave*, *Frize*, and *Corniche*. See ARCHITRAVE, FRIZE, and CORNICHE.

The *Entablature* is alſo called the *Trabeation*: It is different in the different Orders: Indeed it conſiſts of the three grand Parts, or Diviſions above-mentioned, in all; But thoſe Parts conſiſt of a greater, or leſs Number of particular Members, or Sub-diviſions, as the Orders are more or leſs rich. See ORDER.

*Vignola* makes the *Entablature* a Quarter of the Height of the whole Column, in all the Orders. See COLUMN.

In the *Tuſcan* and *Doric*, the *Architrave*, *Frize*, and *Corniche*, are all of the ſame Height. See TUSCAN and DORIC.

In the *Ionic*, *Corinthian*, and *Compoſite*, the whole *Entablature* being 15 Parts; 5 of them are allow'd for the *Architrave*, 4 for the *Frize*, and 6 for the *Corniche*. See IONIC, CORINTHIAN, *&c.*

ENTABLATURE, or ENTABLAMENT, is alſo uſed for the laſt Row of Stones on the Top of the Wall of a Building, whereon the Timber and the Covering reſt.

The

The Word is form'd of the Latin *Tabulatum*, or *Intabulamentum*.

As it is frequently made to project beyond the Naked of the Wall to carry off the Rain, ſome Authors call it in Latin *Stillicidium*, or Drip. Such an *Entablament* does not bear far enough out: It lets the Water fall on the Foot of the Wall.

ENTAIL, in Law, ſignifies Fee Tail, or Fee *Entail'd*, i. e. abridg'd, curtail'd, or limited to certain Conditions. See FEE and TAIL.

*For the Docking of an Entail.* See DOCKING and RECOVERY.

ENTE, in Heraldry. The Term literally implies *Engrafted*; and is uſed by the foreign Heralds to expreſs a Method of Marſhalling, little known among us.

Yet we have an Inſtance of it in the fourth grand Quarter of his Majeſty's Royal Enſign; whoſe Blazon is, *Brunſwic* and *Lunenburgh* impaled with antient *Saxony*, Ente *in pointe*.

ENTELECHIA, a *Greek* Term, by which *Ariſtotle* defines *the Soul*; and which not occurring in any other Author, has given the Criticks and Philoſophers infinite Perplexity to diſcover its meaning.

*Hermolaus Barbarus*, is even ſaid to have conſulted the Devil about it; after which, in his Paraphraſe on *Themiſtius*, whether from the Devil or himſelf we know not, he renders it by *Perfectihabia*, which is not a whit the clearer.

*Cicero*, whoſe Interpretation ſhould be preferable to that of any Modern, defines *Entelechia* (*Tuſcul. q. L.* I. *C.* 1.) to be *a certain, continued, and perpetual Motion*: Whence it ſhould appear that *Ariſtotle* took the Soul for a Mode of the Body; a *continuous Motion* being doubtleſs a Mode of Body. See BODY.

The common *Peripateticks* hold *Entelechia* to ſignify *Act*; and under it, ſuppoſe the Form of the Compound, or Animal, to be underſtood: Accordingly, they define it any Act, whether Subſtantial or Accidental, conſidered as capable of performing ſome Operation in the Body.

Others of them define it to be a ſubſtantial Act, whereby a Thing is, what it is, in Subſtance.

Laſtly, others of the *Peripateticks*, and thoſe the lateſt, agree that the *Act* of *Entelechia*, whereby *Ariſtotle* meant to explain the Nature of the Soul, either ſignifies ſome Mode of the Body, as Motion, or nothing at all. And thus the *Peripatetic* Notion comes round to that of *Cicero*.

ENTENDEMENT, in Law, the true Meaning, Intent, or Signification of a Word, Sentence, Law, *&c.* See INTENDMENT.

ENTERFERING, in the Menage. See CUTTING.

ENTERRMENT, or INTERRMENT, the Act of *Interring*, i. e. of Burying, or laying a deceas'd Perſon in the Ground. See BURIAL and FUNERAL.

The Kings of *England* are *Enterr'd* at *Weſtminſter*, thoſe of *France* at *Dennis*, &c.

The Excommunicated are not to be *Enterr'd* in Holy, *i. e.* in Conſecrated Ground. The Antients did not *Inter* their Dead: They burnt them, as the *Indians* do at this Day. See BURNING.

The Cuſtom of Burning the Dead, ceas'd among the *Romans* under the Empire of the *Anthonines*; long before the Chriſtians were allow'd to *Interr* in Churches, which was even prohibited Kings and Emperors. The *Abaſſinians*, in Lieu of *Interring* their Dead, ſhut them up in the Bodies of Trees, dug hollow for this Purpoſe.

The Gardeners *Interr*, or earth up Sellery, Endive, and Lettice, to blanch, or whiten, and make them the tenderer.

To *Interr* wild Stocks in Ditches, is what *Columella* calls *deponere*, *ſeminare Scrobibus*. There are ſome Trees, as Willows, Olives, *&c.* which grow very well, by *Interring* their Truncheons, *i. e.* by cutting a Truncheon, or Piece off at both Ends, and planting it in the Ground: Which is what the *Latins* call, *Inhumare taleas*, *taleis ſerere*.

ENTEROCELE, in Medicine, a Deſcent of the Inteſtines. See DESCENT.

The *Enterocele* is a Kind of *Hernia*, or Rupture, wherein the Inteſtines, particularly the *Ilion*, fall into the Groin, or the Scrotum. See HERNIA.

The next Cauſe of the *Enterocele*, is the Relaxation, or Extenſion, of the lower Part of the *Peritonæum*, wherein the Inteſtines are contain'd: The remote Cauſes are great Lifts, too violent Exerciſes, great Coughs, frequent Vomiting, much Crying, *&c.* Whence it is that Children are much ſubject thereto.

There are two Kinds of *Enterocele*; the *Perfect*, which happens when the Inteſtine falls into the Scrotum; and the *Imperfect*, when it only falls into the Groin.

The Remedy is chiefly by External Applications, as Truſſes and Boulſters.

The Word is form'd of the *Greek*, ἔντερον, *Inteſtine*; and κήλη, *Tumor*.

ENTERO-EPIPLOCELE, a Kind of Rupture; wherein the Inteſtines, and *Epiploon*, or Caul, fall together into the Scrotum; whence the Appellation *Entero-epiplocele*. See HERNIA.

The Cauſes are the ſame as thoſe of the *Enterocele*.

ENTERO-EPIPLOMPHALUS, a Kind of *Exomphalus*, wherein the Inteſtines, and *Epiploon*, or Caul, bunch out at the Navel. See EXOMPHALUS.

The Word is compoſed of ἔντερον, *Inteſtine*, ἐπίπλοον, *Caul*, and ὀμφαλὸς, *Umbilicus*, *Navel*.

ENTERO-HYDROMPHALUS, in Medicine, a Kind of *Exomphalus*, wherein, beſide a diſplacing and bunching out of the Inteſtine, there is a deal of watery Humours collected along with it.

The Word is form'd of the *Greek*, ἔντερον, *Inteſtine*, and ὀμφαλὸς, *Navel*.

ENTEROLOGY, from ἔντερον, *inteſtinum*, a Gut; and λογία, *Sermo*, a Diſcourſe; is properly a Treatiſe of the Bowels; tho' the Word is generally underſtood to include the Contents of the three Cavities, Head, Breaſt, and Belly.

ENTEROMPHALUS, in Medicine, a Kind of *Exomphalus*, conſiſting in the Inteſtines being put out of their Place, and occaſioning a Tumor. See EXOMPHALUS.

The Word is form'd of the *Greek* ἔντερον, *Inteſtine*, and ὀμφαλὸς, *Umbilicus*.

ENTERPLEDE, in Law, to diſcuſs, or try a Point incidently falling out, before the principal Cauſe can be determined.

*E. gr.* Two Perſons being found Heirs to Land, by two ſeveral Offices in one County; the King is brought in Doubt, to which of 'em Livery ought to be made. Before Livery, therefore, they muſt *Enterplede*, that is, formally try between themſelves which is the right Heir.

ENTHUSIASM, a prophetic, or poetic Rage, or Fury, which tranſports the Mind, enflames and raiſes the Imagination, and makes it think and expreſs Things extraordinary and ſurprizing.

M. *de Piles* defines *Enthuſiaſm* to be a Tranſport of the Mind, whereby it is led to think and imagine Things in a ſublime, ſurpriſing, and yet probable Manner.

The ſublime, he thinks a neceſſary Ingredient in the Definition; as being the proper Effect and Production of *Enthuſiaſm*. *Enthuſiaſm*, he adds, contains the ſublime; as the Trunk, the Branches. See SUBLIME.

The Word is derived from the *Greek* ἔνθεος, or, ἔνθης, a Man animated in an extraordinary Manner with the Spirit of God, in whom God is, whom God animates, ἐν ᾧ Θεὸς.

Whence, the Verb ἐνθουσιάζω, or ἐνθουσιάω, and the Noun ἐνθουσιασμὸς, *Enthuſiaſm*; and ἐνθουσιαστὴς, *Enthuſiaſt*, a Perſon ſubject to *Enthuſiaſm*.

This is the *Enthuſiaſm* felt in Poetry, Oratory, Muſic, Painting, Sculpture, *&c.* But this *Enthuſiaſm* which belongs to the Works of Art, is very different from that attributed to the Sybils and Prieſteſſes of the Oracles, and Heathen Gods; which was little elſe but Fanataciſm, and conſiſted principally in Grimace, and Contorſions of the Body.

There is a Degree of Aſſent, ſays Mr. *Lock*, which, with ſome Men, has the ſame Authority, as either Faith or Reaſon; and that is *Enthuſiaſm*; which laying by Reaſon, would ſet up Revelation without it; whereby, in Effect, it takes away both Reaſon and Revelation, and ſubſtitutes in the Room of it, the ungrounded Fancies of a Man's own Brain, and aſſumes them for a Foundation both of Opinion and Conduct.

Immediate Revelation being a much eaſier Way for Men to eſtabliſh their Opinions, and regulate their Conduct by, than the tedious Labour of ſtrict Reaſoning; it is no Wonder, that ſome have been very apt to pretend to it, eſpecially in ſuch of their Actions and Opinions, as they cannot account for by the ordinary Methods of Knowledge, and Principles of Reaſon.

Hence we ſee, that in all Ages, Men, in whom Melancholy has mixed with Devotion, or whoſe Conceit of themſelves, has raiſed them into an Opinion of a greater Familiarity with God, than is allowed others; have often flattered themſelves with the Perſwaſion of an immediate Intercourſe with the Deity, and frequent Communications from the Divine Spirit.

Their Minds being thus prepared, whatever groundleſs Opinion comes to ſettle it ſelf ſtrongly upon their Fancies, is an Illumination from the Spirit of God; and whatſoever odd Action they find in themſelves an Inclination to

do,

do, that Impulſe is concluded to be a Call, or Direction, from Heaven, and muſt be obeyed. See INSPIRATION.

This we take to be properly *Enthuſiaſm*, which, tho' riſing from the Conceit of a warm, or over-weaning Brain, works, where it once gets Footing, more powerfully on the Perſwaſions and Actions of Men, than either Reaſon, or Revelation, or both together; Men being moſt forwardly obedient to the Impulſes they receive from themſelves.

When Men are once got into this Way of immediate Revelation, of Illumination without Search, and Certainty without Proof, Reaſon is loſt upon 'em; They are above it: They ſee the Light infuſed into their Underſtandings, and they cannot be miſtaken; like the Light of bright Sun-ſhine, it ſhews it ſelf, and needs no other Proof but its own Evidence: They feel the Hand of God moving them within, and the Impulſes of the Spirit, and cannot be miſtaken in what they feel. But of this Seeing and Feeling, is it a Perception of an Inclination to do ſomething, or of the Spirit of God moving that Inclination? Theſe are two very different Perceptions, and ſhou'd be carefully diſtinguiſhed. See REVELATION.

If they know the Thing to be a Truth, they muſt do it, either by its own Self-Evidence, or by the rational Proofs that make it out to be ſo: If they know it to be a Truth, either of theſe two Ways, they in vain ſuppoſe it to be a Revelation: For thus all Truths, of what Kind ſoever, that Men uninſpired, are enlightned with, come into their Minds. If they ſay, they know it to be true, becauſe it is a Revelation from God, the Reaſon is good; but then it will be demanded, how they know it to be a Revelation from God? If they ſay, by the Light it brings with it; they ſhonld conſider, whether this be ſaying any more, than that it is a Revelation, becauſe they believe it to be true; for all the Light they ſpeak of, is but a ſtrong Perſwaſion of their own Minds, that it is a Truth; which is a very unſafe Ground to proceed on, either in our Tenets or Actions. True Light in the Mind, is nothing elſe but the Evidence of the Truth of any Propoſition: And, if it be not ſelf-evident, all the Light it can have, is from the Clearneſs of thoſe Proofs upon which it is received. See EVIDENCE.

God, when he makes the Prophet, doth not unmake the Man: He leaves his Faculties in their natural State, to enable him to judge of his Inſpirations, whether they be of divine Original, or no. If he would have us aſſent to the Truth of any Propoſition, he either evidences that Truth by the uſual Methods of natural Reaſon, or elſe makes it known to be a Truth which he would have us aſſent to by his Authority; and convinces us, that it is from him, by ſome Marks, which Reaſon cannot be miſtaken in.

The Holy Men of God, who had Revelations from God, had ſomething elſe beſides internal Light of Aſſurance in their own Minds, to teſtifie to them, that it was from God. They had outward Signs to convince them, of the Author of thoſe Revelations. And when they were to convince others, they had a Power given them to juſtifie the Truth of their Commiſſion from Heaven; and by viſible Signs to aſſert the divine Authority of the Meſſage they were ſent with. *Moſes* ſaw the Buſh burn without being conſumed, and heard a Voice out of it. God, by another Miracle, of his Rod turn'd into a Serpent, aſſured him likewiſe of a Power to teſtifie his Miſſion, by the ſame Miracle repeated before them to whom he was ſent. See MIRACLE.

ENTHUSIAST, literally ſignifies a Perſon addicted to *Enthuſiaſm*. But the Word is uſually underſtood in an ill Senſe.

It was applied by the Antients, to a Sect of Hereticks, call'd alſo *Maſſalians* and *Euchites*; who, as *Theodoret* expreſſes it, were denominated *Enthuſiaſts*, by reaſon that being poſſeſſed by the Devil, they believed themſelves divinely inſpired. See MASSALIANS.

Among us, *Enthuſiaſt* is of the like Import with *Fanatic*; and is applied to the Quakers, the antient Anabaptiſts, and modern Prophets, from their Pretences to extraordinary Lights, Revelations, Viſions, Impulſes, *&c.* from Heaven. See QUAKER, ANABAPTIST, *&c.*

ENTHYMEME, in Logic, an Argument conſiſting only of two Propoſitions, an Antecedent, and a Conſequent deduced from it. See ARGUMENT.

*Ariſtotle* calls it, the *Rhetorical*, or *probable Argument*; and the Schools, alſo, the *imperfect Syllogiſm*, in Contradiſtinction to the perfect, which conſiſts of three Propoſitions, and is call'd the *dialectical Argument*. See SYLLOGISM.

It muſt be obſerved, however, that the *Enthymeme* is really a perfect Syllogiſm in the Mind, and only imperfect in the Expreſſion, by reaſon one of the Premiſſes is ſuppreſs'd, as being too clear and obvious, and eaſily ſupplied by the Underſtanding of thoſe with whom we diſcourſe.

Thus, *In every right lined Triangle, the three Angles are equal to two right ones; and conſequently, 'tis ſo in an Iſoſceles:* Is an *Enthymeme*; the Propoſition that *an Iſoſceles is a right lined Triangle*, being omitted, as being ſufficiently known and granted.

The *Enthymeme* is the moſt ſimple and elegant of all Argumentations, being what a Man, in arguing cloſely, commonly makes, without attending at all to the Form thereof. Thus, that Verſe remaining of *Ovid*'s Tragedy, entitled, *Medea*, contains an *Enthymeme*: *Servare potui, perdere an poſſim rogas?* I was able to ſave you; conſequently, Cou'd have deſtroy'd you. All the Beauty wou'd have been loſt, had all the Propoſitions been expreſs'd; the Mind being diſpleas'd with a Rehearſal of what is no ways neceſſary.

Sometimes, alſo, the two Propoſitions of an *Enthymeme*, are both included in a ſingle Propoſition; which *Ariſtotle* calls, an *Enthymematical Sentence*; and gives this Inſtance thereof, *Mortal do not bear an Immortal Hatred.* The whole *Enthymeme* wou'd be, *Thou art Mortal, let not, therefore, thy Hatred be Immortal.*

The Word is derived from the *Greek*, ἐνθύμημα, of the Verb ἐνθυμεῖσθαι, *to think, conceive*, which is a Compound of ἐν and θυμὸς, *in the Mind.*

ENTIRE *Tenancy*, in Law, is contra-diſtinguiſhed to *ſeveral Tenancy*; and ſignifies a ſole Poſſeſſion in one Man; whereas the other denotes a joynt, or common one, in ſeveral. See TENANT.

ENTITATIVELY, *Entitativè*, implies an Abſtraction, or Retrenchment, of all the Circumſtances, from a Thing under Conſideration. Thus, a Thing is ſaid to be taken, or conſider'd, *Entitatively*, or *ſecundum Entitatem*, when conſider'd nakedly and preciſely, according to what it is in it ſelf, without any Thing extrinſic. See ABSTRACTION.

*E. gr. Peter, Entitively* taken, is *Peter*, as a Thing, a Subſtance, a Body, *&c.* without any Regard to his being a Lord, a Husband, Learned, *&c.*

ENTITY, in the School Philoſophy, a phyſical *Ens*, or Being, conſider'd according to what it is in its phyſical Capacity. See ENS.

Some Dealers in Diſtinction, give us ſeveral Kinds of *Entities*. In its proper Senſe, they apply it to a Multitude of diſſimilar Parts; ſuch is the *Entity* of a Houſe, of the World, *&c.* In a more limited Senſe, they apply it to a Multitude of ſimilar Parts, ſuch is the *Entity* of Water, Heat, *&c.* And, in its general Senſe, to any Reality, as the *Entity* of God, of Angels, *&c.*

But this is mere Subtlety; perhaps *Entity* were beſt defined the Actual Eſſence, or Exiſtence, of any thinking Thing. See ESSENCE.

ENTOYER, or ENTOIRE, in Heraldry, is uſed to expreſs a Bordure, charged entirely with Things without Life. See BORDURE.

ENTRAILS, the Inteſtines, or Guts, of an Animal. See INTESTINES.

Poiſon leaves its chief Marks in the Entrails. See POISON.

In Embalming they take out the Entrails. See EMBALMING.

*Menage* derives the Word from the Latin *Enteralia*, form'd of the *Greek*, ἔντερον, *Inteſtine.*

ENTRAILS, is alſo uſed, in a more general Senſe, for the *Viſcera*, or all the Parts contain'd in the Bodies of Animals. See VISCERA.

The *Aruſpicina* of the Antients, was employ'd in conſidering the *Entrails* of Victims, as the Heart, Lungs, Liver, *&c.*

ENTRY, or ENTRANCE, in its general Senſe, a Door, Gate, Paſſage, *&c.* thro' which to *Enter*, or arrive within a Place. See DOOR, GATE, *&c.*

ENTRY, in Book-keeping. See BOOK-KEEPING.

ENTRY, in Commerce, a Duty, or Impoſt, laid on Commodities imported into a State, either by Land or Sea.

The Duties of *Entry*, are paid according to a Tariff ſettled for that Purpoſe. Where the Duty of *Entry* of any Commodity, is not fix'd by the Tariff; it is paid by Eſtimation, *i. e.* in Proportion to what ſome other Commodity, of nearly the ſame Quality and Value, uſes to pay. See DUTY, IMPORTATION, EXPORTATION.

ENTRY, is alſo a ſolemn Reception, or Ceremony perform'd by Kings, Princes, Embaſſadors, Legates, *&c.* upon their firſt *Entering* a City, or upon their Return from ſome Triumph and Expedition.

ENTRY, in Law, ſignifies the taking Poſſeſſion of Lands, or Tenements. See POSSESSION.

*Entry* is alſo uſed for a Writ of Poſſeſſion. See INGRESSU.

The *Writs of Entry*, ſays *Briton*, favour much of the Right of Property. Some, *e. gr.* are to recover Cuſtoms, and Services; and in theſe are contain'd the two Words, *ſolet* and *debet*: Such are the Writs *Quo jure, Rationabilibus Diviſis, Rationabili Eſſoverio*, &c.

In the Plea of *Entry* there are three Degrees: First, where a Man demandeth Lands or Tenements, of his own Seiſin, after the Term is expired. The Second is, where one demandeth Lands or Tenements, let by another after the Term is expired. The Third, where one demandeth Lands or Tenements of that Tenant, who had Entry by one, to whom ſome Anceſtor of the Plaintiff did let for a Term now expired; according to which Degrees, the Writs for Remedy are varied

Beſide which, there is a fourth Form, without Degrees, and in Caſe of a more remote Seiſin, to which the other three Degrees do not extend. The Writ in the ſecond Degree, is call'd a *Writ of Entry in le per:* In the third, *In le per & cui:* And in the fourth, without Degrees, a *Writ of Entry in le poſt*; that is, after Diſſeiſin, made by ſuch a one to ſuch a one. And if a *Writ of Entry* be conceiv'd out of the right Cauſe, ſo that one Form is brought for another, it is abatable. In theſe four Degrees are comprehended all Manner of Writs of *Entry*, which are without Certainty and Number.

A *Writ of Entry* differeth from an Aſſize, becauſe it lieth for the moſt Part againſt him who enter'd lawfully, but holdeth againſt Law; whereas an Aſſize lieth againſt him, who unlawfully diſſeized: Yet, ſometimes, a *Writ of Entry* lieth upon an Entruſion. See Assize.

ENTRIES, amongſt Hunters, are thoſe Places, or Thickets, thro' which Deer are found lately to have paſſed; by which Means their Bigneſs or Size is gueſſed at, and then the Hounds, or Beagles, are put to them for the View.

ENTRUSION, or INTRUSION, in Law, a violent, or unlawful Entrance into Lands, or Tenements, void of a Poſſeſſor; by a Perſon who has no Right to them.

*E. gr.* When a Man ſteps into Lands, the Owner whereof lately died, e're the right Heir, either by himſelf, or any other, hath taken Poſſeſſion, it is Intruſion.

*Intruſion* and Abatement, are ſometimes taken for the ſame Thing: Tho' there is a Difference. See Abatement. See alſo Disseisin.

ENVELOPE, in Fortification, is a Mount of Earth, ſometimes raiſed in the Ditch of a Place, and ſometimes beyond it; being either in Form of a ſimple Parapet, or of a ſmall Rampart border'd with a Parapet.

Theſe *Envelopes* are made, where one would only cover the weak Places with ſingle Lines; without any Deſign of advancing towards the Field, which cannot be done but by Works which require a great deal of Breadth; ſuch as Horn-Works, Half-Moons, *&c.*

Theſe *Envelopes* are ſometimes called *Sillons, Contregards, Conſerves, Lunettes*, &c.

ENVIRONNE, in the *French* Heraldry, is when a Lion, or other Figure, is *Environ'd*, or encompaſs'd round with other Thing.

*Environne* with ſo many *Bezants*, &c. *in Orle.*

ENUMERATION, *Numbering*, a particular Account, or Detail of ſeveral Things. See Numeration.

God deſſies *Abraham*, in Scripture, to *Enumerate* the Stars: At the Time of our Saviour's Birth, *Auguſtus Cæſar* had commanded an *Enumeration* to be made of all the World, or rather of all the People under his Empire. Tho' ſeveral able Authors are of Opinion that the Cenſus, Tax, or *Enumeration*, mention'd by St. *Luke*, did not extend to the whole Empire, but only to the People of *Judea.* See *Perizonius de Cenſu Judaico:* And *Berger de Viis Militaribus.*

At *Rome*, it was an uſual Thing to have an *Enumeration* of all the Families: The firſt was under *Servius Tullius*, when the Men amounted to 80 Thouſand. *Pompey*, and *Craſſus*, made another when they reach'd to 400 Thouſand. That of *Cæſar* did not exceed 100 Thouſand: So that the Civil Wars muſt have deſtroy'd 300 Thouſand *Roman* Citizens. Under *Auguſtus*, in the Year 725, the *Roman* Citizens, throughout the Empire, were number'd at 4 Million 63 Thouſand. In the Year of *Rome* 746, the Citizens being number'd again, were found 4 Millions, 2 Hundred 33 Thouſand. In the Year 766, being the laſt Year of *Auguſtus*'s Reign, that Prince, together with *Tiberius*, made another *Enumeration* of the Citizens of *Rome*, when they were found 4 Millions 137 Thouſand Perſons. *Claudius* made a new Computation, in the Year of Chriſt 48, when, as *Tacitus* relates it, the *Roman* Citizens throughout the whole Empire, amounted to 6 Millions 964 Thouſand; tho' others repreſent the Number as conſiderably greater.

A very curious, rare, yet indiſputable Medal of *Claudius*, never yet made public, expreſſes the preciſe Number in this Liſt made by *Claudius*, which was call'd *Oſtenſio*, to be 7 Millions of People fit to bear Arms, beſide all the Soldiers on Foot in the Armies, which amounted to 50 Legions, 57 Cohorts, and 60 Soldiers.

After this *Enumeration* we find no more till that of *Veſpaſian*, which was the laſt.

Enumeration, in Rhetoric, a Part of the Peroration, wherein the Orator, collecting the ſcatter'd Heads of what has been delivered throughout the whole, makes a brief, and artful Rehearſal, or Recapitulation thereof. See Peroration.

Enumeration *of the Parts*, in Rhetoric, is what we more uſually call *Diſtribution.* See Distribution.

ENUNCIATION, a ſimple Expreſſion, or Declaration of a Thing, in Terms either of Affirmation, or Denial.

The Schoolmen uſually diſtinguiſh three Operations of the Underſtanding, Apprehenſion, *Enunciation*, and Reaſoning. See Mind, Operation, *&c.*

Enunciation, among the Logicians, is the ſame as a *Propoſition.* See Proposition.

ENVOICE. See Invoice.

ENVOY, a Perſon deputed, or ſent purpoſely to negotiate ſome particular Affair with a foreign Prince, or Republic. See Minister.

Thoſe ſent from the Courts of *England, France*, &c. to *Genoa*, the Princes of *Germany*, and other petty Princes and States, don't go in Quality of Embaſſadors, but of *Envoys.*

Add, that thoſe ſent from one great Prince, or State, to another; as from the King of *England* to the Emperor, *&c.* When the Affair they go upon is not very ſolemn and important, have frequently no other Character but that of *Envoys.* See Embassador.

*Envoys* are either *Ordinary*, or *Extraordinary.* See Extraordinary, *&c.*

Both Kinds enjoy the Protection of the Law of Nations, and all the Privileges of Embaſſadors; only differing from them in this, that the ſame Ceremonies are not perform'd to them.

The Quality of *Envoy* Extraordinary, *Wicquefort* obſerves, is very modern; more modern than that of Reſident: The Miniſters inveſted therewith, at firſt, took on them moſt of the Airs of Embaſſadors; but they have ſince been taught otherwiſe.

In the Year 1639, the Court of *France* made a Declaration, that the Ceremonies of conducting *Envoys* Extraordinary to their Audience in the Kings and Queen's Coaches, with divers others, ſhould no longer be practiſed to *Envoys.*

S. *Juſtiniani*, the firſt *Envoy* Extraordinary from *Venice*, after that Regulation offer'd to cover, in ſpeaking to the King; but it was refuſed him. And the King of *France* himſelf declared, that he did not expect his *Envoy* Extraordinary at the Court of *Vienna*, ſhould be regarded any otherwiſe than as an ordinary Reſident. Since which Time, thoſe two Kinds of Miniſters have been treated alike. *Wicquefort.*

ENURNY, is the Herald's Term, for a Bordure of a Coat of Arms being charged with any Kind of Beaſts.

ENVY. See Pleasure and Pain.

EOLIC, or, more properly, ÆOLIC, in Grammar, is a Dialect of the *Greek* Language. See Æolic and Dialect.

Eolic, in Muſic, one of the Modes of the antient Muſic. See Mode.

The *Æolic* Mode was found fitteſt for *Lyric* Verſes; as having a peculiar Sweetneſs and Gravity. It was the Sol of *G re Sol ut.*

The *Sub-Æolic*, or *Hypo-Æolic*, had the ſame Effects with the *Æolic.* It was the *re* of *de Sol re*; and began a Diateſſaron lower than its natural authentic Mode.

EOLIPILE, in Hydraulicks. See Æolipile.

EON, or ÆON, a *Greek* Term, ſignifying *Seculum*, Age; attributed by *Valentine*, a *Hereſiarch* of the IId Century, to his God, and all the Productions thereof. See Æon.

*Valentine*, refining on thoſe who had preceded him in this Way, produced a long Genealogy of a Number of *Æons*, or *Æones:* The firſt, and moſt perfect, he particularly denominates Προών, *Proon*, that is, *pre-exiſtent*; beſide other Names, the moſt uſual whereof was that of *Bythos*, Βύθος, *Depth.*

This *Bythos* continued long alone with Ἔννοια, *Ennœa*, Thought; whom *Valentinus* alſo call'd Χάεις, *Grace*, and Σιγή, *Silence.* At length, *Bythos* with *Sige*, produced *Nous*, Νοῦς, *Underſtanding*, and Ἀλήθεια, *Truth*, her Siſter. *Nous* begot two *Eons*; *Logos*, Λόγος, *Word*, and *Zoe*, Ζωή, *Life:* Which two begot two others, *Anthropos*, Ἄνθρωπος, *Man*, and Ἐκκλησία, *Church.* And theſe eight *Æons* were the Chief of all the reſt.

The *Word*, Λόγος, and *Life*, Ζωή, begot ten other *Æons: Man* and the *Church* begot twelve more; among whom were the *Paraclete*, *Faith*, *Hope*, *Charity*, the *Perfect*, Τέλετος, and *Wiſdom*, Σοφία. And thus were the 30 *Æons* made up, which all together made the *Pleroma*, Πλήρωμα, or ſpiritual and inviſible *Plenitude.*

Theſe

Theſe 30 *Eons*, the *Valentinians* hold to have been figured by the thirty Years of our Saviour's private Life. See VALENTINIAN.

EPACTS, in Chronology, the Exceſſes of the Solar Month above the Lunar Synodical Month; and of the Solar Year above the Lunar Year, or 12 Synodical Months: Or of ſeveral Solar Months, above as many Synodical Months; and ſeveral Solar Years above as many Dozens of Synodical Months.

Whence, the *Epacts* are either *Annual* or *Menſtrual*.

*Menſtrual* EPACTS, are the Exceſſes of the Civil, or Calendar Month, above the Lunar Month. See MONTH.

Suppoſe, *e. gr.* it were New Moon on the firſt Day of *January*: Since the Lunar Month is 29 Days $12^h\ 44'\ 3''$; and the Month of *January* contains 31 Days: The Menſtrual *Epact* is 1 Day $11^h\ 15'\ 57''$.

*Annual* EPACTS, are the Exceſſes of the Solar Year above the Lunar. See YEAR.

Hence, as the *Julian* Year is 365 Days 6 Hours, and the *Julian* Lunar Year 354 Days $8^h\ 48'\ 38''$; the annual *Epact* will be 10 Days $12^h\ 11'\ 22''$; that is, nearly, 11 Days. Conſequently, the *Epact* of 2 Years, is 22 Days; of 3 Years, 33 Days; or rather 3, ſince 30 Days make an *Emboliſmic*, or Intercalary Month. See EMBOLISMIC.

Thus, the *Epact* of 4 Years are 14 Days, and ſo of the reſt: And thus, every 19th Year, the *Epact* becomes 30 or 0; conſequently the 20th Year the *Epact* is 11 again: And ſo the Cycle of *Epacts*, expires with the Golden Number, or Lunar Cycle of 19 Years, and begins again with the ſame, as in the following Table.

| *Gold. Numb.* | *Epacts.* | *Gold. Numb.* | *Epacts.* | *Gold. Numb.* | *Epacts.* |
|---|---|---|---|---|---|
| 1 | XI | 7 | XVII | 13 | XXIII |
| 2 | XXII | 8 | XXVIII | 14 | IV |
| 3 | III | 9 | IX | 15 | XV |
| 4 | XIV | 10 | XX | 16 | XXVI |
| 5 | XXV | 11 | I | 17 | VIII |
| 6 | VI | 12 | XII | 18 | XIX |
| | | | | 19 | XXX |

Again, as the New Moons are the ſame, that is, fall on the ſame Day every 19 Years, ſo the Difference between the Lunar and Solar Year, is the ſame every 19 Years. And becauſe the ſaid Difference is always to be added to the Lunar Year, in Order to adjuſt, or make it equal to the Solar Year; hence the ſaid Difference reſpectirely belonging to each Year of the Moon's Cycle, is called the *Epact of the ſaid Year*, that is, the Number to be added to the ſaid Year to make it equal to the Solar Year; The Word being form'd from the *Greek*, επαγω, *induco*, *intercalo*.

Upon this mutual Reſpect, between the Cycle of the Moon, and the Cycle of the *Epacts*, is founded this Rule for finding the *Epact* belonging to any Year of the Moon's Cycle. Multiply the Year given of the Moon's Cycle into 11; if the Product be leſs than 30, it is the *Epact* ſought; if the Product be greater than 30, divide it by 30, and the Remainder of the Dividend is the *Epact*: For Inſtance, I would know the *Epact* for the Year 1712, which is the third Year of the Moon's Cycle. Wherefore 3 is the *Epact* for 1712: For $11 \times 3 = 33$, and 33 being divided by 30, there is left 3 of the Dividend for the *Epact*. See CYCLE.

By Help of the *Epact* may be found what Day of any Month in any Year the New Moon falls on, thus: To the Number of the Month, from *March* incluſively, add the *Epact* of the Year given; if the Sum be leſs than 30, ſubſtract it out of 30; if greater, ſubſtract it out of 60; and the Remainder will be the Day, whereon the New Moon will fall.

If the New Moon be ſought for in the Month of *January* or *March*, then nothing is to be added to the *Epact*; if for *February* or *April*, then only 1 is to be added.

For Example: I would know what Day of *December* the New Moon was on *A. D.* 1711, the *Epact* whereof is 22. By the aforeſaid Rule, I find it will be *December* the 28th; for $22 + 10 = 32$, and $60 - 32 = 28$. See MOON.

The Day whereon the New Moon falls, being thus found, it is eaſy to infer from thence what the Age of the Moon is on any Day given.

However, there is a peculiar Rule commonly made uſe of to this Purpoſe, which is this: Add the *Epact* of the Year, the Number of the Month, from *March* incluſively, and the given Day of the Month all into one Sum, which if it be leſs than 30, ſhews the Age of the Moon; if it be greater than 30, divide it by 30, and the Remainder of the Dividend ſhews the Age of the Moon, or how many Days it is from the laſt New Moon: This Method will never err a whole Day.

For Inſtance: What was the Age of the Moon on *December* 31ſt, *A. D.* 1711? By this Rule, I find, that the Moon will then be three Days old; that is, it will then be three Days from the laſt new Moon. For, $22 + 10 + 31 = 63$, and 63 being divided by 30, there will remain of the Dividend, 3. And this exactly agrees to the other foregoing Rule, whereby it was found that the New Moon was on *December* 28. 1711.

It muſt be obſerved, that as the Cycle of 19 Years, anticipates the new Moons by one Day in 312 Years; the ſame Cycle of *Epacts* will not always hold: The Moon's Anticipation leſſening the ſeveral *Epacts* by one, every 312 Years.

To have the *Epacts*, therefore, point out the New Moons perpetually; that *Epact* given in the Calendar is not ſufficient; but all the 30 *Epacts* ſhould be beſtowed throughout the whole Year, that the Calendar may exhibit all the Cycles of *Epacts*. See CALENDAR.

And, again, that as in 300 *Gregorian* Years, there is one Biſſextile Year dropp'd; the New Moons are thus thrown on the following Day. Conſequently, by the Moon's poſt-poſition there is one added to every *Epact*. See GREGORIAN.

EPANORTHOSIS, in Rhetoric, a Figure, whereby the Orator revokes and corrects ſomething before alledg'd, as too weak; and adds ſomething ſtronger, and more conformable to the Paſſion he is agitated by. See CORRECTION.

Such, *e. gr*, is that of *Cicero* for *Cœlius*: *O Stultitia! Stultitiam ne dicam*, an *Impudentiam Singularem*. Oh Folly! Folly ſhall I call it, or rather intolerable Impudence? And in the firſt *Catalinarian*: *Quamquam quid loquor! Te ut ulla res frangat? Tu ut unquam te corrigas? Tu ut ullam fugam meditere? Tu ut ullum exilium cogites? Utinam tibi iſtam Mentem Dii Immortales donarent.*

Thus alſo *Terence*, in the *Heautontimorumenos*, introduces his old Man *Mendemus*, ſaying,

*Filium Unicum Adoleſcentulum*
*Habeo. Ah! quid dixi habere me? Imo habui, Chreme,*
*Nunc habeam nec ne, incertum eſt.*

The Word is *Greek*, επανόρθωσις, form'd of ὀρθός, *Right*, *Straight*, whence ὀρθόω, *I ſtraighten*, ανορθόω, επανορθόω, *I redreſs*, *ſtraighten*, *correct*, and ἐπανόρθωσις, *Correction*. The *Latins* call it *Correctio*, and *Emendatio*.

EPAULE, or ESPAULE, in Fortification, the *Shoulder* of the Baſtion; or the Angle made by the Face and Flank; whence that Angle is often called the *Angle of the Epaule*. See BASTION and SHOULDER.

The Word is pure *French*, and literally ſignifies *Shoulder*.

EPAULEMENT, in Fortification, a Side-Work haſtily thrown up, to cover the Canon, or the Men.

It is made either of Earth thrown up, of Bags of Earth, Gabions, or of Faſcines and Earth, of which latter make, the *Epaulements* of the Places of Arms, for the Cavalry, behind the Trenches are.

EPAULEMENT, is alſo uſed for a Demi-Baſtion, conſiſting of a Face and Flank, placed at the Point of a Horn- or Crown-Work. Alſo, for a little Flank, added to the Sides of Horn-Work, to defend them when too long. Alſo for the Redoubts made on a right Line, to fortifie it. And, laſtly, for a Square Orillon, which is a Maſs of Earth almoſt ſquare, faced and lined with a Wall, and deſigned to cover the Canon of a Caſement.

EPENTHESIS, in Grammar, the Addition, or Inſertion of a Letter, whether a Vowel, or Conſonant, in the Middle of a Word; as *Relligio* for *Religio*. See FIGURE.

The Word is *Greek*, επένθεσις, form'd of ἐπὶ, ἐν, and τίθημι, *q. d.* επεντίθημι, *infero*, *immitto*.

EPHA, a dry Meaſure in Uſe among the *Hebrews*. See MEASURE.

The *Epha* was the moſt ordinary Meaſure they uſed; and that whereby the reſt were regulated. 'Tis commonly ſuppoſed that the *Epha*, reduced to *Roman Modius*, contain'd four *Modii* and a half. Now the *Roman Modius* of Grains, or Flower, contain'd 20 *Libræ*, or Pounds; conſequently the *Epha* weigh'd 90 Pounds. Dr. *Arbuthnot* reduces the *Epha* to 3 Pecks, 3 Pints, *Engl.*

The Hoſpitality of *Gideon* is prais'd for baking an *Epha* of Flower for a ſingle Angel. Which might have ſerved 45 Men a whole Day; the uſual Portion allow'd the Workmen being two Pound of Bread *per Diem*.

EPHEMERA, in Medicine, an Epithet applied to ſomething that only laſts one Day; particularly to a *Fever*, which terminates in the Compaſs of a Day, *i. e.* to an Acceſs of a Fever which returns no more, called by *Galen*, ἐφήμερος πυρετὸς, *Febris Ephemera*, and alſo *Diaria*. See FEVER.

The

The Word, and the following one, *Ephemerides*, are form'd of the Prepoſition ἐπὶ, *de, ſuper, apud, ob, in, præter*, in *Engliſh*, of, on, at, for, in, by, near; and ἡμέρα, *Dies*, Day.

EPHEMERA, or EPHEMERON, in Natural Hiſtory, an Animal that only lives five Hours: Within the Term whereof it is born, grows, and extends its Members, appears young, breeds Eggs, caſts Seed, grows old, and dies.

*Ariſtotle*, who gives the firſt Account thereof, in his Book *de Animal.* gave it the Name ἐφήμερον, becauſe its Life was bounded within the Day. *Aldrovandus*, *Jonſton* and *Cluſius*, furniſh us Accounts of the *Ephemeron*; and above all, *Swammerdam*, in an expreſs Work *de Ephem. Vitæ*.

He calls it *Ephemera*, *Hemerobios*, and in Latin *Diaria*.

The *Ephemeron* is of the winged, or fly Kind; and appears uſually about St. *John*'s Tide. It is born about Six a Clock in the Evening, and dies about Eleven.

It muſt be obſerved, however, that e're it aſſumes this Figure, it has lived three Years under that of a Worm, in a clay Cell, or Caſe.

It never eats from the Time of its Change to its Death; nor is it furniſh'd with the Parts neceſſary for the Reception and Concoction of Food. Its Change ſeems intended merely for the Sake of Generating and Multiplying its Kind.

Its Life is ſumm'd up in a few Words. In the Beginning, it ſheds his clay Coat; which done, and the poor little Animal thereby render'd light and agile, it ſpends the reſt of its ſhort Life in friſking over the Waters. During which, the Female drops her Egg on the Waters, and the Male his Sperm on them, to impregnate them. Theſe Eggs, thus impregnated, deſcend to the Bottom of the Water by their own Gravity, and are hatch'd by the Warmth of the Sun into little Worms, which make themſelves Caſes in the Clay, and feed on the ſame without any Need of parental Care: Till the Time of their Change, or Metempſychoſis come.

EPHEMERA, is alſo applied among Botaniſts, to a Kind of Flowers, which open, and expand themſelves at Sun-Riſing, and wither and fade away again at his Setting. Such are the *Dent de lion*, vulgarly Dandelion, and divers others.

The Travellers into *Arabia* tell us of ſeveral *Ephemeron Trees*, which grow every Day, from Morn to Noon, and then diſappear; tho' 'tis not known, whether they wither away entirely, or ſink back into the Sands among which they grow.

EPHEMERIDES, or EPHEMERIS, in Aſtronomy, Tables calculated by Aſtronomers, ſhewing the preſent State of the Heavens for every Day, at Noon; that is, the Places wherein all the Planets are found, at that Time. See PLANET, PLACE, and TABLE.

'Tis from theſe Tables, that the Eclipſes, Conjunctions, and Aſpects of the Planets, are determined; Horoſcopes, or Celeſtial Schemes conſtructed, &c. See CALENDAR.

The *Ephemerides* of *Origan*, *Kepler*, *Argoli*, *Heckerus*, *Mezzaracchis*, *Wing*, *de la Hire*, *Parker*, &c.

Sig. *Caſſini* has made *Ephemerides* of the *Sidera Medicæa*, or *Satellites* of *Jupiter*, which are of good Uſe in determining the Longitude. See SATELLITE, ECLIPSE.

EPHETA, in Antiquity, a Magiſtrate among the *Athenians*.

The *Ephetæ* were inſtituted by King *Demophon*, to take Cognizance of Murthers committed by Accident: Their Number was 100, whereof 50 were *Athenians*, and 50 *Argians*. They were not admitted to the Poſt till upwards of 60 Years of Age.

*Draco* extended their Authority. *Ubo Emmius*, *de Rep. Athen.* ſays, he transferr'd Part of the Juriſdiction of the *Areopagites* upon 'em.

EPHIALTES, in Medicine, a Diſeaſe, by the *Engliſh* call'd the *Night-Mare*, and the Latins *Incubus*; chiefly affecting Perſons aſleep, when laid on their Back, and having the Stomach loaded with Food of difficult Digeſtion. See INCUBUS.

In this State they are oppreſs'd, as it were, with a huge Weight on the Breaſt, and imagine ſome Spectre, or Demon, ſtopping their Breath.

This Diſeaſe does not ariſe, as was antiently imagined, from groſs Vapours filling the Ventricles of the Brain: But rather from a too great Repletion of the Stomach, which hinders the Motion of the Diaphragm, and of Conſequence, the Dilatation of the Breaſt neceſſary for Inſpiration. See RESPIRATION.

*Etmuller* obſerves, that they are but rarely affected with this Diſorder who uſe a laudable Diet, and ſup ſparingly: lying on the Side, with the Head pretty high, generally prevents it.

The *Arabs* call it, the *Nocturnal Epilepſy*, becauſe, when habitual, it uſually degenerates into the Epilepſy, being the uſual Forerunner thereof, eſpecially in young People. In old, it frequently terminates in an Apoplexy. See EPILEPSY, &c.

*Menjoitius* accounts for its being moſt uſual in Boys, from their being too voracious, and eating more than they can digeſt. *Aurelianus* aſſures us, it has kill'd ſeveral; adding from *Silimachus*, that there was a contagious, or epidemic *Incubus* at *Rome*, which over-run Numbers like a Plague.

EPHIPPIUM, in Anatomy, a Part of the *Sphenoides*, call'd alſo *Sella Equina*, and *Sella Turcica*. See SELLA *Equina*.

EPHOD, a Sacerdotal Garment, in Uſe among the antient *Jews*.

The *Ephod* is ſuppoſed to have been a Kind of Linnen Alb, or Surplice, by the *Latins* call'd *Super-humerale*: But 'tis very hard to ſay preciſely what it was; And there is Room enough for the Interpreters to be divided about it.

The only Point they are agreed upon is, that it was an upper Garment wore over all the reſt, immediately under the Pectoral, or Breaſt-plate. Some hold it had Sleeves; others deny it. The Generality agree it was very ſhort, tho' ſome hold, that it hung down to the Feet behind.

There were two Kinds of *Ephods*; the one, common to all who aſſiſted in the Temple; being only made of common Linnen, mention'd in the I*ſt* Book of *Samuel*, ii. 18. The other, peculiar to the High-Prieſt, mention'd *Exod.* xxviii. 6, 15. to be made of Gold, of blue, and of Purple, of Scarlet, and fine twined Linnen, with cunning Work; Having two Shoulder Pieces, with a curious Girdle of the ſame Matter, whereon were two Onyx's, with the Names of the Children of *Iſrael* engraven thereon.

It is alſo expreſs'd, in the II*d* Book of *Samuel*, vi. 14. that upon the Removal of the Ark of the Covenant from the Houſe of *Obed Edom*, that Prince danced for Joy, girded with a Linnen *Ephod*; whence ſome Authors have concluded, that the *Ephod* was alſo a Regal Garment on ſolemn Occaſions.

The Word אפד *Ephod*, is derived from אפד *Aphad*, a *Hebrew* Word, ſignifying *to cloath*.

EPHORI, Magiſtrates eſtabliſhed in ancient *Sparta*, to balance, and check the Power and Authority of the Kings; as, at *Rome*, there were Tribunes created to controul the Power of the Conſuls. See TRIBUNE.

*Lycurgus*, being ſenſible that a perfect Underſtanding between the Prince and the People, was the Baſis and Foundation of both their Happineſs; To maintain that good Underſtanding, eſtabliſh'd *Ephori*, or Inſpectors, as a Kind of Mediators, who ſhould have an Eye to the Meaſures and Conduct of both Sides, and preſerve ſo equal a Ballance between 'em, that the Regal Power ſhou'd never decline into Severity and Tyranny; nor the Liberty of the People run into Licenſe and Rebellion.

The Authority of the *Ephori* was very great: On certain Occaſions, they expell'd, and even put to Death, the Kings; and aboliſhed, or ſuſpended the Power of the other Magiſtrates; calling 'em to Account at Pleaſure. *Ageſilaus*, in the Height of all his Conqueſts, which even ſtruck Terror on the great King of *Perſia*; ſtopp'd, and turn'd back, out of Deference to the *Ephori*, when they recall'd him. Some Authors deny, that the *Ephori* were eſtabliſh'd by *Lycurgus*.

The Word is form'd of the *Greek* ἐφορᾶν, *intueri*, form'd of the Prepoſition ἐπὶ, and the Verb ὁρᾶν, *to ſee*; whence ἔφορος, *Inſpector*.

EPIBATERIAN, a Compoſition of Poetry, in Uſe among the ancient *Greeks*.

When any Perſon of Condition and Quality, return'd Home after a long Abſence, or Journey, into another Country; he call'd together his Friends, and Fellow-Citizens, and made 'em a Speech, or rehears'd them a Copy of Verſes, wherein he return'd ſolemn Thanks to the Immortal Gods, for his happy Return, and ended with an Addreſs, by way of Compliment, to his Fellow-Citizens.

This Copy of Verſes, is what the *Greeks* call Ἐπιβατήριον, *Epibaterium*, of ἐπιβαίνω, *I return*. At going away, they had another, call'd *Apobaterium*. See APOBATERIUM.

EPIC *Poem*, call'd alſo EPOPEA; an heroick Poem; or a Poem relating ſome great and ſignal Tranſaction of a Hero. See HERO, &c.

Such is the Iliad and Odyſſee of *Homer*, the Æneid of *Virgil*, the *Gieruſalemme* of *Taſſo*, and the Paradiſe loſt of *Milton*; which are the principal Poems of the *Epic* Kind. See ILIAD, ÆNEID, &c.

The *Epic* Poem, is more accurately and ſcientifically defined, by that excellent Critic, Fath. *Boſſu* in an expreſs Treatiſe on that Subject, to be a Diſcourſe invented with Art,

Art, to form the Manners by Inſtructions, diſguiſed under the Allegory of an important Action, related in Verſe, in a probable, entertaining, and ſurprizing Manner. See POEM.

The *Epopea* is diſtinguiſhed from the Comedy, in that the Action of the latter is not *important*, nor is it *related* by the Poet, but acted by the Perſons introduced for that Purpoſe; which Circumſtance, likewiſe, diſtinguiſhes it from a Tragedy. See COMEDY and TRAGEDY.

Nor is it a philoſophical Poem, as that of *Lucretius*, on the Creation of Sir *R. Blackmore*; nor a Treatiſe of Agriculture, or the like, as the Georgicks of *Virgil*; thoſe Poems not being intended to form the Manners: beſide, that the Inſtructions they contain are naked, ſimple, and direct, without any Diſguiſe, or Allegory. Which ſecond Circumſtance likewiſe diſtinguiſhes it from a Treatiſe of Morality, wrote in Verſe: Or a ſimple Hiſtory in Verſe, as the *Pharſalia* of *Lucan*; the Punic War of *Silius*; or the Civil Wars of *Sam. Daniel*; add, that its being confined to *one important Action*, diſtinguiſhes it from a Poem which relates all the Actions of a Perſon's Life; as the *Theſeid* and *Achilleid* of *Statius*, which are what we properly call *Heroic Poems*. See HEROIC.

Mon. *de la Motte*, indeed, in his Controverſy with Madam *Dacier*, on the Subject of *Homer*, maintains, that the whole Life of a Hero, may juſtly be made the Subject of an *Epic* Poem; and even, that the *Lutrin* of Mon. *Boileau*, might paſs for an *Epic Poem:* But he ſeem'd, afterwards, to return to the common Sentiment. In effect, the Queſtion is not as to the Senſe, which may be affected to the Words *Epic Poem*, but the Senſe which Cuſtom has actually affected to 'em.

If we had only Regard to the Etymology of the Word *Epic*, (of ἔπος, *Verſe*; *Poetry*, from εἶπω, *dico*, *I ſpeak*, *relate*) all Poems wherein the Poet ſpeaks, or rehearſes Things himſelf, without making the Perſons of his Poem ſpeak, except at ſecond hand, as he relates what they ſpoke on this or that Occaſion, wou'd be *Epic* Poems; and ſo, there's not an Epigram, Sonnet, or Madrigal, but wou'd come under this Denomination. But this were wild.

In Effect, the Term *Epic* Poem, is only attributed to a Compoſition, whoſe Subject is great, inſtructive, and ſerious; that only comprehends one ſingle principal Event, to which all the reſt refer; which principal Action is to be terminated in a certain Space of Time, ordinarily about a Year. 'Tis true all this is arbitrary; but the Senſe of all Words is ſo too: And in Matters of Language we muſt always be guided by Cuſtom.

If M. *de la Motte* had only pretended, that one might make a fine, inſtructive Poem, on the whole Life of a Hero; or an agreeable, and diverting Poem, on ſome humorous Adventure; all the World would have been of his Side. But 'tis enough that Cuſtom has not thought good to apply the Term *Epic*, either to Subjects of too much Extent, and that are ſtuff'd with too many Incidents no wiſe connected together; nor to burleſque Poems, as the *Batrachomyamachia* of *Homer*; the *Secchia Rapita* of *Taſſoni*; the *Defaite de Dulot*; the *Lutrin* of *Boileau*; the *Hudibras* of *Butler*; the *Rape of the Lock* of Mr. *Pope*; or the *Diſpenſary* of Dr. *Garth*. See BURLESQUE.

The *Epic* Poem, then, as appears from what was above obſerved, bears a Relation, or Analogy, to four Things; Hiſtory, Morality, Fable, and Poetry: To Hiſtory, as both of 'em relate one or more Actions; but then, the Actions of Hiſtory are ſingular; ſo that the *Epopea* is no Hiſtory, nor Kind of Hiſtory. See HISTORY.

To Moral Philoſophy, as both of them conſiſt of Inſtructions for forming the Manners; but the Action and Allegories diſtinguiſh it herefrom. See MORALITY.

But it relates entirely to Poetry and Fable, as being ſtrictly a Poem, and a Fable. See POETRY and FABLE.

The Nature of the *Epic* Poem, is finely drawn by the great Critic abovementioned: The *Epic* Poets, ſays Fath. *Boſſu*, have done that with Regard to Morality, which the ancient Heathen Divines did with Regard to the Divinity. The too great Diverſity of divine Actions and Perfections, ſo very diſproportionate to our Comprehenſion, obliged the latter to divide a ſingle Idea of a ſimple Eſſence, God, into ſeveral Perſons; to whom they attributed ſeveral Names, *Jupiter*, *Juno*, *Neptune*, &c. See GOD.

And, on the contrary, the Nature of moral Philoſophy, which never preſcribes Rules for particular Things, lead the Poets to collect into one ſingle Idea, one and the ſame Perſon, and one apparently ſingular Action, whatever of that Kind was found in different Perſons, and different Actions.

Thus *Ariſtotle*, Ου σχαζεται ἡ Ποιησις ονομασι, &c. Poetry, ſays he, teaches moral Philoſophy, not by relating only, in manner of an Hiſtorian, what *Alcibiades*, for inſtance, did or ſuffer'd; but by propoſing what ſome Perſon, named as the Poet thinks fit, wou'd, probably, or neceſſarily have done on the like Occaſion. And thus it is that he ſhews either the unhappy Conſequences uſually attending imprudent Schemes, or ill Actions; or the Reward of good Actions, and the Satisfaction reſulting from a Deſign laid in Virtue, and conducted with Prudence. So that in the *Epic* Poem, according to *Ariſtotle*'s Sentiment, the Perſons and Actions, however named, are all feign'd, allegorical, and univerſal, not hiſtorical and ſingular.

But the Poets thus taking on 'em the Office of Moral Philoſophers, did not ceaſe to be Divines. On the contrary, their Morality it ſelf frequently obliges them to introduce the Deity into their Works; as the Knowledge, Fear, and Love of God, are the firſt and moſt ſolid Foundations of all Morality. The Preſence of the Divinity, and the Care ſo auguſt a Perſonage was ſuppoſed to have of the Action, obliged the Poet to make the Action great and important, and to have it tranſacted by Kings and Princes. The ſame likewiſe obliged 'em to think and ſpeak, in a manner elevated above the common Pitch of Men; and equal, in ſome meaſure, to the Dignity of the divine Perſons introduced. To which End ſerves the poetical and figurative Language, with the Majeſty of Heroic Verſe. Add, that as ſo much of the divine and miraculous might ruin the Probability, they were hereby obliged to have Recourſe to ſeveral Rules to maintain the ſame. See MACHINE.

Thus much the Poets were driven to by the Subſtance of the Things they had choſe for the Matter of their Poems and Inſtructions. The Manner of delivering 'em uſefully and methodically, obliged 'em to ſeveral other Rules. See UNITY, EPISODE, &c.

The *Epic* Poem is intended more for the Manners and Habitudes, than for the Paſſions. Theſe latter riſe all at once, and their Violence is but of ſhort Duration; but the Habitudes are more calm, and impreſs'd, or quitted more leiſurely. Conſequently, the *Epic* Action cou'd not be included in the Space of a Day, as that of the Theatrical. A longer Time was neceſſary than is required for Tragedy, which is altogether for the Paſſions.

This Diſtinction has introduced a World of Difference between Tragedy and *Epic* Poetry. The Tragic Violence requires a more lively and animated Repreſentation, than a mere Recital. Accordingly, it is wholly thrown into Action, and the Poet never ſpeaks at all, as he does in the *Epopea*, where there are no Actors.

See further of the Nature of the *Epic* Poem under FABLE.

For its Matter, ſee ACTION. For its Form, ſee NARRATION. See alſo MANNERS, CHARACTER, MACHINES, &c.

EPICARPIUM, in Medicine, a Kind of Remedy, uſually in Form of a Cataplaſm, or Plaiſter, conſiſting of ſharp, penetrating Ingredients, as Garlic, or Onion, Spiders-Web, Hellebore, Camphor, Treacle, &c. applied round the Wriſt, at the Beginning of the Acceſs of a Fever, to prevent the ſame.

The Word is form'd of the *Greek* ἐπὶ, *ſuper*, *on*, and καρπὸς, *Carpus*, *Wriſt*.

EPICEDION, in the *Greek* and *Latin* Poetry, a Poem, or poetical Compoſition, on the Death of a Perſon.

At the Obſequies of any Man, there were three Kinds of Diſcourſes uſually made: That rehears'd at his *Buſtum*, or Funeral Pile, was call'd *Nenia*; that engraven on his Tomb, *Epitaph*; and that ſpoke in the Ceremony of his Funeral, *Epicedion*. See NENIA and EPITAPH.

We have two beautiful *Epicedions* in *Virgil*; that of *Euryalus*, and that of *Pallas*.

The Word is *Greek*, form'd of ἐπὶ, *upon*, and κήδεσθαι, *to perform Funerals*, to do the laſt Office to any one, of κῆδος, *cura*, *care*.

EPICOENE, in Grammar, a Term applied to Nouns, which, under the ſame Gender and Termination, mark, indifferently, two Kinds, or Sexes. See GENDER.

Such, in *Latin*, is *Aquila*, *Veſpertilio*, &c. which ſignifie equally, a Male or Female Eagle, or Bat.

Grammarians diſtinguiſh between *Epicœne* and *Common:* A Noun is ſaid to be common of two Kinds, when it may be joyned either with a Maſculine, or a Feminine Article; and *Epicœne*, when it is always joyn'd to ſome one of the two Articles, and yet ſignifies both Genders.

EPICERASTICKS, in Medicine, are Remedies, which by their emplaſtic Virtue, or temperate Moiſture, ſoften the Acrimony of an Humour, and aſſwage the painful Senſation of the Part irritated or afflicted: Such are the Roots of Althæa, Mallows, Liquorice; Leaves of Lettice, Mallows, Nenuphar, Purſlain; the Seeds of Flax, Poppy, &c.

The Word is form'd of ἐπὶ and κεράννυμι, *tempero*, I moderate, correct.

EPICHEREMA, in Logic, an Argumentation, consisting of four, or more Propositions; some whereof are Proofs of others.

Thus, that Oration of *Cicero* for *Milo*, may be reduced to the *Epicherema*. Those who Way-lay a Man to kill him, 'tis lawful for him to kill; as is allowed by the Laws of Nature and Nations, and by the Practice of the best Men: But *Clodius* Way-laid *Milo* with that View; as appears from his forming an Ambuscade before his Country House, and from his Provision of Weapons, Soldiers, &c. Therefore it was lawful for *Milo* to kill *Clodius*. See Sorites.

EPICOLIC *Regions*, from ἐπὶ, *supra*, upon, and *Colon*, the Gut so called; a Name given by Dr. *Glisson*, to that Space, on both Sides, over the Colon. See Colon.

EPICUREANS, a Sect of antient Philosophers, who adhere to the Doctrines and Opinions of *Epicurus*. See Epicureanism.

The *Epicureans* have, in all Ages, been decried for their Morals, and their Attachment to the Pleasures of Sense: Several Authors, particularly, *Cicero* among the Antients, and *Gassendus* among the Moderns, have endeavoured to vindicate them from this Charge; by shewing that the Pleasure wherein their Master *Epicurus* places the *Summum bonum*, or supreme Happiness of this Life, was not any sensual, or brutal Pleasure, but a Contentment, and Tranquillity of Mind, exempt from all tumultuary Passions, &c.

This Opinion seems just, and well grounded; but, without entering into the Question, which *Gassendus*, *Du Rondel*, and others have exhausted; 'tis certain, that in the common Use of the Word, *Epicurean* constantly signifies a Debauchee, an indolent, soft, effeminate Person, who only consults his Pleasure, without concerning himself with any Thing serious.

In Effect, there were always two Kinds of *Epicureans*; the Rigid and Remiss: The Rigid *Epicureans*, were those strictly attach'd to the Sentiments of *Epicurus*, who placed all their Happiness in the pure Pleasures of the Mind, resulting from the Practice of Vertue. The Remiss *Epicureans*, taking the Words of that Philosopher in a gross Sense, placed all their Happiness in Pleasures of the Body, in Eating, Drinking, Loving, &c. The former Kind, who were the genuine *Epicureans*, call'd the other the Sophists of their Sect.

The *Epicureans* take their Name from the Chief of their Sect, *Epicurus*, whom some, however, deny to be the Author of the Philosophy he taught; charging him with Retailing for Physicks, the Doctrine of *Democritus*; and for Ethicks, that of *Aristippus*.

Be this as it will, he was an *Athenian*, and the Son of *Neocles*; born in the 109th Olympiad, and consequently 342 Years before Christ. He began to form his School at *Mitylene* and *Lampsachus*, about the 32d Year of his Life; tho' he afterwards remov'd to *Athens*, where he philosophized chiefly in his Garden: And died of the Stone at 72 Years of Age.

EPICUREANISM, or EPICUREAN *Philosophy*, the Doctrine, or System of Philosophy, maintain'd by *Epicurus*, and his Followers. See Epicureans.

The noble Poet *Lucretius*, who has given us a beautiful System of *Epicureanism* in fine *Latin* Verse, prefers its Father *Epicurus*, above all other Philosophers, whom, he makes no Scruple to say, he obscured, as much as the Sun does the other Stars. 'Tis said he first taught Grammar; till upon reading *Democritus*'s Books, he began to apply himself to Philosophy.

From *Democritus* he learnt the Doctrine of Atoms, or Corpuscles, which he afterwards made the Basis of his Physicks. *Clem. Alexand.* Strom. 6. advances, that *Epicurus* stole his chief Doctrines from *Democritus*. But, 'tis certain, he greatly improved and illustrated them. *Diog. Laertius* assures us, he composed an infinite Number of Volumes.

This Philosophy consisted of three Parts: *Canonical* κανονικὸν, *Physical* φυσικὸν, and ἠθικὸν, *Ethical*; which he explain'd briefly in three Epistles.

The first, as *Laertius* relates, was about the Canons, or Rules of Judging; wherein, rejecting the Use of Logic, he establish'd the Senses, Passions, and Anticipations, as the Criterions, or Judges of Truth. See Criterion, Sense, &c.

In the second, he laid down Atoms, Space and Gravity, as the first Principles of all Things. The Universe he taught, consisted of Atoms, or Corpuscles, of various Forms, Magnitudes and Weights, which having been dispersed at Random thro' the immense Inane, or Space, fortuitously concurred into innumerable Systems, or Worlds, which were thus form'd, and afterwards, from Time to Time, increas'd, changed, and dissolved again, without any certain Cause, or Design; without the Intervention of any Deity, or the Intendance of any Providence. See Atom and Corpuscle.

Not that he denied the Existence of a God: On the contrary, he asserted it; but thought it beneath the Majesty of the Deity to concern it self with human Affairs: *Laertius* assures us, he held him, τὸ μακάριον, καὶ ἀφθαρτον, ὅτε αὐτὸ πράγματα ἔχει ὅτε ἄλλῳ παρέχει, *A Blessed, Immortal Being, having no Affairs of his own to take Care of, and above taking Care of those of others.* See Corpuscular, Space, Gravity, Element, &c.

As to *Ethicks*; his first Principle, or the supreme Felicity of Man, he held, was Pleasure. Which some, as already observed, understand of Mental, and others of Carnal Pleasure. See Epicureans.

EPICYCLE, in the antient Astronomy. As the Astronomers have invented an Eccentric Circle, to solve the apparent Irregularity of the Planets, and their different Distances from the Earth; they have likewise invented a little Circle to solve the Stations, and Retrogradations of the Planets. This little Circle which they call *Epicycle*, has its Centre in the Circumference of another greater, which is the Eccentric of a Planet. See Eccentric.

In this Eccentric, the Centre of the *Epicycle* moves; carrying with it the Planet fix'd in its Circumference, the Centre of the Planet, all the Way, moving regularly along the Circumference of the *Epicycle*, when downwards, according to the Order of the Signs, and when upwards, contrary to it.

The highest Point of the *Epicycle* is call'd the *Apogee*, and the lowest the *Perigee*. See Apogee and Perigee.

The great Circle, in whose Circumference the Centre of the *Epicycle* is plac'd, is call'd the *Deferent of the Epicycle*, as carrying the *Epicycle* along with it. See Deferent.

Thus, the Moon is supposed to move in an *Epicycle*, whose Centre is in the Orbit of the Earth, according to the Hypothesis of *Copernicus*: But in that of *Ptolomy*, who supposed the Heavens solid, the *Epicycle* was a Sphere, which revolved with the Moon, of the Thickness allowed its Heaven or Orbit; and which, sometimes shew'd it higher, and sometimes lower. See *Ptolemaic* System.

'The Astronomers, who deny the Motion of the Earth; 'in Order to render the Phænomena of the Motions of the 'Planets more consistent with the Motion of the Sun, 'have affix'd the Orbit of the Earth, as an *Epicycle*, to 'the Orbit of the Planets: So that the Planet should 'proceed in an *Epicycle*, while it is carried through its 'Orbit round the Sun: But this is far from answering 'their Expectations.' *Wolf. Elem. Math.* T. II. p. 501.

'*Ricciolus*, tho' a zealous Enemy of the Motion of the 'Earth, cou'd not make any Astronomical Tables that 'should but tolerably agree with Observation, without 'supposing the Earth to move; not, tho' he called in all 'the foreign and forced Assistances of changeable *Epicycles*, 'liable to continual Increase and Decrease, and variously 'inclined to the Ecliptic.' *De Chales Astron. Reform.* Lib. X. *C.* 1. f. 353, &c.

The Word is form'd of the *Greek*, ἐπὶ, and κύκλος, *Circle*, q. d. a Circle on a Circle.

EPICYCLOID, in Geometry, a Curve generated by the Revolution of a Point of the Periphery of a Circle, along the Convex, or concave Part of another Circle. See Curve.

A Point of the Circumference of a Circle, proceeding along a Plane, in a right Line, and at the same Time revolving on its Centre, describes a *Cycloid*. See Cycloid.

And the generating Circle, if in lieu of moving on a right Line, it move along the Circumference of another Circle, whether equal or unequal; the Curve described by any Point in its Circumference is called an *Epicycloid*.

If the generating Circle proceed along the Convexity of the Periphery, it is called an *upper*, or *Exterior Epicycloid*: If along the Concavity, a *lower*, or *Interior Epicycloid*.

In an *Epicycloid*, the Part of the Circle, the generating Point moves along, is called the *Base of the Epicycloid*: Thus in *Tab. Geom. Fig.* 58. D B is the *Base* of the *Epicycloid*, V its *Vertex*; V B its *Axis*; D P V half of the *Exterior Epicycloid*, made by the Revolution of the *Semi-circle* V L B, (which is called the *Generant*) along the Convex Side of the Base, D B: As D P U is the *Interior Epicycloid*, formed by the Generant's revolving along the Concave Side of the Base.

The Length of any Part of the Curve, which any given Point in the revolving Circle has described, from the Time it touched the Circle whereon it revolved, is demonstrated to be double the versed Sine of half the Arch, which all that Time touched the quiescent Circle, as the Sum of the Diameters of the Circles, to the Semi-diameter of the quiescent Circle: Provided the revolving Circle moves upon the Convex Side of the quiescent Circle; but, if upon the Concave Side, as the Difference of the Diameters, to the Semi-diameter.

Dr. *Halley* gives us a general Proposition for measuring all *Cycloids* and *Epicycloids*; thus: The Area of a *Cycloid*, or *Epicycloid*, either primary, or contracted, or prolate, is to the Area of the generating Circle; and also the Area of the Parts, generated in those Curves, to the Areas of analagous Segments of the Circle: As the Sum of double the Velocity of the Centre, and Velocity of the

circular

circular Motion, to the Velocity of the circular Motion. The Demonſtration hereof, See in *Phil. Tranſact.* N° 218.

EPIDEMIA, or EPIDEMIC *Diſeaſe*, is ſometimes uſed for a catching, or contagious Diſeaſe; communicable from one to another: Such as the Plague, Pox, Scorbutus, *&c.*

*Epidemic Diſeaſe*, however, is more properly, and uſually, underſtood of a general or ſpreading Diſorder, as a Plague, ariſing from ſome Corruption, or Malignity in the Air, which ſeizes great Number of People in a little Time.

The Word is form'd of ἐπὶ and δῆμος, *Populus*, People; ſuch Diſeaſes running among all Kinds of People, of whatever Age, Sex, Quality, *&c.* as ariſing from a common or general Cauſe. Whence the *Latins* call them *Populares Morbi*, popular Diſeaſes; in Oppoſition to thoſe call'd *Sporadici*, which are only here and there, as ariſing from private, or particular Cauſes. See SPORADIC.

EPIDEMIA, in Antiquity, Feaſts of *Apollo* at *Delphos*, and *Miletus*; and of *Diana* at *Argos*. See FEAST.

Theſe Feaſts bore the Name *Epidemia*, by Reaſon thoſe Gods were imagin'd to be preſent on thoſe Days among the *People*. Accordingly, on the laſt Day of the *Epidemia*, they ſang Hymns, call'd ἀποπεμπτικὸς, to bid them adieu, and ſet them forwards on their Journey.

As thoſe Gods could not be every where, and yet were honour'd in Abundance of different Places; there were Times allow'd them to paſs from one Place to another to receive the Vows of their Adorers. See *Scaliger*, *Poet.* L. III. *C.* 114.

EPIDERMIS, in Anatomy, the *Cuticula*, or Scarf-ſkin. See CUTICLE.

Some hold the *Epidermis* to be form'd of the Excrements of the *Dermis*, or Skin: *Hippocrates* is of Opinion, it is engender'd by Cold; as, on Blood, Broth, or the like, when cold, we ſee a Pellicle form'd.

But 'tis now paſt doubt, that it is produced at the ſame Time, and after the ſame Manner with the other Parts; it being found in *Fœtus's* of all Ages, in the Womb: It has neither Veins, Arteries, nor Nerves; whence it is inſenſible.

The Word is form'd of the *Greek*, ἐπὶ, *on*, *over*, and δέρμα, *Skin*.

EPIDIDYMIS, in Anatomy, a little, round Body, on the Back of each Teſticle; call'd alſo *Paraſtata*. See PARASTATA.

The Word is form'd of the *Greek*, ἐπὶ, and διδύμος, *Twin*, *Teſticle*.

EPIGASTRIC *Region*, is a Name given to the upper Part of the Abdomen, or Belly; reaching from the *Cartilago Xyphoides*, almoſt to the Navel. See REGION.

It is divided into three Parts: The Sides, or lateral Parts, call'd *Hypochondria*; and the middle, the *Epigaſtrium*. See HYPOCHONDRIA, *&c.*

There are alſo two *Epigaſtric* Veins, and as many Arteries. The Arteries are Branches of the Iliac External Arteries: The Veins diſcharge themſelves into the Iliac External Veins.

EPIGASTRIUM, in Anatomy, the middle Part of the *Epigaſtric* Region; or, according to others, the interior Part of the lower Venter, or Abdomen. See EPIGASTRIC.

The Word is form'd of the *Greek*, ἐπὶ and γαστὴρ, *Belly*.

EPIGLOTTIS, in Anatomy, the Cover or Lid of the *Larynx*. See LARYNX.

The *Epiglottis* is a thin, moveable Cartilage, in Form of a Leaf of Ivy, or a little Tongue, and therefore likewiſe call'd *Lingula*; ſerving to cover the Cleft, or Rima of the *Larynx*, call'd *Glottis*. See GLOTTIS.

The Word is form'd of ἐπὶ and γλῶσσα, or γλῶττα, *Tongue*.

*Galen* takes the *Epiglottis* to be the principal Organ, or Inſtrument, of Voice; ſerving to vary, modulate, and render it harmonious. See VOICE.

Its Baſe, which is pretty broad, is in the upper Part of the *Cartilago Scutiformis*, and its Point, or Tip, turn'd towards the Palate. It is only ſhut by the Weight of the Piece in ſwallowing; but not ſo exactly, but that a Crum, or a Drop, ſometimes eſcapes thro' it into the *Trachea*. See TRACHEA, *&c.*

EPIGRAM, in Poetry, a ſhort *Poem*, or Compoſition in Verſe, treating of one only Thing, and ending with ſome Point, or lively, ingenious Thought. See POEM.

The Word is form'd of the *Greek*, ἐπίγραμμα, *Inſcription*, of ἐπιγράφειν, *to inſcribe*, or make an *Inſcription*.

*Epigrams*, in Effect, properly ſignify *Inſcriptions*, and derive their Origin from thoſe Inſcriptions placed by the Antients on their Tombs, Statues, Temples, triumphal Arches, *&c.* See INSCRIPTION.

Theſe, at firſt, were only ſimple Monograms; afterwards, increaſing their Length, they made them in Verſe, to be the more eaſily retain'd: *Herodotus*, and others, have preſerved us ſeveral of them.

Such little Poems retain'd the Name *Epigrams*; even after the Deſign of their firſt Inſtitution was varied, and People began to uſe them for the relating of little Facts, and Accidents, the Characterizing of Perſons, *&c.*

The *Greeks* confine their *Epigrams* to a very narrow Compaſs: For tho', in the Anthology, we here and there meet with a very long one; ordinarily, they don't exceed ſix, or, at moſt, eight Verſes. The *Latins* were not always ſo ſcrupulous, and the Moderns much leſs, as to theſe Bounds.

M. *le Brun*, in the Preface to his *Epigrams*, defines an *Epigram* a little Poem, ſuſceptible of all Kinds of Subjects, and ending with a lively, juſt, and unexpected Thought: Which are three Qualifications eſſential to the *Epigram*; particularly the firſt and laſt of them, *viz.* Brevity and the Point, or Cloſe of the *Epigram*.

To attain Brevity, only one Thing is to be aim'd at in the Poem, and that to be purſued in the conciſeſt Terms poſſible. Authors are much divided, as to the Length the *Epigram* is to be confined to: The ordinary Limits are from two to twenty Verſes; tho' we have Inſtances, both among the Antients and Moderns, where they extend to fifty. But ſtill it is allow'd that the ſhorter the better, and more perfect, as it partakes more of the Nature and Character of this kind of Poem.

The Point is a Quality much inſiſted on by the Criticks, who require the *Epigram* conſtantly to cloſe with ſomething poignant, and unexpected, to which all the reſt of the Compoſition is only preparatory. Others there are, who exclude the Point, and require the Thought to be equably diffuſed throughout the whole Poem, without laying the whole Streſs on the Cloſe: The former is uſually *Martial's* Practice, and the latter that of *Catullus*. Which is the moſt beautiful and perfect Manner, is diſputed by a third Claſs of Criticks.

The Greek *Epigrams* have ſcarce any Thing of the Point, or Briſkneſs, of the *Latin* ones: Thoſe collected in the Anthology, have moſt of them a certain Air of Eaſineſs and Simplicity, attended with ſomething juſt and witty: Such as we find in a ſenſible Peaſant, or a Child that has Wit. They have nothing that bites, but ſomething that tickles. Tho' they want the Salt of *Martial*, yet to a good Taſt they are not inſipid; except a few of them, which are quite flat and ſpiritleſs. However, the general Faintneſs, and Delicacy of the Pleaſantry in them, has given Occaſion for *a Greek Epigram*, or *Epigram a la Grecque*, to be the Denomination for an *Epigram* void of Salt or Sharpneſs.

'Tis principally the Point that characteriſes the *Epigram*, and diſtinguiſhes it from the *Madrigal*. See POINT.

In the modern Verſification, as obſerved by *Fa. Mourgues*, the *Epigram* and *Madrigal*, are diſtinguiſh'd by the Number of Verſes, and the Cloſe. 1°. By the Number of Verſes, which in the Modern *Epigram* does not go beyond eight, nor in the Modern *Madrigal*, comes ſhort of ſix: And, 2dly, In that the Cloſe, or Fall of the *Epigram*, has always ſomething more lively and ſtudied than that of the *Madrigal*. See MADRIGAL.

The *Epigram* is the loweſt, and leaſt conſiderable of all the Productions of Poetry; and 'tis rather an Effect of good Luck, than of Art, to ſucceed therein. The Fineſſe, and Subtlety of the *Epigram*, M. *Boileau* obſerves, ſhould turn on the Words, rather than the Thought; which ſeems very little to the Credit of this Kind of Compoſition, as it reduces it to the Nature of the Pun, or Equivoque. *Fa. Bouhours* confirms the Hint, in adding, that the Equivoque is what uſually ſhines the moſt in the *Epigram*.

One great Beauty of the *Epigram*, is to leave ſomething for the Reader to gueſs, or ſupply. Nothing pleaſes the Mind ſo much, as to find ſomething of it ſelf in the Objects preſented it; nor does any Thing diſguſt it more than to preclude it from ſhewing and exerciſing a Faculty it values it ſelf for. *Segrais*.

Monſ. *B. L. M.* the Author of a new Collection of French *Epigrams*, in the Year 1720, has a deal of good Obſervations on the Nature of *Epigram*. He defines it an ingenious Thought delivered in a few Verſes; and conceives it as a Generical Name, including under it divers Kinds of ſhort, lively Poeſies, as the *Sonnet*, *Rondelay*, *Madrigal*, and little *Tales* which only turn on ſome merry Thought. Epitaphs and Inſcriptions, he thinks, may be alſo uſed, reduced to the Head of *Epigrams*. See SONNET, RONDELAY, *&c.*

The *Epigram* admits of great Variety of Subjects: Some are made to Praiſe, and others to Satyrize, which laſt are much the eaſieſt; ill Nature ſerving inſtead of Point and Wit. *Boileau's Epigrams*, are all Satyrs on one or another. Thoſe of *des Reaux*, are all made in Honour of his Friends. And thoſe of Mad. *Scudery*, are ſo many Eloges. The *Epigram* being only a ſingle Thought, it would be ridiculous to expreſs it in a great Number of Verſes;

Verſes; it muſt have its Unity like the *Drama*. The Comedy has an Action for its Subject; and the *Epigram* a Thought. See UNITY.

EPIGRAPH, an Inſcription on a Building, to ſignifie its Uſe, Occaſion, the Time when, and the Perſons by whom, it was built.

The Word is *Greek*, and ſignifies *Superſcription*.

EPILEPSY, in Medicine, a Convulſion, either of the whole Body, or ſome of its Parts; attended with a Deprivation of the Senſes and Underſtanding; and returning from Time to Time in Fits, or Paroxyſms. See CONVULSION.

The Patient ſeized herewith, falls inſtantly and ſuddenly down; or, rather, throws and precipitates himſelf violently to the Ground. When down, he grinds his Teeth, foams at Mouth, and frequently ſhakes his Head; his Arms, Legs, Neck, Back, *&c.* either becoming rigid, or variouſly diſtorted. And as all the Parts are in a violent Contraction, there is frequently an involuntary Flux of Urine, Seed, and fecal Matter. After ſome Time he returns to himſelf; only retaining a Head Ache, Heavineſs, Wearineſs of their Limbs, *&c.*

*Etmuller* more accurately diſtinguiſhes the Diſeaſe into three Degrees: The firſt, or loweſt, is much the ſame with the higheſt Degree of a Vertigo. See VERTIGO.

In the ſecond, there ariſe various Agitations and Geſticulations; and the Senſes, both external and internal, either remaining, or being tranſported into a Delirium; they dance, ſing, laugh, weep, talk idly, ſhreek, and beat their Breaſts. Sometimes they remember all after the Fit is over, and ſometimes nothing at all.

In the third Degree, which alone is ordinarily call'd the *Epilepſy*, they loſe the Uſe both of Reaſon and Senſe; fall, or fling themſelves down, foam, grind their Teeth, and bite their Lips, with the other Circumſtances above related. Thoſe affected with the ſecond Degree, are uſually held for *poſſeſs'd by the Devil*.

The Cauſe of this Diſeaſe, *Boerhave* attributes to too much Action of the Brain, on the motory Nerves, and none on the ſenſitive ones. Some are pleas'd to account for it, from the Abundance of ſharp Humours mixing with the animal Spirits, and giving them extraordinary and irregular Motions, and Directions; Whence ariſes its Diſtinction from a Syncope, and Apoplexy, which take away all Motion as well as Senſe. See SYNCOPE and APOPLEXY.

The *Epilepſy* is either *Idiopathic*, or *Sympathetic*: It is Idiopathic, when it ariſes meerly from a Diſorder of the Brain, or Spirits: And ſympathetic, when it is preceded by ſome other Diſeaſe which brings it on.

The *Epilepſy* ſometimes hangs many Years to a Perſon, without much Danger: Tho' when its Paroxyſms return faſt, it renders the Patient more or leſs paralytic, delirious, or ſtupid. In young People there is Hopes of its going off about the Time of Puberty. *Hippocrates* obſerves, that when it ſeizes a Perſon after 25 Years of Age, it laſts for Life; but this does not always hold.

The Cure is very difficult: The principal *Anti-epileptick*s are, the Roots of Pæony, Leaves of the Lilly of the Valley, Seeds of Rue, Miſletoe of the Oak, or Hazle, Box-wood, Spirit of black Cherries, Spirit of human Blood, human Secundines, human Cranium, Tooth of the Sea-Horſe, Caſtoreum, Peacocks Dung, Camphor, Salt, and Oil of Amber.

To recover a Perſon in a Fit, Tobacco Smoak, or that of burnt Feathers, is recommended. *Barbette* above all Things directs the Flowers and Spirits of Sal Ammoniac againſt this Diſeaſe; *Crato*, native Cinnabar. Sir *John Colbatch* has an expreſs Treatiſe on the Miſleto of the Oak, to ſhew it a Specific in this Diſeaſe. Elks Claws have long had the Reputation of the ſame. See each Remedy, its Pretenſions, *&c.* under its proper Term in this Work, as MISLETO, ELKS *Claws*, *&c.*

M. *Poupart*, from a Diſſection of an *Epileptic* Perſon, wherein, immediately under the *Dura Mater*, was found a deal of white, thick, viſcid *pituita*, glued, and, as it were, incorporated with the Membrane; thinks, that this might be the Cauſe of the Diſeaſe; The exceſſive Quantity of ſuch thick Lympha, loading the Brain, and obſtructing its Motions. The firſt Cauſe, he judges, might be the Spongeouſneſs of the *Dura Mater*, which imbibed the Seroſities of the Brain.

He adds, that he knows an *Epileptic* Perſon, who, upon the firſt Approach of his Diſorder, rubs his Forehead with his Hand, and bends his Head as far backward as he can, reſting it againſt a Wall; and by that Means ſecures himſelf againſt the Convulſion. 'Tis probable, that by this he gives a Motion to the Lympha, and drives it from the Place which before it diſturb'd.

The Word *Epilepſy* is form'd of the *Greek*, ἐπιλαμβάνεσθαι, *to ſurprize, graſp hold of one*, by reaſon the Diſeaſe ſeizes and overcomes the Senſes, ſo that the Patient ſeems as if dead.

In *Engliſh* it is uſually call'd the *Falling Sickneſs*, by reaſon People fall down when attack'd therewith. The *Latins* call it *Comitialis Morbus*, by reaſon when any body was ſeiz'd therewith in a *Comitia*, or Aſſembly of the *Roman* People, they preſently broke up the Aſſembly, as deeming it an unhappy Preſage. See COMITIALIS.

Some call it the *Morbus Sacer*, as ſuppoſing it ſent by way of immediate Puniſhment from God. Others, the *Morbus Caducus*, others *Herculeus*, *Sonticus*, *Lues Deifica*, &c.

EPILOGUE, EPILOGUS, in Oratory, *&c.* The Peroration, or laſt Part of a Diſcourſe, or Treatiſe; wherein there is ordinarily made a Recapitulation of the principal Matters deliver'd therein. See PERORATION.

The Word is form'd of the *Greek* ἐπίλογος, of the Verb ἐπιλέγω, *I ſay after*, the Epilogue being the End, or Concluſion of a Diſcourſe.

EPILOGUE, in dramatic Poetry, a Speech addreſs'd to the Audience, when the Play is over, by one of the principal *Perſonæ*, or Actors therein; containing uſually ſome Reflections on certain Incidences in the Play, particularly thoſe of the Part of the Perſon who ſpeaks it.

In the modern Tragedy, the *Epilogue* has uſually ſomewhat of Pleaſantry; intended, we ſuppoſe, to compoſe the Paſſions rais'd in the Courſe of the Repreſentation, and ſend away the Audience in good Humour; tho' how far that Deſign is good and laudable, will bear ſome Diſpute. See TRAGEDY.

An ingenious Author in the *Spectator*, compares it to a merry Jig on the Organ, after a good Sermon, to wipe away any Impreſſions that might have been made thereby, and ſend the People away juſt as they came.

In Effect, tho' the *Epilogue*, in this Senſe, may ſeem an Abuſe; yet has it the Countenance of Antiquity: The *Romans* had ſomething of the ſame Nature, tho' under another Name. Their *Exodium* was a Kind of Farce, brought on the Stage when the Tragedy was over; *ut quidquid Lacrymarum ac triſtitiæ cepiſſent ex Tragicis affectibus, hujus ſpectaculi riſus detergeret*, ſays the Scholiaſt of *Juvenal*.

The *Epilogue* is but of modern Date, much later than the Prologue. See PROLOGUE.

Many, indeed, have taken the *Exodium* of the antient *Greek* Drama, for an *Epilogue*; by reaſon *Ariſtotle* defines it, to be a Part rehearſed after the Chorus had ſung for the laſt Time: But, in Reality, it was of a quite different Nature. The *Exodium* was the laſt of the four Parts of a Tragedy; containing the unravelling and Cataſtrophe of the Plot, and anſwering to our laſt, or fifth Act. See EXODIUM.

EPINICION, a Term in the *Greek* and *Latin* Poetry. It has two different Significations among the Ancients. 1°. A Feaſt, Ceremony, or Rejoycing, on Occaſion of a Victory obtain'd. 2°. A Poem, or Compoſition, on the ſame Subject.

*Scaliger* treats expreſly thereof in his Poeticks, *L.* I. *c.* 44.

The Word is form'd from the *Greek* νικη, *Victory*.

EPIPHANY, in Antiquity, the *Feaſt of Kings*. A double Feſtival, of the firſt Rank, ſolemnized on the *6th* of *January*, *New-Years-Day*, in Honour of the Appearance of *Jeſus Chriſt* to the Three Kings, or *Magi*, who came to adore and bring him Preſents. See FEAST.

The *Feaſt of Epiphany*, now held in Honour of the Adoration of the *Magi*, had, at its firſt Inſtitution among the *Greeks*, a different Object, *viz.* Our Saviour's Birth; and was call'd *Theophany*, and *Epiphany*, that is, Appearance, and Manifeſtation of God.

Pope *Julius*, who reign'd from the Year 337, to 352, was the firſt who taught the Church to diſtinguiſh the Feaſts of the Nativity, and *Epiphany*. *Papebroch. paral. ad Conat.* p. 23. *Act. SS. Maii. T.* VII. See NATIVITY.

The Word in the Original *Greek*, Ἐπιφάνεια, ſignifies *Appearance*, or *Apparition*; and was applied, as ſome Criticks will have it, to this Feaſt, on Account of the Star which appeared to the *Magi*. St. *Jerom*, and St. *Chryſoſtom*, take it for the Day of our Saviour's Baptiſm, when he was declared to Men by the Voice, *Hic eſt filius meus dilectus, in quo mihi complacui*. This is my beloved Son, in whom I am well pleaſed. And accordingly it is ſtill obſerved by the *Cophtæ* and *Ethiopians* in that View. See *Ludolph. Hiſt. Ethiop. Lib.* XXI. *c.* 2.

Others contend, that the Feaſt of *Chriſtmas*, or the Nativity of our Saviour, was held in divers Churches on this ſame Day; which had the Denomination *Epiphany*, or Appearance, by reaſon our Saviour firſt appear'd on Earth on that Day. And it muſt be allow'd, that the Word is uſed among the antient *Greek* Fathers, not for the Appearance of the Star to the *Magi*, but for that of our Saviour to the World. In which Senſe, St. *Paul* uſes the Word *Epiphania*, in his Second Epiſtle to *Timothy*, c. i. v. 10.

Add,

Add, that the *Armenians*, to this Day, celebrate the Feaſt of the Nativity, on the Day of *Epiphany*, according to the Practice of the ancient Church; which ſome *Romiſh* Miſſionaries have impertinently cenſured 'em for, not knowing that the *Epiphany*, originally, and properly, was the Nativity of our Saviour.

*Ammianus Marcellinus* makes mention of this Feaſt, *Lib.* XXI. *c.* 2. and obſerves that it was held in *January*. Upon which Paſſage, *Valeſius* in his Notes, endeavours to ſhew, that the Hiſtorian meant by *Epiphany*, the Feaſt of the Nativity.

The Heathen Writers uſed the Word *Epiphania* in the like Senſe, *viz.* to expreſs the Appearance of their Gods on Earth. And the Chriſtians, after their Example, applied it, in the general, to expreſs any Appearance, or Manifeſtation of the Deity.

EPIPHONEMA, in Rhetoric, a Figure of Speech. See FIGURE.

The *Epiphonema* is a ſententious Kind of Exclamation, frequently added after a Narrative, or Rehearſal, of any Thing remarkable; containing, uſually, a lively, cloſe Reflection, on the Subject there ſpoke of.

Such is that of St. *Paul*, when, after diſcourſing of the Rejection of the *Jews*, and the Vocation of the *Gentiles*, he cries out:

*Oh the Depth of the Wiſdom and Knowledge of God!*

Such alſo is that of *Lucretius*, after relating the Story of *Agamemnon*'s ſacrificing his Daughter *Iphigenia:*

*Tantum Religio potuit ſuadere malorum* ---

Such, laſtly, is that of *Virgil*, upon Occaſion of *Juno*'s perſecuting *Æneas:*

--- *Tantæne animis Cœleſtibus Iræ!*

Which M. *Boileau* has imitated in,

*Tant de fiel entre il en l' Ame des Devots?*

And Mr. *Pope* in,

*And dwells ſuch Rage in ſofteſt Boſoms then?*
*And lodge ſuch daring Souls in little Men?*

EPIPHORA, in Medicine, a Diſeaſe of the Eyes; conſiſting in a preternatural Defluxion of Rheum, or the Matter of Tears; accompanied, frequently, with Heat, Redneſs, and Twitching. *Pitcairn* calls it a Kind of Catarrh of the Glands of the Eye.

The internal Cauſes of the *Epiphora*, or *Rheum in the Eyes*, are a Relaxation of the Glands of the Eyes, and a too great Acrimony, or Sharpneſs of the ſerous Humour ſeparated thereby; which fretting and vellicating the Eye, draws an unuſual Quantity of Blood and Lympha thereto; by which, at length, the Cheek becomes excoriated, *&c.* Children are moſt liable to it, from the frequent Uſe, and ſtraining of the Glands of the Eye in Crying.

The external Cauſes of the *Epiphora*, are ſharp Duſts, Steams, *&c.* entring the Eye, and irritating the ſame. A too cold and ſharp Air has frequently the like Effect. Children are moſt liable to it.

An inveterate *Epiphora* frequently degenerates into a *Fiſtula Lacrymalis.*

The Cure of the *Epiphora*, is, 1°. By cauſing a Revulſion, or Derivation, of the peccant Humour, to ſome other Part, as by Venæſection, Cupping, Bliſtering, or Catharticks. 2°. By correcting its Acrimony by proper Remedies. And, 3°. By applying Aſtringents externally. *Lapis Calaminaris* is much commended.

The Word is *Greek*, form'd of ἐπιφέρομαι, *I am drawn.*

EPIPHYSIS, in Anatomy, is a leſſer Bone, adhering, or growing to another, by ſimple Contiguity. See BONE.

The Subſtance of the *Epiphyſes* is rare and lax; in young Children it is merely cartilaginous; but hardens as they grow in Age, and, at length, becomes quite bony.

'Tis commonly laid down, that there is no regular Articulation between the *Epiphyſis* and the Bone; tho' 'tis certain, that there is a reciprocal Admiſſion of the Heads, or Extremities of each, into the Cavities of the other. See ARTICULATION.

There are ſome Bones that have no *Epiphyſes* at all, as the lower Jaw: Others have no leſs than five, as the *Vertebræ*. The Deſign of adding *Epiphyſes* to Bones, was, to ſupply their Defects, and render them longer and bigger at the Extremes.

The Word is form'd of the *Greek*, ἐπι, *on*, *upon*, and φυειν, *to grow*, *adhere*. It is alſo called *Appendix*, *Additamentum*, *Adnaſcentia*, &c.

EPIPHYSES *Vermiformes*, are two Eminences of the *Cerebellum*, ſhaped like Worms, which keep open the Paſſage from the third to the fourth Ventricle.

In dilating the third Ventricle of the Brain, we perceive four Eminences, two upper, and two bigger, call'd orbicular Protuberances; and two lower, and leſs, call'd *Epiphyſes* of the orbicular Protuberance. *Dionis.*

EPIPLASMA, the ſame with *Cataplaſma*. See CATAPLASM.

EPIPLOCELE, in Medicine, a Kind of *Hernia*, or Tumor, occaſion'd by the Deſcent of the *Epiploon*, or Caul, into the *Scrotum*. See HERNIA. See alſo ENTERO-*Epiplocele*.

EPIPLOIC, or EPIPLOIDES, a Term applied to the Arteries and Veins, diſtributed through the Subſtance of the *Epiploon*, or Caul. See EPIPLOON.

EPIPLOIS *Dextra*, is a Branch of the Celiack Artery, which runs thro' the right Side of the inner, or hinder Leaf of the Caul. See CELIAC.

EPIPLOIS *Siniſtra*, is a Branch of the Celiack Artery, which is beſtowed on the lower and left Side of the Caul. See CELIAC.

EPIPLOIS *Poſtica*, is a Branch of the Celiack Artery, ſpringing out of the lower End of the *Splenica*, and running to the hinder Leaf of the Caul.

EPIPLOMPHALUS, in Medicine, a Species of *Exomphalus*, or Navel-Rupture; being a Tumor, or Swelling of the Part, occaſion'd by the *Epiploon*'s bearing too hard againſt it. See EXOMPHALUS.

The Word is compounded of the *Greek* ἐπίπλοον, and ομφαλὸς.

EPIPLOON, in Anatomy, a fatty Membrane, ſpread over the Inteſtines, and entering even into the Sinuoſities thereof; call'd alſo the *Omentum*, and popularly the *Caul*. See OMENTUM.

The Word is form'd of the *Greek*, ἐπιπλέειν, *to ſwim*, by reaſon it ſeems to float on the Inteſtines.

EPIPLOSARCOMPHALUS, in Medicine, a Sort of Tumor, of the *Exomphalous* Kind. It is form'd of the *Epiploon*, and the Fleſh. See EXOMPHALUS.

The Word is compounded of the three *Greek* Words, ἐπίπλοον, *Epiploon*, σὰρξ, *Fleſh*, and ομφαλὸς, *Umbilicus*, Navel.

EPISCOPACY, the Quality of *Epiſcopal* Government; or that Form of Church Diſcipline, wherein Diocеſan Biſhops are eſtabliſh'd, diſtinct from, and ſuperior to Prieſts or Presbyters. See BISHOP, HIERARCHY, *&c.*

*Epiſcopacy* and *Presbytery*, have been alternately eſtabliſhed and aboliſhed in *Scotland*. See PRESBYTERY.

EPISCOPACIDE, the Crime of murdering a Biſhop by one of his own Clergy.

By the Laws of *England*, the ſame Obedience is due from a Clergyman to his Biſhop, as from a Child to his Father: And therefore the Offences of *Epiſcopacide* and Parricide are made equal, *viz.* Petty-Treaſon. See TREASON.

EPISCOPAL, ſomething that belongs to a Biſhop. See BISHOP.

The *Epiſcopal Government*, is the Government of a Dioceſe, wherein one ſingle Perſon, legally conſecrated, preſides over a whole Clergy, or a whole Church, in Quality of Head, or Super-intendent thereof; conferring Orders, and exerciſing a Sort of Juriſdiction. See DIOCESE.

The *Presbyterians* reject the *Epiſcopal* Eſtabliſhment, and condemn the *Epiſcopal* Order as a human Inſtitution, the mere Reſult of Pride and Ambition. See PRESBYTERIANS.

Among the *Epiſcopal* Functions, the principal is that of making frequent Viſitations of the Dioceſe. See VISITATION.

The Word is form'd of the *Latin*, *Epiſcopus*, Biſhop; derived from the *Greek*, ἐπισκεπτεσθαι, *inſpicere*, to inſpect, whence ἐπισκοπος, *Inſpector*, Biſhop; who is to watch over the Flock committed to his Care.

EPISCOPALIA, is ſometimes uſed in the ſame Senſe with *Pontificalia*. See PONTIFICALIA.

It is alſo uſed to denote Synodals, or cuſtomary Payments, due to the Biſhops from the Clergy of his Dioceſe; call'd alſo *Onus Epiſcopale*.

EPISCOPALIANS, a Name given to thoſe who retain to the Church of *England*, and particularly to the Eccleſiaſtical Hierarchy, ſuch as it was in the *Romiſh* Church, before the Reformation; who affect the Diſcipline of Biſhops, Prieſts, Canons, the Office, or Liturgy, *&c.* and retain the greateſt Part of the Canon Law, with the Decretals of the Popes, more cloſely than the Catholicks themſelves of ſeveral Countries. Tho', as to Matters of Doctrine, or Faith, they agree in moſt Points with the Calviniſts, or Reformed.

In *Scotland*, the principal Diſſenters are the *Epiſcopalians*. Lay *Epiſcopalians* enjoy all the ſame Civil Privileges with thoſe of the Eſtabliſh'd Church. They are under no Reſtrictions; tied to no Teſts; but are imploy'd in all Places of Truſt, upon taking the Oaths to the Government. But the *Epiſcopal* Miniſters are liable to ſeveral penal Laws; the greateſt part of 'em being Nonjurors. *Chamberlain.*

EPISCOPUS *puerorum.* It was an ancient Cuſtom for ſome Layman, about the Feaſt of Epiphany, to plait his Hair, that he might ſeem to have the Tonſure, and to put on the *Epiſcopal* Garments; and then to exerciſe a Shew of Juriſdiction, and do ſeveral ludicrous Actions: For which Reaſon he was call'd the *Biſhop of the Boys.* This Cuſtom obtain'd among us, long after ſeveral Conſtitutions were made to aboliſh it.

EPISODE, is commonly conceiv'd to be a ſeparate Incident, Story, or Action, which an Hiſtorian, or Poet, inſerts and connects with his principal Action; to furniſh out the Work with a greater Diverſity of Events; tho', in Strictneſs, all the particular Incidents, whereof the Action or Narration is compoſed, are call'd *Epiſodes.*

From the *Greek*, ἐπί, and ᾠδή, *Carmen, Verſe.*

EPISODE, EPISODIUM, in dramatic Poetry, was the ſecond part of the ancient Tragedy. See TRAGEDY.

The Origin and Uſe of *Epiſodes*, is admirably deſcribed by M. *Hedelin*, and Fa. *Boſſu.* Tragedy, in its Original, being only a Hymn ſung in Honour of *Bacchus*, by ſeveral Perſons, who made a Kind of Chorus, or Conſort of Muſic, with Dancing, and the like; to diverſify the Repreſentation a little, and divert the Audience, they bethought themſelves at length to divide the Singing of the Chorus into ſeveral parts; and to have ſomething rehears'd in the Intervals.

At firſt, a ſingle Perſon, or Actor, was introduced, then two, then more; and what the Actors thus rehearſed, or entertain'd the Audience withal, being ſomething foreign, or additional to, or beſide, the Song of the Chorus, and no neceſſary part thereof, was call'd Επεισοδιον, *Epiſode.*

And hence Tragedy came to conſiſt of four parts, the *Prologue*, *Epiſode*, *Exode*, and *Chorus.*

The *Prologue* was all that preceded the firſt Entrance of the Chorus. See PROLOGUE.

The *Epiſode*, all that was interpoſed between the Singings of the Chorus.

The *Exode*, all that was rehearſed after the Chorus had done ſinging. See EXODIUM.

And the *Chorus*, was the Grex, or Company that ſung the Hymn. See CHORUS.

And as this Recitation of the Actors was in ſeveral parts, and inſerted in ſeveral places; it might either be conſider'd together, as a ſingle *Epiſode*, conſiſting of ſeveral parts; or each part might be call'd a diſtinct *Epiſode.*

Theſe ſeveral *Epiſodes* in the ſame Tragedy, might either be taken from ſo many different Subjects; or from the ſame, divided into a proper Number of Recitations, or Incidents.

To conſider only the firſt Occaſion, and Inſtitution, of theſe foreign, or additional pieces; it appears no ways neceſſary that they ſhou'd all be taken from one and the ſame Subject: Three or four Recitations of different Actions, no-wiſe related, or connected to each other, wou'd eaſe the Actors, and amuſe the People, in the Intervals of the Chorus as well as if they were all ſo many parts of the ſame Action. By degrees, what was at firſt only an Addition to the Tragedy, became the principal part thereof. Then, the ſeveral Pieces, or *Epiſodes*, began to be conſider'd as one ſingle Body, which were not to have parts, or Members of different Nature, and independent of each other.

The beſt Poets took the Thing in this Light, and drew all their *Epiſodes* from the ſame Action; which Practice was ſo fully eſtabliſh'd in *Ariſtotle*'s Time, that he lays it down as a Rule. Thoſe Tragedies wherein this Unity and Connection was not obſerved, he calls *Epiſodic Pieces.* See EPISODIC.

EPISODE in *Epic* Poetry. The Term *Epiſode*, by being tranſplanted from the Stage to the *Epopea*, did not change its Nature. All the Difference *Ariſtotle* makes between the Tragic and Epic *Epiſodes*, is, that the latter are more ample than the former. See EPIC.

*Ariſtotle* uſes the Word in three different Senſes: The firſt taken from the Enumeration already made, of the parts of the Tragedy, *viz. Prologue*, *Chorus*, *Epiſode*, and *Exode.* Whence it follows, that in Tragedy, every Thing is *Epiſode*, that is none of the other parts: So that as among us, there are Tragedies, without either *Prologue*, *Chorus*, or *Epilogue*, the *Tragic Epiſode* includes the whole Tragedy: Conſequently, the *Epic Epiſode* muſt be the whole Poem, in like manner. All there is to retrench from it being the Propoſition, and Invocation, which ſtand in lieu of the *Prologue.* In this Senſe, the *Epopea* and Tragedy, have each only one *Epiſode*; and if the Parts, or Incidents, be ill connected together, the Poem will be *Epiſodic* and defective.

But further, as all that was ſung in the Tragedy, was call'd the *Chorus*, in the ſingular Number; yet this Singularity did by no means prevent every Part or Diviſion of the ſame from being call'd a *Chorus*, without making ſeveral *Chorus's:* So 'twas with the *Epiſode:* Each Incident, and part of the Fable and Action, is not only a part of the *Epiſode*, but an *Epiſode* it ſelf.

The Term *Epiſode*, therefore, in this Senſe, ſignifies every part of the Action expreſs'd in the Plan, or firſt Draught of the Fable; as the Abſence and Wanderings of *Ulyſſes*, the Diſorders in his Family, and his Preſence which retriev'd every Thing.

*Ariſtotle* furniſhes us with a third Kind of *Epiſode*; in ſhewing, that what is contain'd and expreſs'd in the firſt Plan of the Fable is *proper*, and that all the reſt is *Epiſode.*

By proper, he means what is abſolutely neceſſary; and by *Epiſodes*, what in one Senſe are neceſſary, and in another not; ſo that the Poet is at Liberty to uſe, or let 'em alone.

Thus, *Homer*, having made the firſt Draught of the Fable of his Odyſſee, was not at Liberty to make *Ulyſſes* abſent from his Country, or not. His Abſence was eſſential; and therefore *Ariſtotle* ranks it among the Things he calls *proper.* But he does not beſtow that Appellation on the Adventures of *Antiphale*, *Circe*, the *Syrens*, *Scylla*, *Carybdis*, &c. The Poet was at Liberty to have left theſe alone, and choſen others in their Room; ſo that they are *Epiſodes*, diſtinct from the firſt Action, to which they are not immediately neceſſary. Indeed, in one Senſe, they may be ſaid to be neceſſary: For *Ulyſſes*'s Abſence being neceſſary, it follows, that not being in his own Country, he muſt be ſomewhere elſe. If therefore the Poet was at Liberty, not to have uſed thoſe particular Adventures above mention'd; yet he was not at Liberty not to have uſed any: But if he had omitted thoſe, he muſt neceſſarily have ſubſtituted others in their Room. Otherwiſe, he wou'd have omitted a part of the Matter contain'd in his Plan, and his Poem had been defective.

This third Senſe, therefore, of the Word *Epiſode*, comes to the ſecond: All the Difference between them, is, that what we call *Epiſode*, in the ſecond Senſe, is the Ground, or Plan of the *Epiſode* in the third: And that the third adds to the ſecond, certain Circumſtances which are only probable, and not neceſſary; as the Places, Princes, and People, among whom *Ulyſſes* was caſt by *Neptune.*

It muſt be added, that in an *Epiſode* in the third Senſe, the Incident, or *Epiſode* in the firſt Senſe, whereon it is grounded, is to be extended and amplified; otherwiſe, an eſſential part of the Action and Fable, does not become an *Epiſode.* Laſtly, 'tis in this third Senſe that we are to underſtand that Precept of *Ariſtotle*, not to make the *Epiſodes*, till after the Names of the Perſons have been cho'en. *Homer* wou'd not have ſpoke of the Fleet and Ships as he has done; if, in lieu of the Names of *Achilles*, *Agamemnon*, and *Iliad*, he had choſe thoſe of *Adraſtus*, *Capaneus*, and *Thebaid.* See FABLE.

Upon the whole, the Term *Epiſode*, in the Epic Poem, as uſed by the Father of the Criticks, *Ariſtotle*, does not ſignifie any foreign, or accidental Adventure; but the whole Narration of the Poet, or a neceſſary and eſſential part of the Action and Subject, amplified with probable Circumſtances.

Thus, *Ariſtotle* enjoins, that the *Epiſode* be not added to the Action, or fetch'd from elſewhere; but be a part of the Action; and never uſes the Word *adding*, in ſpeaking of *Epiſodes*, tho' it occurr'd ſo naturally to his Interpreters that they have generally uſed it in their Tranſlations and Comments. He does not ſay, that after laying the Plan, and chuſing the Names, the Poet is to *add the Epiſodes*; but uſes a Derivative of the Word *Epiſode*, επεισοδίῶ, as if in *Engliſh* we ſhou'd ſay, *Epiſodify* his Action.

Add, that to ſhew the different Extenſion of the Tragedy and *Epopea*, that is, how the one becomes longer than the other; he does not ſay, that there is but little *Epiſode* in Tragedy; but more accurately, that the *Epiſodes* of Tragedy are ſhort and conciſe; whereas the *Epopea* is lengthen'd out and extended by 'em. In one Word, the taking Vengeance of the wicked People in *Ulyſſes*'s Court, as expreſs'd in a few Words by *Ariſtotle*, in his Plan of the Odyſſee, is a ſimple proper Action, neceſſary to the Subject. It is no *Epiſode*, but the *baſis*, and, as it were, *ſtamen* of an *Epiſode.* And this ſame Puniſhment explain'd and open'd, with all the Circumſtances of Time, Place, and Perſons, is no ſimple and pro-

proper Action, but an Action *Epiſodified*, or a real *Epiſode*; which, tho' at the Diſcretion of the Poet, is yet neceſſary and proper to the Subject.

From what has been ſaid, we may venture to define *Epiſodes* to be neceſſary Parts of the Action, extended and fill'd up with probable Circumſtances. Now, an *Epiſode* is only a Part of an Action; and not a whole Action. And this Part of the Action, which is the Baſis, or Ground of the *Epiſode*, muſt not, when *Epiſodified*, retain any Thing of the Simplicity which it had when firſt expreſs'd in general, in the Plan of the Fable.

*Ariſtotle* rehearſing the Parts of the Plan of the *Odyſſe*, ſays expreſly, that they are proper; and by that, diſtinguiſhes them from *Epiſodes*. Thus, in the *Oedipus* of *Sophocles*, the ceaſing of the Plague at *Thebes* is no *Epiſode*. 'Tis only the Ground, and Matter of an *Epiſode*, which the Poet might have uſed, had he pleaſed. And *Ariſtotle*, obſerving that *Homer*, in the *Iliad*, had taken but few Things for his Subject, but that he had uſed *Abundance of his Epiſodes*, intimates, that the Subject contains in it ſelf Abundance of *Epiſodes*, which the Poet may uſe, or let alone, at Pleaſure. That is, it contains the Grounds, or Stamina thereof, which may either be left in their general and ſimple Brevity, as *Seneca* has done the ceaſing of the Plague; or may be extended and unfolded, as the ſame Author has done the Puniſhment of *Oedipus*.

The Subject of a Poem is lengthen'd two Ways: Either, by the Poets making uſe of a great many of his *Epiſodes*; or by amplifying, and giving a great Extent to every one. By this latter Method, chiefly, it is, that the *Epic* Poets lengthen their Poems much beyond the *Dramatic*. It muſt be added, that there are certain Parts of an Action, which, of themſelves, don't naturally preſent or afford more than one *Epiſode*; ſuch as the Death of *Hector*, of *Turnus*, or the like: Whereas, there are other Parts of the Fable more copious and fertile, and which oblige the Poet to make divers *Epiſodes* on each; tho' laid down in the firſt Plan, with as much Simplicity as the reſt: Such are the Battels of the *Trojans* and *Grecians*; the Abſence of *Ulyſſes*; the Wanderings of *Æneas*, &c. For *Ulyſſes*'s Abſence ſo many Years from his own Country, required his Preſence elſewhere; and the Deſign of the Fable was to throw him into ſeveral Dangers, and different Countries.

Now each Peril, and each new Country, furniſh'd an *Epiſode*, which the Poet might uſe if he pleas'd.

The Reſult of the whole is, that *Epiſodes* are not Actions, but Parts of Actions; that they are not added to the Action and Matter of the Poem, but that they make that Action and Matter themſelves, as the Members make the Body: That, of Courſe, they are not to be fetch'd from elſewhere, but rais'd from the Ground, or Fund of the Action: That they are not united, and connected with the Action, but with one another: That all the Parts of an Action are not ſo many *Epiſodes*, but only ſuch as are amplified, and extended with particular Circumſtances: And, laſtly, that their Union with each other, is neceſſary in the Ground of the *Epiſode*, and probable in the Circumſtances thereof. See ACTION.

EPISODIC, in Poetry. A Fable is ſaid to be *Epiſodic*, when it is ſwell'd with unneceſſary *Incidents*; and its Epiſodes are not neceſſarily, nor properly connected with each other. See EPISODE.

*Ariſtotle* lays it down, that thoſe Tragedies are moſt defective, whoſe *Epiſodes* have no Connection, or Dependance, on each other; which he calls *Epiſodic*, q. d. ſuperabundant in *Epiſodes*; by Reaſon ſo many little *Epiſodes* can never compoſe one whole one; but neceſſarily remain in a vicious Plurality. See FABLE.

The moſt ſimple Actions are moſt ſubject to this Irregularity; in that, having fewer Incidents and fewer Parts than others, they afford leſs Matter. An unwary Poet would ſometimes have conſumed his whole Stock in the firſt, or ſecond Time that his Actors appear'd between the Chorus's: and be driven to a Neceſſity of looking out for other Actions, to ſupply the remaining Intervals. *Ariſt. Poem.* C. 9.

The firſt *French* Poets did the like: To fill each Act, they took ſo many different Actions of a Hero; which had no other Connection between them, but that they were done by the ſame Perſon. *Boſſu* p. 106.

If an *Epiſode* be uſed, the Names and Circumſtances whereof are unneceſſary, and whoſe Ground and Subject is no Part of the Action, that is of the Matter of the Poem; ſuch an *Epiſode* renders the Fable *Epiſodic*. This Irregularity is diſcover'd, when one may take away a whole *Epiſode*, without ſubſtituting any Thing in its Room; and yet leave no Chaſm, or Defect in the Poem. The Hiſtory of *Hypſipile*, in *Statius*'s *Thebaid*, affords an Inſtance of theſe faulty *Epiſodes*. If the whole Story of that illuſtrious Nurſe were retrench'd, the Sequel of the principal Action would be the better for it. Nor would any Body imagine he had forgot any Thing, or that there was any Member of his Action wanting. *Boſſu.*

EPISPASTIC, in Medicine, a Remedy, which being externally applied, draws or attracts the Humour to the Part; call'd alſo an *Attractive*. See ATTRACTIVE.

Of *Epiſpaſticks* there are ſome which act very gently, and others with a deal of Violence. Thoſe of the latter Kind ſwell, and bloat the Skin, make it Red, and even raiſe Bliſters thereon. See VESICATORY.

The principal ſimple *Epiſpaſticks* are *Pellitory*, *Garlic*, *Muſtard*, *Onions*, *Yeaſt*, *Gooſe-dung*, and that of *Pidgeons*, *Cantharides*, &c.

The Word is *Greek*, form'd of ἐπὶ and σπάω, *traho*, *I draw*.

EPISTATES, in Antiquity, a Commander, or Perſon, who has the Direction and Government of a People.

The Term is of conſiderable Uſe, in ſpeaking of the antient Government of *Athens*; where the *Epiſtates* was the Senator in Command for that Day, or whoſe Turn it was to preſide that Day.

The Conſtitution was this: The ten Tribes of *Athens*, elected every Year by Lot, each of them fifty Senators; which made a Senate of five Hundred. Every Tribe had the Precedence in its Turn, and ſurrender'd it again, ſucceſſively, to another. The fifty Senators in Office were call'd *Prytanes*; the particular Place where they aſſembled *Prytoneum*; and the Term, or Duration, of their Office, *viz.* thirty five Days, *Prytania*. During theſe thirty five Days, ten, of the fifty *Prytanes*, preſided weekly, under the Name of *Proedres*. And of theſe *Proedres*, there was one to preſide each Day of the Week, under the Title of *Epiſtates*.

No Perſon was allow'd to hold this Office more than once in his whole Life; leſt he ſhould fall too much into the Taſt of Dominion. The Senators of all the other Tribes ſtill voted, according to the Order the Lot had given them; but the *Prytanes* alone convened the Aſſemblies; the *Proedres*, laid the Buſineſs before them; and the *Epiſtates*, took their Votes and Opinions.

It muſt be added, that of the ten *Proedres*, of each Week, there were but ſeven that could preſide, each his Day, in Quality of *Epiſtates*. The ten *Proedres* elected the ſeven *Prytanes*. See PRYTANES.

The Word is derived from the *Greek*, ὑπὲρ, *ſuper*, over, and ἵστημι, *ſto*, I ſtand.

EPISTEMONARCH, a Dignitary in the *Greek* Church.

The *Epiſtemonarch* was appointed to watch over the Doctrines of the Church; and to inſpect, or ſurvey every Thing relating to the Faith, in Quality of Cenſor thereof.

His Office anſwer'd pretty much to that of *Magiſter ſacri Palatii* at *Rome*.

The Word is derived from the *Greek*, ἐπίσταμαι, *ſcio*, I know, of ἐπιστήμη, *Science*, *Knowledge*, and ἀρχὴ, *Command*, *Precedence*.

EPISTLE, a Letter miſſive. See LETTER.

The Term *Epiſtle* is now ſcarce uſed, but for Letters wrote in Verſe; and Letters *Dedicatory*. See *Epiſtle* DEDICATORY.

In ſpeaking of Letters wrote by Moderns, or rather, in the modern Languages, we never uſe the Word *Epiſtle*. Thus, we ſay, the Letters, not *Epiſtles*, of the Cardinal *d' Oſſat*; of *Voiture*, of *Balzac*, of *Howel*, of *Farquhar*, &c. But thoſe wrote by the Antients, or rather in the Antient Languages, we call *Epiſtles*: As the *Epiſtles*, not Letters, of *Cicero*, *Pliny*, *Seneca*, *Busbequius*, *Launoy*, &c. Of St. *Auguſtin*, St. *Jerome*, &c. The *Epiſtles* of St. *Paul*, St. *Peter*, St. *John*, &c. to the *Romans*, *Corinthians*, &c.

The Word is form'd of the *Greek*, ἐπιστέλλω, *mitto*, I ſend.

EPISTOLARY, a Term chiefly uſed in the Phraſe *Epiſtolary Style*. See STYLE.

The Word is, ſometimes, alſo applied to Authors who have wrote *Epiſtles* or Letters: The principal *Epiſtolary* Authors, are *Sidonius Apollinaris*, *Tully*, the younger *Pliny*, *Seneca* the Philoſopher, *Petrarch*, *Politian*, *Busbequius*, *Eraſmus*, *Lipſius*, *Muret*, *Aſcham*, *Milton*, *Petau*, *Launoi*, *Sarau*, *Balzac*, and *Voiture*.

EPISTOMIUM, in Hydraulicks, a *Plug*, or Inſtrument by the Application whereof, an Aperture may be open'd, and ſhut again at Pleaſure.

EPISTROPHEUS, from ἐπιστρέφω, *converto*, I turn about; the ſame with *Cardo*. See CARDO.

EPISTYLE, in the antient Architecture, a Term uſed by the *Greeks*, for what we call *Architrave*, viz. a Maſſive of Stone, or Piece of Wood, laid immediately over the Capital of a Column. See ARCHITRAVE.

The

The *Epiſtyle* is the firſt, or loweſt Member of the *Entablature*. See ENTABLATURE.

The Word is derived from the *Greek*, ἐπὶ, *ſuper*, upon, and στυλὸς, *Column*.

EPITAPH, a Monumental Inſcription, in Honour, or Memory, of a Defunct; or an Inſcription engraven, or cut, on a Tomb, to mark the Time of a Perſon's Deceaſe, his Name, Family, and uſually ſome Eloge of his Vertues, or good Qualities. See MONUMENT, TOMB, *&c.*

The Style of *Epitaphs*, eſpecially thoſe compoſed in *Latin*, is ſingular. See LAPIDARY *Style*.

At *Sparta*, *Epitaphs* were only allowed to People who died in Battel. *Boxhornius* has made a Collection of *Epitaphs*, not very ample, but exceedingly well choſen. *Fa. Labbe*, has likewiſe given a Collection of the like Kind, in *French*; entitled, *Treſor des Epitaphes*. *Cambden* has done ſomething in the ſame Way in our Engliſh *Epitaphs*. An *Epitaph* is ſaid to be yet wanting to the Duke of *Marlborough*'s Monument; tho' a Premium of 500 Pounds was offer'd by his Dowager, to him that ſhould compoſe one worthy of the Hero deceas'd.

In *Epitaphs*, the dead Perſon is ſometimes introduced, by Way of *Proſopopœia*, ſpeaking to the Living; of which we have a fine Inſtance, worthy the *Auguſtan* Age, wherein the dead Wife thus beſpeaks her ſurviving Husband.

*Immatura peri: ſed tu felicior, Annos*
*Vive tuos, Conjux optime, vive meos.*

The Word comes from ἐπὶ, *upon*, and τάφος, *Sepulcher*. See SEPULCHER.

The *French* have a Proverb, *Menteur comme une Epitaph*: He lies like an *Epitaph*; in Alluſion to the Eloges ordinarily contain'd therein, which are not always over juſt.

EPITAPH, is alſo applied to certain Eloges, either in Proſe or Verſe, compoſed without any Intent to be engraven on Tombs.

In the Collection of Epigrams, we have Abundance of ſuch *Epitaphs*; ſome of them ludricrous and ſatyrical. See EPIGRAM.

For a Specimen, we ſhall here add a very beautiful *Epitaph*, compoſed by Mr. *Cowley*, on himſelf, to be put on a little Country Houſe, whither he retreated from the Court and Town, to ſpend his laſt Days.

*Hic, O Viator, ſub Lare parvulo,*
Couleius *hic eſt Conditus, hic jacet*
*Defunctus humani laboris*
*Sorte, ſupervacuaq; Vita;*

*Non* indecora pauperie *nitens,*
*Et non inerti nobilis otio,*
*Vanoq; dilectis popello,*
*Divitiis*, animoſus *hoſtis.*

*Poſſis ut illum dicere* mortuum,
*En terra jam nunc* quantula *ſufficit?*
*Exempta ſit curis*, Viator,
*Terra ſit illa levis, precare.*

*Hic ſparge* flores, *ſparge breves* Roſas;
*Nam vita gaudet Mortua floribus;*
*Herbiſq; odoratis corona*
*Vatis adhuc* cinerem Calentem.

EPITASIS, in the antient Poetry, the ſecond Part, or Diviſion of a Dramatic Poem; wherein, the Plot, or Action, propoſed, and enter'd upon, in the firſt Part, or *Protaſis*, was carried on, heighten'd, warm'd, and work'd up, till it arrived at its State, or Height, call'd the *Cataſtaſis*. See PROTASIS, and CATASTASIS.

This Diviſion is laid aſide in the Modern Drama; in Lieu whereof, our Plays are divided into *Acts*. See ACT.

The *Epitaſis* might, ordinarily, take up about our ſecond or third Act. See TRAGEDY.

The Word is pure *Greek*, ἐπιτάσις, of ἐπιτείνω, *Intendo*, I heighten.

EPITASIS, in Medicine, is ſometimes uſed for the Increaſe, or Growth, and heightening of a Diſeaſe; or a Paroxyſm of a Diſeaſe, particularly a Fever. See STATE.

EPITHALAMIUM, in Poetry, a *Nuptial Song*; or a Compoſition, uſually in Verſe, on Occaſion of a Marriage between two Perſons of Eminence.

The Topicks it chiefly inſiſts on, are the Praiſes of Matrimony, and of the Married Couple; with the Pomp and Order of the Marriage Solemnity. It concludes, with praying to the Gods for their Proſperity, their happy Offspring, *&c.* *Catullus* exceeded all Antiquity, in his *Epithalamiums*; and the Cavalier *Marino*, all the Moderns.

The Word is form'd of ἐπὶ and θαλαμος, *Bride-Chamber*.

EPITHEME, EPITHEMA, in Pharmacy, a Kind of *Fomentation*, or Remedy, of a liquid, ſpirituous Kind; applied externally upon the Regions of the Heart, or Liver; to ſtrengthen and comfort the ſame, or to correct ſome Intemperature. See FOMENTATION.

There are two Kinds of *Epithems*; the one *Liquid*, and the other *Solid*: The *Liquid Epithem* is a Fomentation of a more ſpirituous Nature than the reſt; the *Solid*, is a Mixture of Conſerves, Treacle, Confections, and Cordial Powders, generally ſpread on a Piece of Scarlet, or Leather.

The Word is form'd of the *Greek*, ἐπὶ, *upon*, and τίθημι, *pono*, I put.

EPITHET, a Noun Adjective, expreſſing ſome Quality of a Subſtantive to which it is joyn'd. See ADJECTIVE.

As, a *fruitful* Vine, a *ſtately* Pile, an *Echoing* Vault, *&c.*

*Epithets*, are Engines of mighty Uſe and Conveniency among the Poets and Orators; who ſupply in *Epithets*, what they want in Things. Card. *Perron* even blames *Homer* on the Head of *Epithets*; obſerving, that he frequently hooks in *Epithets*, without any Senſe, or Significancy at all, to help out his Meaſures; and that he equips every Hero with an *Epithet*, not according to the Exigence of the Caſe, but the Meaſure of the Verſe.

The Word is form'd of ἐπὶ, *upon*, and θησις, *poſitio*, putting.

EPITHET, is alſo uſed for a *Sur-name*, or ſecond Appellation. See SUR-NAME.

*Epithets*, were antiently beſtow'd very frankly, either on Account of any Defects of the Body, or Mind: The Kings themſelves, were not exempted from them. Hence, thoſe *Epithets* ſo frequent in Hiſtory; as Henry *Long-ſhanks*, Edward *Iron-ſides*, Richard *Crook-back*, John *Lack-land*, &c.

Nor have the *French* uſed their Kings any better: Witneſs their Charles *the ſimple*, Louis *the lazy*, *faineant*, Ludovicus *nihil faciens*; Pepin *the ſhort*; Louis *the Stammerer*, *le Begue*.

EPITHYME, a Medicinal Plant, of a very extraordinary Nature and Figure. Its Seed is very ſmall, from which ariſe long Threads like Hairs, which ſoon periſh, as well as the Root, unleſs they meet with ſome neighbouring Plant, both to ſuſtain and feed them.

The *Epithyme* grows indifferently on all Kinds of Herbs; and, of Conſequence, the Kinds thereof are infinite: To which Writers uſually attribute the particular Virtues of the Plants they grow on.

The moſt known of theſe Plants, and thoſe moſt uſed in Medicine, are ſuch as grow on Thyme; which are the proper *Epithymes*; and thoſe on Flax. There are two Kinds in the Shops; the one from *Venice*, the other from *Candia*: They have both an Aromatic Taſt, but that of *Venice* the ſtrongeſt.

Their Uſe is to ſtrengthen the Parts, and prevent Obſtructions of the Viſcera, *&c.*

EPITOME, an Abridgment, or Reduction, of the principal Matters of a larger Book, into a little Compaſs. See ABRIDGMENT.

The *Epitome* of *Baronius*'s Annals is done by *Sponde*: *Bernier* has made an *Epitome* of the Philoſophy of *Gaſſendus*.

'Tis a popular Objection againſt the *Epitomizing* of Authors, that it frequently occaſions the Loſs of the Originals. Thus the Loſs of the Hiſtorian *Trogus Pompeius*, is attributed to his Epitomizer *Juſtin*; and the Loſs of a great Part of *Livy* to *Lu. Florus*.

The Word is *Greek*, ἐπιτομὴ, form'd of ἐπιτέμνειν, *reſecare*, to retrench, abridge, or cut off.

EPITRITUS, a Foot of the antient *Latin* Verſe, conſiſting of four Syllables. See FOOT.

Grammarians reckon four Species of *Epitrites*: The firſt compounded of *an Jambus* and *Spondee*, as *Sălūtantēs*. The ſecond of a *Trochee* and *Spondee*, as *Concĭtati*. The third of a *Spondee* and *an Jambus*, as *Comunĭcans*. And the fourth of a *Spondee* and *Trochee*, as *Incăntarĕ*.

EPITROPE, in Rhetoric, a Figure of Speech, by the *Latins* call'd *Conceſſio*; whereby the Orator grants ſomething which he might deny; that, by this Shew of Impartiality, he may the more eaſily be granted what he requires, in his Turn. See FIGURE.

This Figure is frequently invidious: Let them extol his Probity; I acquieſce and am ready to be ſilent: But when they propoſe him for a Pattern of Wit, my Spleen is rais'd, *&c.*

EPITROPUS, a Kind of Judge, or rather Arbitrator, which the *Greek* Chriſtians, under the Dominion of the *Turks*, elect, in the ſeveral Cities, to terminate the Differences that ariſe among them; and avoid carrying them before the *Turkiſh* Magiſtrates.

There are ſeveral *Epitropi* in each City: Monſ. *Spon*, in his Travels, obſerves, that at *Athens* there are Eight, taken out of the ſeveral Pariſhes, and call'd *Vecchiardi*,

i. e.

i. e. old Men. But *Athens* is not the only Place where there are *Epitropi*. They are in all the Iſlands of the *Archipelago*.

Some *Latin* Authors of the V*th* Century, call *Epitropi*, thoſe who more anciently were call'd *Villici*, and ſince *Vidames*. See VIDAME.

In Times ſtill earlier, the *Greeks* applied the Term ἐπιτροπος, in the ſame Senſe as the *Latins* did *Procurator*, viz. for a Commiſſioner, or Intendant: Thus the Commiſſioners of Proviſions in the *Perſian* Army, are call'd by *Herodotus*, and *Xenophon*, *Epitropi*; and in the New Teſtament, Ἐπιτροπος, is the Intendant of a Houſe, render'd in the vulgate *Procurator*.

EPLOYE, in Heraldry. An Eagle *Eploye*, is what in *Engliſh* we more uſually call an *Eagle diſplay'd*, or *Spread Eagle*. See DISPLAY'D and EAGLE.

EPOCHA, or *Æra*, in Chronology, a Term, or fix'd Point of Time, whence the Years are number'd, or accounted. See YEAR.

The Word is form'd of the *Greek*, ἐποχη, *inhibitio*, *repreſſio*, of ἐπιχειν *to ſuſtain*, *ſtop*; by reaſon the *Epocha* defines, or limits a certain Space of Time. See TIME.

Very different *Epochs*, or *Epocha's*, obtain in different Nations; and no wonder: for there being no aſtronomical Conſideration to render one preferable to another, their Conſtitution is purely arbitrary.

That principally regarded among Chriſtians, is the *Epocha* of the Nativity, or Incarnation of JESUS CHRIST; that of the Mahometans, the *Hegira*; that of the Jews, &c. the *Creation of the World*; that of the ancient Greeks, the *Olympiads*; that of the *Romans*, the *Building of the City*; that of the ancient *Perſians* and *Aſſyrians*, the *Epocha* of *Nabonaſſar*, &c.

The Doctrine and Uſe of *Epocha's*, is of very great Extent in Chronology. See CHRONOLOGY.

To reduce the Years of one *Epocha* to thoſe of another, *i. e.* to find what Year of one, correſponds to a given Year of another; a Period of Years has been invented, which commencing before all the known *Epocha's*, is, as it were, a common Receptacle of them all, call'd the *Julian Period*. To this Period all the *Epocha's* are reduced, *i. e.* the Year of this Period, whereon each *Epocha* commences, is determined. All that remains, therefore, is to add the given Year of one *Epocha*, to the Year of the Period correſponding with its Riſe; and from the ſame to ſubtract the Year of the ſame Period correſponding to the other *Epocha*. The Remainder is the Year of that other *Epocha*. See JULIAN PERIOD.

The EPOCHA *of Chriſt*, or *our Lord*, is the *vulgar Epocha* throughout *Europe*; commencing from our Saviour's Nativity, *December* 25; or rather, according to the uſual Account, from his Circumciſion, the 1*ſt* of *January*; but particularly in *England*, from the Incarnation, or Annunciation of the Bleſſed Virgin, on the 25*th* of *March*; Nine Months prior to the Nativity. See NATIVITY, CIRCUMCISION, ANNUNCIATION, &c.

Now, the Year of the *Julian* Period whereon *Chriſt* was born, and circumciſed, is uſually computed to be the Year 4713; conſequently, the firſt Year of the Æra of *Chriſt*, correſponds to the Year 4714 of the *Julian* Period.

Hence, 1°. If to any given Year of *Chriſt*, you add 4713, the Sum will be the Year of the *Julian* Period correſponding thereto. *E. gr.* if to the preſent Year 1725, be added 4713, the Sum 6438, is the preſent Year of the *Julian* Period.

2°. On the contrary, ſubtracting 4713, from any given Year of the *Julian* Period, the Remainder is the current Year of *Chriſt*, *e. gr.* From the Year of the *Julian* Period 6438, ſubtracting 4713, the Remainder is the Year of *Chriſt* 1725.

In Effect, the *Epocha* of *our Lord*, ſerves not only for the Computation of the Years elapſed ſince the *Epocha* commenced; but even of thoſe before it.

Now, to find the Year of the *Julian* Period, correſponding to a given Year before *Chriſt*; ſubtract the given Year from 4714; the Remainder is the correſpondent Year required. Thus, *e. gr.* the Year before *Chriſt* 752, is the Year 3956 of the *Julian* Period. On the contrary, ſubtracting the Year of the *Julian* Period from 4714, the Remainder is the Year before *Chriſt*.

The Author of the vulgar *Epocha*, or Way of computing from *Chriſt*, is an Abbot of *Rome*, one *Dionyſius Exiguus*, by Nation a *Scythian*; who flouriſh'd under *Juſtinian*, about the Year 507: Tho' *Dionyſius* borrowed the Hint from *Panodorus* a *Greek* Monk. Till his Time, the Generality of Chriſtians computed their Years, either from the Building of *Rome*, or according to the Order of the Emperors and Conſuls, and the other Ways in Uſe with the People they lived among.

This Diverſity occaſioning a great Diſtraction between the Churches of the *Eaſt* and *Weſt*; *Dionyſius*, to compoſe the ſame, firſt propoſed a new Form of the Year, with a new general Æra, which in a few Years Time was generally admitted.

*Dionyſius* began his Account from the Conception, or Incarnation, popularly call'd Lady-Day, or the Annunciation: Which Method ſtill obtains in the Dominions of *Great Britain*, and there only; ſo that the *Dionyſian*, and *Engliſh Epocha*, is the ſame. In the other Countries of *Europe*, they reckon from the 1*ſt* of *January*; except in the Court of *Rome*, where the *Epocha* of the Incarnation ſtill obtains for the Date of their Bulls.

It muſt be added, that this *Epocha* of *Dionyſius* is charged with a Miſtake: The common Opinion is, that it places our Saviour's Nativity a Year too late; or, that he was born the Winter preceding the Time preſcribed by *Dionyſius* for his Conception.

But, the Truth is, the Fault lies on *Beda*, who miſinterpreted *Dionyſius*, and whoſe Interpretation we follow; as has been ſhewn by *Petavius*, from *Dionyſius's* own Epiſtles. For *Dionyſius* began his Cycle from the Year of the *Julian* Period 1712; but his *Epocha* from the Year 1713, wherein the vulgar Æra ſuppoſes *Chriſt* to have been incarnate.

The Year, therefore, which according to the vulgar *Epocha* is the 1*ſt* Year of *Chriſt*; according to *Dionyſius's* Æra, is the 2*d*. So that the preſent Year, which we call 1725, ſhou'd, in Juſtice, be 1726. Tho' ſome Chronologiſts, inſtead of one Year, will have the Error two.

To this vulgar Æra, as a ſure, fix'd Point, Chronologers uſe to reduce all the other *Epocha's*; tho' there is not one of 'em but what is controverted: So much Uncertainty there is in Time. We ſhall exhibit 'em as reduced to the *Julian* Period.

EPOCHA *of the Creation*, or *Orbis conditi*, according to the Computation of the *Jews*, call'd alſo the *Jewiſh Epocha*, is the Year of the *Julian* Period 953; anſwering to the Year before *Chriſt* 3761; and commences on the 7*th* Day of *October*.

Hence, ſubtracting 952 Years from any given Year of the *Julian* Period, the Remainder is the Year of the *Jewiſh Epocha*, correſponding thereto. Thus, *e. gr.* the preſent Year being the 6438*th* Year of the *Julian* Period; it is the 5486*th* Year of the *Jewiſh Epocha*, or ſince the Creation of the World.

This *Epocha* is ſtill in Uſe among the *Jews*.

The EPOCHA *of the Creation*, uſed by the *Greek* Hiſtorians, is the Year before the *Julian* Period 787; anſwering to the Year before *Chriſt* 5500.

Hence, to any given Year of the *Julian* Period, adding 787; the Sum gives the Year of this *Epocha*. *E. gr.* 6438 being the preſent Year of the *Julian* Period; 7390 is the preſent Year of this *Epocha*, or the Age of the World, according to this Computation.

The Author of this *Epocha*, is *Julius Africanus*, who collected it from the Hiſtorians. But when it came to be admitted into civil Uſe, 8 Years were added to it; that ſo, every Year thereof divided by 15, might exhibit the Indiction, which the *Eaſtern* Emperors uſed in their Charters and Diploma's.

The *Epocha of the Creation* uſed by the later *Greeks*, and *Ruſſians*, is the Year 795, before the *Julian* Period; or the Year 5509 before *Chriſt*; commencing from the 1*ſt* Day of *September*. Tho' the *Ruſſians*, having lately admitted the *Julian* Calendar, begin their Year from the 1*ſt* of *January*.

Hence, adding 795, to the Year of the *Julian* Period, the Sum gives the Year of this *Epocha*. Thus, *e. gr.* the *Julian* Period of the preſent Year being 6438; the preſent Year of this *Epocha*, i. e. the Years from the Creation, on this Footing, are 7233. Again, from the preſent Year 7233, ſubtracting 5508; the Remainder is the Year of the common Æra 1725.

This Æra was uſed by the Emperors of the *Eaſt*, in their Diplomata, &c. And thence alſo call'd the *Civil Æra of the Greeks*. In Reality, it is the ſame with the *Epocha* of the *Conſtantinopolitan* Period; whence ſome call it the *Epocha of the Period of Conſtantinople*. See PERIOD.

The *Alexandrian* EPOCHA *of the Creation*, is the Year 780, before the *Julian* Period; anſwering to the Year before *Chriſt* 5494; and commencing on the 29*th* Day of *Auguſt*.

Hence, adding 5493, to the preſent Year of *Chriſt* 1725; the Sum, 7218, gives the preſent Year of this *Epocha*; or Years elapſed ſince the Creation, according to this Computation.

This *Epocha* was firſt concerted by *Panodorus*, a Monk of *Egypt*, to facilitate the Computation of *Eaſter*; whence, ſome call it, *Greek Eccleſiaſtical Epocha*.

The *Euſebian* Epocha *of the Creation*, is the Year of the *Julian* Period 486; anſwering to the Year before *Chriſt* 4228; and commencing in Autumn.

Hence, ſubtracting 486, from the *Julian* Period of the preſent Year 6438; or adding 4428 to the preſent Year of *Chriſt*, the Reſult 5953, is the preſent Year of this *Epocha*.

This *Epocha* is uſed in *Euſebius*'s *Chronicon*, and the *Roman* Martyrology. See Creation.

Epocha *of Olympiads*, is the Year of the *Julian* Period 3938: anſwering to the Year 776, before *Chriſt*; and the Year 2985 from the Creation; commencing at the Full Moon next the Summer Solſtice. And each *Olympiad* containing four Years.

This *Epocha* is very famous in ancient Hiſtory: It was uſed principally by the *Greeks*, and had its Origin from the *Olympic* Games, which were celebrated at the Beginning of every fifth Year. See Olympiad.

Epocha *of the Building of* Rome, or *Urbis conditæ*, U. C. is the Year of the *Julian* Period 3961, according to *Varro*; or 3962, according to the *Faſti Capitolini*; anſwering to the Years before *Chriſt* 753, or 752, and beginning on the 21*ſt* of *April*.

Hence, if the Years of this *Epocha* be fewer than 754, ſubtracting 'em from 754, or 7535 you have the Year before *Chriſt*. And, on the contrary, if they be more than 745, adding 'em to the ſame, the Sum is the Number of Years ſince *Chriſt*. Laſtly, adding the Year before *Chriſt*, to 753, or 752; the Sum will give the Year of this *Epocha*, or the Time ſince the Building of *Rome*. Thus, *e. gr.* the preſent Year 1725, according to *Varro*, is the Year of *Rome* 2488.

Epocha *of Nabonaſſar*, is the Year of the *Julian* Period 3967; anſwering to the Year before *Chriſt* 747; commencing on the 26*th* Day of *February*.

This Æra takes its Denomination from its Inſtituter, *Nabonaſſar* King of *Babylon*; and is that uſed by *Ptolomy* in his Aſtronomical Obſervations, by *Cenſorinus* and others.

*Dioclefian* Epocha, or Epocha *of Martyrs*, is the Year of the *Julian* Period 4997, anſwering to the Year of *Chriſt* 283; call'd *Æra of Martyrs* from the great Number of Chriſtians, who ſuffer'd Martyrdom under the Reign of that Emperor.

The *Abyſſinians*, among whom 'tis ſtill uſed in all Eccleſiaſtical Computations, call it the *Years of Grace*. Tho' they don't reckon their Years in a continued Series from this *Epocha*. But when the *Dionyſian* Period of 534 Years is expired, they begin their Computation afreſh from 1, 2, &c.

Epocha *of the Hegira*, or *Mahometan* Epocha, is the Year of the *Julian* Period 5335, anſwering to the Year of *Chriſt* 622. It commences on the 16*th* of *July*, the Day of *Mahomet*'s Flight from *Mecca* to *Medina*.

This *Epocha* is uſed by the *Turks* and *Arabs*, and even all who profeſs the *Mahometan* Faith: It was firſt introduced by *Omar*, the third Emperor of the *Turks*. The Aſtronomers, *Alfraganus*, *Albategnius*, *Alphonſus*, and *Ulugh Beigh*, refer *Mahomet*'s Flight to the 15*th* of *July*; but all the People who uſe the *Epocha*, agree to fix it on the 16*th*. See Hegira.

Epocha *of the Seleucides*, uſed by the *Macedonians*, is the Year of the *Julian* Period 4402; anſwering to the Year before *Chriſt* 312. See Seleucides.

*Yezdegerdic*, or *Perſian* Epocha, is the Year of the *Julian* Period 5345; anſwering to the Year of *Chriſt* 632, and commencing on the 16*th* of *June*.

This *Epocha* is taken from the Death of *Yezdegerdis*, the laſt King of *Perſia*, ſlain in Battle by the *Sarazens*.

*Julian* Epocha, or *Epocha* of *Julian* Years, is the Year of the *Julian* Period 4668; anſwering to the Year before *Chriſt* 45.

This *Epocha* had its Origin from the Year of the Reformation of the Calendar under *Julius Cæſar*; call'd the *Year of Confuſion*. See Year.

*Spaniſh* Epocha, is the Year of the *Julian* Period 4676; anſwering to the Year before *Chriſt* 38.

*Actiac*, or *Actian* Epocha, is the Year of the *Julian* Period 4684, anſwering to the Year before *Chriſt* 30. Commencing on the 29*th* Day of *Auguſt*. See Actiac.

Other memorable *Epocha*'s are, that of the *Deluge*, in the Year of the Creation 1656: The Birth of *Abraham* in 2039: The *Iſraelites Exodus* or Departure out of *Egypt*, in 2544: The Building of the *Temple* of *Jeruſalem*, in 2023: And the *Deſtruction* of the ſame in the Year of *Chriſt* 70: The taking of *Conſtantinople* by the *Turks*, in 1453, &c.

EPODE, in Poetry. In the *Lyric* Poetry of the *Greeks*, the *Epode* is the third Part, or End of the Ode: Their Ode, or Song, being divided into Strophe, Antiſtrophe, and *Epode*. See Ode.

The *Epode* was ſung by the Prieſts, ſtanding ſtill before the Altar, after all the Turns and Returns of the Strophe and Antiſtrophe. See Strophe.

The *Epode* was not confined to any preciſe Number, or Kind of Verſes; as the Strophe and Antiſtrophe were. See Strophe, &c.

But when the Ode contain'd ſeveral *Epodes*, Strophes, &c. they were all alike.

As the Word *Epode*, then, properly ſignifies the End of the Song; and as in Odes, what they call'd the *Epode*, finiſh'd the Singing: It became cuſtomary, as M. *Dacier* ſhews, for a little Verſe, which being put after another, cloſed the Period, and finiſh'd the Senſe which had been ſuſpended in the firſt Verſe, to be call'd *Epode*, ἐπῳδὸς.

And hence it is, that the VI*th* Book of *Horace*'s Odes is entitled *Liber Epodωn*, Book of *Epodes*, by reaſon the Verſes thereof are all alternately long and ſhort; and that the ſhort one, generally, tho' not always, cloſes the Senſe of the long one.

But the Signification of the Word is extended ſtill further; *Epode* being become a general Name for all Kinds of little Verſes, that follow one or more great ones, of what Kind ſoever they be: And, in this Senſe, a Pentameter is an *Epode*, after an Hexameter, which in Reſpect thereof is a Pro-ode.

EPOMIS, in Anatomy, the upper Part of the Shoulder, reaching up to the Neck. See Shoulder.

Some Authors apply the Word *Epomis* to the upper Part of the *Os Humeri*: But the ancient *Greek* Phyſicians only uſe it for the muſcular, or fleſhy Part, placed as abovementioned.

The Word is *Greek*, Ἐπωμὶς, which ſignifies the ſame Thing.

EPOPEA, Epos, in Poetry, is ſtrictly the Hiſtory, Action, or Fable, that makes the Subject of an *Epic* Poem. See Action and Fable.

In the common Uſe of the Word, however, *Epopea* is the ſame with *Epic* Poem it ſelf: In which Senſe it is defined, a Diſcourſe invented with Art, or a Fable agreeably imitated from ſome important Action; and related in Verſe, in a probable and ſurprizing Manner; with a View to form the Manners, &c. See Epic *Poem*.

The Word is derived from the *Greek*, ἔπος, *Carmen*, *Verſe*; and ποιέω, *facio*, *I make*.

EPULO, in Antiquity, a Miniſter of Sacrifice among the *Romans*. See Sacrifice.

The Pontifices not being able to attend all the Sacrifices perform'd at *Rome*, to ſo many Gods as were adored by the People; appointed three Miniſters, whom they called *Epulones*, by reaſon they conferr'd on 'em the Care and Management of the *Epula*, Feaſts in the ſolemn Games and Feſtivals.

To them belong'd the ordering and ſerving the ſacred Banquet, offer'd on ſuch Occaſions to *Jupiter*. They wore a Gown border'd with Purple, like the Pontifices. Their Number was at length augmented from Three to Seven, and afterwards by *Cæſar* to Ten.

Their firſt Eſtabliſhment was in the Year of *Rome* 558, under the Conſulate of *L. Furius Purpureo*, and *M. Claudius Marcellus*.

EPULOTICKS, in Medicine, dry, aſtringent Remedies, proper to cicatrize, or incarnate Wounds and Ulcers. See Incarnative, Cicatricive.

Such are Emplaſters of Ceruſs, and Diapalma; the Unguent Pompholix, &c.

The Word is form'd of the *Greek*, ἐπὶ, *ſuper*, and ὠλὴ, *Cicatrix*, *Eſchar*. Whence the Verb ἐπουλόω, *cicatricem*, *infero*.

EPULUM, in Antiquity, *Banquet*, a holy Feaſt prepared for the Gods. See Feast.

The Statues of the Gods were commonly laid upon a Bed, and were ſerved as if they had been very hungry; to perform which, was the Function of the Miniſters of Sacrifice, hence called *Epulones*. See Epulo.

EQUABLE *Motion*, is that whereby the moveable Body proceeds with the ſame continued Velocity; neither accelerated nor retarded. See Motion.

EQUAL, a Term of Relation between two or more Things of the ſame Magnitude, Quantity, or Quality.

*Wolfius* defines *Equals* to be thoſe Things which may be ſubſtituted for each other, without any Alteration of Quantity. 'Tis an Axiom in Geometry, that two Things which are *Equal* to the ſame third, are *Equal* to each other. And again, if to, or from *Equals*, you add or ſubtract *Equals*, the Remainders will be *Equal*. See Equality.

Equal *Circles*, in Geometry, are thoſe whoſe Diameters are *Equal*. See Circle.

Equal *Angles*, are thoſe whoſe Sides are inclined alike to each other; or that are meaſured by ſimilar Parts of their Circles. See Angle.

EQUAL *Figures*, are those whose Area's are *Equal*; whether the Figures be similar or not. See FIGURE.

The Segments of a Sphere, or Circle, are of an *Equal Concavity*, or *Convexity*, when they have the same Ratio, or Proportion to the Diameters of the Spheres, or Circles whereof they are Parts. See SEGMENT.

EQUAL *Solids*, are those which comprehend, or contain each as much as other; or whose Solidities and Capacities are *Equal*. See SOLID.

EQUAL *Hyperbola's*, are those whose Ordinates to their indeterminate Axes, are *Equal* to each other; taken at *Equal* Distances from their Vertices. See HYPERBOLA.

EQUAL *Numbers*, EQUAL *Hours* } See { NUMBER. HOUR.

EQUAL *Geometrical Ratio's*, are those whose least Terms are similar *aliquot*, or *aliquant* Parts of greater. See RATIO.

*Equal Arithmetical Ratio's*, are those wherein the Difference of the two less Terms, is *Equal* to the Difference of the two greater. See RATIO.

In Opticks, we say, that Things seen under *Equal Angles*, are *Equal*. *Equal* Parts of the same Interval, or Magnitude, if unequally distant from the Eye, appear unequal. *Equal* Objects, and at *Equal* Distances, only the one placed directly, and the other obliquely, seem unequal; and that placed directly, the bigger. See VISION.

EQUALITY, in Astronomy. The *Circle of Equality*, or the *Equant*, is a Circle used in the *Ptolomaic* Astronomy, to account for the Eccentricity of the Planets, and reduce them more easily to a Calculus. See EQUANT.

In Geometry, the *Ratio*, or *Proportion of* EQUALITY, is that between two equal Numbers, or Quantities.

*Proportion of* EQUALITY *evenly ranged*, or *ex Æquo ordinata*, is that wherein two Terms in a Rank, or Series, are Proportional to as many Terms in another Series, compared to each other in the same Order, *i. e.* the first of one Rank to the first of another; the second to the second, *&c.*

*Proportion of* EQUALITY *evenly disturbed*, call'd also *ex Æquo Perturbata*, is that wherein more than two Terms of a Rank, are proportional to as many Terms of another Rank, compared to each other, in a different and interrupted Order; *viz.* The first of one Rank to the second of another; the second to the third, *&c.*

EQUALITY, in Algebra, is a Comparison of two Quantities, that are equal both really and representatively, *i. e.* both equal in Effect and Letters: And *Equation*, is a Comparison of two Magnitudes, equal in Effect, but unequal in Letters, to render them equal.

*Equality*, in Algebra, is usually denoted by two parallel Lines, as =: Thus, $2 + 2 = 4$, *i. e.* 2 *Plus* 2, are equal to 4.

This Character was first introduced by *Hariot*. *Des Cartes*, and some after him, in Lieu thereof use ∞: Thus, $2 + 2 \infty 4$, so $z - y = b + c$, signifies that z *minus* y, is equal to b *plus* c.

From an Equation, we arrive at an *Equality*, by changing one Letter into another, whereby the two Members of the Equation, *i. e.* the two Quantities compared together, and connected by the Sign of *Equality*, are render'd Equal.

Thus, in the Equation $a\,a\,x = b\,c\,d$; supposing $x = \frac{b\,c\,d}{a\,a}$, we change $x$ into $\frac{b\,c\,d}{a\,a}$, and by this Substitution arrive at the *Equality* $b\,c\,d = b\,c\,d$.

In the Solution of a Numerical Problem, to be render'd rational; if there be only one Power to be equall'd to a Square, or other higher Power; it is call'd *simple Equality*.

When there are two Powers to be equall'd, each to a Square, it is call'd *double Equality*, &c.

*Diophantus* has given us a Method for double *Equalities*, and *Fa. Billy*, another for *triple Equalities*, in his *Diophantus* and *Redivivus*.

EQUANT, or ÆQUANT, in Astronomy, a Circle, imagined by Astronomers, in the Plane of the Deferent, or Eccentric; for the regulating and adjusting of certain Motions of the Planets. See DEFERENT.

EQUATION, or ÆQUATION, in Algebra, an Expression of the same Quantity, in two different, that is, dissimilar, but *Equal* Terms or Denominations. As when we say, 2. $3 = 4 + 2$; that is, twice three is equal to four and two. See QUANTITY.

*Stifelius* defines *Equation* to be the Ratio of Equality, between two Quantities differently denominated: As when we say 3 Shill. = 36 Pence. Or 50 Shill. = 2 Lib. 10 Shill. = 600 Pence, = 2400 Farth. Or, $b = d + e$. Or, $12 = \frac{a - P}{5}$, *&c.*

Hence, the Reduction of two heterogeneous, or dissimilar Quantities to the same Value, *i. e.* to an Equality, is called the *bringing them to an Equation*.

The Character, or Sign of an *Equation*, is = or ∞; See CHARACTER.

The Resolving of Problems, by Means of *Equations*, is the Business of Algebra. See ALGEBRA.

The *Terms of an Equation*, are the several Quantities, or Parts, of which an *Equation* is composed; connected together by the Signs + and −. Thus, in the *Equation* $b + c = d$; the Terms are b, c and d. And the Tenor of the *Equation* is, that some Quantity, represented by b, is equal to two others represented by c and d. See TERMS *of Equations*.

The *Root of an* EQUATION, is the Value of the unknown Quantity in the *Equation*. E. gr. if $a^2 + b^2 = x^2$; the Root will be $\surd (a^2 + b^2)$. See ROOTS *of Equations*.

*Equations* are divided with Regard to the Powers of the unknown Quantities, into *Simple*, *Quadratic*, *Cubic*, &c.

A *Simple* EQUATION, is that wherein the unknown Quantity is only of one Dimension, or the first Power. As, $x = (a + b) : 2$. See SIMPLE *Equation*.

A *Quadratic* EQUATION, is that wherein the unknown Quantity is of two Dimensions, or the second Power. As, $x^2 = a^2 + b^2$. See QUADRATIC *Equation*.

A *Cubic* EQUATION, is that wherein the unknown Quantity is of three Dimensions. As $x^3 = a^3 - b^3$, *&c.* See CUBIC *Equation*.

If the unknown Quantity be of four Dimensions, as $x^4 = a^4 - b^4$, the *Equation* is call'd a *Biquadratic*; if of 5, a *Surdesolid*, &c. See POWER.

*Equations* are consider'd two Ways: Either, as the ultimate Conclusions we arrive at in the Solution of Problems; or as Means, by the Help whereof, we arrive at those final Solutions. See SOLUTION and PROBLEM.

An *Equation* of the first Kind, consists only of one unknown Quantity, intermix'd with other known Quantities. Those of the latter Kind, consist of several unknown Quantities, which are to be compared, and connected together, till out of them all arise a new *Equation*, wherein the one unknown Quantity sought, is mix'd with the known. To get the Value of which unknown Quantity, the *Equation* is generally turn'd, and transform'd various Ways, till it be brought as low, and render'd as simple as possible.

The Doctrine and Practice of *Equations*; that is, the Solution of Questions by *Equations*, consists of several Steps, or Parts, *viz.* 1°. The denominating of the several Quantities, or expressing them in proper Signs, or Symbols. 2°. The bringing the Quantities thus denoted to an *Equation*. 3°. The reducing that *Equation* to its lowest and simplest Terms. To which 4°. may be added the constructing of the *Equation*, or representing it in Geometrical Lines: We proceed to each in its Order.

With Regard to the *first*; a Question, or Problem, being proposed; we conceive the Thing sought, or required, as already done: And accordingly note, or express it by one of of the Vowels, as *a*, or more usually, by one of the last Letters the Alphabet, *x* y or z; noting the other known Quantities, by the Consonants, or the beginning Letters of the Alphabet, *b*, *c*, *d*, &c. See QUANTITY, CHARACTER, SPECIES.

The Question being thus stated in Species; it is consider'd whether, or no, it be subject to any Restrictions, *i. e.* whether it be determinate, or no; which is found by these Rules.

1°. If the Quantities sought, or required, be more than the Number of *Equations* given, or contain'd in the Question; it is indeterminate, and capable of innumerable Solutions. The *Equations* are found, if they be not expressly contain'd in the Problem it self, by the Theorems of the Equality of Quantities.

2°. If the *Equations* given, or contain'd in the Problem, be just equal in Number with the unknown Quantities; the Question is determinate, or has one only Solution.

3°. If the unknown Quantities be fewer than the given *Equations*, the Question is yet more limited, and sometimes discovers it self impossible, by some Contradiction between the *Equations*. See DETERMINATE, *&c.*

### *To bring Questions to* EQUATIONS.

Now, *to bring a Question to an Equation*, that is, to bring the several mediate *Equations*, to one final one; the principal Thing to be attended to, is to express all the Conditions thereof, by so many *Equations*. In order to which, it is to be consider'd, whether the Propositions, or Sentences, wherein it is expressed, be all of them fit to be noted in Algebraic Terms; as our Conceptions use to be in *Latin*, or *Greek* Characters. And if so, as is generally the Case in Questions about Numbers, or abstract Quantities; then let Names be given both to the known and unknown Qualities, as far as Occasion requires: And thus the Drift of the Question may be couch'd, as we

may

may call it, in the *Algebraical Language*. The Conditions, thus tranſlated to Algebraic Terms, will give as many *Equations* as are neceſſary to ſolve it. To illuſtrate this by an Inſtance: Suppoſe it required to find three Numbers, in continual Proportion, whoſe Sum is 20, and the Sum of the Squares 140; putting $x$, y, z, for the Names of the three Numbers ſought, the Queſtion will be tranſlated out of the Verbal to the Symbolical Expreſſion, thus:

| *The Queſtion in Words.* | *In Symbols.* |
|---|---|
| Required three Numbers, on theſe Conditions. | $x$, y, z? |
| That they be continually proportional. | $x : y :: y : z$, or $xz = yy$ |
| That the Sum be 20. | $x + y + z = 20.$ |
| And the Sum of their Squares 140. | $xx + yy + zz = 140.$ |

Thus, is the Queſtion brought to theſe *Equations*, viz. $xz = yy$, $x + z + y = 20$, and $xx + yy + zz = 140$, by the Help whereof, $x$, y, and z, are to be found.

The Solutions of Queſtions are, for the moſt Part, ſo much the more expedite and artificial, by how much the unknown Quantities, you have at firſt, are the fewer. Thus, in the Queſtion propoſed, putting $x$ for the firſt Number, and y for the ſecond, $\frac{yy}{x}$ will be the third Proportional; which being put for the third Number, bring the Queſtion into *Equations* as follows.

| *The Queſtion in Words.* | *Symbolically.* |
|---|---|
| There are ſought three Numbers in continual Proportion. - - - | $x$, y, $\frac{yy}{x}$? |
| Whoſe Sum is 20. - - - - - | $x + y + \frac{yy}{x} = 20.$ |
| And the Sum of their Squares 140. - - - - - - - - - - | $xx + yy + \frac{y^4}{xx} = 140.$ |

You have therefore the *Equations* $x + y + \frac{yy}{x} = 20$, and $xx + yy + \frac{y^4}{xx} = 140$, by the Reduction whereof, $x$ and y are to be determined.

Take another Example: A Merchant increaſes his Eſtate annually by a third Part, abating 100 *L.* which he ſpends yearly in his Family; and after three Years he finds his Eſtate doubled. *Query*, What is he worth? To reſolve this, it muſt be obſerved, that there are (or lie hid) ſeveral Propoſitions, which are all thus found out and laid down.

| *In Engliſh.* | *Algebraically.* |
|---|---|
| A Merchant has an Eſtate. —— —— | $x$ |
| Out of which the firſt Year he expends 100 *l.* | $x - 100.$ |
| And augments the reſt by one Third. —— | $x - 100 + \frac{x - 100}{3}$, or $\frac{4x - 400}{3}$ |
| And the ſecond Year he expends 100 *l.* — | $\frac{4x - 400}{3} - 100$, or $\frac{4x - 700}{3}$ |
| And augments the reſt by one Third. —— | $\frac{4x - 700}{3} + \frac{4x - 700}{9}$, or $\frac{16x - 2800}{9}$ |
| And ſo the third Year he expends 100 *l.* — | $\frac{16x - 2800}{9} - 100$, or $\frac{16x - 3700}{9}$ |
| And by the reſt gains likewiſe one Third. | $\frac{16x - 3700}{9} + \frac{16x - 3700}{27}$, or $\frac{64x - 14800}{27}$ |
| And he becomes at length twice as rich as at firſt. | $\frac{64x - 14800}{27} = 2x.$ |

Therefore the Queſtion is brought to this *Equation*, $\frac{64x - 14800}{27} = 2x$, by the Reduction whereof you will find

$x = 14800$.

$x$. *Viz.* Multiply it into 27, and you have $64x - 14800 = 54x$; ſubtract $54x$, and there remains $10x - 14800 = 0$, or $10x = 14800$; and dividing by 10, you have $x = 1480$. So that the Value of his Eſtate at firſt was 1480 *Lib.*

It appears then, that to the Solution of Queſtions about Numbers, or the Relations of abſtract Quantities; there is ſcarce any Thing more required, but to tranſlate 'em out of the common, into Algebraic Language; *i. e.* into Characters, proper to expreſs our Idea's of the Relations of Quantities. Indeed, it may ſometimes happen, that the Language wherein the Queſtion is ſtated, may ſeem unfit to be rendred into the Algebraical; tho' by making a few Alterations therein, and attending to the Senſe, rather than the Sound of the Words, the Tranſlation becomes eaſy enough. The Difficulty here reſults merely from the Difference of Idioms, which is as obſervable between moſt Languages, as between the common and ſymbolical.

However, to render the Solution of ſuch Problems a little more eaſy and familiar, we ſhall add an Example or two thereof.

1°. *Given, the Sum of two Numbers* a, *and the Difference of their Squares* b; *to find the Numbers themſelves.* Suppoſe the leſſer, $x$; the other will be $a - x$; and their Squares $xx$ and $aa - 2ax + xx$: Whoſe Difference, $aa - 2ax$ is call'd $b$. Conſequently, $aa - 2ax = b$. Whence, by Reduction, $aa - b = 2ax$. Or $\frac{aa - b}{2a}$ $(= \frac{1}{2}a - \frac{b}{2a}) = x$.

*E. gr.* Suppoſe the Sum of the Numbers, or a, to be 8, and the Difference of their Squares, or b, 16: Then will, $\frac{1}{2}a - \frac{b}{2a} (= 4 - 1) = 3 = x$. And $a - x = 5$. Therefore the Numbers are 3 and 5.

2°. *To find three Quantities* x, y, *and* z; *the Sum of each Pair whereof is given.* Suppoſe the Sum of the Pair $x$ and y be a; that of $x$ and z, b: and that of y and z, c. To determine the three Numbers required, $x$, y, and z; we have three *Equations* $x + y = a$; $x + z = b$; and $y + z = c$: Now, to exterminate two of the unknown Quantities, *e. gr.* y and $x$; take away $x$, both from the firſt and ſecond *Equations*; and we ſhall have $y = a - x$ and $z = b - x$. Which Values being ſubſtituted for y and z in the third *Equation*; there will ariſe $a - x + b - x = c$; and by Reduction $x = \frac{a + b - c}{2}$. Having found $x$ the former *Equations*, $y = a - x$ and $z = b - x$ will give y and z.

Thus, *e. gr.* If the Sum of the Pair $x$ and y be 9; of $x$ and z, 10; and of y and z, 13: Then, in the Values $x$, y and z, write 9 for a, 10 for b, and 13 for c; and you will have $a + b - c = 6$; and conſequently $x$ $(= \frac{a + b - c}{2})$ $= 3$, y $(= a - x) = 6$ and z $(= b - x) = 7$.

3°. *To divide a given Quantity into any Number of Parts, ſo as that the greater Parts ſhall exceed the leaſt by any given Differences.* Suppoſe A a Quantity to be divided into four ſuch Parts, the firſt and ſmalleſt whereof is $x$; the Exceſs of the ſecond Part above this, b, of the third, c, and the fourth, d: Then will $x + b$ be the ſecond Part, $x + c$ the third, and $x + d$ the fourth: The Aggregate of all which $4x + b + c + d$ is equal to the whole Line a. Now, taking away from each, $b + c + d$, and there remains $4x = a - b - c - d$ or $x = \frac{a - b - c - d}{4}$.

Suppoſe, *e. gr.* a Line of 20 Feet, to be divided into 4 Parts, in ſuch manner, as that the Exceſs of the ſecond above the firſt may be 2 Feet, of the third, 3 Feet, and of the fourth 7 Feet. Then the four Parts will be $x$ $(= \frac{a - b - c - d}{4}$ Or $\frac{20 - 2 - 3 - 7}{4})$ $= 2$, $x + b = 4$, $x + c = 5$, and $x + d = 9$. And after the ſame Manner, may a Quantity be divided into a greater Number of Parts on the ſame Conditions.

4°. *A Perſon diſpoſed to diſtribute a little Money among ſome Beggars; wants Eight Pence, of Three Pence for each of 'em: He therefore gives 'em Two Pence a-piece, and has Three Pence left: The Number of Beggars is required.* Let the Number of Beggars be call'd $x$; and the Perſon want Eight Pence of giving 'em all $3x$. Conſequently he has $3x - 8$; out of which he gives $2x$ Pence; and the remaining Pence are 3. That is $x - 8 = 3$ or $x = 11$.

5°. *The Power or Strength of one Agent being given; to determine how many ſuch Agents will produce a given Effect* a, *in a given Time* b. Suppoſe the Power of the Agent ſuch, as that it may produce the Effect c, in the Time d; then, as the Time d, is to the Time b, ſo is the Effect c, which the Agent can produce in the Time d, to the Effect it can produce in the Time b, which accordingly will be $\frac{bc}{d}$ Then, as the Effect of one Agent $\frac{bc}{d}$ is to the joynt Effect of 'em all a; ſo is that one Agent, to all the Agents. Conſequently the Number of Agents will be $\frac{ad}{bc}$.

Thus, *e. gr.* If a Clerk, or Writer, in 8 Days Time, tranſcribe 15 Sheets; how many ſuch Clerks are required to tranſcribe 405 Sheets in 9 Days? *Anſ.* 24. For if 8 be ſubſtituted for d, 15 for c, 405 for a, and 9 for b, the Number $\frac{ad}{bc}$ will become $\frac{405 \times 8}{9 \times 15}$ That is $\frac{3240}{135}$ or 24.

5°. *The Powers of ſeveral Agents being given; to determine the Time* $x$, *wherein they will joyntly perform a given Effect d.* Suppoſe the Powers of the Agents, A, B, C, ſuch as that in the Times e, f, g, they would produce

duce Effects a, b, c, reſpectively: And theſe, in the Time $x$, would produce Effects $\frac{ax}{e}$, $\frac{bx}{f}$, $\frac{cx}{g}$. Conſequently $\frac{ax}{e} + \frac{bx}{f} + \frac{cx}{g} = d$, and by Reduction $x = \frac{d}{\frac{a}{e} + \frac{b}{f} + \frac{c}{g}}$.

Suppoſe, *e. gr.* three Workmen cou'd finiſh a certain Work, on ſuch and ſuch Times, *viz.* A once in three Weeks, B thrice in eight Weeks, and C five Times in twelve Weeks: And it is required, in what Time they will finiſh it together? Here, the Powers of the Agents A, B, C, are ſuch as in the Times 3, 8, and 12, reſpectively produce Effects 1, 3, 5; and it is enquired in what Time they will produce the Effect, 1. For a, b, c, d, e, f, g, write 1, 3, 5, 1, 3, 8, 12; and there will come out $x = \frac{1}{\frac{1}{3} + \frac{3}{8}} + \frac{5}{12}$ or $\frac{8}{9}$ of a Week, that is, 6 Days, $5\frac{1}{3}$ of an Hour; the Time they will finiſh it in together.

6°. *Given, the ſpecific Gravities of a Mixture, and of the ſeveral Ingredients thereof; to find the Proportion of the Ingredients therein.* Suppoſe e the ſpecific Gravity of the Mixture A + B; a that of A, and b that of B: Since the abſolute Gravity, or Weight, is compounded of the Bulk of the Body, and its ſpecific Gravity; a A will be the Weight of A; B b that of B; and e A + e B the Weight of the Aggregate A + B. Conſequently, a A + b B = e A + e B; and therefore a A − e A = e B − b B or e − b. a − e :: A. B.

Thus, *e. gr.* ſuppoſe the ſpecific Gravity of Gold to be as 19, that of Silver as $10\frac{1}{3}$, and that of K. *Hiero*'s Crown as 17; then will 10. 3 (:: e − b. a − e :: A. B) :: the Bulk of Gold in the Crown, to the Bulk of Silver: Or 190. 31 (:: 19 × 10. $10\frac{1}{3} \times 3$ :: a × e − b. b × a − e) :: The Weight of the Gold in the Crown, to the Weight of the Silver, and 221. 31 :: the Weight of the Crown to the Weight of Silver.

*To bring Geometrical Problems to* Equations.

Geometrical Queſtions, or thoſe relating to continued Quantities, are ſometimes brought to *Equations*, after the ſame manner as Arithmetical ones. So that the 1*ſt* Rule to be here preſcribed is, to obſerve every Thing directed for the Solution of Numerical Problems.

Suppoſe, *e. gr.* it were required, *to cut a right Line, as* A B, (*Tab. Algebra. Fig.* 6.) *in mean and extreme Propation in* C; that is, ſo as that B E, the Square of the greateſt Part, ſhall be *Equal* to the Rectangle B D, contain'd under the whole and the leaſt Part.

Here ſuppoſing A B = a and C B = $x$; then will AC = a − $x$; and $xx$ = a into a − $x$. An *Equation*, which by Reduction gives $x = -\frac{1}{2}a + \sqrt{\frac{1}{4}aa}$.

But 'tis very rare, that Geometrical Problems are thus brought to *Equation*; as being generally found to depend on various complex Poſitions, and Relations of Lines; ſo that, here, ſome further Artifice, and certain ſpecial Rules, will be required, to bring 'em to Algebraic Terms. Indeed, 'tis very difficult to preſcribe any Thing preciſe in ſuch Caſes: Every Man's own Genius ſhould be the Rule of his Procedure.

Something, however, ſhall be ſaid in the general, for the Sake of ſuch as are nothing verſed in ſuch Operations; and that principally from Sir *I. Newton*.

Obſerve then, 2°. That Problems concerning Lines related to each other in any definite manner, may be variouſly ſtated, by ſuppoſing different Quantities, the *Quæſita*, or Things ſought, from different *Data*: Yet ſtill, with whatever Date and *Quæſita* the Queſtion is propoſed, its Solution will ariſe after the very ſame manner, without the leaſt Alteration of any Circumſtance, except in the imaginary Species of Lines, or the Names whereby the *Data* are diſtinguiſh'd from the *Quæſita*.

Suppoſe, *e. gr.* the Queſtion were about an *Iſoſceles* Triangle, B C D, (*Fig.* 7.) inſcribed in a Circle; whoſe Sides, BC, B D, and Baſe C D, were to be compared with the Diameter of the Circle A B. Here, the Queſtion may be either propoſed, of the inveſtigating the Diameter, from the given Sides and Baſe; or of inveſtigating the Baſe, from the Sides and Diameter given. Or, laſtly, of finding the Sides, from the Baſe and Diameter given: And propoſe it under which Form you will, it will be brought to an *Equation*, by the ſame Algebraic Series.

Thus, if the *Diameter* be ſought, I put A B = $x$, C D = a, and B C, or B D = b. Then, drawing A C, as the Triangles A B C and C B E are ſimilar; A B : B C :: B C : B E, Or $xx$ : b :: b : B E. Wherefore B E = $\frac{bb}{x}$ and C E = $\frac{1}{2}$ C D or $\frac{1}{2}$ a. And, by reaſon the Angle C E B is a right Angle, C E q + B E q = B C q, that is, $\frac{1}{4}aa + \frac{b^4}{xx} = bb$. Which *Equation* being reduced, gives the Diameter required, $x$. Again,

If the Baſe be ſought, I put A B = c, C D = $x$, and B C, or B D = b. Then, drawing A C, as the Triangles ABC and CBE are ſimilar; AB : BC :: BC : BE, or c : b :: b : BE. Wherefore B E = $\frac{bb}{c}$. And C E = $\frac{1}{2}$ C D or $\frac{1}{2}x$. And ſince the Angle C E B is right, C E q + B E q = B C q; that is, $\frac{1}{4}xx + \frac{b^4}{cc} = bb$; an *Equation*, which reduced, gives the Baſis ſought, $x$.

Laſtly, If the Side B C, or B D, were ſought, I put A B = c; C D = a, and B C or B D = $x$. Then, drawing A C, the Triangles A B C, and C B E, being ſimilar; we have A B : B C :: B C : B E; or c : $x$ :: $x$ : B E. Wherefore, B E = $\frac{xx}{c}$. And C E = $\frac{1}{2}$ C D or $\frac{1}{2}$ a; And the Angle C E B being right C E q + B E q = B C q. That is $\frac{1}{4}aa + \frac{x^4}{cc} = xx$. An *Equation*, which by Reduction, gives $x$ required.

Thus is the *Calculus* for arriving at the *Equation*, as well as the *Equation* it ſelf; the ſame in all the Caſes; except that the ſame Lines are deſign'd by different Letters, according as they are *Data*, or *Quæſita*. Indeed, as the *Data*, or *Quæſita* differ, there ariſes a Difference in the Reduction of the *Equation* found: But no Difference in the *Equation* it ſelf. So that we need make no Difference between given and ſought Quantities; but are at Liberty to ſtate the Queſtion with ſuch *Data* and *Quæſita*, as we think moſt favourable to the Solution of the Queſtion.

3°. A Problem, then, being propoſed, compare the Quantities it includes; and, without making any Difference between *Data* and *Quæſita*, conſider what Dependances they have of each other; that you may learn which of 'em will, by Compoſition, give the reſt. In the doing of which, it is not neceſſary you ſhou'd at firſt contrive, how ſome may be deduced out of others, by an Algebraic *Calculus*; It ſuffices you remark in the general, that they may be deduced by ſome direct Connection.

Thus, *e. gr.* If the Queſtion be about the Diameter of a Circle, A D (*Fig.* 8.) and three Lines A B, B C, and C D, inſcribed in a Semi-circle; whereof, the reſt being given, B C is required: It is evident at firſt Sight, that the Diameter A D, determines the Semi-circle; as alſo, that the Lines A B, and C D, by Inſcription, determine the Points B and C, and conſequently B C required, and that by a direct Connection. Yet does not it appear how B C is deduced from the ſame *Data*, by any analytical *Calculus*.

4°. Having conſider'd the ſeveral Manners, wherein the Terms of the Queſtion may be explain'd and decompounded; chuſe ſome of the ſynthetic Methods; aſſuming ſome Lines as given, from which there is the moſt eaſy Acceſs, or Progreſſion to the reſt, and to which the Regreſſion is the moſt difficult. For, tho' the *Calculus* may be carried on divers Ways, yet muſt it begin with theſe Lines. And the Queſtion is more readily ſolved, by ſuppoſing it to be of theſe *Data*, and ſome *Quæſitum* readily flowing from 'em; than by conſidering the Queſtion as 'tis actually propoſed.

Thus, in the Example already given, if from the reſt of the Quantities given, it were required to find A D; perceiving that this cannot be done ſynthetically; yet that if it were ſo done, I cou'd proceed in my Ratiocination on it in a direct Connection from one Thing to others; I aſſume A D as given, and begin to compute as if it was given indeed, and ſome of the other Quantities, *viz.* ſome of the given ones, as A B, B C, or C D, were ſought. And thus, by carrying on the Computation, from the Quantities aſſumed to the others, as the Relations of the Lines to one another direct, there will always be obtained an *Equation* between two Values of ſome one Quantity; whether one of thoſe Values be a Letter ſet down as a Repreſentation, or Name, at the Beginning of the Work for that Quantity; and the other, a Value of it found out by Computation: or whether both be found by Computation made different Ways.

5°. Having thus compar'd the Terms of the Queſtion in general, there is further Thought and Addreſs required, to find the particular Connections, or Relations of the Lines, fit for Computation. For, what to a Perſon who does not ſo throughly conſider them, may ſeem immediately, and by a very near Relation, connected together; when we come to expreſs that Relation Algebraically, are often found to require a longer Circuit; and ſhall even oblige you to begin your Schemes a-new, and carry on your Computation Step by Step; as may appear by finding B C, from A D, A B, and C D. For you are only to proceed by ſuch Propoſitions, or Enunciations, as can be fitly repreſented in Algebraic Terms, whereof there are

ſeveral ariſe from *Eucl.* Ax. 19. Prop. 4. Book 6. and Prop. 47. *Lib.* I. Elem.

To facilitate this Diſcovery, of the Relations of the Lines in the Figure, there are ſeveral Things that contribute; as firſt, the Addition and Subſtraction of Lines; ſince from the Values of the Parts, you may find the Values of the whole; or from the Value of the whole, and one of the Parts, you may obtain the Value of the other Part. Secondly, by the Proportionality of Lines; ſince, as above ſuppoſed, the Rectangle of the mean Terms, divided by either of the Extremes, gives the Value of the other; or, which is the ſame Thing, if the Values of all four of the Proportionals are firſt had, we make an Equality (or *Equation*) between the Rectangles of the Extremes and Means. But the Proportionality of Lines is beſt found out by the Similiarity of Triangles; which, as it is known by the Equality of their Angles, the Analyſt ought in particular to be converſant in. In Order to which, 'twill be neceſſary he be Maſter of *Euclid*, Prop. 5, 13, 15, 29, and 32, *Lib.* I. and of Prop. 4, 5, 6, 7, 8, *Lib.* VI. and of the 20, 21, 22, 27, and 31, *Lib.* III. To which may be added, the 3d Prop. *Lib.* VI. or the 36th and 37th Prop. *Lib.* III. Thirdly, the Calculus is promoted by the Addition, or Subſtraction of Squares, *viz.* in right angled Triangles, we add the Squares of the leſſer Sides, to obtain the Square of the greater; or from the Square of the greater Side, we ſubſtract the Square of one of the leſſer, to obtain the Square of the other. On which few Foundations, if we add to them Prop. 1. of the VIth *Elem.* when the Buſineſs relates to Superficies, and alſo ſome Propoſitions taken out of the 11th and 12th of *Euclid*, when Solids come in Queſtion; the whole analytic Art, as to right-lined Geometry, depends. Indeed, all the Difficulties of Problems may be reduced to the ſole Compoſition of Lines out of Parts, and the Similiarity of Triangles; ſo that there is no Occaſion to make Uſe of other Theorems; becauſe they may all be reſolved into theſe two, and conſequently into the Solutions that may be drawn from them.

6°. To accommodate theſe Theorems to the Solution of Problems, the Schemes are oft times to be farther conſtructed, by producing out ſome of the Lines, till they cut others, or become of an aſſigned Length; or by drawing Lines parallel, or perpendicular from ſome remarkable Point; or by conjoyning ſome remarkable Points; as alſo, ſometimes, by conſtructing them after other Methods, according as the State of the Problems, and the Theorems, which are made uſe of to ſolve it, ſhall require.

As for Example: If two Lines that do not meet each other, make given Angles, with a certain third Line; perhaps we produce them ſo, that when they concur, or meet, they ſhall form a Triangle, whoſe Angles, and conſequently the Ratio of their Sides, ſhall be given; or if any Angle is given, or be equal to any one, we often complete it into a Triangle given in Specie, or ſimilar to ſome other, and that by producing ſome of the Lines in the Scheme, or by drawing a Line ſubtending an Angle. If the Triangle be an oblique-angled one, we often reſolve it into two right-angled ones, by letting fall a Perpendicular. If the Buſineſs concern multilateral, or many ſided Figures, we reſolve them into Triangles, by drawing diagonal Lines, and ſo in others; always aiming at this End, *viz.* that the Scheme may be reſolved either into given, or ſimilar, or right angled Triangles.

Thus, in the Example propoſed, draw the Diagonal B D, that the Trapezium A B C D, may be reſolved into the two Triangles, A B D a right angled one, and B D C an oblique-angled one, (*Figure* 8.) Then reſolve the oblique-angled one into two right-angled Triangles, by letting fall a Perpendicular from any of its Angle B C or D, upon the oppoſite Side; as from B upon C D, produced to E, that B E may meet it perpendicularly. But ſince the Angles B A D, and B C D, make in the mean while two right ones, (by 22 Prop. 3 *Elem.*) as well as B C E and B C D, the Angles B A D, and B C E are perceived to be equal; conſequently the Triangles B C E, and D A B to be ſimilar. And ſo the Computation (by aſſuming A D, A B, and B C, as if C D were ſought) may be thus carried on, *viz.* A D and A B, (by Reaſon of the right-angled Triangle A B D) give you B D. A D, A B, B D and B C, (by Reaſon of the ſimilar Triangles A B D, and C E B) give B E, and C E. B D, and B E, (by Reaſon of the right-angled B E D) give E D: and E D — E C gives C D. Whence there will be obtain'd an *Equation* between the Value of C D ſo found out, and the ſmall Algebraic Letter that denotes it. We may alſo (and for the greateſt Part it is better ſo to do, than to follow the Work too far in one continued Series) begin the Computation from different Principles, or at leaſt promote it by divers Methods to one and the ſame Concluſion; that at length there may be obtained two Values of any the ſame Quantity; which may be made equal to one another. Thus, A D, A B, and B C, give B D, B E, and C E as before; then C D + C E, gives E D; and laſtly, D B and E D (by Reaſon of the right-angled Triangle B E D) give B E.

7°. Having concerted your Method of Procedure, and drawn up your Scheme; give Names to the Quantities that enter the Computation, (that is, from which aſſumed the Values of others are to be derived, till you come to an *Equation*) chuſing ſuch as involve all the Conditions of the Problem, and ſeem accommodated before others to the Buſineſs, and that ſhall render the Concluſion (as far as you can gueſs) more ſimple, but yet not more than what ſhall be ſufficient for your Purpoſe: Wherefore, don't give new Names to Quantities, which may be denominated from Names already given. Thus, of a whole Line given, and its Parts, of the three Sides of a right-angled Triangle, and of three or four Proportionals, ſome one of the leaſt conſiderable we leave without a Name; becauſe its Value may be deriv'd from the Names of the reſt. As in the Example already brought, if I make A D = $x$, and A B = a, I denote B D by no Letter, becauſe it is the third Side of a right-angled Triangle A B D, and conſequently its Value is $\sqrt{xx - aa}$. Then if I ſay, B C = b, ſince the Triangles D A B, and B C E are ſimilar, and thence the Lines A D, A B :: B C, C E proportional, to three whereof, *viz.* to A D, A B, and B C, there are already Names given; for that Reaſon I leave the fourth C E without a Name, and in its Room I make uſe of $\frac{ab}{x}$ diſcover'd from the foregoing Proportionality. And ſo if D C be called c, I give no name to D E, becauſe from its Parts D C, and C E, or c and $\frac{ab}{x}$, its Value $c + \frac{ab}{x}$ comes out.

8. By this Time, the Problem is almoſt reduced to an *Equation*. For after the aforeſaid Letters are ſet down for the Species of the principal Lines, there remains nothing elſe to be done, but that out of thoſe Species, the Values of other Lines be made out, according to a preconceived Method; till after ſome foreſeen Way they come to an *Equation*. And there is nothing wanting in this Caſe, except that by Means of the right-angled Triangles B C E and B D E, I can bring out a double Value of B E, *viz.* B C q — C E q $\left(\text{or } bb - \frac{aabb}{xx}\right)$ = B E q; as alſo B D q — D E q $\left(\text{or } xx - aa - cc - \frac{2abc}{x} - \frac{aabb}{xx}\right)$ = B E q. And hence (blotting out on both Sides $\frac{aabb}{xx}$) you ſhall have the *Equation* $bb = xx - aa - cc - \frac{2abc}{xx}$; which being reduced, becomes $x^3 = +aa + bbx + 2abc$. as before. $+cc$

9°. For the Geometry of Curve Lines: We uſe to denote them, either by deſcribing them by the local Motion of right Lines, or by uſing *Equations* indefinitely expreſſing the Relation of right Lines diſpoſed in Order, according to ſome certain Law, and ending at the Curve Lines. See CURVE.

The Antients did the ſame by the Sections of Solids, but leſs commodiouſly. The Computations, which regard Curves, deſcribed after the firſt Manner, are performed as above directed: Thus, ſuppoſe A K C (*Fig.* 9.) a Curve Line, deſcribed by K, the vertical Point of the Square A K $\varphi$, whereof one Leg A K, freely ſlides thro' the Point A given in Poſition, while the other K $\varphi$ of a determinate Length is carried along the right Line A D, alſo given in Poſition; and it is required to find the Point C, in which any right Line C D, given alſo in Poſition, ſhall cut this Curve: Draw the right Lines A C, C F, which may repreſent the Square in the Poſition ſought, and the Relation of the Lines (without any Difference, or Regard, of what is given or ſought, or any Reſpect had to the Curve) being conſidered; you perceive the Dependency of the others upon C F, and any of theſe four, *viz.* B C, B F, A F, and A C, to be ſynthetical; two whereof you aſſume, as C F = a, and C B = $x$; and Beginning the Computation from thence, you preſently obtain B F = $\sqrt{aa - xx}$, and A B = $\frac{xx}{\sqrt{aa - xx}}$, by Reaſon of the right Angle C B F; and that the Lines B F, B C :: B C, A B are continual Proportionals. Moreover, from the given Poſition of C D, A D is given, which therefore call b; there is alſo given the Ratio of B C to B D, which ſuppoſe as d to e, and you have B D = $\frac{ex}{d}$, and A B = $b - \frac{ex}{d}$.

Therefore $b - \frac{ex}{d} = \frac{xx}{\sqrt{aa - xx}}$, an *Equation* which (by

ſquaring

ſquaring its Parts, and multiplying by $aa - xx$) will be reduced to this Form.

$$x^4 = \frac{2bdex^3 - bbdd + aaee\,xx - 2aabdex + aabbdd.}{dd + ee}$$

Whence, laſtly, from the given Quantities a, b, d, and e; $x$ may be found by Rules given hereafter; and at that Interval, or Diſtance $x$ or B C, a right Line drawn parallel to A D, will cut C D in the Point ſought C.

If, inſtead of Geometrical Deſcriptions, we uſe *Equations* to denote the Curve Lines by; the Computations will thereby become as much ſhorter and eaſier, as the gaining of thoſe *Equations* can make them. Thus, ſuppoſe the Interſection C, of the given Ellipſis A C E, *Fig.* 10. with the right Line C D given Poſition, ſought: To denote the Ellipſis, take ſome known *Equation* proper to it, as $rx - \frac{r}{q}xx = yy$, where $x$ is indefinitely put for any Part of the Axis A b, or A B, and y for the Perpendicular b c, or B C, terminated at the Curve; and r and q are given from the given Species of the Ellipſis. Since therefore C D is given in Poſition, A D will be alſo given, which call a; and B D will be $a - x$; alſo the Angle A D C will be given, and thence the Ratio of B D to B C, which call 1 to e; and B C (y) will be $= ea - ex$, whoſe Square $eeaa - 2eeax + eexx$, will be equal to $rx - \frac{r}{q}xx$. And thence by Reduction there will ariſe $xx = \frac{2aaeex + rx - aaee}{ee + \frac{r}{q}}$, or $x = \frac{aee + \frac{1}{2}r \pm e\sqrt{ar + \frac{rr}{4ee} - \frac{aar}{q}}}{ee + \frac{r}{q}}$. Add, that tho' a Curve be denominated by a Geometrical Deſcription, or by a Section of a Solid, yet thence an *Equation* may be obtained, which ſhall define the Nature of the Curve, and conſequently all the Difficulties of Problems propoſed about it, may be reduced hither. Thus, in the former Example, if A B be called $x$, and B C, y, the third Proportional B F will be $\frac{yy}{x}$, whoſe Square, together with the Square of B C, is equal to C F q, that is, $\frac{y^4}{xx} + yy = aa$; or $y^4 + xxyy = aaxx$. And this is an *Equation*, by which every Point C, of the Curve A K C, agreeing or correſponding to any Length of the Baſe (and conſequently the Curve it ſelf) is defined; and from whence conſequently you may obtain the Solutions of Problems propoſed concerning this Curve.

After the ſame Manner almoſt, when a Curve is not given in Specie, but propoſed to be determined, you may feign an *Equation* at Pleaſure, that may contain its general Nature; and aſſume this to denote it, as if it was given, that from its Aſſumption you ſome Way arrive at *Equations*, by which the Aſſumptions may be determined.

What remains of the Doctrine and Practice of *Equations*, relates to their *Reduction* to the loweſt and ſimpleſt Terms, the better to come at the Value of the unknown Quantity in the *Equation*; and their Geometrical *Conſtruction*.

For the *Reduction of* EQUATIONS. See REDUCTION *of Equations*.

*Extraction of the Roots of* EQUATIONS. See EXTRACTION *of the Roots of Equation*.

*Conſtruction of Equations*. See CONSTRUCTION *of Equations*.

EQUATION *of Time*, in Aſtronomy, the Difference between mean and apparent Time; or the Reduction of the apparent unequal Time, or Motion of the Sun, or a Planet, to Equable and mean Time or Motion. See TIME and MOTION.

Time is only meaſured by Motion; and as Time, in it ſelf, flows ever equably; to meaſure it, ſuch a Motion muſt be uſed as is equable, or which always proceeds at the ſame Rate.

The Motion of the Sun, is what is commonly uſed for this Purpoſe; as the moſt eaſy to be obſerved: Yet it wants the great Qualification of a Chronometer. In Effect, the Aſtronomers find that the Sun's apparent Motion is no Ways equal: That he now and then ſlackens his Pace, and afterwards quickens it again. Conſequently equal Time cannot be meaſured thereby. See SUN.

Hence, the Time which the Sun's Motion ſhews, call'd the *apparent Time*, becomes different from the true and equable Time, wherein all the Celeſtial Motions are to be eſtimated, and accounted.

This Inequality of Time is thus accounted for: The Natural, or Solar Day is meaſured, not, properly, by one entire Revolution of the Equinoctial, or 24 Equinoctial Hours; but by the Time which paſſes while the Plane of a Meridian paſſing thro' the Centre of the Sun, does, by the Earth's Converſion round its Axis, return again to the Sun's Centre: Which is the Time between one Mid-day and the next. See DAY and MERIDIAN.

Now, had the Earth no other Motion but that round its Axis; all the Days would be preciſely equal to each other, and to the Time of the Revolution of the Equinoctial: But the Caſe is otherwiſe; for while the Earth is turning round its Axis, it is likewiſe proceeding forward in its Orbit. So that when a Meridian has compleated a whole Revolution from the Sun's Centre, its Plane has not yet arrived at the Sun's Centre again: As will appear from the Figure.

Let the Sun be S, (*Tab. Aſtronom. Fig.* 50.) and let A B be a Portion of the Ecliptic: Let the Line M D, repreſent any Meridian, whoſe Plane produced, paſſes thro' the Sun when the Earth is in A. Let the Earth proceed in its Orbit, and in making one Revolution round its Axis, let it arrive at B; then, will the Meridian M D be in the Poſition m d parallel to the former M D; and conſequently has not yet paſſed thro' the Sun, nor have the Inhabitants under that Meridian, yet had their Mid-day. But the Meridian d m, muſt ſtill proceed with its angular Motion, and deſcribe the Angle d B f e're its Plane can paſs thro' the Sun. See EARTH.

Hence it appears, that the Solar Days are all longer than the Time of one Revolution of the Earth round its Axis.

However, were the Planes of all the Meridians perpendicular to the Plane of the Earth's Orbit; and did the Earth proceed with an equal Motion in its Orbit; the Angle d B f would be equal to the Angle B S A, and the Arches A f and A B be ſimilar: Conſequently, the Times would be always equal; the Arch A B, and the Angle d B f, of the ſame Quantity; all the Solar Days equal to each other; and the apparent and real Time agree.

But, as it is, neither of thoſe is the Caſe: For the Earth does not proceed in its Orbit with an equable Motion, but in its Aphelion, deſcribes a leſs Arch, and in its Perihelion a greater, in the ſame Time; beſide, that the Planes of the Meridians, are not perpendicular to the Ecliptic, but to the Equator. Conſequently, the Time of the Angular Motion d B f, which is to be added to the entire Revolution in order to make a whole Day, is not always of the ſame Quantity.

The ſame will be found, if, ſetting aſide the Conſideration of the real Motion of the Earth, we conſider the apparent Motion of the Sun in lieu thereof; as being what we meaſure Time by.

On this Principle we obſerve, that the Day not only includes the Time of one Converſion of the Globe on its Axis, but is increas'd by ſo much as anſwers to that Part of the Sun's Motion, performed in that Time. For when that Part of the Equinoctial, which, with the Sun, was at the Meridian yeſterday at Noon, is come thither again to Day; it is not yet Noon; the Sun not being now at the Place where he yeſterday was, but gone forward near a Degree more or leſs. And this Additament above the 24 Equinoctial Hours is upon a double Account unequal.

1°. In that the Sun, by Reaſon of his Apogee and Perigee, does not at all Times of the Year diſpatch an equal Arch of the Ecliptic in one Day; but greater Arches near the Perigæum, which is about the middle of *December*; and leſſer nearer the Apogæum, which is about the middle of *June*.

2°. In that tho' the Sun ſhould always move equably in the Ecliptic, yet equal Arches of the Ecliptic do not in all Parts of the Zodiac, anſwer to equal Arches of the Equator, by which we are to eſtimate Time; by Reaſon ſome Parts thereof, as the two Solſtitial Points, lie nearer to a parallel Poſition to the Equinoctial than others, *e. gr.* thoſe about the Equinoctial Points, where the Ecliptic and Equinoctial interſect. Whereupon an Arch of the Ecliptic, near the Solſtitial Points, anſwers to a greater Arch of the Equinoctial, than an Arch equal thereto near the Equinoctial Points.

The apparent Motion of the Sun to the Eaſt, then, being unequal; the natural and apparent Days are no Ways proper to be applied to meaſure the Cœleſtial Motions, which have no Dependance on that of the Sun.

And hence Aſtronomers have been obliged to invent other Days for the Uſe of their Calculations: Thoſe others are equal; and a mean between the ſhorteſt and longeſt of the unequal ones.

Theſe are had by conſidering the Number of Hours in the whole Revolution of the Sun in the Ecliptic, and dividing the whole Time into as many Equal Parts as there are Hours, 24 of which conſtitute the Day: And this Reduction of the Days conſtitutes the *Equation of natural Days*.

Conſe-

Consequently, computing those Motions according to the equal Time, it is necessary to turn that Time back again into apparent Time, that they may correspond to Observation: On the contrary, any Phenomena being observed, the apparent Time thereof must be added to equal Time, to have it correspond with the Times mark'd in the Astronomical Tables.

As we don't know of any Body in Nature that moves equably; yet such a Motion is alone proper to measure equal Days and Hours: It has been thought fit to imagine some Body, *e. gr.* a Star, moving in the *Equator*, Eastward; and never quickening, or slackening its Pace, but going thro' the *Equator*, in precisely the same Time, as the Sun finishes his Period in the Ecliptic.

The Motion of such a Star will represent equal Times; and its diurnal Motion in the *Equator*, will be 59′ 8″; the same as the mean, or equated Motion of the Sun in the Ecliptic. Consequently, the mean or equable Day, is determined by the Arrival of this Star at the Meridian; and is equal to the Time wherein the whole Circumference of the *Equator*, or 360°, pass the Meridian, and 59′ 8″ more. Which Addition of 59′ 8″ remaining always the same, these *mean* or *equated Days* will be constantly equal.

Since then the Sun goes unequally Eastwards with respect to the *Equator*; it will sometimes arrive at the Meridian sooner than this imaginary Star, and sometimes later: The Difference is the Difference between true and apparent Time: Which Difference is known by having the Place of the imaginary Star in the *Equator*; and the Point of the *Equator* which comes to the Meridian with the Sun. For the Arch intercepted between 'em, being converted into Time, shews the Difference between equal and apparent Time; which, as before, is call'd the *Equation of Time*.

The *Equation* of Time then, may be defined the Time that flows while the Arch of the *Equator* intercepted between the Point determining the right Ascension of the Sun, and the Place of the imaginary Star, passes the Meridian: Or, as *Tycho*, and, after him, *Street*, state it, the Difference between the Sun's true Longitude, and his right Ascension.

*To* Equate *Solar Days*, that is, *to convert apparent into mean Time, and mean into apparent Time.*

1°. If the Sun's right Ascension be equal to his mean Motion, the imaginary and true Sun will pass the Meridian at the same Time: Consequently, the true coincides with the apparent Time.

2°. If the right Ascension be greater than the mean Motion, subtract the latter from the former; and turning the Difference into Solar Time, either subtract it from the apparent Time, to find the mean Time: or add it to the mean Time to find the apparent.

3°. Lastly, if the right Ascension be less than the mean Motion, subtract the former from the latter, and turning the Difference into Solar Time, either add it to the apparent Time, to find the mean Time; or subtract it from the mean to find the apparent.

This Method of *Equation* obtains, if the *Calculus* be progressive; if it be Retrograde, that is, if the Time be reckon'd backwards, the Operation must be just the Reverse.

This Doctrine of the Inequality and *Equation* of natural Days, is not only of Use in Astronomical Computations, but also in the adjusting and directing of Clocks, Watches, and other Time Keepers: Hence we see, why a Pendulum, or other Movement, which measures equal Time, does not keep Pace with the Sun, which measures apparent Time; but is sometimes before, and sometimes later than the same. Whence, such Automata and Sun-Dials, are found almost perpetually at Variance. See Clock and Dial.

The Variations of the two Kinds of Time, are exhibited in the following Table, for every Day throughout the Year. 'Tis borrowed from Mr. *Flamsteed*; one Part of whose Praise it is, that he was the first who fully demonstrated and clear'd this Inequality of Natural Days: Tho' others, and even *Ptolomy*, had a partial Notion of it.

The Use of the Table is obvious: A Clock, or Watch, that is to be kept to true or equal Time, must be so many Minutes and Seconds faster or slower than a Sun-Dial, as is assign'd in the Table, for the respective Day: Or, if you would have it go by the Sun-Dial, it goes well, if it gains or loses each Day the Number of Minutes and Seconds in the Table.

## *A Table of the Equation of Natural Days, with the Regulation of a Movement by the same.*

Watch too Slow so far as the two Stars

Watch too Fast as far as the two Stars

Watch too Slow as far as the two Stars

Equation *of the Centre*, call'd also *Prostaphæresis*, and *total Prostaphæresis*; is the Difference between the true and mean Place or Motion of a Planet; or the Angle made by the Lines of the true and mean Place or Motion; or, which amounts to the same, between the mean and equated Anomaly. See Prostaphæresis.

The Motions of the Sun and Moon, are affected with various Inequalities; whence arises a Necessity of so many *Equations*. See Moon, &c.

From these Inequalities, the Moon's Place became exceeding difficult to be determined; to remove which Difficulty, is the great Design of Sir *Isaac Newton*'s new Theory

Theory of the Moon; wherein we are furniſh'd with *Equations* for all the Inequalities of the mean Motion. The principal are,

*Annual* EQUATIONS *of the mean Motion of the Sun and Moon, and of the Apogee and Nodes of the Moon.* The Annual *Equation* of the mean Motion of the Sun, depends on the Eccentricity of the Earth's Orbit round the Sun, which is 16 $\frac{11}{12}$ of ſuch Parts, whereof the Earth's mean Diſtance from the Sun is 1000: Whence its Denomination of *Equation of the Centre*. This, when greateſt, is 1 Deg. 56′ 20″. The greateſt *Annual Equation of the Moon's mean Motion* is 11′ 49″: That of *her Apogee* 20′: And of *her Node* 9′ 30″.

Which four Annual *Equations* are always mutually proportional one to another: Wherefore, when any of them is at the greateſt, the other three will alſo be greateſt; and when any one leſſens, the other three will alſo be diminiſhed in the ſame Ratio.

The Annual *Equation* of the Sun's Centre being given, the three other correſponding Annual *Equations* will be alſo given; and therefore a Table of that will ſerve for all. For if the Annual *Equation* of the Sun's Centre be taken from thence, for any Time, and be called P, and let $\frac{1}{10}$ P (*Tab. Aſtronomy Fig.* 51.) = Q, Q + $\frac{1}{60}$ Q = R, $\frac{1}{6}$ P = D, D + $\frac{1}{30}$ D = E, and D − $\frac{1}{60}$ D = 2 F; then ſhall the Annual *Equation* of the Moon's mean Motion for that Time be R, that of the Apogee of the Moon will be E, and that of the Node F.

Only obſerve, that if the *Equation* of the Sun's Centre be required to be added; then the *Equation* of the Moon's mean Motion muſt be ſubſtracted, that of her Apogee muſt be added, and that of the Node ſubducted. And on the contrary, if the *Equation* of the Sun's Centre were to be ſubducted, the Moon's *Equation* muſt be added, the *Equation* of her Apogee ſubducted, and that of her Node added.

There is alſo an *Equation of the Moon's mean Motion*, depending on the Situation of her Apogee in Reſpect of the Sun; which is greateſt, when the Moon's Apogee is in an Octant with the Sun; and is nothing at all, when it is in the Quadratures, or Syzygies. This *Equation*, when greateſt, and the Sun in *Perigæo*, is 3 Min. 56 Seconds. But if the Sun be in *Apogæo*, it will never be above 3 Min. 34 Seconds. At other Diſtances of the Sun from the Earth, this *Equation*, when greateſt, is reciprocally as the Cube of ſuch Diſtance. But when the Moon's Apogee is any where but in the Octants, this *Equation* grows leſs, and is moſtly at the ſame Diſtance between the Earth and Sun, as the Sine of the double Diſtance of the Moon's Apogee, from the next Quadrature or Syzygy, to the Radius. This is to be added to the Moon's Motion, while her Apogee paſſes from a Quadrature with the Sun to a Syzygy; but is to be ſubſtracted from it, while the Apogee moves from the Syzygy to the Quadrature.

There is, moreover, another *Equation of the Moon's Motion*, which depends on the Aſpect of the Nodes of the Moon's Orbit with the Sun: And this is greateſt, when her Nodes are in Octants to the Sun, and vaniſhes quite, when they come to their Quadratures or Syzygies. This *Equation* is proportional to the Sine of the double Diſtance of the Node from the next Syzygy, or Quadrature; and at greateſt, is but 47 Seconds. This muſt be added to the Moon's mean Motion, while the Nodes are paſſing from their Syzygies with the Sun, to their Quadratures with him; but ſubſtracted while they paſs from the Quadratures to the Syzygies.

From the Sun's true Place take the *equated* mean Motion of the Lunar Apogee, as was above ſhewed; the Remainder will be the Annual Argument of the ſaid Apogee. From whence the *Eccentricity of the Moon*, and the *ſecond Equation* of her Apogee may be compared.

EQUATOR, or ÆQUATOR, in Aſtronomy, and Geography, a great moveable Circle of the Sphere, equally diſtant from the two Poles of the World, or having the ſame Poles with thoſe of the World. See CIRCLE.

Such is the Circle D A, (*Tab. Aſtronom. Fig.* 52.) its Poles being P and Q.

It is call'd the *Equator*, by Reaſon when the Sun is therein, the Days and Nights are *Equal*; whence alſo it is call'd the *Equinoctial*; and when drawn on Maps, and Planiſpheres, the *Equinoctial Line*, or ſimply the *Line*. See EQUINOCTIAL.

Every Point of the *Equator* is a Quadrant's Diſtance from the Poles of the World; whence it follows, that the *Equator* divides the Sphere into two Hemiſpheres, in one of which is the Northern, and in the other Southern Pole. See HEMISPHERE.

By the Paſſages, or Tranſits of Arches of the *Equator* over the Meridian, its equal or mean Time is eſtimated: Hence we have frequent Occaſion for the Converſion of Degrees of the *Equator* into Time; and, again, for the Re-converſion of Parts of Time into Parts of the *Equator*.

For Performance whereof, we ſubjoyn the following Table; wherein are exhited the Arches of the *Equator*, which paſs the Meridian in the ſeveral Hours, Minutes, *&c.* of *Equated*, or mean Time. See EQUATION *of Time*.

Converſion of Parts of the *Equator* into Time, and *vice verſa*.

| Deg. of *Equat.* | Hours. | I | Hours. | Deg. of *Equat.* | Hour. Min. | Deg. of *Equat.* | I |
|---|---|---|---|---|---|---|---|
| Min. | | II | | | Sec. | | II |
| Sec. | II | III | | | Third. | | III |
| Third. | III | IV | | | Fourth | | IV |
| 1 | 0 | 4 | 1 | 15 | 1 | 0 | 15 |
| 2 | 0 | 8 | 2 | 30 | 2 | 0 | 30 |
| 3 | 0 | 12 | 3 | 45 | 3 | 0 | 45 |
| 4 | 0 | 16 | 4 | 60 | 4 | 1 | 0 |
| 5 | 0 | 20 | 5 | 75 | 5 | 1 | 15 |
| 10 | 0 | 40 | 6 | 90 | 6 | 1 | 30 |
| 15 | 1 | 0 | 9 | 135 | 10 | 2 | 30 |
| 30 | 2 | 0 | 12 | 180 | 20 | 5 | 0 |
| 60 | 4 | 0 | 15 | 225 | 30 | 7 | 30 |
| 90 | 6 | 0 | 18 | 270 | 40 | 10 | 0 |
| 180 | 12 | 0 | 21 | 315 | 50 | 12 | 30 |
| 360 | 24 | 0 | 24 | 360 | 60 | 15 | 0 |

The Uſe of the Table is obvious; ſuppoſe, *e. gr.* it were required to turn 19° 13′ 7″ of the *Equator* into Time: Againſt 15 Deg. in the firſt Column, we have 1ʰ 0′ 00″: Againſt 4 Deg. we have 16′ 0″: Againſt 10 Minutes, 40″; againſt 3 Minutes, 12″ 0‴: Againſt 5 Seconds, we have 0″ 20‴; and againſt 2 Seconds, 8‴: Which added together, give 1ʰ 16′ 52″ 28‴.

Again, ſuppoſe it were required to find how many Degrees, Minutes, *&c.* of the *Equator*, anſwer to 23 Hours 25 Min. 17 Sec. and 9 thirds. Againſt 21ʰ in the fourth Column of the Table you have 315°: Againſt 2 Hours, 30°: Againſt 20′, 5°: Againſt 10 Sec, 2′ 30″: Againſt 5 Sec. 1′ 15″ 0‴: Againſt 2 Sec. 30″ 0‴; againſt 6 Thirds, 0″ 45‴: Which added together give 351° 19′ 17″ 15‴.

*The Elevation, or Altitude of the* EQUATOR, is an Arch of a Vertical Circle, intercepted between the *Equator* and the Horizon. The *Elevation of the Equator*, with that of the Pole, is always equal to a Quadrant. See ELEVATION.

EQUERY, or ECURY, a grand Stable, or Lodge for Horſes, furniſh'd with all the Conveniencies thereof; as Stalls, Manger, Rack, *&c.*

Some hold that Stable, in Propriety, relates only to Bullocks, Cows, Sheep, Hogs, *&c.* And *Equery* to Horſes, Mules, *&c.*

A *ſimple Equery*, is that provided for one Row of Horſes: A *double Equery* is that provided for two, with a Paſſage in the middle, or two Paſſages; the Horſes being placed Head to Head: As in the little *Equery* at *Verſailles*.

Under *Equery* is ſometimes alſo comprehended the Lodgings, and Apartments, of the *Equeries*, Grooms, Pages, *&c.*

The Word is form'd from the French *Eſcurie*, which ſignifies the ſame Thing. Some, again, derive *Eſcurie* from the Latin *Scuria*, which is not only a Place for Beaſts to be put up in, but alſo a Grange, or Barn. But a more probable Derivation is from *Equile*, a Stable for Horſes, of *Equus*, Horſe.

EQUERY, *Eſcuyer*, is alſo an Officer, who has the Care and Management of the Horſes of a King, or Prince.

Of theſe *Equeries*, there are a great Number in the King of *France*'s Service: As the *Grand Ecuyer*, call'd abſolutely *Monſieur le Grand*; one of the principal Offices of the Crown, and a Branch of that of Conſtable; anſwering to the Maſter of Horſe among us. He has the chief Intendance and Direction of the great and little *Ecurie*, and diſpoſes of all the vacant Poſts therein: the *firſt great Ecuyer of the great Ecurie*, who has the Command thereof in the Abſence of the *Grand Ecuyer*: The *firſt Ecuyer of the little Equeries* call'd abſolutely *Monſieur le Premier*: *Ecuyer Cavalcadeur*, who commands the *Equery* of Horſes for a Prince's own Riding: *Ecuyer de Main*, who not only directs the *Ecurie*, but alſo attends his Maſter in walking, *&c.* call'd alſo Gentlemen-Uſhers, and *Chevaliers d' Honneurs*: *Ecuyer Trenchant*, the King's Carver and Server: *Ecuyer Bouche*, who ranges the Diſhes and Plates on the Table: *Ecuyer de Caiſine*, &c.

EQUERIES are particularly uſed among us, for Officers of the King's Stables; who when his Majeſty goes Abroad, ride in the leading Coach; are in Waiting one at a Time monthly, and have a Table with the Gentlemen Uſhers during the Time.

They uſed to ride on Horſe-back by the Coach-Side, when the King travelled; but that being more expenſive to them, than neceſſary to the Sovereign, it has been diſcontinued. There are Six of them, and their Salary is 300*l. per Annum* each.

The *Equeries* of the Crown Stable have that diſtinct Appellation, as being imployed in managing and breaking the Saddle Horſes, and preparing them for the King's Riding.

One of them is, or always ſhould be, in cloſe Waiting at Court; and when his Majeſty rides, holds the Stirrup, whilſt the Maſter of the Horſe, or one of the *Equeries*, in his Abſence, aſſiſts in mounting him; or when his Majeſty rides, they uſually attend him. They are two, and their Salary is 256*l. per Annum* each.

EQUES *Auratus*, is uſed to ſignifie a Knight Batchelor; call'd *Auratus*, becauſe anciently none but Knights might gild or beautify their Armour, or other Habiliments of War, with Gold. See KNIGHT.

However, in Law, this Term is not uſed; but inſtead of it *Miles*; and ſometimes *Chevalier*. See MILES, CHEVALIER, *&c.*

EQUESTRIS, EQUESTRIAN, a Term rarely uſed, but in the Phraſe *Equeſtrian Statue*, which ſignifies a Statue repreſenting a Perſon mounted on Horſeback. See STATUE.

The *Fortuna Equeſtris*, in ancient *Rome*, was a Statue of that Goddeſs on Horſeback.

We ſometime alſo ſay, *Equeſtrian Column*. See COLUMN.

And *Equeſtrian Order*, which ſignified, among the *Romans*, the Order of Knights, or *Equites*. See KNIGHT,

The Word is form'd of the Latin, *Eques*, Knight, Horſeman; of *Equus*, Horſe.

EQUIANGULAR, or ÆQUIANGULAR, in Geometry, is applied to Figures whoſe Angles are all equal. See ANGLE.

A *Square* is an *Equiangular* Figure. See SQUARE.

All equilateral Triangles are alſo *Equiangular*. See EQUILATERAL.

When the three Angles of one Triangle, are ſeverally equal to the three Angles of another Triangle; the Triangles are alſo ſaid to be *Equiangular*. See TRIANGLE.

EQUICULUS, *Equuleus*, or *Equus minor*, a Conſtellation of the Northern Hemiſphere. See EQUULEUS.

EQUICRURAL, or EQUICRURAL *Triangle*, is what we more uſually call an *Iſoſceles*. See ISOSCELES.

EQUIDIFFERENT, or ÆQUIDIFFERENT, in Arithmetic. If in a Series of three Quantities, there be the ſame Difference between the firſt and ſecond, as between the ſecond and third, they are ſaid to be *continually Equidifferent:* But if in a Series of four Quantities, there be the ſame Difference between the firſt and ſecond, as between the third and fourth, they are ſaid to be *diſcretely Equidifferent*. Thus, 3, 6, 7, and 10, are diſcretely *Equidifferent*; and 3, 6, and 9, continually *Equidifferent*.

EQUIDISTANT, or ÆQUIDISTANT, in Geometry, a Term of Relation between two Things, which are every where at an equal, or the ſame, Diſtance from each other. See DISTANCE.

Thus parallel Lines are ſaid to be *Equidiſtant*, as they neither approach nor recede.

Parallel Walls are *Equidiſtant* from each other. See PARALLEL.

EQUILATERAL, or ÆQUILATERAL, is applied to any Thing whoſe Sides are all equal. Thus, an *Equilateral Triangle*, is that whoſe Sides are all of equal Length. In an *Equilateral* Triangle, all the Angles are likewiſe equal. See TRIANGLE.

All regular Polygons, and regular Bodies, are *Equilateral*. See POLYGON.

An EQUILATERAL *Hyperbola*, is that wherein the conjugate Axes, as A B, and D E, are equal. (*Tab. Conick's Fig.* 20.)

Hence, as the Parameter is a 3*d* Proportional to the conjugate Axes, it is alſo equal thereto. Conſequently, in the Equation $y^2 = bx + \frac{b}{a}x^2$, make $b = a$; And the Equation $y^2 = ax + x^2$, defines the Nature of an *Equilateral Hyperbola*. See HYPERBOLA.

EQUILIBRIUM, or ÆQUILIBRIUM, in Mechanicks, a Term implying an exact Equality of Weight between two Bodies, compared with each other. See WEIGHT.

Thus, we ſay a Balance is in *Equilibrio*; when the two Ends are ſo exactly pois'd, that neither of 'em aſcends or deſcends, but both retain their parallel Poſition to the Horizon. From which Circumſtance the Word is originally taken; as being a Compound of *æquus*, equal, and *libra*, Balance.

Whence we frequently uſe the Word *Balance* in lieu thereof. See BALANCE.

The *Equilibrium* of Fluids makes a conſiderable Part of the Doctrine of Hydroſtaticks. See FLUID.

The Term *Equilibrium*, is alſo uſed figuratively on other Occaſions. A Painter muſt take Care to obſerve the *Equilibrium* of his Figures, *i. e.* to diſpoſe 'em well on their Center of Gravity, that they mayn't ſeem ill ſupported, or ready to tumble.

Thus, *e. gr.* if one Arm be moving forward, the other muſt be proportionably backward to poiſe the Figure.

In a Picture, there ſhould be an *Equilibrium* between one Part and another: That is, the Objects are to be diſtributed ſo, as to balance, and contraſt each other; and not too many, *e. gr.* be crowded on one Side, and the other left bare. — Peace is never well ſecured, unleſs the Neighbouring States are in *Equilibrio*.

EQUIMULTIPLE, in Arithmetic and Geometry, is applied to ſimple Magnitudes, when multiplied equally, *i. e.* by equal Quantities, or Multiplyers. See MULTIPLICATION.

Thus, taking A as many Times as B; or multiplying 'em equally, there will ſtill remain the ſame *Ratio* between the Magnitudes thus multiplied, as between the primitive Magnitudes before Multiplication.

Now, thoſe Magnitudes, thus equally multiplied, are call'd *Equimultiples* of the original ones A and B: Whence we ſay, that *Equimultiples* have the ſame *Ratio* as the ſimple Quantities. See RATIO.

In Arithmetic, we generally uſe the Term *Equimultiples* for Numbers which contain equally, or an equal Number of Times, their *Submultiples*.

Thus 12 and 6 are *Equimultiples* of their *Submultiples* 4 and 2; inaſmuch as each of them contains its *Submultiple* three Times. See SUBMULTIPLE.

EQUINOCTIAL, or ÆQUINOCTIAL, in Aſtronomy, a great and immoveable Circle of the Sphere, under which the *Equator* moves in its diurnal Motion. See SPHERE.

The *Equinoctial*, or *Equinoctial Line*, is ordinarily confounded with the *Equator*; but there is a Difference: the *Equator* being moveable, and the *Equinoctial* immoveable; and the *Equator* drawn about the Convex Surface of the Sphere, but the *Equinoctial* on the Concave Surface of the *magnus Orbis*. See EQUATOR.

The *Equinoctial* is conceiv'd, by ſuppoſing a Semi-diameter of the Sphere, produced thro' a Point of the *Equator*, and there, by the Rotation of the Sphere about its Axis, deſcribing a Circle on the immoveable Surface of the *primum Mobile*.

Whenever the Sun, in his Progreſs thro' the Ecliptic, comes to this Circle, it makes equal Days and Nights all around the Globe; as then ariſing due Eaſt, and ſetting due Weſt, which he never does at any other Time of the Year. See DAY.

And hence the Denomination, from *æquus*, and *nox*, Night; *quia equat diem nocti*. See DAY and NIGHT.

The *Equinoctial*, then, is the Circle which the Sun deſcribes, or appears to deſcribe, at the Time of the *Equinoxes*; that is, when the Length of the Day is every where equal to that of the Night; which happens twice *per Annum*. See EQUINOX.

EQUINOCTIAL, in Geography. See EQUATOR.

People who live under this Circle, by Geographers and Navigators call'd the *Line*, have their Days and Nights conſtantly equal. And at Noon, the Sun is in their *Zenith*, and caſts no Shadow. See ASCII.

From this Circle, is the Declination, or Latitude of Places, accounted in Degrees of the Meridian. See LATITUDE, *&c.*

EQUINOCTIAL *Points*, are the two Points wherein the Equator and Ecliptic interſect each other. The one, being in the firſt Point of *Aries*, call'd the *Vernal*; and the other in the firſt Point of *Libra*, call'd the *Autumnal Point*. See POINT.

EQUINOCTIAL *Colure*, is that paſſing thro' the *Equinoctial* Points. See COLURE.

EQUINOCTIAL *Dial*, is that whoſe Plane lies parallel to the *Equinoctial*. See DIAL.

EQUINOX, or ÆQUINOX, in Aſtronomy, the Time when the Sun enters one of the *Equinoctial* Points.

That when he enters the *Vernal* Point is particularly denominated the *Vernal*; and that in the *Autumnal* Point, the *Autumnal Equinox*. See EQUINOCTIAL *Points*.

The *Equinoxes* happen when the Sun is in the *Equinoctial* Circle; when, of Conſequence, the Days are equal to the Nights throughout the World, which is the Caſe twice

twice a Year; *viz.* About the 10*th* of *March*, and the 12*th* of *September*; the first of which is the *Vernal*, and the second the *Autumnal Equinox*.

As the Sun's Motion is unequal, that is, sometimes swifter, and sometimes slower; (from the Causes already explain'd under the Article EQUATION) it comes to pass, that there are about Eight Days more from the *Vernal*, to the *Autumnal Equinox*, than from the *Autumnal* to the *Vernal:* The Sun spending more Time in travelling thro' the Northern, than the Southern Signs.

According to the Observations of M. *Cassini*, the Sun is 186 d. 14 h. 53′. in the Northern Signs; and only 178 d. 14 h. 56′. in the Southern. The Difference of which is 7 d. 23 h. 57′.

The Sun being continually advancing forwards in the Ecliptic, and gaining a Degree every Day; he makes no Stay in the *Equinoctial* Points, but the Moment he arrives in 'em, leaves 'em.

Of Course, therefore, tho' the Day the Sun enters the *Equinoctial* Point, is call'd the *Equinox*, as being reputed equal to the Night; yet is not it precisely so, unless the Sun enter the *Equator* at Mid-day. For if the rising Sun should enter the *Vernal Equinox*, at setting, he will have departed from it, and have got Northwards about 12′: Consequently, that Day will be somewhat longer than 12 Hours, and the Night proportionably shorter.

The Time of the *Equinoxes*, i. e. the Moment in which the Sun enters the *Equator*, is found by Observation; the Latitude of the Place of the Observer being given.

Thus, in the *Equinoctial* Day, or near it, take the just Meridian Altitude of the Sun; if this be equal to the Altitude of the *Equator*, or the Complement of the Latitude, the Sun is that very Moment in the *Equator*. If it be not equal, the Difference is the Sun's Declination. The next Day observe the Meridian Altitude as before, and find his Declination: If the Declination be of different Kinds, *viz.* the one North, and the other South, the *Equinox* has happen'd in the Interval of Time between 'em. Otherwise, the Sun has either not enter'd the *Equinoctial*, or had pass'd it at first. From these two Observations, a Trigonometrical *Calculus* gives the Time of the *Equinox*.

It is found by Observation, that the *Equinoctial* Points, and all the other Points of the Ecliptic, are continually moving backward, or *in Antecedentia*, that is, Westward. This retrogade Motion of the *Equinoctial* Points, is that famous and difficult Phenomenon, call'd the *Precession of the Equinoxes*. See PRECESSION *of the Equinox*.

EQUIPAGE, a Ship's Crew; or the Officers, Soldiers, Sailors, and other Persons, that man and manage the same; with the Arms, Provisions, Merchandizes, *&c.* wherewith it is loaded. See SHIP, *&c.*

The Sailors that are to work and manage a Ship, are regulated by the Number of Lasts it may carry; each Last making two Tun.

