There are three Sorts of theſe *Galls*: The firſt, Blackiſh; the ſecond, bordering on Green; the third, Whitiſh. The Dyers uſe them all, according to their reſpective Qualities: The Green and Black, ſerve to dye in Black; and the White, for Linnens. 'Tis the Black, and Green, that are uſed in the making of Ink. See INK.

The *Engliſh* and *Dutch* import yearly from *Aleppo*, ten thouſand Quintals of *Galls*. The *Turks* have likewiſe a kind of ruddy *Gall*, of the Size of a ſmall Nut; which they mix with Cochineel, and Tartar, to dye in Scarlet withal. See DYING.

GAMBEZON, GAMBESO, or GAMBA, in the antient Military Language, was a kind of Coat, or Doublet, wore under the Cuiraſs, to make it ſit eaſy, and prevent its hurting the Body. It was made of Wool, or Cotton, quilted between two Stuffs; and was likewiſe called *Counter-Point*.

Others define the *Gambeſon* a kind of ſoft, quilted Waſtcoat, wore under the Coat of Mail, and hanging down over the Thighs.

*Pectora tot Coriis, tot* Gambeſonibus *ornant.*

*——Ego Johannes Becondo Teſtamentum——Je done m'alme a Deo & mon Corps a enſeveli al Abby de Kirkſtede en le Chapel St. Maurice, oue mon meleur Chival pris de xl Marks, mon Haubert de Guerre, mes Chancons, mes Couvertures de Fer, mon* Gambeyſon, *ma Targe, et tout mon Harneys de Guerre q' a mon Corps appent*, &c.

The Word is form'd of the German *Wambon*, or *Saxon Wambes*, the Belly; *quaſi Wambaſium*, a Covering of the Belly and Breaſt.

GAME, PLAY, LUDUS, a regular Diverſion; or a Sport preſcribed, and limited by Rules. See GAMING.

*Games* may be diſtinguiſh'd into thoſe of *Exerciſe*, and *Addreſs*; and thoſe, of *Chance*, or *Hazard*. See EXERCISE, and HAZARD.

To the *firſt*, belong *Tennis*, *Billiards*, *Cheſs*, *Bowls*, *Cudgels*, *Wreſtling*, *Quoits*, *Shooting with Bows*, &c. See TENNIS, BILLIARDS, &c.

To this alſo belong'd the antient *Jouſts* and *Tournaments*. See JOUST, and TOURNAMENTS.

Under the *ſecond*, come *Cards*, and *Dice*, &c. See CARDS, DICE, &c.

Under Cards, again, come ſeveral ſubordinate *Games*; the principal whereof are, *Ombre*, *Picquet*, *Baſſet*, *Whiſt*, &c. See OMBRE, and PICQUET.

GAMES, *Ludi*, in the Plural, were Shews, or publick Repreſentations, uſed among the Antients, on Religious, Funerary, and other ſolemn Occaſions. See SPECTACLE.

Such, among the *Greeks*, were the *Olympic*, *Pythian*, *Iſthmæan*, and *Iſelaſtic Games*. See OLYMPIC, PYTHIAN, ISELASTIC, and ISTHMÆAN.

Among the *Romans*, there were three Sorts of *Games*; *Sacred*, *Honorary*, and *Ludicrous*: And *Auſonius* obſerves a Difference, ſomewhat of the ſame Kind, among thoſe of the *Greeks*; two of their celebrated *Games* being dedicated to *Gods*; and two to *Hero's*. See GOD, and HERO.

The Sacred *Games* were inſtituted immediately in honour of ſome Deity; of which kind were the *Cerealia*, or *Ludi Cereales*, *Florales*, *Martiales*, *Apollinares*, *Megalenſes*, *Romani*,

*mani*, or *Conſuales*, or *Circenſes*, *Capitolini*, *Sæculares*, *Plebeii*, *Compitalitii*, *Auguſtales*, *Palatini*, *Votivi*. See each deſcribed in its Place.

To this Claſs may alſo be refer'd thoſe, celebrated in Memory of ſome Illuſtrious Perſon, or Action; as the *Ludi Nerodiani* and *Actiaci*, &c. See ACTIACI, &c.

Authors mention a Decree of the *Roman* Senate, by which it was enacted, that the Publick *Games* ſhould be conſecrated, and united with the Worſhip of the Gods, as a Part thereof; and accordingly, Feaſts, Sacrifices, and *Games* appear to have made up the greateſt Part, or rather the whole, of the external Worſhip, or Service, offer'd to the Deities of the *Romans*. See FEAST, SACRIFICE, &c.

The Honorary *Games*, *Ludi Honorarii*, were thoſe exhibited by private Perſons, out of their own Purſe; in order to gratify the People, or ingratiate themſelves with them, to make way for their own Preferment. Such were the Combats of *Gladiators*, *Scenic Games*, *Tragedies*, *Comedies*, and other Theatrical and Amphitheatrical Sports. See GLADIATOR, SCENIC, TRAGEDY, COMEDY, &c.

The Ludicrous *Games* were of the ſame Kind with the *Games* of Exerciſe and Hazard among us. Such were the *Ludus Trojanus*, or *Pyrrhicus*; the *Teſſaræ*, and *Tali*, *Sortes*, or Dice; and the *Latrunculi*, or Cheſs; the *Diſcus*, or Quoit; the *Pila*, Ball; *Trochus*, Top; *Nuces*, odd, and even with Nuts; *Harpaſtum*, Foot-ball; *Capita vel Navim*, Croſs and Pile, &c. See TROJANUS, LATRUNCULI, &c.

Others, diſtinguiſh the antient *Games* into three Claſſes, viz. *Races*, *Combats*, and *Spectacles*.

The firſt were called *Equeſtrian*, or *Curule*, *Ludi Equeſtres*, or *Curules*; being Races of Horſes, and Chariots, perform'd in the Circus, in honour of the Sun and Neptune. See CIRCENSES.

The ſecond were called *Agonales*, or *Gymnici*; being Combats of Men, or Beaſts, in the Amphitheatre, dedicated to *Mars* and *Minerva*. See AMPHITHEATRE.

The laſt, called *Scenici*, *Poetici*, and *Muſici*, were Tragedies, Comedies, Balls, &c. repreſented on the Theatres, ſacred to *Venus*, *Bacchus*, *Apollo*, and *Minerva*. See THEATRE, &c.

*Homer* gives us a fine Deſcription of the *Games* which *Achilles* inſtituted at the Funeral of his Friend *Patroclus*, in his *Iliad*; and others of the different *Games* held among the *Pheaci*, *Ithacans*, and at the Court of *Alcinous*, in his *Odyſſee*. *Virgil*'s Deſcription of the *Games* celebrated by *Æneas*, at the Funeral of old *Anchiſes*, is nothing inferior to any of them. See FUNERAL.

GAME is alſo uſed for all kinds of wild Beaſts and Birds, fit for eating; and which are ſought after on that account. See BEAST.

*Game* includes Wild Beaſts of Venery, and Chaſe; and alſo Beaſts and Fowls of Warren. See VENERY, CHASE, and WARREN.

Some Authors divide *Game* into *Large*; which includes Red, and Fallow Deer: And *Small*; to which belong Hares, Rabbets, Pheaſants, and Partridges.

A Foreſt is a Place ſet apart for the preſerving, feeding, breeding, &c. of all ſorts of *Game*; and conſiſts of divers Things, *viz.* Soil, Covert, Laws, Courts, Judges, Officers, *Game*, Bounds. A Chaſe differs from a Foreſt, in this, among other Things, that it has not ſuch Variety of *Game*. See FOREST, &c.

Ways of catching *Game*, are by *Hunting*, *Hawking*, *Fowling*, &c. See HUNTING, CHASING, HAWKING, &c.

*Laws for the Preſervation of the* GAME.

There are abundance of Laws made for the Security and Preſervation of the *Game*: The Foreſt Laws of King *Canutus*, and the *Charta de Foreſta* of King *Henry* III. we have elſewhere mentioned. See FOREST *Law*, and CHARTA *de Foreſta*; ſee alſo PURLIEU, and POURALLEE.

By a Stat. in 33 *Hen.* 8. it is enacted, That no Perſon ſhoot with, or keep in his Houſe any Croſs-bow, or Stone-bow, Hand-gun, or Hagbut, under the Length of one Yard; unleſs he have Lands of the yearly Value of 100 *l.* on Pain of a Forfeiture of 10 *l.* for every Offence: Nor ſhall any Perſon travel with a Croſs-bow, bent; or Gun, charged; or ſhoot within a Quarter of a Mile of a Citty or Town, except at a dead Mark, or in defence of his Houſe; under the like Forfeiture; to be divided between the King and the Proſecutor.—None, under the Degree of a Baron, ſhall ſhoot with any Hand-gun, within a City, or Town; or ſhoot at any Fowl whatever with Hail-ſhot; on the ſame Forfeiture. *Id. Stat.*

Any Perſon ſhooting in the Night-time, or diſguiſed, ſhall be deem'd a Felon, if he deny; if he confeſs, he is fineable at the next General Seſſions. 1 *Hen.* 7.

None ſhall kill or take Pheaſants or Partridges, with any Net, or Engine, in the Night-time; on Forfeiture of 20 *s.* for every Pheaſant; and 10 *s.* for every Partridge. 33 *Eliz.*

None ſhall hawk or hunt with Spaniels in ſtanding Corn, or before it be ſhock'd, unleſs on his own Ground; on the Penalty of 40 *s.* half to the King; and the other Half to the Proprietor of the Ground.

He that is convicted of killing or taking a Pheaſant, Partridge, Duck, Heron, Hare, or other *Game*; or of taking and deſtroying the Eggs of Swans, Pheaſants, or Partridges, ſhall pay 20 *s.* for every ſuch Fowl, Hare, &c. to the uſe of the Poor. 1 *Jac.* 1.

Every Perſon convicted to have kept a Greyhound, Dog, or Net, to kill, or take Deer, Hare, Pheaſant, or Partridge, unleſs he have Inheritance of 10 *l. per Annum*; a Leaſe for Life of 31 *l. per Annum*; or be worth 200 *l.* in Goods; or be the Son of a Knight, or Heir apparent of an Eſquire, ſhall pay 40 *s.* for the Uſe aforeſaid.—Nor ſhall any ſell, or buy to ſell again any Deer, Hare, Pheaſant, or Partridge, on pain of 40 *s.* *Id. Stat.*

The Lord of a Manor, or one having Inheritance of 40 *l. per Annum* Freehold of 80 *l.* or Goods worth 400 *l.* or their Servants licens'd by them, may take Pheaſants, or Partridges within their own Lands or Precincts, in the Day-time, between *Michaelmas* and *Chriſtmas*. 7 *Jac.* 1.

No Lay-man, who hath not Lands of 40 *s. per Annum*; nor Clerk, who hath not 10 *l.* Revenue, ſhall keep any Greyhound, Hound, Ferret, Net, or Engine, to deſtroy Deer, Hares, Conies, or other Gentlemans *Game*; on pain of a Years Impriſonment. 13 *Jac.* 1.

They that kill and take away Red, or Fallow Deer, without Conſent of the Owner, ſhall forfeit 20 *l.* to be taken by Diſtreſs; one half to the Owner, and the other to the Informer; or for Want of ſuch Diſtreſs ſuffer a Years Impriſonment. 13 *Car.* 2.

Lords of Manors, or other Royalties, not under the Degree of Eſquire, may commiſſion one or more *Game-keepers*, who may ſeize all Guns, Dogs, Bows, &c. of Perſons not having Eſtates of 100 *l. per Ann.* Freehold; or 150 *l. per Ann.* Leaſehold; or are not Sons and Heirs of Eſquires; and deſtroy, or convert ſuch Guns, &c. to the Uſe of the Lord. 22 *Car.* 2.

If any enter a Coney-warren, tho' not incloſed, and chaſe or kill Conies, he ſhall forfeit treble Damages, and be impriſon'd three Months: And they that kill Conies in the Night-time upon the Borders of Warrens, or Grounds uſed for keeping Conies, ſhall be amerced at the Diſcretion of the Juſtice of Peace, in any Sum not exceeding 10 *s.* *Id. Stat.*

He who unlawfully hunts, takes in Toyles, kills, or takes away any Deer, in any Foreſt, Chaſe, Park, Purlieu, or other incloſed Ground; or ſhall be aiding and aſſiſting therein, ſhall forfeit 30 *l.* for every Deer killed, taken, or even wounded; and 20 *l.* tho' none ſhall be wounded or taken: To be levied by Diſtreſs. 3 *Will.* and *Mar.*——And if the Keeper of a Foreſt, &c. be an Offender herein, or be aiding thereto, he ſhall forfeit 50 *l.* 5 *Georg.* Levied as above.

In caſe any Hare, Partridge, Pheaſant, Fiſh, Fowl, or other *Game* ſhall be found in any Offender's Houſe, he ſhall forfeit a Sum not leſs than 5 *s.* nor more than 20. to be levied by Diſtreſs; or in Want thereof be committed to the Houſe of Correction for a ſpace of Time not greater than a Month; nor leſs than 10 Days. And if any Perſon, not qualified by Law, ſhall keep or uſe any Bows, Greyhounds, Setting Dogs, Ferrets, Tumblers, Snares, &c. he ſhall be ſubject to the ſame Penalties.

If any Higler, Chapman, Carrier, Innkeeper or Victualler ſhall have in his keeping any Hare, Pheaſant, Partridge, Heath *Game*, or Growſe, not put in his Hands by a Perſon qualified by Law, he ſhall forfeit 5 *l.* for every ſuch Hare, &c. half to the Informer, and half to the Poor, levied by Diſtreſs; or for want thereof be ſent to the Houſe of Correction for three Months. 5 *Annæ.*

Perſons not qualified keeping Greyhounds, Lurchers, Setting Dogs, or Engines to deſtroy *Game*; and *Game-keepers* who under colour of Office kill and ſell *Game*, without their Maſters Knowledge, are liable to the like Penalty. *Id. Stat.*

No Lord of a Manor to appoint more than one *Game-keeper*, and his Name to be enter'd with the Clerk of the Peace, who is to give a Certificate thereof; otherwiſe he is liable to the Penalties againſt Higlers. 5 *Annæ.*

If any Hare, Pheaſant, &c. be found in the Poſſeſſion of a Perſon not qualified; or be entitled to it by ſome Perſon that is qualified; the ſame ſhall be adjudg'd an Expoſing it to Sale. Perſons deſtroying a Hare in the Night, ſhall incur the Forfeiture of 5 *l.* 5 *Ann.*

No Lord of a Manor ſhall appoint a *Game-keeper*, with Power to kill or deſtroy *Game*, unleſs he be truly a Servant of ſuch Lord; or be immediately employ'd to kill *Game* for the ſole Uſe of ſuch Lord: Nor ſhall any Lord authorize a Perſon not qualified to keep or uſe Gun, Greyhounds, &c. And ſuch Perſons as ſhall be found offending in either of theſe Points, ſhall for every Offence forfeit 5 *l.* 3 *Geo.*

Laſtly, if any Perſon enter a Park, Paddock, or other incloſed Ground, where Deer are uſually kept, and wilfully wound or kill any Red, or Fallow Deer, he ſhall be tranſported to the Plantations for ſeven Years. 5 *Georg.*

GAMELIA, Nuptial Feasts, held among the Antient *Greeks*, in the Month *Gamelion*.

They were thus called from γάμος, Marriage; whence Γαμηλιος, an Epithet, or Surname, given to *Jupiter* and *Juno*, consider'd as presiding over Marriages.

GAMELION, or GAMELIUM, is a Poem, or Composition in Verse, on the Subject of a Marriage; more usually call'd *Epithalamium*. See EPITHALAMIUM.

GAMING, the Art, or Act of performing, or practising a *Game*; particularly a *Game* of Hazard. See GAME.

All publick *Gaming* is severily prohibited; and what Money is thus lost, is recoverable again by Law. See PLAY.

In *China*, *Gaming* is equally prohibited the common People, and the Mandarins; and yet this does not hinder their Playing, and frequently losing all they have; their Lands, Houses, Children, and even Wife, which are all sometimes, laid on a single Card. *F. le Comte.*

The Business of Chance, or Hazard, is of Mathematical Consideration; inasmuch as it admits more, and less. It is, or is suppos'd to be, an Equality of Chance; upon which the Gamesters set out: This Equality is to be broke in upon in the Course of the Game by the greater good Fortune, or Adress of one of the Parties; upon which he comes to have a better Chance; so that his Share in the Deposit, or Stakes, is now proportionably more, or better than at first: This more and less is continually varying, and runs thro' all the Ratio's between Equality, and infinite Difference; or from an infinitely little Difference till it arrives at an infinitely great one, upon which the Game is ended. The whole Game, therefore, with respect to the Event or Issue thereof, is only a Change of the Quantity of each Person's Share, or Chance; or of the Proportion their two Shares bear to each other; which Mathematicks alone can measure. See CHANCE.

Hence several Authors have computed the Variety of the Chance in several Cases and Circumstances that occur in *Gaming*; particularly M. *de Moivre*, in a Treatise, *De Mensura Sortis*: Which, as it may either be of service to the practical *Gamester*, or the *Better*, in teaching them on what Side the Advantage lies; and whether they may lay on the square; or to the speculative one, in letting him into the way of thinking and determining in such cases, we shall here give the Reader an Abstract thereof.

### *Laws of Chance applied to* GAMING.

Suppose $p$ the Number of Cases wherein an Event may happen, and $q$ the Number of Cases wherein it may not happen; both Sides, the contingent and non-contingent, have their Degree of Probability: And if all the Cases wherein the Event may, and may not happen, be equally easy; the Probability of the happening, to that of the not-happening, will be as $p$ to $q$.

If two *Gamesters*, A and B, engage on this footing, that if the Cases $p$, happen, A shall win; but if $q$ happen, B shall win; and the Stake be $a$: The Chance, or Expectancy of A will be $\frac{p\,a}{p+q}$; and that of B $\frac{q\,a}{p+q}$; consequently if A or B sell their Expectancies, they should have for them $\frac{p\,a}{p+q}$ and $\frac{q\,a}{p+q}$ respectively.

If there be two independent Events; and $p$ be the Number of Cases wherein the first may happen; and $q$ the Number of those wherein it may not happen; and $r$ the Number of Cases wherein the second Event may happen, and $s$ the Number of those wherein it may not happen; multiply $p+q$ by $r+s$; the Product, *viz.* $pr+qr+ps+qs$ will be the Number of Cases wherein the Contingency or non-Contingency of the Events may be varied.

Hence, if A lay with B, that both Events shall happen, the Ratio of the Chances will be as $pr$ to $qr+ps+qs$. Or if he lay that the first shall happen, but not the second; the Ratio of the Chances will be as $ps$ to $pr+qr+qs$. And if there were three, or more Events; the Ratio of the Chances would be found by Multiplication alone.—

If all the Events have a given Number of Cases wherein they may happen, and also a given Number of Cases wherein they may not; and $a$ be the Number of Cases wherein any one may happen, and $b$ the Number of Cases wherein it may not; and $n$ be the Number of all the Events: Raise $a+b$ to the Power of $n$.

If now A and B agree, that if one or more of the Events happen, A shall win; if none, B: The Ratio of the Chances will be as $\overline{a+b}^n - b^n$ to $b^n$; for the only Term where $a$ is not found, is $b^n$.

*Prob.* I. *If A and B play with a single Die, on this condition, that if A throw two or more Aces at eight Throws, he shall win; otherwise B shall win: What is the Ratio of their Chances?*

*Sol.* Since there is but one Case wherein an Ace may turn up; and 5 wherein it may not; let $a=1$, and $b=5$. And again, since there are eight Throws of the Die, let $n=8$; and you will have $\overline{a+b}^n - b^n - n\,a\,b^{n-1}$ to $b^n + n\,a\,b^{n-1}$. That is, *The Chance of A, will be to that of B, as* 663991, *to* 1015625; *or nearly as* 2, *to* 3.

*Prob.* II. *A and B are engaged at single Quoits, and after playing some Time, A wants* 4 *of being up, and B,* 6; *but B is so much the better Gamester, that his Chance against A upon a single Throw, would be as* 3 *to* 2: *What is the Ratio of their Chances?*

*Sol.* Since A wants 4, and B, 6, the Game will be ended in 9 Throws at the most; therefore raise $a+b$ to the ninth Power, and it will be $a^9 + 9a^8b + 36a^7b^2 + 84a^6b^3 + 126a^5b^4 + 126a^4b^5 + 84a^3b^6 + 36a^2b^7 + 9ab^8 + b^9$: And take all the Terms wherein $a$ has 4 or more Dimensions, for A; and all those wherein it has 6 or more, for B: And the Ratio of the Chances will be as $a^9 + 9a^8b + 36a^7b^2 + 84a^6b^3 + 126a^5b^4 + 126a^4b^5$, to $84a^3b^6 + 36a^2b^7 + 9ab^8 + b^9$. Call $a$, 3; and $b$, 2; and you will have *the Ratio of the Chances in Numbers* 1759077 *to* 194048.

*Prob.* III. *A and B are to play with single Quoits; and A is the best Gamester; so that he can give B,* 2 *in* 3: *What is the Ratio of their Chances, then, in a single Throw?*

*Sol.* Suppose the Chances as $z$ to 1; and raise $z+1$ to its Cube; it will be $z^3 + 3zz + 3z + 1$. Now since A could give B 2 out of 3; A might undertake to win three Throws running; and consequently the Chances in this Case will be as $z^3$ to $3zz + 3z + 1$. Consequently, $z^3 = 3zz + 3z + 1$. Or, $2z^3 = z^3 + 3zz + 3z + 1$. And therefore $z\sqrt[3]{2} = z + 1$; and consequently $z = \frac{1}{\sqrt[3]{2}-1}$. *The Chances therefore are* $\frac{1}{\sqrt[3]{2}-1}$ and 1 respectively.

*Prob.* IV. *To find at how many Trials it is probable any Event will happen; so that A and B may lay a Wager upon even Terms.*

*Sol.* Let the Number of Cases, wherein the thing may happen at the first Trial, be $a$, those wherein it may not, $b$; and $x$ the Number of Trials, wherein it is an even Chance, whether the Thing happen or not. By what is above shewn $\overline{a+b}^x - b^x = b^x$: Or, $\overline{a+b}^x = 2b^x$. Therefore, $x = \frac{Log.\ 2.}{Log.\ a+b - Log.\ b}$. Again, resume the Equation $\overline{a+b}^x = 2b^x$, and let $a : b :: 1 : q$, and the Equation will change into this $\overline{1+\frac{1}{q}}^x = 2$. Raise $1+\frac{1}{q}$ to the Power of $x$, by Sir *I. Newton*'s Theorem, and let $1 + \frac{x}{1}\cdot\frac{1}{q} + \frac{x}{1}\cdot\frac{x-1}{2}\cdot\frac{1}{qq} + \frac{x}{1}\cdot\frac{x-1}{2}\cdot\frac{x-2}{3}\cdot\frac{1}{q^3}$, &c. $= 2$.

In this Equation, therefore, if $q=1$, then $x=1$: If $q$ be infinite, $x$ will also be infinite. Supposing $x$, to be infinite, the Equation above will be $1 + \frac{x}{q} + \frac{xx}{2qq} + \frac{x^3}{6q^3}$, &c. $= 2$. Again, let $\frac{x}{q} = z$, and we shall have $1 + z + \frac{1}{2}zz + \frac{1}{6}z^3$ &c. $= 2$. But $1 + z + \frac{1}{2}zz + \frac{1}{6}z^3$, &c. &c. is a Number whose hyperbolical Logarith. is $z$; consequently $z = $ Log. 2. But the hyperbolical Logarithm of 2 is 7 very nearly; and therefore $z=7$ nearly.

Hence where $q$ is 1, there $x=1\,q$; and where $q$ is infinite, $x=7\,q$ nearly. Thus are the Limits of the Ratio of $x$ to $q$ fix'd; for that Ratio begins with Equality, and when rais'd to Infinity, ends at length in the Ratio of 7 to 1 nearly.

Examp. 1. *To find in how many Throws A may undertake to throw two Aces with two Dice?*

*Sol.* Since A has but one Case wherein he may throw two Aces with two Dice; and 35 wherein he may not, $q=35$: Therefore multiply 35 by .7; the Product 24. 5. shews that *the Number of Throws required is between* 24 *and* 25.

Lem. *To find the Number of Cases, wherein any given Number of Points may be thrown with a given Number of Dice?*

*Sol.* Let $p+1$ be the given Number of Points; $n$ the Number of Dice; and $f$ the Number of Sides or Faces of each Die: Let $p-f=q$, $q-f=r$, $r-f=s$, $s-f=t$, &c. The Number of Cases requir'd will be,

$$\frac{p}{1} + \frac{p-1}{1}\cdot\frac{p-2}{2}\cdot\frac{p-3}{3}, \&c.$$

$$\frac{q}{1}\times\frac{q-1}{2}\times\frac{q-2}{3},\ \&c.\times\frac{n}{1}.$$

$$+\frac{r}{1}\times\frac{r-1}{2}\times\frac{r-2}{3}\ \&c.\times\frac{n}{1}\times\frac{n-1}{2}$$

$$\frac{s}{1}\times\frac{s-1}{2}\times\frac{s-2}{3}\ \&c.\times\frac{n}{1}\times\frac{n-1}{2}\times\frac{n-2}{3}$$

Which Series is to be continued, till ſome of the Factors either become equal to nothing, or negative. And note, ſo many Factors of the ſeveral Products $\frac{q}{1}\times\frac{p-1}{2}\times\frac{p-2}{3}$ &c. $\frac{r}{1}\times\frac{r-1}{2}\times\frac{r-2}{3}$ &c. $\frac{s}{1}\times\frac{s-1}{2}$ &c. are to be taken as there are Units in $n-1$.

*Prax.* Suppoſe the *Number of Caſes required wherein 16 Points may be thrown with four Dice*?

$$+\tfrac{15}{1}\times\tfrac{14}{2}\times\tfrac{13}{3} = 455$$
$$-\tfrac{9}{1}\times\tfrac{8}{2}\times\tfrac{7}{3}\times\tfrac{4}{1} = -336$$
$$+\tfrac{3}{1}\times\tfrac{2}{2}\times\tfrac{1}{3}\times\tfrac{4}{1}\times\tfrac{3}{2} = +6$$

Now, $455-336+6=125$; ſo that 125 *is the Number required.*

Examp. 2. *To find at how many Caſts A may undertake to throw 15 Points with ſix Dice*?

*Sol.* Since A has 1666 Caſes, wherein he may turn up 15 Points, and 44990 againſt him; divide 44990 by 1666; and the Quotient 27 will be $=q$. Therefore, multiply 27 by 7; the Product 18, 9 *ſhews the Number of Throws required to be nearly* 19.

*Prob.* V. *To find the Number of Trials wherein it is probable any Event may happen twice; ſo that A and B may lay a Wager thereon with an equal Chance*?

*Sol.* Suppoſe the Number of Caſes wherein the Event may happen the firſt Trial, to be $a$; and thoſe wherein it may not, $b$; and call the Number of Trials required, $x$: It appears from what is above ſhewn, that $\overline{a+b}^{x}=2b^{x}+2axb^{x-1}$. Or, making $a:b::1:q$, $1+\frac{1}{q}\Big|^{x}=2+\frac{2x}{q}$ 1° Let $q=1$, and then $x=3$. 2° Let $q$ be infinite, and $x$ will alſo be infinite: Suppoſe $x$ infinite, and $\frac{x}{q}=z$, and then $1+z+\frac{1}{2}z^{2}+\frac{1}{2}z^{3}$, &c. $=2+2z$; and therefore $z=Log.\ 2+Log.\ \overline{1+z}$: If then *Log.* 2 be called $y$; the Equation will be transform'd into the following fluctional one $\frac{zz}{1+z}=y$. And inveſtigating the Value of $z$ by the Powers of $y$, we ſhall find $z=1.678$, nearly; and therefore $x$ will always be between the Limits $3q$ and $1.678q$; but $x$ will ſoon converge to $1.678q$; and therefore if $q$ have not a very ſmall Ratio to 1, we may take $x=1.678q$. Or if there be any Suſpicion of $x$ being too ſmall, ſubſtitute its Value in the Equation $1+\frac{1}{q}\Big|^{x}=2+\frac{2x}{q}$, and note the Error, if it be worth regarding: Thus will $x$ be a little increaſed; ſubſtitute the thus increas'd Value for $x$ in the foreſaid Equation, and note the new Error: Thus, from the two Errors, may the Value of $x$ be corrected with ſufficient Accuracy.

Here we ſhall add a *Table of Limits*, that will carry the Intent of this Problem much further.—

If the Wager be upon happening once, the Number of Trials will be between

| | |
|---|---|
| | 1 $q$ and 0.693 $q$ |
| If upon twice, between | 3 $q$ and 1.678 $q$ |
| If upon trice, between | 5 $q$ and 2.675 $q$ |
| If upon four times, between | 7 $q$ and 3.671 $q$ |
| If upon five times, between | 9 $q$ and 4.673 $q$ |
| If upon ſix times, between | 11 $q$ and 5.668 $q$ |

Examp. *To find at how many Throws A may undertake to throw three Aces, twice, with three Dice*?

*Sol.* Since A has but one Caſe, wherein he may throw three Aces; and 215, wherein he may not; $q=215$. Therefore multiply 215 by 1.678. The Product 360, 7 will ſhew the Number of Throws required to be between 360 and 361.

*Prob.* VI. *A, and B depoſit each 12 pieces of Money, and play with three Dice, on this footing, that every time 11 Points are thrown, A ſhall give B one Piece; and every time 14 Points are thrown, B ſhall give A a Piece; and that he ſhall win the whole, that firſt gets all the Money in his Hands: We demand the Ratio of the Chances of A to that of B.*

*Sol.* Let $p$ be the Number of Pieces each ſeverally takes; and $a$ and $b$ the Number of Caſes wherein A and B may reſpectively gain each a piece; the Ratio of their Chances will be as $a^{p}$ to $b^{p}$: In this caſe, $p=12$, $a=27$, $b=15$; or if when $27:15::9:5$. you make $a=9$, $b=5$; and therefore the *Ratio of the Expectancies will be as* $9^{12}$ *to* $5^{12}$, *or as* 24414062 5 *to* 282429536481.

*NB.* Great Care muſt be taken to avoid the confounding of different Problems together, from ſome Appearance of Affinity between them. The following one ſeems very like the former.

*Prob.* VII. *C having 24 Pieces, or Counters, throws three Dice; and every time 27 Points turn up, gives one Counter to A; and every time 14 turn up, gives one to B; and A and B engage on this footing, that he who firſt gets 12 Counters, ſhall win the Stake: We require the Ratio of their Expectancies*?

This Problem differs from the preceding one, in that the Game muſt neceſſarily end in 23 Throws; whereas, in the former, it might hold out to Eternity, by reaſon of the Reciprocations of Loſs and Gain, which deſtroy one another.

*Sol.* Raiſe $a+b$ to the 23d Power, and the 12 former Terms will be to the 12 latter as the Expectancy of A to that of B.

*Prob.* VIII. *Three Gameſters, A B and C, have each twelve Balls, 4 of them white, and 8 black; and being hoodwink'd, play on this condition, that the firſt who chuſes a white Ball, ſhall win the Stake; and that A ſhall have the firſt Choice, then B, then C; and ſo round again: What, then, is the Ratio of the Chances of A, B, C*?

*Sol.* Let $n$ be the Number of Balls, $a$ the Number of white ones, $b$ of black ones, and $n$ the Stake. Here

1° A, has the Caſes $a$, wherein he may chuſe a white Ball; and the Caſes $b$ for a black one: Conſequently, his Expectancy, from the firſt Choice, is $\frac{a}{n}$, or $\frac{a}{a+b}$. Wherefore, ſubtracting $\frac{a}{n}$ from 1; the Value of the remaining Expectancies will be $1-\frac{a}{n}=\frac{n-a}{n}=\frac{b}{n}$.

2° B, has the Caſes $a$ for a white, and the Caſes $b-1$ for a black one; but the firſt Election is in A; and 'tis uncertain, whether or no he may have won the Stake; and therefore the Stake, in reſpect of B, is not 1, but only $\frac{b}{n}$; ſo that his Expectancy from the firſt Choice is $\frac{a}{a+b-1}\times\frac{b}{n}=\frac{ab}{n\times n-1}$. Subtract $\frac{ab}{n\times n-1}$ from $\frac{b}{n}$ and the Value of remaining Expectancies will be $\frac{nb-b-ab}{n\times n-1}=\frac{b\times\overline{n-1}}{n\times n-1}$.

3° C, has the Caſes $a$ for a white; $f$ the Caſes $b-2$ for a black one; and therefore his Expectancy from the third Choice is $\frac{a\times b\times b-1}{n\times n-1\times n-2}$.

4° After the like manner, A has the Caſes $a$ for a white, and $b-3$ for a black; ſo that at the fourth Choice, the Expectancy will be $\frac{a\times b\times b-1\times b-2}{n\times n-1\times n-2\times n-3}$. And ſo of the reſt.

Write down, therefore, the Series $\frac{a}{n}+\frac{b}{n-1}P+\frac{b-1}{n-2}Q+\frac{b-2}{n-3}R+\frac{b-3}{n-4}S$, &c. Where P, Q, R, S, &c. denote the preceding Terms, with their Characters; and take as many Terms of this Series, as there are Units in $b+1$ (for there cannot be more Choices than there are Units in $b+1$) and the Sum of all the third Terms, ſkipping the two Intermediates, beginning from $\frac{a}{n}$, will be the whole Expectancy of A; the Sum likewiſe of all the third Terms, commencing from $\frac{b}{n-1}$ P, will be the whole Expectancy of B; and the Sum of the Thirds, commencing from $\frac{b-1}{n-2}$ Q, the whole Expectancy of C.

Laſtly, making $a=4$, $b=8$, $n=12$; and the General Series will change into the following one $\frac{4}{12}+\frac{8}{11}P+\frac{7}{10}Q+\frac{6}{9}R+\frac{5}{8}S+\frac{4}{7}T+\frac{3}{6}V+\frac{2}{5}X+\frac{1}{4}Y$.

Or into this other (by multiplying all the Terms by ſome common Number judg'd moſt expedient for the throwing out of Fractions, *viz.* in the preſent Caſe, by 495)

$$165+120+84+56+35+20+10+4+1$$

And therefore A will have $165+56+10=231$; B will have $120+35+4=159$; and C will have $84+20+1=105$. *So that their ſeveral Expectancies will be as* 231, 159, 105; or as 77, 53, 35.

*Prob.* IX. *A and B having* 12 *Counters, four of them white, and eight black; A wagers with B, that taking out ſeven Counters, blindfold, three of them ſhall be white: What is the Ratio of their Expectancies?*

*Sol.* 1° Seek how many Caſes there is for ſeven Counters, to be taken out of 12; they will be found from the Doctrine of Combinations, to be 792.

$$\frac{12}{1}\times\frac{11}{2}\times\frac{10}{3}\times\frac{9}{4}\times\frac{8}{5}\times\frac{7}{6}\times\frac{6}{7}=792.$$

2° Set aſide three white ones, and find all the Caſes wherein 4 of the eight black ones may be combined therewith; they will be found to be 70.

$$\frac{8}{1}\times\frac{7}{2}\times\frac{6}{3}\times\frac{5}{4}=70.$$

And ſince there are four Caſes, in which three white may be taken out of four; multiply 70 by 4: Thus, the Caſes, wherein 3 Whites may come out with 4 Blacks, are found to be 280.

3° By the common Laws of *Gaming*, he is reputed Conqueror, who produces an Effect oftener than he undertook to do, unleſs the Contrary be expreſly agreed on; and therefore, if A take out 4 Whites with 3 Blacks, he wins. Set aſide 4 Whites, then, and find all the Caſes wherein 3 of the 8 Blacks may be combined with four Whites: Theſe Caſes will appear to be 56.

$$\frac{8}{1}\times\frac{7}{2}\times\frac{6}{3}=56$$

4° A, therefore, has $280+56=336$ Caſes, wherein he may win; which ſubtracted from the whole Number of Caſes 792, leaves 456 the Number of Caſes wherein he may loſe. The *Ratio of the Chance of A, therefore, to that of B, is as* 336 *to* 456; *or as* 14 *to* 19.

To avoid too much Prolixity in this Article, we muſt deſiſt from further Inveſtigations, which in the following Problems grow very long, and more perplex'd. In the reſt, therefore, we ſhall content ourſelves to give the Anſwer, or Reſult, without the Proceſs of arriving at it; which may be of uſe, as it furniſhes ſo many Data, from whence, as Standards, we may be enabled occaſionally to judge of the Probability of Events of the like Kinds: Tho', without letting the Mind into the preciſe Manner, and Reaſon thereof.

*Prob.* X. *A and B play with two Dice on this Condition, that A ſhall win, if he throw ſix; and B, if he throw ſeven: A to have the firſt Throw, in lieu of which B to have two Throws; and both to continue with two Throws each turn, till one of them wins: What is the Ratio of the Chance of A to that of B?*

*Anſ.* As 10355 to 12276.

*Prob.* XI. *If any Number of Gameſters, A, B, C, D, E, &c. equal in point of Dexterity, depoſit each one piece of Money, and engage on theſe Conditions, that two of them, A and B, beginning the Game; which ever of them ſhall be overcome, ſhall give place to the third, C, who is to play with the Conqueror; and the Conqueror here, to be taken up by the fourth Man, D, and thus on; till ſome one, having conquer'd them all round, draws the Stake: What is the Ratio of their Expectancies?*

*Sol.* This Problem, M. *Bernoulli* ſolves analytically. Here, calling the Number of Gameſters $n+1$, he finds that the Probabilities of any two immediately following each other in the Courſe of playing, are in the Ratio $1+2^n$ to $2^n$; and therefore the Expectancies of the ſeveral Gameſters A B C D E *&c.* are in a Geometrical Progreſſion $1+2^n : 2^n :: a : c :: c : d :: d : e$ &c.

Hence it is eaſy to determine the State of the Probabilities of any two Gameſters, either before the Game, or in the Courſe thereof. If *e. gr.* there be three Gameſters, A, B, C, then $n=2$ and $1+2^n : 2^n :: 5 : 4 :: a : c$: That is, *Their ſeveral Probabilities of winning, before A have overcome B, or B, C; are as the Numbers* 5, 5, 4; and therefore their Expectancies are $\frac{5}{14}, \frac{5}{14}, \frac{4}{14}$: For all of them taken together, muſt make 1, or abſolute Certainty. *After A has overcome B, the Probabilities of A, B and C will be* $\frac{5}{7}, \frac{2}{7}, \frac{4}{7}$, as in the Anſwer above. If there be four Gameſters, A B C D, their Probabilities from the Beginning will be as 81, 81, 72, 64. After A has beat B, the ſeveral Probabilities of B D C A, will be as 25, 32, 36, 56, reſpectively. After A has beat B and C, the Probabilities of C B D A will be as 16, 18, 28, 87.—

*Prob.* XII. *Three Gameſters, A, B and C, whoſe Dexterities are equal, depoſit each one Piece, and engage upon theſe Terms, That two of them ſhall begin to play, and that the vanquiſh'd Party ſhall give place to the third, who is to take up the Conqueror; and the ſame Condition to go round; each Perſon when vanquiſh'd, forfeiting a certain Sum to the main Stake; which ſhall be all ſwept by the Perſon who firſt beats the other two ſucceſſively. How much, now, is the Chance of A and B better or worſe, than that of C?*

*Anſ.* 1° If the Forfeiture be to the Sum each Perſon firſt depoſited, as 7 to 6, the Gameſters are upon an equal footing. 2° If the Forfeiture be in a leſs Ratio to the Depoſit, A and B are on a better footing than C: If in a greater Ratio, the Advantage is on the Side of C. 3° After A has overcome B once, the Probabilities are as $\frac{12}{7}, \frac{6}{7}, \frac{3}{7}$; or as 4, 2, 1; *viz.* that of A the greateſt, and of B the leaſt.

M. *Bernoulli* gives an analytical Solution of the ſame Problem, only made more general; as not being confined to three Gameſters, but extending to any Number at pleaſure.

*Prob.* XIII. *A and B, two Gameſters of equal Dexterity, play with a given Number of Balls; and after ſome time A wants* 1 *of being up, and B,* 3: *What is the Ratio of their Chances?*

*Anſ.* A's Expectancy is worth $\frac{7}{8}$ of the Stake, and B's only $\frac{1}{8}$; ſo that their Chances are as 7 to 1.

*Prob.* XIV. *Two Gameſters, A and B, of equal Dexterity, are engaged in play, on this Condition, that as often as A exceeds B, he ſhall give him one Piece of Money; and that B ſhall do the like, as oft as A exceeds him; and that they ſhall not leave off, till one has won all the other's Money: Each now having four Pieces; two Byſtanders, R and S, lay a wager on the Number of Turns, in which the Game ſhall be finiſh'd; viz. R, that it ſhall be over in* 10 *Turns: What is the Value of the Expectancy of S.*

*Anſ.* $\frac{560}{1024}$ or $\frac{35}{64}$ of the Wager; or it is to that of R as 560 to 464.—

If each Player had 5 Pieces, and the Wager were, that the Game ſhould end in ten Turns, and the Dexterity of A were double that of B; the Expectancy of S would be $\frac{3800}{8581}$.

If each Gameſter have 4 Pieces; and the Ratio of the Dexterities be required to make it an even Wager that the Game ſhall end in 4 Turns: It will be found that the one muſt be to the other as 5.274 to 1.

If each Gameſter have 4 Pieces, and the Ratio of their Dexterities be requir'd to make it an even Lay that the Game ſhall be ended in 6 Turns; the Anſwer will be found to be, as 2.576 to 1.

*Prob.* XV. *Two Gameſters, A and B, of equal Dexterity, being agreed not to leave off playing till ten Games are over; a Spectator, R, lays a Wager with another, S, that by that time, or before, A ſhall have beat B by three Games: What is the Value of the Expectancy of R?*

*Anſ.* $\frac{352}{1024}$ of the Wager; or it is to that of S as 352 to 672.

GAMM, GAMMUT, GAMUT, or GAM-*ut*, in Muſic, a Scale, whereon we learn to ſound the Muſical Notes, *Ut, re, mi, fa, ſol, la*, in their ſeveral Orders, and Diſpoſitions. See NOTE, and SCALE.

The Invention of this Scale is owing to *Guido Aretin*, a Monk of *Aretium*, in *Tuſcany*; tho' it is not properly an Invention, as an Improvement on the Diagramma or Scale of the Antients. See DIAGRAM.

The *Gammut* is alſo call'd the *Harmonical Hand*; by reaſon *Guido* firſt made uſe of the Figure of the Hand, to arrange his Notes on.

Finding the *Greek* Diagramma of too ſmall Extent, *Guido* added five more Chords, or Notes to it: One, below the Proſlambanomenos, or graveſt Note of the Antients; and four, above the Nete, or Acuteſt. The firſt, he call'd Hypo-proſlambanomenos; and denoted it by the Letter G, or rather the *Greek* Γ, *Gamma*: Which Note being at the head of

of the Scale, occaſion'd the whole Scale to be call'd by the barbarous Name *Gamm*, or *Gammut*.

Some ſay, *Guido*'s Intention in calling his firſt Note Γ, *Gamm*, was to ſhew, that the *Greeks* were the Inventors of Muſick: Others, that he meant hereby to record himſelf; this being the firſt Letter of his own Name.—

*Guido*'s Scale is divided into three Series, or Columns; the firſt call'd *Molle*, or flat; the ſecond *Natural*; and the third *Durum*, or Sharp, as repreſented in the Scheme, *Tab. Muſick, Fig.* 3. But ſince his Time, ſome Alterations have been made there.

The Uſe of this Scale, is to make the Paſſages, and Tranſitions from B Molle, to B Durum, by means of the Tones and Semitones. The Series of B Natural ſtanding betwixt the other two, communicates with both; ſo that to name the Chords of the Scale by theſe Syllables, if we would have the Semitones in their natural Places, *viz. b c* and *e f*, then we apply *ut* to *g*; and after *la* we go into the Series of *b* natural at *fa*; and after *la* of this, we return to the former at *mi*, and ſo on: Or, we may begin at *ut* in *c*, and paſs into the firſt Series at *mi*, and then back to the other at *fa:* By which means the one Tranſition is a Semitone, *viz. la, fa*; and the other a Tone, *la, mi*. To follow the Order of *b* Molle, we may begin with *ut* in *c*, or *f*, and make Tranſitions after the ſame manner. See TONE, and SEMITONE.

Hence came the barbarous Names of *Gammut, Are, Bmi*, &c. But what a perplex'd Work is here, with ſo many different Syllables applied to every Chord; and all to mark the Places of the Semitones, which the ſimple Letters *a b c* &c. do as well, and with more Eaſe?

Several Alterations have ſince been made in the *Gamut*. M. *le Maire*, particularly, has added a ſeventh Note, *viz. ſi*; and the *Engliſh* uſually throw out both *ut* and *ſi*, and make the other five ſerve for all: As will be ſhewn under the Article SOL-FA-ING.

GAMM, GAMMA, or GAMMUT, is alſo the firſt, or graveſt Note in the modern Scale of Muſic; the Reaſon whereof is ſhewn under the preceding Article.—

GANG, in the Sea Language: To man a Boat, is call'd to *put a Gang of Men* (which is a Company) into her: They are commonly called the *Coxſwain*'s *Gang*, who has the Charge of her.

GANG-*way*, ſignifies all the ſeveral Entrances, Ways, or Paſſages, from one Part of the Ship to the other; and whatſoever is put in one of theſe Paſſages, is ſaid to be laid, or put in the *Gang-way*.

GANGLION, or GANGLIUM, in Medicine, a ſmall, hard, knotty Tumor, form'd on the nervous and tendinous Parts, without any diſcolouring of the Skin, or Senſe of Pain. See TUMOR.

The Cauſe of the *Ganglion* is a too great Diſtention of the Pores of the Part; or the too great Compreſſion, or a Laceration, thereof: Any of theſe occaſion the nutritious Juice to be there ſtop'd and retain'd; and even to exſude, condenſe, and harden into a Tumor. The ſame Effect is ſometimes produced by a Bruiſe, hard Labour, or the like. Moſt Authors fix the next Cauſe of the *Ganglion* to be a heavy, viſcid Pituita.

The *Ganglion* is ſometimes removed, and reſolved by mere dry Friction, long continued; and ſometimes by Friction with Saliva. Some chuſe to apply a Plate of Lead, anointed with Mercury: Others uſe Gum Ammoniac; or Emplaſter of Vigo, with Mercury. If theſe don't ſucceed, Recourſe is had to Section.

The Word is *Greek*, γάγγλιον, ſignifying the ſame thing. The Tumor, when on the Nerves, Tendons, Articulations, or any of the membranous Parts, retains its Name, *Ganglion*; every where elſe, it is call'd *Nodus*. See NODE.

GANGRENE, GANGRÆNA, in Medicine, is a Mortification in its firſt, or beginning State; while yet the Part retains ſome Senſe of Pain, and a Share of natural Heat: By which this Diſeaſe is diſtinguiſh'd from a *Sphacelus*, or thorough Mortification; where there is no Senſe or Warmth left at all. See MORTIFICATION, and SPHACELUS.

The *Gangrene* is a Diſeaſe in the Fleſh of the Part, which it corrupts, conſumes, and turns black; ſpreading, and ſeizing itſelf of the adjoining Parts: And is rarely cured without Amputation.

It ariſes from a Stoppage, or Interception of the circulatory Motion of the Blood; which by this means, fails to furniſh the Part with the nutritious and ſpirituous Juices, neceſſary to preſerve its Warmth, and Life.

This Interception of Circulation, which is the next Cauſe of the *Gangrene*, is it ſelf occaſion'd divers ways; as, by large Tumors, Eriſypela's, great Inflammations, violent Cold, tight Bandages or Compreſſions, ſudden Fluxions of ſome malignant Humor, Bites of venomous Beaſts, Fractures, Wounds, and Ulcers ill managed, &c.

It is diſtinguiſh'd by the Colour of the Fleſh, which now turns pale, duſky, or ſublivid; and by its growing looſe, and flabby of vehemently Tenſe which it was before. In the Progreſs of the Diſeaſe, the Part diſtils a fetid, diſcolour'd Water; and emits a cadaverous Smell.

Upon the firſt Seizure, the Skin turns pale, afterwards livid; Veſications ariſe, and the Colour at length changes to black; the Fleſh becomes fetid, ſanious, and moiſt; then withers, and ſoon becomes inſenſible: The Heat and Pulſation of the Part being likewiſe diminiſh'd. *Shaw.*

If in a large Wound, the Tumor of the Lips do not ſuppurate, nor any Flux of Matter, or Inflammation ariſe; if the Lips do not ſwell, or after Swelling grow lank and flaccid again on a ſudden: 'Tis reckon'd a ſure Sign of an approaching *Gangrene*. See WOUND.

When a *Gangrene* proceeds from extreme Cold, the Part affected is firſt benumbed, or ſeiz'd with a pricking Pain, followed by a Redneſs, which gradually changes to a Black. See COLD.

When a tight Bandage is the Cauſe, a Flaccidity of the Part is join'd to the Inſenſibility thereof: When the Scurvy, it often begins in the great Toe, and appears in form of a blackiſh Spot, which turns to a dry Cruſt, ſucceeded by a Stupor of the Part, &c.—When the Bite of any venomous Creature is the Cauſe, a continual Fever attends, &c. Pain is felt in the Part; which uſually brings on a Syncope, or Delirium: Puſtles ariſe about the Bite, &c.

By the Microſcope, the *Gangrene* has been diſcover'd to conſiſt of an infinite Number of little Worms, ingender'd in the morbid Fleſh; and which continually producing new Broods, they ſwarm, and over-run the adjacent Parts.

To ſtop the Progreſs of the *Gangrene*, the Phyſicians preſcribe, internally, Sudorificks, and Alexipharmicks; externally, Decoctions of Quick-lime, either ſimple, or with the Addition of Sulphur, Mercurius dulcis, and Spirit of Wine camphorated.

In a ſevere Stage of the Diſtemper, they ſcarify deep, to the very Quick; and afterwards apply hot Liquors, Cataplaſms, &c. Some recommend Horſes Dung, boil'd in Wine, or Urine. The Unguent Ægyptiacum alſo comes into Uſe.

*Belloſte* preſcribes the following, as the moſt efficacious Remedy, known for *Gangrenes*; *viz.* Quickſilver diſſolved in double the Quantity of Spirit of Nitre, or Aqua fortis; a linen Cloth dipt therein, and applied to the *gangrenous* Part. This alone, he aſſures us, is ſufficient.—If the *Gangrene* be occaſion'd by an intenſe Froſt; Snow Water, or a linen Cloth dipt in cold Water, and applied to the Part affected, *Boerhave* directs as the beſt Cure.

If the *Gangrene* proceed to an utter Sphacelation, and be ſeated in any of the Limbs, or extreme Parts, recourſe muſt be had to the Operation of *Amputation*. See AMPUTATION.

The Word *Gangræna*, *Gangrene*, is derived by ſome Authors from the *Paphlagonean Gangra*, a Goat; it being the Character of a Goat to brooze the Graſs all around, without ſhifting its Place. It is juſter, perhaps, to derive it from the *Greek* Verb γεύω, γεύνω, *manduco, abſumo*, I eat, I conſume: But 'tis yet ſafer, to bring it from the Word γάγγραινα, which ſignifies the ſame thing.

GANTLET, or GAUNTLET, a large, ſtronge Glove, made to cover the Arm, or Hands of a Cavalier, when arm'd at all Points. The *Gauntlet* is of Iron; and the Fingers, plated.

The Caſk, and *Gauntlets* were always bore in the antient Marches in Ceremony. *Gauntlets* were not introduc'd, till about the 13th Century.

The *Gauntlet* was frequently thrown, like the Glove, by way of Challenge. See GLOVE, CHALLENGE, CHAMPION, COMBAT, &c.

The Word is derived of the French *Gantelet*; and that of *Gand*, or *Gant*, Glove.—

GANTLET, in Chirurgery, is a kind of Bandage for the Hand.

'Tis a ſort of Swathe, four or five Yards long; wherewith they wrap up the Hand, and all the Fingers, one after another.

GANYMEDE, a Term lately come into Uſe, to expreſs a Catamite, or Bardachio. See CATAMITE, SODOMY, &c.

The Expreſſion takes its riſe from a young, beautiful *Trojan* Shepherd, thus called; whom *Jupiter* raviſh'd, or carried off by his Eagle, or rather by himſelf under the Figure of an Eagle, as he was hunting on Mount *Ida*; and made him his Cup-bearer, in the place of *Hebe*; who, having made a falſe Step, and ſpilt her Liquor, was turn'd out of Office.

Some ſay, that the *Jupiter*, who raviſh'd *Ganymede*, was *Tantalus*, King of *Phrygia:* The Eagle expreſs'd the Swiftneſs, wherewith he was carried off. *Voſſius, De Idolol. L. I. c.* 14, &c. And *Barthius*, on the *Thebaid. L. I. v.* 548.—

GARBE, in Heraldry, a Repreſentation of a Sheaf of Corn, or other Grain; ſometimes bore in Coat Armour, to ſignify Summer, or the Month of *Auguſt*; as the Bunch of Grapes does Autumn.

He bears Azure, a *Garbe*, or; the Arms of the *Grosvenors* of *Eaton*, in *Cheshire*.

GARBLER *of Spices*, is an Officer of great Antiquity, in the City of *London*, who is empower'd to enter any Shop, Ware-house, &c. to view, and search Drugs, &c. and to *garble* and cleanse them.

GARBLES, the Dust, Soil, or Uncleanness that is severed from good Spice, Drugs, &c.

GARBLING of Spice, Drugs, &c. is the purifying it from the Dross and Dust mix'd therewith; and severing the good from the bad.

GARBLING *of Bow Staves*, is the sorting, or culling out the good from the bad.

The Word may come from the *Italian Garbo*, Finery, or Neatness.

GARCON, or, as we pronounce it, GARSOON, a *French* Term, literally signifying *Boy*, or a Male Child, any time before his Marriage.—The *Italians* use *Garsone* in the same Sense.

*Pontanus* remarks, that they antiently wrote it *warçon*: But the Etymologists can't agree as to its Origin.—To say nothing of all the rest, *Martinius* alone proposes seven Derivations; without pitching upon any, *viz.* the Latin *garrire*, to prattle; the *Chaldee* גרס, Student, Learner; the French *Garder*, to guard; the German *warten*, to tarry, or wait; the Greek κεροὸς, Young-man; the Arabic גריה, Young-man; and the Hebrew גור, the young of any Brute.

GARÇON is also applied to divers inferior Officers: Thus, all the People in the King's Chamber, Wardrobe, &c. who do the lesser Offices thereof under the proper Officers, are called *Garçons de la Chambre*, *de la Garderobbe*, &c.

GARD, GARDS, GARDIAN, GARDEROBE, &c. } see { GUARD. GUARDS. GUARDIAN. WARD-ROBE.

GARDANT, in Heraldry. See GUARDANT.

GARDEN, an Inclosure, or Plot of Ground, curiously cultivated, and furnish'd with Variety of Plants, Flowers, Fruits, &c. See GARDENING; see also ORCHARD.

*Gardens* are distinguish'd into *Flower Gardens*, *Fruit Gardens*, and *Kitchen Gardens*: The first for Pleasure, and Ornament; and therefore placed in the most conspicuous Parts: The two latter, for Service; and therefore made in By-places. See FLOWER, FRUIT, &c.

In a *Garden*, the principal Things to be consider'd, are, the *Form*, *Soil*, *Situation*, and *Aspect* or *Exposure*.

For the *first* Point, the *Form*: A Square, or rather Oblong, is most eligible; leading from the Middle of the House, with a Gravel Walk in the Midst; narrow Grass-borders on each Side; and on either Side of these, Rows of Variety of Winter Greens. If the Ground be irregular, it may be made uniform so as to afford a Prospect nothing inferior to the most regular; strait Lines will reduce any Figure to Order. A Triangle has its Beauty, as well as a Square; and the most irregular Spots may be brought by Borders, and Walks to those two Figures.

Indeed, an Irregularity is easily hid in a large *Garden*, by long Walks, and tall Hedges, interrupting a distant View: And the little Corners, and Triangular Spaces, may be agreeably fill'd up with Borders of Flowers, Dwarf Trees, flowring Shrubs, or Ever-Greens. Nor is it prudent, to be solicitous to throw the whole *Garden* into a single View; as Irregularities, and Unevennesses, afford many uncommon, pretty Devices, &c. See WALKS, and BORDERS.

For the *second* Point, or the *Soil*: A deep, rich, black Mould is best for Plants; sandy Land is warm and forward, and good for Flowers; chalky Land is cold and backward. But both are easily corrected by Compost's, or Materials of opposite Kinds. See SOIL, and COMPOST.

For the *Situation*: If the *Garden* be too high, it will be expos'd to the Winds, which are highly prejudicial to Trees; if too low, the Dampness will be injurious, beside the breeding of Vermine: A Flat, therefore, or the Side of a Hill, are the happiest Situation; especially the latter, as it is usually well water'd, and shelter'd from the Extremes of Weather; beside that the Water descending from on high, will supply Fountains, Cascades, and other Ornaments of a *Garden*. See FOUNTAIN, &c.

For the *Aspect*, or *Exposure*, we have already consider'd what relates thereto, under the Article *Exposure*: See EXPOSURE.

Of all things, the Ground, or Soil of the Garden is the most important: Unless this be rich, and fertile, all the other Advantages will be vain. To judge of the Quality of the Soil, some direct us to look, whether there be any Heath, Thistles, or other Weeds growing spontaneously therein, as a certain Sign of a poor Ground: The Growth of the Trees, too, thereabout, is to be consider'd; if they grow cooked, ill shap'd, and grubby, of a faded Green, and full of Moss; the Place is to be immediately rejected. If the Contrary be found; you must proceed to examine the Depth of the Soil, by digging Holes under Ground. The Soil should be three Foot deep; but less than two, is not sufficient.

The chief Furniture of Pleasure Gardens are, *Parterres*, *Vista's*, *Glades*, *Groves*, *Compartiments*, *Quincunces*, *Verdant Halls*, *Arbour Work*, *Mazes*, *Labyrinths*, *Fountains*, *Cabinets*, *Cascades*, *Canals*, *Terrasses*, &c. See each under its proper Article, TERRASS, CASCADE, FOUNTAIN, &c.

In the *planting of a Fruit or Kitchen Garden*, if the Soil be a hungry Gravel, or Sand, Mr. *Switzer* directs the Holes where the Trees are to be planted, to be dug two Foot deep, and three or four over, and filled with rotten Horses or Cows Dung, mix'd with rich Mould: If it be Marle or stiff Clay, a Compost of Rubbish, Lime, Pieces of Brick, Ashes, Sand, &c. will be best to mix with Dung and Mould; tho' he is of opinion, that untried Earth, dug from a Waste or Common where Cattle has been fed, would prove the best Soil for young Trees. See FRUIT *Tree*.

The Trees being now taken out of the Nursery, the biggest Roots are to be shorten'd to about six Inches; all the small Fibres taken off; and the Head to be pruned, so as not to leave above two Branches; and those not above six Inches long. See PLANTING.

The *Wall Trees*, to be placed as far from the Wall, as possible; that there may be the more Room for the Roots to spread. Then, filling up the Hole with Mould, there remains nothing but to secure the Roots from the Winter's Frost, by covering the Spot with Straw, Fern, Dung, &c. And in Summer, from the Sun; by Sand, and Pebble Stone. See WALL *Fruit*.

For Trees planted in Borders, the common Practice is to make a Trench by the Wall-side, two Foot broad, and as many deep. This Trench they fill with old Dung, mix'd with Earth, lightly laid, near as high as the Borders are intended to be; and then trodden down to half the Height in the Places where the Trees are intended to be. 'Tis prudent, to plant the Trees shallow, and to raise the Earth about them; especially in a wet, clayey Soil.—See PLANTING, SEMINARY, &c.

'Tis an Observation of some Importance, that Wall Trees, and Fruit thrive best, when the Walks that run parallel to them, are Gravel; more of the Rays of the Sun being thereby reflected to them, than if they were Grass. Add, that no sort of tall Trees are to be suffer'd to grow in any of the opposite Borders, or intermediate Spaces, so, as their Shade might reach to the South East, or South West Walls. The Places near the Walls are most advantageously filled with Dwarfs.—See DWARF, ESPALIER, &c.

GARDENING, HORTICULTURE, the Art of cultivating a *Garden*. See GARDEN.

*Gardening* has in all Ages been esteem'd an Employment, worthy the greatest Hero's, and Philosophers: The Emperor *Diocletian*, at *Salona*; and *Epicurus*, and *Metrodorus*, at *Athens*, have ennobled the Art beyond all Encomium.

*Goetzius*, Superintendant of *Lubeck*, printed a Dissertation in 1706, entitled Κηποφιλία, *seu De Eruditis Hortorum Cultoribus*, Of the Learned Men who have loved, and cultivated Gardens; among which Number he ranks *Adam*, *Gregory Nazianzen*, St. *Augustin*, *Pliny*, and *Cicero*: Nor should he have forgot the elder *Cato*, *Democritus*, *Plato*, and his Academy.

The Sieur *le Nostre* first carried *Gardening* to any thing of Perfection: M. *la Quintinie* has gone yet further; nor have our own Countrymen of late been wanting to its Improvement; as *London*, and *Wise*, *Bradley*, *Laurence*, *Fairchild*, &c.

M. *Fatio* has lately applied Mathematical Reasoning to *Gardening*, and shewn how to make the best use of the Sun's Rays in Gardens. See WALL.

The principal Operations in *Gardening*, are *Planting*, *Transplanting*, *Engrafting*, *Inoculating*, *Pruning*, *Sowing*, &c. Which see under their proper Articles, PLANTING, TRANSPLANTING, ENGRAFTING, PRUNING, &c.

Other Particulars, relating to the Art of *Gardening*, see under PINCHING, VARIEGATING, NURSERY, SEED, GREEN-HOUSE, HOT-BED, &c. See also PLANT, TREE, FRUIT-TREE, WALL-TREE, DWARF, &c. See also SALLADE, &c.

GARDENING, in Falconry. To *garden a Hawk*, is to put her on a Turf of Grass to chear her.—Some also use the same Phrase for the giving her an Airing, or letting her fly at large.

GARDEVISURE, in Heraldry; see VIZOR.

GARGARISM, GARGLE, in Medicine, a liquid Form of Remedy, for Disorders of the Mouth, Gums, Throat, &c.

*Gargarisms* are composed of Honey, Salts, Syrups, Spirits, Vinegar, Waters, and Decoctions; and produce their Effect by cleansing, lubricating, &c, the Parts.

An Astringent *Gargarism*, Detergent *Gargarism*, Refrigerent *Gargarism*, &c.

The Word is form'd of the *Greek* γαργαλίζειν, *colluere*, to wash.—Or of the Hebrew *Garghera*, the Throat.—

GAR-

GARLAND, an Ornament for the Head, in manner of a Crown. See CROWN.

*Garlands* are a ſort of Chaplets, made of Flowers, Feathers, or even of pretious Stones; but eſpecially Flowers: To which the Word in our Language is more immediately affected.

*Janus* paſſes, in Antiquity, for the Inventor of *Garlands*. *Athen. Dipnoſ. L. XV.*

The Word is form'd of the Barbarous Latin *Ghirlanda*; which is ſtill retain'd in the *Italian*. *Menage* traces its Origin from *Girus*, thro' *girulus*, to *girulare*, *girlare*, *ghirlandus*, *ghirlanda*, and at length *guirlande*, and *Garland*; ſo that *Guirland*, or *Garland* are deſcended in the eighth Degree from *Gyrus*.—

*Hicks* rejects this Derivation, and brings the Word from *Gardel handa*, which in the Northern Languages ſignify, a *Noſegay artfully wrought with the Hand*.—

GARLAND, in a Ship, a Collar of Rope, which is wound about the Head of the Main-maſt, to keep the Shrouds from galling.

GARNISH. In ſome antient Writings and Statutes, to *garniſh the Heir*, ſignifies to warn the Heir.

GARNISHEE, in Law, the Party, in whoſe Hands Money is attach'd within the Liberties of the City of *London*; ſo call'd in the Sheriff of *London*'s Court, becauſe he has had *Garniſhment*, or Warning, not to pay the Money, but to appear and anſwer to the Plaintiff-Creditor's Sute. See ATTACHMENT.

GARNISHING, or GARNISHMENT, is popularly uſed for the Furniture of any thing; or an Aſſemblage, or Sortment neceſſary for the uſing, or adorning of any thing. See FURNITURE.

The GARNISHING *of a Diſh*, conſiſts of certain Things which accompany it; either as a Part, and Ingredient thereof; In which Senſe Pickles, Muſhrooms, Oyſters, &c. are *Garniſhing*: Or as a Circumſtance, or Ornament; as when Leaves, Flowers, Roots, &c. are laid about a Service, to amuſe the Eye.

The ſame Word is us'd for the finer Herbs, Fruits, &c. laid about a Sallad: *Garniſhing* of Lemon, Piſtacho's, Pomgranate, Yolks of hard Eggs, Artichoak Bottoms, Capers, Truffles, Sweat-bread, &c.

The Word is *French*, form'd of the Verb *Garnir*, to furniſh, or fit out.

GARNISHMENT, in Law, a *Warning* given any one to appear; and that for the better furniſhing the Cauſe, and Court. Suppoſe, *e. gr.* one is ſued for the Detinue of certain Charters, and ſays, they were deliver'd to him, not only by the Plaintiff, but *J. S.* alſo; and therefore prays, that *J. S.* may be warn'd to plead with the Plaintiff, whether the Conditions are perform'd, or no.

In this Petition he is ſaid to pray *Garniſhment*; which may be interpreted, a Warning to *J. S.* to provide himſelf of a Defence; or elſe a furniſhing the Court with all Parties to the Action, whereby it may throughly determine the Cauſe.—

GARRISON, a Body of Forces, diſpoſed in a Fortreſs, to defend it againſt the Enemy; or to keep the Inhabitants in Subjection; or even to be ſubſiſted during the Winter Seaſon. See FORTRESS,

The Words *Garriſon*, and *Winter Quarters*, are ſometimes uſed indifferently for the ſame thing; and ſometimes they denote different Things.

In the latter Caſe, a *Garriſon* is a Place wherein Forces are maintain'd, to ſecure it; where they keep regular Guard: As, a *Frontier Town*, a *Cittadel*, *Caſtle*, *Tower*, &c. The *Garriſon* ſhould always be ſtronger than the Towns-men.

*Winter Quarters*, ſignify a Place where a Number of Forces are laid up in the Winter Seaſon, without keeping the regular Guard. The Soldiers like better to be in Winter Quarters, than in *Garriſon*. See FORTIFIED *Place*, *Winter* QUARTERS, &c.

*Du Cange* derives the Word from the corrupt Latin *garnicio*, which the later Writers uſe to ſignify all manner of Munition, Arms, Victuals, &c. neceſſary for the Defence of a Place, and the ſuſtaining of a Siege.

GARTER, literally ſignifies the ſame with the *Greek* Περίσκελις, Periſcelis, a Ligature, to keep up the Stockings; and is particularly uſed for the Badge, or Cognizance of a Noble Order of Knights, hence denominated the *Order of the Garter*. See the following Article.

GARTER, or *Order of the* GARTER, is a Military Order, inſtituted by King *Edward* III. in 1350; under the Title of the *Sovereign*, and *Knights-Companions of the moſt Noble Order of the Garter*. See ORDER.

This Order conſiſts of 26 Knights, or Companions; generally, all Peers, or Princes; whereof the King of *England* is the Sovereign, or Chief.

They wear a blue *Garter* on the left Leg, with this Motto, or Device, *Honi ſoit qui mal y penſe*; *q. d.* Shame to him, that thinks evil hereof. See MOTTO.

They are a College, or Corporation; having a Great, and Little Seal: Their Officers are, a *Prelate*, *Chancellor*, *Regiſter*, *Dean*, *King at Arms*, and *Uſher*. See PRELATE, CHANCELLOR, &c.

Beſide which, they have a *Dean*, and twelve *Canons*, with *Petty Canons*, *Vergers*, and 26 *Penſioners*, or *poor Knights*. See CANON, &c.

The Order is under the Patronage, or Protection of St. *George*, the Tutelary Saint of this Kingdom. See PATRON.

Their College is held in the Caſtle of *Windſor*, within the Chapel of St. *George*, and the Chapter-houſe, erected by the Founder for that Purpoſe. Their Robes, &c. are the *Garter*, deck'd with Gold, Pearl, and precious Stones; and a Buckle of Gold, to be worn daily on the left Leg; and, at Feaſts and Solemnities, a *Sur-coat*, *Mantle*, *high Velvet Cap*, *Collar of SS's*, compoſed of Roſes enamel'd, &c. See SURCOAT, COLLAR, &c.

When they wear not their Robes, they are to have a ſilver Star on the left Side; and they commonly bear the Picture of St. *George*, enamel'd on Gold, and beſet with Diamonds, at the End of a blue Ribbon, croſſing the Body from the left Shoulder. They are not to appear abroad without the *Garter*, on Penalty of 6 *s.* 8 *d.* paid to the Regiſter.

The Order of the *Garter* appears the moſt antient and noble Lay Order in the World. 'Tis prior to the *French* Order of St. *Michael*, by 50 Years: To that of the *Golden Fleece*, by 80 Years: To that of St. *Andrew*, by 190 Years; and to that of the *Elephant*, by 209 Years. See *Order of* St. MICHAEL, GOLDEN *Fleece*, St. ANDREW, ELEPHANT, &c.

Since its Inſtitution, there have been eight Emperors; and 27 or 28 foreign Kings; beſide numerous Sovereign Princes enroll'd as Companions thereof.

Its Origin is ſomewhat differently related: The common Account is, that it was erected in Honour of a *Garter* of the Counteſs of *Salisbury*, which ſhe dropt in Dancing, and the King pick'd up: But our beſt Antiquaries ſet this aſide as fabulous.

*Cambden*, *Fern*, &c. take it to have been inſtituted on occaſion of the Victory obtain'd over the *French*, at the Battle of *Creſſy*: That Prince, ſay ſome Hiſtorians, order'd his *Garter* to be diſplay'd, as a Signal of Battle; in commemoration whereof, he made a *Garter* the Principal Ornament of the Order, erected in memory of this Signal Victory; and a Symbol of the indiſſoluble Union of the Knights.—

Fa. *Papebroch*, in his *Analecta* on St. *George*, in the third Tome of the *Acta Sanctorum*, publiſh'd by the *Bollandiſts*, has a Diſſertation on the *Order of the Garter*. This Order, he obſerves, is not leſs known under the Name *of St. George*; than under that *of Garter*; and that, tho' it was only inſtituted by K. *Edward* III; yet it had been projected before him, by K. *Richard* I. in his Expedition to the Holy Land; if we may credit an Author, who wrote under *Henry* VIII. *Papebroch* adds, however, that he does not ſee what that Author grounds his Opinion on; and that tho' the Generality of Writers fix the Epocha of this Inſtitution to the Year 1350, he chuſes, with *Froiſſard*, to refer it to the Year 1344; which agrees better with the Hiſtory of that Prince; where we read, that he call'd an Extraordinary Aſſembly of Knights that Year.

In 1551 *Edward* VI. made ſome Alterations in the Ritual of this Order: That Prince compos'd it in Latin; the Original whereof is ſtill extant in his own Hand Writing. He there ordain'd, that the Order ſhould no longer be call'd the Order of St. *George*; but that of the *Garter*; and inſtead of the *George*, hung at the Collar, he ſubſtituted a Cavalier, bearing a Book on the Point of his Sword, with the Word *Protectio* graven on the Sword; and *Verbum Dei* on the Book; with a Buckle in the left Hand, and the Word *Fides* thereon.— *Larrey*.

Authors on this Order are, *Cambden*, *Aſhmole*, *Leland*, *Polydore Virgil*, *Heylin*, *Legar*, *Glover*, and *Favyn*.

*Erhard*, *Cellius*, and the Prince of *Orange*, adds *Papebroch*, have given Deſcriptions of the Ceremonies uſed at the Inſtallment of Knights; and a *Ciſtercian* Monk, named *Mendocius Bealetus*, has a Treatiſe, intitled *la Garretiere*, or *Speculum Anglicanum*, ſince printed under the Title of the *Catechiſm of the Order of the Garter*: Wherein he explains all the Allegories, real, or pretended of thoſe Ceremonies, with the Moral Significations thereof.

GARTER, *Principal King at Arms*; ſee KING *at Arms*.

*Garter*, and *Principal King at Arms*, are two diſtinct Offices, united in one Perſon: *Garter's* Employment is to attend the Service of the *Garter*; for which he is allowed a Mantle and Badge, a Houſe in *Windſor* Caſtle, and Penſions both from the Sovereign, and Knights, and laſtly, Fees. He alſo carries the Rod and Sceptre at every Feaſt of St. *George*, when the Sovereign is preſent: Notifies the Election of ſuch as are new choſen: Attends the Solemnity of their Inſtallations, and takes care of placing their Arms over their Seats: Carries the *Garter* to foreign Kings and Princes;

for which Service, it has been uſual to join him in Commiſſion with ſome Peer of the Realm.

*Garter's* Oath relates only to Services to be perform'd within the Order; and is taken in Chapter before the Sovereign and Knights. His Oath, as King at Arms, is taken before the Earl Marſhal.

GARTER is alſo a Term in Heraldry, ſignifying the Moiety, or half of a *Bend*. See BEND.

GAS, in Chemiſtry, a Term us'd by *Van Helmont*, to expreſs the Seeds, or Fermentations, or firſt Principles of Things: But he applies it ſo obſcurely, and precariouſly, that 'tis hard reducing it to any one Senſe.

Thus, he calls the vital Principle in Man, *Gas Vitale*; and the ſame Denomination *Gas* he gives to the ſulphurous Steams, which occaſion Damps: Add, that he calls the Air, *Gas Ventoſum*; and Water, the *Gas of Salts*.

Some would fix his Meaning to the Spirit, or ſubtle and moſt volatile Part of a Body: And thus, *Gas Cereviſiæ*, is the ſpirituous Steam, which flies off from Ale, while in working; but this does not take in the whole Idea of *Gas*.

GASCOIN, or GASKOIN, the hinder Thigh of a Horſe; commencing from the Stifle, and reaching to the Ply, or bending of the Ham.

GASCONADE, a boaſting or vaunting of ſomething very improbable. He pretended he had fought ſingly againſt three Men; a downright *Gaſconade*.

The Term has its Riſe from the *Gaſcoons*, or People in *Gaſcony*, in *France*, who are diſtinguiſh'd for Bragging, and Rhodomontado.—

GASTALDUS, or CASTALDUS, an Officer, antiently entertain'd in the Courts of divers Princes; wrote alſo *Gaſtaldius*, *Gaſtaldio*, *Gaſtaldatus*, *Guaſtaldus*, &c.

The *Gaſtaldus* was what in *Italy* and *Spain* is now call'd *Majordomo*, *viz.* the Maſter, or Steward of a Houſhold. The *Gaſtaldus* was a *Comes*, or Count, which ſhews his Office to have been very conſiderable.—

In the Laws of *Italy* we ſometimes meet with *Gaſtaldus*, in the Senſe of a Courier; and ſometimes as an Eccleſiaſtical Officer, ſo that it is ſomewhere expreſs'd to be Simony, to buy the Function of *Gaſtaldus*.

*Macri* derives the Word from the Arabic *Chaſendar*, Purveyor of a Houſe: Others, from the German *Gaſt*, and *halten*, to retain Travellers.—

GASTEREPIPLOICA, in Anatomy, a Vein, which opens into the Trunk of the Vena Porta; form'd of ſeveral Branches; derived from the Stomach, and Epiploon; whence its Name, γαστὴρ, and ἐπίπλοον. See VEIN.

GASTEROCNEMIUS, in Anatomy, a Name common to two Muſcles, conſtituting the Sura, or Calf of the Leg; the one called *Externus*, the other *Internus*.

GASTEROCNEMIUS *Externus*, call'd alſo *Suralis Externus*, and *Gemellus*, has two diſtinct, fleſhy Originations, from the ſuperior, and hindermoſt Part of each Tubercle of the lower Appendage of the Thigh-bone; which in their Deſcent are each dilated into two ſmall fleſhy Bellies, the innermoſt of which is thickeſt and largeſt; having each a different Series of fleſhy Fibres, which at length uniting, make a broad, ſtrong Tendon; which narrowing itſelf, joins the great Tendon of the Solæus, four Fingers breadth above its Inſertion into the Os Calcis.

When this Muſcle acts, the Foot is ſaid to be extended or pulled backwards; which Motion is very neceſſary in walking, running, leaping, or ſtanding on tip-toe, &c. whence it is, that thoſe who walk much, or carry heavy Burdens; and who wear low-heel'd Shoes, have theſe Muſcles larger than others.

GASTEROCNEMIUS, or *Suralis Internus*, call'd alſo *Solæus*, from its Figure, reſembling a Sole-Fiſh, is placed under the external. Its external fleſhy Part is cover'd with a tranſparent tendinous Expanſion, which makes it appear of a livid Colour.

It begins partly tendinous, chiefly from the hindermoſt Part of the upper Appendix of the Fibula, and back-part of the Tibia, that is, below the Inſertion of the Subpoplitæus; and increaſing to a large fleſhy Belly, compoſed of various Orders of fleſhy Fibres, ſome of them underneath aptly expreſſing the Figure of the Top of a Feather, whoſe Stamina, being here tendinous, join with the great Tendon, which is about a Finger's Breadth long; and inſerted into the ſuperior and hindermoſt Part of the Os Calcis.

The Foot, together with the Toes, being, as it were, a Lever to the whole Body, ought therefore to be attended with Muſcles of great Strength to extend it; which is the Reaſon that theſe Muſcles ſo much exceed their Antagoniſts.

GASTRIC, GASTRICUS, in Anatomy, is applied to divers Veins, on account of their proceeding from the Stomach, or Ventricle, which the *Greeks* call γαστὴρ. See STOMACH.

The *Gaſtricus major*, or greater *Gaſtric* Vein is inſerted into the Splenic Vein; and the *minor*, or leſſer *Gaſtric*, into the Trunk of the Vena Porta.

GASTRILOQUUS, or GASTRILOQOUS, a Perſon who ſpeaks inwardly, or within his Stomach; and whoſe Voice ſeems to come a-far off; more uſually call.ed *Ventriloquus*. See VENTRILOQUUS.

The Word is form'd of the Greek γαστὴρ, Belly; and the Latin *loqui*, to ſpeak.

GASTROLATER, a Glutton, or Belly-god: *Cujus Deus venter eſt*. See IDOLATER.

GASTROMANCY, or GASTROMANTIA, a kind of Divination, practiced among the Antients, by means of Words, coming, or ſeeming to come, out of the Belly. See DIVINATION.

The Word is form'd of γαστρομαντεία, compoſed of γαστὴρ, Belly, and μαντεία, Divination.

There is another kind of Divination, call'd by the ſame Name, *Gaſtromancy*, which is perform'd by means of Glaſſes, or other round, tranſparent Veſſels; at the Bottom whereof certain Figures appear, by Magic Art. 'Tis thus called, by reaſon the Figures appear as in the Belly of the Veſſels.—

GASTROTOMY, the Operation of cutting open the Belly; the ſame with what is otherwiſe called the *Cæſarian Section*. See CÆSARIAN *Section*.

GATE, a large Door, leading, or giving Entrance, into a City, Town, Caſtle, Palace, or other conſiderable Building. See DOOR.

*Thebes*, in *Egypt*, was antiently known by the Appellation, *With an hundred Gates*. *Fez*, in *Africa*, has 31 *Gates*. In Antient *Rome* there was a *Triumphal Gate*, *Porta Triumphalis*. See TRIUMPH. In the Modern *Rome* there is the *Jubilee Gate*, which is only open'd the Year of a Grand Jubilee. See JUBILEE.

The *Gates* of *London* are many of them converted into Goals, or Priſons; as *Ludgate*, *Newgate*, &c. See PRISON. The leſſer, or By-gates, are call'd *Poſterns*. See POSTERN.

*Gates* thro' which Coaches, &c. are to paſs, ſhould not be leſs than ſeven Foot broad; nor more than twelve: The Height to be $1\frac{1}{2}$ the Breadth.

GAVEL, in Law, ſignifies Tribute, Toll, Cuſtom, yearly Rent, Payment, or Revenue; of which there are ſeveral Kinds, as *Gavel-Corn*, *Gavel-Malt*, *Out-Gavel*, *Gavel-Fodder*, &c.

GAVEL, is ſometimes us'd for what we more uſually call the *Gable*. See GABLE.

GAVEL-KIND, a Tenure, or Cuſtom, whereby the Lands of the Father are equally divided, at his Death, among all his Sons; or the Land of the Brother among all the Brethren, if he have no Iſſue of his own. See CUSTOM, and TENURE, DESCENT, &c.

*Teutonicis priſcis patrios ſuccedit in agros*
*Maſcula ſtirps omnis, ne foret ulla potens.*

This Cuſtom, which antiently obtain'd throughout *England*, is ſtill of Force in the greateſt Part of *Kent*, *Urchenfeild* in *Herefordſhire*, and elſewhere; tho' with ſome Difference: But by the Stat. 34 and 35 *Hen.* 8. all *Gavelkind* Lands in *Wales* are made deſcendible to the Heir, according to the Courſe of common Law. See HEIR, &c.

*Cambden* in his *Britan.* gives the Origin and Nature of *Gavelkind* thus: 'The People of *Kent*, upon the *Norman* 'Invaſion, could not be reduced to ſurrender to the Con-'queror, but on theſe Conditions, that they ſhould retain 'their antient Country-cuſtoms without any Infringement 'or Diminution; and eſpecially that call'd *Gavelkind*. The 'Lands held under this Denomination, deſcend equally, and 'are divided, ſhare and ſhare alike, among all the Male 'Children; and in defect of theſe, among the Females.' He adds, 'That they are of Age, or qualified to take the 'Lands upon them, at Fifteen; and may then give, vend, 'or alienate the ſame to any Perſon, without the Conſent of 'any Lord: And Children here inherit their Fathers Land, 'tho' convicted of Felony, Murther, &c. The Tenants in '*Gavelkind* are to do Fealty; and to be in the Tuition of 'the next a-kin, who is not next Heir after them, till 15 'Years of Age; to pay Acknowledgment to the Lord for 'the Lands', &c.

In an antient Book of Records in *Chriſt-Church*, *Canterbury*, of the time of *Henry* VIII. our *Saxon* Anceſtors are ſaid to have either held their Lands by Writing, or without: The firſt were called *Bockland*; whoſe Owners were Men, whom we now call *Freeholders*: The ſecond was called *Folkland*; the Owners whereof were of ſervile Condition, and poſſeſs'd *ad voluntatem Domini*. See BOCKLAND, FREEHOLD, FOLKLAND, &c.

Now, the Inheritance, or Freehold, did not, in thoſe Days, deſcend to the eldeſt Son, but to all alike; which in *Saxon* was called Lande Scyptan, and in *Kent*, *To ſhift Land*; whence came the Cuſtom *Gavelkind*. And the Reaſon why it was retained in *Kent* more than other Places, was that the *Kentiſhmen* were not conquer'd by the *Normans*: For, ſay our Hiſtorians, *Stigand*, the Arch-Biſhop of *Canterbury*;

*terbury*, and one *Egelsine*, an Abbot, who commanded the Forces in that County; ordering every Man, fit to bear Arms, to march and cover themselves, with green Boughs in their Hands: In this Disguise they met the Conqueror unaware at *Swainscomb*; where, discovering themselves, the Archbishop and Abbot acquainted him with their Resolution of standing and falling in defence of the Law of their Country. Upon this the Conqueror, imagining himself encompass'd in a Wood, granted, that they, and their Posterity, should enjoy their Rights, Liberties, and Laws: Some of which, as particularly that of *Gavelkind*, continues to their Descendents to this Day.

GAVELMAN, a Tenant, who is liable to Tribute.— *Villani de Terring, qui vocantur* Gavelmanni. *Somner*, Gavelkind.

GAVELET, in Law, a special, and antient kind of *Cessavit*, us'd in *Kent*, where the Custom of Gavel-kind continues; whereby the Tenant shall forfeit his Lands and Tenements to the Lord, if he withdraw from him his due Rents and Services. See FEE, SERVICE, and GAVELKIND.

The Process of the *Gavelet* is thus: The Lord is first to seek by the Steward of his Court, from three Weeks to three Weeks, to find some Distress upon the Tenement; till the fourth Court; and if in that time he find none, at this fourth Court, it is awarded, that he take the Tenement into his hand in name of a Distress, and keep it a Year and a Day without manuring; within which time, if the Tenant pay his Arrears, and make reasonable Amends for the Withholding, he shall have and enjoy his Tenement as before: If he come not before the Year and Day be past, the Lord is to go to the next County Court, with Witnesses of what pass'd at his own Court, and pronounce there his Process, to have further Witnesses; and then by the Award of his own Court, he shall enter and manure the Tenement as his own: So that if the Tenant desire afterwards to have and hold it as before, he must agree with the Lord, according to this old Saying:

*Has he not since any thing given, or any thing paid,*
*Then let him pay five Pound for his Were, e're he become Healder again.*

Other Copies have the first Part with some Variation;

*Let him nine times pay, and nine times repay.*

GAUGE-*Point, of a solid Measure*, is the Diameter of a Circle, whose Area is equal to the solid Content of the same Measure. See MEASURE, and CONTENT.

Thus, the Solidity of a Wine Gallon being 231 Cubic Inches; if you conceive a Circle to contain so many Inches, the Diameter of it will be 17. 15; and that will be the *Gauge* Point of Wine Measure.

And an Ale Gallon containing 288 Cubic Inches; by the same Rule, the *Gauge* Point for Ale-measure will be found to be 19. 15: And after the same manner may the *Gauge*-Point of any other Measure be determined.

Hence we deduce, that when the Diameter of a Cylinder in Inches is equal to the *Gauge*-Point in any Measure, (given likewise in Inches) every Inch in length thereof will contain an Integer of the same Measure. In a Cylinder, whose Diameter is 17. 15 Inches, every Inch in Height contains one intire Gallon in Wine-measure; and in another, whose Diameter is 19. 15, every Inch in length contains one Ale Gallon.

GAUGE *Line*, a Line on the common Gauging Rod, whose Description and Use see under the Article GAUGING.

GAUGER, an Officer of the King's Excise, whose Business it is to *gauge*, *i. e.* to examine, survey, or measure all Casks of Beer, Wine, Oil, *&c.* and to give them a Mark of Allowance (which is a Circle burnt with an Iron, before they be sold in any Place within the Extent of this Office. See EXCISE, and GAUGING.

GAUGING, the Art, or Act of measuring the Capacities, or Contents of all kinds of Vessels; and determining the Quantity of Fluids, or other Matters, contain'd therein. See MEASURING, CONTENT, *&c.*

Or, *Gauging* is the Art of reducing the unknown Capacity of Vessels of divers Forms; cubical, parallelipipedal, cylindrical, spheroidal, conical, *&c.* to some known cubic Measure; and of computing, for instance, how many Gallons, Quarts, Pints, or the like, of any Liquor, *e. gr.* Ale, Beer, Wine, Brandy, *&c.* are contain'd therein. See CUBE, PARALLELIPIPED, &c.

*Gauging* is a Branch of *Stereometry*. See STEREOMETRY.

The principal Vessels that come under its Operation, are *Pipes*, *Barrels*, *Rundlets*, and other *Casks*; *Backs*, *Coolers*, *Fats*, &c. See BARREL, &c.

The solid Content of cubical, parallelipipedal and prismatical Vessels, we have already observ'd, is easily found in Cubic Inches, or the like, by multiplying the Area of the Base by the perpendicular Altitude. See SOLID, PRISM, *&c.*

And for cylindrical Vessels, the same is found by multiplying the Area of the circular Base, by the perpendicular Altitude, as before. See CYLINDER.

Casks of the usual Form of Hogsheads, Kilderkins, *&c.* may be consider'd as Segments of a Spheroid cut off by two Planes, perpendicular to the Axis; which brings them to *Oughtred*'s Theorem, for measuring Ale and Wine Casks; which is thus: Add twice the Area of the Circle at the Bung, to the Area of the Circle of the Head. Multiply the Sum by one third of the Length of the Cask: The Product is the Content of the Vessel in Cubic Inches.

But, for Accuracy, Dr. *Wallis*, Mr. *Caswel*, &c. think, that most of our Casks had better be consider'd as Frusta of parabolic Spindles; which are less than the Frusta of Spheroids of the same Base, and Height; and give the Capacity of Vessels nearer the Truth, than either *Oughtred*'s Method, which supposes them Spheroids; or than that of multiplying the Circles at the Bung and Head, into half the Length of the Cask, which supposes them parabolic Conoids; or than that of *Clavius*, &c. who takes them for two truncated Cones; which is furthest off of all.

The common Rule for all Wine or Ale Casks, is to take the Diameters at the Bung, and at the Head; by which you may find the Areas of the Circle there: Then taking two Thirds of the Area of the Circle at the Bung, and one Third of the Area of the Circle at the Head; and adding them together into one Sum; this Sum multiplied by the internal Length of the Cask, gives the Content in solid Inches: Which are converted into Gallons, by dividing by 282 for Ale, and by 231 for Wine Gallons.

But *Gauging*, as now practised, is chiefly done by means of Instruments, call'd *Gauging Rods*, or *Rules*, which do the Business at once, and answer the Question without so much Calculation; which is no inconsiderable Addition, both to the Ease and Dispatch of the Work. This Instrumental way of *Gauging*, therefore, we shall here chiefly insist upon.—

*Construction of a* Gauging Rod, *whereby the Content of any Cylindrical, or other common Vessel is easily had.*

Take the Diameter A B of a Cylindrical Vessel, A B D A, *Tab. Surveying, Fig.* 26. that holds one of the Measures wherein the Fluid is estimated, *e. gr.* Gallons; and at the Extremity A, erect an indefinite Perpendicular, A 7. From A to 1, set off a Right Line, equal to A B; then will B 1 be the Diameter of a Vessel, that holds two Measures, or Gallons, of the same Height as the former.

Again, let A 2=B 2; then, B 3 will be the Diameter of a Vessel that holds three Measures, but of the same Height as that which only holds one: And, after the same manner, find the Diameters of other larger Vessels, A 4, A 5, A 6, A 7, &c.

Lastly, set off the several Divisions thus found, A 1, A 2, A 3, &c. upon one Side of a Rod, or Rule; and on the other the Height, or Depth of a Cylinder, that holds one Measure or Gallon, repeated, as oft as it will go. *Thus is the* Gauging Rod *compleat.*

*Demonstration.* For Cylinders, that have the same Altitude, are to each other as the Squares of their Diameters; consequently the Square of the Diameter that holds 2, 3, or 4 Gallons, must be double, triple, or quadruple of that which only holds one. And since in the first, A B= A 1, the Square of B 1 is double, that of B 2 triple, that of B 3 quadruple, *&c*; it is evident, that the Right Lines A 2, A 3, A 4, &c. are the Diameters of the Vessels required.

These Divisions, therefore, being applied to the Side of a cylindrical Vessel, it will immediately appear how many Measures, *e. gr.* Gallons, a cylindrical Vessel of that Base and of the Height of that which holds one Gallon, will contain.

Wherefore, finding by the Divisions on the other Side of the Rod, how often the Height of one Gallon is contained in the Height of the given Vessel; and multiplying the Diameter before found by this Number: The Product will be the Number of Gallons the Vessel contains.

Thus, *v. gr.* if the Diameter of the cylindrical Vessel be 8, and its Height 12, its Content will be 96 Gallons.

Note, 1° The less you take the Height of the Cylinder, containing one Gallon, the greater will the Diameter of the Base be: Whence both that, and the Diameters of the Cylinders, containing several Gallons, will be the more easily divisible into lesser Parts. *Bayer* directs such Height to be only one Digit, or Tenth of an Inch.

2° The Diameters of Vessels holding one or more decimal Parts of a Gallon, will be had by dividing one or more decimal Parts of the Vessel holding a whole Gallon, by its Height; which gives us the Area of the circular Base; from whence the Diameter is easily found by the Rules deliver'd

livered under DIAMETER, CIRCLE, &c. And after the same manner the Diameters are found for the Divisions of Vessels that hold two or more Gallons.

## Use of the *Gauging Rod.*

*To find the Content of a Cask*; that is, to determine the Number of Measures *e. gr.* Gallons, it will hold: Apply the *Gauging Rod* to the Vessels, as directed in the preceding Article; and find both the Length of the Cask A C, *Fig.* 27. and both Diameters G H, and A B. Now, as we find by Experiment, how far soever it may be from Geometrical Exactness, that a common Cask of this Form, may safely enough be reputed as a Cylinder, whose Base is a Medium between the Head and the Belly; find such Medium, which call the *equated Diameter.*

Then, multiplying the Number thus found by the Length of the Cask A C; the Product will be the Number of Measures the Vessel contains.

Suppose *e. gr.* A B=8, and G H=12, and A C=15; the equi-different Mean will be 10; which multiplied by 15, gives the Capacity of the Cask, 150 Measures.

If it happen that the Diameters of the two Ends be not equal; measure them both, and take half their Sum for the Diameter to work by.

There is another Method, whereby the Content of a Vessel is had even without any Calculation at all, which obtains in divers Parts of *Germany* and the Low Countries: But as this supposes all Vessels to be similar to each other; and their Length double of the equated Diameter, that is, of half the Sum of the Diameters A B, and G H; it is not safe to use it in all places. *Kepler*, however, prefers it so much before all others, as including all the Precautions possible; that he recommends it to the Publick, to enact it by Law, that all Casks be made in this Proportion.

The Methods of *Gauging*, which chiefly obtain among us, are by the *Four Foot Gauging Rod*, and *Everard's Sliding Rule.*

## Description and Use of the Four Foot *Gauging Rod.*

The Four Foot *Gauging* Rod, represented in *Tab. Surveying*, *Fig.* 28. is usually made of Box, and consists of four Rules, each a Foot long, and about three Eighths of an Inch square, join'd together by three brass Joints; by which means the Rod is render'd four Foot long, when the four Rules are quite open'd; and but one Foot, when they are folded together.

On the first Face of this Rod, mark'd 4. are plac'd two Diagonal Lines; one for Beer, and the other for Wine: By means of which the Content of any common Vessel in Beer or Wine Gallons may be readily found, by putting the Rod in at the Bung-hole of the Vessel, till it meets the Intersection of the Head of the Vessel with the Staves opposite to the Bung-hole. For distinction of this Line, there is writ thereon, *Beer and Wine Gallons.*

On the second Face, 5, are, a Line of Inches, and the *Gauge Line*; which is a Line expressing the Areas of Circles, whose Diameters are the correspondent Inches in Ale Gallons. At the Beginning is writ, *Ale Area.*

On the third Face, 6, are three Scales of Lines; the first, at the End of which is write *Hogshead*, is for finding how many Gallons there is in a Hogshead, when it is not full, lying with its Axis parallel to the Horizon. The second Line, at the End of which is wrote B. L, signifying a *Butt lying*, is for the same Use as that for the Hogshead. The third Line is to find how much Liquor is wanting to fill up a Butt when it is standing: At the Ends of it is wrote B. S. signifying a *Butt standing.* Half way the fourth Face of the *Gauging* Rod, 7, are three Scales of Lines, to find the Wants in a Firkin, Kilderkin, and Barrel, lying with their Areas parallel to the Horizon. They are distinguish'd by Letters F. K. B. signifying a *Firkin*, *Kilderkin*, and *Barrel.*

## Use of the Diagonal Lines on the *Gauging Rod.*

*To find the Content of a Vessel in Beer or Wine Gallons.* Put the Brass End of the *Gauging Rod* into the Bung-hole of the Cask, with the Diagonal Lines upwards; and thrust the Brass End to the Meeting of the Head and Staves: Then, with Chalk, make a Mark on the Middle of the Bung-hole of the Vessel; and also on the Diagonal Lines of the Rod, right against, or over one another, when the brased End is thrust home to the Head and Staves. Then turn the *Gauging* Rod to the other End of the Vessel, and thrust the brased End home to the End as before.

Lastly, see if the Mark made on the *Gauging* Rod come even with the Mark made on the Bung-hole, when the Rod was thrust to the other End; which if it be, the Mark made on the Diagonal Lines, will, on the same Lines, shew the whole Content of the Cask in Beer or Wine Gallons.—

If the Mark made on the Bung-hole, be not right against that made on the Rod, when you put it the other way; then, right against the Mark made on the Bung-hole, make another on the Diagonal Lines: And the Division on the Diagonal Line, between the two Chalks, will shew the Vessel's whole Content in Beer or Wine Gallons.

Thus, *e. gr.* if the Diagonal Line of a Vessel be 28 Inches four Tenths, its Content in Beer Gallons will be near 51, and in Wine Gallons 62.

If a Vessel be open, as a Half-barrel, Tun, or Copper, and the Measure from the Middle on one Side, to the Head and Staves, be 38 Inches; the Diagonal Line gives 122 Beer Gallons; half of which, *viz.* 61, is the Content of the open half Tub.

If you have a large Vessel, as a Tun, or Copper, and the Diagonal Line taken by a long Rule, prove 70 Inches: The Content of that Vessel may be found thus:

Every Inch at the Beginning-end of the Diagonal Line, call ten Inches. Thus, ten Inches become 100 Inches; and every Tenth of a Gallon call 100 Gallons; and every whole Gallon, call 100 Gallons.

Exam. at 44. 8 Inches, on the Diagonal Beer-Line, is 200 Gallons; so also 4 Inches 48 Parts, now called 44 Inches 8 Tenths, is just two Tenths of a Gallon, now called 200 Gallons: So also, if the Diagonal Line be 76 Inches and 7 Tenths, a close Cask, of such Diagonal, will hold 1000 Beer Gallons: But an open Cask, but half so much, *viz.* 500 Beer Gallons.

## Use of the *Gauge Line.*

*To find the Content of any Cylindrical Vessel in Ale-Gallons:* Seek the Diameter of the Vessel in the Inches, and just against it, on the *Gauge Line*, is the Quantity of Ale Gallons contained in one Inch deep: This multiplied by the Length of the Cylinder, will give its Content in Ale Gallons.

For Example: *Suppose the Length of the Vessel* 32. 06, *and the Diameter of its Base* 25 *Inches*; *what is the Content in Ale Gallons?*

Right against 25 Inches, on the *Gauge Line*, is one Gallon, and .745 of a Gallon; which multiplied by 32. 06, the Length, gives 55 .9447 Gallons for the Content of the Vessel.

*The* Bung *Diameter of a Hogshead being* 25 *Inches, the Head Diameter* 22 *Inches, and the Length* 32. 06 *Inches; to find the Quantity of Ale Gallons contain'd in it.*

Seek 25, the Bung Diameter, on the Line of Inches; and right against it on the Gauge Line you will find 1.745: Take one Third of it, which is .580, and set it down twice: Seek 22 Inches the Head Diameter, and against it you will find on the Gauge Line, 1.356; one Third of which added to twice .580, gives 1.6096; which multiplied by the Length 32.06, the Product will be 51.603776, the Content in Ale Gallons.

Note, This Operation supposes, that the aforesaid Hogshead is in the Figure of the middle Frustum of a Spheroid.

The Use of the Lines on the two other Faces of the Rod, is very easy; you need only put it down right into the Bung-hole (if the Vessel you desire to know the Quantity of Ale Gallons contained therein be lying) to the opposite Staves; and then, where the Surface of the Liquor cuts any one of the Lines appropriated for that Vessel, will be the Number of Gallons contained in that Vessel.

*The Description and Use of* Everard's *Sliding Rule for* GAUGING, *see under the Article* SLIDING *Rule.*

GAUGING *Rod*; see GAUGING.

GAULISH *Language*; see ROMAN, and FRENCH.

GAUNT, an old Word for *lean*, or lank: Thus we say, a *gaunt*-belly'd or light-belly'd Horse, when his Belly shrinks up towards his Flanks.

GAURES, GAVRES, a religious Sect in *Turkey*, *Persia*, &c. The Turks call the Christians, *Gaures*; *q. d.* Infidels, or People of a false Religion; or rather, as *Leunclavius* observes, *Heathens*, or *Gentiles:* The Word *Gaure* among the *Turks* having the same Signification, as *Pagan*, or *Infidel*, among the Christians; and denoting any thing not *Mahometan.*

In *Persia*, the Word has a like general Signification; and beside a more peculiar one, wherein it is applied to a Sect dispersed thro' the Country, and said to be Remains of the antient *Persians*, Worshipers of Fire: Tho', upon the whole, they rather appear to have been *Persians* converted; who being afterwards left to themselves, mingled their antient Superstitions with the Truths and Practices of Christianity; and so form'd themselves a Religion a-part.

The *Gaures* pretend they derive their Religion from one *Azer*, a *Frank* by Nation, and by Profession a Sculptor: This Man coming to *Babylon*, where they then dwelt, married a Maid of the Country, named *Dogdon*; who, after a Visit which she received from an Angel, was fill'd with a Divine Light;

Light; and ſoon afterwards found herſelf with Child. The Aſtrologers, at the ſame time, perceiving that the Child wou'd be a great Prophet, and the Founder of a new Religion; *Neubrout*, the Prince then reigning, was advertis'd hereof; who gave immediate Orders for all the Women with Child to be put to death, throughout his Empire.

The Order was executed accordingly; but the Mother of the future Prophet, ſhewing no Tokens of Pregnancy, eſcaped; and was at length happily deliver'd of a Son, call'd *Ebrahim Zer-Ateucht*.

After his Birth, new Dangers aroſe: The King, being inform'd thereof, had him brought before him; and drawing his Sabre, would have ſlain him with his own Hand; but his Arm grew motion-leſs upon the Spot: Upon this, a huge Fire was lighted, and the Child caſt into the ſame; but he reſted therein, as on a Bed of Roſes. He was afterwards deliver'd from other kinds of Death, by a ſort of Flies, which infeſted the Kingdom; one whereof, entring the King's Ear, render'd him frantic, and at length killed him.

*Cha Glochtes*, his Succeſſor, made the like Attempts on the Child; but was ſo ſtruck with the Miracles which he ſaw him work, that he began to adore him, as all the reſt of the People already did.

At length, after a great Number of Miracles, the Prophet diſappear'd.—Some held he was tranſlated into Heaven, Body, and Soul: Others, that he found an iron Coffin near *Bagdat*, where ſhutting himſelf up, he was carried away by the Angels.

After he was in Poſſeſſion of Paradiſe, God ſent them, thro' his means, ſeven Books; which contain'd all the Matters of Religion; and afterwards, ſeven more, of the Explication of Dreams; and laſtly, ſeven of Medicine. *Alexander* the Great burnt the firſt ſeven, by reaſon no body underſtood the Language, and kept the other fourteen for his own Uſe.

After his Death, ſome of the Prieſts and Doctors among the *Gaures*, retriev'd as much as their Memory would allow them, of the loſt Books; and compoſed a large Volume, ſtill extant among the modern *Gaures*; tho' they underſtand nothing, either of the Words, or the Character.

Throughout the whole, we ſee the Marks, and Traces of Chriſtianity; tho' grivouſly defaced: The *Annunciation*; the *Magi*; the *Maſſacre of the Infants*; Our Saviour's *Miracles*; his *Perſecutions*, *Aſcenſion*, &c.

GAWZE, in Commerce; a very thin, ſlight, tranſparent kind of Stuff, wove ſometimes of Silk, and ſometimes only of Thread. See STUFF.

To warp the Silk for making of *Gawze*, they uſe a kind of Mill, upon which the Silk is wound: This Mill is a wooden Machine, about ſix Feet high; having an Axis perpendicularly placed in the Middle thereof, with ſix large Wings, on which the Silk is wound from off the Bobbins, by the Axis turning round.

When all the Silk is on the Mill, they uſe another Inſtrument, to wind it off again on to two Beams: This done, the Silk is paſs'd thro' as many little Beads as there are Threads of Silk; and thus rolled on another Beam, to ſupply the Loom.

The *Gawze Loom* is much like that of the common Weavers, tho' it has ſeveral Appendages peculiar thereto. See LOOM.

There are *Figur'd Gawze's*; ſome with Flowers of Gold and Silver, on a Silk Ground: Theſe laſt are chiefly brought from *China*.

GAYAC, GAYACUM, or GAYACAN, a Medicinal Wood, brought from the *Indies*; much uſed in Venereal Diſorders; called alſo *Lignum Sanctum*; and by the *Spaniards*, *Ligno Santo*. See WOOD.

*Gayac* grows equally in the Eaſt and Weſt *Indies*: That of the latter is brought in large Pieces, ſome of them weighing four or five hundred Pound; by which it is diſtinguiſh'd from the former.

The *Gayac* Tree, is the Heigth of our Walnut Tree; and is diſtinguiſh'd into two Kinds, Male and Female; only differing, as their Leaves are more or leſs round; being all equally green, the Flowers blue, and of a ſtarry Form; having a little Orange-colour'd Fruit, about the Size of a ſmall Nut, at the Tip thereof.

The Wood *Gayac* is extreamly hard and heavy, and on that account uſed as Ebony, in Moſaic Work, &c. as alſo for the making of Button Moulds. See EBONY.

But its principal Uſe is in Medicine, being found to warm, rarify, attenuate, attract and promote Sweats and Urine. The uſual way of applying it, is in Decoction.

The beſt is that in large Pieces, of a duſky Colour, freſh, gummy, heavy, of an agreeable Smell, and a briſk pungent Taſte; the Bark ſticking cloſe to the Wood.

The Bark of *Gayac* is held of as much Virtue, as the Wood it ſelf: The Rind is of no Efficacy; ſo that to make a Sudorific Decoction or Piſan of the Wood, they firſt pare off all the white Part, which in Reality is the Rind; and only chip or raſp the hard, ſolid Part, which is black, heavy and reſinous.

The Chirurgeons frequently ſubſtitute Box-wood, inſtead of *Gayac*, and, 'tis ſaid, with equal Succeſs.

The Reſin drawn from *Gayac*, is held much more effectual in Venereal Caſes, than either the Wood, or Bark. 'Tis brought us in large Pieces, not unlike common Rozin; but very different in reſpect of Smell: The former, when caſt on the Coals, yielding a very agreeable balſamick Fume.

GAZETTE, a *News Paper*, or printed Account of the Tranſactions of divers Countries, in a looſe Sheet.

Thus we ſay, the *London Gazette*, *Paris Gazette*, *Gazette a la main*, &c.

*Gazettes*, which moſt People look on as Triffles, are really the moſt difficult kind of Compoſitions that have appear'd. They require a very extenſive Acquaintance with the Languages, and all the Terms thereof; a great Eaſineſs and Command of writing, and relating, Things cleanly, and in a few Words.

To write a *Gazette*, a Man ſhould be able to ſpeak of War both by Land and Sea; be thoroughly acquainted with every thing relating to Geography, the Hiſtory of the Time, and that of the Noble Families; with the ſeveral Intereſts of Princes, the Secrets of Courts, and the Manners and Cuſtoms of all Nations.

*Vigneul de Marville* recommends a Set of *Gazettes* well wrote, as the fitteſt Books for the Inſtruction of young Perſons, coming into the World.

The Word is form'd of *Gazetta*, a kind of Coin, formerly currant at *Venice*; which was the ordinary Price of the firſt News Papers printed there: Tho' others derive it by corruption from the Hebrew *Izgad*, which ſignifies *Nuntius*, a Meſſenger; but this Etymology is too much forced, and the former ought to be preferred.

The firſt *Gazette* publiſh'd in theſe Parts, is ſaid to be that of *Paris*, begun in the Year 1631 by *Theophraſt Renaudot*, a Phyſician of *Montpelier*, in his Office of Intelligence. See INTELLIGENCE.

GAZONS, in Fortification, Pieces of freſh Earth cover'd with Graſs, cut in form of a Wedge, about a Foot long, and half a Foot thick; to line Parapets, and the Traverſes of Galleries. See PARAPET, GALLERY, &c.

GEERS, a general Term for Trappings, Harneſs, and all other Things, that belong to Draught-horſes or Oxen.

GEHENNA, a Scripture Term, which has given ſome pain to the Criticks. It occurs in St. *Matthew* v. 22, 29, 30. x. 28. xviii. 9. xxiii. 14. 33. *Mark* ix. 42. 44. 46. *Luke* xii 5. *James* iii. 6.

The Authors of the *Lovain*, and *Geneva* Verſions, retain the Word *Gehenna*, as it ſtands in the *Greek*; the like does Monſ. *Simon*: The *Engliſh* Tranſlators render it by *Hell*, and *Hell-Fire*; and the like do the Tranſlators of *Mons*, and Father *Bouhours*.

The Word is form'd from the Hebrew *Gehinnom*, *i. e.* Valley of *Hinnom*. In that Valley, which was near *Jeruſalem*, there was a Place named *Topheth*, where ſome Jews ſacrificed their Children to *Moloch*, by making them paſs through the Fire. King *Joſias*, to render this Place for ever abominable, made a Cloaca, or common Shore thereof, where all the Filth, and Carcaſſes in the City were caſt. The *Jews* obſerve further, that there was a continual Fire kept up, to burn and conſume thoſe Carcaſſes; for which reaſon, as they had no proper Term in their Language, to ſignify *Hell*, they made uſe of that of *Gehenna*, or *Gehinnom*, to denote a Fire unextinguiſhable.—

GELATINOUS, among Phyſicians, is applied to any thing approaching the glutinous Conſiſtence of a Jelly.

GELD, in our antient Cuſtoms, a Mulct, or Compenſation for a Crime, or Delinquency. See MULCT.

Hence, *Wergild* was antiently uſed for the Value or Price of a Man ſlain; and *Ortgild* of a Beaſt.

*Et ſint quieti de* Geldis, *& Danegeldis*, *Horngeldis*, *& Fortgeldis*, *& de Blodwita & Flitwita*, *& Leirwita*, *& Heingwita*, *& Fremineſeuda*, *& Werdpeni*, *& Averpeni*, *& Hundredpeni*, *& Tolingpeni*. Charta Ric. 2. Priorat. de Hatland in Devon.

GELDABLE, ſee GILDABLE.

GELDING, the Operation of Caſtrating, and particularly Horſes. See CASTRATION.

The ſame Term is alſo applied to a Horſe thus caſtrated; or whoſe Teſticles are cut out; to diſable him from being a Stallion.

In *gelding* of Horſes, regard is had to their Age, the Seaſon of the Year, and the State of the Moon.

For the Firſt, If it be a Colt, the Operation may be perform'd at nine, or fifteen Days old, if the Teſticles be come down; in regard the ſooner he is *gelt*, the better it will be for his Growth, Shape, and Courage; tho' a Horſe may be *gelded* at any Age, if care be taken in the Cure.

As for the Second, The beſt Time is about *April*, or *May*; or elſe about the latter End of *September*.

For the Third, The Wane of the Moon is prefer'd as the fitteſt Time.

*The manner of gelding* is thus: The Beaſt being caſt on ſome ſoft Place, the Operator takes the Teſticles between his fore and great Finger; ſlits the Cod, and preſſes out the Stones; then with a pair of Nippers made very ſmooth, either of Steel, Box, or Brazil, claps the Strings of the Stones between them, very near to where the Stones are ſet on; and preſſes them ſo hard, that there may be no Flux of the Blood; then ſears away the Stone with a thin drawing cauterizing Iron, made red hot.

This done, he takes a hard Plaſter, made of Wax, Roſin, and waſh'd Turpentine melted together, and melts it on the Head of the Strings with the hot Iron; and afterwards ſears the Strings, and melts more of the Salve, till there is a good Thickneſs of the Salve laid on the Strings.

This being done to one Stone, the Nippers are looſen'd, and the like done to the other; and the two Slits of the Cod fill'd with white Salt; and the Out-ſide of the Cod anointed with Hogs Greaſe: And thus they let him riſe, and keep him in a warm Stable, without tying him up.

If he ſwells much in his Cod, or Sheath, they chafe him up and down, and make him trot an Hour in a Day; and he ſoon recovers.

GELOSCOPY, Geloscopia, a kind of Divination, perform'd by the means of Laughter: Or, a Knowledge of any Perſon's Character and Qualities, acquired from the Conſideration of his Laughter. See Physiognomy.

Metapoſcopy, Chiromancy, *Galoſcopy*, Ophthalmoſcopy, Idemgraphy; *Maſcurat.* p. 607.

GEM, Gemma, a common Name for all precious Stones, or Jewels. See Precious *Stones*.

Among *Gems*, the principal are the *Diamond*, *Ruby*, *Saphir*, *Emerald*, *Turcoiſe*, *Opal*, *Agat*, *Cryſtal*, &c. See each under its proper Article, Diamond, Ruby, Saphir, Emerald, &c.

Pearls are alſo ranked among *Gems*; tho' not Stones. See Pearl.

Several Authors, both Antient and Modern, relate Wonders of the Virtues and Medicinal Properties of *Gems*: But their Reputation, in this reſpect, is now not a little fallen; and many even deny them any Virtue at all. Yet are the Fragments of ſuch Stones ſtill preſerv'd by the Phyſicians, in ſome of the moſt celebrated Compoſitions; and there are ſeveral Chemical Preparations made of them.

In effect, as ſeveral Perſons of the greateſt Candour and Experience, have related ſome conſiderable Effects of certain *Gems*, on their own particular Obſervations; and, as it is no ways improbable that ſome of the ſofter Stones may have conſiderable Operations on the human Body; it might be imprudent indiſcriminately to exclude them from any Medicinal Vertue at all.

When much the greateſt Part of their traditionary Qualities are ſet aſide as fabulous; there will ſtill remain ſome, on as real, and well warranted a footing, as many of our other Medicines.

On ſuch Conſiderations, Mr. *Boyle* was induced to give us a Treatiſe of the *Origin and Virtue of Gems*; the Purport whereof is to make appear, that ſuch Stones were originally in a fluid State; or made up of ſuch Subſtances as were formerly fluid; and that many of their general Virtues are probably derived from the Mixture of Metalline, and other Mineral Subſtances uſually incorporated with them; while the great Variety, and the particular Efficacy of their Virtues ariſe from ſome happy concurrent Circumſtances of that Commixture; *e. gr.* the peculiar Nature of the impregnating Liquor, the Proportion wherein it is mix'd, with the petreſcent Juice, and the like.

To ſupport this Hypotheſis of the Virtues of *Gems*, he ſhews that ſeveral of them are not ſimple Concretions of any petreſcent Liquors, but conſiſt alſo of other mineral adventitious Parts; which he argues from the Separableneſs of ſuch Subſtances in ſome Stones; the ſpecific Gravity in others; and the different Waters or Tinctures to be met with in *Gems* of the ſame Species, as Rubies, Saphires, Granates, and even Diamonds; of which ſome are yellow; ſome of other Colours; and ſome green, almoſt like Emeralds.

There may therefore be in ſome *Gems* numberleſs adventitious Corpuſcles: But there is great reaſon to think that ſome of theſe Corpuſcles may be endued with ſeveral Properties and Medicinal Virtues: There is a great Difference among theſe impregnating Particles; and probably a greater Variety than is known by us: And laſtly, many *Gems* are very richly impregnated with theſe Particles; why, then, may not they exert ſome Power? This is the Subſtance of what is directly alledg'd, in behalf of *Gems*.

The Streſs of what is objected againſt them, is, that the Mineral Subſtances they contain, are ſo cloſely locked up, that they can communicate nothing to the Body, and ſo can have no medicinal Operation, being unconquerable by ſo ſmall a Heat, as that of the Stomach, and other Parts of the Body. See Digestion.

Which Objection might be plauſible enough to prevent one's aſcribing any Medicinal Virtues to them *a priori*; but can conclude nothing againſt what is warranted by ſo many Facts, and Obſervations; eſpecially, when there are ſeveral Particulars, that obviate this Objection.

For, a vigorous Loadſtone, tho' frequently harder than many *Gems*, is known to emit copious Effluvia: And there are many which have been found to have a manifeſt and inconvenient Operation on the human Body, by being wore in the Pocket, or long held in the Hand. Mr. *Boyle* has found many tranſparent Pebbles, which, when cut, would reſemble Diamonds, that might be immediately brought to emit copious, and ſtrong-ſcented Steams. And if electrical Attractions be owing to the Effluvia of Bodies excited by rubbing; very ſlight Alterations may ſuffice to procure Expirations from tranſparent *Gems*, many of which are electrical, and even the hardeſt of all, *viz.* Diamonds; one of which Mr. *Boyle* kept by him, which upon a little Friction would attract very vigorouſly. See Magnet, Effluvia, Electricity, Diamond, &c.

To that Part of the Objection, which pretends *Gems* not to be digeſtable by the Heat of the Stomach, it may be replied, that we do not know how far the Digeſtion of Things in the Stomach is owing to Heat: Nor is it proved, that ſuch Materials can have no Operation on the Body, without being digeſted, *i. e.* in paſſing thro' it, without undergoing any ſenſible Change of Bulk, Figure, *&c.* as *Gems*, when ſwallow'd, are ſuppoſed to do.

For ſome Chemiſts make a kind of Bullets of Regulus of Antimony, which they call *Pillulæ perpetuæ*, becauſe when they have perform'd their Operation in the Body, and are caſt forth with the Excrements, they may be applied again and again to the ſame purpoſe. Nor do we know, what Analogy there may be between ſome Juices in the Body, and thoſe mineral Parts which impregnate *Gems*: For tho' *Oculus Mundi* be reckon'd among the rare *Gems*; yet if one of the beſt ſort, be, for a while, kept in common Water, it will receive an Alteration, obvious to the Eye.

Add that Mr. *Boyle* has, without Heat, obtain'd a manifeſt Tincture from ſeveral hard Bodies, and even from a tranſparent ſort of *Gems*, by means of a faint Liquor, diſtilled from a Vegetable Subſtance; as harmleſs, and as plentifully eaten as Bread. And whether ſome Juices of the Body, aſſiſted by the natural Heat thereof, may not ſerve for Menſtrua to ſome *Gems*, we will not ſay; but even the natural Heat of a human Stomach, nay perhaps of the external Parts of the Body, may be able, tho' not to digeſt precious Stones, yet to fetch out ſome of their Virtues: For 'tis certain, it makes a ſenſible Alteration in the hardeſt Sort of them: Witneſs a Diamond of Mr. *Boyle*'s; which might have its electrick Faculty excited without rubbing, only by a languid Degree of adventitious Heat: And another, which, by means of Water, made a little more than luke warm, might be brought to ſhine in the dark. See Phosphorus.

Laſtly, if it be yet objected, that 'tis not likely *Gems* ſhould part with any Effluvia, or Portions of themſelves, inaſmuch as they loſe none of their Weight: It may be anſwer'd, that the Antimonial Glaſs and Cup imbue Wine and other Liquors, with a ſtrong emetic Quality, without undergoing any ſenſible Diminution of Weight. Add, that though common Water be not allow'd a Menſtruum fit to draw any thing from Mercury; yet, both *Helmont*, and others inform us, that a large Quantity of it being kept a Day or two upon a ſmall Proportion of that Drug, will acquire a Virtue of killing Worms; tho' the Mercury retains its former Weight. See Mercury.

Gem, or Germen, in Botany, a Shoot, or Bud of a Plant. See Plant, Germen, Bud, Germination, *&c.*

GEMARA, or Ghemara, the ſecond Part of the *Talmud* of *Babylon*. See Talmud.

The Word גמרה *Gemara*, is commonly ſuppos'd to denote a *Supplement*; but, in Strictneſs, it rather ſignifies *Complement*, Perfection; as being form'd of the *Chaldee* גמר *Gemar*, or *Ghemar*, to finiſh, perfect, or compleat any thing: In which Senſe it is that the Rabbins uſe the Word.

For, the Pentateuch, they call ſimply the *Law*; the firſt Part of the *Talmud*, which is only an Explication of that Law, or an Application thereof to particular Caſes, with the Deciſions of the antient Rabbins thereon, they call the *Miſchna*, *i. e.* Second Law; and the ſecond Part, which is a more extenſive and ample Explication of the ſame Law, and a Collection of Deciſions of the Rabbins, poſterior to the Miſchna, they call *Gemara*, *i. e.* Perfection, Completion, Finiſhing; by reaſon they eſteem it the Finiſhing of the Law, or an Explication, beyond which there is nothing further to be deſired. See Mischna.

The *Gemara* is uſually call'd *Talmud*, the common Name of the whole Work. In this Senſe we ſay, there are two

*Gama-*

*Gemara's*, or Talmuds; that of *Jeruſalem*, and that of *Babylon*: Tho' in Strictneſs, the *Gemara* is no more than an Explication of the Miſchna, made by the Jewiſh Doctors in their Schools: Much as the Commentaries of our School Divines on St. *Thomas*, or the Maſter of the Sentences, are an Explication of the Writings of thoſe Authors.

A Commentary, Monſ. *Tillemont* obſerves, was wrote on the *Miſchna*, by one *Johanan*, whom the *Jews* place about the End of the ſecond Century: But Fa. *Morin* proves from the Work it ſelf, wherein mention is made of the *Turks*, that it was not wrote till the time of *Heraclius*, about the Year 620: And this is what is called the *Gemara*, or *Talmud of Jeruſalem*, which the *Jews* do not uſe or eſteem much, by reaſon of its Obſcurity.

They ſet a much greater Value of the *Gemara*, or *Talmud of Babylon*, begun by one *Aſa*; diſcontinued for 73 Years, on occaſion of the Wars with the *Saracens* and *Perſians*; and finiſh'd by one *Joſa*, about the Cloſe of the ſeventh Century.

Tho' the Name *Talmud*, in its Latitude, include both the *Miſchna*, and the two *Gemara's*; yet is it properly that of *Aſa* and *Joſa* alone which is meant under that Name.

This the *Jews* priſe above all their other Writings; and even ſet it on a Level with Scripture itſelf: In effect, they conceive it as the Word of God, derived by Tradition from *Moſes*, and preſerved without Interruption to their time. See TRADITION.

Ra. *Jehuda*, and afterwards R. *Jehanan*, R. *Aſa*, and R. *Joſa*, fearing the Traditions ſhould be loſt in the Diſperſion of the *Jews*, collected them into the *Miſchna* and *Gemara*.

GEMATRIA, or GAMETRIA, the firſt kind of arithmetical Cabbala, uſed by the Cabbaliſtick *Jews*. See CABBALA.

*Gematria* is a Geometrical, or Arithmetical manner of explaining Words; whereof there are two Kinds: The firſt bearing a more immediate Relation to *Arithmetick*; and the latter, to *Geometry*.

The *firſt* conſiſts, in taking the Numerical Value of each Letter in a Word, or Phraſe; and giving it the Senſe of ſome other Word, whoſe numerical Letters, taken after the ſame manner, make the ſame Sum.

For it is to be obſerv'd, that neither the *Hebrews*, nor *Greeks*, have any other Numeral Figures, beſide the Letters of the Alphabet. See LETTER, and CHARACTER.