The *Equipage* of a *Dutch* Ship, from 40 to 50 Lasts, is 7 Sailors and a Swabber; from 50 to 60 Lasts, the *Equipage* consists of 8 Men and a Swabber; and thus increases at the Rate of one Man for every 10 Lasts; so that a Ship of 100 Lasts has 12 Men, *&c.*

*English* and *French* Crews, are usually stronger than *Dutch*; but always about the same Proportion.

EQUIPPE, in Heraldry, expresses a Knight equipp'd, *i. e.* arm'd at all Points.

EQUIPOLLENCE, in Logic, is when there is an Equivalence between two or more Terms, or Propositions; *i. e.* when they signify one and the same Thing, tho' they express it differently. Such Propositions, *&c.* are said to be *Equipollent*. See EQUIVALENT.

EQUITY, is Justice, or Right, mitigated and temper'd by the Consideration of particular Circumstances; or a Correction, or Moderation of the Severity of some Law; or a Temperament, which, without being unjust, abates the Rigour of some just Law. See LAW.

This is what the *Greeks* call ἐπιείκεια. The utmost Severity of a good Law, is frequently contrary to Justice; it should always have *Equity* for its Rule and Guide. *Summum jus, sæpe summa injuria.*

The Foundation of *Equity*, is not that there is any Mistake in the Law; but that the Law was laid down universally; when as all Circumstances cou'd not be consider'd, or taken in under one Law.

*Equity*, therefore, is not so much a Correction of a Law, as an Amendment; nor yet so properly an Amendment of the Law it self, as of the Opinion arising from its being ill understood, or ill applied.

In this it is distinguished from a *Dispensation*, which takes away the Obligation of the Law in some particular Case; whereas a Correction does not take away any Thing of the Obligation, but only shews in what Sense it is to be taken, lest there should be imagin'd any Obligation, where there is none.

For an Instance, suppose it an express Law, that *the City being now beset with an Enemy, the Gates be all shut*; and suppose it fall out, that the Enemy is then in pursuit after some of the Citizens by whom it is defended; so that it would be highly prejudicial thereto, not to open 'em the Gates: *Equity* here decrees the Gates to be open'd, contrary to the express Word of the Law.

*Thom. Aquin.* proposes another Instance: Suppose it Law, that whoever refuses to restore what had been committed in Trust to him, shall pay a grievous Mulct; and suppose some Person refuse to restore a Sword left with him, to a Mad-man. This Case is comprehended in the Sense and Intendment of the Law, tho' not in the Words thereof. And the Legislator himself, if he were present, would except it. *Equity*, therefore, must here step in, to correct or supply the Defects of the Judge, and acquit the Man of the Mulct.

In this View, *Equity* is of two Kinds, and those of contrary Effects: The one abridges, and takes from the Letter of the Law; and the other enlarges, and adds thereto.

The first is defined, the Correction of a Law, made generally in that Part wherein it fails: As, suppose an Act made, That whosoever does such a Thing, shall be a Felon, or suffer Death; yet if a Madman, or an Infant, who hath no Discretion, do the same, he shall neither be a Felon, nor suffer Death.

The other is defined an Extension of the Words of the Law, to Cases unexpress'd, which yet have the same Reason; so that, when one Thing is enacted, all other Things, which are of the like Degree, are so too.

Thus in the Statute which ordains, That in Action of Debt against Executors, he that doth appear by Distress shall answer; doth extend, by *Equity*, to Administrators; for such of them as shall appear first by Distress, shall answer by the *Equity* of the said Act: *Quia sunt in equali genere.*

EQUITY is also used for the Virtue of Justice. See JUSTICE.

EQUITY, in our Laws, *&c.* is frequently used for the Court of Chancery, where Controversies are supposed to be determined, according to the exact Rules of *Equity* and Conscience, by mitigating the Rigour of the Common Law. See CHANCERY.

*Æquitas sequitur Legem*, is an old Maxim in Law, but from the great Increase of Suits in Chancery, some have thought fit to give it this Construction, That in all Causes after a Man has been at Law, he must go into *Equity*.

EQUIVALENT, is understood of something that is equal in Value, Force, or Effect to another. See EQUALITY.

*Equivalence* is of various Kinds, in *Propositions*, in *Terms*, and in *Things*.

*Equivalent Terms* are, where several Words that differ in Sound, have yet but one and the same Signification; as *Every Body was there*, and no Body was absent; *Nihil non* and *omne*.

*Equivalence* in Things, is either moral, physical, or statical. *Moral*, as when we say, that the commanding or advising a Murther, is a Guilt *Equivalent* to that of the Murtherer: *Physical*, as when a Man, who has the Strength of two Men, is said to be *Equivalent* to two: And *Statical*, whereby a less Weight becomes of equal Force with a greater, by having its Distance, or the like, increas'd.

EQUIVOCAL, EQUIVOQUE, is applied to an Expression that is dubious and ambiguous; or that may have several Senses, one true, and another false. See EQUIVOCATION.

EQUIVOCAL, ÆQUIVOCUM, EQUIVOQUE, in Logic, by the *Greeks* call'd *Homonymum*, is any Word which under one Sense exhibits several Idea's, or is adapted to different Conceptions.

As the Word *Emperor*, which is both the Name of a Dignity, the proper Name of a Person, and the Name of a Plant. So also the Latin *Gallus*, which stands indifferently for a Cock, and a *Frenchman*.

In which Cases one Word denotes divers Conceptions, one Word divers Things. Whence that common Definition of *Equivocal* in the School, *quorum nomen est commune, Ratio vero Essentiæ secundum illud Nomen diversa.*

The Philosophers have distinguished *Equivocals*, into *Active* and *Passive*; or into *Equivoca*, *Equivocantia*, and *Equivocata*.

*Equivoca Equivocantia*, or those that denominate and signify Things, are Words common to several Things in a very different Signification, *i. e.* to several Things which have a similar Essence, correspondent to the similar Denomination.

tion. *E. gr.* The Word *Taurus*, which ſtands for a Sign, a Mountain, and an Animal; and in one ſignifies a lowing Animal; in another, a Heap of Stones and Earth; and in the third, a Conſtellation, or Syſtem of Stars.

*Equivoca Equivocata*, or thoſe that are called, or denominated; are the Things ſignified by ambiguous Names, *e. gr.* a Sign, a Mountain, and an Animal. Which laſt Species of *Equivocals* alone, *Ariſtotle* ſeems to have had in View in his Definition, which agrees to theſe, and theſe only.

EQUIVOCATION, the uſing a Term, or Expreſſion, that has a double Signification. See EQUIVOCAL.

*Equivocations* are Expedients to ſave telling the Truth, and yet without telling a Lye for the Matter. The Fathers are great Patrons of *Equivocations*, and mental Reſervations; holding, that the Uſe of ſuch Shifts, and Ambiguities, is in many Caſes allowable.

St. *Auguſtin*, particularly, is reproach'd with endeavouring to vindicate *Iſaac* for ſaving his Wife from a Crime, by an *Equivocation: Tacuit aliquid veri, & non dixit aliquid falſi.* To advance a dubious Propoſition, knowing it will be underſtood in a Senſe different from that you give it in your Mind, is an *Equivocation*, in Breach of good Faith and Sincerity. See TRUTH, FALSHOOD, *&c.*

EQUIVOCATION, or EQUIVOCAL, in Moral Theology, is ſtrictly underſtood of a Term, or Phraſe, with two different Significations; the one common, and obvious; the other more unuſual, and remote; the latter of which being underſtood by the Speaker, but the former by the Hearers, they conceive ſomething different from one another.

Of this we have an Inſtance in St. *John*, Chap. II. where our Saviour is repreſented as ſaying, *Lazarus ſleepeth:* For the Diſciples taking the Word *Sleeping* in the uſual Signification, concluded that *Lazarus*, whom they had been told was ſick, began to take Reſt, and would ſoon recover; but *Jeſus*, taking the Words in a leſs, direct, and uſual Signification, meant that *Lazarus* was dead.

When the *Equivoque* conſiſts of ſeveral Words, 'tis properly call'd an *Amphibology:* Of which we have an Inſtance in St. *John*, Chap. 2. *Deſtroy this Temple*, ſays Jeſus Chriſt, ſpeaking to the Jews, *and I will raiſe it again in three Days.*

The Uſe of *Equivoques* has been greatly diſputed among the modern Caſuiſts: Many grave Authors deny that it is allowable to uſe them on any Occaſion whatever. Their Reaſon is, that an *Equivoque* is to all Intents and Purpoſes the ſame with a Lye. See FALSHOOD.

Others, on the contrary, particularly *Cabuſſot*, a Divine famous among the Prieſts of the Oratory, hold a World of Difference between an *Equivocation* and a Lye; maintaining that it is ever criminal to uſe a Lye; but that there are ſome Occaſions where an *Equivocation* may be uſed innocently: And ſuch, in Effect, is the Sentiment of St. *Thomas*, St. *Anthonin*, St. *Raymond*, and eſpecially St. *Auguſtin*, as *Fa. Cabuſſot* ſeems to have demonſtrated. *Lib.* IV. *Theor. de Prax. Jur. Can. Edit. Lugd.* 1685. Cap. 4.

EQUIVOCAL *Generation*, is a Method of producing Animals and Plants, not by the uſual Way of Coition between Male and Female, but I know not what plaſtic Power, or Virtue in the Sun, *&c.* See GENERATION.

Thus Inſects, Maggots, Flies, Spiders, Frogs, *&c.* have uſually been ſuppoſed to be produced by *Equivocal Generation*, i. e. by the Heat of the Sun warming, agitating and impregnating the Duſt, Earth, Mud, and putrified Parts of Animals.

This Method of Generation, which we alſo call *ſpontaneous*, was commonly aſſerted and believed among the antient Philoſophers: But the Moderns, from more and better Obſervations, unanimouſly reject it, and hold that all Animals, nay and Vegetables too, are *Univocally* produced, that is, by Parent Animals, and Vegetables of the ſame Species and Denomination. See UNIVOCAL *Generation.*

'Twere a Thing one would imagine ſufficient to diſcredit the *Ariſtotelian*, or rather the *Egyptian Doctrine of Equivocal Generation*, to ſee Flies, Frogs, Lice, *&c.* to be Male and Female; and accordingly to engender, lay Eggs, *&c.*

To imagine that any of thoſe Creatures could be ſpontaneouſly produced, eſpecially in ſo romantic a Manner, as in the Clouds, as they particularly thought the Frogs were, and that they dropp'd down in Showers of Rain, were, certainly, highly unphiloſophical.

Yet ſome, even to this Day, credit the raining of Frogs; and, among the reſt, the very curious and learned Dr. *Liſter*, ſeems inclined to the Opinion: Inſtancing in Frogs, found on the Leads of the Lord *Aſton*'s Gatehouſe at *Tixal* in *Staffordſhire*, which he imagines came there by ſome ſuch Means. But we may make a Judgment of this, and a hundred the like Reports to be met with in conſiderable Authors, from ſome other the like Relations that have been better inquired into. Such are ſeveral Reports of the raining of *Millet-ſeed*, *Wheat*, *Whitings*, &c. An Account of which, with the Grounds of the Deceit, ſee under RAIN and SHOWER.

The Doctrine of *Equivocal Generation* we call an *Egyptian* Doctrine, as having, in all Probability, had its Riſe in *Egypt*, to ſalve the Hypotheſis of the Original Production of Men, and other Animals, out of the Earth, by Help of the Sun's Heat. To prove which, the *Egyptians*, as *Diodorus Siculus* obſerves, produce this Obſervation; that about *Thebes*, when the Earth is moiſten'd by the *Nile*, and afterwards impregnated by the intenſe Heat of the Solar Rays, an innumerable Swarm of Mice do come forth: Whence he infers, that all Kinds of Animals might equally have aroſe out of the Earth at the Beginning of Things. And from theſe, Biſhop *Stillingfleet* takes the other Writers and Adherents, to the Doctrine of *Equivocal* Generation, *Mela*, *Pliny*, *Ovid*, &c. to have borrow'd the Hypotheſis, without enquiring into its Truth. *Derham*'s *Phyſ. Theol.* Lib. IV. *C.* 15.

EQUULEUS, among the Antients, was an Inſtrument of Torture, or Puniſhment; being a Kind of *Wooden-Horſe*, made with very ſharp Ridge, or Back, widening much in its Deſcent. See PUNISHMENT.

The Criminal being ſeated on the Ridge, Weights were hung to his Feet, to make his Seat more painful.

This Puniſhment is ſtill retain'd in Cittadels and Armies; where the Soldiers of the Garriſon, *&c.* are condemn'd to the *Wooden-Horſe*, for divers Offences.

*Hieronymus Magius*, when a Priſoner among the *Turks*, wrote an expreſs Treatiſe *de Equuleo*; and another of Bells; merely, as 'tis ſaid, from his Memory, without any Aſſiſtance of Book. *Sigonius* has another Treatiſe on the ſame Subject.

EQUULEUS, in Aſtronomy, a Conſtellation of the Northern Hemiſphere. See CONSTELLATION.

The Stars in the Conſtellation *Equuleus*, in *Ptolomy*'s Catalogue are 4; in *Tycho*'s 4; in Mr. *Flamſteed* Catalogue 10.

The Longitudes, Latitudes, Magnitudes, *&c.* whereof are as follows.

*Stars in the Conſtellation* EQUULEUS.

| *Names and Situations of the Stars.* | Sign. | Longit. ° ′ ″ | Latitude. North. ° ′ ″ | Magnit. |
|---|---|---|---|---|

EQUULEUS, in the Arts and Manufactures. See HORSE.

ERADICATIVE, in Medicine. An *Eradicative Cure* is that which takes away the Cauſe, or Root of the Diſtemper; in which Senſe it ſtands oppoſed to *palliative*; which relieves for a Time, but not going to the Cauſe of the Diſorder, does not prevent its Return. See CURE.

The Word is a Compound of *e* out, and *radix* Root.

ERANARCHA, a publick Officer among the ancient *Greeks*, whoſe Buſineſs was to preſide over, and direct the Alms and Proviſions made for the Poor.

The *Eranarcha* was properly the Adminiſtrator, or Commiſſioner of the Poor: When any Perſon was reduced to Poverty, taken Captive, or had a Daughter to marry, which he could not effect for Want of Money, *&c.* this Officer call'd an Aſſembly of Friends and Neighbours, and taxed each according to his Means and Eſtate, to contribute towards his Relief. This is what we learn from *Corn. Nepos*, in his Life of *Epaminondas.*

The Word is form'd of the *Greek* ἔρανος, *Alms, Contribution*, and ἀρχὴ, *Command.*

ERASED, in Heraldry, expreſſes any Thing violently torn off from its proper Place.

It is uſed in Contra-diſtinction to *Couped*, which ſignifies a Thing clean cut off. The Family of *Card* bears *Ermine*, a *demy Lion rampant* eraſed, *Azure*, &c.

ERASTIANS, a religious Sect, or Faction, that aroſe in *England* during the Time of the Civil Wars.

They were thus call'd from their Leader *Tho. Eraſtus*; whoſe diſtinguiſhing Doctrine it was, that the Church had no Right to diſcipline, that is, no regular Power to excommunicate, exclude, cenſure, abſolve, decree, or the like.

ERECT,

ERECT *Flowers*, are such as grow upright, without hanging or reclining the Head. See FLOWER.

ERECT *Vision*. See VISION.

ERECT { *Direct* / *Declining*, &c. } *Dials*. See DIAL.

ERECTION, the Act of raising, or elevating a Thing, in a right Line. See ELEVATION.

The *Erecting* a Perpendicular on a Line given, is a popular Problem in Geometry. See PERPENDICULAR.

The Term is also used figuratively: As, the *Erection* of a Marquisate into a Dutchy; Bishopricks can only be *Erected* by the King. It was antiently the Practice to *erect* Statues to great Men. See STATUE.

*Cato*, the Censor, being ask'd why a Statue was not *Erected* him? I had rather, says he, hear the Question made, than hear it ask'd why a Statue was *Erected* me.

ERECTION, is particularly used in Medicine, for the State of the Penis, when swell'd, and distended by the Action of the Muscles, call'd *Erectors*, or *Erectores*. See PENIS and ERECTOR.

There is also an *Erection of the Clitoris*, perform'd by Muscles provided for that Purpose. See CLITORIS, &c.

An Alternation of *Erection*, and Flaccidity in the Penis, Dr. *Drake* observes, is of absolute Necessity: The first to the Performance of its Office; the second for the Security of the Part. Without an *Erection* it were impossible to emit and lodge the Seed where it ought to be; and with a constant one, almost as impossible to secure the Part from external Injuries. — To say nothing of the Loss of Instigation, which must be a necessary Consequence of constant *Erection*. See PRIASPISMUS.

The *Erection* of the Penis, consists in a Distention of its *Corpora Cavernosa*, by an extraordinary Quantity of Blood pent up therein. See CAVERNOSA.

That the Blood is the Matter which distends the Penis in *Erection*, is evident from Abundance of Experiments; tho' the most convincing is that of firmly tying the Penis of an Animal (as has been frequently done to a Dog) in *Coitu*; wherein, nothing has been found but Blood to distend it. Hence, in the Bodies of Criminals, that hang long after Death, the Penis becomes erected; the Blood, in that Position, falling to the inferior Parts, and stopping there.

By blowing into the Blood Vessels after Death, the Penis becomes *Erected*. This was first discover'd by Mr. *Cowper*, upon viewing its Veins, after he had distended 'em with Wind; whence it plainly appear'd, that the external Trunks pass'd, some under its Skin only, and some over the *Ossa pubis*: Beside, that a vast Number of other Veins on the *Dorsum penis*, unite and empty themselves into one Trunk, call'd *Vena penis*, which passes immediately under a transverse Ligament of the *Ossa pubis*, which is compress'd by the Approximation of the *Dorsum penis*, to the Ligament of the *Pubis*. This Application of the *Dorsum penis* is effected by its *Musculi Directores*, pulling down the *Crura* of the *Corpora Cavernosa Penis*, which are tied up at their Juncture in the Body of the *Penis*, to the *Os pubis*, by the *Ligamentum Suspensorium*. Now, this cannot happen to the cavernous Body of the *Urethra*, by Reason there is no Bone, whose Position can give Rise to a Ligament, which can have that Effect on its Veins: Wherefore, the *Musculi Accelatores*, embracing the Veins of the Bulb do that Office, tho' not so effectually as in the *Penis* it self.

Accordingly, the Glans is not always perfectly distended with the *Penis*, and soonest becomes flaccid on an *Erection*. See GLANS.

The Blood, by such Means, being precluded from its Return, the *Corpora Cavernosa* must of Necessity become distended, if we consider their Structure above-mentioned, with Respect to the Veins. The Arteries, which before were flaccid, have now their Trunks also distended, and do more plentifully import Blood into the *Corpora Cavernosa*.

But since it is absolutely necessary some Part of the detain'd Blood should be still passing off, lest it become grumous, and unfit for a Reflux; the *Venæ preputii* communicate with those of the *Penis* it self; whereby Part of the Blood may be return'd from the *Penis* during its *Erection*, and give Way to a fresh Supply from the Arteries, and preserve the Circulation uninterrupted. See CIRCULATION.

ERECTOR *Clitoridis*, in Anatomy, a Pair of Muscles arising from the Protuberances of the *Ischium*, and inserted into the spongious Bodies of the *Clitoris*; which they serve to erect in Coition. See CLITORIS.

ERECTOR *Penis*, a Pair of Muscles arising fleshy from the Protuberances of the *Ischium*, below the Beginning of the cavernous Bodies of the Yard, into whose thick Membranes they are inserted.

Their Use is to pull the Yard towards the *Os pubis*, whereby its greatest Vein is compress'd, and the resluent Blood denied its Passage under those Bones; which makes it swell. See ERECTION.

EREMITE. See HERMIT.

ERICTHONIUS, in Astronomy, a Constellation, the same as *Auriga*. See AURIGA.

ERIDANUS, in Astronomy, a Constellation of the Southern Hemisphere. See CONSTELLATION.

The Stars in the Constellation *Eridanus*, in *Ptolomy*'s Catalogue are 30: In *Tycho*'s 19: In Mr. *Flamsteed*'s 68: The Longitudes, Latitudes, Magnitudes, &c. whereof are as follow.

*Stars in the Constellation* ERIDANUS.

ERIGENS *Penis*. See ERECTOR *Penis*.

ERMINE, in Heraldry, a white Field, or Fur, powder'd, or interſperſed with black Spots. See FUR.

It is ſuppoſed to repreſent the Skin of an Animal, of the ſame Denomination; which ſome will have a *Water Rat*, others a *Muſtela*, or Sort of *Weazle*, and others an *Armenian* Mouſe. In Effect, there is no Animal whoſe Skin naturally correſponds to the Herald's *Ermine*.

The Animal is Milk white; and ſo far is it from Spots, that the Tradition has it, he will rather die, or be taken, than ſully its Whiteneſs. Whence its ſymbolical Uſe.

But white Skins having for many Ages been uſed for the Linings of the Robes of Magiſtrates, and great Men; the Furriers, at length, to add to their Beauty, uſed to ſew Bits of the black Tails of thoſe Creatures upon the white Skins; to render them the more conſpicuous. Which Alteration was introduced into Armoury.

The Sable Spots in *Ermine* are not of any determinate Number, but may be more or leſs, at the Pleaſure of the Painter or Furrier.

ERMINES, is uſed by ſome *Engliſh* Writers for the Reverſe of *Ermine*, i. e. for white Spots on a black Field; but on what Foundation no body can tell; for the *French*, from whom we have our Heraldry, have no ſuch Term; but call this black powder'd with white, *Contre Ermine*; as denoting the Counter, or Reverſe of *Ermine*; which is white powder'd with black.

ERMINEE. A *Croſs* ERMINEE, is a Croſs compoſed of four *Ermine* Spots, placed in that Figure. See CROSS.

It muſt be obſerv'd, that the Colours in ſuch Arms are not to be expreſs'd; by reaſon, neither the Croſs, nor the Arms, can be of any Colour but white and black.

*Colombiere* blazons it *quatre queues de'Hermine en Croix*. The Editor of *Guillin* deſcribes it thus; A Croſs of four *Ermines*; or, as I think more properly, of four *Ermine* Spots in Croſs. 'Tis the Coat of *Hurſton* in *Cheſhire*.

ERMINITES, ſhou'd ſeem a diminutive of *Ermines*, and naturally to ſignifie little *Ermines*; but 'tis otherwiſe. *Erminites* expreſſes a white Field pouder'd with black; only every Spot has a little red Hair therein.

Some Authors uſe the Word *Erminites*, for a yellow Field pouder'd with black; which the *French* expreſs much better by *or ſemée d'Ermines de Sable*.

EROSION, in Medicine, the Act of ſharp, acid Fluids, or Humors, gnawing and tearing off Parts from the Fleſh, and other Subſtances. Arſenic, and other Poiſons, make *Eroſions* in the Inteſtines. See CORROSION.

EROTIC, is applied to any Thing which has a Relation to the Paſſion of Love. See PASSION.

In Medicine, we particularly uſe the Phraſe *Delirium Eroticum*, for a Kind of Melancholy contracted thro' Exceſs of Love. See MELANCHOLY.

Tho', among the ſeveral Species of Pulſes, there be no amorous Pulſe, that is, no Pulſe peculiar to that Paſſion; yet we can certainly diſcover where the Diſorder is *Erotic*, by the beating of the Pulſe, which, in that Caſe, is changeable, unequal, turbulent and irregular. Speak to the Patient of the Perſon he loves, and his Pulſe inſtantly changes, becoming higher and quicker: And the Minute you change the Converſation, the Pulſe is loſt again, and is diſturb'd a-new. See PULSE.

The Word is derived from the *Greek*, ἔρως, *Love*; whence ἐρωτικὸς.

ERRANT, in Law, the ſame with *Itinerant*, attributed to Judges that go the Circuit: To Bayliffs at large, &c. See JUSTICE, BAILIFF, &c.

ERRATA, a Liſt at the Beginning or End of a Book, containing the Faults that have eſcaped in the Impreſſion, and, ſometimes, even in the Compoſition, of the Work. See PRINTING.

*Lindenberg* has an expreſs Diſſertation on Typographical *Errata*, *de Erroribus Typographicis*; wherein he obſerves, that there is no Book exempt from 'em, not even the Sacred Books. He ſets himſelf to enquire into all the Cauſes thereof; and propoſes Means to prevent 'em. But he advances nothing on that Article, but what is either common or impracticable. The Authors, Compoſitors, and Correctors of the Preſs, he ſays, muſt do their Duty; who diſputes it? Each Author muſt have his own Printing-Preſs at Home, as *Calixtus* and *Opitius* had; who can do it?

Fa. *Hardouin*'s Book on Medals, might be entitled the *Errata of the Antiquaries*; and the Critiques on Hiſtory by *Perizonius*, the *Errata of the ancient Hiſtorians*. In the ſame Senſe, M. *Bayle*'s Dictionary might be call'd the *Errata* of *Moreri*.

ERRATIC, in Aſtronomy, an Epithet applied to the Planets, which are call'd *Erratic*, or wandering Stars, in Contra-diſtinction to the fix'd Stars. See PLANET.

There is alſo a Kind of Fever call'd *Erratic*. See FEVER.

ERRHINA, ERRHINES, in Medicine, are Remedies taken by the Noſe, to enliven the Spirits, ſtop Bleeding, &c. but principally to purge the Humidities of the Head.

Of theſe, ſome are taken in *Powders*, as Betony, Tobacco, Marjoram, Iris, white Hellebore, *Euphorbium*, &c.

Others in a *liquid* Form, made of the Juice of Marjoram, Sage, Beet, Cyclamen, Iris, &c.

Others in Form of *Liniments*, incorporated with *Unguent. Roſat.*

Others, *ſolid*, form'd like Pyramids, to ſtop Bleeding at the Noſe; compoſed of Armenian Bole, *Terra ſigillata*, Maſtic, human or Hogs-Blood dried, &c.

Such *Errhina* as are dry, and made up in Powders, are properly call'd *Sternutatories*. The Moderns ſometimes call 'em *Caput purgia*. See STERNUTATORY.

The Word is derived from ἐν, *in*, and εἷς, *Noſe*.

ERROUR, or ERROR, a Miſtake of the Mind, in giving Aſſent to a Thing or Propoſition which is not true. See FALLACY.

Some Philoſophers define *Error* an Act of the Mind, whereby Things that ſhould be joyn'd, are ſeparated; or, Things that ſhould be ſeparated, are joyn'd: Or a wrong Judgment, diſagreeing with the Things whereon it is paſs'd. See JUDGMENT.

*Error* ſtands in Oppoſition to *Truth*, which conſiſts in an Agreement between the Propoſition, and the Thing whereof it is affirmed or derived. See TRUTH.

However, a bare Failure, or Non-attainment of Truth, does not conſtitute *Error*; that being common both to *Ignorance* and *Doubting*. See IGNORANCE and DOUBTING.

*Error* only ſtands diſtinguiſhed from *Falſehood*, in that the former is in the Mind, and the latter in the Propoſition. See FALSEHOOD.

The great Origin of all *Error*, i. e. of believing that to be true, which is falſe, is a *Liberty*, or Power in the human Mind, of giving its Aſſent to Idea's or Propoſitions, that are obſcure, as if they were perſpicuous and plain. See LIBERTY.

Particular Cauſes of Error are, 1°. An *Inadvertency*, or Negligence, in paſſing Judgment, without uſing or attending to the Means proper to aſſiſt the Judgment. As if a Perſon ſhould attempt to judge of the Height of the Pole, without proper Inſtruments, or Obſervations: Or determine about Nations without knowing their Hiſtory.

2°. Ignorance, in not having informed the Underſtanding by Study and Application; or furniſh'd it with the Idea's that have an immediate Relation to the Matter in hand.

3°. Impatience of the Labour and Fatigue, of going thro' a long Chain of Reaſons and Arguments; or of waiting for a neceſſary Number of Experiments: with a Fondneſs for the Opinion of being *knowing*; and a Prejudice for, or againſt, ſome particular Perſon, Sect, &c.

4°. The fallacious Rules of Probability, and Opinion. See PROBABILITY and OPINION.

5°. Intereſt, which makes us incline to believe thoſe Things true, from which we are like to derive Advantage.

6. Authority: Education: and vulgarly receiv'd Opinions, imbibed ere we were qualified for judging. See FAITH.

Againſt all which, there is this one general Rule or Caution laid down, by Fa. *Mallebranch* and others, *viz.* Never to give our full Aſſent to any Propoſition, unleſs the Evidence for it be ſo ſtrong, as that we can no longer with-hold it, without incurring the ſecret Reproaches of our own Reaſon.

Mr. *Lock* reduces the Cauſes of all our *Errors* to theſe four, *viz.* 1°. Want of Proofs. 2°. Want of Ability to uſe 'em. 3°. Want of Will to uſe 'em. And, 4°. Wrong Meaſures of Probability.

F. *Mallebranch* conſiders five Occaſional Cauſes of *Error*, or rather five different Kinds of *Errors*, accommodated to the different Manners we have of perceiving Things. 1°. *Errors* of *Senſe*. 2°. Of the *Imagination*. 3°. Of the *Underſtanding*. 4°. Of our *Inclinations*. And 5°. Of the *Paſſions*. See SENSE, IMAGINATION, UNDERSTANDING, INCLINATION, and PASSION.

ERROUR, in Law, is generally underſtood of a Fault, or Overſight, either in Pleading, or in Proceſs: Upon either of which is brought a Writ, by way of Remedy; call'd a *Writ of Error*; and in Latin, *de Errore Corrigendo*. See WRIT.

*Fitzherbert* defines a Writ of *Error* to be, that which lies to redreſs falſe Judgment given in any Court of Record,

cord, having Power by Charter, or Preſcription to hold Plea of Debt or Treſpaſs of above xx *Sh.*

There is alſo a *Writ of Error* for reverſing a Fine, *&c.*

ERUCTATION, *Belching*, the ſame as Ructation. See RUCTATION.

ERUDITION, Learning, or Knowledge; and chiefly that of Antiquity. See LEARNING.

The *Scaligers* were Men of deep *Erudition:* The Writings of Mon. *Launoy*, a Prieſt of the Oratory, are full of *Erudition.*

Mr. *Lock* ſays, 'tis of more Uſe to fill the Head with Reflections, than with Remarks of *Erudition.* If the Mind be not juſt and right, Ignorance is better than *Erudition*, which only produces Confuſion and Obſcurity: St. *Evremond.* M. *Balzac* calls a Heap of *Erudition* ill-choſen, the Luggage of Antiquity.

ERUGINOUS, or ÆRUGINOUS, ſome Thing partaking of, or like to the Ruſt of Braſs, or Copper. See RUST and ÆRUGO.

ERUPTION, a burſting forth, or Excluſion of ſomething before cover'd, or conceal'd.

The *Eruption of Puſtles* in the Small-Pox, ordinarily begins on the 4*th* Day. See *Small* Pox.

In the Inoculated Kind, the *Eruption* does not begin till the 9*th* Day. See INOCULATION.

The *Eruption* of Vulcano's, or Burning Mountains, is frequently the Effect, and Iſſue, of Earthquakes. See VULCANO and EARTHQUAKE.

The *Eruptions* of Mount *Etna*, and *Veſuvius*, are obſerved to be ſomewhat periodical: They are of two Kinds; the one leſs violent, happening once in 2 or 3 Months, and laſting uſually three or four Days, without much Damage to the adjacent Country.

The other more furious, and of longer Continuance, happening to Mount *Veſuvius* about once in 80 Years. The laſt, in 1632, was ſo violent, that, by the beſt of his [*S. Peccacio*'s] Obſervations, it caſt the Rocks three Miles into the Air. Mr. *Hartop* in Philoſoph. Tranſact. N°. 202.

M. *Oldenbourg* gives us an Hiſtorical Account of the ſeveral *Eruptions* of Mount *Etna*, recorded in Authors. The firſt whereof we have any credible Account, was at the Time of the Expedition of *Æneas*, deſcribed by *Virgil*, *Æneid. Lib.* III. The 2*d*, deſcribed by *Thucydides*, was 476 Years before *Chriſt:* In the Time of *Roman* Conſuls there were 4: Another in *Cæſar*'s Time, ſo fierce, that *Diodorus* aſſures us, the Ships near the Iſland of *Lipara* were burnt with the extreme Heat of the Water: Another under *Caligula:* Another at the Time of the Martyrdom of St. *Agatha*, ſaid to have been ſtopp'd at her Interceſſion: Another in the Year 812: Several between the Years 1160 and 1169: Others in 1284, 1329, 1408, 1444, 1536, 1633, 1650. *Phil. Tranſact.* N°. 48.

Another extraordinary *Eruption* happen'd in 1669, particularly deſcribed in the ſame Tranſactions, N°. 51. It was preceeded for the Space of 18 Days, with a dark thick Sky, Thunder, Lightning, and frequent Concuſſions of the Earth: The Place of the *Eruption* was 20 Miles from the old Mouth.

The Matter here yielded, was a Stream, or River of Metals and Minerals, render'd liquid by the Fierceneſs of the Fire, and boiling up, and guſhing forth, as Water does at the Head of ſome great River; till, having run in a full Body for a Stone's Caſt, or more, the Extremity thereof began to cruſt and curdle, and turn'd, when cold, into hard, porous Stones, call'd *Sciarri*, as reſembling huge Cakes of Sea-Coal, full of a fierce Fire. Theſe came rolling and tumbling over one another, and where they met a Bank, Wall, Building, *&c.* would fill up, and ſwell over; by their Weight bearing down any common Building, and burning up what was combuſtible. The Progreſs of this Inundation was at the Rate of a Furlong a Day; which it continued for 15 or 20 Days; running, at firſt, into the Sea, but afterwards into the City of *Catania*; in its Courſe, it overwhelm'd 14 Towns and Villages, containing three or four thouſand Inhabitants. The Noiſe of the *Eruption* at the Mouth was heard 60 Miles.

Dr. St. *Clair*, in the *Philoſop. Tranſact.* gives an Account of a conſtant *Eruption* of Fire, on one Side of one of the *Appenines*, between *Bologna* and *Florence:* A Spot of Ground 3 or 4 Miles in Diameter, he obſerves, inceſſantly ſends up a Flame, riſing very high, without Noiſe, Smoak, or Smell; tho' it gives a very great Heat. In great Rains it ſometimes intermits, but re-kindles with greater Vigour and Heat. Within 3 or 4 Yards of it, he adds, there grows Corn. The Flame he conjectures to ariſe from a Vein of Bitumen, or Naphtha. There are three other ſuch Fires on the ſame Hills.

ERYSIPELAS, in Medicine, call'd alſo *Sacer Ignis*, and St. *Anthony*'s *Fire*, a Diſeaſe of the Skin.

Its Seat is any Part of the Body, but principally the Face: It ſhews it ſelf in a ruddy Inflammation of the Part, with a little Swelling of the ſame; an intenſe Pain, and a Croud of little Puſtles, which, as the Inflammation increaſes, grow into *Veſiculæ*. See SKIN.

The Diſeaſe ſpreads it ſelf a-pace; ſhifting from one Place to another, with a Fever attending it. It attacks the Patient all at once, and chiefly when out in the Air; whence the Country People call it *blaſting*, *Sideratio.*

Dr. *Quincy* accounts for the *Eryſipelas*, from a too ſizy Blood, which obſtructing the Capillaries, occaſions Inflammations: Others, from a too ſharp and bilious Blood, which, on Account of its great Subtilty, occaſions no ſenſible Tumor; but ſpreads, or diffuſes it ſelf in Length and Breadth. Its Colour, tho' red, generally inclines towards a yellow, on Account of the Mixture of Bile; and always the more of the Bile, the more dangerous the Diſeaſe.

There is another Species of *Eryſipelas*, tho' leſs uſual than the former; moſt commonly ariſing from a too copious drinking of ſpirituous Liquors. It begins with a Fever, after which there is an univerſal Eruption of Puſtles, almoſt over the whole Body, much like thoſe after the ſtinging of Nettles, and ſometimes riſing into *Veſiculæ*. At going off, they leave an intolerable Itching, and as often as ſcratch'd return again.

*Etmuller* gives it as the diſtinguiſhing Character of an *Eryſipelas*, that when preſs'd very lightly by the Finger, there follows a white Spot, which preſently after becomes red again; which does not happen in an ordinary Inflammation, unleſs when violently preſs'd. Scorbutic People are moſt ſubject to this Diſeaſe.

'Tis diſputed, whether Purging be good in the *Eryſipelas: Sydenham* recommends it the next Day after Bleeding. *Etmuller* cautions us againſt 'em both; and recommends Diaphoreticks. Dr. *Friend* obſerves, that in the laſt Stage of an *Eryſipelas* of the Head, attended with a Coma, Delirium, *&c.* unleſs Catharticks will do good, the Caſe is deſperate. All unctuous, aſtringent, and cold Applications, externally, are dangerous, and ſometimes make the *Eryſipelas* degenerate into a Gangrene.

The Word is form'd of the *Greek*, ἐρυθειν, *trahere*, to draw; and πελας, *prope*, by reaſon it withdraws it ſelf towards the Skin: Whence *Galen* calls it the *Paſſio Cutis.*

The *Eryſipelas* is either ſimple, or attended with an Ulcer.

ERYTHROIDES, in Anatomy, the firſt of the proper Membranes that incloſe the Teſticles. See TESTICLE.

It is interſperſed with fleſhy Fibres, derived to it from the Cremaſter Muſcle, which make it appear reddiſh.

And whence its Name from the *Greek*, ἐρυθρὸς, *red*, and εἶδος, *form.*

ESCALADE, or SCALADE, a furious Attack upon a Wall, or a Rampart; carried on with Ladders, to mount by; without proceeding in Form, breaking Ground, or carrying on Works to ſecure the Men. See SCALADE.

ESCALOP-*Shells*, a frequent bearing in Coat Armour; proper, ſay our Heralds, for ſuch as have diſtinguiſh'd themſelves by Naval Exploits. Azure, three *Eſcalop*-Shells Or, by the Name of *Mallet.*

ESCAMBIO, was anciently a Licenſe granted any one for the making over a Bill of Exchange to another beyond Sea. See EXCHANGE.

For, by Stat. 5 *Rich.* II. no Perſon might exchange, or return Money beyond Sea, without the King's Licenſe.

ESCAPE, in Law, is either *voluntary*, or *negligent.*

Voluntary, is when one arreſts another for Felony, or other Crime, and afterwards lets him go; in which *Eſcape*, the Party that permits it, is by Law guilty of the Fault, committed by the Perſon who *Eſcapes*; be it Felony, Treaſon, or Treſpaſs.

Negligent *Eſcape* is, when one is arreſted, and afterwards *Eſcapes* againſt his Will that arreſted him; and is not purſued by freſh Suit, and taken again, before the Party purſued hath loſt Sight of him.

ESCARTELE', in Heraldry, *Quarter'd*, or *Quarterly.* See QUARTER'D, *&c.*

ESCHAR, in Chirurgery, a hard Cruſt, or Scab, form'd on the Fleſh, by means of a hot Iron, or a Cauſtic Medicine, or ſome ſharp, corroſive Humour within.

The Cauſtic Stone, or *Lapis Infernalis*, produces a round *Eſchar* in the Place where it has burnt. See ESCHAROTIC, CAUSTIC, and CAUTERY.

The Word is derived from the *Greek*, ἐσχάρα, *Cruſt*, or *Scab.* Some Authors derive it from ἐς and καίω, *I burn*; but this comes with ſome Difficulty, by reaſon καίω is wrote with a κ; and ἐσχάρα with a χ.

ESCHAROTICKS, Medicines, which being applied externally, produce *Eſchars*, or Scabs, by burning the Fleſh. See ESCHAR.

Such are the *Lapis Infernalis*, red precipitate, *&c.* theſe are alſo call'd *Cauſticks.* See CAUSTIC.

The Word is derived from the *Greek* ἐσχάρα. See ESCHAR.

ESCHEAT,

ESCHEAT, in Law, ſignifies any Lands, or other Profits, that fall to a Landlord within his Mannor, by way of Forfeiture, or the Death of his Tenant dying without Heir general or ſpecial, or leaving his Heir within Age, and unmarried.

The Civilians call ſuch Forfeitures *Bona Caduca*; and in the ſame Senſe as we ſay the *Fee* is *Eſcheated*, they ſay *feudum aperitur*.

The Word *Eſcheata* ſometimes alſo ſignifies a lawful Inheritance deſcending on the Heir. But then, it is uſually diſtinguiſhed by the Addition of *Recta*, as *Recta Eſcheata*.

ESCHEAT, is alſo uſed for the Place or Circuit within which the King, or other Lord, hath *Eſcheats* of his Tenants.

And ſometimes for a Writ, lying where the Tenant having Eſtate of Fee Simple, in any Lands or Tenements holden of a ſuperiour Lord, dies ſeiz'd, without Heir general, or ſpecial: In which Caſe, the Lord brings this Writ againſt him that poſſeſſes the Lands, after the Death of his Tenant; and thereby recovers the ſame in lieu of his Services.

ESCHEATOR, an Officer, who anciently took Care of the King's *Eſcheats* in the County, and certified them into the Exchequer, or Chancery. See ESCHEAT.

He was appointed by the Lord Treaſurer; held his Office only for one Year; nor cou'd any Perſon be *Eſcheator* above once in three Years. But this Office having its chief Dependance on the Court of Wards, is now out of Date.

ESCHEQUER. See EXCHEQUER.

ESCHEVIN, or ECHEVIN, in the *French* and *Dutch* Polity; a Magiſtrate, elected by the Inhabitants of a City, to take Care of their common Concerns, the good Order, Conveniency, and Decoration of the City.

At *Paris*, there is a *Prevot*, and four *Eſchevins*; in moſt other Cities, a *Maire*, or Mayor, and *Eſchevins*.

In *Languedoc*, *Province*, and *Dauphine*, they are call'd *Conſuls:* At *Toulouſe*, *Capitouls:* And *Jurats* at *Bourdeaux*.

Anciently, the *Eſchevins* were Aſſeſſors, and Counſellors, of the Comites, or Judges of Cities: On which Account they were call'd in ſome Places, *Pairs*, *Pares:* They even took Cogniſance of petty Cauſes themſelves.

*Du Cange* obſerves, that the Judges, and their Aſſeſſors, who were choſe by the Inhabitants, were call'd *Scabini*, *Echevins*, and their College, *Scabinagium*, or *Eſchevinage*. He adds, that ſome Authors call 'em *Paciurii*, by reaſon their Office and Juriſdiction extended to the ſecuring Peace in their City and *Banlieue*, call'd *Pax Villæ*.

The *Eſchevins* are alſo frequently what the *Ediles* were at *Rome*, the *Sheriffs* at *London*, and the Magiſtrate call'd *Poteſtas*, in the petty Cities of *Italy*. The *Greeks* call him ἀρχεγνώμων, &c.

In *Holland*, the *Eſchevins* judges of all Civil Affairs at firſt Hand. They alſo take Cognizance of criminal Affairs, and if the Criminal confeſs himſelf guilty, they can ſee their Sentence executed without Appeal. They can even give the Torture.

The Number is not the ſame in all Cities: At *Amſterdam* there are Nine, at *Rotterdam* Seven, &c.

ESCHRAKITES, or ESRAKITES, a Sect of Philoſophers among the *Mahometans*, who adhere to the Doctrines and Opinions of *Plato*.

The *Eſchrakites*, or *Mahometan Platoniſts*, place their higheſt Good and Happineſs in the Contemplation of the Divine Majeſty; deſpiſing the groſs Imaginations of the *Alcoran* touching Paradiſe.

They are very careful in avoiding Vice, preſerve an equal and eaſy Temper, love Muſic, and divert themſelves with compoſing little Poems, or ſpiritual Songs.

The *Scheies*, or Prieſts, and the chief among the Preachers of the *Imperial* Moſques, are *Eſchrakites*.

The Word is derived from the *Arabic* שרק *Scharaka*, which in the Fourth Conjugation אשרק *Aſchraka*, ſignifies *to ſhine, glitter like the Sun:* So that *Eſchrakite* ſeems to import *Illumined*.

ESCHYNOMENOUS *Plants*, are the ſenſitive Plants; that is, ſuch as upon approaching 'em ſhrink back, and contract their Leaves. See SENSITIVE *Plant*.

ESCLAIRCISSEMENT, a *French* Term, which we ſee retain'd in ſome late *Engliſh* Writers.

The Word properly ſignifies the Act, or Effect of *clearing a Thing*, or rendering it more *bright and tranſparent*; being form'd from the Verb *Eſclaircir*, to clear, &c.

But it is chiefly uſed in a figurative Senſe, for an Explication of an Obſcurity, or Difficulty. *Eſclairciſſement* of the Dialogues of the Gods: The *Eſclairciſſement* of difficult Paſſages in the Bible, is only had from ſimilar Paſſages, or Paſſages of the like Kind occurring in other Places.

ESCLATTE', in Heraldry, is applied to a Thing violently broke.

Thus a Bend, or other Partition, *Eſclatte*, is repreſented torn, or broke off like a Piece of a ruin'd Wall; or rather, a Shield broke and ſhatter'd with the Stroke of a Battle Ax, &c.

ESCORT, a *French* Term, ſometimes uſed in *Engliſh* Authors.

An *Eſcort* is a *Convoy*, or Company of armed Men, attending ſome Perſon or Thing, in a Journey or Voyage, to defend or ſecure it from Inſults. See CONVOY.

A Supply was ſent to the Camp before *Arras*, with an *Eſcort* of 1200 Men. In Times of War, Merchant Veſſels ſeldom ſtir much abroad without an *Eſcort* of Men of War. People that travel in *Turky*, generally take Janiſſaries to *Eſcort* them.

After the Victory, the General ſent the Priſoners under a ſtrong *Eſcort* into the neighbouring Towns. See CONVOY.

Some derive the Word from the Latin *Cohors*.

ESCOUADE, is uſually the third Part of a Company of Foot. See COMPANY.

It is divided ſo for mounting of Guards, and for the more convenient relieving one another: It is equivalent to a *Brigade* of a Troop of Horſe. See BRIGADE.

ESCRITOIRE. See SCRITOIRE.

ESCROL, or SCROLL, in Heraldry, a long Slip, as it were, of Parchment, or Paper, whereon a Motto is placed. See MOTTO.

*Leigh* obſerves, that no Perſon, under the Degree of a Knight, might, long after King *Henry* V, place his Creſt on a Wreath, as is now uſually done, but only on an *Eſcrol*.

ESCU, or ECU, the *French* Crown, of 60 *Sols*, or 3 *Livres*. See CROWN, LIVRE, &c. See alſo COIN.

The *Eſcu* was thus called by Reaſon the Eſcutcheon, or Arms of *France*, which they call *Eſcu*, was ſtruck thereon. See SHIELD, HELMET, ESCUTCHEON.

ESCUAGE, or SCUTAGE, an antient Kind of Knight's Service, call'd alſo *Service of the Shield*; the Tenant holding by which, was obliged to follow his Lord to the *Scottiſh*, or *Welſh* Wars, at his own Expence. See CAPITE.

He who held a whole Knight's Fee, was bound to ſerve with Horſe and Arms for 40 Days: And he who held half a Knight's Fee, 20 Days. See SERVICE.

The ſame Term *Eſcuage*, is alſo uſed for a Sum of Mony, paid by ſuch as held by this Tenure, when they neither attended the Wars, nor provided another in their Room.

ESCUAGE, was alſo a reaſonable Aid, demanded by the Lord of his Tenants, who held of him in Knight's Service.

*Conceſſerunt Domino Regi ad Maritandam filiam ſuam de omnibus qui tenent de Domino Rege in Capite de ſinglis* Scutis 20 *ſolidos ſolvendos*, Matth. Paris, *Anno* 1242.

ESCULENTS, are Plants for Food, as Artichokes, Carrots, Turnips, Parſnips, Cabbages, Colliflowers, &c. See PLANT, SALADE, &c.

ESCURIAL, by the *Spaniards* wrote ESCORIAL, a Term that occurs pretty frequently in our Gazettes, and Journals of News.

*Eſcurial*, is originally a little Village in *Spain*, ſituate in the Kingdom of *Toledo*, ſeven Leagues to the Weſt of *Madrid*, and nine to the Eaſt of *Avila*; on the Side of a Chain of Mountains, call'd by ſome the *Carpentain*, or *Carpentanian* Mountains, and by others the *Pyreneans*; as being a Branch of the *Pyranean* Ridge.

Here, King *Philip* II. built a ſtately Monaſtery of the Order of St. *Jerom*; held by the *Spaniards* for one of the Wonders of the World; and call'd *the Eſcurial*.

Fa. *Franciſco de los Padros*, in a Deſcription thereof, entituled, *Deſcription breve del Monaſteria de S.* Lorenzo *el real del* Eſcorial, &c. aſſures us it was built by that Prince in Memory of the Battle of S. *Quintin*, gain'd on the Day of S. *Lawrence*, *Lorenzo*, a famous *Spaniſh* Saint, and at his Interceſſion.

The King and Queen have their Appartments therein; the reſt being poſſeſs'd by the Monks. Whence, many of the great Tranſactions of that Court, are dated from the *Eſcurial*.

It has a very fine Church, to which *Philip* IV. built a beautiful Chappel, call'd the *Pantheon*, wherein the Kings and Queens of *Spain*, who leave any Poſterity, are Enterr'd. The reſt being laid in another Vault of the ſame Church, together with the Infanta's and other Princes. See PANTHEON.

ESCUTCHEON, or SCUTCHEON, in Heraldry, the Shield, Coat, or Field, whereon the Bearing, or Arms of any Perſon is repreſented. See SHIELD, COAT *of Arms*, &c.

The Word *Eſcutcheon* is form'd of the French *Eſcuſſon*, and that from the Latin *Scutum*, Shield; which was what Arms were originally bore on, e're ever they came

on

on Banners; and ſtill, wherever they are placed, 'tis on ſomething repreſenting the Form of a Shield.

The Latin *Scutum*, no doubt, came originally from the Greek *Scutos*, Leather, wherewith the Shields were uſually cover'd. See SHIELD.

On theſe Shields was always ſome particular Mark, Badge or Symbol painted: Which was the Original of Armoury. See ARMS.

The *Eſcutcheon* is of a Square Figure, excepting for the Bottom Part, which is uſually a little rounded, ending with a Point in the middle.

Till within a few Hundred Years, the *Eſcutcheons* of the *French* and *Engliſh* were triangular: Thoſe of the *Spaniards*, are ſtill quite round at Bottom without any Point: Thoſe of the *Italians*, are Oval: And thoſe of the *Germans*, in Form of Cartouches.

The antient *Eſcutcheons* were generally couch'd, or inclined; and they only began to place them upright, when Crowns, *&c.* were put over them by Way of Creſt.

In *France*, Eſcuſſon, *Eſcutcheon*, was formerly reſtrain'd to a Shield, or Coat, pointed at Bottom; by which it was diſtinguiſh'd from the *Eſcu*, which was quite Square, and was only allowed to be bore by the Counts and Viſcounts. Thoſe of inferior Quality were confined to the *Eſcuſſon*, or pointed *Eſcu*.

The ſeveral Parts, and Points of the *Eſcutcheon*, have their ſeveral Names: The Point D, for Inſtance, is the *Dexter chief Point*; C the *middle Chief*; and S the *ſiniſter Chief Point*: H is the *Honour Point*; F the *Feſſe Point*; N the *Nombril Point*; *d* the *Dexter* Baſe, B the *Middle*, and *s* the *Siniſter* Baſe Point.

The *Eſcutcheon* is diverſely denominated, according to its Diviſions. It is call'd *dexter'd*, when the perpendicular Line that divides it, is to the right of a third Part of the *Eſcutcheon*: *Siniſter'd*, when on the left: *Tierced in Pal*, when it is double, and divides the whole *Eſcutcheon* into three equal Parts: *Paled*, when increas'd to the Number of ſix, eight, or ten. A Horizontal Line makes the *Chief*, when at one third Part from the Top: The *Plein*, when at a third from the Bottom: And when double, in the middle, at an equal Diſtance from both Extremes, it makes the *Feſs*, and the *Tierced* in Feſs: When 'tis multiplied, it denominates it *feſſed*: When there are 8, or 10 equal Spaces, *Burrelle:* A Diagonal from the Dexter of the Chief to the Siniſter of the Point makes it *tranche*; the contrary, *double*. If it be doubled at equal Diſtances, the firſt makes *bande*, and the *tierce* in Bend; and the other *barre*, or *tierce* in Bar: Increaſing the Number of the firſt makes *bande* and *cottice*; and increaſing that of the ſecond, *barre* and *traverſe*.

ESCUTCHEON *of Pretence*, is an *Inescutcheon*, or little *Eſcutcheon*, which a Man, who hath married an Heireſs, and hath Iſſue by her, may bear over his own Coat of Arms; and in it the Arms of his Wife: and the ſurviving Iſſue will bear both Coats Quarterly. See PRETENSE.

ESCUTCHEON, and ESCUTCHEON-GRAFTING, in Gardening. See ENGRAFTING.

ESPALIER, in the *French* Gardening, a *Wall-Tree*; or a Fruit-Tree which is not left to grow at Liberty in full Air, but has its Branches nail'd or faſten'd to a Wall, near which it is planted; and thus growing, it is made to conform it ſelf to the flat, tho' unnatural, Figure thereof. See WALL *Tree*.

ESPALIERS, in our Gardening, are Rows of Trees, planted in a curious Order round the Outſide of a Garden, or Plantation, for the general Security thereof, from the Violence and Injury of the Winds; or elſe only round ſome Part of a Garden, for the particular Security of a Plantation of Orange Trees, Lemon Trees, Myrtles, and other tender Plants; or, laſtly, for the bounding of Borders, Walks, Avenues, *&c.* See GARDEN, *&c.*

*Eſpaliers* are now come into mighty Uſe, with Reſpect to the firſt of theſe Intentions: In Effect, 'tis found by Experience, that the beſt Brick, or Stone Walls, are not of themſelves ſufficient Security to Fruit-Trees, from the Ravages of blighting Winds. See WALL.

The Reaſon may be, that being built cloſe and compact, they repel the Winds, and by that Means damage the tender Plants, that lie within the Reach of the Repulſion. But theſe *Eſpaliers* ſerve to deaden the Violence of the Winds, ſo as the tender Greens, or Plants, encompaſſed by them, reſt ſerene and quiet.

Thus, if the *Eſpaliers*, for Inſtance, be of Spruce Holly or Yew, they give Way to the Force of tempeſtuous Winds, beating againſt them, without occaſioning any Reſilition thereof.

Meſſ. *London*, and *Wiſe*, direct them to be planted at ſome Diſtance, without the outmoſt Bounds, or Walls of Gardens, *&c.* Two, or three Rows of Trees, they think ſufficient, from 18 or 20 to 25 Foot a-part. And as to the Method, or Order, of diſpoſing the Trees, the moſt commodious is where the middle Row makes every where Equilateral Triangles with the extreme Rows, in the following Manner.

* * * * * * *
* * * * * * * *
* * * * * * * *

The Trees recommended for making, or planting, theſe *Eſpalier* Fences, are the Elm, Lime, Beech, *Scotch* Fir, Oak, Pine and Sycamores; bnt particularly the two firſt. For the Method of Planting 'em. See PLANTING, TRANSPLANTING, *&c.*

As for *Eſpalier Hedges*, or Hedge Rows, for Defence of tender Greens, and Plants from deſtructive Winds in the Summer Seaſon: If there be Occaſion to uſe them the firſt or ſecond Year after they are planted; a ſubſtantial Frame of Wood muſt be made, ſeven or eight Foot high, with Poſts and Rails. And to this *Eſpalier* Frame, muſt the ſide Boughs of the young Trees be tied, to cauſe the *Eſpalier* to thicken the ſooner.

As to the Form of ſuch an *Eſpalier*, it muſt be oblong, running North and South.

Theſe *Eſpaliers* may be planted of Apples, Pears, Holly, Laurel, Lime, Maple, white-Thorn, Yew, *&c.*

To prevent the Diſorders that might befal *Eſpalier* Fruit Trees when in Bloſſom, Mr. *Bradley* mentions a nurſery Man at *Brentford*, who having moſt Sorts of Fruit in *Eſpaliers*, has portable Hedges made of Reeds in Frames, which he ſets both at the Back, and Front of his *Eſpaliers*, as he ſees Occaſion.

ESPAULE, ESPAULEMENT, *&c.* in Fortification. See EPAULE, EPAULEMENT, *&c.*

ESPLANADE, in Fortification, call'd alſo *Glacis*, a Part ſerving the Counterſcarp, or cover'd Way, for a Parapet; being a Declivity, or Slope of Earth, commencing from the Top of the Counterſcarp, and loſing it ſelf inſenſibly in the Level of the Campaign. See GLACIS.

ESPLANADE, alſo ſignifies the Ground which has been levell'd from the *Glacis* of the Counterſcarp, to the firſt Houſes; or the vacant Space between the Works and the Houſes of the Town.

The Term is alſo applied in the general for any Piece of Ground render'd flat or level, which before had ſome Eminence that incommoded the Place. See TALUT.

ESPOUSALS. See MARRIAGE.

ESQUADRILLE, } See { QUADRIL.
ESQUADRON, } See { SQUADRON.

ESQUINANCY, in Medicine, a Diſeaſe call'd alſo *Angina*, *Squinancy*, and popularly *Quinzy*. See ANGINA, SQUINANCY, *&c.*

ESQUIRE, a Title of Nobility, next below that of *Knight*, and above that of a ſimple *Gentleman*. See NOBILITY, KNIGHT, and GENTLEMAN.

The Origin, both of the Name and the Thing, *Eſquire*, is very dark and intricate: The *Engliſh* Denomination is confeſſedly borrowed from the French *Eſcuyer*; and that from the Latin *Scutum*, Shield, as ſome will have it; or as others, from *Scutarius*, or *Scutiger*, Shield-Bearer, or from *Scuria*, Stable, or *Equiſo*, Groom.

So many different Ideas of the Formation of the Word, have given riſe to as many about their Office; unleſs, perhaps, the latter have given Occaſion to the former.

*Paſquier* in his *Recherches*, L. II. *C.* 15. maintains the Title of *Eſquire*, Eſcuyer, Scutarius, to be very antient. From the Time of the Declenſion of the *Roman* Empire, he obſerves, there were two extraordinary Kinds of Soldiery, in the *Roman* Army; the one call'd *Gentiles*, and the other *Scutarii*.

*Ammian. Marcellin* L. XIV. *C.* 7. and *L.* XVI. C. 4. ſpeaks of theſe *Scutarii* as Men of redoubted Proweſs; and even deem'd invincible. 'Tis added, that *Julian* the Apoſtate ſet a mighty Value on thoſe Troops, when he was in the *Gauls:* And hence, probably, it was, that the *Gauls*, or perhaps, only the *Franks*, finding the braveſt among the *Roman* Forces were call'd *Gentiles*, and *Scutarii*, gave the like Names to the boldeſt and braveſt among themſelves; ſuch, according to that curious Antiquary, is the Origin of *Eſquires*.

ESQUIRE, however, afterwards came to be uſed in a ſomewhat different Senſe; *viz.* for a *Gentleman* who attended a Knight in the Wars, and on other military Occaſions; bearing the Shield, *Scutum*, before him: Whence *Scutarius*, *Scutiger*, or *Scutifer*; as alſo his Launce, and other Weapons: Whence his other *Latin* Appellation, uſual among us, *Armiger*, q. d. Armour-Bearer.

And hence it is, that in all our antient Romances, the Hero is conſtantly attended by a gentle, and truſty *Squire*.

After all, the moſt probable Derivation of *Eſcuyer*, is not from *Eſcu*, *Scutum*, as is the common Opinion, but from *Equus*; and theſe *Eſquires* were originally what the *Latins* call *Equiſones*, and had the Care and Intendance of the Equeries, or Stables only. See EQUERY.

Be this as it will, the Title *Eſquire*, Armiger, as now eſtabliſh'd among us, is the next below that of Knight, *Eques*. They who bear this Title, are all younger Sons of Noblemen, and the eldeſt Sons of ſuch younger Sons; the eldeſt Sons of Knights, and their eldeſt Sons ſucceſſively; the four *Eſquires* of the King's Body; and *Eſquires* created by the King, by putting about their Necks a Collar of S S's, and beſtowing on them a Pair of Silver Spurs. Laſtly, divers others in the ſuperior public Offices, are reputed *Eſquires*, or equal to *Eſquires*; as Sheriffs of Counties, Serjeants at Law, Juſtices of Peace, Mayors of Towns, Councellors at Law, Batchellors of Divinity, Law, Phyſic, *&c.* tho' none of them are really ſo: Laſtly, the Chiefs of ſome antient Families are likewiſe *Eſquires* by Preſcription.

ESQUISSE, in the *French* Painting, a Term ſignifying the firſt ſlight ſketch, or draught of a Picture; the firſt Thought of a Deſign drawn haſtily with a Crayon, or in Colours on Paper, Canvas, or the like; in Order to be finiſh'd, and painted or engraven afterwards. See DESIGN.

He had not the Trouble of making a finiſh'd, and correct Deſign; but went to work upon the *Eſquiſſe*.

The Word is form'd of the Italian *Schizzo*, a Splaſh; by Reaſon an *Eſquiſſe* of a Painting only repreſents, as it were, Splaſhes, or Dabs of Colours.

ESSART, or ASSART. See ASSART.

To *Eſſart*, is to grub up, or extirpate Buſhes, Trees, old Roots, Stumps, or the like; in Order to fit the Ground for Tillage.

*Du Cange* derives the Word from ſome of the barbarous *Latin* Words, *Exartus*, *Exartum*, *Exartes*, *Eſſartum*, *Aſſartum*, *Sartum*, and *Sartus*; which all ſignifie a Foreſt cut down or dug up: Tho' *Spelman* derives it from the Latin *Exertum*, torn up, or unrooted. Others, from *ſarrire*, to weed. And others, laſtly, from *exaro*, to plow, whence *exarare* and, by Contraction, *Exartum*.

In our antient Law Books, *Exartum facere in Sylva*, is to *Eſſart* a Place in a Foreſt.

ESSAY, a Trial, or Experiment, to prove whether a Thing be of the requiſite Quality, or Goodneſs. See SPECIMEN.

The Word is alſo uſed for an Attempt, or Tentative, to learn whether or no a Thing will ſucceed. *Eſſays* of Machines ſhould be made in large; 'tis not enough they ſucceed in little. See MACHINE.

In Monaſteries, *Eſſay* is particularly uſed for a Trial which a Perſon makes of the Monaſtic Life, in a ſecular Habit. This *Eſſay* is of one, two, and in ſome Monaſteries, of three Months. The *Eſſay* is not reckon'd in the Noviciate. See PROBATION.

Some Authors derive the Word from the Latin *Examen*.

ESSAY, or ASSAY, or ſimply SAY, in Coinage, *&c.* is a Proof, or Trial, made by the Cuppel, or Teſt, of the Fineneſs, or Purity of the Gold or Silver to be uſed in the Coining of Mony, *&c.* or that have been uſed therein. See COINING.

There are two Kinds of *Eſſaying*; the one before Metals are melted, in Order to bring them to their proper Fineneſs; the other after they are ſtruck, to ſee that the Species be Standard.

For the firſt *Eſſay*; the *Eſſayers* uſe to take fourteen or fifteen Grains of Gold, and half a Drachm for Silver; if it be for Mony: and eighteen Grains of the one, and a Drachm of the other, if for other Occaſions.

As to the ſecond *Eſſay*, 'tis made of one of the Pieces of Mony already coin'd, which they cut in four Parts.

*Method of* ESSAYING *Gold.*

The *Eſſayer* having weigh'd the Gold he intends to make the Trial in, very exactly, and noted down the Weight; adds twice as much fine Silver thereto; tho' this ſhould be in Proportion to the Fineneſs the Gold ſeems to be of; the baſeſt Gold requiring the leaſt Silver. The Gold and Silver thus weigh'd, and mix'd, are wrapp'd up in a Piece of Paper, to prevent their loſing any Thing of their Weight, which would diſturb the Accuracy of the *Eſſay*.

While the *Eſſayer* is weighing his Matters, a reverberatory Fire is lighted in a Furnace, furniſh'd with a Muffler, and a Cuppel, or Teſt, ſet therein to heat. This done, a little Bullet of Lead is put in the Cuppel, of a Weight proportionable to the Quantity and Quality of the Gold to be *Eſſay'd*. When the Lead is well melted, and appears very clear and bright; they put in the Gold and Silver, and let it fuſe and ſeeth till it appear of an Opal Colour, and have fix'd it ſelf, in a little Lump, to the Bottom of the Cuppel.

This done, the Cuppel is left to cool in the Furnace it ſelf; after which the Lump is ſeparated very exactly from the Place where it ſtuck to the Veſſel; and ſtretch'd, or hammer'd on the Anvil; heating it again and again, on the Coals, to promote the ſtretching.

When ſufficiently hammer'd, they roll it up in Form of a Cornet, or Coffin, and thus put it in a Glaſs Matraſs, capable of containing four Spoonfuls of Water; and having added to it a Quantity of *Aqua fortis*, well corrected, that is, mix'd with near one third of the Quantity of River Water, they boil it over a Wood Fire, till ſuch Time as the *Aqua fortis* yields no more red Fumes.

This firſt Water being pour'd off, and the Cornet left alone at the Bottom of the Matraſs, they fill the Matraſs again, but with pure *Aqua fortis*; which, after boiling, is pour'd off in its Turn, at ſuch Time as the Fumes are become white. This done, they fill up the Matraſs with River Water, to waſh the Cornet.

When waſh'd, they put it dry in a Crucible, with a Cover over it, and heat it till it become of a Cherry Colour.

This done, the *Eſſay* is finiſh'd; and there remains nothing but to weigh it againſt the ſame Weight of fine Gold, as was uſed at firſt, before the *Eſſay*. For by Comparing the firſt Weight of the Gold, e're it was put in the Fire, and the *Aqua fortis*, with what it retain'd after it had thus undergone the Teſt; they judge, from the greater, or leſs Loſs it has ſuſtain'd, of the Quantity of Alloy mix'd with it.

*Method of* ESSAYING *Silver.*

The Proceſs is much the ſame as in Gold; only leſs difficult, and ſhorter. The Silver is weigh'd, as before; and the ſame Furnace, and Muffler, the ſame Fire, the ſame Cuppel uſed. Add, that Lead is likewiſe put in the Cuppel, proportioned to the Quantity and Quality of the Silver to be *Eſſay'd*.

The Lead being well melted, and clear, the Silver is put in; and after it is brought to an Opal Colour, and fix'd in a Lump at the Bottom of the Cuppel, which happens in about half an Hour: They let it cool, and cleanſe it, and laſtly, weigh it again, as in Gold: And from its Diminution, eſtimate the Quantity of Alloy.

ESSAYING *of Lead.*

The *Eſſay* of Gold and Silver being perform'd by Means of Lead; 'tis of the utmoſt Importance, the Lead be free of any Mixture of either of the two Metals: Otherwiſe the *Eſſay* will be falſe; by reaſon the Gold and Silver mix'd with the Lead, will not evaporate like other Kinds of Alloy, but unite with the Metal under *Eſſay*.

To prevent this Diſorder, and aſſure the Operation, there is no way but to *Eſſay* the Lead it ſelf.

This *Eſſay* is performed in the ſame Furnace, and with the ſame Cuppels, as thoſe of Gold and Silver: But the Proceſs is incomparably more ſimple. All here required, when the Cuppel is heated, being, to put in the Piece of Lead to be *Eſſay'd*. If this Lead evaporate entirely, 'tis fit for the Purpoſe. On the contrary, if there remain any little Grain of Silver, *&c.* at the Bottom, it muſt be ſet aſide. See LEAD.

ESSAY, in Matters of Learning, is a peculiar Kind of Compoſition; whoſe Character is to be free, eaſy, and natural; not tied to ſtrict Order, or Method, nor work'd up and finiſh'd, like a formal Syſtem.

The Matter of an *Eſſay* is ſuppoſed to conſiſt principally of ſudden, occaſional Reflexions, which are to be wrote much at the Rate, and in the Manner a Man thinks; ſometimes leaving the Subject, and then returning again, as the Thoughts happen to ariſe in the Mind.

At leaſt, this has hitherto been the Practice; and *Montague*, who has got no ſmall Reputation by this Way of Writing, ſeldom keeps many Lines to the Subject he propoſes: Tho' it is our Opinion, that my Lord *Bacon* is a better Pattern in the *Eſſay* Kind.

Mr. *Lock*, however, and a few other Authors uſe *Eſſay* in a ſeverer Senſe: The *Eſſay of human Underſtanding*, every Body knows is a regular, artful, labour'd Work.

ESSAY-*Maſter*. See MINT.

ESSE, in the School Philoſophy, is uſed in the ſame Senſe with *Eſſence*; principally for that which is actual, or actually exiſting. See ESSENCE.

From *Eſſe* ariſes *Eſſatum*, a barbarous Term now almoſt obſolete, ſignifying that which is endued with *Eſſence*, or Nature; or effected with the Virtue or Efficacy of another. Some diſtinguiſh *Eſſe* into *real* and *intentional*; and again into *Eſſatum* and *Volitum*. See ESSENCE.

The Word is pure *Latin*, being the Infinitive of the Verb *Sum*, I am; whence *Eſſe*, to be.

ESSENCE,

ESSENCE, that which conſtitutes, or determines the Nature of a Thing; or which is abſolutely neceſſary for its being what it is. See NATURE.

In Philoſophy, the *Eſſence* of a Thing is defined to be that whereby a Thing is diſtinguiſhed from every other Thing.

The *Carteſians* hold the *Eſſence of Matter* to conſiſt in Extenſion; and on that Principle, deny that there is any ſuch Thing as Mere Space, or Vacuity: But the *Hypotheſis* is falſe, as is ſhewn under the Articles MATTER, SPACE, VACUITY, PLENUM, *&c.*

*Gaſſendus*, and moſt of the Corpuſcular Philoſophers, hold the *Eſſence* of Matter to conſiſt in Solidity, or Impenetrability, or Reſiſtance, or, more adequately, in a ſolid Impenetrability reſiſting the Touch; which, it muſt be allow'd, of all the Properties of Matter, ſeems to have the faireſt Title. See EXTENSION, BODY, SOLIDITY, IMPENETRABILITY, *&c.*

The School Philoſophers give us two Significations of the Word *Eſſence*; the firſt denotes the whole *Eſſential* Perfection of a Being, and conſequently its Entity, with all its intrinſic, or *Eſſential*, and neceſſary Attributes taken together. In which Senſe, *Eſſence* may be defined to be *all that whereby a Thing is, and is what it is.* In which Caſe, the *Eſſence* of a Thing, is to the Thing it ſelf, what Humanity, *e. gr.* is to Man.

The ſecond Signification of *Eſſence*, is that whereby it denotes the principal, and moſt intimate of all the Attributes of a Thing; or that which agrees to every ſuch Thing, and ſuch alone, and that always, and in ſuch manner, as that the Mind, with all its Attention, cannot perceive any Thing prior thereto. By which, *Eſſence* is diſtinguiſh'd from the *Eſſential Attributes*, i. e. from ſuch as flow from its *Eſſence*, or firſt Attribute. Thus, the *Eſſence* of the human Mind is commonly ſuppoſed to conſiſt in the Power of Thinking; by reaſon all its other Perfections ſeem to pre-ſuppoſe this; but this pre-ſuppoſes none. And thus, the Powers of underſtanding, doubting, aſſenting, willing, *&c.* do all flow from the Power of Thinking; and cannot exiſt without it, tho' this may without any of them.

It muſt be allow'd, however, that the *Eſſential* Properties of a Thing do ſo cloſely cohere, nay, and inhere in the *Eſſence* it ſelf, that 'tis ſcarce poſſible to diſtinguiſh the one from the other. Hence, what ſome urge, that ſetting aſide all the Attributes and Properties of a Thing, and what remains is its *Eſſence*; is a mere Chimera. For ſet aſide, *e. gr.* from the Mind, the Powers of underſtanding and willing, with the reſt of its Attributes: and what will there remain to call its *Eſſence*?

'Tis greatly diſputed in the Schools, whether the *Eſſences* of created Things be Eternal: Or, whether the *Eſſences*, as well as the Exiſtences, had their Origin in Time? The *Carteſians* hold, that the *Eſſences* of Things depend abſolutely on the free concurring Will of God.

ESSENCE, in Medicine and Chymiſtry, is the pureſt and moſt ſubtle Part of a Body, extracted from the ſame, by means of Fire. See EXTRACT.

Of theſe there are a great Variety, drawn from Flowers, Fruits, *&c.* uſed on Account of their agreeable Smells, Taſts, *&c.* by the Apothecaries, Perfumers, *&c.*

The principal are *Eſſence of Roſemary: Of Turpentine: Of Anis: Of Cloves: Of Cinnamon*; and *of Citron.*

The *Eſſences* commonly ſold by the Perfumers, are only the Oils of Ben, and of bitter Almonds; to which they give the Smell of certain Flowers, or Spices, as Violets, Jaſſemin, Cinnamon, *&c.*

The *Eſſences* to be drunk, or mix'd with Liquors, are of a more elaborate Compoſition: The moſt uſual and beſt, is prepared with the Spirit of Wine, Cloves, Cinnamon, Mace, Long Pepper, and Coriander: The whole being put up in a very cloſe Veſſel, is expoſed to the Sun for ſix Weeks, or two Months, during the Day-time, and in the Night ſet on the Fire.

In Winter they uſe the Fire alone: This *Eſſence* being exceedingly ſtrong; 'tis frequently uſed only to give a Strength to other weaker Liquors. After the ſame manner may the *Eſſences* of Amber, Muſc, *&c.* be drawn.

The *Eſſences* of odoriferous Flowers, to give a fine Smell to Liquors, are drawn by laying *Strata*, or Lays of the Flowers, and of Sugar, alternately, in a proper Veſſel, and leaving 'em to infuſe in a Cellar for 24 Hours; and after that as long by the Sun; and laſtly, ſtraining or percolating the whole thro' a Sieve, without ſqueezing the Flowers.

ESSENI, or ESSENES, or ESSÆANS, an ancient Sect among the *Jews*. See SECT.

*Joſephus* making mention of the ſeveral Sects among his Countrymen; diſtinguiſhes three; *viz.* the Phariſees, Sadducees, and *Eſſeni*: Which laſt he prefers to the two former, as to their manner of Life. He aſſures us, further, that they were *Jews* by Original; from which it ſhould appear, that S. *Epiphanius* was miſtaken, in ranking 'em among the *Samaritans.*

In Effect, the *Eſſeni* appear to have been true Pythagorian Philoſophers, in every Thing that related to their manner of Living. For they greatly affected Solitude and Retirement, and all Converſation with Women, to devote themſelves more entirely to the contemplative Life.

The *Eſſeni* ſeem to have been among the *Jews*, what the moſt retired and auſtere Monks are, or were, among the Chriſtians; which was what gave them their Denomination of Ιεδαικοὶ ασκηταὶ, *Aſcetic Jews.* See ASCETIC.

Many Catholic Writers have even deduced the Origin of Monks from 'em: Building, principally, on what *Philo* relates of 'em, who divides 'em into two Branches or Sects: The one who married, and the other who lived in Cœlibate. See MONK and CELIBATE.

*Joſephus* ſeems likewiſe to have had an Eye to theſe two Sorts of *Eſſeni*. *Serrarius*, who has wrote very amply on the Subject, follows *Philo*, in making two Claſſes of *Eſſeni:* The firſt, are thoſe whom he calls *Practici*, and who lived in Community: The ſecond, thoſe call'd *Theoretici*, who lived in Solitude, and led a Life of pure Contemplation. He adds, that *Joſephus* only makes mention of the firſt; paſſing, untouch'd, over the contemplative Kind, whom *Philo* calls *Therapeutes*, and who were principally found in *Egypt.* See THERAPEUTÆ.

*Grotius* will have the *Eſſeni* the ſame with the ancient חסידים *Haſidim*, or *Haſidæi*, thus call'd, according to *Philo*, from their ſingular Piety, Humility, and Devotion. Among theſe, *Gale* obſerves, it was, that the *Hebrew* Philoſophy chiefly flouriſh'd. *Porphyry, de Abſtinent.* is very prolix in his Praiſes of the *Eſſeni*; Εισὶ πόλλῳ οἱ Εσσαῖοι, Ἰεδαῖοι μὴν τὸ γένος, φιλαλληλοι, &c. He repreſents 'em as Deſpiſers of Pleaſure, Riches, Glory, and Delicacy, *&c.* and ſtrenuous Retainers to Continency, Auſterity, Study, *&c.* They decline Marriage; and adopt and educate other Peoples Children in Religion and Philoſophy. They are all on a Level, hold every Thing in common, neither buy nor ſell, *&c.* By long Habits, they arrived at ſuch a Degree of Patience, that *Porphyry* aſſures us, Flames and Tortures had not the leaſt Effect on 'em. They ſcorn'd to intreat their Tortorers; nor ever ſhed a Tear; but would ſmile under all their Agonies, *&c.* As to their Learning, *Philo Judæus*, in his Treatiſe, *That every good Man is free*, tells us, that they deſpiſed Logic, as uſeleſs to the acquiring of Virtue: Phyſics, they left to the Sophiſts and Diſputers, as judging it to tranſcend the human Faculties; and apply'd themſelves wholly to Morality. *Gale, Eſſenor. Char. ap. Philoſ. Gener.* p. 29.

*Euſebius* holds, that the *Eſſeni*, call'd *Therapeutæ*, were real Chriſtians, or *Jews* converted by St. *Mark*, who had embraced this Kind of Life. *Scaliger*, on the contrary, maintains, that theſe *Therapeutæ* were no Chriſtians, but real *Eſſeni*; who made Profeſſion of *Judaiſm.* However, he allows the two Kinds of *Eſſeni* abovementioned. But *Valeſius*, in his Notes on *Euſebius*, abſolutely rejects any ſuch Diſtinction: He denies, that the *Therapeutæ* were any real *Eſſeni*; and that, chiefly, on the Authority of *Philo* himſelf, who never calls 'em *Eſſeni*, and who places the *Eſſeni* in *Judæa* and *Paleſtine*; whereas the *Therapeutæ* were ſpread throughout *Greece*, *Egypt*, and other Countries.

ESSENTIAL, ſomething that is neceſſary to conſtitute a Thing, or that has ſuch a Connexion with the Nature and Reaſon of a Thing, that it is found, or ſuppoſed, wherever the Thing it ſelf is. See ESSENCE.

Thus, it is eſſential to God to be juſt. Mr. *Lock* has overturn'd that great Principle of the *Carteſians*, that *Thinking is eſſential to the Soul.* See THINKING.

The Heart, Brain, and Spinal Marrow, are Parts ordinarily ſuppoſed *Eſſential* to Life, or without which Life cannot be; yet we have Inſtances in Natural Hiſtory, of Childrens being found, and alive, without almoſt any of thoſe Parts. See BRAIN, *&c.*

ESSENTIAL *Properties*, are ſuch as neceſſarily depend on, and are connected with, the Nature and *Eſſence* of any Thing, ſo as to be inſeparable from it: in Diſtinction from accidental. See PROPERTY.

ESSENTIAL *Oils*, are ſuch as are really in a Plant, and drawn from it by Diſtillation, in an Alembic, with Water; in Contra-diſtinction to thoſe made by Inſolation. See OIL.

ESSENTIAL *Salts*, are ſuch as will cryſtallize in the Juice or Infuſion of a Plant; in Diſtinction from thoſe made by *Incineration.* See SALT.

ESSOIN, in Law, an Excuſe for him that is ſummon'd to appear and anſwer to an Action real, or to perform

Suit

Suit to a Court Baron. It is equivalent to *Excuſatio* among the Civilians.

The Cauſes that ſerve to *Eſſoin*, are divers; yet may be reduced to five Heads: The firſt is, *Eſſoin de ultra mare*, when the Party is beyond Sea: The ſecond, *De terra ſancta*, when on an Expedition in the Holy Land: The third, *de malo veniendi*, when he is infirm of Body, and cannot come; which is alſo call'd, the *Common Eſſoin*: The fourth, *Eſſoin de malo lecti*, when the Defendant is ſick a-bed: The fifth, *de ſervitio Regis*, when he is in the King's Service. *Horn* mentions ſeveral other *Eſſoins* touching the Service of the King Celeſtial.

The Word is form'd of the French, *Eſſoinie*, i. e. *Cauſarius miles*, he that has his Preſence forborn upon any juſt Cauſe, as Sickneſs, or other Impediment.

ESSOINS and PROFFERS. See PROFFER.

ESSORANT, in Heraldry, a Term uſed to expreſs a Bird ſtanding on the Ground with the Wings expanded, as if it had been wet, and were drying it ſelf.

ESTANDARD. See STANDARD.

ESTATE, in Law, the Title, or Intereſt a Man hath in Lands or Tenements.

*Eſtate* is either ſimple or conditional: *Eſtate ſimple*, call'd alſo *Fee ſimple*, is where a Man by Deed Indented, enfeoffs another in Fee, reſerving to him and his Heirs a Yearly Rent; with this Proviſo, that if the Rent be behind, *&c.* it ſhall be lawful for the Feoffer and his Heirs, to enter. See FEE.

*Eſtate Conditional, or upon Condition at Law*, is ſuch, as hath a Condition annexed to it, tho' it be not ſpecified in Writing. *e. gr.* If a Man grant to another, by his Deed, the Office of Park-Keeper for Life: this *Eſtate* is upon *Condition in Law*, viz. If the Park-Keeper ſhall ſo long well and truly keep the Park.

ESTATE, or ſimply STATE, the Empire, Kingdom, Provinces, or Extent of Lands under any one Government or Dominion.

The *Eſtates* of the Grand Seignior, of the King of *Spain*, &c. are very extenſive: Thoſe of the King of *France* are compact, and well peopled. *Italy* is canton'd out into a great Number of petty *Eſtates*.

*Miniſters of Eſtate, Secretaries of Eſtate*, &c. See MINISTER, SECRETARY, *&c.*

ESTATE is particularly applied to the ſeveral Ranks, or Claſſes, of a People aſſembled together, for the concerting of Meaſures, reforming Abuſes, or compoſing the Diſturbances of a State.

In *England*, the Three *Eſtates*, viz. King, Lords, and Commons, meet ordinarily in Parliament.

In *France*, the *Eſtates* conſiſt of the Churchmen, the Nobleſſe, and the Third *Eſtate*.

Some will have theſe Aſſemblies of *Eſtates* to be a very ancient Conſtitution: All we know is, that there were general Aſſemblies held in the *Gauls*, before *Cæſar*'s Conqueſt. But then the People, or third *Eſtate*, had no Share in 'em. Under the Iſt and IId Race of the *French* Kings, there were alſo ſolemn Convocations, call'd *Parliaments*; but it was only the great Lords of the Realm that were call'd to 'em. See PARLIAMENT.

ESTATES *General.*
ESTATES *of Holland.* } See { STATES *General*, &c.

ESTERLING, or EASTERLING. See STERLING.

ESTETE, in Heraldry, is uſed by the *French* to ſignify a Beaſt whoſe Head has been, as it were, torn off by Force; and conſequently the Neck left rough and rugged: In Contra-diſtinction to *deffait*, or *decapite*, where the Neck is left ſmooth; as if the Head had been cut off. See DEFFAIT.

ESTHER, a Canonical Book of the Old Teſtament.

The *Book of Eſther*, is denominated from a celebrated *Jewiſh* Captive of that Name, in *Perſia*, whoſe Beauty prefer'd her to the Bed of *Ahaſuerus*, and the Throne of *Perſia*; And who, in that Quality, ſaved her Compatriots the *Jews*, from the Death, to which *Ahaſuerus* had doom'd 'em, by the Councils of his Favourite *Haman*: The Hiſtory of which Tranſaction makes the Subject of the Book of *Eſther*.

The Criticks are divided about the Author of this Book: *S. Epiphanius*, *S. Auguſtin*, and *Iſidore*, attribute it to *Ezra*; But *Euſebius* will have it of a later Date. Some aſcribe it to *Joachim*, High-Prieſt of the *Jews*, and Grand-ſon of *Joſedek*. Others will have it compoſed by an Aſſembly, or Synagogue of the *Jews*, to whom *Mordecai* wrote Letters, informing 'em of what had happen'd, *Eſth.* IX. 29.

But the Generality of Interpreters, both *Hebrew*, *Greek*, *Latin*, &c. aſcribe the Book to *Mordecai* himſelf: *Elias Levita*, in his *Maſs. hamum.* Præf. 3. mentions this Sentiment as unqueſtionable.

'Tis chiefly founded on the Paſſage, Ch. IX. Ver. 20. where it is ſaid, *That Mordecai wrote theſe Things, and ſent Letters unto all the Jews, that were in all the Provinces*, &c. 'Tis alſo ſuppoſed, that Queen *Eſther* her ſelf, might have ſome Share therein; it being expreſs'd in the ſame Chapter, Ver. 29. that *Eſther* and *Mordecai* wrote a ſecond Letter with the King's Authority, to ordain the ſolemnizing a Yearly Feaſt, call'd *Purim*, that is, Days of Lots, in Commemoration of the *Jews* being deliver'd from the Lots, or Sortes, whereby they had been condemned.

Some will have this Book to be only Deuterocanonical. Others contend for its being Canonical, as far as Chap. X. Ver. 3. incluſive; and all the reſt Deuterocanonical. Of this Sentiment are S. *Jerom*, *De Lyra*, *Dionyſius* the *Carthuſian*, *Cajetan*, and others. The Council of *Trent* turn'd the Scale for its being Canonical throughout: ſo that the Matter is determined for the Catholic Countries.

But as to the Proteſtants, they retain to the old Opinion, and only admit it as far as the 3*d* Verſe of the X*th* Chapter. See DEUTEROCANONICAL.

ESTIVAL, or ÆSTIVAL *Solſtice*. See SOLSTICE.

ESTOILEE'. A *Croſs Eſtoilee*, is a Star with only four long Rays, in manner of a Croſs; and accordingly broad in the Centre, and terminating in ſharp Points. See CROSS.

ESTOPPEL, in Law, an Impediment, or Bar of Action growing from a Man's own Act, who hath, or otherwiſe might have had his Action. See BAR.

*Goddard* defines an *Eſtoppel* to be a Bar, or Hindrance, to one to plead the Truth; and extends it not to the Impediment given by his own Act only, but anothers alſo.

There are three Kinds of *Eſtoppel*, viz. by *Matter of Record*; by *Matter in Writing*; and by *Matter in pais*.

The Word is form'd of the French, *Eſtouper*, *oppilare*, *obſtipare*.

ESTOVERS, in Law, is uſed by *Bracton*, for that Suſtenance, which a Man committed for Felony, is to have out of his Lands, or Goods, for himſelf and his Family, during Impriſonment.

In Stat. 6. *Edu.* I. it is uſed for an Allowance in Meat or Clothes. In Stat. *Weſt.* it is alſo uſed for certain Allowances of Wood, to be taken out of another Man's Woods.

In this laſt Senſe *Eſtovers* comprehends *Houſe-bote*, *Hay-bote*, and *Plow-bote*: So that if a Man hath in his Grant theſe general Words, *de Rationabili Eſtoverio in Boſcis*, &c. he may thereby claim all three.

In ſome Mannors, the Tenants have Common of *Eſtovers*; that is, neceſſary Botes out of the Lord's Wood. See ALIMONY.

ESTRADE, a *French* Term, literally ſignifying a public Road, or High-way. Hence the Military Phraſe, *Battre l'Eſtrade*, to *Beat the Eſtrade*, that is, to ſend Scouts, or Horſemen, to get Intelligence, to learn the Diſpoſitions of the Enemy, and inform the General of every Thing like to fall in the Way. An Army never marches, without ſending *Batteurs d'Eſtrade* on every Side.

The Word is form'd of the Italian *Strada*, Street, or Road, which is derived from the Latin *Strata*, a paved Street. Some derive it from *Eſtradiots*, who were Cavaliers anciently employ'd in *beating the Eſtrade*.

ESTRADE is alſo us'd, for a little Elevation in the Floor of a Room, frequently encompaſs'd with an Alcove, or Rail, for the placing a Bed in; and ſometimes, as in *Turkey*, only cover'd with fine Carpets, to receive Viſitors of Diſtinction in. See ALCOVE.

ESTRANGEL, in the *Syriac* Grammar. The *Eſtrangel*, or *Eſtrangelus Character*, is a particular Species, or Form of *Syriac* Letters; ſerving as the Majuſcule Letters of the *Syriac* Language.

*Abraham Ecchellenſis* takes the *Eſtrangel* Character, for the true, ancient, *Chaldee* Character. And 'tis certain, the *Abyſſinians*, who call themſelves *Chaldeans*, ſtill occaſionally uſe the *Eſtrangel* Character; if we may credit *Hottinger* in his *Theſaur. Philol.* p. 286. Biſhop *Walton*, in his *Prolegomena*, gives us an *Eſtrangel Alphabet*.

ESTRAY, ſignifies any tame Beaſt found within any Lordſhip, and not owned by any Man; in which Caſe, being cried, according to Law, in the Market adjoyning, if it be not claimed by the Owner in a Year and a Day, it is then the Lord's of the Soil where found.

ESTREAT, in Law, is uſed for the true Copy, or Duplicate, of an original Writing: For Example, of Amerciaments, or Penalties, ſet down in the Rolls of a Court, to be levied by the Bailiff, or other Officer, of every Man for his Offence.

*Clerk of the* ESTREATS. See CLERK.

ESTREPEMENT, in Law, an impoveriſhing, or making of Land barren, by continual Plowing and Sowing; without due Manuring, Reſt, and other Husbandry.

The Word is alſo uſed, for any Spoil made by the Tenant for Life, upon any Lands, or Woods, to the Prejudice of him in Reverſion; as the cutting down of Trees,

or

or lopping them further than the Law allows, &c. Stat. *Edu.* VI.

The Word is derived from the French, *Eſtropier*, to maim; or the Latin, *extirpare*.

ESTREPEMENT, is alſo a Writ which lies in two Caſes; the one, when a Man having an Action depending, (wherein the Demandant is not to recover Damages as a Writ of Right, *dum fuit infra ætatem*, &c.) ſues, to inhibit the Tenant from making Waſt during the Suit.

The other is for the Demandant who is adjudged to recover Seiſin of the Land in Queſtion, and before Execution, for fear of Waſte to be made ere he can get Poſſeſſion, ſues out this Writ.

ESULA, a medicinal Root. The *Eſula*, is properly the Bark of a little reddiſh Root, which produces green, narrow, milky Leaves. It grows chiefly in *France*. 'Ere they uſe it, 'tis infuſed in Vinegar: After which, they draw Extracts from it, uſed in the Dropſy.

ESURINE *Salts*, are ſuch as are of a fretting, eating, or corroding Nature; which chiefly abound in Places near the Sea-ſide, and where great Quantity of Coal is burnt: As appears from the ſpeedy ruſting of Iron in ſuch Places. See SALT.

ETAPPE, in War, the Allowance of Proviſions and Forage made to the Soldiers, upon March thro' a Kingdom or Province, to or from Winter Quarters.

Hence, he that contracts with the Country, or Territory, for furniſhing the Troops in their March, is called ETAPPIER.

ETCHING, a Method of Engraving on Copper; wherein the Lines, or Strokes, inſtead of being cut with a Tool, or Graver, are eat with Aqua fortis. See ENGRAVING.

*Etching* was invented much about the ſame Time with *Engraving* on Copper, properly ſo call'd; by *Alb. Durer*, and *Lucas*. It has ſeveral Advantages over that Art; as, that it is done with more Eaſe and Expedition; that it requires fewer Inſtruments; and even, that it repreſents divers Kinds of Subjects better, and more agreeably to Nature, as Landſkips, Ruins, Grounds, and all ſmall, faint, looſe, remote Objects, Buildings, &c.

The Method of *Etching* is thus: The Plate being well poliſh'd, is heated over the Fire; and when hot, cover'd over with a peculiar *Ground*, or Varniſh. When cold again, the Ground is blacken'd with the Smoak of a Candle; and on this Ground, thus blacken'd, the Back of the Deſign, or Draught, is laid.

This done, the Deſign remains to be calk'd, or tranſfer'd upon the Plate; which is more eaſily effected, than in the common Graving; for the Back of the Deſign having been before rubb'd over with red Chalk, nothing remains but to trace over all the Lines and Strokes of the Draught with a Needle or Point; which preſſing the Paper cloſe down to the Ground, occaſions the Wax therein to lay hold of the Chalk, and ſo bring off the Marks of the ſeveral Lines: So as at length, to ſhew a Copy of the whole Deſign in all its Correctneſs.

The Draught thus calk'd, the Artiſt proceeds to draw the ſeveral Lines, and Contours with a Point, thro' the Ground, upon the Copper.

To finiſh his Work, he makes uſe of Points of divers Sizes, or Bigneſſes; and preſſes on them ſometimes more ſtrongly, and ſometimes more lightly, according as the ſeveral Parts of the Figures, &c. require more or leſs Strength or Boldneſs: Some of the Points being as fine as Needles, for the tender, Hair ſtroaks, and the remoter, fainter Objects; and others again, as big as Bodkins, made oval-wiſe, for the deeper Shadows, and the Figures in the Front of the Work.

Things thus prepared, a Rim, or Border of Wax, is rais'd round the Circumference of the Plate, and *Aqua fortis* pour'd on; which, by the ſaid Border, is kept from running off at the Edges.

The Ground being impenetrable to that corroſive Water, the Plate is defended from it every where but in Lines, or Hatches, cut thro' it with the Points; which, lying open, the Water paſſes thro' them to the Copper, and eats into the ſame, to the Depth required: Which done, it is pour'd off again.

Of *Etching* Grounds, it muſt be obſerved, there are two Kinds; the one *ſoft*, and the other *hard*. There are alſo two Kinds of *Aqua fortis*: The one *White*, which is only uſed with the ſoft Ground, and is applied as above directed: The other *Green*, made of Vinegar, Common Salt, *Sal Ammoniac* and Verdegreaſe. This is uſed indifferently with either Kind of Ground: Its Application is ſomewhat different from that of the *White*.

Without making any Border, they pour it on the Plate, which is placed for that Purpoſe a little inclined; and as the Water runs off, it is received in a Veſſel placed underneath. This they repeat, pouring it again and again, till it has eaten deep enough.

Add, that the *Aqua fortis*, of which Kind ſoever it be, muſt not continue equally long, or be pour'd equally often, on all the Parts of the Deſign. The remote Parts muſt be bitten more ſlightly, than thoſe nearer to the View.

To manage this, they have a Compoſition of Oil and Greaſe, wherewith they cover the Parts that are to be bitten no further. Or elſe they lay the Compoſition on as a defenſitive at firſt, and take it off again when they find proper. In Effect, they are every now and then covering and uncovering this or that Part of the Deſign, as Occaſion requires; the Conduct of the *Aqua fortis* being one of the principal Concerns in the whole Art, and that on which the Effect of the whole very much depends. The Operator is alſo to be very attentive to the Ground, that it don't fail, or give Way, in any Part, to the Water; and where it does, to ſtop up the Place with the Compoſition aforeſaid.

Laſtly, it is to be remember'd, that a freſh Dip of *Aqua fortis* be never given, without firſt waſhing out the Plate in fair Water, and drying it at the Fire.

The *Aqua fortis* having done its Part, the Ground is taken off, and the Plate waſh'd and dried; after which nothing remains but for the Artiſt to examine it with his Graver in his Hand, to touch it up, and heighten it, where the *Aqua fortis*, &c. has miſs'd.

ETERNITY, an Attribute of God, whereby the Duration of his Exiſtence is conceiv'd incommenſurable with Time, and excluſive of Beginning, Progreſs, Ending, &c. See GOD, TIME, &c.

Authors are terribly ſtraighten'd for a proper and juſt Definition of *Eternity*. That of *Boethius de Conſol. Philoſ. L.* V. Pr. 6. viz. *Interminabilis vitæ, tota ſimul & perfecta poſſeſſio*, i. e. *a perfect Poſſeſſion of a whole endleſs Exiſtence all together, or at once*, tho' retain'd by S. *Thomas*, and others, is Faulty in divers Reſpects.

*Cenſorinus, de Die Natal.* defines *Eternity*, by *Infinite Duration*; that is, Duration which has always been, and always will be. — Others, more fully deſcribe it by a Duration that exiſts all together, without any Flux, or Succeſſion of Parts, prior, or poſterior to each other: Where, the Word *Duration*, taken abſtractedly, imports no more than the Perſeverance of a Thing in Exiſtence; the *to durare*, being here oppoſed to the *to ceſſare*, in Exiſtendo.

But ſoften the Word *Duration* how you will, it is ſcarce conceiveable, but by conceiving a Quantity thereof; nor a Quantity, without conceiving a Succeſſion. — Others, therefore, define *Eternity* by a *perpetuum nunc*, a *perpetual now*; or a *nunc ſemper ſtans*, an *ever-ſtanding now*: But neither are theſe unexceptionable; the Words *perpetuum*, and *ſemper-ſtans*, importing an obſcure Sort of Duration. See DURATION.

ETESIAN *Winds*. See WINDS.

ETHER. See ÆTHER.

ETHERIAL *Oil*, a Name the Chymiſts give to high rectified Oils, which differ little from inflammable Spirits; ſuch are Oil of Turpentine, &c. See OIL, SPIRIT, &c.

ETHICKS, ETHICA, a Term originally *Greek*, ἠθικὴ, applied to the Doctrine of *Morality*, or *Moral Philoſophy*. See PHILOSOPHY.

*Gale* makes *Ethicks* only the firſt Part, or Branch of Moral Philoſophy, *viz.* that which regards private Perſons, or in a private Capacity. See MORAL.

The Word is form'd from ἦθος, ἔθη, *Mores*, Manners; by Reaſon the Scope, or Object thereof, is to form the *Manners*. See MANNERS.

Now, by *Manners*, is here meant a Way, or Manner of Living, confirm'd by Cuſtom, or Habit; or certain Habitudes of doing; or Actions which are often repeated: Which, if they be according to right Reaſon, the *Morals*, or *Manners*, are ſaid to be *Good*; otherwiſe *Evil* and vitious. See GOOD and EVIL.

Hence, the Object of *Ethicks*, is the Exerciſe of right Reaſon, in all our Affairs, Actions and Circumſtances; or it is Man himſelf conſider'd as dirigible, and to be conducted according to Reaſon: And the End of *Ethicks*, is to make him good and happy. For that if a Man conduct himſelf, according to right Reaſon, in all the Circumſtances of his Actions, Affairs and Relations, he will arrive at the higheſt Pitch of Moral Perfection and Beatitude.

Whence, *Ethicks* may be defined a right Manner of thinking, in order to attain human Felicity; or a Diſcipline whereby Man is directed to conduct his Will, and the Actions thereof, ſo as to live well and happily. See WILL.

The principal, nay, the only Topicks thereof, are Happineſs and Manners; whence ariſe two Parts, or Branches of *Ethicks*; the firſt on moral Happineſs, conſider'd as the End; and the ſecond on Moral Virtues, or good

Manners, as the Means to arrive thereat. See HAPPINESS, VIRTUE, &c.

ETHICOPROSCOPTES, in Antiquity, the Name of a Sect.

*Damascenus*, in his Treatise of *Heresies*, tells us, that the Denomination *Ethicoproscoptes* was given to such as err'd in Matters of Morality, and Things relating to Practice, that were to be done, or be avoided, &c. who blamed Things laudable, and good in themselves, or recommended or practised Things Evil. Which shews, that they were no particular Sect.

The Word is form'd of the *Greek*, ἦθος, *Manners*, and πρόσκοπτω, *offendo*, I offend.

ETHMOIDAL, ETHMOIDALIS, in Anatomy, one of the *Sutures* of the Human Cranium. See SUTURE.

The common Sutures are those which separate the Bone of the Cranium from those of the Cheeks; and are four: The Transversal, *Ethmoidal*, Sphenoidal, and Zygomatical. See CRANIUM.

The *Ethmoidal* takes its Denomination from its turning round the *Os Ethmoides*. See ETHMOIDES.

ETHMOIDES, in Anatomy, a Bone situate in the middle of the Basis of the Fore-head, or Os frontis, and at the Top of the Root of the Nose; filling almost the whole Cavity of the Nostrils. See NOSTRILS.

It has its Name from ἦθμος, *Cribrum*, Sieve, and εἶδος, *Form*; because all spongeous and cribrous.

By its cribrous Part it is joyn'd to the Head; by the spongeous Part, to the Cavity of the Nostrils; and by the plain and broad Part, to the Orbits of the Eyes.

In the cribrous Part is an Apophysis, which jets out, in a Point, into the Cavity of the Skull; call'd, from its Figure, *Crista Galli*, or Cock's Comb. From its under Side, there goes a thin Bone, which divides the Cavity of the Nostrils into two, call'd the *Vomer*. It is perforated by a Number of small Holes, thro' which the Fibres of the olfactory Nerves pass to the *Processus Mamillares*.

*J. Philip Ingrassias*, a *Sicilian*, who flourish'd about the Year 1546, was the first who gave a just Account of the Structure of the *Os Ethmoides* or *Cribrosum*. See NOSE.

ETHNARCHA, ETHNARCH, a Governour, or Commander of a Nation. See TETRARCH.

There are some Medals of *Herod* I. surnamed the *Great*, on one Side whereof is found ΗΡΩΔΟΥ, and on the other ΕΘΝΑΡΚΟΥ, q. d. *Herod the Ethnarch*: Now, after the Battel of *Philippi*, we read that *Anthony* passing over into *Syria*, constituted *Herod* and *Phasael* his Brother, Tetrarchs, and in that Quality committed to them the Administration of the Affairs of *Judea*. Jos. Ant. *L.* XIV. C. 23. *Herod* therefore had the Government of the Province before ever the *Parthians* enter'd *Syria*, or before *Antigonus*'s Invasion, which did not happen till six or seven Years after *Herod* was Commander in *Galilee*. Jos. *L.* XIV. C. 24, 25.

Consequently, *Herod* was then truly *Ethnarch*; for he can be no otherwise denominated: So that it must have been in that Space of Time that the Medals were struck which only give him this Title. Which Medals are a Confirmation of what we read in History of the Government that Prince was intrusted withal e're he was rais'd to the Royalty.

*Josephus* gives *Herod* the Appellation of Tetrarch, in lieu of that of *Ethnarch*; but the two Terms came so near to each other, that it was very easy to confound them together. See TETRARCH.

Tho' *Herod* the *Great* left by Will, to *Archelaus*, all *Judea*, *Samaria*, and *Idumea*; yet, *Josephus* tells us, he was then only call'd *Ethnarch*.

The Word is *Greek*, form'd of ἔθνος, *Nation*, and ἀρχή, *Command*.

ETHNOPHRONES, in Antiquity, the Name of a Sect. See SECT.

The *Ethnophrones*, or *Paganizers*, were Hereticks of the VIIth Century, who made a Profession of Christianity, but joyn'd thereto all the Ceremonies and Follies of Paganism, as Judiciary Astrology, Sortileges, Auguries; and other Divinations.

And hence their Denomination; from ἔθνος, *Nation*, and φρὴν, *Thought*, *Sentiment*, q. d. whose Thoughts, or Sentiments were still Heathen or Gentile.

They practised all the Expiations of the Gentiles, held all their Feasts, observed all their Days, Months, Times, and Seasons. See *Damascenus*, L. *Hæres.* N. 94.

ETHOPOEIA, or ETHOPEA, in Rhetoric, call'd also ETHOLOGY, and vulgarly *Picture*, or *Portrait*; is a Draught, or Description, expressing the Manners, Passions, Genius, Temper, Aims, &c. of another Person.

Such is that beautiful Passage in *Salust*, in his *Bellum Catilinarium*, wherein he gives us a Picture of *Catiline*: *Fuit magna vi & animi & Corporis sed Ingenio malo pravoque huic*, &c. 'He had an uncommon Strength both 'of Body and Mind; but an ill turn'd, and wicked Dis-'position. When a very Boy, his great Pleasure was in 'intestine Broils, Rapine, Slaughter, and civil Discord. 'His Body was form'd to undergo Fasting, Cold, and 'Watching, beyond all Belief. His Mind was daring, de-'ceitful and various; and could imitate, or accommodate 'it self to any Body: He was extremely covetous of 'other People's Goods, and profuse of his own withal. 'His Lusts and Desires were very high; his Stock of 'Eloquence considerable; but his Discretion scarce any.'

The *Ethopœia* is divided into *Prosographia*, and *Ethopœia*, properly so call'd; the former of which is a Picture of the Body, Countenance, Make, Dress, Gait, &c. and the latter of the Mind.

The Word is of *Greek* original, being form'd of ἦθος, *mos*, *consuetudo*, and ποιεω, *facio*, *fingo*, *describo*. *Quintilian*, L. IX. *C.* 2. calls this Figure *Imitatio morum alienorum*; and in *Greek*, μιμησις, *Imitation*.

ETYMOLOGY, that Part of Grammar, which considers, deduces, and explains the Origin and Derivation of Words; in order to arrive at their first and primary Signification. See GRAMMAR.

The Word is form'd of the *Greek*, ἔτυμος, *verus*, true, and λεγω, *dico*, I speak; whence λογια, *Discourse*, &c. and thence *Cicero* calls the Etymology, *Notatio*, and *Veriloquium*: Tho' *Quintilian* chuses rather to call it *Originatio*.

In all Ages there have been People curious in *Etymologies*: *Varro* has wrote on the *Etymology* of the *Latin* Words; and we have a Greek *Etymologicon*, under the Name of *Nicas*.

The *Etymologies* of our *English* Words have been deduced from the *Saxon*, *Welsh*, *Walloon*, *Danish*, *Latin*, *Greek*, &c. by *Somner*, *Cambden*, *Verstegan*, *Spelman*, *Casaubon*, *Henshaw*, *Skinner*, *Junius*, &c. See ENGLISH.

Those of the *French* and *Italian* Words, by *Menage*, in what he calls his *Origines*: *Henry Stephens*, *Tripot*, *Borel*, &c. have also laboured on the French *Etymologies*. *Guichard*, and Fa. *Thomassin*, have carried the *Etymologies* of Abundance of *French* Words as high as the *Hebrew*. *Postel* had the same Design before them.

We have a Latin *Etymologicon* of *Gerard Vossius*, another of *Martinius*, &c. *Octavio Ferrari*, has an *Etymology* of the *Italian* Tongue: And *Bernard d'Aldretta*, another of the *Spanish*.

*Fa. Dom. Pezron*, Abbot of *Charmoye*, and Priest of the *Sorbonne*, has traced up to the *Celtic* Language the *Etymologies* of Abundance of *Greek*, *Latin*, *German*, *French*, and other Words, used by *Plato*, *Servius*, *Donatus*, and other *Latin* Authors without knowing their true Origin, and *Etymology*, for Want of being acquainted with the Roots of the *Celtic* Tongue, from which Abundance of *Greek*, *Latin*, &c. Words are derived. But it must be added, that his *Etymologies* are frequently so far fetch'd, that one can scarce see any Resemblance, or Correspondence at all.

A strict, and sollicitous Enquiry into *Etymologies*, is no frivolous, and impertinent Design; but has considerable Uses. Nations, who value themselves on their Antiquity, have always look'd on the Antiquity of their Language as one of the best Titles they cou'd plead. For the *Etymologist*, by seeking the true, and original Reason of the Notions and Ideas attach'd to each Word, and Expression, may often furnish an Argument of Antiquity from the Vestigia, or traces remaining thereof; and from the Indices still subsisting in the present Use of the Words, compared with the antient Uses.

Add, that *Etymologies* are necessary for the thorough Understanding of a Language: For, to explain a Term precisely, there seems a Necessity of recurring to its first Imposition, in Order to speak justly and satisfactorily thereof. The Force and Extent of a Word is generally better conceiv'd, and enter'd into, when a Person knows its Origin and *Etymology*.

'Tis objected, however, that the Art is arbitrary, and built altogether on Conjectures and Appearances; and the *Etymologists* are charged with deriving their Words from where they please. But the Science is certainly real, and as regular as divers others; having its proper Principles, and Method.

It must be own'd, indeed, that it is no easy Matter to return into the antient *British*, and *Gaulish* Ages; to follow, as it were by the Track, the divers imperceptible Alterations a Language has undergone from Age to Age. A sober *Etymologist* has need of all the Lights he can come at, to conduct and bring down Words variously dis-

guis'd

guis'd in their Paſſage, and remark all the Changes that have befallen them. And as thoſe Alterations have ſometimes been owing to Caprice, or Hazard, 'tis eaſy to take a mere Imagination, or Conjecture, for a regular Analogy; ſo that 'tis nothing ſtrange the Public ſhould be prejudiced againſt a Science which ſeems to ſtand on ſo precarious a Footing.

EVACUANTS, in Medicine, Remedies proper to expel, or carry off any ill, peccant, or redundant Humor in the animal Body; by the proper Ways or Emunctories. See EVACUATION.

Of *Evacuants*, there are divers Kinds, diſtinguiſh'd according to their various Humours and Emunctories. See HUMOR and EMUNCTORY.

Some, *e. gr.* carry off their Matters by *Stool*, call'd *Purgatives*, or *Catharticks*. See PURGATIVES, *&c.* Others by *Urine*, call'd *Diureticks*. See DIURETICKS. Others by *Perſpiration*, call'd *Diaphoreticks*. See DIAPHORETICKS. Others by *Sweat*, call'd SUDORIFICKS. Others by the Mouth, call'd *Vomitories*, or EMETICKS. Others by the ſalival Glands, as SIALIGOGUES: And others, laſtly, by the *Menſes*, as MENAGOGUES and ARISTOLOCHICKS.

EVA UATION, in Medicine, a Diminution of the animal Fluids, in Order to a Diſcharge of ſome morbid, or redundant Matters therein; or, only, for the Sake of thinning, attenuating, and promoting the Motion and Circulation thereof. See EVACUANTS.

The Matter of a Diſeaſe, or what is preſcribed by Art to remove or eaſe it, is *Evacuated* two Ways.

1°. By the natural Emunctories, or Out-lets of the Skin; the Noſtrils, Mouth, Fauces, Oeſophagus, Ventricle, Inteſtines, Bladder, and Urethra.

And 2°. By artificial Outlets, made either in the Blood Veſſels; as by *Phlebotomy*, *Arteriotomy*, *Scarifications*, and *Leaches*. See PHLEBOTOMY and SCARIFICATION, *&c.* Or, in the Lymphatic Veſſels; as by CAUSTICKS and VESICATORIES. Or, laſtly, in both, as by *Iſſues*, *Setons*, *Ulcers*, *Fiſtula's*, &c. See ISSUE, SETON, FISTULA, *&c.*

Hence, the firſt Diſtinction of *Evacuants* is derived from the different *Emunctories*; and the 2d, from the Diverſity of Matter *evacuated* thro' them.

Moſt of the Chronical Diſeaſes, the Infirmities of old Age, and the ſhort Periods of the Lives of *Engliſhmen*, Dr. *Cheyne* obſerves, are owing to Repletion. This is evident from hence; that *Evacuation* of one Kind or another, is nine Parts in ten of their Remedy: For not only Cupping, Bleeding, Bliſtering, Iſſues, Purging, Vomiting and Sweating, are manifeſt *Evacuations*, or Drains, to draw out what has been ſuperfluouſly taken down; but even Abſtinence, Exerciſe, Alteratives, Cordials, Bitters, *&c.* are but ſeveral Means to diſpoſe the groſs Humours, to be more readily *evacuated* by inſenſible Perſpiration. *Eſſay on Health.*

For the Periodical *Evacuations* of Women. See MENSES.

For the *Evacuations* of Women after Delivery. See LOCHIA.

The Term is likewiſe uſed in the Art of War: To *Evacuate a Place*, is to make the Garriſon quit, or march out of it, in order for another Power to take Poſſeſſion of it, or to make Room for another Garriſon.

EVANGELISTS, the inſpired Authors of the Goſpels. See GOSPEL.

The Name *Evangeliſts* was likewiſe given, in the antient Church, to ſuch as preach'd the Goſpel here and there; without being attach'd to any particular Church. In which Senſe, ſome Interpreters think it is, that St. *Philip*, who was one of the ſeven Deacons, is call'd the *Evangeliſt*, in 21ſt Chapter of the *Acts of the Apoſtles*, Ver. 8.

Again, St. *Paul* writing to *Timothy*, Ep. 2. *C.* IV. *v.* 5. bids him do the Work of an *Evangeliſt*. The ſame Apoſtle, *Eph.* IV. 11. ranks the *Evangeliſts* after the Apoſtles and Prophets.

Hence, Monſ. *Tillemont* takes the Liberty to uſe the Word in the ſame Senſe. 'Moſt of thoſe who then em-'braced the Faith, being fill'd with the Love of a holy 'Philoſophy, began to diſtribute their Goods to the Poor, 'and after that went into divers Countries to do the Office 'of *Evangeliſts*, to preach Chriſt to ſuch as had not yet 'heard of him, and to furniſh them with the ſacred Wri-'tings of the Goſpel.'

The Word is derived from the *Greek*, ευαγγελιον, form'd of ευ, *bene*, well, and αγγελος, *Angel*, *Meſſenger*.

*O ſuaves Epiſtolas tuas uno tempore mihi datas duas! quibus* Evangelia *quæ reddam neſcio; deberi quidem plane fateor.* Cic. *ad* Attic.

EVANID. A Name ſome Authors give to thoſe Colours which are not of very long Duration; as thoſe in the Rain-bow, in Clouds before and after Sun-ſet, *&c.* See COLOUR, *&c.*

*Evanid* are the ſame with thoſe otherwiſe call'd *Fantaſtical*, and *Emphatical Colours*: See FANTASTICAL, *&c.*

EVANTES, in Antiquity, the Prieſteſſes of *Bacchus*; thus call'd, by Reaſon, in celebrating the *Orgia*, they ran about as if diſtracted, crying *Evan*, *Evan*, *Ohe Evan!* See BACCHANTES.

EVAPORATION, in Philoſophy, the Act of exhaling the Humidity of a Body; or of diſſipating it in Fumes or Vapour. See VAPOUR.

Common Salt is form'd, by evaporating all the Humidity in the Salt-Water, or Brine; which *Evaporation* is either perform'd by the Heat of the Sun, as in the Salt-Works by the Sea-Coaſt, *&c.* or by Means of Fire, as in the Salt Springs, *&c.* See SALT.

By the Obſervations of Monſ. *Sedileau* it appears, that what is rais'd in Vapour, exceeds that which falls in Rain. See RAIN.

Tho' the *Evaporation* of Liquids is generally look'd on as an Effect of the Heat, and the Motion of the Air; yet Monſ. *Gauteron*, in the *Memoirs de l'Academ des Scien.* An. 1705. ſhews, that a quite oppoſite Cauſe may have the ſame Effect; and that Liquids loſe a deal more of their Parts in the ſevereſt Froſt, than when the Air is moderately warm. In the great Froſt of the Year 1708, he found, that the greater the Cold, ſtill the more conſiderable the *Evaporation*; and that Ice it ſelf loſt full as much as the warmer Liquors that did not freeze. See FROST.

Dr. *Halley* furniſhes us with ſome Experiments of the Quantity, or Meaſure of the *Evaporation* of Water. --- The Reſult is contain'd in the following Articles:

1°. That Water ſalted to about the ſame Degree as Salt Water, and expoſed to a Heat equal to that of a Summer's Day, did, from a circular Surface of about Eight Inches Diameter, *Evaporate* at the Rate of 6 Ounces in 24 Hours. Whence, by a Calculus, he finds, that the Thickneſs of the Pellicle, or Skin of Water *Evaporated* in two Hours, was the 53*d* Part of an Inch: But, for a round Number, he ſuppoſes it only a 60*th* Part; and argues thence, that if Water as warm as the Air in Summer, evaporates the Thickneſs of one 60*th* Part of an Inch in two Hours, from its whole Surface; in twelve Hours it will exhale one tenth of an Inch. Which Quantity, he obſerves, will be found abundantly ſufficient to furniſh all the Rains, Springs, Dews, *&c.* See SPRING, *&c.*

In Effect, on this Principle, every 10 Square Inches of the Surface of the Water, yields in Vapour, *per diem*, a Cubic Inch of Water; and each Square Foot half a Wine Pint; every Space of 4 Foot Square, a Gallon; a Mile Square, 6914 Tons; and a Square Degree, ſuppoſe of 69 *Engliſh* Miles, will *Evaporate* 33 Millions of Tons. See RIVER, *&c.*

2°. A Surface of Eight Square Inches, *Evaporated*, purely by the natural Warmth of the Water without either Wind or Sun, in the Courſe of a whole Year, 16292 Grains of Water, or 64 Cubic Inches; conſequently, the Depth of Water thus *Evaporated* in one Year amounts to 8 Inches. But this being much too little to anſwer the Experiments of the *French*, who found, that it rain'd 19 Inches of Water in one Year at *Paris*; or thoſe of Mr. *Townley*, who found the Annual Quantity of Rain in *Lancaſhire*, above 40 Inches: He concludes, that the Sun and Wind contribute more to *Evaporation*, than any internal Heat, or Agitation of the Water. See RAIN.

3°. The Effect of the Wind is very conſiderable, on a double Account. For the ſame Obſervations ſhew a very odd Quality in the Vapours of Water, *viz.* that of adhering and hanging to the Surface that exhaled 'em, which they clothe, as it were, with a Fleece of vaporous Air; which once inveſting the Vapour, it thenceforwards riſes in much leſs Quantity. Whence, the Quantity of Water loſt in 24 Hours, when the Air was very ſtill from Winds, was very ſmall; in proportion to what went away when there was a ſtrong Gale of Wind Abroad to diſſipate the Fleece, and make Room for the Emiſſion of Vapour: And this, even tho' the Experiment was made in a Place as cloſe from the Wind as could be contrived.

Add, that this Fleece of Water hanging on the Surface of Waters in ſtill Weather, is the Occaſion of very ſtrange Appearances, by the Refraction of the Vapour's differing from, and exceeding that of common Air. Whence every Thing appears rais'd, as Houſes like Steeples, Ships as on Land above the Water, the Land rais'd, and as it were lifted from the Sea, *&c.*

4°. The ſame Experiments ſhew, that the *Evaporations* in *May*, *June*, *July*, and *Auguſt*, which are nearly equal, are about three Times as great as thoſe in the Months of *November*, *December*, *January*, and *February*.

EVAPORATION, in Pharmacy, an Operation by which the more aqueous and volatile Parts of Liquids are ſpent, or drove away in Steam; ſo as to leave the remaining Part ſtronger, or of a higher Conſiſtence than before.

*Evapo-*

*Evaporation* is properly the ſetting a Liquor over a gentle Heat, to carry off the moſt fluid and volatile Parts, without leſſening the Quantity of the other Matter the Liquor is impregnated withal.

*Evaporation* differs from Exhalation, in that the former is practiſed on moiſt Things, and the latter on dry. See EXHALATION.

To *Evaporate ad Cuticulam*, to a *Pellicle*. See CUTICULA and PELLICLE.

EVATES, a Branch, or Diviſion of our old Philoſophers the Druids. See DRUID.

*Strabo* diſtributes the Philoſophers among the *Britains* and *Gauls*, into three Sects. Βάρδοι, *Bards*, Οὐάτεις, *Evates*, and Δρυίδαι, *Druids*. He adds, that the *Bardi* were Poets and Muſicians; the *Evates*, Prieſts and Naturaliſts; and the *Druids*, Moraliſts as well as Naturaliſts.

But *Marcellinus*, Lib. 15. *Voſſius* Philoſ. Lect. l. 2. and *Hornius* Hiſt. Philoſoph. l. 2. c. 12. reduce 'em all to two Sects, *viz. Bardi* and *Druides*.

And, laſtly, *Cæſar*, lib. 6. comprehends 'em all under the Name of *Druids*.

The *Evates*, or *Vates*, of *Strabo*, might probably be what other Authors, and particularly *Ammian. Marcellin.* calls *Eubages*. But M. *Bouche*, in his *Hiſt. de Provence*, L. II. c. 2. diſtinguiſhes between 'em. The *Vates*, he ſays, were ſuch as took Care of the Sacrifices, and other Ceremonies of Religion; and the *Eubages*, thoſe who ſpent their Time in the Search and Contemplation of the great Myſteries of Nature. See EUBAGES.

EUBAGES, an Order of Prieſts, or Philoſophers, among the ancient *Celtæ* or *Gauls*.

*Chorier* takes the *Eubages* to be the ſame with the *Druids*, and *Saronidæ* of *Diodorus*: Others take the *Eubages* to be thoſe whom *Strabo* L. IV. p. 197. calls Οὐάτεις, *Evates*, or *Vates*: On which Principle there were Room to conjecture, that the Word ſhould be wrote Ουασεις; it being eaſy to miſtake a Γ for a T. See EVATES.

Be this as it will, the *Eubages* appear to have been different from the *Druids*. See what has been ſhewn under the Article DRUID.

EUCHARIST, *Euchariſtia*, the Sacrament of the Supper; or a Communication of the Body and Blood of *Chriſt*, under the Species, or Figures of Bread and Wine. See COMMUNION, SACRAMENT, SPECIES, TRANSUBSTANTIATION, CONSUBSTANTIATION, *&c.*

The Word in its Original *Greek*, Ευχαειστια, literally imports *Thankſgiving*; being form'd of ευ, *bene*, well, and χαεις, *gratia*, Thanks.

EUCHITES, or EUCHETES, a Sect of ancient Hereticks, thus call'd, by reaſon they pray'd without ceaſing; imagining that Prayer alone was ſufficient to ſave 'em. See PRAYER.

Their great Foundation, were thoſe Words of St. *Paul*, Epiſt. I. to the *Theſſalon.* C. 5. V. 17. *Pray without ceaſing.*

The Word is form'd of the *Greek*, Ευχὴ, *Prayer*; whence Ευχιται, the ſame with the Latin *Precatores*, Prayers. They were alſo call'd *Enthuſiaſts* and *Meſſalians*. See ENTHUSIAST.

St. *Cyril* of *Alexandria*, in one of his Letters, takes Occaſion to cenſure certain Monks in *Egypt*, who, under Pretence of reſigning 'emſelves wholly to Prayer, led a lazy, ſcandalous Life. The Orientals, however, lay a further Charge on the *Euchites*, or *Meſſalians*. See MESSALIANS.

EUCHOLOGUS, EUCHOLOGUE, a *Greek* Term, ſignifying, literally, a *Diſcourſe on Prayers*; being form'd of ευχὴ, *Prayers*, and λογος, *Diſcourſe*.

The *Euchologus* is properly the *Greek* Ritual, wherein is preſcribed the Order and Manner of every Thing relating to the Order and Adminiſtration of their Ceremonies, Sacraments, Ordinations, *&c.*

Fa. *Goar* has given us an Edition of the *Greek Euchologue* in *Greek* and *Latin*, with Notes, at *Paris*.

EUCHRASY, from ευ, *bene*, good, and χρασις, *Temperamentum*, Conſtitution, is an agreeable, well proportion'd Mixture of Qualities; whereby a Body is ſaid to be in good Order, that is, in a good State of Health. See TEMPERAMENT.

EUDOXIANS, a Party, or Sect of Hereticks, of the IV*th* Century; denominated from their Leader *Eudoxius*, Patriarch of *Alexandria* and *Conſtantinople*, a great Defender of the *Arian* Doctrine.

The *Eudoxians*, then, adhered to the Errors of the *Arians* and *Eunomians*; maintaining, that the Son was created out of Nothing; that he had a Will diſtinct and different from that of the Father, *&c.* See ARIANS and EUNOMIANS.

EVECTION, is uſed by ſome Aſtronomers for the *Libration* of the Moon. See LIBRATION.

EVEN *Number*, is that which may be divided into two equal Parts, or Moieties. See NUMBER.

EVENLY *even* Number, is which is exactly diviſible by an *Even* Number taken an *Even* Number of Times; ſuch is 32; ſince diviſible by eight, taken four Times.

EVENLY *odd*, is that which an *Even* Number meaſures by an *Odd* one; as 30, which is meaſured by 6, taken five Times.

EVERGETES, a *Greek* Term, ſignifying *Benefactor*; being form'd of ευ, *bene*, well, and ἔργον, *opus*, Work.

It is ſtill retain'd in our Language, by Way of Addition, or Epithet, given to ſeveral Princes, or Kings of *Syria* and *Egypt*, who ſucceeded *Alexander*. Thus we ſay, *Ptolomy Evergetes* King of *Egypt*; *Antiochus Evergetes* King of *Syria* aſcended the Throne 139 Years before *Chriſt*.

EVER-GREENS, or *Perennials*, ſuch Plants as continue their Verdure, Leaves, *&c.* all the Year. See PLANT, *&c.*

Of theſe, our Gardeners reckon twelve, fit for *Engliſh* Air, *viz.* the *Alaternus*, *Arbutus*, *Bay-Tree*, *Box-Tree*, *Holley*, *Juniper*, *Laurus tinus*, *Phylirea*, *Pyracantha*, or *Ever-green Thorn*, *Italian green Privet*, and the *Yew-Tree*.

EVIDENCE, a Quality in Things whereby they become viſible and apparent to the Eyes, either of the Body, or the Mind. See KNOWLEDGE.

The Schoolmen diſtinguiſh *Evidence*, into *formal* and *objective*.

Formal *Evidence*, is the Act of the Intellect, conſider'd as clear and diſtinct.

Objective *Evidence*, conſiſts in the Clearneſs and Perſpicuity of the Object; or it is the Object it ſelf, ſo conſtituted, as that it may be clearly and diſtinctly known.

Others divide *Evidence* into *Moral*, *Phyſical*, and *Metaphyſical*.

A Thing is ſaid to be *morally Evident*, ſo far as I have a diſtinct Notion, or Knowledge thereof, by unexceptionable Witneſſes. *Phyſically*, ſo far as natural Senſe and Reaſon pointing out any Thing, convinces one thereof. *Metaphyſically*, when I enter ſo fully and clearly into the Eſſence of any Thing, that nothing can be clearer.

*Evidence*, is the eſſential and infallible Character, or Criterion of Truth; and is that, in Effect, which with us conſtitutes Truth. See TRUTH.

If *Evidence* ſhould be found in Propoſitions that are falſe, we ſhou'd be compell'd into Error; ſince the Aſſent we give to *Evidence* is neceſſary. Whence wou'd follow this impious Poſition, that God who made us, is the Author of our Errors, as he has conſtituted us ſo, as to put us under a Neceſſity of falling into 'em. See ERROR.

It may be added, that as we neceſſarily love Truth, and hate Error, it ſeems inconſiſtent with the Nature of a beneficent Being, to form us with a Love of what we could not obtain, or not know whether we did obtain it or not: Beſide that, if we ſhould err in Things that are *Evident*, as well as in thoſe that are not ſo, we ſhould ſometimes find Contradictions in *Evident* Propoſitions, as we commonly do in Things that are obſcure.

*Evidence* therefore muſt be allow'd the Mark of Truth; and thoſe Things muſt be allow'd true, which carry with 'em ſuch a Degree of *Evidence*, as obliges us to aſſent to 'em. Whatever we ſee *Evidently* agreeable to the Things whereof we ſpeak, that we muſt acknowledge to be true. See FAITH, OPINION, VERISIMILITUDE, *&c.*

The *Epicureans* allow of no other *Evidence* but that of Senſe; or that ariſing from Senſe, (it being a fundamental with them, that Senſe is the firſt and primary Criterion of all Truth) See FALSHOOD and FALLACY.

By *Evidence* of Senſe, they mean that Species, or Image, exhibited by the Senſe, or Phantaſie; which, when all Impediments to a juſt judging, as Diſtance, Motion, Medium, *&c.* being removed, cannot be contradicted, or gain-ſay'd. Wherefore, the Queſtion being put, whether or no a Thing be ſuch as it appears; the Anſwer is not to be given, till it have been tried and examined all the Ways, and by all the Senſes that it can be an Object of. See SENSE, CRITERION, EPICUREANS, *&c.*

EVIDENCE, in Law, is any Proof, be it Teſtimony of Men, Records, or Writings: It is thus call'd, becauſe the Point in Iſſue is hereby made *Evident* to the Jury. See TESTIMONY, WITNESS, *&c.*

Sir *Tho. Smith* reſtrains *Evidence* to authentic Writings of Contracts, written, ſeal'd, and deliver'd. *De Rep. Angl.* Lib. II.

EVIL, *Malum*, in Ethicks, a Privation, or Abſence of ſome proper, or neceſſary Good; or ſome due Meaſure, or Degree thereof. See GOOD.

The Schoolmen deny, that any thing is every way *Evil*; and reſtrain all *Evil*, to be only ſo, *quoad hoc*;

as the Thing wants this, or that Degree of a certain Quality, neceſſary to conſtitute it, in that reſpect, good. There is nothing *Evil*, ſay they, without ſome Good in it wherein the *Evil* reſides as in its Subject; for, as it is a Being, and as every Being depends on the Supreme Being, it cannot but be good, as flowing from the Supreme Good.

*Evil* is either Natural or Moral; between which there is this Relation, that Moral *Evil* produces Natural.

*Moral* Evil, is defined a Deviation from right Reaſon, and conſequently from the Will and Intendment of the Great Legiſlator, who gave us that as a Rule: This the Philoſophers call *Inhoneſtum* and *turpe*, as ſtaining the Image of God, and ſullying our original Beauty; likewiſe *malum culpæ*.

*Natural* Evil, is a Want of ſomething neceſſary to the *bene eſſe*, or Perfection of a Thing, or to its anſwering all its Purpoſes. Such are Defects of the Body, Blindneſs, Lameneſs, Hunger, Diſeaſes, Death.

This Species of *Evil* is denominated *triſte*, *injucundum*, *noxium*; and *malum pœnæ*.

Again, *Evil* is either ſuch *in it ſelf*, as Envy, Impiety, *&c.* or, *to another*; as Meat, which in it ſelf is good, may be *Evil* to a Man on Account of ſome Diſeaſe; as Wine to a Feveriſh Perſon, *&c.*

Thus far the Schools have gone in the Nature and Reaſon of Moral and Natural *Evil:* A late excellent Author ſets the Thing in another Light, and furniſhes a much finer, more adequate Theory of Moral Good and *Evil. Inquir. into the Origin of our Idea's of Beauty and Virtue.*

*Moral* Evil, according to this Philoſopher, denotes our Idea of a Quality apprehended in Actions which excite Averſion and Diſlike towards the Actor, even from Perſons who receive no Diſadvantage thereby: As Moral Goodneſs denotes our Idea of a contrary Quality which procures Approbation and Love towards the Actor, even in Perſons unconcern'd in its natural Tendency.

This Notion ſuppoſes an univerſally acknowledged Difference of Moral Good and *Evil*, from Natural. Moral Good, we all know, procures Love towards thoſe we apprehend poſſeſs'd of it: Whereas Natural Good does not. How differently, for inſtance, are we affected towards thoſe we ſuppoſe poſſeſs'd of Honeſty, Faith, Generoſity, *&c.* when we expect no Benefit from thoſe Qualities: And thoſe poſſeſs'd of the natural Goods, as Houſes, Lands, Gardens, Health, Strength, *&c.* So, whatever Quality we apprehend morally *Evil*, raiſes our Hatred towards the Perſon in whom we obſerve it; as Treachery, Cruelty, Ingratitude, *&c.* Whereas we love and pity many expoſed to natural *Evils*, as Pain, Hunger, Sickneſs, *&c.*

The Origin of theſe different Idea's of Actions, has greatly puzzled the Moraliſts: The Generality make Self-Intereſt, or Self-Love, the Source of 'em all: We approve the Virtue of others, as it has ſome ſmall Tendency to our Happineſs, either from its own Nature, or from this general Conſideration, that a Conformity to Nature and Reaſon is in the general advantageous to the whole, and to us in particular: And, on the contrary, diſapprove the Vice of others, as tending at the long Run to our particular Detriment.

Others ſuppoſe an *immediate natural Evil*, in the Actions call'd *Vicious*; that is, that we are determined to perceive ſome Deformity or Diſpleaſure from ſuch Actions, without reflecting on any Diſadvantage that may any way redound to us from the Action; and that we have a ſecret Senſe of Pleaſure accompanying ſuch of our own Actions as are call'd virtuous, when we expect no further Advantage from 'em: But then they add, that we are excited to perform thoſe Actions, even as we purſue or purchaſe Pictures, Statues, Landskips, *&c.* from Self-Intereſt, to obtain the Pleaſure which accompanies the Action.

But the Author juſt mention'd has ſhewn the Miſtake: Some Actions, he proves, have to Men an immediate Goodneſs, and others an *immediate Evil*, i. e. We perceive Pleaſure in ſome, and Pain in others, and are determined to love, or hate the Doers, without any View of natural Advantage, without any View to future Rewards or Puniſhments, or even without any Intention to obtain the ſenſible Pleaſure of the Good; but from a very different Principle, *viz.* an internal moral Senſe, or a natural Determination of the Mind, to receive amiable, or diſagreeable Idea's of Actions, when they ſhall occur to our Obſervation, antecedently to any Opinions of Advantage or Loſs to redound to our ſelves from 'em; even as we are pleas'd with a regular Form, or an harmonious Compoſition, without any Knowledge of Mathematicks, or ſeeing any Advantage in that Form or Compoſition, different from the immediate Pleaſure. See Sense, Good, Virtue and Vice, Benevolence.

Evil, or *Kings*-Evil, in Medicine, a Diſeaſe by the Phyſicians call'd *Strumæ*, and *Scrophulæ*, conſiſting of ſcirrhous Tumours, ariſing moſt commonly about the Neck, but ſometimes alſo on the other glandulous Parts, as the Breaſts, Arm-pits, Groin, *&c.* See Strumæ and Scrophulæ.

The Kings of *England* and *France*, have, of a long Time, pretended to the Privilege of Curing the *Kings-Evil* by *Touching*. See Touching.

The Right, or Faculty, 'tis ſaid by ſome, was originally inherent in the *French* Kings; and thoſe of *England* only claim'd it, as an Appendage, or Appurtenant to that Crown, to which they laid a Claim. Tho' ſome of our own Monkiſh Writers ſet the Thing on a different Footing; and will have it to have been practiſed by our Kings, as early as *Edward the Confeſſor*; which Opinion the ingenious Mr. *Becket* has abundantly overthrown.

*Raout de Pruelles*, addreſſing his Tranſlation of St. *Auguſtin*, *de Civitate Dei*, to *Charles* V. of *France*, ſays expreſly, *Vos Devanciers, & vous avez telle Vertu & Puiſſance que vous eſt donnee & attribuee de Dieu que vous faites Miracles en votre Vie, telles, ſi grandes & ſi apertes que vous Gariſſes d'une tres horrible Maladie ques' appelle* les Eſcrouelles [*i. e.* the Kings-Evil] *de laquelle nul autre Prince terrien ne peut garir hors vous.*

*Steven de Conti*, a Religious of *Corbie*, who lived in the Year 1400, and wrote a Hiſtory of *France* ſtill preſerved in MS. in the Library of St. *Germains des prez*, deſcribes the Practice of Touching for the *Evil*. After the King had heard Maſs, a Veſſel of Water was brought him, and his Majeſty having put up his Prayers before the Altar, *touch'd* the diſeaſed Part with his right Hand, and waſh'd it with the Water.

*Matthew Paris* will have S. *Louis* the firſt who practiſed it: Others contend, that King *Robert* was the firſt who was gifted this Way. 'Tis certain, we find no mention of any ſuch Prerogative, before the Kings of the 11*th* Century, when that Prince reign'd. Fa. *Daniel*, Hiſt. *de France*, T. I. *p.* 1032.

*Polydore Virgil* ſtrains hard to prove the ſame Virtue in the Kings of *England*; but to little Purpoſe. *Favyn Hiſt. de Navarre*, 1062.

The Continuer of *Monſtrelet*, obſerves, that *Charles* VIII. touch'd ſeveral Sick Perſons at *Rome*, and cured 'em, *dont ceux des Italies*, ſays he, *voyant ce Myſtere ne furent onques ſi emerveillez.*

The ſame Virtue, we know not on what Grounds, is commonly attributed to a Seventh Son, born without any Daughter between: As alſo to the Chiefs of certain particular Families; particularly, the Eldeſt Perſon of the Houſe of *Aumont* in *Burgundy*.

EULOGY, Eulogia, in Church-Hiſtory. — When the *Greeks* have cut a Loaf, or Piece of Bread, to conſecrate it, they break the reſt into little Bits, and diſtribute it among the Perſons who have not yet communicated, or ſend it to Perſons that are abſent; and theſe Pieces of Bread are what they call *Eulogies*.

The *Latin* Church has had ſomething of the like Kind, of a great many Ages; and 'twas thence aroſe the Uſe of their Holy Bread.

The Name *Eulogy*, was likewiſe given to Loaves, or Cakes, brought to Church by the Faithful, to have them bleſs'd.

Laſtly, the Uſe of the Term, paſs'd hence to mere Preſents made a Perſon, without any Benediction. See the Jeſuit *Gretſer*, in his Treatiſe *de Benedictionibus & Maledictionibus*, L. II. C. 24, 25, *&c.* where he treats of *Eulogies* throughly.

From a Paſſage in *Bollandus*, on the Life of S. *Melaine*, C. 4. it appears, that *Eulogies* were not only of Bread, but any Kinds of Meats bleſs'd and hallowed for that Purpoſe. Add, that almoſt every body bleſs'd and diſtributed *Eulogies:* Not only Biſhops and Prieſts, but even Hermits, tho' Laymen, made a Practice of it. Women alſo would ſometimes ſend *Eulogies*, as appears from the Life of S. *Waulry*, C. III. n. 14. in the *Bollandiſts. Acta Sanct. Jan.* T. I. p. 20.

The Wine ſent as a Preſent, was alſo held an *Eulogy*. *Bollandus* remarks further, that the Euchariſt it ſelf was call'd *Eulogy. Act. Sanct. Jan.* T. II. p. 199.

The Word is *Greek*, Ευλογια, form'd of ευ, *bene*, well; and λέγω, *dico*, I ſay, ſpeak, q. d. *Benedictum*.

EUNOMIANS, a Sect of Hereticks, denominated from *Eunomius*, Biſhop of *Cyzicus*, who, in the IV*th* Century, maintain'd moſt of the Errors of *Arius*, and added others to 'em; as, particularly, that he knew God, as well as God knew himſelf. See Arians.

He re-baptized ſuch as had already been baptized in the Name of the Trinity: He had diſſembled his Errors for ſome Time, but having at length made a Diſcovery, he was expell'd his See.

The *Arians* endeavour'd to have put him into that of *Samosata*, but could not effect it: In lieu thereof, the Emperor *Valens* restored him to *Cyzicus*.

EUNOMIOEUPSYCHIANS, a Sect of Hereticks of the IV*th* Century. See HERESY.

The *Eunomioeupsychians*, mention'd by *Nicephorus*, L. XII. C. 30. are the same with those call'd *Eutychians* by *Sozomen*, L. VII. C. 17. The Author whereof, according to *Sozomen*, was an *Eunomian*, named *Eutychus*, and not *Eupsychius*, as *Nicephorus* has it: And yet this latter Writer only copies *Sozomen* in this Passage; so that it is past doubt, they both speak of the same Sect. But on whose Side the Error lies, is not easy to decide: *Valesius* durst not undertake to shew it; but contented himself to mark the Difference in his Notes on *Sozomen*, as Fa. *Fronton* has done on *Nicephorus*.

EUNUCH, EUNUCHUS, a Term applied, in the general, to all who have not the Faculty of Generating, either thro' Imbecility, or Frigidity; but particularly to such as have been *castrated*, or have lost the Parts necessary thereto. See CASTRATION.

In *England*, *France*, &c. *Eunuchs* are never made but on Occasion of some Diseases, which render such an Operation necessary; but in *Italy*, they make *Eunuchs*, for the Sake of preserving the Voice; and, in the *East*, they make *Eunuchs* to be Guards, or Attendants on their Women.

Great Numbers of Children, from one to three Years of Age, are yearly castrated in *Italy*, to supply the Opera's and Theaters, not only of *Italy*, but other Parts of *Europe*, with Singers: Tho' 'tis not one in three, that after having lost their Virility, have a good Voice for a Recompence.

*Tavernier* assures us, that in the Kingdom of *Boutan* in the *East-Indies*, there are every Year made Twenty Thousand *Eunuchs*, and sold thence into other Countries.

The Seraglio's of the *Eastern* Emperors, are chiefly serv'd, and guarded by *Eunuchs*. And yet we have very good Testimonies, that the rich *Eunuchs* in *Persia* and other Countries, keep Seraglio's for their own Use.

By an Arret of the grand Chamber of *Paris* in 1665, it is adjudged, that an *Eunuch* could not marry, not even with the Consent of the Woman and all the Parties on both Sides.

*Claudian* has a very severe Satyr against the *Eunuch Eutropius*, who had been Elected Consul of *Rome*. He represents him as an old Woman, dress'd up in the Honours of the Consulate.

The Story of *Origen* is notorious: That learned and pious Father, upon a too literal Interpretation of that Passage in St. *Matthew*, C. XIX. ver. 12. where mention is made of, *Eunuchs so born from their Mothers Womb*; ---- *Eunuchs who were made so of Men*; --- *And Eunuchs who made themselves Eunuchs for the Kingdom of Heaven:* Castrated himself.

In the Council of *Nice*, those were condemned, who, out of an indiscreet Zeal and to guard themselves from sensual Pleasures, should make 'emselves *Eunuchs:* Such as thus mutilated their Bodies, were excluded from Holy Orders; witness *Leontius* Bishop of *Antioch*, who was deposed for having practised this Cruelty on himself. And the Bishop of *Alexandria* excommunicated two Monks, who had follow'd his Example on Pretence of securing 'emselves from the impetuous Motions of Concupiscence. Several of the Emperors made very severe Prohibitions against the making of *Eunuchs*, or castrating one's self.

The Word is derived from the *Greek*, εὐνοῦχος, *Eunuch*; form'd of εὐνὴν ἔχει, *Lecti curam habet*, q. d. *Guardian*, or *Keeper of the Bed*.

In the III*d* Century, there was even a Sect of Hereticks form'd, call'd *Eunuchs*, *Eunuchi*; as having the Folly or Madness, to castrate not only those of their own Persuasion, but even all they could lay Hands on. They took their Rise from the Example of *Origen*, who, upon a Misunderstanding of our Saviour's Words in St. *Matthew*, made himself an *Eunuch*, by cutting off the Part, as some say; or, as others, particularly S. *Epiphanius*, Hæres. 58. by the Use of certain Medicines. These Hereticks were also call'd *Valesians*. See VALESIANS.

EVOLVENT, in Geometry, a Term some Writers use for the Curve resulting from the *Evolution* of a Curve; in Contra-distinction to the *Evolute*, which is the first Curve supposed to be open'd, or *Evolved*. See EVOLUTE.

The *Evolute* always both touches and cuts the *Evolvent* at the same Time: The Reason is, that it has two of its infinitely small Sides in common with the *Evolvent*, or rather exactly placed on two equal Sides thereof. One of 'em withinside that of the *Evolvent*, i. e. on the concave Side thereof; and the other, on the convex Side of its correspondent Side: So that the *Evolute* touches the *Evolvent* in two Points; whence, instead of being a Tangent, it is said to *Osculate* the *Evolvent*, and hence it is also call'd *Osculator*, and *Circulus Osculator*. See OSCULUM.

There is one, and but one *Osculator*, to each Point of the *Evolvent*; but to the same Point there are an Infinity of other Circles, which only touch, and don't Osculate. The *Osculator* and the *Evolute* make no Angle in the Place where they touch and cut: Nor can any Curve Line be drawn between; as there may betwixt a Tangent and a Curve. See *Angle of* CONTACT.

EVOLUTE, EVOLUTA, in the higher Geometry, a Curve, first proposed by Mr. *Huygens*; and since, much studied by the later Mathematicians. See CURVE.

The *Evolute* is a Curve, supposed to be *evolved*, or open'd; and which in opening, describes other Curves.

To conceive its Origin and Formation the better; suppose a flexible Thread, wound exactly over the Convexity of any Curve, as A B C G, (*Tab. Geometry Fig.* 20.) and suppose the Thread fix'd in G, and every where else at Liberty, to A. Now, beginning to unwind the Thread from the Point, and continuing it to G, and throughout keeping it tight on the Curve Surface A B C G; when the Thread is become quite straight, and is only a Tangent, F G, to the Curve in the Point G; 'tis evident the Extremity A, in its Progress to G, has described another Curve Line A D E F.

Here, the first Curve A B C G is call'd the *Evolute:* Each of its Tangents B D, C E, *&c.* comprehended between it, and the Curve A D E F, is call'd a *Radius of the Evolute*; or *Radius Osculi*, or *Radius Osculator* of the Curve A D E F, in each Point D, E, *&c.* And the Circles whereof the Osculators B D, C E, *&c.* are *Radii*, are call'd *Circuli Osculatores* of the Curve A D E F, in D, E, *&c.* And lastly, the new Curve, resulting from the *Evolution* of the first Curve, begun in A, is call'd the *Curve of Evolution*, or *Curve described by the Evolution.*

*The Radius of the* EVOLUTE, then, is the Part of the Thread comprized between any Point where it is a Tangent to the *Evolute*, and the correspondent Point, where it terminates on the new Curve. Which Appellation *Radius* is the more proper, as one may actually consider this Part of the Thread in every Step it takes, as if it described an Arch of an infinitely small Circle, making a Part of the new Curve, which thus consists of an infinite Number of such Arches, all described from different Centres and different *Radii*.

Every Curve, therefore, may be conceiv'd as form'd by the *Evolution* of another. And we are to find that whose Evolution that form'd it, which amounts to the finding of the Radius of the *Evoluta* in any Point. For, as it is always a Tangent to the generating Curve, it is properly no more than one of its infinitely small Parts, or Sides prolonged; and all its Sides, whose Position is determined of Course, is no more than the generating Curve it self.

The same Thread is also called *Radius Curvedinis*, or *Radius Osculi*, by Reason a Circle described hereby, from the Centre C, is said to *Osculate* or kiss it; as both touching and cutting at the same Time, *i. e.* touching both the inside and the out. See OSCULATION.

Hence, 1°. The *Evolute* B C F, (*Fig.* 21.) is the Place of all the Centres of the Circle that *Osculate* the Curve described by the Evolution A M I. 2°. When the Point B, falls on A, the Radius of the *Evolute* M C, is equal to the Arch B C; or to the Aggregate of A B, and the Arch B C. 3°. Since the Element of the Arch M m, in the Curve described by Evolution, is an Arch of a Circle described by the Radius C M; the Radius of the *Evolute* C M is perpendicular to the Curve A I. 4°. Since the Radius of the *Evolute* M C, is always a Tangent to the *Evolute* B C F; Curves of Evolution may be described thro' innumerable Points, if only Tangents be produced in the several Points of the *Evolute*, till they become equal to their correspondent Arches.

The finding of the *Radii of Evolutes*, is a Thing of great Importance in the higher Speculations of Geometry; and even, sometimes, is of Use in Practice, as the Inventor of the whole Theory, *Huygens*, has shewn in applying it to the Pendulum. *Horol. Oscill.* Part III. — The Doctrine of the *Oscula of Evolutes*, is owing to M. *Leibnitz*; who first shewed the Use of *Evolutes* in the measuring of Curves.

To find the Radius of the *Evolute* in the divers Kinds of Curves, with Equations to the *Evolutes*. See *Wolf. Elem. Math.* Tom. I. *p.* 524, &c. *sequent.* Or the *Infinim. Petites of Monf. le Marquis de l' Hôpital.*

Since, the Radius of an *Evolute* is equal to an Arch of an *Evolute*, or exceeds it by some given Quantity; all the Arches of *Evolutes* may be rectified geometrically, whose *Radii* may be exhibited by geometrical Constructions; whence we see why an Arch of a Cycloid is

double

double its Chord: The Radius of the *Evolute* being double the ſame; and the *Evolute* of a Cycloid, being it ſelf a Cycloid. See RECTIFICATION, CYCLOID, *&c.*

Monſ. *Varignon* has applied the Doctrine of the Radius of the *Evolute* to that of Central Forces; ſo that having the Radius of the *Evolute* of any Curve; one may have the Value of the Central Force of a Body which moving in that Curve, is found in the ſame Point where that Ray terminates: Or reciprocally, having the Central Force given, the Radius of the *Evolute* may be determined. *Hiſt. de l' Acad. Roy. des Sciences.* An. 1706.

*Imperfect* EVOLUTE. Monſ. *Reaumur* has given a new Kind of *Evolute* under this Denomination. Hitherto, the Mathematicians had only conſider'd the Perpendiculars let fall on the Points of the Convex Side of the Curve: If other Lines, not perpendicular, were drawn upon the ſame Points, provided they were all drawn under the ſame Angle, the Effect would be the ſame; that is, the oblique Lines would all interſect within the Curve, and by their Interſections, form the infinitely ſmall Sides of a new Curve, whereof they would be ſo many Tangents.

This Curve would be a Sort of *Epicycloid*, and would have its Radii; but, an *imperfect* one, ſince the Radii are not perpendicular to the firſt Curve. *Hiſt. de l'Acad.* &c. *An.* 1709.

EVOLUTION, in Geometry, the unfolding, or opening, of a Curve, and making it deſcribe an *Evolute*.

For the Nature of *Evolution*. See EVOLUTA.

The Equable *Evolution* of the Periphery of a Circle, or other Curve, is ſuch a gradual Approach of the Circumference to Rectitude, as that all its Parts do meet together, and equally evolve, or unbend; ſo that the ſame Line becomes ſucceſſively a leſs Arc, of a reciprocally greater Circle, till at laſt they change into a ſtraight Line. In *Philoſ. Tranſact.* N°. 260. a new Quadratrix to the the Circle, is found by this Means, being the Curve deſcribed by the equable *Evolution* of its Periphery.

EVOLUTION is alſo uſed for the Extraction of Roots out of Powers, in which Senſe it is directly contrary to *Involution*. See EXTRACTION.

EVOLUTION, in the Art of War, is a Term applied to the divers Figures, Turns, and Motions, made by a Body of Soldiers, in ranging them in Form of Battle, or in changing their Form; either in the Way of Exerciſe, or when in actual Engagement.

'Tis by the *Evolutions*, that the Form, and Poſture of a Batallion, Squadron, *&c.* are changed; either to make good the Ground they are upon, or to poſſeſs themſelves of another, that they may attack the Enemy, or receive an Onſet more advantageouſly.

The *Military Evolutions*, are *Converſions*, *Countermarches*, or *Wheelings*, *Doublings* of Rank or File, *&c.* See CONVERSION, *&c.*

Fa. *Hoſte*, a Jeſuite in 1697, printed a Treatiſe of *Naval Evolutions*, in Folio: —By *Naval Evolutions*, he means the Motions made by a Fleet, Squadron, or Naval Armament, in order to put themſelves into a proper Arrangement, or Situation, for attacking the Enemy, or defending themſelves with the moſt Advantage.

The Word is Latin, *Evolutio*, form'd of the Prepoſition *e*, out, and *volvo*, I roll or wind, *q. d.* an *unwinding*, or *unrolling*.

EUPHONY, EUPHONIA, in Grammar, an Eaſineſs, Smoothneſs, and Elegancy of Pronunciation. See PRONUNCIATION.

The Word is *Greek*, form'd of εὖ, *bene*, well; and φωνὴ, *Vox*, Voice.

*Quintilian* calls the *Euphonia*, *Vocalitas*; Scaliger, *facilis pronunciatio*.

The *Euphonia* is properly a Kind of Figure, whereby we ſuppreſs a too harſh Letter, or convert it into a ſmoother, contrary to the ordinary Rules. There are Examples enough in all Languages.

EUPHORBIUM, or EUPHORBIA, in Pharmacy, a Kind of Gum, brought from *Africa*, in little roundiſh Pieces, whitiſh when new, and yellowiſh when old, very ſharp to the Taſte, but void of Smell. See GUM.

The principal Uſe of *Euphorbium*, is external; being a great Ingredient in divers reſolutive Plaſters, as well as in Tincture, and Powder for ſtopping of Gangrenes, cleanſing of foul Ulcers, and exfoliating carious Bones.

Internally uſed, 'tis a Purgative, but ſo violent a one, that 'tis almoſt out of Doors, as tearing off the neceſſary Mucus or Covering of the Stomach and Bowels, and occaſioning Dyſenteries. Yet we are told the *Africans* uſe it very commonly; tho' they firſt quench its Fire in Purſlain Water.

Its Powder is a violent Sternutatory, and to be uſed very cautiouſly, and never alone, but mix'd with a ſmall Quantity of ſome other Powder, to guard againſt its intolerable Heat.

The Gum we call *Euphorbium*, is form'd of the Juice of a Tree, or rather Plant, of the ſame Name, pretty frequent in *Mauritania*; tho' the Species of the Tree, or Plant, has been greatly controverted. The Generality of our lateſt Botaniſts, make it a ferulaceous Plant; and Mr. Profeſſor *Hermannus* calls it the *Tithymalus Mauritanus Aphyſios Anguloſus & Spinoſus*. Hort. *Acad. Lug. Batav.* 598.

It has no Leaves; but in Lieu thereof puts forth along its Stem a Kind of long prickly Eyes, or Buds. Which Buds, it is, that yield that gummy Juice, call'd *Euphorbium Officinarum*.

Some Authors will have it, that the Gum is drawn from the Plant by Inciſion; others, on the contrary, ſay it oozes ſpontaneouſly: The Juice, we are told, is ſo very ſubtile, and penetrating, that the Perſon who taps the Tree, is forced to ſtand at a good Diſtance, and make the Inciſion with a long Pike; otherways it gets to the Brain, and occaſions dangerous Inflammations. It oozes out in great Abundance, and is gather'd in a Sheep's Skin, wrapp'd round the Tree.

*Pliny* tells us, that the firſt Diſcovery of *Euphorbium* is attributed to *Juba* King of *Lybia*, who denominated it from *Euphorbius* his Phyſician, Brother of *Muſa*, Phyſician to *Auguſtus*.

*Etmuller* aſſures us, that the Plant, which yielded the *Euphorbium* of the Antients, is now unknown to us; but if we go by *Pliny*'s Deſcription, the Plant call'd *Schadida Calli* in the *Hortus Malabaricus*, muſt be the antient *Euphorbium*. This Diſcovery is owing to *Commelinus*, Bourguemaiſter of *Amſterdam*, and Profeſſor of Botany.

EUPHORY, ſignifies the ſame as *Euchraſy*. See EUCHRASY.

EUPSYCHIANS. See EUNOMIOEUPSYCHIANS.

EURIPUS, in Hydrography: The Word, originally and properly, ſignifies a certain Streight of the Sea, between *Bœtia*, and the *Negropont*; where the Currents are ſo ſtrong, that the Sea is ſaid to Ebb and flow ſeven Times a Day; in which Place, as the Story commonly goes, *Ariſtotle* drown'd himſelf, out of Chagrin, for not being able to account for ſo unuſual a Motion.

But *Euripus* has ſince become a general Name for all Streights, where the Water is in great Motion and Agitation.

The antient Circus's had their *Euripi*, which were no other than Pits, or Ditches, on each Side the Courſe; into which it was very dangerous falling with their Horſes and Chariots, as they run their Races.

The Term was alſo applied by the *Romans*, in Particular, to three Canals, or Ditches, which encompaſſed the Circus on three Sides; and which were fill'd occaſionally, to repreſent *Naumachia*, or Sea Battles.

The ſame People call'd their ſmalleſt Fountains, or *Jets d' Eau*, Canals in their Gardens, *Euripus's*; and their largeſt, as Caſcades, *&c.* Niles.

The Word is derived from the *Greek*, εὖ, *facilé*, eaſily, and εἰπτεσθαι, *præcipitari*.

EURUS,
EURO-*Auſter*. } See WINDS.
EURO-*Notus*.

EURYTHMY, EURYTHMIA, in Architecture, Painting, and Sculpture; a certain Majeſty, Elegance, and Eaſineſs appearing in the Compoſition of divers Members, or Parts of a Body, Building, or Painting; and reſulting from the fine Proportions thereof. See PROPORTION.

The Word is *Greek*, and ſignifies literally a Conſonance, or fine Agreement, or as we may call it, a Harmony of all the Parts; being compounded of εὖ, *well*, and ῥυθμὸς, *Rythmus*, a Cadence, or Agreement of Numbers, Sounds, or the like Things. See RYTHMUS.

*Vitruvius* ranks the *Eurythmia* among the eſſential Parts of Architecture: He deſcribes it as conſiſting in the Beauty of the Conſtruction, or Aſſemblage of the ſeveral Parts of the Work, which render its Aſpect, or whole Appearance graceful: *E. gr.* when the Height correſponds to the Breadth, and the Breadth to the Length, *&c.*

'From theſe three Ideas, (or *Deſigns*, viz. *Orthography*, '*Scenography*, and *Profile*) it is, that the ſame *Eurythmy*, '*Majeſtica*, and *Venuſta Species Edificii*, does Reſult; 'which creates that agreeable Harmony between the ſe-'veral Dimenſions; ſo as nothing ſeems diſproportionate, 'too long for this, or too broad for that, but correſponds 'in a juſt and regular Symmetry, and Conſent of all the 'Parts with the whole.' *Evelyn*'s *Account of Archit.* &c. See SYMMETRY.

EUSEBIANS, a Denomination given to the Sect of *Arians*, on Account of the Favour and Countenance, which *Euſebius* Biſhop of *Cæſarea* ſhew'd, and procured for them at their firſt Riſe. See ARIANS.

EUSTA-

EUSTATHIANS, a Name given to the Catholicks of *Antioch*, in the IVth Century; on Occaſion of their Refuſal to acknowledge any other Biſhop beſide S. *Euſtathius*, depoſed by the *Arians*.

The Denomination was given them during the Regency of *Paulinus*, whom the *Arians* ſubſtituted to S. *Euſtathius*, about the Year 330, when they began to hold their Aſſemblies apart.

About the Year 350, *Leontius* of *Phrygia*, call'd the *Eunuch*, who was an *Arian*, and was put in the See of *Antioch*, deſired the *Euſtathians* to perform their Service in that Church; which they accepting, the Church of *Antioch* ſerv'd indifferently both the *Arians* and *Catholicks*.

This, we are told, gave Occaſion to two Inſtitutions, which have ſubſiſted in the Church ever ſince: The firſt was Pſalmody in two Choirs; but, M. *Baillet* thinks, that if they inſtituted an alternate Pſalmody between two Choirs, 'twas between two *Catholic* Choirs; and not by Way of Reſponſe to an *Arian* Choir. The ſecond was the Doxology, *Glory be to the Father, and the Son, and the Holy Ghoſt*. See DOXOLOGY.

This Conduct, which ſeem'd to imply a Kind of Communion with the *Arians*, gave great Offence to Abundance of Catholicks, who began to hold ſeparate Meetings; and thus form'd the Schiſm of *Antioch*. Upon this, the reſt, who continu'd to meet in the Church, ceas'd to be call'd *Euſtathians*, and that Appellation became reſtrain'd to the Diſſenting Party.

S. *Flavianus*, Biſhop of *Antioch* in 381, and one of his Succeſſors, *Alexander* in 482, brought to paſs a Coalition, or Re-union, between the *Euſtathians* and the Body of the Church of *Antioch*, deſcribed with much Solemnity by *Theodoret*, Eccl. *L.* III. *C.* 2.

EUSTATHIANS, was alſo a Sect of Hereticks, in the IVth Century; denominated from their Author *Euſtathius*, a Monk ſo fooliſhly fond of his own Profeſſion, that he condemn'd all other Conditions of Life.

He excluded married People from Salvation; prohibited his Followers from praying in their Houſes; and obliged them to quit all they had, as incompatible with the Hopes of Heaven.

He drew them out of the other Aſſemblies of the faithful, to hold ſecret ones with him; and made them wear a particular Habit: He appointed them to faſt on *Sundays*; and taught them that the ordinary Faſts of the Church were needleſs, after they had attained to a certain Degree of Purity, which he pretended to. He ſhew'd a World of Horror for Chappels built in Honour of Martyrs, and the Aſſemblies held therein.

Several Women, ſeduced by his Reaſons, forſook their Husbands, and Abundance of Slaves deſerted their Maſters Houſes. He was condemn'd in the Year 342, at the Council of *Gangres*, in *Paphlagonia*.

EUSTYLE, in Architecture, a Kind of Edifice, where the Pillars are placed at a moſt convenient Diſtance one from another; the Intercolumniations being all juſt two Diameters and a Quarter of the Column; except thoſe in the middle of the Face before and behind, which are three Diameters diſtant. See INTERCOLUMNIATION.

The *Euſtyle* is a Medium between the *Pycnoſtyle* and *Araeoſtyle*. See PYCNOSTYLE, *&c.*

The Word is *Greek*, being form'd of εὖ, *bene*, well, and στύλος, *Column*.

*Vitruvius*, L. III. *C.* 2. obſerves, that the *Euſtyle* is the moſt approved of all the Manners of Intercolumniation; and that it ſurpaſſes all the reſt, in Conveniency, Beauty, and Strength.

EUTYCHIANS, ancient Hereticks, denominated from *Eutyches* the Archimandrite, or Abbot of a Monaſtery at *Conſtantinople*. See HERETIC.

The Averſion *Eutyches* bore to the Hereſy of *Neſtorius*, threw him into another Extreme, not leſs dangerous than that he ſo warmly oppoſed; tho' ſome Paſſages in St. *Cyril*, which rais'd the Unity of the Perſon of *Jeſus Chriſt* very high, contributed, likewiſe, to his Deluſion.

At firſt he held, that the *Logos*, Word, brought his Body down with him from Heaven: which was a near Approach to the Hereſy of *Apollinarius*: And tho' he afterwards teſtified the contrary in a Synod at *Conſtantinople*, wherein he was condemned; yet he could not be brought to acknowledge, that the Body of *Jeſus Chriſt* was conſubſtantial with ours.

In Effect, he did not ſeem quite ſteady, and conſiſtent in his Sentiments; for he appear'd to allow of two Natures, even before the Union; which was apparently a Conſequence he drew from the Principles of the Platonic Philoſophy, which ſuppoſes a Pre-exiſtence of Souls; accordingly, he believed that the Soul of *Jeſus Chriſt* had been united to the Divinity before the Incarnation; but then he allow'd no Diſtinction of Nature in *Jeſus Chriſt*, ſince his Incarnation.

See the Diſſertation of Fa. *Hardouin*, *de Sacramento Altaris*, wherein that Jeſuit endeavours to unfold all the Sentiments of the *Eutychians*.

This Hereſy was at firſt condemned in a Synod held at *Conſtantinople*, by *Flavian* in 448: Was re-examined, and fulminated in the General Council of *Chalcedon* in 451. The Legates of Pope *Leo*, who aſſiſted thereat, maintain'd, that it was not enough to define that there were two Natures in *Jeſus Chriſt*, but inſiſted ſtrenuouſly, that to remove all Equivocation, they muſt add theſe Terms, without *being changed, or confounded, or divided*.

But this Decree of the Council of *Chalcedon*, at which aſſiſted upwards of 630 Prelates, did not ſtop the Progreſs of *Eutychianiſm*: Some Biſhops of *Egypt*, who had attended at the Council, upon their Return, proclaimed openly, that St. *Cyril* had been condemned, and *Neſtorius* acquitted therein: Which occaſioned great Diſorders; ſeveral Perſons, under Pretence of contending for the Sentiments of St. *Cyril*, making no Scruple of weakening the Authority of the Council of *Chalcedon*.

The Hereſy of the *Eutychians*, which made a very great Progreſs throughout the *Eaſt*, at length became divided into ſeveral Branches. *Nicephorus* makes mention of no fewer than twelve: Some call'd *Schematici*, or *Apparentes*, as only attributing to *Jeſus Chriſt*, a Phantom, or Appearance of Fleſh, and no real Fleſh: Others, *Theodoſians*, from *Theodoſius* Biſhop of *Alexandria*: Others, *Jacobites*, from one *James*, *Jacobus*, of *Syria*; which Branch eſtabliſh'd it ſelf principally in *Armenia*, where it ſtill ſubſiſts. See JACOBITES.

Others were call'd *Acephali*, q. d. without Head, and *Severians*, from a Monk call'd *Severus*, who ſeiz'd on the See of *Antioch* in 513. See ACEPHALI and SEVERIANS.

Theſe laſt were ſubdivided into Five Factions, *viz. Agnoetes*, who attributed ſome Ignorance to *Jeſus Chriſt*: Followers of *Paul*, Μελανίται, that is, *the Black*; *Angelites*, thus call'd from the Place where they aſſembled. *Adrites* and *Conovites*, with divers others.

EUTYCHIANS, were alſo a Sect half *Arian*, half *Eunomian*; which aroſe at *Conſtantinople*, in the IV*th* Century.

It being then a Matter of mighty Controverſy among the *Eunomians* at *Conſtantinople*, whether or no the Son of God knew the laſt Day and Hour of the World; particularly with Regard to the Paſſage in the Goſpel of St. *Matthew*, C. XXIV. Ver. 36. Or rather that in St. *Mark*, XIII. 31. where 'tis expreſs'd, that *the Son did not know it, but the Father only*: *Eutychius* made no Scruple to maintain, even in Writing, that the Son did know it: Which Sentiment diſpleaſing the Leaders of the *Eunomian* Party, he ſeparated from 'em, and made a Journey to *Eunomius*, who was then in Exile.

That Heretick acquieſced fully in *Eutychius*'s Doctrine, that the Son was not ignorant of any Thing the Father knew, and admitted him to his Communion: *Eunomius* dying ſoon after, the chief of the *Eunomians* at *Conſtantinople*, refuſed to admit *Eutychius*; who, upon this, form'd a particular Sect of ſuch as adhered to him, call'd *Eutychians*.

This ſame *Eutychius*, with one *Theophronius*, as was ſaid in *Sozomen*'s Time, were the Occaſions of all the Changes made by the *Eunomians* in the Adminiſtration of Baptiſm; which conſiſted, according to *Nicephorus*, in only making one Immerſion, and not doing it in the Name of the Trinity, but into the Death of *Jeſus Chriſt*.

*Nicephorus* calls the chief of this Sect, not *Eutychius*, but *Eupſychius*, and his Followers EUNOMIOEUPSYCHIANS.

EWRY, an Office in the King's Houſhold, where they take Care of the Linen for the King's own Table; lay the Cloth, and ſerve up Water in Silver *Ewers* after Dinner; whence the Office hath its Name.

EXACERBATION, the ſame as *Paroxyſm*. See PAROXYSM.

EXACTION, in Law, is a Wrong done by an Officer, or one pretending to have Authority, in taking a Reward or Fee, for that which the Law allows not.

The Difference between *Exaction* and Extortion conſiſts in this, that Extortion is where the Officer takes more than his Due: And *Exaction*, where he wreſts a Fee or Reward, when none is due. See EXTORTION.

EXAGGERATION, in Rhetoric, a Figure whereby we enlarge, or heighten Things; making them appear more than they really are, whether as to Goodneſs, Badneſs, or other Qualities.

The Word is form'd of the Latin, *Exaggero*, I exaggerate; which is a Compound of *ex*, and *agger*, a Mound, or Elevation of Earth.

EXAGGERATION, in Painting, is a Method of repreſenting Things, wherein they are charged too much, or marked too ſtrong; whether in reſpect of the Deſign, or the Colouring.

*Exagge-*

*Exaggerating* differs from *Caricatouring*, in that the latter preverts, or gives a Turn to the Features, *&c.* of a Face, which they had not; whereas the former only improves, or heightens upon what they had.

The latter is a Kind of Burleſque on the Objects, and is generally meant to ridicule. The former is generally an exalting, or enlivening of the Beauties of the Object. See CARICATOURING.

The Painter is obliged to have Recourſe to an *Exaggeration of Colours*, both on Account of the Surface of his Ground, the Diſtance of his Work; and of Time, and the Air which diminiſh and weakens the Force of the Colours. But this *Exaggeration* muſt be conducted in ſuch manner, as not to put the Objects out of their natural Characters. *De Piles.*

EXAGON, EXACHORD, EXAMILION, *&c.* See HEXAGON. HEXACHORD. HEXAMILION, *&c.*

EXALTATION, *Elevation*, is chiefly uſed in a figurative Senſe, for the raiſing, or advancing a Perſon to ſome Eccleſiaſtical Dignity; and particularly, the Papacy.

The Term *Exaltation*, is in ſome meaſure appropriated to the Pope, and expreſſes his Inauguration, Coronation, taking of Poſſeſſion, and the Beginning of his Pontificate. See POPE.

EXALTATION *of the Croſs*, EXALTATIO CRUCIS, is a Feaſt of the Church, held on the 14*th* of *September*, in Memory, as is generally ſuppoſed, of this, that the Emperor *Heraclius* brought back the true Croſs of *Jeſus Chriſt* on his Shoulders, to the Place on Mount *Calvary*, from which it had been carried away fourteen Years before, by *Coſroe* King of *Perſia*, at his taking of *Jeruſalem*, under the Reign of the Emperor *Phocas*. See CROSS.

The Croſs was deliver'd up, by a Treaty of Peace made with *Siroe*, *Coſroe*'s Son. --- The Inſtitution of this Feaſt is commonly ſaid to have been ſignalized by a Miracle; in that *Heraclius* could not ſtir out of *Jeruſalem* with the Croſs, while he had the Imperial Veſtments on, enrich'd with Gold and precious Stones; but bore it with Eaſe in a common Dreſs.

But long before the Empire of *Heraclius*, there had been a Feaſt of the ſame Denomination obſerved both in the *Greek* and *Latin* Churches, on Occaſion of what our Saviour ſaid in St. *John* XII. 32. *And I, if I be* exalted, or *lifted up, will draw all Men unto me.* And again, in Ch. VIII. ver. 28. *When they ſhall have* Exalted, or *lift up the Son of Man, then ſhall ye know that I am he.* Fa. *Du Soulier* aſſures us, that M. *Chaſtelain* was of Opinion, this Feaſt had been inſtituted, at leaſt at *Jeruſalem*, 240 Years before *Heraclius*.

The Feaſt of the Dedication of the Temple built by *Conſtantine*, was held, ſays *Nicephorus*, on the 14*th* of *September*, the Day the Temple had been conſecrated on, in the Year 335; and this Feaſt was call'd, *the Exaltation of the Croſs*, by reaſon it was a Ceremony therein, for the Biſhop of *Jeruſalem* to aſcend a high Place built by *Conſtantine* for that Purpoſe, in manner of a Pulpit, call'd by the *Greeks*, the *Sacred Myſteries of God*, or *the Holineſs of God*; and there hoiſt up the Croſs for all the People to ſee it.

EXALTATION, in Phyſicks, is the Act, or Operation of elevating, purifying, ſubtilizing, or perfecting any natural Body, its Principles and Parts; as alſo the Quality, or Diſpoſition, which Bodies acquire by this Operation. See MATURATION and PURIFICATION.

'Tis this *Exaltation* of the ſulphureous Part in the Straw-berries, that gives them their agreeable, vinous Taſt. *Lemery.* --- A gentle and temperate Heat of the Body, *Exalts* and diſengages the moſt volatile Parts of our Food, and diſpoſes 'em for Nutrition.

The Term *Exaltation*, is peculiarly affected by the Chymiſts and Alchymiſts, who imagining it to have ſome extraordinary Emphaſis, are uſing it at every Turn. Moſt ſulphureous Matters, much *Exalted*, are obſerved to be of a red Colour.

EXALTATION, in Aſtrology, is a Dignity which a Planet acquires in certain Signs, or Parts of the Zodiac; which Dignity is ſuppoſed to give 'em an extraordinary Virtue, Efficacy, and Influence.

The oppoſite Sign, or Part of the Zodiac, is call'd the *Dejection* of the Planet. See DEJECTION.

Thus, the fifteenth Degree of *Cancer*, is the *Exaltation* of *Jupiter*, according to *Albumazar*, by reaſon it was the Aſcendant of that Planet at the Time of the Creation: That of the Sun, is in the 19*th* Degree of *Aries*; and its Dejection in *Libra*: That of the Moon, is in *Taurus*, &c. *Ptolomy* gives the Reaſon hereof in his firſt Book *de Quadrup.*

EXAMEN, or EXAMINATION, an exact and careful Search, or Inquiry; in Order to diſcover the Truth, or Falſhood, of a Thing.

The Way of Authority is, without Compariſon, more eaſy, and better proportion'd to the Reach and Capacity of ſimple Man, than the Way of Diſcuſſion and *Examen. Nicole.*

Such a Perſon had his Houſe robb'd; and has made a ſevere *Examination* of all his Domeſticks, to find out the Criminal. A Student ſtands a rigorous *Examination* to be admitted to a Degree of Maſter, Batchelor, Doctor, *&c.* See DEGREE.

*Self* EXAMINATION, is a Point much inſiſted on by Divines, and particularly the antient Fathers, by Way of Preparation, or Introduction, to Repentance. S. *Ignatius* reduces it to five Points, *viz.* 1°. A returning of Thanks to God for his Benefits. 2°. A Begging of Grace and Light to know and diſtinguiſh our Sins. 3. A running over all our Actions, Occupations, Thoughts and Words, in Order to learn what has been offenſive to God. 4°. A Begging of Pardon, and conceiving a ſincere Sorrow for having diſpleaſed him. And 5°. A making a firm Reſolution not to offend him any more, and taking the neceſſary Precautions to preſerve us from it.

EXAMINERS, in Chancery, are two Officers, whoſe Buſineſs is to *examine*, on Oath, the Witneſſes produced on both Sides; upon ſuch Interrogatories as the Parties to the Suit do exhibit for the Purpoſe. See CHANCERY.

EXAMPLE, in Rhetoric, *&c.* is defined an imperfect Kind of Induction, or Argumentation; whereby it is proved that a Thing which has happen'd on ſome other Occaſion, will happen again on the preſent one; from the Similitude of the Caſes.

As, the Wars of the *Thebans*, againſt their Neighbours the *Phocians*, was ruinous; conſequently, that of the *Athenians* againſt their Neighbours, will likewiſe be ruinous.

EXANTHEMA, in Medicine, an *Eruption*, or *Efflorescence* on the Skin. See ERUPTION, *&c.*

*Exanthemata* are of two Kinds: The one only a diſcolouring of the Skin; ſuch are the Meaſles, the purple Spots in malignant Fevers, *&c.* --- The other are little Eminences, or *Papillæ*, ſtanding out from the Skin, not unlike Puſtles, only ſmaller. See MEASLES, *&c.*

The Word is form'd of the *Greek*, ἐξανθέω, *Effervesco*, *Efflorescо*, I flower, or work out.

EXARCH, EXARCHUS, in Antiquity, a Name given, by the Emperors of the *Eaſt*, to certain Officers ſent into *Italy*, in Quality of Vicars, or rather *Præfects*, to defend what Part of *Italy* was yet under their Obedience, particularly the City of *Ravenna*, againſt the *Lombards*, who had made themſelves Maſters of the greateſt Part of the reſt.

The Reſidence of the *Exarch* was at *Ravenna*; which City, with that of *Rome*, were all that was left the Emperors.

The firſt *Exarch* was the Patrician *Boethius*, famous for his Treatiſe, *de Conſolatione Philoſophiæ*; appointed in 568 by the younger *Juſtin*. The *Exarchs* ſubſiſted about 185 Years; and ended in *Eutychius*; under whoſe *Exarchate*, the City of *Ravenna* was taken by the *Lombard* King *Aſtulphus*, or *Aſtolphus*.

Fa. *Papebroch*, in his *Propylæum ad Acta Sanct. Maii*, has a Diſſertation on the Power and Office of the *Exarchus* of *Italy*, in the Election and Ordination of the Pope.

The Word is form'd from the *Greek*, ἔξαρχος, *Chief*, *Commander*, and particularly in the Factions of *Italy*.

*Homer*, *Philo*, and other antient Authors, give the Name *Exarch* to the *Choragus*, or Maſter of the Singers, in the antient Chorus's; or he who ſung firſt: The Word ἄρχω, or ἄρχομαι, ſignifying equally to *begin*, and to *command*. See CHORAGUS.

The Emperor *Frederic* created *Heraclius* Archbiſhop of *Lyons*, a Deſcendant of the illuſtrious Houſe of *Montboiſſier*; created him, we ſay, *Exarch* of the whole Kingdom of *Burgundy*: A Dignity, till that Time, unknown any where but in *Italy*, particularly in the City of *Ravenna*. Meneſtrier *Hiſt. de Lyons.*

EXARCH *of a Dioceſe* was, antiently, the ſame Thing with *Primate*. This Dignity was inferior to the Patriarchal, yet greater than the Metropolitan. See PRIMATE.

EXARCH, is alſo an Officer ſtill ſubſiſting in the *Greek* Church. See GREEK.

The Modern *Exarch* is a Kind of Deputy, or Legat *a latere* of the Patriarch; whoſe Office it is to viſit the Provinces allotted him, in order to inform himſelf of the Lives and Manners of the Clergy; take Cognizance of Eccleſiaſtical Cauſes, the Manner of celebrating Divine Service, the Adminiſtration of the Sacraments, particularly Confeſſion; the Obſervance of the Canons, Monaſtical, Diſcipline, Affairs of Marriages, Divorces, *&c.* But above all, to take Account of the ſeveral Revenues, which the Patriarch receives from ſeveral Churches; particularly, as to what regards the collecting the ſame.

The *Exarch*, after having greatly enrich'd himſelf in his Poſt, frequently riſes to the *Patriarchate* himſelf. See PATRIARCH.

EXARCH, is alſo uſed, in the *Eaſtern*-Church Antiquity, for a General, or Superior over ſeveral Monaſteries: The ſame that we otherwiſe call *Archimandrite*; being exempted, by the Patriarch of *Conſtantinople*, from the Juriſdiction of the Biſhops; as are now the Generals of the *Romiſh* Monaſtic Orders. See GENERAL, *&c.*

In 493, *Sebas* was eſtabliſh'd *Exarch*, or Chief of all the *Anchorites* within the Territory of *Jeruſalem*. *Du Bois.*

EXARCH was alſo a military Dignity. See *Du Cange.*

EXARTICULATION, a *Diſlocation* of ſome of the jointed Bones; or a Breach of Articulation. See DISLOCATION.

EXCALCEATION, the Act of putting off the Shoes. See SHOE.

Among the *Hebrews*, there was a particular Law, whereby a Widow, whom her Husband's Brother refuſed to marry, had a Right to ſummons him into a Court of Juſtice; and upon his Refuſal, might *diſcalceate* him, *i. e.* pull off one of his Shoes, and ſpit in his Face: Which were both Actions of great Ignominy among that People.

The Houſe of the Perſon who had undergone them, was thenceforward call'd the Houſe of the *Diſcalceated*.

EXCAVATION, the Act of hollowing, or digging a Cavity; particularly in the Ground.

The *Excavation* of the Foundations of a Building, by the *Italians* call'd *Cavaſione*, is ſettled by *Palladio* at a ſixth Part of the Height of the whole Building. Unleſs there be Cellars under Ground, in which Caſe he would have it ſomewhat more. See FOUNDATION.

The Word is Latin, *Excavatio*, form'd of *ex* and *cavus* hollow, or *Cavea*, a Pit, &c.

EXCELLENCY, a Quality, or Title of Honour, given to Ambaſſadors, and other Perſons, who are not qualified for that of *Highneſs*; as not being Princes; and yet are to be elevated above the other inferior Dignities. See QUALITY.

In *England* and *France*, the Title is now peculiar to Embaſſadors; but very common in *Germany* and *Italy*. Thoſe it was firſt affected to, were the Princes of the Blood, of the ſeveral Royal Houſes; but they quitted it for that of Highneſs, upon ſeveral great Lords aſſuming *Excellency*. See HIGHNESS.

The Embaſſadors have only bore it ſince the Year 1593, when *Henry* IV. of *France* ſent the Duke *de Nevers*, Embaſſador to the Pope; where he was firſt complemented with *Excellency*. After that, the ſame Appellation was given to all the other Embaſſadors reſiding at that Court: From whence the Practice ſpread thro' the other Courts. See EMBASSADOR.

The Embaſſadors of *Venice* have only had it ſince the Year 1636, when the Emperor and King of *Spain* conſented to allow it them.

The Embaſſadors of Crown'd Heads, diſpute the giving that Title to the Embaſſadors from the Princes of *Italy*; where the Practice is not eſtabliſh'd.

The Court of *Rome* never allow the Quality of *Excellency* to any Embaſſador who is a Churchman; as judging it a ſecular Title.

The common Rules and Meaſures of *Excellency* are a little varied with Reſpect to the Court of *Rome*. — The Embaſſadors of *France*, at *Rome*, antiently gave the Title *Excellency* to all the Relations of the Pope then reigning; to the Conſtable *Colonne*, to the Duke *de Bracciano*, and the eldeſt Sons of all thoſe Lords; as alſo the Dukes *Savelli*, *Ceſarini*, &c. But they are now more reſerved in this Reſpect; tho' they ſtill treat all the *Roman* Princeſſes with *Excellency*.

The Court of *Rome* in their Turn, and the *Roman* Princes, beſtow the ſame Title on the Chancellor, Miniſters, and Secretaries of State, and Preſident of the Soveraign Courts in *France*; the Preſidents of the Councils in *Spain*; the Chancellor of *Poland*; and thoſe in the firſt Dignities of other States, if they be not Eccleſiaſticks.

The Word *Excellency*, was antiently a Title of Kings and Emperors; accordingly, *Anaſtaſius* the Library-Keeper, calls *Charlemaign*, His *Excellency*. The ſame Title is ſtill given to the Senate of *Venice*; where, after ſaluting the Doge under the Title of *Sereniſſimo*, the Senators are addreſſed to under *Your Excellencies*. The *Liber Diurnus Pontif. Rom.* gives the Title *Excellency* to the Exarchs and Patricians. See TITLE.

The *Italians* and *French* have improved on ſimple *Excellency*; and made *Excellentiſſimus*, *Excellentiſſimo*, which has been beſtowed on certain Popes, Kings, *&c.*

EXCEPTION, a Reſerve; or ſomething ſet aſide, and not included in the Rule. See RULE.

'Tis become proverbial, that there is no Rule, but has its *Exceptions*; intimating, that it is impoſſible to comprehend all the particular Caſes under one and the ſame Maxim. 'Tis dangerous following the *Exception*, preferably to the Rule.

EXCEPTION, in Law, is a Stop, or Stay to an Action. See ACTION.

The Term is uſed indifferently both in the Civil, and Common Law; and in each, *Exceptions* are divided into *Dilatory* and *Peremptory*. See DILATORY and PEREMPTORY.

*Exception*, in a general Senſe, includes all the Kinds of Defence, or Vindication, which a Perſon, againſt whom a Proceſs is brought, makes uſe of to prevent, or retard its Effect. See PLEA, *&c.*

The Civilians reckon three Kinds of *Exception*; viz. *Declinatory*, whereby the Authority of the Judge, or Court, is diſallowed; *Dilatory*, intended to defer, or prevent the Thing from coming to an Iſſue; and *Peremptory*, which are proper and pertinent Allegations, founded on ſome Preſcription that ſtands for the Defendant; as Want of Age, or other Quality in the Party; or other Matter, that may be decided without entering into a full Diſcuſſion of the Merits of the Cauſe.

EXCEPTIVE *Propoſitions*, are thoſe wherein ſomething is affirm'd of a whole Subject, abating ſome one of the Parts thereof, which is *excepted* by a Particle, thence call'd an *Exceptive* Particle, or Particle of *Exception*. See PROPOSITION.

Thus, all the Sects of the antient Philoſophers, except the *Platoniſts*, held God to be Corporeal. Covetouſneſs is inexcuſable in Reſpect of every Thing, but Time.

EXCESS, is diſtinguiſh'd into *Natural* and *Moral*: The firſt, is a Part whereby one Quantity is greater than another. — Thus, we ſay, this Line is longer than that; but the *Exceſs* is inconſiderable.

The latter, is an Intemperance, or going beyond the juſt Bounds and Meaſures preſcribed to any Thing: Thus, we ſay, *Exceſs* in Wine, Women, *&c.* is prejudicial to the Health.

EXCHANGE, a *Permutation*, or an Agreement; whereby one Thing is truck'd or given for another. See PERMUTATION.

The firſt Commerce carried on among Men, was by *Exchange*; People furniſhing each other mutually with what Things they wanted: But ſuch *Exchanges* were clogg'd with two conſiderable Difficulties. 1°. On Account of the unequal Values of Commodities: And, 2°. In that every Body had not juſt what might accommodate him he would *Exchange* withal. See COMMERCE.

To remove theſe Inconveniencies, Money was invented for a common Medium, and inſtead of *Exchanging*, Buying and Selling, was introduced. See MONEY.

Yet there are Nations among whom the Primitive Way of *Exchange* ſtill obtains: And even among the moſt civilized People, there are frequent Occaſions, wheron they have Recourſe to this Method. — Such, for Inſtance, is the Trade of ſeveral Cities of the *North*, and *Baltic* Sea, where the French *exchange* their Wines and Brandies for Woods, Metals, Hemps and Furs.

The Commerce of Bills of *Exchange* is, it ſelf, a pure trading by *Exchange*; a Truck of Money for Money; of Money, for Inſtance, which I have here at *London*, for what a Merchant, or Banker, has at *Venice*, *Rome*, *Amſterdam*, or *Conſtantinople*. In this Senſe.

EXCHANGE properly denotes the Buſineſs, or Trade of Money, carried on between one Place and another, by Means of Bills of *Exchange*; i. e. by giving Money in one City, and receiving a Bill to entitle you to receive the Value in another City. See *Bill of* EXCHANGE.

EXCHANGE, is alſo uſed for the Profit, which a Merchant, Negotiant, or Broker, receives for a Sum of Money paid, and for which a Bill of *Exchange* is drawn payable in ſome other Place, and by ſome other Perſon; for the Intereſt of his Money, or the Salary and Reward of his Negociation.

This Profit is exceeding various; being ſometimes 2, ſometimes 3, 4, or even 10 and 15 *per Cent.* according as the Alloy of the Species differs, or as Money is more or leſs plentiful, or Bills of *Exchange* more or leſs ſcarce in the Places. This Kind of *Exchange* is ordinarily call'd *Real Exchange*, and ſometimes *Mercantile* and mixt *Exchange*. See PAR.

The Price of *Exchange* is regulated according to the Courſe of the Place where the Bill is drawn, or that of the Place where the Remittance is to be made: Some pretend that 'tis the City of *Lyons* gives the Law, or Rule, for the Price of *Exchange* to moſt of the other Cities of *Europe*.

The Word *Exchange*, according to ſome, is derived from that perpetual Alteration obſerv'd in the Price of this *Exchange*, which is ſometimes higher, and ſometimes lower; there being ſometimes ſomewhat to get, and ſometimes to loſe thereby; and ſometimes nothing to be either got or loſt: As is the Caſe when the *Exchange* is at Par.

From

From this Diverſity in the Price of *Exchange*, ariſes that common Proverb, *The Exchange and the Wind are often changing.*---But the more natural Way of deriving the Word *Exchange*, is from this, that a Man here *exchanges* his Money for a Bill; or that he *changes* preſent Money for abſent Money; or changes his Debtor.

*Exchange* is not to be look'd on as a *Loan*; from which it differs, in that in the one, the Riſque, or Danger, lies on the Perſon who borrows; and in the other, on him who lends. It likewiſe differs from *Intereſt*, in that *Exchange* is not paid in proportion to the Time, which Intereſt is. See INTEREST and LOAN.

EXCHANGE, is alſo uſed in divers Places for the Due, or Profit, allow'd for the changing of one Sort, or Species, of Money for another. ---- This is particularly call'd *Small Exchange*, *Natural Exchange*, *Pure Exchange*, &c.

EXCHANGE, is ſometimes alſo uſed for the *Agio*, or Profit, allowed for the Monies advanced in any one's Behalf. See AGIO.

EXCHANGE, is alſo a public Place, in moſt conſiderable Cities, wherein the Merchants, Negotiants, Agents, Bankers, Brokers, Interpreters, and other Perſons concern'd in Commerce, meet, on certain Days, and at certain Times thereof; to confer, and treat together of Matters relating to *Exchanges*, Remittances, Payments, Adventures, Aſſurances, Freightments, and other Mercantile Negotiations both by Land and Sea.

In *Flanders*, *Holland*, and ſeveral Cities of *France*, theſe Places are call'd *Bourſes*; at *Paris* and *Lyons*, *Places de Change*; and in the Hanſe Towns, *Colleges of Merchants*. See BURSE.

Theſe Aſſemblies are held with ſo much Exactneſs, and Merchants and Negotiants are ſo indiſpenſably required to attend at them; that a Perſon's Abſence alone, makes him be ſuſpected of a Failure or Bankrupcy. See BANKRUPT.

The moſt conſiderable *Exchanges* in *Europe*, are that of *Amſterdam*; and that of *London*, call'd the *Royal Exchange*. See ROYAL *Exchange*.

That of *Antwerp* was little inferior to either of them; till the Port of that City was render'd impracticable by the *Hollanders*, to bring the Commerce thereof to themſelves.

Even in the Time of the antient *Romans*, there were Places for the Merchants to meet, in moſt of the conſiderable Cities of the Empire. That built at *Rome*, in the Year of the City 259, 459 Years before our Saviour, under the Conſulate of *Appius Claudius*, and *Publius Servilius*, was call'd *Collegium Mercatorum*; whereof we have ſtill ſome Remains, call'd by the modern Romans *Loggia*, the Lodge; and now, uſually, the Place of St. *George*. See COLLEGE.

EXCHANGE, in Law, is the Compenſation which the Warrantor muſt make the *Warrantee*, Value for Value, if the Land warranted be recovered from the *Warrantee*, Bracton. *L.* II. See WARRANTY.

*The King's* EXCHANGE, is the Place appointed by the King for *Exchange* of Plate, or Bullion for the King's Coin. Theſe Places have formerly been divers; but now there is only one, *viz.* that of the Tower of *London*, joyn'd with the Mint. See MINT.

*Bill of* EXCHANGE, is a Writing given by a Merchant, or other Negotiant, to procure a Sum of Money to be paid the Bearer thereof, in ſome diſtant Place; in Conſideration of a like Sum paid the Writer, by the Perſon in whoſe Behalf the Bill is drawn. See BILL *of Exchange*.

What we call *Rechange*, is the Due, or Premium of a ſecond *Exchange*, when a Bill is proteſted. See RECHANGE.

EXCHANGE-*Brokers*, are Perſons who make it their Buſineſs to know the Alteration of the Courſe of *Exchange*, to inform Merchants how it goes, and to notify to thoſe who have Money to receive or pay beyond Sea, who are proper Perſons for the *Exchanging* and doing thereof. See BROKER.

When the Matter is accompliſhed, that is, the Money paid, they have for Brokage 2 Shillings *per* 100 Pound Sterling.

But of late, the Humour of gaining, and dealing in Stocks, hath ſo prodigiouſly increaſed the Number of Perſons who act as Brokers, that their Buſineſs, and their Pay, is very uncertain.

EXCHANGERS, are thoſe who return Money beyond Sea, by Bills of *Exchange*, &c. call'd antiently alſo *Excambiators*, and ſince Remitters. See EXCAMBIATOR.

EXCHEQUER, or ſimply, CHEQUER, a *Cheſs-Board*; or a Frame divided into 64 Squares, of two Colours, whereon to play at Draughts, Cheſs, &c.

The Word is form'd from the French *Eſchequier*, which ſignifies the ſame Thing. See CHESS.

Hence, Trees are ſaid to be planted *Ex-chequer*-wiſe, in *Quincuncem*, when diſpoſed ſo as to form divers Squares repreſenting a *Checquer*.

EXCHEQUER, is alſo a Chamber, or Apartment in *Weſtminſter-Hall*, conſiſting of two Parts; the *Court of Exchequer*, and the *lower Exchequer*.

The *Court of* EXCHEQUER, is a Court, wherein are tried all Cauſes relating to the King's Treaſury, or Revenue; as, touching Accounts, Diſburſements, Cuſtoms, Fines, &c. See TREASURY.

It conſiſts of Seven Judges, *viz.* the Lord Treaſurer, the *Chancellor of the Exchequer*, the Lord Chief *Baron*, and three other *Barons of the Exchequer*, with one Curſitor Baron. See CHANCELLOR, &c.

The Lord Chief Baron is the principal Judge of the Court. See BARONS *of the Exchequer*.

The Court of *Exchequer* is divided into two: The one *of Law*, the other *of Equity*.

All Judicial Proceedings according to Law, are ſtyled, *coram Baronibus* only: But the Court of Equity held in the *Exchequer Chamber*, is *coram Theſaurario, Cancellario, & Baronibus*; before the Treaſurer, Chancellour, and Barons.

For a long Time after the Conqueſt, there ſate in the *Exchequer*, both Spiritual and Temporal Barons of the Realm: But of later Times, there have ſat in their Places other Judges, who, tho' no Peers of the Realm, yet retain the original Denomination.

The common Opinion of our Hiſtorians is, that this Court was erected by *William the Conquerour*, ſoon after his having obtain'd the Kingdom; and that it took its Form from the *Echequier*, or *Scaccarium*, eſtabliſh'd in *Normandy* long before that Time. In Effect, the two *Exchequers* have this in common, that the *Norman* was the Supreme Court of that Dutchy, or a general Aſſize whereat all the great Lords attended, to judge finally of all Concerns of the greateſt Importance; and was ambulatory: And that the *Engliſh Exchequer* was a Court of the higheſt Juriſdiction; that the Acts thereof were not to be examined by any of the ordinary Courts; that it was the Repoſitory of the Records of all the other Courts; and that it was to be held in the King's Court, and before him; and that it was concerned in the Prerogative, as well as the Revenue of the Crown.

The immediate Profits of the Crown, as of Franchiſes, Lands, Tenements, Hereditaments, Debts, Duties, Accounts, Goods, Chattels, all Diſburſements, Seizures, and Fines, impoſed on the Subject, &c. are within the Juriſdiction of the *Exchequer*. And the King's Attorney may exhibit Bills, for any matter concerning the King in Inheritance or Profits; ſo alſo may any Perſon, who finds himſelf aggrieved in any Cauſe proſecuted againſt him on Behalf of the King, or any Patent by Grant of the King, exhibit his Bill againſt the King's Attorney, &c. to be relieved by Equity. See COURT, KING, &c.

To this Court belong two Offices, the King's Remembrancer's Office, and the Lord Treaſurer's Remembrancer. See REMEMBRANCER.

Authors are divided about the Origin of the Denomination of this Court, *Exchequer*. *Du Cange* is of Opinion, it came from a *Chequer*-wrought Carpet, covering the great Table in that Court; or from the Pavement of the Court, which was *Chequer*-wiſe: Others, from the Accomptants in this Office uſing *Chequers*, or Cheſs-Boards, in their Computations: *Nicod*, from the Court's being compoſed of different Qualities, as the Pieces or Partitions in a Cheſs-Board: Others, by reaſon People pleaded here, ranged, as it were, in Battle array, as they do at Cheſs. *Menage*, after *Pithou*, &c, derives the Word from the German, *Schichen*, *to ſend*; by reaſon this Court ſucceeded the Commiſſioners call'd in ancient Titles, *Miſſi Dominici*. *Spelman*, &c. derives it from *Schatz*, which ſignifies, Treaſure: Whence *Polydore Virgil* alſo writes it, *Scattarium*, inſtead of *Scaccharium*. Laſtly, *Somner* derives it from *Schaen*, to raviſh; which, according to him, is the Character of the Treaſury.

The *Lower* EXCHEQUER, call'd alſo the *Receipt of the Exchequer*, is the Place wherein the King's Revenue is receiv'd and diſburſed. See REVENUE and TREASURY.

The principal Officers whereof are, the *Lord Treaſurer*, a *Secretary of the Treaſury*, a *Chancellor of the Exchequer*, two *Chamberlains of the Exchequer*, an *Auditor of the Receipts of the Exchequer*, four *Tellers*, a Clerk of the *Pells*, an Uſher of the *Receipt*, a *Tally Cutter*, &c. See LORD TREASURER, CHANCELLOR *of the Exchequer*, SECRETARY, CHAMBERLAIN, TELLER, PELLS, TALLY, &c.

*Black Book of the* EXCHEQUER, is a Book under the keeping of the two Chamberlains of the *Exchequer*; ſaid to have been compoſed in 1175, by *Gervais* of *Tilbury*, Nephew of King *Henry* II. and divided into ſeveral Chapters.

Herein is contain'd a Deſcription of the Court of *England*, as it then ſtood, its Officers, their Ranks, Privileges,

leges, Wages, Perquisites, Power, and Jurisdiction; the Revenues of the Crown, both in Money, Grain, and Cattel.

Here we find, that for One Shilling, as much Bread might be bought, as would serve a hundred Men a whole Day; that the Price of a fat Bullock was only Twelve Shillings; and a Sheep, Four, &c. *Larrey*, P. 1. *p.* 394. See also DOOMSDAY-*Book*.

EXCISE, a Duty, or Imposition, charged on Beer, Ale, Cyder, and other Liquors made for Sale, within the Kingdom of *England*, *Wales*, and Town of *Berwick* upon *Tweed*. See DUTY.

The Duty of *Excise*, was first granted to King *Charles* II. by Act of Parliament, in the Year 1660; during the Life of that Prince: It has been since continued and augmented by divers Parliaments, under the several succeeding Princes, and extended to *Scotland*. --- This Duty, as it now stands, on strong Beer and Ale, is at the Rate of 4*s.* and 9*d.* *per* Barrel; and upon small Beer 1*s.* 6*d.*

Now, Brewers being allow'd for Leekage of Beer, 3 Barrels in 23; and of Ale, 2 in 22; the neat *Excise* of a Barrel of strong Beer amounts to 4*s.* 1*d.* and $\frac{3}{23}$; of a Barrel of Ale, 4*s.* 3*d.* 3*q*; and of a Barrel of small Beer, 1*s.* 1*d.* 1*q.* $\frac{14}{15}$.

The *Excise* is one of the most considerable Branches of the King's Revenue. ---- It was formerly farmed out: But is now managed for the King by Seven *Commissioners*, who sit in the *General Excise Office*, receive the whole Product of the *Excise* of Beer, Ale, and other Liquors, and Malt, collected all over *England*, and pay it into the Exchequer. See EXCHEQUER.

Their Salary is 800*l.* *per Annum* each, and they are obliged by Oath, to take no Fee, or Reward, but from the King only. From the Commissioners of *Excise* there lies an Appeal to Five others, call'd *Commissioners of Appeals*. See COMMISSIONER.

The Number of Officers imploy'd in this Branch of the Revenue, is very great. Beside the Commissioners abovementioned, and their subordinate Officers, as Registers, Messengers, &c. There is an *Auditor of the Excise*, with his Clerks, &c. A Comptroller with his Clerks: A *Register*; *Secretary*; *Sollicitor*, *Cashier*; *Teller*; *Clerk of Securities*; *House-Keeper*; *Door-Keeper*; an *Accomptant for the Impress Money*; *General Gauger*; *General Accomptants*, *with their Assistants*; *Messengers*; a *Clerk for Stationary Wares*; *Examiners*; *Clerks for Supervisors Diaries*; *Accomptants*, *Examiners*, &c. for the *London* Distillery, Vinegar, Cyder, &c. *Examiners* for Malt; General and other *Surveyors* of the *London Brewery*; with *Assistants*, and other Officers, to the Number of an hundred: *General* and other *Surveyors of the London Distillery*, with other Officers, to the Number of 40; a *Collector*, and *Surveyor*, of *imported Liquors*; with a Land Surveyor at the Custom-House, &c.

The Yearly Salaries of all the Officers in the *Excise* Office, as computed by Mr. *Chamberlayne*, amounts to 23650*l.*

Beside which, there are in the Country fifty *Collectors*; and one hundred and fifty *Supervisors*; with a great Number of inferiour Officers, call'd *Gaugers*, or *Excisemen*; which may make the Number of Persons imploy'd in this Revenue about 2000.

The *Excise* on Beer, Ale, and other exciseable Liquors, even during a Time of War, is computed to amount to 1100000*l.* *per Annum*, and is collected from above 30000 People.

The Duty on Malt, with the additional Duty on Cyder, &c. amount to betwixt 6 and 7 hundred thousand Pound *per Annum*; and are collected from more Hands than the former.

And yet the whole Charge of the managing all these Duties, does not amount to Twenty Pence *per* Pound; which, considering every Thing, is esteem'd an Exactness and Frugality, not to be parallel'd in any Revenue levied in any other Country.

The Rates, with the neat Produce of the several Impositions of *Excise*, are as follow:

| | *L.* |
|---|---|
| 1°. A Duty of 2*s.* 6*d.* *per* Barrel, whereof 15*d.* *per* Barrel during his Majesty's Life; and the other 15*d.* hereditary; appropriated to the Civil Government, after a Deduction of 3700*l.* *per* Week for Annuities. Neat Produce | 269837 |
| 2°. A Duty of 9*d.* *per* Barrel, granted 4 *Will.* and *M.* for 99 Years, commencing *Jan.* 1692. charged with 124866*l.* *per Ann.* for Annuities, and 7567*l.* *per Ann.* on Survivorship. Neat Produce | 150106 |
| 3°. Another 9*d.* *per* Barrel perpetual, 5 *W.* and *M.* for Payment of 100000*l.* *per Ann.* to the Bank, as also several Annuities on Lives. Neat Produce | 150094 |
| 4°. Another 9*d.* *per* Barrel, for 16 Years, continued 4 *Ann.* from *May* 1713. for 95 Years, for paying 140000*l.* *per Ann.* on Million Lottery Tickets; with Annuities of 99 Years, &c. Neat Produce 159898; --- which, with some additional Duties granted in a later Act may amount to | 184898 |
| 5°. A Duty on Low Wines, and Spirits of the first Extraction, continued to the 24*th* of *June* 1710. Neat Produce | 25257 |
| 6°. The *Excise* on Ale and Beer in *Scotland*, is farm'd at | 33500 |
| Total | *L.* 1006102 |

EXCLAMATION, in Rhetoric, a Figure, wherein, by raising the Voice, and using an Interjection, either expressly or understood, we testify an uncommon Warmth and Passion of Mind; and express the Magnitude of the Thing.

Such is, O Heavens! O Earth! &c. such is that of *Cicero* against *Catiline*, O Times! O Manners! This, the Senate knows, the Consul sees: And yet he lives. Lives, said I? Nay, and comes into the Senate!---- Or that for *Cælius*, *Proh Dii Immortales! Cur interdum in hominum sceleribus maximis aut connivetis, aut præsentis fraudis pœnas in diem reservatis! Oh præclarum, custodem, ovum, ut aiunt, Lupum!*

In *English*, the Interjections O! or Oh! Alas! or, Good God! are generally adjoyn'd in an *Exclamation*. In *Latin* they use *O! Heu! Eheu! Ah! Vah! Pro Superi! Pro Superum atque Hominum fidem:* Sometimes, however, the Interjection is understood, as, Wo is me! *Miserum me! Hoccine sæculum.* See INTERJECTION.

EXCLUSION, is that whereby a Thing is *Excluded*, i. e. shut out, or set aside.

As, a Crown imports an *Exclusion* from the Papacy: He appointed a Stranger his Heir, in *Exclusion* of all his own Relations.

Great Efforts were made towards the Close of the Reign of K. *Charles* II. to pass a *Bill of Exclusion*, for setting aside the Duke of *York*, the King's Brother, on Account of his being a Papist.

EXCLUSIONS, in Mathematicks, the *Method of Exclusions*, is a Way of coming at the Solution of Problems (in numerical Cases), by previously ejecting, or *excluding* out of Consideration, such Numbers, as are of no Use in solving the Question; whereby, of consequence, the Process may be regularly and judiciously abbreviated. See SOLUTION.

EXCLUSIVE, is sometimes used adjectively, for the Force, or Power of *Excluding*: as a Patent carries with it an *Exclusive* Privilege. See PRIVILEGE.

Soveraign Princes have *Exclusive* Voices in the Election of Popes, &c.

Sometimes it is also used adverbially: as Marriage is allow'd to the first Day of Lent, *Exclusive*; i. e. *Ash-Wednesday* is not comprized in the Permission. ----- He sent him all the *Gazettes*, from N°. 195, to N°. 300, *Exclusive*; i. e. all between those two Numbers, which themselves were excepted.

EXCLUSIVE *Propositions*, are those wherein the predicate so agrees with its Subject, as to agree with no other. See PROPOSITION.

Thus; Virtue alone makes Nobility: Nothing else renders a Man truly noble.

EXCOMMUNICATION, an Anathema, or Ecclesiastical Censure, and Punishment; whereby a Heretic is cut off from the Society of the Faithful; or an obstinate Sinner from the Communion of the Church, and the Participation of the Sacraments. See CENSURE and ANATHEMA.

The Power of *Excommunication* properly belongs to the Bishop; but he may delegate it to any grave Priest, with the Chancellor. See BISHOP.

Every *Excommunication* should be preceded by three public Admonitions, two Days, at least, distant from each other: But this is to be understood of *Excommunications* imposed by the Ecclesiastical Judge; for those imported by the Law, are incurr'd to all Intents and Purposes the Moment the Action is committed.

These latter are call'd *Excommunications* by the Canon, or *latæ sententiæ:* And are so very numerous, that it would be difficult, even for the best Canonists, to give an exact List of 'em: There are 50 in the *Clementines*; 20 in the Bull *in cœna Domini*, &c.

*Rebuffe* on the Concordat, reckons up 60 Penalties accruing upon *Excommunication*.

*Excommunication* is founded on a natural Right which all Societies have, of excluding out of their Body, such as violate the Laws thereof.

*Excommunication* is either *major* or *minor*, i. e. *greater* or *less:* The first, which is that understood when we say, simply, *Excommunication*, separates, or cuts off the Delinquent from all Communion and Fellowship with other Chri-

Chriſtians; diſables him from defending his Rights, bringing an Action at Law, &c. The ſecond, or leſſer, only excludes from the Communion of the Lord's Supper.

The greater *Excommunication*, call'd alſo *ab homine*, is when a Prelate, or his Deputy, *Excommunicates* any Man perſonally, and interdicts him all Society with the Faithful, all Uſe of Sacraments, &c.

The leſſer *Excommunication* is incurr'd *pleno jure*, by having any Communication with a Perſon *Excommunicated* in the greater *Excommunication*. And this too imports a Privation of Communion, but not an Interdiction from entering the Church, nor having Commerce with the Faithful.

Anciently, the *Excommunicated* were obliged to procure Abſolution from their Biſhop, and make Satisfaction to the Church in forty Days Time; otherwiſe they were compell'd to it by the ſecular Judge, by a Seizure of their Effects, Impriſonment of their Perſons, &c. In *France* they were allow'd a whole Year.

By an Edict of S. *Louis*, in the Year 1228. Vaſſals, Tenants, &c. were diſpenſed, or freed from the Oath of Fidelity, Homage, &c. they had taken to their Lords, or Superiours, till they had made their Submiſſion.

In *Spain*, to this Day, a Perſon who is not abſolved from his *Excommunication* in a Year's Time, is deem'd a Heretic. See HERETIC.

There was a Time, when the People were fully convinced, that the Bodies of *Excommunicated* Perſons, unleſs they were firſt abſolved, could not rot, but remain'd entire for ſeveral Ages, a horrible Spectacle to Poſterity; as is atteſted by *Matthew Paris*, and other Writers. And the *Greeks* are ſtill of the Opinion; and affirm, they have infinite Proofs thereof; as is ſhewn by *Du Cange*, from the Teſtimony of a vaſt Number of Authors.

By the Laws, an *Excommunicated* Perſon was not to be buried, but the Body flung into a Pit, or cover'd with a Heap of Stones; which was call'd *imblocare corpus*.

In the ancient Church, there were divers Degrees of *Excommunication:* In Effect, *Excommunication* did not always import an Interdiction of the Sacraments; but frequently, a Separation, or Kind of Schiſm between the ſeveral Churches, or a Suſpenſion of ſpiritual Communication between the Biſhops.

But, afterwards, the Occaſions of *Excommunications* growing more frequent, they began to uſe it with leſs Circumſpection and Reſervedneſs.

In the IX*th* Century, the Eccleſiaſticks were continually making Uſe of theſe ſpiritual Weapons, to repel any Violences, or Affronts, offer'd them; and Time and Familiarity rendering them more and more obdurate, they proceeded, by degrees, to Rigours unknown to Antiquity; as the *Excommunicating* of whole Families, or Provinces; the prohibiting the Exerciſe of all Religion therein; and even accompanying the *Excommunications* with horrible Ceremonies, and direful Imprecations.

In the X*th* and XI*th* Centuries, the Severity againſt the *Excommunicated* was carried to its Pitch: No body might come near them, not even their own Wives, Children, or Servants: They forfeited all their natural and legal Rights and Privileges; and were excluded from all Kind of Offices. Thus was an *Excommunicated* King, reduced to the Condition of a private Man.

By thus ſtretching the Power of the Church to Extravagance, they render'd it contemptible. *Gregory* VII. temper'd it a little; exempting the Wives and Children of *Excommunicated* Perſons, from *Excommunication*; and allowing them to converſe with them.

To render the *Excommunicated* ſtill more odious, the Prieſt was obliged to ſtop, and break off divine Service, if an *Excommunicated* Perſon enter'd the Church. Nothing of which Averſion is any where diſcover'd in the Primitive Church.

At preſent we have but little of the Terror or Reſpect of our Fore-fathers, for *Excommunication*; and 'tis even judg'd, and proclaim'd an Abuſe, whenever impertinently employ'd.

Thus, the Official of *Thoulouſe* having *Excommunicated* the Officers of the *Senechauſſee* of *Tholouſe*, on Occaſion of their refuſing to deliver up a Priſoner; the Official was condemn'd to take off, and revoke the *Excommunication*. 'Tis judg'd an Abuſe to fulminate an *Excommunication* againſt a King, or Kingdom, or the Officers thereof, for any Thing relating to the Diſcharge of their Offices.

The Form of *Excommunication* in the *Romiſh* Church, as related by *Fevret*, is to take lighted Torches, throw them on the Ground with Curſes and Anathema's, and trample them out under Foot to the ringing of the Bells.

--- *Auctoritate Dei patris omnipotentis & filii, & Spiritus Sancti, & beatæ Dei Genetricis Mariæ, Omniumq; Sanctorum*, Excommunicamus, *Anathematizamus, & a limitibus Sanctæ Matris Eccleſiæ ſequeſtramus illos Malefactores, N. Conſentaneos quoq; & participes & niſi reſipuerint, & ad ſatisfactionem venerint ſic extinguetur lucerna eorum ante viventem in ſæcula ſæculorum. Fiat: Amen: Amen: Amen:* Ex Emendat. Leg. Will. Conqueſt.

We have now none of this Folly; the Sentence is gravely read, and the Perſon remains *Excommunicated* without further Ceremony.

*Peter* of *Blois* aſſures us, that in *England* it was anciently the Practice, only to *Excommunicate* ſuch as had kill'd an Eccleſiaſtick; whereas they were put to Death who had kill'd a Lay-man. --- But the Reaſon was, they held *Excommunication* a greater Puniſhment than Death.

We have Inſtances of Biſhops, who have pronounced formal *Excommunications* againſt Caterpillars, and other Inſects, after a formal, Juridical Proceſs againſt them, wherein thoſe Animals were allow'd an Advocate and Proctor, to defend their Cauſe. See EXORCISM.

*Fevret* relates divers Inſtances of ſuch *Excommunications*, both againſt Rats and Mice, for infecting a Country; and other Animals. See the Form of theſe *Excommunications* in that Author.

In the ancient Church there were two different Kinds of *Excommunication* in Uſe: The one call'd *Medicinal*, whereby Perſons convicted of a Crime by their own Confeſſion, were removed from Communion: The other call'd *Mortal*, was fulminated againſt Rebels, who perſiſted obſtinately in their Errors and Impieties.

The Power of *Excommunicating* was lodg'd in the whole Church in general: That is, the Biſhops and Prieſts had the Adminiſtration thereof, by and with the Conſent of the People; which was practiſed even in St. *Cyprian*'s Time. But afterwards, they ceaſed to conſult the People about the Matter: The Biſhop and Clergy arrogated the whole Power to themſelves. Recourſe, however, might be had to a Synod of the Province, to judge of the Validity of an *Excommunication*.

It frequently happen'd, that Churches *Excommunicated* each other, that is, broke off the Communication that was between them. In which Caſe, *Du Pin* obſerves, it might be dubious, which of the two Parties was *Excommunicated* and cut off from the Body of the Church.

EXCOMMUNICATION was alſo in Uſe among the *Jews*; who uſed to expel from their Synagogue, ſuch as had committed any grievous Crime. See the Goſpel according to St. *John*, IX. 22. XII. 42. XVI. 2. And *Joſeph. Antiq. Jud.* L. IX. C. 22. and L. XVI. C. 2.

The *Eſſeni*, when *Excommunicated*, durſt not ſo much as receive Food at any Perſon's Hand, for Fear of violating their Oath, but contented themſelves to live on Herbs; inſomuch that they frequently periſh'd, and dy'd for Want. See *Joſeph. de Bello*, L. II. C. 12.

*Goodwin*, in his *Moſes* and *Aaron*, diſtinguiſhes three Degrees, or Kinds of *Excommunication* among the *Jews*. The firſt, he finds intimated in St. *John*, IX. 22. The ſecond in St. *Paul*, Epiſt. 1. Cor. V. 5. And the third, in the 1*ſt* Ep. to *Corinth*. XVI. 22.

The Rule of the *Benedictins*, gives the Name *Excommunication*, to the being excluded from the Oratory, and the common Table of the Houſe, in our Inns of Court call'd *Diſcommoning*. This was the Puniſhment of ſuch Monks as came too late.

EXCOMMUNICATION, or a being ſecluded, or cut off from a Participation in the Myſteries of Religion, was alſo in Uſe under Paganiſm.

Such as were thus *Excommunicated*, were forbid to aſſiſt or attend at the Sacrifices, or to enter within the Temples; and were afterwards deliver'd over to the Demons and Furies of Hell, with certain Imprecations; which was call'd among the *Romans*, *Diris devovere*.

The *Druids* among the ancient *Britains* and *Gauls*, likewiſe, made Uſe of *Excommunication* againſt Rebels; and interdicted the Communion of their Myſteries, to ſuch as refuſed to acquieſce in their Judgments. See DRUID.

EXCOMMUNICATO *Capiendo*, a Writ directed to the Sheriff, for the Apprehenſion of one who ſtandeth obſtinately *Excommunicated* forty Days; for ſuch an one not ſeeking Abſolution, hath, or may have, his Contempt certified into the Chancery; whence this Writ iſſues for laying him up, without Bail, or Main-prize, until he conform himſelf. See WRIT.

EXCOMMUNICATO *Deliberando*, is a Writ to the Under-Sheriff, for the Delivery of an *Excommunicate* Perſon out of Priſon; upon Certificate of the Ordinary, of his Conformity to the Eccleſiaſtical Juriſdiction.

EXCOMMUNICATO *Recipiendo*, is a Writ whereby Perſons *Excommunicated*, being for their Obſtinacy committed to Priſon, and unlawfully deliver'd thence before they

have given Security to obey the Authority of the Church, are commanded to be ſought for, and laid up again.

EXCORIATION, the Act of raſing, or tearing off the Skin from any Part of the Body. --- He had a grievous *Excoriation* behind, with riding Poſt. --- We alſo ſay, an *Excoriation* in the Throat, *&c.* when the Membrane that covers, or lines it, is tore by the Acrimony of a Humour, a Medicine, or the like; which is ordinarily the Caſe in what we call a *ſore Throat.*

The Word is Latin, *Excoriatio*, form'd of *ex* and *corium*, Skin, Leather, *&c.*

EXCORTICATION, the ſtripping off the *Cortex*, or Bark, from any Thing; call'd alſo *Decortication.* See BARK and DECORTICATION.

EXCREMENT, what is evacuated, or *excreted*, out of the Body of an Animal, after Digeſtion; being what in other Reſpects is ſuperfluous and prejudicial thereto. See EXCRETION.

*Chauvin* defines *Excrement*, to be all that Matter taken in by way of Food, which cannot be aſſimilated; and which, of Conſequence, not growing or adhering to the Body, wanders about thro' the laxer, and more patent Parts thereof, till it be ejected.

The Urine and Fæces or fecal Matter, are the *great Excrements*, expell'd from the Bladder and the Inteſtines, by Stool, *&c.* See URINE, FECAL *Matter*, &c.

The Matter of inſenſible Perſpiration is alſo an *Excrement*, and a more conſiderable one than either of the others. See PERSPIRATION.

Among *Excrements*, are likewiſe ordinarily rank'd, divers Humours and Matters, ſeparated from the Blood by the ſeveral Strainers, or Emunctories of the Body, tho' far from being uſeleſs; and ſerving divers valuable Purpoſes of the OEconomy. Such are Cerumen, or Ear-wax; the Mucus of the Noſe; *Lachrymæ*, or Tears; Saliva, Bile, Lympha, Menſes, Lochia, *&c.* See CERUMEN, MUCUS, TEARS, SALIVA, BILE, MENSES, *&c.*

Some hold Ambergreaſe an *Excrement* of the Whale; others, an *Excrement* of the Sea. See AMBERGREASE.

All Foods have two Parts, the one Nutritious, the other *Excrementitious.* See FOOD.

EXCREMENT, is alſo attributed, by way of Analogy, to Plants.

Thus Gums, divers Juices, Balms, *&c.* iſſuing ſpontaneouſly from their reſpective Trees, are ſometimes call'd *Excrements.* See GUM, *&c.*

EXCRESCENCE, in Chirurgery, a ſuperfluous, or unneceſſary Piece of Fleſh, or other Matter, growing on certain Parts of the Bodies of Animals, contrary to, or beyond the ordinary Structure and Diſpoſition of Nature.

Such are Wens, Warts, *&c.* Such alſo are the Woman's Horns now ſhewn in *London*; a parallel Caſe to which, ſee in the Philoſoph. Tranſact. N°. 297.

Natural, or cuſtomary *Excreſcences*, as thoſe of Bones, *&c.* are call'd by Phyſicians *Apophyſes.* See APOPHYSIS.

The Word is form'd of the Latin, *ex*, and *creſco*, I grow; *q. d.* ſomething that grows from, or out of another.

EXCRETION, in Medicine, the Act whereby Nature expels, or ejects out of the Body, ſome Humour that is uſeleſs, or even hurtful thereto. See EXCREMENT.

Moſt Criſes are effected by *Excretion*; as Fluxes of Blood, and Urine, Sweats, Vomitings, Looſeneſſes, *&c.* See FLUX, *&c.*

The Word is form'd of the Latin, *excernere*, to excern, ſeparate.

EXCRETORY, in Anatomy, a Term applied to certain little Ducts, or Veſſels, making Part of the Structure, or Compoſition of Glands. See GLAND.

The *Excretory Ducts* are the Tubes thro' which the Humours ſeparated in the ſeveral Glands, are emitted, or diſcharged out of the Gland, into ſome convenient Receptacle, or Emunctory. See SECRETION and EMUNCTORY.

A capillary Artery, to which a capillary Vein is joyn'd; with an *Excretory* Duct, convolved, or wound together, make up the Body of the Glands, the Organs of Secretion. The *Excretory* Ducts ſpring from the Extremities of the Arteries and Veins, and carry off a Liquor ſeparated from the Blood. *Drake.*

The Lymphatick Glands, have either Lymphæducts, for their *Excretory Ducts*, or Lacteal Veſſels, as in the Meſentery. *Id.*

The Muſcles of thoſe two Bones being contracted, they compreſs the Bag, and ſqueeze out the Liquor thro' two *Excretory* Ducts, terminating in the two Gums of the great Teeth of the Viper. *Lemery.*

EXCURSION, in Aſtronomy. See ELONGATION.

*Circles of* EXCURSION, are Circles parallel to the Ecliptic, at ſuch Diſtance from it, as is capable of bounding, or comprehending the greateſt Digreſſions, or Excurſions, of the Planets from the ſame; which is commonly fix'd at 10 Degrees. See CIRCLE.

EXEAT, in Church Diſcipline, a pure *Latin* Term, uſed for a Permiſſion, which a Biſhop grants a Prieſt to go out of his Dioceſe; or an Abbot, to a Religious, to go out of his Monaſtery.

The Word is alſo uſed in ſeveral Great Schools, for Leave given a Scholar, or Student, to go out. His Maſter has given him an *Exeat.*

EXECUTION, the Act of *Executing*, i. e. of accompliſhing, finiſhing, or atchieving any Thing, to be done.

The *Execution* of a Teſtament; of a Law; of a Treaty; of a Building, *&c.*

The Term is particularly uſed in the *French* Muſic, for the Manner of Singing, or *Performance:* As to the Manner of Singing, call'd in *France*, *Execution*; no Nation may, with any Probability, diſpute it with the *French.* If the *French*, by their Commerce with the *Italians*, have gain'd a bolder Compoſition; the *Italians* have made their Advantage of the *French*, in learning of them a more polite, moving, and exquiſite *Execution.* St. *Evremond.*

EXECUTION, in common Law, ſignifies the laſt Performance of an Act: As of a *Fine*, of a *Judgment*, &c.

That of a Fine, is the obtaining of actual Poſſeſſion of Things contained in the ſame by virtue thereof; which is either by Entry into the Lands, or by Writ. See FINE and POSSESSION.

There are two Sorts of *Executions*, one final, another with a *Quouſque*, as only tending to an End.

An *Execution final*, is that which maketh Money of the Defendant's Goods, or extendeth his Lands, and delivers them to the Plaintiff; for this the Party accepteth in Satisfaction: and this is the End of the Suit, and all that the King's Writ commandeth to be done.

The other Sort, with a *Quouſque*, is that which only tends to an End; and is not final, as in the Caſe of a *Capias ut Satisfaciendum*, &c.

This is not final, but the Body of the Party is to be taken, to the Intent and Purpoſe to ſatisfie the Plaintiff; and his Impriſonment is not abſolute, but till he doth ſatisfie: ſo that the Body is but a Pledge for the Debt.

*Military* EXECUTION, is the Pillage, or plundering of a Country by the Enemies Army. --- The Towns and Villages of the Province were required to pay Contribution, on Penalty of Military *Execution.* See CONTRIBUTION.

EXECUTIONE *facienda*, a Writ commanding *Execution* of a Judgment. ----- *Executione facienda in Withernamium*, lies for taking his Cattle, who had formerly convey'd out of the County the Cattle of another.

EXECUTOR, a Perſon nominated by a Teſtator, to take Care to ſee his Will, or Teſtament, *Executed* or performed; and his Subſtance diſpoſed of according to the Tenor of the Will. See TESTAMENT.

An *Executor* is either *univerſal*, as having the Charge and Diſpoſal of the whole; or, only *particular*, entruſted with ſome particular Branch thereof.

An *Executor* ſhould be ſeiz'd of all the Moveables of the deceas'd during one Year; at the End whereof he is to account for them. To the Validity of a Teſtament, 'tis not neceſſary there be an *Executor* nominated therein. The Teſtaments made in *Latin* in the XIV*th* Century, call *Executors*, *Proviſores Teſtamentarii.*

EXECUTOR *de ſon tort*, or, of his own Wrong, is he who takes on him the Office of an *Executor* by Intruſion, not being conſtituted thereto by the Teſtator, or deceaſed, nor authorized by the Ordinary to adminiſter. How far he ſhall be accountable to the Creditor, ſee Stat. 43 *Eliz.*

EXECUTORY, that which has, or carries with it a ſufficient Authority for being *executed.* --- A Contract is only *Executory*, when it is in Form, and ſeal'd. The Great Seal of *England* is *Executory* throughout the whole Iſland. See SEAL.

EXEDRÆ, among the Ancients, were Places wherein the Philoſophers, Sophiſts, Rhetors, *&c.* uſed to hold their Conferences and Diſputes.

M. *Perrault* is of Opinion, they were a Sort of little Academies, where the Men of Learning met together.

*Budeus* rather thinks, that what the Ancients call'd *Exedræ*, might anſwer to what we call Chapters in the Cloiſters of Monks, or Collegiate Churches.

The Word is pure *Greek*, ἐξέδρα.

EXEGESIS, a Term ſometimes uſed by the Learned, to ſignifie *Explication.*

Several Interpreters of the Bible are of Opinion, that in three Paſſages of Scripture, where we meet with *Abba Pater*, two Words the firſt *Syriac*, and the ſecond *Greek* or *Latin*, but both ſignifying the ſame Thing; the ſecond is only an *Exegeſis* of the firſt.

The

The Word *Exegeſis* is alſo uſed for a whole Diſcourſe by way of Explication, Comment, or *Eſclairciſſement* on any Thing.

EXEGESIS *Numeroſa*, or *Linealis*, ſignifies the Numeral or Lineal Solution, or Extraction of Roots, out of adfected Equations; firſt invented by *Vieta*. *Ozanam* calls it *la Rhetique*. See EXTRACTION *of Roots*.

EXEGETES, among the *Athenians*, were Perſons learn'd in the Laws of the *Juris conſulti*; whom the Judges us'd to conſult in capital Cauſes.

The Word is *Greek*, Ἐξηγητὴς, form'd of ἐξηγέομαι, *I explain*.

EXEGETIC, a *Greek* Term, form'd of ἐξηγῶμαι, which, among other Things, ſignifies to *explain*, *interpret*, &c. Whence we ſay *Exegetic Notes*, an *Exegetic Comment*, &c.

*Vieta*, the Author of what we call the new Algebra, introduced ſeveral *Greek* Names into his Method; ſuch were *Thetic*, *Zetetic*, *Exegetic* or *Exegetica*, &c.

In this Senſe, *Exegetic* is either a Subſtantive Feminine; or an Adjective, under which is underſtood *part*, as the *Exegetic* Part of Algebra. See ALGEBRA.

The *Exegetica* in Algebra, is the Art of finding, either in Numbers, or Lines, the Roots of the Equation of a Problem, according as the Problem is either Numerical, or Geometrical. See ROOT and EQUATION.

EXEMPLAR, a Model, or Original, to be imitated, or copied. See MODEL, *&c.*

*Exemplar* is alſo the Idea, or Image, conceiv'd, or form'd in the Mind of the Artiſt, whereby he conducts his Work: Such is the Idea of *Cæſar*, which a Painter has in his Mind when he goes to make a Picture of *Cæſar*. The *Exemplar* is ordinarily number'd among the Cauſes. See CAUSE.

EXEMPLIFICATION *of Letters patent*, an *Exemplar*, or Copy of Letters Patent, made from the Inrolment thereof; and ſeal'd with the Great Seal of *England*. See PATENT.

Such *Exemplifications* are as effectual to be ſhew'd, or pleaded, as the Letters Patent themſelves: Nothing but Matter of Records are to be *Exemplified*. See RECORD.

EXEMPTION, a Privilege, or Diſpenſation, whereby a Perſon is excepted out of ſome general Rule. See PRIVILEGE, *&c.*

*Exemption* is particularly applied to Churches, Chappels, and Monaſteries which have a Privilege given them by the Popes, or Princes, whereby they are *Exempted* from the Juriſdiction of the Biſhop, or Ordinary. See CHAPPEL, ORDINARY, *&c.*

The Council of *Conſtans* revoked all *Exemptions*, to reſtore to the general Law, weaken'd and diminiſh'd by a Relaxation of ſeveral Ages, its ancient Force and Vigour; and make it every where obtain in all its Latitude.

The firſt *Exemptions* granted to Monks were only for the Liberty of Electing their Abbot, independently on the Biſhop; and not to ſcreen them from the regular Juriſdiction of the Biſhops. The Pretence for theſe *Exemptions* was, that the Biſhops abuſed their Authority, and exacted extravagant Dues on the Monaſteries in their Dependance. But the real Cauſe was, rather, that the Monaſteries, being fallen from the Severity of their Rules, did not care for Inſpectors ſo near at Hand, and therefore ſollicited *Exemptions* at *Rome*.

As this was to derogate from the common Laws, the Popes were a good while very reſerved in the Point; and ſeldom granted them, but with the Conſent of the Biſhops themſelves. But, by degrees, the Popes began to aſſume a Power of granting ſuch *Exemptions* at Pleaſure; and made their Account of the Indulgence of the Biſhops, who were not ſufficiently apprehenſive of all the Conſequences. Accordingly, they favour'd whole Orders with the Privilege of *Exemption*, as the *Ciſtercians*, *Dominicans*, *Carthuſians*, *Jeſuits*, &c.

Things, at length, were brought to ſuch a paſs, that there was a Neceſſity for putting a Check to *Exemptions*; accordingly, the Council of *Trent* prohibited, and declar'd them null for the future; confirming only ſuch as were well founded, on legal Conceſſions from the Holy See.

EXERCISE, a Repetition of any Operation, for the ſtrengthening or retaining of a Habit. See HABIT.

Thus, we uſe *Exerciſe* of the Body, for the acquiring, or maintaining of Health; as it contributes both to the Expulſion of the Excrements, and preſerving the Tone, and Spring of the Solids. See HEALTH.

People who live a ſedentary Life, and do not uſe *Exerciſe*, are liable to Defluxions, which bring on other Diſorders. Games of Hazard are to be diſcountenanced, and thoſe of *Exerciſe* to be promoted. See GAMES.

*Exerciſe* and Quiet make one of the Phyſicians Non Naturals. See NON-NATURALS.

Labour, or *Exerciſe*, Dr. *Cheyne* obſerves, is indiſpenſibly neceſſary to preſerve the Body any Time in due Plight. Let what Diet will be purſued, however adjuſted both in Quantity and Quality, let whatever Evacuations be uſed to leſſen the Malady, or any *Succedaneum* be propoſed to prevent the ill Effects; ſtill, our Bodies are ſo made, and the Animal Oeconomy now ſo contrived, that without due Labour and Exerciſe, the Juices will thicken, the Joints will ſtiffen, the Nerves will relax, and on theſe Diſorders, Chronical Diſeaſes, and a crazy old Age, muſt enſue. *Eſſay of Health*, p. 90. — Of all the *Exerciſes* that are or may be uſed for Health, as *Walking*, *Riding* a Horſeback, or in a Coach; *Fencing*, *Dancing*, *Bowling*, *Digging*, *Pumping*, *Ringing*, &c. Walking is the moſt Natural, and would be the moſt uſeful, if it did not ſpend too much of the Spirits of the weakly. But now *Riding* is certainly the moſt manly, the moſt healthy, and leſs laborious and expenſive of Spirits than any. *Id.* p. 94, *&c.* — Thoſe Organs of the Body that are moſt uſed, always become ſtrongeſt; ſo that we may ſtrengthen any weak Organ by *Exerciſe*: Thus the Legs, Thighs and Feet of Chairmen; the Arms and Hands of Watermen; the Backs and Shoulders of Porters, grow thick, ſtrong and brawny by Time and Uſe. 'Tis certain alſo, that ſpeaking ſtrong and loud, will ſtrengthen the Voice, and give Force to the Lungs. *Id.* p. 96. — To the Aſthmatic, therefore, and thoſe of weak Lungs, I would recommend talking much and loud; walking up eaſy Aſcents, *&c.* To thoſe of weak Nerves, and Digeſtion, Riding on Horſeback: To thoſe troubled with the Stone; riding over rough Cauſeways in a Coach: To thoſe troubled with Rheumatic Pains, playing at Billiards, Cricket, or Tennis: To thoſe of weak Arms or Hams, playing at Tennis or Foot-ball: To thoſe of weak Backs, or Breaſts, ringing a Bell, or working at the Pump. Walking through rough Roads, even to Laſſitude, will beſt recover the Uſe of the Limbs to the Gouty; tho' Riding will beſt prevent the Diſeaſe. But the Studious, the Contemplative, the Valetudinary, and thoſe of weak Nerves, muſt make *Exerciſe* a Part of their Religion. — A Condition neceſſary to render *Exerciſe* as beneficial as may be, is that it be uſed on an empty Stomach. — Under the Head of *Exerciſe*, Cold-Bathing, and the Fleſh-Bruſh, come alſo to be recommended. — *Id.* — *Ibid.* p. 103, 104, *&c.* See COLD-BATHING and FLESH-BRUSH.

EXERCISES, in the Plural, is particularly underſtood of what is taught young Gentlemen in the Academies of the Ecuyers at *Paris*, &c. As Riding the great Horſe, Dancing, Fencing, Vaulting, drawing Fortifications, *&c.* — This young Nobleman went thro' all his *Exerciſes* with great Applauſe. See ACADEMY, *&c.*

EXERCISE, in the Art of War, is the ranging a Body of Soldiers in Form of Battle, and making them practiſe the ſeveral Motions and military Evolutions, with the divers Management of their Arms, *&c.* to make, or keep them expert thereat againſt Occaſion.

This is what *Vegetius*, and other *Latin* Writers call *Meditatio*.

EXÆRESIS, or EXHERESIS, in Chirurgery, an Operation whereby ſomething foreign, uſeleſs, and even pernicious, is taken from the human Body.

The *Exæreſis* is perform'd two Ways: By *Extraction*, when ſomething formed in the Body is drawn out of the ſame: And by *Detraction*, when ſomething is taken away, that had been introduced into the Body from without. See LITHOTOMY, *&c.*

The Word is *Greek*, ἐξαίρεσις, which ſignifies the ſame Thing.

EXERGUM, among Medalliſts, a little Space, around or without the Work or Figures of a Medal; for an Inſcription, Cypher, Device, Date, or the like, to be put thereon. See MEDAL, LEGEND, *&c.*

The Word is derived from the *Greek*, ἐξ and ἔργον, *Opus*, Work.

EXFOLIATION, in Chirurgery, the ſcaling of a Bone; or its riſing and ſeparating in Leaves, or Laminæ. See BONE.

Any Part of the Surface of the Cranium that has been bored, is liable to *Exfoliation*. The Uſe of the Cephalic Powders avails nothing for promoting the *Exfoliation*. *Dionis*. The Wound muſt not be ſtopp'd too much, but the Bone left at Liberty to recover it ſelf, which it ſometimes does, without *Exfoliating*, particularly in Children. See TREPANNING.

The Word is compounded of the Latin *ex* and *folium*, Leaf.

EXFOLIATIVE. — An *Exfoliative* Trepan, is a Trepan proper to ſcrape, and at the ſame Time pierce, a Bone, and ſo to *exfoliate*, or raiſe ſeveral Leaves, or Flakes, one after another.

The Uſe of the *Exfoliative* Trepan is very dangerous; as being apt to ſhake and diſorder the Head.

EXHA-

EXHALATION, a Fume, or Steam, *exhaling*, or iſſuing from a Body, and diffuſing it ſelf in the Atmoſphere. See EFFLUVIA.

The Terms *Exhalation* and *Vapour*, are ordinarily uſed indifferently; but the more accurate Writers diſtinguiſh them: Appropriating the Term *Vapour* to the moiſt Fumes rais'd from Water, and other liquid Bodies; and *Exhalation* to the dry ones emitted from ſolid Bodies; as Earth, Fire, Minerals, Sulphurs, Salts, &c. See VAPOUR.

In this Senſe, *Exhalations* are dry, ſubtile Corpuſcles, or Effluvia, looſen'd from hard terreſtrial Bodies, either by the Heat of the Sun, or the Agitation of the Air, or ſome other Cauſe; and emitted upwards to a certain Height of the Atmoſphere, where mixing with the Vapours, they help to conſtitute Clouds, and return back again into Dews, Miſts, Rains, &c. See ATMOSPHERE, CLOUD, RAIN, &c.

Nitrous, and ſulphureous *Exhalations* are the chief Matter of Thunder, Lightning, and divers other Meteors generated in the Air. See THUNDER, &c.

Sir *Iſaac Newton* takes true and permanent Air to be form'd from the *Exhalations* rais'd from the hardeſt and moſt compact Bodies. See AIR.

EXHAUSTED *Receiver*, a Glaſs, or other Veſſel, applied on the Plate of the Air-Pump, and the Air extracted out of the ſame, by the working of the Engine. See RECEIVER, AIR-PUMP, &c.

Things placed in an *Exhauſted Receiver*, are ſaid to be *in Vacuo*. See VACUUM.

EXHAUSTIONS, in Mathematicks. — The *Method of* EXHAUSTIIONS, is a Way of proving the Equality of two Magnitudes, by a *Reductio ad abſurdum*; ſhewing, that if one be ſuppoſed either greater or leſs than the other, there will ariſe a Contradiction. See REDUCTION.

The *Method of Exhauſtions*, is of frequent Uſe in the antient Mathematicians, as *Euclid*, *Archimedes*, &c. See METHOD.

It is founded on what *Euclid* ſaith in his tenth Book, *viz.* That thoſe Quantities whoſe Difference is leſs than any aſſignable Quantity are equal: For if they were unequal, be the Difference never ſo ſmall, yet it may be ſo multiplied, as to become greater than either of them; if not ſo, than it is really nothing.

This he aſſumes in the Proof of *Prop.* 1. of Book X. which imports, that if from the greater of two Quantities, you take more than its half, and from the Remainder more than its half, and ſo continually, there will at length remain a Quantity leſs then either of thoſe propoſed.

On this Foundation they demonſtrate, that if a regular Polygon of infinite Sides be inſcribed in, or circumſcribed about, a Circle, the Space, which is the Difference between the Circle and the Polygon, will, by Degrees, be quite exhauſted, and the Circle equal to the Polygon. See CIRCLE, QUADRATURE, POLYGON, &c.

EXHEREDATION, or EXHÆREDATION, in the Civil Law, with us ordinarily call'd *Diſinheriting*, is the Father's excluding his Son from inheriting his Eſtate. See DISINHERITING.

There are fourteen Cauſes of *Exheredation* expreſs'd in *Juſtinian*'s Novel: Without ſome one of which Cauſes, he decrees the *Exheredation* null, and the Teſtament inofficious, *Teſtamentum inofficioſum*, as the Civilians call it. See TESTAMANT.

Indeed, by the antient *Roman* Law, the Father might pronounce *Exheridation* without any Cauſe; but the Rigour of this Law was reſtrain'd, and moderated by *Juſtinian*. See HEIR.

EXHIBIT, in Law. When a Deed, Acquittance, or other Writing, is in a Chancery Suit exhibited to be proved by Witneſs; and the Examiner writes on the Back, that it was ſhew'd to ſuch a one, at the ſame Time of his Examination: This is call'd an *Exhibit*. See EXHIBITION.

EXHIBITION, a producing, or ſhewing of Titles, Authorities, and other Proofs of a Matter in Conteſt.

The Parties have *exhibited* their Titles and Pretenſions before the Arbitrators.

Antiently, they uſed the Phraſe *Exhibition* of a Tragedy, Comedy, or the like; but now we ſay *Repreſentation* in Lieu thereof. See REPRESENTATION.

EXHUMATION, the Act of digging up a Body interr'd in holy Ground, by the Authority of the Judge. See INTERMENT.

In *France*, the *Exhumation* of a dead Body is order'd upon Proof that he was kill'd in a Duel. --- A Parſon has a Right to demand the *Exhumation* of the Body of one of his Pariſhioners, when interr'd out of the Pariſh, without his Conſent. See BURIAL.

The Word is compounded of the Latin *ex*, out of, and *humus*, Ground.

EXIGENCE, or EXIGENCY, that which a Thing requires, or which is ſuitable thereto.

The Criminals were remitted back to the Judges, to be puniſh'd according to the *Exigency* of the Caſe.

EXIGENT, in Law, a Writ that lies where the Defendant in a perſonal Action cannot be found, nor any Thing of his within the County, whereby to be attach'd, or diſtrain'd. See WRIT, ATTACH, &c.

It is directed to the Sheriff, ordering him to proclaim and call the Party five County Days ſucceſſively, and charge him to appear under Pain of Out-lawry.

The ſame Writ alſo lies in an Indictment of Felony, where the Party indicted cannot be found.

It is call'd an *Exigent*, by Reaſon it *exigit*, i. e. *exacts* or requires the Party to appear, or be forthcoming, to anſwer the Law. If he appear not at the laſt Days Proclamation, he is ſaid to be *quinquies exactus*, and then is out-law'd. See OUT-LAWRY.

EXIGENTERS, are four Officers of the Court of Common Pleas, who make all *Exigents* and Proclamations, in all Actions where the Proceſs of the Out-lawry lies. See EXIGENT.

Antiently, the making of Writs of *Superſedeas* upon ſuch *Exigents* as were made in their Offices, did likewiſe belong to them: But this Branch of Buſineſs was taken from them under King *James* I. and committed to a particular Officer in the Court of Common-Pleas, created by Patent. See SUPERSEDEAS.

EXILE, *Baniſhment*. See BANISHMENT.

Among the *Romans*, the Word Exile, *Exilium*, properly ſignified an Interdiction, or Excluſion from Water and Fire; the neceſſary Conſequence of which was, that the interdicted Perſon muſt betake himſelf into ſome other Country, ſince there was no living without Fire and Water.

Thus, *Cicero ad Herenn.* obſerves, that the Form of the Sentence did not expreſs *Exile*, but only *Aquæ & Ignis Interdictio*. See INTERDICTION.

The ſame Author remarks, that *Exile* was not properly a Puniſhment, but a voluntarily flying, or avoiding the Puniſhment decreed: Exſilium *non eſſe Supplicium ſed perfugium, portuſq; Supplicii.* Pro Cæcinna.

He adds, that there was no Crime among the *Romans*, as among other Nations, puniſh'd with *Exile*; but *Exile* was a Recourſe People flew voluntarily too, to avoid Chains, Ignominy, Starving, &c.

The *Athenians* frequently ſent their Generals, and great Men into *Exile*, out of Envy of their Merits, or Diſtruſt of their too great Authority. A perpetual *Exile* is a Civil Death, and imports Confiſcation.

EXILE, is ſometimes alſo uſed for the *relegating* a Perſon into a Place, whence he is obliged not to ſtir without Leave. See RELEGATION.

The Word is derived from the Latin *Exilium*, or from *Exul*, a baniſh'd Perſon; and that, probably, from *Extra-ſolum*, out of his Native Soil.

Figuratively, we uſe the Phraſe honourable *Exile* for an Office, or Employment, which obliges a Man to reſide in ſome remote, or diſagreeable Place. Under the Reign of *Tiberius*, remote Employments were a Kind of myſterious *Exiles*. --- A Biſhopric, or even a Lord Lieutenancy, in *Ireland*, is ſometimes deem'd a Kind of *Exile*. A Reſidence, or Embaſſy, in ſome barbarous Country, is a Sort of *Exile*.

EXINANITION, the ſame as *Evacuation*. See EVACUATION.

EXISTENCE, that whereby a Thing has an actual *Eſſence*; or that whereby a Thing is ſaid *to be*, *eſſe*; See ESSENCE and ESSE.

This Notion of *Exiſtence*, is applicable not only to a created, but an uncreated Subſtance. ---- But it muſt be added, that the *Exiſtence* of created Subſtances, and eſpecially Corporeal ones, implies a Reſpect to Place, Time, and even an Efficient Cauſe; whence the Schoolmen generally define it; *That whereby a Thing is formally and extrinſically without, or beyond its Cauſes, and this here, and now.*

*Exiſtence*, and Eſſence, come very near the Nature of each other: In Effect, they only differ in that we have different Manners of conceiving the ſame Thing.

For, 1°. Eſſence is uſually explain'd either by the firſt, nobleſt, and radical Attribute of the Thing, *e. gr.* That of Body, by Extenſion; that of Mind, by thinking, &c. or by the ſpecifying of all the intrinſic Attributes: And *Exiſtence*, by the ſpecifying of all Place, and all Time, as in that of God; or by the ſpecifying of ſome definite Place, and Time, together with the Cauſes; as in the Creatures.

2°. The Foundation, and Occaſion of this Diſtinction, is this; that Eſſence belongs to the Queſtion, What is it? *Quid eſt?* But *Exiſtence* to the Queſtion, Is it? *An eſt?*

3°. *Exiſtence* neceſſarily preſuppoſes Eſſence, and cannot be conceiv'd without it: But Eſſence may be conceiv'd without *Exiſtence*; in that Eſſence belongs equally to Things that are in *Potentia*, and in *Actu*: But *Exiſtence*, only

only to those in *Actu*. Note, however, that this does not obtain in God; about whose Nature and Essence the Mind cannot think, without conceiving his *Existence*.

We have divers Ways of arriving at the Knowledge of the *Existence* of Things.---Our own *Existence* we know by Intuition; the *Existence* of a God, by Demonstration: And that of other Things by Sensation.

As for our own *Existence*, we perceive it so plainly, that it neither needs, nor is capable of any Proof. I think, I reason, I feel Pleasure and Pain: Can any of these be more evident to me than my own *Existence*? If I doubt of all other Things, that very Doubt makes me perceive my own *Existence*, and will not suffer me to doubt of that. If I know I doubt, I have as certain a Perception of the Thing doubting, as of that Thought which I call Doubt. Experience then convinces us, that we have an intuitive Knowledge of our own *Existence*, and an internal, infallible Perception that we are. In every Act of Sensation, Reasoning or Thinking, we are conscious to our selves of our own Being, and in this Matter come not short of the highest Degree of Certainty. See CARTESIANISM.

As to our Knowledge of the *Existence* of a God; tho' he has given us no innate Ideas of himself, yet having furnish'd us with Faculties of Sense, Perception and Reason, we can never want a clear Proof thereof. See GOD.

The Knowledge of the *Existence* of other Things, *i. e.* of external Objects, Bodies, a World, *&c.* we only have by Sensation; for there being no necessary Connexion of real *Existence* with any Idea a Man hath in his Memory; nor of any other *Existence* but that of God, with the *Existence* of any particular Man; no particular Man can know the *Existence* of any other Being, but only, when by actually operating upon him, it makes it self be perceived by him. The having the Idea of any Thing in our Mind, no more proves the *Existence* of that Thing, than the Picture of a Man evidences his Being in the World; or the Visions of a Dream make a true History. It is therefore the actual receiving of Ideas from without, that gives us notice of the *Existence* of other Things, and makes us know that something doth *exist* at that Time without us, which causes that Idea in us, tho' we neither know, nor consider how it doth it.

This Notice which we have by our Senses of the *existing* of Things without us, tho' it be not altogether so certain as Intuition and Demonstration, yet deserves the Name of Knowledge, if we persuade our selves, that our Faculties act and inform us right, concerning the *Existence* of those Objects that affect them. See KNOWLEDGE.

Now besides the Assurance of our Senses 'emselves, that they do not err in the Information they give us of the *Existence* of Things without us, we have other concurrent Reasons: As 1°. It is plain those Perceptions are produced in us, by exterior Causes affecting our Senses, because those that want the Organs of any Sense, never have the Ideas belonging to that Sense produced in their Minds. 2°. Because we find we cannot avoid the having those Ideas produced in our Minds: When our Eyes are shut, we can at Pleasure recal to our Mind the Ideas of Light, or the Sun, which former Sensations had lodged in our Memories; but if we turn our Eyes towards the Sun, we cannot avoid the Ideas, which the Light or the Sun then produces in us; which shews a manifest Difference between those Ideas laid up in the Memory, and such as force themselves upon us, and we cannot avoid having. Besides, there is no Body who doth not perceive the Difference in himself between actually looking upon the Sun, and contemplating the Idea he has of it in his Memory; and therefore he hath certain Knowledge, that they are not both Memory or Fancy. Thirdly, Add to this, that many Ideas are produced in us with Pain, which we afterwards remember without the least Offence: Thus, the Pain of Heat or Cold, when the Idea of it is receiv'd in our Minds, gives us no Disturbance; which when felt, was very troublesome; and we remember the Pain of Hunger, Thirst, Head-ach, *&c.* without any Pain at all, which would either never disturb us, or else constantly do it, as often as we thought of it, were there nothing more but Ideas floating in our Minds, and Appearances entertaining our Fancies, without the real *Existence* of Things affecting us from abroad. 4°. Our Senses, in many Cases, bear Witness to the Truth of each others Report, concerning the *Existence* of sensible Things without us: He that doubts, when he sees a Fire, whether it be real, may feel it too, if he pleases, and by the exquisite Pain may be convinced, that it is not a bare Idea or Phantom.

Such is Mr. *Lock*'s Demonstration of the *Existence* of External Bodies.

The ingenious Mr. *Berkeley* has a quite different System. External Bodies, he contends, have no *Existence* but in a Mind perceiving them; that is, they only *exist*, quatenus they are perceiv'd; there *Existere* is *percipi*. They have no *Existence*, nor Shadow of *Existence* out of our Minds. And of this he has given us what he and some others account a Demonstration. See BODY, EXTERNAL *World*, &c.

As to the *Existence* of Spirits, Mr. *Lock* allows, that our having Ideas of them, does not make us know, that any such Things do *exist* without us; or that there are any finite Spirits, or any other spiritual Beings, but God. We have ground from Revelation, and several other Reasons, to believe with Assurance, that there are such Creatures; but our Senses being not able to discover them, we want the Means of knowing their particular *Existence*: For we can no more know that there are finite Spirits really *Existing* by the Idea we have of such Beings, than by the Ideas any one has of Fairies, or Centaurs, he can come to know that Things answering to those Ideas do really *exist*.

EXIT, properly expresses the Departure of a Player from off the Stage, when he hath acted his Part.---The Word is also used in a figurative Sense to express any Kind of Departure.

EXITUS, in Law, *Issues*; or, the yearly Rents, or Profits of Lands or Tenements. See ISSUE.

EX-*mero motu*, are formal Words used in the King's Charters, and Letters patent; signifying that he does what is contain'd therein *Of his own Will and Motion*.---The Effect of these Words is to bar all Exceptions that might be taken to the Instrument, by alledging that the Prince, in passing such Charter, was abused by false Suggestion.

EXOCATACOELUS, in Antiquity, a general Denomination, under which were included several grand Officers of the Church at *Constantinople*; as the *Grand Oeconomus*, *Grand Sacellarius*, *Grand Master of the Chappel*, *Grand Scevophylac*, or Keeper of the Vessel, *Grand Cartophylax*, *the Master of the little Chappel*, and the *Protecdicus*, or first Defender of the Church.

The *Exocatacœli*, were of great Authority: In public Assemblies they had the Precedence of Bishops; and in the Patriarchate of *Constantinople*, did the Office of Deacons; as the Cardinals originally did in the Church at *Rome*. Accordingly, in the Letter of *John* IX. to the Emperor *Basil Leo*, they are call'd *Cardinales*. See CARDINAL.

At first they were Priests; but some Patriarch of *Constantinople*, whom *Codin* does not mention, would have them for the future to be no more than Deacons. The Reason was, that being Priests, each of them had their several Churches, wherein they were to officiate on all the grand Festival Days; so that it unhappily fell out, the Patriarch on the most solemn Days was deserted by all his chief Ministers. See DEACON.

The Criticks are not at all agreed about the Origin of their Name *Exacatacœli*: *Junius*, in his Edition of *Codin*, breaks the Word into two, and reads ἑξ Κατακοιλῳ, q. d. *Six Catacœli*; but this Reading, tho' authorized by several MSS. is faulty; the Generality of Copies only making one Word: Beside that they are call'd *Exacatacœli*, even when there were only five of them. The same *Junius* derives *Catacœlus* hence, that these Officers dwelt in the Valleys, κατα τας κοιλαδας.

*Pet. Gregor. Tolosan*, takes the Word to have been form'd from καταπαλεω, *permulceo*, *suavitate Animum delinio*: But *Gretser* rejects this Etymology, as without any Foundation. In Lieu thereof, he proposes another Conjecture, tho' with a good deal of Timidity: He reads ἐξωκαλακοίτας, instead of ἐξωκαλακοίλας, as if they were thus called by Reason they lodged, or lived out of the Patriarchal Palace.

Fa. *Goar* rejects this Opinion, and had rather they should read ἐξωκατακελλας, as intimating they were thus call'd in Opposition to the *Syncellus*, who lay in the Patriarch's Apartment, which the rest did not; but he is far from being of the Opinion that Officers of so much Eminence, should take their Denomination from a Thing which testifies a Want of a Privilege. He chuses, therefore, to imagine that all the inferior Priests were call'd Κατακοιλοι, *Catacœli*, q. d. People of a low Condition; and that their Superiors were call'd *Exocatacœli*, q. d. People out of the Number of *Katacœli*, or above them.

Upon the whole, however, he adheres to the Sentiment of *G. Coresius*, who says, that the Patriarchal Palace and the Apartments of the *Syncellus*, and the Monks in the Patriarch's Service, were in a very low Part of the City, which with Regard to the rest seem'd a Valley or Pit; and that the Offices above mentioned had their several Houses, or Palaces, ἐξω, out of the Valley: Whence the Name *Exocatacœli*.

The Opinion of M. *du Cange* is the last we shall name: He derives the Appellation from their being above the Level, or Rank of the other Clerks; and seated at Church, *&c.* in more

honourable Places rais'd for that Purpoſe by the Patriarch's Sides: Theſe two laſt Syſtems are the moſt probable.

EXOCIONITÆ, Exocionites, in Church Antiquity. --- *Meurſius* tells us, that there was a Monaſtery at *Conſtantinople* call'd *Exocionium*; and that the firſt who were call'd *Exocionites*, were the Monks thereof: But this is a Miſtake.

'Twas the *Arians* who were firſt call'd *Exocionites*; by Reaſon, when expell'd the City by *Theodoſius* the Great, they retired into a Place call'd *Exocionium*, and there held their Aſſemblies. *Juſtinian* gave the Orthodox all the Churches of the Hereticks, excepting that of the *Exocionites*. Cedrenus. See Arian.

The Word is derived from ἐξακιόνιον, or ἐξωκιόνιον, the Name of the Place abovementioned.

*Codin*, in his *Origines*, ſays, that the *Exocionium* was a Place encompaſſed with Walls, built and adorn'd by *Conſtantine*; and that without the Circumference of this Wall, there was a Column, with a Statue of that Emperor, whence the Place took its Name, *viz.* from ἔξω, *without*, and κίων, *Column*.

*Gothefrid* holds, that *Theodoret* is miſtaken, in ſaying that the *Arians* were call'd *Exocionites*, or *Exacionites*, from the Name of the Place where they aſſembled; and takes the Name to be the ſame with that of *Exoucontians*, which was attributed to the *Arians*, by Reaſon they held that the Son was made out of nothing, ἐξ οὐκ ὄντων. But a mere Conjecture of *Gothefrid* is not ſufficient to make us ſet aſide the Authority of ſo able a Perſon as *Theodoret*.

EXODE, or Exodium, in the antient *Greek* Drama, was one of the four Parts or Diviſions of Tragedy. See Tragedy.

The *Exodium*, according to *Ariſtotle*, was ſo much as was rehearſed after the Chorus had ceas'd to ſing for the laſt Time; ſo that *Exodium* with them, was far from being what the Epilogue is with us, as ſeveral People have imagined it was. See Epilogue.

The *Exode* was ſo much of the Piece as included the Cataſtrophe and unravelling of the Plot; which Cataſtrophe, *&c.* in Pieces regularly compoſed, always begun after the laſt ſinging of the Chorus; anſwering nearly to our 4th and 5th Acts. See M. *Dacier's* Comment. on *Ariſtotle's Poeticks*, p. 166. See alſo the Articles Catastrophe, Chorus, *&c.*

Among the *Romans*, the *Exodium* was a different Thing; 'twas pretty nearly what Farces are with us. After the Tragedy was over, came a Pantomime on the Stage, call'd the *Exodiarius*, who by his Grimace, Jeſting, and Buffoonry, diverted the People, compoſed their Minds, and wiped away the Tears with the Tragic Spectacle had occaſion'd to be ſhed.

This was his Office, as related by the antient Scholiaſt of *Juvenal:* Exodiarius, *apud Veteres in fine Ludorum intrabat, quod ridiculus foret, ut quidquid Lacrymarum atque Triſtitiæ coepiſſent ex tragicis Affectibus, hujus Spectaculi Riſus detergeret.*

Such was the original Intention of the *Exodium*, but it afterwards degenerated into a bitter, malicious Kind of Raillery.

*Vigenere* on *T. Livy*, ſays the *Exodium* conſiſted of certain humorous, drolling Verſes, rehearſed by the Youth at the End of the *Fabulæ Attellanæ*, and anſwering to our Farces. --- In another Place, the ſame Author ſays, that the *Exodes* were a Kind of Interludes, in the Intervals, between the Acts, partly Fable and Pleaſantry, partly Muſic, *&c.* to give Time both for the Spectators and Actors to recover Breath.

The Paſſage in *Livy*, whence he takes the Notion, is *Lib.* VII. *Dec.* 1. *Ridicula intexta Verſibus, quæ Juventus inter ſe more Antiquo jactare cæpit eaque conſerta ſunt fabulis potiſſimum Attellanis.* So alſo *Juvenal*,

> *Urbicus* Exodio *riſum movet Attellanæ*
> *Geſtibus Antonoes.*

The Word is form'd from the *Greek*, ἔξοδος, *going out*, or even *Digreſſion*, going *aſide*, out of the Way; of ἐξ and ὁδὸς, *Road*. Feſtus, *Lib.* V. calls it *Exitus:* Varro, πάφη μενίππη. — The ſame Author uſes the Phraſe *in Exodium Vitæ*.

Exodium, in the Septuagint, ſignifies the End, or Concluſion of a Feaſt. See Feast.

In Particular, it is uſed for the Eighth Day of the Feaſt of Tabernacles, which, 'tis ſaid, had a ſpecial View to the Commemoration of the *Exodus*, or Departure out of *Egypt*. Tho' there is nothing of it expreſſed in Scripture.

The *Hebrew* Text calls the Day עצרת which the Seventy render ἐξόδιον.

Exodium, was alſo the Name of a Song, ſung at the Concluſion of a Meal.

EXODIARY, Exodiarius, in the antient *Roman* Tragedy, was a Droll, or Mime, who appear'd on the Stage, when the Tragedy was ended, and perform'd what they call'd the *Exodium*, or Concluſion of the Shew; to divert the Company. See Exodium.

EXODUS, the ſecond of the five Books of *Moſes*. See Pentateuch.

The Word in its original *Greek*, Ἔξοδος, literally imports a *going out*, or *Journey*; and was applied to this Book, by reaſon the Hiſtory of the *Iſraelites* Paſſage out of *Egypt* is related therein. Beſide this, it contains the Story of what was tranſacted in *Egypt*, from the Death of *Joſeph*, to the Delivery of the *Jews*; as well as what paſs'd in the Wilderneſs, and particularly at Mount *Sinai*, to the building of the Tabernacle.

The *Hebrews* call it *Vëelle Semoth*, ſignifying, *& hæc nomina; Theſe are the Names*; which are the initial Words of the Book: For the ſame reaſon as they call *Geneſis*, *Bereſith*, q. d. *in principio, in the Beginning*. See Genesis.

EX *Officio*. ---- By a Branch of a Statute of 1 *Eliz.* the Queen, by her Letters Patents, might authorize any Perſons, *&c.* to adminiſter an Oath *Ex Officio*; whereby the ſuppoſed Offender was forced to confeſs, accuſe, or clear himſelf of any criminal Matter, *&c.*

But this Branch relating to this Oath, is repealed by 17 *Car.* I. *cap.* 11.

EXOMOLOGESIS, a Term little uſed but in ſpeaking of the ancient Rites of Repentance; whereof the *Exomologeſis* was a Part. See Confession.

It ſignifies *Confeſſion*; being pure *Greek*, ἐξομολόγησις, form'd of ἐξομολογέω, *I confeſs*.

Some of the Ancients, and particularly *Tertullian*, *de pœnit.* C. 9. uſes the Word in a greater Latitude, as comprehending the whole of Repentance: A public *Exomologeſis* was never commanded by the Church for ſecret Sins; as may be ſeen in the Capitularies of *Charlemaign* and the Canons of divers Councils.

EXOMPHALUS, in Medicine, a Generical Name for divers Diſorders.

*Exomphalus* expreſſes all Kinds of Ruptures, or Tumors, happening in the *Umbilicus*, or Navel. See Rupture.

Authors diſtinguiſh three Kinds of *Exomphali*; the firſt are, Tumors, or Swellings of the ſolid Parts, whereof there are three Varieties, denominated from the ſeveral Parts affected, as the *Enteromphalus*, *Epiplomphalus*, and *Entero-epiplomphalus:* The ſecond are, Tumors form'd by Collections, or Gatherings of Humours, of which there are four Varieties, diſtinguiſh'd by the particular Humours they are form'd of, as the *Hydromphalus*, *Pneumatomphalus*, *Sarcomphalus*, and *Varicomphalus:* The third are thoſe compounded of both the other, *viz.* the *Entero hydromphalus*, and *Epiploſarcomphalus*. See each Species under its ſeveral Heads, Enteromphalus, *&c.*

EXORCISM, Prayers, or Conjurations, wherewith to *exorciſe*, i. e. drive out Devils from Perſons poſſeſs'd, purify unclean Creatures, or preſerve from Danger.

*Exorciſms* are of great Uſe in the *Romiſh* Church: Their Prelates, *&c.* are frequently *Exorciſing* Demoniacal Perſons. The Prieſts make the Holy Water, by *Exorciſing* common Water a certain Number of Times.

The *Exorciſm* is a Part in moſt of their Conſecrations. See Exorcist.

It muſt be allow'd, the Uſe of *Exorciſms* is almoſt as ancient as the Church: Recourſe was had to ſuch Machines, to drive away Diſeaſes both of Men and Beaſts, to expel and deſtroy Vermine, and other Animals, noxious to the Earth, and the Fruits thereof.

M. *Thiers*, in his *Traite des Superſtitions*, gives divers Formula's of ſuch *Exorciſms*; and quotes, particularly, the Inſtance of St. *Grat*, who, by Means of *Exorciſms*, obtain'd of God, the Favour, that there ſhould be no Rat found in the Country of *Aoſt*, nor three Miles around the ſame.

The ſame Author is of Opinion, that ſuch *Exorciſms* may be ſtill uſed to good Purpoſe, againſt Rats, Mice, Locuſts, Caterpillars, Storms, *&c.* But in order to perform any Thing of this Kind, he obſerves, a Man muſt have the proper Quality and Character, and be approv'd of by the Church; and muſt likewiſe uſe Words and Prayers authoriz'd thereby; otherwiſe, his *Exorciſms* will be damnable Superſtitions.

*Exorciſms* had anciently another and further Purpoſe, being applied by way of Trial, or Purgation, to extort the Truth from the accuſed. See Purgation.

The *Exorciſm*, in this Senſe, was a Sort of Bread conjured and *Exorciſed* for the Purpoſe: And the Opinion,

nion was, that if the Perſon were criminal, he could not ſwallow the Bread.

This, it ſeems, was a frequent Practice in the Time of our *Edward* III. and the Bread thus *Exorciſed*, was ſaid to be *Corſned*. *Lindenbrock* gives Inſtances of *Exorciſms* with Barley Bread, and others with Cheeſe. And hence, probably, might ariſe that popular Imprecation, May this Bread choak me, if I tell a Lye. See ORDEAL, JUDICIUM *Dei*, &c.

The Word is derived from the *Greek*, ἐξορκίζειν, *adjurare*, *conjurare*, to adjure, or conjure.

In moſt Dictionaries, *Exorciſm* and Conjuration are uſed as ſynonymous: But, in Reality, *Conjuration* is only a Part of the *Exorciſm*; and the *Exorciſm* the Ceremony entire. --- The Conjuration is properly the Formula, whereby the Devil is commanded to come forth, &c. See CONJURATION.

EXORCIST, in the *Romiſh* Church, a Prieſt, or tonſured Clerk, who has receiv'd the four leſſer Orders, one of which is that of *Exorciſt*. See ORDER.

The Term is likewiſe applied to a Prelate, who actually *Exorciſes* a Perſon poſſeſs'd. See EXORCISM.

'Tis a Diſpute among Divines, whether ever the *Greeks* had properly any ſuch Order, as that of *Exorciſt*: Fa. *Goar*, in his Notes on the *Greek* Euchologue, has made it very probable they had, from ſeveral concurring Paſſages in St. *Dionyſius*, and St. *Ignatius Martyr*.

The Ordination of *Exorciſts* is perform'd in the Time of Maſs: Their principal Office being to expel Devils, the IV *th* Council of *Carthage*, Can. 7. appoints, that in the Ordination of *Exorciſts*, the Biſhop putting the Book of *Exorciſms* in their Hands, ſhall ſay theſe Words, *Receive it, and keep it in Remembrance, and have Power to lay Hands on Energumeni, whether Baptized, or Catechumens*; which Form ſtill obtains.

M. *Fleury* mentions certain People among the *Jews*, who travell'd round the Country, making Profeſſion of driving out Devils by Invocations, which they pretended had been taught them by *Solomon*: Theſe were alſo call'd *Exorciſts*. See *Joſeph. Antiq. Jud.* L. VIII. C. 2. *Origen. Tract.* XXXV. in *Matth.* XXVII. 63.

EXORDIUM, in Oratory, &c. the Preamble, or Beginning of a Diſcourſe, or Speech; ſerving to prepare the Audience, and introduce the Matter in Hand: Call'd alſo the *Prologue*, *Prælude*, and *Proem*. See PROLOGUE, &c.

*Cicero* defines *Exordium*, a Part of an Oration, whereby the Minds of the Audience are duly prepar'd for what remains to be ſaid: --- The *Exordium* is a Part of principal Importance, and to be labour'd with extraordinary Care; whence *Tully* calls it, *difficilima pars Orationis*. See ORATION.

The Word is form'd of the Latin, *Ordiri*, to begin; or by a Metaphor from the Weavers, who are ſaid *ordiri telam*, *ourder*, *begin*, or *warp* a Web, by diſpoſing and ordering the Threads in a certain Manner for the future Work.

*Exordiums* are of two Kinds: either juſt, and formal; or vehement and abrupt. In the firſt, the Audience is prepared and conducted, by due and eaſy Steps: In the ſecond, the Orator, as if ſeiz'd with ſome ſudden Paſſion, breaks out upon his Audience at once. Such is that *Exordium* of *Iſaiah*, *Hear, Oh Heavens, and give Ear, Oh Earth*. Or that of *Cicero* againſt *Catiline*, *Quouſq; tandem abutere patientia noſtra Catilina?*

Abrupt *Exordiums* are the moſt ſuitable, on Occaſions of exceeding Joy, Indignation, or the like; tho' we have Inſtances of Panegyricks of the greateſt Orators, begun abruptly without any ſuch Occaſions: Such is that of *Gorgias*, who began his Eloge of the City and People of *Elis*, with ἦλις πολις ἐυδαιμων, *Elis, beata civitas:* Or that of *Greg. Nazianzen*, in Praiſe of *Athanaſius*, Ἀθανασιον ἐπαινῶν αρετὴν ἐπαινεσομαι, *Athanaſium laudans virtutem laudabo*. Abrupt, haſty *Exordiums*, were more of the Taſte and Manner of the *Greeks* than the *Latins*.

The Requiſites in an *Exordium*, are, 1°. *Propriety*, whereby the *Exordium* becomes of a-piece with the whole Diſcourſe, and matches it, as a Part does a whole; ſo as that it could not be accommodated to any other, or perhaps a contrary Occaſion. The ancient Orators were very defective in this Point: Their *Exordiums* had frequently nothing in common with the Subject.

2°. *Care*, Accuracy, and Magnificence, as being the Part moſt minded, and moſt expoſed to Shew. Thus *Tully*, *Veſtibula, adituſq; ad cauſam facias illuſtres*.

3°. *Modeſty*, or an ingenuous Baſhfulneſs, which recommends the Orator exceedingly to the Favour of his Audience. This is what *Cicero* extols ſo much in *L. Craſſus*, *Fuit enim in L. Craſſo pudor quidam, qui non modo non obeſſet ejus Orationi, ſed etiam probitatis commendatione prodeſſet*. The ſame *Tully* owns, of himſelf, that at the Beginning of his Orations, he trembled every Limb, and his whole Mind was in a Flutter.

And, 4°. *Brevity*, not amplified, or ſwell'd with a Detail of Circumſtances, or a long Circuit of Words: Such as that muſt be of the Lawyer, who being to ſpeak of a Difference between two Neighbours, deduced his *Exordium* from *Adam*.

The *Exordium* appears an eſſential Part of an Oration: Tho', anciently, in the *Areopagus*, *Julius Pollux* tells us, they ſpoke without any *Exordium*, any Paſſions, and any Peroration, or Epilogue. The like is ſaid to have been done by *Xenophon*, who begins thus, *Darius & Pariſatis duos habuere filios*.

EXOSTOSIS, from ἐξ and ὀστέον, *Os*, a Bone; is any unnatural Protuberance of a Bone; frequent in Venereal Caſes: Or rather, it is a Swelling, occaſion'd by a Bone's being out of its natural Place, or Poſition. See BONE.

EXOTIC, a Term properly ſignifying *foreign*, or extraneous, *i. e.* brought from a remote, ſtrange Country: In which Senſe we ſometimes ſay *Exotic* or barbarous *Terms*, or *Words*, &c.

But *Exotic* is chiefly applied to Plants which are Natives of Foreign Countries, particularly thoſe brought from the *Eaſt* and *Weſt-Indies*; and which do not naturally grow in *Europe*.

The Generality of *Exoticks*, or *Exotick* Plants, do not thrive in *England*, without ſome peculiar Culture. They require the Warmth of their own Climates; whence the Uſe of hot-Beds, Glaſs Frames, Green-Houſes, &c. The Green-Houſe is properly a Conſervatory of *Exoticks*. See GREEN-HOUSE.

The Word is derived from the *Greek*, ἔξω, ἔξωθεν, *extra*; whence ἐξωτικὸς.

Dr. *Liſter* has a Diſcourſe in the Philoſoph. Tranſact. on *Exotic Diſeaſes*, i. e. Such Diſeaſes as are never bred among us, but brought from Time to Time by Infection from other Countries. Such, according to this Author, are, 1°. The *Plague*, which is properly a Diſeaſe of *Aſia*, where it is Epidemic. 2°. The *Small-Pox*, which is an *Oriental* Diſeaſe, and not known to *Europe*, or even *Aſia minor*, or *Africa*, till a Spice Trade was open'd to the remoteſt Part of the *Indies*; whence it originally came, and where it ſtill rages more cruelly than among us. 3°. The *Griping of the Guts*, which he takes for a Diſeaſe peculiar to the *Weſt-Indies*, and yearly receiv'd from thence. For this, he adds, is a quite different Diſeaſe from the *Tormina Ventris* of the Ancients; and is ſcarce ever known in the mid-land Countries, or far in the North of *England*.

EXPANSION, in Metaphyſicks, expreſſes the Idea we have of laſting, or perſevering Diſtance; *i. e.* of Diſtance, all the Parts whereof exiſt together. See DISTANCE.

EXPANSION, in Phyſicks, is the dilating, ſtretching, or ſpreading out of a Body; whether from any external Cauſe, as the Cauſe of Rarefaction; or from an internal Cauſe, as Elaſticity. See DILATATION, RAREFACTION, ELASTICITY.

Bodies naturally *Expand* by Heat, beyond their Dimenſions when cold; whence their ſpecific Gravities are different, at the different Seaſons of the Year. See SPECIFIC *Gravity*.

Air compreſſed, or condenſed, aſſoon as the compreſſing, or condenſing Force is removed, *Expands* it ſelf by its Elaſtic Power, to its former Dimenſions. See AIR.

But this may ſeem a leſs accurate Notion of *Expanſion*; which ſome Authors reſtrain to an Increment of the natural, or ordinary Dimenſions of a Body, by the mere Action of Heat. See HEAT.

Dr. *Halley* found by Experiment, that Water *Expands* it ſelf by one twenty ſixth part of its Bulk, when made to boil: But a moderate Heat does not induce any ſenſible *Expanſion* at all. ---- Mercury, with a very gentle Heat, *Expands* it ſelf one ſeventy fourth part of its ordinary Dimenſions. See WATER, &c.

Spirit of Wine, with a Heat leſs than that of boiling Water, *Expanded* it ſelf by one twelfth part of its Bulk; and then fell a boiling. The moſt ſenſible *Expanſion* of Water, is by Freezing. Mr. *Boyle*, in his *Hiſt. of Cold*, aſſures us, that Ice takes up one twelfth part more Space than Water. See FREEZING.

Dr. *Gregory*, in his *Aſtron.* p. 407. proves, that a Globe of our Air, of an Inch Diameter, if it were removed to the Diſtance of a Semi-diameter of the Earth, would *Expand* it ſelf ſo, as to fill all the planetary Region, as far as, nay, far beyond, the Sphere of *Saturn*.

EX *parte*, i. e. *partly*, or of *one part*, is thus uſed in the Court of Chancery: A joint Commiſſion is that wherein both Plaintiff and Defendant joyn; A Commiſſion *Ex parte*, is that taken out and executed by one Party only.

EX-

EXPECTANT-*Fee*, in Law, differs from Fee ſimple; Thus, *e. gr.* Lands being given to a Man and his Wife, in frank Marriage, to hold to them and their Heirs: In Caſe they have Fee-ſimple. If it be given to them, and the Heirs of their Body, *&c.* they have *Fee-Expectant.* See FEE.

EXPECTATIVE, a Hope founded on a Promiſe of obtaining the next Benefice that ſhall become vacant, or a Right to the Reverſion of the next.

*Expectative* Graces, *Gratiæ Expectativæ*, call'd alſo Preventions, were Bulls frequently given by the Popes, or Kings, for future Benefices: The Biſhops were exceedingly mortified with them; by reaſon they encroach'd on their Privileges. Beſides that ſuch *Expectatives* are odious, as they induce People to wiſh for the Death of others. See PREVENTION.

The Uſe of *Expectatives* is very ancient, tho' it was not near ſo frequent in the firſt Ages, as at preſent. Originally they were no more than ſimple Requeſts made on the Part of Kings, or Popes, which the Biſhops conſented to with the more Willingneſs, as they only preſented to them Perſons fit to ſerve the Church. But the frequent Exerciſe of this Privilege, made it at length be deem'd a Matter of Obligation and Neceſſity. See PRÆMUNIRE.

The Council of *Trent* annull'd all *Expectatives*; but thoſe Canons were never admitted in *France*; where the Right of conferring *Expectative* Graces, is look'd on as one of the Regalia.

EXPECTORATION, the Act of evacuating, or bringing up of Phlegm, or other Matters, out of the Lungs; by Coughing, Hawking, Spitting, *&c.* See LUNGS.

*Expectoration* eaſes the Lungs of the viſcid, or putrid Matters, which obſtruct its Veſſels, and ſtraitens the Breaſt.

EXPEDITATION, in the Foreſt Laws, ſignifies a cutting out the Ball of a Dog's Fore-feet, for the Preſervation of the King's Game. See FOREST and GAME.

Every one that keeps any great Dog not *expeditated*, forfeits three Shillings and Four Pence to the King. In Maſtiffs, not the Ball of the Feet, but the three Claws, are to be cut to the Skin. *Inſtit.* P. 4. pag. 308. *Nullos dominicos canes, Abbatis & Monachorum* expeditari, *Cogat. Chart.* Hen. 3. *Et ſint quieti de* Eſpedimentis *Canum. Ex mag. Rot. Pip. de Ann.* 9. Ed. 2.

This *Expeditation* was to be performed once in every three Years; and was done to every Man's Dog who lived near the Foreſt, and even the Dogs of the Foreſters themſelves.

EXPEDITION, a military Enterprize. Such were the *Expedition* of *Cyrus* againſt *Xerxes*; of *Alexander* into the *Indies*; the *Expedition* of *Xerxes* againſt *Greece*, was unhappy. *Cæſar* himſelf, in the middle of his *Expeditions* in the *Gauls*, compoſed two Books of the Analogy of Words.

The *Expeditions* for the Recovery of the Holy Land, were call'd *Croiſades*. See CROISADE.

EXPENSIS *militum levandis*, is a Writ directed to the Sheriff, for levying Allowance for the Knights of Parliament. See PARLIAMENT.

EXPERIENCE, a Kind of Knowledge acquired by long Uſe, without any Teacher.

*Experience* conſiſts in the Idea's of Things we have ſeen, or read, which the Judgment has reflected on, to form it ſelf a Rule, or Method.

Authors make three Kinds of *Experience*: The 1°. is the ſimple Uſe of the external Senſes, whereby we perceive the Phænomena of natural Things, without any direct Attention thereto, or making any Application thereof.

The 2°. is, when we premeditately, and deſignedly, make Trials of various Things, or obſerve thoſe done by others; attending cloſely to all the Effects and Circumſtances.

The 3°. is, that preceded by a Fore-knowledge, or, at leaſt, an Apprehenſion of the Event; and which determines whether the Apprehenſion were true or falſe. Which two latter Kinds, eſpecially the third, are of great Service in Philoſophy. See EXPERIMENT.

EXPERIMENT, in Philoſophy, a Trial of the Effect or Reſult of certain Applications, and Motions of natural Bodies; in Order to diſcover ſomething of the Laws and Relations thereof, or to aſcertain ſome Phænomenon, or its Cauſe.

The Schoolmen define *Experiment*, a Compariſon of ſeveral Things before obſerved by the Senſes, and retain'd in the Memory; in ſome one ſimilar convenient Inſtance.

The Nature of *Experiment*, therefore, according to them, conſiſts in comparing ſeveral Things by one Act; whence they diſtinguiſh two Things in every *Experiment*, the one *material*, viz. the ſeveral Idea's remember'd; the other *formal*, viz. the comparing of theſe Idea's in the Mind.

This will be illuſtrated by an Example: A Phyſician gives a Quantity of Rhubarb to ten ſeveral Perſons, and remembers each of them: Now, coming afterwards to compare the ſeveral Remembrances together, and finding the Effect of the Exhibition of Rhubarb to be the ſame in all, *viz.* A Purging: This is an *Experiment* of Rhubarb.

The making of *Experiments*, is grown into a Kind of form'd Art; and we now abound in Syſtems of *Experiments*, under the Denomination of *Courſes of experimental Philoſophy*. *Sturmius* has made a curious Collection of the principal Diſcoveries and *Experiments* of the preſent Age, under the Title of *Collegium Experimentale*. The Chymiſts chuſe to call their *Experiments*, by way of Diſtinction, or Eminence, *Proceſſes*, or *Operations*. See PROCESS.

EXPERIMENTAL *Philoſophy*, by the *Greeks* call'd Εμπειρια, *or* Εμπειρικη, is that which proceeds on *Experiments*; or which deduces the Laws of Nature, and the Properties and Powers of Bodies, and their Actions upon each other, from ſenſible *Experiments* and Obſervations.

*Experiments* are of the laſt Importance in Philoſophy; and the great Advantages the modern Phyſicks have above the Ancient, is chiefly owing to this, that we have a great many more *Experiments*, and that we make more Uſe of the *Experiments* we have.

Their Way of Philoſophizing was, to begin with the Cauſes of Things, and argue to the Effects and Phænomena; ours, on the contrary, proceeds from *Experiments* and Obſervations alone.

My Lord *Bacon* firſt paved the Way for the new Philoſophy, by ſetting on Foot the making of *Experiments*. His Method has been proſecuted with laudable Emulation by the Academy *del Cimento*, the Royal Society, Royal Academy at *Paris*, Mr. *Boyle*, Sir *Iſ. Newton*, and many others.

In Effect, *Experiments*, within theſe 50 or 60 Years, are come into ſuch Vogue, that nothing will paſs in Philoſophy, but what is founded on *Experiment*, or confirm'd by *Experiment*, &c. So that the new Philoſophy is almoſt altogether *Experimental*. See PHILOSOPHY.

Indeed, the Ancients, whatever we commonly ſay to the contrary, ſeem to have thought as well of the *Experimental* Way, as the Moderns. *Plato* miſſes no Occaſion of ſpeaking of the Advantages of the εμπειρια; and as to *Ariſtotle*, his Hiſtory of Animals may bear Witneſs for him. *Democritus*'s great Buſineſs was to make *Experiments*; and even *Epicurus* himſelf owes Part of his Glory to the ſame Cauſe. *Plato* calls it, in reſpect to its Subject, ευαισθησια, Subtlety of Senſe.

Yet there are thoſe, even among the Learned, who conceive of *Experiments* in a different Manner.

Dr. *Keill* allows, that Philoſophy has receiv'd very conſiderable Advantages from the Makers of *Experiments*; but complains of their Diſingenuity, in too often wreſting and diſtorting their *Experiments*, and Obſervations, to favour ſome darling Theories they had eſpouſed. But this is not all: M. *Hartſoeker*, in his *Recueil de pluſieurs pieces de phyſique*, undertakes to ſhew, that they who imploy themſelves in the making of *Experiments*, are not properly Philoſophers, but, as it were, the Labourers, or Operators of Philoſophers, who work under them, and for them, furniſhing them with Materials to build their Conjectures upon.

The learned M. *Dacier*, in the Beginning of his Diſcourſe on *Plato*, at the Head of his Tranſlation of the Works of that Philoſopher, deals ſtill more ſeverely with the Makers of *Experiments*. He breaks out with a Sort of Indignation, at a Tribe of idly curious People, whoſe Philoſophy conſiſts in making *Experiments* on the Gravity of the Air, the Equilibrium of Fluids, the Loadſtone, *&c.* and yet arrogate to themſelves the noble Title of Philoſophers.

EXPERIMENTUM *Crucis*, is a Capital, leading, or deciſive Experiment; thus call'd, either as, like a *Croſs* or Poſt of Directions placed in the meeting of ſeveral Roads, it guides and directs Men to the true Knowledge of the Nature of the Thing they are enquiring after: Or, as it is a Kind of Torture, whereby the Nature of the Thing is as it were extorted by Violence. See CRUCIS.

EXPIATION, the Act of *Suffering* the Puniſhments adjudged to a Man's Crimes, and thus paying off and diſcharging the Guilt.

The *Romaniſts* hold, that Souls, after Death, are ſent to Purgatory, to *expiate*, or atone for their Sins. See PURGATORY.

The Word is alſo applied to *Sacrifices* offered to the Deity, to implore his Mercy and Forgiveneſs. See SACRIFICE.

*The Feaſt of* EXPIATION, among the *Jews*, call'd by our Tranſlators the *Day of Atonement*, was held on the Xth Day of the 7th Month of the *Jewiſh* Year, anſwering to our *September*. It was inſtituted by God himſelf, *Levit.* XXIII. 27, *&c.* On that Day, the High-Prieſt, the Figure or Type of Jeſus Chriſt, confeſs'd his Sins;

Sins; and after ſeveral Ceremonies, made an Atonement for all the People to waſh them from their Sins.

EXPIATION, among the Heathens, was a Purification uſed for effacing, or aboliſhing of a Crime.

It was practiſed with divers Ceremonies: The moſt uſual was *Ablution*. See ABLUTION.

*Expiations* were perform'd for whole Cities, as well as particular Perſons.

After the young *Horatius* had been abſolved by the People from the Murther of his Siſter; he was further purified by the ſeveral *Expiations* preſcribed by the Laws of the Pontifices for involuntary Murthers. *Halicarnaſs.*

EXPILATION, in the Civil Law, the Act of *Withdrawing*, or diverting any Thing belonging to an Inheritance, before any Body had declared himſelf Heir thereof.

This made a peculiar Species of Theft: For there cou'd not properly be a Theft in taking a Thing not poſſeſs'd by any Body; or ere the Inheritance was accepted.

For this Reaſon, the *Roman* Legiſlature introduced the Action of *Expilation*, for the Puniſhment of this Crime.

EXPIRATION, in Medicine, that Motion in an Animal, whereby the Air, inſpired into the Lungs, is expell'd, or thruſt out of the ſame, and the Cavity of the Breaſt contracted. See LUNGS.

Reſpiration conſiſts of two alternate Motions, or Actions of the Lungs, correſponding to thoſe of a Pair of Bellows; *Inſpiration*, whereby the Air is drawn in; and *Expiration*, whereby 'tis driven out again. See RESPIRATION.

By Means of this Alternation, the Circulation of the Blood, and the Motions of the Heart are maintain'd. See CIRCULATION and HEART.

EXPIRATION, is alſo uſed figuratively, for the End of a Term of Time granted, agreed on, or adjudged.---'Tis not above eight Days, till the *Expiration* of the Term of his Impriſonment. The Term of ſuch a Bill of Exchange is *expired*, i. e. it is fallen due. See BILL.

EXPLICIT, in the Schools, ſomething clear, diſtinct, formal, and unfolded.--- The Will, Intention, *&c.* is ſaid to be *Explicit*, when 'tis fully explain'd, in proper Terms; and *implicit*, when 'tis only learnt by Deductions and Conſequences.

The *Jews* had not all an *Explicit* Knowledge of Jeſus Chriſt, but they had at leaſt an implicit one.

Such a Teſtator has declared his Will *explicitly*, i. e. in formal Terms; there is no need to have Recourſe to Explications.

EXPLOSION, in Phyſicks, the Action of a Thing that drives another out of the Place it before poſſeſs'd.

The Term is chiefly uſed for the going off of Gun-Powder, and the Expulſion of the Ball, Shot, or the like Conſequent thereon. See GUN-POWDER.

Hence the Word comes likewiſe to be figuratively uſed to expreſs ſuch ſudden Actions of other Bodies, as have ſome Reſemblance thereto; as thoſe which ferment with Violence, immediately upon their Mixture, and occaſion a crackling Sound.

Some Writers have likewiſe applied it to the Excurſions of the Animal Spirits, and inſtantaneous Motions of the Fibres, ariſing without the Direction of the Mind; but the Term then becomes too figurative to expreſs any determinate Idea, ſo as really to inform the Underſtanding.

EXPOLITION, in Rhetoric, a Figure, whereby we explain the ſame Thing in different Phraſes and Expreſſions, in order to ſhew it more fully.

*Expolition* was the favourite Figure of *Balzac* --- A Man, but moderately verſed in the Style of Scripture, will perceive that this is no more than an *Expolition*; that is, a Figure whereby the ſacred Author explains the ſame Thing in different Terms. The Scriptures are full of ſuch Figures; and I ſcarce think there is any one more ordinary. *Souciet.*

EXPONENT, in Arithmetic, or EXPONENT *of a Power*, the Number which expreſſes the Degree of the Power; or which ſhews how often a given Power is to be divided by its Root, ere it be brought down to Unity. See POWER.

Thus the *Exponent* of a Square Number is 2; of a Cube 3: The Square being a Power of the ſecond Degree; the Cube of the third, *&c.*

EXPONENT, is alſo uſed in Arithmetic, in the ſame Senſe with *Index*, or *Logarithm*.

Thus a Series of Numbers in Arithmetical Progreſſion, being placed under another Series in Geometrical Progreſſion, are call'd the *Exponents*, Indices, or Logarithms thereof. See INDEX.

*E. gr.* In the two Progeſſions,

*Geom.* 1, 2, 4, 8, 16, 32, 64, 128, 256, 512

*Arith.* 0, 1, 2, 3, 4, 5, 6, 7, 8, 9

0 is the *Exponent*, Index, or Logarithm, of the firſt Term 1; 5 that of the *6th.* 32, &c.

Hence, Unity is to the *Exponent* of the Power, as the Logarithm of the Root, to the Logarithm of its Power: Conſequently, the Logarithm of the Power is had, by multiplying the Logarithm of the Root by its *Exponent*; and the Logarithm of the Root is had, by dividing the Logarithm of the Power by its *Exponent*. See LOGARITHM.

EXPONENT *of a Ratio*, is the Quotient ariſing upon a Diviſion of the Antecedent by the Conſequent.--- Thus, in the Ratio 3 to 2, the *Exponent* is $1\frac{1}{2}$; and the *Exponent* of the Ratio 3 to 2, is $\frac{2}{3}$. See RATIO.

Hence, 1°. If the Conſequent be Unity, the Antecedent is the *Exponent* of the Ratio. *E. gr.* The *Exponent* of the Ratio 4 to 1, is 4. And again: The *Exponent* of a Ratio is to Unity, as the Antecedent to the Conſequent.

2°. Since, in a rational Ratio, the *Exponent* of the Ratio is had by dividing a rational Number by another rational; the *Exponent* of a rational Ratio, is a rational Number.

EXPONENTIAL *Calculus*, or *Calculus* EXPONENTIALIS, is the Method of differencing *Exponential* Quantities, and of ſumming up the Differentials of *Exponentials*. See CALCULUS.

EXPONENTIAL *Curve*, is that defined by an *Exponential Equation* ---Tranſcendental Curves partake both of the Nature of Algebraic and Tranſcendent ones; Of the former, becauſe they conſiſt of a finite Number of Terms, tho' thoſe Terms themſelves are indeteterminate; and of the latter, becauſe they cannot be Algebraically conſtructed. See CURVE.

EXPONENTIAL *Equation*, is that wherein there is an *Exponential* Quantity; call'd alſo a *Tranſcendental Equation*, and by ſome, a *Geometrical Irrational*. See EQUATION, TRANSCENDENTAL, *&c.*

EXPONENTIAL *Quantity*, is a Power whoſe *Exponent* is an indeterminate, variable, or flowing Quantity. See QUANTITY.

*Exponential* Quantities are of ſeveral Degrees and Orders; when the *Exponent* is a ſimple indeterminate Quantity, it is call'd an *Exponential* of the firſt or loweſt Degree.

When the *Exponent* it ſelf is an *Exponential* of the firſt Degree, then the Quantity is an *Exponential* of the ſecond Degree.

Thus $z^y$ is an *Exponential* of the firſt Degree, becauſe the Quantity y is a ſimple flowing Quantity. But $z^{y^x}$ is an *Exponential* Quantity of the ſecond Degree; becauſe $y^x$ is an *Exponential* of the firſt Degree. So alſo $z^{y^{x^y}}$ is an *Exponential* of the third Degree, the *Exponent* $y^{x^y}$ being one of the ſecond.

EXPORTATION, in Commerce, the Act of ſending Commodities out of one Kingdom into another. See COMMERCE.

The Merchandizes yearly *Exported* from *England* are immenſe.--- The principal Articles are Corn, Cattle, Cloth, Iron, Lead, Tin, Leather, Coal, Hops, Flax, Hemp, Hats, Malt Liquors, Fiſh, Watches, Ribbands, *&c.*

The Woollen Manufacture alone, yearly *Exported*, is computed to amount to 2000000 Pound Sterling; and Lead, Tin, and Coals, 500000 Pound. See WOOLLEN.

Wool, Fullers Earth, *&c.* are contraband Goods, *i. e.* prohibited to be *exported*. See CONTRABAND.

For the Duties of *Exportation*. See DUTY.

EXPOSING, the ſetting a Thing to publick View.

Perjury, Forgery, Libelling, falſe Weights and Meaſures, are puniſh'd, by *Expoſing* the Criminal in the Pillory, to the Deriſion of the People. See PILLORY.

In the *Romiſh* Church, the Sacrament is ſaid to be *Expoſed*, when 'tis ſhewn in public, uncover'd, on Feſtival Days, and during the Time of plenary Indulgences.

The Term is alſo uſed with a further Latitude: Thus, we ſay, 'tis prohibited to *Expoſe* falſe, or clipp'd Money.

Children are ſometimes *Expoſed* in the Streets; *i. e.* are left in the Streets, with Deſign to be loſt. --- Such a Houſe ſtands very high, and has a delicious Proſpect, but it is *expoſed* to all the Four Winds. Such a City being on the Frontiers, and not fortified, is *Expoſed* to the Inſults of every Party of Forces.

EXPOSITION, the Act of *Expoſing*.--- But the Term has a further Meaning; being likewiſe applied to the Interpretation, or Explication of an Author, or a Paſſage therein.

Thus we ſay, an *Expoſition* of the 39 Articles, of the Lord's Prayer, *&c.* In which Senſe we do not ſay *Expoſing*, but *Expounding*. See EXPOSURE.

EXPOSITOR, or EXPOSITORY, a Title ſome Writers have given to a little Kind of Dictionaries, or Vocabularies,

laries, *expounding*, or explaining the Meaning of the hard Words of the Language. See DICTIONARY and VOCABULARY.

EXPOSURE, or EXPOSITION, in Gardening, the Aſpect, or Situation of a Garden, Wall, Building, or the like, with reſpect to the Sun, Winds, *&c.* See GARDEN.

There are four regular Kinds of *Expoſures*, viz. *Eaſt*, *Weſt*, *North*, and *South*. But it muſt be obſerved, that among Gardeners, theſe Terms ſignifie juſt the contrary to what they do among Geographers.

The Gardeners, in Effect, do not give the Names *Eaſt*, *Weſt*, &c. to the Places where the Sun is; but to thoſe whereon he ſhines; and they conſider the Manner wherein he ſhines, whether as to the whole Garden, or ſome one of its Sides.

If they find, that the Sun at its Riſing, and during the firſt half of the Day, continues to ſhine on one Side of a Garden or Wall; they call that an *Eaſtern Expoſure*, or *Eaſt Wall*, &c. And if the Sun begin to ſhine later, or end ſooner, 'tis not a proper *Eaſtern Expoſure*.

For the ſame Reaſon, they call the *Weſt*, the Side the Sun ſhines on in the latter half of the Day, *i. e.* from Noon to Night. And accordingly, the *South*, or *South Expoſure*, is the Place whereon he ſhines, from about Nine a Clock in the Morning, till Night; or which, in the general, he ſhines longeſt on in the whole Day; and the Part he ſhines leaſt on, is the *North*, or *Northern Expoſure*; at what Hour ſoever it begin or end, being uſually from 11 a Clock to 1.

Such is the Gardeners Language with Regard to the *Expoſures*, and particularly thoſe of Walls; by which we are let into the Signification of this or the like Expreſſions, uſual among them. --- My *Eaſt* Wall proves, hits, or thrives better, than my *Weſt*. My *Eaſt* Fruit Trees have had fewer Showers than my *Weſt*, &c.

The *Eaſtern* and *Southern Expoſures* are, by common Conſent of all Gardeners, the two principal; and have a conſiderable Advantage above the reſt. A *Weſt Expoſure* is not much amiſs; at leaſt, 'tis better than a *Northern* one, which is the worſt of all. Each has its Inconveniencies.

The *Eaſtern*, commencing differently at different Seaſons of the Year, and ending about Noon, ſubjects the Trees, *&c.* to the *N. E.* Winds, which wither the Leaves and new Shoots, blow down the Fruit, *&c.* beſide that it has little Benefit of Rains, which come moſtly from the *Weſt*. Yet does the Reverend Mr. *Lawrence* judge, the *Eaſt* better than the *Weſt* Wall, for all Kinds of Fruit: Not that it has more Hours of Sun, or that there are any peculiar Virtues in the *Eaſtern* Rays, but becauſe the early Rays of the Sun do ſooner take off the cold chilly Dews of the Night.

M. *Gentil* recommends the *Eaſtern Expoſure*, as beſt for all Kinds of Peaches; adding, that they ripen ſoooeſt, grow bigger, are better colour'd, and of a finer Taſt than in any other: But Mr. *Carpenter* reſtrains the Rule to the early and middle Sorts: For the backward, he rather chuſes a *Southern*, or *South Eaſt Expoſure*; which is beſt for all late Fruits; becauſe the Influence of the Sun is ſtrongeſt, and continues longeſt therein.

The *Weſtern*, accounted from half an Hour paſt 11, till Sun-ſet, is backwarder than an *Eaſtern* one by 8 or 10 Days; but it has this Advantage, that it receives little Damage from the Froſts, which melt before the Sun comes to ſhine upon the Fruit, and fall off like Dew, without doing any Prejudice: So that it may bear Apricocks, Peaches, Pears, and Plums. But it is incommoded with *North Weſt* Winds in the Spring, as alſo the Autumn Winds, which blow down a deal of Fruit.

The *Northern Expoſure* has le's Sun than the *Weſt*; yet is it not without its Advantages. In the Northerly Parts of *England*, it bears little elſe but Pears, Cherries, and Plums. But in the warmer Parts it ſerves for Apricocks, which have the Advantage of continuing later, than in any other *Expoſure*, beſides being free from Inſects.

The *Southern Expoſure*, accounted from about 9 till 4, is recommended for Peaches, Pears, Grapes, and Plums.

EXPRESS, ſomething that is preciſe, in formal Terms, or for ſome particular Deſign.

I told him as much in *Expreſs* Terms: He gave me a Commiſſion *Expreſs*: He had *Expreſs* Orders. A Courier was diſpatch'd *Expreſs*.

We alſo ſay, ſomewhat abuſively, to ſend an *Expreſs*, meaning a Courier. See COURIER.

EXPRESSED *Oils*, are ſuch as are procured from Bodies, only by preſſing; as the Oils of Olives, Almonds, and the like. See OIL and EXPRESSION.

EXPRESSION, in Medicine, Chymiſtry, *&c.* the Act of *Expreſſing*, or extracting the Juices of Plants, Fruits, and other Matters, by ſqueezing, wringing, or preſſing them in a Preſs. See PRESS.

After having let the Herbs infuſe their due Time, their Juice muſt be drawn by *Expreſſion* in a Linen Cloth, or under a Preſs. See INFUSION.

EXPRESSION, the Manner of delivering, or conveying a Man's Ideas to another.

The Simplicity of the *Expreſſion*, leaves the Grandeur, or Littleneſs of the Thought, to be perceiv'd.

*Expreſſion* is particularly uſed for the Elocution, Diction, and Choice of Words in a Diſcourſe. --- 'Tis not enough a Poet, or Orator, have fine Thoughts, he muſt likewiſe have a happy *Expreſſion*. Defects in the *Expreſſion* ordinarily ariſe from Defects in the Imagination. Abundance of the Beauties of the ancient Writers, are attach'd either to an *Expreſſion* peculiar to their Language; or to Relations, which not being ſo familiar to us as to them, do not give us the ſame Pleaſure. *De la Motte*.

EXPRESSION, in Painting, the natural and lively Repreſentation of the Subject, or of the ſeveral Objects intended to be ſhewn. See PAINTING.

The *Expreſſion* conſiſts principally in repreſenting the human Body, and all its Parts, in the Action ſuitable to it; in exhibiting in the Face, the ſeveral Paſſions proper to the Figures; and obſerving the Motions they impreſs on the other external Parts. See ALTITUDE.

The Term *Expreſſion*, is ordinarily confounded with that of Paſſion: But they differ in this, that *Expreſſion* is a general Term, implying a Repreſentation of an Object, agreeably to its Nature and Character, and the Uſe, or Office it is to have in the Work; and Paſſion, in Painting, is a Motion of the Body, accompanied with certain Diſpoſitions, or Airs of the Face, which mark an Agitation in the Soul. So that every Paſſion is an *Expreſſion*; but not every *Expreſſion* a Paſſion. See PASSION.

*The Laws, or Rules of* Expreſſion *in Painting.*

*Expreſſion*, we have ſaid, is a Repreſentation of Things according to their Character; and may be conſider'd either with reſpect to the *Subject* in general; or to the *Paſſions* peculiar thereto.

I. With regard to the *Subject*, 'tis to be obſerved, 1°. That all the Parts of the Compoſition are to be transform'd, or reduced, to the Character of the Subject; ſo as they may conſpire to impreſs the ſame Sentiment, Paſſion, or Idea: Thus, *e. gr.* in a Repreſentation of Joy and Peace, every Thing is to appear calm and agreeable; of War, turbulent, and full of Terror, *&c.*

2°. In Order to this, if any Circumſtance occur in Hiſtory, or Deſcription, that would invert, or take from the Idea; it muſt be ſuppreſſed; unleſs eſſential to the Subject.

3°. To this End, the Hiſtory, or Fable, is to be well ſtudied in the Authors who deſcribe it, in Order to conceive its Nature and Character truly, and impreſs it ſtrongly on the Imagination; that it may be diffuſed and carried thro' all the Parts of the Subject. See ACTION, FABLE, *&c.*

4°. A Liberty to be taken of chuſing favourable Incidents, in order to diverſifie the *Expreſſion*; provided they be not contrary to the principal Image of the Subject, or the Truth of Hiſtory. See EPISODE.

5°. The Harmony of the *tout Enſemble* to be particularly regarded, both with regard to the Actions, and the Light and Colour. See CLAIR *obſcure*.

6°. The Modes and Cuſtoms to be obſerved; and every Thing made conformable to Time, Place, and Quality. See CUSTOM.

7°. The three Unities of Time, Place, and Action, to be obſerved: That is, nothing to be repreſented in the ſame Picture, but what paſſes at the ſame Time, and may be ſeen at the ſame View.

II. With regard to the particular *Paſſions* and *Affections* of the Subject; the Rules are, 1°. That the Paſſions of Brutes are few and ſimple, and have almoſt all an immediate Reſpect, either to Self-Preſervation, or the Propagation of the Kind: But, in Men, there is more Variety; and accordingly, more Marks and *Expreſſions* thereof. Hence, Man can move his Eye-brows, which, in Brutes, are immoveable: And can likewiſe move the Pupil every way, which Brutes cannot.

2°. Children, having not the Uſe of Reaſon, act much on the Footing of Brutes; and *expreſs* the Motions of their Paſſions directly, and without Fear or Diſguiſe.

3°. Tho' the Paſſions of the Soul, may be *expreſs'd* by the Actions of the Body; 'tis in the Face they are principally ſhewn; and particularly in the Turn of the Eye, and the Motion of the Eye-brows.

4°. There are two Ways of lifting up the Eye-brows, the one at the middle, which likewiſe draws up the Corners of the Mouth, and argues pleaſant Motions: The other, at the Point next the Noſe, which draws up the middle of the Mouth, and is the Effect of Grief and Sadneſs.

5°. The

5°. The Paſſions are all reducible to Joy and Sadneſs; each of which is either ſimple, or mix'd and paſſionate.

6°. Simple Joy cauſes a Dilatation of all the Parts: The Eye-brows riſe in the middle, the Eyes half open, and ſmiling, the Pupil ſparkling and moiſt, the Noſtrils a little open, the Cheeks full, the Corners of the Mouth drawn a little upwards, the Lips red, the Complexion lively, the Forehead ſerene.

7°. Paſſionate Joy proceeding from Love, ſhews the Forehead ſmooth and even, the Eye-brows a little elevated on the Side the Pupil is turn'd to, the Eyes ſparkling and open, the Head inclined towards the Object, the Air of the Face ſmiling, and the Complexion ruddy: --- That proceeding from Deſire, ſhews it ſelf by the Body, the Arms extended towards the Object, in uncertain and unquiet Motions.

8°. Simple Sadneſs, is *Expreſs'd* by the Body being caſt down, the Head careleſſy hanging aſide, the Forehead wrinkled, the Eye-brows rais'd to the midſt of the Fore-head, the Eyes half ſhut, the Mouth a little open, the Corners downwards, the under-Lip pointing and drawn back, the Noſtrils ſwell'd, and drawn downwards. --- That mix'd with *Fear*, cauſes the Parts to contract and palpitate, the Members to tremble and fold up, the Viſage to be pale and livid, the Point of the Noſtrils elevated, the Pupil in the middle of the Eye, the Mouth openeſt at the Sides, and the under-Lip drawn back. --- In that mix'd with *Anger*, the Motions are more violent, the Parts all agitated, the Muſcles ſwell'd, the Pupil wild and ſparkling, the Point of the Eye-brows fix'd towards the Noſe, the Noſtrils open, the Lips big and preſs'd down, the Corners of the Mouth a little open and foaming, the Veins ſwell'd, and the Hair erect. --- That with *Deſpair*, reſembles the laſt, only more exceſſive and diſorder'd.

9°. The Hand has a great Share in the *Expreſſion* of our Sentiments and Paſſions: The raiſing of the Hands conjoyn'd --- towards Heaven, *expreſſes* Devotion: Wringing the Hands, Grief: Throwing them towards Heaven, Admiration: Fainting, and dejected Hands, Amazement and Deſpair: Holding the Hands, Idleneſs: Holding the Fingers indented, muſing: Holding forth the Hands together, Yielding and Submiſſion: Lifting up the Hand and Eye to Heaven, calling God to Witneſs: Waving the Hand from us, Prohibition: Extending the right Hand to any one, Pity, Peace, and Safety: Scratching the Head, Thoughtfulneſs and Care: Laying the Hand on the Heart, ſolemn Affirmation: Holding up the Thumb, Approbation: Laying the Fore-finger on the Mouth, bidding Silence: Giving with the Finger and Thumb, *parce dare*: And the Fore-finger put forth, the reſt contracted, *Monſtrari & dicier hic eſt.*

10. The *Sex* of the Figure to be regarded; and Man, as he is of a more vigorous and reſolute Nature, to appear in all his Actions freer and bolder than Women, who are to be more reſerved and tender.

11. So alſo the *Age*, the different Stages whereof incline to different Motions both of Body and Mind.

12. The *Condition*, or Honours, a Perſon is inveſted withal, renders their Actions more reſerved, and their Motions more grave; contrary to the Populace, who obſerve little Conduct or Reſtraint; giving themſelves, for the moſt part, up to their Paſſions; whence their external Motions become rude and diſorderly.

Laſtly, in *Spirits* we muſt retrench all thoſe corruptible Things, which ſerve only for the Preſervation of Life, as Veins, Arteries, *&c.* only retaining what may ſerve for the Form and Beauty of the Body. --- In *Angels*, particularly, as being ſymbolical Figures, we are to mark out their Offices and Virtues, without any Draught of ſenſual Paſſions; only appropriating their Characters to their Functions of Power, Activity, and Contemplation.

EXPULSION, the Act of driving a Man by Force out of a City, Community, or the like.

*Milton* is upbraided by one of his Antagoniſts, Archbiſhop *Bramhall*, with his *Expulſion* from the Univerſity of *Oxford*; but he ſhews it a groundleſs Suggeſtion. --- Mr. ..... was expell'd from *Cambridge*, on Suſpicion of Hereſy. --- *Expulſion* out of Parliament, *&c.*

EXPULSION, is alſo uſed in Medicine, for the Act of driving a Thing out with Violence, from the Place it was in.

The *Uterus* has the chief Office in the *Expulſion* of the *Fœtus*: If the *Expulſion* of the *Fœtus* happen within ſeven Days after Conception, 'tis call'd a falſe Birth. See FOETUS, DELIVERY, *&c.*

EXPURGATION, in Aſtronomy, is uſed by ſome Authors, for the State or Action of the Sun; wherein, after having been Eclipſed and hid by the Interpoſition of the Moon, it begins to appear again: But the later Aſtronomers do all call this, *Emerſion*, not *Expurgation*. See EMERSION.

EXSICCATION, in Chymiſtry, *&c.* the Act of drying, or evaporating the Moiſture of a Thing. See EVAPORATION.

The Word is *Latin*, form'd of *ex*, and *ſiccus*, dry.

EXSUDATION, the Act of ſweating out --- in which manner Gums, Balſams, *&c.* are produced from Trees. See GUM and BALM.

EXTANT, ſomething ſtill ſubſiſting, or in being.

'Tis but part of the Hiſtory of *Livy*, of the Writings of *Cicero*, *Cæſar*, &c. that are *Extant*; the reſt are loſt. We have nothing *Extant* of *Socrates*; tho' he wrote a great deal.

EXTASY, a Rapture, or Removal of the Mind out of its natural State and Situation: Or, a Tranſport, whereby a Perſon is hurried out of himſelf, and the Office of his Senſes ſuſpended.

In Eccleſiaſtical Hiſtory, we read of divers Monkiſh Saints being in *Extaſies* for ſeveral Days ſucceſſively. --- St. *Paul*'s being taken up into the Third Heaven, was what we call an *Extaſy*.

EXTASY, in Medicine, is a Diſeaſe much like a Catalepſy, only differing in this, that the Cataleptic Patient has no Perception of what paſſes in his Paroxyſm, nor any Remembrance thereof when 'tis over; whereas the *Extatic* is taken up with a very lively Idea, or Imagination, which he remembers afterwards.

In an *Extaſy*, there muſt be an unuſual Tenſion of the Fibres of the Senſory, as in moſt Deliriums, *&c.* See PHRENZY, MANIA, MELANCHOLIC, *&c.*

EXTENDING, in a Legal Senſe, ſignifies the valuing of Lands and Tenements, of one bound by Statute, *&c.* and who hath forfeited his Bond, to ſuch an indifferent Rate, as that by the Yearly Rent, the Obligator may, in Time, be fully paid his Debt. See EXTENT.

EXTENSION, in Phyſicks, that whereby a Thing is conſtituted long, broad, or deep, *&c.* See BODY.

*Extenſion* is uſually deſcribed, as conſiſting *in the Situation of Parts, beyond Parts*; which ſome Authors cavil withal, as holding that we can conceive abſolute *Extenſion*, without thinking of any Relation of Parts.

If a Man conſider the Diſtance between two Bodies, abſtractedly, and without having Regard to the Bodies that fill that Interval, it is call'd *Space:* And when he conſiders the Diſtance between the Extremes of a ſolid Body, it is call'd *Extenſion*. See SPACE.

*Extenſion* is frequently confounded with *Quantity* and *Magnitude*; and, for what we can perceive, without much Harm: The Thing ſignified by them all appearing to be the ſame. Unleſs we admit a Diſtinction made by ſome Authors, that the *Extenſion* of a Body is ſomething more abſolute; and its Quantity and Magnitude more reſpective, or implying a nearer Relation to much and little. See QUANTITY, MAGNITUDE, BULK, *&c.*

EXTENSOR, in Anatomy, a Name common to divers Muſcles, ſerving to *extend*, or ſtretch out the Parts; and particularly the Hands and Feet: Such are the

EXTENSOR *Carpi Ulnaris*, call'd alſo *Cubitæus internus*, a Muſcle, which coming from the internal Protuberance of the *Humerus*, and paſſing tendinous under the *Ligamentum Annulare*, is inſerted into the upper Part of the Bone *Metacarpium*, which anſwers to the little Finger. This, and the *Ulnaris flexor*, moving together, draw the Hand ſide-wiſe towards the *Ulna*.

EXTENSOR *Carpi Radialis*, call'd alſo *Radiæus Externus*, and *Bicornis*, is really two diſtinct Muſcles. The firſt ariſes from above the external Protuberance of the *Humerus*; and the ſecond from the lowermoſt Part of the external Protuberance. They both lie along the external Part of the *Radius*, and paſſing under the annular Ligament, one is inſerted into the Bone of the *Metacarpus*, that ſuſtains the Fore-finger; and the other to that which ſuſtains the Middle-finger. Theſe two extend the Wriſt.

EXTENSOR *communis digitorum manus*, ariſes from the external Protuberance of the *Humerus*, and at the Wriſt divides into three flat Tendons, which paſs under the annular Ligament, to be inſerted into all the Bones of the Fore, Middle, and Ring-finger.

EXTENSOR *primi internodii pollicis*, ariſes from the upper and external Part of the *Ulna*, and paſſing obliquely over the Tendon of the *Radius externus*, is inſerted near the ſecond Joint of the Thumb.

EXTENSOR *ſecundi internodii pollicis*, ariſes from the upper and internal Part of the *Radius*, and is inſerted into the upper Part of the ſecond Bone of the Thumb.

EXTENSOR *tertii internodii pollicis*, ariſes from the *Ulna*, a little below the firſt Extenſor, and is inſerted into the third Bone of the Thumb.

EXTENSOR *indicis*, comes from the middle and external Part of the *Ulna*, and paſſing under the annular Ligament, is inſerted into the third Bone of the Fore-finger, where it joins the *Extenſor Communis*.

EXTEN-

EXTENSOR *minimi Digiti*, ariſes from the external Protuberance of the *Humerus*, and from the upper Part of the *Ulna*; and paſſing under the annular Ligament, is inſerted into the third Bone of the little Finger.

EXTENSOR *Pollicis*, ariſes from near the upper half of the *Perone* forwards, and paſſing under the annular Ligament, is inſerted into the laſt Bone of the great Toe.

EXTENSOR *digitorum Pedis longus*, is a Muſcle derived from the fore Part of the upper Epiphyſis of the *Tibia*, and growing tendinous about the middle thereof, runs in four Tendons under the annular Ligament, to the third Bone of every Toe, except the *Pollex*.

EXTENSOR *digitorum pedis brevis*, comes from the exterior and fore Part of the *Calcaneum*, and goes to the ſecond Joint of the Toes.

EXTENSOR *pollicis Pedis longus*, riſes large and fleſhy from the fore Part of the *Fibula*, a little below its upper Proceſs; whence, paſſing under the annual Ligament, it is inſerted into the upper Part of the ſecond Bone of the great Toe.

EXTENSOR *pollicis Pedis brevis*, ſprings fleſhy from the fore Part of the *Os Calcis*, and after a ſhort Belly, is contracted into a ſlender Tendon; which running obliquely over the upper Part of the Foot, is inſerted into the ſecond Bone of the *Pollex*.

EXTENT, in Law, hath three Significations; ſometimes it denotes a Writ, or Commiſſion to the Sheriff, for the valuing of Lands and Tenements: Sometimes the Act of the Sheriff upon this Writ. And ſometimes the Eſtimate, or Valuation of Lands, *per proprios Viros*. Fleta, *Lib.* 2. See EXTENDING.

EXTENUATION, the Act of diminiſhing, or leſſening, the Force of a Thing.

Thus, in Medicine, we ſay, Fevers, Agues, long Abſtinences, *&c.* occaſion great *Extenuations* or Emaciations.

EXTENUATION, is alſo a Figure in Rhetoric, oppoſite to the Hyperbole. The *Greeks* call it λιτότης.

EXTERIOR *Polygon*, } See { POLYGON.
EXTERIOR *Talus*, } See { TALUS, *&c.*

EXTERMINATION, the Act of *Extirpating*, or totally deſtroying a People, Race, Family, *&c.*

The *Jews* have been *Exterminated* out of *Portugal*; the *Moors* out of *Spain*; the *Albigenſes* out of *France*, &c. *Philip* the Fair of *France*, to be revenged on the *Knights Templars*, took a Reſolution in 1307, to *Exterminate* them. See TEMPLAR.

The Word is Latin, form'd of *ex* and *terminus*, Boundary.

EXTERNAL, or EXTERIOUR, a Term of Relation, applied to the Surface, or out-ſide of a Body; or that Part which appears, or preſents, to the Eye, Touch, *&c.* In which Senſe it is expoſed to *Internal*, or *Interior*. See INTERNAL.

*External* Medicines are alſo call'd *Topicks*. See TOPIC.

The Senſes are divided into *External*, which are thoſe whereby we perceive Ideas, or Perceptions of *External* Objects; as *Seeing*, *Hearing*, &c. and *Internal*. See SENSES.

EXTERNAL, is alſo uſed to expreſs any Thing that is without-ſide a Man, or that is not within him, and particularly in his Mind. In this Senſe, we ſay *External Objects*, &c. See OBJECT.

The Exiſtence of an *External World*, i. e. of Bodies, and Objects, out of the Mind, is a Thing has been greatly call'd in Queſtion of late. See MATTER, BODY, WORLD, *&c.*

'Were it poſſible for Bodies, *i. e.* ſolid, figured, *&c.* 'Subſtances to exiſt without the Mind, correſponding to 'thoſe Ideas we have of *External* Objects, yet how were 'it poſſible for us to know it? Either we muſt know 'it by Senſe, or Reaſon: As for our Senſes, by them 'we have only the Knowledge of our Senſations or Ideas: 'They do not inform us that Things exiſt without 'the Mind, or unperceiv'd, like thoſe which are perceiv'd. 'It remains, therefore, that if we have any Knowledge 'at all of *External* Things, it muſt be by Reaſon, in'ferring their Exiſtence from what is immediately per'ceiv'd by Senſe. But how ſhall Reaſon induce us to 'believe the Exiſtence of Bodies without the Mind, when 'the Patrons of Matter themſelves deny that there is any 'neceſſary Connection betwixt them and our Ideas. In 'Effect, 'tis granted on all Hands, and what happens in 'Dreams, Phrenzies, Deliriums, Extaſies, *&c.* puts it be'yond Diſpute, that we might be affected with all the 'Ideas we have now, tho' there were no Bodies exiſting 'without, reſembling them. Hence, it is evident, the Sup'poſition of *External* Bodies is not neceſſary for the 'Production of our Ideas.' *Berkeley's Princ. of Human Knowledge*, p. 59.

'Granting the Materialiſts their *External* Bodies, they 'by their own Confeſſion, are never the nearer knowing 'how our Ideas are produced; ſince they own themſelves unable to comprehend in what Manner Body can 'act upon Spirit; or how it is poſſible it ſhould imprint 'any Idea in the Mind. Hence, the Production of Ideas, 'or Senſations, in our Minds, can be no Reaſon why 'we ſhould ſuppoſe Matter, or Corporeal Subſtances; 'ſince that is equally inexplicable with or without the 'Suppoſition. In ſhort, tho' there were *External* Bodies, 'tis impoſſible we ſhould ever come to know it; and if 'there were none, we ſhould have the ſame Cauſe to 'think there were that we now have.' *Id. ibid.* p. 60, 61.

'Try, whether you can conceive it poſſible for a Sound, 'or Figure, or Motion, or Colour, to exiſt without the 'Mind, or unperceiv'd. This may perhaps convince you, 'that what you contend for, is a downright Contradiction. '—I am content to put the whole upon this Iſſue: If 'you can but conceive it poſſible for one extended, move'able Subſtance, or, in general, for any one Idea to exiſt 'otherwiſe than in a Mind perceiving it; I ſhall readily 'give up the Cauſe. *Id. ibid.* p. 63.

'It is worth while to reflect a little on the Motives 'which induced Men to ſuppoſe the Exiſtence of material 'Subſtance; that ſo, having obſerved the gradual ceaſing 'and Expiration of thoſe Motives, we may withdraw the 'Aſſent grounded on them. Firſt, Therefore it was thought 'that Colour, Figure, Motion, and the reſt of the ſenſible 'Qualities, did really exiſt without the Mind; and 'for this Reaſon, it ſeem'd neceſſary to ſuppoſe ſome 'unthinking Subſtratum, or Subſtance, wherein they did 'exiſt, ſince they could not be conceiv'd to ſubſiſt by 'themſelves. Afterwards, in Proceſs of Time, Men being 'convinced that Colours, Sounds, and the reſt of the ſenſible ſecondary Qualities had no Exiſtence without the 'Mind; they ſtripp'd this Subſtratum of theſe Qualities, 'leaving only the primary ones, Figure, Motion, *&c.* 'which they ſtill conceiv'd to exiſt without the Mind, 'and conſequently to ſtand in need of a material Sup'port. But having ſhewn above, that none, even of theſe, 'can poſſibly exiſt otherwiſe than in a Spirit, or Mind, 'which perceives them, it follows, that we have no longer 'any Reaſon to ſuppoſe the Being of Matter.' *Id. Ibid.* p. 118, 119. See QUALITY.

This Syſtem, Mr. *Lock* endeavours to ſet aſide, and to prove the Exiſtence of *External Bodies*.—His Arguments ſee under the Article EXISTENCE.

EXTERNAL *Angles*, are the Angles of any right-lined Figure form'd without it, when all the Sides are ſeverally produced. See ANGLE.

Theſe are all, taken together, equal to four right Angles.

Particularly, in a Triangle, the *External* Angle e, (*Tab. Geometry Fig.* 76.) is equal to both the internal and oppoſites ones z and y. See TRIANGLE.

EXTERNAL *Ear*, } See { EAR.
EXTERNAL *Rights*, } See { RIGHT.
EXTERNAL *Beauty*, } See { BEAUTY.

EXTERNUIS *Auris*, in Anatomy, a ſmall Muſcle coming from the Side of the *Meatus Auditorius*, to the ſhort Proceſs of the *Malleus*; ſerving to draw the Handle thereof downwards, and ſo to relax the *Membrana Tympani*. See TYMPANUM and MALLEUS.

EXTINCTION, the Act of *Extinguiſhing*, or deſtroying Fire or Light.

*Boerhaave* denies, that there is properly any ſuch Thing as extinguiſhing of Fire. 'Tis a Body *Sui generis*, of an immutable Nature, and we can no more extinguiſh, or deſtroy it, than create it. See FIRE.

The *Ariſtotelians* account for the *Extinction* of Fire from the Principle of Contrariety; thus, ſay they, Water puts out Fire, by Reaſon the Qualities of Water are contrary to thoſe of Fire; the one being cold, and moiſt, and the other, hot and dry. But how far this will go, may appear hence, that Fire is extinguiſhed by hot Water as readily as cold; nay by Oil, Earth, *&c.* See ANTIPERISTASIS.

Some of the Moderns offer two more plauſible Cauſes of *Extinction*, viz. *Diſſipation*, as when the next, immediate Fuel of the Flame, is diſperſed and blown off by too forcible a Wind: And *Suffocation*, when it is ſo compreſs'd, as that its free Motion cannot be maintain'd; as happens upon throwing Water, *&c.* thereon. See FUEL.

EXTINCTION, in Chymiſtry and Pharmacy, is when a Metal, Mineral, or the like Body, after having been heated red hot in the Fire, is plunged in ſome Fluid; either to ſoften and temper its Acrimony, as the Tutty made of Pearl; or to communicate its Virtue to the Liquor, as Iron or Steel in Water; or, laſtly, to give it a Temper, as in the *Extinction* of Steel in Water, or other Preparation. See TEMPER.

EXTINGUISHMENT, in Law, is uſed for a *Conſolidation*. See CONSOLIDATION.

*E. gr.*

*E. gr.* If a Man, having a yearly Rent due to him out of my Lands, afterwards purchaſe the ſame Lands; both the Property and Rent becoming Conſolidated, or United in one Poſſeſſor, the Rent is ſaid to be *extinguiſh'd*.

So, where a Man has a Leaſe for Years, and afterwards buys the Property, there is a *Conſolidation* of the Property, and an *Extinguiſhment* of the Leaſe. See CONSOLIDATION.

So alſo if there be Lord, Meſn, and Tenant, and the Lord purchaſe the Tenancy, the Meſnalty is *extinct*.

EXTIRPATION, the Act of pulling up, or deſtroying a Thing to the very Roots. — Dogs Graſs is a Weed very difficult to *Extirpate*.

Among the Prayers of the *Romiſh* Jubilee, there is one for the *Extirpation* of Hereſy.

The Word is form'd of the Latin *ex* and *ſtirps*. But its chief Uſe is in a figurative Senſe.

EXTIRPATION, is alſo uſed in Chirurgery, for the cutting off any Part entirely; as a Wen, *&c.* or the eating it away, as a Wart, *&c.* by corroſive Medicines.

EXTISPEX, in Antiquity, an Officer who viewed, and examined the Entrails of Victims; in order to draw Preſages therefrom as to Futurity. See SACRIFICE.

This Kind of Divination, call'd *Extiſpicium*, was mightily in Vogue throughout *Greece*, where there were two Families, the *Jamides* and *Clytides*, conſecrated, or ſet a-part, peculiarly for it.

In *Italy*, the firſt *Extiſpices* were the *Hetrurians*; among whom, likewiſe, the Art was in great Repute. *Lucan* gives us a fine Deſcription of one of theſe Operations in his Firſt Book.

The Word is form'd from the Latin *exta* and *ſpicere*, of *ſpicio*, I view, conſider.

EXTORTION, in Law, an illegal Manner of wreſting any Thing from a Man, either by Force, Menace, or Authority.

Thus, *e. gr.* if an Officer, by terrifying, or ſpunging another on Pretence of his Office, takes more than his ordinary Fees, or Dues, he commits, and is indictable for *Extortion*.

So alſo the Exacting of unlawful Uſury, winning by unlawful Games, and, in fine, all taking of more than is juſtly due by Colour or Pretence of Right, as exceſſive Tolls in Millers, exceſſive Prices of Ale, Bread, Victuals, Wares, *&c.* comes under *Extortion*. See EXACTION.

*Crompton* ſays, that Wrong done by any Man, is properly a Treſpaſs, but exceſſive Wrong is *Extortion*; which is moſt properly applicable to Sheriffs, Mayors, Bailiffs, and other Officers, who, by Colour of their Office, greatly oppreſs and wrong the King's Subjects, by taking exceſſive Rewards, or Fees, for executing their Office.

EXTRA *Judicial*, in Law, is when Judgment is given in a Cauſe, or Caſe, not depending in that Court where ſuch Judgment is given, or wherein the Judge has not Juriſdiction.

EXTRA *Parochial*, what is out of the Bounds of any Pariſh; or privileged, and freed from the Duties of a Pariſh. See PAROCHIAL.

EXTRACT, in Pharmacy, the pureſt, and fineſt Part of a Vegetable, or other Body, ſeparated from the coarſer, by diſſolving and digeſting it with a proper Menſtruum; and afterwards reduced into a thick, moiſt Conſiſtence by a Diſtillation, or Evaporation of the Humidity of the Menſtruum. See EXTRACTION.

EXTRACT, in Matters of Literature, *&c.* is uſed for ſome Matter, Doctrine, Paſſage, or the like taken from a Book, or Regiſter.

The Journals, *Nouvelles*, *Bibliotheques*, *Memoires*, and other Monthly or Quarterly Accounts of the Affairs of Learning, conſiſt principally of *Extracts* of the moſt material Paſſages, Doctrines, *&c.* found in the ſeveral Books, publiſh'd in that Time. See JOURNAL.

EXTRACTING, an artful drawing out of the Juices, Virtues, and Qualities of a natural Body. See EXTRACTION.

There are divers Ways of *Extracting* the Virtues of Vegetables, Minerals, *&c.* by *Preſſion*, *Infuſion*, *Lotion*, *Calcination*, *Diſtillation*, *Cohobation*, and other Operations taught in Chymiſtry and Pharmacy. See PRESSION, *&c.*

EXTRACTION, in Pharmacy and Chymiſtry, an Operation, whereby Eſſences, Tinctures, *&c.* are drawn from natural Bodies. See EXTRACT.

Some will have *Extraction* to ſignify any Solution made by Menſtruums: But, in Strictneſs, there is this Difference; that in *Solution* the Menſtruums abſorb the whole Subſtance of the Body, but in *Extraction* they carry off only certain Part of it: And in this Senſe, Camphire is diſſolved in Spirit of Wine, but Jalap is more properly ſaid to be *extracted*; for the Reſin is only taken out by the Menſtruum, the other Particles being left untouch'd. See SOLUTION and DISSOLUTION.

*Extraction* does alſo frequently ſignify ſuch an Inſpiſſation, or thickening of a Solution, as that when a certain Quantity of the Menſtruum is drawn off, reduceth the remaining Mixture to the Conſiſtence of Honey; as in the *Extracts* of Saffron, Gentian, and the like.

*Extracts* are chiefly made from Vegetables, and require different Menſtruums, according to the different Nature of the Plants; eſpecially in Gummous Kind: For ſuch as are mucilaginous, as *Gum Arabic*, and *Tragacanth*, &c. are not eaſily diſſolved but in aqueous Liquors; whereas, on the other Hand, reſinous Gums, as *Galbanum*, *Scammony*, &c. muſt have burning Spirits to diſſolve them. See GUM.

There are others again of a middle Nature, which may be diſſolved in either Sort of Menſtruums, tho' not ſo eaſily in one as the other. See GUMMO *Reſin*.

Thus Aloes, and Rhubarb, which are ſomething reſinous, are better made into *Extracts* with Spirit of Wine, than Water: But Plants, which abound leſs with Reſin, ſuch as Hellebore, *&c.* are more commodiouſly *extracted* with Water. — To perform *Extraction* therefore aright, a proper Menſtruum is neceſſary, and one which is as near a-kin as poſſible to the Body to be *extracted*. See MENSTRUUM.

EXTRACTION, in Chirurgery, an Operation whereby ſome foreign Matter, formed in the Body, contrary to the Order of Nature, is drawn out of the ſame.

Such is the *Extraction of a Stone*, formed in the Bladder, or in the Kidneys, *&c.* See STONE. See alſo LITHOTOMY.

*Extraction* belongs to the *Exæreſis*, as a Species to its Genus. See EXÆRESIS.

EXTRACTION, or *Deſcent*, in Genealogy, is the Line, Stem, Branch, or Family which a Perſon is deſcended from. See DESCENT.

In ſome military Orders, Chapters, *&c.* a Candidate muſt make Proof of the Nobility of his *Extraction* ere he is admitted. See DESCENT.

EXTRACTION *of Roots*, is the Method of finding the Root of a given Number or Quantity. See ROOT.

The Square, Cube, and other Powers of a Number, or Root, are form'd by multiplying the given Number into it ſelf a greater, or leſs Number of Times, as the Power required is higher or lower.

This Multiplication compounds the Powers; and the *Extraction* of the Root decompounds them again, or reduces them to their firſt Principles or Roots. So that the *Extraction* of the Root is to the Multiplication of the Power, what the Analyſis is to the Syntheſis.

Thus, 4, multiplied by 4, produces 16; which is the Square of 4, or the Factum of 4 by it ſelf: And 16 multiplied by 4, makes 64, which is the Cube of 4, or the Factum of 4 by its Square: — Such is the *Compoſition of Powers*.

Again, the Square Root of 16 is 4, by Reaſon 4 is the Quotient of 16 divided by 4; and the Cube Root of 64 is likewiſe 4; by Reaſon 4 is the Quotient of 64 divided by the Square of 4: — Such is *the Extraction of Roots*.

Hence, to *extract the Root out of a given Power*, is the ſame Thing as to find a Number, *e. gr.* 4, which being multiplied a certain Number of Times into it ſelf, produces the given Power, *e. gr.* 16 or 64. See POWER.

For the *Extraction* of Square and Cube Roots, 'tis neceſſary to have the Squares, and Cubes of all the Digits in Readineſs; as exhibited in the following Table.

| Roots | 1 | 2 | 3 | 4 | 5 | 6 | 7 | 8 | 9 |
|---|---|---|---|---|---|---|---|---|---|
| Square | 1 | 4 | 9 | 16 | 25 | 36 | 49 | 64 | 81 |
| Cubic | 1 | 8 | 27 | 64 | 125 | 216 | 343 | 512 | 729 |

*To* Extract the Square Root *out of a given Number.*

1°. Divide the given Number into Claſſes, of two Figures a-piece; and include each Claſs between two Dots, commencing with the Place of Unites, or right Hand Figure: The Root will conſiſt of ſo many Parts, or Figures, as you have Claſſes. — By the Way obſerve, it may happen that for the laſt Claſs on the left Hand there ſhall only be one Figure left.

2°. Then, the left Hand Claſs being the Square of the firſt Figure of the Root ſought; look in the Table of Roots for the Square Root anſwering to that Number: Or, if that Square Number be not preciſely there, to the next leſs Number: This Root write down for the firſt Figure of the Quotient: And ſubtract its Square from the left Hand Claſs. — To the Remainder, bring down the next Claſs toward the right.

3°. Write down the double of the Quotient Figure under the left Hand Figure of the ſecond Claſs; and ſeek how oft this Duple is contain'd in the Figure over it; The Quotient gives the ſecond Figure of the Root.

4°. Write the ſame Quotient under the right Hand Figure of the ſame Claſs; and ſubtract the Product of the whole Number underwritten, multiplied by the laſt Figure of the Root, from the Number over it, as in Diviſion.

5°. The Operation being repeated according to the third and fourth Steps, *i. e.* the Remainder being ſtill divided by the double of the Root as far as *extracted*, and from the Remainder, the Square of the Figure that laſt came out, with the Duple of that foreſaid Diviſor augmented thereby, being ſubtracted; you will have the Root required.

*E. gr.* To *extract* the Root of 99856, point it after the following Manner, 99856, then ſeek a Number, whoſe Square ſhall equal the firſt Figure 9, *viz.* 3, and write it in the Quotient; then having ſubſtracted from 9, 3 × 3, or 9, there will remain 0; to which ſet down the Figures as far as the next Point, *viz.* 98 for the following Operation. Then, taking no Notice of the laſt Figure 8, ſay, How many Times is the double of 3, or 6, contained in the firſt Figure 9? Anſwer 1. Wherefore having wrote 1 in the Quotient, ſubtract the Product, of 1 × 61, or 61 from 98, and there will remain 37, to which connect the laſt Figures 56, and you will have the Number 3756, in which the Work is next to be carried on. Wherefore alſo neglecting the laſt Figure of this, *viz.* 6, ſay, How many Times is the double of 31, or 62, contain'd in 375, (which is to be gueſs'd at from the initial Figures 6 and 37, by taking Notice how many Times 6 is contained in 37?) Anſwer 6; and writing 6 in the Quotient, ſubtract 6 × 626, or 3756, and there will remain 0; whence it appears, that the Buſineſs is done, the Root coming out 316.

```
  : : :
99856 ( 316
9
---
098
 61
---
3756
3756
---
   0
```

Otherwiſe, with the Diviſors ſet down, it will ſtand thus:

```
  . . .
99856 ( 316
9
---
6) 98
   61
---
62) 3756
    3756
---
       0
```

And ſo in others.

Again, if you were to *Extract* the Root out of 22178791: firſt, having pointed it, ſeek a Number, whoſe Square (if it cannot be exactly equall'd) ſhall be the next leſs Square, (or neareſt) to 22, the Figures to the firſt Point, and you will find it to be 4. For 5 × 5, or 25, is greater than 22; and 4 × 4, or 16, is leſs; wherefore 4 will be the firſt Figure of the Root. This therefore being writ in the Quotient, from 22, take the Square 4 × 4, or 16; and to the Remainder 6, adjoin the next Figures 17, and you'll have 617; from whoſe Diviſion, by the double of 4, you are to obtain the ſecond Figure of the Root, *viz.* neglecting the laſt Figure 7, ſay, How many Times 8 is contained in 61? Anſwer, 7; wherefore write 7 in the Quotient, and from 617, take the Product of 7 into 87, or 609, and there will remain 8, to which join the two next Figures 87, and you will have 8879 by the Diviſion whereof by the double of 47, or 94, you are to obtain the third Figure; in order to which ſay, How many Times is 94 contained in 88? Anſwer, 0; wherefore write 0 in the Quotient, and adjoin the two laſt Figures 91, and you will have 88791, by whoſe Diviſion by the double of 470, or 940, you are to obtain the laſt Figure, *viz.* ſay, How many Times 940 in 8879? Anſwer 9; wherefore write 9 in the Quotient, and you will have the Root 4709. But ſince the Product 9 × 9409, or 84681, ſubtracted from 88791 leaves 4110, the Number 4709 is not the Root of the Number 22178791 preciſely, but a little leſs.

```
  . . . .
22178791 ( 4709, 43637, &c.
16
---
617
609
---
 88791
 84681
---
 411000

  282566169
---
   73624231
```

If then it be required to have the Root approach nearer; carry on the Operation in Decimals, by adding to the Remainder two Cyphers in each Operation. Thus the Remainder 4110, having two Cyphers added to it, becomes 411000; by the Diviſion whereof, by the double of 4709, or 9418, you will have the firſt Decimal Figure 4. Then having writ 4 in the Quotient, ſubtract 4 × 94184, or 376736, from 411000, and there will remain 34264. And ſo having added two more Cyphers, the Work may be carried on at Pleaſure, the Root at length coming out 4709, 43637, &c.

But when the Root is carried on half Way or above, the reſt of the Figures may be obtain'd by Diviſion alone: As in this Example if you had a Mind to *extract* the Root to nine Figures, after the five former 4709,4 are *extracted*, the four latter may be had, by dividing the Remainder by the double of 4709,4.

Thus if the Root of 32976, were to be *Extracted* to five Places, in Numbers; after the Figures are pointed, write 1 in the Quotient, as being the Figure whoſe Square 1 × 1, or 1, is the greateſt that is contain'd in 3, the Figure to the firſt Point; and having taken the Square of 1 from 3, there will remain 2: Then having ſet the two next Figures, *viz.* 29 to it, (*viz.* to 2) ſeek how many Times the double of 1, *viz.* 2, is contain'd in 22, and you will find indeed that it is contained more than 10 Times; but you are never to take your Diviſor 10 Times, no, nor 9 Times in this Caſe; becauſe the Product of 9 × 29, or 261, is greater than 229, from which it would be to be taken, or ſubtracted: Wherefore write only 8. And then having wrote 8 in the Quotient, and ſubtracted 8 × 28, or 224, there will remain 5; and having ſet down to this the Figures 76, ſeek how many Times the double of 18, or 36, is contained in 57, and you will find 1, and ſo write 1 in the Quotient; and having ſubtracted 1 × 361, or 361, from 576, there will remain 215. Laſtly, to obtain the remaining Figures, divide this Number 215, by the double of 181, *viz.* 362, and you will have the Figures 59, which being writ in the Quotient, give the Root 181, 59.

```
  . . .
32976 ( 181, 59
1
---
2)229
  224
---
36)  576
     361
---
362) 215 (59 &c.
```

After the ſame manner are Roots *Extracted* out of Decimal Numbers. — Thus the Root of 329, 76 is 18, 1595 and the Root of 3, 2976 is 1, 81595; and the Root of 0, 032976, is 0, 18159, and ſo on. But the Root of 3297, 6 is 57, 4247; and the Root of 32, 976 is 5, 74247. And thus the Root of 9, 9856 is 3, 16.

*To* Extract the Cube, *or other higher* Root, *out of a given Number.*

The *Extraction* of the Cubic Root, and of all other Roots may be comprehended under one general Rule; *viz.* Every third Figure, beginning from Unity, is firſt to be pointed, if the Root to be *Extracted* be a Cubic one; or every fifth, if it be a Quadrato Cubic, (or of the fifth Power) and then ſuch a Figure is to be writ in the Quotient, whoſe greateſt Power (that is, whoſe Cube, if it be a Cubick Power, or whoſe Quadrato-Cube, if it be the fifth Power, &c.) ſhall either be equal to the Figure, or Figures, before the firſt Point, or next leſs under them; and then having ſubtracted that Power, the next Figure will be found by dividing the Remainder augmented by the next Figure of the Reſolvend, by the next leaſt Power of the Quotient multiplied by the Index of the Power to be *Extracted*, that is, by the triple Square, if the Root be a Cubick one; or by the Quintuple Biquadrate (that is, five Times the Biquadrate) if the Root be of the fifth Power, &c. And having again ſubtracted the Power of the whole Quotient from the firſt Reſolvend, the third Figure will be found by dividing that Remainder, augmented by the next Figure of the Reſolvend, by the next leaſt Power of the whole Quotient, multiplied by the Index of the Power to be *Extracted*.

Thus, to *Extract* the Cube Root of 13312053, the Number is firſt to be pointed after this manner, *viz.* 13312053, then you are to write the Figure 2, whoſe Cube is 8, in the firſt Place of the Quotient, as, that which is the next leaſt Cube to the Figures 13, (which is not a perfect Cube Number) or as far as the firſt Point; and having ſubtracted that Cube, there will remain 5; which being augmented by the next Figure of the Reſolvend 3, and divided by the triple Square of the Quotient 2, by ſeeking how many Times 3 × 4, or 12, is contained in 53, it gives 4 for the ſecond Figure of the Quotient. But ſince the Cube of the Quotient

```
  . . .
13312053 ( 237
Subtract the Cube 8
---
12) rem: 53 (4 or 3
Subtract Cube 12167
1587) rem: 11450 ( 7
---
13312053
Remains 0
```

24,

24, *viz.* 13824, would come out too great to be ſubtracted from the Figures 13312 that precede the ſecond Point, there muſt only 3 be writ in the Quotient: Then the Quotient 23 being in a ſeparate Place multiplied by 23, gives the Square 529, which again multiplied by 23, gives the Cube 12167, and this taken from 13312, will leave 11455 which augmented by the next Figure of the Reſolvend 0, and divided by the triple Square of the Quotient 23, *viz.* by ſeeking how many Times $3 \times 529$, or 1587, is contained in 11450, it gives 7, for the third Figure of the Quotient. Then the Quotient 237, multiplied by 237, gives the Square 56169, which again multiplied by 237, gives the Cube 13312053, and this taken from the Reſolvend, leaves 0. Whence it is evident, that the Root ſought is 237.

So, to *Extract* the Quadrato Cubical Root of 36430820, it muſt be pointed over every fifth Figure, and the Figure 3, whoſe Quadrato Cube, or fifth Power 243, is the next leaſt to 364, *viz.* to the firſt Point, muſt be writ in the Quotient. Then the Quadrato Cube 243, being ſubtracted from 364, there remains 121, which augmented by the next Figure of the Reſolvend, *viz.* 3, and divided by five Times the Biquadrate of the Quotient, *viz.* by ſeeking how many Times $5 \times 81$, or 405, is contain'd in 1213, it gives 2 for the ſecond Figure. That Quotient 32, being thrice multiplied by it ſelf, makes the Biquadrate 1048576; and this again multiplied by 32, makes the Quadrato Cube 33554432, which being ſubtracted from the Reſolvend, leaves 2876388. Therefore 32 is the integer Part of the Root, but not the true Root; wherefore if you have a Mind to proſecute the Work in Decimals, the Remainder, augmented by a Cypher, muſt be divided by five Times the aforeſaid Biquadrate of the Quotient, by ſeeking how many Times $5 \times 1048576$, or 5242880, is contain'd in 2876388, 0, and there will come out the third Figure, or the firſt Decimal 5. And ſo by ſubtracting the Quadrato Cube of the Quotient 32,5 from the Reſolvend, and dividing the Remainder by five Times its Biquadrate, the fourth Figure may be obtained. And ſo on *in infinitum*.

```
  36430820 ( 32, 5
  243
  405 ) 1213 ( 2
  33554432
  5242880 ) 2876388, 0 ( 5
```

In ſome Caſes, 'tis convenient only to indicate the *Extraction* of a Root; eſpecially where it cannot be had exactly. Now, the Sign, or Character, whereby Roots are denoted, is $\surd$: To which is added the Exponent of the Power, if it be above a Square. *E. gr.* $\surd^2$ denotes the Square Root. $\surd^3$ the Cube Root, *&c.*

When a Biquadratick Root is to be *Extracted*, you may *Extract* twice the Square Root, becauſe $\surd^4$ is as much as $\surd^2 \surd^2$. And when the Cubo Cubick Root is to be *Extracted*, you may firſt *Extract* the Cube Root, and then the Square Root of that Cube Root, becauſe the $\surd^6$ is the ſame as $\surd^3 \surd^3$; whence ſome have called theſe Roots, not Cubo Cubick ones, but Quadrato Cubes. And the ſame is to be obſerved in other Roots, whoſe Indexes are not prime Numbers.

*To prove the Extraction of Roots.*

1°. For a *Square Root:* Multiply the Root found by it ſelf, and to the Product add the Remainder, if there were any: If the Sum be equal to the Number given, the Operation is juſt.

2°. For a *Cube Root:* Multiply the Root found by it ſelf; and the Product, again, by the ſame Root. To the laſt Product, add the Remainder if there were any. If the Sum come out the Number firſt given, the Work is juſt.

After the like Manner may the *Extraction* of other Roots be proved.

*To* Extract *the Roots of Equations, or Algebraic Quantities.*

The *Extraction of Roots* out of ſimple Algebraic Quantities, is evident, even from the Nature, or Marks of Notation it ſelf, as — that $\surd aa$ is a, and that $\surd aacc$ is ac, and that $\surd 9aacc$ is $3ac$; and that $\surd 49a^4xx$ is $7aax$. And alſo that $\surd \frac{a^4}{cc}$, or $\frac{\surd a^4}{\surd cc}$ is $\frac{aa}{c}$, and that $\surd \frac{a^4bb}{cc}$ is $\frac{aab}{c}$, and that $\surd \frac{9aazz}{25bb}$ is $\frac{3az}{5b}$, and that $\surd \frac{4}{9}$ is $\frac{2}{3}$, and that $\surd \frac{8b^6}{27a^3}$ is $\frac{2bb}{3a}$, and that $\surd^4 aabb$ is $\surd ab$. Moreover, that $b \surd aacc$, or $b$ into $\surd aacc$, is $b$ into $ac$, or $abc$. And that $3c\surd \frac{9aazz}{25bb}$, is $3c \times \frac{3az}{5b}$, or $\frac{9acz}{5b}$. And that $\frac{a+3x}{c}\surd \frac{4bbx^4}{81aa}$ is $\frac{a+3x}{c} \times \frac{2bxx}{9a}$, or $\frac{2abxx+6bx^3}{9ac}$. I ſay theſe are all evident, becauſe it will appear at firſt Sight, that the propoſed Quantities are produced, by multiplying the Root, into themſelves (as $aa$ from $a \times a$, $aacc$ from $ac$ into $ac$, $9aacc$ from $3ac$ into $3ac$, *&c.*) But when Quantities conſiſt of ſeveral Terms, the Buſineſs is performed as in Numbers.

Thus to *extract* the Square Root out of $aa+2ab+bb$, in the firſt Place, write the Root of the firſt Term $aa$, *viz.* $a$ in the Quotient, and having ſubtracted its Square $a \times a$, there will remain $2ab+bb$ to find the Remainder of the Root by. Say therefore, How many Times is the double of the Quotient, or $2a$, contained in the firſt Term of the Remainder $2ab$? I anſwer b, therefore write b in the Quotient, and having ſubtracted the Product of b into $2a+b$, or $2ab+bb$, there will remain nothing. Which ſhews that the Work is finiſhed, the Root coming out $a+b$.

```
aa + 2ab + bb ( a + b
aa
0. + 2ab + bb
   + 2ab + bb
0   0
```

And thus to *extract* the Root out of $a^4+6a^3b+5a^2bb-12ab^3+4b^4$, firſt ſet in the Quotient the Root of the firſt Term $a^4$, *viz.* $aa$, and having ſubtracted its Square $aa \times aa$, or $a^4$, there will remain $6a^3b+5aabb-12ab^3+4b^4$ to find the Remainder of the Root. Say therefore, How many Times is $2aa$ contained in $6a^3b$? Anſwer $3ab$; wherefore write $3ab$ in the Quotient, and having ſubtracted the Product of $3ab$, into $2aa+3ab$, or $6a^3b+9aabb$, there will yet remain $-4aabb-12ab^3+4b^4$ to carry on the Work. Therefore, ſay again, How many Times is the double of the Quotient, *viz.* $2aa+6ab$ contained in $-4aabb-12ab^3$, or which is the ſame Thing, ſay, How many Times is the double of the firſt Term of the Quotient, or $2aa$, contained in the firſt Term of the Remainder $-4aabb$? Anſwer $-2bb$. Then having writ $-2bb$ in the Quotient, and ſubtracted the Product $-2bb$ into $2aa+6ab-2bb$, or $-4aabb-12ab^3+4b^4$, there will remain nothing. Whence it follows, that the Root is $aa+3ab-2bb$.

```
a^4 + 6a^3b + 5aabb - 12ab^3 + 4b^4 (aa + 3ab - 2bb
a^4
  - 6a^3b + 5aabb - 12ab^3 + 4b^4
0 + 6a^3b + 9aabb
      - 4aabb - 12ab^3 + 4b^4
      - 4aabb - 12ab^3 + 4b^4
0   0   0
```

And thus the Root of the Quantity $xx-ax+\frac{1}{4}aa$ is $x-\frac{1}{2}a$; and the Root of the Quantity $y^4+4y^3-8y+4$ is $yy+2y-2$; and the Root of the Quantity $16a^4-24aaxx+9x^4+12bbxx-16aabb+4b^4$ is $3xx-4aa+2bb$, as may appear underneath.

```
xx - ax + 1/4 aa ( x - 1/2 a
xx
0  - ax + 1/4 aa
0   0

                + 16a^4
9x^4 - 24aa x^2 - 16aab^2 ( 3x^2 - 4aa
     + 12bb     + 4b^4          + 2bb
9x^4
0
          + 16a^4
  - 24aa x^2 - 16a^2b^2
  + 12bb     + 4b^4
0   0

y^4 + 4y^3 - 8y + 4 ( yy + 2y - 2
y^4
0
  4y^3 + 4yy
0 - 4yy
    - 4yy - 8y + 4
0   0   0
```

If you would *extract* the Cube Root of $a^3+3aab+3abb+b^3$, the Operation is performed thus:

```
a^3 + 3aab + 3abb + b^3 ( a + b
a^3
3aa ) 0 + 3aab ( b
        a^3 + 3aab + 3abb + b^3
        0   0   0
```

*Extract*

*Extract* firſt the Cube Root of the firſt Term $a^3$, *viz.* a, and ſet it down in the Quotient: Then ſubtracting its Cube $a^3$, ſay, How many Times is its triple Square, or 3 a a, contained in the next Term of the Remainder 3 a a b? and there comes out b; wherefore write b in the Quotient, and ſubtracting the Cube of the Quotient, there will remain 0; therefore a + b is the Root. After the ſame Manner, if the Cube Root is to be *extracted* out of $z^6 + 6z^5 - 40z^3 + 96z - 4$, it will come out $zz + 2z - 4$. And ſo likewiſe in higher Roots.

EXTRACTS, in Law. See ESTREATS.

EXTRAORDINARY, ſomething rare and uncommon.

*Extraordinary* COURIERS, are thoſe ſent expreſs on ſome urgent Occaſion. See COURIER.

An *Embaſſador*, or *Envoy Extraordinary*, is ſuch a one as is ſent to treat, or negotiate ſome ſpecial and important Affair, as a Marriage, a Treaty, Confederacy, *&c.* or even on Occaſion of ſome Ceremony, as Condolance, Congratulation, *&c.* See EMBASSADOR and ORDINARY.

A *Gazette*, *Journal*, or other *News-paper Extraordinary*, is that publiſh'd after ſome great and notable Event, containing the Detail, or Particulars thereof, which were not found in the ordinary Papers. — Our News Writers generally uſe Poſt-ſcripts, inſtead of *Extraordinaries*.

EXTRAVAGANTES, a Part of the Canon Law, containing divers Conſtitutions of the Popes, not contain'd in the Body of the Canon Law; whence the Denomination of *Extravagantes*; *Quaſi extra corpus juris vagantes*. See CANON *Law*.

They are divided into two Parts: The firſt contains XX Conſtitutions of *John* XXII; and the ſecond, other later Conſtitutions of the ſaid *John* and his Succeſſors. See CONSTITUTION.

EXTRAVASATION, in Medicine, the Act, or Motion, whereby the Blood *extravaſates* it ſelf, *i. e.* breaks out of its ordinary Veſſels, the Veins and Arteries, and gathers and ſtagnates in ſome Part of the Body: The Blood that flows out of the Body, or that is drawn from it in opening a Vein, is not properly ſaid to be *Extravaſated*. See BLOOD.

*Extravaſated* Blood always corrupts and turns into an Impoſthume. See IMPOSTHUME, TUMOR, *&c.*

The ordinary Cauſes of *Extravaſations*, are unnatural Repletions, and Diſtentions of the Veſſels; or Lacerations, and Eroſions thereof.

There is a Neceſſity for bleeding, to prevent the Blood's growing to ſuch a Head as to *Extravaſate*. See PHLEBOTOMY.

In Wounds of the Head, particularly, bleeding is neceſſary, to prevent the *Extravaſation* of the Blood in the Brain.

The Term is likewiſe uſed with Regard to other Humours beſide the Blood, as the Lympha, Urine, *&c.* See DROPSY.

The Gardeners likewiſe uſe it, in ſpeaking of Gums, Juices, *&c.* oozing out of their Trees either ſpontaneouſly, or at Inciſions. See GUM, BALM, *&c.*

The Word is form'd of the Latin, *extra*, without, and *vas*, veſſel.

EXTREME, or EXTREAM, is applied to the laſt Part of any Thing; or that which finiſhes, and terminates it, and beyond which you cannot go.

There is no paſſing out of one *Extreme*, into the other, without going thro' the middle. — *Extreme* Remedies muſt only be had Recourſe to in *Extreme* Diſeaſes.

Some Anatomiſts apply the Denomination *Extreams*, or *Extremities*, to the Arms and Legs.

The Arms, or *upper Extremes*, *ſuperiour Extremities*, conſiſt of 60 Bones; thirty one in each, *viz.* the *Omoplate*, *Humerus*, *Cubitus*, *Radius*, eight in the *Carpus*, four in the *Metacarpus*, and fifteen in the Fingers. See each in its Place, OMOPLATE, *&c.*

The *Lower Extremities*, or Legs, conſiſt of ſixty; thirty in each, *viz.* the *Femur*, *Rotula*, *Tibia*, *Fibula*, ſeven in the *Tarſus*, five in the *Metatarſus*, and fourteen in the Fingers. See LEG, FEMUR, *&c.*

EXTREMES, in Logic, are the two *Extream* Terms of the Concluſion of a Syllogiſm, *viz.* the Predicate and Subject. See CONCLUSION.

The Predicate, as being likewiſe had in the firſt Propoſition, is call'd the *majus extremum*, greater *Extreme*; and the Subject, as being put in the ſecond, or *minor* Propoſition, is call'd the *minus Extremum*, leſſer *Extreme*. See PREDICATE and SUBJECT.

They are both call'd *Extremes*, from their Relation to another Term, which is a Medium, or Mean between them. See MEDIUM.

Thus, in the Syllogiſm, *Man is an Animal, Peter is a Man; therefore Peter is an Animal:* The Word *Animal* is the greater *Extreme*; *Peter* the leſs *Extreme*; and *Man* the Medium. See SYLLOGISM.

EXTREME and *mean Proportion*, in Geometry, is when a Line is ſo divided, that the whole Line is to the greater Segment, as that Segment is to the other.

Or, as *Euclid* expreſſeth it, when the Line is ſo divided, that the Rectangle under the whole Line and the leſſer Segment, ſhall be equal to the Square of the greater Segment.

The Invention of this Diviſion is thus: Let the given Line be A B = a, (*Tab. Geometry*, *Fig.* 64.) and for the greater Segment put *x*, the leſſer will be a − *x*. Then by the Hypotheſis, $a : x : a - x \div$. Therefore $a\,a - a\,x = x\,x$, conſequently $a\,a = x\,x + a\,x$. And by adding $\frac{1}{4}\,a\,a$ on each Side, to make $x\,x + a\,x + \frac{1}{4}\,a\,a$ a compleat Square, the Equation will ſtand thus $\frac{5}{4}\,a\,a = x\,x + x\,a + \frac{1}{4}\,a\,a$.

Now, ſince the latter is exactly a Square, its Root $x + \frac{1}{2}\,a = \sqrt{\frac{5}{4}\,aa}$, and by Tranſpoſition it will be $\sqrt{\frac{5}{4}\,aa} - \frac{1}{2}\,a = x$; which laſt Equation is a Canon to find *x*.

For at the Foot of A B = a, ſet at right Angles $CB = \frac{1}{2}\,a$: Then draw C A, the Square of which is equal, $AB\,q + CB\,q = \frac{5}{4}\,a\,a$. And therefore $AC = \sqrt{\frac{5}{4}\,aa}$; make C D = C A.

From whence $CB = \frac{1}{2}\,a$ being taken, as the Caſe requires, there remains B D = *x*; which transferr'd into A B, ſhall give the Point E, where A B is cut according to *Extreme* and *mean Proportion*.

This cannot be exactly done in Numbers; but if you would have it tolerably near, add together the Square of any Number, and the Square of its half, and extract as near as you can, the Square Root of the Sum; from whence taking half, the Remainder is the greater Part.

EXTREME-UNCTION, one of the Sacraments of the *Romiſh* Church, the fifth in Order, adminiſter'd to People dangerouſly ſick, by anointing them with holy Oils, and performing ſeveral Prayers over them. See UNCTION and SACRAMENT.

This Sacrament is not only in Uſe in the *Latin*, but alſo in the *Greek* Church, and throughout the *Eaſt*, tho' under another Name, and with ſome Difference in the Circumſtances; in that the Orientals don't wait till their Sick are come to Extremity, in Order to anoint them: But the Sick generally go to Church themſelves; and it is adminiſter'd to them as often as they are indiſpoſed. The *Greeks* taking that Direction of St. *James*, C. V. ver. 14. which is the Foundation of the Practice, in a general Senſe: *Is any Sick among you? let him call for the Elders of the Church, and let them pray over him, anointing him with Oil.*

Fa. *Dandini* diſtinguiſhes two Kinds of *Unction* among the *Maronites:* The one call'd, *Unction with the Oil of the Lamp*; but this, he ſuggeſts, is not the ſacramental *Unction*, ordinarily adminiſter'd to ſuch as are in extreme Sickneſs, for that the Oil is only Conſecrated by a ſimple Prieſt, and that it is given to all who are preſent, not to the ſick only, but alſo to the healthy, and even to the Prieſt himſelf who officiates. The other Kind of *Unction*, according to that Father, is only for the Sick; it is perform'd with Oil Conſecrated by the Biſhop alone, on *Holy Thurſday*. And this, it ſeems, is their ſacramental *Unction*.

But that *Unction* with Lamp Oil, is in Uſe not only among the *Maronites*, but throughout all the *Eaſtern* Church, who uſe it very religiouſly. The Truth is, they don't ſeem to have any other Sacrament of *Extreme Unction* beſide this.

Fa. *Goar* obſerves, that tho' it be only a Ceremony, with regard to thoſe in Health, it is a real Sacrament to thoſe that are ſick.

In their great Churches they have a Lamp, wherein this Oil for the Sick is preſerved: This Lamp they call, Καντήλα τῆς εὐχέλαιου, that is, *the Lamp of Oil join'd with Prayer*; For what the *Latins* call *Extreme Unction*, the *Greeks* call, εὐχέλαιον, or ἅγιον ἔλαιον, that is, *Oil with Prayer*, or *Holy Oil*.

'Tis call'd *Extreme Unction*, as being only given to Perſons in *Extremity*. — In the XIII*th* Century, it was call'd the *Unction of the Sick*, and not *Extreme Unction*. For in the earlier Ages, it was given before the *Viaticum*. Which Practice, according to Fa. *Mabillon*, was not changed till the XIII*th* Century. See VIATICUM.

The Reaſons he aſſigns for the Change are, that in that Age there aroſe divers miſtaken Opinions, ſeveral of which we find mention'd and condemn'd in the *Engliſh* Councils. Among the reſt, 'twas held, that ſuch as had received this Sacrament, in caſe they recover'd, might not uſe the Rites of Marriage, nor eat Meat, nor go bare-footed: Whence, they choſe to forbear uſing it till the laſt *Extremity*; which Practice prevail'd. See the Councils of *Worceſter* and *Exeter*, in the Year 1287; that of

of *Winchester* in 1308; and Fa. *Mabillon*, *Acta Sanct. Benedict. Sec.* III. p. 1. The Form of *Extreme Unction* is now deprecative, as the Divines call it; formerly 'twas abſolute and indicative.

EXTRINSIC, is applied in the Schools in various Senſes.

Sometimes it ſignifies a Thing's not being of the Eſſence of another; in which Senſe the efficient Cauſe, and the End or Scope of a Thing, are ſaid to be *Extrinſic*, or *Extrinſic* Cauſes. See CAUSE.

Sometimes it implies a Thing's not being contain'd within the Capacity of another; in which Senſe thoſe Cauſes are ſaid to be *Extrinſic*, which introduce ſomething into a Subject from without; as when Fire introduces Heat, *&c.*

Sometimes it denotes a Thing added, or applied to another. — Thus, Accidents and Adherences are ſaid to be *Extrinſic* to the Subject; and thus Viſion is *Extrinſic* to the Wall ſeen. See ACCIDENT.

EXUBERANCE, in Rhetoric, *&c.* a Redundancy. See REDUNDANT.

The Word is compounded of the Latin *ex* and *uber*, plentiful, of *uber*, Udder.

EXULCERATION, in Medicine, the Act of occaſioning, or producing Ulcers. See ULCER.

Thus, Arſenic *Exulcerates* the Inteſtines: Corroſive Humours *Exulcerate* the Skin.

The Term is ſometimes alſo uſed for an Ulcer it ſelf; but more generally for thoſe beginning Eroſions, which wear away the Subſtance, and form Ulcers. — *Exulcerations* in the Inteſtines, are Marks of Poiſon. See POISON.

EXUSTION, a burning with Fire; as it is uſed in ſome Operations by Surgeons. See BURNING.

EXUVIÆ, in Nat. Hiſtory, the Shells, and other marine Bodies, which are found every where in the Bowels of the Earth. See EARTH, FOSSIL, DELUGE, SHELL, *&c.*

EYE, the Organ, or Part of the Body, whereby Viſion is effected, *i. e.* whereby viſible Objects are repreſented to the Mind. See VISION.

The *Eye*, or Organ of Sight, is generally divided into *Internal* and *External* Parts; or into the *Eye* properly ſo call'd, and the Appendages thereof.

Under the latter Claſs, come the *Orbit*, or Cavity wherein the *Eye* is placed; the *Supercilium*, or *Eye-brow*, whereby Sweat, and other Nuſances, are prevented falling down into it: The *Palpebræ*, or *Eye-lids*, which cover and defend it in Time of Sleep; with their *Cilia*, or Fringes of Hair, to break the too fierce Impreſſion of the Light, and keep off Flies and Moats: And the *Canthi*, or Angles. See each Part particularly deſcribed under its proper Article, PALPEBRA, SUPERCILIUM, CILIA, ORBIT, and CANTHUS.

The *Eye*, properly ſo call'd, is of a globular Form, and conſiſts of *Tunicks*, *Humours*, and *Veſſels*. See TUNIC, HUMOUR, *&c.*

In ſome Parts it is lined with *Fat*; and it is moved with *Muſcles*; which two latter are by ſome Anatomiſts, tho' ſomewhat inaccurately, reckon'd among the conſtituent Parts of the *Eye*.

The *Tunicks*, *Coats*, or *Membranes* of the *Eye* are ſix: *viz.* 1°. The *Adnata*, or *Conjunctiva*, covering the whole Ball of the *Eye*, except the fore-part, call'd the *Sight*; and making what we popularly call the *White* of the *Eye*: Tho' this is not reckon'd as a proper Tunic of the *Eye*. 2°. Immediately under the *Adnata*, is the *Sclerotica*, which covers the whole Globe of the *Eye*; being opake every where but in the fore-part, which covers the Sight and is tranſparent like Horn; which has occaſion'd Anatomiſts to account this a diſtinct Membrane, the 3*d* in Number, and to denominate it the *Cornea*. The 4*th* is the *Choroides*, ſituate immediately under the *Sclerotica*. Its fore-part, like the former, is tranſparent, and therefore accounted a diſtinct, or 5*th* Coat, and call'd the *Uvea*. Of the Duplicature of this Part of the Tunic, is form'd a ſtriped, variegated Circle, call'd the *Iris*, which, in different Subjects, is of different Colours, and gives the Denomination of this or that Colour to the *Eye*. In its middle is an Aperture, or Perforation, call'd the *Pupil*, or Apple of the *Eye*, about which the *Iris* forms a Ring. From the Inſide of this Tunic, ſpring certain Fibres, which ſpreading round the cryſtalline Humour, form the *Ligamentum Ciliare*. The 6*th* Tunic, which ſome only make the 3*d*, is the *Retina*, ſo call'd, as reſembling a Net, and covering only the Fund, or Bottom of the *Eye*, oppoſite to the Sight.

Of the three proper Tunicks, the *Sclerotica*, *Choroides*, and *Retina*; the firſt is derived from the *Dura Mater*, being detach'd from the Brain as an outer Coat, or Cover of the Optic Nerve, till arriving at the Ball of the *Eye*, it is there expanded into a Tunic: The ſecond is derived from the *Pia Mater*, and tranſmitted likewiſe from the Brain, along with the Optic Nerve; the third may be ſaid to be derived from the Brain, or *Medulla* it ſelf, as being an Expanſion of the medullary Subſtance of the Optic Nerve. See each Tunic deſcribed under its proper Article, CONJUNCTIVA, SCLEROTICA, CORNEA, CHOROIDES, UVEA, and RETINA. See alſo IRIS and PUPILLA.

The *Humours of the Eye*, incloſed between theſe Tunics, are three: *viz.* 1°. The *Aqueous*, a limpid, tranſparent Humour, ſituate in the fore-part of the *Eye*, immediately under the *Cornea*, and occaſioning its Protuberance. 2°. The *Cryſtalline*, ſituate immediately under the *Aqueous*, behind the *Uvea*, oppoſite to the Pupil. 3°. The *Vitrious*, or Glaſſy Humour, which fills all the hind-part of the Cavity of the Globe; and is that which gives the ſpherical Figure to the *Eye*. On its back Part is the *Retina* ſpread. See each Humour under its proper Article, AQUEOUS, CRYSTALLINE, and VITRIOUS.

Some Authors finding theſe Humours cover'd with proper Membranes, have given diſtinct Names to them; as the *Aqueous*, *Cryſtalline*, and *Vitrious Tunics*; but theſe being only Productions of the other Coats abovemention'd, the Diſtinction is not much regarded.

The *Veſſels of the Eye* are Nerves, Glands, Arteries, and Veins.

1°. The Nerves are the *Optic* Pair, which iſſuing thro' a Perforation in the Skull, behind the Orbit, enter the Ball of the Eye, and diffuſe and loſe themſelves therein; the outer Coat, as already obſerved, going to form the *Sclerotica*, the inner to the *Choroides*; and the *Medulla* to the *Retina*. See OPTIC *Nerve*, &c.

Beſide which, the *Motorii*, *Pathetici*, the firſt Branch of the fifth Pair, call'd *Ophthalmicus*, and the 6*th* Pairs are beſtow'd on the Muſcles of the *Eye*. See NERVES.

2°. On the upper part of the Ball of the *Eye*, near the leſſer or outer *Canthus*, is the *Glandula Innominata*, or *Lacrymalis*, which ſeparates the Matter of the Tears, to be diſcharged, by the continual Motion of the *Eye-lid*, upon the *Cornea*, to moiſten it, and facilitate its Motion. The Tears falling down the *Cornea*, are ſtopp'd by the Edge of the under *Eye-lid*, along which they run, till they fall into two ſmall Holes in the great Angle, one in each *Eye-lid*, call'd *Puncta Lacrymalia*, which lead to a ſmall Bag, from the Bottom of which a ſmall Tube ariſing, opens into the Noſe. Between the two *Puncta*, is a Caruncle, or Eminence, which ſerves to ſeparate and keep them open, and which was anciently taken for the *Glandula Lacrymalis*. See LACRYMALIS *Glandula*, *Puncta* LACRYMALIA, TEARS, *&c.*

3°. The *Eye* receives Arteries, both from the internal and external *Carotids*, and returns the Blood by Veins that go to the Jugulars. See CAROTID and JUGULAR.

The Muſcles of the *Eye* are ſix; four of which are from their Situation call'd *Recti*, or ſtraight Muſcles; and two, *Obliqui*. The *Recti* come from ſeveral Points of the Bottom of the Orbit, and run immediately between the *Sclerotica* and *Adnata*: They derive ſeveral Denominations from their ſeveral Offices, *viz.* *Attollens*, or *ſuperbus*, which draws the *Eye* upwards: *Deprimens*, or *humilis*, which caſts it down: *Adducens*, and *Potator*, which draws the *Eye* towards the Noſe: And *Abducens*, or *Indignator*, which draws it the other Way towards the leſſer Angle. The two oblique Muſcles are, the *ſuperior*, call'd alſo *Rotator*, and *Trochlearis*; and the *inferior*. See each Muſcle in its proper Place, ATTOLLENS, DEPRIMENS, ADDUCENS, ABDUCENS, OBLIQUUS, TROCHLEARIS, *&c.*

The whole Structure and *Apparatus* of the *Eye* tends to this, that there be produced a diſtinct and vivid Collection in the Bottom of the *Eye*, directly under the Pupil, of all the Rays, which proceeding from any Point of an Object, and entering the *Eye*, penetrate the cryſtalline Humour; and that ſo many Points be painted in the Bottom of the *Eye*, as are conſpicuous in an Object; that ſo a ſmall Image like thereto, may be repreſented on the *Retina*. See RAY and RADIANT.

In order to this, the Rays from any radiant or reflecting Point, ſtriking on the Cornea, are refracted towards the Perpendicular, and thus determined to proceed thro' the Aperture of the Pupil to the Surface of the Cryſtalline: While other Rays, which enter'd ſo obliquely as to be thrown upon the *Iris*, are reflected out again, that they may not diſturb the Diſtinctneſs of the Sight; and others whoſe leſs Obliquity threw them between the *Uvea* and vitrious Humour, are extinguiſh'd in the Darkneſs thereof: So that none can be propagated thro' the vitrious, but ſuch as paſſing thro' the Pupil, ſtrike on the Cryſtalline. See CRYSTALLINE and REFRACTION.

In the mean Time the *Iris*, contracting by its circular, or dilating by its right Fibres, the *Pupilla* of the *Eye*; admits

fewer or more Rays, as the Object is nearer or more vivid; or remoter and more languid. See PUPIL.

Now, the flatter the Figure of the *Cornea* is, the leſs does it collect the Rays emitted from any lucid Point; whence fewer arrive at the Cryſtalline, and thoſe more diverging, unleſs when they come from a very remote Object: On the contrary, the rounder it is, the more of the Rays from any Point does it collect, and throw on the Cryſtalline; and thoſe the more converging: Whence one great Cauſe of the Defects in the *Eyes* both of Old Men and Myopes.

Again, the Rays tranſmitted thro' the Pupil to the Cryſtalline, are there refracted a-new, further collected, and render'd converging; ſo as that thoſe which came from the ſame Point of the Object, are now thrown in one Point thro' the Vitrious, upon the *Retina*; where they paint or exhibit that preciſe Point of the Object whence they flow'd. Accordingly, if the Cryſtalline be very denſe, or ſpherical, the Focus, or the Point wherein they are united, will be too near; and if too flat, or thin, the Point will be too remote: The Effect of both which is Confuſion. And hence another Cauſe of the Defects of *Myopes* and *Presbytæ*. See MYOPES and PRESBYTÆ.

'Tis not, however, *Myopes* and old Men alone, that would labour under theſe Defects, and have their Viſion, in moſt Caſes confuſed, as in Objects very near, or very remote, very ſmall, or very great: But thoſe would be the common Condition of Viſion.

Diſtinct Viſion, depending abſolutely on the Union of all the Rays coming from the ſame Point of the Object, on the ſame preciſe Point of the *Retina*; and Rays from Objects at different Diſtances, being united at different Diſtances behind the Cryſtalline; it were impoſſible, *e. gr.* for the ſame *Eye* to ſee diſtinctly any two Objects differently removed from it. But Nature has made a Proviſion againſt theſe Defects; and that principally, by bringing the Cryſtalline nearer to the *Cornea*, or further from it, occaſionally; which is effected two Ways, *viz.* either by compreſſing the Bulb of the *Eye* by the four Muſcles all ſtrongly contracted at once, which changes the Figure of the aqueous Humour, and renders the *Eye* oblong; or by the *Ligamentum Ciliare*, augmenting and diminiſhing the Convexity of the Cryſtalline, and ſetting it nearer or further from the *Retina*. See SEEING, SIGHT, *&c.*

As complex as the Mechaniſm of the *Eye* may ſeem, and as manifold as the Parts are which have a Relation hereto: The Juſtneſs of Viſion ſeems to require an exact Habitude in them all. — Thus, tho' the Pupil be no ſubſtantial Part of the *Eye*, but only an Aperture of the *Uvea* almoſt perpetually changing its Bigneſs according to the different Degrees of Light the *Eye* chances to be expoſed to; and therefore ſhould ſeem, while this Hole remains open, to perform its Office, by giving Entrance to the incident Rays of Light: Yet Mr. *Boyle* ſaw a Woman, who, after a Fever, not being able to dilate the *Pupillæ* of her *Eyes*, as before, tho' they were very little narrower than ordinary; yet had ſhe thereby almoſt loſt her Sight. — And on the other Side, tho' a competent Wideneſs of the Pupil be requiſite to a clear and diſtinct Viſiion, yet if its Dilatation exceeds the due Limits, there is thereby produced a conſiderable Diſtemper of Sight.

It may ſeem alſo but a ſlight Circumſtance, that the tranſparent Coats of the *Eye* ſhould be devoid of Colour; and of as little Moment, that the *Cornea* ſhould be very ſmooth, provided it remain tranſparent: Yet when either of theſe Circumſtances is wanting, the Sight is greatly vitiated. — Thus we ſee, that in the yellow Jaundice, the adventitious Colour, wherewith the *Eye* is tinged, makes the Patient think he ſees many Objects yellow, which are of a contrary Colour.

It has of late been an Opinion, that tho' both *Eyes* be open, and turned towards an Object, yet only one of them at a Time is effectually employed in giving the Repreſentation of it: So that the having of two *Eyes* ſhould ſeem in ſome Sort a Redundance. — But Mr. *Boyle* furniſhes ſeveral Conſiderations which invalidate this Opinion, and ſhew that both the *Eyes* are of Uſe at the ſame Time. — He aſſures us, he has found by frequent Experiment, that his two *Eyes* together, beheld an Object in another Situation, than either of them apart would do. — He adds, that he has met with a Perſon, who had a Cataract in his *Eye* for two or three Years, without finding any Impediment in his Sight, tho' others had, during that Time, taken Notice of a white Film that had croſſed his *Eye*; till, at length, happening to rub his ſound *Eye*, he was ſurprized to find himſelf in the dark: And that a very ingenious Perſon, who by an Accident had one of his *Eyes* ſtruck out, told him, that for ſome Months after, he was apt to miſtake the Situation and Diſtances of Things; for having frequent Occaſion to pour Liquors out of one Vial into another, after this Misfortune he often ſpilt them, and let them run quite beſides the Necks of the Vials, he thought he was pouring them directly into.

The like was related to him by another Perſon, who had, by a Wound, loſt the uſe of one of his *Eyes*; viz. that for ſome Time after, he often, in pouring out his Wine, miſs'd the Mouth of the Bottle, or Glaſs.

A yet more conſiderable Inſtance of this Kind, the ſame Author gives us, of a noble Perſon, who, in a Fight, had one of his *Eyes* ſtrangely mangled by a Muſket Ball, which came out at his Mouth; after which Accident, he could not well pour Drink out of one Veſſel into another; but had broken many Glaſſes by letting them fall out of his Hand, when he thought he had given them to another, or ſet them down on the Table: He added, that this Aptneſs to misjudge of Diſtances and Situation, continued with him, tho' not in the ſame Degree, for two Years.

The comparative Structure, and Anatomy of the *Eye*, is very curious: The Situation, Number, Conformation, *&c.* of this Organ, in different Animals, being finely and wonderfully adapted to their different Circumſtances, Occaſions and Manners of Living.

In *Man*, and ſome other Creatures, an ingenious Author obſerves, the *Eye* is placed chiefly to look forwards; but withal ſo order'd, as to take in nearly the Hemiſphere before it. — In *Birds*, and ſome other Creatures, the *Eyes* are ſo ſeated, as to take in near a whole Sphere, that they may the better ſeek their Food and eſcape Danger. — In others they are ſeated, ſo as to ſee behind them, or on each Side, whereby to ſee the Enemy purſuing them: Thus, in *Hares* and *Conies*, the *Eyes* are very protuberant, and placed ſo much towards the Side of the Head, that their two *Eyes* take in nearly a whole Sphere: Whereas in *Dogs*, that purſue 'em, the *Eyes* are ſet more forward in the Head, to look that Way more than backward.

Generally, the Head is contrived to turn this and that Way, chiefly, for the Occaſions of the *Eyes*; and generally the *Eyes* themſelves are moveable upwards, downwards, backwards, ſidewiſe, for the more commodious Reception of the viſual Rays. Where Nature deviates from theſe Methods, ſhe always makes uſe of very artful Expedients to anſwer the ſame End.

Thus, in ſome Creatures, the *Eyes* are ſet out at a Diſtance from the Head, to be moved here and there, the one this Way, and the other that; as in *Snails* particularly, whoſe *Eyes* are contain'd in their four Horns, like atramentous Spots fitted to the End of their Horns, or rather to the Ends of thoſe black Filaments, or Optic Nerves, ſheath'd in the Horn. *Power*, Exper. Phil. *Obſ.* 31.

And in other Creatures, whoſe *Eyes* or Head is without Motion, as in divers Inſects; that Defect is ſometimes made up by their having more *Eyes* than two; as in *Spiders*, which having no Neck, and conſequently the Head being immoveable, the Defect is ſupplied by the Situation and Multiplicity of their *Eyes*; ſome having four, ſome ſix, and others eight, all placed in the forefront of the Head, which is round, like a Locket of Diamonds. The Reaſon Dr. *Power* gives, is, that being to live by catching ſo nimble, and ſhy a Prey as Flies, they ought to ſee her every Way, and ſo take her *per ſaltum*, without any Motion of the Head to diſcover them.

Again, Men, and moſt Quadrupeds, are found to have ſeveral Muſcles belonging to their *Eyes*, by Help whereof they can turn them any Way, and ſo obvert the Organ of Senſe to the Object. — But Nature not having given that Mobility to the *Eyes* of Flies, ſhe in Recompence furniſhes them with a Multitude of little protuberant Parts, finely ranged upon the Convex of their large bulging *Eyes*; ſo that by Means of theſe numerous little Studs, numberleſs Rays of Light are reflected from Objects placed on either Hand, above, or beneath the Level of the *Eye*, and conveniently thrown upon that Organ, to render the Objects they come from, viſible to the Animal; and by the Help of a good Microſcope, and a clear Light, ſome Hundreds of theſe little round Protuberances may be diſcover'd, curiouſly ranged on the Convexity of a ſingle *Eye* of an ordinary Fleſh Fly.

So *Scorpions* are found to have above an hundred *Eyes*; and *Swammendam* has obſerved no leſs than two thouſand in the little Inſect call'd *Ephemera*.

In other Creatures, the like Deficiency is ſupplied by having their *Eyes* nearly two protuberant Hemiſpheres, each conſiſting of a prodigious Number of other little Segments of a Sphere.

The *Eyes* of a *Cameleon*, Dr. *Goddard* obſerves, reſemble a Lens, or Convex Glaſs, ſet in a verſatile globular Socket,

Socket, which ſhe turns backward and forward without ſtirring the Head; and ordinarily the one a contrary Way to the other.

Laſtly, *Moles*, which the Antients, *Ariſtotle*, *Pliny*, *Alb. Magnus*, &c. ſuppoſed to have no *Eyes* at all, are now found to furniſh a notable Inſtance of the Diverſity of the Apparatus of Viſion. For that Animal living altogether underground, Sight would generally be uſeleſs to it, and ſo tender a Part as the *Eye* troubleſome. It has therefore *Eyes*, but thoſe ſo exceedingly ſmall, and withal ſituate ſo far in the Head, and cover'd ſo ſtrongly over with Hair, that they cannot ordinarily be either of Service or Diſſervice to it. Yet, to guide and ſecure it a little when it chances to be above ground, *Borrichius*, *Blaſius*, *Schneider*, Mr. *Derham*, and others, obſerve, that it can protend, or put them forth beyond the Skin, and again draw them back at Pleaſure, ſomewhat after the Manner of Snails.

In the *Eyes* of Nocturnal Animals is a Part not yet mention'd, *viz.* a Sort of *Tapetum* at the Bottom of the *Eye*, which gives a Kind of Radiation on the Pupil, enabling them to ſee and catch their Prey in the Dark. Thus Dr. *Willis*: *Hajus uſus eſt* Oculi *pupillam quaſi jubare inſito illuminare* —— *quare in Fele plurimum illuſtris eſt, at Homini, Avibus & Piſcibus deeſt.* *De* Animi Brutor.

He adds, that in ſome Perſons the *Iris* has a Faculty alſo of darting out Light: And inſtances in a Man of a hot Head, who after a plentiful drinking of generous Wine, could ſee to read in the darkeſt Night. *Willis*, ibid.

The like *Pliny* tells us of *Tib. Cæſar*, that upon his firſt waking in the Night, he could ſee every Thing for a little while, as if in broad Day light. *Nat. Hiſt.* L. II. *C.* 37. And Dr. *Briggs* give a parallel Inſtance of a Gentlemen in *Bedforſhire*. Opthalm. *C.* 5. §. 12.

Frogs, beſide the Parts of the *Eye* which they have in common with Men, and moſt Quadrupeds, have a peculiar Membrane, or Cartilage, which is not commonly perceived, wherewith they can, at Pleaſure, cover the *Eye*, without too much hindring the Sight, becauſe the Membrane is both tranſparent and ſtrong; ſo that it may paſs for a Kind of moveable *Cornea*, or occaſional Safeguard to the *Eye*.

In furniſhing Frogs with this ſtrong Membrane, the Providence of Nature ſeems very conſpicuous; for that being amphibious Creatures, deſigned to paſs their Lives in watery Places, which for the moſt part abound in Plants, endowed with ſharp Edges, or Points; and the progreſſive Motion of this Animal, being not by walking, but by leaping, if his *Eyes* were not provided with ſuch a Caſe, he muſt either ſhut them, and ſo leap blindfolded, or by leaving them open, muſt run the Riſk of having the *Cornea* cut, pricked, or otherwiſe offended: But this Membrane, like a Kind of Spectacle, covers the *Eye*, without taking away the Sight; and as ſoon as the Occaſion for it is over, the Animal withdraws it into a little Cell, where it reſts, till its Uſe be again required. This Membrane becomes viſible, by applying the Point of a Pin, or any ſuch ſharp Thing, to the *Eye* of a Frog, whilſt his Head is held ſteady; for to ſcreen his *Eye*, he will preſently cover it therewith, and afterwards withdraw it, upon a Removal of the ſuſpected Danger. — And becauſe many Birds are deſtined to fly among the Branches of Trees and Buſhes, leſt by this Means the Prickles, Twigs, Leaves, *&c.* ſhould wound or offend their *Eyes*, Nature has alſo given them ſuch another Kind of horny Membrane as we ſee in Frogs. See NICTITATING *Membrane*.

Naturaliſts relate Wonders of the Sharpneſs and Accuracy of the *Eyes* of ſome Animals, as the Eagle, *&c.* beyond thoſe of Men. See EAGLE, *&c.*

Yet do thoſe of Men ſeem improveable to a ſurprizing Degree: — Mr. *Boyle* inſtances in a Major of a Regiment of King *Charles* I. who being afterwards forced Abroad, ventured at *Madrid*, to do his King a Piece of Service of an extraordinary Nature and Conſequence; which being there judged very irregular, he was committed to an uncommon Priſon, or rather Dungeon; having no Window belonging to it, only a Hole in the Wall, at which the Keeper put in Proviſion, and preſently cloſed it again on the Outſide, but not perhaps very exactly. — For ſome Weeks this Gentleman continued utterly in the Dark very diſconſolate; but afterwards he began to think he ſaw ſome little Glimmering of Light, which, from Time to Time, increaſed, ſo that he could not only diſcover the Parts of his Bed, and other ſuch large Objects, but at length, amidſt this deep Obſcurity, cou'd perceive the Mice that frequented his Chamber, to eat the Crumbs of Bread which fell upon the Ground, and diſcern their Motions very well.

The Author juſt mention'd, in his *Obſervations on Viciated Sight*, gives us ſome uncommon Phænomena, that regard the *Eyes*. — He furniſhes ſeveral Inſtances of *Nyctalopias*, or People, whoſe *Eyes* in the Day-time were quite dark, or at leaſt ſo dim, that they could hardly diſcern their Way; who yet, ſoon after Sun-ſet, and during Twilight, ſaw very clearly. See NYCTALOPIA.

This brings to mind an odd Caſe of an old learned Divine, who complained, that during the Day-time, his right Hand ſhook ſo much, that he could not manage his Pen; and therefore was forced to make Uſe of it only by Candle-Light.

But, which is yet more ſtrange, one of theſe Patients who could only ſee by Night, cou'd diſtinguiſh ſome Colours, *viz.* black and white, but not others, eſpecially red and green. The Meadows to this Perſon did not appear green, but of an odd, darkiſh Colour; and when ſhe had a Mind to gather Violets, tho' ſhe kneeled in the Place where they grew, ſhe could not diſtinguiſh them by the Colour from the Graſs about them, but only by their Shape or Touch.

*Artificial* EYE, is an Optical Machine, wherein Objects are repreſented after the ſame manner as in the natural *Eye*; of conſiderable Uſe in illuſtrating the manner of Viſion.

Its Conſtruction is thus: Provide two hollow Hemiſpheres of hard, dry Wood, well cemented together, to repreſent the *Ball* of the *Eye*: Let the *Anterior*, or Fore-Hemiſphere, be perforated with a round Hole in C, (*Tab. Opticks, Fig.* 9.) to ſupply the Place of a *Pupil*; and therein fit a thin, plane Glaſs, or, which amounts to the ſame, a Concavo-convex Glaſs, to ſerve for the *Cornea*. In the Inſide, have a ſhort draw-Tube G, with a Lens Convex on both Sides, to do the Office of the *Cryſtalline* therein. In the hind, or poſterior Hemiſphere, fit another Draw-Tube E F, with a plain Glaſs therein, having its inner Surface ſmooth, tho' not poliſh'd, repreſenting the *Retina* and *Optic* Nerve.

If now the Aperture C, be turn'd towards any Object; and the Draw-Tube F E be gradually pull'd out; you will have the Object beautifully and ſtrongly repreſented in all its Colours on the *Retina*, only in an inverted Order. See VISION.

It being of no Conſequence what the Figure of the inner Cavity is; any Room, or Chamber, ſo darken'd as only to receive Light from a ſingle Hole, with a Glaſs Convex on both Sides fitted therein; will do the Office of an *Artificial Eye*, and exhibit all the Objects oppoſed to the Aperture, on a Wall, or a white Cloth, ſtretch'd at a proper Diſtance from the Aperture: With this Circumſtance, that the leſs Sphere the Glaſs is a Segment of, the greater will the Figures appear. And this is the celebrated *Camera Obſcura*. See CAMERA *Obſcura*.

EYE, in Architecture is uſed for any round Window made in a Pediment, an Attic, the Reins of a Vault, or the like. See WINDOW.

BULLOCKS-EYE, or *Oeuil de Bœuf*, is a little Sky-Light in the Covering, or Roof, intended to illumine a Granary, or the like. The ſame Term is applied to the little Luthern in a Dome, as in that at St. *Peters* at *Rome*, which has 48 in three Rows. See LUTHERN.

EYE *of a Dome*, is an Aperture at the Top of the Dome; as that of the *Pantheon* at *Rome*, or of St. *Pauls* at *London*. It is uſually cover'd with a Lanthorn. See DOME.

EYE *of the Volute*, in Architecture, is the Centre of the Volute, or that Point wherein the Helix, or Spiral, whereof it is form'd, commences: Or it is the little Circle in the middle of the Volutes, wherein are found the thirteen Centres for the deſcribing the Circumvolutions thereof. See VOLUTE.

EYE, in Agriculture and Gardening, is a little Bud, or Shoot, inſerted into a Tree by Way of *Graft*. See ENGRAFTING.

The Term is alſo uſed for a Gem, or Bud, as it ſtands on the parent Tree. A Tree with fine, ſtrong, healthy *Eyes*. *La. Quint.* P. I. *C.* 3. *Art.* 6. The good Branches are thoſe which have come in the Order of Nature, and that have large *Eyes* pretty near each other. *Id.* This Branch muſt be cut off at the third *Eye*. Liger. See BUD, GEM, *&c.*

EYE, among Phyſicians, is frequently taken for a Hole, or Aperture. — Whence it is that the firſt of the big Inteſtines is call'd *Cæcum*, or the blind Gut, as having no *Eye*, or Perforation. — For the ſame Reaſon the Chymiſts call the Alembic, uſed in Circulation, a *blind Head*.

EYE, in Printing, is ſometimes uſed for the Thickneſs of the Types, or Characters, uſed in Printing: Or, more ſtrictly, it is the Graving in Relievo, on the Face, or Top of the Letter. See TYPE.

'Tis the *Eye* alone that makes the Impreſſion; the reſt, which they call the *Body*, ſerving only to ſuſtain it. A big

*Eye*,

*Eye*, ſmall *Eye*, &c. — The *Eye* of the e, is the little Aperture at the Head of that Character, which diſtinguiſhes it from the c.

EYE, is alſo uſed among Jewellers, for the Luſtre and Brilliant of Pearls and precious Stones; more uſually call'd the *Water*.

EYE-*lids*, EYE-*brows*, } See { PALPEBRÆ. SUPERCILIUM.

EYE-*brow* is ſometimes uſed in Architecture, in the ſame Senſe with Liſt, or Fillet. See LIST and FILLET.

*Bulls*-EYE, in Aſtronomy, is a Star of the firſt Magnitude, in the Conſtellation *Taurus*; by the *Arabs* call'd *Aldebaran*.

Its Longitude, Latitude, &c. See among thoſe of the other Stars in the Conſtellation TAURUS.

*Cats*-EYE, *Oculus Cati*, in Nat. Hiſtory, a precious Stone; call'd alſo *Sun's Eye*, or *Oculus Solis*. See PRECIOUS *Stone*.

'Tis tranſparent, very ſhining, and of divers Colours, uſually oblong as to Figure, and not unlike the Opal, only much harder.

'Tis found in divers Parts of the *Eaſt Indies*, but thoſe of the Iſland of *Ceylon* are the moſt prized.

*Hares*-EYE, *Oculus Leprinus*, in Medicine, a Diſeaſe ariſing from a Contraction of the upper *Eye-lid*, which prevents its being able to cover its Part of the *Eye*. Whence the Patient is obliged to ſleep with the *Eye* half open after the Manner of *Hares*.

The Phyſicians call it *Lagophthalmia*, a *Greek* Word ſignifying the ſame Thing; being compounded of λαγὼς, *Hare*, and ὀφθαλμὸς, *Eye*.

*Goats*-EYE, *Oculus Caprinus*, is when there is a white Speck on the *Cornea*; as is ſeen in the *Eye* of *Goats*. Phyſicians call it *Aigis*.

*Crabs*-EYES, *Oculus Cancrorum*. See CRABS-*Eyes*.

EYRE, or EIRE, in Law, ſignifies the Court of Juſtices Itinerant. See ITINERANT.

Hence Juſtices in *Eyre*, are thoſe whom *Bracton* calls, *Juſticiarios Itinerantes*. See JUSTICE *in Eyre*.

The EYRE *of the Foreſt*, is otherwiſe call'd *Juſtice Seat*; which by the ancient Cuſtoms was to be held every three Years, by the Juſtices of the Foreſt journeying up and down for that Purpoſe. See JUSTICE *Seat*.

The Word is form'd of the French, *Erre*, *Iter*, Journey.

EYRIE, or AYRIE, among Falconers, the Neſt where Hawks ſit, and hatch, and feed their Young. See NEST.

Hence a young Hawk newly taken from the Neſt, is called an *Eyeſs*. See HAWK and FALCON.

EZECHIEL's *Reed*, or *Rod*, a Scripture Meaſure, computed by late Writers to amount to 1 *Engliſh* Foot, 11 Inches, $\frac{1}{3}$ of an Inch. See MEASURE.

EZRA, or ESDRAS, in Divinity. — The Books of *Ezra*, are two Books of Holy Scripture, compoſed by *Ezra*, or *Eſdras*, the High-Prieſt of the *Jews* during the Captivity; and particularly about the Time when they return'd to *Paleſtine*, under the Reign of *Cyrus*.

The Original of the Books of *Eſdras* is in *Hebrew*; and the ſecond is particularly call'd by the *Hebrews*, and from them by the *Engliſh* Tranſlators, *Nehemiah*.

They contain the Hiſtory of the Return of that People from the *Babyloniſh* Captivity, and their Re-eſtabliſhment in the Holy Land. They are Canonical, and are allow'd as ſuch both by the Church and the Synagogue.

The *Canon of Ezra*, is the Collection of the Books of Scripture made by that Pontiff. See CANON.

It appears, however, that the Synagogue added other Books to *Eſdras*'s Canon; witneſs the Book of *Ezra* it ſelf, and that of *Nehemiah*.

# F

# FAB

**F**, THE ſixth Letter of the Alphabet, and the fourth Conſonant. *See* Letter.

The letter F may be either conſider'd abſolutely and in it ſelf; or with regard to the particular Languages where it is found. In the firſt view, F is placed by ſome Grammarians among the Mutes, like the Φ among the *Greek* Grammarians: But others give it the Quality of Semi-vowel. See MUTE, *&c.*

*Joh. Conrad Aman*, in his Diſſertation *de Loquela*, divides the Conſonants into ſingle and double; and the ſingle into hiſſing and exploſive. Among thoſe called *Hiſſing*, there are ſome pronounc'd by the Application of the upper Teeth to the lower Lip; and theſe are the f and the ph. The Reaſon why ſome account it a Semi-vowel, and *Aman* places it among the Hiſſers, is, that one may produce a little Sound, without any other Motion of the Organs, than what is neceſſary to the Pronunciation of the *F*.

This Letter is derived to us from the *Romans*, who borrowed it from the *Æolians*; for the *F* does not at all differ from the *Æolic* Digamma, or double Gamma, thus call'd as reſembling two Γ's, one over the other: and the Digamma ſeems no other than the *Greek* Φ, which being made at three Strokes, degenerated at length into the Figure *F*; for the Letter Φ being compounded of an O, *Omicron*, with a Perpendicular drawn through it: If that Perpendicular be made firſt, and the O at two Strokes afterwards, *viz.* firſt the upper, then the under part; it will happen, eſpecially in writing faſt, that the two Parts ſhall not join; and even inſtead of two Arches of Circles, Haſte and Conveniency may naturally enough make two ſtraight Lines.

Thus it is that the tranſverſe Stroke of the Letter Ψ, is frequently ſeen ſtraight; and the Letter, in form of a Croſs †. And what confirms this Tranſmutation of the Φ into *F* ſtill further, is, that on the Medals of *Philip*, and the Kings of *Syria*, in the Words ΕΠΙΦΑΝΟΥΣ and ΦΙΛΑΔΕΛΦΟΥ, the *Phi* Φ is frequently ſeen in the Form juſt mentioned, *i. e.* it has no Circle or Omicron; but a-croſs the Middle of the Perpendicular, is a kind of Right-line, form'd only of two Dotts, the one on the right ſide, and the other on the left, repreſenting a Croſs, †. Such appears to be the Origin of the Letter *F*; which, of conſequence is no other than a Corruption of the *Greek* Φ: And accordingly, on the Medals of the *Faliſci*, the F is ordinarily put in lieu of the *Greek* Φ; but it muſt be added, that tho' the *Greek* and *Latin* Letter were thus the ſame thing, yet the Sound was much ſofter among the *Latins*, than among the *Greeks*: As was long ago obſerv'd by *Terentianus*.

The *Romans*, for ſome time, uſed an inverted F, Ⅎ, in lieu of an V conſonant, which had no peculiar Figure in their Alphabet: thus in Inſcriptions we meet with TERMINAⅎIT, DIⅎI, *&c.* *Lipſius*, in his Comment on the Annals of *Tacitus*, L. XI; *Covarruvias*, and *Dauſquius* in his Treatiſe of Orthography, hold, that it was the Emperor *Claudius*, who firſt introduced this Uſe of the inverted Digamma, or Ⅎ; which they call the Invention of a Letter, as being equivalent to the Invention of the Letter V. In effect, *Tacitus*, in the 4th Chapter of the ſaid Book, and *Suetonius* in his Life of *Claudius*, c. 41. aſſure us, that the Emperor invented three Letters; one of which *Lipſius* ſhews muſt be the inverted *Eolic* Digamma: But, before *Claudius*, *Varro* made an Attempt to introduce the ſame thing, but could not ſucceed. All the Authority of an Emperor was neceſſary to make it take: Nor did it ſubſiſt long; for after *Claudius*'s Death it was thrown by again; as we are told by the ſame *Tacitus*; and *Quintilian* obſerves, it did not ſubſiſt in his time. So far is the Cuſtom of a Language from being ſubject even to the Maſters of the World. It may be added, that the Pronunciation of the F is almoſt the ſame with that of the V; as will be evident by attending to the manner of pronouncing the following Words, *F*avour, *V*anity, *F*elicity, *V*ice, *F*oment, *V*ogue, *&c.* The *French* particularly, in borrowing Words from other Languages, uſually turn the final *v* into an *f*, as Chetif of Cattivo; Neuf of Novus; Nef of Navis, *&c.*

In the later *Roman* Writers we find the *Latin F* and *Greek ph* frequently confounded; as in *F*alanx, for *Ph*alanx; Filoſophia, for Philoſophia, *&c.* Which Abuſe is ſtill retain'd by many *French* Writers, who write Filoſophie, Filippe, Epifane, *&c.* and even ſometimes by the *Engliſh*, as in Fantaſy, Filtre, *&c.*

F, in the Civil Law. Two ff's join'd together, ſignify *Digeſt*; See the Reaſon thereof under the Article DIGEST.

F, in Muſick, is one of the ſigned Clefs or Keys, plac'd at the Beginning of one of the Lines of a piece of Muſick. See CLEF.

F is the Baſs-clef, and is plac'd on the fourth Line upwards. See BASS.

Indeed, the Character or Sign by which the *f* and *c* Clefs are mark'd, bear no Reſemble to thoſe Letters. Mr. *Malcolm*, thinks it were as well if we uſed the Letters themſelves, but Cuſtom has carried it otherwiſe. The ordinary Character of the F or Baſs-clef is ): which *Kepler* takes a deal of pains to deduce, by Corruption, from the Letter F it ſelf. See CHARACTER.

F, in our antient Cuſtoms. He that ſhall maliciouſly ſtrike any Perſon with a Weapon in Church or Church-yard, or draw any Weapon there with Intent to ſtrike, ſhall have one of his Ears cut off; and if he have no Ears, he ſhall be mark'd on the Cheek with an hot Iron, having the Letter F, whereby he may be known for a Fray-maker or Fighter.

F, in Phyſical Preſcriptions, ſtands for *Fiat*, let it be done; as F. S. A. denotes as much as *fiat ſecundum artem*.

F, among ſuch as give us the numeral Value of the Letters, ſignifies 40, according to the Verſe,

*Sexta quaterdenos gerit quæ diſtat ab alpha.*

And when a Daſh was added a-top, $\overline{F}$ it ſignified 40 thouſand.

FA is one of the Notes of Muſic, being the fourth in riſing in this order of the Gamma, Ut, re, mi, fa. See NOTE.

FABIANS, FABII, in Antiquity, a part of the Luperci. See LUPERCI, and LUPERCALIA.

Thoſe Prieſts were divided into two Parts; one of which was called the *Fabians*, and the ſecond the *Quintilians*, from their reſpective Chiefs. The *Fabians* were for *Romulus*, and the *Quintilians* for *Remus*. See QUINTILIANS.

FABLE, a *Tale*, or feign'd Narration, deſign'd either to inſtruct or divert: Or, *Fable*, as Monſ. *de la Motte* defines it, is an Inſtruction diſguis'd under the Allegory of an Action.

*Fable* ſeems to be the moſt antient way of teaching: The principal Difference between the Eloquence of the Antients, and that of the Moderns, conſiſts, according to *Pere Boſſu*, in this, that our manner of ſpeaking is ſimple and proper; and theirs, full of Myſteries and Allegories. The Truth was uſually diſguis'd under thoſe ingenious Inventions, call'd by way of Excellence, μυθοι, *Fabulæ*, *Fables*, that is, *Words*; as intimating that there was the ſame Difference between theſe *fabulous* Diſcourſes of the learned, and the common Language of the People, as between the Words of Men, and the Voices of Beaſts.

At firſt, *Fables* were only employ'd in ſpeaking of the Divine Nature, as then conceiv'd: Whence, the antient Theology was all *Fable*. The Divine Attributes were ſeparated as into ſo many Perſons; and all the Oeconomy of the Godhead laid down in the feigned Relations and Actions thereof; either by reaſon the human Mind could not conceive ſo much Power and Action in a ſingle indiviſible Being; or perhaps, becauſe they thought ſuch Things too great and high for the Knowledge of the Vulgar. And as they could not well ſpeak of the Operations of this Almighty Cauſe, without ſpeaking, likewiſe of its Effects; natural Philoſophy, and at length human Nature and Morality it ſelf came thus to be veil'd under the ſame *fabulous* allegoric Expreſſion; whence the Origin of Poetry, and particularly of Epic Poetry. See EPIC *Poem*.

The Criticks, after *Aphtonius* and *Theon*, reckon three kinds of *Fables*, Rational, Moral, and Mix'd.

*Rational* FABLES, call'd alſo *Parables*, are Relations of Things ſuppoſed to have been ſaid and done by Men; and which might poſſibly have been ſaid, or done, though in reality they were not. Such, in the Sacred Writings, are thoſe of the ten Virgins; of *Dives* and *Lazarus*; the prodigal Son, *&c.* Of theſe *Rational Fables* we have likewiſe about a dozen in *Phædrus*. See PARABLE.

*Moral* FABLES, call'd alſo *Apologues*, are thoſe wherein Beaſts are introduced as Actors, Speakers, *&c.* Theſe Moral *Fables* are alſo call'd *Eſopic Fables*: not that *Eſop* was their Inventor, for they were in uſe long before him, *viz.* in the times of *Homer* and *Heſiod*; but becauſe he excell'd therein. In this kind not only Beaſts, but even ſometimes

Trees, Hammers, &c. are ſuppos'd to ſpeak. See APOLOGUE.

Rational differs from the *Moral Fable* in this; that the former, though it be feign'd, might be true; but the the latter is impoſſible; as 'tis impoſſible for Brutes or Stocks to ſpeak.

*Mix'd* FABLES, are thoſe compoſed of both ſorts, rational and moral; or wherein Men and Brutes are introduc'd converſing together. Of this we have a fine Inſtance, in *Juſtin* L. XXXIII. c. 4. made by a petty King, to alarm the antient *Gauls* againſt the *Maſſilians*, who arriving out of *Aſia*, in *Spain*, charm'd with the Place, beg'd leave of the Inhabitants to build a City.

*The Bitch and Shepherd, a Mix'd* FABLE.

A Bitch big with young, beg'd of a Shepherd, a Place to lay her Whelps in; which when ſhe had obtain'd, ſhe further beg'd for leave to rear 'em in the ſame. At length, the Whelps being now grown up, depending on the Strength of her own Family, ſhe claim'd the Property of the Place. So the *Maſſilians* who are now only Strangers, will hereafter pretend to be Maſters of this Country.

As to the Laws of *Fable*, the principal are; *Firſt*, That to every *Fable* there be ſome Interpretation annexed, to ſhew the moral Senſe, or Deſign thereof. This Interpretation, if it be plac'd after the *Fable*, is called ἐπιμυθιον, or *affabulatio*; if before it, προμυθιον, *præfabulatio*. *2dly*, That the Narration be clear, probable, ſhort and pleaſant. To preſerve this Probability, the manners muſt be expreſs'd, and cloſely kept to, as in Poetry. See PROBABILITY and MANNERS.

*M. de la Motte*, has ſome fine Remarks on the Subject of *Fables*, at the Beginning of his *Fables nouvelles, dedies au Roi* 1719. A *Fable*, according to this polite Writer, is a little Epic Poem; differing in nothing from the great one, but in Extent, and in that being leſs confin'd as to the Choice of its Perſons, it may take in all ſorts at pleaſure, as Gods, Men, Beaſts, or Genii; or even, if occaſion be, create Perſons, *i. e.* perſonify Virtues, Vices, Rivers, Trees, &c. Thus *M. de la Motte* very happily introduces Virtue, Talent, and Reputation, as Perſons making a Voyage together. See EPOPEA, and PERSONIFYING.

That Author ſuggeſts two Reaſons, why *Fables* have pleas'd in all Ages and Places. The firſt is, that Self-love is ſpared in the Inſtruction. The 2d, that the Mind is exerciſed by the Allegory. Men don't love direct Precepts; too proud to condeſcend to thoſe Philoſophers who ſeem to command what they teach; they will needs be inſtructed in a more humble manner: They would never amend, if they thought that to amend were to obey. Add, that there is a ſort of Activity in the Mind, which muſt be humour'd. It pleaſes it ſelf in a Penetration, which diſcovers more than is ſhewn: and in apprehending what was hid under a Veil, fancies it ſelf in ſome meaſure the Author of it. The *Fable* muſt always imply or convey ſome Truth: in other Works, Delight alone may ſuffice; but the *Fable* muſt inſtruct. Its Eſſence is to be a Symbol, and of conſequence to ſignify ſomewhat more than is expreſs'd by the Letter. This Truth ſhould for the generality be a moral one; and a Series of Fictions conceiv'd and compos'd in this View, would form a Treatiſe of Morality preferable to any more direct and methodical Treatiſe: Accordingly, *Socrates*, we are told, had a Deſign to compoſe a Courſe of Morality in this way. This Truth ſhould be concealed under the Allegory; and in Strictneſs, it ought not to be explain'd either at the Beginning or End.

The Truth, or Idea intended, ſhould ariſe up in the Reader's Mind from the *Fable* it ſelf. However, for the Conveniency of the leſs diſcerning Readers, it may be a good way to point out the Truth or Moral in preciſer terms. To have the Moral at the End of the *Fable*, ſeems much better than at the Beginning: The Mind is apt to be foreſtall'd in the latter Caſe: I carry the Key all along with me, ſo that there is no room to exerciſe my Mind, in finding any thing my ſelf.

The Image, *M. de le Motte* obſerves, muſt be *juſt*, and expreſs the Thing intended, directly and without any Equivoque: It muſt be *one*, that is, all the Parts muſt be viſibly acceſſory to one principal end; and it muſt be *natural*, that is, founded on Nature, or at leaſt on Opinion.

The Writers of *Fables* are not many. If there were any before *Æſop*, his Succeſs has quite effaced their Memory; and even occaſion'd all the good Things of that kind to be aſcrib'd to him. His Life, as wrote by *Planudes*, is it ſelf a thorough *Fable*. It muſt be own'd to be very happily imagin'd, to make the Inventor of *Fables* a Slave, and his Maſter a Philoſopher. The Slave has his Maſters Pride, and ill Humour to deal with all, throughout. His Leſſons were all contain'd in the *Fables* themſelves; and the Readers were left the Pleaſure of picking them out themſelves.

'Tis generally allow'd among the Learned, that tho' the Matter and Invention of the *Fables* be *Æſop*'s, the Turn and Expreſſion is not. The Greek is of *Planudes*, and bad Greek it is in the Judgment of *F. Vavaſſor*, de *Ludicra Dict.* Some Authors will have *Socrates* the Author of the *Fables* of *Æſop*; others attribute them to *Solomon*, and others to *Homer*.

*Phædrus* was a Slave too, and a freed-Man; but he had the Advantage over *Æſop* in Education. He is only a Fabuliſt, as he tranſlates and copies. Tho' his *Fables* be generally ſhort, yet is he prolix, compared to his Author. His Style however is always florid, his Deſcriptions conciſe, and his Epithets ſuitable: He frequently adds Graces never dreamt of by the Inventor; and every where enriches the Simplicity of *Æſop* in the moſt delicate manner.

*Philpai*, another Fabuliſt, govern'd *Indoſtan* a long time under a powerful Emperor: but he was not the leſs a Slave; for the prime Miniſters of ſuch Princes are always more ſo than the meaneſt Subjects. *Philpai* compriz'd all his Politicks in his Fables; and accordingly his Work long continued the Book of State; or the Diſcipline of *Indoſtan*. It was tranſlated into *Perſian* and *Arabic*, and ſince into the modern Languages. His *Fables*, *M. de la Motte* obſerves, are rather famous than good: but he is the Inventor, and the Merit of Invention will always compenſate for a deal of Faults. His *Fables* are often wild, and artleſs; and the Collection is a ſort of Romantic Aſſemblage of Men and Genii; compoſed, in its kind, like *Cyrus* or *Orlando*; where the Adventures are continually thwarting and claſhing with each other.

We ſay nothing of the *Fables* of *Gabrias*, *Babrius*, *Avienus*, *Abſtemius*, &c.

Among the Moderns, we have none that deſerve to be ſeen in the Company above-mention'd, but *Meſſ. de la Fontaine*, and *Motte*. The firſt of whom has pick'd out all the beſt things in *Æſop*, *Phædrus* and *Philpai*, and given them a-new in *French* with a Delicacy and Simplicity peculiar to himſelf, and which in the Judgment of his Country-men, ſets him even above *Phædrus*.

The latter, rather than take up with what *de la Fontaine* had left, choſe to be an Inventor himſelf. He has ſucceeded. His *Fables* are many of them very happy, tho' ſome think 'em too full of Thought and Reaſoning. His Verſification is infinitely more correct than that of *la Fontaine*; and more ſuitable to the Subject, than that of *le Noble*.

FABLE, is alſo us'd for the *Plot* of an Epic or Dramatic Poem; or the *Action* which makes the Subject of ſuch Poem, or Romance. See POEM, DRAMA, EPIC and ACTION.

The *Fable*, according to *Ariſtotle*, is Αρχὴ, καὶ οἷον ψυχὴ, μῦθος, the principal Part, and as it were the Soul of a Poem. It muſt be conſider'd as the firſt Foundation of the Compoſition; or the Principle, which gives Life and Motion to all the Parts. In this Senſe, the *Fable* is defined *A Diſcourſe invented with Art, to form the Manners by Inſtructions diſguis'd under the Allegory of an Action.*

The *Epic Fable*, according to *Boſſu*, is confin'd to the *Rational* kind, *i. e.* the Actors and Perſons are to be Gods and Men. And yet it admits of a deal of Latitude: it may be either grave, illuſtrious, and important; or low, and popular: either whole, or defective: in verſe, or in proſe: much epiſodified, or brief: rehearſed by an Author, or repreſented by Actors on the Scene; all which are only ſo many Circumſtances, which do not make any Alteration in the Nature and Eſſence of the *Fable*.

The Characters that ſpecify the *Epic Fable* are theſe: It is Rational and Probable; it imitates a whole, and an important Action; and it is long, and related in Verſe. None of which Properties affect the nature of the *Fable*; or make it leſs a *Fable* than thoſe of *Æſop*.

The *Fable*, according to *Ariſtotle*, conſiſts of two eſſential Parts, *viz.* Truth, as its Foundation; and Fiction, which diſguiſes the Truth, and gives it the Form of *Fable*. The Truth is the Point of Morality intended to be inculcated: the Fiction is the Action, or Words the Inſtruction is cover'd under.

To make a *Plot* or *Fable*: The firſt thing, according to the great Critick juſt mention'd, is to pitch on ſome moral Inſtruction to be exemplify'd.

*E. gr.* I would exhort two Brothers, or other Perſons who have ſome common Intereſt to live in Amity; in order to preſerve it. This is the end of the *Fable*, and the firſt thing I have in view. In order to this, I endeavour to impreſs this Maxim on their Minds, that *ill Underſtanding ruins Families, and all kinds of Society*. This Maxim is the Moral, or Truth which is to be the Ground of the *Fable*: which moral Truth is now to be reduc'd into Action; and a general Action to be framed from ſeveral ſingle and real Actions of ſuch as were ruined by ill Underſtanding.

Thus

Thus *e. gr.* I ſay, that certain Perſons united together for the Preſervation of ſomething that belong'd to them in common; coming to diſagree; their diviſion left them open to an Enemy who ruin'd them. Such is the firſt Plan of a Fable. The Action preſented by this Narration has four Conditions: It is univerſal, imitated, feign'd, and contains a moral Truth under an Allegory.

The Names given to the ſeveral Perſons, begin to ſpecify the *Fable*. *Eſop* uſes thoſe of Brutes.

Two Dogs, ſays he, appointed to watch a Flock, fall out, fight, and leave all open to the Wolf, who carries off what he pleaſes. If you would have the Action more ſingular, and render the *Fable* rational, take the Names of Men. *Pridamant* and *Orontes*, Brothers by a ſecond Venter, were left very rich by their Father's Will: But diſagreeing about the Partition of their Effects, they engaged themſelves ſo far againſt each other, that they took no care of their common Intereſt, againſt *Clitander* their eldeſt Brother, by the firſt Venter; which laſt, artfully inflaming their Quarrel, and feigning he had no View but to ſome moderate Augmentation, which might be made him without preſſing them; he, in the mean time, gets the Judges on his ſide, and the other Perſons intruſted with the Affair, procures the Will to be annull'd, and becomes entituled to the whole Eſtate the Brothers were at Variance about.

Now, this *Fable* is rational; but the Names being feign'd, as well as the Things, and beſides, the Perſons being only of a private Rank, it is neither *Epic*, nor *Tragic*. However, it may be employ'd in Comedy; it being a Rule laid down by *Ariſtotle*, that Epic and Tragic Poets only invent Things; but Comic Poets invent both Names and Things. See Comedy, *&c.*

To accommodate this comic *Fable* more to the Mode and Taſte of the Town, ſome *Dorinda* muſt be imagin'd to have been promis'd to *Clitander*; but her Father, finding him diſinherited by the Will, changes his Reſolution, and will have her marry one of the rich, ſenſeleſs, younger Brothers, whom ſhe deſpiſed, *&c.*

But to return. The Fiction may be ſo diſguiſed with the Truth of Hiſtory, that there ſhall not appear any Fiction at all. To effect this, the Poet looks back into Hiſtory, for the Names of ſome Perſons to whom the feign'd Action either really or probably did happen; and relates it under thoſe known Names, with Circumſtances which do not change any thing of the Ground of the *Fable*.

Thus, In the War of 1302, between King *Philip* the Fair, and the *Flemiſh*: The *French* Army was under the Command of *Robert*, Earl of *Artois*, as General, and *Ralph de Neſle*, his Conſtable. Being in the Plain of *Courtray*, in ſight of the Enemy, the Conſtable was of Opinion it were eaſy to ſtarve them; and that it was not worth while to hazard ſo many of the Nobles, againſt a vile, deſperate Populace. This Advice the Earl rejected with Scorn, taxing the Conſtable with Cowardice and Infidelity. It ſhall be ſeen, anſwers the Conſtable, which of us two is the braveſt, and the moſt faithful; and clapping Spurs to his Horſe, led the whole *French* Cavalry precipitately to the Charge. This Precipitation, with the Duſt they rais'd, prevented their ſeeing a large deep Ditch, behind which the *Flemiſh* were poſted. The Cavalry therefore plunging into it, periſh'd miſerably; and the Infantry, aſtoniſh'd with the Loſs, let themſelves be cut in pieces by the Enemy. Thus may Fiction be made to conſiſt with Truth.

As for the *Fable*, it matters but little, whether the Perſons be called *Dogs*; or *Orontes* and *Pridamant*; or *Robert* of *Artois*, and *Ralph de Neſle*; or *Achilles* and *Agamemnon*.

The Epic *Fable* we ſhall now propoſe in its juſt Extent, under theſe two Names, laſt mention'd. It is too ſhort for the *Epopea* in the two preceding ones. We chuſe the *Fable* of the Iliad, as being the fineſt Plan of an Epic Poem in the World; and at the ſame time the moſt uſeful Syſtem of the Precepts of the Art; it being hence, that *Ariſtotle* was furniſh'd with all his Reflexions.

In every diſcrete Undertaking the End is the firſt Thing propoſed; and by this the whole Work and all its Parts are regulated: Conſequently, the Deſign of the Epopea being to form the Manners, 'tis with this firſt View the Poet muſt begin. Now, the Philoſopher dwelling on Virtues and Vices in general, the Inſtructions he gives, ſerve equally for all States and all Ages; but the Poet has a more immediate Regard to his Countrymen, and the preſſing Occaſions of his fellow Citizens. On this view it is that he chuſes his Moral, which he is to inſinuate into the People, by accommodating himſelf to their peculiar Cuſtoms, Genius and Inclinations. See how *Homer* has acquitted himſelf of all this.

He ſaw the *Greeks*, for whom he wrote, divided into as many States, as Cities; each thereof was a Body apart, and had its Government, independant of the reſt. Yet were theſe different States frequently obliged to unite into one Body againſt their common Enemies. Here then were two ſorts of Government, too different to be commodiouſly treated in one Poem. The Poet accordingly had Recourſe to two Fables; the one for all *Greece*, conſider'd as confederated together, only conſiſting of independant Parts: the other, for each particular State; ſuch as they are in Time of Peace, and without the firſt Relation. The firſt is the Subject of the *Iliad*, the ſecond of the *Odyſſee*. See Iliad and Odyssee.

For the firſt kind of Government, all Experience agrees, that that only Thing can render it happy, and its Deſigns ſucceſsful, is a good Underſtanding, and due Subordination among the ſeveral Chiefs that compoſe it; and that Miſunderſtandings, a deſire of Sway, *&c.* are the inevitable Bane of ſuch Confederacies. The beſt Inſtruction therefore that could be given them, was to ſet before their Eyes the Deſtruction of the People, and even of the Princes themſelves, thro' the Ambition and Diſcord of theſe latter. *Homer* therefore, for the Ground or Moral of his *Fable*, choſe this great Truth, that the Miſunderſtandings of Princes ruin their States. *I ſing*, ſays he, *the Wrath of* Achilles *ſo fatal to the* Greeks, *and which deſtroy'd ſo many Heroes, occaſioned by a Diſagreement between King* Agamemnon *and that Prince.*

To enforce this Truth, he repreſents divers confederate States firſt at Variance, and unproſperous; then reconciled and victorious. All which he thus includes in one univerſal Action.

Several independant Princes league againſt a common Enemy: he whom they chuſe as their Leader, affronts the braveſt of all the Confederacy; upon which the offended Prince withdraws, and refuſes any longer to fight for the Common Cauſe. This Miſunderſtanding gives the Enemy ſo much Advantage, that the Confederates are ready to relinquiſh the Enterprize. The diſaffected Perſon himſelf becomes a Sharer in the Calamities of his Allies; one of his chief Friends and Favourites being kill'd by the Chief of the Enemies. Thus, both Parties grown wiſe at their own Coſts, are reconciled. Upon which the valiant Prince again joining in the War, turns the Scale to his own Party, and kills the Enemy's Chief.

Such is the firſt general Plan of the Poem. To render this probable and more intereſting, Circumſtances of Time, Place, Perſons, *&c.* are to be added; that is, he looks in Hiſtory, or Tradition, for Perſons, to whom ſuch Action may with Truth or Probability be attributed.

He pitches on the Siege of *Troy*, and ſuppoſes the Action to have paſſed there. The brave, cholerick Character he calls *Achilles*; the General, *Agamemnon*; the Chief of the Enemies, *Hector*, &c. To inſinuate himſelf unto his Readers, he accomodates himſelf to their Manners, Genius, Views, *&c.* And to render his *Fable* more intereſting, makes his chief Perſons, and thoſe who remain'd at length victorious, to be *Greeks*, the Fathers of thoſe very People. The Courſe of the Work is fill'd up, and extended with other uſeful Leſſons and Inſtructions. See Episode.

That the Epopea in all its Glory is ſtill juſtly and ſtrictly a mere *Fable*, in the ſame Senſe as the Fictions of *Eſop*'s are, is ſhewn by *M. Boſſu*, in a Parallel between the *Fable* of the *Iliad*, and that of *Eſop* already mention'd. The moral Inſtruction is viſibly the ſame in both: ſo is the Fiction. All the Difference lies in the Names and Qualities of the Perſons.

*Homer*'s are Kings; he calls 'em *Achilles*, *Patroclus*, *&c.* and the general Good to be preſerv'd, he calls the *Greeks*. *Eſop*, after this manner, gives his Perſons the Names of Beaſts. The *Dogs* are confederated, the *Wolf* is their Enemy; and what *Homer* calls the *Greeks*, he calls *Sheep*. One ſays, that while the confederate Princes are at Variance, *Hector* ruſhes on the *Greeks*, and makes them pay dear for the Folly of their Soveraigns (*Delirant Reges, plectuntur Achivi*): but that the Allies, brought by Misfortunes to themſelves again, re-unite, repulſe *Hector*, and kill him. The other, that while the Dogs are together by the Ears, the Wolf falls on the Sheep; and that the Dogs, ſeeing the Havock he makes, join together, drive him away, and kill him.

The two *Fables* were capable of a ſtill nearer Reſemblance. *Homer* has extended his by long Speeches, Deſcriptions, Compariſons and particular Actions; and that of *Eſop* might be amplified after the like Manner, without corrupting or altering it.

There needs only to relate what Cauſe ſet the Dogs at Variance, and ſhew the Riſe of the fatal Wrath in all its Circumſtances; to make fine Deſcriptions of the Plain wherein the Sheep fed, and of ſome neighbouring Wood, where the Wolf was ſhelter'd: to give this Enemy Whelps to rear; make them follow their Father in ſearch of Prey; and deſcribe the Carnage they made at divers Expeditions: nor would the Genealogy of the Hero's be forgotten. The Wolf ſhould boaſt himſelf a Deſcendant of *Lycaon*; and one of the Dogs be ſprung in a direct Line from *Canicula*.

Which

Which laſt would be the proper Hero of the Poem, as being hot and apt to be enraged. He would repreſent the Perſon of *Achilles* to Admiration; and the Folly of ſome *Ajax* his Couſin, would afford a good Proof of ſo divine an Extraction. Nothing more were required to engage Heaven in the Cauſe, and divide the Gods; which, no Doubt, have as much Right in *Æſop*'s Republic, as in the States of *Homer*. Witneſs *Jupiter* taking care to give a King to the Nation of the Frogs.

The Reader has here field enough for an Epopea; if he have any thing of Fancy and Expreſſion, and do but take care to repeat, as often as *Homer* does,

Τὸν δ' ἀπαμειβόμενος προσέφη πόδας ὠκὺς.

*For the Unity of the* FABLE, *ſee* UNITY.

FABRICK, the Structure, or Conſtruction of any thing, particularly a Building. See BUILDING.

The Word is form'd of the Latin *Fabrica*, which originally ſignifies a *Forge*.

In *Italy*, the Word *Fabrick* is applied to any conſiderable Building. In *France* it rather ſignifies the manner of building.

FABRICK *Lands*, are Lands given towards the Maintenance, Rebuilding or Repair of Cathedrals or other Churches; mentioned in the Act of Oblivion, 12 *Car.* 2. cap. 8. See CHURCH, GLEBE, &c.

In ancient time almoſt every one gave by his Will more or leſs to the *Fabrick* of the Cathedral or Pariſh Church where he lived. See INTESTATE.

FABULOUS, denotes ſome thing that has a Relation to *Fable*. See FABLE.

*Varro* divides the Duration of the World into three States or Periods. The firſt, ἄδηλον, the obſcure or dark, including all the Time before the Deluge; for the Heathens had ſome faint Idea of a Deluge, and a Sort of Tradition founded therein; but knew nothing of what had paſſed before. See DELUGE.

The ſecond Period he calls the μυθικὸν, *fabulous Age*, including the Time from the Deluge to the firſt Olympiad; and making, according to *Petavius*, 1552 Years; or to the Deſtruction of *Troy*, which was 1164 Years after the Deluge, or 308 after the Delivery from *Egypt*. See AGE.

This Period is called ſometimes *Fabulous*, and ſometimes *Heroic*. The firſt, on account of the *Fables* wherein the Hiſtory and Learning of thoſe Ages are veil'd: The Second, from the Heroes, or Sons of the Gods, whom the Poets feign to have lived in thoſe Days. See HERO and HEROIC.

FACE, the Surface, or firſt Side, which a Body preſents to the Eye. See SURFACE.

Thus we ſay, *The Face of the Earth*, *of the Waters*, &c. *Polyhedrons* have ſeveral regular *Faces*. See POLYHEDRON.

A Die, or Cube has ſix *Faces*. See CUBE.

FACE, is particularly uſed for the Viſage of an Animal, and eſpecially of a Man; as being the only Part of the Body, that ordinarily appears bare to the Eye. The *Latins* call it *Facies*, *Vultus*, *Os*, &c. In other Animals it is ſometimes call'd *Bill* or *Beck*; ſometimes *Snout*, &c. See BILL, &c.

The great Variety obſervable in Mens *Faces*, Voices and Hand-writing, furniſhes a noble Argument of a Providence. See VOICE.

The human *Face* is call'd the *Image of the Soul*, as being the Seat of the principal Organs of Senſe; and the Place where the Ideas, Emotions, &c. of the Soul are chiefly ſet to View. Pride and Diſdain are ſhewn in the Eye-brows; Modeſty on the Cheeks, Majeſty in the Forehead, &c. 'Tis the *Face* ſhews the Sex, Age, Temperament, Health, or Diſeaſe, &c.

The *Face*, conſider'd as the Index of the Paſſions, Habitudes, &c. of the Perſon, makes the Subject of *Phyſiognomy*. See PHYSIOGNOMY.

Anatomiſts uſually divide it into two Parts, the Upper, and Lower: The Upper is the *Front*, or Fore-head; the Lower includes the *Eyes*, *Noſe*, *Ears*, *Mouth*, and *Chin*. See each Part deſcribed under its reſpective Article, EYE, NOSE, MOUTH, &c.

FACE, or *Facade*, is ſometimes uſed for the *Front* of a Building; or the Side on which the chief Entrance is: as alſo for the Side it preſents to a Street, Garden, Court, &c. And ſometimes for any Side oppoſite to the Eye. See FRONT.

FACE, in Aſtrology, is uſed for the third Part of a Sign. Each Sign is ſuppoſed to be divided into three *Faces*. The ten firſt Degrees compoſe the firſt *Face*; the ten following ones the ſecond; and the laſt ten the third. *Venus* is in the third *Face* of *Taurus*, that is, in the firſt ten Degrees thereof. See SIGN.

FACE, *Facia*, or *Faſcia*, in Architecture, is a flat Member, having a conſiderable Breadth, and but a ſmall Projecture: ſuch are the Bands of an Archdrave, Larmier, &c. See FASCIA.

FACE *of a Stone*, is the Surface or Plain of Stone, which is to lie in the Front of the Work. The *Face* is eaſily known when the Stone is ſcapled, as being always oppoſite to the Back; and the Back going rough as it comes from the Quarry.

But rough Stones, the Workmen generally chuſe to make one of thoſe Sides the *Face*, which when in the Quarry, lay perpendicular to the Horizon; and conſequently the Breaking, and not the Cleaving way of the Stone. See STONE.

FACE *of a Place*, includes the Curtain, together with the two Flanks raiſed above it, and the two *Faces* of the Baſtion, which look towards one another, and flank the Angle of the Tenaille.

FACE *of a Baſtion*, or *of a Bulwark*, is the moſt advanced Part of a Baſtion towards the Field; or the Diſtance comprehended between the Angle of the Shoulder, and the Flank'd Angle. See BASTION.

The *Face*, or Flat of a Baſtion, Ravelin, Demi-baſtion, Horn-work, Crown-work, &c. is more uſually underſtood of that Part of the Work terminated between the Angle of the Epaule, and the flank'd Angle; or between the Point of the Baſtion, and the Flank.

FACE *prolonged*, in Fortification, is that Part of a Line of Defence raſant, which is between the Angle of the Epaule or Shoulder of a Baſtion, and the Curtain; or the Line of a Defence raſant cut by the Length of the *Face*.

FACET, or *Facette*, a little *Face*, or Side of a Body cut into a great Number of Angles.

Multiplying Glaſſes ate cut in *Facets*, or *Facet-wiſe*.

Diamonds are alſo cut in *Facets*, or Tables. See DIAMOND.

FACIA, in Architecture. See FASCIA.

FACIES *Hippocratica*, in Medicine, is when the Noſtrils are ſharp, the Eyes hollow, the Temples low, the Tips of the Ears contracted, the Fore-head dry and wrinkled, and the Complexion pale, or livid.

The *Facies Hippocratica* is chiefly obſerved toward the Period of Phthiſes and other Conſumptions. It is held a ſure Prognoſtick of Death.

FACTION, a Cabal, or Party, form'd in a State to diſturb the publick Repoſe.

The moſt celebrated *Factions* in the World were that of the *Guelphs* and *Gibelins*, who kept *Italy* in Alarm for many Ages; and that of the *Whigs* and *Tories* in *England*. See GUELPH, TORY, &c.

FACTION, was originally the Name given the divers Troops or Companies of Combatants in the Games of the *Circus*. Of theſe there were four, *viz.* the *Green Faction*, the *Blue Faction*, the *Red Faction*, and the *White Faction*. See CIRCUS and COLOURS.

Theſe *Factions*, with their Liveries and Badges were at length aboliſh'd. The Emulation which was at firſt between them, growing to ſuch height, that in *Juſtinian*'s Time they came to Blows.

FACTITIOUS, ſignifies any thing made by Art; in Oppoſition to what is the Produce of Nature.

Thus Cinnabar is divided into Natural and *Factitious*. See CINNABAR.

Diſtilled Waters are *Factitious* Liquors. See WATER.

*De*-FACTO, ſee DE-FACTO.

FACTOR, in Commerce, an Agent or Perſon who acts, and negotiates for a Merchant, by Commiſſion, call'd alſo *Commiſſioner*, and on ſome Occaſions *Broker*, and throughout the *Levant*, *Coagis*. See COMMISSIONER, BROKER, &c.

*Factors* are chiefly either charged with the Buying, or the Selling of Goods; or with both.

Thoſe of the firſt Kind are uſually eſtabliſhed in Places of conſiderable Manufactures, or Cities of great Trade. Their Office is to buy up Commodities for other Merchants, reſiding elſewhere; to ſee them packed, and ſend them to the Perſons for whom they were bought.

*Factors of Sale*, are uſually fix'd in Places where there is a great Vent. To theſe, Merchants and Manufacturers ſend their Goods to be ſold for them according to the Price and other Conditions expreſs'd in the Orders deliver'd them.

The Wages, or Allowances for ſelling, are uſually clear of all Expences, of Carriage, Exchange, Remittances, &c. excepting Poſtage of Letters, which are never ſet to Account. See FACTORAGE.

FACTORS, in Arithmetick, is a Name given to the Multiplicand and Multiplier; by reaſon they do *facere productum*, make or conſtitute the Product. See MULTIPLICATION.

FACTORAGE, ſee FACTOR, BROKAGE, &c.

The *Factorage*, or Wages, call'd alſo *Commiſſion*, is different, at different Places, and for different Voyages: at a Medium it may be fix'd at three *per Cent.* of the Value of the Goods bought; beſide the Charge of Package, which is pay'd over and above.

At *Virginia*, *Barbadoes*, and *Jamaica*, the *Factorage* is from three to five *per Cent.* and the like throughout the greateſt

greateſt Part of the *Weſt-Indies*. In *Italy* it is two and a half. In *Holland* one and a half. In *Spain*, *Portugal*, *France*, &c. two *per Cent*.

FACTORY, a Place where a conſiderable Number of *Factors* reſide, to negotiate and officiate for their Maſters or Principals. See FACTOR.

The Term is chiefly uſed in ſpeaking of the *Eaſt-Indies* and other Parts of *Aſia*, whither the *European* Nations ſend their Ships every Year, and keep Factors to buy the Commodities of the Country, and ſell thoſe brought from *Europe*.

The greateſt and nobleſt *Factory* in the World, is that of the *Engliſh* at *Smirna*. It uſually conſiſts of 80 or 100 Perſons, moſt of them young Gentlemen of the beſt Families, and frequently younger Sons of Peers. 'Tis a ſort of Seminary of Merchants. As there is a Neceſſity for ſerving an Apprenticeſhip of ſeven Years, to be entitled to trade to the *Levant*; the Cuſtom is for Perſons of Fortune, to bind their younger Sons to ſome Merchant, who, in Conſideration of 3 or 400 Pound Sterling agrees, after the three firſt Years of their Apprenticeſhip are expired, to ſend them to *Smyrna*, where they have not only the Management of their Maſters Affairs, with very plentiful Allowances, but are likewiſe permitted to trade for themſelves; whereby they are enabled to live ſplendidly the reſt of their Apprenticeſhip, and at length come out the beſt qualified for Buſineſs of any young Perſons in the World. See COMPANY.

FACTUM, in Arithmetick, The Product of two Quantities multiplied by each other. See PRODUCT and FACTOR.

FACULÆ, in Aſtronomy, a Name given by *Scheiner* and others after him, to certain Spots on the Sun's Disk, that appear brighter, and more lucid than the reſt of his Body. See SUN.

The *Faculæ* or bright Spots differ very conſiderably from the *Maculæ* or dark Spots, both in Light, Colour, Figure, Magnitude aud Duration. See MACULÆ.

*Hevelius* aſſures us, that *July* the 20th 1634. he obſerv'd a *Facula* that took up a third Part of the Sun's Diameter. And from the Obſervations of the ſame *Hevelius*, we learn, that the Maculæ frequently change into *Faculæ*; the *Faculæ* into Maculæ rarely, if ever. Some Authors even contend that all the Maculæ degenerate into *Faculæ*, e'er they quite diſappear.

*Huygens* however, declares he was never able to diſcover any *Faculæ*; though the Maculæ occurr'd to him very frequently. All the Foundation he could ſee for the Notion of *Faculæ*, was, that in the darkiſh Clouds which frequently ſurround the Maculæ, one ſometimes diſcerns little Points or Sparks brighter than the reſt.

However, Authors after *Kircher* and *Scheiner*, have generally repreſented the Sun's Body full of bright, fiery Spots, which they conceive to be a ſort of Volcano's in the Body of the Sun. But *Huygens*, and others of the lateſt and beſt Obſervers, finding that the beſt Teleſcopes diſcover nothing of the Matter, agree to explode the Phænomena of *Faculæ*: Their Cauſe, theſe Authors attribute to the tremulous Agitation of the Vapours near our Earth; the ſame as ſometimes ſhews a little Unevenneſs in the Circumference of the Sun's Disk, when view'd through a Teleſcope. Strictly then, the Maculæ are not Eructations of Fire and Flame, but Refractions of the Sun's Rays in the rarer Exhalations, which being condenſed in the Neighbourhood of that Shade, ſeem to exhibit a Light greater than that of the Sun. See SPOT, &c.

The Word is pure Latin, *Facula* being a Diminutive of *Fax*, Torch; and ſuppos'd to be here applied from their appearing and diſſipating by turns.

FACULTY, a *Power*, or Ability of performing an Action. See POWER.

The Term is much uſed by the antient Philoſophers, and ſtill retain'd in the Schools, to explain the Actions of natural Bodies by.

Thus, to account for the Act of Digeſtion, they ſuppos'd a *Digeſtive Faculty* in the Stomach: To account for Motion, they imagin'd a *Motive Faculty* in the Nerves, &c. which is only a ſubſtituting of one Name of an unknown Phænomenon for another.

Yet this Practice of attributing Effects to their reſpective Virtues or *Faculties*, ſtill obtains in divers Things, which our Philoſophy has not yet afforded us a better Account of. Thus, ſay our Medicinal Writers, Senna and Rhubarb have a *Purgative Faculty*; Barberries an *Aſtringent Faculty*, &c. which amounts juſt to this, that Senna purges, and Barberries bind.

The FACULTIES or *Powers of the Soul*, are commonly reputed two, *viz.* of *Underſtanding* and *Willing*. See POWERS. See alſo UNDERSTANDING and WILLING.

A FACULTY *of an Animal Body*, is defined to be the Principle whereby the Body performs its Functions. This is uſually diſtinguiſh'd with regard to the ſeveral Functions, into *Vegetative* and *Animal*.

Under the *Vegetative Faculty*, are comprehended the divers ſubaltern ones, whereby Nutrition and Generation are effected.

Under the *Animal Faculties*, are comprehended thoſe relating to Senſe and Motion.

The *Vegetative Faculty* then is divided into *Nutritive* and *Generative*; and the Nutritive is again ſubdivided into *Natural* and *Vital*.

To the firſt, belong the Functions of the lower Belly, relating to the Preparation of the Food; to the latter, the Actions of the Heart and Lungs, wherein Life is chiefly concern'd.

Others ſubdivide the Vegetative *Faculty* into *Attractive*, *Retentive*, *Concoctive*, and *Expulſive*.

The *Animal Faculties*, being thoſe whereby an Animal perceives and moves, become divided into *Senſitive* and *Loco-motive*. See ANIMAL, VEGETATIVE, VITAL, NATURAL, &c. See alſo FUNCTIONS.

FACULTY is alſo applied in the Schools, to the divers Parts or Members of an Univerſity, divided according to the Arts or Sciences taught or profeſs'd therein.

There are four *Faculties* in moſt Univerſities: That of the *Arts*, which includes the Humanities and Philoſophy, and which is much the moſt antient and extenſive: The ſecond, is that of *Theology*: The third, *Medicine*: And the fourth, *Juriſprudence*. See each under its proper Article, THEOLOGY, &c. See alſo UNIVERSITY.

The Degrees in the ſeveral *Faculties* in our Univerſities are, thoſe of *Batchelor*, *Maſter* and *Doctor*. See DEGREE. See alſo BATCHELOR, MASTER and DOCTOR.

The *Faculty* is frequently uſed abſolutely, and by way of Eminence for that chiefly ſtudied or taught in that Place. Thus, the *Faculty of London* and *Montpelier* is Medicine: That of *Paris* Theology: That of *Orleans* Law, &c. See COLLEGE *of Phyſicians*, SORBONNE, &c.

FACULTY, as it is reſtrain'd from the original and active Signification to the particular Underſtanding in Law, is uſed for a Privilege or ſpecial Power granted to a Man by Favour, Indulgence, and Diſpenſation, to do that which by Law he cannot: As to eat Fleſh upon Days prohibited; to marry without Banes firſt ask'd.

The *Court of* FACULTIES belongs to the Archbiſhop of *Canterbury*, and his Officer is called *Magiſter ad Facultates*. His Power is to grant Diſpenſations, as to marry, to eat Fleſh on Days prohibited, the Son to ſucceed his Father in his Benefice, one to have two or more Benefices incompatible, &c.

The Office where ſuch Diſpenſations are taken out, is alſo call'd the FACULTY-OFFICE.

FÆCAL *Matter*, a Term uſed by Phyſicians, particularly the *French*, for the *Fæces* or great Excrements of a Man, *i. e.* thoſe diſcharged by Stool. See EXCREMENT.

The *Fæcal Matter* is become famous for a chymical Operation thereon, by Monſ. *Homberg*, related at length in the *Mem. de l'Academie R. An.* 1711. He had a Notion ſuggeſted to him, that the *Fæcal Matter*, by Diſtillation, yielded an Oil clear as Water, without any Smell, and which had the Property of fixing Mercury into fine Silver. Upon this, to work he goes; and becauſe he would have as laudable and promiſing a *Matter* as he could, hired four robuſt healthy young Fellows, whom he ſhut up for three Months, and agreed with them, that they ſhould eat nothing but the fineſt Bread, which he ſupplied them withall freſh every Day, and drink the beſt *Champain* Wine as long as they would. After a long Proceſs, and numerous Eſſays on the Excrements they made, he at length got the clear, inodorous Oil; but it had no Effect at all on Mercury, which was the great Point aim'd at.

However, miſſing of what he expected, he fell on ſomething he never dreamt of, *viz.* a *Phoſphorus*. The *Caput Mortuum* of the Oil, he found to have a ſurprizing Property of taking Fire without any Motion, or the Application of any other Fire; inſomuch, that it might deſerve a Place in the firſt Rank of Phoſphori known.

The Quantity of a Pea taken out of the Matras, and laid on a Paper, or other combuſtible Matter, begins to ſmoak immediately, and ſets the Paper on Fire. See PHOSPHORUS *Ardens*.

FÆCES, or FOECES, or FECES, the Dregs, Sediment, or Impurities remaining of a mixt Body, after the purer, more volatile and fluid have been ſeparated therefrom by Evaporation, Diſſolution, Decantation, Derivation, or the like.

Thus we ſay the *Fæces* of *Oil*, &c. Thoſe of Wines are properly call'd *Lees*. See LEES. Thoſe of Malt-liquors, *Grounds*. See GROUNDS.

FÆCES is particularly uſed in Medicine, &c. For the groſs, impure Matters found at the Bottom of the Compoſitions and Preparations of either Pharmacy.

FÆCES, in Chymiſtry, denotes the Lees, Refuſe, Dirt, Mud, Ordures, Impurities, Excrements and heterogeneous Matters remaining in the Alembic after the Diſtillation of any Body. See DISTILLATION.

What remains in the Retort, inſtead of *Fæces*, is properly denominated *Caput mortuum*, or *Terra damnata*. See DAMNATA TERRA, CAPUT MORTUUM.

FÆCES is alſo uſed for the Excrements of an Animal voided by Stool. See EXCREMENT.

FÆTOR, Stench. See FOETOR.

FAGGOT, or FAGOT, in Fortification. See FASCINE. *Menage* derives the Word from the Latin *Facottus*, which was form'd of the Greek φακὸς. *Nicod.* borrows it from *Faſciculus*, a Bundle: *Du Cange* from the baſe Latin *Fagatum*, and *fagotum*.

A *Faggot of Steel* is the Quantity of 120 *l.* weight.

In the time of Popery in theſe Kingdoms, *Faggot* was a Badge wore on the Sleeve of the upper Garment by ſuch as had abjur'd Hereſy; being put on after the Perſon had carried a *Faggot* by way of Penance to ſome appointed Place of Solemnity. The Leaving this Badge was ſometimes conſtrued Apoſtacy.

FAGGOTS, among the Military Men, are ineffective Perſons, who receive no regular Pay, nor do any regular Duty, but are hired, occaſionally to appear at a Muſter, to fill up the Companies, and hide the real Deficiences thereof.

FAGONA, in Anatomy, a conglomerate Gland, call'd alſo *Thymus*. See THYMUS.

FAILLIS, in Heraldry, a *French* Term, denoting ſome Failure or Flaw in an Ordinary, as if it were broke, and a Splinter taken from it.

FAILURE, or FAILING, a Species of Bankrupcy; popularly call'd *Breaking*, or *Stopping Payment*. See BANKRUPT.

FAINT, *alias* FAINT-ACTION, is as much as *feign'd Action*; that is ſuch Action, as albeit the Words of the Writ be true, yet, for certain Cauſes the Party has no Title to recover thereby. A falſe Action is that where the Words of the Writ are falſe. *Coke on Littl. fol.* 361. Yet ſometimes the two are confounded. See ACTION.

FAIR, a publick Place, where Merchants Traders, and other Perſons from divers Parts meet, on ſome fix'd Day of the Year, to buy and ſell Commodities, and to partake of the Diverſions uſually accompanying ſuch Aſſemblies.

FAIRS are either free, or charg'd with Tolls and Impoſitions.

The Privileges of *Free Fairs* conſiſt chiefly, firſt, In that all Traders, &c. whether Natives, or Foreigners, are allow'd to enter the Kingdom, and are under the Royal Safeguard and Protection in coming and returning, they and their Agents, with their Goods, &c. 2ly, In that the ſaid Perſons and their Effects are exempt from all Duties, Impoſitions, Tolls and Servitudes. 3ly, That Merchants in going to, or returning from the *Fair*, &c. cannot be arreſted, or their Goods ſtop'd, &c. 'Tis the Prince alone that has a Right, by his Letters Patent, to eſtabliſh *Fairs*, whether *free*, or ſubject to Duties, and the other ordinary Laws and Penalties.