Thus, a Cabbaliſt, taking the two firſt Words in *Geneſis*, בראשית ברא, and by Addition getting the Sum total of all the Numbers, ſignify'd by thoſe Letters; finds that theſe two Words ſignify the ſame as thoſe other three, נראש השנה נברא: For, as to the firſt; ב, is 2; ר, 200; א, 1; ש, 300; י, 10; ת, 400; ב, 2; ר, 200; and א, 1: Which, together make 1116. And as to the latter; ב, ſignifies 2; ר, 200; א, 1; ש, 300; ה, 5; נ, 50; ש, 300; ה, 5; נ, 50; ב, 2; ר, 200; and א, 1: Which, ſumm'd up, yield the ſame ber 1116.

Whence the Cabbaliſt concludes, בראשית ברא, *in the Beginning he created*; ſignifies the ſame thing as נראש השנה נברא, *it was created at the beginning of the Year*; and accordingly, the received Opinion of the Cabbaliſts, is, that the World was created at the beginning of the Month *Thiſri*, which was antiently the firſt Month in the Year, and anſwers to our firſt Month in Autumn, *viz. September*.

So, again, in the Prophecy of *Jacob*, *Gen.* xl. 9, the Words יבא שילה are underſtood of the *Meſſiah*; by reaſon they make the ſame Number with משיה, which ſignifies the Meſſiah.—

The *ſecond* kind of *Gematria* is much more obſcure, and difficult; and accordingly leſs uſed: 'Tis employ'd in ſeeking for abſtruſe, and hidden Interpretations in the Dimenſions and Parts of the Buildings mention'd in Scripture, by dividing, multiplying, &c. thoſe Magnitudes by each other. Of this we ſhall give an Example from ſome Chriſtian Cabbaliſts.

The Scripture ſays, that *Noah*'s Arch was 300 Cubits long, 50 wide, and 30 high: Now, the Cabbaliſt takes the Length for the Baſis of his Operations: 300, in the *Hebrew*, is expreſs'd by the Letter ש; which Length, divided by the Height 30, gives the Quotient 10: The *Hebrew* Character whereof is י, to be placed on the right Side of ש. He then divides the ſame Length by the Width, 50; the Quotient whereof, 6, is expreſs'd by a ו; which being placed on the left Side of ש, makes, together with the other two Letters, the Name JESUS, ישו. Thus, by the Rules of Cabbala, it appears, that there is no Salvation, but in Jeſus Chriſt; as, at the Deluge, no Perſon was ſaved but thoſe in the Ark.

After the ſame manner, is the ſame Name ישו found in the Dimenſions of *Solomon*'s Temple. But it is rather an Injury, than an Advantage to the chriſtian Religion, to ſupport it by ſuch frivolous Evidences.

The Word *Gematria* is derived from the Rabbinical *Hebrew* גימטריא, form'd by Corruption of the *Greek* Γεωμετρία *Geometry*.

GEMELLES, in Heraldry, a bearing of Bars by Pairs, or Couples, in a Coat of Arms: As, he beareth Gules on a Chevron Argent, three Bars *Gemelles* Sable, by the Name of *Throgmorton*.

GEMELLUS, in Anatomy, a Muſcle of the Arm, call'd alſo *Biceps externus*, as having two Heads. See BICEPS.

One of the Heads of this Muſcle riſes tendinous from the upper Part of the inferior Coſta of the Scapula, whence paſſing between the Muſcles to the back Part of the Humerus, it joins the other Head; and both run together to their Inſertion at the Anco or Tip of the Elbow.

The *Gemellus* is the firſt Extenſor of the Cubit; and is by many reckon'd two diſtinct Muſcles; the firſt called *Longus*; the latter, *Brevis*.

GEMINI, in Aſtronomy, *the Twins*; a Conſtellation, or Sign of the Zodiac: The third in Order; repreſenting *Caſtor* and *Pollux*. See SIGN, and CONSTELLATION.

The Stars in the Sign *Gemini*, in *Ptolomy*'s Catalogue are 24; in *Tycho*'s 29; in the *Britannic Catalogue* 79. The Order, Names, Longitudes, Latitudes, Magnitudes, &c. whereof, are as follow.

*Stars in the Conſtellation* GEMINI.

GEMINI, in Anatomy, two Muſcles of the Thigh, which ariſe from the Protuberance of the Iſchium, and are inſerted with the Pyriformis into the Dent at the Root of the great Trochanter.

GEMMA, or *Sal* GEMMÆ, is peculiarly uſed for Rock Salt, or Salt dug out of Mines.—See SALT.

The Name *Gemma* is applied hereto, on occaſion of its Luſtre, and Brillant; which is not unlike that of Cryſtal.

The principal Mines of this Salt are thoſe of *Wiliſca*, in *Poland*; of *Eperie*, in *Upper Hungary*; and of *Cardonna*, in *Catalonia*.——The principal Uſe of this Salt is for the powdering, or pickling of Meats, in Places deſtitute of Salt-Springs, &c.

GEMMA, among Botaniſts, the turgid Bud of any Tree, when it is beginning to bear; call'd alſo *Oculus*, or Eye. See BUD, EYE, &c.

GEMONIÆ, call'd alſo *Scalæ* GEMONIÆ, and *Gradus* GEMONII, among the *Romans*, were much the ſame as *Gallows*, or *Gibbets* in *England*. See GALLOWS, and GIBBET.

The *Gradus Gemonii*, according to *Publius Victor*, or *Sextus Rufus*, was a Place rais'd on ſeveral Steps, from whence they precipitated their Criminals. Others repreſent it as the Place whereon they were executed, and afterwards expoſed to publick View.

The *Gemoniæ* were in the tenth Region of the City, near the Temple of *Juno*. *Camillus* firſt appropriated the Place to this Uſe, in the Year of *Rome* 358.

Some ſay, they were thus denominated from the Perſon who rais'd them: Others, from the firſt Criminals, that ſuffer'd on them: Others, from the Verb *gemo*, I ſigh, or groan.

GEMOTE, *Conventus*, a *Saxon* Word, denoting a *Meeting*. *Omnis homo pacem habeat eundo ad* Gemotum *& rediens de* Gemoto, *niſi probatus fur fuerit*. LL. Ed. Conf.

GENDARMES, or GENS D'ARMES, *q. d. Men of Arms*, a Term uſed among the *French*, for the King's Horſe Guards; by reaſon they ſucceeded the antient *Men of Arms*, who were arm'd at all Points, and thence call'd *Gendarmes*. See GUARDS.

At preſent, the Companies of the King's *Gard de Corps*, the Muſqueteers, and Light Horſe, are reputed to belong to the *Gendarmerie*. See GENDARMERIE.

The *Grand Gendarmes*, ſometimes call'd ſimply the *Gendarmes*, are a Company of Gentlemen, to the Number of about 250, who guard the King's Perſon. The King himſelf is their Captain; and one of the prime Peers, the Lieutenant Captain. When the King marches with all his Houſhold Troops, the *Gens d'Armes* cloſe the March.

Their Device is, a Thunderbolt, falling from Heaven, with the Motto, *Quo jubet iratus Jupiter*. There are alſo *Gens d'Arms* of the Queen, the Dauphin, &c.

GENDARMERIE, or GENS D'ARMERIE, the *French* Cavalry, and particularly that of the King's Houſhold. See GENDARMES.

The *Gendarmerie*, at preſent, is a Body of Horſe, conſiſting of 16 Companies, *viz.* the *Scotch* Gendarmes; the *Engliſh* Gendarmes; the *Burgundy* Gendarmes; and the *Flemiſh Gend'Armes*: Which four Companies compoſe the King's *Gens d'Armes*, or Life Guard.

The other Companies take their Names from the Princes who command them, as Captains; *viz.* the Queen's *Gens d'Armes*; the Queen's Light Horſe: The Dauphins *Gens d'Armes*; the Dauphins Light Horſe: The Duke of *Burgundy*'s *Gens d'Armes*; the Duke of *Burgundy*'s Light Horſe: The Duke of *Orlean*'s *Gens d'Armes*, &c. Each Company, at a Medium, conſiſts of 76 *Gens d'Armes*, or Light Horſe.

GENDER, GENUS, in Metaphyſicks; ſee GENUS, and KIND.

GENDER, in Grammar, a Diviſion, or Diſtinction of Nouns or Names, according to the different Sexes of the Things they denote. See NOUN.

It has been thought proper, in order to render Diſcourſe more expreſs, and diſtinct, as alſo to embelliſh it by a Variety of Terminations; to contrive certain Diverſities in Adjectives, accommodated to the Subſtantives they are applied to: Whence, from a Regard to that notable Difference there is between the two Sexes, all Nouns Subſtantives have been diſtinguiſh'd into Maſculine, and Feminine; and the Nouns Adjectives alſo varied to correſpende therewith. See ADJECTIVE.

But as there was an Infinity of Words, which had no proper Relation, either to the one Sex, or the other; they had *Genders* aſſigned them, rather out of Caprice, than Reaſon: And hence it is that the *Gender* of a Noun is frequently dubious and fluctuating. See MASCULINE, and FEMININE.

It ſhould here however be obſerved, that this Inſtitution of *Genders* was not made with Deſign and Deliberation, by the Maſters of Language; but was introduced by Cuſtom and Uſage. At firſt, there was only a Difference between the Names of Animals, when ſpoke of Males, and Females; by degrees, the ſame Regulation was extended to other Things: The Grammarians have only obſerved and followed, what Uſage had eſtabliſh'd.

The Oriental Languages frequently neglect the Uſe of *Genders*; and the *Perſian* Language has none at all, which is no Diſadvantage; the Diſtinction of *Genders* being intirely uſeleſs.

The *Latins*, *Greeks*, &c. generally content themſelves to expreſs the different *Genders* by different Terminations, as *Bonus equus*, a good Horſe; *bona equa*, a good Mare, &c. But in *Engliſh*, we frequently go further, and expreſs the Difference of Sex by different Words; as Boar, Sow; Boy, Girl; Buck, Doe; Bull, Cow; Cock, Hen; Dog, Bitch, &c.

We have only about 24 Feminines, diſtinguiſh'd from the Males, by the Variation of the Termination of the Male into *eſs*; of which Number are Abbot, Abbeſs; Count, Counteſs; Actor, Actreſs; Heir, Heireſs; Prince, Princeſs, &c. which is all that our Language knows of any thing like *Genders*.

The Eaſtern Languages, as well as the vulgar Languages of the Weſt, have only two *Genders*; the *Maſculine Gender*, and *Feminine Gender*. The *Greek* and *Latin* have likewiſe the *Neuter*, *Common*, and the *Doubtful Gender*; and beſide theſe, they have the *Epicene*, or Promiſcuous, which under one ſingle *Gender* and Termination includes both the Kinds. See MASCULINE, FEMININE, NEUTER, EPICENE, &c.

GENDER, in Geometry. Geometrical Lines are diſtinguiſh'd into *Genders*, Claſſes, or Orders, according to the Number of the Dimenſions of an Equation, expreſſing the Relation between the Ordinates, and the Abſciſſæ. See GEOMETRICAL *Line*.

GENDER, in Botany, GENDER, in Muſick, &c. } ſee } GENUS.

GENEALOGY, a Series, or Succeſſion of Anceſtors, or Progenitors: Or, a ſummary Account of the Relations and Alliances of a Perſon, or Family, both in the Direct, and Collateral Lines. See LINE, COLLATERAL, DIRECT, DEGREE, &c.

In divers Chapters, and Military Orders, 'tis required that the Candidates produce their *Genealogy*; to ſhew that they are Noble by ſo many Deſcents. See DESCENT.

The Word is *Greek*, γενεαλογία, which is form'd of γενὸς, *Genus*, *Proſapia*, Race, Lineage; and λόγ&, *Sermo*, Diſcourſe.

*Genealogical Tables*, *Genealogical Tree*, *Genealogical Column*: The *Genealogical* Degrees are repreſented in Circles, ranged over, under, and aſide of each other. The Antients had the like; which they called *Stemmata*, from a *Greek* Word, ſignifying *Crown*.—

GENERAL,

GENERAL, ſomething that comprehends all, or extends to a whole Genus. See GENUS; ſee alſo UNIVERSAL.

Thus we ſay, a *General* Rule, *q. d.* an univerſal Rule, A *general* Loſs, *&c.* 'Tis diſputed, whether *Noah*'s Flood was *general*, or no. See DELUGE.

All the Sciences have ſome *general* Principles, or Maxims. See MAXIM. A *general* Court: *General* Councils are particularly called *Oecumenical*. See OECUMENICAL.

GENERAL *Iſſue*, in Law; ſee ISSUE.

*General* is particularly applied to divers Officers and Dignitaries.

| | | |
|---|---|---|
| *States* GENERAL, | ſee | STATES. |
| GENERAL *Council*, | | OECUMENICAL. |
| GENERAL *Aſſembly*, | | ASSEMBLY. |
| *Vicar* GENERAL, *&c.* | | VICAR. |

GENERAL *Officers*, in an Army, are thoſe who do not only command over a ſingle Company, or Regiment; but whoſe Office and Authority extends over a Body of ſeveral Regiments of Horſe, and Foot.

Such are *Lieutenant Generals*, *Major Generals*, *Generals* of the Horſe, of the Foot; *Paymaſter General*, *Commiſſary General*, *Chirurgeon General*, &c.

The Word is alſo now uſed in a more extenſive Senſe; and comprehends ſuch as may command, by virtue of their Rank, over ſeveral Bodies of Forces, tho' all of the ſame Kind; in which Senſe Brigadiers are *General Officers*; notwithſtanding that they are attach'd to one kind of Forces, either Infantry, or Cavalry, See BRIGADIER.

The Pay of a *Lieutenant General*, when in Service, is 4 *l. per* Day: Of a *Major General*, 2 *l.* Of a *Brigadier General*, 1 *l.* 10 *s.* Of a *Captain General*, 10 *l.* See LIEUTENANT *General*, MAJOR *General*, &c.

We have alſo Officers in the Law, in the Revenues, *&c.* diſtinguiſh'd by the Appellation of *General*: As, Attorney *General*, Solicitor *General*, &c. See ATTORNEY, and SOLICITOR.

Receiver *General*, Controller *General*, &c. See RECEIVER, and CONTROLLER.

GENERAL is alſo uſed in a *Monaſtic* Senſe, for the Chief of an Order; or of all the Houſes, or Congregations eſtabliſh'd under the ſame Rule. Thus we ſay, the *General* of the *Ciſtercians*, the *Franciſcans*, &c. See ORDER.

Fa. *Thomaſſin* derives the Origin of *Generals* of Orders, from the Privileges granted by the antient Patriarchs to the Monaſteries ſituate in their capital Cities. By ſuch means they were exempted from the Juriſdiction of the Biſhop, and immediately ſubjected to that of the Patriarch alone.

GENERAL is alſo uſed in the *Military* Art for a particular March, or Beat of Drum.

To beat the *General*, is to give Notice to the Infantry to march. See DRUM.

GENERAL *Terms*, or *Words*, are ſuch as expreſs, or denote *general* Ideas. See WORD.

Ideas become *general*, by ſeparating from them, the Circumſtances of Time, Place, or any other Ideas that may determine them to this or that particular Exiſtence. See IDEA.

By this way of Abſtraction they become capable of repreſenting more Individuals, than one; each of which having a Conformity to that abſtract Idea, is of that Sort. See ABSTRACTION, INDIVIDUAL, &c.

All Things, Mr. *Lock* obſerves, that exiſt, being Particulars, it might be expected, that Words ſhould be ſo too in their Signification: But we find it quite contrary; for moſt of the Words, that make all Languages, are *general* Terms.

This is the Effect of Reaſon and Neceſſity: For, 1° It is impoſſible that every particular Thing ſhould have a diſtinct, peculiar Name; becauſe it is impoſſible to have diſtinct Ideas of every particular Thing, to retain its Name with its peculiar Appropriation to that Idea. 2° It would be uſeleſs, unleſs all could be ſuppoſed to have theſe ſame Ideas in their Minds: For Names, applied to particular Things, whereof one alone has the Ideas in his Mind, could not be ſignificant or intelligible to another, who is not acquainted with all thoſe particular Things which had fallen under his Notice. 3° It would be of no great uſe for the Improvement of Knowledge; which, tho' founded in particular Things, enlarges itſelf by *general* Views, to which Things, reduced into Sorts under general Names, are properly ſubſervient.

In Things, where we have occaſion to conſider and diſcourſe of Individuals, and Particulars, we uſe proper Names: As in Perſons, Countries, Cities, Rivers, Mountains, *&c.* Thus wee ſee that Jockeys have particular Names for their Horſes, becauſe they have often occaſion to mention this or that Horſe particularly, when he is out of ſight.

The firſt Ideas Children get, are only particular, as of the Nurſe, or Mother; and the Names they give them, are confined to theſe Individuals: Afterwards, obſerving, that there are a great many other Things in the World that reſemble them in Shape, and other Qualities, they frame an Idea, which they find thoſe many Particulars do partake in; to that they give, with others, the Name, Man, for Example. In this they make nothing new, but only leave out of the complex Idea they had of *Peter*, *James*, *Mary*, &c. that which is peculiar to each, and retain only what is common to all. And thus they come to have a *general* Name, and a *general* Idea.

By the ſame Method they advance to more *general* Names and Notions: For, obſerving ſeveral Things that differ from their Idea of Man, and which cannot, therefore, be comprehended under that Name, to agree with Man in ſome certain Qualities; by retaining only thoſe Qualities, and uniting them into one Idea, they have another, more *general* Idea; to which, giving a Name, they make a Term of a more comprehenſive Extenſion.

Thus, by leaving out the Shape, and ſome other Properties ſignified by the Name, Man; and retaining only Body, with Life, Senſe, and ſpontaneous Motion; we form the Idea ſignified by the Name Animal. After the ſame manner, the Mind proceeds to Body, Subſtance, and at laſt to Being, Thing, and ſuch univerſal Terms, which ſtand for any Ideas whatſoever, See ENS, ESSE, &c.

Hence we ſee the whole Myſtery of Genus and Species, is nothing but abſtract Ideas, more or leſs comprehenſive, with Names annexed to them: This ſhews us the Reaſon, why in defining Words, we make uſe of the Genus; namely, to ſave the Labour of enumerating the ſeveral ſimple Ideas, which the next general Term ſtands for.

From what has been ſaid, it is plain, that *General* and Univerſal belong not to the real Exiſtence of Things; but are the Inventions of the Underſtanding, made by it for its own Uſe, and concerns only Signs, either Words, or Ideas. See UNIVERSAL.

*General* Words do not barely ſignify one particular Thing; for then they would not be *general* Terms; but proper Names: Neither do they ſignify a Plurality; for then Man and Men would ſignify the ſame thing; but what they ſignify, is a ſort of Things: And this they do, by being made a Sign of an abſtract Idea in the Mind, to which Idea, as Things exiſting are found to agree, ſo they come to be ranked under that Name, or to be of that ſort.

The Eſſences then of the Sorts, or Species of Things, are nothing but theſe abſtract Ideas. See ABSTRACT.

It is not denied here, that Nature makes Things alike; and ſo lays the Foundation of this ſorting and claſſing: But the Sorts or Species themſelves are the Workmanſhip of human Underſtanding; ſo that every diſtinct abſtract Idea, is a diſtinct Eſſence; and the Names that ſtand for ſuch diſtinct Ideas, are the Names of Things eſſentially different. Thus Oval, Circle, Rain and Snow are eſſentially different. See this further illuſtrated under ESSENCE, SUBSTANCE, *&c.*

GENERALISSIMO, call'd alſo *Captain* GENERAL, and ſimply, the GENERAL; is an Officer, who commands all the military Powers of the Nation; who gives Orders to all the other General Officers; and receives no Orders himſelf but from the King.

Monſ. *Balzac* obſerves, that the Cardinal *de Richelieu* firſt made this Word, of his own abſolute Authority, upon his going to command the *French* Army in *Italy*.

GENERATED, or GENITED, is uſed in Mathematicks, for whatever is produced, either in Arithmetick, by the Multiplication, Diviſion, or Extraction of Roots; or in Geometry, by the Invention of the Contents, Areas, and Sides; or of extreme and mean Proportionals, without arithmetical Addition, and Subſtraction.

GENERATING *Line*, or *Figure*, in Geometry, is that which by its Motion or Revolution produces any other Figure, Plane, or Solid. See GENESIS.

GENERATION, in Phyſicks, the Act of procreating, or producing a thing, which before was not: Or, as the Schoolmen define it, the total Change, or Converſion of a Body, into a new one, which retains no ſenſible Part or Mark of its former State. See BODY.

Thus, Fire is ſaid to be *generated*, when we perceive it to be, where before was only Wood, or other Fuel; or, when the Wood is ſo changed, as to retain no ſenſible Character of Wood: Thus alſo, A Chick is ſaid to be *generated*, when we perceive the Chick, where before was only an Egg; or the Egg is changed into the Form of the Chick.

In *Generation*, there is not properly any Production of new Parts, but only a new Modification or manner of Exiſtence of the old ones; by which *Generation* is diſtinguiſh'd from *Creation*. See CREATION.

It is diſtinguiſh'd from *Alteration*, in that the Subject, in this latter, remains apparently the ſame; and only the Accidents, or Affections are changed: As when the ſame Body is to day well, and to morrow ſick; or Braſs, which before was round, is now ſquare. See ALTERATION.

Laſtly, *Generation* ſtands oppoſed to *Corruption*, which is the utter Extinction of a former Thing: As, when that which before was Wood, or an Egg, is no longer the one or the other: Whence it appears, that the *Generation* of one Thing is the Corruption of another. See CORRUPTION.

The Peripateticks explain *Generation* by a Change or

Paſſage from a Privation, or Want of a ſubſtantial Form, to the having of ſuch a Form. See *Subſtantial* FORM.

The Moderns allow of no other Change in *Generation*, than what is *local*: According to them, 'tis only a Tranſpoſition, or new Arrangement of Parts; and thus, the ſame Matter ſhall ſucceſſively undergo an Infinity of *Generations*.

A Grain of *Wheat*, *e. gr.* is committed to the Ground; this imbibing the Humidity of the Soil, becomes turgid, and dilates to ſuch Degree, that it becomes a *Plant*, and, by a continual Acceſſion of Matter, ripens by degrees into an Ear; and at length into new *Seed*. This Seed, ground in the Mill, appears in form of *Flower*; which, mix'd up with Water, makes a *Paſte*; whereof, with the Addition of Yeſt, Fire *&c. Bread* is *generated*: And this Bread, broke with the Teeth, digeſted in the Stomach, and convey'd thro' the Canals of the Body, becomes *Fleſh*.

Now, in all this Series of *Generations*, the only thing effected, is a local Motion of the Parts of the Matter, and their ſettling again in a different Order; ſo that, in Reality, wherever there is a new Arrangement, or Compoſition of Elements, there is a new *Generation*; and therefore *Generation* is reduced to Motion. See ELEMENT, and MOTION.

GENERATION is more immediately underſtood of the Production of Animal and Vegetable Bodies, from Seed, or the Coition of others of different *Sexes*, but the ſame Genus, or *Kind*. See ANIMAL, and VEGETABLE; ſee alſo SEX, &c.

Some of the modern Naturaliſts maintain, after Monſ. *Perrault*, that there is not properly any new *Generation*: That God created all Things at firſt: And that what we call *Generation*, is only an Augmentation and Expanſion of the minute Parts of the Body of the Seed; ſo that the whole Species to be afterwards produced, were really all form'd in the firſt, and incloſed therein; to be brought forth and excloſed to view in a certain Time; and according to a certain Order and Oeconomy. See SEED.

Thus, Dr. *Garden*: 'It is moſt probable, that the Stamina of all the Plants and Animals that have been, or ever ſhall be in the World, have been form'd *ab origine Mundi*, by the Almighty Creator, within the firſt of each reſpective Kind. And he who conſiders the Nature of Viſion, that it does not give us the true Magnitude, but only the Proportion of Things; and that what ſeems to our naked Eye but a Point, may truly be made up of as many Parts as ſeem to be in the whole Univerſe, will not think this an abſurd or impoſſible Thing." *Mod. Theor. of Generat.*

The Manner, wherein the Seed of the Male Animal acts on that of the Female, to impregnate, and render it prolifick, has long been inquir'd after; and yet remains ſtill a Myſtery. Some, with *Ariſtotle*, hold the Male Semen to do the Office of a Coagulum; and the Female that of Milk: Which ſome later Authors have improved on, by ſuppoſing the Male Seed an Acid; and the Female an Alcali. Others, conſider the thicker Seed of the Male, as the Flower; and the thinner Seed of the Female, as Water, out of which two an animal Paſte is wrought, and baked by the Heat of the Womb. But the Moderns are generally agreed, that what Effect ſoever the Male Seed produces on the Female, 'tis by Motion and Mechanicks that it produces it.

GENERATION *of Animals*, or *Animal* GENERATION, is a Proceſs in the Oeconomy of Nature, very difficult to be traced. The Parts concurring hereto, are numerous; and their Functions moſtly diſcharg'd in the Dark.

The Antients diſtinguiſh'd two kinds of *Generation*: *Regular*, called *Univocal*; and *Anomalous*, called alſo *Equivocal*, or *Spontaneous*.

The firſt was effected by Parent Animals of the ſame kind; as that of Men, Birds, Beaſts, *&c.* The ſecond was ſuppoſed effected by Corruption, the Sun, *&c.* as that of Inſects, Frogs, *&c.* But this latter Kind is now generally exploded. See EQUIVOCAL, SPONTANEOUS, UNIVOCAL, &c.

There are two principal Theories, or Methods of accounting for the *Generation* of Animals: The one ſuppoſes the Embryo, or Fœtus to be originally in the *Seed* of the Male; the other, in the *Ovum*, or Egg of the Female.

The firſt ſuppoſes Animalcules in the Male Seed, to be the firſt Rudiments of the Fœtus; and that the Female only furniſhes a proper Nidus, and Nutriment to bring them forwards. See SEED, and ANIMALCULA.

The ſecond ſuppoſes the firſt Rudiments of the Animal to be in the Ova; and that the Male Seed only ſerves to warm, cheriſh and ripen the Ova, till they fall off out of the Ovary into the Womb. See EGG, OVARY, &c.

The firſt Syſtem is well illuſtrated by Dr. *Geo. Garden*: That Author, upon comparing the Obſervations, and Diſcoveries of *Harvey*, *Malpighi*, *De Graaf*, and *Leewenhoeck* together, concludes it moſt probable, "That all Animals are "*ex animalculo*: That theſe Animalcules are originally in "*Semine Marium*, and not in that of the Female; but "that they can never come forward, nor be form'd into A-"nimals, without the Ova in the Female."

The Iſt of theſe Points he argues from the three following Obſervations:

1° That ſomething has often been obſerved by *Malpighi*, in the Cicatricula of an Egg before Incubation, like the Rudiments of an Animal, in form of a Tadpole. See CICATRICULA.

2° From the ſudden Appearance and Diſplaying of all the Parts, after Incubation, it ſeems probable, that they are not then actually formed out of a Fluid; but that the Stamina of them have been formerly there exiſtent, and are now expanded—The firſt Part of the Chick, which is diſcover'd with the naked Eye, is the *Punctum Saliens*, and that not till three Days and Nights of Incubation are paſt; on the fifth Day the Rudiments of the Head and Body appear. This made Dr. *Harvey* conclude, that the Blood had a Being before any other Part of the Body, and that from it all the Organs of the Fœtus were both formed and nouriſh'd; but by *Malpighi*'s Obſervations it appears that the Parts are then only ſo far extended, as to be made viſible to the naked Eye; and that they were actually exiſtent before, and diſcernable by Glaſſes. After an Incubation of 30 Hours, we ſee the Head, the Eyes, and the Carina, with the Vertebræ, diſtinct, and the Heart. After 40 Hours, its Pulſe is viſible, and all the other Parts more diſtinct, which cannot be diſcerned by the naked Eye, before the Beginning of the fifth Day: From whence it ſeems very probable, that even the ſo early Diſcovery of thoſe Parts of the Fœtus by the Microſcope, is not the diſcerning of thoſe Parts newly form'd; but only more dilated and extended by receiving of Nutriment from the Colliquamentum; ſo that they ſeem all to have been actually exiſtent before the Incubation of the Hen. And what *Swammardam* has diſcover'd in the Tranſmutation of Inſects, gives no ſmall Light to this; ſince he makes appear, that in thoſe large Eruca's which feed upon Cabage, if they be taken about the Time they retire to be transformed into Aurelias, and plunged often in warm Water to make a Rupture of the outer Skin; you will diſcern, thro' the Tranſparency of their ſecond Membrane, all the Parts of the Butterfly, the Trunk, Wing, Feelers, *&c.* folded up: But, that after the Eruca is chang'd into an Aurelia, none of theſe Parts can be diſcerned; being ſo much drench'd with Moiſture; tho' they be there actually form'd. See FŒTUS, AURELIA, &c.

3° As to the Analogy between Plants and Animals: All Vegetables, we ſee, do proceed *ex Plantula*; the Seeds of Vegetables being no other but little Plants of the ſame kind, folded up in Coats and Membranes: Whence we may infer, that ſo curiouſly an organiz'd Creature, as an Animal, is not the ſudden Product of a Fluid, or Colliquamentum, but does much rather proceed from an Animalcule of the ſame kind, and has all its little Members folded up according to their ſeveral Joints and Plicatures, which are afterwards enlarged and diſtended, as we ſee in Plants.

The IId Point, which our late Diſcoveries have made probable, is, that theſe Animalcules are originally in the Seed of the Male, and not in the Female: For 1° There are obſerv'd innumerable Animalcula in *ſemine maſculino*, of all Animals. *Leewenhoeck* has made this ſo evident, that there ſeems little room to doubt thereof.

2° We obſerve the Rudiments of a Fœtus in Eggs which have been fœcundated by the Male; tho' no ſuch Thing is viſible, in thoſe not fœcundated. *Malpighi*, in his Obſervations, makes it very probable, that theſe Rudiments proceed originally from the Male, and not from the Female.

3° The Reſemblance between the Rudiments of the Fœtus in Ovo, both before and after Incubation, and the Animalcule, makes it very probable that they are one and the ſame. The ſame Shape and Figure, which M. *Leewenhoeck* gives us of the Animalcule, *Malpighi* gives of the Rudiments of the Fœtus, both before and after Incubation; yea, and even the Fœtus's of viviparous Animals appear ſo at firſt to the naked Eye; whence Dr. *Harvey* acknowledges, that all Animals, even the moſt perfect, are begotten of a Worm.

4° This gives a rational Account of many Fœtus's at one Birth, eſpecially that of the Counteſs of *Holland*: And how, at leaſt, a whole Cluſter of Eggs in a Hen are fœcundated by one Coition of the Male. See FŒTUS.

5° This gives a new Light, as it were, to the firſt Prophecy concerning the *Meſſiah*, that *the Seed of the Woman ſhall bruiſe the Head of the Serpent*; all the reſt of Mankind being thus moſt properly and truly the Seed of the Man.

6° The Analogy already mention'd, which we may rationally ſuppoſe between the manner of the Propagation of Plants and Animals, does likewiſe make this probable. Every Herb and Tree bears its Seed after its Kind; which Seed is nothing elſe but a little Plant of that Kind; which being thrown into the Earth, as into its Uterus, ſpreads forth its Roots, and receives thence its Nouriſhment; but has its Form within it ſelf: And we may rationally conjecture ſome

ſuch

ſuch Analogy in the Propagation of Animals. See VEGETATION.

The III^d Thing, which our Diſcoveries make probable, is, That Animals cannot be form'd of theſe Animalcula without the *Ova in Feminis*, which are neceſſary for ſupplying them with proper Nutriment; and this is evinced from the following Conſiderations.

1° It appears, that an Animalcule cannot come forward, if it do not fall into a proper Nidus: This we ſee in the Cicatricula in Eggs; and tho' a Million of them ſhould fall into one Egg, none of them would come forward, but what were in the Center of the Cicatricula; and perhaps the Nidus, neceſſary for their Formation, is ſo proportioned to their Bulk, that it can hardly contain more than one Animalcule; which may be the Reaſon why there are ſo few Monſters. This, we ſee, is abſolutely neceſſary in the Oviparous Kinds; and the only Difference which lies between them and the Viviparous, ſeems to be this, that in the latter the Ova are properly nothing but the Cicatricula, with its Colliquamentum, ſo that the Fœtus muſt ſpread forth its Roots into the Uterus, to receive its Nouriſhment; but the Egg in Oviparous Animals may be properly termed an Uterus, in relation to the Fœtus; as it contains not only the Cicatricula, with its Amnion and Colliquamentum, which is the immediate Nouriſhment of the Fœtus, but alſo the Materials which are to be converted into that Colliquamentum; ſo that the Fœtus ſpreads forth its Roots no farther than into the White and Yolk of the Egg, from whence it derives all its Nouriſhment. Now, that an Animalcule cannot come forward without ſome ſuch proper Nidus, will not be deny'd; for if there were nothing needful but their being thrown into the Uterus, we do not ſee why many hundreds of them ſhould not come forward at once, at leaſt while ſcatter'd in ſo large a Field.

2° That this Cicatricula is not originally *in Utero*, ſeems evident from the frequent Conceptions which have been found *extra Uterum*: Such as the Child which continued 26 Years in the Woman of *Tholouſe's* Belly: And the little Fœtus found in the Abdomen of Mad. *de St. Mere*, together with the Teſticle torn, and full of clotted Blood: Such alſo ſeem to be the Fœtus in the Abdomen of the Woman of *Copenhagen*, mention'd in the *Nouvelles des Lettres*, for *Sept.* 85. All the Members of which were eaſily to be felt thro' the Skin of the Belly, and which ſhe had carried in her Belly for four Years: And the ſeven Years Gravidation related by Dr. *Cole*. Now, granting once the Neceſſity of a proper Nidus for the Formation of an Animalcule into an Animal, theſe Obſervations make it probable, that the Teſtes are the Ovaria appropriated for this Uſe: For tho' the Animalcule's coming thither in ſuch Caſes, may ſeem to be extraordinary, and that uſually the Impregnation is in Utero; yet it may be collected from hence, that the Cicatricula or Ova to be impregnated, are in *Teſtibus fœmineis*; for if they were not ſo, the Accidental coming of Animalcules thither, could not make them come forward more than in any other Part of the Body; ſince they cannot be form'd and nouriſh'd without a proper Nidus.

3° It is acknowledg'd, that the Fœtus *in Utero*, for ſome conſiderable Time after Conception, has no Connexion with the Womb; that it ſits wholly looſe to it, and is perfectly a little round Egg, with the Fœtus in the midſt; which ſends forth its umbilical Veſſels by degrees, and at laſt lays hold on the Uterus. Now, from hence it ſeems evident, that the Cicatricula, which is the Fountain of the Animalcules Nouriſhment, does not ſprout from the Uterus, but has its Origin elſewhere; and falls in thither as into a fit Soil: from whence it may draw Nutriment for the Growth of the Fœtus; elſe it cannot be eaſily imagin'd how it ſhould not have an immediate Connexion with the Uterus, from the Time of Conception.

It is indeed difficult to conceive, how theſe Eggs ſhould be impregnated *per ſemen maris*, both becauſe there is no Connexion between the Fallopian Tubes, and the Ovary, for its Tranſmiſſion; and for that Dr. *Harvey* could never diſcover any thing of it *in Utero*: But as to the laſt, M. *Leewenhoeck* has cleared that Difficulty by the Diſcovery of innumerable Animalcula in the Tubæ, or Cornua Uteri, and thoſe living a conſiderable Time after Coition. And as to the former, we may either ſuppoſe that there is ſuch an Inflation of the Tubæ, at the Time of Coition, as makes them embrace the Ovaries; and ſuch an Approach of the Uterus and its Cornua, as that it may eaſily tranſmit the Seed into the Ovary: Or elſe, that the Ova are impregnated by the Animalcules after they deſcend into the Uterus, and not in the Ovary. The former ſeems probable for this Reaſon, that at leaſt a whole Cluſter of Eggs in a Hen will be fœcundated by one Tread of the Cock: Now this Fœcundation ſeems to be in the Vitellary, and not in the Uterus, as the Eggs paſs along from day to day: For it can hardly be ſuppoſed, that the Animalcules ſhould ſubſiſt ſo long, being ſcatter'd looſely in the Uterus, as to wait there, for many Days, for the Fœcundation of the Eggs as they paſs along. The latter Conjecture has this to ſtrengthen it: That the Animalcules are found to live a conſiderable Time in the Uterus, and that if they ſhould impregnate the Ova in the Ovary it ſelf, the Fœtus would encreaſe ſo faſt, that the Ova could not paſs thro' the Tubæ Uteri; but would either burſt the Ovary, or fall down into the Abdomen from the Orifices of the Tuba: And from hence probably proceed thoſe extrrordinary Conceptions in the Abdomen, out of the Uterus. See FALLOPIAN *Tube*.

Thus much is urged for the *Syſtem ab Animalculo*.

The Retainers to the *Syſtem of* Generation *ab Ovo*, contend that the Rudiments of the Fœtus are laid in the Ovary, and that the Female furniſhes the whole Matter of the Body; which they chiefly ſupport from the Conformation in Rabbits, Sheep, Cows, *&c.* where the Vagina of the Womb is ſo long, and ſinuous, that it is ſcarce poſſible the Male Seed ſhould ever arrive within the Body of the Uterus; eſpecially in Cows, whoſe Vagina is fill'd with a thick, viſcid Ichor, and the inner Orifice of the Womb exactly cloſed: Beſide that, the Thickneſs of the Membranes of the Ova ſhould ſeem inpenetrable to ſo craſs a Matter as the Male Seed. Add, that if Animalcula be found in the Male Seed, which, however, will admit of ſome Diſpute (that inteſtine Motion and Agitation of the groſſer Particles thereof, which give riſe to the Opinion being accountable for from the common Laws of warm Fluids) yet are the ſame obſerv'd in Vinegar, Pepper, Water, *&c.* Add, that it is highly improbable, thoſe Animalcules ſhould contain the Rudiments of a future Body; ſince their large Numbers would produce too plentiful an Offspring; inſomuch that it would be neceſſary for 9999 Parts of them to be in vain, and periſh: Which is contrary to the Oeconomy of Nature in other Things.

*Analogy* is likewiſe urged in favour of this Syſtem: Thus, all Plants are maintained to ariſe from Eggs; Seeds being no other than Eggs under another Denomination. All Oviparous Animals do unexceptionably ariſe from Eggs, which the Female caſts forth; and 'tis highly probable, that the Viviparous only differ from Oviparous, in that the Females lay and hatch their Eggs within themſelves. See VIVIPAROUS, and OVIPAROUS.

Againſt this Hypotheſis it is urged, that what are uſually called Ova, or Eggs, in Women, are no other than little Cells, or Bladders, full of a certain Liquor: And how can a Drop of Liquor paſs for an Egg? Add, that theſe imaginary Eggs have no proper Membrane belonging to them, nor any Covering but that of the Cell; which ſeems ſo inſeparable therefrom, that when they are diſcharged, it is hard to conceive how they ſhould take it with them. And beſide, how ſhould they make themſelves a Paſſage through the commom Membrane wherewith the Ovary is inveſted, which is of ſo cloſe a Texture, that it muſt ſeem abſolutely impenetrable by a round Body of ſo ſoft a Conſiſtence, as one of theſe Veſicles. Laſtly, Veſiculæ, in all reſpects perfectly like Ova, have been found in other Parts of the Body, where it is apparent they could not ſerve for any purpoſes of *Generation*. *Mem. del Acad. Royal des Scien, An.* 1708, 1709.

To this it is anſwer'd, that Ova or Veſiculæ have been actually found in Diſſections, detach'd and ſeparated from the Ovary, and the Ruptures in the Membrane of the Ovary, thro' which they had paſs'd, ſtill viſible. M. *Littre* even obſerved ſome of theſe ſeparated Ova ſpread with Blood Veſſels, like thoſe in the Yolks of Birds Eggs. Nay more, the ſame Author is poſitive, that he ſaw an Embryo in one of the Ova not yet ſeparated; could diſcern its Head, Mouth, Noſe, Trunk, and Funiculus Umbilicalis, whereby it adhered to the Membranes of the Ovary. See EMBRYO. But this will come to be further conſider'd under GENERATION *of Man*.

Sir *John Floyer* ſtarts a Difficulty, which ſeems to preſs equally againſt each Syſtem, taken ſingly: 'Tis fetch'd from Monſters: In a Mule, for inſtance, which is the Production of a Venereal Copula between an Aſs, and a Mare, the Bulk of the Body partakes of the Form of the Dam; and the Feet, Tail, and Ears of that of the Sire: Hence it is argued, that the Rudiments of the greater Part of the Fœtus are laid in the Ovum; and that the Inpregnation either conveys, or changes the Extremities. If the Male ſupplied the Animalcula, the Fœtus ſhould always be of the ſame Species as the Male: If the Female ſupply it, it ſhould be of her kind; whereas Monſters are of both. See MONSTER.

GENERATION *of Man*. As 'tis in human Subjects, that the gradual Proceſs of *Generation* has been principally inquired into; and the Structure, and Office of the Organs ſubſervient thereto, chiefly examined: What the lateſt Naturaliſts, and Anatomiſts have ſettled with regard thereto, is reſerved for this Head.

The *Parts of Generation*, then, are different in the different Sexes.

Thoſe, *proper to the Male*, are the *Penis*; the *Teſticles*; the *Veſiculæ Seminales*; the *Vaſa deferentia*; the *Paraſta-*

*tæ*;

*tæ*, and the *Vaſa præparantia*; which ſee deſcribed each under its proper Article, PENIS, TESTICLES, &c.

The *Parts of* Generation *proper to the Female*, are the *Pudendum*, the *Clitoris*, *Nymphæ*, *Hymen*, *Uterus*, *Fallopian Tubes*, and *Ovaries* or *Teſtes*. See PUDENDUM, CLITORIS, NYMPHÆ, HYMEN, UTERUS, FALLOPIAN *Tubes*, and OVARIES.

The Proceſs of *Generation*, ſo far as the Male contributes to it, is as follows: The Penis being erected by an Affuſion of Blood; as ſhewn under ERECTION; the Glans, at the ſame time tumified; and the nervous Papillæ in the Glans much rubbed, and highly excited in Coitu; an ejaculatory Contraction follows, by which the Seed is preſs'd out of the Seminal Veſicles, and expell'd with ſome Force. See PAPILLÆ, EJACULATION, &c.

The Proceſs of *Generation* on the part of the Female, is thus: The Clitoris being erected, after the like manner as the Penis in Man; and the neighbouring Parts all diſtended with Blood, they more adequately embrace the Penis in Coitu; and by their Intumeſcence preſs out a Liquor from the Glands about the Neck of the Womb, to facilitate the Paſſage of the Penis.

At the ſame time, the Fibres of the Womb contracting, open its Mouth (which at other times is extremely cloſe) for the Reception of the finer Part of the Seed.

Thus, the Seed, pregnant with Animalcules, is convey'd, with ſome Impetus, into the Uterus; where being retain'd by the convulſive Conſtriction of the inner Membrane thereof, and further heated and agitated therein; it is prepared to impregnate the Ovum.

During the Act of Coition, the Fallopian Tubes growing ſtiff, embrace the Ovaries with their ſtrong muſculous Edges, like Fingers; and compreſs them; till, their Mouths being dilated, and expanded by this Embrace, force the Egg, now ripen'd, into their Cavities, and gradually drive it forwards by their Vermicular Motion, till at laſt they protrude it into the Cavity of the Womb, to meet the Seed, ſome of the Animalculas whereof entering the dilated Pores of the glandulous Membrane of the Egg, are there retain'd, nouriſh'd, grow to its Navel, and ſuffocate the reſt of the leſs lively Animalcula. And thus is *Conception* perform'd. See CONCEPTION.

Others rather ſuppoſe the Seed convey'd from the Uterus thro' the Fallopian Tubes to the Ova; and thus take the Inpregnation to be firſt perform'd in the Ovaries; or even the Tubæ themſelves, the Ova and Seed meeting by the way.

Others, conſidering the Cloſeneſs of the Mouth of the Womb, and the Thickneſs of the Membranes of the Ovaries, judge it impoſſible for the Seed to paſs that way; and therefore ſuppoſe it taken up by the Veins, which open into the Cavity of the Vagina, or even Womb; where circulating, it ferments with the Maſs of Blood; and hence all the Symptoms which appear in Conception. At length it enters and impregnates the Egg by the ſmall Twigs of Arteries, which are upon its Membranes. This Fermentation ſwelling the Membranes of the Tubæ, they open their Cavity, and make room for the Ova, to paſs into the Womb.

The Egg inpregnated, and cloſe ſhut up in the Womb, ſwims in the Humors thereof; which growing more and more ſubtil, enter the patent Pores found on one Side the Ovum, diſtend, fill, and augment it; and there being ſtill further attenuated, nouriſh the Embryo; thicken and expand the Membranes of the Ovum, eſpecially in that Part by which it grew to the Ovary, and thus form the Rudiments of a *Placenta*. See PLACENTA.

The ſame Cauſes ſtill continuing, and the Pores both of the Placenta, and the Membranes being enlarged; the Egg begins to fill the Capacity of the Womb; and at length its Stem or Calyx grows to the concave Surface thereof: And thus is the Navel-ſtring, or Funiculus form'd. See *Funiculus* UMBILICALIS, &c. See alſo FŒTUS.

This Syſtem is founded on the Suppoſition of the *Animalcula* in the Male Seed.

They who ſet them aſide as unconcern'd in *Generation*, account for it thus: The Seed, containing volatile, oily, and ſaline Parts, as appears from its fetid Smell, oleaginous Subſtance, &c. being lodg'd in the Womb, and there further digeſted and exalted; grows yet more volatile, fetid, pungent, and ſtimulating; and thus, adding to the Heat occaſioned by Coition, vellicates the nervous Fibres of that Part, and occaſions a Fermentation, and gentle Inflammation; and by that means an extraordinary Flux of Humors to that, and the adjacent Parts.

By this means the Tubæ become rigid, and fit to graſp the Ovaries, which are alſo heated by the Effluvia of the Semen, and the Warmth of the Parts ſurrounding. Upon this, a greater Flux into the Ovaries; till at length, the Ova, ſome of them at leaſt, by ſuch greater Supply of Nouriſhment, increaſe in Bulk; and as thoſe graſp'd by the Edges of the Tubæ, will be kept warmeſt, and the greateſt Flux be made thereto, they will ſooneſt be ripen'd, fall off, and be received by the Tubæ, and convey'd to the Womb: Where, growing, after the manner of the Seeds of Plants, the Placenta at length takes hold of, and adheres to the Uterus; from which time the Embryo begins to be nouriſh'd after a different manner. See GESTATION; ſee alſo NUTRITION, CIRCULATION, &c.

GENERATION *of Inſects*; ſee INSECT.

GENERATION *of Plants* bears an admirable Analogy to that of Animals: See the Proceſs deliver'd at length under the Article *Generation of* PLANTS.

The *Parts of* Generation *of Plants*, are the *Flowers*; and particularly the *Stamina*, *Apices*, *Farina fœcundans*, and *Piſtils* thereof. See FLOWER; ſee alſo STAMINA, FARINA, and PISTIL.

GENERATION *of Muſhrooms*, ſee MUSHROOM.

GENERATION *of Minerals*, or *Foſſils*, ſee MINERAL, and FOSSIL.

GENERATION *of Stones*, ſee STONE; ſee alſo SPAR, TROCHITES, and CRYSTAL.

GENERATION *of Shells*, ſee SHELL.

GENERATION, in Theology. The Father is ſaid to have produc'd his *Word*, or *Son*, from all Eternity, by way of *Generation*; on which occaſion the Word *Generation* raiſes a peculiar Idea: That Proceſſion, which is really effected in the way of Underſtanding, is called *Generation*, by reaſon the *Word*, in virtue thereof, becomes like to him from whom he takes his Original; or as St. *Paul* expreſſes it, the Figure, or Image of his Subſtance, *i. e.* of his Being and Nature. See TRINITY, PERSON, PROCESSION, &c.

And hence it is, that the Second Perſon in the Trinity is called the *Son*. See SON, &c.

GENERATION is alſo us'd, tho' ſomewhat improperly, for *Genealogy*; or the Series of Children, iſſued from the ſame Stock: Thus, the Goſpel of St. *Matthew* commences with *the Book of the* Generation *of Jeſus Chriſt*, &c.

The later, and more accurate Tranſlators, inſtead of *Generation*, uſe the Word *Genealogy*. See GENEALOGY.

GENERATION is alſo us'd to ſignify a People, Race, or Nation; eſpecially in the literal Tranſlations of the Scripture: Where the Word generally occurs, wherever the *Latin* has *Generatio*; and the *Greek*, γένεα, or γένεσις.

Thus, *A wicked and perverſe* Generation *ſeeketh a Sign*, &c. *One* Generation *paſſes away, and another cometh*, &c.

GENERATION is alſo us'd in the Senſe of an Age, or the ordinary Period of Man's Life.

Thus, we ſay, To the third and fourth *Generation*: In this Senſe, Hiſtorians uſually reckon a *Generation* the Space of thirty Years, or there abouts. See SECULUM.

*Herodotus* makes three *Generations* in an hundred Years; which Computation appears from the later Authors of political Arithmetic, to be pretty *juſt*. See ANNUITY, and POLITICAL *Arithmetick*.

GENEROSA, Gentlewoman; ſee GENTLEMAN.

*Generoſa* is a good Addition; and if a Gentlewoman be named *Spinſter*, in any original Writ, Appeal, or Indictment, ſhe may abate and quaſh the ſame. 2 *Inſt. fol.* 668.

GENESIS, the firſt Book of Holy Scripture, or the Bible; containing the Hiſtory of the Creation; and the Lives of the firſt Patriarchs. See BIBLE, and SCRIPTURE.

The Book of *Geneſis* makes the Head of the *Pentateuch*. See PENTATEUCH.

Its Author is *Moſes*: It contains the Relation of 2367 Years; *viz.* from the Beginning of the World, to the Death of *Joſeph*.

The *Jews* are forbid to read the Beginning of *Geneſis*, and the Beginning of *Ezekiel*, before 30 Years of Age.

The *Hebrews* call this Book *Bereſith*, in regard it begins with that Word, which in their Language ſignifies *in principio*, in the Beginning. 'Twas the *Greeks* gave it the Name *Geneſis*, Γένεσις, *q. d.* Production, Generation; by reaſon it begins with the Hiſtory of the Production, or *Generation* of all Beings.—

*Cedrenus* makes mention of an Apocryphal Book, entitled *little Geneſis*, *Geneſis parva*, containing ſeveral Incidents, not in the other: Some of which he has preſerv'd; particularly, that *Cain* was buried under the Ruins of a Houſe: That an Angel taught *Abraham* the *Hebrew* Tongue: That *Maſtiphal*, Prince of the Devils, adviſed God to order *Adam* to ſacrifice his Son, for a Trial of his Obedience: That the Children were only caſt into the *Nile* for ten Months, &c.

GENESIS, in Geometry, the Formation of a Line, Plane, or Solid, by the Motion, or Flux of a Point, Line, or Surface. See LINE, and SURFACE; ſee alſo POINT, and FLUXION.

The *Geneſis*, or Formation, *e. gr.* of a Globe, or Sphere, is conceived by ſuppoſing a Semi-circle to revolve upon a Right Line, drawn from one Extreme thereof to the other; call'd its *Axis*, or the Axis of Circumvolution: The Motion, or Revolution of that Semi-circle, is the *Geneſis* of the Sphere, &c. See AXIS; ſee alſo SPHERE, GLOBE, &c.

In the *Geneſis* of Figures, &c. the Line, or Surface that moves, is called the *Deſcribent*; and the Line around which, or according to which the Revolution, or Motion is made, the *Dirigent*. See DESCRIBENT, and DIRIGENT.

GENET, in the Manage, &c. a ſmall ſized, well proportioned *Spaniſh* Horſe.

Some alſo give the Term *Geneta* to well made *Italian* Horſes.

To *ride a la Genette*, is to ride in the *Spaniſh* Faſhion; *i. e.* with the Stirrups ſo ſhort, that the Spurs bear upon the Flanks of the Horſe. This is deem'd a Piece of Gallantry in *Spain*, but not among us.

GENETHLIACI, in Aſtrology, Perſons who erect Horoſcopes; or foretel what ſhall befal Men, by means of the Stars which preſided at their Nativity. See HOROSCOPE, and NATIVITY.

The Antients call'd them *Chaldæi*, and by the general Name *Mathematici*: Accordingly, the ſeveral Civil, and Canon Laws, which we find made againſt the Mathematicians, only reſpect the *Genethliaci*, or Aſtrologers.

They were expell'd *Rome* by a formal Decree of the Senate; and yet found ſo much Protection from the Credulity of the People, that they remain'd therein unmoleſted.

Hence an antient Author ſpeaks of them as *Hominum genus quod in civitate noſtra ſemper & vetabitur, & retinebitur.* See ASTROLOGY.

*Antipater*, and *Achinapolus* have ſhewn that *Genethliology* ſhould rather be founded on the Time of Conception, than that of the Birth. *Vitruvius.*

The Word is form'd of the *Greek* γενέθλη, Origin, Generation.

GENETHLIACUM, GENETHLIAC *Poem*, GENETHLIACUM *Carmen*, is a Compoſition in Verſe, on the Birth of ſome Prince, or other Illuſtrious Perſon; wherein the Poet promiſes him great Honours, Advantages, Succeſſes, Victories, &c. by a kind of Propheſy or Prediction.

Such is the *Eclogue* of *Virgil* to *Pollio*, beginning,

*Sicelides Muſæ paulo majora canamus.*

There are alſo *Genethliac Speeches*, or *Orations*; made to celebrate a Perſon's Birth-day.

GENEVA, a popular Name for a diſtill'd Water; procur'd from the Seeds, or Berries of the Juniper Tree; which the *French* call *Genevrier*, and the Berry *Genevre*: Whence the *Engliſh* Appellation *Geneva*.—See WATER, and JUNIPER.

GENEVIEVE, St. GENEVIEVE, or St. GENEVIEFVE. The *Fathers* or *Religious* of St. *Genevieve*, is a Congregation of Regular Canons of the Order of St. *Auguſtin*; eſtabliſh'd in *France*.

The Congregation of St. *Genevieve* is a Reform of the *Auguſtin* Canons, begun by St. *Charles Faure*, in the Abby of St. *Vincent de Senlis*, whereof he was a Member, in the Year 1618. See AUGUSTINES.

The Reform ſoon ſpread into other Houſes; particularly that of *Notre Dame d'Eu*, and the Abby of St. *Genevieve* at *Paris*, chiefly by the Intereſt of the Cardinal *de la Rochefoucaud*, who was choſe Abbot thereof in 1619; and in 1621 propoſed the Reform to the Religious of his Abby.

In the Year 1634 the Abby was made elective; and a General Chapter, compoſed of the Superiors of 15 Houſes who had now receiv'd the Reform, choſe F. *Faure* Co-adjutor of the Abby of St. *Genevieve*, and General of the whole Congregation. Such were its Beginnings.

It has ſince increas'd very much, and now conſiſts of above an hundred Monaſteries; in ſome whereof the Religious are employ'd in the Adminiſtration of the Pariſhes, and Hoſpitals; and in others, in the Celebration of Divine Service, and the Inſtruction of Eccleſiaſticks in Seminaries for the purpoſe.

The Congregation takes its Name from the Abby of St. *Genevieve*, which is the Chief of the Order; and whoſe Abbot is the General thereof. The Abby it ſelf took its Name from St. *Genevieve*, the Patroneſs of the City of *Paris*; who died in the Year 512. Five Years after her Death, *Clouis* erected the Church of St. *Genevieve*, under the Name and Invocation of St. *Peter*; where her Relicks are ſtill preſerv'd; her Shrine viſited, and her Image carried with great Proceſſions and Ceremonies, upon extraordinary Occaſions, as when ſome great Favour is to be intreated of Heaven.

GENIAL, GENIALIS, an Epithet, applied by the Antients to certain Deities, whom they ſuppos'd to preſide over the Affair of *Generation*. See GOD.

Among the *Genial* Gods, *Dii Geneales*, ſays *Feſtus*, were Water, Earth, Fire, and Air, which the Greeks call'd *Elements*.

The twelve Signs were alſo rank'd in the Number; as alſo the Sun and Moon.

They were thus called *a Gerendo*, from Bearing: Or, according to the Correction of *Scaliger* and *Voſſius*, *a genendo*, to yean, produce.—

Yet *Feſtus* ſays, they were alſo call'd *Gerules*, or *Gerulos*; which ſeems to require the former Reading. M. *Dacier*, in a Note, ſhews that *gerere* has the Senſe of φορτίζειν.—

GENICULI, in Botany, the Knots, which appear on Herbs: Whence Botaniſts call thoſe mark'd therewith *Geniculate Plants*. See PLANT.

GENIOGLOSSI, in Anatomy, a Pair of Muſcles, proceeding inwardly from the Fore-part of the lower Jaw, under another called *Geniohyoides*; and which, enlarging themſelves, are faſten'd into the Baſis of the Tongue. See TONGUE.

They ſerve to pull the Tongue forward; and to thruſt it out of the Mouth; being thus called from γένυς, *Mentum*, the Chin, and γλῶσσα, *Lingua*, the Tongue.

GENIOHYOIDÆUS, in Anatomy, a Muſcle of the Os Hyoides, which, with its Partner, is ſhort, thick, and fleſhy; ariſing from the internal Parts of the lower Jaw-bone, called the Chin; and dilating themſelves, are ſoon leſſen'd again, and inſerted into the ſuperior Part of the Fore-bone of the Os Hyoides. See MUSCLE.

Theſe pull upwards and forwards the Os Hyoides, and aſſiſt the Geniogloſſi in thruſting the Tongue out of the Mouth. See HYOIDES.

They take their Name from γένυς, *Mentum*, the Chin, and ὑοειδὲς, Hyoides.

GENITAL, GENITALIS, in Medicine, ſomething that relates to Generation. Thus we ſay, the *Genital* Parts, *q. d.* the Parts imploy'd in the Affair of Generation. See PARTS and GENERATION.

The *Genital* Gods, *Dii Genitales*, are ſometimes uſed in the antient *Roman* Poets for thoſe we otherwiſe call *Indigetes*. See INDIGETES.

*Auſonius*, in the Argument of the fourth Book of the *Eneid*, takes the Word in a different manner: The *Dii Genitales*, he obſerves, were not ſuch as were born of human Parents, were not thus called *quaſi geniti ex hominibus*; but rather becauſe they themſelves had begot human Children.

GENITALIA, or GENITORIES, in Anatomy, a Name ſometimes given the Teſtes, or Teſticles of Man; on account of their Office in Generation. See TESTICLE.

GENITES, or GENITEI, among the *Hebrews*, were thoſe who deſcended from *Abraham*, without any Mixture of foreign Blood.

The *Greeks* diſtinguiſh'd by the Name of *Genites* ſuch of the *Jews*, as were iſſued from Parents, who, during the *Babyloniſh* Captivity, had not allied with any Gentile Family.

The Word is form'd of the *Greek* γενέτες.—

GENITIVE, the ſecond Caſe of the Declenſion of Nouns. See CASE.

The Relation of one thing conſider'd as belonging in ſome manner to another, has occaſion'd a new Termination of Nouns, call'd the *Genitive* Caſe. See NOUN.

In *Engliſh*, the *Genitive* Caſe is made by prefixing the Particle *of*; in *French*, *de*, or *du*, &c. though, in Strictneſs, there are no Caſes at all in either of thoſe Languages, inaſmuch as they do not expreſs the different Relations of Things by different Terminations, but by additional Prepoſitions.

In the *Latin*, this Relation is expreſs'd in divers manners: Thus we ſay, *Caput Hominis*, the Head of a Man; *Color Roſæ*, the Colour of a Roſe; *Opus Dei*, the Work of God, &c.

As the *Genitive* Caſe ſerves to expreſs very different, and even oppoſite Relations, there ſometimes ariſes an Ambiguity therefrom: Thus in the Phraſe *Vulnus Achillis*, the Wound of *Achillis*, the *Genitive Achillis* may either ſignify the Relation of Subject, in which Senſe it is taken paſſively for the Wound *Achilles* has receiv'd; or the Relation of a Cauſe, in which Senſe it is taken actively for the Wound *Achilles* has given: Thus in that Paſſage of St. *Paul*, *Certus ſum quod neque mors, neque vita*, &c. *nos poterit ſeparare a charitate Dei in Chriſto*, &c. The *Genitive DEI*, has been taken by Interpreters in two different Senſes; ſome giving it the Relation of Object, and underſtanding the Paſſage of the Love which the Elect bear to God in Jeſus Chriſt, whereas others give it the Relation of Subject, and explain it of the Love which God bears the Elect in Jeſus Chriſt.

In the *Hebrew* Tongue, the *Genitive* Caſe is marked after a manner very different from that of the *Greek*, and *Latin*; for whereas in thoſe Languages the Noun Govern'd is varied; in *Hebrew* they change the Noun Governing.

GENITURA, or GENITURE, a Name ſome Authors give to the Seed; both that of the Male, and Female. See SEED.

GENIUS, a good, or evil Spirit; or a Dæmon, whom the Antients ſuppos'd ſet over each Perſon, to direct his Birth, accompany him in Life, and to be his Guard. See DÆMON.—

Among the *Romans*, *Feſtus* obſerves, the Name *Genius* was given to the God who had the Power of doing all things, *Deum qui vim obtineret rerum omnium gerendarum*; which *Voſſius*, *de Idolol.* rather chuſes to read *genendarum*, who has the Power of producing all Things; by reaſon *Cenſorinus* frequently uſes *genere* for *gignere*.

Accordingly, St. *Auguſtin de Civitat. Dei*, relates, from *Varro*, that the *Genius* was a God who had the Power of generating all things; and preſided over them when produced.

*Feſtus* adds, that *Aufuſtius* ſpake of the *Genius* as the Son of God, and the Father of Men, who gave them Life; others, however, repreſented the *Genius* as the peculiar or tutelary God of each Place: And 'tis certain, this laſt is the moſt uſual Meaning of the Word.

They had their *Genii* of Nations, of Cities, of Provinces, *&c.* Nothing is more common than the following Inſcription on Medals, *GENIUS* POPULI ROM. the *Genius* of the *Roman* People: Or, *GENIO* POP. ROM. *to the* Genius *of the* Roman *People.*—

In this Senſe, *Genius* and *Lar* were the ſame thing; as, in effect, *Cenſorinus* and *Apuleius* affirm they were. See LARES, and PENATES.

The *Platoniſts*, and other Eaſtern Philoſophers, ſuppoſed the *Genii* to inhabit the vaſt Region, or Extent of Air, between Earth and Heaven. They were a ſort of intermediate Powers, who did the Office of Mediators between Gods and Men. They were the Interpreters, and Agents of the Gods; communicated the Wills of the Deities to Men; and the Prayers, and Vows of Men, to the Gods. As it was unbecoming the Majeſty of the Gods to enter into ſuch trifling Concerns; this became the Lot of the *Genii*, whoſe Nature was a Mean between the two; who derived Immortality from the one, and Paſſions from the other; and who had a Body framed of an aerial Matter.

Moſt of the Philoſophers, however, held that the *Genii* were born, and died; and *Plutarch* attributes the ceaſing of Oracles partly to the Death of the *Genii*. See ORACLE.

The Heathens who conſider'd the *Genii* as the Guardian Spirits of particular Perſons, believed that they rejoyc'd, and were afflicted at all the good, and ill Fortune that befel their Wards. They never, or very rarely appear'd to them; and then only in favour of ſome Perſon of extraordinary Virtue or Dignity.

They likewiſe held a great Difference between the *Genii* of different Men; and that ſome were much more powerful than others; on which Principle it was, that a Wizzard in *Appian* bids *Anthony* keep at a diſtance from *Octavius*, by reaſon *Anthony*'s *Genius* was inferior to, and ſtood in Awe of that of *Octavius*.

There were alſo *Evil Genii*, who took a pleaſure in perſecuting Men, and bringing them evil Tidings: Such was that in *Paterculus*, &c. which appear'd to *Brutus* the Night before the Battle of *Philippi*. Theſe were alſo call'd *Larvæ*, and *Lemures*. See LARVÆ, and LEMURES.

GENIUS is more frequently us'd for the Force or Faculty of the Soul, conſider'd as it thinks, or judges.

Thus we ſay, A happy *Genius*, a ſuperior *Genius*, an elevated *Genius*, a narrow confin'd *Genius*, &c. In the like Senſe we ſay, A Work of *Genius*; a Want of *Genius*, &c.

GENIUS is alſo us'd in a more reſtrain'd Senſe for a natural Talent, or Diſpoſition to one Thing more than another. In this Senſe we ſay, A *Genius* for Verſe; for the Sciences, *&c.*

GENS D'ARMES, ſee GEND'ARMES.

GENTIAN, a Medicinal Root, the Product of a Plant of the ſame Name; which the Antients, to render it the more conſiderable, denominated from *Gentius*, King of *Illyria*, who is ſuppos'd to have been the firſt that diſcover'd the admirable Virtues thereof.

The Root *Gentian* is of a yelloviſh Colour, and intolerably bitter; is ſometimes as thick as the Arm, but more commonly divided into Branches no bigger than the Thumb: Its Stem is ſeveral Feet high, being very ſmooth and poliſh'd, tho' divided by Knots from Space to Space, out of which ariſe the Leaves, which reſemble thoſe of *Plantain*. Its Flowers, which likewiſe accompany the Knots, are yellow; and its Seed, flat, round, ſmooth, and light.

This Root is held excellent againſt Poiſons, and even againſt the Plague. It ſtands at the Head of the Stomachicks, warming and ſtrengthning the Stomach, and helping Digeſtion. It is ſudorifick, and us'd with Succeſs in intermitting Fevers, whence ſome call it the *European Quinaquina*; and is alſo an Ingredient in Treacle. Externally, it is uſed for Wounds.

The Plant affects moiſt Places, and is found commonly enough in ſome Parts of *England*, *Burgundy*, the *Alps*, and *Pyrenæans*: The Root is to be choſe dry, new, of a moderate Thickneſs, free from Earth, and furniſh'd with five little Branches or Fibres; and, if poſſible, that which is dry'd by the Air, which is diſtinguiſhable by the Colour, it being blackiſh within Side, when dry'd in the Oven, and of a golden Yellow, when in the Air.

GENTILE, GENTILIS, a *Pagan*, or Perſon who adores Idols. See IDOL, PAGAN, &c.

This Name the *Jews* gave to all who were not of their Religion; as the Chriſtians give that of *Infidel*. St. *Paul* is called the *Doctor*, or *Apoſtle of the Gentiles*, which Appellation he firſt gave himſelf. *Rom.* xi. 13. *As I am the Apoſtle of the* Gentiles, *I magnify mine Office.*

The Calling of the *Gentiles* to Chriſtianity, had been predicted in the Old Teſtament, as it was accompliſh'd in the New. See *Pſal.* ii. 8. xix. 48. *Iſ.* ii. 2. lxvi. 18. *Joel* ii. 29. *Matth.* viii. 11. xii. 17. *Acts* xi. 40. xiii. 47, 48. xxviii. 8. *Rom.* i. 5. iii. 29. xi. 12, 13, 25. *Eph.* ii. 11. *Revel.* xi. 2. xxii. 2.

In the *Roman* Law, and Hiſtory, the Name *Gentile*, *Gentilis*, ſometimes expreſſes thoſe whom the *Romans* otherwiſe called *Barbarians*; whether they were Allies of *Rome*, or not: In this Senſe the Word occurs in *Ammianus*, *Auſonius*, and the *Notitia Imperii*.

The ſame People us'd the Word *Gentilis* in a more peculiar Senſe, for all Strangers, or Foreigners, not ſubject to their Empire; as we ſee in the *Theodoſian* Code, in the Title *De Nuptiis Gentilium*, where the Word *Gentiles* ſtands oppoſed to *Provinciales*, or the Inhabitants of the Provinces of the Empire.

The Word is likewiſe us'd in the *Greek*; but was not introduced either into that, or the *Latin* Tongue, till after Chriſtianity was eſtabliſh'd; it being taken from Scripture.

The *Hebrews* apply the Name גוים, *Gentes*, to all the other People of the Earth, who were not *Iſraelites*, or *Hebrews*. Some will have it, that the *Gentiles* were thus called in Contradiſtinction to the *Jews*, and *Chriſtians*, by reaſon theſe latter have a poſitive Law to obſerve in Matters of Religion, whereas the *Gentiles* have only the natural Law; hence they are called *Gentiles*, *quia ſunt uti geniti fuerunt*.

GENTLEMAN, a Perſon of noble Birth, or deſcended of an antient Family, which has long bore Arms. See NOBLE, and ARMS.

In Strictneſs, *Chamberlain* obſerves, a *Gentleman* is one whoſe Anceſtors have been Freemen, and have owed Obedience to none but their Prince: So that in Propriety of Speech, no Man is a *Gentleman* who is not born ſo.

But, in *England*, the King, being the Fountain of Honour, can make a *Gentleman* by Charter, or by beſtowing an honourable Employment on him.—*Guillim* is even of Opinion, that if a *Gentleman* be bound Apprentice to a Merchant, or other Trade, he does not loſe his Degree of *Gentility*.

By the Cuſtom of *England*, Nobility is either *greater*, or *leſs*: The greater contains all from Barons upwards, inclusive: The leſſer, all from Baronets downwards, conſiſting of Baronets, Knights, Eſquires, and *Gentlemen*. See NOBILITY; ſee alſo KNIGHT, &c.

The Word is form'd of the French *Gentilhomme*, or rather of *Gentil*, fine, faſhionable, or becoming; and the *Saxon*, *Man*, *q. d. honeſtus*, or *honeſto loco natus*.

The ſame Signification has the Italian *Gentil huomini*, and the Spaniſh *Hidalgo*, or *Hijo d'Algo*, that is, the Son of a Perſon of Note.

Among us, the Term is applicable to all above Yeomen; ſo that Noblemen may be properly called *Gentlemen*. See YEOMAN.

If we go further back, we ſhall find *Gentleman* originally derived from the Latin *Gentilis homo*, which was uſed among the *Romans* for a Race of noble Perſons of the ſame Name, born of free or ingenuous Parents, and whoſe Anceſtors had never been Slaves, or put to death by Law.

Thus, *Cicero*, in his *Topicks*; Gentiles *ſunt*, *qui inter ſe eodem ſunt nomine ab Ingenuis oriundi*, *quorum majorum nemo ſervitutem ſervivit*, *qui capite non ſunt diminuti*, &c.

Some hold, that it was formed from *Gentile*, *i. e.* Pagan, and that the antient *Franks*, who conquer'd *Gaul* which was then converted to Chriſtianity, were called *Gentiles* by the Natives, as being yet Heathens.

Others relate, that towards the Declenſion of the *Roman* Empire, as recorded by *Ammianus Marcellinus*, there were two Companies of Brave Soldiers, the one called *Gentilium*, and the other *Scutariorum*; and that it was hence we derived the Names *Gentleman*, and *Eſquire*. See ESQUIRE.

This Sentiment is confirmed by *Paſquier*, who ſuppoſes the Appellations *Gentils* and *Ecuyers* to have been tranſmitted to us from the *Roman* Soldiery; it being to the *Gentiles* and *Scutarii*, who were the braveſt of the Soldiery, that the principal Benefices and Portions of Lands were aſſigned. See BENEFICE.

The *Gauls* obſerving, that during the Empire of the *Romans*, the *Scutarii* and *Gentiles* had the beſt Tenements,

or

or Appointments of all the Soldiers on the Frontiers of the Provinces, became inſenſibly accuſtomed to apply the ſame Names *Gentilhommes*, and *Ecuyers*, to ſuch as they found their Kings gave the beſt Proviſions or Appointments to. *Paſq. Rech. L. II. C.* 15.

In our Statutes, *Gentilis homo* was adjudg'd a good Addition for a *Gentleman.* 27 *Edw.* 3. The Addition of Knights is very antient, but that of Eſquire or *Gentleman*, rare, before 1 *Hen.* 5. See ADDITION.

GENTLEMEN *of the Chapel*, are Officers, whoſe Duty and Attendance is in the Royal Chapel; being in Number 32: Twelve whereof are Prieſts, and the other twenty called *Clerks of the Chapel*, who aſſiſt in the Performance of Divine Service. See CHAPEL.

One of the firſt twelve is choſen for Confeſſor of the Houſhold, whoſe Office it is to read Prayers every Morning to the Houſhold Servants; to viſit the Sick; examine, and prepare Communicants, and adminiſter the Sacraments.

Another, well verſed in Muſick, is choſen firſt Organiſt; who is Maſter of the Children to inſtruct them in Muſick, and what is neceſſary for the Service of the Chapel: A ſecond is likewiſe an Organiſt: A third a Lutaniſt; and a fourth a Violiſt.

There are likewiſe three *Vergers*, ſo called from the Silver Rods they uſually carry in their Hands, being a Serjeant, Yeoman, and Groom of the Veſtry: The firſt attends the Dean, and Sub-Dean, finds Surplices, and other Neceſſaries for the Chapel: The ſecond has the whole Care of the Chapel, keeps the Pews, and ſeats the Nobility and Gentry: The Groom has his Attendance within the Chapel Door, and looks after it.

GENUFLEXION, the Act of bowing, or bending the Knee; or rather, of kneeling down. See KNEELING.

The Jeſuit *Roſweyd*, in his Onomaſticon, ſhews that *Genuflexion*, or Kneeling, was a very antient Cuſtom in the Church; and even under the Old Teſtament Diſpenſation: And that this Practice was obſerv'd throughout all the Year, excepting on Sundays, and during the time from Eaſter to Whitſuntide, when kneeling was forbid by the Council of *Nice*.

Others have ſhewn, that the Cuſtom of not kneeling on Sundays had obtain'd from the Time of the Apoſtles; as appears from St. *Irenæus* and *Tertullian*: And the *Æthiopic* Church, ſcrupulouſly attach'd to the antient Ceremonies, ſtill retains that of not kneeling at Divine Service. The *Ruſſians* eſteem it an indecent Poſture, to worſhip God on the Knees. Add, that the *Jews* uſually pray'd ſtanding.

*Roſweyd* gives the Reaſons of the Prohibition of *Genuflexion* on Sundays, &c. from St. *Baſil*, *Anaſtaſius*, St. *Juſtin*, &c.

*Baronius* is of opinion that *Genuflexion* was not eſtabliſh'd before the Year of Chriſt 58, from that Paſſage in *Acts*, chap. xx. 36. where St. *Paul* is expreſly mention'd to kneel down at Prayer; but *Saurin* ſhews that nothing can be thence concluded.

The ſame Father remarks, that the primitive Chriſtians carried the Practice of *Genuflexion* ſo far, that ſome of them had wore Cavities in the Floor where they pray'd: And St. *Jerom* relates of St. *James*, that he had contracted a Hardneſs of his Knees, equal to that of Camels.

GENUS, *Kind*, in Logicks, and Metaphyſicks, is that which has Species under it: Or, it is the Origin, and Radix of divers Species, join'd together by ſome Affinity or common Relation betwen them. See SPECIES.

Or, *Genus* is a Nature, or Idea, ſo common and univerſal, that it extends to other general Ideas, and includes them under it. See GENERAL.

Thus, *Animal* is ſaid to be a *Genus*, in reſpect of *Man*, and *Brute*; in regard Man and Brute agree in the common Nature and Character of Animal: So, a *right lined Figure of four Sides*, is a *Genus*, in reſpect of a *Parallelogram*, and a *Trapezium*; and ſo likewiſe is *Subſtance*, in reſpect of *Subſtance extended*, which is a *Body*; and *thinking Subſtance*, which is *Mind*. See SPECIES.

In the general, *Genus* may be ſaid to be a Claſs of a greater Extent than *Species*; and which is not convertible therewith. For though we may ſay, that *all Body is Subſtance*; yet it cannot be ſaid *all Subſtance is Body*.

Add, that whatever may be ſaid of the *Genus*, may likewiſe be ſaid of the Species under it; *e. gr.* whatever is ſaid of *Ens*, Being, will equally hold of Body.

The Schoolmen define the *Genus Logicum* to be an Univerſal which is predicable of ſeveral Things of different Species; and divide it into two kinds: The one, *ſummum*, which is the higheſt or moſt general; and has nothing above it to reſpect as a *Genus*: The other *ſubaltern*, which they likewiſe call *Medium*.

The *Genus ſummum* is that which holds the uppermoſt Place in its Claſs, or Predicament; or it is that which may be divided into ſeveral Species, each whereof is a *Genus* in reſpect of other Species plac'd below it. See PREDICAMENT.

Thus in the Predicament of things ſubſiſting of themſelves, *Subſtance* has the Place and Effect of *Genus ſummum*, and is predicated of all the Things contain'd in that Claſs; for both *Plato*, and *Man*, and *Animal*, and even *Spirit*, are properly call'd Subſtance.

Accordingly there are ſo many *ſumma genera*, as there are Claſſes of Predicaments or Categories. See CATEGORY.

A *Subaltern Genus* is that which being a Medium between the higheſt *Genus*, and the loweſt Species; is ſometimes conſider'd as a *Genus*, and ſometimes as a Species.

Thus Bird, when compar'd with Animal, is a Species; when to a Crow, an Eagle, or the like, a *Genus*.

*Genus*, again, is divided into *Remotum*, remote, where, between it and its Species, there is another *Genus*; and *Proximum*, or next, where the Species is immediately under it; as Man, under Animal.

A good Definition, ſay the Schoolmen, conſiſts of *Genus*, and Difference. See DEFINITION, and DIFFERENCE.

GENUS is alſo us'd for a Character or Manner, applicable to every thing of a certain Nature: In which Senſe it ſerves to make capital Diviſions in divers Sciences; as Muſick, Rhetorick, Botany, Anatomy, &c. See ART, and SCIENCE.

GENUS, GENDER, in Botany, a Syſtem, or Aſſemblage of ſeveral Plants, agreeing in ſome one common Character, in reſpect of the Structure of certain Parts; whereby they are diſtinguiſh'd from all other Plants. See PLANT.

The Diſtribution of Plants into *Genera*, and Species, is abſolutely neceſſary to eaſe the Memory, and prevent its being oppreſs'd, and overburthen'd with an Infinity of different Names.

The Knowledge of a *Genus*, comprehends, in a kind of Miniature, that of all the Plants belonging thereto; each being denominated from ſome Circumſtance, common to the whole Kind, to ſave the Embarraſs of ſo many particular Names.

Something like this, even the common People do, eſpecially in the inſtance of *Ranunculas*; but in moſt other Plants the Difficulty is infinitely greater, as 'tis hard to find any thing in common among them, whereon to found their *Genus*.

Hence Botaniſts differ as to the Manner of regulating theſe *Genera*, and the Characters whereon they are to be eſtabliſh'd: Mr. *Ray*'s Diſtribution, ſee under the Article PLANT.

One of the lateſt, and beſt Writers, Monſ. *Tournefort*, after a long and accurate Diſcuſſion, has choſe in Imitation of *Geſner*, and *Columna*, to regulate them by the Flowers, and Fruit conſider'd together; ſo that all Plants, which bear a Reſemblance in thoſe two reſpects, are of the ſame *Genus*: After which the reſpective Differences as to Root, Stem, or Leaves, make the different Species, or Sub-diviſions. See SPECIES.

Mr. *Ray* made ſome Objections to this Diſtribution; which grew into a conſiderable Controverſy between the two Authors. The Queſtion was, Whether the Flowers and Fruits were ſufficient to eſtabliſh *Genera*, and to determine whether a Plant was of this *Genus*, or that?

The ſame M. *Tournefort* introduces another higher kind of *Genus*, or Claſs, which is only regulated by the Flowers: He obſerves, that he has never hitherto met with above fourteen different Figures of Flowers; which, therefore, are all that are to be retain'd in the Memory; ſo that a Perſon who has a Plant in Flower, whoſe Name he does not know, will immediately ſee what Claſs it belongs to in the *Elements of Botany*: The Fruit appearing ſome Days afterwards, determines its *Genus*, in the ſame Book; and the other Parts give its Species.

It is a wonderful Eaſe to the Memory, to have only fourteen Figures of Flowers to retain, and by means hereof to be inabled to deſcend to 673 *Genera*, which comprehend 8846 Species of Plants; which is the Number of thoſe yet known by Land and Sea.

GENUS, in Muſick, by the Antients called *Genus Melodiæ*, is a certain manner of ſubdividing the Principles of Melody, *i. e.* the conſonant Intervals, into their concinnous Parts. See INTERVAL, CONCORD, and CONCINNOUS.

The Moderns, conſidering the Octave, as the moſt perfect Interval, and that whereon all the other Concords depend in the preſent Theory of Muſick; the Diviſion of that Interval is conſider'd as containing the true Diviſion of the whole Scale. See OCTAVE, and SCALE.

But the Antients went to work ſomewhat differently: The Diateſſaron, or Fourth, was the leaſt Interval which they admitted as Concord; and therefore they ſought firſt how that might be moſt concinnouſly divided; from which they conſtituted the Diapente, or Fifth; and Diapaſon, or Octave.

The Diateſſaron being thus, as it were, the Root or Foundation of the Scale; what they call the *Genera*, Kinds, aroſe from its various Diviſions; and hence they defined the *Genus modulandi*, the manner of dividing the Tetrachord, and

diſpoſing

diſpoſing its four Sounds as to Succeſſion. See TETRACHORD.

The *Genera* of Muſick were three, *viz.* the *Enharmonick*, *Chromatick*, and *Diatonick:* The two laſt whereof were variouſly ſubdivided; and even the firſt, though 'tis commonly reckon'd to be without any Species, yet different Authors have propos'd different Diviſions under that Name, tho' without giving particular Names to the Species as was done to the other two. See SPECIES.

*For the Character*, &c. *of the ſeveral* Genera, *ſee* ENHARMONICK, CHROMATICK, and DIATONICK.

The Parts, or Diviſions of the Diateſſaron they call'd the *Diaſtems* of the ſeveral *Genera*, upon which their Differences depend; and which in the Enharmonick are particularly call'd the *Dieſis*, and *Ditonum*; in the Chromatic, the *Hemitonium*, and *Triemitonium*; and in the Diatonic, the *Hemitonium*, or *Limma*, and the *Tonus*.

But under theſe general Names, which diſtinguiſh the *Genera*, there are other different Intervals, or Ratio's which conſtitute the *Colores Generum*, or Species of Enharmonic, Chromatic, and Diatonic. Add, that what is a Diaſtem in one *Genus*, is a Syſtem in another. See DIASTEM, SYSTEM, CHROAI; ſee alſo DIAGRAMMA.

GENUS, in Rhetorick. Authors diſtinguiſh the Art of Rhetorick, as alſo Orations, or Diſcourſes produced thereby, into three *Genera*, or Kinds, *Demonſtrative*, *Deliberative*, and *Judiciary*.

To the *Demonſtrative* Kind belong *Panegyricks*, *Genethliacons*, *Epithalamiums*, *Funeral* Harangues, &c. See each under its Head, PANEGYRIC, EPITHALAMIUM, *&c.*

To the *Deliberative* Kind belong *Perſuaſions*, *Diſſuaſions*, *Commendations*, &c. See PERSUASION, *&c.*

To the *Judiciary* Kind belong *Defences*, and *Accuſations*. See RHETORIC, ORATION, *&c.*

GENUS, in Algebra. The antient Algebraiſts diſtributed that Art into two *Genera*, or Kinds; the *Logiſtic*, and *Specious*. See LOGISTIC, and SPECIOUS.

GENUS, in Anatomy. The *Genus nervoſum*, or *nervous kind*, call'd alſo the *nervous Syſtem*, is an Expreſſion, pretty frequent among Authors; ſignifying the Nerves, conſider'd as an Aſſemblage or Syſtem of ſimilar Parts, diſtributed throughout the Body. See NERVE, and SIMILAR *Part*.

Tobacco contains a deal of ſharp, cauſtic Salt, proper to cauſe Irritations in the nervous Kind: Vinegar, taken in too great Quantity, incommodes the nervous Kind.

GEOCENTRIC, in Aſtronomy, is applied to a Planet, or its Orbit, to denote it concentric with the Earth; or, as having the Earth for its Centre, or the ſame Centre with the Earth.

Thus we ſay, that all the Planets are not *geocentric*. See PLANET.

GEOCENTRIC *Place* of a Planet, is the Place wherein it appears to us, from the Earth; ſuppoſing the Eye there fix'd: Or, it is a Point in the Ecliptick, to which a Planet, ſeen from the Earth, is referr'd. See PLACE, and HELIOCENTRIC.

GEOCENTRIC *Latitude* of a Planet, is its Latitude ſeen from the Earth; or the Inclination of a Line connecting the Planet and the Earth, to the Plane of the Earth's (or true) Ecliptick.

Otherwiſe, it is the Angle, which the aforeſaid Line (connecting the Planet, and the Earth) makes with the Line which is drawn perpendicular to the Plane of the Ecliptick. See LATITUDE.

Thus, in *Tab. Aſtronomy, Fig.* 40. the Angle ☿ *T e* is the Meaſure of that Planet's *Geocentric* Latitude, when the Earth is in *T*, and the Angle *e T* ☿, the Meaſure of it when the Earth is in *t*. See LATITUDE.

GEODÆSIA, that Part of Geometry, which contains the Doctrine, or Art of meaſuring Surfaces; and finding the Contents of all kinds of plain Figures. See SURFACE; ſee alſo MEASURING.

It is uſually called *Surveying*, when employ'd in meaſuring of Lands, Grounds, Roads, Countries, Provinces, *&c.* See SURVEYING.

The Word is *Greek*, γεωδαισία, form'd of γῆ, *terra*, Earth, and δαίω, *divido*, I divide.—

GEOGRAPHICAL *Mile*, is the Minute, or ſixtieth Part of a Degree of a great Circle. See MILE, and DEGREE.

GEOGRAPHICAL *Table*, ſee MAP.

GEOGRAPHY, the Doctrine or Knowledge of the *Earth*, both as in it ſelf, and as to its Affections; or a Deſcription of the Terreſtrial Globe, and particularly of the known inhabitable Part thereof, with all its Parts.

The Word is form'd of the *Greek* γῆ, *terra*, Earth, and γράφω, *ſcribo*, I write.

*Geography* makes a Branch of Mathematicks, of the mix'd kind; in that it conſiders the Earth, and its Affections, as depending on Quantity, and conſequently meaſurable, *viz.* its Figure, Place, Magnitude, Motion, cœleſtial Appearances, *&c* with the ſeveral Circles imagin'd on its Surface. See MATHEMATICKS.

*Geography* is diſtinguiſh'd from *Coſmography*, as a Part from the Whole: This latter conſidering the whole viſible World, both Heaven, and Earth. See COSMOGRAPHY.

From *Topography*, and *Chorography*, it is diſtinguiſh'd as the whole from a Part. See TOPOGRAPHY, and CHOROGRAPHY.

*Golnitzius* conſiders *Geography* as either *Exterior*, or *Interior:* But *Varenius* more juſtly divides it into *General*, and *Special*; or, *Univerſal*, and *Particular*.

*General*, or *Univerſal* GEOGRAPHY is that which conſiders the Earth in General, without any Regard to particular Countries; or the Affections, common to the whole Globe, as its Figure, Magnitude, Motion, Land, Sea, *&c.* See GLOBE.

*Special*, or *Particular* GEOGRAPHY, is that which conſiders the Conſtitution of the ſeveral *Regions*, or *Countries*; their Bounds, Figure, *&c.* with the *Mountains*, *Foreſts*, *Mines*, *Waters*, *Plants*, *Animals*, &c. therein: As alſo their *Climates*, *Seaſons*, *Heat*, *Weather*, *Diſtance from the Equator*, &c. And their *Inhabitants*, *Arts*, *Foods*, *Commodities*, *Cuſtoms*, *Language*, *Religion*, *Policy*, *Cities*, &c.

*Geography* is very antient; at leaſt the Special Part thereof: For the antient Writers ſcarce went beyond the Deſcription of Countries.

It was a Cuſtom among the *Romans*, after they had conquer'd and ſubdued any Province, to have a Map, or painted Repreſentation thereof carried in Triumph, and expoſed to the View of the Spectators. See MAP.

Hiſtorians relate that the *Roman* Senate, about a hundred Years before Chriſt, ſent Geographers into divers Parts, to make an accurate Survey and Menſuration of the whole Globe; but they ſcarce ever ſaw the twentieth Part thereof.

Before them, *Neco*, King of *Egypt*, order'd the *Phœnicians* to make a Survey of the whole Coaſt of *Africa*, which they accompliſh'd in three Years: *Darius* procured the *Ethiopic* Sea, and the Mouth of the *Indus* to be examin'd: And *Pliny* relates, that *Alexander*, in his Expedition into *Aſia*, took two Geographers, *Diognetus*, and *Beto*, to meaſure and deſcribe the Roads; and that from their Itineraries the Writers of the following Ages took many Particulars. Indeed, this may be obſerved, that whereas moſt other Arts are Sufferers by War, *Geography* and Fortification alone are improved thereby.

The Art, however, muſt need have been exceedingly defective; as a great Part of the Globe was then unknown; particularly all *America*, the *Northern* Parts of *Europe*, and *Aſia*; with the *Terra Auſtralis*, and *Magellanica:* And as they were ignorant of the Earth's being capable of being ſail'd round, of the Torrid Zone's being habitable, *&c.*

The principal Writings on this Art, among the Antients, are *Ptolomy*'s eight Books: Among the Moderns, *Johannes de ſacro Boſco*, *De Sphæra*, with *Clavius*'s *Comment*; *Riciolus*'s *Geographia*, and *Hydrographia Reformata*; *Weigelius*'s *Speculum Terræ*; *De Chales*'s *Geography*, in his *Mundus Mathematicus*; and above all, *Varenius*'s *Geographia Generalis*, with *Jurin*'s Additions: To which may be added *Liebknecht*'s *Elementa Geographiæ Generalis*; *Sturmius*'s *Compendium Geographicum*; and *Wolfius*'s *Geographia*, in his *Elementa Matheſeos.*—

GEOMANCY, GEOMANTIA, a kind of Divination, perform'd by means of a Number of little Points, or Dots, made on Paper, at random; and conſidering the various Lines and Figures, which thoſe Points preſent; and thence forming a Judgment of Futurity and deciding any Queſtion propoſed. See DIVINATION.

The Word is form'd of the *Greek* γῆ, *terra*, Earth; and μαντεία, Divination; it being the antient Cuſtom to caſt little Pebbles on the Ground, and thence to form their Conjectures; inſtead of the Points now made uſe of.

*Polydore Virgil* defines *Geomancy* a kind of Divination perform'd by means of Clefts or Chinks made in the Ground; and takes the *Perſian* Magi to have been the Inventors thereof. *De Invent. Rer. L.* 1. *c.* 23.

GEOMETRY, the Science, or Doctrine of Extention, or extended things; that is, Lines, Surfaces, and Solids. See LINE, SURFACE, and SOLID.

The Word is form'd of the *Greek* γῆ, *terra*, Earth, and μετρεῖν, *metiri*, to meaſure; it being the Neceſſity of meaſuring the Earth, and the Parts and Places thereof that gave the firſt occaſion to the Invention of the Principles and Rules of this Art, which has ſince been extended and applied to numerous other Things; inſomuch that *Geometry* with Arithmetick, are now the general Foundation of all Mathematicks. See MATHEMATICKS.

*Geometry* is commonly divided into four Parts, or Branches, *Planimetry*, *Altimetry*, *Longimetry*, and *Stereometry*. See each under its proper Article, PLANIMETRY, ALTIMETRY, LONGIMETRY, and STEREOMETRY.

*Geometry*, again, is diſtinguiſh'd into *Theoretical*, or *Speculative*, and *Practical*.

The firſt contemplates the Property of Continuity; and demonſtrates the Truths of General Propoſitions, call'd *Theorems*. See THEOREM.

The second applies those Speculations and Theorems to particular Uses in the Solution of Problems. See PROBLEM.

*Speculative Geometry*, again, may be distinguish'd into *Elementary*, and the *Sublimer*.

*Elementary*, or *Common* GEOMETRY, is that employed in the consideration of Right Lines, and plain Surfaces, and Solids generated therefrom. See PLAIN, &c.

The *Higher*, or *Sublimer* GEOMETRY is that employ'd in the consideration of Curve Lines, Conic Sections, and Bodies form'd thereof. See CURVE, &c.

*Herodotus*, *lib. II.* and *Strabo*, *lib. XVII.* assert the *Egyptians* to have been the first Inventors of *Geometry*; and the annual Inundations of the *Nile* to have been the Occasion: For that River bearing away all the Bounds and Landmarks of Mens Estates, and covering the whole Face of the Country, the People, say they, were obliged to distinguish their Lands by the consideration of their Figure, and Quantity; and thus by Experience and Habit, form'd themselves a Method, or Art, which was the Origin of *Geometry*.—A farther Contemplation of the Draughts or Figures of Fields thus laid down and plotted in Proportion, might naturally enough lead them to the Discovery of some of their excellent and wonderful Properties; which Speculation continually improving, the Art became gradually improved, as it continues to do to this Day. *Josephus*, however, seems to attribute the Invention to the *Hebrews*: And others among the Antients make *Mercury* the Inventor. *Polid. Virgil. de Invent. Rer. L. I. C.* 18.

The Province of *Geometry* is almost infinite: Few of our Ideas, but may be represented to the Imagination by Lines, upon which they straight become of *Geometrical* Consideration; it being *Geometry* alone that makes Comparisons, and finds the Relations, of Lines. See LINE.

Astronomy, Music, Mechanicks, and, in a Word, all the Sciences which consider Things susceptible of more, and less; *i. e.* all the precise and accurate Sciences, may be refer'd to *Geometry*: For all Speculative Truths only consisting in the Relations of Things, and in the Relations between those Relations, they may be all referred to Lines. Consequences may be drawn from them; and these Consequences, again, being render'd sensible by Lines, they become permanent Objects, constantly exposed to a rigorous Attention and Examination: And thus we have infinite Opportunities both of enquiring into their Certainty, and pursuing them further. See ART, and SCIENCE.

The Reason, for instance, why we know so distinctly, and mark so precisely, the Concords call'd Octave, Fifth, Fourth, &c. is, that we have learnt to express Sounds by Lines, *i. e.* by Chords accurately divided; and that we know that the Chord, which sounds Octave, is double of that which it makes Octave withal; that the Fifth is in the sesquialterate Ratio, or as three to two; and so of the rest.

The Ear it self cannot judge of Sounds with such Precision; its Judgments are too faint, vague, and variable to form a Science. The finest, best tuned Ear, cannot distinguish many of the Differences of Sounds; whence many Musicians deny any such Differences; as making their Sense their Judge. Some, for instance, admit no Difference between an Octave and Three Ditones: And others, none between the greater and lesser Tone; so that the Comma, which is the real Difference, is insensible to them; and much more the Schisma, which is only half the Comma.

'Tis only by Reason, then, that we learn, that the Length of Chord which makes the Difference between certain Sounds, being divisible into several Parts, there may be a great Number of different Sounds contained therein, useful in Music, which yet the Ear cannot distinguish. Whence it follows, that had it not been for Arithmetic and *Geometry*, we had had no such thing as regular, fix'd Music; and that we could only have succeeded in that Science by good Luck, or Force of Imagination, *i. e.* Music would not have been any Science founded on inconteſtable Demonstrations: Tho' we allow that the Tunes composed by Force of Genius and Imagination, are usually more agreeable to the Ear, than those composed by Rule. See SOUND, TUNE, GRAVITY, CONCORD, &c.

So, in Mechanicks, the Heaviness of a Weight, and the Distance of the Centre of that Weight from the Fulcrum, or Point it is sustained by, being susceptible of *plus*, and *minus*, they may both be express'd by Lines; whence *Geometry* becomes applicable hereto; in virtue whereof, infinite Discoveries have been made, of the utmost use in Life. See BALANCE, STILYARD, &c.

*Geometrical* Lines and Figures, are not only proper to represent to the Imagination the Relations between Magnitudes, or between Things susceptible of more and less; as Spaces, Times, Weights, Motions, &c. but they may even represent Things which the Mind can no otherwise conceive; *e. gr.* the Relations of incomensurable Magnitudes. See INCOMMENSURABLE.

We do not, however, pretend, that all Subjects Men may have occasion to inquire into, can be express'd by Lines. There are many not reducible to any such Rule: Thus, the Knowlege of an infinitely powerful, infinitely just GOD, on whom all Things depend, and who would have all his Creatures execute his Orders to become capable of being happy, is the Principle of all Morality, from which a thousand undeniable Consequences may be drawn, and yet neither the Principle, nor the Consequences can be express'd by Lines, or Figures. *Mallebranche Recherche de la Verite, T. II.*

Indeed, the antient *Egyptians*, we read, used to express all their Philosophical, and Theological Notions by *Geometrical* Lines. In their Researches into the Reason of Things, they observ'd, that GOD, and Nature affect Perpendiculars, Parallels, Circles, Triangles, Squares, and harmonical Proportions; which engaged the Priests and Philosophers to represent the Divine and Natural Operations by such Figures: In which they were followed by *Pythagoras*, *Plato*, &c. Whence that Saying of *Boethius*, *Nullum Divinorum Scientiam ἀγεωμέτρητον attingere posse*. See PLATONIC, PYTHAGOREAN, &c.

But it must be observ'd, that this Use of *Geometry* among the Antients was not strictly Scientifical, as among us; but rather Symbolical: They did not argue, or deduce Things and Properties unknown from them; but represented or delineated Things that were known. In effect, they were not used as Means or Instruments of discovering, but Images or Characters, to preserve, or communicate the Discoveries made. See SYMBOL, and HIEROGLYPHIC.

" The *Egyptians*, (*Gale* observes) used Geometrical Figures, not only to express the Generations, Mutations, " and Destructions of Bodies; but the Manner, Attributes, " &c. of the Spirit of the Universe, who diffusing himself " from the Centre of his Unity, thro' infinite concentric " Circles, pervades all Bodies, and fills all Space. But of " all other Figures they most affected the Circle, and Tri- " angle; the first, as being the most perfect, simple, capacious, &c. of all Figures: Whence *Hermes* borrowed it to " represent the Divine Nature; defining GOD to be an in- " tellectual Circle or Sphere, whose Centre is every where, " and Circumference no where." See *Kirch. Oedip. Ægyptiac.* and *Gale Phil. General. Lib. I. c. II.*

The Antient *Geometry* was confined to very narrow Bounds, in comparison of the Modern. It only extended to Right Lines and Curves of the first Order, or Conic Sections; whereas into the modern *Geometry* new Lines of infinitely more and higher Orders are introduced. See CURVE.

The Writers, who have cultivated and improved *Geometry*, may be distinguish'd into *Elementary*, *Practical*, and those of the *Sublimer Geometry*.

The principal Writers of *Elements*, see enumerated under the Article ELEMENTS.

Those of the *Higher Geometry* are *Archimedes*, in his Books *de Sphæra*, *Cylindro*, and *Circuli Dimensione*; as also *de Spiralibus*, *Conoidibus*, *Sphæroidibus*, *de Quadratura Parabolæ*; and *Arenarius*: *Kepler*, in his *Stereometria Nova*; *Cavalerius*, in his *Geometria Indivisibilium*; and *Torricellius*, *de Solidis Sphæralibus*; *Pappus Alexandrinus*, in *Collectionibus Mathematicis*; *Paulus Guldinus*, in his Mechanicks and Staticks; *Barrow*, in his *Lectiones Geometricæ*; *Huygens*, *de Circuli Magnitudine*; *Bullialdus*, *de Lineis Spiralibus*; *Schooten*, in his *Exercitationes Mathematicæ*; *de Billy*, *de Proportione Harmonica*; *Lalovera*, *de Cycloide*; *Fer. Ernest. Com. ab Herbenstein*, in *Diatome Circulorum*; *Viviani*, in *Exercit. Mathemat. de Formatione*, and *Mensura Fornicum*; *Bap. Palma*, in *Geomet. Exercitation.* and *Apoll. Pergæus*, *de Sectione Rationis*.

The Writers on the *Sections of the Cone*, and *Sphere*; see under CONICKS, and SPHERICKS.

For *Practical Geometry*, the fullest and compleatest Treatises are those of *Mallet*, written in *French*; but without the Demonstrations: And those of *Schwenter*, and *Cantzlerus*, both in *High-Dutch*.—In this Class are likewise to be rank'd *Clavius*'s, *Tacquet*'s, and *Ozanam*'s *Practical Geometries*; *De la Hire*'s *Ecole des Arpenteurs*; *Reinholdus*'s *Geodesia*; *Hartman Beyer*'s *Stereometria*; *Voigtel*'s *Geometria Subterranea*, all in *High-Dutch*; *Hulsius*, *Gallileus*, *Goldmannus*, *Scheffelt*, and *Ozanam*, on the *Sector*.—

GEOMETRICAL, something that has a relation to *Geometry*. See GEOMETRY.

Thus we say, a *Geometrical* Method, a *Geometrical* Genius, a *Geometrical* Strictness, a *Geometrical* Construction, and *Geometrical* Demonstration, &c. See DEMONSTRATION, &c.

*Geometry* it self leads us into Errors: After once reducing a thing to *Geometrical* Consideration, and finding that it answers pretty exactly, we pursue the View, are pleas'd with the Certainty and Agreeableness of the Demonstrations; and apply the Geometry further and further, till we outrun Nature. Hence it is, that all Machines do not succeed: That all Compositions of Music, wherein the Concords are the most rigidly observ'd, are not agreeable: That the most exact Astronomical Computations do not always foretel the precise Time and Quantity of an Eclipse.

The Reason is, that Nature is not abstracted; Mechanical Levers and Wheels are not *Geometrical* Lines and Circles, as they are supposed to be: Our Taste for Tunes is not the same in all Men; nor at all times in the same Man: And as to Astronomy, there is no perfect Regularity in the Motions of the Planets; their Orbits do not seem reducible to any fix'd known Law, *&c.*

The Errors, therefore, we fall into in Astronomy, Music, Mechanicks, and the other Sciences to which Geometry is applied, do not properly arise from Geometry, which is an infallible Science; but from the false Misapplication of it. *Mallebranch, Recherche de la Ver.*

Geométircal *Line*, or *Curve*, call'd also *Algebraic Line*, or *Curve*, is that wherein the Relation of the Abscisses to the Semi-ordinates may be express'd by an Algebraick Equation. See *Algebraic* Curve.

Thus, suppose in a Circle, *Tab. Geometry*, *Fig.* 51. AB=*a* AP=*x* PM=*y*; then will PB=*a*—*x*, and consequently, since $PM^2 = AP \times PB$; $y^2 = ax - x^2$.— Again, suppose in *Fig.* 52. PC=*x*, AC=*a* PM=*y*; then will $MC^2 = PM^2$, that is $a^2 - x^2 = y^2$. See Equation.

*Geometrical Lines* are distinguish'd into Classes, Orders, or Genders, according to the Number of the Dimensions of the Equation that expresses the Relation between the Ordinates and the Abscissæ; or which amounts to the same, according to the Number of Points in which they may be cut by a Right Line.

Thus, a *Line of the first Order* will be only a Right Line: Those of the *second*, or *Quadratick Order*, will be the *Circle*, and the *Conick Sections*; and those of the *third*, or *Cubick Order*, will be the *Cubical* and *Nelian Parabolas*, the *Cissoid* of the Antients, *&c.* See Circle, Conic *Section*, Parabola, Cissoid, *&c.*

But a Curve of the first Gender (because a Right Line can't be reckon'd among the Curves) is the same with a Line of the second Order; and a Curve of the second Gender, the same with a Line of the third Order; and a Line of an infinitesimal Order is that, which a Right Line may cut in infinite Points; as the Spiral, Cycloid, the Quadratrix, and every Line generated by the infinite Revolutions of a Radius. See Line.

However, it is not the Equation, but the Description, that makes the Curve a *Geometrical* one: The Circle is a *Geometrical* Line, not because it may be expressed by an Equation, but because its Description is a Postulate: And it is not the Simplicity of the Equation, but the Easiness of the Description, which is to determine the Choice of the Lines for the Construction of a Problem. The Equation, that expresses a Parabola, is more simple than that which expresses a Circle; and yet the Circle, by reason of its more simple Construction, is admitted before it.

The Circle, and the Conick Sections, if you regard the Dimension of the Equations, are of the same Order; and yet the Circle is not numbered with them in the Construction of Problems, but by reason of its simple Description is depress'd to a lower Order, *viz.* that of a Right Line; so that it is not improper to express that by a Circle, which may be express'd by a Right Line: But it is a Fault to construct that by the Conic Sections, which may be constructed by a Circle.

Either, therefore the Law must be taken from the Dimensions of Equations, as observed in a Circle, and so the Distinction be taken away between plane and solid Problems: Or the Law must be allow'd not to be strictly observed in Lines of superior Kinds; but that some, by reason of their more simple Description, may be preferr'd to others of the same Order, and be numbered with Lines of inferior Orders.

In Constructions that are equally *Geometrical*, the most simple are always to be preferr'd: This Law is so universal as to be without Exception. But Algebraick Expressions add nothing to the Simplicity of the Construction; the bare Description of the Lines here are only to be consider'd; and these alone were consider'd by those Geometricians, who joined a Circle with a Right Line. And as these are easy or hard, the Construction becomes easy, or hard: And therefore it is foreign to the Nature of the Thing, from any thing else to establish Laws about Constructions. See Construction.

Either, therefore with the Antients, we must exclude all Lines besides the Circle, and perhaps the Conic Sections, out of Geometry; or admit all according to the Simplicity of the Description: If the Trochoid were admitted into Geometry, we might, by its means, divide an Angle in any given Ratio: Would you therefore blame those, who would make use of this Line to divide an Angle in the Ratio of one Number to another, and contend that this Line was not defin'd by an Equation, but that you must make use of such Lines as are defin'd by Equations? See Transcendental.

If, when an Angle were to be divided, for instance, into 1001 Parts, we should be oblig'd to bring a Curve defin'd by an Equation of above an hundred Dimensions to do the Business; which no body could describe, much less understand; and should prefer this to the Trochoid, which is a Line well known, and described easily by the Motion of a Wheel, or Circle. Who would not see the Absurdity?

Either therefore the Trochoid is not to be admitted at all in Geometry, or else in the Construction of Problems, it is to be preferr'd to all Lines of a more difficult Description: And the Reason is the same for other Curves.

Hence, the Trisections of an Angle by a Conchoid, which *Archimedes* in his Lemma's, and *Pappus* in his Collections have preferr'd to the Invention of all others in this Case, must be allow'd good, since we must either exclude all Lines, beside the Circle, and Right Line, out of Geometry, or admit them according to the Simplicity of their Descriptions; in which Case, the Conchoid yields to none, except the Circle.

Equations are Expressions of arithmetical Computation, and properly have no Place in Geometry, except as far as Quantities truly Geometrical (that is, Lines, Surfaces, Solids, and Proportions) may be said, to be some equal to others: Multiplications, Divisions, and such sort of Computations are newly received into Geometry, and that apparently contrary to the first Design of this Science; for whoever considers the Construction of Problems by a Right Line, and a Circle found by the first Geometricians, will easily perceive, that Geometry was invented, that we might expeditiously avoid by drawing Lines the Tediousness of Computation.

It should seem therefore, that the two Sciences ought not to be confounded: The Antients so industriously distinguish'd them, that they never introduced arithmetical Terms into Geometry; and the Moderns by confounding both, have lost a deal of that Simplicity, in which the Elegancy of Geometry principally consists. Upon the whole, that is arithmetically more simple which is determined by more simple Equations; but that is geometrically more simple which is determined by the more simple drawing of Lines; and in Geometry, that ought to be reckon'd best, which is geometrically most simple.

Geometrical *Plane*, see Plane.

Geometrical *Solution* of a Problem, is when the Problem is directly solved, according to the strict Principles and Rules of Geometry; and by Lines that are truly *Geometrical*. See Problem, and Solution.

In this Sense we say, *Geometrical* Solution, in Contradistinction to a *Mechanical*, or *Instrumental Solution*, where the Problem is only solved by Rules and Compasses. See Mechanical.

The same Term we likewise use in opposition to all indirect, and inadequate Solutions, as by infinite Series's, *&c.* See Series.

We have no *Geometrical* Way, of finding the Quadrature of the Circle; the Duplicature of the Cube, or finding of two mean Proportionals: Mechanical ways, and others, by infinite Series's, we have. See Quadrature, Duplicature, and Proportional.

The Antients, *Pappus* informs us, in vain endeavour'd at the Trisection of an Angle, and the finding out of two mean Proportionals by a Right Line, and a Circle. Afterwards they began to consider the Properties of several other Lines, as the Conchoid, the Cissoid, and the Conic Sections, and by some of these endeavour'd to solve those Problems. At length, having more throughly examined the Matter, and the Conic Sections being received into Geometry, they distinguish'd *Geometrical* Problems into three Kinds, *viz.*

1° Into *Plane* ones, which deriving their Original from Lines on a Plane, may be solved by a Right Line, and a Circle. See Plane.

2° *Solid* ones, which were solved by Lines deriving their Original from the Consideration of a Solid, that is, of a Cone. See Solid.

3° *Linear* ones, to the Solution of which were required Lines more compounded. See Linear.

According to this Distinction, we are not to solve solid Problems by other Lines than the Conic Sections; especially if no other Lines but Right ones, a Circle, and the Conic Sections must be received into Geometry.

But the Moderns advancing much farther, have received into Geometry all Lines that can be express'd by Equations; and have distinguish'd according to the Dimensions of the Equations, those Lines into Kinds; and have made it a Law, not to construct a Problem by a Line of a Superior kind, that may be constructed by one of an inferior one. See Geometrical *Line*.

Geometrical *Proportion*, call'd also absolutely and simply, *Proportion*; is a Similitude or Identity of Ratio's. See Ratio.

Thus, if A be to B, as C to D, they are in *Geometrical* Proportion: So 8, 4, 30 and 15 are *Geometrical* Proportionals. See Proportion.

Fletcher. Sculp.

GEOMETRICAL *Progreſſion* is a Series of Quantities, in continued *Geometrical* Proportion, *i. e.* increaſing or decreaſing in the ſame Ratio. See RATIO.

Thus, *e. gr.* 1, 2, 4, 8, 16, 32, 64, and 128 : And 729, 243, 81, 27, 9, 3, 1, are *Geometrical Progreſſions*. See *Geometrical* PROGRESSION.

GEOMETRICAL *Locus*, or *Place*, called alſo ſimply *Locus*, is a Line whereby an indeterminate Problem is conſtructed. See LOCUS.

GEOMETRICAL *Conſtruction* of an Equation, is the contriving and drawing of Lines and Figures, whereby to demonſtrate the Equation, Theorem, or Canon to be geometrically true. See CONSTRUCTION *of Equations*.

GEOMETRICAL *Oſculum*, ſee EVOLUTA, and OSCULUM.

GEOMETRICAL *Scale*, ſee DIAGONAL *Scale*.

GEOMETRICAL *Table*, ſee PLAIN *Table*.

GEOMETRICAL *Pace*, is a Meaſure conſiſting of five Feet. See PACE, and FOOT.

GEOMETRICALLY *Proportionals*, are Quantities in continual Proportion; or which proceed in the ſame conſtant Ratio; as 6, 12, 24, 48, 96, 192, &c. See PROPORTIONALS.

They are thus called, in Contradiſtinction to equidifferent Quantities; which are called, tho' ſomewhat improperly, *Arithmetically Proportionals*. See *Arithmetically* PROPORTIONAL.

GEOPONIC, ſomething relating to *Agriculture*.—Thus *Cato*, *Varro*, *Columella*, *Palladius*, and *Pliny* are ſometimes called *Geoponic* Writers. See GEORGIC.

St. GEORGE, a Name whereby ſeveral Orders, both Military and Religious, are denominated. It has its Riſe from a Saint, famous throughout all the Eaſt; and called by the *Greeks* Μεγαλομάρτυς, *q. d. Great Martyr*.

On ſome Medals of the Emperors *John*, and *Manuel Commenii*, we have the Figure of St. *George* arm'd, holding a Sword, or Javelin in one Hand, and in the other, a Buckler, with this Inſcription, an O, and therein a little A, and P
ΓΕ—ΓΙΟC, making Ο ΑΓΙΟΣ ΓΕΟΡΓΙΟΣ, *O Holy George*.
O
He is generally repreſented on Horſeback, as being ſuppoſed to have frequently engaged in Combats in that manner.

He is adored throughout *Armenia*, *Muſcovy*, and all the Countries which adhere to the *Greek* Rite: From the *Greek*, his Worſhip has long ago been received into the *Latin* Church; and *England* and *Portugal* have both choſe him for their Patron Saint. See PATRON.

St. GEORGE is particularly uſed for an *Engliſh* Order of Knights; more uſually now called the *Order of the Garter*. See *Order of the* GARTER.

Our King *Edward* VI. out of a Spirit of Reformation, made ſome Alterations in the Ceremonial, Laws, and Habit of the Order, that the *Romiſh* Saint might have leſs Share therein. 'Twas he firſt commanded that the Order ſhould no longer be called the *Order of* St. *George*, but that of the Garter.

*Knights of St.* GEORGE. There have been various Orders under this Denomination, moſt of which are now extinct; particularly, one founded by the Emperor *Frideric* III. in the Year 1470, to guard the Frontiers of *Bohemia* and *Hungary* againſt the *Turks*.—Another, called St. *George* of *Alfalma*, founded by the Kings of *Arragon*.—Another in *Auſtria* and *Carinthia*.—And another in the Republic of *Genoa*, ſtill ſubſiſting, &c.

*Religious of the* Order of *St.* GEORGE. Of theſe there are divers Orders, and Congregations; particularly Canons Regular of St. *George in Alga*, at *Venice*, eſtabliſh'd by two Noble *Venetians*, in the Year 1404.—Another Congregation of the ſame Inſtitute in *Sicily*, &c.

GEORGICK; ſomething that relates to the Culture or Tilling of the Ground. See AGRICULTURE.

The *Georgicks* of *Virgil*, are the 4 Books compoſed by that Poet on the Subject of Agriculture.

The Word is borrowed from the Latin *Georgicus*; and that of the *Greek* γεωργικὸς, of γῆ, *terra*, Earth, and ἔργάζομαι, *opero*, I work, labour; of ἔργον, *opus*, Work.—

GEOSCOPY, a kind of Knowledge of the Nature, and Qualities of the Earth, or Soil, gain'd by viewing and conſidering it. See SOIL.

*Geoſcopy* is only conjectural; but its Conjectures are very well grounded.

The Word is form'd of the *Greek* γῆ, Earth, and σκόπεω, I ſee, view.

GERESOL, in Muſic, one of the Cleſs. See CLEF.

GERFALCON, or GYRFALCON, a Bird of Prey, of a Size between a Vultur and an Hawk; and of the greateſt Strength next the Eagle. See FALCON, and HAWK.

GERMAN. A *Brother German* is a Brother both by the Father's and Mother's ſide; in Contradiſtinction to *Uterine Brothers*, &c. who are only ſo, by the Mother's ſide. See BROTHER.

So, likewiſe, *Couſins German* are thoſe in the firſt, or neareſt Degree; being the Children of Brothers or Siſters-*German*. See COUSIN, &c.

Among the *Romans* we have no Inſtance of Marriage between Couſins *German*, before the Time of the Emperor *Claudius*; when, they were very frequent. See MARRIAGE.

*Theodoſius* prohibited them under very ſevere Penalties, even Fine, and Proſcription. See CONSANGUINITY.

GERMAN *Language*, ſee TEUTONIC, and LANGUAGE.

GERMAN *Empire*, &c. ſee EMPIRE, &c.

GERMANICUS, an antient Title of Honour, given to ſeveral Emperors, on account of the Victories obtain'd by them over the *Germans*, or in *Germany*.

*Gallian* bears this Title on Medals; and the Argument for its being on occaſion of a Victory in *Germany*, is, that on the Reverſe we find the Words, VICTORIA GERMANICA. VICTORIA GER. VICTORIA. G. M. that is, *Germanica maxima*.

*Claudius Gothicus* bore the ſame Title, *Germanicus*, and accordingly on the Reverſe of his Medals we find *Victoria Germanica*; as on others of his Medals we read, *Victoria Gothica*.

GERMEN, or GERM, or GEM, that Part of a Seed which germinates, *i. e.* ſprouts or ſhoots out the firſt, for the Production of a new Plant. See SEED.

Botaniſts call it the *Plume*, ſee PLUME; ſee alſo PLANT, and SEED; ſee alſo GERMINATION.

GERMINATION, the Act of *Germinating*; that is, of a Plant's ſprouting, or ſhooting in the Ground. See PLANT, and GERMEN.

Some uſe the Word in a more extenſive Senſe; ſo as likewiſe to include the ſhooting of Leaves, Bloſſoms, Branches, Flowers, Fruits, and Seeds. See SEED, LEAF, FLOWER, BRANCH, &c.

The Modern Philoſophers have been very attentive to the *Germinations* of Plants, as well of the Formation of the Chick in the Egg. See PLANT.

The Progreſs of *Germination* has been very accurately obſerv'd by the Curious *Malpighi*, in the Seed of a Gourd. The Day after it was committed to the Ground, he found the Outer-coat or Integument a little tumid, and in its Tip there appear'd a ſmall Gap or Aperture, thro' which the Plume or Gem was ſeen.

The ſecond Day, the outward Coat, or Secundine was much ſofter, the inner torn and corrupted, the Plume, or Plantule ſomewhat longer and more tumid, and the Beginning of the Roots ſhew'd themſelves.

The third Day, the outer Secundine was become duſky, and the Leaves of the Plantule inflated, and the Root or Radicle had made itſelf a Paſſage thro' the Secundines, near the former Aperture; the Plume, or Stem, as alſo the Seed Leaves being now grown much bigger.

On the ſixth Day, more of the Seed Leaves had broke thro' the Secundines, and were found thicker and harder; the Root having now emitted a great Number of Fibres, and the Stem grown a Finger's Length.

The following Days, the Roots ſtill ſhot further, other Roots ariſing from them, and others from theſe; and the Stem, in its Progreſs, grew hollow, or fiſtulous, and the Seed Leaves broader and greener.

About the twenty firſt Day, the Plant ſeemed compleat; from which time the Seed Leaves began to droop, and at length died away. See PLANT.

GERON, GERONTES, in Antiquity, a kind of Magiſtracy in antient *Greece*.

The *Gerontes* were at *Sparta*, what the *Areopagites* were at *Athens*. See AREOPAGITE.

The *Gerontes* were inſtituted by *Lycurgus*: Their Number, according to ſome, was twenty eight; and according to others, thirty two. They govern'd in Conjunction with the King, whoſe Authority they were intended to ballance, and to watch over the Intereſts of the People.

None were to be admitted into this Office under ſixty Years of Age, and they held it for Life.

They were ſucceeded by the *Ephori*. See EPHORI.

The Word is formed of the *Greek* γέρον, which ſignifies old Man.

Whence alſo the Words GERONTIC, ſomething belonging to an old Man; and GERONTICON, a famous Book among the Modern *Greeks*, containing the Lives of the antient Monks.

The Senate of *Gerontes* was called *Geruſia*, that is Aſſembly or Council of old Men.

GERUND, in Grammar, a Tenſe, or Time of the Infinitive Mood; like to the Participle, but indeclinable. See MOOD, and INFINITIVE.

The *Gerund* expreſſes not only the Time, but alſo the Manner of an Action; as, He fell *in running Poſt*.

It differs from the Participle, in that it expreſſes the Time which the Participle does not. See PARTICIPLE.

And from the Tenſe properly ſo called, in that it expreſſes the Manner which the Tenſe does not. See TENSE.

The

The Grammarians are very much imbarraſs'd to ſettle the Nature and Character of the *Gerunds*: 'Tis certain, they are no Verbs, nor diſtinct Moods of Verbs, in regard they do not mark any Judgment, or Affirmation of the Mind, which is the Nature of a Verb.—And beſide, they have Caſes, which Verbs have not. See VERB.

Some therefore will have them to be Adjectives paſſive, whoſe Subſtantive is the Infinitive of the Verb: On this footing they denominate them Verbal Nouns, or Names formed of Verbs and retaining the ordinary Regimen thereof. See NOUN.

Thus, ſay they, *tempus eſt legendi libros*, or *librorum*, is as much as to ſay, *tempus eſt τὸ legere libros, vel librorum.* But others ſtand up againſt this Deciſion.

The Word is form'd of the Latin *Gerundivus*, and that from the Verb *gerere*, to bear.

GESSES, in the Furniture belonging to an Hawk. See JESSES.

GESTATION, the Time of a Woman's going with Child; or the Interval between Conception, and Delivery. See DELIVERY; ſee alſo FŒTUS, and CONCEPTION.

GESTATION is alſo a Term in the antient Medicine, uſed for a ſort of Exerciſe. See EXERCISE.

*Aſclepiades* firſt brought Frictions, and *Geſtation* into Practice.—The Deſign of *Geſtation* was to recover Strength after a Feaver, *&c.* was gone.

It conſiſted in making the Patient walk, or ride in a Chariot, or in a Boat; or even in rocking him in his Bed, if he could not indure a more violent Agitation.

GESTICULATION, the Act of making indecent or unſuitable Geſtures, or in too great Number. See GESTURE.

*Geſticulation* is a grievous Fault in an Orator.

GESTURE, a Motion of the Body, intended to ſignify ſome Idea, or Paſſion of the Mind.

*Quintilian* defines *Geſture, totius corporis motus & conformatio. Geſtures* are a kind of Natural Language which ſupplies the Uſe of Speech in thoſe naturally dumb. The *Mimes* and *Pantomimes* were great Proficients in the Style of *Geſture*. See MIME, and PANTOMIME.

*Geſture* conſiſts principally in the Actions of the Hands, and Face. See ACTION, and PRONUNCIATION.

GIAGH, or JEHAGH, a Cycle of twelve Years, in uſe among the *Turks* and *Cathayans*. See CYCLE.

Each Year of the *Giagh* bears the Name of ſome Animal: The firſt, that of a Mouſe; the ſecond, that of a Bullock; the third, of a Lynx, or Leopard; the fourth, of a Hare; the fifth, of a Crocodile; the ſixth, of a Serpent; the ſeventh, of a Horſe; the eighth, of a Sheep; the ninth, of a Monkey; the tenth, of a Hen; the eleventh, of a Dog; and the twelfth, of a Hog.

They alſo divide the Day into twelve Parts, which they call *Giagh's*; and diſtinguiſh them by the Names of the ſame Animals.

Each *Giagh* contains two of our Hours, and is divided into eight *Keh*, as many there are Quarters of Hours in our Day.

GIANT, or GYANT, a Man of extraordinary, enormous Stature and Bulk. See STATURE.

The Reality of *Giants*, and of Nations of *Giants*, is much controverted among the Learned. Travellers, Hiſtorians, and Relations both ſacred and profane furniſh various Inſtances thereof; a great Part of which, Naturaliſts and Antiquaries ſet aſide.