The Word *Fair* is formed of the *French Foire*, which ſignifies the ſame Thing. And *Foire* ſome derive from the Latin *Forum*, Market: Others from the Latin *Feriæ*, by reaſon *Fairs* were antiently always held in the Places where the Wakes, or Feaſts of the Dedications of Churches, call'd *Feriæ*, were held. See FERIÆ.

The *Romans* call'd them *Nundinæ*. *Eric Puteanus* has a very pretty little Treatiſe on the *Fairs of the Romans*, *De Nundinis Romanorum*, which he calls *Nova faſtorum facula*.

Several *Fairs* are held in the open Fields, or on Heaths & Commons; under Tents, Booths and Barracks erected for the Purpoſe, as *Sturbridge Fair*, &c. Others in Places wall'd in for the Purpoſe; and form'd into regular Streets, Lanes, &c. for the Occaſion. As the *Fair* of St. *Laurence* at *Paris*: Laſtly, others are held in the open Places and Streets of Cities, as *Bartholomew Fair*, the *Briſtol Fair*, the *Fair* of St. *Germains*, &c.

FAIRS, particularly *Free Fairs*, make a very conſiderable Article in the Commerce of *Europe*, eſpecially that of the Mediterranean or Inland Parts, as *Germany*, &c. where the continual Paſſage and Repaſſage of Veſſels is impracticable.

The moſt celebrated *Fairs* in *Europe* are thoſe, 1. of *Francfort*, held twice a Year, in Spring and Autumn: The firſt commencing the Sunday before Palm-Sunday, and the other on the Sunday before the eighth of *September*. Laſts 14 Days, or two Weeks, the firſt of which is called the *Week of Acceptance*, and the ſecond the *Week of Payment*. They are famous for the Sale of all Kinds of Commodities, but particularly the immenſe Quantity of curious Books, no where elſe to be found, and whence the Booksellers throughout all *Europe* uſed to furniſh themſelves. Before each *Fair* there is a Catalogue of all the Books to be ſold thereat, printed and diſperſed, to call together Purchaſers; though the Learned complain of divers unfair Practices therein; as factitious Titles, Names of Books purely imaginary, &c. beſide great Faults in the Names of the Authors, and the Titles of the real Books.——2. The *Fairs of Leipſick*, which are held thrice a Year; one beginning on the firſt of *January*, another three Weeks after *Eaſter*; and a third after *Michaelmas*. They hold twelve Days a-piece, and are at leaſt as conſiderable as thoſe of *Franckfort*. 3. The *Fairs* of *Novi*, a little City in the *Milaneſe*, under the Dominion of the Republic of *Genoa*. There are four in the Year, commencing on the ſecond of *February*, the ſecond of *May*, the firſt of *Auguſt*, and ſecond of *September*. Tho' the Commodities bought and ſold here be very conſiderable; yet, what chiefly contributes to render them ſo famous, is the vaſt Concourſe of the moſt conſiderable Merchants and Negotiants of the neighbouring Kingdoms for the tranſacting of Affairs, and ſettling Accounts. 4. The *Fairs* of *Riga*, whereof there are two in the Year; one on *May*, and the other in *September*. They are much frequented by the *Engliſh*, *Dutch* and *French* Ships, as alſo from all Parts of the *Baltick*. The beſt Time for the Sale of Goods at *Riga*, is during the *Fairs*. Since the Building of the famous City of *Petersbourg*, theſe *Fairs* have ſuffer'd ſome Diminution. 5. *Fair* of *Archangel*, during which, all the Trade Foreigners have with that City, is managed. It holds a Month, or ſix Weeks at moſt, commencing from the middle of *Auguſt*. The *Muſcovite* Merchants attend here from all Parts of that vaſt Empire; and the *Engliſh*, *Dutch*, *French*, *Sweediſh*, *Daniſh* and other Ships in the Port of that City, on this Occaſion, ordinarily amount to three hundred. But this is no *Free Fair*, as the reſt are. The Duties of Exportation and Importation are very ſtrictly paid, and on a very high footing. 6. *The Fair of St. Germain*, one of the Suburbs of *Paris*, commencing on the third of *February*, and holding till *Eaſter*; tho' it is only *free* for the firſt fifteen Days. 7. The *Fairs of Lyons*, which Monſ. *du Cheſne*, in his Antiquity of Cities, would inſinuate from a Paſſage in *Strabo*, were eſtabliſh'd by the *Romans*: Tho' 'tis certain, the *Fairs*, as they now ſtand, are of a much later Date. There are three in the Year, each laſting twenty Days, and *free* for ever. They begin on *Eaſter* Monday; the 26th of *July*; and the firſt of *December*. 8. *Fair of Guibray*, a Suburb of the City *Falaiſe* in the lower *Normandy*. It is ſaid to have been eſtabliſh'd by our *William* the Conqueror, in Conſideration of his being born at *Falaiſe*. It commences on the 16th of *Auguſt*, and holds 15 Days, *free* by Charter, and longer by Cuſtom. 9. *Fair of Beaucaire*, held partly in a City of that Name, in *Languedoc*, and partly in the open Country, under Tents, &c. It commences on the 22d of *July*, and only holds for three Days; yet it is the greateſt and moſt celebrated of all the *Fairs* in that Part of *Europe*, both for the Concourſe of Strangers from all Parts of the World; and for the Traffick of all kind of Goods: The Money return'd in theſe three Days amounting ſometimes to above ſix Million of Livres.

The *Fairs of Porto-bello*, *Vera Crux*, and the *Havana*, are the moſt conſiderable of all thoſe in *America*. The two firſt laſt as long as the Flota and Gallions continue in thoſe Parts; and the laſt is open'd as ſoon as the Flota or Gallions arrive there upon their Return for *Spain*; this being the Place where the two Fleets join. See FLOTA, and GALLIONS.

FAIR *Pleading*. See BEAU-PLEADER.

FAIRY, a Term frequently occurring in antient Traditions and Romances, denoting a kind of Genii, or imaginary Deities, converſant on Earth, and diſtinguiſh'd by abundance of fantaſtical Actions and Offices, either good or evil.

The *Fairies* are a peculiar ſpecies of Divinities, that have but little Relation to any of thoſe of the antient *Greeks* and *Romans*; unleſs perhaps to the *Larvæ*. See LARVÆ. Tho' others, and with Reaſon, won't have them rank'd among *Gods*; but ſuppoſe them an intermediate kind of Beings, neither Gods, nor Angels, nor Men, nor Devils.

They are of Oriental Extraction, and ſeem to have been invented by the *Perſians* and *Arabs*, whoſe Hiſtory and Religion abounds with Tales of *Fairies* and Dragons. The *Perſians* call them *Peri*, and the *Arabs Ginn*, having a peculiar Country, which they ſuppoſe them to inhabit, call'd *Ginniſtan*, and by us *Fairy Land*. Our great Countryman *Spencer*'s Maſter-work, the *Fairy Queen*, is an Epic Poem under the Perſons and Characters of *Fairies*.

*Nauda*, in his *Maſcurat* derives the Origin of our Fables of *Fairies*, from thoſe of the *Parcæ* of the Antients; and ſuppoſes both the one and the other to have been a kind of Envoys, or Interpreters of the Will of Heaven to Men. But then, by *Fairies* he means a ſort of Witches, famed for foretelling future Events, by means of ſome Communication with the Genii above-mentioned. The ſilly ſuperſtitious Notions of the Antients, he obſerves, were not near ſo formidable as ours; nor their Hell and Furies any thing comparable to our Devils. Accordingly, in lieu of our Hags and Witches, who do nothing but ill, and are employ'd in the loweſt, baſeſt Offices, they had a ſort of finer Goddeſſes, call'd by *Latin* Authors *Albas Dominas*, who ſcarce did any thing but good, and took Pleaſure in noble, honourable Deeds:

Deeds: Such were their *Lamia*, and Nymph *Egeria*; from whom the later fairy Queens, *Morga*, *Alcina*, *Fata Manto* of *Arioſto*, *Gloriana* of *Spencer*, and other Machines in *Engliſh* and *French* Fable were, no doubt, deriv'd. Some of them are uſually made to attend the Births of young Princes and Cavaliers, to inform them of their Deſtiny, as was antiently done by the *Parcæ*, witneſs *Hyginus*, c. 171, and 174.

But with *Nauda*'s Leave, the Antients were not without Witches, as wicked as our own; witneſs the *Canidia* of *Horace* Epod. IV. Od. V. & Satyr L. I. 10. Nor did the *Fairies* ſucceed the *Parcæ*, or even *Venificæ* of the Antients; but rather the *Nymphæ*: for ſuch were *Lamia* and *Egeria*. See NYMPH, PARCÆ, &c.

FAIRY *Circle* or *Ring*, is a Phænomenon pretty frequent in the Fields, &c. being a kind of Round, ſuppos'd, by the Vulgar, to be trac'd by the *Fairies* in their Dances.

There are two kinds; one of them ſeven or eight Yards in Diameter, containing a round bare Path, a Foot broad, with green Graſs in the Middle: The other, of divers Bigneſſes; being incompaſs'd with a Circumference of Graſs, much freſher and greener than that in the Middle.

Mr. *Jeſſop* and Mr. *Walker*, in the Philoſ. Tranſact. aſcribe them to the Lightning; which is confirm'd by their being moſt frequently produc'd after Storms of that kind; as well as by the Colour and Brittleneſs of the Graſs's Roots, when firſt obſerv'd. 'Tis no Wonder that Lightning, like all other Fires, moves round, and burns more in the Extremity than the Middle.

According to thoſe Gentlemen, the ſecond Kind of Circle ariſes originally from the firſt: The Graſs burnt up by the Lightning, uſing to grow the more plentifully afterwards.

Other Authors have aſſerted, that theſe *Fairy* Rings are form'd by Ants; by reaſon thoſe Inſects are ſometimes found travelling in Troops therein.

FAITH, in Philoſophy, call'd alſo *Belief*, is that Aſſent we give to a Propoſition advanc'd by another, the Truth of which Propoſition we don't immediately perceive, from our own Reaſon or Experience, but believe it diſcover'd and known by the other: Or, *Faith* is a Judgment or Aſſent of the Mind, the Motive whereof is not any intrinſick Evidence, but the Authority or Teſtimony of ſome other, who reveals, or relates it. See REASON.

Hence, as there are two Kinds of Authorities or Teſtimonies; the one of God, and the other of Man; *Faith* becomes diſtinguiſh'd into *Human*, and *Divine*.

*Divine* FAITH is that founded on the Authority of God; or 'tis that Aſſent we give to what is affirm'd by God. The Object of this *Faith* is Matters of Revelation. See REVELATION.

*Human* FAITH is that whereby we believe what is told us by Men: The Object hereof is Matter of human Teſtimony and Evidence. See TESTIMONY, and EVIDENCE.

*Faith* again, may be diſtinguiſh'd into *implicit*, and *ſcientific*.

*Implicit* or *blind* FAITH is that whereby we give our Aſſent to a Propoſition advanc'd by another, of whoſe Knowlege and Veracity we have no certain and evident Reaſon or Proof; and this is only *Opinion* under another Name. See OPINION.

*Scientifical* or *ſeeing* FAITH, is that by which we give our Aſſent to a Propoſition advanc'd by one who can neither deceive, nor be deceiv'd; which may be properly refer'd to *Science* or *Knowledge*. See KNOWLEDGE.

*Divine Faith*, *cæteris paribus*, is ſtronger than human. When we are fully convinc'd that any Propoſition comes from God, *Faith* becomes Aſſurance, or Science; it being an Ingredient in our Idea of God, that he can neither deceive, nor be deceiv'd: But when there is any Doubt, whether the Propoſition is declared by God, or whether he has commanded that we ſhould believe ſuch a Thing; the *Faith* can be no ſtronger, or weaker than the *Reaſons* on which it is founded: Divine *Faith* therefore, may either be ſtrong, weak or none at all.—Again, the Reaſons or Motives of believing Men, may be of ſuch Weight and Force, that being perfectly underſtood, they may equal a mathematical Evidence: And then the human *Faith* is ſcarce inferior to the Divine; there being, as it were, an equal Neceſſity of giving our Aſſent on each Side. See CREDIBILITY *of human Teſtimony*.

Hence it is eaſily obſerv'd, that all our *Faith* or Belief has its Foundation on Reaſon, which cannot deceive us, if we make a due Uſe of our Liberty, and do not acquieſce, till it neceſſarily compels us. See LIBERTY, and JUDGMENT.

Strictly, and philoſophically ſpeaking, no Man can have what we call a *Divine Faith*, but a Prophet, to whom God has immediately ſpoken. See PROPHET, and PROPHECY.

All our preſent religious *Faith* is really *human*, as depending on the ſecondary Teſtimony of Men; of whoſe Veracity however, we have the ſtrongeſt Proofs. The Prophets, or thoſe to whom God immediately revealed his Will, believ'd him, for that they knew he could not deceive. We, at this Day, believe them, or rather their Writings, for other Reaſons, *viz.* the ſame which oblige us to believe all undoubted Hiſtories. See REVELATION.

FAITH, in Theology, is the firſt of the Theological Virtues, or Graces. See GRACE.

*Faith*, in this Senſe, is a Gift of God, whereby we are led to give a firm Aſſent to the Truths he has reveal'd to his Church: Or, *Faith* is a Gift or Impreſſion, which leads us to give our Aſſent to certain Things relating to God, his Nature, Attributes, Worſhip, Truth, &c. The Evidence of which Things, we do not ſee and underſtand clearly enough, to have given our Aſſent on the common Footing of Reaſon, and Neceſſity. See REVELATION, and TRUTH.

St. *Paul* defines *Faith* the Subſtance or Support of Things hoped for, and the Evidence of Things not ſeen. The Life of *Faith* conſiſts in ſerving God without knowing him in any ſenſible manner. *Nicole*.

Beſide the two Species of *Faith*, human and divine; the Romaniſts make a third, or intermediate Kind, call'd *Eccleſiaſtical* FAITH, which is the Aſſent, orthodox Perſons give to certain Events decided by the Church, and propos'd to be believed of all: As when ſhe declares that ſuch a Book contains heretical Doctrine: That ſuch a Perſon is in Heaven, &c. This Term, *Eccleſiaſtical Faith*, was firſt introduc'd by Mr. *Pereſixe*, to diſtinguiſh the *Faith* whereby we believe Matters of Divine Revelation, from thoſe of Eccleſiaſtical Determination.

*Confeſſion of* FAITH, is a *Creed* or Formula containing all thoſe Articles, the Belief whereof is eſteemed neceſſary to Salvation. See CREED, and SYMBOL.

FAITH *and Homage*, in the Feudal Law. See FEALTY.

FAKIR, or *Faquir*, a kind of Dervice, or Mahometan Religious, who travels the Country, and lives on Alms: Or rather, as *d'Herbelot* obſerves, *Fakir* and Dervice are the ſame thing.

The *Turks* and *Perſians* uſe the Name *Dervice* for any poor Perſon, whether he be ſo out of Neceſſity, or Choice: And the *Arabs* apply *Fakir* in the ſame Senſe. Whence, in ſome Countries of Muſſulmaniſm, the Religious are call'd *Dervices*; and in others, particularly throughout the States of the great *Mogul*, *Fakirs*. See DERVICE.

The *Fakirs* ſometimes travel ſingly, and ſometimes in Companies. When they go in Companies, they have a Superior, who is diſtinguiſh'd by his Habit. Each *Fakir* bears a Horn, which he blows at his Arrival in any Place, as alſo at his Departure; and a kind of Scraper or Trowel, to ſcrape the Earth in the Place where he ſits or lies down. When they go together, they divide their Alms equally amongſt them; give what is left every Night to the Poor, and never reſerve any thing for the Morrow.

There are alſo a kind of idolatrous *Fakirs*, who follow much the ſame Trade. D. *Herbelot* reckons in the *Indies* eight hundred thouſand Mahometan *Fakirs*; and twelve hundred thouſand idolatrous ones: To ſay nothing of divers extraordinary ſpecies of *Faquirs*, particularly *Penitents*; whoſe Mortification and Penance conſiſts in very odd Obſervances. Some, *v. gr.* remain Night and Day for many Years in certain uneaſy Poſtures. Others never ſit or lay down to ſleep, but ſuſtain themſelves by a Rope, hung down for the Purpoſe. Others bury themſelves in a Ditch, or Pit, for nine or ten Days without eating or drinking. Others keep their Arms lifted up to Heaven, ſo long, till they cannot let them down again, if they would. Others lay Fire on their Heads, and burn the Scalp to the very Bone. Others roll themſelves naked on Thorns. *Tavernier*, &c.

Another Claſs of *Fakirs*, retire unto Moſques, live on Alms, and devote themſelves to the Study of the Law, the reading of the Alcoran, &c. to fit themſelves for *Moulas* or Doctors.

People of Quality ſometimes aſſume the Character and Quality of *Fakirs*: And the famous *Orangzeb* himſelf, e'er he aſcended the Throne, gave out, that he intended to commence *Fakir*.

The Word *Fakir* is *Arabic*, and ſignifies a poor Perſon. It is form'd of the Word פקר, *fakara*, to be in want.

FALCATED, one of the Phaſes of the Plants, popularly call'd *Horned*. See PHASES.

The Aſtronomers ſay the Moon, or any Planet appears *Falcated*, when the enlighten'd Part appears in form of a Sickle, or Reaping-hook, by the *Latins* call'd *Falx*.

The Moon is *Falcated*, whilſt ſhe moves from the Conjunction to the Oppoſition, or from New Moon to Full; from Full to a New again, the enlighten'd Part appears gibbous, and the dark *Falcated*. See MOON.

FALCON, or *Faucon*, a Bird of Prey, of the Hawk-kind, ſuperior to all others for Goodneſs, Courage, Docibility, Gentleneſs, and Nobleneſs of Nature. See HAWK.

The *Falcon* or *Falcon Gentle*, is both for the Fiſt, and the Lure: Its Feet are yellow, its Head black, and Back ſpotted. In the Choice, obſerve that the Head be round, the

the Beak thick and ſhort, the Neck long, the Shoulders broad, Thighs long, Legs ſhort, Feet large, the Feathers of the Wings ſlender, Pounces black, &c.

The *Falcon* is excellent at the River, Brook, and even Field; and flies chiefly at the larger Game, as Wild-gooſe, Kite, Crow, Heron, Crane, Pye, Shoveler, &c.

It muſt be added, that the Name *Falcon* is retrain'd to the Female; for as to the Male *Falcon*, 'tis much ſmaller, weaker, and leſs courageous than the Female, and therefore denominated *Taſſel*, or *Tiercelot*.

*John de Janua*, and ſeveral others, take the Name *Falcon* to have been occaſion'd by its crooked Talons, or Pounces, which reſemble a *Falx* or Sickle. *Giraldus* derives it *a falcando*, becauſe it flies in a Curve.

As in the Courſe of this Work, the ſeveral Terms of Falconry are explain'd, it may be here neceſſary to ſay ſomething in the general, of the Management and Diſcipline of the *Falcon*, as being the Foundation of the Art of *Falconry*. For the reſt, the Reader may have Recourſe to the Heads HAWK, and HAWKING.

When a young *Falcon* is firſt taken, ſhe muſt be *ſeel'd*; and the Seeling at length gradually ſlacken'd, that ſhe may be able to ſee what Proviſions are brought her. Her Furniture is to be Jeſſes of Leather, maild Leaſhes, with Buttons at the End, and Bewets. Beſide, a ſmall round Stick hanging in a String to ſtroke her frequently withal; which, the oftener 'tis done, the ſooner and better will ſhe be man'd: Two Bells on her Legs, that ſhe may be the more readily found, or heard when ſhe ſtirs, ſcratches, &c: And a Hood rais'd, and boſs'd over her Eyes. Her Food to be Pidgeons, Larks, and other live Birds, of which ſhe is to eat twice or thrice a Day, and till ſhe be full gorged. When the Falconer is about to feed her, he muſt hoop and lure, that ſhe may know when to expect it. Then unhooding her gently, he gives her two or three Bits, and putting her Hood on again, gives her as much more; but takes care ſhe is cloſe ſeeled, and after three or four Days leſſens her Diet. At going to bed, he ſets her on a Pearch by him, that he may awake her often in the Night; continuing to do ſo, till ſhe grow tame and gentle. When ſhe begins to feed eagerly, he gives her Sheeps-heart; and now he begins to unhood her by Day, but it muſt be done far from Company: Feeds her and hoods her again; and feeds her as before, but takes care not to fright her with any thing, when he unhoods her; and if he can, reclaims her without over-watching. The *Falcon* muſt be born continually on the Fiſt, till ſhe be throughly manned, and induced to feed in Company: For two or three Days give her waſh'd Meat, and then Plumage, according as you eſteem her foul within; if ſhe caſt, hood her again, and give her nothing till ſhe gleam after her Caſting: But when ſhe has gleamed and caſt, give her a little hot Meat in Company; and towards Evening let her plume a Hen's Wing, likewiſe in Company: Cleanſe the Feathers of her Caſting, if foul and ſlimy: If ſhe be clean within, give her gentle Caſting; and when ſhe is well reclaimed, manned, and made eager and ſharp ſet, you muſt venture to feed her on the Lure.

But three things are to be conſider'd before your Lure be ſhew'd her. 1. That ſhe be bold and familiar in Company, and not afraid of Dogs and Horſes. 2. Sharp-ſet and hungry, having regard to the Hour of Morning and Evening when you would lure her. 3. Clean within, and the Lure well garniſh'd with Meat on both Sides. When you intend to give her the Length of a Leaſe, you muſt abſcond your ſelf: She muſt alſo be unhooded, and have a bit or two given her on the Lure, as ſhe ſits on your Fiſt. That done, take the Lure from her, and ſo hide it that ſhe may not ſee it: When ſhe is unſeeled, caſt the Lure ſo near her, that ſhe may catch it within the Length of her Leaſh; and as ſoon as ſhe has ſeiz'd it, uſe your Voice as Falconers do, feeding her upon the Lure on the Ground.

After having lur'd your *Falcon*, in the Evening give her but little Meat; and let this Luring be ſo timely, that you may give her Plumage, &c. next Morning on your Fiſt: When ſhe has caſt and gleamed, give her a little beaching of warm Meat: About Noon, tye a Creance to her Leaſe, go into the Field, there give her a bit or two upon the Lure, and unſeel her; if you find ſhe is ſharp-ſet, and has eagerly ſeiz'd on the Lure, let a Man hold her, to let her off to the Lure; then unwind the Creance, and draw it after you a good way, and let him who has the Bird, hold his Right-hand on the Taſſel of her Hood readily to unhood her, as ſoon as you begin to lure; to which if ſhe come well, ſtoop roundly upon it, and haſtly ſeize it, let her caſt two or three bits thereon. That done, unſeize, take her off the Lure, and deliver her again to the Perſon that held her; and going further off the Lure, feed her as before; and ſo daily farther and farther off the Lure. Afterwards, you may lure her in Company, but do not fright her: And having us'd her to the Lure on foot, do it alſo on Horſe-back; which may be ſooner accompliſh'd, by cauſing Horſemen to be about you, when you lure her on Foot: 'Tis alſo ſooner done, by rewarding her upon the Lure on Horſe-back among Horſemen. And when ſhe is grown familiar this way, let ſomebody a-foot hold the Hawk, and he that is on Horſe-back, muſt call, and caſt the Lure about his Head, while the Holder takes off the Hood by the Taſſel; and if ſhe ſeize eagerly on the Lure without fear of a Man or Horſe, then take off the Creance, and lure at a greater Diſtance, Laſtly, if you would have her love Dogs as well as the Lure, call Dogs when you give her Plumage. See BATHING, ENSEAMING, &c.

FALCON, FALCONET, } in Gunnery { See FAUCON, and FAUCONET.

FALCONER, a Perſon who brings up, tames, tutors, and manages Birds of Prey; as *Falcons*, Hawks, &c. See FALCONRY.

The Grand Seignior uſually keeps ſix thouſand *Falconers* in his Service.

The *French* King has a *Grand Falconer*, which is an Office diſmembred from that of Great Hunt, Grand Veneier. The Hiſtorians take notice of this Poſt as early as the Year 1250.

One great Buſineſs of the *Falconer*, is to conſider the Quality and Mettle of his Birds, to know which to fly early, and which late. He muſt alſo be buſy and cleanly in freeing them of Lice, Nits, and Vermine. Every night after flying, he ſhould give his Bird Caſting; nor muſt he forget to water her, unleſs ſhe have been bath'd. After this, ſhe muſt be put in a warm Room, having a Pearch with a Candle burning by her; where ſhe is to ſit unhooded, that ſhe may prune and pick her ſelf. Next Morning ſhe ſhould be weather'd, &c.

FALCONRY, or FAUCONRY, the Art of taming, managing, and tutoring Birds of Prey, particularly *Falcons* and *Hawks*; and employing them with Advantage in the Purſuit of *Game*, call'd alſo HAWKING.

The Word is form'd of *Falco*, *Falcon*, or *Faucon*, the Bird of moſt Uſe and Eſteem in this kind of Sport. See FALCON.

*Falconry*, as now practic'd, was unknown among the *Greeks* and *Romans*. All their Writings don't furniſh ſo much as a proper Name to call it by: So far are they from teaching us the Terms. 'Tis the *French* Language alone, that has particular Words for all the Parts of *Falconry* and Hunting; and from them moſt of our Terms, as well as what we know of the Art it ſelf, are borrow'd.

The Writers of Reputation on *Falconry*, are *Deſparon*, *Franchiere*, *Tardif*, *Artelouche*, *Dalagona*, and *Latham*. *M. de S. Martha* has put the Principles of the Art into fine *Latin* Verſes, in his *Hieracoſophon, ſive de re accipitraria, libri tres.*

FALDAGE, an antient Privilege, which ſeveral Lords reſerved to themſelves of ſetting up Sheep-folds, or Pens, in any Fields within their Manors, the better to manure them; and this not only with their own, but with their Tenants Sheep.

This was alſo term'd *Secta Faldæ*; and in ſome old Charters *Fold-ſoca*; and in ſome Places a *Fold-courſe*, or *Free-fold*.

FALL, *Deſcent*, in Phyſicks, the Tendency of any heavy Body towards the Center of the Earth. See DESCENT.

*Gallileo* firſt diſcover'd the Ratio of the Acceleration of *falling* Bodies, *viz.* That dividing the whole Time of falling into equal Parts, the Body will *fall* thrice as far in the ſecond Moment, as in the firſt; five times as far in the third; ſev'n times in the fourth, &c. and ſo on in the Order of the uneven Numbers. See ACCELERATION.

*For the Cauſe of the* FALL *of Bodies*, ſee GRAVITY.

*For the Laws of the* FALLING *Bodies*, ſee DESCENT.

*Water*-FALL, ſee CATARACT.

FALL, is alſo us'd in a moral Senſe; as the *Fall* of *Adam*. See ORIGINAL SIN: The *Fall* of the *Roman* Empire, &c.

Authors contend, that *Plato* had a Notion of the *Fall* of *Adam*, which he had learnt from *Moſes*. *Euſeb. de Præparat. Evangel. L.* 12. *c.* 11. quotes a Fable in *Plato*'s *Sympoſ.* wherein he finds the whole Hiſtory, allegorically related.

FALL, in Muſick and Poetry. See CADENCE, EPIGRAM, &c.

FALLACY, a Deception, or falſe Appearance or Report. See ERROR, and TRUTH.

The *Epicureans*, deny that there is any ſuch thing as a *Fallacy* of the Senſes. According to them all our Senſations, and all our Perceptions, both of Senſe and Phantaſy, are true: So that Senſe is the firſt grand Criterion of Truth. That the Senſes are never deceiv'd, they argue from their being incapable of all Ratiocination and Remembrance: Hence they can neither add, take away, couple, nor disjoin; they cannot, therefore, infer, or conclude, or invent; and conſequently cannot deceive by any Inference, or Invention. This the Mind may do, but not the Senſe, whoſe only

only Buſineſs is to apprehend what is preſent. *E. gr.* Colours, not to diſcern or diſtinguiſh between this Body and that. But a Thing that barely apprehends without pronouncing any thing, cannot deceive. Add, that there is nothing to convict our Senſes of Falſhood. The right Eye, *e. gr.* cannot convict the left; nor *Plato*'s Eyes, thoſe of *Socrates*; ſince the Reaſons or Pretenſions of each are equal; and the pur-blind Perſon ſees what he ſees as much as the *Lynceus*. Nor can a Senſe of one Kind convict another; as the Sight, the Smell; by reaſon their Objects are different; and conſequently their Reports, or Judgments are not of the ſame Things. Thus again, if I ſee a Stick ſtreight, when out of the Water; but when in it, crooked: My Perception is altogether as true in the latter, as in the former Caſe; *i. e.* 'Tis as true that I have the Perception or Idea of the crooked Stick, as of the ſtreight one. And this Idea is all that the Senſe ſuggeſts; ſo that it does not deceive. Laſtly, Reaſon cannot ſhew our Senſes miſtaken, ſince all reaſoning depends on previous Senſations; and the Senſes muſt firſt be true, before any Reaſoning founded thereon, be ſo. Thus, the *Epicureans*; whoſe Syſtem is ſtrongly confirm'd by what we have already laid down from Mr. *Berkely*, concerning the External *World*.

The *Carteſians*, on the other hand, are continually crying out againſt the Senſes, as the great Sources of all Deception. Every thing, which our external Senſes preſent us, they ſay, ſhould be ſuſpected as falſe, or at beſt dubious, till our Reaſon has confirm'd the Report. They add, that our Senſes, as being *fallacious*, were never given us by Nature, for the Diſcovery of any thing of Truth, but only to point out what Things are convenient, or hurtful to our Bodies.

The *Peripateticks* keep a middle Courſe: They hold, that if a ſenſible Object be taken in its common or generical View, the Senſe cannot be deceiv'd about it; for the Sight can ſee nothing but what is viſible; nor can it err in perceiving what is viſible *quatenus* ſuch. But they add, that if the Object be taken under its ſpecific View, the Senſe may be miſtaken about it, *viz.* from a Want of the Diſpoſitions neceſſary to a juſt Senſation, as an Indiſpoſition in the Eye, in the Medium, *&c.* See Sense, Reason, *&c.*

Fallacy, in Logic, or *Syllogiſtic Fallacy*, is a captious Argument, call'd alſo a *Sophiſm*. See Sophism.

*Fallacies* either ariſe from Words, or Things: The Foundation of all Illuſion and *Fallacy* in Words, is that one Article of *Ambiguity*; which is of two Kinds, *viz.* a ſimple *Homonymia*, and an *Amphibology*. See Homonymia, and Amphibology.

The Kinds of *Fallacy* in Things are very numerous, but may be reduc'd to ſeven Heads, *viz. Ignoratio Elenchi*, *Petitio Principii*, *falſa Cauſa*, *Interrogatio multiplex*, *Limitatio vitioſa*, *Accidens & Conſequens*. See Elenchus, Petitio Principii, *&c.*

Falling *Sickneſs*. See Epilepsy.

Dr. *Turberville* in the Philoſoph. Tranſact. gives the Hiſtory of a Patient, much troubled with the *Falling* Sickneſs. In her Urine he obſerv'd a great Number of ſhort Worms, full of Legs, and like Mille-pedes. While theſe continued lively, and full of Motion, the Fits return'd daily; but upon preſcribing her half an Ounce of Oxymel Helleboratum in Tanſey Water, the Worms and the Diſtemper were both effectually deſtroy'd.

FALLOPIAN *Tubes*, in Anatomy, two Ducts ariſing from the Womb, one on each Side of the Fundus thereof, and thence extended to the Ovaries; having a conſiderable Share in the Affair of Conception. See Conception.

They are call'd *Tubæ*, i. e. Trumpets, in reſpect of their Form; for that in their Riſe or Opening into the Womb, they are exceedingly ſmall, ſo as ſcarce to admit a knitting Needle; but in their Progreſs, towards the Ovaries, they grow much bigger; and at length are capable, to receive the Finger: From whence they contract again; and at the Extremity next the Ovaries, are expanded into a ſort of Flanch or Foliage, which is fringed round with innumerable little Fibres, bearing ſome Reſemblance to the Flanch of a Trumpet.

Theſe Tubes are four or five Inches long: They conſiſt of a double Membrane, derived from the outer and inner Membranes of the Uterus. The Extremity next the Ovary, at the Time of Impregnation, at which Time the whole Tube is expanded, reaches to, and embraces the Ovary; tho' at other times it ſeems to fall a little ſhort of it, and is only ſlightly tied by the Fringe, to the Underſide of the Ovary.

The Uſe of theſe Tubes, is to convey the Seed, or rather Ova of Women, and other Animals, from the Teſticles, or Ovaries, into the Uterus, or Womb. See Ovary, and Uterus.

Their inner Subſtance is compos'd, in good Meaſure of Ramifications of Veins, and Arteries, which form a kind of reticular, or cavernous Body, not unlike that of the Clitoris. This Structure makes them capable of Dilatation, and Contraction, according to the Quantity, and Stop of the Blood; and conſequently, of being, as it were, erected, in Coitu, and of embracing the Ovary at that Time, which in their State of Flaccidity they did not. See Generation.

They take their Denomination *Fallopian*, from *Gabriel Fallopius*, a *Modeneſe*, who died in 1562; and who is commonly reputed their firſt Inventor; tho' we find them deſcribed long before him, in *Rufus* of *Epheſus*.

The Ova, or Embryos, are ſometimes detain'd in the *Tubæ Fallopianæ*, and cannot make their Way into the Womb. See Fætus.

Inſtances of this Kind, have frequently been met with-al in Diſſections. But the moſt remarkable, is that related by *Abraham Cyprianus*, a celebrated Phyſician of *Amſterdam*, in a Letter, addreſs'd to Sr. *Tho. Millington*, wherein he deſcribes the Manner, in which he drew a Fœtus 21 Months old, out of the Tuba of a living Woman, who lived and had ſeveral Children after the Operation.

FALLOW, a Colour, of a paliſh red, like that of a Brick half burnt; as a *Fallow* Deer, *&c.*

Fallow *Field*, or *Fallow* Ground, is Land laid up; or that has lain untill'd for a conſiderable Time.

So, to *Fallow*, is to prepare Land by plowing, long before it is plow'd for Seed. To do this twice, is to *twifallow*, and thrice, to *trifallow*. See Ploughing.

FALSE *Arms*, in Heraldry, are thoſe wherein the fundamental Rules of the Art are not obſerv'd: As if Metal be put on Metal; or Colour on Colour, *&c.* See Arms.

False *Attack*, in War, a feigned Attack, intended to draw all the Enemy's Force to one ſide, in order to favour a real Attack, intended in another Part. See Attack.

False *Braye*, in Fortification, a ſmall Mount of Earth, four Fathom wide, erected on the Level round the Foot of the Rampart, on that Side towards the Field, and ſeparated by its Parapet from the Berme, and the Side of the Moat.

It is made uſe of to fire upon the Enemy, when he is already ſo far advanced, that you cannot force him back from off the Parapet of the Body of the Place; and alſo to receive the Ruins, which the Cannons make in the Body of the Place.

False *Claim*, is where a Man claims more than his Due. See Claim.

False *Conception*. See Mole.

False *Diamond*, a Diamond counterfeited with Glaſs. See Diamond.

False, or *Falſe Poſition*, in Arithmetick. See Position.

False *Flower*, a Flower, which does not ſeem to produce any Fruit; as thoſe of the Hazle, Mulberry-Tree, *&c.* Or a Flower, that does not ariſe from any Embryo, or that does not knit; as thoſe of the Melon, Cucumber, *&c.* See Flower.

False *Impriſonment*, is a Treſpaſs committed againſt a Man, by impriſoning him without lawful Cauſes. It is alſo uſed for the Writ brought upon this Treſpaſs.

False *Keel*, in a Ship, is a ſecond Keel, which is ſometimes put under the firſt, to make it deeper. See Keel.

False *Muſter*, is when ſuch Men paſs in Review, as are not actually liſted as Soldiers. See Muster, Fagot, *&c.*

False *Opal*. See Girasol.

False *Prophecies*, See Prophecies.

False *Roof* of a Houſe, is that Part between the upper Rooms, and the Covering. See Roof.

False *Money*, False *Weights*, &c., False *Ribs*, False *Birth*, } See { Money. Weight, *&c.* *Spurious* Ribs. Abortion.

FALSEHOOD, *Falſeneſs*, in Philoſophy, an Act of the Underſtanding, repreſenting a Thing, otherwiſe than it is, as to its Accidents: Or, a falſe Enunciation, or Judgment of any Thing. As if a Perſon ſhould judge, that the King of *Spain* is in *America*. See Error, and Truth.

The Circumſtance, *as to its Accidents*, is of abſolute Neceſſity in the Definition; inaſmuch as a thing cannot be repreſented otherwiſe than it is as to Eſſentials: for in ſuch Caſe the Eſſence of the thing would not be repreſented: And ſince the Eſſence is the Thing it ſelf, it would not be that Thing, which is repreſented, but another.

There is no *Falſehood* in Apprehenſion, or Senſation: Our Ideas of Senſe are all juſt, and true, ſo far as they go; and all our Deluſions ariſe from our Reaſonings and Concluſions. See Fallacy.

The School-men diſtinguiſh *Falſehood* into *Objective*, which is the Object of the falſe Judgment; *e.gr.* the King of *Spain* being in *America*: *Entitative*, that of the Things appearing what it is not, and thus occaſioning the Fallacy: And *Tranſcendental* and *Metaphyſical*; which is a Repugnancy to the Eſſence, nor Eſſentials of the Thing.

*Crimen* FALSI, in the Civil Law, is a fraudulent Subornation, or Concealment, with deſign to darken, or hide the Truth, and make Things appear otherwiſe, than they are.

The *Crimen Falſi* is committed three ways; by Words, as when a Witneſs ſwears falſly. See PERJURY. By Writing, as when a Man frames or alters ſomething, antedates a Contract, or the like. See FORGERY. And by Deed, as when he ſells by falſe Weights, or Meaſures, debaſes the Coin, &c.

FALSO *Judicio*, a Writ, which lies for falſe Judgment, given in the *County Court*, *Court Baron*, or other Court, not of Record.

FALSO *Retorno Brevium*, a Writ, which lies againſt the Sheriff for making falſe Returns of Writ. See RETURN.

FALX, in Anatomy, a Part of the Dura Mater, deſcending between the two Hemiſpheres of the Brain, and ſeperating the Fore-part from the hinder. See DURA *Mater*.

It is call'd *Falx*, i. e. *Sickle*, by reaſon of its Curvature, occaſion'd by the Convexity of the Brain. See BRAIN It divides the Brain, as low as the *Corpus calloſum*.

FAMES *Canina*, by the *Greeks* call'd *Cynodes Arexis*, q. d. Dog appetite, is ſuch an inſatiable Hunger, as is not to be ſatisfied with Eating; but continues, even when the Stomach is full. See BULIMIA.

This is a Caſe, much talk'd of by Antients; but rarely met with amongſt us.

It may be ſuppoſed, to ariſe from ſharp fretting Juices in the Stomach, which by their continual Vellications excite a Senſe like that of Hunger. See HUNGER.

FAMILIA, *Family*, commonly implies all the Servants, belonging to a particular Maſter.

In another Senſe, 'tis taken for a Portion of Land, *viz.* as much as is ſufficient to maintain one *Family*.

The Term *Hide* is by our Writers ſometimes call'd a *Manſe*; ſometimes a *Family*; and ſometimes *Carucata*, or a *Plow-land*; containing as much as one Plow and Oxen could cultivate in a Year. See HIDE, PLOUGH-LAND, &c.

FAMILY *of Curves*, is a Congeries of ſeveral Curves of different Orders, or Kinds; all which are defin'd by the ſame indeterminate Equation, but in a different Manner, according to their different Orders.

Suppoſe, *e. gr.* the indeterminate Equation, $a^m - {}^x x = y^m$. If $m=2$, $ax=y^2$. If $m=3$, $a^2x=y^3$. If $m=4$, $a^3x=y^4$, &c. in Infinitum. All which Curves are ſaid to be of the ſame *Family*. See CURVE.

FAN, a Machine, uſed to raiſe a Wind, and cool the Air, by agitating it.

The Cuſtom which now prevails among the Ladies, of wearing *Fans*, was borrow'd from the *Eaſt*; where the hot Climate renders the Uſe of *Fans* and Umbrellas almoſt indiſpenſible. It is not long, ſince the *European* Women firſt began to uſe a kind of *Fans*, made of Leather, in the Summer time: But they are now found of Neceſſity in Winter.

In the *Eaſt* they chiefly uſe large *Fans*, made of Feathers, to keep off the Sun, and the Flies. In *Italy* and *Spain* they have a huge ſort of ſquare *Fans*, ſuſpended in the middle of their Apartments, and particularly over the Tables: Theſe by a Motion at firſt given them, and which they retain a long Time, by reaſon of their perpendicular Suſpenſion, help to cool the Air, and drive off Flies.

In the *Greek* Church, a *Fan* is put into the Hand of the Deacons, in the Ceremony of their Ordination; in Alluſion to a Part of the Deacon's Office in that Church, which is to keep the Flies off the Prieſts, during the Celebration of the Sacrament.——

*Wicquefort* in his Tranſlation of the Embaſſy of *Garcias de Figueroa*, gives the Name *Fans* to a Kind of Chimneys or Ventiducts, in uſe among the *Perſians*, to furniſh Air, and Wind into their Houſes; without which the Heats would be inſupportable. See the Deſcription thereof in that Author, *p.* 38.

At preſent, what is call'd a *Fan* amongſt us, and throughout the beſt Part of *Europe*, is a very thin Skin, or Piece of Paper, Taffaty, or other light Stuff, cut in a Semi-circle and mounted on ſeveral little Sticks of Wood, Ivory, Tortoiſe-ſhell, or the like.

*Fans* are either made with a double, or ſingle Paper.

If the Paper be ſingle, the Sticks of the Mounting are paſted on the leaſt ornamental Side; if double, the Sticks are ſewed betwixt them. E'er they proceed to place the Sticks, which they call, *mounting the Fan*; the Paper is to be plaited in ſuch manner, as that the Plaits may be alternately inward and outward.

'Tis in the Middle of each Plait, which is uſually about an Inch broad, that the Sticks are to be paſted; which again, are to be all join'd, and riveted together at the other End: They are very thin, and ſcarce exceed $\frac{1}{4}$ of an Inch, in breadth: And where they are paſted to the Paper, are ſtill narrower; continuing thus to the Extremity of the Paper. The two outer ones, are bigger and ſtronger than ordinary. The Number of Sticks rarely exceed twenty two. The Sticks are uſually provided by the Cabinet-makers, or Toymen: The San-painters plait the Papers, paint, and mount them.——

The common Painting is gold Leaf, applied on a ſilver'd Ground, both prepared by the Gold-beaters. Sometimes they paint on a Gold-ground; but 'tis rarely: True Gold being too dear; and falſe too paltry. To apply the ſilver Leaves on the Paper, they uſe a Compoſition, which they pretend is a great Secret, but which appears to be no other than *Gum Arabic*, Sugar Candy, and a little Honey, melted in common Water, and mix'd with a little Brandy. This Compoſition is laid on with a Spunge; then, laying the Silver-leaves thereon, and preſſing them gently down, with a linnen Ball, ſtuffed with Cotton, they catch hold, and grow together. When inſtead of Silver, Gold-ground is laid, the ſame Method is obſerv'd.

The Ground being well dry'd, a Number of them are well beaten together on a Block; by which means the Silver, or Gold, get a Luſtre, as if they had been burniſh'd.

FANATICK, a wild, extravagant, viſionary, enthuſiaſtical Perſon; who pretends to Revelation, and Inſpiration, and believes himſelf poſſeſs'd with a Divine Spirit.

Such were the Anabaptiſts, Quakers, &c. at their firſt Riſe; and ſuch are ſtill the modern Prophets, *Muggletoneans*, &c.

*Wigelius*, and *Behmen*, were the Leaders of the *Fanaticks* of *Germany*; and both came out of the School of *Paracelſus*. *Wigelius* is held the Father of the *Roſycrucians*.

The Word is form'd of the Latin *Fanum*, a heathen Temple; for which Reaſon the firſt Chriſtians call'd all the Gentiles *Fanaticks*. And accordingly the antient Chronicles of *France*, call *Clovis*, *Fanatick* and Pagan. But the Word is yet of higher Original.

Among the Heathens themſelves, there were thoſe, call'd *Fanaticks*; from whom the Denomination ſince paſs'd to all the reſt. They had their Name from the Latin *Fanum*, Temple, by reaſon they liv'd altogether in Temples. *Struvius*, *Antiq. Rom. Synt. C. 6. p.* 212. Such, particularly, were the Prieſts of *Iſis*, of the Mother of the Gods; of *Bellona*, &c. Some others, who were always call'd *Fanaticks*. In *Gruter*, *p. CCCXII*, *n.* 7. we have an Inſcription, wherein one *L. Cornelius Januarius*, is call'd *Fanaticus*. AB ISIS, SERAPIS. ABAEDEM BELLONE. And *p. DCLIV*, *n.* 7. *Fanaticus de Ædæ Bellonæ*.

What might give further Occaſion to the Appellation of *Fanaticks*, was, that they perform'd their Sacrifices in a wild, enthuſiaſtical manner.——

FANATIO, in our antient Cuſtoms, the *Fawning-time*, or *Fence-month*, in Foreſts. See FENCE.

FANCY, ſee PHANTASY, and IMAGINATION.

FANTASTICAL *Colours*, are the ſame as thoſe call'd *Emphatical Colours*. See EMPHATICAL COLOURS.

FAPESMO, in Logic, one of the Moods of Syllogiſms. See MOOD.

A Syllogiſm in *Fapeſmo*, has its firſt Propoſition an univerſal Affirmative; the ſecond an univerſal Negative; and the third, a particular Negative. See SYLLOGISM.

FAQUIR, ſee FAKIR.

FARCE, was originally a *Droll*, or petty Shew, or Entertainment, exhibited by Charletans, and their Buffoons, in the open Street, to gather the Croud together.

The Word is *French*, and ſignifies literally, *force-meat*, or *Stuffing*. It was applied on this Occaſion, no doubt, on account of the Variety of Jeſts, Gibes, Tricks, &c. wherewith the Entertainment was interlarded.

At preſent, *Farce* is of a little more Dignity. 'Tis remov'd from the Street, to the Theater; and inſtead of being perform'd by Jack-puddings, to amuſe the Rabble, is now acted by our Comedians, and become the Entertainment of the politeſt Audiences.

The Poets have reform'd the Wildneſs of the primitive *Farces*; and brought them to the Taſte, and manner of Comedy. The Difference between the two, on our Stage, is, that the latter keeps to Nature, and Probability; and in order to that, is confin'd to certain Laws, Unities, &c. preſcrib'd by the antient Criticks.

The former, diſallows of all Laws; or rather, ſets them all aſide, on occaſion. Its End is purely to pleaſe, or make merry: And it ſticks at nothing, which may contribute thereto, however wild, and extravagant. Hence, the Dialogue is uſually low; the Perſons, of inferior Rank; the Fable, or Action, trivial, or ridiculous; And Nature, and Truth, every where heighten'd, and exaggerated, to afford the more palpable Ridicule. See COMEDY.

Some Authors derive the Word *Farce* in this Senſe from the Latin *Facetia*; others from the *Celtic Farco*, Mockery; others from the Latin *farcire*, to ſtuff.

FARCIN, FARCY, or FASHIONS, a Diſeaſe in Horſes, and ſometimes in Oxen, &c. The *Farcin* is ſomewhat of the nature of a Scabies, or Mange.

*Vegetius* calls it *morbus farciminoſus*. It conſiſts in a Corruption of the Blood; which ſhews it ſelf in Eruptions of hard Puſtles, Knots, or Strings, along the Veins; and in Ulcers, which are not cured, without great Difficulty, by running hot Irons into them. There is a *ſpreading Farcin*, which diffuſes it ſelf over the whole Body; an *inner Farcy*; a *ſtringed Farcy*, &c.

The

The *Farcin* is infectious; and has the Effect of a true Plague. *Geſner* derives the Word from *Varices*, by changing the *v* into a Digamma, or *f*.

The *Farcy* is ordinarily occaſion'd by Over-heats, and Colds; ſometimes by Spur-galling with ruſty Spurs, Snaffle, Bit, or the like: Or by the Bite of another Horſe, infected with it: Or, if in the Leg, by cutting, or interfering.

The *Water-Farcin* proceeds from a Horſe's feeding, on low, watery Grounds, and Pits, or Holes, where the Graſs grows above the Water: For the Horſe, in picking out the Graſs, licks up the Water, which occaſions him to ſwell under the Belly, or Chaps. The Cure is by a red-hot Iron.

FARDEL *of Land*, is according to ſome Authors, the fourth Part of a Yard-land. See YARD-LAND.

FARDING-*Deal*, in our antient Cuſtoms, ſignifies the fourth Part of an Acre, now call'd a Rood. See ACRE.

In the Reg. of Writs, we have alſo *Denariata*, *Obolata*, *Solidata*, and *Librata Terræ*; which muſt probably riſe in Proportion of Quantity from the *Farding-deal*, as an halfpenny, Penny, Shilling and Pound, riſe in Value: On which footing *Obolata*, muſt be half an Acre; *Denariata*, an Acre; *ſolidata*, twelve Acres; and *Librata*, twelve Score Acres.

Yet we find, *Viginta libratas terræ, vel redditus Reg. fol.* 94. *a.* and 248. *b.* whereby it ſeems *librata terra* is ſo much, as yields xx *s. per Annum:* and *centum ſolidatas terrarum tennementorum & redituum, fol.* 249. *a.* See FURLONG.

Others holds *Obolata* to be but half a Pearch; and *Denariata*, a Pearch. See PEARCH.

FARE, a Voyage, or Paſſage; or the Money paid for paſſing by Water, *&c.*

For the *Fares* of Hackney Coach-men, Water-men, *&c.* ſee COACH-MAN, *&c.*

FARINA, the Flower, or Powder of ſome Grain, or Pulſe ground, and ſifted from the Bran. See FLOWER, PULSE, BRAN, *&c.*

The Word is pure Latin, *Farina*, form'd of *Far*, Corn, Wheat: And *Far*, according to *Guichard*, comes from the *Hebrew* בר, *bar*, ſignifying the ſame Thing.

FARINA *fœcundans*, among Naturaliſts, is a fine Duſt, prepar'd in the Male flowers of Plants; which being afterwards ſhed on the Female, does the Office of a Sperm, or Semen, by impregnating the ſame. See GENERATION, PLANT, and FLOWER.

The *Farina fœcundans*, call'd alſo the *Male-duſt*, and *Male-ſeed*, is form'd and ſecreted in the *Apices*, or Tops of the *Stamina*; where, when it becomes mature, and copious enough, burſting its Capſula, it is ſpilt on the Head of the *Piſtil*, and thence convey'd to the *Matrix*, or *Utricle* thereof, to fœcundify the *Ova*, or female Seed, contain'd therein, See STAMINA, APICES, PISTIL, and UTERUS.

This *Duſt*, in any one Plant, being view'd with a Microſcope; every Particle thereof appears of the ſame Size and Figure: But in different Plants, the Figure, Size, Colour, *&c.* of the Duſt, is very different. Some are clear, and tranſparent, as Cryſtal; as thoſe of the *Maple*, *Burrach*, and *Hemlock:* Others are white, as thoſe of *Hen-bane*, *Balſamins:* Others blue, as thoſe of *Flax*: Others purple, as of ſome *Tulips:* Others fleſh-colour'd, as ſome Species of *Lychnis*; and others red, as thoſe of the *Geum*.

It may be obſerv'd, however, that the Colour of the *Farina* varies, in the ſame Species, according to the Colour of the Flower; and even, ſometimes, the *Farina* of the ſame Flower is of different Colours; as is eaſily obſerv'd in the *Caryophillus arvenſis*.

The Figures of the divers Kinds of *Farinæ* are much harder to deſcribe. The moſt general Figure is the Oval, more or leſs ſharp at the Ends, with one or more Channels, or Furrows, running length-wiſe; ſo that through the Microſcope they look not unlike the Stone of a Date, a grain of Wheat, a Coffee-berry, or an Olive. Such are thoſe of the Polygonatum, Bugles, Bryony, Tithimal, *&c.* Thoſe of the Melilot, are Cylinders: Thoſe of the Panſey, are Priſms, with four irregular Sides: Thoſe of the great Conſolida, repreſent two cryſtal Globules, cloſely faſten'd to each other: Thoſe of the Sycamore, repreſent two Cylinders, plac'd a-croſs: Thoſe of the Jonquille, are in form of a Kidney: Thoſe of the *Camponulæ*, Paſſion-flower, *&c.* are nearly round, but unequal in their Surfaces: Thoſe of *Caryophyllus ſilveſtris*, are round, and cut in Facets: Thoſe of the *Geranium*, and ſome other Species, are round, with a kind of *Umbelicus*, or Indenture, as in an Apple, *Bradley* ſays, they are perforated quite through, like the Bead of a Necklace, which we doubt: Thoſe of the *Caltha*, *Corona Solis*, &c. are little Globes, ſet with Prickles, *&c.*

Of theſe *Farinæ*, ſome are very hard; others, ſoft, and eaſily broke. They all contain a deal of ſulphureous Matters, more than the other Parts; whence, they are very odorous. Thoſe of the Lilly, are ſo full of Oil, that they greaſe the Paper they are put in, as if it had been oil'd. The *Farinæ* of moſt Aromatic Plants, ſwim in an eſſential Oil, or ſort of liquid Turpentine: Others are involved in a dry Roſin; as theſe of the *Lycopodium*, or *Muſcus terreſtris clavatus*. C. B. Others, as thoſe of Fumitory, are inclos'd in a little, viſcid, mucilaginous Matter; and all, in effect, have ſomething ſo glutinous, that they ſtick to any thing, that touches them: So that 'tis difficult to ſeparate them from each other.

Some have imagin'd, that theſe *Farinæ* were only Particles of Wax, or Roſin: But the Contrary is eaſily prov'd: For they neither diſſolve in Water, nor Spirit, nor Oils; even when aſſiſted with Fire.

Mr. *Bradley* ſuppoſes a Magnetick Virtue lodg'd in the *Farina fœcundans*, or Male Duſt; by means whereof, when depoſited in the Utricle of the Female, it draws the Nouriſhment from the other Parts of the Plant into the *Ova*, or Rudiments of the Fruit, and makes them ſwell. The Reality of this Virtue, he argues from the ſame being found in Wax, which is chiefly, or wholly gather'd hence by the Bees. See WAX.

Some, againſt the great Uſe of the *Farina fœcundans* in Generation, may object, that in Flowers, which hang downwards, as the Cyclamen, *&c.* the *Farina fœcundans* cannot be caſt on the Orifice of the Piſtil: To which it may be anſwer'd, that the Piſtils of ſuch Flowers, hanging lower than the duſty Apices which ſurround them, the glutinous Matter and Velvet, covering the Extremity of the Piſtil, may be capable of receiving, and retaining ſome of the *Farina*, as it falls: And without any Intromiſſion of the *Farina*, its Lodgment on the Mouth of the Piſtil, may by Virtue of its attractive Power fecundify the Seed in the *Uterus*.——

FARM, or FERM, in Law, ſignifies a little Country-Domain, or Diſtrict, containing Houſe and Land, with other Conveniences; hired, or taken by Leaſe, either in Writing, or Parole. See LEASE.

This in divers Parts is call'd diverſely: In the North, it is a *Tack*; in *Lancaſhire*, a *Fermeholt*; in *Eſſex*, a *Wike*, &c.

The Word originally is form'd of the Latin *firmus*.

In the corrupted Latin, *firma* ſignified a Place inclos'd, or ſhut in: Whence, in ſome Provinces, *Menage* obſerves, they call *Cloſerie*, or *Cloſure*, what in others they call *Farm*. Add, that we find *locare ad firmum*, to ſignify *to let*, *to farm*; probably, on account of the Sure hold the Tenant here has in Compariſon of Tenants at Will.

But *Spelman*, and *Skinner*, chuſe to derive the Word *Farm*, from the *Saxon Feorme*, that is, *Victus*, or Proviſion; by reaſon the Country-people and Tenants antiently paid their Rents in Victuals, and other Neceſſaries; afterwards converted into the Payment of a Sum of Money. Whence a *Ferm* was originally a Place that furniſh'd its Owner or Lord with Proviſions. And among the *Normans*, they ſtill diſtinguiſh between *Farms*, that pay in Kind, *i. e.* in Proviſions; and thoſe, which pay in Money; calling the former ſimply *Fermes*, and the latter *Blanche Ferme*, white *Farm*.

*Spelman* ſhews farther, that the Word *firma* ſignified not only what we now call a *Farm*, but alſo a Feaſt, or Entertainment, which the Farmer gave the Proprietor, or Landlord for a certain Number of Days, and at a certain Rate, in Conſideration of the Lands, *&c.* he held of him.

Thus, *Fearm*, in the Laws of King *Canutus*, is render'd by Mr. *Lambard*, *victus*; and thus we read of *reddere firmam unius noctis*; and, *reddebat unum diem de firma*; which denote, Proviſion for a Night, and Day; The Rents about the Time of the Conqueſt being all reſerved in Proviſions: The Cuſtom whereof is ſaid to have been firſt alter'd under *Henry* I.

We alſo ſay, *to farm* Duties, Impoſts, *&c.* The Duty of Exciſe in *Scotland* is farm'd, or *let to farm*, for at 33500 *per Annum*. See EXCISE.

FARREATION, in Antiquity, the ſame with *Confarreation*. See CONFARREATION.

FARRIER, a Perſon, whoſe Office is to ſhoe Horſes, and cure them, when they are diſeaſed, or lame. See SHOEING, *&c.*

FARTHING, a ſmall *Engliſh* Copper Coin, amounting to $\frac{1}{4}$ of a Penny. See COIN.

It was antiently call'd *Fourthing*; as being a fourth of the Integer, or Penny. See PENNY.

FASCE, *Faſcia*, in Heraldry. See FESSE.

FASCES, in Antiquity, were Axes, or Hatchets, tied together with Rods, and bore before the *Roman* Magiſtrates, as a Badge of their Office, and Authority.

*Florus*, L. I. c. 5. aſſures us, that the Uſe of *Faſces* was introduc'd by the elder *Tarquin*, the 5th King of *Rome*; and were then the Mark of the ſoveraign Dignity. In after Times, they were bore before the Conſuls. They had each

of

of them twelve, bore by ſo many Uſhers, call'd *Lictors*. See LICTOR. *Dionyſ. Halicarn.* L. III. c. 84.

Others will have *Romulus* the Author of the Inſtitution, and aſcribe the Number twelve, to the Number of Birds, which foretold him his Kingdom. Others hold, that he borrow'd it from the *Hetrurians*; and that the Number twelve anſwer'd to the twelve Nations of *Hetruria*, who in creating him King, gave him each an Officer, to ſerve him as Lictor. *Silius Italicus* aſcribes their firſt Invention to a City of *Hetruria*, call'd *Vetulonia*.

Theſe *Faſces* conſiſted of Branches of Elm; in the Middle whereof was a *Securis*, or Hatchet, the Head whereof ſtood out beyond the reſt. *Plutarch* relates the Reaſons of this Diſpoſition. *Publicola* took the Hatchet out of the *Faſces*, as *Plutarch* aſſures us, to remove from the People all Occaſion of Terror.

After the Conſuls, the Prætors aſſum'd the *Faſces*. *Cenſorin. de Die Natal.* obſerves, that the Prætors had only two: Tho' *Polybius* and *Plutarch* give them ſix. In the Government of the Decem-vir's, it was the Practice, at firſt, for only one of them to have the *Faſces*. Afterwards, each of them had twelve, in the ſame manner as the Kings.

FASCIA, in Architecture, by the Workmen call'd *Facia*, *Facio*, or *Face*, a Broad-liſt, Fillet, or Band; particularly uſed in Architraves, and Pedeſtals. See ARCHITRAVE, and PEDESTAL.

The Architrave conſiſts of three *Faſciæ*, or Bands; thus call'd by *Vitruvius*, as reſembling *Swaths*, call'd in Latin *Faſciæ*.

That Author admits no *Faſciæ*, in the *Tuſcan*, and *Doric* Architrave, *i. e.* he makes it all plain, without any Diviſion, or cantoning into Parts or *Faſciæ*: But the modern Architects take Liberty to differ from him herein. See TUSCAN, DORIC, &c.

In Brick-buildings, the Juttings out of the Bricks, beyond the Windows, in the ſeveral Stories, except the higheſt, are call'd *Facia's*, or *Faſciæ*.

Theſe are ſometimes plain, and ſometimes moulded. But the Moulding is only a *Cima reverſa*, or an O G, at the Bottom, with two plain Courſes of Bricks over it; then an *Aſtragal*, and laſtly a *Boultine*.

FASCIA *lata*, or *Faſcialis*, in Anatomy, a Muſcle of the Leg; call'd alſo *Membranoſus*. See MEMBRANOSUS.

FASCIÆ, in Aſtronomy, two Rows of bright Spots, obſerv'd on *Jupiter*'s Body; appearing like Swaths, or *Belts*. See JUPITER.

The *Faſciæ*, or *Belts* of *Jupiter*, are more lucid than the reſt of his Diſk, and are terminated by parallel Lines. They are ſometimes broader, and ſometimes narrower; nor do they always poſſeſs the ſame Part of the Diſk.

M. *Huygens*, likewiſe, obſerv'd a very large Kind of *Faſcia*, in *Mars*; but it was darker than the reſt of the Diſk, and took up the middle Part thereof. See MARS.

FASCIALIS, in Anatomy, a Muſcle of the Leg; call'd alſo *Sartorius*. See SARTORIUS.

FASCICULUS, in Medicine, a Term ſometimes uſed to expreſs a certain Quantity, or Meaſure of Herbs.

By *Faſciculus* is meant ſo much, as may be held in the Arm, when bent, and reſted on the Top of the Haunch. Phyſicians note it in Perſcription by *Faſc.*

FASCINATION, Witchcraft; or a Charm, or Spell, which alters the Appearance of Things, and repreſents 'em different, from what they are. See WITCHCRAFT.

*Linder*, a *Swediſh* Phyſician, has treated very well of *Faſcination*, in the VIII^th^ Chapter of his little Work, *De Venenis*.

The Word is form'd of the *latin* Verb *faſcinare*, of the *Greek* βασκαίειν, ſignifying the ſame Thing. See CHARM.

FASCINES, or *Faggots*, in Fortification, are ſmall Branches of Trees, or Bavins, bound up in Bundles; which being mix'd with Earth, ſerve to fill up Ditches, to ſcreen the Men, make the Parapets of Trenches, &c.

Some of them are dipp'd in melted Pitch or Tar; and being ſet on Fire, ſerve to burn the Enemies Lodgements, or other Works.

A pitch'd *Faſcine* is a Foot and half about: A *Faſcine* for Defence, two or three Foot.

In the corrupt *Latin*, they uſe *Faſcenina*, *Faſcennia*, and *Faſcinata*, to ſignify the Pales, *Faſcines*, &c. uſed to encloſe the antient Caſtles, &c.

FASHION, ſee MODE, CUSTOM, &c.

FASHION is particularly us'd among Artificers, for the Trouble, Time, and Labour, employ'd on a piece of Work; particularly ſome ſilver, or gold Utenſil, Inſtrument, Toy, &c. 'Tis by the *Faſhion*, that the Workmens Wages, or Salary are regulated. We paid ſo much a-piece for the *Faſhion* of theſe Spoons, excluſive of the Matter, or Silver. That Weaver has ſo much a-piece for the *Faſhion* of the Stuffs we give him to weave. The Word is *French*, Façon.

FASHION-*Pieces*, are thoſe two Timbers, which form the Breadth of a Ship, at the Stern; and are the outmoſt Timbers of the Stern, on each Side, except aloft, where the Counters are. See STERN.

FAST, a Space of Time, wherein a Perſon takes little, or no Food. See FOOD.

The Advantages of *Faſting*, with regard to Health, with extraordinary Inſtances of long *Faſting*, ſee under the Article ABSTINENCE.

The *Bramins* never bleed their Sick, but make them faſt in lieu thereof.

FAST, is peculiarly uſed for an Abſtinence, on account of Religion; or a ſpace of Time, wherein the Church prohibits the uſe of Food; or at leaſt reſtrains it to certain Things, and certain Hours.

The ſtrict, canonical *Faſt*, only allows of one Meal in 24 Hours. *Fa. Thomaſſin* obſerves, that the antient *Faſt* was, to ſup, without dining, *i. e.* only to take one Meal, and that not till after Nones: Adding, that to dine, though without ſupping, was a Breach of the *Faſt*. The Practice of the *Latin* Church, was to faſt 36 Days in the Year; which, is as it were, the Tyth of the Year.

*Tertullian* wrote an expreſs Treatiſe *de Jejuniis*, of *Faſts*; to ſupport the new Laws of *Faſting*, which the *Montaniſts* were for impoſing. See MONTANIST.

The antient Catholicks allow'd of no *Faſts* of *Obligation*, or Command, beſide that preceding *Eaſter*, ſince call'd *Lent*; the Terms of which were to forbear Eating till the Evening. See LENT.

The other *Faſts* obſerv'd were only of *Devotion*: Such were the fourth and ſixth *Feriæ*, i. e. *Wedneſdays*, and *Fridays*. This *Faſt* was call'd *Station*. Beſides theſe there were occaſional *Faſts*, injoyn'd by the Biſhops, &c. See FERIÆ.

In the Book of *Hermas*, call'd the *Paſtor*, the Angel tells him, The Day thou *faſteſt*, thou ſhalt take nothing but Bread and Water; and having computed the uſual Expences of each Day, thou ſhalt lay aſide ſo much for the Widow, the Orphan, and the Poor.

In the ſame Paſſage, the *Faſt* is call'd *Station*, and the Perſon who *faſted*, was to begin early in the Morning to retire to Prayer. See STATION.

*St. Fructuoſus*, *Flery* tells us, going to ſuffer, ſome People, out of a Principle of Charity, offer'd him Drink, to ſupport him: But he refus'd it, ſaying, It is not yet Time to break *Faſt*; for it was but ten in the Morning, and it was *Friday*, Station-day. Which ſhews the Exactneſs of the primitive Chriſtians, in this Point; and that Drinking was held breaking of *Faſt*.

Some introduced the Xerophagy into *Faſts*; that is, the Uſe of dried Fruits for their Meals; and made a Practice of abſtaining not only from all Meats, and Wines, but alſo from ſucculent Fruits, for the whole 24 Hours: And ſome reduc'd themſelves to Bread and Water. But this was more than was commanded. See XEROPHAGY.

The Practice of *Faſting* is more antient than Chriſtianity. The *Iſraelites faſted* often, and had their ſtated *Faſt*-days. The Day of Attonement, which they call'd *Kipparim*, was a Day of *Faſting*, injoin'd in *Levit*, xxiii, 27. &c. Some will have this the Day St. *Paul* refers to in Acts xxvii. 9. The *Jews* had likewiſe *Faſts*, inſtituted by Precept of the Synagogue: Such were thoſe of the fourth, fifth, and tenth of the Month, mention'd by *Zachariah* vii. 3. and viii. 19.

The Heathens adopted the ſame Cuſtom, in all Probability, from the People of God; tho' their Religion inclin'd more to Feaſting, than *Faſting*: as appears from the long Liſt of *Feaſts*, enumerated under the Article FEAST.

Yet they *faſted* in the *Eleuſinia*; as appears from *Arnobius*, and *Clemens Alexand.* See *Salmaſius*, p. 150. and *Scaliger*, Poeti l. I. c. 32.

The *Faſts* of the *Calogeri* are ſo ſevere, that they remain ſeven Days, without Eating at all. For the *Faſts* of the *Greeks*, ſee *Spon. Voyag.* P. II.

The *Turks* are ſo ſcrupulous on the point of *Faſting*, that they will not ſo much as take the Smell of any Perfume, by the Noſe. They hold that Odors themſelves break *Faſt*. If they bath, 'tis forbid to put the Head under Water, for fear of ſwallowing any of it: And as for Women, they are forbid to bath at all on *Faſt-days*.

FASTERMANS, or FASTING *men*, q. d. *homines habentes*, was uſed in our antient Cuſtoms, for Men of Repute, and Subſtance; or rather for Pledges, Sureties, or Bonds-men, which according to the *Saxon* Polity were *faſt* bound to anſwer for one anothers peaceable Behaviours. See DECENNA.

FASTI, in Antiquity, was the *Roman* Calendar; wherein the ſeveral Days of the Year, with their Feaſts, Games, and other Ceremonies, were expreſs'd. See CALENDAR.

The *Romans* had their greater and leſſer *Faſti*. The *Great Faſti* were call'd, the *Faſti of the Magiſtrates*; and the *leſſer*, the *Faſti Calendares*.

The *Faſti Calendares*, which were, what was properly, and primarly call'd *Faſti*, are defined by *Feſtus Pompejus*, to be Books, containing a Deſcription of the whole Year; *i. e.* Ephemerides, or Diaries, diſtinguiſhing the ſeveral kinds

kinds of Days, *Feſti*, *Profeſti*; *Faſti*, *Nefaſti*, &c. See FESTI, &c.

The Author hereof was *Numa*, who committed the Care and Direction of it to the *Pontifex Maximus*; whom the People uſed to go and conſult on every Occaſion. This Cuſtom held to the Year of *Rome* 550. when *C. Flavius*, Secretary of the Pontifices, expos'd in the *Forum* a Liſt of all the Days, whereon it was lawful to work; which was ſo acceptable to the People, that they made him *Curule Ædile*. *Liv.* L. IX. c. 46.

Theſe *leſſer Faſti*, or *Faſti Calendares*, were of two Kinds: *Urbani*, and *Ruſtici*. The *Faſti Urbani*, or *Faſti* of the City, were thoſe, which obtain'd, or were obſerv'd in the City. Some will have them thus call'd, by reaſon they were expos'd publickly in divers Parts of the City; tho' by the divers Inſcriptions, or Gravings thereof on antique Stones, one would imagine, that private Perſons had them likewiſe in their Houſes. It was theſe *Faſti Urbani*, *Ovid* undertook to illuſtrate, and comment on, in his *Faſtorum*; whereof we have the ſix firſt Books ſtill remaining; the ſix laſt, if ever they were wrote, being loſt. Beſide *Ovid*, ſeveral other Authors had undertook the ſame Subject, particularly *L. Cincius Alimentatus*, *Fulvius Nobilior*, *Maſurius Sabinus*, *Cornelius Labeo*, *C. Licinianus*, and *Niſus*: Of all whom, *Macrobius* makes Mention, in his *Saturn.* and preſerves Fragments of each; beſide a Work of one *Bæbius Marcus*, entitled, *De Faſtis diebus*, quoted by *Fulgentius*, *De Priſco Sermone*.

In the *greater Faſti*, or *Faſti* of the Magiſtrates, were expreſs'd the ſeveral Feaſts, with every thing, relating to the Gods, Religion, and the Magiſtrates; the Emperors, their Birth-days, Offices, Days conſecrated to them; and Feaſts, and Ceremonies, eſtabliſh'd in their Honour, or for their Proſperity, &c.

With a Number of ſuch Circumſtances, did Flattery, at length, ſwell the *Faſti*; whence they became denominated *Magni*, to diſtinguiſh them from the bare Calendar, or *Faſti Calendares*.

In the *Faſti Ruſtici*, or *Country-Faſti*, were expreſs'd, the ſeveral Days, Feaſts, &c. to be obſerv'd by the Country-people: For as theſe were taken up in tilling the Grounds, fewer Feaſts, Sacrifices, Ceremonies, and Hollidays were enjoyn'd them, than on the Inhabitants of Cities: And they had ſome peculiar ones, not obſerv'd at *Rome*.

Thoſe *Ruſtick Faſti*, contain'd little more, than the Ceremonies of the Calends, Nones, and Ides; the Fairs, Signs of the Zodiac, Increaſe, and Decreaſe of the Days, the Tutelary Gods of each Month, and certain Directions for the rural Works, to be perform'd each Month.

FASTI, was alſo a Tablet, Chronicle, or Regiſter of Time, wherein the ſeveral Years were denoted by the reſpective Conſuls, with the principal Events, that happen'd during their Conſulates; call'd alſo *Faſti Conſulares*, or *Conſular Faſti*.

*Onuphrius Panvinius*, *Pighius*, and *Janſon d'Almeloween*, have given us the *Faſti Conſulares*; the two firſt, with long, and learned Comments, wherein are expreſs'd, not only the Conſuls, but alſo the Dictators, *Magiſtri Equitum*, Triumphs, and Ovations. *Pighius* even adds as many of the other Officers, as he could find, *viz.* Prætors, Tribunes, &c. *Janſon* confines himſelf to the Conſuls alone.

FASTI, is ſtill applied to the Archives, and publick Regiſters, wherein are kept Hiſtorical Memoirs, of the moſt memorable Things, befallen a People.

In the like Senſe, the Martyrology is call'd the *Sacred Faſti* of the Church. See MARTYROLOGY.

The Jeſuit *Du Londel* has compil'd the *Faſti of Lovis le Grand*, &c.

FASTI, or *Dies Faſti*, were Court-days, anſwering, in ſome meaſure, to our Terms. See TERM.

The Word *Faſti*, *Faſtorum*, is form'd of the Verb *Fari*, to ſpeak; by reaſon, during thoſe Days the Courts were open, Cauſes might be heard; and the Prætor was allow'd *fari*, to pronounce the three Words, *Do*, *Dico*, *Addico*: The other Days, wherein this was prohibited, were call'd, *Ne-faſti*. Thus *Ovid*:

*Ille* Ne-faſtus *erit per quem tria verba ſilentur*,
Faſtus *erit per quem lege licebit agi*.

Theſe *Dies Faſti* were noted in the Calendar, by the Letter *F*. But obſerve, that there were ſome Days, *ex parte Faſti*, partly *Faſti*, partly *Ne-faſti*, i. e. Juſtice might be diſtributed at certain Seaſons of the Day; and at others not. Theſe Days were call'd *Interciſi*, or *Endotherciſi*: Theſe were mark'd in the Calendar thus, *F. P. Faſtus primo*, denoting, that Juſtice might be demanded during the firſt Part of that Day.

FASTIDIUM *Cibi*. See NAUSEA.

FASTIGIUM, in Architecture, the ſame with *Pediment*. See PEDIMENT.

FAT, in an Animal Body, a white, oily, ſulphurous Subſtance, collected in little membranous *Loculi* or Cells, in divers Parts of the Body; ſerving to keep the Parts warm, and to ſoften and temper the ſharp Salts in the Maſs of Blood.

Phyſicians diſtinguiſh two kinds of *Fat*: the firſt, call'd in Latin *Pinguedo*, and *Axungia*, and in *Engliſh*, abſolutely, and by way of Eminence, *Fat*, is a groſs, whitiſh Oil, found immediately under the *Cutis*, incloſ'd in little Bags, call'd *Cellulæ Adipoſæ*, adhering to the outer Surface of a Membrane, call'd *Adipoſa*, all over the Body, except on the Forehead, Eye lids, Penis, and Scrotum.

This *Fat* is nothing but the oily Part of the Aliment, or Chyle, ſeparated from the Arterial blood, by the adipoſe Glands, and carried by peculiar Ducts to the membranous Cells; whence it is tranſmitted again to the Blood by the Veins.

Dr. *Grew* takes it to be a Coagulum of the oily Parts of the Blood, made, either by ſome of its own ſaline Parts, or by the nitrous Particles of the Air mingled therewith in the Lungs; which Sentiment is confirm'd by an Experiment of that learned Perſon, who made an artificial *Fat*, by only mixing Oil of Olives with Spirit of Nitre for ſome Days: And hence it is, that divers Animals, as Conies, Hares, &c. grow *fat* in Winter, and particularly in ſevere froſty Weather; the Air then abounding moiſt in Nitre. Hence alſo it is, that the *Fat* of Land Animals, is much firmer, then that of Fiſhes; the watery Element containing leſs nitrous Matter, than the Air.

In ſome Subjects the *Cellulæ* are ſo full and diſtended, that the *Fat* is above an Inch thick: In others they are almoſt flat; and in emaciated Subjects, inſtead of *Fat*, we find a ſort of flaccid tranſparent Subſtance, which is nothing, but the bare Membrane; the Cells being all exhauſted. See *Membrana* ADIPOSA.

The ſecond kind of *Fat*, call'd *Sevum*, *Suet*, and *Leaf*, is whiter, harder, and more brittle, than the former; being found in the Cavities of the Abdomen, Omentum, &c. See OMENTUM, &c.

The *Fat* of both Kinds, ſerves as a natural Balſam, to preſerve the Body; and by mixing with, and enveloping the Salts wherewith the Blood and Serum are highly ſaturated, keeps them from fretting and corroding the Parts of the Body, through which they paſs.

It is thought likewiſe, and not without Probability, to make a conſiderable Part of the Nouriſhment of our Bodies; whence, the fatteſt Perſons, falling into an Atrophy, gradually loſe all their *Fat*, which is always quite expended in ſuch Caſes, e're the Diſeaſe become fatal.

Too much *Fat* is uſually attended with Heavineſs, and Drowſineſs, not only from the Unwieldineſs of an overgrown Body, nor from the ſtuffing of the Cavities and *Thorax* alone, which ſometimes obſtructs the Expanſion of the Diaphragm and Lungs, and produces a *Dyſpnæa*, or an *Orthopnæa*; but it is likewiſe probable, that the Abundance of *fatty*, or oily Particles, return'd into the Blood, and implicating the more ſubtle and active Parts, may hinder the neceſſary Secretions in the Brain.

The *Fat* of Animals, for the generality, is not reckon'd good Food; as being hard of Digeſtion, and producing a thick, viſcid Chyle. But it is of good uſe in Medicine.

*Calves Fat* is us'd in Pomatums, and Unguents; being reſolutive, and emollient.——That of *Hogs* and *Boars*, has the ſame Qualities, and is ſtrengthening beſides.——*Deers Greaſe* is good to fortify the Nerves, againſt the Rheumatiſm, Sciatica, Gout, and Fractures.——*Hares Greaſe*, applied externally, promotes Digeſtion, and the Suppuration of Abſceſſes.——That of *Rabbits*, is nervous, and reſolutive.——That of *Cocks*, and *Hens*, reſolves and ſoftens Hardneſſes.——That of *Geeſe*, has the ſame Qualities; and likewiſe abates Hemorrhoids, aſſuages Pains in the Ear, being applied within the ſame; and opens the Belly, being taken inwardly.——*Eels Fat* is eſteem'd good againſt the Hemorrhoids and Deafneſs; to take away Pits of the Small-pox, and to make the Hair grow.——That of the *Trout*, beſide its being emollient, is good in Diſeaſes of the Anus, and Ulcers of the Breaſt.

FAT, in the Sea Language, is the ſame with *Broad*.

Thus, if the Truſſing in, or Tuck of a Ship's Quarter under Water be deep, they ſay, ſhe hath a *fat* Quarter.

FAT, or *Vat* is a great wooden Veſſel, which among Brewers and Maltſters is uſed to meaſure Malt for Expedition; containing a Quarter or eight Buſhels. See MALT.

It is likewiſe a Veſſel, or Pan of Lead, uſed in the making Salt, &c. See SALT.

FATE, *Fatum*, a Term much uſed among the antient Philoſophers.

It is form'd *a fando*, from *ſpeaking*: and primarily implies the ſame with *Effatum*, viz. a Word, or Decree, pronounc'd by God; or a fix'd Sentence, whereby the Deity has preſcrib'd the Order of Things, and allotted every Perſon, what ſhall befall him.

The *Greeks* call it, εἱμαρ, εἱμαρμένη, *quaſi* εἱρμὸς, *Catena*, a Chain, or neceſſary Series of Things, indiſſolubly link'd together; and the Moderns, *Providence*. See PROVIDENCE.

But beſide this Senſe of the Word, wherein it is us'd, ſometimes to denote the Connexion of Cauſes in Nature, and ſometimes in the Divine Appointment; the Word *Fate* has a further Intention; being us'd to expreſs, I know not what *Neceſſity*, or eternal Deſignation of Things, whereby all Agents, both neceſſary, and voluntary, are ſway'd, and directed to their Ends. See NECESSITY.

In this Acceptation, ſome Authors divide *Fate* into *Aſtrological*, and *Stoical*.

The firſt, is a *Neceſſity* of Things and Events, ariſing from the Influence, and Poſitions of the heavenly Bodies, which give Law, both to the Elements, and mix'd Bodies, and to the Wills of Men.

In this Senſe is the Word often uſed by *Manilius*: *Certum eſt & inevitabile fatum: materiæque datum eſt cogi, ſed cogere ſtellis*. See ASTROLOGY.

The *Stoical* FATE, or *Fatality*, is defin'd by *Cicero*, an Order, or Series of Cauſes, wherein Cauſe being link'd to Cauſe, each produces other; And thus, all Things flow from the one prime Cauſe.

*Chryſippus* defines it a natural invariable Succeſſion of all Things *ab æterno*, each involving other. To this *Fate* they ſubject the very Gods.

Thus the Poet: The Parent of all Things made Laws at the Beginning, by which he not only binds other Things, but himſelf. So *Seneca*: *Eadem* neceſſitas *& Deos alligat. Irrevocabilis divina pariter & humana curſus vehit.—Ipſe ille omnium Conditor & Rector ſcripſit quidem* Fata, *ſed ſequitur: ſemel ſcripſit, ſemper paret.*

This eternal Series of Cauſes, the Poets call μοιρῶν, and *Parcæ*, or *Deſtinies*. See STOICISM.

*Fate*, is divided by ſome later Authors, into *Phyſical*, and *Divine*.

The firſt, is an Order, and Series of natural Cauſes, appropriated to their Effects.

This Series is neceſſary; and the Neceſſity is natural. The Principle, or Foundation of this *Fate*, is Nature, or the Power and Manner of acting which God, originally gave the ſeveral Bodies, Elements, Mixts, *&c.* By this *Fate* it is, that Fire warms; Bodies communicate Motion to each other; the Sun and Moon occaſion the Tides, *&c.* And the Effects of this *Fate*, are all the Events, and Phænomena in the Univerſe; except ſuch, as ariſe from the human Will. See NATURE.

*Divine* FATE, is what we more uſually call *Providence*. See PROVIDENCE.

*Plato*, in his *Phædo*, includes both theſe in one Definition, as intimating, that they were one and the ſame thing actively and paſſively conſider'd: Thus, *Fatum eſt ratio quædam divina, lexque naturæ comes, quæ tranſiri nequeat, quippe a cauſa pendens, quæ ſuperior ſit quibuſvis impedimentis*. Tho' that of *Boetius* ſeems the clearer, and more juſt: *Fatum*, ſays he, *eſt inhærens rebus mobilibus diſpoſitio, per quam Providentia ſuis quæque nectit ordinibus.*——

FATHER, *Pater*, a Term of Relation, denoting a Perſon who begot a Child, either Male or Female. See SON, and DAUGHTER.

Among the antient *Romans*, the *Fathers* of three Children had very conſiderable Privileges allow'd them. By the Laws of *Romulus*, a *Father* had an abſolute unlimited Power over his Children.

*Adoptive* FATHER, is he who takes the Children of ſome other; and owns them as his own. See ADOPTION.

*Putative* FATHER, is he who is only the reputed, or ſuppoſed *Father*; as *Joſeph* was *putative Father* of our Saviour. See PUTATIVE.

*Natural* FATHER, is he who has illegitimate Children. See BASTARD.

A *Father-in-Law*, is a Perſon married to a Woman, who has Children by a former Husband, *&c.*

FATHER, is alſo uſed in Theology, for the firſt Perſon in the Trinity. See PERSON, and TRINITY.

*God the Father*, is the *proper Father* of Jeſus Chriſt; with regard to Men, he is call'd *heavenly Father*. See GOD, and SON.

FATHER, is alſo us'd in a figurative Senſe, on divers Moral, and Spiritual Occaſions. Thus, it is applied to the Patriarchs; as we ſay, *Adam* was the *Father* of all Mankind; *Abraham*, the *Father* of the Faithful, *&c.* See PATRIARCH.

In an Eccleſiaſtical Senſe, *Fathers* is uſed for the antient Prelates, and Doctors of the Church. The *Fathers* aſſembled at the Council of *Nice*: *Chryſoſtom*, *St. Baſil*, &c. were *Greek Fathers*: *St. Auguſtin*, *St. Ambroſe*, &c. *Latin Fathers*.

The *Fathers*, ſay the *Meſſieurs de Port Royal*, are the proper Interpreters of the Goſpel; and are only honour'd with that ſacred Appellation, as their Works are, in ſome meaſure, a Patrimony, or Inheritance, left the Faithful, as their proper Children.

*Scaliger* obſerves, that the *Fathers* were good People, but not learned ones. To which St. *Evremond* ſubjoins, that when a Man comes to look near the *Fathers*, he loſes a great Part of the Veneration, which Time and Opinion has procur'd them: The great Diſtance between them and us, makes them appear much greater, than they are.

The *Fathers*, ſays the ſame Author, had more Imagination and Vivacity of Mind, than Judgment, and good Senſe. They gave altogether into Allegories, and affected the Brillant to an Exceſs. Juſtneſs of Mind was a thing they valued themſelves of the leaſt.

FATHER, is alſo a Title of Honour, given to Prelates, and Dignitaries of the Church. The Right Reverend *Father* in God, *Tho.* Lord Biſhop of, *&c.* See TITLE. See alſo REVERENCE.

FATHER, is alſo applied to the Superiors of Convents; the *Father* General; *Father* Provincial; Exprovincial: *Father* Prior, Sub-Prior: *Father* Definitor, in the Order of *Benedictines*: *Father* Guardian, in that of the *Franciſcans*: *Father* Corrector, among the *Minimi*, &c.

FATHERS, is alſo us'd plurally for all Congregations of Eccleſiaſticks, whether Regular, or Secular; as, the *Fathers Cordeliers*, *Capuchins*, *Auguſtins*, *Jacobins*, &c. The *Fathers Jeſuites*, *Fathers* of the Oratory, *Barnabites*, *Theatins*, of the Miſſion, *&c.* See each under the proper Article. See alſo BROTHER.

FATHERS, is alſo us'd for Perſons venerable for their Age, Quality, or the Services they have done the Publick. Thus, at *Rome*, the Senators were call'd, *Conſcript* FATHERS, *Patres Conſcripti*, &c. See PATRES *Conſcripti*. See alſo SENATORS.

FATHIMITES, or FATHEMITES, the Deſcendants of *Mahomet*, by *Fathima*, or *Fathemah*.

The Dynaſty of *Fathimites*, that is, of Princes deſcending in a direct Line from *Ali*, and *Fathima* his Wife, *Mahomet*'s Daughter, commenc'd in *Africa*, in the Year of the *Hegira*, 296; of Jeſus Chriſt, 908.

The *Fathimites* afterwards conquer'd *Egypt*, and eſtabliſh'd themſelves therein, in Quality of *Kaliphs*. See KALIPH.

The *Fathimites* of *Egypt*, ended in *Abed*, in the Year of the *Hegira*, 567; 268 Years after their firſt Eſtabliſhment in *Africa*; and 208, after the Conqueſt of *Egypt*.

FATHOM, a long Meaſure, containing ſix Feet; taken from the utmoſt Extent of both Arms, when ſtretch'd into a right Line. See MEASURE.

The *Fathom* is chiefly us'd at Sea, in eſtimating the Lengths of Cables, and other Ship-ropes, with the Depths and Soundings of the Sea: Alſo in Mines, Quarries, Wells, and all Works of Fortification.

There are three kinds of *Fathoms*, accommodated to the different Ranks of Veſſels. The firſt, which is that of Men of War, contains ſix Feet: The middling, or that of Merchant Ships, five Feet, and a half; and the ſmall one, uſed in Fluyts, Flyboats, and other Fiſhing-veſſels, only five Feet.

*Fathom* is alſo us'd in ſeveral Countries, particularly *Italy*, for the common Yard, or Ell, whereby Things are ordinarily meaſur'd, in Commerce: In which Senſe it is commonly call'd *Brace*, or *Braccio*, q. d. Arm. See BRACE.

FATNESS, *Obeſity*, or *Corpulency*, in Medicine, the State of a Perſon too much loaded with Fleſh, and Fat. See FLESH, and FAT.

*Fatneſs* ariſes from a laudable, copious, oily, ſoft Blood containing leſs than its Share of Salt.

Such a Conſtitution of Blood, occaſioning but a feeble Fermentation, there is leſs conſumed, than is made; the Lymph, which ſeems to be the Matter of Nutrition, preſerves its viſcid Conſiſtence longer; and by that means adheres the more plentifully to the divers Parts of the Body. Add, that there is more a Fat ſeparated from the Blood, than can well be depoſited in the adipoſe Cells. Hence the Body grows very conſiderably, and the Parts ſometimes diſtend to a monſtrous Bulk.

*Fatneſs* is promoted by any thing that tempers and ſoftens the Blood, and renders it leſs ſharp, and ſaline: Such is want of Exerciſe, and Motion; an indolent Life; too much Sleep; nouriſhing Foods, *&c.* It is prevented, or removed, by the contrary Cauſes; and particularly by the Uſe of ſaline and acid Meats, and Drinks.

*Fatneſs* is the Occaſion of divers Diſeaſes, and particularly the Apoplexy.

*Sennertus* mentions a Man, that weigh'd ſix-hundred Pound; and a Maid, 36 Years of Age, who weighd 450. *Chiapin Vitelli*, Marqueſs of *Cerona*, a noted General in his Time, from an exceſſive *Fatneſs*, reduced himſelf, by drinking of Vinegar, to ſuch a Degree of Leanneſs, that he could fold his Skin ſeveral times round him.

*Fatneſs* was infamous among the *Lacedemonians*.

FATUA-

FATUARII, in Antiquity, were Persons, who appearing inspir'd, foretold Things to come.

The Word is form'd of *Fatua*, Wife of the God *Faunus*, who was suppos'd to inspire Women with the Knowledge of Futurity; as *Faunus* himself did the Men.

*Fatua*, had her Name from *Fari*, q. d. *Vaticinari*, to propheſy.

FATUUS *Ignis*, a kind of fiery Meteor, popularly call'd *Will-with-a-Wiſp*. See METEOR.

The *Ignis Fatuus* is a Vapour, ſhining without Heat; and is there not the ſame Difference between this Vapour, and Flame, as between rotten Wood, ſhining without Heat, and burning Coals of Fire? *Newt. Opt. p.* 316.

FAUCON, a ſort of Cannon, whoſe Diameter at the Bore is $5\frac{1}{4}$ Inches; Weight, 750 Pound; Length, 7 Foot; Load, $2\frac{1}{4}$ Pound; Shot, $2\frac{1}{2}$ Inches Diameter; and $2\frac{1}{2}$ Pound weight. See CANON.

FAUCONET, a piece of Ordnance, whoſe Diameter at the Bore is $4\frac{1}{2}$ Inches; Weight, 400 Pounds; Length, 6 Foot; Load, $1\frac{1}{4}$ Pound; Shot, ſomething more than two Inches diameter, and $1\frac{1}{4}$ Pound Weight. See CANON.

FAVISSA, among Antiquaries, A Hole, Pit, or Vault under Ground, wherein is kept ſomething of rare Value.

The *Faviſſa*, according to *A. Gellius*, and *Varro*, was much the ſame, with what the antient *Greeks* and *Romans* called Θησαυρὸς, *Theſaurus*; and what in ſome of the modern Churches is called the *Archives* and *Treaſury*.

In the Capitol there were divers *Faviſſæ*. They were ſubterraneous Places, wall'd, and vaulted; having no Entrance, or Light, but by a Hole a-top, which was ſtop'd up with a huge Stone.

They were chiefly deſtined for keeping the old, worn Statues, and other antient Moveables, formerly us'd in the Temple; ſo religiouſly did the People reſpect, and preſerve whatever was conſecrated. *Catulus* would have lowerd the Floor of the Capitol; but that the *Faviſſæ* prevented him.

*Feſtus*, however, gives us a different Account of the *Faviſſæ*. According to that Author, they were Wells, or Pits of Water, near the Temples, and for the Uſe thereof: The ſame with what the *Greeks* call'd Ὀμφαλὸς, Navel, as being round, *&c.* *Gellius* likewiſe gives them the Name of *Ciſterns*, as well as *Feſtus*; but 'tis apparently, for no other Reaſon, than that they bore a Reſemblance thereto in figure.

In effect, the two Notions are pretty eaſily reconciled: It being certain, that the Treaſuries of ſome of the antient *Greek* Churches were Ciſterns, or Reſervoirs of Water, wherein People us'd to waſh themſelves, e're they enter'd the Temple.

The Word *Faviſſa*, ſeems form'd of *Foviſſa*, a Diminutive of *Fovea*, Pit or Ditch.

FAUNALIA, in Antiquity. Feaſts celebrated by the *Romans*, in honour of the God *Faunus*. See FEAST.

The *Faunalia* were held on the Day of the Nones of *December*, i. e. on the fifth Day of that Month. The principal Sacrifice was a Roe-buck; or rather, according to *Horace*, a Kid, attended with Libations of Wine, and burning of Incenſe.

It was properly a Country Feſtival; being perform'd in the Fields and Villages with peculiar Joy and Devotion.

*Horace* gives us a very gay Deſcription thereof, in the XVIII$^{th}$ Ode of his 3$^{d}$ Book.

*——Teneor pleno cadit hædus anno*
*Larga nec deſunt Veneris ſodali*
*Vina Crateræ, vetus ara multo*
*Fumat odore.*

*Struvius*, in his *Roman* Calendar, marks the Feaſt of *Faunus* on the Day of the Ides of *February*, which is the 13$^{th}$ Day of that Month; and the *Faunalia* he places on the 5$^{th}$ of the Ides of *December*, or the 9$^{th}$ of that Month. And in C. IX. he ſhews, that there really were two *Faunalia*; the one in *February*, mention'd by *Ovid*, *Faſt.* L. VI, v. 246; the other, on the 9$^{th}$ of *December*, mention'd by *Horace*, in the Place juſt cited.

The Deity *Faunus*, to whom the Solemnity was devoted, and from whom it was denominated, was the ſame among the *Romans*, with the *Pan* of the *Greeks*.

FAUNS, FAUNI, among the Antients, were a Species of Demi-Gods, inhabiting the Foreſts; call'd alſo *Silvans*, *Silvani*. See SILVANS.

The *Fauns* are reputed pure *Roman* Deities; unknown to the *Greeks*. They were repreſented as half Men, half Goats; having the Horns, Ears, Feet, and Tail of a Goat, a very flat Noſe; and the reſt human.

The *Roman Faunus*, we have obſerv'd, was the ſame with the *Greek Pan*. Now, in the Poets, we find frequent Mention of *Fauns* and *Panes* in the plural Number; in all Probability therefore, the *Fauns* were the ſame with the *Panes*. See PANES.

The Reaſon was, that there were ſeveral *Faunus's* and *Pan's*; tho' all deſcended from one principal one. Thus *Ovid*:

*Aut quas ſemideæ Dryades, Faunique bicornes*
*Numine contactas attonuere ſuo.*

The *Romans* call'd them *Fauni*, *Ficarii*, and *Fauni Ficarii*.

The Denomination *Ficarii* was deriv'd, not from the Latin *Ficus*, *ficûs*, a Fig, as ſome have imagin'd; but from *ficus*, *fici*, a ſort of fleſhy Tumor, or Excreſcence, growing on the Eyelids and other Parts of the Body; with which the *Fauns* were repreſented.

Tho' the *Fauns* were held for Demi-Gods; yet were they ſuppos'd to dye, after a long Life. *Arnobius* ſhews, that their Father or Chief, *Faunus* himſelf, only liv'd 120 Years.

FAVOUR, in Commerce, *ſee* GRACE.

FAUSSE-*braye*, in Fortification, *ſee* FALSE *braye*.

FAWN, among Hunters, is a Buck, or Doe, of the firſt Year; or the young one, of the Buck's Breed, in its firſt Year.——

FEALTY, an Oath, taken at the Admittance of every Tenant, to be true to the Lord, of whom he holds his Land.

He that holds Land by this only Oath of *Fealty*, holds in the freeſt manner; for all, even thoſe that have Fee, hold *per fidem & fiduciam*, that is, by *Fealty* at the leaſt.

This *Fealty* is alſo us'd in other Nations; as in *Lombardy*, and *Burgundy*.

Indeed, as the very firſt Creation of this Tenure grew from the Love of the Lord, towards his Followers; ſo did it bind the Tenant to Fidelity; as appears by the whole Courſe of the Feuds; and the Breach thereof is Loſs of the Fee.

*Hotoman*, in his Commentaries *De Verbis Feudalibus*, ſhews a double *Fealty*; one *General*, to be perform'd by every Subject to his Prince; the other *Special*, requir'd only of ſuch, as in reſpect of their Fee, are tied by this Oath towards their Landlords. We read of both in the Grand Cuſtomary of *Normandy*, &c.

*Fealty Special*, is with us perform'd, either by *Freemen*, or *Villains*.

The Form of both, ſee *Anno* 17 *Ed.* 2. in theſe Words: When a Freeman ſhall do *Fealty* to his Lord, he ſhall hold his right Hand upon a Book, and ſhall ſay thus: *Hear you, my Lord* R. *that* J P. *ſhall be to you, both faithful and true, and ſhall owe my* Fealty *to you, for the Land that I hold of you, on the Terms aſſigned. So help me GOD, and all his Saints.*

When a Villain ſhall do *Fealty* to his Lord, he ſhall hold his right Hand over the Book, and ſay thus: *Hear you, my Lord* A. *that* J B. *from this Day forth, unto you ſhall be true and faithful, and ſhall owe you* Fealty, *for the Land that I hold of you in Villainage, and ſhall be juſtified by you in Body and Goods. So help me GOD, and all his Saints.*

*Fealty* is uſually mention'd as ſynonomous, with Homage; but it differs from it.

Homage conſiſts in taking an Oath, when the Tenant comes to his Land; and is done but once; being an Obligation, which is permanent, and binds for ever: which *Fealty* does not. See HOMAGE.

They differ alſo in the manner of the the Solemnity; for the Oath of Homage is taken by the Tenant kneeling; but that of *Fealty* is taken ſtanding, and includes ſix Things, which are compriſed in the Words, *Incolume*, *Tutum*, *Utile*, *Honeſtum*, *Facile*, *Poſſibile*.

*Incolume*, that he do no bodily Injury to the Lord: *Tutum*, that he do him no ſecret Injury in any thing, which is for his Defence; as in his Houſe, or Caſtle: *Honeſtum*, that he do him no Injury in his Reputation: *Utile*, that he do not damage him in his Poſſeſſions: *Facile*, and *Poſſible*, that he make it eaſy, and not difficult for the Lord to do any good, which otherwiſe he might do; all which is likewiſe compris'd in *Leg. H.* 1. *cap.* 5.

FEAST, or FESTIVAL, a Church-Solemnity, or Rejoycing, in Honour of God, or a Saint.

The Word is form'd of the Latin *Feſtum*, which ſome derive *a feriari*, to keep Holiday. Others derive it from the *Greek* ἑστία, which ſignifies the ſame Thing, and is form'd of ἑστία, *Hearth*, and *Veſta*. See FESTUM, and FERIÆ.

FEASTS, and the Ceremonies thereof, have made a great Part of the Religion of almoſt all Nations and Sects: Witneſs thoſe of the *Greeks*, *Romans*, *Hebrews*, *Chriſtians*, and *Mahometans*.

*Feaſts*, among us, are either *immoveable*, or *Moveable*.

*Immoveable* FEASTS, are thoſe conſtantly celebrated on the ſame Day of the Year: The principal are, *Chriſtmas-day*,

or

or the *Nativity*; the *Circumciſion*, *Epiphany*, *Candlemaſs*, or the *Purification*; *Lady Day*, or the *Annunciation*, call'd alſo the *Incarnation*, and *Conception*; *All Saints*, and *All Souls*: Beſides the Days of the ſeveral *Apoſtles*, St. *Thomas*, St. *Paul*, &c. which with us, are *Feaſts*, tho' not *Feriæ*. See each *Feaſt* under its proper Article, NATIVITY, CIRCUMCISION, EPIPHANY, *&c.*

*Moveable* FEASTS are thoſe, which are not confined to the ſame Day of the Year. Of theſe the principal is *Eaſter*, which gives Law to all the reſt; all of them following, and keeping their proper Diſtance therefrom: Such are, *Palm-Sunday*, *Good-Friday*, *Aſh-Wedneſday*, *Sexageſima*, *Aſcenſion-day*, *Pentecoſt*, and *Trinity Sunday*. See EASTER, SEXAGESIMA, PENTECOST, TRINITY, *&c.*

Beſide theſe *Feaſts*, which are general, and enjoyn'd by the Church, there are others, *Local*, and *Occaſional*, enjoyn'd by the Magiſtrate, or voluntarily ſet on Foot by the People: Such are Days of *Thankſgiving* for Delivery from Wars, Plagues, *&c.*

Such alſo are the *Vigils*, or *Wakes*, in Commemoration of the Dedications of particular Churches. See VIGIL, *&c.*

The *Romans* had abundance of ſtated *Feaſts*, in honour of their Deities and Heroes: Such were the *Saturnalia*, *Cerealia*, *Lupercalia*, *Liberalia*, *Neptunalia*, *Conſualia*, *Portumnalia*, *Vulcania*, *Palilia*, *Divalia*, &c.

They had alſo *Feaſts*, inſtituted occaſionally *Carmentalia*, *Quirinalia*, *Terminalia*, *Floralia*, *Compitalia*, *Lemuria*, *Vernalia*: Beſide other moveable, and occaſional ones; as to give Thanks to the Gods, for Benefits receiv'd; to implore their Aſſiſtance, or to appeaſe their Wrath, *&c.* as the *Paganalia*, *Feralia*, *Bacchanalia*, *Ambarvalia*, *Amburbalia*, *Suovetaurilia*; and divers others, particularly denominated *Feriæ*; as *Sementinæ*, *Latinæ*, &c. See each *Feaſt* and *Feria* in its proper Place, SATURNALIA, LUPERCALIA, SEMENTINÆ, *&c.*

Theſe *Feaſts*, were divided into Days of Sacrifice, and Days of *feaſting*, or banqueting; Days of Games, and Days of Reſt, or Feriæ. See GAMES, SACRIFICES, *&c.*

There being but little Hiſtory wrote, or at leaſt publiſh'd in thoſe Days; one end of theſe *Feaſts*, or ſpeaking Ceremonies, was to ſerve the People to keep up the Remembrance of Things, in lieu of reading, and Books.

The principal *Feaſts* of the *Jews* were, the *Feaſt* of *Trumpets*; that of the *Expiation*; of *Tabernacles*; of the *Dedication*; of the *Paſſover*, and of *Pentecoſt*. See *Feaſt* of EXPIATION, TABERNACLES, PASSOVER, *&c.*

FEAST is alſo us'd for a Banquet, or ſumptuous Meal, without any immediate Regard to Religion.

The Uſe of the Word in this Senſe, is owing to this, that a Part of the Ceremony of many of the antient *Feſtivals*, both thoſe of the Heathens, and the Agapea of the Chriſtians, was good Eating: Tho' M. *Huet* chuſes to derive the Word from *Feſtinare*, which is found in an antient *Latin* Verſion of *Origen*'s Comment on *Matthew*, to ſignify *to Feaſt*. *Ut veniens illuc Jeſus feſtinet cum Diſcipulis ſuis.*

In all Antiquity, both ſacred, and profane, Sacrifices were little more than religious *Feaſts*. See SACRIFICE.

It has been often obſerv'd by Authors, that there is no Nation in the World comes near the *Engliſh*, in the Magnificence of their *Feaſts*. Thoſe made at our Coronations, Inſtallments, Conſecrations, *&c.* tranſcend the Belief of all Foreigners; and yet it is allow'd, that thoſe now in uſe are no way comparable to thoſe of our Forefathers.

The *Perſians* never diſcourſe, and deliberate of their moſt important Affairs, but in the middle of their *Feaſts*.—

FEATHER, *Plume*, that Part in Birds, which covers them; and by which they are enabled to fly. See WING, FLYING. See alſo BIRD.

*Feathers* make a conſiderable Article in Commerce; particularly thoſe of the *Oſtrich*, *Heron*, *Swan*, *Peacock*, *Gooſe*, &c. For Plumes, Ornaments of the Head, filling of Beds, writing Pens, *&c.* See PLUME, QUILL, *&c.*

Some of our lateſt Naturaliſts contend for *Feathers* being a Species of Plants; as having the two great Characters of Vegetables, *viz.* That they grow, and are not ſenſible. They add, that the Growth of *Feathers* is not perform'd with leſs Art or Apparatus, than that of Plants; and that they have all the eſſential, or characteriſtick Parts thereof, as a Root, Stem, Branches, and Leaves. See PLANTS.

Others, take *Feathers* to be that on Birds, which Leaves are on Trees. See LEAVES.

Others ſeem to be nearer to Nature, in making *Feathers* to be what Hairs are on other Animals. See HAIR.

Others, will have *Feathers* a kind of Neophytes, or Plant-Animals; ſuch as the Fætus is in the Womb. Accordingly, in *Feathers*, eſpecially thoſe of unfledg'd Birds, the Stem, or Quill, is found full of Blood; which argues, that there is ſome umbelical Nodus, whereby the firſt Rudiment of the *Feather* was connected to the extreme Fibres, *i. e.* to the Veins and Arteries of the Bird.

In effect, *Feathers* ſeem only Productions and Expanſions of the laſt, extreme *Fibrillæ* of the Cutis; and hence, upon ſtripping off the Cutis, the *Feathers* are likewiſe taken away: Juſt, as the Leaves, and Fruit follow, upon peeling the Bark off a Tree. Add, that *Feathers* as well, as Hairs, ariſe out of Pores in the Cutis; which Pores are not mere Apertures, or Foramina, but a kind of Vaginulæ, wove of the Fibres of the Skin; which terminate in the Oſcula or Anaſtomaſes of the internal Fibres of the *Feather*.

*Feathers*, Mr. *Derham* obſerves, are a very commodious Dreſs for the Inhabitants of the Air; not only a Guard againſt wet and cold, and a Means for the Hatching and Brooding the Young, but moſt commodious for Flight: To which purpoſe they are nicely placed over the Body, to give an eaſy Paſſage; every where neatly poſited, from the Head towards the Tail in cloſe uniform Order: So that being preen'd and dreſs'd by an unctuous Matter, ſecreted in a proper Gland, and depoſited in a *Oil bag*, placed therein for that Purpoſe (See OIL-BAG); they afford as eaſy a Paſſage through the Air, as a Boat new clean'd and dreſs'd, through the Waters. Without all this Nicety they would have been apt to be ruffled and diſcompos'd; would have gather'd Air, and prov'd an Obſtruction to the Paſſage of the Body.

Moſt of the *Feathers* tend backwards, and are laid over each other in exact Method, arm'd with warm and ſoft Down next the Body; and more ſtrongly made, as well as more curiouſly clos'd next the Air, and Weather. To which Purpoſe the Apparatus Nature has made, and the Inſtinct ſhe has given them to *preen*, or dreſs their *Feathers*, are admirable. See PREENING.

The Mechaniſm of the *Feather* is wonderful: The *Shaft*, or Rib exceeding ſtrong, but hollow below, for Strength and Lightneſs ſake, and above, not much leſs ſtrong; fill'd with a *Parenchyma*, or Pith both ſtrong and light.

But the *Vanes*, or *Webs* in the flag Part of the Wing, are incomparable; nicely gauged; broad on one Side, and narrower on the other: The Edges of the exterior Vanes bending downwards, and thoſe of the interior, or wider, upwards; by which means they catch, hold, and lie cloſe to each other, when the Wing is ſpread; ſo that not one *Feather* may miſs its full Force and Impulſe upon the Air: The Tips all made ſloping; thoſe of the interior Vanes ſloping to a Point towards the outer Part of the Wing, and the exterior Vanes towards the Body; ſo that the Wing, whether extended, or ſhut, is as neatly ſlop'd and form'd, as if conſtantly trim'd with a pair of Sciſſars.

Mr. *Derham* has ſeveral new Obſervations on the Mechaniſm of the *Vanes* or Webs of the *Feathers*, as they preſent themſelves to the Microſcope, by which the wonderful Care and Accuracy of the Creator in ſo ſmall a Part, are excellently illuſtrated.

The Vane conſiſts not of one continued Membrane (becauſe if once broken, it would then be ſcarce reparable); but of many *Laminæ*, admirably contriv'd to hook and hang together. On the under ſide they are thin, and ſmooth; but their upper, outer Edge (repreſented *Tab. Nat. Hiſtory*, *Fig.* 3.) parted into two hairy Edges; each Side having a different ſort of Hairs, laminated, or broader at Bottom, and ſlender, and bearded towards the Top. Thoſe bearded Hairs, on one ſide the Laminæ, have ſtrait Beards, as repreſented in *Fig.* 4. Thoſe on the other, have hook'd Beards on one Side, the ſlender part of the Briſtle; and ſtrait ones on the other, as in *Fig.* 5.

Both Kinds are repreſented, as they grow on the upper Edge of the Lamina, in *Fig.* 3. In the Vane, the hooked Beards of one Lamina always lie next the ſtrait Beards of the next Lamina; by which means they lock, and lay hold of each other; and by a pretty Mechaniſm, braſe the Laminæ cloſe to one another.

FEATHER *Edg'd Boards and Planks*, are thoſe which are thicker on one ſide, than on the other.

FEATHER *in a Horſes Fore-head*, &c. Is a Turning, or Parting of the Hair, which in ſome reſembles an Ear of Barley, and in others, a kind of Oeilet-hole.

FEBRIFUGE, in Medicine, a ſpecifick Remedy for the Cure of *Fevers*. See FEVER.

The Word is a Compound of *Febris*, and *Fugo*, I drive away.

The Quinquina, or Jeſuit's Bark, is the greateſt, and ſureſt of all the Claſs of *Febrifuges*. See QUINQUINA.

The little Centaureum is ſometimes alſo call'd *Febrifugum*, on account of its Virtues. See CENTAUREUM.

The *Chineſe* Ginſeng is particularly fam'd as a *Febrifuge*. See GINSENG.

For ſuch as cannot take the Bark in Subſtance, Dr. *Fuller* preſcribes a *Febrifuge Enema*, made of a Decoction thereof.

The inner Bark of the Aſh-tree, with a little Salt of Wormwood, taken like the *Peruvian* Bark, is ſaid to equal, or even exceed it, as a *Febrifuge*.

The like is ſaid of the Bark of the *Elm* near the Root. The Flowers of *Sal Armoniac* are held an excellent

*Febri-*

*Febrifuge*, especially in intermitting Fevers. Cold Water has been lately much extoll'd as a *Febrifuge*. Dr. *Hancock* gives it the emphatical Denomination of *Febrifugium Magnum*. See WATER.

Mr. *Reneaume*, in the *Hist. de l'Academ. R. de Sciences*, *An.* 1711. proposes a new *Febrifuge*, of his own Discovery, *viz. Galls*. From a great Number of Experiments, he has learnt, that Galls alone will frequently cure an intermitting Fever, as well as the Quinquina; over which it has some Advantages in other Things; in that it is not so bitter, does not heat, is taken in a lesser Dose, seldomer, and cheaper.

At his Motion, several other Physicians tried it with Success, particularly Mr. *Homberg*; though it did not succeed so well with M. *Bulduc*, *Lemery*, and *Geoffroy*. See GALLS.

FEBRIS, in Medicine. See FEVER.

FEBRUA, in Antiquity, A Feast, held by the *Romans*, in the Month of *February*; in behalf of the Manes of the Deceased.

*Macrobius* tells us, that Sacrifices were here perform'd; and the last Offices pay'd the Shade of the Defunct. *Saturn. L. I. c.* 13. And from this Feast it was, that the Month of *February* took its Name.

The Design of these Sacrifices is somewhat controverted: *Pliny* says, that they were perform'd, to render the infernal Gods propitious to the Deceas'd; tho' some of the Moderns have imagin'd, that they were intended, to appease the Deceas'd themselves, and were offer'd immediately to them, as a sort of Deities. What confirms the former Sentiment, is, that *Pluto* himself is surnam'd *Februus*. They held for twelve Days.

The Word is of a very antient standing in the *Latin* Tongue. From the very Foundation of the City, we meet with *Februa*, for *Purifications*; and *Februare*, to purify. *Varro*, *de Ling. Lat. L. V.* derives it from the *Sabins*: *Vossius*, and others, from *ferveo*, I am hot; by reason, that Purifications chiefly were perform'd with Fire, and hot Water. Some go higher, and even deduce the Words from פור, *Phur*, or *Phavar*, which in *Syriac* and *Arabic* has the same Signification with *Ferbuit*, or *Efferbuit*; and might probably, likewise signify, *to purify*: For *phavar*, in *Arabic*, denotes a Preparative, given to Women in Childbed, to bring away the After-birth, and other Impurities, remaining after Delivery: Much as among the *Romans*, who gave the Name *Februa* to the Goddess suppos'd to preside over the Delivery of Women. *Ovid. Fast.*

FECES, and FECAL *Matter*, } See { FÆCES. FÆCAL MATTER.

FECIALES, FÆCIALES, or FETIALES, were publick Officers among the antient *Romans*.

The *Feciales* were a sort of Heralds, or Kings at Arms; who, when the *Romans* had any Dispute with their Neighbors, were sent, first, to demand the Thing pretended to be usurp'd; or require Satisfaction for the Injury alledg'd to be done. If an Answer was not return'd by them, that was satisfactory to the People and the Senate; they were dispatch'd again to declare War: And the like in treating of Peace; the *Feciales* being the only Persons appointed to treat between the Senate, *&c.* and the Enemy.

*Plutarch*, in the Life of *Numa*; and *Halicarnasseus* L. II. observe, that they were first instituted by that Prince. The latter adds, that they were chosen out of the best Families in *Rome*; that their Office, which was reputed a sort of *Sacerdotium*, or Priesthood, only ended with their Life; that their Persons were sacred, and inviolable, as those of other Priests; that they were even charged to see the Republick did not declare War unjustly; that they were to receive the Complaints and Remonstrances of Nations, who pretended to have been any way injur'd by the *Romans*; that if those Complaints were found just, they were to seize the Criminals, and deliver them up to those they had offended; that they were invested with the Rights and Privileges of Embassadors; that they concluded Treaties of Peace, and Alliance, and took Care they were executed, and lastly abolish'd them, if they were not equitable.

But *Varro* assures us, that in his time most of these Functions of the *Feciales* were set aside; as those of the antient Heralds at Arms are among us: Tho' *Plutarch* observes, that they had still some Authority in his Time. See HERALD.

The *Feciales* went crown'd with *Verbena*, Vervein, when they went to declare War: Their Head was cover'd with a Veil, over which the Crown was applied. In this Equipage they proceeded to the Frontiers of the new Enemy's Country, and threw a bloody Dart, or Javelin into the Earth, within the same. In *Livy*, and other antient Authors, as also among the modern Criticks and Grammarians, we have the Formala's us'd in such Declarations.

*Festus* derives the Word from *ferio*, I strike; as *ferire fœdus*, signifies to conclude a Treaty: And accordingly, instead of *Feciales*, he would have it wrote *Fetiales*.

Others derive it from *fœdus*, which was antiently wrote *fœdus*; or from *fides*, Faith: Others from *facio*, *feci*, I make, *&c.* by reason they made War and Peace.

*Vossius* chuses to derive it from *fatu*, of the Verb *fari*, to speak; in which sense the *Feciales* should be the same with *Oratores*; which Sentiment is confirm'd from the Authority of *Varro*, who says, they were call'd indifferently, *Feciales* and *Oratores*. *De Vita Popul. Roman.* L. II.

FECULA, or FÆCULA, in Pharmacy, A white, mealy Substance, or Powder, which subsides, and gathers at the Bottom of the Juices, or Liquors of divers Roots; as those of Briony, Arum, Iris, *&c.*

This Substance, or Sediment, they dry in the Sun, after having pour'd off the Liquors; and it serves for divers Remedies.

The Word *Fœcula* is a Diminutive of *Fœces*.

FECULENT, or FÆCULENT, is applied to the Blood, and other Humors, which abound in Fæces, or Dregs; or have not the proper and usual Degree of Purity.——

FECUNDITY, or FÆCUNDITY, *Fertility*, or the Quality of a thing, which denominates it fruitful.

The *Fecundity* of divers Plants is very extraordinary. M. *Dodart* has an express Treatise thereof in the Memoirs of the Academy of Sciences.

He shews, that at a moderate Computation, an Elm, one Year with another, yields 329000 Grains, or Seeds; each of which, if properly lodg'd, would grow up unto a Tree. Now, an Elm ordinarily lives 100 Years; consequently, in the Course of its Life, it produces 33000000 Grains; all which arise from one single Grain.

He shews farther, that the same Elm, by frequently cutting off its Head, *&c.* might be brought to produce 15840000000 Seeds; and that there are so many actually contain'd in it, see PLANT.

FEE, FEUD, FEUDUM, FEODUM, or FIEF, an Estate, Land, Tenement, Lordship, or Right held of a superior Lord, on condition of Fealty, Homage, or other Acknowledgement.

The Term *Fees* is properly applied to Lands and Tenements, which we hold in perpetual Right, on condition of an Acknowledgment of Superiority in a higher Lord. See TENURE.

The Writers on this Subject, divide all Lands and Tenements, wherein a Man hath a perpetual Estate to him and his Heirs, into *Allodium*, and *Feudum*.

*Allodium* is defin'd, to be a Man's own Land, which he possesses merely in his own Right, without Acknowledgment of any Service or Payment of any Rent to another; and this is Property in the highest Degree. See ALLODIUM.

He that hath *Fee* holds of another by some Duty, or other, call'd *Service*, see SERVICE.

*Feudum* is that, which we hold by the Benefit of another, and for which we do Service, or pay Rent, or both, to the chief Lord.

Originally, a *Feud* was only an Estate for Life; and those to whom it was granted, were call'd *Vassalli*, who, by such means, were brought to a stricter Discipline and Obedience to the Princes, and were bound to serve them in Wars. See VASSAL.

The Origin of *Fees* is one of the darkest, and most intricate Points in modern History; Authors being exceedingly divided about it.

Some attribute the Invention thereof to the *Lombards*: Others find some Appearance of the Duties of a Vassal to his Lord, in the antient Relations between the Patron, and his Client: And others look for its Rise in the *Roman* Beneficia.

The Emperors, it seems, distributed Lands among the antient Legions, on condition of their holding themselves ready at all Times, to take up Arms, in defence of the Frontiers of the Empire; which affords us a good Image enough of *Feuds*; and in all Probability, their first Origin was no otherwise: But in Process of Time their Nature was changed, and Duties were annex'd to them, which originally were not.

*Du Moulin* makes no Doubt, that these Distributions of Lands, call'd *Benefices*, were the first matter of *Fees*; for which reason he uses the Terms *Benefice* and *Feud* promiscuously; as if they were the same Thing: And yet, there was a good deal of Difference between them; as there was neither Fealty, nor Homage, nor the other *feudal* Rights annex'd to the Benefice; and as the Benefice was not hereditary. See BENEFICE.

Probably, *Benefices* began then to be call'd *Feuds*, when they became hereditary; and when those, of whom the Benefices were held, began to demand Faith, or Fealty, from them. See FEALTY.

This Fealty seems to constitute the *Fee*; the Word *Fee* it self, signifying in the antient *Norman* Language, *Faith*.

There is no fixing the precise Æra, when these Changes commenced; For *Fees*, such as they now are, were not establish'd all at once: And in different Countries they took place at different Times, and in different manners. The Great

Lords, after the Deſtruction of the *Roman* Empire, having in ſeveral Parts uſurp'd the Property of their Benefices; laid likewiſe hold of the Juriſdiction; and made their Vaſſals their Subjects, ſo that each became a ſort of petty Sovereign in his own Territory.

*Mezeray* obſerves, that the Donation of *Fees* to the Nobleſſe of *France* commenc'd under the Principality of *Charles Martel*.

*Hugh Capet*, when he came to the Crown, was himſelf ſo little eſtabliſh'd, that he durſt not oppoſe thoſe Uſurpations; and was forc'd to ſuffer, what he could not redreſs. See *le Fevre, de l'Origine des Fiefs:* and *Hauteſerre*'s *Origines Feudorum pro Moribus Galliæ*.

The Origin of *Fees* in *England*, *Cambden* attributes to *Alexander Severus*. That Prince having built a Wall in the North of *England*, to prevent the Incurſions of the *Picts*; he ſome time after, began to neglect the Defence thereof, and gave, as *Lampridius* aſſures us, the Lands conquer'd from the Enemy, to his Captains and Soldiers, whom that Author calls *Limitarios Duces, & Milites*, i. e. Captains and Soldiers of the Frontiers; but it was on this Condition, that their Heirs ſhould continue in the Service; and that the Lands ſhould never deſcend to private Perſons, *i. e.* to ſuch as did not bear Arms. That Prince's Reaſon was, that People, who in ſerving defended their own, would ſerve with a deal more Zeal, than others.

Such was the Riſe of *Fees* in our Nation, according to *Cambden. Britan. p.* 651.

All our Lands in *England* (the Crown Land which is in the King's own Hand, in right of his Crown excepted) is in the Nature of *Feude* or *Fee*.

For tho' many have Land by Deſcent from their Anceſtors, and others have bought Lands; yet cannot Land come to any, either by Deſcent, or Purchaſe, but with the Burden that was laid on him who had the *Novel Fee*, or who firſt received it as a Benefice from his Lord to him, and ſuch as ſhould deſcend from him, or to whom it ſhould be otherwiſe convey'd and transfer'd; ſo that no Man has *directum Dominium*, i. e. the very Property or Demain in any Land, but the Prince, in right of his Crown. *Camb. Britan. p.* 93.

Tho' he who has *Fee*, has *Jus perpetuum*, and *utile Dominium*, yet he owes a Duty for it; ſo that it is not ſtrictly his own. Indeed, as much is imported by the Terms in which we expreſs our higheſt Right in Lands, *&c.* the moſt he can ſay, is, *I am ſeiz'd of this Land, in my Demain, as of* Fee.

In the Stat. 37 *Hen.* 8. *cap.* 16. *Fee* is alſo us'd for Lands inveſted in the Crown; but 'tis from Ignorance of the Import of the Word; for *Fee* cannot be without Fealty ſworn to a Superior: But the King owns Fealty to no Superior, but God alone.

The Words *Fee*, *Feud*, or *Fief*, are deriv'd by ſome Authors from *fœdus*, as ariſing from *Treaty*, or Alliance, made with the Lord: Others, as *Cujas*, &c. fetch them from *fides*, on account of the Faith the Perſon is oblig'd to bear his Lord: Others derive them from the *Saxon* Feh, Hire, Wages, q. d. *Status beneficiarius*.

*Bodin* takes the Latin *Fedum* to be form'd by Abbreviation of the initial Letters of *Fidelis Ero Domino Vero Meo*, which is an antient Formula of Fealty and Homage. *Nicod* derives it from the German *Feld*, which ſignifies the ſame Thing: *Hottoman* from *Feed*, a *German* Word, ſignifying *War: Pontanus* from the Daniſh *Feide*, Militia: Others from the Hungarian *Foeld*, Land: Others from *foden*, to feed: But the Opinion of *Selden*, ſeems the beſt authoriz'd, who brings it from the Saxon *Feon*, Stipendium; the *Fee* being a kind of Prebend to live upon; and accordingly we find, that in antient Times it was us'd for the Wages, and Appointment of Officers.

*Fee* is divided in our Laws, into *Fee abſolute*, call'd alſo *Fee Simple*; and *Fee Conditional*, alſo call'd *Fee Tail*.

Fee-*Simple*, *Feudum ſimplex*, is that, whereof we are ſeiz'd *to us and our Heirs, for ever*.

Fee-*Tail*, *Feudum taliatum*, is that, whereof we are ſeiz'd with Limitation *to us and the Heirs of our Body*. *Fee-Tail* is of two kinds, *General*, and *Special*.

*Fee-Tail general* is, where Land is given to a Man, and the Heirs of his Body; ſo that if a Man ſeiz'd of ſuch Land by ſuch Gift, marry one, or more Wives, and have no Iſſue by them, and at length marry another, by whom he hath Iſſue; this Iſſue ſhall inherit the Land.

*Fee-Tail ſpecial* is, where a Man and his Wife are ſeiz'd of Lands to them, and the Heirs of their two Bodies; becauſe in this Caſe, the Wife dying without Iſſue, and he marrying another, by whom he hath Iſſue; this Iſſue cannot inherit the Land, it being eſpecially given to ſuch Heirs, *&c.*

This *Fee-Tail ſpecial* has its Origin from the Stat. of *Weſtm.* 2. *cap.* 1. Before that Statute, all Land given to a Man, and his Heirs, either General, or Special, was reputed in the nature of a *Fee*; and therefore ſo firmly held to him, that, any Limitation notwithſtanding, he might alienate it at pleaſure. For Redreſs of which Inconvenience, the Statute provides, that if a Man give Lands in *Fee*, limiting the Heirs to whom it ſhall deſcend, with a Reverſion to himſelf, and his Heirs for Default of ſuch former Heirs; that the Form and Meaning of the Gift ſhall be obſerv'd.——

Fee is alſo us'd for the Compaſs or Circuit of a Manor, or Lordſhip. Thus *Bracton, in eadem Villa, & de eodem Feodo.*——

Alſo for a perpetual Right Incorporeal; as to have the keeping of Perſons in *Fee:* Rent granted in *Fee:* an Office held in *Fee*, &c.

Laſtly, *Fee* ſtill ſignifies a Reward, or ordinary Due, given a Perſon for the Execution of his Office, or the Performance of his Part, in his reſpective Art or Science. Thus, the Lawyer, and Phyſician, are ſaid to have their *Fees*, *i. e.* Conſiderations for the Pains taken with the Client, or Patient. A Barriſter, or Phyſician, are ſuppos'd to receive their *Fees* from time to time, as their Service is perform'd: They cannot make a Bill.

Fee-*Expectant*, *Feudum expectativum*, ſee Expectant.

Fee-*Farm*, or Fee-*Ferm*, *Feudi-firma*, or *Feofirma*, ſignifies Lands holden to a Man and his Heirs for ever, under Rent.

*Fee-Farm* ariſes, when the Lord upon Creation of the Tenancy reſerves to himſelf, and his Heirs, either the Rent for which it was before let to Farm, or at leaſt a fourth Part of the Rent; and that without Homage, Fealty, or other Services more than are eſpecially compriz'd in the Feoffment.

Tho', by *Fitz-herbert*, it appears that the third Part of the Value may be appointed for the Rent, or the finding of a Chaplain, to ſay Divine Service, *&c.* And the Nature of it is this, that if the Rent be behind, and unpaid for the Space of two Years; then the Feoffer or his Heirs have Action, to recover the Lands as their Demeans. See Farm.

Fees are alſo ſettled Perquiſites, or Allowances, paid to Publick Officers, by Perſons who have Buſineſs with them.

The Smallneſs of the Salaries of divers of the Queens Servants, is compenſated by the Perquiſites, or *Fees* of Honour.

The *Fees* paid to the ſeveral Officers by every Perſon, upon his being knighted, amount to 78 *l.* 13 *s.* 4 *d.* And if it be done within the Verge of the Courts, there is three Pound more to the ſix Pages of the Bed-Chamber, which brings it to 81 *l.*

FEELING, or *Touching*, one of the external Senſes, whereby we get the Ideas of *ſolid, hard, ſoft, rough, hot, cold, wet, dry*, or other *tangible* Qualities; as alſo of *Diſtance, Titillation, Itching, Pain*, &c. See Sense, Solid, Hard, *&c.*

*Feeling*, is the groſſeſt, but at the ſame time the moſt extenſive of our Senſes; having more Objects than all the reſt taken together: And ſome even reduce all the other Senſes, to this one of *Feeling*.

*Ariſtotle* is expreſs, that all Senſation is only *Feeling*; and that the other Senſes, as *Seeing, Hearing, Taſting*, and *Smelling*, are only the more exquiſite Species or Degrees thereof. *De Anim. lib.* 4. *c.* 3. and *lib.* 3. *c.* 12. See Seeing, Hearing, *&c.*

Naturaliſts are divided as to the Organ, or Inſtrument of *Feeling*.

*Ariſtotle* takes this Senſe to reſide in the Fleſh, *quatenus* Fleſh; inaſmuch as all Fleſh, is, in ſome meaſure capable of *feeling. Hiſt. Anim. L. I. c.* 4. Others will have it in all the Parts that have nervous Fibres; which extends it to the Skin, Fleſh, Muſcles, Membranes, and Parenchyma's: Others reſtrain it to the Skin, or *Cutis*; it being obſerv'd, that only thoſe Parts cover'd with a Cutis, have properly the Faculty of *Touching*, or perceiving tangible Qualities. But what part of the Cutis to aſſign immediately for this Office, is again diſputed.

Some will have it the membranous Part; others the Carnous; and others the medullary Part, derived from the Nerves.

*Malpighi*, and after him, all our lateſt, and beſt Authors, hold the immediate Organ of the Senſe of *Feeling*, to be the pyramidal Papillæ under the Skin.

Theſe Papillæ are little, ſoft, pulpous, medullary, nervous Prominences, lodg'd every where immediately under the Cuticula. They are form'd of the ſubcutaneous Nerves, which in order hereto, firſt lay aſide their outer Membrane, and are left exceedingly ſoft, and ſenſible; are continually moiſten'd by a thin, ſubtle Humor; and only covered over, and defended by the Cuticle, or ſcarf Skin. They are largeſt, and moſt conſpicuous in thoſe Parts, chiefly deſign'd for the Office of *Feeling, viz.* the *Tongue, Tips* of the *Fingers*, and *Toes*; and are contractile, and again expanſive at pleaſure. See Papillæ; ſee alſo Tongue, Finger, *&c.*

*Feeling*, then, is thus effected: The Tip of the Finger, for inſtance, being applied to an Object to be examined; By that Intention of the Mind, the Papillæ are emitted or elevated; and being lightly rubb'd over the Surface of the Object, a Motion is impreſs'd on them; which being thence propagated by the Nerves communicating with them, to the common Senſory, excites the Perception of Heat, Cold, Hardneſs, or the like. See SENSATION.

Hence we ſee, why *Feeling* becomes painful, when the Cuticle is wore off, burnt, macerated, &c. And why, when the Cuticle becomes thick, hard, callous, or cicatrized, &c. the Senſe of *Feeling* is loſt; whence the Numbneſs impreſs'd by the Torpedo; why that exquiſite Painfulneſs under, and at the Roots of the Nails, &c. See CUTICLE, BURNING, CALLUS, TORPEDO, and NAIL.

*Feeling* is, on many Accounts, the moſt univerſal of our Senſes: There is no Animal without it.

*Pliny* obſerves, that ſeveral Animals, as Oyſters, and Earth-worms, which have no other Senſe, yet have this of *Feeling*. *Nat. Hiſt. lib.* 10. *c.* 71. The other Senſes are confin'd to narrow Bounds; *Feeling* only is coextended with the Body, as being neceſſary to the Well-being of every Part. Hence *Cicero*, *Feeling* is equally diffuſed throughout the whole Frame, that we might be ſenſible of all Impulſes in every Part, and feel all the Degrees of Heat, Cold, &c. *De Nat. Deor. L. II. c.* 56.

Naturaliſts obſerve, that Spiders, Flies, and Ants have the Senſe of *Feeling* in a much greater Perfection than Men; though we have Inſtances of Perſons, who could diſtinguiſh Colours by their *Feeling*; and of others, who could perceive what People ſaid, by the ſame Senſe. See COLOUR, and DEAFNESS.

FEINT, in Muſick, a Semi-tone; the ſame with what we alſo call *Dieſis*. See DIESIS.

FEINT, in Rhetorick, A Figure whereby the Speaker touches on ſome thing, in making a Shew of paſſing it over in Silence. The *Latins* call it *Prætermiſſio*. See PRETERMISSION.

FEINT, in Fencing, a falſe Attack, or a Shew of making a Stroke, or Puſh in one Part, with Deſign to bring the Enemy to guard that Part, and leave ſome other Part unguarded, where the Stroke is really intended. See GUARD.

*Feints* are either ſingle, or double; high, or low; without, or within, &c. In Prime, in Tierce, in Quart, in Demi, and in the whole Circle; in one, two, or three Meaſures.

The *ſimple Feint* is a mere Motion of the Wriſt, without ſtirring the Foot, &c.

FELAPTON, in Logick, one of the Moods of Syllogiſms. See MOOD.

In a Syllogiſm, in *Felapton*, the firſt Propoſition is an univerſal Negative; the ſecond, an univerſal Affirmative; and the third, a particular Negative. See SYLLOGISM.

FELLING *of Timber*, ſee TIMBER.

FELLOWS, in Fortification, are ſix pieces of Wood, each of which form an Arch of a Circle; and theſe joyn'd all together by Duledges, make an entire Circle; which with twelve Spokes, make the Wheel of a Gun-Carriage. See CARRIAGE.

Their Thickneſs is uſually the Diameter of the Ball of the Gun they ſerve for, and their Breadth ſomething more.

FELLOWSHIP, *Company*, or *Partnerſhip*, in Arithmetick, is a Rule of great Uſe in ballancing Accounts amongſt Merchants, and Owners of Ships; where a Number of Perſons putting together a general Stock; it is requir'd to give every one his proportional Share of the Loſs, or Gain.

The Golden Rule ſeveral times repeated, is the Baſis of *Fellowſhip*, and fully anſwers all Queſtions of that Kind: For, as the whole Stock is to the Total thereby gain'd, or loſt; ſo each Man's particular Share, is to his proper Share of Loſs, or Gain. Wherefore, the ſeveral Sums of Money of every Partner are to be gather'd into one Sum, for the firſt Term; the common Gain, or Loſs for the ſecond; and every Man's particular Share for the third: and the Golden Rule to be wrought ſo many times, as there are Partners.

There are two Caſes of this Rule; the one *Without*, the other *With Time*.

FELLOWSHIP *without Time*, is where the Quantity of Stock, contributed by each Perſon, is alone conſider'd; without any particular regard to the Length of Time, that any of their Monies were employ'd. An Example will make this Proceſs eaſy.

*A*, *B*, and *C*. freight a Ship with 212 Tun of Wine; *A*. laying out 1342 *l*. *B*. 1178 *l*. and *C*. 650 *l*. towards the ſame: The whole Cargo is ſold at 32 *l*. *per Tun*. Query, what ſhall each Perſon receive?

Find the whole Produce of the Wine, by multiplying 212 by 32, which yields 6784: Then, adding together the ſeveral Stocks, 1342, 1178, and 630, which make 3150, the Work will ſtand thus:

$$3150 : 6784 \left\{ \begin{array}{l} 1342 — \text{Anſw.} — 2890 \\ 1178 \quad — \quad — \quad 2537 \\ 630 \quad — \quad — \quad 1356 \end{array} \right.$$

Proof 3150 6784

FELLOWSHIP *with Time*, is, where the Time, wherein the Money, &c. was employ'd, enters into the Account. An Example will make it clear.

*A. B. C.* commence a Partnerſhip the firſt of *January*, for a whole Year. *A*. the ſame Day diſburſed 100 *l*. whereof he receiv'd back again on the firſt of *April*, 20 *l*. *B*. pays on the firſt of *March* 60 *l*. and more the firſt of *Auguſt*, 100 *l*. *C*. pays the firſt of *July* 140 *l*. and the firſt of *October* withdraws 40 *l*. At the Years End their clear Gain is 142 *l*. Query, what is each Perſon's Due?

*A*'s 100 *l*. multiplied by 3 Months, the Time it was in, makes 300 *l*. and the remaining 80, by 9 Months=720, In all 1020 *l*. of *A*'s Contribution. For *B*. 60 into 10, gives 600; and 100 into 5, 500; in all 1100 *l*. for *B*. For *C*, 140 into 3, gives 420; and 100 into 3, is 300; in all 720 *l*. for *C*.

Now, 1020+1100+720=2840 for the common Antecedent; and the Gain 142, is for the general Conſequent: Then the Rule will ſtand thus:

$$2840 : 142 \left\{ \begin{array}{l} 1020 — \text{Anſw.} — 51 \\ 1100 \quad — \quad — \quad 55 \\ 720 \quad — \quad — \quad 36 \end{array} \right.$$

Proof 2840 142

FELO-*de-ſee*, is he, that commits Felony, by willingly killing himſelf.

The *Saxons* call'd him *Self-bane*. See SUICIDE.

He is to be interr'd without chriſtian Burial, with a Stake driven through his Corps; and to forfeit his Goods.

FELONY, was antiently uſed for a violent and injurious Action of a Vaſſal, or Tenant againſt his Lord.

In which Senſe, *Felony* was equivalent to petty Treaſon; or it was a Crime next below High Treaſon. The Crime of *Felony* inported Confiſcation of the Fee, to the Profit of the Lord.

The ſame Term *Felony*, is applied to an Injury of the Lord to his Vaſſal; which imports a Forfeiture of the Homage and Service thereof, and make it revert to the Soveraign.

Fidelity, and *Felony* are reciprocal between the Lord and the Vaſſal. See LORD.

*Menage* derives the Word from *Felonia*, form'd of *felo*, or *fello*, which occurs in the Capitularies of *Charles* the Bald, and is ſuppos'd to come from the *German Fehlen*, or *Saxon Felen*, to fail, or be delinquent. Others derive it from the barbarous Latin *Vilania*.

My Lord *Coke*, *Nicod*, &c. derive it *a felle*, Gall, as being ſuppos'd to be done maliciouſly. Laſtly, others derive it from the *Greek* φήλειν, to deceive.

FELONY, in Common Law, is an Offence next below that of Petty-Treaſon.

*Felony* includes ſeveral Species of Crimes, whoſe Puniſhment is the ſame, *viz.* Death: Such as *Murther*, *Theft*, *Suicide*, *Sodomy*, *Rape*, wilful *Burning* of Houſes, receiving of *ſtolen Goods*, and divers others found in the Statutes, which are daily making Crimes *Felony*, that were not ſo before.

*Felony* is eaſily diſtinguiſh'd from *Treaſon*. See TREASON.

From leſſer Crimes, it is diſtinguiſh'd by this, that its Puniſhment is Death; tho' not univerſally: For Petty Larceny, *i. e.* ſtealing of a thing, under the Value of 12 *d*. is *Felony*, according to *Brook*; tho' the Crime be not capital, but only a Loſs of Goods.

The Reaſon *Brook* gives for its being *Felony*, is that the Indictment runs, *Felonice cepit*.

Till the Reign of *Henry* I. *Felonies* were puniſh'd by pecuniary Fines: That Prince firſt order'd *Felons* to be hang'd, about the Year 1108.

*Felony* is of two Kinds: The one lighter, which for the firſt time is entitled to the *Benefit of Clergy*; as *Manſlaughter*. See MANSLAUGHTER. The other is not.

*Felony* is alſo puniſh'd by Loſs of all Lands, not intail'd; and all Goods and Chattels, both real and perſonal: Tho' the Statutes make a Difference in ſome Caſes, concerning Lands; as appears by Stat. 37 *Hen.* 8.

*Felony* ordinarily works Corruption of Blood, unleſs the Statute, ordaining the Offence to be *Felony*, provide otherwiſe; as the Stat. 39 *Eliz.* c. 17. See FURCA.

FELT, a kind of Stuff, either of Wool alone, or of Wool and Hair; neither ſpun, croſs'd, nor wove, but deriving all its Conſiſtence from its being wrought, and full'd with Lees and Size, and afterwards faſhioned on a Block or Mould, by help of Fire and Water.

Caſtor's, Camels, and Coneys Hair; Lambs and Sheeps Wool, &c. are the moſt uſual Ingredients of *Felts*: And Hats of all kinds, are the Works, they are chiefly employed in.

The

The *Felt* intended for a Hat, being ſufficiently full'd, and prepar'd, is reduc'd into one Piece, ſomewhat in the figure of a large Funnel: In which State it remains ready, to be put into Form, and become a Hat. See HAT.

FELUCCA, or FELUCCO, a little Veſſel, with ſix Oars, not cover'd over; and much us'd in the Mediterranean. It may bear its Helm on both Sides; which is likewiſe ſhifted from behind, forewards occaſionally. Its Size is about equal to that of a Sloop, or Chaloup. See BOAT.

The Word is form'd from the *Arabick Felicon*, a Ship.—

FEMALE, the Sex that conceives, and bears Fruit. See SEX, and WOMAN.

An Animal that generates in it ſelf, is called *Female*; and that which generates in another, *Male*. See MALE.

The *Female* both in Quadrupeds, and even Birds, is uſually ſmaller, and weaker than the Male; tho' in Birds of Prey, as the Falcon, Hawk, &c. it is otherwiſe; the *Female* being bigger, ſtronger, bolder, hardier, and more courageous. See FALCON.

The like is obſerv'd in moſt Inſects, particularly Spiders; to that Degree, that Mr. *Homberg* aſſures us, he has weigh'd five or ſix Male Garden-Spiders againſt one *Female* of the ſame Species.

For the *Proportion of Males to* FEMALES, ſee MARRIAGE, BIRTHS, &c.

Naturaliſts diſtinguiſh Male and *Female* Plants; Male and *Female* Flowers, &c. See PLANT, FLOWER, GENERATION, &c.

FEMALE *Screw*. See SCREW.

FEME *Covert*, in Law, a married Woman; who is alſo ſaid to be under *Covert Baron*. See COVERT.

FEMININE, in Grammar, one of the Genders of Nouns. See GENDER.

The *Feminine Gender* is that, which denotes the Name to belong to a *Female*. In the *Latin*, the *Feminine* Gender is form'd of the Maſculine, by altering its Termination; particularly by changing *us* into *a*. Thus, of the Maſculine *bonus equus*, a good Horſe, is form'd the *Feminine*, *bona equa*, a good Mare: So, of *parvus homo*, a little Man, is form'd, *parva fæmina*, a little Woman, &c.

In *French*, the *Feminine* Gender is expreſs'd, not by a different Termination; but a different Article: Thus, *le* is joyn'd to a Male, and *la* to a Female.

In *Engliſh*, we are generally more ſtrict, and expreſs the Difference of Sex, not by different Terminations, nor by different Particles, but different Words; as Boar, and Sow; Boy, and Girl; Brother, and Siſter, &c. tho' ſometimes the *Feminine* is form'd by varying the Termination of the Male into *eſs*; as in Abbot, Abbeſs, &c.

FEMININE *Rhimes*, ſee RHIME.

FEMUR, or *Os* FEMORIS, in Anatomy, the Thigh-bone. See BONE, and THIGH.

The *Femur* is the largeſt and ſtrongeſt Bone in the Body; and its Articulations are proportion'd to its Bulk, and Strength. Its upper Part is jointed with the Iſchium, by Enarthroſis; the Head of the *Femur* being receiv'd into a Cavity of the Iſchium; and the two kept together by a ſtrong Cartilage, or Bandage. The lower End is articulated with the Tibia by Ginglimus; two Heads of the *Femur* being receiv'd into two Cavities of the Tibia; beſide a Cavity between the two Heads, which receives a Proceſs of the Tibia.

The *Femur* is pretty much incurvated, or bent; the convex Part being before, and the Concave behind. It is divided into three Parts; the upper, middle, and lower.

The upper, conſiſts of a Head, and a Neck; in which are contain'd three Epiphyſes, *viz.* the *Extremity*, or Head, which is round, and big, and receiv'd into the Acetabulum of the Coxendix, wherein it is tied by two Ligaments; the one from the Head, and the other from the Bottom of the Acetabulum, but both inſerted into the Middle of the Head. Immediately under the Head, is the *Neck*, which is ſmall, long, and a little oval, and makes an Angle with the Body of the Bone; by means whereof the Thighs and Feet are kept at a due Diſtance from each other, to make our Standing the firmer; Beſide that the Obliquity of the Neck conduces to the Strength of the Muſcles, which muſt otherwiſe have paſs'd too near the Centre of Motion. The other two Epiphyſes are call'd the greater and leſs *Trochanters*. See TROCHANTER.

The middle Part, or Shank of the *Femur*, is round, ſmooth, and poliſh'd on its Fore-ſide, and rough on the Hind-ſide; along which there runs a ſmall Ridge, the whole Length of the Bone, called the *Linea aſpera*, ſerving for the Inſertion of Muſcles.

The lower Part of the *Femur* is divided by a Sinus in the Middle, into two Heads, or Apophyſes, call'd *Condili*, which make the Ginglymus above mention'd; being both received into the Sinus of the Tibia. See CONDILUS.

Between the hind Parts of theſe Heads is a Space for the Paſſage of the great Veſſels and Nerves, which go to the Leg.

The *Femur* has a very large Cavity, running its whole Length, filled, like the reſt, with Marrow. The Curvity of the *Femur* makes it ſerve as a Buttreſs to the Body, to prevent its falling, or bearing too much forward.

Surgeons and Bone-ſetters ſhould take Care, that in fractures of the *Femur* they don't endeavour to ſet it ſtreight, which is unnatural.

Monſ. *Dionis* derives the Word *Femur* from *fero*, by reaſon it bears the whole Weight of the Body.——

FEN, in Geography, a kind of Lake, or rather, Moraſs. See LAKE, and MORASS.

*Fens* are of two Kinds: The firſt of a Boggy Conſiſtence, compoſed of Water and Earth intermixed; ſcarce firm enough to ſuſtain the Tread of a Man. See BOG, and MOSS.

The ſecond are Ponds, or Collections of Waters, with pieces of dry Land, raiſed here and there, above the Surface thereof.

The former kind neither receive, nor emit any River: But the latter are frequently the Heads or Springs of Rivers: Such is the Head of the *Nile*, *Tanais*, &c.

FENCE-*Month* (*Menſis prohibitionis*, or *Menſis vetitus*) is a Month, wherein the female Deer do fawn; for which Reaſon it is unlawful to hunt in the Foreſt, during that Time.

It begins fifteen Days before Midſummer, and ends fifteen Days after; in all, thirty Days.

There are alſo certain *Fence*, or *Defence* Months, or Seaſons for Fiſh, as well as wild Beaſts; as appears by Stat. *Weſtm.* 2. *cap.* 13. in theſe Words:

All Waters, where Salmons are taken, ſhall be in *Defence* for taking of Salmon, from the Nativity of our Lady, unto St. *Martin*'s Day. And likewiſe, young Salmons ſhall not be taken or deſtroyed by Nets, &c. from the Midſt of *April*, to the Nativity of St. *John Baptiſt*, &c. See TEMPUS, FOINESUN, FANATIO, &c.

FENCE-*Walls*, are Walls of Brick, or Stone, made round Gardens, &c. See WALL.

FENCING, the Art of *Defence*; or of uſing the Sword, to wound an Enemy, and ſhelter one's ſelf from his Attacks. See SWORD, and GUARD.

*Fencing* is one ſo the Exerciſes learnt in the Academies, &c. See EXERCISE.

*Fencing* is learnt by practiſing with *Files*, called in *Latin*, *Rudes*; whence *Fencing* is called *Gladiatura rudiaria*. See GLADIATOR.

*Pyrard* aſſures, that the Art of *Fencing* is ſo highly eſteemed in the *Eaſt Indies*, that none but Princes and Noblemen are allowed to teach it. They wear a Badge or Cognizance on their right Arms, called in their Language *Eſaru*, which is put on with great Ceremony, like the Badges of our Orders of Knighthood, by the Kings themſelves.

*Montaign* aſſures us, that when he was a Youth, the Nobility all ſhunned the Reputation of being good *Fencers*; as ſomething too ſubtle, and deſigning, and apt to corrupt virtuous Manners.

*Fencing* is divided into two Parts, Simple, and Compound.

*Simple* is, what is performed directly and nimbly, on the ſame Line; and is either Offenſive, or Defenſive. The principal Object of the firſt, is whatever may be attempted, in puſhing or paſſing from this or that Point, to the moſt uncovered Part of the Enemy. The ſecond, conſiſts in parrying, and repelling the Thruſts aimed by the Enemy.

The *Compound*, on the offenſive Side, includes all the poſſible Arts and Inventions, to deceive the Enemy, and make him leave that Part we have a Deſign on, bare, and unguarded, upon finding we cannot come at it by Force, nor by the Agility of the ſimple Play.

The principal Means hereof are Feints, Appeals, Claſhings, and Intanglings of Swords, half-Thruſts, &c. And in the Defenſive, to puſh in ſpeaking.

FEND, in the Sea Language, is uſed for the ſaving a Boat from being daſh'd againſt the Rocks, Shore, or Ships Side.

Hence the Phraſe, *Fending the Boat*, &c. Hence alſo

FENDERS, any Pieces of old Cable Ropes, or Billets of Wood, hung over the Ship's Side, to *fend* or keep other Ships from rubbing againſt her.

Boats have the like.——

FENDUE *en Pal*, in Heraldry, a *French* Phraſe, applied to a Croſs, to denote it cloven down from Top to Bottom, and the Parts ſet at ſome Diſtance from one another.

FENESTRA, in Anatomy, a Name applied to two Holes, or Apertures in the inner Ear. See EAR.

The *Feneſtræ* are two Openings in the Labyrinth; the firſt of them incloſ'd by the Baſis of the Stapes, and from its oval Figure denominated *Feneſtra ovalis*; the latter, call'd *rotunda*, is cloſ'd with a tranſverſe tranſparent Membrane, plac'd a little within the Surface of its Aperture.

Theſe *Feneſtræ*, with the whole Labyrinth, are comprehended in that Part of the *Os temporum*, properly call'd from its Hardneſs *petroſum*. See LABYRINTH, &c.

FENNEL, or *Fennel-ſeed*, in Commerce, &c. a longiſh, ſtriated Seed, flat on one Side, and roundiſh on the other; of a ſweetiſh Taſte, not unlike that of Anis-ſeed; being the Produce of an umbelliferous Plant of the ſame Name, well known as a Pot-herb.

*Fennel* makes part of the Commerce of the Druggiſts and Apothecaries. 'Tis eſteem'd a Carminative, and us'd like Anis-ſeed, to diſpell Winds in the Body; and correct Senna, and the reſt of the vegetable Purgatives.

There is alſo a ſtrong Water, or Brandy made of the Seeds of *Fennel*, and call'd *Fennel-Water*. The Ingredients are *Fennel* Seed, Liquorice, Brandy, and white Wine, which are diſtill'd together; and to the Eſſence thereof are added Spirit of Wine, Sugar, and ſweet Almonds: The whole ſtrain'd, &c.

FENUGREE, *Fænum Græcum*, or *Fennigreek*, a medicinal Plant, thus call'd, becauſe antiently brought from *Greece*, tho' now cultivated in ſeveral Parts of *Europe*.

Its Stem is about a Foot high: Its Leaves ſmall, and diſpos'd ſomewhat like thoſe of Trefoil. It yields a little white Flower, from whence ariſes a long, pointed Pod, ſhap'd not unlike a Bullocks Horn.

The Grain, or Seed is inclos'd in this Pod, which bears the Name of the Plant it ſelf, is leſs than Muſtard Seed, very hard, and ſolid, of a triangular Form, and a ſtrong diſagreeable Smell: When new, 'tis of a yellow, gold Colour; but when kept, ruddy, or brown.

The Farina, or Flower of theſe Seeds is eſteem'd good to ripen and digeſt; and as ſuch, is uſed in Cataplaſms of thoſe Intentions; as alſo in emollient Clyſters, Decoctions, and Cataplaſms.

It yields a Mucilage uſed in Inflammations of the Eyes and on other Occaſions.

FEODARY, FEUDARY, or FEUDATARY, was an Officer, antiently made and authorized by the Maſter of the Court of Wards. See WARD.

His Office was, to be preſent with the Eſcheator, at the finding any Office; and to give Evidence for the King, concerning the Tenure and the Value thereof: To ſurvey the Land of the Ward after the Office found, and rate it. He alſo aſſign'd the Kings Widows their Dowers, and received the Rents of Wards Lands. This Office is taken away by Stat. 12 *Car.* 2.

FEODER, a Capital Meaſure for Liquids, uſed throughout *Germany*. See MEASURE.

FEODUM, or FEUDUM, the ſame with *Fief*, or *Fee*. See FEE.

FEOFFMENT, in Common Law, ſignifies any Gift, or Grant of any Honours, Caſtles, Manors, Meſſuages, Lands, or other corporeal or immoveable Things of like nature, unto another in Fee ſimple; that is, to him, and to his Heirs for ever, by the Delivery of Seiſin, and the Poſſeſſion of the Thing given; whether the Gift be made by Deed, or Writing.

When it is in Writing, it is called the *Deed of Feoffment*.

In every *Feoffment*, the Giver is called the *Feoffer*, or *Feoffator*.

The proper Difference between a *Feoffer*, and a Donor, is, that the Feoffer gives in Fee ſimple; and the Donor in Fee-tail. See DONOR, and FEE.

FERALIA, in Antiquity, a Feaſt held by the *Romans*, on the 21ſt of *February*, in honour of the Dead. See FEAST.

*Macrobius*, *Saturn.* L. I. c. 13. refers the Origin of the Ceremony to *Numa Pompilius*. *Ovid*, in his *Faſti*, goes back as far as *Eneas*, for its Inſtitution. He adds, that on the ſame Day, a Sacrifice was perform'd to the Goddeſs *Muta*, or Dumb; and that the Perſons who officiated, were an old Woman, attended with a Number of young Girls.

*Varro* derives the Word from *inferi*, or from *fero*; on account of a Repaſt, carried to the Sepulchers of ſuch, as the laſt Offices were that Day render'd to.

*Feſtus* derives it from *ferio*, on account of the Victims ſacrificed. *Voſſius* obſerves, that the *Romans* called Death *fera*, *cruel*, and that the Word *Feralia* might ariſe thence.

FER *de Fourchette*, in Heraldry. *Croix a Fer de Fourchette* is a Croſs, having a forked Iron at each End, like that formerly us'd by Soldiers, to reſt their Muſkets; by which it is diſtinguiſh'd from the Croſs *Fourchee*; the Ends whereof turn forked, whereas in this, the Fork is fix'd on the ſquare End; as in the adjoining Figure.

FER *de Moulin*, q. d. Iron of the Mill, is a Bearing in Heraldry of the Figure adjoining.

It repreſents the Iron-Ink, or Ink of a Mill, which ſuſtains the moving Mill-ſtone.

There are divers ways of bearing it: The moſt uſual is that here repreſented.

It is born by the Name of *Beveatham*, and alſo by the Name of *Turner*.

FERD-*wit*, in our antient Cuſtoms, A Formulary, by which the King pardoned Manſlaughter, committed in the Army.

The Word is form'd of the *Saxon Fird*, Army, and *Wite*, Puniſhment.

FERENTARII, or FERENDARII, a Term in Hiſtory. The *Ferentarii* among the *Romans*, were auxiliary Troops, lightly arm'd; their Arms being a Sword, Arrows, and a Sling; which are much leſs cumberſome, than a Buckler, Battle-ax, Pike, &c.

The Name *Ferentarii* was derived *a ferendo auxilio*; theſe being auxiliary Forces: Tho' *Varro* thinks, they might be ſo called, by reaſon, the Sling and Stones *feruntur*, *non tenentur*.

We have alſo Mention of another ſort of *Ferentarii*, whoſe Buſineſs was, to carry Arms after the Armies, and to be ready to ſupply the Soldiers therewith in Battle.

*Lydius* uſes the ſame *Ferentarii* for the *Cataphracti Equites*, i. e. Cavaliers, arm'd Cap-a-pee.

FERIÆ, among the *Romans*, were Holidays; or Days wherein they abſtain'd from Work.

The *Feriæ*, or *Dies feriati*, were obſerv'd and diſtinguiſh'd chiefly, by Reſt; whereas the *Feaſts*, or *Dies feſti*, beſide a Ceſſation from Labour, were celebrated with Sacrifices and Games; ſo that there were *Feriæ*, which were not Faſt-days. Tho' Authors frequently confound the *Feriæ*, and *Feſti*. See FEAST, and FESTI DIES.

Others confound the *Feriæ* with the *Dies Ne-faſti*, or Non-Court-Days. See FASTI *Dies*.

The Latin *Feria*, amounts to the *Sabbath* of the *Hebrews*. See SABBATH.

The *Romans* had divers kinds of *Feriæ*: Their Names, at leaſt the principal thereof, are, The *Æſtivales*, Summer-*Feriæ*; *Anniverſariæ*, Anniverſary *Feriæ*; *Compitalitiæ*, *Feriæ* of the Streets, and *Compita*, or Croſs-ways; *Conceptivæ*, Votive *Feriæ*, which the Magiſtrates promis'd every Year: *Denicales*, for the Expiation of a Family polluted by the Death of any one; *Imperativæ*, or *Indictivæ*, thoſe decreed by the Magiſtrate; *Latinæ*, the Latin *Feriæ*, inſtituted by *Tarquin* the Proud, for all the Latin People, amounting to above fifty Nations; being celebrated on *M. Alba*, in Memory of the Peace, concluded by *Tarquin*, with the People of *Latium*; *Meſſis Feriæ*, the *Feriæ* of Harveſt; *Paganales Feriæ*, or *Paganalia*, an Account of which is given in its Place; *Præcidaneæ*, which were, what we properly call, the Vigils, or Eves of the Feaſts; *Privatæ*, or *Propriæ*, thoſe peculiar to the ſeveral Families; as the *Familiæ Claudiæ*, *Æmiliæ*, *Juliæ*, &c. *Publicæ*, thoſe obſerv'd by all in general, or for the Publick Weal; *Sementivæ*, thoſe held in Seed-time; *Stativæ*, thoſe kept conſtantly to the ſame Day of the Year; *Saturnales*, whereof we ſhall ſpeak in their Places; *Stultorum Feriæ*, or *Quirinalia*, the *Feriæ* of Fools, held on the 17th of *February*; *Victoriæ Feriæ*, thoſe of Victory, in the Month of *Auguſt*; *Vindemiales*, thoſe of the Vintage, from the 20th of *Auguſt*, to the 15th of *October*; *Vulcani Feriæ*, thoſe of *Vulcan*, which fell on the 22d of *May*.

FERIÆ was alſo uſed among the *Romans* for Fair Days; by reaſon it was the Cuſtom to hold their Fairs, on *Dies feriati*, or Holidays. *Struvius Synt. Antiqq. Rom. C. IX. p.* 425. 443. &c. See NUNDINA.

The Word *Feriæ*, is uſually deriv'd *a feriendis Victimis*. *Martinius* ſays, that *Feriæ dictæ ſunt velut ἱερὰι, μέρὰι, dies ſacri*, holy Days. Others obſerve, that all Days in general, tho' they were not Feaſt-days, were antiently call'd *Feſtæ*; or as *Voſſius* reads it, *Feſiæ*; whence, according to that Author, is form'd the Word *Feriæ*.

FERIA is ſtill retain'd in the *Romiſh* Breviary, tho' in a Senſe ſomewhat different from the *Feriæ* of the Antients.

It is applied to the ſeveral Days of the Week, beginning with Sunday; provided none of thoſe Days be a Feaſt, or Faſt Day. Thus, *Monday* is the ſecond *Feria*; *Tueſday* the third, &c.

Theſe are the ordinary *Feriæ*; beſide which they have extraordinary, or greater *Feriæ*, *viz.* the three laſt Days of Paſſion Week; the two Days following Eaſter Day, and Whitſunday; and the ſecond *Feria* of Rogation.

The Word *Feria*, in this Senſe, is doubtleſs borrowed from the antient *Feria*, a Day of Reſt. Accordingly, Sunday is the firſt *Feria*: For antiently, all the Days of Eaſter Week were accounted Feſtival Days, by a Decree of *Conſtantine*; whence thoſe ſeven Days were called *Feriæ*: Sun-

day being the first, Monday the second, &c. And this Week being then accounted the first of the Ecclesiastical Year; they afterwards accustom'd themselves, to call the Days of the other Weeks after the same manner, first, second, third, &c. *Feriæ*.

Tho' others will have it, that the Days of the Week were not called *Feriæ*, from resting the People, that is, on account of being oblig'd to abstain from servile Works; but to advertise the Faithful, that they ought to abstain from Sin. See *Durand. de Off. Div. L. VIII. c.* 1.

FERIAL *Days*, *Dies feriales*, or *Feriæ*, among the Antients, signify Holidays, or Days vacant from Labour and Pleading. See FERIÆ.

But in the Stat. 27 *Hen. 6. c.* 5. and in *Forteſcu*, *De Laudibus LL. Angliæ*, *Ferial Days* are taken for working Days. *S. Silveſter* ordained—*Sabbati & Dominici dies nomine retento, reliquos hebdomadæ dies* feriarum *nomine diſtinctos, ut jam ante in Eccleſia vocari cæperant, appellari.*

So that *Ferial Days* are properly all the Days of the Week, except Saturday and Sunday.

FERM, in Law, see FARM.

FERMENT, in Phyſicks, A Body of any Kind, which being applied to another, produces a *Fermentation* therein: Or, any thing capable of exciting an inteſtine Motion, in the Part of another; and of ſwelling, or dilating the ſame, by means of its more penetrating and moveable Parts, which by their Agitation divide and agitate the Particles thereof. See FERMENTATION.

Thus, the Acid in Leven, is a *Ferment*, which makes Bread riſe, or ſwell. The Moiſture in Hay is the *Ferment*, which heats and makes it ſmoak. Thus alſo, Rennet is the *Ferment*, that curdles and breaks Milk: Balm, or Yeaſt is the *Ferment*, that ſets Wort a-working, &c. See LEVEN, &c.

The Force or Effect of a *Ferment*, ariſes hence, that by diſſolving, and breaking the Texture or Combination of the component Parts or Principles of the Body, and giving them a new Motion; it diſpoſes them to take a new Arrangement, or to combine again in a new manner; and ſo to conſtitute a new Species of Body. Its Effect is ſomewhat like that of a Perſon, who opening the Gates of a City, lets in the Enemy, who ſoon raiſes terrible Diſorders: Thus, the Bite of a mad Dog excites a ſlow Fermentation in the Blood, whereby the divers Liquors, or Matters it conſiſts of, loſe that Nexus, or Union, neceſſary to a State of Health; and occaſion an Irregularity in the Spirits, from which ariſe the Horrors, and other Symptoms of the Diſeaſe. See HYDROPHOBIA.

One way of accounting for Digeſtion, is by ſuppoſing a certain *Ferment* or Menſtruum in the Stomach, which diſſolves the Food contain'd therein. But what this *Ferment* is, or whence it ſhould be derived, is greatly diſputed. Some will have it an Acid; others, alcalious; others, ſulphureous; others, alcalino-ſulphureous; others, muriatick, &c. as their own Fancies ſuggeſt to them. See DIGESTION, and MENSTRUUM.

FERMENTARII, or FERMENTACEI, a Denomination thoſe of the *Latin* Church have given to the *Greeks*, on account of their conſecrating and uſing leven'd, or *fermented* Bread in the Euchariſt.

As the *Greeks* call the *Latins Azymites*, the *Latins*, in return, call them *Fermentarii*. See AZYMUS.

FERMENTATION, an inteſtine Motion, or Commotion of the ſmall, inſenſible Particles of a mix'd Body, ariſing without any apparent mechanical Cauſe, and producing a conſiderable Alteration therein.

Or, it is an eaſy, ſlow, gentle Motion of the inteſtine Particles of a Body, ariſing uſually from the Operation of ſome active, acid Matter; which rarifies and ſubtilizes the ſofter, yielding Particles thereof. See FERMENT.

*Fermentation* differs from *Diſſolution*, as the latter is the Reſult or Effect of the former. *Fermentation* is frequently without Diſſolution, *i. e.* the fermentative Motion frequently does not go ſo far as to diſſolve the Body: But Diſſolution always ſuppoſes an antecedent *Fermentation*. See DISSOLUTION.

*Fermentation* differs from *Ebullition*, and *Effervescence* in this, that the Motion, which in the former is ſlow; in the two latter, is violent; and that in the former, the Motion is reſtrain'd to the minute Particles of the Body; but in the latter it extends to large Maſſes thereof. See EBULLITION, and EFFERVESCENCE.

Indeed it muſt be obſerv'd, that Authors uſually allow of divers kinds of *Fermentations*; *viz.* an *inſenſible* one, which is only known from its Effects; and a *ſenſible* one: A *violent* and a *moderate* one: A *hot*, and a *cold* one: A *natural*, and an *artificial* one.

Plants bruis'd, and left a certain Time in a cloſe Veſſel, *ferment* of themſelves; and if let alone, the *Fermentation* will proceed to Putrefaction. See PUTREFACTION.

In order to *Fermentation*, 'tis neceſſary, the Ferment or Liquor have ſomething acid and ſpirituous in it; that its Motion be tumultuous; that it be in an open, ſpatious Place, and aſſiſted by the Air; and that it tend to exalt and puriſy the Liquor, and produce vinous, or inflammable Spirits. Theſe are the particular Properties and Conditions of *Fermentation*; tho' in the general, all required to effect a *Fermentation*, is a Body, or Liquor, which is not homogeneous, that is, conſiſts of different Principles; that there be a ſtrong Attraction between the Particles of the *Ferment*, and the Body; that the Parts of this latter be moved and agitated irregularly; and that this Motion produce ſome Alteration in the mixt.

*Fermentation* is one of the moſt obſcure Proceſſes in all Nature. The Generality of our later Philoſophers allow it in great Meaſure a Myſtery, to which their Principles will not fully reach.

Dr. *Morgan*, in his late *Philoſoph. Prin. of Medicine*, attempts to account for it, on the *Newtonean* Syſtem. His Principle is, that the expanſive Force of Air, rarified by the Action of Fire; or the mutual Action of Fire and Air, is the univerſal natural Cauſe of *Fermentation* and Diſſolution.

To ſhew this, he conſiders, two great Powers, or Principles in Bodies; *viz.* an attractive, coheſive Power, in the ſmall Particles of Matter, as the Principle of all Reſt, Concretion, &c. And the expanſive Force of heated Air; as that of *Fermentation*. On the different Proportion and Adjuſtment of theſe two oppoſite Forces, with reſpect to each other, the Conſtitution, Texture and Coheſion of Bodies depend.

By the attractive Force, acting alone, the conſtituent Parts of compound Bodies, muſt be brought to their neareſt and greateſt Contacts, and remain there in a Degree of Firmneſs, and Coheſion, proportional to the Quantities of Contact. See FIRMNESS.

On the other hand, by the repulſive, expanſive Force, acting alone, all Bodies, even the moſt compact and ſolid, muſt be diſſolved and diffuſed into one perfectly fluid, incoherent Maſs. See FLUIDITY.

If both are found in the ſame Body, and equal in Degree, ſuch Body muſt continue in its preſent State of Fluidity, or Coheſion; if the attractive Power prevail, the Quantity of Contact, or Degree of Coheſion will be continually increaſed to a certain Pitch, where it will reſt: On the Contrary, if the expanſive Force of the Fire and Air, included in any Body, or Maſs of Matter, prevails againſt the attractive Power of the contiguous Parts, the Parts muſt neceſſarily recede from their Points of Contact.

And this happening thro' all the Subdiviſions of which the Body or Maſs is capable, every ſmall Part muſt be divided and ſeparated into other ſmaller Parts; and theſe again into others, and ſo on, till we come to the firſt conſtituent Particles or Atoms, which are ſuppoſed to be perfectly ſolid, and indiviſible. See ATOM.

This Receſs of the Parts of Bodies from their Points of Contact, and the Separation, and Diviſion conſequent thereon, is what we call *Rarefaction*; as, on the Contrary, the Approach of the Parts nearer to the Points of Contact, is called *Condenſation*. Now from the contrary Effects of theſe two Forces, there neceſſarily ariſes an inteſtine Commotion, Colliſion, and natural Struggle of the Parts among themſelves, *i. e.* the Parts acted on by two ſuch oppoſite Forces, will fly off, and recoil, recede, and accede, in Proportion to the Strength and Energy of the oppoſite Powers, till one or the other prevail, either to *fix* and condenſe, or *diſſolve* and diffuſe it; which alternate Motion is what we call *Fermentation*. See RAREFACTION, &c.

If the attractive Force prevail, the moſt fluid Body will be conſolidated, as Water into Ice. See FREEZING.

On the contrary, if the expanſive Force prevail, the firmeſt Body will be broke, and diſſolved. See DISSOLUTION.

*Fermentation* is a Point of the utmoſt Conſequence in Medicine: It is one of the principal Means, or Inſtruments we have for altering, exalting, or calling forth the Properties and Powers of Bodies. To get an Idea of theſe Changes, we cannot conſider it better, than in the procuring of a ſpirituous Liquor from Malt, by means thereof.

It is to be obſerv'd then, that the Malt being made, as ſhewn under the Article MALT; and then laid to infuſe or *maſh* in hot Water, the reſt of the Proceſs of Brewing is nothing but a raiſing and directing of a *Fermentation*, or inteſtine Motion. See BREWING.

How ſuch Motion is mechanically effected, and how it brings forth ſuch a Spirit, may be conceived from what follows; ſuppoſing the Reader acquainted with theſe common Propoſitions in Hydroſtaticks; *viz.* 1°. That a Body immerſed in any Fluid, ſpecifically lighter than itſelf, will ſink; otherwiſe, emerge and get to the Top.

2°. That if two equal Bodies of different ſpecifick Gravities be immerſed in a Fluid, lighter than either of them, the Celerities of their Deſcents will be as their Gravities.

3°. That

3°. That if two unequal Bodies of unequal ſpecifick Gravities be immerſed in a Fluid lighter than either, the Celerities of their Deſcents will be compounded of their Gravities and Dimenſions together.

The ſame Law, by which Bodies deſcend, hold good in the Aſcent of thoſe ſpecifically lighter than the Fluid.

Hence in all heterogeneous Fluids, the conſtituent Parts of which are not fitted to aſſociate and cohere, ſo as to form what is called an uniform homogeneous Fluid, the heavier may be accounted as ſolid Bodies, immerſed in a Fluid ſpecifically lighter; and the lighter Parts, as ſuch Bodies in a Fluid ſpecifically heavier; as it may be demonſtrated, that the component Parts of all Fluids, ſeparately conſider'd, are ſolid. See FLUID, SOLID, &c.

This Liquor, therefore, called *Wort*, which is a Decoction of Malt, may be conſider'd as ſuch an heterogeneous Fluid, whoſe Parts cannot be interchang'd in their Poſitions, till each has obtained ſuch an Elevation, as correſponds to its proper Gravity: But leſt this alone ſhould fail of the Intention, by not being ſufficient to break thoſe Moleculæ and Vicidities, which entangle the ſpirituous Parts, and likewiſe to prevent their flying off at the Surface, ſome Portion of an already fermented Subſtance is mix'd with it.

This Subſtance, term'd *Barm*, or *Yeaſt*, conſiſts of a great Quantity of ſubtile ſpirituous Particles, wrapp'd up in ſuch as are viſcid. Now, when this is mix'd with ſuch a Liquor, it cannot but much contribute to that inteſtine Motion, which is occaſioned by the Intercourſe, and Occurſions of Particles of different Gravities; as the ſpirituous Particles will be continually ſtriving to get up to the Surface, and the viſcid ones continually retarding ſuch Aſcent, and preventing their Eſcape.

So that by theſe two concurring Cauſes the Particles extracted from the Grain, will by ſuch frequent Occurſions be ſo comminuted, as continually to increaſe the more ſubtile and ſpirituous Parts, until all that can be made ſo by Attrition, are ſet looſe from their former viſcid Confinements: and this appears by the Warmth of the Liquor, and the Froth drove to the Top; juſt at which Time, if it be thrown into the Still, it affords ſome Quantity of an high inflammable Spirit.

Moderate Warmth much haſtens this Proceſs, as it aſſiſts in opening the Viſcidities, in which ſome ſpirituous Parts may be entangled, and unbend the Spring of the included Air, which cannot but contribute to the Rarefaction and Comminution of the whole.

The viſcid Parts, which are raiſed to the Top, not only on account of their own Lightneſs, but by the continual Efforts and Occurſions of the Spirit to get uppermoſt, both ſhew, when the Ferment is at the higheſt, and prevent the finer Spirits making their Eſcape: For if this inteſtine Luctus be permitted to continue too long, a great Deal will get away, and the remaining grow flat, and vapid, and raiſe little beſides Phlegm in the Still.

The greateſt Uſe of this Theory in Medicine, will be in teaching, what Parts of the Materia Medica are moſt properly brought under this Procedure; and how ſuch inteſtine Motion, does in ſome Things, deſtroy their Virtues: For by ſome Medicines an Intention is aimed at, which is not to be procured, but by their being ſpirituous; whereas in others the very contrary Property is required: In ſuch Caſes therefore, when by any adventitious Cauſe thoſe Medicines get into a *Ferment*, they are deſtroyed, and ſhould not be adminiſtred.

FERNAMBOUC, *ſee* BRASIL *Wood*.

FERRUGINOUS, a Term, intimating a Thing to partake of the Nature of Iron; or to contain Particles of that Metal. See IRON.

It is particularly applied to certain mineral Springs, whoſe Water in their Paſſage along the Strata of the Earth meet with the Ore, or Marcaſſite of the Metal, part of which they waſh off, and carry with them; and thus become impregnated with the Principles thereof. Such are what we call *chalybeate* Waters. See CHALYBEAT, and MARS.

The Waters of *Tunbridge*, thoſe of Forges, and of the iron Spring at *Bourges*, are *ferruginous*.

FERRUGO, the Ruſt of Iron; or a kind of Calx, found on the Surface thereof. See IRON, and RUST.

FERRUM, ſee IRON.

FERTILITY, *Fruitfulneſs*, or the Quality, which denominates a thing *fertile*, or *prolific*. See FECUNDITY; ſee alſo BARRENNESS, DISEASE, &c.——

The *Egyptian* Nitre, or Natron, renders the Ground exceedingly *fertile*. *M. de la Chambre* obſerves, that Plants grow in ſuch Abundance in *Egypt*, that they would choak one another, if they were not hindred, by throwing Sand upon the Fields: Inſomuch that the *Egyptians* muſt take as much Pains to leſſen the Fatneſs of their Soil, as other Nations do to increaſe it. *Philoſ. Tranſact.* N° 160.

Nothing is more *fertile* than Wheat, which Faculty was given it by the Creator, in regard it was to be the principal Food of Men: Thus a ſingle Meaſure of that Grain, ſown in a proper Soil, will yield 150 Meaſures.—One of *Auguſtus*'s Procurators ſent him 400 Ears, all produced from one Seed. *Nero* had 340 Ears ſent him, from a ſingle Seed. *Plin. Nat. Hiſt. lib.* 18. *c.* 10. See SEMBRADOR.

FERULA, a little wooden Pallet, or Slice; reputed the Schoolmaſters Sceptre, wherewith he chaſtiſes the Boys, by ſtriking them on the Palm.

The Word is pure *Latin*, and has alſo been uſed to denote the Prelates Crozier, and Staff. Under the Eaſtern Empire, the *Ferula* was the Emperor's Sceptre, as is ſeen on divers Medals. It conſiſts of a long Stem, or Shank, and a flat, ſquare Head. The Uſe of the *Ferula* is very antient among the *Greeks*, who uſed to call their Princes ῥαβδηκόρους, q. d. *Ferula-bearers*.

The Word is ſuppoſed to be form'd of the Latin *ferire*, to *ſtrike*; or, perhaps, *Ferula* in this Senſe may be derived from the Name of a Plant, called *Ferula*, the Stem whereof was antiently uſed to correct Children withal; tho' others think, the Plant took its Name from the Inſtrument, or rather from its Uſe, *ferire*.

In the antient Eaſtern Church, *Ferula* ſignifies a Place ſeparated from the Church, wherein the Penitents, or Catechumens of the ſecond Order, called *Auſcultantes*, ἀκροώμενοι, were kept; as not being allowed to enter the Church. Whence the Name of the Place; the Perſons therein being under Penance, or Diſcipline: *Sub Ferula erant Eccleſiæ*.

FERULÆ, among Chirurgeons, called alſo *Splinters*; are little Chips, of different Matter, as Woods, Barks, Fir, Leather, Paper, &c. applied to Bones, that have been diſjointed, when they are ſet again.

The Bark of the Herb Sagapene, called in Latin *Ferula*, was antiently much uſed on this occaſion; whence the Name *Ferula* became common to all.

FESCENNINE, in Antiquity. *Feſcennine* Verſes were a kind of ſatyrical Verſes, full of open, wanton, and obſcene Expreſſions, ſung or rehears'd by the Company, at the ſolemnizing of a Marriage among the *Romans*. See SATYR.

The Word *Feſcenninus* is borrowed, according to *Menage*, from *Faſcinum*, a Charm; the People taking ſuch Songs to be proper to drive away Witches, or prevent their Effect. See LIGATURE.

FESSE, one of the nine Honourable Ordinaries of the Eſcutcheon, which it divides horizontally in the Middle, and ſeparates the Chief from the Point. It is ſuppoſed to repreſent a broad Girdle, or Belt of Honour, which Knights at Arms were antiently girded withal.

It poſſeſſes the Centre of the Eſcutcheon, and contains in Breadth one third Part thereof.

Thus, he beareth Azure, a *Feſſe* Or, by the Name of Eliott.

When the *Feſs* takes up leſs than its proper Breadth, it is called a *Bar*. See BAR.

FESSE-*Point*, is the exact Centre of the Eſcutcheon. See ESCUTCHEON.

It is thus called, as being the Point, through which the *Feſs* Line is drawn from the two Sides; and accordingly divides the Eſcutcheon into two equal Parts; when the Eſcutcheon is parted *Per-feſs*.

FESSE-*ways*, or *in Feſſe*, denotes Things born after the manner of a *Feſſe*, *i. e.* in a Line, or Range, a-croſs the Middle of the Shield, which the *French* call *en Feſſe*.

*Party per* FESSE, implies parted a-croſs the Middle of the Shield from Side to Side, through the *Feſſe* Point.

This the *French* expreſs by one Word, *Couppe*.

FESTI *Dies*, among the Antients, were *Feaſt*-Days, or Holidays. See FEAST.

*Numa* diſtinguiſh'd the Days of the Year into *Feſti*, *Profeſti*, and *Interciſi*.

The firſt were thoſe dedicated to the Gods: The ſecond, were thoſe allowed to Men, for the Management of their own Affairs; being thus called, according to *Feſtus*, *Quod procul ſint a religione Numinis divinæ*: The third were ſhared between the Gods and Men.

The *Feſti dies*, again, were divided, according to *Macrobius*, *Saturn. c.* 16. into Sacrifices, Epulæ, or Banquets; Ludi, or Games; and Feriæ. See FERIÆ, &c. And the Profeſti into *Faſti*, *Comitiales*, *Comperendini*, *Stati*, and *Præliares*. See FASTI, &c.

FESTINO, in Logick, one of the Moods of Syllogiſms. See MOOD.

In a Syllogiſm in *Feſtino*, the firſt Propoſition is an univerſal Negative; the ſecond, a particular Affirmative; and the third a particular Negative. See SYLLOGISM.

FESTIVAL, ſee FEAST, and FESTUM.

FESTOON, a *Garland*, or Ornament of Flowers, Fruits and Leaves intermix'd; antiently much uſed at the Gates of Temples, where Feaſts, or ſolemn Rejoycings were held; or at any other Places, where Marks of publick Joy and Gayety were deſired; as at Triumphal Arches, Tournaments, &c.

*Feſtoons*,

*Feſtoons*, or Garlands, were alſo put on the Heads of Victims in the antient heathen Sacrifices. St. *Paulinus*, in his Poem on St. *Felix*, does not forget the *Feſtoons* and Crowns of Flowers, plac'd at the Door of the Church, and on the Tomb of that Saint. See GARLAND.

The *Italians* have a ſort of Artificers, called *Feſtaroli*, whoſe Office is, to make *Feſtoons* and other Decorations for Feaſts.

The Word is *French*, *Feſton* form'd of the *Latin Feſtum*, Feaſt.

FESTOON, in Architecture, Sculpture, *&c.* A Decoration uſed by Architects, Painters, Joyners, *&c.* to enrich their reſpective Works.

It conſiſts of a String, or Collar of Flowers, Fruits, and Leaves tied together, ſomewhat biggeſt in the Middle, and ſuſpended by the two Extremes; from which, beſide the main Part which falls down in an Arch, two leſſer Parts hang perpendicularly.

This Ornament is made in Imitation of the *Feſtoons*, or long Cluſters of Flowers, plac'd by the Antients on the Doors of their Temples, *&c.* on feſtival Occaſions.

*Feſtoons* are now chiefly uſed in Freezes, and other vacant Places, required to be filled up, and adorn'd.

FESTUM, ſee FEAST.

In our Law Books, *Feſtum* is alſo frequently uſed for a general Court; in regard ſuch were antiently always kept on the Great Feſtivals of the Year. Thus, in our Chronicles we read, that in ſuch a Year the King kept his *Feſtum* at *Wincheſter*, &c. that is, he kept a Court there at that Time. *Rex apud Winton. maximum* Feſtum *& Convivium celebravit, tempore Natalis Domini, convocatis ibidem Principibus & Baronibus totius Regni.*

FET-*Lock*, in the Manage, the Hair that grows behind on a Horſes Foot: Hence, the Joint where it grows, is called the *Fetloch Joint.*

FETUS, ſee FOETUS.

FEUD, or FEUDE, FEODUM, is the ſame with *Fief*, or *Fee*. See FEE.

FEUD is alſo uſed in our antient Cuſtoms, or a capital Quarrel, or Enmity, called alſo *Feed*, or *Feeth.*

*Feud*, or *Feed*, called alſo *Feida*, and *Faida*, in the original *German* ſignifies *Guerram*, i. e. *Bellum*, War.

*Lambart* writes it *Feeth*, and ſaith, it ſignifies *Capitales inimicitias.*

In *Scotland*, and the North of *England*, *Feud* is particularly uſed for a Combination of Kindred, to revenge the Death of any of their Blood againſt the Killer and all his Race, or any other great Enemy.

FEUDAL, or FEODAL, of, or belonging to a *Feud*, or *Fee*. See FEE.

A *Feudal* Lord, in default of Fealty and Homage from his Vaſſal, may ſeize the Fruits of the Fee. A *Feudal* Matter: *Feudal* Juriſprudence: *Feudal* Seiſure.

A *Neapolitan* Lawyer, called *Caravita*, has not long ago publiſh'd a *Latin* Treatiſe of the *Feudal Law*, entitled, *Prælectiones Feodales.*

When once the Uſe of *Fees* was thoroughly eſtabliſh'd in *France*, they would need extend it much further: And almoſt all the great Offices of the Crown thus became *Feudal*; even the Courts of Juſtice were drawn in; in order to which they were annex'd to certain Lands, or Revenues.

The Deſign of theſe *Infeodations* was to render the Offices hereditary, after the manner of Fees, which were now become ſo. Thus the Offices of Grand Chamberlain, Grand Butler, *&c.* came to be held by hereditary Right.

FEUDATARY, a *Vaſſal*, or Perſon who holds of a Superior in *Fee*, i. e. on condition of yielding Fealty and Homage, or other Service. See FEE.

The Electors, Princes, and free Cities of *Germany* are all *Feudataries* of the Emperor. See EMPEROR, ELECTOR, *&c.*

*Fa. Daniel* obſerves, that *Charles* VII. forbad the Count *d'Armignac* to call himſelf in his Titles, *by the Grace of God Count d'Armignac*; ſuch Terms, which ſeem to exclude all Dependance, except on God, being an Innovation, prejudicial to the Right of the Soveraign, and which had never been allowed to any Duke, or Count, who was a *Feudatary* of any Crown. *Hiſtoire de France*, T. II. p. 1162.

FEUDBOTE, a Recompence, for engaging in a Feud, or Faction, and for the Damages conſequent therein; it having been the Cuſtom of antient times for all the Kindred to engage in their Kinſmens Quarrels, according to that of *Tacitus de Morib. Germanor. Suſcipere tam Inimicitias ſeu patris, ſeu propinqui quam amicitias neceſſe eſt.*

FEUDIST, a Lawyer, or Doctor learned, or much converſant about *Feuds*, or *Fees.*

*Du Moulin* is reckon'd a Great *Feudiſt.*

FEVER, *Febris*, in Medicine, a Diſeaſe, or rather Species, or Claſs of Diſeaſes; it being an Obſervation of *Sydenham*, that *Fevers* with their Appendages, make two Thirds of all the Diſeaſes of the Body. See DISEASE.

This Diſorder is very differently defined by Phyſicians, according to the different Views and Relations they conſider it in.

*Sydenham* defines it a ſtrenuous Endeavour or Effort of Nature, to throw off ſome morbific Matter, that greatly incommodes the Body.

*Etmuller*, with the ſame View, calls it a Motion, or Struggle of Nature, whereby with the Aſſiſtance of the Spirits, more or leſs alter'd, ſhe ſeeks to expell what is hurtful to the animal Oeconomy.

*Quincy* defines it an augmented Velocity of the Blood: Others, a Fermentation of the Blood, accompanied with a quick Pulſe, and exceſſive Heat.

The Cauſes of *Fevers* are innumerable; and the Diſeaſe even often ariſes in the ſoundeſt Bodies, where there was no previous morbific Apparatus; as Cacochymia, Plethora, *&c.* But merely from a Change of Air, Food, or other Alteration in the Non-naturals.

A *Fever*, *Boerhave* obſerves, is an inſeparable Companion of an Inflammation.

The Symptoms are many: Every *Fever* ariſing from any internal Cauſe, is attended with a quick Pulſe and unuſual Heat, at different Times, and in different Degrees. Where theſe are intenſe, the *Fever* is *acute*; where remiſs, *ſlow.* The Diſeaſe begins almoſt always with a Senſe of Chilneſs; and in its Progreſs is chiefly diſtinguiſh'd by the Velocity of the Pulſe: So that a too quick Contraction of the Heart, with an increaſed Reſiſtence or Impulſe againſt the Capillaries, furniſhes the proper Idea of a *Fever*; and he Health of the Patient is the ſcope Nature chiefly aims at in the Diſeaſe.

The other attendant Symptoms are uſually a laborious and diſturb'd Reſpiration; an uniform, high colour'd Urine; a Parchedneſs and Dryneſs of the Tongue, Mouth, *&c.* a Clammineſs of the Saliva; Thirſt; Wakefulneſs; and Nauſea againſt every thing but thin diluting Liquors.

From theſe Symptons, Dr. *Morgan*, our lateſt Writer on that Subject, lays it down as a Principle, that in every *Fever*, there is a *general Obſtruction, and Diminution of the glandular Secretions*; that is, a great Part of the Lymph, or Serum of the Blood, which ought to be continually drain'd off by the Glands, is, during the *Fever*, ſo retain'd in, and cloſely united to the Maſs, that it circulates together with it in the Veins and Arteries. This he endeavours to prove to be the State and Condition of the Blood in the Production of a *Fever*, by accounting for all the above mentioned Phænomena from it, as the juſt and adequate Effects of ſuch a Cauſe. How he does it, ſee in his *Philoſ. Princ. of Med.* p. 207, *&c.*

The general Indication in the Cure of *Fevers*, is, to reſtrain the Commotion of the Blood, with in the Bounds agreeable to the End, Nature had in raiſing it, *i. e.* neither to let it riſe too high, for fear of the Conſequence; nor yet keep it too low, for fear of fruſtrating the Endeavour of Nature. And hence the Rule and Meaſure of letting more, or leſs Blood, or none at all.

The Cure of *Fevers*, *Boerhave* ſummarily comprehends in correcting the ſharp, irritating febrile Matter, diſſolving the Lentor, and mitigating the Symptoms. If Nature ſeem to carry the *Fever* too high, it muſt be moderated by Abſtinence, thin Diet, drinking of Water, bleeding and cooling Clyſmas: If ſhe bring it on too ſlowly, it muſt be excited by Cardiacs, Aromaticks, Volatiles, *&c.* The Cauſe removed, the Symptoms ceaſe of courſe; and if they can be bore without much Danger of Life, it were beſt not to enter into any particular Cure thereof: If they be unſeaſonable, or too ſevere, they are each to be abated with the proper Remedies.

*Sydenham* recommends an Emetick in the Beginning of a *Fever*; or if it have been then omitted, in any other Stage thereof; eſpecially where there is a Propenſity to Vomiting: For want of this, a Diarrhæa frequently ſucceeds, which is exceedingly dangerous. After this, he uſes a Paregorick; and the following Days, if there be no Indication to repeat the Venæſection, nor any Diarrhæa, he preſcribes every other Day an Enema, till the twelfth Day, when Matters coming to a Criſis, he has Recourſe to hotter Medicines, in order to promote and accelerate it. He adds, that if the Diſeaſe proceed well, and the Fermentation be laudable, there is no occaſion for any Phyſick at all. About the 15th Day, if the Urine be found to ſeparate, and give a Sediment; and the Symptoms be abated, a Cathartick is uſually order'd, leſt the Sediment returning into the Blood again, occaſion a Relapſe. Nothing cools the Patient, and abates the *Fever* ſo much, as a Cathartick after Venæſection.

The more acute the *Fever*, the thinner, according to *Etmuller*, muſt be the Diet. 'Tis no matter, if the Patient ſhould faſt for ſeveral Days running; for never did feveriſh Perſons die of Hunger: Eating, always exaſperates the Diſeaſe. Vomitories, he allows the principal Place in the Cure of all *Fevers*; but, as a Patron of the hot Regimen,

men, aſſigns Sudorificks the ſecond. Spirit of Sal Ammoniack, or its Sal Volatile, he obſerves is an univerſal Febrifuge, and rarely fails: All ſugar'd Things are hurtful.

*Hippocrates*, in all *Fevers*, preſcribes Wine. Dr. *Hancock*, Water. See FEBRIFUGE.

So long as the Urine remains crude, that is, does not give a Sediment, the Patient's Caſe is very dubious: But when once the Coction commences, and the Urine ſeparates, the great Danger is over.

Among the Signs of Death, the ſame Author adds, there is none more certain, than a frequent blowing of the Noſe, without any Diſcharge of Matter. A ſtrong, equable Pulſe, with Deliria, Tremors, Twitches of the Tendons, and other Symptoms, fatal in Diſeaſes of the nervous kind, always preſage well in *Fevers:* On the contrary, a quick, weak, faltering Pulſe, howſoever favourable the other Symptons may ſeem, infallibly proclaim Death at the Door. *Morton.*

It appears, by Obſervation, that a frequent letting of Blood, renders Perſons more inclinable to *Fevers.*

There are various Kinds of *Fevers*, denominated and diſtinguiſh'd from the particular Cauſe that produce them; the Time they continue; their Acceſſes, or Returns; and their ſeveral Symptoms.

The moſt general and genuine Diviſion of *Fevers*, is into *Eſſential*, and *Symptomatick.*

An ESSENTIAL FEVER, is that whoſe primary Cauſe is in the Blood it ſelf; and which does not ariſe as an Effect, or Symptom from any other Diſeaſe in the Solids, or other Parts. This is, what we abſolutely and properly call a *Fever.*

A *Symptomatick* FEVER is that which ariſes as an Accident, or Symptom of ſome other antecedent Diſorder, as an *Inflammation*, *Phlegmon*, *Eryſipelas*, *Impoſtume*, ſmall *Pox*, *Pleuriſy*, &c. Whence it is peculiarly denominated *Inflammatory*, *Eryſipelatous*, *Purulent*, &c.

*Eſſential Fevers* are generally diſtinguiſhed into *Continued* and *Intermitting.* Others chuſe to divide them into *Diary*, *Intermitting*, *Continent*, and *Continued.*

A CONTINUED FEVER is that which gives the Patient no Reſpite, or Intermiſſion; but ſticks to him from its firſt Seizure, to its final Period. This is ſubdivided into *Putrid*, and *not putrid.*

A *Continued Fever not putrid*, is that wherein the Parts of the Blood are not ſo diſſolved and broke, as to give Room and Occaſion for the principal Parts thereof to be ſecreted: Or that, wherein there is not any Diſcharge of putrid, purulent Matter into the Blood. Of this there are two Kinds, the *Diary*, and *Synochus*; to which ſome add the *Hectick.*

A *Diary Fever* is that, which does not ordinarily hold beyond 24 Hours. 'Tis alſo called *Ephemera*, from the *Greek* ἡμέρα, Day. It is the gentleſt of all *Fevers:* Is frequently got by too much Exerciſe, or other external Accident. It is cured by Reſt alone, and keeping a-bed: If it remain for ſeveral Days, it is either called a continued *Ephemera*, or Simple *Synochus.*

A *Hectick Fever* is a ſlow, durable *Fever*, which extenuates and emaciates the Body by inſenſible degrees. It is thus called from the *Greek* ἕξις, Habitude, as being difficult to get rid off.

It has three Stages; the firſt, while it conſumes the Juices of the Body: The ſecond, when it exhauſts the fleſhy Subſtance of its Humidity: And the third, when it lays hold of, and deſtroys the Solids themſelves: In which laſt Stage it is reputed incurable. Its Effect is ſomewhat like that of a Flame; firſt conſuming the Oil of the Lamp; then the Moiſture of the Wick; and laſtly the Wick it ſelf. But this *Fever* is frequently conſider'd as of the *Symptomatick*, or ſecundary kind, ariſing in *Phthiſes*, &c. See HECTICK *Fever.*

A *Putrid*, or *continued Putrid Fever*, is that wherein the Texture of the Blood is render'd ſo lax, or even diſſolv'd, that its Parts or Principles ſeperating, ſome of the principal are ſecreted, and loſt. See BLOOD.

Or *Putrid Fevers* are frequently conſider'd as ſecundary ones, ariſing from the Diſcharge of putrid, purulent Matter from ſome morbid Part, as an Ulcer in the Lungs, &c.

*Putrid Fevers* are divided into *Simple*, and *Compound* or *Remitting.*

A *Simple continued putrid Fever*, or a *Continued Fever*, properly ſo called, by the *Greeks* called Συνοχὼ, is that which continues uniformly, from firſt to laſt, without any Fits or Periods of Exaſperation and Remiſſion of Heat, and the other Symptoms.

*Willis* divides the *Putrid Fever* into four Stadia, or Stages. The *Beginning*, which is attended with a Chillneſs, Shivering, Wearineſs, Thirſt, Wakefulneſs, Pain in the Head and Loins, Nauſea, and Vomiting: The *Increaſe*, wherein the former Symptoms are heighten'd, with the Addition of Deliria, convulſive Motions, Foulneſs of the Mouth, high turbid Urine, without any laudable Sediment, or Hypoſtaſis; the *State*, which contains the Criſis, which in this Diſeaſe is much what the Paroxyſm is in Intermitters: For as that returns at certain Hours, ſo do the critical Motions in continued *Fevers* happen on the fourth, fifth, ſixth, or ſeventh Day. See CRISIS. The laſt Stage is the *Declenſion*, which ends either in Recovery, or Death.

Theſe *Fevers* are divided into *Burning*, and *Slow.*

*Ardent*, or *Burning Fever*, called by the *Greeks* καυσὼ, is a very acute *Fever*, attended with a vehement Heat, intolerable Thirſt, a dry Cough, Delirium, and other violent Symptoms.

It frequently kills on the third, and fourth Day; rarely exceeds the ſeventh.

It often goes off in a Hemorrhage, on the third, or fourth Day; which, if it prove too ſparing, is deadly. Sometimes it goes by Stool, Vomiting, &c. and ſometimes ends in a Peripneumony.

To the Claſs of *Burning Fevers* ure reducible, the *Liperia*, *Aſſodes*, *Elodes*, &c.

The *Fever Liperia* is a burning *Fever*, wherein the Heat is very intenſe within ſide, and at the ſame time the external Parts cold.

The *Aſſodes* is a burning *Fever*, attended with great Inquietudes, Nauſeas, Vomitings, &c.

The *Elodes* is a *Fever*, wherein the Patient ſweats continually.

The *Syncopal Fever* is that attended with frequent Swoonings.

The *Epeal Fever* is that wherein both Heat and Cold are felt in the ſame Part at the ſame Time.

*Slow Fevers* are gentle, but durable ones, which conſume the Patients by degrees.

They uſually ariſe from Diſorders in the Lympha, or Pituita; whence *Sylvius* calls them *Lymphatick Fevers.*

The principal of theſe are the Catarrhal, attended with a Catarrh, Cough, Hoarſeneſs, &c. And the *Scorbutick Fever*, into which acute *Fevers*, and ſometimes Intermitters degenerate. To this Claſs are reducible,

*Colliquative Fevers*, wherein the whole Body is conſumed and emaciated in no long Time; the ſolid Parts, with the Fat, &c. melted down, and carried off by a Diarrhœa, Sweat, Urine, &c. See COLLIQUATION.

A REMITTING FEVER, called alſo a *Continent*, Συνεχὴς, and a *compound continued Fever*, is that which continues ſome Time, without any gradual Increaſe of Heat; yet is liable to alternate Fits of Remiſſion and Aggravation; either ſtated and periodical, or irregular.

Of this there are divers Kinds, denominated from the Periods of returning; as the *Remitting*, *Continued*, *Quotidian*, the *Continued Tertian*, *Continued Quartan*, &c. which are only a continued *Fever*, whoſe Acceſſes or ſeverer Fits return every Day, or any other Day; or every third Day; or every fourth Day.

Some enumerate divers other more complicated continued *Fevers*; as the *double* or *triple*, *Quotidian*, which has two or three Paroxyſms every Day: *Double*, or *triple Tertian*, or *Quartan*, which have two or three every third or fourth Day: The *Semi-tertian*, by the *Greeks* called ἡμιτριτὰιὸ, which conſiſts of a *Continued*, and two intermitting *Fevers* of different Kinds, *viz.* a Quotidian, and Tertian. The Patient, beſide a Continued *Fever*, has an extraordinary Fit every Day; and every other Day two.——

Others divide the *Remitting*, Συνεχὴς, *Continent*, or *Compound Continued Fever*, into *Simple*, and *Spurious.*

The *Simple Remitter* returns regularly, and is only diſtinguiſh'd from an Intermitter, in that the feveriſh Heat in the Intervals of this latter is never quite extinguiſh'd; and that the Paroxyſms don't begin with ſo much Chillneſs and Horror; and go off in profuſe Sweats.

The *Spurious Remitter* is attended with grievous Symptoms in the nervous Kind, reſembling thoſe of the Rheumatiſm, Colick, Pleuriſy, and other inflammatory and ſpaſmodick Diſeaſes; beſide immoderate Excretions, Vomitings, Diarrhœas, &c. Whence its Returns are uncertain, and variable.

The *Simple* rarely, if ever, kills; the *Spurious*, frequently. Sometimes it degenerates into a malignant Συνὸχὼ.

The firſt is cured with the Cortex Peruv. almoſt as infallibly an Intermitter; the febrile Ferment being much the ſame in both: And the ſame Medicine is found almoſt a ſure, tho' not ſo ſpeedy a Remedy of the Spurious, if properly applied.

An INTERMITTING FEVER, or *Ague*, is that which ceaſes, and returns again alternately, at ſtated Periods.

In this kind, Cold, and Heat, Shivering, and Sweating ſucceed each other.

The Paroxyſms are attended with Sickneſs, Nauſea's, Vomitings, Headach, Pain in the Back and Loins, &c. The Paroxyſms are acute, but the Diſeaſe uſually more or leſs chronical.

No body was ever killed of an intermitting *Fever*, except in the firſt Stage of the Paroxyſm, during the Shiver-

ing, cauſed by the Oppreſſion of the Spirits. When the Diſeaſe becomes of a very old ſtanding, it ſometimes degenerates into other very fatal ones.

As to the Cure, 'tis found by abundant Obſervations, that neither Bleeding, nor Emeticks, nor Catharticks, nor any other Remedy, adminiſter'd during the Fit, avail any thing. A juſt Doſe of *Vinum Benedictum*, three Hours before the Paroxyſm, *Morton* aſſures us, has often cured it: *Antimonium Diaphoreticum*, a little before the Paroxyſm, has the like Effect: And Salt of Wormwood is commended on the ſame Occaſion. *Dolæus* mentions *Lapis Lazuli* taken in Spirit of Wine before the Fit, is admirable.

And ſeveral Bitters, as Carduus Benedictus, Gentian Root, Camomile Flowers, Pulvis Febrifugus, &c. were much valued before the Invention of the Cortex Peruv. But that Bark has almoſt thrown them all out of uſe; being by the univerſal Conſent of all Phyſicians allowed a Pianacea, or Specifick for all intermitting *Fevers*, on all Seaſons, Ages, and Conſtitutions. See CORTEX *Peruvianus*; ſee alſo FEBRIFUGE.

Intermitting *Fevers* are of divers kinds, as the

*Quotidian Fever*, where the Paroxyſm returns every Day.

*Double Quotidian*, which returns twice in twenty four Hours.

*Tertian Fever*, which only returns every other Day; which again is, either Legitimate, or Spurious.

The *Legitimate Tertian* only holds twelve Hours, and is followed by an abſolute Intermiſſion.

The *Spurious Tertian* exceeds twelve Hours, and ſometimes holds 18, or 20.

The *Double Tertian* is that which returns twice every other Day. The Word *Double Tertian* is alſo uſed, where the *Fever* returns every Day, like a Quotidian; only at different times of the Day; the third Fit anſwering to the Time of the firſt; the fourth to that of the ſecond, &c.

The *Quartan Fever* is that which only returns every fourth Day; leaving two Days Intermiſſion between every two Fits.

The *Double Quartan* is that which has two Fits every fourth Day. The ſame Name is given to a *Fever*, which returns two Days ſucceſſively; only leaving one Day's Intermiſſion.

*Triple Quartan Fever* is that which has three Fits every fourth Day: Or that which returns every day like a Quotidian, only at different Seaſons of the Day; the fourth Fit anſwering to the Time of the firſt; the fifth to the ſecond, &c.

There are alſo intermitting *Fevers*, which only return every *fifth* Day, or every *ſixth*, or every *ſeventh*, and at other Intervals.

Laſtly, there are ſome extraordinary Species of *Fevers*, not reducible to any of the forementioned Claſſes; as *Malignant*, *Eruptive*, and *Peſtilential Fevers*.

*Malignant* FEVERS are thoſe, wherein the uſual, regular Symptoms do not appear (Nature being oppreſs'd with the Malignity of the febrile Matter) but other foreign Symptoms ariſe; as a Pain about the Stomach, and Præcordia; a livid Complexion, with the Face much disfigur'd, &c. Sometimes Efflorescences on the Skin, &c.

Some Authors, from microſcopical Obſervations affirm, that in all malignant *Fevers* the Blood is ſo corrupted, that Swarms of little Worms are generated therein, which occaſion moſt of the Symptoms.

In all malignant *Fevers* the Blood is too fluid. Bloodletting has here no Place: Vomitories do well at firſt; afterwards Sudorificks and Alexipharmachicks: Bliſters are commended in the Progreſs of the Diſeaſe.

*Eruptive* FEVERS are thoſe, which beſide the Symptoms common to other *Fevers*, have their Criſes attended with cutaneous Eruptions. Such are thoſe of the ſmall Pox, Meazles, Petechiæ, the Purple or Scarlet *Fever*, and Miliary *Fever*: Their other Symptoms are, a grievous Oppreſſion of the Breaſt; laborious, ſhort Breadth, obſtinate Waking; Spaſms, ſoar Throat, Cough, &c. See PETECHIÆ, SMALL-POX, MEAZLES, and MILIARY *Fever*.

*Peſtilential* FEVERS, are acute, contageous, and mortal Diſeaſes. Some will have the *Fever* to be the Diſeaſe or Plague it ſelf: Others only account it a Symptom of the Plague. See PLEAGUE.

*Petechial* FEVER, is a malignant *Fever*, wherein, beſide the other Symptoms, on the fourth, or more frequently the ſeventh Day, *Petechiæ*, or red Spots, like Fleabites, appear, chiefly on the Breaſt, Shoulders, and Abdomen. The Spots afterwards turn paler, then yellow, and ſo diſappear. When they grow livid, or black, they uſually prove fatal.

This *Fever* is contagious, and often Epidemical. It is treated much as thoſe juſt mentioned.

FEUILLANS, an Order of Religious, cloathed in White, and going bare-foot; who live under the ſtrict Obſervance of the Rule of St. *Bernard*. See BERNARDINES.

The Name was occaſioned by a Reform of the Order of *Bernardines*, firſt made in the Abby of *Feuillans*, a Village in *France*, five Leagues diſtant from *Tholouſe*, by the Sieur *Barriere*, who was Abbot thereof in 1589.

It was approved of by Pope *Sixtus* V. And the Popes *Clement* VIII. and *Paul* V. granted it its particular Superiors. King *Henry* II. founded a Convent of *Feuillans* in the *Fauxbourg*, St. *Honorius* at *Paris*.

There are alſo Monaſteries of Nuns, who follow the ſame Reform, called *Feuillantines*.

FEUILLE *de Scie*, in Heraldry, expreſſes that an Ordinary, as a Feſſe, Pale, or the like, is indented only on one Side; in regard it then looks like a *Saw*, as the *French* Phraſe imports. See INDENTED.

FEWEL, or FUEL, in Philoſophy, the *Pabulum* of Fire, or whatever receives, and retains Fire, and is conſumed, or render'd inſenſible thereby. See FIRE.

Pure Fire, if left to it ſelf, would diſperſe, and diſappear: To preſerve it, it is neceſſary there be ſome *Fuel*, to ſuſtain, and keep it together.

The only proper *Fuel*, known in all Nature, is Oil, commonly called Sulphur: And all Bodies, whether vegetable, foſſil, or animal, are only inflammable, as they contain Oil in them.

Oil feeds and ſuſtains Fire by virtue of its ramoſe, tenacious Particles, which are diſpoſed to be put into a moſt vehement, rotatory Motion, before they will let each other go. But, by this rotatory Motion the Fire at length breaks and comminutes the ramoſe Particles of the *Fuel*; till, ceaſing to cohere, they are no longer able to ſuſtain the Fire.

In the popular Senſe of the Word, *Fewel* is any Body, which contains this Pabulum, or Oil, in ſuch Quantity, as to fit them for culinary Uſes.

Such 1°, Are dry, or green Vegetables; eſpecially thoſe abounding in Oil; as the roſinous, and balſamick Woods.

2°, Foſſil Coals, whether vegetable, or animal; as being little elſe, but the oily Part of the Vegetable, or animal, purged of the Salt, Water, &c. ſo that the blacker they are, the better.

3°, Foſſil, and bituminous Earths, as Turf, and Peat, which are a fatty Earth, dug out of the Ground.

4°, All mineral Sulphur, whether pure, or mix'd with Earth, Stone, &c.

5°, The Fat and Dungs of Animals dried.

And 6°, The Productions of Chymiſtry, which are either Coals, or Oil, or oily Bodies; as, inflammable Spirits, produced by Fermentation, Putrifaction, &c. See COAL, TURF, &c.

FIBRA *Auris*, ſee EAR.

FIBRE, in Anatomy, a ſimilar Part of the animal Body, called alſo *Filament*; and when very ſmall, *Fibrilla*, or *Capillament*. See CAPILLAMENT.

A *Fibre* is a long, ſlender Thread; which being variouſly interwove, or wound up, forms the various ſolid Parts of an animal Body; ſo that *Fibres* are the Stamen, or Matter of the Animal. See SOLID, and STAMEN.

Anatomiſts uſually diſtinguiſh four kinds of *Fibres*, viz. *Carnous*, or *Fleſhy*; *Nervous*; *Tendinous*; and *Oſſeous*, or *Bony*; of one or other of which all the other Parts conſiſt. See FLESH, NERVE, TENDON, BONE, MUSCLE, and SENSATION.

*Fibres* again are divided, with reſpect to their Situation, into *Direct* or *Longitudinal*, which proceed in right Lines; *Tranſverſe*, which cut, or go a-croſs the former, at right Angles: And *Oblique*, which interſect, or croſs them at unequal Angles.——

Some Anatomiſts reduce the animal *Fibres* to two Species, viz. *Muſcular*, or *Motive*; and *Nervous*, or *Senſitive*.

The *Nervous* FIBRES are the minute Threads, whereof the Nerves are compoſed. They ariſe from the Medulla of the Brain; as that does from the Cortex; and that again from the laſt, fineſt Ramifications of the carotid and vertebral Arteries: So it is probable, theſe Nerves are only Continuations of thoſe Arteries. See BRAIN.

From every Point of the Cortex there ariſes a fine, medullary *Fibrilla*, which uniting in their Progreſs form the Medulla of the Cerebrum, Cerebellum, and Oblongata; and *Fibrillæ* ariſing from each Point of theſe again, form the ſpinal Marrow. See MEDULLA.

From the medullary Subſtance of all theſe Parts ariſe Nerves; which are Combinations or Aſſemblages of a Number of theſe minute medullary *Fibres* incloſed, after they are got out of the Cranium in a common Membrane, or Coat from the Pia mater: And 'tis probable, that to each Nerve, there concur *Fibres* from all three; as alſo that theſe *Fibres* are ſo many fine hollow Tubuli or Canals, for the Conveyance of a fine Juice or Spirit from the Brain throughout the Body. See NERVE.

The *Muſcular* FIBRES are thoſe whereof the Muſcles, or fleſhy Part the Body are compoſed. Every Muſcle is diviſible into other leſs ones; and theſe into others, ſtill leſs, beyond all Imagination. The laſt and ſmalleſt are the muſcular

muſcular *Fibres*; which whether or no they be veſicular, is ſome queſtion.

Now, there are Nerves propagated to every Muſcle, and diſtributed through the Body thereof; ſo as there is no aſſignable Point wherein there is not ſomewhat of a Nerve. Add, that all the Nerves here diſappear; and that in other Parts of the Body, the Extremities of the Nerves are expanded into Membranes. 'Tis therefore probable, the muſcular *Fibres* are only Continuations of the nervous ones. See MUSCLE.

The animal *Fibres* have different Properties; ſome are ſoft, flexible, and a little elaſtick: And theſe are either hollow, like ſmall Pipes; or ſpongious, and full of little Cells, as the nervous and fleſhy *Fibres* above mentioned. See FLESH.

Others are more ſolid, flexible, and endowed with a ſtrong Elaſticity, or Spring; as the membranous and cartilaginous *Fibres*. See MEMBRANE, *&c.*

A third ſort are hard, and inflexible, as the *Fibres* of the Bones. See BONE.

Now of all theſe, again, ſome are very ſenſible, and others deſtitute of all Senſe: Some ſo very ſmall, as not to be eaſily perceived; and others on the contrary, ſo big, as to be plainly ſeen; and moſt of them, when examin'd with a Microſcope, appear to be compoſed of ſtill ſmaller *Fibres*. Theſe *Fibres* firſt conſtitute the Subſtance of the Bones, Cartilages, Ligaments, Membranes, Nerves, Veins, Arteries, and Muſcles. And again, by the various Texture, and different Combination of ſome, or all of theſe Parts, the more compound Organs are framed; ſuch as the *Lungs*, *Stomach*, *Liver*, *Legs*, and *Arms*, the Sum of all which make up the Body. See BODY.

The great Property of *Fibres*, is *Elaſticity*, or a Power of Contraction, after the diſtractile Force is removed; upon which the Knowledge of the animal Mechaniſm greatly depends. See ELASTICITY.

To underſtand this, it may be obſerved, that any Membrane or Veſſel may be divided into very ſmall *Fibres*, or Threads; and that theſe Threads may be drawn out into a very conſiderable Length, without breaking; and that when ſuch external Force is removed, they will again reſtore themſelves to their proper Dimenſions. It is farther alſo manifeſt, that this Property is preſerved to them by a convenient Moiſture; becauſe if one of thoſe Threads be dried, it immediately looſes it; ſo that upon the Application of any Force to ſtretch it, it will break; as alſo will its lying ſoked in Liquor too much, render it flaccid, and deſtroy all its Power of Reſtitution, when diſtended.

Now ſome Hints of that Configuration of Parts, upon which this Property depends, may be had from the Contrivance and Properties of a Syringe; with the Reaſon, why it is ſo difficult to draw back the Embolus, when the Pipe is ſtopp'd; and the Neceſſity of any Liquors following it, wherein the Pipe is immerſed.

All that is neceſſary hereto, is, that the Embolus be ſo exactly adapted to the inner Surface of the Barrel, as to prevent any Air paſſing between them, when it is drawn up: It matters not what Figure the Barrel is of, ſo that the Embolus is well fitted to it. A Caſe of Syringes therefore might be contrived, wherein every Barrel may alſo ſerve as an Embolus to its exterior, which immediately includes it.

In this manner it is not difficult to imagine a continued Series of Particles, ſo put together, that they may be moved, and drawn upon one another, without ſuffering the Air immediately to enter into the Interſtices made by their Diſtraction; whereupon as ſoon as that Force, which drew them, is removed, they will, for the very ſame Reaſon as the Embolus of a Syringe, ruſh up again into their former Contacts.

As ſuppoſe *A. B.* (Fig. 1.) two Particles touching one anothe in *e. f.* and *C. D.* two others, covering the oppoſite Sides of their Contacts. It is alſo to be ſuppoſed, that on the other Sides they are covered with other Particles in the ſame manner, as by *C. D.* ſo that the Places of their Contacts are on all Sides covered from the Air, or the Inſinuation of any fluid Body.

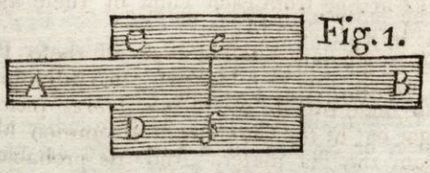

Fig. 1.

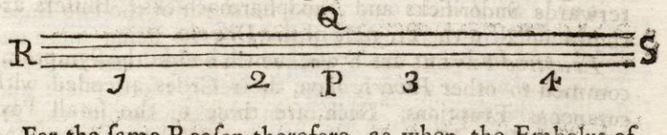
If now *A. B.* by an external Force, greater than that of their Coheſion be drawn from each other, as far as *G. I.* and *H. K.* (in Fig. 2.) as ſoon as that Force is removed, they will again run into their former Contacts in *e. f.* (Fig. 1.) that is, if they are not ſo far as to bring their tranſverſe Surfaces to coincide with *C.* and *D.* for then the Air, or circum-ambient Fluid will interpoſe and prevent their Reunion; ſo that by this Contrivance, ſo much of *A.* and *B.* as is incloſed by other ſurrounding Particles, is as the Embolus of a Syringe, and the Particle ſurrounding them as its Barrel. And therefore when *A.* and *B.* are diſtracted from their Contacts in *e. f.* it will be with ſome Difficulty; and when the diſtracting Force is taken away, they will again run up in their former Contacts; juſt as the Embolus of a Syringe, and for the ſame reaſon. See SYRINGE.

Fig. 2.

It is not rigidly contended that this muſt exactly be the Contexture of a *Fibre*; but only ſome thing like this; whereby the Interſtices of the interior Orders are covered by the exterior in ſuch a manner, that when the Thread is diſtended, that is, when its conſtituent Parts are drawn from their tranſverſe Contacts, neither the Air, nor any other external Fluid can get between them, ſo as to hinder their Re-union, as ſoon as ſuch Force is withdrawn; that is, if their Diſtraction, as was before ſaid, be not ſo far as to bring their tranſverſe Surfaces to a Co-incidence with one another; for then the circum-ambient Fluid will interpoſe, that is, the Thread will be broke.



But beſides this peculiar Arrangement of a determinate Set of Particles to compoſe the main Suſtance of an animal *Fibre*, endowed with the Properties above-mentioned; it ſeems not at all unreaſonable to conjecture, that into their Compoſition alſo enters a common Capſula, or Covering, which aſſiſts in the wrapping up, and holding together thoſe Faſciculi, or Series of Particles already deſcribed; not much unlike the Perioſtium of the Bones; the Contexture of which covering, reſembling that of a Net, cannot any ways hinder, either the tranſverſe, or longitudinal Diſtractions of the other Parts.

Suppoſing this, then, the Contexture of a *Fibre*, it will be neceſſary to conſider, what farther Requiſites are needful to put them into that State, which they are in, in a living Body; to ſhew how they are maintained in continual Motion; and what are the Conſequences of it.

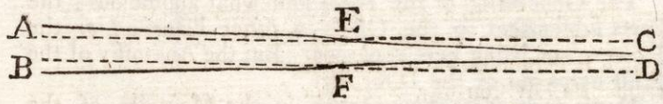
And 1°, it is neceſſary to take notice, that all the *Fibres* in a living Body are in a State of Diſtention; that is, they are drawn out into a greater Length than they would be in, if ſeparated from any Part, and taken out of the Body; which is demonſtrable upon any Solutio Continui, as in the tranſverſe Diviſion of a Nerve, or Artery; for immediately the divided Parts run up, and leave a great Diſtance between them; and the Fluids contained between them, upon ſuch Contraction are ſqueezed out. This alſo ſhews, that their natural Diſtractions are owing to ſome Fluids being propelled into the Veſſels which they compoſe, with a Force greater than their Endeavours of Reſtitution, ſo far as to obtain a cloſe Contact of all their tranſverſe Surfaces; but yet leſs than that which is neceſſary to diſtract them, ſo as to bring them into a Coincidence; for then the Veſſels would break.

2°, This State of Diſtraction muſt neceſſarily leave Vacuola between all the tranſverſe Surfaces; as betwen *G. I.* and *H. K.* (in Fig. 2.) which may be repreſented by the ſeveral Series of Particles (Fig. 3.) which Vacuola will continue as long, as the longitudinal Surfaces of its component Parts continue to cloſe to one another, as to prevent the Inſinuation of any foreign Matter, how ſubtile ſoever between them.

Fig. 3.

For the ſame Reaſon therefore, as when the Embolus of a Syringe is drawn, and the Pipe is ſtopp'd, there muſt be continually a *Niſus reſtituendi*, or an endeavour of Contraction.

There is alſo this farther Neceſſity of their being continued in a State of Diſtraction, becauſe if they were cloſely to touch one another in all Parts, they could not be put into, and continue in thoſe undulatory Motions, which they are always in, in a living Body, without being altered in their Figures and Contextures.



3°. It being manifeſt, that all animal *Fibres* are continued by the perpetual ſucceſſive Impulſe of the Fluids, in ſuch undulatory Motions; beſides this Neceſſity of their Diſtraction, they muſt alſo be continually moiſten'd with ſome convenient Fluid; becauſe otherwiſe their continual Attritions againſt one another, would wear them out, as well as render it difficult to move them: The Fluid alſo for this purpoſe, muſt be very ſoft and ſubtile, becauſe otherwiſe it cannot inſinuate into all the Interſtices of the *Fibres*, without ſo far ſeparating their Parts, as is inconſiſtent with that Contexture and Mechaniſm here laid down.

Upon this View there ariſes a very natural Explication of ſeveral Terms, much uſed by mechanical Writers; ſuch as *Diſtraction*, *Contraction*, *Vibration*, *Undulation*, *Tonick Motion*, *Concuſſion*, *Relaxation*, *Corrugation*, and *Elaſticity* of the Solids; all which are but different ways of expreſſing the various Modifications and Diſpoſitions of thoſe Machinulæ with which all the *Fibres* are compoſed.

Thus much being granted of the Contexture of a *Fibre*, and the Requiſites for its Office, it is to be conſider'd, how it comes firſt to be ſet in Motion, and by what Mechaniſm it is afterwards carried on. Suppoſe then the *Fibre* (Fig. 3.) in ſuch a State of Diſtraction, as before mentioned; it is certain by *Req.* 2. that in all its Parts there is a *Niſus reſtituendi*: Where, then, any external Impulſe is made againſt it from *R* to *S*, ſucceſſively thruſting it from *P* towards *Q*, it is certain that againſt 1 for inſtance, the Thread will be more diſtracted, than in any other Part; and thereby will there be a greater Endeavour of Reſtitution. And therefore the Impulſe paſſing on towards S, all the conſtituent Machinulæ, 1, 2, 3, 4, will ſucceſſively move after one another.

To make this Matter ſtill more plain, let a Portion of an Artery be repreſented by Fig. 4. through which the Blood is continually propelled in a Direction parallel to its Axis: Nothing is more certain, than that if it were not for the Reſiſtance of the Sides of the Artery at *E F*, the Blood ſetting out at *A*, *B*, would go on by the prick'd Lines *C*, *D*; and therefore it cannot but ſtrike againſt the Sides of the Artery at *E*, *F*, and diſtract them there more, than any where elſe; whereby their Endeavours of Reſtitution will be there the greateſt: And therefore, when the Impulſe of the Blood has raiſed them to a certain Meaſure, wherein their Endeavours of Reſtitution will exceed the Impulſe which raiſed or diſtracted them, their contractile Powers will draw them again into the ſame Dimenſions; and conſequently the Blood will be thruſt forward into the next Section of the Artery, and ſo on ſucceſſively from one to another, thro' the whole Courſe of its Circulation; the Contraction of one Section of an Artery being the true Cauſe of the Blood's Impulſe againſt, and raiſing the next. See CIRCULATION.

Fig. 4.

FIBRE is alſo uſed in Phyſicks, for long, fine Parts, or Threads, whereof other natural Bodies are compoſed, and which prevent their being friable, or brittle.