Thoſe among the Antients who ſpeak of *Giants*, as Hiſtorians, and affirm there were ſuch Things, are *Cæſar, de Bello Gallico, L. I. Tacitus, de Morib. Germanor. & Annal. L. II. Florus, L. III. c.* 3. St. *Auguſtin de Civit. Dei L. XV. c.* 9. and *Saxo Grammaticus*, at the End of his Preface: And among the Moderns, *Hieron. Magius, Miſcellan. de Gigantibus; Chaſſagnonus, de Gigantibus; Kircher Mund. Subterran. L. VIII. S. II. c.* 4. and ſo many others; that *Stephanius* in his Notes on *Saxo Grammaticus*, affirms nothing can be more extravagant than to deny, or allegorize the Authorities we have thereof.—

Mr. *Derham* obſerves that though we read of *Giants* before the Flood, *Gen.* vi. 4. and more plainly after it, *Numb.* xiii. 33; yet 'tis highly probable, the Size of Man has always been the ſame from the Creation; for as to the *Nephilim, Gen.* vi. the Antients vary about them; ſome taking them for Monſters of Impiety, Atheiſm, Rapine, Tyranny: And as to thoſe *Num.* xiii. which were evidently ſpoke of as Men of a *Gigantic* Size, 'tis probable the Fears of the Spies might add thereto.

But be this as it will, 'tis manifeſt that in both theſe Places *Giants* are ſpoken off as Rarities and Wonders of the Age, not of the common Stature: And ſuch Inſtances we have had in all Ages; excepting ſome fabulous Relations; ſuch as we take to be that of *Theutobocchus*, who is ſaid to be dug up Anno 1613, and to have been higher than the Trophies, and 26 Foot long: And no better we ſuppoſe the *Giants* to have been, which *Ol. Magnus* gives an Account of in his 5th Book, ſuch as *Harthen* and *Starchater* among the Men; and among the Women, *Reperta eſt* (ſaith he) *Puella—in capite vulnerata, mortua induta chlamyde purpurea, longitudinis cubitorum* 50, *latitudinis inter humeros quatuor.* Ol. Mag. *Hiſt. L.* 5. *c.* 2.

But, as for the more credible Relations of *Goliath* (whoſe Height was ſix Cubits, and a Span, 1 *Sam.* xvii. 4. which, according to Biſhop *Cumberland*, is ſomewhat above eleven Feet *Engliſh*); of *Maximinus* the Emperor (who was nine Foot high), and others in *Auguſtus* and other Reigns, of about the ſame Hight: To which might be added the Dimenſions of a Skeleton, dug up lately in the Palace of a *Roman* Camp near St. *Albans* by an Urn inſcribed *Marcus Antoninus*; of which an Account is given by Mr. *Cheſeldon*, who judg'd by the Dimenſions of the Bones, that the Perſon was eight Foot high. *Philoſ. Tranſact* N° 333. For theſe antique Examples and Relations, we ſay, they may be match'd, nay outdone, with modern Examples; of which we have divers in *J. Ludolph. Comment. in Hiſt. Æthiop. L.* 1. *c.* 2. §. 22. *Magus, Conringius*, D. *Hackewill*, and others; which laſt relates from *Nannez*, of Porters and Archers belonging to the Emperor of *China*, of Fifteen Foot high; and others from *Purchas*, of ten and twelve Foot high, and more. See the Learned Author's *Apolog. p.* 208.

GIBBOUS, in Medicine, is uſed to denote a Perſon bunch'd or hump-back'd. See VERTEBRA.

That Part of the Liver out of which the Vena Cava ariſes, is alſo called the *gibbous* Part. See LIVER.

GIBBOUS is alſo uſed in reference to the enlightened Parts of the Moon, while ſhe is moving from Full to the firſt Quarter, and from the laſt Quarter to Full again; for all that time the dark Part appears horned, and falcated, and the light one bunch'd out, Convex, or *Gibbous*. See PHASES, and MOON.

GIBELINS, GIBELLINS, or GIBELLING, a famous Faction in *Italy*, oppoſite to the *Guelphs*. See GUELPH.

The *Guelphs*, and *Gibellins* ravaged, and laid waſte *Italy* for a long Series of Years; ſo that the Hiſtory of the Country, for the ſpace of two Centuries, is only a Detail of their mutual Violences, and mortal Wars.

We have but a very obſcure Accunt, of their Origin, and the Reaſon of their Names: The Generality of Authors affirm, that they aroſe about the Year 1240, upon the Emperor *Frideric* the Second's being excommunicated by Pope *Gregory* the Ninth.

That Prince, ſay they, making a Tour among the Cities of *Italy*, gave the Name *Gibelins* to ſuch as he found well affected to him; and that of *Guelphs* to thoſe who adhered to the Pope.

But as to the Reaſon, and Signification of thoſe Words, there is a deep Silence: *Gibelin* might poſſibly be form'd of *Ghebieder, Imperator*; whence *guabiedolijken, imperioſe.* Of *Ghebiedelin*, the *Italians* might make, by Corruption, *Gibelin*; ſo that *Gibelins*, in this Light, ſhould be the ſame with Imperialiſts, or ſuch as follow'd the Emperor's Party.

By the way, ſome Writers maintain, that the two Factions aroſe ten Years before; tho' ſtill under the ſame Pope, and Emperor.

Other Hiſtorians relate, that *Conrad* IIId marching into *Italy*, in the Year 1139, againſt the *Neapolitans, Roger*, Count of *Naples* and *Sicily*, in order to defend his States, called to his Aſſiſtance *Guelph*, Duke of *Bavaria*; and that one Day when the two Armies were ready to join Battle, the *Bavarians* cried out in *High-Dutch, Hie Guelph*; or as others ſay in *Flemiſh, Hier Guelph*, that is, *Here Guelph*: And that the Imperialiſts anſwer'd, on their Side, with the Words *Hie*, or *Hier, Gibelin, here Gibelin*; calling the Emperor by the Name of the Place where he had been bred.

*Hornius* refers the Names to the War in 1140, between *Henry* the Proud, Duke of *Bavaria*, and *Saxony*; and *Conrad* the Third, Duke of *Suabia:* The two Princes being preparing to engage near the Town of *Winsberg*, the *Bavarians* began to cry out, *Guelph*, which was the Name of Duke *Henry*'s Brother, and the Partiſans of the Emperor, *Weiblingen*, the Name of the Place where that Prince was born and bred in the Dutchy of *Wirtenberg*, whoſe Surname he bore: From which *Weiblingen*, the *Italians* at length form'd *Gibelin.*

This Account is confirm'd by *Martin Cruſius: Initium* Gibelinæ *(Weibelinæ a Patria Conradi Regis)* & Welfiæ *concertationis. Conrad* being of *Weiblingen*, that Word, ſays *Cruſius*, gave riſe to *Gibellingue*, and that to *Gibelling, Gibelins, Gibellini.*

*Platina*, on the other Hand, aſſures us, that the Name *Gibelins* aroſe from that of a *German* at *Piſtoya*; whoſe Brother, named *Guelph*, gave likewiſe his Name to the oppoſite Faction; the two Brethren, it ſeems, bearing an irreconcilable Hatred.

Others maintain, that the Emperor gave the Appellation *Gibelins* to thoſe of his Party, from the *German* Word *Gipfel*, ſignifying Ridge, or Top; by reaſon the Empire reſted on them, as the Rafters of a Houſe lean on the Ridge, which joins them a-top.

*Kraus*, a learned Canon of *Strasbourg*, in the Lives of the Emperor of the Houſe of *Brunſwick*, is of the ſecond Sentiment above related: In a Battle, ſays he, between *Welff*, or *Guelff*, and *Friderick*, the Army of the firſt crying out, *Hie Welff! Hie, Welff!* the ſecond commanded his, to cry out *Hie, Gibeling! Hie, Gibeling*, the Name of his Birth Place; and the *French* and *Lombards* aſking the Signification of thoſe Words, they were anſwer'd, that by *Welff* was meant the Pope's Party; and by *Gibeling*, the Emperor's.

Yet others contend, that the Word *Gibelin* is only a ſoftning of the Word *Gibertin*, or *Guibertin*; and that it aroſe from *Guibert*, an Anti-Pope, ſet up by the Emperor *Henry* III^d, in the Year 1080, *Acta Sanct. Propyl. Maii, p.* 198.

*Maimbourg*, in his *Hiſt. de la Decad. de l'Emp.* advances another Opinion: The two Factions, and their Names, ſays he, aroſe from a Quarrel between two Antient and Illuſtrious Houſes, on the Confines of *Germany*, that of the *Henry's* of *Gibeling*, and that of the *Guelfes* of *Adorf*: Which Account appears the moſt probable of them all.

GIBET, a Machine, in manner of a Gallows, whereon notorious Criminals after Execution, are hung in Irons, or Chains; as Spectacles, *in terrorem*. See GALLOWS.

The Word in French, *Gibet*, properly denotes what we call *Gallows*: It is ſuppoſed to come originally from the Arabic *Gibel*, Mount, Elevation of Ground; by reaſon they are uſually made on Hills, or Eminences.

GIBLETS, the Offalls or Entrails of a Gooſe; including the Heart, and Liver, with the Feet, Gizzard, *&c.*

The Word is ſuppos'd to be form'd of *Goblets*, from the French *Gobeau*, mouth-full.

*Giblets* make a conſiderable Article in Cookery: They boil *Giblets*, ſtew *Giblets*, make Ragoos of *Giblets*, *Giblet* Pies, *&c.*

GIGANTIC, ſee GIANT.

F. *Bouhours* relates, that one of the Artifices of the *Indian Bramans* conſiſts in perſuading the ſimple People, that the Gods eat like us; and, that they may bring them Store of Victuals, they repreſent thoſe Gods of a *Gigantic* Size, and above all, give them a huge Tun Belly.

GIGANTOMACHIA, the Battle of the Giants againſt the fabulous Gods of the antient Heathens.

Several of the Poets have compoſed *Gigantomachia's*: That of *Scarron* is the fineſt of all his Pieces.

The Word is *Greek*, γιγαντομαχία, form'd of γίγας, γίγαντος, Giant, and μάχη, Combat, of μάχομαι, *pugno*, I fight.

GIGG, GIGUE, or JIG, in Muſic and Dancing, a gay, briſk, ſprightly Compoſition, and yet in full Meaſure, as well as the *Allemand*, which is more ſerious. See DANCE.

*Menage* takes the Word to ariſe from the Italian *Giga*, a muſical Inſtrument mentioned by *Dante*.

GILBERTINES, an Order of Religious, thus call'd from St. *Gilbert*, of *Simpringham*, in the County of *Lincoln*, who founded the ſame, about the Year 1148.

Antiently, none were received into it but married People: The Monks obſerved the Rule of St. *Auguſtin*; and were accounted Canons; and the Nuns that of St. *Benedict*.

The Founder erected a double Monaſtery, or rather, two different ones, contiguous to each other, the one for Men, the other for Women, but parted by a very high Wall.

The Order, afterwards, conſiſted of ten ſuch Monaſteries: All which were ſuppreſs'd at the general Diſſolution of Monaſtic Orders under King *Henry* VIII.

GILD, or GUILD, originally ſignify's a Fraternity, or Company; form'd from the *Saxon Gildan*, to pay, becauſe every Man was *gildare*, *i. e.* to pay ſomething towards the Charge and Support of the Company. See COMPANY, and FRATERNITY.

Thence comes our *Guild-hall*, *q. d.* the Hall of the Society or Fraternity, where they meet and make Orders and Laws among themſelves. See GUILD-*Hall*.

The Original of *Gilds* is thus related: It being a Law amongſt the *Saxons*, that every Freeman of fourteen Years old ſhould find Sureties to keep the Peace, or be committed; certain Neighbours entred into an Aſſociation, and became bound for each other, either to produce him who committed an Offence, or to make Satisfaction to the injur'd Party: This, that they might the better do, they rais'd a Sum of Money among themſelves, which they put into a common Stock; and when one of their Pledges had committed an Offence, and was fled, then the other nine made Satisfaction out of this Stock, by Payment of Money, according to the Offence. See FRANK-*Pledge*.

Becauſe this Aſſociation conſiſted of ten Families, it was called a *Decennary*: And from hence came our Fraternities. See DECENNA.

But, as to the direct Time when theſe *Gilds* had their Origin in *England*, there is nothing of Certainty to be found; ſince they were in uſe long before any formal Licence was granted to them for ſuch Meetings.

*Edward* the third, in the fourteenth Year of his Reign, granted Licence to the Men of *Coventry*, to erect a Merchants *Gild* and Fraternity, of Brethren and Siſters, with a Maſter, or Warden; and that they might make Chantries, beſtow Alms, do other Works of Piety, and conſtitute Ordinances touching the ſame, *&c.*

So *Henry* the fourth, in his Reign, granted a Licence to found a *Gild* of the *Holy Croſs*, at *Stratford* upon *Avon*.

In the Royal Boroughs of *Scotland*, a *Gild* is ſtill uſed for a Company of Merchants, who are Freemen of the Borough. See BOROUGH.

Every Royal Borough has a *Dean of Gild*, who is the next Magiſtrate below the Bailiff. He judges of Controverſies among Men concerning Trade; diſputes between Inhabitants touching Buildings, Lights, Water-courſes, and other Nuſance; calls Courts, at which his Brethren of the *Gild* are bound to attend; manages the common Stock of the *Gild*, and amerces and collects Fines.

GILD, or GELD, according to *Cambden*, does alſo ſignify a Tribute, or Tax; and the Statutes of 27 *Edw.* 3. Stat. 2. cap. 13; and 11 *Hen.* 7. cap. 9. uſe *Gildable* in the ſame Senſe with *Taxable*. See GELD.

GILD, according to *Crompton*, does alſo ſignify an Amercement: As in *Footgeld*, which he interpretes a Preſtation within the Foreſt, in theſe Words,—To be quit of all manner of Preſtations to be made for gathering Sheafs of Corn, Lamb, and Wool, to the uſe of Foreſters.

GILD, or GELD, is alſo uſed among our antient Writers for a Compenſation, or Mulct for a Fault committed.—— *Quicquid in amore in alterum furatum habent in duos* Geldos *componere faciat*.

Hence, *Weregeld*, is the Price of a Man; *Orpgeld*, is the Price of Cattle; *Angild*, the ſingle Value of a thing; *Twigeld*, the double Value. See WERGILD, *&c.*

There are likewiſe many Words, which end with *Geld*, and that ſhew the ſeveral kinds of Payments; as *Danegeld*, *Vadegeld*, *Seregeld*, *Hornegeld*, *Sotgeld*, *Penigeld*, &c. See DANEGELD, &c.

GILD, or GUILT *Rents*, are Rents payable to the Crown by any *Gild*, or Fraternity; or ſuch Rents as formerly belonged to Religious *Gilds*, and came to the Crown at the general Diſſolution, order'd for Sale by the Stat. 22 *Car.* 2.

GILDABLE, or GELDABLE, denotes *Tributary*, that is, liable to Pay, Tax, or Tribute.

*Cambden*, dividing *Suffolk* into three Parts, calls the firſt *Gildable*, becauſe liable to Tax; from which the other two Parts were exempt, becauſe *Eccleſiæ Donatæ*.

*Guildable* is alſo explained in an antient MS. to be that Land or Lordſhip which is *ſub diſtrictione Curiæ Vice-Com.*

GILGUL *Hammethin*, a *Hebrew* Phraſe, literally ſignifying the *Rolling of the Dead*.

To conceive the Uſe of this Diction, it is to be obſerv'd that the *Jews* have a Tradition, that at the coming of the *Meſſiah*, no *Iſraelite* ſhall riſe any where but in the Holy Land. What, then, ſhall become of all the Faithful inter'd in other Parts? Shall they periſh, and remain in the State of Death?

No, ſay the Jewiſh Doctors: But GOD will dig them ſubterraneous Canals, or Cavities, thro' which they ſhall *roll* from their Tombs to the Holy Land; and when arrived there, GOD will blow on them, and raiſe them again.

This imaginary Paſſage of the Carcaſſes, or Aſhes of the *Jews*, from their Tombs, to the Holy Land, by *rolling* under Ground, is what they call *Gilgul Hammethin*, the rolling of the Dead.

GILHALDA *Teutonicorum*, was us'd for the Fraternity of Eaſterling Merchants in *London*; called the *Stillyard*. See STILLYARD.

GILD-*Hall*, *q. d. Gildæ Aula*, the chief Hall in the City of *London*. See GUILD-*Hall*.

—Gildarum *nomine continentur non ſolum minores Fraternitates, & ſodalitia, ſed ipſæ etiam civitatum Communitates*, ſays the learned *Spelman*. See GILD.

GILD-*Merchant*, *Gilda Mercatoria*, was a certain Privilege, or Liberty, granted to Merchants, whereby they were enabled among other Things to hold certain Pleas of Land within their own Precincts.

King *John* granted *Gildam Mercatoriam* to the Burgeſſes of *Nottingham*.

GILDING, or GUILDING, the Art, or Act of ſpreading or covering a Thing over with Gold, either in Leaf or Liquid. See GOLD.

The Art of *gilding* was not unknown among the Antients, tho' it never arrived among them at the Perfection to which the Moderns have carried it.

*Pliny* aſſures us, that the firſt *gilding*, ſeen at *Rome*, was after the Deſtruction of *Carthage*, under the Cenſorſhip of *Lucius Mummius*; when they began to *gild* the Ceilings of their Temples, and Palaces; the Capitol being the firſt Place on which the Enrichment was beſtow'd. But he adds, that Luxury advanced on them ſo haſtily, that in a little time you might ſee all, even private and poor Perſons, *gild* the very Walls, Vaults, *&c.* of their Houſes.

We need not doubt but they had the ſame Method with us, of beating Gold, and reducing it into Leaves; though it ſhould ſeem they did not carry it to the ſame Height; if it is true which *Pliny* relates, that they only made five-hundred Leaves four Fingers ſquare of a whole Ounce. Indeed he adds that they could make more; that the thickeſt were called *Bracteæ Prænestinæ*, by reaſon of a Statue of that Goddeſs at *Præneste* gilt with ſuch Leaves; and that the thinner ſort were called *Bracteæ Queſtoriæ*.

The modern Gilders do alſo make uſe of Gold Leaves of divers Thickneſſes; but there are ſome ſo fine, that a thouſand don't weigh above four or five Drachms. The thickeſt are uſed for *gilding* on Iron, and other Metals; and the thinneſt, on Wood.—

But we have another Advantage over the Antients, in the manner of uſing, or applying the Gold: The Secret of painting in Oil, lately diſcover'd, furniſhes us with means of *gilding* Works that ſhall endure all the Injuries of Time and Weather, which to the Antients was impracticable. They had no way to lay the Gold on Bodies that would not endure the Fire but with Whites of Eggs, or Size; neither of which will endure the Water: So that they could only *gild* ſuch Places as were ſhelter'd from the Moiſture of the Weather.—

The *Greeks* called the Compoſition which they uſed for *gilding* on Wood, *Leucopheum*, or *Leucophorum*; which is deſcribed as a ſort of glutinous, compound Earth, ſerving, in all Probability, to make the Gold ſtick, and bear poliſhing. But the Particulars of this Earth, its Colour, Ingredients, &c. the Antiquaries and Naturaliſts are not agreed upon.

There are ſeveral Methods of *Gilding* in uſe among us; *viz. Gilding in Oil*; *Water Gilding*; *Gilding by the Fire*, which is peculiar to Metals; *Gilding of Books*, &c.

*Method of* GILDING *in Oil.*

The Baſis, or Matter whereon the Gold is applied, in this Method, is the Remains of Colours found ſettled to the Bottom of the Pots wherein the Painters waſh their Pencils. This Matter, which is very viſcid, they firſt grind; then paſs it thro' a linen Cloth; and thus lay it with a Pencil on the Matter to be gilt, after having firſt waſh'd it once or twice over with Size; and if it be Wood, with ſome white Paint.

When almoſt dry, but while yet unctuous enough to catch and retain the Gold, they ſpread their Gold Leaves thereon, either whole, or cut in pieces: To take up and apply the Leaves, they make uſe of a Piece of fine, ſoft, well carded Cotton; or of a Palet for the purpoſe; or barely the Knife, wherewith the Leaves were cut, according to the Parts of the Work they are to *gild*, or the Breadth of the Gold to be applied.

In proportion as the Gold is laid, they paſs over it a coarſe, ſtiff Pencil or Bruſh, to make it ſtick, and, as it were, incorporate, with the Ground: With the ſame Pencil, or a ſmaller one, they mend any Cracks that may happen therein, after the ſame manner as will be hereafter ſhewn in *Water* GILDING.

This ſort of *Gilding* is chiefly uſed for Domes, and Roofs of Churches, Courts, Banquetting Houſes, &c. and for Figures of Plaſter, Lead, &c. that are to ſtand expoſed to the Weather.

*Method of* GILDING *in Water.*

Water *Gilding* is not perform'd without more Apparatus; nor can it be uſed ſo ordinarily, nor on ſuch large Works, as the former: WoodenWorks, and thoſe of Stuc, are almoſt the only ones *gilt* in this way: which, beſide, muſt be ſhelter'd from the Weather.

The Size made uſe of for *gilding*, is to be made of Shreds, &c. of Parchment, or Gloves, boil'd in Water, to the Conſiſtence of a Gelly. See GLUE.

If it be Wood that is to be *gilt*, they firſt give it a *Waſh* of this Size, boiling hot; and when this is dry, another of white Paint, mix'd up with the ſame Size. For this White, ſome uſe Plaſter of Paris, well beaten and ſifted; others Spaniſh White, &c. It is laid on with a ſtiff Bruſh, and oftener, or ſeldomer repeated, according to the Nature of the Work: For Pieces of Sculpture, ſeven or eight Lays ſuffice; for flat, or ſmooth Works, ten, or twelve. In the latter Caſe they are applied by drawing the Bruſh over the Work; in the former by dabbing it.

When the whole is dry, they moiſten it with fair Water, and rub it over with ſeveral Pieces of coarſe Linen, if it be on flat; otherwiſe, they beat or ſwitch it with ſeveral Slips of the ſame Linen tied to little Sticks, to make it follow and enter all the Cavities and Depreſſures thereof.

The White thus finiſh'd, they proceed to yellow it; obſerving, that if it be a Piece of Sculpture in Relievo, they firſt touch up, and repare the ſeveral Parts which the white Ground may have disfigur'd, with little iron Inſtruments, as Gouges, Chiſſels, &c.

The Yellow, which they uſe, is only common Oker well ground and ſifted, and thus mix'd up with the Size us'd for the White, only weaker by one half. This Colour is laid on hot; and in Works of Sculpture ſupplies the Place of Gold, which frequently cannot be carried into all the Cavities and Dentings of Foliages and other Ornaments.

Over this yellow is applied a Lay, which is to ſerve for the Ground whereon the Gold is to be immediately laid: It is uſually compoſed of the *Armenian* Bole, Blood-ſtone, Black Lead, and a little Fat, to which ſome add Soap and Oil of Olives; others, burnt Bread, Biſtre, Antimony, Glaſs of Tin, Butter and SugarCandy. Theſe Ingredients being all ground together, with hot Size, they apply three Lays of the Compoſition upon the Yellow, each after the other is dried; taking Care not to put any in the ſmall Cavities of the Work, to hide the yellow. The Bruſh uſed in this Application, is to be ſoft; and when the Matter is well dried, they go over it with a ſtronger Bruſh, to rub it down, and take off the little prominent Grains, and thus facilitate the burniſhing of the Gold.

In order to proceed to *gild*, they muſt have three ſorts of Pencils; one, to wet; another to touch up, and amend; and a third to flatten: There is alſo required a Cuſhion, to ſpread the Gold Leaves on, when taken out of the Book; a Knife to cut them; and a Squirrel's Tail fitted with a Handle; or elſe a piece of fine Stuff on a Stick, to take them up, direct, and apply them.—

They begin with the wetting Pencils, by which they moiſten the Lay laſt laid on with Water, that it may the better receive and retain the Gold: The Leaves are then laid on the Cuſhion; and taken up, if whole, with the Squirrel's Tail; if in pieces, with the other Inſtrument, or even the Knife they are cut withal, and laid, and ſpread gently on the Parts of the Work before moiſten'd.

When the Leaves happen to crack, or break in laying on, they make up the Breaches with little Pieces of Leaf taken up on the repairing Pencil; and with the ſame Pencil, or another ſomewhat bigger, they ſmooth the whole; preſſing the Gold into the Dents, where it could not ſo well be carried with the Squirrel's Tail.

The Work thus far *gilt*, when dry, remains either to be burniſh'd, or flatted.—

To *burniſh* it, is to ſmooth, and poliſh with a Burniſher, which is uſually a Dog's, or Wolf's Tooth, or a Blood-ſtone fitted in a Handle for the purpoſe. See BURNISHING.

To *flat*, is to give it a light Lick in the Places not burniſh'd, with a Pencil dipt in Size, wherein a little Vermillion ſometimes has been mix'd. This helps to preſerve and prevent its flawing, when handled.

The laſt thing is to apply the Vermeil in all the little Lines, and Cavities; and to ſtop and amend any little Faults with Shell Gold.

The Compoſition here call'd *Vermeil*, is made of Gum Gutta, Vermillion, and a little of ſome ruddy, brown Colour, ground together, with *Venice* Varniſh, and Oil of Turpentine. Some *Gilders*, in lieu hereof, content themſelves with fine Lacca, or Dragons Blood, with Gum Water.

Sometimes, inſtead of burniſhing the Gold, they burniſh the Ground or Compoſition laid on laſt before it; and content themſelves afterwards to waſh the Part over with the Size. This Method is chiefly practiced for the Hands, Face, and other Nudities in Relievo; which, by this means, don't appear ſo very brillant as the Parts burniſh'd; though much more ſo than the Parts perfectly flat.

To *gild* a Work, and yet preſerve white Grounds; they uſe to apply a Lay of Spaniſh White mix'd with a weak Fiſh Glue, on all the Parts of the Ground whereon the yellow, or the laſt Lay might run.—

*Method of* GILDING *by the Fire.*

There are two ways of *Gilding by Fire*, *viz.* that with Liquid Gold, and that with Leaf Gold.

The firſt is perform'd with Gold, reduc'd to a Calx, and amalgamated with Mercury, in the Proportion of about an Ounce of Mercury to a Drachm of Gold.

In order to the Operation, they heat a Crucible red hot, then put the Gold and Mercury in it, and ſtir them gently about, till the Gold be found melted and incorporated into a Maſs with the Mercury. This done, they caſt them into Water, to waſh and purify; and thence into other Waters, where the Amalgama which is almoſt as liquid as if there were nothing but Quickſilver in it, may be preſerved a long time for Uſe.

Before they proceed to apply this amalgamated Gold, they firſt *roughen* the Metal it is to be applied on; which is done by waſhing it over with *Aqua fortis*, or *Aqua ſecunda*: Then rincing the Metal in fair Water, and ſcouring it a little with ſmall Sand, it is ready for the Gold.—

They now cover over the Metal with the Mixture of Gold, and Mercury, taking it up with a Slip of Copper, or a Bruſh made of braſs Wire, and ſpreading it as equably thereon as poſſible; in order to which they wet the Bruſh from time to time in fair Water.—

Thus

Thus far advanc'd, the Metal is ſet to the Fire, upon a Grate, or in a ſort of a Cage, under which is a Pan of Coals: In proportion as the Mercury evaporating and flying off diſcovers Places where Gold is wanting, they take Care to ſupply them, by adding new Pieces of Amalgama.—

The Work is then rubb'd over, with the Wire Bruſh dipt in Beer, or Vinegar, which leaves it in a Condition to be brought to Colour, which is the laſt Part of the Proceſs, and which the Gilders keep to themſelves as a mighty Secret; tho' we know it cannot differ much from what we ſhall hereafter ſhew of the manner of giving Gold Species their Colour, under the Article COINING.

### GILDING *by the Fire with Gold Leaves.*

To prepare the Metal for this *Gilding*, it muſt be firſt well ſcratch'd, or raked; then poliſh'd, with a Poliſher; and then ſet to the Fire to *blue*, *i. e.* to heat, till it appear of a blue Colour. This done, the firſt Lay of Gold is clap'd thereon, and lightly rubb'd down with a Poliſher; and thus expoſed to a gentle Fire.

They uſually only give it three ſuch Lays, or four at moſt; each Lay conſiſting of a ſingle Leaf for the common Works, and of two for the extraordinary ones: After each Lay they ſet it a-freſh to the Fire. After the laſt Lay, the Gold is in a Condition to be burniſh'd.

GILDING *of Books*; ſee BOOK-*binding*.

GILL, or *Ground-Ivy*, a Medicinal Plant, which gives the Denomination to a ſort of medicated Ale, or Drink, called *Gill*, or *Gill Ale*, made by infuſing the dried Leaves of the Plant therein. See ALE.

*Gill* is held very abſterſive and vulnerary, and is preſcribed in all Diſorders of the Lungs, and Breaſt; and is alſo eſteem'd good in Obſtructions of the Viſcera: Whence it alſo paſſes for Hepatic, Diuretic, Splenetic, and Nephritic. It is ſaid to do Wonders in Tubercles and tartarous Indurations of the Lungs. *Willis* commends its Powder in obſtinate Coughs; and *Etmuller* gives the Hiſtory of a Scorbutic Conſumption cured by a ſtrong Decoction of this Herb after a Vomit.

GILLA, in Chymiſtry and Pharmacy, is an *Arabic* Term for *Salt*; peculiarly uſed among us for the Emetic Salt of Vitriol. See VITRIOL.

This Salt is prepared from that Mineral, by three, or four repeated Operations, *viz.* Diſſolution, in *May* Dew; Filtration; and Cryſtallization. In default of *May* Dew, Rain Water may ſerve.

*Gilla* is uſed in Tertian Agues, and all Fevers ariſing from a Corruption of the Humors of the firſt Region. It deſtroys Worms, and prevents Putrefaction. The Doſe is from 20 Grains to half a Drachm, taken in Broth, or in Cordial Waters.—

GILLS, BRANCHIÆ, in Natural Hiſtory, thoſe membranous, cartilaginous Parts in Fiſhes, whereby they reſpire, hear, *&c.* See FISH; ſee alſo BRANCHIA.

What we call *Gills* in Fiſhes, are properly their Lungs: Reſpiration of Air is as neceſſary to Fiſhes, as to terreſtrial Animals: There is always a deal of Air incloſed among Water; and 'tis this Air that Fiſhes reſpire. The whole Mechaniſm of their *Gills* is contrived with this View, *viz.* to ſeparate and imbibe this Air from the Water, and preſent it to the Blood, after the ſame manner as it is preſented to the Lungs of other Animals. See LUNGS.

M. *du Verney* has unravel'd this infinitely complicated Piece of Mechaniſm, in the *Gills* of a Carp: The firſt thing that offers, is a ſort of Timber-work, conſiſting of a great Number of bony Laminæ, each ſubdivided into an Infinity of bony Fibres, whoſe Office is to ſuſtain the innumerable Ramifications of an Artery diſpatch'd hither from the Heart. The Uſe of theſe Ramifications is to preſent the Blood extremely ſubdivided, and, as it were, each Globule of Blood by it ſelf, to the Water. Between theſe Laminæ, and throughout the whole Contexture of the *Gills*, are an infinite Number of very narrow Paſſages, deſtined to receive and ſubdivide the Water which the Fiſh takes in by the Mouth, into little Parcels. In this State the Air, its Priſon Doors being now in ſome meaſure open'd, makes its Eſcape, and joins it ſelf with the Blood of all the little Arteries.—

Theſe *Gills* have neceſſarily an alternate Motion of Dilatation and Compreſſion, which is effected by another very curious Piece of Mechaniſm; when they dilate, the Water is taken in, and when they contract, it is expell'd again. Hence 'tis probable that it is in the very Inſtant of Contraction, that the Air expreſs'd from the Water is forc'd to enter the Pores of the little Blood Veſſels, by reaſon the Force is then greater than at any other time; and this Action requires a conſiderable Force. The ſame Reaſon holds with reſpect to the Lungs of Men; accordingly M. *du Verney* maintains, that tho' the Air enter the Lungs in the time of Inſpiration, it is only received into the Blood in that of Expiration, when the ſuperfluous Air is carried off by the Trachea; ſo that the real Inſpiration, *i. e.* the Entrance of the Air into the Blood, ſhould be the Expiration. See RESPIRATION.

The Water is taken in by the Mouth, and carried off again, ſtrip'd of its Air, by the *Gills*; and the Air gain'd from it, is diſtributed firſt to the Arteriolæ of the *Gills*, and thence by the Law of Circulation to all the little Veins inoſculated therewith. See CIRCULATION, &c.

GINGER, GINGIBER, an Aromatic Root, of conſiderable Uſe both as a Spice, and a Medicine.—

It is brought chiefly from *Calicut*, in the Eaſt Indies; tho' of late it has been cultivated with good Succeſs in the *Antilles* Iſlands.

The Plant which affords it, reſembles our Ruſh, both in reſpect of Stem, and Flower.—The Root goes no depth under Ground, but ſpreads itſelf near the Surface, in form not unlike a Man's Hand; but very knotty.

When arrived at Maturity, they dig it up, and dry it in Hurdles, either in the Sun, or Oven: The beſt is that which is new, dry, well fed, hard to break, of a ruddy, brown Colour without, reſinous within, and of a hot, pungent Taſte.

They uſe to comfit the Root, when green, with Sugar, and Honey; having firſt ſteep'd it ſome time in Water, to take away part of its Acrimony, and diſpoſe it to part with the Outer-ſkin. They alſo make a Marmelade of it, and dry Cakes.

The Northern People make great uſe of this Confection, as holding it ſoveraign againſt the Scurvy. The *Indians* eat the Root, when green, by way of Salade, firſt chipping it ſmall, mixing it with other Herbs, and ſeaſoning it with Oil and Vinegar.

As to its Medicinal Uſe, it is held good to ſtrengthen the Stomach, and awaken Appetite. It promotes Digeſtion, prevents Putrefaction, *&c.*

GINGER-*Bread*, a richer kind of Bread, the Flavour and Taſte whereof are heighten'd and improv'd with Spices, and particularly *Ginger*; whence the Name. See BREAD.

There are various Forms and Preparations of *Ginger*-Bread: We ſhall content ourſelves with the following one, which is well recommended.

Into a Pound of Almonds, grate a penny white Loaf, ſift, and beat them together: To the Mixture add an Ounce of *Ginger*, ſcraped fine, and Liquorice and Annis Seed in Powder, of each a quarter of an Ounce: Pour in two or three Spoonfuls of Roſe-water, and make the whole into a Paſte, with half a Pound of Sugar: Mould, and roll it, print it, and dry it in a Stove.

Others make it of Treacle, Citron, Lemon, and Orange Peel, with candied *Ginger*, Coriander, and Carroway Seeds, mix'd up with as much Flower as will make it into a Paſte.

GINGIVA, in Anatomy, the *Gums*; a hard ſort of Fleſh, inveſting the Alveoli, or Sockets of the Teeth. See FLESH, and TEETH.

The *Gingivæ* are form'd by the Union of two Membranes; one of which is a Production of the Perioſteum, and the other of the internal Membrane of the Mouth. See MOUTH.

GINGLYMUS, in Medicine, one of the Species of Articulation. See ARTICULATION.

The *Ginglymus* is that Jointure of the Bones, where each Bone mutually receives the other; ſo that each both receives, and is recived. See BONE.

There are three Species of *Ginglymus*: The firſt, when the ſame Bone, at the ſame Extremity, receives and is reciprocally received by another Bone; after the manner of a Hinge: Such is that of the Cubitus and Humerus. See CUBITUS, and HUMERUS.

The ſecond, when a Bone receives another at one of its Extremes, and is received into another, at the other: As the Vetebræ do. See VERTEBRÆ.

The third is that where a Bone is received into another, after the manner of a Wheel, or Axis of a Wheel in a Box: Such is that of the ſecond Vertebra of the Neck in the firſt. See AXIS.

GIN-SENG, or GIN-SEM, in Natural Hiſtory, a very extraordinary and wonderful Plant, hitherto only found in *Tartary*.

The *Gin-ſeng* is one of the principal Curioſities of the *Chineſe*, and *Tartars*: Their moſt eminent Phyſicians have wrote many a Volume of its Virtues.

It is known among them by divers other Names, as the *only ſpirituous*; the *pure Spirit of the Earth*; the *Plant that gives Immortality*, &c. It makes, in effect, the whole *Materia Medica*, for the People of Condition; being too pretious for the Populace.

All the Writers of the *Chineſe* Affairs make mention of the *Gin-ſeng*: As *Martinius*, in his *Atlas*; F. *Kircher*, in his *China Illuſtrata*; F. *Tachard*, in his *Voyages*; and F. *le Comte*, in his *Memoirs*.

And yet we knew but very little of this Plant, before F. *Jartoux*, a Jeſuit, and Miſſionary in *China*; who being employ'd by Order of the Emperor, in making a Map of *Tartary*, in the Year 1709, had an Opportunity of ſeeing it growing

growing in a Village about four Leagues from the Kingdom of *Corea*, inhabited by *Tartars*, call'd *Calca-Tatze*.

That Father took the occaſion to deſign the Plant, and give an accurate Deſcription thereof, with its Virtues, and the manner of preparing it; which, being a great Curioſity, we ſhall here gratify the Reader withal.

The *Gin-ſeng*, repreſented *Tab. Nat. Hiſtory*, *Fig.* 10. has a white Root, ſomewhat knotty, about thrice the Thickneſs of the Stem, and which goes tapering to the End: At a few Inches from the Head, it frequently parts into two Branches, which gives it ſome Reſemblance of a Man, whoſe Thighs the Branches repreſent: And 'tis hence it takes the Denomination *Gin-ſeng*.

From the Root riſes a perfectly ſmooth, and tolerable round Stem: Its Colour is a pretty deep Red, except toward the Foot, where, by the Neigbourhood of the Earth, it is turn'd ſomewhat whiter. At the Top of the Stem is a ſort of Joint, or Knot, form'd by the ſhooting out of four Branches, which ſpread as from a Centre: The under Side of each Branch is green, mix'd with white; and the upper Part, much like the Stalk, of a deep Red: The two Colours gradually decreaſe, and at length unite on the Sides.

Each Branch has five Leaves, well enough repreſented in the Figure; and 'tis obſervable that the Branches divide equally from each other, both in reſpect of themſelves, and of the Horizon; and with the Leaves make a circular Figure, nearly parallel to the Surface of the Ground.

The Fibres of the Leaves are very diſtinguiſhable, and on the upper Side are ſet with ſmall whitiſh Hairs: The Membrane, or Pellicle between the Fibres, riſes a little in the Middle, above the Level of the Fibres.

The Colour of the Leaf is a dark Green, above, and a ſhining, whitiſh Green underneath; and all the Leaves are finely jagged or indented.

On the Edges, from the Centre of the Branches, ariſes a ſecond Stalk, D E, very ſtraight, ſmooth, and whitiſh, from Bottom to Top, bearing a Bunch of round Fruit, of a beautiful red Colour. This Bunch, in the Plant viewed by our Miſſionary, was compoſed of twenty four Berries; two of which are here repreſented 9, 9.

The Red Skin, that covers the Berry, is very thin, and ſmooth, and contains within it a white Pulp: As theſe Berries were double (for they are ſometimes ſingle) each had two rough Stones, of the Size and Figure of our Lentils. The Pedicles, whereon the Berries were ſupported, all aroſe from the ſame Center; and ſpreading exactly like the Radii of a Sphere, made the Bunch of Berries of a circular Form. The Fruit is not good to eat; and the Stone includes a Kernel: It has alſo a ſmall Beard at the Top, diametrically oppoſite to the Pedicle.

The Plant dies away every Year; the Number of its Years may be known by the Number of Stalks it has ſhot forth; of which there always remains ſome Mark, as is ſhewn in the Figure, by the Letters *b b b*, &c. From whence it appears, that the Root A was ſeven Years old; and the Root H fifteen.

As to the Flowr, F. *Jartoux* owns he had never ſeen it; and therefore could not deſcribe it: Some have aſſured him, that it is white, and very ſmall; others, that there is no Flower at all, and that no body had ever ſeen it. He rather inclines to think it ſo ſmall as to have eſcap'd Notice; and, what confirms him in the Opinion, is, that thoſe who ſeek the *Gin-ſeng*, having nothing in view but its Root, overlook and deſpiſe the reſt as uſeleſs.

As they have ſowed the Seed in vain, without any Plant ever ariſing therefrom; 'tis probable this might give occaſion to the Fable which is current among the *Tartars*:—They ſay, that a Bird eats it, as ſoon as in the Earth; and not being able to digeſt it, it purifies in its Stomach, and afterwards ſprings up in the Place where it was caſt by the Bird with its Dung.—The Miſſionary rather believes that the Stone remains a long time in the Ground, before it takes root; which Opinion appears the more probable, as there are ſome Roots no longer or bigger than ones little Finger, which yet have ſhot forth at leaſt ten Stalks.

Tho' the Plant, here deſcribed, had four Branches; yet there are ſome which have but two; others, three; and others, five, ſix, or ſeven: But each Branch has always five Leaves.

The Heighth of the Plant is proportionable to its Bigneſs, and the Number of Branches the Root has: The larger and more uniform it is, and the fewer ſmall Strings or Fibres it has, the better it is accounted.

'Tis hard, to ſay, why the *Chineſe* ſhould call it *Gin-ſeng*, a Word which ſignifies *Form*, or *Repreſentation*: Neither that Father, nor any he inquir'd of, could ever find that it bore more Reſemblance to the Figure of a Man, than is ordinarily ſeen among other Roots. The *Tartars*, with more Reaſon, call it *Orhota*, that is, the *firſt of Plants*.

Thoſe who gather the *Gin-ſeng*, preſerve only the Root; and all they can get of it in ten, or fifteen Days time, they bury together in ſome Place under Ground. Then they take care to waſh it well, and ſcour it with a Bruſh: Then dip it in ſcalding Water, and prepare it in the Fume of a ſort of yellow Milet, which gives it Part of its Colour.

The Milet is put in a Veſſel, with a little Water, and boil'd over a gentle Fire; the Roots being laid over the Veſſel upon ſmall, tranſverſe Pieces of Wood, being firſt cover'd with a linen Cloath, or ſome other Veſſel, plac'd over them.

They may alſo be dried in the Sun, or by the Fire; but then, tho' they retain their Virtue well enough, they have not that yellow Colour, which the *Chineſe* ſo much admire. When the Roots are dried, they muſt be kept cloſe in ſome very dry Place; otherwiſe they are in danger of corrupting, or being eaten by Worms.

As to the Place where this Root grows, it is between the thirty ninth and forty ſeventh Degree of North Latitude, and between the tenth and twentieth Degree of Eaſt Longitude, reckoning from the Meridian of *Peking*. Here is found a long Tract of Mountains, which the thick Forreſts that cover and encompaſs them, render almoſt unpaſſable. It is upon the Declivities of theſe Mountains, and in theſe thick Forreſts, upon the Banks of Torrents, or about the Roots of Trees, and amidſt a thouſand other different Sorts of Plants, that the *Gin-ſeng* is found. It is not to be met with in Plains, Vallies, Marſhes, the Bottoms of Rivulets, or in Places too much expoſed and open.

If the Foreſt take fire, and be conſumed, this Plant does not appear till two or three Years after: It alſo lies hid from the Sun as much as poſſible, which ſhews that Heat is an Enemy to it.

The Places where the *Gin-ſeng* grows, are on every Side ſeparated from the Province of *Quan-tong*, by a Barrier of wooden Stakes, which incompaſſes this whole Province, and about which Guards continually patroll, to hinder the *Chineſe* from going out, and looking after this Root.

Yet, how vigilant ſoever they are, their Greedineſs after Gain incites the *Chineſe* to lurk about privately in theſe Deſerts, ſometimes to the Number of two or three thouſand; at the hazard of looſing their Liberty, and all the Fruit of their Labour, if they are taken, either as they go out of, or come into the Province.

The Emperor having a mind that the *Tartars* ſhould reap all the Advantage that is to be made of this Plant, rather than the *Chineſe*, gave Orders, in 1709, to ten thouſand *Tartars*, to go and gather all that they could of the *Gin-ſeng*, upon Condition that each Perſon ſhould give him two Ounces of the beſt, and that the reſt ſhould be paid for Weight for Weight, in pure Silver.

It was computed that by this means the Emperor would get this Year about twenty thouſand *Chineſe* Pounds of it, which would not coſt him above one fourth Part of its Value.

We met, by chance, with ſome of theſe *Tartars*, in the Midſt of thoſe frightful Deſerts; and their Mandarins, who were not far out of our Way, came one after another, and offer'd us Oxen for our Subſiſtance, according to the Commands they had received from the Emperor.

This Army of Herbariſts obſerved the following Order: After they had divided a certain Tract of Land among their ſeveral Companies, each to the Number of an hundred Perſons, ſpread itſelf out in a Right Line, to a certain fix'd Place, every ten of them keeping at a diſtance from the reſt.

Then they ſearch'd carefully for the Plant, going on leiſurely in the ſame Order; and in this manner, in a certain Number of Days, they run over the whole ſpace of Ground appointed them.

When the Time is expired, the Mandarins, who are encamp'd with their Tents in ſuch Places as are proper for the Subſiſtance of their Horſes, ſend to view each Troop, to give them freſh Orders, and to inform themſelves if their Number is compleat.

If any one of them is wanting, as it often happens, either by wandring out of the way, or being attack'd by wild Beaſts, they look for him a Day or two, and then return again to their Labour, as before.

The *Gin-ſeng*, we have obſerv'd, is an Ingredient in moſt of the Medicines which the *Chineſe* Phyſicians preſcribe to the better ſort of Patients: They affirm that it is a ſovereign Remedy for all Weakneſſes occaſion'd by exceſſive Fatigues, either of Body, or Mind; that it attenuates and carries off pituitous Humours; cures Weakneſs of the Lungs, and the Pleuriſy; ſtops Vomitings; ſtrengthens the Stomach, and helps the Appetite; diſperſes Fumes, or Vapours; fortifies the Breaſt; is a Remedy for ſhort and weak Breathing; ſtrengthens the vital Spirits, and is good againſt Dizzineſs of the Head, and Dimneſs of Sight, and that it prolongs Life to extreme old Age.

No body can imagine, that the *Chineſe* and *Tartars* would ſet ſo high a Value upon this Root, if it did not conſtantly produce a good Effect: Thoſe that are in Health, often make uſe of it to render themſelves more vigorous and ſtrong; and I am perſuaded it would prove an excellent Medicine

Medicine in the Hands of any *European* who underſtands Pharmacy, if he had but a ſufficient Quantity of it to make ſuch Trials as are neceſſary to examine the Nature of it chymically, and to apply it in a proper Quantity, according to the Nature of the Diſeaſe for which it may be beneficial.

It is certain that it ſubtiliſes, increaſes the Motion of, and warms, the Blood; that it helps Digeſtion, and invigorates in a very ſenſible manner.

After I had deſigned the Root, I obſerved the State of my Pulſe, and then took half of the Root, raw as it was, and unprepar'd; in an Hour after, I found my Pulſe much fuller and quicker: I had an Appetite, and found myſelf much more vigorous, and could bear Labour better and eaſier than before. Four Days after, finding myſelf ſo fatigued and weary, that I could ſcarce ſit on Horſeback, a Mandarin who was in Company with us, perceiving it, gave me one of theſe Roots: I took half of it immediately, and an Hour after I was not in the leaſt ſenſible of any Wearineſs. I have often made uſe of it ſince, and always with the ſame Succeſs: I have obſerv'd alſo, that the green Leaves, and eſpecially the fibrous Part of them, chewed, would produce nearly the ſame Effect. The *Tartars* often bring us the Leaves of *Gin-ſeng*, inſtead of Tea; and I always find myſelf ſo well afterwards, that I ſhould readily prefer them before the beſt Tea. Their Decoction is of a grateful Colour; and when one has taken it twice, or thrice, its Taſte and Smell become very agreeable.

As for the Root, it is neceſſary to boil it a little more than Tea, to allow time for extracting its Virtue; as is practis'd by the *Chineſe*, when they give it to ſick Perſons; on which occaſion they ſeldom uſe more than the fifth Part of an Ounce of the dried Root.

To prepare the Root for Exhibition, cut it into thin Slices, and put it into an earthen Pot well glazed, with about half a Pint of Water; the Pot to be well cover'd, and ſet to boil over a gentle Fire; and when the Water is conſumed to the Quantity of a Cup full, a little Sugar to be mix'd with it, and to be drank: Immediately after this as much more Water to be put on the Remainder, and to be boiled as before, to extract all the Juice, and what remains of the ſpirituous Part of the Root. Theſe two Doſes to be taken, the one in the Morning, and the other in the Evening.

GIRDERS, in Architecture, the largeſt Pieces of Timber in a Floor—Their Ends are uſually faſten'd into the Summers, or Breſt-Summers, and the Joiſts are framed in at one End to the *Girders*. See JOIST.

By the Statute *for rebuilding London*, no *Girder* is to lie leſs than ten Inches into the Wall; and their Ends to be always laid in Lome, *&c.*

| *Girders* and *Summers* in Length. | *From* | | *to* | | *muſt be in* | | | |

GIRDING-*Beams*, in Building, the ſame as *Girders*. See GIRDER.

GIRDLE, CINGULUS, or ZONA, a Belt, or Band, of Leather, or other Matter, tied about the Reins; to keep the Part more firm, and tight.

It was antiently the Cuſtom for Bankrupts, and other Ceſſionaries, to put off, and ſurrender their *Girdle*, in open Court—The Reaſon hereof, was, that our Anceſtors uſed to carry all their neceſſary Utenſils, as Purſe, Keys, *&c.* tied to the *Girdle*; whence the *Girdle* became a Symbol of the Eſtate. Hiſtory relates, that the Widow of *Philip* I. Duke of *Burgundy*, renounced her Right of Succeſſion, and put off her *Girdle* on the Duke's Tomb. See INVESTITURE.

The *Romans* always wore a *Girdle*, to tuck up the Gown when they had occaſion to do any thing. This Cuſtom was ſo general, that ſuch as went without *Girdles*, and let their Gowns hang looſe, were reputed idle, diſſolute Perſons.

*Maidens* or *Virgins* GIRDLE—It was the Cuſtom among the *Greeks*, and *Romans*, for the Husband to untie his Bride's *Girdle*.

*Homer*, *lib.* 11. of the *Odyſſey*, calls this *Girdle* παρθένιον ζωνον, Maid's *Girdle*. *Feſtus* relates, that this *Girdle* was made of Sheep's Wool; and that the Husband untied it in Bed. He adds, that it was tied in the *Herculian* Knot; and that the Husband untied it, as a happy Preſage of his having as many Children as *Hercules*, who at his Death left ſeventy behind him.

The Poets attribute to *Venus* a particular kind of *Girdle*, called *Ceſtus*; to which they annex a Faculty of inſpiring the Paſſion of Love. See CESTUS.

*Quickſilver* GIRDLE, in Medicine, is a ſort of *Girdle* ſmeered over with Mercury, or having Mercury incloſed within it. See MERCURY.

It is made of Leather, Linen, Cloth, Cotton, Stuff, or the like, and the Mercury prepared or killed various ways; as with faſting Spittle, Fat, or the like.

It is applied as a Topical Medicine about the Waſte, ſometimes with good Effect, but frequently proves dangerous, principally in weak Conſtitutions, and thoſe ſubject to Convulſions.

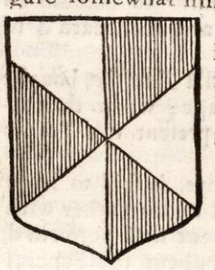
Its Intention is, the Cure of the Itch, driving away Vermin, killing Lice, *&c.*

*Queens* GIRDLE, is an antient Duty, or Tax, rais'd at *Paris* every three Years, at the rate of three Deniers upon each Muid of Wine, and ſix for each Queue. It was intended for the Maintenance of the Queen's Houſhold: Afterwards they augmented and extended it to other Commodities, as Coals, *&c.*

*Vigenere* ſuppoſes it to have been originally thus called, by reaſon the *Girdle* antiently ſerved for a Purſe; but he adds, that a like Tax had been raiſed in *Perſia*, and under the ſame Name, above two thouſand Years ago; as appears from *Plato*, in his *Alcibiades*, *Cicero*, *Atheneus*, &c.

*Chriſtians of the* GIRDLE. *Motavackkel*, tenth Calif of the Family of the *Abaſſides*, enjoin'd the Chriſtians, and *Jews* in the Year of the Hegira, 235; of Jeſus Chriſt, 856, to wear a large leathern *Girdle*, as a Badge of their Profeſſion; which they bear to this Day throughout the Eaſt: From which time the Chriſtians of *Aſia*, and particularly thoſe of *Syria* and *Meſopotamia*, who are almoſt all *Neſtorians*, or *Jacobites*, have been called *Chriſtians of the Girdle*.

*Order of the* GIRDLE, the Order of *Cordeliers*; ſee CORD, and CORDELIER.



GIRDLE, in Architecture; ſee CINCTURE.

GIRLE, among Hunters, is a Roe-buck of two Years.

GIRON, or GUIRON, in Heraldry, a Gore, or triangular Figure, having a long, ſharp Point, like the Step of a ſpiral Stair Caſe, and ending in the Centre of the Eſcutcheon.

When a Coat has ſix, eight, or ten of theſe *Girons*, meeting or centring in the Middle of the Coat, it is ſaid to be *Gironne*, or *Gironny*. See GIRONNE.

The Word is *French*, and literally ſignifies the *Gremium*, or Lap; by reaſon, in ſitting, the Knees being ſuppoſed ſomewhat aſunder, the two Thighs, together with a Line imagin'd to paſs from one Knee to the other, forms a Figure ſomewhat ſimular hereto.

GIRONNE, GIRONNY, in Heraldry, is when a Shield or Coat is divided into ſeveral *Girons*, which are alternately Colour and Metal; as in the adjoining Figure, which we Blazon, *Gironne* of ſix Argent and Sable.

When there are eight pieces or *Girons*, it is abſolutely ſaid to be *Gironne*; when there are more, or fewer, the Number is to be expreſs'd—*Gironne* of four, of fourteen, *&c.*

Some, inſtead of *Gironne*, ſay, *Parti*, *Couppé Trenché*, and *Faillé*, by reaſon the *Girons* are form'd by ſuch Diviſions of the Field.

Four *Girons* form a *Salteer*, and eight, a *Croſs*, See SALTEER, &c.

GIVEN, *Datus*, a Term frequently uſed in Mathematicks, ſignifying ſomething which is ſuppoſed to be known. See DATA.

Thus, if a Magnitude be known, or we can find another equal to it, we ſay, it is a *given Magnitude*, or that ſuch a Thing is *given* in Magnitude. See MAGNITUDE.

If the Poſition of any thing be ſuppoſed as known, we ſay, *Given in Poſition*. See POSITION.

Thus, if a Circle be actually deſcribed on a Plain, its Centre is *Given in Poſition*; its Circumference *Given in Magnitude*; and the Circle is *Given* both *in Poſition*, and *Magnitude*.

A Circle may be *given* in Magnitude only, as when only its Diameter is *given*, and the Circle not actually deſcribed.

If the Kind, or Species of any Figure be *given*, they ſay, *given in Specie*.—If the Ratio between any two Quantities is known, they are ſaid to be *given in Proportion*.

GLACIALIS, ICY, ſomething relating to Ice; and particularly, a Place that abounds in Ice.

Thus, we ſay, the *Mare Glaciale*, or *Congelatum*, that is, the Icy, or Frozen Sea; call'd alſo *Chronian* Sea, or *Sarmatian* Sea. See SEA.

The Word is form'd of the Latin *Glacies*, Ice. See ICE.

GLACIS, in Building, *&c.* is an eaſy, inſenſible Slope, or Declivity. See DECLIVITY.

The Deſcent, or Inclination of the *Glacis* is leſs ſteep than that of the *Talut*. See TALUT.

In Gardening, a Deſcent ſometimes begins in *Talut*, and ends in *Glacis*.

The GLACIS *of the Cornich* is an eaſy, imperceptible Slope in the Cymaiſe of a Cornich, to promote the Deſcent and draining off of the Rain-Water. See CYMAISE.

GLACIS, in Fortification, is particularly uſed for that of the Counterſcarp.

The *Glacis* of the Counterſcarp, or cover'd Way, is the Sloping Bank that reaches from the Parapet of the Corridor, or Counterſcarp, to the level Side of the Field. See COUNTERSCARP.

The *Glacis* is about ſix Foot high, and loſes itſelf by an inſenſible Diminution in the ſpace of ten Fathoms. See ESPLANADE.

GLADE, in Agriculture, Gardening, *&c.* a *Viſta*, or open, and light Paſſage, made thro' a thick Wood, Grove, or the like, by lopping off the Branches of Trees along the Way. See VISTA, *&c.*

GLADIATOR, in Antiquity, a Perſon who fought with naked Swords on the *Arena*, at *Rome*, to entertain the People. See ARENA, SPECTACLE, &c.

The *Gladiators* were uſually Slaves, and fought out of Neceſſity; tho', ſometimes, Freemen made Profeſſion thereof, like our Prize-fighters, for a Livelihood.

After a Slave had ſerv'd on the Arena three Years, he was diſmiſs'd. See SLAVE.

The *Romans* borrow'd this cruel Diverſion from the *Aſiaticks:* Some ſuppoſe that there was Policy herein; the frequent Combates of *Gladiators* tending to accuſtom the People to deſpiſe Dangers, and Death.

The Origin of ſuch Combats ſeems to be as follows: From the earlieſt Times, we have any Acquaintance withal in profane Hiſtory, it had been the Cuſtom to ſacrifice Captives, or Priſoners of War, to the Manes of the Great Men who had died in the Engagement: Thus *Achilles*, in the Iliad, *L. XXIII.* ſacrifices twelve young *Trojans*, to the Manes of *Patroclus*; and in *Virgil*, *L. XI. v.* 81. *Æneas* ſends Captives to *Evander*, to be ſacrificed at the Funeral of his Son *Pallas*.

In length of Time they came to ſacrifice Slaves at the Funerals of all Perſons of Condition: This was even eſteemed a neceſſary Part of the Ceremony; but as it would have appeared barbarous to have maſſacred them like Beaſts, they were appointed to fight with each other, and do their beſt to ſave their own Lives, by killing their Adverſary. This ſeem'd ſomewhat leſs inhuman, by reaſon there was a Poſſibility of avoiding Death; and it only lay on themſelves, if they did not do it. See FUNERAL.

This occaſion'd the Profeſſion of *Gladiator* to become an Art: Hence aroſe Maſters of Arms; and Men learn'd to fight, and exerciſe therein.

Theſe Maſters, whom the *Latins* call'd *Laniſtæ*, bought them Slaves, to train up to this cruel Trade; whom they afterwards ſold to ſuch as had occaſion to preſent the People with ſo horrible a Shew.

*Junius Brutus*, who expell'd the Kings, is ſaid to have been the firſt who honour'd the Funeral of his Father with theſe inhuman Diverſions—They were at firſt perform'd near the Sepulchre of the Deceaſed, or about the Funeral Pile; but were afterwards removed to the Circus and Amphitheatres, and became ordinary Amuſements. See CIRCUS, AMPHITHEATRE, *&c.*

The Emperor *Claudius* reſtrain'd them to certain times, but he ſoon afterwards annull'd what he decreed, and private Perſons began to exhibit them at Pleaſure, as uſual; and ſome carried the brutal Satisfaction ſo far as to have them at their ordinary Feaſts. See FEAST.

And not Slaves only, but other Perſons would hire themſelves to this infamous Office.

The Maſter of the *Gladiators* made them all firſt ſwear, that they would fight to death; and if they fail'd therein, they were put to death, either by Fire, or Swords, Clubs, Whips, or the like.

It was a Crime for the Wretches to complain when they were wounded; or to aſk for Death; or ſeek to avoid it, when overcome: But it was uſual for the Prince, or the People to grant them Life, when they gave no Signs of Fear, but waited the fatal Stroke with Courage and Intrepidity. *Auguſtus* even decreed, that it ſhould always be granted them.

From Slaves, and free'd Men, the wanton Sport ſpread to People of Rank and Condition; and *Nero* is related to have brought upwards of 400 Senators, and 600 *Roman* Knights upon the Scene; yet *Domitian*, that other Monſter of Cruelty, refined upon him, exhibiting Combats of Women in the night-time.

*Conſtantine* the Great is ſaid to have firſt prohibited the Combats of *Gladiators*, in the Eaſt; at leaſt, he forbad thoſe condemn'd to death for their Crimes, to be employ'd herein: There being an Order ſtill extant to the *Præfectus Prætorii*, rather to ſend them to work in the Mines in lieu thereof: It is dated at *Beryta* in *Phœnicia*, the firſt of *October* 325.

The Emperor *Honorius* firſt forbad them at *Rome*, on occaſion of the Death of St. *Telemachus*, who, coming out of the Eaſt into *Rome*, at the time of one of theſe Spectacles, went down into the Arena, and us'd all his Endeavours to prevent the *Gladiators* from continuing the Sport: Upon which the Spectators of that Carnage, fired with Anger, ſtoned him to death. *Theodoret. Hiſt. Eccleſ. L. V. C. 26.*

It muſt be obſerv'd, however, that the Practice was not entirely aboliſh'd in the Weſt before *Theodoric*, King of the *Oſtrogoths.—Honorius*, on the occaſion firſt mentioned, had prohibited them; but the Prohibition does not ſeem to have been executed. *Theodoric*, in the Year 1500 aboliſh'd them finally.

Some time before the Day of Battle, the Perſon who preſented the People with the Shews, gave them Notice thereof, by Programma's, or Bills, containing the Names of the *Gladiators*, and the Marks whereby they were to be diſtinguiſh'd; for each had his ſeveral Badge, which was moſt commonly a Peacock's Feather, as appears from the *Scholiaſt* of *Juvenal*, on the 158th Verſe of the IIId *Satyr*; and *Turnebius Adverſ. L. III. c.* 8.

They alſo gave notice what time the Shews would laſt, and how many Couples of *Gladiators* there were: And it even appears from the 52d Verſe of the 7th *Satyr* of the IId Book of *Horace*, that they ſometimes made Repreſentations of theſe Things in Painting; as is practic'd among us, by thoſe who have any thing to ſhew at Fairs.

The Day being come, they began the Entertainment by bringing two kinds of Weapons; the firſt were Staves, or wooden Files, call'd *Rudes*; and the ſecond, effective Weapons, as Swords, Poniards, *&c.*

The firſt were call'd *Arma luſoria*, or *Exercitoria*; the ſecond, *Decretoria*, as being given by Decree, or Sentence of the *Prætor*; or of him at whoſe Expence the Spectacle was given.

They began to fence, or ſkirmiſh with the firſt, which was to be the Prelude to the Battle: From theſe, when well warm'd, they advanc'd to the ſecond, with which they fought naked.

The firſt Part of the Engagement was called *ventilare, præludere*; and the ſecond, *dimicare ad certum*, or *verſis armis pugnare:* And ſome Authors think with much Probability, that it is to theſe two kinds of Combat that St. *Paul* alludes in the Paſſage 1 *Cor.* ix. 26, 27. *I fight, not as one that beateth the Air; but I keep under my Body, and bring it into Subjection.*

If the Vanquiſh'd gave up his Arms, it was not in the Victor's Power, to grant him Life: It was the People, during the time of the Republic; and the Prince, or People, during the time of the Empire, that were alone impower'd to grant the Boon.

The Reward of the Conqueror was a Crown, or a Branch of the *Lentisk* Tree: Sometimes they gave them his Conge, or diſmiſs'd him, by putting one of the wooden Files, or *Rudes* in his Hand; and ſometimes they even gave him his Freedom.

The Sign, or Indication whereby the Spectators ſhew'd that they granted the Favour, was, to fall the Thumb; or clench it between the other Fingers: And when they would have the Combat finiſh'd, and the Vainquiſh'd ſlain, they rais'd the Thumb, and directed it towards the Combatants: Which we learn from *Juvenal*, *Sat. III. v.* 36.

The *Gladiators* challeng'd, or defied each other, by ſhewing the little Finger; which ſame, during the Combat, was to own themſelves overcome. *Pliny*, L. XXVIII. c. 2. *Prudentius*, L. II. contra Symm. v. 1098. *Horace*, L. I. Ep. 18. v. 66. *Politian.* Miſcell. c. 42. *Turneb.* Adverſ. L. XI. c. 6. *Lipſ.* Saturn. L. II. c. 22.

There were divers kinds of *Gladiators*, diſtinguiſh'd by their Weapons, Manner, and Time of fighting, *&c.* as,

The *Andabatæ*, of whom we have already given an account under the Article ANDABATÆ.

The *Catervarii*, who fought in Troops, or Companies; Number, againſt Number. *Lipſ.* Lib. II. c. 16.

The *Conſummati*, whom Authors mention as a Species of *Gladiators*, the ſame with the *Rudiarii* and *Veterani*; founding the Opinion on a Paſſage in *Pliny*, L. VIII. c. 7. But *Lipſius* ſhews, that they have miſtaken *Pliny*. *Saturn.* Lib. II. c. 16. and *Turneb. Adverſ.* L. XXX. c. 6.

The *Cubicularii*, which are a little precarious, being chiefly founded on a Paſſage in *Lampridius*, in the Life of the Emperor *Commodus: Inter hæc habitu Victimarii, victimas immolavit, in arena rudibus, inter* Cubicularios *Gladiatores pugnavit lucentibus aliquando mucronibus.*

*Turnebius* reads *Rudiarios*, in lieu of *Cubicularios*, and underſtands it of thoſe who had been diſmiſs'd, and could no longer be oblig'd to fight, except with Files.

*Salmaſius* reads *Gladiator*, and refers it to the Emperor, who fought not only on the Arena, and with Files, or blunted Inſtruments; but at home, with his Servants, and Valets de Chambre, and with Sharps.

*Lipſius* will have nothing alter'd in the Text: The *Gladiatores Cubicularii*, he obſerves, were thoſe who fought at private Houſes, during Feaſts, &c. Accordingly, *Dion* ſays expreſly, that *Commodus* ſometimes fought at home, and even kill'd ſome Perſon on ſuch a Rencounter; but that in publick he only fought with blunted Weapons.

The *Dimachæ*, or *Dimacheres*, who fought arm'd with two Poniards, or Swords; or with Sword and Dagger. *Lipſ. Saturn.* L. II. c. 13.

The *Eſſedarii*, who fought in Carrs; call'd alſo, in an Inſcription lately diſcover'd at *Lyons*, *Aſſedarii*. *Saturn. Serm.* L. II. c. 13.

The *Fiſcales*, or *Cæſariani*, who belong'd to the Emperor's Company, and who being more robuſt and dexterous than the reſt, were frequently call'd for; and therefore named *Poſtulatitii*. *Saturn.* L. II. c. 16.

The other Kinds were, the *Heptomachi*, *Meridiani*, *Mermillones*, *Ordinarii*, *Provocatores*, *Retiarii*, *Rudiarii*, *Secutores*, *Spectatores*, and *Thraces*: Which ſee deſcribed under their ſeveral Articles MERIDIANI, RETIARII, SECUTORES, &c.

Some Authors, and particularly *Vigenere* on *Livy*, rank the *Obſequentes*, mention'd by *Spartan* in his Life of *Marcus Aurelius*, among the Number of *Gladiators*. *Lipſius* laughs at him, *Saturn.* L. II. c. 16. and with ſome Reaſon: The *Obſequentes* properly were the Troops which that Emperor rais'd among the *Gladiators*, or whom of *Gladiators* he made Soldiers.

*The War of the* GLADIATORS, *Bellum Gladiatorium*, or *Spartacium*, call'd alſo the *Servile War*, was a War which the *Romans* ſuſtained about the Year of their City 680.

*Spartacus*, *Crinus*, and *Oenomaus*, having eſcaped with thirty *Gladiators* more, out of the Place where they had been kept, at *Capua*, gather'd together a Body of Slaves, put themſelves at their Head, render'd themſelves Maſters of all *Campania*, and gain'd ſeveral Victories over the *Roman* Prætors.

At length they were defeated, in the Year 682, at the Extremity of *Italy*, having in vain attempted to paſs over into *Sicily*.

This War proved very formidable to the *Romans*. *Craſſus* was not able to finiſh it: The Great *Pompey* was forc'd to be ſent as General.—

GLADIUS, SWORD; or *Jus* GLADII, *q. d. Right of the Sword*, is uſed in our antient *Latin* Authors, and in the *Norman* Laws, for a ſupreme Juriſdiction.

*Cambden*, in *Britannia*, writes, *Comitatus Flint pertinet ad* Gladium *Ceſtriæ*. And in *Selden*, *Tit.* of *Honour*, p. 640. *Curiam ſuam liberam de omnibus placitis*, &c. *exceptis ad* Gladium *ejus pertinentibus*.

And it is probably from hence, that at the Creation of an Earl, he is *Gladio ſuccinctus*, to ſignify that he had a Juriſdiction over the County. See EARL, COUNT, &c.

GLAND, GLANDULA, in Anatomy, a ſoft, ſpungy, lax kind of Body; ſerving to ſeparate ſome particular Humor from the Maſs of Blood. See BLOOD, and HUMOR.

The Antients took the *Glands* to be nothing more than a kind of *Pillows*, or *Cuſhions*, for the neighbouring Parts to reſt on—Some of them, at length, began to fancy them *Sponges*; to receive and imbibe the ſuperfluous Moiſture of the other Parts.

Later Phyſicians came to aſſign them nobler, and more important Uſes—They conſider'd them as *Ciſterns*, which contain'd proper Ferments, whereby the Blood, upon its mixing therewith, was put into a Fermentation, in the Progreſs whereof it work'd, or threw off certain of its Parts, and ſent them away by their excretory Ducts.

The Moderns, who allow'd them the Organs whereby the vital Fluids are ſeparated for the Uſes of the Body, conſider'd them as *Filtres*, the Pores whereof being all of different Figures, would only admit of ſimilarly figur'd Particles, to paſs thro' them.

But the lateſt Authors rather conceive the *Glands* as *Sieves*, whoſe Perforations being of different Sizes, tho' of the ſame Figure, only ſeparate ſuch Particles whoſe Diameters are leſs than their own.

The *Glands*, to the Eye, appear a ſort of whitiſh, membranous Maſſes, compoſed of an outer Cover, or Integument, within which a vaſcular plexus Matter is contain'd. They are denominated from their Reſemblance in form, to *Acorns*, which the *Latins* call *Glandes*.

By Diſſection, and the Microſcope, they are found to be real Plexus's, or Pelotoons of Veſſels, variouſly wound, and implicated among themſelves. But the modern Anatomiſts, *Malpighi*, *Bellini*, *Wharton*, *Nuck*, *Peyer*, &c. have gone further, and diſcover'd them to be no more than continued Convolutions of the capillary Arteries. See ARTERY.

Their Formation appears to be thus—An Artery arriving at a certain Part, is divided into an infinite Number of exceedingly fine Branches, or Ramifications: Theſe capillary Branches are laid in various Bends and Circumvolutions; and from the Returns thereof, ariſe new Branches, or Veſicles, for Veins; which, a little further, unite, or terminate in ſome larger Branch.

All theſe Ramifications, both Veins and Arteries, are rolled up in a Bundle; making numerous Gyres, and Circumvolutions: And from the various Bends and Angles form'd by both Kinds, ariſe numerous other minute Veſſels, which make the principal and moſt eſſential Part of the *Gland*.

The Blood brought from the heart-ward, by the Artery, into the *glandular* Plexus, purſues all the Turns, and meanders in the arterial Part thereof, till arriving at the venal Part, it is brought back again to the Heart. In the mean time, during its Progreſs thro' the Arterial and Venal Folds, ſome Part of it is abſorbed, or drain'd off, at the Orifices of the Tubules ariſing from the Flexures thereof.

What is thus received into theſe, which we may call the *Secretory Ducts*, is commonly taken up by other Tubules, ſpringing out of them: Theſe, joining together, form a ſingle Canal, call'd the *Excretory Duct*; which, paſſing out of the Body of the *Gland*, carries off the ſecreted Matter into ſome proper Receptacle deſtined to retain, or receive it.

Tho', ſometimes, the Secretory Veſſels themſelves terminate in a Baſon, or Reſervoir; and depoſite their Contents therein.

Such is the general Structure, and Office of the *Glands*; which we ſhall further illuſtrate under the Article SECRETION.

A *Gland*, then, is a Compoſition of divers kinds of Veſſels; *viz.* an *Artery*, and a *Vein*; *Secretory*, and *Excretory Ducts*: To which may be added a *Nerve*, which is found in every *Gland*, diffuſed thro' the whole Subſtance thereof, to furniſh Spirits for the promoting the Secretion; and a *Membrane*, which ſupports the Convolutions of the Vein and Artery, accompanying them thro' all their minuteſt Diviſions; and *Lymphaticks*, which have been diſcover'd in ſeveral *Glands*. See VEIN, ARTERY, NERVE, SECRETORY, EXCRETORY, and LYMPHATIC.

The Secretory Tubes, however, are what we principally conſider as the Organ of the *Gland*. Theſe alone do ſometimes form the greateſt Part of what is called a *Gland*, or *glandulous* Body.

M. *Winſlow* has diſcover'd a kind of *Tomentum*, or Down within their Cavity; which he ſuppoſes to do the Office of a Philtre, and to be that whereby ſuch a certain Humor is ſeparated from the common Maſs of Blood.—His Syſtem will be explained when we come to treat of SECRETION.

The *Down-Veſſel* being the grand Organ of Secretions, its Structure and Application is diverſified according to the different Purpoſes Nature has in view. Sometimes the Liquor filtrated thro' it, trickles out, Drop by Drop, upon a Membrane, to which one Extremity of the Veſſel is faſten'd; as where the Filtration is only intended for moiſtening and lubricating the Part, with that Liquor: In which caſe the Down-Veſſel is both Secretory, and Excretory; which is the moſt ſimple Caſe.—Such are thoſe innumerable *Glands* ſpread thro' the greateſt Part of the Viſcera.—

Sometimes a great Number of theſe Down-Veſſels is ſpread over the inner Surface of a little, membranous Cell, into which they pour their Liquor, which is diſcharged hence at a little Aperture in the Cell: Such are the ſolitary *Glands* of the Inteſtines, which appear like ſo many little ſeparate Grains.

Sometimes a Veſſel is bent, and has only Down in the firſt Part thereof, which alone is Secretory, and the reſt excretory, pouring the Liquor into ſome other common Cavity—Such are the *Glands* that compoſe a Calves Kidney.

The Secretory Veſſels are ſometimes of a very great Length, notwithſtanding that they take up but little room, being wound over themſelves again and again; ſometimes in a ſingle Pelotoon, or Knot, and ſometimes in ſeveral, incloſed in a common Membrane—Whence the Diſtinction of *Glands* into *Conglobate*, and *Conglomerate*.

The *Glands* are of ſeveral Kinds, in reſpect of their Form, Structure, Office, and Uſe: Authors uſually divide them into *Conglobate*, and *Conglomerate*.

*Conglobate*, or *Simple* GLANDS, are thoſe conſiſting of one continuous Maſs, with an uniform Surface—Such are the *Subcutaneous Glands*.

A Conglobate *Gland*, is, more ſtrictly, a little, ſmooth Body, wrap'd up in a fine, double Skin, by which it is ſeparated from all the other Parts; only admitting an Artery and Nerve to paſs in, and a Vein and excretory Duct to go out.—Theſe *Glands* either diſcharge their ſecreted Humor into the Chyle, or venous Blood; or elſe it tranſpires thro' the Pores of the Skir, or the Coats of the looſer Membranes found in moſt Parts of the Body.

Of the Conglobate Kind are the *Glands* in the cortical Part of the Brain, where the animal Spirits are ſuppoſed to be ſecreted. See CORTEX, BRAIN, and SPIRITS.

Such alſo are the *Labial Glands*, and the *Teſtes*. See TESTICLE.

*Conglomerate*, or *Compound* GLAND, is an irregular Aſſemblage of ſeveral ſimple *Glands*, tied together, and wrap'd

wrap'd up under one common Membrane—Such are the *Maxillary Glands*, &c.

The Humors ſecreted in theſe *Glands*, are ſometimes diſcharged at a common excretory Duct, form'd of an Union of the excretory Ducts of all the particular ones; as the *Panchreas* and *Carotides* do. See PANCHREAS and CAROTIDES.

Sometimes, the Ducts uniting form ſeveral Tubes, only communicating with each other by croſs Canals; as in thoſe of the Breaſts. See MAMMÆ.

Some, again, have ſeveral excretory Tubes, without any Communication together; as the *Glandulæ lachrymales*, and *proſtatæ*. See PROSTATÆ, &c.

Others, have their ſeveral excretory Ducts inſerted into a common Canal, which opens at laſt into ſome of the greater Cavities; as the *Salival Glands*, *Inteſtinal Glands*, &c. See SALIVA, INTESTINES, &c.

Laſtly, in others, each *Gland* has its own excretory Duct, thro' which it tranſmits its Liquor to a common Baſon; ſuch are thoſe of the Kidneys. See KIDNEY, PELVIS, &c.

The *Glands* are again divided into *Vaſcular*, and *Veſicular*.

*Vaſcular* GLANDS are only Cluſters of little Veſſels, which uniting together, form the Canal or excretory Duct through which their ſecreted Juice is diſcharged.

*Veſicular* GLANDS are Aſſemblages of Veſiculæ communicating with each other, and all terminating in two or three larger Veſſels; by a Prolongation whereof the excretory Duct is form'd.

The *Glands*, again, are divided into *Adventitious*; and *Perpetual*, or *Natural*.

*Adventitious* GLANDS are thoſe Kernels ariſing occaſionally under the Arm-pits, on the Neck, &c. Such are the *Strumæ*, and the Tumors ſometimes found on the Larynx, and Middle of the Trachea.

*Perpetual*, or *Natural* GLANDS are of two Kinds, *Conglobate*, and *Conglomerate*. See CONGLOBATE, and CONGLOMERATE.

*Lumbal* GLANDS, or GLANDULÆ *Lumbares*, are three *Glands*, thus called by *Bartholine*, as lying on the Loins. See LOINS.

The two largeſt lie upon one another betwixt the deſcending Cava and Aorta, in the Angle made by the Emulgents with the Cava: The third and ſmalleſt ſtands over the former under the Appendices of the Diaphragm. They communicate, and are connected together by ſmall lacteal Veſſels. *Bartholine* had concluded them to ſerve as a common Receptacle of the Chyle; but Dr. *Wharton*'s Opinion is more probable, *viz.* that they ſupply the Place of thoſe larger *Glands* found in the Meſenteries of Brutes.

*Miliary* GLANDS, GLANDULÆ *Miliares*. See MILIARY *Glands*.

*Mucilaginous* GLANDS are a kind of *Glands* firſt deſcribed by Dr. *Havers*. See MUCILAGINOUS *Glands*.

*Mucous* GLANDS, GLANDULÆ *Mucoſæ*; ſee MUCOUS *Glands*.

*Myrtiform* GLANDS, are Contractions of the Hymen, broke by the firſt Act of Venery. See MYRTIFORMES *Glandulæ*; ſee alſo HYMEN.

*Odoriferous* GLANDS, GLANDULÆ *Odoriferæ*, are certain ſmall *Glands* diſcover'd by Dr. *Tyſon*, in that Part of the Penis, where the Præpuce is contiguous to the Balanus. See PRÆPUTIUM.

He gave them this Name from the briſk Scent which their ſeparated Liquor emits. In ſuch Perſons as have the Prepuce longer than ordinary, they are not only more in Number, but larger, and ſeparate a greater Quantity of Juice; which, lodging there, often grows rancid, and corrupts the *Glands*. Theſe *Glands* are very conſpicuous in moſt Quadrupeds, eſpecially Dogs, and Boars.

*Pineal* GLAND, GLANDULA *Pinealis*. See PINEAL *Gland*, and CONARIUM.

*Pituitary* GLAND, GLANDULA *Pituitaria*. See PITUITARY *Gland*.

*Renal* GLANDS, GLANDULÆ *Renales*; call'd alſo *Capſulæ atrabilares*, are two *Glands*, firſt diſcover'd by *Euſtachius*, between the Aorta, and the Kidneys, a little above the emulgent Veſſels; tho' their Situation and Figure is varied: In ſome they are round; in others ſquare, triangular, &c. The right is uſually bigger than the left, and each about the Size of a *Nux Vomica*: They are incloſ'd in Fat.

Their Uſe is not certainly known: 'Tis ſuppos'd to be to ſeparate a Liquor from the Arterial Blood, before it go to the Kidneys.—See ATRABILARES.

GLANDERS, a filthy Diſeaſe in a Horſe, conſiſting in a running of corrupt Matter from the Noſe, of a different Colour, according to the Degree of the Malignity, or as the Infection has been of ſhorter or longer Continuance; being white, yellow, green, or black.—

Authors aſcribe it to various Cauſes; ſome to Infection; ſome, to a Diſorder of the Lungs; others, to the Spleen; ſome, to the Liver; and others, to the Brain—After it has been of ſo long ſtanding, that the Matter is become of a blackiſh Colour, which is uſually in its laſt Stage, they ſuppoſe it to come from the Spine; and hence call it the *Mourning of the Chine*.

Kernels and Knots are uſually felt under the Caul in this Diſorder: And as theſe grow bigger and more inflamed, ſo the *Glanders* increaſe more under the Horſe's Body.

A late Author is of opinion, that the chief Seat of this Diſtemper is in a little, ſoft, ſpungy Fleſh, which is eaſily dilated by the leaſt Influx of the Blood: And thence it is that ſome Horſes have a running at the Noſe from a very ſlight Cold; but when this ſpungy Subſtance happens to be very much relaxed, the Running is increaſed in Proportion.

GLANDULA, in Anatomy, the ſame as *Gland*. See GLAND.

The Word is a Diminutive of the Latin *Glans*, Acorn; and is here us'd on account of ſome external Reſemblance between the Glands of the Body, and the Fruit of the Oak.

GLANDULÆ *Sebaceæ*, are a Number of *Glands* under the Skin of the Auricle of the Ear, firſt diſcover'd by *Valſalva*, and thus denominated, by reaſon they ſeparate a greaſy Matter, like *Sebum*, or Tallow. See AURICLE.

This *Sebum*, he aſſerts, being carried to the Surface of the Skin, turns into a ſcaly Subſtance, not unlike that of Bran.

GLANDULA *Guidonis*, among Surgeons, is a Tumor reſembling a *Gland*, ſoft, ſingle, moveable, without Roots, and ſeparated from the adjacent Parts.—

GLANDULE, in Anatomy, &c. a Diminutive of the Word *Gland*; ſignifying a little *Gland*.

Thus, the *Amygdalæ*, or Almonds of the Ears are called *Glandules*. See TONSIL.

GLANDULOUS, or GLANDULAR, ſomething compoſed of *Glands*; or that abounds with *Glands*. See GLAND.

Thus, the Breaſts are ſaid to be *Glandulous* Bodies. See BREASTS.

The Cortical Subſtance of the Brain is commonly reputed to be *glandulous*: Tho' the Excellent *Ruyſch*, from the Diſcoveries made by his admirable Injections, holds that there is no ſuch thing therein. See BRAIN.

The Antients diſtinguiſh'd a particular kind of Fleſh, which they call'd *Caro glanduloſa*, or *glandulous* Fleſh. See FLESH.

GLANDULOUS *Body*, GLANDULOSUM *Corpus*, the ſame with *Proſtata*. See PROSTATA.

GLANS, *Acorn*, in Natural Hiſtory, a Fruit contain'd within a ſmooth, but hard Bark, including a ſingle Seed; its Hind-part being cover'd with a kind of Cup, and the Fore-part bare. See FRUIT, and SEED; ſee alſo TIMBER, &c.

GLANS, in Anatomy, is the Tip, or Button of the Penis; or that Part cover'd with the Præpuce; call'd alſo *Balanus*. See BALANUS, and PENIS.

The *Glans* is only a Dilatation of the Extremity of the ſpongeous Subſtance of the Urethra, bunch'd and turn'd back on the two conical Tips of the *Corpora cavernoſa*, which terminate therein. See URETHRA, and CAVERNOSA *Corpora*.

The Extremity of the Præpuce is apt to grow ſo ſtraight in old Men, that it cannot bear the *Glans*; perhaps thro' the Defect of frequent Erections. See PRÆPUCE; ſee alſo ERECTION.

GLANS is alſo uſed for the Tip, or Extremity of the Clitoris, from its Reſemblance both in Form and Uſe, to that of the Penis. See CLITORIS.

The principal Difference conſiſts in this, that it is not perforated: This *Glans* is alſo cover'd with a Præputium, form'd of the inner Membrane of the Labia. See PRÆPUTIUM.

GLASS,

GLASS, *Vitrum*, a tranſparent, brittle, factitious Body, produc'd of Salt and Sand, by the Action of Fire. See VITRIFICATION.

The Word *Glaſs* is form'd of the Latin *Glaſtum*, a Plant call'd by the Greeks *Iſatis*, by others, *Aogigneme*, by the *Romans*, frequently, *Aroſion*, ſometimes *Vitrum*, by the antient Britains, *Guadum*, and the Engliſh, *Woad*.

We find frequent Mention of this Plant in antient Writers, particularly *Cæſar*, *Vitruvius*, *Pliny*, &c. who relate, that the antient *Britains* painted, or died their Bodies with *Glaſs*, *Glaſtum*, *Guadum*, *Vitrum*, &c. *i. e.* with the *Blue* Colour procured from this Plant.

And hence, the factitious Matter we are ſpeaking of, came to be call'd *Glaſs*; as having always ſomewhat of this Blueiſhneſs in it. See WOAD.

The Chymiſts hold that there is no Body but may be *vitrified*, *i. e.* converted into *Glaſs*—By intenſe Heat even Gold it ſelf gives way to the Sun's Rays collected in a Burning-Glaſs, and becomes *Glaſs*. See GOLD, and BURNING-*Glaſs*.

Add, that as *Glaſs* is the Effect, or Fruit of Fire, ſo 'tis the laſt Effect: All the Chymiſts Art, and all the Force of Fire not being able to carry the Change of any natural Body beyond its Vitrification. Whence Dr. *Merret* mentions it as a merry Saying of a very great Artiſt in the Buſineſs of *Glaſs*, That their Profeſſion would be the laſt in the World: For that when God ſhould conſume the Univerſe with Fire, all things therein ſhould be turn'd to *Glaſs*. See VITRIFICATION.

### *Nature, Character, and Properties of* GLASS.

Naturaliſts are divided, in what Claſs of Bodies to rank *Glaſs*—*Agricola* makes it a concrete *Juice*: *Belvacenſis*, a *Stone*: *Fallopius* ranks it among the Media *mineralia*; and the Workmen, when in Fuſion, call it *Metal*. But Dr. *Merret* with Reaſon ſets aſide all theſe Opinions, from this Conſideration, that all the forementioned Bodies are natural Concretes; whereas *Glaſs* is a Compound made by Art, and never found in the Earth, as the others are.

*Fallopius*, indeed, contends, that *Glaſs* is no more artificial than a Metal; and that they are both equally extracted, or educed from other Bodies: The one from Sand; the other from its Ore.—He adds, that tho' Aſhes be added to Sand, for the making of *Glaſs*, yet it is falſe that they contribute to the Compoſition of *Glaſs*; their Uſe, according to him, being only for the better extracting of the *Glaſs* from the mineral Stone.

This, Dr. *Merret* eaſily confutes: For if *Glaſs* were extracted from the Stones, or Sand only, the Weight of the Metal muſt be much leſs than that of the Stones alone; whereas, it is much greater, an hundred Weight of Sand, ſufficing for 150 of *Glaſs*.

In effect, the Aſhes contribute a deal of Salt to the Compoſition of *Glaſs*—Accordingly, in Pieces of old *Glaſs*, one may ſometimes pick out Grains of Salt, eaſily diſcoverable to the Taſte; beſide that the fineſt *Glaſs*, ſtanding long in a ſubterraneous Place, will moulder or reſolve into its firſt Ingredients, Salt and Sand, by the Decay of the Union thereof. Whence it appears that the Salt remains in the *Glaſs*, *in Specie*: To which may be added that Experiment of *Van Helmont*. "Melt *Glaſs*-Duſt with Sandever, and "ſet them in a moiſt Place; and the *Glaſs* will reſolve into "Water. Pour on *Aqua regia*, enough to ſaturate the "Sandever; and the Sand will precipitate to the Bottom "in the ſame Quantity, and Weight, as was firſt uſed." *Helm. Cap. De Terra.*

Here, then, is a true Analyſis of *Glaſs*; or a Solution into its firſt Principles, or Ingredients: The Salt being imbibed by the Sandever, and *Aqua Regia*. *Merret. in Ant. Neri De Art. Vitrar.*

The learned, and curious Author juſt mentioned, gives us the following Characters, or Properties of *Glaſs*; whereby it is diſtinguiſh'd from all other Bodies; *viz.* 1° That it is an *Artificial Concrete* of Salt, and Sand, or Stones: 2° *Fuſible*, by a ſtrong Fire. 3° When fuſed, *tenacious*, and coherent. 4° It does not waſte, or *conſume* in the Fire. 5° When melted, it *cleaves* to Iron. 6° *Ductile*, when red hot, and faſhionable into any Form; but not malleable: And capable of being *blown* into a Hollowneſs; which no Mineral is. 7° *Frangible*, when thin, without annealing. 8° *Friable*, when cold. 9° Always *diaphanous*, whether hot, or cold. 10° *Flexible*, and *Elaſtic*. 11° *Diſſoluble by Cold* and *Moiſture*. 12° Only capable of being *graven*, or *cut with Diamond*, and Emery. 13° Receives any *Colour*, or *Dye*, both externally, and internally. 14° Not diſſoluble by *Aqua fortis*, *Aqua regia*, or *Mercury*. 15° Neither *Acid Juices*, nor any other Matter *extract either Colour*, *Taſte*, nor any other Quality from it. 16° It admits of *poliſhing*. 17° *Neither loſes of Weight*, *nor Subſtance* by the longeſt, and moſt frequent Uſe. 18° Gives *Fuſion to other Metals*, and ſoftens them. 19° The moſt *plyable thing in the World*, and that which beſt retains the Faſhion given it. 20° Not *capable of being calcined*. 21° An open *Glaſs*, fill'd with Water in the Summer-time, will *gather Drops of Water* on the Out-ſide ſo far as the Water on the Inſide reaches; and a Man's Breath blown upon it will manifeſtly moiſten it. 22° Little Glaſs Balls fill'd with Water, Mercury, or other Liquor, and thrown into the Fire; as alſo Drops of Green *Glaſs* broken, *fly aſunder* with a loud Noiſe. 23° Neither Wine, Beer, nor any other *Liquor will make it muſty*, nor *change its Colour*, nor *ruſt it*. 24° It may be *cemented* as Stones, and Metals. 25° A Drinking *Glaſs*, partly fill'd with Water, and rubb'd on the Brim with a wet Finger, *yields muſical Notes*, higher, or lower, as the *Glaſs* is more or leſs full, and makes the Liquor friſk and leap.—

*For the Flexibility of* GLASS, ſee further under FLEXIBILITY *of Glaſs*.

*For the Malleability of* GLASS, ſee MALLEABILITY, &c.

### *Hiſtory, and Antiquity of* GLASS.

*De Neri* will have *Glaſs* as antient as *Job*: For that Writer, *c. XXVIII. v.* 17. ſpeaking of Wiſdom, ſays, *Gold and Glaſs ſhall not be equall'd to it.*

This, we are to obſerve, is the Reading of the *Septuagint*, Vulgate *Latin*, St. *Jerom*, *Pineda*, &c. For in the *Engliſh* Verſion, inſtead of *Glaſs*, we read *Cryſtal*; and the ſame is done in the *Chaldee*, *Arias Montanus*, and the King of *Spain*'s Edition: In other Verſions, &c. it is read a *Stone*; in others, a *Beryl*: In the *Italian*, *Spaniſh*, *French*, *High* and *Low Dutch*, &c. a *Diamond*; in others, a *Carbuncle*; and in the *Thargum*, a *Looking Glaſs*.

In effect, the Original Word is *Zechuchih*, from the Root *Zacac*, to purify, cleanſe, ſhine, be white, tranſparent: And the ſame Word, *Exod. XXX.* 34. is applied to *Frankincenſe*, and render'd in the Septuagint, *pellucid*.—Hence the Reaſon of ſo many different Rendrings: For the Word ſignifying *beautiful*, and *tranſparent* in the general, the Tranſlators were at liberty to apply it to whatever was valuable and tranſparent.

Moſt Authors will have *Ariſtophanes* to be the firſt Author who mentions *Glaſs*: That Poet, in his Comedy call'd *the Clouds*, *Scen. I. Act* 2. uſes the Word *Hyalus*, ὕαλος, which is now ordinarily render'd *Glaſs*. He there introduces *Sthrepſiades*, teaching *Socrates* a new way to pay old Debts, *viz.* "by placing a fair tranſparent Stone ſold by the Druggiſts, "from which Fire is ſtruck, between the Sun and the Writ-"ing; and ſo melting away the Letters thereof." This Stone *Socrates* calls ὕαλος; which the *Scholiaſt* on *Ariſtophanes* derives from ὗειν, to *rain*, from the Likeneſs it bears to Ice, which is Rain, or Water congeal'd; tho' it muſt be own'd the Word ὕαλος is ambiguous, and ſignifies Cryſtal as well as *Glaſs*: And *Gorræus* relates that they had a kind of yellow Amber, tranſparent as *Glaſs*, call'd by ſome, ὕαλος.

*Ariſtotle* has two Problems upon *Glaſs*; the firſt, Why we ſee through it? The ſecond, Why it cannot be beaten? If theſe Problems be *Ariſtotle*'s, which the Learned doubt very much; this would probably be the earlieſt Piece of Antiquity of *Glaſs*: But the firſt Author, who makes unqueſtion'd Mention of this Matter, is *Alexander Aphrodiſæus*, who uſes it in a Simile: "As the Floridneſs of a Colour is ſeen thro' "*Glaſs*," &c.

After him the Word occurs commonly enough: *Lucian* mentions large Drinking *Glaſſes*; and *Plutarch*, in his *Sympoſiacon*, ſays that the Fire of *Tamariſk* Wood is fitteſt for the making of *Glaſs*.

Among the *Latin* Writers, *Lucretius* is the firſt that takes notice of *Glaſs*. —*Niſi recta foramina tranant*—*Qualia ſunt Vitri.*—

Dr. *Merret*, however, adds, that *Glaſs* could not be unknown to the Antients; but that it muſt needs be as antient as Pottery it ſelf, or the Art of making Bricks: For ſcarcely can a Kiln of Bricks be burnt; or a Batch of Pottery Ware be made, but ſome of the Bricks, and Ware, will be at leaſt ſuperficially turn'd to *Glaſs*: And therefore, without doubt it was known at the Building of *Babel*.

Hence, *Ferrant Imperatus*, *lib.* 25. *c.* 7. "*Glaſs*, like the "artificial Kind, is found under Ground, in Places where "great Fires have been.—Other *Glaſſes* are found in round "Clods, like Fireſtone, ſome brittle, others firm, &c. This "Foſſil *Glaſs* is wrought by the *Americans*, and uſed in-"ſtead of Iron." *lib. XXV. c.* 7. And no doubt, but Vitrifications were more common in the antient Bricks than ours: as they temper'd their Earth two Years together, and burnt them better. See BRICK.

*Pliny* relates the manner of the Diſcovery of *Glaſs*—It was found, according to that Author, by accident, in *Syria*, at the Mouth of the River *Belus*, by certain Merchants driven thither by the Fortune of the Sea. Being obliged to live there, and dreſs their Victuals, by making a Fire on the Ground; and there being Store of the Plant Kali upon the Spot; this Herb being burnt to Aſhes, and the Sand or

Stones of the Place, accidentally mix'd with it, a Vitrification was undeſignedly made. From whence the Hint was taken, and eaſily improved.

Indeed, how old ſoever *Glaſs* may be; the Art of making, and working it, appears of no great Antiquity—The firſt Place mention'd for the making hereof, is *Sidon* in *Syria*, which was famous for *Glaſs* and *Glaſs-houſes*, as obſerv'd by *Pliny*, *L. XXXVI. c. 26.*—The firſt Time we hear of *Glaſs* made among the *Romans*, was in the Time of *Tiberius*; when *Pliny* relates that an Artiſt was put to death for making *Glaſs* Malleable. See MALLEABILITY.—

*Venice*, for many Years, excell'd all *Europe* for the Fineneſs of its *Glaſſes*. The great *Glaſs-works* were at *Muran*, or *Mouran*, a Village near the City; which furniſh'd all *Europe* with the fineſt and largeſt *Glaſſes*. But within this fifty Years the *French* and *Engliſh*, have not only come up to, but even ſurpaſs'd the *Venetians*; ſo that we are now no longer ſupplied from abroad.

The *French* made a conſiderable Improvement in the Art of *Glaſs*, by the Invention of a Method to caſt very large Plates; till then unknown; and ſcarce practic'd yet, by any but themſelves, and the *Engliſh*.

That Court applied itſelf with a laudable Induſtry to cultivate and improve the *Glaſs* Manufacture.—A Company of Glaſs-men was eſtabliſh'd by Letters Patents; and it was provided by an Arret, not only that the working in *Glaſs* ſhould not derogate any thing from Nobility, but even, that none but Nobles ſhould be allowed to work therein.

### *Ingredients of* GLASS, *with the Method of preparing them.*

The Materials uſed in the Compoſition of *Glaſs*, we have obſerv'd, are *Salt*; and *Sand*, or Stone. See SALT, and SAND.

The Salt is of the fix'd Kind; ſuch as will not evaporate with the moſt intenſe Heat.—The Sand, or Stone muſt be ſuch as will melt eaſily: This is what gives Firmneſs and Conſiſtence to the *Glaſs*.

1° This Salt is procured chiefly from a kind of Aſhes, call'd *Polverine*, or *Rochetta*, brought from the *Levant*, and particularly from *Alexandria* and *Tripoli*—The Aſhes are thoſe of a Vegetable, frequent in the Country, commonly call'd *Kali*; ſometimes *Kalli*; *Kallu*; *Cali*; by *Geſner*, *Alkali*; by *Lobel*, *Soda*; by *Dodonæus*, *Salſola*; and by *Camer. Cordus*, *Fuchſius*, &c. *Anthyllis*. Dr. *Merret* calls it Engliſh *Salt-wurt*, from its Saline Taſte; and *Glaſs-weed*, from the Uſe made of its Aſhes in making of *Glaſs*. See KALI and POLVERINE.

*Bauhin* mentions ten Species of this Plant; whereof there are four uſed by the *Alexandrians*, &c. for the making of *Polverine*, and Soap; *viz. Kali geniculatum*; *Kali ſecunda ſpecies*; *Kali Ægyptiacum*; and *Kali Spinoſum*.

The firſt and laſt, our own Coaſts affords, where they are call'd by the People *Frog-graſs*, and *Sea-graſs*; but they are of no uſe for making of *Glaſs*: Being laid on a hot Iron, they fly off almoſt wholly in Fumes, leaving no Aſhes at all; whereas the Kalies brought from the *Levant*, applied on the ſame Iron, are ſoon converted almoſt wholly into *Polverine*, *i. e.* very ſaline Aſhes, of a dark Colour. See SOAP.

To get the Salt from this *Polverine*, they pulverize, and ſift it very fine; then boil it in a Braſs Copper, with fair Water and Tartar, till a third Part of the Water is conſumed; taking care to ſtir it from time to time. Then, filling up the Copper with freſh Water, they boil it a ſecond time, till half be conſumed: This done, they have a Lee impregnated with Salt. To get the Salt from the Lees, they boil them, till the Salt ſhoots at the Top; which they ſcum off as it riſes. An hundred Pounds of Aſhes, this way, uſually yields eighty or ninety of Salt.

When the Salt is dry, they beat it groſly, and put it into a Furnace, to dry it further with a gentle Heat. When ſufficiently dry, they pound and ſift it very fine, and lay it by to make *Frit*. See FRIT.

*Note.* Inſtead of the Aſhes of the Plant *Kali*, thoſe of *Fern* will alſo yield a Salt, which makes excellent *Glaſs*; nothing inferior to that of Polverine. The Method of Preparation is the ſame. Add, that the Aſhes of the Cods, and Stalks of Beans; as alſo thoſe of Coleworts, Bramble Buſh, Millet Stalks, Ruſhes, Fern Ruſhes, and many other Plants may be us'd for the like Purpoſe, and after the ſame manner.

2° For *Stone*, the ſecond Ingredient in *Glaſs*.—The beſt, we have obſerv'd, is that which will melt, is white, and tranſparent. This is found principally in *Italy*, being a ſort of Marble, call'd *Tarſo*: The next is *Quocoli*, or *Cuogele*, a ſort of Pebbles found at the Bottoms of Rivers.

Indeed, nothing makes finer and clearer *Glaſs* than Flint, but the Charge of preparing it, deters the Glaſs-men from uſing it. The Preparation neceſſary for Stone, is to calcine, powder, and fierce it.

*Ant. Neri* obſerves, that all white, tranſparent Stones, which will not burn to Lime, are fit to make *Glaſs*; and that all Stones which will ſtrike Fire with Steel, are capable of being employ'd in making of *Glaſs*. But this latter Rule, Dr. *Merret* obſerves, does not hold univerſally.

Where proper Stone cannot be had, *Sand* is us'd: The beſt for the purpoſe is that which is white and ſmall; for green *Glaſs*, that which is harder, and more gritty: It is to be well waſh'd; which is all the Preparation it needs—Our Glaſs-houſes are furniſh'd with white Sand for their Cryſtal *Glaſſes* from *Maidſtone*; and with the coarſer, for green *Glaſs*, from *Maidſtone*.

Some mention a third Ingredient in *Glaſs*, *viz. Manganeſe*, or *Sydera*, a kind of *Pſeudo* Loadſtone, dug up in *Germany*, *Italy*, and even in *Mendip* Hills in *Somerſetſhire*. But the Proportion hereof to the reſt, is very inconſiderable; beſide, that it is not uſed in all *Glaſs*. Its Office is to purge off the natural greeniſh Colour, and give it ſome other Tincture requir'd.

### *Method of making White, and Cryſtal* GLASS.

There are three ſorts of Furnaces us'd in the *Glaſs-works*: One to prepare the *Frit*, call'd the *Calcar*: A ſecond to work the *Glaſs*; and a third, call'd the *Leer*, to anneal it. See them all deſcribed under the Article FURNACE.

To make Cryſtal *Glaſs*, take of the whiteſt *Tarſo* pounded ſmall, and ſierced as fine as Flower, two hundred Pounds; and Salt of *Polverine*, an hundred and thirty Pounds. Mix them together, and put them into the Furnace call'd *Calcar*, firſt heating it. For an Hour keep a moderate Fire, and keep ſtirring the Materials, that they may incorporate and calcine together. Then increaſe the Fire for five Hours: After which take out the Matter; which being now ſufficiently calcined, is called *Frit*.—From the Calcar put the Frit in a dry Place, and cover it up from the Duſt, for three or four Months. See FRIT.

Now, *to make* the *Glaſs*, or Cryſtal: Take of this Cryſtal Frit, call'd alſo *Bollito*; ſet it in Pots in the Furnace, adding to it a due Quantity of Manganeſe: When the two are fuſed, caſt the Fluor into fair Water, to clear it of the Salt, call'd *Sandever*; which would otherwiſe make the Cryſtal obſcure, and cloudy. This Lotion muſt be repeated again, and again, as oft as needful, till the Cryſtal be fully purged. Then ſet it to boil four, five, or ſix Days; which done, ſee whether it have Manganeſe enough; and if it be yet greeniſh, add more Manganeſe, at Diſcretion, by little and little at a time; taking care not to overdoſe it, by reaſon the Manganeſe inclines it to a blackiſh Hue. Then let the Metal clarify, till it become of a clear, and ſhining Colour: Which done, it is fit to be blown, or form'd into Veſſels at pleaſure.

There are three principal Kinds of *Glaſſes*, diſtinguiſh'd by the Form, or manner of working them; *viz. Round Glaſs*, as theſe of our Veſſels, Phials, Drinking *Glaſſes*, &c. *Table* or *Window Glaſs*, of which there are divers Kinds, *viz. Crown Glaſs*, *Jealous Glaſs*, &c. and *Plate Glaſs*, or *Looking Glaſs*.

### *Method of Working or Blowing Round* GLASS.

The Working Furnace, we have obſerv'd, is round, and has ſix *Boccas*, or Apertures: At one of theſe, call'd the *great Bocca*, the Furnace is heated, and the Pots of Frit ſet in the Furnace: Two other, ſmaller Holes, call'd *Boccacellas*, ſerve to lade or take out the melted Metal, at the End of an Iron, to work the *Glaſs*. At the other Holes, they put in Pots of other fuſible Ingredients, to be prepared, and at laſt emptied into the Lading Pot.

There are ſix Pots in each Furnace, all made of Tobacco-Pipe Clay, proper to ſuſtain not only the Heat of the Fire, but alſo the Effect of the Polverine, which penetrates every thing elſe. There are only two of theſe Pots that work: The reſt ſerve to prepare the Matter for them. The Fire of the Furnace is made and kept up with dry, hard Wood, caſt in, without Intermiſſion, at the ſix Apertures. This they never omit, not even on the moſt ſolemn Feſtivals.

When the Matter contain'd in the two Pots is ſufficiently vitrified, they proceed to blow, or faſhion it: The Proceſs whereof we ſhall here deliver from *Agricola*, Dr. *Merret*, the French *Diction. de Commerce*, &c,

The Operator, or *Servitor* (the Metal being now ſufficiently refined) takes his Blowing Iron, which is a hollow Tube, about two Foot and a half long; and dipping it in the Melting-pot, there turns it about: The Metal ſticks to the Iron, like ſome glutinous, or clammy Juice, much like but more firmly, than Turpentine, or *Venice* Treacle.

For each *Glaſs* he dips four times, and at each Dip rolls the End of his Inſtrument, with the *Glaſs* thereon, on a piece of Iron, over which is a Veſſel of Water; the Coolneſs whereof helps to conſolidate the *Glaſs* more readily, and diſpoſes it the better to bind with the next to be taken out of the Pot.

After

After they have dipp'd the fourth time, and there is now Matter enough on the Inſtrument, the Operator begins to blow gently thro' the Iron; by which he raiſes or lenghtens it nearly a Foot; much as we do by blowing in a Bladder, or Globe: And to give it a Poliſh, he rolls it to and fro on a Stone, or Marble.

This done, he blows a ſecond time, and thus forms the Bunch, or Belly of the *Glaſs*. The Matter by this ſecond Blaſt aſſumes the Figure of a Gourd, or Callebaſs, eighteen or twenty Inches in Diameter. As often as the Operator blows into the Iron (which muſt be very often) he removes it haſtily from his Mouth to his Cheek, leſt he ſhould draw the Flame into his Mouth, when he re-applies it to the Iron.

The Operator whirls his Iron many times round his Head, to lengthen and cool the *Glaſs*; ſometimes the *Glaſs* thus blown round, is return'd to the Fire, where it flattens a little of itſelf: When flatted, it is taken out, and cooled; and if needful for the Deſign, the Workman flats its Bottom, by preſſing it on the Marble; or moulds it in the *Stamp-irons*: And thus delivers it to the Maſter Workman, to break off the Collet.

The Collet, or Neck, is the narrow Part which clove to the Iron: To ſet the *Glaſs* at liberty, they lay a Drop of cold Water on the Collet; which by its Coldneſs, cuts, or cracks about a Quarter of an Inch: After which, giving it a ſlight Blow, the Fracture is communicated all around the Collet. The waſt Piece to be thrown by to make green *Glaſs*.

This done, they dip an Iron Rod, or *Ponteglo* in the Melting Pots, and with the Matter that ſticks thereto, they apply and faſten it to the Bottom of the Veſſel, oppoſite to the Collet.—The Veſſel thus ſuſtained by the Iron Rod, is carried to the great Bocca to be heated, and ſcalded; and while another Perſon takes care thereof, the former Operator reſts and prepares himſelf for the *Branching*.

To *branch*, or make the Bowl, they thruſt in an Iron Inſtrument, call'd *Paſſago*; and the Aperture, open'd thereby, they further augment, and widen with the *Procello*: In turning this Inſtrument about, to form the Bowl, the Edge becomes thickned; the *Glaſs* being, as it were, doubled in that Part: Whence the Hem obſerved on the Circumference of our *Glaſſes*.—What is ſuperfluous, they cut off with the Shears.

The Veſſel thus open'd, is return'd to the great Bocca; where, being ſufficiently heated a ſecond time, the Workman gives the Bowl its finiſhing, by turning it about with a circular Motion; which it increaſes, in proportion as the Bowl opens, and enlarges by means of the Heat and Agitation.

The *Glaſs* thus finiſh'd, they carry it from the Bocca, ſtill turning it round, to a kind of earthen Bench, cover'd with Brands, or Coals extinguiſh'd: Here they let it cool a little, and come to its Conſiſtence, having firſt detach'd it from the Iron Rod, by a Stroak or two with the Hand.

Thus, with *blowing*, *preſſing*, *ſcalding*, *amplifying*, and *cutting*, the *Glaſs* is framed into the Shape preconceived in the Workman's Mind. If need be, he proceeds to put on a *Foot* and *Handle*; and with the *Spici* puts on *Rigarines*, and *Marblings*.

When the Maſter has finiſh'd a Number of them, another Servitor takes them with an Iron Fork, and ſpeedily places them in the Tower, or *Leer* to anneal and harden. See FURNACE, ANNEALING, *&c.*

What has been here ſaid of White, or Cryſtal *Glaſs*, holds equally of common, or Green *Glaſs*; the working being the ſame in all; and the Difference only in the Salt, or Polverine made uſe of.

So many Maſters as there are, ſo many Pots, at the leaſt, and ſo many Bocca's there muſt be; each Man having his proper Station; where, ſays Dr. *Merret*, they receive thoſe ſcorching Heats ſallying directly into their Faces, Mouths, and Lungs; whence they are forc'd to work in their Shirts, like the *Cyclopes*, and *Nudi-membra Pyrracmones*, with a Straw broad-brimm'd Hat on their Heads, to defend their Eyes from the exceſſive Heat and Light.—They ſit in large, wide, wooden Chairs, with two long Elbows, to which their Inſtruments are hung. They work ſix Hours at a time, meaſur'd by a ſingle Glaſs; after which they are relieved by others, for the like Time: So that the Furnaces are never idle.

### *Method of working, or blowing* WINDOW, or TABLE GLASS.

The Method of making Crown Window *Glaſs*, now practis'd in *England*, is ſaid to have been borrowed from the *French*.—An *Engliſh* Glaſs-maker went over, to work in *France*, on purpoſe to get into the Secret; which, when he had attain'd to, he return'd, and ſet up a Glaſs-work, wherein he far outdid the *French*, his Teachers.

This *Glaſs* is blown much after the manner of Looking *Glaſs*. Some Writers, from wrong Intelligence, have ſaid that it was run, or caſt in Sand: But the real Proceſs is as follows.—

The Furnace, Melting-pots, Materials, and Fire are the ſame for Window, or Table *Glaſs*, as for Round *Glaſs*; and the Difference in the Operation only commences after the Servitor has dip'd his Blowing-iron the fourth time in the melted Metal.

The *Glaſs*, then, being in this Condition, they blow it; but inſtead of rounding, or forming it into a Bunch; the particular Motion the Workman gives it in the directing and managing the Wind, and the way of rolling it on the Iron; make it extend in length two or three Foot, and form a Cylinder, which at firſt is but two Inches in Diameter; but which, by being recommitted to the Fire, and blown a-freſh when taken out, becomes of the Extent required for the Table of *Glaſs* to be form'd. With this Circumſtance however, that the Side which is faſten'd to the Iron, goes gradually diminiſhing, and ends in a kind of Cone, or Pyramid.

To render the two Ends nearly of the ſame Diameter, after adding a little *Glaſs* to that oppoſite to the Iron, they draw it out with a Pair of Iron Pinchers. Then they incide, or cut off the ſame End with a little Water; and carrying the Cylinder back to the Bocca, they incide it likewiſe with Water in two other Places; one, eight, or ten Inches from the Iron; and the other, the whole Length.

The *Glaſs* Cylinder thus abridg'd of both its Extremities, is, next, heated on a kind of earthen Table, ſomewhat rais'd in the Middle, in order to promote its Opening at the Place incided longitudinally. The Workman, here, makes uſe of an Iron, wherewith he alternately lowers and raiſes the two Sides, or Halves of the Cylinder, which now begin to open, and unfold like a Sheet of Paper, and at length grow perfectly flat.—The Table of *Glaſs* is now in its laſt Perfection, and needs nothing farther but to be heated over again. When taken out, they lay it on a Table of Copper; whence, after it has cool'd and come to its Conſiſtence, they carry it on Forks to the Tower of the Furnace, where they leave it to anneal for 24 Hours.

The Number of Tables anneal'd at a time, which ſometimes amount to an hundred, with the perpendicular Situation they are ſet in, occaſion'd, antiently, that thoſe ſet in firſt, ſuſtaining in ſome meaſure, the Preſſure of all the laſt, were bent; and thus render'd inconvenient for Uſe: But this Inconvenience is now remedied, by ſeparating them into Tens, with an Iron Shiver; which diminiſhing the Weight, by dividing it, keeps the Tables as flat, and even as they were put in.

### *Kinds of* Table, *or* Window GLASS.

There are divers Sorts of this *Glaſs*, made in divers Places, for the uſe of Building: Thoſe moſt known among us, are given us, by the Author of the *Builders* Dictionary, as follows:

*Crown*-GLASS, of which, ſays that Author, there are two Kinds; diſtinguiſh'd by the Places where they are wrought, *viz.* 1° *Ratcliff Crown Glaſs*, which is the beſt and cleareſt; and was firſt made at the Bear Garden, on the Bank-ſide, *Southwark*; but ſince at *Ratcliff*: Of this there are 24 *Tables* to the *Caſe*, the Tables being of a circular Form, about three Foot ſix Inches in Diameter. See TABLE, and CASE.

2° *Lambeth Crown Glaſs*, which is of a darker Colour than the former, and more inclining to green.

*French* GLASS, alſo call'd *Normandy Glaſs*, and formerly *Lorrain Glaſs*, becauſe made in thoſe Provinces. At preſent it is made wholly in the *Nine Glaſs Works*; five whereof are in the Foreſt of *Lyons*; four in the County of *Eu*; the laſt, at *Beaumont*, near *Rouen*.—It is of a thinner Kind than our Crown *Glaſs*; and when laid on a Piece of white Paper, appears of a dirtyiſh green Colour. There are but 25 Tables to the Caſe.

*German* GLASS, is of two Kinds, White, and Green: The firſt is of a whitiſh Colour, but ſubject to thoſe ſmall, curved Streaks, obſerved in our *New-Caſtle Glaſs*; tho' free from the Spots and Blemiſhes thereof. The *Green*, beſide its Colour, is liable to the ſame Streaks as the White: But both of them are ſtraighter, and leſs warped than our *New-Caſtle Glaſs*.—

*Dutch* GLASS, is not much unlike our *New-Caſtle Glaſs*, either in Colour, or Price. 'Tis frequently much warped, like that, and the Tables are but ſmall.—

*New-Caſtle* GLASS, is that moſt uſed in *England*. 'Tis of an Aſh Colour, and ſubject to Specks, Streaks, and other Blemiſhes; and beſide is frequently warp'd. *Leybourn* ſays, there are 45 Tables to the Caſe, each containing five ſuperficial Feet: Some ſay there are but 35 Tables, and ſix Foot in each Table.

### *Method of working* PLATE-*or* LOOKING GLASS.

The Materials whereof *Looking Glaſs* is made, are much the ſame as thoſe of other Works of *Glaſs*; *viz.* an Alkali Salt, and Sand.

The

The Salt, however, it is to be obſerv'd, ſhould not be that extracted from *Polverine*, or the Aſhes of the *Syrian* Kali; but that from *Barillia*, or the Aſhes of a Plant of that Name, of the Genus of Kalies, but growing about *Alicant* in *Spain*.—'Tis very rare that we can have the Barillia pure; the *Spaniards*, in burning the Herb, make a Practice of mixing another Herb along with it, which alters its Quality; or of adding Sand to it, to increaſe the Weight: Which is eaſily diſcover'd, if the Addition be only made after the boiling of the Aſhes, but next to impoſſible, if made in the boiling. It is from this Adulteration that thoſe Threads and other Defects in *Plate Glaſs* ariſe.—To prepare the Salt, they clean it well of all foreign Matters; pound or grind it with a kind of Mill, and ſift it pretty fine.

As to the Sand, 'tis to be ſifted, and waſh'd, till ſuch time as the Water come off very clear; and when it is well dried again, they mix it with the Salt, paſſing the Mixture thro' another Sieve. This done, they lay them in the annealing Furnace for about two Hours; in which time the Matter becomes very light, and white: In which State they are called *Frit*, or *Fritta*, and are to be laid up in a dry, clean Place, to give them time to incorporate, for at leaſt a Year. See FRIT.

When they would employ this *Frit*, they lay it for ſome Hours in the Furnace, adding to ſome, the Fragments, or Shards of old, and ill made *Glaſſes*; taking care firſt to calcine the Shards, by heating them red hot in the Furnace, and thus caſting them into cold Water. To the Mixture muſt likewiſe be added Manganeſe, to promote the Fuſion, and Purification.

The Matter thus far prepared, is equally fit for Plate-*Glaſs* to be form'd either by Blowing, or Caſting.—

### *Method of blowing* LOOKING-GLASS-PLATES.

The Work-houſes, Furnaces, *&c.* uſed in the making of this kind of *Plate Glaſs*, are the ſame as thoſe in the following Article, to which the Reader is refer'd.

The Melting-pots, wherein the Materials to be blown, are fuſed, are 38 Inches in Diameter, and 35 high. After thoſe Materials are vitrified by the Heat of the Fire; and the *Glaſs* is ſufficiently refined; the Maſter Workman dips in his Blowing-iron, once, and again, till he has got Matter enough thereon.

This done, he mounts on a kind of Block, or Stool, five Foot high, to be more at liberty to ballance it, as it lengthens in the blowing. If the Work be too heavy for the Workman to ſuſtain on his Blowing-iron, two or more Attendants aſſiſt him, by holding Pieces of Wood under the *Glaſs*, in proportion as it ſtretches, for fear it ſhould fall off the Iron by its own Weight.

When, after ſeveral repeated Heatings, and Blowings, the *Glaſs* is at length brought to the Compaſs, proper for its Thickneſs, and the Quantity of Metal taken out; they cut it off with Forces, at the Extremity oppoſite to the Iron, in order to *point* it with the *Pointil*.

The Pointil is a long, firm Piece of Iron, having a Piece going a-croſs one of its Ends, in manner of a T: To point the *Glaſs*, they plunge the Head of the T into the Melting-pot; and with the Liquid *Glaſs* ſticking thereto, they faſten it to the Extremity of the *Glaſs* before cut off. When it is ſufficiently faſten'd, they ſeparate the other Extremity of the *Glaſs* from the Blowing-iron; and inſtead thereof, make uſe of the Pointil to carry it to the Furnaces appointed for that end; where, by ſeveral repeated Heatings, they continue to enlarge it, till it be equally thick in every Part.

This done, they cut it open with the Forces; not only on the Side by which it ſtuck to the Blowing-iron, but likewiſe the whole Length of the Cylinder: After which, giving it a ſufficient Heating, it is in a condition to be entirely open'd, extended, and flatten'd. The manner of doing which is much the ſame as for *Table Glaſs*, and need not be here repeated.

Laſtly, the *Glaſs* being ſufficiently flatted, is laid to anneal, for ten, or fifteen Days, according to the Size and Thickneſs.

It may be obſerv'd, that *Looking Glaſſes* thus blown, ſhould never be above 45, or at moſt 50 Inches long, and of a Breadth proportionable. Thoſe exceeding theſe Dimenſions, as we frequently find among the *Venice Glaſſes*, cannot have the Thickneſs ſufficient to bear the Grinding; and beſide are ſubject to warp, which prevents them from regularly reflecting Objects.

### *Method of caſting, or running large* LOOKING-GLASS-PLATES.

This Art is of *French* Invention; and not above fifty Years old. 'Tis owing to the Sieur *Abraham Thevart*, who firſt propoſed it to the Court of *France*, in 1688.

It is perform'd much like the caſting of Sheet Lead, among the Plumbers: By means hereof we are not only enabled to make *Glaſſes* of more than double the Dimenſions of any made the *Venetian* way of blowing; but alſo to caſt all kinds of Borders, Mouldings, *&c.*

The Furnaces for melting the Materials of this Manufacture, are of enormous Size; and thoſe for annealing the *Glaſſes* when form'd, are much more ſo. Round a Melting-Furnace, there are at leaſt twenty four Annealing Furnaces; each from 20 to 25 Foot long: They are called *Carquaſſes*: Each Carquaſſe has two *Tiffarts*, or Apertures, to put in Wood, and two Chimnies. Add, that beſide the Annealing Furnaces, *&c.* there are others for the making of *Frit*, and calcining old Pieces of *Glaſs*.

All theſe Furnaces are cover'd over with a large Shed; under which are likewiſe Forges, and Work-houſes for Smiths, Carpenters, *&c.* continually employ'd in repairing, and keeping up the Machines, Furnaces, *&c.* As alſo Lodges, and Apartments, for theſe, and the other Workmen employ'd about the *Glaſs*; and in keeping up a perpetual Fire in the great Furnace: So that the Glaſs-houſe, as that in the Caſtle of St. *Gooen*, in the Foreſt of *Fere*, in the *Sbiſſonois*, appears more like a little City, than a Manufactory.

The Inſide of the Furnaces are form'd of a ſort of Earth, proper to ſuſtain the Action of the Fire; and the ſame Earth ſerves for Melting-pots, Ciſterns, *&c.* The Furnaces ſeldom laſt above three Years; after which they are to be rebuilt, from Bottom to Top: And to keep them good even for that Time, the Inſide muſt be refitted every ſix Months. The Melting-pots are as big as Hogſheads, and contain above two thouſand Weight of Metal. The Ciſterns are much ſmaller, and ſerve for the Conveyance of the liquid *Glaſs*, which is drawn out of the Pots, to the Caſting Tables.

When the Furnace is in a condition to receive the Pots, and Ciſterns, they heat it red hot: This done, they fill the Pots with Materials; which is done at three times, to facilitate the Fuſion. When the Matter is ſufficiently vitrified, refined, and ſettled, which uſually happens in twenty four Hours; they fill the Ciſterns, which are in the ſame Furnace, and which are left there about ſix Hours longer, till ſuch time as they appear all white, through the exceſſive Heat.

To get the Ciſterns with the Metal out of the Furnace; they make uſe of a large Iron Chain, which opens and ſhuts with Hooks, and Eyes. From the Middle hereof, on each Side, ariſe two maſſive iron Pins, whereby, with the Aſſiſtance of Pullies, the Ciſterns are rais'd on a kind of Carriage of a proper Height; and thus conducted to the Table where the Glaſs is to be run. Here, ſlipping off the Bottom of the Ciſtern, there ruſhes out a Torrent of Matter, all in Fire, wherewith the Table, prepared for that purpoſe, is preſently cover'd.