Trees, Plants, and Fruits have their *Fibres*, or Capillaments; which are Modifications of their woody Subſtance, penetrating and terminating in the Parenchyma, or Pith. See PLANT, WOOD, &c.

In the common Uſe, *Fibre* is only applied to the ſlender, capillary Roots of Plants.

*Kepler* even gives *Fibres* to the Stars; and explains ſeveral of their Motions from the Situation of their *Fibres*.

FIBRILLA, a little Fibre, or Capillament. The Word is a Diminutive of *Fibra*. Each Fibre is diviſible into a number of leſſer Threads, called *Fibrillæ*. See FIBRÆ.

FIBULA, in Anatomy, one of the Bones of the Leg, called alſo *Perone*, *Sura*, and *Focile minus*. See BONE, LEG, FOCIL, &c.

The *Fibula* is the outer, and ſlenderer of the two Bones of the Leg; and yet, notwithſtanding its being more expoſed, and its being much weaker than the inner Bone, or Tibia, 'tis not ſo often broken, as being more pliant and flexible; ſo that the Tibia often breaks, leaving the *Fibula* entire.

The *Fibula* is join'd or articulated with the Tibia, at both Ends, by a kind of cloſe Arthrodia.

It is divided into three Parts; the *upper*, which is a round Head, which terminates a little below the Knee, and receives a lateral Protuberance of the Tibia into a ſmall Sinus; by which the Articulation of this Part is effected: The *Middle* is very ſlender, long, and triangular, like the Tibia, but ſomewhat more irregular. The *lower* Part is receiv'd into a Sinus of the Tibia, and then ſhoots out into a large Proceſs, called the Malleolus internus, or outer Ankle: It is a little hollow on the Inſide, to give Liberty for the Aſtragalus to move; and a little Convex on the Out-ſide, that it may have the more Strength, to retain the Aſtragalus.

The Tibia and *Fibula* only touch at the two Extremes, like the Radius, and Ulna: The Space between them is filled up with a ſtrong membranous Ligament, which ties them together, and ſtrengthens the Articulation. See TIBIA.

FIBULA, *Button*, in Surgery, an Inſtrument in uſe among the Antients, for the cloſing of gaping Wounds.

*Celſus* ſpeaks of the *Fibula*, as to be uſed when the Wound was ſo patent as not eaſily to admit of being ſewed.

Authors are ſomewhat at a loſs as to the Form of the *Fibulæ*. *Guido* ſays, they were made of iron Circles, or Semi-circles, bent backwards both ways; the Hooks whereof being faſten'd on both Sides to the Wound, anſwer'd exactly to each other: But, as this muſt have been an inſupportable Pain to the Patient, this Deſcription is generally ſet aſide.

*Fallopius*, *Sanctorius*, and others, take the *Fibula* to have been, in reality, no more than the ſewing up of the Wound with a Needle and Thread, uſed at this Day. See SUTURE.

FIBULÆUS, in Anatomy, a Muſcle of the Leg, call'd alſo *Peroneus primus*. See PERONEUS.

FICUS, a kind of Wart, or Excreſcence, yielding a very ſtinking Sanies, ariſing ſometimes on Fractures of the Skull, but more uſually about the Fundament, and Pudenda.

The Phyſicians more uſually call it *Sarcoma*, of σάρξ, Fleſh. See SARCOMA.

FICHANT, *Figens*, a *French* Term, uſed in Fortification: Thus, a Flank *Fichant*, or a Line of Defence *Fichant*; is the Place, whence the Shots are made, that not only raſe the oppoſite Face to be defended, but alſo enter within it.

The Word is form'd of *ficher*, to ſtick a Thing in.

FICHE, in Heraldry; ſee FITCHEE.

FICTION, ſee FABLE, FALLACY, &c.

FIDDLE, ſee VIOLIN.

FIDE-*Juſſor*, in the Civil Law, is the ſame with Repromiſſor, Adpromiſſor, Sponſor, Prædes, and Vades; that is, a *Surety*, or one that obliges himſelf in the ſame Contract with a Principal, for the greater Security of the Creditor, or Stipulator.

FIDEI-*Commiſſum*, in the *Roman* Law, the appointing of an Heir, or Bequeathing of a Legacy to a Perſon, on this View or Condition, that he ſurrender the Inheritance or Legacy to another Perſon, for whom the ſame is originally meant: Or, it is an Inheritance left in truſt with any one, for the uſe of another. See TRUSTEE.

*Fidei-Commiſſa* were much uſed among the *Romans*. In the *French* Law the thing is become odious; as being, ordinarily, no other than an Expedient in favour of Perſons to whom the Laws forbad any thing to be given. In order to this, ſome Friend was choſe, whom they truſted to make legal Heir, under a tacit Agreement, to deliver the Succeſſion to the Perſon incapacitated by Law: At length, the ſame Expedient came to be uſed with regard to Perſons capable of inheriting; to whom the Teſtator for particular Reaſons did not care to leave the Succeſſion directly.

As it happen'd, that the *Fidei-Commiſſioners* did not always faithfully reſtore, what was truſted to them, *Auguſtus* took proper Meaſures to oblige them thereto: To this End a Pretor was erected, whoſe Buſineſs was reſtrain'd to the ſingle Matter of *Fidei-Commiſſions*. Juſt. Lib. II. T. 23.

FIDEI-*Commiſſioner*, a Truſtee, or Heir intruſted with Charge, to reſtore the Inheritance or Succeſſion to another Perſon.

A *Fidei*-commiſſionary Heir had a Right to reſerve the *Trebellianick* Fourth to himſelf: as a Teſtament was null without the Inſtitution of an Heir; and it frequently happening, that the *Fidei-Commiſſioner* refuſed to accept the Truſt, upon which the Teſtament fell to the Ground; To engage ſome body to accept it out of the Conſideration of Advantage, the *Pegaſian* Senatus-Conſultum decreed, that the *Fidei-Commiſſioner* ſhould be at Liberty to retain a Fourth of the Fidei-commiſſum.

By the *Trebellian* Senatus-Conſultum, a farther Regulation was made. And in courſe of Time, the two Senatus-Conſulta, the *Pegaſian* and *Trebellian*, came to be confounded under the Name of the *Trebellian*.

FIDEI-*Juſſio*, in the Civil Law, a Security, or Guaranty. See GUARANTY.

FIDICINALES, in Anatomy, a Name given to ſeveral Muſcles of the Fingers, called alſo *Lumbricales*. See LUMBRICALIS *Manus*.

FIEF, the ſame with *Feud*, or *Fee*. See FEE.

FIELD, in Agriculture, a piece of Land, or Ground incloſed, and fit for Tillage, to bear Hay, Grain, &c. See TILLAGE, PLOUGHING, FALLOW, &c.

FIELD, *Campus*, in Antiquity, is frequently uſed for a publick Place, or Square in a City, &c. as the *Field* of *Mars*, *Campus Martius*; and *Field* of *Flora*, *Campus Floræ*, in *Rome*; the *Field* of *May*, *Campus Maji*, among our Anceſtors, &c. See CAMPUS.

The FIELD *of Mars* was denominated from a Temple of that Deity, built therein. It was the Scene, or Place of the Aſſemblies called *Comitia*. See COMITIA.

*Tarquin* the Proud at length appropriated it to his own Uſes;——But after the Expulſion of the Kings, the Conſuls

ſuls *Brutus* and *Collatinus* reſtor'd it to the publick Uſe of Aſſemblies and Elections.

Originally it was no more than a Meadow, on the Banks of the *Tiber*, where Horſes grazed, and the *Roman* Youth were exerciſed to War. But it was afterwards erected into a magnificent Square, adorn'd with Statues, &c. The *Field of Flora* was the Place, where the Laws, Edicts and Conſtitutions were publiſh'd.——

For *Field of May*, ſee CAMPUS *Maji*.

FIELD, in Heraldry, is the Surface, or Face of the Shield, or Eſcutcheon; thus called, as containing the Atchievements antiently acquired in the *Field* of Battle.

The *Field* is the Ground whereon the Colours, Bearings, Metals, Furs, Charges, &c. are repreſented. In blazoning a Coat, we always begin with the *Field*: He bears Sable, &c.

Among the more Modern Heralds, *Field* is leſs frequently uſed than Shield, or Eſcutcheon. See SHIELD, and ESCUTCHEON.

FIELD *of a Painting*, &c. is more uſually call'd the *Ground* thereof. See GROUND.

FIELD, in War, the Place where a Battle was fought.—The General remain'd Maſter of the *Field* of Battle——*Cloſe Field* was antiently a Place incloſed, or rail'd in with a Barrier, for Juſts and Turnaments to be perform'd. See BARRIER, JUST, and TOURNAMENT.

FIELD-*Colours*, are ſmall Flags about a Foot and an half ſquare, which are carried along with the Quarter-maſter General for marking out the Ground for the ſeveral Squadrons and Battallions of an Army.

FIELD *Pieces*, are ſmall Cannon, uſually carried along with an Army in the *Field*; ſuch as three Pounders, Minions, Sakers, ſix Pounders, Demi-Culverins, and twelve Pounders; which being light, and ſmall, are eaſily carried.

FIELD *Works*, in Fortification, are thoſe thrown up by an Army, in the Beſieging of a Fortreſs; or elſe by the Beſieged, in defence of the Place. Such are the Fortifications of Camps; thoſe of the High ways, &c.

FIELD *Staff*, is a Staff carried by the Gunners: It is about the Length of an Halbert, with a Spare at the End, which on each Side has Ears ſcrewed on, like the Cock of a Match lock; and in theſe the Gunners ſcrew in lighted Matches, when they are on Command. And this is called, arming the *Field Staffs*.

*Elyſian* FIELDS, ſee ELYSIAN *Fields*.

FIERI *Facias*, is a Writ Judicial, that lieth at all times within the Year and Day, for him that hath recovered in an Action of Debt and Damages, to the Sheriff, to command him to levy the Debt, or the Damages of his Goods on him againſt whom the Recovery was had.

FIFTEENTH, *Decima quinta*, an antient Tribute, or Impoſition of Money, laid upon any City, Borough, or other Town through the Realm; not by the Poll, or upon this or that Man, but in general upon the whole City, or Town. See TRIBUTE, TAX, &c.

It is ſo called, becauſe amounting to a *Fifteenth* Part of that which the City hath been valued at of old; or to a *Fifteenth* Part of every Man's perſonal Eſtate, according to a reaſonable Valuation.

This is impoſed by Parliament, and every Town thro' the Realm knows what a *Fifteenth* for themſelves amounts to, becauſe it is always the ſame: Whereas the *Subſidy*, which is raiſed of every particular Man's Lands, or Goods, muſt needs be uncertain. See SUBSIDY.

In this View, the *Fifteenth* ſeems to have been a Rate, antiently laid upon every Town, according to the Land or Circuit belonging to it.

*Cambden* mentions many of theſe *Fifteenths* in his *Britan.* *viz.* pag. 171. *Bath geldebat pro viginti hidis, quando Schira geldabat*, &c. And *p.* 181. *Old Sarum pro quinquaginta hidis geldabat*, &c. Which Rates were according to Domeſday.

The *Fifteenth* therefore ſeems in old Time to have been a yearly Tribute in Certainty; whereas now, though the Rates be certain, yet it is not levied but by Parliament. See QUINSIEME.

FIFTH, in Muſick, one of the harmonical Intervals, or Concords. See INTERVAL.

The *Fifth* is the Third in order, of the Concords. The Ratio of the Chords that afford it, is 3:2. See CONCORD.

It is called *Fifth*, becauſe containing *five Terms*, or Sounds between its Extremes; and four Degrees: So that in the natural Scale of Muſick it comes in the *fifth* Place, or Order, from the Fundamental. See DEGREE, and SCALE.

The Antients called this Interval, *Diapente*. See DIAPENTE.

The *imperfect*, or *defective Fifth*, by the Antients called *Semi-Diapente*, is leſs than the *Fifth* by a mean Semi-tone. See TONE, and SEMI-TONE.

FIG, *Ficus*, a ſoft, ſweet, delicious Fruit; the Produce of a Tree of the ſame Name.

There are *Figs* of divers Kinds; chiefly denominated from their Colours; White, Violet, Black, Purple, Green, and Ruddy: The White are eſteem'd the beſt: The Black and Violet are the worſt.

They are gather'd in Autumn, and laid on a Rack, or Hurdle, to dry in the Sun.

*Figs* contain a deal of Phlegm; a little volatile, alcali Salt, and a moderate Quantity of Oil.

They are very nouriſhing, and ſoften the Aſperities of the Breaſt, &c. And accordingly are uſed in Medicine, to make Gargariſms, againſt Diſorders of the Throat and Mouth. They are alſo applied externally, to ſoften, digeſt, and promote Maturation.

*Figs* are dried, either by a Furnace, or the Sun. The *Latins* call them *Caricæ*, or *Ficus paſſæ*, when thus dried. In this Condition they are uſed both as Medicine and Food; being both the wholeſomer, and eaſier of Digeſtion, for being thus clear'd of a deal of their aqueous and viſcid Parts.

The Word is form'd of the *Latin Ficus*; and that of the *Greek* φύω, I produce; by reaſon the *Fig* Tree is a great Bearer, and has uſually two Crops a Year.

The beſt *Figs* are the Produce of *Italy*, *Spain*, *Provence*, &c. The Iſlands of the Archipelago yield *Figs* in great Abundance; but they are much inferior in Goodneſs to thoſe of *Europe*. The *Greeks* in thoſe Iſlands cultivate them with wonderful Care, and Attention; as making the principal Food, and a conſiderable Part of the Riches of the Country.

They have two Kinds of *Fig* Trees, the firſt called *Ornos*, or the wild *Fig* Tree; the ſecond, the domeſtick *Fig* Tree. The wild, called by the Latins *Caprificus*, yields ſucceſſively three ſorts of Fruits, called *Fornites*, *Cratitires*, and *Orni*; none of which are of any uſe as Foods; but all abſolutely neceſſary for the ripening thoſe of the domeſtick *Fig* Tree.

The Art of cultivating and ripening theſe *Figs*, makes a peculiar Art, by the Antients called *Caprification*; often ſpoke of among them in Terms of Admiration. Some of the modern Naturaliſts have look'd on it as a Chimera; but Monſ. *Tournefort* has aſſured us of the Contrary, and given us that Proceſs, as he learn'd it upon the Spot; which ſee under the Article CAPRIFICATION.

The Generation of the *Fig* is ſomewhat anomolous; the Parts ſubſervient to the Office in other Plants; *i. e.* the Flower, not being here apparent. But the Anatomy of the Fruit helps out of the Difficulty.

Monſ. *de la Hire* the younger, in the Memoirs of the Fr. Academy, ſhews, that the *Fig* is a Flower, as well as a Fruit. By Diſſection it diſcovers all the Eſſentials of a Flower, *viz.* Stamina, Apices, and a Farina fecundans.

To ſhew this, that ingenious Author divides the Length of the *Fig* into three Parts or Spaces, A, U, X, *Tab. Nat. Hiſt. Fig.* 4. The firſt of which, A, being the next the Pedicle, and much the greateſt, contains the Grains, or Seeds of the *Fig*. Theſe Seeds are little Stones, repreſented by A, *Fig.* 5. within which are Kernels. Each Stone is half incompaſs'd with a Parenchyma, B, ſupported by a Calyx, laid on the Parenchyma: This Calyx is fix'd to a pretty long Pedicle, which grows to the inner Rind of the *Fig*, as repreſented in the Figures.—The Diviſion X of the *Fig* is full of little Leaves, like thoſe repreſented in *Fig.* 6. which are faſten'd by their Baſes to the Rind or Skin of the *Fig*. In this Diviſion there is a Hole B, *Fig.* 4. called the Umbilicus, or Navel, whoſe outer, or upper Edge is furniſh'd with little Leaves, which cloſe the Aperture.—— Laſtly, the Space V is full of little whitiſh Bodies, repreſented Fig. 4. which ariſe from the internal Parietes of the *Fig*, by a large Pedicle A, at whoſe Extremity is a Calyx B C; from the Diviſions whereof ariſe three other Bodies, D, E, F. Theſe Bodies terminate in little Eminences in E, F, &c. which are Capſulæ, that include an infinite Number of little Grains, eaſily perceivable by the Microſcope, and all alike, and of a Size, perfectly ſimilar to the Farinæ in the Apices or Capſulæ of other Flowers. Whence it follows, that the Bodies contain'd in the Space V, of the *Fig*, are real *Fig* Flowers; tho' ſeveral Naturaliſts have taken theſe in the Diviſions A, and X, for the Flowers; which have no eſſential Marks of Flowers at all.

FIGURATE, or FIGURATIVE, that which has relation to a *Figure*; or that teaches under ſome obſcure Reſemblance.

A *Figurative Stile* is that which abounds in Figures.

The *figurative* Stile, Fa. *Bouhours* obſerves, is neither the moſt juſt, nor the beſt. For this reaſon, *Cicero* directs us to the Antients, who, not having yet bethought themſelves to uſe figurative Expreſſions, but keeping to the moſt proper, and natural way, have almoſt all wrote well. *Sunt enim illi veteres, quia nondum ornare poterant ea quæ dicebant, omnes prope præclare loquuti.* Long Uſe, ſay the Grammarians, renders that proper in all Languages, which at firſt was *figurative*.

The ſame Thoughts appear more lively when expreſs'd by a Figure, than when in ſimple Terms. The Reaſon is,

that *figurative* Expreſſions denote not only the principal Matter, but alſo the Emotion and Paſſion of the Perſon who ſpeaks.

The Term *figurative* is alſo much uſed in ſpeaking of the Myſteries and Figures of the old Law. Thus, Manna is ſaid to be *figurative* of the Euchariſt.

In the *Greek* Grammar, *figurative* is alſo uſed for what we otherwiſe call *characteriſtick*, viz. a Letter that characteriſes certain Tenſes of the *Greek* Verbs; or that diſtinguiſhes, and ſpecifies them.

In the firſt Conjugation of the *Barytonous* Verbs, the ω is characteriſtick, or *figurative* of the Preterit; and the ψ of the Future. See CHARACTERISTICK.

FIGURATE *Counter-point*, in Muſick, is that wherein there is a Mixture of Diſcords along with the Concords. See COUNTER-POINT.

*Figurative Counter-point* is of two Kinds: That wherein the Diſcords are introduced occaſionally, to ſerve only as Tranſitions, from Concord to Concord; and that, wherein the Diſcord bears a chief Part in the Harmony. See DISCORD.

'Tis a Rule in Compoſition, that the Harmony muſt always be full on the accented Parts of the Bar, or Meaſure *i. e.* Nothing but Concords are allowed in the Beginning and Middle; or the Beginning of the firſt half of the Bar, and Beginning of the latter half thereof in common Time; and the Beginning, and firſt three Notes in triple Time. But upon the unaccented Parts, this is not ſo neceſſary: But Diſcords may tranſiently paſs there without any Offence to the Ear.

This the *French* call *Suppoſition*, becauſe the tranſient Diſcord ſuppoſes a Concord immediately to follow it. See SUPPOSITION.

Where the Diſcords are uſed as a ſolid, and ſubſtantial Part of the Harmony, the *Counter-point* is properly called the *Harmony of Diſcords*. See HARMONY *of Diſcords*.

FIGURE, in Phyſicks, is the Surface, or terminating Extremes of a Body.

All Bodies have ſome *Figure*; whence, *Figurability* is generally rank'd among the eſſential Properties of Body, or Matter. See MATTER.

A Body that ſhould have no *Figure*, would be an infinite Body. See INFINITE.

The corpuſcular Philoſophers account for every thing from the *Figures*, Bulks, and Motions of the Atoms, or primary Corpuſcles. See CORPUSCULAR.

The Earth is of a ſpherical *Figure*, or rather a ſpheroidical. See EARTH. *Saturn* ſometimes appears of an Elliptick, or Oblong *Figure*. See SATURN.

For the *Figures* of Bodies, conſider'd as Objects of Sight, ſee VISION.

The Author of a Collection of Diſſertations, printed at *Paris*, in 1715. ſhews in the firſt Diſſertation on the *Hebrew* Medals, *p.* 66. That the Jews were allowed to make any kind of *Figures*, or Images of Trees, Plants, Flowers, Buildings, &c. excepting thoſe of Animals, the Sun, Moon, and Stars. See IMAGES.

FIGURE, is particularly uſed by the Philoſophers, in oppoſition to eſſential Form. See FORM.

There are Bodies of the ſame nature, and they only differ in *Figure*, or *Configuration*. See CONFIGURATION.

The Schoolmen diſpute, whether or no the Quality of *Figure* be the ſame with that of *Form*; and if they differ, what it is conſtitutes the Difference.

*Boetius* will have *Figure* only predicated of inanimate Bodies, and Form of animate. Others extend *Figure* to all natural Things, and Form to all artificial ones: Whence the Verſe,

*Formam viventis, picti dic eſſe* Figuram.

Laſtly, others apply *Figure* indifferently to all kinds of Bodies, but not in all Relations. If only the bare Circumference, or Circumſcription be conſider'd, they call it *Figure*; but if the Circumference be conſider'd as endued with Colour, then they call it *Form*.

FIGURE is alſo applied to all Repreſentations, or Images of Things, in Prints, &c. Such a Book is printed with *Figures*.

The *Figures*, or Schemes in Mathematical and Phyſical Writings, ſhould be made to fold out of the Book.

Some Readers chuſe to have the *Figures*, eſpecially the Mathematical ones, in Wood, for the Convenience of having them immediately annex'd to the Matter they refer to: Others, rather chuſe to be at the Pains of turning over, and having Recourſe to another Part of the Book, that they may have the *Figures* more neat and accurate on Copper.

FIGURE, in Geometry, a Surface incloſed, or circumſcribed with one or more Lines. See SURFACE.

Such are *Triangles*, *Squares*, *Polygons*, *Circles*, *Ellipſes*, &c. which ſee.

*Wolfius* defines *Figure* a Continuum, terminated by a Perimeter.

In which Senſe *Figure* is applicable both to Superficies and Solids.

In the former Caſe, the Perimeter is Lines; in the ſecond, Surfaces. See PERIMETER.

*Figures* are either *Rectilinear*, or *Curvilinear*, or *Mixt*, according as the Perimeter conſiſts of right Lines, curve Lines, or both. See CURVE.

The ſuperficial Parts of a *Figure* are called its *Sides*; the loweſt Side, its *Baſe*; and the Angle oppoſite to the Baſe, the *Vertex*. See BASE, VERTEX, &c.

The Height of a *Figure* is the Diſtance of the Vertex from the Baſe. See HEIGHT.

An Equilateral *Figure* is that whoſe Sides are equal. See EQUILATERAL.

A *Figure Circumſcribed*, and *Inſcribed*, ſee CIRCUMSCRIBED, and INSCRIBED.

*Similar* FIGURES, ſee SIMILAR *Figure*.

All Similar *Figures*, both Regular, and Irregular, are in a duplicate Ratio of the homologous Sides.

A *Regular* FIGURE is that which is Equilateral, and Equiangular.

An *Irregular* FIGURE is that which is not both. See REGULAR.

FIGURE, in Conicks, is the Rectangle, made under the Latus rectum, and tranſverſum in the Hyperbola, and Ellipſis.

FIGURE *of the Diameter*. The Rectangle under any Diameter, and its proper Parameter, is in the Ellipſis and Hyperbola called the *Figure of that Diameter*. See DIAMETER.

FIGURE, in Painting, and Deſigning, is the Lines and Colours, that form the Repreſentation of a Man, or other Animal. See DESIGN.

Thus we ſay, There are above an hundred *Figures* in this Piece: Such a *Figure* is lame, &c.

But the Term *Figure* is in a more immediate and peculiar manner underſtood of human Perſonages: Thus, a Painting is ſaid to be full of *Figures*, when there are abundance of Repreſentations of Men: And a Landſkip is without *Figures*, when there is nothing but Trees, Plants, Mountains, &c. See COLOUR.

FIGURE, in Architecture, and Sculpture, is uſed for Repreſentations of Things, made in ſolid Matters; ſuch as Statues, &c.

In this Senſe we ſay, *Figures* of Braſs, of Marble, of Stuck, of Plaſter, &c. But in this Senſe too, the Term is more uſually applied to human Repreſentations, than other Things. Thus we ſay, an Equeſtrian *Figure*, for a Man on Horſeback. See STATUE.

*Daviler*, however, obſerves, that thoſe, either repreſented ſitting, as Popes, &c. or kneeling, as thoſe on Monuments, &c. or laid all along, as Rivers, &c. are more properly called *Figures*, than Statues.

FIGURE, in Heraldry, a bearing in a Shield, repreſenting, or reſembling a human Face; as a Sun, a Wind, an Angel, &c.

Among the Maſters of Defence, *Figures* are the divers Guards, Poſtures or Diſpoſitions of the Body, Arm, or Sword.——

In Aſtronomy we ſay, the *Figure of an Eclipſe*, meaning the Repreſentation of the Path, or Orbit of the Sun and Moon, during the Time of the Eclipſe, upon Paper; with the Number of Digits eclipſed, and the Beginning, Middle and End of Darkneſs. See ECLIPSE.

The *Figure*, or Delineation of the Full Moon, ſuch as viewed thro' a Teleſcope, with two convex Glaſſes, is of conſiderable uſe in Obſervations of Eclipſes, and Conjunctions of the Moon with other Luminaries. In this *Figure*, of the Moon, are repreſented the Maculæ, or Spots of the Moon, mark'd by Numbers; beginning with the Spots, which uſually enter firſt, within the Shade at the Time of great Eclipſes, and alſo emerge the firſt. See MOON, MACULÆ.

FIGURE, in Aſtrology, a Deſcription, or Draught of the State and Diſpoſition of the Heavens, at a certain Hour; containing the Places of the Planets and Stars, mark'd down in a *Figure* of twelve Triangles, called *Houſes*.

This is alſo called a *Horoſcope*, and *Theme*. See HOROSCOPE, &c.

In Geomancy, *Figure* is applied to the Extremes of Points, Lines or Numbers, thrown, or caſt at random; on the Combinations or Variations whereof the Sages of this Art found their fantaſtical Divinations.

FIGURE, in Fortification, is the Plan of the fortified Place; or the interior Polygon. See POLYGON, &c.

When the Sides and Angles are equal, 'tis called a *Regular*; when unequal, an *Irregular Figure*. See REGULAR, &c.

FIGURE, in Dancing, the ſeveral Steps which the Dancers make in Order, and Cadence; which mark divers *Figures* on the Floor.

FIGURE,

FIGURE, in the Manufactures, is applied to the various Deſigns repreſented, or wrought on Velvets, Damasks, Taffaties, Sattens, and other Cloths and Stuffs.

The moſt uſual *Figures* of ſuch Deſigns are Flowers, imitated from the Life; or Groteſques and Compartiments of pure Fancy. Repreſentations of Men, Beaſts, Birds, Landſkips, have only been introduced ſince the Taſt for the *Chineſe* Stuffs, particularly thoſe called *Furees*, have begun to prevail among us.

'Tis the Woof of the Stuff that forms the *Figures*: The Warp only ſerves for the Ground. In working *figured* Stuff, there is required a Perſon to ſhew the Workman, how far he muſt raiſe the Threads of the Warp, to repreſent the *Figure* of the Deſign with the Woof, which is to be paſs'd a-croſs between the Threads thus raiſed. This ſome call reading the Deſign. See DESIGN.

For the *Figures on Tapeſtry*, *Brocade*, &c. ſee TAPISTRY, *&c.*

For thoſe given by the *Callenders*, *Printers*, &c. ſee CALLENDER, *&c.*

FIGURES, in Arithmetick, are the numeral Characters; or the Characters whereby Numbers are expreſs'd, or wrote. See CHARACTER.

Thus the Number four hundred and fifty, is wrote, or expreſs'd by three *Figures* 450.

For the Antiquity, Uſe, *&c.* of the *Numeral Figures*, ſee NUMERAL *Character.*

The *Figures* in Arithmetick, are the nine Digits; 1, 2, 3, 4, 5, 6, 7, 8, 9, and 0.

FIGURE, in Logick, a certain Diſpoſition of the Terms of a Syllogiſm; particularly of the Medium, with regard to the Extremes.

*Chauvin* defines it, a proper placing or connecting of the middle Term with the Extremes, ſo as to have the Effect of a Proof, or Concluſion. See SYLLOGISM.

Hence it follows, that there are ſo many *Figures* of Syllogiſms, as there are different Connections of the Extremes with the Medium: So that, tho' the School-men ordinarily only reckon three; yet a fourth might be admitted.

For the Medium may be either prefix'd to both Extremes; or ſubjoin'd to both: Or, it may be before the Major, and after the Minor; or before the Minor, and behind the Major.

If it be after the Major, and before the Minor, it is uſually called the *Firſt Figure*; this ſeeming the neareſt way of arguing to the natural way.

If it be before the Major, and after the Minor, it is called the *Fourth* and *Laſt*; and by the Peripateticks, the *Indirect*, and by others, the *Galenical Figure*; as varying too far from the natural Form.

If it precede both, 'tis called the *Second Figure.*

And if it follow both, the *Third Figure*; as in the following Technical Diſtich:

Prima *infra*, *&* *ſupra*: *ſupraque bis*, Altera: *biſque*
Tertia *vult infra medium*: *ſupra*, Ultima, *&* *infra.*

A Syllogiſm, therefore, *of the Firſt Figure* is that wherein the Medium is ſeverally join'd with both Extremes of the Concluſion, ſo as to be predicated of the leſſer; the Concluſion being ſometimes Affirmative, and ſometimes Negative. In that of the *Second Figure*, the Medium is predicated of both; and the Concluſion is always negative. In the *Third Figure*, the Concluſion, which in the former Caſes is ſometimes General, ſometimes Special, is always Special.

The *Fourth*, called the Indirect *Figure*, ſome prefer before all the others; by reaſon 'tis in this alone, that the Medium or mean Term has its natural Situation, *viz.* in the Middle, between the Extremities; it being in the reſt no more than a Medium by Office: But in the Fourth *Figure*, the Medium is in the middle Place.

*E. gr.* Take the two Terms. *Man*, and *Living* for Extremes, and Animal for the Medium. The Mind argues thus, There is a Connection between *Man* and *Animal*; and between *Animal*, and *Living*: Therefore the Order is, Man, Animal, Living; and by Animal, as a Medium, the two Extremes are conjoin'd, as the Extremes of a Line are connected by the Middle.

A C A B C
B

FIGURE, in Rhetorick, is an Ornament, or Turn of Speech or Diſcourſe, finer and nobler than what is uſed in natural, or ordinary talking.

*Figures*, by the *Greeks* called *Schemata*, are the Enrichments of Diſcourſe, which we only uſe when raiſed and moved with the Conſideration of ſome thing extraordinary. See SUBLIME.

There are two kinds of *Figures*; the one of *Sentences*, and contained in the *Senſe* it ſelf, without any immediate Dependance on any particular Words; the other are only in the *Words* themſelves.

Of the FIGURES *of Sentences* ſome are deſign'd to move; others to teach; and others only to delight: Of the firſt kind, the moſt conſiderable are, *Exclamation*, *Imprecation*, *Obſecration*, *Interrogation*, *Doubting*, *Præterition*, *Expolition*, and *Epiphonema.*

Thoſe of the Second, are the *Antitheſis*, *Correction*, *Communication*, and *Suſpenſion.*

Thoſe of the Third, the *Apoſtrophe*, *Hypotypoſis*, *Proſopopæia*, *Ethopæia*, and *Proſegraphia.* See each under its proper Head, EXCLAMATION, *&c.*

Of *Figures of* WORDS, ſome are *Tropes*, i. e. Tranſlations of Words from their proper Signification, to ſome more remote and extraordinary one. See TROPE.

The principal of theſe are, the *Metaphor*, *Allegory*, *Metonymy*, *Synecdoche*, *Irony*, and *Sarcaſm*; *Metalepſis*, *Antonomaſia*, and *Syllepſis.*

Others, are *Figures* of *Words*, properly ſo called, and not Tropes; being ſo inherent in the Words, that upon changing of thoſe, the *Figure* is deſtroy'd; as in *Amantes ſunt Amentes*, where the *Figure* would be loſt, if inſtead of *Amentes* you ſhould put *Stulti.*

Of theſe, the principal are, the *Repetition*, *Converſion*, *Complexion*, *Gradation*, *Synonymy*, *Polyſyndeton*, and *Polyptoton*, *Reticency*, *Diſjunction*, *Similitude*, *Paronomaſy*, and *Tranſition.* See each *Figure* under its Article, as METAPHOR, ALLEGORY, METONOMY, SYNECDOCHE, IRONY, SARCASM, *&c.*

FIGURE, in Grammar, is an Expreſſion that deviates from the common and natural Rules of Grammar; either for the ſake of Elegancy, or Brevity. The beſt Grammarians only reckon four *Figures*; the *Ellipſis*, *Pleonaſm*, *Syllepſis*, and *Hyperbaton*: Others add two more, viz. *Antiptoſis*, and *Enallage.* See each in its Place, ELLIPSIS, PLEONASM, *&c.*

FIGURE is alſo uſed among the Divines, for the Myſteries repreſented or delivered obſcurely to us under certain Types or Actions in the Old Teſtament. See TYPE.

Thus Manna is held a *Figure*, or Type of the Euchariſt: The Death of *Abel* a *Figure* of the Suffering of Chriſt.

Many Divines and Criticks contend that all the Actions, Hiſtories, Ceremonies, *&c.* of the Old Teſtament are only *Figures*, Types, and Propheſies of what was to befal under the New. See MYSTICAL.

The Jews are ſuppoſed to have had the *Figures* or Shadows, and we the Subſtance. See PROPHESY.

*Figure* is alſo applied in the like Senſe to prophane Matters; as the *Emblems*, *Enigma's*, *Fables*, *Symbols*, and *Hieroglyphicks* of the Antients. See EMBLEM, ENIGMA, DEVISE, *&c.*

FIGURED, in the Manufactures; A *figured* Camlot, Stuff, Tabby, *&c.* is that whereon there are divers Deſigns of Flowers, Figures, Branches, *&c.* impreſs'd by means of hot Irons. See CAMLOT.

FIGURED *Velvet*, ſee VELVET.

FIGURED *Ribbonds*, firſt came into Faſhion about the Year 1680. The Method of Performance was by ſucceſſively applying Steel Plates engraven with divers Ornaments, as Flowers, Birds, Groteſques, *&c.*

But one *Chandelier*, a Ribbonmaker of *Paris*, invented a much better and readier way of doing it; by a Machine not unlike the Flatter uſed in Coining to flatten the Pieces of Metal, only much ſimpler.

The principal Parts thereof, were two Steel Cylinders, engraven with the Figures intended to be repreſented. Theſe Cylinders were plac'd over each other, like the Rolls of a Rolling Preſs; having each of them, at one of its Extremes, a little dented Wheel, one of which catching into the other, the whole was put in Motion, by means of a Winch, or Handle, faſten'd to the firſt. The Machine thus prepared: The Workman heats the Cylinders; and places the Ribbond in the little Space remaining between the two, which he contracts yet further by a Screw, that preſſes the upper down upon the lower; then, turning the Rolls by the Handle, a whole Piece of Ribbon is *figured* in leſs Time than a ſingle Yard could be done in the ordinary way. See RIBBOND.

FILAMENT, in Medicine, Anatomy, Nat. Hiſtory, *&c.* a Term uſed in the ſame Senſe with *Fibre*; for thoſe fine Threads, whereof the Fleſh, Nerves, Skins, Plants, Roots, *&c.* are compoſed. See FIBRE.

FILANDERS, in Falconry, a Diſeaſe in Hawks, *&c.* conſiſting of Filaments, or Strings of Blood, coagulated and dried; occaſioned by a violent Rupture of ſome Vein, by which the Blood extravaſating, hardens into Points like Needles, to the great Annoyance of the Reins, Hips, *&c.*

FILANDERS are alſo a ſort of fine, ſmall Worms, that greatly incommode the Hawk in the Gorge and about the Heart, Liver and Lungs; and which, on ſome Occaſions, are of Service, as they feed on the Superfluities of thoſe Parts.

There

There are five kinds of these *Filanders*, or *Vermiculi*.

The first, in the Gorge, or Throat; the second, in the Belly; the third, in the Reins; the fourth, are called Needles, on account of their exceeding Fineness. The Symptoms that discover the Disease, are, the Bird's gaping frequently; straining the Fist or Perch with her Pounces; croaking in the Night; ruffling her Train; rubbing her Eyes, Wings, Nostrils, &c.

As the Worms are very restless, the Bird is frequently endeavouring to cast them up; and in opening his Mouth you will readily discover them. From the Throat, &c. they will ascend to the Larynx, Brain, &c. and over over the whole Body.

The ordinary Cause is bad Food. The Cure is, not by killing them, for fear of Imposthumes from their Corruption; but chiefly by stupifying them, that they may be offensive but seldom.

This is best effected by making the Bird swallow a Clove of Garlick, after which she'll feel nothing of the *Filanders* for forty Days. Others use Rue, Worm-powder, Aloes, Vervain, Saffron, &c.

The Word is form'd of the *French Filanders*, of Fil, Thread.

FILAZER (from the *French* Fil, a Thread, Line, or String) is an Officer in the Court of Common Pleas, so called, because he *files* the Writs, whereon he makes out Process. Of these there are fourteen, in the several Divisions and Counties.

They make out all *Writs*, and *Process* upon original Writs, issuing out of the Chancery, as well real, as personal and mix'd, returnable in that Court. See WRIT, &c.

In Actions merely personal, where the Defendants are return'd summon'd, they make out *Pone's* or *Attachments*; which being return'd and executed, if the Defendant appears not, they make out a Distringas, and so *Ad infinitum*, or till he does appear. See DISTRINGAS, &c.

If he be return'd Nihil, then Process of Capias infinite, if the Plaintiff will; or after the third Capias, the Plaintiff may proceed to Outlawry, in the County where his Original is grounded, and have an Exigent with Proclamation.

The *Filazers* likewise make out all Writs of View in real Actions, where the View is prayed; and upon Replevins or Recordare's, Writs of Retorno habendo, second Deliverance, and Writ of Withernam. In real Actions, Writs of Grand and Petit Cape before Appearance.

They enter all Appearances, and special Bails, upon any Process made by them. They make the first Scire Facias upon Special Bails, Writs of Habeas Corpus, Distringas nuper Vice-Comitem vel Balivum, and Duces tecum; and all Supersedeas's upon Special Bail or Appearance, &c. Writs of Habeas Corpus cum Causa upon the Sheriffs return, that the Defendant is detained with other Actions, Writs of Adjournment of a Farm, in case of Pestilence, War, or publick Disturbance. Till an Order of Court made 14 *Jac.* which limited the *Filazers* to all Matters and Proceedings before Appearance, and the Prothonotaries to all after, they also enter'd Declarations, Imparlances, Judgments, and Pleas, whereto a Serjeant's Hand was not requisite, and made out Writs of Execution, and divers other Judicial Writs after Apperance.

FILBERDS, the best sort of small *Nuts*, worth planting in Orchards, or Gardens. See NUT.

They are raised from Nuts set in the Earth, or Suckers from the Roots of an old Tree; or may be grafted on the common Hazle Nut.

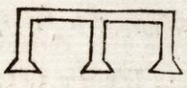
They delight in a fine, mellow, light Ground, but will grow almost any where, especially if defended from violent and cold Winds.

The Tree is easily propagated, bears well, and is of two sorts, the *White*, and the *Red*; but the former is the best.

FILE, an Instrument of Steel, cut in little Hatches, or Furrows; used by the Workmen in Metals, to smooth, polish and fashion the same.——*Files* bear a near Resemblance to *Rasps*: The only Difference between them, is, that the former are cut with Edge Tools; and the latter punch'd with pointed ones. See RASP.

The *File* is a principal Instrument in all the Kinds and Parts of Smithery.

It should be forged of the best Steel; after which rubbing it with Grease, to make it more soft under the Chissel, they *cut* it with Chissels and a Mallet, this and that way, and this or that Depth, according to the Grain or Tooth required. After *cutting* the *File*, it remains to be *temper'd*; which being the principal Mystery in the making of *Files*, will deserve to be particularly described.



*Files*, then, are temper'd with a Composition of Chimney Sooth, very dry, and hard, diluted and work'd up with Urine and Vinegar; to which is added common Salt: The whole being to be reduced to the Consistence of Mustard.

Now, the *Files* being cut, and rubb'd over with Vinegar and Salt, to scour off the Grease laid on it for the cutting, they cover them over with this Composition; and having laid several of them together in a Packet, and cover'd them in Loam, they put them in a Charcoal Fire: Out of which they are taken out again, by that Time they have acquired a Cherry Colour, which is known by a little Rod of the same Steel, put in along with them. Upon raking them out, they cast them into the coldest Spring Water they can get.

Iron *Files* require a more intense Heat, than Steel ones. When the *Files* are cold, they clean them with Charcoal, a Rag, &c. to take away any of the Soot or Fæces left in the Cuttings: Then drying them before the Fire, they put them up carefully in a Box of Wheat Bran, to keep them from rusting.

*Files* are of different Forms, according to the different Occasions: Those in common use are the *Square*, *Flat*, *Triangular*, *Half-round*, *Round*, *Thin File*, &c. all which are made of different Sizes, as well as different Cuts, and Degrees of Fineness, to take place, according as the Work is more or less advanced: Some cutting faster, as the *rough tooth'd File*, &c. others more slowly, as the *fine tooth'd File*, &c. See FILING.

FILE, is also a Thread or Wire, whereon Writs, or other Exhibits in Courts, or Offices are fasten'd, properly called *Filed*, for the more safe keeping them.

FILE, or *Label*, in Heraldry, a bearing of this Form; tho' sometimes of more, and sometimes of fewer Points.

It is sometimes born as a Charge in a Coat of Armour, of which *Guillim* gives many Instances: But it is usually the Difference or Mark of Distinction, which the elder Brother bears in his Coat, during his Fathers Life. See DIFFERENCE.

Some distinguish *File*, and *Label*, calling the *File* the upper horizontal Line, and the Label the Point, that issues from it. See LABEL.

FILE *of three or more Labels*, see LABEL.

FILE in a Military Sense, is a Row of Men standing one behind, or below another from Front to Rear.

Or FILE, in War, is a Line or Series of Soldiers, placed one before another; and thus composing the Depth of a Battallion, which in the Infantry ordinarily consists of six Soldiers in a *File*; and in the Cavalry, of three.

They say, *Close the Files*, that is, bring the Men nearer each other: *Double the Files*, *i. e.* Double the Depth of the Batallion; and diminish its Breadth, or Front by one half. The last or hindmost Person is said to bring up the *File*.

The Word is *French*, *File* literally signifying a long Series or Succession of any kind of Things, of *Fil*, Thread.

FILIAL, something belonging to the Relation of Son. See SON.

The Divines usually distinguish between a Servile, and a *Filial* Fear. The most abandon'd may have a servile Fear of God, such as that of a Slave to his Master; but not a *Filial* Fear, *i. e.* a Fear resulting from Love and Respect.

FILLIGRANE, or, as some call it, FILLIGRAM, or FILLIGREAN, a kind of Enrichment on Gold, or Silver, wrought delicately in manner of little Threads, or Grains, or both, intermix'd.

In *Latin* it is called *Filatim elaboratum opus*, *argentum*, *aurum*. This Cabinet is furnish'd with divers fine Pieces of *Filligrean* Work. Vases, Torches, &c. of *Filligrean* Work.

The Word is a Compound of Fil, or *Filum*, Thread, and *Granum*, Grain.

FILING, one of the principal Operations in Smithery, &c. succeeding to *Forging*. See FILE.

The coarser Cut Files are always to be succeeded by finer; and in all the Kinds the Rule is, to lean heavy on the File in thrusting it forward, because the Teeth of the File are made to cut forwards: But in drawing the File back again for a second Stroak, it is to be lightly lifted just above the Work, by reason it cuts not coming back.

The *rough*, or *coarse-tooth'd File* (which, when large, is called a *Rubber*) serves to take off the Unevennesses of the Work, left by the Hammer, in Forging. See FORGING.

The *bastard-tooth'd File* is to take out the too deep Cuts, and File Strokes made by the *rough File*. The *fine-tooth'd* File takes out the Cuts, or File Strokes the Bastard File made. And the *smooth File* those left by the fine File.

In this Order the Files of several Cuts are to succeed each other, till the Work is as smooth as it can be filed. After which it may be made yet smoother with Emery, Tripoli, &c. See POLISHING.

FILIUS *ante Patrem*, q. d. The Son before the Father, a Phrase applied by Botanists and Florists, to Plants, whose Flowers come out before their Leaves.

FILLET, in Anatomy, is the Extremity of the membranous Ligament under the Tongue, more usually called the *Frænum*, or Bridle. See FRÆNUM.

FILLET, in Botany, is understood of those Threads usually found in the middle of Flowers; as in the Lilly, Tulip, Rose, &c. There

There are two Kinds: Thoſe which ſupport Apices, are particularly called *Stamina*; and thoſe which have none, ſimply *Fillets*. See STAMINA.

FILLET, *Tæniola*, in Heraldry, a kind of Orle, or Bordure, containing only a third or fourth Part of the Breadth of the common Bordure. See BORDURE.

It is ſuppoſed to be withdrawn, inwards; and is of a different Colour from the Field. It runs quite round, near the Edge, as a Lace over a Cloak.

FILLET is alſo uſed for an Ordinary drawn, like the Bar, from the ſiniſter Point of the Chief a-croſs the Shield; in manner of a Scarf: tho' it is ſometimes alſo ſeen in the Situation of a Band, Feſs, Croſs, &c.

According to *Guillim*, the *Fillet* is a fourth Part of the Chief; and placed in the chief Point of the Eſcutcheon. See CHIEF.

FILLET, or FILET, in Architecture, a little ſquare Member, or Ornament, uſed in divers Places, and on divers Occaſions; but generally as a ſort of Corona, over a greater Moulding.

The *Fillet* is the ſame with what the *French* call *Reglet*; the *Italians*, *Liſta*, or *Liſtella*; and others, *Band*, or *Bandelette*. See REGLET, LIST, &c.

The Word is *French*, *Fillet*, of Fil, Thread.

FILLET is alſo uſed among Painters, Gilders, &c. for a little Rule, or Reglet of Leaf Gold, drawn over certain Mouldings; or on the Edges of Frames, Pannels, &c. eſpecially when painted white; by way of Enrichment.

FILLETS, in the Manage, are the Loins of an Horſe; which begin at the Place, where the hinder part of the Saddle reſts.

FILM, a thin Skin, or Pellicle, dividing ſeveral Parts of the Fleſh.

In Plants, it is that thin woody Skin, which ſeparates the Seeds in the Pods, and keeps them apart.

FILTRATION, the Act of paſſing a thing thro' a *Filtre*; called alſo *Percolation*, and *Tranſcolation*. See PERCOLATION.

*Filtration* is a kind of Diſtillation; perform'd by ſtraining a Liquor thro' a Cloth, Bag, Linen, or brown Paper, in order to clarify or purify it. The moſt commodious way of *filtrating* is by brown Paper, faſten'd over the Mouth or Aperture of a Funnel. See FILTRE.

The Secretion of the divers Juices in the Body, from the Maſs of Blood, ſeem to be little elſe but *Filtration*. See SECRETION.

*Pitcairn*, and other late Authors, hold that the Differences of *Filtrations* don't depend on the different Configurations of Pores; but on their different Sizes or Diameters. And Springs ſeem to be rais'd from the Ocean by the ſame Principle. See SPRING, ASCENT *of Water*, CAPILLARY *Tubes*, &c.

There are alſo *Filtrations* thro' Sand, pulverized Glaſs, &c. Spirits of Vitriol, Salt, and Nitre, are *filtrated* thro' a Quantity of beaten Glaſs, in the Bottom of a Funnel.

*Filtration* is chiefly concern'd in Tinctures; as when ſome Portion is drawn from the Ingredients, or ſuſpended in the Tincture, which is not neceſſary thereunto; but diſturbs and renders the reſt unpleaſant, both to the Palate, and Sight.

The *Filtration* moſt in uſe, is the ſtraining a Liquor thro' Paper, which by the Smallneſs of the Pores admits only the finer Parts through, and keeps the reſt behind.

Beſide this, there is a *Filtration*, which hath much tortur'd the Philoſophy of ſome Ages to account for, *viz.* that perform'd by the Aſcent of the finer Parts of a Liquor, up a Cord, or Skain of Cotton, or ſuch like Matter, which is contrived to drop over another Veſſel, and leave the groſſer behind.

Some ſay, that the Cauſe of this Aſcent is, becauſe the Liquor ſwells thoſe Parts of the Filtre, that touch it by entering into the Pores of the Threads, which compoſe it, whereby they riſe up, touch, and wet thoſe next above them; and theſe again the next Threads; and ſo on, to the Brims of the Veſſel; when, the Liquor runs over, and deſcends in the other Part of the Filtre, which hangs down, by its own natural Gravity.

But this Account is liable to many Objections; eſpecially as Liquors riſe, after the like manner in Glaſs Tubes, much above the Surface of the Liquor they are immerſed in; where the Glaſs cannot be imagin'd thus to ſwell.

Others account for it, by conſidering every Filtre, as compoſed of a great Number of long, ſmall, ſolid Bodies, which lie very cloſe together; ſo that the Air getting in between them, loſes much of its Preſſure, and cannot gravitate ſo ſtrongly, as it doth on the Fluid without them: The Conſequence is, that the Parts of the Water between the Threads of the Filtre muſt be preſs'd upwards, and aſcend till they come ſo high, as by their Weight to counter-ballance the general Preſſure on the other Parts of the Surface of the Water.

Laſtly, the Retainers to Sir *I. Newton*'s Philoſophy deduce the Phænomenon from the Principle of Attraction. See ATTRACTION.

The Principle of this *Filtration* is doubtleſs the ſame with that whereby Fluids aſcend up Heaps or Lumps of Aſhes, Sand, &c. The ſame with that, whereby Water is raiſed in form of Vapour: The Sap riſes in Vegetables; and the Blood circulates through the capillary Arteries, and the extremely minute glandular Strainers. See ASCENT *of Liquors*.

FILTRE, FILTER, or PHILTER, in Chymiſtry, &c. A piece of Cloth, Linen, Paper, or other Matter, uſed to *filtrate* or ſtrain Liquors through. See FILTRATION.

The *Filtre* has the ſame Uſe and Effect, with regard to Liquids, that the Sieve or Searce has in dry Matters.

*Filtres* are of two ſorts: The firſt, ſimple pieces of Paper, or Cloth; through which the Liquor is paſs'd without further Ceremony.

The ſecond are twiſted up like a Skain or Wick, and firſt wet, then ſqueez'd, and one End put in the Veſſel that contains the Liquor to be filtrated. The other End is to be out, and hang down below the Surface of the Liquor. By means hereof, the pureſt Part of the Liquor diſtills Drop by Drop out of the Veſſel; leaving the coarſer Part behind.

This *Philtre* acts as a Syphon. See SYPHON.

FILTRE is alſo a Charm, ſuppoſed to have a Virtue of inſpiring Love. See CHARM.

The Word is derived from the *Greek* φιλεῖν, which ſignifies the ſame Thing, of φιλέω, *amo*, I love.

FIMASHING, in Heraldry. See FUMETS.

FIMBRIA, the Extremities or Border of the Tubæ Fallopianæ were formerly thus called; the Word ſignifying a fringed Border, which that Part reſembles. See FALLOPIAN *Tube*.

FIMBRIATED, a Term in Heraldry, ſignifying that an Ordinary is edged round with another of a different Colour.

Thus, He beareth Or, a Croſs, Patee Gules *fimbriated* Sable.

FIN, that Part of a Fiſh, made in Faſhion of a Feather. See FISH.

The Office of the *Fins* has commonly been ſuppoſed to be analogous to that of Feathers in Fowls; and to aſſiſt the Fiſh in its progreſſive Motion, or Swimming: But the later Naturaliſts find this a Miſtake.

'Tis the Tail is the great Inſtrument of Swimming: The *Fins* only ſerve to keep the Fiſh upright, and prevent Vacillation, or Wavering. See SWIMMING, TAIL, &c.

*Whale* FINS are commonly taken for that Part of the Whale, which the Populace call Whale-bone; but whence the Miſtake ſhould ariſe, is not eaſy to determine.

'Tis certain, that fibrous, flexible Matter is not the *Fins* of that Fiſh, but rather its Teeth; that Species of Whales wherein they are found having no other Teeth. They are taken out of the Throat, and are uſually about a Span broad, and 14 or 15 long. See WHALE *Bone*.

The Whale *Fins* are the moſt valuable Part of the Animal. See *Whale* FISHERY.

FINAL, that which terminates, or comes laſt in any Thing: *Final* Judgment; *Final* Sentence, &c.

Divines call the Impenitence of the Reprobate *Final*, as ſuppoſing it to continue to the End of their Life.

FINAL *Cauſe*, is the end for which any thing is done, The *final Cauſe* is the firſt thing in the Intention of a Perſon who does a thing; and the laſt, in the Execution. See *Final* CAUSE.

*Final Cauſes* are of good uſe in Ethicks; but miſchievous in Phyſicks, and by no means to be allowed; yet Mr. *Boyle* propoſes ſome Views and Regulations, under which they may be admitted, in an *Expreſs Inquiry into the* Final Cauſes *of Natural Things*.

FINAL *Letters* are thoſe which cloſe the Words. The Figure call'd Apocope, conſiſts in retrenching *final* Letters.

The *Hebrews* have five *final* Letters; which, when at the End of a Word, have a different Figure from what they have at the Beginning, or in the Middle thereof. Theſe are the ך, ם, ן, ף, ץ, Caph, Mem, Nun, Pe, Tſade; which every where but at the Ends of Words are wrote כ, מ, נ, פ, צ.

FINANCE, a Term uſed by the *French*, for the Revenues of the King, or State. Thus, The Council of the *Finances*, correſponds to our Commiſſioners of the Treaſury: The Comptroller General of the *Finances*, to our Lord High Treaſurer, &c. See REVENUE, TREASURY, &c.

The Word is derived from the *German Finantz*, Uſury. Tho' *du Cange* chuſes rather to deduce it from the barbarous *Latin Financia*, *præſtatio pecuniaria*.

FINANCES, in the *French* Cuſtoms, denote the publick Treaſury of the King and Government: Much the ſame with the Treaſury, or Exchequer of the *Engliſh*, and the Fiſcus of the *Romans*. See TREASURY, EXCHEQUER, &c.

The Word is ſometimes alſo uſed for the Stock or Caſh of a Banker, &c.

The *French* have a peculiar kind of Figures, or numeral Characters, which they call *Chiffre de Finance*. See CHARACTER.

FINE, that which is pure, and without Mixture. The Term is particularly uſed in ſpeaking of Gold and Silver.

*Fine* Gold ſhould be 24 Carats; but there is but little, if any, that riſes to ſuch a Degree of Fineneſs.

Gold thus fine, is ſoft, and difficult to work; for which reaſon they always mix a certain Quantity of Alloy with it. See GOLD, ALLOY, and CARACT.

*Fine* Silver is that of twelve-penny Weights. See SILVER; ſee alſo REFINING.

FINE, in Law, hath divers Uſes or Significations.

The firſt and moſt noble is, a Covenant made before Juſtices, and enter'd of Record for Conveyance of Lands, Tenements, or any thing inheritable, being *in eſſe tempore Finis*, to cut off all Controverſies. See COVENANT.

A *Fine*, then, appears to be a Concord, acknowledged and recorded before a competent Judge, touching ſome Hereditament or Thing immoveable, that was in Controverſy between the Parties to the ſame Concord; and for the better Credit of the Tranſaction, it is ſuppoſed to be made in the Preſence of the King, becauſe levied in his Court.

Hence it binds Women Covert, being Parties, and others whom ordinarily the Law diſables to tranſact, only for this Reaſon, That all Preſumption of Deceit or evil Meaning is excluded, where the King and his Court of Juſtice are ſuppoſed to be privy to the Act.

Originally this Final Concord was inſtituted and allowed, in regard that by the Law and antient Courſe of Proceedings, no Plaintiff could agree or end the Cauſe without Licence of the Court: So as *Fines* have been antiently levied in perſonal Actions; and for no greater a Sum of Money than 11 *l.*

But Time has produced other Uſes of *Fine*, *viz.* To cut off Entails; and with more Certainty to paſs the Intereſt or Title of any Land or Tenement, though not controverted, to whom we think good either for Years, or in Fee: Inſomuch as the paſſing a *Fine* in moſt Caſes now is but *Fictio Juris*, ſuppoſing an Action or Controverſy, where in Truth none is; and ſo not only operating a preſent Bar and Concluſion againſt the Parties to the *Fine*, and their Heirs; but at five Years End againſt all others, not expreſly excepted, and not claiming (if it be levied upon good Conſideration, and without Covin) as Woman Covert; Perſons under twenty one Years; Priſoners, or ſuch as are out of the Realm at the Time of its acknowledging.

This *Fine* hath in it five eſſential Parts: 1°. The original Writ taken out againſt the Cognizor. 2°. The King's Licence, giving the Parties Liberty to accord; for which he hath a *Fine*, called the King's Silver; being accounted part of the Crown Revenue. 3°. The Concord it ſelf, which begins thus, *Et eſt Concordia talis*, &c. 4°. The Note of the *Fine* beginning thus, K. *inter* R. *querentem*, & S. & T. *uxorem ejus deforcientes*, &c. (where inſtead of *Deforcientes*, antiently *Impedientes* was uſed) 5°. The Foot of the *Fine* (*Hæc eſt finalis concordia facta in Curia Domini Regis apud Wiſt. a die Paſchæ in quindecim dies Anno*, &c.) concludes all, containing the Day, Year, and Place, and before what Juſtice the Concord was made.

This *Fine* is either *Single*, or *Double*.

A *Single Fine* is that, by which nothing is granted or render'd back again by the Cognizees to the Cognizors, or any of them.

A *Double Fine* contains a grant and Render-back, either of ſome Rent, Common, or other thing out of the Land, or of the Land it ſelf, to all or ſome of the Cognizors for ſome Eſtate, limiting thereby Remainders to Strangers, not named in the Writ of Covenant.

Sometimes a *Double Fine* is, when the Lands do lie in ſeveral Counties.

Again, a *Fine* is with regard to its Effect divided into a *Fine executed*, and a *Fine executory*.

A *Fine executed* is ſuch, as, of its own Force, gives a preſent Poſſeſſion (at leaſt in Law) to a Cognizee, ſo that he needs no Writ of *Habere facias ſeiſinam*, for Execution of the ſame, but may enter; of which ſort is a *Fine*, *Sur Cognizance de droit come ceo que il ad de ſon done*, that is, Upon Acknowledgment that the Thing mentioned in the Concord, is *Jus ipſius cognizati, ut illa quæ idem habet de dono Cognitoris*. Weſt. Sect. 51. K.

The Reaſon is, becauſe this *Fine* paſſeth by way of Releaſe of that Thing which the Cognizee hath already (at leaſt by Suppoſition) by Virtue of a former Gift of the Cognizor; which is in truth the ſureſt *Fine* of all.

*Fines executory* are ſuch, as of their own Force do not execute the Poſſeſſion in the Cognizees; as *Fines ſur Cognizance de droit tantum*; Fines *ſur done*, Grant, Releaſe, Confirmation, or Render.

For if ſuch *Fines* are not levied; or ſuch Render made to thoſe who are in Poſſeſſion at the time of the *Fines* levied, the Cognizees muſt needs ſue out Writs of *Habere facias ſeiſinam*, according to their ſeveral Caſes, for obtaining their Poſſeſſion; except, at the levying ſuch executory *Fines*, the Parties to whom the Eſtate is limited, be in Poſſeſſion of the Lands paſſed thereby: For in this Caſe ſuch *Fines* do enure by way of Extinguiſhment of Right, not altering the Eſtate or Poſſeſſion of the Cognizee, but perhaps bettering it. *Weſt. Symb. Sect.* 20.

As to the Form of theſe *Fines*, it is to be conſider'd, upon what Writ or Action the Concord is to be made; which is commonly on a Writ of Covenant. In this Caſe there muſt firſt paſs a pair of Indenture between the Cognizor, and Cognizee; whereby the Cognizor covenants with the Cognizee, to paſs a *Fine* to him of ſuch and ſnch Things by a Day limited. As theſe Indentures are firſt in this Proceeding, ſo are they ſaid to *lead the Fine*. See INDENTURE.

Upon this Covenant, the Writ of Covenant is brought by the Cognizee againſt the Cognizor, who thereupon yields to paſs the *Fine* before the Judge; and ſo the Acknowledgment being recorded, the Cognizor and his Heirs are preſently excluded, and all Strangers (not excepted) after five Years paſſed.

If the Writ whereon the *Fine* is grounded, be not a Writ of Covenant, but of *Warrantia Charta*, or a Writ of Right, or Meſn, or of Cuſtoms and Services (for of all theſe *Fines* may alſo be found) then this Form is obſerved: The Writ is ſerved upon the Party that is to acknowledge the *Fine*; and then he appearing, doth accordingly. See *Dyer*.

*Fines* are now only levied in the Court of Common Pleas at *Weſtminſter*, in regard of the Solemnity thereof, ordain'd by the Statute of 18 *Edw.* 1. Before which Time they were ſometimes levied in the County-Courts, Court-Barons, and in the Exchequer; as may be ſeen in *Origines Juridiciales*, &c.

*Plowden* ſays, There were *Fines* levied before the Conqueſt: *Fulbeck* ſays, He has ſeen the Exemplification of one of *Henry* the Firſt's time: *Dugdale* affirms, That there were none till *Henry* the Second. See IMPEDIENS.

FINE alſo ſignifies a Sum of Money, paid as an Income for Lands or Tenements let by Leaſe; antiently called *Gerſuma*.

Sometimes it alſo denotes an Amends, pecuniary Puniſhment or Recompence, upon an Offence committed againſt the King and his Laws; or againſt a Lord of a Manor.

In which Caſe a Man is ſaid, *Facere* Finem *de Tranſgreſſione cum Rege*, &c.

In all the Diverſities of Uſes of *Fine*, it hath but one Signification; and that is, a *Final Concluſion*, or End of Differences between Parties.

And in this laſt Senſe, wherein it is uſed for the ending and Remiſſion of an Offence, it is uſed by *Bracton*, who ſpeaks of a Common *Fine*, that the County pays to the King for falſe Judgments or other Treſpaſſes, which is to be aſſeſſed by the Juſtices in Eyre before their Departure, by the Oath of Knights, and other good Men, upon ſuch as ought to pay it.

There is alſo a *Common Fine* in Leets.

FINES *for Alienation*, are reaſonable *Fines* paid to the King by his Tenants in Chief, for Licence to alien their Lands according to the Statute, 1 *Edw.* 3. cap. 12. See ALIENATION.

FINE-DRAWING, or *Rentering*, a dexterous ſowing up, or rejoining the Parts of any Cloth, Stuff, or the like; torn or rent in the dreſſing, wearing, &c. 'Tis prohibited to *fine-draw* Pieces of foreign Manufacture, upon thoſe of our own; as has formerly been practiſed. See RENTERING.

FINERS *of Gold and Silver*, are thoſe that purify, and part thoſe Metals from other coarſer, by Fire and Water.

They are alſo called *Parters* in our old Law-Books, and ſometimes *Departers*.

FINESSE, a *French* Term, of late current in *Engliſh*. Literally, and as it is uſed among the *French*, it is of no further Import than our *Engliſh Fineneſs*.

But among us, 'tis chiefly uſed to denote that peculiar kind of Fineneſs, Delicacy, or Subtlety perceived in Works of the Mind; and the niceſt and moſt ſecret and ſublime Parts of any Science, or Art.

A Perſon of Taſte can never be fond of a Pun, where all the *Fineſſe* lyes in an Equivoque, or an Ambiguity. This Man underſtands all the *Fineſſes* of his Art. The Subſtance and neceſſary Part of a Language is learnt at a little Expence: 'Tis the *Fineſſes* and Delicacies that coſt the moſt.

FINGERS, *Digiti*, the extreme Part of the Hand, divided into five Members. See HAND.

The *Fingers* conſiſt of fifteen Bones, diſpoſed in three Rows, or Ranks; each *Finger* having three Bones.

The Joints or Jointures are called *Condyli*, and *Internodii*; and their Arrangement or Rows, *Phalanges*: The uppermoſt of which is the longeſt and largeſt; the ſecond leſs, but yet longer and larger than the third. See PHALANX.

The firſt *Finger* is called the *Pollex*, or Thum: The ſecond, *Index*, ſometimes *ſalutaris* Digitus, and ſometimes *numerans*: The third, the *Middle Finger*, *Infamis*, *Obſcenus*, *Impudicus*, and *Famoſus* becauſe uſed in mocking and Deriſion: The fourth, *Annularis*, the Ring *Finger*, *medio proximus*, and *Medicus*; by reaſon the Antients uſed

to

to ſtir and mix their Medicines therewith: The fifth, the little *Finger*, *Auricularis*; by reaſon the Ear is pick'd therewith.

FINGERS *Breadth*, a Meaſure, of two Barley Corns in Length, and four laid Side to Side. See MEASURE.

FINING, ſee REFINING, CLARIFYING, &c.

FINISHING, in Architecture, &c. is frequently applied to a Crowning, Acroter, &c. rais'd over a piece of Building, to terminate, and *finiſh*, or compleat it. See CROWNING.

FINITE, ſomething bounded, or limited; in Contradiction to Infinite. See INFINITE.

The School-men make two kinds of *Finites*: The one as *to Extenſion*; which is applied to Things that have not all poſſible, or conceiveable Extenſion.

The other as *to Perfection*, applied to Things, which have not the laſt Perfection.

To get an Idea, *e. gr.* of a Thing *finite* in Point of Perfection, we firſt conceive the thing as having certain Perfections; and then conceive ſome other Perfection, which it has not, or ſome Perfection in a further Degree.

Thus, when I ſay that Three is a finite Number, I firſt conceive a Number, conſiſting of three Unites; then conceive other Unites beyond theſe three. Thus it is I conceive my Mind *finite*, by obſerving certain Perfections beyond what I find in my Mind.

After the ſame manner I conceive this Study to be *finite*, by having an Idea of Extenſion beyond what is contained therein. See EXTENSION.

FINITOR, in Aſtronomy, the *Horizon*; thus called, by reaſon it *finiſhes* or bounds the Sight or Proſpect. See HORIZON.

FIOL, ſee PHIOL.

FIRE, in Phyſiology. The moſt univerſal and ſenſible Character of *Fire*; and that which beſt defines and diſtinguiſhes it from every other thing, is its *Heating*.

*Fire*, therefore, may be defined to be whatever warms, or heats Bodies. See HEAT.

Again, as Heat is ſomething, whoſe Preſence we beſt perceive by the Dilatation of the Air or Spirit in the Thermometer: *Fire* may be defined to be that whoſe Preſence we perceive by the Expanſion of the Air, or Spirit in the Thermometer. See RAREFACTION.

Whence it follows, that *Fire* is a Body, and a Body in Motion.

Its *Motion* is argued from its expanding the Air; which is not effected without communicating Motion thereto: And its *Corporeity* is proved by Experiment.

For pure Mercury being incloſed in a Phial with a long Neck, and kept in a gentle Heat for the ſpace of a Year, is reduced into a Solid; and its Weight conſiderably increaſed; which Increaſe can ariſe from nothing but the Acceſſion of *Fire*. See MERCURY.

'Tis a Diſpute of ſome Standing among Philoſophers, Whether *Fire* be any ſpecifick Subſtance, originally diſtinct from all other; or whether it be the Matter of other Bodies, only under certain peculiar Modifications, *i. e.* Whether *Fire* be ſuch by its own Nature, or by Motion.

*Fire*, makes one of the vulgar, or Peripatetick Elements, defined to be hot, and dry; or, it is that Part, or Ingredient in all Bodies, which is hot in the higheſt Degree, and dry in an inferior one. See ELEMENT.

What the School-Philoſophers add further, as to the Nature of *Fire*, is, that it is a *Simple* Body; as not including any Contrariety of Qualities; and a Body abſolutely *light*, as tending naturally upwards: For which reaſon they hold its natural Place above all the other Elements, between the Extremity of our Atmoſphere, and the Moon; and the Source of *Fire* ſuppoſed to reſide in that Sphere, they call *Elementary Fire*. See ELEMENTARY.

*Fire*, according to the *Carteſians*, is an Aſſemblage of the more ſolid, earthy Particles; which ſwimming in the rapidly fluid Matter of the firſt Element, become vehemently agitated thereby; and by this intenſe Agitation or Motion are diſpoſed to give the Senſation of Heat, Light, &c. See CARTESIANISM.

*Fire*, according to Sir *I. Newton*, is a Body heated ſo hot, as to emit light copiouſly.

For what elſe, ſays that Philoſopher, is red-hot Iron, but *Fire*? And what elſe is a *fiery* Coal, than red hot Wood? By which he ſuggeſts, that Bodies which are not *Fire*, may be changed and converted into *Fire*. See FLAME.

*Fire*, according to ſome of the lateſt Philoſophers, is a certain Subſtance, or Body *ſui generis*, originally ſuch; and not producible by any Motion or Alteration of other Bodies.

Theſe Authors lay it down as a very ſubtile, moveable, penetrating Body; and the Cauſe or Inſtrument of Heat and Light. Some of them add, that when *Fire* enters the Eye in right Lines, it produces or excites the Idea of *Light*; which rectilinear Motion they account abſolutely neceſſary to the Idea of Light. See LIGHT.

Whereas, to produce Heat, and the other Effects of *Fire*, ſuch Motion is not required; but on the Contrary, an irregular, various Motion is fitter to produce the ſame. See HEAT.

The Nature of *Fire* is ſo wonderful, and abſtruſe, that the Antients generally revered it as a God: Among the Moderns, we can ſcarce name one one Point in all Philoſophy of more Importance, or leſs underſtood.

*Fire*, in Effect, is the univerſal Inſtrument of all the Motion, and Action in the Univerſe: Without *Fire*, all Bodies would become immoveable; as in a ſevere Winter we actually ſee our Fluids become ſolid, for want thereof. Without *Fire*, a Man would harden into a Statue; and the very Air cohere into a firm, rigid Maſs.

*Fire*, then, is the univerſal Cauſe of all Mutation, or Change; for all Mutation is by Motion; and all Motion by *Fire*.

Several Authors have labour'd to ſet this grand Agent in its juſt Light; and particularly the excellent *Boerhave*, in a new Courſe of Experiments, and Lectures expreſly on the Subject, *De Igne*. That Author has indeed done Wonders: The Sum of his Doctrine we ſhall here ſubjoin.

*Fire*, then, is diſtinguiſh'd into two Kinds; as it is in it ſelf, called *Elementary*; or as it is join'd with other Bodies, called *Culinary Fire*.

*Pure*, or *Elemental* FIRE, is ſuch as it exiſts in it ſelf; which alone we properly call *Fire*.

*Common*, or *Culinary* FIRE is that exiſting in ignited Bodies; or excited, by the former, in combuſtible Matters, the minute Particles whereof joining with thoſe of the pure *Fire*, conſtitute pure Flame.

This latter is improperly called *Fire*; in regrad only a ſmall Part of it is real, or pure *Fire*.

Pure *Fire*, ſuch as collected in a Burning Glaſs, yields no Flame, Smoak, Aſhes, or the like: Conſequently, in *ignited* Bodies, that which flames, ſmoaks, &c. is not ſimply *Fire*.

The Effects, Nature, Properties, &c. of each ſhall be conſider'd.

I. *Pure*, or *Elemental Fire* of it ſelf, is imperceptible; and only diſcovers it ſelf by certain Effects, which it produces in Bodies; which Effects are only learnt, by obſerving the Changes that ariſe in thoſe Bodies.

The Firſt *Effect of Elemental Fire* on Bodies, is *Heat*; which ariſes wholly from *Fire*; and in ſuch manner as that the Meaſure of Heat is always the Meaſure of *Fire*; and that of *Fire*, of Heat. So the Heat is inſeparable from *Fire*. See HEAT.

The Second is, *Dilatation* in all ſolid Bodies; and *Rarefaction* in all Fluids.

That both theſe are inſeparable from Heat, is evident from numerous Experiments. An iron Rod, or Bar being heated, increaſes in all its Dimenſions; and the more ſo, as it is further and further heated: Upon expoſing it to the Cold again, it contracts and returns ſucceſſively through all the Degrees of its Dilatation, till it arrive at its firſt Bulk; being never two Minutes ſucceſſively of the ſame Magnitude.

The like is obſerved in the heavieſt of all Bodies, Gold; which, when fuſed, takes up more Space than before: So Mercury, the heavieſt of all Fluids, we have known to aſcend in a narrow Tube over the *Fire*, to above 30 times its Height. See RAREFACTION, and DILATATION.

The Laws of this Expanſion, are 1°. That the ſame Degree of *Fire* rarefies Fluids ſooner, and in a greater Degree than it does Solids. Without this, the Thermometer would be of no uſe; ſince the Cavity of the Tube would then be dilated in the ſame Proportion, as the Fluid is rarified. 2°. The lighter the Liquid, the more it is dilated by *Fire*. Thus Air, the lighteſt of all Fluids, expands the moſt; and after Air, Spirit of Wine. See THERMOMETER.

The Third *Effect of Fire* on Bodies, is *Motion*: For *Fire*, in warming and dilating Bodies, muſt of Neceſſity move their Parts.

In Effect, all the Motion in Nature ariſes from *Fire* alone; and taking this away, all Things become immoveable: Upon the Abſence of only a certain Degree of *Fire*, all Oils, Fats, Waters, Wines, Ales, Spirits of Wine, Vegetables, Animals, &c. become hard, rigid, and inert: And the leſs the Degree of *Fire*, the ſooner, and more violently is this Induration made.

Hence, if there were the greateſt Degree of Cold, and all *Fire* were abſolutely taken away, all Nature would grow into one concrete Body, ſolid as Gold, and hard as Diamond. But upon the Application of *Fire*, it would recover its former Mobility.

Conſequently, every Diminution of *Fire* is attended with a proportionable Diminution of Motion: And *vice verſa*. See COLD.

This *Fire*, whoſe Effects we have been relating, needs no Air, or Pabulum to ſuſtain or preſerve it.

For

For, putting ſome Calx of Tin or Lead, in the exhauſted Receiver of an Air Pump; and apply a Burning Glaſs, ſo as the Focus ſhall fall on the Calx; the Conſequence will be a vehement Dilatation of the Calx, from the Centre towards the Circumference, whereby the Receiver will be broke into a thouſand Pieces. And if a Quantity of any eſſential aromatick Oil be pour'd in Vacuo, upon Spirit of Nitre, there will immediately ariſe a huge *Fire*, to the great Danger of the By-ſtanders.

All the above-mentioned Effects of Elemental *Fire* may be increas'd divers ways, *viz.*

1°. By *Attrition*, or a ſwift Agitation, or rubbing of one Body againſt another. This is apparent in Solids: A vehement Attrition of a Flint, and Steel, every body knows, will produce Sparks. So in Fluids, Cream, by long churning to ſeparate the Butter, will grow ſenſibly warm; and a Barometer renders the Effect ſtill more diſcernable. See ATTRITION.

In effect, all the Heat of an Animal is owing to the Agitation and Attrition of the Parts of its Juices againſt each other, and the Sides of the Veſſel. See CALIDUM *Innatum*.

The more ſolid, hard, and elaſtick the Bodies thus agitated are; the more Points of Contact they have; the more intenſe the Force whereby they are ſtruck againſt each other, is; the greater their Motion; the quicker the Returns of the Strokes; and the longer continued; the greater is the Heat produced.

Thus, a piece of Spunge rubb'd lightly, and for a little while againſt another, acquires no ſenſible Heat: But a large, heavy piece of Iron briſkly rubb'd againſt another in a cold Seaſon (when Bodies are the denſeſt) will preſently acquire an intenſe Heat, ſufficient to *fire* Sulphur, Gunpowder, or the like.

So a Knife whetted briſkly on a dry rough Stone, ſhall yield Sparks of *Fire*; but if Oil, or any other fatty Matter be interpoſed, no ſenſible Heat ſhall ariſe: And the Points of two Needles rubb'd againſt each other ever ſo ſtrongly, or ſo long, will never grow warm; as only touching in a few Points.

Hence 1°, The Globules of the Cruor, or red Blood drove by the Force of the Heart againſt each other, or againſt the Sides of the Arteries, excite more Heat than the Globules of the Serum, or any other Humor in the Animal. Hence 2°. Thoſe Parts abounding moſt in theſe Globules thus agitated, as the Heart, Liver, and Head, will be the hotteſt of all others: And the denſer the Blood, *cæteris paribus*, the greater the Heat, &c. 3°, The quicker the Contractions of the Heart are repeated, the greater will the Heat be.

The Second *Manner of increaſing the Effect of Elemental Fire*, is by throwing a Quantity of moiſt or green Vegetables, cut down while full of Sap, into a large Heap, and preſſing them cloſe down: The Reſult of which, is, that they grow warm, hot, ſmoak, and break out into Flame.

The Third way is, by the Mixture of certain cold Bodies. Thus, Water and Spirit of Wine, firſt warm'd, grow much hotter by the Mixture: So, any of the heavy aromatick Oils, as of Cloves, Cinnamon, Saſſafras, Guiacum, &c. mix'd with Spirit of Nitre, grow exceedingly hot, and burſt forth like Vulcano's. And the ſame may be ſaid of Spirit of Nitre, and Steel Filings.

The like Effect may be had from dry Bodies. Thus, pure Sulphur, and Steel Filings, well ground and mix'd in equal Quantities, with Water enough to make them into a dry Paſte, and laid an Hour or two any where, even under Ground, will ſmoak and emit Flame; and that with the greater Vehemence, as it is more ſtrongly preſs'd down. See EARTHQUAKE.

The Fourth is by *Phoſphorus*, which is a kind of Magnet, prepar'd from the Parts of Animals, that imbibes and retains *Fire* for many Ages. See PHOSPHORUS.

But, in all theſe manners, it does not appear, that any *Fire* is excited, or generated of what was not *Fire* before: For, if in a ſevere Winter's Day you rub a Plate of Gold briſkly againſt another, they will both grow hotter and hotter by Degrees, till at length they become red hot, and at the point of melting: And yet all this time the Plates loſe nothing of their Weight; but ſwell or grow bigger in all their Dimenſions.

Hence it follows, that the Particles of the Gold are not converted by the Friction, into *Fire*; but the *Fire* exiſted before; and all the Effect of the Friction, &c. is to collect, or bring together a Quantity thereof before diſperſed throughout the Atmoſphere.

In Effect, there is no making or producing of *Fire de novo*. All we can do, is, of inſenſible, to render it ſenſible, *i. e.* to collect it out of a greater Space into a leſſer; and to direct and determine it to certain Places, This is effected, as above mention'd, by Motion, Attrition, &c.

The Sun alſo contributes very much to the bringing of *Fire* to light, by means of his rapid Motion round his Axis; whereby the fiery Particles, every where diffuſed, are directed and determined in parallel Lines towards certain Places, where their Effect becomes apparent. See SUN.

Whence it is that we perceive the *Fire* when the Sun is above the Horizon; but that, when he diſappears, his Impulſe or Preſſion being then taken away, the *Fire* continues diſperſed at large thro' the ethereal Space.

In effect, there is not leſs *Fire* in our Hemiſphere in the Night time, than by day; only it wants the proper Determination to make it perceived.

Another way of rendering it ſenſible, is, by collecting the parallel Rays into a leſs Compaſs, by means of Convex Glaſſes, or Concave Specula. See LENS, BURNING GLASS, &c.

This Elemental *Fire* is preſent every where, in all Bodies, all Space, and at all Times; and that in equal Quantities: For, go where you will, to the Top of the higheſt Mountain, or deſcend into the loweſt Cavern; whether the Sun ſhine, or not; in the coldeſt Winter, or the moſt ſcorching Summer; by one or other, or all of the means above mentioned may *Fire* be collected. In a Word, there is no aſſignable phyſical Point without *Fire*; no Place in Nature, where the Attrition of two Sticks will not render it ſenſible.

So long as *Fire* remains equably, and undetermin'd in any Place, it does not diſcover it ſelf by any Effect. In the ſevereſt Weather we perceive no Influence or Effect of *Fire*, when, at the ſame time being collected and determined by Attrition, it becomes manifeſt.

By changing *Fire* out of its indeterminate State, and impelling it in converging Lines, its Moment is increaſed. Witneſs the Phænomena of Burning Glaſſes.

But, how Attrition, crude Vegetables, &c. contribute towards altering the Direction, &c. of *Fire*, does not appear.

Of this *Fire*, and the Effects thereof above mentioned, depends all Fluidity of Humours, Juices, &c. All Vegetation, Putrifaction, Fermentation, animal Heat, &c. See FLUIDITY, VEGETATION, PUTRIFACTION, &c.

II. But in what manner ſoever, *Fire* is collected in Bodies; upon a Ceſſation of the collecting Cauſe, it ſoon diſappears again, unleſs it be ſupplied with a *Pabulum*, or Fuel. In which caſe it becomes Culinary *Fire*.——

By *Pabulum*, or *Fuel* of *Fire*, we mean whatever receives, and retains *Fire*; and is conſumed, or at leaſt render'd inſenſible thereby. See FUEL.

The only *Pabulum* of *Fire*, in all Nature, is the Oil, Sulphur, or Fat of Bodies: And Bodies are only Fuel, on account of the Oil they contain.

Hence 1°, All Vegetables, not too moiſt, nor too dry, afford ſuch a Pabulum; particularly thoſe, which contain the greateſt Quantity of Oil; as Balſamick and Reſinous Woods, &c. 2°, All vegetable and animal Coals are a proper Pabulum for maintaining of *Fire*; as being only the Parts of Vegetables and Animals, which have exhaled their Water and Salt, and retain'd the Oil alone inhering, in a black Form, in their Earth. 3°, All foſſil and bituminous Earths, Turfs, &c. 5°, All Mineral Sulphur, whether pure or join'd with Earth, Stone, or Metals; as Pit-Coal, &c. 6°, The Fat and Dung of Animals; and 7°, Several Productions of Chymiſtry; as Oils, inflammable Spirits, &c.

This *Fire*, which burns combuſtible Bodies, requires Air, to ſuſtain it; which taken away, the *Fire* is immediately diſſipated: As appears from the Experiments in Vacuo.

And yet, *Fire* does not immediately bear, or endure the Air; but always repels it: And by that means forms a kind of Vault, or aerial Furnace all round; which by its Weight, and the Preſſure of the incumbent Air acts on all the Particles, or Corpuſcles that would make their Way through it; and thus retains the *Fire*, and applies it to the combuſtible Matter.

Hence, the heavier the Air, the more vehement the *Fire*: And accordingly, in ſtill cold Weather we obſerve the *Fire* to act with more Violence than in warm Weather.

But whether the Air retains *Fire* by its Weight alone (which Water it ſelf would do), may be queſtioned: And whether its Elaſticity does not contribute ſomething thereto; as alſo, whether there be not ſome further unknown Property in the Air, that has a Share, may be doubted. Something of this kind one would ſuſpect from hence, that all Air is not proper to maintain Flame. See AIR.

This *Fire*, in burning a combuſtible Matter, affords a *ſhining Fire*, or a Flame, or both, according to the Diverſity of Fuel; and frequently, Smoak, Soot and Aſhes.

*Shining*, or *luminous Fire*, ſeems to be elemental *Fire*, attracted towards the Parts of the Sulphur, or Oil, with ſuch Force and Velocity, as to move, and ſhake them very violently, whirl them about, divide, and attenuate them, and thus render them volatile, and ready to be expelled: While, in the mean time, the Air, making its Vault all around, reſtrains and keeps them in, directs them to the Sulphur, and keeps them ſtill collected in their Place or Pabulum, while the combuſtible Matter is diffuſed all around.

*Flame*

*Flame* ſeems to be nothing but a thick Sulphur agitated, as before, by Elemental *Fire*; ſo as the *Fire* is driven with a great Motion around the revolving Particles of the Sulphur. See FLAME.

*Soot*, ſeems to be produced, when *Fire* and Sulphur cannot break into a Flame; being a ſort of Coal, conſiſting of a thick Sulphur, and an attenuated Oil with Earth and Salt. See SOOT.

*Smoak* ſeems to be the combuſtible Matter, when it begins to be relinquiſh'd by the Elemental *Fire*: For, if this Smoak be afterwards paſs'd thro' a Flame, it will it ſelf become Flame, as before. See SMOAK.

Laſtly, *Aſhes* are the Earth, and Salt; which the *Fire* leaves untouch'd. See ASHES.

FIRE may be diſtinguiſh'd into *Shining*, and *not Shining*: For, that there is *Fire* which does not emit Light, is evident hence, that a piece of Iron taken out of the *Fire*, before it be red hot, ſhall yet give *Fire* to Sulphur.

*Shining Fire* again may be ſubdivided into two Kinds: That which *warms*, as red hot Iron; and that which does *not warm*, as that obſerved in putrid Fiſhes, rotten Wood, &c. The Oil whereof beginning to be agitated, and attenuated, produces Light, without any Heat, ſo far as the Thermometer may be a Judge.

Of *Shining*, and at the ſame time *Warming Fires*, the principal is that of the *Sun*, as it is called; tho', whether the *Fire* be really emitted from the Body of the Sun; or whether it be only the common, vague, univerſal *Fire*, determin'd by the Sun, is not eaſy to ſay. This *Fire* we more uſually conſider under the Denomination of *Light*. See SUN, and LIGHT.

This *Solar Fire*, in calcining certain Bodies, makes ſome Addition to the Weight thereof.

Thus, Antimony expoſed in the Focus of a Burning Glaſs, will ſmoak a conſiderable Time; and the greateſt Part of it ſeem to evaporate in Fumes: But, if tried by the Balance, it will be found to have gain'd in Weight. And if it be again applied in the Focus of a larger Glaſs, it will again emit Fumes; and yet ſtill be increaſed in Weight.

Beſide the *Solar*, there is likewiſe a *Subterraneous Fire*. This appears in digging under Ground: For the firſt Glebe, next to the Surface, is warm'd by the Heat of the Sun; and as you go deeper, you will find it colder; whence in hot Countries they have Conſervatories of Ice at ſome Depth under Ground: Till, arriving at a certain Depth, *viz.* forty or fifty Foot, it begins to grow warmer; ſo as no Ice can there ſubſiſt: And at a yet greater Depth, 'tis ſo hot, as to take away Reſpiration, extinguiſh Candles, &c. And if the Miner will venture further, and carry a Candle along with him, he frequently ſets the whole Place in a Flame, the ſulphurous Fumes render'd volatile by the ſubterraneous *Fire*, catching Flame from the Candle.

Whence it appears, that there is another Source of *Fire*, or another Sun, in the Boſom of the Earth, which gives Motion and Life to every thing growing in, or upon the Globe; and even, that the Centre of the Earth is mere *Fire*: which *Fire* is likewiſe argued to be perpetual from Vulcano's or burning Mountains, which have been known to caſt up *Fire*, from the earlieſt Account of Times. See VULCANO.

There are two great *Fires* therefore, the Higher, or Solar; and the lower, or ſubterraneous; in every other reſpect perfectly alike. See SUBTERRANEAN, CENTRAL, SOLAR, &c.

FIRE, in Chymiſtry, is the great Inſtrument, by which moſt of the Operations of that Art are perform'd. See CHYMISTRY.

The Kind, Degree, Direction, &c. of *Fire* are Things the Chymiſt is principally to attend to. The Diverſity of *Fire* makes a great Difference in the Reſult of the Experiment; ſo as, the ſame Effect, *e. gr.* ſhall not ariſe, if an Experiment be made with the *Fire* of Spirit of Wine, and that of Pitcoal.

And to this Cauſe, Mr. *Boyle*, in his Treatiſe of the unexpected Failure of Experiments, attributes it, that a great many Experiments ſucceſsfully tried by ſome, have not ſucceeded to others.

The *Fires* chiefly required by the Chymiſts, are ſuch as yield no Fæces, or Remains; no Salt, or Smoak: And ſuch alone are thoſe of the Sun, and of Spirit of Wine. Thoſe which come next in Purity, are Oils diſtilled per Veſicam; which loſe their Earth and Salt, by their Boyling and Agitation in the Water; ſo that the oftener the Diſtillation is repeated, the purer they are render'd: After theſe come Turf.

Indeed, the very Manner wherein the *Fire* is blown, is found to have ſome Effect: Thus, *Acoſta*, *lib.* 4. *c.* 5. relates, that in *Peru*, when they would melt and ſeparate their Silver from the Earth, &c. if the *Fire* be blown up with Bellows, the Fuſion will not ſucceed: Nor will any other *Fire* do but that blown by the Wind raiſed from the Fall of ſome Water; ſo that they are forc'd to have Recourſe to large Tubes laid to the Feet of large Mountains, or Cataracts to convey the Wind generated by the Fall of Water to their Works.

The *Degree of Fire*; or the Collection and Direction of *Fire*, to the Degree proper for each Operation, is almoſt the Whole of Chymiſtry: For the *Fire*, *e. gr.* requiſite to melt Metals, is by no means proper for the Diſtilling of Spirit of Wine.

Now, the greater or leſs Force of *Fire* depends altogether on a greater or leſs Quantity thereof collected into a Focus: For, as to its Motion, it does not ſeem in our Power to alter it; or to make any Increaſe or Diminution of the Force of the *Fire* on that account.

The Chymiſts uſe four principal *Degrees of Fire* in their Operations.

The Firſt is equal to the natural Heat of the human Body; or rather that of a Hen, hatching her Eggs; which is the Standard: And accordingly this firſt Degree is beſt meaſured by applying a Thermometer to a Hen; and ſome Chymiſts, by keeping a *Fire* continually to this Degree, by means of a Thermometer, have hatch'd Chickens.

By this Degree all their Digeſtions, eaſy Separations and Solutions, gentle Diſtillations, with all Fermentations and Putrifactions are perform'd. See DIGESTION, DISTILLATION, &c.

The Second *Degree of Fire* is that which gives a Man Pain, but does not deſtroy, or conſume the Parts: Like the Heat of a ſcorching Summers Sun, which chafes and inflames the Skin; and even ſometimes raiſes Bliſters.

It is uſed in making Separations of the more ponderous Bodies, which the firſt Degree is not equal to; as alſo in ſome Fixations, particularly that of Mercury, which is render'd fix'd by a gradual Introduction of ſuch *Fire* among the Parts of the Mercury.

It makes the Serum of the Blood, and White of an Egg coaleſce, and ſo occaſions deadly Inflammations; and is too intenſe for any Digeſtion, Putrifaction, or Fermentation to be effected by it.

The Third *Degree of Fire* is that of boiling Water, which ſeparates and deſtroys the Parts of Bodies. This Degree is perfectly ſtable; for Water, when once it boils, is at its utmoſt Degree of Heat, and cannot be rais'd a whit further, by any Augmentation of *Fire*, or Fuel; as was firſt obſerv'd by Monſ. *Amontons*.

This Degree ſerves to attenuate, ſeparate, fix, and perform other Operations, where the two former would not be effectual.

The Fourth *Degree* is that which melts Metals, and deſtroys every thing elſe.

This Degree is too vehement to be eſtimated by the Thermometer; that Inſtrument not being able to endure it; ſo that it is only determinable by its Effect in the Fuſion of Metals: As the Heat of boiling Water cannot be increaſed, ſo neither can that of melted Metals.

This Degree is uſed in abundance of Operations, and particularly about Minerals, where the three preceding Degrees are inſufficient. This is the laſt Degree known to the antient Chymiſts.

The lateſt Chymiſts reckon a Fifth *Degree of Fire*. viz. that where by Gold is made to emit Fumes, and evaporate. This was firſt diſcover'd in the Year 1690, by Mr. *Tſchirnhauſen*, whoſe Burning Glaſs render'd every thing, even Gold it ſelf volatile. See VOLATILITY, BURNING GLASS, GOLD, &c.

Beſide theſe five Degrees, the Chymiſts have ſeveral intermediate ones; all which however may be eaſily reduc'd to the former.

As, *the digeſting Fire*, or *Venter Equi*, which is the Heat of a Dunghil.

The *Balneum Mariæ*, *Arenoſum*, &c. explain'd under the Article BALNEUM.

The *Naked*, or *Immediate Fire*, which is the common *Fire* applied under a Veſſel.

The *Fire of a Lamp*, which is moderate and equal, and may be increaſed by the Addition of more Wick; uſed by Enamellers, &c.

The *Wheel Fire*, which is lighted all round a Crucible, or other Veſſel, to heat it all alike.

That called *by Suppreſſion*, which is when the Veſſel is not only encompaſs'd round, but cover'd over with *Fire*.

The *Reverberatory Fire*, when it is in a Furnace cloſe a-top, by which the *Fire* is reflected back, and all around upon the Veſſel. See REVERBERATORY.

The *Melting*, or *Fuſing Fire*, for the Solution and Calcination of Metals and Minerals. See FUSION.

The *Glaſs-houſe Fire*, for the Vitrifying of the Aſhes of Vegetables. See GLASS.

And the *Olympick Fire*, which is that of the Sun collected in the Focus of a burning Mirror, &c.

To the ſeveral Degrees of *Fire* required, ſeveral Forms of Furnaces are accomodated; which ſee under the Article FURNACE.

There are five principal ways of *altering the Degrees of Fire*.

For *Fire* differs 1°, According to the *Weight of the Pabulum*, or Fuel; it being a Rule, that the heavier the Fuel or combuſtible Matter is, the more vehement, *cæteris paribus*, is the *Fire*. Thus, Spirit of Wine affords a weaker and leſs deſtructive *Fire* than Oil; and this, than Pitch, and ſo on; the heavier and groſſer, ſtill the fiercer.

2°, According to the *Quantity of the Pabulum*.

3°, According to the *Diſtance of the Fire* from the Object; it being a Rule, that the Heat of the *Fire* at different Diſtances is reciprocally, as the Squares of thoſe Diſtances.

4°, By the introducing or blowing of Air into the *Fire*; it being a Rule, that the ſtronger the Current of Air, or Wind, provided it be not ſo ſtrong as to break the aerial Fornix or Vault incumbent on the *Fire*, the more is the *Fire* increas'd.

For a briſk Blowing puts the minute Parts of the Pabulum into a greater Motion, whence a greater Attrition ariſes, and of conſequence, more *Fire* is collected.

5°, According to the *Solidity*, or *Reſiſtance* of the Medium between the *Fire* and the Object: For the more ſolid the Medium, the greater Quantity of Heat, *cæteris paribus*, does it receive from the *Fire*, and communicate to the Object.

Thus, a Vapour Bath communicates much leſs Heat to the Bodies diſtilled by it, than a Water Bath; and this, leſs than a Sand Bath; and this again leſs than a Bath of Steel Filings; for all Bodies expoſed to the *Fire*, grow hot in Proportion to their ſpecifick Gravities.

Thus, if a piece of Metal be put in Water, and both ſet over the *Fire*; while the Water only grows lukewarm, the Metal ſhall be ſo hot, as to be paſt touching: And thus, a Key in a Perſon's Pocket ſitting near the *Fire*, ſhall frequently be very hot, while his Cloaths themſelves have not any ſenſible Warmth.——Indeed, this Rule admits of ſome Exceptions; for we have Oils, lighter than Water, which yet admit of triple its Degree of Heat, before they boil.

'Tis a great Controverſy in Chymiſtry, whether *Fire*, when applied to Bodies, only ſeparates and diſſolves them; or whether it does not alſo change them.

Mr. *Boyle*, in his *Sceptical Chymiſt*, we think, has abundantly proved, that *Fire* alters Bodies; and that the Parts or Elements procured from Bodies by *Fire*, did not exiſt ſuch in the Bodies themſelves. See ELEMENTS.

Add, that *Fire* does not only ſeparate and decompound; but it alſo compounds and mixes Bodies. This no body can doubt of, who knows that *Fire* in acting on many Bodies, inſinuates and fixes it ſelf among them, and ſo conſtitutes one Body together with them.

This is the Caſe in diſſolving of Lead by *Fire*; as is evident from the Increaſe of the Weight of the Lead: The like is obſervable in Salt of Tartar, which when firſt melted, loſes ſomewhat of its Weight; but as it is calcined further and further, grows ſtill heavier and heavier. In like manner, Antimony calcined by a Burning Glaſs, receives a notable Acceſſion of Weight.

To ſay no more, Phoſphorus muſt derive its ſhining Matter from the fiery Particles it imbibes in the Diſtillation: For no body will imagine that any of that ſhining Matter before exiſted in the human Body. See PHOSPHORUS.

FIRE, in Medicine and Chirurgery, is uſed in the ſame Senſe with Cautery; and is diſtinguiſh'd into *Actual*, and *Potential*.

*Actual Fire* is a hot Iron. There are ſeveral Diſeaſes, only to be cured by the Application of *Actual Fire*; which Method of Cure is practiced with great Succeſs in the *Eaſt Indies*. See BURNING.

*Potential Fire* is that contain'd in Cauſtick Medicines. See CAUSTICK, and CAUTERY.

*Fire* alſo gives the Denomination to divers Diſeaſes, as St. *Anthony*'s FIRE, by Phyſicians more uſually called *Eryſipelas*. See ERYSIPELAS.

St. *Anthony*'s *Fire* is alſo called *Holy Fire*, or *Sacer Ignis*; and in an antient Inſtrument, belonging to the Hoſpital in the Church of St. *Anthony*, at *Marſeilles*, it is called *Fire of Hell*, or *Ignis infernalis*.

This Diſtemper made great Ravages in *France*, in the XI^th^ and XII^th^ Century; and it was for the Relief of Perſons labouring under it, that the religious Order of St. *Anthony* was founded, in the Year 1093. under the Pontificate of *Urban* II.

*Walking* FIRE, called alſo Will-with-a-wiſp, *Jack in a Lanthorn*, *Ignis fatuus*, &c. See *Ignis* FATUUS.

FIRE, in Theology, is frequently underſtood of the Puniſhment of the Wicked after Death. See HELL, GEHENNA, PURGATORY, &c.

'Tis ſuppoſed the World will periſh at laſt by *Fire*. See CONFLAGRATION.

God has made ſeveral Revelations of himſelf, under the Appearance of *Fire*: He appeared to *Moſes* under the Form of a *Fire* burning in a Buſh.: The Holy Ghoſt deſcended on the Apoſtles in Tongues of *Fire*; and the Camp of the *Iſraelites* was guided and conducted in the Night-time by a Pillar of *Fire*.

The *Perſians* ador'd *God* under the Image or Repreſentation of *Fire*; by reaſon 'tis *Fire* gives Motion to every thing in Nature. They are ſaid to have *Fires* ſtill ſubſiſting, which have burnt above a thouſand Years.

The *Hebrews* kept up the *Holy Fire* in the Temple; and the Veſtals were appointed expreſs, to keep up the ſacred *Fire* of the *Romans*. See VESTAL.

*Vulcan* was worſhip'd among the Antients, and particularly the *Egyptians*, as the Inventor of *Fire*: And *Boerhave* has made it highly probable, that the *Vulcan* of the Heathens was the *Tubal-Cain* of the *Hebrews*, the firſt who appears to have known the Uſe of *Fire*; and to have applied it in the Fuſion of Metals, and other Preparations of Chymiſtry. See CHYMISTRY.

FIRE-*Stone*, a kind of Stone, called alſo *Rigate Stone*, from the Place whence 'tis chiefly brought: 'tis very good, and much uſed for Chimneys, Hearths, Ovens, Stoves, &c. See STONE.

FIRE *Office*, ſee OFFICE, of INSURANCE.

FIRE *Maſter*, in our Train of Artillery, Is an Officer that gives Directions and the Proportions of the Ingredients for all the Compoſitions of *Fire* Works, whether for Service in War, or for Rejoycings and Recreations.

The Orders are given to the *Fire* Workers and Bombardeers, who are oblig'd to execute them.

FIRE *Workers*, are ſubordinate Officers to the *Fire* Maſter, who command the Bombardeers.

They receive the Orders from the *Fire* Maſters, and ſee that the Bombardeers execute them.

FIRE-*Eater*. We have a great Number of Charletans, who have procured the Attention and Wonder of the Publick, by *eating of Fire*, *walking on Fire*, *waſhing their Hands in melted Lead*, &c.

The moſt celebrated is our Countryman *Richardſon*, much talk'd of abroad. His Secret, as related in the *Journal des Scavans*, of the Year 1680, conſiſts in a pure Spirit of Sulphur, wherewith he rubs his Hands, and the Parts that are to touch the *Fire*; which burning and cauterizing the Epidermis, hardens and enables the Skin to reſiſt the *Fire*.

Indeed, this is no new Thing: *Amb. Pare* aſſures us he had tried on himſelf, that after waſhing the Hands in ones own Urine, or with Unguentum Aureum, one may ſafely waſh them in melted Lead.

He adds, that by waſhing his Hands in the Juice of Onions, he could bear a red hot Shovel on them, while it diſtill'd Lard.

FIRE *Works*, or *Artificial* FIRES are Preparations made of Gunpowder, Sulphur, and other inflammable and combuſtible Ingredients, on occaſion of publick Rejoycings, and other Solemnities.

The principal of theſe are *Rockets*, *Serpents*, *Stars*, *Hail*, *Mines*, *Bombs*, *Garlands*, *Letters*, and other Deviſes. See ROCKET, STAR, BOMB, &c.

The Art of preparing and managing *Fire* Works, is called *Pyrotechnia*. See PYROTECHNIA.

*Wild* FIRE, is a kind of artificial or factitious *Fire*, which burns even under Water; and that with greater Violence than out of it.

It is compoſed of Sulphur, Naphtha, Pitch, Gum, and Bitumen; and is only extinguiſhable by Vinegar, mix'd with Sand and Urine; or with raw Hides.

Its Motion or Tendency is ſaid to be contrary to that of natural *Fire*, and always follows the Direction in which it is thrown; whether it be downwards, ſidewiſe, or otherwiſe.

The *French* call it *Greek Fire*, or *Feu Gregeois*, becauſe firſt uſed by the *Greeks*, about the Year 660; as is obſerv'd by the Jeſuit *Petavius*, on the Authority of *Nicetas*, *Theophanes*, *Cedrenus*, &c.

The Inventor, according to the ſame Jeſuit, was an Ingineer of *Heliopolis*, in *Syria*, named *Callinicus*, who firſt applied it in the Sea Fight commanded by *Conſtantine Pogonat*, againſt the *Sarazens*, near *Cizicus*, in the *Helleſpont*; and with ſuch Effect, that he burnt the whole Fleet therewith, wherein were thirty thouſand Men.

But others will have it of a much older Date; and hold *Marcus Gracchus* the Inventor; which Opinion is ſupported by ſeveral Paſſages, both in the *Greek* and *Roman* Writers, which ſhew it to have been antiently uſed by both thoſe Nations in their Wars. See *Scaliger* againſt *Cardan*.

*Conſtantine*'s Succeſſors uſed it on divers Occaſions, with equal Advantage, as himſelf; and what is remarkable enough, is, that they were ſo happy as to keep the Secret of the Compoſition to themſelves; ſo that no other Nation knew it in the Year 960.

*Hugh*, King of *Burgundy*, demanding Ships of the Emperor *Leo*, for the Siege of *Freſne*, deſired likewiſe the *Greek Fire*. *Chorier Hiſt. de Dauph.*

Fa. *Daniel* gives us a good Deſcription of the *Greek Fire*, in his Account of the Siege of *Damiette*, under St. *Louis*.

Every body, ſays that Author, was aſtoniſh'd with the *Greek Fire* which the *Turks* then prepared; and the Secret where-

whereof is now loſt. They threw it out of a kind of Mortar; and ſometimes ſhot it with an odd ſort of Croſs Bow, which was ſtrongly bent by means of a Handle, or Winch, of much greater Force than the bare Arm. That thrown with the Mortar, ſometimes appear'd in the Air of the Size of a Tun, with a long Tail, and a Noiſe like that of Thunder. The *French* by Degrees got the Secret of extinguiſhing it; in which they ſucceeded ſeveral times.

FIRE, in the Military Language, is ſometimes uſed for the *Fires* lighted in an Army in the Night time.

Thus, the Enemy's *Fires* were ſeen on the Top of the Mountains.

But, the Term *Fire* is more frequently uſed for the Diſcharge of the *Fire Arms*; or the Shot made on the Enemy from the Artillery, *&c.*

The Horſe ſuffered extremely from the *Fire* of the Foot, which took them in Flank: The Trench was expoſed to the *Fire* of the Place: In this Aſſault the Courtin was all in *Fire.*——

In Fortification, the *Fire of the Place* is the Flank, or that Part of the Courtin where the Line of Defence terminates; from whence they *fire*, to defend the oppoſite Face of the Baſtion.

The beſt way of fortifying is that which gives the moſt *Fire.* See FORTIFICATION.

FIRE *Arms* are thoſe charged with Gunpowder: Such are *Canons*, *Mortars*, and other *Ordnance*; *Muſquets*, *Carabines*, *Piſtols*, and even *Bombs*, *Granado's*, *Carcaſſes*, &c. See CANON, MORTAR, ORDNANCE, &c.

For the *Rebound* or *Reſilition of Fire Arms*, ſee REBOUND: See alſo GUNPOWDER, BULLET, SHOT, &c.

In the Hiſtory of the *Royal Academy* for the Year 1707, we have an Account of ſome Experiments made with *Fire Arms*, differently charged, by Mr. *Caſſini.*

That Author, among other Things obſerves, that by loading the Piece with a Ball which is ſomewhat leſs than Caliber; and only laying a little Gunpowder below the Ball, and a good deal above it, it will yield a vehement Noiſe, but have no ſenſible Effect or Impulſe on the Ball.

This he takes to have been all the Secret of thoſe People who pretended to ſell the Art of rendering ones ſelf invulnerable, or Shot proof.——

FIREBOTE, *i. e.* Fuel for neceſſary Occaſions, which by the Common Law any Man may take out of the Lands granted to him. See HAYBOTE, ESTOVERS, and LIGNAGIUM.

FIRKIN, an *Engliſh* Meaſure of Capacity, for Things liquid. See MEASURE.

The *Firkin of Ale* contains eight Gallons; and that *of Beer*, nine: Two *Firkins* of Beer make the Kilderkin; two Kilderkins the Barrel; and two Barrels the Hogshead. See KILDERKIN, GALLON, BARREL, and HOGSHEAD.

The *Firkins* of Soap and Butter are on the footing of the *Firkin* of Ale, *viz.* a Gallon *per Firkin* leſs than that of Ale.

FIRMAMENT, in the antient Aſtronomy, the eighth Heaven, or Sphere; being that wherein the fix'd Stars are ſuppoſed to be placed. See SPHERE.

'Tis called the *Eighth*, with reſpect to the ſeven Heavens or Spheres of the Planets, which it ſurrounds.

It is ſuppoſed to have two Motions: A Diurnal Motion, given it by the Primum Mobile, from Eaſt to Weſt, about the Poles of the Ecliptick: and another oppoſite Motion from Weſt to Eaſt; which laſt it finiſhes, according to *Tycho*, in 25412 Years; according to *Ptolomy*, in 36000; and according to *Copernicus*, in 258000: In which Time the fixed Stars return to the ſame preciſe Points wherein they were at the Beginning. This Period is commonly called *Plato*'s Year, or the Great Year. See PRÆCESSION *of the Equinox.*

In divers Places of Scripture the Word *Firmament* is uſed for the middle Region of the Air. Many of the Antients allowed, with the Moderns, that the *Firmament* is a fluid Matter; tho' they, who gave it the Denomination of *Firmament*, muſt have taken it for a ſolid One.

FIRMAN, in the *Eaſt Indies*, and particularly in the Territories of the Great *Mogul*, is the Paſſport, or Permit, granted to foreign Veſſels, to trade within their Juriſdiction.

FIRMNESS, or FIRMITY, in Philoſophy, a *Conſiſtence* of a Body; or that State, wherein its ſenſible Parts cohere, or are united together, ſo that the Motion of one Part induces a Motion of the reſt: In which Senſe, *Firmity* ſtands oppoſed to *Fluidity.* See FLUIDITY.

Some Authors confound *Firmneſs* with *Denſity*; as thinking the ſame State or Property of Body, implied by both; or at leaſt, that *Firmneſs* follows Denſity: But this is a Miſtake: For Mercury, the denſeſt Body in Nature, excepting Gold, is yet one of the moſt fluid: And even Gold it ſelf, with all its *Denſity*, when fuſed, wants *Firmneſs*, or Coheſion. See DENSITY.

Many of the *Carteſians*, and others, hold *Firmneſs* to conſiſt in the mere Quiet of the Particles of the Body, and their mutual immediate Contact; urging, that a Separation of Parts can only ariſe from ſome Matter interpoſed between them, which is excluded, by the Notion of Contiguity.

But the Inſufficiency of this Hypotheſis is evident: For mere ſimple Quiet has no Force, either to act, or reſiſt; conſequently two Particles only join'd by Reſt and Contiguity, would never cohere ſo as that a Motion of the one ſhould induce a Motion of the other. This is obvious in the Caſe of two Grains of Sand, which however contiguous, and at reſt, will never conſtitute a *firm*, coherent Body.

The *Firmneſs* of Bodies, then, depends on the Connection or Coheſion of their *Particles.* Now, the Cauſe of Coheſion, Sir *I. Newton* and his Followers, hold to be an attractive Force, inherent in Bodies, which binds the ſmall Particles thereof together; exerting it ſelf only at, or extremely near, the Points of Contact, and vaniſhing at greater Diſtances. See ATTRACTION.

The *Firmneſs* of Bodies, therefore, follows the Laws of the Coheſion of Bodies; which ſee under COHESION.

Hence, *Firmneſs* in all Bodies muſt be as the Surfaces, and Contacts of the component Parts: Thus a Body, whoſe Parts are by their peculiar Shapes capable of the greateſt Contacts, is moſt *firm*; and that, whoſe Parts are capable of the leaſt Contact, will be moſt ſoft.

In the former, the greateſt Requiſite is to be as near Cubes as poſſible, and in the latter to Spheres. And in the ſame manner are to be accounted for, not only all the intermediate Degrees between the moſt *firm*, and the moſt ſoft Bodies, but thoſe different Conſiſtences, which are diſtinguiſh'd by other Names, as *friable*, *tenacious*, *glutinous*, and the like: for the greater are the Solidities of the component Parts of any Body, in Proportion to their Surfaces, though that Body by the Aptitude of the Contacts, may be what we call very *hard*; yet it will be moſt *friable* or brittle. And where the Surfaces of the compounding Particles are much extended upon a ſmall Quantity of Matter, the Bodies they compoſe, though they may be light and ſoft, yet they will be *tenacious* or glutinous: For although the Flexibility of their compounding Parts admits of their eaſy Changing of Figure by any external Force, yet by their touching one another in ſo many Points, they are very difficultly ſeparated.

The former is the Caſe in cryſtalized Salts, Reſins, and the like; the latter in Turpentines, Gums, and all of that Sort. See SOLIDITY, &c.

FIRST *Fruits*, *Annates*, or *Primitiæ*, are the Profits of every Benefice for one Year. See PRIMITIÆ, &c.

The *Firſt Fruits* were originally intended for the Pope's Benefit, and were accordingly, before the Reformation, paid to him: But King *Henry* VIII. by a Statute in the twenty ſixth Year of his Reign, tranſlated them to the Crown.

Queen *Anne*, in the third Year of her Reign, made a Grant of the whole Revenue of *Firſt Fruits* and Tenths, to ſettle a Fund for the Augmentation of the Maintenance of the poor Clergy. See AUGMENTATION.

By the Act 26 *Hen.* 8. he, who enters on any ſpiritual Living, before he pays, or compounds for it, on Conviction, forfeits double the Value thereof.

Every Clerk therefore, before his Induction (or ſoon after) ſhould go himſelf with one Friend, or ſend two Friends for him to the *Firſt Fruits* Office, and there enter into Bond to pay the *Firſt Fruits* of his Benefice within two Years next enſuing, at four equal half-yearly Payments. Only one Tenth of the whole yearly Sum, enter'd in the King's Books, is to be deducted; becauſe that muſt be paid by it ſelf the firſt Year.

Formerly four Bonds were given for the four ſeveral Payments; but by Statute 2 and 3 of Queen *Anne*, one Bond only is appointed to be given; and the Rates of all Benefices, according to the King's Books, are declared unalterable. The Succeſſor is chargeable with Arrears of Tenths, due from his Predeceſſor; and conſequently, by 27 *H.* 8. c. 8. is impower'd to diſtrain his Predeceſſor's Goods, being upon the Benefice; and hath likewiſe a good Action at Law againſt him or his Executors.

FISC, FISCUS, in the Civil Law, the Treaſury of a Prince, or State; or that, to which all Things due to the Publick, do fall.

By the Civil Law, none but a Sovereign Prince has a Right to have a *Fiſc*, or publick Treaſury. At *Rome*, under the Emperors, the Term *Ærarium* was uſed for the Revenues deſtin'd for the Support of the Charges of the Empire; and *Fiſcum* for thoſe of the Emperor's own Family.

The Treaſury, in effect, belong'd to the People, and the *Fiſc* to the Prince. See TREASURY.

The Word is derived from the *Greek* φίσκος, a great Baſket.

FISCAL, ſomething relating to the pecuniary Intereſts of the King, the Publick, or a private Perſon.

The

The Emperor *Adrian* erected the Office of *Fiſcal Advocate* in the *Roman* Empire.

FISH, in Natural Hiſtory, an Animal that lives in the Waters, as its proper Place of Aboad. See ANIMAL.

Naturaliſts obſerve a World of Wiſdom, and deſign in the Structure of *Fiſhes*, and their Conformation to the Element they are to reſide in.

Their Bodies are cloathed and guarded in the beſt Manner, with Scales or Shells, ſuitable to their reſpective Circumſtances, the Dangers they are expoſed to, and the Motion and Buſineſs they are to perform. See SHELL, and SCALE.

The Centre of Gravity is placed in the fitteſt Part of the Body for Swimming; and their Shape moſt commodious for making way through the Water, and moſt agreeable to Geometrical Rules. See SWIMMING.

They have ſeveral Parts, peculiar to themſelves; as *Fins*, to ballance and keep them upright. See FIN.

And an *Air Bladder*, to enable them to riſe and ſink to any Height and Depth of Water, at pleaſure. See *Air* BLADDER.

They have Gills, or *Branchiæ*, whereby they reſpire; as Land Animals do by the Lungs. See BRANCHIÆ, and RESPIRATION.

The *Tail* is the Inſtrument of progreſſive Motion, and ſerves to row them forward. See TAIL.

Their *Eyes* are peculiarly form'd to enable them to correſpond to all the Convergences and Divergences of Rays, which the Variations of the watery Medium, and the Refractions thereof, may occaſion: In which reſpect they bear a near Reſemblance to Birds. See EYE, CHOROEIDES, and BIRD.

*Fiſhes* are diſtinguiſh'd into *Sea* or *Salt-Water-Fiſh*, *Piſcis Marinus*; as the Whale, Herring, Mackarel, *&c.* *River* or *Freſh-Water-Fiſh*, *Piſcis Fluviatilis*; as the Pike, Trout, *&c.* and *Pond* or *Lake-Fiſh*; as the Carp, Tench, *&c.* To which may be added others, which abide indifferently in freſh Water, or ſalt, as Salmons, Shad-*Fiſh*, &c.

There are alſo an *Amphibious* Kind, which live indifferently on Land, or Water; as the Caſtor, Otter, *&c.* See AMPHIBIOUS.

*Ariſtotle*, and after him Mr. *Willoughby*, more accurately diſtinguiſh *Fiſhes* into *Cetaceous*, *Cartilaginous*, and *Spinous*.

The *Cetaceous* Kind, called alſo *Bellæ Marinæ*, have Lungs and Breath like Quadrupeds; they copulate alſo like them; and conceive and bring forth their Young alive, whom they ſuckle with their Milk.

The *Cartilaginous* Sort are produc'd from large Eggs, like Birds; which are excluded the Womb, alſo, like thoſe of Birds.

The *Spinous* Kind are alſo oviparous; but their Eggs are ſmaller, and they have Spinæ up and down in their Fleſh to ſtrengthen it.

*Willoughby* thinks, it would be yet more proper to divide *Fiſhes* into ſuch as *breath with Lungs*; and into ſuch as *breath with Gills*: And then, to ſubdivide thoſe that breath with Gills, not into Cartilaginous and Spinous, but into *Viviparous* and *Oviparous*.

The *Viviparous* Kind that breath *with Gills*, he ſubdivides into *Long*; ſuch as the *Galei & Canes*, or Sharks, and Dog *Fiſh*: And *Broad*, ſuch as the *Paſtinaca*, *Raja*, &c. The Subdiviſions of each whereof he gives in his Chapter of *Cartilaginous Fiſhes* in general.

The *Oviparous* Kind that breath *with Gills*, are the moſt numerous; and theſe he ſubdivides into ſuch as are what we uſually call *Flat Fiſh*; and ſuch as ſwim with their Back upright, or at Right Angles to the Horizon.

The *Plain* or *Flat Fiſh* Kind, called uſually *Plani Spinoſi*, are either *Quadrati*, as the *Rhombi* and *Paſſeres*; or *Longiuſculi*, as the *Soleæ*.

Such as ſwim *with their Backs erect*, are either *Long*, and *Smooth*, and *without Scales*, as the *Eel kind*; or *ſhorter* and *leſs ſmooth*: And theſe have either but *one Pair of Fins* at their Gills, which are called *Orbes*, and *Congeneres*; or elſe *another Pair of Fins* alſo on their Bellies: And this latter Kind he divides into two Kinds.

1°. Such as have *no prickly Fins on their Backs*, but ſoft and flexible ones. 2°. Such as *have prickly Fins* upon their Backs.

Thoſe *Fiſhes* which have only ſoft and flexible Fins on their Backs, may be divided into ſuch as have *three*, *two*, or but *one* ſingle Fin there.

No *Fiſh* but the *Aſelli* have *three* Fins on their Backs.

*Fiſhes* with *two* Fins on their Backs, are either the *Truttaceous*, or *Trout Kind*; or the *Gobionite*, or *Loach*, or *Gudgeon Kind*.

*Fiſhes* with but *one* ſoft back Fin, are of three ſorts: The firſt Kind have one *long continued Fin*, from Head to Tail, as the *Hipparus* of *Rondeletius*, &c.

The ſecond, have their *Fin but ſhort*, and placed juſt in the Middle of their Back; and theſe are either *Marine*, as the *Herring Kind*;

Or *Fluviatile*, as thoſe we call *leather-mouthed Fiſhes*; ſuch as Carp, Tench, *&c.*

Such *Fiſhes* as have *prickly Fins on their Backs*, are of two Kinds.

Firſt, ſuch as have *two prickly Fins* on their Backs; and in theſe the anterior Radii of their Fins are always prickly.

Or, 2°. Such as have but *one prickly Fin* there.

Mr. *Willoughby* gives us the following Catalogue of our *Engliſh Fiſhes*.

(1) Of the *Long Cartilaginous* Kind are the

1 *Canis Carcharius*, or *Lamia*, the White Shark.
2 *Galeus Glaucus Rondeletii*, the Blue Shark.
3 *Canis Galeus Rondeletii*; called a *Tope* in *Cornwall*.
4 *Galeus Acanthias*, *ſive Spinax*, the Prickled Dog, or Hound-Fiſh.
5 *Galeus*, *ſeu Muſtela levis*, the Smooth, or unprickled Hound-Fiſh.
6 *Catulus Major*, *vulgo Canicula Ariſtotelis*, the Rough Hound, called in *Cornwall*, the *Bounce*.
7 *Catulus Minor*, the leſſer Hound-Fiſh, or Morgay.

(2) Of the *Plain Cartilaginous* Kind, are the

1 *Raja levis undulata*, the Skate, or Flare.
2 *Raja clavata*, the Thornback.
3 *Raja aſpera noſtras*, the White-Horſe.
4 *Squatinu*, the Angel, or Monk Fiſh.
5 *Rana piſcatrix*, the Thoad Fiſh, or Sea-Devil.

(3) Of the Plain Spinous Kind, are the

1 *Rhombus maximus aſpero ſquamoſus*, called the *Turbot*, or Brett.
2 *Rombus non aculeatus ſquamoſus*, in *Cornwall* called the *Lug-alefe*.
3 *Paſſer Bellonii*, the Place.
4 *Paſſer aſper*, *ſive ſquammoſus*, the Dab.
5 *Paſſer fluviatilis*, *ſive amphibius*, the Flounder, Fluke, or Butt.
6 *Hippogloſſus Rondeletii*, the Holy-But, called in the North the *Turbot*.
7 *Bugloſſus*, or *Solea*, the Sole.

(4) Of the Eel Kind we have,

1 *Lampreta major*, the Lamprey, or Lamprey-Eel.
2 *Lampreta parva*, and *Fluviatilis*, the Lampern.
3 *Anguilla*, the common Eel.
4 *Conger*, the Conger, or Sea-Eel.
5 *Ammodytes Geſneri*, the Sand-Eel, or Launce.
6 *Gunnellus Cornubienſis*, the Butter-Fiſh.
7 *Muſtela vulgaris Rondeletii*, the Sea-Loach, or Whiſtle-Fiſh.
8 *Muſtela fluviatilis*, the Eel-Pout, or Turbou.
9 *Lupus marinus*, the Wolf-Fiſh, or Sea-Wolf.
10 *Alauda non criſtata*, the Sea-Lark; called in *Cornwall* Mulgranock, and Bulcard.
11 *Alauda Criſtata*, the creſted Sea-Lark.
12 *Liparis Rondeletii*.
13 *Gobio fluviatilis*, the Bull-head, or Miller's-Thumb.
14 *Scorpana Bellonii ſimilis*, the Dutch-Pots-Hog; the *Corniſh* Boys call it *Father-Laſher*.

(5) Of the Kind of *Fiſhes* wanting the Belly Pair of Fins; we have,

1 *Mola Salviani*, the Sun-Fiſh.
2 *Acus Ariſtotelis*, *ſpecies major*.
3 *Acus Ariſtotelis congener*, the Sea-Adder.
4 *Xiphias*, *ſeu Gladius piſcis*, the Sword-Fiſh.

(6) Of the Non-ſpinous Kind of *Fiſhes*, with three unprickly ſoft Fins on their Backs; we have

1 *Aſellus vulgaris major*, the Cod-Fiſh, or Kaling.
2 The *Whiting* Pollack.
3 *Aſellus niger*, the Coal-Fiſh, or Rawling Pollack.
4 *Aſellus lucus*, the Bib, or Blinds.
5 *Aſinus antiquorum*, the Haddock.
6 *Aſellus mollis major*, the Whiting.

(7) Of the Non-ſpinous Kind, with only two ſoft Fins on their Backs, are found with us,

1 *Merlucius*, the Hake.
2 *Aſellus longus*, the Ling.
3 *Thynnus*, *Thunnut*, the Tunny, or *Spaniſh* Mackrel.
4 *Scomber*, the Mackrel.
5 *Thymallus*, the Gragling, or Umber.

6 *Albula Salmoni ſimilis*, the Guinnard.
7 *Albula Harengi formis*, the Schelly.
8 *Salmo*, the Salmon.
9 *Salmulus*, the Samlet, or Eranlin.
10 *Salmo griſeus*, the Gray.
11 *Trutta Salmonata*, the Salmon Trout.
12 *Trutta Lacuſtris*, the Scurf, or Bull Trout.
13 *Trutta fluviatilis duum generum*, the Trout.
14 *Umbia minor Geſn.* the Red Charr, or Welſh Torgoch.
15 *Carpio lacus Benaci*, the Guilt, or Guilt Charr.
16 *Eperlanus, ſeu Violæ*, the Smelt.
17 *Golius Niger*, the Rock-Fiſh, or Sea Gudgeon.
18 *Lumpus Anglorum*, the Lump, or Sea Owl.
19 *Cataphractus Schonfeldii*, in the Weſt of *England*, a *Dog*.

(8) Of the Non-ſpinous Kind, with only one Fin on the Back; there are,

1 *Harengus*, the Herring.
2 *Harengus minor*, the Pilchard, called alſo *Calchis*.
3 *Enerasicholus*, the Anchoris.
4 *Aloſa, ſeu Clupæa*, the Shad, or Mother of Herrings.
5 *Sardina*, the Sprat, or Sparling; which is nothing elſe but the Fætus of an Herring.
6 *Acus vulgaris*, the Garr Fiſh, or Horn Fiſh.
7 *Sturio*, the Sturgeon.
8 *Lucius*, the Pike, or Pickrel.
9 *Cyprinus*, the Carp.
10 *Cyprinus latus*, the Bream, or Bruma.
11 *Tinca*, the Tench.
12 *Orfus Germanorum*, the Riedd, Oerve, or Nerſling.
13 *Capito, ſeu Cephalus*, the Chub, or Chevin.
14 *Barbus*, the Barbel.
15 *Leuciſcus*, the Dace, or Dare.
16 *Rutilus, ſeu Rubellas*, the Roach.
17 *Alburnus*, the Bleak, or Bley.
18 *Gobius fluviatilis*, the Gudgeon.
19 *Bobites fluviatilis barbatula*, the Locke.
20 *Varias, ſeu Phoxinus lævis*, the Pink, or Minnow.

The laſt twelve of theſe are called by us (*Malacoſtomi*) *Leather-mouthed Fiſhes*; becauſe they have no Teeth in their Jaws, but only deep down in their Mouths.

(9) Of the Spinous Kind, with two Fins on their Back, of which the foremoſt is aculeate, we have,

1 *Lupus*, the Baſſe.
2 *Mugil*, the Mullet.
3 *Gurcardus Piſcis*, the Grey Garnard.
4 *Hirundo Aldrovandi*, the Tub Fiſh.
5 *Cuculus Aldrovandi*, the Red Garnard, or Rotchet.
6 *Lyra prior Rondeletii*, the Piper.
7 *Mullus major*, the Sur-Mullet.
8 *Draco, ſive Araneus Plinii*, the Spider.
9 *Frachurus*, the Scud.
10 *Perca fluviatilis*, the Perch.
11 *Faber Piſcis*, the Dorge.

(10) Of the Aculeate Kind, with only one Fin on the Back, whoſe Radii are ſome prickly, and ſome ſoft; there are,

1 *Aurata*, the Gilt-Head, or Gilt-Poll.
2 *Pagrus*, the Bream.
3 *Turdus, vulg.* the Old Wife, or Wraſs.
4 *Perca fluviatilis minor, ſeu aurata*, the Ruff.
5 *Piſcis aculateus vulgaris, ſeu Pungitius Aberti*, the Common Prickle-Back, or Sharpling, or Branſtickle.
6 *Piſcis aculeatus minor*, the Leſſer Prickle-Back.

(11) Of the Cetaceous Kind, we reckon only

1 *Balæna Britanica Antiquorum*, which ſeems now to be gone from our Seas; and we ſcarce know what kind of Fiſh it was.
2 *Balæna, vulg. Rondeletii*, the Whale, which is ſometimes found ſtranded on our Coaſts, or rambles up our Rivers.
3 *Delphinus Antiquorum*, the Dolphin, very rarely, but ſometimes ſeen here.
4 *Phocæna*, the Porpuſs, called by *Schonfeld*, the *Northern Dolphin*.

Fish, with regard to Commerce, is diſtinguiſh'd into *Dry*, *Pickled*, *Green*, and *Red*.

*Dry*, or *Salt* Fish, is that which is ſalted and dryed, either by the Heat of the Sun; or by Fire. Such principally are the *Cod*, *Stock-Fiſh*, *Herring*, and *Pilchard*.

*Green* Fish is that lately ſalted, and which yet remains moiſt; as *Green Cod*, &c.

*Pickled* Fish is that boil'd and ſteep'd in a Pickle, made of Salt, Vinegar, &c. as *Salmon*, *Cod*, *Herring*, *Mackarel*, *Pilchard*, *Anchovy*, and *Oiſters*.

*Red* Fish, is ſome freſh *Fiſh*, broil'd on the Grid-iron, then fried in Oil of Olives, and barrel'd up with ſome proper Liquor; as new Olive Oil, Vinegar, Salt, Pepper, Cloves, and Laurel Leaves, or other Herbs. The beſt *Fiſh* thus prepar'd are Sturgeon and Tunny.

Fish, *conſider'd as a Food*, makes a conſiderable Article in the Furniture of the Table; and the Breeding, Feeding, Catching, &c. thereof makes a peculiar Art of no ſmall Moment in the Oeconomy of a Gentleman's Houſe and Garden.

To this relate the Ponds, Stews, &c. deſcribed in their proper Places. See Pond, Stew, &c.

Some General Rules and Obſervations on the ſame Subject, may not here be unacceptable.

1°. *For the Breeding of Fiſh*, the Quality of the Pond, Water, &c. proper for this end, is ſcarce determinable by any certain Symptom, or Rule: For ſome very promiſing Ponds do not prove ſerviceable that way. One of the beſt Indications of a *Breeding* Pond, is when there is good Store of Ruſh, and Grazing about it, with gravelly Shoals; ſuch as Horſe-ponds uſually have: So that when a Water takes thus to Breeding, with a few Milters and Spawners, two or three of each, a whole County may be ſtock'd in a ſhort Time.

Eels and Pearch are of very good Uſe, to keep down the Stock of *Fiſh*; for they prey much upon the Spawn and Fry of bred *Fiſh*, and will probably deſtroy the Superfluity of them.

As for Pike, Pearch, Tench, Roach, &c. they are obſerv'd to breed in almoſt any Waters, and very numerouſly; only Eels never breed in ſtanding Waters, that are without Springs; and in ſuch are neither found, nor increaſe, but by putting in: Yet where Springs are, they are never wanting, tho' not put in. And which is moſt ſtrange of all, no Perſon ever ſaw in an Eel the leaſt Token of Propagation, either by Milt, or Spawn; ſo that whether they breed at all, and how they are produc'd, are Queſtions equally myſterious, and never yet reſolved.

2°. *For the Method of Feeding Fiſh*, take the following Remarks. 1. In a Stew, thirty or forty Carps may be kept from *October* to *March*, without Feeding; and by fiſhing with Tramels, or Flews in *March*, or *April*, you may take from your great Waters, to recruit the Stews: But you muſt not fail to feed all Summer, from *March* to *October* again, as conſtantly as cooped Chickens are fed; and 'twill turn to as good an Account.

2. The Conſtancy and Regularity of ſerving the *Fiſh*, conduces very much to their well eating and thriving.

3. Any ſort of Grain boiled, is good to feed with, eſpecially Peaſe and Malt, coarſe ground: The Grains after Brewing, while freſh and ſweet, are very proper; but one Buſhel of Malt not brew'd, will go as far as two of Grains: Chippings of Bread, and Orts of a Table ſteep'd in Tap-droppings of ſtrong Beer, or Ale, are excellent Food for Carps. Of theſe the Quantity of two Quarts, to thirty Carps, every Day, is ſufficient: And ſo fed Morning and Evening, is better than once a Day only.

There is a ſort of Food for *Fiſh*, that may be called accidental, and is no leſs improving than the beſt that can be provided; and this is, when the Pools happen to receive the Waſh of Commons, where many Sheep have Paſture, the Water is enrich'd by the Soil, and will feed a much greater Number of Carps, than otherwiſe it would do: And farther, the Dung that falls from Cattel ſtanding in Water in hot Weather, is alſo a very great Nouriſhment to *Fiſh*.

The beſt Food to raiſe Pikes to an extraordinary Fatneſs, is Eels; and without them 'tis not to be done, but in a long Time: Setting theſe aſide, ſmall Perches are the beſt Meat. Breams put into a Pike-pond, breed exceedingly, and are fit to maintain Pikes; which will take care they do not encreaſe over-much: The numerous Fry of Roaches and Rouds, which come from the greater Pools into the Pike-Quarters, will likewiſe be good Diet for them.

Pikes in all Streams, and Carps in hungry-ſpringing Waters, being fed at certain Times, will come up, and take their Meat almoſt from your Hand.

The beſt Feeding-place is toward the Mouth of the Pond, at the Depth of about half a Yard; for by that means the Deep will be kept clean and neat; the Meat thrown into the Water, without other Trouble, will be pick'd up by the *Fiſh*, and nothing be loſt: Yet there are ſeveral Devices for giving them Food, eſpecially Peaſe; as a ſquare Board let down with Meat on it.

When *Fiſh* are fed in the larger Pools or Ponds, where their Numbers are great, Malt boiled, or freſh Grains, is the beſt Food. Thus Carps may be fed and rais'd like Ca-

pons, and Tenches will feed as well; but Perch are not for a Stew in Feeding-time.

3°. As to the *Benefits that redound from the keeping of Fiſh*, beſides furniſhing your Table for your Friends, and raiſing Money; your Land will be vaſtly improv'd, ſo as to be really worth, and yield more this way, than by any other Employment whatſoever: For ſuppoſe a Meadow of 2 *l. per* Acre; four Acres in Pond, will return every Year a thouſand fed Carps, from the leaſt Size, to fourteen or fifteen Inches long; beſides Pikes, Perch, Tench, and other Fry: The Carps are ſaleable, and will bring 6 *d.* 9 *d.* and perhaps 12 *d.* a piece, amounting in all to 25 *l.* which is 6 *l.* 5 *s. per* Acre.

FISH-GARTH, according to *Skinner*, ſignifies an Engine, to take *Fiſh*; but it ſeems rather to ſignify the Dam or Wear in a River, where theſe Engines are laid and uſed.

For *Garth*, in the North, is ſtill uſed for a Back-ſide, or Horneſted.

FISH-*Glue*, ſee ICHTHYOCOLLA.

FISH-*Ponds*, Reſervoirs of Water, for the Breeding, Feeding, and Preſerving of *Fiſh*.

For theſe *Ponds*, 'tis agreed, thoſe Grounds are beſt, which are full of Springs, and apt to be mooriſh: The one breeds them well, and the other preſerves them from being ſtolen.

The Situation of the Pond is alſo to be conſider'd, and the Nature of the Currents that fall into it; likewiſe, that it be refreſh'd with a little Brook, or with the Rain-water that falls from the adjacent hilly Ground. Add, that thoſe Ponds, which receive the Stale and Dung of Horſes and other Cattle, breed the largeſt and fatteſt *Fiſh*.

In making the Pond, obſerve that the Head be at the loweſt Part of the Ground; and that the Trench of the Flood-gate or Sluice have a good ſwift Fall, that it may not be too long a-emptying.

If the Pond carry ſix Foot of Water, it is enough; but it muſt be eight Foot deep, to receive the Freſhes and Rains that ſhould fall into it.

It would alſo be advantageous to have Shoals on the Sides, for the *Fiſh* to ſun themſelves in, and lay their Spawn on; beſides in other Places, certain Holes, hollow Banks, Shelves, Roots of Trees, Iſlands, *&c.* to ſerve as their Retiring Places. Conſider farther, whether your Pond be a Breeder; if ſo, never expect any large Carps from thence; the Greatneſs of the Number of Spawn overſtocking the Pond.

For large Carps, a Store-Pond is ever accounted the beſt; and to make a Breeding-Pond become a Store-Pond, ſee what Quantity of Carps it will contain: Then put in all Milters, or all Spawners; whereby in a little Time you may have Carps that are both large, and exceeding fat. Thus, by putting but one Sex, there is an Impoſſibility of the Increaſe of them; yet the Roach will notwithſtanding multiply abundantly.

Reſerve ſome great Waters for the Head-Quarters of the *Fiſh*, whence you may take, or wherein you may put any Quantity thereof. And be ſure have Stews and other auxiliary Waters, ſo as you may convey any Part of the Stock from one to the other; ſo, to loſe no Time in the Growth of the *Fiſh*, but employ the Water, as you do your Land, to the beſt Advantage.

View the Grounds, and find out ſome Fall between the Hills, as near a Flat as may be, ſo as to leave a proper Current for the Water: If there be any Difficulty in judging of ſuch, take an Opportunity after ſome ſudden Rain, or the breaking up of a great Snow in Winter, and you'll plainly ſee which way the Ground caſts; for the Water will take the true Fall, and run accordingly.

The Condition of the Place muſt determine the Quantity of Ground to be cover'd with Water. For Example, we may well propoſe in all fifteen Acres, in three Ponds; or eight Acres in two, and not leſs: And theſe Ponds ſhould be plac'd one above another, ſo as the Point of the lower may almoſt reach the Head or Bank of the upper; which Contrivance is no leſs beautiful, than advantageous.

The Head, or Bank, which by ſtopping the Current, is to raiſe the Water, and ſo make a Pond, muſt be built with the Clay and Earth taken out of the Pan, or Hollow, dugg in the loweſt Ground above the Bank; and that Pan ſhould be ſhap'd as an half Oval, whereof the Flat comes to the Bank, and the longer Diameter runs ſquare from it. See BANKS *for Fiſh-ponds*, and POND-*Heads*.

*Royal* FISHES, ſee ROYAL *Fiſhes*.

FISHES, in Aſtronomy, ſee PISCES.

FISHES, in Heraldry, are of themſelves of leſs Eſteem in a Coat Armour, than Beaſts and Fowls, as being poſterior thereto in the Order of Creation: But they ſometimes become ſo dignified by the Perſons or Families, who bear them, as to be preferable to many Birds, and Beaſts.

*Fiſhes* are born divers ways, *Upright*, *Imbowed*, *Extended*, *Endorſed*, *Surmounted* of each other; *Fretted*, *Triangled*, &c.

All *Fiſhes* born Feeding, ſhould be term'd *Devouring*.

Thoſe born directly Upright, ſhould be term'd *Hauriant*.

And thoſe born Traverſe the Eſcutcheon, *Najant*.

FISHERY, a commodious Place for *Fiſhing*; or, a Place wherein great Quantities of Fiſh are caught. See FISH, and FISHING.

The principal *Fiſheries* of *Europe*, for *Salmon*, *Herring*, *Cod*, and *Mackarel*, are along the Coaſts of *England*, *Scotland*, and *Ireland*: For *Whales*, about *Greenland*: For *Pearls*, in the *Eaſt* and *Weſt Indies*, &c.

The *Fiſhery* makes a principal Branch of the *Britiſh* Commerce. A great Quantity of Veſſels and Sea-men are employ'd therein; and beſide what is ſpent at home, above 200000 Pounds Sterling is yearly return'd merely for Herring, and Cod, exported to *Spain*, *Italy*, ſeveral Parts of the Mediterranean, and Iſlands of the Archipelago.

Yet are our Countrymen reproach'd, and with a good deal of Juſtice, for their Remiſsneſs in this Branch of Trade. The advantagious Situation of our Coaſts might be of immenſe Benefit to us, did not we let our Neighbours ſhare with us therein. The *Dutch*, *French*, *Hamburgers*, &c. come yearly in huge Shoals, and not only take the Fiſh from our own Doors; but ſell them us for our Money, when they have done.

*Scotland* ſuffers incredibly on this Score: No Country in *Europe* can pretend to rival them in the Abundance of the fineſt Fiſh, wherewith their numerous Harbours, Loughs, Rivers, *&c.* are incredibly ſtored. In the River *Dee*, 'tis ſaid, an hundred and ſeventy Head of Salmon is not very extraordinary for a ſingle Draught of Net: And the pickled Salmon ſent hence, is allowed the beſt in *Europe*. The *Scottiſh* Iſlands, eſpecially thoſe on the Weſtern Side, do certainly lye moſt commodiouſly for carrying on the Fiſhing Trade to Perfection.

King *Charles* the Firſt began the Experiment, in Conjunction with a Company of Merchants; but the Civil Wars ſoon ſet it aſide. King *Charles* the Second made a like Attempt; but having preſſing Occaſion for Money, he was perſuaded to withdraw, what he had employ'd in the *Fiſhery*; at which the Merchants, join'd with him, being diſpleas'd, did the like.

Since the Union, ſeveral Efforts have been made, to retrieve it; and there is now a Corporation ſettled on that footing, called the *Royal Britiſh Fiſhery*, though now in a very languiſhing Condition, and ready to ſink.

### *Whale* FISHERY, or *Greenland*-FISHERY.

This huge Fiſh, we have elſewhere obſerv'd, is chiefly caught in the North Sea. The largeſt Sort are thoſe about *Spitzberg*, ſome of them amounting to two hundred Foot in length. Thoſe on the Coaſts of *America* are about ninety, or hundred; and thoſe on the Coaſts of *Guyenne*, and the Mediterranean, the ſmalleſt of all. See WHALE.

The *Dutch* have upwards of theſe hundred Years had the *Whale Fiſhery* almoſt to themſelves; and it is now eſteem'd one of the principal Branches of their flouriſhing Trade: The chief Merchants of the ſeveral Provinces aſſociate themſelves into a Body, for the carrying it on; and ſend every Year a great Fleet of Veſſels to the North Seas for the purpoſe. They attempted to make their firſt Eſtabliſhments in *Grœnland*; but not ſucceeding, they have ſince fix'd their *Fiſhery* about the Weſtern Coaſt of *Spitzberg*; from the Latitude of 76 Deg. 40 Min. to 80 Deg.

This preſent Year 1725. the *Engliſh* South-Sea Company have begun to ſhare it with them; and by the extraordinary Succeſs they met withal in their firſt Attempt, beyond any of their Neighbours, will no doubt be induced to perſiſt in it.

To give ſome Idea of the Manner and Importance of this Trade, we ſhall here ſubjoin the *Diſcipline*, of a long Time obſerv'd in the Whale *Fiſhery*; the *Method of Fiſhing*; the *Cargo* and *Equipage* of a Veſſel; and the *Produce* thereof.

The *Diſcipline* is adjuſted by a ſtanding Regulation, conſiſting of twelve Articles; the principal whereof, are:

That in caſe a Fiſhing Veſſel be ſhipwrack'd, and the Captain and Crew ſaved, the next Veſſel they meet, ſhall take them in; and the ſecond Veſſel take half of them from the firſt: But that no Veſſel ſhall be oblig'd to take any of the Loading of a Veſſel ſhipwrack'd: That what Effects of a ſhipwrack'd Veſſel, which are abſolutely relinquiſh'd, an other Captain ſhall find, and take up, upon his Arrival in *Holland* he ſhall account for one Half of them to the Proprietors of the ſhipwrack'd Veſſel, clear of all Expences: That if the Crew deſert a ſhipwrack'd Veſſel, they ſhall have no Claim to any of the Effects ſaved; but the whole ſhall go to the Proprietor; but if they be preſent, when the Effects are ſaved, and aſſiſt therein, they ſhall have one Fourth thereof: That if a Perſon kill a Fiſh on the Ice, it ſhall be reputed his own, ſo long as he leaves

any

any Perſon with it; but the Minute he leaves it, it becomes the Due of the firſt Captain that comes that way; but that if a Fiſh be tied to an Anchor, or a Rope faſten'd to the Shoar, it ſhall remain to its firſt Proprietor, tho' he leave it alone: That if any Perſon be wounded, or lamed in the Service, the Commiſſioners of the *Fiſhery* undertake to procure him a reaſonable Satisfaction; to which the whole Fleet ſhall contribute.

Beſide this general Regulation, which all the Captains, Pilots, and Maſters of Veſſels are oblig'd to ſwear to ſee obſerved, before they put to Sea; there is alſo a particular one for each Ship's Crew, which they are all ſwore to execute, in Preſence of one of the Commiſſioners, who goes a-board every Ship, to receive the Oath.——

This Regulation is a kind of Charter-Party, importing, That they will attend Prayers Morning and Evening, on pain of an Amercement, at the Diſcretion of the Captain: That they will not get drunk; nor draw their Knives, on Forfeiture of half their Wages; nor fight, on Forfeiture of the whole: That no body ſhall lay Wagers, on the good or ill Succeſs of the Fiſhing; nor buy, or ſell on ſuch Conditions, *In caſe we take one or more Fiſh*, on Penalty of 25 Florins: That they will be contented with the Proviſions allowed them; and that they will never light Fire, Candle, or Match, by Night or Day, without the Captain's Leave, on the like Penalty.

After the Reading of this Regulation, the Crew are all called, to receive the cuſtomary Gratuity before their Setting out, with an Aſſurance of another Sum at their Return, in Proportion to the Succeſs of the Fiſhing.——

The Captain, on this Occaſion, receives from 100, to 150 Florins; the Pilot, from 40, to 60; each Harpineer, from 40, to 50 Florins; the other Officers, from 26, to 36 Florins; the elder Sailors 20; and the younger 12.

The Fleet, which conſiſts moſtly of Fluyts, from two, to three hundred Tuns; and from 35 Men to 41. uſually ſets Sail about the Beginning of *April*, and takes its Courſe by the Iſles of *Iceland*, from 60 to 61 Degrees of Latitude; after which, leaving them to the Weſt, it ſteers Northward, thro' 73, 74, and 75 Deg. of Lat. where they begin to find the Ice.

'Tis through theſe huge Heaps of Ice, wherewith the whole Quarter is filled, that they firſt begin to ſpy the Whales: And there moſt of the Veſſels fix their Abode for the Fiſhing.——But, as the Fiſh are larger and fatter, the further North you go; ſome Captains will venture as far as 80, or 82 Deg. of N. Lat.

Each Veſſel of 300 Tuns has ſix Chaloupes; and each Chaloupe ſix Harpineers, with five Seamen, to row it. To every Chaloup there are ſeven Lines, of three Inches Circumference; five of them in the Hind-part of the Veſſel, and two behind. The hind Lines together make ſix hundred Fathoms, and with the Addition of the other two, 880. If the Whale dive deeper, or run further underneath the Ice, the Line muſt be cut, leſt the Chaloupe be drawn after it.

The Inſtrument, wherewith the Execution is done, is a harping Iron, or Javelin, five or ſix Foot long, pointed with Steel, in a triangular Shape, like the Barb of an Arrow.

The Harpineer, upon ſight of the Fiſh, from one End of the Chaloupe, where he is plac'd, flings the harping Iron with all his Might againſt the Whales Back; and if he be ſo happy as to make it penetrate the Skin and Fat, into the Fleſh, he lets go a String, faſten'd to the harping Iron, at the End whereof is a dry Gourd, which ſwimming on the Water, diſcovers whereabout the Whale is; who, the Minute he is ſtruck, plunges to the Bottom.

If the Whale return to breath in the Air, the Harpineer takes occaſion to give him a freſh Wound; till, fainting by the Loſs of Blood, the Men have an Opportunity of approaching him; and thruſting a long ſteeled Lance under his Gills into his Breaſt, and thro' the Inteſtines, which diſpatches him: And when the Carcaſs begins to float, they cut off the Fins, and Tail; and tying a Rope to the Place where the Tail was, ſwim to the Veſſel, where he is taken in.——

When they have got their Quota of Whales, they begin to take the *Blubber*, or Fat, and the *Fins*, or Whale-bone.

In order to this, the Whale is hoiſted over-board, and kept ſuſpended above the Water, by two Ropes, the one tied around his Neck, the other about his Tail; and under the Carcaſs are two Chaloupes, placed to receive what may chance to drop.

This done, three or four Men go down upon the Whale, with a kind of Calkers, or Irons on their Feet to prevent their Slipping. They begin to open him on the Side, and proceed downwards the Belly; cutting off all the Lard or Fat, in Pieces of about three Foot broad, and eight long: Beſide the Fat on the Sides, they likewiſe cut off that of the Throat, and the under Lip, leaving all the lean behind.——They next proceed to the Whale-bone, which they cut off with a Hatchet, made for the purpoſe, from the upper Jaw of the Fiſh, and make it up in Packets. The Fat and Bone thus procured, what remains of the Whale, they leave for the Bears, who are very fond of it.

In Proportion as the large Pieces of Fat are cut off, the reſt of the Crew are employed in ſlicing them ſmaller, and picking out all tke lean. When this is prepared, they ſtow it under the Deck, where it lies, till the Fat of all the Whales is on Board: Then, cutting it ſtill ſmaller, they put it up in Tubs, in the Hold, or Bottom of the Veſſel, cramming them very full and cloſe.

Nothing now remains, but to ſail homewards, where the Fat is to be boiled, and melted down into *Train Oil*. See WHALE.

### *Produce of One Years* Whale Fiſhery.

To ſtate the Produce, we make choice of the *Fiſhery* of 1697. as being the greateſt, and moſt fortunate that ever was known: To which we ſhall add that of the preſent Year.

In the Year 1697. there were an hundred, ninety eight Veſſels of divers Nations; whereof an hundred, twenty nine were *Dutch*; forty ſeven *Hamburghers*; two *Sweediſh*; four *Daniſh*; twelve of *Bremen*; two of *Embden*; and one of *Lubeck*.

In the preſent Year 1725. there were 226 Veſſels; whereof 144 were *Dutch*; twelve *Engliſh*; forty three *Hamburghers*; twenty three *Bremers*; one and twenty of *Berghen*; two of *Flensburg*. Their Captures each Year were as follow.

In 1697,

| | | |
|---|---|---|
| 129 *Dutch* Veſſels took—— | 1255 | Whales. |
| 47 *Hamburghers* — — | 449 | —— |
| 2 *Sweeds* — — — | 113 | —— |
| 4 *Danes* — — — | 52 | —— |
| 12 *Bremers* — — — | 96 | —— |
| 2 *Embden* — — — | 2 | —— |
| 1 *Lubeck* — — — | 1 | —— |
| In all, 197 Veſſels took — — | 1968 | Whales. |

In 1725,

| | | |
|---|---|---|
| 144 *Dutch* Veſſels took—— | 248½ | Whales. |
| 12 *Engliſh* — —— | 25½ | —— |
| 43 *Hamburghers* —— | 46 | —— |
| 23 *Bremers* — —— | 29 | —— |
| 2 *Berghen* — —— | 0 | —— |
| 2 *Flensburg* — —— | 0 | —— |
| In all, 226 Veſſels took — — | 349 | Whales. |

The *Dutch* Captures in 1697 produced 41344 Punchions of Blubber
The *Hamburghers* — — 16414 —
The *Sweeds* — — — 540 —
The *Danes* — — 1710 —
The *Bremers* — — — 3790 —
The *Embdeners* — — 28 —

The *Engliſh* Captures in 1725 produced 1000 Puncheons of Blubber, and 20 Tuns of Whale Bone.

Now, eſtimating the Puncheon of Blubber at 30 Florins *Dutch*; or 2 *l.* 15 *s.* *Engliſh*, the currant Price in the Year 1697, the total Produce of the Years Fiſhing amounting to 63826 Puncheons, yields

*l.* 175521—10 *s.* Sterl.

As to Fins, or Whale Bones, ſetting them at 2000 Weight *per* Whale; and hundred Weight at 4 *l.* 4 *s.* they will yield *l.* 171233

Total *l.* 346754

Whereof, the Share belonging to the *Dutch*, was 228737

On the ſame Footing might the Produce of the *Fiſhery* of the preſent Year be eaſily ſtated. It will come far ſhort of that of 1697; which indeed vaſtly tranſcends what has ever been known: Each Veſſel, taking one with another, caught that Year 10 Whales, $\frac{9}{24}$: And the preſent Year only *one* Whale $\frac{5}{9}$; tho' the *Engliſh*, more happy than the reſt, caught above two a-piece. But it may be added, that the Whales of the preſent Year being larger and fatter than thoſe of 1697, produced one with another 40 Puncheons of Blubber; and theſe other only 33 Puncheons.

### *Herring* FISHERY.

The *Herring* is a ſmall Salt-water Fiſh, with a blueiſh Back, and a white ſilver'd Belly, not unlike the little Shad Fiſh; whence it is called in Latin *Aloſa minor*. *Rondeletius* calls it *Harengus*.

It is a popular Error to believe the Herring to be the *Halec* of the *Romans*. The Halec was no particular Fiſh, but a kind of Sauce, made of any ſort of Salt Fiſh: The modern

Herring

Herring ſeems to have been unknown to the Antients: It is neither the *Halec*, nor *Halex*, nor *Moenis*, nor *Lencomænis*, nor the *Gerres* of *Pliny*. See *Rondelet. de Piſcib. marin. L. V. c.* 13. and *Voſſius de Idolol.*

*Herrings* are chiefly found in the North Sea. 'Tis true, there are *Fiſheries* elſewhere, but none ſo copious.

They uſually make two Fiſhing Seaſons; the firſt in *Auguſt*; and the ſecond in Autumn: The latter of which is the more conſiderable, on account of the Fogs, which are very favourable to this kind of Fiſhing.

'Tis commonly ſaid, that no body ever ſaw a Herring alive; and that they die the Minute they are taken out of Water: But there are Inſtances to the Contrary.

The *Herring* is a Fiſh of Paſſage; ſo that it is allowed to fiſh them on Holydays, and Sundays: In the Decretal there is an expreſs Chapter to this Effect. They go chiefly in Droves, and are fond of following Fire, or Light; and in their Paſſage reſemble a kind of Lightning themſelves.

The *Dutch* were the firſt who began the *Herring Fiſhery*, and obſerv'd the ſeveral Seaſons of their Paſſage. Their firſt regular Fiſhing is fix'd to the Year 1163.

The Method of Salting and Barreling them, was not diſcover'd, till the Year 1416. *Willoughby*, in his Hiſtory of *Fiſhes*, obſerves, that *Will. Buckelſz*, a Native of *Bier Uliet*, render'd his Name immortal, by the Diſcovery of the Secret of Curing and Pickling Herring: He adds, that the Emperor *Charles* V. coming in to the Low Countries, made a Journey to *Bier Uliet*, with the Queen of *Hungary*, on purpoſe to view the Tomb of this firſt Barreler of Herring.

The *Dutch* begin their *Herring Fiſhing* on the 14th of *June*, and employ no leſs than 1000 Veſſels therein. Theſe Veſſels are a kind of Barks, by the *Dutch* called *Fly boats*, carrying from 45 to 60 Tun, and two or three ſmall Canon. See Boat.

None of them are allowed to ſtir out of Port without a Convoy; unleſs there be enough of them together, to make 18, or 20 Pieces of Canon: In which caſe they are allowed to go in Conſerve, or Company. Before they ſet out, they make a verbal Convention; which has the ſame Force, as if it were in Writing.

Theſe Regulations of the Admiralty of *Holland* are partly followed by the *French*, and other Nations; and partly improved, and augmented with new ones; as, that No Fiſher ſhall caſt his Net within a hundred Fathoms of another Boat: That while the Nets are caſt, a Light ſhall be kept on the hind Part of the Veſſel: That when a Boat is by any Accident obliged to leave off Fiſhing, the Light ſhall be caſt into the Sea: That when the greater Part of a Fleet leaves off Fiſhing, and caſts Anchor, the reſt ſhall do the ſame, *&c.*

The Manner of *Fiſhing* has nothing particular in it. The Nets wherein the Fiſh is drawn, ſhould, regularly, have their Maſhes an Inch ſquare, that none of the leſſer Fry may be taken. See Nets.

The Commerce of *Herring*, both *pickled*, and *red*, is very conſiderable: But there are ſo many different Sorts prepared; in ſuch different ways, and different Places, that 'tis hard to ſay any thing preciſe thereupon.

Thoſe prepared by the *Dutch*, are in the greateſt Repute: They are diſtinguiſh'd into four Kinds, according to their Sizes. The Goodneſs of this Commodity conſiſts in its being fat, fleſhy, firm, white; ſalted the ſame Day 'tis taken, and with good Salt, and well barrel'd.——

The *Iriſh* Herring are the next in Value after thoſe of *Holland*; and principally thoſe of *Germuth* and *Dublin*, which are ſcarce inferior to the beſt Herring of *Rotterdam*, or *Enkuyſen*. The *Scotch* Herring is not near ſo well prepared, gutted, ſalted, nor barrel'd as the *Dutch*; and yet its Taſte is excellent: Nor is it doubted, but that if the *Scotch* were as careful in theſe Circumſtances, as their Neighbours, their Herring would be the beſt in the World. The Herring fiſh'd in *England* is inconſiderable; the Fiſh being too dry and freſh for the Market.

*Method of Curing, and Preparing* Pickled, *and* Red Herring.

1°. *For Pickled Herring:* As ſoon as the Herring are taken out of the Sea, one of the Crew, appointed for this Office, cuts them open, and takes out the Guts, and every thing but the Milt, and the Eggs which are always to be left in the Body of the Fiſh. Then, waſhing them in freſh Water, they are left the Space of twelve or fifteen Hours in a Tub full of ſtrong Brine made of freſh Water, and Sea Salt.

When they are taken out, they drain them; and when well drain'd, put them up in Barrels; taking care to diſpoſe and range them evenly, in Rows, or Layers; and preſſing them well down; and ſtrewing a Layer of Salt both at Top, and Bottom.

When the Barrel is full, they ſtop it up very cloſe; that no Air may get in, nor any Brine out; either of which is very prejudicial to the Fiſh.

2°. *For Red Herrings:* The Fiſh being caught, they proceed to waſh, gut, and lay them in Brine, as for pickled Herring; only they let them lie double the Time in Brine, *viz.* twenty four Hours; inaſmuch as they are to take all their Salt here, whereas the other Kind takes half its Salt in the Barrel.

When the Herring is taken out of the Brine, they ſpit them, *i. e.* ſtring them by the Head on little wooden Spits, and thus hang them in a kind of Chimneys, made for the purpoſe; and when the Chimney is as full as it will hold, which leſs than ten or twelve thouſand ſeldom effects, they make a little Fire underneath, of bruſh Wood, which yields a deal of Smoak, but no Flame.

Here the Herring remains, till ſufficiently ſmoaked, and dried; which ordinarily is in 24 Hours. Then they are taken down, and barrel'd up for keeping.

Their Goodneſs conſiſts in their being large, firm, and dry; their Outſide of a yellow, golden Colour; their Eggs, or Milt within, and well ſalted and barrel'd.——

*Salmon* Fishery.

The *Salmon*, according to ſome, breeds in the Sea; but the Opinion of others ſeems better warranted, that he breeds in the clear ſandy Parts of Rivers, not far from the Mouths thereof. They commonly ſpawn in *October*, and the young becomes a *Samlet* the following Year, and in a few Months a large *Salmon*. The Milter and Spawner having perform'd their Office, betake themſelves to the Sea; and if their Return be prevented by Wears, or the like, they become ſick, lean, pine away, and die in two Years time: If they ſpawn in the mean time, the Produce is a diminutive Salmon, called *Skegger*, which will never arrive at the natural Bulk; it being the Sea that makes them grow big, and the Rivers, fat. The Female is diſtinguiſh'd from the Male, in that its Noſe is longer and more hooked, its Scales not ſo bright, and its Body ſpeckled over with dark-brown Spots; its Belly flatter, and its Fleſh not ſo red; more dry, and leſs delicious to the Taſte. In ſpawning Time, when they repair from the Sea up the Rivers, ſcarce any thing can ſtop their Progreſs. We have ſeen them leap up Cataracts and Precipices, many Yards high.——

The chief *Salmon Fiſheries* in *Europe*, are along the Coaſts of *England*, *Scotland*, and *Ireland*. The Fiſhing uſually begins about the firſt of *January*, and ends by the laſt of *September*. It is perform'd with Nets, in the Places where the Rivers empty themſelves into the Sea; and along the Sea Coaſts there about. The Fiſh are ſeen to croud thither frequently in Shoals from all Parts, in ſearch of the freſh Water: They alſo fiſh for them higher up in the Rivers; ſometimes with Nets; and ſometimes with a kind of Dikes, or Wears made for the Purpoſe, with iron Grates therein, ſo diſpoſed, as that the Fiſh, in going up the River, open them with their Head; but are no ſooner enter'd, than the Gate claps to. Thus the Salmon are incloſed as in a Reſervoir, where it is eaſy taking them. In ſome Places they fiſh for Salmon in the Night time, by the Light of Torches, or kindled Straw. The Fiſhermen watch when the Fiſh draws towards the Light, whereof he is naturally a great Lover, and ſtrike him with a Fork, or Liſter. In ſome Parts of *Scotland*, it is ſaid, they ride a-fiſhing up the Rivers, and when they ſpy them in the ſhallow Parts, ſhoot them with Piſtols.——

When the Fiſh is taken, they open them; take out the Guts and Gills, and ſalt them, in large Tubs for the Purpoſe: Out of which they are not taken before *October*, to be pack'd up in Caſks from three to four hundred and fifty Pound Weight.

Salmon is alſo *fiſh'd* in Rivers, after the manner of Trout, with a Line, and Hook. He bites beſt in the Afternoon, about Three, in *May*, *June*, *July*, and *Auguſt*; the Water being clear, and a little Breeze of Wind ſtirring; eſpecially if the Wind and Stream ſet contrary ways. The Salmon is catch'd like a *Trout*, with Worm, Fly, and Minion; and eſpecially the Garden Worm, if well ſcour'd, and kept twenty Days in Moſs. The Salmon never ſtays long in a Place, but is continually ſhifting; to be as near the Spring Head as poſſible, and ſwimming generally in the deepeſt and broadeſt Parts of the Rivers, near the Ground. Put two, or three Garden Worms well ſcour'd on your Hook at once, as if you were baiting for Trout; and be ſure to give him Time to gorge his Bait, before you ſtrike. Some uſe a Wire-ring on the Top of the Rod, through which the Line may be let run to any Length at Pleaſure, by a Reel near at hand.——

*Mackarel* Fishery.

The *Mackarel* is a Salt-water Fiſh, without Scales. Its Body is round, and fleſhy; terminating almoſt in a Point, at each Extreme.

Some

Some Perſons, well ſkilled in the Naval Architecture, hold its Figure the moſt commodious for Swimming of all others, and propoſe it as a Model for the Building of Ships.

'Tis ordinarily about a Foot long: When in the Water, it appears yellow; and when out of it, of a Silver White, excepting for Streaks, or Speckles of a deep Blue, on the Back, and Sides.

The Mackarel is found in large Shoals, in divers Parts of the Ocean; but eſpecially on the *French* and *Engliſh* Coaſts.

The Fiſhing is uſually in the Months of *April*, *May*, and *June*, and even *July*, according to the Place. They enter the *Engliſh* Channel in *April*, and proceed up to the Streights of *Dover*, as the Summer advances; ſo that by *June* they are on the Coaſts of *Cornwal*, *Suſſex*, *Normandy*, *Picardy*, &c. where the *Fiſhery* is moſt conſiderable. They are an excellent Food, freſh; and not to be deſpiſed, when well prepared, pickled, and put up in Barrels.

Naturaliſts have obſerved, that the Water wherein Mackarel has been boiled, yields a Light, after ſtirring it a little.——

The Fiſh is taken two ways; either with a Line, or Nets: the latter is the more conſiderable; and is perform'd in the Night-time. The Rules obſerv'd in the Fiſhing of Mackarel are much the ſame as thoſe already mentioned in the *Fiſhery of Herrings*.

*There are two ways of pickling them:* The firſt is, by opening and gutting them, and filling the Belly with Salt, cramm'd in as hard as poſſible with a Stick: Which done, they range them in Strata or Rows, at the Bottom of the Veſſel, ſtrewing Salt between the Layers.

In the ſecond way, they put them immediately into Tubs full of Brine, made of freſh Water, and Salt; and leave them to ſteep, till they have imbibed Salt enough to make them keep: After which they are taken out, and barrel'd up; taking care to preſs them cloſe down.

### *Cod* Fishery.

The *Cod* is a Fiſh of Paſſage, pretty large, with a frightful Head; Teeth in the Bottom of the Throat; its Fleſh, white; its Skin, browniſh on the Back, white under the Belly; and cover'd with thin, tranſparent Scales.

It eats excellently, when freſh; and, if well prepared and ſalted, will keep a long Time. 'Tis this Fiſh, commonly eaten among us in Lent, &c. under the Denomination of *Salt-Fiſh*, or *Stock-Fiſh*.

There are two Kinds of Salt Cod; the one called *Green* or *White*; and the other *Dried*, or *Cured:* Tho' it is all the ſame Fiſh; only differently prepared.——

#### *Green Cod.*

The chief *Fiſheries* for *Green Cod* are in the Bay of *Canada*, on the Great and Little *Bank* near the Coaſt of *New-found Land*, the Iſland of St. *Peter*, and the Iſle of *Sable:* And hither, Veſſels are yearly ſent from divers Parts, both of *America* and *Europe*.

The Veſſels uſed herein, are from an hundred, to an hundred and fifty Tuns; which will bring thirty, or thirty five thouſand Fiſh a-piece.

The moſt eſſential Articles in this *Fiſhery* are three Perſons, who know how to open the Fiſh, to cut off the Heads, and to ſalt them; upon the Ability of which laſt the Succeſs of the Voyage chiefly depends.

Several Authors will have it, that the *Biſcayans*, in purſuing their Whales, made the firſt Diſcovery of the Great and Little *Bank* of Cods, *New-found Land*, *Canada*, &c. a hundred Years before *Columbus*'s time; and that it was a *Biſcayan Newfound-lander*, that gave the firſt Intimation thereof to *Columbus*.

Others ſay, that the Great Bank was diſcover'd by a Native of St. *Maloes*, named *Cartier*. But, be the Inventor of what Name or Nation he will, the Invention is certainly highly valuable: Not a trading Nation in *Europe*, but allows the Commerce of Cod Fiſh one of the moſt ſecure and gainful that is known.

The beſt, largeſt, and fatteſt Cod, are thoſe taken on the South Side of the Great *Bank*; which is a kind of ſubmarine Mountain, 150 Leagues long, and 50 broad; and at the Diſtance of 25 from *New-found Land:* Thoſe on the North Side are much ſmaller.

The beſt Seaſon is from the Beginning of *February*, to the End of *April*; at which Time the Cod, which during the Winter had retired to the deepeſt Parts of the Sea, return to the Bank, and grow very fat.

Thoſe caught from *March*, to *June*, keep well enough; but thoſe in *July*, *Auguſt*, and *September* ſoon ſpoil.

The Fiſhing is ſometimes done in a Month, or ſix Weeks; ſometimes it holds ſix Months. As Lent draws on, if the Fiſhers have but half their Cargo, they ſtrive to make homeward the firſt; the Market being then the beſt.

Some will make a ſecond Voyage, before others have got Loading for the firſt. Each Fiſher only takes one Cod at a time; and yet the more experienc'd will take from 350 to 400 *per* Day: But this is the moſt; for 'tis very fatiguing Work, both on account of the Weightineſs of the Fiſh, and of the extreme Cold which reigns on the Bank.

The Salary uſually allowed the Captain and Sailors, is one Third of the Cod they bring home ſound.

They ſalt the Cod on Board. The Head being cut off, the Belly open'd, and the Guts out; the Salter ranges them in the Bottom of the Veſſel, Head to Tail; and having thus made a Layer thereof, a Fathom or two ſquare, covers it with Salt: Over this he lays another, which he covers as before; and thus he diſpoſes all the Fiſh of that Day, taking care never to mix the Fiſh of different Days together.

By that time the Cod has lain thus to drain three or four Days, they are moved into another Part of the Veſſel, and ſalted a-freſh. After this, they are no more to be touch'd, till the Veſſel have its Burthen.

Sometimes they put them up in Barrels, for the Conveniency of Carriage.——

#### *Dry Cod.*

In the Fiſhing of Dry Cod, Veſſels of all Sizes are uſed; though ſuch are generally choſe, as have large Holds, by reaſon this ſort of Fiſh incumbers more than it burthens.

As Cod is only to be dried by the Sun, the *European* Veſſels are obliged to put out in *March*, or *April*, to have the Benefit of the Summer for Drying. Indeed, we ſend Veſſels for Cod in *June*, and *July*; but thoſe only buy what has been fiſh'd and prepared by the Inhabitants of the *Engliſh* Colonies of *New-found Land*, and the neighbouring Parts; in exchange for which, we carry them Meals, Brandies, Biſcuits, Pulſe, Moloſſes, Linen, &c.

The principal *Fiſhery* for Dry Cod is along the Coaſt of *Placentia*, from *Cape-Roſe*, to the *Bay des Experts*; in which Compaſs there are divers commodious Ports for the Fiſh to be dried in.

The Fiſh intended for this Uſe, tho' of the ſame Kind with the Green Cod, is yet much ſmaller; whence it is the fitter to keep, as the Salt takes more hold.

The Method of Fiſhing is much the ſame in both; only this latter is the more expenſive, as it takes up more Time, and employs more Hands; and yet ſcarce half ſo much Salt is ſpent in this, as the other.

When ſeveral Fiſhing Veſſels meet, and intend to fiſh in the ſame Port; he whoſe Chaloupe firſt touches Ground, becomes entitled to the Quality and Privileges of Admiral; has the Choice of his Station, and the Refuſal of all the Wood on the Coaſt at his Arrival.

As faſt as the Captains arrive, they unrig all their Veſſels, leaving nothing but the Shrouds, to ſuſtain the Maſts; and in the mean time the Mates provide a Tent on Shore, cover'd with Branches of Fir, and Sails over them; with a Scaffold, fifty, or ſixty Foot long; and one third as much broad. While the Scaffold is making ready, the Crew are a-fiſhing; and as faſt as they catch, they bring their Fiſh, open them, and ſalt them on moveable Benches: But the main Salting is perform'd on the Scaffold.

When the Fiſh has taken Salt, they waſh them; and to drain them again, lay them in Piles on the Galleries of the Scaffold: When drained, they range them on Hurdles, a Fiſh thick, Head againſt Tail, with the Back uppermoſt; obſerving, while they lie thus, to turn, and ſhift them four times every 24 Hours.

When they begin to dry, they lay them in Heaps, of ten or twelve a-piece, to retain their Warmth; and continue to inlarge the Heap every Day, till it becomes double its firſt Bulk: At length they join two of theſe Heaps into one, which they turn every Day, as before. Laſtly, they ſalt them over again; beginning with thoſe that had been ſalted firſt; and thus lay them in huge Piles, as big as Hay-Stacks.

And thus the reſt: Till they are carried a Ship-board, where they are laid on Branches of Trees, diſpoſed for that purpoſe in the Bottom of the Veſſel, with Mats all around, to prevent their contracting any Moiſture.——

There are four kinds of Commodities drawn from Cod, *viz.* the *Tripes*, and *Tongues*, which are ſalted at the ſame time with the Fiſh, and barrel'd up: The *Rows*, or Eggs, which being ſalted and barrel'd up, ſerve to caſt into the Sea, to draw Fiſh together, and particularly Pilchards: And laſtly, the *Oil*, which is uſed in the dreſſing of Leather, &c.

The *Scots* catch a ſmall kind of Cod on the Coaſts of *Buchan*, which is highly prized, tho' very much like Ling. They ſalt it, and dry it in the Sun, upon Rocks; and ſometimes in the Chimney: But the greateſt Part of it is ſpent at home.——

### *Sturgeon* Fishery.

The *Sturgeon* is a large Sea Fiſh, which at its Seaſon runs up the Rivers; having a ſharp-pointed Snout, flat

Belly, and bluiſh Back. Sturgeons are reckon'd among the Number of Royal Fiſhes; and when left on Shore, belong to the King; but when taken out at Sea, are the Property of the Perſon who takes them. See ROYAL *Fiſh*.

There are Sturgeons of all Sizes; and we even read of ſome twenty Foot long: But the middle Size are reckon'd the beſt.

Some will have this the *Silurus* of the Antients.

'Tis of the Roe, or Eggs of this Fiſh, that the *Cavia* or *Kavia*, ſo much prized by the *Italians*, &c. is prepared. See CAVIA.

Sturgeon, when freſh, eats deliciouſly. To make it keep, they ſalt or pickle it in large Pieces, and put them up in Cags, from 25 to 50 Pounds.

The greateſt *Sturgeon Fiſhery* in the World is in the Mouth of the *Volga*, in the Caſpian Sea; where the *Muſcovites* find Employment for a great Number of Men.

They are not caught in Nets, but in a kind of Incloſure, form'd by huge Stakes, diſpoſed in Triangles, repreſenting the Letter Z ſeveral times repeated. Theſe ſort of *Fiſheries* are open on the Side towards the Sea; and cloſe on the other; by which means the Fiſh, aſcending in its Seaſon up the River, embaraſſes it ſelf in theſe narrow, angular Retreats, and not being able to turn it ſelf, to go back again, by reaſon of its Bulk, is eaſily ſtruck, and killed with a ſort of harping Iron.

The chief Object of this *Fiſhery* is the Roe; which is a Commodity as much uſed in *Muſcovy*, as Butter in *Holland*; and there are Sturgeons, that furniſh 400 Pounds thereof. 'Tis only the leſſer and younger Sturgeon, that they pickle for Eating.——

### PILCHARD *Fiſhery*.

The *Pilchard* is a ſmall Salt-water Fiſh, bigger than the Anchovy; but leſs than the Herring, which in other reſpects it reſembles. Its Head is yellow; Belly, white; and Head, a Sea-green. It eats admirably, freſh, or lightly ſalted.

There are Seaſons for fiſhing the Pilchard; which, like the Herring and Anchovy, is a Fiſh of Paſſage. They are prepared and ſalted much as the Anchovy is; with this Difference, that the Head is cut off the latter: But the Pilchard were diſtinguiſhable from the Anchovy, even tho' its Head were off likewiſe; the Pilchard having a very flat Back, and the Anchovy a round one.

The chief *Pilchard Fiſheries* are along the Coaſts of *Dalmatia*, to the South of the Iſland *Iſſea*: On the Coaſts of *Bretagne*, from *Bell* Iſland, as far as *Breſt*; and along the Coaſts of *Cornwall* and *Devonſhire*.

That on the Coaſts of *Dalmatia* is ſo plentiful, that it not only furniſhes all *Greece*; but a great Part of *Italy*. That on the Coaſts of *Bretagne* employs yearly above three hundred Sloops, and moſt of the Seamen of the Country.

The Fiſh caught on our own Coaſts, tho' bigger, are not ſo much valued, as thoſe on the Coaſts of *France*; owing principally to their not being ſo thorougly cured. The Seaſon is from *June* to *September*.——

The Pilchards naturally follow the Light; and will gather about a Boat, which bears a Light in the Night-time; which contributes much to the Facility of the *Fiſhery*.

On the Coaſts of *France* they make uſe of the Roes of Cod-fiſh, as a Bait; which, thrown into the Sea, makes them riſe from the Bottom, and run into the Nets, diſpoſed for the Purpoſe.

On our Coaſts, there are Perſons poſted a-ſhore, who ſpying by the Colour of the Water where the Shoals are, make Signs to the Boats, to get among them, to caſt their Nets.

When taken, the Fiſh are brought to a Ware-houſe on Shore, where they are laid up in broad Piles, ſupported by Backs or Sides.

As they pile them, they ſalt them with Bay Salt; in which, lying ſoaking twenty or thirty Days, they run out a deal of Blood, with dirty Pickle, and Bittern; which laſt draws a deal of the Oil from the Fiſh, to the great Loſs of the Owners. When taken out of the Pile, there remains a deal of Salt, Blood, Scales, &c. at Bottom, which, with freſh Salt, ſerves for another Pile.

They now proceed to waſh them in Sea Water, to clear off the Dirt, and Blood; and when dry, put them up in Barrels, and preſs them hard down, to ſqueeze out the Oil, which iſſues away at an Hole in the Bottom of the Caſk: And in this State, they are fit for Sale, or Uſe.——

### *Pearl* FISHERY, ſee PEARL *Fiſhery*.

FISHING, the Act, or Art of catching *Fiſh*. See FISH.

*Fiſhing* is diſtinguiſh'd, with regard to its Inſtrument, into that perform'd with the *Net*, for Fiſh that *go in Shoals*; and that with the *Hook*, for *ſolitary* Fiſh: Which latter is properly called *Angling*. See NET, and ANGLING.

*Fiſhing* again, is diſtinguiſh'd, with regard to its Object, into that perform'd in *Salt Water*; and that in *Freſh*. The firſt practiſed for *Whales*, *Herring*, *Cod*, *Salmon*, *Pearls*, *Mackarel*, and other Sea Fiſh. See FISHERY.

The latter practiſed for *Pike*, *Trout*, *Carp*, *Tench*, *Perch*, *Dace*, *Eels*, &c.

The Inſtruments principally uſed in Angling, or *Fiſhing with the Hook*, are the *Rod*, *Line*, *Hook*, and *Fly*. See FISHING *Rod*, FISHING *Hook*, FISHING *Fly*, &c.

The Points on which the Art of *Fiſhing* chiefly turns, are the proper *Seaſon*, *Place*, *Bait*, and manner of *Application*. What relates to each hereof, we ſhall here entertain the Reader withal, in the ſeveral kinds of *Fiſhing*, chiefly practiſed among us.

*Pike* FISHING. The *Pike* is reputed the Tyrant of the freſh Waters: By the common Conſent of Naturaliſts, he is the longeſt lived of all Fiſhes. The larger he is found, the coarſer the Food; and ſo *vice verſa*. This Fiſh never ſwims in Shoals, but always ſingle; being very rapacious, and preying even on his own kind. He ſpawns in *February*, and *March*. The beſt Sort is in Rivers: The worſt in Meres and Ponds. His ordinary Food is Pickeral Weed, Frogs, and what Fiſh he can lay hold on.

There are two ways of *fiſhing* for the Pike; by the Ledger Bait, and the Walking Bait. 1°. The *Ledger Bait* is that, fix'd in one certain Place; and which the Angler may leave behind him. Of this kind, the beſt is ſome living Bait, as a Dace, Roach, Gudgeon, or yellow Frog. To apply it, if a Fiſh, ſtick the Hook through his upper Lip; then faſtening it to a ſtrong Line, ten or twelve Yards long, tie the other End of the Line to ſome Stake on the Ground, or Bough of a Tree, near the Pike's uſual Haunt; letting the Line paſs over the Fork of a Stick, plac'd for the purpoſe; ſuſpending the Hook, and about a Yard of Line in the Water; but ſo, as that when the Pike bites, the Fork may give way, and let him have Line enough to his Hold and Paunch. If the Bait be a Frog, the Arming Wire is to be put in at his Mouth, and out at his Gills, and one of the Legs to be ſtitch'd, or tied over the upper Joint of the Wire.—2°. The *Walking Bait* is that the Fiſher caſts in, and conducts with a Rod, &c. This Method is perform'd by a Troll, with a Winch to wind it up withal. At the Top of the Rod is to be placed a Ring for the Line to be run thro'. The Line, for two Yards, and a Quarter next the Hook, to be of Silk, double; and arm'd with Wire, the length of ſeven Inches: On the Shank of the Hook is to be faſten'd a ſmooth piece of Lead, ſo as to ſink the Fiſh Bait, which is to be a Gudgeon, with its Head downwards. Thus diſpoſed, the Bait to be caſt up, and down; and if you feel the Fiſh at the Hook, give him Length enough, to run away with the Bait, and paunch it: Then ſtrike him with a ſmart Jerk. To *fiſh* with a dead Bait, uſe a Minnow, yellow Frog, Dace, or Roach, anointed in Gum of Gee, diſſolved in Oil of Spike; and caſt it where the Pike frequents. After it has lain a little while at the Bottom, draw it to the Top, and ſo up the Stream, and you will quickly perceive a Pike in earneſt Purſuit thereof. The Fiſh bites beſt about three in the Afternoon, in clear Water, with a gentle Gale, from the Middle of Summer, to the End of Autumn; but in Winter all Day long; and in the Spring he bites beſt early in the Morning, and late at Night.——Another Method of *fiſhing* for Pike, ſee under HUXING.

*Trout* FISHING. The *Trout* is a delicious Freſh-water Fiſh, ſpeckled with red and yellow; coming in, and going out of Seaſon with the Buck, and ſpawning in the cold Months of *October* and *November*; whereas all the other Species ſpawn in hot Summer Weather. There are divers Kinds of this Fiſh, all valuable; but the beſt are the red and yellow Trouts; and of theſe the Female, diſtinguiſh'd by a leſs Head and deeper Body, is preferr'd. They are known to be in Seaſon, by their large Backs; which may ſerve as a Rule for other Fiſh. All Winter long they are ſick, lean, and unwholeſome, and frequently louſy. As the Spring comes on, deſerting the ſtill, deep Waters, they repair to the gravelly Ground, againſt which they continue to rub, till they have got rid of their Lice, which are a kind of Worms, with large Heads. From that Time they delight to be in the ſharp Streams, and ſuch as are ſwift; where they lie in wait for Minnows and May Flies. At the latter End of *May* they are in their prime.

The uſual Baits whereby the Trout is catch'd, are the *Worm*, *Minnow*, and *Fly*, either Natural, or Artificial. The proper *Worms* are the Brandling, Lob-worm, Earth-worm, Dung-worm, and Maggot, or Gentle, eſpecially the two firſt: But whatever Worms are uſed, they are the better for keeping, which is to be done in an earthen Pot, with Moſs frequently changed. For the *Minnow*, ſlip the Hook thro' his Mouth, and the Point and Beard out of the Tail, ſo as it may lie almoſt ſtraight on the Hook. Then try againſt the Stream, whether it will turn. In defect of a Minnow, a ſmall

a ſmall Leach may ſerve the Turn; or for want of either, an artificial one may be made of Cloth, by the Life, which is found every whit as good a Bait as the natural one.

For *Fiſhing with Flies, either Natural, or Artificial*, ſee FISHING *Fly*.

*Carp* FISHING. The *Carp* is generally held the Queen of Freſh-water Fiſh. It is exceeding ſubtle, and of all others, the Eel only excepted, lives longeſt out of Water. Mr. *Ray* aſſures us, that in *Holland* they have a ſpeedy way of fattening them, by hanging them up in a Net in a Cellar, and feeding them with White-Bread and Milk. They breed ſeveral times in one Year; for which reaſon we ſeldom meet with either Male or Female, without either Melt or Spawn. Their natural Place is a Pond; in running Waters they rarely, if ever, breed. To make them fat and large, 'tis a good way, when the Pond is low, in *April*, to rake all the Sides thereof with an iron Rake, and ſow Hay Seeds thereon. By Autumn there will be a Crop of Graſs; which coming to be overflow'd, as the Pond riſes, will be a fine Feeding Place for them.

A World of Patience is required to angle for Carp, on account of their incredible Policy. They always chuſe to lie in the deepeſt Places: They ſeldom bite in cold Weather; and in hot, a Man cannot be too early, or too late for them. When they do bite, there is no fear of the Hold. The Baits are, the Red Worm, in *March*; the Candice, in *June*; and the Graſhopper in *July*, *Auguſt*, and *September*. Proper Paſtes may alſo be prepared for him; as Honey and Sugar wrought together, and thrown in Pieces into the Water, ſome Hours before you begin to angle. Honey and White Crums of Bread mix'd together do alſo make a good Paſte.

*Tench* FISHING. The *Tench* is a fine Freſh-water Fiſh, having very ſmall Scales, but large, ſmooth Fins, with a red Circle about the Eyes, and a little Barb hanging at each Corner of the Mouth. It takes more Delight among Weeds in Ponds, than in clear Rivers; and covets to feed in foul Water. His Slime is ſaid to have a healing Quality for wounded Fiſh; upon which Account he is commonly called the *Fiſhes Phyſician*. When the Carp, Pike, &c. are ſick, they find Relief by rubbing themſelves againſt the Tench.

The Seaſon for catching this Fiſh, is in *June*, *July*, and *Auguſt*, very early, and late, or even all Night, in the ſtill Part of Rivers. His Bait is a large Red Worm, at which he bites very eagerly, if firſt dipt in Tar. He alſo delights in all ſort of Paſtes, made up of ſtrong ſcented Oils, or with Tar: Or a Paſte of brown Bread, and Honey. Nor does he refuſe the Cud-worm, Lob-worm, Flag-worm, green Gentle, Cad-bait, or ſoft boil'd Bread, Grain.

*Pearch* or *Perch* FISHING. The *Pearch* or *Perch* is hook-back'd, not unlike a Hog; arm'd with ſtiff Griſtles, and his Sides with dry thick Scales: He is voracious, and will venture on his own Kind; even with greater Courage than the Pike. He ſeldom grows above two Foot long: He ſpawns in *February*, or *March*; and bites beſt when the Spring is far ſpent.

The proper Baits are, the Brandling, Minnow, and ſmall Frog; as alſo the Cob-Worm, Bob Oak-Worm, Gentle, Waſp, and Cad Bait. The Minnow yields the beſt Sport, which is to be alive, and ſtuck on the Hook through the upper Lip, or Back Fin, and kept ſwimming about Mid-Water. If the Frog be uſed, he is to be faſten'd to the Hook by the Skin of his Leg. When the Fiſh bites, as he is none of the Leather-mouthed kind, he muſt have Time to pouch his Bait. The beſt Place to fiſh for him, is in the turning of the Water Eddy, in a good Gravel Bottom.

*Roach* FISHING. The *Roach*, or *Rochet* is no delicate, but a very ſilly Fiſh. Thoſe in Rivers are more valued, than thoſe in Ponds; tho' the latter are much the larger. They ſpawn about the Middle of *May*.

To angle for this Fiſh in *April*, Cads or Worms are proper Baits; ſo are ſmall white Snails or Flies in Summer. The Bait is always to be under Water; for the Fiſh will not bite a-top. Others uſe a *May* Fly, in that Seaſon, with good Succeſs. In Autumn a Paſte muſt be uſed, made of the Crum of White Bread, moulded with a little Water, labour'd with the Hands into a tough Paſt, and colour'd, not very deep, with red Lead. In Winter, Gentles are the beſt Bait. Sprouted Malt; the young Brood of Waſps, and Bees, dipt in Blood; and the thick Blood of Sheep, half dried, are Noſtrums in this ſort of *Fiſhing*.

*Dace*, and *Dare* FISHING. The *Dace*, and *Dare*, bearing a near Reſemblance to each other, in Kind, Size, Goodneſs, Feeding, Cunning, &c. we join them together. They bite at any Fly; but eſpecially the Stone Caddice Fly, or *May* Fly, the latter End of *April*, and moſt Part of *May*; and the Ant Fly in *June*, *July*, *Auguſt*, &c. They rarely refuſe a Fly a-top of the Water, in a warm Day; but when you fiſh under Water for them, 'tis beſt to be within a handful of the Ground. To catch Dace in Winter, the Bait is a white Worm, with a large red Head, gather'd after the Plough in Heaths or ſandy Grounds.——The Noſtrums for Roaches are alſo commended for *Dace*.

*Gudgeon* FISHING. The *Gudgeon* is a ſmall Fiſh, of a very delicious Taſte. It ſpawns three or four times in the Summer Seaſon, and feeds in Streams, and on Gravel; ſlighting all kind of Flies: But is eaſily taken with a ſmall red Worm, *fiſhing* near the Ground; and being a leather-mouthed Fiſh, will not eaſily be off the Hook, when ſtruck. The Gudgeon may either be fiſh'd for with a Float, the Hook being on the Ground; or by Hand, with a running Line on the Ground, without Cork, or Float. He will bite well at Waſps, Gentles, and Cad Baits; and one may even fiſh him with two or three Hooks at the ſame time; which makes good Sport. When you angle for Gudgeons, ſtir up the Sand or Gravel with a long Pole, which will make them gather to the Place, and bite the faſter.

*Flounder* FISHING. The *Flounder* is a flat Sea or River Fiſh; caught in *April*, *May*, *June*, and *July*, in any time of the Day; in a ſwift Stream, and ſometimes alſo in the ſtill Deep. The beſt Bait is red Worms, Waſps, and Gentles.—

*Eel* FISHING. The *Eel* is a Freſh-water Fiſh, much in Shape of a Serpent: Naturaliſts have long been divided, as to the Manner how it is produced; whether by Generation; or Corruption as Worms are; or by certain glutinous Dew Drops, which, falling in *May* and *June* on the Banks of ſome Ponds and Rivers, are by the Heat of the Sun turn'd into Eels. This is certain, that there is not the leaſt Appearance of Sex or Difference therein. *Abr. Mylius*, in a Treatiſe of *the Origin of Animals*, deſcribes a Method of producing them by Art. He ſays, that if you cut up two Turfs, cover'd with *May* Dew, and lay one on the other, the graſſy Side inwards; and thus expoſe them to the Heat of the Sun, on the Banks of a Water: In a few Hours time there will ſpring from them an infinite Quantity of Eels. The Kinds of Eels are various: Some reduce them to four; the *Silver Eel*; a greeniſh, call'd the *Gray Eel*; a *blackiſh Eel*, with a broad flat Head; and an *Eel with reddiſh Fins*. The firſt is allowed to generate: It is viviparous, and the young, when it comes from the Female, is no bigger than a ſmall Needle.

The *Silver* Eel may be caught with divers Baits; particularly powder'd Beef, Garden Worms, or Lobs, Minnows, Hens Gut, Fiſh Garbage, &c. But as they hide themſelves in Winter in the Mud, without ſtirring out for ſix Months, and in the Summer take no Delight to be abroad in the Day, the moſt proper Time to take them, is in the Night, by faſtening a Line to the Bank ſide, with a laying Hook in the Water. Or a Line may be thrown at large with good Store of Hooks baited, and plumbed, with a Float, to diſcover where the Line lies, in the Morning. The Roach does here well for a Bait, the Hook being laid in his Mouth. ——Another uſual way of catching Eels, call'd *Sniggling*, is perform'd in the Day time, by taking a ſtrong Line, or Hook baited with a Lob, or Garden Worm, and reſorting to ſuch Holes and Places, as Eels uſe to abſcond in, near Mills, Wears, or Flood Gates; where, the Bait being gently put into the Hole, by help of a cleft Stick, the Eel will certainly bite.——*Bobbing for Eels* is another Method: In order to this, ſcour ſome large Lobs, and with a Needle run a twiſted Silk through them, from End to End, taking ſo many as may be wrap'd a dozen times round a Board. Tie them faſt with the two Ends of the Silk, that they may hang in ſo many Links. This done, faſten all to a ſtrong Cord, and about an Handful and an half above the Worms fix a Plummet, three Quarters of a Pound Weight; and make the Cord faſt to a ſtrong Pole: *Fiſhing* with theſe in muddy Water, the Eels will bite haſtily at the Bait. When you think they have ſwallow'd it, gently draw up the Line, and bring them aſhore as ſoon as may be.——Others uſe an Eel Spear, with three or four Forks, or jagged Teeth, which they ſtrike at random into the Mud.——

*Chub* FISHING. The *Chevin* or *Chub* is a Freſh-water Fiſh, with a large Head. It ſpawns in *March*, and is very ſtrong, tho' inactive; yielding in a very little Time, after he is ſtruck; and the larger he is, the quieter. His Bait is any kind of Worm, or Fly, particularly the large Yellow-moth; alſo Grain, Cheeſe, the Pith in the Bone of an Ox's Back, &c. He affects a large Bait, and Variety of them at the ſame Hook. Early in the Morning angle for him with Snails; but in the Heat of the Day chuſe ſome other Bait; and in the Afternoon fiſh for him at Ground, or Fly.

FISHING *Fly*, a Bait uſed in Angling for divers kinds of Fiſh. See FISH, and FISHING.

The *Fly* is either Natural, or Artificial.

*Natural Flies* are innumerable: The more uſual on this occaſion are the *Dun-Fly*, the *Stone*, or *May-Fly*, the *Red-Fly*, the *Moor-Fly*, the *Tawny-Fly*, the *Vine-Fly*, the *Shell-Fly*, the *Cloudy* and *Blackiſh-Fly*, the *Flag-Fly*; alſo *Caterpillars*, *Canker-Flies*, *Bear-Flies*, &c. all which appear ſooner or later, according to the Forwardneſs or Backwardneſs of the Spring. To know the particular Fly the Fiſh moſt covets, when you come in the Morning to the River-ſide, beat the Buſhes with your Rod, and take up what Variety you can of all ſorts of Flies; try them all, and you will quickly know which are in greateſt Eſteem: Not but that they will ſometimes change their Fly, but it is only when they have glutted themſelves therewith.

There are two ways to fiſh with Natural Flies, either on the Surface of the Water, or a little underneath it.

In angling for Chevin, Roach, or Dace, move not your Natural Flie ſwiftly, when you ſee the Fiſh make at it; but rather let it glide freely towards him with the Stream: But if it be in a ſtill and ſlow Water, draw the Fly ſlowly ſideways by him, which will make him eagerly purſue.

For the *Artificial Fly*, 'tis ſeldom uſed but in bluſtering Weather, when the Waters are ſo troubled by the Winds, that the Natural Fly cannot be ſeen, nor reſt upon them.

Of this Artificial Fly, there are reckon'd no leſs than twelve Sorts; of which theſe are the principal.

1. The *Dun-Fly*, in *March*, made of Dun Wool, and the Feathers of a Partridge Wing. 2. A *Dun-Fly*, made of black Wool, and the Feathers of a black Drake; the Body made of the firſt, and the Wings of the latter. 3. The *Stone-Fly*, in *April*, the Body made of black Wool, dy'd yellow under the Wings, and Tail. 4. The *Ruddy Fly*, in the Beginning of *May*; the Body made of red Wool, and bound about with black Silk, with the Feathers of a black Capon, which hang dangling on his Sides, next his Tail. 5. The *Yellow*, or *Greeniſh Fly*, in *June*; the Body made of black Wool, with a yellow Liſt on either Side, and the Wings taken off the Wings of a Buzzard, bound with black broken Hemp. 6. The *Mooriſh Fly*; the Body made of duſkiſh Wool, and the Wings with the blackiſh Mail of a Drake. 7. *Tawny-Fly*, till the Middle of *June*; the Body made of tawny Wool, the Wings made contrary one againſt the other, of the whitiſh Mail of a white Drake. 8. The *Waſp-Fly*, in *July*; the Body made of black Wool, caſt about with yellow Silk, and the Wings of Drakes-feathers. 9. The *Steel-Fly*, in the Middle of *July*; the Body made of greeniſh Wool, caſt about with the Feathers of a Peacocks-tail, and the Wings made of Buzzards Wings. 10. The *Drake-Fly*, in *Auguſt*; the Body made of black Wool, caſt about with black Silk, his Wings of the Mail of a black Drake, with a black Head.

The beſt Rules for *Artificial Fly-Fiſhing*, are

1°. To fiſh in a River ſomewhat diſturbed with Rain; or in a cloudy Day, when the Waters are moved by a gentle Breeze: The South-wind is beſt; and if the Wind blow high, yet not ſo, but that you may conveniently guard your Tackle, the Fiſh will riſe in plain Deeps; but if the Wind be ſmall, the beſt Angling is in ſwift Streams.

2°. Keep as far from the Water-ſide as may be; fiſh down the Stream, with the Sun at your Back, and touch not the Water with your Line.

3°. Ever angle in clear Rivers, with a ſmall Fly, and ſlender Wings; but in muddy Places uſe larger.

4°. When after Rain the Water becomes browniſh, uſe an Orange-Fly; in a clear Day, a light colour'd Fly; a dark Fly for dark Waters, &c.

5°. Let the Line be twice as long, as the Rod, unleſs the River be incumber'd with Wood.

6°. For every ſort of Fly, have ſeveral of the ſame, differing in Colour, to ſuit with the different Complexions of ſeveral Waters and Weathers.

7°. Have a nimble Eye, and active Hand, to ſtrike preſently with the riſing of the Fiſh; or elſe he will be apt to ſpew out the Hook.

8°. Let the Fly fall firſt into the Water, and not the Line, which will ſcare the Fiſh.

9°. In ſlow Rivers, or ſtill Places, caſt the Fly croſs over the River, and let it ſink a little in the Water, and draw it gently back with the Current.

*Salmon-Flies* ſhould be made with their Wings ſtanding, one behind the other, whether two, or four. That Fiſh delights in the gawdieſt Colours that can be; chiefly in the Wings, which muſt be long, as well as the Tail.

FISHING *Floats*, are little Appendages to the Line, ſerving to keep the Hook and Bait ſuſpended at the proper Depth, to diſcover when the Fiſh has hold of them, &c.

Of theſe are divers Kinds; ſome made of *Muſcovy* Duck-quills, which are the beſt for ſlow Waters; but for ſtrong Streams, ſound Cork, without Flaws or Holes, bored thro' with an hot Iron, into which is put a Quill of a fit Proportion, is preferable: Pare the Cork to a pyramidal Form, and grind it ſmooth.

FISHING *Hook*, a little Engine, of Steel Wire, of a proper Form to catch and retain Fiſh. See HOOK.

The *Fiſhing Hook*, in general, ought to be long in the Shank, ſomewhat thick in the Circumference, the Point even, and ſtraight; let the Bending be in the Shank.

For ſetting the Hook on, uſe ſtrong, but ſmall Silk, laying the Hair on the Inſide of your Hook; for if it be on the Outſide, the Silk will fret and cut it aſunder.

There are ſeveral Sizes of theſe Fiſhing Hooks, ſome big, ſome little, and of theſe ſome have peculiar Names; as,

1. *Single Hooks*. 2. *Double Hooks*, which have two Bendings, one contrary to the other. 3. *Snappers*, or *Gorgers*, which are Hooks to whip the Artificial Fly upon, or to bait with the Natural Fly. 4. *Springers*, or *Spring Hooks*, a kind of double Hooks, with a Spring, which flies open, being ſtruck into any Fiſh, and ſo keeps its Mouth open.

FISHING *Rod*, a long, ſlender Rod, or Wand, to which the Line is faſten'd, for Angling.——

Of theſe there are ſeveral Sorts; as,

1. A *Troller*, or *Trolling Rod*, which has a Ring at the End of the Rod, for the Line to go through, when it runs off a Reel. 2. A *Whipper*, or *Whipping Rod*, a Top Rod, that is weak in the Middle, and top-heavy, but all ſlender and fine. 3. A *Dopper*, which is a ſtrong Rod, and very light. 4. A *Snapper*, or *Snap Rod*, that is a ſtrong Pole, peculiar for a Pike. 5. A *Bottom Rod*, being the ſame as the *Dopper*, but ſomewhat more pliable. 6. A *Sniggling*, or *Proking Stick*, a forked Stick, having a ſhort ſtrong Line, with a Needle, baited with a Lob-worm: This is only for Eels in their Holes. See ANGLING, &c.

FISHING *Veſſels*, or thoſe uſed in the ſeveral Fiſheries at Sea, or on the Coaſts, are the

FISSURE, FISSURA, in Chirurgery; A Cleft or Crack in a Bone: Or, a longitudinal Fracture of a Bone: Or, a Solution of the Continuity of a Bone, whereby it is only cloven, or crack'd. See FRACTURE.

*Fiſſures* are of two Kinds: The one apparent, by the *Greeks* called ῥωγμὴ, or ῥῆξις; and by the Latins, *Sciſſura*: The other ſo ſmall, as not to be viſible, called τειχισμὸς, or τειχιάσις, Capillary; as reſembling a Thread.

The Cauſes of *Fiſſures* are Falls, Leaps, and Contuſions of the Parts againſt hard Bodies. See BONE.

*Fiſſures*, eſpecially in the Cranium, either happen on the Part the Stroke was given on; or on the oppoſite Part: That on the oppoſite Part is called *Counter-Fiſſure*, or *Counter-Cleft*, by the *Greeks* ἀντύχημα; and the Latins, *Reſonatio*.

Old Men are more ſubject to *Fiſſures*, than young ones; by reaſon their Bones are drier.

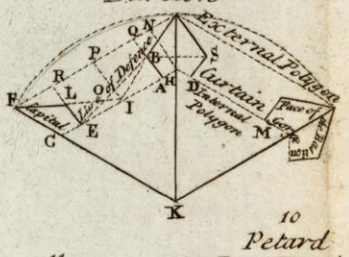
*Fiſſures* are difficult to find; but the eaſieſt cured of all Fractures: Tho', if they be not known, or be neglected, they bring on Ulcers, and Caries's; and in ſuch Caſe become dangerous; ſo that there is frequently a Neceſſity of having Recourſe to an Amputation of the Member.

The Signs of a *Fiſſure* of the Cranium, are bilious Vomitings; Vertigo; Flux of Blood at the Mouth, or Noſe; Dumbneſs; Delirium, &c. If there be any *Fiſſure* in the Scull, the Patient will feel a Pain in the Place, upon holding a String between his Teeth, while the Chirurgeon pulls it ſtrongly.

In ſuch Caſes 'tis frequently neceſſary to perforate the Cranium, to give Vent for the Blood and Sanies.

FISTULA, in the antient Muſick, An Inſtrument, of the Wind kind, reſembling our Flute, or Flageolot. See FLUTE.

The principal Wind Inſtruments of the Antients, are the *Tibia*, and *Fiſtula*: Tho' how theſe were conſtituted; or wherein they differ'd; or how they were play'd on, does not appear. All we know, is that the *Fiſtula* was at firſt made of Reeds, and afterwards of other Matters. Some had Holes; ſome none: Some again were ſingle Pipes; others a Combination of ſeveral; Witneſs the Syringa of *Pan*. See TIBIA.



FISTULA, in Medicine, A deep, winding, callous, cavernous Ulcer, with a narrow Entrance, but opening thence into a ſpacious Bottom; and generally yielding a ſharp, virulent Matter.

*Fiſtula's* differ from winding Ulcers in this, that the former are callous, and the latter not. See ULCER.

No. VII.

They attack all Parts of the Body, without Exception; particularly the Anus, Foramen lachrymale, Thorax, &c. The general Cauſe of *Fiſtula's*, is ſome Abſceſs, or Ulcer, which either being inveterate, or having been ill uſed, comes to be callous; the Orifice being at firſt lined or incruſtated therewith, and at length the whole Sinus.

The Cure conſiſts, in conſuming the Callus, and healing, and conſolidating the Ulcer with cleanſing Medicines, and Sarcoticks.

The Antients gave the Name *Fiſtula* to this ſort of Ulcers, from the Reſemblance they bear, on account of their Depth, to a *Flute*, or *Pipe*, called by the Latins *Fiſtula*.

Fistula *in Ano*, is a *Fiſtula* form'd in the Anus, or Fundament. See Anus.

Of this, ſome Authors reckon four Kinds, *viz.* the *Cæcum Internum*, which is open outwards, but not into the Rectum: The *Cæcum Externum*, which has an Aperture into the Rectum, but none outwards: The *Compleat*, which opens both into the Anus, and the Inteſtine: And the *Cuniculatus*, or that with ſeveral Sinus's, which diſcharge themſelves into one common Cavity, that is the Fund, and as it were, Reſervoir of them all.

Others, as *Wiſeman*, reduces *Fiſtula's in Ano* to two Claſſes. The *firſt* are thoſe, ariſing from a Phyma: Theſe are very painful, and difficult to cure; as entering deep amongſt the *Inteſtines* of the *Muſcles*, and forming various Cuniculi, or Sinus's; which, the more remote they are from the Anus, the worſe they be, by reaſon they do not allow of being cut: The ſecond, owe their Origin to an internal Hæmorrhage, or Extravaſation between the Coats of the Rectum; and have a ſmall Perforation, near the Circumference of the Anus, whence they yield a thin Sanies, or Ichor, without Pain: They in time bring on Itchings and Excoriations; and the Orifices at length become callous, and are ſometimes cloſed, and ſometimes open again.

*Fiſtulæ*, if they do no Harm by the Copiouſneſs of the Flux, the Stench, or the like Accidents, are a Benefit to Nature, as carrying off cachectic Humours; and ought not to be cured, but kept open. The freſh, ſimple *Fiſtulæ* may be cured without Danger.

The great way is by cutting; where that may be done without Damage to the Muſcle of the Anus, which might occaſion an involuntary Diſcharge of the Excrements. Cutting is either perform'd with a *Thread*, or a *cutting* Inſtrument. See each Method under the Article Cutting *for the Fiſtula in Ano*.

Fistula *Lachrymalis*, is a *Fiſtula* in the greater Canthus of the Eye, call'd alſo *Ægilops Lachrymalis*.

It is a little deep callous Ulcer, in the greater Caruncle, or the Place of the Glandula Lachrymalis. It uſually begins with an Abſceſs, call'd *Anchylops*, which in time produces an Ulcer, that afterwards degenerates into a *Fiſtula*. When preſs'd with the Finger, it yields a ſtinking Matter, not unlike the Yolk of an Egg; and the corroſive Humor finding, or making it ſelf a Paſſage, there enſues a perpetual Oozing.

Sometimes the Os Ethmoidis it ſelf is corroded, and render'd carious by it; in which Condition it is ſuppoſed to be only curable by an actual Cautery: Sometimes it becomes cancrous; and then, *Riverius* directs, all Medicines to be laid aſide.

The Cure of the *Fiſtula lachrymalis*, is wholly external and chirurgical; excepting that Evacuants and Mercurials may be given internally; as alſo Decoctions of the Woods. Some perforate the Os Naſi, to give room for the Matter, to be evacuated that way.

A *French* Chirurgeon, named *Anel*, has found out a new way, *viz.* by putting a Probe and Syringe of an inconceiveable Fineneſs, thro' the *Puncta lachrymalia* into the *Saccus lachrymalis*.

Fistula was alſo the Pipe put into the Cup, out of which the Communicants antiently ſucked the Wine.

*Diviſit Eccleſiis Cruces, Altaria, Scrinia*, &c. *Situlas*, Fiſtulas, *& Ornamenta varia*. Flor. Wigorn. Anno 1087.

FISTULAR *Flowers*, among Herbaliſts, are thoſe made up of many long, hollow, ſmall Flowers, like Pipes; all divided into large Jaggs at the end. See Flower.

FISTULOUS, or Fistular, is applied by the Chirurgeons to Wounds and Ulcers, which degenerate into Fiſtula's.

Care muſt be taken, not to leave the Seton too long in the Wound, leſt it renders it callous and *fiſtulous*. Dionis.

Among Botaniſts, *fiſtulous* is underſtood of ſuch Leaves of Plants, as are ronnd and hollow within, like a Fiſtula, or Flute. Thus the Leaves of Onions are ſaid to be *fiſtulous*.

FIT, in Medicine, an Acceſs, or Paroxyſm. See Paroxysm.

Fits *of the Mother*, ſee Hysterick *Affection*.

Fits *of eaſy Reflexion* and *eaſy Tranſmiſſion*, ſee Reflexion, Transmission, Light, &c.

FITCHEE, or Fichee, in Heraldry, is when the lower Part of any Croſs is ſharpen'd into a Point, fit to fix into the Ground.

Thus, Azure, a Croſs Potent *Fitchee*.

The Origin hereof, *Mackenzy* aſcribes to the primitive Chriſtians, who uſed to carry their Croſſes with them, wherever they went; and when they ſtop'd at any Place in a Journey, fix'd them in the Ground.

FITZ, a *French* Term, literally denoting *Son*; ſometimes given by way of Addition to the natural Sons of the Kings of *England*; as *James Fitz-Roy*, Duke of *Grafton*, &c.

FIVE-*leav'd Graſs*, Cinque-foil, in Heraldry, is us'd by ſuch as would introduce a Blazon by Herbs and Flowers, inſtead of Metals and Colours, to ſignify *Vert* or *Green*. See Vert.

FIXATION, the Act of *fixing*, or rendering a thing firm, and fix'd. See Fixity, and Firmness.

Fixation, in Chymiſtry, is a peculiar Preparation of Mercury, whereby it is put in a Condition to bear the Fire without evaporating; or the Hammer without flying, or ſeparating. See Mercury.

The Alchymiſts hold, that if they had the true Secret of fixing Mercury, without the Addition of any foreign leſs heavy and ſolid Ingredient, they could make Gold, at leaſt Silver. See Philosophers *Stone*.

Monſ. *Homberg* has a long Proceſs of many Months, to prepare an Oil from the fecal Matter, or human Excrements, which he imagin'd would have fix'd Mercury into Silver; but he fail'd. See Fecal *Matter*.

The Term is likewiſe applied in the general to any thing that fixes, and binds together what of its own Nature is volatile; and enables it to ſuſtain the Force of the Fire for ſome conſiderable Time.

*Geber* defines *Fixation* an Operation whereby a volatile thing, *i. e.* a thing that cannot endure the Fire, is render'd capable of enduring it. In the general, *Fixation* is the changing of a volatile Body into a fix'd one. See Fixed.

FIXT, or Fix'd *Bodies*, in the general, are ſuch, as neither the Fire, nor any Corroſive, has ſuch Effect on, as to reduce or reſolve them into their component Elements, *i. e.* abſolutely to deſtroy them.

*Chauvin* holds it not ſufficient to denominate a Body *fixt*, that it can withſtand the Fire, or any one Agent; but it ſhould withſtand all. He contends, that *Fixity* ſhould not be reſtrain'd, as it uſually is, to an Exemption from Evaporation; but from Deſtruction, or Reſolution into primary Elements; in which ſenſe, Gold, pretious Stones and Glaſs, and even Sulphur, and Mercury it ſelf, are properly *fix'd* Bodies; for Mercury, and Sulphur retain their Nature, notwithſtanding all their Evaporation. See Mercury.

Fixt, or Fix'd *Bodies*, among Chymiſts, are ſuch as bear the Violence of the Fire, without evaporating. See Evaporation.

The Chymiſts divide all Natural Bodies into *fix'd* and *volatile*, *i. e.* Such as bear the utmoſt Force of the Fire, without diſſipating, or ſpending themſelves in Fume; and ſuch as do not.

Of *fix'd* Bodies, the principal are Gold, Silver, pretious Stones particularly the Diamond, Salts, &c.

Of all Metals, Gold and Silver alone are *fix'd*, *i. e.* remaining a long time expoſed to the moſt intenſe Flame; they alone loſe nothing of their Weight. See Volatile.

Whence this Property ſhou'd ariſe, is difficult to ſay. If the Reader is not contented with the Cauſes enumerated under Fixity, he may add the following one from *Boerhave*, *viz.* The Homogeneity and Equality of the Parts.

The Parts, *e. gr.* of Gold being all homogeneous and equal, will equally ſuſtain each other, and leave equal Pores between them; through which Pores, when fus'd, the Fire finding an eaſy, equal Paſſage, goes off, without carrying any thing of the Metal with it: Or rather, the Particles of Gold being of all others the moſt ſolid, and heavy (as appears from the Weight of that Metal) and of all others the moſt ſtrongly united, or bound together (as appears from the infinite Ductility of that Metal) the Force of the Fire is not ſufficient to overcome ſo powerful a Reſiſtance: The Solidity of the Particles, and their Freedom from Air prevents their being rarified, or ſet further apart; which might leſſen their ſpecifick Gravity, and diminiſh their *vis coheſionis*: So that what has the chief Effect in the raiſing of Fumes and Vapours, *viz.* the Rarefaction, or Expanſion of the Body being here precluded, the Metal maintains its natural Weight and Tendency to the Centre. See Rarefaction, and Expansion.

Mr. *Boyle*, the Prince of *Mirandola*, Monſ. *Homberg*, and others, have made numerous Experiments on Gold, Silver, &c. to ſee how far their Fixity extended. Pure Gold, kept in an intenſe Heat for two Months, loſt nothing ſenſible of

its Weight. See GOLD. Silver, under the like Circumſtances and in the like time, loſt one twelfth Part of its Weight; tho' Mr. *Boyle* attributes this to the Metals not being fine and pure. See SILVER. See alſo SALT, DIAMOND, &c.

Indeed, by the great Burning Glaſſes of Meſſ. *Tſchirnhauſen* and *Villette*, the moſt *fix'd* Bodies, as Gold it ſelf, are render'd volatile, and loſe of their Weight; ſo that there is no Body in all Nature abſolutely *fix'd*. See BURNING *Glaſs*, MIRROR, &c.

FIX'D *Stars* are ſuch, as conſtantly retain the ſame Poſition, and Diſtance with reſpect to each other: By which they are contra-diſtinguiſh'd from erratick or wandering Stars, which are continually ſhifting their Situation and Diſtance.

The *Fix'd* Stars are, what we properly and abſolutely call *Stars:* The reſt have their peculiar Denomination of *Planet*, and *Comet*. See STAR, PLANET, and COMET.

FIXED *Signs* of the Zodiack, according to ſome are the Signs *Taurus*, *Leo*, *Scorpio*, and *Aquarius*. See SIGN.

They are ſo called, becauſe the Sun paſſes them reſpectively in the Middle of each Quarter, when that particular Seaſon is more ſettled and fixed, than under the Sign, which begins and ends it.

FIX'D *Salts*. The Chymiſts diſtinguiſh Salts into *fix'd* and volatile.

*Fix'd* Salts are theſe extracted or gain'd from Bodies by Calcination and Lotion. They are call'd *fix'd*, in that the *Fire* was not able to ſublime or raiſe them; as thoſe carried off in the Courſe of Calcination, by the Vehemence of the Fire, are called *volatile*. See SALTS.

The Aſhes of all Plants yield *fix'd* Salts. See LIXIVIUM.

The Chymiſts alſo give the Appellation *fix'd* to certain of their Preparations.

FIX'D *Nitre* is a Preparation of that Salt, by fuſing it in a Crucible, and then inflaming it with throwing in a few Coals, and this again and again, till no more Flame or Detonation ariſe: Then letting it cool, they pulverize, and then diſſolve it in Water, and afterwards evaporate it into a fine white Salt; which ſerves to draw the Tinctures out of Vegetables. This Salt, *per deliquium*, yields, what we call, the *Liquor of fix'd Nitre*. See NITRE, and SALT-*Petre*.

FIXING *Sulphur*, ſee SULPHUR and METAL.

FIXITY, or FIXEDNESS, in Philoſophy, the Quality of a Body, which denominates and renders it *fix'd:* Or, a Property, which enables it to endure the Fire and other violent Agents.

According to *Chauvin*, *Fixity* conſiſts in this, that the component Principles of the Body are ſo cloſely united, or cohere ſo ſtrongly, and are mix'd in ſuch Proportion, that they cannot eaſily be divided either by Fire, or any other corroſive Menſtruum; or their integral Parts ſeparated, and carried off in Vapour. For a Body may be ſaid to be *fix'd* in two reſpects.

Firſt, when expoſed to the Fire, or a corroſive Menſtruum, its Particles are indeed ſeparated, and the Body render'd fluid; but without being reſolved into its firſt Elements: The Second, when the Body ſuſtains the active Force of the Fire, or Menſtruum, without its integral Parts being carried off in Fumes. Each kind of *Fixity* is the Reſult of a ſtrong or intimate Coheſion between the Particles of the mix'd. See COHESION.

FIXITY, or *Fixedneſs*, in Chymiſtry, is in a peculiar manner uſed for the Property oppoſite to Volatility, *i. e.* the Property whereby Bodies bear the Action of the Fire, without being diſſipated in Fumes. See VOLATILITY.

The principal Cauſes of *Fixity*, or the Qualifications that contribute moſt to the rendering a Body *fix'd*, according to Mr. *Boyle*, are 1° That its Corpuſcles be ſingly of a certain proportionable Bulk, too big and unwieldy to be carried, up by Heat, or buoyed up in the Air. See VAPOUR. 2° That they have alſo a proper Degree of Weight, or Solidity. 3° That their Figure be ſuch as unfits them for Evaporation, or flying off; ſome being branched, others hook'd &c. So that being entangled with one another, they cannot eaſily be extricated, looſen'd, and ſeparated. To theſe may be added a fourth Circumſtance, *viz.* the Nearneſs of the Particles, and their being contiguous in a great many Points, or a deal of their Surface, which produces a ſtronger Force of Attraction and Coheſion. See ATTRACTION, COHESION, &c.

FLACCIDITY, in Medicine, &c. a Diſorder of the Fibres, or ſolid Parts of the Body, oppoſite to *Rigidity*. See FIBRE.

The too great *Flaccidity* of the Parts is cured by Cardiacks; Exerciſe; Friction; a dry warm Air, and Food, &c.

FLAG, a general Name, including *Colours*, *Standards*, *Antients*, *Banners*, *Enſigns*, &c. which Authors frequently confound with each other. See COLOUR, STANDARD, BANNER, &c.

The Faſhion of bearing the *Flags* pointed, or triangular, which now obtains, *Rodric. Toletan.* aſſures us, came from the *Mahometan Arabs*, or *Saracens*, upon their ſeizing of *Spain*; before which Time all the Enſigns of War were ſtretch'd, or extended on croſs-pieces of Wood, like the Banners of the Church; on which account they were called in Latin *Vexilla*, q. d. *Velilla, a veli diminatione*, as is remark'd by *Iſidore*.

The Pirates of *Algiers*, and throughout the Coaſts of *Barbary*, are the only People who bear a hexagonal *Flag*. It is *Gules*, charged with a Moreſk Head, coifed with its Turban, &c. though this be expreſly contrary to their Law, which prohibits the making any Image, or Repreſentation of a Man; founded on an Opinion, that they who make them, ſhall be obliged at the Day of Judgment to find Souls for them; and that in defect hereof they ſhall be damn'd. But this Portrait is that of *Hali Sulficar*, *Mahomet*'s Son in Law, to whoſe Party the *Africans* all retain; who order'd that his Effigy ſhould be expreſs'd on their *Flags* and Standards, believing himſelf ſo formidable to the *Chriſtians*, that the bare Sight of his Image would carry undoubted Victory over them. *Leunclavius*.

FLAG is more particularly uſed at Sea, for the Colours, Antients, Standards, &c. bore on the Top of the Maſts of Veſſels, to notify the Quality of the Perſon who commands the Ship, of what Nation it is, and whether it be equip'd for War, or Trade.

The Admiral alone carries his *Flag* on the Main-Top, or Top of the Main-Maſt. See ADMIRAL.

The Vice Admiral carries his on the Fore-Top; and the Rear Admiral his on the Mizzen Top, or Top of the Mizzen Maſt.

The Commanders of Squadrons bear their *Flag* on the Mizzen Maſt, when in the Body of a Fleet: And on the Main Maſt, when they command a Party. It ſhould be cleft two Thirds of its Height, and terminate in a Point.

The *Flags* bore on the Mizzen, are particularly called *Gallants*. See MAST, GALLANT, &c.

The *Flag* of the *French* Nation is blue, charged with a white Croſs, and the Arms of *France*.

Beſide the National *Flag*, Merchant Ships frequently bear leſſer *Flags* on the Mizzen Maſt, with the Arms of the City, where the Maſter ordinarily reſides; and on the Fore-Maſt, with the Arms of the Place, where the Perſon who fraights them, lives.——

To *Lower*, or *Strike the Flag*, is to pull it down, out of Reſpect or Submiſſion, when a weaker Party meets a more powerful one.

By an Ordinance of *Philip* II. King of *Spain*, 1565. the Captains are peremptorily commanded, to periſh rather, than *lower the Royal Flag*, when once hung out.——

To *hang out the White Flag*, is to aſk Quarter: Or, it ſhews, when a Veſſel is arrived on a Coaſt, that it has no hoſtile Intention, but comes to trade, or the like. The *red Flag* is the Signal of Defiance and Battle.

The way of leading vanquiſh'd Ships in Triumph, is to tye the *Flags* to the Shrouds, or the Gallery in the Hind-part of the Ship, and let them hang downwards to the Water: And to tow the Veſſels by the Stern. 'Twas thus the *Romans* uſed thoſe of *Carthage*, as *Livy* relates.

FLAG *Ship*, a Ship commanded by a General, or *Flag* Officer, who has a Right to carry a *Flag*; in Contra-diſtinction to the ſecondary Veſſels, under the Command thereof.——

FLAG *Officers*, are the General Officers of Fleets, Squadrons, &c. Such are the Admiral, Vice-Admiral and Rear-Admiral. See ADMIRAL.

The *Flag-Officers* in Sea-Pay are the Admiral, Vice-Admiral, and Rear-Admiral of the White, Red, and Blue. See NAVY.

FLAG *Staves* are Staves ſet on the Heads of the Top-Gallant Maſts, ſerving to let fly, and unfurl the *Flags*.

FLAGS, in Falconry, are the Feathers in a Hawk's Wing near the principal ones. See FEATHER.

FLAGELLANTS, or FLAGELLANTES, a Sect of Hereticks, who chaſtiſed and diſciplined themſelves with Whips, in publick.

The Sect of the *Flagellants* had its Riſe at *Perouſe*, in the Year 1260. Its Author was one *Rainier*, a Hermit. 'Twas in all Probability no more than an Effect of an indiſcreet Zeal.

A great Number of Perſons of all Ages made Proceſſions, walking two by two, with their Shoulders bare, which they whip'd, till the Blood ran down, in order to obtain Mercy from God, and appeaſe his Indignation againſt the Wickedneſs of the Age. They were then called the *Devout*; and having eſtabliſh'd a Superior, he was called the General of the Devotion.

Women did not appear in theſe publick Aſſemblies; tho' they practis'd the ſame Severities: But it was in private, and in their own Houſes.

In

In the Middle of the XIV^th Century the Sect of the *Flagellantes* was reſtored, on occaſion of a great Mortality; and ſpread it ſelf into all Parts of *Europe*.

The Biſhops and Magiſtrates at length found it neceſſary to put a Stop to their Exceſs. The Writers and Preachers diſputed againſt it; but the *Flagellants* remain'd unſhaken againſt all they could ſay: So that of a Number of perhaps innocent, well-meaning Zealots, Pride, Obſtinacy and Schiſm converted them into a dangerous Sect. They held, that the Blood they thus ſpilt, was mix'd with that of Jeſus Chriſt; and that by a *Flagellation* of twenty four Days they gain'd the Pardon of all their Sins.

*Clement* VI^th forbad all publick *Flagellations*. *Gerſon* wrote an expreſs Treatiſe againſt publick *Flagellations*,

FLAGELLATION, a Term appropriated to the Suffering of JESUS CHRIST, when whipp'd and ſcourged by the *Jews*; from the Latin *Flagellum*, a *Scourge*, or *Whip*.