The Table, whereon the *Glaſs* is to be run, is of Pot Metal, about nine Foot long, and broad in proportion. It is ſupported on a wooden Frame, with Truckles, for the Convenience of removing from one Carquaſſe, or Annealing Furnace to another, in proportion as they are fill'd.—

To form the Thickneſs of a *Glaſs*, there are two iron Rulers, or Rims, placed a-round the Edge of the Table; and on theſe, reſt the two Extremes of a kind of Roller, which ſerves to drive the liquid Matter before it to the End of the Table, or Mould. The iron Rulers, being moveable, and capable of being ſet cloſer, or further a-part at pleaſure, determine the Width of the *Glaſſes*, and retain the Matter, that it does not run off at the Edges.

As ſoon as the Matter is arrived at the End of the Table, and the *Glaſs* is come to a Conſiſtence, which is in about a Minute; they ſhove it off into the Annealing Furnace, where it ſlides with eaſe enough, by reaſon of the Sand ſtrew'd thereon.

What is moſt ſurpriſing throughout the whole Operation, is the Quickneſs, and Adreſs, wherewith ſuch maſſy Ciſterns, fill'd with ſo flaming a Matter, are taken out of the Furnace, convey'd to the Table, pour'd therein, the *Glaſs* ſpread, *&c.* The whole is inconceivable to ſuch as have not been Eye witneſſes of that ſurprizing Manufacture.

As faſt as the Ciſterns are emptied, they carry them back to the Furnace, and take freſh ones, which they empty as before. This they continue to do, ſo long as there are any full Ciſterns; laying as many Plates in each Carquaſſe as it will hold, and ſtopping them up as ſoon as they are full; to let them anneal, and cool again, which requires at leaſt ten Days.

The firſt Running being diſpatch'd, they prepare another, by filling the Ciſterns a-new, from the Matter in the Pots: And after the ſecond, a third; and even a fourth time, till the Melting-pots are quite empty.

The Ciſterns, at each Running, ſhould remain at leaſt ſix Hours in the Furnace, to whiten; and when the firſt Annealing Furnace is full, the Caſting-table is to be carried to another. It need not here be obſerv'd, that the Carquaſſes, or Annealing Furnaces muſt firſt have been heated to the Degree proper for them. When the Pots are emptied, they take them out, as well as the Ciſterns, to ſcrape off what

what *Glaſs* remains, which otherwiſe would grow green by Continuance of Fire, and ſpoil the *Glaſſes*.

The manner of heating the large Furnaces, is ſingular enough: The *Tiſor*, or Perſon employ'd for that purpoſe, quite naked to his Shirt, runs round the Furnace without making the leaſt Stop, with a Speed ſcarce inferior to that of the lighteſt Courier: As he goes along, he takes two Billets, or pieces of Wood, cut for the purpoſe; which he throws into the firſt Tiſſart; and continuing his Courſe, does the ſame for the ſecond. This he holds on without Interruption for ſix Hours, ſucceſſively; after which he is reliev'd by another, *&c.* It is ſurprizing that two ſuch ſmall pieces of Wood, and which are conſumed in an inſtant, ſhould keep the Furnace to the proper degree of Heat; which is ſuch, that a large Bar of Iron, laid at one of the Mouths of the Furnace, becomes red hot in leſs than half a Minute.

'Tis computed that a Furnace, before it be fit to run *Glaſs*, coſts above three thouſand five hundred Pounds: That at leaſt ſix Months are requir'd for the building it a-new; and three Months for the refitting it: And that when a Pot of Matter burſts in the Furnace, the Loſs of Matter and Time amounts to above 250 Pounds.

The *Glaſs*, when taken out of the Melting Furnace, needs nothing further but to be *ground*, *poliſh'd*, and *foliated*.

*For the Grinding of* GLASS, ſee GRINDING *of Glaſs*.
*For the Poliſhing of* GLASS, ſee POLISHING *of Glaſs*.
*For the Foliating of* GLASS, ſee FOLIATING.

### *Painting on* GLASS.

The primitive manner of painting on *Glaſs* was very ſimple, and of conſequence very eaſy: It conſiſted in the mere Arrangement of pieces of *Glaſs* of different Colours, in ſome ſort of Symmetry; and conſtituted a kind of what we call *Moſaic Work*. See MOSAIC *Work*.

Afterwards, when they came to attempt more regular Deſigns, and even to repreſent Figures rais'd with all their Shades, their whole Adreſs went no further than to the drawing the Contours of the Figures in Black, with Water-colours, and hatching the Draperies, after the ſame manner, on *Glaſſes* of the Colour of the Object intended to be painted. For the Carnations, they choſe *Glaſs* of a bright Red; upon which they deſign'd the principal Lineaments of the Face, *&c.* with Black.

At laſt, the Taſte for this ſort of Painting being conſiderably improv'd, and the Art being found applicable to the adorning of Churches, Baſilicks, *&c.* they found means of incorporating the Colours with the *Glaſs* itſelf, by expoſing them to a proper Degree of Fire, after the Colours had been laid on.

A *French* Painter of *Marſeilles* is ſaid to have given the firſt Notion hereof, upon going to *Rome*, under the Pontificate of *Julius* II. *Albert Durer*, and *Lucas* of *Leyden* were the firſt that carried it to any Height.

The Colours uſed in *painting on Glaſs*, are very different from thoſe uſed either in painting in Oil, or Water. See PAINTING.

The *Black* is made of two Thirds of Flakes, or Scales of Iron, beaten up, and mix'd with another Third of Rocaille, or little Glaſs-beads.—*White*, with Sand, or little white Pebbles, calcined, pounded in a Mortar, and afterwards ground on a Marble; with one fourth Part of Salt-peter added thereto, and the Mixture calcined and pulveris'd over again: To which, when they are ready to uſe it, is added a little *Gypſum*, or Plaiſter of Paris well ground, *&c.*—For *Yellow*, they uſe Leaf-ſilver-ground, mix'd up in a Crucible with Sulphur, or Salt-peter; then, well beaten and ground on a Porphyry Stone; and, at length, ground over again with nine times as much red Oker.—*Red* is made of Litharge of Silver, and Scales of Iron, Gum Arabic, Harderia, Glaſs-beads, and Blood-ſtone, nearly in equal Quantities. This is one of the moſt difficult Colours; and the Preparation only to be learnt by Experience.—*Green*, is made of Æs Uſtum, one Ounce; as much black Lead, and four Ounces of white Sand, incorporated by the Fire. After Calcination, they add a fourth Part of Salt-peter; after a ſecond Calcination, a ſixth Part more: After which they make a third Coction before it is uſed.—*Azure*, *Purple*, and *Violet*, are prepared like Green, only leaving out the Æs Uſtum, and in lieu thereof uſing Sulphur, for Azure; Perigueux, for Purple; and both thoſe Drugs for Violet.—*Carnations* are made of Ferretta and Rocaille: And laſtly, Colours for the *Hair*, *Trunks of Trees*, &c. are made of Ferretta, Rocaille, *&c.*

This Account of the Colours we have from Monſ. *Felibien*'s Excellent Work *des Principes d'Architecture*, &c. Tho' it muſt be own'd that all the Painters on *Glaſs* don't uſe them; there being few Artiſts of that kind but have invented their own particular ones, whereof they make great Secrets. But this is certain, that theſe above deſcribed are ſufficient for the beſt Paintings of all ſorts; provided a Perſon has but the Skill to manage them.

In the Windows of divers antient Churches, Chapels, Colleges, *&c.* we meet with the moſt beautiful, and vivid Colours imaginable; ſuch as far exceed any uſed among us: Not that the Secret of making thoſe Colours is loſt; but that the Moderns won't go to the Expence of them; nor take all the neceſſary Pains; by reaſon this ſort of Painting is not now ſo much eſteem'd as formerly.

Thoſe beautiful Works, which were made in the Glaſs-houſes, were of two kinds: In ſome, the Colour was diffuſed thro' the whole Body of *Glaſs*; in others, which were the more common, the Colour was only on one Side, ſcarce penetrating within the Subſtance above one third of a Line; tho' more, or leſs, according to the Nature of the Colour; the Yellow being always found to enter the deepeſt.

Theſe laſt, tho' not ſo ſtrong and beautiful as the former, were of more Advantage to the Workmen; by reaſon, on the ſame *Glaſs*, tho' already colour'd, they could ſhew other kind of Colours, where there was occaſion to embroider Draperies, enrich them with Foliages, or repreſent other Ornaments of Gold, Silver, *&c.*

In order to this they made uſe of Emery; grinding, or wearing down the Surface of the *Glaſs*, till ſuch time as they were got thro' the Colour, to the clear *Glaſs*: This done, they applied the proper Colours on the other Side of the *Glaſs*.—By this means the new Colours were prevented from running, and mixing among the former, when the *Glaſſes* came to be expoſed to the Fire, as will be hereafter ſhewn.

When the intended Ornaments were to appear white, or ſilver'd, they contented themſelves to bare the *Glaſs* of its Colour with Emery, without applying any new Colour at all; and it was in this manner, that they wrought their Lights and Heightenings on all kinds of Colours.—

The firſt thing to be done, in order to *paint on Glaſs*, in the modern way, is to deſign, and even colour the whole Subject on Paper. Then they make choice of pieces of *Glaſs* proper to receive the ſeveral Parts; and proceed to divide, or diſtribute the Deſign itſelf, or the Paper it is drawn on, into Pieces ſuitable to thoſe of *Glaſs*: Having always a view that the *Glaſſes* may join in the Contours of the Figures, and the Folds of the Draperies; that the Carnations, and other finer Parts may not be damaged by the Lead wherewith the Pieces are to be join'd together.

The Diſtribution made, they mark all the *Glaſſes*, as well as Papers, with Letters, or Numbers; that they may be known again.

This done, applying each Part of the Deſign on a *Glaſs* intended for it, they copy, or transfer the Deſign upon this *Glaſs*, with the black Colour, diluted in Gum-water; by tracing and following all the Lines, and Stroaks, as they appear thro' the *Glaſs*, with the Point of a Pencil.

When theſe firſt Stroaks are well dried, which happens in about two Days, the Work being only in black and white, they give it a ſlight Waſh over, with Urine, Gum Arabic, and a little black; and this ſeveral times repeated, according as the Shades are deſir'd to be heighten'd: With this Precaution, never to apply a new Waſh, till the former is ſufficiently dried. This done, the Lights, and Riſings are given, by rubbing off the Colour in the reſpective Places, with a wooden Point, or the Handle of the Pencil.

As to the other Colours above-mention'd, they are uſed with Gum-water, much as in Painting in Miniature; taking care to apply them lightly, for fear of effacing the Out-lines of the Deſign; or even for the greater Security, to apply them on the other Side, eſpecially the yellow, which is very pernicious to the other Colours, by blending therewith.

And here, too, as in pieces of black and white, particular regard muſt be had, not to lay Colour on Colour, or Lay on Lay, till ſuch time as the former are well dried. It may be added, that the Yellow is the only Colour that penetrates thro' the *Glaſs*, and incorporates therewith by the Fire: The reſt, and particularly the Blue, which is very difficult to uſe, remaining on the Surface, or at leaſt entring very little.

When the Painting of all the Pieces is finiſh'd, they are carried to the Furnace, to *anneal*, or bake the Colours.

The Furnace, here us'd, is ſmall, built of Brick, from 18 to 30 Inches ſquare: At ſix Inches from the Bottom is an Aperture, to put in the Fuel, and maintain the Fire. Over this Aperture is a Grate, made of three ſquare Bars of Iron, which traverſe the Furnace, and divide it into two Parts. Two Inches above this Partition, is another little Aperture, thro' which they take out Pieces, to examine how the Coction goes forwards.

On the Grate is plac'd a ſquare earthen Pan, ſix or ſeven Inches deep; and five or ſix Inches leſs, each way, than the Perimeter of the Furnace. On one Side hereof is a little Aperture, thro' which to make the Trials, plac'd directly oppoſite to that of the Furnaces deſtined for the ſame end.

In this Pan are the Pieces of *Glaſs* to be placed, in the following manner: Firſt, the Bottom of the Pan is cover'd with three Strata, or Layers of Plaiſter, or Lime, pulverized; thoſe Strata being ſeparated by two others, of old, broken *Glaſs*: The Deſign whereof is to ſecure the painted *Glaſs* from the too intenſe Heat of the Fire. This done, the

*Glaſſes* are laid horizontally on the laſt, or uppermoſt Layer of Plaiſter, or Lime.

This firſt Row of *Glaſs* they cover over with a Lay of the ſame Powder, an Inch deep; and over this lay another Range of *Glaſſes*: And thus alternately, till the Pan is quite full; taking care that the whole Heap always end with a Layer of Plaiſter.

The Pan thus prepared, they cover up the Furnace with Tiles, or a ſquare Table of earthen Ware, cloſely luted all round; only having five little Apertures, one at each Corner, and another in the Middle, to ſerve as Chimnies.

Things thus diſpoſed, there remains nothing but to give the Fire to the Work.—The Fire for the two firſt Hours, muſt be very moderate; and to be increas'd, in proportion as the Coction advances, for the ſpace of ten, or twelve Hours; in which Time it is uſually compleated. At laſt, the Fire, which at firſt was only of Charcoal, is of dry Wood: So that the Flame covers the whole Pan, and even iſſues out at the Chimnies.

During the laſt Hours, they make Eſſays from time to time; by taking out Pieces laid for the purpoſe, thro' the little Aperture of the Furnace, and Pan, to ſee whether the Yellow be perfect, and the other Colours in good Order. When the Annealing is thought ſufficient, they proceed with great Haſte to extinguiſh the Fire, which otherwiſe would ſoon burn the Colours, and break the *Glaſſes*.—

Glasses are diſtinguiſh'd with regard to their Form, Uſe, &c. into various Kinds; as,

*Drinking Glaſſes*, *Optic Glaſſes*, *Looking Glaſſes*, *Burning Glaſſes*, &c.

*Drinking* Glasses are ſimple Veſſels, of common *Glaſs* or Cryſtal, uſually in form of an inverted Cone.—

Each *Glaſs* conſiſts of three Parts, *viz.* the Calix, or Bowl; the Bottom; and Foot; which are all wrought, or blown ſeparately.

Nothing can be more dexterous, and expeditious than the manner wherein theſe Parts are all blown; two of them open'd, and all three join'd together. An Idea is only to be had thereof, by ſeeing them actually at work.

The *Glaſſes* chiefly uſed in *England*, are made of the Aſhes of *Fern*; Cryſtal *Glaſſes*, being grown into Diſeſteem. The exceeding Brittleneſs of this Commodity, notwithſtanding the eaſy Rate of each *Glaſs*, renders the Conſumption hereof very conſiderable.

*Optic* Glasses, are thoſe made of uſe to ſtrengthen, improve, or preſerve the Sight. See Optic *Glaſs*.

GLAUCOMA, in Medicine, a Diſeaſe of the Eye, wherein the cryſtalline Humour is turn'd of a greeniſh, or Azure Colour, and its Tranſparency thus diminiſh'd. See Eye, and Crystalline.

Thoſe in whom this Diſorder is forming, diſcover it hence that all Objects appear to them as thro' a Cloud or Miſt: When entirely form'd, the viſual Rays are all intercepted, and they ſee nothing at all.

It is reckon'd incurable, when inveterate, and in aged Perſons: And even under other Circumſtances, is very difficult of Cure; Externals proving of little Service.

The Internals beſt ſuited to it, are thoſe uſed in the Gutta Serena. See Gutta *ſerena*.

*Jul. Cæſar Claudinus*, *Conſul.* 74. gives a Remedy for the *Glaucoma*.

The Word comes from the *Greek* γλαυκὸς, *glaucus*, *cæſius*, ſea-green.

The *Glaucoma* is uſually diſtinguiſh'd from the Cataract or Suffuſion, in this, that in the Cataract the Whiteneſs appears in the Pupil, very near the Cornea, but ſhews deeper in the *Glaucoma*.

Some late *French* Authors, however, maintain the Cataract and *Glaucoma* to be one and the ſame Diſeaſe.—According to them, the Cataract is not a Film, or Pellicle form'd before the Pupil, as had always been imagin'd; but an Alteration of the Humor itſelf, whereby its tranſparency is prevented; which brings the Cataract to the *Glaucoma*. See Cataract.

GLEAM, is popularly uſed for a Ray, or Beam of Light. See Ray.

Among Falconers, a Hawk is ſaid to *gleam*, when ſhe caſts or throws up Filth from her Gorge.

GLEANING, or Glaning, the Act of gathering, or picking up the Ears of Corn, left behind after the Field has been reap'd, and the Crop carried home.

By the Cuſtoms of ſome Countries, particularly thoſe of *Melun*, and *Eſſampes*, all Farmers, and others, are forbid either by themſelves, or Servants to put any Cattle into the Fields, or prevent the *gleaning* in any manner whatever, for the ſpace of 24 Hours, after the carrying off of the Corn; on Penalty of Confiſcation, &c.

GLEBE, Gleba, in Natural Hiſtory, Chymiſtry, &c. a Clod, or Piece of Earth, containing ſome Metal, or Mineral. See Ore; ſee alſo Marchasite, Metal, &c.

The *Glebes* are carried to the Forges to be waſh'd, purify'd, melted, &c. See Gold, Silver, Iron, &c.

Glebe, or Gleab-*land*, is properly us'd for Church-land. *Dos vel Terra ad Eccleſiam pertinens.*— See Church.

*Glebe-land* is moſt commonly uſed for that Land belonging to the Pariſh Church, beſide the Tithes; tho' in the more general, and extenſive Uſe of the Word, *Glebe* is applicable to any Land, or Ground belonging to a Benefice, Fee, Manor, Inheritance, or the like.

Thus, *Lindwode*, Gleba *eſt terra in qua conſiſtit dos Eccleſiæ; generaliter tamen ſumitur pro ſolo, vel pro terra culta.*—

Thus, in the Civil Law, Slaves were ſaid to be affected to the *Glebe*, *i. e.* went with it, were ſold with it, &c. The Right of Patronage ſhould be annex'd to a *Glebe*. See Patronage.

GLEET, in Medicine, a Flux of thin Humor from the Urethra. See Flux, Urethra, &c.

This, or a *Gonorrhæa Simplex*, often ſucceed the Cure of a *Gonorrhæa Virulenta*, and ſometimes remain obſtinate, even after the Uſe of a Salivation. See Gonorrhæa.

The *Gleet* may happen either from too great Relaxation of the Glands in the Urethra, or from a Corroſion or Exulceration of them. It appears moſt frequently after a Gonorrhæa has been of long ſtanding, or ill managed in the Cure; as by the Uſe of acrid or corroding Injections, and the like.

The Glands may here alſo happen to be ulcerated by the Matter of the Running, which is often ſharp enough for that purpoſe.

A *Gleet* is diſtinguiſh'd from a *Gonorrhæa ſimplex*, not only by the Colour, and Conſiſtence of the Matter evacuated, but alſo by the manner wherein it comes away: The Matter of a *Gleet* comes away as well at one time as at another; but that of a *Gonorrhæa ſimplex* chiefly in Erections, and when the Patient goes to ſtool. The Matter of a *Gleet* is commonly browniſh, but that of a *Gonorrhæa ſimplex* white. And the Continuance of a true *Gleet* is unattended with Weakneſs, or other ill Conſequences, and dangerous Symptoms; nor does it unfit Men for Procreation, as *Gonorrhæa ſimplex* will.

An aſtringent Regimen is the moſt proper in both; Coffee and Claret are ſuppoſed proper Liquors in theſe Caſes: So are thoſe made acid with Juice of Lemmons, Vinegar, &c.

GLENE, Glena, Glenoides, in Anatomy, a Name given to thoſe Cavities in Bones, which are of a middle kind, that is, neither of the deepeſt, nor ſhalloweſt, but in a mean between the two. See Bone.

Thus, the Cavity of the Omoplate, wherein the Humerus is received, is a *Glene*, or *Glenoides*. See Omoplate.

Glenoides, or Glene, according to *Blanchard*, &c. is peculiarly attributed to two Cavities in the lower Part of the firſt Vertebra of the Neck.

The Word is *Greek*, compoſed of γλήνη, Eyelid; and εἶδος, Form.

GLICYRRHIZZA, or Glycyrrhiza, call'd alſo *Radix dulcis*, *Liquiritia*, and *Liquorice*, a ſweet-taſted Root, of conſiderable Uſe in Medicine, againſt Coughs, and other Diſorders of the Breaſt and Lungs.

The Shrub which bears it, is cultivated in divers Parts of *England*, particularly about *Pontefract* in *Yorkſhire*; in ſome Provinces of *France*, *Spain*, *Germany*, and *Muſcovy*; and eſpecially in *Perſia*, where it thrives better than any where elſe; there being ſome on the Banks of the *Caraſu*, *Kenki*, and *Kerni-arpa*, whoſe Roots are thicker than the Arm; and whoſe Juice, in reſpect of Strength, Virtue, &c. are preferable to others.

The Root of the *Liquorice* Plant runs, or ſpreads a great way in the Ground, and emerging into Air from Place to Place, produces ſo many new Stems, or Plants, few of which riſe above five Foot high. Its Leaves are thick, green, ſhining, half-round, and glutinous: Its Flower red, like the Hyacinth; and its Seed contain'd in roundiſh Pods.

In

In the Culture, care muſt be taken to have a warm, light, rich Soil, or to amend it with Manure: They plant it in Trenches, three Spits deep, in *February* and *March*; uſually in Rows, at a Foot diſtance from each other. The Parts choſe for this purpoſe, are Sets from the Top of the Plant, or the very Top of the Root; or elſe the Runners that ſpread from the Maſter-root—In moiſt Weather, the Branches may alſo be ſlip'd and planted.

They are taken about *November*, or *December*, after they have ſtood three Summers in the Ground; for then the *Liquorice* weighs moſt, and will keep with leaſt Loſs: Not but that there is a continual Diminution in this reſpect from the firſt taking it.

New, green *Liquorice* ſhould be choſe ſmooth and even, about the Thickneſs of the middle Finger, ruddy without, yellowiſh within, eaſy to cut, and of an agreeable Smell.

This Root being boil'd a long time in Water, till the Fluid has got a deep, yellow Tincture; and the Water, at length evaporated over a moderate Fire; there remains a black, ſolid Sediment, which is what we call *Liquorice*, or *Liquorice Juice*, or ſometimes *Spaniſh Juice*.

Chuſe it black without ſide, and of a ſhining Black within, eaſy to break, and of an agreeable Taſte. The whitiſh, and yellowiſh Liquorice Juices are good for nought; being uſually no other than Compoſitions of Sugar, Starch, a little Gum Tragacanth, and *Liquorice* Powder.

The native *Liquorice* Juice is very ſweet upon the Palate, even more than Sugar, or Honey; and is yet accounted a great Quencher of thirſt; on which account *Galen* preſcribes it in Dropſies. It is very balſamic, and detergent; inſomuch that there is ſcarce any medicinal Compoſition for Diſeaſes of the Breaſt, but it is an Ingredient in.—

GLOBE, in Geometry, a round or ſpherical Body; more uſually called a *Sphere*. See SPHERE.—

The Earth, and Water, together, are ſuppoſed to form a *Globe*, hence call'd the *Terraqueous Globe*, See TERRAQUEOUS.

The Planets, both Primary, and Secundary, are ſuppoſed, as well as our Earth, to be ſolid *Globes*. See PLANET.

The Earth, is, in a peculiar Senſe call'd the *Globe*, or *Globe of the Earth*. See EARTH.

GLOBE is particularly uſed for an artificial Sphere of Metal, Plaiſter, Paper, or other Matter; on whoſe convex Surface is drawn a Map, or Repreſentation, either of the Earth, or Heavens, with the ſeveral Circles conceived thereon. See MAP.

In this Senſe, *Globes* are of two kinds, *Terreſtrial*, and *Celeſtial*; each of very conſiderable Uſe: The one, in Aſtronomy, and the other in Geography; to perform many of the Operations thereof, in an eaſy, ſenſible manner, ſo as to be conceived without any Knowlege of the mathematical Grounds of thoſe Arts.

The fundamental Parts, common to both *Globes*, are an *Axis*, repreſenting that of the World; and a ſpherical Shell, or Cover, which makes the Body of the *Globe*, on whoſe external Surface the Repreſentation is made. See AXIS, POLE, &c.

*Globes*, we have obſerved, are made of divers Materials, *viz.* Silver, Braſs, Paper, Plaiſter, *&c.* Thoſe commonly uſed, are of Plaiſter, and Paper: The Conſtruction whereof is as follows:

### *Conſtruction of* GLOBES.

A wooden Axis is provided, ſomewhat leſs than the intended Diameter of the *Globe*; and into the Extremes hereof two Iron Wires are driven, for Poles: This Axis is to be the Beam, or Baſis of the whole Structure.

On the Axis are applied two ſpherical, or rather hemiſpherical Caps, form'd on a kind of wooden Mould, or Block.—Theſe Caps conſiſt of Paſteboard, or Paper, laid, one Lay after another, on the Mould, to the Thickneſs of a Crown-piece; after which, having ſtood to dry, and imbody; making an Inciſion along the Middle, the two Caps thus parted, are ſlip'd off the Mould.

They remain now to be applied on the Poles of the Axis, as before they were on thoſe of the Mould: And to fix them in their new Place, the two Edges are ſown together with Packthread, *&c.*

The Rudiments of the *Globe* thus laid, they proceed to ſtrengthen, and make it ſmooth and regular—In order to this, the two Poles are haſp'd in a metalline Semicircle, of the Size intended; and a kind of Plaſter, made of Whiting, Water, and Glue heated, melted, and incorporated together, is daub'd all over the Paper-Surface. In proportion as the Plaiſter is applied, the Ball is turn'd round in the Semicircle, the Edge whereof, pares off whatever is ſuperfluous, and beyond the due Dimenſion; leaving the reſt adhering in Places that are ſhort of it.

After ſuch Application of Plaiſter, the Ball ſtands to dry; which done, it is put again in the Semicircle, and freſh Matter applied: Thus they continue alternately to apply the Compoſition, and dry it, till ſuch time as the Ball every where accurately touches the Semicircle; in which State it is perfectly ſmooth, regular, firm, *&c.*

The Ball thus finiſh'd, it remains to paſte the Map, or Deſcription thereon: In order to this, that Map is projected in ſeveral Gores, or Guſſets; all which join accurately on the ſpherical Surface, and cover the whole Ball. To direct the Application of theſe Gores, Lines are drawn by a Semicircle on the Surface of the Ball, dividing it into a Number of equal Parts correſponding to thoſe of the Gores, and ſubdividing thoſe again anſwerably to the Lines and Diviſions of the Gores.

The Papers thus paſted on, there remains nothing but to colour and illuminate the *Globe*; and to varniſh it, the better to reſiſt Duſt, Moiſture, *&c.*

The *Globe* itſelf, thus finiſh'd, they hang it in a Braſs Meridian, with an Hour Circle, and Quadrant of Altitude; and thus fit it into a wooden Horizon.

### *Deſcription of the* GLOBES.

The Things common to both *Globes*, are either delineated on the Surface; or added as Appendages, without it.

*Without* the Surface, are 1° The two *Poles*, whereon the *Globe* is turn'd, repreſenting thoſe of the World.—See POLE. 2° The *Brazen Meridian*, which is divided into Degrees, and paſſes thro' the Poles. See MERIDIAN.—3° The *Wooden Horizon*, whoſe Upper-ſide repreſents the Horizon; and is divided into ſeveral Circles: The innermoſt whereof contains the twelve Signs of the Zodiac, ſubdivided into their Degrees; the next, the *Julian*; and the third, the *Gregorian* Calendars: Without-ſide of all theſe, are drawn the Points of the Winds. See COMPASS, and WIND.—4° A Braſs *Quadrant of Altitude*, divided into 90 Degrees, to be faſten'd on the Meridian at the Diſtance of 90 Degrees from the Horizon. See QUADRANT *of Altitude*.—5° The *Hour Circle*, divided into twice twelve Hours, and fitted on the Meridian, round the Pole, which carries an Index pointing to the Hour—A Mariner's *Compaſs* is ſometimes added on the Bottom of the Frame; and ſometimes, a *Semicircle of Poſition*. See COMPASS, and POSITION.

*On the Surface* are delineated, 1° The *Equinoctial Line*, divided into 360 Degrees; commencing from the Vernal Interſection. See EQUINOCTIAL.—2° The *Ecliptic*, divided into 12 Signs, and theſe ſubdivided into Degrees. See ECLIPTIC.—3° The *Zodiac*. See ZODIAC.—4° The two *Tropics*. See TROPIC; and 5° The *Polar Circles*. See POLAR *Circle*.

What elſe belongs to *Globes*, either as to Conſtruction, or Deſcription, is different, as the *Globe* is either Celeſtial, or Terreſtrial. See *Celeſtial*, and *Terreſtrial* GLOBE.

*Celeſtial* GLOBE, is an artificial Sphere, on whoſe convex Surface the fix'd Stars are laid down, at proportionable Diſtances, together with the principal Circles of the Sphere. See STAR, CONSTELLATION, CIRCLE, &c.

The Uſe of theſe *Globes*, is to exhibit the Phænomena of the Motions of the Sun, and Stars, in an eaſy, and obvious manner; which, tho' ſomewhat unaccurate, is yet exact enough for the common Uſes of Life, and may ſave the Trouble of Trigonometrical Calculation.—See ASTRONOMY.

### *To exhibit the Stars, Circles, &c. on the Surface of a given Sphere, or Ball, and fit it for the Uſes of Aſtronomy.*

1° Aſſume any two Points diametrically oppoſite to each other, as P, and Q: (*Tab. Aſtronomy, Fig.* 58.) And in theſe, fix up Axes, P A, and Q C, for the Ball to turn round on. The Points P and Q; or A and C, will exhibit the *Poles* of the World. 2° Divide a Brazen Circle A B C D into four Quadrants, A E, E C, C F, and F D; and ſubdivide each Quadrant into 90 Degrees, number'd from the Points E, and F towards the Poles A, and C. 3° Cloſe the *Globe* in this Circle, as in a *Meridian*, at the Points A, and C, ſo as it may freely turn therein.

4° Apply a Style, or Pin to the Surface of the *Globe* in the firſt Degree of the Meridian, and turn the Ball round; by this means will a Circle be deſcribed on the Surface, repreſenting the *Æquator*, to be divided into Degrees. 5° From the Pole of the World P, towards M; and from the other Pole C, towards N. Number $23\frac{1}{2}$ Degree; the Points M and N will be the *Poles of the Ecliptic*.

6° Apply a Style to the Meridian, in the Point M, and turn the *Globe* round; by this Rotation will the Arctic Polar Circle be deſcribed: And after the ſame manner is the Antarctic Polar to be deſcribed about the Point O.

7° Number $23\frac{1}{2}$ Deg. from the Æquator towards the Poles P, and Q; and note the Points H, and I. Then, applying a Style to the Meridian, as before, two Circles will be deſcribed parallel to the Equator; whereof that drawn thro' H, will be the Tropic of Cancer, and the other thro' I, the Tropic of Capricorn.

8° Hang

8° Hang the *Globe* within the Meridian, in the Poles of the Ecliptic, as before in the Poles of the World; and applying a Style to E, turn it round: By this means will the *Ecliptic* be delineated; which remains to be divided into 12 Signs; and each of these into 30 Degrees.

9° While the *Globe* remains thus suspended, bring the Degree of Longitude of any Star under the Meridian; and in the Meridian, number as many Degrees towards the Pole as is the Degree of Latitude of the Place: The Point of Intersection is the Place of that Star on the Surface of the *Globe*. After the like manner is the Place of the *Star* determined from the right Ascension and Declination given; the *Globe* being supposed suspended from the Poles of the World, or the Æquator.

10° All the Stars of a Constellation thus laid down; the Figure of the Constellation is to be design'd; after which it may either be colour'd, or engraven.

11° Place the *Globe* with the Meridian, in a wooden Frame or Horizon D B L, supported on four Feet; in such manner, as to be divided thereby into two Hemispheres; and that the Pole A may be rais'd or depress'd at pleasure.

12° On the Limb, or Edge of the Horizon describe a Circle, which divide into 360 Degrees, and insert the Calendars, and Winds.—

13° Lastly, to the Pole A, fit a Brazen Semicircle, divided into 24 horary Parts, and number'd twice twelve, so that the Lines or Divisions of XII, may be in the Plane of the Meridian, on either Side the Pole. And on the Pole itself apply an Index, to turn round with the *Globe*.—Thus is the *Globe* compleat.

It may be here observ'd, that as the Longitude of the Stars is continually growing, a *Globe* does not remain of perpetual Use: But the Increase in 72 Years only amounting to a Degree, it will make no considerable Error in an hundred Years; the Design of a *Globe* being only to represent things something near the Truth.

### *To make a Celestial* Globe *the usual way.*

This Method is that the most frequently used; and we only premis'd the former as being the most easily conceived; and leading more naturally to this.—

1° From the given Diameter of the *Globe*, find a Right Line A B, *Fig.* 59. equal to the Circumference of a great Circle; and divide it into twelve equal Parts.

2° Thro' the several Points of Division, 1, 2, 3, 4, &c. with the Interval of 10 of them, describe Arches mutually, intersecting each other in D and E.—These Figures, or Pieces duly pasted or join'd together, will make the whole Surface of the *Globe*.

3° Divide each Part of the Right Line A B, into 30 equal Parts; so that the whole Line A B, representing the Periphery of the Equator, may be divided into 360 Degrees.

4° From the Poles D, and E, with the Interval of $23\frac{1}{2}$ Deg. describe Arches *a b*; these will be twelfth Parts of the Polar Circles.

5° After the like manner, from the same Poles D, and E, Fig. 59, 60. with the Interval of $66\frac{1}{2}$ Deg. reckon'd from the Æquator, describe Arches *c d*; these will be twelfth Parts of the Tropicks.

6° Thro' the Degree of the Æquator *c* corresponding to the right Ascension of any given Star, and the Poles D and E, draw an Arch of a Circle; and taking in the Compasses the Complement of the Declination from the Pole D, describe an Arch, intersecting it in *i*; this Point *i* will be the Place of the Star.

7° All the Stars of a Constellation thus laid down, the Figure of the Constellation is to be drawn according to *Bayer*, *Hevelius*, or *Flamsteed*.

8° Lastly, after the same manner, are the Declinations, and Right Ascensions of each Degree of the Ecliptic *d g* determined.

9° The Surface of the *Globe* thus projected on a Plane, is to be engraven on Copper, to save the Trouble of doing this over again for each *Globe*.

10° A Ball, in the mean time, is to be prepar'd of Paper, Plaster, &c. after the manner above directed, and of the intended Diameter of the *Globe*. On this, by means of a Semicircle, and Style, is the Æquator to be drawn; and thro' every 30th Degree, a Meridian. The Ball thus divided into twelve Parts, corresponding to the Segments before projected; they are to be cut out from the printed Paper, and pasted on the Ball.

11° Nothing now remains but to hang the *Globe* as before in a Brazen Meridian, and Wooden Horizon. To which may be added a Quadrant of Altitude H I, *Fig.* 61. made of Brass, and divided in the same manner, as the Ecliptic and Æquator,—

If the Declinations, and Right Ascensions of the Stars be not given; but their Longitudes, and Latitudes, in lieu thereof; the Surface of the *Globe* is to be projected after the same manner as before; except that in this case D, and E, *Fig.* 59. are the Poles of the Ecliptic, and *f h* the Ecliptic itself; and that the Polar Circles, and Tropicks, with the Equator *q d*, and the Parallels thereof, are to be determin'd from their Declinations.

The latest Catalogue of the Stars is that of Mr. *Flamsteed*, wherein the Right Ascensions and Declinations, as well as the Longitudes, Latitudes, &c. are every where express'd. See Catalogue.

### *Use of the Celestial* Globe.

The Use of this Instrument is very extensive: Scarce any thing in the spherical Astronomy but may be exhibited thereby. See Astronomy.

The principal Points are contain'd in the following Problems, with their Solutions; which will let the Reader enough into the Nature and Reason of this noble Instrument to apply it, of his own Accord, in any other Cases.—

Problem I. *To find the Right Ascension, and Declination of a Star, represented on the Surface of the* Globe.

Bring the Star to the graduated Side of the Brazen Meridian: Then, the Number of Degrees intercepted between the Æquator, and the Point of the Meridian cut by the Star, gives its *Declination*; and the Degree of the Æquator, which comes under the Meridian together with the Star, is its *Right Ascension*. See Ascension, and Declination.

II. *To find the Longitude and Latitude of a Star.*

Apply the Centre of the Quadrant of Altitude over the Pole of the Ecliptic in the same Hemisphere with the Star; and bring its graduated Edge to the Star: The Degree on the Quadrant cut by the Star is its *Latitude*, reckon'd from the Ecliptic; and the Degree of the Ecliptic cut by the Quadrant, its *Longitude*. See Longitude, and Latitude.

III. *To find the Sun's Place in the Ecliptic.*

Seek the Day of the Month in the proper Calendar on the Horizon; and against the Day in the Circle of Signs is the Sign and Degree the Sun is in for that Day. This done, find the same Sign upon the Ecliptic, on the Surface of the *Globe*: This is the Sun's *Place* for that Day.—See Place.

IV. *To find the Declination of the Sun.*

The Sun's Place for the Day given being brought to the Meridian; the Degrees of the Meridian intercepted between the Equinoctial and that Place, is the Sun's *Declination* for that Day, at Noon.

V. *To find the Place of a Planet, with its Right Ascension and Declination; its Longitude, and Latitude, for the Time being given.*

Apply the Centre of the Quadrant of Altitudes on the Pole of the Ecliptic (the Pole, we mean, of the same Denomination with the Latitude); and bring it to the given Longitude, in the Ecliptic: This Point is the Planet's *Place*: And bringing it to the Meridian, its *Right Ascension*, and *Declination* will be found as already shewn of a Star.

VI. *To* rectify the Globe, *or adjust it to the Place*, &c. *so as it may represent the present State, or Situation of the Heavens.*

1° If the Place be in North Latitude, raise the North Pole above the Horizon, if in South, the South Pole; till the Arch intercepted between the Pole and Horizon be equal to the given Elevation of the Pole. 2° Fix the Quadrant of Altitude on the Zenith, *i. e.* on the Latitude of the Place. 3° By means of a Compass or Meridian Line place the *Globe* in such manner as that the Brazen Meridian may be in the Plane of the Meridian. 4° Bring the Degree of the Ecliptic the Sun is in, to the Meridian, and set the horary Index to XII: Thus will the *Globe* exhibit the Face of the Heavens for the Noon of that Day. 5° Turn the *Globe* till the Index come to any other given Hour: Thus will the *Globe* shew the Face of the Heaven for that time. See Rectifying.

VII. *To know all the Stars and Planets by means of the* Globe.

1° Adjust the *Globe* to the State of the Heavens, for that Time. 2° Look on the *Globe* for some one Star, which you know; *e. gr.* the middlemost Star in the Tail of the Great Bear. 3° Observe the Positions of the other more conspicuous Stars in the same Constellation; and by transferring the Eye from the *Globe* to the Heavens, you will easily

eaſily note the ſame, there. 4° After the ſame manner may you proceed from this to the neighbouring Conſtellations; till you have learnt them all. See STAR.

If the Planets be repreſented on the *Globe*, after the manner above deſcribed, by comparing them with the neighbouring Stars, you will likewiſe know the *Planets*. See PLANET.

VIII. *To find the Sun's oblique Aſcenſion, his Eaſtern Amplitude, and Azimuth, with the Time of Riſing.*—

1° Rectify the *Globe* for the Hour of XII; and bring the Sun's Place to the Eaſtern Side of the Horizon: Then, the Number of Degrees intercepted between that Degree of the Æquator now come to the Horizon, and the Beginning of Aries, is the Sun's *Oblique Aſcenſion*. 2° The Degrees on the Horizon intercepted between the Eaſt Point thereof, and the Point wherein the Sun is, is the *Ortive*, or *riſing Amplitude*. 3° The Hour pointed to by the Index, is the Time of *the Sun's* Riſing. 4° Turning the *Globe*, till the Index points to the preſent Hour; lay the Quadrant to the Sun's Place; the Degree cut by the Quadrant, in the Horizon, is the Sun's *Azimuth*. See AZIMUTH, OBLIQUE, &c.

IX. *To find the Sun's Oblique Deſcenſion, Weſtern Amplitude, and Azimuth, with the Time of Setting.*

The Solution of this Problem is the ſame as that of the former; excepting that the Sun's Place muſt be here brought to the Weſtern Side of the Horizon; as, in the former, it was to the Eaſtern. See DESCENSION.

X. *To find the Length of Day and Night.*

1° Find the Time of the Sun's riſing; which being numb'er'd from Midnight, the Double thereof gives the *Length of the Night*. 2° Subſtract the Length of the Night from the whole Day, or 24 Hours; the Remainder is the *Length of the Day*. See DAY, and NIGHT.

XI. *To find the Riſing, Setting, and Culminating of a Star, its Continuance above the Horizon, for any Place and Day; together with its oblique Aſcenſion, and Deſcenſion; and its Eaſtern and Weſtern Amplitude and Azimuth.*

1° Adjuſt the *Globe* to the State of the Heavens, at 12 a-Clock, that Day. 2° Bring the Star to the Eaſtern Side of the Horizon: Thus will its *Eaſtern Amplitude*, and *Azimuth*, and the Time of *riſing* be found; as already taught of the Sun. 3° Bring the ſame Star to the Weſtern Side of the Horizon: Thus will the *Weſtern Amplitude* and *Azimuth*, and the Time of *ſetting* be found. 4° The Time of Riſing ſubtracted from that of Setting, leaves the *Continuance* of the Star above the Horizon.—5° This Continuance above the Horizon ſubtracted from 24 Hours, leaves the Time of its Continuance below the Horizon. 6° Laſtly, the Hour to which the Index points, when the Star is brought to the Meridian; gives the Time of *Culmination*. See RISING, SETTING, CULMINATING, &c.

XII. *To find the Altitude of the Sun, or a Star, for any given Hour of the Day or Night.*

1° Adjuſt the *Globe* to the Poſition of the Heavens; and turn it till the Index point at the given Hour. 2° Fix on the Quadrant of Altitude, at 90 Degrees from the Horizon, and bring it to the Sun's or Star's Place. The Degrees of the Quadrant intercepted between the Horizon, and the Sun or Star is the *Altitude* required. See ALTITUDE.

XIII. *The Altitude of the Sun by Day, or of a Star by Night being given, to find the Time of that Day, or Night.*

1° Rectify the *Globe* as in the preceeding Problem. 2° Turn the *Globe*, and Quadrant till ſuch Time as the Star, or Degree of the Ecliptic the Sun is in; cut the Quadrant in the given Degree of Altitude; then does the Index point at the Hour ſought. See TIME, HOUR, &c.

XIV. *The Azimuth of the Sun, or a Star, given; to find the Time of Day, or Night.*

Rectify the *Globe*; and bring the Quadrant to the given Azimuth in the Horizon: Turn the *Globe*, till the Star come to the ſame: Then will the Index ſhew the Time.

XV. *To find the Interval of Time between the Riſings of two Stars; or their Culminations.*

1° Raiſe the Pole of the *Globe* ſo many Degrees above the Horizon, as is the Elevation of the Pole of the Place. 2° Bring the firſt Star to the Horizon; and obſerve the Time the Index points to. 3° The ſame do by the other Star. Then ſubtracting the former Time from the latter; the Remainder is the Interval between the Riſings.

After the like manner is the Interval between two Culminations found; by bringing both Stars to the Meridian.

XVI. *To find the Beginning and Ending of the Crepuſculum, or Twi-light.*

1° Rectify the *Globe*; and ſet the Index to the XII^th^ Hour; the Sun's Place being in the Meridian. 2° Take the Sun's Place, and turn the *Globe* Weſtward, as alſo the Quadrant of Altitude, till the Point oppoſite to the Sun's Place cut the Quadrant of Altitude in the 18^th^ Degree above the Horizon. The Index will ſhew the Time when the Twi-light commences in the Morning. 3° Taking the Point oppoſite to the Sun; bring it to the Eaſtern Hemiſphere, and turn it, till it meet with the Quadrant of Altitude in the 18^th^ Degree: Then will the Index ſhew the Time when Twi-light ends. See CREPUSCULUM.

*Terreſtrial* GLOBE, is an artificial Sphere, on whoſe Surface are delineated the principal Places of the Earth, in their proper Situations, Diſtances, &c. together with the Circles imagin'd on the Surface of the terreſtrial Sphere. See EARTH.

The Uſe of the *Terreſtrial Globe*, is to exhibit the ſeveral Affections, and Phænomena of the different Places of the Earth, depending on Magnitude, &c. in an eaſy, obvious manner, without the Trouble of Trigonometrical Calculation. See GEOGRAPHY.

*To conſtruct a Terreſtrial* GLOBE.

The Conſtruction of a Terreſtrial *Globe*, whether of Metal, or Plaiſter, Paper, &c. is the ſame as that of a Celeſtial. The ſame *Circles* are delineated on both: And as for the *Places*, *viz.* Cities, Towns, &c. they are laid down from the Longitudes, and Latitudes given; as the Stars are from their right Aſcenſions and Declinations.

Hence, all Problems depending on the Circles, may be equally wrought on either *Globe*; as the Aſcenſions, Deſcenſions, Amplitudes, Azimuths, Riſings, Settings, Altitudes, &c. of the Sun; the Lengths of Day and Night; Hours of the Day and Night; Crepuſcula, &c.

We ſhall here, therefore, only give what is peculiar to the Terreſtrial *Globe*.

*Uſe of the Terreſtrial* GLOBE.

Problem. I. *To find the Longitude and Latitude of any Place delineated on the* Globe.

Bring the Place to the graduated Side of the Braſs Meridian: The Degree of the Meridian it cuts, is the *Latitude* required; and the Degree of the Æquator at the ſame time under the Meridian, is the *Longitude* required.

II. *The Longitude and Latitude given, to find the Place on the* GLOBE.

Seek, in the Æquator, the given Degree of Longitude, and bring it to the Meridian: Then count from the Æquator on the Meridian the Degree of Latitude given towards this or that Pole, as the Latitude is either North, or South. The Point under this is the *Place* requir'd.

III. *To find the Antoeci, Periœci, and Antipodes of any Place.*

1° The given Place being brought to the Meridian; count as many Degrees on the Meridian from the Æquator towards the other Pole. The Point thus arrived at, is the Place of the *Antoeci*. See ANTOECI. 2° Note the Degrees of the Meridian over the given Place and its *Antoeci*; and turn the *Globe* till the oppoſite Degree of the Equator, come under the Meridian; or, which amounts to the ſame, till the Index, which before ſtood at XII, come to the other XII: Then will the Place correſponding to the former Degree, be the *Periœci*; and the latter, that of *Antipodes*. See PERIŒCI, and ANTIPODES.

IV. *To find what Place of the Earth the Sun is Vertical to at any Time aſſigned.*

1° Bring the Sun's Place found in the Ecliptic to the Meridian; and the Index to the Hour of XII: Noting what Point of the Meridian correſponds thereto. 2° If the given Hour be before Noon; ſubtract it from twelve Hours; and turn the *Globe* towards the Weſt, till the Index point at the Hours remaining. Thus will the Place requir'd be under the Point of the Meridian before noted. 2° If the Hour be Afternoon, turn the *Globe* in the ſame manner towards the

Weſt, till the Index point at the given Hour: Thus again will the Place requir'd be found under the Point of the Meridian before noted.—

If, at the ſame time, you note all the Places which are under the ſame Half of the Meridian with the Place found; you will have all the Places to which the Sun is then in the Meridian: And the oppoſite Half of the Meridian will ſhew all the Places, in which it is then Midnight.

V. *A Place being given in the torrid Zone, to find the two Days in the Year wherein the Sun is vertical to the ſame.*

1° Bring the given Place to the Meridian; and note the Degree of the Meridian correſponding thereto. 2° Turn the *Globe* about, and note the two Points of the Ecliptic paſſing thro' that Degree. 3° Find what Days the Sun is in thoſe Points of the Ecliptic: For on thoſe Days he is vertical to the given Place.

VI. *To find thoſe Places in the Torrid Zone to which the Sun is Vertical on a given Day.*—

Bring the Sun's Place in the Ecliptic to the Meridian: Then turning the *Globe* round, note all the Places which paſs thro' that Point of the Meridian. Thoſe are the Places required.

After the ſame manner are found what People are *Aſcii*, for any given Day. See Ascii.

VII. *A Place being given in the Frigid Zone, to find on what Days of the Year the Sun does not riſe; and on what Days he does not ſet to the ſame.*

1° Count as many Degrees in the Meridian from the Æquator towards the Pole, as is the Diſtance of the given Place from the Pole. 2° Turning the *Globe* round, note all the Points of the Ecliptic paſſing thro' each Point noted in the Ecliptic: By this means you will have the Arches which the Sun deſcribes while he neither riſes, nor ſets; and the Points themſelves give the Places of the Sun, when he neither riſes nor ſets, at the Beginning and Ending. 3° Find what Days of the Year the Sun is in thoſe Places: Theſe are the Anſwer to the Queſtion.

VIII. *To find the Latitude of the Places wherein any given Day is of any given Length.*

1° Bring the Sun's Place for the given Day to the Ecliptic, and ſet the Index to the Hour of twelve. 2° Turn the *Globe*, till the Index point at the Hour of riſing or ſetting. 4° Raiſe and depreſs the Pole till the Sun's Place appear in the Eaſtern or Weſtern Side of the Horizon. Then will the Pole be duly elevated, and conſequently the Latitude given.

IX. *To find the Latitude of thoſe Places in the Frigid Zone, where the Sun does not ſet for a given Number of Days.*

1° Count ſo many Degrees from the next Tropic, towards the Equinoctial Point, as there are Units in half the Number of the given Days; by reaſon, the Sun in his proper Motion, goes nearly a Degree every Day. 2° Bring the Point of the Ecliptic, thus found, to the Meridian: Its Diſtance from the Pole will be equal to the Elevation of the Pole, or Latitude of the Places requir'd.

X. *Any Hour of the Day, or Night being given, to ſhew all thoſe Places to which the Sun riſes, and ſets; where it is Noon, or Midnight; and where Day, or Night.*

1° Find what Place the Sun is at that time vertical to, as already taught. 2° Let this Place be brought to the Zenith of the wooden Horizon, *i. e.* elevate the Pole as the Latitude of that Place requires. Then, will the Places on the Eaſtern Side of the Horizon, be thoſe the Sun is ſetting to; and on the Weſtern Side, thoſe he riſes to: Thoſe under the upper Semicircle of the Meridian, have it Noon; and thoſe under the lower, Midnight. Laſtly, to thoſe in the upper Hemiſphere it is Day; and to thoſe in the lower, Night.—

Hence, as, in the Middle of an Eclipſe, the Moon is in the Degree of the Ecliptic oppoſite to the Sun's Place; by the preſent Problem it may be ſhewn what Places of the Earth then ſee the Middle of the Eclipſe; and what, the Beginning, or Ending.—

XI. *To find what Places of the Earth a Planet*, e. gr. *the Moon, is vertical to, any day of the Year.*

1° Mark the Planet's Place on the *Globe*, as above taught. 2° Bring this Place to the Meridian; and note the Degree over it. 3° Turn the *Globe* round; the Places which paſs under the Point, are thoſe required.—

XII. *The Declination of a Star, or any other Phænomenon given; to find what Parts of the Earth the ſame is vertical to.*

Count as many Degrees in the Meridian, from the Æquator towards one Pole, as are equal to the given Declination; *viz.* towards the North, if the Declination be Northward; and towards the South, if the Declination be South. Then, turning it round, the Places that paſs thro' the Extremity of this Arch in the Meridian, are the Places required.—

XIII. *To determine the Place of the Earth where any Star, or other Celeſtial Phænomenon will be Vertical at a given Hour.*

1° Elevate the Pole according to the Latitude of the Place, from whoſe Noon or Midnight the Hours are number'd. 2° Bring the Sun's Place for that Day to the Meridian, and ſet the Index to Twelve a-Clock. 3° Determine the Place of the Star on the Surface of the *Globe*, and bring it to the Meridian: The Index will ſhew the Difference of Time between the Appulſe of the Sun and Star to the Meridian of the Place: Note the Point of the Meridian over the Place of the Star. 4° Find in what Places of the Earth it is then Noon, and ſet the Index to Twelve a-Clock. 5° Turn the *Globe* towards the Weſt, till the Index have paſs'd over the Interval of Time between the Culmination of the Sun and Star. Then, under the Point of the Meridian before obſerved, will the Place required be found.

And hence may be found what Place a Star, or other Phænomenon riſes or ſets to at any given time.—

XIV. *To place the* Globe *in ſuch manner, under any given Latitude, as that the Sun ſhall illumine all thoſe Regions, which he actually illumines on Earth.*

1° Rectify the *Globe*, *i. e.* Elevate the Pole according to the Latitude of the Place: Bring the Place to the Meridian; and ſet the *Globe* North, and South by the Compaſs: Thus, the *Globe* having the ſame Situation to the Sun, as the Earth has; that Part thereof will be illumined, which is illumined on Earth.

Hence, the *Globe* being ſituate in the ſame manner, when the Moon ſhines, it will ſhew what Parts are then illumined by the Moon.

And, in the ſame manner, may we find where the Sun and Moon riſe and ſet at any given Time.

XV. *To find the Diſtance of two Places on the* Globe.

Take the given Places in the Compaſſes; and apply them to the Æquator. The Degrees they there ſubtend, being reduc'd into Miles, Leagues, or the like, give the Diſtances required. See Degree, Mile, *&c.*

The ſame may be done, and more commodiouſly, by laying the graduated Edge of the Quadrant of Altitude over the two Places; and noting the Degrees intercepted.—

GLOBULAR *Chart*, a Repreſentation of the Surface, or ſome Part of the Surface, of the Terraqueous Globe, upon a Plane; wherein the Parallels of Latitude are Circles nearly Concentric; the Meridian's, Curves bending towards the Poles; and the Rhumb-lines alſo Curves. See Chart, and Projection.

The Merits of this *Chart* conſiſt in this, that the Diſtances between Places upon the ſame Rhumb, are all meaſur'd by the ſame Scale of equal Parts, and the Diſtances of any two Places in the Arch of a great Circle, is nearly repreſented in this Chart by a Straight Line.—Hence, Land Maps made according to this Projection, would indiſputably have great Advantages above thoſe made any other way. See Map.

But for Sea Charts, and the Uſes of Navigation, 'tis yet controverted, whether the *Globular Chart* be preferable to *Mercator's*, where the Meridians, Parallels, and particularly the Rhumb-lines, are all ſtraight Lines; inaſmuch as ſtraight Lines are found more eaſy to draw, and manage than Curves, eſpecially ſuch as the Rhumb-lines on the *Globular Chart* are. See Mercator, Rhumb, &c.

This Projection is not new, tho' not much taken notice of till of late. It is mention'd by *Ptolomy*, in his *Geography*; as alſo by *Blundevil* in his *Exerciſes*.

Globular *Sailing*; ſee *Great Circle* Sailing.

GLOBULE, Globulus, a little Globe; call'd alſo a *Spherule*. See Globe.

Thus the Cruor, or red Particles of the Blood are call'd *Globules* of the Blood, on account of their Redneſs, and Smalneſs. See Cruor.

The Microſcope diſcovers the Blood to conſiſt of red, *globular* Particles, ſwimming in a limpid, tranſparent Water,

or

or Serum; and these, when at a due Distance, may be discern'd to attract each other, and unite into larger *Globules*, like the Spheres of Quickſilver. See BLOOD.

The *Carteſians* call the Particles broke off of the Matter of the firſt Element *Globules of the ſecond Element*. See ELEMENT, CARTESIANS, &c.

GLOBULUS *Naſi*, is us'd for the lower cartilaginous moveable Part of the Noſe. See NOSE.

GLORIA *Patri*, in the Liturgy, a Formula, or Verſe, repeated at the End of each Pſalm, and on other Occaſions, to give Glory to the Holy Trinity; call'd alſo *Doxology*. See DOXOLOGY.

It is thus called, becauſe beginning in the *Latin* Office with theſe Words, *Gloria Patri*, q. d. *Glory be to the Father*, &c.

Pope *Damaſus* is commonly held to have firſt order'd the Rehearſal, or rather the ſinging the *Gloria Patri* at the End of Pſalms. *Baronius*, indeed, will have it to have been us'd in the times of the Apoſtles: But its uſe, then, he allows to have been more obſcure; and that it did not become popular till after the Riſe of *Arianiſm*, when it was made a kind of Symbol of Orthodoxy.

The fifth Canon of the Council of *Vaiſon*, held in 529, decrees, "That the Name of the Pope ſhall always be re-"hears'd in the Churches of *France*; and after the *Gloria* "*Patri*, ſhall be added *Sicut erat in Principio*, as is done "at *Rome*, in *Africa*, &c. On account of the Hereticks, "who ſay that the Son of God had his Beginning in time." *Fleury*.

GLORIA *in Excelſis*, a kind of Hymn alſo rehearſed in the Divine Office; beginning with the Words *Gloria in Excelſis Deo, & in terra pax hominibus*, &c. Glory be to God on High, on Earth Peace, &c.

GLOSS, or GLOSSA, a Comment made on the Text of any Author, to explain his Senſe more fully, and at large; whether in the ſame Language, or another.

*Nic. de Lira* has compoſed a *Gloſs* of the Bible in ſix Volumes, Folio.—The *French* ſay proverbially of an ill Comment, that it is *Gloſe d'Orleans, plus obſcure que le Texte*.

The Word *Gloſs*, according to ſome, comes from the *Greek* γλῶτ∫α, Tongue; the Office of a *Gloſs* being to explain the Text; as that of the Tongue is to diſcover the Mind.

Others derive it from the Latin *Glos*, a Siſter-in-Law, which among the Lawyers ſometimes ſtands for Siſter; the *Gloſs* being, as it were, Siſter to the Text.—

GLOSS is alſo uſed for a literal Tranſlation; or an Interpretation of an Author in another Language, Word for Word. See TRANSLATION.

Young Scholars need an Interlineary *Gloſs* for the underſtanding of *Juvenal*, *Horace*, *Saluſt*, &c.

GLOSS is alſo us'd in Matters of Commerce, &c. for the Luſtre of a Silk, Stuff, or the like. See LUSTRE.

GLOSSARY, a kind of Dictionary, for explaining the obſcure, antient, and barbarous Words, and Phraſes of an alter'd, corrupted, or refined Language. See DICTIONARY, &c.

*Spelman*'s *Gloſſary*, intituled *Latino-Barbarum*, is an excellent Work; tho' that Author did not begin to ſtudy in this way till 50 Years of Age.

M. *du Canges* Latin *Gloſſary* in three Volumes, and his Greek *Gloſſary* in two Volumes Folio, are wonderful Performances, full of uncommon Erudition.

*Lindenbrok* has a *Gloſſary* on the Laws of *Charlemaign*, &c.

GLOSSOCOMON, a Chirurgeons Inſtrument, uſed in ſetting broken and diſlocated Thighs and Legs; as alſo in extending thoſe which remain too ſhort after ſetting. See DISLOCATION, &c.

It conſiſts of a hollow Trunk, wherein the Thigh, or Leg is laid: At the Bottom hereof is a kind of Wheel; and towards the Top are two Pullies, one on each Side. Several Thongs of Leather are tied both above and below the fractur'd Place. Thoſe below, are faſten'd to the Axis of the Wheel, which they are near: Thoſe above, go over the Pullies to come to the Axis, which they are likewiſe faſten'd to; ſo that the ſame Turning of the Wheel, both draws the Part of the Leg, or Thigh, which is above the Fracture, upwards; and that below, downwards.

The Word is form'd of the *Greek* γλῶσα, Tongue, and κομεῖν, to have care; and was properly and primarily given by the Antients to a little Box, wherein they kept the Reeds of their Hautbois, &c.

GLOSSOCOMON, in Mechanicks, is a Name given by *Geron* to a Machine compoſed of divers dented Wheels, with Pinions; ſerving to raiſe huge Burthens.—

GLOSSOPETRA, or GLOTTOPETRA, in Natural Hiſtory, a kind of Stone, in form of a Tongue; commonly found in the Iſland of *Malta*, and divers other Parts. See STONE.

Naturaliſts are divided as to the Nature, and Origin of theſe Stones.—*Steno, de Corpore ſolido intra ſolidum contento: Ol. Wormius, Diſſert. de* Gloſſopetra; and *Reyſchius de* Gloſſopetris *Luneburgenſibus*, treat of them at large.

The vulgar Notion is that they are the Tongues of Serpents petrify'd; and hence their Name, which is a Compound of γλῶσα, Tongue, and πέτρα, Stone—Hence alſo their traditionary Virtue in curing the Bites of Serpents.

The People relate, that ſince the Viper which bit St. *Paul* without doing him any Harm; all the Serpents of that Iſland have had the ſame Virtue; and that the *Gloſſopetræ* are the Tongues of thoſe formerly dead—But this is palpable Fable, which the ſole Figure of the *Gloſſopetræ* refutes; they having nothing of the Figure of a Serpent; beſide that they are too big. See PETRIFACTION.

The common Opinion of Naturaliſts is that they are the Tongues of Fiſhes, left at Land by the Waters of the Deluge; and ſince petrify'd. See DELUGE.

Some ſpecify the very kind of Fiſh; and take it to be that which *Theophraſtus*, and the *Greek* Writers call καρχαείας, and the Moderns, the *Sea-dog*.

*Camerarius* cannot perſuade himſelf that the *Gloſſopetræ* found in *England*, *Malta*, and a-round *Montpelier* were ever the Teeth of a Sea-dog, or any other Fiſh—The chief Difficulty, he ſuggeſts, is the ſmall Quantity of volatile Salt and Oil they afford by Diſtillation. To which Dr. *Woodward* anſwers, in defence of the common Syſtem, that having laid ſo long burried under Ground, 'tis no wonder they ſhould have loſt the beſt Part of their volatile Principles.—'Tis certain that human Bones, and Skulls long interr'd don't afford near the Quantity of thoſe Principles, as they would have done immediately after the Perſon's Death.

Another Scruple propoſed by *Camerarius*, is, that the *Gloſſopetræ*, when expoſed to the naked Fire, turn to a Coal, and not a Calx; contrary to what is aſſerted by *Fabius Columna*—Dr. *Woodward* anſwers, that 'tis likely enough the *Gloſſopetræ*, in burning, may aſſume the Form of Coal, before it arrive at that of a Calx.

GLOTTIS, in Anatomy, a Cleft, or Chink in the Larynx, ſerving for the Formation of the Voice. See LARYNX.

The *Glottis* is in form of a little Tongue; whence its Name, from γλῶσα, Tongue: For the ſame reaſon the *Latins* call it *Lingula*, *i. e.* little Tongue.

Thro' this Chink the Air deſcends, and aſcends in reſpiring, ſpeaking, ſinging, &c. It has an Apparatus of Muſcles, whereby we contract and enlarge it; and hence all the Variety of Tones of the Voice. See VOICE.

The *Glottis* is cover'd and defended with a thin, ſoft Cartilage call'd the *Epiglottis*. See EPIGLOTTIS.

GLOVE, CHIROTHECA, a Habit or covering for the Hand and Wriſt; us'd both for Warmth, Decency, and to ſhelter from the Weather.

*Gloves*, are diſtinguiſh'd, with reſpect to Commerce, into Leathern *Gloves*, Silk *Gloves*, Thread *Gloves*, Cotton *Gloves*, worſted *Gloves*, &c.

There are alſo *Gloves* of Velvet, Satin, Taffaty, &c. Leather *Gloves* are made of Shammy, Kid, Lamb, Doe, Elk, Buff, &c. See LEATHER.

There are Perfumed *Gloves*; Waſh'd, Glazed, Wax'd, White, Black, Snuff-colour, &c. Single, lin'd, top'd, lac'd, fring'd with Gold, Silver, Silk, Fur, &c.

'Tis a Proverb, that for a *Glove* to be good, and well made, three Kingdoms muſt contribute to it; *Spain*, to dreſs the Leather; *France*, to cut it; and *England*, to ſew it: But, of late, the *French* ſeem to have appropriated the Functions of the other two; the *Gloves* of the *French* Manufacture having now the Advantage in point of dreſſing and ſewing; as much as cutting.—

To *throw the Glove*, was a Practice, or Ceremony very uſual among our Forefathers; being the Challenge, whereby another was defied to ſingle Combat—It is ſtill retain'd at the Coronation of our Kings; when the King's Champion caſts his *Glove* in *Weſtminſter-Hall*. See CHAMPION.

*Favyn* ſuppoſes the Cuſtom to have aroſe from the Eaſtern Nations, who in all their Sales, and Deliveries of Lands, Goods, &c. give the Purchaſer their *Glove* by way of Livery, or Inveſtiture. To this effect he quotes *Ruth* iv. 7. where the *Chaldee* Paraphraſe calls *Glove*, what the common Verſion renders by *Shoe*. He adds, that the Rabbins interpret by *Glove*, that Paſſage in the CVIII^th^ Pſalm, *In Idumæam extendam calceamentum meum*, Over *Edom* will I caſt out my Shoe.—Accordingly, among us, he who took up the *Glove*, declared thereby his Acceptance of the Challenge; and as a Part of the Ceremony, continues *Favyn*, took the *Glove* off his own right Hand, and caſt it upon the Ground, to be taken up by the Challenger. This had the Force of a mutual Engagement on each ſide, to meet at the Time and Place which ſhould be appointed by the King, Parliament, or Judges.—See GAGE, &c.

The ſame Author aſſerts, that the Cuſtom which ſtill obtains of *bleſſing Gloves* in the Coronation of the Kings of *France*, is a Remain of the Eaſtern Practice of giving Poſſeſſion with the *Glove*. *L. XVI. p.* 1017. &c.

Antiently it was prohibited the Judges to wear *Gloves* on the Bench. And at preſent in the Equeries of moſt Princes, 'tis not ſafe going in without pulling off the *Gloves*.—

GLUE,

GLUE, Gluten, a viſcid, tenacious Matter ſerving as a Cement to bind, or connect divers Things together. See Cement.

There are divers Kinds of *Glues* made uſe of in the divers Arts; as the Common *Glue*; Glove *Glue*; Parchment *Glue*—But the two laſt are more properly call'd *Size*.

The *Common*, or *Strong* Glue is a Commodity uſed by numerous kinds of Artificers; as Joiners, Cabinet-makers, Caſe-makers, Hatters, Bookbinders, &c. And the Conſumption thereof is very conſiderable. The beſt is that made in *England*, in ſquare Pieces, of a ruddy, brown Colour. *Flanders Glue* is held the next after the *Engliſh*.

*Glue* is made of the Skins of all kinds of Beaſts, as Oxen, Cows, Calves, Sheep, &c. The older the Beaſt is, the better is the *Glue*, made of its Hide. Indeed, 'tis rare they uſe whole Skins for this purpoſe; thoſe being capable of being applied to better purpoſe: But they make uſe of the Shavings, Parings, or Scraps thereof: Sometimes they make it of the Feet, Sinews, Nerves, &c. of Beaſts.

That made of whole Skins, is the beſt; and that of Sinews, &c. the worſt: And hence chiefly ariſes the Difference of *Glues*; and the Advantages of the *Engliſh* and *Flemiſh Glues*: For, as our Tanners generally make the *Glue* themſelves; they are not ſparing of the Parings of the Skins, which they never ſell: Whereas, in *France*, &c. the *Glue-makers* being a peculiar kind of Manufacturers, and having no Parings, &c. but what they buy, make uſe chiefly of Sinews, Feet, &c.

*Method of making* Glue.

To make *Glue* of Parings; they firſt ſteep them two, or three Days in Water; then waſhing them well out, they boil them to the conſiſtence of a thick Gelly. This done, they paſs the Gelly, while yet hot, thro' Oſier Baſkets, to ſeparate from it any Impurities; and in order to purify it ſtill further, they let it reſt ſome time. When the Ordures, or foreign Matters are precipitated to the Bottom of the Veſſel; they melt and boil it a ſecond time.

This done, they pour it into flat Frames, or Moulds; whence it is taken out, when pretty hard and ſolid, and cut into ſquare Pieces, or Cakes. Nothing now remains, but to dry it in the Wind, on a ſort of coarſe Net, and afterwards to ſtring it, to finiſh the Drying.

The *Glue* made of Feet, Sinews, &c. is manag'd after the ſame manner; with this only Difference, that they bone, and ſcour the Feet, and don't lay them to ſteep.

The beſt *Glue* is that which is oldeſt: The ſureſt Teſt of Goodneſs is to lay a Piece to ſteep three, or four Days in Water; if it ſwell conſiderably without melting, and when taken out reſume its former Dryneſs, it is excellent.

*Fiſh* Glue, is a ſort of *Glue* made of the nervous and mucilaginous Parts of a large Fiſh, found chiefly in the *Ruſſian* Seas.

Theſe Parts being boil'd, bear a near Reſemblance to that viſcid Matter found on the Skins of Cod Fiſh. When boil'd to the Conſiſtence of a Gelly, they ſpread it on a Leaf of Paper, and form it into Cakes; in which State it is ſent to us.

*Fiſh Glue* is of conſiderable uſe in Medicine, and divers other Arts; where it is better known under the Names of *Iſing Glaſs* and *Ichthyocolla*. See Ising *Glaſs*, &c.

GLUTÆUS, in Anatomy, from γλουτὸς, *Nates*, a Buttock; a Name common to three Muſcles, whoſe Office is to extend the Thigh—The firſt

The *Glutæus Major*, or the *greater*, ariſes ſemicircularly from the Os Coccygis, the Spines of the Sacrum, the Spine of the Ilium, and a ſtrong Ligament which runs between the Sacrum, and Tubercle of the Iſchium; and deſcending, is inſerted into the Linea aſpera, four Fingers Breadth below the great Trochanter.

The *Glutæus Medius*, or the *middle* one, call'd alſo *minor*, or *leſs*, ariſes from the Spine of the Ilium under the former, and is inſerted into the ſuperior and external Part of the great Trochanter.

The *Glutæus minimus*, or *leaſt*, ariſes from the lower Part of the external Side of the Ilium, under the former, and is inſerted at the ſuperior Part of the great Trochanter.

GLUTINATIVE, Agglutinative, or Conglutinative, in Medicine, and Pharmacy. See Conglutinative.

GLYCONIAN, or Glyconic, in the *Greek* and *Latin* Poetry.—A *Glyconian Verſe* is that conſiſting of two Feet, and a Syllable. See Verse, and Foot.

This is *Scaliger*'s Sentiment, who adds, that the *Glyconian* Verſe was alſo call'd *Euripidæan*.

Others hold that the *Glyconian* Verſe conſiſted of three Feet; a Spondee, and two Dactils; or rather, a Spondee, Choriambus, and a Pyrrhic; which Opinion is the moſt followed.

*Sic te diva potens Cypri*, is a *Glyconian Verſe*.

GLYCYRRHIZA, or Glicyrhizza, in Medicine, *Liquorice*. See Glicyrrhizza.

GLYPHE, or Glyphis, in Architecture, a general Name for any Cavity, or Canal, whether round, or terminating in an Angle; us'd as an Ornament, in any Part.

The Word is *Greek*, γλυφὴ, which literally ſignifies *graving*.

Τλυφὶς is properly a Nitch, or Indenture made in *graving*; or, more properly, the Notch in the Head of an Arrow, over which the String goes. See Triglyph.

GLYSTER; ſee Clyster.

GNOME, a Name which the Cabaliſts give to certain inviſible People, whom they ſuppoſe to inhabit the Inner Parts of the Earth, and to fill it to the Centre.

They are repreſented as very ſmall of Stature, tractable, and friendly to Men; and are made the Guardians of Mines, Quarries, hidden Treaſures, &c.

*Vigenere* calls them *Gnomons*—The Females of this Species are call'd *Gnomides*.

*Vigneuil de Marville* in his *Melange d'Hiſtoire & de Literature*, *T. I. p.* 100. gives a Relation of a Conference with a Philoſopher of this Claſs, who held that an Infinity of Spirits inhabited each of the four Elements, Fire, Air, Water, and Earth, under the Denomination of *Salamanders*, *Sylphs*, *Oudins*, and *Gnomes*; that the *Gnomes* are employ'd in working, or actuating the Machines of Brutes upon the Earth.

He added that ſome Philoſophers of that Sect, held that theſe Spirits were of two Sexes, for the two Sexes of Beaſts, or moving Machines; that they were even more or leſs perfect as the Brutes were; and that there was an infinite Number of exceedingly ſmall ones, to actuate the infinite Number of Inſects, and Animalcula, both thoſe that are viſible, and thoſe which are too ſmall to come under our Senſes; that all theſe Spirits in general govern their reſpective Machines according to the Diſpoſition of the Parts, or Organs, the Humors, Temperaments, &c. that they do not lay hold of all Machines indifferently, but of theſe ſuited to their own Character, Element, &c. That a haughty one, for inſtance, ſeizes a *Spaniſh* Gennet; a cruel one, a Tyger, &c. See Silph, &c.

Gnome, or Chria, is alſo us'd for a ſhort, pithy, uſeful, and ſententious Obſervation, Reflexion, or the like; worthy to be treaſur'd up, and remembred. See Sentence, Apothegm, &c.

Such is that of *Juvenal*,

*Orandum eſt ut ſit mens ſana in corpore ſano.*

The Writers of Rhetoricks diſtinguiſh ſeveral kinds of *Gnomes*, according as they turn on Words, on Actions, or both; denominating them Verbal, Active, and Mix'd *Gnomes* or Chriæ.

Gnomon, in Geometry.—If a Parallelogram be divided into four leſſer ones, by two Lines interſecting eath other; and one of theſe Parallelograms be retrench'd, or taken away; the other three will make a *Gnomon*, ordinarily call'd a *Square*. See Square.

Or, a *Gnomon* in a Parallelogram, may be ſaid to be a Figure form'd of the two Complements, together with either of the Parallelograms about the Diameter. Thus, in the Parallelogram A B *Tab. Geometry*, *Fig.* 5. the *Gnomon* is M + *x* + *z* + N; or M + N + *X* + Z.

Gnomon, in Aſtronomy, an Inſtrument, or Apparatus for meaſuring the Meridian Altitudes of the Sun, and Stars. See Meridian *Altitude*.

Thoſe converſant in Obſervations, prefer the *Gnomon* to the ſmaller Quadrants, both as more accurate, eaſier made, and more eaſily applied. See Quadrant, and Observation.

Accordingly, both Antients, and Moderns have made uſe of *Gnomons*, for the making of their more conſiderable Obſervations: *Ulugh Beigh*, King of *Parthia*, &c. uſed a *Gnomon*, in the Year 1437. which was 180 *Roman* Feet high: That erected by *Ignatius Dantes* in the Church of St. *Petronius* at *Boulogne*, in the Year 1576, was 67 Feet high; M. *Caſſini* erected another 20 Foot high, in the ſame Church, in the Year 1655. See Solstice.

*To erect an Aſtronomical* Gnomon, *and obſerve the Meridian Altitude of the Sun by the ſame.*

Erect a perpendicular Style, of a conſiderable Height, on the Meridian Line: Note the Point where the Shadow of the *Gnomon* terminates when projected along the Meridian Line: Meaſure the Diſtance of that Extreme from the *Gnomon*, *i.e.* the Length of the Shadow.—Thus, having the Height of the *Gnomon*, and the Length of the Shadow; the Meridian Altitude of the Sun is eaſily found.

Suppoſe, *e. gr.* T S (*Tab. Opticks*, *Fig.* 13.) the *Gnomon*, and T V the Length of the Shadow. Here, on the rectangled Triangle S T V, having the two Sides T V and T S; the Angle V which is the Quantity of the Sun's Altitude, is found out by this Analogy: As the Length of the Shadow T V, is to the Altitude of the *Gnomon* T S; ſo is the whole

whole Sine : to the Tangent of the Sun's Altitude above the Horizon.

*Or, more accurately, thus* ;

Make a Circular Perforation in a Braſs Plate, to tranſmit enough of the Sun's Rays to exhibit his Image on the Floor: Fix it parallel to the Horizon in a high Place, proper for Obſervation: Let fall a Line, and Plummet, wherewith to meaſure the Height of the Perforation from the Floor. Take care the Floor be perfectly level, and exactly horizontal; and let it be whiten'd over, to exhibit the Sun more diſtinctly. Draw a Meridian Line thereon, paſſing thro' the Foot of the *Gnomon*, *i. e.* thro' the Point the Plummet points out: Note the extreme Points of the Sun's Diameter on the Meridian Line K and I, and from each ſubtract a Right Line equal to the Semi-diameter of the Aperture, *viz.* K H, *Tab. Aſtron. Fig.* 57. on one Side, and L I on the other.—Then will H L be the Image of the Sun's Diameter, which biſſected in B, gives the Point on which the Rays fall from the Centre of the Sun.

Now, having given the Right Line A B, and the Altitude of the *Gnomon*, with the Angle A, which is Right; the Angle A B G, or the apparent Altitude of the Sun's Centre, is eaſily found: For, aſſuming one of the given Sides A B for Radius; A G will be the Tangent of the oppoſite Angle, B. Then ſay, As one Leg, A B, is to the other A G ; So is the whole Sine, to the Tangent of the Angle B.

GNOMON, in Dialling, is the *Style*, Pin, or Cock of a Dial; the Shadow whereof pointeth out the Hours. See STYLE, and DIAL.

The *Gnomon* of every Dial is ſuppos'd to repreſent the Axis of the World; and therefore the two Ends or Extremities thereof muſt directly anſwer to the North, and South Poles. See MERIDIAN.

The Word is *Greek*, γνόμον; which literally imports ſomewhat that *makes a thing known*; by reaſon the Style, or Pin makes the Hour, *&c.* known.

GNOMONICA, or GNOMONICE, GNOMONICKS, the Art of *Dialling*; or of drawing Sun and Moon Dials, *&c.* on any given Plane. See DIAL, and DIALLING.

'Tis thus call'd, as it ſhews how to find the Hour of the Day, *&c.* by the Shadow of a *Gnomon*, or Style.

GNOSIMACHI, an antient Sect in Religion, whoſe diſtinguiſhing Character was that they were profeſs'd Enemies of all ſtudied Knowlege in Divinity.

*Damaſcenus* ſays that they were perfectly averſe to all the *Gnoſis* of Chriſtianity, *i. e.* to all the Science, or Knowlege therein. They held it an uſeleſs Labour to ſeek for *Gnoſes* in the Holy Scriptures; that God requires nothing of Men but good Works; that it were, therefore, much better to walk with more Simplicity, and not to be ſo ſollicitous about the Dogmata of the Gnoſtic Life.

This *Gnoſis* which they decried, is commonly underſtood of Science; and *Damaſcenus*'s Interpreters tranſlate the Word ſo.

Some Authors take the Word *Gnoſis* to have a further Meaning, and that in the firſt Ages of Chriſtianity, it ſignified much the ſame with what we call *Spirituality*, and the *Gnoſtic Life*, Γνωσικὴ ἄσκησις. In which Senſe the *Gnoſimachi* muſt have been ſuch as were Enemies of the Spiritual Life; who contended for the doing of good Works in all Simplicity; and blamed ſuch as aim'd to render them more perfect by Meditation, a deeper Knowlege and Inſight into the Doctrines and Myſteries of Religion, and the ſublimer, and more abſtracted Exerciſes. See GNOSTIC.

The Word is *Greek*, γνωσιμάχος, *q. d.* an Enemy of Wiſdom.—

GNOSTICKS, antient Hereticks, famous from the firſt Riſe of Chriſtianity; principally in the Eaſt. See HERETICKS.

The Name *Gnoſtic*, which properly ſignifies *learned*, was adopted by thoſe of this Sect, as if they were the only Perſons who had the true Knowlege of Chriſtianity: Accordingly, they look'd on all the other Chriſtians as ſimple, ignorant, and barbarous Perſons, who explain'd, and interpreted the Sacred Writings in too low, and literal a Signification.

At firſt, they were no more than the Philoſophers, and Wits of thoſe Times, who form'd themſelves a peculiar Syſtem of Theology, agreeable to the Philoſophy of *Pythagoras*, and *Plato*; to which they accomodated all their Interpretations of Scripture.

But the Word *Gnoſtic* afterwards became a generical Name, comprehending divers particular Sects, and Parties of Hereticks, who roſe in the firſt Centuries; and who, tho' they differ'd among themſelves as to Circumſtances, yet all agreed in ſome common Principles: Such were the *Valentinians*, *Simonians*, *Carpocratians*, *Nicolaitans*, &c. See VALENTINIANS, SIMONIANS, &c.

Sometimes, the Word *Gnoſtic* is us'd as a proper Name, and peculiarly attributed to the Succeſſors of the firſt *Nicolaitans*, and *Carpocratians* in the ſecond Century, upon their laying aſide the Names of the firſt Authors. See CARPOCRATIANS, NICOLAITANS, &c.

Such as would be thoroughly acquainted with all their Doctrines, Reveries, and Viſions, may conſult St. *Irenæus*, *Tertullian*, *Clemens Alexandrinus*, *Origen*, and St. *Epiphanius*; particularly the firſt of theſe Writers, who relates their Sentiments at large, and confutes them at the ſame time: Indeed, he dwells more expreſly on the *Valentinians*, than on any other Sort of *Gnoſticks*; but he ſhews the General Principles whereon all their miſtaken Opinions were founded, and the Method they followed in explaining Scripture.

He accuſes them with introducing into Religion certain vain and ridiculous Genealogies, *i. e.* a kind of divine Proceſſions, or Emanations; which had no other Foundation but in their own Imaginations. See EON, ABRA, CADABRA, &c.

In effect, the *Gnoſticks* confeſs'd that theſe Emanations were no where expreſly deliver'd in the ſacred Writings; but inſiſted at the ſame time, that Jeſus Chriſt had intimated them in Parables, to ſuch as could underſtand him.

They built their Theology not only on the Goſpels, and the Epiſtles of St. *Paul*; but alſo on the Law of *Moſes*, and the Prophets. Theſe laſt were peculiarly ſerviceable to them, on account of the Allegories, and Alluſions they abound withal; which are capable of different Interpretations.

They ſet a great Value on the Beginning of the Goſpel of St. *John*; where they fancied they ſaw a great deal of their Emanations, under the *Word*, the *Life*, the *Light*, &c.

They divided all Nature into three kinds of Beings; *viz.* *Hylic*, or Material; *Pſychic*, or Animal; and *Pneumatic*, or Spiritual.

On the like Principle they alſo diſtinguiſh'd three Sorts of Men; *Material*, *Animal*, and *Spiritual*: The firſt, who were Material, and incapable of Knowlege, inevitably periſh'd both Soul and Body: The third, ſuch as the *Gnoſticks* themſelves pretended to be, were all certainly ſaved: The Pſychic, or Animal, who were the middle between the other two, were capable either of being ſaved, or damn'd, according to their good, or evil Actions.

The Word *Gnoſtic* is form'd of the Latin *Gnoſticus*, and that of the Greek γνωστικὸς, knowing, learned, witty, enlighten'd, ſpiritual; of γινώσκω, I know.

The Name *Gnoſtic* ſometimes occurs in a good Senſe, in the antient Eccleſiaſtical Writers, and particularly *Clemens Alexandrinus*, who, in the Perſon of his *Gnoſtic*, deſcribes the Characters and Qualities of a perfect Chriſtian. This Point he labours in the ſeventh Book of his *Stromata*, where he ſhews that none but the *Gnoſtic*, or learned Perſon has any true Religion. He affirms, that were it poſſible for the Knowlege of God to be ſeparated from eternal Salvation; the *Gnoſtic* would make no Scruple to chuſe the Knowlege: And that if God ſhould promiſe him Impunity in doing of any thing he has once ſpoke againſt, or offer him Heaven on thoſe Terms, he would never alter a Whit of his Meaſures. See GNOSIMACHI.

In this Senſe that Father uſes *Gnoſtic*, in oppoſition to the Hereticks of the ſame Name; affirming that the true *Gnoſtic* is grown old in the Study of the Holy Scripture; and that he preſerves the Orthodox Doctrine of the Apoſtles, and the Church: Whereas the falſe *Gnoſtic* abandons all the Apoſtical Traditions, as imagining himſelf wiſer than the Apoſtles.

At length the Name *Gnoſtic*, which originally was the moſt glorious, became infamous, by the idle Opinions, and diſſolute Lives of the Perſons who bore it; much, as in the preſent Age, has fared with the Names *Quietiſt*, *Pietiſt*, &c. See QUIETISM, &c.

GO, is ſometimes uſed in Law, in a ſpecial Signification: Thus, to *go without Day*; and, to *go to God*, is as much as to be diſmiſs'd the Court; to be acquitted.

GOAD, STIMULUS, a Stick arm'd at one End with a pointed Iron, to prick, and urge on a Horſe, Ox, or the like.

In ſpeaking of Horſes, we more commonly uſe the *French* Name *Valet*; reſerving *Goad* for Oxen.—

GOAL, a Priſon, or Place of legal Confinement. See PRISON.

The Word is form'd of the French *Geole*; and that of the Barbarous Latin *Geola*, *Gaola*, *Gayola*, a *Cage*: Whence the *Picards* ſtill call a Bird-cage, *Gayolle*.

The Goaler, Geolier, was call'd *Gaularius*, and *Cajularius*. *Scaliger* derives the Word *Goaler* from *Janicularius*. Some *Latin* Authors call him *Commentarienſis*, by reaſon he keeps a Regiſter, or Liſt of all thoſe under his Cuſtody.

GOBLET, or GOBELET, a kind of Drinking-cup, or Bowl, ordinarily of a round Figure, and without either Foot, or Handle.

*Goblets*, made of the Wood Tamarin, are rank'd among the Medicinal Drugs; in regard the Liquors infused a while therein, are supposed to acquire a Quality which renders them good in Diseases of the Spleen.

The Word is French, *Gobelet*; which *Salmasius*, and others derive from the Barbarous Latin, *Cupa*: *Budæus* derives it from the *Greek* κυπέλλον.—

GOBELINS, a celebrated Manufactory, established at *Paris*, in the Fauxbourg St. *Marcel*, or St. *Marceau*; for the making of Tapistry, and other Furniture, for the use of the Crown. See TAPISTRY.

The House where this Manufacture is carried on, was built by two Brothers, *Giles*, and *John Gobelins*, both excellent Dyers, and the first who brought to *Paris* the Secret of dying that beautiful Scarlet Colour still known by their Name; as well as the little River *Bievre*, on whose Banks they fix'd their Dye-house; and which is now known by no other Name than that of the River of the *Gobelins*.

It was in the Year 1667, that this Place, till then call'd *Gobelin*'s *Folly*, chang'd its Name into that of *Hotel Royal des Gobelins*, in consequence of an Edict of *Louis* XIV.

Monsr. *Colbert*, having re-established'd, and with new Magnificence enrich'd and compleated the King's Palaces, particularly the *Louvre*, and *Tuilleries*, began to think of making Furniture, suitable to the Grandeur of those Buildings: With this View he call'd together all the ablest Workmen in the divers Arts and Manufactures throughout the Kingdom; particularly Painters, Tapistry-makers, Sculptors, Goldsmiths, Ebenists, *&c.* and by splendid Offers, Pensions, Privileges, *&c.* call'd others from foreign Nations.

And to render the intended Establishment more firm and lasting, brought the King to purchase the *Gobelins*, for them to work in; and drew up a System of Laws, or Policy, in XVII Articles.

By these it is provided that the new Manufactory shall be under the Administration of the Superintendant of the King's Buildings, Arts, *&c.* That the ordinary Masters thereof shall take Cognizance of all Actions, or Processes brought against any of the Persons in the said Manufactory, their Servants, and Dependants: That no other Tapistry Work shall be imported from any other Country, *&c.*

The *Gobelins* has ever since remain'd the first Manufactury of this kind, in the World. The Quantity of the finest, and noblest Works, that have been produc'd by it; and the Number of the best Workmen bred up therein, are incredible. In effect, the present flourishing Condition of the Arts, and Manufactories of *France* is in a great measure owing thereto.

Tapistry Work, in particular, is their Glory. During the Superintendance of M. *Colbert*, and his Successor M. *de Louvois*, the making of Tapistry is said to have been practis'd to a Degree of Perfection, scarce inferior to what was antiently done by the *English*, and *Flemish*.

The Battles of *Alexander*; the Four Seasons; the Four Elements; the King's Palaces, and a Series of the principal Actions of the Life of *Louis* XIV. from the time of his Marriage to the first Conquest of *Franche Comte*, done from the Designs of M. *le Brun*, Director of the Manufactory of the *Gobelins*, are Master-pieces in their kind.

GOBONE, GOBONATED, in Heraldry, the same as *Compone*. See COMPONE.

GOD.—No just Definition can be given of the Thing signified by this Name, as being infinite, and incomprehensible. See DEFINITION.

In Scripture, he is defined by, I am that I am: Alpha and Omega; the Beginning and End of all Things.

Among Philosophers, he is defined a Being of infinite Perfection; or in whom there is no Defect of any thing which we conceive might raise, improve, or exalt his Nature. See PERFECTION.

Among Men, he is chiefly consider'd as the first Cause, the first Being, who has existed from the Beginning, has created the World, and who subsists necessarily, or of himself. See CAUSE, *&c.*

Sir *Isaac Newton* chuses to consider, and define *GOD* not as is usually done, from his Perfection, his Nature, Existence, or the like; but from his Dominion. 'The Word *God*,' according to him, 'is a relative Term, and has a Regard to Servants: 'Tis true, it denotes a Being eternal, infinite, and absolutely perfect; but a Being, however eternal, infinite, and absolutely perfect, without Dominion, would not be *God*.

'The Word *God* frequently signifies *Lord*; but every Lord is not *God*: The Dominion of a spiritual Being or Lord, constitutes *God*; true Dominion, true *God*; the supreme, the Supreme; feign'd, the feign'd.

'From such true Dominion it follows that the true *God* is living, intelligent, and powerful; and from his other Perfections, that he is supreme, or supremely perfect: He is eternal, and infinite, omnipotent, and omniscient; that is, he endures from Eternity to Eternity, and is present from Infinity, to Infinity.

'He governs all Things that exist, and knows all Things that are to be known: He is not Eternity, or Infinity, but eternal and infinite: He is not Duration, or Space, but he endures, and is present: He endures always, and is present every where; and by existing always and every where, constitutes the very Things Duration and Space, Eternity and Infinity. See ETERNITY, DURATION, SPACE, &c.

'Since every Particle of Space is always, and every indivisible Moment of Duration, every where, the Creator and Lord of all Things can never be *nunquam nusquam*. See UBIQUITY, &c.

'He is omnipresent, not only virtually, but also substantially; for Power without Substance cannot subsist. See POWER, &c.

'All Things are contain'd, and move in him; but without any mutual Passion: He suffers nothing from the Motions of Bodies; nor do they undergo any Resistance from his Omnipresence.

'It is confessed that *GOD* exists necessarily; and by the same Necessity he exists always, and every where. Hence also he must be perfectly similar; all Eye, all Ear, all Brain, all Arm, all the Power of perceiving, understanding and acting; but after a manner not at all corporeal, after a manner not like that of Men, after a manner wholly to us unknown. See ANTHROPOMORPHITE.

'He is destitute of all Body, and all bodily Shape; and therefore cannot be seen, heard, nor touched; nor ought to be worship'd under the Representation of any thing corporeal. See IMAGE, &c.

'We have Ideas of the Attributes of *God*, but do not know the Substance even of any Thing: We see only the Figures, and Colours of Bodies; hear only Sounds, touch only the outward Surfaces, smell only Odours, and taste Tasts; and do not, cannot, by any Sense, or any reflex Act know their inward Substances, and much less can we have any Notion of the Substance of *God*. See BODY, SUBSTANCE, &c.

'We know him by his Properties, and Attributes; by the most wise, and excellent Structure of Things, and by final Causes; but we adore, and worship him only on account of his Dominion: For *God*, setting aside Dominion, Providence, and final Causes, is nothing else but Fate, and Nature. *Philos. Nat. Princip. Math. in Calce*. See FATE, NATURE, &c.

A late ingenious Divine has wrought these Thoughts of that admirable Philosopher into Form, and ripen'd them into a more express System; in a Discourse upon this Occasion.

The great Principle or Proposition he lays down, is that 'God is not rightly defined a Being absolutely perfect, but a spiritual Being endued with absolute Dominion—Not that he denies the self existent Being to be infinitely perfect; but only that it is his Dominion, not his Perfection, that is intended by the Word *God*.'

The self existent Being, he observes, may be consider'd either *absolutely*, or *relatively*: Absolutely, as he is in his own Nature, and as he is consider'd by the Metaphysician: Relatively, as he stands related to his Creatures, and as he is consider'd by the Religionist, his Worshipper. Now, in treating of the Definition of *God*, he intends a nominal, not a real Definition; not what the Nature of that self-existent Being is, which we call *God*; but what it is we mean by the Word *God*: Which, on this System, is that self existent Being, consider'd not absolutely, but relatively; not as he is abstractedly in his own Nature, but as he stands related to the Universe, whose Sovereign Lord he is. See UNIVERSE.

'Tis added, that the Names given him in most Languages, denote, not his abstract, metaphysical, and absolute Idea, but his religious, popular, and relative one.

Indeed, every Worshipper of *God* will allow that he worships that self-existent Being for no other Reason, but because he is *God*; that is, because he is *Lord* and Sovereign; for one would be under no Obligation to worship a Being, tho' absolutely perfect, that had no Dominion over him.—A perfect Being without Dominion, would be only an Object of Contemplation, and Admiration; not of Worship: For Worship is only a Payment of Homage, an Acknowledgment of Subjection; which, where there is no Dominion, cannot be due, and is therefore always due in proportion to the Degree of Dominion.

The Word *God* signifies *Lord*, and not a Being absolutely perfect: Thus when I say, my *God*, the *God* of the Universe, it seems plain, that the Notion of *God* is relative, not absolute, that is, includes Dominion, not absolute Perfection; and if I were to express the same in any other Words, could I do it otherwise than thus, My Lord, the Lord of the Universe; and not thus, my perfect Being, the perfect Being of the Universe?

Indeed, it seems impossible to prove the Existence of a *God*, in the Sense affix'd to that Name, *a priori*, or any otherwise than from his Dominion; that is by arguing from the Effect to the Cause. The following Propositions, 'tis true, are undeniably demonstrable *a priori*. 1° That there is a self-existent, *i. e.* necessarily existent Being; because the Uni-

Univerſe could not produce itſelf. 2° That a neceſſarily exiſtent Being muſt be eternal, and omnipreſent, that is coextended with infinite Duration, and infinite Space, becauſe whatever exiſts by an abſolute Neceſſity of Nature, has no Relation to Difference of Time, Place, &c. and conſequently muſt exiſt always and every where. 3° This Being muſt be perfectly ſimilar, ſimple, and uncompounded, without the leaſt Variety, or Difference imaginable, or poſſible, becauſe abſolute Neceſſity is every where and always the ſame. From which Propoſition it alſo follows, as a Corollary, that this Being is immutable.

It is apparent therefore, *a priori*, that there is a ſelf-exiſtent Being, which is not Matter; and that this Being is eternal, omnipreſent, ſimilar, and unchangeable, by neceſſary Connexion between ſelf-Exiſtence, and theſe Attributes: but it is impoſſible to ſhew any neceſſary Connexion between ſelf-Exiſtence and Underſtanding; and if ſo, it is impoſſible to prove that the ſelf-exiſtent Being is intelligent *a priori*, or any otherwiſe than by arguing from the Effect to the Cauſe; that is, from the Conſideration of the Frame of the Univerſe, the Laws of Nature, and final Cauſes. *Maxwell's Diſc. concern.* GOD.—

The *Hebrews* call the Name of *God* בוארכע אותיוה, and the *Greeks*, after this Example, Τετραγράμματον; as conſiſting of four Letters, which it is obſerv'd to do in moſt Languages: Thus, in the Hebrew, *God* is called יהוה, *Jehovah*; in Greek, Θεὸς; in Latin, *Deus*; in Spaniſh, *Dios*; in Italian, *Idio*; in French, *Dieu*; in the antient Gauliſh, *Diex*; in antient German, *Diet*; in the Sclavonic, *Buch*; in Arabic, *Alla*; in the Poliſh, *Bung*; in the Pannonian, *Iſtu*; in the Egyptian, *Tenu*; in the Perſian, *Sire*; in the Language of the Magi, *Orſi*.—

The Rabbins, and Hebraiſts, particularly St. *Jerom*, and the Interpreters, reckon up ten different Names of *God* in Scripture; which are, אל, *El*, אלהים, *Elohim*, אלהי, *Elohe*, or in the Singular, אלה, *Eloah*, צבאות, *Tſebaoth*, עליון, *Elion*, אהיה, *Ehjeh*, ארוני, *Adonai*, יה, *Jah*, שרי, *Shaddai*, יהוה, *Jehovah*; but 'tis wrong to divide אלהי from צבאות; they ſhould be but one Name אלהיצבאות, *Eliohe tſebaoth*, i. e. *God of Hoſts*.—Of theſe Names there are three which expreſs the Eſſence of *God*, and are proper Names, *viz.* אהיה, *Ehjeh*, יה, *Jah*, and יהוה, *Jehovah*: The others are only Names of Attributes. St. *Jerom* gives a particular Explanation of the ten Names, in his Epiſtle to *Marcella*: And *Buxtorf* the younger has an expreſs Diſſertation on the ſame; *Diſſertatio de nominibus Dei*. The Jeſuit *Souciet* has three ſeveral ones on the three Names *El*, *Shaddai*, and *Jehovah*, printed at *Paris* in 1715.

*Cicero* in his Treatiſe *de Nat. Deorum* puts this ridiculous Argument againſt the Exiſtence of a *God* in the Mouth of *Cotta*: 'How ſhall we conceive any thing of a *God*, when we 'cannot poſſibly attribute any Virtue to him? Shall we ſay 'he has Prudence? No, for Prudence conſiſting in making a 'Choice between good and evil, what need has *God* of 'ſuch Choice, when he is by his own Nature incapable of 'any evil? Shall we ſay he has Underſtanding and Rea'ſon? No, for Underſtanding and Reaſon only ſerve to 'diſcover Things unknown to us, by Things that are known; 'but there can be nothing unknown to *God*. Nor can we 'attribute Juſtice to *God*; that being a Thing which only 'relates to human Society: Nor Temperance; ſince he 'has no Pleaſure to reſtrain: Nor Courage, in regard he is 'not ſuſceptible of any Pain, Labour, or Fatigue; nor ex'poſed to any Danger. How then can a Thing be *God*, 'which has neither Virtue, nor Underſtanding?' See Attribute, Divinity, &c.

God is alſo uſed in ſpeaking of the falſe Deities of the Heathens; many of which were only Creatures, to which divine Honours and Worſhip were paid. See Idol.

The *Greeks* and *Latins*, it is obſervable, did not mean by the Name *God* an all-perfect Being, whereof Eternity, Infinity, Omnipreſence, &c were eſſential Attributes: With them, the Word only implied an excellent and ſuperior Nature; and accordingly they give the Appellation *Gods* to all Beings of a Rank, or Claſs higher and more perfect than Men.

Nay, Men themſelves, according to their Syſtem, might become *Gods*, after Death; inaſmuch as their Souls might attain to a Degree of Excellence ſuperior to what they were capable of in Life. See Deification.

The firſt Divines, Father *Boſſu* obſerves, were the Poets: The two Functions, tho' now ſeparated, were originally combined, or rather one and the ſame Thing. See Poetry.

Now the great Variety of Attributes in *God*, that is the Number of Relations, Capacities, and Circumſtances wherein they had occaſion to conſider him; put theſe Poets, &c, under a Neceſſity of making a Partition, and to ſeparate the divine Attributes into ſeveral Perſons; by reaſon of the Weakneſs of the human Mind could not conceive ſo much Power and Action in the Simplicity of one ſingle divine Nature.

Thus the Omnipotence of *God* came to be repreſented under the Perſon and Appellation of *Jupiter*; the Wiſdom of *God*, under that of *Minerva*; the Juſtice of *God*, under that of *Juno*. See Epick, Fable, &c.

The firſt Idols, or falſe *Gods* that are ſaid to have been adored, were the Stars, Sun, Moon, &c. in regard of the Light, Heat, and other Benefits we derive from them. See Astronomy, Star, Sun, &c.

Afterwards, the Earth came to be deified for furniſhing Fruits neceſſary for the Subſiſtance of Men and Animals: Then Fire and Water became Objects of divine Worſhip, for their Uſefulneſs to human Life. See Fire, and Water.

When Things were thus got in the Train, *Gods*, by degrees, became multiplied to Infinity; and ſcarce any thing but the Weakneſs, or Caprice of ſome Devotee or other, elevated into the Rank; Things uſeleſs, or even deſtructive not excepted.

To authorize their own Crimes, and juſtify their Vices and Debaucheries, they conſtituted criminal, vitious, and licentious *Gods*, unjuſt, rapacious, and tyrannical *Gods*, covetous and thieviſh *Gods*, Drunken *Gods*, impudent *Gods*, cruel and bloody *Gods*.—

The principal of the antient *Gods*, whom the *Romans* call'd *Dii majorum Gentium*, and which *Cicero* calls *Cæleſtial Gods*; *Varro*, *Select Gods*; *Ovid*, *Nobiles Deos*, others, *Conſentes Deos*; were *Jupiter*, *Juno*, *Veſta*, *Minerva*, *Ceres*, *Diana*, *Venus*, *Mars*, *Mercury*, *Neptune*, *Vulcan*, *Apollo*.

*Jupiter* is conſider'd as the *God* of Heaven; *Neptune* as *God* of the Sea; *Mars* as the *God* of War; *Apollo* of Eloquence, Poetry, and Phyſick; *Mercury* of Thieves; *Bacchus* of Wine; *Cupid* of Love, &c.

A ſecond Sort of *Gods*, call'd *Demi Gods*, *Semi-Dii*, *Dii minorum Gentium*, *Indigites*, or *Gods* adopted, were Men canonized, and deified.—As the greater *Gods* had Poſſeſſion of Heaven by their own Right, ſo theſe ſecondary Deities had it by Right of Donation; being tranſlated into Heaven for that they liv'd as *Gods* upon Earth. See Indigites, Hero, and Apotheosis.

The Heathen *Gods* may be all reduced to the following Claſſes. 1° Created Spirits, Angels, or Demons; whence good and evil *Gods*; *Genii*, *Lares*, *Lemures*, *Typhones*, Protecting *Gods*, Infernal *Gods*, &c. See Dæmon, Genius, Lares, &c.

2° Heavenly Bodies, as the *Sun*, *Moon*, and other *Planets*, fixed *Stars*, *Conſtellations*, &c. See Sun, Moon, Star, Constellation, &c.

3° Elements, as *Air*, *Earth*, *Ocean*, *Ops*, *Veſta*; the *Rivers*, *Fountains*, &c. See Naiads, Fountains, &c.

4° Meteors; thus the *Perſians* adored the *Wind*: *Thunder*, and *Lightning*, were honour'd under the Name of *Geryon*. See Thunderbolt. And ſeveral Nations of *India* and *America* have made themſelves *Gods* of the ſame. *Caſtor*, *Pollux*, *Helena*, and *Iris* have alſo been prefer'd from Meteors to be *Gods*; and the like has been practic'd in regard to *Comets*: Witneſs that which appear'd at the Murther of *Cæſar*. *Socrates* deified the *Clouds*, if we may give Credit to *Ariſtophanes*; and the primitive Chriſtians, *Tertullian* aſſures us, were reproach'd with the ſame Thing.

5° They erected Minerals, or Foſſils into Deities; ſuch was *Bætylus*; the *Finlanders* ador'd *Stones*; the *Scythians Iron*; and many Nations *Silver*, and *Gold*.

6° Plants have been made *Gods*; thus *Leeks* and *Onions* were Deities in *Egypt*: The *Sclavi*, *Lithuanians*, *Celtæ*, *Vandals*, and *Peruvians* ador'd *Trees* and *Foreſts*: The antient *Gauls*, *Britons*, *Druids*, bore a particular Devotion to the Oak; and it was no other than Wheat, Corns, Seeds, &c. that the Antients adored under the Names of *Ceres* and *Proſerpina*. See Panes, Sylvans, Druids, &c.

7° They took themſelves *Gods* from among the *Waters*: The *Syrians*, and *Egytians* adored *Fiſhes*; the *Oxyrinchites*, *Latopolitani*, *Sienites*, and the Inhabitants of the *Eliphantide* had each a Fiſh for their *God*; and the *Tritons*, *Nereids*, *Syrens*, &c. what were they but Fiſhes? Several Nations have ador'd *Serpents*, particularly the *Egyptians*, *Pruſſians*, *Lithuanians*, *Samogitians*, &c. See Tritons, Nereid, Syren, &c.

8° Inſects, as *Flies* and *Ants* have had their Sacrificers; theſe among the *Theſſalians*, and thoſe in *Acarnania*, where Bullocks were offer'd to them.

9° Among Birds, the *Stork*, *Crow*, *Sparrowhawk*, *Ibys*, *Eagle*, *Griffon*, and *Lapwing* have had Divine Honours; the laſt in *Mexico*, the Reſt in *Egypt*, and at *Thebes*.

10° Four-footed Beaſts have had their Altars, as the *Bull*, *Dog*, *Cat*, *Wolf*, *Baboon*, *Lion*, and *Crocodile* in *Egypt* and elſewhere; the *Hog* in the Iſland of *Creta*; *Rats* and *Mice* in the *Troas*, and at *Tenedos*; *Weaſels* at *Thebes*, and the *Porcupin* throughout all *Zoroaſter's* School.

11° Nothing was more common than to place Men among the Number of Deities; and from *Belus*, or *Baal* to the *Roman* Emperors before *Conſtantine*; the Inſtances of this kind are innumerable. Frequently they did not wait ſo

long

long as their Deaths for the Apotheosis. *Nebuchadnezzar* provided to have his Statue worship'd while living; and *Virgil* shews that *Augustus* had Altars, and Sacrifices offer'd to him, *Eclog.* 1. *v.* 6, 7. As we learn from other Hands, that he had Priests call'd *Augustales*; and *Temples*, at *Lyons*, *Narbona*, and several other Places; and he must be allowed the first of the *Romans*, in whose behalf Idolatry was carried to such a Pitch. The *Æthiopians* deem'd all their *Kings*, Gods: The *Velleda* of the *Germans*; the *Janus* of the *Hungarians*; and the *Thaut*, *Othin*, and *Assa* of the Northern Nations were also Men.

12° Not Men only, but every thing that relates to Man has also been deified; as *Labour*, *Rest*, *Sleep*, *Youth*, *Age*, *Death*, *Virtues*, *Vices*, *Occasion*, *Time*, *Place*, *Numbers* among the *Pythagorians*; the *Generative* Power, under the Name of *Priapus*: *Infancy* alone had a Cloud of Deities; as *Vagetanus*, *Levana*, *Rumina*, *Edusa*, *Potina*, *Cuba*, *Cumina*, *Carna*, *Ossilago*, *Statulinus*, *Fabulinus*, &c.

They also ador'd the Gods *Health*, *Fever*, *Fear*, *Love*, *Pain*, *Indignation*, *Shame*, *Impudence*, *Opinion*, *Renown*, *Prudence*, *Science*, *Art*, *Fidelity*, *Felicity*, *Calumny*, *Liberty*, *Money*, *War*, *Peace*, *Victory*, *Triumph*, &c.

Lastly, *Nature*, or the *Universe*, was reputed a *God*. See Nature, and Universe.

*Hesiod* has a Poem under the Title of Θεογονία, *i. e.* the Generation of the *Gods*; wherein he explains their Genealogy and Descent, sets forth who was the first, and principal of all the others; who first descended from him and what Issue each had; the whole making a sort of System of Heathen Theology. See Theogony.

Beside this popular Theology, each Philosopher had his separate System; as may be seen from the *Timeus* of *Plato*, and *Cicero De Natura Deorum*.

*Justin Martyr*, *Tertullian* in his *Apologeticks* and his Books *contra Gentes*; *Arnobius*, *Minucius Felix*, *Lactantius*, *Eusebius*, Prepar. & Demon. Evangel. St. *Augustin* De Civit. Dei, and *Theodoret* adverss. Gentes, shew the Vanity of these *Gods*.

'Tis very difficult to discover the real Sentiments of the Heathens, with respect to their *Gods*: They are exceedingly intricate and confused, and even frequently contradictory. They admitted so many superior and inferior *Gods*, who shared the Empire, that all was full of *Gods*. *Varro* reckons up no less than thirty thousand ador'd within a small Extent of Ground, and yet their Number was every Day growing. The Way to Heaven was so easy for the Great Men of those Days, that *Juvenal* brings in *Atlas* complaining he was ready to sink under the Load of such a Number of new *Gods* as were daily placed in the Heavens: Yet Fa. *Mourges* seems to have proved, that all the Philosophers of Antiquity have acknowledg'd that there was but one *God*—*Plan Theol. des Sect. Scavant. de Grece*. See Goddess.

GOD-*Bote*, in our antient *Saxon* Customs. *Mulcta ex delictis in Deum admissis obveniens*.—A Fine, or Amerciament for Crimes and Offences against *God*: An Ecclesiastical, or Church Fine.

God-*Fathers*, and God-*Mothers*, Persons who direct, and attend at the Baptism of Infants, or other Persons; and give the Name. See Baptism, and Name.

The Number of *God-fathers*, and *God-mothers* is now reduc'd to three in the Church of *England*, and to two in that of *Rome*: Antiently, they had as many as they pleas'd.—

The *Romanists* have also *God-fathers*, and *God-mothers* at their *Confirmation*. See Confirmation.

They also give *God-fathers*, &c. to Bells, at their Baptism. See Bell.

Among the Antients it was the Custom for Persons of Quality to have others of like Quality cut their Childrens Hair, the first time; by which they became reputed a sort of *God-fathers*. And the like was practis'd with regard to the Hair of the Beard. See Adoption, Father, Hair, &c.

The Name *God-father* was also antiently given to a kind of Seconds, who attended and assisted the Knights in Tournaments, or single Combats.

The *God-fathers* of Duels were a kind of Advocates, chosen by the two Parties, to represent the Reasons of their Combat to the Judges. See Combat, Duel, Champion, &c.

Something of this kind is still retain'd at solemn Carrousals: There are two, or more in each Quadrile. See Quadril.

The Institution of *God-fathers* and *God-mothers*, *Patrimi* and *Matrimi* is originally *Roman*: They were young People, who in the Games of the Circus had the Direction of the Chariots, Shews, and Images of the Gods. *Cicero* makes mention of them in his Oration *de Haruspicum responsis*.

Their Office was much like that of the Children in some Romish Ceremonies, who are dress'd in the Habit of Angels, to strew Flowers, bear Incense-Pots, Lights, &c. and accompany the Relicks, and Images of Saints.—

GODDESS, *Dea*, *Diva*, a Heathen Deity, of the female Sex. See God.

The Antients had almost as many *Goddesses*, as Gods: Such were *Juno*, the *Goddess* of Air; *Diana*, the *Goddess* of Woods, and Chastity; *Proserpina*, the *Goddess* of Hell; *Venus*, of Beauty; *Thetis*, of the Sea: Such also were *Victory*, *Fortune*, &c. See Fortune.

Nay, they were not contented to make Women Gods, and admit both Sexes into the Roll; but they had also Hermophrodite Gods: Thus *Minerva*, according to several of the Learned, was both Man and Woman, and worship'd both under the Appellation of *Lunus*, and *Luna*. *Mitra*, the *Persian* Deity, was both God and *Goddess*; and the Sexes of *Venus* and *Vulcan* are very dubious: Whence, in the Invocations of those Deities, they used this Formula, *Be thou God, or Goddess*; as we learn from *A. Gellius*.

It was a Privilege peculiar to *Goddesses*, that they might be represented on Medals, naked: The Imagination, it was supposed, must be aw'd, and kept from taking Liberties, by the Consideration of the Divine Character.

GOD-*Gild*, in our antient Customs, that which is offer'd to God. See Gild.

GOLD, Aurum, a yellow Metal; the heaviest, purest, most ductile, and shining, and on those accounts the most valuable, of all Metals. See Metal.

The Chymists call Gold *Sol*, the *Sun*, to denote its Preeminence over the other Metals, which are call'd by the Names of the Planets: Its Symbol, or Character is ☉, which in their Hieroglyphical way of writing, denotes Perfection, Simplicity, Solidity, &c.—See Character.

The Weight of *Gold* is to that of Silver as 19 to 10—A Cubic Inch of pure *Gold* weighs 12 Ounces, 2 Drachms, 52 Grains; and the Cubic Inch of Silver 6 Ounces, 5 Drachms, 28 Gr.—The Pound Weight, or twelve Ounces Troy of *Gold* is divided into 24 Carats. See Caract, Weight, and Specific *Gravity*.

The Value of *Gold* is to that of Silver as 14 to 1; antiently, it was only as 12 to 1. Indeed, this Proportion varies as *Gold* is more or less plentiful: For *Suetonius* relates, that *Cæsar* brought such a Quantity of *Gold* from *Italy*, that the Pound of *Gold* was only worth seven Pound and half of Silver. Standard *Gold* is worth 44 *lib.* 10 *s.* Sterling the Pound-weight: Standard Silver, is worth 3 *l.* the Pound; or 5 *s.* the Ounce. See Standard; see also Silver, and Money.

The *first* Characteristic, or Property of *Gold* is that it is the heaviest of all Bodies—So that whoever would make *Gold*, must be able to add to the Weight of other Matters, and make them equiponderate with *Gold*.

In every Mass of Matter, therefore, heavier than Mercury, there must of necessity be a Share of *Gold*; there being no Body in Nature of intermediate Gravity; *i. e.* no Body whose Gravity is to that of *Gold*, more than as 14 to 19. See Mercury.

Its *second* Character is, that of all known Bodies it is the most ductile, and malleable, and of all Bodies its Parts have the greatest Degree of Attraction, *i. e.* cohere with the greatest Force.—Our Gold-beaters, and Wier-drawers furnish us with Proof of this Property. They every Day reduce *Gold* into Leaves, or Lamellæ, unconceiveably thin; yet without leaving the least Aperture, or Chasm visible to the best Microscope, or even pervious to the Light. *See this Property consider'd more at large under the Article* Ductility.

This Tenacity, or cohesive Force of *Gold* depends altogether on its being free from Sulphur: For mix but a single Grain of Sulphur with 1000 times the Weight of *Gold*, and the Mass ceases to be malleable. See Sulphur.

The *third* Character of *Gold* is its Fixedness in the Fire; in which it exceeds all other Bodies.—This Property seems to result from the Homogenity, and Equality of its Parts, which equally aid, and support each other, and have equal Pores, or Interstices thro' which the fiery Corpuscles find an easy Passage.—The Prince of *Mirandola*, Mr. *Boyle*, and other Chymists furnish divers Experiments to illustrate this wonderful Fixity. After laying a Quantity of *Gold* two Months in the intensest Heat imaginable, it is taken out without any sensible Diminution of Weight. See Fixity.

It must be added, however, that in the Foci of the large Burning Glasses of Mess. *Tschirnhausen*, and *Villette*, even *Gold* itself volatizes and evaporates. After this manner, we are told from the Royal Academy at *Paris*, a Quantity of pure *Gold* was vitrified; being first fused into a sort of Calx, which emitted Fumes, and lost of its Weight. But the same Calx fused again with a Quantity of Greese was restor'd into *Gold*. See Volatility, Vitrification, Burning *Glass*, &c.

Its *fourth* Character is, not to be dissoluble by any Menstruum in Nature, except *Aqua Regia*, and Mercury. See Menstruum.

The Basis of *Aqua Regia* is Sea Salt, which is the only Salt in Nature that has any Effect on *Gold*. But this Salt has its Effect in what Form or Manner soever applied, whether as a Fluid, or a Solid; in Substance, or in Spirit. See *Aqua* Regia, and Salt.

Mr. *Boyle*

Mr. *Boyle* made a Menſtruum of Butter of Antimony, which diſſolved *Gold* with great Facility; and hence concluded that *Gold* might be diſſolv'd without Sea Salt: But by Miſtake, the effective Part even of this Menſtruum being ſtill Sea Salt, which is an Ingredient in Sublimate of Mercury wherewith Butter of Antimony is made. See SALT, SUBLIMATE, &c.

The ſeventh Character is that it readily and ſpontaneouſly, as by ſome Magnetic Virtue, attracts, and abſorbs Mercury; tho' what My Lord *Bacon* writes, *viz.* that *Gold*, in imbibing Mercury, increaſes in Weight, we doubt, is but ill warranted. For 'tis certain it muſt be increas'd in Bulk, more than in Weight, and conſequently muſt be ſpecifically lighter. See MERCURY.

It may be added, that as ſoon as the Mercury enters the *Gold*, the Metal becomes ſoft, like a Paſte. See AMALGAMATION.

The eighth Character is, that it withſtands the Violence both of Lead, and Antimony, *i. e.* being fuſed in the Coppel along with either of thoſe Matters, it does not diſſipate and fly off with them in Fume, but remains fix'd, and unchanged.

All other Metals, except *Gold*, and Silver melted with Lead, periſh with it, and evaporate by Fire; and in Antimony, all other Metals except *Gold*, and even Silver itſelf, undergo the ſame Fate.—Thus, if a Maſs conſiſting of *Gold*, Silver, Stones, Copper, *&c.* be fuſed together with Antimony, the ſeveral Matters become ſeparated, and all but the *Gold* riſes to the Surface in form of a Scoria, and is blown off with Bellows: But the *Gold* remains behind, much purified, as having loſt all its heterogeneous Parts along with the other Metals. And hence Antimony is uſed as the Teſt of *Gold*. See TEST, COPPEL, REFINING, &c.

The ninth Character is that of all Bodies it is the ſimpleſt (the primary Elements being here excepted).—By *ſimple* we here mean that whoſe minuteſt Part has all the Phyſical Properties of the whole Maſs. Thus, if a Grain of *Gold* be diſſolv'd in *Aqua Regia*; and a ſingle Drop of the Solution be taken, a Quantity of *Gold* may be ſeparated therefrom, which ſhall only be the Millionth Part of the Grain, and yet have all the Characters of *Gold*. Or, if you fuſe a Grain of *Gold* with a large Maſs of Silver, and mix the two together, ſo that the *Gold* becomes equally diffuſed thro' the whole Maſs; you will have in every Particle of the Maſs a Particle of perfect *Gold*. Accordingly, diſſolve any Part of the Mixture in *Aqua fortis*, and a Quantity of *Gold* will precipitate to the Bottom, bearing the ſame Proportion to the Grain that the Part diſſolved did to the whole Maſs. On which Principle depends the Art of Eſſayng. See ESSAYNG.

All the known Parts of the Earth afford this precious Metal; tho' with a deal of Difference, in point of Purity, and Abundance: *Europe*, ſo fertile in other reſpects, comes ſhort of all the other Quarters, in *Gold*. *America* furniſhes the moſt; and particularly the Mines of *Peru*, and *Chilly*. That of *Aſia* is eſteem'd the fineſt, particularly that of *Menaricabo* in the *Eaſt Indies*: The *Spaniards* aſſure us that they get *Gold* out of ſome of their *Peruvian* Mines, 23 Carats fine before it be purified. Add, that the *Gold* of *Axima* on the Coaſt of *Africa* is found from 22 to 23 Carats.

*Glauber*, an eminent Chymiſt, holds that there is not any Sand, or Stone, but *Gold* may be procured from; Limeſtone only excepted: Only that the Expence of ſeparating it, much ſurmounts the Profits.

*Gold* is chiefly found in Mines: Tho' there is ſome alſo found in the Sand and Mud of Rivers, and Torrents; particularly in *Guinea*. This laſt is in form of a fine Powder, and call'd ἀμμοχρύσος, *Gold-duſt*. *Glauber* holds that there is a third ſort of *Gold*, ſcarce found any where but in the Drains of the Mountains of *Chilly*, which they ſeparate from the Earth by waſhing; whence the Places where it is found, or ſeparated, are call'd *Lavadero's*.

This Earth is uſually reddiſh, and very fine: At about ſix Foot deep it is mix'd with Grains of large Duſt; and from hence commences the Stratum, or Bed of *Gold*. Between are Banks of ſoft blueiſh Stone, mix'd with yellow Threads, which yet are not *Gold*, but only Pyrites, or Marcaſſites of *Gold*.

When they have diſcover'd any of this Earth, they endeavour to bring Rivulets to it (which in thoſe Mountains are very frequent) in order, by force thereof, to tear off the upper Earth, and lay the *Golden* Stratum bare. This they forward by digging with Spades, *&c.* As ſoon as the Golden Earth is uncover'd, they turn off the Water; and dig up the Soil by Force of Arm; and loading it on Mules, carry it to the *Lavadoro's*, *i. e.* a ſort of Baſons of Water, where the Earth undergoing divers repeated Lotions, in different Waters, the earthy, and impure Part is all ſeparated and carried off by the Stream, and the *Gold* left at Bottom. See LAVATORY.

This Method of getting *Gold* is immenſely gainful; the Expences being but trifling, compared with thoſe accruing in the common way by Machines, Fire, and Quickſilver: The richeſt of theſe *Lavadero's* is that *de l'Eſtancia del Rey*, twelve Leagues from the *Conception*, a Port of the South Sea—*Thuringia*, and ſome other Places along the *Rhine*, are the only Places in *Europe*, where *Gold* is got in this manner.

The *Gold* of Mines is of two kinds; the one in ſmall Pieces, or Grains of various Forms, and Weights. Of this ſort, among the Specimens ſent by *Columbus* into *Spain*, to let them ſee the Richneſs of his Diſcovery, there were ſome of 18 Ounces Weight; and the Relations of thoſe Days aſſure us, that in 1502 there were others found of thirty two Pounds Weight.

The other kind of *Gold* is dug up in Stony Glebes, which is what they call the *Mineral*, or *Ore* of *Gold*: Theſe Glebes are of various Colours, and uſually 150 or 160 Fathom deep. Along with the *Gold* they uſually contain ſome other Mineral Matter, as Antimony, Vitriol, Sulphur, Copper, or Silver; particularly the laſt; without ſome Share of which it is ſcarce ever found.

*Manner of ſeparating* GOLD.

They firſt break the Metalline Stone with Iron Mallets, pretty ſmall; then carry it to the Mills, where it is ground into a very fine Powder; and laſtly paſs it thro' ſeveral Braſs Sieves one after another, thelaſt as fine as any of our Silk Sieves.

The Powder thus prepar'd, is laid in wooden Troughs with a proper Quantity of Mercury and Water, and there left to knead and ſaturate in the Sun and Air for twice twenty four Hours. After this the Water, with the recrementitious Earth is drove out of the Tubs by means of other hot Waters, pour'd thereon. This done, there remains nothing but a Maſs of Mercury with all the *Gold* that was in the Ore. The Mercury they ſeparate from it by Diſtillation in large Alembicks. The *Gold*, in this State, is call'd *Virgin Gold*; as well as that found in the Sand of Rivers, or that in Grains in the Mines; in regard none of them have paſs'd the Fire. After this, they uſually fuſe them in Crucibles, and caſt them into Plates, or Ingots. See FUSION.