Thus we ſay, A Painting of the *Flagellation*; or ſimply, a *Flagellation*, to denote a Painting, or Print, repreſenting this Torment inflicted on the Saviour of the World. In this Senſe we ſay, the *Flagellation* of ſuch a Painter, *&c.*

FLAGELLATION, *Whipping*, is alſo uſed for a voluntary Diſcipline, or Penance, frequently practiſed by the antient Penitents.

The Parliament of *Paris* prohibited all publick *Flagellations*, by an Arret of 1601. See FLAGELLANTS.

FLAGEOLET, or FLAJOLET, a kind of little Flute, or muſical Inſtrument of the Flute kind; uſed chiefly by the Shepherds and Country-People. See FLUTE.

'Tis uſually made of Box, or other hard Wood; ſometimes of Ivory. It has ſix Holes, or Stops, beſide that at Bottom, the Mouth-piece, and that behind the Neck.

FLAIL, ſee THRASHING.

FLAMBEAU, or FLAMBOY, a Luminary, made of an Aſſemblage of ſeveral thick Wicks, cover'd over with Wax; ſerving to burn a-nights in the Streets; as alſo at funeral Proceſſions, Illuminations, *&c.* See LUMINARY.

*Flambeaux* differ from *Links*, *Torches*, and *Tapers*. See TORCH, and TAPER.

They are made ſquare; ſometimes of white Wax, and ſometimes of yellow. They uſually conſiſt of four Wicks, or Branches, near an Inch thick, and about three Foot long; made of a ſort of coarſe hempen Thread, half twiſted.

They are made with the Ladle, much as Torches, or Tapers are; *viz.* by firſt pouring the melted Wax on the Top of the ſeveral ſuſpended Wicks, and letting it run down to the Bottom: This they repeat twice. After each Wick has thus got its ſeveral Cover of Wax, they lay them to dry; then roll them on a Table, and ſo join four of them together, by ſoldering them with a red hot Iron.

When join'd, they pour on more Wax, till the *Flamboy* is brought to the Size required; which is uſually a Pound, and half, or two Pounds.

The laſt Thing is to finiſh their Form, or Out-ſide; which they do with a kind of poliſhing Inſtrument of Wood, by running it along all the Angles, form'd by the Union of the Branches. See *Wax* CANDLE.

The *Flambeaux* of the Antients were different from ours. They were made of Woods, dried in Furnaces, or otherwiſe. They uſed divers kinds of Wood for this Purpoſe: The moſt uſual was Pine. *Pliny* ſays, that in his Time they frequently alſo burnt Oke, Elm, and Hazle. In the VII^th Book of the *Æneid*, Mention is made of a *Flambeau* of Pine: And *Servius* on that Paſſage remarks, that they alſo made them of the Cornel Tree.

FLAME, the brighteſt and ſubtileſt Part of a Fire, aſcending above the Fewel in a pyramidal or conical Figure. See FIRE.

*Flame* ſeems to be the Smoak, *i, e.* the Fumes, or volatile Parts of the Fewel, greatly rarified, and at laſt kindled, or heated red hot. By the great Rarifaction, the Matter becomes ſo light, as to be rais'd with great Velocity in the Air: And by the Preſſure of the incumbent atmoſpherical Fluid, it is kept for ſome time together; the Air forming a ſort of Arch, or Sphere around it, that prevents its immediate Diffuſion and Diſſipation, and by its Contiguity and Fixation ſuſtains and feeds the Fire of the *Flame*; the aqueous and earthy Parts of the Fume being naturally incapable of being ignited, are only rarified, and ſo impelled upwards, without *flaming*. See SMOAK.

*Flame* is defined by Sir *I. Newton*, in his little Treatiſe *De Acido*, to be *Fumus Candens*, red hot Smoak. The ſame Author argues, Is not *Flame* a Vapour, Fume, or Exhalation heated red hot, that is, ſo hot as to ſhine? For Bodies do not *flame* without emitting a copious Fume; and this Fume burns in the *Flame*. The *Ignis Fatuus* is a Vapour, ſhining without Heat; and is there not the ſame Difference between this Vapour, and *Flame*, as between rotten Wood, ſhining without Heat, and burning Coals of Fire? In diſtilling hot Spirits, if the Head of the Still be taken off, the Vapour which aſcends, will take Fire at the *Flame* of a Candle, and turn into *Flame*. Some Bodies, heated by Motion or Fermentation, if the Heat grow intenſe, fume copiouſly; and if the Heat be great enough, the Fumes will ſhine, and become *Flame*. Metals in Fuſion do not *flame*, for want of a copious Fume. All *flaming* Bodies, as Oil, Tallow, Wax, Wood, foſſil Coal, Pitch, Sulphur, *&c.* by burning, waſte in Smoak, which at firſt is lucid; but at a little Diſtance from the Body, ceaſes to be ſo, and only continues hot. When the *Flame* is put out, the Smoak is thick, and frequently ſmells ſtrongly; but in the *Flame* it loſes its Smell, and according to the Nature of the Fewel, the *Flame* is of divers Colours. That of Sulphur, *e. gr.* is blue; that of Copper open'd with ſublimate, green; that of Tallow, yellow; of Camphire, white, *&c.* We find that when Gunpowder takes Fire, it goes off in a *flaming* Smoak. The manner we conceive to be this: The Charcoal and Sulphur eaſily take Fire, and ſet Fire to the Nitre; by which the Spirit of the Nitre being rarified into Vapour, ruſhes out, the like Vapour of Water out of an Æolipile. Then the acid Spirit of the Sulphur entering violently into the fix'd Body of the Nitre, ſets looſe the Spirit of the Nitre, and excites a greater Fermentation, whereby the Heat is increaſed, and the fix'd Body of the Nitre rarified into Fume; and thus is a vehement Exploſion effected. The *Flame* of Gun-powder ariſes from a violent Action, whereby the mixt being quickly and vehemently heated, is rarified and converted into Fume and Vapour: Which Vapour by the Violence of the Action becoming ſo hot as to ſhine, appears in the Form of *Flame*. *Newt. Opticks*, p. 318.

'Tis a remarkable Phænomenon of the *Flame* of a Candle, Torch, or the like, that in the dark it appears bigger at a Diſtance, than near at hand. The reaſon is, that at a Diſtance, *e. gr.* of ſix Feet, the Eye can readily diſtinguiſh between the *Flame*, and the contiguous Air illumined by it; and ſees preciſely where the *Flame* terminates: But at the Diſtance, *e. gr.* of thirty Foot, tho' the Angle ſubtended by the *Flame* be much ſmaller than before; yet the Eye not being able to diſtinguiſh the preciſe Bound of the *Flame*, takes part of the Sphere of Air illuminated by it, for the *Flame* it ſelf. See VISION.

We have ſeveral Inſtances of actual *Flames's* being produc'd by the Mixture of two cold Liquors. Dr. *Slare* gives us a Liſt of the Oils which burſt into *Flame*, upon mixing them with compound Spirit of Nitre: Such are thoſe of Carroways, Cloves, Saſſafras, Guaicum, Box, Camphor, Pepper, Hartſhorn, Blood, *&c.* *Phil. Tranſact.* N^o 213.

*Vital* FLAME, FLAMMA, or FLAMMULA *Vitalis*, a fine, warm, kindled, but mild Subſtance, ſuppoſed by many both of the Antients and Moderns, to reſide in the Hearts of Animals, as neceſſary to Life, or rather, as that which conſtitutes Life it ſelf.

To the Preſervation of this *Flame*, they ſuppoſe Air as neceſſary, as it is to the Conſervation of common *Flame*; And hence refer the Neceſſity of Reſpiration to animal Life. See LIFE.

Mr. *Boyle*, by Experiments in an exhauſted Receiver found, that the *Vital Flame* of Animals, if Life may be ſo called, ſurvives, or outlaſts the *Flame* of Spirit of Wine, or of a Wax or Tallow Candle, *&c.* Some Animals would remain alive and well in Vacuo, for three or four Minutes, whereas no common *Flame* would laſt there one Minute. The Light of Gloworms he found would preſently be deſtroy'd by exhauſting the Air; and retriev'd again upon its Re-admiſſion.

Dr. *Quincy* can find nothing more in the Notion of Vital *Flame*, than the natural Warmth, which is the Effect of a circulating Blood; and which is always as its Velocity. See CALIDUM *Innatum*.

FLAMEN, among the antient *Romans*, was a Prieſt, or Miniſter of Sacrifice.

There were as many kinds of *Flamens* at *Rome*, as there were Gods who had Prieſts, and Sacrificers.

*Numa*, at firſt, only inſtituted three: One for *Jupiter*, called *Flamen Dialis*; another for *Mars*, called *Flamen Martialis*; and a third for *Romulus* or *Quirinus*, call'd *Flamen Quirinalis*. See DIALIS, &c.

In After-times twelve more were added; which made the Number of *Flamens* fifteen.

The three firſt were taken from among the Patricians; and were held of a Rank and Diſtinction ſuperior to the reſt. They were called *Greater Flamens*, *Flamines majores*; in Contra-diſtinction to the other twelve, who were choſe from among the Plebeians, and were called *Leſſer Flamens*, *Flamines minores*.

The *Flamen* of *Jupiter* was the firſt inſtituted, and held in the greateſt Repute. He bore a peculiar Ornament on his Head, called *Albogalerus*, white Cap, or Hat; which was made of a white Victim, ſacrificed to *Jupiter*.

The Cap wore by the reſt, was called *Flamineum*, or *Galerium*. It was made of a Sheeps Skin, with the Wool on:

To

To it was faſten'd a little Branch of an Olive Tree. That of the *Flamen* of *Jupiter* ended in a Point, called *Tutulus*. It was tied under the Chin with Strings. In the Summer time it was only made of woolen Thread: With this the Head was conſtantly cover'd; it being prohibited them to appear bare headed. And hence, according to *Feſtus*, came their Denomination of *Flamen*, *viz.* from *Filamen*, of *Filum*, Thread.

Tho' the *Flamens* all bore one Name; yet did not they conſtitute any thing of a Company or College. Each God had his ſeveral Sacrifices, Feaſts, and Ceremonies a-part: Nor had one *Flamen* any relation to another; only they were all ſubordinate to the *Pontifex Maximus*. *Aulus Gellius* aſſures us, that they were created by the People in the Comitia of the Curiæ: But the *Pontifex Maximus* conſecrated them. Their Prieſthood was perpetual; tho' on ſome Occaſions they might be depoſed.

The Names of the ſeveral *Flamens* are as follow: The three great *Flamens*, as already obſerved, were the *Flamen Dialis*; *Flamen Martialis*, and *Flamen Quirinalis*. The twelve leſſer were, the *Flamen Carmentalis*, or Prieſt of the Goddeſs *Carmenta*: *Flamen Falacer*, or Prieſt of the God *Falacer*; a Name, whoſe Origin *Varro* obſerves, is not known: *Flamen Floralis*, or of the Goddeſs *Flora*: *Flamen Furinalis*, whoſe Etymology is not known: *Flamen Levinalis*: *Flamen Lucullaris*: *Flamen Palatualis*, whom ſome Moderns will have the Prieſt of the Goddeſs that preſided over the Palatium; tho' *Varro* owns himſelf at a loſs for its Original: *Flamen Pomonalis*, or of *Pomona*, Goddeſs of Fruits: *Flamen Virbialis*, or of the God *Virbius*, whom ſome take for the ſame with *Hippolytus*: *Flamen Vulcanalis*, or of *Vulcan*; and *Flamen Volturnalis*, or of the God *Volturnus*.

They had alſo their *Flaminæ* or *Flaminicæ*, who were Wives of the *Flamens*, or the Prieſteſſes of the Deities. In an antient Marble, quoted by *Gruter*, *p.* CCCCLIX. *n.* 9. the Word *Flamina* is uſed for Prieſteſs: And in the ſame Author, *p.* CCCVIII. *n.* 3. the Prieſteſs of the Goddeſs *Feronia* is called FLAM. FERON. that is, *Flamina*, or *Flaminica Feroniæ*.

The *Flamina* bore the ſame Ornament on her Head with the *Flamen*. She had alſo the ſame Surname with her Huſband; as Flamina *Dialis*, *Martialis*, &c.

FLAMMULA, or FLAMULA, in the *Greek* Militia under the Eaſtern Empire, was a kind of Ornament, ſerving as a Mark, or Badge, to diſtinguiſh the ſeveral Companies, Batalions, Regiments, *&c.*

In *Greek* it was called φλάμουλον. The *Flamula* was ſometimes placed on the Caſk; ſometimes on the Cuiraſs, and ſometimes at the End or Tip of the Pike, *&c.*

The Emperor *Maurice* order'd, that the *Flammulæ* of each Diviſion ſhould be of a different Colour, to diſtinguiſh them from the other Batalions or Brigades. φλάμυλα ἑκάστης μοίρας ἐδιόχρωα εἶναι.

They uſed to lay aſide the *Flammula* before an Engagement, leſt it ſhould prove an Incumbrance. The Cavalry had alſo *Flammulæ* on their Horſes, to diſtinguiſh the Troops they belong'd to.

FLANCH, FLANQUE, or FLASQUE, an Ordinary in Heraldry, form'd by an Arch-line, which begins at the Corners of the Chief, and ends in the Baſe of the Eſcutcheon: Thus, He beareth Ermin, two *Flanches* Vert.

*Flanches* are always born by Pairs.

The *Flanch* bends in more than the Flaſk.

*Leigh* makes *Flanque* and *Flask* two diſtinct and ſubordinate Bearings; but *Gibbon* judiciouſly makes them but one, which he calls *Flanque*.

FLANEL, or FLANNEL, a kind of ſlight, looſe, woolen Stuff, not croſs'd, but very warm; compos'd of a Woof, and Warp, and wove on a Loom, with two Tredles, after the Manner of Bays, *&c.* See BAYS.

FLANK, or FLANC, in the Manage, is applied to the *Sides* of Horſes Buttocks, *&c.*

In a ſtrict Senſe, the *Flanks* of a Horſe are the Extremes of the Belly, where the Ribs are wanting, and below the Loins.

The *Flanks* of a Horſe ſhould be full; and at the Top of each, a Feather. The Diſtance between the laſt Rib, and Haunch Bone, which is properly the *Flank*, ſhould be ſhort; which they term *well-coupled*: Such Horſes being moſt hardy, and fit to endure Labour.

A Horſe is ſaid *to have no Flank*, if the laſt of the ſhort Ribs be at a conſiderable Diſtance from the Haunch Bone; as alſo when his Ribs are too much ſtreighten'd in their Compaſs.

FLANK, in War, is uſed by way of Analogy, or Similitude, for the Side of a Batalion, Army, *&c.* in Contra-diſtinction to the *Front* and *Rear*.

To attack the Enemy in *Flank*, is to diſcover, and fire upon them on one Side.

The Enemy took us in *Flank*. The *Flank* of the Infantry muſt be cover'd with the Wings of the Cavalry.

FLANK, in Fortification, is a Line, drawn from the Extremity of the Face, towards the Inſide of the Work.

Such is the Line B A *Tab.* Fortification. Fig. 1.

Or, *Flank* is that Part of the Baſtion, which reaches from the Courtin to the Face, and *defends* the oppoſite Face, the *Flank*, and the Courtin. See BASTION.

There is alſo an *Oblique*, or *Second Flank*, which is that Part of the Courtin, where they can ſee to ſcour the Face of the oppoſite Baſtion, and is the Diſtance between the Lines Razant, and Fitchant.

The *Low*, *Cover'd*, or *Retired Flank*, is the Platform of the Caſemate, which lies hid in the Baſtion.

*Simple* FLANKS, are Lines, going from the Angle of the Shoulder, to the Courtin; whoſe chief Office is for Defence of the Moat, and Place.

FLANK *of the Courtin*, or *Second Flank*, is that Part of the Courtin between the *Flank* and the Point, where the Fitchant Line of Defence terminates.

FLANK *Fitchant* is that from whence a Canon playing, *fireth* its Bullets directly in the Face of the oppoſite Baſtion.

FLANK *Razant* is the Point, from whence the Line of Defence begins, from the Conjunction of which with the Courtin, the Shot only raſeth the Face of the next Baſtion; which happens when the Face cannot be diſcover'd but from the *Flank* alone.

*Retired* FLANK, or the *Lower* and *Covert Flank*, is that exterior Part thereof, which advanceth to ſecure the innermoſt; which advanced Part, if it be rounded, is called the Orillon; ſo that this *Flank* is only the Platform of the Caſemate, which lies hid in the Baſtion.

FLANK'D *Angle*, is the Angle form'd by the two Faces of the Baſtion, and which of courſe forms the Point of the Baſtion. See BASTION.

FLANK'D *Tenaille*, call'd alſo *double Tenaille*. See TENAILLE.

FLANK'D, *Flanque*, is uſed by the *French* Heralds, to expreſs our *Party per Saltire*; that is, when the Field is divided into four Parts, after the manner of an X.

Tho', *Columbiere* uſes the Term in another Senſe, which to us appears more natural, *viz.* for the taking of *Flanks* or rounding Sections out of the Sides of the Eſcutcheons; the firſt from the Angles of it; the latter in ſtrait Lines, forming an Angle at the Feſs, without making any Saltire.

FLANKING, in the general, is the Act of diſcovering and firing upon the Side of a Place, Body, Batalion, *&c.*

To *flank* a Place, is to diſpoſe a Baſtion, or other Work in ſuch manner, as that there ſhall be no Part of the Place, but what may be defended, *i. e.* may be play'd on, both in Front, and Rear.

To *flank* a Wall with Towers. This Baſtion is *flank'd* by the oppoſite Flank, and a Half-Moon. This Horn-Work is *flank'd* by the Courtin.

Any Fortification that has no Defence but juſt right forwards, is faulty: And to render it compleat, one Part ought to be made to *flank* the other. Hence the Courtin is always the ſtrongeſt Part of any Place, becauſe 'tis *flank'd* at each End. See DEFENCE.

Batalions alſo are ſaid to be *flank'd* by the Wings of the Cavalry: And a Houſe is ſometimes ſaid to be *flank'd* with two Pavillions, or two Galleries; meaning it has a Gallery, *&c.* on each Side.

FLANKING *Line of Defence*, ſee RASANT LINE of *Defence*.

FLASK, FLASQUE, a Bearing, more properly called *Flank*, or *Flanque*. See FLANK.

FLATS, in Muſick, a kind of additional Notes, contriv'd, together with *Sharps*, to remedy the Defects of Muſical Inſtruments. See SHARP.

The Natural Scale of Muſick being limited to fix'd Sounds, and adjuſted to an Inſtrument; the Inſtrument will be found defective in ſeveral Points: As particularly, in that we can only proceed from any Note, by one particular Order of Degrees; that for this Reaſon we cannot find any Interval required from any Note or Letter upwards and downwards; and that a Song may be ſo contrived, as that if it be begun by any particular Note, or Letter, all the Intervals, or other Notes, ſhall be juſtly found on the Inſtrument, or in the fix'd Series; yet were the Song begun with any other Note, we could not proceed. See SCALE.

To remove, or ſupply this Defect, the Muſicians have Recourſe to a Scale proceeding by twelve Degrees, that is, thirteen Notes, including the Extremes, to an Octave; which makes the Inſtruments ſo perfect, that there is but little to complain of. This, therefore, is the preſent Syſtem or Scale for Inſtruments, *viz.* betwixt the Extremes of every Tone of the Natural Scale is put a Note, which divides it into two unequal

unequal Parts, called *Semi-tones*; and the Whole may be called the *Semitonic Scale*, containing twelve Semi-tones betwixt thirteen Notes, in the Compaſs of the Octave. See SEMI-TONE, and *Scale of* SEMI-TONES.

Now, to preſerve the Diatonic Series diſtinct, theſe inſerted Notes either take the Name of the natural Note next below, with a Character ♯ called a *Sharp*; or they take the Name of the natural Note next above, with the Mark ♭ called a *Flat*: Thus D ♭ or D *Flat* ſignifies a Semi-tone below the D natural. And it is indifferent in the main, whether the inſerted Note be accounted as a *Flat*, or *Sharp*.

This Semitonic Series or Scale is very exactly repreſented by the Keys of a Spinet: The foremoſt Range of Keys being the natural Notes; and the Keys behind, the artificial Notes, or the *Flats* and *Sharps*. See SPINET.

FLATULENT, ſometing, that has a relation to *Flatus's* or Winds. See FLATUS.

Peeſe, and moſt kinds of Pulſe, Onions, &c. are *flatulent* Foods.

FLATUS, or FLATULENCY, a Wind gather'd in the Bowels, or other Cavity of the Body, by Indigeſtion, or a groſs internal Perſpiration. It is diſcuſſed by warm Aromaticks, which rarefy it enough to break away wherever Vent can be found.

FLATTER, or FLATTENER, } See COINING.
FLATTING, or FLATTENING, }

FLAX, or LINE, a Plant, with a ſlender hollow Stem, uſually about two Foot high; whoſe Bark conſiſts of Fibres, or Threads, much like thoſe of Hemp, which being dreſs'd and work'd in a due manner, makes that noble Commodity, *Linen Cloth*. See LINEN.

*Flax* thrives beſt in a Soil that has long lain fallow.

To bear *Flax*, it muſt be well plowed, laid flat and even, and the Seed ſown in a warm Seaſon, about the Middle of *March*, or Beginning of *April*. The beſt Seed is that brought from the Eaſt; which, though dear, repays the Charges with Abundance. One Sowing will produce two or three Crops, before it need be renewed.

*Flax* pull'd up in the Bloom, proves whiter and ſtronger, than if left ſtanding till the Seed is ripe; but then the Seed is loſt.

The Preparations *Flax* muſt undergo, to fit it for Spinning, are *Pulling*, *Drying*, and *Swingling*. See HEMP.

The Seed of *Flax* has ſeveral conſiderable Properties.

It enters the Compoſition of ſeveral Medicines, and yields an Oil, by Expreſſion, which has moſt of the Properties of Nut-Oil; and which is frequently uſed, in defect thereof in Painting, to burn in Lamps, &c. That drawn cold, is reputed good in divers Diſeaſes. See OIL.

FLEA, in Natural Hiſtory. The Generation of this familiar Vermin affords ſomething very curious, firſt diſcover'd by Sig. *Diacinčto Ceſtone*.

*Fleas* bring forth Eggs, or Nits, which they depoſit on Animals that afford them a proper Food: Theſe Eggs being very round and ſmooth, uſually ſlip ſtreight down; unleſs detain'd by the Plies, or other Inequalities of the Cloaths, Hairs, &c.

Of theſe Eggs are hatch'd white Worms, of a ſhining Pearl Colour, which feed on the ſcurfy Subſtance of the Cuticle, the downy Matter gather'd in the Plies of Cloaths, or other the like Excrement.

In a fortnight they come to a tolerable Size, and are very lively and active; and if at any time diſturbed, ſuddenly roll themſelves into a kind of Ball.

Soon after they come to creep, after the manner of the Silkworms, that have no Legs, with a very ſwift Motion. When arrived at their Size, they hide themſelves as much as poſſible, and ſpin a ſilken Thread out of their Mouth, wherewith they form themſelves a ſmall round Bag, or Caſe, white within, as Paper, but without always dirty, and foul'd with Duſt.

Here, after a fortnight's Sleep, he burſts out, transform'd into a perfect *Flea*; leaving its Exuvia in the Bag. While it remains in the Bag, it is milk white; till the ſecond Day before its Eruption, when it becomes colour'd, grows hard, and gets Strength; ſo that upon its firſt Delivery it ſprings nimbly away. *Philoſoph. Tranſact.* N° 24.

FLEA-BITTEN *Colour* of a Horſe is white ſpotted all over with dark reddiſh Spots.

FLEAM, is a Surgeon's Inſtrument to lance the Gums; or a Farrier's Tool to let a Horſe blood. See LANCET.

FLEDWITE, or FLIGHT-WITE, in our antient Laws, a Diſcharge or Freedom from Amerciaments, when one, having been an outlaw'd Fugitive, comes to the Peace of our Lord the King, on his own accord, or with Licence. *Raſtal.*

Others rather take it to denote a Mulct, or Fine, ſet upon a Fugitive to be reſtored to the King's Peace.

FLEECE, the covering of Wool ſhorn off the Bodies of Sheep. See WOOL.

The *Golden* FLEECE is famous among the antient Writers. 'Twas this that the *Argonauts* under the Command of *Jaſon* went in Purſuit of to *Colchis*, a Province of *Aſia*, now call'd *Mingrelia*. See ARGONAUTS.

*Order of the Golden* FLEECE. See GOLDEN *Fleece*.

FLEET, by the *Spaniards* call'd *Flotta*, or *Flota*, and the *French*, *Flotte*, a Number of Veſſels, going in Company, whether on a Deſign of War, or Commerce.

In times of Peace, Merchants Ships go in *Fleets*, for their mutual Aid and Aſſiſtance: In times of War, beſide this Security, they likewiſe procure Convoys of Men of War; either to eſcort them to the Places whither they are bound; or only a part of the way, to a certain Point or Latitude, beyond which they are judg'd out of Danger of Privateers, &c. See CONVOY.

The *Spaniſh Fleet*, ſent againſt *England*, by *Philip* II. conſiſted of 1000 Veſſels. In the Eaſt there have been *Fleets* ſeen of 3000 Veſſels.

Merchant *Fleets* generally take their Denomination from the Place they are bound to; as the *Turky-Fleet*, *Eaſt India Fleet*, &c.

The *Spaniards* call ſimply the *Fleet*, or *Flota* a certain Number of Veſſels, belonging partly to the King, and partly to the Merchants, ſent every Year to *Vera Crux*, a Port of *New Spain*.

The *Flota* conſiſts of the *Captain*, *Admiral*, and *Patach*, or *Pinnace*, which go on the King's account; and about ſixteen Ships, from four hundred to a thouſand Tuns, belonging to particular Perſons. They are all ſo heavy laden both going and coming, that they have much a-do to defend themſelves when attack'd. The *Fleet* puts out from *Cadix* about the Month of *Auguſt*, and makes it eighteen or twenty Months, before its return. See FLOTA.

The *Fleet* ſent annually from the ſame Port to *Peru*, they call the *Gallions*. See GALLION.

When the two *Fleets* put out together, they go in Company as far as the *Antilles*, where they ſeparate; the *Gallions* for *Carthagena*, and *Porto Bello*; and the *Flota* for *Vera Crux*: At their Return they join in the *Havana*.

Of the two *Fleets* the Gallions are the moſt richly laden; not but the Cargo of the *Flota* is very conſiderable. See COMMERCE.

FLEET is alſo a famous Priſon in *London*, thus called from the River *Fleet*, on the Border whereof it ſtands. See PRISON.

To this Priſon Perſons are uſually committed for Contempt of the King and his Laws; or upon abſolute Command of the King, or ſome of his Courts, particularly that of Chancery; and laſtly, for Debt.

FLEGM, FLEGMATICK, FLEGMAGOGUE, &c. ſee PHLEGM, PHLEGMATIC, &c.

FLEMISH, is applied to any thing belonging to *Flanders*, or the Inhabitants of *Flanders*.

The FLEMISH Tongue is what we call *Low-Dutch*, to diſtinguiſh it from the *German*, which is called ſimply *Dutch*, or *High-Dutch*; whereof it is a Corruption, and a kind of Dialect. See DUTCH.

The *Flemiſh* is the Language uſed throughout all the Low Countries. It differs from the *Walloon*; which is a corrupt *French*. See WALLOON.

There are ſeveral *Flemiſh* Tranſlations of the Bible. In the Year 1618. it was decreed by the Synod of *Dort*, that a new *Flemiſh* Verſion ſhould be made of the whole Scripture; by reaſon the old Tranſlation which had been taken from that of *Luther*, was full of Faults. Accordingly, ſeveral Perſons, learn'd in the *Greek* and *Hebrew* Languages, undertook the Work; which was publiſh'd with Notes in 1637. This Bible is highly valued by the Reform'd in *Holland*, &c. though M. *Simon* cenſures it as far from the Perfection of a juſt Tranſlation. See BIBLE.

FLEMISH *Bricks*, a neat, ſtrong kind of Brick, of yelloviſh Colour, brought from *Flanders*, and much uſed for paving. See BRICK.

FLESH, CARO, in Anatomy, a ſimilar, fibrous Part of an animal Body, ſoft, thick, and bloody; being that whereof moſt of the other Parts are compoſed, and whereby they are connected together. See BODY.

The Antients made five different kinds of *Fleſh*: The firſt *Muſculous*, *Fibrous*, or *Fiſtular*; as the Subſtance of the Heart, and other Muſcles. See MUSCLE, FIBRE, &c. The ſecond, *Parenchymous*, as that of the Lungs, Liver and Spleen. See PARENCHYMA, SPLEEN, &c. The third, *Viſcerous*, as the *Fleſh* of the Stomach and Inteſtines. See INTESTINES. The fourth, *Glandulous*, as that of the Breaſts, Panchreas, Tonſils, &c. See BREAST, PANCHREAS, &c. And the fifth, *Spurious*; as that of the Gums, Glans of the Penis, the Lips, &c. See GLANS, &c.

The Moderns only admit of one kind of *Fleſh*, *viz.* That of the Muſcles, conſiſting of little Tubes, or Veſſels with Blood therein. See CARO; ſo that the *fleſhy* and muſcular Parts of the Body with them are the ſame thing. See MUSCLE. Sometimes, however, they apply that Term to the Glands; which they call, by way of Diſtinction, Glandulous *Fleſh*. See GLAND.

As to the Parenchymas, they are now found to be quite other Things than the Antients imagin'd. The Lungs are only an Aſſemblage of membranous Veſicles, inflated with Air. See LUNGS. The Liver a Collection of Glands, wherein the Bile is ſeparated. See LIVER. The Spleen, a Heap of Veſicles, full of Blood; and the Kidneys, like the Liver, a Maſs of Glands, for ſeparating of the Urine. See SPLEEN, and KIDNEY.

FLESH is alſo uſed in Theology, in ſpeaking of the Myſteries of the Incarnation and Euchariſt; The Word was made *Fleſh: Verbum* Caro *factum eſt.* See INCARNATION.

The *Romaniſts* hold, that the Bread in the Sacrament of the Supper is turn'd into the real *Fleſh* of Jeſus Chriſt. See TRANSUBSTANTIATION.

The Reſurrection of the *Fleſh* is an Article of Faith. See RESURRECTION.

The Anthropophagi, or *Cannibals*, feed upon human *Fleſh*. See CANNIBAL, and CARNIVOROUS.

*Fungous* FLESH, ſee FUNGUS.

FLESH-*Colour*, ſee CARNATION.

FLESH is alſo us'd by Botaniſts, *&c.* for the ſoft pulpy Subſtance of any Fruit, inclos'd between the Outer Rind or Skin, and the Stone: Or that part of a Root, Fruit, *&c.* fit to be eaten.

FLEUR-DE-LISEE, FLEURETTEE, FLEURONNEE, and FLEURY, in Heraldry, ſee FLORY.

FLEXIBLE, in Phyſicks, is applied to Bodies that are capable of being bent, or changed from their natural Form and Direction. See DUCTILITY.

Trees that grow near Waters, as the Willow, Popler, *&c.* are more *flexible* than others. The Fibres being finer and more *flexible* in Women than Men, they have generally a greater Degree of Delicacy of Thought, and Imagination. A *flexible* Voice ſucceeds in Muſic.

A Body is not capable of being thus inflected, or bent, unleſs the whole thereof be at reſt. In bending a Body it conſtitutes, as it were, two Levers; and the Point it is to be bent in, is a Fulcrum: Hence, as a moving Power, the further it is from the Fulcrum, has the greater Force; the longer the *flexible* Body is, the eaſier it is bent.

FLEXION, in Anatomy, &c. is applied to the Motion of an Arm, or other Member, when bent.

The Arm has a Motion of *Flexion*, and another of Extenſion.

The Motion of *Flexion* is, when the Radius and Humerus approach each other, and from an Angle, at the Elbow. See FLEXOR.

FLEXION, or FLEXURE *of Curves*, ſee POINT *of contrary Flexion.*

FLEXOR, in Anatomy, a Name given to ſeveral Muſcles, in reſpect of their Action, *viz.* the *Bending* of the Members, or Joints; in oppoſition to the *Extenſors*, which open or ſtretch them. See MUSCLE.

FLEXOR *Capitis*, is a Muſcle of the Head, called alſo *Rectus major anticus.* See RECTUS *major*, &c.

FLEXOR *Carpi ulnaris*, called alſo *Cubitæus internus*, ariſes tendinous from the inner Protuberance of the Humerus, and upper Part of the Ulna, upon which it runs along, till paſſing under the Ligamentum annulare, it is inſerted by a ſhort ſtrong Tendon into the fourth Bone of the firſt Row of the Carpus.

FLEXOR *Carpi Radialis*, called alſo *Radicæus Internus*, riſes from the ſame Part with the former, and running along the Radius, is inſerted into the upper Part of the Bone of the Metacarpus, which is join'd with the Fore-finger.

Both theſe Muſcles bend the Wriſt.——

FLEXOR *Pollicis longus*, a Muſcle of the Toe, derived from the Back-part of the Fibula, with a double Order of Fibres, and runs tendinous under the inner Ankle, and thro' the Channel in the inner Part of the Bone of the Heel, to its Inſertion at the Extremity of the great Toe, on the under Side.

FLEXOR *Pollicis brevis*, ariſes from the Middle of the Cuneiform Bone. It is ſhort, thick, and fleſhy, ſeemingly two, and running over the Termination of the Peronæus, has a double Inſertion into the Oſſa Seſamoidea.

FLEXOR *primi Internodii Digitorum Pedis*, ſee LUMBRICALES *pedis.*

FLEXOR *ſecundi Internodii Digitorum Manus*, ſee PERFORATUS *manus.*

FLEXOR *tertii Internodii Digitorum Pedis.* See PERFORANS *Pedis.*

FLEXOR *tertii Internodii Digitorum Manus*, ſee PERFORANS *Manus.*

FLEXORES *primi Internodii Digitorum Manus*, are Muſcles of the Fingers, called alſo *Lumbricales Manus.* See LUMBRICALES.

FLEXORES *ſecundi Internodii Digitorum Pedis*, ſee PERFORATUS *Pedis.*

FLEXORES *Pollicis Manus*, are two Muſcles, ſerving to bend the Thumb.

The firſt, called *Flexor tertii Internodii*, &c. ariſes from the internal Protuberance of the Humerus, and part of the Radius, by different Orders of Fibres, and paſſing under the Ligamentum Annulare, is inſerted into the third Bone of the Thumb.——

The ſecond, called *Flexor ſecundi Internodii*, &c. ariſes from the Bones of the Carpus, and Annular Ligament; and is inſerted into the ſecond Bone of the Thumb.——

FLIE, that Part of the Mariners Compaſs, on which the thirty two Winds are drawn, and to which the Needle is faſten'd underneath. See COMPASS.

FLIGHT, the Act of a Bird in *flying*; or the Manner, Duration, *&c.* thereof. See FLYING.

The Feathers of Birds are admirably contriv'd and fitted for the Eaſe and Conveniency of *Flight.* See FEATHER.

Almoſt every kind of Bird has its particular *Flight:* The Eagle's *Flight* is the higheſt: The *Flight* of the Sparrow-Hawk, and Vultur, are noble, diſpos'd for high Enterpriſe and Combat. The *Flight* of ſome Birds is low, weak, tranſient, and as they call it, *terra a terra:* The *Flight* of the Partridge and Pheaſant, is but of ſhort Continuance: That of the Dove, labour'd: That of the Sparrow, in Waves, *&c.*

The Augurs pretended to foretell future Events from the *Flight* of Birds. See AUGURY.

FLIGHT. In melting the Lead Oar in the Works in *Mendip*, there is a ſubſtance flies away in the Smoak, which they call the *Flight.*

They find it ſweetiſh upon their Lips, if their Faces happen to be in the way of the Smoak, which they avoid all they can. This, falling on the Graſs, kills Cattle that feed there; and being gather'd and carried home, kills Rats and Mice in their Houſes: That which falls on the Sand, they gather and melt upon a Flagg-hearth, into Shots and Sheet-Lead.

FLIGHT *of a Stair-Caſe*, ſee STAIR-*Caſe.*

FLIGHT, in Heraldry, ſee VOL.

*Capons* FLIGHT, in ſome Cuſtoms, is a Compaſs of Ground, ſuch as a Capon might *fly* over, due to the eldeſt born of ſeveral Brothers, in making Partition of the Father's Effects with them, when there is no principal Manor in a Lordſhip.

It it uſually eſtimated by a Bow-ſhot.——

FLINT, a ſmall, hard, livid or black Pebble. See STONE, and PEBBLE.

*Flints* are one of the principal Ingredients in the making of Glaſs. See GLASS.

FLINT-*Glaſs*, ſee *Flint* GLASS.

FLINT and *Steel*, ſee TINDER.

The *Indians*, inſtead of *Flint* and Steel, uſe two Pieces of green Wood, which they rub violently againſt each other. In the Eaſt, they uſe the Wood Candon; and in *Peru*, Reyaca. See FIRE.

FLINT-*Walls*, ſee WALLS.

FLIP, a ſort of Sailors Drink, made of Malt Liquor, Brandy and Sugar, mix'd.

FLOAT, or FLEET, ſee FLOTA, and FLOTILLA.

FLOAT *of a Fiſhing Line*, a Cork, or Quill, ſwimming on the Water, to obſerve what becomes of the Hook, whether any thing bite, *&c.* See FISHING *Float.*

FLOATS, a certain Quantity of Pieces of Timber joined together with Rafters a-thwart, thrown into a River, to be convey'd down the Stream; and even to convey Burdens down a River with the Stream. The Invention of *Floats* is of great uſe: 'Tis ſaid to have been firſt put in Execution at *Paris*, in the Year 1618.

FLOATING *Veſſels*, ſee BOAT.

FLOATING, in Husbandry, is the drowning or watering of Meadows.

FLOOD, a Deluge, or Inundation of Waters. See DELUGE.

*Plato* ſeems to have had ſome Notion of the Great *Flood*, and the Intention thereof. ὅταν δ' αὖ ὁι Θεοι τλῶ γλῶ ὑδασι καθαίρησι, &c. When the Gods purge the Earth with a *Flood. Plat. Tim. p.* 22.

FLOOD is alſo us'd in ſpeaking of the Tides.

When the Water is at loweſt, 'tis called *Flood*; when riſing, Young, or Old *Flood*; when at higheſt, and beginning to fall, *Ebb Water.* See TIDES, EBB, FLUX, *&c.*

FLOOK, or FLOAK *of an Anchor*, ſee ANCHOR.

FLOOR, in Building, the Underſide of a Room, or that Part we walk on.

*Floors* are of divers ſorts; ſome of Earth, ſome of Brick, others of Stone, *&c.*

Carpenters, by the Word *Floor*, underſtand as well the framed Work of Timber, as the Boarding over it.

*Earthen Floors* are commonly made of Lome, and ſometimes, eſpecially to make Malt on, of Lime, and Brook Sand, and Gun Duſt, or Anvil Duſt from the Forge.

Ox-blood, and fine Clay, temper'd together, Sir *Hugh Plat* ſays, makes the fineſt *Floor* in the World.

For *Brick* and *Stone Floors*, ſee PAVING.

For boarded *Floors*, it is obſervable, that the Carpenters never *floor* their Rooms with Boards, till the Carcaſs is ſet up, and alſo inclos'd with Walls, leſt the Weather ſhould wrong the *Flooring*; yet they generally rough-plane their Boards for the *Flooring*, before they begin any thing elſe about the Building, that they may ſet them by to dry and ſeaſon; which is done in the moſt careful manner.

FLOOR *of a Ship*, ſtrictly taken, is only ſo much of her Bottom, as ſhe reſts on, when a-ground; ſo that ſuch Ships as have long, and withal broad *Floors*, lye on the Ground with moſt Security, and are not apt to feel, or tilt on one Side; whereas others, which are narrow in the *Floor*, or in the Sea-Phraſe, *Cranck'd by the Ground*, cannot be grounded without Danger of being overthrown.

FLORALES *Ludi*, or FLORAL *Games*, in Antiquity, were Games held in Honour of *Flora*, the Goddeſs of Flowers. See FLORALIA.

They were celebrated with horrible Debaucheries. The moſt licentious Diſcourſes were not enough; but the Courtiſans were called together by the Sound of a Trumpet, made their Appearance naked, and entertain'd the People with abominable Shews and Poſtures: The Comedians appear'd after the ſame manner on the Stage. *Val. Maximus* relates, that *Cato* being once preſent in the Theater on this occaſion, the People were aſham'd to aſk for the infamous Pleaſure, in his Preſence; till *Cato*, appriz'd of the Reſervedneſs and Reſpect he inſpir'd them withal, withdrew, that the People might not be balk'd of their accuſtomed Diverſion.

There were divers other ſorts of Shews exhibited on this occaſion; and if we may believe *Suetonius*, in *Galba*, C. 6. and *Vopiſcus* in *Carinus*, theſe Princes preſented Elephants dancing on Ropes.

The *Ludi Florales*, according to *Pliny*, L. XVIII. C. 29. were inſtituted by order of an Oracle of the Sibyls, on the 28th of *April*; not in the Year of *Rome* IↃXVI. as we comconly read it in the antient Editions of that Author; nor in IↃXIV. as *Fr. Hardouin* has corrected it; but as *Voſſius* reads it, in 513. They were chiefly held in the Night time, in the *Patrician-Street*: Some will have it there was a Circus for the purpoſe on the Hill call'd *Hortulorum*.

Some will have the Goddeſs *Flora* to be the ſame with the *Chloris* of the *Greeks*.

Others hold, that this ſame *Flora* was a famous Courtiſan at *Rome*, who having enrich'd her ſelf by Proſtitution, made the People of *Rome* her Heir, on condition that they ſhould celebrate the Anniverſary of her Birth-day, by the Games and Feaſts above-mentioned. Some time afterward, the Senate judging ſuch a Foundation unworthy the Majeſty of the *Roman* People; to ennoble the Ceremony, converted *Flora* into a Goddeſs, whom they ſuppos'd to preſide over Flowers; and ſo made it a piece of Religion to render her propitious, that it might be well with their Gardens, Vineyards, &c.

This is the common Account: But *Voſſius de Idol.* L. I. C. 12. can by no means allow the Goddeſs *Flora* to have been the Courtiſan above-mention'd: He will rather have her a *Sabine* Deity; and thinks her Worſhip might have commenc'd under *Romulus*. His Reaſon is, that *Varro* in his *Fourth Book of the Latin* Tongue, ranks *Flora* among the Deities, to whom *Tatius*, King of the *Sabins*, offer'd up Vows, before he join'd Battle with the *Romans*. Add, that from another Paſſage in *Varro* it appears, that there were Prieſts of *Flora*, with Sacrifices, &c. as early as *Romulus* and *Numa*.

FLORAL *Games*. There are a kind of *Floral Games* obſerv'd at this day in *France*. They were firſt inſtituted in 1324.

The Deſign and Eſtabliſhment is owing to ſeven Perſons of Condition, Lovers of Poetry, who about *All-Saints Day*, in 1323. ſent a Circular Letter to all the Provincial Poets, called *Troubadours*, to meet at *Tholouſe* on *May-day* following, there to rehearſe their Poems; promiſing a Violet of Gold to the Perſon whoſe Piece ſhou'd be judg'd the beſt.

The *Capitouls* found the Deſign ſo good, that it was afterwards reſolv'd at a Council of the City, to continue it at the City Charge; which is ſtill done, in a manner that does Honour to the Place:

In 1325 a Chancellor, and Secretary of the New Academy were choſe; and the ſeven Inſtitutors took the Quality of *Maintainers* thereof. Two other Prizes were afterwards added to the Violet, *viz.* an Eglantine for the ſecond Prize; and a Panſy for the third. It was alſo decreed, that the Perſon who bore away the firſt Prize, might demand to be made Batchelor; and that whoever bore away all three, ſhould be created Doctor in the *Gaye Science*, that is, in Poetry.

There is a Regiſter of theſe Games kept at *Tholouſe*, which gives this Account of their Origin: Tho' others give the thing another turn. It was an antient Cuſtom, they ſay, for the Poets of *Provence*, to meet yearly at *Tholouſe*, to confer together, rehearſe their Verſes, and receive a Prize allotted to the beſt Performance. This held till about the Year 1540, when a Lady of Quality left the beſt part of her Fortune, to eternize the Cuſtom, and bear the Expence of Prizes; the Number of which ſhe increas'd, ordering an Eglantine, a Panſy, a Violet, and a Pink: The three firſt a Cubit high; worth fifteen Piſtoles a-piece.

The Ceremony begins on *May-day*, with a ſolemn Maſs, Muſick, &c. The Corporation attend; and Poems are rehearſed every day: The third Day a magnificent Treat is given the Magiſtracy, &c. and that day the Prizes are adjudged. The three Prizes are the Rewards of three different kinds of Compoſitions, *viz.* a Poem, an Eclogue, and an Ode.

FLORALIA, in Antiquity, a general Name for the Feaſts, Games, and other Ceremonies, held in honour of the Goddeſs *Flora*.

The *Floralia* were alſo called *Anthiſteſes*: They were held at the latter end of the Month of *April*, as *Ovid* witneſſes,

*Exit, & in Majas feſtum* Florale *Calendas.*

In effect, the *Floralia* began on the 28th of *April*, and laſted ſix Days.

They who aſſiſted at the Ceremony, were crown'd with Ivy, and committed a world of undecent things; which indeed was no extraordinary thing in the Heathen Feaſts.

Some apply the Word *Floralia* indifferently to the Feaſts, and Games of this Goddeſs; but others reſtrain it to the Feaſts alone; calling the Games *Ludi Florales*. See FLORALES *Ludi*.

FLORID *Style*, is that enrich'd and heighten'd with Figures and Flowers of Rhetorick. *Longinus* uſes the Terms *florid* and *affected* Style indifferently, and lays them down as quite contrary to the true ſublime. See STYLE, and SUBLIME.

FLORILEGIUM, FLORILEGE, a Name the *Latins* have given, to what the *Greeks* call ἀνθολόγιον. *Anthology*; *viz.* a Collection of choice Pieces, containing the fineſt and moſt florid Things in their kind. See ANTHOLOGY.

The Term is particularly uſed in the Eaſtern Church, for a kind of Breviary, compiled by *Arcadius*, for the Conveniency of the *Greek* Prieſts and Monks, who cannot carry with them in their Travels and Pilgrimages all the Volumes wherein their Office is diſpers'd.

The *Florilegium* contains the General Rubricks, Pſalter, Canticles, the Horologium, Office of the Feriæ, &c.

FLORIN, is ſometimes us'd for a Coin, or real Money; and ſometimes for an imaginary Money, or Money of Account. See COIN, and MONEY.

As a *Coin*, *Florin* is of divers Values, according to the divers Metals, and divers Countries where it is ſtruck.

*Florins* were antiently very frequent in Commerce; at preſent they are leſs common, though there were abundance of them ſtruck in *Holland*, of *Engliſh* Silver, during the War which was terminated by the Treaty of *Ryſwick*.

In all appearance they took their Name from the Place where they were firſt ſtruck, *viz.* the City of *Florence*. Their Æra is about the Year 1251. though others aſcribe the Name to a Flower-de-Lis, which was ſtruck on one Side.

The Gold *Florins* are moſt of them of a very coarſe Alloy; ſome of them not exceeding thirteen or fourteen Carats, and none ſeventeen and a half. They weigh about two Penny-weights, and thirteen Grains.

*Villani* obſerves, that there were Gold *Florins* in the Year 1067; from which time the Names *Frank*, or *Florin* became applied to the Gold Coins, which till that time had been called *Solidi*, Shillings.

As to Silver *Florins*, thoſe of *Holland* are worth about 25 *French* Sols, or 1 *s.* 10½ *d.* Sterling. Thoſe of *Genoa*, &c. are worth about 8 *d.* ¼ Sterling.

Pieces of three *Florins* are called *Ducatoons*. See DUCATOONS.

As a *Money of Account*, the *Florin* is us'd by the *Italian*, *Dutch*, and *German* Merchants and Bankers, in keeping their Books, and making out their Accounts. But this *Florin* is very diverſe, and admits of different Diviſions. In *Holland* it is on the foot of the *Dutch* Coin of that Name, containing 24 *Deniers Groſch*, and divided into *Pacards* and *Penins*.

At *Francfort*, *Nuremberg*, &c. it is equivalent to three Shillings Sterl. and is divided into *Creutzers* and *Pfennings*. At *Liege* it is equivalent to 2 *s.* 3 *d.* At *Strasbourgh* to 1 *s.* 8 *d.* In *Savoy* to 11 *d.* At *Genoa* to 8 *d.* ¼. and at *Geneva* to 6 *d.* ½.

FLORIN was alſo a Gold Coin, ſtruck in *England* in the 18th of *Edw.* 3. of the Value of ſix Shillings.

*Cambden* ſays, They were ſo called, becauſe made by *Florentines*: And *Fabian* ſays, they were not of ſo fine Gold as the Nobles and Half-Nobles of that Prince.

But what is moſt obſervable, is that *Fabian* calls the *Florin* a Penny, Val. 6 *s.* 8 *d.* the half *Florin* an Half-penny, Val. 3 *s.* 4 *d.* the Quarter *Florin* a Farthing, Val. 1 *s.* 8 *d.*

Theſe Words you will often meet with in old Hiſtories and Accounts, applied to ſeveral Coins, as Rials and Angels,

gels, &c. where you are to underſtand by Denarius the whole, by Obolus the half, and by Quadrans the fourth Part, or Farthing. See DENARIUS, PENNY, OBULUS, FARTHING, &c.

By Indenture of the Mint in 18 *Ed.* 3. every Pound weight of old Standard Gold, was to be coin'd into fifty *Florins*, to be currant at ſix Shillings a-piece; all which made in Tale fifteen Pounds; or into a proportionable Number of half or quarter *Florins*.

FLORINIANS, FLORIANI, a Sect of Hereticks, of the ſecond Century, denominated from its Author *Florinus*, or *Florianus*, a Prieſt of the *Roman* Church, depoſed along with *Blaſtus*, for his Errors.

*Florin* had been a Diſciple of St. *Polycarp*, along with *Irenæus*. He made God the Author of Evil; and taught the *Gnoſtic* Doctrine of two Principles.

According to *Philaſtrius*, the *Florianians* likewiſe denied a future Judgment and Reſurrection: Held that JESUS CHRIST was not born of a Virgin; and taught that the Reſurrection was in effect a new Generation. They are alſo charged with holding criminal Aſſemblies in the Night-time, and giving into Judaiſm and Paganiſm.

They had other Names given them: *Philaſtrius* ſays, they were the ſame with the *Carpophorians*. He adds, that they were alſo called Soldiers, *Milites*, *Quia de militaribus fuerunt*. St. *Irenæus* calls them *Gnoſticks*: St. *Epiphanius*, *Phibionites*; and *Theodoret*, *Borborites*, on account of the Impurities of their Life: Others call them *Zacheans*; others *Coddians*, &c. though, for what particular Reaſons, 'tis not eaſy, nor perhaps wou'd it be worth while, to ſay.

FLORIST, a Perſon curious, or learned in Flowers; their Kinds, Names, Characters, Culture, &c. See FLOWER.

FLORY, FLOWRY, FLEURY, FLORETTEE, FLEUR-DE-LISEE, &c. are Terms in Heraldry, when the Outlines of any Ordinary are drawn as if trimm'd with, or in the Form of, Flowers, Lillies, Flower-de-Luces, &c.

Thus, He bears a Croſs *Flory*, &c.

FLOTA, or FLOTTA, *i. e. Fleet*, a Name the *Spaniards* give particularly to the Ships which they ſend annually from *Cadix*, to the Port of *Vera-Crux*, to fetch the Merchandizes gather'd in *Mexico* for *Spain*. Thoſe ſent to fetch the Commodities prepared in *Peru*, are called *Gallions*. See FLEET, and GALLION.

They give the Name FLOTILLA to a Number of Ships, which get before the reſt in their Return, and give Information of the Departure and Cargo of the *Flota* and Gallions.——

FLOTAGES, are all ſuch things as are floating on the Top of the Sea, or great Rivers; a Word more eſpecially uſed in the Commiſſions of Water-Bailiffs.

FLOTSON, or FLOTZAM, a Term ſignifying any Goods loſt by Shipwreck, and ſwimming on the Top of the Water; which, with *Jetſon*, and *Lagon*, and *Shares*, are given to the Lord High Admiral, by his Letters Patents. See ADMIRAL.

*Jetſon* is what is caſt out of the Ship, being in Danger of a Wreck, and beaten to the Shore by the Water; or caſt on Shore by the Seamen. See JETSON.

*Lagon*, or *Lagan* is that which lies in the Bottom of the Sea. See LAGON.

*Shares* are Goods due to ſeveral Perſons, by Proportion.

FLOUNDER *Fiſhing*, ſee *Flounder* FISHING.

FLOWER, *Flos*, is that Part of a Plant, which contains the Organs of Generation; or the Parts neceſſary for the Propagation of the Kind. See PLANT and GENERATION *of Plants*.

The *Flower* is a natural Production, which precedes the Fruit, and yields the Grain or Seed. See SEED, and FRUIT.

The Structure of *Flowers* is ſomewhat various; though the Generality, according to *Grew*, have theſe three Parts in common, *viz.* The *Empalement*, the *Foliation*, and the *Attire*. See EMPALEMENT, FOLIATION, &c.

Mr. *Ray* reckons, that every perfect *Flower* has the *Petala*, *Stamina*, *Apices*, and *Stylus*, or *Piſtil*: Such as want any of theſe Parts, he deems *Imperfect Flowers*. See PETALA, STAMINA, PISTIL, &c.

In moſt Plants there is a *Perianthium*, Calix, or *Flower*-Cup, of a ſtronger Conſiſtence than the *Flower* it ſelf, and deſign'd to ſtrengthen and preſerve it. See PERIANTHIUM, and CALIX.

In ſome *Flowers* the two Sexes are confounded, *i. e.* the Male and Female Parts are found in the ſame *Flower*; in others, they are ſeparated: And of theſe again, ſome are followed by Fruits, and others not: Whence, *Flowers* become diſtinguiſh'd into *Male*, *Female*, and *Hermaphrodites*.

The Generality of *Flowers* are of the *Hermaphrodite* kind: Such *e. gr.* are the Lilly, Tulip, Daffodil, Roſemary, Sage, Thyme, Geranium, Althæa, &c. See HERMAPHRODITES.

The Structure of Parts is much the ſame in thoſe where the Sexes are divided: The Difference between them conſiſts in this, that the Stamina and Apices, *i. e.* the male Parts, in theſe, are ſeparated from the Piſtils; being ſometimes on the ſame ſtand, and ſometimes on different ones.——

Thoſe, wherein the Stamina are, in regard they bear no Fruit, are called *Male*, or barren *Flowers*, and by the Botaniſts, *Stamineous Flowers*: Thoſe which contain the Piſtil, being ſucceeded with Fruit, are called *Females*, or *Knitting*, or *Fruitful Flowers*.

Among the Plants which bear both Male and Female Parts on the ſame Stand, but at a diſtance from each other, are reckon'd, the Cucumber, Melon, Gourd, Turky Wheat, Turnſol, Wallnut, Oak, Beech, Fir, Alder, Cypreſs, Cedar, Juniper, Mulberry, Plantan, &c.

Thoſe, where the Male and Female Parts of the *Flowers* are bore on different Stands, are ſome Species of Palm, the Willow, Poplar, Hemp, Mercury, Spinage, Nettles and Hops.——See GENERATION *of Plants*.——

Mr. *Ray* divides *Flowers* into *Perfect*, and *Imperfect*.

*Perfect Flowers* he here accounts all ſuch as have the Petala, tho' they want the Stamina. Theſe he ſubdivides into *Simple*, which are thoſe not compos'd of other ſmaller ones, and which uſually have but one ſingle Style; and *Compounded*, which conſiſt of many Floſculi, all making but one *Flower*. See *Simple* FLOWERS.

*Simple Flowers* are either *Monopetalous*, which have the Body of the *Flower* all of one entire Leaf, though ſometimes cut, or divided a little way, into many ſeeming Petala, or Leaves, as in Borrage, Buglois, &c.

Or *Polypetalous*, which have diſtinct Petala, and thoſe falling off ſingly, and not altogether, as the ſeeming Petala of the monopetalous *Flowers* always do.

Both thoſe are farther divided into *Uniform* and *Difform Flowers*.

The former have their Right and Left-hand Parts, and the forward and backward Parts all alike; but the Difform have no ſuch Regularity; as in the *Flowers* of Sage, Dead-Nettle, &c.

A Monopetalous *difform Flower* is likewiſe farther divided into

1° *Semi-fiſtular*, whoſe upper Part reſembles a Pipe, cut off obliquely, as in the Ariſtolochia.

2° *Labiate*: And this either with one Lip only, as in the Acanthum and Scordium; or with two Lips, as in the far greater Part of the Labiate *Flowers*.

And here the upper Lip is ſometimes turned upwards, and ſo turns the convex Part downwards, as in the Chamæciſſus, &c. but moſt uſually the upper Lip is convex above, and turns the hollow Part down to its Fellow below, and ſo repreſents a kind of Helmet, or Monk's Hood; whence theſe are frequently called *Galleate*, *Cucullate*, and *Galericulate Flowers*.

Such are the *Flowers* of the Lamium, and moſt verticillate Plants.

Sometimes alſo the Labium is entire, and ſometimes jagged or divided.

3° *Corniculate*, that is, ſuch hollow *Flowers*, as have on their upper Part a kind of Spur or little Horn; as in the Linaria, Delphinum, &c. And the Corniculum or Calcar is always impervious at the Tip or Point.

*Compound* FLOWERS are,

1° *Diſcous* or *Diſcoidal*, that is, whoſe Floſculi are ſet together ſo cloſe, thick, and even, as to make the Surface of the *Flower* plain and flat; which therefore, becauſe of its round Form, will be like a Diſcus.

This Diſk is ſometimes radiated, when there are a Row of Petala ſtanding round in the Diſk, like the Points of a Star; as in the Matricaria, Chamæmelum, &c.

And ſometimes naked, having no ſuch radiating Leaves round the Limb of its Diſk, as in the Tanacetum.

2° *Planifolious*, which are compos'd of plain *Flowers*, ſet together in circular Rows, round the Centre, and whoſe Face is uſually indented, notch'd, uneven, and jagged; as the Hieracia, Sonchi, &c.

3° *Fiſtular*, which are compounded of many long, hollow, little *Flowers*, like Pipes, all divided into large Jags at the Ends.

*Imperfect Flowers* are ſuch as want the Petala, and are called likewiſe *Stamineous*, *Apetalous*, and *Capillacious*.

Thoſe which hang pendulous by fine Threads like the Juli, are by *Tournefort* called *Amentacious*; we call them *Cats-tails*.

Botaniſts furniſh other Diviſions and Denominations of *Flowers*.

*Campaniform*, or Bell-like FLOWERS, are thoſe in Shape of a Bell. See CAMPANIFORM.

*Cruciform* FLOWERS, are thoſe conſiſting of four Petala, or Leaves: The Calix alſo containing four Leaves; and the Piſtil always producing a Fruit. Such are thoſe of the Clove Tree, Cabbage Tree, &c.

*Infun-*

*Infundibuliform* FLOWERS, are ſuch as reſemble the Figure of a Funnel, *i. e.* broad, and ample at top, and contracted into a Neck at bottom: Such is that of the Bear's Ear.

*Cucurbitaceous* FLOWERS, are ſuch as reſemble the *Flower* of the Gourd; or have the ſame Conformation therewith. See CUCURBITACEOUS.

*Stamineous* FLOWERS, are ſuch as have no Petala, but conſiſt wholly of Stamina's or Threads, with Apices a-top.

The Leaves placed around theſe Stamina, are not to be eſteem'd as Petala, but a Calix; in regard they afterwards become a Capſula, or Cover, including the Seed; which is the Office of the Calix alone. See CALIX.

In effect, it is eſſential to the Leaves of *Flowers*, not to ſerve as a Cover to the Seeds that ſucceed them: And this is the only Characteriſtic that diſtinguiſhes the Leaves, or Petala of *Flowers* from their Calix; for, that no particular Colour of the Leaves does determine, whether the Parts in diſpute be Leaves of the *Flower*, or the Calix of the *Flowers*, appears hence, that there are ſome Leaves of *Flowers*, which are green like the Calix; and ſome Calices colour'd, like Petala.——.

*Leguminous* FLOWERS, are thoſe of Leguminous Plants. Theſe bear ſome Reſemblance to a flying Butterfly; for which reaſon they are alſo called *Papillionaceous Flowers*.

*Papillionaceous* FLOWERS, conſiſt of four or five Leaves, whereof the uppermoſt is called *Vexillum*, or Standard; and the loweſt *Carina*, as reſembling the Bottom or Keel of a Boat: Thoſe between the two, are called *Lateral* Leaves, or *Alæ*.

From the Bottom of the Calix ariſes a Piſtil, which is incompaſs'd with a Sheath, or Cover, fringed with Stamina. This Piſtil always becomes the Fruit, and is uſually called the Pod, in Latin, *Siliqua*. See *Leguminous*.

*Umbelliform* FLOWERS, are thoſe with ſeveral Leaves doubled, and diſpos'd in manner of a Roſe; and whoſe Calix eſſentially becomes a Fruit of two Seeds, join'd, before they come to Maturity; but afterwards eaſily ſeparated again.

They have this Denomination, by reaſon they are generally ſuſtain'd by a Number of Threads, which proceeding from the ſame Centre, are branch'd all around, like the Sticks of an Umbrello.

Of this kind are the *Flowers* of Fennel, Angelica, &c. See UMBELLIFORM.

*Verticillate* FLOWERS, are thoſe ranged, as it were, in Stories, Rings, or Rays along the Stems: Such are thoſe of Horehound, Clary, &c.

FLOWERS, in Gardening, are diſtinguiſh'd, into *Early*, or *Spring-Flowers*, which flouriſh in the Months of *March*, *April*, and *May*.

Such are the Anemonies, Daffodils, Hyacinths, Tulips, Junquils, Cowſlips, Primroſes, &c.

*Summer Flowers*, which open in *June*, *July*, and *Auguſt*, as Pinks, Gilly Flowers, Lillies, Daſies, Campanulas, Poppies, Sun Flowers, &c.

And *Autumnal*, or *Late Flowers*, thoſe of *September* and *October*; as the Oculus Chriſti, Indian Pinks, and Roſes, Panſy, Flower Gentle, &c.

Of theſe *Flowers*, thoſe which ſubſiſt all the Year, we mean in the Stem, or Root at leaſt, are called *Perennials*; And thoſe which are to be planted, or ſow'd a-freſh every Year, according to the Seaſon, are called *Annuals*.——See GREEN-HOUSE.

FLOWER, in Architecture, according to *Vitruvius*, is a Repreſentation of ſome imaginary *Flower*, by way of crowning, or finiſhing, on the Top of a Dome, &c.

In lieu of this the Moderns commonly uſe a Vaſe, Ball, or the like.

FLOWER *of the Capital*, is an Ornament of Sculpture, in form of a Roſe, in the middle of the Sweep, of the *Corinthian* Abacus: In that of the Compoſite, 'tis an imaginary kind of *Flower*. See CAPITAL.

FLOWERS, in Chymiſtry, are the fineſt, and moſt ſubtle Parts of dry Bodies, rais'd by Fire, into the Head, and Aludels; and adhering to them, in form of a fine Powder, or Duſt. Such are the *Flowers* of Sulphur, Benjamin, &c. See SUBLIMATION.

FLOWER *of Sulphur*, or *Brimſtone*, is prepared by putting the Sulphur groſly powder'd into a Glaſs Body, placed in a ſmall open Fire, with another earthen Veſſel of the ſame form over, or in it, Neck to Neck. This diſpoſed, the Fire will ſublime, or raiſe the *Flowers*, and gather them in the upper Veſſel. See ALUDEL; ſee alſo SULPHUR.

FLOWER *of Wheat*, Rye, and other Pulſe. See FARINA.

FLOWERS, in the Animal Oeconomy, are Womens monthly Purgations, or Menſes. See MENSES.

*Nicod* derives the Word in this ſenſe from *fluere*, q. d. *Fluors*: Others will have the Name occaſion'd hence, that Women do not conceive, till they have had their *Flowers*; ſo that theſe are a ſort of Forerunners of their Fruit.——

FLOWERS, in Rhetoric, are Figures, or Ornaments of Diſcourſe, by the *Latins* called *Floſculi*. See FIGURE.

FLOWER-*de-Lis*, or, as it is vulgarly wrote, *de Luce*, in Heraldry, is a bearing antiently of great Dignity; being reputed the nobleſt of all *Flowers*, and as ſuch having been in all Ages the Charge of the Royal Eſcutcheon of the Kings of *France*; thoguh Tract of Time has made the bearing thereof more vulgar.

In ſome Coats 'tis bore Single; in others Triple; in others it is Semée, ſeeded all over the Eſcutcheon.

FLOWERAGE, a Collection of Flowers of ſeveral kinds ſet together in Huſks, and hung up with Strings.——

FLOWER'D, in the Manufactures. A Stuff, or Cloth, is ſaid to be *flower'd*, *flouriſh'd*, *ſprig'd*, or *figur'd*, when there are Repreſentations of *Flowers*, either natural, or imaginary wrought thereon.

There are Stuffs *flower'd* of almoſt all kinds of Matters: Flowers of Gold, Silver, Silk, Wool, Thread, Cotton, &c. Stuffs and Cloths are uſually denominated from the Ground, whereon the Flowers are raiſed.

Thus there are *flower'd* Velvets, Taffaties, Damaſks, Satins, Mohairs, Dimities, &c. See VELVET, TAFFATY, DAMASK, &c.

Thoſe *flower'd* with Gold and Silver, are more uſually called *Brocades*. See BROCADE.

The Flowers are uſually wrought at the ſame time with the Cloth, or Ground. The Threads of the Warp are rais'd, and lowerd by means of Packthreads, paſs'd through them in mounting the Loom; and the Manufacturer ſhooting his Warp, or matter of the Flowers, whether Gold, Silver, Silk, or the like between the Threads thus rais'd, forms the Flowers. See WARP, WOOF, WEAVING, &c.

'Tis very curious to ſee them mount a Loom; or, as they call it, *Read a Deſign*, to be repreſented on a Stuff: But it is next to impoſſible to deſcribe it; yet we have endeavour'd to give ſome Idea thereof under the Article DESIGN; ſee alſo TAPISTRY.

FLUIDITY, in Phyſicks, that State or Affection of Bodies, which denominates, or renders them *fluid*; ſee FLUID.

*Fluidity* ſtands in direct Oppoſition to *Firmneſs*, or Solidity. See FIRMNESS.

It is diſtinguiſh'd from *Liquidity*, and *Humidity*, in that the Idea of the firſt is abſolute, and the Property contain'd in the thing it ſelf; whereas that of the latter is relative, and implies wetting, or adhering; *i. e.* ſomewhat that gives us the Senſation of Wetneſs, or Moiſture, and which would have no Exiſtence, but for our Senſes.

Thus, melted Metals, Air, Æther, and even Smoak and Flame it ſelf are *Fluid* Bodies, but not *Liquid* ones; their Parts being actually dry, and not leaving any Senſe of Moiſture. See LIQUID, and HUMIDITY.

The Nature, or Cauſe of *Fluidity* has been variouſly aſſign'd. The *Gaſſendiſts*, and antient Corpuſcularians, require only three Conditions as neceſſary thereto, *viz.* a Smallneſs and Smoothneſs of the Particles of the Body; Vacuities interſperſed between them; and a Spherical Figure. Thus the Epicurean Poet, Lucretius,

*Illa autem debent ex lævibus atque rotundis*
*Eſſe magis*, fluido *quæ corpore liquida conſtant.*

The *Carteſians*, and after them Dr. *Hook*, Mr. *Boyle*, &c. beſide the Circumſtances above mentioned, require a various, perpetual, inteſtine Motion of the Particles of the Bodies, as that which principally contributes to *Fluidity*.

*Fluidity* then, according to theſe Philoſophers, conſiſts in this, that the Parts of the Body being very fine, and ſmall, are ſo diſpoſed by Motion, or Figure, as that they can eaſily ſlide over one another's Surfaces all manner of ways; and that they be in a conſtant, various, ſeparate Agitation to and fro; and that they only touch one another in ſome Parts of their Surfaces.

Mr. *Boyle* in his *Hiſtory of Fluidity* mentions theſe three as the Conditions principally required to *Fluidity*, viz.

1° The *Minuteneſs of Parts*: As, in effect, we find that Fire, by dividing Metals into fine, ſmall Parts, renders them fluid; and that acid Menſtruums diſſolve and render them fluid after the like manner; and that Fire turns the hard Body of common Salt almoſt wholly into a Liquor, by Diſtillation: Not but that the Figure of the Particles may have a conſiderable Share in *Fluidity*.

Thus Mercury, whoſe Parts are doubtleſs much groſſer than thoſe of Oil and Water, is yet more fluid than either of them: And thus Oil, by the Action of Fire, may be converted into a conſiſtent Subſtance, like Butter.

2° *Store* of *Vacuities* interſperſed between the Corpuſcles, to give room for the ſeveral Particles to move among themſelves.

3° A *Motion* and *Agitation* of the Corpuſcles; either from ſome Principle of Mobility within themſelves, or from ſome extraneous Agent, penetrating and entering the Pores, moving variouſly among them, and communicating to them part of its Motion.

That this laſt is the Qualification chiefly required in *Fluidity*, he argues from divers Obſervations and Experiments.

Thus, a little dry Powder of Alabaſter, or Plaiſter of Paris finely ſifted, being put in a Veſſel over the Fire; it ſoon begins to boil like Water; exhibiting all the Motions and Phænomena of a boiling Liquor. It will kindle variouſly in great Waves like that; will bear ſtirring with a Stick or Ladle like that, without reſiſting; Nay, if ſtrongly ſtirr'd near the Side of the Veſſel, its Waves will apparently daſh againſt them: Yet is it all the while a dry, parch'd Powder.

The like is obſerv'd in Sand: A Diſh of which being ſet on a Drumhead, briſkly beaten by the Sticks; or on the upper Stone of a Mill, it in all reſpects emulates the Properties of a fluid Body. A heavy Body, *e. gr.* will immediately ſink in it to the Bottom, and a light one emerge to the Top: Each Grain of Sand has a conſtant vibratory and dancing Motion; and if a Hole be made in the Side of the Diſh, the Sand will ſpin out like Water.

That the Parts of Fluids are in continual Motion, the *Carteſians* bring divers Conſiderations to prove; as 1° The Tranſmutation of Solids into Fluids, *e. gr.* Ice into Water, and *vice verſa*; the chief Difference between the Body in thoſe two States conſiſting in this, that the Parts being fix'd and at reſt in the one, reſiſt the Touch; whereas in the other, being already in Motion, they gave way upon the ſlighteſt Impulſe,

2° The Effects of Fluids, which commonly proceed from Motion: Such are the Inſinuation of Fluids among the Pores of Bodies; the ſoftening and diſſolving of hard Bodies; the Actions of corroſive Menſtruums, *&c.* Add, that no Solid can be brought to a State of *Fluidity*, without the Intervention of ſome moving, or moveable Body, as Fire, Air, or Water.

Air, the ſame Gentlemen hold the firſt Spring of theſe Cauſes of *Fluidity*; it being this that gives Motion to Fire and Water, though it ſelf receives its Motion and Action from the Æther, or ſubtle Medium. See AIR and ÆTHER.

The Learned *Boerhaave*, in his late Excellent *Inſtitut. Chymiæ*, pleads very ſtrenuouſly for Fire's being the firſt Mover, and the Cauſe of all *Fluidity* in other Bodies, as Air, Water, *&c.* without this, he ſhews, that the Atmoſphere it ſelf would fix into one ſolid Maſs. See FIRE.

Sir *I. Newton* ſets aſide this Theory of the Cauſe of *Fluidity*, and ſubſtitutes a new one, the great Principle of Attraction.

The Corpuſcular Syſtem, with all the Improvements of *Des Cartes*, and Mr. *Boyle*, did not ſufficiently account for the primary Condition, requiſite to conſtitute a Body fluid, *viz.* the various inteſtine Motion and Agitation of its Particles.

But, this Motion is naturally enough accounted for, by ſuppoſing it a primary Law of Nature, that, as all the Particles of Matter attract each other, when within a certain Diſtance; ſo at all greater Diſtances, they fly from, and avoid one another.

For then, tho' theirommon Gravity together with the Preſſure of other Bodies upon them, may keep them together in a Maſs; yet their continual Endeavour to avoid one ananother ſingly, and the adventitious Impulſes of Heat, Light, or other external Cauſes, may make the Particles of Fluids continually move round about one another, and ſo produce this Quality.

There is a Difficulty indeed, in accounting, why the Particles of Fluids always keep at ſuch a Diſtance from one another, as not to come within the Sphere of one another's Attraction.

The Fabrick and Conſtitution of that fluid Body, Water, is amazing; that a Body ſo very rare, and which has a vaſt Over-proportion of Pores, or interſpers'd Vacuity, to ſolid Matter, ſhould yet be perfectly incompreſſible by the greateſt Force: And yet this Fluid is eaſily reducible into that firm, tranſparent, friable Body, which we call *Ice*, by being only expoſed to a certain Degree of Cold. See COLD and FREEZING.

One would think, that tho' the Particles of Water cannot come near enough to attract each other, yet the intervening frigorifick Matter doth, by being mingled *per minima*, ſtrongly attract them, and is it ſelf likewiſe ſtrongly attracted by them, and ſo wedges or fixes all the Maſs into a firm ſolid Body; which ſolid Body loſes its Solidity again, when by Heat the Vinculum is ſolved, and the frigorifick Particles are disjoined from thoſe of the Water, and are forced to fly out of it: And juſt thus may the Fumes of Lead perhaps fix Quickſilver. See FIXATION.

When a firm ſolid Body, ſuch as a Metal, is by Heat reduced into a Fluid, the Particles of Fire disjoinand ſeparate its conſtituent Parts, which their mutual Attraction cauſed before to cohere; and keep them at ſuch a diſtance from one another, as that they are out of the Sphere of each other's Attraction, as long as that violent Motion laſts; and when by their Lightneſs and Activity they are flown off, unleſs they are renewed by a continual Supply, the component Particles of the Metal come near enough again to feel one another's Attractions.

As therefore the Cauſe of Coheſion of the Parts of ſolid Bodies appears to be their mutual Attraction; ſo the chief Cauſe of *Fluidity* ſeems to be a contrary Motion, impreſs'd on the Particles of Fluids, by which they avoid, and fly one another, as ſoon as they come at, and as long as they keep at ſuch a Diſtance from each other.

It is obſerv'd alſo in all Fluids, that the Direction of their Preſſure againſt the Veſſels which contain them, is in Lines perpendicular to the Sides of ſuch Veſſels; which Property being the neceſſary Reſult of the Particles of any Fluid's being ſpherical, it ſhews that the Parts of all Fluids are ſo, or of a Figure very nearly approaching thereunto.

FLUIDS, are Bodies, whoſe Particles are but weakly connected; their mutual Coheſion being in great meaſure prevented from ſome external Cauſe: In which ſenſe a *Fluid* ſtands oppoſed to a *Solid*. See SOLID.

Sir *I. Newton* defines a *fluid* Body, to be that whoſe Parts yield to the ſmalleſt Force impreſs'd, and by yielding are eaſily moved among each other.

The Cauſe, therefore, of *Fluidity*, ſhould ſeem to conſiſt in this, that the Parts do not cohere ſo ſtrongly, as they do in ſolid or firm Bodies; and that their Motion is not hinder'd by any Inequality in the Surface of the Parts; as is the Caſe in Powders.

For, that the Particles whereof *Fluids* conſiſt, are of the ſame nature, and have the ſame Properties with the Particles of Solids, is evident, from the Converſion of Liquids and Solids into each other, *e. gr.* of Water into Ice; of Metals into Fluors, *&c.* Nor can it be reaſonably doubted, that the component Parts of all Bodies are the ſame, *viz.* hard, ſolid, impenetrable, moveable Corpuſcles. See BODY, and MATTER.

The *Carteſians* define a *Fluid* to be a Body whoſe Parts are in continual inteſtine Motion; and Dr. *Hook*, Mr. *Boyle* and *Boerhave*, tho' far from Carteſianiſm, ſubſcribe to the Definition; alledging Arguments to prove that the Parts of *Fluids* are in continual Motion; and even that it is this Motion, which conſtitutes *Fluidity*. See FLUIDITY.

The later *Newtonians* dare not go ſo far: To ſay that the Parts of a *Fluid* are in continual Motion, is more than either our Senſes, Experience, or Reaſon will warrant; and to define a thing from a Property that is diſputable, is certainly bad Philoſophy. See DEFINITION.

Add, that the great Argument from Geometry, produced in favour of this continual Motion, *viz.* That the Reſiſtance of a Body moving in a *Fluid*, is leſs, if the Parts of the *Fluid* be agitated by an inteſtine Motion, than if they were at reſt, is demonſtrated to be falſe. See RESISTANCE.

We add, therefore, with Dr. *Clark*, That if the Parts of a Body either do not touch each other, or eaſily ſlide over one another; and are of ſuch a Magnitude, as that they may be eaſily agitated by Heat: And the Heat be ſufficiently great to agitate them; tho' it may perhaps be leſs than ſuffices to prevent Water from freezing: Or, even, tho' the Parts be not actually moved, yet, if they be ſmall, ſmooth, ſlippery, and of ſuch a Figure and Magnitude as diſpoſes them to move and give way: That Body is *fluid*.

And yet the Particles of ſuch *fluid* Bodies, do, in ſome meaſure, cohere; as is evident hence, that Mercury, when well purg'd of Air, will be ſuſtained in the Barometer, to the Height of 60 or 70 Inches; that Water will aſcend in Capillary Tubes even in Vacuo; and that the Drops of Liquors in Vacuo run into a ſpherical Form: As adhering by ſome mutual Coheſion like that between poliſh'd marble Planes. Add, that theſe *fluid* Bodies, if they conſiſt of Particles that are eaſily entangled with each other, as *Oil*; or if they be capable of being ſtiffen'd by Cold, and join'd by the Interpoſition of little Cunei, or Wedges, as Water; they are eaſily render'd hard: But if their Particles be ſuch as can neither be entangled, as *Air*; nor ſtiffen'd by Cold, as Quickſilver; then they never grow hard and fix'd. See PARTICLE.

FLUIDS are either Natural, as *Water*, and *Mercury*; or Animal, as *Blood*, *Milk*, *Bile*, *Lymph*, *Urine*, &c; or Factitious, as *Wines*, *Spirits*, *Oils*, &c. See each under its proper Article, WATER, MERCURY, BLOOD, MILK, BILE, WINE, SPIRIT, OIL, *&c.*

The Doctrine and Laws of *Fluids* are of the greateſt Extent in Philoſophy.

The Preſſure, and Gravitation of Bodies in *Fluids*, and the Action of the *Fluids* immerſed in them, makes the Subject of *Hydroſtaticks*. See HYDROSTATICKS.

## *Hydroſtatical Laws of* FLUIDS.

### I. Of the Preſſure and Equilibrium of FLUIDS.

1° *The upper Parts of all* Fluids, *as Water*, &c. *do preſs upon the lower:* Or, as ſome Philoſophers ſtate it, *All* Fluids *do gravitate* in proprio loco.

The Contrary of this was a Principle in the School-Philoſophy; but the Certainty of ſuch Preſſure is now demonſtrated by a thouſand Experiments: It will be ſufficient to inſtance one or two.

Immerge a Tube, open at both Ends, and half filled with Oil of Turpentine, in a Veſſel of Water, the upper End of the Tube being ſtopp'd with the Finger: If now the upper Surface of the Oil lie as low as that of the Water; the Oil, upon removing the Finger, will not run out at the lower End of the Tube: Nay, and if the Tube be thruſt a little lower, the Water will riſe up in it, and bear the Oil above it: But if the upper Surface of the Oil be conſiderably higher than that of the Water; the Oil will drop out of the Tube. Whence it follows, that the Column of Oil in one caſe preſſes or gravitates leſs on the Plane imagined to paſs under its lower Surface, than a Column of Water; and in the other caſe, more.

Or thus; an empty Vial, cloſe ſhut, being immerſed in Water, and ſuſpended by a Horſe Hair to the Beam of a Balance, with a Weight at the other End exactly counterpoiſing it: Upon unſtopping the Vial, and letting it fill with Water, it will preponderate, and bear down the End of the Balance; without having any Communication with the external Air.

Which two Experiments abundantly prove the Propoſition, that the upper Parts of *Fluids* preſs, or gravitate on the lower. See PRESSURE, and GRAVITATION.

*Corol.* From this Gravity it follows, that the Surfaces of ſtagnant *Fluids* are plain, and parallel to the Horizon; or rather that they are Segments of a Sphere concentrical with the Earth.

For, as the Particles are ſuppoſed to yield to any Force impreſs'd, they will be moved by the Action of Gravity, till ſuch time as none of them can deſcend any lower. And this Situation once attained, the *Fluid* muſt remain at reſt, unleſs put in Motion by ſome foreign Cauſe; inaſmuch as none of the Particles can now move without aſcending; contrary to their natural Tendency.

2° *If a Body be immerſed in a* Fluid, *either wholly, or in part, its lower Surface will be preſs'd upward by the Water underneath it.*

The Truth of this Propoſition is evident from the Experiment above mention'd; where the Oil of Turpentine was ſuſpended, nay and made to mount up in the Tube by the Preſſure of the Water upwards on its lower Parts.

The Law, or Quantity of this Preſſure is this, that *a Body immerged in a* Fluid, *loſes juſt ſo much of the Weight it would have in Air; as ſo much of the* Fluid *as is equal to it in Bulk, if weigh'd in the Air, would amount to.*

This Preſſure of *Fluids* on the lower Parts of an immerſed Body is farther confirm'd, by attending to the Reaſon why Bodies ſpecifically lighter than *Fluids* aſcend therein. The Effect is owing to this, that there is a greater Preſſure or Weight on every other Part of the Plane or Surface of the *Fluid* imagined to paſs under the lower Surface of the Body, than there is on that whereon the emerging Body inſiſts. Conſequently, to produce an Equilibrium in the *Fluid*, the Parts immediately under the riſing Body being preſs'd by the reſt every way, do continually force it upwards.

In effect, the emerging Body is continually preſs'd on by two Columns of Water, one bearing againſt its upper; and the other againſt its lower Parts: The length of both which Columns being to be accounted from the Top of the Water; that which preſſes on the lower Part, will be the longer, by the Thickneſs of the aſcending Body, and conſequently overbalance it by the Weight of as much Water as will fill the Space that Body takes up. See SPECIFIC *Gravity*.

*Corol.* 1. Hence we are furniſh'd with one Reaſon, why very minute Corpuſcles, either heavier, or lighter than the Liquor they are mingled with, will be ſuſtain'd therein a good while, without either emerging to the Top, or precipitating to the Bottom: The Difference between the two Columns of the *Fluid* being here inconſiderable.

*Corol.* 2. Hence alſo, if a Body A be ſpecifically lighter than B, an equal Portion of the *Fluid* in which it is immerged; it will riſe with a Force proportionable to the Exceſs of Gravity of B above A: And if A be ſpecifically heavier than B; it gravitates and deſcends with the Exceſs only of its Weight above that of B.

3° *The Preſſure of the upper Parts of a* Fluid, *on the lower, exerts it ſelf every way, and every way equally; laterally, horizontally, and obliquely as well as perpendicularly.*

For, as the Parts of a *Fluid* yield to any Impreſſion, and are eaſily moved, 'tis impoſſible any Drop ſhou'd remain in its Place: If while it is preſs'd by the ſuper-incumbent *Fluid*, it be not equally preſs'd on every ſide.

The ſame is confirm'd from Experiments: For ſeveral Tubes of divers Forms, ſtraight, curved, angular, &c. being immerſed in the ſame *Fluid*; tho' the Apertures, thro' which the *Fluid* enters, be differently poſited to the Surface or Plane, ſome being perpendicular, others parallel, and others variouſly inclined; yet will the *Fluid* riſe to an equal Height in all.

*Corol.* 1. Hence, all the Particles of *Fluids* being thus equally preſs'd on all Sides, 'tis argued that they muſt be at reſt, and not in continual Motion, as has been uſually ſuppos'd.——

*Corol.* 2. Hence alſo a Body being immerſed in a *Fluid*, ſuſtains a lateral Preſſure from the *Fluid*; which is alſo increas'd as the Body is placed deeper beneath the Surface of the *Fluid*.——

4° *In Tubes that have a Communication with each other, whatever their Magnitude be, whether equal, or unequal; and whatever their Form, whether ſtreight, angular, or crooked: Still,* Fluids *riſe in them to the ſame Height.*

5° *If a* Fluid *riſe to the ſame Altitude in two Tubes that communicate with each other; the* Fluid *in one Tube is a Balance, or equal in weight, to that in the other.*

If the Tubes be of equal Diameters, the Columns of the *Fluid* having the ſame Baſe and Altitude, are equal, and conſequently their Gravities equal; ſo that they preſs and gravitate againſt each other with equal Force.

This is demonſtrated from Mechanicks. *E. gr.* Let the Baſe of G I *Tab. Hydroſtaticks, Fig.* 6. be ſuppoſed Quadruple the Baſe of H K; and that the *Fluid* deſcend in the greater Tube the Space of an Inch, as from L to O; it will then riſe in the other the Space of four Inches, as from M to N. Wherefore the Velocity wherewith the *Fluid* moves in the Tube H K, is to that wherewith it moves in G I; as the Baſe of the Tube G I to the Baſe of the other, H K. But the Altitude of the *Fluid* being ſuppoſed the ſame in both Tubes, the Quantity of the *Fluid* in the Tube G I, will be to that in the other Tube H K as the Baſe of the Tube G I to the Baſe of the other, H K.

Conſequently, the Momentum of the *Fluid* in the Tube G I, is to that in the Tube H K, as the Product of the Baſe of the Tube G I into the Baſe of the other H K; to the Factum of the Tube H K into the Baſe of the other G I. Wherefore, the Products being equal; the Momenta muſt be equal.

The ſame is eaſily demonſtrated where one of the Tubes is inclined, and the other perpendicular, &c.

*Corol.* Hence in Tubes that communicate, the *Fluid* preponderates in that where its Altitude is the greateſt.

6° *In Communicating Tubes,* Fluids, *of different ſpecific Gravities, will equiponderate, if their Altitudes be in the Ratio of their ſpecific Gravities.*

*Corol.* Hence we have a Way of finding the *Specific Gravities of* Fluids, *viz.* by pouring one *Fluid* into one of the communicating Tubes, as A B (*Fig.* 7.) and another, into the other Tube C D; and meaſuring the Altitudes E B and F D, at which they ſtand when balanced.

For the ſpecific Gravity of the *Fluid* in A B, is to that in D C; as D H, to B G. If the *Fluids* be apt to mix; it may be proper to fill the Horizontal Tube B D with Mercury, to prevent the Mixture.

*Corol.* Since the Denſities of *Fluids*, are as their ſpecific Gravities; the Denſities will likewiſe be as the Altitudes of the *Fluids* D H and B G: So that we have hence likewiſe a Method of determining the *Denſities of* Fluids. See DENSITY.

7° *The Bottoms, and Sides of Veſſels, are preſs'd in the ſame manner, and by the ſame Laws as the Liquids, contained in them.*

*Corol.* Hence as Action and Re-action are equal; the *Fluids* themſelves, ſuſtain an equal Preſſure from the Bottoms and Sides. And as the Preſſion of *Fluids* is equal every way, the Bottom and Sides are preſs'd as much as the neighbouring Parts of the *Fluids:* And conſequently this Action increaſes in proportion to the Height of the *Fluid*; and is equal every way at the ſame Depth; as depending altogether on the Height, and not at all on the Quantity of the *Fluid.*

8° *In perpendicular Veſſels of equal Baſes, the Preſſures of* Fluids *on the Bottoms, is in the Ratio of their Altitudes.*

This is evident, in that the Veſſels being perpendicular, the Bottoms are horizontal: Conſequently the Tendency of *Fluids* by the Action of Gravity will be in Lines perpendicular to the Bottom; ſo that they will preſs with all their Weight: The Bottoms therefore are preſs'd in the Ratio of the Gravities. But the Gravities are as the Bulks; and the Bulks here are as the Altitudes: Therefore the Preſſures on the Bottoms are as the Altitudes.

9° *In*

9° *In perpendicular Veſſels of unequal Baſes, the Preſſure on the Bottoms is in a Ratio compounded of the Baſes, and Altitudes.*

From the preceeding Demonſtration it appears, that the Bottoms are preſs'd in the Ratio of the Gravities: And the Gravities of *Fluids* are as their Bulks; and their Bulks in a Ratio compounded of the Baſes and Altitudes. Conſequently, *&c.*

10° *If an inclined Veſſel A B C D, Fig.* 8. *have the ſame Baſe and Altitude with a perpendicular one B E F G, the Bottoms of each will be equally preſs'd.*

For in the inclined Veſſel A B C D, the Bottom C D, is preſs'd in the Direction B D. But the Force of Gravity in the Direction B D, is to the abſolute Gravity, as B E to B D. See GRAVITY.

Conſequently, the Bottom C D is preſs'd in the ſame manner; as if it had been preſs'd perpendicularly by the *Fluid* under the Altitude B E. Therefore, the Bottoms of the perpendicular and inclined Veſſels are equally preſs'd.

11° Fluids *preſs upon ſubjected Bodies, according to their perpendicular Altitude, and not according to their Latitude.*

Or, as others ſtate it, thus: If a Veſſel be taper, or unequally big at Top and Bottom; yet the Bottom will be preſs'd after the ſame manner as if the Veſſel were cylindrical, and the Top and Bottom equal.

Or thus: The Preſſure ſuſtain'd by the Bottom of a Veſſel, whatever the Figure of the Veſſel be, is ever equal to the Weight of a Column of the *Fluid*, whoſe Baſe is the Bottom it ſelf, and Height, the vertical Diſtance of the upper Surface of the Water from the Bottom.

Or, yet more explicitly, thus: If there be two Tubes or Veſſels, having the ſame Heights, and Baſes, both filled with Water; but one of them made ſo tapering upwards, that it ſhall contain but twenty Ounces of Water, whereas the other widening upwards, holds 200 Ounces: Yet, the Bottoms of the two Tubes ſhall ſuſtain an equal Preſſure of Water, *viz.* each of them, that of the Weight of 2000 Ounces.

This is a noble Paradox in Hydroſtaticks, which it is well worth the clearing and inſiſting on. It is found unexceptionably true from abundant Experiments: And may even be demonſtrated and accounted for on Principles of Mechanicks.

Suppoſe *e. gr.* the Bottom of a Veſſel, C D (*Fig.* 9.) leſs than its Top, A B. Since the *Fluid* preſſes the Bottom C D, which we ſuppoſe horizontal, in a perpendicular Direction E C, none but that Part within the Cylinder E C D F can preſs upon it; the natural Tendency and Preſſure of the reſt being taken off by the Sides.

Again, ſuppoſing the Bottom, C D (*Fig.* 10.) much bigger than the Top F G. Or even, for the eaſier Demonſtration, ſuppoſe a Tube F E fix'd in a Cylinder A B C D: And ſuppoſe the Bottom C D rais'd to L; that the *Fluid* may be moved through the Interval D L. Then will it have riſen through the Altitude G H, which is to D L, as the Baſe C D to that G F. The Velocity therefore of the *Fluid* F E, is to its Velocity in the Veſſel A D; as the Baſe C D to the Baſe F G.

Hence, we have the Momentum wherewith the *Fluid* in the Tubes tends downwards, by multiplying the Baſe of the Cylinder C D into its Altitude C K.

Conſequently, the Bottom C D is preſs'd with the ſame Force; as it would be preſs'd by the Cylinder H C D I.

To confirm and illuſtrate this Doctrine of the Preſſure of *Fluids* in the Ratio of the Baſe and Altitude, provide a metallick Veſſel, A C D B (*Fig.* 11.) ſo contrived, as that the Bottom C D may be moveable, and to that End fitted in the Cavity of the Veſſel with a Rim of wet Leather, to ſlide without letting any Water paſs. Then, thro' a Hole in the Top, A B, apply ſucceſſively ſeveral Tubes of equal Altitudes, but different Diameters. Laſtly, faſtening a String to the Beam of a Balance, and fixing the other End by a little Ring K to the moveable Bottom; put Weights in the other Scale, till they be ſufficient to raiſe the Bottom C D: Then will you not only find, that the ſame Weight is required, what Diameter or Magnitude ſoever the Tube be of; but even, that the Weight which will raiſe the Bottom, when preſs'd by the ſmalleſt Tube, will raiſe it when preſs'd by the whole Cylinder H C D I.——

12° *The moſt ſolid and ponderous Body, which near the Surface of the Water would ſink with great Velocity, yet if placed at a greater Depth than twenty times its own Thickneſs, will not ſink, unleſs aſſiſted by the Weight of the incumbent Water.*

Thus, immerge the lower End of a ſlender Glaſs Tube in a Veſſel of Mercury: Then, ſtopping the upper End with your Finger, you will by that means keep about half an Inch of that ponderous *Fluid*, ſuſpended in the Tube. Laſtly, keeping the Finger thus; immerge the Tube in a long Glaſs of Water, till the little Column of Mercury be more than 13 or 14 times its Length under Water. Then, removing the Finger, you will find that the Mercury will be kept ſuſpended in the Tube by the Preſſure of the Water upwards: But if you raiſe the Tube a very little above the former Station; the Mercury will immediately run out: Whereas, if before you had removed the Finger from the Top, you had ſunk the Pipe ſo low, as that the Mercury were 12 or 14 Inches, *&c.* below the Surface of the Water; the Mercury would be violently forced up, and make ſeveral Aſcents and Deſcents in the Tube, till it had gain'd its proper Station, according to the Laws of ſpecific Gravity.

*Corol.* Hence we have a Solution of the Phænomenon of two poliſh'd Marbles, or other Planes, adhering ſo ſtrongly together: In that the Atmoſphere preſſes or gravitates with its whole Weight on the under Surface and Sides of the lower Marble; but cannot do ſo at all on its upper Surface, which is cloſely contiguous to the upper, and ſuſpended Marble.

II. *For the Laws of the Preſſure and Gravitation in* FLUIDS *ſpecifically heavier, or lighter than the Bodies immerged,* ſee SPECIFIC *Gravity.*

*For the Laws of the Reſiſtance of* FLUIDS, or the *Retardation of ſolid Bodies, moving in* Fluids, ſee RESISTANCE.

*For the Aſcent of* FLUIDS *in Capillary Tubes, or between Glaſs Planes,* ſee ASCENT.

The Motions of *Fluids*, and particularly *Water*, make the Subject of *Hydrulicks*. See HYDRULICKS.

## *Hydrulick Laws of* FLUIDS.

1° *The Velocity of a* Fluid, *as* Water, *moved by the Preſſure of a ſuper-incumbent* Fluid, *as* Air, *is equal at equal Depths; and unequal, at unequal ones.*

For the Preſſure being equal at equal Depths, the Velocity ariſing thence muſt be ſo too; and *vice verſa:* Yet does not the Velocity follow the ſame Proportion, as the Depth; notwithſtanding that the Preſſure, whence the Velocity ariſes, does increaſe in the Proportion of the Depth. But here the Quantity of the Matter is concern'd: And the Quantity of Motion, which is compounded of the Ratio of the Velocity and Quantity of Matter, is increaſed in equal times as the Square of the Velocities.

2° *The Velocity of a* Fluid *ariſing from the Preſſure of a ſuper-incumbent* Fluid, *at any Depth, is the ſame as that which a Body would acquire in falling from a Height, equal to the Depth.* As is demonſtrated both from Mechanicks and Experiments. See DESCENT.

3° *If two Tubes of equal Diameters, full of any* Fluid, *be placed any how, either erect, or inclined; provided they be of the ſame Altitude, they will diſcharge equal Quantities of the* Fluid *in equal times.*

That Tubes, every way equal, ſhould, under the ſame Circumſtances, empty themſelves equally, is evident; and that the Bottom of a perpendicular Tube is preſs'd with the ſame Force, as that of an inclined one, when their Altitudes are equal, has already been ſhewn. Whence it eaſily follows, that they muſt yield equal Quantities of Water, *&c.*

4° *If two Tubes of equal Altitudes, but unequal Apertures or Diameters, be kept conſtantly full of Water, the Quantities of Water they yield in the ſame Time, will be as the Diameters: And this, whether they be erect, or any how inclined.*

*Corol.* If the Apertures or Diameters be circular, the Quantities of Water emptied in the ſame time, are in a duplicate Ratio of the Diameters.

This Law, *Mariotte* obſerves, is not perfectly agreeable to Experiment. If one Diameter be double the other, the Water flowing out of the leſs is found more than a Fourth of what flows out of the greater. But this muſt be owing to ſome accidental Irregularities in making the Experiments.

*Wolfius* aſcribes it principally to this, that the Column of Water directly over the Aperture is ſhorter than that next the Sides or Parietes of the Veſſel: For the Water, in its Efflux forms a kind of Cavity over the Aperture; that Part immediately over it being evacuated firſt, and the other Water not running faſt enough from the Sides to ſupply it. Now, this Cavity, or Diminution of Altitude being greater in the greater Tube, than the leſs; hence the Preſſure or Endeavour to paſs out, becomes proportionably leſs in the greater Tube, than the leſs.

5° *If the Apertures E and F of two Tubes A B and C D* (Fig. 12) *be equal, the Quantities of Water diſcharged in the ſame time are as the Velocities.*

6° *If two Tubes have equal Apertures E and F, and unequal Altitudes A B and C D; the Quantity of Water diſcharged from the greater A B, will be to that diſcharged from C D, in the ſame time; in a ſubduplicate Ratio of the Altitudes A B and C D.*

*Corol.*

*Corol.* 1. Hence, the Altitudes of Waters, A B, and C D, discharged thro' equal Apertures E and F; are in a duplicate Ratio of the Waters discharged in the same time. And as the Quantities of Water are as the Velocities; the Velocities are likewise in a subduplicate Ratio of their Altitudes.

2. Hence, the Ratio of the Waters discharged by two Tubes A B, and C D, together with the Altitude of one of them being given; we have a Method of finding the Altitude of the other, *viz.* by finding a fourth Proportional to the three given Quantities; which Proportional multiplied by it self, gives the Altitude of C D, required.

3. Hence also, the Ratio of the Altitudes of two Tubes of equal Apertures being given; as also the Quantity of Water discharged by one of them: We have a Method of determining the Quantity the other shall discharge in the same time. Thus, to the given Altitudes, and the Square of the Quantity of Water discharged at one Aperture, find a fourth Proportional. The square Root of this will be the Quantity of Water required.

Suppose *e. gr.* the Heights of the Tubes as 9 to 25; and the Quantity of Water discharged at one of them, three Inches: That discharged by the other, will be $= \sqrt{(9.25:9)} = \sqrt{25} = 5$.

7° *If the Altitudes of two Tubes A B, and C D be unequal; and the Apertures E and F likewise unequal: The Quantities of Water discharged in the same time, will be in a Ratio compounded of the simple Ratio of the Apertures; and the subduplicate one of the Altitudes.*

*Corol.* Hence, if the Quantities of Water discharged in the same time by two Tubes, whose Apertures and Altitudes are unequal, be equal; the Apertures are reciprocally as the Roots of the Altitudes: and the Altitudes in a reciprocal Ratio of the Squares of the Apertures.

8° *If the Altitudes of two Tubes be equal, the Water will flow out with equal Velocity, however unequal the Apertures be.*

9° *If the Altitudes of two Tubes, A B, and C D* (Fig. 13.) *as also their Apertures E, and F be unequal; the Velocities of the Waters discharged are in a subduplicate Ratio of their Altitudes.*

*Corol.* 1. Hence, as the Velocities of Waters flowing out at equal Apertures, when the Altitudes are unequal, are also in a subduplicate Ratio of the Altitudes; and, as this Ratio is equal, if the Altitudes be equal; it appears, in the general, that the Velocities of Waters flowers out of Tubes is in a subduplicate Ratio of the Altitudes.

2. Hence also, the Squares of the Velocities are as the Altitudes.

*Mariotte* found from repeated Experiments, that if a Vessel A B C D have a Tube E F fitted to it, there will more Water be evacuated through the Tube, than there could have been in the same time, through the Aperture of the Vessel E, without the Tube: And that the Motion of the *Fluid* is accelerated so much the more, as the Tube E F is the longer.

*E. gr.* The Altitude of a Vessel A C being one Foot, that of the Tube E F three Feet, and the Diameter of the Aperture three Lines; $6\frac{1}{2}$ Septiers of Water were discharged in the Space of one Minute; whereas upon taking off the Tube, only four Septiers were discharged. Again, when the Length of the Tube E F was six Feet, and the Diameter of the Aperture F, an Inch; the whole Quantity of Water run out in 37 Seconds: But, cutting off half the Tube F H, the Vessel was not evacuated in less than 45 Seconds; and taking it quite away, in less than 95 Seconds.

9° *The Altitudes and Apertures of two Cylinders full of Water, being the same: One of them will discharge double the Quantity of Water discharged in the same time by the other; if the first be kept continually full, while the other runs it self empty.*

For the Velocity of the full Vessel will be equable; and that of the other continually retarded. Now, 'tis demonstrated, that, if two Bodies be impell'd by the same Force, and the one proceeds equably, and the second is equably retarded: By that time they have lost all their Motion, the one has moved double the space of the other.

10° *If two Tubes have the same Altitudes, and equal Apertures; the Times wherein they will empty themselves, will be in the Ratio of their Bases.*

11° *Cylindric, and Prismatic Vessels, as A B C D* (Fig. 14.) *empty themselves by this Law, that the Quantities of Water discharged in equal times, decrease according to the uneven Numbers,* 1. 3. 5. 7. 9. &c. *taken backwards.*

For the Velocity of the descending Level F G is continually decreasing in the subduplicate Ratio of the decreasing Altitudes: But the Velocity of a heavy Body descending, increases in the subduplicate Ratio of the increasing Altitudes. The Motion, therefore, of the Level F G in its Descent from G to B, is the same, as if it were to descend in the inverse Ratio, from B to G. But if it descend from B to G, the Spaces, in equal times, would increase according to the Progression of the uneven Numbers. Consequently, the Altitudes of the Level F G in equal times decrease according to the same Progression inversely taken.

*Corol.* Hence, the Level of Water F G, descends by the same Law, as, by an equal Force impress'd, it would ascend thro' an Altitude equal to F G.

From this Principle, might many other particular Laws of the Motion of *Fluids* be demonstrated, which for Brevity sake we here omit.

*To divide a Cylindrical Vessel into Parts, which shall be evacuated in certain Parts, or Divisions of time,* see CLEPSIDRA.

12° *If Water descending thro' a Tube H E* (Fig. 15.) *spout up at the Aperture G, whose Direction is vertical, it will rise to the same Altitude G I, at which the Level of the Water L M, in the Vessel A B C D does stand.*

For since the Water is driven thro' the Aperture G, by the Force of Gravity of the Column E K; its Velocity will be the same as that of a Body by the same Force impress'd, would rise to the Altitude F I. Wherefore, since the Direction of the Aperture is vertical; the Direction of the Water spouting thro' it, will be so too. Consequently, the Water must rise to the Height of the Level of the Water L M in the Vessel.

Indeed, by the Experiment it appears, that the Water does not rise quite so high as I: Beside, that the Aperture G should be smaller, as the Height of the Level of the Water is less: And even smaller, when Mercury is to be spouted, than when Water. But this is no Objection to the Truth of the Theorem; it only shews that there are certain external Inpediments, which diminish the Ascent.

Such are the Resistance of the Air; the Friction of the Tube, and the Gravity of the ascending *Fluid.*

13° Water descending thro' an inclined Tube, or a Tube bent in any manner; will spout up through a perpendicular Aperture to the Height at which the Level of the Water in the Vessel stands.——

14° *The Lenghts or Distances D E and D F, or I H, and I G* (Fig. 16.) *to which Water will spout either thro' an inclined, or a horizontal Aperture D, are in a subduplicate Ratio of the Altitudes in the Vessel or Tube A B and A D.*

For, since Water spouted out thro' the Aperture D, endeavours to proceed in the horizontal Line D F; and at the same time, by the Power of Gravity, tends downwards in Lines perpendicular to the same; nor can the one Power hinder the other, in as much as the Directions are not contrary: It follows, that the Water by the Direction B A will arrive at the Line I G, in the same time wherein it would have arrived at it, had there been no horizontal Impulse at all. Now the Right-lines I H and I G are the Spaces which the same Water would have described in the mean time by the horizontal Impetus: But the Spaces I H and I G, inasmuch as the Motion is uniform, are as the Velocities. Consequently, the Velocities are in a subduplicate Ratio of the Altitudes A B and A D. And therefore, the Lengths or Distances to which the Water will spout in Apertures either horizontal or inclined, are in a subduplicate Ratio of the Altitudes.

*Corol.* Hence, as every Body projected either horizontally, or obliquely, in an unresisting Medium, describes a Parabola: Water projected either through a vertical or inclined Spout, will describe a Parabola.

Hence we have a way of making a delightful kind of Water Arbours, or Arches, *viz.* by placing several inclined Tubes in the same Right-line.

*On these Principles are form'd various Hydraulic Engines for the raising,* &c. *of* Fluids, *as* Pumps, Syphons, Fountains, *or* Jets de Eau, *&c. Which see described under their proper Articles,* PUMP, SYPHON, FOUNTAIN, SPIRAL SCREW, *&c.*

*For the Laws of the Motion of* Fluids, *by their own Gravity, along open Channels,* &c. see RIVER, and WAVE.

*For the Laws of Pressure and Motion of Air, consider'd as a* Fluid, see AIR, and WIND.

FLUMMERY, A wholesome Jelly, made of Oatmeal.

The manner of preparing it in the Western Parts of *England,* is to take half a Peck of Wheat Bran, which must be soaked in cold Water three or four Days; then strain out the Oil and Milk-water of it, and boil it to a Jelly: Afterwards season it with Sugar, Rose and Orange-flower Water, and let it stand till cold, and thickened again; and then eat it with White or Rhenish Wine, or Milk-cream.

FLUOR, in Physick, *&c.* a *Fluid*; or more properly, the State of a Body, which was before hard, or solid, but is now reduc'd by Fusion or Fire into a State of Fluidity. See FLUIDITY.

Gold and Silver will remain a long time in a *Fluor,* kept to it by the intensest Heat, without losing any thing of their Weight. See FIXITY.

FLUOR is also us'd by the modern Mineral Writers for such soft, transparent, starry kinds of mineral Concretions, as are frequently found amongst Oars, and Stones, in Mines and Quarries.

Fluor *Albus*, or *Uterinus*, a kind of Flux, incident to Women, popularly called the *Whites*. See Whites.

It conſiſts in an irregular, diſorderly Diſcharge of ſome corrupt Humor, ſometimes white, and pale, like Whey; ſometimes yellow, green, or blackiſh: At firſt it is uſually ſoft and harmleſs, but in time grows hot, ſharp, and corroſive, and excoriates all the Parts it touches.

It is attended with a Pain in the Spina Dorſi, a Swelling of the Feet and Eyes, Wearineſs, Lumbago, a Loſs of Appetite, Change of Complexion, &c.

It is frequently produced from a too heavy and laſting Grief. It muſt be well diſtinguiſh'd from an Ulcer in the Uterus, and a Gonorrhæa. See Gonorrhæa.

It happens to all Ages; from Girls of three Years old: And at all times; before, after, or even along with the Menſes; and even to Women with Child.

*Etmuller* takes it for a *Gonorrhæa muliebris*, analogous to a non virulent Gonorrhæa in Men, and flowing out of the Glandulæ of the Proſtrates.

What the *Coryza* is in the Noſtrils; too much weeping in the Eyes; coughing and hawking in the Fauces; that, according to *Etmuller*, is this *Fluor* in Women.

According to *Pitcairn*, all the Difference between the venereal Gonorrhæa, and a *Fluor albus*, is that the Humor evacuated in the latter is viſcid, and in the former, quite thin and ſerous. The ſame Author adds, that the *Fluor albus*, can only be cured by Medicines proper for the venereal Diſeaſe. See Gonorrhæa.

FLUTE, an Inſtrument of Muſick, the ſimpleſt of all thoſe of the Wind kind. See Musick.

It is play'd, by blowing in it with the Mouth; and the Tones or Notes form'd and changed by ſtopping or opening Holes diſpoſed for that purpoſe all along it.

The *Latins* call it *Fiſtula*, and ſometimes *Tibia*, Pipe; from the former of which, ſome derive the Word *Flute*: Tho' *Borel* will have it derived from *Flutta*, a Lamprey, thus called *a fluitando in Fluviis*; in regard the *Flute* is long, like the Lamprey, and has Holes all along it, like that Fiſh.

The antient *Fiſtulæ* or *Flutes* were made of Reeds; afterwards they were of Wood; and at length, of Metal. But how they were blown, whether as our *Flutes*, or Hautboys, does not appear.

'Tis plain, ſome had Holes, which at firſt, were but few; but afterwards increaſed to a greater Number: And ſome had none. Some were ſingle Pipes; and ſome a Combination of ſeveral, particularly *Pan's Syringa*, which conſiſted of ſeven Reeds, join'd together ſideways.

They had no Holes; each giving but one Note, in all ſeven diſtinct Notes: but at what Intervalls, is not known: Perhaps they were the Notes of the Natural, or Diatonic Scale. See Tibia, and Fistula.

The *German* Flute is different from the common one: 'Tis not put into the Mouth, by the End, as the ordinary ones are: The End is ſtop'd up with a Plug, or Tampion; but the lower Lip is applied to a Hole about half an Inch diſtant from it.

'Tis uſually a Foot long; equally big every where, and perforated with ſix Holes, beſide that of the Mouth. It is us'd as a Treble in a Concert of ſeveral Parts.

Its Baſs is double, or quadruple that Length.

Flutes, or *Flutings*, in Architecture, are perpendicular Channels, or Cavities, cut along the Shaft of a Column or Pilaſter. See Column, and Pilaster.

They are ſuppoſed to have been firſt introduced in Imitation of the Plaits of Womens Robes; and are therefore called by the *Latins*, *Striges*, and *Rugæ*. See Striges, &c.

The *French* call them *Cannelures*, as being Excavations; and we, *Flutes*, or *Flutings*, as bearing ſome Reſemblance to the muſical Inſtrument ſo called.

They are chiefly affected in the *Ionic* Order, where they had their firſt Riſe; tho' they are alſo us'd in all the richer Orders, as the *Corinthian* and *Compente*; but rarely in the *Doric*; ſcarce ever in the *Tuſcan*. See Ionic, Corinthian, Composite, Doric, &c.

Their Number is 24, tho' in the *Doric* only, 20.

Each *Flute* is hollow'd in, exactly a Quadrant of a Circle.

Between the *Flutes* are little Spaces that ſeparate them, called by *Vitruvius*, *Striæ*, and by us, *Liſts*; tho' in the *Doric*, the *Flutes* are frequently made to join each other, without any intermediate Space at all; the Liſt being ſharpen'd off to a thin Edge, which forms a Part of each *Flute*.

In ſome Buildings we ſee Columns with *Flutes* that go winding round the Shaft, ſpirally; but this is rather look'd on as an Abuſe.

*Vignola* determines the Depth of the *Flutes* by taking the Angle of an equilateral Triangle for the Centre.

*Vitruvius* deſcribes it from the Middle of the Square, whoſe Side is the Breadth of the *Flute*: Which latter Method makes them deep.

The *Flutes*, or *Striges*, are frequently fill'd up with a prominent, or ſwelling Ornament, ſometimes plain, in form of a Staff or Reed; and ſometimes a little carved, or enrich'd, in imitation of a Rope, or otherwiſe, and therefore called a *Rudenture*, or *Cabling*; and the Columns thus enrich'd, *Cabled Columns*. See Column.

This is moſt frequent in the *Corinthian* Order. The Cablings, or Fillings up commence from about one Third of the Height of the Column, reckoning from the Baſe; and are continued to the Capital: That is, they begin and end with the Diminution of the Column. See Diminution.

Flutes, or *Flutings*, are alſo us'd in Botany, in deſcribing the Stems and Fruits of certain Plants, which have Furrows, analogous to thoſe of Columns.

Flute, or *Fluyt*, is alſo a kind of long Veſſel, with flat Ribs, or Floor Timbers; round behind, and ſwelled in the Middle; ſerving chiefly for the carrying of Proviſions in Fleets, or Squadrons of Ships: tho' it is alſo us'd in Merchandizes.

The Word *Flute*, taken for a ſort of Boat, or Veſſel, is derived, according to *Borel*, from the antient *Flette*, a little Boat. In the verbal Proceſs of the Miracles of St. *Catharine* of *Sweden*, in the XII^th^ Century, we read, *Unus equum ſuum una cum mercibus magni ponderis introduxit ſuper inſtrumentum de lignis fabricatum, vulgariter dictum* Fluta.

Upon which the *Bollandiſts* obſerve, that in ſome Copies it is read *Flotta*, an Inſtrument call'd by the Latins *Rattis*; and that the Word *Flutta*, or *Flotta*, aroſe from *Flotten*, or *vlotten*, to float.——

Flute-*Grafting*, ſee Engrafting.

FLUX, Fluxus, in Medicine, an extraordinary Iſſue, or Evacuation of ſome Humor. See Humor.

*Fluxes* are various, and variouſly denominated, according to their Seats, or the Humors thus voided; as, *a Flux of the Belly*; *Uterine Flux*, *Hepatic Flux*, *Salival Flux*, &c.

The *Flux of the Belly* is of four kinds, which have their reſpective Denominations, *viz.* the *Lientery*, or *Fluxus Lientericus*; the *Cæliac*, or *Fluxus Chyloſus*; *Diarrhæa*; and *Diſſentery*, or *Bloody Flux*. See each explain'd under its proper Article, Lientery, Diarrhæa, &c.

A Wound, or Scarification croſs the Crown of the Head is uſed in *Scotland* to cure *Fluxes* and Diſſenteries. *Phil. Tranſact.* N° 312.

Flux *of the Mouth*, or *Salival* Flux, ſee Salivation.

The *Hepatic* Flux of the Antients is a mere Name; being, in reality a hæmorrhoidal *Flux*, out of the hemorrhoidal Veins; and ſo reducible to the *Diſſentery*. See Hæmorrhoids.

Women are ſubject to three kinds of *Fluxes* extraordinary: The firſt, call'd the *Menſes*, or *Menſtrual Flux*, as happening every Mouth; ſometimes *Courſes*, as keeping pace with the Moon; and ſometimes *Flowers*. See Menses, and Flowers.

The ſecond is after Delivery, call'd *Lochia*. See Lochia.

The third is irregular, and præternatural; and for want of a better Name called *Fluor albus*, or *Whites*. See Fluor *Albus*.

Flux, in Hydrography, a regular, periodical Motion of the Sea; happening twice in twenty four Hours; wherein the Water is rais'd, and driven violently againſt the Shores.

The *Flux*, or *Flow*, is one of the Motions of the Tide; the other, whereby the Water ſinks and retires, is call'd the *Reflux*, or *Ebb*. See Tides.

There is always a kind of reſt, or Ceſſation of about half an Hour, between the *Flux* and Reflux: During which the Water is at its greateſt Height, called *High Water*.

The *Flux* is made by the Motion of the Water of the Sea, from the Equator towards the Poles; which, in its Progreſs, ſtriking againſt the Coaſts in its way, and meeting with Oppoſition from them, ſwells, and where it can find Paſſage, as in Flats, Rivers, &c. riſes up, and runs into the Land.——

This Motion follows in ſome meaſure the Courſe of the Moon; as it loſes, or comes later every Day by about three Quarters of an Hour; or more preciſely, 48 Minutes: And by ſo much is the Motion of the Moon ſlower than that of the Sun. It is always higheſt and greateſt in full Moons, particularly thoſe of the Equinoxes. In ſome Parts, as at Mount St. *Michael*, it raiſes 80 or 90 Feet; tho' in the open Sea it never riſes above a Foot, or two: And in ſome Places, as about the *Morea*, there is no *Flux* at all.

It runs up ſome Rivers above 120 Miles. Up the River *Thames* it only goes 80; *viz.* near to *Kingſton* in *Surry*.

Above *London* Bridge the Water *flows* four Hours, and *ebbs* eight; and below the Bridge, *flows* five Hours, and ebbs ſeven. See Flood.

Flux *Powders* are thoſe prepared to facilitate the Fuſion of the harder Metals; as alſo to melt Oars, in order to diſcover what Proportion of Metal they contain. See Fusion.

Powder of Antimony is a very good *Flux* Powder. By this alone may you readily melt Iron or Steel in a Crucible, with

with an ordinary Charcoal Fire. See ANTIMONY; ſee alſo FOUNDERY.

FLUXION, in Medicine, a ſudden Collection of morbid Matter in any Part of the Body.

*Fluxions* ariſe either from the Weakneſs, Flaccidity, and Inactivity of the Part affected, which does not diſperſe, protrude, or expell the Humors naturally receiv'd into it: Or from the Derivation of ſome extraordinary Quantity of peccant Matter from ſome other Part.

This latter is properly called *Defluxion*, and by the Antients, *Attraction*. See DEFLUXION.

*Fluxions* are occaſion'd by Motion, Heat, Pain, Fomentation, &c.

A *Fluxion*, or Defluxion on the Lungs, is called a Catarrh. See CATARRH.

FLUXIONS, or the *Method of* FLUXIONS, is the Arithmetick, or Analyſis, of infinitely ſmall variable Quantities; or the Method of finding an Infiniteſimal, or infinitely ſmall Quantity, which being taken an infinite Number of times, becomes equal to a given Quantity. See INFINITE, and INFINITESIMAL.

Sir *I. Newton*, and after him all the *Engliſh* Authors, call theſe infinitely ſmall Quantities, *Fluxions*; as conſidering them as the momentary Increments or Decrements of variable Quantities, *e. gr.* of a Line conſider'd as generated by the *Flux* of a Point; or of a Surface generated by the *Flux* of a Line.

Accordingly, the variable Quantities are called *fluent*, or *flowing Quantities*; and the Method of finding either the *Fluxion*, or the *Fluent*, the *Method of Fluxions*. See METHOD.

M. *Leibnitz*, and the Foreigners after him, conſider the ſame infinitely ſmall Quantities as the *Differences*, or *Differential* of two Quantities; and call the Method of finding thoſe Differences, the *Differential Calculus*. See CALCULUS *differentialis*.

Each of theſe ways of conſidering and denominating, has its Advantages; which the Retainers to this, or that Method, ſtrenuouſly aſſert.

Variable Quantities, *i. e.* ſuch as in the Geneſis of Figures by local Motion are continually increaſing and diminiſhing, are certainly very properly denominated *Fluents*: And as all Figures may be conceiv'd as ſo generated; the infinitely ſmall Increments, or Decrements of ſuch Quantities are very naturally denominated *Fluxions*.

Beſide this Difference in the Name, there is another in the Notation.

Sir *I. Newton* expreſſes the *Fluxion* of a Quantity, as $x$ by a Dot placed over it, as $\dot{x}$; and Mr. *Leibnitz* expreſſes his Differential of the ſame $x$ by prefixing a $d$ as $dx$; each of which Methods of Notation has likewiſe its Advantage. See *Differential* CALCULUS.

Setting aſide theſe circumſtances, the two Methods are the ſame.

The Method of *Fluxions* is one of the greateſt, moſt ſubtile and ſublime Diſcoveries of this, or perhaps any other Age: It opens a new World to us, and extends our Knowledge, as it were, to Infinity. It carries us beyond the Bounds that ſeem'd to have been preſcrib'd to the human Mind; at leaſt infinitely beyond thoſe to which the antient Geometry was confined.

The Hiſtory of this important Diſcovery, as freſh as it is, is a little dark, and imbroiled. Two of the greateſt Men of this Age, do both of them claim the Invention, Sir *I. Newton*, and M. *Leibnitz*; and nothing can be more glorious for the Method it ſelf, than the Zeal wherewith the Partiſans of either ſide have aſſerted the Title.

To give the Reader a juſt View of this noble Diſpute, and of the Pretenſions of each Party, we ſhall lay before him the *Origines* of the Diſcovery, and mark where each Claim commenced, and how it was ſupported.

The firſt time the Method made its Appearance in publick, was in 1684; when M. *Leibnitz* gave the Rules thereof in the *Leipſic* Acts of that Year; but the Demonſtrations he kept to himſelf. The two Brothers, the *Bernoulli's*, were preſently ſtruck with it; and found out the Demonſtrations, tho' very difficult; and practiſed the Calculus with ſurprizing Succeſs.

This is all we hear of it, till the Year 1687; when Sir *I. Newton's* admirable *Principia* came forth, which is almoſt wholly founded on the ſame Calculus.

The common Opinion at that time, was, that Sir *Iſaac*, and M. *Leibnitz* had each invented it about the ſame time: And what confirm'd it, was, that neither of them made any mention of the other; and that, tho' they agreed in the Subſtance of the thing, yet they differed in their ways of conceiving; called it by different Names, and uſed different Characters.

In effect, Mr. *Leibnitz's* Character, was ſuppos'd by Foreigners to be ſomewhat more comodious than that of Sir *Iſaac Newton*; accordingly, the Method ſoon ſpreading it ſelf throughout Europe, M. *Leibnitz's* Character went with it; by which means the Geometricians were inſenſibly accuſtomed too look on him as the ſole, or principal Inventor.

The two Great Authors themſelves, without any ſeeming Concern, or Diſpute as to the Property of the Invention, enjoy'd the glorious Proſpect of the Progreſſes continually making under their Auſpices; till the Year 1699: when the Peace began to be diſturb'd.

M. *Fatio*, in a Treatiſe of the *Line of ſwifteſt Deſcent*, having declared that he was oblig'd to own Sir *I. Newton* as the firſt Inventor of the Differential Calculus, and the firſt by many Years; and that he left the World to judge, whether M. *Leibnitz*, the ſecond Inventor, had taken any thing from him: This preciſe Diſtinction between firſt and ſecond Inventor; with the Suſpicion it inſinuated; raiſed a Controverſy between M. *Leibnitz*, ſupported by the Editors of the *Leipſic Acta*; and the *Engliſh* Geometricians, who declared for Sir *I. Newton*.

Sir *Iſaac* himſelf never appear'd on the Scene: His Glory was become that of the Nation; and his Adherents, warm in the Cauſe of their Country, needed him not to animate them.

Writings ſucceeded each other but ſlowly, on either ſide; probably on account of the Diſtance of Places; but the Controverſy grew ſtill hotter and hotter: Till at length it came to ſuch Paſs, that in the Year 1711, M. *Leibnitz* complain'd to the Royal Society, that Dr. *Kiel* had accuſed him of publiſhing the Method of *Fluxions* invented by Sir *I. Newton*, under other Names, and Characters.

He inſiſted, that no body knew better than Sir *Iſaac* himſelf, that he had ſtolen nothing from him; and required that Dr. *Kiel* ſhould publickly diſavow the ill Conſtruction which might be put on his Words.

The Society, here appeal'd to as Judge, appointed a Committee to examine all the old Letters, Papers, &c. that had paſſed among the ſeveral Mathematicians, relating to the Point: And after a ſtrict Examen of all the Evidences that could be procured, gave in their Report, "That it "did not appear that M. *Leibnitz* knew any thing of the "differential Calculus before a Letter wrote him by Sir *I.* "*Newton*, and ſent to him at *Paris*, in the Year 1672; "wherein the Method of *Fluxions* was ſufficiently ex- "plain'd, to let a Man of his Sagacity into the whole Mat- "ter; and that Sir *I. Newton* had even invented his Me- "thod before the Year 1669, and of conſequence fifteen "Years before M. *Leibnitz* had given any thing on the "Subject in the *Leipſic Acts*." And thence they concluded, that Dr. *Kiel* had not at all injured Mr. *Leibnitz* in what he had ſaid.

The Society printed this Cenſure of theirs, together with all the Pieces and Materials relating thereto, under the Title of *Commercium Epiſtolicum, de Analyſi promota. London*, 1712.

The Book was carefully diſtributed through *Europe*, to vindicate the Title of the *Engliſh* Nation to the Diſcovery; for Sir *Iſaac*, as already hinted, never appear'd in it: Whether it were, that he truſted his Honour with his Compatriots, who were zealous enough in the Cauſe; or whether it were, that he were even ſuperior to the Glory thereof.——

M. *Leibnitz* and his Friends could not ſhew the ſame Indifference: He was accus'd of a Theft; and the whole *Commercium Epiſtolicum* either expreſſes it in Terms, or inſinuates it.

Soon after the Publication thereof, a looſe Sheet was printed at *Paris*, in behalf of M. *Leibnitz*, then at *Vienna*. It is wrote with a world of Zeal and Spirit, and maintains boldly, that the Method of *Fluxions* had not preceded that of Differences; and even inſinuates, that it might have aroſe from it.

The Detail of the Proofs on each ſide would be too long, and could not be underſtood without a large Comment, which muſt enter into the deepeſt Geometry.

M. *Liebnitz* had begun to work upon a *Commercium Epiſtolicum*, in oppoſition to that of the Royal Society; but he died before it was compleated.

It muſt be own'd, there are ſtrong Preſumptions in favour of M. *Leibnitz*; Preſumptions, we mean, that he was no Plagiary: For that Sir *Iſaac Newton* was the firſt Inventor, is paſt all Diſpute: His Glory is ſecure: The reaſonable Part, even among the Foreigners, allow it; and the Queſtion is only, Whether M. *Liebnitz* took it from him, or fell upon the ſame thing with him: For in his *Theory of abſtract Motions*, which he dedicated to the Royal Academy, in 1671, before he had ſeen any thing of Sir *Iſaac Newton's*, he already ſuppoſed infinitely ſmall Quantities, ſome greater than others; which is one of the great Principles of the Syſtem.

The Doctrine conſiſts of two Parts, viz. *Fluxions properly ſo called*, or the DIRECT METHOD *of Fluxions* call'd alſo *Calculus Differentialis*; and the *Inverſe Method of Fluxions*, or *Calculus Integralis*.

The

The latter is directly oppoſite to the former; and is a Sequel of it. Both of them are adopted into the new Geometry, and make reigning Methods therein.

The firſt deſcends from finite, to infinite; the latter aſcends from infinitely ſmall, to finite: The one decompounds a Magnitude, the other re-eſtabliſhes it.

### *Direct Method of* Fluxions.

All finite Magnitudes are here conceiv'd to be reſolv'd into infinitely ſmall ones; which are the Elements, Moments, or Differences thereof.

The Art of finding theſe infinitely ſmall Quantities, and of working on them, and diſcovering other infinite Quantities by their means, makes the *Direct* Method of *Fluxions*.

What renders the Knowledge of infinitely ſmall Quantities of ſuch infinite Uſe and Extent, is that they have Relations to each other, which the finite Magnitudes, whereof they are the Infiniteſimals, have not.

Thus, *e. gr.* In a Curve of any kind whatever, the infinitely ſmall Differences of the Ordinate and Abſciſſe, have the Ratio to each other, not of the Ordinate, and Abſciſſe; but of the Ordinate and Subtangent; and of conſequence, the Abſciſſe and Ordinate alone being known, give the Subtangent unknown; or which amounts to the ſame, the Tangent it ſelf. See *the inverſe Method of* Fluxions.

The Method of Notation in *Fluxions*, introduc'd by the Inventor Sir *I. Newton*, is thus,

The *Fluxion* of the variable, or flowing Quantity, to be uniformly augmented, as ſuppoſe the Abſciſſe of a Curve, he denotes by 1, or Unite; and the other flowing Quantities he denotes by the Letters $v\ x\ y\ z$; and their *Fluxions* by the ſame Letters, with Dots plac'd over them, thus $\dot{v}\ \dot{x}\ \dot{y}\ \dot{z}$.

Again, as the *Fluxions* themſelves are alſo variable Quantities, and are continually increaſing, or decreaſing; he conſiders the Velocities with which they increaſe, or decreaſe, as the *Fluxions* of the former *Fluxions*, or *ſecond Fluxions*; which are denoted with two Dots over them, thus, $\ddot{y}\ \ddot{x}\ \ddot{z}$.

After the ſame manner one may conſider the Augments, and Diminutions of theſe, as their *Fluxions* alſo; and thus proceed to *third*, *fourth*, *fifth*, &c. *Fluxions*, which will be noted thus, $\dddot{y}\ \dddot{x}\ \dddot{z}$: $\ddddot{y}\ \ddddot{x}\ \ddddot{z}$: $\dot{\dddot{y}}\ \dot{\dddot{x}}\ \dot{\dddot{z}}$ &c.

Laſtly, if the flowing Quantity be a Surd, as $\sqrt{:a-b}$; he notes its *Fluxion* $\dot{\sqrt{}}:a-b$: If a Fraction $\frac{x}{d-y}$ he notes it, $\frac{\dot{x}}{d-y}$:

The chief Scope and Buſineſs of *Fluxions*, is, from the flowing Quantity given, to find the *Fluxion*: For this, we ſhall lay down one general Rule, as ſtated by Dr. *Wallis*; and afterwards apply and exemplify it in the ſeveral Caſes.——

" Multiply each Term of the Equation ſeperately by the " ſeveral Indices of the Powers of all the flowing Quanti- " ties contain'd in that Term: And in each, change one " Root or Letter of the Power into its proper *Fluxion*: " The Aggregate of all the Products connected together " by their proper Signs, will be the *Fluxion* of the Equa- " tion deſired."

The Application of this Rule will be contain'd in the following Caſes.——

I. In the General: To *expreſs the* Fluxions *of ſimple variable Quantities*, as already mentioned, you need only put the Letter, or Letters, which expreſs them, with a Dot over them: Thus, the *Fluxion* of $x$ is $\dot{x}$; and the *Fluxion* of $y$ is $\dot{y}$; and the *Fluxion* of $x+y+v+z$, is $\dot{x}+\dot{y}+\dot{v}+\dot{z}$ &c.

*Note.* For the *Fluxion* of Permanent Quantities, when any ſuch are in the Equation, you muſt imagine o, or a Cypher; for ſuch Quantities can have no *Fluxion*, properly ſpeaking, becauſe they are without Motion, or invariable.

II. To *find the* Fluxions *of the Products of two or more variable or flowing Quantities*;

Multiply the *Fluxion* of each ſimple Quantity by the Factors of the Products; or the Product of all the reſt; and connect the laſt Products by their proper Signs; the Sum or Aggregate is the *Fluxion* ſought.

Thus, the *Fluxion* of $x\ y$ is $\dot{x}\ y+x\ \dot{y}$; and the *Fluxion* of $x\ y\ z$, is $\dot{x}\ y\ z+x\ \dot{y}\ z+x\ y\ \dot{z}$; and the *Fluxion* of $x\ v\ y\ z$, is $\dot{x}\ v\ y\ z+x\ \dot{v}\ y\ z+x\ v\ \dot{y}\ z+x\ v\ y\ \dot{z}$; and the *Fluxion* of a $\overline{+\ x\ x}$ by $b-y$ (the common Product being $a\ b+b\ x-y\ a-x\ y$) will be $\dot{b}\ \dot{x}-\dot{y}\ a-\dot{x}\ y-x\ \dot{y}$.

III. *To find the* Fluxion *of a Fraction*;

Multiply the *Fluxion* of the Numerator by the Denominator, and after it place (with the Sign —) the *Fluxion* of the Denominator to the Nominator, and divide the whole by the Square of the Denominator.

Thus, the *Fluxion* of $\frac{x}{y}$ is $\frac{\dot{x}\ y-x\ \dot{y}}{y\ y}$;

For ſuppoſe $\frac{x}{y}=z$, then will $x=y\ z$; which equal Quantities will have equal *Fluxions*; therefore $\dot{x}=\dot{y}\ z+z\ \dot{y}$, and $\dot{x}-z\ \dot{y}=z\ \dot{y}$; and dividing all by $y$ $\frac{\dot{x}-x\ \dot{y}}{y}=z=$ (becauſe $\frac{x}{y}=z$) $y\frac{\dot{x}-x\ \dot{y}}{y\ y}$: Wherefore this laſt is the *Fluxion* of the Fraction $\frac{x}{y}$; becauſe $z$ being $=\frac{x}{y}$, $\dot{z}$ will be equal to the *Fluxion* of $\frac{x}{y}$

And the *Fluxion* of $\frac{a}{x}$ will be $\frac{-\dot{x}\ a}{x\ x}$; for the permanent Quantity $a$ having no *Fluxion*, there can be no Product of the *Fluxion* of the Numerator into the Denominator, as there would have been, had $a$ been $x$, $z$, or any other variable Quantity.

IV. *To find the* Fluxion *of a Power*;

Multiply the Power (firſt brought one Degree lower) by the Index of that firſt Power; and the Product by the *Fluxion* of the Root.

Thus, the *Fluxion* of $x\ x$ will be $2\ x\ \dot{x}$, for $x\ x=x\times x$; but the *Fluxion* of $x\times z=\dot{x}\ x+x\ \dot{x}=2\ \dot{x}\ x$, &c. and the *Fluxion* of $x^3$ will be $3\ x\ x\ \dot{x}$. That of $x^8$ will be $8\ x^7\ \dot{x}$, &c. Or if $m$ expreſs the Index of any Power, as ſuppoſe $x^m$, its *Fluxion* will be $m\ x^{m-1}\ \dot{x}$, or $m\ \dot{x}\ x^{m-1}$:

For $x^m$ brought one Degree lower ($m$ being a general Index) muſt be $x^{m-1}$; then that $\times$ by $m$ the Index, makes $m\ x^{m-1}$; and this laſt by the *Fluxion* of the Root, produces $m\ x^{m-1}\ \dot{x}$.

If the Power be produced from a Binomial, &c. as ſuppoſe $x\ x+2\ x\ y+y\ y$, its *Fluxion* will be $2\times\dot{x}+2\ \dot{x}\ x+2\ x\ \dot{y}+2\ y\ \dot{y}$, by the Fourth and Second Rules.

If the Exponent be Negative, as ſuppoſe $x^{-m}$ or $\frac{1}{x^m}$, its *Fluxion* will be $-m\ \dot{x}\ x^{-m-1}$.

Or, if you would do it by way of Fraction, $\frac{-m\ x^{m-1}\ \dot{x}}{x^{2m}}$, (for the Square of $x^m$ is as well $x^{2m}$ as $x^{m2}$) or according to Sir *I. Newton*'s Method, which is yet ſhorter, $\frac{-m\ \dot{x}}{x^{m+1}}$.

If the Power be imperfect, *i. e.* if its Exponent be a Fraction, as ſuppoſe $\sqrt[n]{:x^m}$; or in the other Notation $x^{\frac{m}{n}}$, ſuppoſe $x^{\frac{m}{n}}=z$: Then if you raiſe up each Member to the Power of $n$, it will ſtand thus, $x^m=z^n$; the *Fluxion* of which will be, by this general Rule, $m\ x^{m-1}\ \dot{x}=n\ z^{n-1}\ \dot{z}$: Wherefore $\dot{z}$ will be $=\frac{m\ \dot{x}\ x^{m-1}}{n\ z^{n-1}}$ (by dividing both Parties by $n\ z^{n-1}$,) and $\frac{m\ \dot{x}\ x^{m-1}}{n\ z^{n-1}}=\frac{m}{n}\ \dot{x}\ x^{m-1}\ z^{1-n}$; or $\frac{m}{n}\ \dot{x}\ x^{m-n}\ z^{1-n}$, by putting inſtead of $n\ z^{n-1}$, its Value $n\ x^{\frac{m}{n}(n-1)}$.

Hence

Hence to find the *Fluxion* of any kind of Power, proceed thus:

Multiply the Power given by its Index or Exponent, and then that Product by the *Fluxion* of the Root of the Power given; and after that, subtract One, or Unity, from the Index of the Power.

V. *To find the* Fluxions *of Surd Quantities.*

Suppose it requir'd to find the *Fluxion* of $\sqrt{2rx - xx}$, or $\overline{2rx - xx}\,|^{\frac{1}{2}}$. Suppose $2\overline{rx - xx}\,|^{\frac{1}{2}} = z$; then is $2rx - xx = zz$; and consequently $r\dot{x} - x\dot{x} = z\dot{z}$; and by Division, $\frac{r\dot{x} - x\dot{x}}{z} = \dot{z} =$ (by Substitution) $\frac{r\dot{x} - x\dot{x}}{\sqrt{2rx - xx}} =$ to the *Fluxion* of $\sqrt{2rx - xx}$

If it be required to find the *Fluxion* of $a\overline{y - xx}\,|^3$; for $\overline{ay - xx}\,|^3$ put $z$; then, $ay - xx = z^{\frac{2}{3}}$, and $a\dot{y} - 2x\dot{x} = \frac{2}{3}z^{-\frac{1}{3}}\dot{z}$: And multiplying by 3, $3a\dot{y} - 6x\dot{x} = z^{-\frac{1}{3}}\dot{z}$; and consequently, $3az^{\frac{2}{3}}\dot{y} - 6z^{\frac{2}{3}}x\dot{x} = \dot{z}$ equal (substituting $a\overline{y - xx}\,|^2 = z^{\frac{2}{3}}$) $3a^3y^2\dot{y} - 6a^2x^2y\dot{y} + 3ax^4\dot{y} - 6a^3y^2x\dot{x} + 12ayx^3\dot{x} - 6x^5\dot{x} =$ to the *Fluxion* of $a\overline{y - xx}\,|^3$.

VI. *To find the* Fluxion *of Quantities compounded of Rational and Surd Quantities.*

Let it be requir'd to find the *Fluxion* of $\frac{bx^2 + cax + ea^2}{x\sqrt{xx + aa}} = z$. Put $bx^2 + cax + ea^2 = p$ and $\sqrt{xx + aa} = q$. Then the given Quantity is $\frac{p}{q} = z$, and the *Fluxion* thereof is $\frac{\dot{p}q - q\dot{p}}{qq} = \dot{z}$: But $\dot{q}$ is $\frac{x\dot{x}}{\sqrt{xx + aa}}$, and $\dot{p}$ is $= 2b\dot{x}\dot{x} + ca\dot{x}$; therefore in the Equation $\frac{\dot{p}q - q\dot{p}}{qq} = \dot{z}$, if in the place $p$, $q$, $\dot{p}$, $\dot{q}$, we restore the Quantities they represent, we shall have $\frac{bx^3 + cax^2 + ea^2}{\sqrt{xx + aa}} \times \frac{x\dot{x}}{\sqrt{xx + ea}} + 2bx\dot{x}\sqrt{xx + aa} - \frac{cax\dot{x}}{\sqrt{xx + aa}} = z$. Which being reduc'd to one Denomination, gives $\frac{3bx^3 + 2acx^2 + ea^2x}{\sqrt{xx + aa}} + 2ba^2x + xa^3 \times \dot{x} = \dot{z} =$ to the *Fluxion* of the given Quantity.

*Inverse Method of* Fluxions, or *Calculus Integralis*, consists in finding finite Magnitudes, from the infinitely small Parts thereof.

It proceeds, as already observ'd, from infinitely small Quantities to finite; and recompounds and sums up what the other has resolved; whence it is also call'd the *Summatory Calculus*.

But what that has decompounded, this does not always re-establish; so that the Inverse Method is limited, and imperfect; at least, hitherto. If it were once compleat, Geometry would be arrived at its last Perfection.

To give an Idea of its Nature and Office, take the Instance already proposed in the direct Method: In that the infinitely small Quantities of the Ordinates and Abscis, being known, give the Subtangent required. In this, on the contrary, the Subtangent of an unknown Curve being had, gives the infinitely small Quantities of the Abscis and Ordinate which produc'd it, and of consequence the Abscis and Ordinate themselves; which are finite Magnitudes, in whose Relation the whole Essence of the Curve is founded.

But the distinguishing Province of this Methodis in measuring the Base of a Parallelogram multiplied by the infinitely small Element of its Weight, gives an infinitely small Parallelogram; which is the Element of the finite Parallelogram, and is repeated an Infinity of times therein, *i. e.* as many times as there are Points in the Height of the Parallelogram.

To have the finite Parallelogram, therefore, by means of its Element, the Element must be multiplied by the Height; which is the inverse Method of *Fluxions*, re-ascending from the infinitely small Quantity, to the finite.

Such a Circuit of Infinitesimals, 'tis true, were impertinent in so simple a Case; but when we have to do with Surfaces, terminated by Curves; the Method then becomes necessary, or at least superior to any other.

Suppose, *e. gr.* in a Parabola, the Space included between two infinitely near Ordinates, an infinitely small Portion of the Axis, and an infinitely little Arch of the Curve: 'Tis certain, this infinitely small Surface is no Parallelogram; since the two parallel Ordinates which terminate it on one Side, are not equal; and the Arch of the Curve, opposite to the little Portion of the Axis, is frequently neither equal nor parallel thereto. And yet this Surface, which is no Parallelogram, may be consider'd, in the strictest Geometry, as if it really were one; by reason it is infinitely small, and the Error, of consequence infinitely little, *i. e.* none.

So that, to measure it, there needs nothing but to multiply an Ordinate of the Parabola by the infinitely small Portion of the Axis corresponding thereto. Thus we have the Element of the whole Parabola; which Element being rais'd by the inverse Method to a finite Magnitude, is the whole Surface of the Parabola.

This Advantage is peculiar to the Geometry of Infinites, of being able without any Error to treat little Arches of Curves, as if they were Right-lines; curvilinear Spaces, as if rectilinear ones, &c. enables it not only to go with more Ease and Readiness than the antient Geometry, to the same Truths; but also a great Number of Truths inaccessible to the other.

Its Operations, in effect, are more easy, and its Discoveries more extensive: And Simplicity and Universality are its distinguishing Characters.

*To find the flowing Quantity belonging to any* Fluxion *given.*

To have the Doctrine of the Inverse Method correspond and keep pace with that of the Direct, we will apply it in the same Cases.

I° Then, in the general: *To express the variable Quantity of a* Fluxion, there needs nothing but to write the Letters without the Dots.

Thus the flowing Quantities of $\dot{x}$ $\dot{y}$ $\dot{z}$, are $x$ $y$ $z$.

II° *To find the flowing Quantities belonging to the* Fluxion *of the Product of two Quantities*;

Divide each Member of the *Fluxion* by the fluxionary Quantity, or Letter; or change the fluxionary Letter into the proper flowing Quantity of which it is the *Fluxion*: The Quota's connected by their proper Signs will be the flowing Quantities sought.

Only, if the Letters be all exactly the same, the flowing Quantity will be a simple one, whose Parts are not to be connected together by the Signs + and −

III° *To find the flowing Quantity belonging to the* Fluxion *of any Power, either perfect, or imperfect.*

Take the fluxionary Letter or Letters out of the Equation: Then augment the Index of the *Fluxion* by 1, or Unity: Lastly, divide the *Fluxion* by the Index of its Power so increased by Unity.

Thus suppose $3\dot{x}\dot{x}\dot{x}$ proposed; by taking away $\dot{x}$ it will be $3\dot{x}\dot{x}$: and by increasing its Index by Unity, it will be $3\dot{x}\dot{x}\dot{x}$: Then dividing it by 3, its now (augmented) Index, the Quotient will be $\dot{x}\dot{x}\dot{x}$, the flowing Quantity required.

Again, suppose $\frac{n}{m}\dot{x}\,x^{\frac{n-1}{m}}$ a *Fluxion* propos'd: By taking away the fluxionary $\dot{x}$, it will be $\frac{n}{m}x^{\frac{n}{m}-1}$: By augmenting the Index by Unity (*i. e.* taking away −1) it will be $\frac{n}{m}x^{\frac{n}{m}}$: And lastly, by dividing the remaining Part of the *Fluxion* by $\frac{n}{m}$, prefix'd to, or multiplied into $x$, the Quotient will be $x^{\frac{n}{m}}$; which is the flowing Quantity sought.

*The Uses of the direct Method of* Fluxions, *see specified under the Articles* Maximis *and Minimis*, Tangents, &c.

*Those of the Inverse Method, see under* Quadrature *of Curves*; Rectification *of Curves*; Cubature *of Solids*, &c.

FLYBOAT, a large Vessel, with a broad Bow, us'd by Merchants in the coasting Trade.

Some of them will carry 800 Ton of Goods.

*To* Fly *Gross*, in Falconry, is said of a Hawk when she flies at the great Birds, as Cranes, Geese, Herons, &c.

Fly *on Head*, is when the Hawk missing her Quarry, betakes her self to the next Check, as Crows, &c.

FLYERS, in Architecture, such Stairs, as go strait; and do not wind round, nor its Steps made tapering; but the fore and back part of each Stair and the Ends respectively parallel to one another.

So that if one *Flight* do not carry you to your design'd Height, there is a broad half Space; and then you *fly*

again, with Steps every where of the ſame Breadth and Length as before. See STAIR-CASE.

FLYING, the progreſſive Motion of a Bird, or other winged Animal in the liquid Air. See FLIGHT, and BIRD.

*Flying* is either *Natural*, or *Artificial*.

*Natural* FLYING is that perform'd by an Apparatus or Structure of Parts concerted for that end by Nature her ſelf. Such is that of moſt Birds, and Inſects; and ſome Fiſhes.

In *Virginia*, and *New England*, they have alſo *flying Harts*. *Philoſoph. Tranſact.* N° 127. And in *Languedoc*, *flying* Graſhoppers, about an Inch long, wherewith the Ground, in ſeveral Parts, in the Year 1685 was cover'd one third of a Foot deep.——*Ibid.* N° 182.

The Parts of Birds, &c. chiefly concern'd in *Flying*, are the *Wings*, and *Tail*: By the firſt, the Bird ſuſtains and wafts himſelf along; and by the ſecond he is aſſiſted in aſcending, and deſcending; to keep his Body pois'd and upright, and to obviate the Vacillations thereof. See WING and TAIL.

'Tis by the Largeneſs and Strength of the temporal Muſcles, that Birds are ſo well diſpoſed for quick, ſtrong, and continued *Flying*.

Theſe Muſcles, which in Men are ſcarce $\frac{1}{70}$ Part of the Muſcles of the Body, in Birds, exceed and outweigh all the other Muſcles taken together: Upon which Mr. *Willoughby* makes this Reflection, that if it be poſſible for Man to *fly*, his Wings muſt be ſo contrived and adapted, that he may make uſe of his Legs, and not his Arms in managing them. See PECTORAL *Muſcle*.

The *Flying* of Birds is thus effected:

The Bird, firſt, bends his Legs, and ſprings with a violent Leap from the Ground: Then, opens or expands the Jointures of his Wings, ſo as to make a Right-line, perpendicular to the Sides of his Body. Thus, as the Wings, with the Feathers therein, conſtitute one continued Lamina; being now rais'd a little above the Horizon, and vibrating the Wings with great Force and Velocity, perpendicularly, againſt the ſubject Air; the Air, tho' a Fluid, reſiſts thoſe Succuſſions both from its natural Inactivity, and from its Elaſticity, which makes it reſtore it ſelf, after it has been compreſs'd, and react aſmuch as it is acted on: By ſuch means is the whole Body of the Bird protruded.

The Sagacity of Nature is very remarkable in the opening and recovering of the Wing for freſh Strokes.

To do it directly, and perpendicularly, it would needs have a great Reſiſtance to overcome: To avoid which, the bony Part, or Bend of the Wing into which the Feathers are inſerted, moves ſidewiſe with its ſharp End foremoſt; the Feathers following it like a Flag.

The Reſiſtance the Air makes to the withdrawing of the Wings, and conſequently the Progreſs of Bird, will be ſo much the greater, as the Waft, or Stroke of the Fan of the Wing is the longer: But, as the Force of the Wing is continually diminiſh'd by this Reſiſtance; when the two Forces come to be in Equilibrio, the Bird will remain ſuſpended in the ſame Place: For the Bird only aſcends ſo long, as the Arch of Air the Wing deſcribes, makes a Reſiſtance equal to the Exceſs of the ſpecific Gravity of the Bird above the Air. If the Air therefore be ſo rare as to give way with the ſame Velocity as it is ſtruck withal, there will be no Reſiſtance, and conſequently the Bird can never mount on ſuch unſtable Steps.——

Mr. *Ray*, *Willoughby*, &c. have ſuppos'd the Tail to do the Office of a Rudder, in ſteering and turning the Body this way or that: But *Borelli* has ſhewn it unfit for any ſuch Office.

The *Flying* of a Bird, in effect, is quite a different Motion from the Sailing of a Ship: Birds don't vibrate their Wings towards the Tail, as Oars are ſtruck towards the Stern; but waft them downward: Nor does the Tail of the Bird cut the Air at right Angles, as the Rudder does the Water; but is diſpoſed horizontally, and preſerves the ſame Situation what way ſoever the Bird turns.

In effect, as a Veſſel in the Water is turn'd about on its Centre of Gravity to the right, by a briſk Application of the Oars to the left; ſo a Bird, in beating the Air with its right Wing alone, towards its Tail, its Fore-part will be turn'd to the left: As when in ſwimming, by only ſtriking out with the right Arm, and Leg, we are driven to the left.

Thus, we ſee Pidgeons, changing their Courſe to the leftward, labour it with the right Wing; keeping the other almoſt at reſt.

Add, that Birds with long Necks have another way of altering their Courſe: For by only inclining the Head and Neck towards this or that Side; the Centre of Gravity of the whole being ſhifted, the Bird will proceed according to his new Direction.

Birds never fly upwards in a perpendicular Line, but always in a Parabola, the Line deſcribed by Projectiles.

In a direct Aſcent, the Natural and Artificial Tendency would oppoſe and deſtroy each other; ſo that the Progreſs would be very ſlow: In a direct Deſcent, they would aid one another; ſo that the Fall would be too precipitate.

Indeed, the Hawk we frequently find take that Advantage in ſeizing of the Partridge: But ordinarily, Birds keep their Wings expanded, and at reſt, to retard their Deſcent; and at the ſame time ſtretch out their Feet, and Legs.——

*Artificial* FLYING, is that attempted by Men, by the Aſſiſtance of Mechanicks.

The *Art of Flying* is one of the great Deſiderata of Mechanicks; attempted in divers Ages: The Diſcovery whereof might prove of great Service, and great Diſſervice to Mankind.

No body ſeems to have bid ſo fair for that Invention, as our famous Fryar *R. Bacon*, who liv'd upwards of 500 Years ago. He not only affirms the Art feaſible; but aſſures us he himſelf knew how to make an Engine, in which a Man ſitting might be able to carry himſelf through the Air, like a Bird: And affirms, that there was another Perſon, who had actually tried it with Succeſs.

The Secret conſiſted in a Couple of large thin hollow Copper Globes, exhauſted of Air; which being much lighter than Air, would ſuſtain a Chair, whereon a Perſon might ſit. See AIR-PUMP.

Fa. *Franciſco Lane*, in his *Prodromo*, propoſes the ſame thing, as his own Thought. He computes, that a round Veſſel of Plate Braſs, fourteen Foot in Diameter, weighing three Ounces the ſquare Foot; will only weigh 1848 Ounces; whereas a Quantity of Air of the ſame Bulk, will weigh $3155\frac{2}{3}$ Ounces: So that the Globe will not only be ſuſtain'd in the Air; but will carry with it a Weight of $373\frac{2}{3}$ Ounces; and by increaſing the Bulk of the Globe, without increaſing the Thickneſs of the Metal, he adds, a Veſſel might be made to carry a much greater Weight.

But the Fallacy is obvious: A Globe of the Dimenſions he deſcribes, Dr. *Hook* ſhews, would not ſuſtain the Preſſure of the Air; but be cruſh'd inwards. Beſide, that in whatever Ratio the Bulk of the Globe were increas'd, in the ſame muſt the Thickneſs of the Metal, and conſequently the Weight, be increaſed: So that there would be no Advantage in ſuch Augmentation.

The ſame Author deſcribes an Engine for *Flying*, invented by the Sieur *Beſnier*, a Smith of *Sable*, in the County of *Maine*. *Philoſoph. Collect.* N° 1.——

FLYING *Bridges*, in Fortification, are thoſe made of two ſmall Bridges, laid one upon the other, ſo that the uppermoſt, by means of Ropes and Pullies, is forc'd forwards, till the End of it is joined to the Place deſigned. See BRIDGE.

FLYING *Camp*, a ſmall Body of an Army, conſiſting of 4, 5, or 6000 Men, and ſometimes a greater Number, as well Foot as Horſe, which continually keep the Field, making divers Motions, to prevent the Incurſions of the Enemy, or to fruſtrate their Enterpriſes; to hinder Convoys, to harraſs the adjacent Country, and to be thrown into a beſieged Place, as Occaſion ſhall ſerve.——

FLYING *Pinion*, is a Part of a Clock, having a Fly or Fan, whereby to gather Air, and ſo to bridle the Rapidity of the Clock's Motion, when the Weight deſcends in the ſtriking Part. See PINION, CLOCK, &c.

FOCAGE, or FUAGE, Fire-money, Hearth-money, or Chimney-money. See FUAGE.

FOCILE, FOCIL, in Anatomy, a Name the *Arabs* give to the two Bones of the Arm, reaching from the Elbow, to the Wriſt. See ARM.

The biggeſt, which is what we call the *Cubitus*, and *Ulna*, they call the *greater Focil*, *Focile majus*.

The leſs, which we call *Radius*, they call *Focile minus*. See CUBITUS, and RADIUS.

The like is obſerv'd with regard to the Bones of the Leg. The biggeſt of which, by the *Latins* called *Tibia*, the *Arab* Writers, &c. call the *great Focil*: And the leſs, or *Fibula*, the leſſer *Focil*. See TIBIA, and FIBULA.

FOCUS, in Geometry, and the Conic Sections, is applied to certain Points in the Parabola, Ellipſis, and Hyperbola; wherein the Rays reflected from all Parts of theſe Curves do concur, or meet. See CURVE.

*The* Focus *of a Parabola* is a Point in its Axis, as F, (*Tab. Conicks*, *Fig.* 18.) wherein the ſemi-ordinate F N, is equal to the Semi-parameter; or a Point in the Axis diſtant from the Vertex, by a fourth Part of the Parameter, or Latus rectum. See PARABOLA.

'Tis demonſtrated in Conicks, 1° That in a Parabola, the Diſtance of the *Focus*, from the Vertex, A F, is to the Parameter, in a ſubquadruple Ratio.

2° That the Square of the ſemi-ordinate is quadruple of the Rectangle of the Diſtance of the *Focus* from the Vertex, and the Abſciſſe.

3° That the Right-line F M drawn from the *Focus* F to the Extremities of the Semi-ordinate of the Parabola is equal to the aggregate of the Abſciſſe A P; and the Diſtance of the *Focus* from the Vertex A F.

*The* Foci *of an Ellipſis* are two Points, as F f (*Fig.* 19.) in the Axis A B, on which, as Centres, the Figure is deſcribed:

ſcribed: Or, two Points in the longer Axis, whence two Right-lines being drawn to any Point in the Circumference, ſhall be together equal to the Axis it ſelf. Theſe are alſo called *Umbilici*. See UMBILICUS, and CENTRE.

To find the *Foci* of an Ellipſis, from B to L, ſet off half the Parameter: And in the Centre C erect a Perpendicular C K, meeting a Semicircle deſcribed on A L. Then making C F=C K; the Point F will be the *Focus*.

If then the Axis A B be cut in the *Focus* F; the Rectangle of the Segments of the Axis A F, F B, will be ſubquadruple of the Rectangle of the Parameter into the Axis; whence the Square of the Diſtance of the *Focus* from the Centre is equal to the Rectangle of half the Axis into the Difference of the Semi-parameter from half the Axis. See ELLIPSIS.

FOCUS *of the Hyperbola*, ſee HYPERBOLA.

FOCUS, in Opticks, is a Point wherein ſeveral Rays concur, and are collected; either after having undergone Refraction, or Reflection. See RAY.

It is thus called, by reaſon the Rays being here brought together, and united; their Force and Effect is increas'd; ſo that they become able to burn: Accordingly, 'tis in this Point, that Bodies are plac'd to ſuſtain the Force of Burning Glaſſes, or Mirrors. See BURNING *Glaſs*, &c.

It muſt be obſerv'd, that the *Focus* is not ſtrictly ſpeaking a Point; the Rays are not all accurately collected into the ſame Place: *Huygens* demonſtrates, that the *Focus* of a Lens convex on both Sides is $\frac{2}{3}$ of the Thickneſs of the Lens. See LENS.——

FOCUS, in Dioptricks, is the Point wherein the refracted Rays, by Refraction render'd convergent, do concur, or meet, and croſs the Axis. See REFRACTION.

The ſame Point is alſo call'd the *Point of Concourſe*, or *Concurrence*. See POINT *of Concourſe*.

*Virtual* FOCUS, in Dioptricks, is the Point from which refracted Rays, when by Refraction they are render'd divergent, do begin to diverge, or recede from each other. See VIRTUAL *Focus*.

The ſame Point is alſo call'd *Punctum Diſperſus*. See POINT *of Diſperſion*.

The Effect of convex Glaſſes, or Lenſes, is to render the Rays, tranſmitted thro' them, convergent, and bring them together into a *Focus*, which will be nearer or further off, as the Lens is a Portion of a greater or leſs Sphere. See CONVEX, and CONVERGENT.

The Effect of concave Lenſes is to render the Rays tranſmitted thro' them, *divergent*, or to diſperſe them from a Virtual *Focus*. See CONCAVE, and DIVERGENT.

*For the Place, Poſition, Diſtance*, &c. *of the* Foci *of Rays refracted thro' Plain, Concave, and Convex Mediums of divers Denſities, as Air, Water, Glaſs*, &c. ſee REFRACTION, &c.

The Laws of the *Foci* of Glaſſes, and the Methods of finding the ſame, being thoſe of moſt Uſe, and Importance; we ſhall here ſubjoin them a-part, as deliver'd and demonſtrated by the ingenious Mr. *Molyneux*, in his *Dioptrica Nova*.

1° then, The *Focus of a convex Glaſs*, i. e. the Point wherein parallel Rays tranſmitted through a convex Glaſs, whoſe Surface is the Segment of a Sphere do unite, is diſtant from the Pole, or Vertex of the Glaſs, almoſt a Diameter and half of the Convexity.

2° In a *Plano-Convex Glaſs*, the *Focus* of parallel Rays, or the Place where they unite with the Axis, is diſtant from the Pole of the Glaſs a Diameter of the Convexity; provided the Segment do not exceed 30 Degrees.

The Rule or Canon in Plano-Convex Glaſſes, is as 107 : 193 : : So is the Radius of the Convexity: to the refracted Ray taken in its Concourſe with the Axis; which in Glaſſes of larger Spheres, is almoſt equal to the Diſtance of the *Focus* taken in the Axis.

3° In *double Convex Glaſſes* of the ſame Sphere, the *Focus* is diſtant from the Pole of the Glaſs about the Radius of the Convexity, if the Segment be but 30 Degrees.

But if the Convexities are unequal, or if the two Sides are Segments of different Spheres, then the Rule is,

As the Sum of the Radii of both Convexities : to the Radius of either Convexity alone : : So is the double Radius of the other Convexity : to the Diſtance of the *Focus*.

Here obſerve, that the Rays which fall nearer the Axis of any Glaſs, are not united with it ſo ſoon as thoſe farther off: Nor will the *Focal Diſtance* be ſo great in a Plano-Convex Glaſs, when the convex ſide is towards the Object, as when the contrary way.

Hence it is truly concluded, that in viewing any object by a Plano Convex Glaſs, the convex Side ſhould be turned outward; as alſo in burning by ſuch a Glaſs.

For the *Virtual Focus* obſerve,

1° That in *Concave Glaſſes*, when a Ray falls from Air parallel to the Axis, the Virtual *Focus*, by its firſt Refraction becomes at the diſtance of a Diameter and an half of the Concavity.

2° In *Plano-Concave Glaſſes*, when the Rays fall parallel to the Axis, the Virtual *Focus* is diſtant from the Glaſs the Diameter of the Concavity.

3° In *Plano-Concave Glaſſes*; as 107 : 193 : : So is the Radius of the Concavity, to the Diſtance of the Virtual *Focus*.

4° In *double Concaves* of the ſame Sphere, the Virtual *Focus* of parallel Rays is at the Diſtance of the Radius of the Concavity.

But whether the Concavities be equal or unequal, the Virtual *Focus*, or Point of Divergency of the parallel Rays is determined by this Rule;

As the Sum of the Radii of both Concavities : is to the Radius of either Concavity : : So is the double Radius of the other Concavity : to the diſtance of the Virtual *Focus*.

5° In *Concave Glaſſes*, if the Point to which the incident Ray converges, be diſtant from the Glaſs farther than the Virtual *Focus* of parallel Rays; the Rule for finding the Virtual *Focus* of this Ray is this;

As the Difference between the Diſtance of this Point from the Glaſs, and the Diſtance of the Virtual *Focus* from the Glaſs : is to the Diſtance of the Virtual *Focus* : : So the Diſtance of this Point of Convergence from the Glaſs : is to the Diſtance of the Virtual *Focus* of this converging Ray.

6° In *Concave Glaſſes*, if the Point to which the incident Ray converges, be nearer to the Glaſs, than the Virtual *Focus* of parallel Rays; the Rule to find where it croſſes the Axis, is this;

As the Exceſs of the Virtual *Focus*, more than this Point of Convergency : is to the Virtual *Focus* : : So the Diſtance of this Point of Convergency from the Glaſs : is to the Diſtance of the Point where this Ray croſſes the Axis.

*Practical Rules for finding the* FOCI *of Glaſſes.*

To find the *Focus* of a Convex Spherick Glaſs, being of a ſmall Sphere, apply it to the End of a Scale of Inches, and Decimal Parts, and expoſe it before the Sun; upon the Scale you will have the bright Interſection of the Rays meaſur'd out; or, expoſe it in the Hole of a dark Chamber; and where a white Paper receives the diſtinct Repreſentation of diſtinct Objects, there is the *Focus* of the Glaſs.

For a Glaſs of a pretty long *Focus*; obſerve ſome diſtant Objects thro' it, and recede from the Glaſs till the Eye perceives all in Confuſion, or the Objects begin to appear inverted; here the Eye is in the *Focus*.

For a Plano-Convex Glaſs: Make it reflect the Sun againſt a Wall; you will on the Wall perceive two Sorts of Light; one more bright within another more obſcure: Withdraw the Glaſſes from the Wall, till the bright Image is at its ſmalleſt; the Glaſs is then diſtant from the Wall about the fourth Part of its *focal* Length.

For a double Convex: Expoſe each Side to the Sun in like manner; and obſerve both the Diſtances of the Glaſs from the Wall. The firſt Diſtance is about half the Radius of the Convexity turned frrm the Sun; and the ſecond, about half the Radius of the other Convexity.

Thus, we have the Radii of the two Convexities; whence the *Focus* is found by this Rule;

As the Sum of the Radii of both Convexities : is to the Radius of either Convexity : : So is the double Radius of the other Convexity : to the Diſtance of the *Focus*.

FOCUS, in Catoptricks, is a Point wherein the Rays reflected from the Surface of a Mirror, or Speculum; and by Reflection render'd convergent; do concur, or meet. See MIRROR.

The Effect of Concave Mirrors is to collect the Rays falling on their Concave Surface into a *Focus*. See CONCAVE *Mirror*.

The Effect of Convex Mirrors, is to diſperſe the Rays falling on them, or render them more Divergent. See CONVEX *Mirror*.

*For the Laws of the* Foci *of Rays refracted from Mirrors, or Specula*, ſee REFLECTION, &c.

The *Foci* of Concave Glaſſes are had by Reflection: For as a Concave Mirror burns at the Diſtance of about half the Radius of the Concavity; ſo a Concave Glaſs, being ſuppos'd a reflecting Speculum, unites the Rays of the Sun, at the Diſtance of about half the Radius of the Concavity.

*To find the* Foci *of all Glaſſes, Geometrically*;

Dr. *Halley* furniſhes us a general Method for finding the *Foci* of ſpherical Glaſſes of all kinds, both concave, and convex; expos'd to any kind of Rays, either parallel, converging, or diverging; under the following Problem.

To find the *Focus* of any Parcel of Rays diverging from, or converging to a given Point in the Axis of a ſpherical Lens, and inclined thereto under the ſame Angle: The Ratio of the Sines of Refraction being given:

Suppoſe G L (*Tab. Opticks, Fig.* 38.) a Lens; P a Point in its Surface; V its Pole; C the Centre of the Sphere whereof it is a Segment; O, the Object, or Point in the Axis, to or from which the Rays do proceed; and O P a given Ray: And ſuppoſe the Ratio of Refraction to be as *r* to *s*.

Then,

Then, making C R to C O, as *s* to *r* for the Immerſion of a Ray; or as *r* to *s* for the Emerſion (*i. e.* as the Sines of the Angles in the Medium which the Ray enters, to their correſponding Sines in the Medium out of which it comes) and laying C R, from C towards O, the Point R will be the ſame for all the Rays of the Point O. Laſtly, drawing the Radius P C, if need be, continued; with the Centre R, and Diſtance O P ſtrike a piece of an Arch, interſecting P C in Q. The Line Q R being drawn, ſhall be parallel to the refracted Ray; and P F being made parallel thereto, ſhall interſect the Axis in the Point F, the *Focus* ſought.

Or, make it, as C Q : C P : : C R : C F. Then will C F be the Diſtance of the *Focus* from the Centre of the Sphere.

This Author gives a Demonſtration of the Method; and adds various Figures, exhibiting the various Caſes of Rays either diverging, or converging, as they enter, or emerge out of the Surface either of a convex or concave Lens.

From this Principle all the Rules for the *Foci* of Rays parallel to the Axis, as likewiſe for the principal *Focus*, where the Rays neareſt the Axis do unite, are deduc'd. As,

Hence 1° If O P be equal to C R; the Points Q and C are coincident, and the Rays O P, after Refraction, run on parallel to the Axis. 2° If the Point Q fall on the ſame Side of the Axis, as is the Point P; then the Beams after Refraction do tend on, either Diverging, or Converging, as before: But if Q fall on the other Side the Axis, the Diverging Rays are made to converge by a Convex, or the Converging to diverge by a Concave Glaſs. 3° If O P do exceed C R, the *Focus* is in all Caſes on the ſame Side of the Glaſs, as is the Centre of the Sphere C. But contrarywiſe, if O P be leſs than C R, the *Focus* falls on the other Side of the Glaſs beyond the Vertex V. 4° An Object may be ſo placed, that the Rays next the Axis of a Convex Glaſs ſhall have an imaginary *Focus* tranſmitting diverging Rays, when the more remote Parts thereof ſhall make them converge to a real *Focus*. 5° If O V, the Diſtance of the Object from the Pole or Vertex of the Glaſs, be taken inſtead of O P, then will C Q be the Difference of O V and C R; and as that Difference is to C R, ſo is the Radius C V, to C F, the Diſtance of the principal *Focus* from the Centre of the Sphere, whereof the Glaſs is a Segment. Or elſe, as C Q : to O P or R Q : : So P C : to V F, the *focal* Diſtance from the Pole of the Glaſs. Whence follows a General Rule for the *Foci* of all Glaſſes; only according to *Cor.* 3. if O V do exeed C R, the *Focus* is on the ſame Side of the Glaſs, as the Center of the Sphere: But if C R be greater, then the *Focus* is on the oppoſite Side of the Glaſs: Whence it will be determined, whether the *Focus* be real, or imaginary.

What has been ſaid of one Surface of the Lens, is eaſily applicable to the other, taking F the *Focus*, for an Object.—

FODDER, any kind of Meat for Horſes, or other Cattle: In ſome Places Hay and Straw mingled together, is accounted *Fodder*:

In the Civil Law it is us'd for a Prerogative that the Prince has, to be provided of Corn, and other Meat, for his Horſes, by the Subjects, in his warlike Expeditions.

FODINA, a Name ſome Authors give to the Labyrinth in the Bone of the Ear. See LABYRINTH.

FOECES, FOECAL, FOECULÆ, } See { FÆCES. FÆCES. FÆCULÆ.

FOETOR, in Medicine, ſtinking, or ſœtid Effluvia, proceeding from the Body, or the Parts thereof. See EFFLUVIA.

*Fœtors* ariſe from ſtagnant, extravaſated, corrupted, or poiſon'd Humors; as alſo from any thing capable of attenuating and volatilizing the Oil and Salts: As, Abſtinence, Heat, too much Motion, Acrimony of Food, &c.

FOETOR *Narium*, Stench of the Noſtrils, a ſort of Diſeaſe, ariſing from a deep Ulcer, within ſide the Noſe, yielding a fœtid Smell. Its Cauſe, according to *Galen*, is a ſharp Humor, falling from the Brain upon the Mamillary Proceſſes. This is one of the Cauſes that annuls Marriage. See DIVORCE.

FOETUS, in Medicine, denotes the Child, while yet contain'd in the Mother's Womb: but particularly, after it is perfectly form'd: Till which Time it is properly call'd *Embryo*. See EMBRYO.

The manner of the Conception, or Generation of the *Fœtus*, is Matter of great Controverſy.

That all the Parts of the Animal did exiſt, and that its Fluids were in Motion, before Generation, is generally allow'd; but whether the Animalcule was lodg'd in the Male, or Female, is not agreed of.

Many of the Moderns will have the Ova, or Eggs, contain'd in the Ovary of the Female, to be the firſt Matter, or Stamen of the *Fœtus*: Theſe Eggs, they ſuppoſe to contain all the Parts of the *Fœtus* in little; and that being impregnated with the Male Seed, the Parts thereof become enlarg'd, and diſplay'd: From the Ovary they are convey'd by the Fallopian Tubes into the Uterus, where they receive their Impregnation, Accretion, &c. See EGG, and OVARY.

Others will only have the female Ovum to be a proper Nidus for the Animalcule, which, they contend, is in the Male Seed. The Animalcule getting into an Ovum fit to receive it; and this falling thro' one of the Tubæ Fallopianæ into the Womb; the Humors which diſtil thro' the Veſſels of the Womb penetrating the Coats of the Egg, ſwell and dilate it, as the Juice of the Earth does Seed thrown into the Ground. Or elſe, the Branches of the Veins and Arteries, whereby the Egg was tied in the Ovary, being broken, knit with the Veſſels of the Womb. See GENERATION, CONCEPTION, SEED, &c.

The firſt thing that appears of a *Fœtus*, is the *Placenta*, like a little Cloud, on one Side of the external Coat of the Egg: About the ſame time the Spina is grown big enough to be viſible; and a little after, the Cerebrum and Cerebellum appear like two ſmall Bladders: Next, the Eyes ſtand prominent in the Head; Then the Punctum ſaliens, or Pulſation of the Heart is plainly ſeen. The Extremities diſcover themſelves laſt of all.

The *Fœtus*, when form'd, is almoſt of an Oval Figure, while it lies in the Womb: For its Head hangs down, with its Chin upon the Breaſt: Its Back is round; with its Arms it embraces its Knees, which are drawn up to its Belly; and its Heels are cloſe to its Buttocks: Its Head upwards, and its Face towards its Mother's Belly. About the ninth Month, its Head which was hitherto ſpecifically lighter than any other Part, becomes ſpecifically heavier; its Bulk bearing a much ſmaller Proportion to its Subſtance, than it did.

The Conſequence of this Change, is, that it tumbles in the Liquor which contains it: Its Head falls down; its Feet get up; and its Face turns towards its Mother's Back. But being now in an irkſome Poſture, tho' at the ſame time a favourable one for its Exit; the Motion it makes for its Relief, gives frequent Pains to the Mother; which cauſes a Contraction of the Womb, for the Expulſion of the *Fœtus*. See DELIVERY.

Indeed, what ſome Anatomiſts pretend to give of the Poſture of the *Fœtus* in the Womb, in the ſeveral Stages of Geſtation, is very precarious.

In the firſt Month it is of no moment, how it lies in the Womb: In the latter Months, after the *Fœtus* is grown not only quick, but robuſt, it frequently changes its Poſture of it ſelf; as not only the Mothers themſelves feel, but any other Perſon by laying the Hand on their Bellies, frequently may. However, its ordinary Poſture is ſuppoſed to be ſitting: As the Time of Birth draws near, it turns it ſelf, and preſents the Head to the Os Uteri; tho' ſometimes it offers the Feet firſt, and ſometimes lies a-croſs, and offers either a Hand, a Knee, or the like; which are irregular Situations, and without a deal of Adreſs in the Midwife in turning the *Fœtus*, both the Mother and the Infant are in Danger. See PARTURITION, &c.

The *Fœtus* is encloſed in two Membranes, or Coats; the inner, which immediately inveſts the *Fœtus*, and the Liquor wherein it lies, is call'd the *Amnios*: The outward Membrane is called the *Chorion*. See AMNIOS, and CHORION.

In ſome Animals there is a third Membrane, called the *Allantois*, whoſe Place is between the other two; and ſerves for the Diſcharge of the Urine of the *Fœtus*, brought hither by the Urachus.

Dr. *Needham* ſeems to have diſcover'd ſomething analogous hereto in the human *Fœtus*, and calls it the *Membrana Urinaria*: But others chuſe only to make it a Duplicature of the Chorion; tho' the Neceſſity of ſuch third Membrane be the ſame in Men, as in Cows, Sheep, &c. See ALLANTOIS.

There are ſome Differences in the Structure, Mechaniſm, and Proportion of the Parts of a *Fœtus*; from thoſe of an *Adult*: And even ſome additional and extraordinary Parts; by which the Nutrition of this Zoophyte, or Plant Animal; and the Circulation of the Blood therein, are effected.

The principal Variations are about the Liver, Heart, and Lungs. Of theſe the moſt conſiderable are the *Umbilical Veſſels*, which are two Arteries, a Vein, and Urachus, ariſing from the Placenta, and convey'd thro' the Navel to the Liver of the *Fœtus*, near the Navel; which after the Birth drying up, become impervious and uſeleſs. See FUNICULUS, and UMBILICAL *Veſſels*.

In the Liver it ſelf is an extraordinary Communication between the Porta and Cava, call'd *Canalis Venoſus*, which after the Birth gradually dries up. In the Heart, at the Mouth of the Vena Cava, is the *Foramen Ovale*, whereby that Vein has a Communication with the pulmonary Vein: There is alſo a Communication between the Aorta, and Pulmonary Artery, by means of the *Canalis Arterioſus*, which paſſes between the two, at about two Inches diſtance from the Baſe of the Heart. 'Tis by means of theſe two Canals or Paſſages, that the Blood circulates in the *Fœtus* while inclos'd in the Womb; they ſerving to convey and paſs the

Blood

Blood from the Heart into the Arteries; and from the Veins into the Heart again, without paſſing through the Lungs, which are now uſeleſs. See CIRCULATION.

The Lungs of a *Fœtus* are of a darker Colour, and cloſer Conſiſtence, than after they have been breath'd into; as appears from their ſwimming in Water, after Birth, which they will not do before: Which Difference affords an uſeful Experiment, in caſe of the ſuſpected Murther of Children. For if they were ſtill-born, the Lungs ſink in Water; if born alive, they ſwim.

The two Canals above-mentioned ſerve only to prevent the Obſtruction the Blood would otherwiſe have within the Lungs, before they have been open'd. After Reſpiration has open'd the Lungs, the Blood taking its Courſe through them, the Paſſages cloſe up. See FORAMEN *Ovale*, RESPIRATION, &c.

The Head of the *Fœtus* is much bigger in proportion to the Body, than afterwards: The Bones and Brain ſofter: The Sutures open, and leaving a great Space on the Top of the Head, cover'd only with a Membrane; and the Glands, particularly the *Thymus*, and *Renales*, bigger and ſofter. For other Differences in the Proportions, ſee EMBRYO.

*Bartholin*, in his Treatiſe *De inſolitis partus viis*, relates a great many ſtupendous Caſes of *Fœtus's* Dead and putrified in the Womb; the Parts of which have made their way thro' Apoſtemations; one whereof at the Navel was ſome Years in coming away: And in the *Philoſoph. Tranſactions* we meet with the like Inſtances; particularly, of one voided piece-meal by the Anus, ſeveral Years after Conception.

Authors give Accounts of *Fœtus's* found in the Fallopian Tubes; and others in the Cavity of the Belly.

M. *de S. Maurice*, in the Memoirs of the R. Academy of Sciences, relates the Hiſtory of a *Fœtus* form'd in the Ovary of the Mother; and which at three Months from Impregnation, burſting the Teſticle, forc'd its Way through, into the Epigaſtric Region.

During the Rupture, the Mother felt all the Preludes of an imminent Travel; and calling her Chirurgeon, died in his Arms, crying, I am delivering, I am delivering!

The Story of *Margaret* Counteſs of *Holland*, who is ſaid to have been deliver'd of 364 *Fœtus's*, all alive, and afterwards baptized, commonly paſſes for a Fable: And yet there is a Picture of this notable Delivery ſtill preſerv'd in the Church of *Loſdune*, as a Monument of the Truth thereof. *Albertus Magnus* gives a like Inſtance of a Woman, who brought forth 150 *Fœtus's*, or Embryo's, all form'd, and as big as the little Finger.

FOG, or MIST, a Meteor, conſiſting of groſs Vapours, floating near the Surface of the Earth. See VAPOUR.

If the Vapours, plentifully rais'd from the Earth, and Waters either by the ſolar or ſubterraneous Heat, meet, at their firſt Entrance into the Atmoſphere, with Cold enough to condenſe them conſiderably; their ſpecific Gravity being hereby increas'd, their Aſcent will be ſtop'd, and they will either return back in form of a *Dew*, or drizzling Rain; or remain ſuſpended, for ſome time, in form of a *Fog*. See RAIN, and DEW.

*Fogs* are only low *Clouds*; or Clouds in the loweſt Region of the Air: And *Clouds* are no other than *Fogs* rais'd on high. See CLOUD.

Objects view'd thro' *Fogs*, appear larger, and more remote than thro' the common Air. See VISION.

The fiſhing for Herring is chiefly practiced in *foggy* Weather. See *Herring* FISHERY.

FOGAGE, in the Foreſt Law, is Rank Graſs, not eaten in the Summer.

FOIBLE, a *French* Term, frequently us'd alſo in our Language.

It literally ſignifies *weak*, and in that Senſe is applied to the Body of Animals, and the Parts thereof: As, *foible* Reins, *foible* Sight, &c. being deriv'd from the *Italian Fievola*, of the Latin *Flebilis*, to be lamented, pitied.

But it is chiefly us'd with us ſubſtantively; to denote the principal Defect, or Flaw in a Perſon, or Thing. Thus we ſay, Every Perſon has his *Foible*; and the great Secret conſiſts in hiding it artfully: Princes are gain'd by Flattery, that is their *Foible*: The *Foible* of young People is Pleaſure: The *Foible* of old Men is Avarice: The *Foible* of the Great and Learned, is Vanity: The *Foible* of Women and Girls, Coquettry, or an Affectation of having Gallants: You ſhould know the Force, and the *Foible* of a Man, before you employ him: We ſhould not let People perceive that we know their *Foible*.

FOIL, a Sheet of Tin, Quickſilver, or the like, laid on the Backſide of a Looking Glaſs, to make it reflect. See FOLIATING.

The Word is form'd of the Latin *Folium*, Leaf.

FOILING, among Hunters, is the footing, and treading of Deer, which is on the Graſs, but ſcarce viſible.

FOLDS, in the Manufactures, ſee PLAITS, CLOTH, PACKING, &c.

FOLDS *of the Drapery*, in Painting. See DRAPERY.

FOLIA, in Botany, is us'd for the *Leaves* of Plants and Flowers; but particularly the former: The Leaves of Flowers being more properly called *Petala*. See LEAVES, and PETALA.

FOLIACEUM *Expanſum*, in Anatomy, is that Extreme of the Fallopian Tube, next the Ovary; and which is expanded like the Mouth of a Trumpet, and inviron'd with a ſort of Fringe. See FALLOPIAN *Tube*.

FOLIAGE, a Cluſter, or Aſſemblage of Flowers, Leaves, Branches, &c.

FOLIAGE is particularly us'd for Repreſentations of ſuch Flowers, Leaves, Branches, Rinds, &c. whether Natural, or Artificial; us'd, as Inrichments on Capitals, Freezes, Pediments, &c. See CAPITAL, FREEZE, &c.

FOLIATING *of Looking Glaſſes*, is the ſpreading a Compoſition of ſomething which will firmly adhere to the Back of the Glaſs, and there reflect the Image. See MIRROR.

This is called the *Foil*, and is uſually made with Quickſilver, mix'd with ſome other Ingredients.

For the Method of *Foliating* Looking Glaſſes, ſee LOOKING GLASS.

In *Philoſ. Tranſact.* N° 245 we have a Method of *foliating* Globe Looking Glaſſes, communicated by Sir *R. Southwell*.

The Mixture is of Quickſilver, and Marchaſite of Silver, of each three Ounces; and Tin, and Lead, of each half an Ounce: To theſe two firſt throw on the Marchaſite; and laſt of all the Quickſilver. Stir them well together over the Fire; but they muſt be taken off, and be towards cooling, before the Quickſilver is put to them.

When you uſe it, the Glaſs ſhould be well heated, and very dry: But it will do alſo when it is cold, tho' beſt when the Glaſs is heated.

FOLIATION, in Botany, &c. is us'd by Dr. *Grew*, to expreſs the Aſſemblage of the *Folia*, or Petala of a Flower. See PETALA.—

The *Foliation* is the moſt conſpicuous Part of Flowers; being that Collection of fugacious, colour'd Leaves, which conſtitute the Compaſs, or Body of the Flower. See FLOWER.

It is of great uſe in the Generation and Preſervation of the young Fruit, or Seed: It filtrates a fine Juice, to nouriſh it in the Uterus, or Piſtil. See GENERATION *of Plants*.

In ſome Species, as Apricocks, Cherries, &c. it likewiſe ſerves to guard the young tender Fruit from the Violence of Wind, Weather, &c. for theſe being of a very tender, and pulpous Body, and coming forth in the colder Parts of the Spring, would be often injured by the Extremities of Weather, if they were not thus protected, and lodged up within their Flowers.

Before the Flower opens, the *Foliation* is curiouſly and artfully folded up in the Calix or Periantheum. See CALIX.

Dr. *Grew* enumerates ſeveral Varieties of theſe Foldings, *viz.* the *Cloſe Couch*, as in Roſes; the *Concave Couch*, as in the Blattaria *flore albo*; the *Single Plait*, as in Peaſe Bloſſoms; the *Couch* and *Plait*, as in Marigolds; the *Rowl*, as Ladies Bower, &c.

FOLIO, ſignifies *Page*. See PAGE.

Thus *Folio* 7, wrote abridgedly F° 7. denotes the ſeventh Page, &c.

*Folio Recto*, or F° R° expreſſes the firſt Side or Page of a Leaf.

*Folio Verſo*, or F° V° the ſecond, or back ſide of the Leaf.—

The Word is *Italian*, and literally ſignifies *Leaf*.

FOLIO, among Bookſellers. A *Book in Folio*, or ſimply, a *Folio*, is that where the Sheet is only folded in two, each Leaf making half a Sheet.

Beneath the *Folio* are the *Quarto*, *Octavo*, *Duodecimo*, *Sixteens*, *Twenty fours*, &c. See BOOK.

FOLIUM *Indicum*, or *Indum*, call'd alſo *Thamalapathra*, and *Malabathrum*; a Leaf brought from the *Indies*, growing chiefly about *Cambaya*, produc'd by a Tree not unlike the Lemon Tree; us'd in the Compoſition of *Venice* Treacle. See TREACLE.

FOLIUM *Cariophyllatum*, or Clove Leaf. See CLOVES.

FOLK-LAND, in our antient *Saxon* Cuſtoms, denoted *Copyhold Lands*. See COPYHOLD.

In oppoſition to theſe, *Charter Lands* were called Boc-lands. See BOC-LAND.

*Fundus ſine ſcripto poſſeſſus* (ſays *Somner*) *cenſum penſitans annuum, & officiorum ſervituti obnoxius: Terra popularis.*

FOLCMOTE, and FOLKESMOTE, omong our *Saxon* Anceſtors, ſignified, according to *Lumbard*, two kinds of Courts.

One, now called the *County Court*: The other, the *Sheriff's Turn*. See COUNTY *Court*, and TURN.

The Word, ſays *Stow*, is ſtill in uſe among the *Londoners*, and ſignifies, *Celebrem ex omni Civitate conventum*. But *Manwood* ſays, it is the Court holden in *London*, wherein all the Folk and People of the City did complain of the Mayor and Alderman for any Miſgovernment.

Mr. *Somner*, in his his *Saxon* Dictionary, makes it a general Aſſembly of the People, for conſidering and ordering Matters of the Commonwealth. *Omnes proceres regni, & milites & liberi homines univerſi totius Regni Britanniæ facere debent in pleno* Falcmote *fidelitatem Domino Regi, coram Epiſcopis Regni. In Leg. Edw. Confeſſ. cap.* 35. *Et amplius non ſit in Huſtinga, Miskenninga*, i. e. ſpeaking amiſs; *neque in* Folkeſmote, *neque in aliis placitis infra Civitatem. Charta H.* 1. *pro London. Du Cange.*

When this great Aſſembly is made in a City, it may be call'd a *Burgemot*; when in the County, a *Shiregemot*. *Cum aliquid vero inopinatum & malum contra regnum vel contra coronam Regis emerſerit, ſtatim debent pulſatis campanis, quod Anglice vocatur* Amotbel, *convocare omnes & univerſos, quod Anglici vocant* Folkmote, *&c.* Leg. Alfred.

FOLLICULUS, among Gardeners, the Seed-Veſſel, Caſe, Coat, Huſk, or Cover, which ſome Seeds and Fruits have over them. See FRUIT, and SEED.

FOLLICULUS *Fellis*, ſee VESICA *Bilaria*.

FOLLY, according to Mr. *Look*, conſiſts in the drawing of falſe Concluſions from juſt Principles; by which it is diſtinguiſh'd from *Madneſs*, which draws juſt Concluſions from falſe Principles. See MADNESS.

FOMAHANT, in Aſtronomy, a Star of the firſt Magnitude, in the Conſtellation *Aquarius*. Its Longitude is 329 Degrees, 17 Minutes, Latitude 21 Degrees, 3 Minutes. See AQUARIUS.

FOMENTATION, a liquid Medicine, applied on any diſeas'd Part.

*Fomentations* are either Simple, or Compoud.

*Simple* FOMENTATIONS are thoſe made with luke warm Water, Milk, Oil, Oxicrat, or other the like Liquor.

*Compound* FOMENTATIONS are Decoctions of Roots, Leaves, Flowers, Seeds, made in common Water, or other proper Liquor; to which are ſometimes added Salts, Axungiæ, Oils, *&c.*

To uſe, or apply them, they dip a hot linen Cloth, or Flannel in the Liquor, and ſpread it on the Part affected.

There are alſo *Fomentations* made another way; *viz.* by boiling certain Drugs in linen Bags, and then applying 'em, Bags and all, on the Part.

There are alſo a ſort of *dry Fomentations*, being Bags fill'd with Medicines, but not boil'd, only ſometimes ſprinkled with a little Wine or Brandy.

The Intention of *Fomentations* is to reſolve, diſcuſs, ſoften, aſſuage, fortify, conſtringe, *&c.* the Parts they are applied on.

*Fomentations* are alſo called *Local Baths*, or Partial Bathings; becauſe, being applied on a diſeaſed Part, they have much the ſame Effect as a Bath, or Half-bath has on the whole Body. See BATH, and BATHING.

FONT, or *Baptiſmal* FONT, a Stone, or Marble Veſſel, at the lower End of a Pariſh Church, ſerving to hold the Water, to be us'd in adminiſtring the Sacrament of Baptiſm. See BAPTISM.

A Baptiſmal *Font* is the Character of a Pariſh Church. See PARISH.

Its Place, at preſent, is at the Bottom of the Church, or in a little Chapel within the Church. Antiently, it was placed in a little Church, diſtinct from the great one, tho' near to it, called the *Baptiſtery*. See BAPTISTERY.

It was a common thing, during the firſt Ages of the Church, for the Baptiſmal *Fonts* to be fill'd miraculouſly, at the time of Eaſter, which was their great Baptizing Seaſon.

*Baronius* gives divers Inſtances of theſe miraculous *Fonts*, in the Years 417, 554, and 558.

*Poſſevinus* B. of *Lilybeum*, who wrote in 443, obſerves, that in the Year Four hundred and ſeventeen, under the Pontificate of *Soſinus*, there was an Error committed in the time of celebrating Eaſter; it being held on the 25th of *March*, in lieu of the 22d of *April*, which was the Time it was held on at *Conſtantinople*. He adds, that GOD was pleas'd to ſhew the Error in a very convincing manner, by the *Fonts* of a certain Village, which always us'd to be miraculouſly fill'd againſt Eaſter; and which, this Year, were not full till the 23d of *April*. See *Tillemont Hiſt. Eccleſ. T. X. p.* 678, and 679. *Gregory de Tours, p.* 320, 516, 746, 950, 1063.

FONTICULUS, or FONTINELLA, in Chirurgery, a general Name for Iſſues, Seatons, Cauteries, and other ſmall artificial Diſcharges. See ISSUE, SEATON, CAUTERY, *&c.*

The Word is a Diminutive of *Fons*, Fountain.——

FONTINALIA, or FONTANALIA, in Antiquity, a religious Feaſt, held among the *Romans*, in honour of the Deities who preſided over Fountains, or Springs.

*Varro* obſerves, that it was the Cuſtom to viſit the Wells on thoſe Days; and to caſt Crowns into Fountains. *Scaliger* in his Conjectures on *Varro*, takes this not to be the Feaſt of Fountains, as *Feſtus* inſinuates; but of the *Fountain* which had a Temple at *Rome*, near the *Porta Capena*, call'd alſo *Porta Fontinalis*: He adds, that 'tis of this Fountain *Cicero* ſpeaks in his II Book *de Legib.* The *Fontinalia* were held on the 13th of *October*.—

FOOD, or ALIMENT, is whatever Matter is taken in at the Mouth, digeſted in the Stomach, and other Viſcera, and converted into the Matter of the Body, to repair, or ſupply what is ſpent, or wanting. See DIGESTION.

The Changes which the *Food* undergoes, before it become a Part of our Body, are 1° *Maſtication*; 2° *Deglutition*; 3° *Concoction*; 4° *Chylification*; 5° *Sanguification*; 6° *Aſſimilation*. See MASTICATION, CONCOCTION, CHYLIFICATION, NUTRITION, *&c.*

*Food* is of two Kinds, *viz. Eſculents*, or *Meat*; and *Potulents*, or *Drink*. See ESCULENT, DRINK, WINE, MALT *Liquors*, WATER, *&c.*

The firſt *Foods* of our Great Forefathers, were Water, and the ſpontaneous Productions of the Earth; with which whole Nations ſuſtain themſelves to this Day.

*Tulpius*, Obſ. 14. 10. notes, That Men antiently fed after the ſame rate as other Animals; and lived of Hay and Corn. By degrees they came to the Humors or Juices of certain Beaſts, as *Milk*; and at length they commenced *Carnivorous*, and devour'd the Parts of the Animals themſelves. See CARNIVOROUS.

The Variety of *Foods*, it ſeems, does not make any Difference in the Subſtance, or Actions of the Bodies ſuſtain'd thereby; the Viſcera having a Power of altering and aſſimulating them, however heterogeneous, into one ſimilar Subſtance, like themſelves. See ASSIMILATION.

The Difference in *Foods* conſiſts principally in this, that ſome are more eaſily digeſted and aſſimilated, than others; and afford more nutritious Juice, than others: To which end it is, that the divers Kinds of dreſſing have been invented; *viz.* to diſpoſe the Matter for a more eaſy and plentiful Aſſimilation. See DRESSING.

The beſt, moſt ſimple, and light of Digeſtion are theſe *Foods* prepar'd of Frumentatious, and Leguminous Seeds; as Wheat, Rye, Barley, Oats, Mays, dried, ground, fermented, baked, *&c.* See BREAD. Peaſe, Beans, Vetches, *&c.* Alſo green Plants, and Pot-herbs, as Lettice, Beet, Parſly, *&c.* See SALLET. Fruits, as Apples, Pears, Berries, Plumbs, Cherries, *&c.* See FRUIT. And the lean Parts of Animals, Birds, Fiſhes, Inſects, *&c.* prepar'd by *Boiling*, *Baking*, *Stewing*, &c.

And yet for different Intentions, different kinds of *Food* are requir'd: Thus hard, dry, thick, heavy, fæculent *Foods* are beſt for thoſe whoſe Viſcera are ſtrong, Digeſtion quick, *&c.* and ſoft, light, humid, ſimple *Foods* to ſuch, are pernicious. Again, to the Weak, valetudinary, ſtudious, and ſedentary, thoſe *Foods* are beſt, which are either by Art, or Nature the neareſt to Chyle, as Milk, Broths, *&c.*

Where the Temperature inclines to Acidity, there alcalious *Foods* are the moſt ſuitable; and Acids, where the Conſtitution inclines to be alcaline.

Some will have it, that Iron, Metals, Minerals, *&c.* may by a proper Preparation become *Food*; on which accounts Decoctions of Gold, Chalybeat's, *&c.* are cried up: But 'tis certain, that no ſuch Matters can ever be aſſimilated, and become Part of our Body. They may act on the Blood, and the Blood Veſſels, by their Weight, Impetus, *&c.* and on that account, may be of uſe in Medicine; but not as *Food*.—

A due Regulation of the Quantity, and Quality of our *Food*; and a nice Adjuſtment thereof to the concoctive Powers, would be of the utmoſt Conſequence to Health and long Life. See HEALTH.

What we expend in Motion, Excretion, Effluvia, *&c.* is but a determinate Quantity; and the Supply ſhould only keep pace with the Expence. A juſt Proportion of the two would probably preſerve us from acute Diſtempers; as it certainly would from chronical ones; Moſt, or all of which proceed from Repletion, as appears from their being cured by Evacuation. See EVACUATION.

The Qualities of *Foods*, as to Eaſineſs, or Difficulty of Digeſtion, Dr. *Cheyne* thinks, may be determin'd in all Caſes from theſe three Principles.

1° That thoſe Subſtances which conſiſt of the groſſeſt Parts, are hardeſt of Digeſtion; by reaſon their conſtituent Parts touch in the moſt Points; or have the greateſt Quantity of Contact, upon which their Coheſion depends. See COHESION.

2° That thoſe Subſtances, whoſe Parts are brought together with the greater Force, cohere proportionably cloſer, and are the more difficultly ſeparated.

3° That Salts are very hard to be digeſted; becauſe united by plain Surfaces, under which they are always comprehended: Hence, in the laſt Stages of the Circulation, where

where it is ſlower, they readily ſhoot into larger Cluſters, and ſo are hard to be driven out of the Habit.—

From theſe Principles that Author infers, That ſuch Vegetables and Animals, as come ſooneſt to their Growth, are eaſier of Digeſtion, than thoſe long in attaining to Maturity: The ſmalleſt of their kind, ſooner than the larger: They of a dry, fleſhy, and fibrous Subſtance, ſooner than the oily, fat, and glutinous: Thoſe of a white Subſtance, ſooner than thoſe of a redder: Thoſe of a ſoft, mild, and ſweet, ſooner than thoſe of a rich, ſtrong, poignant, aromatic Taſte: Land Animals, than Sea Animals; Animals that live on light, vegetable *Food*, than thoſe on hard and heavy *Food*; plain dreſs'd *Food*, than what is pickled, ſalted, bak'd, ſmoak'd, or otherwiſe high ſeaſon'd; boil'd Meat ſooner than roaſt, *&c.*

The ſame Author adds, that Abſtinence, and Exerciſe moſt concur with the due *Food* for the Preſervation of Health; and that where Exerciſe is wanting, as in ſtudious Perſons, the Defect muſt be ſupplied by Abſtinence. See ABSTINENCE, and EXERCISE.

FOOL, according to Mr. *Lock*, is one who makes falſe Concluſions from right Principles; by which he is diſtinguiſh'd from a Madman. See MADNESS.

Dr. *Willis* relates, That upon diſſecting of a *Fool*, the principle Differences found between him and a Man of Senſe, were, that the Brain was ſmaller; and that the Cervical Plexus, form'd of the Intercoſtal Nerve, whereby the Correſpondence between the Brain and Heart is effected, was leſs, and ſent forth fewer Branches to the Heart, *&c.*— *Nervor. Deſcript. & Uſ. c.* 26. See CONSENT *of Parts*.

FOOT, a Part of the Body of moſt Animals, whereon they ſtand, walk, *&c.* See BODY.

Animals are diſtinguiſh'd, with reſpect to the Number of *Feet*, into *Bipedes*, q. d. two-footed; ſuch are Men, and Birds: *Quadrupedes*, q. d. four-footed; ſuch are moſt Land Animals: And *Multipedes*, q. d. *many-footed*; as Inſects. See QUADRUPED, INSECT, *&c.*

The Reptile Kind, as Serpents, *&c.* have no *Feet*. See REPTILE.

The Merchants would perſwade us, that the Bird of Paradice has no *Feet*; that when it ſleeps, it hangs by its Wings; and when it feeds, by its Bill: But the Matter is, they cut them off, that the Bird may be thought the more extraordinary. Others ſay, 'tis for fear they ſhould ſpoil the Feathers, which are very beautiful.

Lobſters have twelve *Feet*; Spiders, Mites, and Polypus's, eight; Flies, Graſhoppers, and Butterflies, ſix *Feet*.

*Galen* has ſeveral good Obſervations on the wiſe Adjuſtment of the Number of *Feet* in Men, and other Animals, in his Book *De Uſu Part.* L. 3.

The *Fore-feet* of Moles are admirably form'd to dig, and ſcratch up the Earth, and make way for its Head, *&c.* In Water Fowls, the Legs and *Feet* are excellently adapted to their reſpective Occaſions and Manners of living. In ſuch, as are to wade in the Rivers, the Legs are long, and bare of Feathers a good way above the Knee: Their Toes alſo are broad; and in ſuch as bear the Name of Mud-ſuckers, two of the Toes are ſomewhat jointed, that they may not eaſily ſink in walking upon boggy Places.

Others are *whole-footed*, i. e. have their Toes webbed together, as the Gooſe, Duck, *&c.* And 'tis pretty enough to obſerve, how artificially theſe will gather up their Toes and *Feet*, when they withdraw their Legs, or go to take their Stroke in ſwimming; and again expand, or open the whole *Foot*, when they preſs upon, or drive themſelves forward in the Water. See LEG.—

FOOT, in Anatomy, or the great *Foot*, is the whole Extent from the Jointure of the Hip, to the Tip of the Toes; as the *Hand* is the whole, from the Shoulder to the Fingers Ends. See HAND.

The *Pes magnus*, or great *Foot*, is divided into the Thigh, the Leg, and the *Foot*, properly ſo called. See THIGH, LEG, &c.

Its Bones are the *Femur*, or Thigh Bone; the *Tibia* and *Fibula* for the Leg; and thoſe of the *Tarſus*, *Metatarſus*, and *Fingers*. See FEMUR, TIBIA, &c.

Its Arteries are Branches of the Crural Artery; and its Veins terminate in the crural Vein. See CRURAL.

Of theſe there are five principal ones, *viz.* the *Saphæna*, great and little *Iſchiadic*, the *Muſculous*, *Popliteus*, and *Suræus*. See each under its proper Article, SAPHÆNA, *&c.*

The *Leſſer Foot*, or Extremity of the *Foot*, which is the *Foot* properly ſo call'd, conſiſts of three Parts, *viz.* the *Tarſus*, the Space from the Ankle to the Body of the *Foot*; anſwering to the Wriſt in the Hand: The *Metatarſus*, the Body of the *Foot* to the Toes; and the *Digiti*, or Toes.

Each of theſe Parts conſiſts of a great Number of Bones, as the *Calx*, *Talus*, *Cuneiformia*, and *Cuboides*. The Bottom of all is call'd the *Sole*, or *Planta Pedis*. See TARSUS, METATARSUS, CALX, *&c.*

FOOT, in the *Greek*, and *Latin* Poetry, the Metre, or Meaſure of the Verſe. See MEASURE, and VERSE.

*Feet* are compos'd of a certain Number of long and ſhort Syllables. See QUANTITY.

The *Spondee*, *Jambic*, *Trochee*, and *Pirrhic*, of two Syllables, each.

The *Dactyl*, *Anapeſt*, *Moloſs*, *Tribrach*, &c. of three Syllables. See SPONDEE, JAMBIC, DACTYL, &c.

Hexameter Verſes conſiſt of ſix *Feet*; Pentameters of only five. See HEXAMETER, and PENTAMETER.

*Even*, and *Odd* FOOT, *Par*, and *Impar*, in Poetry, and particularly in Jambic Verſes. *Feet* are denominated *Odd*, and *Even*, in reſpect of their Situation in the Verſe.

Thus, the firſt, third, and fifth *Foot* of the Verſe are *uneven*, in regard thoſe Numbers are not capable of being divided into two equal Parts.

In the antient Tragedy, the Jambic Verſes, which prevail'd therein, only allow'd the uneven *Feet* to the Spondees; ſo that the ſecond, the fourth, and ſixth *Feet* were to be Jambus's, in regard they were even. This regular Mixture of Spondees in the uneven *Feet*, render'd the Verſe the more ſolemn and noble.

The Comic Poets, the better to diſguiſe their Verſe, and make it more like Proſe, took the contrary Courſe; putting Spondees, where the Tragic Poets would only have allow'd Jambus's.—

FOOT, is alſo a Meaſure, conſiſting of twelve Inches. See MEASURE.

The *Foot-long* is divided into twelve Inches; and the Inch into three Barley Corns. See INCH, *&c.*

Geometricians divide the *Foot* into ten *Digits*; the *Digit* into ten *Lines*, &c. See DIGIT, *&c.*

The *French* divide their *Foot* like us, into twelve Inches; and the Inch, into twelve Lines. See LINE, *&c.*

The *Foot ſquare* is the ſame Meaſure, both in Length, and Breadth; containing 144 ſquare, or ſuperficial Inches. See SQUARE.—

The *Cubic*, or *Solid Foot* is the ſame Meaſure in all the three Dimenſions; containing 1728 Cubic Inches. See CUBE, and CUBIC.

The *Foot* is of different Lengths, in different Countries.

The *Paris Royal Foot* exceeds the *Engliſh* by ſeven Lines and a half: The Antient *Roman Foot* of the Capital, conſiſted of four Palms; equal to eleven Inches, and ſeven Tenths *Engliſh*: The *Rhineland*, or *Leiden Foot*, by which all the Northern Nations go, is to the *Roman Foot*, as 950 to 1000—The Proportions of the principal *Feet* of ſeveral Nations, compar'd with the *Engliſh* and *French*, are as follow.

The *Engliſh Foot* being divided into 1000 Parts; or into 12 Inches; the other *Feet* will be, as follow;

| | | *Thouſ. Parts.* | *F.* | *Inch.* | *Li.* |
|---|---|---|---|---|---|
| *London* — — | Foot | 1000 | 0 | 12 | 0 |

| *Hall* | Foot | 1320 |

FOOT *Rule*, ſee RULE.

FOOT *Level*, an Inſtrument, which ſerves to do the Office both of a Level, a Square, and a *Foot* Rule. See LEVEL, SQUARE, &c.

The *Foot Level*, repreſented *Tab. Surveying*, *Fig.* 22. conſiſts of two Branches, about an Inch broad; opening and ſhutting like a two-foot Rule.

Theſe Branches are hollow'd half way up the ſide of each, to receive a kind of Tongue, or thin piece of Braſs, which is faſten'd to one of them, by means whereof the Branches may be ſhut cloſe together. The Uſe of this Tongue is ſuch, that when the End of it is placed in the Branch it is not faſten'd to, where there is a Pin that holds it, the two Branches will ſtand at Right Angles: To the Head of the Inſtrument is likewiſe added a ſquare piece of Braſs; by means whereof it does the Office of a Square. At the Bottom of the Angle of the ſaid Piece of Braſs is a little hole, wherein is faſten'd a Line with a Plummet; which falling on a perpendicular Line, drawn on the Tongue, ſhews whether any thing the Inſtrument is applied to, be level, or not.

FOOT *of the Foreſt*, *Pes Foreſtæ*, in our antient Cuſtoms, contain'd 18 Inches, or 1$\frac{1}{2}$ of the common *Feet*.——

*Notandum eſt, quod* Pes Foreſtæ *uſitatus tempore Ric. Oyſell, in Arrentatione Vaſtorum, factus eſt, ſignatus & ſculptus in pariete Cancellæ Eccleſiæ de Edwynſtone, & in Eccleſia Beatæ Mariæ de Nottingham: Et dictus* Pes *continet in Longitudine octodecim pollices*, &c. *Ex Regiſt. Abb. de Novo Loco in Com. Nott.*

FOOT *Pace*, *Half Pace*, or *Landing Place*, ſee STAIR *Caſes*.

FOOT *Bank*, or BANQUETTE, in Fortification, is a ſmall Step of Earth, on which the Soldiers ſtand to fire over the Parapet. See BANQUETTE.

FOOT *Gilde*, was an antient Amerciament, for not cutting out the Balls of the *Feet* of great Dogs in the Foreſt; which was done for preventing their running after the King's Deer; and was called *Expeditation*. See EXPEDITATION.

FOOT *Husks*, among Gardners, are ſhort Heads, out of which Flowers grow.——

FORAMEN, in Anatomy, a Name given to certain Holes or Perforations in divers Parts of the Body; as the

FORAMEN *Ovale*, or FORAMEN *Botalli*, an Oval Aperture, or Paſſage thro' the Heart of a Fœtus, which cloſes up after Birth.

It ariſes above the Coronal Vein, near the right Auricle; and paſſes directly into the left Auricle of the Heart. See HEART.

The *Foramen Ovale* is one of the temporary Parts of the Fœtus; wherein it differs from an Adult. It ſerves for the circulating of the Blood in the Fœtus, till ſuch time as the Infant breaths, and the Lungs are open'd. See FOETUS, and LUNGS.

Its Uſe was firſt exactly deſcrib'd by *Leon. Botal* of *Aſſa* in *Piedmont*, in the Year 1562; who tracing the Courſes and Paſſages of the Blood, aſſerted the *Foramen Ovale* to be one, whereby the Blood in Fœtus's was convey'd from the right Ventricle to the left.

The Modern Anatomiſts ſtand to the Diſcovery; and the *Foramen Ovale* is now generally allow'd a part neceſſary in the Syſtem of the Circulation of the Blood in the Fœtus. See CIRCULATION.

At the Aperture of the *Foramen*, there is a kind of floating Membrane, which looks like a Valve; but has nothing of the Office thereof: It does not hinder the Blood from paſſing from either Auricle to the other: All it ſerves for, according to Mr. *Winſlow*, is, to cloſe the *Foramen* after the Birth.

It has generally been thought, that the *Foramen Ovale* might ſometimes remain open, even in Adults: And in effect, divers Authors furniſh us with Inſtances thereof.

Dr. *Connor* aſſures us he found it but half clos'd in a Girl of four or five Years old; and in another Girl which he open'd at *Oxford*, there was Room left to thruſt a Tent thro'. *Diſſert. Med. Phyſ. de Stup. Of. Coat.*

The accurate Mr. *Cowper* adds, that he has often found the *Foramen Ovale* open in Adults. *Anat. Append. Fig.* 3. And the *Paris* Anatomiſts obſerve, that in a Sea Calf the *Foramen Ovale* is always open; by which means it is enabled to ſtay ſo long under Water.

Somewhat of this, too, is ſuppos'd to have been the Caſe in the extraordinary Recoveries of divers Perſons drown'd, hang'd, &c. See HANGING, and DROWNING.

But Mr. *Cheſelden* ventures to ſet aſide all theſe Authorities; and contends, that the *Foramen Ovale* is neither open in any Adult Land Animals, nor in Amphibious Creatures.

When he firſt applied himſelf to Diſſection, he tells us, he had no Diſtruſt of the frequent Accounts in Authors of the *Foramen* being open: But he afterwards found that he miſtook the Oſtium of the Coronary Veins for the *Foramen*; and the like he imagines other Authors to have done; who aſſert, that it is always open in amphibious Animals: For that upon a diligent Enquiry into theſe Animals, he could never find it open in any.

Neither does he think that ſufficient, to enable thoſe Creatures to live under Water, as the Fœtus does in Utero; unleſs the Ductus Arterioſus were open alſo. *Cheſel. ap. Der. Phyſ. Theol. L. IV. c.* 7.

FORAMEN *of the Membrana Tympani*, is a Perforation in the Membrane of the Tympanum, or Drum in the Ear; which admits of the Paſſage of Wind, Smoak, &c. from the *Meatus a palato* to the Drum. See EAR.

This Paſſage is very ſmall, and runs obliquely from the Tympanum thro' the upper Part of its Membrane, near the Proceſs of the Malleus. The Exiſtence of this Perforation is more evident, when Ulcers affect the Palate, by the Egreſs of Wind, upon the Patient's ſtopping his Noſe and Mouth, and forcing the Wind by the Ears, than by any Anatomical Inſpection. See TYMPANUM.

FORAMEN *Lacerum*, ſee DURA *Mater*.

FORCE, VIS, or POWER, in Mechanicks, Philoſophy, &c. See VIS, and POWER.

| | | |
|---|---|---|
| *Attractive* FORCE, | See | ATTRACTION. |
| *Repelling* FORCE, | | REPULSION. |
| *Elaſtic* FORCE, | | ELASTIC. |
| FORCE *of Gravity*, | | GRAVITY. |
| FORCE *of Coheſion*, | | COHESION. |
| *Central* FORCE, | | CENTRAL. |
| *Centripetal* FORCE, | | CENTRIPETAL. |
| *Centrifugal* FORCE, | | CENTRIFUGAL. |

| *Accelerating* FORCE, &c. | | ACCELERATION, &c. |

FORCE, in Common Law, ſignifies an Offence, by which Violence is us'd to Perſons, or Things.

*Force* is either *Simple*, or *Compound*.

Simple *Force* is that which has no other Crime adjoin'd to it: As if one by *Force* do enter into another Man's Poſſeſſion, without doing any other unlawful Act.

Mix'd, or Compound *Force* is that Violence committed with ſuch a Fact as of it ſelf only is criminal: As if any by Force enter into another Man's Poſſeſſion, and there kill a Man, or raviſh a Woman, &c.

*Force* is alſo divided into *True Force*, and *Force after a ſort*.

There are other Branches; as *forcible Entries*, *forcible Detaining*, or *Holding*; *unlawful Aſſembly*, *Routs*, *Riots*, *Rebellions*, &c. See FORCIBLE *Entry*, FORBIBLE *Detaining*, UNLAWFUL *Aſſembly*, RIOT, &c.

FORCE, in Grammar, and ſome other Arts, is applied to ſomething which ſtands in lieu of, or has the ſame Effect as, another.

In our Language, the *ſ* between two Vowels has the *Force* of a *z*, and is ſometimes put for a *z*: As in Horiſon, Baptiſing, &c.

In *Hebrew*, the *Dageſch*; and in *Arabic*, the *Teſdid*, have the *Force* of a Letter ſuppreſs'd. A Figure before a Cypher, has the *Force* of ten.——

FORCEPS, *Pair of Tongues*, a Chirurgeon's Inſtrument, wherewith dead, and corrupt Parts are ſeiz'd, cut, or pulled off, &c. As alſo foreign Bodies extracted out of Wounds, &c.

They are of divers Forms, long, crooked, with *Teeth*, with *Beaks*, *half-moon'd*, &c. See SPECULUM.

FORCIBLE *Entry*, a violent, actual Entry into a Houſe or Land, &c. or a taking Diſtreſs of any Perſon, weapon'd, whether he offer Violence or Hurt to any Perſon there, or furiouſly drive any out of the Poſſeſſion thereof, or not. See ENTRY.

FORCIBLE *holding*, or *detaining* Poſſeſſion is a violent Act of Reſiſtance, by a ſtrong Hand of Men, weapon'd with Harneſs, or other Action of Fear in the ſame Place, or elſewhere, whereby the lawful Entry of Juſtices, or others, is barr'd, or hindred.

FORDICIDIA, in Antiquity, a religious Feaſt among the *Romans*, held on the thirteenth of *April*.

It was thus call'd from the Latin *Forda*, a Cow big with Calf, and *cædo*, I ſlay, or ſacrifice; by reaſon Cows were herein ſacrificed to the Goddeſs *Tellus*, or the Earth.

*Forda*, a Cow with Calf, is form'd, according to *Ovid*, from *fero*, I bear; or rather, as *Scaliger* and *Salmaſius* imagine, from the *Greek* φορὰς, φορὰδος, ſignifying the ſame thing. *Varro* writes, that there were ſeveral of theſe Cows ſacrific'd in the *Curiæ*. *Livy*, and *Halicarnaſſæus* relate, that there was one in each Curia; ſo that there were thirty in all; which is confirm'd by *Ovid. Faſtor. L. IV. v.* 635.

The *Fordicidia* were firſt inſtituted by *Numa*, on occaſion of a general Barrenneſs among the Cattle: *Ovid* gives a particular Deſcription of the Ceremony, in the Paſſage firſt quoted: He adds, that part of theſe Cows were ſacrific'd in the Temple of *Jupiter*; that is, in the Capitol.

FORE-*Knight*, in the Sea Language, a piece of Wood, carv'd in the Figure of a Man's Head, and faſt bolted to the Beams upon the ſecond Deck.

FORE *Caſtle* of a Ship, is that Part where the Fore-maſt ſtands: It is divided from the reſt of the Floor by a Bulk-head; that Part of the *Fore Caſtle* which is aloft, and not in the Hold, is called the Prow.

FORE *Maſt* of a Ship, is a round large piece of Timber, ſeated in her *Fore* Part, on which is born the *Fore* Sail, and *Fore*-Top-Sail Yards. See MAST.

Its Length is uſually $\frac{8}{9}$ of the Main Maſt.

The *Fore-Top-Maſt* is half the Length of the *Fore* Maſt, and the *Fore-top-gallant* Maſt is half the Length of the *Fore*-Top-Maſt. See GALLANT.

FORELAND, or FORENESS, in Navigation, a Point of Land jutting out into the Sea. See CAPE.

FORELAND, in Fortification, is a ſmall Space of Ground between the Wall of a Place, and the Moat, call'd alſo *Berme*. See BERME.

FORELOCKS in a Ship, are little flat Wedges like pieces of Iron; us'd at the Ends of Bolts, to keep them from flying out of the Holes. See BOLTS.

FORE *Sail*, the Sail of the *Fore* Maſt. See SAIL.

FORE-*ſhorten*, among Painters, *&c.* See SHORTENING.

FORE *Loin*, among Hunters, is when a Hound going before the reſt of the Cry, meets Chace, and goes away with it.

FORE *Skin*, ſee PREPUCE.

FOREJUDG'D *the Court*, is when an Officer of any Court is baniſh'd or expell'd the ſame for ſome Offence, or, for not appearing to an Action by Bill fil'd againſt him; and in the latter he is not to be admitted to officiate, till he appear to the Bill, Anno 2 *Hen.* 4. *c.* 8.

He ſhall looſe his Office, and be *forejudg'd* the Court, *&c. Forjudicare, interdum eſt male judicare.* Spel.

FOREJUDGER, in Law, ſignifies a Judgment, whereby a Man is depriv'd, or put by the thing in queſtion.

FORECLOS'D, in our antient Law Books, ſignifies barr'd, ſhut out, or excluded for ever.

FOREFOOT, in the Sea Language, is when one Veſſel ſails, or lies a-croſs another's way.

As if two Ships being under Sail, and in Ken of one another, one of them lies in a Courſe with her Stern ſo much a-weather the other, that if both hold on, the windward Ship will run out a-head of the other. Such Ship is ſaid to lie with the others *forefoot*.

Tho', as ſoon as ſhe has paſs'd, they ſay, ſhe is gone out *a-head*.

FOREIGN, ſomething extraneous, or adventitious. *Foreign* Miniſter, *Foreign* Prince, *Foreign* Goods, *&c.* are thoſe belonging to other Nations. *Foreign* to the Purpoſes, *i. e.* remote.

Matter is *foreign* to the Idea of Space, *i. e.* is not inherent therein, but additional thereto. See VACUUM.

*Foreign* Plants are particularly call'd *Exoticks*. See EXOTIC.——

In ſome Univerſities they give the Appellation *Foreign Doctors*, *Doctores Forenſes*, to ſuch as do not reſide in the Place, or the Univerſity; but take Degrees to go and live elſe where, and in other Countries.

In the Life of St. *Paul*, Biſhop of *Verdun*, written by an anonymous Author, and publiſh'd from a MS. above 400 Years old, by *Bollandus*; we meet with *Forenſis Preſbyter*, for a Prieſt who lives in another Part. The ſame *Bollandus* notes, that St. *Ambroſe* uſes the Word *Forenſis* for *Exterior*.

*Foreign*, or *Foraine Traitte*, is a Duty belonging to the King of *France*, of $\frac{1}{20}$ of the Value of all Goods imported or exported out of the Kingdom. See DUTY.

The Word *Foreign* is form'd of the Latin *Fores*, Doors; or *foris*, or out of doors; or *Forum*, Market, *&c.*

FOREIGN, is us'd in Law in ſeveral Senſes, and join'd with divers Subſtantives. Thus,

FOREIGN *Anſwer*, is ſuch an Anſwer, as is not triable in the County where it is made. See ANSWER.

FOREIGN *Attachment*, is an Attachment of *Foreigners* Goods found within a Liberty or City, in the Hands of a third Perſon; for the Satisfaction of ſome Citizen, to whom the *Foreigner* oweth Money. See ATTACHMENT.

FOREIGN *Matter*, in Law, is Matter triable in another County; or Matter done in another County. See MATTER.

FOREIGN *Opposer*, or *Appoſer*, is an Officer in the Exchequer, to whom all Sheriffs or Bailiffs do repair to be appos'd by him of their Green-Wax, after they are appos'd of their Sums out of the Pipe Office; and from thence draws down a Charge upon one of them to the Clerk of the Pipe.

His Buſineſs is, to examine the Sheriff's Eſtreats with the Record, and to aſk the Sheriff, what he ſays to every particular Sum therein.

FOREIGN *Plea* is a Refuſal of the Judge as incompetent, becauſe the Matter in hand was not within his Precinct. See PLEA.

FOREIGN *Service*, is ſuch Service whereby a mean Lord holdeth of another, without the Compaſs of his own Fee; or elſe that which a Tenant performeth, either to his own Lord, or to the Lord Paramount out of his own Fee. See SERVICE.

FORELORN *Hope*, in an Army, the *Enfans perdues*. See ENFANS *Perdues*.

FORESCHOKE, *Derelictum*, antiently ſignified as much as *forſaken* in our modern Language.

It is ſpecially us'd in one of our Statutes, for Land or Tenements ſeiz'd by the Lord, for want of Services due from the Tenant; and ſo quietly held and poſſeſs'd beyond the Year and Day.

As if we ſhould ſay, that the Tenant, who ſeeing his Lands or Tenements taken into the Lord's Hand, and poſſeſs'd ſo long, takes not the Courſe appointed by Law to recover them; does in due Preſumption of Law diſavow or forſake all the Right he has to them.

And then ſuch Lands ſhall be call'd *Foreſchoke*, ſays the Stat. 10 *Ed.* 2. *c. unico.*

FOREST, *Silva*, in Geography, a huge Wood: Or, a large Extent of Ground, cover'd with Trees. See WOOD.

The *Calidonian* and *Hercynian Foreſts* are famous in Hiſtory: The firſt was a celebrated Retreat of the antient *Picts*, and *Scots*: The latter, antiently poſſeſs'd the greateſt Part of *Europe*; particularly *Germany*, *Poland*, *Hungary*, &c. In *Cæſar*'s time it extended from the Borders of *Alſatia* and *Switzerland* to *Tranſylvania*; and was computed 60 Days Journey long, and nine broad: Some Parts, or Cantons thereof are ſtill remaining.

The *Foreſt* of *Dean* in *Gloceſterſhire* is famous for the Iron Works therein. See IRON.

The Antients ador'd *Foreſts*, and imagin'd a great Part of their Gods to reſide therein: Temples were frequently built in the thickeſt *Foreſts*; the Gloom and Silence whereof naturally inſpire Sentiments of Devotion, and turn Men's Thoughts within themſelves.

For the like reaſon, the antient *Druids* made *Foreſts* the Place of their Reſidence, perform'd their Sacrifices, inſtructed their Youth, and gave Laws therein. See DRUIDS.

The Word *Foreſt* is form'd of the Latin *Foreſta*, which firſt occurs in the Capitularies of *Charlemaign*, and which it ſelf is deriv'd from the German *Forſt*, ſignifying the ſame thing. *Spelman* derives it from the Latin *foris reſtat*, by reaſon *Foreſts* are out of Towns. Others derive *Foreſta a feris*, q. d. *Fereſta*, *quod ſit tuta ſtatio ferarum*, as being a ſafe Station or Aboad for wild Beaſts.