*Manner of Refining* GOLD.

There are three principal Manners of refining *Gold*; the firſt with Antimony; the ſecond with Sublimate; and the third with *Aqua fortis*. This laſt, which is call'd *Departing*, or Parting, is already deſcrib'd under the Article DEPART; and the two former under thoſe of *Refining*. See REFINING.

Beſide theſe three, there are other Methods of Refining *Gold*; particularly that call'd the *Coppel*, which is perform'd with Lead and Aſhes; and that call'd *Cementation*, by means of a Compoſition of Brick Duſt, common Salt, Sal Ammoniac, Sal Gemma, and Urine. See COPPEL, and CEMENTATION.

*The Eſſaying of* GOLD, is perform'd with the Touch-ſtone, but more ſecurely by Fire. See TOUCH-*Stone*, and ESSAYING.

*For the Making of* GOLD, ſee *Philoſopher* STONE, and TRANSMUTATION.

GOLD WIRE, is a Cylindrical Ingot of Silver, ſuperficially gilt, or cover'd with *Gold*, at the Fire; and afterwards drawn ſucceſſively thro' an infinite Number of little round Holes of a Wire-drawing Iron, each leſs than the other, till it be no bigger than a Hair of the Head. See WIRE.

It may be obſerv'd, that before the Wire be reduc'd to this exceſſive Fineneſs, it is drawn thro' above an hundred and forty different Holes; and that each time they draw it, it is rubb'd freſh over with new Wax, both to facilitate its Paſſage, and to prevent the Silver's appearing thro'.

It is amazing to what Degree of Fineneſs the *Gold* is here drawn; and yet it ſtill keeps firm together, and never ſhews the leaſt Signs of the Silver underneath it. The Reader may ſee a Computation hereof, as alſo a more particular Account of the manner of proceeding, under the Article DUCTILITY *of Gold*.

GOLD WIRE FLATTED, is the former Wire flatted between two Rollers of poliſh'd Steel, to fit it to be ſpun on Silk, or to be uſed flat as it is, without ſpinning, in certain Stuffs, Laces, Embroideries, *&c.*

GOLD THREAD, or *Spun* GOLD, is the flatted *Gold* wrapp'd, or laid over a Thread of Silk, by twiſting it with a Wheel, and Iron Bobins.

The Methods of managing and drawing *Gold* and Silver both real and ſeeming in all theſe Kinds, are very curious, and of great Uſe in Commerce.

*Manner of forming* GOLD WIRE, *and* GOLD THREAD *both round, and flat.*

*Firſt*, An Ingot of Silver of 24 Pound is forged into a Cylinder about an Inch in Diameter: Then 'tis drawn thro' eight or ten Holes of a large, coarſe Drawing Iron, both to finiſh the

Roundneſs, and to reduce it to about three Fourths of its former Diameter. This done, they file it very carefully all over, to take off any Filth remaining of the Forge: Then they cut it in the Middle, and thus make two equal Ingots thereof; each about 26 Inches long; which they draw thro' ſeveral new Holes to take off any Inequalities the File may have left, and to render it as ſmooth, and equable as poſſible.

The Ingot thus far prepar'd, they heat it in a Coal Fire: Then, taking ſome Gold Leaves, each of about four Inches ſquare, and weighing 12 Grains; they join four, eight, twelve, or ſixteen of theſe together, as the Wire is intended to be more, or leſs gilt; and when they are ſo join'd as only to form a ſingle Leaf, they rub the Ingots, reeking hot, with a Burniſher.

Theſe Leaves, thus prepar'd, they apply over the whole Surface of the Ingot to the Number of ſix, over each other; burniſhing or rubbing them well down with the Blood-ſtone, to cloſe, and ſmoothen them.

When gilt, the Ingots are laid a-new in a Coal Fire; and when rais'd to a certain Degree of Heat, they go over them a ſecond time with the Blood-ſtone, both to ſolder the *Gold* more perfectly, and to finiſh the Poliſhing.—

The Gilding finiſh'd, it remains to draw the Ingot into Wire. In order to this, they paſs it thro' twenty Holes of a moderate Drawing-iron, by which it is brought to the Thickneſs of the Tag of a Lace: From this time, the Ingot loſes its Name, and commences *Gold Wire*. Twenty Holes more of a leſſer Iron, leave it ſmall enough for the leaſt Iron; the fineſt Holes of which laſt, ſcarce exceeding a Hair of the Head, finiſh the Work.

To diſpoſe the Wire to be ſpun on Silk, they paſs it between two Rollers of a little Mill: Theſe Rollers are of poliſh'd Steel, and about three Inches Diameter. They are ſet very cloſe to each other, and turn'd by means of a Handle faſten'd to one of them, which gives Motion to the other. The *Gold* Wire in paſſing between the two, is render'd quite flat; but without loſing any thing of its Gilding; and is render'd ſo exceedingly thin, and flexible, that it is eaſily ſpun on Silk Thread, by means of a Hand Wheel; and ſo wound on a Spool, or Bobin. See FLEXIBILITY.

GOLD LEAF, or *Beaten* GOLD, is *Gold* beaten with a Hammer, into exceedingly thin Leaves.

'Tis prodigious to conſider the Fineneſs they will thus reduce a Body of *Gold* to: 'Tis computed, that an Ounce may be beaten into 1600 Leaves, each three Inches ſquare; in which State, it takes up more 159092 times its former Space. See DUCTILITY.

This *Gold* they beat on a Block of Marble, commonly black Marble, about a Foot ſquare, and uſual rais'd three Foot high: They make uſe of three ſorts of Hammers, form'd like Mallets, of poliſh'd Iron. The firſt, which weighs three, or four Pounds, ſerves to chaſe, or drive; the ſecond, of eleven or twelve Pounds, to cloſe; and the third, which weighs fourteen or fifteen Pounds, to ſtretch, and finiſh.

They alſo make uſe of four Moulds, of different Sizes; *viz.* two of Vellum, the ſmalleſt whereof conſiſts of 40 or 50 Leaves, and the larger, of two hundred: The other two, conſiſting each of 500 Leaves, are made of Bullocks Gut, well ſcour'd and prepared. See MOULD.

*The Method of preparing, and beating* GOLD, is as follows.

They firſt melt a Quantity of pure *Gold*, and form it into an Ingot: This they reduce, by forging, into a Plate about the Thickneſs of a Sheet of Paper: Which done, they cut the Plate into little Pieces about an Inch ſquare, and lay them in the firſt, or ſmalleſt Mould, to begin to ſtretch them. After they have been hammer'd here a while with the ſmalleſt Hammer, they cut each of them into four; and put them in the ſecond Mould to be extended further.

Upon taking them hence, they cut them again into four, and put them into the third Mould; out of which they are taken, divided into four, as before, and laid in the laſt, or finiſhing Mould; where they are beaten to the Degree of Thinneſs required.—

The Leaves thus finiſh'd, they take them out of the Mould, and diſpoſe them in little Paper Books prepar'd with red Bole, for the *Gold* to ſtick to: Each Book ordinarily contains 25 Gold Leaves.

There are two Sizes of theſe Books: Twenty five Leaves of the ſmalleſt only weigh five or ſix Grains; and the ſame Number of the largeſt nine, or ten Grains.

It muſt be obſerv'd that *Gold* is beaten more, or leſs, according to the Kind, or Quality of the Work it is intended for: That for the Gold-wire Drawers to gild their Ingots withal, is left much thicker, than that for gilding the Frames of Pictures, &c. withal.

SHELL GOLD is that us'd by the Illuminers; and wherewithall we write *Gold* Letters.—It is made of the Parings of Leaf Gold, and even of the Leaves themſelves, reduc'd into an impalpable Powder, by grinding on a Marble, with Honey. After leaving it to infuſe ſome time in *Aqua fortis*, they put it in Shells, where it ſticks. To uſe it, they dilute it with Gum Water, or Soap Water.

*Burniſh'd* GOLD, is that ſmoothen'd, or poliſh'd with a Steel Inſtrument, call'd the *Burniſher*, if it be wrought *Gold*, or Gilding on Metal; or with a Wolf's Tooth, if it be gilding in Water. See BURNISHER, and GILDING.

*Million of* GOLD, is a Phraſe us'd to ſignify a Million of Crowns. See CROWNS.

*Tun of* GOLD, is a kind of Money of Account, us'd by the *Dutch*, and in ſome other Countries; containing a hundred thouſand Florins. See FLORIN.

GOLD *Coin*, or *Species of* GOLD; ſee COIN.

A hundred Pounds of, or in, *Gold*, is found to weigh two Pound, ten Ounces: The ſame Sum in Silver, weighs 26 Pound, 4 Ounces. Twenty two Pence, in Copper Farthings and Half-pence, weigh one Pound Avoirdupoiſe.—

A Tun of *Gold* at 4 Pounds the Ounce amounts to 96000 *l.* A Tun of Silver at 5 *s.* 2 *d.* the Ounce, to 6200 *l.* A Pound Sterling *Gold*, to 48 *l.* An Ounce is worth 4 *l.* The Penny-weight, 4 *s.* One Grain, 2 *d.* A Pound of Sterling Silver amounts to 3 *l.* 2 *s.* An Ounce is worth 5 *s.* 2 *d.* The Penny-weight, 3 *d.* and ſomething more; one Grain, a half-penny. A Pound of Silver Avoirdupoiſe comes to 3 *l.* 5 *s.* 3 *d.* half-penny.

*Moſaic* GOLD, is *Gold* applied in Panels on a proper Ground, diſtributed into Squares, Lozanges, and other Compartments, part whereof is ſhadow'd to raiſe, or heighten the reſt. See MOSAIC.

*Virgin* GOLD, is *Gold*, juſt as it is taken out of the Mines before it have undergone any Action, or Preparation of Fire: Whence the *Greeks* call it ἄπυρὸς. Such is the ἀμμοχρύσος, or *Gold Duſt*, and that got by Lotion in the Lavedero's in *Chilly*: 'Tis added, that there are Maſſes, or Lumps of pure *Gold* found in the Mines, particularly thoſe of *Hungary*. Accordingly, in the Emperor's Collection are ſtill preſerved ſeveral Plates of *Gold*, ſaid to have been thus found.

Virgin *Gold* is ſaid to be very pale, and ſo ſoft that it may be moulded into any Figure, with the Hand: It even takes an Impreſſion from a Seal, like the ſofteſt Wax. To harden it, as alſo to highten its Colour, they mix Emery with it.

*Fine*, or *Pure* GOLD, is that purged by Fire of all its Impurities, and all Alloy.—The *Latins* call it *Aurum purum*, *Aurum primum*, *Aurum obrizum*, *Aurum coctum*.

The Moderns frequently call it *Gold of* 24 *Carats*; but, in Reality, there is no ſuch thing as *Gold* ſo very pure; and there is always wanting at leaſt a Quarter of a Carat. *Gold* of 22 Carats has one Part of Silver, and another of Copper: That of 23 Carats has half a Part, *i. e.* half a twenty-fourth of each. See CARAT, and ALLOY.

*Bouteroue* maintains, that the *Electrum* of the Antients was *Gold* of 19 Carats; or four Parts *Gold*, and a fifth Silver.—From an Ordonance of King *John* of *France*, it appears that the *Gold* then ſtruck at *Paris* was of 19 Carats $\frac{1}{5}$; and yet 'tis added that it was the beſt and fineſt *Gold* then known on Earth.

In *England*, at this time, the Standard of Crown *Gold* is 22 Carats. See GUINEA.

*Cloth of* GOLD, } ſee { CLOTH *of* GOLD.
GOLD *Money*, } { MONEY.

*Potable* GOLD, *Aurum potabile*, ſee POTABLE *Gold*.

*Fulminating* GOLD, *Aurum fulminans*, ſee FULMINATING.

GOLD, in Medicine, and Chymiſtry.—The Chemiſts make ſeveral Preparations of *Gold* for Medicinal Uſes; as Salts, Mercuries, and Tinctures of *Gold*; but 'tis a Point not yet well agreed on whether *Gold* have any real Property whereby it may be of Uſe of Medicine.—

The moſt antient Phyſicians are all ſilent on the Matter: The *Arabs* are the firſt who mention it in this Quality.—*Avicenna* attributes extraordinary Virtues to it; but he ſpeaks on Conjecture more than Experiment. And yet it is pretty certain *Gold* muſt have an Effect: A Quantity of Gold Filings being taken by a Perſon in a Bolus, he was very well purg'd thereby: But this might well be owing to the great Weight of its Particles, which impinging violently againſt the Glands of the Inteſtines, promoted their Vibrations, and thus expreſs'd the Humor ſecreted therein. *Boræus*, in a Letter to *Bartholin* relates, that having heated an Ingot of fine *Gold* ſeveral times red hot, and extinguiſh'd it as often in Water, he found the Weight of the Ingot conſiderably diminiſh'd; upon which, proceeding to evaporate the Water, he drew a little Quantity of *Gold* from it. Hence it appears, that the ſubtile Parts of the *Gold* paſs into the Liquors it is extinguiſh'd in; and hence, 'tis argued, it may have conſiderable Effects.

Notwithſtanding the ſmall Number of Experiments whereon the Medicinal Efficacy of *Gold* is founded; the Alchymiſts will have it contain the Radical Balm of Life, for the retrieving of Health and Youth, and the Removal of all Diſeaſes. *Gold*, according to them, contains a Sulphur friendly to Nature, like that of the Sun, which animates the whole Univerſe: And on this Principle they have form'd a thou-

a thouſand airy Projects for an Univerſal Remedy. See ELIXIR.

In effect, 'tis probable the *Arabs* and Alchemiſts were only brought to attribute all theſe Virtues to *Gold*, from their perceiving certain Qualities therein, which they ſuppoſed it muſt communicate to other Bodies. Thus, *e. gr. Gold* being commonly ſaid to be incapable of being deſtroyed; 'tis hence concluded to be proper to preſerve animal Matters, and defend them from Putrifaction: Which is juſt as reaſonable as ſome Phyſicians preſcribing the Blood of an Aſſes Ear as an appeaſing Remedy, by reaſon the Aſs is a very peaceable Animal. See POTABLE *Gold*.

GOLD, in Heraldry, is one of the Metals; more properly call'd by the *French* Name *Or*. See METAL, and OR.

GOLDEN, ſomething that has a relation to Gold, or conſiſts of Gold, is valuable like Gold, or the like. See GOLD.

GOLDEN BULL, *Bulla Aurea*, ſee explain'd under the Article BULL.

GOLDEN *Fleece*, in the antient Mythology, was the Skin, or Fleece of the Ram, upon which *Phryxus* and *Hella* are ſuppos'd to have ſwam over the Sea to *Colchos*; and which being ſacrific'd to *Jupiter*, was hung upon a Tree in the Grove of *Mars*, guarded by two Brazen-hoof'd Bulls, and a monſtrous Dragon that never ſlept; but taken, and carried off by *Jaſon*, and the *Argonauts*. See ARGONAUT.

Many Authors have endeavour'd to ſhew that this Fable is an Allegorical Repreſentation of ſome real Hiſtory.

*Order of the* GOLDEN FLEECE, is a Military Order inſtituted by *Philip the Good*, Duke of *Burgundy*, in 1429. See MILITARY *Order*.

It took its Denomination from a Repreſentation of the *Golden* Fleece, bore by the Knights on their Collars, which conſiſted of Flints, and Steels. The King of *Spain* is now Grand Maſter of the Order, in Quality of Duke of *Burgundy*: The Number of Knights is fix'd to 31.

'Tis uſually ſaid to have been inſtituted on occaſion of an immenſe Profit which that Prince made by Wool: Tho', others will have a Chymical Myſtery couch'd under it, as under that famous one of the Antients, which the Adepti contend to be no other than the Secret of the Elixir, wrote on the Fleece of a Sheep.

*Oliver de la Marche* writes that he had ſuggeſted to *Philip* I. Archduke of *Auſtria*, that the Order was inſtituted by his Grand-father *Philip the Good*, Duke of *Burgundy*, with a View to that of *Jaſon*; and that *John Germain*, Biſhop of *Chalons*, Chancellor of the Order, upon this occaſion made him change his Opinion, and aſſur'd the young Prince that the Order had been inſtituted with a View to the Fleece of *Gideon*.

*William* Biſhop of *Tournay*, Chancellor likewiſe of the Order, pretends that the Duke of *Burgundy* had in View the *Golden* Fleece of *Jaſon*, and *Jacob*'s Fleece, *i. e.* the ſpeckled Sheep belonging to this Patriarch, according to the Agreement made with his Father-in Law *Laban*. Which Sentiment gave Birth to a great Work of this Prelate in two Parts: In the firſt, under the Symbol of the Fleece of *Jaſon* is repreſented the Virtue of Magnanimity, which a Knight ought to poſſeſs; and under the Symbol of the Fleece of *Jacob*, he repreſents the Virtue of Juſtice.

*Paradin* is of the ſame Mind, and tells us that the Duke deſign'd to inſinuate that the fabulous Conqueſt which *Jaſon* is ſaid to have made of the *Golden* Fleece in *Colchos*, was nothing elſe but the Conqueſt of Virtue, which requires a Victory over thoſe horrible Monſters Vice, and our evil Inclinations.

GOLDEN NUMBER, in Chronology, a Number ſhewing what Year of the Moon's Cycle, any given Year is. See CYCLE *of the Moon*.

*To find the* Golden Number *of any Year ſince Chriſt.*

Since the Lunar Cycle commences with the Year before our Saviour's Birth; to the given Year add 1: Then, dividing the Sum by 19; the Sum remaining after the Diviſion, is the *Golden Number* required: If there be nothing remaining, the *Golden Number* is 19.

Suppoſe, *e. gr.* the *Golden Number* of the preſent Year 1725 were required: $1725 + 1 = 1726$. And 1726 divided by 19, gives a Quotient 9, and leaves a Remainder of 16, the *Golden Number* of this Year.

The *Golden Number* is uſed in the *Julian* Calendar, to ſhew on what Days the New Moons fall. In Succeſſion of Time, however, it muſt be obſerv'd, that the *Golden* Numbers, thro' the Defect of the Lunar Cycle, recede, and do no longer ſhew the true Time of New Moons, *&c.* See CALENDAR.

Hence, in the *Gregorian* Reformation of the Calendar the *Golden* Number is thrown out; and the Epact introduced in lieu thereof. See EPACT.

GOLDEN RULE, in Arithmetick, a Rule, or Praxis, of great Uſe, and Extent in the Art of Numbers; whereby we find a fourth Proportional to three Quantities given. See PROPORTION.

The *Golden Rule* is alſo call'd the *Rule of Three*, and *Rule of Proportion*. *See its Nature and Uſe under the Article* RULE *of Three*.

GOLDEN CALF, was a Figure of a Calf, which the *Iſraelites* caſt in that Metal, and ſet up in the Wilderneſs, to worſhip, during *Moſes*'s Abſence in the Mount; and which that Legiſlator, at his Return, burnt, ground to Powder, and mix'd with the Water the People were to drink of; as related *Exodus* xxxii.

The Commentators have been divided on this Article: The pulverizing of Gold, and rendring it potable, is an Operation in Chymiſtry, of the laſt Difficulty; and 'tis hard to conceive how it ſhould be done at that Time, before Chymyſtry was ever heard of, and in a Wilderneſs too. Many therefore, ſuppoſe it done by a Miracle: And the reſt, who allow of nothing ſupernatural in it, advance nothing but Conjectures, as to the Manner of the Proceſs.

He could not have uſed ſimple Calcination, nor Amalgamation, nor Antimony, nor Calcination; nor is there one of thoſe Operations, that quadrates with the Text.

M. *Sthall* has endeavour'd to remove this Difficulty. The Method *Moſes* made Uſe of, in making his *Aurum potabile*, according to this Author, was the ſame with that which now obtains; only that inſtead of Tartar, he made uſe of the *Egyptian* Natron, which is common enough throughout the Eaſt. See POTABLE *Gold*.

GOLOPS, in Heraldry, are Roundles of a Purple Colour. See ROUNDLE.

GOMPHOSIS, in Anatomy, a kind of Articulation of the Bones, wherein the one is chaſed, or fitted immoveably into the other, after the manner of a Peg, or Nail. See ARTICULATION.

The Teeth are ſet in the Jaws by *Gomphoſis*. See TEETH, and MAXILLÆ.

The Word is *Greek*, γόμφωσις, form'd of γομφὸς, *clavus*, a Nail.

GONAGRA, in Medicine, the Gout in the Knee. See GOUT.

The Word is compos'd of γόνυ, Knee, and ἄγρα, *captura*, Seizing.

GONARCHA, a Term in the antient Dialling—Mr. *Perrault*, in his Notes on *Vitruvius*, *lib. IX. c. 9.* takes the *Gonorcha* to have been a Dial drawn on divers Surfaces, or Planes; ſome of which being Horizontal, others Vertical, others Oblique, *&c.* form'd divers Angles. Whence the Appellation; from γόνυ, Knee, or γωνία, Angle. See DIAL.

GONDOLA, a little, flat Boat, very long, and narrow; chiefly uſed at *Venice*, to row on the Canals. See BOAT.

The middle-ſized *Gondola's* are upwards of 30 Foot long, and four broad: They always terminate, at each End, in a very ſharp Point, which is rais'd perpendicularly the full Height of a Man.

The Word is Italian, *Gondola*. *Du Cange* derives it from the vulgar *Greek* γόμτελας, a Bark, or little Ship. *Lancelot* deduces it from γόνδυ, a Term in *Athenæus* for a ſort of Vaſe.

The Addreſs of the *Venetian Gondoliers*, in paſſing their narrow Canals, is very remarkable: There are uſually two to each *Gondola*; and they row by puſhing before them. The Fore-man reſts his Oar on the left Side of the *Gondola*: The Hind-man is placed on the Stern, that he may ſee the Head over the Tilt, or covering of the *Gondola*; and reſts his Oar, which is very long, on the right ſide of the *Gondola*.

GONFALCON, or GONFANON a Kind of round Tent, bore as a *Canopy*, at the Head of the Proceſſions of the principal Churches at *Rome*, in Caſe of Rain; its Verge, or Banner ſerving for a Shelter, where there is not a great deal of Attendance.

GONORRHÆA, or rather GONORRHEA in Medicine, an involuntary Flux, or Dripping of Seed, or other Humor, by the Penis; without Erection, or Titillation. See SEED.

The Word is form'd of the *Greek* γόνος, *genitura*, Seed, and ῥέω, *fluo*, I flow.—

The *Gonorrhæa* is of two kinds: The one *Simple*, the other *Virulent*.

The *Simple Gonorrhæa*, or that without Virus, or Malignity, takes its riſe from violent Exerciſes, and Strainings; the immoderate Uſe of hot Foods, and particularly, fermented Liquors, as Wine, Beer, Cyder, *&c.* It is cured by indulging Reſt, nouriſhing Foods, Broths, *&c.*

This Species is again divided into two; the one *True*, *Gonorrhæa vera*, wherein the Humor diſcharged is real Seed: The other *Spurious*, *Gonorrhæa Notha*, wherein the dripping Humor is not Seed, but a Matter from the Glands about the Proſtates. See PROSTATES.

This latter Kind bears ſome Reſemblance to the *Fluor Albus*, or Whites in Women; and frequently remains a long time, without much Diminution of the Patient's Strength. Some call it a *Catarrhal Gonorrhæa*. Its Seat is in the Glands of the Proſtates, which are either too much relax'd, or ulcerated.

The

The *Virulent* GONORRHÆA, *Gonorrhæa Virulenta*, ariſes from ſome impure Commerce, and is the firſt Stage of the Venereal Diſeaſe; being what we popularly call a *Clap*. See VENEREAL *Diſeaſe*, and CLAP.

The Parts here primarily affected are the *Proſtates* in Men, and *Lacunæ* in Women, which being ulcerated by ſome contagious Matter received in Coition, emit, firſt, a whitiſh, watery Liquor, with an acute Pain: This afterwards grows yellowiſh, then ſharper, and at length greeniſh, or blueiſh, and frequently fœtid.

It is attended with a Tenſion and Inflammation of the Yard, and an *Ardor Urinæ*, or Sharpneſs of Urine, which gives a painful Senſation in the Emiſſion; the urinary Paſſage being torn and excoriated by the Acrimony of the Humor.

Hence ariſe Tumors of the Prepuce, and Glands, with Ulcers on the ſame; and ſometimes Caruncles in the Urethra.

The Cauſe of the Virulent *Gonorrhæa*, according to M. *Littre*, is ſome acid Humor, heated, rarified, and rais'd at the time of Coition, from the internal Parts of the Pudendum of a Woman infected, and lodg'd in the Urethra of the Man. It has different Seats in the Body: Sometimes it only fixes on *Cowper*'s mucous Glands; ſometimes on the Proſtates; and ſometimes on the Veſiculæ Seminales: Sometimes it poſſeſſes two; and ſometimes all three of the Places at once.

From this Diverſity of Seat of the *Gonorrhæa Virulenta*, M. *Littre* makes two Sorts; *Simple*, which only affects one of the three Parts; and *Compound*, or Complicated, where ſeveral are affected.

That ſeated in the mucous Glands, he obſerves, may remain Simple, thro' the whole Courſe of the Diſeaſe, by reaſon the Mouths of thoſe Glands open into the Urethra an Inch and half on this Side the Proſtates, and alſo look down towards the Glans; ſo that their Liquor is eaſily diſcharged. The other two Sorts mutually produce each other; by reaſon the Ducts of the Veſiculæ Seminales terminate in the Urethra in the Middle of thoſe of the Proſtates: So that there is an eaſy Communication between them.

That ſeated in the mucous Glands, is much the rareſt Caſe; and the eaſieſt cured. The Cure is effected by emollient Cataplaſms, and Fomentations upon the Part, and a Half-bath. *Mem. de Acad.* An. 1711.

For the other Species, more powerful Means are to be uſed.—The principal Remedies are *Mercurial Purges*, an *Emulſion of green Hempſeed*, *Cuttle-fiſh-bone*, *Turpentine*, *Sacch. Saturni*, &c. We have likewiſe great Commendations of *Green Precipitate of Mercury*, and *Mercur. dulcis*. *Balſ. Saturni Terebinthinatum*, prepared with a gentle Fire of *Sacch. Saturni*, and *Oil of Turpentine*, is much applauded where the Heat is great about the Reins and Genitals; as alſo *Camphor*. An *Infuſion of Cantharides* in Wine, is the *Noſtrum* of a noted *Dutch* Phyſician. *Reſin* of the Wood *Guaiacum* is alſo recommended; and *Balſom of Cupaiba* is held a ſort of Specifick: To which muſt be added *Antimonium Diaphoreticum*, *Bezoardicum Minerale*, Water wherein Mercury has been boiled; *Injections of Lime-water*, *Mercurius dulcis*, *Saccharum Saturni*, &c.

*Pitcairn*'s Method of curing the *Gonorrhæa Virulenta*, is as follows: In the Beginning of the Diſeaſe, he purges with a laxative Ptiſan of Senna, Salt of Tartar, and Melilot Flowers; and gives the Patient Whey for his Drink. After three, or four Days ſpent in purging, if the Scalding of the Urine, and the Flux, be abated, and the Colour and Conſiſtence of the Matter improved; he adminiſters Bolus's of Turpentine, and Rheum for ſix or ſeven Days; and if they keep the Body looſe, ſo much the better. By all means, Aſtringents to be avoided; the *Gonorrhæa* being ſcarce ever known to degenerate into a Pox, unleſs too haſtily ſtop'd. *Pitcairn in MS.*

*Du Blegny* directs the Cure of the *Gonorrhæa*, to begin with a gentle Cathartic of Caſſia, Senna, Cryſtal Mineral, Tamarinds, Althæa, and Rhubarb, adminiſter'd every other Day: Then, Diureticks, particularly thoſe of Turpentine; and laſtly, gentle Aſtringents; as Mineral Waters, *Crocus Martis aſtringens*, Tincture of Roſes, Tincture of Coral in Cochineel.

A Ptyaliſm, or Salivation never cures a *Gonorrhæa*. See SALIVATION.

GOOD or GOODNESS, in the general, is whatever tends, or conduces to preſerve, or improve Nature, or Society; in oppoſition to *Evil*, which tends to deſtroy or impair the ſame. See EVIL.

Hence *Good* is divided by the Philoſophers into 1° *Bonum ſui*, Private *Good*; which is that whereby a thing tends to preſerve &c. it ſelf; under which comes that popular Diviſion of *Goods* of Body, Mind, and Fortune: And 2° *Bonum Communionis*, whatever promotes the Intereſt, and Welfare of Society; as all the Civil Offices &c.

GOOD, in Metaphyſicks, or *Metaphyſical* GOOD, call'd alſo *Abſolute*, or *Real* GOOD, and GOOD *per ſe*, is the eſſential Perfection or Integrity of a thing, whereby it has every thing that belongs to its Nature. See PERFECTION.

In this Senſe all things that are, are *Good*; in as much as they have the Perfections naturally belonging to things of their Kind. Thus, a thinking Subſtance is *good*, or perfect, as it has all the eſſential Attributes of Thought: So an extended Subſtance is *good*, as is poſſeſſes all the Parts neceſſary to conſtitute it ſuch.

In effect, as it is abſurd to imagine a Being without its Eſſence; ſo is it, to imagine a Being without the Requiſites of its Eſſence: So that it appears an Error in ſome Philoſophers who divide Beings into *Good*, or Perfect; and *Evil*, or Imperfect. See ESSENCE.

Others define Metaphyſical, or Tranſcendental *Goodneſs*, by Congruency with the Divine Will; as making that the Meaſure of all real *Goodneſs*.

*Phyſical*, or *Natural* GOOD, is that whereby a thing poſſeſſes all things neceſſary to its *Bene eſſe*, *i. e.* to its well Well-being, or ſecond Perfection; and to the Performance of its Functions, and Uſes.

In this Senſe Phyſical *Goodneſs* coincides with Phyſical Perfection. See PERFECTION.

To this are required the ſeveral Powers, and Faculties in their proper Degree; a due Situation, Figure, Proportion, &c. of Parts.

Note, beſide abſolute Phyſical *Goodneſs*, there may be a *Relative* one; as in Foods, which to one Man are Salutary, to another Poiſon, &c. To this Head alſo belong Things *Good pro tempore*, or according to Circumſtances; as the Amputation of a mortified Limb, &c.

*Moral*, or *Ethical* GOOD, is the Agreement of a Thinking, reaſonable Being, and of the Habits, Acts, and Inclinations thereof, with the Dictates of right Reaſon, and the Will of the Creator, as diſcover'd by natural Light.

In order to this, it is not enough that a thing done, ſaid, thought, deſir'd, be juſt, and *good*; but it muſt be done thought, &c. well, *i. e.* from good Principles, and to good Ends.

Others define *Moral Good* more largely. *Moral*, which they alſo call *Relative Good* according to them, is ſomething that is good to another, or that tends ſomeway to the Perfection thereof. In this Senſe they divide it into three Kinds, *Honeſtum*, *Jucundum*, and *Utile*.

The firſt, *Bonum honeſtum*, is what agrees with right Reaſon; and is deſirable for it ſelf; as all things virtuous; as to love God, reſpect our Parents, &c. It is conſider'd without any regard to Pleaſure; not but that there is a ſincere Pleaſure annex'd to it. *Zeno*, and the *Stoicks* allow of no other *Goods*; the *Goods* of Body, &c. they call *Commoda*, Conveniences, not *Goods*. See STOICKS.

*Bonum jucundum*, is that which is good, as is tends to give us Pleaſure, and is deſired for that reaſon; but without any Repugnancy to Virtue, or right Reaſon: As Muſic, to the Ears; Painting, to the Eyes, &c.

*Bonum utile*, or *commodum*, is that which is good on account of ſomething elſe for which it is deſired; as Money, Riches, &c.

*Chief*, or *Supreme* GOOD, *Summum Bonum*; ſee SUMMUM *Bonum*.

The Philoſophers are divided as to what the Chief *Good* of Man conſiſts in; whether in the *Goods* of Fortune, of Body, or Mind. Some, hold Riches, and Honors, the Supreme *Good*; others, as *Ariſtippus*, and the *Cyrenaic* School, bodily Pleaſures; and others, as *Zeno*, and the *Stoicks*, Virtue. See CYRENAIC, STOICKS, &c.

GOOD *Works* } ſee { MERIT, and SUPEREROGATION.
GOOD *Will* } ſee { COMMON *Place*.

GOOD *Abearing*, *Bonus Geſtus*, in a Law Senſe, is particularly uſed for an exact Carriage, or Behaviour of a Subject towards the King, and his liege People; to which ſome Men, upon their Misbehaviour, are bound.

He that is bound to this, *Lambard* ſays, is more ſtrictly bound than to the Peace; becauſe whereas the Peace is not broken without an Affray, Battery, or ſuch like, this Surety *De bono geſtu* may be forfeited by the Number of a Man's Company, or by his, or their Weapons, or Arms. See PEACE.

GOOD-*Behaviour*; ſee GOOD *Abearing*.

GOODS, *Bona*, in Law, and particularly the Civil Law, include all kinds of Effects, Riches, Poſſeſſions.

There are two Kinds of *Goods*; *Moveable*, *res moventes*, *mobiles*; and *Immoveable*, *res non moventes*. See MOVEABLE, and IMMOVEABLE.

It is a Maxim in the Civil Juriſprudence, that he who confiſcates the Body, confiſcates the *Goods*; meaning that all the Effects of a Perſon condemned to a capital Puniſhment, or perpetual Baniſhment, are forfeited to the King. See CONFISCATION.

A Man is ſaid to bind himſelf *Body and Goods*; meaning, that beſide his *Goods* he obliges his Perſon, and ſubmits to remain in Priſon, provided he don't execute his Promiſe.

*Goods*, again, are divided into *Proper*, *Avita*, *Paterna*, *Hæreditaria*: *Acquired*, or *Acqueſts*, *Alio quam hæreditatis jure*

*jure acquiſita*: And *Conqueſts*; *Viro & Uxori ſtante ſocietate* acquiſita.

And again, into *real* and *perſonal Goods*; ſee REAL, and PERSONAL.

And laſtly, into *Noble*, or *Free*; and *Servile*, or *Baſe*.

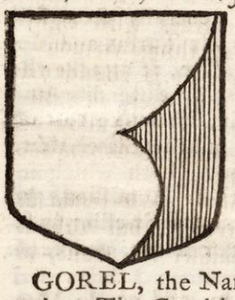
*Goods* belonging to the Domain of the Crown, *ad Fiſcum ſpectantia*, cannot be alienated for ever; unleſs by way of Exchange: They may be ſold under the Faculty of perpetual Redemption.—See REDEMPTION.

*Dotal Goods*, *Dotalia*, are thoſe accruing from a Dowry, and which the Husband is not allowed to alienate. See DOWER.

*Vacant Goods*, *Vacantia*, are thoſe abandoned, or left at large, either by reaſon the Heir renounces them, or that the Defunct has no Heir. See VACANT.

*Paraphernal Goods*, *Paraphernalia*, are thoſe which the Wife gives her Husband to enjoy, on condition of withdrawing them when ſhe pleaſes. See PARAPHERNALIA.

*Adventitious Goods*, *Adventitia*, are thoſe which ariſe otherwiſe than by Succeſſion from Father, or Mother; or from direct Anceſtor to Deſcendant. See ADVENTITIOUS.



*Provectitious Goods*, *Provectitia*, are thoſe ariſing by direct Succeſſion. See PROVECTITIOUS.

*Receptitious Goods* were thoſe which the Wife might reſerve the full Property of to her ſelf, and enjoy them independantly of her Husband; in diſtinction from *Dotal* and *Paraphernal Goods*.

GORDIAN, a Term in Hiſtory.—The GORDIAN *Knot* was a Knot made in the Leathers, or Harneſs of the Chariot of *Gordius*, Father of *Midas*; ſo very intricate, that there was no ſeing where it began, or ended.

The Inhabitants had a Tradition, that the Oracle had declared that he ſhould be Maſter of *Aſia* who could untie this Knot. *Alexander* having undertaken it, and fearing that if he ſhould not be able to effect it, it would be deem'd an ill Augury, and prove a Check in the way of his Conqueſts; cut it aſunder with his Sword; and thus, ſays *Quintus Curtius*, either accompliſh'd, or eluded the Oracle.

Some will have the Phraſe derived from *Gordius*, King of *Phrygia*, who tied the fatal Knot; others, from *Gordium*, a City in *Phrygia*, where the Knot was made.—

GORE, in Heraldry, one of the regular Abatements, uſed, according to *Gwillim*, to denote a Coward. See ABATEMENT.

It conſiſts of two Arches, or Curve Lines, drawn, one from the Siniſter Chief, the other from the Siniſter Baſe, and meeting in an acute Angle in the middle of the Feſs-Point; as in the Figure adjoining.

GOREL, the Name, or Title given to the Prince of *Georgia*.—The *Gorel* is always a *Mahometan*: The *Sophi* of *Perſia* obliges him to obſerve the Religion of the Alcoran, to preſerve the Dignity of *Gorel* in his Family.

GORGE, a *French* Term, uſed for what in *Engliſh* we call the *Throat*, and the Latins *Fauces*. See THROAT.

GORGE, in Falconry, is the uppermoſt Bag, or Stomach of a Hawk, or Falcon; being that which receives the Food the firſt. See HAWK.

The *Gorge*, *Ingluvies*, is the ſame in Birds of Prey with what we call the *Crow*, or *Crop*.

When the Bird is fed, he is ſaid to be *gorged*. See HAWKING.

GORGE, in Architecture, a ſort of concave Moulding, wider, but not ſo deep as a Scotia; uſed chiefly in Frames, Chambranles, &c. See SCOTIA.

GORGE *of a Chimney*, is the Part between the Chambranle, and the Crowning of the Mantle.—Of this there are divers Forms, ſtraight, perpendicular, in form of a Bell, &c.

GORGE is ſometimes alſo uſed for a Moulding that is concave in the upper Part, and convex at Bottom; more properly called *Gula*, and *Cymatium*. See GULA, and CYMATIUM.

GORGE is alſo uſed for the Neck of a Column; more properly called *Collarino*, and *Gorgerin*. See GORGERIN, &c.

GORGE, in Fortification, the Entrance of a Baſtion; or of a Ravelin, or other Out-work. See BASTION, RAVELIN, &c.

The *Gorge* is what remains of the Sides of the Polygon of a Place, after retrenching the Curtains: In which caſe it makes an Angle in the Centre of the Baſtion—Such is A H D *Tab. Fortification, Fig.* 1.

In flat Baſtions, it is a Right Line on the Curtain by which we enter either the Baſtion, or the Out-works. It is alſo the Aperture thro' which we enter, or the Interval between, the two Wings, or Flanks on the Side of the Ditch.

All the *Gorges* are to be deſtitute of Parapets; otherwiſe, the Beſiegers having taken poſſeſſion of a Work, might make uſe thereof to defend themſelves from the Shot of the Place: So that they are only fortified with Paliſado's, to prevent a Surpriſe.

*Half the Gorge*, *Demi* GORGE, or That Part of the Polygon between the Flank, and the Centre of the Baſtion, as A H, is call'd the *Demi Gorge*. See DEMI *Gorge*.

GORGED, in Heraldry, is when a Crown, Coronet, or the like thing is bore about the Neck of a Lion, a Swan, &c. In that caſe they ſay, the Lion, or Cygnet is *gorged* with a Ducal Coronet, &c.

*Gorged* is alſo uſed when the Gorge, or Neck of a Peacock, Swan, or the like Bird is of a different Colour, or Metal from the reſt.—

GORGED, among Farriers, &c. ſignifies as much as *ſwelled*.

In this Senſe they ſay, the Legs of a Horſe are *gorged*; the paſtern Joint is *gorged*.

GORGERIN, a Part of the antient Armour; being that which cover'd the Throat, or Neck of a Perſon arm'd at all Points.—

GORGERIN, or GORGE, in Architecture, is the little Frieze in the Doric Capital, between the Aſtragal at the Top of the Shaft of the Column, and the Annulets. See *Doric* CAPITAL.

Some call it *Colarino*.—*Vitruvius* gives it the Name *Hypotrachelium*. See HYPOTRACHELIUM.

GOTHIC, or GOTHICK, ſomething that has a relation to the *Goths*, an antient People, originally inhabiting that Part of *Sweden* call'd *Gothland*; whence they ſpread themſelves over *Greece*, *Dalmatia*, *Bulgaria*, *Italy*, *Spain*, &c.

Thus we ſay, *Gothic* Manner, *Gothic* Ignorance: The Tyrant *Maximin* was of *Gothic* Race, &c.

GOTHIC *Character*, or *Gothic* Writing, is a Character, or manner of Writing, which, in the main, is the ſame with the *Roman*, only full of Angles, Turns, and Bendings; eſpecially at the Beginning and Ending of each Letter. See CHARACTER, and LETTER.

The Manuſcripts in *Gothic* Characters are not very antient.—*Ulpilas*, Biſhop of the *Goths*, was the firſt Inventor of the *Gothic* Characters; and the firſt that tranſlated the Bible into the *Gothic* Tongue.

The *Runic* Characters are alſo frequently called *Gothic* Characters: Fa. *Mabillon*, *De re Diplomat.* L. I. C. II. But they who take the *Gothic* Characters to be the ſame with the *Runic*, are miſtaken; as is ſhewn by *Ol. Wormius*, *Junius* in his Preface to the Goſpels wrote in *Gothic* Letters, and Dr. *Hicks* on the *Runic* Tongue. See RUNIC.

GOTHIC *Architecture*, is that which deviates from the Proportions, Characters, &c. of the Antique. See ARCHITECTURE.

The *Gothic* Architecture is frequently very ſolid, heavy, and maſſive; and ſometimes, on the contrary, exceedingly light, delicate, and rich. The Abundance of little, whimſical, impertinent Ornaments, are its moſt uſual Character.

Authors diſtinguiſh two Kinds of *Gothic Architecture*; the one antient, the other Modern.—The *Antient*, is that which the *Goths* brought with them from the North, in the V^th^ Century: The Edifices built in this manner, were exceeding maſſive, heavy, and coarſe.

Thoſe of the *Modern Gothic* run into the other Extreme, being light, delicate, and rich to a Fault: Witneſs *Weſtminſter* Abby, the Cathedral of *Lichfield*, the Croſs of *Coventry*, &c.

The laſt kind continued long in uſe, eſpecially in *Italy*, *viz.* from the XIIIth Century, to the Reſtauration of the antique Building in the XVIth. All the antient Cathedrals are in this kind. See ARCHITECTURE.

The Inventors of the *Gothic* Architecture thought, no doubt, they had far ſurpaſs'd the *Greek* Architects: A *Greek* Building has not a ſingle Ornament but what adds a Beauty to the Whole. The Parts neceſſary to ſuſtain, or ſhelter it, as the Columns, Corniches, &c. derive all their Beauty from their Proportions: Every thing is ſimple, meaſur'd, and reſtrain'd to the Uſe it is intended for. No daring, out of the way Strokes; nothing quaint to impoſe on the Eye: The Proportions are ſo juſt, that nothing appears very grand of itſelf, tho' the whole be grand. On the contrary, in the *Gothic* Architecture, we ſee huge Vaults rais'd on ſlender Pillars, which one would expect every Minute to tumble down, tho' they will ſtand for many Ages. Every thing is crammed with Windows, Roſes, Croſſes, Figures, &c.

GOTHIC *Column*, is any round Pillar, in a *Gothic* Building, either too thick, or too ſmall for its Height. See COLUMN.

There are ſome found even of 20 Diameters high; without either Diminution, or Swelling. See PILLAR, DIMINUTION, SWELLING, &c.

GOUD, or GAUD, or *Woad*, a Plant uſed by the Diers, to give a yellow Colour; and for this reaſon called in Latin, *Luteola*, of *luteus*, yellow. See YELLOW.

This Plant is ſown in a light Ground, in the Months of *March*, or *September*; and is ripe in *June*, or *July*. In hot Countries it is frequently dry enough when gather'd; but in the colder, care muſt be taken to dry it. Great Circumſpection to be uſed, that it be not gather'd before thorough ripe; as alſo to prevent its getting wet, when gather'd. See WOAD.

GOVERNMENT, or GOUVERNMENT, a Quality, or Office, which gives a Man Power, or Right, to command, or rule over a Place, a City, a Province, a Kingdom, or the like; either ſupremely, or by Deputation.

*Government* is either *General*, and Supreme, as that of a whole Kingdom, Empire, Soveraign State, &c. See KINGDOM, EMPIRE, STATE, &c. or *Particular*, and Subordinate; which again is ſubdivided into Civil, Military, or Eccleſiaſtical. See CIVIL, MILITARY, and ECCLESIASTICAL.

The *Government* of the King's Houſhold belongs to the Lord *Steward*. See STEWARD, and HOUSHOLD.

Our Cities, Corporations, and Boroughs are uſually *govern'd* by Mayors, with Aldermen, and Common Council-Men. See MAYOR, ALDERMAN, &c. See alſo CITY, &c.

The King was called to the *Government* of *England*, by the free Voices of the Parliament, and the People.—Such a Lord bought the *Government* of ſuch a Province, Iſland, &c. The Eaſt India Company nominate to the *Government* of *Fort St. George*, &c.

GOVERNMENT is alſo uſed for the City, Country, or Place to which the Power of *governing* or commanding, is extended.

*Sanſon* has given us Maps of *France*, divided into its *Governments*. There are 38 *Governments*, or Provinces in that Kingdom, independant of each other. Beſide theſe, there is another Diviſion into *Governments*, called *Grand Governments*, whereof there are twelve, *viz.* thoſe of the Iſle of *France*, *Burgundy*, *Normandy*, *Brittany*, *Picardy*, *Dauphiny*, &c. which are not proper Provinces, commanded each by its ſeveral Governor, but rather ſo many Claſſes of Governors, or *Governments*, contrived for the better, and eaſier regulating the Seats, &c. of ſo many Governors, Baillages, Prevotes, &c. as were obliged to aſſiſt at the holding of the General Eſtates.—

GOVERNMENT, again, is uſed for the manner, or Form of *governing*, *i. e.* for the Policy of a Country, State, &c. See LAW, and POLICY.

In this Senſe, *Governments* are divided into *Monarchies*, *Ariſtocracies*, and *Democracies*. See MONARCHY, ARISTOCRACY, DEMOCRACY.

The *Government* of *France* is *Monarchic*; that of *Venice*, *Ariſtocratic*; and that of the United Provinces, *Democratic*: The *Government* of *England* is both *Monarchic*, *Ariſtocratic*, and *Democratic* all in one.

GOVERNMENT, in Grammar, is underſtood of that Conſtruction of Nouns, and Verbs, wherein they require ſome Alteration to be made in others, join'd or conſtructed with them. See CONSTRUCTION, NOUN, and VERB.

Conſtruction is divided into two Parts, that of *Concord*; and that of *Government*, call'd alſo *Regimen*. See CONCORD.

*The Rules, or Meaſures of* Government, *or Regimen, ſee under the Article* REGIMEN.

GOVERNOUR, or GOUVERNOUR, an Officer veſted by a King or Soveraign Prince, with the Command and Adminiſtration of a Province, Place, &c. See GOVERNMENT.

Such a *Governour* being charg'd with Mal-adminiſtration, was recalled, and brought to his Trial.

A *Governour* repreſents the King; and not only commands the Garriſon, Troops, &c. but the Citizens, &c. A *Governour* of a fortified Place was antiently required to hold out three Attacks, before he ſurrender'd.—

GOVERNOUR is alſo frequently uſed for a Superintendant. Thus we ſay, The *Governour* of the Bank; the *Governour* and Directors of the South Sea Company; the *Governour* of a Hoſpital, &c. See BANK, COMPANY, HOSPITAL, &c.

GOUGE, an Inſtrument uſed by divers Artificers; being a ſort of round, hollow Chiſſel; ſerving to cut Holes, Channels, Grooves, &c. in Wood, Stone, &c. See CHISSEL.

GOUST, Goût, a *French* Term, for what the *Italians* call *Guſto*, and we, *Taſte*. See TASTE.

GOUT, ARTHRITIS, in Medicine, a painful Diſeaſe, occaſion'd by a Flux of ſharp Humor, upon the Joints of the Body. See DISEASE.

Some Phyſicians define the *Gout*, an Inflammation, Swelling, and Painfulneſs of the Joints. Its prime Cauſe is uſually attributed to Wine, Venery, Gluttony, and Idleneſs,

The *Gout* is ſuppoſed to ariſe from two Cauſes: A Redundancy of Humors, and a Weakneſs of the Joints. Its proper Seat is in the Limbs; not in the Trunk of the Body: In the latter Caſe it frequently proves mortal, not in the former.

*Muſgrave* makes the Apoplexy a *Gout*, becauſe ariſing from the Abundance of Pituita, or Phlegm. According as this redundant Pituita throws itſelf on the Lungs, the Liver, or any other Part, it makes, according to him, an *Apoplexy*, a *Gout of the Liver*, *of the Lung*, *of the Spleen*, &c.

The *Gout* is a Painful, Periodical, and Critical Paroxyſm, tending to free the Body of an offenſive, or corroſive Matter, by throwing it upon the Extremities; breathing it out inſenſibly; or comminuting it ſo as to render it harmleſs, or capable of circulating freely along with the Juices, till by collecting again, gradually increaſing, or ſeparating from the Blood, it cauſes another Paroxyſm.

The *Gout* is either Regular, or Irregular.

*Regular*, when it appears to be ſeated in the Extremities of the Body, returns at ſtated Periods, and with a gradual Increaſe and Decline of the Symptoms: *Irregular*, when the Paroxyſms are frequent, and uncertain; when the Symptoms vary, or happen promiſcuouſly, and the Diſeaſe appears to be ſeated in the internal Parts of the Body; as the Stomach, Brain, &c. leaving the extreme Parts, as the Hands, Feet, &c. free from Pain.

According as different Parts are affected by this Diſtemper, it goes by different Names: When it ſeizes the Feet, it is called *Podagra*; when the Knees, *Gonagra*; when the Hands, *Chiragra*; and when the Hip Joint, *Sciatica*, &c. See PODAGRA, CHIRAGRA, SCIATICA, &c.

Sometimes it attacks the whole Body at the ſame time, and then it is called the *General*, or *Univerſal Gout*.

The *Gout* may be Hereditary, or Natural to the Conſtitution, proceeding from a too great Conſtriction of the Capillary Veſſels, whence the *gouty* Humor is more eaſily lodged, or detained in them. It may alſo proceed from High-living, Crapula's, and eating ſuch things as are hard of Digeſtion; a ſedentary Life, drinking too freely of tartarous Wines; irregular living, Exceſs in Venery; an obſtructed Perſpiration, and a Suppreſſion of the natural Evacuations.

The immediate Cauſe of the *Gout* appears to be an Alkaline, or acrimonious Matter in the Blood; which being ſeparated from it at particular times, falls upon the Joints, but moſt frequently upon the Feet, and Hands; which, if it be repelled, or if the Blood be overcharged therewith, ſo that a Criſis cannot be procured in the Extremities (as generally happens in old Age) it falls upon the nobler Parts; and then produces the Irregular *Gout*.

The Regular, chiefly and immediately affects the Tendons, Nerves, Membranes, and Ligaments of the Body, about the Joints—Sometimes a cold ſhivering Fit precedes, and generally a Fever accompanies, its firſt Appearance, which ſoon goes off, and returns by Intervals. A ſlight Pain is felt in the Joints, where the Criſis is perform'd, which increaſes gradually; and in the Podagra generally fixes firſt on the great Toe, thence proceeding to the Tarſus and Metatarſus; ſometimes, eſpecially in old Age, it attacks the Knees and Hands; and wherever it is, by diſtending and irritating the Parts, cauſes a violent Pain, not unlike to that of a diſlocated Bone. When the Pain is at its State, there appears an Inflammation, and a Swelling; both which increaſe as the Pain increaſes; and upon their Remiſſion, the Paroxyſm is ended: Tho' the Tenderneſs and Swelling in ſevere Fits, will ſometimes remain a longer Time, and cauſe an Uneaſineſs upon Motion.

It it obſerved, that Women, Children, and young Men, are ſeldom troubled with the *Gout*, unleſs it be hereditary; that it rarely attacks, before the Patient is 35, or 40 Years old, and ſometimes not till the Decline of Life; that the Corpulent are more ſubject to it, than thoſe who are ſpare, and lean; that the Pain increaſes towards Night, and decreaſes towards the Morning; that the longer the Interval between the Paroxyſms, the more ſevere they prove, and the longer they generally continue.

The Diſeaſe uſually returns twice a Year, *viz.* in the Spring, and Autumn; and in the latter the Paroxyſm is ſometimes two, or three Months, before it comes to a Period; tho' its Duration is ſometimes not above three, or four Weeks.

Theſe are called *Cardinal Paroxyſms*, to diſtinguiſh them from others of leſs Duration, which happen between the Spring and Autumn. The more high-colour'd the Urine, and the leſs Sediment it depoſites; the further is the Diſeaſe from the State of *Concoction*, as 'tis termed. According to the Violence and Continuance of the Fever, the Paroxyſm proves more or leſs ſevere.

In Conſtitutions much broke or ſhatter'd with the *Gout*, there are uſually ſtony, or chalky Concretions form'd in the Joints of the Fingers, or Toes, and thence tranſlated to the Viſcera; which caſe is often attended with irregular, frequent, and ſhort Paroxyſms in the Extremities. In the Decline of Life, when the uſual Fits do not happen; or if the *gouty* Matter be ſuddenly repelled from the Extremities by an improper Regimen, or Medicines; it uſually ſeizes the internal Parts, and frequently the Stomach, Head, Inteſtines, &c. Cauſing Want of Appetite, Reaching to vomit, Indigeſtion, a Cachexia, the Jaundice, Aſthma, Diarrhæa; and at laſt, ſo obſtructs the fine capillary, nervous Tubes (eſpecially thoſe of the Stomach, and Brain) as poſſibly to hinder the Flux of the Animal Spirits: Upon which Death ſuddenly enſues.

*Sydenham* gives us an accurate Hiſtory of a Fit of the *Gout* in the Feet: It begins towards the Cloſe of *January*, or Beginning of *February*, without the leaſt previous Notice; except, perhaps, a Crudity, or Apepſy for ſome Weeks beforehand; with a ſort of windy Intumeſcence, and a Heavineſs

of

of the Body, which continually increaſes, till at laſt, a Paroxyſm breaks out; being preceded, ſome Days, with a ſort of Torpor, and a ſenſible Deſcent of the Flatulences thro' the Fleſh of the Thighs, with ſome ſpaſmodic Symptoms. The Day before the Paroxyſm, his Appetite is very greedy; an Hour or two after Midnight, he is waked by a Pain, commonly in his great Toe, ſometimes in the Heel, Ankle, or the Calf of the Leg, not unlike the Pain felt upon a Diſlocation of the ſaid Bones; with a Senſe as if Water were ſprinkled on the Part affected. This is ſucceeded by a Chilline ſs, and ſome Approach to a Fever: The Pain in the mean time, which at firſt was more remiſs, gradually increaſes; in proportion to which the Chilline ſs abates. By Night, it is arrived at its Height, and ſettled about the Ligaments of the Bones of the Tarſus, and Metatarſus; where it ſometimes reſembles a violent Tenſion; and ſometimes a Laceration of theſe Ligaments; ſometimes the Biting, or Gnawing of a Dog; a Squeezing, or Coarctation. Thus far the Part affected has ſuch an exquiſite Senſe, that it cannot bear the Weight of the Linnen, nor even the Shaking of the Room occaſion'd by a Perſon's Stepping. Hence, a thouſand vain Endeavours to get Eaſe, by changing the Poſture of the Body, the Poſition of the Foot, &c. till about two or three a-Clock in the Morning (the Space of a Nychthemeron from its Acceſs), when a Remiſſion is firſt perceived; the morbid Matter being by this time tolerably digeſted, or even diſſipated. The Patient, hereupon, drops a-ſleep, and at his Waking finds his Pains much abated, but the Part newly ſwell'd. A few Days hence, the other Foot undergoes the ſame Fate: Sometimes, both are attack'd from the firſt. From the Time it has ſeiz'd on both Legs, the Symptoms become more irregular, and precarious, both as to the Time of Invaſion, and the Duration thereof. But this ſtill holds, that the Pain recruits in the Night, and remits again in the Morning. A Series of theſe little, alternate Acceſſes, &c. conſtitutes a *Fit*, or *Paroxyſm of the Gout*, which holds longer, or leſs, according to the Age, &c. of the Patient. In ſtrong People, and thoſe who have not had it often, fourteen Days is a moderate Paroxyſm: In old People, and thoſe long uſed to it, it will hold two Months.

For the firſt fourteen Days the Patient is uſually bound: A Loſs of Appetite, Chilline ſs towards Evening, and a Heavine ſs, and Uneaſine ſs even of the Parts not affected, attend the whole Paroxyſm. As it goes off, he is ſeiz'd with an intolerable Itching, eſpecially between the Fingers; the Furfur falls, and his Toes ſcale, as if he had drank Poiſon.

Such is the Courſe of a *Regular Gout*; but when thro' improper Treatment it is diſturbed, or prolonged, it ſeizes the Hands, Wriſts, Elbows, Knees, and other Parts: Sometimes diſtorting the Fingers, and taking away their Uſe; ſometimes generating tophaceous Concretions, or Knots about the Ligaments of the Joints, reſembling Chalk, or Crabs Eyes; ſometimes raiſing a whitiſh, inflamable Tumor, almoſt as big as an Egg, about the Elbows. &c.

It may be added, that where a Perſon has labour'd under the *Gout* for many Years; the Pain is ſenſibly leſſen'd each Paroxyſm, till at length it becomes rather an Uneaſine ſs than a Pain: Hence that Reflexion of the Great *Sydenham*, DOLOR IN HOC MORBO AMARISSIMUM EST NATURÆ PHARMACUM.

The *Gout* is rank'd among the Number of incurable Diſeaſes: In effect, we have no thoro', and aſſured Remedy yet diſcovered for it; theſe that now obtain are little more than Palliatives: They tend to aſſuage the Pain, to diminiſh it for a time; but not to extirpate it.

Bleeding, and Purging are found abſolutely prejudicial; and Diaphoreticks of no Service. Emeticks, according to *Pitcairn*, and *Etmuller*, may do good in the Beginning of the Diſeaſe. But, upon the whole, nothing, in *Sydenham*'s Opinion, proves of more Service than Digeſtives, or Medicines which ſtrengthen the Stomach, and promote Digeſtion: As, Angelica Root, *Enul. Campan.* The Theriac *Andromach.* the Jeſuit's Bark; and Antiſcorbuticks: Theſe chiefly to be adminiſter'd in the Intervals between the Paroxyſms. *Muſgrave*, however, recommends internally Repellents, and principally Cardiacks; externally, Emplaſters of *Gum. Caran.* or *Oxycroc*, or Cephalic, with *Burgundy* Pitch; or green Sea-cloth, commonly called *Hat-caſe*, &c. Yet *Dolæus* affirms, that Repellents do more harm than good; and gives us the following Recipe, as more than equal to all others.

℞ *Confect. hamech.* ℥j. *Pulv. Jalap.* ℥ ſs. *extract. Trifol. fibrin.* ℥ij. *Litharg. aur.* ℥vj. *Sapæ Antimon.* ℥ ſs. *Sacchar. Canth.* ℥vj. *Ol. Olivar. q. s. Ceræ & Picis parum f. s. a.* An Emplaſter to be laid on the Joint affected, till the Pain, and the morbid Matter be driven away.—

GRABATARII, or GRABBATARII, in Church Antiquity, were ſuch Perſons as defer'd the receiving of Baptiſm, to the Hour of Death; or, who did not receive it till they were dangerouſly ill, and out of Hopes of Life: From an Opinion, that Baptiſm abſolutely waſh'd away all former Sins. See BAPTISM.

The Word is form'd of the Latin *Grabatum*, Bed; and that from the Greek γραβᾶτος, a Hanging-bed, of κρεμᾶν, to ſuſpend: Such was the Bed of Slaves, poor People, *Cynic* Philoſophers, &c. who were Enemies of Luxury and Eaſe.

GRACE, in Theology, any Gift which God makes to Man, of his own free Liberality, and without their having deſerv'd it at his Hands; whether ſuch Gift regard the preſent, or a future Life.—

*Grace* is uſually divided into *Natural*, and *Supernatural*. By *Natural Grace* is underſtood the Gift of Being, of Life, of ſuch and ſuch Faculties, of Preſervation, &c. St. *Jerom*, Epiſt. 139. allows it a *Grace* of God, that Man was created: *Gratia Dei eſt quod homo creatus eſt.* So, alſo, it is by the *Grace* of God, that Angels, and human Souls are immortal; that Man has free Will, &c.

*Supernatural Grace*, is a Gift from above confer'd on intelligent Beings, in order to their Salvation.— 'Tis theſe, only, are called *Graces* in the Rigor of Theology; and 'tis for the Conveyance, Improvement, and Strengthening of theſe that the Sacraments are confer'd, the Miniſtry of the Word inſtituted, &c. See SACRAMENT, &c.

The Divines diſtinguiſh this *Grace* into *Habitual*, and *Actual*; *Juſtifying*, and *Sanctifying*.—

*Habitual* GRACE, is that which reſides ſtatedly in us; is fix'd in the Soul, and remains till ſome grievous, wilful Sin expunge it.

This is alſo called *Juſtifying Grace*, as it makes us appear righteous and innocent before God: And *Sanctifying Grace*, as it makes us holy, and devoted to God. See JUSTIFICATION, and SANCTIFICATION.

*Actual* GRACE, is that which God gives us for the ſpecial Performance of ſome particular Good thing; as to convert us, enable us to reſiſt a Temptation, &c.—

This, the Divines ſubdivide into divers Kinds: *Preventing*, *Concomitant*, and *Subſequent Grace*.

It is an Article of Faith, 1° That Actual *Grace* is neceſſary for the beginning, carrying on, and finiſhing every good Work. 2° That the Will is able to reſiſt this *Grace*, and reject it. See WILL.

And hence this *Grace* becomes further divided into *Efficacious*, and *Sufficient*.—It is *Efficacious*, or *Efficient*, when it has the Effect; and *Sufficient*, when it has it not, tho' it might have had it. See EFFICACIOUS, and SUFFICIENT.

Some of the more rigid *Calviniſts*, &c. admit a *Neceſſitating Grace*. See CALVINIST, PREDESTINATION, REPROBATION, &c.

We alſo ſay, *the Law of Grace*; the *Covenant of Grace*, in oppoſition to the *Moſaic* Law, &c. See LAW; ſee alſo REVELATION, &c.

*Days of* GRACE, or *Favour*, are a certain Number of Days, allow'd for the Payment of a Bill of Exchange, after the ſame becomes due. See DAY *of Grace*.

The Days of *Grace* in *England* are 3; at *Rome* 5; at *Rotterdam*, 6; at *Paris*, 10; at *Hamburg*, 12; at *Antverp*, 14.

*Act of* GRACE, is an Act of Parliament for the Relief of inſolvent Debtors in the ſeveral Priſons; by clearing ſuch as are qualified, or come within the Terms of the ſame, from all their former Debts, &c.

GRACES, *Gratiæ*, in the Canon Law, are the ſame with what we otherwiſe call *Proviſions*, See PROVISION.

*Expectative* GRACES, *Gratiæ Expectativæ*, are a ſort of reverſionary Benefices, diſpoſed before the Time, or before they become vacant. See EXPECTATIVE.

GRACE is alſo a Term in the Formula of all Patents, &c. which begin, *George, by the* Grace *of God King of* Great Britain, &c.—The *Romiſh* Biſhops frequently begin their Mandates in the like manner. Such-a-one, by the *Grace* of God, and the Holy See, Biſhop of, &c.

The *Engliſh* Archbiſhops ſay, *By Divine Grace*, or *Divine Providence*. See ARCHBISHOP, &c.

All Soveraigns now uſe the Phraſe *Grace of God*; Emperors, Kings, Princes, &c. Antiently Dukes, Counts, and even Lords talk'd in the ſame Style: In the new Collection of Fa. *Martene* we meet with a mere Seigneur qualified *by the Grace of God Seigneur de Comborn*. *Louis* XI. forbad the Duke of *Brittany* to entitle himſelf *by the Grace of God*.

GRACE is alſo a Title of Dignity, attributed to Princes of inferior Rank, and who are not qualified for that of *Highneſs*. See TITLE.

Till the Time of King *James* I. the Kings of *England* were addreſs'd to under the Title of *Grace*, as they now are under that of *Majeſty*. See MAJESTY, KING, &c.

Our *Engliſh* Dukes and Archbiſhops are addreſs'd to under the Title of *Grace*. But that Title is moſt frequent in Upper *Germany*, and particularly *Auſtria*; where it is bore by the Barons, as being inferior to that of Excellence. See QUALITY, EXCELLENCE, &c.

GRACES, *Gratiæ*, *Charites*, in the Heathen Theology, were a Set of fabulous Deities, three in Number, who attended on *Venus*. See GOD.

Their

Their Names are, *Aglaia*, *Thalia*, and *Euphroſyne*; and they are ſuppoſed to be the Daughters of *Jupiter*. *Voſſius de Idolol. L. XIII. c. XV.*

Some will have the *Graces* to have been four, and make them the ſame with the *Horæ*, Hours, or rather with the four Seaſons of the Year. See HOURS, &c.

A Marble in the King of *Pruſſia's* Cabinet repreſents the three *Graces* in the uſual manner, with a fourth, *ſeated*, and cover'd with a large Veil, with the Words underneath, AD SORORES IIII. Yet Monſ. *Beger* will not allow the *Graces* to have been four: The Company there preſent, he underſtands to be the three *Graces*, and *Venus*, who was their Siſter, as being Daughter of *Jupiter* and *Dione*.

They were always ſuppoſed to have hold of each other's Hands, and never parted. They were painted naked, to ſhew that the *Graces* borrow nothing from Art, and that they have no other Beauties but what are natural.

Yet, in the firſt Ages, they were not repreſented naked, as appears from *Pauſanias L. VI.* and *L. IX.* who deſcribes their Temple, and Statues. They were of Wood, all but their Head, Feet, and Hands, which were white Marble. Their Robe, or Gown was gilt: One of them held in her Hand a Roſe, another a Dye, and the other a Sprig of Myrtle.

The Poets feign the *Graces* to have been very ſmall of Stature; to intimate that the Things which charm, and delight us, are frequently little Matters; as, a Geſture, a Laugh, a careleſs Air, or the like.

GRACILIS, in Anatomy, a Muſcle of the Leg, thus called from its ſlender Shape. See LEG.

It ariſes partly tendinous, and partly fleſhy, from the Os Pubis internally, between the firſt and ſecond Heads of the Triceps; and in its Deſcent in the Inſide of the Thigh, grows narrow, and becomes tendinous a little below the Sartorius, and is thus inſerted into the Tibia. It aſſiſteth in bringing the Thigh and Leg inwards.

GRADATION, the Act of aſcending, Step by Step, to any Pitch, or Eminence: From the Latin *Gradus*, Degree Step.— See DEGREE.

GRADATION, in Rhetoric, is when a Series of Proofs is brought, riſing by degrees, and emproving each on the other. See CLIMAX.

GRADATION, in Logic, is an Argumentation conſiſting of four, or more Propoſitions, ſo diſpoſed, as that the Attribute of the firſt is the Subject of the ſecond; and the Attribute of the ſecond, the Subject of the third; and ſo on, till the laſt Attribute come to be predicated of the Subject of the firſt Propoſition.

As, in *Porphyries* Tree: Man is an Animal; an Animal is a living Thing; a living Thing is a Body; a Body is a Subſtance: Therefore Man is a Subſtance.

An Argument of this kind is liable to a world of Fallacies; both from the Ambiguity of Words, and Things: *E. gr. Peter* is a Man; Man is an Animal; Animal is a Genus; Genus is an Univerſal; therefore *Peter* is an Univerſal.

GRADATION, in Chymiſtry, is a kind of Proceſs belonging to Metals.—It conſiſts in raiſing, or exalting them to a higher Degree of Purity, and Goodneſs, ſo as both to increaſe their Weight, Colour, Conſiſtence, &c. See METAL, TRANSMUTATION, &c.

GRADATION, in Architecture, ſignifies an artful Diſpoſition of ſeveral Parts, as it were, by Steps, or Degrees, after the manner of an Amphitheater; ſo that thoſe placed before, do no Diſſervice, but rather Service to thoſe behind.

The Painters alſo uſe the Word *Gradation* for an inſenſible Change of Colour, by the Diminution of the Teints, and Shades. See DEGRADATION.

GRADUAL, GRADUALE, was antiently a Church-book, containing divers Prayers, rehearſed, or ſung after the Epiſtle.

In ſome of our antient Writers 'tis read *Graile*, *Graduale*, &c.

After reading the Epiſtle, the Chantor aſcended the Ambo with his *Gradual*, and rehears'd the Prayers, &c. therein; being anſwer'd by the Choir: Whence the Name *Gradual*, on account of the Steps, or *Degrees* of the Ambo. See AMBO.

In the *Romiſh* Church, the Name *Gradual* is ſtill retain'd to a Verſe which they ſing after the Epiſtle, and which antiently rehears'd on the Steps of the Altar: Tho' *Ugotio* gives another Account, and ſays it took its Denomination *Gradual*, becauſe ſung in a gradual Aſcent from Note to Note. *Magri* ſpeaks differently ſtill, and will have it to have took this Name, becauſe ſung while the Deacon went up the *Steps* to the Pulpit, to ſing the Goſpel.

GRADUALS, GRADUALES, is alſo applied to the fifteen Pſalms ſung, among the *Hebrews*, on the fifteen Steps of the Temple.—Others are of Opinion they were thus denominated, becauſe the Singers rais'd their Voice by degrees, from the firſt to the laſt.

Cardinal *Bona*, in his Treatiſe of Divine Pſalmody, ſays, The fifteen gradual Pſalms are intended to repreſent to the Mind, that we only arrive at the Perfection of Goodneſs or Holineſs, by degrees: He goes on to lay down the fifteen Degrees of Virtue, correſponding to the 15 Pſalms; five of them are for Beginners; five for Proficients; and the reſt for the Perfect.

GRADUATE, a Perſon who has the Degrees in any Faculty. See DEGREE, &c.

A *Graduate* in Phyſic, in Divinity, &c. See FACULTY, DOCTOR, &c.

In *France*, one Third of the Benefices of the Kingdom are affected to *Graduates*, *viz.* all that become vacant in the Months of *January*, and *July*; *April*, and *October*.

This Privilege of *Graduates* is no older than the fifteenth Century: It being obſerv'd that Men of Learning were much neglected by the Collators, and Patrons of Churches, Complaint therefore was made to the Council of *Baſil*, where this Decree was made; which was afterwards confirm'd by the *Pragmatic* Sanction, and again by the Concordat. See PRAGMATIC, &c.

GRADUATION, is uſed in Mathematicks, for the Act of *Graduating*, or dividing any thing into Degrees. See DEGREE.

*Graduation* of this Quadrant, Theodolite, or the like, is very juſt, and clean. See QUADRANT, THEODOLITE, &c.

GRAFT, in Agriculture and Gardening, a little Shoot, Cyon, Bud, or Eye of a Tree, inſerted into another Tree, to make it yield Fruit of the ſame Nature, and Kind as thoſe of the Tree whence the *Graft* is taken. See BUD, CYON, EYE, &c.

Or, *Graft*, is a little Portion of a Tree, incloſed in a Cleft, or Inciſion made in another, in order to correct, qualify, or improve the Taſte of its Fruit; or even to make it bear a different Sort of Fruit. See ENGRAFTING; ſee alſo FRUIT, TREE, STOCK, &c.

The Word is form'd of the French *Greffe*, which ſignifies the ſame thing; and *Greffe*, in this Senſe, is ſuppos'd to have been derived from the Reſemblance the Shoot bore to the Point of a Penknife, which was antiently called *Greffe*. *Du Cange* goes further, and derives the antient *Greffe* from *Graphiolum*; *Menage*, from *Graphium*, a *Latin* Word, ſignifying a little Style, or Iron Bodkin, one End whereof was pointed, and ſerved to write withal on Waxen Tablets; and the other flat, ſerving to efface, or rub out what was wrote.

GRAFTING, or GRAFFING, or INGRAFTING, in Agriculture, and Gardening. See ENGRAFTING.

GRAFTING *Wax*. See WAX, &c.

GRAIN, a minute Body, or Parcel of a Body pulveriz'd. In this Senſe we ſay, a *Grain* of Sand; a *Grain* of Salt; a *Grain* of Gunpowder, &c. See PULVERIZATION, &c.

GRAIN is alſo uſed for the Fruits, or Seeds of divers Plants; as, a *Grain*, or Corn of Pepper, of Fileria, &c. See BERRY, SEED, KERNEL, &c.

The Kingdom of Heaven is compared to a *Grain* of Muſtard Seed.

GRAIN is more generally uſed for any Fruit, or Seed growing in a Spica, or Ear. See SPICA.

In this Senſe, *Grain* comprehends all ſorts of *Corn*; as Wheat, Rye, Barley, Oats, &c. See CORN.

GRAIN is alſo a ſmall Weight, us'd in eſtimating divers Subſtances. See WEIGHT.

The *Grain* is the ſmalleſt of all the Weights known in *England*.—It is taken from the Weight of a *Grain* of Wheat, gather'd out of the Middle of the Ear, and well dried. 24 *Grains* make a Penny-weight, and 20 Penny-weight an Ounce. See PENNY-*Weight*, and OUNCE.

The *Grain* is a Troy Weight, and uſed in the weighing of Gold, Silver, Jewels, Bread, and Liquors. See TROY *Weight*.

Among the Antients, the *Grain* was the fourth Part of the *Siliqua*, or twelfth of the *Obolus*, and the 72d of the *Drachma*. It comprehended a Lens and an half. See SILIQUA, OBOLUS, &c.

*Fernelius L. IV. c. 6. Method. Medend.* affirms it as a thing known and certain, that the *Grain* is of the ſame Weight, every where; but he is miſtaken. Mr. *Greaves* in his Treatiſe of the *Roman Foot* has ſhewn, that 179 *Dutch Grains*, which *Snellius* had found to be the Weight of a *Philip* of Gold, only amount to 134½ *Engliſh Grains*. Add, that Monſ. *Perrault* has computed the French *Grain* to be leſs than the *Engliſh*; and yet bigger than the *Dutch*: To the *Engliſh*, it is as 158 to 134½; and to that of *Holland*, as 158 to 179.

The *Grain* uſed by the Apothecaries, is the ſame with that of the Goldſmiths; tho' they make a Difference in the Weights rais'd therefrom. Thus, 20 *Grains*, with them, make a Scruple, ℈; 3 Scruples, a Drachm, ʒ; 8 Drachms, an Ounce, ℥, &c. See DRACHM, SCRUPLE, &c.

The Carat uſed in weighing Diamonds and precious Stones, is alſo divided into four *Grains*. See CARAT.

GRAIN is alſo uſed for the Figure, or Repreſentation of *Grains* on Stones, Stuffs, Leathers, &c. Thus we ſay, Morocco has a bolder *Grain* than Shagreen. See MOROCCO, and SHAGREEN.

In ſome Marble, the *Grain* is very fine; in others coarſer. See MARBLE, STONE, &c.

Steel

Steel is known by its *Grain*, which is much finer than that of Iron. See STEEL, and IRON.

GRAINING-BOARD, is a Board uſed by the Curriers, to give the Grain to their Leather. See CURRYING.

It is made with Teeth, or Nitches running quite a-croſs; into which, the ſoft, moiſten'd, ſuppled Leather being preſs'd, its Surface readily takes the Impreſſion.—See LEATHER.

GRAMINEUS, GRAMINEA, in Antiquity, a Crown form'd of Graſs, *Gramen*, beſtow'd, by the *Romans*, on certain of their Generals, in conſideration of their having ſaved, or reſcued an Army. See CROWN.

The *Graſſy* Crown was but rarely confer'd; and for ſome ſignal Exploit; when, thro' the Courage, or Dexterity of a General, an Army reduc'd to the laſt Extremities had been ſaved, or deliver'd, and the Enemy put to flight.

GRAMINEOUS *Herbs*, among Botaniſts, are ſuch as have a long, narrow Leaf, and no Foot-ſtalk. See PLANT.

GRAMMAR, the Art of *ſpeaking* rightly; that is, of expreſſing one's Thoughts, by Signs mutually agreed on for that purpoſe. See SPEAKING.

The Signs, here found moſt convenient, are articulate Sounds; but, as theſe are tranſient, others have been invented more permanent, *viz. Grammata*, γεάμμαλα, Letters, whence the Name *Grammar*. See VOICE, and LETTER.—

*Grammar* is more accurately defined, after Mr. *Johnſon*, the Art of expreſſing the Relations of Things in Conſtruction, with due Quantity in ſpeaking, and Orthography in writing, according to the Cuſtom of thoſe whoſe Language we learn. See LANGUAGE.

*Grammar* is divided by ſome Authors, into four Parts, *Orthography*, *Proſody*, *Etymology*, and *Syntax*. See ORTHOGRAPHY, PROSODY, ETYMOLOGY, and SYNTAX.

Others chuſe to divide it ſomewhat more obviouſly, into the Doctrine of *Letters*, or *Sounds*, which coincides with Orthography and Orthoepy; that of *Syllables*, their Accent, Time, &c. which falls in with Proſody; that of *Words*, their Kinds, Derivations, Changes, Analogy, &c. which amounts to Etymology; and that of *Sentences*, which conſiders the placing, or joining of Words together, called Syntax. See LETTER, WORD, SYLLABLE, and SENTENCE.—

The chief Buſineſs of *Grammar* is to decline, conjugate, conſtruct, and ſpell Nouns, Verbs, and other Parts of Speech. It teaches the Propriety, and natural Force of each Part of Diſcourſe; and the Reaſon of all Expreſſions uſed therein. See DECLENSION, CONJUGATION, CONSTRUCTION, NOUN, VERB, SPEECH.

Some have called *Grammar* the Door, or Gate of the Arts and Sciences; by reaſon none of theſe are attainable, but by means hereof. *Grammar*, according to *Quintilian*, is that to Eloquence, which the Foundation is to the Building: They who deſpiſe it, as only dealing in low, trivial Things, are exceedingly miſtaken: It has, really, more Solidity than Shew.

The Authors of the *Art of Thinking* conſider *Grammar*, as not leſs neceſſary to try, and exerciſe the Abilities of the moſt Knowing, than to form the Minds of Beginners: The Advantages of *Grammar* are well ſet forth by *Perizonius*, in the Preface of his Edition of *Sanctius*'s *Minerva*, *Amſterd.* 1714. See GRAMMARIAN.

*Diogenes Laertius* relates, after one *Hermippus*, that *Epicurus* was the firſt that gave the Rules of *Grammar* for the *Greek* Tongue; but that *Plato* was the firſt who had taken the thing into Conſideration, and even made ſome Diſcoveries on that Subject.

At *Rome*, *Crates* of *Mallunthus* in *Myſia*, cotemporary with *Ariſtarchus*, gave the firſt Lectures thereon to the *Romans*, during the Time of his being Embaſſador for King *Attalus*, to the Commonwealth, between the ſecond and third *Punic* Wars, ſoon after *Ennius*'s Death. Before him, it was not known at *Rome* what *Grammar* meant. *Polydor Virgil De Invent. Rer. L. I. C.* 7.

*Grammar* is the ſame in all Languages, as to its general Principles, and Notions which it borrows from Philoſophy to explain the Order and Manner wherein we expreſs our Ideas by Words: But, as each Language has its particular Turns, its ſeveral Character, and Genius, different from the Genius and Character of other Languages: Hence ariſe as many *Grammars*, as Languages.—An Example will ſuffice to ſhew this: We ſay in Engliſh, *Draw a ſtrait Line*, not, *a Line ſtrait*: In *French*, they ſay, *tirer ligne droite*, a Line ſtrait, not *droite ligne*, a ſtrait Line: And in *Latin* there is a Liberty to ſay it either the one way, or the other, *rectam lineam*, or *lineam rectam*, *ducere*. And if there be a Language which in the Phraſe above-mentioned follows the ſame Analogy, as the *Engliſh*; it differs from it on a hundred other Occaſions.—

Hence Dr. *Wallis* juſtly finds Fault with our *Engliſh* Grammarians, where he ſays, that all of them forcing our *Engliſh* Tongue too much to the *Latin* Method, have deliver'd many uſeleſs Things concerning Caſes, Genders, and Declenſions of Nouns; Tenſes, Moods, and Conjugations of Verbs; as alſo the Government of Nouns and Verbs, which our Language has nothing to do with. See ENGLISH, CASE, DECLENSION, GENDER, MOOD, &c.

GRAMMAR is alſo uſed for a Book containing the Rules of *Grammar* which obtain in any Language. See LANGUAGE.

The antient *Grammars*, are; for the *Hebrew*, that of Rabbi *Judas Chiug*, which is commonly held the firſt *Hebrew Grammar* that appear'd; tho' it is certain, Rabbi *Saadias Haggaon*, who lived before Rabbi *Juda*, compos'd two Works in the ſame kind, one, expreſly of *Grammar*; and the other, of the Elegances of the *Hebrew* Tongue. See HEBREW, &c.

For the *Greek*, the oldeſt *Grammar* is that of *Gaza*: The *Latin* ones, are the Works of *Martianus Capella*, *Priſcian*, and *Aſconius Pædianus*. See GREEK, &c.

The beſt of the modern *Grammars*, are 1° For the *Hebrew*, that of *Pagninus*, the Edition of *Hen. Stevens*, or *le Preux* at *Geneva*, in 1592; that of *Petrus Martinius* at *Rochel* 1592; that of *Buxtorf*; that of *Ludovicus Deus*, in three Languages; that of *Sixtinus Amama*, which is a Collection from *Martinius* and *Buxtorf*; that of *Bellarmine*, with the Notes of *Muis*; that of Fa. *Sglanther* is uſeful for Beginners.

2° For the *Chaldee*, the beſt are thoſe of *Martinius*, *Buxtorf*, and *Lud. Deus*, in three Languages. See CHALDEE.

3° For the *Syriac*, thoſe of *Amira*, *Myricæus*, *Waſerus*, and *Beveridge*; with the *Chaldee* and *Syriac* ones of *Buxtorf*, of *Lud. Deus* in three Languages, and that of *Lambden*.

4° For the *Coptic*, the *Prodromus Coptus*, and *Lingua Æ yptiaca Reſtituta* of *Kircher*. See COPTIC.

5° For the *Arabic*, that of *Erpenius*, and that of *Golius*, which is only *Erpenius*'s a little augmented. See ARABIC.

6° For the *Ethiopic*, that of *J. Ludolphus*.

7° For the *Perſian*, that of *Lud. Deus*.

8° For the *Armenian*, thoſe of *Schroder*, and *Galanus*.

9° For the *Greek*, thoſe of *Mart. Rulandus*, *Silburgius*, Fa. *Mocquet*, *Voſſius*, *Busby*, and *Port Royal*.

10° For the *Latin*, thoſe of *Deſpauter*, the *Minerva* of *Sanctius*, thoſe of *Voſſius*, and that of *Port Royal*, which is only a Collection from the reſt.

11° For the *Italian*, thoſe of *Berger*, *Lanfredini*, *Port Royal*, and *Veneroni*.

12° For the *Spaniſh*, thoſe of *Salazar*, *Port Royal*, the Abbot *de Verac*, &c.

13° For the *Portugueſe*, that of *Pereyra*.

14° For the *French*, thoſe of the Abbe *Regnier*, and Fa. *Buffier*.

15° For the *High-Dutch*, thoſe of *Heim*, *Claius*, *Hertzberger*, and *Leopold*. Laſtly,

16° For the *Engliſh*, thoſe of *Wallis*, *Brightland*, and *Greenwood*.—

GRAMMARIAN, GRAMMATICUS, a Perſon well verſed, in Grammar; or who teaches Grammar. See GRAMMAR.

The Denomination *Grammarian*, is, like that of *Critic*, now frequently uſed as a Term of Reproach; A mere *Grammarian*; A dry, plodding *Grammarian*, &c. The *Grammarian* is conceived as a Perſon wholly attentive to the *Minutiæ* of Language; induſtriouſly employ'd about Words, and Phraſes; incapable of perceiving the Beauties, the Delicacy, Fineſſe, Extent, &c. of a Sentiment. See PEDANT.

*Scaliger*, however, conſider'd *Grammarians* in another Light. *Utinam eſſem*, ſays he, *bonus* Grammaticus: *Sufficit enim ei, qui omnes Authores probe vult intelligere, eſſe* Grammaticum.—

The Title *Grammarian*, 'tis certain, was antiently a Title of Honour; being given not only to ſuch as applied themſelves to Grammar, or excell'd in Philology; but to all who were reputed Learned in any Art, or Faculty whatever, as is ſhewn by *Ger. Voſſius*, in his Book of Grammar.

The Word was properly a Title of Literature and Erudition, and frequently given to Perſons who excell'd in all, or many Arts, call'd alſo *Polyhiſtores*. See POLYHISTOR.

Thus, *Philoponus*, a famous Philoſopher in *Juſtinian*'s Time, remarkable for the Extent, and Variety of his Knowledge, was ſurnamed *Grammaticus*, as appears from *Photius*'s Library: So *Saxo*, the *Daniſh* Hiſtorian, in the XIIIth Century, got the Apellation *Grammaticus*: And as late as the Year 1580 *Thomas d'Acurſius*, a celebrated *Neopolitan* Lawyer, was ſurnamed the *Grammarian*.

The Title *Grammarian* was antiently beſtow'd on thoſe we now call Criticks, Men of Learning, Erudition, Letters, &c. and particularly ſuch as wrote well, and politely in every kind. See CRITICISM.

'Tis in this Senſe that *Suetonius* entitles his Book which he wrote on the beſt *Latin* Authors, *Of the Celebrated Grammarians*; and that *Cornelius Nepos* calls the Commentators on the Orators, and Poets, *Grammarians*; and laſtly, 'tis in this Senſe the Word is attributed by the Antients to *Apion*, *Philoponus*, and *Solinus*.

The moſt celebrated *Grammarians* of the II^d Century, were *Aper*, *Pollio*, *Eutychius*, *Proculus*, *Athenæus*, *Julius Pollux*, *Macrobius*, and *Aulus Gellius*: The Works of theſe laſt Authors, are an Aſſemblage of Abundance of very different Things, and Subjects, relating to the Criticiſm of the antient Writers, and the polite Literature.

If the Name have loſt its antient Effect, 'tis thro' the Fault of thoſe who have aſſumed it; by treating of Grammar in a low, Pedantic, Dogmatic manner; reducing it to Words and Syllables; and dwelling altogether on trifling, puerile Remarks, and Cenſures: Whereas its proper Office is to make an accurate, and thoro' Examen of an Author; to enter into all his Views, to point out the Beauties, and the Defects thereof; to diſtinguiſh the true Beauties from the falſe; and the genuine Productions of an Author, from the Suppoſitious: That is, a *Grammarian* was then, what we call a *Critic*, now.

Thoſe who only taught to read, underſtand, and explain Authors, were called *Grammatiſts*, *Grammatiſtæ*; in Contradiſtinction from *Grammatici*: tho', in courſe of Time, the *Grammatiſtæ* have roſe into the Place of *Grammatici*; who are prefer'd to that of *Critici*. See CRITICISM.

GRAMMATICAL, ſomething relating to Grammar.—Thus we ſay, *Grammatical* Conſtruction: *Grammatical* Signification, *&c.* Idioms, as Angliciſms, Latiniſms, Greciſms, Galliciſms, *&c.* deviate from *Grammatical* Strictneſs. See ANGLICISM, GALLICISM, &c.

Such a Phraſe is not *Grammatically* juſt; 'tis an Idiom. See IDIOM.

GRANADO, or GRANADA, or GRENADA, in the Military Art, a hollow Ball, or Shell, of Iron, Braſs, or even Glaſs, or Potters Earth, filled with Gunpowder, and fitted with a Fuſee to give it Fire.

Of theſe there are two kinds; the one *large*, the other *ſmall*: The firſt to be thrown at the Enemy by a Mortar, properly call'd *Bombs*. See BOMB.

The latter to be caſt with the Hand; and thence denominated *Hand Granado's*.

*Caſimir*, indeed, makes another Diſtinction; where the Ball, or Shell is round, whatever the Size be, he calls it a *Granado*; and where, Oval, or Cylindrical, a *Bomb*: But Cuſtom allows only the former Diviſion.

The beſt way, *Caſimir* obſerves, to ſecure a Man's ſelf from the Effect of a *Granada*, is, to lie flat down on the Ground, before it burſt.

*Hiſtorians* relate, that at the Siege of *Oſtend* there were above fifty thouſand *Granado's* thrown in one Month into the City; and that the Citizens threw above twenty thouſand into the Works of the Beſiegers.

The Common, or *Hand Granade* is a little, hollow Ball of Iron, Wood, Paſtboard, *&c.* fill'd with ſtrong Powder, lighted with a Fuſee, and thus thrown with the Hand among the Enemy's Battallions, Trenches, Poſts, *&c.*

Their Compoſition is the ſame with that of Bombs; which ſee.—For Size, they are uſually about the Bigneſs of an Iron Bullet, and weigh about three Pounds: As to Dimenſions, they are common in Thickneſs one eighth, one ninth, or one tenth of their Diameter; their Aperture, or Orifice about $\frac{2}{19}$ wide, as preſcribed by *Caſimir*.

*Thuanus* obſerves that the firſt time *Granado's* were uſed, was at the Siege of *Wachtendonck*, a Town near *Gueldres*; and that the Inventor was an Inhabitant of *Venlo*, who in making an Experiment of the Effect thereof, occaſion'd two thirds of that City to be burnt; the Fire being kindled by the Fall of a *Granado*.

Bombs: were known long before the Invention of *Granado's*. See MORTAR.

The Antients had a ſort of *Ollæ*, or Fire-pots, ſomewhat of the ſame Nature with our *Granado's*, but leſs perfect.

*Caſimir* mentions a ſort of Blind *Granado's*, without any Aperture, or Fuſee, as not needing to be lighted; but being thrown with a Mortar, take Fire of themſelves whenever they fall on any hard, ſolid Object.

The Name *Granada* takes its Riſe hence, that they are fill'd with Grains of Powder, as a Pomgranate is with Kernels. See POMGRANATE.

GRANADIER, or GRENADIER, or GRANADEER, a Soldier who carries a Pouch full of Hand Granado's to be thrown among the Enemy. See GRANADO.

There are Companies of *Foot Granadiers*, and *Horſe Granadiers*, or *Granadiers* of Horſe, who march at the Head of the King's Guards.

To each Troop of Horſe Guards there is added by Eſtabliſhment a Troop of *Granadiers*, conſiſting of 64 Men, beſide Officers commanded by the Captain of the Troop of Guards. See GUARDS.

One Diviſion of *Granadiers* mounts with a Diviſion of the Troop; go out on ſmall Parties from the Guard; perform Centinels, Duty, *&c.*

The Pay of the private *Granadiers* is 2 *s.* 6 *d. per* Day.

GRANARY, A Place to lay, or ſtore Corn in, particularly for keeping. See CORN.

Sir *Hen. Wotton* adviſes to make it look towards the North, as much as may be; becauſe that Quarter is moſt cool and temperate.

Mr. *Worlidge* obſerves, that the beſt *Granaries* are built of Brick, with Quarters of Timber wrought in the Inſide, whereto to nail the Boards, with which the Inſide of the *Granary* muſt be lined ſo cloſe to the Bricks, that there be no Room for Vermine to ſhelter themſelves. There may be many Stories one above another, and let them be near the one to the other; for the ſhallower Corn lieth, the better, and it is the eaſier turned.

Some have had two *Granaries*, the one above the other, and filled the upper with Wheat, or other Corn: This upper one had a ſmall Hole in the Floor, by which the Corn deſcended into the lower one, like the Sand in an Hour-Glaſs; and when it was all come down into the lower *Granary*, it was then carried up again into the upper one; and ſo it was kept continually in Motion: Which is a great Preſervation to the Corn. See further in the Article CORN.

A large *Granary*, full of ſquare wooden Pipes, may keep Corn from heating.

GRANATE, a Gem, or pretious Stone, of a high, red Colour; thus called from the Reſemblance it bears to that of the Kernel of a Pomgranate. See PRECIOUS *Stone*.

*Granates* are either *Oriental*, or *Occidental*: The firſt are brought from divers Parts of the Eaſt Indies; the ſecond from *Spain*, *Bohemia*, and *Sileſia*.—

Theſe, from the Eaſt, are diſtinguiſh'd by their Colour into three Kinds: The firſt, of a deep, browniſh Red, like black clotted Blood; of which Kind there are ſome as big as an Hen's Egg: The ſecond, are nearly of the Colour of a Hyacinth, with which it were eaſy to confound them, but for their ſuperior Redneſs. The laſt, having a Mixture of Violet with their Red, are called by the Italians, *Rubini della Rocha*. See RUBY.

The Occidental *Granates* are of divers Reds, according to the Places they are found in. Thoſe of *Spain*, imitate the Colour of the Kernel of a Pomgranate: Thoſe of *Bohemia* have a golden Caſt with their Red, glittering like a live Coal: Thoſe of *Sileſia* are the darkeſt of all, and ſeldom thoroughly tranſparent.

Of the *Occidental Granates*, thoſe of *Bohemia* are the moſt valued: Some even give them the Preference over the Oriental Kind. They are found near *Prague*; not in any particular Mines, but are pick'd up by Peaſants in the Fields, from among the Sands, and Pebbles.

The *Granate* is of ſome Uſe in Medicine: Its Powder is ſometimes an Ingredient in the Cordial Electuaries. The Antients held it excellent againſt Heavineſs and Melancholy.

GRAND, a Term rather *French*, than *Engliſh*, though uſed on many Occaſions in our Language. It has the ſame Import with *Great*; being form'd of the Latin *Grandis*.—See GREAT.

In this Senſe we ſay, The *Grand* Maſter of an Order; the *Grand* Maſter of *Malta*; of the Free Maſons, *&c.* See MALTA, and MASON.

So alſo we ſay, the *Grand Viſier*, the *Grand Signior*, &c. See VISIER, and SIGNIOR, &c.

*Grand* Father, *Grand* Mother, *&c.* See PARENTAGE, DESCENT, DEGREE, CONSANGUINITY, &c.

In the *French* Polity and Cuſtoms, are divers Officers thus denominated, which we frequently retain in *Engliſh*; as *Grand Almoner*, *Grand Ecuyer*, *Grand Chambellan*, *Grand Voyer*, &c.

We alſo ſay, the *Grand Guſt*, *Grand Monde*, the *Grand Style*, &c. See SUBLIME, &c.

GRAND *Aſſize*; ſee ASSIZE, and MAGNA *Aſſiſa*.

GRAND *Cape*; ſee CAPE, and ATTACHMENT.

GRAND *Diſtreſs*, *Diſtrictio magna*, a Diſtreſs ſo called, not for the Quantity, for it is very ſhort; but for the Quality, for the Extent is very great; for thereby the Sheriff is commanded, *Quod* diſtringat *tenentem*, *ita quod ipſe nec aliquis per ipſum ad ea manum apponat*, *donec habuerit aliud præceptum*; *& quod de exitibus eorundem nobis reſpondeat*, *& quod habeat corpus ejus*, &c. See DISTRESS.

This Writ lies in two Caſes: Either when the Tenant, or Defendant is attach'd, and ſo returned, and appears not, but makes Default; or where the Tenant, or Defendant hath once appear'd, and after makes Default. On ſuch Occaſions, this Writ lies by Common Law, in lieu of a *Petit Cape*.

GRAND *Guſto*, is a Term uſed by Painters, to expreſs, that there is ſomething in the Picture very great, and extraordinary, calculated to ſurpriſe, pleaſe, and inſtruct.

Where this is found, they ſay, The Painter was a Man of the *Grand Guſto*: And they uſe the Word *Sublime*, and *Marvellous*, when they ſpeak of a Picture in much the ſame Senſe.

GRAND *Sergeanty*; ſee CHIVALRY, and SERGEANTY.

GRANDEE, is underſtood of a Lord of the firſt Rank, or prime Quality.

In *Spain*, the Term *Grandees*, is ſpoken abſolutely of the Prime Lords of the Court, to whom the King has once given Leave to be cover'd in his Preſence: There are ſome *Grandees*

*dees* for life only; made by the King's saying, simply, *Be cover'd.* Others, are *Grandees* by Descent; made by the King's saying, *Be cover'd for thy self, and Heirs.* These last, are reputed far above the former. There are some have three, or four *Grandees*, or *Grandates* in their Family.

GRANGE, an antient Term for a *Barn*; or Place wherein to lay up and thrash Corn.

The Word is sometimes also used in a more extensive Sense, for the whole Farm; with all the Appendages of Stables for Horses, Stalls for Cattle, &c. See FARM.

It is form'd of the Latin *Grania*; or of *Granum*, Grain, Corn.—Hence also *Granger*, or *Grangier*, a Farmer.

GRANI, in our antient Writers, Mustachoes, or Whiskers of a Beard.—*Quia cum sint in fine rotundati* Granorum *formam efficiunt.*

It is given for a Reason why the Cup is refused to the Laity, *Quia barbati, & prolixos habent* Granos, *dum poculum inter epulas sumunt, prius liquore pilos inficiunt quam ori infundunt.*

GRANIT, GRANITES, a sort of Marble, extreamly hard, rough, and incapable of taking a thoro' Polish: Thus called, as being sprinkled over with a great Number little Stains, resembling Grains of Sand. See MARBLE.

There are three sorts of *Granit*; that of *Egypt*; that of *Italy*, and that of *Dauphiny.*

The first has browniſh, or greeniſh Spots, on a dirty, white Ground. It is found in very large Pieces; and is that chiefly used by the *Egyptians*, in their Obelisks, and Pyramids on the Tombs of their great Men. There are Columns of this Stone above 40 Foot high.

The *Granit* of *Italy* is softer than that of *Egypt*; especially in the Quarry, where it cuts with much more Ease. There is also a sort of *Green Granit*, which is a Species of Serpentine, spotted with green, and white Spots.

The *Granit* of *Dauphiny*, a Quarry whereof has been found, is only a very hard sort of Flint.

GRANIVOROUS, an Epithet, or Denomination given to such Animals as feed upon Corn, or any other Grain or Seeds. See ANIMAL and SEED.

*Granivorous* Animals are chiefly of the Bird kind. See BIRD.

These have a peculiar Provision for the digesting of so dry and hard a Food. See DIGESTION, GIZZARD, &c.

GRANT, in Law, a Gift in Writing, of something which cannot aptly be passed, or convey'd by Word only; as Rents, Reversions, Services, Advowsons in Gross, Tithes, &c.

Or, it is a Gift made by such Persons as cannot give but by Deed; as the King and all Bodies Politick. See DONATION.

This Difference is often, in Speech, neglected; and the Word *Grant* taken generally for every Gift whatsoever, made of any thing, by any Person. In this Sense he that granteth is named *Grantor*, and he to whom it is made, the *Grantee.* —A Thing is said to *lie in Grant*, which cannot be assigned without Deed. See DEED.

GRANULATION, in Chymistry, an Operation perform'd on Metals, whereby they are reduc'd into small *Grains*, or Globules.

It is done by melting them; and when in Fusion, casting them into cold Water; in which they congeal into Granules, as required: And are hereby render'd more easy to be dissolved. See DISSOLUTION.

The best way is to pour the fluid Metal thro' a Culender, or a new Birchen Broom.—

We also say, the *Granulation* of Gun-powder. See GUN-*Powder.*

GRAPE, see VINE, RAISIN, and WINE.

GRAPPLE, in the Manage—A Horse is said to *grapple* with one, or both Legs, when he catches, or raises 'em more hastily, and higher than ordinarily, as if he were curvetting.

GRAPHOIDES, in Anatomy, an Appendage of the Bones of the Temples, long, small, sharp, and a little crooked, like a Cock's Spur. See *Os* TEMPORIS.

The same Name is sometimes also applied to the *Musculus Digastricus.* See DIGASTRICUS.

Likewise, to an Extension of the Brain, resembling a Writing-pen. See BRAIN.

GRAPHOMETER, a Name which some Authors, particularly the *French*, give to a Surveying Instrument, by us commonly called a *Semicircle.* See SEMICIRCLE.

GRASS-*Plots*, and *Walks*, make a considerable Article in Gardening, &c. See WALK, &c.

*Grass*, or *Green Plots* are had either by sowing of Hay-seed, or laying of Turf: For the first, which is the cheapest way, the Seed of the finest Upland Pastures is to be chose, well sifted and cleansed.

For the second, the Turf should be cut on a Down, or Green, or Common, or Sheep-walk, where the *Grass* is short and fine; if there be any Knobs, or Roughnesses, the Place must be cleansed and roll'd after a Shower, before it be cut up. The Turf is cut in Squares, mark'd out with Lines, rais'd with a Knife, and roll'd up; about three Inches thich.

The Quarters, or Verges are to be prepared with a fine Coat of poor Earth to lay the Turf on; and after laying, the Turf must be well water'd, rolled, &c.

Small Pieces of *Grass*-work, as Knots, Shell-work, and Volutes of Parterres, Cut-work, Verges about Basons, &c. must always be laid with Turf.—

To sow *Grass* for Plots, &c. the Ground must first be dug or broke with a Spade, then dress'd, laid even, raked fine, and cover'd an Inch thick with good Mould to facilitate the Growth of the Seed. Then the Seed to be sown pretty thick, that it may come up close and short; and lastly, to be raked up, and cover'd. The best Season is the latter End of *August*: When it is well come up, it must be mow'd, and this often repeated; since the oftener 'tis mow'd, the thicker and handsomer it grows. It must also be rolled from time to time.

GRATICULATION, a Term some Writers use for the dividing a Draught, or Design into Squares, in order to the reducing it thereby. See REDUCTION.

GRATIOLA, a Medicinal Plant, of considerable Virtues; tho' little known in the ordinary Practice; as being suppos'd dangerous of Application.

Its most noted Effects are to evacuate hydropic Waters, both upwards and downwards, taken either in Infusion, or Decoction; to cleanse Wounds, and to kill Worms.

Its Bark, taken in Powder, is said to be scarce inferior in Virtue to Ipecacuanha for Dysenteries.

It is of a very bitter Taste; whence, probably its vermifugous Power; and its Root astringent, whence its Use in the Dysentery.

M. *Boulduc* made an Extract of this Plant, which purged gently, and was very Diuretic: Another Extract made of the Fæces or Refuse, proved much more efficacious. *Hist. de l'Acad. An.* 1705.

GRAVE, in Music, is applied to a Sound, which is in a low, or deep Tune. See SOUND, and TUNE.

The thicker the Chord, or String, the more *grave* the Tone, or Note: And the smaller, the acuter. See CHORD.

Notes are supposed to be the more *grave*, in proportion as the Vibrations of a Chord, are less quick. See GRAVITY.

GRAVE, in Grammar, an Accent opposite to *Acute.* See ACCENT.

The *Grave* Accent is express'd thus: (`) and shews that the Voice is to be depress'd, and the Syllable over which it is placed, pronounced in a low, deep Tone.

GRAVE is also an Ingredient in the Composition of divers Terms in History, and Policy. Thus we say, *Landgrave, Burggrave, Markgrave, Palsgrave*, &c. See PALS-*Grave*, &c.

The Word, in this Sense, is form'd of the German *Graaf*, signifying *Comes*, Count; and in the Barbarous Latin *Gravio, Graphio.*— See COURT.

GRAVE is also used for a Tomb, wherein a Defunct is interr'd. See TOMB, and SEPULCHRE.

GRAVEDO, a Heaviness, or Listlessness, which accompanies a lessened Transpiration, or taking Cold as it is commonly called. Hence also, the Case being frequently accompanied with a Running of the Nose and Eyes.

The *Gravedo* and *Coryza* are sometimes used promiscuously. See CORYZA.

GRAVEL, in Natural History, coarse Sand, found at the Bottom, and the Sides of Rivers. See SAND.

Mons. *Perrault* lays down the Difference between *Sand*, and *Gravel.*—The first, according to him, is small, and consists of fine, even Grains: The latter is bigger, and consists of little Pebbles, mix'd with the finer Fragments of Stones.

*Gravel* is chiefly used in laying Yards, Courts, and Walks in Gardens,—

The Word is form'd of the French *Gravier*; which *du Cange* derives from the Barbarous Latin *Graveria*, signifying the same thing.—

GRAVEL, in Medicine, a Disease of the Bladder, and Kidneys, occasion'd by a sandy, or gritty Matter gather'd therein, which cohering into a stony Mass, prevents the due Secretion, and Excretion of the Urine. See URINE.

The *Gravel* is generally consider'd as the same Disease with the Calculus, or Stone. See STONE.

GRAVEL *Soil*, see SOIL.

GRAVEL *Walk*, in Gardening.—To lay, or form a Walk with *Gravel*, all the good Soil is to be pared away, below the Roots of any Grass, or Weeds; then the Place to be filled two or three Inches with coarse *Gravel* unsearced, laying it highest in the Middle: Then rolling it; a new Stratum of finer *Gravel* to be thrown on, two, or three Inches thick; And the Rolling to be repeated again and again.

Note, the Sides next the Beds should be laid a Foot and an half, or two Foot with Turf from whence the Heat of the Sun cannot be reflected as from *Gravel*, to the Prejudice of the neighbouring Flowers.

GRAVELLING, among Farriers, a Disorder incident to Travelling-horses, occasion'd by little Gravel-stones getting in between the Hoof and the Shoe, which settling to the Quick, frets, and festers the Part. 'Tis

'Tis cured by pulling off the Shoe, drawing the Place to the Quick, picking out all the Gravel, and ſtopping up the Foot with Horſe-greaſe, and Turpentine pour'd in hot.

GRAVER, a Steel Inſtrument, ſerving to engrave on Metals. See ENGRAVING.

The *Graver* conſiſts of four Sides, or Faces; and the Point uſually terminates in a Lozange. The other End is fitted into a Wooden Handle. See STEEL, TEMPER, &c.

Beſide Engravers, the Seal-cutters, Lockſmiths, Gunſmiths, Goldſmiths, Armourers, Spurmakers, *&c.* likewiſe make uſe of *Gravers*.—

GRAVING, the Act, or Art of cutting Lines, Figures, and other Deſigns on Metals; more properly called *Engraving*. See ENGRAVING.

GRAVITATION, the Exerciſe of *Gravity*, or the Preſſure a Body exerts on another Body underneath it by the Power of Gravity. See GRAVITY.

'Tis one of the Laws of Nature, diſcover'd by Sir *Iſaac Newton*, and now received by moſt Philoſophers, that every Particle of Matter in Nature *gravitates* towards every other Particle; which Law is the Hinge whereon the whole *Newtonian* Philoſophy turns. See NEWTONIAN *Philoſophy*.

What we call *Gravitation*, with reſpect to the *Gravitating* Body, is call'd *Attraction* with reſpect to the Body *gravitated* to. See ATTRACTION.

The Planets, both primary and ſecundary, as alſo the Comets, all *gravitate* toward the Sun, and toward each other; and the Sun toward them; and that in proportion to the Quantity of Matter in each. See PLANET, COMET, SUN, EARTH, MOON, &c.

The Peripateticks, *&c.* hold that Bodies only *gravitate* when out of their Natural Places; and that *Gravitation* ceaſes when they are reſtored to the ſame; the Intention of Nature being then fulfill'd. The final Cauſe of this Faculty, they hold, is only to bring Elementary Bodies to their proper Places where they may reſt. But the Moderns ſhew that Bodies exerciſe Gravity even when at reſt, and in their proper Places.

This is particularly ſhewn of Fluids; and it is one of the Laws of Hydroſtaticks, demonſtrated by Mr. *Boyle*, and others, that Fluids gravitate *in proprio loco*, the upper Parts preſſing on the lower, *&c.* See FLUID.

*For the Laws of* Gravitation *of Bodies in Fluids, ſpecifically lighter or heavier, than themſelves*; *ſee* SPECIFIC *Gravity*.

GRAVITY, in Phyſicks, the natural Tendency, or Inclination of Bodies towards a Centre. See CENTRE.

In this Senſe *Gravity* coincides with *Centripetal Force*. See CENTRIPETAL *Force*.

*Gravity* is defined by others, more generally, to be the Natural Tendency of one Body towards another; and by other more generally ſtill, the mutual Tendency of each Body, and each Particle of a Body towards all others: In which Senſe the Word coincides with what we more uſually call *Attraction*. See ATTRACTION.

The Terms *Gravity*, *Centripetal Force*, *Weight*, and *Attraction*, do, in effect, all denote the ſame thing; only in different Views, and Relations: Which different Relations, however, Authors are apt to confound; and accordingly, the four, are frequently uſed promiſcuouſly.

In Propriety, when we conſider a Body as tending towards the Earth, the Force wherewith it tends we call *Gravity*, Force of *Gravity*, or *Gravitating Force*: The ſame Force, when we conſider it as immediately tending to the Centre of the Earth, we call *Centripetal Force*: The ſame, when we conſider the Earth, or Body toward which it tends, we call *Attraction*, or *Attractive* Force; and when we conſider it, in reſpect of an Obſtacle, or a Body in the way of its Tendency, upon which it acts, we call it *Weight*. See WEIGHT, *&c.*

Philoſophers conceive very differently of *Gravity*: Its Nature, Uſe, Phænomena, Cauſe, Effects, and Extent have afforded various Speculations in all Ages.

Some conſider it as an active Property, or innate *Vis* in Bodies, whereby they endeavour to join their Centre. Others hold *Gravity* in this Senſe, to be an occult Quality, and as ſuch to be exploded out of all ſound Philoſophy. See OCCULT *Quality*.

Sir *Iſ. Newton*, tho' he frequently calls it a *Vis*, Power, or Property in Bodies; yet explains himſelf, that all he intends by the Word, is the Effect, or the Phænomenon. He does not conſider the Principle, the Cauſe whereby Bodies tend downwards, but the Tendency itſelf, which is no occult Quality, but a ſenſible Phænomenon, be its Cauſe what it will, whether a Property eſſential to Body, as ſome make it; or ſuperadded to it, as others; or even an Impulſe of ſome Body from without, as others. See NEWTONIAN *Philoſophy*.

'Tis a Law of Nature long obſerv'd, that *all Bodies near the Earth, have a* Gravity, *or Tendency towards the Centre of the Earth*; which Law, the Moderns, and particularly the immortal Sir *Iſ. Newton*, have found, from certain Obſervation, to be much more Extenſive; and to hold univerſally with reſpect to all the known Bodies in Nature. See NATURE.

'Tis now, therefore acknowledg'd a Principle or Law of Nature, that *all Bodies, and all the Particles of all Bodies* gravitate *towards each other, mutually*: From which ſingle Principle, Sir *Iſ. Newton* has happily deduc'd all the great Phænomena of Nature. See NEWTONIAN *Philoſophy*.

Hence *Gravity* may be diſtinguiſh'd into *Particular*, and *General*.

*Particular Gravity* is that whereby heavy Bodies deſcend towards the Earth. See EARTH.

*Phænomena, or Properties of Particular* GRAVITY.

1° All Circumterreſtrial Bodies do hereby tend towards a Point which is either accurately, or very nearly the Centre of Magnitude of the terraqueous Globe. See TERRAQUEOUS *Globe*.

2° This Point, or Centre is fix'd within the Earth; or at leaſt hath been ſo ever ſince we have had any authentick Hiſtory:

For a Conſequence of its ſhifting, tho' ever ſo little, would be the overflowing of the low Lands, on that Side of the Globe towards which it approached. Dr. *Halley* ſuggeſts, it would well account for the univerſal Deluge, to have the Centre of Gravitation removed for a Time towards the Middle of the then inhabited World: For the Change of Place but the 2000th Part of the Radius of our Earth would be ſufficient to lay the Tops of the higheſt Hills under Water. See DELUGE.

3° In all Places equi-diſtant from the Centre of the Earth, the Force of *Gravity* is nearly equal.

Indeed all Places of the Earth's Surface are not at equal Diſtances from the Centre; becauſe the Equatorial Parts are ſomething higher than the Polar Parts: The Difference between the Earth's Diameter and Axis being about 34 *Engliſh* Miles, which hath been proved by the Neceſſity of making the Pendulum ſhorter in thoſe Places, before it will ſwing Seconds. See PENDULUM.

4° *Gravity* equally affects all Bodies, without regard either to their Bulk, Figure, or Matter: So that abſtracting from the Reſiſtance of the Medium, the moſt compact and looſe, the greateſt and ſmalleſt Bodies would deſcend equal Spaces in equal Times; as appears from the quick Deſcent of very light Bodies in the exhauſted Receiver. See VACUUM.

Hence, a very great Difference may be obſerved betwixt *Gravity* and Magnetiſm; the latter affecting only Iron, and that towards its Poles; the former, all Bodies alike, in every Part. See MAGNETISM.

Hence, it follows that *Gravity*, in all Bodies, is proportionable to their Quantity of Matter; ſo that all Bodies conſiſt of Matters equally heavy. See BODY, MATTER, *&c.*

Hence alſo may be concluded that there is no ſuch thing as poſitive *Levity*, thoſe Things which appear light, being only comparatively ſo. See LEVITY.

If ſeveral things aſcend, and ſwim in Fluids, it is only becauſe they are not Bulk for Bulk, ſo heavy as thoſe Fluids; Nor is there any Reaſon, why Cork, for inſtance, ſhould be ſaid to be light, becauſe it ſwims on Water, any more than Iron, becauſe it will ſwim on Mercury. See SPECIFIC *Gravity*, &c.

5° This Power increaſes as we deſcend, and decreaſes as we aſcend from the Centre of the Earth, and that in the proportion of the Squares of the Diſtances therefrom reciprocally; ſo as, for inſtance, at a double Diſtance, to have but a Quarter of the Force, *&c.*

6° As all Bodies *gravitate* towards the Earth; ſo, does the Earth equally *gravitate* towards all Bodies, *i. e.* The Action of *Gravity* is mutual on each Side, and equal. See REACTION.

Hence alſo the attractive Powers of Bodies, at equal Diſtances from the Centre, are as the Quantities of Matter in the Bodies.

Hence alſo the attractive Force of the entire Bodies, conſiſts of the attractive Force of the Parts: For by the adding, or taking away any Part of the Matter of a Body, its *Gravity* is increas'd, or diminiſh'd in the Proportion of the Quantity of ſuch Particle to the entire Maſs.—

*General, or Univerſal* GRAVITY.

The Exiſtence of the ſame Principle of *Gravity* in the great Regions of the Heavens, as well as on Earth, is eaſily proved.

That all Motion is naturally rectilinear, is allow'd by all; thoſe Bodies, therefore, which move in Curves, muſt be retain'd therein by ſome Power continually acting on them. Hence, the Planets being found to revolve in curvilinear Orbits, we infer that there is ſome Power, by whoſe conſtant Influence, they are prevented from flying off in Tangents.

Again, it is proved by Mathematicians, that all Bodies moving in any Curve Line deſcribed in a Plane, and which by Radii drawn to any certain Point, deſcribe Areas about the Point proportionable to the Times; are impell'd, or acted on by ſome Power tending to that Point: Now it is ſhewn by the Aſtronomers that the Primary Planets, round the Sun; and the Secundary Planets, round the Primary ones, do deſcribe Areas proportionable to the Times. Conſequently, the Power whereby they are retain'd in their Orbits, is directed towards the Bodies placed in the Centres thereof.

Laſtly, it is demonſtrated, that if ſeveral Bodies revolve with an equable Motion in Concentrical Circles, and the Squares of their Periodical Times be as the Cubes of the Diſtances from the Common Centre; the Centripetal Forces of the revolving Bodies, will be reciprocally as the Squares of the Diſtances. Or, if Bodies revolve in Orbits approaching to Circles, and the Apſides of thoſe Orbits be at reſt; the Centripetal Forces of the revolving Bodies, will be reciprocally as the Squares of the Diſtances.

Now, the Aſtronomers all agree, that both theſe Caſes obtain in all the Planets: Whence it follows, that the Centripetal Powers of all the Planets are reciprocally as the Squares of the Diſtances from the Centres of the Orbits.

Upon the whole, it appears, that the Planets are retain'd in their Orbits by ſome Power which is continually acting on them: That this Power is directed toward the Centre of their Orbits: That the Intenſion, or Efficacy of this Power increaſes upon an Approach toward the Centre, and diminiſhes at its Receſs from the ſame; and that it increaſes in the ſame Proportion as the Diſtance diminiſhes; and diminiſhes in the ſame as the Diſtance increaſes—Now, by comparing this Centripetal Force of the Planets, with the Force of *Gravity* on Earth, they will be found perfectly alike.

This we ſhall illuſtrate in the Caſe of the Moon, the neareſt to us of all the Planets—The Rectilinear Spaces deſcrib'd in any given Time by a falling Body urged by any Powers, reckoning from the Beginning of its Deſcent, are proportionable to thoſe Powers. Conſequently, the Centripetal Force of the Moon revolving in its Orbit, will be to the Force of *Gravity* on the Surface of the Earth; as the Space which the Moon would deſcribe in falling, any little Time, by her Centripetal Force towards the Earth, had ſhe no circular Motion at all, to the Space, a Body near the Earth would deſcribe in falling by its *Gravity* towards the ſame.

Now, by an actual Calculus of thoſe two Spaces, it appears, that the firſt of them is to the ſecond, *i. e.* the Centripetal Force of the Moon revolving in her Orbit, is to the Force of *Gravity* on the Surface of the Earth, as the Square of the Earth's Semidiameter, to the Square of the Semidiameter of her Orbit: Which is the ſame Ratio, as that of the Moon's Centripetal Force in her Orbit, to the ſame Force near the Surface of the Earth.

The Moon's Centripetal Force, therefore, is equal to the Force of *Gravity*. Theſe Forces, conſequently, are not different, but one and the ſame: For, were they different, Bodies acted on by the two Powers conjointly, would fall towards the Earth, with a Velocity double to that ariſing from the ſole Power of *Gravity*.

It is evident, therefore, that the Moon's Centripetal Force, whereby ſhe is retain'd in her Orbit, and prevented from running off in Tangents; is the very Power of *Gravity* of the Earth, extended thither.

The Moon, therefore, gravitates towards the Earth; and the Earth reciprocally towards the Moon: which is further confirm'd by the Phænomena of the Tides. See TIDES.

The like Reaſoning might be applied to the other Planets—For, as the Revolutions of the Primary Planets round the Sun, and thoſe of the Satellites of Jupiter and Saturn round their Primaries, are Phænomena of the ſame Kind as the Revolution of the Moon round the Earth; as the Centripetal Powers of the Primary are directed towards the Centre of the Sun; and thoſe of the Satellites, towards the Centre of their Primaries; and laſtly, as all theſe Powers are reciprocally as the Squares of the Diſtances from the Centres: it may ſafely be concluded that the Power and Cauſe is the ſame in all.

Therefore, as the Moon gravitates towards the Earth, and the Earth towards the Moon; ſo do all the Secundaries to their Primary ones; the Primary to their Secundary ones; ſo, alſo, the Primary ones to the Sun, and the Sun to the Primary ones. See PLANET, COMET, SYSTEM, *&c.*

### *Phænomena, or Properties of Univerſal* GRAVITY.

1. *All the ſeveral Particles of all Bodies in Nature gravitate to all the Particles of all other Bodies.*

To what has been urged in Proof hereof, from the Analogy between the Motions of the ſeveral Bodies in our Syſtem; it may be added, that *Saturn* is actually obſerved by Aſtronomers to change its Courſe when neareſt to *Jupiter*; and *Jupiter*, alſo, is found to diſturb the Motion of the Satellites of *Saturn*. So that the Gravitation of thoſe Bodies is Matter of actual Obſervation. See JUPITER, SATURN, and SATELLITES; ſee alſo DISTURBING *Force*.

2. *The Quantity of this* Gravity *at equal Diſtances, is always proportional to the Quantity of Matter in the gravitating Bodies.*

For, the Powers of *Gravity*, are as the Quantities of Motion they generate; which Quantities, in unequal Bodies, equally ſwift, are to each other as the Quantities of Matter. Conſequently, ſince unequal Bodies, which are equally ſwift, are to each other as the Quantities of Matter; therefore, in regard unequal Bodies at the ſame Diſtance from the attracting Body are found to move equally ſwift, by *Gravity*: It is evident, the Forces of *Gravity* are proportionable to the Quantities of Matter.

3. *The Proportion of the Increaſe, or Decreaſe of* Gravity *in the Approach, or Removal of Bodies from each other, is this; that the Force is reciprocally in a Duplicate Ratio*; i. e. *As the Squares of the Diſtances.*

Thus, ſuppoſe a Body of an hundred Pounds, at the Diſtance of ten Diameters from the Earth; the ſame Body, if its Diſtance were but half ſo great, would have quadruple the Weight: If its Diſtance were but one third of the former, its Weight would be nine times as great, *&c.*

Hence, we gather the following Corollaries. 1° That at equal Diſtances from the Centre of Homogeneal Bodies, the *Gravity* is directly as the Quantity of Matter, and inverſely as the Square of the Diameter. 2° That on the Surfaces of equal, ſpherical, and homogeneous Bodies, the *Gravities* are as the Denſities. 3° That on the Surfaces of ſpherical, homogeneous, equally denſe, but unequal Bodies, the *Gravities* are inverſely as the Squares of the Diameters. 4° That if both the Denſities and Diameters differ, the *Gravities* on the Surfaces will be in a Ratio compounded of the Denſities, and the Diameters. Laſtly, that a Body placed any where, within a hollow Sphere, which is homogeneous, and every where of the ſame Thickneſs, will have no *Gravity*, whereſoever it be placed; the oppoſite *Gravities* always preciſely deſtroying each other.

*For the Particular Laws of the Deſcent of Bodies, by the Force of* Gravity, *ſee* DESCENT *of Bodies*; and CENTRIPETAL *Force*.

### *Cauſe of* GRAVITY.

We have various Theories advanced by the Philoſophers of various Ages to account for this Grand Principle of *Gravitation*. The antients, who were only acquainted with particular *Gravity*, or the Tendency of ſublunar Bodies towards the Earth, aim'd no further than at a Syſtem which ſhould anſwer the more obvious Phænomena of the ſame: But the Moderns, as their Principle is higher and more extenſive, ſo ſhould their Theory be.

*Ariſtotle*, and the Peripateticks, content themſelves to refer Gravity or Weight to a native Inclination in heavy Bodies to be in their proper Place or Sphere, the Centre of the Earth. See SPHERE and ELEMENT.

*Copernicus* aſcribes it to an innate Principle in all Parts of Matter, whereby when ſeparated from their Wholes, they endeavour to return to them again, the neareſt way.

But neither of theſe Syſtems aſſigns any Phyſical Cauſe of this great Effect: They only amount to this, that Bodies deſcend, becauſe they deſcend.—

*Gaſſendus*, *Kepler*, *Gilbert*, and others aſcribe *Gravity* to a certain Magnetic Attraction of the Earth.