FOREST, in a Law Senſe, is defined a certain Territory of woody Grounds, and fruitful Paſtures, privileg'd for wild Beaſts, and Fowls of *Foreſt*, Chaſe and Warren, to reſt and abide in the ſafe Protection of the King for his Princely Delight; meer'd and bounded with unremoveable Bounds, Marks, Meers, and Boundaries, either known by Matter of Record, or Preſcription; Repleniſh'd with wild Beaſts of Venery, or Chaſe, and with great Coverts of Vert for Succour of the ſaid Beaſts. For Preſervation and Continuance of which Place with the Vert and Veniſon, there are certain peculiar Laws, Privileges, and Officers.

The Properties or Characters of a *Foreſt*, are,

1° That it cannot be in the Hands of any, but the King; becauſe none elſe hath Power to conſtitute ſuch *Commiſſions* as are neceſſary to the Being of a *Foreſt*, beſide the King; as, particularly that of a Juſtice in Eyre of the *Foreſt*.

And yet the Abbot of *Whitby* had a *Foreſt* by Grant of King *Henry* the Second, and King *John*; with all Officers incident thereto.

The Second Character, is the *Courts* belonging thereto, which are, the *Juſtice Seat*, held every three Years; the *Swainmote*, held trice every Year; and the *Attachment*, once every forty Days. See JUSTICE *Seat*, SWAINMOTE, *&c.*

The Third Characteriſtic is the *Officers* belonging thereto, for Preſervation of the Vert and Veniſon; as the *Juſtices of the Foreſt*, the *Warder*, or Keeper, *Ranger*, *Verderors*, *Foreſters*, *Agiſtors*, *Regardors*, *Bailiffs*, *Beadles*, &c.

See each under its proper Article, JUSTICE *of the Foreſt*, WARDEN, RANGER, VERDER, or REGARDER, *&c.*

But the moſt eſſential Mark of a *Foreſt* is the *Swainmote*, which is no leſs incident thereto, than the Court of Pye-Powder to a Fair. If this fail, it ceaſes to be a *Foreſt*, and commences a *Chace*. See CHACE.

The way of making a *Foreſt*, is thus: Certain Commiſſioners, appointed under the Great Seal, view the Ground intended, and fence it round: This being reported in Chancery, the King cauſes it to be proclaim'd throughout the County where the Land lies, that it is a *Foreſt*; and thenceforth to be govern'd by the Laws of the *Foreſt*; and prohibits all Perſons from hunting therein, without his Leave.

*New Foreſt*, in *Hampſhire*, Hiſtory tells us, was rais'd by the Deſtruction of 22 Pariſh Churches, and all the Villages, Manors, Chappels, *&c.* for the ſpace of 30 Miles together. Beſide *New Foreſt*, there are now ſubſiſting 68 *Foreſts* in *England*; thirteen *Chaſes*, and more than 781 *Parks*. See PARK.

Our antient *Norman* Kings were the firſt who inclos'd *Foreſts*, and ſettled the Juriſdiction thereof: Their Taſte run mightily that way. In the Courſe of a few Reigns from the Conqueſt, no leſs than ſixty eight *Foreſts* were inclos'd; the ſtricteſt Laws were made to ſecure them; and the ſevereſt Penalties inflicted on all Treſpaſſers thereon.

*William* the Conqueror decreed, the Eyes of any Perſon to be pull'd out, who took either a Buck, or Boar: *William Rufus* made the Stealing of a Doe a hanging matter: The taking of a Hare was fined at 20 *s.* and a Cony at 10 *s.*

*Eadmer* adds, that fifty Perſons of Fortune being apprehended by the ſame Prince, for killing his Bucks, were forc'd to purge themſelves by the Fire of Ordeal, *&c.*

*Henry* the Firſt made no diſtinction between him who kill'd a Man, and a Buck; and puniſh'd thoſe who deſtroy'd the Game, tho' not in the *Foreſt*, either by Forfeiture of their Goods, or Loſs of Limbs; tho' *Henry* the Second remitted it for a temporary Impriſonment.

*Richard* the Firſt revived the old Diſcipline of gelding and pulling out the Eyes of thoſe convict of hunting in the *Foreſt*: But he afterwards relax'd a little, and was contented to make ſuch Convicts abjure the Realm, or be committed, or pay a Fine.

*Charter of the* FOREST, ſee CHARTA *de Foreſta*.

FOREST is alſo us'd adjectively. The *Foreſt Cities* of the Empire are four Cities ſituate in the Black *Foreſt*, or *Silva Nigra*, a Part of the antient *Hyrcinian Foreſt*; viz. *Rhinfield*, *Valdſhuſt*, *Seckinghen*, and *Lauffembourg*. But, now that the Bounds of the *Black Foreſt* are contracted, theſe Cities are out of the Limits thereof.

FOREST *Law*. The *Foreſt* Laws are peculiar Laws, different from the common Law of *England*. See LAW.

Before the making of *Charta de Foreſta*, Offences committed therein, were puniſh'd at the Pleaſure of the King, in the ſevereſt manner; and even in the Charter were ſome grievous Articles, which the Clemency of later Princes have ſince by Statute thought fit to alter *Per Aſſiſas Foreſtæ*.

Yet to this Day, in Treſpaſſes relating to the *Foreſt*, *Voluntas reputabitur pro facto*; ſo that if a Man be taken hunting a Deer, he may be arreſted, as if he had taken a Deer. The Foreſter may take, and arreſt a Man, if he be taken either at *Dog-draw*, *Stable-ſtand*, *Back-bear*, or *Bloody-hand*; notwithſtanding that three of theſe be only Preſumptions. See DOG-DRAW, STABLE-STAND, *&c.*

FORE-STAFF, an Inſtrument us'd at Sea, for taking the Altitudes of heavenly Bodies. See ALTITUDE.

The *Fore-ſtaff*, call'd alſo *Croſs-ſtaff*, takes its Denomination hence, that the Obſerver, in uſing it, turns his Face towards the Object; in contradiction to *Back-ſtaff*, where he turns his Back of the Object. See BACK-STAFF.

The *Fore* or *Croſs-ſtaff*, repreſented in *Tab. Navigation. Fig.* 14. conſiſts of a ſtraight, ſquare, graduated Staff, A B, and four Croſſes, or Vanes F F, E E, D D, C C, which ſlide thereon.

The firſt, and ſhorteſt of theſe Vanes F F, is called the Ten-croſs, or Vane, and belongs to that ſide of the Inſtrument, whereon the Diviſions begin at three Degrees, and end at 10. The next longer Vane E E is call'd the thirty Croſs; belonging to that Side of the Staff, wherein the Diviſions begin at 10 Degrees, and end at 30, called the thirty Scale. The next Vane D D is call'd the ſixty Croſs, and belongs to the Side where the Diviſions begin at 20 Degrees, and end at 60. The laſt, and longeſt, C C, call'd the ninety Croſs, belongs to the Side whereon the Diviſions begin at 30 Degrees, and end at 90.

### *Uſe of the* FORESTAFF.

The great Uſe of this Inſtrument, is to take the Heights of the Sun, and Stars, or the Diſtance of two Stars: And the Ten, Thirty, Sixty, or Ninety Croſſes are to be us'd according as the Altitude is greater, or leſſer; that is, if the Altitude be leſs than 10 Degrees, the Ten Croſs to be us'd; if above ten, but leſſer than 30, the Thirty Croſs to be us'd, *&c.*

Note, for Altitudes greater than 60 Degrees, this Inſtrument is not ſo convenient as a Quadrant, or Semi-circle. See QUADRANT.

*To obſerve an Altitude by the* FORESTAFF; Apply the flat End of the Staff to your Eye, and look at the upper End *b* of the Croſs for the Centre of the Sun or Star, and at the lower End *a* for the Horizon. If you ſee the Sky inſtead of the Horizon, ſlide the Croſs a little nearer the Eye; and if you ſee the Sea, inſtead of the Horizon, ſlide the Croſs further from the Eye: And thus continue moving, till you ſee exactly the Sun or Star's Centre by the Top of the Croſs *b*, and the Horizon by the Bottom thereof, *a*.

Then the Degrees, and Minutes cut by the inner Edge *c* of the Croſs upon the Side of the Staff peculiar to the Croſs you uſe, is the Altitude of the Sun, or Star.

If it be the Meridian Altitude you want, continue your Obſervation as long as you find the Altitude increaſe; ſtill moving the Croſs nearer to the Eye. See MERIDIAN.

By ſubſtracting the Meridian Altitude thus found from 90 Degrees, you will have the Zenith Diſtance.

To work accurately, an Allowance muſt be made for the Height of the Eye above the Surface of the Sea; *viz.* for one *Engliſh* Foot, 1 Minute; for five Foot, $2\frac{1}{2}$; for ten Foot, $3\frac{1}{2}$; for twenty Foot, 5; for forty Foot, 7, *&c.*

Theſe Minutes ſubtracted from the Altitude obſerv'd; and added to the Zenith Diſtance obſerv'd; give the true Altitude, and Zenith Diſtance.

*To obſerve the Diſtance of two Stars, or the Moon's Diſtance from a Star, by the* FORESTAFF; Apply the Inſtrument to the Eye; and looking to both Ends *a* and *b* of the Croſs, move it nearer, or farther from the Eye, till you ſee the two Stars; the one on the one End, and the other on the other End of the Croſs. Then the Degrees and Minutes cut by the Croſs on the Side proper to the Vane in uſe, give the Star's Diſtance.

FORESTAGE, FORESTAGIUM, in our antient Cuſtoms, an obſolete Duty, or Service, paid by the Foreſters to the King.

In *Britany*, *Lobineau* obſerves, the Office of Foreſters was held by Gentlemen of the firſt Rank, who for their *Foreſtage* were oblig'd to furniſh the Lord, when he kept open Houſe, with Cups and Spoons.——

*Foreſtage* alſo ſeems to have been us'd for a Duty, payable to the King's *Foreſters*. *Et ſint quieti de Theolonio, & Paſſagio, & de* Foreſtagio, &c. *Chart. Edu.* 1.

It may likewiſe be taken for a Right to uſe the Foreſt; or, a taking of reaſonable Eſtovers. See ESTOVER.

FORESTAL, or FORSTAL, in Domeſday wrote *Foriſtel*, is an intercepting in the Highway; or ſtopping, or even inſulting a Paſſenger therein.

*Spelman* defines it an Obſtruction, or ſhutting up of the King's Highway.

In the Laws of *Hen.* 1. the Senſe of the Word is thus explain'd: *Foreſtal eſt, ſi quis ex tranſverſo incurrat, vel in viam expectet, & aſſaliet inimicum ſuum.*

The Word is form'd of the *Saxon Fore*, before; and *Stal*, Journey, Road.

FORESTALLER, a Perſon who *foreſtals* the Market, or buys up Goods upon the Road. See FORESTALLING.

FORESTALLING, the buying, or bargaining for Corn, Cattle, or other Merchandize, by the Way, before it reaches the Market, or Fair, to be ſold; or by the Way, as it comes beyond the Sea's, or otherwiſe, toward any City, Port, Haven, or Creek of this Realm; with deſign to take Advantage thereof, and ſell it again at a more advanc'd and dear Rate. See REGRATOR, and ENGROSSER.

*Foreſtalling* is particularly us'd in *Crompton*, for ſtopping a Deer broken out of the Foreſt, and preventing its returning home again; or, a lying between him and the Foreſt, in the Way he is to return.

*Fleta* ſays, it ſignifies *Obſtructionem viæ, vel impedimentum tranſitus & Fugæ averiorum.*

FORESTER, a ſworn Officer of the *Foreſt*, appointed by the King's Letters Patent, to walk the Foreſt, and to watch the Vert, and Veniſon; as alſo to attach and preſent all Treſpaſſers againſt both, within his Bailiwick or Walk, to the Foreſt Courts; to be puniſh'd according to their Offences. See FOREST.

Tho' the Letters Patent of a *Foreſter* be ordinarily only granted, *quam diu bene ſe geſſerint*; yet they are granted to ſome, and their Heirs; who are hereby calleſt *Foreſters in Fee*. See FEE.

Sir *William Temple* relates, that the *Franks* having ſubdued all *Gaul*, their Princes reduc'd *Flanders* into a kind of Government; and gave the Quality of *Foreſter*, with part of the Province, to the braveſt of their Captains.

This Quality of *Lord Foreſter* held till the time of *Charlemaign*, or, according to others, of *Charles the Bald*, in whoſe Time *Flanders* being erected into a County, the Title of *Foreſters* was chang'd into that of *Count*. See COUNT.

FORFEITURE, originally ſignifies a Tranſgreſſion, or Offence againſt ſome penal Law.

But with us, it is now more frequently us'd for the Effect of ſuch Tranſgreſſion, or the loſing ſome Right, Privilege, Eſtate, Honour, Office, or Effects, in conſequence thereof; than for the Tranſgreſſion it ſelf.

As, *Forfeiture of Eſcheats*, &c. *Forfeiture of Goods*, &c.

A Fee becomes vacant by the *Forfeiture* or Rebellion of his Vaſſal.

Goods *forfeited*, and Goods confiſcated, differ: Thoſe which have a known Owner who has committed ſome Offence, whereby he loſes his Goods, are ſaid to be *forfeited*. Thoſe which an Offender diſavows, as not his own; and which are not claim'd by any other, are ſaid to be *confiſcate*. Stat. 25 *Edu.* 3.

*Forfeiture*, or *Forfeit*, again, is rather more general; and Confiſcation more particular, to ſuch as *forfeit* only to the King's Exchequer. See CONFISCATION.

The Word is form'd of the baſe Latin, *Forisfactura*; whence *Forfaitura*, and *Forfaictura*, and the *French Forfait*. *Forisfactura* comes of *forisfacere*, which, according to *Iſidore*, ſignifies to hurt, or offend, *facere contra rationem*; and which is not improbably deriv'd of *foris*, out, and *facere*, to do, q. d. an Action out of Rule, or contrary to the Rules. *Borel* will have *Forfait* deriv'd from the uſing of *Force*, or Violence: *Lobineau* in his Gloſſary will have *Forsfacta* properly to ſignify a Mulct, or Amend; not *a Forfeit*, which latter he derives from the baſs Briton *forfed*, a Penalty.——

*Full* FORFEITURE, *plena forisfactura*, call'd alſo *plena wita*, is a *Forfeiture* of Life and Member, and all elſe that a Man has.

FORFEITURE *of Marriage*, *Forisfactura Maritagii*, a Writ, which laid againſt him, who, holding by Knight's Service, and being under Age, and unmarried, refus'd her whom the Lord offer'd him, without his Diſparagement, and married another.

FORFEX, an Inſtrument to draw Teeth withal.

FORGE, properly ſignifies a little Furnace, wherein Smiths, and other Artificers in Iron and Steel, &c. heat their Metals red hot, in order to ſoften and render them more malleable and manageable on the Anvil, &c. See FURNACE.

Farriers *Forge*, Silverſmiths *Forge*, Cutlers *Forge*, Lockſmiths *Forge*, &c.

The *Forge* us'd by the ſeveral Operators in Iron, is very ſimple: We ſhall inſtance in that of the Blackſmith, to which all the reſt are reducible.

The *Hearth*, or Fire-place, is a Maſſive of Brick, about two Foot, ſix Inches high: The *Back* of the *Forge* is built upright to the Cieling, and is inclos'd over the Fore-place with a *Hovel*, which leads into a Chimney, to carry away the Smoak. In the Back of the *Forge*, againſt the Fire-place, is a thick iron Plate, with a taper Pipe fix'd therein, about five Inches long, call'd the *Fewel*, into which the Noſe or Pipe of the Bellows is receiv'd: The Uſe of this Plate and Fewel is, to preſerve the Pipe of the Bellows, and the Back of the Hearth from being burnt. Right before the Back, at about two Foot diſtance, is the *Trough*, fill'd with Water, to wet the Coals in, and thereby increaſe their Force; as alſo to quench the Iron in. Behind the Back of the *Forge* is plac'd the *Bellows*, one of whoſe Boards is fix'd ſo, that it move not, either upward, or downward; and to the other is fitted a Rope, Chain, or even Rod; which riſing perpendicularly, is fix'd to a croſs piece, call'd the *Rocker*, which moving on a kind of Fulcrum, near the Middle, ſerves as a Handle.

By drawing down this Handle, the moveable Board of the Bellows riſes, and by a conſiderable Weight a-top of its upper Board ſinks down again; and by this alternate Agitation performs the Office of a pair of Bellows.

*Braziers*, and *Copperſmiths* FORGE differs but little from that already deſcrib'd; only that it is much leſs, and that nothing is burnt in it but Charcoal; the Metals us'd by theſe Operators not being able to ſuſtain the Violence of Pit Coal.

FORGE is alſo us'd for a large Furnace, wherein iron Oar taken out of the Mine, is melted down. See IRON.

But this is not ſo properly call'd a *Forge*, as a *Furnace*. See FURNACE.

FORGE is more properly us'd for another kind of Furnace, wherein the iron Oar, melted down and ſeparated in a former Furnace, and there caſt into Sows, and Piggs, is heated, and fus'd over again, and beaten with large Hammers; and thus render'd more ſoft, pure, ductile, and fit for uſe. See IRON.

Of theſe *Forges* there are two kind; which the Iron ſucceſſively paſſes through, before it comes to the Smith.

The firſt, call'd the *Finary*, where the Pigs are work'd into Groſs Iron, and prepar'd for the ſecond, which is call'd the *Chafery*, where it is further wrought into Bars, fit for Uſe. See FINARY, &c.

FORGER *of Falſe Deeds*, ſignifies either him, that fraudulently makes, and publiſhes falſe Writings, to the Prejudice of any Man's Right; or elſe the Writ that lies againſt him who commits this Offence.

*Fitz. Nat. Br. fol. 96. b.* ſays, That a Writ of Deceit lies againſt him, who commits this Offence, and the Penalty of it is declar'd in the Stat. 5 *Eliz. cap.* 14.

FORGING, the Act of beating, or hammering Iron on an Anvil; after having firſt made it red hot in the *Forge*; in order to faſhion, and extend it into various Forms, and Works.

Iron is hammer'd, and *forg'd* two ways: Either by the Force of the Hand; in which there are uſually ſeveral Perſons employ'd, one of them turning the Iron, and hammering likewiſe; and the reſt only hammering.

Or, by the Force of a Water-mill; which raiſes, and works ſeveral huge Hammers, beyond the Force of Man, under the Strokes whereof the Workmen preſent large Lumps, or pieces of Iron, which are ſuſtain'd at one End by the Anvils, and at the other by iron Chains faſten'd to the Ceiling of the Forge.

This laſt way of *forging* is only us'd in the largeſt Works, as Anchors for Ships, &c. which uſually weigh ſeveral thouſand Pounds. See ANCHOR.

For the lighter Works, a ſingle Man ſuffices to hold, heat and turn with one Hand, while he ſtrikes with the other.—

Each Purpoſe the Work is deſign'd for, requires its proper Heat. If it be too cold, it will not *feel the Weight of the Hammer*, as the Smiths call it (*i. e.* will not ſtretch, or give way); and if it be too hot, it will *red-ſear* i. e. break or crackle under the Hammer. See HAMMERING.

The ſeveral Heats the Smiths take of their Iron, are 1° A Blood-red Heat. 2° A white-flame Heat. 3° A ſparkling, or welding Heat. See HEAT.

FORKED *Heads*, among Hunters, all Deers Heads, which bear two Croches on the Top; or which have their Croches doubled.

FORLET *Land*, was ſuch Land in the Biſhoprick of *Hereford*, as was granted or leas'd, *dum Epiſcopus in Epiſcopatu ſteterit*; that the Succeſſor might have it for his preſent Income.

But now that Cuſtom is diſus'd, and the ſame Lands are granted, as others, by Leaſe; yet they ſtill retain the Name. *Butterfield*'s Survey, fol. 56.

FORLINS, or FIELD FORTS, are Sconces, or little Fortreſſes, whoſe flank'd Angles are generally diſtant one from another 120 Fathom; but their Extent and Figure are different, according to the Situation and Nature of the Ground; ſome of them having whole Baſtions, and others only Demi-Baſtions.

They are made uſe of only for a time; either to defend the Lines of Circumvallation, or to guard ſome Paſſage or dangerous Poſt.

FORM, in Philoſophy, is the manner of being peculiar to each Body; or that which conſtitutes it ſuch a particular Body, and diſtinguiſhes it from every other. See BODY.

The Philoſophers generally allow two Principles of Bodies: *Matter*, as the common Baſis, or Subſtratum of all; and *Form*, as that which ſpecifies and diſtinguiſhes each; and which added to a Quantity of common Matter, determines or denominates it this, or that; Wood, or Fire, or Aſhes, &c. See PRINCIPLES; ſee alſo MATTER.

*Ariſtotle* calls *Form* λόγος τῆς οὐσίας, the *Reaſon*, or Manner of the *Eſſence*, or Being of a thing: But as οὐσία denotes *Subſtance*, as well as *Eſſence*, a mighty Controverſy has aroſe in the Schools, in which ſenſe the Word is here to be us'd; and whether *Forms* are to be accounted *ſubſtantial*, or only *eſſential*: *i. e.* Whether the *Forms* of Bodies be any real Subſtances, and have an Exiſtence diſtinct from that of Matter, or not.

'Tis certain, the moſt antient Philoſophers never dreamt of making *Form* a Subſtance. *Parmenides* and *Teleſius* expreſly aſſert, all natural Things to conſiſt of one and the ſame kind of Subſtance, and only to differ in Accidents. And tho' *Empedocles* allow'd of a ſubſtantial *Form* in mixt Bodies; yet he deny'd it in the Elements, and only held an eſſential one.

*Galen* allow'd of nothing in Matter more than the Temperature of the primary Elements, in which he was ſeconded by *Alex. Aphrodiſæus*, *Philoponus*, and others.

*Subſtantial* FORMS ſeem to have been firſt broch'd by the Followers of *Ariſtotle*, who thought Matter, under different Modes or Modifications, not ſufficient to conſtitute different Bodies; but that ſomething ſubſtantial was neceſſary to ſet them at a ſufficient Diſtance: And thus introduc'd ſubſtantial *Forms*; on the footing of Souls, which ſpecify and diſtinguiſh Animals.

The Conſiderations which the Peripateticks principally inſiſt on, in confirmation of this Doctrine, are: 1° That without

out ſubſtantial *Forms*, all natural Things would be of the ſame Species, Nature, and Eſſence; which is ſuppos'd an Abſurdity.

2° That every thing has its peculiar Pow'r, Motion, and Operation; as the Magnet, *e. gr.* has of attracting Iron; but that this Pow'r, does not flow from the Matter of the Body, which is only paſſive; nor from the Accidents: And therefore muſt ariſe from a ſubſtantial *Form*.

3° That without ſubſtantial *Forms* there would be no Generation; for a Production of Accidents is only an Alteration.

4° That without ſuch *Form*, the Nature of a Man and of a Lyon would not differ.

What contributed much to their Error, was the Circumſtances of Life and Death: For, obſerving, that as ſoon as the Soul was departed out of a Man, all Motion, Reſpiration, Nutrition, *&c.* immediately ceas'd; they concluded that all thoſe Functions depended on the Soul; and conſequently that the Soul was the *Form* of the animal Body, or that which conſtituted it ſuch: And that the Soul was a Subſtance, independent of Matter, no body doubted; whence the *Forms* of other Bodies were concluded equally ſubſtantial.

But to this it is anſwer'd, that tho' the Soul be that by which a *Man* is *Man*; and conſequently is the *Form* of the *human* Body, as *human*; yet it does not follow, that it is properly the *Form* of this Body of ours, as it is a Body; nor of the ſeveral Parts thereof, conſider'd as diſtinct from each other.

For thoſe ſeveral Parts have their proper *Forms* ſo cloſely connected with their Matter, that it remains inſeperable therefrom, long after the Soul has quitted the Body: Thus, Fleſh has the *Form* of Fleſh; Bone, of Bone, *&c.* after the Soul is remov'd, as well as before.

The Truth is, the Body does not become incapable of performing its accuſtom'd Functions, by reaſon the Soul has deſerted it; but the Soul takes its leave, by reaſon the Body is not in a Condition to perform its Functions.

The antient and modern corpuſcular Philoſophers therefore, with the *Carteſians*, exclude the Notion of ſubſtantial *Forms*; and ſhew by many Arguments, that the *Form* is only the Modus, or manner of the Body it is inherent in.

And as there are only three primary Modes of Matter, *viz.* Figure, Reſt, and Motion; with two others ariſing therefrom, *viz.* Magnitude, and Situation: The *Forms* of all Bodies they hold to conſiſt therein; and ſuppoſe the Variations theſe Modes are capable of, ſufficient to preſent all the Variety obſervable in Bodies. See MODE.

Many Varieties we actually ſee reſult from changes in theſe Modes; which may very well paſs for Differences of *Form*: Thus an Awl only differs from a Needle in Magnitude; a Globe from a Cube in Figure: Tranſparent Glaſs being pulveriz'd, will reflect the Light, and appear white; and yet all the Alteration conſiſts in the Order and Arrangement of the Parts: When Wheat is ground into Flower, all the Change conſiſts in a Seperation of the contiguous Parts; and when the Flower is bak'd into Bread, what is it but the ſame Particles aſſociated again, in another manner. By agitating Water, a Froth is form'd; if the Agitation be increas'd, the Particles will exhale, and form Clouds; which being congregated again, return in Dew, Snow, Hail, or Rain: And the ſame Water, by the Acceſſion of Cold, might have been form'd into Ice. So many different Bodies, endued with different Qualities, and which the Peripateticks themſelves allow ſpecifically different, ariſe from one and the ſame Body, by mere Motion, and Reſt.

The Philoſophy of ſubſtantial *Forms*, its Riſe, Uſe, and Extent, are ſet in an excellent light by Fa. *Mallebranch*.

The way of thinking, that firſt introduc'd it, is this: Every thing I perceive in taſting, ſeeing, and handling this Honey, and Salt, is in the Honey, and Salt: But it is certain, that the things I perceive in the Honey, *e. gr.* the Colour, Taſte, *&c.* differ eſſentially from thoſe I perceive in the Salt; conſequently, there is an eſſential Difference between the two.

Hence it follows, that they are groſly deceiv'd, who take all the Differences between thoſe Bodies to conſiſt in the different Configurations of the component Parts; ſince the different Figure is not at all eſſential to the different Bodies: For change the Figure of the Parts of the Honey how you will; and even give them thoſe of the Parts of Salt; yet it is Honey ſtill.

There muſt therefore be ſome Subſtance added to the common Matter of all Bodies, to make them eſſentially different. And thus are *ſubſtantial Forms* hook'd in; thoſe fertile Subſtances, which perform every thing that we ſee in all Nature.

Since then in every natural Body there are two Subſtances; the one common to Honey, Salt, and all other Bodies; and the other, that which makes the Honey, Honey; the Salt, Salt; and all other Bodies what they are: It follows, that the firſt, viz. *Matter*, having no contrary, but being indifferent to all *Forms*, muſt remain without Force, and Action; as having no occaſion to defend it ſelf.

But for the others, *viz.* the *ſubſtantial Forms*, there is a Neceſſity of their being accompany'd and inveſted with Faculties and Qualities for their Defence, and Subſiſtence. Theſe muſt be always on their Guard, for fear of being ſurpriz'd: They are in poſſeſſion of a thing, which they are to hold againſt numerous Pretenders; and therefore muſt be continually at work, to fortify themſelves, and extend their Dominion over the neighbouring Matters, and puſh their Conqueſts as far as they can: Were they to remain unactive, and unprepar'd, other *Forms* would lay hold of them, and baniſh and deſtroy them for ever. To guard againſt this, they keep conſtant watch; and entertain mortal Enmities and Antipathies againſt thoſe other *Forms*, which only wait to deſtroy them.

If now it happen, that one *Form* ſeize the Matter, or Receptacle of another; that the *Form* of a Carcaſs, for inſtance, ſeize the Body of a Dog; it is not enough, that this new *Form* annihilate the former; but its Hatred muſt be further gratify'd with the Deſtruction of all the Qualities, that took its Enemy's part.

The Hair of the Carcaſs, then, muſt be turn'd white; by a Creation of a new Colour: Its Blood muſt become red, but of ſuch a red, as is not to be ſuſpected in the Intereſt of the Enemy; and the whole Body to be inveſted with Qualities, truſty to their new Maſter, whom they are to defend with all the Power the Qualities of a Carcaſs can have; till ſuch time as being overpow'rd, this *Form* gives way too, in its turn, to the *Form* of Maggots, Worms, *&c.*

But, as nothing can be in perpetual War; but every thing has its place of Reſt; it follows, that even the Fire muſt likewiſe have its Centre, whither its natural Levity always prompts it, that it may remain at reſt, ceaſe to burn, and even quit its Heat, which it only maintains here below for its Defence.——

Theſe may ſerve as a Taſte of the Conſequences, drawn from that important Principle, *Subſtantial Forms*; which is infinitely fertile, and furniſhes every Philoſopher with all ſorts of Solutions, according to his Ability, Adreſs, Inclination, *&c.*

FORMS are diſtinguiſh'd into *Eſſential*, and *Accidental*.

*Eſſential* FORMS. Though the five Modes above-mention'd, generally taken, be adventitious; yet, to this, or that Body, *e. gr.* to Fire, or Water, they are eſſential: Thus, it is *accidental* to Iron, to have this, or that Magnitude, Figure, or Situation; ſince it might exiſt in different ones; yet, to a Knife, or Hammer, the Figure, Magnitude, and Poſition of Parts, which conſtitute it a Hammer, or Knife, are *eſſential*; and they cannot exiſt, or be conceiv'd without them.

Hence it is infer'd, that tho' there be no *Subſtantial*, there are *Eſſential Forms*, whereby the ſeveral Species of Bodies become each what they are, and are diſtinguiſh'd from all others. See ESSENTIAL.

*Accidental* FORMS are thoſe really inherent in Bodies; but in ſuch manner, as that the Body may exiſt in all its Perfection, without them.

Such is Whiteneſs in a Wall; Heat in Water; a Figure of a Man in Wax, *&c.*

*Metaphyſical* FORM is nothing elſe but ſpecific Difference; as metaphyſical Matter is nothing elſe but Genus.

Thus, *Rational*, is the Metaphyſical *Form* of Man.

*Syllogiſtic* FORM is a juſt Diſpoſition, both of the Terms, in reſpect of Predicate, and Subject; and of the Propoſitions, in reſpect of Quantity, and Quality.

By juſt Diſpoſition we mean ſuch an one, wherein the Concluſion follows duly and legitimately from the two Premiſſes; there being no *Form*, where there is no Concluſion. See SYLLOGISM.

The Diſpoſition of the ſeveral Terms, being, as it were, ſo many Steps or Degrees of a *Syllogiſtic Form*; is call'd the *Figure* of the Syllogiſm. See FIGURE.

The Diſpoſition of the Premiſſes alone, being as it were another Degree, is call'd the *Mode of the Syllogiſm*. See MODE.

*Forms*, again, are diſtinguiſh'd into *Simple*, and *Compound*.

*Simple* FORMS are thoſe of Simple Bodies, *i. e.* of ſuch as have but few Properties.

*Compound* FORMS are thoſe of more Compounded Bodies; or ſuch, as have more Properties.

Thus, *e. gr.* If the *Form* of a *hard Body* be compar'd with the *Form* of Wood; the former may be accounted *Simple*, and the latter *Complex*; inaſmuch as a hard Body, conſider'd only as *hard*, has fewer Properties than Wood. Abſolutely ſpeaking, however, Simple *Forms* are thoſe of the Elements; and Compound, of mixt Bodies.

Laſtly, ſome diſtinguiſh *Forms* into a *Natural*, and *Artificial*.

Natural, are thoſe inherent in Bodies, without any thing contributed thereto on the part of Man. Such is the *Form* of Marble.

Artificial, are thoſe ariſing from human Induſtry: Such is that of a Statue. But this Diſtinction is uſeleſs; and does not imply any intrinſic Difference in the *Forms* themſelves.—

Form *of Corporeity*, according to *Avicenna*, and the *Scotiſts*, is that which conſtitutes Body in the generical *Eſſe* of Body.

That there is ſuch a thing, they prove thus: The human Body is a natural Body, which cannot be plac'd in the *Eſſe* of Body, but by the *Form* of Corporeity: For it is either ſo plac'd by this, or by the rational Soul; not by the Soul, ſince that is ſpiritual; therefore by the *Form* of Corporeity. And the ſame may be underſtood of other Bodies: But the later Philoſophers ſet this aſide as a Chimæra.

Form, in Theology, is one of the eſſential Parts of the Sacraments; being that which gives them their Sacramental *Eſſe*. See Sacrament.

The *Form* conſiſts in certain Words, which the Prieſt pronounces in adminiſtring them.

In ſome of the *Romiſh* Sacraments the *Form* is deprecative; in ours it is abſolute, or indicative.

The Fathers and antient Divines held, that the Sacraments conſiſted of Things, and Words, *Rebus & Verbis*. *William* of *Auxerre* was the firſt, who, about the Beginning of the XIII^th^ Century introduc'd the Terms, Matter, and *Form* in lieu thereof.

Form is alſo the external Appearance, or Surface of a Body; or the Diſpoſition of its Parts, as to Length, Breadth and Thickneſs: In which ſenſe it coincides with *Figure*. See Figure.

Form is alſo us'd in the Mechanic Arts, for a kind of Mould, whereon a Thing is faſhion'd, or wrought.

As the Hatters *Form*, the Papermakers *Form*, &c.

*Hatters* Form, is a large Block, or piece of Wood, of a cylindrical Figure; the Top thereof rounded, and the Bottom quite flat.

Its Uſe is, to mould or faſhion the Crown of the Hat, after the Matter thereof has been beaten, and full'd.——

To *form* a Hat, 'tis neceſſary the Wool, Hair, &c. be very hot, juſt reeking out of the Copper. See Hat.

*Papermakers* Form is one of the Moulds wherein the Sheets are fram'd. See Paper.

*Printers* Form, is a Frame, or Board, compos'd of divers Letters, rang'd in Order, and diſpos'd into Pages, by the Compoſitor; from which, by means of Ink, and a Preſs, the Printed Sheets are drawn.——

Every *Form* is inclos'd in an iron Chaſe, wherein it is firmly lock'd by a Number of pieces of Wood; ſome long, and narrow; and others in *form* of Wedges. See Chase.

There are two *Forms* requir'd for every Sheet; one for each ſide; and each *Form* conſiſts of more or fewer Pages, according to the Volume of the Book. See Printing.

Form is alſo us'd in a Moral ſenſe, for a manner of being, or doing a thing according to Rules.

This Republic has frequently chang'd its *Form* of Government; that is, its antient Order, or Conſtitution. Pardons generally expreſs a Remiſſion, or Abolition of a Crime; in what *Form*, or Manner ſoever it were committed. He was admitted Doctor *in Form*: Put your Argument in *Form*.

Form, in Law, is apply'd to certain eſtabliſh'd Rules, to be obſerv'd in Proceſſes, or Judiciary Proceedings; in which ſenſe the Word ſtands oppos'd to the Ground or Matter in diſpute.

'Tis a Maxim in Law, that the *Form* leads, or ſways the Matter: The very contrary Maxim ſhould be true.

Form, in Joinery, &c. is apply'd to the long Seats, or Benches in the Choirs of Churches, for the Prieſts, Canons, Prebends, Religious, &c. to ſit on.

Such a Joiner made the *Forms* of ſuch a Church. *Du Cange* takes the Name to be deriv'd hence, that the Backs of theſe Seats were antiently enrich'd with Figures of Painting and Sculpture; call'd in Latin *Formæ & Typi*.—

In the Life of Sir *William* of *Roſchild* we meet with *Forma*, as ſignifying a Seat for an Eccleſiaſtic, or Religious in a Choir; and in that of St. *Lupicin*, we have *Formula* in the ſame ſenſe. In the Rule of the Monaſtery of St. *Cæſarea*, the Nun, who preſides over the Choir, is call'd *Primiceria, vel Formaria*.

FORMA *Pauperis*, or *In Forma Pauperis*, is when any Perſon has Cauſe of Suit, and is ſo poor that he cannot diſpend the uſual Charges of ſuing at Law, or in Equity.

In this caſe, upon his making Oath that he is not worth 5 *l.* his Debts being paid; and bringing a Certificate from ſome Lawyer, that he has juſt cauſe of Suit; the Judge admits him to ſue *in Forma Pauperis*, that is, without paying Fees to Councellor, Attorney, or Clerk. This Cuſtom has its Beginning from Stat. 11 *H.* 7. *c.* 12.

FORMAL, any thing that regards the *Form*; that gives the Manner, or *Form*.

Thus, we ſay, The *formal* Cauſe joining it ſelf to the material, produces the Body, or Compound.

The Schoolmen alſo apply it to any thing which has a kind of *Form*, either Eſſential, or Accidental; at leaſt, in our Conception.

Thus, we frequently hear the Philoſophers talk of the *formal* Object of Knowlege; the *formal* Reaſon of any thing; *formal* Unity, &c. The *formal* Cauſe.

Formal *Cauſe*, is defin'd by certain Philoſophers to be ſomething implanted in Matter, whereby it is diſtinguiſh'd from other Matter.

For Matter is ſuppos'd common to all Bodies; conſequently, that they are diſtinguiſhable from one another does not ariſe from their Matter, but the Form which is peculiar to each: So that what is produc'd by ſuch Cauſe, is ſaid to be *formed*. See Matter.

Hence it follows, that the Cauſality of Matter, and Form, is not the ſame; or that the Component Pow'r, and the Actual Compoſition are different. Contrary to the Opinion of the Generality of Schoolmen, who maintaining *Form* to be a Subſtance coextended with Matter, make it a real component Part; as much as Matter it ſelf. See Cause, Form, Substance, and Substantial.

Formal is alſo us'd in a Moral ſenſe, importing poſitive, expreſs, and preciſe.

Thus we ſay, A *formal* Agreement; a *formal* Text; *formal* Anſwer, &c.

FORMALITER, or Formally, is variouſly us'd in the Schools.

Sometimes it is underſtood of the Subject, when a Predicate is therein on account of ſome Form: Thus, White *formally* taken, diffuſes the Light; *q. d.* the Form inherent in this Subject, *viz.* Whiteneſs, is the Cauſe why the Subject diſperſes the Light.

*Formally* has alſo place in Suppoſitions; A Word being *formally* ſuppos'd, when it is taken for the Thing it was intended to ſignify; as *Man is an Animal*.

*Formally* is alſo us'd in the ſame ſenſe with adequately, and totally: Thus, a Syllogiſm *formally*, i. e. adequately taken, requires three Propoſitions.

Sometimes it is alſo us'd for *Quidditatively*: Thus, Man *formally* taken is a reaſonable Animal.

*Formally* is alſo us'd for *Really*, in oppoſition to objectively: And a thing is ſaid to be *formally* ſuch, when it is ſuch in the proper Notion of the thing ſpoke of.—

*Formally*, again, is us'd in ſpeaking of the Manner wherein a Thing is contain'd in another; in oppoſition to *Virtually*, and *Eminently*. See Virtually, and Eminently.

FORMALITY, the Quality of a *Form*, or *Formula*; or that which conſtitutes, and denominates them ſuch. See Form, and Quality.

*Formality*, as defin'd in the Schools, is any Manner, or Notion, wherein a thing is conceiv'd: Or, a Manner in any Object, importing a Relation to the Underſtanding, whereby it may be diſtinguiſh'd from another Object.

Thus, *Animality*, and *Rationality* are *Formalities*.

The *Scotiſts* make great uſe of *Formalities*; in oppoſition to the *Virtualities* of the *Thomiſts*. See Scotist.

The *Scotiſts* hold, that the Metaphyſical Degrees in Man are ſo many *Formalities*, really diſtinct from each other; as *Man*, *Living*, *Animal*, &c. And the ſame they hold of the Attributes of God: The *Thomiſts*, on the contrary, contend, that they are really and intrinſically the ſame. See Degree.

In Matters of Law, *Formalities* are frequently us'd for the Formula's themſelves; or the Rules preſcrib'd for judiciary Proceedings. In Contracts of ſtrict Law, all the *Formalities* muſt be ſtrictly obſerv'd. An Omiſſion of the leaſt *Formality* may ruin the whole Convention.

The Term is alſo us'd for a certain Order, certain Decencies, and Ceremonies obſerv'd.

This Compoſition of *Formalities*, Decencies, and Circumſpections, may form a political Pedant; but not an Ambaſſador, who muſt be a Gallant Man. *Wicquefort*.

FORMATION, in Philoſophy, &c. the Act of forming, faſhioning, or producing a thing.

The *Formation* of the Chick in the Egg, is admirably explain'd by *Malpighi*, in an expreſs Treatiſe, *De Formatione Pulli in Ovo*. See Egg.

The *Formation* of the Fœtus, the Embryo in the Womb, is a Proceſs of which we have but very dark Conceptions. See Conception, Foetus, &c.

The *Formation* of Metals is effected in the Veins of the Earth, of Fumes or Vapours rais'd by the ſubterraneous Fire, and fix'd, or condens'd as they arrive toward the Surface of the Earth. See Metals, Minerals, &c.

The *Formation* of an Abſceſs in the Body, ſee Abscess.

FORMATRIX, or Formatrice. The antient Philoſophers admitted a *Virtus*, or *Facultas Formatrix*, whereby all Bodies had their *Forms* given them. See Faculty.

FORMé, or FORMY, in Heraldry. A Croſs *Formé*, or *Formy*, is a Croſs narrow in the Centre, and broad at the Extremes; ſo call'd by *Leigh*, and *Morgan*; though moſt other Authors call it *Patee*. See PATEE.

FORMED, or FIGURED *Stones*, among Naturaliſts, are ſuch Bodies, as being either pure Stone, Flint, or Spar, are found in the Earth, ſo *form'd* as that they bear a near Reſemblance to the external Figure of Muſcles, Cockles, Oiſters, and other Shells, or Plants.

Authors are greatly divided as to their Origin: The ſeveral Opinions ſee under FOSSIL, SHELL, *Stone* PLANT, SPAR, &c.

FORMED, in Heraldry, ſee SEATED.

FORMEDON, in Law, a Writ which lies for him who has Right to Lands, or Tenements, by virtue of any Intail, ariſing from the Statute of *Weſtm.* 2. *c.* 1.

There are three Kinds, viz. *Forma Donationis*, or *Formedon, in the Deſcender*; *Formedon in the Reverter*; and *Formedon in the Remainder*.

*Formedon in the Deſcender*, lies for the Recovery of Lands, &c. given to one and the Heirs of his Body; or to a Man and his Wife, and the Heirs of their two Bodies; or to a Man, and his Wife, being Couſin to the Donor, in Frak Marriage, and afterwards alienated by the Donee.

After his Deceaſe, his Heir ſhall have this Writ againſt the Tenant, or Alienee.

*Fitz. Nat. Br. fol.* 211. &c. makes three ſorts of *Formedon* in the Deſcender: The firſt is that now expreſs'd: The ſecond, for the Heir of a Coparcenor, that aliens, and dies: The third he calls, *Inſimul tenuit*; which lies for a Coparcenor, or Heir in Gavel-kind, before Partition againſt him, to whom the other Coparcenor or Heir has alienated, and is dead.

*Formedon in the Revertor*, lies for the Donor, or his Heirs (whoſe Land is entail'd to certain Perſons, and their Iſſue, with condition, for want of ſuch Iſſue to revert to the Donor, and his Heirs) againſt him to whom the Donee alienates after the Iſſue extinct, to which it was entail'd.

*Formedon in the Remainder*, lies where a Man gives Land in Tail, the Remainder to another in Tail, and afterwards the former Tenant in Tail dies without Iſſue, and a Stranger abates; then he in Remainder ſhall have this Writ.

FORMICA, literally ſignifies an *Ant*, and is us'd to expreſs little Tumours, which appear like the Bites of thoſe Creatures.

FORMING, is us'd for the Act of giving Being, or Birth to any thing: Thus, GOD is ſaid to have *form'd* Man after his own Image. Every thing generated, is form'd of ſomething corrupted.—

The Word is alſo ſimply us'd for giving the Figure to any thing. The Potter *forms* his Veſſels as he pleaſes. Geometry teaches, how to *form* all kinds of Figures.—

Alſo, for the producing of a thing: Thus, Thunder is *form'd* of Exhalations: The Lines of his Face began to be *form'd*.

FORMING *of a Siege*, is the making Lines of Circumvallation, to fortify the Camp, and diſpoſing things for the Attack of a Place, in *form*. See SIEGE.

They alſo ſay, to *form* a Squadron, or Battalion; meaning, to range the Soldiers in form of a Squadron, &c.

The Term is alſo us'd in ſpeaking of a Body of Forces; which being out of any order of Squadrons, Battalions, &c. do halt, range themſelves into Order, and put themſelves in a Condition for the Attack. Aſſoon as the Enemy obſerv'd this Motion, they began to *form* themſelves.

FORMING, is alſo us'd in Grammar, in ſpeaking of certain Tenſes of Verbs, which are made from others, by a Change of certain Letters.

The Preſent Tenſe is *form'd* from the Infinitive. Compound and Derivative Words, and even all that have any Etymology, are alſo ſaid to be *form'd*.

FORMS, in Hunting, the Seat of an Hare; or the Place or Time when and where ſhe ſquats.

FORMULA, a Rule, or Model; or certain Terms preſcrib'd, and decreed by Authority, for the *Form* and Manner of an Act, Inſtrument, Proceeding, &c.

The *Roman* Law was full of *Formula's*. Divorces, Adoptions, Stipulations, &c. were perform'd by certain *Formula's*, or in certain Terms.

*Cnejus Flavius* publiſh'd a Collection of the *Formulas* of his Time; which were well receiv'd. The leaſt Slip or Failure in any of the Terms of theſe *Formulæ*, render'd the whole Tranſaction Null. The *Formula's* of *Marculphus*, with M. *Bignon's* Comment, are in great Eſteem.

FORMULA, in Church Hiſtory, and Theology, is a Formulary, or Profeſſion of Faith.

The Council of *Seleucia* was diſſolv'd by *Leonas*, the Emperor's Commiſſary, as not able to bring them to ſign the *Formula*.

FORMULA is particularly us'd for a little Form, or Preſcription; ſuch as Phyſicians direct in extemporaneous Practice; in Diſtinction from the greater Forms, which are the Officinal Medicines. See PRESCRIPTION.

FORMULARY, a Writing, containing the Form, or Formula of an Oath, Declaration, Atteſtation, or Abjuration, &c. to be made on certain Occaſions.

There are alſo *Formularies* of Devotion, of Prayers, &c. Liturgies are *Formularies* of the publick Service in moſt Churches. See LITURGY.

FORNACALIA, or FORNICALIA, a Feaſt held among the antient *Romans*, in honour of the Goddeſs *Fornax*, or *Fornix*, Furnace. See FEAST.

It was ſolemniz'd with Sacrifices, perform'd before the Mouth of a Furnace, or Oven, wherein they dry'd their Corn, bak'd their Bread, &c.

The *Fornacalia* were moveable: The Grand Curio proclaim'd the time of Celebration every Year on the twelfth of the Calends of *March*.

They were firſt inſtituted by *Numa*. The Quirinalia were inſtituted for the ſake of ſuch as had not kept the *Fornacalia*. See QUIRINALIA.

FORNICATION, WHOREDOM, the Act, or Crime of Incontinency between ſingle Perſons: For if either of the Parties be married, it becomes *Adultery*.

St. *Thomas* labours to prove ſimple *Fornication*, contrary to the Law of Nature. See CONCUBINE.

By the antient Law of *England*, the firſt Offence herein was puniſh'd with three Months Impriſonment: The ſecond was made Felony, by an Act in the time of the late Uſurpation. See WHOREDOM.

FORNICATION is ſometimes us'd as a Generical Term, including all kinds of Offences againſt Chaſtity.

Its Species are, 1° *Simple Fornication*, which is that committed with a Proſtitute. 2° call'd *Stuprum*, is that committed with Perſons of Reputation and Sobriety. 3° That committed with Relations, call'd *Inceſt*. 4° That committed with married Perſons, *Adultery*. 5° That committed with Perſons conſecrated to God, *Sacrilege*. 6° That committed between Perſons of the ſame Sex, *Sodomy*. 7° That committed by Perſons on themſelves, *Manuſtupration*. 8° That committed with Beaſts, *Beſtiality*. See ADULTERY, INCEST, SODOMY, &c.

FORNIX, in Anatomy, the Extremity of the Corpus Calloſum, next the Cerebellum; which is ſeparated or divaricated into two Legs, forming a kind of *Arch*, or *Fornix*. See CORPUS *Calloſum*.

FORPRISE, in Law, an Exception, or Reſervation: In which Senſe the Word is us'd in the Statute of *Exon*, 14 *Edw.* 1. but there written Horſepriſe.

We ſtill uſe it in Conveyances and Leaſes, wherein *Excepted* and *Forepriſed* are ſynonymous.

FORPRISE is alſo us'd for an *Exaction*: In which Senſe it is the ſame with Forecapium.

*Totum pratum*, &c. *ſine quacunque* Forpriſa *in excambium pro placea dedit*.

FORRAGE, Proviſion for Cattle, of Hay, Oats, and Straw; particularly in War.

In Marching, Encamping, &c. care muſt be taken, that the Cavalry may find *Forrage*. To go to *forrage:* They were ſent *a-forraging*. A Ration of *Forrage* is the Portion of Hay, Straw and Oats, allow'd each Horſeman, for the Subſiſtance of his Horſe one Day; which is 12 Pounds of Hay, as much Straw, and three Pecks of Oats. See RATION.

*Skinner* derives the Word from *foras agere*, by reaſon they go abroad to ſeek *Forrage:* Others, from *Far*, which antiently ſignify'd any kind of Corn, or Grains: *Menage*, from *Foderagium*, of *Foderum*, or *Fodrum*, which the *Romans* us'd in the ſame Senſe. *Cujas*, and *du Cange*, derive it from the German *Futter*, Horſe-meat: *Voſſius*, from the German *Foden*, or *voeden*, to feed: *Nicod*, from *Farrago*; which literally ſignifies what we call *Forrage*; and figuratively, a Mixture of divers kinds of Things. *Hicks* derives it from the Saxon *Fodre*, or the Engliſh *Fodder*, or the baſe Latin, *Fodrum*.

FORSTAL, FORSTALLING, } See { FORESTAL. FORESTALLING.

FORT, a little Caſtle, or Fortreſs; or a Place of ſmall Extent, fortify'd by Art, or Nature, or both. See CASTLE, and FORTRESS.

A *Fort* is a Work encompaſs'd round with a Moat, Rampart, and Parapet; to ſecure ſome high Ground, or Paſſage of a River; to make good an advantageous Poſt; to fortify the Lines and Quarters of a Siege, &c.

*Royal* FORT is a *Fort* whoſe Line of Defence is at leaſt 26 Fathoms long. See DEFENCE.

*Star* FORT, is a Sconce, or Redoubt, conſtituted by reentering and ſalient Angles; having commonly from five, to eight Points; and the Sides flanking each other. See SCONCE.

*Field* FORT, ſee FORTIN.

FORTERESSE, or FORTRESSE, a general Name for all fortify'd Places, whether ſo fortify'd by Nature, or Art: Such are fortify'd *Towns*, *Caſtles*, *Cittadels*, *Forts*, *Towers*, *Redoubts*, *Sconces*, &c.

FORTI-

FORTIFICATION, call'd alſo *Military Architecture*, is the Art of *fortifying*, or ſtrengthening a Place; by making Works around the ſame, to render it capable of being defended by a ſmall Force, againſt the Attacks of a more numerous Enemy. See *Military* ARCHITECTURE.

Some Authors go back to the Beginning of the World, for the Author and Origin of Military Architecture.

According to them, GOD himſelf was the firſt Engeneer; and Paradice, or the Garden of *Eden*, the firſt *Forteresſe*. *Cain* improv'd on the Hint, in building the firſt City, *Gen.* iv. 17. After him came *Nimrod*, *Gen.* x. 17. Then *Semiramis*, as *Poliænus* relates, *Stratagem. L. VIII. c.* 27. The *Canaanites*, *Numb.* xiii. 19. *Deut.* i. 28. *David*, 2 *Kings* v. 9. *Solomon*, 2 *Chron.* iii. 5. *Rehoboam* his Son, 2 *Chron.* xi. 5, 10. and the other Kings of *Juda* and *Iſrael*, and at length the *Greeks* and *Romans*. *Vitruvius L. X.* laſt Chap. and *L. I. c.* 5.

Such is the Series of thoſe who fortify'd Places: To which might be added *Pharoah*, the Perſecutor of the *Iſraelites*, who built the Cities of *Pithom* and *Raamſes*. *Exod.* i. 11.

But how antient ſoever the ſurrounding of Cities with Walls, Towers, *&c.* may be; the Name *Fortification*, and the Art now underſtood thereby, are of no very old Standing.——

They had their Riſe ſince the Invention of Cannons; the terrible Effects whereof render'd it neceſſary to change the Structure of the antient Walls, and add ſo many Things thereto, that thoſe Changes were thought enough to conſtitute a new Art, which was called *Fortification*, by reaſon of the Strength it afforded thoſe in Cities, to defend them againſt an Enemy.

The firſt Authors who have wrote of *Fortification*, conſider'd as a particular form'd Art, are *Ramelli*, and *Cataneo*, *Italians*. After them *Errard*, Engineer to *Henry* the Great of *France*; *Stevinus*, Engineer to the Prince of *Orange*, *Marolois*, the Chevalier *de Ville*, *Lorini*, the Count *de Pagan*, and the Mareſhal *de Vauban*: Which two laſt Noble Authors contributed very greatly to the Perfection of the Art.

From the Idea and Office of *Fortification*, ſome General Fundamental Rules or Axioms may be drawn, as

1° That the Manner of fortifying ſhould be accommodated to that of Attacking: So that no one Manner can be aſſured will always hold, unleſs it be aſſured the Manner of Beſieging be incapable of being alter'd; and to judge of the Perfection of a *Fortification*, the Method of Beſieging at the Time when it was built, muſt be conſider'd.

2° All the Parts of a *Fortification* ſhould be able to reſiſt the moſt forcible Machines us'd in Beſieging.

3° A *Fortification* ſhould be ſo contriv'd, as that it may be defended with as few Men as poſſible; which Conſideration, when well attended to, ſaves a world of Expence.

4° That the Defendents may be in the better Condition, they muſt not be expos'd to the Enemy's Guns and Mortars; but the Aggreſſors be expos'd to theirs.

Hence 5° All the Parts of a *Fortification* ſhould be ſo diſpos'd, as that they may defend each other; in order to this, every Part thereof is to be *flank'd*, i. e. capable of being ſeen and defended from ſome other; ſo that there be no Place where an Enemy can lodge himſelf, either unſeen, or under Shelter.

6° All the Campaign around muſt lie open to the Defendents; ſo that no Hills or Eminences muſt be allow'd, behind which the Enemy might ſhelter himſelf from the Guns of the *Fortification*; or from which he might annoy them with his own.

The Fortreſs, then, is to command all the Place round about; conſequently the Outworks muſt all be lower than the Body of the Place.

7° No Line of Defence to be above Point blank Muſket Shot, which is about 120 Fathom.

8° The acuter the Angle at the Centre; the ſtronger is the Place, as conſiſting of the more Sides, and conſequently more defenſible.

Such are the General Laws and Views of *Fortification*: The Particular ones, reſpecting each ſeveral Work or Member thereof, will be deliver'd under their proper Articles.— See FORTIFIED *Place*.

FORTIFICATION is alſo us'd for the *Place fortified*; or the ſeveral Works rais'd to defend and flank it, and keep off the Enemy.

All *Fortifications* conſiſt of Lines and Angles, which have various Names, according to their various Offices. See LINE, and ANGLE.

The principal Angles are thoſe of the CENTRE, the FLANKING *Angle*, FLANK'D *Angle*, *Angle of the* EPAULE.

The principal Lines are, thoſe of CIRCUMVALLATION, of CONTRAVALLATION, of the CAPITAL, &c. See each in its Place.

*Fortifications* are divided into *Regular*, and *Irregular*; and again into *Durable*, and *Temporary*.

*Regular* FORTIFICATION, is that wherein the Baſtions are all equal; or that built in a regular Polygon; the Sides and Angles whereof are generally about a Muſket Shot from each other. See POLYGON.

In a Regular *Fortification*, the Parts being all equal, have the Advantage of being equally defenſible; ſo that there are no weak Places.

*Irregular* FORTIFICATION, is that wherein the Baſtions are unequal, and unlike; or the Sides, and Angles not all equal, and equidiſtant.

In an Irregular *Fortification*, the Defence and Strength being unequal; there is a Neceſſity for reducing the Irregular Figure, as near as may be, to a Regular one.

And, as the Irregularity of a Figure depends on the Quantity of Angles and Sides; the Irregularity of a *Fortification* ariſes either from the Angles being too ſmall, or the Sides being too long, or too ſhort.

Conſequently, an Irregular Figure being propos'd to be fortify'd; all the Angles, with the Quantity of the Sides, muſt be found, to be able to judge how it is to be fortify'd.

*Durable* FORTIFICATION, is that built with deſign to remain a ſtanding Shelter for Ages. Such are the uſual *Fortifications* of Cities, Frontier Places, &c.

*Temporary* FORTIFICATION, is that erected on ſome emergent Occaſion, and for little time.

Such are Works caſt up for the ſeizing and maintaining a Poſt, or Paſſage; thoſe about Camps, *&c.* as Circumvallations, Contravallations, Redoubts, Trenches, Batteries, &c.

FORTIFIED *Place*, a *Forteresſ*, or *Fortification*; *i. e.* a Place well flank'd, and ſhelter'd with Works.

*Places fortified*, after the modern way, conſiſt chiefly of *Baſtions*, and *Curtains*, and ſometimes of *Demi-Baſtions*; according to the Situation of the Ground, of *Cavaliers*, *Ramparts*, *Fauſſe-brayes*, *Ditches*, *Counterſcarps*, *Cover'd Ways*, *Half Moons*, *Ravelins*, *Hornworks*, *Crownworks*, *Outworks*, *Eſplanades*, *Redents*, and *Tenailles*. See each under its proper Article, BASTION, CURTAIN, RAMPART, CAVALIER, FAUSSEBRAYE, DITCH, &c.

There are other moveable and additional Parts, as BERMES, PARAPETS, BANQUETTES, EMBRASURES, CORDONS, BOYAUX, MOULINETS, CHEVAUX *de Friſe*, CHAUSSE-TRAPES, GALLERIES, MANTELETS, BATTERIES, SAPS, MINES, BLINDS, GABIONS, and PALISSADES. See each in its Place.

Several of theſe Works, again, conſiſt of divers Parts, which have different Denominations: Thus a Baſtion conſiſts of FACES, FLANKS, CASEMATES, ORILLONS, GORGE, *&c.* which ſee.

The Methods of *Fortifying*, that have been invented, are various; and new Methods continue ſtill to be propos'd. The principal, and thoſe which chiefly obtain thro' *Europe*, are thoſe of *Coehorn*, *Pagan*, *Vauban*, and *Scheiter*, from which all the reſt are eaſily conceiv'd.——

FORTIFICATION, *according to the* Dutch *Method*, is that, which making the Flank perpendicular to the Curtain, makes the Flank ſubduple of the Face, and ſubtriple of the Curtain; and the Angle of the Baſtion, equal, either to two thirds of the Angle of the Polygon; or to half thereof, with the Addition of 15 or 20 Degrees, to make it equal to a right Angle.

*Freitach* determines the Quantity of the Flank in a ſquare to be ſix; in a Pentagon, ſeven; in a Hexagon, eight; in a Heptagon, nine; in a Enneagon, ten; in a Decagon, eleven and in all other Figures, twelve *Rhinland* Perches: Conſequently, the Face 24, and the Curtain 36 Perches.

*To draw the Profile of a* Fortification *after the* Dutch *manner*; Draw the inner Polygon G H *Tab. Fortification. Fig.* 6. into five equal Parts: The Demigorge A B is to contain one of them; and the Capital A B, two. Then divide the Curtain E A into four Parts; and make the Flank A B one.

This is *Freitach*'s Method: But the *French* make both the Demigorge, and Flank a ſixth Part of the Polygon; and in Squares, and Pentagons, ſetting aſide the ſecond Flanks, deſcribe a Semicircle upon B S, that the Angle of the Baſtion C may be a right Angle.

The *Italians* giving the ſame Dimenſions to the Gorge and Flank, make the ſecondary Flank half the Curtain, in Polygons exceeding a Hexagon, and a third of the Curtain in the reſt.

Laſtly, the *Spaniards* giving the ſame Dimenſions to the Flanks, omit the ſecundary Flanks.

But Flanks perpendicular to the Curtain, with ſecundary Flanks, are in Diſrepute, on account of the Obliquity of the Defence; ſo that the *Dutch* Method of fortifying, with the other antient ones, founded on the ſame Principles, are now out of Doors.——

FORTIFICATION, *according to the* COUNT *de* PAGAN'*s Method*; ſuppoſes in the larger Fortifications, the external Polygon A B, *Fig.* 7. to be 100, the Face A G, 30 Perches; in the ſmaller, the firſt, 80, and the ſecond, 25; and in the middle Size, the firſt 90, and the ſecond 27½: The Perpendicular C D, 15, and the Flanks G F and H E perpendicular to the Lines of Defence A F and B E, cover'd with

an

ah Orillon, and tripled; and a Ravelin, Curtain and Baſtions built on the Outſide the Rampart.

This Method was receiv'd with great Applauſe, and muſt be allow'd greatly preferable to the *Dutch* Method.

But it has its Defects; for beſides that the *fortifying* of Places by it is very expenſive; its triple Flanks are too cloſe, ſo as to lie expos'd to the Violence of the Bombs; the Orillon is ſo large as to prejudice the Length of the Flanks; the outer Rampart of the Baſtion is too big, *&c.*

FORTIFICATION, *according to Monſ.* Blondel's *Method*; has a great Affinity with that of the Count *de Pagan*, only that the Quantity of the Lines and Angles are differently determined.

Thus, a Right Angle being ſubtracted from the Angle of the Polygon, and to a third part of the Remainder, 15 added; the Sum gives the diminiſh'd Angle. In the greater Fortifications, the outer Polygon is 100, in the ſmaller 85. The external Polygon being divided into ten parts, ſeven of them give the Lines of Defence; and the Faces are half thoſe of the Tenaille.

This Method is very well calculated for the Purpoſes of Architecture; only, being ſomewhat expenſive, 'tis but little us'd.——

FORTIFICATION, *according to Monſ.* Vauban's *Method*, ſuppoſes the outer Polygon in the larger Fortifications to be 100; in the ſmaller, 80; and in the middle Size 90: The Faces are made $\frac{2}{7}$ of the ſame; the Perpendicular, in a ſquare, $\frac{1}{8}$, in a Pentagon $\frac{1}{7}$, in the other Polygons $\frac{1}{6}$ of the ſame. The Complement of the Face to the Line of Defence, he makes equal to the Diſtance of the Epaule: He uſes re-entering and crooked Flanks; and places a low Tenaille before the Curtain; and the *Dutch* Ravelin with Lunettes.

This Method of *fortifying* pleaſes moſt People; both as it increaſes the Strength, without much Expence; and as it is perfectly well accomodated to the Principles of military Architecture, above laid down.

Yet it ſeems defective in this, that the Faces are too much expos'd to the View of the Enemy; and that the Lunettes are a little too long to be defended.

*Monſ.* Vauban's *newer Method of* FORTIFYING, is that which builds large Baſtions before ſmall ones, and covers the Courtin with a double Ravelin; drawing a low Tenaille before the ſame Curtain.

Detached Baſtions are perfectly ſuitable to what we have deliver'd in the former Method; excepting that the Flanks are rectilinear, and deſtitute of an Orillon.

FORTIFICATION, *according to the Method of* Scheiter, ſuppoſes the external Polygon, in the larger Fortifications to be 100 Perches; in the leſſer 80; in the middle Size 90: The Flanks perpendicular to the Lines of Defence; and the Lines of Defence in the greater Fortifications 70 Perches, in the leſſer 60, and the middle Size 65.

It detaches Baſtions from the Curtain, and forms a kind of inner Receſs behind the Curtain: It aſſumes the Angle of the Baſtion, in a Square, to be 64 Degrees; to this adding 8, the Product is the Angle in a Pentagon; to which adding ſix Degrees, the Sum is the Angle of the Baſtion in a Hexagon; and adding 5 to this, the Sum is the ſame Angle in a Heptagon.

FORTIN, a Diminutive of the Word *Fort*, importing a little *Fort*, or Sconce, call'd alſo *Field Fort*, built in Haſte, for defence of a Paſs, or Poſt; but particularly to defend a Camp, in the time of a Siege, where the principal Quarters are join'd, or made to communicate with each other by Lines defended by *Fortins* and Redoubts.

*Fortins* being very ſmall, their flank'd Angles are generally 120 Fathom diſtant from each other; but their Figure and Extent is various, according to the Place and Occaſion; ſome having whole Baſtions, and others only half Baſtions. See REDOUBT.

*Star*-FORTIN, is that whoſe Sides flank each other, *&c.* See *Star* FORT.

FORTUNA, in our antient Law Books, is the ſame with what we call *Treaſure-Trove*. See TREASURE-*Trove*.

*Theſaurum ducente* Fortunâ *invenire inquirendum eſt per* 12 *Juratores pro Rege*, &c. *quod fideliter præſentabunt*, &c. *omnes* Fortunas, *abjurationes*, *appella*, &c.

*Spelman* tells us, it alſo ſignifies *Fortuito occiſos*; but this ſeems to be very fanciful. See SACROBARRA.

FORTUNATE *Iſlands*, in the antient Geography, an Appellation which has given the Criticks and Antiquaries a world of Perplexity; being a Denomination of a Place famous for Golden Apples, which grew therein: Or, as *Varro* ſays, for Sheep, with Golden Fleeces.

The Antients deſcribe them as ſituate without the Straights of *Gibraltar*, in the *Atlantic* Ocean.

The common Opinion of the Moderns takes them for the *Canary* Iſlands; grounded principally on the Situation and Temperature of thoſe Iſlands, which renders the uſe of Cloaths unneceſſary; and the Abundance of Oranges, Lemons, Grapes and other delicious Fruit growing therein. See GOLDEN *Fleece*.

*Ol. Rudbecks* has found a very different Place for them. That learned Author, who makes his native Country *Sweden* the Scene of all that is great and extraordinary in antient Tradition and Fable; will have the *Fortunate* Iſlands to be *Sweden*.

The delicious Fruits, talk'd off by the Antients, his Imagination ſuggeſts, were nothing but the Virtue, and good Manners, which antiently flouriſh'd in that cold Hyperborean Nation.

FORTUNE, ſee PROVIDENCE, FATE, &c.

The Name *Fortune*, τύχη, was unknown in the earlier Ages; and does not occur either in *Homer*, or *Heſiod*; as not being yet invented.

In After-days, it was introduc'd as a Machine; and made to ſerve divers Purpoſes in Natural Philoſophy, and Theology.

Men obſerving a world of Evils, and Diſorders to fall out; and not daring directly to complain of Providence; and being willing withal to excuſe themſelves from being the Occaſions of their own Misfortunes, had recourſe to the Notion of *Fortune*: Againſt whom they might vent all their Reſentments *impune*.

*Plutarch*, in an expreſs Treatiſe of *the Fortune of the Romans*, accounts for the Practice of the antient Poets, who ſeem to make *Jupiter* the Author of all the Evils of Life. Mankind, he obſerves, before the Name of *Fortune* had got into the World, perceiving a certain arbitrary Cauſe, diſpoſing of things in an irreſiſtible manner, call'd it *God*; but the ſame Cauſe being often obſerv'd to act at random, and without any Rule or Order at all; the ſupreme Being came to be diveſted of the Attribute; and *Fortune*, or *Deſtiny* acknowledg'd in his ſtead. See DESTINY.

It is not eaſy to unravel, what the Antients meant by the Name *Fortune*.

The *Romans* underſtood by it, I know not what Principle of Fortuity, whereby things came to paſs, without being neceſſitated thereto; but what, and whence that Principle is, they do not ſeem to have ever preciſely thought: Whence their Philoſophers are often intimating, that Men only fram'd the phantom *Fortune* to hide their Ignorance; and that they call *Fortune* whatever befalls a Man, without his knowing why.

*Juvenal* affirms, it was Men who made a Deity of *Fortune*.

*Nullum Numen abeſt ſi ſit prudentia; ſed te, nos facimus,* Fortuna, *Deam, Cœloque locamus.*

According to the Sentiment of the Heathens, therefore, *Fortune*, at Bottom, was only the Arrival of Things in a ſudden and unexpected Manner, without any apparent Cauſe, or Reaſon: So that the Philoſophical Senſe of the Word, coincides with what is vulgarly call'd *Chance*. See CHANCE.

But in Religion it had a further Force: Altars and Temples in great Numbers were conſecrated to this *Fortune*, as a Deity.

This intimates, that the Heathens had perſonify'd, and even deify'd their Chance; and conceiv'd her as a ſort of Goddeſs, who diſpos'd of the Fate of Men at her pleaſure. Hence that Invocation of *Horace*, *O Diva gratum quæ regis Antium*; in the 35th Ode of the firſt Book, where he recommends *Auguſtus*, then preparing for a Viſit to *Britain*, to her Protection.——

From theſe different Sentiments it may be infer'd, that the Antients at one time took *Fortune* for a peremptory Cauſe, bent upon doing good to ſome, and perſecuting others: And ſometimes for a blind, inconſtant Cauſe, without any View or Determination at all.

If then the Word *Fortune* had no certain Idea in the Mouth of thoſe who erected Altars to her; much leſs can it be aſcertain'd what it denotes in the Mind of thoſe who uſe the Word in their Writings.

They who would ſubſtitute the Name *Providence* in lieu of that of *Fortune*, cannot give any tolerable Senſe to half the Phraſes wherein the Word occurs.

To theſe, *e. gr.* we muſt always diſtruſt *Fortune*, but eſpecially when ſhe ſeems to flatter us moſt: The Contempt of Riches, in the Philoſophers, is a ſecret Deſire of revenging their Merit againſt the Injuſtice of *Fortune*, by a Contempt of thoſe very Benefits ſhe deprives them off: *Fortune* is ſo blind, that amidſt a Croud, wherein there is but one wiſe Man, we muſt not imagin ſhe will trace him out, to accumulate him with her Favours.——

On theſe and the like Occaſions, the Word *Providence* cannot be ſubſtituted in lieu of *Fortune*: The Idea anſwering to the Expreſſion, is Pagan, as well as the Expreſſion it ſelf. Add, that it is a Fault, even in point of Accuracy, to uſe a Term that ſignifies nothing; as much as it is in point of Religion, to aſſociate *Fortune* with Providence, in the Direction of the Univerſe.

*Horace* paints the Goddeſs, preceded by Neceſſity, holding Nails and Wedges in her Hands, with a Cramp-iron, and melted Lead to faſten it; rarely accompanied with Fidelity, unleſs when ſhe abandons a Family; for in that caſe Fidelity never fails to depart with her, as well as Friends.

The Painters repreſent her in a Woman's Habit, with a Bandage before her Eyes, to ſhew that ſhe acts without Diſcernment; ſtanding on a Wheel, to expreſs her Inſtability. The *Romans*, ſays *Lactantius*, repreſented her with a Cornucopia, and the Helm of a Ship, to ſhew that ſhe diſtributes Riches, and directs the Affairs of the World. In effect, 'tis with ſuch Characters, that we ſee her repreſented on ſo many Medals, with the Inſcriptions, FORTUNA AUG. FORTUNA REDUX. FORTUNÆ AUG. or REDUCIS, &c. Sometimes ſhe is ſeen pointing at a Globe before her Feet, with a Sceptre in one Hand, holding the Cornucopia in the other.

The *Romans* had a Male, and Female *Fortune* for the Objects of their Adoration: The *Fortuna Virilis*, honour'd by the Men; and the *Fortuna Muliebris*, by the Women.

On the Reverſe of a Medal of *Commodus*, we have a Repreſentation of *Fortune*, under the Quality, or Surname of *Manens*, *i. e.* ſtable, permanent; holding a Horſe by the Reins. On the *Greek* Medals we meet with ΑΓΑΘΗ, or ΚΑΛΗ ΤΥΧΗ, Good *Fortune*. *Conſtantine* gave the Epithet *Anthouſia*, *i. e.* flouriſhing, to the *Fortune* of his new City *Conſtantinople*.

FORUM, in Antiquity, is us'd in divers Acceptations.

Sometimes for a Place of Negotiation, or Merchandizing, anſwering to our *Market Place*; in which ſenſe it has uſually ſome Adjective added to it, as *Forum Boarium*, the Beaſt Market; *Forum Piſcarium*, the Fiſh Market; *Olitorium Forum*, the Herb Market, &c. See MARKET.

FORUM, again, is us'd for any Place, where the Governor of a Province convenes his People, to give Judgment, according to Courſe of Law: Whence a Man is ſaid *Forum agere*, when he keeps the Aſſizes; *Forum indicere*, when he appoints the Place where they are to be kept, &c.

FORUM is alſo a publick Standing Place in the City of *Rome*, where Cauſes were judicially try'd, and Orations deliver'd to the People.

Of theſe *Forums* there were ſeveral; at firſt only three, viz. *Romanum*, *Julianum*, and *Auguſtum*: But that Number was afterwards increas'd to ſix, by the Addition of the *Tranſitorium*, call'd alſo *Palladium*; the *Trojanum*, and *Saluſtii Forum*.

The firſt, and moſt eminent of theſe, was the *Forum Romanum*, call'd alſo *Forum Vetus*; and abſolutely, *Forum*, or *the Forum*.

In this was an Apartment, call'd the *Roſtra*, where the Lawyers pleaded; the Officers harangued; Funeral Orations were deliver'd, &c. See ROSTRA.

In the ſame *Forum* was the *Comitium*, or Hall of Juſtice, with the Sanctuary of *Saturn*, the Temple of *Caſtor*, &c. See COMITIUM.

FORUM is alſo us'd among Caſuiſts, &c. for Juriſdiction.

Thus, they ſay in *Foro Legis*, or the *Outer Forum*, i. e. in the Eye of the Law, or the common Courſe of Juſtice: In *Foro Conſcientiæ*, or the *Inner Forum*, *i. e.* in the Eye of GOD, or a Man's own Conſcience.

There are a great many things not condemn'd in *Foro Legis*, which yet are criminal in *Foro Conſcientiæ*.—

FOSS, in Fortification, &c. a *Ditch*, or *Moat*. See DITCH, &c.

The Word is form'd of the Participle *Foſſum*, of the Verb *fodio*, I dig.——

Foss, in Anatomy, a kind of Cavity in a Bone, with a large Aperture, but no Exit, or Perforation.

When the Aperture is very narrow, it is called a SINUS.

In the Cranium there are ſix internal, and fourteen external *Foſſes*. The Cavity of the Orbit, which contains the Eye, is a *Foſs*.

Foss is particularly us'd for a Cavity, or Denture in the Back Part of the Neck. See NECK.

Foss-*Way*, was antiently one of the four great Highways of *England*; ſo call'd, becauſe in ſome Places it was never perfected, but left as a great Ditch. See WAY, ſee alſo WATLING *Street*.

FOSSA *Magna*, or *Navicularis*, is an oblong Cavity, forming the Inſide of the *Pudendum Muliebre*, and which preſents it ſelf upon opening the *Labia*; and in the Middle whereof are the *Caruncuiæ Myrtiformes*. See PUDENDUM.

FOSSA, in our antient Cuſtoms, was a Ditch, full of Water, where Women; committing Felony, were drowned; but Men hanged.

*Nam & ipſi in omnibus tenementis ſuis omnem ab antiquo legalem habuere juſtitiam, videlicet ferrum*, foſſam, *furcas*, & *ſimilia*. See FURCA.

In another Senſe 'tis taken for a Grave, as appears by theſe old Verſes;

*Hic jacent in* Foſsâ BEDÆ *venerabilis oſſa,*
*Hic eſt* foſſatus, *qui bis erat hic cathedratus.*

FOSSARII, in Antiquity, a kind of Officers in the Eaſtern Church, whoſe Buſineſs was, to inter the Dead.

*Ciaconius* relates, that *Conſtantine* created 950 *Foſſaries*, whom he took out of the divers Colleges or Companies of Tradeſmen: He adds, that they were exempted from Taxes, Services, onerary Offices, &c.

Fa. *Goar*, in his Notes on the *Greek Euchologos*, inſinuates, that the *Foſſarii* were eſtabliſh'd in the times of the Apoſtles; and that the young Men, who carried off the Body of *Ananias*, and thoſe Perſons full of the Fear of GOD, who interr'd St. *Stephen*, were of the Number.

St. *Jerom* aſſures us that the Rank of *Foſſarius* held the firſt Place among the Clerks: But he is to be underſtood of thoſe who had the Direction and Intendance of the Interment of the Devout.

FOSSIL *Kingdom*. The Chemiſts divide all Bodies into three Claſſes, or Kingdoms; *viz. Foſſil*, or *Mineral*; *Vegetable*; and *Animal*. See each in its Place, FOSSIL, VEGETABLE, &c.

FOSSIL, in Natural Hiſtory, is us'd, in a general Senſe, for any thing dug up, or found under Ground. Such are all *Minerals*, *Metals*, *Rock Salts*, &c.

There are alſo *Foſſil* Salt Petre, *Foſſil* Borax, &c.

FOSSILS may be diſtinguiſh'd into 1° Such as are *Natives* of the Earth; and 2° Such as are *adventitious* and repoſited therein by any extraordinary Means, as Earthquakes, Deluges, &c.

*Native* FOSSILS, or FOSSILS *properly ſo called*, are ſtrictly defin'd to be ſenſible Bodies generated, and growing in, and of the Earth; whoſe conſtituent Parts are ſo ſimple, and homogeneous, that there is no apparent Diſtinction of Veſſels, and Juices; between the Part, and the Whole.

Native *Foſſils* are either *Simple*, or *Compound*.

*Simple* FOSSILS are thoſe, whoſe Parts, however divided, are all of the ſame Nature, *i. e.* of the ſame Gravity, Magnitude, Figure, Hardneſs, and Mobility.

Such is Quickſilver, which, however divided, is always found the ſame.

*Compound* FOSSILS are thoſe which may be divided into different, or diſſimilar Parts.

As Antimony, which may be reſolv'd by Fire into Sulphur, and a Metalline Part.

The Simple *Foſſils* are all *Metals*, *Salts*, *Stones*, both vulgar and pretious, and *Earths*. See METAL, SALT, STONE, and EARTH.

The *Compound* FOSSILS are all Sulphurs, all Semimetals, or what we properly call *Minerals*; and all Bodies combin'd out of any two, or more of the preceding, either Simple, or Compound *Foſſils*. See SULPHUR, and SEMIMETAL.

*Adventitious*, or *Foreign* FOSSILS, include the ſubterraneous Exuviæ of Sea and Land Animals, and even vegetables; as Shells, Bones, Teeth, Leaves, Stalks, &c. which are found in great Abundance, in divers Parts of the Earth.

Theſe Extraneous *Foſſils* have employ'd the Curioſity of ſeveral of our lateſt and beſt Naturaliſts, who have each their ſeveral Syſtem to account for the ſurprizing Appearances of petrify'd Sea-fiſhes, in Places far remote from the Sea, and on the Tops of Mountains: Shells in the Middle of Quarries of Stones: Elephants Teeth, and Bones of divers Animals, peculiar to the Southern Climates; and Plants only growing in the Eaſt, found in our Northern and Weſtern Parts. See SHELL, &c.

Some will have theſe Shells, &c. to be real Stones, and Stone Plants, form'd after the uſual manner of other figur'd Stones, and Stone Plants: Of which Opinion is our learned Dr. *Liſter*.

That Author, tho' he allows of petrify'd Shells on the Sea Shores, will by no means agree, that there are any ſuch Petrifactions in the Midland Countries. The Shell-like Stones, found in our Quarries, he contends, are *Lapides ſui generis*; and never were any Part of an Animal.

His Reaſons are, that their Matter, and Texture, is perfectly the ſame with that of the Rock, or Quarry, where they are taken; as Iron-ſtone Shells are all Iron-ſtone; Spar, or Cryſtalline, all Sparr, &c. That Quarries of different Stone yield different Sorts of theſe Shells: And that there are no Animals in Nature, which yield any thing exactly like them. See STONE, and STONE *Plant*.

But 1° Theſe Shells found under Ground, are perfectly conformable to thoſe in the Sea in Figure, Subſtance, Magnitude, &c. 2° The Subſtance of theſe *Foſſils* differs eſſentially from the common Subſtance of Stones. 'Tis true, we frequently find them cover'd, or incruſtated with a Mineral, or Stony Matter, which has gradually inſinuated it ſelf into the Pores; but it is eaſy diſtinguiſhing that Matter from the Subſtance of the Shell.

The common Opinion is, that theſe *foſſil* Shells, with all other foreign Bodies, found within the Earth, as Bones, Trees, Plants, &c. were buried therein at the time of the univerſal Deluge; and that having been penetrated either by the Bituminous Matter, abounding chiefly in watery

Places; or by the Salts of the Earth, they have been preſerv'd entire, and ſometimes petrify'd. See DELUGE.

Others think, that thoſe Shells, found at the Tops of the higheſt Mountains, could never have been carried thither by the Waters, even of the Deluge; inaſmuch as moſt of theſe aquatic Animals, by reaſon of the Weight of their Shells, always remain at the Bottom of the Water, and never move but cloſe along the Ground.

They imagine, that a Year's Continuance of the Waters of the Deluge, intermix'd with the ſalt Waters of the Sea, upon the Surface of the Earth, might well give occaſion to the Production of Shells of divers kinds in different Climates; and that the univerſal Saltneſs of the Water was the real Cauſe of their Reſemblance with the Sea Shells. The Lakes form'd dayly by the Retention of Rain, or Spring Water, produce different Kinds.

Others think, that the Waters of the Sea, and the Rivers, with thoſe which fell from Heaven, turn'd the whole Surface of the Earth upſide down; after the ſame manner as the Waters of the *Loire*, and other Rivers, which roll in a Sandy Bottom overturn all their Sands, and even the Earth it ſelf, in their Swellings and Inundations: And that in this General Subverſion, the Shells come to be interr'd here, Fiſhes there, Trees there, *&c.* See the *Journ. des Scavans, M DCC XV. p.* 19. and the *Mem. de Trev.* 1713.

But no body has ſet this Sentiment in a better Light, than Dr. *Woodward*, in his *Nat. Hiſtory of the Earth*. That Ingenious Author maintains the whole Maſs of Earth, with every thing belonging thereto, to have been ſo broke, and diſſolv'd, at the Time of the Deluge, that a new Earth was form'd in the Boſom of the Water, conſiſting of different Strata, or Beds of terreſtrial Matter, ranged over each other nearly, according to the Order of their ſpecifick Gravities. See STRATA. By this means, Plants, Animals, and eſpecially Fiſhes, and Shells, not yet diſſolv'd among the reſt, remain'd mix'd and blended among the Mineral and Foſſil Matters; which preſerv'd them, or at leaſt aſſum'd and retain'd their Figures and Impreſſions, either indentedly, or in Relievo.

*Camerarius* attacks this Sentiment of Dr. *Woodward*, and goes yet higher. He ſuppoſes 1° That the greateſt Part of the Shells now dug from under Ground, had been plac'd there before the Deluge, that is, at the Time of the Creation, when God ſeparated the Earth from Waters. 2° That without having recourſe to the Diſſolution of the Earth by the Waters, one might ſuppoſe moſt of them to have ſlipp'd in at the Chinks and Crevices naturally happening after the Waters were retir'd, and the Earth ſufficiently drain'd. 3° That particular Inundations might have ſwept moſt of theſe Shells into the Places where we now find them. 4° That the Sea may have wrought, or caſt up moſt of theſe Shells through ſubterraneous Spiracles and Canals. 5° That GOD has created divers Stony and Metalline Bodies, perfectly like the Vegetables and Animals, we ſee on Earth, and in the Sea.——

To all theſe Suppoſitions, Dr. *Woodward* anſwers, 1° That it is no ways probable, God ſhould create ſuch a Number of Shell-fiſh of the ſame Species at once; and that purely with a Deſign to deſtroy them all again ſo ſoon after: That among the *foſſil* Shells of the ſame Species, 'tis eaſy to diſtinguiſh different Ages: That ſome appear preciſely ſuch as we now find them in the Spring, the Seaſon when the Deluge began: That 'tis not only Shells, we find under Ground, but alſo Bones of Quadrupeds, Plants, and Trees of extraordinary Sizes; and which are not of the Number of Aquaticks: And laſtly, that the Waters were ſeparated from the Earth on the third Day; and that none of theſe Things were created, till afterwards. 2° That, on the ſecond Suppoſition, theſe Shells would be diſpos'd perpendicularly, and not horizontally, as they are always found: That we ſhould ſometimes find of them in the Clefts of the Earth, of which there is none but where they are broke. 3° That we have no Acquaintance with any of theſe pretended Inundations: That they could never have brought Shells, Stags Horns, and Elephants from *America*, and the *Eaſt Indies*, to *England* and other Parts of *Europe*; Nor thoſe Pines and Beeches, frequently found far greater than any of our Growth. Add, that theſe particular Inundations muſt have riſen to the Tops of the higheſt Mountains, and of conſequence muſt have been general. 4° On the fourth Suppoſition it muſt be held, that God did not only create all theſe ſeveral Bodies in the Entrails of the Earth; but their ſeveral Parts, and the ſeparate Pieces and Fragments of thoſe Parts; a Piece of a Shell, for Inſtance; a Side of a Shell, which conſiſts of two; a Shell void of the Fiſh it ſhould contain; Beards of Corn, without the Grain; Pieces of Cedar Bark, without Wood; Pieces of Bullocks Hides without Fleſh and Bones; human Skins without Bodies; a Bone without the reſt of the Skeleton; a Tooth without the Jaw, *&c.* Add, that the *foſſil* Shells have not only external, but eſſential Reſemblages to Sea Shells; both, *e. gr.* Yielding, by Analyſis, a Quantity of Sea Salt: That among the *foſſil* Teeth of Fiſhes, we meet with ſome apparently worn: And laſtly, that the Shell Fiſh called *Purple*, has a long ſharp Tongue, by means whereof it pierces other Shells, and picks the Fiſh out of them; and that in digging under Ground we actually meet with divers of theſe Shells thus pierc'd. Can ſuch minute, thoro' paced Reſemblances be the accidental Effect of a *Luſus Naturæ*?

This is the Subſtance of what has hitherto been advanced on the Point.

FOSTERLEAN, antiently ſignify'd Nuptial Gifts: Much the ſame with what we now call Jointure. See JOINTURE.

The Word is originally *Saxon*, and ſignifies *Ciborum exhibitio*, that is, a Stipend which the Wife has for her Maintenance.

*Poſtea ſciendum eſt cui* Foſterlean *pertineat, vadiet hoc Brigduniæ, & plegient amici ſui.*

FOTUS, in Medicine, the ſame as *Fomentation*. See FOMENTATION.

FOVEA *Cordis*, the Hollow of the Heart. See HEART.

FOUGADE, or FOUGASS, in the Art of War; a kind of little Mine, in manner of a Well, ſcarce exceeding ten Foot in Width, and twelve in Depth; dug under ſome Work, or piece of Fortification, and charg'd with Barrels or Sacks of Gunpowder. 'Tis ſet on fire like other Mines, with a Saucidge. See MINE.

The Word is *French*. M. *Huet* derives it from *focata*, of *focus*, Fire.

FOULE, in the Sea Language, is us'd in various Senſes; *viz.* When a Ship has been long untrimm'd, ſo that Graſs, Weeds, Perriwinkles, Barnacles, or the like ſtick or grow to her Sides under Water, ſhe is ſaid to be *foule*. Again, a Rope is ſaid to be *foule*, when it is either tangled in it ſelf, or hindred by another, ſo that it cannot run, or be haled.—A Ship is ſaid to make *foule Water*, when being under Sail, ſhe comes into ſuch Shole, or low Water, that tho' her Keel do not touch the Ground; yet ſhe comes ſo near it, that the Motion of the Water under her raiſes the Mud from the Bottom, and ſo *fouls* the Water.

FOUNDATION, that Part of a Building under Ground: Or, the Maſs of Stone, *&c.* which ſupports a Building; or upon which the Walls of a Superſtructure are rais'd: Or, it is the Coffer, or Bed, dug below the Level of the Ground, to raiſe a Building upon; in which Senſe the *Foundation* either goes the whole Area and Extent of the Building, as when there are to be Vaults, Cellars, or the like; or it is drawn in Cuts, or Trenches, as when only Walls are to be rais'd. See BUILDING.

The *Foundation* is properly ſo much of the Maſonry, as reaches as high as the Surface of the Ground; and is always to be proportion'd to the Load, or Weight of the Building it is to bear.

Sometimes it is maſſive, and continued under the whole Building; as in the antique Arches, and Aqueducts, and ſome Amphitheatres: More uſually it is only in Spaces, or Intervals; either to avoid Expence, or becauſe the Vacuities are at too great a diſtance, in which latter caſe they make uſe of inſolated Pillars, bound together by Arches.—

That we may found our Habitation firmly, ſays Sir *H. Wotton*, we muſt firſt examine the Bed of Earth, upon which we are to build; and then the Under-cielings, or Subſtruction, as the Antients call'd it. For the former, we have a general Precept in *Vitruvius*, *Subſtructionis* Fundationes *fodiantur, ſi queant inveniri ad ſolidum & in ſolido*: By which he recommends not only a diligent, but even jealous Examination of what the Soil will bear; adviſing us not to reſt upon any appearing Solidity, unleſs the whole Mould thro' which we cut, have likewiſe been ſolid. But how deep we ſhould go in this Search, he has no where determined, as perhaps depending more on Diſcretion, than Regularity, according to the Weight of the Work: Yet *Palladio* has ventur'd to reduce it to a Rule; allowing for the *Cavaſione*, *i. e.* hollowing or underdigging, a ſixth Part of the Height of the whole Fabrick, unleſs there be Cellars under Ground, in which caſe he would have it ſomewhat lower. Sir *H. Wotton*'s *Elem. of Architecture.*——

The *Foundations* of Buildings are either *Natural*, or *Artificial*.

Natural, as when we build on a Rock, or a very ſolid Earth; in which caſe we need not ſeek for any further Strengthening.

But, if the Ground be ſandy, or marſhy, or have lately been dug; in ſuch caſe recourſe muſt be had to *Art*. In the former Caſe, the Architect muſt adjuſt the Depth of the *Foundation* by the Height, Weight, *&c.* of the Building: A ſixth Part of the whole Height is look'd on as a Medium: And as to Thickneſs, double that of the Width of the Wall, is a good Rule.

Where the Natural *Foundation* may not be truſted, they either fortify the Ground by *pallifying* it, *i. e.* driving it full of Piles; ſee PALLIFICATION: Or elſe lay large wooden Planks at the Bottom of the Trenches, dug for the *Foundation.*

In

In ſome Places they *found* the Peers of Bridges, and other Buildings near the Water, on Sacks of Wool, laid like Matraſſes; which being well preſs'd, and greaſy, will never give way, nor rot in Water.

FOUNDATION is alſo us'd for the Eſtabliſhment of a City, or Empire.

The *Romans* reckon'd their Years from the *Foundation* of *Rome*, *Ab Urbe Condita*; which we ſometimes expreſs by *ab U. C.* Chronologers make 479 Years from the paſſing out of *Egypt*, to the *Foundation* of *Rome*. See EPOCHA.

FOUNDATION is alſo a Donation, or Legacy, either in Money, or Lands, for the Maintenance and Support of ſome Community, Hoſpital, School, Lecture, or other work of Piety. See SCHOOL, HOSPITAL, COLLEGE, &c.

Among the Order of *Auguſtins*, there is a *Foundation* for the marrying of poor Maids; and another for the furniſhing of Truſſes to poor People, who have Ruptures, or Hernias.——

FOUNDER, He who lays a *Foundation*; or who *founds* and endows a Church, School, Religious Houſe, or other Work of Charity and Piety. See FOUNDATION.

The *Founders* of Churches may preſerve to themſelves the Right of Patronage, or Preſentation to the Living. See PATRONAGE.

FOUNDER, is alſo an Artiſt that melts, or caſts Metals into various Forms, for divers Uſes; as Guns, Bells, Statues, Bombs, Types or Printing Characters, and other ſmall Works, as Candleſticks, Bitts, Buckles, &c.

The Word is form'd of the *French fondre*, to melt, or fuſe. In the *Roman* Law they are call'd *Flatuarii*.

From the different Productions, or Works of the *Founders*, they are differently denominated, as *Founders of ſmall Works*; *Bell Founders*; *Gun Founders*; *Letter Founders*; and even *Carvers*, or *Statuaries*.

What belongs to each, ſee under the Article FOUNDRY.

FOUNDER, in the Sea Language; A Ship is ſaid to *founder at Sea*, when by an extraordinary Leak, or by a great Sea breaking in upon her, ſhe is ſo filled with Water, that ſhe cannot be freed of it; nor is ſhe able to ſwim under it, but ſinks with the Weight thereof.——

FOUNDERING, in the Manage, a Diſorder in Horſes, whereof there are two Kinds, *viz.* in *the Feet*, and in *the Cheſt*.

*Foundering in the Feet*, ariſes from hard Riding, ſore Labour, great Heats, ſudden Colds, &c. which inflame the Blood, melt the Greaſe, and make it deſcend downward to the Feet, and there ſettle; which cauſes ſuch a Numbneſs, and pricking in the Hoof, that the Horſe has no Senſe or Feeling thereof, being hardly able to ſtand; or when he does, ſhaking and trembling, as if he had an Ague.

A Horſe may likewiſe be *foundred* by wearing ſtraight Shoes, and travelling upon hard Ground.

It may be known when he is *founder'd* on his Forefeet, and not his Hindfeet, by his treading only on his Hindfeet, and ſparing the other; or his going crouching and crippling on his Buttocks.

Sometimes, tho' rarely, he is *founder'd* on his Hindfeet, and not his Fore; which is known by his ſeeming weak behind, and reſting as much as poſſible on the Forefeet.

The general Methods of curing this Diſtemper, are firſt by paring all the Horſe's Soles, ſo thin that the Quick may be ſeen; then bleeding him well at every Toe; ſtopping the Vein with Tallow and Roſin; and having tack'd hollow Shoes on his Feet, ſtopping them with Bran, Tar, and Tallow, as boiling hot as may be; which is to be renew'd once in two Days, for a Week together; after which he is to have good Exerciſe.

Or, after he is pared thin, and let Blood at the Toes, his Feet are to be ſtop'd with Cows Dung, Kitchen Fee Tar, and Soot boil'd together, and pour'd boiling hot into them.

*Foundering in the Body*, befals a Horſe by eating too much Provender ſuddenly, when too hot; as alſo by drinking too much upon travelling, when he is hot, and riding him after it.

The Effect of which, is, that his Body is oppreſs'd with ill Humors, which take away his Strength, and put him in ſuch Condition, that he can neither go, nor bow his Joints; and being once laid, cannot riſe again, &c. His Legs ſwell; and ſoon after begin to peel: He has a dry Cough, which makes his Eyes water; his Noſe runs with white phlegmatic Matter, &c.

FOUNDRY, or FOUNDERY, the Art of melting and caſting all ſorts of Metals, particularly Braſs, Iron, Bell Metal, &c. See METAL, FUSION, &c.

The Word is alſo us'd for a Place, or Work-houſe, furniſh'd with Furnaces, or Forges for this Purpoſe. See FURNACE.

### FOUNDRY *of Small Works, or the Manner of Caſting in Sand.*

The Sand us'd by the *Founders*, in caſting of Braſs, &c. is yellowiſh, pretty ſoft, and greaſy; but after it has been us'd, becomes quite black, by reaſon of the Charcoal Duſt us'd in the Moulds. Every time they would uſe this Sand, they work and tew it ſeveral times over in a Board about a Foot ſquare, plac'd over a kind of Trunk, or Box, into which it may fall from off the Board. This Tewing is perform'd with a Roller, or Cylinder, about two Foot long, and two Inches in Diameter; and a kind of Knife, made of the Blade of a Sword: With theſe two Inſtruments they alternatively roll and cut the Sand, and at length turn it down into the Box under neath.

Then, taking a wooden Board, or Table, of a Length and Breadth proportional to the Quantity of Things to be caſt; round this they put a Frame, or Ledge, and thus make a ſort of Mould. The Mould they fill with the Sand before prepar'd, and a little moiſten'd. This done, they take wooden, or metalline Models, or Patterns of the Things intended to be caſt; apply them on the Mould, and preſs them down into the Sand, ſo as to leave their Form indented. Along the Middle of the Mould is laid half a little Cylinder of Braſs, which is to be the Maſter Jet, or Canal for running the Metal; being ſo diſpos'd as to touch the Ledge at one Side, and only to reach to the laſt Pattern on the other. From this are plac'd ſeveral leſſer Jets, or Branches, reaching to each Pattern, whereby the Metal is convey'd thro' the whole Frame.

This firſt Frame thus finiſh'd, they turn it upſide down, to take out the Patterns from the Sand: In order to which they firſt looſen them a little all round, with a ſmall cutting Inſtrument.

After the ſame manner they proceed to work the Counter Part, or other Half of the Mould, with the ſame Patterns, in a Frame exactly like the former; excepting that it has Pins, which entring Holes, correſponding thereto in the other, make, that when the two are join'd together, the two Cavities of the Pattern fall exactly on each other.

The Frame thus moulded, is carried to the Founder, or Melter, who after enlarging the principal Jet, or Canal of the Counter Part, with a kind of Knife, and adding the Croſs Jets, or Canals to the ſeveral Patterns in both, and ſprinkling them over with Mill Duſt, ſets them to dry in a Furnace.

When both Parts of the Mould are ſufficiently dry'd, they join them together, by means of the Pins; and to prevent their ſtarting or ſlipping aſide by the Force of the Metal, which is to come in flaming hot thro' a Hole contriv'd at the Maſter Jet, they lock them in a kind of Preſs, either with Screws; or, if the Mould be too big, with Wedges.

The Moulds thus put in Preſs, are rang'd near the Furnace, to be in Readineſs, to receive the Metal as it comes out of the Crucible.

While the Moulds are thus preparing, the Metal is put in Fuſion in an earthen Crucible, about ten Inches high, and four in Diameter.

The Furnace wherein the Fuſion is made, is much like the Smith's Forge; having like that a Chimney, to carry off the Smoak; a pair of Bellows, to blow up the Fire; and a Maſſive, or Hearth, where the Fire is made, and the Crucible plac'd. 'Tis the Uſe of this Maſſive, that chiefly diſtinguiſhes the Furnace from the Forge. See FORGE.

In the Middle thereof is a ſquare Cavity, ten or twelve Inches wide, which goes to the very Bottom. It is divided into two, by an iron Grate: The upper Partition ſerves to hold the Crucible and the Fewel; and the lower, to receive the Aſhes.

When the Fewel, which is to be of dry Wood, is pretty well lighted, they put the Crucible full of Metal in the Middle, and cover it with an earthen Lid: And to increaſe the Force of the Fire, beſide blowing it up with the Bellows, they lay a Tile over part of the Aperture or Cavity of the Furnace.

The Metal being brought to a *Fluor*, they fill the Crucible with pieces of Braſs, beaten in a Mortar. To put them in, they make uſe of a kind of iron Ladle, with a long Shank at the End thereof, form'd into a kind of hollow Cylinder, out of which the Ball is drop'd.

Nothing, now, remains, but for the Founder to take the Crucible out of the Fire, and carry it in a Pair of iron Tongues (whoſe Feet are bent, the better to embrace the Top of the Crucible) to the Mould: Into which he pours it, through the Hole anſwering to the Maſter Jet of each Mould.

Thus he goes ſucceſſively from one to another, till his Crucible is emptied, or there is not Matter enough left for another Mould.

Then, caſting cold Water on the Moulds; they take the Frames out of the Preſſes, and the Caſt-works out of the Sand, which they work again for another Caſting. Laſtly, they cut off the Jets, and ſell, or deliver the Work to thoſe who beſpoke it, without any further repairing.

FOUNDRY *of Statues, Great Guns, and Bells.*

The Art of *Caſting Statues* in Braſs, is very antient; inſomuch that its Origin was too remote and obſcure, even for the Reſearch of *Pliny*, an Author admirably ſkill'd at diſcovering the Inventors of other Arts.

All we can learn for certain, is, that it was practic'd in all its Perfection firſt among the *Greeks*, and afterwards among the *Romans*: And that the Number of Statues conſecrated to the Gods and Hero's, ſurpaſs'd all Belief.

The ſingle Cities of *Athens*, *Delphos*, *Rhodes*, &c. had each 3000 Statues; and *Marcus Scaurus*, tho' only Ædile, adorn'd the *Circus* with no leſs than 3000 Statues of Braſs, for the time of the *Circenſian* Games.

This Taſte for Statues was carried to ſuch a Pitch, that it became a Proverb, That in *Rome* the People of Braſs were not leſs numerous than the *Roman* People.

Among us, the caſting of Statues was but little known, or practic'd before the Seventeenth Century. See STATUE.

As to the *Caſting of Guns*, 'tis quite Modern; and it were perhaps to be wiſh'd, we were as ignorant of it as the Antients.

All the Authors agree, that the firſt Canon were caſt in the fourteenth Century; tho' ſome fix the Event to the Year 1338; and others to 1380. See CANON, ORDNANCE, &c.

The *Caſting of Bells* is of a middle Standing, between the other two.

The Uſe of Bells is certainly very antient in the Weſtern Church; and the ſame were likewiſe us'd in the Church of the Eaſt. But at preſent Father *Vanſleb* aſſures us, in his ſecond Account of *Egypt*, he had found but one Bell in all the Eaſtern Church, and that in a Monaſtery in the upper *Egypt*. See BELL.

The Matter of theſe large Works is rarely any ſimple Metal, but commonly a Mixture of ſeveral, as Braſs, Bell Metal, &c. We ſhall here give the Proceſs in the *Foundry* of each.

*Method of caſting Statues, or Figures.*

There are three things chiefly requir'd in caſting of Statues, Buſts, Baſſo-Relievo's, Vaſes, and other Works of Sculpture; *viz.* The Mould, Wax, and Shell or Coat.

The *Mould*, or *Core*, (thus call'd from *Cœur*, as being in the *Heart*, or Middle of the Statue) is a rude, lumpiſh Figure, a little reſembling the Statue intended. 'Tis rais'd on an iron Grate, ſtrong enough to ſuſtain it, and is ſtrengthen'd withinſide by ſeveral Bars or Ribs of Iron.

It may be made indifferently of two ſorts of Matter, at the Diſcretion of the Workmen, *viz.* Potters Earth mix'd up with Horſes Dung and Hair; or of Plaiſter of Paris, mix'd with fine Brick Duſt.

The Uſe of the Mould in Statues is to leſſen the Weight, and ſave Metal. In Bells it takes up all the Inſide, and preſerves the vacant Space where the Clapper is hung. In Great Guns it forms the whole Barrel, from the Mouth to the Breech: And in Mortars, the Barrel, and Chamber.

The *Wax* is a Repreſentation of the intended Statue in Wax.

If it be a piece of Sculpture, the Wax muſt be all of the Sculptor's own Hand, who uſually faſhions it on the Mould it ſelf. Tho' it may be wrought a-part in Cavities moulded, or form'd on a Model, and afterwards diſpos'd and arrang'd on the Ribs of Iron over the Grate, as before; filling the vacant Space in the Middle with liquid Plaiſter, and brick Duſt; by which means the Mould, or Core is form'd in Proportion as the Sculptor carries on the Wax.

When the Wax (which is to be the intended Thickneſs of the Metal) is finiſh'd, they fit little waxen Tubes perpendicularly to it, from Top to Bottom; to ſerve both as Jets for the Conveyance of the Metal to all Parts of the Work, and as Vent Holes, to give Paſſage to the Air, which would otherwiſe occaſion great Diſorder, when the hot Metal came to encompaſs it. By the Weight of the Wax us'd herein, is that of the Metal adjuſted; ten Pounds of this laſt being us'd to one Pound of the former.

The Work brought thus far, wants nothing but to be cover'd with its *Shell*; which is a kind of Coat, or Cruſt laid over the Wax; and which being of a ſoft Matter, and even at firſt liquid, eaſily takes and preſerves the Impreſſion of every Part thereof, which it afterwards communicates to the Metal, upon its taking the Place of the Wax between the Shell and the Mould.

The Matter of this outer Cover, or Shell, is varied according as different Lays, or Strata are apply'd. The firſt is a Compoſition of putty and old Crucibles well ground, and ſifted, and mix'd up with Water, to the Conſiſtence of a Colour fit for Painting. Accordingly, they apply it with a Pencil, laying it ſeven or eight times over; letting it dry betwixt whiles. For the ſecond Impreſſion they add Horſe's Dung, and natural Earth to the former Compoſition: The third Impreſſion is only Horſes Dung and Earth. Laſtly, the Shell is finiſh'd by laying on ſeveral more Impreſſions of this laſt Matter made very thick with the Hand.

The Shell thus finiſh'd is ſecur'd and ſtrengthen'd by ſeveral Bands or Girts of Iron wound around it at half a Foot's Diſtance from one another, and faſten'd at Bottom to the Grate under the Statue, and a-top to a Circle of Iron, where they all terminate.

Here it muſt be obſerv'd, that if the Statue be ſo big, that it won't be eaſy to move the Mould when thus provided, it muſt be wrought on the Spot where it is to be caſt.

This is perform'd two ways: In the firſt, a ſquare Hole is dug under Ground, much bigger than the Mould to be made therein; and its Inſides lined with Walls of Free-ſtone or Brick. At the Bottom is made a Hole of the ſame Materials, with a kind of Furnace, having its Aperture outwards. In this is a Fire to be lighted, to dry the Mould, and afterwards melt the Wax. Over this Furnace is plac'd the Grate; and on this the Mould, &c. framed as above explain'd. Laſtly, at one of the Edges of the ſquare Pit is made another large Furnace to melt the Metal, as hereafter mention'd.

In the other way, 'tis ſufficient to work the Mould above Ground; but with the ſame Precaution of a Furnace and Grate underneath. When finiſh'd, four Walls are to be run up around it; and by the Side thereof a Maſſive made for a melting Furnace.

For the reſt, the Method is the ſame in both.

The Mould being finiſh'd and incloſ'd between four Walls, whether under Ground, or above it; a moderate Fire is lighted in the Furnace under it; and the Hole cover'd with Planks, that the Wax may melt gently down, and run out at Pipes contriv'd for the purpoſe at the Foot of the Mould, which are afterwards very exactly cloſ'd with Earth, as ſoon as all the Wax is carried off.

This done, the Hole is fill'd up with Bricks thrown in at random, and the Fire in the Furnace augmented, till ſuch time as both the Bricks and the Mould become red hot; which ordinarily happens in 24 Hours. Then, the Fire being extinguiſh'd, and every thing cold again, they take out the Bricks, and fill up their Place with Earth, moiſten'd, and a little beaten, to the Top of the Mould, in order to make it the more firm and ſteady.

Things in this Condition, there remains nothing but to melt the Metal, and run it into the Mould.

This is the Office of the Furnace above; which is made in manner of an Oven, with three Apertures; one to put in the Wood, another for a Vent, and a third to run the Metal out at. From this laſt Aperture, which is kept very cloſe all the time the Metal is in Fuſion, a little Tube or Canal is laid, whereby the molten Metal is convey'd into a large earthen Baſon over the Mould, into the Bottom of which all the big Branches of the Jets, which are to carry the Metal into all the Parts of the Mould, are inſerted.

It muſt be added, that theſe Jets are all terminated, or ſtop'd with a kind of Plugs, which are kept cloſe, that upon opening the Furnace, the Braſs, which guſhes out like a Torrent of Fire, may not enter any of them, till the Baſon be full enough of Matter to run into them all at once: Upon which occaſion they pull out the Plugs, which are long iron Rods, with a Head at one End capable of filling the whole Diameter of each Tube. The Hole of the Furnace is open'd with a long piece of Iron, fitted at the End of each Pole; and the Mould filled in an Inſtant.

The Work is now finiſh'd; at leaſt ſo much as belongs to the *Caſting*; the reſt being the Sculptor's or Carver's Buſineſs; who, taking the Figure out of the Mould and Earth, it is encompaſs'd withal, ſaws off the Jets wherewith it appears cover'd over, and repairs it with Inſtruments proper to his Art, as Chiſſels, Gravers, Puncheons, &c.

*Bell* FOUNDRY, *or the Manner of caſting Bells.*

What has been hitherto ſhewn of the Caſting of Statues, holds, in proportion, of the Caſting of Bells: All that there is particular in theſe latter, is as follows.

Firſt, then, the Metal is different; there being no Tin in the Metal of Statues; but no leſs than a Fifth Part in that of Bells. Secondly, the Dimenſions of the Mould, or Core, and the Wax of Bells, eſpecially if it be a Ring of ſeveral Bells that is to be caſt, are not left to Chance, or the Caprice of the Workman; but muſt be meaſur'd on a kind of Scale, or Diapaſon, which gives the Height, Aperture, and Thickneſs neceſſary for the ſeveral Tones required.

It need not be added, that 'tis on the Wax, that the ſeveral Mouldings, and other Ornaments and Inſcriptions to be repreſented in Relievo on the Outſide of the Bell, are form'd.

The Clapper, or Tongue, is not properly a Part of the Bell, but is furniſh'd from other Hands.

In *Europe*, it is uſually of Iron, with a large Head at the Extreme, and is ſuſpended in the Middle of the Bell.

In

In *China* it is only a huge wooden Mallet, ſtruck by Force of Arm againſt the Bell: Whence they can have but little of that Concordancy ſo muchad mir'd in ſome of our Rings of Bells. The *Chineſe* have an extraordinary way of increaſing the Sound of their Bells, *viz.* by leaving a Hole under the Canon; which our *Bell Founders* would reckon a Defect.

The Proportions of our Bells differ very much from thoſe of the *Chineſe*. In ours, the modern Proportions are to make the Diameter fifteen times the Thickneſs of the Ledge, and twelve times the Height.

*The Manner of caſting great Guns, or Pieces of Artillery.*

The Caſting of Canons, Mortars, and other Pieces of Artillery, is perform'd like that of Statues and Bells: Eſpecially as to what regards the Mould, Wax, Shell, Furnaces, &c.

As to the Metal, it is ſomewhat different from both; as having a Mixture of Tin, which is not in that of Statues; and only having half the Quantity of Tin that is in Bells, *i. e.* at the rate of ten Pound of Tin, to an hundred of Copper. A Canon is always ſhap'd a little Conical, being thickeſt of Metal at the Breech; where the greateſt Effort of the Gunpowder is made, and diminiſhing thence to the Muzzle: So that if the Mouth be two Inches thick of Metal, the Breech is ſix.

Its Length is meaſur'd in Callipers, *i. e.* in Diameters of the Muzzle. Six Inches at the Muzzle require 20 Callippers, or ten Feet in length: There is about $\frac{1}{8}$ of an Inch allow'd Play for the Ball.

*Letter* FOUNDRY, *or the Manner of caſting Printing Letters.*

The Invention of Printing Letters we ſhall ſpeak of under the Articles PRINTING, and LETTER.

Their Difference, Kind, &c. has already been explain'd under the Articles CHARACTER, &c.

The two Things principally to be regarded in the caſting of Letters, are the *Matter*, and the *Matrices*.

The Matter is a Compound Metal; partly Copper, and partly Lead, mix'd in a certain Proportion, which every *Letter Founder* regulates at his own Diſcretion, and to which he frequently adds a certain Quantity of ſome other Metal or Mineral, as his Experience directs him, to render his Compoſition the harder.—

The moſt uſual Proportion of the two Metals, is a hundred Pound of Lead to twenty or twenty five Pound of Braſs. Some (tho' not the beſt Founders) uſe Iron, inſtead of Braſs; in the Proportion of a hundred Pound of Lead, to thirty, or thirty five of Iron.—

Theſe Metals are melted ſeparately in large Crucibles; the Braſs, or Iron with Antimony, and the Lead by it ſelf. When in Fuſion, they are mix'd together: This Fuſion, and Mixture are the moſt laborious Parts of the Letter Founders Art.

The Matrices of the Letters are Pieces of Copper, whereon the Impreſſion of the intended Character has been cut, or ſtruck in Creux, by means of Punchions, &c. graven in Relievo. See MATRICE, PUNCHION, &c.

Each Letter has its proper Matrix; and there are particular ones for Points, Virgula's, Figures, Rules, Head-pieces and other Ornaments of Printing: Excepting the Quadrats, which being only of Lead, and not intended to leave any Impreſſion, are caſt without Matrices, and only in Moulds: And each Matrice has its Punchion, made of Steel, or Iron, well temper'd. See ENGRAVING *in Steel*.

The Matrices being ſtruck, and touch'd up, or repair'd, where needful, are put each at the End of an iron Mould, inclos'd between two thin pieces of Board, two or three Inches ſquare; the two upper Angles being cut off, ſo as to compoſe an irregular Hexagon.

The principal Parts of theſe Moulds, which, as already mention'd, are hid between the pieces of Wood; are 1° Two Steel Plates, with each its Screw, to keep them faſt, at a diſtance from the Boards. 2° Long Pieces. 3° A Piece call'd the Blank, which is what properly forms the Body of the Character, and at the Extremity whereof the Matrice is put. 4° A Jet; which is a ſort of little Funnel, to receive and convey the melted Matter to the Matrice. 5° A Regiſter, ſerving to rejoin the two Parts of the Mould, after they have been open'd to take out the Letter, when caſt.

On the Outſide of the Moulds are three other Pieces, *viz.* the Bow, at bottom; and two Hooks a-top. The Bow is a thick Steel Wire, two or three Lines in Diameter; and eight or ten Inches long, bent in a manner of a Bow, or Arch; whereof the lower piece of Wood is as it were the Chord, or String. One End is faſten'd to the Board, and the other, which is left at liberty, ſerves, by its Spring, or Elaſticity to preſs and retain the Matrice of the Character againſt the Extremity of the Blank, where the melted Matter running in, makes the Impreſſion.

The Hooks a-top of the Mould are alſo of Wire, about the ſame Size with the Bow, and about an Inch and half long; being faſten'd, one of them to one Board, and the other to the other. Their Uſe is, to open the Mould, and to take out the Character when caſt, ſo as the Workman may not be incommoded with the Heat.

Every thing belonging to the Mould being thus diſpos'd, they begin to prepare the Matter.

The Furnace, whereon the Baſon is plac'd for the Metal to be melted in, is made of the ſame Matter as Crucibles. It is uſually 18 or 20 Inches high, and ten or twelve in Diameter. An iron Grate horizontally plac'd, divides it into two: The lower Part ſerves to hold the Aſhes, and is furniſh'd with a Hole to let in Air. The Wood is put in the upper Part, thro' an Aperture made over the Grate. An earthen Pipe ſerves to carry off the Smoak out at a Window, near which the Furnace is ordinarily plac'd. Laſtly, a Stone, or wooden Stool ſerves to ſupport the Furnace, and raiſe it to a proper Height for the Workman, to work ſtanding.

Over the Furnace is plac'd the Melting Baſon, or Copper. It is about nine Inches in Diameter, and takes up the whole Aperture a-top; being even luted to it all round, with Potters Earth. Its Matter is a kind of Pot Metal; and that it may be fit for melting both hard and ſoft Metals, it is divided into two equal Parts, by a perpendicular Partition.

In this Baſon they melt only the Matter already prepar'd; that is, the Mixture or Compoſition made in the Crucibles above mention'd. A little iron Ladle ſerves to ſkim off the Scoriæ or Impurities from the Surface of the melted Metal. Theſe Scoriæ are not all loſt, but ſerve to melt over again.

Two Workmen are uſually employ'd at each Furnace. Each of them has his Part of the Baſon to empty; and they have a Table or Bench in common, where they lay the Characters as faſt as they are caſt.

To run the Metal into the Mould, the Founder holds it in his left Hand; and in his right a little iron Ladle with a wooden Handle, containing juſt enough for one Letter.

Having now fill'd this Ladle with liquid Metal, he pours it into the Jet, or Funnel, whoſe Aperture is in the Middle of the two Hooks of the Mould; and thruſting his Hand briſkly forward wherewith he holds the Mould, makes the Metal run into the Matrix of the Character; which without ſuch Motion might grow cold before it arrived there.

He then unbends the Bow, opens the Mould, and with one of the Hooks takes out the Character; and without Loſs of Time ſhuts it again, replaces the Matrice, and caſts a new Letter. 'Tis incredible with what Expedition and Addreſs all this is done.

The Letter being caſt, they view it, before they break off the Jet; to ſee whether it be perfect; otherwiſe to throw it among the Refuſe of the Fount.

If it be found compleat, the Jet is broke off; the ſuperfluous Metal occaſion'd by the Mould's not being exactly cloſed, taken off with a Knife; the long-tail'd Letters, as *f* and *ſ* hollow'd at bottom, to give room for the Maſſive of the other Letters to be plac'd underneath.

With the ſame Knife they ſcrape the Letter, to ſmooth its two broadeſt Sides, or Faces, and fit them to be rub'd on the Stone. They take care only to rub thoſe Sides; for fear of damaging a Notch on one of the other Sides, which is to ſhew the Sides to the Compoſitor when he ſets his Forms.

The Stone they grind them on, is a ſort of hard, coarſe-grain'd Free-ſtone, plac'd horizontally; before which the Workman ſits. To ſave his Fingers from the Friction, he has a kind of Finger-ſtalls, made of ſome old piece of Leather; with which he covers the two Fingers next the Thumb: With theſe he works each Side of the Letter backwards and forwards: To ſhift Sides, he makes uſe of the Thumb, but without diſcontinuing the Motion; ſo that the By-ſtander would eaſily be deceiv'd, and be ready to ſwear they had all the while rub'd on the ſame Side.

The Letters thus ground are plac'd on the Compoſitor, to be ſcrap'd and brought to the proper Thickneſs on the two other Sides, *viz.* that of the Notch, and its Oppoſite. This they call *Compoſition*.

The Compoſitor is a wooden Ruler, with a little Ledge at Bottom, againſt which the Letters are rang'd. On the ſame Inſtrument the Quadrats, Rules, Borders, &c. are adjuſted.

When the Letters are compoſed, they remain to be *juſtified*, both as to Thickneſs and Height. In order to this, they uſe a little Copper-plate, which is their Level. The Juſtification, as to Thickneſs, is made on a piece of Marble; and that for the Height, on an iron Compoſitor. The Juſtification of the Height, is guided by the *m* of ſome Body of Characters already juſtified.

Letters are ſaid to be of their *juſt* Height, when the Part of the Plate, or Level bears equally on the ſtandard *m* plac'd on its Foot, in the little Compoſitor, and on the Face of two Letters newly caſt plac'd a-ſide of it to be juſtified: As to the Thickneſs, the Juſtification is perform'd by laying the Standard Letter flat on the little Marble, and two new Letters a-ſide of it; and thus levelling the three, with the Plate.

All that remains, is *to get ready the Letters*, *i. e.* to cut the Foot, or rather hollow it, and make that ſort of Groove which every Letter has at bottom, preciſely oppoſite to the Eye or upper Part, or Face of the Letter.

In order to this they turn a long Line of them upſide down in the Juſtificator; which is an Inſtrument of poliſh'd Iron or Steel, conſiſting of two long Pieces join'd together by Screws. Between theſe two, they encloſe as many Letters as it will hold, all plac'd againſt each other in the ſame Situation, as when compos'd for Books; excepting that the Face in the former caſe is downwards, and the Foot a-top. When the Juſtificator is full of Letters, they ſet it on the Table of the Cutter, between two Cheeks of Wood; which preſſing it very tight, enable the Workman to run his Plane along the Line of the Letters thus inverted.

This Plane conſiſts of three Parts; two of Steel, and the third Wood. Of the Steel ones, that at bottom conſiſts of two moveable Steel Plates, which may be drawn cloſer, or ſet further off, at pleaſure, by means of two Screws. Within the Interval between the two, they paſs the Feet of the Row of Letters; and thus is the Plane kept from deviating.

The ſecond Part of the Plane, anſwering to the Bit of Steel in the common Planes, conſiſts of two Branches, and two Screws, which ſerve to raiſe or let down the Steel, as the Groove is to be cut deeper, or ſhallower. The Poſition of this piece of Steel, which is four or five Inches long, is almoſt perpendicular.

The laſt Part of the Plane, which is Wood, ſerves to join the other two. Its Form is that of an Arch: One End of it is faſten'd to the poſterior Extreme of the Plates, and the other to the Branches, which carry the Bit of Steel: So that the three Parts together make a kind of Triangle, voided in the Middle.

The Cutter is a Steel Inſtrument, with a wooden Handle, in manner of a Chiſſel; ſerving to pare off the rough Wire Edge of the Letters when they are got ready.

The Letters are now fit for the Printer's Uſe. See PRINTING.

The Perfection of Letters thus caſt, *&c.* conſiſts in their being all ſeverally ſquare and ſtrait, on every ſide; and all, generally of the ſame Height, and evenly lined, without ſtooping one way or other; neither too big in the Foot, nor the Head; well groov'd, ſo as the two Extremes of the Foot contain half the Body of the Letter; well ground, barb'd, and ſcrap'd; with a ſenſible Notch, *&c.*

The *Letter Founders* have a kind of Policy or Catalogue to regulate the Number of each kind of Lettes in a Fount. See FOUNT.

FOUNT, or FONT, among Printers, *&c.* a Set, or Quantity of Characters, or Letters of each Kind; caſt by the Letter Founder, and ſorted.

Thus we ſay, A Founder has caſt a *Fount* of *Pica*, of *Engliſh*, of *Pearl*, &c. meaning, he has caſt a Set of Characters of theſe Kinds. See LETTER, *Letter* FOUNDRY, &c.

A Compleat *Fount* does not only include the running *Letter*; but alſo *Majuſcules*, or Large, and Small *Capitals*, *Single* Letters, *Double* Letters, *Points*, *Comma's*, *Lines*, *Borders*, *Head-pieces*, *Tail-pieces*, and *Numeral* Characters.

The Letter Founders have a kind of Liſt, or Tarif, whereby they regulate their *Founts*.

The Occaſion thereof is, that ſome Letters being in much more uſe, and oftener repeated than others; their Cells, or Caſes ſhould be better fill'd and ſtored than thoſe of the Letters which do not return ſo frequently.

Thus the *o* and *i* for inſtance, are always in greater Quantity than the *k* or *z*.

This Difference will be beſt perceiv'd from a proportional Compariſon of thoſe Letters with themſelves, or ſome others.

Suppoſe a *Fount* of a hundred thouſand Characters, which is a common *Fount*: Here the *a* ſhould have five thouſand; the *c* three thouſand; the *e* eleven thouſand; the *i* ſix thouſand; the *m* three thouſand; the *k* only thirty; and the *x*, *y* and *z* not many more.

But this is only to be underſtood of the Letters of the Lower Caſe; thoſe of the Upper having other Proportions, which it would be here too long to inſiſt on. See LETTER, CHARACTER, *Letter* FOUNDRY.

FOUNTAIN, FONS, in Philoſophy, a *Spring*, or Source of living Water, riſing out of the Ground.

For the Phænomena, Theory, Origin, *&c.* of Springs or *Fountains*, ſee SPRING.

Among the Antients, the *Fountains*, or Sources of Rivers were held ſacred, and even worſhip'd as a kind of Divinities.

*Seneca* obſerves as much in his Forty firſt Epiſtle: And *Cicero* L. III. *de Nat. Deor.* c. 20. mentions, that the *Roman* Prieſts and Augurs us'd in their Prayers and Invocations to call on the Names of the *Tiber*, and other Rivers, Brooks and Springs about *Rome*. The ſeventh Inſcription in *p. XCIV.* of *Gruter* has, *FONTI* DIVINO ET GENIO NUMINIS FONTIS. It was a Point of Religion, not to diſturb or muddy the Waters in Waſhing or Bathing. See FONTINALIA.

*Tacitus* gives an Inſtance hereof in *Nero Annal.* L. IV. c. 22. And *Struvius Antiq. Rom. Syntag.* c. 1. p. 167.

FOUNTAIN, or *Artificial* FOUNTAIN, in Hydraulicks, a Machine, or Contrivance, whereby the Water is violently ſpouted, or darted up; call'd alſo *Jet d'Eau*. See JET *d'Eau*, FLUID, *&c.*

There are divers kinds of theſe Artificial *Fountains*; ſome founded on the Spring, or Elaſticity of the Air; and others on the Preſſure or Weight of the Water, *&c.*

The Structure of each hereof, being very pretty and curious, and affording a good Illuſtration of the Doctrine of Hydraulicks and Pneumaticks, ſhall be here explain'd.

### *Conſtruction of an Artificial* FOUNTAIN, *playing by the Spring, or Elaſticity of the Air.*

A Veſſel, proper for a Reſervoir, as A B, *Tab. Hydraulicks Fig.* 17. is provided of Metal, Glaſs, or the like; ending in a ſmall Neck *c*, a-top. Thro' this Neck a Tube is put, *c a*, traverſing the Middle of the Veſſel, till its lower Orifice, *d*, nearly, but not abſolutely, reach the Bottom of the Veſſel; the Veſſel being firſt half fill'd with Water. The Neck is ſo contriv'd, as that a Syringe, or condenſing Pipe may be ſcrew'd upon the Tube; by means whereof, a large Quantity of Air may be intruded thro' the Tube into the Water; out of which it will diſengage it ſelf, and emerge into the vacant Part of the Veſſel, and lie over the Surface of the Water, C D.

Now, the Water here contain'd, being thus preſs'd by the Air, which is *e. gr.* twice as denſe as the external Air; and the Elaſtick Force of Air being equal to its gravitating Force: The Effect will be the ſame as if the Weight of the Column of Air over the Surface of the Water, were double that of the Column, preſſing in the Tube; ſo that the Water muſt, of neceſſity, ſpout up, thro' the Tube, with a Force equal to the Exceſs of Preſſure of the included, above that of the external Air. See AIR.

### *Conſtruction of an Artificial* FOUNTAIN, *playing by the Preſſure of the Water.*

Having the Conveniency of a Fund, or Reſervoir of Water, in a Place conſiderably higher than that where the *Fountain* is to be (whether that Fund have been plac'd there by Nature; or whether it have been rais'd for the Purpoſe, by a proper Engine, as a Pump, Syphon, Spiral Screw, or the like) from the Reſervoir lay vertical Tubes for the Water to deſcend thro'; and to theſe vertical Tubes, fit other horizontal ones, under Ground, to carry the Water to the Place where the *Fountain* is to play. Laſtly, from theſe horizontal Tubes erect other vertical ones, by way of Ajutages, Jets, or Spouts; their Altitude being much leſs than that of the Tubes whereby the Water was brought to the horizontal ones.

Then will the Water, by the Preſſure of the ſuperincumbent Column, be ſpouted up at theſe Jets; and that to the Height, or Level of the Water in the Reſervoir; and this, howſoever any of the Tubes be bent or incurvated: *The Demonſtration hereof, ſee under* FLUIDS.

Thus may Water be ſpouted to any given Height at pleaſure: The Tubes may be ſo proportion'd as to yield any given Quantity of Water, in a given Time; or ſeveral Tubes of the ſame *Fountain* may be made to yield Water in any given Ratio: Or, laſtly, different Tubes may project the Water to different Altitudes. Rules, for all which, the Reader will find among the Laws of FLUIDS.

Theſe aerial, or aquatic *Fountains*, may be applied in various manners; ſo as to exhibit various Appearances: And from theſe alone, ariſe the greateſt Part of our artificial Water-works.

An Inſtance or two, will not be diſagreeable.

### *A* FOUNTAIN *that ſhall ſpout the Water in various Directions.*

Suppoſe the Vertical Tube, or Spout in which the Water riſes, to be A B (*Tab. Hydraulicks*, *Fig.* 18.) into this, fit ſeveral other Tubes; ſome Horizontal, others oblique; ſome inclining, others reclining, as O P, M N, F L, &c.

Then, as all Water retains the Direction of the Aperture, thro' which it is ſpouted: That, iſſuing thro' A, will riſe perpendicularly; and that thro' L, H, N, P, E will deſcribe Arches of different Magnitudes, and tending different ways.——

Or

*Or thus*: Suppoſe the Vertical Tube A B, *Fig.* 19. thro' which the Water ariſes, to be ſtop'd a-top, as in A; and inſtead of Pipes, or Jets, let it be only perforated with little Holes all around, or only half, its Surface. Then will the Water ſpin forth in all Directions thro' the little Apertures, and to a Diſtance proportional to the Height of the Fall of the Water.——

And hence if the Tube A B be ſuppos'd the Height of a Man, and be furniſh'd with an Epiſtomium, or Cock at C: Upon opening the Cock, the Spectators, dreaming of no ſuch Matter, will be cover'd with a Shower.

It muſt be here obſerv'd, that the Diameters of the Apertures, by which the Water is emitted, muſt be conſiderably leſs than thoſe of the Tubes in which the Water is brought; leſt the Reſiſtance of the Air, and other Impediments, ſpecify'd under FLUID, break the Force of the Water.——

### *A* FOUNTAIN *playing by the Draught of the Breath.*

Suppoſe A B, *Fig.* 20. a Glaſs or Metal Sphere; wherein is fitted a Tube, C D, having a little Orifice in C, and reaching almoſt to D, the Bottom of the Sphere. If now the Air be ſuck'd out of the Tube C D, and the Orifice C be immediately immerg'd under cold Water; the Water will aſcend thro' the Tube into the Sphere.

Thus proceeding, by repeated Exſuctions, till the Veſſel be above half full of Water; and then applying the Mouth to C, and blowing Air into the Tube; upon removing the Mouth, the Water will ſpout forth.

Or, if the Sphere be put in hot Water; the Air being thereby rarify'd, will make the Water ſpout as before.

This kind of *Fountain* is call'd *Pila Heronis*, or *Hero*'s Ball, from the Name of its Inventor.

### *A* FOUNTAIN, *the Stream whereof raiſes, and plays a Braſs Ball.*

Provide a hollow Braſs Ball A, *Fig.* 21. made of a thin Plate, that its Weight may not be too great for the Force of the Water. Let the Tube B C, through which the Water riſes, be exactly perpendicular to the Horizon.

Then, the Ball being laid in the Bottom of the Cup, or Baſon B; will be taken up in the Stream, and ſuſtain'd at a conſiderable Height, as A; alternately vibrating, or playing up and down.

Hence, as the Figure of the Ball contributes nothing to its reciprocal Riſe, and Fall: Any other Body, not too heavy, may be ſubſtituted in lieu thereof; *e. gr.* a Bird with its Wings ſtretch'd forth.

But, note, that as 'tis neceſſary the Globe, when on the Deſcent, ſhou'd keep the ſame preciſe Perpendicular, wherein it roſe (ſince otherwiſe it wou'd miſs the Stream, and fall downright); ſuch a *Fountain* ſhou'd only be play'd in a Place free from Wind.

### *A* FOUNTAIN *which ſpouts the Water in manner of a Shower.*

To the Tube wherein the Water is to riſe, fit a Spherical, or Lenticular Head, A B, *Fig.* 22. made of a Plate of Metal, and perforated a-top, with a great Number of little Holes.

The Water riſing with Vehemence towards A B, will be there divided into innumerable little Threads, and afterwards broke, and diſperſed into the fineſt Drops.——

### *A* FOUNTAIN *which ſpreads the Water in form of a Cloth.*

To the Tube A B, *Fig.* 23. ſolder two Spherical Segments C, and D, almoſt touching each other; with a Screw E, to contract, or amplify the Interſtice or Chink at Pleaſure.

Others chuſe to make a ſmooth, even Nitch, in a Spherical, or Lenticular Head, fitted upon the Tube.

The Water ſpouting thro' the Chink, or Nitch, will expand it ſelf in manner of a Cloth.

### FOUNTAINS *wherein the Water ſpouts out of the Figures of Men and other Animals.*

Since Water may be deriv'd or convey'd by Tubes in any Situation; and always retains the Direction of the Aperture: All here requir'd, is to incloſe Tubes within the Figures of Men, or other Animals, having their Orifices in thoſe Parts whence the Water is to ſpout forth.

From the Principles hitherto laid down, it will be very eaſy to deduce whatever relates to the Furniture of *Fountains*, and the various Forms Water may be put into by their means: All depending on the Magnitude, Figure, and Direction of the Ajutages, or Apertures.——

### *A* FOUNTAIN, *which when it has done ſpouting, may be turn'd like an Hour-glaſs.*

Provide two Veſſels, L M, and N O, *Fig.* 24. to be ſo much the bigger as the *Fountain* is to play the longer; and plac'd at ſo much the greater Diſtance from each other, P N, as the Water is deſir'd to ſpout the higher. Let B A C be a crooked Tube, furniſh'd in C with a Cock; and F E D an other crooked Tube, furniſh'd with a Cock in D. In I, and K are to be other leſſer Tubes, open at both Ends, and reaching near to the Bottoms of the Veſſels N O, and L M: To which the Tubes Q R, and S T are likewiſe to reach.

If, now, the Veſſel L M be fill'd with Water; it will deſcend thro' the Tube B A, and upon opening the Cock C, will ſpout up near to the Height of K: And, after its Fall again, will ſink thro' the little Tube I, into the Veſſel N O, and expell the Air thro' the Tube Q O. At length, when all the Water is emptied out of the Veſſel L M; by turning the Machine upſide down, the Veſſel N O will be the Reſervoir, and make the Water ſpout up through the Cock D.

Hence, if the Veſſels L M, and N O contain juſt as much Water as will be ſpouted up in an Hour's time; we ſhall have a ſpouting Clepſydra, or Water Clock, which may be graduated or divided into Quarters, Minutes, *&c.* as ſhewn under the Article CLEPSYDRA.

### *A* FOUNTAIN *that begins to play upon the lighting of Candles, and ceaſes as they go out.*

Provide two Cylindrical Veſſels, A B, and C D, *Fig.* 25. Connect them by Tubes, open at both Ends, K L, B F, &c. ſo that the Air may deſcend out of the higher, into the lower. To the Tubes ſolder Candleſticks, H, *&c.* And to the hollow Cover of the lower Veſſel, C F, fit a little Tube, or Jet F E, furniſh'd with a Cock G, and reaching almoſt to the Bottom of the Veſſels. In G let there be an Aperture, furniſh'd with a Screw, whereby Water may be pour'd into C D.

Then, upon lighting the Candles H, *&c.* the Air in the contiguous Tubes becoming rarify'd thereby; the Water will begin to ſpout thro' E F.

By the ſame Contrivance may a Statue be made to ſhed Tears upon the Preſence of the Sun, or the lighting of a Candle, *&c.* All here requir'd, being to lay Tubes from the Cavity wherein the Air is rarify'd, to ſome other Cavities near the Eyes, and full of Water.——

FOUNTAIN, with regard to Architecture, is an Aſſemblage of Maſonry, Sculpture, *&c.* either for the Decoration, or Conveniency of a City, Garden, or the like.

*Fountains* acquire various Denominations, according to their Form, and Situation; as,

*Spring* FOUNTAIN, a kind of plain Spout, or Stream of Water, iſſuing out of a Stone, or Hole in a Wall, without any Decoration.

Such is the *Fountain* of *Trevi* at *Rome*.

*Coverd* FOUNTAIN, a kind of Pavillion, built of Stone; either Inſulate, and ſquare; or round; or Multilateral; or back'd: And that, either with a Projecture, or Indenture: Incloſing a Reſervoir, and ſpouting, or darting forth the Water thereof thro' one or more Cocks; in the Middle of a Street, Square, Garden, Court, or the like. Such is that in *Lincolns-Inn*, *London*.

*Open* FOUNTAIN, is any ſpouting *Fountain*, with a Baſon, Cup, and other Ornaments; all open: As is frequent in our Gardens, and the Vineyards at *Rome*.

*Spouting* FOUNTAIN, or *Jet d'Eau*, is any *Fountain*, whoſe Water is darted forth impetuouſly thro' one, or more Jets, or Adjutages, and returns in Rain, Nets, Folds, or the like. See JET *d'Eau*.

*Baſon* FOUNTAIN, is that with only a ſimple Baſon, of any Figure whatever; in the Middle whereof is a Jet, or Spout, or perhaps a Statue; or even a Group of Figures: As in the Court of *Buckingham* Houſe.

*Cup* FOUNTAIN, is that which beſide a Baſon, has likewiſe a Cup of one ſingle piece of Stone, or Marble, ſupported on a Shaft, or Pedeſtal, and receiving a Jet, or Spout, riſing out of the Middle thereof. As the *Fountain* in the Court of the *Vatican*; the Cup whereof is of Granate, and antique; being brought from the Baths of *Titus* at *Rome*.

*Pyramidal* FOUNTAIN, that form'd of ſeveral Baſons, or Cups, rang'd in Stories over each other, and diminiſhing all the way; being ſupported by a hollow Stem, or Shaft.

As the *Fountain* of *Monte-Dragone* at *Freſcati*: Or elſe ſupported by Figures, Fiſhes, or Conſoles; the Water whereof in its Fall makes Nets in divers Stories, and repreſents a kind of Water Pyramid: As that at the Head of the Caſcades at *Verſailles*.

*Statuary* FOUNTAIN, that which being open and inſu-

lated

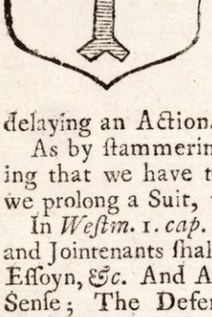
lated, or even back'd, is adorn'd with one or more Statues, by way of finiſhing, or crowning: As the *Fountain* of *Latona* at *Verſailles*; and that of the Shepherd at *Caprarola*. There are alſo Statues, which ſpout forth Water at ſome of their Parts; or at Sea Shells, Vaſes, Urns, and other Attributes of the Sea.

*Ruſtic* FOUNTAIN, is that form'd, or enrich'd with Rock-work, Shell-work, Petrifactions, &c.

*Satyric* FOUNTAIN, a kind of Ruſtic *Fountain*, in manner of a Grotto; adorn'd with Termini, Maſcaroons, Fauns, Sylvans, Bacchantes, and other Satyrical Figures, ſerving for Ornaments as well as Jets d'Eau.

*Marine* FOUNTAIN, that compos'd of Aquatic Figures, as Sea Divinities, Naiads, Tritons, Rivers, Dolphins, and other Fiſhes, and Shells. As the *Fountain* of the Place *Paleſtrina* at *Rome*; where a Shell ſupported by four Dolphins, ſerves as a Cup, and ſupports a Triton, that ſpouts Water out of his *Concha Marina*.

*Naval* FOUNTAIN, is that made in form of a Veſſel. Such is that of the Place *d'Eſpagne* at *Paris*, repreſenting a *Bark*: That at *Monte-Cavallo*, repreſenting a *Galley*; or that before the Vineyard *Mattei* at *Rome*, reſembling a Boat.



*Symbolical* FOUNTAIN, that where the principal Ornaments are the Attributes, Arms, or Cognizances of the Perſon who erected it. As the *Fountain* of St. *Peter* in *Montorio*, reſembling a Caſtle flank'd with Towers; and *Doujons*, repreſenting the Arms of *Caſtile*: And ſome other *Fountains* at *Rome*; among which are the *Flower-de-Lis*, and the *Dove*, the Bearings of the Family of Pope *Innocent* X.

*Arch'd* FOUNTAIN, that whoſe Baſon and Jet are plac'd perpendicularly under an Arch. Such are the *Fountains* of the *Colonnade*, and Triumphal Water Arch at *Verſailles*.—

FOUNTAIN *Pen*, is a ſort of Pen, contriv'd to contain a great Quantity of Ink, and let it flow by gentle Degrees; ſo as to ſupply the Writer a long time, without a Neceſſity of taking freſh Ink.—

The *Fountain* Pen, repreſented *Tab. Miſcellany*, *Fig.* . conſiſts of divers Pieces F G H of Braſs, Silver, &c. whereof the middle Piece F carries the Pen, which is ſcrew'd into the Inſide of a little Pipe; which again is ſolder'd to another Pipe, of the ſame Bigneſs, as the Lid G; in which Lid is ſolder'd a Male Screw, for ſcrewing on the Cover; as alſo for ſtopping a little Hole at the Place, and hindering the Ink from paſſing thro' it. At the other End of the Piece F is a little Pipe, on the Outſide whereof the Top Cover H may be ſcrew'd. In the Cover there goes a Port Crajon, to be ſcrew'd into the laſt mention'd Pipe, in order to ſtop the End of the Pipe, into which the Ink is to be pour'd by a Funnel.

To uſe the Pen, the Cover G muſt be taken off, and the Pen a little ſhaken, to make the Ink run more freely.

FOURCHEE, or FOURCHY, in Heraldry. A Croſs *Fourchee* is that forked at the Ends. See CROSS.

*Upton* rather repreſents it as *Anchor'd*, the Extremities turning in a circular manner to ſharp Points; whereas the true Croſs *Fourchee*, *i. e.* forked, has its Forks compos'd of ſtrait Lines, and blunt Ends.

FOURCHER, an antient Law Term, ſignifying a putting off, prolonging, or delaying an Action.

As by ſtammering we draw out our Speech, not delivering that we have to ſay, in ordinary time, ſo by *fourching* we prolong a Suit, that might be ended in a ſhorter Space.

In *Weſtm.* 1. *cap.* 42. we have theſe Words: Coparceners and Jointenants ſhall no more *fourch*, but only ſhall have one Eſſoyn, &c. And Anno 6 *Ed.* 1. *cap.* 10. it is us'd in the ſame Senſe; The Defendants ſhall be put to Anſwer without *fourching*, &c. In the *Latin* 'tis called *furcare*, and is us'd, Where a Man, and his Wife, or each of them caſt a Eſſoin. 'Tis called *furcare*, becauſe 'tis twofold. *Caveat vir & mulier implacitati, quod ſemper in Eſſonio alterius alter compareat, quamdiu* furcare *poſſint*; *& cum ultra non poſſint, concurrant coram Eſſonia in ſuis locis: Alter autem earum tantum unum Eſſonium de malo lecti habere poteſt.* Hengham Mag. cap. 9.

FOURTH, in Muſick, one of the Harmonic Intervals, or Concords. See CONCORD.

The *Fourth*, is the Fourth, in order, of the Concords. It conſiſts in the Mixture of two Sounds, which are in the Ratio of 4 to 3; *i. e.* of Sounds produc'd by Chords, whoſe Lengths are to each other as 4:3. See CHORD, and INTERVAL.

'Tis call'd *Fourth*, becauſe containing *four* Terms, or Sounds between its Extremes; and three *Degrees*: Or, as being the *fourth* in the Order of the Natural Scale from the Fundamental. See DEGREE, and FUNDAMENTAL.

The Antients call the *Fourth*, *Diateſſaron*, and ſpeak of it as the firſt and principal of all Concords; and yet the Moderns find it one of the moſt imperfect. 'Tis ſo very barren, and jejune, that it affords nothing good, either by Multiplication, or Diviſion. See DIATESSARON.

The *Redundant* FOURTH is a Diſcord compos'd of the Ratio's of 27 to 20; and of 4 to 5. See DISCORD.

FOUTGELD, or FOOT-GELD, antiently denoted an Amerciament, for not cutting out the Balls of great Dogs Feet, in the Foreſt. See EXPEDITATE.

To be quit of *Foutgeld*, is a Privilege to keep Dogs within the Foreſt, unlawed, without Puniſhment, or Controul.

FOWL, in its general Senſe, is of equal Import with *Bird*. See BIRD.

FOWL, is in a more peculiar manner underſtood of *Poultry*; or the larger ſort of Birds, both Domeſtic, and Wild; either bred up, or hunted for the Table. Such are Turkeys, Geeſe, Cocks, Hens, and Ducks, both wild and tame; Pheaſants, Partridges, Pidgeons, Snipes, &c. See POULTRY.

*Tame* FOWL, are a neceſſary Part of the Stock of a Country Farm; and yield conſiderable Service and Profit by their *Eggs*, *Brood*, *Feathers*, *Dung*, &c.

They may be kept at a very eaſy Expence near any Highway ſide; as being able to ſhift for themſelves the greateſt Part of the Year, by their feeding on Inſects, Worms, Snails, Gleaning, or almoſt any thing eatable.

The eldeſt Hens are always the beſt for ſitting; and the youngeſt for laying: But no ſort will be good for either, if kept too fat.

The beſt Age to ſet a Hen for Chickens, is from two Years old to five; and the moſt proper Month to ſet them in, is *February*: Tho' it may be done to good purpoſe any time between that and *Michaelmas*. One Cock will ſerve ten Hens: A Hen ſits twenty Days; whereas Geeſe, Ducks, Turkeys, ſit thirty.

Buckwheat, or *French* Wheat, or Hemp-ſeed, 'tis ſaid, make them lay faſter than any other Food: And the ſame Buckwheat, either whole, or ground, and made into a Paſte, fats them apace; tho' the common Food for that purpoſe is Barley-meal, or Wheat-flower, ſoak'd in Milk, or Water, made into a Paſte, and cram'd down their Throats twice a day, till they will hold no more. A Gooſe will will ſcarce ſit on any, but her own Eggs: A Hen, indifferently on all.

The lighteſt colour'd Geeſe are the beſt: And thoſe that begin to lay the ſooneſt; as they have a Chance of hatching twice in one Year. They begin to lay in the Spring; and lay 12 or 16 Eggs. Green Geeſe are begun to be fatten'd at a Month old; and will be fat in a Month more. Old Geeſe are chiefly fatten'd at ſix Months old, in, or after the Harveſt. A wild Gooſe, if red footed, is old, and harry; but if white footed, and not harry, ſhe is young.

When the Eggs are ſet under a Hen, or other *Fowl*, 'tis neceſſary to mark the upper ſides thereof; and when ſhe goes to feed, to note whether ſhe minds to turn them upſide down, or not; that, if ſhe neglect that Office, it may be done for her. See EGG, FEATHER, &c.

FOWLING, the Act, or Art of catching Birds with Nets, Birdlime, Decoys, and other Devices; as alſo of breeding up the ſame. See FOWL, NET, and BIRDLIME.

FOWLING is alſo us'd for the purſuing, and taking of Birds with Hawks, Falkons, and other Birds of Prey; more properly call'd *Falconry*. See FALCONRY.

FOWLING *Piece*, a portable Fire Arm for the ſhooting of Birds. See FIRE ARM.

Of *Fowling* Pieces, thoſe are reputed the beſt, which have the longeſt Barrel, *viz.* from 5½ Foot, to 6; with an indifferent Bore, under Harquebuſs: Tho' for different Occaſions they ſhou'd be of different Sorts, and Sizes. But in all, 'tis eſſential the Barrel be well poliſh'd and ſmooth within; and the Bore all of a Bigneſs, from one End to another; which may be prov'd by thruſting in a piece of Wood, cut exactly to the Bore of the Muzzle, down to the Touch-hole.

FOX *Hunting*, ſee *Fox* HUNTING.

FRACTION, in Arithmetic, a Part, or Diviſion of an Unite, or Integer: Or, a Number which ſtands in the relation to an Unite, a Part to its Whole.

The Word literally imports a *Broken* Number. See NUMBER.

*Fractions* are uſually divided into *Decimal*, *Sexageſimal*, and *Vulgar*.—

For *Decimal*, and *Sexageſimal* FRACTIONS, ſee DECIMAL, and SEXAGESIMAL *Fractions*.

*Vulgar* FRACTIONS, called alſo Simple *Fractions*, are always expreſs'd by two Numbers, the one wrote over the other, with a Line between them.

The lower, call'd the *Denominator of the Fraction*, denotes the Unite, or Whole, that is divided into Parts; and the upper, called the *Numerator of the Fraction*, expreſſes the Parts given in the preſent Caſe. See NUMERATOR, &c.

Thus, two third Parts of a Line, or other Thing, are wrote ⅔. Where the Denominator 3 ſhews, that the whole Line is ſuppos'd to be divided into three equal Parts; and the Numerator 2 indicates or aſſigns two of ſuch Parts.

Again,

Again, twenty nine Sixtieths is wrote $\frac{29}{60}$; where the Numerator 29 expreſſes 29 Parts of an Integer divided into Sixty; and the Denominator 60 gives the Denomination to theſe Parts, which are call'd Sixtieths.

The real Deſign of adding the Denominator, is to ſhew what *aliquot* Part the broken Number has in common with Unity. See DENOMINATOR, &c.

In all *Fractions*, as the Numerator is to the Denominator; ſo is the *Fraction* it ſelf; to the Whole, whereof it is a *Fraction*.

Thus, ſuppoſing $\frac{3}{4}$ of a Pound equal to 15 *s.* 'Tis evident, that 3 : 4 : : 15 : 20. Whence it follows 1° That there may be infinite *Fractions* of the ſame Value, one with another; inaſmuch as there may be infinite Numbers found, which ſhall have the Ratio of 3 : 4. See RATIO.

*Fractions* are either *Proper*, or *Improper*.

A *Proper* FRACTION is that where the Numerator is leſs than the Denominator; and conſequently the *Fraction* leſs than the Whole, or Integer; as $\frac{15}{40}$.

An *Improper* FRACTION is, where the Denominator is either equal to, or bigger than the Denominator; and, of courſe, the *Fraction*, equal to, or greater than the Whole, or Integer, as $\frac{25}{25}$; or $\frac{25}{20}$; or $\frac{90}{32}$.

*Fractions*, again, are either *Simple*, or *Compound*.

*Simple* FRACTIONS are ſuch, as conſiſt of only one Numerator, and one Denominator; as $\frac{2}{7}$, or $\frac{14}{365}$, &c.

*Compound* FRACTIONS, call'd alſo *Fractions of Fractions*, are ſuch as conſiſt of ſeveral Numerators, and Denominators; as $\frac{4}{7}$ of $\frac{11}{12}$ of $\frac{5}{9}$ of $\frac{15}{80}$ &c.——

Of *Fractions* thoſe are *equal* to each other, whoſe Numerators have the ſame Ratio to their Denominators. Thoſe are *greater*, whoſe Numerators have a greater Ratio; and thoſe *leſs*, which have leſs: Thus, $\frac{1}{2} = \frac{4}{8} = \frac{5}{10} = \frac{25}{50} = \frac{50}{100}$. But $\frac{3}{24}$ is greater than $\frac{2}{8}$; and $\frac{4}{8}$ leſs than $\frac{10}{18}$.

Hence, if both the Numerator, and Denominator of a *Fraction*, as $\frac{4}{8}$, be multiply'd, or divided by the ſame Number, 2; the Facta in the former Caſe, $\frac{8}{16}$, and the Quotients in the latter, $\frac{2}{4}$, will conſtitute *Fractions*, equal to the firſt *Fraction* given.——

The Arithmetic of *Fractions* conſiſts in the *Reduction*, *Addition*, *Subtraction*, and *Multiplication* thereof.

## I. *Reduction of* FRACTIONS.

1° *To reduce a given whole Number into a* Fraction *of any given Denominator:* Multiply the given Integer, by the given Denominator: The Factum will be the Numerator.

Thus we ſhall find $3 = \frac{72}{24}$; and $5 = \frac{40}{08}$; and $7 = \frac{28}{04}$ &c.

If no Denominator be given, the Number is reduc'd to a *Fraction*, by writing 1 underneath it, as a Denominator. Thus $\frac{2}{1}$ $\frac{4}{1}$ $\frac{55}{01}$.

2° *To reduce a given* Fraction *to its loweſt Terms*; *i. e.* to find a *Fraction*, equivalent to a given *Fraction*, $(\frac{20}{48})$ but expreſs'd in leſs Numbers: Divide both the Numerator 20, and Denominator 48 by ſome one Number, that will divide them both without any Remainder, as here by 4. The Quotients 5 and 12 make a new *Fraction*, $\frac{05}{12}$, equal to $\frac{20}{48}$.

And if the Diviſion be perform'd with the greateſt Number that will divide them both; the *Fraction* is reduc'd to its loweſt Terms.

Now, *To find the greateſt common Diviſor of two Quantities:* Divide the greater by the leſs: Then divide the Diviſor of the Diviſion by the Remainder thereof: Again, divide the Diviſor of the ſecond Diviſion by the Remainder of the ſecond; and ſo on, till there remain nothing. The laſt Diviſor is the greateſt common Meaſure of the given Numbers.

If it happen that Unity is the only common Meaſure of the Numerator and Denominator; then is the *Fraction* incapable of being reduc'd any lower.

3° *To reduce two, or more* Fractions *to the ſame Denomination*; *i. e.* to find *Fractions* equal to the given ones, and with the ſame Denominators: If only two *Fractions* be given, multiply the Numerator, and Denominator of each, by the Denominator of the other: The Products given are the new *Fractions* requir'd.

Thus 5) $\frac{2}{3}$ and 3) $\frac{4}{5}$ make $\frac{10}{15}$ and $\frac{12}{15}$. If more than two be given, multiply both the Numerator and Denominator of each into the Product of the Denominators of the reſt. Thus, 24) $\frac{2}{3}$. 12) $\frac{1}{8}$. 18) $\frac{3}{4} = \frac{48}{72}$. $\frac{12}{72}$. $\frac{54}{72}$.

4° *To find the Value of a* Fraction *in the known Parts of its Integer:* Suppoſe, *e. gr.* It were requir'd to know what is $\frac{09}{16}$ of a Pound; Multiply the Numerator 9 by 20, the Number of known Parts in a Pound, and divide the Product by the Denominator 16. The Quotient gives 11 *s.* Then multiply the Remainder 4 by 12, the Number of known Parts in the next inferior Denomination; and dividing the Product by 16, as before, the Quotient is 3 *d.* So that $\frac{09}{16}$ of a Pound = 11 *s.* 3 *d.*

5° *To reduce a mix'd Number, as* $4\frac{11}{12}$ *into an improper* Fraction *of the ſame Value:* Multiply the Integer, 4, by 12, the Denominator of the *Fraction*: and to the Product 48 add the Numerator: The Sum 59 ſet over the former Denominator, $\frac{59}{12}$, conſtitutes the *Fraction* requir'd.

6° *To reduce an improper* Fraction *into its equivalent mixt Number:* Suppoſe the given *Fraction* $\frac{59}{12}$; divide the Numerator by the Denominator; the Quotient $4\frac{11}{12}$ is the Number ſought.

7° *To reduce a Compound* Fraction *into a Simple one:* Multiply all the Numerators into each other for a new Numerator; and all the Denominators for a new Denominator. Thus $\frac{1}{2}$ of $\frac{3}{4}$ of $\frac{5}{8}$ reduc'd, will be $\frac{15}{48}$.

## II. *Addition of Vulgar* FRACTIONS.

1° If the given *Fractions* have different Denominators, reduce them to the ſame. Then, add the Numerators together, and under the Sum write the common Denominator. Thus, *e. gr.* $\frac{2}{3} + \frac{4}{5} = \frac{10}{15} + \frac{12}{15} = 1\frac{07}{15}$. And $\frac{2}{3} + \frac{1}{8} + \frac{3}{4} = \frac{48}{72} + \frac{12}{72} + \frac{54}{72} = \frac{114}{072} = 1\frac{42}{72} = 1\frac{07}{12}$.

2° If Compound *Fractions* are given to be added; they muſt firſt be reduc'd to ſimple ones: And if the *Fractions* be of different Denominations, as $\frac{6}{8}$ of a Pound, and $\frac{2}{3}$ of a Shilling, they muſt firſt be reduc'd to *Fractions* of the ſame Denomination of Pounds.

3° *To add mixt Numbers:* The Integers are firſt to be added; then the fractional Parts: And if their Sum be a proper *Fraction*, only annex it to the Sum of the Integers. If it be an improper *Fraction*, reduce it to a mix'd Number; adding the integral Part thereof to the Sum of the Integers, and the fractional Part after it. Thus, $5\frac{2}{3} + 4\frac{1}{2} = 10\frac{1}{2}$.

## III. *Subſtraction of* FRACTIONS.

1° If they have the ſame common Denominator, ſubſtract the leſſer Numerator from the greater, and ſet the Remainder over the common Denominator.

Thus from $\frac{9}{16}$ take $\frac{5}{16}$, and there remains $\frac{4}{16}$.

2° If they have not a common Denominator, they muſt be reduc'd to *Fractions* of the ſame Value, having a common Denominator, and then as in the firſt Rule.

Thus, $\frac{6}{7} - \frac{2}{5} = \frac{30}{35} - \frac{14}{35} = \frac{16}{35}$.

3° *To ſubtract a whole Number from a mix'd Number; or one mix'd Number from another:* Reduce the whole, or mix'd Numbers to improper *Fractions*, and then proceed as in the firſt and ſecond Rule.

## IV. *Multiplication of* FRACTIONS.

1° If the *Fractions* propos'd be both ſingle, multiply the Numerators one by another for a new Numerator, and the Denominators for a new Denominator.

Thus $\frac{3}{4}$ into $\frac{5}{8}$ produces $\frac{15}{32}$.

2° If one of them be a mix'd, or whole Number, it muſt be reduc'd to an improper *Fraction*; and then proceed as in the laſt Rule.

Thus $\frac{1}{8}$ into $5\frac{2}{3}$, gives $\frac{11}{24}$; and $\frac{4}{9}$ into $\frac{10}{1} = \frac{40}{09}$.

In Multiplication of *Fractions* obſerve that the Product is leſs in Value, than either the Multiplicand, or Multiplicator; becauſe in all Multiplications, as Unity, is to the Multiplicator; ſo is the Multiplicand, to the Product: Or, as Unity, is to either Factor; ſo is the other Factor, to the Product. But Unity is bigger than either Factor, if the *Fractions* be proper; and therefore either of them muſt be greater than the Product.

Thus in whole Numbers, if 5 be multiply'd by 8, it will be, as 1 : 5 : : 8 : 40; or 1 : 8 : : 5 : 40. Wherefore in *Fractions* alſo, as 1 : $\frac{3}{4}$ : : $\frac{5}{8}$ : $\frac{15}{32}$; or as 1 : $\frac{5}{8}$ : : $\frac{3}{4}$ : $\frac{15}{32}$. But 1 is greater than either $\frac{3}{4}$ or $\frac{5}{8}$: Wherefore either of them muſt be bigger than $\frac{15}{32}$.

## V. *Diviſion of* FRACTIONS.

1° If the *Fractions* propos'd be both ſimple, multiply the Denominator of the Diviſor, by the Numerator of the Dividend; the Product is the Numerator of the Quotient. Then multiply the Numerator of the Diviſor, by the Denominator of the Dividend, the Product is the Denominator of the Quotient.

Thus $\frac{3}{5}) \frac{4}{9} (\frac{20}{27}$.

2° If either Dividend, Diviſor, or both, be whole or mix'd Numbers, reduce them to improper *Fractions*: And if they be compound *Fractions*, reduce them to ſimple ones; and proceed as in the firſt Rule.

In Diviſion of *Fractions*, obſerve that the Quotient is always greater than the Dividend; becauſe in all Diviſion, as the Diviſor, is to Unity; ſo is the Dividend, to the Quotient; as if 3 divide 12, it will be, as 3 : 1 : : 12 : 4. Now 3 is greater than 1; wherefore 12 muſt be greater than 4: But in *Fractions* as $\frac{3}{5}$ : 1 : : $\frac{4}{9}$ : $\frac{20}{27}$; where, $\frac{3}{5}$ is leſs than 1; wherefore $\frac{4}{9}$ muſt alſo be leſs than $\frac{20}{27}$.

FRACTIONS *in Species*, or *Algebraic Quantities*.

1° *To reduce* Fractions *in Species to their leaſt Terms*: The Numerators and Denominators are to be divided by the greateſt common Diviſor as in Numbers.

Thus the *Fraction* $\frac{a\,a\,c}{b\,c}$ is reduc'd to a more ſimple one $\frac{a\,a}{b}$ by dividing both $a\,a\,c$, and $b\,c$ by $c$; and $\frac{203}{667}$ is reduc'd to a more ſimple one $\frac{7}{23}$ by dividing both 203 and 667 by 29; and $\frac{203\,a\,a\,c}{667\,b\,c}$ is reduc'd to $\frac{7\,a\,a}{23\,b}$ by dividing by $29\,c$. And ſo $\frac{6\,a^3-9\,a\,c\,c}{6\,a\,a+3\,a\,c}$ becomes $\frac{2\,a\,a-3\,c\,c}{2\,a+c}$ by dividing by $3\,a$. And $\frac{a^3-a\,a\,b+a\,b\,b-b^3}{a\,a-a\,b}$ becomes $\frac{a\,a+b\,b}{a}$ by dividing by $a-b$.

2° *To reduce* Fractions *in Species to a common Denominator*.

The Terms of each are to be multiplied by the Denominator of the other.

Thus, having $\frac{a}{b}$ and $\frac{c}{d}$, multiply the Terms of one $\frac{a}{b}$ by $d$, and alſo the Terms of the other $\frac{c}{d}$ by $b$, and they will become $\frac{a\,d}{b\,d}$ and $\frac{b\,c}{b\,d}$, whereof the common Denominator is $b\,d$. And thus $a$ and $\frac{a\,b}{c}$, or $\frac{a}{1}$ and $\frac{a\,b}{c}$ become $\frac{a\,c}{c}$ and $\frac{a\,b}{c}$.

But where the Denominators have a common Diviſor, it is ſufficient to multiply them alternately by the Quotients.

Thus the *Fraction* $\frac{a^3}{b\,c}$ and $\frac{a^3}{b\,d}$ are reduc'd to theſe $\frac{a^3\,d}{b\,c\,d}$ and $\frac{a^3\,c}{b\,c\,d}$, by multiplying alternately by the Quotients $c$ and $d$, ariſing by the Diviſion of the Denominators by the common Diviſor $b$.

*Addition and Subſtraction of* FRACTIONS *in Species*.

The Proceſs is in all reſpects the ſame in Species, as in Numbers. *E. gr.* Suppoſe it required to add the *Fractions* $\frac{a}{b}$ and $\frac{c}{d}$. Theſe, when reduc'd to the ſame Denomination, will be $\frac{a\,d}{b\,d}$ and $\frac{b\,c}{b\,d}$. Conſequently their Sum is $\frac{a\,d+b\,c}{b\,d}$.

So, if the *Fraction* $\frac{a}{b}$ were to be ſubtracted from $\frac{c}{d}$: Having reduc'd them, they will be $\frac{a\,d}{b\,d}$ and $\frac{b\,c}{b\,d}$, as before. Their Difference, therefore, is $\frac{b\,c-a\,d}{b\,d}$.

*Multiplication and Diviſion of* FRACTIONS *in Species*.

Here too, the Proceſs is perfectly the ſame as in Vulgar Arithmetic. Thus, *E. gr.* Suppoſe the Factors, or *Fractions* to be multiplied, $\frac{a}{b}$ and $\frac{c}{d}$: The Product will be, $\frac{a\,c}{b\,d}$.

Or, ſuppoſe the *Fractions* required to be divided, $\frac{a\,c}{b\,d}$ and $\frac{a}{b}$; the Quotient will be $\frac{a\,c}{b\,d}\,\frac{b}{a}=\frac{a\,b\,c}{a\,b\,d}=\frac{c}{d}$.

Hence, as $a=\frac{a}{1}$: The Product of $a$ into $\frac{c}{d}$, that is, of an integral Quantity into a *Fraction*, $\frac{c}{d}\,\frac{a}{1}=\frac{a\,c}{d}$. Whence it appears, that the Numerator of the *Fraction* is to be multiplied by the Integer.

Hence alſo, the Quotient of $\frac{c}{d}$ by $a$, that is, of the broken Quantity, divided by the whole one, $\frac{c}{d}\,\frac{1}{a}=\frac{c}{a\,d}$.

Beſide the common Notion of a *Fraction*, there is another neceſſary to be underſtood. Thus,

Suppoſe $\frac{3}{4}$ or 20 *s.* or a Pound Sterling, were the *Fraction*: This *Fraction* inſtead of three Quarters of one Pound may be conſider'd as a fourth Part of three Pounds; that is, by taking as many of the Integers, as the Numerator expreſſes (*viz.* 3.) and dividing them by 4, the Denominator; for then the Quotient of the ſame Value will ariſe for 4) 60 *s.* 15 *s.* This ſhews the Reaſon of that manner of Expreſſion us'd by Geamaters and Algebraiſts, who read $\frac{a}{b}$, thus, $a$ divided by $b$.

*Logarithm of a* FRACTION, ſee LOGARITHM.

*Summing of infinite* FRACTIONS, ſee SUMMATORY *Calculus*.

FRACTURE, in Medicine, and Chirurgery, a Breach, or Rupture of a Bone: Or, a Solution of Continuity in a Bone, when it is cruſh'd or broken, by ſome external Cauſe. See BONE.

In *Fractures*, the Bone is either broken breadth-wiſe, that is, tranſverſely; or length-wiſe, which laſt is properly call'd a *Fiſſure*. See FISSURE.

Tranſverſe *Fractures* are more eaſy to diſcover, but more difficult to cure than longitudinal ones. A *Fracture* in the Middle of a Bone is leſs dangerous than towards the Articulation. When the *Fracture* is attended with a Wound, Contuſion, &c. or when the Bone is ſhatter'd into ſeveral Pieces, 'tis highly dangerous. A *Fracture* of the Femur in Adults is very rarely, if ever cur'd; but there ſtill remains a Lameneſs. *Fractures* of the leſſer Bones are uſually cur'd in ſeven or fourteen Days; thoſe of the greater, in 20 or 40 Days.

In the Cure of *Fractures*, the Chirurgeon has two Things to attend to: Firſt to reſtore the *fractur'd* Bone into its natural Situation; and to keep it tight with *Ferulæ*, or Splinters, and Bandages: In which caſe Nature takes on her ſelf the Office of healing and conglutinating it, by forming a Callus thereon. See CALLUS.

If there be an Inflammation, it muſt be cur'd before any thing be attempted about the *Fracture*. If the Bone happen to be broke again, it never breaks in the Callus, but at a diſtance from it. After ſetting or replacing the *fractur'd* Bone, Bleeding is requir'd, to prevent any Lodgment of Blood on the Part aggriev'd, by the Violence upon the Fibres.

A *Fracture* of the Cranium is certain Death, without Trepanning. See TREPANNING.

FRÆNUM, BRIDLE, in Anatomy, a Name given to divers Ligaments, from their Office in retaining, and curbing the Motions of the Parts they are fitted to.

The *Frænum Linguæ*, or *Bridle of the Tongue*, is a membranous Ligament, which ties the Tongue to the Os Hyoides, Larynx, Fauces, and lower Part of the Mouth. See TONGUE.

In ſome Subjects, the *Frænum* runs the whole Length of the Tongue, to the very Tip: In which Caſes, if it were not cut, it would take away all Poſſibility of Speech.

The *Frænum of the Penis* is a ſlender Ligament, whereby the Præpuce is tied to the lower Part of the Glans. See PENIS.

Nature varies in the Make of this Part; it being ſo ſhort in ſome, that unleſs divided, it would not admit of perfect Erection. See ERECTION.

There is alſo a kind of little *Frænum*, faſten'd to the lower Part of the Clitoris. See CLITORIS.

FRAIGHT, FREIGHT, or FRET, in Navigation and Commerce, the Hire of a Ship, or of a Part of it; for the Conveyance and Carriage of Goods, from one Part, or Place to another: Or the Sum agreed on between the Maſter and the Merchant, for the Hire and Uſe of a Veſſel.

The *Fraight* of a Veſſel is uſually agreed on at the Rate of ſo much for the Voyage; by the Month, or *per* Tun.

FRAIGHTING, or letting out of Veſſels on *Fraight*, or Hire, is one of the principal Articles in the Trade of the *Hollanders*: They are the Carriers of all the Nations of *Europe*, and their Purveyors; notwithſtanding that their Country produces nothing at all, and that they are forc'd to to have every thing neceſſary for the Building of a Veſſel from other Countries.

*The principal Laws and Rules relating to fraighting*, are: That if a whole Veſſel be hired, and the Merchant, or Perſon who hires it, don't give it its full Load, or Burthen; the Maſter of the Veſſel cannot without his Conſent take in any other Goods, without accounting to him for *Fraight*.

That, tho' the Merchant don't load the full Quantity of Good, agreed on in the Charter Party; yet he ſhall pay the whole *Freight*; and if he load more, he ſhall pay for the Exceſs.

That, the Maſter may ſet a-ſhore ſuch Goods as he finds in his Veſſel, which were not notify'd to him; or take 'em at a higher Rate, than was agreed on for the reſt.

That, if a Ship be ſtopp'd or detain'd in its Courſe, either thro' the Maſter's, or the Merchant's Default; the Delinquent ſhall be accountable to the other.

That

That if the Master be oblig'd to refit his Vessel during the Voyage, the Merchant shall wait; or else pay the whole *Fraight*: If the Vessel could not be refitted, the Master is oblig'd to hire another immediately; otherwise only to be pay'd his *Fraight* in proportion to the Part of the Voyage perform'd (tho', in case the Merchant prove that the Vessel at the time it set sail, was not capable of the Voyage, the Master must loose his *Fraight*, and account for Damages to the Merchant.

That *Fraight* shall be paid for Merchandizes which the Master was oblig'd to sell for Victuals, or refitting, or other necessary Occasions; paying for the Goods at the Rate the rest were sold at, where they were landed.

That in case of a Prohibition of Commerce with the Country whither the Vessel is bound, so that it is oblig'd to be brought back again; the Master shall only be paid *Fraight* for going.

And if a Ship be stop'd or detain'd in its Voyage, by an Embargo by order of the Prince; there shall neither be any *Fraight* paid for the Time of the Detention, in case it be hired *per* Month: Nor shall the *Fraight* be increas'd, if hired for the Voyage; but the Pay, and Victuals of the Sailors during the Detention, shall be deem'd Average.

That the Master shall take no *Fraight* for any Goods lost by Shipwreck, plunder'd by Pyrates, or taken by the Enemy; unless the Ship and Goods be redeem'd; in which case he shall be paid his *Fraight* to the Place where he was taken; upon contributing to the Redemption.

That the Master shall be paid his *Fraight* for the Goods sav'd from Shipwreck; and in case he can't get a Vessel to carry them unto the Place where they were bound, that he shall be paid in Proportion to the Part of the Voyage already gone.

That the Master may not detain any Merchandize in his Vessel, in default of Payment of *Fraight*; tho' he may order them to be seiz'd any time, or any where afterwards. That if Merchandizes in Casks, as Wines, Oils, *&c.* have so run out in Carriage, that the Vessels are left empty; or almost empty, the Merchant may relinquish them, and the Master be oblig'd to take them for their *Fraight*; though this does not hold of any other Goods damag'd, or diminish'd of themselves, or thro' Accidents.

The Word *Fraight* is form'd of the French *Fret*, signifying the same thing; and *Fret*, of *Fretum*, an Arm of the Sea; tho' others chuse to derive it from the German *Fracht*, or the Flemish *Vracht*, signifying *Carriage*.

FRAIGHT is also a Duty of 50 *Sols per* Tun, paid to the Crown of *France* by the Captains and Masters of all foreign Vessels at their Entrance and coming out of the Ports and Havens of that Kingdom. And note, that all Vessels not built in *France*, however they may belong to the Subjects of *France*, are reputed Foreigners, and subject to this Impost; unless it be made appear, that two Thirds of the Ship's Crew are *French*.

By the 11th Article of the Treaty of Commerce concluded at *Utrecht* between *England* and *France*, this Duty of 50 *Sols per* Tun should be remitted the *English*; and at the same time the Duty of 5 *s.* Sterling should be suppress'd in favour of the *French*: But the Execution of that Article, as well as the Tariff settled between the two Nations, has been suspended. The *Dutch* however and the *Hans Towns* are exempted from the Duty of *Fret*.

FRAIGHT is also the Burthen, or Lading of a Ship; or the Burthen of Goods, *&c.* she has on board. See BURTHEN.

FRAIL, a Basket of Rushes; or such like Materials, to pack up Figs, Raisins, *&c.*

It is also a certain Quantity of Raisins, of about 75 Pounds.

FRAISE, in Fortification, a kind of Defence, consisting of pointed Stakes, driven parallel to the Horizon, into the Retrenchments of a Camp, a Half Moon, or the like; to fend off and prevent any Approach or Scalade.

*Fraises* differ from Palissades chiefly in this, that the latter stand pependicular to the Horizon; and the former jet out parallel to the Horizon. See PALISSADE.

*Fraises* are chiefly us'd in Retrenchments, and other Works, thrown up of Earth: Sometimes they are found under the Parapet of a Rampart; serving instead of the Cordon of Stone, us'd in Stone Works.

He fortified all the weak Places of his Camp with *Fraises* and Palissades.——All the Outworks of the Place were *frais'd* and palissaded.

FRAISING *of a Batallion*, is the lining of the Musqueteers all around with Pikes; in case of their being charg'd by a Body of Horse.

FRAME, in Joinery, *&c.* a kind of Case, wherein a thing is set, or inclos'd, or even supported; as a Window *Frame*, *Frame* of a Picture, of a Table, *&c.* See WINDOW, &c.

The *Frame* is also a Machine, us'd in divers Arts. The Printers *Frame* is more usually call'd *Chase*. See CHASE.

The Founders *Frame* is a kind of Ledge, inclosing a Board; which being fill'd with Sand, serves as a Mould to cast their Work in. See FOUNDERY, and MOULD.

FRAME is particularly us'd for a Sort of Loom, whereon they stretch their Linens, Silks, Stuffs, *&c.* to be embroider'd, quilted, *&c.* See EMBROIDERY, TAPESTRY *Work*, &c.

FRAME, among Painters, *&c.* is a kind of a *Chassy*, or Square, compos'd of four long Pieces, or Slips of Wood, join'd together; the intermediate Space whereof is divided by little Strings or Threads into a great Number of little Squares, like the Mashes of a Net; and for that reason sometimes call'd *Reticula*.

Its Use is in the reducing of Figures from great to small; or from small to great. See REDUCTION.

FRAMING *of a House*, is all the Timber Work therein; *viz.* the *Carcase*, *Flooring*, *Partitioning*, *Roofing*, *Cieling Beams*, *Ashlering*, &c. See CARCASE, PARTITION, ROOF, FLOOR, *&c.*

FRAMPOLE *Fences* are such Fences as any Tenant in the Manor of *Writtel* in *Essex* hath against the Lords Demeans; whereby he hath the Wood growing on the Fence; and as many Trees or Poles as he can reach from the Top of the Ditch with the Helve of his Ax; toward the Repair of his Fence. The late Chief Justice *Brampton*, whilst Steward of this Court, acknowledg'd he could not find out the Reason, why these Fences were call'd *Frampole*.

It may come from the *Saxon* Fremful, profitable; or may be a Corruption of *Fran-pole*, because the Poles are free for the Tenant to take.

FRANCHISE, a Privilege, or Exemption from the ordinary Jurisdiction; or an Asylum, or Sanctuary, where People are secure of their Persons, *&c.* See ASYLUM.

Churches and Monasteries in *Spain* are *Franchises* for Criminals: So were they antiently in *England*; till they were abus'd to such a degree, that there was a Necessity for abolishing them. See SANCTUARY.

One of the most remarkable Capitularies made by *Charlemain*, in his Palace of *Heristal*, in 779, was that relating to the *Franchises* of Churches.

The Right of *Franchises* was held so sacred, that even the less religious Kings observ'd it to a degree of Scrupulousness: But to such Excess in time was it carried, that *Charlemaign* resolv'd to bring it down. Accordingly he forbid any Provision being carried to Criminals retir'd into Churches for *Refuge*. See REFUGE.

FRANCHISE is also us'd for an Immunity from the ordinary Tributes and Taxes.

This is either Real, or Personal; that is, either belonging immediately to the Person; or else by means of this or that Place, or Office of Immunity.

FRANCHISE *Royal*, is a Place where the King's Writ runs not; as at *Chester*, and *Durham*: And antiently at *Tyndal* and *Examshire* in *Northumberland*. See SAC.

FRANCHISE *of Quarters*, is a certain Space, or District at *Rome*, wherein are the Houses of the Embassadors of the Princes of *Europe*; and where such as retire, cannot be arrested or seiz'd by the *Sbirri*, or Sergeants, nor prosecuted at Law.

The People of *Rome* look on this as an old Usurpation, and a scandalous Privilege, which Embassadors, out of a Jealousy of their Power, carried to a great length in the XVth Century, by enlarging insensibly the Dependances of their Palaces or Houses, within which the Right of Asylum was antiently confin'd. Several of the Popes, *Julius* III. *Pius* XIV. *Gregory* XIII. and *Sixtus* V. publish'd Bulls and Ordinances against this Abuse; which had rescued so considerable a Part of the City from their Authority, and render'd it a Retreat for the most Abandoned.

At length *Innocent* XI. expresly refused to receive any more Embassadors but such as would make a formal Renunciation of the *Franchise of Quarters*. See PRIVILEDG'D *Place*.

FRANCHISING, see ENFRANCHISING, and MANUMISSION.

FRANCIGENA, or FRENCHMAN, in our antient Customs, was a general Appellation of all Foreigners, *i. e.* all Persons who could not prove themselves *Englishman*. See ENGLECERY.

FRANGIPANE, an exquisite kind of Perfume, frequently given to the Leather whereof Gloves, Purses, Bags, *&c.* are made.

It takes its Name from a *Roman* Nobleman, of the antient Family of *Frangipani*; who was the Inventor thereof.

There is also a kind of perfum'd Liquor of the same Denomination, said to have been invented by a Grandson of *Mutio Frangipani*; and a perfum'd kind of *Ros Solis*, call'd by the same Name. See ROS SOLIS.

FRANK, or FRANC, a Term literally signifying free, open, and sincere, exempt from publick Impositions and Charges: as *Frank* Confession, *Frank* Fair, *Frank* Letter, *&c.* See FREE.

The Term *Frank* is much us'd in our antient Customs and Tenures; where it receives various particular Modifications and Meanings, according to the Words it is combined with, as

FRANK *Alleu*, or *Allodium*, is a Land, Tenement, or Demeasn, that does not hold of any ſuperior Lord. See ALLODIUM, and FREE *Land*.

FRANK *Almoin*, or *Free Alms*, is a Tenure of Lands or Tenements beſtow'd on God; that is, given to ſuch People as devote themſelves to the Service of GOD, in pure and perpetual Alms.

Whence, the Feoffers, or Givers cannot demand any terreſtrial Service, ſo long as the Lands remain in the Hands of the Feoffees. *Briton* mentions another kind of this Land given in Alms, but not *free* Alms; the Tenants being tied in certain Services to the Feoffer. See ALMOIN.

FRANK *Bank*, ſee FREE *Bench*.

FRANK *Fee*, or *Feudum liberum*, is that for which no Service is perform'd to any Lord. See FEE.

According to *Frachin. l.* 7. *c.* 39. Lands held in *Frank* Fee were exempted from all Services, except Homage.

*Frank Fee*, as defin'd by *Broke*, is that which is in the Hand of the King, or Lord of any Manor; being antient Demeſne of the Crown: In Contradiſtinction to that in the Tenants Hands, which is only *Antient Demeſne*. See DEMESNE.

In the *Reg. of Writs*, *Frank Fee* is ſaid to be that which a Man holds at Common Law to him and his Heirs; and not by ſuch Service as is requir'd in antient Demeſne, according to the Cuſtom of the Manor.

'Tis added, that the Land in the Hands of King *Edward* the Confeſſor, at the making of Domeſday Book is Antient Demeſne; and all the reſt, *Frank* Fee. Upon this footing, all the Lands in the Realm are either Antient Demeſne, or *Frank* Fee.——

Others define *Frank* Fee to be a Tenure in Fee Simple, of Lands pleadable at Common Law; and not in Antient Demeſne.

FRANK *Ferm*, or *Ferma libera*, is Lands or Tenements, wherein the Nature of the Fee is chang'd, by Feoffment, from Knights Services, to certain yearly Services; and whence neither Homage, Wardſhip, Marriage, nor Relief may be demanded: Nor any other Service, not contain'd in the Feoffment. See FEE *Farm*.

FRANK *Fold*, is where the Lord hath the Benefit of *folding* his Tenants Sheep, within his Manor; for the manuring of his Land. See FALDAGE.

FRANK *Law*, is the Benefit of the Free, and Common Law of the Land. See LAW.

He that for any Offence, as Conſpiracy, *&c.* looſeth his *Frank Law*, incurs theſe Inconveniencies. 1° That he may not be impaneld upon any Jury or Aſſize; or otherwiſe us'd as an Evidence, or Witneſs to the Truth. 2° That if he have any thing to do in the King's Court, he muſt not approach it in Perſon, but appoint his Attorney. 3° That his Lands, Goods and Chattels be ſeiz'd into the King's Hands; and his Lands be eſtreated, his Trees rooted up, and his Body committed to Cuſtody. See CONSPIRACY.

FRANK *Marriage*, or *Liberum Maritagium*, is a Tenure in Tail Special, whereby Lands or Tenements are held to a Perſon and his Wife, and the Heirs of their Bodies, on condition of doing Fealty to the Donor from the fourth Degree.

This Tenure ariſes from theſe Words in the Gift: *Sciant*, &c. *me* T. B. *de* O. *dediſſe ac conceſſiſſe, & præſenti charta mea confirmaſſe* A. B. *filio meo, & Mariæ uxori ejus, filiæ veræ* C. D. *in liberum maritagium unum Meſſuagium*, &c. See TAIL.

*Glanvil* divides Marriage, *Maritagium*, into *liberum*, and *ſervitio obligatum*. See MARRIAGE.

*Fleta* gives this reaſon, why the Heirs do not Service, till the fourth Degree: *Ne donatores vel eorum hæredes per homagii receptionem a reverſione repellantur*: And why in the fourth Deſcent they ſhall do Service to the Donor, *Quia in quarto gradu vehementer præſumitur quod terra eſt pro defectu hæredum donatariorum reverſura.*

*Frank Marriage*, or *Liberum Maritagium*, is more clearly expreſs'd by *Bracton*, to be that where the Donor intends that the Land thus beſtow'd, ſhall remain quiet, and free from all ſecular Service that might be affected to the Fee; ſo that he who gave it, ſhall claim no manner of Service from it, untill the third Heir, and the fourth Deſcent, or Degree; reckoning the Donee in the firſt Degree, his Heir in the ſecond, the Heir of him in the third, and his, again, in the fourth: But afterwards the ſame Land to become ſubject to all the former Services; as being then ſuppos'd to revert to the Lord for want of Heirs.

The Lands otherwiſe given in Marriage, viz. *Servitio obligatæ* were with a Reſervation of the Services due to the Lord, which the Donee and his Heirs were bound to perform for ever: Only, Homage was not to commence till the fourth Degree; when both Service and Homage were to be enjoin'd for ever.

FRANK *Pledge*, ſignifies a Pledge, or Surety for a free Man; call'd alſo *Friburgh*. See FRIBURGH.

The antient Cuſtom of *England*, for Preſervation of the publick Peace, was, that every free born Man, at 14 Years of Age (religious Perſons, Clerks, Knights, and their eldeſt Sons excepted) ſhould find Surety for his Truth towards the King and his Subjects, or elſe he kept up in Priſon.

Accordingly, a Number of Neighbours became interchangeably bound for each other, to ſee each Man of their Pledge forthcoming at all times; or to anſwer for the Offence committed by any one gone away: So that when ever one offended, it was preſently enquir'd in what Pledge he was; and then thoſe of the *Pledge* either brought him forth within one and thirty Days to his Anſwer; or ſatisfy'd for his Offence.

This Cuſtom was call'd *Frank Pledge*; and the Circuit it extended to *Decenna*, by reaſon it uſually conſiſted of ten Houſholds; and every Perſon thus bound for himſelf and Neighbours, was call'd *Decennier*. See DECENNA.

This Cuſtom was ſo obſerv'd, that the Sheriffs at every County Court did from time to time take the Oaths of young Perſons, as they arriv'd at the Age of 14; and ſee they were ſettled in one *Decenna*, or *Dozein* or another. Whereupon this Branch of the Sheriffs Office and Authority was call'd *Viſus Franci Plegi*, i. e. *View of Frank Pledge*. See LEET, VIEW *of Frank Pledge*, &c.

*Omnis homo, ſive liber, ſive ſervus, aut eſt, vel debet eſſe in* Franco Plegio, *aut de alicujus manupaſtu, niſi ſit aliquis itinerans de loco in locum, qui non plus ſe teneat ad unum quam ad alium, vel quid habet quod ſufficiat pro* Franco Plegio, *ſicut dignitatem, vel ordinem, vel liberum tenementum, vel in civitate rem immobilem*, &c. *Bracton L. III. Tract. de Corona, c.* 10.

FRANK *Chace*, is Liberty of Free Chace in a Circuit adjoining to a Foreſt, by which all Men, though they have Land of their own within that Compaſs, are forbidden to cut down Wood, without the View of the Foreſter; though it be their own Demeſn.

FRANKINCENSE, or INCENSE, an odoriferous aromatic Gum, or Reſin, antiently burnt in Temples, and ſtill us'd in Pharmacy. See GUM, and RESIN.

For all the great Uſe of this Gum, both in the antient Religion, and the modern Medicine; the Tree that produces it, or even the Place where the Tree grows, is but little known.

The moſt common Opinion has always been, that it was brought from *Arabia Fælix*, and was found near the City of *Saba*; whence its Epithet *Sabæum*: And yet the Name *Olibanum*, which it ſometimes bears, ſeems to intimate, that there are of theſe thuriferous, or Incenſe bearing Trees in the Holy Land near Mount *Libanon*. And Travellers are poſitive, that there are others in the *Eaſt Indies*.

Nor are we leſs at a loſs as to the Form or Kind of the Tree from which it flows. *Pliny* contents himſelf to ſay, that it at firſt reſembles the Pear Tree; then the Maſtic Tree; then the Laurel; but that in reality it is the Turpentine Tree.

*Frankincenſe*, is either *Male*, or *Female*.

The *Male Incenſe*, call'd alſo *Olibanum*, is in fair, white Bits, or Tears, a little yellowiſh, of a bitter diſagreeable Taſte; and when chew'd, promotes the Flux of Saliva.

It is call'd *Male*, in reſpect of its Tears, which are larger than the common, or Female. See OLIBANUM.

That brought from the *Indies*, is not near ſo good as that from *Arabia*, or Mount *Libanon*. It is uſually call'd *Incenſe of Mocha*, or Female Incenſe; tho' it be not brought from that City. 'Tis uſually in a Maſs, but ſometimes in Drops or Tears; ſomewhat reddiſh, and bitter to the Taſte.

Some ſell it for the true *Bdellium*. See BDELLIUM.

The Manna of *Frankincenſe* is only little, round, clear, tranſparent Grains of the Incenſe it ſelf.

*Soot of Incenſe* is the fine Flower, rub'd or ground off the Gum in Carriage, and burnt like Roſin, to make Lamp-black.——

*Bark of Incenſe*, is the Bark of the Tree that produces it. It has much the ſame Qualities, and the ſame Smell as the Incenſe it ſelf.——

*Jewiſh Incenſe* is only red Storax. See STORAX.

*Male Incenſe*, or *Olibanum*, is an Ingredient in divers *Galenical*, and Chymical Preparations. It is alſo us'd to aſſuage the Tooth-each: But it is apt to ſpoil the ſound Teeth. The Female is inferior to it in all reſpects.

FRANKS, FRANCS, FRANKIS, or FRANQUIS, a Name the *Turks*, *Arabs*, *Greeks*, &c. give to all the People of the Weſtern Parts of *Europe*.

The Appellation is commonly ſuppoſed to have had its riſe in *Aſia*, at the time of the *Croiſades*; when the *French* made the moſt conſiderable Figure among the *Croiſees*: From which time the *Turks*, *Sarrazens*, *Greeks*, *Abyſſineans*, &c. us'd it as a common Term for all the Chriſtians of *Europe*; and call'd *Europe* it ſelf, *Frankiſtan*.

The *Arabs* and *Mahometans*, ſays *Monſ. d'Herbelot*, apply the Term *Franks* not only to the *French* (to whom the Name originally belong'd) but to the *Latins* and *Europeans* in general.

*Frank*,

*Frank*, or *Frenk*, primarily denotes a *Frenchman*; and by Extenſion, an *European*, or rather a *Latin*, by reaſon, ſay they, the *French* diſtinguiſh'd themſelves above the other Nations, engag'd in the Holy War. See CROISADE.

But Fa. *Goar*, in his Notes on *Codinus*, *c. V. n.* 43. furniſhes another Origin of the Appellation *Franks*, of greater Antiquity than the former.

He obſerves that the *Greeks* at firſt confin'd the Name *Franks* to the *French*, i. e. the *German* Nations, who had ſettled themſelves in *France*, or *Gaul*: But afterwards they gave the ſame Name to the *Apulians* and *Calabrians*, after they had been conquer'd by the *Normans*; and at length the Name was further extended to all the *Latins*.

In this Senſe is the Word us'd by divers *Greek* Writers; as *Commenius*, &c. who, to diſtinguiſh the *French*, call them the *Weſtern Franks*.

*Du Cange* adds, that about the time of *Charlemaign*, they diſtinguiſh'd Eaſtern *France*; Weſtern *France*; and *Latin*, or *Roman France*, and *German France*, which was the antient *France*, afterwards call'd *Franconia*.

The FRANK *Language*, or *Lingua* FRANCA, is a kind of *Jargon*, ſpoke on the Mediterranean, and particularly thro'-out the Coaſts and Ports of the *Levant*; compos'd of *Italian*, *Spaniſh*, *French*, vulgar *Greek*, and other Languages.

The *Lingua Franca* is the *Trading Language*; and is thus call'd from the *Franks*, a common Appellation given in the *Levant* to all the *European* Merchants and Traders, who come thither to traffick.

In this Language, if it may be ſo call'd, nothing but the Infinitive Mood of each Verb is us'd; this ſerving for all the Tenſes and Moods of the Conjugation: And yet this lame, mutilated Diction, this barbarous Medly, is learnt and underſtood by the Merchants and Mariners of all Nations who repair thither.

FRANK, or FRANC, is alſo an antient Coin, ſtruck, and current in *France*; thus call'd from its Impreſſion, which repreſented a *Frenchman*, ſometimes on horſeback, and ſometimes on foot. See COIN.

The *Frank* was either of Gold, or Silver: The firſt was worth ſomewhat more than the Ecu d'Or, or Gold Crown; See ECU.

The ſecond was a Third of the firſt: But the Money has been long diſus'd.

The Term *Frank*, however, is ſtill retain'd, as the Name of a Money of Account. In this Senſe it is equivalent to a Livre, or 20 Sols, or $\frac{1}{3}$ of a *French* Crown.

Thus they ſay indifferently, a hundred *Franks*, or a hundred Livres. See LIVRE.

FRATERNITY, BROTHERHOOD, the Relation, or Union of Brothers, Friends, Partners, Aſſociates, &c. See BROTHER, and COMPANY.

FRATERNITY, in a Civil Senſe, is particularly us'd for a Gild, Aſſociation, or Society, of Perſons, united into a Body, for ſome common Intereſt, Advantage, &c. For the Origin, Uſe, &c. of *Fraternities*, ſee GILD.

FRATERNITY, in a Religious Senſe, is a Society of Perſons, meeting together to perform ſome Exerciſes of Devotion, or Divine Worſhip. See SOCIETY.

In the *Romiſh* Church, ſuch *Fraternities* are very numerous and conſiderable; being moſt of them eſtabliſh'd by Royal Patents: As the *Fraternity* of the *Scapulary*; of St. *Francis*'s *Cord*. The Biſhop may hinder the Eſtabliſhment of any ſuch *Fraternity* in his Dioceſe. At *Rome* there is a *Fraternity* call'd the *Archi-Fraternity*, or Grand *Fraternity*, under the Title of *Our Lady of the Suffrages*, eſtabliſh'd in favour of the Souls in Purgatory; approv'd and confirm'd by a Bull of Pope *Clement* VIII. in 1584.

There are nine different Sorts of *Fraternities*, or Confraieries in *France*, *viz.* 1° Of *Devotion*. 2° Of *Charity*, or *Mercy*. 3° Of *Penitents*, under divers Names. 4° Of *Pilgrimages*. 5° Of *Merchants*, to procure the Divine Favour on their Endeavours. 6° Of *Officers of Juſtice*. 7° Of *the Sufferings of Chriſt*. 8° Of *Arts* and *Trades* of divers kinds; and 9° Of *Factions*.

*Fraternities*, in *latin* call'd *Sodalitates*, derive their Origin from the Heathens; as is ſhewn by *Polydore Virgil*, in his Book de *Inventione Rerum*.

The good Uſe made of them by the Chriſtians, has effectually purg'd them of any Impurities, deriv'd from ſo ill a Source.

*Numa Pompilius* is ſaid to have eſtabliſh'd *Fraternities* of all the Arts and Trades in antient *Rome*; and to have preſcrib'd the Sacrifices each Profeſſion was to perform to the Patrons or Tutelary Gods he had aſſign'd them. See COLLEGE.

FRATERNITY is alſo a Title, or Quality. See QUALITY.

Kings and Emperors gave it each other; ſo do Biſhops, and Monks. We meet with it frequently in Authors under the Eaſtern Empire, both *Greek*, and *Latin*; ἀδελφότης, *Fraternitas*.

FRATERNITY *of Arms*, was an Alliance, or Aſſociation in Arms, antiently concluded between two Knights, who thereby agreed to go together, ſhare their Fortune, and mutually aſſiſt each other againſt all the World.

*Bertrand du Gueſclin*, and *Oliver Cliſſon* ſwore a *Fraternity* of Arms in the Year 1579. laying their Hands on the Goſpels. *Hiſt. de Bret. T.* 1. *p.* 395.——

FRATICELLI, a Sect of Hereticks, who roſe in the Marquiſate of *Ancona*, about the Year 1294.

The Word is an *Italian* Diminutive, ſignifying *Fratriculi*, or little Brothers; and was here us'd, by reaſon they were moſt of them apoſtate Monks, whom the *Italians* call *Fratelli*.

The Founders were *P. Maurato*, and *P. de Foſſombrone*; who having obtain'd of Pope *Celeſtin* V. a Permiſſion to live in Solitude, after the manner of Hermits, and to obſerve the Rule of St. *Francis* in all its Rigor; ſeveral idle, vagabond Monks join'd them; who living after their own Fancies, and making all Perfection to conſiſt in Poverty, were ſoon condemn'd by Pope *Boniface* VIII. and the Inquiſitors order'd to proceed againſt them as Hereticks. Upon this, retiring into *Sicily*; *Peter John Oliva de Serignan* had no ſooner publiſh'd his Comment on the Apocalypſe, than they adopted his Errors.

They held the *Romiſh* Church to be *Babylon*; and propos'd to eſtabliſh another far more perfect one; maintain'd that the Rule of St. *Francis* was the Evangelical Rule obſerv'd by Jeſus Chriſt and his Apoſtles.

Some ſay they even elected a Pope of their New Church: At leaſt they appointed a General, with Superiors: Built Monaſteries, &c. Beſide the Opinions of *Oliva*, they held that the Sacraments of the Church were uſeleſs; by reaſon thoſe who adminiſter'd them, had no longer any Power or Juriſdiction.

They were condemn'd a-freſh by Pope *John* XXII; but ſeveral of them returning into *Germany*, were ſhelter'd by the Duke of *Bavaria*.

The *Fraticelli* had divers Denominations: They were call'd *Fraticelli*, by reaſon they liv'd in Community, in imitation of the Primitive Chriſtians; *Dulcini*, from one of their Doctors; and *Biſoches*, for what reaſon we don't know.

FRATRAGE, FRATRIAGIUM, or FRERAGE, the Partition among Brothers, or Coheirs, coming to the ſame Inheritance or Succeſſion. See PARTITION.

FRATRAGE is alſo us'd more particularly for that Part of the Inheritance, which comes to the youngeſt Brothers: For whatever the Cadets, or younger Brothers poſſeſs of the Father's Eſtate, they poſſeſs *ratione Fratragii*, and are to do Homage to the older Brother for it; in regard he is to Homage for the Whole to the Superior Lord. See HOMAGE.

FRATRES *Conjurati*, in our antient Law Books, &c. denote ſworn Brothers, or Companions.

Sometimes they are alſo ſo call'd who were ſworn to defend the King againſt his Enemies, *Leg. W.* 1. *cap.* 59. *Præcipimus ut omnes liberi homines ſint* Fratres conjurati *ad Monarchiam noſtram & Regnum noſtrum contra inimicos pro poſſe ſuo defendendum.* Leg. Edu. cap. 35.

FRATRICIDE, the Crime of murthering ones Brother. See PARRICIDE.

*Cain* committed the firſt *Fratricide*: The Empire of *Rome* begun with a *Fratricide*.

FRAUD, a ſecret, under-hand, Deceit, or Injury, done any one.

To export, or import Goods by *Fraud*, or fraudulently, is to do it by indirect ways; in order to avoid the paying of Duty, &c. if they be permitted Goods; or if they be contraband Goods, to avoid the Penalties adjudg'd by the Laws. See DEFRAUD.

A *Fraudulent* ACTION, *Fraudulent* BANKRUPT, &c. ſee BANKRUPT.

FRAY, literally ſignifies to *fret*; as Cloth or Stuff does by rubbing, or over-much wearing.

Among Hunters a Deer is ſaid to *fray her Head*, when ſhe rubs it againſt a Tree, to cauſe the Pills of her new Horns to come off.

FRECKLES, a kind of little, hard, duſky Bubo's, or Puſtles, ariſing on the Skin of the Face, or Hands; particularly in Perſons of the faireſt, fineſt Skins.

Some pick the *Freckles* out with a Pin; or ſqueeze them out with the Fingers.

*Freckles*, according to M. *Homberg*, are only the earthy, oily, and ſaline Part of the Sweat; retain'd in the Plexus, or Maſhes of the Skin. While the aqueous Liquor, which was their Vehicle, is evaporated by the Heat of the Body, theſe groſſer Parts are gradually accumulated, till the Maſhes are full.

Some Parts of this Sweat, he obſerves, are continually oozing thro' the Cuticle; and being of a viſcid nature, retain the Dirt, Duſt, &c. that flies about the Face. This viſcid Matter on the Surface of the *Freckles* will ſtick there, notwithſtanding any repeated Wipings, which rather condenſe and preſs it into the Cavities thereof. 'Tis this Duſt, thus incorporated with the glutinous Baſis above-mentioned, that forms thoſe black Specks on the Pores of moſt Peoples Noſes in

Summer, call'd *Freckles*; which, as they may be ſqueez'd out by a dexterous Application of the Fingers, many People have been induc'd to take them for little Worms, generated in the Skin, whoſe Head is the little Speck above-mention'd; whereas, in reality, they are little Pelotoons of Sweat, dried in the Pores of the Skin; the outer Tip, or Extreme whereof is dirty, and blacken'd with the Duſt continually floating in the Air, arreſted by the glutinous Matter of the Sweat it ſelf.——

They are found more about the Noſe and Skin, than any where elſe; by reaſon the Skin is more ſtretch'd there, and conſequently the Pores more patent, to receive the Duſt, &c.

From this Theory it follows, that there can ſcarce be any ſuch thing as an adequate Remedy or Preventive of *Freckles*. Temporary ones there may be, which ſhall draw out and diſſipate, what Matter is already gather'd: But the Spaces will fill up again in time.

Bullocks Gall mix'd with Alum; and after the Alum has precipitated, expos'd three or four Months to the Sun in a cloſe Phial, Monſ. *Homberg* obſerves, is one of the beſt Remedies known for *Freckles*. It acts as a Lixivium; enters the Pores, and dilutes and diſſolves the Coagulum of the *Freckles*. *Mem. de l'Acad. Royal des Scienc. An.* 1709. *p.* 472. &c.

FREE, a Term variouſly us'd; but generally in oppoſition to conſtrain'd, confined, neceſſitated. See FRANK.

Thus, a Man is ſaid to be *free*, who is out of Priſon: And a Bird is *free*, when let out of the Cage: *Free* from Pain, *i. e.* void of Pain: A *free* Air: *Free* Paſſage, &c.

But in ſpeaking of Things endued with Underſtanding, the Word *Free* has a more peculiar relation to the Will, and implies its being at full Liberty. See LIBERTY.

The Stoicks maintain, that their ſage or wiſe Man alone is *Free*. See STOIC.

*Free* is alſo us'd in oppoſition to *Slave*.

The Moment a Slave ſets foot on *Engliſh* Ground, he becomes *free*. The fineſt Legacy the antient *Romans* could leave their Slaves, was their *Freedom*. See SLAVE, SERVITUDE, and MANUMISSION.

FREE *Will*, ſee WILL.

FREE *Thinker*, ſee DEIST.

FREE *Maſon*, ſee MASON.

FREE *State*, is a Republick govern'd by Magiſtrates elected by the *free* Suffrages of the Inhabitants. See STATE.

*Free*, or *Imperial* Cities in *Germany*, are thoſe not ſubject to any particular Prince; but govern'd, like Republicks, by their own Magiſtrates. See EMPIRE.

There were *Free Cities*, *Liberæ Civitates*, even under the antient *Roman* Empire: Such were thoſe to whom the Emperor, by the Advice, or Conſent of the Senate, gave the Privilege of appointing their own Magiſtrates, and governing themſelves by their own Laws. See CITY.

FREE *Bench*, or *Franc Banc*, ſignifies that Eſtate in Copyhold Lands, which the Wife hath after the Death of her Husband, for her Dower, according to the Cuſtom of the Manor. See DOWER.

Thus, at *Orleton* in the County of *Hereford*, the Relict of a Copyhold Tenant is admitted to her *Free* Bench, *i. e.* to all her Husband's Copyhold Land, during her Life, at the next Court after her Husband's Death. See BENCH.

*Fitzherbert* calls *Free* Bench a Cuſtom, whereby, in certain Cities, the Wife ſhall have her Husband's whole Lands, &c. for her Dower.

Of this *Free Bench*, different Manors have different Cuſtoms: Thus, *E. gr.* in the Manors of Eaſt, and Weſt *Emborne* in *Berks*, if a cuſtomary Tenant die, the Widow ſhall have her *Free Bench* in all his Copyhold Lands, *dum ſola & caſta fuerit*; but if ſhe commit Incontinency, ſhe forfeits her Eſtate: But if ſhe will *come into Court riding backwards on a black Ram, with his Tail in her Hand*, rehearſing a certain Form of Words, the Steward is bound by the Cuſtom to reſtore her to her *Free Bench*.

The like Cuſtoms are in the Manor of *Chadleworth* in *Berks*; that of *Tor* in *Devonſhire*, and other Parts of the Weſt.

FREE *Bord*, *Franc Bord*. In ſome Places three Feet, in ſome more, and in others leſs, is claim'd by way of *Free Bord* beyond, or without the Fence.—

*Et totum Boſcum, quod vocatur* Brendewode, *cum* Franc Bordo *duorum pedum, & dimid. per circuitum illius boſci.* Mon. Ang. 2d Part, fol. 241.

FREE *Chapel*, is a Chapel founded by the King, and by him exempted from the Juriſdiction of the Ordinary. See CHAPEL.

Tho', a Subject may be licenc'd by the King to build ſuch a Chapel; and by his Charter may exempt it from the Viſitation of the Biſhop, &c.

FREE *Stool*, ſee FRIDSTOLL.

FREE *Warren*, the Power of granting or denying Licence to any one to hunt in ſuch and ſuch Ground. See WARREN.

FREE *Fee*, ſee FEE.

FREE *Fair*, ſee FAIR.

FREE *Stone*, a white Stone, dug up in many Parts of *England*, that works like Alabaſter; but more hard, and durable; being of excellent uſe in Building, &c. See STONE.

It is a kind of Greet, but finer ſanded, and a ſmoother Stone.

FREEBOOTER, or FLIBUSTER, a Name given to the *Corſairs*, or Pirates, who ſcour the *American* Seas; particularly ſuch as make War againſt the *Spaniards*. See BUCANEER.

The *French*, &c. call them *Flibuſters*, deducing the Word from the Engliſh *Flibote*, or *Flybote*; by reaſon the firſt Adventurers of this kind were the People of St. *Domingo*, who made their Excurſions with *Flybotes*, which they had taken from the *Engliſh*.

FREEDOM, the Quality, or Habit of being *Free*. See FREE.

FREEDOM *of the Will*, a State, or Faculty of the Mind, wherein all the Motions of our Will are in our Power; and we are enabled to determine on this, or that; to do good, or evil, without any Force, or Conſtraint from any foreign Cauſe whatever. See LIBERTY.

The Schoolmen diſtinguiſh two kinds of *Freedom*.

*Viz.* FREEDOM *of Contradiction*, whereby we are at our choice to *will*, or *nill*; to love, or not love, &c.

Thus, if I give my Friend a Power to take my Horſe; that Friend has *Freedom* of Contradiction, with reſpect to the Horſe; ſince it is in his own Power, either to uſe him, or let him alone. See CONTRADICTION.

FREEDOM *of Contrariety*, or of *Contraries*, is that whereby we are at our choice to doo good, or evil; be virtuous, or vitious; take a Horſe, or a Lion.

Thus if I offer my Friend a Horſe, or a Lion; and give him his Option of the two, he is ſaid to have a Liberty of Contrariety, over the Horſe and Lion. See CONTRARIETY.

But the Logicians charge this as a faulty, or unartful Diviſion; in regard one Member of the Diviſion is contain'd in the other, as a Species in the Genus: For whatever is *free*, in reſpect of Contradiction, is alſo *free* in reſpect of Contrariety; tho' not *vice verſa*: For if it be *free* for my Friend to take the Horſe, or the Lion; it is alſo *free* for him, to let them both alone: But he may be *free* to take one of them, without a *Freedom* of chuſing which to take.

Yet is the Diſtinction of ſome uſe; as it intimates that the Will is not always poſſeſs'd of both kinds of *Freedom*; and that the Matter, or Subject of the two is different.

The Will, tho' free, has not a Liberty of Contrariety: Thus, any evident Truth being propos'd to the Mind, *e. gr.* That the Whole is greater than a Part, we have a Power of not aſſenting thereto, by diverting our Attention to ſome thing elſe: But we have not a Power of diſſenting from that Propoſition, and judging that the Whole is not greater than the Part.

Hence, the Moraliſts commonly hold, that with reſpect to the Supreme Good, Mankind has a Liberty of Contradiction; inaſmuch as he may abſtain from the Love, or Purſuit thereof: But not a Liberty of Contrariety, whereby to hate Goodneſs.

Add, that tho' the human Mind may have a *Freedom* of Contradiction, with reſpect to all Objects, even the Supreme Good it ſelf; yet the *Freedom* of Contrariety is reſtrain'd to certain Particulars, which either are, or appear to be Good: The Will having ſuch a natural Propenſity to Good, that it cannot deſire evil, but under the Notion and Appearance of Good. See GOOD, and EVIL; ſee alſo NECESSITY.

FREEDOM *of Thinking*, ſee DEISM.

FREEDOM *of Conſcience*, ſee LIBERTY, and TOLERATION.

FREEDOM *of a City, Town*, &c. A Right, or Capacity of exerciſing a certain Trade, or Employment in a City, or Town Corporate; and of being elected to the Dignities and Offices thereof, procur'd regularly by ſerving an Apprenticeſhip; but ſometimes purchas'd with Money; and ſometimes confer'd as a Favour or Complement. See CITY, CORPORATION, APPRENTICESHIP, &c.

FREEHOLD, FRANK TENEMENT, or *Liberum Tenementum*, is Land, or Tenement, which a Man holds in Fee, Fee Tail, or for Term of Life.

*Freehold* is of two kinds; *in Deed*, and *in Law*.

The firſt is the real Poſſeſſion of Land, or Tenement in Fee, Fee Tail, or for Life: The other is the Right a Man has to ſuch Land or Tenement before his Entry, or Seizure.

*Freehold* is likewiſe extended to ſuch Offices as a Man holds in Fee, or for Life. See FEE.

*Briton* defines Franc Tenement to be a Poſſeſſion of the Soil, or Services iſſuing out of the Soil, which a Free-man holds in Fee, or at leaſt for Life, tho' the Soil be charg'd with *free* Services.——

FREEHOLD is alſo ſometimes taken in oppoſition to *Villenage*. See VILLENAGE.

*Lambard* obſerves, that Land, in the *Saxons* time, was diſtinguiſh'd into *Bockland*, i. e. holden by Book, or Writing; and *Folk-land*, held without Writing.

The former, he ſays, was held on far better Condition, and by the better ſort of Tenants; as Noblemen and Gentlemen; being ſuch as we now call *Freehold:* The latter was moſtly in Poſſeſſion of Peaſants; being the ſame with what we now call *at the Will of the Lord.* See BOCKLAND, and FOLKLAND.

In *Reg. Judicial.* it is expreſs'd, that he who holds Land upon an Execution of a Statute Merchant, until he hath ſatisfy'd the Debt, *tenet ut liberum tenementum ſibi & aſſignatis ſuis*; and the ſame of a Tenant *per Elegit:* The Meaning of which ſeems to be, not that ſuch Tenants are *Freeholders*, but as *Freeholders* for the Time till they have receiv'd Profits to the Value of their Debt.——

In the antient Laws of *Scotland*, *Freeholders* are call'd *Milites*, Knights.——

FREEZE, or FRIZE, in Architecture, that Part of the Entablature of Columns, between the Architrave and Corniche. See ENTABLATURE.

The *Freeze* is properly a large, flat Face, or Member ſeparating the Architrave from the Corniche. See CORNICHE.

The Antients call'd it *Zophoros*, Ζωφορὸς, by reaſon it was uſually enrich'd with Figures of Animals; and our Denomination *Freeze* has a like Origin, being form'd of the Latin *Phrygio*, an Embroiderer, becauſe commonly adorn'd with Sculptures in Baſſo Relievo, imitating Embroidery.

The *Freeze* is ſuppos'd to be intended to repreſent the Heads of the tranſverſe Beams that ſuſtain the Roof or Covering.

In the *Tuſcan* Order it is quite plain: In the *Doric*, enrich'd with Triglyphs: In the *Ionic*, 'tis ſometimes made arch'd, or ſwelling; particularly in which caſe 'tis call'd by *Vitruvius*, *Pulvinatus*, *q. d.* pillow'd: In the *Corinthian*, and *Compoſite*, it is frequently join'd to the Architrave, by a little Sweep; and ſometimes to the Corniche. And in theſe richer Orders it it uſually adorn'd with Sculpture, Figures, Compartiments, Hiſtories, Foliages, Feſtoons, &c. See TUSCAN, DORIC, IONIC, &c.

As to the Height of the *Freeze*, 'tis in the general much the ſame with that of the Architrave.

The *Tuſcan* FREEZE, *Vitruvius* makes 30 Minutes; *Vignola*, 35; *Palladio*, who makes it ſwelling, gives it but 26; and *Scamozzi* 42. The *Doric*, in *Vitruvius* and *Vignola*, is 30 or 40 Min: In *Palladio*, &c. 45. The *Ionic*, *Vitruvius* makes flat, adorned with *Acanthus* Leaves, Lions, &c. and makes it 30 Minutes high: *Vignola*, who alſo makes it flat, gives it 45 Minutes: And *Palladio*, who makes it convex, or ſwelling, 27 Minutes; and *Scammozzi* 28. The *Corinthian*, *Vitruvius* enriches with *Acanthus* Leaves, human Figures, &c. and makes its Height 37 Minutes: *Vignola*, 45; *Palladio* 28; and *Scamozzi* 31¼. Laſtly, the *Compoſite*, which in *Vitruvius* is ſet with Cartouſes, and carv'd between them, is 52½ Min; *Vignola*, who makes it like *Vitruvius*, only gives it 45 Min. *Palladio* who makes it ſwelling, only 30: And *Scamozzi*, 32.

From the Variety of Enrichments practic'd on the *Freezes*, they become variouſly denominated.

*Convex*, or *Pulvinated* FREEZES, are thoſe whoſe Profile is a Curve; the beſt Proportion whereof, is, when drawn on the Baſe of an equilateral Triangle.

In ſome the Swelling is only a-top, as in a Conſole: In others at Bottom, as in a Balluſter.

*Ruſtic* FREEZES are thoſe whoſe Courſes are ruſticated, or imboſs'd; as in the *Tuſcan Freeze* of *Palladio.*——

*Flouriſh'd* FREEZES are thoſe enrich'd with Rinds of imaginary Foliages; as the *Corinthian Freeze* of the Frontiſpiece of *Nero:* Or with Natural Leaves, either in Cluſters; or Garlands: Or Continued, as in the *Ionic* of the Gallery of *Apollo* in the *Louvre.*

*Marine* FREEZES are thoſe repreſenting Sea Horſes, Tritons, and other Attributes of the Sea; or Shells, Baths, Grotto's, &c.——

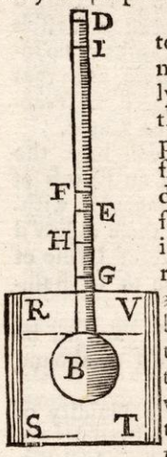
*Hiſtorical* FREEZES are thoſe adorn'd with Baſs-Relievo's, repreſenting Hiſtories, Sacrifices, &c. as the Arch of *Titus* at *Rome.*——

*Symbolical* FREEZES are thoſe adorn'd with the Attributes of Religion; as the *Corinthian*, of the Temple behind the Capitol at *Rome*, whereon are repreſented the Inſtruments and Apparatus of Sacrifice.

FREEZE *of the Capital*, ſee HYPOTRACHELIUM.

FREEZE, in Commerce, a kind of Cloth, or Stuff; ſee FRIZE.

FREEZING, CONGELATION, in Phyſiology, the Fixing of a Fluid; or depriving it of its natural Mobility, by the Action of Cold: Or the Act of converting a fluid Subſtance into a firm, coherent, rigid one, call'd *Ice.* See ICE, and COLD.



The *Carteſians* define *Freezing* to be the reſting of a fluid Body, harden'd by Cold; which follows naturally enough from their Notion of Fluidity, where the Parts are ſuppos'd to be in a continual Motion. See FLUID.

In effect, one may pretty ſafely ſay with ſome of thoſe Philoſophers, That Water only *freezes*, becauſe its Parts loſe their natural Motion, and adhere cloſe to each other. See FIRMNESS.

*The Principal Phænomena of* FREEZING are,

1° That Water dilated or rarify'd, and all Fluids, Oil excepted, in *freezing*, *i. e.* take up more Space, and are ſpecifically lighter than before.

That the Bulk, or Dimenſions of Water is increas'd by *freezing*, is Matter of abundant Experiment; and here it may be proper to obſerve the Proceſs of Nature.

A Glaſs Veſſel, then, B D full of Water to D, being immerg'd in a Veſſel of Water, mix'd with Salt, R S T V, the Water preſently riſes from E to F; which ſeems owing to the ſudden Conſtriction of the Veſſel haſtily plung'd into ſo cold a Medium. Soon after, from the Point F it continually deſcends, condenſing, till it arives at the Point G; where, for ſome time, it ſeems to remain at reſt. But it ſoon recovers it ſelf, and begins to expand; riſing from G to H; and from thence, ſoon after, by one violent Leap, mounts to I. And here the Water in B is immediately ſeen all thick, and cloudy; and in the very Inſtant of this Leap, is converted into Ice. Add, that while the Ice is growing harder; and ſome of the Water near the Neck of the Veſſel B is *freezing*, the Flux of Water is continued above I, towards D, and it at length runs out at the Veſſel.

2° That they loſe not only of their Specifick, but alſo of their Abſolute Gravity, by *freezing*; ſo that when thaw'd again, they are found conſiderably lighter than before.

3° That *frozen* Water is not quite ſo tranſparent, as when liquid; and that Bodies don't perſpire ſo freely thro' it.

4° That Water, when froze, evaporates almoſt as much as when fluid.

5° That Water does nor freeze in Vacuo; but requires the Preſence and Contiguity of the Air.

6° That Water which has been boiled, does not freeze quite ſo readily as that which has not.

7° That the Water being cover'd over with a Surface of Oil of Olives, does not freeze ſo readily as without it: And that Nut Oil abſolutely preſerves it under a ſtrong Froſt, when Olive Oil would not.

8° That Spirit of Wine, Nut Oil, and Oil of Turpentine don't freeze at all.

9° That the Surface of the Water, in *freezing*, appears all wrinkled; the *Rugæ*, or Wrinkles being ſometimes in parallel Lines, and ſometimes like Rays, proceeding from a Centre to the Circumference.

*The Theories of* FREEZING, or the Method of accounting for theſe Phænomena, are very numerous.

The great Principles different Authors have gone upon, are either, That ſome foreign Matter is introduc'd within the Pores of the Fluid, by whoſe means it is fix'd, its Bulk encreas'd, &c.

Or, that ſome Matter naturally contain'd in the Fluid, is now expell'd; by the Abſence whereof the Body becomes fix'd, &c.

Or, that there is ſome Alteration produc'd in the Texture or Form, either of the Particles of the Fluid it ſelf, or of ſomething contain'd within it.

To ſome one of which Principles all the Syſtems of *Freezing* are reducible.

I. The *Carteſians*, *e. gr.* who aſcribe all to the Quietude of the Parts of the Fluid, before in Motion; account for *Freezing* from the Receſs of the ætherial Matter out of the Pores of the Water. The Activity of that Æther, or ſubtle Matter, they hold to be that which gave the Particles of the Fluid their Motion: Conſequently, upon the Abſence of this Matter, the Fluidity muſt ceaſe.

Tho' others of the ſame Sect aſcribe *Freezing* to a Diminution of the uſual Force and Efficacy of the ætherial Matter, occaſion'd by an Alteration in the Temperature of the Air, whereby it is incapacitated for agitating the Parts of the Fluid as uſual.

II. The *Gaſſendiſts*, and other Corpuſcularians, with more Probability aſcribe the *Freezing* of Water to the Ingreſs of Multitudes of cold or frigorifick Particles, which entering the Liquor in Swarms; and diſperſing themſelves every way thro' it, do croud into the Pores of the Water, and hinder the wonted Agitation of its Parts; wedging it up, as it were, into the hard and conſiſtent Body of Ice. And hence its Increaſe of Dimenſions, Coldneſs, &c.

This Intromiſſion of a foreign frigorifick Matter they ſuppoſe eſſential to *Congelation*; as that which characteriſes and diſtinguiſhes it from *Coagulation*: The former being effected indifferently by a hot, or cold Mixture; but the latter only by a cold one. See COAGULATION.

Of what kind theſe frigorific Particles are, or how they produce their Effect, is Matter of Debate; and has given occaſion to various Syſtems.

*Hobbs* will have it common Air, which intruding into the Water in Congelation, entangles it ſelf with the Particles of the Fluid; prevents their Motion, produces thoſe numerous Bubbles obſerv'd in Ice; thus expanding its Bulk, and rendering it ſpecifically lighter: But this Opinion is overturn'd by Mr. *Boyle*, who ſhews that Water will freeze in Veſſels Hermatically ſeal'd, and into which the Air can have no Ingreſs; yet the Bubbles will be as numerous herein, as in that froze in the open Air. Add, that Oil is condens'd, in *freezing*: Conſequently, the Air cannot there be the Cauſe.

Others, and thoſe the greateſt Number, will have the *freezing Matter* to be a Salt; arguing, that an Exceſs of Cold will render Water torpid; but never congeal it, without Salt. They are ſaline Particles, ſay they, and thoſe diſſolv'd and mix'd in a due Proportion, that are the chief Cauſe of *Freezing*: Congelation bearing a near relation to Cryſtallization. See CRYSTALLIZATION.

This Salt, they ſuppoſe of the Nitrous kind; and to be furniſh'd by the Air, which is generally allow'd to abound in Nitre. See AIR, and NITRE.

How the Particles of Nitre may prevent the Fluidity of Water, is pretty eaſily accounted for: Theſe Particles are ſuppos'd to be ſo many rigid, pointed Spicula, which are eaſily driven into the Stamina, or Globules of the Water; which thus becoming variouſly mingled and entangled therewith, by degrees infeeble and deſtroy the Motion thereof.

The Reaſon this Effect only ariſes in ſevere Winter Weather, is, that 'tis then only, that the retarding Action of the nitrous Spicula, is more than equal to the Power or Principle whereby the Fluid is otherwiſe kept in Motion, or diſpos'd for Motion. See FLUID.

This Opinion is ſupported by the known Experiments of Artificial *Freezing*.

A Quantity of common Salt or Petre being mix'd with Snow, or Ice pulveriz'd; and the Mixture diſſolv'd by the Fire: Upon immerging a Tube full of Water in the Solution; the Water, that Part of it next the Mixture, preſently freezes, even in warm Air. Whence it is argued, that the Spicula of the Salt, by the Gravity of the Mixture, and of the incumbent Air, are driven thro' the Pores of the Glaſs, and mix'd with the Water: For that it is the Salt has the Effect, is evident; inaſmuch as we know aſſuredly that the Particles of Water cannot find their Way thro' the Pores of Glaſs. In theſe *Artificial Freezings* whatever Part the Mixture is applied in, there is preſently produc'd a Skin, or Lamina of Ice; whether at top, or bottom; or on the Sides: By reaſon there is always a Stock of ſaline Corpuſcle, ſufficient to overpower theſe Corpuſcles of Fire: But *Natural Congelations* are confin'd to the Top of the Water, where the Salt moſt abounds.