Theſe Authors conceive the Earth to be one great Magnet continually emitting Effluvia, which lay hold on all Bodies, and draw them toward the Earth.—But this, we have obſerv'd, is inconſiſtent with the Phænomena. See MAGNETISM.

*Des Cartes*, and his Followers, *Rohault*, &c. attribute *Gravity* to an external Impulſe, or Truſion of ſome ſubtle Matter. See CARTESIANISM.

By the Rotation of the Earth, ſay they, all the Parts and Appendages thereof neceſſarily endeavour to recede from the Centre of Rotation: But they cannot, all, actually recede, as there is no Vacuum or Space to receive them.

If now, we ſuppoſe the Earth A B C D, *Tab. Mechanicks, Fig.* 8. and L a Terreſtrial Body placed in the Pyramidal Space, A E B: It follows, that the Matter in this Pyramid, will have ſo much leſs Endeavour to recede from the Centre, as the Body L has a leſs Endeavour than the fluid Matter whoſe Place it poſſeſſes. Hence it will follow, that the Matter of the adjacent Pyramids receding with more Force; that in the Pyramid A E B, and particularly the Body L will be thereby driven toward the Centre; for the ſame Reaſons, as Cork, tho' a heavy Body, aſcends in Water.

This Hypotheſis, tho' ingenious enough, yet, as it is founded on the Suppoſition of a Plenum, it is overthrown by what we ſhall prove of the Exiſtence of a VACUUM.

Dr. *Hook* inclines to an Opinion much like that of *Des Cartes*: *Gravity*, he thinks, deducible from the Action of a moſt ſubtle Medium, which eaſily pervades, and penetrates the moſt ſolid Bodies; and which by ſome Motion it has, detrudes all earthly Bodies from it, toward the Centre of the Earth.

*Voſſius*, and many others give partly into the *Carteſian* Notion, and ſuppoſe *Gravity* to ariſe from the Diurnal Rotation of the Earth round its Axis.

Dr. *Halley*, deſpairing of any ſatisfactory Theory, chuſes to have immediate Recourſe to the Agency of the Almighty.

So, Dr. *Clark*, from a View of ſeveral Properties of *Gravity*, concludes, that it is no adventitious Effect of any Motion, or ſubtle Matter, but an Original, and General Law impreſs'd by the Almighty on all Matter, and preſerv'd therein by ſome efficient Power penetrating the very ſolid, and intimate Subſtance thereof; as being found always proportionable, not to the Surfaces of Bodies or Corpuſcles, but to their ſolid Quantity and Contents.

It ſhould, therefore, ſays he, be no more enquired, why Bodies gravitate, than how they came to be firſt put in Motion.—*Annot. in* Rohaulti *Phyſ.* P. *c.* 28.

Dr. *S. Graveſande*, in his *Introduct. ad Philoſoph. Newton.* contends, that the Cauſe of Gravity is utterly unknown; and that we are to look on it no otherwiſe than as a Law of Nature, originally and immediately impreſſed by the Creator, without any Dependance on any ſecond Law or Cauſe at all. Of this he thinks, the three following Conſiderations, ſufficient Proof.

1*ſt*. That *Gravity* requires the Preſence of the gravitating or attracting Body: So the Satellites of *Jupiter*, *e. gr.* gravitate towards *Jupiter* wherever he be.

2*d*. That the Diſtance being ſuppoſed the ſame, the Velocity wherewith Bodies are moved, by the Force of *Gravity*, depends on the Quantity of Matter in the attracting Body: And that the Velocity is not changed, let the Maſs of the gravitating Body be what it will.

*Laſtly*, That if *Gravity* do depend on any known Law of Motion, it muſt be ſome Impulſe from an Extraneous Body; whence, as *Gravity* is continual, a continual Stroke wou'd be required.

Now, if there be any ſuch Matter continually ſtriking on Bodies, it muſt be fluid, and ſubtle enough to penetrate the Subſtance of all Bodies: But how ſhall a Body ſubtle enough to penetrate the Subſtance of the hardeſt Bodies, and ſo rare as not ſenſibly to hinder the Motion of Bodies, be able to impel vaſt Bodies towards each other with ſuch Force? How does this Force increaſe in a Ratio of the Maſs of the Body toward which the other Body is moved? whence is it that all Bodies, ſuppoſing the ſame Diſtance, and the ſame Body gravitated to, move with the ſame Velocity? Can a Fluid, which only acts on the Surface, either of the Bodies themſelves, or of their internal Particles, communicate ſuch a Quantity of Motion to Bodies, which in all Bodies ſhall exactly follow the proportion of the Quantity of Matter in them?

Mr. *Cotes*, goes yet further; giving a View of Sir *Iſ. Newton*'s Philoſophy, he aſſerts that *Gravity* is to be rank'd among the primary Qualities of all Bodies; and deem'd as eſſential to Matter, as Extenſion, Mobility, or Impenetrability. *Præfat. ad Newton. Princip.*

But this Author ſeems to have overſhot the Mark. His great Maſter, Sir *I. Newton* himſelf, diſclaims the Notion; and to ſhew that he does not take *Gravity* to be eſſential to Bodies, gives us his Opinion about the Cauſe; chuſing to propoſe it by way of Query, as not being yet ſufficiently ſatisfied about it by Experiments.

This Query we ſhall ſubjoin at large—After having ſhewn that there is a Medium in Nature vaſtly more ſubtle than Air, by whoſe Vibrations Light communicates Heat to Bodies, and is itſelf put into alternate Fits of eaſy Reflexion and eaſy Tranſmiſſion, and Sound propagated; and by the different Denſities whereof the Refraction and Reflexion of Light is perform'd. See MEDIUM, HEAT, REFRACTION, &c. He proceeds to enquire,

'Is not this Medium much rarer within the denſe Bodies 'of the Sun, Stars, Planets, and Comets, than in the empty 'celeſtial Spaces between them? And in paſſing from them 'to great Diſtances, doth it not grow denſer and denſer perpetually, and thereby cauſe the *Gravity* of thoſe great Bodies towards one another, and of their Parts towards the 'Bodies; every Body endeavouring to go from the denſer 'Parts of the Medium towards the rarer?

'For if this Medium be ſuppoſed rarer within the Sun's 'Body than at its Surface, and rarer there than at the hundreth Part of an Inch from its Body, and rarer there than 'at the fiftieth Part of an Inch from its Body, and rarer 'there than at the Orb of Saturn; I ſee no Reaſon why 'the Increaſe of Denſity ſhould ſtop any where, and not 'rather be continued thro' all Diſtances from the Sun to Saturn, and beyond.

'And tho' this Increaſe of Denſity may at great Diſtances 'be exceeding ſlow, yet if the Elaſtic Force of this Medium be exceeding great, it may ſuffice to impel Bodies 'from the denſer Parts of the Medium towards the rarer 'with all that Power which we call *Gravity*.

'And that the Elaſtick Force of this Medium is exceeding great, may be gather'd from the Swiftneſs of its Vibrations. Sounds move about 1140 *Engliſh* Feet in a ſecond 'Minute of Time, and in ſeven or eight Minutes of Time 'they move about one hundred *Engliſh* Miles: Light 'moves from the Sun to us in about ſeven, or eight Minutes 'of Time, which Diſtance is about 70000000 *Engliſh* Miles, 'ſuppoſing the Horizontal Parallax of the Sun to be about '12"; and the Vibrations or Pulſes of this Medium, that they 'may cauſe the alternate Fits of eaſy Tranſmiſſion, and eaſy 'Reflection, muſt be ſwifter than Light, and by conſequence, 'above 700000 ſwifter than Sounds; and therefore the Elaſtick Force of this Medium, in Proportion to its Denſity, muſt 'be above 700000 × 700000 (that is above 490000000000) 'times greater than the Elaſtick Force of the Air, is in Proportion to its Denſity: For the Velocities of the Pulſes of 'Elaſtick Mediums, are in a ſubduplicate Ratio of the Elaſticities and the Rarities of the Mediums taken together.

'As Magnetiſm is ſtronger in ſmall Loadſtones than in 'great ones, in proportion to their Bulk; and Gravity is 'ſtronger in the Surface of ſmall Planets, than in thoſe of 'great ones, in proportion to their Bulk; and ſmall Bodies 'are agitated much more by Electric Attraction, than great 'ones: So the Smallneſs of the Rays of Light, may contribute very much to the Power of the Agent by which they 'are refracted, And if any one ſhould ſuppoſe that Æther '(like our Air) may contain Particles which endeavour to 'recede from one another (for I do not know what this Æther 'is) and that its Particles are exceedingly ſmaller than thoſe 'of Air, or even than thoſe of Light; the exceeding Smallneſs of ſuch Particles may contribute to the Greatneſs of 'the Force by which they recede from one another, 'and thereby make that Medium exceedingly more 'rare and elaſtick than Air, and of conſequence exceedingly leſs able to reſiſt the Motions of Projectiles, and exceedingly more able to preſs upon groſs Bodies, by endeavouring to expend it ſelf. *Opticks*, p. 325, &c. See LIGHT, ELASTICITY, &c.

GRAVITY in *Mechanicks*, is the Conatus, or Tendency of Bodies toward the Centre of the Earth. See CENTRE.

That part of Mechanicks which conſiders the Motion of Bodies ariſing from *Gravity*, is peculiarly called *Staticks*. See STATICKS.

GRAVITY is diſtinguiſh'd into *Abſolute* and *Relative*.

*Abſolute* GRAVITY, is that wherewith a Body deſcends freely thro' another reſiſting Medium. See RESISTANCE.

*The Laws of Abſolute* GRAVITY, ſee under the Article DESCENT *of Bodies*.

*Relative* GRAVITY, is that wherewith a Body deſcends after having ſpent part of its Weight in overcoming ſome Reſiſtance. See RESISTANCE.

Such is that wherewith a Body deſcends along an inclined Plane, where ſome part is employed in overcoming the Reſiſtance, or Friction of the Plane. See FRICTION.

*The Laws of Relative* GRAVITY; ſee under the Article *Inclined* PLANE.

*Centre of* GRAVITY, *Diameter of* GRAVITY, *Plane of* GRAVITY, } See { CENTRE *of Gravity*, DIAMETER *of Gravity*, PLANE *of Gravity*.

GRAVITY in *Hydroſtaticks*—the Laws of Bodies *gravitating* in Fluids, make the Buſineſs of Hydroſtaticks. See HYDROSTATICKS.

GRAVITY is here divided into *Abſolute* and *Specific*.

*Abſolute* or *true* GRAVITY, is the whole Force wherewith the Body tends downward. See GRAVITATION.

*Specific* GRAVITY, call'd alſo *Relative*, *Comparative*, and *Apparent* GRAVITY, is the Exceſs of Gravity in any Body, above that of an equal Quantity or Bulk of another.

*For the Laws of Specific* GRAVITY: with the Methods of determining it both in Solids and Fluids. See SPECIFIC *Gravity*, and HYDROSTATICAL *Balance*.

GRAVITY *of the Air*. See WEIGHT *of the Air*. See alſo AIR and PRESSURE.

GRAVITY, in *Muſic*, an Affection of Sound, whereby it becomes denominated *grave*, *low*, or *flat*. See SOUND.

*Gravity* ſtands in Oppoſition to *Acuteneſs*, which is that Affection of Sound, whereby it is denominated *Acute*, Sharp, or high. See ACUTENESS.

The Relation of *Gravity*, and Acuteneſs, is the principal thing concerned in Muſic; the Diſtinctneſs, and Determinateneſs of which Relation, gives Sound the Denomination of *Harmonical*, or *Muſical*. See MUSIC and HARMONY.

The

The Degrees of *Gravity*, &c. depend on the Nature of the Sonorous Body itſelf, and the particular Figure and Quantity thereof: Tho, in ſome Caſes, they likewiſe depend on the Part of the Body where it is ſtruck. Thus, *e. gr.* the Sounds of two Bells of different Metals, and the ſame Shape and Dimenſions, being ſtruck in the ſame Place, will differ as to Acuteneſs and *Gravity*; and two Bells of the ſame Metal will differ in Acuteneſs, if they differ in Shape or Magnitude, or be ſtruck in different Parts. See BELL.

So in Chords, all other things being equal, if they differ either in Matter, or Dimenſions, or Tenſion; they will alſo differ in *Gravity*. See CHORD.

Thus again, the Sound of a Piece of Gold is much graver than that of a Piece of Silver of the ſame Shape and Dimenſions; and in this Caſe, the Tones are, *cæteris paribus*, proportional to the Specific Gravities; ſo a ſolid Sphere of Braſs, two Foot diameter, will ſound graver than another of one Foot diameter; and here the Tones are proportional to the Quantities of Matter, or the Abſolute Weights.

But it muſt be obſerved, that Acuteneſs and *Gravity*, as alſo Loudneſs and Lowneſs, are but relative Things. We commonly call a Sound *acute* and loud, in reſpect to another which is *grave*, or low with reſpect to the former: So that the ſame Sound may be both *grave* and acute, and alſo loud and low, in different Compariſons.

The Degrees of Acuteneſs, and *Gravity*, make the different *Tones*, or *Tunes* of a Voice, or Sound: So we ſay one Sound is in Tune with another, when they are in the ſame Degree of *Gravity*. See TUNE.

The immediate Cauſe, or Means of this Diverſity of Tone lies deep. The modern Muſicians fix it on the different Velocity of the Vibrations of the Sonorous Body: In which Senſe *Gravity* may be defined, a relative Property of Sound, which, with reſpect to ſome other, is the Effect of a leſſer Number of Vibrations accompliſh'd in the ſame Time, or of Vibrations of a longer Duration: In which Senſe alſo, Acuteneſs is the Effect of a greater Number of Vibrations, or Vibrations of a ſhorter Duration.

If two, or more Sounds be compared in the Relation of *Gravity*, &c. they are either *Equal*, or *Unequal*, in the Degree of Tune.

Such as are equal, are call'd *Uniſons*. See UNISON.

The Unequal including, as it were, at a Diſtance between each other, conſtitute which we call an *Interval* in Muſic, which is properly the Difference in Point of *Gravity*, between the two Sounds. See INTERVAL.

Upon this Unequality, or Difference, does the whole Effect depend; and in reſpect hereof, theſe Intervals are divided into *Concords* and *Diſcords*. See CONCORD and DISCORD. See alſo SCALE.

GRAVY, in Cookery, &c. the Juice of Fleſh or Fiſh, obtained therefrom by Coction, Elexation, Frixion, or the like. See JUICE.

The procuring of *Gravies* is no inconſiderable part of Cookery, inaſmuch as theſe are required to heighten the *Guſto*, and Reliſh of moſt Diſhes. There are divers Proceſſes of *Beef Gravy*; one of the ſhorteſt and ſimpleſt, is to cut a Pound or two of lean Beef-Stakes into Slices, beat 'em well, fry them till brown, and then add a Pint of ſtrong Broth, and an Onion; letting the whole boil a little, and then ſtraining it for Uſe.

To make *Mutton Gravy*, they roaſt a Shoulder of Mutton a little more than half, cut it with a Knife, ſqueeze out the *Gravy* with a Preſs; then moiſten the Meat again with Broth, and preſs it a ſecond time: Add a little Salt, and keep it for Uſe.

*Veal Gravy* is chiefly had by cutting Stakes off a Fielet, beating them, and ſtewing them with ſliced Onions, Carrots, and Parſnips; and at laſt adding ſtrong Broth, Parſley, &c. letting them ſtew afreſh, and ſtraining them for Uſe.

To make *Fiſh Gravy*, Carps and Tenches are ſlit lengthways, and ſtewed with Butter, Onions, Carrots, &c. till brown; then a little Flower put in, and ſtew'd till brown. Laſtly, Some Fiſh-Broth is ſtrained in thro' a Cloth, and the whole ſeaſon'd with Salt, Lemon, Cloves, and ſavoury Herbs.

GRAY, a mix'd Colour, partaking of the two Extremes Black and White. See BLACK, WHITE, &c.

In the Manage they make ſeveral Sorts of *Grays*, as the *Branded* or blacken'd *Gray*, which has Spots quite black, diſperſed here and there. The *dappled Gray*, which has Spots of a darker Colour than the reſt of the Body. The *light* or *ſilver Gray*, wherein there is but a ſmall Mixture of black Hairs. The *ſad* or *powder'd Gray*, which has but a ſmall Mixture of white: And the *browniſh* or *ſandy-colour'd Gray*, where there are *bay-colour'd* Hairs mix'd with the Black. See HORSE.

GREASE. See FAT.

GREASE, among Farriers, &c. a Swelling and Gourdineſs of the Legs of a Horſe, generally happening after a Journey.

If the *Greaſe* be an Attendant of ſome other Diſeaſe, it will be in vain to attempt the Cure before the Diſeaſe be removed that is the original Cauſe of it: And therefore, if it be a Hectick, the Yellows, or the Farcin, &c. the Directions given for thoſe Diſeaſes are to be followed, and in the mean Time proper Applications to be uſed outwardly for the *Greaſe*.

If the *Greaſe* proceeds from common and ordinary Accidents, and the Horſe has no other Diſtemper upon him; then, Applications that are peculiar to that Diſtemper are to be followed: If the Horſe has been well fed and pampered, begin the Cure with Bleeding and Purging, ſo as to diminiſh the Redundance of the Humours; but theſe ought to be uſed with Moderation, and it may be better to effect it with ſpare Diet and daily Labour.

After moderate Evacuations, it may be proper to make a Rowel on the Inſide of the Thigh, or on the Belly; and to keep it open for a Month, or longer, as there ſhall be occaſion; and in the mean time to give the Horſe the Cinnabar or Antimonial Balls. See ROWEL.

GREAT, a Term of Compariſon, denoting a thing to have more Extenſion than ſome other to which it is refer'd. See COMPARISON.

Thus we ſay a *great* Space: A *great* Diſtance: A *great* Figure, a *great* Body, &c. See GRAND.

The Term is likewiſe uſed figuratively, and in Matters of Morality, &c. to ſignify Ample, Noble, Elevated, Extraordinary, Important, &c.

Thus we ſay, *Shakeſpear* was a *great* Genius: Queen *Elizabeth* had a *great* Soul: *Cromwell* was a Man of *great* Deſigns: *Da Vinci*, a *great* Painter: *Galileo* a *great* Philoſopher: *Boſſu* a *great* Critick, &c.

GREAT is alſo a Title or Quality affected to certain Princes, and other illuſtrious Perſonages. See TITLE and QUALITY.

Thus we ſay the *great* Turk: The *great* Mogul: The *great* Cham of *Tartary*: The *great* Duke of *Florence*, &c. See MOGUL, CHAM, &c.

GREAT is alſo a Surname beſtowed on ſeveral Kings and Emperors. See SURNAME.

Thus we ſay *Alexander the Great*: *Cyrus* the *Great*: *Charles* the *Great*, or *Charlemaign*: *Henry* the *Great* of *France*, &c. So the *Engliſh* frequently ſay, *Edward* the *Great*, or the *Great Edward*; *William* the *Great*, meaning King *William* III. or the *Great William*. And the *French*, *Louis the Great*, *le Grand*, ſpeaking of the late *Louis* XIV.

*Gyles* of *Paris*, ſays *Charlemaigne* firſt got the Surname *Great* from the Tallneſs and Eminence of his Stature. *Helgan* adds that *Hugue*, *Hugh* the *Great* of *France* was thus denominated on account of his great Piety, Goodneſs, &c.

GREAT is alſo applied to ſeveral Officers, who have Preeminence over others. See GRAND.

Thus we ſay, the Lord *Great* Chamberlain: The *Great* Marſhal of *Poland*, &c. See CHAMBERLAIN, &c.

GREAT *Circles* of the Sphere, are particularly ſuch as divide the Sphere into two equal Parts or Hemiſpheres; or whoſe Planes paſs thro' the Centre of the Sphere: in Contradiſtinction from the *leſſer* Circles, which cut the Sphere into unequal Parts, &c. See CIRCLE, SPHERE, CIRCLE, LESSER, &c.

The Equator, Meridian, Ecliptic, Vertical, &c. are *great* or *greater Circles* of the Sphere; and the Parallels, Tropicks, &c. leſſer Circles. See EQUATOR, MERIDIAN, &c.

GREAT *Tithes*, GREAT *Gun*, GREAT *Letters*, GREAT *Bear*, } ſee { TITH, CANON, CAPITAL, URSA *major*.

GREE, in our Law-Books, from the *Frence Gre*, i. e. *Will*, *Allowance*, or *liking*; ſignifies Agreement, Contentment, or Good-liking.— Thus to make *Gree* to the Parties, is to ſatisfy them for an Offence done. 'Judge-'ment ſhall be put in Suſpence, till the *Gree* be made to 'the King of his Debt, *Stat.* 25. *Edw.* 3. See AGREEMENT.

GREEK, GRECIAN, ſomething belonging to the People of *Greece*.

GREEK, abſolutely ſo called, or GREEK *Language*, or *antient* GREEK, is the Language ſpoke by the antient *Greeks*, and ſtill preſerv'd in the Works of their Authors, as *Plato*, *Ariſtotle*, *Iſocrates*, *Demoſthenes*, *Thucydides*, *Xenophon*, *Homer*, *Heſiod*, *Sophocles*, *Euripides*, &c. See LANGUAGE.

The *Greek* has been preſerved entire longer than any other Language known, maugre all the Revolutions that have happened in the Country where it was ſpoke. See ENGLISH.

Yet, from the Time of the Removal of the Seat of Empire to *Conſtantinople*, in the 15th Century, it has been gradually altering: The Alterations at firſt did not affect the Analogy of the Tongue, the Conſtruction, Inflexions, &c. There were only new Words, new Riches acquired, by taking in the Names of new Dignities and Offices, and the Terms of

Art

Art it was before unacquainted with: But, at length, the Incurſions of the Barbarians, and eſpecially the Invaſion of the *Turks*, wrought much more conſiderable Alterations. See *Modern* GREEK.

The *Greek* has a great Copia or Stock of Words: Its Inflexions are as remarkable for their Variety, as thoſe of moſt of the other European Tongues, for their Simplicity. See INFLEXION.

It has three Numbers, Singular, Dual, and Plural. See NUMBERS; and abundance of Tenſes in its Verbs, which makes a Variety in Diſcourſe, prevents a certain Dryneſs which always accompanies a too great Uniformity, and renders the Language peculiarly fit for all Kinds of Verſe. See TENSE, *&c.*

The Uſe of the Participles of the Aoriſtus, and Preterit, together with the compound Words, wherein it abounds; give it a peculiar Force and Brevity, without taking any thing from its Perſpicuity.

The proper Names, in the *Greek* Language, are ſignificative, as in the Oriental, as well as in moſt of the modern Languages, where the Learned ſtill find ſome, tho' remote, Character of their Origin. See NAME.

The *Greek* was the Language of a polite People, who had a Taſte for Arts and Sciences, which they cultivated with Succeſs. In the living Tongues, are ſtill preſerved a vaſt Number of *Greek* Terms of Arts: Some deſcended to us from the *Greeks*, and others form'd a-new. When a new Invention, Machine, Rite, Order, Inſtrument, *&c.* has been diſcovered, Recourſe has commonly been had to the *Greek* for a Name; The Facility wherewith Words are there compounded, readily affording us Names expreſſive of the Uſe, Effect, *&c.* of ſuch Inſtruments. Hence *Aræometer*, *Thermometer*, *Barometer*, *Micrometer*, *Logarithm*, *Teleſcope*, *Microſcope*, *Loxodromy*, &c.

*Modern* or *Vulgar* GREEK, is the Language now ſpoke in *Greece*.

There have been few Books writ in this Language, from the taking of *Conſtantinople* by the *Turks*; ſcarce any thing but ſome Catechiſms, and the like Pieces, compoſed or tranſlated into the Vulgar *Greek*, by the *Latin* Miſſionaries.

The native *Greeks* are contented to ſpeak the Language without cultivating it. The Miſery they are reduced to under the Dominion of the *Turks*, renders them ignorant, of neceſſity; the Turkiſh Politicks not allowing any of the Subjects of their Eſtates, to apply themſelves to the Arts and Sciences.

Whether it be out of a Principle of Religion, or Politicks, or Barbariſm, they have induſtriouſly deſtroy'd all the Monuments of antient *Rome*; deſpiſing the Study of a Language which might have render'd them polite, their Empire happy and flouriſhing, and have made the People forget their former Maſters, and their antient Liberty.

In this, widely different from the *Romans*, thoſe antient Conquerors of *Greece*, who after they had ſubdued the Country, applied themſelves to learn the Language; in order to imbibe their Politeneſs, Delicacy, and Taſte for Arts and Sciences.

'Tis not eaſy to aſſign the preciſe Difference between the vulgar, and the antient *Greek*: It conſiſts in the Terminations of Nouns, Pronouns, Verbs, and other Parts of Speech, which make a Difference between thoſe two Languages much like that obſerved between ſome of the Dialects of the *Italian* or *Spaniſh*: We inſtance in thoſe Languages, as being the moſt known, but we ought to have ſaid the ſame of the *Hebrew*, *Sclavonic*, &c. Dialects.

Beſide, the modern *Greeks* have divers new Words not in the antient; particularly ſeveral Particles which appear as Expletives, and which were introduced to characterize certain Tenſes of Verbs, and certain Dictions, which would have the ſame Meaning without ſuch Particles, had Cuſtom diſpenſed with them; Divers Names of Dignities and Offices, unknown to the antienr *Greeks*; and abundance of Words borrowed from the vulgar Tongues of the neighbouring Nations.

Accordingly, one may diſtinguiſh three Ages of the *Greek* Tongue: The firſt ends at the Time when *Conſtantinople* became the Capital of the *Roman* Empire; Not but there were ſeveral Books, eſpecially of the Fathers of the Church, wrote with great Purity after that Time; but, as Religion, Law, and Policy, both civil and military, began then to introduce new Words into the Language, it ſeems neceſſary to begin the ſecond Age of the *Greek* Tongue from that Epocha; which laſted to the taking of *Conſtantinople* by the *Turks*, where the laſt Age commences.

GREEK *Wine*. See WINE.

GREEK *Orders* in Architecture, are the *Doric*, *Ionic*, and *Corinthian*; in Contra-diſtinction to the two Latin Orders, the *Tuſcan* and *Compoſite*. See ORDER; ſee alſo DORIC, IONIC, and CORINTHIAN.

GREEK *Rite*, or RITUAL, is diſtinguiſhed from the Latin. See RITE and RITUAL.

GREEK *Church*, is that part of the Chriſtian Church which is eſtabliſhed in *Greece*; extending likewiſe to ſome other Parts of *Turky*. See CHURCH.

It is thus called in *Europe*, *Aſia*, and *Africa*, in Contra-diſtinction from the *Latin*, or *Romiſh* Church; as alſo the *Eaſtern* Church, in Diſtinction from the *Weſtern*. See LATIN.

The Romaniſts call the *Greek Church*, the *Greek Schiſm*, becauſe the *Greeks* don't allow the Authority of the Pope, but depend wholly, as to Matters of Religion, on their own Patriarchs. They have treated them as Schiſmaticks, ever ſince the Revolt, as they call it, of the Patriarch *Photius*. See PATRIARCH.

The Learned are divided as to the peculiar Doctrines and Sentiments of the *Greek* Church. 'Tis certain many Errors are uſually charged on them, which they are free of. The Point has been warmly conteſted between *Caucus* Archbiſhop of *Corfu*, and the Sieur *de Moni*, on the one Side; and *Lucas Holſatius*, and *Leo Allatius*, a *Greek*, on the other; the two firſt accuſing, the laſt excuſing them. *Caucus*, &c. will have them agree with the Proteſtants, in rejecting abundance of the Rules and Obſervances eſtabliſh'd in the *Romiſh* Church; while *Allatius*, &c. endeavours to find the ſame Obſervances among the *Greeks*, as among the *Latins*, only under other Forms, and with other Circumſtances.

Of the Seven Latin Sacraments, ſays *Caucus*, the *Greeks* only admit five: Confirmation and Extreme Unction, they ſet aſide. *Allatius*, on the contrary, inſiſts, that they don't properly ſet them aſide, but only differ as to the manner of adminiſtring them. Inſtead of confirming long after Baptiſm, they always join Baptiſm and Confirmation together: Beſide that Confirmation, among them, is confer'd by the ordinary Prieſts. The like Error is charged on *Caucus*, with regard to Extreme Unction. See SACRAMENT and EXTREME UNCTION.

But it is to be here added, that from the Anſwer of *Jeremy*, Patriarch of *Conſtantinople*, to the Divines of *Wirtembergh*, it appears, that the *Greeks*, like the Reformed, do really own no more than two Sacraments inſtituted by Chriſt, *viz.* Baptiſm and the Euchariſt. See EUCHARIST, *&c.*

The *Greeks*, ſays the ſame *Caucus*, offer no Worſhip to the Euchariſt: *Allatius* replies, it is true, they don't adore it, as the Romaniſts do, immediately after the ſpeaking thoſe Words, *This is my Body*: Yet do they really adore it after the Words wherein Conſecration conſiſts, *viz.* after the Prayer call'd *The Invocation of the Holy Spirit*. See ADORATION.

As to Confeſſion, *Caucus* is certainly in the right, that they don't hold it of divine Appointment, but only of poſitive, or eccleſiaſtical Right; which they likewiſe affirm of all the other Sacraments, except the two above-mentioned: yet have they the Uſe of Auricular Confeſſion. See CONFESSION.

As to Marriage, *Caucus* is juſt to them, in ſaying, that they do not eſteem it an indiſſoluble Band; they maintain with great Zeal, the Neceſſity and Validity of Divorce. See DIVORCE.

As to the Primacy of the Pope, *Caucus* does them Juſtice in ſaying they deny it. 'Tis certain the *Greeks*, *Melchites*, and other Orientals, do not allow the Primacy of the Pope over the other Patriarchs, in the Senſe it is allowed of among the *Latins*. See POPE, PRIMACY, *&c.*

Nor do they allow of more than Seven General Councils. All thoſe held by the *Latins* ſince *Photius*, they ſet aſide. See COUNCIL.

GREEK *Grammar*, GREEK *Teſtament*, GREEK *Lexicon*, } ſee { GRAMMAR, BIBLE, LEXICON, *&c.*

GREEN, one of the original Colours of the Rays of Light. See COLOUR, RAY, and LIGHT.

If Urine, Citron-Juice, or Spirit of Vitriol, be caſt on a *green* Ribbon, it becomes blew; by reaſon the yellow of the Greening-wide is thereby exhaled and conſumed; ſo that nothing but blue remains behind. See BLUE, *&c.*

Graſs and Herbs, and even all Vegetables in Places expoſed to the open Air, are *Green*; and thoſe in ſubterraneous Places, or Places inacceſſible to the Air, White and Yellow. Thus when Wheat, or the like, germinates under Ground, 'tis White or Yellow; and what is in the open Air, *Green*: Tho' this too is Yellow before it be *Green*.

*Artificial Greens* are rarely ſimple Colours, but produced by the Mixture of Yellow and Blue. See BLUE and YELLOW.

Two Powders, the one Blue, and the other Yellow, well mixed, appear perfectly *Green*; tho' when viewed with a Microſcope, we obſerve a Chequer of Blue and Yellow.

The Dyers make divers Shades, or Caſts of *Green*, as *Light-Green*, *Yellow-Green*, *Graſs-Green*, *Laurel-Green*, *Sea-Green*, *Dark-Green*, *Parrot-Green*, and *Celadon-Green*.

All the *Greens* are firſt dy'd in Blue, then taken down with Woad, Verdigreeſe, *&c.* and then *green'd* with the Weed, there

here being no one Ingredient that will give *Green* alone.

Mountain-*Green*, or *Hungary-Green*, is a ſort of *greeniſh* Powder found in little Grains, like Sand, among the Mountains of *Kernauſent* in *Hungary*, and thoſe of *Moldavia*.

Tho' ſome hold that this Mountain-*Green* is factitious, and the ſame with what the Ancients called *Flos Æris*, prepared by caſting Water, or rather Wine, on Copper red-hot from the Furnace, and catching the Fumes thereof on Copper-Plates laid over for the Purpoſe; or by diſſolving Copper-Plates in Wine, much as in making Verdegreaſe. The Painters make uſe of this Colour for a *Graſs-Green*. It is ſometimes counterfeited, by grinding Verdegreaſe with Ceruſe.

*Earth* GREEN. See VERDITER.

*Calcined* GREEN, and *Diſtilled* GREEN. See VERDEGREASE.

GREEN *Copperas*. See COPPERAS.

GREEN *Fiſh*. See FISH.

GREEN *Glaſs*. See GLASS.

GREEN *Cap*. See CAP.

GREEN *Hide*, is that not yet curried, but ſuch as taken off from the Carcaſe. See HIDE, LEATHER, and CURRYING.

GREEN *Cloth*, a Board, or Court, of Juſtice, held in the Compting-Houſe of the King's Houſhold, for the taking Cognizance of all Matters of Government and Juſtice within the King's Court Royal; and for correcting all the Servants therein, that ſhall any way offend. See HOUSHOLD, and COMPTING-HOUSE.

To this Court alſo belongs the Authority of maintaining the Peace for twelve Miles round the King's Court, whereever it ſhall be, excepting at *London*. See PEACE and PAX.

The Judge of this Court, is the Lord Steward, aſſiſted by the Treaſurer, Comptroller, Cofferer, Clerks of the *Green-Cloth*, &c. See STEWARD; ſee alſo VERGE.

It takes its Name *Green-Cloth*, from a *Green-Cloth* ſpread over the Board where they ſit, whereon are the Arms of the Compting-Houſe.

*Clerks of the* GREEN-*Cloth*, are two Officers of the Board of *Green-Cloth*, who attend there, and have Buſineſs aſſign'd them by the Board. All Bills of Comptrolments relating to the Office, are ſum'd up, and allowed by the Clerks Comptrollers, and audited by the Clerks of the *Green-Cloth*.

They alſo appoint the King's, Queen's, and Houſhold's Diet, keep all Records, Leigers, and Papers relating thereto; make up Bills, Parcels, and Debentures for Salaries, *&c.* And Proviſions and Neceſſaries for the Offices of the Pantry, Buttery, Cellar, *&c.*

GREEN-*Houſe*, or *Conſervatory*; a Houſe, or Building, in a Garden; contrived for preſerving of the more tender and curious Exotic Plants, which will not bear the Winter's Cold abroad in our Climate. See EXOTIC.

*Green-Houſes*, as now built, ſerve not only as *Conſervatories*, but likewiſe as Ornaments of Gardens; being uſually large and beautiful Structures, in Form of Galleries, wherein the Plants are handſomely ranged in Caſes for the purpoſe. See GARDEN.

The *Green-Houſe*, Mr. *Mortimer* directs to be open to the South, or very little declining therefrom: The Heighth and Breadth to be about 12 Foot, and Length according to the Number of Plants intended to be kept therein. It ſhould be ſituate on the drieſt Ground, and ſo contrived, as that nothing may obſtruct the Sun's Rays in Winter. In the building it, Care muſt be taken, not to plaiſter it on the Inſide with Lime and Hair; Dampneſs being obſerved to continue longer on ſuch Plaiſter, than on Bricks or Wainſcote. To preſerve it the more from Moiſture and Colds, an artificial Heat is to be uſed: In order to this, ſome hang up Fires, and others place Pans of Coals in Holes in the Ground. The better way is, to have a Stove behind the *Green-Houſe*, and to convey the Heat thereof thro' Trills made under the Floor for that Purpoſe. The beſt Method of all, according to *Bradley*, is the new Stove invented by M. *Gauger*, and publiſhed in *Engliſh* by Dr. *Deſaguliers*. See FIRE.

Some have Saſhes, Caſements, and Doors of Glaſs; others prefer moveable Canvas Doors, to be taken off, and put on at pleaſure.

The Pots and Caſes are to be ranged in the *Green-Houſe* ſo, as not to incommode one another, or hinder any from readily receiving both Sun, Air, *&c.* As to the Management of the Plants herein, *Mortimer* recommends the opening of the Mould about them, from time to time, and ſprinkling a little freſh Mould in them, and a little warm Dung on that; as alſo to water them when the Leaves begin to wither and curl, and not oftner, which would make them fade and be ſickly; and to take off ſuch Leaves as wither and grow dry.

*Bradley* adviſes, that in the colder Parts of *England*, the Front of the *Green-Houſe* be built in a Sweep, or Semicircle, to receive the Sun's Rays, one part or other of it, all Day: That all the Windows, *&c.* in the Front, have cloſe, thick, wooden Shutters, to be ſhut every Night in Winter, for fear of Froſts, Nipping Winds, *&c.*—*Dutch* Tiles he thinks the beſt Lining for the Walls, as being dry, and reflecting a deal of Heat; and ſquare Tiles for the Pavement, which readily imbibe the Wet, and never ſweat, as Marble and the harder Stones do.—The Plants in the *Green-Houſe* are not to fill above a $\frac{1}{4}$ Part of the Space thereof; the reſt being left vacant for the Air to circulate about the Plants. If the *Houſe* be crowded with Plants, the Effluvia they are continually emitting by Perſpiration, and the Vapours from the Mould, will condenſe the Air, and cauſe Dampneſs. The Plants to be diſpoſed, as much as poſſible, about the middle Parts of the *Green-Houſe*, where they will be ſafer from the Cold, which is uſually greateſt near the Glaſſes and Walls: The tendereſt Plants to be diſpoſed neareſt to where the Heat comes in.

'Tis a general Rule among Gardeners, to ſet Exotic Plants into the *Green-Houſe*, about the ſecond Week in *September*, and to take them out again about the middle of *May*; tho' there ſhould be ſome Diſtinction made herein; the tendereſt Sorts from Places near the Line, as the Aloes, *&c.* being to be confined more to the *Green-Houſe*, than Oranges, Myrtles, *&c.*

GREEN-*Plots*, *Walks*, &c. See GRASS-*Plots*, &c.

GREENLAND *Fiſhery*. See *Whale* FISHERY.

GREENWICH *Hoſpital*. See HOSPITAL.

GREGORIAN *Calendar*, is that which ſhews the new and full Moon, with the Time of *Eaſter*, and the moveable Feaſts depending thereon, by Means of Epacts diſpoſed thro' the ſeveral Months of the *Gregorian* Year. See CALENDAR, EASTER, &c.

The *Gregorian Calendar*, therefore, differs from the *Julian*, both in the Form of the Year; and in that it uſes Epacts, inſtead of Golden Numbers. See EPACT, and GOLDEN *Number*.

This Reformation of the Calendar, was made in 1582, by Order of Pope *Gregory* XIII. and with the Advice of *Aloyſius Lilius*, and other Mathematicians: At the ſame Time, ten Days were cut off from that Year, and caſt away, to bring the Equinoxes to their antient Seat, *viz.* the 21° of *March*. And to keep them conſtantly there, the ſame Pope introduced the *Gregorian* Year. See the Article following.

GREGORIAN *Year*, is the *Julian* Year corrected, or modell'd, in ſuch manner, as that the three ſecular Years, which in the *Julian* Account are Biſſextile, are here common Years, and only every fourth ſecular Year, a Biſſextile Year. See BISSEXTILE.

The *Gregorian* Year, tho' it comes nearer to Nature and Truth, than the *Julian*; is not ſtrictly juſt: In 400 Years it gets 1 Hour 20'; and conſequently in 7200, a whole Day. See YEAR.

The *Gregorian* Year, is that now uſed in moſt Countries of *Europe*; *England*, moſt of the *United Provinces*, *Sweeden*, and *Denmark*, excepted; where the *Julian* Year ſtill obtains. See JULIAN *Year*.

From this Difference, ariſes the Diſtinction of *Old* or *Julian*, and *New* or *Gregorian* Style. See STYLE.

The *Old Style* is now 11 Days behind the *New*: So that the ſame Day which in the *Gregorian* Account is the 11th Day of any Month, in the *Julian* is only the 1°.

GREGORIAN *Epocha*, is the Epocha, or Time whence the *Gregorian* Calendar, or Computation, took Place. See EPOCHA.

The preſent Year 1726, is the 144th Year of the *Gregorian* Epocha.

GRENADA, GRENATE, GRENADIER, } ſee { GRANADO, GRANATE, GRANADIER.

GRESHAM-*College*. See COLLEGE.

GREVE, among our antient Writers, is a Denomination of Power and Authority; ſignifying as much as a *Comes*, or *Vicecomes*: and hence our *Shyreeve*, *Portgreeve*, &c. See PORTGREEVE, *&c.*

According to *Hoveden*, *Greve dicitur*, *ideo quod jure debeat* Grith, *i. e. pacem ex illis facere*, *qui Patriæ inferunt væ*, *i. e. miſeriam vel malum.*

Hence, but with leſs Power and Dignity, is derived the Word *Reve*, a Bailiff, or Under-Officer of the Lord of a Manor. See REVE.

GRIFFON, *Gryphus*, γρύψ, in Natural Hiſtory, a Bird of Prey, of the Eagle Kind. See EAGLE.

The Antients ſpeak fabulouſly of the *Griffon*; they repreſent it with four Legs, Wings, and a Beak; the upper Part repreſenting an Eagle, and the lower a Lion: They ſuppoſed it to watch over Gold Mines, hidden Treaſures, *&c.* The Animal was conſecrated to the Sun; and the antient Painters repreſented the Chariot of the Sun as drawn by *Griffons*. *M. Spanheim* obſerves the ſame of thoſe of *Jupiter* and *Nemeſis*.

We find mention of the *Griffon* in Holy Scripture; but are not to underſtand the Text of that chimerical Animal juſt deſcribed, which no Body ever ſaw but in Painting and Armories, notwithſtanding what *Servius*, in his Comment on the 8th Eclogue of *Virgil* and *Iſidore*, ſay of it.—The *Griffon* in Scripture, is that Species of Eagle, called in Latin *Oſſifraga*, and in Hebrew פרס, *Peres*, of the Verb פרס, *Pares*, to break.

God prohibited the *Jews* to eat divers Kinds of Birds of Prey, as the Kite, Vulture, &c. And the divers Species of Eagles, which are diſtinguiſhed in Latin by the Names of *Aquila*, *Gryps*, *Haliætus*.—*Pauſanias*, *in Arcadicis*, ſays the *Griffon* has his Skin ſpotted like a Leopard.

The *Griffon*, we mean the fabulous one, is frequently ſeen on antient Medals; and is ſtill bore in Coat-Armour.

Or, a *Griffon* Rampant, with Wings diſplay'd, Sable, is born by the Family of *Morgan* in *Monmouthſhire*, &c. *Guillam* blazons it *Rampant*; alledging that any very fierce Animal may be ſo blazoned, as well as a Lyon.

*Sylveſter*, *Morgan*, and others, uſe the Term *Segreiant* inſtead of Rampant. See RAMPANT and SEGREIANT.

GRILLADE, in Cookery, a Diſh of Meat broiled on the Grid-Iron; thus called from the *French Griller*, to broil.

The Word is alſo uſed for the browning of any Diſh, by rubbing a hot Iron over it.

To *Grill Oyſters*, is to put them into Scollop-Shells, ſeaſon them with Salt, Pepper, and Parſley ſhred, and pour their own Liquor to them; covering them with grated Bread; ſtewing them half an Hour on the Fire, and browning them with a red-hot Iron.

Shrimps are *grill'd* after the ſame Manner.

GRINDING, *Trituration*, the Act of breaking, or comminuting a ſolid Body, and reducing it into a Powder, Duſt, Flower, Farina, or the like; particularly, by means of a Mill. See MILL.

*Grinding* is one of the Species of Diſſolving. See DISSOLUTION.

The Painters Colours are ground on a Marble, or Porphyry, either with Oil or Gum Water; ſee PAINTING and COLOUR.

Some late Phyſicians have contended, that Digeſtion is perform'd by *grinding* the Food in the Stomach: Some even maintain that every Part in the Body, is a Veſſel or Veſſels; that all the Veſſels have a Motion of Syſtole and Diaſtole; and that all the Operations of the Body conſiſt in the Attrition or *grinding* of the Humours or Matters contained in ſuch Veſſels. See DIGESTION and TRITURATION.

GRINDING is alſo uſed for the rubbing or wearing off, the irregular or otherwiſe redundant Parts of the Surface of a Body, and of reducing it to the deſtined Figure, whether that be flat, concave, or the like. See FIGURE.

The *grinding of Glaſſes* is a conſiderable Art, and as ſuch, neceſſarily requires to be here inſiſted on; eſpecially that of Optic Glaſſes. See GLASS, OPTIC GLASS, &c.

### *Method of* GRINDING *Optic Glaſſes.*

For Convex-Glaſſes, the firſt Step is to provide a Diſh or Baſon, within whoſe Cavity the Glaſs is to be form'd.

In order to this, they take a piece of Braſs, Copper, Iron, or Wood, and form it into a Segment of a Circle, with the Radius of the Baſon or Diſh intended. This done, a Baſon is made by a Smith, either of Iron or Copper; having its Cavity exactly fitting or correſponding to the Segment above mentioned: tho' ſometimes they chuſe to have the Baſon caſt; in which Caſe, the Rules above delivered for concave Mirrors, are to be here obſerved. See MIRROUR.

The Figure of the Baſon thus roughly formed, is to be finiſhed in the Pewterers Lathe; or on a Stone Mould A. *Tab. Miſcellany*, Fig. 12. fixed to an Iron Axis, with a Pinion B C, moveable by a Wheel D E, and that by a Winch or Handle F. The Baſon being ground on the Mould, till it exactly fit in all Parts; they take it off, and cementing it to a wooden Block (loaden, if need be, with Lead) ſtrew it over with fine ſifted Sand, and thus *grind* it over again on the Mould, till all the Furrows or Scratches be quite taken away.

Laſtly, They *grind* large Pieces of Glaſs in a Baſon, with fine Sand between; till ſuch Time as its Surface being well ſmoothed, there is no longer any Oppoſition to the Motion.

Note, the Diſh is known to be perfectly finiſhed, when a Hair being ſtretched over it, its Shadow projected in the Cavity, particularly in a Camera obſcura, does not appear diſtorted.

The Baſon finiſh'd, proceed to chuſe Glaſſes for the Purpoſe: In order to this, lay 'em on clean Paper, and obſerve what Colours are projected thereon; for the ſame are the Colours of the Glaſſes. Always ſet aſide thoſe of the darker Colours, and chuſe the brighter: But as the whiteſt and brighteſt have uſually Veins; and beſide, in Tract of Time, by the Humidity of the Air, are apt to ruſt, and loſe their Poliſh; for this Reaſon *Huygen* recommends thoſe a little yelloviſh, reddiſh, or greeniſh; *Hevelius* the blueiſh. A Glaſs is found to be free from Bubbles, Sands, Veins, Knots, and Spires, by holding it to the Sun, and receiving the Rays through it on a white Paper; for the Flaws abovementioned, will each project a Shadow thereon.

If inſtead of Lenticular, or at leaſt Spherical Glaſſes, you make uſe of Plate Glaſs; it muſt be divided, and cut with a Diamond, into Squares; and if it be too thick to break otherwiſe, you may do it by laying it on a Table covered with a Cloth, in ſuch manner, as that the Side or Part to be ſever'd, hang over the Edge; for being ſtruck with an Iron Inſtrument, in this Situation it eaſily breaks in the Direction of the Line drawn by the Diamond. Having thus got a ſquare Piece, deſcribe two concentric Circles thereon, with a Pair of Compaſſes, one of whoſe Legs carries a Diamond; the Diameter of the inner Circle, to be equal to the Breadth of the intended Lens, and that of the outer ſomewhat more; and break off the Corners, as above directed; and the leſſer Inequalities take off on a Grind-Stone, or the like. Examine now whether the Piece of Glaſs be every where equally thick; if it be not, reduce it to ſuch Equality by *grinding* it on an Iron Plate with Sand and Water. Laſtly, glue or cement the Glaſs thus prepared to a wooden Handle N M O, *Fig.* 31. with a Cement made of Pitch, with a fourth part of Roſin; or one Part of Wax, and eleven of Colophony. Care to be taken that the Baſe, or bottom of the Handle N O, be equal to the Glaſs; and that the Centre of the Glaſs and Handle meet together. Smaller Lens's, as thoſe uſed for Microſcopes, are fix'd on with Sealing-Wax.

Now, to grind the Glaſs, and bring it to the Convexity required; ſmear over the Diſh equally with fine ſifted Sand moiſten'd with Water: Then taking the Handle with the Glaſs thereon, work the Baſon ſometimes this way, and ſometimes that, to prevent the Form of the Baſon from being diſturb'd; never leaning too hard thereon. When the Glaſs has got the Figure of the Baſon, clean it well of all the Sand, and Filth adhering; and ſprinkle the Baſon over with Emery moiſten'd in Water; *grinding* the Glaſs thereon, till all the Roughneſſes and Inequalities are taken away. After this, the fine Sand uſed in Hour-Glaſſes may be of Service, applied and uſed as before; remembring to take out the Sand when too much worn, and ſubſtitute new in its ſtead. Some in lieu hereof, chuſe ſeveral Sorts of Emery, each finer than other, or even the Powder of Flints calcined and pounded. Laſtly, *grind* the ſame Glaſs in another Baſon, or Diſh which is a Segment of a leſſer Sphere, making uſe of the like Sand as before; till it have got a pretty high Rim or Margin all around.

In regard the Preſſion is not here determined accurately enough upon the Middle of the Glaſs, by the mere Guidance of the Hand; ſome have choſe to make Uſe of the following Machine, eſpecially for *grinding* of Object-Glaſſes.

Fix the Diſh H I, *Fig.* 14. on a horizontal Table: exactly over its Centre let the Aperture D be, through which paſs an Iron Arm five or ſix Inches long, faſten'd to the Staff A B. Let the other Extreme of the Staff be fitted into a Hole cut in the Diſh, and faſten'd therein. Now to *grind* the Glaſs, inſtead of the Diſh, take hold of the ſaid Staff, and work with Sand, &c. as before.

*Huygens* tells us, that he firſt uſed coarſe Emery, then a finer Powder of the ſame, which would be 50 Seconds in ſinking to the bottom of a Veſſel of Water, putting in freſh every half or quarter of an Hour. Sometimes too, he uſed Emery of 50 Seconds, for $\frac{1}{4}$ of an Hour; then Emery of 400 Seconds, for $\frac{1}{4}$ of an Hour; and laſtly, Emery of 45 Minutes for $\frac{1}{4}$ of an Hour. The ſame Effect is had from Powder of Flints, broke in an Iron Mortar, mix'd with Water, and ſtirred ſometime with a wooden Spatula, taking the Powder as it precipitates in ſome certain Time to the bottom of the Veſſel, by decanting the Water.

What remains is, to poliſh the Glaſs; *which ſee under the Article* POLISHING.

GRINDING is alſo uſed for a coarſer, and leſs accurate Method of ſmoothing or poliſhing the Surface of a Body; particularly Glaſs for Looking-Glaſſes, &c. See LOOKING-GLASS, &c.

In the new Method of working large Plates of Glaſs for Looking Glaſſes, Coach-Glaſſes, &c. by moulding, and, as it were, caſting them ſomewhat after the manner of Metals; deſcribed under the Article GLASS: The Surface being left uneven, it remains to be *ground* and poliſhed.

In order to this, the Plate of Glaſs is laid horizontal, on a Stone in Manner of a Table; and to ſecure it the better, plaſter'd down with Mortar, or Stuc, that the Effort of the Workman, or of the Machine uſed therein, may not ſhake or diſplace it. To ſuſtain it, there is a ſtrong wooden Frame that ſurrounds it an Inch or two higher than the Glaſs.

The Bottom or Baſe of the *grinding* Engine, is another rough Glaſs, about half the Dimenſions of the former: On this

this is a wooden Plank, cemented thereto; and upon this are proper Weights applied to promote the Triture: The Plank or Table, being faſten'd to a Wheel, which gives it a Motion. —This Wheel, which is at leaſt 5 or 6 Inches Diameter, is made of very hard but light Wood, and is wrought by two Workmen placed againſt each other, who puſh and pull it alternately; and ſometimes, when the Work requires it, turn it round. By ſuch means, a conſtant mutual Attrition is produced between the two Glaſſes, which is favour'd by Water and Sands of ſeveral Kinds beſtowed between; Sand ſtill finer and finer being applied, as the *grinding* is more advanced: At laſt Emery is uſed. We need not add, that as the upper or incumbent Glaſs poliſhes and grows ſmoother, it muſt be ſhifted from time to time, and others put in its Place.

It is to be noted, that only the largeſt Size Glaſſes are thus *ground* with a Mill; for the middling and ſmaller Sorts are wrought by the Hand, to which End there are four wooden Handles at the four Corners of the upper Stone, or Carriage, for the Workmen to take hold of, and give it Motion.

*What remains to the Perfection of Glaſs, comes under the Denomination of Poliſhing.* See POLISHING.

GRIP, or GRIPE, is a ſmall Ditch cut a-croſs a Meadow, or ploughed Land; in order to drain it: It alſo ſignifies an Handful; as, a *Gripe* of Corn.

GRIPE of a Ship, is the Compaſs or Sharpneſs of her Stem under Water; chiefly towards the bottom of her Stem. See SHIP.

The Deſign of ſharping her ſo, is to make her *gripe* the more, or keep a good Wind; for which purpoſe ſometimes a falſe Stem is put on upon the true one.

GRIPE is alſo a Sea-Phraſe for a Ship's being apt to run her Head or Noſe too much into the Wind: In ſuch Caſe they ſay, ſhe *gripes*; of which there are two Cauſes, either over-loading her a-head, the Weight of which preſſes her Head ſo down, that it is not apt to fall off from the Wind; or the ſtaying or ſetting her Maſts too much aft; which will always be a Fault in a ſmall Ship that draws much Water, and will cauſe her to be continually running into the Wind.

In floaty-Ships, if the Maſts be not ſtayed very far aft, they will never keep a good Wind.

GRIPES, *tormina Ventris*, in Medicine, a ſort of Colick, or painful Diſorder of the Lower Belly, occaſioned by ſome ſharp pungent Matters vellicating the Parts, or by Winds pent up in the Inteſtines. See COLICK.

The *Gripes* are a very common Symptom in young Children, and may be cauſed by the Aliment they uſe, which is conſiderably different from what they had been accuſtom'd to in the *Uterus*. See CHILDREN.

The Retention of a Part of the Meconium may alſo give occaſion hereto, as being ſomewhat acrimonious. See MECONIUM.

This Diſorder ſometimes proves ſo violent, as to throw the Child into univerſal Convulſions, or to cauſe what is vulgarly called Convulſions of the Bowels.

GRIST is Corn ground, or fit for grinding. See FLOWER, MEAL.

GROANING, in Heraldry, a Term uſed for the Cry or Noiſe of a Buck. See HUNTING.

GROAT, an *Engliſh* Money of Account, equal to Four-Pence. See PENNY.

Other Nations, as the *Dutch*, *Polanders*, *Saxons*, *Bohemians*, *French*, &c. have likewiſe their *Groats*, *Groots*, *Groches*, *Gros*, &c. See MONEY and COIN.

We had no Silver Money in the *Saxon* Times bigger than a Penny; nor after the Conqueſt, till *Edward* III. who about the Year 1351, coin'd *Groſſes*, i. e. *Groats*, or *great Pieces*, which went for 4*d.* a-piece; and ſo the Matter ſtood till the Reign of *Henry* VII. who, in 1504, firſt coined Shillings. See SHILLING.

GROCERS, by the Stat. 37 *Edw.* II. cap. 5. were uſed for thoſe who engroſſed Merchandize. See ENGROSSING.

GROGRAM, in the Manufactories, a ſort of Stuff, all Silk; being in Reality no more than a Taffety, coarſer and thicker than ordinary. See TAFFETY.

GROOM, properly denotes a Servant appointed to attend on Horſes; the Word being formed of the *German* Grom, Boy, Youth. See EQUERRY.

GROOM is alſo the Denomination of ſeveral Officers and Servants in the King's Houſhold. See HOUSHOLD.

There are *Grooms* of the Almonry, *Grooms* in the Compting-Houſe, *Grooms* of the Chamber, the Privy-Chamber, *Grooms* of the Robes, of the Wardrobe, &c. See ALMONRY, CHAMBER, WARDROBE, &c.

GROOM *of the Stole*. See STOLE.

GROOM-*Porter* is an Officer of the Houſhold, whoſe Buſineſs is to ſee the King's Lodging furniſhed with Tables, Chairs, Stools, and Firing; to provide Cards, Dice, &c. and to decide Diſputes ariſing at Cards, Dice, Bowling, &c.

GROS, a foreign Money, in divers Countries, anſwering to our *Groat*. See GROAT.

A *Pound* GROS, *Livre de Gros*. See POUND and LIVRE.

GROSS is the Quantity of twelve Dozen. See DOZEN.

GROSSA, a Groat—*Conceſſa eſt Regi una* Groſſa *quæ continet quatuor denarios de quolibet viro & muliere*. Knighton. *Anno* 1378.

GROSSE-*Bois*, in our antient Law-Books, ſignifies ſuch Wood as hath been, or is, either by the Common Law, or Cuſtom of the Country, reputed Timber. See TIMBER.

GROSSUS, in our antient Writers, denotes a thing entire, and not depending on another.

Thus, *Villanus* in *Groſſo*, was a Servant, who did not belong to the Land, but immediately to the Perſon of the Lord: So, an Advowſon in *Groſſo*, is a Right of Patronage not annexed to the Fee or Manor, but belonging to the Patron himſelf, diſtinct from the Manor. See ADVOWSON, VILLAIN, &c.

GROSS-*Weight* is the Weight of Merchandizes, and Goods with their Duſt and Droſs, as alſo of the Bag, Cask, Cheſt, &c. wherein they are contained; out of which *Groſs*-Weight, Allowance is to be made for Tare and Tret. See TARE and TRET.

GROTESQUE, or GROTESK, or GROTTESQUE, a wild whimſical Figure of a Painter, or Engraver; having ſomething ridiculous, extravagant, and even monſtrous in it.

The Name ariſes hence, that Figures of this Kind were antiently much uſed to adorn the Grotto's wherein the Tombs of eminent Perſons, or Families were incloſed. Such was that of *Ovid*, whoſe Grotto was diſcover'd near *Rome* about 50 Years ago. See GROTTO.

*Calot* a celebrated Engraver of *Lorrain*, had a wonderful Genius for deſigning *Groteſques*: the like ſaid of *Leonardo da Vinci*.

We alſo extend the Word to any Thing whimſical, or wildly pleaſant, in a Perſon's Dreſs, Diſcourſe, &c.—Maſquerade Habits are the more valued, the more *Groteſque* they are: Our Theatres preſent us with Entertainments in *Groteſque* Characters, *i. e.* Perſons quaintly dreſs'd; as Harlequins, Scaramouches, &c.

*Planudes* has given us a very *Grotesk* Picture of *Æſop*. *Arioſto* and the *Italian* Poets are full of *Groteſque* Deſcriptions.

GROTESQUE-*Work*, GROTESK-*Work*, or *Grotteſco*, is a Work or Compoſition in Painting, and Sculpture, in the *Groteſque* Manner or Taſte; conſiſting either of Things which are merely imaginary, and have no Exiſtence in Nature, or of Things turn'd and diſtorted out of the way of Nature, ſo as to raiſe Surprize and Ridicule.

*Groteſque-Work* is the ſame with what we ſometimes call *Antique*. See ANTIQUE. See alſo MORESQUE.

GROTESQUES, or GROTESKS, are particularly uſed for little fanciful Ornaments, of Animals, compounded with Foliages, Fruit, &c,

Such are thoſe painted by *Raphael* in the Apartments of the Vatican; and thoſe carved by *Michael Angelo* in the Ceilings of the Portico of the Capitol.

*Vitruvius* calls Compartments of this kind *Harpagenituli*.

GROTTO, or GROTTA, in natural Hiſtory, a large deep Cavern or Den in a Mountain or Rock. See STONE.

The antient *Anchorites* retired into Dens, and *Grotto's*, to apply themſelves the more attentively to Meditation, &c. See ANCHORITE, HERMIT, &c.

In *Grottos* are frequently found Cryſtals of the Rock, Stalactites, and other natural Conglaciations; ſee CRYSTAL, STALACTITES, PETRIFACTION, &c.

The Word is *Italian*, *Grotta*, form'd according to Menage, &c. from the Latin *Crypta*. *Du Cange* obſerves, that *Grota* was uſed in the corrupt Latin.

M. *Homberg* conjectures, from ſeveral Circumſtances, that the Marble Pillars in the *Grotto* of *Antiparos*, vegitate or grow.

That Author looks on this *Grotto* as a Garden, whereof the Pieces of Marble are the Plants; and endeavours to ſhew that they could only be produced by ſome vegetative Principles. *Memdel.* Acad. *Anno* 1702.

At *Foligno* in *Italy*, is another *Grotto*, conſiſting of Pillars and Orders of Architecture of Marble, with their Ornaments, &c. ſcarce inferior to thoſe of Art; but they all grow downwards: So that if this too be a Garden, the Plants are turn'd upſide down. *Memdel.* Acad. *Anno* 1711.

The *Zirchnitzer-Sea*, or Lake, in *Carniola*, famous for being full of Water, Fiſh, &c. the beſt part of the Year, and quite dry, and bearing Graſs, Corn, &c. the reſt; proceeds from ſome ſubterraneous *Grotto* or Lake; as is made highly probable by Mr. *Valvaſer*; Philoſoph. Tranſ. Nº 191.

We have ſeveral *Grotto*'s famous in Natural Hiſtory; as,

GROTTA *del Cane*, a little Cavern near *Puzzuoli*, four Leagues from *Naples*, the Steams whereof are of a mephitical or noxious Quality; whence alſo it is called *Bocca Venenoſa*, the *poiſonous Mouth*. See MEPHITES.

Two Miles from *Naples*, ſays Dr. *Mead*, juſt by the *Lago d'Agnano* is a celebrated *Moſeta*, commonly called *La Grotta*

de

*de Cani*, equally deſtructive to all within the Reach of its Vapours.

'Tis a ſmall *Grotto* about 8 Foot high, 12 long, and 6 broad; from the Ground ariſes a thin, ſubtle, warm Fume, viſible enough to a diſcerning Eye, which does not ſpring up in little Parcels here and there, but in one continued Stream, covering the whole Surface of the bottom of the Cave; having this remarkable Difference from common Vapours, that it does not, like Smoke, diſperſe it ſelf into the Air, but quickly after its Riſe, falls back again, and returns to the Earth; the Colour of the Sides of the *Grotto* being the Meaſure of its Aſcent; for ſo far it is of a darkiſh green, but higher only common Earth. And as I my ſelf found no Inconveniency by ſtanding in it, ſo no Animal, if its Head be above this Mark, is the leaſt injured. But when, as the manner is, a Dog, or any other Creature, is forcibly kept below it; or by reaſon of its Smallneſs, can't hold its Head above it; it preſently, looſes all Motion, falls down as dead, or in a Swoon, the Limbs convulſed and trembling, till at laſt no more Signs of Life appear, than a very weak and almoſt inſenſible beating of the Head and Arteries; which if the Animal be left a little longer, quickly ceaſes too, and then the Caſe is irrecoverable; but if ſnatched out, and laid in the open Air, ſoon comes to life again, and ſooner if thrown into the adjacent Lake.

The Fumes of the *Grotto*, the ſame Author argues, are no real Poiſon, but act chiefly by their Gravity; elſe the Creatures could not recover ſo ſoon; or if they did, ſome Symptoms, as Faintneſs, &c. would be the Conſequence of it. He adds, that in Creatures killed therewith, when diſſected, no Marks of Infection appears; and that the Attack proceeds from a want of Air, by which the Circulation tends to an entire Stoppage, and this ſo much the more, as the Animal inſpires a Fluid of a quite different Nature from the Air, and ſo no ways fit to ſupply its Place.

Taking the Animal out while alive, and throwing it into the neighbouring Lake, it recovers: This is owing to the Coldneſs of the Water, which promotes the Contraction of the Fibres, and ſo aſſiſts the retarded Circulation; the ſmall Portion of the Air which remains in the Veſiculæ, after every Expiration, may be ſufficient to drive out the noxious Fluid. After the ſame manner, cold Water acts in a *deliquium Animi*: The Lake of *Agnano* has no other Virtue in it more than others.

Grotta *delli Serpi*, is a ſubterraneous Cavern near the Village of *Saſſa*, eight Miles from the City of *Braccano* in *Italy*; deſcribed by *Kircher* thus:

The *Grotta delli Serpi*, is big enough to hold two Perſons; it is perforated with ſeveral fiſtular Apertures, ſomewhat in manner of a Sieve; out of which, at the beginning of the Spring Seaſon, iſſues a numerous Brood of young Snakes of divers Colours, but all free of any particular poiſonous Quality.

In this Cave they expoſe their Lepers, Paralyticks, Arthriticks, and Elephantiac Patients quite naked; where, the Warmth of the ſubterraneous Steams reſolving them into Sweat, and the Serpents clinging variouſly all around, licking and ſucking them, they become ſo thoroughly freed of all their vitious Humours, that upon repeating the Operation for ſome Time, they became perfectly reſtored.

This Cave *Kircher* viſited himſelf, and found it warm, and every way agreeable to the Deſcription given of it. He ſaw the Holes, and heard a murmuring, hiſſing Noiſe in them. Tho' he miſs'd ſeeing the Serpents, it being not the Seaſon of their creeping out; yet he ſaw a great Number of their Exuviæ, or Sloughs, and an Elm growing hard by laden with them.

The Diſcovery of this Cave, was by the Cure of a Leper going from *Rome* to ſome Baths near this Place; who, loſing his way, and being benighted, happen'd upon this Cave, and finding it very warm, pulled off his Cloaths, and being weary and ſleepy, had the good Fortune not to feel the Serpents about him till they had wrought his Cure. *Muſeum Wormian.*

We alſo read of the *Milky Grotto*, or *Crypta Lactea*, a Mile diſtant from the antient Village of *Bethlehem.*

It is ſaid to be thus denominated, on occaſion of the bleſſed Virgin, who let fall ſome Drops of Milk in giving Suck to the little Jeſus in this *Grotto*. And hence it has been commonly ſuppoſed, that the Earth of this Cavern has the Virtue of reſtoring Milk to Women that are grown dry, and even of curing Fevers.

Accordingly, they are always a-digging in it, and the Earth is ſold at a good Rate to ſuch as have Faith enough to give Credit to the Fable—An Altar has been built on the Place, and a Church juſt by it.

Grotto is alſo uſed for a little artificial Edifice made in a Garden, in Imitation of a natural *Grotto.*

The Outſides of theſe *Grottos* are uſually adorn'd with Ruſtic Architecture, and their Inſide with Shell-work, furniſh'd likewiſe with various Jet d'Eaus, or Fountains, &c. See Shell-Work, &c.

The *Grotto* at *Verſailles*, is an excellent Piece of Building.—*Solomon de Caux* has an expreſs Treatiſe of *Grottos* and Fountains.

GROVE, in Agriculture, &c. a little thick Wood. See Wood.

The antient *Romans* had a ſort of *Groves* near ſeveral of their Temples, which were conſecrated to ſome God, and called *Luci*, by *Antiphraſis*, *a non lucendo*, as being ſhady and dark. See Lucus.

In very large and magnificent Gardens, a *Grove* is uſually a Plot of Trees, incloſed with Paliſſades, conſiſting of tall Trees, as Elms, Horſe-Cheſnuts, &c. the Tops whereof make a Tuft or Plume, and ſhade the Ground below.

At the Foot of the tall Trees, which generally run all along the Paliſſades at equal Diſtance, other leſſer Trees are often planted, whoſe Tufts form a Reſemblance of a ſort of Copſe within the former.

GROUND, in Agriculture, a Piece of Land, or Soil; or a Portion of Earth, whether fit or unfit to be tilled and cultivated. See Earth and Soil. See alſo Orchard, Garden, &c.

All Sorts of Land may be reduced to *boggy* or *marſhy*, *chalky*, *gravelly*, and *ſtony*. See Bog, Marsh, Chalk, Sand, Gravel, &c.

Ground, in Painting, is the Surface, upon which the Figures, and other Objects, are raiſed or repreſented. See Painting.

The *Ground* is properly underſtood of ſuch Parts of the Piece as have nothing painted on them, but retain the original Colour upon which the other Colours are applied to make the Repreſentations. See Colouring.

A Drapery, Piece of Building, the like, are ſaid to ſerve as a *Ground* to a Figure, when the Figure is painted on the Drapery or Building.

In the like Senſe, we alſo ſay the *Ground* of a Piece of Tapiſtry, of an Embroidery, of a Medal, Coin, &c. See Tapistry, Embroidery, Brocade, Medal, Coin, &c.

The *Ground* of a Shield or Eſcutcheon in Heraldry, is properly called the *Field*. See Field.

Ground, in Etching, is a gummous Compoſition, ſmeared over the Surface of the Metal to be etch'd; to prevent the *Aqua Fortis* from eating, or having effect, except in Places where this *Ground* is cut thro', or pared off, with the Points of Needles. See Etching.

Ground-*Work*, in Building. See Foundation.

Ground-*Sell*, or Ground-*Plate*. See Sell.

Ground-*Tackle*, a Sea-Term denoting a Ship's Anchor, Cables, &c. with whatever is neceſſary to make her ride ſafe at Anchor in a proper *Ground*. See Tackle, Anchor, &c.

GROUNDING of a Ship, is the bringing her on *Ground*, to be trimmed, made clean, or to have ſome Leak ſtopped in her.

GROUPADES is corruptly uſed, in the Manage for *Croupades*. See Croupade.

GROUP, or Grouppe, in Painting and Sculpture, an Aſſemblage or Knot of two or more Figures of Men, Beaſts, Fruits, or the like, which have ſome apparent relation to each other.

In a good Painting, it is neceſſary that all the Figures be divided into 2 or 3 *Groups*, or ſeparate Collections—Such and ſuch a Thing make a *Group* with ſuch and ſuch others of different Nature and Kind. The antique *Laomedon* is a fine *Group* of three beautiful Figures.

A *Group* has ſomewhat in it of the Nature of a Symphony or Concert of Voices: As, in the one the Voices muſt ſuſtain each other, in order to fill the Ear with an agreeable Harmony from the whole; whence if any part were to ceaſe, ſomething would neceſſarily be miſs'd: So, in the *Group*, if the Parts or Figures be not well balanced, ſomething will be found diſagreeable.

There are two Sorts of *Groups*, or two manners of conſidering *Groups*; with regard to the Deſign, and to the Clair obſcure. The firſt is common both to Works of Painting, and thoſe of Sculpture; the latter peculiar to Painting.

*Groups*, with regard to the Deſign, are Combinations of divers Figures, which have relation to each other, either on account of the Action, or of their Proximity, or of the Effect they have. Theſe we conceive, in ſome meaſure, as repreſenting ſo many different Subjects, or at leaſt ſo many diſtinct Parts or Members of one greater Subject. See Design.

*Groups*, with regard to the Clair obſcure, are Bodies of Figures wherein the Lights and Shadows are diffuſed in ſuch manner that they ſtrike the Eye together, and naturally lead it to conſider them in one View. See Clair *obſcure*.

The Word *Grouppe* is *French*, form'd of the *Italian Groppo*, a *Knot*.

In Architecture we ſay a *Group of Columns*, ſpeaking of three or four Columns join'd together on the ſame Pedeſtal. See Column.

When there are but two together, we ſay a *couple*, not a *Group* of Columns. See Couple.

In Muſic, a *Group* is one of the Kinds of Diminutions

of

of long Notes, which in the Working, forms a ſort of *Group*, Knot, Buſh, or the like.

The *Group* uſually conſiſts of four Crotchets, Quavers, or Semiquavers tied together, at the Diſcretion of the Compoſer.

GRABATARII, Grabbatarii, in Antiquity, were ſuch Perſons as deferr'd the receiving of Baptiſm to the Hour of Death; or, who did not receive it till they were dangerouſly ill, and out of Hopes of Life; from an Opinion, that Baptiſm abſolutely waſh'd away all antecedent Guilt. See Baptism.

The Word is form'd of the Latin *Grabatum*, Bed; and that from the Greek γραβατος, a Hanging-Bed, of κρεμαν, to ſuſpend; ſuch being the Bed of Slaves, poor People, Cynic Philoſophers, &c. who were Enemies of Luxury and Eaſe.

GRUBBING a Cock, a Term uſed by Cock-fighters, for the cutting off the Feathers under the Wings.—It is a thing not allowed by Cock pit Law, nor to cut off his Feathers in any handling Place. See Cock-pit *Law*.

GRUBBS, in Medicine, a white, unctuous kind of Pimples or little Tumors, ariſing upon the Face, chiefly the Alæ of the Noſe. See Tumor, &c.

They are uſually owing to hard Drinking, and an obſtructed Perſpiration; though natural in ſome Conſtitutions—They begin with a ſmall black Point, which gradually ſpreads; and ſometimes the Matter tends to Suppuration, upon which the Heads of the Eruptions grow white or yellow—They are uſually reputed ſalutary; whence to check their Growth ſuddenly, has proved of ill Conſequence. They are cured by Evacuation, and acrimonious Lotions.

GRUME, Grumus, in Medicine, &c. A Particle of Blood, Milk, or other Fluid, which is coagulated, thicken'd, harden'd, or not ſufficiently thin, and diluted. See Blood, ſee alſo Coagulation, &c.

Phthiſical People frequently ſpit up *Grumes*, i. e. Clots of Blood. See Pthisis.

*Grumes* of Milk, are what we popularly call *Curds*. See Milk, Cheese, &c.

GRUMOUS *Blood*, is that State or Conſiſtence of the Blood, wherein it is too viſcid, and thick, for a due brisk Circulation: The Effects whereof are, that it ſtagnates in the Capillary Veſſels, and produces divers Diſeaſes. See Lentor; ſee alſo Disease, &c.

GRUS, in Antiquity, a Dance perform'd yearly by the young *Athenians*, around the Temple of *Apollo*, on the Day of the Delia. See Delia.

The Motions and Figures of this Dance were very intricate, and variouſly interwove, ſome of them being intended to expreſs the Windings of the Labyrinth, wherein the Minotaur was kill'd by *Theſeus*. See Labyrinth.

GRY, a Meaſure containing $\frac{1}{10}$ of a Line. See Line.

A Line is $\frac{1}{10}$ of a Digit; and a Digit $\frac{1}{10}$ of a Foot; and a Philoſophical Foot $\frac{1}{3}$ of a Pendulum, whoſe Diadromes, or Vibrations, in the Latitude of 45 Degrees, are each equal to one Second of Time, or $\frac{1}{60}$ of a Minute. See Inch, Foot, Pendulum, &c.

GRYPHUS, a kind of Enigma; or an artful obſcure Deſcription of a Thing. See Ænigma.

GUADAGE, or Guidage, among our antient Writers, (*eſt quod datur alicui, ut tuto conducatur per terram alterius*;) that which is given for ſafe Conduct through unknown Ways, or a ſtrange Territory.

GUADUM, Guoad, in Natural Hiſtory, an Herb by the antient *Romans* called *Glaſtum* and *Vitrum*; by the *Greeks Iſatis*; by the *Britains Guadum*; and by us now, *Woad*.

The antient *Britains*, *Cæſar* informs us, painted their Faces with this Herb, to appear the more terrible to their Enemies. And *Pliny* relates, that the ſame was practiced by the Women in divers Sacrifices. See Glass.

GUANNAGIUM. See Wannage.

GUARANTEE, or Warrantee, a Term relative to *Warrant*, or *Warranter*; properly ſignifying him whom the Warranter undertakes to indemnify, or ſecure from Damage. See Warrantee.

Guarantee, or *Guaranty*, is more frequently uſed for a *Warranter*, or a Perſon who undertakes and obliges himſelf to ſee a ſecond Perſon perform, what he has ſtipulated to a third.

The *Guarantee of a Treaty*, is a Prince, or Power, pitched on by the treating Parties, to ſee, or engage that each Side ſhall perform the Articles. The *Guarantees* of the Treaty of *Oliva*, of *Weſtphalia*, &c. See Treaty.

The antient Lords were obliged to *Guaranty* the Lands of their Vaſſals, *i. e.* to defend them againſt their Enemies; otherwiſe they loſt their Fee, and their Vaſſals were no longer bound to do them Homage and Service—Kings alone did not forfeit their Fiefs by not *Guarantying* them; and yet we read that *Borel*, Count of *Barcelona*, threaten'd the King of *France*, *Hugh Capet*, to ſwear Fealty to the *Sarazens*, in caſe he did not *guaranty* him; and under *Lewis* the Young, the Count of *Champagne* did Homage to the Emperor, on the like Account. See Fee.

To *Guaranty a Fee*, had likewiſe another Meaning, being uſed to denote, that where a *Fee* was divided between the eldeſt Son, and the younger, the eldeſt did Homage to the Lord both for himſelf and all the reſt; and by that Homage *guaranty'd* the whole.

GUARD, or Gard, in its general Senſe, implies Defence, Cuſtody, or Conſervation of any Thing; the Act of obſerving what paſſes, to prevent Surprize; or the Care and Precaution taken to hinder any Thing's being done contrary to the Intention and Deſire of another.

The Word is both uſed in a proper and a figurative Senſe; for the Act or Service of *Guarding*, and the Perſons appointed for that Purpoſe: Thus we ſay, to be upon *Guard*, to ſet the *Guard*, mount the *Guard*, &c. So alſo we ſay a ſtrong *Guard*, an Attempt on the *Guard*; 2000 Men are neceſſary for the *Guard* of the City, &c.—So, again, thoſe to whom the King commits the Safety of his Perſon, are called his *Guard*, *Life-Guard*, *Body-Guard*.

And ſo, thoſe who have the Education and Guardianſhip of Infants, or Idiots, are called their *Guards*, or Wards. See Ward.

The ſame Term is alſo applied to a Writ relating to the Office of Ward, whereof there are three Kinds; one called *droit de Garde*; the ſecond *Ejectment de Garde*; the third *Raviſhment de Garde*. See Ward and Guardian.

The Word is form'd of the *French Garde*, and that of the corrupt *Latin Warda*; and that of the *German Wahren* to keep.

Guard, in the military Senſe, is properly the Duty or Service done by the Soldiers, to ſecure the Army or Place from the Surprizes and Efforts of an Enemy.—Of this there are divers Kinds, as

*Main-Guard*, is that from whence all the other *Guards* are detach'd. Thoſe who are to mount the *Guard*, meet at the reſpective Captain's Quarters, and from thence go to the Parade; where, after the whole *Guard* is drawn up the ſmall *Guards* are detach'd for the Poſts and Magazines; and then the ſubaltern Officers throw Lots for their *Guards*, and are commanded by the Captain of the *Main-Guard*.

*Grand-Guard*, conſiſts of three or four Squadrons of Horſe, commanded by a Field-Officer, and poſted before the Camp on the Right and Left Wing, towards the Enemy; for the Security of the Camp.

In a Camp every Batallion poſts a ſmall *Guard*, commanded by a ſubaltern Officer, about 100 Yards before its Front. This is called the *Quarter-Guard*. As

That ſmall *Guard* of Foot, which a Regiment of Horſe mounts in their Front under a Corporal, is called the *Standard-Guard*.

*Advance-Guard*, is a Party of Horſe or Foot which marches before a Body to give Notice of approaching Danger. When an Army is upon the March, the Grand *Guards*, which ſhould ſerve that Day, are as *Advance-Guards* to the Army.—That ſmall Body alſo of 12 or 16 Horſe, which are poſted under a Corporal, or Quarter-Maſter, before the Grand-*Guard* of a Camp, are called the *Advance-Guard*.

There is alſo the *Picquet-Guard*, which is a Number of Horſe and Foot, who keep themſelves always in a Readineſs in caſe of an Alarm; the Horſes are ſaddled, and the Riders booted all the while, and the Foot draw up at the Head of the Batallion at the beating of the Tattou, but afterwards return to their Tents, where they are in a Readineſs to march upon any ſudden Alarm.—This *Guard* is to make Reſiſtance in caſe of an Attack, till the Army can get ready.

Guard is particularly underſtood of a Soldier, as a Muſqueteer, Archer, or the like, detach'd from a Company or Corps, to protect, detain, or ſecure any Perſon, or ſurvey his Actions.

A *Guard* was ſet over each Party, to prevent the Duel's taking Place.

The Term is alſo uſed for the Troops or Companies kept up to guard the King: As in the following Articles—

*Royal Guards*, are Forces raiſed and maintained to *guard* his Majeſty's Perſon. See King.

There are alſo Bodies of *Guards* to wait on the Princes of the Blood, in the ſame Capacity.

The *Guards* are diſtinguiſhed into *Horſe*, *Foot*, *Granadiers*, and *Yeomen*.

The *Horſe-Guards* are diſtinguiſh'd by Troops: Firſt, ſecond, third, and fourth Troop of *Horſe-Guards*. See Troop.

The *Foot-Guards* are diſtinguiſhed by Regiments: Firſt Regiment, Cold-Stream Regiment, Royal Regiment of *Foot-Guards*. See Regiment.

*Guards*, no doubt, are as antient as Monarchy. The remoteſt Antiquity affords Inſtances hereof; the Scripture mentions thoſe of *Saul* the firſt King of the People of God, 1 *King.* xix. 11. and thoſe of *Achis* King of the *Philiſtines*, 1 *King.* xxviii. The *Grecian* Kings had alſo their Guards: *Juſtin* mentions thoſe of *Piſiſtratus*, Tyrant of *Athens*, lib. 11. c. 8. thoſe of the Tyrants of the ſame City, eſtabliſhed by *Lyſander*, lib. v. c. 8. thoſe of *Agis* King of *Sparta*, lib. xii. c. 1. thoſe of *Alexander*, lib. xii. c. 8. thoſe of the *Ptolomys* Kings of *Ægypt*, lib. xvi. c. 2, &c. *Tarquin* the Proud, is

ſaid to have been the firſt who took *Guards* at *Rome*. *Dionyſ. Halicarnaſſæus*, lib. iv. and yet we find that *Romulus* form'd himſelf a *Guard*, conſiſting at firſt of 12 Lictors, and afterwards of 300 Soldiers, whom he called *Celeres*. See CELERES.

The *Roman* Emperors had, for their *Guard*, the *Pretorian* Cohorts, eſtabliſhed by *Auguſtus*, as *Dion* and *Suetonius* relate: Thoſe of the Emperors of *Conſtantinople*, were called *Buccellarii*. See BUCCELLARII; ſee alſo DOMESTICI and PROTECTORES.

Captain of the *Guards*, Colonel of the *Guards*, Brigadier of the *Guards*, Exempt of the *Guards*, &c. See CAPTAIN, COLONEL, BRIGADIER, EXEMPT, &c.

*Yeomen of the* GUARDS. See YEOMEN *of the Guards*.

The *French Guards* are divided into thoſe *within*, and thoſe *without* the Palace: The firſt conſiſts of the *Gardes du Corps*, q. d. Body-Guard; part whereof are *Gardes de la Manche*, q. d. of the Elbow: The hundred *Swiſſes*; and the *Guards* of the Gate.

The *Guards without*, are *Gens d'Armes*, Light-Horſe, Muſqueteers, and two Regiments of *Guards*, the one of *French*, the other *Swiſs*. See GENSD'ARMES.

The *Garde du Corps*, or *Life-Guard*, conſiſts of four Companies of Horſe: The firſt was antiently *Scotch*, and ſtill retains the Name; tho' it now conſiſts wholly of *French* Men. Not only the Name, but they alſo retain the antient Phraſe or Formula of anſwering when called upon, *I am here*. The *Scotch Guard* was firſt eſtabliſhed in *France* by *Charles* VII. who choſe himſelf a *Guard* out of ſuch *Scots* as were ſent by the Earls of *Buccan*, *Douglas*, and other *Scotch* Lords, to drive out the *Engliſh*.

*Pretorian* GUARDS, *White* GUARDS, } fee { PRETORIAN, SCHOLARES.

GUARD, in Fencing, an Action or Poſture proper to defend or ſcreen the Body from the Efforts, or Attacks of an Enemies Sword— See FENCING and DEFENCE.

There are four general *Guards* of the Sword; to conceive which, it will be neceſſary to imagine a Circle drawn on an upright Wall, and divided into four Cardinal Points, *viz.* top, bottom, right, and left.

Now, when the Point of the Sword is directed to the bottom Point of the Circle, and conſequently the Head of the Sword tilted up to the top Point, with the Body inclining forwards; this is called *Prime*, or the *firſt Guard*—The *ſecond Guard*, which ſome improperly called the *third*, is when the Point of the Sword is directed to the right or ſecond Point of the ſame Circle, a Quadrant diſtant from the *firſt*; with the Fort of the Sword turn'd to the right, and the Body rais'd proportionably—*Tierce*, or the *third Guard*, is perform'd by directing the Sword's Point to the uppermoſt Point of the ſame Circle diametrically oppoſite to that of *Prime*: In which Caſe the Body, Arm, and Sword, are in their natural Diſpoſition, being the Mean between the Extremes of their Motion—*Quart*, or the *fourth Guard*, is when the Point of the Sword is directed to the fourth Point of rhe Circle, deſcending to the right as far as one fourth of *Tierce*, wirh the external Side of the Arm and the Flat of the Sword turn'd towards the Ground; and the Body out of the Line to the right, and the Fort of the Sword towards the Line to the left—There is alſo *Quint*, or a kind of *fifth Guard*, being the return of the Point of the Sword on the right, after traverſing the Circle, to the Point of the *Prime* whence it had departed; and yet with a different Diſpoſition of the Body, Arm, and Sword.

Theſe *Guards* are alſo called *Figures* and *Poſtures*; and the common Centre of all their Motions is to be in the Shoulder.

In all theſe Kinds of *Guards*, there are high *advanced*, high *retired*, and high *intermediate Guards*, when diſpoſed before the upper part of the Body, either with the Arm quite extended, quite withdrawn, or in a mean State—*Mean advanced Guard*, or ſimply *mean Guard*, is when the Sword is diſpoſed before the middle part of the Body—*Low advanced*, *retired*. or *intermediate Guards*, are thoſe where the Arm and Sword are advanced, withdrawn, or, between the two Extremes, before the lower part of the Body.

Some will have *Prime* the principal *Guard*; others *Quint*; others, with better Reaſon, *Tierce*, in regard it conſiſts of right Lines, which are more eaſily defended than oblique ones, ſuch as thoſe of *Prime*, *Second*, *Quart*, and *Quint*. See SWORD.

GUARDS, in Aſtronomy, is a Name ſometimes applied to the two Stars neareſt the Pole, being in the hind part of the Chariot, at the Tail of the little Bear. See CYNOSURE.

Their Longitude, Latitude, &c. ſee among thoſe of the other Stars in the Conſtellation URSA *minor*.

One of them is the Pole Star. See POLE *Star*.

GUARDANT, or GARDANT, in Heraldry, a Term applied to a Lion or other Beaſt when born in a Coat of Arms, full faced, or with his Face turned towards the Spectator, and thus appearing in a Poſture of Guard, and Defence.—The Heralds ſay a Lion is never ſo repreſented, but a Leopard always.

GUARDIAN, or GARDIAN, he to whom the Charge or Cuſtody of any Perſon or Thing is committed. See WARD.

The Notion of *Guardian* Angels, is very antient in the Eaſt. See DÆMON.

In the Convents of *Franciſcans*, the Officer is called *Guardian* who in the reſt is called *Superior*. See SUPERIOR.

In the Order of the Garter, the Officer who in other military Orders is called Grand-Maſter, is called the *Sovereign Guardian* of the Order. See GARTER.

GUARDIAN, in Law, is a Perſon intruſted with the Education, Tuition, &c. of ſuch as are not of ſufficient Diſcretion to guide themſelves, and their own Affairs; as Children, and Ideots.

The Word *Guardian*, with us, includes the Offices both of the *Tutor* and *Curator* of the *Civilians*: The *Tutor*, for inſtance, had the Government of a Youth, till he arrived at 14 Years of Age. See TUTOR. And the *Curator* had the Diſpoſition and ordering of his Effects thence forward, till 25 Years of Age; or the Charge of a Lunatick, during his Lunacy. See CURATOR; all which Purpoſes, our *Guardian* alone anſwers.

We have three Kinds of *Guardians*: One appointed by the Father in his Will; another by the Judge afterwards; and a third caſt upon a Minor by the Cuſtom of the Land: But the antient Law relating to *Guardians*, is much alter'd by *Stat.* 12. *Car.* II. which ordains that, 'Where any Perſon 'has a Child under the Age of 21 Years, and unmarried at 'the Time of his Death, it ſhall be lawful for the Father 'of the Child, whether born at the Time of his Deceaſe, 'or yet in *ventre ſa mere*, either by Deed or Will, to diſpoſe of the Cuſtody and Tuition of ſuch Child while under Age, or for any leſſer Time, to any Perſon, Popiſh 'Recuſants excepted: Which Diſpoſition ſhall be good a'gainſt all Perſons claiming ſuch Child as *Guardian in Socage*, or otherwiſe. And in Caſe the Father appoint no 'Guardian, the Ordinary may appoint one to look to his 'Goods and Chattels till the Age of fourteen; at which 'Time the Child may chuſe a *Guardian* himſelf. And 'for his Lands, the next of kin on that ſide by which the 'Lands deſcends, ſhall not be *Guardian*, as heretofore in 'Caſe of a Tenure *in Socage*. See SOCAGE.

GUARDIAN *of the Spiritualities*, is he to whom the ſpiritual Juriſdiction of a Dioceſe is committed, during the Vacancy of the See. See VACANCY.

This *Guardian* may be either ſuch *in Law*, i. e. *Jure Magiſtratus*, as the Archbiſhop is of any Dioceſe within his Province; or by *Delegation*, as he whom the Archbiſhop or Vicar-General, does for the Time depute. See VICAR, &c.

The *Dean* and *Chapter* of *Canterbury*, are *Guardians* both for the Dioceſe, and the whole Province, during a Vacancy of the Archbiſhop.

GUARDIAN, or *Warden*, of the *Cinque-Ports*, is an Officer who has the Juriſdiction of the Cinque-Ports, with all the Power that the Admiral of *England* has in other Places. See CINQUE-PORTS, and ADMIRAL.

*Cambden* relates, that the *Romans*, after they had ſettled themſelves, and their Empire in our Iſland, appointed a Magiſtrate or Governour over the Eaſt Parts where the Cinque-Ports lie, with the Title of *Comes Littoris Saxonici per Britanniam*; having another that bore the like Title, on the oppoſite Side of the Sea. Their Buſineſs was to ſtrengthen the Sea Coaſt with Munition againſt the Outrages and Robberies of the Barbarians. And that Antiquary takes our Warden of the Cinque-Ports to have been erected in Imitation hereof. *Britannia*. p. 228.

GUARDIAN *of the Peace*. See CONSERVATOR *of the Peace*.

GUELPHS, or GUELFS, a celebrated Faction in *Italy*, Antagoniſts of the *Gibellins*. See GIBELLIN.

The *Guelphs* and *Gibellins* fill'd *Italy* with Blood and Carnage for many Years. The *Guelphs* ſtood for the Pope, againſt the Emperor. Their Riſe is referr'd by ſome to be the Time of *Conrad* III. in the 12th Century; by others to that of *Frederic* I. and by others, to that of his Succeſſor *Frederic* II. in the 13th Century.

The Name *Guelf* is commonly ſaid to have been form'd from that of *Welfe*, *Welfo*, on the following Occaſion: The Emperor *Conrad* III. having taken the Dutchy of *Bavaria* from *Welfe* VI. Brother of *Henry* Duke of *Bavaria*, *Welfe*, aſſiſted by the Forces of *Roger* King of *Sicily*, made War on *Conrad*, and thus gave Birth to the Faction of the *Guelfs*.

Others chuſe rather to derive the Name *Welfe* from that of *Guelfon*. Others, again, derive the Name *Guelfs* from the *German Wolff*, on account of the grievous Evils committed by that cruel Faction. Laſtly, others derive the Denomination from that of a *German* called *Guelfe*, who lived at *Piſtoye*; adding, that his Brother, named *Gibel*, gave the Name to the *Gibellines*: Under which Head, the Reader will find a more ample Account of the Origin and Hiſtory of thoſe celebrated Factions.

GUERITE, in Fortification, a ſmall Tower of Wood or Stone, placed uſually on the Point of a Baſtion, or on the Angles of the Shoulder; to hold a Centinel, who is to take care of the Ditch, and watch out againſt a Surprize—

GUEST-TAKERS, or GIST-TAKERS. See AGISTORS.

GUET,

GUET, a *French* Term of War, ſignifying *Watch*; particularly uſed for a Perſon poſted as a *Spy* in any Place, to have an Eye thereto, and give Notice of what paſſes. See CENTINEL, SENTRY, &c.

GUET is alſo uſed for a *Corps de Garde* poſted at any Paſſage; or Company of Guards who go on the Patrol. See WATCH.

Some Officers are exempted from *Guet* and Guard, *i. e.* Watch and Ward.

In the ſame Senſe they ſay *Guet de Nuit*, Night Watch: *Mot de Guet*, Watch-Word: *Guet Royal*: *Guet Bourgeoiſe*, &c.

The *Chevalier de Guet*, is the Officer who commands the *Guet Royal*, or Royal Watch.

GUEULE, in Architecture. See GULA.

GUIDON, a ſort of Flag, or Standard bore by the King's Life-Guard; being broad at one Extreme, and almoſt pointed at the other, and ſlit or divided into two. See FLAG, STANDARD, &c.

The *Guidon* is the Enſign or Flag of a Troop of Horſe-Guards. See GUARD.

GUIDON is alſo the Officer who bears the *Guidon*.

The *Guidon* is that in the Horſe-Guards, which the Enſign is in the Foot. See ENSIGN.

The *Guidon* of a Troop of Horſe takes place next below the *Cornet*.

GUIDONS, GUIDONES, or *Schola Guidonum*, was a Company of Prieſts, eſtabliſhed by *Charlemaign* at *Rome*, to conduct and guide Pilgrims to *Jeruſalem*, to viſit the holy Places; to aſſiſt them in caſe they fell ſick, and to perform the laſt Offices to them in caſe they died.

GUIDRIGILD. See WEREGILD.

GUILD, GELD, or GILD. See GILD.

GUILD-HALL, or GILD-HALL, the great Court of Judicature for the City of *London*. See HALL.

In it are kept the Mayor's Court, the Sheriffs Court, the Court of Huſtings, Court of Conſcience, Court of Common-Council, Chamberlain's Court, &c. See MAYOR'S-COURT, COMMON-COUNCIL, CHAMBERLAIN, &c.

Here alſo the Judges ſit upon *Niſi prius*, &c.

GUINEA, a Gold Coin ſtruck, and current in *England*. See COIN.

The Value or Rate of *Guineas* has varied: It was firſt ſtruck on the Footing of 20 Shillings; by the Scarcity of Gold it has ſince advanced to 21 Shillings and 6 Pence; but is now ſunk to 21 Shillings.

The Pound Weight Troy of Gold is cut into Forty-four Parts and an half; each Part makes a *Guinea*. See GOLD.

This Coin took its Denomination *Guinea*, by reaſon the Gold whereof the firſt were ſtruck, was brought from that Part of *Africa* called *Guinea*; for which Reaſon it likewiſe bore the Impreſſion of an Elephant.

GUINEA-*Pepper*. See PEPPER.

GULA, in Anatomy, the *Gullet*; or that Conduit by which Animals take down Food into the Stomach. See DIGLUTITION.

GULE, GUEULE, or GOLA, in Architecture, a wavy Member, whoſe Contour reſembles the Letter S; called by the *Greeks Cymatium*, q. d. a little Wave, and by our Workmen an *Ogee*. See CYMATIUM and OGEE.

This Member is of two Kinds, *recta* and *inverſa*:

The *firſt*, and principal, has its Cavity above, and Convexity below. This always makes the Top of the Corona of the Cornice, jetting over the Drip of the Cornice like a Wave ready to fall.

It is called *Gula recta*, and by the *French Doucine*. Sometimes it is abſolutely called the *Entablature*, as being the firſt or uppermoſt Member thereof. See DOUCINE, CORONA, CORNICE, &c.

The *ſecond* is juſt the reverſe of the former, its Cavity being at the Bottom; ſo that it appears inverted, with regard to the former. This is uſed in the Architrave, and ſometimes in the Cornice, along with the former, only ſeparated by a Reglet.

Some derive the Word from the Reſemblance theſe Members bear to the *Gula*, or Throat of a Man: Others from the Herald's Term *Gules*; as ſuppoſing the Moulding formed from the antient manner of wearing their Garments, which conſiſted of Slips or Swaths, alternately Fur and Stuff of various Colours; the Intervals between which, were called *Gules* or *Guales*.

GULES, in Heraldry, ſignifies the Colour *Red*. See COLOUR and RED.

The ſame Colour, in the Coats of Noblemen, is, by ſome, called *Ruby*; and in thoſe of ſovereign Princes *Mars*: but this is no ſtanding Practice. See METAL, PRETIOUS STONE, &c.

In Engraving, *Gules* is expreſs'd by perpendicular Strokes drawn from the Top of the Eſcucheon to the Bottom, with the Letter G.

This Colour is reputed a Symbol of Charity, Valour, Hardineſs, Generoſity; and repreſents Blood Colour, Cinnabar and true Scarlet. It is the firſt of all Colours uſed in Armory; and is of that account, that antiently it was prohibited any Perſon to wear *Gules* in his Coat Armour, unleſs he were a Prince, or had Permiſſion from the Prince. *Spelman* in his *Aſpilogia*, ſays this Colour was particularly honour'd by the *Romans*, as it had been before by the *Trojans*; and that they painted the Bodies of their Gods, and of their Generals that triumph'd, with Vermillion—Under the Conſuls, the *Roman* Soldiers wore *Red*; whence they were denominated *Ruſſati*. *John de Bado Aureo* adds, that the Red Garment, which the *Greeks* call *Phœnician*, and we Scarlet, was firſt uſed by the *Romans*, to prevent ſeeing of the Blood iſſue from Wounds in Fight.

In effect, *Gules* has always been eſteem'd an Imperial Colour; the Emperors were cloathed, ſhod, and had their Appartments furniſh'd with Red: Their Edicts, Diſpatches, Signatures, and Seals, were of Red-Ink, and Red Wax; whence the Name *Rubricks*. See RUBRIC.

Fa. *Monet* derives the Word *Gules*, *Gueules*, from the Hebrew *Gulud*, and *Guludit*, a reddiſh Pellicle or Skin appearing on a Wound when it begins to heal: But F. *Meneſtrier* reproaches him, that there were no ſuch Words in the *Hebrew* Tongue. This, however, is not true: All the Eaſtern Languages, the *Hebrew*, *Chaldee*, *Syriac*, and *Arabs*, ſay גָּלַד. *Gheled*, for *Cutis*, *Pellis*; when the *Arabic Gulud*. And in the general, the Word *Gules* ſignifies Red among moſt of the oriental Nations: The *Arabs* and *Perſians* give the Name to the Roſe.

Others, with *Nicod*, derive the Name *Gules* from *Gule*, the Throats of Animals, being generally Red; whence the Latin *Cuſculium*, of the Greek κοκκος, Scarlet Grain.

GULLET. See OESOPHAGUS.

GULPH, or GULF, in Geography, an Arm or Part of the Ocean running up within the Land.—Such is the *Gulph* of *Venice*, called alſo the *Adriatic Sea*; the *Gulph* of *Lyons*, the *Gulph* of *Mexico*, of *Florida*, &c. See OCEAN.

A *Gulph* is ſtrictly diſtinguiſhed from a *Sea*, in that that the latter is larger. See SEA. From a *Bay*, or Sinus, it is again diſtinguiſhed by its being greater than the ſame. See BAY.

Some will have it eſſential to a *Gulph*, to run into the Land thro' a Streight or narrow Paſſage. See STREIGHT.

The Sea is always moſt dangerous near *Gulphs*, by reaſon of the Currents being penn'd up by the Shores. The Word is form'd of the *Greek* κόλπος; which *Guichart* again derives from the *Hebrew* עוב, *Gob*. *Du Cange* derives it from the barbarous Latin *Gulfum* or *Gulfus*, which ſignifies the ſame Thing.

GUM, GUMMI, a vegetable Juice exſuding thro' the Pores of certain Plants, and there hardening into a tenacious tranſparent Maſs. See PLANT.

*Gum* is properly one of the Juices of the Bark: It is drawn thence by the Sun's Warmth, in Form of a glutinous Humour; and by the ſame Cauſe is afterwards inſpiſſated, concocted, and render'd tenacious

The Character of *Gums*, whereby they are diſtinguiſhed from Reſins and other vegetable Juices, is, that they are diſſoluble in Water, and at the ſame Time inflammable by Fire. See MENSTRUUM, WATER, and FIRE.

In the general they are more viſcid, and leſs friable, and generally diſſoluble in any aqueous Menſtruum; whereas Reſins are more ſulphurous, and require a ſpirituous Diſſolvent. *Boerhaave* conſiders a *Gum* as a ſort of ſaponaceous Fat; which beſide its oily Principle in common with a Reſin, has ſome other Ingredient that renders it miſcible with Water. See RESIN.

GUMS are different, according to the different Trees, Roots, &c. they ouze from: Some Authors diſtinguiſh them into *Aqueous*, and *Reſinous Gums*: The firſt, thoſe diſſoluble in Water, Wine, and the like Fluids; The ſecond, thoſe only diſſoluble in Oil.

To theſe two ſome add a third *anomalous* Kind, *viz.* thoſe ſoluble with much Difficulty either in Water or Oil.

Among the Claſs of *Gums* are uſually ranked, *Gum-Anima*, *Arabic*, *Gutta*, *Adraganth*, *Ammoniac*, *Aſſa Fœtida*, *Bdellium*, *Balm*, *Benjoin*, *Camphor*, *Copal*, *Elemy*, *Frankincenſe*, *Euphorbium*, *Galbanum*, *Lacca*, *Manna*, *Myrrh*, *Olibanum*, *Sagapenum*, *Sanguis Draconis*, *Sarcocolla*, *Stacte*, *Storax*, *Tacamahacha*, *Turpentine*. See each deſcribed under its proper Article.

*Theophraſtus* ſpeaks of a way of multiplying Plants, perform'd *per Lachrymas*, by means of the *Gum* or Reſin; but *Agricola* takes this to be only practicable where there are Seeds in the *Gum*.

GUM-*Anima*, or *Animi*, is a reſinous Juice ouzing from a Tree by the *Portugueze* called *Courbari*, growing in divers Parts of *America*.

This *Gum* is very hard and tranſparent, of an agreeable Smell, not unlike Amber: It neither diſſolves in Water nor Oil, and conſequently is not properly accounted a *Gum*. In lieu of this, they frequently ſubſtitute *Copal*.

GUM-*Arabic*, call'd alſo *Thebaic*, *Sarracenaic*, *Babyloniſh*, and *Achantine*, from the Places or the Tree which produce it, is the Juice of a little Tree growing in *Egypt*, of the *Caſſia* Kind, called in Latin *Acacia foliis Scorpioides Leguminoſa*. 'Tis very tranſparent, glutinous upon the Tongue, almoſt inſipid to the Taſte, and twiſted ſomewhat in form ner of a Worm.

It

It is eſteem'd good to incraſſate, to ſtop the Pores, blunt the Points of too pungent Medicines, and temper the Acrimony of the Trachea in Coughs, &c.

GUM-*Gutta*, or *Gutta-Gamba*, or *Gutta-Gemou*, or *Gamandra*, popularly *Gamboche*, is a reſinous *Gum* brought from the Kingdom of *Siam*, &c. in large Pieces faſhion not unlike Saucidges, hard, brittle, and very yellow.

It ouzes from Inciſions made in a kind of prickly Shrub, which climbs up the neighbouring Trees. It purges violently both upwards and downwards; and is particularly uſed in Dropſies, the Itch, &c. but it is dangerous.

It ſerves alſo to make a yellow Colour, for painting in Miniature. See MINIATURE.

GUM-*Senegal*, is the *Gum* ordinarily ſold by the Druggiſts for *Gum-Arabic*, which it reſembles very nearly both as to Form and Virtue: It is either white bordering on the yellow, or of a deep Amber Colour, tranſparent, &c. It ouzes out of a prickly Shrub common enough in *Africa*. The *Gum* is brought us from *Senegal*, whence its Name.—

GUMMO-*Reſin*, or *Gum-Reſin*, is a harden'd Juice of a middle Nature between a *Gum* and a *Reſin*, being both diſſoluble in aqueous Menſtruums like a *Gum*; and in oleaginous ones like a *Reſin*.

Such are MASTIC, CAMPHOR, STORAX, &c.

Some Naturaliſts make a Claſs of *Irregular* GUMMO *Reſins*, being ſuch as diſſolve, tho' with Difficulty, and not perfectly, both in aqueous and oleaginous Liquors; as *Bdellium*, *Myrrh*, &c.

GUM, among Gardeners, is a Diſeaſe incident to Fruit Trees, of the Stone kind, as Peaches, Plumbs, Apricots, Cherries, &c. See DISEASE, &c.

The *Gum* is a kind of Gangrene, ariſing from a Corruption of the Sap, which extravaſates and hardens. It uſually begins on ſome naked or broken Part, and ſpreads it ſelf to the reſt. To avoid its ſpreading, *M. Quintinie* directs to cut off the morbid Branch two or three Inches below the Part affected.

This *Gum* is no more than a thick, diſtemper'd, viſcid Juice, which not being able to make its way through the Fibres of the Body of the Tree, to feed and ſupply them, is obliged, by the Protruſion of other ſucceeding Juice, to burſt its Veſſels, which lie between the Wood and Bark, and to ouze out upon the Bark.

When the Diſtemper ſurrounds the Graft, it admits of no Remedy: When it is only on one Side of a Bough, the *Gum* muſt be taken off to the Quick of it; ſome Cow-dung clap'd on the Wound, and cover'd over with a linnen Cloth, and tied down.—

GUN, a Fire-Arm, or Weapon of Offence, which forcibly diſcharges a Ball, Shot, or other offenſive Matter, thro' a Cylindrical Barrel, by means of Gun-powder. See BALL, GUN-POWDER, ARM, &c.

GUN is a general Name, under which are included divers, or even moſt Species of Fire-Arms: They may be divided into *great* and *ſmall*.

*Great*-GUNS, called by the general Name *Cannon*, make what we call *Ordnance*, or *Artillery*; under which come the ſeveral Sorts of *Cannon*, as Cannon-Royal, Demi-Cannon, &c. *Culverins*, *Demi-Culvers*, *Sakers*, *Minions*, *Falcons*, &c. See ORDNANCE; ſee alſo CANNON, CULVERIN, &c.

Small Arms include

*Muskets*, *Musketoons*, *Carabines*, *Blunderbuſſes*, *Fowling-Pieces*, &c. See CARABINE, MUSKET, FOWLING-PIECE, &c.

*Piſtols* and *Mortars* are almoſt the only Kinds of regular Weapons charged with Gun-powder, that are excepted from the Denomination of *Guns*. See MORTAR and PISTOL.

For the Hiſtory and Invention of *Guns*, } ſee { CANNON and GUN-POWDER.
For the Uſe and Application of *Guns*, } ſee { GUNNERY.

GUNNERS, Officers of the Tower, and other Garriſons, whoſe Buſineſs is to manage and look after the Ordnance mounted on the Lines and Batteries, which are all fix'd and ready with Cartouches and Ball, for Service, on the ſhorteſt Warning.—One or more of them are on Duty Day and Night. See ORDNANCE and TOWER.

*Maſter*-GUNNER *of England*, is an Officer appointed to teach and inſtruct all ſuch as deſire to learn the Art of Gunnery, and to adminiſter to every Scholar an Oath; which, beſide the Duty of Allegiance, obliges him not to ſerve any foreign Prince or State without Leave; nor to teach the Art of Gunnery to any, but ſuch as have taken the ſaid Oath; and to certify to the Maſter of the Ordnance, the Sufficiency of any Perſon recommended to be one of his Majeſty's *Gunners*.

The *Gunner*, Sir *J. Moor* obſerves, ſhould know his Pieces, and their Names, which are taken from the Height of the Bore, the Names of the ſeveral Parts of a Piece of Ordnance, how to tertiate his Gun, and how to diſpart it. See ORDNANCE, TERTIATE, DISPART, &c.

GUNNERY, the Art of ſhooting with Guns and Mortars, *i. e.* of charging, directing, and exploding thoſe Fire-Arms to the beſt Advantage. See GUN and MORTAR.

GUNNERY is ſometimes conſidered as a part of the military Art, and ſometimes of Pyrotechny. See WAR and PYROTECHNY.

To the Art of *Gunnery* belongs the Knowledge of the Force, and Effect of Gun-powder, the Dimenſions of Pieces, and the Proportions of Powder and Ball they carry; with the Methods of Managing, Charging, Pointing, Spunging, &c. See GUN-POWDER, CHARGE, POINTING, SPUNGE, &c.

Some Parts of *Gunnery* are brought under mathematical Conſideration, which among Mathematicians are called abſolutely by the Name *Gunnery*, *viz.* the Method of elevating or raiſing the Piece to any given Angle, and of computing its Range; or of raiſing and directing it ſo, as it may hit a Mark or Object propoſed.

The Inſtruments chiefly uſed in this Part of *Gunnery*, are the Callipers or Gunners Compaſſes, Quadrant, and Level; the Methods of applying which ſee under the Articles CALLIPER, LEVEL, and QUADRANT.

The Line or Path in which the Bullet flies, whatever Direction or Elevation the Piece is in, is found to be the ſame with that of all other Projectiles, *viz.* a Parabola. See PARABOLA.

Hence, the particular Laws obſerved in the Motion or Flight of the Ball, its Velocity, Extent, &c. with the Rules for hitting Objects, are delivered under the Article PROJECTILE.

*Maltus*, an *Engliſh* Engineer, is mentioned as the Perſon who firſt taught any regular Uſe of Mortars, in the Year 1634; but all his Knowledge was experimental and tentative; he knew nothing of the Curve the Shot deſcribes in its Paſſage, nor of the Difference of Range at different Elevations. And moſt of the Gunners and Engineers employ'd about Batteries, &c. to this Day go by no better Rules: If the Range does not hit right, they raiſe or lower the Piece, till they bring it to a Truth: And yet there are certain Rules, founded on Geometry, for all theſe Things; moſt of which we owe to *Galileo* Engineer to the Grand Duke of *Tuſcany*, and his Diſciple *Torricellius*.

A Ball or Bomb going out of a Piece, we find, never proceeds in a ſtreight Line towards the Place it is levelled at, but begins to riſe from its Line of Direction the Moment it is out of the Mouth of the Piece.—This ſome account for thus: The Grains of Powder nigheſt the Breech, taking Fire firſt, preſs forward, by their precipitated Motion, not only the Ball, but likewiſe thoſe Grains which follow the Ball along the Bottom of the Piece; where ſucceſſively taking Fire, they ſtrike, as it were, the Ball underneath, which becauſe of a neceſſary Vent, has not the ſame Diameter, as the Diameter of the Bore; and ſo inſenſibly raiſe the Ball towards the upper Edge of the Mouth of the Piece, againſt which it ſo rubs in going out, that Pieces very much uſed, and whoſe Metal is ſoft, are obſerved to have a conſiderable Canal there, gradually dug by the Friction of Balls. Thus the Ball going from the Cannon, as from the Point of the Parabola E, Tab. *Fortification*, Fig. 13. raiſes it ſelf, in its Progreſs, to the Vertex G; after which it deſcends by mix'd Motion.

Ranges made from the Elevation of 45 Deg. are the greateſt; and thoſe made from Elevations equally diſtant from 45 Deg. are equal; that is, a Piece of Cannon, or a Mortar, level'd to the 40th Deg. will throw a Ball, or Bomb, the ſame Diſtance, as when they are elevated to the 50th Deg. and as many at 30 as 60, and ſo of others.

It has been ſhewn, that to find the different Ranges of a Piece of Artillery in all Elevations, we muſt, 1*ſt*. Make a very exact Experiment by firing off a Piece of Cannon, or Mortar, at an Angle well known, and meaſuring the Range made, with all the Exactneſs poſſible; for by one Experiment well made, we may come at the Knowledge of all others, in the following Manner.

To find the Range of a Piece, at any other Elevation required, ſay, as the Sine of double the Angle under which the Experiment is made, is to the Sine of double the Angle of an Elevation propoſed, ſo is the Range known by the Experiment, to the other required.

GUN-POWDER, a Compoſition of Salt-Peter, Sulphur, and Charcoal, mixed together, and uſually granulated; which eaſily takes Fire, and rarifies or expands with great Vehemence, by means of its Elaſtic Force. See ELASTICITY, RAREFACTION, &c.

'Tis to this *Powder* we owe all the Action, and Effect of Guns, Ordnance, &c. ſo that the modern military Art, Fortification, &c. depend wholly thereon. See GUN, ORDNANCE, FORTIFICATION, &c.

The Invention of *Gun-powder* is aſcribed, by *Polydore Virgil*, to a Chymiſt, who having accidentally put ſome of this Compoſition in a Mortar, and cover'd it with a Stone; it happen'd to take Fire, and blew up the Stone.

*Thevet* ſays, the Perſon here ſpoke of, was a Monk of *Frybourg*, named *Conſtantine Anelzen*: But *Belleforet* and other Authors, with more Probability, hold it to be *Bartholdus Schwartz*, or the Black: At leaſt it is affirm'd, he

he firſt taught the Uſe of it to the *Venetians*, in the Year 1380, during the War with the *Genoeſe*; and that it was firſt imployed in a Place antiently called *Foſſa Caudeana*, now *Chioggia*, againſt *Laurence de Medicis*; and that all *Italy* made Complaints againſt it, as a manifeſt Contravention of a fair Warfare.

But what contradicts this Account, and ſhews *Gun-powder* of an older Æra, is, that *Peter Meſſius*, in his various Readings, mentions, that the *Moors* being beſieged in 1343, by *Alphonſus* XI. King of *Caſtile*, diſcharged a ſort of Iron Mortars upon them, which made a Noiſe like Thunder: which is ſeconded by what *Don Pedro* Biſhop of *Leon* relates in his Chronicle of King *Alphonſus* who reduced *Toledo*, *viz.* that in a Sea Combat between the King of *Tunis*, and the *Mooriſh* King of *Sevil*, above 400 Years ago, thoſe of *Tunis* had certain Iron Tuns or Barrels, wherewith they threw Thunder-bolts of Fire.

*Du Cange* adds, that there is mention made of it in the Regiſters of the Chambers of Accounts in *France* as early as the Year 1338. See CANNON.

To ſay no more, it appears that our *Roger Bacon* knew of *Gun-powder* 150 Years before *Schwartz* was born: That excellent Friar mentions the Compoſition in expreſs Terms, in his Treatiſe *de Nullitate Magiæ*, publiſh'd at *Oxford* in 1216. 'You may raiſe Thunder and Lightning at pleaſure, 'ſays he, by only taking Sulphur, Nitre, and Charcoal, 'which ſingly have no Effect, but mix'd together, and 'confined in a cloſe Place, cauſe a Noiſe and Exploſion 'greater than that of a Clap of Thunder.'

There are divers Compoſitions of *Gun-powder*, with reſpect to the Proportions of the three Ingredients; to be met with in Pyrotechnical Writers: But the Proceſs is much the ſame in all.

The Sulphur and Salt-peter being purified, and reduced to Powder, are put, with the Charcoal-Duſt, in a Mortar, moiſten'd with Water or Spirits of Wine, or the like, and pounded 24 Hours together; taking Care to wet the Maſs from time to time, to prevent its taking Fire: Laſtly, ſqueezing it through a Sieve, it is formed into little Grains, or Globules; which being dried, the Powder is compleat; and the leaſt Spark being ſtruck thereon from a Steel and Flint, the whole will be immediately inflam'd, and burſt out with extreme Violence.

The Effect is not hard to account for: The Charcoal part of the Grain whereon the Spark falls, catching Fire like Tinder, the Sulphur and Nitre are readily melted, and the former alſo breaks into Flame; and at the ſame time the contiguous Grains undergo the ſame Fate. Now 'tis known that Salt-peter, when ignited, rarifies to a prodigious Degree. See SALT-PETER, and RARIFICATION.

Sir *J. Newton* reaſons thus on the Point: The Charcoal and Sulphur in *Gun-powder*, eaſily take fire, and kindle the Nitre; and the Spirit of the Nitre being thereby rarified into Vapour, ruſhes out with an Exploſion much after the manner that the Vapour of Water ruſhes out of an Æolipile; the Sulphur alſo being volatile, is converted into Vapour, and augments the Exploſion: Add that the acid Vapour of the Sulphur, namely, that which diſtils under a Bell into Oil of Sulphur, entring violently into the fix'd Body of the Nitre, lets looſe the Spirit of the Nitre, and excites a greater Fermentation, whereby the Heat is farther augmented, and the fix'd Body of the Nitre is alſo rarified into Fume, and the Exploſion thereby made more vehement and quick.

For if Salt of Tartar be mixed with *Gun-powder*, and that Mixture be warmed till it takes Fire, the Exploſion will be more violent and quick than that of *Gun-powder* alone, which cannot proceed from any other Cauſe than the Action of the Vapour of the *Gun-powder* upon the Salt of Tartar, whereby that Salt is rarified. See PULVIS FULMINANS.

The Exploſion of *Gun-powder* ariſes, therefore, from the violent Action whereby all the Mixture being quickly and vehemently heated, is rarified and converted into Fume and Vapour; which Vapour, by the Violence of that Action, becoming ſo hot as to ſhine, appears in the Form of Fume. See FIRE.

M. *de la Hire* aſcribes all the Force and Effect of *Gun-powder*, to the Spring or Elaſticity of the Air, incloſed in the ſeveral Grains thereof, and in the Intervals or Spaces between the Grains: The Powder being kindled, ſets the Springs of ſo many little Parcels of Air a-playing, and dilates them all at once; whence all the Effect; the *Powder* it ſelf only ſerving to light a Fire which may put the Air in Action; after which the whole is done by the Air alone. See AIR.

GUN-POWDER is a Commodity of ſuch Conſequence, both in reſpect of Speculation, of War, and of Commerce; (the Conſumption thereof being incredible,) that it will deſerve a more particular Detail—To make *Gun-powder* duely, then, Regard is to be had, that the *Salt-Peter* be pure, and in fine large Cryſtals or Shootings: Otherwiſe, it is to be purified, by taking away its fix'd or common Salt, and earthy Parts, thus: Diſſolve 10 Pounds of Nitre, in a ſufficient Quantity of fair Water, ſettle, filtrate, and evaporate it in a glazed Veſſel, to the Diminution of half, or till a Pellicle appear on it: The Veſſel may then be taken off from the Fire, and ſet in a Cellar: In twenty-four Hours the Cryſtals will ſhoot, which ſeparate from the Liquor; and after the like manner may the Liquor be cryſtalliz'd ſeveral Times, till all the Salt be drawn forth: This done, put it into a Kettle, and that on a Furnace with a moderate Fire, which gradually encreaſe till it begins to ſmoke, evaporate, looſe its Humidity, and grow very white: It muſt be kept continually ſtirring with a Ladle, for fear it ſhould return to its former Figure, whereby its Greaſineſs will be taken away; after that, ſo much Water is to be poured into the Kettle, as will cover the Nitre, and when 'tis diſſolv'd and reduc'd to the Conſiſtency of a thick Liquor, it muſt be ſtirred with a Ladle, without Intermiſſion, till all the Moiſture is again evaporated, and it be reduced to a dry and white Meal.

The like Regard is to be had to the Sulphur, chuſing that which is in huge Lumps, clear and perfectly yellow, not very hard nor compact, but porous; nor yet too much ſhining; and if when ſet on the Fire, it freely burns away all, leaving little or no reſident Matter, 'tis a ſign of its Goodneſs; ſo likewiſe if it be preſſed between two Iron Plates that are hot enough to make it run, and in the running appear yellow, and that which remains of a reddiſh Colour, it may be concluded to be fit for the purpoſe—But, in caſe the ſame be foul and impure, it may be prepared in this manner; Melt the Sulphur in a large Iron-Ladle or Pot over a very gentle Coal-fire well kindled, but not flaming; then ſcum off all that riſes on the Top, and ſwims upon the Sulphur; take it preſently after from the Fire, and ſtrain it through a double Linnen-Cloth, letting it paſs at leiſure; ſo will it be pure, the groſs filthy Matter remaining behind in the Cloth.

For the Charcoal, the third Ingredient, ſuch ſhould be choſen as is large, clear, free from Knots, well burnt, and cleaving.

There are three Kinds of *Powder*, viz. *Cannon-Powder*, *Musket-Powder*, and *Piſtol-Powder*, of each of theſe again there are two Sorts, a *ſtronger* and a *weaker*; all which Differences ariſe only from the various Proportions.

The Proportions are thus: In the ſtronger *Cannon-Powder*, to every hundred Pounds of Salt-Peter, 25 Pounds of Sulphur are generally allowed, with the ſame Quantity of Charcoal; and in the weaker *Cannon-Powder*, to every hundred Pounds of Salt-Peter, 20 Pounds of Sulphur, and 24 of Charcoal. As for the ſtronger *Musket-Powder*, an hundred Pounds of Salt-Peter require 18 Pounds of Sulphur, and 20 of Charcoal; and in the weaker there go to an hundred Pounds of Salt-Peter, 15 of Sulphur, and 18 of Charcoal. In the ſtronger *Piſtol-Powder*, an hundred Pounds of Salt-Peter require 12 of Sulphur, and 15 of Coal; whereas the weaker has an hundred Pounds of Salt-Peter, only 10 of Sulphur, and but 18 of Charcoal.

Other Authors preſcribe other Proportions: *Semienowitz*, for Mortars, directs an hundred Pounds of Salt-Peter, 25 of Sulphur, and as many of Charcoal: For great Guns, an hundred Pounds of Salt-Peter, 15 of Sulphur, and 18 of Salt-Peter: For *Muskets* and *Piſtols*, an hundred Pounds of Salt-Peter, 8 of Sulphur, and 10 of Charcoal.

*Miethius* extols the Proportion of one Pound of Salt-Peter to three Ounces of Charcoal; and two, or two and a quarter of Sulphur: than which, he affirms, no *Gun-powder* can poſſibly be ſtronger.

He adds, that the uſual Practice of making the *Gun-powder* weaker for Mortars, than Guns, as in the Example above, is without any Foundation, and renders the Expence needleſly much greater: For, whereas to load a large Mortar, 24 Pounds of common Powder is required, and conſequently to load it ten times 240 Pounds; he ſhews, by Calculation, that the ſame Effect would be had by 180 Pounds of the ſtrong *Powder*.

*As to the Proceſs of making the Gun-powder:* All the Ingredients are firſt to be finely powder'd, then moiſtened with fair Water, or Vinegar, or Spirit of Wine, or with Water and Spirit of Wine mixed together, or Urine, which is uſual; afterwards all muſt be well beat for the Space of 24 Hours at leaſt, and then granulated after the following manner: A Sieve is to be prepared with a Bottom of thick Parchment made full of round Holes, and the former beaten Maſs moiſten'd before-hand with 20 Ounces of Spirit of Wine, 12 of Spirit of Wine-Vinegar, 13 of Spirit of Nitre, 2 of Spirit of Sal Armoniack, and 1 Ounce of Camphire diſſolved in Spirit of Wine, and let all theſe be mingled together. Otherwiſe, take 40 Ounces of Brandy, and one of Camphire, and let them be mixt and diſſolved for the ſaid Purpoſe: When the whole Compound is made up into Balls as big as Eggs, put them into the Sieve, and with them a wooden Ball; which move up and down about the Sieve, ſo that it may break the Balls of Powder, and make it paſs thro' the little Holes in Corns.

For greater Quantities, Mills are uſually provided, by means of which, more Work may be perform'd in one Day, than a Man can do in an hundred. See MILL.

*Gun-Powder* may alſo be made of ſeveral Colours, but the Black is the moſt ſerviceable of any. To make *White-Powder*, proceed thus:

Take ten Pounds of Salt-Peter, one of Sulphur, and two of the Saw-duſt of Elder or the like Wood powder'd fine; mix them together, and uſe the former Method—Or thus, with ten Pounds of Nitre, and a Pound and a half of Sulphur dried and finely powder'd, mix two Pounds of Saw-duſt, *&c.* or inſtead of that, rotten Wood dried and powdered, with two Pounds and three Ounces of Salt of Tartar; whereof make *Powder* to be kept cloſe from the Air.

'Tis alſo to be noted, that in making *Piſtol-Powder*, if you would have it ſtronger, it ſhould be ſtirred up ſeveral Times while in the Mortar, and moiſten'd with Water diſtill'd from Orange or Lemmon-peels in an Alembick, and then beat for 24 Hours, as aforeſaid.

*Corn-Powder* is of ſo much greater Force than when in Duſt or Meal, that 'tis concluded, the larger Grains are ſtronger than the ſmaller; for which Reaſon *Cannon-Powder* is granulated larger than other Powders; and therefore *Powder* in loading ſhould not be beat home into the Piece, ſo as to bruiſe the Grains.

There are three Ways to prove the Goodneſs of *Gunpowder*, 1. By Sight, for if it be too black, it is too moiſt, or has too much Charcoal in it; ſo alſo if rubbed upon white Paper, it blackens it more than good *Powder* does: but if it be a kind of Azure Colour, ſomewhat inclining to Red, 'tis a ſign of good *Powder*. 2. By Touching, for if in cruſhing it with your Fingers-Ends, the Grains break eaſily and turn into Duſt without feeling hard, it has too much Coal in it; or if in preſſing under your Fingers upon a ſmooth hard Board, ſome Grains feel harder than the reſt, or as it were dent your Fingers-Ends, the Sulphur is not well mixed with the Nitre, and the *Powder* is naught. 3. By Burning, wherein little Heaps of *Powder* are laid upon White Paper three Inches or more aſunder, and one of them fired; which if it only fires all away, and that ſuddenly and almoſt imperceptibly, without firing the reſt, and make a ſmall thundering Noiſe, and a white Smoke riſes in the Air almoſt like a Circle, the Powder is good; if it leaves black Marks, it has too much Coal, or is not well burnt: If it leaves a Greaſineſs, the Sulphur or Nitre are not well cleanſed or ordered. Again, if two or three Corns be laid on Paper an Inch diſtant, and Fire be put to one of them, and they all fire at once, leaving no Sign behind, but a white ſmoaky Colour in the Place, and the Paper not touched; the *Powder* is good. So alſo if fired in a Man's Hand and it burns not: but if black Knots appear which burn downwards in the Place where Proof was made after firing, 'tis not ſtrong enough, but was Nitre.

To recover damaged *Powder*, the Method of the *Powder*-Merchants is to put part of the *Powder* on a Sailcloth, to which they add an equal Weight of what is equally good; and with a Shovel mingle it well together, dry it in the Sun, and barrel it up, keeping it in a dry and proper Place.

Others again, if it be very bad, reſtore it by moiſt'ning it with Vinegar, Water, Urine, or Brandy; then they beat it fine, ſearce it, and to every Pound of *Powder*, add an Ounce, an Ounce and half, or two Ounces (according as 'tis decay'd) of melted Salt-Peter; afterwards theſe Ingredients are to be moiſten'd and mixed well, ſo that nothing can be diſcern'd in the Compoſition; which may be known by cutting the Maſs, and then they granulate as aforeſaid.

In Caſe the *Powder* be in a manner quite ſpoiled, the only way is to extract the Salt-Peter with Water according to the uſual manner, by boiling, filtrating, evaporating, and cryſtallizing; and then with freſh Sulphur and Charcoal, to make it up a-new again.

GUNTERS-LINE, call'd alſo *Line of Lines*, and *Line of Numbers*, is a graduated *Line* uſually placed on Scales, Rules, Sectors, *&c.* See SCALE, RULE, *&c.*

This *Line* is only the Logarithms transfer'd upon a Ruler, from the Tables, ſo as to anſwer much the ſame Purpoſes inſtrumentally, as the Logarithms themſelves do arithmetically.—What the Logarithms do by Addition and Subſtraction, is done in this *Line* by turning a Pair of Compaſſes this way and that. See LOGARITHM.

This *Line* has been contrived various Ways, for the Advantage of having it as long as poſſible— As, firſt, on the two-foot Ruler, contrived by *Edm. Gunter*, and called *Gunter's-Scale*; whence alſo the *Line* itſelf took its popular Denomination *Gunter's-Line*. See GUNTER's-*Scale*.

After this, *Wingate* doubled the *Line*, or laid it together, ſo as one might either work right on, or a-croſs. Then it was projected in a Circle, by *Oughtred*, and made to ſlide by the ſame Author: And laſtly, projected in a kind of Spiral, by *Brown*.

The Method of uſing or applying it, is much the ſame in all; except that in *Gunter's* and *Wingate's* way; common Compaſſes are uſed: In *Oughtred's* and *Brown's*, flat Compaſſes, or an opening Index; and in the Sliding-Rules no Compaſſes at all. See SLIDING-RULE.

### *Deſcription of* GUNTER's-*Line, or the Line of Numbers.*

The *Lines* repreſented, is uſually divided into an hundred Parts, whereof every Tenth is number'd, beginning with 1 and ending with 10: So that if the firſt great Diviſion 1, ſignify one tenth of any whole Number or Integer, the next will ſignify 2, two tenths; 3, three tenths, *&c.* and the intermediate Diviſions ſo many 100 Parts of the ſame Integer, or Tenths of one of the former Tenths. For Numbers greater than 10, the Sub-diviſions muſt ſignify Integers, and the greater Diviſions 10 Integers, ſo that the whole *Line* will expreſs 100 Integers; and if you would have it ſtill more, then the Sub-diviſions to be each 10 Integers, and each great Diviſion 100, ſo that the whole be 1000; and after the ſame Manner, may it be extended to 10000, by making each Sub-diviſion 100.

### *A whole Number under four Figures being given, to find the Point on the Line of Numbers that repreſents the ſame.*

Look for the firſt Figure of the Number among the large figured Diviſions; this leads you to the firſt Figure of your Number. For the ſecond, count ſo many Tenths from that Diviſion forwards, as that ſecond Figure amounts to. For the third Figure, count from the laſt Tenth ſo many Centeſms as the third Figure contains: And ſo for the fourth Figure, count from the laſt Centeſm ſo many Millions as the fourth Figure has Units, or is in Value; that will be the Point where the Number propounded is, on the *Line* of Numbers.

For an Example—To find the Point repreſenting the Number 1728—for 1000 take the firſt grand Diviſion marked 1 on the *Line*; then for 7 reckon ſeven Tenths forwards, this is 700; for 2, reckon two Centeſms from the ſeventh Tenth; and for 8, eſtimate the following Centeſm to be divided into 10 Parts, if it be not expreſſed, which in *Lines* of ordinary Length cannot be done; and 8 of that ſuppoſed 10 Parts, is the preciſe Point for 1728, the Number propoſed to be found; and the like of any other Number.

To find a Fraction, conſider that the *Line* properly only expreſſes decimal Fractions, as thus, $\frac{1}{10}$, or $\frac{1}{100}$, or $\frac{1}{1000}$, and nearer the Rule cannot well come than as one Inch, one Tenth, one Hundred, or one Thouſand Part of an Inch: So that for other Fractions, as Quarters, Half-Quarters, *&c.* you muſt either eſtimate them as near as you can reaſonably, or elſe reduce them into Decimals.

### *Uſe of* Gunter's-Line, *or the Line of Numbers.*

1° *Two Numbers being given*, to find a third geometrically proportional to them; and to three a fourth Number, to four a fifth, *&c.*—Extend the Compaſſes on the *Line* from one Number to another; then that Extent applied upwards or downwards, as you would either increaſe or diminiſh the Number from either of the Numbers, the moveable Point will fall on the third proportional Number required. Again, the ſame Extent applied the ſame way from the third, will give a fourth; and from the fourth a fifth, *&c.*

For Example—Let the two Numbers 2 and 4 be propoſed to find a third Proportional, *&c.* to them; extend the Compaſſes on the firſt Part of the *Line* of Numbers, from 2 to 4; which done, and the ſame Extent being applied upwards from 4, the moveable Point will fall on 8, the third Proportional required; and from 8 it will reach to 16, the fourth Proportional; and from 16 to 32 the fifth, *&c.* Contrariwiſe, if you would diminiſh, as from 4 to 2, the moveable Point will fall on 1, and from 1 to $\frac{5}{10}$ or .5; and from .5 to .25, *&c.*

But, generally, in this, and moſt other Works, make uſe of the ſmall Diviſions in the middle of the *Line*; that you may the better eſtimate the Fractions of the Numbers you make uſe of; for how much you miſs in ſetting the Compaſſes to the firſt and ſecond Term, ſo much the more you will err in the fourth; therefore the middle Part will be moſt uſeful. For Example; as 8 to 11, ſo is 12 to 16, .50, if you imagine one Integer to be divided but into 10 Parts, as they are on the *Line* on a two foot Rule.

2° *One Number being given to be multiplied by another, to find the Product*—Extend the Compaſſes from 1 to the Multiplicator; and the ſame Extent applied the ſame way from the Multiplicand, will make the moveable Point fall on the Product: Thus, if 6 be given to be multiplied by 5; extending the Compaſſes from 1 to 5, the ſame Extent will reach from 6 to 30, the Product ſought.

3° *One*

3° *One Number being given to be divided by another, to find the Quotient*—Extend the Compaſſes from the Diviſor *E. gr.* 25. to 1, and the ſame Extent will reach from the Dividend *E. gr.* 750, to the Quotient 30; or, extend the Compaſſes from the Diviſor to the Dividend, the ſame Extent will reach the ſame way from 1 to the Quotient.

4° *Three Numbers being given, to find a fourth in direct Proportion*—Extend the Compaſſes from the firſt Number, ſuppoſe 7, to the ſecond, *v. g.* 14: that done, the ſame Extent applied the ſame way from the third, 22, will reach to the fourth Proportional ſought, *viz.* 44.

5° *Three Numbers being given, to find a fourth in Inverſe Proportion*—Extend the Compaſſes from the firſt of the given Numbers, ſuppoſe 60, to the ſecond of the ſame Denomination, *viz.* 30; if the Diſtance be applied from the third Number backwards, 5, it will reach to the fourth Number ſought, 25.

6° *Three Numbers being given, to find a fourth in duplicate Proportion*— If the Denominations of the firſt and ſecond Terms be Lines, extend the Compaſſes from the firſt Term to the ſecond, of the ſame Denomination: This done, that Extent being applied twice the ſame way from the third Term, the moveable Point will fall on the fourth Term required. *E. gr.* the Area of a Circle, whoſe Diameter is 14, being 154, what will the Content of a Circle be, whoſe Diameter is 28; applying that Extent the ſame way from 154 twice, the moveable Point will fall on 616, the fourth Proportional or Area ſought.

7° *To find a mean Proportional between two given Numbers*—Biſſect the Diſtance between the given Numbers, the Point of Biſection will fall on the mean Proportional ſought. Thus the Quotient of the two Extremes divided by one another. Extremes being 8 and 32, the middle Point between them will be found 16.

8° *To find two mean Proportionals between two given Lines*—Triſſect the Space between the two given Extremes; the two Points of Triſſection will give the two Means required—Thus if 8 and 27 be the two given Extremes, the two Means will be found 12 and 18.

9° *To find the Square Root of any Number under* 1000000—The Square Root of a Number is always a mean Proportional between 1, and the Number whoſe Root is required; yet with this general Caution, that if the Figures of the Number be even, that is, 2, 4, 6, 8, 10, &c. then you muſt look for the Unit at the beginning of the Line, and the Number in the ſecond Part or Radius, and the Root in the firſt Part; or rather reckon 10 at the End to be Unity; and then both Root and Square will fall backwards towards the Middle in the ſecond Length or Part of the Line—If they be odd, the Middle 1 will be moſt convenient to be counted Unity, and both Root and Square will be found from thence forwards towards 10— On this Principle the Square Root of 9 will be found to be 3; the Square Root of 64, to be 8, &c.

10° *To find the Cube Root of any Number under* 1000000000-The Cube Root is always the firſt of two mean Proportionals between 1 and the Number given, and therefore to be found by triſſecting the Space between them. Thus the Cube Root of 1728 will be found 12; the Root of 17280, nearly 26; the Root of 172800 almoſt 56.

Though the Point on the Line repreſenting all the ſquare Numbers is in one Place, yet by altering the Unit, it produces various Points and Numbers for their reſpective Roots. —The Rule to find this, is to put Dots, or ſuppoſe them put over the firſt Figure to the Left-hand, the fourth Figure, the ſeventh, and the tenth: If then the laſt Dot on the Left-hand falls on the laſt Figure, as it does in 1728, the Unit muſt be placed at 1 in the Middle of the Line, and the Root, the Square, and the Cube, will all fall forwards toward the End of the Line.

If it fall on the laſt but 1, as in 17280, the Unit muſt be placed at 1 in the beginning of the Line, and the Cube in the ſecond Length; or the Unit may be placed at 10 at the End of the Line; and then the Root, the Square, and Cube, will all fall backwards, and be found in the ſecond Part, between the middle and the End of the Line. —Thus will the Cube Root of 8 be found 2; that of 27 3; that of 64, 4; that of 125, 5; that of 216, 6, &c.

*For particular Uſes of* Gunter's-*Line in the Meaſuring of Timber, Gauging of Veſſels*, &c. See Sliding-Rule.

*For other Uſes in* Geometry, Trigonometry, &c. See Sector *and* Gunter's-Scale.

Gunter's-*Quadrant*, is a Quadrant made of Wood, Braſs, or the like; being partly a Stereographic Projection on the Plane of the Equinoctial, the Eye ſuppoſed in one of the Poles: So that the Tropick, Ecliptick, and Horizon, are Arches of Circles, but the Hour-Circles all Curves, drawn by means of ſeveral Altitudes of the Sun for ſome particular Latitude every Day in the Year. See Stereographic and Projection.

The Uſe of this Inſtrument is to find the Hour of the Day, the Sun's Azimuths, &c. and other common Problems of the Globe; as alſo to take the Altitude of an Object in Degrees.

*See its Deſcription and Uſe more at large under the Article Gunter's*-Quadrant.

Gunter's-*Scale*, called alſo by Navigators abſolutely the *Gunter*, is a large Plain Scale, with divers Lines thereon; of great Uſe in working Queſtions in Navigation, &c. See Scale and Sailing.

On one Side the Scale repreſented Tab. *Trigonometry*, Fig. 35. are the Line of Numbers, marked Numbers; the Line of artificial Sines, marked Sines; the Line of artificial Tangents, marked Tangents; the Line of artificial verſed Sines, marked V. S. the artificial Sines of the Rhumbs, marked S. R. the artificial Tangents of the Rhumbs, marked T. R. the Meridian Line in *Mercator*'s Chart, mark'd Merid. and equal Parts marked E. P.—To which, on the ſhorter Scales, of a Foot long, are uſually added Lines of Latitudes, Hours, and Inclinations of Meridians.

On the Backſide of the Scale are the Lines uſually found on a Plain Scale. See Plain-Scale.

The Lines of artificial Sines, Tangents, and Numbers are ſo fitted on this Scale, that by means of a Pair of Compaſſes, any Problem, whether in right-lined or ſpherical Trigonometry, may be ſolved very expeditiouſly, and with tolerable Exactneſs; whence the Inſtrument becomes extremely uſeful in all Parts of Mathematicks where Trigonometry is concerned; as Navigation, Dialling, Aſtronomy. See Trigonometry, &c.

The ſame Lines are alſo occaſionally laid down on Rulers to ſlide by each other; hence called *Sliding-Gunters*; So as to be uſed without Compaſſes: but he that underſtands how to uſe them with, may, by what we have ſaid of *Everard*'s and *Coggeſhall*'s *Sliding-Rules*, uſe them without. See Sliding-*Rule*.

### *Uſe of* Gunter's-*Scale*.

1° *The Baſe of a right-lined right-angled Triangle being given*, 30 *Miles, and the oppoſite Angle thereto* 26 *Degrees; to find the Length of the Hypothenuſe.*

The trigonometrical Canon or Proportion is thus—As the Sine of the Angle, 26 Deg. is to the Baſe 30 Miles, ſo is Radius to the Length of the Hypothenuſe—Set one Foot of the Compaſſes, therefore, on the 26th Deg. of the Line of Sines; and extend the other to 30 on the Line of Numbers, and the Compaſſes remaining thus opened, ſet one Foot on 90 Deg. on the End of the Line of Sines, and extend the other on the Line of Numbers: This will give 68 Miles and a half, for the Length of the Hypothenuſe ſought.

2° *The Baſe of a right-angled Triangle being given*, 25 *Miles, and the Perpendicular* 15; *to find the Angle oppoſite to the Perpendicular.*

As the Baſe 25 Miles is to the Perpendicular 15 Miles, ſo is Radius to the Tangent of the Angle ſought.—Extend the Compaſſes, then, on the Line of Numbers, from 15 the Perpendicular given, to 25 the Baſe given; and the ſame Extent will reach the contrary way, on the Line of Tangents, from 45 Deg. to 31 Deg. the Angle ſought.

3° *The Baſe of a right-angled Triangle being given, ſuppoſe* 20 *Miles, and the Angle oppoſite to the Perpendicular* 50 *Deg. to find the Perpendicular.*

As Radius is to the Tangent of the given Angle 50 Deg. ſo is the Baſe 20 Miles to the Perpendicular ſought—Extend the Compaſſes then on the Line of Tangents, from the Tangent of 45 Deg. to the Tangent of 50 Deg. and the ſame Extent will reach on the Line of Numbers the contrary way, from the given Baſe 20 Miles, to the required Perpendicular 23 ¾ Miles.

*Note*, The Extent on the Line of Numbers is here taken from 20 to 23 ¾ forwards; that the Tangent of 50 Deg. may be as far beyond the Tangent of 45 Deg. as its Complement 40 Deg. wants of 45 Deg.

4° *The Baſe of a right-angled Triangle being given, ſuppoſe* 35 *Miles, and the Perpendicular* 48 *Miles; to find the Angle oppoſite to the Perpendicular.*

As the Baſe 35 Miles is to the Perpendicular 48 Miles, ſo is Radius to the Tangent of the Angle ſought—Extend the Compaſſes from 35, on the Line of Numbers, to 48; the ſame Extent will reach the contrary way on the Line of Tangents, from the Tangent of 45 Deg. to the Tangent of 36 Deg. 5 Min. or 53 Deg. 55 Min.— To know which of thoſe Angles the Angle ſought is equal to, conſider that the Perpendicular of the Triangle being greater than the Baſe, and both the Angles oppoſite to the Perpendicular, and the

Baſe,

Baſe, making 90 Deg. the Angle oppoſite to the Perpendicular will be greater than the Angle oppoſite to the Baſe; and conſequently the Angle 53 Deg. 55 Min. will be the Angle ſought.

5° *The Hypothenuſe of a right-angled Spherical Triangle being given, ſuppoſe* 60 *Degrees, and one of the Sides* 20 *Degrees, to find the Angle oppoſite to that Side.*

As the Sine of the Hypothenuſe 60 Deg. is to Radius, ſo is the Sine of the given Side 20 Deg. to the Sine of the Angle ſought—Extend the Compaſſes on the Line of Sines, from 60 Deg. to the Radius or 90 Deg. and the ſame Extent will reach on the Line of Sines the ſame Way, from 20 Deg. the given Side, to 23 Deg. 10 Min. the Quantity of the Angle ſought.

6° *The Courſe and Diſtance of a Ship being given, to find the Difference of Latitude and Departure.*

Suppoſe a Ship ſails from the Latitude of 50 Deg. 10 Min. North, S. S. W. 48. 5 Miles: As Radius is to the Diſtance ſailed 48. 5 Miles, ſo is the Sine of the Courſe, which is two Points, or the ſecond Rhumb, from the Meridian, to the Departure—Extend the Compaſſes from 8 on the artificial Sine Rhumb-Line, to 48.5 on the Line of Numbers; the ſame Extent will reach the ſame way from the ſecond Rhumb, on the Line of artificial Sines of the Rhumbs, to the Departure Weſting 18.6 Miles.

Again, As Radius is to the Diſtance ſailed 48.5 Miles, ſo is the Coſine of the Courſe 67 Deg. 30 Min. to the Difference of Latitude—Extend your Compaſſes from the Radius, on the Line of Sines, to 48.5 Miles on the Line of Numbers; the ſame Extent will reach the ſame way, from 67 Deg. 30 Min. on the Line of Sines, to 44.8 on the Line of Numbers; which converted into Degrees, by allowing 60 Miles to a Degree, and ſubſtracted from the given North-Latitude 50 Deg. 10 Min. leaves the Remainder 49 Deg. 25 Min. the preſent Latitude.

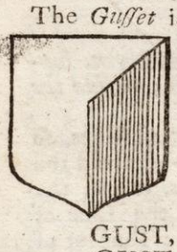
7° *The Difference of Latitude and Departure from the Meridian being given; to find the Courſe and Diſtance.*

A Ship from the Latitude of 59 Deg. North, ſails North-Eaſtward till ſhe has altered her Latitude 1 Deg. 10 Min. or 70 Miles, and is departed from the Meridian 57.5 Miles, to find the Courſe and Diſtance—As the Difference of Latitude 70 Miles is to Radius, ſo is the Departure 57.5 Miles to the Tangent of the Courſe 39 Deg. 20 Min. or three Points and a half from the Meridian—Extend the Compaſſes from the fourth Rhumb, on the Line of artificial Tangents of the Rhumbs, to 70 Miles on the Line of Numbers, the ſame Extent will reach from 57.5 on the Line of Numbers to the third Rhumb and a half on the Line of artificial Tangents of the Rhumbs, to 70 Miles on the Line of Numbers.

Again; as the Sine of the Courſe 39 Deg. 20 Min. is to the Departure 57.5 Miles, ſo is the Radius to the Diſtance 90.6 Miles—Extend the Compaſſes from the third Rhumb and a half, on the artificial Sines of the Rhumbs, to 57.5 Miles on the Line of Numbers; that Extent will reach from the Sine of the eigth Rhumb, on the Sines of the Rhumbs, to 90.6 Miles on the Line of Numbers.

8° *Three Sides of an oblique Spherical Triangle being given, to find the Angle oppoſite to the greateſt.*

Suppoſe the Side A B, *Fig.* 36. be 40 Deg. the Side B C 60 Deg. and the Side A C 96 Deg. to find the Angle ABC. Add the three Sides together, and from half the Sum ſubſtract the greater Side A C, and note the Remainder: Thus, *e. gr.* the Sum will be 196 Deg. half of which is 98 Deg. from which ſubſtracting 96 Deg. the Remainder is 2 Deg.



Then extend the Compaſſes from the Sine of 90 Deg. to that of the Side A B 40 Deg. and applying this Extent to the Sine of the other Side B C 60 Deg. you will find it reach to a fourth Sine 34 Deg.

Again; from this fourth Sine extend the Compaſſes to the Sine of half the Sum, *i. e.* the Sine of 72 Deg. the Complement of 98 Deg. to 180; this ſecond Extent will reach from the Sine of the Difference 2 Deg. to the Sine of 3 Deg. 24 Min. againſt which, on the verſed Sines, ſtands 151 Deg. 50 Min. the Quantity of the Angle ſought.

GUN-SHOT *Wounds.* See WOUND.

GUSSET, in Heraldry, one of the Abatements of Honour. See ABATEMENT.

The *Guſſet* is ſaid to be appropriated to laſcivious, effeminate, or wanton Perſons. It is form'd of a Line drawn from the Dexter, or ſiniſter Angle of the Chief, and deſcending diagonally to the chief Point; from whence another Line falls perpendicularly upon the Baſe: as in the Figure adjoining.

GUST, GUSTATION, } ſee { TASTE and GOÛT, TASTING.

GUST-*Hoſpes*, is uſed by *Bracton* and other antient Writers, for a Stranger, or *Gueſt*, who lodges with a Perſon the ſecond Night.

In the Laws of St. *Edward*, publiſhed by *Lambard*, it is written *Geſt*. See UNCOUTH.

GUTTA, a Latin Term for what in *Engliſh* we call *Drop*. See DROP.

GUTTÆ *Anglicanæ*, the *Engliſh Drops*, or the *Volatile Engliſh Drops*, or *Goddard's Drops*, is a medicinal Liquor prepared from divers Ingredients; of ſovereign Efficacy againſt Coagulations of the Blood, malignant Fevers, and particularly the Small-Pox, Obſtructions, Epilepſies, drouſy Diſeaſes, Vapours, &c.

The Inventor of theſe celebrated Drops, was Dr. *Goddard*, a Phyſician of *London*. The Secret of their Compoſition was purchaſed by King *Charles* II. at the Price of 6000 Pounds Sterling; whence the Denomination *Guttæ Anglicanæ*.

This coſtly Receipt, we ſhall here gratify the Reader withal, *a Meilleure Marche*: 'Take five Pounds of human 'Cranium of a Perſon hang'd, or dead of ſome violent 'Death, two Pounds of dried Vipers, two Pounds of Hart's-'Horn, and two of Ivory; mince the whole ſmall, put it in 'two or three Retorts, and diſtill it in a reverberatory Fur-'nace, with the ſame Precautions as are ordinarily uſed in 'diſtilling Hart's-Horn and Vipers, to extract their volatile 'Salt. When the Veſſels or Receivers are cold, unlute 'em, 'and ſhake them well, in order to looſen the volatile Salt 'from the Sides of the Veſſels. Pour the whole into a large 'Glaſs Cucurbite, and filtrate it through a Brown-Paper, in 'order to ſeparate the Oil, which is here uſeleſs: Put the 'filtrated Liquor in a Glaſs Retort, with a Sand Heat, and 'fit a Glaſs Retort thereto, as a Recipient: Take care all 'Things be well luted, and make a Cohobation of the ſaid 'Matters at three Times. But, by the way, add all the 'Salt before ſeparated from the Receivers; and after the 'ſaid three Cohobations, unlute the Retorts, and pour the 'whole into a Matraſs with a long Nock, to which fit a ſu-'table Capital, and a Receiver; lute all the Joinings on 'each Side with a wet Bladder, and ſet the Veſſel in a Sand 'Heat: By this means, the volatile Salt will be ſublimed, 'and ſtick to the Capital, and upper Part of the Matraſs. 'Continue the Fire till Spirit enough have roſe to fuſe and 'diſſolve the Salt which aroſe firſt: Then take all the Fire 'out of the Furnace, that the Diſtillation may proceed no 'further; which is a Circumſtance of the laſt Importance; 'without which the Medicine would be weaken'd by too 'much Phlegm. *Biet*, in the *Mem. de Trev. An.* 1713.

As to the Doſe of this Remedy, they begin with 7 or 8 Drops, increaſing, by Degrees, to 40 or 50, on preſſing Occaſions, as in Apoplexies, Lethargies, Weakneſſes, &c.

The real Compoſition of the *Guttæ*, however, is ſomewhat controverted. *M. Tournefort* aſſures us, that he had the Secret communicated to him by Dr. *Liſter*; and that it is no other than the volatile Spirit of Raw-Silk rectified with Oil of Cinnamon, or other eſſential Oil. See SILK.

The ſame Author aſſures us, he had found by Experience that the *Guttæ Anglicanæ* were not in any reſpect preferable to the common volatile Spirits of Hart's-Horn and Sal. Ammoniac, except that the Smell is more ſupportable.—*Mem. de l'Acad. An.* 1700.

GUTTÆ, in Architecture, are Ornaments in form of little Cones, uſed in the Plafond of the Doric Cornice, or on the Architrave, underneath the Triglyphs; repreſenting a ſort of Drops, or Bells; uſually ſix in Number. See TRIGLYPH.

They are ſometimes alſo called *Lachrymæ*, Tears; and *Campanæ* or *Campanulæ*, Bells. *Leon. Baptiſta Alberti* calls them *Nails*.

GUTTA *Serena*, is a Diſeaſe of the Eyes, conſiſting in an entire Prevention of Sight, without any apparent Fault or Diſorder of the Eyes, excepting that the Pupil looks ſomewhat larger and blacker than before. See EYES, &c.

Its Cauſe is ſuppoſed to be a Compreſſion or Obſtruction of the Optic Nerves, which prevents the due Flux of the animal Spirits into the Retina. *Pitcairn* aſcribes it to an Indiſpoſition of the Retina, occaſioned by the Veſſels thereof being too much diſtended with Blood.

The *Gutta Serena* is one of the moſt dangerous and untractable of all the Diſeaſes of the Eyes. The Cure, according to *Pitcairn*, muſt be attempted with Mercurials and even Salivation, and with Decoctions of Guiacum.

The *Muſcæ Volitantes* are a pathogonomic Sign of a growing *Gutta Serena*. The *Greeks* call it *Amauroſis*. See AMAUROSIS.

GUTTERS, in Building, are a kind of Vallies in the Roofs of Buildings, ſerving to drain and receive the Rain-Waters. See ROOF.

GUTTURAL *Letters*, are thoſe pronounced, or form'd as in were in the Throat. See LETTER.

Dr. *Wallis* diſtinguiſhes the Vowels in our Language into Labial, Palatine, and *Guttural*; according to the three ſeveral Degrees of opening of the Mouth to pronounce them, larger, middle, and leſs. On this Footing he makes three *Guttural* Vowels, and three Labial, and as many Palatines. See VOWEL.

GUTTUS,

GUTTUS, a Latin Term uſed among Antiquaries, for a ſort of Vaſe uſed in the *Roman* Sacrifices; to take the Wine and ſprinkle it, *Guttatim*, Drop by Drop, upon the Victim. See SACRIFICE.

*Vigenere* on *T. Livy*, gives the Figure of the *Guttus*, as repreſented on divers Medals and other antient Monuments.

GUTTY, or GUTTE, in Heraldry, is when a thing is repreſented as charged or ſprinkled with Drops.

In Blazon, the Colour of the Drops is to be named: Thus, *Gutty* of Sable, of Gules, &c.

Some Authors will have red Drops called, *Gutty de Sang*, or Drops of Blood; black ones, *Gutty de Poix*, of Pitch; white, *Gutty d'Eau*, of Water, &c.

GUZES, in Heraldry, Roundles of a ſanguin or murry Colour. See ROUNDLE.

GWABR-MERCHED, a *Britiſh* Word, ſignifying a Payment or Fine made to the Lords of ſome Manors, upon the Marriage of their Tenants Daughters; as alſo upon their committing Incontinency. See MARCHET and LAIRWITE.

GYMNASIARCH, GYMNASIARCHA, in Antiquity, the Maſter, or chief of a *Gymnaſium*. See GYMNASIUM.

The *Greeks* did not rank the *Gymnaſiarcha* among the Number of Magiſtrates; tho' his Office was of great Conſideration, as having the Care of all their Youth, who were truſted to him to be form'd to Exerciſes of the Body.

He had two Officers under him, to aſſiſt him in the Government of the *Gymnaſium*: The firſt named *Xyſtarch*, and the ſecond *Gynaſtes*. The former was Maſter of the *Athletæ*, and preſided over the Wreſtling. See XYSTARCH, ATHLETA, &c.

The latter had the Direction of all the other Exerciſes; taking Care they were performed in due Time and Manner; that they were not too ſevere; that the Youth attempted nothing beyond their Strength; and that nothing were done that might be injurious to their Health.

They had ſeveral ſubaltern Officers or Servants under them, for the Service and Inſtruction of the Youth committed to them.

The Word is compounded of γυμνάσιον, and ἀρχη, Government.

GYMNASIUM, a Place of Exerciſe; or a Place fitted for performing Exerciſes of the Body. See EXERCISE.

Among the Antients, the *Gymnaſium* was a Place deſtined for this very Purpoſe, and where People were even taught and regularly diſciplin'd therein. See XYSTUS.

If we may credit *Solon* in *Lucian*'s *Anachars*, and *Cicero de Orat.* lib. 2. the *Greeks* were the firſt who had *Gymnaſia*; and among the *Greeks*, the *Lacedæmonians*; after them, the *Athenians*.

*Vitruvius* deſcribes the Structure and Form of the antient *Gymnaſiums* at length, *lib.* 15. c. 11.—The Word is Greek, γυμνάσιον, form'd of γυμνὸς, Naked; by reaſon they put off their Clothes, to practice with the more Freedom.

GYMNASTICE, GYMNASTICA, the *Gymnaſtic Art*; or the Art of performing the Exerciſes of the Body. See EXERCISE.

The *Gymnaſtica* comprehended all the Exerciſes, as Wreſtling; Running, both on Foot and on Horſeback; Fencing; the Diſcus, or Quoits; the Uſe of the Launce, &c. *Hoffman* reckons no leſs than 55 *Gymnaſtic* Exerciſes. See WRESTLING, DISCUS, &c.

It appears that they did not perform their Exerciſes quite naked ſo early as the Time of *Homer*, but always in Drawers; which they did not lay aſide before the 32d Olympiad. One *Orſippus* is ſaid to have been the firſt that introduced the Practice; for having been worſted by means of his Drawers undoing, and entangling him; he threw them quite aſide, and the reſt afterwards came to imitate him.

GYMNIC, GYMNICUS, ſomething belonging to the Exerciſes of the Body.

The *Gymnic* Games are thoſe wherein the Body is exerciſed; ſuch are Wreſtling, Running, Dancing, the Uſe of the Launce, and Quoit-Playing. See GAME.

It was thoſe made the chief Diverſions of the *Olympic*, *Nemæan*, *Pythian*, and *Iſthmæan* Solemnities; being called by the *Greeks* Πενταθλον, and the *Latins Quinquatrium*. See OLYMPIC, NEMÆAN, PYTHIAN, and ISTHMÆAN, &c.

GYMNOPÆDIA, a kind of Dance, in Uſe among the antient *Lacedæmonians*. It was performed during their Sacrifices, by young Perſons who danced naked, ſinging at the ſame Time a Song in Honour of *Apollo*. See DANCE.

One *Terpander* is recorded as the Inventor of the *Gymnopædia*.

GYMNOPÆDICE, a kind of Dance, in Uſe among the Antients.

*Athenæus* deſcribes it as a *Bacchic* Dance, perform'd by Youths ſtrip'd quite naked, with certain interrupted, tho' agreeable Motions, and Geſtures of the Body, the Arms and Legs being flouriſhed and directed after a peculiar Manner, repreſenting a ſort of real Wreſtling.

The Word is compounded of γυμνὸς, naked, and παῖς, Child.

GYMNOSOPHISTS, a Set of *Indian* Philoſophers, famous in Antiquity; denominated from their going barefooted. See PHILOSOPHER.

The Word *Gymnoſophiſt* is form'd of the Greek γυμνοσοφιστὴς; *q. d.* a Sophiſt, or Philoſopher, who goes naked.

This Name was given to the *Indian* Philoſophers, whom the exceſſive Heat of the Country obliged to go naked; as that of *Peripateticks* was given thoſe who philoſophiz'd Walking. See PERIPATETICKS, &c.

*Laertius*, *Vives*, &c. will not have *Gymnoſophiſt* to be the Name of any particular Sect, but a common Name of all the Philoſophers in the *Indies*: And hence divides them into *Brachmans* and *Germans*. See BRACHMANS.

Among the *Germans*, called alſo by *Clemens Alexand. Sarmanæ*, ſome were called *Hylobii*; by *Clemens Alexand. Allobii*, as inhabiting the Woods; which laſt ſeem to come neareſt to the Notion of *Gymnoſophiſts*. *Clemens* relates, that they neither inhabit Cities nor Towns, are cloathed moſtly with the Leaves of Trees, eat Acorns and Berries, and drink Water out of their Hands, abſtaining from all Marriage and Procreation.

*Apuleius Florid.* lib. 1. deſcribes the *Gymnoſophiſts* thus: 'They are all devoted to the Study of Wiſdom, both the 'elder Maſters, and the younger Pupils; and what to me 'appears the moſt amiable thing in their Character, is, 'that they have an Averſion to Idleneſs and Indolence: 'Accordingly, as ſoon as the Table is ſpread, ere a Bit of 'Victuals be brought, the Youth are all called together 'from their ſeveral Places and Offices, and the Maſters 'examine them what good they have done ſince the Sun-'riſe. Here one relates ſomething he has diſcovered by 'Meditation; another has learn'd ſomething by Demon-'ſtration: And as for thoſe who have nothing to alledge 'why they ſhould dine, they are turn'd out to Work faſting.'

The great Leader of the *Gymnoſophiſts*, according to *Jerom*, was one *Buddas*, call'd by *Clemens Butta*; who is rank'd by *Suidas* among the *Brachmans*. That laſt Author makes *Buddas* the Præceptor of *Manes* the *Perſian*, the Founder of the *Gymnoſophiſts*.

GYNÆCEUM, among the Antients, the Apartment of the Women; or a ſeparate Place, where the Women kept themſelves retired, and out of the Sight of the Men.

The Word is compounded of the Greek γυνὴ, a Woman, and οἶκος, an Houſe.

Under the *Roman* Emperors there was a particular Eſtabliſhment of *Gynæcea*; being a kind of Manufactories managed chiefly by Women, for the making of Clothes, Furniture, &c. for the Emperor's Houſhold. Mention is made of theſe *Gynæcea* in the *Theodoſian* Code, *Juſtinian*'s Code, and divers other Authors.

In Imitation hereof, divers of the modern Manufactories, particularly thoſe of Silk, where a Number of Women and Maids, aſſociated and form'd into a Body, are called *Gynæcea*.

GYNÆCIARIUS, a Workman employ'd in a *Gynæceum*.

In the antient *Gynæcea* there were Men to weave and ſhape; the reſt, as Spinning, &c. being performed by Women.

Criminals were ſometimes condemned to ſerve in the *Gynæcea*, much as now in the Gallies. Frequently, too, this was a kind of Service which Princes exacted of their Subjects, or Vaſſals, both Men and Women, whom they made to work for them in their *Gynæcea*.

GYNÆCOCRATUMENIANS, GYNÆCOCRATUMENI, an antient People of *Sarmatia Europæa*, inhabiting the Eaſtern Banks of the River *Tanais*, near its Opening into the *Palus Meotis*; thus called, as Authors relate, becauſe they had no Women among them.

The Word is formed of γυνὴ, a Woman; and κρατῦμενος, vanquiſh'd; of κρατεω, I overcome; *q. d.* overcome by a Woman.

Fa. *Hardouin*, in his Notes on *Pliny*, ſays they were thus called, by reaſon, after a Battle which they loſt againſt the *Amazons* on the Banks of the *Thermodoon*, they were obliged to have a venereal Commerce with them, in order to get them Children: *Et quod Victricibus obſequantur ad procurandam eis Sobolem.*

Fa. *Hardoun* calls them the Husbands of the *Amazons*, *Amazonum Connubia*. For, as that Author obſerves, the Word *Unde* muſt be retrench'd from *Pliny*; having been foiſted into the Text by People who were not Maſters of the Author's Meaning, *Unde Amazonum Connubia*.

They who take the *Amazons* for a fabulous People, will imagine the ſame of the *Gynæcocratumenians*. See AMAZON.

GYNÆCONOMUS, the Name of a Magiſtrate of *Athens*, who had the Cenſure and Inſpection of the Women.

There were ten *Gynæconomi*: Their Buſineſs was to inform themſelves of the Lives and Manners of the Ladies of that City, and to puniſh ſuch as misbehaved themſelves, or tranſgreſſed the common Bounds of Modeſty and Decency.

They had a Liſt hanging out, of the Names of all thoſe whom they had cenſured, or condemned to any Mulct, Forfeiture, Penance, or other Penalty.

The Word is compounded of the Greek Γυνὴ, Γυναίκος, a Woman; and νόμος, Law.

GYNÆCOCRACY, GYNÆCOCRATIA, a State where Women have, or may have, the ſupreme Command.

In this Senſe, *England* and *Spain* are *Gynæcocracies*: The *French* value themſelves, and think they are greatly happy that their Monarchy is not *Gynæcocratic*. See SALIC *Law*.

The Word is form'd of Γυνὴ, γυναικὸς, a Woman, and κράτος, Authority, Power, Government.

GYNGLIMUS, in Anatomy, &c. See GINGLYMUS.

GYPSUM, in natural Hiſtory, a Stone found in Quarries, which being burnt, and diluted, or wrought up with Water, ſerves to make the fine Plaſter of *Paris*. See PLASTER.

GYPSE, GIPSE, or GYPSUM, is alſo uſed for a coarſer ſort of Talk; or a ſhining tranſparent Stone chiefly found in the Quarries of *Montmartre* near *Paris*, among other Plaſter Stones.

Some confound this with the former, on account of the Conformity of its Name with the Latin *Gypſum*; but unhappily enough; as the *Gypſe* is not fit for the making of Plaſter.

This Stone being calcined in a Kiln, beaten in a Mortar, and ſifted, and mix'd up with Gum, or ſize Water and Colours, ſerves to counterfeit Marble, which it does to that Perfection, that both the Eye and Touch may be deceived. See MARBLE.

The Method of preparing it, will be ſhewn under the Article MOSAIC WORK.

GYROMANCY, or GYROMANTIA, a kind of Divination, performed by walking round, or in a Circle. See DIVINATION.

The Word is compounded of the Greek γύρος, a Circle, and μαντεία, Divination.

H.

H Is the 8*th* Letter of the Alphabet, and the 6*th* Conſonant. See LETTER and ALPHABET.

Varro, *de Re Ruſtica*, L. III. *C.* 1. calls the H *afflatus*. And *Martianus Capella* ſays it is pronounced by a gentle Contraction of the *Trachea*. — Hence it has been diſputed, whether or no the *h* be a real Letter.

Some will only have it an Aſpiration, or Spirit, in Regard its Sound is ſo weak. And accordingly the *Greeks*, now a-days at leaſt, do not place it in the Line of the other Letters, but put it over the Head of the following Letter: Tho' it ſhould ſeem they antiently wrote it in the ſame Line with the reſt.

The *Latin* Grammarians, as they were religious Imitators of the *Greeks*, have on their Authority generally rejected the *h*; and the Moderns have herein followed the *Latins*.

But we have already ſhewn that the *h*, like all the other Aſpirates, from the Time it is aſpirated, and for this very Reaſon that it is aſpirated, is not only a Letter, but a real Conſonant; it being a Motion, or Effort, of the *Larynx*, to modify the Sound of the Vowel that follows; as is evident in the Words *Hallebard*, *Hero*, *Holland*, &c. where the Vowel *e*, is apparently differently modified from what it is in the Words *Endive*, *Eating*, *Elect*, &c. and ſuch Modification is all that is eſſential to a Conſonant. See CONSONANT.

Upon the whole, the *H* is either a Letter, or *S* and *Z* are none; thoſe being no more than hiſſing Aſpirations: And they who exclude the *h* from among the Letters, as conceiving it only a Mark of Aſpiration, might as well exclude the Labial Conſonants *b* and *p*, and ſay they are only Marks of certain Motions of the Lips, &c. See ASPIRATION.

The *H*, then, is a Letter and a Conſonant, of the Guttural Kind, *i. e.* a Conſonant, to the Pronunciation whereof, the Throat concurs in a particular Manner, more than any other of the Organs of Voice. See GUTTURAL.

'Tis true, in many Words beginning with *h*, the Aſpiration is very weak, and almoſt inſenſible; the *h* in thoſe Caſes, not doing its Office: But it does not ceaſe to be a Conſonant on that Score, more than various other Conſonants, which we write, but do not pronounce; as the *k* in Phyſick, &c. and ſeveral other Letters, particularly in the *Hebrew*, *French*, &c.

Nor does it ceaſe to be a Conſonant, becauſe it does not hinder the Eliſion of the foregoing Vowel, when another Vowel follows in the ſubſequent Word; for then *m* would undergo the ſame Diſqualification.

Monſ. *Menage* diſtinguiſhes two Kinds of *h*; the one an Aſpirate, which he allows a Conſonant; the other a Mute, which he conſiders as a Vowel. — Now, 'tis certain, the aſpirated *h* is a Conſonant; but the Mute *h* is no Vowel, as having no peculiar or proper Sound diſtinct from that of the Vowel, or Diphthong, immediately following it. See VOWEL.

When the *h* is preceeded by a *c*, the two Letters together have the Sound of the *Hebrew* ש, with a Point over the right Horn; as in Charity, Chyle, &c.

In moſt Words derived from the *Greek*, and beginning in that Language with the Letter χ, the *ch* which begins them in *Engliſh*, has generally the Sound of a *k*, as in Echo, Chorus, &c. tho' it is ſometimes ſoften'd a little, as in *Cherſoneſus*, &c.

After a *p*, the *h* is always pronounced together with the *p*, like an *f*; as in Phraſes, *Philiſtins*, Phlegm, Phlebotomy, Philoſophy, *Phocæans*, &c. — Moſt Words of this Claſs, are either proper Names, or Terms of Art, borrow'd from the *Greek*, or the *Oriental* Languages; and wrote in *Greek* with a φ, and with a פ in the others. — In antient Authors we frequently meet with *h* put inſtead of f; as *haba*, for *faba*; but this is principally obſervable in the *Spaniſh* Tongue, where, moſt of the Words borrow'd from the *Latin*, beginning with an *f*, take the *h* in lieu of it: As *hablar* for *fabulari*; *habo* for *favus*; *hado* for *fatum*.

The *Aſpera*, or ſharp Accent of the *Greeks*, which is the ſame with our *h*, is alſo frequently changed for an *s*; as, Ἅλς, *Sal*; ἕπτα, *Septem*; ἕξ, *Sex*; ἕρπω, *Serpo*; ἥμιον, *Semis*; ὗς, *Sus*, &c. — The *h* is alſo uſed for ſome other Letters enumerated at large by Paſſerat, *de Litterarum inter ſe cognatione & permutatione*.

Antiently, the *H* was put for *Ch*; thus, of *Chlodovæus* was form'd *Hludovicus*, as 'tis read in all the Coins of the IXth and Xth Centuries; and it was on this Account, that they wrote *Hludovicus* with an *H*. — In Courſe of Time, the Sound of the *h* being much weaken'd, or entirely ſuppreſs'd, the *H* was dropt, and the Word was wrote *Ludovicus*. In like Manner we read *Hlotaire*, *Hlouis*, &c.

*Fa. Lobineau*, will have this Difference to have aroſe from the Differences in the Pronunciation. — Such, ſays he, as could not pronounce the Guttural, wherewith thoſe two Words begin, ſubſtituted a *c* for it; and they who pronounced it ſo, wrote it after the ſame Manner: But ſuch as were accuſtom'd to pronounce it, wrote it likewiſe. — He might have added, that ſuch as could not pronounce the Guttural, at length abſolutely rejected it, and both wrote and ſpoke *Louis*, *Lothaire*, &c.

Some learned Men have conjectured that the *H* ſhould have been detach'd from the Name; and that it ſignified Lord, from the Latin *Herus*, or the German *Herr*. Much as the D, which the *Spaniards* prefix to their proper Names, as *D. Phelipe* for *Don Philip*. — But as it is likewiſe found before the Names of ſeveral Cities, 'tis more probable the Letter was there uſed to denote the rough harſh Pronunciation of the antient *Franks*.

The *H* is ſometimes alſo found prefix'd to the C; as *Hcarolus*, *Hcalendæ*, &c. for *Carolus*, *Calendæ*, &c.

Among the Antients, the *H* was alſo a Numeral Letter, ſignifying 200, according to the Verſe.

H *quoque ducentos per ſe deſignat habendos.*

When a Daſh was added a Top, $\overline{H}$, it ſignified two hundred Thouſand. — *See what has been obſerved on this Subject, under the Letter* E.

HABAKKUK, or HHABAKKUK, one of the twelve leſſer Prophets whoſe Prophecies are taken into the Canon of the Old Teſtament. See PROPHET and PROPHECY.

The preciſe Time is not known when *Habakkuk* propheſied; but from his predicting the Ruin of the *Jews*, by the *Chaldæans*, it may be concluded he propheſied before *Zedekiah*, or about the Time of *Manaſſes*. — His Prophecy only conſiſts of three Chapters.

The Name is wrote in the *Hebrew* with ח, *kheth*; and ſignifies a Wreſtler, or *Grappler*. The *Greek* Tranſlators call him *Ambakoum*.

HABDALA, or HABHDALAH, a *Jewiſh* Ceremony, practiſed among the People, every Sabbath-Day Evening.

Towards the Cloſe of the Sabbath, when the Stars begin to appear, each Maſter of a Family lights a Torch, or Flambeau, or, at leaſt, a Lamp with two Wicks. — A little Box of Spices is prepared, or a Glaſs of Wine taken; then ſinging, or rehearſing a Prayer, and bleſſing the Wine and the Spices, they all ſmell them, and after a few Ceremonies perform'd about the Torch, or Lamp, they caſt a little of the conſecrated Wine into the Flame; every Body taſts; and thus they break up, wiſhing each other not good Night, but good Week.

The Word is *Hebrew*, and literally ſignifies *Separation*: It is form'd of בדל, *badal*, to ſeparate, divide; the Ceremony being look'd upon, as the Diviſion or parting of the Sabbath from the reſt of the Week. It was eſtabliſh'd to prevent their being too haſty in ending the Sabbath.

HABEAS *Corpus*, in Law, a Writ, which a Man indicted for a Treſpaſs before the Juſtices of Peace, or in a Court of Franchiſe, and impriſoned for it, may have out of the King's Bench, thereby to remove himſelf thither, at his own Coſts, to anſwer the Cauſe at the Bar thereof.

The Order in this Caſe, is, firſt to procure a *Certiorari*, out of the Chancery, directed to the ſaid Juſtices, for removing the Indictment into the King's Bench; and upon that to procure this Writ to the Sheriff, for cauſing his Body to be brought at a certain Day.

HABEAS *Corpora*, is alſo a Writ, that lays for bringing in a Jury, or ſo many of them, as refuſe to come upon the *venire facias*, for the Trial of a Cauſe brought to Iſſue. See JURY, &c.

HABENDUM, a Word of Courſe in a Conveyance. — In every Conveyance are two principal Parts, the *Premiſſes*, and the *Habendum*: The Office of the firſt is to expreſs the Name of the Grantor, the Grantee, and the Thing granted.

The *Habendum* is to limit the Eſtate, ſo that the general Implication, which, by Conſtruction of Law, paſſeth in the Premiſſes, is by the *Habendum* controlled and qualified. — As in a Leaſe to two Perſons; the *Habendum* to one for Life, alters the general Implication of the Jointenancy in Free-hold, which ſhould paſs by the Premiſſes, if the *Habendum* were not. See CONVEYANCE.

HABERE *facias Seſinam*, a Writ Judicial, which lies where a Man hath recovered Lands in the King's-Court; directed to the Sheriff, commanding him to give him the Seiſin thereof. See SEISIN.

This Writ iſſues ſometimes out of the Records of a Fine executory, directed to the Sheriff of the County, where the Lands lye; commanding him to give to the Cognizee, or his Heirs, Seiſin of the Land, whereof the Fine is levied.

The Writ lieth within the Year after the Fine, or Judgment, upon the *Scire facias*; and may be made in divers Forms.

There is alſo a Writ called *Habere facias Seiſinam, ubi Rex habuit annum, diem & vaſtum*; which is for the Delivery of Lands to the Lord of the Fee, after the King had taken his Due of his Lands who was convict of Felony.

HABERE *facias Viſum*, is a Writ that lies in divers Caſes, as in Dower, Formedon, *&c.* where a View is to be taken of the Land, or Tenements, in Queſtion. See VIEW.

HABERGE, or HAUBERGE, or HAUBERE, or HAUBERT, in the antient Cuſtoms, the ſame with *Habergeon*, viz. a Coat of Mail. See HABERGEON.

HABERGEON, or HAUBERGEON, or HABERGETUM, a Coat of Mail; or an antient Piece of defenſive Armour, in Form of a Coat, deſcending from the Neck to the Middle; form'd of little Iron Rings, or Maſhes, link'd into each other. See MAIL.

*Varro* makes the *Gauls* the firſt Inventors of the *Habergeon*.

The Antiquaries and Criticks are divided as to the Etymology of the Word. — *Spelman* derives it from *hame*, *haim*, or *hamecon*, Hook; and *berg*. *Menage*, &c. derive from *al*, or *alba*, all; and *bergen*, to cover. — *Fauchet* derives it from *albus*, by Reaſon the Maſhes, or Links, were white, poliſh'd, and ſhining.

Some of our Writers, and particularly *Du Cange*, make the *Habergeon*, a Head-piece, or Helmet, covering the Head and Shoulders; and derive the Word from the German *Hals*, Neck, and *bergen*, to cover. He adds, that in the Age of corrupt *Latin*, they wrote it *Halsberga*, *Albergellum*, *Ausbergatum*, &c.

HABILLIMENTS *of War*, in our antient Statutes, ſignify Armour, Harneſs, Utenſils, or other Proviſions, for War; without which there is ſuppoſed no Ability to maintain War. 3*d* Part. *Inſtit.* fol. 97.

HABIT, or HABITUDE, in Philoſophy, an Aptitude, or Diſpoſition, either of the Mind, or Body, acquired by a frequent Repetition of the ſame Act. See HABITUDE.

Some of the Schoolmen call it *Qualitative Habit*, *Habitus Qualitativus*; and define it a Quality adventitious to a Thing, fitting and diſpoſing it either to act, or ſuffer: Others define it an Affection of Mind, or Body, perſiſting by long Uſe and Continuance.

*Habits* may be diſtinguiſhed into thoſe of the Mind, and of the Body. — Thus Virtue is call'd a *Habit* of the Mind: Strength a *Habit* of the Body.

All natural *Habits*, whether of Body or Mind, are no other than the Body and Mind themſelves, conſider'd as either acting or ſuffering; or they are Modes of the Body or Mind, wherein it perſeveres till effaced by ſome contrary Mode. See MODE.

*Ariſtotle* enumerates ſix *Habits* of the Mind, *viz.* Underſtanding, Knowledge, Wiſdom, Prudence and Art: Which Diviſion the later Writers ſet aſide, and only admit of three Intellectual *Habits*, viz. *Science*, *Prudence*, and *Art*; agreeable to the three Kinds of Objects, about which the Mind has occaſion to be facilitated; which are either *Theoretical*, *Practical*, or *Effective*. See ART, SCIENCE, *&c.*

HABIT, in Medicine, is what we otherwiſe call the *Temperament*, or *Conſtitution* of the Body, whether obtain'd by Birth, or Manner of Living. See TEMPERAMENT and CONSTITUTION.

An ill diſtemper'd *Habit*, without any particular apparent Diſeaſe, the Phyſicians uſually call a *Cachexia*, or *Cacochymia*. See CACHEXIA and CACOCHYMIA.

A Thing is ſaid to *enter the Habit*, when it becomes intimately diffuſed throughout the Body; and is convey'd to the remoteſt Stages of Circulation.

HABIT is alſo uſed for a *Dreſs*, or *Garb*; or the Aſſemblage, or Compoſition of Garments, wherewith a Perſon is cover'd. See GARMENT.

In this Senſe we ſay, the *Habit* of an Eccleſiaſtic; of a Religious, *&c.* The military *Habit*, &c.

The Eccleſiaſtical *Habit* only commenced about the Time of *Gregory the Great*, i. e. it only began at that Time to be diſtinguiſhed from the Lay *Habit*, viz. in the VIth Century. — The Eſtabliſhment of the barbarous Nations was the Occaſion thereof: For the Laymen took the *Habit* of the Nations they had ſubmitted to; but the Prieſts kept to the *Roman* Dreſs.

The Abbot *Boileau* has an expreſs Treatiſe on the *Eccleſiaſtical Habit*, wherein he maintains, contrary to the common Opinion and Cuſtom, that the Eccleſiaſtic *Habit* ſhould be a ſhort one, and that a ſhort *Habit* is more decent than a long one.

HABIT, is particularly uſed for the uniform Garments of Religious, conformable to the Order whereof they make Profeſſion. See RELIGIOUS and ORDER.

The *Habit* of St. *Benedict*, of St. *Auguſtine*, &c.

In this Senſe, we ſay abſolutely ſuch a Perſon has taken the *Habit*, meaning he has enter'd upon a Novitiate in a certain Order. — So he is ſaid to quit the *Habit*, when he renounces the Order. See NOVITIATE, VOWS, *&c.*

The *Habits* of the ſeveral Religious, were not ſuppoſed to be calculated for Singularity or Novelty: The Founders of the Orders, who were at firſt chiefly Inhabitants of Deſarts and Solitudes, gave their Monks the *Habit* uſual among the Country People. Accordingly the Primitive *Habits* of S. *Anthony*, S. *Hilarion*, S. *Benedict*, &c. are deſcribed, by the antient Writers, as conſiſting chiefly of Sheep's Skins, the common Dreſs of the Peaſants, Shepherds, and Mountaineers of that Time: And the ſame they gave their Diſciples.

The Orders eſtabliſh'd in and about Cities, and inhabited Places, took the Habit wore by the Eccleſiaſticks at the Time of their Inſtitution. — Thus S. *Dominic* gave his Diſciples the *Habit* of regular Canons, which he himſelf had always bore to that Time. And the like may be ſaid of the *Jeſuites*, *Barnabites*, *Theatins*, *Oratorians*, &c. who took the common *Habit* of the Eccleſiaſticks at the Time of their Foundation. And what makes them differ ſo much from each other, as well as from the Eccleſiaſtical *Habit* of the preſent Times, is, that they have always kept invariably to the ſame Form; whereas the Eccleſiaſticks have been changing their Mode at every Turn.

HABITATION, a Dwelling-Place, or Houſe. See HOUSE, EDIFICE, BUILDING, *&c.*

HABITATION, is ſometimes alſo uſed for *Cohabitation*. See COHABITATION.

HABITUAL, ſomething that is become, or turn'd into a Habit, or Habitude. See HABITUDE, *&c.*

Thus, we ſay, a *Habitual*, or inveterate Diſeaſe: *Habitual* Sin, *&c.* An *Habitual* Diſpoſition is the ſame Thing with a Habitude it ſelf.

*Habitual Grace*, is that convey'd to us by Baptiſm, and afterwards augmented and improved by the Euchariſt, and other appointed Means. See GRACE.

The *Romiſh* Divines hold *Habitual Grace* neceſſary in Order to be ſaved; and Actual Grace, to the doing any Thing meritorious.

HABITUDE, HABITUDO, in the Schools, ſignifies the Reſpect, or Relation, which one Thing bears to another. See RELATION.

In this Senſe, *Habitude* is one of *Ariſtotle*'s Categories. See CATEGORY.

Some of the more preciſe, and accurate Schoolmen, conſider *Habitude* as a Genus; and ſub-divide it into two Species. Where it is conſider'd as Quieſcent, they call it *Reſpect*; where, as moved, *Relation*: To which ſome add a third Species, conſider'd with Reſpect of Figure, which they call *Mode*.

HABITUDE, is alſo uſed in Philoſophy, for what we popularly call *Habit*, viz. a certain Diſpoſition, or Aptitude, for the performing, or ſuffering, of certain Things; contracted by reiterated Acts of the ſame Kind. See HABIT.

*Habitudes* are diſtinguiſh'd into thoſe of the *Body* and the *Mind*.

Among thoſe of the *Mind*, call'd alſo intellectual *Habitudes*, are frequently number'd Memory, Knowledge, Prudence and Art. But others deny there are any ſuch Thing as proper intellectual *Habits*; and fix them all in the Brain.

Bodily *Habitudes* are innumerable: To theſe we refer all our *Arts*. See ART.

Virtues, and Vices, are conſider'd by the Philoſophers under the Notion of good and bad *Habitudes*. See VIRTUE and VICE.

The Archbiſhop of *Cambray* defines *Habitudes*, in the general, to be certain Impreſſions left in the Mind; by Means whereof, we find a greater Eaſe, Readineſs, and Inclination to do any Thing formerly done, by having the Idea ready at hand to direct us how it was done before, — Thus, *E. gr.* we form a *Habitude* of Sobriety, by having always before us the Inconveniencies of Exceſs; the Reflections whereof, being often repeated, render the Exerciſe of that Virtue more and more eaſy.

Fa. *Mallebranch* gives a more artful, and mechanical Theory of the *Habitudes*. — His Principle is, that they conſiſt in a Facility, which the Spirits have acquired, of paſſing eaſily from one Part of the Body to another. He argues thus: If the Mind act on, and move the Body, 'tis, in all Probability, by Means of a ſtock of animal

animal Spirits, lodg'd in the Brain, ready to be ſent at the Motion of the Will, by means of the Nerves which open or terminate in the Brain, into the Muſcles of the Body. See BRAIN and NERVE.

Now, an Influx of Spirits into a Muſcle, occaſions a Swelling; and, of Conſequence, a ſhortening of the Muſcle; and conſequently a Motion of the Part that Muſcle is faſten'd to. See MUSCULAR *Motion*.

Further, the Spirits do not always find all the Roads open and free, which they are to paſs thro'; whence that Difficulty we perceive of moving the Fingers with that Quickneſs neceſſary to play on a Muſical Inſtrument; or of moving the Muſcles neceſſary to pronounce the Words of a foreign Language. But, by Degrees, the Spirits, by their continual Flux, ſmoothen the Ways; ſo that at length they meet with no Reſiſtance at all. Now, 'tis this Facility the Spirits find of paſſing, when directed into the Members of the Body, that *Habitudes* conſiſt. See SPIRIT.

On this Hypotheſis, 'tis eaſy accounting for an Infinity of Phænomena relating to the *Habitudes*. — Why, for Inſtance, Children acquire new Habits with more Eaſe than grown Perſons: Why, 'tis difficult getting rid of inveterate Habits: Whence that incredible Quickneſs in the Pronunciation of Words, even without thinking of them, as is particularly obſervable in thoſe long accuſtom'd to Formula's, *&c.*

On this footing, the Faculty of Memory appears to have very much the Nature of a *Habitude*; inſomuch that in one Senſe it may paſs for a *Habitude*. See MEMORY. See alſo PASSION, NATURAL *Inclination*, &c.

HACHES, and HACHING. See HATCHES and HATCHING.

HACKNEY. See HAQUENY.

HACKNEY *Coach*. See *Hackney* COACH.

HADRIANEA, or HADRIANALIA, in Antiquity, Games inſtituted in Honour of the Emperor *Hadrian*, or *Adrian*. See GAMES.

There were two Sorts of *Hadrianalia*, the one held every Year, and the other every five Years.

HÆMATITES, or HÆMATITES *Lapis*, in Natural Hiſtory, the *Blood-Stone*; a ruddy Mineral in Form of a Stone; thus call'd, either on Account of its reſembling dry, curdled Blood, or of the Faculty it has of ſtanching Blood; from the *Greek*, αἷμα, *Sanguis*, Blood.

*Pliny* reckons five Kinds, *viz.* the *Ethiopic*, the *Androdomas*, or black, the *Arabic*, the *Elalites*, or *Milites*, and the *Chiſtos*; beſide that commonly call'd the *Magnes Hæmatites*; from the Property it has of attracting Iron.

The five Sorts differ chiefly in point of Hardneſs: The beſt, according to *Dioſcorides*, is that which is friable, hard, black, and ſmooth, without either gritty Parts, or Veins.

That commonly us'd by the Painters is factitious; being made of *Armenian* Bole, and other Drugs.

The Native, or Foſſil Kind, comes from *Egypt*, *Bohemia*, &c. It has divers Uſes in Medicine; being held cooling and aſtringent, and in that Quality preſcribed in Hæmorrhages. — It is given, in Subſtance, in Form of a fine Powder.

The Gilders uſe it for Burniſhers, to poliſh their Gold withal. *Bauſchius* has an expreſs Treatiſe on this Stone. See GILDING.

HÆMATOSIS, in Medicine, the Action whereby the Chyle is converted into Blood; call'd alſo *Sanguification*. See SANGUIFICATION.

The Word is form'd of the *Greek*, αἷμα, *Sanguis*, Blood.

The chief of the vital Actions, are the *Chyloſis*, and *Hæmatoſis*. See CHYLOSIS, BLOOD, *&c.*

HÆMOPTYSIS, or HÆMOPTOE, in Medicine, a ſpitting of Blood; occaſion'd by the Rupture, or Eroſion of ſome Veſſel of the Lungs; and accompanied, uſually, with a Cough, and a Senſe of Preſſure on the Breaſt. See BLOOD.

The *Hæmoptyſis* differs from a Vomiting of Blood, in that in the *Hæmoptyſis*, the Blood comes from the Lungs, and for that Reaſon is florid and frothy; whereas in the Vomiting of Blood, it comes from the Stomach, and is blackiſh.

The *Hæmoptyſis* is occaſioned by violent Shouts, or Cries; by Strains, Falls, vehement Coughs; by the Suppreſſion of ſome ordinary Evacuation, or by the Abundance of ſome ſharp corroſive Humor.

The *Hæmoptyſis* is either accidental, or habitual — The latter is a Symptom of the *Phthiſis*. It is beſt cured, according to *Morton*, by the *Cortex*: It is ſtopp'd by Aſtringents, as *Armen. Bol. Sang. Dracon. Lapis Hæmat.* &c. See PHTHISIS.

The Word comes from αἷμα, *Blood*; and πτυειν, *to ſpit*.

HÆMORRHAGE, in Medicine, a Flux of Blood, at any Part of the Body; ariſing either from a Rupture of the Veſſels, as when they are too full, or too much preſs'd; or from an Eroſion of the ſame, as when the Blood is too ſharp and corroſive. See FLUX and BLOOD.

The *Hæmorrhage*, properly ſpeaking, as underſtood by the *Greeks*, was only a Flux of Blood at the Noſe; but the Moderns extend the Name to any Kind of Flux of Blood, whether by the Noſe, Mouth, Lungs, Stomach, Inteſtines, Fundament, Matrix, or the like.

Hypochondriac, Scorbutic, and Cachectic Perſons, are liable to various and immoderate *Hæmorrhages*. — The Cure of *Hæmorrhages* ariſing from a Plethora, is by Evacuants, and particularly Phlebotomy, to cauſe a Revulſion. — That from an increas'd Velocity of a thin acrimonious Blood, is to be attack'd with Coolers, and Agglutinants.

The principal ſimple Remedies in *Hæmorrhages*, are *Album Græcum*, Spirit or Oil of Vitriol, *Calcanthum* rubified, Colophony pulverized, Oil of Turpentine, Decoction of *Catechu*, *Cortex Peruv.* &c. See STYPTICS.

A Ligature on the Limb has frequently a good Effect: So *Elect. Boylean. Pulvis Galeni*; *Elect. Styptic. Tinctur. Roſar. Epithem. de Sacchar. Saturn.* &c.

An *Hæmorrhage* at the *Anus*, is more uſually call'd a *Dyſentery*. See DYSENTERY.

The Word is compounded of the *Greek*, αἷμα, *Sanguis*, Blood; and ῥήγνυμι, or ῥυσσω, *frango*, *rumpo*, *erumpo*, I break, burſt forth, *&c.*

HÆMORRHOIDAL, an Epithet given to the Veins and Arteries of the *Inteſtinum Rectum*, and the Fundament; as being the Seat of the *Hæmorrhoids*. See HÆMORRHOIDS.

The *Hæmorrhoidal* Arteries are two; the one *internal*, the other *external*.

The internal is a Branch of the lower Meſenteric, which running along the *Rectum*, terminates at the Fundament; the external ſprings from the Hypogaſtric Artery.

The *Hæmorrhoidal* Veins are alſo internal and external. The internal carries back the Blood of the *Rectum* and Fundament, which it embraces regularly; and is inſerted ſometimes into the ſplenic Branch of the *Porta*, and ſometimes into the Meſenteric: The external brings back the Blood from the muſculous Parts about the Fundament, and terminates in the Hypogaſtric Vein.

HÆMORRHOIDS, in Medicine, a Diſeaſe of the Fundament, popularly call'd the *Piles*.

The *Hæmorrhoids* are a painful, periodical Tumor, in the lower Part of the *Inteſtinum Rectum*; uſually appearing externally in the *Anus*. — They may be conſider'd as a Sort of varicous Tumors in the *Hæmorrhoidal* Veins; ariſing from the too great Abundance of morbid Blood therein. See HEMORRHOIDAL *Veſſels*.

The Diſeaſe is either *ſimple*, as when the Veins alone are tumified; or *compound*, as when the neighbouring Parts become infected, or an Excreſcence ariſes therefrom, as a *Ficus*, *Criſta Galli*, *Condyloma*, or the like.

*Hæmorrhoids* are either *open*, *fluentes*, that is, yield Blood; or *blind*, *cæcæ*, where the Parts are only tumid. — In the firſt, the Veſſels of the *Rectum* are open; in the latter, there is ſome Obſtruction, which occaſions them to ſwell.

The *Hæmorrhoids* ſometimes are internal, and cauſe great Pain in going to Stool; eſpecially if the *Fæces* be indurated: After which they often appear externally, and Blood is ſeen upon the Excrements.

*Etmuller* is careful in diſtinguiſhing the genuine, hæmorrhoidal Flux, from a bloody Diarrhœa, frequent in ſcorbutic Caſes. — The *Hæmorrhoids* are uſually open'd by the Attrition of the Excrements in a Stool, ſo that the Blood flows at the ſame Time with the Excrements; but if it flow promiſcuouſly before, as well as after the Excrements, and without Pain, 'tis a ſcorbutic Flux.

Where the Flux is exceſſive, Phlebotomy, and Cupping, are good, by way of Revulſion; and internally, Aſtringents and Opiates. — Upon a Suppreſſion of the uſual Flux, without removing the Cauſe, the open *Hæmorrhoids* degenerate into the blind: In which Caſe they muſt be open'd again with Aloeticks, *&c.* Tamarinds are held excellent to aſſwage the Flux. Chalybeats ſtrike at the Cauſe of the Evil. Scrophulary, Onion, and Leek, are much commended.

The Word is form'd of the *Greek*, αἱμόῤῥοις, *Sanguinis profluvium*, Flux of Blood; which is compounded of αἷμα, *Blood*, and ῥέω, *I flow*.

HÆREDE *abducto*, is a Writ that lay for the Lord, who, having by Right the Wardſhip of his Tenant under Age, could not come by his Body, as being conveyed away by another. See RAVISHMENT *de Gard.*

HÆREDE *deliberando alii qui habet cuſtodiam terræ*, a Writ directed to the Sheriff, willing him to command one that had the Body of him who was ward to another,

to deliver him to him, whoſe Ward he was on Account of his Land. See WARD and GUARDIAN.

HÆREDIPETA, in our ancient Law-Books, the next Heir. *Et nullus* Hæredipeta *ſuo propinquo vel extraneo periculoſa ſane cuſtodia committatur.* Leg. H. *Cap.* 70.

HÆRESIARCH, *Hæreſiarcha*, of the *Greek*, Αἱρεσιάρχης, an Arch-Heretick. See HERETIC.

HÆRESIS, *Hereſy*, } See { HERESY.
HÆRETICUS, *Heretic*, } { HERETIC.

HÆRETICO *Comburendo*, is a Writ that lies againſt one who is an *Heretic*, viz. who having once been convicted of *Hereſy* by his Biſhop, and having abjured it, afterwards falling into it again, or ſome other, is thereupon committed to the ſecular Power. See HERETIC, *&c.*

Sir *Edward Coke* was of Opinion, that this Writ did not lye in his Time: But it is now formally taken away by Statute, *Car.* II.

HAGARD, in Falconry, a Hawk, or Falcon, not taken in the Neſt; but after ſhe had been inured to Liberty, and preying for her ſelf. See FALCONRY.

*Hagard* Hawks, are hard to tame, and bring under Diſcipline. See HAWK and FALCON.

The Word is *French*, and ſignifies *fierce*; ſome derive it from the Latin *agreſte*, wild: Others, from the German *hag*, Incloſure, fortified Place. — Whence, Monſ. *Huet* obſerves, the Word *Hagard* is ſometimes applied to a Man who becomes hardy and proud, in Confidence of the Strength of the Place he is in.

HAGIOGRAPHA, a Name given to Part of the Books of Scripture, call'd by the Jews *Chetuvim*. See SCRIPTURE, BIBLE, *&c.*

The *Jews* divide the Sacred Writings into three Claſſes: The *Law*, which comprehends the five Books of *Moſes*: The *Prophets*, which they call *Neviim*; and the *Chetuvim*, q. d. *Writings*, call'd by the *Greeks*, &c. *Hagiographa*, comprehending the Book of *Pſalms*, *Proverbs*, *Job*, *Daniel*, *Eſdras*, *Chronicles*, *Canticles*, *Ruth*, the *Lamentations*, *Eccleſiaſtes* and *Eſther*.

The *Jews* call theſe Books the *Writings*, by way of Eminence, as being wrote by immediate Inſpiration of the Holy Spirit. — Thus ſay *Kimhhi*, in his Preface to the *Pſalms*; *Maimonides*, in *More. Neb.* and *Elias Levita*, in his *Thisbi*, under the Word כתב.

They diſtinguiſh them, however, from the Prophets; in that their Authors did not receive the Matters contain'd in them, by the Way call'd Prophecy, which conſiſts in Dreams, Viſions, Whiſpers, Extaſies, *&c.* but by mere ſimple Inſpiration, and Direction of the Spirit. See INSPIRATION.

The Word is compounded of ἁγιος, *holy*; and γεφω, *I write.*

The Name is very antient: St. *Jerom* makes frequent Mention of it. — Before him, St. *Epiphanius* call'd theſe Books ſimply Γραφία.

HAGIOSIDERE, or HAGIOSIDIRE. — The *Greeks*, who are under the Dominion of the *Turks*, being prohibited the Uſe of Bells, make uſe of an Iron to call People to Church, call'd *Hagioſidere*. See BELL.

*Magius* gives us the Deſcription of a *Hagioſidere* he had ſeen. — 'Tis a Plate of Iron, about 3 Inches broad, and ſixteen long, faſten'd by the middle to a Chain, or Cord, whereby it is ſuſpended at the Church-Door. On this they ſtrike with an Iron Hammer, with ſome Meaſure and Cadence, ſo as to make no diſagreeable Noiſe.

They alſo carry a *Hagioſidere* before the Prieſt in a Proceſſion of the Sacrament to any ſick Perſon, beating on it from Time to Time, to advertiſe the People to adore it; much as in the *Romiſh* Church they do with a Bell.

The Word is compounded of ἁγιος, *holy*; and σιδηρος, *Iron.*

HAIL, *Grando*, in Phyſiology, an aqueous Concretion, in Form of white, or pellucid Spherules, deſcending out of the Atmoſphere. See METEOR and ATMOSPHERE.

*Hail*, is conceiv'd to be form'd of Drops of Rain, frozen in their Paſſage thro' the middle Region. See RAIN and FREEZING.

Others, take it for the Fragments of a frozen Cloud, half melted, and thus precipitated and congeal'd again. See CLOUD and BAROMETER.

Accordingly, the *Carteſians* define *Hail* to be a Cloud, either wholly, or in Part liquified; which tending downward by its own Gravity, is, in its Paſſage, froze by the Impreſſion of ſome very cold Wind; and thus precipitated, for the moſt Part, in round tranſparent Glebes. — They add, that if the Cloud have been totally liquified, the *Hail-ſtones* are pellucid; otherwiſe, only partly ſo. See SNOW.

*Hail* aſſumes various Figures, according to the Degrees of Heat or Cold of the Air, which the Parts of the liquified Clouds paſs thro': Sometimes 'tis round, ſometimes Angular, Triangular, Pyramidal, *&c.* ſometimes thin and flat, ſtar-like, with ſix equal Points, *&c.*

*Hail* is obſerved frequently to attend Thunder and Lightning; the Nitre that contributes to the one, having likewiſe a large Share in the Production of the other. See THUNDER, NITRE, *&c.*

Natural Hiſtories furniſh us with various Inſtances of extraordinary Showers of *Hail*. — In the *Philoſoph. Tranſactions*, Dr. *Halley*, and others relate, that in *Cheſhire*, *Lancaſhire*, &c. *April* 29. 1697, a thick, black Cloud, coming from *Carnarvonſhire*, diſpoſed the Vapours to congeal in ſuch Manner, that for about the Breadth of two Miles, which was the Limit of the Cloud, in its Progreſs for the Space of 60 Miles, it did inconceivable Damage: Not only killing all Sorts of Fowls, and other ſmall Animals, but ſplitting Trees, knocking down Horſes and Men, and even ploughing up the Earth, ſo that the *Hail-ſtones* buried themſelves under Ground, an Inch, or an Inch and a half deep. — The *Hail-ſtones*, many of which weighed five Ounces, and ſome half a Pound, and were five or ſix Inches about, were of various Figures, ſome round, others half round; ſome ſmooth, others emboſs'd and crenilated: The Icy Subſtance of them was very tranſparent and hard; but there was a ſnowy Kernel in the middle of them.

In *Hertfordſhire*, May 4. the ſame Year, after a ſevere Fit of Thunder and Lightning, a Shower of *Hail* ſucceeded, which far exceeded the former: Some Perſons were kill'd by it, their Bodies beat all black and blue: Vaſt Oaks were ſplit, and Fields of Rye cut down as with a Scythe. The Stones were meaſur'd from ten to thirteen or fourteen Inches about. Their Figures were various, ſome oval, others picked, ſome flat. *Philoſoph. Tranſact.* N°. 229.

At *Liſle* in *Flanders*, 1686, fell *Hail-ſtones* of a very large Size; ſome of which contained in the middle a dark brown Matter, which thrown on the Fire, gave a very great Report. *Phil. Tranſact.* N°. 203.

*Mezeray*, ſpeaking of the War of *Louis* XII. in *Italy*, in the Year 1510, relates, that there was for ſome Time, a horrible Darkneſs, thicker than that of Night; after which the Clouds broke into Thunder and Lightning, and there fell a Shower of *Hail-ſtones*, or rather as he calls them Pebble-ſtones, which deſtroy'd all the Fiſh, Birds, and Beaſts of the Country. — It was attended with a ſtrong Smell of Sulphur; and the Stones were of a bluiſh Colour: Some of them weighing an hundred Pounds. *Hiſt. de France*, T. II. p. 339.

HAILE, a Sea Term, uſed either to call to a Ship to know from whence ſhe comes, and whither ſhe is bound; or elſe to ſalute her, and wiſh her well. — To *hale* a Ship, is alſo the ſame Thing as what we call pulling a-ſhore.

HAIR, little ſlender Threads, iſſuing out of the Pores of the Skins of Animals; and ſerving moſt of them as a Tegument, or Covering. See SKIN and PORE.

In Lieu of *Hair*, the Nakedneſs of ſome Animals is cover'd with Feathers, Wool, Skins, *&c.* See FEATHER, WOOL, *&c.*

The *Hair* is found on all Parts of the Body, except the Soles of the Feet, and the Palms of the Hands. — But it grows longeſt on the Head, Beard, in the Arm-Pits, and about the Privities. See PUBES, *&c.*

The Phyſicians diſtinguiſh it into Kinds, and give it divers Denominations; but this only in *Greek* and *Latin*. — The *Hair* of the Head they call *Capillus*: That of Women particularly, *Coma*, from κομεῖν, *to dreſs* and *adjuſt*; and that of Men *Cæſaries*, from *cædendo*, becauſe often cut: That of the Back of the Head, *Juba* and *Crines*: That hanging behind the Ears, *Cincinni*; q. d. curled and buckled.

The Antients held the *Hair* a Sort of Excrement, fed only with excrementitious Matters, and no proper Part of a living Body. — They ſuppoſed them generated of the fuliginous Parts of the Blood, exhaled by the Heat of the Body to the Surface, and there condenſed in paſſing thro' the Pores. — Their chief Reaſons were, that the *Hair* being cut, will grow again apace, even in extreme old Age, and when Life is very low: That in Hectic, and Conſumptive People, where the reſt of the Body is continually emaciating and attenuating, the *Hair* ſhall thrive: Nay, and that it will grow again in dead Carcaſes. — They added, that *Hair* did not feed and grow like the other Parts, by Introſuſception, *i. e.* by a Juice circulating within 'em; but, like the Nails, by Juxtapoſition, each Part next the Root thruſting forward that immediately before it.

But the Moderns are all agreed that every *Hair* does properly and truly live, and receive Nutriment to fill and diſtend it like the other Parts; which they argue hence, that the Roots do not grow grey in aged Perſons, ſooner than the Extremities, but the whole changes Colour at once: And the like is obſerved in Boys, *&c.* which

ſhews that there is a direct Communication; and that all the Parts are affected alike. — To which it may be added, that there are Inſtances of Perſons, who by intenſe Grief, or Fear, have been known to grow grey in a Night's Time.

It may be obſerved, however, that, in Propriety, the Life and Growth of *Hairs*, is of a different Kind from that of the reſt of the Body; and is not immediately derived therefrom, or reciprocated therewith. — 'Tis rather of the Nature of Vegetation. They grow as Plants do out of the Earth; or as ſome Plants ſhoot from the Parts of others; from which tho' they draw their Nouriſhment, yet each has, as it were, its ſeveral Life, and a diſtinct Oeconomy. — They derive their Food from ſome Juices in the Body, but not from the nutritious Juices of the Body; whence they may live, tho' the Body be ſtarv'd. See VEGETATION, PLANT, *&c.*

The *Hairs*, examined by the Microſcope, appear to be fiſtulous Bodies like Horns. Their tubulous Structure is confirm'd from the Diſeaſe call'd *Plica Polonica*, wherein the Blood oozes out at their Extremities. See PLICA.

Each *Hair* is found to conſiſt of five or ſix other leſſer ones, all wrapp'd up in one common Tegument: They are knotted like ſome Sorts of Graſs, and ſend out Branches at the Joints. — They have each a round bulbous Root, which lies pretty deep in the Skin, being implanted in the pyramidal *Papillæ*; and by this they imbibe, or ſecrete, their proper Food from the adjacent Humors. Their Extremities ſplit or divide into two or three Branches, eſpecially when kept dry, and left to grow too long; ſo that what to the naked Eye appears only a ſingle *Hair*, to the Microſcope ſeems a Bruſh.

They turn grey on the fore-part of the Head, and particularly about the Temples, ſooner than behind; the back-part affording them the proper Juice longer than the reſt. See TEMPLES.

For the like Reaſon they fall ſooneſt on the Crown of the Head. See HEAD.

Their Size, or Thickneſs, depends on the Magnitude of the Pores they iſſue from: — If thoſe be ſmall, theſe are fine: If the Pores be ſtraight, the *Hairs* are ſtraight: If thoſe be oblique or ſinuous, the *Hair* is curl'd.

They ordinarily appear round, or cylindrical; but the Microſcope alſo diſcovers triangular, and ſquare ones; which Diverſity of Figures ariſes from that of the Pores; to which the *Hairs* always accommodate themſelves. Their Length depends on the Quantity of the proper Humor to feed them; and their Colour on the Quality of that Humor: Whence, at different Stages of Life the Colour uſually differs.

The *Hair* of a Mouſe, view'd by Mr. *Derham* with a Microſcope, ſeem'd to be one ſingle tranſparent Tube, with a Pith made up of fibrous Subſtance, running in dark Lines, in ſome Hairs tranſverſly, in others ſpirally. The darker medullary Parts, or Lines, he obſerves, were no other than ſmall Fibres convolved round, and lying cloſer together, than in the other Parts of the *Hair*. They run from the Bottom to the Top of the Hair; and, he imagines, may ſerve to make a gentle Evacuation of ſome Humor out of the Body. Hence, the *Hair* of hairy Animals, this Author ſuggeſts, may not only ſerve as a Fence againſt Cold, *&c.* but as an Organ of inſenſible Perſpiration.

It was eſteem'd a notable Honour among the ancient *Gauls*, to have long *Hair*; and hence came the Appellation *Gallia Comata*. For this Reaſon *Julius Cæſar*, upon ſubduing the *Gauls*, made them cut off their *Hair*, as a Token of Submiſſion.— It was with a View to this, that ſuch as afterwards quitted the World, to go and live in Cloiſters, procured their *Hair* to be ſhaven off; to ſhew that they bid Adieu to all earthly Ornaments, and made a Vow of perpetual Subjection to their Superiors. See TONSURE.

*Greg. de Tours* aſſures us, that in the Royal Family of *France*, it was a long Time the peculiar Mark and Privilege of the Kings and Princes of the Blood, to wear long *Hair*, artfully dreſs'd and curl'd: Every body elſe were obliged to be cut round, in Sign of Inferiority and Obedience. Some Writers aſſure us, that there were different Cuts for all the different Qualities and Conditions, from the Prince, who wore it at full Length; to the Slave, or Villain, who was quite cropt. *Hottoman* treats at large of this Privilege of the Kings of *France*. *Franco Gallia, C.* 11.

To cut off the *Hair* of a Son of *France*, under the firſt Race of Kings, was to declare him excluded from the Right of ſucceeding to the Crown, and reduced to the Condition of a Subject. Fa. *Daniel*, Hiſt. de *France*, T. 1.

In the 8*th* Century, it was the Cuſtom for People of Quality, to have their Childrens *Hair* cut the firſt Time, by Perſons they had a particular Honour and Eſteem for; who, in virtue of this Ceremony, were reputed a Sort of ſpiritual Parents, or God-fathers thereof. — Tho' this Practice appears to have been more ancient, inaſmuch as we read that *Conſtantine* ſent the Pope, the *Hair* of his Son *Heraclius*, as a Token that he deſired him to be his adoptive Father. See GODFATHER, ADOPTION, *&c.*

The Parade of long *Hair* became ſtill more and more obnoxious in the Progreſs of Chriſtianity; as ſomething utterly inconſiſtent with the Profeſſion of Perſons who bore the Croſs. Hence numerous Injunctions and Canons to the contrary. — Pope *Anicetas* is commonly ſuppoſed to have been the firſt who forbad the Clergy to wear long *Hair*; but the Prohibition is of an older Standing in the Churches of the *Eaſt*; and the Letter wherein that Decree is wrote, is of a much later Date than that Pope. — The Clerical Tonſure is related by *Iſidore Hiſpalenſis*, as of Apoſtolical Inſtitution. See CLERC.

Long *Hair* was anciently held ſo odious, that there is a Canon ſtill extant of the Year 1096, importing, that ſuch as wore long *Hair*, ſhould be excluded coming into Church while living; and not be pray'd for when dead.

We have a furious Declamation of *Luitprand* againſt the Emperor *Phocas*, for wearing long *Hair*, after the Manner of the other Emperors of the *Eaſt*; all except *Theophilus*, who being bald, enjoyn'd all his Subjects to ſhave their Heads.

The *French* Hiſtorians and Antiquaries, have been very exact in recording the Head of Hair of their ſeveral Kings. — *Charlemaign* wore it very ſhort, his Son ſhorter, *Charles the Bald* had none at all. Under *Hugh Capet*, it began to appear again: This the Eccleſiaſticks took in Dudgeon, and excommunicated all who let their *Hair* grow. *Peter Lombard* expoſtulated the Matter ſo warmly with *Charles the Young*, that he cut off his *Hair*; and his Succeſſors for ſome Generations wore it very ſhort.

A Profeſſor of *Utrecht*, in 1650, wrote expreſly on the Queſtion, whether it be lawful for Men to wear long *Hair*? and concluded for the Negative. — Another Divine, named *Reves*, who had wrote for the Affirmative, replied to him.

The *Greeks*, and after their Example, the *Romans*, wore falſe *Hair*. See PERRUKE.

*Wulferus*, in the Philoſophical Collections, gives an Account of a Woman buried at *Norimberg*, whoſe Grave being open'd 43 Years after her Death, there was *Hair* found iſſuing forth plentifully thro' the Clefts of the Coffin; inſomuch that there was Reaſon to imagine, the Coffin had ſome Time been cover'd all over with *Hair*. — The Cover being removed, the whole Corps appeared in its perfect Shape; but from the Crown of the Head to the Sole of the Foot, cover'd over with a thick ſet *Hair*, long and curl'd. — The Sexton going to handle the upper Part of the Head with his Fingers, the whole Structure fell at once; leaving nothing in his Hand but a Hand full of *Hair*: There was neither Skull, nor any other Bone left; yet the *Hair* was ſolid, and ſtrong enough.

Mr. *Arnold*, in the ſame Collection, gives a Relation of a Man hang'd for Theft, who in a little Time, while he yet hung upon the Gallows, had his Body ſtrangely cover'd over with *Hair*.

Dr. *Tyſon* adds, that tho' the outward Surface of the Body, be the uſual Place where the *Hair* grows; yet it has been ſometimes found on the Tongue, in the Heart, the Breaſts, Kidneys, *&c.* but that there is ſcarce any inward Part more ſubject to it, than the Ovary, or Teſticles of Females. *Phil. Collect. N°.* 2.

HAIR, makes a very conſiderable Article in Commerce; eſpecially ſince the Mode of Perrukes has obtain'd. See PERRUKE.

The *Hair* of the Growth of the *Northern* Countries, as *England*, &c. is valued much beyond that of the more Southern ones, as *Italy*, *Spain*, the South Parts of *France*, &c.

The Merits of a good *Hair* conſiſt in its being well fed, and neither too coarſe nor too ſlender; the Bigneſs rendering it leſs ſuſceptible of the artificial Curl, and diſpoſing it rather to frizzle; and the Smallneſs making its Curl of too ſhort Duration. — Its Length ſhould be about 25 Inches; the more it falls ſhort of this, the leſs Value it bears.

There is no certain Price for *Hair*, but it is ſold from Five Shillings to Five Pound an Ounce, according to its Quality. — The grey is the moſt coveted, then the white, *&c.*

The Scarceneſs of grey and white *Hair* has put the Dealers in that Commodity upon Methods of reducing other Colours thereto. — This is done by ſpreading the *Hair* to bleach on the Graſs, like Linnen; after firſt waſhing it out in a lixivious Water. See BLEACHING.

This Lye, with the Force of the Sun and Air, brings the *Hair* to ſo perfect a Whiteneſs, that the moſt experienced Perſon may be deceived therein; there being ſcarce any Way of detecting the Artifice but by boiling and drying it; which leaves the *Hair* of the Colour of a dead Walnut-Tree Leaf.

There is alſo a Method of dying *Hair* with Biſmuth; which renders ſuch white *Hair*, as borders too much upon the yellow, of a bright Silver Colour. — Boiling is the Proof of this too; the Biſmuth not being able to ſtand it.

*Hair* which does not curl or buckle naturally, is brought to it by Art; by firſt boiling, and then baking it in the following Manner: — After having pick'd and ſorted the *Hair*, and diſpoſed it in Parcels, according to the Lengths; they roll them up, and tye them tight down, upon little cylindrical Inſtruments, either of Wood or Pottery, a Quarter of an Inch thick, and hollow'd a little in the middle; in which State they are put in a Pot over the Fire, there to boil for about two Hours. — When taken out they let them dry; and when dried, ſpread them on a Sheet of brown Paper, cover them with another, and thus ſend them to the Paſtry Cook; who making a Cruſt or Coffin around them of common Paſt, ſets them in the Oven, till the Cruſt is about three fourths baked.

The End by which a *Hair* grew to the Head, is called the *Head* of the *Hair*; and the other, with which they begin to give the Buckle, the *Point*. — Formerly the Perruke-Makers made no Difference between the two Ends, but curled and wove them by either indifferently; which made them unable to give a fine Buckle: *Hair* wove by the Point never taking the right Curl. — Foreigners own themſelves obliged to the *Engliſh* for this Diſcovery; which was firſt carried abroad by a Perruke-Maker of our Country. *Dict. de Commerce.*

HAIR is alſo uſed in divers Arts and Manufactures.

The *Hair* of Beavers, Hares, Conies, *&c.* is the principal Matter whereof Hats are made. See HAT.

Spread on the Ground, and left to putrify on Corn Lands, *Hair*, as all other animal Subſtances, *viz.* Horns, Hoofs, Blood, Garbage, *&c.* proves a good Manure. See MANURE.

*Hair* alſo makes an Ingredient in the Compoſition of Plaiſter. See PLAISTER.

HAIR, in the Manage, and among Farriers, is popularly call'd the *Coat*, and makes a Point of principal Conſideration in Reſpect of Horſes, *&c.* See HORSE.

If the *Hair* of a Horſe, eſpecially about the Neck, and Parts uncover'd, be ſleek, and ſmooth, and cloſe; 'tis an Indication of his being in Health and good Caſe: If rough and ſtaring, or any Way diſcolour'd, it denotes a Coldneſs, Poverty, or ſome inward Defect. — To make the *Hair* ſmooth, ſleek, and ſoft, he muſt be kept warm, ſweated often, and when ſweated, the Coat well ſcraped and rubb'd down.

The *Hair* growing on the Fetlock, ſerves as a Defence to the prominent Part thereof, in travelling on ſtony Ways, or in froſty Weather.

If a Place be bare, or thin of *Hair*, or the *Hair* be too ſhort; the ancient Farriers uſed to waſh it with the Urine of a young Boy; and after that with a Lye of unſlaked Lime, Ceruſe, and Litharge. — The Moderns have various other Ways: Some waſh the Parts with a Decoction of the Roots of *Althæa*; others with Goats Milk, wherein Agrimony has been pounded; others rub the Part with Nettle Seed, bruis'd with Honey Water, and Salt: Others anoint it with the Juice of an Onion, or Radiſh; others with a Mixture of Alum, Honey, Goats Dung, and Swines Blood: Others with the Root of the white Lilly, boil'd in Oil: Others with Tar, Oil of Olives, and Honey: And others, with green Walnut Shells powder'd, and mix'd with Honey, Oil, and Wine.

To take off *Hair* in any Part, they apply a Plaiſter, made of unſlack'd Lime, boil'd in Water, with Orpiment added. See MARK, STAR, *&c.*

HAIRS-*Breadth*, is accounted the forty eighth Part of an Inch. See MEASURE, INCH, *&c.*

HALBARD, or HALBERD, an offenſive Weapon, conſiſting of a long Shaft, five Foot long, with a Steel Head, ſomewhat in manner of a Creſcent. See ARMS and ARMOUR.

The *Halbard* was antiently a common Weapon in the Army; where, there were Companies of *Halbardeers*: It is ſtill retain'd by the Sergeants and Corporals on divers Occaſions. — It was called the *Daniſh* Ax, becauſe firſt bore by the *Danes*; and on the left Shoulder. From the *Danes* it was derived to the *Scots*; from the *Scots* to the *Engliſh-Saxons*; and from them to the *French*.

The Word is form'd of the German *Hal*, Hall, and *bard*, a Hatchet. *Voſſius* derives it from the German *hellebaert*, of *hel*, clarus, ſplendens, and *baert*, bipennis. Others bring it from *ala*, by Reaſon the *Halbards* were ranged in the Wings of the Army, *quaſi aliparatum*.

HALBERT, among Farriers, *&c.* is a Piece of Iron, an Inch broad, and three or four Inches long, ſolder'd to the Toe of a Horſe's Shoe, that ſets out before; to hinder a lame Horſe from reſting or treading upon his Toe.

*Halbert* Shoes do of Neceſſity conſtrain a lame Horſe to tread or reſt on his Heel, when he goes a moderate Pace; which lengthens and draws out the back Sinew, that was ſomewhat ſhrunk before.

HALCYON-*Days*, *Dies Alcyonis*, a Phraſe, that frequently occurs among Writers, to denote a Time of Peace and Tranquillity.

The Diction takes its Riſe from a Sea-Fowl, call'd among Naturaliſts *Halcyon*, or *Alcyon*, which builds its Neſt about the Winter's Solſtice, when the Weather is uſually obſerv'd to be ſtill and calm.

The antient Tradition was, that it built its Neſt, and laid its Eggs in the Sea; chuſing for that Purpoſe a Seaſon when the Waves were quite ſtill.

HALF-*Bloom*, a round Maſs of Metal, which comes out of the Finery of an Iron-Work. See BLOOMERY and IRON-WORK.

HALF-*Mark*, *Dimdia Merkæ*, is a Noble. See NOBLE.

*Fitz-herbert* ſays, that in Caſe a Writ be brought, and the Seiſin of the Demandant, or his Anceſtor alledged; the Seiſin is not traverſable by the Defendant, but he may tender the *half Mark* for the Enquiry of this Seiſin: Which is, in plainer Terms, that the Defendant ſhall not be admitted to deny, that the Poſſeſſor, or his Anceſtors, was ſeiſed of the Land in Queſtion, and to prove his Denial; but that he ſhall be admitted to render *half a Mark* in Money, to have an Enquiry made, whether the Demandant, *&c.* were ſeiſed or not?

HALF-*Moon*, *Demi Lune*, in Fortification, is an Outwork, that hath only two Faces, forming together a ſaliant Angle, which is flanked by ſome Part of the Place, and of the other Baſtions. See *Out*-WORK, DEMI-*Lune*, &c.

Theſe *Half-Moons* are ſometimes raiſed before the Curtain, when the Ditch is a little wider than it ought to be; in which Senſe it is much the ſame with a Ravelin, only that the Gorge of an *Half-Moon* is made bending in like a Bow, or a Creſcent, and is moſt Times uſed to cover the Point of a Baſtion; whereas Ravelins are placed before the Curtain. — But they are defective, as being ill flanked. See RAVELIN.

HALF-*Penny*, a Copper Coin, whoſe Value is expreſs'd by its Name. See PENNY. See alſo OBOLUS.

HALF-*Seal*, is uſed in Chancery, for the Sealing of Commiſſions to Delegates appointed upon any Appeal in Eccleſiaſtical or Marine Cauſes. See DELEGATE.

HALF-*Tongue*, *Medietas Linguæ*, is a Jury impannell'd in a Cauſe, where a Stranger, or Foreigner, is a Party. See MEDIETAS *Linguæ*.

HALIEUTICKS, *Halieutica*, of the *Greek*, Ἁλιευτικὰ, Books treating of *Fiſhes*, or the Art of *Fiſhing*. See FISH and FISHING.

HALIGAMOT. See HALIMOTE.

HALL, was antiently uſed for a Manſion-Houſe, or Habitation. See MANSION.

HALL, *Salle*, in Architecture, is a large Room, at the Entrance of a fine Houſe, Palace, or the like. See PALACE, *&c.*

*Vitruvius* mentions three Sorts of *Halls*: The *Tetraſtyle*, which has four Columns ſupporting the Plafond, or Ceiling: The *Corinthian*, which has Columns all around, let into the Wall, and is vaulted over: And the *Egyptian*, which had a Periſtyle of inſolated *Corinthian* Columns, bearing a ſecond Order, with a Ceiling. Theſe were call'd *Oeci*.

The *Hall* is properly the firſt, and fineſt Partition, or Member of an Apartment; and, in the Houſes of Miniſters of State, public Magiſtrates, *&c.* is that wherein they diſpatch Buſineſs, and give Audience.

In very magnificent Buildings, where the *Hall* is larger and loftier than ordinary, and placed in the middle of the Houſe, it is call'd a *Saloon*. See SALOON.

A Royal Apartment is ſaid to conſiſt of a *Hall*, or Chamber of Guards, *Aula Prætoriana*; an Anti-chamber, *Procamera*; a Chamber, *Camera*; a Cabinet, *Conclave*; and a Gallery, *Porticus*. See APARTMENT.

HALL is alſo a public Building, erected for the Adminiſtration of the Policy and Juſtice of a City, or Corporation. — In this Senſe we ſay the *Town-Hall*, a *Company*'s *Hall*, &c.

*Guild*-HALL, is a ſtately Building in the City of *London*, and the great Court of Judicature for that City. See COURT and GUILD-*Hall*.

Here

Here, Meetings of the Citizens are held, for the Election of Officers, ſolemn Entertainments, *&c.*

HALL, is alſo particularly uſed for a Court of Juſtice; or an Edifice wherein there is one or more Tribunals. See COURT, JUSTICE, and TRIBUNAL.

In *Weſtminſter Hall* are held the great Courts of this Kingdom, *viz.* the King's-Bench, Chancery, Common-Pleas, and Exchequer. See *Kings*-BENCH, COMMON *Pleas*, and EXCHEQUER.

Above Stairs, is likewiſe held the High Court of Parliament. See PARLIAMENT.

*Weſtminſter-Hall* was the Royal Palace, or Place of Reſidence of our antient Kings; who ordinarily held their Parliaments, and Courts of Judicature, in their Dwelling-Houſes, (as is ſtill done by the Kings of *Spain*) and frequently ſat the ſaid Courts of Judicature, as they ſtill do in Parliament.

A great Part of this Palace was burnt under *Henry* VIII. what remains is ſtill reſerved for the ſaid Judicatories. — The great *Hall*, wherein the Courts of *Kings-Bench*, &c. are kept, is ſaid to have been built by *William Rufus*; others ſay by *Richard* I. or II. 'Tis reckon'd ſuperior, in Point of Dimenſions, to any *Hall* in *Europe*, being 300 Foot long, and 100 broad.

HALLAGE, a Fee due for Cloth brought for Sale to *Blackwell-Hall* in *London*.

The Word is alſo uſed for Toll paid to the Lord of a Fair, or Market, for Commodities ſold in the common *Hall* of the Place.

HALLELUJAH, a Term of Rejoycing, ſometimes ſung or rehears'd, at the End of Verſes on that Occaſion.

St. *Jerom* firſt introduced the Word *Hallelujah* into the Church Service: For a conſiderable Time it was only u ed once a Year, in the *Latin* Church, *viz.* at *Eaſter*: But in the *Greek* Church it was much more frequent. St. *Jerom* mentions its being ſung at the Interments of the Dead, which it ſtill continues to be in that Church; alſo on ſome Occaſions in *Lent*.

In the Time of *Gregory the Great*, it was appointed to be ſung all the Year round in the *Latin* Church, which rais'd ſome Complaints againſt that Pope, as giving too much into the *Greek* Way, and introducing the Ceremonies of the Church of *Conſtantinople* into that of *Rome*. But he excuſed himſelf by alledging that this had been the antient Uſage at *Rome*; and that it had been brought from *Conſtantinople* at the Time when the Word *Hallelujah* was firſt introduced under Pope *Damaſus*.

The Word is *Hebrew*; or rather, it is two *Hebrew* Words joyn'd together; one of them הללו, *hallelu*, and the other יה, *ja*, an Abridgment of the Name of God, יהוה, *Jehova*. The firſt ſignifies *Laudate*, praiſe ye; and the other *Dominum*, the Lord.

HALLIARDS, or HALYARDS, in a Ship, are Ropes which ſerve for hoiſting up all the Yards, except the Croſs Jack, and the Sprit-ſail Yards. See YARD.

HALMOTE, or HALIMOTE, from the *Saxon* Þeale, i. e. *Aula*, Hall, and ȝemoꝛ, *conventus*, Meeting; is the ſame with what we now call a *Court-Baron*; the Word implying a Meeting of the Tenants of the ſame Hall or Manor. See BARON.

*Omnis cauſa terminetur, vel Hundredo, vel Comitatu, vel* Halimote, *ſocam habentium vel dominorum curia.* L. L. *Hen.* I. Cap. 10.

The Name is ſtill retained at *Luſton*, and other Places in *Hereford*ſhire. See MOTE.

It is ſometimes alſo taken for a Convention of Citizens in their public *Hall*; which was alſo call'd *Folkmot* and *Halmot*. See FOLKMOTE, HALL, *&c.*

This *Halmote* and *Halimote*, are often confounded with the *Folkmote*, though originally they were two diſtinct Courts. In Effect, the *Halimote* properly ſignifies the Lord's Court, or a Court Baron held in the Manor, in which Differences between the Tenants were determined. See MANOR, COURT, TENANT, LORD, *&c.*

HALO, in Phyſiology, a Meteor, in Form of a luminous Ring, or Circle, of various Colours, appearing round the Bodies of the Sun, Moon, and Stars. See METEOR.

That around the Moon is the moſt uſual; and is alſo call'd *Corona*, Crown. See CORONA.

That about the Sun is peculiarly call'd *Parhelia*. See PARHELIA.

The Word is form'd of the *Greek*, ἁλως, or αλων, *Area*.

Naturaliſts conceive the *Halo* to ariſe from a Refraction of the Rays of Light in their paſſing thro' the fine, rare *Veſiculæ* of a thin *Nubecula*, or Vapour, toward the Top of our Atmoſphere; which Account they confirm hence, that a Quantity of Water being thrown up againſt the Sun, as it breaks and diſperſes into Drops, it forms a Kind of *Halo*, or Iris, exhibiting the Colours of the Natural ones. See RAINBOW.

Mr. *Huygens* ſuppoſes *Halo's*, or Circles round the Sun, to be formed by ſmall round Grains of a Kind of *Hail*, made up of two different Parts; one of which is opake, an incloſed in the other which is tranſparent: Which is the Structure really obſerved in Hail. See HAIL.

After the ſame Manner he accounts for the *Parhelia*; only that there he imagines the icy Grains of an oblong Figure, and rounding at the Ends; like Cylinders, with round Convex Tops. — Where ſome of theſe Cylinders are in an erect Poſition, the Circle they form will be white, by Reaſon of the Reflection of the Rays of the Sun on the Surface of theſe Cylinders.

He proceeds to account for the coloured *Halo's*, and *Parhelia*, from the ſame Hypotheſis; and produces an Experiment of a glaſs Cylinder, a Foot long, having within it an opake Kernel, (which was a Cylinder of Wood) and the ambient Space filled with Water: This Cylinder being expoſed to the Sun, and the Eye diſpoſed in a proper Place; the ſeveral ſucceſſive Reflections and Refractions neceſſary to produce ſuch an Effect did plainly appear.

The Light which comes through Drops of Rain by two Refractions, without any Reflection, Sir *Iſ. Newton* obſerves, ought to appear ſtrongeſt at the Diſtance of about 26 Degrees from the Sun, and to decay gradually both Ways, as the Diſtance from him increaſes and decreaſes: And the ſame is to be underſtood of Light, tranſmitted through ſpherical Hail-ſtones, — Add, that if the Hail be a little flatted, as is often the Caſe, the Light tranſmitted may grow ſo ſtrong at a little leſs Diſtance than that of 26 Degrees, as to form a *Halo* about the Sun or Moon; which *Halo*, as often as the Hail-ſtones are duly figured, may be coloured; and then it muſt be red within by the leaſt refrangible Rays, and blue without by the moſt refrangible ones; eſpecially if the Hail-ſtones have opake Globules of Snow in their Centre, to intercept the Light within the *Halo*, as *Huygens* has obſerved, and make the inſide thereof more diſtinctly defined than it would otherwiſe be.

Such Hail-ſtones, though ſpherical, by terminating the Light by the Snow, may make a *Halo* red within, and colourleſs without, and darker in the red than without, as *Halo's* uſe to be: For of thoſe Rays which paſs cloſe by the Snow, the Rubriform will be leaſt refracted, and ſo come to the Eye in the directeſt Lines. *Optice*.

HALSFANG. See HEALFANG and PILLORY.

HALT, in War, a Pauſe, or Stop, in the March of a military Body. See PAUSE.

In Places full of Defiles, frequent *Halts* muſt be made. The Army made a *Halt* to reſt themſelves.

Some derive the Word from the Latin *Halitus*, Breath; it being a frequent Occaſion of *halting*, to take Breath. Others from *alto*, by Reaſon in *Halts* they raiſe their Pikes, *&c.* an End.

HALTERISTÆ, HALTERISTS, in Antiquity, a Sort of Players at *Diſcus*; denominated from a peculiar Kind of *Diſcus*, by the *Greeks* call'd ἁλτὴς, and by the Latins *Halter*. See DISCUS.

*Budæus*, and others, take the *Halter* to have been a leaden Weight, or Club, which the Vaulters bore in their Hands, to ſecure and keep themſelves the more ſteady in their Leaping. — Nor will theſe Authors allow of any Sort of *Halter* beſides this Weight; nor other *Halteriſts* but theſe Vaulters. — But *Cornarius*, in his Comments on *Galen*, refutes the Opinion.

Others, as *Cornarius*, *Conſtantine*, and *Portus*, will have the *Halter* to be a Lump, or Maſſive of Lead, or Stone, with a Hold, or Handle, fix'd to it, by which it might be carried; and that the *Halteriſtæ* were thoſe who exerciſed themſelves in removing theſe Maſſives from Place to Place. — Theſe Authors add, that the Weight, or Ball mention'd by *Budæus*, was not call'd ἁλτὴς, *Halter*, but ἄλκτὴρ, *Alter*, which ſignifies *Aſſiſtance*, *Help*.

*Hier. Mercurialis*, in his Treatiſe *de Arte Gymnaſtica*, L. II. *C.* 12. diſtinguiſhes two Kinds of *Halteriſtæ*; for tho' there was but one *Halter*, there were two Ways of applying it. — The one was to throw or pitch it in a certain Manner, or only to hold it out at Arm's End; and in this Poſture to give themſelves divers Motions, ſwinging the Hands backwards and forwards, *&c.* according to the engraven Figures thereof given us by *Mercurialis*.

The *Halter* was of a cylindrical Figure, leſs in the middle, where it was held, by one Diameter, than at the two Ends. It was above a Foot long; and there was one for each Hand: It was either of Iron, Stone, or Lead.

Galen, *De tuend. Valetud.* Lib. I. Lib. V. and Lib. VI. ſpeaks of this Exerciſe, and ſhews of what Uſe it is in purging the Body of peccant Humors; making it equivalent both to Purgation and Phlebotomy. See EXERCISE and GYMNASTIC.

HALTING,

HALTING, among Farriers, *&c.* an Irregularity in the Motion of a Horſe, ariſing from a Lameneſs, or other Injury in the Shoulder, Leg, or Foot; which leads him to ſpare the Part, or uſe it too timorouſly.

An Acquaintance with this Diſorder, in its ſeveral Circumſtances, is a Thing of great Extent in the Affairs of the Manage; for which Reaſon we ſhall add the principal Points relating thereto. — If a Horſe *halts*, 'tis either *before*; in which Caſe his Grief lies either in the Shoulder, the Legs, or Feet: Or *behind*, where it muſt lye in the Hip, Ham, or the like.

1°. The Signs which indicate it in the *Shoulder*, are his not lifting up his Leg, but trailing it on the Ground; or his caſting out one Leg more than the other, and with his Knee, in a Manner, unbent. — Add that in turning ſhort he will viſibly favour the Leg on the lame Side. Again, if the Ailment be found in the Shoulder, it muſt either be in the Top of the Shoulder Blade, call'd the *Withers*, which is known by his *Halting* moſt when a Perſon is on his Back, his ſhrinking much, and offering to bite when griped, and handled about the Top of the Shoulder Blade: Or in the Bottom of the Shoulder Blade, joyning to the Marrow Bone, which is the fore Pitch of the Breaſt; which is known by his treading his Steps thick, and ſhrinking, ready to fall down, when preſs'd in that Part: Or in the Elbow, which joyns the Marrow Bone to the Leg; which is known by wincing, and taking up his Foot when pinch'd there.

2°. If the Grievance be in the *Legs*, it either lies in the Knee, or Paſtern Joint, which he diſcovers by refuſing to bow the one or the other, and going ſtiffly on it: Or in the *Shank*, which is diſcovered by ſome Splint, Screw, Wind-gall, or other viſible Malady thereon.

3°. If it be in the *Foot*; it is either in the Coronet, and owing to ſome Strain, to be diſtinguiſh'd by ſome Tumor, or breaking thereon, or its appearing hot and burning to the Touch: Or in the *Heel*, owing to an Over-reach or the like, and viſible to the Eye, as alſo by his treading altogether on his Toe: Or in the *Quarters*, between the middle of the Hoof and the Heel, which is known by his *Halting* more when on the Edge of a Bank than when on plain Ground. — This is ſometimes occaſion'd by being pricked with a Nail in the Shoeing; and the faulty Nail is diſtinguiſhed by pinching the Head of each Nail, and the Hoof together with a Pair of Pinchers.

If a Horſe halt *behind*, from a Diſorder in the Hip, or Huckle Bone, he will go ſidelong, and not follow ſo well with that Leg as the others; nor will he turn on that Side without favouring the Leg; add, that he ſhows it ſtill moſt, in walking on the Side of a Bank with the worſt Leg higheſt.

If a Horſe has any hidden Infirmity, that will bring him to *halt* when he comes to Travel, it may be diſcover'd by running him in the Hand on ſmooth Way, at the Length of the Halter; and obſerving how he ſets down his Legs: If he favour none of them, he is to be further proved, by riding him roundly till well heated; then letting him ſtand ſtill an Hour, and after that running him in the Hand at Halters length as before.

HALYMOTE, properly ſignifies an Holy, or Eccleſiaſtical Court. See HALMOTE.

There is a Court held in *London* by this Name, before the Lord Mayor and Sheriffs, for regulating the Bakers. — It was antiently held on *Sunday* next before St. *Thomas*'s Day, and for this Reaſon called the *Halymote*, or Holy-Court. — The Title thereof runs thus: *Cura ſancti-motus tenta in* Guilhalda *Civitatis* London. *Coram Majors & Vicecom.* &c.

HALYWERCFOLK, antiently ſignified ſuch Perſons of the Province of *Durham*, as held Lands, on Condition of defending the Corps of St. *Cuthbert*; and who hereupon claimed the Privilege not to be forced to go out of the Biſhoprick either by King or Biſhop. *Hiſt. Dunelm.*

Hence *Durham* in our Year Books is called *Franchiſe de Werk*. Selden.

HAM, a *Saxon* Word, properly ſignifying a Houſe, or Dwelling-Place. — Sometimes it alſo ſignifies a Street, or Village.

Hence it is that the Name of many of our Towns end with it; as Notting*ham*, Bucking*ham*, Walſing*ham*, &c.

HAM, is alſo a Part of the Leg of an Animal; being the inner, or hind Part of the Knee; or the Ply, or Angle, in which the Leg and Thigh, when bent, incline to each other. See LEG, THIGH and KNEE.

HAM, in Commerce, *&c.* is uſed for a Thigh or Shoulder of Pork, dried, ſeaſon'd, and prepar'd to make it keep, and give it a briſk agreeable Flavour. See GAMMON.

*Weſtphalia-Hams*, ſo much in Vogue, are prepared by Salting them with Salt-Petre, preſſing them in a Preſs eight or ten Days, ſteeping them in *Juniper* Water, and drying them by the Smoak of *Juniper* Woods.

HAMADRYADES, in Antiquity, fabulous Deities, revered among the ancient Heathens, and believ'd to preſide over Woods and Foreſts, and to be incloſed under the Bark of Oaks. See GOD.

The Word is compounded of ἅμα, *ſimul*, together; and δρυας, *Dryad*, of δρυς, *Oak*. See DRYADES.

The *Hamadryades*, αμαδρυάδες, were ſuppoſed to live and dye with the Trees they were attach'd to; as is obſerved by *Servius* on *Virgil*, *Eccl.* X. v. 62. after *Meneſimachus*, the Scholiaſt of *Apollonius*, &c. who mention other Traditions relating thereto.

The Poets, however, frequently confound the *Hamadryades*, with the *Naiads* and *Napææ*; witneſs *Catullus Carm.* LXIII. *v.* 23. *Ovid. Faſt.* IV. 229. *Proper. Eleg.* XX. 32. See NAIADS.

*Feſtus* calls them *Querquetulanæ*, as being iſſued, or ſprung from Oaks. An ancient Poet, one *Pherenicus*, in *Athenæus*, L. III. calls the Vine, Fig-Tree, and other Fruit Trees, *Hamadryades*, from their Mother's Name.

HAMAXOBII, HAMAXOBIANS, in the ancient Geography, a Nation of People who lived wholly in Chariots; whence their Appellation, from αμαξα, *a Car*, or *Chariot*, and βιος, *Life*.

The *Hamaxobii*, or *Hamaxobitæ*, were an ancient People of *Sarmatia Europæa*, inhabiting the Southern Part of *Muſcovy*. — They had no Houſes, but Tents made of Leather, and fix'd on Chariots, to be ready for ſhifting and Travel.

HAMBOROUGH *Company*. See COMPANY.

HAMMELING, or HAM-*ſtringing*, the Act of cutting off the *Ham*.

*Hameling*, or *Hambling* of Dogs, is the ſame with Expeditating, or Lawing. See EXPEDITATING.

HAMLET, HAMEL, or HAMPSEL, from the Saxon, *Ham*, Houſe, and the German, *Let*, Member; are Diminutives of *Ham*; and ſignifie a little Village; or rather, a Part of a Village. See VILLAGE.

The learned *Spelman* upon theſe Words, ſhewing the Difference between *Villa integra*, *Villa dimidia*, & Hamleta, ſays, Hamleta *vero, quæ medietatem friborgi non obtinuit, hoc eſt ubi quinque capitales plegii non deprehenſi ſint.* — The Statute of *Exon*, 14 *Edw.* I. mentions this Word thus, *Les noſmes de toutes les Villes &* Hamlets *que ſont en ſon Wapentake.* In an ancient MS. it is expounded *the Seat of a Free-holder.*

HAMMER, an Inſtrument of Iron, with a Handle of Wood; uſed in moſt mechanic Arts, to beat, ſtretch, drive, *&c.* See BEATING, *&c.*

Bodies capable of being ſtretch'd, or extended, under the *Hammer*, are ſaid to be *malleable*. See MALLEABILITY.

The *Latins* call it *Malleus*, of *Martellus*, by which Name *Pliny* calls it, when he ſays, that *Cynira*, Daughter of *Agriope*, invented the *Hammer* and Pinchers. *Menage* derives the *Latin* Name *a Marte, & Martus.*

The *Hammers* of Forges, are moved or worked by a Water-Mill. See FORGE.

HAMMER *Hardening*. See HARDENING.

HAMMER *of a Clock*. See CLOCK and CLOCK-WORK.

HAMMER, in Anatomy. See MALLEUS.

HAMMERING, the Act of beating, or extending, and faſhioning a Body under the *Hammer*. See HAMMER.

When it is perform'd on Iron heated for the Purpoſe, the Smiths uſually call it *Forging*. See FORGING.

HAMMERING, in Coining. — A Piece of Money, or a Medal, is ſaid to be *Hammer'd*, when ſtruck, and the Impreſſion given, with a *Hammer*, and not with a Mill. See COIN and MEDAL.

*For the Method of Coining with the* Hammer, See COINING.

HAMMOCK, or HAMAC, a Kind of hanging-Bed; ſuſpended between two Trees, Poſts, Hooks, or the like; much uſed throughout the *Weſt Indies*, as alſo on Board of Ships.

The *Indians* hang their *Hamacs* to Trees, and thus ſecure themſelves from wild Beaſts and Inſects, which render lying on the Ground dangerous.

The People of the *Caribbee* Iſlands are wonderfully ſuperſtitious in the Point of their *Hamacs*; and do not make them without a deal of Ceremonies. — At each End of the Room, they put Bags of Aſhes, without which, it is the Opinion, that the *Hammock* won't laſt. If they were to eat Figs on a *Hammock*, they believe it would rot: Nor dare they eat any Fiſh that has good Teeth, as believing that would make their *Hammock* ſoon wear thro'.

According

According to Fa. *Plumier*, who has often made uſe of the *Hamac* in the *Indies*, it conſiſts of a large, ſtrong Coverlet, or Sheet of coarſe Cotton, about ſix Foot Square: On two oppoſite Sides, are Loops of the ſame Stuff, thro' which a String is run, and thereof other Loops are form'd, all which are tied together with a Cord; and thus is the whole faſten'd to two neighbouring Trees, in the Field; or two Hooks, in Houſes.

This Kind of Bed ſerves, at the ſame Time, for Bed, Quilts, Sheets, Pillow, *&c.*

HAMUS, or HAMULUS, is an Hook. See HOOK.

Surgeons alſo make Uſe of an Inſtrument thus called, to extract the Child in difficult Labours.

HANAPER, or HAMPER, an Office in Chancery. See CHANCERY.

The *Clerk of the Hanaper*, ſometimes ſtyled *Warden of the Hanaper*, receives all Money due to the King for Seals of Charters, Patents, Commiſſions, and Writs; and attends the Keeper of the Seal daily in Term-Time, and all Times of Sealing; and takes into his Cuſtody all ſealed Charters, Patents, and the like, which he receives into Bags; but anciently, it is ſuppoſed, into *Hampers*, which gave Denomination to the Office.

There is alſo an Officer, who is Comptroller of the *Hamper*. See COMPTROLLER.

HANCES, in a Ship, are Falls, or Deſcents of the Fife-Rails, which are placed as Baniſters in the Poop, *&c.* and down to the Gang-way.

HANCES, or HANSES, in Architecture, are the Ends of Elliptical Arches; which are Arcs of ſmaller Circles than the Scheme, or middle Part of the Arch. See ARCH.

HAND, *Manus*, a Part, or Member of the Body of Man; making the Extremity of the Arm. See ARM.

The Mechaniſm of the *Hand* is very curious; excellently contrived to fit it for the various Uſes and Occaſions we have for it, and the great Number of Arts and Manufactures it is to be imploy'd in. It conſiſts of a Compages of Nerves, and little Bones, joynted into each other, which give it a great Degree of Strength, and at the ſame Time an unuſual Flexibility, to enable it to handle adjacent Bodies, lay hold of them, and graſp them, in order either to draw them towards us, or thruſt them off.

*Anaxagoras* is repreſented by ancient Authors, as maintaining, that Man owes all his Wiſdom, Knowledge, and Superiority over other Animals, to the Uſe of his *Hand*. — *Galen* puts the Thing another Way: Man, according to him, is not the wiſeſt Creature, becauſe he has *Hands*; but he had *Hands* given him becauſe he was the wiſeſt Creature. For it was not our *Hands* that taught us Arts, but Reaſon. The *Hands* are the Organs of Reaſon, *&c. De uſu part.* Lib. I. C. 3.

HAND, in Medicine: — The *Hand*, among Anatomiſts, extends from the Shoulder to the Fingers Ends; call'd alſo the *greater Hand*.

It is divided into three Parts: — The firſt reaching from the Shoulder to the Elbow; properly call'd the *Arm*, *Brachium*. See ARM.

The ſecond reaches from the Elbow to the Wriſt. — The third, the *Hand*, *Manus*, properly ſo call'd; call'd alſo the *leſſer Hand*, or *extrema Manus*. — This is ſubdivided into three other Parts; the *Carpus*, which is the Wriſt: — The *Metacarpus*, which is the Body of the *Hand*, including the *Dorſum* and *Vola*: — And the Fingers, *Digiti*. See each deſcribed under its proper Article, CARPUS, METACARPUS, and FINGERS.