Againſt this Syſtem the ingenious Author of the *Nouvelle Conjecture pour Expliquer la Nature de la Glace*, objects, That it does not appear, that Nitre always enters the Compoſition of Ice; but that if it did, it would come ſhort of accounting for ſome of the principal Effects. For how, for inſtance, ſhould the Particles of Nitre by entering the Pores of Water, and fixing the Parts, oblige the Water to dilate and render it ſpecifically lighter? Naturally they ſhould augment its Weight. This Difficulty, with ſome others, ſhew the Neceſſity of a new Theory. That Author, therefore, advances the following one, which ſeems to ſolve the Phænomena in a more eaſy, and ſimple manner; as not depending on the precarious Admiſſion or Extruſion of any heterogeneous Matter.

III. Water, then, *freezes* in the Winter only, becauſe its Parts being more cloſely join'd together, mutually embarraſs one another, and loſe all the Motion they had: And the Cauſe of this cloſer Union of the Water, is the Air; or rather an Alteration in the Spring and Force of the Air.

That there are an infinite Number of Particles of groſs Air, interſpers'd among the Globules of Water, is abundantly evident from Experiment: And that each Particle of Air has the Virtue of a Spring, is confeſs'd: Now, this Author argues, that the ſmall Springs of groſs Air mix'd with the Water, have more Force in cold Winter Weather, and unbend themſelves more, than at other times. Hence, thoſe Springs thus unbending themſelves on one Side, and the external Air continuing to preſs the Surface of the Water on the other; the Particles of Water thus conſtring'd and lock'd up together, muſt loſe their Motion and Fluidity, and form a hard conſiſtent Body: Till a Relaxation of the Spring of the Air, from an Increaſe of Heat, reduce the Particles to their old Dimenſions, and leave room for the Globules to flow again.

But this Syſtem has its Foible: The Principle on which it ſtands, may be demonſtrated to be falſe. The Spring, or Elaſticity of the Air is not increas'd by Cold; but diminiſh'd. Air expands it ſelf by Heat; and condenſes by Cold: And 'tis demonſtrated in Pneumaticks, that the elaſtic Force of expanded Air, is to that of the ſame Air condens'd; as its Bulk when rarify'd, to its Bulk, condenſed. See ELASTICITY, and AIR.

We don't know, whether it is worth mentioning, what ſome Authors have advanc'd, to account for the Increaſe of Bulk and Diminution of ſpecific Gravity of frozen Water: *viz.* That the aqueous Particles, in their natural State, were nearly Cubes, and ſo fill'd their Space without the Interpoſition of many Pores: But that by Congelation they are chang'd from Cubes, to Spheres; whence a Neceſſity of a deal of empty Space between them. Cubic Particles are certainly much leſs proper to conſtitute a fluid, than ſpherical ones; and ſpherical Particles leſs diſpoſed to form a fix'd, than cubic ones.

Thus much the Nature of Fluidity and Firmneſs eaſily ſuggeſts.

After all, for a conſiſting Theory of *Freezing*, we muſt recur either to the frigorific Matter of the Corpuſcularians; conſider'd under the Light and Advantages of the *Newtonian* Philoſophy: Or to the ætherial Matter of the *Carteſians*, under the Improvements of Monſ. *Gauteron*, in the *Memoires de l'Academie Royale des Sciences*, *An.* 1709.—

Each of which we ſhall here ſubjoin; and leave the Reader to make his Choice.

For the *firſt*: A Number of cold, ſaline Corpuſcles being introduc'd into the Interſtices between the Globules of Water; may be ſo near each other, as to be within the Spheres of one another's Attractions; the Conſequence of which muſt be, that they will cohere into one ſolid, or firm Body: Till, Heat afterwards ſeparating them, and putting them into various Motions, breaks this Union, and ſeparates the Particles ſo far from one another, that they get out of the Diſtance of the attracting Force, and into the Verge of the repelling Force; and then the Water re-aſſumes its fluid Form.

For, that Cold and *Freezing* do ariſe from ſome Subſtance of a ſaline Nature floating in the Air, ſeems probable hence, that all Salts, and more eminently ſome particular ones, when mix'd with Snow, or Ice, do prodigiouſly increaſe the Force and Effects of Cold: Add, that all ſaline Bodies do produce a Stiffneſs and Rigidity in the Parts of thoſe Bodies, into which they enter.

Microſcopical Obſervations upon Salts manifeſt, that the Figures of ſome Salts, before they ſhoot into Maſſes, are thin, double, wedge-like Particles, which have abundance of Surface with reſpect to their Solidity (the Reaſon why they ſwim in Water, when once rais'd in it, tho' ſpecifically heavier). Theſe ſmall Points of the Salt getting into the Pores of the Water, whereby alſo they are in ſome meaſure ſuſpended in the Winter time (when the Heat of the Sun is not ſtrong enough to diſſolve the Salts into a Fluid, to break their Points, and to keep them in perpetual Motion) being leſs diſturbed; are more at Liberty to approach one another; and by ſhooting into Cryſtals of the Form above mention'd, do, by their Extremities, inſinuate themſelves into the Pores of Water, and by that means *freeze* it into a ſolid Form.

Further, there are many little Volumes or Particles of Air, included at ſeveral Diſtances both in the Pores of the watry Particles, and in the Interſtices made by the ſpherical Figures. By the Inſinuation of theſe Cryſtals, the Volumes of Air are driven out of the watry Particles; and many of them uniting, form larger Volumes, which thereby have a greater Force to expand themſelves, than when diſpers'd; and ſo both enlarge the Dimenſions, and leſſen the ſpecifick Gravity of the Water, thus congealed into Ice.

Hence alſo we may conceive, how Water impregnated with Salts, Sulphurs, or Earths, which are not eaſily diſſolveable, may form itſelf into Metals, Minerals, Gums, and other Foſſils; the Parts of theſe Mixtures becoming a Cement to the Particles of Water, or getting into their Pores, change them into theſe different Subſtances.

For the *ſecond*: As an ætherial Matter or Medium is generally allow'd the Cauſe of the Motion of Fluids; ſee MEDIUM: And as the Air it ſelf has all its Motion from the ſame Principle; it follows, that all Fluids muſt remain in a State of Reſt, or Fixity, when that Matter loſes of its neceſſary Force. Of conſequence, the Air being leſs warm'd in the Winter time, from the Obliquity of the Rays of the Sun; the Air is denſer, and more fix'd in Winter, than any other Seaſon of the Year.

But further, from divers Experiments we have learnt, that the Air contains a Salt, ſuppos'd to be of the Nature of Nitre. This granted, and the Denſity of the Air allow'd, it follows, that the Molecules of this Nitre muſt likewiſe

be

be brought nearer together, and thickn'd by the Condenſation of the Air: As, on the contrary, a Rarefaction of the Air, and an Augmentation of its Fluidity, muſt divide and ſeperate them.

If now the ſame Thing happen to all Liquors that have imbibed, or diſſolv'd any Salt; if the Warmth of the Liquid keep the Salt exactly divided; and if the Coolneſs of a Cellar, or of Ice give occaſion to the Molecules of the diſſolv'd Salt to approach, run into each other, and ſhoot into Cryſtals: Why ſhould the Air, which is allow'd a Fluid, be exempt from the general Law of Fluids?

'Tis true, the Nitre of the Air being groſſer in cold Weather, than hot; muſt have leſs Velocity: But ſtill, the Product of its augmented Maſs, into the Velocity remaining, will give it a greater Momentum, or Quantity of Motion. Nor is any thing further requir'd to make this Salt act with greater Force againſt the Parts of Fluids: And probably, this is the Cauſe of the great Evaporation in froſty Weather.

This aerial Nitre muſt promote the Concretion of Liquids: For 'tis not the Air, nor yet the Nitre it contains, that gives the Motion to Fluids: 'Tis the Etherial Medium. From a Diminution of the Force of that, therefore, ariſes a Diminution of Motion of the reſt.

Now the etherial Matter, weak enough of it ſelf in the Winter time, muſt loſe ſtill more of its Force by its Action againſt Air condens'd and loaded with large Molecules of Salt. It muſt, therefore, loſe of its Force in cold Weather, and become leſs diſpos'd to maintain the Motion of Fluids. In a Word, the Air, during Froſt, may be eſteem'd like the Ice impregnated with Salt, wherewith we ice our Liquors in Summer time. Thoſe Liquors, in all Probability, *freeze* from a Diminution of the Motion of the etherial Medium, by its acting againſt the Ice and Salt together: And the Air, for all its ſcorching Heat, is not able to prevent its Concretion.——

FREEZING *Rain*, or *Raining Ice*, a very uncommon kind of Shower, which fell in the Weſt of *England*, in *December*, *Anno* 1672; whereof we have divers Accounts in the *Philoſophical Tranſactions*.

This Rain, as ſoon as it touch'd any thing above Ground, as a Bough, or the like; immediately ſettled into Ice; and by multiplying and enlarging the Icicles, broke all down with its Weight. The Rain that fell on the Snow, immediately froze into Ice, without ſinking in the Snow at all.

It made an incredible Deſtruction of Trees, beyond any thing in all Hiſtory: "Had it concluded with ſome Guſt of Wind", ſays a Gentleman on the Spot, "it might have been of ſad Importance."

"I weigh'd the Sprig of an Aſh Tree, of juſt three Quarters of a Pound; the Ice on which weigh'd 16 Pound."— "Some were frighted with the Noiſe in the Air; till they "diſcern'd it was the Clatter of icy Boughs, daſh'd againſt "each other."

Dr. *Beale* obſerves, that there was no conſiderable Froſt obſerv'd on the Ground during the whole; whence he concludes, that a Froſt may be very fierce and dangerous on the Tops of ſome Hills, and Plains; while in other Places it keeps at two, three, or four Foot diſtance above the Ground, Rivers, Lakes, *&c.* And may wander about very furious in ſome Places, and remiſs in others, not far off. The Froſt was followed by glowing Heats, and a wonderful Forwardneſs of Flowers and Fruits. See FROST.

FREEZING, in Commerce and Manufactures; ſee FRIZING.

FREEZING *Mixture*, a Preparation for the artificial Congelation of Water, and other Liquors.——

All kinds of Salts, whether alcalizate, or acid; and even all Spirits, as thoſe of Wine, *&c.* as alſo Sugar, and *Saccharum Saturni*, mix'd with Snow, are capable of *freezing* other Bodies: And the ſame Effect is produc'd in a very great Degree by a Mixtion of Oil of Vitriol, or Spirit of Nitre with Snow: Thus Mr. *Boyle*.

Monſ. *Homberg* obſerves the ſame of equal Quantities of corroſive Sublimate, and *Sal* Ammoniac, with four times the Quantity of Vinegar diſtill'd. See WATERS.

FREEZELAND *Horſe*, in War, the ſame with *Cheval de Friſe*. See CHEVAL *de Friſe*.

FRENCH, abſolutely us'd, ſignifies the Language of the People of *France*. See LANGUAGE.

The *French*, as it now ſtands, is no Original, or Mother Language; but a Medley of ſeveral: Scarce any Language, but it has borrowed Words, or perhaps Phraſes, from.

The Languages that prevail moſt, and that are, as it were, the Baſis thereof, are 1° The *Celtic*; whether that were a particular Language it ſelf, or whether it were only a Dialect of the *Gothic*, as ſpoke in the Weſt, and North. 2° The *Latin*, which the *Romans* carried with them into the *Gauls*, when they made the Conqueſt thereof. And 3°, The *Teutonic*, or that Dialect of the *Teutonic* ſpoke by the *Franks*, when they paſs'd the *Rhine*, and eſtabliſh'd themſelves in the *Gauls*.

Of theſe three Languages, in the ſpace of about thirteen hundred Years, was the *French* form'd; ſuch as it is now found.

Its Progreſs was very ſlow; and both the *Italian* and *Spaniſh* were regular Languages long before the *French*.

*Paſquier* obſerves, it was under *Philip de Valois*, that the *French* Tongue firſt began to be poliſh'd; and that in the Regiſter of the Chamber of Accounts of that Time, there is a Purity ſeen almoſt equal to that of the preſent Age.

However, the *French* was ſtill a very imperfect Language, till the Reign of *Francis* I. The Cuſtom of ſpeaking *Latin* at the Bar, and of writing the publick Acts and Inſtruments of the Courts of Juſtices in that Language, had made them overlook the *French*, their own Language. Add, that the preceding Ages had been remarkable for their Ignorance, owing in good meaſure to the long and calamitous Wars, which *France* had been engag'd in: Whence, the *French* Nobleſſe deem'd it a kind of Merit, not to know any thing; and the Generals regarded little, whether or no they wrote and talk'd politely, provided they could but fight well.

But *Francis* I. who was the Reſtorer of Learning, and the Father of the Learned; chang'd the Face of Things; and after his Time *Henry Stevens* printed his Book *De la Precellence du Langage Francois*.

The Change was become very conſpicuous at the End of the XVI^th^ Century; and under *Henry* IV. *Amyot*, *Coeffeteau*, and *Malherbe* contributed towards bringing it to Perfection: Which the Cardinal *de Richelieu* compleated, by the Eſtabliſhment of the *French* Academy; an Aſſembly, wherein the moſt diſtinguiſh'd Perſons of the Church, the Sword, and the Gown have been Members.

Nor did the long Reign of *Louis* XIV. contribute a little to the Improvement of the Language. The perſonal Qualities of that Prince, and his Taſte for the polite Arts, and that of the Princes of the Blood, render'd his Court the politeſt in the World. Wit and Magnificence ſeem'd to vye; and his Generals might have diſputed with the *Greeks*, *Romans*, &c. the Glory of Writing well, if they could not that of Fighting.

From Court, the Elegance, and Purity of the Language ſpread it ſelf into the Provinces; and now there is no Body but writes and ſpeaks good *French*.

One of the Characters of the *French* Language is to be natural, and eaſy. The Words are rang'd in it much in the ſame Order as the Ideas in our Minds; in which it differs exceedingly from the *Greek* and *Latin*, where the Inverſion of the natural Order of the Words is a Beauty.

Indeed, the *Hebrew* ſurpaſſes even the *French* in this Point; but then it comes ſhort of it in Copiouſneſs and Variety.

It muſt be added, however, that as to the Analogy of Grammar, and the Simplicity wherewith the Moods of Verbs are form'd; the *Engliſh* has the Advantage, not only over the *French*, but over all the known Languages in the World: But then the Turns, the Expreſſions, and the Idioms of the *Engliſh* are ſometimes ſo quaint, and extraordinary, that it loſes a good deal of the Advantage which its grammatical Simplicity gives it over the reſt. See ENGLISH.

The *French* has but few compound Words; wherein it differs widely from the *Greek*, *High Dutch*, and *Engliſh*. This the *French* Authors own a great Diſadvantage in their Language; the *Greek* and *Dutch* deriving a great Part of their Force and Energy from the Compoſition of Words; and frequently expreſſing that in one ſounding Word, which the *French* cannot expreſs but by a Periphraſis. And the Diminutives in the *French* are as few as the Compounds: The greateſt Part of thoſe remaining in uſe having loſt their diminutive Signification. But what diſtinguiſhes the *French* moſt, is its Juſtneſs, Purity, Accuracy, and Flexibility.

*French* is the moſt univerſal and extenſive Language in *Europe*. The Policy of States and Courts has render'd it neceſſary for the Miniſters of Princes, and their Officers, *&c.* And the Taſte of Arts and Sciences has had the ſame Effect with regard to the Learned.

In *Germany*, and elſewhere, the Princeſſes and Perſons of Diſtinction value themſelves on underſtanding *French*: And in ſeveral Courts of *Europe*, *French* is almoſt as much known as the Language of the Country; tho' the Court of *Vienna* is an Exception from this Rule. *French* is there very little us'd: The Emperor *Leopold* could not bear to hear it ſpoke in his Court: The *Latin* and *Italian* are there cultivated inſtead of it.

This Extenſiveneſs of the *French* Language is no modern Advantage: *William* the Conqueror gave Laws to *England* in the *French* Language; and the antient Cuſtoms of moſt of the Provinces of the *Netherlands* are wrote in the ſame.

Laſtly, the *French* is the ſame Language every where; not only in all the Provinces of *France*, but in all the Places where 'tis ſpoke, out of *France*.

The ſeveral Nations who ſpeak *Sclavonic*, don't ſo much ſpeak the ſame Language, as different Dialects of the ſame Language. In ſeveral Parts of *Europe* there are as many different Languages, as there are States; and in *Italy* there are reckon'd no fewer than ten or twelve Dialects, ſome of which differ as much from the common *Italian* as from the *French*, or *Spaniſh*. In *Holland*, the Seamen of *Rotterdam*, and the Banks of the *Meuſe*, don't underſtand thoſe of *Amſterdam*, and the Coaſts of the *Zuyder Zee*. They who underſtand *Caſtillan*, will not underſtand the Language of *Catalonia* and *Cerdagnia*. The *High Dutch* is not the ſame in *Sweeden*, as in *Jutland*: In the Low Countries, as at *Lubeck*. *Bohemia*, *Hungary*, *Croatia*, &c. are Countries belonging to the Emperor; yet ſpeak a Language different from that ſpoke at *Vienna*. The King of *Sweden*, when he ſpeaks the Language of his Country, will not be underſtood by his Subjects in *Pomerania*, *Lapland*, &c. And the like may be obſerv'd of the King of *Denmark*, with regard to his Subjects of *Norway* and *Iceland*: Whereas, at *Quebec*, the *Louiſiana*, *Martinico*, *St. Domingo*, *Pondicheri*, &c. they ſpeak the ſame Language as at *Paris*, and throughout the reſt of *France*.

For a critical Acquaintance with what regards the *French* Tongue, ſee the *Remarques* of M. *Vangelas*; and the *Obſervations* M. *Corneille* has made on thoſe Remarks: The *Remarques* of Fa. *Bouhours*; and the *Doubts* of a *Bas-Breton* Gentleman by the ſame Father: The *Converſations* of *Ariſte* and *Eugene*: The *Obſervations* of M. *Menage*, and his *Etymologies*; with thoſe of M. *Huet*: Fa. *Buffier*'s *French* Grammar; and that of the Abbe *Regnier*. And the two Diſcourſes of the Abbe *de Dangeau*; one on the Vowels, and the other on the Conſonants.

FRENCH *Bread*, a Sort of Bread, valued for its Delicacy. See BREAD.

It is prepar'd by taking half a Buſhel of fine Flower, to ten Eggs, and a Pound and half of freſh Butter; and into that putting as much Yeſt with a Manchet.

Then, tempering the whole Maſs with new Milk pretty hot, let it lie half an Hour to riſe. Which done, make it into Loaves or Rolls, and waſh it over with an Egg, beaten with Milk. The Oven not to be too hot. See BAKING.

FRENCH-*Man*, ſee FRANCIGENA, and ENGLECERY.

FRENDLES *Man*, was the old *Saxon* Name for him whom we call an *Outlaw*. See OUTLAW.

The Reaſon is, becauſe he was, upon his Excluſion from the King's Peace and Protection, deny'd all Help of Friends after certain Days: *Nam foris fecit amicos*.

FRENZY, and FRENETIC, ſee PHRENZY, and PHRENETIC.

FRESCO, a kind of Painting; perform'd on freſh Plaiſter; or on a Wall laid with Mortar not yet dry; and with Water Colours. See PAINTING.

This ſort of Painting has a great Advantage: By its incorporating with the Mortar, and drying along with it, it is render'd extremely durable; and never fails or falls, but along with it. The *Italians*, from whom we borrow the Term, call it *a Freſco*: *Vitruvius*, *lib.* 7. *c.* 3. calls it *Udo Sectorio*.

Painting in *Freſco* is very antient; having been practiced in the earlieſt Ages of *Greece* and *Rome*.

It is chiefly perform'd on Walls and Vaults, newly plaiſter'd with Lime and Sand: But the Plaiſter is only to be laid, in proportion as the Painting goes on; no more being to be done at once, than the Painter can diſpatch in a Day, while it is dry.

Before he begins to paint, a Cartoon or Deſign is uſually made on Paper; to be calk'd, and transfer'd to the Wall, about half an Hour after the Plaiſter is applied.

The Antients painted on Stuck; and we may remark in *Vitruvius*, what infinite Care they took in making the Incruſtation or Plaiſtering of their Buildings to render them beautiful and laſting: Tho' the modern Painters find a Plaiſter made of Lime and Sand preferable thereto; both as it does not dry ſo haſtily; and as being a little browniſh, it is fitter to lay Colours on, than a Ground ſo white as Stuck.

In this kind of Painting, all the Compound and Artificial Colours, and almoſt all the Minerals are ſet aſide; and ſcarce any thing us'd but Earths; which are capable of preſerving their Colour, defending it from the burning of the Lime, and reſiſting its Salt, which *Vitruvius* calls its Bitterneſs.

For the Work to come out in all its Beauty; the Colours muſt be laid on quick, while the Plaiſter is yet moiſt: Nor muſt they ever be retouch'd, dry, with Colours mix'd up with the White of an Egg, or Size, or Gum, as ſome Workmen do; by reaſon ſuch Colours grow blackiſh: Nor do any preſerve themſelves, but ſuch as were laid on haſtily at firſt.

The Colours us'd, are *White* made of Lime ſlack'd long ago, and white Marble Duſt; *Oker*, both red, and yellow; Violet *Red*; Verditer; *Lapis Lazuli*; Smalt; Earth Black, &c. All which are only ground, and work'd up with Water; and moſt of them grow brighter and brighter, as the *Freſco* dries. See COLOUR, WHITE, BLACK, VERDITER, LAPIS, &c.

FRESH-*Water*, is that not tinctur'd or impregnated with Salt, or ſaline Particles, enough to be diſcoverable by the Senſe. See WATER.

Such generally is that of Springs, Rains, Wells, Lakes, &c. See SPRING, RAIN, WELL, LAKE, &c.

Dr. *Liſter* is of Opinion, that the natural and original State of Water is to be Salt: The *Freſhneſs* he ſuppoſes to be accidental, and to be owing to the Vapours of Plants, and the Breath of Animals therein; and to the Exhalations raiſed by the Sun.

Others will have Water originally *freſh*; and take its Saltneſs to be accidental: To account for which, a great Number of Hypotheſes have been fram'd. See SALTNESS.

The Saltneſs of Water is a foreign, and in moſt Caſes a hurtful Quality. It renders it not only nauſeous to the Taſte, but greatly prejudicial to the Body: And it is generally agreed, that thoſe Waters, *cæteris paribus*, are beſt, not only for drinking, but for œconomical Uſes, as Waſhing, Boiling, Brewing; which are the freeſt from Saltneſs.—

Hence, various Methods have been contrived for examining the *Freſhneſs* of Waters; and of making ſalt Water *freſh*.

Mr. *Boyle* gives us a Method of examining the *Freſhneſs* of Water, by means of a Precipitate, which caſts down any ſaline Particles before floating therein.

Into 1000 Grains of diſtilled Water, he puts one Grain of Salt; and into the Solution lets fall a few Drops of a ſtrong well filtrated Solution of well refin'd Silver, diſſolv'd in clear *Aqua Fortis*; upon which there immediately appears a whitiſh Cloud, which, tho' but ſlowly, deſcends to the Bottom, and there ſettles to the Bottom in a white Precipitate, which is the ſaline Matter of the Fluid.

This Method, if it were requir'd, would examine Water to a greater Nicety, than that here ſpecify'd. It has diſcover'd Salt in Water, where there was but one Grain of the Salt in 2000, nay 3000 times the Weight of Water. in

The Experiment was tried before the Royal Society, in 1692. by Dr. *Sloan*; where it was likewiſe found that a Drop or two, even of Spirit of Salt, mix'd with common Water, would be diſcover'd by the ſame Method.——

Dr. *Hook*, in the ſame Year, read a Lecture before the Royal Society, on a Method of his own, for diſcovering the ſmalleſt Quantity of Salt contain'd in Water, on a Principle of Hydroſtaticks.

The Operation was perform'd by means of a large Poiſe of Glaſs, of the Shape of a Bolt Head; the Ball thereof three Inches in Diameter, and the Neck $\frac{1}{24}$ of a Inch. This being ſo pois'd, with red Lead put in it, as to make it very little heavier than *freſh* Water; and then ſuſpended by the ſmall Stem, which was graduated, to the End of a nice Beam of a Balance; and the Degree or Diviſion of the Neck, contiguous to the Surface of the Water, noted: Upon infuſing a Quantity of Salt, only equal to the two thouſandth Part of the Weight of the Water, the Neck of the Poiſe ſunk near half an Inch lower in the Water.

The Dulcifying, or making of ſalt Water *freſh*, is a Secret, and has been long ſought with great Attention.

Dr. *Liſter* takes the moſt eaſy, ſafe, and natural way of procuring *freſh* Water from the Sea, to be by putting Sea Plants, as *Alga Marina*, or common Sea Weed into a Quantity of the Water, in a Glaſs Body, with a Head, Beak, and Receiver: From which a *freſh*, ſweet, and potable Liquor will continually diſtill.

Monſ. *Hauton* has at length declared his Secret of making Sea Water *freſh*.

It conſiſts firſt, in a Precipitation, made with Oil of Tartar, which he can prepare at a ſmall Expence. Next he diſtills the Sea Water, with a Furnace contriv'd to take up little Room, and which, with a very little Fire, will diſtill 24 *French* Quarts of Water in a Day. For the Cooling thereof, inſtead of making the Worm paſs thro' a Veſſel full of Water, he makes it paſs thro' a Hole made on purpoſe out of the Ship, and enter it again at another; ſo that the Sea Water does the Office of a Refrigeratory. To the two proceeding Operations he joins Filtration, which is performed by a peculiar kind of Earth, mix'd and ſtirred with the diſtilled Water; and at length ſuffer'd to ſettle. This *Filtration* leaves it perfectly ſalubrious. *Phil. Tranſ.* N° 67.

FRESH *Fine*, is that which was levied within a Year paſt. *Weſtm.* 2. *c.* 45. See FINE.

FRESH *Force*, *Friſca Fortia*, in Law, is a Force done within forty Days. See FORCE.

If a Man be diſſeis'd of any Lands or Tenements, within any City or Borough; or deforc'd from them after the Death of his Anceſtors, to whom he is Heir; or after the Death of his Tenant for Life, or in Tail; he may, within forty Days after his Title accrued, have his Remedy by an Aſſize, or Bill of *Freſh Force*.

FRESH *Sute*, *Recens Insecutio*, is such a present and active Prosecution of an Offender, as never ceases, from the Time of the Offence committed, or discover'd, till he be apprehended. See SUTE.

The Benefit of such Persuit of a Felon, is, That the Party persuing shall have his Goods restor'd to him, whereas otherwise they are the King's.

*Fresh Sute* may continue for seven Years.——

*Fresh Sute* is either within the View, or without. *Manwood* says, That upon *fresh* Sute within the View, Trespassers in the Forest may be attached by the Officers pursuing them, tho' without the Limits of the Forest.

FRESH *Spell*, in the Sea Language, a *fresh* Gang, to relieve the Rowers in the Longboat. See SPELL.

FRESH *Shot*, in the Sea Phrase, signifies the falling down of any great River, into the Sea; by means whereof the Sea hath *fresh* Water a good way from the Mouth of the River.

As this is more or less, they call it a *great* or *small Fresh Shot*.

FRET, or FRETTE, in Architecture, a kind of Knot, or Ornament, consisting of two Lists, or small Fillets variously interlac'd, or wove; and running at parallel Distances, equal to their Breadth.

A necessary Condition of these *Frets* is, that every Return, and Intersection be at Right Angles. This is so indispensible, that they have no Beauty without it; but become perfectly *Gothic*.

Sometimes the *Fret* consists but of a single Fillet; which, if well managed, may be made to fill its Space exceedingly well.

The Antients made great use of these *Frets*: The Places they were chiefly applied on, were even, flat Members, or Parts of Building; as the Faces of the Corona, and Eves of Cornices; under the Roofs, Soffits, &c. on the Plinths of Bases, &c.

The Appellation was occasion'd hence, that the Word *Frette* literally signify'd the Timber Work of a Roof, which consists chiefly, of Beams, Rafters, &c. laid a-cross each other, and as it were, *fretted*.

FRET-*work*, an Enrichment of *Frets*; or a Place adorn'd with something in manner thereof. See FRET.

*Fret-work* is sometimes used among us, to fill up, and enrich flat, empty Spaces; but 'tis principally practiced in Roofs, which are *fretted* over with Plaister Work.

The *Italians* also apply it to the Mantlings of Chimneys with great Figures: A cheap Piece of Magnificence, and as durable almost within Doors, as harder Matters in the Weather.

FRET, or FRETTE, in Heraldry, is a Bearing consisting of six *Bars*, cross'd, and interlac'd, *fret*-wise; as in the adjoining Figure.

He bears Diamond a *Fret* Topaz: The Coat Armor formerly of the Lord *Maltrevers*, and now quarter'd by the Duke of *Norfolk*.

When it consists of more than six Pieces, the Number must be specified.

Some call this the true Lovers Knot; others, *Harrington*'s Knot, because 'tis their Arms, and *Nodoformo* the Motto. *Gibbon* is for calling it *Heraldorum Nodus Amatorius*.

FRETTY, or FRETTEE, in Heraldry, is where there are divers Bars laid a-cross each other.

*Frettee* is of six, eight, or more Pieces. Azure, *Fretty* of eight Pieces Or: The Coat of the Lord *Willoughby*.

*Colombiere* observes, that *Fretty* absolutely us'd, without any Addition, is suppos'd to be of six Pieces; that is, so many Bars or Pieces crossing each other: Which, therefore, need not be express'd; but if there be more, as much must be mention'd.

And yet *Guillim* has Azure, *Fretty* of six, Argent: The Coat of the antient Lords *Elthingham* of *Sussex*.

*Guillim* derives the Word from the French *Rets*, Net: But the Reader will easily furnish himself a better Etymology from the Word FRET, *in Architecture*.

FRIABLE, is applied to Bodies, to denote them tender and brittle; easily crumbled, or reduc'd to Powder between the Finger: Their Force of Cohesion being such as easily exposes them to Solution.

Such is Pumice, and all calcin'd Stones, burnt Alum, &c.

*Friability* is suppos'd to arise hence, that the Body consists wholly of dry Parts, irregularly combined, and which are readily separated, as having nothing unctuous, or glutinous to bind them together. See COHESION.

FRIAR, or FRIER, by the *Latins* call'd *Frater*, the *Italians Fraticello*, and the *French*, *Frere*, that is, *Brother*, is a Term common to the Monks of all Orders; founded on this, that there is a kind of Fraternity, or Broderhood presumed between the several religious Persons of the same Convent, or Monastery. See BROTHER, MONK, &c.

The kinds of *Friars* are very numerous, *Augustin Friars*; *Dominican*, or *Black*, or *Preaching Friars*; *Franciscan*, or *Grey*, or *Minor*, or *Begging Friars*; *Carmelites*, or *White Friars*, &c. See *Religious* ORDERS; see also DOMINICAN, FRANCISCAN, CARMELITE, &c.

FRIAR, in its more peculiar and proper Sense, is restrain'd to such Monks, as are not Priests; for those in Orders, are usually dignify'd with the Appellation of *Father*. See FATHER.

FRIARS, or FRIERS *Observant*, *Fratres Observantes*, were a Branch of the *Franciscans*, which are *Minores tam Observantes*, *quam Conventuales & Capucini*. See MINOR, and OBSERVANT.

They were called *Observants*, because not combined together in any Cloister, Convent, or Corporation, as the Conventuals are; but only agreed among themselves to observe the Rules of their Order, and that more strictly than the Conventuals did; from whom they separated themselves out of a Singularity of Zeal; living in certain Places of their own chusing.

FRIBURGH, or FRITHBORG, among our *Anglo-Saxon* Ancestors, denoted the same as *Frank-pledge* did after the Time of the Conquest. See FRANK-PLEDGE.

*Præterea est quædam summa & maxima securitas, per quam omnes statu firmissimo sustinentur*, viz. *ut unusquisq; stabiliat se sub fidejussionis securitate, quam Angli vocant* Freoborghes: *soli tamen Eboracenses dicunt eandem* Tienmannatale, *quod sonat latine decem hominum Numerum. II Edu. per Lam.*

Every Man in this Kingdom was antiently associated in some Decennary, or Company of ten Families, who were pledg'd or bound for each other, to keep the Peace, and observe the Law. See DECENNA.

If any Offence was done by one, the other nine were to answer it: That is, if the Criminal fled from Justice, they had thirty Days allow'd to apprehend him: If he was not taken in that time, he who was the *Friburgh*, i. e. the principal Pledge of the ten, should take two of his own Number, and the chief Pledges of three neighbouring *Friburghs*, with two others out of each of the said *Friburghs*; who were to purge themselves and their *Friburgh* of the Forfeiture and Flight of the Criminal. If they could not do this, the principal Pledge, with the other eight, were to make Satisfaction.

Great Men were not combined in any ordinary *Decenna*, or Dozein; as being deem'd a sufficient Assurance for themselves and their menial Servants. See DOZEIN.

FRICASSEE, a Dish, or Mess, hastily dress'd in a Pot, or Frying-pan, and season'd with Butter, Oil, or the like.

Thus we say, a *Fricassee* of Pullets, of Rabbits, of Tenches, of Tripe, of Frogs, of Eggs, of Peas, &c.

The Word is pure *French*, form'd of the Latin *Frixatura*, frying. Others will have *Fricassee* form'd in imitation of the Noise made by Butter, or other Fat, when melted in the Pan.

FRICTION, the Act of rubbing, or grating the Surface of one Body against that of another; called also *Attrition*.

The Phænomena arising upon the *Friction* of divers Bodies under divers Circumstances, are very numerous and considerable.

Mr. *Hawksbee* gives us a Number of Experiments of this Kind: Particularly that of the Attrition, or *Friction* of Glass, under various Circumstances; the Result of which was, that it yielded Light, became Electrical, &c. See ATTRITION, ELECTRICITY, &c.

All Bodies by *Friction* are brought to conceive Heat; many of them to emit Light; particularly a Cats-back, Sugar, beaten Sulphur, Mercury, Sea Water, Gold, Copper, &c. But above all, Diamonds, which when briskly rubb'd against Glass, Gold, or the like, yield a Light, equal to that of a live Coal, when blowed by the Bellows. See FIRE, LIGHT, HEAT, PHOSHORUS, DIAMOND, &c.

FRICTION, in Mechanicks, the Resistance a moving Body meets withal from the Surface whereon it moves. See RESISTANCE.

*Friction*, arises from the Roughness or Asperity of the Surface of the Body mov'd on, and that of the Body moving. For such Surfaces consisting alternately of Eminences, and Cavities; either the Eminences of the one must be raised over those of the other; or they must be both broke and wore off: But neither can happen without Motion; nor can Motion be produc'd without a Force impress'd. Hence, the Force applied to move the Body, is either wholly, or partly spent on this Effect; and consequently there arises a Resistance, or *Friction*: Which will be greater, *cæteris paribus*, as the Eminences are the greater, and the Substance the harder. And as the Body, by continual *Friction* grows more and more Polite, the *Friction* diminishes.

Hence it follows, that the Surfaces of the Parts of Machines that touch each other, should be as smooth and polish'd as possible. But, as no Body can be so much polish'd, as quite to take away all Inequality; witness those numerous Ridges discover'd by the Microscope on the smoothest Surfaces: Hence arises the Necessity of anointing the Parts that touch, with Oil, or other fatty Matter.

*Laws of* FRICTION.

1° *As the Weight of a Body moving on another, is increaſed, ſo is the* Friction.

This we ſee experimentally in a Balance; which when only charged with a ſmall Weight, eaſily turns; but with a greater, a greater Force is required.

Hence, if the Line of Direction of a moving Body be oblique to the Surface moved on; the *Friction* is the greater; this having the ſame Effect as an Increaſe of Weight.

And hence, again, as a perpendicular Stroke, or Impreſſion is to an oblique one as the whole Sine, to the Sine of the Angle of Incidence; and the Sine of the greater Angle is greater, and that of the leſſer, leſs: The *Friction* is the greater, as the Line of Direction approaches nearer to a Perpendicular.

This is eaſily obſervable, and eſpecially in the Teeth of Wheels, which are frequently broke on this very account. The *Friction*, therefore, is taken away, if the Line of Direction of the moving Body be parallel to the Surface.

2° *The* Friction *is leſs in a Body that rolls, than it would be were the ſame Body to ſlide*, as is eaſily demonſtrated.

For ſuppoſe a dented Ruler, A B, *Tab. Mechanicks*, *Fig.* 38. and ſuppoſe a Wheel D E to move along it, with its Teeth perpendicular to the Circumference. If now the Body were to ſlide; the Tooth F, when it touch'd the Ruler, would deſcribe a Right Line on the Surface thereof: And, as the Tooth of the Ruler, H, reſiſts the ſame; it could not proceed without removing, or breaking either the Tooth H; or that F. And the ſame will hold in the ſliding of any rough Surface upon another; where all the *Friction* will take place, than can any way ariſe from the Roughneſs of the Surface. But if the Wheel E D roll along the Ruler, then the Tooth H will no longer reſiſt its Motion, only as it is to be hoiſted out of the Cavity F over the Eminence of the Tooth H: And the ſame holds in the robbing of any rough Body over the Surface of another.

Hence, in Machines, leſt the *Friction* ſhould employ a good Part of the Power; Care is to be taken, that no Part of the Machine ſlide along another; if it can be avoided: But rather that they roll, or turn upon each other. With this View it may be proper to lay the Axes of Cylinders, not, as is uſually done, in a Groove, or Concave Matrix; but between little Wheels, A B C D *Fig.* 39. moveable on their reſpective Axes. This was long ago recommended by *P. Caſatus*; and Experience confirms, that we ſave a deal of Force by it. Hence alſo it is that a Pully moveable on its Axis reſiſts leſs than if it were fix'd. And the ſame may be obſerv'd of the Wheels of Coaches, and other Carriages.

From theſe Principles, with a little further Help from the higher Geometry, *Olaus Roemer* determined the Figure of the Teeth of Wheels, that ſhould make the leaſt Reſiſtance poſſible; and which ſhould be epicycloidal. And the ſame was afterwards demonſtrated by *de la Hire*; tho', which is to be lamented, the Thing is not yet taken into Practice.

Hence in Sawing-Mills, the Sides of the wooden Rectangle the Saws are fitted into, ſhould be furniſh'd with *Rotulæ*, or little Wheels; which would greatly leſſen the *Friction*; and the like in other Caſes. Add, that as Winches, or curved Axes prevent all *Friction*; thoſe ſhould be uſed in lieu of Wheels, as often as it is poſſible. See WINCH.

*Calculation of the Quantity or Value of* FRICTION.

The *Friction* is a Point of the utmoſt Importance in Machines; and by all means to be conſider'd, in calculating the Force thereof: Yet it is generally overlook'd in ſuch Calculations: But this, principally, by reaſon its preciſe Value is not known.

It is not yet reduc'd to certain, and infallible Rules: The common Method is, barely to compute the Advantage, which a moving Power has from the Machine; either on account of its Diſtance from a fix'd Point; or of the Direction in which it acts. And in all the Demonſtrations it is ſuppos'd that the Surfaces of Bodies are perfectly ſmooth and poliſh'd. Indeed the Engineers expect, that in the Practice they ſhould loſe part of the Advantage of their Force, by the *Friction*: But how much, it is ſuppos'd nothing but the Practice can determine. M. *Amontons*, indeed, has made an Attempt to ſettle, by Experiment, a Foundation for a preciſe Calculation of the Quantity of *Friction*; and M. *Parent* has confirm'd it from Reaſoning, and Geometry: But their Theory, however warranted, is not generally, and fully received.

M. *Amonton*'s Principle, is, that the *Friction* of two Bodies depends on the Weight, or Force wherewith they bear on each other; and only increaſes as the Bodies are more ſtrongly preſs'd, or applied againſt each other; or are charged with a greater Weight: And that it is a vulgar Error, that the Quantity of *Friction* has any Dependance on the Bigneſs of the Surfaces rub'd againſt each other; or that the *Friction* increaſes as the Surfaces do.

Upon the firſt Propoſal of this Paradox, M. *de la Hire* had Recourſe to Experiments, which ſucceeded much in favour of the new Syſtem. He laid ſeveral Pieces of rough Wood, on a rough Table: Their Sizes were unequal; but he laid Weights on them, ſo as to render them all equally heavy. And he found, that the ſame preciſe Force, or Weight, applied to them by a little Pully, was requir'd to put each in Motion; notwithſtanding all the Inequality of the Surfaces. The Experiment ſucceeded in the ſame manner in Pieces of Marble, laid on a Marble Table.

Upon this, M. *de la Hire* betook himſelf to the Rationale of the Thing; and has given us a Phyſical Solution of the Effect: And M. *Amontons* ſettled a Calculus of the Value of *Friction*, and the Loſs ſuſtain'd thereby in Machines, on the footing of the New Principle.

In Wood, Iron, Lead, and Braſs, which are the principal Materials us'd in Machines, he finds the Reſiſtance cauſed by *Friction*, to be nearly the ſame; when thoſe Materials are anointed with Oil, or other fatty Matter: And this Reſiſtance, independant of the Quantity of Surface, he makes to be nearly equal to a third Part of the Force wherewith the Bodies are preſs'd againſt each other.

Beſide the Preſſion, the Magnitude whereof determines that of the *Friction*; there is another Circumſtance to be conſider'd, *viz.* the Velocity. The *Friction* is the greater; and the more difficult to ſurmount, as the Parts are rub'd againſt each other with the greater Swiftneſs: So that this Velocity muſt be compared with that of the Power neceſſary to move the Machine, and overcome the *Friction*. If the Velocity of the Power be double that of the Parts rub'd; it acquires, by that means, an Advantage that makes it double; or, which amounts to the ſame, diminiſhes the contrary Force of *Friction* by one half; and reduces it to a ſixth Part of the Weight or Preſſion. But this Velocity M. *Amontons* only conſiders as a Circumſtance that augments or diminiſhes the Effect of the Preſſion, *i. e.* the Difficulty of the Motion: So that the *Friction* ſtill follows the Proportion of the Weight. Only, we are hereby directed to diſpoſe the Parts of Machines that rub againſt each other, in ſuch manner as that they may have the leaſt Velocity poſſible: And thus the Diameter of the Axis of a Wheel ſhould be as ſmall as poſſible, with regard to that of the Wheel; in that the leſſer the Axis, the ſlower will be the Motion of the Surfaces rubbing againſt each other: ſince the Velocity of a circular Motion always goes diminiſhing from the Circumference to the Centre. And for the ſame Reaſon the Teeth of dented Wheels ſhould be as ſmall and thin as poſſible: For a Tooth catching on a Notch, *&c.* rubs one of its Sides againſt a Surface equal to its own; and is to diſengage it ſelf in a certain time by paſſing over a Space equal to the Surface: Conſequently, the leſs the Surface, the leſs Space it has to move; the littleneſs of the Surface diminiſhing the Reſiſtance of the *Friction*; not as it is a leſs Surface that rubs, but as there is a leſs Space to move.

But notwithſtanding all the Confirmations and Illuſtrations of this Theory of *Friction*; the Publick, nor even the Academy it ſelf where it was propoſed, could not be brought fully to acquieſce in it. 'Tis granted, the Preſſion has a great Effect; and is, in many Caſes, the only Thing to be conſider'd in *Frictions*: But 'twill be hard to perſuade us abſolutely to exclude the Conſideration of the Surface. In effect, the Contrary ſeems capable of a Metaphyſical Demonſtration.

If two Bodies with plain Surfaces, ſuppoſed infinitely hard, and poliſh'd, be moved along each other; the *Friction* will be none, or infinitely ſmall: But, if in lieu of ſuch Suppoſition, which has no Place in Nature, we ſuppoſe two Bodies with rough, uneven Surfaces; the Difficulty of moving one of them on the other, muſt either ariſe from this, that the firſt is to be rais'd, in order to diſengage the Parts catch'd or lock'd in the ſecond; or that the Parts muſt be broke and wore off; or both.

In the firſt Caſe, the Difficulty of raiſing one of the Bodies, makes that of the Motion; and of conſequence, the *Friction* ariſes wholly from the Weight, or Preſſion; and the Surface has nothing to do.

In the ſecond Caſe, the Magnitude of the Surface would be all; were it poſſible this ſecond Caſe could be abſolutely abſtracted from the firſt; *i. e.* could the Parts of one Body be rub'd and wore againſt thoſe of the other, without raiſing one of them; it being viſible that a greater Number of Parts to be broke would make a greater Reſiſtance, than a leſs. But as in Practice we never rub, or grind without raiſing the Body; the Reſiſtance ariſing from the Greatneſs of the Surface is always combined in the ſecond Cauſe with that from the Preſſion: Whereas in the former Caſe that ariſing from the Preſſion, may be alone, and uncompounded.

Add, that what is wore off a Body, is ordinarily very little; with regard to the great Number of times the Body muſt have been raiſed during the *Friction*; and all the little Heights added together, which the Body muſt have been raiſed to.

Hence,

Hence, as the Reſiſtance from Preſſion may be ſingle; and as the ſame always accompanies that ariſing from the Magnitude of the Surfaces; and is uſually much the more conſiderable of the two, when it does accompany it: For theſe Reaſons in moſt of the Experiments that are made, it is the only one perceived, and the only one that need to be conſider'd.

But then, as 'tis poſſible, in certain Caſes, for the Preſſion to be very ſlender; and the Number of Parts to be rub'd very great: It muſt be own'd there are Caſes wherein the *Friction* follows very ſenſibly the Proportion of the Surfaces.

*For the* Friction *of the Parts of Fluids*, ſee RESISTANCE, and RETARDATION *of Fluids*.

FRICTION, in Medicine, and Chirurgery, the Act of rubbing a diſeaſed Part with Oils, Unguents, or other Matters, in order to eaſe, relieve, and cure it. See UNGUENT.

*Frictions* are much uſed, eſpecially abroad, in Venereal Caſes; where they prefer the applying of Mercury externally, by way of *Friction*; to that of giving it internally to raiſe a Salivation. See SALIVATION, and MERCURY.

There are alſo *Frictions with the Fleſh-bruſh*, a *linen Cloth*, or the *Hand* only: For the Effect of which laſt, ſee STROAKING.

*Frictions* in the general, and of any kind, are a ſort of Exerciſe that contributes very greatly to Health; as they excite and ſtir up the natural Warmth, divert Defluxions, promote Perſpiration, open the Pores of the Skin, and carry off Humors.

The *Fleſhbruſh*, Dr. *Cheyne* obſerves, is an Exerciſe moſt uſeful for promoting a full and free Perſpiration and Circulation. Every Body knows the Effect of currying of Horſes; that it makes them ſleek, gay, lively, and active; ſo as to be judg'd equivalent to half the Feeding.

This it can no otherwiſe effect, but by aſſiſting Nature to throw off the Recrements of the Juices which ſtop the free Circulation; and by conſtant *Friction*, Irritation and Stimulation, to call the Blood and Spirits to the Parts moſt diſtant from the Seat of Heat, and Motion, and ſo plump up the ſuperficial Muſcles. And the ſame Effects it would have in other Creatures, and Man himſelf, if managed in the ſame manner, and with the ſame Care and Regularity.

Perſons, therefore, of weak Nerves and ſedentary Lives, would do well to ſupply the Want of other Exerciſe with ſpending half an Hour, Morning and Night, in currying and rubbing their whole Body, eſpecially their Limbs, with a Fleſh-bruſh. See EXERCISE.

FRICTION, or FRIXION, in Chymiſtry, is the ſame with what in Cookery we call *Frying*, *viz.* a Preparation of certain Matters in a Pan, with the Addition of ſome unctuous thing, as Oil, Fat, *&c.*

The *Frixion* of Medicines is perform'd over a ſlow, moderate Fire; and that of Foods over a quick one.

FRIDSTOLL, and FRITHSTOW, in our antient Writers, ſignifies a Seat, Chair, or Place of Peace. See SANCTUARY.

In the Charter of Immunities granted to the Church of St. *Peter* in *York*, by *Hen.* 1. and confirmed *An.* 5. *H.* 7. we read thus,—*Quod ſi aliquis veſano ſpiritu agitatus diabolico auſu quemquam capere præſumerit in Cathedra lapidea juxta Altare, quod Anglici vocant* Fridſtol, *i. e.* Cathedra quietudinis *vel* pacis; *hujus tam flagitioſi ſacrilegii emendatio ſub nullo judicio erat, ſub nullo pecuniæ numero claudebatur, ſed apud Anglos* Botelee, *hoc eſt, ſine emenda, vocabatur.*

Of theſe there were many others in *England*; but, the moſt famous was at *Beverly*, which had this Inſcription, *Hæc ſedes lapidea* Freedſtoll *dicitur, i. e.* Pacis Cathedra, *ad quam reus fugiendo perveniens, omnimodam habet ſecuritatem.* Camb.

It ſignifies alſo a Palace, which is uſually a priviledg'd Place.

FRIENDLY *Society*, ſee OFFICE of INSURANCE.

FRIEZE, or FRIZE, or FREEZE, in Architecture, a Member, or Diviſion of the Entablature of Columns, by the Antients call'd *Zophoros*. See FREEZE.

FRIGATOON, a *Venetian* Veſſel, commonly us'd in the *Adriatick*.

It is built with a ſquare Stern, and without any Fore-maſt; having only a Main-maſt, Miſſen-maſt, and Bowſprit.

FRIGID, of the Latin *frigidus*, cold, is variouſly uſed.

A *frigid* Style, is a low, jejune manner of Diction, wanting Force, Warmth of Imagination, Figures of Speech, *&c.* See STYLE.

FRIGID *Zone*, or *Frozen Zone*, in Geography. See ZONE.

FRIGIDITY, is alſo uſed in the ſame Senſe with *Impotency*; ſee IMPOTENCY.

FRIGORIFIC, in Phyſicks; ſomething that occaſions cold. See COLD.

Some Philoſophers, particularly *Gaſſendus*, and other Corpuſcularians, denying Cold to be a mere Privation or Abſence of Heat, contend that there are actual *frigorific* Corpuſcles, or Particles as well as fiery ones: Whence proceed Cold and Heat. But the later Philoſophers allow of no other *frigorific* Particles, beſide thoſe nitrous Salts, which float in the Air in cold Weather, and occaſion Freezing. See FREEZING.

FRIPPERY, a *French* Term, ſometimes uſed in our Language.

*Frippery*, or *Fripperie*, properly imports the Trade, or Traffick of old ſecond-hand Cloaths, and Goods.

The Word is alſo uſed for the Place, where ſuch ſort of Commerce is carried on, and even for the Commodities themſelves.——

The Company of *Frippiers*, or *Fripperers* at *Paris*, are a regular Corporation, of an antient Standing, and make a conſiderable Figure among the *Communautes* of that City. See BROKER.

FRIT, or FRITT, in the Glaſs Manufacture, is the Matter, or Ingredients, whereof Glaſs is to be made, calcined, or baked in a Furnace. See GLASS.

A Salt drawn from the Aſhes of the Plant Kali, or from Fern, mix'd with Sand, or Flints, and baked together, make an opake Maſs, called by Glaſſmen *Frit*; probably from *frittare*, to fry; or by reaſon the *Frit*, when melted, runs into lumps like *Fritters*, called by the *Italians*, *Fritelli*.

By the Antients it was called *Hammonitrum*, or *Ammonitrum*, of ἄμμος, Sand, and νίτρον, Nitre: Under which Name it is deſcribed by *Pliny* thus: Fine Sand from the *Volturnian* Sea, mix'd with three times the Quantity of Nitre, and melted, makes a Maſs call'd *Ammonitrum*; which being re-boiled, makes pure Glaſs. *Hiſt. Nat. L.* 36. *c.* 26.

*Frit*, *Neri* obſerves, is only the Calx of the Materials which make Glaſs; which, tho' they might be melted, and Glaſs be made without thus calcining them, yet would it take up much more Time. This Calcining, or making of *Frit*, ſerves to mix and incorporate the Materials together, and to evaporate all the ſuperfluous Humidity. The *Frit* once made, is readily fuſed and turned into Glaſs.——

There are three kinds of *Frits*: The Firſt, *Cryſtal Frit*, or that for Cryſtal Metal, made with Salt of Polverine and Sand.

The Second, and ordinary *Frit* is made of the bare Aſhes of Polverine, or Barillia, without extracting the Salt from them. This makes the ordinary white, or cryſtal Metal.

The Third, is *Frit* for Green Glaſſes, made of common Aſhes, without any Preparation. This laſt *Frit* will require 10 or 12 Hours baking.

The Materials in each, are to be finely powder'd, waſh'd, and ſierced; then equally mix'd; and frequently ſtirr'd together in the Melting Pot. For the reſt ſee GLASS, and CRYSTAL.

FRITHBURGH, ſee FRIBURGH.

FRITHGILD, was antiently the ſame we now call a *Guild*, or a *Fraternity*, or *Company*. See GILD.

FRIZE, or FRIEZE, in Architecture, a Part of the Entablature of Columns, more uſually wrote, and pronounced *Freeze*. See FREEZE.

FRIZE, or FREEZE, in Commerce, a kind of woollen Cloth, or Stuff, for Winter Wear, being *frized* or nap't on one Side; whence, in all Probability, it derives its Name.

Of *Frizes*, ſome are croſs'd; others not croſs'd. The former are chiefly of *Engliſh* Manufacture: The latter of *Iriſh*. See FRIZING.

FRIZING *of Cloth*, a Term in the Woolen Manufactury, applied to the forming of the Nap of a Cloth, or Stuff, into a number of little hard Burs, or Prominences, covering almoſt the whole Ground thereof.

Some Cloths are only *frized* on the Back-ſide; as black Cloths: Others on the right Side, as colour'd and mix'd Cloths, Rateens, Bays, Frizes, *&c.*

*Frizing* may be perform'd two ways: One *with the Hand*, *i. e.* by means of two Workmen, who conduct a kind of Plank, that ſerves as a *frizing* Inſtrument.

The other *by a Mill*, work'd either by Water, or a Horſe; or ſometimes by Men. This latter is eſteem'd the better way of *frizing*; by reaſon the Motion being uniform, and regular, the little Knobs of the *Frizing* are form'd more equably, and alike. The Structure of this uſeful Machine is as follows.

The three principal Parts are, The *Frizer*, or Criſper; the *Frizing* Table; and the *Drawer*, or Beam.

The two firſt are two equal Planks or Boards, each about ten Foot long, and fifteen Inches broad; differing only in this, that the *Frizing* Table is lined, or cover'd with a kind of coarſe Woolen Stuff, of a rough, ſturdy Nap; and that the Frizer is incruſtated with a kind of Cement, compoſed of

Glue, Gum Arabick, and yellow Sand, with a little *Aqua Vitæ*, or Urine. The *Beam*, or Drawer, is thus called, by reaſon it draws the Stuff from between the *Frizer* and *Frizing* Table, which is a wooden Roller, beſet all over with little, fine, ſhort Points or Ends of Wire, like thoſe of Cards, uſed in carding of Wool.

The Diſpoſition and Uſe of the Machine is thus: The Table ſtands immoveable, and bears, or ſuſtains the Cloth to be frized, which is with that Side uppermoſt, on which the *Frize* is to be raiſed. Over the Table is plac'd the *Frizer* at ſuch Diſtance from it, as to give room for the Stuff to be paſs'd between them: So, that the *Frizer* having a very ſlow ſemicircular Motion, meeting the long Hairs or Nap of the Cloth, twiſts and rolls them into little Knobs, or Buttons; while, at the ſame time, the Drawer, which is continually turning, draws away the Stuff from under the Frizer, and winds it over its own Points.

All that the Workman has to do while the Machine is going, is to ſtretch the Stuff on the Table, as faſt as the Drawer takes it off; and, from time to time, to take off the Stuff from the Points of the Drawer.

It has already been obſerv'd, that the *Frizing* Table is lined with Stuff of a ſhort, ſtiff, ſtubby Nab; the Uſe whereof is to detain the Cloth between the Table, and Frizer long enough for the Grain to be form'd; that the Drawer may not take it away too readily; which muſt otherwiſe be the Caſe, inaſmuch as it is not held by any thing at the other End.

It were needleſs to ſay any thing particular of the manner of *frizing* Stuffs with the Hand; it being the Aim of the Workmen to imitate as near as they can, with their wooden Inſtrument, the ſlow, equable, and circular Motion of the Machine. It needs only be added, that their Frizer is but about two Foot long, and one broad; and that to form the Nap more eaſily, they moiſten the Surface of the Stuff lightly with Water, mingled with Whites of Eggs, or Honey.

FRONT, the *Forehead*, or that Part of the Face above the Eyebrows. See *Os* FRONTIS.

The Word is form'd of the Latin *Frons*, and that from the *Greek* φρενεῖν, to think, perceive; of φρὴν, *mens*, the Mind, Thought. *Martinius*, to make out this Etymology, obſerves, that from the Forehead of a Perſon we perceive what he is, what he is capable of, and what he thinks of. *DuLaurens* chuſes to derive it from *ferre*, by reaſon it *bears* the Marks of what we have in our Head.

FRONT is alſo us'd where ſeveral Perſons, or Things are ranged Side by Side, and ſhew their *Front*.

Thoſe Troops ranged in form of Battel made a large *Front*: The three Legions were here diſpos'd in two Lines, as *Cæſar* us'd to do, when with a few Forces he had occaſion to extend his *Front*. The *Front* of the Army conſiſted of ſo many Battalions, and ſo many Squadrons.

The Military Evolutions teach how to make a *Front* of any Side, *i. e.* How to preſent the Face and Arms to the Enemy, what Side ſoever he attack on. They attack'd the Enemy in *Front*, and in *Flank*. See FLANK,

FRONT, in Architecture, the principal Face, or Side of a Building: Or that preſented to the chief Aſpect, or View. See FACE.

The Palace conſiſts of a large Pile in *Front*, flank'd with two Wings. See FRONTISPIECE.

FRONT, in Perſpective, a Projection, or Repreſentation of the Face or Fore-part of an Object; or of that Part directly oppoſite to the Eye; call'd alſo, and more uſually, *Orthography*. See ORTHOGRAPHY.

FRONTAL, in Architecture, a little *Fronton*, or Pediment, ſometimes placed over a little Door, or Window. See PEDIMENT.

FRONTALE *Os*, in Anatomy, ſee *Os* FRONTIS.

FRONTALE, or FRONTAL, in Medicine, an external Form of Remedy, applied on the Forehead, with a Bandage; for the Cure of the Head Ach, Megrim, Vapours, &c.

*Frontals* are compoſed of Roſes, Elder Flowers, Betony, Marjoram, Lavender, &c. wrap'd in a Linen Cloth, and applied over the Forehead and Temples.

There are alſo *Frontals* in manner of Linements, made of *Unguentum populeum*, Extract of Opium; or of Paſtes, Powders, Seeds, &c.

In *Frontals* applied to eaſe the Violence of the Head-ach in the height of Fevers, they frequently mix the Kernels of Cherries.

FRONTAL, FRONTLET, or BROW-BAND, is alſo us'd in ſpeaking of the Jewiſh Ceremonies.

The *Frontal* conſiſts of four ſeveral Pieces of Vellum, on each whereof is wrote ſome Text of Scripture. They are all laid on a piece of black Calves Leather, with Thongs to tye it by. The Jews apply the Leather with the Vellum on their Foreheads, in the Synagogue, and tie it round the Head with the Thongs.

FRONTALES, in Anatomy, two Muſcles, one on each Side the Forehead; commonly ſuppoſed to ſpring from the Skull, but now known to ariſe from the Occipital Muſcles; or rather, it appears that the *Frontales* and Occipitales are only one continued Digaſtric Muſcle, on each Side, moving the Scalp and Skin of the Forehead and Eyebrows. See OCCIPITALIS.

The *Frontales* begin to be thus denominated after they have begun to paſs the Coronal Suture, with Fibres paſſing obliquely to the Eyebrows, where they terminate, and in the lower Part of the Skin of the Forehead.

They have each two Appendages; the ſuperior, or external is commonly fix'd to the Bone of the Noſe; the lower is fix'd to the *Os Frontis*, and is by *Volcherus Coiter* made a diſtinct Muſcle, and called *Corrugator*, from its Uſe in drawing the Eyebrows to each other.

FRONTATED, a Term us'd by the Botaniſts, to expreſs that the Petalum or Leaf of a Flower grows broader and broader; and at laſt, perhaps, terminates in a Right Line.

In oppoſition to *cuſpidated*, which expreſſes that the Leaves terminate in a Point. See PETALA.

FRONTIER, the Border, Confine, or Extreme of a Kingdom, or Province; which the Enemies find in *Front*, when they would enter the ſame.

A *Frontier* Town: *Frontier* Province. *Frontiers* were antiently called *Marches*. See MARCHES.

The Word is derived from the French *Frontiere*, and that of the Latin *Frontaria*, as being a kind of Front oppoſed to the Enemy. *Skinner* derives *Frontier* from *Front*; inaſmuch as the *Frontier* is the exterior, and moſt advanced Part of a State, as the Front is that of the Face of a Man.

FRONTIS *Os*, in Anatomy, the Bone of the Forehead. See FRONT.

The *Os Frontis* is a Bone of the Cranium, in form almoſt round: It joins the Bones of the Sinciput and Temples by the Coronal Suture, and the Bones of the upper Jaw by the tranſverſe Suture, and the Os Sphænoides, by the Sphænoidal Suture. See CRANIUM.

It forms the upper Part of the Orbit, and has four Apophyſes, which are at the four Angles of the two Orbits.

It has two Holes above the Orbits, thro' which paſs the Vein, Artery, and ſome Twigs of the firſt Branch of the fifth Pair. It has alſo one in each Orbit, a little above the Planum, thro' which a Twig of the Opthalmick Branch of the fifth Pair of Nerves paſſes to the Noſe.

It has two Sinus's above the Eyebrows, between its two Tables; they are lined with a thin Membrane, in which there are ſeveral Blood Veſſels and Glands, which ſeparate a mucous Seroſity, that falls into the Noſtrils.

The Inſide of this Bone has ſeveral Inequalities, made by the Veſſels of the Dura Mater. It has two large Dimples made by the anterior Lobes of the Brain. Above the Criſta Galli, it has a ſmall blind Hole, into which the End of the Sinus *longitudinalis* is inſerted.

FRONTISPIECE, in Architecture, the *Portail*, or principal Face of a fine Building. See PORTAIL.

The *Frontiſpiece* of the *Louvre* is the fineſt Piece of Architecture in *France*.

The Word is form'd of the Latin *Frontiſpicium*, q. d. *Frontis hominis inſpectio*. Hence, by a Figure, we ſay the *Frontiſpiece* of a Book, meaning an Ornament with an engraven Title on the firſt Page.

FRONTLET, ſee FRONTAL.

FRONTON, in Architecture, an Ornament among us, more uſually called *Pediment*. See PEDIMENT.

FROST, an exceſſive cold State of the Weather, whereby the Motion and Fluidity of Liquors is ſuſpended: Or, it is that State of the Air, &c. whereby Fluids are converted into Ice. See FREEZING, and ICE.

Metals contract, or are ſhorten'd in *Froſt*. Monſ. *Auzout* found by Experience, that an iron Tube twelve Foot long loſt two Lines of its Length, upon being expoſed to the Air, in a froſty Night. But this we ſuppoſe wholly the Effect of the Cold.

*Froſt* does not contract Fluids, as was formerly imagined: On the contrary, it ſwells or dilates them by nearly $\frac{1}{10}$ of their Bulk.

*Scheffer* aſſures us, that in *Sweden* the *Froſt* pierces into the Earth two Cubits, or *Sweediſh* Ells; and turns what Moiſture is found therein, into a whitiſh Subſtance, like Ice. He adds, that ſtanding Waters freeze to a greater Depth; even to three Ells, or more: But thoſe that have a Current, leſs; and rapid Waters, and bubbling Springs, never.

Mr. *Boyle* gives us ſeveral Experiments of Veſſels made of Metals, exceeding thick and ſtrong; which being fill'd with Water, cloſe ſtop'd, and expoſed to the Cold: The Water, in freezing, coming to be expanded; and not finding either Room, or Vent, burſt the Veſſels.

A ſtrong Barrel of a Gun, with Water in it, cloſe ſtop'd and *frozen*, was rent the whole Length: And a ſmall Braſs Veſſel, five Inches deep, and two in Diameter, fill'd with Water, &c. liſt up its Lid, which was preſs'd with a Weight of 56 Pounds.

*Olearius*

*Olearius* aſſures us, that in the City of *Moſcow* he obſerv'd the Earth to be cleft by the *Froſt* many Yards length, and a Foot broad. *Scheffer* mentions ſudden Cracks or Rifts in the Ice of the Lakes of *Sweden*, nine or ten Foot deep, and many Leagues long; and adds, that the Rupture is made with a Noiſe not leſs terrible than if many Guns were diſcharged together. By ſuch means the Fiſhes are furniſh'd with Air; ſo that they are rarely found dead.

In the great *Froſt* of 1683, Oaks, Aſhes, Walnut Trees, *&c.* Mr. *Bobart* tells us, were miſerably ſplit, and cleft, ſo that one might ſee thro' them; and this frequently with terrible Noiſes, like the Exploſion of Fire Arms. The Clifts were not only in the Bodies, but continued to the larger Boughs, Roots, *&c.* See an Inquiry into the Circumſtances and Cauſes hereof in the *Philoſ. Tranſact.* N° 165. See alſo FREEZING *Rain.*

The Natural Hiſtory's of *Froſts* furniſh very extraordinary Effects thereof. The Trees are frequently ſcorch'd and burnt up as with the moſt exceſſive Heat; of which there are divers Inſtances in ſo warm a Climate as that of *Provence*. *Mezeray*, *Hiſt. de France*, An. 1570.

The Year 1708 was remarkable throughout the greateſt Part of *Europe* for a ſevere *Froſt*. Mr. *Derham* ſays, it was the greateſt in Degree, if not the moſt univerſal in the Memory of Man. It extended throughout *England*, *France*, *Germany*, *Denmark*, *Italy*, &c. But was ſcarce felt in *Scotland* or *Ireland*. All the Orange Trees, and Olives in *Italy*, *Provence*, &c. And all the Walnut Trees throughout *France*, with an Infinity of other Trees, periſh'd by *Froſt*.

They had a kind of Gangrene grew on them; which Monſ. *Gauteron* takes to have been the Effect of a corroſive Salt, corrupting and deſtroying their Texture. He adds, there is ſo much Reſemblance between the Gangrene befalling Plants thro' *Froſt*, and that which the Parts of Animals are liable to, that they muſt have ſome analogous Cauſe. Corroſive Humors burn the Parts of Animals; and the aerial Nitre condenſed, has the ſame Effect on the Parts of Plants. *Penetrabile* Frigus *adurit. Memoires de l'Academie Royale des Sciences*, An. 1709.

In *Germany* the Freſh-water Fiſh were every where killed; and a vaſt Deſtruction befell the ſmaller Birds. The Spittle was no ſooner out of a Man's Mouth, than it was froze. The *Luſatian* Letters add, that many Cows were froze to death in their Stalls; and many Travellers on the Road were ſome quite froze to death, others loſt their Hands, Feet, Noſes, or Ears.

*G. Remus*, the Author of an Academical Exerciſe on this Subject, publiſh'd at *Hall* in *Saxony*, entitled *Conſideratio Phyſico-Mathematica Hyemis proxime præterlapſi*, gives Inſtances from the News Papers, of two Gentlemen and a Smith in *England*; and above 60 Men, and many Cattle near *Paris*; and the like at *Venice*, and 80 *French* Soldiers near *Namur*; all kill'd on the Road with *Cold*. On the Coaſts of *Italy* many of the Mariners abroad the *Engliſh* Men of War died of the Cold; and ſeveral loſt part of their Fingers and Toes.

In *England*, the greateſt Sufferers in the animal Kingdom, Mr. *Derham* obſerves, were Birds and Inſects; particularly Larks and Robin-red-breaſts: Much the greateſt Part of which periſh'd. But the Vegetables were much the greateſt Sufferers. Few of the tender Sorts eſcaped: Bays, Hollies, Roſemary, Cypreſs, Alaterni, Phyllyrea's, Arbuti, Lauruſtines, and even Furze, with moſt of the fruteſcent Herbs, as Lavenders, Abrotonums, Rue, Thyme, *&c.* Mr. *Bobart* informs us, were generally deſtroyed. The ſame Writer adds, that the Sap of the finer Wall Fruit was ſo congealed, and diſorder'd, that it ſtagnated in the Limbs and Branches, and produced Diſorders like to Chillblains in human Bodies, which in many Parts of Trees would turn to Mortifications: That the very Buds of the finer Trees, both the Leaf Buds, and Bloſſom Buds, were quite killed and dried into a farinaceous Matter.

In *Switzerland*, *Scheuchzer* relates, that not only the Walnut Trees and Vines, but even the Beech, Laryx, *&c.* were undone. And yet in ſome Parts of thoſe Cantons, he adds, there never was a milder Winter Seaſon known.

Mr. *Derham* relates it as a common Obſervation, that Vegetables ſuffer'd more from the Sun, than the *Froſt*; in that the Sun-ſhine melting the Snow, and opening the Ground, left it more expoſed to the Rigours of the enſuing Night. And at a Meeting of the Royal Society, it was obſerved, that the Calamities which befel Trees, aroſe not purely from their being frozen; but principally from the Winds ſhaking and rocking them, when they were ſo; which rent and parted their Fibres. *Philoſoph. Tranſact.* N° 324.

*Hoar* FROST, or *White* FROST, *Pruina*, is the Dew, *froze* or congealed early in cold Mornings; chiefly in Autumn.

*Hoar Froſt*, Mr. *Regis* obſerves, conſiſts of an Aſſemblage of little Parcels of Ice, or Cryſtals; which are of various Figures, according to the different Diſpoſition of the Vapours, when met and condenſed by the Cold. See CRYSTALLIZATION.

Dew, is in all appearance the Matter of *Hoar Froſt*: Tho' many of the *Carteſians* will have it form'd of a Cloud, and either congealed in the Cloud, and ſo let fall; or ready to be congealed aſſoon as it arrives at the Earth. See DEW.

FROTH, a white, light Subſtance, form'd on the Surface of Fluids, by vehement Agitation. See BOILING.

*Froth* conſiſts wholly of little Spherules, or Globules; and accordingly, may be defined an Aſſemblage of *Aqueo-aereal* Bubbles. See BUBBLE; ſee alſo SCUM.

FROZEN, or FRIGID *Zone*, ſee ZONE.

FRUGIVOROUS *Birds*, according to Mr. *Willoughby*, are thoſe of the Parrot kind, which tho' they have a crooked Beek and Talons, and therefore belong in general to the Birds of Prey, as being rapacious, and carnivorous; yet becauſe they eat *Fruit* too, he diſtinguiſhes them from the reſt by the Title of *Frugivorous*. See BIRD.

FRUIT, in its general Senſe, includes whatever the Earth produces, for the Nouriſhment and Support of Men, and other Animals; as Herbs, Grains, Pulſe, Hay, Corn, Flax, and every thing, expreſs'd by the *Latins* under the Name *Fruges*. See HERB, GRAIN, PULSE.

The Devotion and Solemnity of Rogation Week, were inſtituted to procure a Bleſſing on the Fruits of the Earth. See ROGATION.

In the Civil Law, we diſtinguiſh three kinds of *Fruits*: Natural *Fruits*, which the Earth produces ſpontaneouſly, and without any Culture; as thoſe of Trees.

*Fruits* of Induſtry, which, tho' Natural, require ſome Culture to perfect them.

And Civil *Fruits*, which are only *Fruits* in the Eye of Law, as Rents, Salaries, Wages, *&c.*

In the Canon Law, *Fruits* include every thing whereof the Revenue of a Benefice conſiſts; as Glebe, Tythes, Rents, Offerings, Mills, *&c.* See FIRST *Fruits*.

FRUIT, in Nat. Hiſtory, is the Production of a Tree, or Plant; for the Propagation, or Multiplication of its Kind: In which Senſe *Fruit* includes all kinds of Seeds, with their Furniture, *&c.* See SEED.

FRUIT, in Botany, is properly that Part of a Plant wherein the Seed is contain'd; called by the Latins *Fructus*, and the *Greeks* καρπὸς.

The *Fruit* of a Plant is ſometimes ſingle, as in the Poppy; and ſometimes in great Number, as in the Apple Tree, *&c.* Sometimes dry; and ſometimes ſoft, and fleſhy.

The Word alſo implies an Aſſemblage of Seeds, in a Plant, as in a Ranuncula, Pea, *&c.* And in the general, all kinds of Grains, whether naked, or incloſed in a Cover, Capſula or Pod, whether bony, fleſhy, ſkinny, membranous, or the like. See SEED, GRAIN.

The *Fruit* is the Product, or Reſult of the Flower; or that for whoſe Production, Nutrition, *&c.* the Flower is intended. See FLOWER, and GENERATION *of Plants*.

The Structure and Parts of different *Fruits* are ſomewhat different; but in all the Species, the eſſential Parts of the *Fruit* appear to be only Continuations, or Expanſions of thoſe obſerv'd in the other Parts of the Tree.

Dr. *Beal* ſuggeſts ſome very good Reaſons for a direct Communication between the remoteſt Parts of the Tree and the *Fruit*; ſo that the ſame Fibres or Stamina, which conſtitute the Root, Trunk and Boughs are extended into the very Fruit. See PLANT.

Thus, cutting open an *Apple* tranſverſely, it will be found to conſiſt of four Parts, *viz.* 1° A *Skin*, or Cortex, which is only a Production of the Skin, or outer Bark of the Tree. 2° A *Parenchyma*, or Pulp; which is an Expanſion, and Intumeſcence of the Ble or inner Bark of the Tree. 3° *Fibres* or Ramifications of the woody Part of the Tree, diſperſed throughout the Parenchyma.

Of theſe laſt, Authors generally reckon fifteen principal Branches: Ten whereof penetrate the Parenchyma, and incline to the Baſis of the Flower; the other five aſcend more perpendicularly from the Pedicle, or Stalk, meet with the former at the Baſe of the Flower: To which Branches are faſten'd the Capſulæ or Coats of the Kernels.

Theſe Branches being at firſt extended through the Parenchyma to the Flower, furniſh the neceſſary Matter for the Vegetation thereof; but, the *Fruit* increaſing, it intercepts the Aliment, and thus the Flower is ſtarved, and falls off.

4° The *Core* which is the Produce of the Pith or Medulla of the Plant; indurated and ſtrengthen'd by Twigs of the Wood and Fibres, inoſculated therewith. It ſerves to furniſh a Cell, or Lodge for the Kernels; filtrates the Juice of the Parenchyma, and conveys it thus prepared to the Kernel.——

In a *Pear* we diſtinguiſh five Parts, *viz.* the Skin, Parenchyma, Ramification, Stone, and Acetarium.

The three firſt Parts are common to the Apple. The *Stone*, obſerv'd chiefly in Choak Pears, is a Congeries of ſtony Corpuſcles, diſpers'd throughout the whole Parenchy-

mi,

ma, but in the greateſt Plenty, and cloſeſt together, about the Centre or Acetarium. It is form'd of the ſtony or calculous Parts of the nutritious Juice of the Parenchyma, extravaſated in Maſſes.

The *Acetarium*, is a Subſtance of a tart, acid Taſte, of a globular Figure, inclos'd in an Aſſemblage of ſeveral of the ſtony Parts above-mention'd.

In the *Plumb*, *Cherry*, &c. there are four Parts, *viz.* A *Coat*, *Parenchyma*, *Ramification*, and *Stone*, or *Nucleus*. The Stone conſiſts of two very different Parts; the inner, call'd the *Kernel*, is ſoft, tender, and light; being derived from the Pith or Medulla of the Tree by ſeminal Branches, which penetrate the Baſe of the Stone: The external or harder Part, called the *Stone*, or *Shell*, is a Concretion of the ſtony, or calculous Parts of the nutritious Juice; like the Stone in Pears, and like that, contains a ſoft, parenchymous Matter within it.——

The *Nut*, analogous to which is the *Acorn*, conſiſts of a *Shell*, *Cortex*, and *Medulla*. The *Shell* conſiſts of a Coat and Parenchyma, derived from the Bark and Wood of the Tree. The *Cortex* conſiſts of an inner, and outer Part: The firſt is a Duplicature of the inner Tunic of the Shell; the ſecond is a moſſy Subſtance, derived from the ſame Source as the Parenchyma of the Shell. But whether the Medulla or Pulp of the Kernel ariſe from the Pith of the Tree, or the cortical Part of the *Fruit*, is not agreed.

Laſtly, *Berries*, as Grapes, *&c.* beſide three general Parts, *viz.* Coat, Parenchyma, and Ramification, contain *Grains* of a ſtony Nature, to do the Office of Seeds.

As to the Uſe of *Fruits*, beſide the Pleaſure and Advantage they afford Men, *&c.* they are of ſervice in guarding, preſerving, and feeding the Seed incloſed; in filtrating the coarſer, more earthy and ſtony Parts of the nutritious Juice of the Plant, and retaining it to themſelves; ſending none to the Seed but the pureſt, moſt elaborated and ſpirituous Parts for the Support and Growth of the tender delicate Embryo, or Plantule contain'd therein.

So that the *Fruit* does the ſame Office to the Seed that the Leaves do to the *Fruit*. See PLANT, GENERATION, FLOWER, LEAVES, &c.

FRUIT, in Gardening, is the Production of *Fruit-Trees*; as the *Apple*, *Pear*, *Plumb*, *Peach*, *Apricock*, *Cherry*, *Grape*, *Currant*, *Orange*, *Fig*, *Almond*, &c. See FRUIT-*Tree*.

*Fruits* are diſtinguiſh'd into *Stone Fruit*, and *Kernel Fruit*; *Summer Fruit*, and *Winter Fruit*; *Wall Fruit*, and *Dwarf Fruit*, &c.

Monſ. *Quintiney* obſerves, that cold, heavy, moiſt Lands produce the faireſt and largeſt *Fruit*; but the hotter, dryer, and lighter, the more delicious and rich taſted.

FRUITS, with regard to Commerce, are diſtinguiſh'd into Recent, or *Freſh*; and *Dry*.

Recent *Fruits* are thoſe ſold juſt as they are gather'd from the Tree, without any further Preparation: As are moſt of the Productions of our Gardens and Orchards, ſold by the *Fruiterers*.

Dry *Fruits* are thoſe dried in the Sun, or by Fire, with other Ingredients, ſometimes added to them, to make them keep; imported chiefly from beyond Sea, and ſold by the *Grocers*. Such are *Raiſins*, *Currants*, *Figs*, *Rice*, *Capers*, *Olives*, *Cloves*, *Nutmegs*, *Pepper*, and other *Spices*: Which ſee under their reſpective Articles, RAISIN, CURRANT, FIG, *&c.* See alſo SPICERY.

Under the Denomination of Dry *Fruits* are alſo frequently included Apples, Pears, Almonds, Filberds, *&c.*

FRUIT *Trees* are diſtinguiſh'd, like the *Fruits* they bear, into Wall *Fruit* Trees, Standard *Fruit* Trees, *&c.* See FRUIT, and TREE.

With regard to *Fruit Trees*, Monſ. *Quintiney* obſerves, 1° That the cutting and trimming of young Trees hinders them from quick bearing; tho' it contributes both to the Beauty of the Tree, and the Richneſs and Flavour of the *Fruit*.

2° That Kernel *Fruit* Trees come later to bear, than Stone *Fruit* Trees; the Time required by the firſt before they arrive at a fit Age for bearing, being, one with another, about four or five Years: But that when they do begin, they bear in greater Plenty than Stone *Fruit*.

3° That *Stone Fruit*, Figs and Grapes commonly bear conſiderably in three or four Years; and bear full Crops the fifth and ſixth Year; and hold it for many Years, if well order'd.

4° That *Fruits* in the ſame Neighbourhood will ripen a fortnight ſooner in ſome Grounds, than others of a different Temperature.

5° That in the ſame Spot, hot or cold Summers ſet conſiderably forward, or put backwards the ſame *Fruit*.

6° That the *Fruits* of Wall Trees generally ripen before thoſe on Standards; and thoſe on Standards before thoſe on Dwarfs.

7° That the *Fruits* of Wall Trees planted in the South and Eaſt Quarters commonly ripen about the ſame time; only thoſe in the South rather earlier than thoſe in the Eaſt: Thoſe in the Weſt are later by eight or ten Days, and thoſe in the North by 15 or 20. See EXPOSURE.

For the *Planting*, *Pruning*, *Engrafting*, &c. of *Fruit Trees*, ſee PLANTING, TRRNSPLANTING, PRUNING, ENGRAFTING, &c. See alſo ORCHARD, GARDEN, SEMINARY, &c.

Monſ. *de Reſſons*, in the *Memoires de l'Academie Royale des Sciences*, An. 1716. gives us a Method of *Grafting Stone Fruit Trees*, without loſing of Time; ſo that a Tree which bore ſorry *Fruit* the preceding Year, ſhall bear the choiceſt the Year following.

It frequently happens, that Perſons are deceiv'd in their *Fruit* Trees; eſpecially thoſe bought of the Nurſery Men: And it is a melancholy thing, after having waited three Years for *Fruit*, to find it naught at laſt; and to be oblig'd to graft the Tree again, and wait four Years more, for the ſecond Hopes. In effect, in the common Methods of grafting, they know nothing better than to cut off the Head of a Tree, and make it put forth new Wood, to graft in: This neceſſarily makes a long Delay; which Monſ. *Reſſons* ſhews how to abridge.

Upon conſidering the Union of the Sap in Grafts, that Author was led to think, that all the Office the Bark has in grafting, is to receive the Scutcheon; ſo that if the Bark be not quite hard, dry, and inflexible, and incapable of yielding without Cracking, or Burſting; it ſhould ſeem indifferent, whether one grafted on new Wood, or old: The Sap paſſing equally into both. Which Reaſoning had the Fortune to be verify'd by a Number of Experiments made with that View.

We are at liberty, then, to graft almoſt at any Age, and in any Wood. Accordingly, a Peach Tree of a worſe Kind or Quality, may be grafted from another of the beſt, in Autumn, in the Height of its *Fruit*, and Sap, without cutting off any Branches; the Graft ſoon cements to the Tree by the Union of the Saps, without ſhooting at all: So that cutting off the Branches above the Grafts the Spring following; the ſame Graft inſerted the preceding Autumn will ſhoot vigorouſly; and being on a Wood of the ſame Kind, the *Fruit* thenceforth produc'd will be much the larger and finer. But this is not the great Point: For the Tree thus ingrafted will not bear till the third Year; and we want *Fruit* the firſt.

In order to this, it is to be obſerv'd, that there are three kinds of Branches: *Wood Branches*, growing immediately from the Stem or Stock of the Tree: *Fruit Branches*, and Branches *half Wood*, *half Fruit*, being ſuch as ariſing from the largeſt Wood Branches, preſerve the Character thereof, but which, in two Years time will produce *Fruit* Branches. Now, 'tis theſe intermediate kind of Branches, that we are to chuſe for Scutcheons or Grafts. They are eaſily known by being bigger than the *Fruit* Branches; and leſs than the Wood Branches: They have each of them two, three, four, or even five Leaves to each Eye; and the Eyes are further diſtant from each other than thoſe of the *Fruit* Branches, but cloſer than thoſe of the Wood Branches. It muſt be added, that the Eyes on ſuch Branch are three; one, intended for a Wood Branch, being ſituate between the two Leaves, and advancing further than the other two, which are intended for *Fruit*, and are plac'd without-ſide the Leaves.

'Tis theſe laſt are the preciſe Subject to be choſen for the Grafting withal. Twelve of theſe Scutcheons, more or leſs, according to the Strength of the Tree to be grafted on, being duly applied; we may depend on a Crop of good *Fruit*, the very next Year, on the ſame Tree which laſt Year produced the worſt.

*Stone*-FRUIT-*Trees*, ſee STONE *Fruit*, and TREE.
*Wall*-FRUIT-*Trees*, ſee WALL *Fruit*, and WALL.

FRUITERY, a Place for the laying up and keeping of *Fruit*.

The *Fruitery* ſhould be inacceſſible to any thing of Moiſture, or even Froſt.

FRUITFULNESS, the Quality of bearing plenty of Fruit; call'd alſo Fertility, and *Fecundity*. See FECUNDITY.

FRUMENTACEOUS, a Term applied to all Plants which have a Conformity with Wheat, or *Frumentum*; either in reſpect of their Fruits, Leaves, Ears, or the like.

Thus Barley, Dogs-graſs, *&c.* are *Frumentaceous Plants*.

FRUMENTARII, in Antiquity, a kind of Soldiers, or Archers, under the Weſtern Empire.

St. *Cyprian* relates, in one of his Letters, that ſome of theſe *Frumentarii* were ſent to take him.

The firſt time we read of *Frumentarii*, as Officers, is in the Time of the Emperor *Adrian*. *Spartian*, in his Life of that Prince, aſſures us, that he made uſe of them to inform himſelf of what paſs'd: Before, the Name *Frumentarius* was only given to the Corn Merchants, or Meaſurers of Corn.

Theſe *Frumentarii* did not make any particular Corps, diſtinct from the other Forces: But there were a certain Number of them in each Legion; as, among us, there are a certain Number of Grenadiers in each Battalion. Accordingly, in antient Inſcriptions, we meet with *Frumentarii* of this or that Legion.

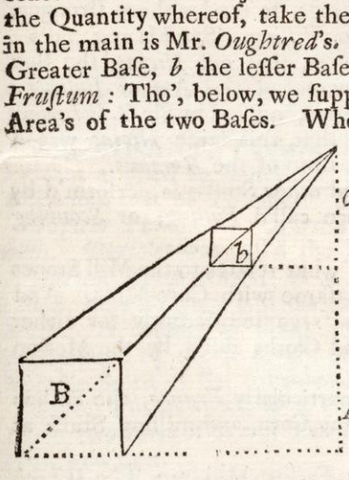
'Tis ſuppos'd they were originally a Number of young Perſons diſpos'd by *Auguſtus* throughout the Provinces, particularly on all the grand Roads, to advertiſe the Emperor with all Expedition of every thing that happen'd. In order to this, they had a kind of Intendance of all the Carriages: And on this account came to be employ'd for the Conveyance of Corn, *Frumentum*, to the Armies: Whence their Appellation.

Afterwards they were incorporated into the Troops themſelves; where they ſtill retain'd their antient Name.

Their principal Office was the giving of Intelligence; in which they agreed with thoſe call'd *Curioſi*, with whom they were frequently join'd. See CURIOSI.

FRUMENTY, popularly FURMETY, a kind of Pottage, or Broth, the Baſis whereof is Wheat, boil'd up with Milk, Sugar, and ſometimes Spice.

*Pliny* tells us, that in his Time they mix'd Chalk among it. *Galen* deſcribes it as a very nutritious ſort of Corn or Pulſe, boil'd with Water, Wine, and Oil.



The *Latins* call'd it *Alica*, which *Feſtus* derives *ab alendo*; as being very feeding. But then it muſt be obſerv'd, they made it of any kind of Corn.

Ours being reſtrain'd to Wheat, we have given its Denomination accordingly, from *Frumentum*.——An Emulſion, wherein Wheat were an Ingredient, would be a kind of *Frumenty*.

FRUSTUM, in Mathematicks, a Piece cut off or ſeparated from a Body.

Thus the *Fruſtum of a Pyramid*, or *Cone*, is a Part, or Piece thereof; cut off, uſually, by a Plane, parallel to the Baſe. See PYRAMID, and CONE.

All round, and ſquare Timber that goes tapering, may be conceived as the *Fruſtum* of a Cone, or Pyramid; to find the Quantity whereof, take the following Theorem; which in the main is Mr. *Oughtred's*. Given, B, the Side of the Greater Baſe, *b* the leſſer Baſe's Side, A the Height of the *Fruſtum*: Tho', below, we ſuppoſe B and *b* to repreſent the Area's of the two Baſes. Whole Height $a + A = H$.

Firſt, to find *a*, ſay, as $B - b : b :: A : \frac{bA}{B-b}$, or $\frac{bA}{x}$. Now B H = 3 times the whole Pyramid, becauſe any Priſm is 3 times a Pyramid of the ſame Baſe, and Height with it, by 7 and 10 Euclid, and $ba = 3$ times the upper Pyramid.

Wherefore $\frac{BH - ba}{3}$ equal to the *Fruſtum* of the Pyramid required; which Theorem in Words is this.

Multiply the lower Baſe by the whole Height; and from the Product ſubtract the upper Baſe multiply'd by the Height of the Top-piece wanting; and then one third of the Remainder ſhall give the *Fruſtum*.

And the ſame way you may proceed for the *Fruſtum* of a Cone; only it will be more difficult to find the Circular Baſes.

FRUTEX, SHRUB, a Vegetable, of a Genus between a Tree, and Herb; but of a woody Subſtance. See SHRUB.

FRUTICOSE *Stalks*, of Plants, are thoſe of a hard woody Subſtance. See STALK.

FRYTH, or FRITH, is explain'd by Sir *Edward Coke*, as a Plain between two Woods; a *Lawnd*. *Chaucer* uſes it for a Wood.

*Camden*, for an Arm of the Sea; or a Streight, between two Lands: from *Fretum*.—Maketh his Iſſue into the Eſtuary or *Frith* of *Thames*.

*Smith*, in his *England*'s Improvement, makes it ſignify all Hedge-wood, except Thorns.

How to reconcile theſe different Sentiments, we know not; but we are ſure the *Saxon* Word ſignifies *Peace*; and that *Fryth*, in our Records, is often us'd for a Wood: *Lector, tu tibi Oedipus eſto.*

FUAGE, or FOCAGE, a Tax, or Impoſition, laid on Hearths, or Chimnies; *i. e.* Fire-places, or Families, call'd alſo *Hearth Silver*, and *Chimney Money*. See HEARTH *Silver*, and CHIMNEY *Money*.

*Edward* III, the Black Prince, having *Acquitain* granted him, laid an Impoſition of *Fuage*, or *Focage* upon the Subjects of that Dukedom, *viz.* One Shilling for every Fire. After his Example, *Charles* V. of *France* laid a like Tax of a Franc for each Fire for one Year only. His Succeſſor *Charles* VI. augmented it under the ſame Name: *Charles* VII. render'd it perpetual, and call'd it *Taille*.

By an Ordinance of *Humbert* II. Dauphin of *France*, the Impoſition of *Fouage*, or *Feuage*, was then laid *per Feu*, i. e. *per Fire*, or Family, *ſeu per Lares focum habentes*. In *Latin* it was call'd *Focagium*, q. d. *pro ſingulis focis*.

Sometimes it was alſo call'd *Fournage*, on account of the Oven, or Furnace: In *Greek* καπνικὸν, of καπνὸς, *fumus*, Smoak.

In *Will. Tyr. de Bello Sacro*, it is call'd *Foagium*: For it was alſo impos'd by the Kings of *Jeruſalem*. The Counts, and other Lords likewiſe impos'd it on their Feudataries, or Vaſſals. *Zonaras* aſſures us, that the General *Nicephorus* firſt eſtabliſh'd it among the *Greeks*.

FUCUS, in Natural Hiſtory, a Sea-plant, call'd alſo *Alga*. See *Marine* PLANT.

The Flowers of the *Fucus* grow on the whole Extent of its Leaves; in form of little Tufts, compoſed of a great Number of exceedingly fine Filaments, about the length of a Line. The Seed is inclos'd in a viſcid Matter, at the Extremity of the Leaves. See MUSHROOM, CORAL, GENERATION *of Plants*, SEED, *&c.*

FUCUS is alſo us'd for a *Paint*, or a Compoſition applied on the Face, to beautify it, and heighten the Complexion. See COSMETIC.

Old Women make uſe of *Fucus's* and Pomatums, to appear young. The *Fucus* made with Ceruſs, is corroſive, and pernicious to the Skin.

The Chymiſts abuſe the Ladies in ſelling them Oil of Bricks, as an excellent *Fucus*. *Pliny* ſays, that the *Fucus* of the *Roman* Ladies was a kind of white Earth, or Chalk brought from *Chio*, and *Samos*, diſſolv'd in Water.

The *Fucus Solimanni* is a Compoſition of prepared Sublimate, in great Repute among the *Spaniards* of *Peru*.

FUEL, or FEWEL, the Pabulum of Fire; ſee FEWEL.

FUGA *Vacui*, in the antient School Philoſophy, a Principle, whereby various Effects were produced, ariſing from a ſuppoſed Averſion, in Nature, to a Vacuum. See VACUUM.

The *Fuga Vacui* was a very fertile, and extenſive Principle; and ſolved abundance of Difficulties with a deal of Eaſe. Suppoſe, *e. gr.* a Syringe; immerſe one Extreme of it in Water; and draw up the Embolus, or Sucker: Then hear how the Antients will reaſon upon it. They firſt laid it down for granted, that there can be no Vacuum; then arguing, that there muſt be a Vacuum, unleſs the Water ſhould follow the Embolus; they conclude, that the higher the Embolus is drawn, the higher ſhall the Water aſcend; and this, *Fugâ Vacui*, to keep out a Vacuum.

In after times, the Matter was ſtated in other Terms; and the Water was ſaid to riſe, *Metu Vacui*, for fear of the Vacuum; which muſt otherwiſe enſue. And at length, as if this were not enough, inſtead of *Fuga*, and *Metus*, they ſubſtituted the Word *Horror*; and affirm'd, that the Water roſe out of Natures *Abhorrence* of a Vacuum. Which was juſt as good Senſe, as if a Perſon being aſk'd, Why Coals were brought to *London*? ſhould anſwer, That it was done *fuga*, or *metu*, or *horrore frigoris*; for *fear* of Cold. Which is giving the Final Cauſe, when the Efficient one was required.

Moſt of the Phænomena, which the Antients aſcribed to the *Fuga Vacui*, the Moderns have demonſtrated to ariſe from the Gravity and Preſſure of the Air. This is the Caſe in the Aſcent of Water in Syringes, Pumps, *&c.* See AIR; ſee alſo PUMP, SYRINGE, &c.

FUGALIA, in Antiquity, a Feaſt, celebrated among the *Romans*. See FEAST.

*Hoffman*, after *Feſtus*, takes the *Fugalia* to be the ſame with the *Regifugium*, a Feaſt held on the 24th of *February*, in Memory of the Expulſion of the Kings, and the aboliſhing of the Monarchical Government. But *Struvius*, *Antiq. Roman. Syntag. c.* 9. diſtinguiſhes the *Fugalia* from the *Regifuge*: And even doubts, whether the *Regifugium* were thus called on account of the Expulſion of the Kings; or, by reaſon the *Rex Sacrorum*, after the Sacrifice was ended, fled haſtily out of the *Forum*, and *Comitia*. See REGIFUGIUM.

Be this as it will, the only antient Author of Note, that makes expreſs mention of the *Fugalia*, is St. *Auguſtin*, *De Civit. Dei*, L. II. c. 6. And his Commentator *Vives*, ſhews a great Inclination to correct the Reading of the Word, were it not, that St. *Auguſtin* adds, that the Feaſt was a true *Fugalia*; all Decency and Modeſty being baniſh'd therefrom.

That learned Perſon conjectures, that the *Fugalia* were the ſame thing with the *Poplifugia*, or the Feaſt of *Fugia*, the Goddeſs of Joy; occaſioned by the Rout of an Enemy; which was the Reaſon why the People abandon'd themſelves to Riot and Debauchery: And that the Feaſt was firſt inſtituted on occaſion of the Victory gain'd over the *Ficulneates*, *Fidenates*, and neighbouring Nations, upon their Attempt to take Poſſeſſion of *Rome*, the Day after

ter the People had withdrawn from it. As related by *Varro L. V. de Ling. Lat.*

But *Varro* relates, that the *Poplifugia*, which fell on the Month of *June*, were held in Memory of the Flight, or Retreat of the People, in a Sedition rais'd among them: 'Tis true, he adds, that the Day followed ſoon after the Retreat of the *Gauls*, and the time when the neighbouring Nations conſpir'd againſt them: But this does not appear to have any relation to the *Poplifugia*, being only meant to mark the *Æra*, or Time when the Sedition and Flight of the *Roman* People happen'd.

After all, tho' the *Poplifugia* might have been originally eſtabliſh'd in Commemoration of the Flight of the People; and not that of the Enemies; this does not hinder, but the *Fugalia* of St. *Auguſtin* may probably be the *Poplifugia* of *Varro*: according to the Conjecture of *Vives*.

FUGITIVE, a Wanderer, or Renegado; a Perſon oblig'd to fly his Country, or remove from a Place where he had ſome Aboad, or Eſtabliſhment; on account of his Crimes, Debts, or other Occaſions.

A Perſon who has broke open, or eſcaped out of Priſon, is oblig'd to be a *Fugitive*. *Cain* became a *Fugitive*, after the Murther of his Brother.

Among the Learned, *fugitive* Pieces are thoſe little Compoſitions, on looſe Sheets, or half Sheets; thus call'd, becauſe eaſily loſt, and ſoon forgot.

In the *Roman* Law, a *Fugitive* Slave was ſuch a one as was apt to run away from his Maſter. In ſelling a Slave, the Maſter was oblig'd to declare, whether or no he were *fugitive*. The Term is alſo apply'd to Deſerters in an Army; or thoſe who fly from the Combat.

FUGITIVES *Goods*, *Bona Fugitivorum*, are the proper Goods of him that flies upon Felony; which after the Flight lawfully found, do belong to the King, or Lord of the Manor. See WAIF.

FUGUE, in Muſic, is when the different Parts of a muſical Compoſition follow each other; each repeating what the firſt had perform'd.

There are three kinds of *Fugues:* The Single *Fugue*; Double *Fugue*, and *Counterfugue*.

The *Single*, or *Simple* FUGUE, is ſome Point conſiſting of 4, 5, 6, or any other Number of Notes, begun by one ſingle Part, and then ſeconded by a third, fourth, fifth, and ſixth Part, if the Compoſition conſiſts of ſo many, repeating the ſame, or ſuch like Notes; ſo that the ſeveral Parts follow, or come in, one after another in the ſame manner, the leading Parts ſtill flying before thoſe which follow.

FUGUE-*Double*, is when two or more different Points move together in a *Fugue*, and are alternately interchanged by ſeveral Parts.

*For the* Counter FUGE, ſee COUNTER *Fugue*.

The *Italians* ſay, a *Fugue of Rooms*, or *Chambers*, meaning a Series, or Range of Rooms, the Doors whereof anſwer in a Right Line behind each other; ſo as they may be all ſeen at once, from one Extreme to the other.

FULCRUM, PROP, in Mechanicks; ſee LEVER.

FULIGINOUS, an Epithet applied to a thick Smoak, or Vapour, replete with Soot, or other craſs Matter. See SMOAK, SOOT, and VAPOUR.

The Word is form'd from the Latin *Fuligo*, Soot; and is rarely uſed but when join'd with *Vapour*. In the firſt Fuſion of Metals there exhales a great deal of *fuliginous* Vapour; which retain'd and collected, makes what we call *Litharge*. See LITHARGE.

Lampblack is what is gather'd from the *fuliginous* Vapours of Pines, and other reſinous Woods, when burnt. See *Lamp* BLACK.

Some Phyſicians talk of *fuliginous* Vapours, emitted from the Spleen to the Brain; which they will have the Cauſe of the Hypocondriac and Hyſteric Diſorders: Thence called the *Vapours* and *Spleen*. See HYPOCONDRIAC, &c.

FULL, is variouſly us'd, in oppoſition to empty, narrow, confin'd, &c.

The *Carteſians* hold, that the Univerſe is *full*, i. e. every Part, or Point has Matter in it. See PLENUM.

When the Body is *full* of Humors, it ſhould be purged. See PLENITUDE, and PLETHORA.

An Embaſſador has *full* Power given him to act, tranſact, &c.——The Army was in *full* March, *i. e.* the whole Army was in March, with all the Forces it conſiſted of.—

A Man is ſaid to bear the Arms of a Family, *full*, i. e. without any Differences. See DIFFERENCE.

FULL *Moon*, *Plenilunium*, the Phaſis of the Moon, when her whole Diſk, or Face is illumined; which is in the Time of her Oppoſition to the Sun. See PHASIS, MOON, and OPPOSITION.—

Eclipſes of the Moon, happen at the time of *full Moon*, See ECLIPSE.

FULLER, a Workman employ'd in the Manufactories, to *full*, mill, or ſcour Cloths, Rateens, Serges, and other woolen Stuffs, by means of a Mill; to render them thicker, more compact, and durable. See FULLING.

The *Fullers*, among the *Romans*, waſh'd, ſcour'd, and fitted up Cloaths; and their Office was judged of that Importance, that there were formal Laws preſcrib'd them for the manner of performing it.

Such was the *Lex Metella de Fullonibus*. See alſo *Pliny* L. VII. c. 56. *Ulpian* lib. 12. ff. *de Furtis*, l. 13. §. 6. *Locati*, l. 12. §. 6. ff. &c.

The Word is form'd of the Latin *Fullo*, which ſignifies the ſame thing.

FULLERS *Earth*, a fatty, foſſile Earth, abounding in Nitre; of great Uſe in the woolen Manufacture.

It ſerves to ſcour Cloths, Stuffs, &c. and imbibe all the Greaſe, and Oil neceſſarily uſed in the preparing, dreſſing, &c. of the *Wool*. See WOOL, CARDING, WEAVING, CLOTH, &c.

*Fullers Earth* is only dug out of certain Pitts near *Brickhill* in *Staffordſhire*; no other Country affording any.

It is abſolutely neceſſary to the well dreſſing of Cloth; and hence, Foreigners, who can procure Wool to be clandeſtinely exported out of the Kingdom, can never reach to the Perfection of the *Engliſh* Cloths, &c. without *Fullers* Earth.

For this reaſon, it is made a contraband Commodity; and the Export made equally criminal, with that of exporting Wool. See CONTRABAND.

Abroad they make great uſe of Urine, in lieu of *Fullers* Earth. This Earth abounds much in the vegetative Salt, which promotes the Growth of Plants; and is therefore reckon'd by Sir *H. Plat*, and others, a great Improver of Land. When diſſolv'd in Vinegar, it diſperſes Pimples and Puſhes; checks Inflammations, and cures Burns.

FULLERS *Weed*, *Thiſtle*, or *Teazle*. See TEAZLE.

FULLERY, a Work-houſe, or Place where Cloths, &c. are *fulled*.

The Term is principally underſtood of the Fulling Mill. Thus, when they ſay, Carry that Cloth, Serge, or the like, to the *Fullery*, they mean it is to be ſent to the Mill, to be ſcour'd and fulled. See *Fulling* MILL.

FULLING, the Art, or Act of cleanſing, beating, and preſſing Cloths, Stuffs, Stockings, to render them ſtronger, cloſer, and firmer; call'd alſo *Milling*. See MILL.

*Pliny*, *lib.* 7. *cap.* 16. aſſures, that one *Nicias*, the Son of *Hermias*, was the firſt Inventor of the Art of *Fulling*: And it appears by an Inſcription, quoted by Sir *G. Wheeler*, in his Travels thro' *Greece*, that this ſame *Nicias* was a Governour in *Greece*, in the time of the *Romans*.

The *Fulling of Cloths*, and other Stuffs, is perform'd by a kind of Water Mill; thence call'd *Fulling*, or *Scouring Mill*.

Theſe Mills, excepting in what relates to the Mill Stones and Hopper, are much the ſame with Corn Mills. And there are even ſome, which ſerve indifferently for either Uſe; Corn being ground, and Cloths full'd by the Motion of the ſame Wheel.

Whence, in ſome Places, particularly *France*, the Fullers are call'd Millers; as grinding Corn, and milling Stuffs at the ſame time.

The principal Parts of the *Fulling* Mill, are, The *Wheel*, with its Trundle; which gives Motion to the *Tree*, or Spindle, whoſe Teeth communicate it to the *Peſtles*, or Stampers, which are hereby raiſed, and fallen alternately according as its Teeth catch on, or quit a kind of Latch in the Middle of each Peſtle. The Peſtles and Troughs are of Wood; each Trough having at leaſt two, ſometimes three Peſtles, at the Diſcretion of the Maſter, or according to the Force of the Stream of Water.

In theſe Troughs are laid the Cloths, Stuffs, &c. intended to be *fulled:* Then, letting the Current of Water fall on the Wheel, the Peſtles are ſucceſſively let fall thereon, and by their Weight and Velocity ſtamp, and preſs the Stuffs very ſtrongly; which by this means become thickned and condenſed.

In the Courſe of the Operation, they ſometimes make uſe of Urine; ſometimes Fullers Earth, and ſometimes Soap.

To prepare the Stuffs, to receive the firſt Impreſſions of the Peſtle, they are uſually laid in Urine; then in Fullers Earth, and Water; and laſtly in Soap, diſſolv'd in hot Water.

Soap alone would do very well; but this is expenſive; though Fullers Earth, in the way of our dreſſing, is ſcarce inferior thereto; but then it muſt be well clear'd of all Stones and Grittineſſes, which are apt to make Holes in the Stuff.

As to Urine, 'tis certainly prejudicial, and ought to be entirely diſcarded; not ſo much on account of its ill Smell, as of its Sharpneſs, and Saltneſs; which is apt to render the Stuffs dry and harſh.

The true Method of *Fulling* with Soap, is deliver'd by Monſ. *Colinet*, in an authentic Memoir on that Subject, ſupported by Experiments made by order of the Marquis *de Louvois*, then Super-Intendent of the Arts and Manufactories of *France*. The Subſtance of which we ſhall here ſubjoin.

*Method*

*Method of* Fulling *Cloths and Woolen Stuffs, with Soap.*

A colour'd Cloth, of about 45 Ells, is to be laid, in the uſual manner, in the Trough of a *Fulling* Mill; without firſt ſoaking it in Water, as is commonly practiced in many Places.

To full this Trough of Cloth, 15 Pounds of Soap are requir'd; one half of which is to be melted in two Pails of River or Spring Water, made as hot as the Hand can well bear it. This Solution is to be pour'd by little and little upon the Cloth, in proportion as 'tis laid in the Trough: And thus it is to be fulled for at leaſt two Hours; after which it is to be taken out, and ſtretch'd.

This done, the Cloth is immediately return'd into the ſame Trough; without any new Soap; and there full'd two Hours more. Then taking it out, they wring it well, to expreſs all the Greaſe and Filth.

After this ſecond *Fulling*, the Remainder of the Soap is melted, as the former, and caſt at four different times, on the Cloth; remembring to take out the Cloth every two Hours, to ſtretch it, and undo the Plaits and Wrinkles it has acquired in the Trough. When they perceive it ſufficiently full'd, and brought to the Quality and Thickneſs required, they ſcour it out for good, in hot Water, keeping it in the Trough, till it be quite clean.

As to white Cloths; in regard theſe *full* more eaſily, and in leſs time, than colour'd ones, a third Part of the Soap may be ſpared.—

FULLING *of Stockings, Caps*, &c. ſhould be performed ſomewhat differently; *viz.* either with the Feet, or the Hands; on a kind of Rack, or wooden Machine, either arm'd with Teeth of the ſame Matter, or elſe Horſes, or Bullocks Teeth.

The Ingredients made uſe of herein, are Urine, green Soap, white Soap, and Fullers Earth. But the Urine alſo is reckon'd prejudicial here.

Note, woven Stockings, *&c.* ſhould be full'd with Soap alone: For thoſe that are knit, Earth may be us'd with the Soap.

Indeed, 'tis frequent to full theſe kinds of Works with the Mill, after the uſual manner of Cloths, *&c.* But that is too coarſe and violent a Manner, and apt to damage the Work, unleſs it be very ſtrong. See STOCKINGS.

FULMINANT, FULMINANS, or FULMINATING, an Epithet applied to ſomething that *thunders*, or makes a Noiſe like that of Thunder. See THUNDER.

*Jupiter Fulminans: Aurum Fulminans: Pulvis Fulminans. Pericles* was call'd the *fulminating* Orator.

*Aurum* FULMINANS, is a Preparation of Gold, thus called, becauſe when laid on the Fire, it produces a huge Noiſe. It conſiſts of Gold diſſolv'd in *Aqua Regia*, and precipitated by means of Oil of Tartar *per Deliquium*; or Volatile Spirit of Sal Ammoniac. See GOLD.

*Pulvis* FULMINANS, is a Compoſition of three Parts of Nitre, two Parts of Salt of Tartar, and one of Sulphur. See GUN-POWDER.

Both the *Aurum* and *Pulvis Fulminans* produce their Effect principally downwards: In which they differ from Gunpowder, which acts *in orbem*; but principally upwards. If they be laid in Braſs Ladles, and ſo ſet a fire; after Fulmination, the Ladles will be found perforated.—

FULMINATING *Legion*, was a Legion in the *Roman* Army, conſiſting of Chriſtian Soldiers; who, in the Expedition of the Emperor *Marcus Aurelius* againſt the *Sarmatæ*, *Quadi* and *Marcomanni*, ſaved the whole Army, then ready to periſh of Thirſt; by procuring, with their Prayers, a very plentiful Shower thereon: And, at the ſame time, a furious Hail, mix'd with Lightning and Thunderbolts on the Enemy. See LEGION.

This is the Account commonly given by Eccleſiaſtical Hiſtorians: And the whole Hiſtory is engraven in Baſs-Relivo's, on the *Anthonine* Column. And hence aroſe the Denomination *Fulminants*: Tho' ſome ſay, that the Legion thoſe Chriſtians were of, was called the *Fulminating Legion* before.

FULMINATION, in the *Romiſh* Canon Law, a Sentence of a Biſhop, Official, or other Eccleſiaſtic appointed by the Pope; whereby it is decreed, that ſome Bull ſent from the Pope, ſhall be executed. See BULL.

*Fulmination* is the ſame thing with the *Verification*, or Recognition of a Letter, or Inſtrument of a Prince in a Lay Court.

FULMINATION is alſo us'd for the Denunciation, or Execution of a Sentence of Anathema, made in publick, with due Solemnity.

In fulminating Anathema's, the Biſhop who pronounces Sentence, is to be cloathed in his Epiſcopalia. See ANATHEMA, EXCOMMUNICATION, &c.

FULMINATION, or FULGURATION, in Chymiſtry, a vehement Noiſe, or Shock made by divers Preparations; as *Aurum fulminans*, &c. when ſet on Fire. See DETONATION.

FUMIGATION, in Medicine, and Chymiſtry, is underſtood of Things taken in *Fume*, or Smoak; or that are turn'd into Smoak: And particularly for the Corroſion of a Metal, by the Fumes, or Steam of Lead, Mercury, Vinegar, or other acrimonious Matter.

'Tis dangerous taking Mercury by *Fumigation*. This *Fumigation* is a kind of potential Calcination; the Vapour of Mercury laid on the Fire, corroding and reducing into a Calx, the little Laminæa of Metals ſuſpended over it. See MERCURY.

Ceruſs is made by the *Fumigation*, or Vapour of Vinegar, gnawing and corroding Plates of Lead. See CERUSS.

*Alexander Severus* made a very ſevere Decree againſt Phyſicians who ſold Smoak, that is, *Fumigations*. The Decree imported, Fumo *pereat qui* Fumum *vendidit*. A Northern Phyſician has an expreſs Treatiſe to juſtify the Phyſicians in this reſpect.

FUMIGATION is alſo uſed for the Act of making a ſuſpended Body receive the Fumes, or Steam of one or more other Bodies; in order to calcine them, to correct them, or impart to them ſome new Quality.

FUNAMBULUS, among the *Romans*, was what we call a Rope-dancer, and the Greeks, *Scænobates*. See ROPE-DANCER.

The Term is alſo us'd for ſuch as letting themſelves down by a Rope, or Cord; make their Eſcape out of a City, or Place beſieged: as obſerv'd by *Du Cange*.

*Julius Capitolinus*, and *Horace*, make mention of *Funambuli*. *Acron*, on *Horace*, aſſures us, that it was the Orator *Meſſala*, who firſt introduc'd the Word *Funambulus*, in lieu of *Schænobates*, us'd by the *Greeks*. For the *Greeks* ſeem to have had of theſe Rope Dancers from the firſt Inſtitution of their Scenic Games, which are ſaid to have been invented about the time of *Iſcharius*, Son of *Erigon*; or of *Dionyſius*, ſurnamed *Liber Pater*, whom *Theſeus* firſt introduced into *Athens*.

At *Rome*, the *Funambuli* firſt appear'd under the Conſulate of *Sulpitius Peticus*, and *Licinius Stolo*, who were the firſt Introducers of the Scenic Repreſentations. It is added, that they were firſt exhibited in the Iſland of the *Tiber*: And that the Cenſors *Meſſala* and *Caſſius* afterwards promoted them to the Theatre.

In the *Floralia*, or *Ludi Florales*, held under *Galba*, there were *funambulatory* Elephants, as we are inform'd by *Suetonius*. *Nero* ſhewed the like, in honour of his Mother *Agrippina*. *Vopiſcus* relates the ſame of the Time of *Carinus* and *Numerianus*.

There was a *Funambulus*, it ſeems, of that Mankind, who perform'd at the time when the *Hecyra* of *Terence* was acted; and the Poet complains, that the Spectacle prevented the People from attending to his Comedy. *Ita populus ſtudio ſtupidus in* funambulo *animum occuparat*.

FUNCTION, the Act of doing ſomething, for which the Agent was deſtined, or which he was obliged to. See ACTION.

Thus we ſay, the Stomach performs its *Function*; *i. e.* digeſts, well. The Fumes of Wine diſturb the Brain in the Performance of its *Functions*.

Phyſicians divide the *Functions* of the human Body into *Vital*, *Natural*, and *Animal*.

*Vital* FUNCTIONS are thoſe neceſſary to Life; and without which it cannot ſubſiſt: As the Actions of the Heart, Brain, Lungs, *&c.* See LIFE.

*Natural* are thoſe which change the Food, *&c.* ſo as to aſſimilate it to our own Nature: Such are the Actions of the Viſcera, and the Veſſels which receive, retain, ſecern, *&c.* the Humors. See NATURAL.

*Animal*, are thoſe without which we cannot perceive, will, remember, *&c.* Such are *Feeling*, *Seeing*, *Imagining*, *Judging*, *Paſſions*, *voluntary Motion*, &c.

FUNCTION is alſo us'd figuratively in ſpeaking of the Offices, Duties, or Occupations a Perſon is engaged in.

He acquitted himſelf of all the *Functions* of the Magiſtracy with Applauſe. The Actions of an Embaſſador muſt be diſtinguiſh'd from his *Functions*; the one regard his Character; the other his Perſon.

FUND, FUNDUS, a *Latin* Term, us'd for the *Bottom* of certain Things; and particularly of certain Parts of the Body.

FUND *of the Eye*, is that Part poſſeſs'd by the Choroeides and Retina. See EYE, RETINA, &c.

The Images of Objects are repreſented in an inverted Situation, in the *Fund* of the Eye. See VISION.

FUNDUS *Uteri*, or *Fund of the Womb*, is the Body, or principal Part thereof; in contradiſtinction to the *Cervix*, or Neck; the *Oſculum*, or Mouth; and the *Vagina*. See UTERUS.

FUNDUS *Veſicæ*, or *of the Bladder*, is the Cavity thereof, wherein the Urine is contained. In Men it is placed over the Rectum; and in Women over the Matrix. See BLADDER.

FUND *of the Gall Bladder*, the *Stomach*, &c. See GALL *Bladder*, STOMACH, &c.

FUNDUS *Plantæ*, is that Part of a Plant, where the Stalk juſt meets, and joins the Root.

FUNDUS *Cœli*, is the Point oppoſite to the Point of Culmination; or the Point of the Ecliptick, wherein it is interſected by the Meridian, beneath the Horizon.—

FUND, in Commerce, is uſed for the Capital, or Stock of a Merchant, Company, or Corporation; or the Sum of Money they put into Trade. See STOCK, CAPITAL, &c.

In this Senſe we ſay abſolutely, the *Funds*, the *Publick Funds*; meaning the Stock of the great Companies, or Corporations, as the *Bank*, *South Sea*, *Eaſt India*, &c. See BANK, COMPANY, &c.

FUNDAMENT, the *Anus*, or Aperture, thro' which a Man voids his Excrements. See ANUS.

FUNDAMENTAL, ſomething that ſerves as a Baſe, Reſt, Support, or Foundation for any thing. See FOUNDATION.

The Apoſtles Creed contains the *fundamental* Points of Religion. The *Salic* Law is the *fundamental* Law of the Polity of *France*.

FUNDAMENTAL, in Muſic, the principal Note of a Song, or Compoſition, to which all the reſt are in ſome meaſure adapted, and by which they are ſway'd; call'd alſo the *Key* of the Song. See KEY.

FUNERAL, the Ceremonies perform'd at an Interment; or the laſt Offices paid the Deceaſed. See OBSEQUIES.

The Word is form'd of the Latin *Funus*; and that of *Funalia*, by reaſon of the Torches (which were *Funes*, *cera circumdati*) us'd in the *Funerals* of the *Romans*. Tho' others derive *Funus* from the *Greek* φόνος, Death, or Slaughter.

The *Funeral Rites* among the antient *Romans* were very numerous.

The Deceas'd was kept ſeven Days; and every Day waſh'd with hot Water, and ſometimes anointed with Oil, that in caſe he were only in a Slumber, he might thus be waked; and every now and then his Friends meeting, made a horrible Outcry, or Shout, with the ſame View: Which laſt Action they call'd *Conclamatio*.

The third Conclamation was on the ſeventh Day; when, if no Signs of Life appear'd, the Defunct was dreſs'd and embalmed by the Pollinctores, plac'd in a Bed near the Door, with his Face and Heels outward, toward the Street; and the Outſide of the Gate, if the Deceas'd were of Condition, garniſh'd with Cypreſs Boughs.

In the courſe of theſe ſeven Days an Altar was rais'd near his Bed ſide, call'd *Acerra*; on which his Friends every day offer'd Incenſe; and the *Libitinarii* provided Things for the *Funeral*.

On the ſeventh Day a Crier was ſent about the City to invite the People to the Solemnization of the *Funeral* in theſe Words, *Exequias L. Tito L. Filio, quibus eſt commodum, ires. Jam tempus eſt. Ollus ex ædibus effertur.*

The People being aſſembled, the laſt Conclamation ended, and the Bed cover'd with Purple; a Trumpeter march'd forth, followed by old Women, call'd *Præficæ*, ſinging Songs in praiſe of the Deceas'd: And laſtly, the Bed followed, bore by the next Relations. And if the Perſon were of Quality and Office, the waxen Images of all his Predeceſſors were carried before him on Poles. See IMAGE.

The Bed was followed by his Children, Kindred, *&c. atrati*, or in Mourning: From which Act of following the Corps, theſe *Funeral* Rites were called *Exequiæ*.

The Body thus brought to the *Roſtra*, the next of Kin *laudabat Defunctum pro roſtris*, made a *Funeral* Oration in his Praiſe, and that of his Anceſtors.

This done, the Body was carried to the *Pyra*, or *funeral* Pile, and there burnt: His Friends firſt cutting off a Finger, to be buried with a ſecond Solemnity. See PYRA, and ROGUS.

The Body conſumed, the Aſhes were gather'd; and the Prieſt ſprinkling the Company thrice with clean Water, the eldeſt of the *Præficæ* crying aloud, *Ilicet*, diſmiſs'd the People, who took their leave of the Deceas'd in this Form, *Vale, Vale, Vale: Nos te ordine quo natura permiſerit, ſequemur.*

The Aſhes, inclos'd in an Urn, were laid in the Sepulcher, or Tomb. See URN, SEPULCHER, and TOMB.

The firſt *Romans* did not burn their Dead, but interr'd them, as we do. See BURNING.

*Pliny*, *lib.* 7. *c.* 54. aſſures us, that the Cuſtom of Burning was not introduced till after they had learnt, that their Enemies dug up, and expos'd the Bodies of their Soldiers buried in remote Countries. And yet *Plutarch*, in his Life of *Numa*, obſerves, that *Numa* was buried; as having expreſly forbid them by his Teſtament to burn him: Which ſhews that the *Romans* had practiced Burning before him.

This Cuſtom of burning the Dead, ſo religiouſly obſerv'd by the *Greeks* and *Romans*, was held in Abhorrence by ſeveral other Nations.

*Herodotus* relates, that the *Perſians* deteſted it; as holding Fire to be a God. The *Egyptians* declined to burn their Dead; as taking Fire for an inanimate Beaſt; and judging it Impiety to commit the Bodies of the Deceaſed to be devour'd by Beaſts. The Cuſtom of burning among the *Romans* ceas'd under the Empire of the *Anthonines*.

FUNERAL *Oration*, or *Sermon*, a Diſcourſe pronounced in praiſe of a Perſon deceaſed, at the Ceremony of his *Funeral*.

The Cuſtom of making *funeral* Orations is very antient. The *Romans* had it of a long ſtanding; and it was always one of the neareſt Relations that made it. *Auguſtus* did the Office to his Grandmother *Julia*, when only twelve Years of Age. *Suet. Aug. c.* 8. And we have divers parallel Inſtances.

The Cuſtom ſeems to have begun with the Republic; at leaſt, the firſt *funeral* Oration we read of, was that of *Brutus*, who expell'd the Kings, and was the firſt Conſul; who having been kill'd in a Battle againſt the *Hetrurians*, was *laudatus pro roſtris*, prais'd in the *Forum* by *Valerius Publicola* his Collegue.

Indeed, ſome Authors will have the Practice more antient. They maintain it to have been in uſe among the *Greeks*; and that *Solon*, who, according to *Aulus Gellius*, gave Laws to the *Athenians* in the Time when the elder *Tarquin* reign'd at *Rome*, was the firſt Author thereof: Something like which, it ſeems, the Orator *Anaximenes* has left in Writing. See *Polydore Virgil de Invent. Rer. L. III. c.* 10.

FUNERAL *Games*, or *Ludi Funebres*, were a Part of the Ceremony of the antient *Funerals*. See GAMES.

They conſiſted in mortal Combats of Gladiators around the *funeral* Pile. See GLADIATOR.

The Cuſtom was very antient; tho' it had not always been the ſame. At firſt, they cut the Throats of a Number of Captives before the *Pyra*, as Victims to appeaſe the *Manes* of the Deceas'd. This *Achilles* does in *Homer*, *Iliad*, φ, at the *Funeral* of *Patroclus*: And *Æneas*, in *Virgil*, *L. XI.* at that of *Pallas*, Son of *Evander*. *Cæſar*, in his Commentaries *L. VII.* relates, that the *Gauls* did the ſame.

But at length it appear'd barbarous, thus to butcher Men; and therefore to ſave the Horror of the Spectacle, yet without the Dead's loſing any thing thereby; they made the poor Captives fight and kill one another, only ſaving ſome few of ſuch as came off Victors.

This Cuſtom was borrowed of the *Greeks* by the *Romans*; among whom the cruel Diverſion was call'd *Munus*.

The firſt who introduc'd it at *Rome*, was *Junius Brutus*, at the Obſequies of his Father; or, according to others, *Ap. Claudius*, and *M. Fulvius*, during their Conſulate.

The like horrible Combats were alſo occaſionally exhibited by the Magiſtrates; and ſometimes added to the Theatrical Pieces.

The Emperor *Claudius* decreed, that whereas theſe accurſed Games were till then arbitrary; it ſhould be the Practice for the future, to perform them regularly every Year, at the Expences of the State; and that the Ædiles ſhould have the Care and Direction thereof. But he conceiv'd a Horror for them himſelf; and ſoon after aboliſh'd them: Tho' it was ſtill allow'd particular Perſons to have them, provided they were worth forty thouſand Seſterces *per Annum*.

They were not finally aboliſh'd before *Theodoric* King of the *Goths*, at the End of the fifth Century.

FUNERAL *Column*, a Column crown'd with an Urn, wherein the Aſhes of ſome deceas'd Perſon are ſuppos'd to be inclos'd; the Fuſt, or Shaft being ſet with Tears, or Flames; the Symbols of Grief, and Immortality. See COLUMN.

FUNGUS, in Natural Hiſtory; ſee MUSHROOM.

FUNGUS, in Medicine, a fleſhy Tumor, or Excreſcence, very ſpongeous, ſoft, and pale; ariſing on the Membranes, Tendons, and other nervous Parts, in conſequence of Ulcers, Wounds, Contuſions, and Strains.

*Fungus's* are frequently form'd on the Meninges, or Membranes of the Brain, in Wounds of the Head when not well cover'd, or defended from the external Air: They are alſo frequent about the Joints; which laſt grow very inſenſibly. But where the Skin is open, finding more room, they grow to a prodigious degree in a very little time, aſſuming the Form of a Muſhroom or *Fungus*.

There are alſo *Fungus's* of the *Anus*, and *Uterus*. They are all ſuppos'd to proceed from a Retention and Depravation of the nutritious Juice.

The *Fungus* is a general kind of Excreſcence, whereof there are divers particular Species; as the *Ficus*, *Sarcoma*, *Condyloma*, &c. See FICUS, &c.

FUNGOUS *Fleſh*, is a ſpongeous, excreſcent, or (as we popularly call it) *proud* Fleſh, frequently growing on the Lips of Wounds, Ulcers, *&c.* See FUNGUS.

The *Sarcocele* is ſometimes the Reſult of a *fungous* Fleſh. See SARCOCELE.

In

In Ulcers, *Wiſeman* obſerves, there frequently ariſes a ſpongious, or *fungous* Fleſh, either from the too great Afflux of Humors; or thro' the Surgeon's Unskilfulneſs.

It muſt be ſuppreſs'd, or taken off by drying Medicines, or even Cauſticks: As *Lapis Tutiæ*, burnt Alum, Precipitate of Mercury, *Roman* Vitriol, &c. See ULCER.

There is alſo a malignant kind of *Fungus* rooted in the *Rectum*. See RECTUM.

FUNNEL *of a Chimney*, the Shaft, or ſmalleſt Part of the Chimney, from the Waſt upwards. See CHIMNEY.

*Palladio* orders, that the *Funnel* be carried three, four, or five Foot at leaſt above the Roof, that it may carry the Smoak clear from the Houſe into the Air.

Care too is to be taken, as to the Width; for that if they be too wide, the Wind will drive back the Smoak into the Room; and if too narrow, the Smoak will not be able to make its way.

Chamber Chimneys therefore are not to be made narrower than ten or eleven Inches; nor broader than fifteen.

FURBISHER, a Perſon who *furbiſhes* or poliſhes Arms, and gives them a Brightneſs and Luſtre. See FURBISHING.

In the general Senſe of the Word, it includes what we now call Armorers and Sword Cutlers: In a more reſtrain'd Senſe, it is appropriated to thoſe who clean, and ſcour up old Swords, Guns, Halberds, and put them in order.

Among the Officers of the Tower is a *Furbiſher of ſmall Arms*, and another *of Swords*. And the like is at moſt of the Palaces and Armories of *England*; as St. *Jame*'s, *Windſor*, *Cheſter*, *Plymouth*, *Hull*, and *Berwick*.

FURBISHING, the Act of cleaning, ſcouring, and poliſhing Arms; as Guns, Piſtols, Swords, &c. See FURBISHER; ſee alſo SWORD, GUN, &c.

*Furbiſhing* is principally perform'd with Emery. See EMERY.

The Word is form'd of the French *Fourbiſſure*, which *Hicks* derives from *Furben*; which in the Language of the antient *Franks* ſignify'd to clean and poliſh.

M. *Huet* chuſes rather to derive the French *Fourbir* and *Fourbeſſure*, from the Engliſh *Furbiſh*, and *Furbiſhing*.

*Skinner* obſerves, that ſome Authors derive the Engliſh *Furbiſh* from the Latin *furvus*, and *fervor*; but for his part he rather derives it from the German *Farb*, Colour, and *farben*, to give a colour.

FURCA, FORK, in Antiquity, a kind of Puniſhment, or rather Inſtrument of Puniſhment, among the *Romans*.

The Form of the *Roman Furca* is very obſcurely deſcribed by the Antients, and much controverted by the Moderns.

All we know for certain, is that it was of Wood, and reſembled a Fork; whence it is called in Writers ξύλον δίπαλὲν, δικρὲν, δίδυμον, that is, *lignum duplex*, *bicornutum*, *geminum*, a double fork'd or horned Timber.

*Plutarch*, treating of the *Furca*, ſays, it is originally a piece of Timber, wherewith the Beam of the Waggon was upheld: He adds, that it is the ſame with what the *Greeks* call *Hypoſtate* and *Sterigma*: And the Sterigma is deſcribed by *Heſychius* as the forked Piece of Timber put under the Yoke of the Waggon.

From the two, *Goodwin* takes the *Furca* to have been the Beam of a Waggon, to which the Yokes were faſten'd.

The Puniſhment of the *Furca* was of three kinds: The firſt, only *Ignominious*, was when a Maſter forc'd his Servant for ſmall Offences to carry a *Furca*, or Fork on his Shoulders, about the City; confeſſing his Fault, and warning others to beware of the like; whence ſuch Servant came to be denominated *Furcifer*.

The ſecond kind was *Penal*; when the Party having the *Furca* on his Neck, was lead about the Circus, or other Place, and whip'd all the way.

The third was *Capital*; the Malefactor having his Head faſten'd to the *Furca*, and ſo whip'd to death.

In After-times of the Empire, when Crucifying became interdicted, the Form of the *Furca* was changed, and made like our Gibets or Gallows. See CROSS, CRUCIFYING, GIBET, &c.

FURCA, in our antient Cuſtoms, was the ſame with *Catifurcia*, or *Foſſa*, *i. e.* Gallows, and Pit; *viz.* a Right or Juriſdiction of puniſhing Felons; that is, Men with hanging; Women with drowning. See GALLOWS.

FURCHE, in Heraldry, a Croſs in the Form here repreſented. See CROSS.

FURCULA, in Anatomy; ſee JUGULUM.

FURFUR, literally ſignifies Huſk, or Chaff; and therefore is uſed for the Scales, Scurf, or Dandriff, which grows upon the Skin with ſome Likeneſs thereto. See CUTICLE. Hence

FURFURATION, the falling off of Furfures in Combing, &c.

FURIES, EUMENIDES, DIRÆ, in the Heathen Theology, and Poetry, were infernal Deities, ſuppoſed to enter, and poſſeſs Men; to torment, and puniſh them. See GOD.

The *Furies* were reputed the Miniſters of *Pluto*; and the Avengers of Crimes. *Strabo* paints them cloathed in long Robes falling to their Heels, but girt about the Breaſt. They were three in Number: *Tyſiphone*, *Megæra*, and *Alecto*.

*Patin*, *Spanheim*, &c. will have it to be them, which we ſee on a Medal of the Emperor *Philip*, ſtruck at *Antioch*, on whoſe Reverſe are repreſented three Women dreſs'd as above-mentioned, and arm'd with a Key, burning Torches, Poniards, and Serpents.

*Struvius*, *Antiq. Rom. Synt. C. I. p.* 182. adds, that the three *Furies* may probably be no other than the triple *Hecate*, whom the Antients believ'd to purſue and torment the Wicked in Hell, on Earth, and in Heaven.

Some of the Poets add a fourth *Fury*, call'd *Lyſſa*; a *Greek* Word, ſignifying Madneſs, Rage. They repreſent them with Eyes inflam'd; their Heads twiſted round with Snakes, with Whips and burning Torches in their Hands to puniſh the Guilty.

The Daffodil was ſacred to the *Furies*; and ſuch as offer'd Sacrifices to them, were crown'd therewith. This we learn from *Euſtathius*, on the firſt Book of the Iliad, *p.* 87.

Theſe *Furies* were alſo call'd *Pœnæ*, Ποιναι, by reaſon of the Puniſhments they inflicted on Criminals: As their Denomination *Furies* aroſe from the Rage and Madneſs, which they threw into the Conſcience. *Voſſ. de Idolol. L. VIII. c.* 18.

The *Grecks* call'd them *Eumenides*; the Origin of which Name is much controverted among the Learned: The Etymology that ſeems beſt authorized, derives it from Εὐμενὴς, gentle, mild; which was applied to them on occaſion of *Oreſtes*'s being abſolv'd of the Murther committed by him on the Perſon of his Mother. *Minerva*, it ſeems, appeas'd and pacified the *Furies*; ſo that they ceas'd to purſue him: Upon which the *Athenians* ever after denominated them *Eumenides*.

But it muſt be added, that the *Athenians* called them by the ſame Name, long before *Oreſtes*'s time; as appears from the *Oedipus* of *Sophocles*. There was a Temple in *Athens*, near the *Areopagus*, conſecrated to the *Eumenides*, whom the *Athenians* call'd *Venerable Goddeſſes*. *Ariſtides* and the Scholiaſt of *Thucydides* ſpeak of this Temple as erected in Memory of the Judgment of *Oreſtes*. See EUMENIDES.

FURLING *Lines*, are ſmall Lines made faſt to the Top-ſails, Top-gallant Sails, and to the Miſen-yard Arms, ſerving to *furle* up thoſe Sails.

The Miſen hath but one *Furling Line*, but all the reſt have two, one at each End.

FURLONG, an *Engliſh* long Meaſure, containing the eighth Part of a Mile. See MILE, and MEASURE.

The *Engliſh Furlong* is equal to forty Poles, or Perches; and the Perch to 16½ Feet. See PERCH, FOOT, &c.

*Hercules* is ſaid to have run a Stadium or *Furlong* at one breath. See STADIUM.

FURLONG is alſo us'd for the eighth Part of an Acre, now called a Rood. See ROOD.

Tho', in an old Law Book, printed in *Henry* the VIII's time, we read, that ſix hundred Foot, of five Score to the Hundred, make a *Furlong*. See ACRE.

In the former Signification the *Romans* call it *Stadium*; in the latter, *Jugerum*.

FURLONG is alſo us'd for a piece of Land, of more, or leſs Acres.

*Omnibus Chriſti Fidel. Johannes Blunt de Eyc, Arm. —Dedit Thomæ Croft & Franciſco Lovel, Arm. unum* Furlongum *terræ arabilis continen. per æſtimationem quatuor Acras*, &c. *Dat.* 20 *Jan.* 3 *Eliz.*

FURLOUGH, a Licence granted by an Officer to a Soldier, to be abſent for a while.

FURNACE, an Utenſil, or Veſſel, proper to contain Fire; or to raiſe and maintain a vehement Fire in; whether of Coal, or Wood. See FIRE.

There are divers kinds of *Furnaces*, of various Forms, and for various Uſes.

The Domeſtick *Furnace*, us'd in making Confections, &c. is uſually of Iron, or Earth.

Thoſe us'd by the Goldſmiths, Refiners, &c. are much larger, and of a different Structure.

Thoſe wherein Lime, Bricks, &c. are burnt, are called *Kilns*. See LIME, BRICK, &c.

FURNACE is particularly us'd for a kind of Oven, wherein the Ores of Metals, after beating, waſhing, &c. are melted down, by a huge Coal or Wood Fire. See FUSION.

The Structure and Application of theſe *Furnaces* is ſomewhat different in the different Metals. See GOLD, SILVER, COPPER, TIN, &c.

FURNACE is more ſtrictly applied to thoſe us'd in the melting of Iron; which Authors frequently confound with Iron *Forges*; tho' there is a conſiderable Difference between them.

The *Furnace* is a Brick Structure, much in the Shape of an Egg ſet an end, wherein the Iron Ore, after it has been burnt in a Kiln, is put, intermix'd with Cinders and Charcoal; and the whole melted, till it trickle down into a Receiver underneath; where, the Scum and Droſs being taken away, the Metal is thrown into Furrows made in a Bed of Sand, and thus caſt into Sows or Pigs of Iron. See IRON-*work*.

The *Forge* is a Place, where the Pigs are heated and fuſed a ſecond, and even third time, to prepare and fit them further for uſe. See FORGE.

*Glaſs-houſe* FURNACE, is the Place wherein the Materials of Glaſs are fuſed, and vitrified. See GLASS.

There are three kinds of *Furnaces* us'd in the Glaſs-works.

The firſt called the *Calcar*, ſerves to prepare or calcine the *Frit* in. It is made in faſhion of an Oven, ten Foot long, ſeven broad, and two deep. The Fuel, which is Sea Coal, is put in a Trench, on one Side of the *Furnace*; and the Flame reverberates from the Roof back upon the Frit. The Coals burn in an iron Grate, and the Aſhes fall hence into a Hole underneath. See FRIT.

The ſecond, is the *Working Furnace*, ſerving to melt the Metal in, or make the Glaſs. Its Figure is round, three Yards in Diameter, and two high, being arch'd over. Round the Inſide are eight, or more Pots plac'd, and piling Pots on theſe. The Number of Pots is always double that of the *Boccas* or Mouths, or that of the Workmen; that each may have one Pot refined, to work out of; and another for Metal, to refine in, while he works out the former.

The *Furnace* has two Partitions; the lower, ſeperating the Pots from the Fire Place, has a circular Hole in the Centre, cover'd with a Grate, through which the Flame paſſes from the Fire Place into the *Furnace*; from the arched Sides and Roof whereof it is reverberated into the Melting-pots.

The ſecond Partition divides this from the *Leer*, or *Annealing Furnace*. Thro' the Boccas, or Working-holes the Metal is taken out of the Pots, and the Pots put in the *Furnace*. Theſe Boccas are ſtop'd with moveable Covers, made of Lute and Brick, to ſcreen the Workmens Eyes from the Fire. On each Side the Bocca is a Boccarella, out of which, colour'd Glaſs, or the finer Metal is taken from the Piling-pot. To the *Furnace* likewiſe belong Ovens or Holes near the Leer, for the calcining of Tartar, Iron, &c.

The *Leer*, which ſerves to anneal and cool the Veſſels; and which *Agricola* makes a particular *Furnace*, conſiſts of a *Tower*, and the Leer. The Tower lyes directly over the Melting *Furnace*, with a Partition betwixt the Aperture; having an Aperture, call'd *Occhio*, or *Lumella*, thro' which the Flame or Heat aſcends out of the *Furnace* into the Tower: On the Floor or Bottom of this Tower, the Veſſels faſhion'd by the Maſters, are ſet to anneal. It has alſo two *Boccas* or Mouths, by which the Glaſſes are put in with a Fork, and ſet on the Floor.

The *Leer* is an Avenue, five or ſix Yards long, continued to the Tower: Thro' this the Glaſſes, when anneal'd, are drawn in iron Pans, called *Fraches*; by which they come to cool by degrees; being quite cold, by that time they reach the Mouth of the Leer, which enters the *Saroſel*, or Room where the Glaſſes are to be ſet.

The third, is the *Green Glaſs Furnace*, which is a kind of Compound of all the former. It is made ſquare (the two former being circular) having an Arch, at each Angle thereof, for annealing and cooling the Glaſſes. The Metal is wrought on two oppoſite Sides; and on the other two, they have their Calcars, into which are made *Linnet Holes* for the Fire to come from the *Furnace* to bake the Frit; as alſo to diſcharge the Smoak. Fires are made in the Arches to anneal the Veſſels; ſo that the whole Proceſs is done in one *Furnace*.——

The Stones wherewith the Inſides of theſe *Furnaces* are built, are not Brick (which would ſoon melt down into Glaſs, as alſo all the ſofter Stones); but hard, and ſandy, by *Imperat.* call'd *Pyrachmia*.——

*Founders* FURNACE, is of divers kinds, according to the different kinds of Work to be caſt.

That us'd by the Founders of Small Work, is much like the Smiths Forge, with this only Difference, that the Fire is made on the Maſſive, built in a Cavity in the Middle of the *Furnace*, to which the Pipe of the Bellows reaches.

This Cavity goes to the Bottom of the Maſſive: A-croſs the Middle of it is plac'd a Grate, which holds the Fire and the Crucible: And below is the Place for the Aſhes, &c. See FOUNDRY.

The Statuaries, or Figure-makers, uſe two kinds of *Furnaces*; which ſee deſcrib'd under the Article FOUNDRY *of Statues*.

*Glaſs-Painters* FURNACE, is made of Brick, nearly ſquare, and about two Foot and a half each way.

It is cut horizontally in the Middle by a Grate, which ſuſtains the Pan or Shovel the Glaſs is baked in. This *Furnace* has two Apertures; one below the Grate, to put the Fuel in at; the other above it, thro' which the Workman ſpies how the Coction of the Colours goes on. See *Painting on* GLASS.

*Letter Founders* FURNACE, is very ſmall, not exceeding a Foot and half in Height, and one in Diameter; being plac'd on a wooden Stand, or Bench, to raiſe it to a proper Height for the Artiſt, who works ſtanding. It is made of the ſame Earth with Crucibles. See *Letter* FOUNDRY.

*Plumbers* FURNACE is of three Kinds: In the firſt, they melt the Lead, whereof Sheets are to be caſt.

This is only a ſort of large Copper, or Receptacle like a Copper, made of Free-ſtone and Potters Earth, well plaiſter'd round with a little iron Pan at bottom.

In the ſecond, they melt the Lead to be caſt in Moulds, for Pipes, &c. which are not to be ſolder'd.

The third, is the Tinning *Furnace*, which is a ſquare Frame of Wood, or ſometimes a Maſſive of Stone-work, with a Brick Hearth, whereon is made a Charcoal Fire, which ſerves them for the applying of thin Tin Leaves on their Works. See PLUMBERY.

*Hatters* FURNACES are of three Kinds: A little one under the Mould, whereon they form their Hats: A larger, in the Fullery under a little Copper full of Water and Lees: And a very large one under the great Copper they dye their Hats in. See HAT.

*Bellows*-FURNACE, is one of the two kinds of *Furnaces* us'd in the Mintage, for the fuſing of Metals.

It conſiſts of a flat Hearth at Bottom, into which the Air may be admitted by a Hole contriv'd therein.

On a Level with the Hearth is a ſecond Aperture, which gives Paſſage to the Pipe of the *Bellows*, from which the *Furnace* is denominated. About a Foot over this is a moveable Grate, which may be taken off and put on at pleaſure. Laſtly, over this is the Place where the Crucible is ſet; which is ſquare, and made of the ſame Earth with the Crucible; of Breadth ſufficient to bear a Range of Coals around the Crucible.

To melt a Metal in this *Furnace*, they lay a little Plate of forged Iron over the Grate; and on this they ſet the Crucible, which is likewiſe cover'd with an iron, or earthen Lid. Then they fill the *Furnace* with Charcoal; and when it is well lighted, and the Crucible ſufficiently hot, they ſtop the Vent-hole. Laſtly, throwing on freſh Coals, they ſtop the *Furnace* with an iron Lid: Thus, continuing to work the Bellows, and ſupply freſh Fuel, till the Metal be in Fuſion. See COINING.

*Wind*-FURNACE is the ſecond *Furnace* us'd in the Fuſion of Metals for Coinage. At Bottom it has a Hearth made hollow, in manner of a Coupel, with a Vent-hole in the Fore-part thereof. Over the Vent-hole, is a Grate ſeal'd in the Maſſive of the *Furnace*. Over the Grate is the Place for the Crucible, which is uſually of forged Iron.

The Fire being lighted, the Crucible is ſet in, with a Cover over it; and a Capital or Cover of Earth or Iron laid likewiſe over the *Furnace*. A-top of this Capital is a Hole five or ſix Inches in Diameter.

It is called *Wind Furnace*, by reaſon the Air entring thro' the Vent-hole at bottom, which is always open, ſerves the ſame purpoſe as the Bellows in other *Furnaces*,

Gold is uſually melted in the *Bellows Furnace*, as requiring an intenſer Heat before it fuſes. See GOLD.

Silver, and Copper, are commonly melted by the *Wind-Furnace*. See COINAGE.

FURNACE, in Chemiſtry, is an earthen Veſſel, wherein the Fire neceſſary for the ſeveral Operations, is contain'd, determined, and directed. See FIRE.

The *Furnace* conſiſts of ſeveral Parts; as, a Place for the Veſſel, or Body to be wrought on; a *Focus* or Hearth fot the Aſhes; a *Chimney*; a *Grate*; a *Door*; a *Dome*, and a *Fan*; or elſe *Regiſters*, whereby to let in Air, to increaſe, or abate the Fire.

The Perfection of a *Furnace* conſiſts in its maintaining a conſtant equable Fire; and this eaſily temper'd; and at an eaſy Expence.

To have the *Expence* eaſy, the whole Action of the Fire or Fuel muſt be employ'd on the Subject or Matter of the Operation.

It muſt be *equable*, ſince different Degrees of Fire have different Effects; ſo that if any given Degree would anſwer any given Intention; an Alteration of that Degree will prevent the Intention from taking place. And on theſe Circumſtances does all the Variety of *Furnaces* depend.

*Furnaces* are either fix'd and immoveable, call'd *Athanors*; or portable, call'd *Catholic*, or Univerſal, being proper for all Operations, where the Body to be operated on is not too large.

The firſt Species of Athanor, or fix'd *Furnace* is fitted to give a Heat equal to that of a healthy Man.

The ſecond is the *Furnace* of the *Balneum Mariæ*, fit for the Deſtillation of the more ſubtile Spirits. See BALNEUM *Mariæ*.

The third is the *Digeſting Furnace*. See DIGESTING.

The fourth, the Anema, or *Wind Furnace*, call'd alſo Melting *Furnace*, and Metallic *Furnace*; us'd in the Fuſion of Metals, Minerals and Vitrifications.

It is call'd *Wind Furnace*, by reaſon the Air drives forcibly in at the ſame, to blow up the Coals: Its Form is much like that of the Reverberatory *Furnace*, only leſs.

*For the Reverberatory* Furnace, *ſee* REVERBERATORY.

FURNACE *of a Mine*, in the Art of War; ſee CHAMBER and MINE.

FURNITURE, in Dialling, certain additional Points and Lines, drawn on a Dial, by way of Ornament. See DIAL.

Such are the Signs of the Zodiac, Length of Days, Parallels of Declination, Azimuths, Meridians of the principal Cities, *Babylonick* and *Italian* Hours, Points of the Compaſs, *&c.* See DIALLING.

For drawing *Furniture* on Dials, the *Analemma*, or Trigon of Signs is an Inſtrument of principal Uſe. See ANALEMMA.

FUROR *Uterinus*, a Species of Madneſs, peculiar to Women, exciting them to a vehement Deſire of Venery, and rendering them inſatiate therewith. See UTERINE *Fury*.

It is owing, according to *Sennertus*, to a too great Abundance of Semen, and a præternatural Heat and Pungency thereof.

FURR, the Skin of divers kinds of Wild Beaſts, dreſs'd with the Hair on; to be us'd as a Lining, or Doubling of Garments, Robes, *&c.* either for Warmth, Ornament, or Diſtinction of Rank and Dignity.

The Robes of Kings, Dukes and Peers are lined with divers kinds of *Furrs*, and particularly Ermine, to render them more magnificent. See ERMINE, &c.

The ſame may be obſerv'd of ſeveral chief Magiſtrates; Judges, and Doctors of different Faculties in the Univerſities.

The Kinds of *Furrs*, or the Skins chiefly dreſs'd in Alum, and with the Hair on, are thoſe of the *Ermine*, *Sable*, *Squirrel*, *Cony*, *Caſtor*, *Otter*, *Dog*, *Fox*, *Wolf*, *Tiger*, *Bear*, &c. See SKIN.

The Word is form'd of the French *Fourrure*, a Lining; which *Du Conge* derives from *Furrura*,, us'd, in the barbarous *Latin*, for the ſame thing. We alſo meet with *Forratura*, *foderata*, *fodratum*, and *fodratura*, in the ſame ſenſe.

FURR, in Heraldry, a Repreſentation of the Skins of certain wild Beaſts, ſeen, both in the Doublings of the Mantles of Coat Armour, and in the Armour it ſelf.

The Heralds uſe two Metals, five Colours, and two *Furrs*, or hairy Skins, *Ermin* and *Vaire*.

The Origin of theſe *Furrs*, *Mackenzy* aſcribes to the Shield's being antiently cover'd with Skins; which Skins or Coverings were afterwards repreſented in the Shields: A more probable Derivation, in our Opinion, than to ſay they were plac'd on Shields, becauſe they had been wore in Mantles and Garments.

*Furrs* either conſiſt of one Colour, which is *white*; or more than one; and theſe either two, or more than two.

*Furrs* of two Colours are either *Ermine*, being white with black Spots; *Ermines*, black with white Spots; *Erminois*, whoſe Ground is yellow; or *Pean*, which is black, pouder'd with yellow. See ERMINE, PEAN, *&c.*

*Furrs* of more than two Colours are *Vair*. See VAIR, and VAIRY.

FURRIER, a Perſon who trades, or works in *Furrs*, or lines Robes, *&c.* therewith. See FURR.

FURRING, in Architecture, the making good the Rafters Feet in the Cornice. See RAFTER.

Thus, when Rafters are cut with a Knee, theſe *Furrings* are Pieces which go ſtrait along with the Rafter, from the Top of the Knee, to the Cornice.

Alſo, when Rafters are rotten, or ſunk hollow in the Middle, there are Pieces cut thickeſt in the Middle, and tapering towards each End, which are nailed upon them to make them ſtrait. Such Pieces are called *Furrs*; and the Putting them on, *Furring the Rafters*.

FUSAROLE, in Architecture, a Moulding, or Ornament, placed immediately under the Echinus, in the *Doric*, *Ionic*, and Compoſite Capitals

The *Fuſarole* is a round Member, carved, in manner of a Collar or Chaplet, with oval Beads. The *Fuſarole* ſhould always anſwer exactly under the Eye of the Volute in the *Ionic* Capital.

The *Italians* call it *Fuſciolo*; and the *French*, from whom we borrow it, *Fuſarole*.

FUSEE, or FUSY, in Watch-work, is that conical Part, drawn by the Spring, and about which the Chain, or String is wrapp'd. See WATCH.

The Spring of a Watch is the firſt Mover. It is roll'd up in a Cylindrical Box, againſt which it acts, and which it turns round in unbending itſelf. The String, or little Chain, which at one End is wound about the *Fuſee*, and at the other faſten'd to the Spring-box, diſengages itſelf from the *Fuſee*, in proportion as the Box is turn'd. And hence the Motion of all the other Parts of the Spring Watch. See SPRING.

Now the Effort, or Action of the Spring is continually diminiſhing from firſt to laſt; and of conſequence, unleſs that Inequality was rectify'd, it would draw the String with more Force, and wind a greater Quantity of it upon the Box at one time than another; ſo that the Movement would never keep equal time.

To correct this Irregularity of the Spring; nothing could be more happily contriv'd than to have the Spring applied to the Arms of Levers, which are continually longer as the Force of the Spring is weaker. This foreign Aſſiſtance, always increaſing as 'tis moſt needed, maintains the Action, and Effect of the Spring in an Equality.

'Tis for this reaſon, that the *Fuſy* is made of a conical Figure. Its Axis, which is immoveable, is the Series of the Centres of all the unequal Circumferences, which compoſe the Surface of the *Fuſy*. According as the Part of a String which is untwiſting, is applied to a larger Circumference, it is at a greater Diſtance from the fix'd Point in the Axis, correſponding thereto; and of conſequence the Power which draws by this String, *viz.* the Spring, acts with the more Advantage. The Spring begins to draw by the Top of the Cone; the moſt diſadvantageous Part, by reaſon its own Force is then the greateſt. See LEVER.

If the Action of the Spring diminiſh'd equally, as the Parallel Baſes of a Triangle do; the Cone, which is generated of a Triangle, would be the preciſe Figure required for the *Fuſee*. But 'tis certain the weakening of the Spring is not in that Proportion; and of conſequence the *Fuſy* ſhould not be conical.

In effect, Experience ſhews, that it ſhould not be ſtrictly ſo; but that it be a little hollow toward the Middle, *i. e.* the Arm of the Lever muſt be there a little ſhorten'd; by reaſon the Action of the Spring is not ſufficiently diminiſh'd of it ſelf.——

'Tis a Matter of Inquiry among Geometricians what the preciſe Figure of the *Fuſy* ſhould be; that is, what the Curve is, by whoſe Revolution round its Axis, the Solid, whoſe Figure the *Fuſy* is to have, ſhall be produced.

M. *Varignon* has determ'd this Curve. The Axis of the *Fuſee* is alſo the Axis of the Curve, which is convex on the Side toward the Axis, and of conſequence concave all the way on the other, or outer ſide; and the Ordinates are the different Diſtances wherein the String is to be with regard to all the ſucceſſive fix'd Points of the Axis.

The Force of the Spring multiplied by the Arm of the Lever it is applied to, each Moment, being always to make an equal Product; it follows that when the Solid of the Curve ſhall be form'd, an Ordinate multiplied by the Surface of the Solid comprized between that Ordinate, and the greateſt of all the Ordinates, *viz.* that of the Baſe, will always yield a Product equal to that of any other Ordinates multiplied in the ſame manner. For the Ordinates are only Arms of the Lever; and the Parts of the Surface comprehended between them and the Baſe are equal to the Lengths of the String, which cover them; *i. e.* to the correſpondent Forces of the Spring: Which is what conſtitutes the Equation, and the Eſſence of the Curve.

FUSEE, FUSIL, or FUSE, in War, an Appendage of a Bomb, or Granado-Shell, by which the Powder or Compoſition in the Shell is ſet on Fire, to do the deſign'd Execution. See BOMB, and GRANADO.

The *Fuſee* is a wooden Pipe or Tap, fill'd with Wild-fire, or the like Compoſition; and is deſign'd to burn ſo long, and no longer, as is the time of the Motion of the Bomb from the Mouth of the Mortar, to the Place, where it is to fall; which Time is about 27 Seconds: So that the *Fuſe* muſt be contriv'd, either from the Nature of the Compoſition or the Length of the Pipe which contains it, to burn juſt that time.——

The uſual Compoſition of *Fuſees* is two Ounces of Nitre, to one of Sulphur, and three of Gunpowder Duſt.

The Word is *French*, and literally denotes a *Spindle*.

FUSIBILITY, that Quality in Metals, and Minerals, which diſpoſes them for Fuſion. See FUSION.

Gold is more *fuſible* than Iron, or Copper; but leſs ſo than Silver, Tin, and Lead. See GOLD, SILVER, &c.

Borax is frequently mix'd with Metals, to render them more *fuſible*. See BORAX.

FUSIL, in Heraldry, by the *French* called *Fuſee*, *q. d.* Spindle, is a bearing of a Rhomboidal Figure, more ſlender than the *Lozenge*; its upper and lower Angles being more acute than the two collateral or middle ones: as repreſented in the adjoining Figure.

FUSILIERS, in an Army, are the ſame with Muſqueteers; and are called ſo from the Word Fuſil, a *Fire-arm*, or Muſquet. See MUSQUET.

FUSILLY, or FUSILÉE, is when a Field or Ordinary is entirely cover'd over, or divided into *Fuſils*.—

FUSION, the Solution, or melting of Metals, Minerals, &c. by means of Fire: Or, the Act of changing them from their ſolid State to a Fluor. See SOLUTION, and DISSOLUTION.

To give the Ore its metallic Form, they *fuſe* it: When it is in *Fuſion*, the metalline Subſtance, being the heavieſt, ſinks to the Bottom of the Furnace; the other terreſtrial Matters riſing in Form of Scoria to the Surface. See METAL.

'Tis commonly imagin'd, that the *Fuſion* and metalline Form of *Minerals* is wholly the Effect of Fire; and we have Theories of Fuſibility built on this Principle: But 'tis a miſtaken one. Fire, no doubt, is the principal Agent: But Fire alone is not ſufficient.

A Mineral, or piece of Metal not purify'd, being put alone in a Crucible, melts with a world of Difficulty, and never becomes a perfect Metal: Copper Ore, for inſtance, being thus applied, its impure Part forms a Scoria, and vitrifies; the metalline Part reſiding at Bottom, under the Appearance of a black Regulus.

To promote the *Fuſion* and Separation, they mix Coals, or Stones, or Cinders, or old Scoria along with the Ore; the inflammable Principle in which, by help of the Fire, fuſes them perfectly, ſets the heterogeneous Part at liberty, and attaches it to the Top.

The general reaſon of *Fuſion* is pretty eaſily aſſign'd. The Firmneſs, or Solidity of the Body ariſes from the Force wherewith its Particles cohere. See FIRMNESS. And the Coheſion in all Bodies is as the Quantity of Contact in the component Particles. See COHESION.

Now, the Corpuſcles of Fire entering with Rapidity into the Pores of the Metal agitates, and by degrees, looſens, divides, and diminiſhes their Contact, till at length there is not enough to hinder their rolling over each other; and giving way upon the leaſt Impulſe. See FLUIDITY.

The Dilatation obſervable in all *Fuſions*, is a Proof that their Particles are ſeparated and ſet at a diſtance from each other, and conſequently their Contacts and Coheſions diminiſh'd.

In effect, Rarefaction and Dilatation is the neceſſary Conſequence of Fire and Heat. See FIRE, DILATATION, RAREFACTION.

From the Difference of Coheſion proceeds that Variety we obſerve in the *Fuſion* of Bodies: for ſuch as have leaſt Contact of Parts, ſooneſt give way to the Fire; and ſome will melt away by the Warmth of a Vapour only, when others, which have a ſtronger Contact, are not to be ſeparated, but with Difficulty. Upon this account, Vegetables very eaſily diſunite; Minerals ſlower, and Metals ſloweſt of all: And of the laſt, thoſe wherein the Contact of Parts is leaſt, as in Lead and Tin, moſt readily melt; but thoſe which are more compact as Gold, and Silver, are not to be managed, but by a violent Heat.

If now the Force of Coheſion were proportional to the Quantity of Matter, or to the Weight of Bodies, we might from Staticks account for all the Variety that occurs in *Fuſion*; for by knowing the ſpecifick Gravity of a Body, we ſhould then know, what Force is required to melt it: But becauſe the ſame Quantity of Matter may be ſo variouſly diſpoſed, that in one Body there ſhall be a much greater Contact, than in another, tho' the Gravity be equal, or even leſs at the ſame time; therefore the Force of Coheſion cannot be eſtimated by Gravity: For Lead, tho' more ponderous than all other Metals, except Gold; yet in the Fire is more eaſily melted, than any other: So that it neceſſarily follows, that in this Metal there muſt be a leſs Coheſion, or Contact of Parts, how much ſoever it may exceed others in the Quantity of its Matter. See LEAD.

Bodies after *Fuſion* return again into a ſolid Maſs, upon removing them from the Fire; becauſe their Particles hereupon approach nearer to one another by their attractive Force, and are ſo compelled to unite.

Such as conſiſt of homogeneous and unalterable Parts, as Wax, Gums, and the purer Metals, recover their antient Form: For when the ſame Texture of Parts remains in the whole Body, it muſt of courſe reaſſume the ſame Appearance, when the ſeparating Power ceaſeth to act; but other Bodies, whoſe Parts, with reſpect to Denſity and Surface, are extremely different from one another, while ſome are carried off by the Force of Heat, and others are changed as to Figure and Poſition, muſt be forced to appear in another Form: For they cannot recover their original Phaſes, unleſs every Particle could reinſtate it ſelf in that very Situation it had before, which may be hindered infinite ways; as may be experienced eaſily in heterogeneous Bodies.

The Difference, therefore, obſerv'd even in homogeneous Bodies after Liquefaction, is no ways to be accounted for but from the changeableneſs of Surface in its Parts: For thoſe Bodies whoſe Parts conſtantly retain the ſame Surfaces, never loſe their Form; but others, by having the Surfaces of their Parts altered, have a different Texture, and put on another Appearance.

FUST, in Architecture, the *Shaft* of a Column; or that Part comprehended between the Baſe, and the Capital; called alſo the *Naked*. See SHAFT.

The *Fuſt* is that cylindrical Part, which makes, as it were, the Body, or Trunk of the Column, excluſive of the Head and Foot. See COLUMN.

The Word is *French*, and literally ſignifies a *Caſk*.

FUSTIAN, in Commerce, a kind of Stuff, which ſeems, as it were, croſs'd, on one Side.

Right *Fuſtians* ſhould be made altogether of Cotton Thread, both Woof, and Warp.

There are *Fuſtians* of divers Kinds, wide, narrow, coarſe, fine; with Shag, or Nap, and without it. There are alſo a great many made whereof the Warp is Flax, or even Hemp.

*Fuſtian* croſs'd, and napp'd on both Sides, is called *Bombaſin*.——

The Plumbers uſe *Fuſtian* to caſt Lead on. See PLUMBERY.

*Menage* derives the Word from *Fuſtanum*, which in the corrupt *Latin* Writers is uſed in the ſame Senſe; and is ſuppoſed to be form'd from *Fuſtis*, on account of the Tree whereon the Cotton grows. See COTTON.

*Bochart* derives it from *fuſtat*, which in *Arabic* ſignifies the antient City of *Memphis*, where Cotton is produced in great Abundance.

FUSTICK, or FUSTOCK, a yellow Wood, us'd by the Dyers. See DYING.

The Colour it yields is a fine golden Yellow; but there ſhould be ſome other Ingredients mix'd with it, to make it laſting. See YELLOW.

The Tree that yields it, grows in all the *Antilles* Iſlands; but particularly that of *Tabago*, where it riſes to a great Height.

The Dyers uſe it chiefly for Blacks. See BLACK. But ſome of the ableſt, and honeſteſt among them, who would dye none but the beſt, and moſt laſting Colours, are of Opinion it ſhould be abſolutely excluded out of all Dying.

Beſide this, there is another kind of *Fuſtick* or *Fuſtel*, growing in *Italy*, *Provence*, &c. uſed to dye a Coffee Colour.

F-UT-FA, in Muſick, one of the Cleſs. See CLEF.

FUTURE, ſomething *to come* hereafter. A *future* Contingency. There is none but GOD to whom *future* Things are preſent. A *future* State. See RESURRECTION, and IMMORTALITY.

FUTURE, or FUTURE *Tenſe*, in Grammar, an Inflexion of Verbs, whereby they denote, that a Thing *will be*, in ſome Time yet to come. The laſt Day will come. I ſhall ſee an End. See TENSE.

The *future* Time admits of two Caſes: Either we may have a mind to expreſs a thing that ſhall come to paſs in a ſhort time; or a thing that ſhall happen in any indefinite Time.

Thus the *Greeks* have their *paulo poſt Future*, ὀλίγον μέλλων, which marks a thing about to be done; as ποιήσομαι; beſide the common, indefinite *Future* ποιήσω, I will do it; *amabo*, I will love.

In *Latin*, *Italian*, *French*, and even *Engliſh*, the *Future* of the *Indicative* expreſſes only the Deſign, or Intention of doing a thing, or ſimply that the Thing will be; as, I will praiſe, I will be approved: And the *Future* of the Subjunctive ſhews that the thing will be done under certain Circumſtances; when I ſhall have ſeen *Verſailles*, I will tell you. Sometimes the *Future* is expreſs'd by the Preſent; If I meet your Friend; *ſi offendero*; *ſi incidero*.

# G.

G, Is the ſeventh Letter of the Alphabet, and the fifth Conſonant: But in the Alphabets of all the Oriental Languages, the *Hebrew*, *Phœnician*, *Chaldee*, *Syriac*, *Samaritan*, *Arabic*, and even *Greek*, G 'tis the third Letter. See LETTER.

The *Hebrews* call it *Ghimel*, or *Gimel*, *q. d.* Camel; by reaſon it reſembles the Neck of that Animal: And the ſame Appellation it bears in the *Sarmatian*, *Phœnician*, and *Chaldee*: In *Syriac* 'tis pronounced *Gomal*; in *Arabec*, *Giim*, and in *Greek*, *Gamma*.

The Letter *G* is of the mute Kind, and cannot be any way ſounded without the Help of a Vowel. 'Tis form'd by the Reflection of the Air againſt the Palate, made by the Tongue, as the Air paſſes out of the Throat: Which *Martianus Capella* expreſſes thus, *G, ſpiritus, cum palato*; ſo that the *G* is a palatal Letter. See LETTER, MUTE, and PALATAL.

The *Latins* took the Liberty to drop the Letter *G* at the Beginnings of Words, before an *n*; as in *gnatus*, *gnoſco*, *gnobilis*, *gnarrat*, &c. which they ordinarily wrote, *natus*, *noſco*, *nobilis*, &c. They alſo frequently changed it into *C*, as *Gamelus*, into *Camelus*; *Grogulus*, *Graculus*; *Quingentum*, *quincentum*, &c. Sometimes it is put inſtead of *N*, before a *C*, and another *G*; as *Agchiſes*, *Agcora*, *Agguilla*, &c. for *Anchiſes*, *Ancora*, *Anguilla*, &c. Inſtead of *P*; as *Magilia*, for *Mapilia*, &c. *G* is alſo uſed inſtead of *Q*, and *Q* inſtead of *G*, as *Anquina*, *Angina*, *Anguina*, &c. Inſtead of *R*, as *Aquagium*, for *Aquarium*; *Agger*, *Arger*, &c. And inſtead of *S*, as *Spargo*, *ſparſi*, *ſparſum*; or, rather, it is retrench'd from thoſe laſt Words, to avoid the Cacophony of *ſpargſi*, or *ſparcſi*.

*G*, is alſo put for *C*; as *Cneius*, for *Gneius*; *Caius*, for *Gaius*; *Gaeta*, for *Caieta*: for *V*, as *figere*, for *fivere*.

The Northern People frequently change the *G* into *V*, or *W*; as in *Gallus*, *Wallus*, *Gallia*, *Wallia*, *Vallia*, &c. For in this Inſtance it muſt not be ſaid that the *French* have changed the *W* into *G*; by reaſon they wrote *Gallus* long before *Wallus*, or *Wallia* were known; as appears from all the antient *Roman* and *Greek* Writers.

And yet, 'tis equally true, that the *French* change the *W* of the Northern Nations, and the *V* Conſonant into *G*; as *Willielmus*, *William*, into *Guillaume*,; *Wulphilas*, into *Gulphilas*; *Vaſco*, into *Gaſcon*, &c. It may be added, that the antient *Gauls*, and *Celtæ* changed the ו or *v* of the primitive Language into *G*: Accordingly, in the Bas Breton they ſtill ſay *gouin*, of ויין Wine, from יי", by changing the latter י into ו.

*Diomed. L. II. de Litera*, calls *G*, a new Letter: His Reaſon was, that the *Romans* had not introduc'd it before the firſt *Punic* War; as appears from the Roſtral Column, erected by *C. Duilius*, on which we every where find a *C* in lieu of *G*. It was *Sp. Carvilius*, who firſt diſtinguiſh'd between thoſe two Letters; and invented the Figure of the *G*: as we are aſſured by *Terentius Scaurus*. The *C* ſerved very well for *G*; it being the third Letter of the *Latin* Alphabet, as the *g* or *γ* was of the *Greek*.

The *G* is found inſtead of *C* in ſeveral Medals: *Vaillant Num. Imperat. T. I. p.* 39. M. *Reger* produces a Medal of the *Familia Ogulnia*, where GAR is read inſtead of CAR, which is on thoſe of M. *Patin*. But the *C* is more frequently ſeen on Medals, in lieu of *G*; as AUCUSTALIS CALLAECIA CARTACINENCES, &c. for AUGUSTALIS, &c. Not that the Pronunciation of thoſe Words was alter'd; but only that the *G* was unartfully or negligently cut by the Workmen. As is the Caſe in divers Inſcriptions of the Eaſtern Empire; where AUC, AUCC, AUCCC, are frequently found for AUG, &c.

The Form of our *G* is taken from that of the *Latins*, who borrowed it from the *Greeks*; the *latin G* being certainly a Corruption of the *Greek* Gamma Γ, as might eaſily be ſhewn, had our Printers all the Characters and Forms of this Letter, which we meet withal in the *Greek* and *Latin MSS.* thro' which the Letter paſs'd from Γ to *G*.

As to the Gamma of the *Greeks*, 'tis manifeſtly the ג Ghimmel of the *Hebrews*, or *Samaritans*. All the Difference between the Gamma and Ghimel conſiſts in this, that the one is turn'd to the Right, and the other to the Left, according to the different manners of writing and reading, which obtain'd among thoſe different Nations: ſo that all the pains *Salmaſius* has taken on *Solinus*, to prove that the *G* was derived from *Greek* Kappa, is loſt.

*G* has alſo been us'd as a Numeral Letter, ſignifying 400, according to the Verſe,

# GAB.

*G Quadringentos demonſtrativa tenebit.*

When a Daſh was added a-top the $\overline{G}$, it ſignify'd forty thouſand. See A.

*G* is alſo us'd in Muſic, to ſignify one of the Clefs. See CLEF.

*G* is the Clef of the higheſt Part, call'd the *Treble*, or *Alt*. See TREBLE.

GABBARA, a Name the *Egyptians* gave the dead Bodies, which they kept by them, inſtead of burying them.

That People, out of a Cuſtom which they had receiv'd from their Anceſtors, and which aroſe in ſome meaſure from the Diſpoſition of their Country, which is expoſed to the Inundations of the *Nile*; us'd to wrap up the Bodies of Perſons of Piety and Eminence, particularly thoſe of Saints, and Martyrs, in a great Number of linen Cloths, with Balms, and Spices; and inſtead of interring them, preſerved them in their Houſes: thinking, that thereby they did them much more Honour. And theſe, St. *Auguſtin* tells us, were what they call'd *Gabaras*. Sermon CXX. *De diverſis*, *c.* 12.

*Pliny* makes mention of the ſame thing, *L. VII. c.* 16. where he relates, that in the time of *Claudius* a *Gabbara* was brought from *Arabia*, almoſt ten Foot long.

Fa. *Hardouin* imagines, that *Pliny* here took the Word for a proper Name; and accordingly ſearches in *Tacitus*, for one *Abbarus*, a King of *Arabia*: But *Hardouin* himſelf is not of that Opinion; taking the Word to be rather the גבור *Ghibbor*, of the *Hebrews*; or גבאר *Ghabbar*, of the *Arabians*; and to ſignify a *Gyant*.

But the Jeſuite *Roſweyd* has given us a much better Account in his learned Notes, on the Life of St. *Anthony*, *c.* 7; and in his Onomaſticon, under the Word *Gabbara*; where he ſhews that we meet with both *Gabbara*, *Gabbares*, *Gabarus*, and *Gabbarus*; and that they all ſignify a Body embalm'd; which he proves from the Teſtimonies of *Cicero*, *Tuſcul. Queſt.*; of *Pompon. Mela*, *L. I. c.* 9.; of *Sextus Empiricus*, *L. III.*; *Pyrrhon Hypotheſ. c.* 24.; of *Lucian*, *de Luctu*; of *Corippus*, *L. III. De funere Juſtiniani*; of St. *Auguſtin*, *Caſſian*, *Damaſcenus*, &c. See MUMMY.

The Word is *Arabic*, *Syriac*, and *Hebrew*, form'd of גבר Gaber, a Man.

GABEL, or GABELLE, in the *French* Cuſtoms, a Duty or Impoſition on Salt. See SALT.

The *Gabelles* is let out to Farm; and make the ſecond Article in the King's Revenue. See DUTY, FARM, &c.

There are three Farms of *Gabels*; the firſt comprehends the greateſt Part of the Kingdom: The 2d is that of the *Lyonnois* and *Languedoc*; and the 3d that of *Dauphine* and *Provence*. There are ſeveral Provinces exempt from the *Gabel*; having purchaſed the Privilege of *Henry* II.

This Duty is ſaid to have had its Riſe in *France*, in 1286. under *Philip* the Fair. *Philip* the Long took a Double *per* Livre on Salt, by an Edict in 1331; which he promis'd to remit when he was deliver'd from his Enemies; and which he did accordingly in 1345. King *John* reſum'd it in 1355; and it was granted the Dauphin in 1358, to ranſom King *John*. *Charles* V. made it perpetual. *Charles* VII. rais'd it to ſix Deniers: *Louis* XI. to twelve; and *Francis* I. to 24 Livres *per* Muid. And it has been conſiderably augmented ſince. *Philip de Valois* firſt eſtabliſh'd Granaries and Officers of the *Gabelles*, and prohibited any Perſons from ſelling Salt: From which time the whole Commerce of Salt, for the Inland Conſumption, has lain wholly in the King's Hands, who ſells and diſtributes every Grain thereof by his Farmers, and Officers created for the purpoſe.

The Produce of this Impoſt is ſo conſiderable, that it is computed to make one Fourth of the whole Revenue of the Kingdom; and yields the Crown as much as all the Mines of *Peru*, *Chilly Potoſi*, and the reſt of *America* does the *Spaniards*.

Etymologiſts are extremely divided as to the Origin of the Word. Some derive it from the Hebrew *Gab*, a Preſent; others from קבל to deliver; others from קבלה *Kabbalah*, Receipt; others from *Ghauel*, or *Gabe*, unjuſt Law; others from the corrupt latin *Gabella*, or *Gablum*, Tribute.—

GABEL is alſo us'd in ſome of our antient Writers, for any ſort of Tax, or Impoſition: As *Gabel* of Wines, of Silks, *&c.* See DUTY.

GABIONS, in Fortification, &c. large Baſkets, made of Oſier Twigs, wove of a cylindrical Form, ſix Foot high, and four wide; which being fill'd with Earth, ſerve as a Defence, or Shelter from the Enemy's Fire.

They are commonly uſed in Batteries, to ſcreen the Engineers, &c. In order to which one is placed on either Side each Gun, only leaving room for the Muzzle to appear thro'. See BATTERY.

There are alſo a ſmaller ſort of *Gabions*, us'd on Parapets, in Trenches, &c. to cover the Muſqueteers; being placed ſo near as that a Muſquet can but juſt peep thro'.

They alſo ſerve as a Parapet on Lines, Lodgments, &c. where the Ground proves too hard to dig into. See PARAPET.

To render the *Gabions* uſeleſs, they endeavour to ſet them on fire, by throwing pitched Faggots among them.

GABLE, or GABLE-*End* of a Houſe, is the upright triangular End; from the Cornice, or Eaves, to the Top of its Roof. See HOUSE.

GAGE, in our antient Cuſtoms, ſignifies a Pledge, or Pawn, given by way of Security.

The Word is only properly us'd for Moveables; for Immoveables, *Hypotheca* is us'd. If the *Gage* periſh, the Perſon who received it is not to anſwer for it, but only for extreme Negligence, &c. See PLEDGE.

The Word *Gage* is particularly us'd for a Challenge, to Combat; in which Senſe it was a Pledge, which the Accuſer, or Challenger caſt on the Ground, and the other took up, as accepting the Challenge: It was uſually a Glove, Gantlet, Chaperoon, or the like. See COMBAT, and DUEL.

The Grand Cuſtomary mentions *Gages Pleiges de Duel*. Theſe were Gentlemen, of their Relations or Friends: If he who had given the *Gages Pleiges*, was overcome, he was to pay a Mulct agreed on.

The Word *Gage* is only retain'd as a Subſtantive: As a Verb, the G is chang'd into W; and of *Gage* is form'd *Wage*; as, to *wage* Law; to *wage* Deliverance, *q. d.* to give Security a thing ſhall be deliver'd. See WAGE.

Thus, if a Perſon who has diſtrain'd be ſued for not having deliver'd what he had took by Diſtreſs, he ſhall *wage* or *gage* Deliverance; that is, put in Surety that he will deliver them. See LAW; ſee alſo *Mort* GAGE.

*Mort*-GAGE, it that which is left in the Hands of the Proprietor, ſo that he reaps the Fruits thereof; in oppoſition to *Vif-gage*, where the Fruits or Revenues are reap'd by the Creditor, and reckon'd on the Foot of the Debt, which diminiſhes in proportion thereto.

The ſecond, acquits, or diſcharges it ſelf; the firſt does not.

*Pomey* alſo uſes *Mort-gage* for the Poſſeſſion of any Effects, on condition of ſurrendring them up at the good pleaſure of the Perſon who gave them. See MORTGAGE.

GAGE, in the Sea Language. When one Ship is to windward of another, ſhe is ſaid to have the *Weather-gage* of her.

The Seamen alſo call trying how much Water a Ship draws, *gaging*, or rather *gauging* of her; and it is done thus:

They drive a Nail into a Pike, near the End, and then put down this Pike by the Rudder, till the Nail catch hold under it; for then as many Feet as the Pike is under Water, is the Ship's *Gage*, or Depth of Water ſhe draws.

GAGE, in Joinery, is an Inſtrument made to ſtrike a Line truly parallel to the ſtreight Side of any Board or Piece of Stuff.

Its chief Uſe is for *gaging* of Tenants true, to fit into Mortiſſes; and for *gaging* Stuff of an equal Thickneſs.

It is made of an oval piece of Wood, fitted on upon a ſquare Stick, to ſlide up and down ſtifly thereon, and with a Tooth in the End of a Staff, to ſcore, or ſtrike a Line upon the Stuff at any Diſtance, according to the Diſtance of the Oval from it.

GAGER *del Ley*; ſee WAGE, and WAGER *of Law*.

GAGER, and GAGING, in Geometry, } ſee { GAUGER. GAUGING.

GAÏANITES, GAÏANITÆ, or GAÏNITES, a Sect of antient Hereticks, ſprung from the *Eutychians*.

This Sect was of an older Standing than *Gaian*, or *Gain*, a Biſhop of *Alexandria*, in the VI^th^ Century, from whom they took their Name. They adhered to the Opinions of *Julian Halicarnaſſæus*, the Chief of the *Incorruptibiles* and *Phantaſtici*; and came at length to be denominated *Gaianites*, upon *Gaian*'s putting himſelf at their Head. They denied that Jeſus Chriſt, after the Hypoſtatical Union was ſubject to any of the Infirmities of human Nature. See PHANTASTICI.

GAIN, the Profit, or Lucre a Perſon reaps from his Trade, Employment, or Induſtry.

There are legal and reputable *Gains*, as well as ſordid and infamous ones. What is *gain'd* by Gaming, is all liable to be reſtored again, if the Loſer will take the Benefit of the Law. *Menage* derives the Word from the German *Gewin*; whereof the *Italians* have made *Guadagno*; the *French*, and *Engliſh*, *Gain*.

GAIN, in Architecture, is the Workmens Term for the Bevelling Shoulder of the Joiſt, or other Timber.

It is us'd alſo for the lapping of the End of the Joiſt, &c. upon a Trimmer, or Girder; and then the Thickneſs of the Shoulder is cut into the Trimmer alſo bevelling upwards, that it may juſt receive the *Gain*; and ſo the Joiſt and Trimmer lie even and level with their Surface. This way of working is us'd in Floors and Hearths.

GAINAGE, in our antient Writers, ſignifies the Draught-oxen, Horſes, Wain, Plough, and Furniture for carrying on the Work of Tillage by the baſer ſort of Sokemen and Villains; and ſometimes the Land it ſelf, or the Profit rais'd by cultivating it.

*Bracton*, *lib.* 1. *cap.* 9. ſpeaking of Lords and Servants, ſays, *Ut ſi eos deſtruant, quod ſalvum non poſſit eis eſſe* Wainagium *ſuum*. And again, *Lib.* 3. *Tract.* 2. *cap.* 1. *Villanus non amerciabitur, niſi ſalvo* Wainagio *ſuo*. For antiently, as it appears both by *Mag. Char.* and other Books, the Villain, when amerced, had his *Wainage* free; to the end his Plough might not ſtand ſtill: And the Law, for the ſame Reaſon, does ſtill allow a like Privilege to the Husbandman, that is, his Draught-horſes are not, in many Caſes, diſtrainable. See DISTRESS.

GALACTITES, in Natural Hiſtory, a Stone, thus called by reaſon when broke or ground, it reſolves into a white Liquor, like *Milk*, which the *Greeks* call γαλα.

The Stone is of an Aſh Colour, and pretty ſoft, and ſweet to the Taſte. 'Tis found in *Tuſcany*, *Saxony*, and other Parts. Authors recommend it as good in Defluxions of the Eyes, and for Ulcers: It is ſuppoſed to make the Milk more copious in Nurſes; and when hung to the Necks of Children, promotes Salivation.

GALACTOPHAGI, and GALACTOPOTÆ, in Antiquity, Perſons who lived wholly on Milk, without Corn, or the uſe of any other Food.

Certain Nations, in *Scythia Aſiatica*, as the *Getæ*, *Nomades*, &c. are famous in antient Hiſtory, in quality of *Galactophagi*, Milk-eaters. *Homer* makes their Eloge, *Iliad. lib. III.* *Ptolomy*, in his Geography, places the *Galactophagi* between the *Riphæan* Mountains, on one Side; and the *Hircanian* Sea on the other.

The Words are compounded of γαλα, γαλάκτος, Milk; φάγομαι, I eat; and πότης, of πίνω, I drink.—

GALACTOPHEROUS *Ducts*, are ſuch Veſſels as ſerve to convey Milk. See MILK.

Such are the Lacteals, and Mamillary Veſſels. See LACTEALS, and MAMMÆ.

GALACTOSIS, the changing into Milk; or the Production of Milk. See MILK.

The Term properly denotes the Action whereby the Food, or Chyle, is converted into Milk.

GALANGA, or GALANGAL, a Medicinal Root, brought from the *Eaſt Indies*; the Produce of a Tree of the ſame Name.

There are two kinds of *Galanga's*; the ſmall, and the great: The ſmall is a rough, knotty Root, of a ruddy Colour both within, and without, and of a very pungent aromatic Taſte, and Smell. It is brought from *China*, and is uſed with good Succeſs in all Diſorders of the Stomach, Bowels, and Womb, ariſing from the Weakneſs of the Nerves.

The greater *Galanga*, growing chiefly in *Java* and *Malabar* inclines more to an Aſh Colour. Its Qualities are of the ſame kind with thoſe of the other; only leſs efficacious, and much leſs uſed. The Vinegar-makers uſe both. See ACORUS.

GALAXY, in Aſtronomy, That long, white, luminous Track, which ſeems to incompaſs the Heavens like a Swath, Scarf, or Girdle; and which is eaſily perceiveable in a clear Night, eſpecially when the Moon does not appear.

It paſſes between Sagittary, and Gemini, and divides the Sphere into two Parts: It is unequally broad; and in ſome Parts is ſingle, in others double.

The *Greeks* call it Γαλαξίας, *Galaxy*, of Γαλα, γαλάκτος, *Milk*; on account of its Colour, and Appearance: The *Latins*, for the ſame reaſon, call it *Via Lactea*; and we, the *Milky Way*.—

The antient Poets, and even Philoſophers, ſpeak of the *Galaxy*, as the Road, or Way, by which the Hero's went to Heaven.

*Ariſtotle* makes it a kind of Meteor, form'd of a Croud of Vapours, drawn into that Part by certain large Stars diſpoſed in the Region of the Heavens anſwering hereto.

Others, finding that the *Galaxy* was ſeen all over the Globe; that it always correſponded to the ſame fix'd Stars; and that it tranſcended the Height of the higheſt Planets; ſet aſide *Ariſtotles*'s Opinion, and placed the *Galaxy* in the Firmament, or Region of the fixed Stars, and concluded it to be nothing but an Aſſemblage of an infinite Number of minute Stars.

Since

Since the Invention of the Teleſcope, this Opinion has been abundantly confirmed. By directing a good Teleſcope to any Part of the Milky Way; where, before, we only ſaw a confuſed Whiteneſs, we now deſcry an innumerable Multitude of little Stars. Theſe Stars are ſo remote, that a naked Eye confounds them: The like we obſerve in thoſe other Spots, called Nebuloſe Stars, which when examined with the Teleſcope, are diſtinctly perceived to be Cluſters of little Stars, too faint to affect the Eye ſingly. See STAR.

GALBANETUM, a Compoſition, or Preparation of Galbanum, formerly preſcribed, but now much out of Uſe. See GALBANUM.

GALBANUM, in Pharmacy, A Gum iſſuing from an Inciſion in the Root of a ferulaceous Plant, call'd in Latin, *Ferula Galbanifera*; growing in *Arabia*, *Syria*, &c. See GUM.

There are two kinds of *Galbanum*; the one in Tears; the other in Maſs: The firſt is to be choſe of a golden Yellow without ſide, but much paler within; of a bitter Taſte, and ſtrong, diſagreeable Smell. For the ſecond, take that which is fulleſt of Tears, very dry, clear, and not ſtinking. This laſt is eaſily ſophiſticated with broken Beans, Roſin, and Gum Ammoniac.

*Galbanum* is of an emollient, and reſolutive Nature; good in all Hyſteric Caſes, and in Aſthma's and inveterate Coughs: It provokes the Menſes, and brings on Delivery: But it is chiefly uſed externally, in Plaſters for the Belly, which it looſens, what way ſoever applied.

The Word is derived, according to *Martinius*, from the *Hebrew* Chelbenah, *Fat*.

GALE, a Sea Phraſe, for the blowing of the Wind at Sea: When the Sea doth not blow ſo hard, but that a Ship can carry her Top-ſails a-trip, that is, hoiſted up to the higheſt, they ſay it is a *Loom Gale*: When it blows very ſtrong, they ſay it is a *Stiff Gale*, or at leaſt a *Freſh Gale*; but when it blows ſo hard, and violently, that a Ship cannot bear any Sail, they ſay, it blows *a Storm*.

When two Ships are near one another at Sea, and there being but little Wind blowing, one feels more of it than the other; they ſay, the Ship *gales* away from the other.

GALEARII, or GALIARII, in Antiquity, a Name the *Romans* gave to the Black Guards or Servants of the Soldiers. *Vegetius III*, 6. *Salmaſius* on the third Chapter of the Life of *Adrian* by *Spartian*.

GALEASSE, or GALEACE, a large, low built, heavy Veſſel; the biggeſt of all Veſſels that go with Ores. See VESSEL.

It may carry twenty Guns; with a Stern, capable of lodging a great Number of Muſqueteers. It uſes both Sails and Oars; and the Rowers are under Cover. It has three Maſts; the Main, Mizzen, and Bowſprit, which are never to be taken down, or lowerd, as they may be in Galleys. It has 32 Benches of Rowers, and to each Bench five or ſix Slaves; tho' *Will. of Tyre* makes mention of *Galeaſſes*, with 100 Benches of Oars.

It has three Tire of Guns, in the Head, one over the other, of two Guns each, bearing Balls of 36, 24, and 10 Pounds. It has but two Tire in the Stern; each containing three Guns, carrying Balls of 18 Pounds. See GALLEY.

The *Venetians* are the only People who have *Galeaſſes*: Antiently, the *French* likewiſe made uſe of them.

GALENIC *Medicine*, is properly the Manner of conſidering and treating Diſeaſes, founded on the Principles of *Galen*; or introduced by *Galen*. See MEDICINE.

*Claud. Galen*, was of *Pergamus* in *Aſia*, the Son of a famous Architect, and Pupil of *Satyron* and *Pelops*, two able Phyſicians. He firſt diſtinguiſh'd himſelf at *Athens*; then at *Alexandria*, and laſtly at *Rome*; where he wrote a great deal; where he alſo died, in the Year of Chriſt 140.

He is ſaid to have compoſed 200 Treatiſes, whereof there are 170 ſtill extant. There have been 23 ſeveral Editions of this Author: The firſt is that of *Venice*, in Folio, in the Year 1525: The beſt is that of *Paris*, in 13 Volumes in Folio, *Greek* and *Latin*, publiſh'd in 1639.

This Author, collecting and digeſting what the Phyſicians before him had done; and explaining every thing according to the ſtricteſt Doctrines of the Peripateticks, ſet Phyſic on a new Footing; introduced the Doctrine of the four *Elements*; the Cardinal *Qualities*, and their *Degrees*; and the four *Humors* or Temperaments. See ELEMENT, QUALITY, DEGREE, HUMOR, &c.

GALENIC is now more frequently us'd in a wider Signification, *viz.* for that Method of Phyſick, contradiſtinguiſh'd from *Chymical*. See MEDICINE.

In this Senſe, *Galenical Medicine*, *Galenical Pharmacy*, &c. are thoſe which go upon the eaſier Preparations of Herbs, Roots, &c. by Infuſion, Decoction, &c. and attain their Ends, and make their Remedies effectual, by the combining and multiplying of Ingredients: In oppoſition to *Chemical Medicine*, or *Pharmacy*, which torture the *Materia Medica* by Fire, and draw their more intimate and remote Virtues by elaborate Preparations; as Calcination, Digeſtion, Fermentation, &c. See CHEMISTRY, and PHARMACY.——

Medicine was wholly *Galenical*, till the Time of *Paracelſus*. *Geber*, indeed, and after him *Raymund Lully*, *Arnoldus de Villa Nova*, and *Baſil Valentine*, made ſome Attempts to apply Chemiſtry to Medicine; eſpecially the laſt of them; but no great Advance was made. *Paracelſus*, and after him *Van Helmont*, alter'd the whole of Medicine; exploded *Galeniſm*, and the Peripatetic Doctrine, and render'd Medicine wholly *Chemical*. See CHEMISTRY.

The late Improvements in Philoſophy, have reform'd, and retriev'd the *Galenical* Medicine, which has now very little of *Galen*'s in it. 'Tis now all Mechanical and Corpuſcular: Inſtead of Qualities and Degrees, every thing is now reduced to mechanical Affections; to the Figures, Bulks, Gravities, &c. of the component Particles, and to the great Principle of Attraction. See MECHANICAL, and CORPUSCULAR; ſee alſo MEDICINE.

GALENISTS, a Denomination given ſuch Phyſicians, as practice, preſcribe, or write on *Galenical* Principles. See GALENICAL.

The *Galeniſts* ſtand oppoſed to the Chymiſts: The *Materia Medica* of the firſt, is chiefly of the Vegetable Kind; the Virtues of which they procure by the more ſimple and eaſy means; and ſeldom go beyond Decoction. The latter take in Minerals, Salts, Stones, and even Metals, and Semimetals: Theſe, they hold, afford more efficacious Remedies; and their Virtues, procured by long, artful, labour'd Proceſſes, with the Help of Fire, are had more pure, and in a leſſer Compaſs. See CHEMIST.

At preſent, the *Galeniſts* and Chemiſts are pretty well accommodated; and moſt of our Phyſicians uſe the Preparations and Remedies of both. See PHYSICIAN, REMEDY, &c.

GALENISTS, GALENASTS, or GALENITES, are alſo a Branch of the *Mennonites*, or Anabaptiſts, who take in ſeveral of the Opinions of the *Socinians*, or rather *Arians*, touching the Divinity of our Saviour. See MENNONITE.

They are thus call'd from their Leader *Galenas*, a learned, and eloquent Phyſician of *Amſterdam*, who is accuſed of being a thorough *Socinian*. *Jovet T. I. p.* 413. &c.

GALERICULATE *Flowers*; ſee FLOWERS.

GALILÆANS, a Sect among the antient Jews, denominated from *Judas* of *Galilee*, their Chief; who, eſteeming it unworthy, that the Jews ſhould pay Tribute to Strangers, rais'd up his Countrymen againſt the Edict of the Emperor *Auguſtus*, which had order'd a Cenſus and Enumeration to be made of all his Subjects.

Their Pretence was, that God alone ſhould be own'd as Maſter, and called by the Name of *Lord*. In other reſpects, they had much the ſame Doctrines as the *Phariſees*; but as they judg'd it unlawful to pray for infidel Princes, they ſeparated themſelves from the reſt of the Jews, and perform'd their Sacrifices apart. See PHARISEE.

As our Saviour, and his Apoſtles were of *Galilee*, they were ſuſpected to be of the Sect of *Galilæans*; and it was on this Principle, as St. *Jerom* obſerves, that the *Phariſees* laid a Snare for him, aſking, whether it was lawful to give Tribute to *Cæſar*; that in caſe he denied it, they might have an Occaſion of accuſing him. *Joſeph. Ant. Jud. L.* 18.

GALL, a yellow, bitter Juice, or Humor, call'd alſo *Bile*, ſecreted from the Blood, in the Glands of the Liver, and depoſited in a peculiar Reſervoir, call'd the *Gall-bladder*. See LIVER, and GALL-*Bladder*.

The Bile contain'd in the *Gall* Bladder, properly call'd *Gall*, is ſomewhat different from the Bile depoſited in the Porus Biliarius; being of a brighter Yellow, a greater Conſiſtence, and more bitter and acrimonious. For the reſt; the manner of Secretion with the Qualities, Uſe, &c. of the two Juices, are the ſame; which ſee under the Article BILE.

The *Gall* of divers Animals, is found of divers Uſes: That of a Hog is ſaid to make the Hair grow; deterges and heals Ulcers of the Ears: That of a Lamb is recommended for the Epilepſy: That of the Pike, for intermitting Fevers: That of the Carp, clears and ſtrengthens the Sight: That of a Kid, mix'd with the white of an Egg, Bread, and Oil of Laurel, and applied in form of Poultice on the Navel; is an approved Remedy for a quotidian Fever: That of a Cock, and a Bullock, reputed good in Diſeaſes of the Eyes, and to take away Freckles and other Diſfigurements of the Skin. See FRECKLE. That of a Roebuck, or Hare, deterges and carries off Clouds, Specks and Cataracts of the Eyes: That of the Boar, externally applied, is reſolutive, and good in ſcrophulous Tumors: Thoſe of the Sheep and Partridge, ſerve to deterge and cleanſe Ulcers of the Eyes. Fa. *Roger* adds, that the *Mahometans* of *Paleſtine* uſe no other Remedy againſt Poiſons, but ſeven, or eight Drops of the *Gall* of a Bear.

GALL *Bladder*, call'd alſo *Veſicula* and *folliculus fellis*, is a membranous Receptacle, in Figure ſomewhat like a Pear; ſituate at the lower Margin of the Liver, on the concave Side, and about the Bigneſs of a Pullet's Egg. See BLADDER.

The

The *Gall* Bladder adheres to the Liver, both by its Veſſels, which it receives from it; and likewiſe by its Membranes, whereof the external is common with that of the Liver. The lower Part, which hangs out of the Liver, reſts on the Pylorus of the Stomach, which it dies yellow with the *Gall* tranſuding thro' its Membranes.

Its Membranes are reckon'd five: An outer, or common one, from the Peritonæum; an inner one, from the Capſula of the Porta, and Porus Biliarius; and three proper ones: The firſt, *Vaſculous*, conſiſting of white Fibres, interwove with Veſſels; the ſecond, *Muſcular*, conſiſting of a double Row of fleſhy Fibres, the one longitudinal, the other annular; the third, or inner Coat, *Glandulous*, conſiſting of a great Number of Glands, like the Cruſta Villoſa of the Stomach, which ſeperate a Mucus that lines the Inſide of the *Gall* Bladder, and defends it from the Acrimony of the Bile.

The Bladder is uſually divided into two Parts, the *Fundus*, or Bottom; and the *Collum*, or Neck: At the Orifice of which latter is plac'd a Ring, or Circle of muſcular Fibres, which ſerve as a Sphincter to conſtringe the Orifice of the *Gall* Bladder, and hinder the too liberal Diſcharge of the Bile. See CYSTIC, HEPATIC, &c.

There are ſome Animals without *Gall* Bladders; as Deer, Horſes, Aſſes, Mules, Camels; and among Fiſhes, the Sea Calf, and Dolphin. The *Gall* of theſe Animals is inclos'd in Ducts, which terminate in the Inteſtines.

GALLANT, or GALANT, a *French* Term, ſignifying civil, polite, well bred; a Perſon of Wit, and Addreſs; that does every thing with a good Grace. A *galant* Man is a civil Man, ſomewhat brighter, gayer, and more agreeable than ordinary.

'Tis very difficult to define all the Qualities attach'd to the Idea of a *galant* Man: It frequently implies an Air of the World; a Diſpoſition to pleaſe, and particularly the Ladies; and a great Devotion to the Sex. The *French* Authors are very nice on the Point: They diſtinguiſh *galant Homme*, and *Homme galant*.——

*Mercure* GALANT, is the Title of a Book, which has appear'd Monthly at *Paris* for ſeveral Years. See JOURNAL.

It contains abundance of very pretty, curious Things; tho' ſeveral of the Wits have made it their Buſineſs to decry it. M. *de Vize* was the firſt Projector, and Author, or rather Collector: Since his Death, it has been continued by three other Perſons ſucceſſively.

GALLEATE *Flowers*; ſee FLOWERS.

GALLEON, ſee GALLION.

GALLERY, in Architecture, a cover'd Place in a Houſe, much longer than broad, and which is uſually on the Wings of the Building; ſerving to walk in.

The *Galleries* of the *Louvre* are magnificent: A *Gallery* of Painting: A compleat Apartment is to conſiſt of a Hall, Antichamber, Chamber, Cabinet, and *Gallery*. See APARTMENT.

*Savot*, in his Architecture, derives the Word *Gallery* from *Gaul*, as ſuppoſing the antient *Gauls* to have been the firſt who us'd them: *Nicod* fetches it from the *French aller*, to *go*, *q. d. Allerie*. Others bring it from *Galere*, Gally, by reaſon it bears ſome Reſemblance thereto in reſpect of Length. In the corrupt *Latin* we meet with *Galilæa*, for the *Gallery* of a Monaſtery.

GALLERY, is alſo a little Iſle, or Walk, ſerving as a common Paſſage to ſeveral Rooms, placed in a Line, or Row.

The *Gallery of a Church* is a kind of continued Tribune, with a Baluſtrade; built along the Sides or lower End of a Church, to hold the more People: And, in the *Greek* Churches, to ſeperate the Women from the Men.—*Gallery of a Theatre*, ſee CHURCH, THEATRE, &c.

GALLERY, in Fortification, is a cover'd Walk, made of Timber; ſerving for the ſafe Paſſage of a Ditch.

The Sides of the *Gallery* are to be Muſket proof, and conſiſt of a double Row of Planks, lined with Plates of Iron; and the Top is ſometimes cover'd with Earth, or Turf, to hinder the Effect of the Stones, artificial Fires, &c. of the Enemy.

*Galleries* are chiefly uſed to ſecure and facilitate the Miners Approach to the Face of the Baſtion, over the Moat, which is already ſuppoſed fill'd up with Faggots and Bavins, and the Artillery of the oppoſite Flank diſmounted. Sometimes it is called a *Traverſe*. See TRAVERSE.

GALLERY *of a Mine*, is the Paſſage, or Canal of a Mine; or any Branch thereof. See MINE.

The Beſiegers, and Beſieged do each of them carry *Galleries*, or Branches under Ground, in ſearch of each others Mines, which ſometimes meet and deſtroy each other.

GALLERY *in a Ship*, is a kind of Balcony, made upon the Stern, without Board, into which there is a Paſſage out of the Captain's Cabin, called the Great Cabin.

Theſe *Galleries* are indeed for Shew, and the Captain's Pleaſure, rather than any other Benefit; for in Ships of War, all open *Galleries* of this kind are to be avoided; in regard of the Facility of an Enemy's Entrance, and boarding of the Ship that way.

GALLEY, a low built Veſſel, going both with Oars and Sails; chiefly us'd by the States bordering on the Mediterranean. See VESSEL.

*Galleys* have uſually from 25 to 30 Benches of Oars, on each Side; and four or five *Galley* Slaves, to each Bench.

The *Galley* carries a large Gun, called the *Courſer*; two Baſtard Pieces; and two ſmall Pieces, with two Maſts and two Latin, or ſquare Sails. It it uſually from 20 to 22 Fathoms long; three broad; and one deep.

All the *Galleys*, both antient, and modern, are of a finer, and ſlenderer Make than Ships. Formerly they made divers kinds; at preſent the *Galleys* are all alike: All the Difference between them is as to Size, and nothing as to Figure. They uſually keep towards the Coaſts; tho' ſometimes they croſs the Sea.

The King of *France* keeps up forty *Galleys* for the Uſe of the Mediterranean, the Arſenal thereof being at *Marſeilles*: The General of the *Galleys* bears a double Anchor, placed in Pale, behind the Eſcutcheon of his Arms, as a Mark of his Authority.

*Galleys*, in *Latin* are called *Biremes*, *Triremes*, and *Quadriremes*; not on account of their having two, three, or four Ranges of Oars before one another, as many learned Men have imagin'd, and particularly *Scaliger* and *Snellius*, tho' this laſt has wrote excellently on the Subject of Navigation; for this were impracticable: Nor yet on account of their having but two, three, or four Oars; for then there would want Strength: But by reaſon there were two, three, or four Rowers faſten'd to each Oar, as in the *Galleys* uſed among us; as is very well ſhewn by the Jeſuite *Dechales*, in his Art of Sailing.

This Error was occaſioned by ſome antient *Galleys*, repreſented on Medals, or in Baſſo-Relievo's, wherein are ſeveral Ranges of Rowers placed over each other: But all the Mathematicians, Pilots, and Ship-builders look on this as a mere Viſion; inaſmuch as *Pliny* makes Mention of *Galleys* of 15, 20, 30, 40, 50 Rows of Rowers; ſo that if they were ranged over each other, tho' we were only to allow four Feet for each Deck, there would be a Diſtance of 160 Feet between the loweſt Rowers, and the higheſt: And yet we are aſſured, that the higheſt Ship ever built, was only 72 Feet high.—

*Scaliger* affirms, that the firſt *Triremis*, or *Galley* of three Stories, was built at *Corinth*; and is of opinion, that what *Pliny* calls *Long Ships*, were what we call *Galeaſſes*; the firſt whereof was that of the *Argonauts*. *Vegetius* mentions a *Galley* of five Decks; and *Memnon*, another with eight, and only one Man to each Oar.

The *Galley* is called by the *Greek* Authors under the Eaſtern Empire, Γαλαία, and Γαλέα; and by the *Latin* Authors of the ſame Time, *Galea*; whence the modern Denomination.

Some ſay, it was called *Galea*, on account of the Figure of a Caſk, or Helmet, which it bore on its Head, or Prow, as *Ovid.* atteſts, *De Triſtib.* The *French* call it *Galere*, by reaſon, they ſay, that the Top of the Maſts is uſually cut in manner of a Hat, which the *Italians* call *Galero*. Others derive both *Galea* and *Galere* from a Fiſh, by the *Greeks* call'd Γαλεώτης, or ξίφιας; and by us, the *Sword-fiſh*, whoſe Shape this Veſſel reſembles. Laſtly, others derive *Galley*, *Galea*, *Galere*, *Galeaſſe*, &c. from the *Syriac* and *Chaldee Gaul*, and *Gallin*, a Man expoſed on the Water, or in a Veſſel of Wood.

The *Captain*-GALLEY is the principal *Galley* of a State, commanded by the Captain General of the *Galleys*: In *France*, the *Royal Galley* is the firſt.

The *Patroon* GALLEY is the ſecond *Galley*, both of *France*, *Tuſcany*, and *Malta*. The General of the *Gallies* is on Board the Royal *Galley*; and the Lieutenant, on the Patroon.

The Terms peculiar to *Galleys*, are very numerous; and make a new Syſtem of Sea Language, quite different from that uſed in Ships. Monſ. *de Baras*, an antient Officer on Board the King of *France*'s *Galleys*, we hear, is engaged in writing a New Dictionary of the Dialect of the *Galleys*.

*Condemnation to the* GALLEYS, is a Penalty impoſed on Criminals and Delinquents, particularly in *France*; whereby they are adjudg'd to ſerve the King, or State, as Slaves, on Board the *Galleys*; either for ever; or for a limited Time. See PUNISHMENT, and SLAVE.

Condemnation to the *Galleys* for ever, imports Confiſcation of Lands, Goods, &c. For in *France*, he that confiſcates the Perſon, confiſcates the Goods. A Man *condemn'd to the Galleys* for Perpetuity, is dead in a Civil Senſe. He cannot diſpoſe of any of his Effects; cannot inherit; and if he be married, his Marriage is null: Nor can his Widow have any of her Dower out of his Goods. The Eccleſiaſtical Courts cannot ſentence to the *Galleys*: It is out of their Juriſdiction, and Reſſort. By an Ordinance of *Charles* IX. in 1564, the

Judges

Judges are enjoin'd, not to condemn a Criminal to the *Galleys* for leſs than ten Years: And *Henry* III. by another, of 1579, injoins the Captains, not to detain their *Galley* Slaves, after their Time is expired. But neither of theſe Laws are now obſerv'd.—

GALLEY, in Printing, a wooden Frame, or Inſtrument, into which the Compoſitor empties the Letters out of his Compoſing Stick, as often as it is filled. The *Galley*, when fill'd, contains the Matter of one Page; and when they have compoſed as many Pages, as are required for a Whole Sheet, Half Sheet, *&c.* they impoſe them, *i. e.* take the ſeveral Pages out the *Galleys*; put them into a Chaſe; lock them up with the Furniture; and ſo make Forms, ready for the Preſs. See PRINTING; ſee alſo COMPOSING-STICK, CHASE, and FORM.

GALLI, in Antiquity, a Name given in *Phrygia* to the Eunuch Prieſts of the Goddeſs *Cybele*.

The Principal of them was called *Archi-gallus*. The *Galli* were alſo call'd *Dactyli Idæi*, *Corybantes*, &c. See DACTYLI, CORYBANTES, CURETES, &c.

Authors are not agreed as to the Reaſon of this Denomination. St. *Jerom*, on the fourth Chapter of *Hoſea*, ſays, it was, becauſe they took *Gauls* for the Prieſt of this Goddeſs; and by way of Puniſhment and Deriſion for burning of *Rome*, caſtrated them. *Forcatulus* maintains the ſame Opinion, *L. V. de Gallor. Imp. & Philoſ.* But *Valla*, *Eleg. V. c. 6.* and *Voſſius de Idolol. L. I. c.* 20. reject it, with reaſon; as the *Phrygians* were no ways intereſted in the burning and ſacking of *Rome*.

Others derive the Name from the River *Gallus*; by reaſon they drank of its Waters, which inſpir'd them with, I know not what religious Fury and Enthuſiaſm, and deprived them of their Senſes to ſuch Degree, that they mutilated themſelves. Others hold, that the firſt Prieſt of *Cybele* having been nam'd *Gallus*; the Name became appropriated to all his Succeſſors. *Voſſius*, who propoſes theſe two Opinions, ſeems to incline moſt to the latter; tho' *Ovid*, in the fourth of his *Faſti*, and *Herodian*, *L. I.* favour the former.

Theſe Prieſts threw themſelves into a kind of Phrenzy, when they perform'd the Ceremonies of the Goddeſs; apparently, in imitation of the young *Atys*, her Favourite: whom they likewiſe imitated, by mutilating themſelves.

For Authors relate, that *Cybele* being deſperately in Love with that young *Phrygian*, ſhe gave him the Superintendance of her Sacrifices, on condition he would keep his Virginity; but that ſoon after, forgetting his Promiſe, he had an Affair with the Nymph *Sangaritis:* That *Cybele* provoked hereat, ſtruck him mad: That in a vehement Acceſs of his Phrenzy he was going to kill himſelf; and that the Goddeſs relenting, reſtored him to his Underſtanding: That out of his own Remorſe, he caſtrated himſelf; and that after his Example all the Prieſts of *Cybele* from that Time did the like.

Their Phrenzy, at the time of the Sacrifices, conſiſted in throwing round the Head with great Rapidity, and making violent Contorſions of the whole Body: They had alſo Drums and Flutes, wherewith they play'd, and danced to them; as already obſerv'd under the Articles CORYBANTES, and CURETES.

GALLIAMBIC, in the antient Poetry. A *Galliambic* Poem is a Compoſition in *Galliambic* Verſes.——A *Galliambic* Verſe conſiſts of ſix Feet; 1° An *Anapeſt*, or a Spondee; 2° An *Iambus*, or an Anapeſt, or Tribrach. 3° An *Iambus*. 4° A *Dactyl*. 5° A *Dactyl*; and 6° An *Anapeſt*.

Tho', one might meaſure the *Galliambic* Verſe in another manner; and make a different Arrangement and Combination of Syllables; which would give different Feet.——'Tis certain, the Antients regarded little more in the *Galliambic* Verſe, beſide the Number of Meaſures, or Intervals; without troubling themſelves about the Number of Syllables, or the Kinds of *Feet*, whereof it was compoſed.

GALLIAMBUS, in Poetry, a pleaſant kind of Verſe, us'd to be ſung by the Prieſts, in honour of the Goddeſs *Cybele*.——

*Galliambus* is alſo a Piece, or Compoſure in *Galliambic* Verſes. See GALLIAMBIC.

The Word is a Compound of *Gallus*, a Prieſt of *Cybele*; and *Jambus*, a Foot in the *Greek* and *Latin* Verſe.

GALLIARD, or GAILLARDE, in Muſic, and Dancing, a ſort of Dance, antiently in great Requeſt; conſiſting of very different Motions, and Actions, ſometimes proceeding *terra a terra*, or ſmoothly along; ſometimes capering; ſometimes along the Room, and ſometimes a-croſs.

It was alſo called *Romaneſque*, becauſe brought from *Rome*.

*Thoinot Arbeau*, in his Orcheſography, deſcribes it as conſiſting of five Steps, and five Poſitions of the Feet, which the Dancers perform'd before each other, and whereof he gives us the Score, or Tablature, which is of ſix Minims, and two triple Times.—

The Word is *French*, and literally ſignifies gay, merry, ſprightly.—

GALLICAN, a Term chiefly us'd in the Phraſe *Gallican Church*, *q. d.* the *French* Church; or the Aſſembly, or Convocation of the Prelates of *France*. M. *du Puy* has an expreſs Treatiſe of the Liberties of the *Gallican* Church.

The *Gallican* Breviary is the Breviary us'd by the Church of *Agrigentum*, in *Sicily*; which the modern Writers call *Breviarium Gallicanum*.

The Reaſon, no doubt, is its having been introduced by St. *Gerlan*, who was made Biſhop of *Agrigentum*, after Earl *Roger* had been driven out of *Sicily* by the *Sarazens*; and by the other *French* Biſhops, which the *Norman* Princes brought thither. See BREVIARY.

The *Gallican* Liturgy is the manner of performing the divine Offices antiently obſerved in the *Gauls*. Fa. *Mabillon* ſhews wherein it differ'd from the *Roman* Liturgy. *I. Liturg. Gall. c.* 5. &c.

GALLICISM, a Phraſe, or Conſtruction, peculiar to the *French* Language; or which has ſomething contrary to the ordinary Rules of Grammer of the other Languages. See PHRASE, and IDIOTISM.

Thus, *Cet homme eſt ſur ſa Bouche*, is a *Galliciſm*, having no regular Conſtruction: And the ſame may be ſaid of *Faire de la terre le foſſé*; which no Grammar could never find out. See ANGLICISM.

GALLIMATHIAS, a dark, perplex'd Diſcourſe, where Words, and Things are huddled together ſo as to make an inconcivable Jargon,

The Word is *French*, form'd, as ſome will have it, from *Polymathia*, which ſignifies Diverſity of Sciences; by reaſon ſuch as have their Memory charged with ſeveral kind of Sciences, are uſually confuſed, and expreſs themſelves ill.

M. *Huet* takes the Word *Gallimathias* to have had the ſame Origin with *Aliborum*; and to have firſt aroſe at the time when all the Pleadings at the Bar were in *Latin*. There was a Cauſe, it ſeems, upon the Carpet, about a Cock, belonging to the Plaintiff *Matthias*. The Council in the Heat of his Harangue, by often repeating the Words *Gallus*, and *Matthias*, happen'd to blunder; and inſtead of ſaying *Gallus Matthiæ*, ſaid *Galli Matthias*; which at length became a general Name for all confuſed, imbroil'd Diction, and Diſcourſe.

GALLIMAUFRY, a Ragout, Hache, or Hotch-potch, made of the Remains of ſeveral kinds of Meats. See RAGOUT.

Hence the Word is uſed in a figurative Senſe for a Piece, or Compoſition, of ſeveral different Parts, ill digeſted, and embaraſs'd.——

The Word is French, *Galimafree*.

GALLION, or GALLEON, a large Veſſel or Ship of War, of three, or four Decks. See VESSEL.

The Term is now only uſed in ſpeaking of the *Spaniſh* Fleet; the *Gallions* being a Part of the Ships employ'd in the Commerce of the Weſt Indies.

The *Spaniards* ſend every Year two Fleets; the one for *Mexico*, which they call the *Flota*; and the other for *Peru*, which they call the *Gallions*. The firſt, we have already given an Account of under the Article FLOTA.

The *Gallions* are eight in Number, the principal whereof are the *Capitane*, the *Amirante*, *il Governo*, the *Patach*, and *Marguarita*, of fifty Pieces of Braſs Canon: Beſide which there is a Patache of Advice. Theſe are all Ships of War, and go on the King's account; but are ſo loaden and embarraſs'd with Merchandices, that in caſe of an Attack, they would find it difficult to defend themſelves.

Beſide the King's *Gallions*, there are uſually twelve, or ſixteen Merchant Ships, call'd *Regiſter Ships*, belonging to private Perſons, who obtain leave for the ſame, or rather buy it; there being no Weſt India Company in *Spain*. See REGISTER.

The *Gallions* are loaded at *Cadix*, from whence they may put out at any time: They are about two Years in the whole Voyage. Their Departure is uſually ſome Months before that of the Flota; which cannot put out before *Auguſt*, by reaſon of the Winds. When they put out together, they ſeperate about the *Antilles* Iſlands; the *Gallions* for *Carthagena*, and *Porto Bello*; and the Flota for *Vera Crux*. At their Return, they rejoin at the *Havana*, in the Iſle of *Cuba*.

The Loading of the *Gallions* is always the richeſt: An Eſtimate of the yearly Returns or Cargo's, both of the Flota and *Gallions*, is as follows.

Of *Gold*, the *Gallions* bring yearly about two or three Millions of Crowns; and the *Flota* about one. Of *Silver*, the *Gallions* bring 18 or 20 thouſand Crowns; and the *Flota* 10 or 12. Of precious Stones, the *Gallions* bring as follow; two hundred thouſand Crowns worth of Pearls; two or three hundred thouſand Crowns of Emeralds; and twenty or thirty thouſand Crowns worth of Bezoards, Amethyſts, and other Stones of leſs Value: The *Flota* brings none at all. Of Wools, the *Gallions* bring forty or fifty thouſand Crowns: The *Flota*, none. Of Quinquina, the *Gallions* bring for twenty thouſand Crowns: The *Flota*, none. Of Skins and

Leathers, the *Gallions* bring for ſeventy thouſand Crowns: The *Flota* as much. Of Campeche Wood, the *Gallions* bring for ſixty thouſand Crowns: The *Flota* none. Of Skins and Leathers from *Buenos Ayres*, the Regiſter Ships may bring for about two hundred thouſand Crowns: Of Cochineel, about a Million of Crowns: And of Indigo, about ſix hundred thouſand Crowns. See COMMERCE.

GALLIOT, a ſmall Galley; or a ſort of Brigantine, built very ſlightly, and deſign'd for Chace. See BRIGANTINE.

She hath but one Maſt, and can both ſail, and row. She uſually carries two or three Pedrero's, and hath ſixteen or twenty Oars.

Some call the Bomb-ketches, *Galliots*.

GALLOGLASSES, a kind of Militia, or Soldiery in *Ireland*. *Cambden*, in his Annals of *Ireland*, p. 792. relates that the *Iriſh* Militia conſiſts of Cavalry, or Horſemen, call'd *Galloglaſſes*, or *Galloglaſſii*, who uſe a very ſharp ſort of Hatchet; and Infantry, call'd *Kernes*.

GALLON, an *Engliſh* Meaſure, for things both liquid and dry. See MEASURE.

The *Gallon* always contains eight *Pints*, or four *Quarts*; but thoſe Pints, and Quarts, and conſequently the *Gallon* it ſelf, are different, according to the Quality of the Things meaſur'd: The Wine *Gallon*, for inſtance, contains 231 Cubic Inches, and holds eight Pound, Averdupois, of pure Water: The Beer, and Ale *Gallon*, contain 282 ſolid Inches: And the *Gallon* for Grains, Meals, &c. 272 Inches, and hold nine Pound, 130 Ounces of pure Water.——See ALE *Meaſure*, WINE *Meaſure*, and DRY *Meaſure*.

GALLOON, in Commerce, a thick, narrow kind of Ferret, Ribband, or Lace, us'd to edge, or border Clothes.

The Term is ordinarily underſtood of that made of Woolen; ſometimes, that of Thread; or even Gold, or Silver.

GALLOP, in the Manage, is the ſwifteſt natural Pace of a Horſe, perform'd by Reaches, or Leaps; the two Forefeet being rais'd almoſt at the ſame time; and the Hindfeet, the like.——

In *Galloping*, the Horſe may lead with which Foreleg he pleaſes; the moſt uſual way is that with the Right: But which ſoever it be, the Hindleg of the ſame Side muſt follow it next; otherwiſe the Legs are ſaid to be *diſunited*. To remedy which Diſorder, the Rider muſt ſtay the Horſe a little on the Hand, and help him with the Spur on the contrary Side to that on which he is diſunited.

In a Circle, the Horſe is confined always to lead with his Foreleg, within the *Turn*; otherwiſe he is ſaid to *gallop falſe*. But here, too, the Hindleg of the ſame Side muſt follow.

We ſay, a *Hand Gallop*, a *Canterbury Gallop*, a *School Gallop*, &c. A ſmooth *Gallop* cloſe to the Ground, the *French* call, the *Engliſh Gallop*, *Gallop a l'Angloiſe*.

The Word is borrowed from the Barbarous Latin *caluparе*, or *calpare*, to run. Some derive it from *caballicare*: Others from the *Greek* καλπάζειν, or καλπὰν, to ſpur a Horſe.

GALLOWS, an Inſtrument of Puniſhment, whereon Perſons convicted capitally of Felony, &c. are executed by *Hanging*. See PUNISHMENT, FELONY, HANGING, &c.

Among our Anceſtors it was called *Furca*, Fork; a Name by which it is ſtill denominated abroad, particularly in *France* and *Italy*. In this latter Country, the Reaſon of the Name ſtill ſubſiſts; the *Gallows* being a real Fork drove into the Ground, a-croſs the Legs whereof is laid a Beam, to which the Rope is tied. See FURCA.

GALLS, or GALL *Nuts*, in Natural Hiſtory, &c. a kind of morbid Tumors or Excreſcencies, found on divers Vegetables; as the Oak, Willow, &c. in form of Balls, Cones, or little Apples.

The manner of the Production of *Galls*, is well deſcribed by *Malpighi*, in an expreſs Treatiſe, *de Gallis*.

The Proceſs, as obſerv'd, in the *Galls*, or Apples on the Gems of Oaks, is alſo given us by Mr. *Derham*.

Theſe Cones, ſays that Author, are in outward Appearance perfectly like the Gems, or Buds themſelves, only vaſtly bigger; and, in effect, they are no other than the Gems ſwell'd out in Bulk, which naturally ought to be puſh'd out in length. The Cauſe of which Obſtruction of Vegetation is this: Into the very Heart of the young, tender Bud, which begins to be turgid in *June*, and ſhoots out in a Month more, an Inſect of the Ichneumon Fly-kind, thruſts one, or more Eggs; and in all Probability, ſome venomous Ichor therewith. This Egg ſoon becomes a Maggot; which eats it ſelf a little Cell in the very Heart or Pith of the Gem; which ſhould be the Rudiment of the Branch, Leaves, and Fruit.

The Branch thus deſtroy'd, or at leaſt, its Vegetation obſtructed; the Sap that was to nouriſh it, is diverted into the remaining Parts of the Bud, which are only the Scaly Teguments; and which by this means grow large and flouriſhing, and become a Covering to the Inſect Caſe, as before they were to the tender Branch, &c. The Caſe lying within this Cone, is, at firſt, but ſmall; but, by degrees, as the included Maggot increaſes, ſo does the Caſe; till it comes to the Size of a large white Pea, ſhaped like an Acorn.

It may be added, that even Nettles, Ground-ivy, &c. have a kind of Balls or Caſes produced on their Leaves, by the Injection of the Eggs of a Fly of the ſame Kind. Theſe Caſes always grow in, or adjoining to ſome Rib of the Leaf; and their Production, *Malpighi*, and Mr. *Derham* deſcribe thus:

The parent Inſect, with its ſtiff ſetaceous Tail, terebrates the Rib of the Leaf, when tender, and makes way for its Eggs into the very Pith, or Heart thereof; emitting along with it a proper Juice to pervert the regular Vegetation.

From this Wound riſes a ſmall Excreſcence; which, when the Maggot is hatch'd, increaſes, and ſwells on each Side the Leaf, between the two Membranes; extending it ſelf into the parenchymous Parts thereof: till it be grown as big as two Grains of Wheat. In this Caſe lies a ſmall white, rough Maggot; which turns to an Aurelia, and afterwards to an Ichnemon Fly.

GALLS, or *Aleppo* GALLS, are a particular kind of vegetable Tumors, or Excreſcences; uſed in Dying, making Ink, &c.

Theſe *Galls* are produced on the hardeſt Species of Oak, called *Rouvre*, from the Latin *Robur*. Thoſe on other Oaks are leſs fit for the Purpoſes. They are hard as Shells; and yet are no other than the Caſes of Inſects, which are bred in them after the manner above deſcribed; and which, when come to Maturity, gnaw their Way out: Which is the Cauſe of thoſe little Holes obſervable in them.

Of the Inſects bred in them, we have a particular Account in *Philoſ. Tranſact.* N° 245.