The Muſcles whereby the *Hand* is moved and directed, are the *Palmares*; the *Flexor* and *Extenſor*, *Carpi Ulnaris*, and *Radialis*; *Perforatus*; *Perforans*; *Lumbricales*; *Interoſſei*; *Extenſors*, *Abductors*, and *Flexors* of the Fingers. See each in its Place, PALMARIS, FLEXOR, EXTENSOR, *&c.*

The *Hand* makes the Subject-Matter of the Art of Palmiſtry, which is employ'd in conſidering the ſeveral Lines and Eminencies of the Palm of the *Hand*, their Significations, *&c.* See PALMISTRY.

Among the *Egyptians*, the *Hand* was uſed as a Symbol of Strength: — Among the *Romans*, it was held a Symbol of Fidelity; and accordingly was conſecrated to that Goddeſs, by *Numa*, with great Solemnity.

In Chirurgery, they uſe an *Iron Hand*, which is a Kind of Artificial, or Subſidiary *Hand*, to be applied, and fitted on the Stump of an Arm, after the *Hand* has been cut off.

It has moſt of the Motions of the natural *Hand*; which are effected by Means of Springs, Pullies, Pinions, Buttons, *&c.* *Amb. Pare* gives us its Structure at large.

HAND, in Falconry, is uſed for the Foot of the Hawk: — To have a clean, ſtrong, ſlender, glutinous *Hand*, well clawed, are ſome of the good Qualities of a Hawk or Falcon. See HAWK and FALCON.

HAND, in the Manage, is a Term variouſly uſed. — Sometimes it ſtands for the Fore-feet of a Horſe.

*Hand* is alſo uſed, for a Diviſion of the Horſe into two Parts, with Reſpect to the Rider's *Hand*. — The *Forehand* includes the Head, Neck, and fore-Quarters. — The *Hind-hand* is all the reſt of the Horſe.

*Spear*-HAND, or *Sword-Hand*, is uſed for a Horſeman's Right-*Hand*.

*Bridle-Hand*, is his Left-*Hand*. — Your regular Cavalier holds his Bridle-*Hand* 2 or 3 Inches above the Pommel of the Saddle.

A Horſeman is ſaid to have *no Hand*, when he only makes Uſe of the Bridle unſeaſonably; not knowing how to give the Aids or Helps of the *Hand* with Diſcretion.

To keep a Horſe *upon the Hand*, ſignifies to feel him in the Stay upon the *Hand*, and to be always prepared to avoid any Surprize from him. — When the Horſe obeys and anſwers the Effects of the *Hand*, he is ſaid to *reſt well upon the Hand*.

A Horſe-man ought to have a *light Hand*, i. e. he ought only to feel the Horſe upon his *Hand*, ſo as to reſiſt him whenever he attempts to ſlip from it; and aſſoon as he has made his Reſiſtance, ought to lower the Bridle, inſtead of cleaving to it.

If a Horſe, by a too great Eagerneſs to go forward, *preſſes* too much *upon the Hand*; it ought to be ſlacken'd at certain Times, and at other Times to be kept hard, in order to diſappoint him from continually preſſing upon the Bit. This Facility, or Liberty of the Horſeman, of ſlackening or ſtiffening the *Hand*, makes what they call a *good Hand*.

A Horſe is ſaid to *force the Hand*, when he does not fear the Bridle, but runs away in Spite of the Rider.

To *work a Horſe upon the Hand*, is to manage him by the Effects of the Bridle, without any other Helps, except the Calves of the Legs.

To be *heavy upon the Hand*, is underſtood of a Horſe, which by Reaſon of the Softneſs of his Neck, the Weakneſs of his Back, the Largeneſs of his Head, and the Weight of his Fore-quarters; or his Wearineſs; throws himſelf upon the Bridle, without making any Reſiſtance, or Effort, to force the Horſeman's *Hand*.

*Harmonical* HAND, in Muſic, is uſed by ſome Writers for the ancient Diagramma, or Scale of Muſic, upon which they learn'd to ſing. See GAMMUT, SCALE, DIAGRAM, *&c.*

The Reaſon of the Appellation was, that *Guido Aretin*, upon inventing the Notes, *ut*, *re*, *mi*, *fa*, *ſol*, *la*, diſpoſed them on the Fingers of the Figure of a *Hand* ſtretch'd out. See NOTE.

He changed the Letters of the Alphabet, uſed till that Time to expreſs the Notes, for theſe ſix Syllables, which he took out of the firſt Strophe of the Hymn of St. *John Baptiſt*, compoſed by *Paulus Diaconus*.

Ut *queant Laxis* re-*ſonare fibris*
Mi-*ra Geſtorum* fa-*muli tuorum*
Sol-*ve polluti* la-*bii reatum*.
*Sancte* Joannes.

*Impoſition of* HANDS, or *Laying on of Hands*, ſignifies the conferring of Holy Orders; a Ceremony wherein the *Hands* are laid on the Head of another, as a Sign of a Miſſion, or of a Power given him to exerciſe the Functions of the Miniſtry belonging to the Order. See ORDINATION, *&c.*

The Apoſtles began to appoint Miſſionaries by the Impoſition of *Hands*. See IMPOSITION.

*Waſhing one's* HANDS of a Thing, ſignifies the witneſſing that a Perſon has no Part or Concern in an Affair; and that he will not be anſwerable for it: As *Pilate* did in Reſpect of our Saviour's Death. — In this Senſe a Man is ſaid to have *clean Hands*; and particularly a Judge, to denote that he has not been corrupted by Bribes or Preſents.

*Left*-HAND, — To marry with the *Left Hand*, is to Eſpouſe a Woman of inferior Degree, whoſe Children, in virtue of ſuch Marriage, are not to ſucceed to the Father, nor ſhare with the other Children; but be contented with what Fortune the Husband ſhall appoint them the next Day after Marriage.

This Method of taking *Left-handed Wives* obtains in *Germany*. See MARRIAGE.

HAND, is alſo uſed for the Index of a Clock, Watch, or the like, ſerving to point the Hour, *&c.* See INDEX.

HAND *of Juſtice*, is a Scepter, or Batoon, a Cubit long, having an Ivory Hand at the Extremity thereof; uſed as an Attribute of Kings, wherewith they are painted in their Royal Robes; as on the Coronation Day.

Authors uſually call it *Virga*. — *Louis* X. of *France*, firſt took the *Hand* of Juſtice for his Deviſe.

*Long*-HAND, *Longimanus*. — A Kind of Title, or Surname, aſſumed by certain Princes. *Artaxerxes*, the Son of *Xerxes*, and his Succeſſor in the *Perſian* Empire, were thus denominated; as having one *Hand* longer than the other.

*Short* HAND. See TACHEOGRAPHY.

*Bloody* HAND. See BLOODY-*Hand*.

HAND is alſo figuratively uſed in Painting, Sculpture, *&c.* for the Manner or Style of this or that Maſter. See MANNER, STYLE, *&c.*

HANDS, are born in Coat Armour, *dexter* and *ſiniſter*; that is, right and left; expanded or open, and after other Manners.

Azure, a *dexter* Hand couped at the Wriſt, and extended in pale Argent; is born by the Name of *Brome*. — Argent, three *ſiniſter* Hands, couped at the Wriſt, Gules, by the Name of *Maynard*.

The Knights Baronets, are to bear in a Canton, or in an Eſcutcheon, which they pleaſe, the Arms of *Ulſter*, viz. In a Field Argent, a *ſiniſter* Hand couped at the Wriſt, Gules. See BARONET.

HAND-*Borow*, from the *Saxon*, Bopg-hand, a *Surety*; *eſt quaſi vas, aut fidei juſſor manuenſis, hoc eſt, minor, ſeu inferior; nam Head-borow, vas eſt Capitalis, vel ſuperior*. Spelman. See HEAD BOROUGH.

HAND-*Breadth*, is ſometimes uſed for a Meaſure of three Inches. See INCH and MEASURE.

HAND, or HANDFUL, is alſo a Meaſure of four Inches, by the Standard; according to the Stat. 33 *H.* 8. *Cap.* 5. See MEASURE.

The *Hand*, among Jockeys, is four Fingers Breadth, and is the Meaſure of a Fiſt clench'd; by which the Height of Horſes is meaſured.

A Horſe for War ſhould be 16 or 18 *Hands* high.

HAND-HABEND, in our ancient Cuſtoms, denotes a Thief taken in the very Fact. See HOND-HABEND.

*Si quis hominem liberum latrocinium, ſeu rem furatam ſecumdeferentem* (*quem* hæbbenðne hanða *vocant*) *comprehenderit*, &c. Concil. Berghamſted, *Anno* 697.

HANDLING, a Term uſed in Reſpect of fighting Cocks; ſignifying the meaſuring the Girth of them, by griping one's Hands and Fingers about the Cock's Body.

HANGINGS, Linings for Rooms, made of Arras, Tapeſtry, *&c.* See TAPESTRY.

HANGS-*Over*, in Building. See BATTER.

HANSE, or ANSE, an ancient Name, for a Society or Company of Merchants; particularly thoſe of certain Cities in *Germany*, &c. hence call'd *Hanſe Towns*. See COMPANY and HANSE *Town*.

HANSE *Towns*, certain Free Towns of *Germany*, and the *North*, united in ſtrict League, under Laws and Magiſtrates of their own appointing, for the better carrying on of Commerce, and their mutual Safety and Aſſiſtance. See COMPANY.

This celebrated Aſſociation, which makes ſo great a Figure in the Hiſtory of Commerce, is commonly ſuppoſed to have commenced at *Bremen* on the *Weſer*, in the Year 1164; others ſay in 1260, immediately after the Incurſions and Pyracies of the *Danes*, *Normans*, &c. others in 1206; and others in 920: But be its Origin when it will, it was confirm'd and re-eſtabliſh'd in 1270. See COMMERCE.

At firſt it only conſiſted of Towns ſituate on the Coaſts of the *Baltic* Sea, or not far from it. — But its Strength and Reputation increaſing, ſcarce any Trading City in *Europe* but deſired to be admitted into it.

Under our King *Henry* III. the *Hanſe* conſiſted of no leſs than 62 Cities; to which were afterwards added 4 more.

*France* furniſhed to the Confederacy, *Rouen*, St. *Malo*, *Bourdeaux*, *Bayonne*, and *Marſeilles*: Spain, *Barcelona*, *Sevil*, and *Cadix*: England, *London*: Portugal, *Liſbon*: — The Low-Countries, *Antwerp*, *Dort*, *Amſterdam*, *Bruges*, *Rotterdam*, *Oſtend*, and *Dunkirk*: And Italy and Sicily, *Meſſina*, *Leghorn*, and *Naples*.

The *Hanſe* was divided into 4 Claſſes, or Members, which were thoſe of *Lubec*, *Cologn*, *Brunſwick*, and *Pruſſia*, or *Dantzic*. — Thoſe four Cities were the Heads of the four Members; and *Lubec* that of the whole *Hanſe*.

Beſide this, the *Hanſe* had four principal Factories, or Staples, at *London*, *Bruges*, *Novogrod*, and *Berg*; that of *Bruges* was afterwards removed to *Antwerp*. But the firſt and principal was that of *Lubec*, which ſtill remains the Head of the Aſſociation. That of *London* was call'd *Guildhalla Teutonicorum*, or the *Stillyard*. See STILLYARD.

The Government of the *Hanſe* was at firſt Ariſtocratical: Then it came under the ſole Direction of the Grand Maſter of the *Teutonic* Order; and, at length, divers Princes and Lords made Intereſt for it.

The End of the XIV*th* Century, and the Beginning of the XV*th*, were the moſt flouriſhing Times of this Alliance. — They were then in a Condition to proclaim War againſt Kings: Hiſtory is not ſilent, as to that they waged againſt *Waldemar* King of *Denmark*, about the Year 1348; and againſt *Eric*, in 1428; particularly this laſt, where the *Hanſeatic* Fleet conſiſted of Forty Ships, containing above 12,000 Regular Troops, beſide the Seamen.

But the ſeveral Princes, whoſe principal Cities were enter'd into the Aſſociation, began to think it Policy to put ſome Bounds to a Power, which, in Time, might have proved formidable to themſelves. — The Means were eaſy, and ſhort: Each withdrew the Merchants of his Country from the Aſſociation; which, in a little Time, from the great Number of Cities it had comprehended, found it ſelf ſunk to thoſe few which had begun the Confederacy; which henceforth was call'd the *Teutonic Hanſe*. Tho' theſe are ſtill ſo conſiderable in Point of Commerce, that they are admitted to make Treaties with the greateſt Kings.

The Diviſions that were got among them, contributed greatly to their Fall: Nor muſt it be forgot, that the Eſtabliſhment of the Republic and Commerce of *Holland* had its Share therein.

The four firſt Cities which form'd the League, were *Lubec*, *Cologn*, *Brunſwick*, and *Dantzick*, which were call'd *Mother-Towns*; as thoſe afterwards added thereto, were call'd *Daughters* thereof.

A great Number of Towns in *Germany*, ſtill retain the Title of *Hanſe Towns*; but this is rather an empty Title which they affect, than any Argument of their continuing to trade under the Laws and Protection of the ancient Alliance; there being ſcarce any but *Lubec*, *Hamburgh*, *Bremen*, *Roſtock*, *Brunſwick*, and *Cologn*, that are truly *Hanſeatic*, and that have Deputies at the Aſſemblies held on the common Occaſions thereof.

The great Trade the *Dutch* maintain with the *Hanſe Towns*, contributes not a little towards maintaining ſome Part of them in their ancient Reputation; and 'tis principally to their Alliance with that flouriſhing Republic, that they owe the Preſervation of their Liberties: The Succours ſome of them have received from the *Dutch*, having ſav'd them more than once from the Enterprizes of the Neighbouring Princes. See COMMERCE.

The Word *Hanſe*, is obſolete *High-Dutch*, or *Teutonic*, and ſignifies Alliance, Confederacy, Aſſociation, *&c.*

Others derive it from the two *German* Words, *Am-ſee*, that is, on the Sea; by Reaſon the firſt *Hanſe Towns* were all ſituate on the Sea-Coaſt: Whence, the Society is ſaid to have been firſt call'd, *aen zee ſteden*, that is, Cities on the Sea; and afterwards, by Abbreviation, *Hanſee*, and *Hanſe*.

HANSEATIC, ſomething belonging to the Alliance, or Company of the *Hanſe*.

Thus we ſay, The *Hanſeatic* Body: The *Hanſeatic* Towns, *&c.* See HANSE.

HANSGRAVE, the Title of an Officer in *Germany*. — The *Hanſgrave* is the chief of a Company, or Society.

The Word is a Compound of the German, *Hanſe*, and *Graf*, Count. See GRAVE.

HAP, in Law, from the French, *Happer*, to catch, or ſnatch; ſignifies the ſame with us: — Thus we ſay, to *Hap* the Poſſeſſion of a deed Poll, *Littleton*, Fol. 8. to *Hap* the Rent.

If Partition be made between two Partners, and more Land be allowed the one than the other; and ſhe that hath moſt of the Land, charges her Land to the other, and *happeth* the Rent; ſhe ſhall maintain Aſſize without Speciality. *Term. ley.*

HAQUENY, *Hackney*, an old *French* Word for an ambling Horſe. See AMBLING.

HAQUEBUT, a Kind of Gun, or Caliver, otherwiſe call'd an *Harquebuſs*, or *Arquebuſſe*. See HARQUEBUSS.

It is alſo call'd a *Hagbut*. — The *Haquebut* is a bigger Sort of Hand-Gun; thus call'd from the *Teutonic*, *Haeck Buyſe*.

HARANGUE, a Modern *French* Name for a *Speech*, or *Oration*; i. e. a Diſcourſe made by an Orator in public. See ORATION.

*Menage* derives the Word from the German *huborung*, or the *Engliſh* hearing. Others derive it from the Latin, *Ara*, Altar, by Reaſon the firſt *Harangues* were made before Altars: Whence the Verſe of *Juvenal*,

*Aut Lugdunenſem Rhetor dicturus ad Aram.*

The Word is alſo frequently uſed in an ill Senſe, *viz.* For a too pompous, prolix, or unſeaſonable Speech, or Declamation. — In *Homer*, the Poets generally *Harangue*

ere

ere they come to fight; as in *England*, Criminals *Harangue* on the Scaffold before they die. St. *Evrem.*

HARBINGER, an Officer of the King's Houſhold, having four Yeomen under him, who ride a Day's Journey before the Court when they travel, to provide Lodgings, &c.

HARBOUR, a *Sea-Port*; or a Station where Ships may ride ſafe at Anchor. See PORT.

The Word is chiefly applied to thoſe cloſed, or ſecured with a Bomb, or Chain; and that are furniſhed with a Mole, &c. See MOLE, &c.

To *Harbour*, is to lodge, receive, or entertain; to find a retiring Place. — Among Hunters, an Hart is ſaid to *Harbour* when he goes to Reſt; whence to *unharbour* a Deer, is to diſlodge him. See HUNTING.

HARDENING, the Act of communicating a greater Degree of *Hardneſs* to a Body, than it already has. See HARDNESS.

The *Hardening* and Tempering of Iron and Steel, makes a conſiderable Article in the mechanical Arts. See IRON, STEEL, TEMPERING, &c.

There are divers Ways of effecting it; as by the Hammer; quenching it, when hot, in cold Water; Caſe hardening, &c.

To *harden* and temper *Engliſh*, *Flemiſh*, and *Swediſh* Steel, they give it a pretty high Heat, then ſuddenly quench it in Water, to make it very hard: *Spaniſh* and *Venice* Steel only need a blood red Heat, and then quench'd. See HEAT.

The Workmen ſometimes grind Indigo, and Sallad Oyl together, and rub the Mixture upon it with a Woollen Rag while it is heating, and let it cool of it ſelf.

If the Steel be too *hard* or brittle for an Edge, ſpring, or pointed Inſtrument, it may be let down, or made ſofter, thus: Take a Piece of Grind-ſtone, or Whet-ſtone, and rub hard on the Work, to take the black Scurf off it, and brighten it; then let it heat in the Fire, and, as it grows hotter, the Colour will change by degrees, coming firſt to a light Goldiſh Colour, then to a darker Goldiſh Colour, and at laſt to a blue Colour: Chuſe which of theſe Colours the Work requires, and quench it ſuddenly in the Water.

*Hammer* HARDENING, is moſtly uſed on Iron and Steel Plates, for Saws, Springs, Rules, &c. See SPRING, &c.

*Caſe* HARDENING is thus perform'd: — Take Cow-horn, or hoof, dry it well in an Oven, and beat it to Powder; put as much Bay-Salt as Powder into ſtale Urine; or White-wine Vinegar, and mix them well together, cover the Iron, or Steel, all over with this Mixture, and wrap it up in Loam, or Plate Iron, ſo as the Mixture touch every Part of the Work; then put it in the Fire, and blow the Coals to it, till the whole Lump have a blood-red Heat, but no higher; laſtly, take it out and quench it.

HARDNESS, *Durities*, in Philoſophy, that Quality in Bodies, whereby their Parts cohere firmly together, ſo as to reſiſt the Touch. See COHESION.

In this Senſe *Hardneſs* coincides with what on other Occaſions we call *Firmneſs*, and ſometimes *Solidity*, in Oppoſition to Fluidity. See FIRMNESS, SOLIDITY, and FLUIDITY.

More ſtrictly ſpeaking, a Body is ſaid to be *hard*, when its Parts mutually cohere, ſo as not to yield inwards, or give Way to an external Impulſe; and therefore not ſubject to any Motion in Reſpect of each other, without breaking the Body. — In which Senſe, *Hardneſs* ſtands oppoſed to *Softneſs*, where the Parts do readily give Way.

The Peripateticks make *Hardneſs* a ſecondary Quality; as ſuppoſing it to ariſe from *Dryneſs*, which is a primary one, and to be in Proportion thereto. See QUALITY.

Its remote Cauſes, according to them, are either Heat or Cold, according to the Diverſity of the Subject: Heat producing Dryneſs, and by that Means *Hardneſs* in Clay; and Cold, doing the like in Wax.

The *Epicurean* and Corpuſcular Philoſophers, account for *Hardneſs*, from the Figure of the component Parts, and their Union together. — Accordingly, ſome aſcribe it to the Atoms, or Particles of the Body, being hooked, and thus mutually catching and hanging upon one another: But this is directly bringing that for an Anſwer, which was the Queſtion. For how do thoſe hooked Parts hang on? See PARTICLE.

Again: The *Carteſians* will have the Coheſion of hard Bodies, effected by Reſt; that is, by nothing at all. See REST.

Sir *Iſ. Newton* ſhews, that the primary Particles of all Bodies, whether ſolid or fluid, are *hard*, perfectly *hard*; and not capable of being broke or divided by any Power in Nature. — See MATTER, BODY, ELEMENT, &c.

Theſe Particles he maintains to be connected together by an attractive Power; and according to the Circumſtances of this Attraction, is the Body either *hard*, or ſoft, or even fluid. See ATTRACTION.

If the Particles be ſo diſpoſed or fitted for each other, as to touch in large Surfaces, ſuch Body will be *hard*; and the more ſo, as thoſe Surfaces are the larger. If, on the contrary, they only touch in ſmall Surfaces, the Body, by the Weakneſs of the Attraction, will remain ſoft. See PARTICLE.

HARDS, or HURDS, of Flax, or Hemp, are the coarſer Parts, ſeparated in the dreſſing of it, from the Tear, or fine Stuff. See HEMP.

HARE-*Hunting*. See *Hare*-HUNTING.

HARIOT, or HERIOT, a Due, or Service, belonging to the Lord at the Death of his Tenant; conſiſting of the beſt Beaſt the Tenant had at the Time of his Death. See SERVICE.

*Coke* on *Littleton* obſerves, that *Heriot* in *Saxon* is called ꝥeꝥegat, *q. d.* the *Lord's Beaſt*: ꝥeꝥe, ſignifying *Lord*, and ȝeat, *Beaſt*; from which others diſſent, urging that ꝥeꝥe, in *Saxon*, ſignifies an *Army*, and ȝeoт, *fuſus*: And that the *Saxon* ꝥeꝥegat, whence we derive our *Hariot*, ſignified *Proviſion* for War, or a Tribute, or Relief, given to the Lord of a Mannor, for his better Preparation towards War. — *Erat enim* Heriotum *militaris ſupellectilis præſtatio, quam obeunte vaſſallo, Dominus reportavit in ſui ipſius munitionem*, ſays *Spelman*.

By the Laws of *Canutus*, Tit. de *Heriotis*, it appears, that at the Death of the great Men of this Nation, ſo many Horſes and Arms were to be paid, as they were in their reſpective Life obliged to keep for the King's Service. See RELIEF.

But *Heriot* is now wholly taken for a Beaſt, which the Lord by Cuſtom, chuſes out of all the Store of his deceaſed Tenant, be it Horſe, Ox, &c. and in ſome Mannors, the beſt Piece of Plate, Jewel, or the beſt Moveable.

*Heriot* is of two Sorts: 1°. *Heriot Cuſtom*, where *Heriots* have been paid Time out of Mind by Cuſtom, after the Death of a Tenant for Life. 2°. *Heriot Service*, when a Tenant holds by ſuch Service to pay *Heriot* at the Time of his Death; which Service is expreſſed in the Deed of Feoffment. See SERVICE.

For this the Lord ſhall diſtrain; and for the other he ſhall ſeize and not diſtrain. — If the Lord purchaſe Part of the Tenancy, *Heriot Service* is extinguiſhed; but not ſo of *Heriot Cuſtom*. See FARLEY and SOLE *Tenant*.

HARLEQUIN, a *Buffoon*. — In the *Italian* Comedy, the *Harlequin* is the ſame with a Merry Andrew, or Jack Pudding in our Drolls, on Mountebanks Stages, &c. — We have alſo introduced the *Harlequin* upon our Theatres; and this is one of the ſtanding Characters in our Groteſque Entertainments.

The Term took its Riſe from a famous *Italian* Comedian, or rather Buffoon, who came to *Paris* under *Henry* III. and who frequenting the Houſe of M. *de Harlay*; his Companions uſed to call him *Harlequino*, q. d. *little Harlay*, a Name which has deſcended to all thoſe of the ſame Rank, and Profeſſion.

HARLOT, a Woman given to Incontinency; or that makes a *Habit* or a Trade of proſtituting her Body.

The Word is ſuppoſed to be uſed for *Whorelet*, or a little Whore. — Others derive it from *Arletta*, Miſs to *Robert* Duke of *Normandy*, and Mother to *William the Conquerour*: *Cambden* derives it from one *Arlotha*, Concubine to *William the Conquerour*. — Others from the Italian *Arlotta*, a proud Whore.

HARMONIA, in Muſic, &c. See HARMONY.

HARMONIA, in Anatomy, a Sort of Jointure, or Articulation of the Bones. See ARTICULATION.

*Harmonia* is a Species of the *Symphyſis*, or Juncture, intended for abſolute Reſt. See SYMPHYSIS.

Two Bones are ſaid to be joyn'd *per Harmoniam*, by *Harmonia*, when the Jointure is in one uniform, right, or circular Line; or when the Bones meet with even Margins: In Contradiſtinction from *Sutura*, where they are indented. See SUTURA.

The Bones of the upper Jaw are joyn'd *per Harmoniam*. See MAXILLA *Superior*.

HARMONICA, HARMONICKS, a Branch, or Diviſion of the antient Muſic. See MUSIC.

The *Harmonica* is that Part which conſiders the Differences, and Proportion of Sounds, with Reſpect to acute and grave: In Contradiſtinction from *Rythmica* and *Metrica*. See RYTHMICA and METRICA.

The only Part of their Muſic the Antients have left us any tolerable Account of, is the *Harmonica*; which it ſelf is but very general and theoretical.

Mr.

Mr. *Malcolm* has made a very induſtrious, and learned Inquiry into the *Harmonica*, or Harmonic Principles of the Antients. — They reduced their Doctrines into ſeven Parts, *viz.* of *Sounds*; of *Intervals*; of *Syſtems*; of the *Genera*; of the *Tones*, or *Modes*; of *Mutations*; and of the *Melopœia*. See each conſider'd under its proper Article SOUND, INTERVAL, SYSTEM, GENERA, MODE, MUTATION and MELOPOEIA.

HARMONICAL *Arithmetic*, is ſo much of the Theory and Doctrine of Numbers, as relates to making the Compariſons, Reductions, *&c.* of Muſical Intervals, which are expreſſed by Numbers, in order to our finding their mutual Relations, Compoſitions and Reſolutions. See INTERVAL, *&c.*

HARMONICAL *Compoſition*, in its general Senſe, includes the Compoſition both of *Harmony* and *Melody*, i. e. of Muſic, or Songs, both in a ſingle Part, and in ſeveral Parts. See COMPOSITION.

In its more proper and limited Senſe, *Harmonical Compoſition* is reſtrain'd to that of Harmony. In which Senſe it may be defined the Art of diſpoſing and concerting ſeveral ſingle Parts together, in ſuch Manner, as to make one agreeable whole. See SONG, *&c.*

The Art of Harmony has been long known under the Name of *Counterpoint*. See COUNTERPOINT.

At the Time when Parts were firſt introduced, Muſic being then very ſimple, there were no different Notes of Time; and the Parts were in every Note made Concord.

This they afterwards call'd *ſimple*, or *plain Counterpoint*, to diſtinguiſh it from another Kind, then introduced, wherein Notes of different Value were introduced, and Diſcords brought in between the Parts. See DISCORD.

This they call'd *Figurative Counterpoint*. See FIGURATIVE *Counterpoint*.

HARMONICAL *Interval*, is an Interval, or Difference of two Sounds which are agreeable to the Ear, whether in Conſonance or Succeſſion. See INTERVAL.

*Harmonical Intervals*, therefore, are the ſame with *Concords*. See CONCORD.

They are thus call'd, as being the only eſſential Ingredients of Harmony. See HARMONY.

HARMONICAL *Proportion*, is a Sort of Proportion between three Quantities, wherein the Difference of the firſt and ſecond, is to the Difference of the ſecond and third; as the firſt is to the third.

Thus, 2 : 3 : 6 are *Harmonical*, becauſe 2 : 6 :: 1 : 3 are Geometrical.

So four Numbers are *Harmonical*, when the firſt is to the fourth, as the Difference of the firſt and ſecond, to the Difference of the third and fourth.

Thus, 24 : 16 : 12 : 9 are *Harmonical*; becauſe 24 : 2 :: 8 : 3 are Geometrical.

*For the Laws and Rules of* HARMONICAL *Proportion*. See *Harmonical* PROPORTION.

HARMONICAL *Series*, is a Series of many Numbers in continual *Harmonical* Proportion. See SERIES.

If there be four or more Numbers, whereof, every three immediate Terms are *Harmonical*; the whole makes an *Harmonical Series*, of continual *Harmonical* Proportionals: As 30 : 20 : 15 : 12 : 10.

Or if every 4 immediately next each other are *Harmonical*, 'tis alſo a continual *Harmonical Series*, but of another Species; as 3, 4, 6, 9, 18, 36, *&c.*

HARMONICAL *Sounds*, is an Appellation given by M. *Sauveur* to ſuch Sounds as always make a certain determinate Number of Vibrations in the Time that ſome other fundamental Sound, to which they are referr'd, makes one Vibration. See SOUND and VIBRATION.

*Harmonical Sounds*, are produced by the Parts of Chords, *&c.* which vibrate a certain Number of Times while the whole Chord vibrates once. See CHORD.

By this they are diſtinguiſhed from the third, fifth, *&c.* where the Relations of the Vibrations is 4 to 5, or 5 to 6, or 2 to 3. See THIRD, *&c.*

The Relations of Sounds, had only been conſider'd in the Series of Numbers 1 : 2, 2 : 3, 3 : 4, 4 : 5, *&c.* which produced the Intervals call'd *Octave*, *Fifth*, *Fourth*, *Third*, &c. Mr. *Sauveur* firſt conſider'd them in the natural Series, 1, 2, 3, 4, &c. and examined the Relations of the Sounds ariſing therefrom. — The Reſult is, that the firſt Interval 1 : 2, is an Octave; the ſecond 1 : 3, a twelfth; the third 1 : 4, a fifteenth, or double Octave; the fourth 1 : 5, a ſeventeenth; the fifth 1 : 6, a nineteenth, *&c.*

This new Conſideration of the Relations of *Sounds*, is more natural than the old one; and does expreſs and repreſent the whole of Muſic, and is in Effect all the Muſic that Nature gives without the Aſſiſtance of Art. — The String of a Harpſichord, or a Bell, beſide their general Sound, which is proportionate to their Length, Tenſion, *&c.* do alſo at the ſame Time yield other ſubordinate and acuter Sounds, which a nice Ear, with a good Attention, clearly diſtinguiſhes.

Theſe ſubordinate *Sounds* ariſe from the particular Vibrations of ſome of the Parts of the String, or Bell, which are, as it were, detach'd from the reſt, and make ſeparate Vibrations: In Effect, every half, every third, every fourth, *&c.* of the Chord performs its Vibrations apart, while a general Vibration is made of the whole Chord. — Now all theſe ſubordinate Sounds are *Harmonical* with Regard to the whole Sound: The leaſt acute, which we hear, is Octave with the whole Sound; the leaſt acute that follows, makes a twelfth with the whole Sound; the next a ſeventeeth, *&c.* till they grow too acute for the Ear to perceive them. Now throughout the whole, we hear no ſuch Thing as a Sound that makes a fifth, or a third, *&c.* with the whole Sound; none in ſhort, but what are comprized in the Series of *Harmonical* Sounds.

Add, that if the Breath, or Bellows that blow a Wind Inſtrument, be play'd ſtronger and ſtronger, the Tone will be continually rais'd, but this only in the *Ratio* of the *Harmonical Sounds*. — So that it appears that Nature, when ſhe makes as it were a Syſtem of Muſic her ſelf, uſes no other but this Kind of Sounds; and yet they had hitherto remained unknown to the Muſicians: Not but that they frequently fell into 'em, but it was inadvertently, and without knowing what they did. — M. *Sauveur* ſhews that the Structure of the Organ depends entirely on this unknown Principle. See ORGAN.

HARMONY, in Muſic, the agreeable Reſult of an Union of ſeveral Muſical Sounds, heard at one and the ſame Time; or, the Mixture of divers Sounds, which together have an Effect agreeable to the Ear. See SOUND.

As a continued Succeſſion of Muſical Sounds produces *Melody*; ſo does a continued Combination of thoſe produce *Harmony*. See MELODY.

Among the Antients, however, as ſometimes alſo among the Moderns, *Harmony* is uſed in the ſtrict Senſe of *Conſonance*; and ſo is equivalent to the *Symphony*. See CONSONANCE and SYMPHONY.

The Words *Concord*, and *Harmony*, do really ſignify the ſame Thing; tho' Cuſtom has made a little Difference between them. Concord is the agreeable Effect of two Sounds in Conſonance: And *Harmony*, the Effect of any greater Number of agreeable Sounds in Conſonance. See CONCORD.

Again, *Harmony* always implies *Conſonance*: But *Concord* is alſo applied to Sounds in *Succeſſion*; tho' never but where the Terms can ſtand agreeably in Conſonance: The Effect of an agreeable Succeſſion of ſeveral Sounds, is call'd *Melody*; as that of an agreeable Conſonance, *Harmony*.

The Antients ſeem to have been entirely unacquainted with *Harmony*; the Soul of the modern Muſic. — In all their Explications of the *Melopœia*, they ſay not one Word of the Concert, or *Harmony* of Parts. We have Inſtances, indeed, of their joyning ſeveral Voices, or Inſtruments, in Conſonance: But then thoſe Voices, *&c.* were not ſo joyn'd, as that each had a diſtinct and proper Melody, ſo making a Succeſſion of various Concords; but were either Uniſons, or Octaves, in every Note; and ſo all perform'd the ſame individual Melody, and conſtituted one Song. See SONG, SYNAULIA, *&c.*

When the Parts differ, not in the Tenſion of the whole, but in the different Relations of the ſucceſſive Notes; 'tis thus that conſtitutes the modern Art of *Harmony*. See MUSIC and MELOPOEIA.

*Harmony* is well defined the Sum of Concords, ariſing from the Combination of two or more Concords, *i. e.* of three or more ſimple Sounds, ſtriking the Ear all together: And different Compoſitions of Concords make different *Harmony*.

To underſtand the Nature, and determine the Number, and Preference of *Harmonies*; it is to be conſider'd, that in every compound Sound, where there are no more than three ſimple ones, there are three Kinds of Relations, *viz.* the primary Relation of every ſimple Sound to the fundamental, or graveſt, whereby they make different Degrees of Concord with it: The mutual Relations of the Acute ſounds each with other, whereby they mix either Concord or Diſcord into the Compound: And the ſecondary Relation of the whole, whereby all the Terms unite their Vibrations, or coincide more or leſs frequently.

Suppoſe, *e. gr.* four Sounds, A, B, C and D, whereof A is the graveſt; B next; then C; and D the acuteſt. — Here, A is the fundamental; and the Relations of B, C, and D, to A are primary Relations: So, if B be a 3d *g* above A, that primary Relation is 4 to 5; and if C be 5th to A, that primary Relation is 2 to 3; and if D be

8ve

8ve to A, that is 1 to 2. For the mutual Relations of the acute Terms, B, C, D, they are had by taking their primary Relations to the fundamental, and ſubſtracting each leſſer from each greater: Thus, B to C is 5 to 6, a 3d *l*; B to D is 5 to 8, a 6th *l*, &c. — Laſtly, to find the ſecondary Relation of the whole, ſeek the leaſt common Dividend to all the leſſer Terms or Numbers of the primary Relations, *i. e.* the leaſt Number that will be divided by each of them exactly: This is the Thing ſought; and ſhews that all the ſimple Sounds coincide after ſo many Vibrations of the Fundamental as the Number expreſſes.

So in the preceding Example, the leſſer Terms of the three primary Relations are 4, 2, 1, whoſe leaſt common Dividend is 4. Conſequently, at every 4th Vibration of the fundamental, the whole will coincide.

Now *Harmony*, we have obſerved, is a compound Sound, conſiſting of three, or more, ſimple Sounds. — Its proper Ingredients are Concords; and all Diſcords, at leaſt in the primary and mutual Relations, are abſolutely forbidden. 'Tis true Diſcords are uſed in Muſic; but not for themſelves ſimply, but to ſet off the Concords by their Contraſt and Oppoſition. See DISCORD.

Hence, any Number of Concords being propoſed to ſtand in primary Relation with a common Fundamental; we diſcover whether or no they conſtitute a perfect *Harmony* by finding their mutual Relations. — Thus, ſuppoſe the following Concords, or primary Relations, *viz.* the greater 3d, 5th, and Octave given; their mutual Relations are all Concord, and therefore may ſtand in *Harmony*. For the greater 3d and 5th are to one another, as 5 : 6, a leſſer third. The greater 3d and Octave, are as 5 : 8 a leſſer 6th. And the 5th and Octave are as 3 : 4 a leſſer fourth. But if 4th, 5th, and 8ve, be propoſed, 'tis evident they cannot ſtand in *Harmony*; by Reaſon betwixt the 4th and 5th there is a Diſcord, *viz.* the Ratio 8 : 9. Again, ſuppoſing any Number of Sounds which are Concord, each to the next, from the loweſt to the higheſt; to know if they can ſtand in *Harmony*, we muſt find the primary, and all the mutual Relations, which muſt be all Concord. So let any Number of Sounds be as 4 : 5 : 6 : 8, they may ſtand in *Harmony* by Reaſon each to each is Concord: But the following ones cannot, *viz.* 4, 6, 9, becauſe 4 : 9 is Diſcord.

The neceſſary Conditions of all *Harmony*, then, are Concords in the primary and mutual Relations; on which Footing, a Table is eaſily form'd of all the poſſible Varieties: But to determine the Preference of *Harmonies*, the ſecondary Relations are likewiſe to be conſider'd. — The Perfection of *Harmonies* depends on all the three Relations: It is not the beſt primary Relations that make beſt *Harmony*: For then a 4th and 5th muſt be better than a 4th and 6th. Whereas the firſt two cannot ſtand together, becauſe of the Diſcord in the mutual Relation: Nor does the beſt ſecondary Relation carry it; for then would a 4th and 5th, whoſe ſecondary Relation with a common Fundamental is 6, be better than a leſſer 3d and 5th, whoſe ſecondary Relation is 10: But here alſo the Preference is due to the better mutual Relation. — Indeed, the mutual Relations depend on the primary; tho' not ſo, as that the beſt primary ſhall always produce the beſt mutual Relation: However, the primary Relations are of the moſt Importance; and together with the ſecondary, afford us the following Rule for determining the Preference of *Harmonies*.

*Viz.* Comparing two *Harmonies*, which have an equal Number of Terms, that which has the beſt primary and ſecondary Relations, is moſt perfect. — But in Caſes, where the Advantage is in the primary Relation of the one, and the ſecondary of the other, we have no certain Rule: The primary are certainly the moſt conſiderable; but how the Advantage in theſe ought to be proportion'd to the Diſadvantage in the other, or *vice verſa*, we know not. So that a well turned Ear muſt be the laſt Reſort in theſe Caſes.

*Harmony* is divided into Simple and Compound.

*Simple* HARMONY, is that where there is no Concord to the fundamental above an Octave.

The Ingredients of ſimple *Harmony*, are the ſeven ſimple original Concords, of which there can be but 18 different Combinations, that are *Harmony*; which we give in the following Table from Mr. *Malcolm*.

*Table of ſimple* HARMONIES.

| | | 2dary *Rel.* | | | 2dary *Rel.* | |
|---|---|---|---|---|---|---|
| 5th | 8ve | 2 | 3d *g* 5th | 4 | 3d *g*, 5th 8ve |
| 4th | 8ve | 3 | 3d *l* 5th | 10 | 3d *l*, 5th 8ve |
| 6th *g* | 8ve | 3 | 4th, 6th, *g* | 3 | 4th, 6th, *g* 8ve |
| 3d *g* | 8ve | 4 | 3d *g*, 6th *g* | 12 | 3d *g*, 6th *g* 8ve |
| 3d *l* | 8ve | 5 | 3d *l*, 6th *l* | 5 | 3d *l*, 6th *l*, 8ve |
| 6th *l* | 8ve | 5 | 4th, 6th *l* | 15 | 4th, 6th *l*, 8ve |

These are all the poſſible Combinations of the Concords that make *Harmony*: For the 8ve is compounded of a 5th and 4th, or a 6th and 3d; which have a Variety of greater and leſſer; out of theſe are the firſt ſix *Harmonies* compoſed: Then, the 5th being compoſed of the greater 3d, and leſſer 3d, and the 6th of 4th and 3d; from theſe proceed the next ſix of the Table: Then an 8ve joyn'd to each of theſe 6, make the laſt ſix.

The Perfection of the firſt twelve is according to the Order of the Table: Of the firſt ſix each has an Octave, and their Preference is according to the Perfection of the other leſſer Concord joyn'd to the Octave. — For the next ſix, the Preference is given to the two Combinations with the 5th, whereof that which has the 3d *g* is beſt; then to theſe two Combinations with the 6th *g*, of which that which has the 4th is beſt. — For the laſt ſix, they are not placed laſt, as being the leaſt perfect, but becauſe they are the moſt complex, and are the Mixtures of the other 12 with each other. In Point of Perfection they are plainly preferable to the preceding ſix, as having the very ſame Ingredients, and an Octave more.

*Compound* HARMONY, is that which to the ſimple *Harmony* of one Octave, adds that of another Octave.

For the Compound *Harmonies*, their Variety is eaſily found out of the Combinations of the ſimple *Harmonies* of ſeveral Octaves.

*Harmony*, again, may be divided into that *of Concords*, and that *of Diſcords*.

The *firſt* is that we have hitherto conſider'd, and wherein nothing but Concords are admitted.

The *ſecond* is that wherein Diſcords are uſed, intermix'd with the Concords. See HARMONICAL *Compoſition*.

*Compoſition of* HARMONY. See HARMONIC *Compoſition*.

HARMONY, is ſometimes alſo uſed in a laxer Senſe, to denote an Agreement, Suitableneſs, Union, Conformity, *&c.*

The Word is form'd of the *Greek* ἁρμονία, of the Verb ἁρμόζειν, *convenire*, *congruere*, to agree, match, *&c.*

In Muſic, we ſometimes apply it to a ſingle Voice, when ſonorous, clear, and ſoft; or to a ſingle Inſtrument, when it yields a very agreeable Sound. — Thus, we ſay, the *Harmony* of her Voice: of his Lute, *&c.*

In Matters of Learning, we uſe *Harmony* for a certain Agreement between the ſeveral Parts of a Diſcourſe, which renders the reading thereof agreeable. — In this Senſe we ſay *Harmonious* Periods, *&c.* See PERIOD, NUMBERS, *&c.*

In Architecture, *Harmony* denotes an agreeable Relation between the Parts of a Building. See SYMMETRY.

In Painting, they ſpeak of a *Harmony*, both in the Ordonnance and Compoſition, and in the Colours of a Picture. — In the Ordonnance, it ſignifies the Union, or Connection between the Figures, with Reſpect to the Subject of the Piece. See ORDONNANCE.

In the Colouring it denotes the Union, or agreeable Mixture of different Colours. See COLOURING.

M. *de la Chambre* derives the *Harmony* of Colours from the ſame Proportions, as the *Harmony* of Sounds. — This he inſiſts on at large, in his Treatiſe of the Colours *of the Iris*. On this Principle, he lays down green, as the moſt agreeable of Colours, correſponding to the Octave in Muſic; red, to a fifth; yellow, to a fourth, *&c.*

The Name *Harmony*, or *Evangelical Harmony*, is uſed as the Title of divers Books, compoſed to ſhew the Uniformity and Agreement of the four Evangeliſts. See EVANGELIST.

The firſt Attempt of this Kind is attributed to *Tatian*, or *Theophilus* of *Antioch*, in the IId Century. — After his Example, divers other *Harmonies* have been compoſed, by *Ammonius* of *Alexandria*, *Euſebius* of *Cæſarea*, *Janſenius* Biſhop of *Gant*, Monſ. *Toinard*, Mr. *Whiſton*, &c.

HARMONY *of the Spheres*, or *Celeſtial* HARMONY, is a Sort of Muſic, much ſpoke of by many of the Philoſophers and Fathers; ſuppoſed to be produced by the regular, ſweetly tuned Motions of the Stars and Planets. See SYSTEM.

*Plato*, *Philo Judæus*, St. *Auguſtine*, St. *Ambroſe*, St. *Iſidore*, *Boetius*, and many others, are ſtrongly poſſeſs'd with the Opinion of this *Harmony*, which they attribute to the various and proportionate Impreſſions of the heavenly Globes upon one another; which acting under proper Intervals, form a *Harmony*.

It is impoſſible, according to them, that ſuch ſpacious Bodies, moving with ſo much Rapidity, ſhould be ſilent; on the contrary, the Atmoſphere, continually impell'd by them, muſt yield a Set of Sounds, proportionate to the Impulſions it receives: Conſequently, as they do not all run the ſame Circuit, nor with one and the ſame Velocity, the different Tones ariſing from the Diverſity of Motions, directed by the Hand of the Almighty, form an admirable Symphony, or Concert. See MUSIC.

St. *Irenæus*, St. *Baſil*, and St. *Epiphanius*, have appeared againſt the Notion.

*Pre-eſtabliſh'd* HARMONY, a celebrated Syſtem of M. *Leibnitz*, by Means whereof he accounts for the Union or Communication between the Soul and Body. See SOUL, *&c.*

The Philoſophers had univerſally held that the Soul and Body act really and phyſically on each other. — *Des Cartes* firſt appear'd, and ſhew'd that the Heterogeneity of their Nature did not allow of ſuch real Union; and that they could only have an apparent one, whereof God is the Mediator. See CAUSE.

Mr. *Leibnitz*, unſatisfied with either of theſe Hypotheſes, eſtabliſhes a third. — A Soul, or Spirit, he obſerves, is to have a certain Series of Thoughts, deſires and wills: A Body, which is only a Machine, is to have a certain Series of Motions, to be determined by the Combination of its mechanical Diſpoſition, with the Impreſſions of external Objects.

If, now, there be found a Soul and a Body ſo framed, that the whole Series of Wills of the Soul, and the whole Series of Motions of the Body, exactly correſpond; and that at the ſame Time, for Inſtance, when the Soul deſires to go to any Place, the two Feet move mechanically that Way: This Soul and Body will have a Relation to one another, not by any actual Union between them, but by the conſtant and perpetual Correſpondence of the ſeveral Actions of both. — Now, God puts together this Soul and Body, which had ſuch a Correſpondence antecedent to their Union; ſuch a *pre-eſtabliſh'd Harmony*. — And the ſame is to be underſtood of all the other Souls and Bodies, that have been or ever will be joyn'd.

In Effect, the Laws of Motion in the Body, ſucceeding in the Order of Efficient Cauſes, do alſo agree and correſpond with the Ideas of the Soul; ſo that the Body is determined to act at the Time when the Soul wills.

The ſame Principle he extends further, and makes a *pre-eſtabliſh'd Harmony* between the Kingdoms of Nature and Grace; to account for the apparent Communication between them, and make phyſical and moral Evil correſpond. See GRACE, EVIL, *&c.*

Such is the Syſtem of pre-eſtabliſh'd Harmony, *Harmonie pre-etabile*. — The Author's Way of ſtating and inforcing it, may be ſeen in his *Eſſais de Theodicee*.

HARMONY, in Anatomy. See HARMONIA.

HARMOSTES, in Antiquity, a Sort of Magiſtrate among the *Spartans*; whereof there were ſeveral in Number. — Their Buſineſs was to look to the Building of Citadels, and repairing the Forts, and Fortifications of the Cities.

The Word is *Greek*, Ἁρμόστης, form'd of ἁρμόω, *apto, concinno*.

HARNESS, a compleat Armour; or, the whole Equipage and Accoutrements of a Cavalier, heavily arm'd; as Caſk, Cuiraſs, *&c.* See ARMOUR. See alſo CASK, CUIRASS, *&c.*

The Word is form'd of the *French*, *Harnois*; which ſome derive from the *Greek*, αρναξις, a Lamb's Skin; by Reaſon they anciently cover'd themſelves herewith. — *Du Cange* obſerves, that the Word *Harneſium* is uſed in the corrupt *Latin*, in the ſame Senſe; and that it comes from the *High-Dutch*, *Harnas*, or *Harniſch*. Others derive it from the *Italian*, *arneſe*. Others from the *Celtic*, *Harnes*, a Cuiraſs.

HARNESS, is alſo uſed for the Furniture put on a Horſe, to draw in a Coach, Waggon, or other Carriage; as Collars, Leathers, Traces, *&c.*

HARO, in the Cuſtoms of *Normandy*, a Cry whereby to invoke the Help and Aſſiſtance of the Officers of Juſtice, *&c.* See CRY.

When any Perſon finds his Man, and would carry him before the Judge: Upon hearing the *Haro*, he is obliged to follow the Perſon who has cried it on him; and both of them either remain in Priſon, or put in Bail.

The Letters of the *French* Chancery have uſually this Clauſe, *Non obſtant Clameur de Haro*, &c.

The *Haro* had anciently ſuch vaſt Power, that a poor Man of the City of *Caen*, named *Aſſelin*, in virtue hereof, arreſted the Corps of *William the Conqueror*, in the middle of the Funeral Proceſſion, till ſuch Time as his Son *Henry* had paid the Value of the Land in Queſtion; which was that whereon the Chapel was built, where he was interr'd.

The Word is commonly derived of *Ha* and *Roul*, as being ſuppoſed an Invocation of the Soveraign Power, to aſſiſt the Weak againſt the Strong, on Occaſion of *Raoul* firſt Duke of *Normandy*, about the Year 912; who render'd himſelf venerable to his Subjects, by the Severity of his Juſtice: So that they call'd on him even after his Death, when they ſuffer'd any Oppreſſion.

*Guill. Guiart* ſpeaks of the *ha Rous*, (i. e. *ha Roul*) as a Military Cry brought into *Neuſtria* by the *Normans*, under the Conduct of *Raoul*. Others ſay, that during his Life-time, they uſed to cry *a Raoul*, I cite you to appear before *Raoul*, by Reaſon he adminiſter'd Juſtice to his Subjects in Perſon. But others, as M. *Caſeneuve*, take all theſe Etymologies to be falſe; and ſuppoſe the Word *Haro*, to have been a Cry long before Duke *Raoul*. Some derive it from *Harola* King of *Denmark*, who in the Year 826, was made Grand Conſervator of Juſtice at *Mentz*. Others, laſtly, derive it from the *Daniſh aa rau*, ſignifying *help me*; a Cry rais'd by the *Normans*, in flying from a King of *Denmark*, named *Roux*, who made himſelf Duke of *Normandy*.

HARP, a Muſical Inſtrument, of the String Kind; being of a triangular Figure, and placed an End between the Legs to be play'd on. See INSTRUMENT.

There is ſome Diverſity in the Structure of *Harps*. — That call'd the *Triple Harp*, has 78 Strings, or Chords, in three Rows, 49 in each, which make four Octaves: The firſt Row is for the Semitones; and the third is in Uniſon with the firſt. There are two Rows of Pins, or Screws, on the right Side, ſerving to keep the Strings tight in their Holes, which are faſten'd at the other End to three Rows of Pins on the upper Side.

This Inſtrument is ſtruck with the Finger and Thumb of both Hands. Its Muſic is much like that of the Spinett; all its Strings going from Semitone to Semitone: Whence ſome call it an *inverted Spinett*. See SPINETT.

It is capable of a much greater Degree of Perfection than the Lute. See LUTE.

King *David* is uſually painted with a *Harp* in his Hands; but we have no Teſtimony in all Antiquity, that the *Hebrew Harp*, which they call *Chinnor*, was any Thing like ours. — On a *Hebrew* Medal of *Simon Machabæus* we ſee two Sorts of Muſical Inſtruments; but they are both of them very different from our *Harp*, and only conſiſt of three or four Strings.

*Papias*, and *du Cange* after him, will have the *Harp* to have took its Name from the *Arpi*, a People of *Italy*, who were the firſt that invented it; and from whom it was borrowed by other Nations.

All Authors agree, that it is very different from the *Lyra*, *Cythara*, or *Barbiton*, uſed among the *Romans*. See LYRA.

*Fortunatus*, *L.* VII. *Carm.* 8. witneſſes, that it was an Inſtrument of the *Barbarians*.

*Romanuſq; Lyra, plaudet tibi Barbarus* Harpâ
*Græcus Achilliaca, Crotta Britannia canat.*

*Menage*, &c. derive the Word from the *Latin*, *Harpa*; and that from the *German*, *herp*, or *harpff*. Others bring it from the *Latin Carpo*, becauſe touch'd, or thrum'd with the Fingers. Dr. *Hicks* derives it from *Harpa*, or *Hearpa*, which ſignify the ſame Thing; the firſt in the Language of the *Cimbri*, the ſecond in that of the *Anglo Saxons*.

The *Engliſh* Prieſt who wrote the Life of St. *Dunſtan*, and who lived with him in the *Xth* Century, ſays, C. 2. N. 12. *Sumpſit ſecum ex More Citharam ſuam, quam paterni lingua* Hearpam *vocamus*; which intimates the Word to be *Anglo-Saxon*.

HARPIES, HARPYÆ, in Antiquity, a Sort of fabulous Monſters, of the Bird-Kind, mention'd among the Poets.

They are repreſented with Wings, Ears like Bears, Bodies like Vultures, Faces like Women, and Feet and Hands hooked like the Talons of Birds of Prey. See *Virgil. Æneid. L.* III. who gives a Deſcription of them.

The Ancients looked on the *Harpies*, as a Sort of *Genii*, or Dæmons. — Some make them the Daughters of *Tellus* and *Oceanus*, the Earth and Ocean; whence, ſays *Servius*, it is, that they inhabit an Iſland, half on Land, and half in Water. *Valerius Flaccus* makes them the Daughters of *Typhon*.

There were three *Harpies*, *Aello*, *Ocypete*, and *Celæno*, which laſt *Homer* calls *Podarge*. — *Heſiod*, in his Theogony, *v.* 267. only reckons two, *Aello* and *Ocypete*; and makes them the Daughters of *Thaumas* and *Electra*; affirming, that they had Wings, and went with the Rapidity of the Wind. *Zephirus* begat of them *Balius* and *Xanthus*, *Achilles*'s Horſes. *Pherecydes* relates, that the *Boreades* expell'd them from the *Ægean* and *Sicilian* Seas, and purſued them as far as the Iſlands, which he calls *Plotæ*; and *Homer*, *Calynæ*; and which have ſince been call'd *Strophades*.

*Voſſius*, *de Idolol.* L. III. C. 99. *p.* 63. thinks, that what the Ancients have related of the *Harpies*, agrees to no other Birds ſo well as the *Bats*, found in the Territories of *Darien* in *South America*. — Theſe Animals kill not only Birds, but Dogs and Cats; and prove very troubleſome

ſome to Men by their Peckings. But the Ancients, as the ſame *Voſſius* obſerves, knew nothing of theſe Birds. By the *Harpies*, therefore, he thinks, they could mean nothing elſe but the Winds; and that it was on this Account they were made Daughters of *Electra*, the Daughter of *Oceanus*. Such is the Sentiment of the Scholiaſts of *Apollonius*, *Heſiod*, and *Euſtathius*. — Their Names *Aelle*, *Ocypate*, and *Cæleno*, are ſuppoſed to be a further Argument.

HARPINEER, the Engineer, or Fiſherman, who manages, and throws the *Harping Iron*. See HARPING *Iron*.

The *Harpineers*, are the moſt robuſt and dexterous Perſons in the Crew of Ships ſent on Whale Fiſhing. — Their Place is at the End of the Pinnace, and they direct the Pilot as well as the Rowers. When they come within Reach of the Whale, they dart their Iron with great Vehemence into his Head, ſo as to penetrate the Skin and Fat, and enter deep into the Fleſh. Immediately upon this, the Whale dives to the Bottom, and when he returns to the Air again to fetch Breath, the *Harpineer* takes Occaſion to ſtrike him afreſh; tho' he would have died of the former Wound; it being a Circumſtance well aſſured, that Blood never ſtanches, nor Wounds ever heal in the Water.

This done, the other Fiſhers approach a Side of him, and run a long Spear ſho'd with Iron, under the Fins, thro' the Inteſtines, into his Breaſt. The Blood now ſpouts out, and the Carcaſe welters in its own Fat. It remains to tow him to Shore, there to cut off the Blubber, *&c.* See *Whale* FISHERY.

— Aſſoon as the *Harpineer* perceives the Sturgeon's Belly, which is frequently turning, now on this Side, and then on that, he darts his Iron into the ſame, as being deſtitute of Scales. *Denis Hiſt. de l'Amerique.* See *Sturgeon* FISHERY.

HARPING-*Iron*, *Harpago*, a Sort of Dart, or Spear, faſten'd to a Line, wherewith they catch Whales, and other large Fiſh, as Sturgeons, *&c.* See HARPINEER.

This *Harping-Iron* is a large Javelin of forged Iron, five or ſix Foot long, with a ſharp, cutting, triangular Point, barbed like that of an Arrow. At the upper End is engraven the *Harpineer*'s Name, near a Ring, to which the Line is faſten'd, which they let down, aſſoon as the Beaſt is ſtruck, to give him Room to dive, *&c.* See *Whale* FISHERY.

HARPINGS, in a Ship, is properly her Breadth at the Bow; tho' ſome call the Ends of the Bends, which are faſten'd into the Stem, by the ſame Name.

HARPOCRATIANS, a Sect of Hereticks, mention'd by *Celſus*; the ſame with *Carpocratians*. See CARPOCRATIANS.

HARPSICHORD, or HARPSICHOL, a Muſical Inſtrument of the Wind-Kind; play'd after the Manner of an Organ. See ORGAN.

The *Italians* call it *Clave Cimbala*, and the *French Clavecin*. In *Latin* it is uſually call'd *Grave Cymbalum*, q. d. a large or deep Cymbal. See CYMBAL.

The *Harpſichord* is furniſh'd with a Set of Keys; ſometimes two Sets: — The touching, or ſtriking of theſe Keys, moves a Kind of little Jacks, which move a double Row of Chords, or Strings of Braſs and Iron, ſtretch'd on the Table of the Inſtrument over four Bridges. See MUSIC.

HARQUEBUS, or HARQUEBUSS, in our ancient Statutes, call'd alſo ARQUEBUSE, HAQUEBUT, or HAGBUT; is a *Hand-Gun*; or a Fire-Arm of a proper Length, *&c.* to be bore in the Arm. See GUN.

The *Harquebus* is properly a Fire-Arm, of the ordinary Length of a Muſquet, or Fowling-Piece; cock'd, uſually, with a Wheel. — *Hanzelet* preſcribes its Legitimate Length to be 40 Calibers; and the Weight of its Ball one Ounce, ſeven eights; its Charge of Powder as much.

There is alſo a larger Kind, call'd *Harquebuſs a Croc*, much of the Nature of our Blunderbuſſes, uſed in War, for the Defence of Places; being uſually reſted on ſomething when diſcharged.

The firſt Time theſe Inſtruments were ſeen, was in the *Imperial* Army of *Bourbon*, who drove *Bonnivet* out of the State of *Milan*. — They were ſo big and heavy, that there were two Men to carry them.

The Word *Harquebus*, is form'd of the *French*, *Arquebuſe*; and that from the *Italian*, *Arcobuſio*, or *Arco Abuſo*, of *Arco*, a Bow, and *Buſio*, a Hole; on Account of the Touch-Hole, at which the Powder is put to prime it; and that it ſucceeded to the Bows of the Ancients.

HARRIER, a Kind of Hound, call'd in *Latin*, *Sagax*, from his tracing, or chaſing by Foot. — Being endow'd with an admirable Gift of Smelling, and alſo very bold in the Purſuit of his Game. See HOUND.

There are ſeveral Kinds; all differing in their Services; ſome are for the Hare, Fox, Wolf, Hart, Buck, Badger, Otter, Pole-Cat, Weaſel, Coney, and ſome for one Game, ſome for another, *&c.* See HUNTING.

HARROW, in Husbandry, a Drag made in a Square Form, to break the Clods of Earth after Ploughing. See PLOUGHING, TILLING, SOWING, *&c.*

It conſiſts of three Parts; 1°. The *Harrow*-Bulls, which are the Holes where the Nails go in; 2°. The Slots, which are the Croſs-Pins; 3°. The *Harrow* Tines, Pins, or Tuſhes, which are Iron Nails; 4°. The Hook, being that which faſtens the Horſe to them; 5°. The Couples, when two *Harrows* are tied together.

HART, in the Foreſt Law, a Stag of five Years old compleat. See GAME.

If the King or Queen hunt him, and he eſcape, he is called an *Hart Royal*. See HUNTING.

And if by ſuch Hunting he be chaſed out of the Foreſt, Proclamation is commonly made in the Places adjacent, that in Regard of the Paſtime the Beaſt has afforded the King or Queen, none ſhall hurt, or hinder him from returning to the Foreſt; upon which he is call'd an *Hart Royal proclaim'd*. See PURLIEU, *&c.*

HARTS-*Horn*, *Cornu Cervi*. See *Harts*-HORN.

HART-*Hunting*. See *Hart*-HUNTING.

HARTH-*Peny*, and *Harth-Silver*, (*Sax.* heorþpening) See CHIMNEY-*Money*, and PETER-*Pence*.

HARUSPEX, or ARUSPEX, in Antiquity, a Sort of Prieſt, or Diviner, who inſpects and conſiders the Entrails of Beaſts, particularly thoſe of Victims; to find Signs, or Indications of ſomething he wants to know. See DIVINATION.

*Cicero de Divinat.* L. II. explains the Difference between *Auſpex* and *Haruſpex*. See AUSPICES.

The Word is *Latin*, form'd of *Hara*, an Augur's Bird; or *Haruga*, *Viſcera*, Entrails; and *inſpicio*, I look into.

In *Feſtus* we meet with *Harviga*, or *Haruiga*, which he defines to be a Victim, whoſe *Viſcera* are conſider'd while yet remaining together. Upon which M. *Dacier* obſerves, that *Harviga* is form'd from ἀρὴξ, *Aries*, by inſerting the *Eolic Digamma*, before the ι, thus, ἀϝριξ. It was properly, therefore, a Ram they ſacrificed; but afterwards the Name became common to all Victims. See VICTIM.

HASSOCK, or HASECK, probably of the *Teutonic Haſe*, Hare, and *Socks*, becauſe Hare-Skins are ſometimes worn inſtead thereof to keep the Feet warm in the Winter; denotes a Baſs, or Cuſhion made of Ruſhes, to kneel upon in Churches.

HASTA, among Antiquaries and Medalliſts, ſignifies a Kind of Javelin, not ſho'd or headed with Iron; or rather, an ancient Scepter, ſomewhat longer than ordinary, occaſionally given to all the Gods. See SCEPTER.

The *Haſta* is ſuppoſed a Symbol of the Goodneſs of the Gods, and of the Conduct of Providence, which is equally mild and forcible.

The *Haſta pura* on Medals, is that unadorn'd with any Ferrils, *&c.*

In ſome Countries, *Haſta* is a Meaſure, or Quantity of Ground, amounting to 30 Paces; thus call'd, according to M. *du Cange*, from the *Haſta*, Pole, or Rod, wherewith it was meaſured.

HASTIVE, or HASTING, a *French* Term ſometimes uſed in *Engliſh*, for *haſty*, *forward*, or ſomething that comes before the ordinary Time or Seaſon.

The HASTIVE Fruits are Straw-berries and Cherries. — We have alſo *Haſtive* Peas, *&c.*

HAT, a Covering for the Head, wore by the Men throughout the Weſtern Part of *Europe*. See HEAD.

*Hats* are chiefly made of Hair, Wool, *&c.* work'd, full'd, and faſhion'd to the Figure of the Head. See HAIR and WOOL.

*Hats* are ſaid to have been firſt ſeen about the Year 1400; at which Time they became of Uſe for Country Wear, Riding, *&c.* — Father *Daniel* relates, that when *Charles* II. made his Publick Entry into *Rouen* in 1449, he had on a *Hat*, lined with red Velvet, and ſurmounted with a Plume, or Tuft of Feathers. — He adds, that it is from this Entry, at leaſt under this Reign, that the Uſe of *Hats* and Caps is to be dated, which henceforward began to take Place of the Chaperoons and Hoods, that had been wore before.

In Progreſs of Time, from the Laity, the Clergy likewiſe took the Habit; but it was look'd on as a crying Abuſe, and ſeveral Regulations were publiſh'd, forbidding any Prieſt, or Religious, to appear Abroad in a *Hat* without Cornets; and enjoyning them to keep to the Uſe of Chaperoons, made of black Cloth, with decent Cornets: If they were Poor, they were at leaſt to have Cornets faſten'd to their *Hats*, and this upon Penalty of Suſpenſion and Excommunication. — Indeed, the Uſe of *Hats* is ſaid to have been of a longer Standing among the Eccleſiaſtics of *Brittany*, by two hundred Years; and principally among the

the Canons: But theſe were no other than a Kind of Caps; and 'twas from hence aroſe the ſquare Caps wore in Colleges, &c. See CAP.

*Lobineau* obſerves, that a Biſhop of *Dol*, in the XII*th* Century, zealous for good Order, allow'd the Canons alone to wear ſuch *Hats*; enjoyning, that if any other Perſon ſhould come with them to Church, Divine Service ſhould immediately ſtand ſtill. *T. I. p.* 845.

*Hats* make a very conſiderable Article in Commerce. — The fineſt, and thoſe moſt valued, are made of the pure Hair of an amphibious Animal, call'd *Caſtor*, or *Beaver*, frequent in *Canada*, and other Provinces of *North America*. See CASTOR.

*Method of making* HATS.

*Hats*, we have obſerved, are made either of Wool, or of Hair of divers Animals, particularly the Caſtor, Hare, Coney, Camel, &c. The Proceſs is much the ſame in all; for which Reaſon we ſhall content our ſelves to inſtance in that of Caſtors.

The Skin of this Animal is ſet with two Kinds of Hair; the one long, ſtiff, gloſſy, and pretty ſcarce; this being what renders the Skin, or Fur, of ſo much Value. See FUR. The other ſhort, thick, and ſoft; which alone is uſed in *Hats*.

To tear off one of theſe Kinds of Hair, and cut the other, the *Hatters*, or rather the Women imploy'd for that Purpoſe, make Uſe of two Knives, a large one like a Shoemaker's Knife, for the long Hair; and a ſmaller, not unlike a Vine-Knife, wherewith they ſhave, or ſcrape off the ſhorter Hair.

When the Hair is off, they mix the Stuff; to one third of dry Caſtor, putting two thirds of Old Coat; *i. e.* Hair which has been wore ſome Time by the Savages; and card the whole with Cards, like thoſe uſed in the Woollen Manufactory, only finer. This done, they weigh it, and take more or leſs, according to the Size or Thickneſs of the *Hat* intended. — The Stuff is now laid on the *Hurdle*, which is a Square Table, parallel to the Horizon, having longitudinal Chinks cut thro' it. On this Hurdle, with an Inſtrument call'd a *Bow*, much reſembling that of a Violin, but larger; whoſe String is work'd with a little Bow-ſtick, and thus made to play on the Furs; they *fly* and mix them together, the Duſt and Filth at the ſame Time paſſing thro' the Chinks. This they reckon one of the moſt difficult Operations in the whole; by Reaſon of the Juſtneſs required in the Hand to make the Stuff fall preciſely together, and that it may be every where of the ſame Thickneſs. — In Lieu of a Bow, ſome *Hatters* make uſe of a Sieve, or Searce of Hair, thro' which they paſs the Stuff.

After this Manner they form Gores or two Capades, of an Oval Form, ending in an acute Angle a-top. — And with what Stuff remains, they ſupply and ſtrengthen them in Places where they happen to be ſlenderer than ordinary. — Tho' it is to be remember'd, that they deſignedly make them thicker in the Brim, near the Crown, than towards the Circumference, or in the Crown it ſelf.

The Capades thus finiſh'd, they go on to harden them into cloſer, more conſiſtent Flakes, by preſſing down a *hardening Skin*, or Leather thereon. — This done, they are carried to the *Baſon*, which is a Sort of Bench with an Iron Plate fitted therein, and a little Fire underneath it; upon which laying one of the harden'd Capades, ſprinkled over with Water; and a Sort of Mould applied thereon; the Heat of the Fire, with the Water and preſſing, imbody the Stuff into a ſlight hairy Sort of Stuff, or Felt: After which, turning up the Edges all around over the Mould, they lay it by; and thus proceed to the other. — This finiſh'd, the two are next join'd together, ſo as to meet in an Angle a-top, and only form one Conical Cap, after the Manner of a *Manica Hippocrates*.

The *Hat* thus baſon'd, they remove it to a large Kind of Receiver, or Trough, reſembling a Mill-hopper, going ſloping, or narrowing down from the Edge, or Rim, to the Bottom, which is a Copper Kettle, fill'd with Water and Grounds, kept hot for the Purpoſe. — On the Deſcent, or ſloping Side, call'd the *Plank*, the Baſon'd *Hat*, being firſt dipt in the Kettle, is laid. — And here they proceed to work it, by rolling and unrolling it again and again, one Part after another, firſt with the Hand, and then with a little wooden Roller; taking Care to dip it from Time to Time: till at length by thus fulling and thickening it, four or five Hours, it is reduced to the Extent, or Dimenſions of the *Hat* intended. — To ſecure the Hands from being injured by this frequent Rolling, &c. they uſually guard them with a Sort of thick Gloves.

The *Hat* thus wrought, they proceed to give it the proper Form; which is done by laying the conical Cap on a Wooden *Block*, of the intended Size of the Crown of the *Hat*; and thus tying it round with a Pack-Thread, call'd a *Commander*: After which, with a Piece of Iron, or Copper, bent for the Purpoſe, and call'd a *Stamper*, they gradually beat or drive down the Commander all around, till it has reach'd the Bottom of the Block; and thus is the Crown form'd; what remains at Bottom below the String, being the Brim.

The *Hat* being now ſet to dry; they proceed to *ſinge* it, by holding it over a Flair of Straw, or the like; then it is *pounced* or rubbed with Pumice, to take off the coarſer Nap; then rubbed over afreſh with Seal-Skin, to lay the Nap ſtill finer; and laſtly, carded with a fine Card, to raiſe the fine Cotton, with which the *Hat* is afterwards to appear.

Things thus far advanced, the *Hat* is ſent, upon its Block, and tyed about with Pack-Thread as before, to be dyed. — The Dyer's Copper is uſually very large, holding 10 or 12 Dozen *Hats*. The Dye, or Tincture, is made of *Logwood*, *Verdegreaſe*, *Copperas*, and *Alder Bark*; to which ſome add *Galls* and *Sumac*. See DYING.

Here the *Hat* is kept boiling for about three Quarters of an Hour; then taken out and ſet to cool, and then return'd to the Dye; and this for 10 or 12 Times ſucceſſively.

The Dye being compleat, the *Hat* is return'd to the *Hatter*, who proceeds to dry it, by hanging it in the Top, or Roof, of a Stove or Oven; at the Bottom of which is a Charcoal Fire. — When dry, it is to be ſtiffned, which is done with melted glue, or *Gum Senek*, applied thereon by firſt ſmearing it, and beating it over with a Bruſh, and then rubbing it with the Hand. — The next Thing is to *ſteam* it, on the *Steaming Baſon*, which is a little Hearth, or Fire Place, rais'd three Foot high, with an Iron Plate laid over it, exactly covering the Hearth. On this Plate they firſt ſpread Cloths, which being ſprinkled over with Water to ſecure the *Hat* from Burning, the *Hat* is placed, Brim downwards, thereon. When moderately hot, the Workman ſtrikes gently on the Brim, with the Flat of his Hand, to make the Jointings incorporate and bind, ſo as not to appear; turning it from Time to Time, this Way and that Way, and at laſt overturning and ſetting it on the Crown.

When ſteam'd ſufficiently, and dried, they put it again on the Block, bruſh and *iron* it on a Table, or Bench for the Purpoſe, call'd the *Stall-Board*. This they perform with a Sort of Irons like thoſe commonly uſed in Ironing Linnen, and heated like them; which being rubb'd over and over each Part of the *Hat*, with the Aſſiſtance of the Bruſh, ſmoothens and gives it a Gloſs, which is the laſt Operation; nothing now remaining but to clip the Edges even with Sciſſars, and ſew a Lining into the Crown.

HAT, is alſo figuratively uſed for the Dignity of a Cardinal, or a Promotion to the Dignity. See CARDINAL.

In this Senſe they ſay, To expect the *Hat*; claim, or have Pretenſions to the *Hat*, &c.

Pope *Innocent* IV. firſt made the *Hat* the Symbol, or Cognizance of the Cardinals; injoyning them to wear a *Red Hat*, at all Ceremonies and Proceſſions, as a Token of their being ready to ſpill their Blood for Jeſus Chriſt.

HA't, in Heraldry. See CHAPEAU.

HATCHES, in a Ship, are Doors in the Mid-ſhip, or between the Main-maſt, or Fore-maſt; by which any Goods of Bulk are let down into the Hold.

Hence, the *Hatch-Way* is that Place directly over the *Hatches*; ſo that to lay a Thing into the *Hatch-Way*, is to put it ſo that the *Hatches* cannot be come at, or opened.

HATCHES, are alſo Flood-Gates, ſet in a River, &c. to ſtop the Current of the Water.

The Word is particularly uſed for certain Dams, or Mounds, made of Rubbiſh, Clay, or Earth, to prevent the Water that iſſues from the Stream-Works, and Tin-Waſhers in *Cornwal*, from running into the freſh Rivers. See TIN.

The Tenants of *Bulyſtoke*, and other Mannors, are bound to do certain Days Works to the *Hatches*.

HATCHING, the Act whereby fœcundated Eggs, after ſeaſonable Incubation, exclude their young. See EGG and INCUBATION.

*Hatching*, with Reſpect to the Oviparous Tribe, amounts to the ſame as Parturition, or Delivery, in the Viviparous. See DELIVERY, &c.

The Oſtrich is ſaid to lay her Eggs in the Sand; and that the Heat of the Sun does the Office of a parent Animal, and *hatches* them.

In *Egypt*, they *hatch* their Chickens by the Heat of an Oven: The Method whereof is given us by Mr. *Greaves*, in the *Philoſophical Tranſactions*, N°. 117.

They have Houſes, it ſeems, built for the Purpoſe; having a long Entrance, on each Side whereof are 12 or 14 Ovens, whoſe Bottoms and Sides are form'd of Sun

dried

dried Bricks, lined with Mats, for the Eggs to lye on; and the Tops cover'd with Sticks, except two Spaces, which are Brick, and ſerve as Hearths to build the Fires on wherewith the Eggs are to be heated. — Over theſe, is another Story of Ovens; having Holes, which are either ſtop'd with Tow or left open at Pleaſure, to govern the Heat of the Ovens below.

They begin to heat the Ovens in the middle of *January*; ſpending every Morning about an hundred Pound Weight of Camel's or Buffalo's Dung, and the like Quantity at Night; till the middle of *February*; by which Time the Ovens are too hot for the Hand to be held upon the Walls. — After this they put in the Eggs to *hatch*; which they continue ſucceſſively till the End of *May*.

The Eggs are firſt put upon Matts in the lower Ovens, upon the Ground, 7 or 8000 Eggs in Number, and laid only double, one upon another; in the Ovens over theſe, the Fire is made in the little Channels, from whence the Heat is conveyed into the lower: The Eggs directly under theſe Hearths lie threefold.

At Night, when they new-make their Fires in the Hearths, they remove the Eggs that were directly undermoſt, lying three one upon another, in the Place of thoſe which lay on the Sides only double; and theſe being now removed, they lie treble under the Hearth, becauſe the Heat is greater there, than on the Sides.

Theſe Eggs continue in the lower Ovens fourteen Days and Nights; after which they remove them into the upper. And in theſe, there being now no more Fire uſed, they turn the Eggs four Times every twenty four Hours.

The 21*ſt*, or 22*d* Day, the Chickens are *hatched*; which, the firſt Day eat not: The ſecond, they are fetched away by Women who give them Corn, *&c.* The Maſter of the Ovens hath a third Part of the Eggs for his Coſt and Pains; out of which he is to make good to the Owners, who have two thirds in Chicken for their Eggs, if any happen to be ſpoil'd, or miſcarry.

The Fire in the upper Ovens, when the Eggs are placed in the lower, is thus proportioned. — The firſt Day the greateſt Fire, the ſecond leſs than the firſt; the fourth more than the third, the fifth leſs, the ſixth more than the fifth, the ſeventh leſs, the eighth more, the ninth without Fire, the tenth a little Fire in the Morning, the eleventh they ſhut all the Holes with Flax, *&c.* making no more Fire; for if they ſhould, the Eggs would break. They take Care that the Eggs be no hotter than the Eye of a Man, when they are all laid upon it can well endure. When the Chickens are *hatch'd*, they put them into the lower Ovens, *&c.*

HATCHING, or HACHING, in Deſigning, Engraving, *&c.* ſignifies the making of Lines with a Pen, Pencil, Graver, or the like; and the interſecting, or going a-croſs thoſe Lines, with others drawn over them another Way. See ENGRAVING, DESIGN, *&c.*

The Depths and Shadows of Draughts are uſually form'd by *Hatching*, or *Hatch-Work*.

What is ſurprizing in the Gravings of *Mellan* and *Sadelers*, is, that they expreſs the Shadows exceeding well, without any *Hatches*, or *Hatchings*. See SHADOW.

Theſe *Hatchings* are of great Uſe in Heraldry, to diſtinguiſh the ſeveral Colours of an Eſcutcheon, without its being illumined. See COLOUR.

The firſt Kind of *Hatching* in Pale, or from Top to Bottom, ſignifies *Gules*, or *Red*. — The ſecond in Feſs, a-croſs the Coat, *Azure* or *Blue*.

*Hatching* in Pale, counter-*hatch'd* in Feſs, ſignifies *Sable*, or Black. — *Hatching* in Bend, proceeding from right to left, ſignifies *Green:* And that in Bars, from left to right, *Purple*.

When the Coat is only dotted, it is ſuppoſed to be *Or*. And when quite bare, or void, *Argent*, or *White*. See ARGENT, *&c.*

The Invention is, commonly, aſcribed to Fa. *Pietra Sancta*. —Tho' the Sieur *de la Colombiere*, has diſputed his Title to it.

HATCHMENT, in Heraldry, the Marſhalling of ſeveral Coats of Arms in an Eſcutcheon. See MARSHALLING.

HATCHMENT, is alſo a popular Name for an *Atchievement*. See ATCHIEVEMENT.

HATTOCK, a Shock of Corn, containing twelve Sheaves. — Others make it only three Sheaves laid together.

HAVEN, a *Sea-Port*, or Harbour for Ships. See PORT and HARBOUR.

The Word is derived from the Saxon *Hafene*; or the German *hafen*, or the French *havre*, which all ſignifie the ſame Thing.

HAUNCH, or HANCH, the *Hip*; or that Part of the Body between the laſt Ribs, and the Thigh.

The *Haunches* conſiſt of three Bones, joyn'd together by Cartilages; which, in Courſe of Time, grow dry, hard, and bony; ſo that in Adults, the three only ſeem to conſtitute one continued Bone. See SACRAM.

The *Haunches*, or *Hips*, of a Horſe, are thoſe Parts of the hind Quarters, which extend from the Reins or Back, to the Hoof or Ham; See HORSE.

One of the moſt neceſſary Leſſons in managing the great Horſe, is that of *putting him upon his Haunches*; which in other Terms is called to *couple* him well, or to put him well together or compact.

A Horſe that does not *bend*, or *lower his Haunches*, throws himſelf too much upon his Shoulders, and is heavy upon the Bridle. — To *drag the Haunches*, is to change the leading Foot in Galloping.

HAUNT, among Hunters, the Walk of a Deer, or the Place of his ordinary Paſſage. See HUNTING.

HAVRE, in Geography, *&c.* a *French* Term; ſignifying the ſame with *Haven*, or *Harbour*. See HARBOUR.

HAUTBOY, or HOBOY, a Sort of Muſical Inſtrument, of the Wind-kind, with a Reed to blow or play it withal. See INSTRUMENT.

The *Hautboy* is ſhaped much like the Flute, only that it ſpreads, or widens, more toward the Bottom. The Treble is two Foot long: The Tenor goes a fifth lower, when blown, or ſounded open. It has only ſeven Holes: The Baſs is five Foot long, and has eleven Holes.

The Word is *French*, *Haut-bois*, q. d. *High-wood*; and is given to this Inſtrument, by Reaſon its Tone is higher than that of the Violin.

HAW, among Farriers, *&c.* a Griſtle growing between the nether Eye-lid and the Eye of a Horſe, and which will put it quite out, if not timely taken away.

It comes by groſs, tough, and flegmatic Humours, falling from the Head, and knitting together, which in the end grow to this Infirmity, the Signs whereof are the watering of the Eye, and the involuntary opening of the nether Side.

Every Smith can cut it out: The affected Beaſt is to be held faſt by the Head, and with a ſtrong double Thread, a Needle to be put in the midſt of the upper Eye-lid, and tied to his Horn: Then taking the Needle again, with a long Thread, and putting it through the Griſtle of the Haw; with a ſharp Knife cut the Skin finely round, and ſo pluck out the *Haw*. — That done, lay about his Eye, take out the Blood, waſh it with Beer, or Ale, and caſt in a good deal of Salt; waſh it again afterwards, ſtroaking it down with your Hands, and ſo let him go. — To cure a Sheep of this Malady, drop into the Eye the Juice of Cammomile, or Crows-foot.

HAWK, *Accipiter*, a Bird of Prey, of a bold and generous Nature; whereof there are ſeveral Species. See BIRD.

The *Hawk* makes the Subject of a particular Art, call'd *Hawking*, or Falconry. See HAWKING and FALCONRY.

Naturaliſts diſagree about the Number and Diviſion of the *Hawk-kind*.—The moſt commodious Diſtribution is into *Long-winged* and *Short-winged Hawks*.

To the *Long-winged*, which may be alſo call'd the *Falcon*-Tribe, belong the Falcon, Haggard Falcon, Gerfalcon, Lanner, Hobby, Saker, Merlin and Bawler; all which are reclaim'd, mann'd, fed and mued, much after the ſame Manner. — Of the *ſhort-winged* Species, or *Hawks* properly ſo call'd, are the *Gos-Hawk*, and *Sparrow-Hawk*.

The former are generally brought to the Lure; and ſeize their Prey with the Foot; breaking the Neck Bone with their Beak, ere they proceed to plume or tire it: The latter are brought to the Fiſt; and kill their Game by Strength, and force of Wing, at Random; and proceed immediately to plume them. See LURE, PLUME, *&c.*

It is to be noted, that the Female of all Birds of Prey is much larger, ſtronger, and more couragious than the Male; which is diſtinguiſhed therefrom by ſome diminutive Name. — Thoſe of the *Falcon* and *Gos-Hawk*, are call'd *Tiercels*, or *Tiercelets*; that of the Gerfalcon, *Jerkin*; that of the Merlin, *Jack*; that of the Hobby, *Robbin*; that of the Sparrow-Hawk, *Musket*; and that of the Lanner, *Lanneret*.

*Hawks* alſo have different Names, according to their different Ages. — The firſt Year ſhe is call'd a *Soarage*. — The ſecond an *Enterview*. — The third a *white Hawk*. — The fourth a *Hawk of the firſt Coat*.

Add, that they have different Denominations according to the different Seaſons when they are taken. — Thoſe taken in the Eyrie, are call'd *Eyeſſes*, or *Nyeſſes*. — Thoſe which had forſaken it, and were fed in ſome Place, not far off, by the old ones, *Branchers*. — Thoſe which had begun to prey for themſelves, *Soar-Hawks*. — Thoſe which have chang'd their Feathers once or more, *Mew'd Hawks*. — And thoſe which lived at large, and prey'd for themſelves about the Woods, *Hagards*.

We ſhall here, according to our Method in other Things, give the Reader what relates to the ſeveral Species of *Hawks*; referring for what is common to 'em all, to the Article HAWKING.

1°. Of the *Falcon*, or *Falcon Gentle*, her Nature and Qualities; with the Manner of luring and reclaiming, and bringing her up to the Sport, we have elſewhere ſpoke under the Article FALCON.

2°. The *Hagard Falcon*, call'd alſo *Peregrine Falcon*, *Paſſenger*, and *Traveller*, becauſe no Native of our Iſland; or rather, by Reaſon of its Roving, and Wandring more than any other Sort; is not inferior to the beſt of the Tribe, for Strength, Courage, Hardineſs, and Perſeverance. She is diſtinguiſhed from the Common Falcon, as being larger, longer arm'd, with a longer Beak and Talons, a higher Neck, *&c.* She will lie longer on the Wing; and is more deliberate and adviſed in her ſtooping, *&c.*

The *Hagard Falcon*, when wild and unreclaim'd, takes the greateſt Liberty of all Birds; living either by Land or Sea: And is of ſuch abſolute Power, that wherever ſhe comes, all flying Fowl ſtoop under her Subjection: Even the Tiercelet, tho' her natural Companion, dares not ſit by her, or approach her Reſidence, except in Cawking Time; when, for Procreation Sake, ſhe admits him in a ſubmiſſive Manner to come near and woo her.

When very young, ſhe is apt to attack Birds too ſtrong for her; which ſhe perſiſts in, till a ſound Beating have brought her to a better Underſtanding. — She is an inceſſant Pains Taker; no Weather diſcouraging her from her Game. — When unreclaim'd, ſhe has ſeiz'd her Prey, and broke the Ink or Neck, ſhe falls on the Crop, and feeds firſt on what is contain'd there; then on the other Parts. When ſhe has fill'd her Gorge, ſhe flies to ſome ſolitary Place, near the Water, where ſhe ſits all Day, and at Night takes Wing to ſome convenient Place, where ſhe had before purpos'd, to pearch till Morning.

*For the Method of Reclaiming, Manning, Entering,* &c. *a* Hagard Falcon, *or other Sort of* Hawk, *with the Terms of Art uſed in Reſpect thereof.* See the Article HAWKING.

3°. The *Gerfalcon*, or *Gyrfalcon*, is the largeſt Bird of the *Falcon* Kind; coming next to the Size of a Vulture; and of the greateſt Strength next an Eagle: She is ſtoutly armed; and in all Reſpects a lovely Bird to the Eye.

Her Head and Eyes are like the Hagard; her Back great and bending, her Nares large: — Her Sails long and ſharp pointed, and her Train and Mail much like the Lanners, having a large Marble ſeared Foot; and plumed black, brown, and ruſſet. — She may alſo be called a *Paſſenger*, her Eyrie being in *Pruſſia*, *Muſcovy*, and the Mountains of *Norway*.

The *Gerfalcon* is of a fierce and fiery Nature, very hardly managed and reclaimed; but being once overcome, proves an excellent *Hawk*, ſcarce refuſing to ſtrike at any Thing. She does not naturally fly the River; but always purſues the Herons, Shovelers, *&c.* In going up to their Gate, they do not hold the Courſe, or Way, which others uſe to do; but climb up upon the Train, when they find any Fowl, and aſſoon as they have reach'd her, pluck her down, if not at the firſt, yet at the ſecond or third Encounter.

4°. The *Saker*, or *Sacre*, is the third in Eſteem, next the Falcon, and Gerfalcon, but difficult to be managed, being a *Paſſenger*, or *Peregrine Hawk*, whoſe Eyrie has not yet been diſcovered, but chiefly found in the Iſlands of the *Levant*.

She is ſomewhat longer than the *Hagard Falcon*; her Plume ruſty and ragged; the Sear of her Foot and Beak like the Lanner; her Pounces ſhort, and her Train the longeſt of all Birds of Prey.

She is very ſtrong and hardy to all Kind of Fowl, being more diſpoſed to the Field a great deal than the Brook, and delighting to prey on great Fowl, as the Heron, Gooſe, *&c.* but for the Crane ſhe is not ſo free as the Hagard Falcon. — She alſo excels for the leſſer Fowl, as Pheaſants, Partridges, *&c.* and is much leſs dainty in her Diet, as long-winged *Hawks* uſually are.

The *Saker* makes excellent Sport with a Kite; who, as ſoon as he ſees caſt off, immediately betakes her ſelf to, and truſts in the Goodneſs of her Wings, and gets to her Pitch, as high as poſſibly ſhe can, by making many Towers and Wrenches in the Air; which together with the Variety of Conteſts and Bickerings between them, affords a curious Spectacle.

5°. The *Lanner*, or *Lanar*, is a *Hawk* common in moſt Countries, eſpecially *France*; making her Eyrie on lofty Trees in Foreſts, or on high Clifts near the Sea-ſide.

She is leſs than the Falcon Gentle, fair plumed, and of ſhorter Talons than any other Falcon. — Such as have the largeſt and beſt ſeaſon'd Heads, are eſteemed the beſt.

Mewed *Lanners* are not eaſily known from Gos-Hawks, or Sakers; the chief Marks and Characteriſticks are, That they are blacker, have leſs Beaks, and are leſs armed and pounced than any other *Hawks*.

Of the whole *Hawk* Tribe, there is none ſo fit for a young Falconer as this, becauſe ſhe is not inclined to Surfeits, and ſeldom melts Greaſe by being overflown.

There is another Sort of *Lanners*, whoſe Eyrie is in the *Alps*, having their Heads white, and flat aloft, large and black Eyes, ſlender Nares, ſhort and thick Beaks; being leſs than the Hagard, and Falcon Gentle, tho' there are different Sizes of them; their Tail Marble, or Ruſſet: Breaſt Feathers white and full of Ruſſet Spots, and the Points and Extremities of their Feathers full of white Drops; their Sails and Trains long; ſhort legged, with a Foot leſs than that of a Falcon, marble-ſeered.

This *Hawk* never lies upon the Wing, after ſhe has flown to a Mark; but after once ſtooping, makes a Point; and like the *Gos-Hawk*, waits the Fowl. — She is more valued abroad than in *England*; we looking on her as ſlothful, and hard mettled. The Truth is, a very ſtrict Hand muſt be kept over her; as being of an ungrateful Diſpoſition. — She is flown at Field, or Brook, and will maintain long Flights; by which Means much Fowl is killed. To fly them, they muſt be kept very ſharp; and becauſe they keep their Caſtings long, they muſt have hard Caſtings made of Tow, and Knots of Hemp.

6°. The *Merlin* is the ſmalleſt of all Birds of Prey; and bears a Reſemblance to a Hagard Falcon in Plume, as alſo in the Seare of the Foot, Beak, and Tallons, and not unlike her in Conditions.

When well manned, lured, and carefully looked after, ſhe proves an excellent *Hawk*; eſpecially at Partridge, Thruſh, and Lark. — But ſhe is very buſie, and unruly, and ſpecial Care muſt be had leſt ſhe unnaturally eat off her own Feet and Talons, as ſhe has often been known to do.

She is wonderouſly ventureſome; and will fly at Birds bigger than her ſelf, with ſuch Eagerneſs, as to purſue them even into a Town or Village.

Tho' the *Merlin* be accounted an *Hawk* of the Fiſt, ſhe may be brought to take delight in the Lure; when you have made her come to the Lure, ſo as ſhe will patiently endure the Hood, you ſhould make her a Train with a Partridge; if ſhe foot and kill it, reward her well: Then fly her at the wild Partridge, and if ſhe take or make it at firſt or ſecond Flight, being retrieved by the Spaniels, feed her upon it with a reaſonable Gorge; chearing her in ſuch Manner with the Voice, that ſhe may know it another Time: If ſhe do not prove hardy at the firſt or ſecond Time, ſhe will be good for nothing.

7°. The *Hobby*, is a Sort of *Hawk* that naturally preys on Doves, Larks, and other ſmall Game.

She has a blue Beak, but the Sear thereof and Legs are yellow; the Crinels, or little Feathers under the Eye, very black, the Top of the Head between black and yellow.

She has alſo two white Seams on her Neck: The Plumes under the Gorge, and about the Brows, are reddiſh, without Spot or Drop; the Breaſt Feathers for the moſt Part brown, yet interſperſed with white Spots; her Back, Train and Wings, are black aloft, having no great Scales upon the Legs, unleſs a few behind; the three Stretchers and Pounces are very large, with Reſpect to her ſhort Legs; her brail Feathers are tinctured between red and black; the pendant ones, or thoſe behind the Thigh, of a ruſty, ſmoaky Hue.

She is a *Hawk* of the Lure, and not of the Fiſt; and is an higher Flyer, being in every Reſpect like the Saker, but ſhe is of a much leſs Size; for ſhe is not only nimble and light of Wings, but dares encounter Kites, Buzzards, or Crows, and will give Souſe for Souſe, Blow for Blow, till ſometimes they ſiege and come tumbling down to the Ground both together. — But ſhe is chiefly for the Lark, which poor little Creature does ſo dread the Sight of her, ſoaring in the Air over her, that ſhe will rather chooſe to commit her ſelf to the Mercy of Men or Dogs, or to be trampled on by Horſes, than venture into the Element, when ſhe ſees her mortal Enemy ſoaring there.

The *Hobby* alſo makes excellent Sport with Nets and Spaniels; for when the Dogs range the Field, to ſpring the Fowl, and the *Hobby* ſoars aloft over them, the ſilly Birds, apprehenſive of a Conſpiracy among the *Hawks* and Dogs to their utter Ruin, dare not commit themſelves to their Wings, but think it ſafer to lie cloſe on the Ground, and ſo are taken in the Nets. — This Sport is call'd *Daring*.

8°. The *Goſhawk*, or *Goſs-Hawk*, q. d. *Groſs Hawk*, is a large, ſhort-winged *Hawk*, of which there are ſeveral Sorts, differing in Goodneſs, Force, and Hardineſs, according to the Diverſity of their Choice in Cawking; at which Time the ſeveral Sorts of Birds of Prey aſſemble themſelves with the *Goſhawk*, and gallant it together.

There are *Gos-Hawks* from moſt Countries, but none better than thoſe bred in the North of *Ireland*. — She ought to have a ſmall Head, a long and ſtraight Face, a large Throat, great Eyes, deep ſet; the Apple of the Eye black; Nares, Ears, Back and Feet large and black; a

black

black long Beak, long Neck, big Breaſt, hard Fleſh, long fleſhy Thighs, the Bone of the Leg and Knee ſhort, long large Pounces and Talons; and to grow round from the Stern, or Train, to the Breaſt forward. — The Feathers of the Thighs, towards the Train, ſhould be large, and the Train Feathers ſhort and ſoft, ſomewhat tending to an Iron Mail. The Baril Feathers ought to be like thoſe of the Breaſt; and the Covert Feathers of the Train, ſpotted and full of black Rundles, but the Extremity of every Train Feather black ſtreaked.

To diſtinguiſh the Strength of the Bird, tie divers of them in ſeveral Places of one Chamber, or Mew; and that *Hawk* that ſlices and mutes higheſt and fartheſt off, may be concluded to be ſtrongeſt.

The *Gos-Hawk* flies at the Pheaſant, Mallard, wild Gooſe, Hare, and Coney; nay ſhe will venture to ſeize a Kid, or Goat. — She is to be kept with Care, as being very choice and dainty in Eating, *&c.*

9°. *Sparrow-Hawk*, is alſo a Kind of ſhort-winged *Hawk*; whereof there are ſeveral Sorts, different in Plumes: Some ſmall plumed and black; others of a larger Feather; ſome plumed like the Quail; ſome brown or Canvas-Mail, *&c.*

The *Sparrow-Hawk*, ſo far as her Strength will give her Leave, is a good *Hawk*; and he that knows how to man, reclaim, and fly with a *Sparrow-Hawk*, may eaſily attain to the keeping and managing of all others. — In this Reſpect ſhe really excels, that ſhe ſerves both for Winter and Summer, with great Pleaſure, and will fly at all Kind of Game, more than the Falcon.

HAWKERS, antiently, were fraudulent Perſons; who went from Place to Place, buying and ſelling Braſs, Pewter, and other Merchandize, which ought to be uttered in open Market.

In this Senſe, the Word is mention'd, *Anno* 25 *Hen.* VIII. *Cap.* 6. and 33 *ejuſdem*, *Cap.* 4.

We now call thoſe *Hawkers*, who go up and down *London* Streets, crying News Books, and ſelling them by Retail. — The Women who furniſh the *Hawkers*, i. e. ſell the Papers by Wholeſale from the Preſs, are call'd *Mercuries*.

The Appellation of *Hawkers* ſeems to grow from their uncertain Wandring, like thoſe who, with *Hawks*, ſeek their Game where they can find it.

HAWKING, the Art, or Exerciſe of Chaſing and taking Wild-Fowl, by Means of *Hawks*, or Birds of Prey. See HAWK.

*Hawking* is the ſame Thing with what we otherwiſe call *Falconry*. See FALCONRY.

The Word *Hawking*, in its Latitude, does alſo include the taming and diſciplining of *Hawks*, and fitting them for the Sport.

*Hawking*, tho' an Exerciſe now much diſuſed among us, in Compariſon of what it antiently was, does yet furniſh a great Variety of ſignificant Terms, which ſtill obtain in our Language.

Thus, the Parts of a *Hawk* have their proper Names. — The Legs, from the Thigh to the Foot, are call'd the *Arms*: The Toes, the *Petty-ſingles*: The Claws, the *Pounces*. — The Wings are call'd the *Sails*; the long Feathers thereof the *Beams*; the two longeſt, the *principal Feathers*; thoſe next thereto, the *Flags*. — The Tail the *Train*. — The Breaſt Feathers, the *Mailes*: — Thoſe behind the Thigh, the *Pendant Feathers*: When the Feathers are not yet full grown, ſhe is ſaid to be *unſumm'd*; when they are compleat, ſhe is *ſumm'd*: — The Craw, or Crop, is call'd the *Gorge*: — The Pipe next the Fundament, where the Fœces are drawn down, is call'd the *Pannel*: — The ſlimy Subſtance, lying in the Pannel, is call'd the *Glut*: — The upper and crooked Part of the Bill, is call'd the *Beak*; the nether Part the *Clap*: The yellow Part between the Beak and the Eyes, the *Sear* or *Sere*; the two ſmall Holes therein, the *Nares*.

As to her Furniture: — The Leathers, with Bells button'd on her Legs, are call'd *Bewits*. — The Leathern Thong, whereby the Falconer holds the *Hawk*, is call'd the *Leaſe*, or *Leaſh*; the little Straps, by which the Leaſe is faſten'd to the Legs, *Jeſſes*; and a Line or Pack-thread faſten'd to the Leaſe, in diſciplining her, a *Creance*. — A Cover for her Head, to keep her in the Dark, is call'd a *Hood*; a large wide Hood, open behind, to be wore at firſt, is call'd a *rufter Hood*: To draw the Strings, that the Hood may be in Readineſs to be pull'd off, is call'd *unſtriking the Hood*. — The blinding a Hawk juſt taken, by running a Thread thro' her Eye-lids, and thus drawing them over the Eyes, to prepare her for being hudded, is call'd *Seeling*. — A Figure, or Reſemblance of a Fowl, made of Leather and Feathers, is call'd a *Lure*. — Her reſting Place, when off the Falconer's Fiſt, is call'd the *Pearch*. — The Place where her Meat is laid, is call'd the *Hack*. — And that wherein ſhe is ſet, while her Feathers fall and come again, the *Mew*.

Something given a Hawk, to cleanſe and purge her Gorge, is call'd *Caſting*: — Small Feathers given to make her Caſt, are call'd *Plumage*: — Gravel given her to help bring down her Stomach, is call'd *Rangle*: — Her throwing up Filth from the Gorge after Caſting, is call'd *Gleaming*. — The Purging of her Greaſe, *&c.* *Enſeaming*. — A being ſtuffed is call'd *Gurgiting*. — The inſerting a Feather in her Wing, in lieu of a broken one, is call'd *Imping*. — The giving her a Leg, Wing, or Pinion of a Fowl to pull at, is call'd *Tiring*: — The Neck of a Bird the *Hawk* preys on, is call'd the *Inke*: — What the *Hawk* leaves of her Prey, is call'd the *Pill*, or *Pelf*.

There are alſo proper Terms for her ſeveral Actions: — When ſhe flutters with her Wings, as if ſtriving to get away, either from Perch or Fiſt, ſhe is ſaid to *Bate*. — When ſtanding too near, they fight with each other, it is call'd *Crabbing*: — When the young ones quiver, and ſhake their Wings in Obedience to the elder, it is call'd *Cowring*: — When ſhe wipes her Beak after feeding, ſhe is ſaid to *Feak*: — When ſhe ſleeps, ſhe is ſaid to *Jouk*: — From the Time of exchanging her Coat, till ſhe turn white again, is call'd her *Intermewing*: — Treading is call'd *Cawking*. — When ſhe ſtretches one of her Wings after her Legs, and then the other, it is call'd *Mantling*: — Her Dung is call'd *Muting*; when ſhe mutes a good Way from her, ſhe is ſaid to *ſlice*; when ſhe does it directly down, inſtead of yerking backwards, ſhe is ſaid to *ſlime*; and if it be in Drops, it is call'd *Dropping*. — When ſhe as it were ſneezes, it is call'd *Suiting*. — When ſhe raiſes and ſhakes her ſelf, ſhe is ſaid to *Rouze*; when after Mantling, ſhe croſſes her Wings together over her Back, ſhe is ſaid to *Warble*.

When a *Hawk* ſeizes, ſhe is ſaid to *Bind*. — When after ſeizing ſhe pulls off the Feathers, ſhe is ſaid to *Plume*. — When ſhe raiſes a Fowl aloft, and at length deſcends with it to the Ground, it is call'd *Truſſing*. — When being aloft, ſhe deſcends to ſtrike her Prey, it is call'd *Stooping*. — When ſhe flies out too far from the Game, ſhe is ſaid to *Rake*. — When forſaking her proper Game, ſhe flies at Pyes, Crows, *&c.* that chance to croſs her, it is call'd *Check*. — When miſſing the Fowl, ſhe betakes her ſelf to the next Check, ſhe is ſaid to *fly on Head*. — The Fowl or Game ſhe flies at is call'd the *Quarry*. — The dead Body of a Fowl, kill'd by the *Hawk*, is call'd a *Pelt*. — When ſhe flies away with the Quarry, ſhe is ſaid to *carry*. — When in ſtooping, ſhe turns two or three Times on the Wing, to recover her ſelf ere ſhe ſeizes, it is call'd *Cancelleering*. — When ſhe hits the Prey, yet does not truſs it, it is call'd *Ruff*.

The making a *Hawk* tame and gentle, is call'd *Reclaiming*. — The bringing her to endure Company, *Manning her*. — An old ſtaunch *Hawk* uſed to fly and ſet Example to a young one, is call'd a *Make-Hawk*.

The Reclaiming, Manning, and bringing up a *Hawk* to the Sport, is not eaſy to be brought to any preciſe Set of Rules. — It conſiſts in a Number of little Practices, and Obſervances, calculated to familiarize the Falconer to his Bird, to procure the Love thereof, *&c.* — The principal Hold and Foundation which the Falconer has to work upon, is the Bird's Stomach. — The great Principle of Appetite he is to make uſe of an hundred Ways, to lead the Bird obliquely to what he would have from him: All he can do is, to divert Nature, and make her ſubſervient to his Purpoſes, to make it the Intereſt of the Bird, either real or apparent, to do what the Falconer requires of her.

The Courſe, 'tis evident, will be different, according to the State and Condition of the Bird to be managed. — An *Eyeſs*, e. gr. needs no reclaiming; ſhe is to be carefully nurſed, and brought up in their natural Tameneſs.

A *Brancher*, *Soar-Hawk*, or *Ramage-Hawk*, needs no Nurſing; ſhe is to be brought down from her Wildneſs, and habituated to another Courſe of Life; and in Purſuance of her own Views, and Intereſts, to be made ſubject to thoſe of her Maſter.

To *Reclaim*, e. gr. a *Hagard* Falcon; they begin with ſhutting her up from the Light, by pulling a Hood over her Eyes; and fixing her by a *Creance*, which makes her more acceſſible. — The next Thing is to handle her frequently, taking her up, often ſtroaking her, ſetting her on the Hand, and carrying her about; unhudding, and preſently hudding her again; and this for eight or nine Days, without ever ſuffering her to ſleep. — All the while ſhe is to be kept ſharp ſet, but to be frequently fed, with a little at a Time; unhudding her for the Purpoſe, and when unhudded, the Voice to be continually uſed to her, that ſhe may learn it; and that the hearing of the Voice may naturally put her in Hopes of being fed. — This done ſhe is to be invited to come from the Pearch to the Fiſt, by unſtriking her Hood, ſhewing her ſome Meat, uſing the Voice, and calling her till ſhe come to it, and feed thereon. — If ſhe ſtill refuſe, keep her ſharp ſet

till ſhe do. — Proceed then to bring her to the Lure, by giving her to ſome Perſon to hold, and calling her with a Lure, well garniſhed with Meat on both Sides, and give her a Bit: Uſe her to this for ſix or ſeven Days; after which tempt her to come gradually further and further off, to the Lure, waving it and caſting it round your Head, *&c.* and if ſhe come to it roundly, reward her. In three or four Days more call her to your Lure, well garniſhed as above, as far as 'tis poſſible for her to ſee or hear you; and ſet her looſe from all her Furniture.

The *Hawk* thus mann'd, reclaim'd and lured, you may go with her into the Fields; and whiſtle her off your Fiſt, to ſee whether ſhe will rake out or no. If ſhe mount and fly round you in Circles, as a good *Hawk* ought to do; after two or three Turns call to her with your Voice, and fling out the Lure about your Head, and upon her ſtooping, or coming to it, give her a Chicken, or Pidgeon, and let her kill and feed thereon. — Being thus far initiated, give her firſt Stones, every Evening, to prepare her Body for Caſtings; and then Caſtings to cleanſe and ſcour her Body, and make her eager. — This Courſe continue till ſhe have have endewed and mewted enough to enter upon Buſineſs.

If the *Hawk* be intended for ſome particular Sort of Game, let her Lure be a Reſemblance of that Sort of Game; and make a Practice of frequently feeding and rewarding her thereon; or on a Train of the ſame Kind; calling her when feeding, as if ſhe were call'd to the Lure. Add, that it may be proper to feed her in ſuch like Places as thoſe her Game is chiefly to be found in.

To *enter a Hawk*, it may be convenient to take a well quarried *Hawk*, and let her ſtoop a Fowl, on Brook or Plaſh; this done, reward, hood and ſet her; and taking the young *Hawk*, go half a Bow-ſhot up the Wind, looſe her Hood, and ſoftly whiſtle her off the Fiſt, till ſhe have rouzed or mewted; then let her fly with her Head into the Wind; and when ſhe is at a proper Height, let go a Fowl for her to ſtoop and truſs. *See further under the Article* FALCON.

HANKWIT, or HANGWITE, from the *Saxon* hangan, i. e. *ſuſpendere*, to hang, and wite, *Mulcta*, Puniſhment, is a Liberty granted to a Man, whereby he is quit of a Felon, or Thief, hanged without a Judgment, or eſcaped out of Cuſtody. — We alſo read it interpreted to be *Quit de laron pendu ſans Serjeants le Roy*, i. e. without a legal Trial. — And elſewhere, *Mulcta pro latrone præter juris exigentiam ſuſpenſo vel elapſo.*

Some ſuſpect that the Word may alſo ſignifie a Liberty, whereby a Lord challengeth the Forfeiture due for him who hangs himſelf within the Lord's Fee. See BLOODWIT.

It ſeems to be ſo *in Conſuetud. ex Domeſday*, by Dr. *Gale*, viz. *Hangenwithum faciens in Civitate* 10 *S. dabit.*

HAWSER, or HALSER, belonging to a Ship, is a Rope conſiſting of three Strands; being a Kind of little Cable, ſerving for many Uſes on Board, as to faſten the Main and Fore-ſhrouds, to warp a Ship over a Bar, *&c.* See ROPE, CABLE.

HAWSES, in a Ship, are two round Holes under her Head, through which the Cables paſs, when ſhe is at Anchor. See CABLE and ANCHOR.

A *Bold Hawſe*, is when the Hole is high above the Water.

A *Freſh Hawſe*, when there is Reaſon to ſuſpect the Cable may be fretted in thoſe Holes.

*Burning in the Hawſe*, is when the Cable endures an extraordinary Streſs.

*Clearing the Hawſe*, is the untwiſting of two Cables, which being let out at different *Hawſes*, are twiſted about one another.

*Freſhing the Hawſe*, is when new Pieces are laid upon the Cable in the *Hawſe*.

*Riding upon the Hawſe*, is when any weighty Subſtance lies acroſs, or falls directly before the *Hawſe*.

HAY, HAYA, or HAYE, a Fence or Incloſure, form'd of Rails; wherewith ſome Foreſts, Parks, *&c.* were antiently ſurrounded.

Sometimes the Word is uſed for the Park it ſelf: And ſometimes for an Hedge, or hedged Ground. — *Univerſis. Capitulum B. Petri Ebor. conceſſiſſe ad firmam totam* Hayam *noſtram de Langerath, cum ſolo ejuſdem* Hayæ, *Bruera, Mariſco, & omnibus aliis pertin. Reddendo inde annuatim nobis tempore pinguedinis unum damum, & fermiſonæ tempore unam damam*, &c.

HAYBOOT, in our antient Cuſtoms, from the *Saxon* Hæg, *Hedge*, and Bote; a Mulct or Recompence for a Hedge-breaking; or rather, a Right to take Wood neceſſary for making Hedges, either by Tenant for Life, or for Years, though not expreſſed in the Grant or Leaſe. — 'Tis mention'd in the *Mon.* 2 *Tom.* pag. 134, *& concedo ei ut de boſco meo Heybot*, &c. — In the ſame Place, *Husbote* ſignifies a right to take Timber to repair the Houſe.

HAYS, a particular Kind of Nets for the taking of Rabbets, Hares, *&c.*

HAYWARD, or HAWARD, a Keeper of the common Herd of Cattle of a Town; who is to look that they neither break nor crop the Hedges of incloſed Grounds; and is ſworn in the Lord's Court, for the due Performance of his Office. See HAY.

HAZARD. See CHANCE and GAMING.

HEAD, *Caput*, the uppermoſt, or foremoſt Part of the Body of an Animal. See BODY and ANIMAL.

*Pliny*, and other of the antient Naturaliſts, ſpeak of a Nation of People without *Heads*, call'd *Blemmyes*. See BLEMMYES.

We have Accounts in modern Geographers and Travellers, of People whoſe *Heads* are as flat as the Hand; it being the Cuſtom among them to flatten their Children's *Heads*, when new Born, by paſſing them thro' a Preſs, or laying them between two Planks with a conſiderable Weight thereon. — They are ſaid to be the Inhabitants of the Province *Coſaquas*, on the great River of the *Amazons*, in South *America*.

Anatomiſts account the *Head* of Man, the firſt or uppermoſt Venter; being that which comes laſt in Order of Diſſection, by Reaſon its Contents are not ſo ſubject to Corruption. See VENTER.

The *Head* is divided into two Parts: The 1*ſt*, the *Calvaria*, or Scalp, being that Part cover'd with Hair. See HAIR.

The 2*d*, ſmooth, or without Hair, call'd the *Face*, or Viſage; by the Latins *Vultus*, and by the Greeks *Proſopon*, q. d. *looking forward*. See FACE.

The former is ſubdivided into four; *viz.* the *Front*, or Forehead, which is reputed the moſt humid, call'd by Phyſicians the *Sinciput*, q. d. *ſummum Caput*. See FRONT and SINCIPUT.

The hind, or Back Part, call'd *Occiput*; by the Greeks *Inion*, by Reaſon all the Nerves, which among them are call'd *Ines*, ariſe herefrom. See OCCIPUT and NERVE.

The middle, or Top-part, call'd the *Crown* of the *Head*, and by Anatomiſts *Vertex*, *a Vertendo*, by reaſon the Hair turns round there. See VERTEX.

Laſtly, the Sides are call'd the *Temples*, *Tempora*, as being the Places where the Hair firſt begins to turn grey, and diſcover the Age. See TEMPLE.

The Bone, or Baſis of the *Head*, is call'd by one general Name *Skull*, or *Cranium*; conſiſting of ſeveral Parts, or leſſer Bones. See CRANIUM.

The Bone of the Fore-head, is call'd *Os frontis*, or *Puppis*, or *Coronale*, or *Verecundum*, whence impudent Perſons are ſaid to be *frontleſs*. See *Os* FRONTIS, *&c.*

The Bone of the Scalp is call'd *Os ſincipitis*, or *Bregma*. See BREGMA, *&c.*

The Bone of the Back of the *Head Os Occipitis*, or *Proræ*. See *Os* OCCIPITIS, *&c.*

And thoſe of the Temples, *Temporalia*, or *Oſſa Temporis*. See *Os* TEMPORIS.

Theſe Bones are connected or joyn'd together by Sutures. See SUTURE.

In the *Head* are ſeated the principal Organs of Senſe; *viz.* the *Eye*, *Ear*, &c. And in it is likewiſe the *Brain*, inveſted with its Meninges; the ſuppoſed Seat of the Soul. See SENSE, BRAIN, *&c.*

The *Head* is moved by ten Pair of Muſcles, *viz.* the *Par Splenium*, *Complexum*, *Rectum majus externum*, *Rectum minus externum*, *Obliquum Superius*, *Obliquum Inferius*, *Maſtoideum*, *Rectum internum majus*, *Rectum internum minus*, and *Rectum Laterale*. See each deſcribed under its reſpective Article.

The Orientals cover the *Head* with a *Turban*, or a *Cap*. — The Occidentals with a *Hat*, &c. See TURBAN, HAT and CAP.

Kings, on ſolemn Occaſions, wear the Crown on the *Head*; Biſhops the Mitre, *&c.* See CROWN, MITRE, *&c.*

The antient Cavaliers wore *Helmets*. — The Soldiers, *Casks*. See HELMET and CASK.

HEAD, is alſo uſed for the Top of a Tree, or other Plant. See TREE and PRUNING.

HEAD, is alſo applied to the Extremity of a Bone. See BONE.

When a Bone has a round Tip, or End, which advances, or projects forward, whether in the Way of an Apophyſis or Epiphyſis; it is call'd the *Head* of the Bone. See APOPHYSIS, *&c.*

If its Riſe, or Origin, be ſlender, and it enlarge by Degrees, it is call'd the *Neck*. See NECK.

If it terminate in a Point, it is call'd *Corone*, *Corvus*, or *Coracoides*, as reſembling a Crow's Bill. See CORONE, CORACOIDES, *&c.*

When the *Head* is flat, they call it *Condylus*, or *double Head*; as in the Extremities of the Bones of the Fingers. See CONDYLUS.

HEAD, is alſo uſed for the Extreme of a Muſcle, which is faſten'd or inſerted into the Stable-Bone, or

the

the Part not intended for Motion. See MUSCLE, &c.

The *Head* of a Muſcle is a Tendon. See TENDON and TAIL.

HEAD, again, is applied in the Mechanic Arts, to the Parts of Inanimate and Artificial Bodies. See CAPITAL.

In this Senſe we ſay, that ſome Nails have *Heads*; others *Hooks*; others, as Brads, neither. See NAIL.

So alſo we ſay the *Head* of a Pin, &c. See PIN.

HEAD, is alſo uſed in Painting, Sculpture, &c. for a Picture, or Repreſentation of that Part of the human Body; whether in Colours, Draught, Relievo, or Creux. See SCULPTURE, BUSTO, &c.

Thoſe in Painting, taken from the Life, or ſuppoſed to bear a juſt Reſemblance to the Perſon; are more properly call'd *Portraits*. See PORTRAIT.

HEAD, in Architecture, &c. an Ornament of Sculpture, or carved Work, frequently ſerving as the Key of an Arch, Plat-band, and on other Occaſions. See KEY and ARCH.

Theſe Sort of *Heads* uſually repreſent ſome of the Heathen Divinities, Virtues, Seaſons, Ages, &c. with their Attributes. — As a Trident for *Neptune*, a Helmet for *Mars*, a Crown of Ears of Corn for *Ceres*, a Caduceus for *Mercury*, a Diadem for *Juno*. See ATTRIBUTE, &c.

The *Heads* of Beaſts are alſo uſed in Places ſuitable thereto: As a Bullock's, or Sheep's *Head*, for a Shambles, or Market-houſe; a Dog's, for a Kennel; a Deer's, or Boar's, for a Park or Foreſt; a Horſe's, for an Equery, &c.

In the Metopes of the Freezes, and other Parts of certain *Antique*, *Doric* Temples, we meet with Repreſentations of Bullocks, or Rams *Heads* flea'd; as a Symbol of the Sacrifices offer'd there.

In Heraldry, the *Heads* of Men, Beaſts, Birds, &c. are bore in Armoury, either full-faced and in *front*, or ſide-faced and in *profile*; which muſt be diſtinguiſh'd in Blazoning. — *Vert a Chevron Gules, between three Turks Heads, Couped, Side-faced, proper:* By the Name of *Smith*.

Among Medalliſts, the different *Heads* on antient Coins, are diſtinguiſh'd by the different Dreſſes thereof. See MEDAL.

In the *Imperial* Medals, where the *Head* is quite bare, 'tis uſually a Sign the Perſon was not an Emperor, but one of the Children thereof, or the preſumptive Heir of the Empire. Tho' we have Inſtances of thoſe who were only *Cæſars*, and never reign'd, being crown'd with Lawrel, or adorn'd with a Diadem: As, on the contrary, we have Emperors *Heads* entirely bare.

The *Heads* which are cover'd, are either cover'd with a Diadem, or a Crown, or a ſimple Caſk, or a Veil, or ſome other foreign Covering; whereof the Diadem is the moſt antient. — The Senate firſt granted it to *Julius Cæſar*, to wear the Lawrel Crown, which his Succeſſors took after him. See CROWN, DIADEM, &c.

The *Heads* of Deities are frequently diſtinguiſh'd by ſome ſpecial Symbol thereof.

HEAD, is alſo applied to Monſters; ſuppoſed moſt of them fabulouſly to have many *Heads*. See MONSTER, &c.

The Serpent *Amphisbæna*, or *Cæcilia*, is ſaid by Naturaliſts to have two *Heads*. — The Poets attribute three *Heads* to *Hecate*, *Geryon*, and *Cerberus*: *Typhon* and *Hydra* are ſaid to have an hundred *Heads*.

The *Head* of the Gorgon *Meduſa*, is ſaid to have ſtruck People dead with the very Sight. — It has been ſince tranſlated into Heaven, and made a Conſtellation; where it ſtill ſhines as a Part or Appendage of the Conſtellation *Perſeus*; continuing ſtill to diſpenſe its malific Influences, as the Aſtrologers ſuppoſe, upon our Earth. See CONSTELLATION.

The Stars, &c. in *Meduſa's Head*, which is alſo call'd from the Arabs, *Ras Algol*; See among the reſt of PERSEUS.

HEAD, is alſo uſed for the Horns of a Deer; as a Hart, Buck, &c. See HORN.

Hart's *mew*, or caſt their *Heads* every Year; and get new ones. See MOULTING.

The old Hart, or Buck, caſts his Head ſooner than the young; and the Time is about the Months of *February* and *March*. — Having caſt their *Heads*, they inſtantly withdraw into the Thickets; hiding themſelves in convenient Places near good Water, &c. far from the Annoyance of Flies.

After they have mewed, they begin to *button* again in *March*, or *April*, i. e. to ſhoot out new Horns; which at firſt appear like little Bunches.

*Note.* If a Hart be gelt before he have a *Head*, he will never bear any; and if he be gelt when he has a *Head*, he will never after mew or caſt it. — If only one of his Teſticles be taken out, he will want the Horn of that Side: If one of the Teſticles be only tyed up, he will want the Horn of the oppoſite Side. See CASTRATION and GELDING.

The Age of a Hart, or Deer, is uſually reckon'd by the Number of *Heads*. — A Deer of the firſt *Head*, the ſecond *Head*, &c.

At one Year they have nothing but Bunches, call'd *Significators* of Horns to come. The 2d Year they appear more perfectly, but ſtrait and ſimple: This makes the firſt *Head*, properly call'd *Broches*, and in a Fallow-Deer, *Pricks*. The 3d Year they grow into two *Speers*, or four, ſix, or eight ſmall Branches. At the 4th, they bear eight or ten: At the 5th, ten or twelve: At the 6th, fourteen or ſixteen: At the 7th Year they bear their *Heads* beamed, branched and ſummed as much as they will bear; never multiplying further, but only growing in Magnitude.

*The Names and Diverſities of* Heads *in the hunting Language*, are as follow:

The Thing that beareth the Antlers, Royals, and Tops, is call'd the *Beam*; and the little Streaks therein are *Glitters*. — That which is about the Cruſt of the Beam, is termed *Pearls*; and that which is about the Bur it ſelf, formed like little Pearls, is called *Pearls bigger than the reſt*. — The Bur is next the *Head*, and that which is about the Bur, is called *Pearls*. — The firſt is called *Antler*, the ſecond *Sur-antler*; all the reſt which grow afterwards, till you come to the Crown, Palm, or Croche, are call'd *Royals* and *Sur-royals*; the little Buds or Broches about the Tops, are called *Croches*.

Their *Heads* go by ſeveral Names: The firſt *Head* is called a *Crown-top*, becauſe the Croches are ranged in Form of a Crown. — The ſecond is called a *Palmed-top*, becauſe the Croches are formed like a Man's Hand. — All *Heads* which bear not above three or four, the Croches being placed aloft, all of one Height, in Form of a Cluſter of Nuts, are called *Heads of ſo many Croches:* All *Heads* which bear two on the Top, or having their Croches doubling, are called *Forked-Heads*. — All *Heads* which have double Burs, or the Antlers, Royals, and Croches turned downwards, contrary to other *Heads*, are called ſimple *Heads*. See HUNTING.

HEAD, is ſometimes alſo uſed for the whole Man.

In this Senſe we ſay, to offer a Reward for a Man's *Head*. — In Proſcriptions a Price is ſet on a Man's *Head*. See PROSCRIPTION.

Capitation is a Tax laid upon each *Head*; call'd alſo *Poll* and *Head-money*. See CAPITATION and POLL.

HEAD, again, is uſed figuratively in ſpeaking of Communities and Bodies politic, for the principal or leading Member thereof. See PRINCIPAL.

Thus, we ſay, a Preſident, or Maſter, is at the *Head* of his Company. — A Dean is the *Head* of his Chapter. — The Miniſters are at the *Head* of Affairs. See PRESIDENT, DEAN, MINISTER, &c.

The King of *Great Britain* is at the *Head* of the *Proteſtant* World, &c.

HEAD, is alſo uſed to denote the Relation of Priority; or that which comes firſt in any Thing. See PRIORITY.

In this Senſe, we ſay, the Names of Authors ſhould always appear at the *Head* of their Books. — Prefaces, and Epiſtle Dedicatory, come at the *Head*. — The Governour marches out at the *Head* of the Garriſon.

HEAD, in the military Art. — The *Head of the Camp*, is the Front, or fore-moſt Part of the Ground, an Army is incamped on; or that which advances moſt towards the Campaign, Field, or the Enemy. — The *Head* of the Camp is always to be the beſt fortified. See CAMP, &c.

In the like Senſe we ſay, the *Head of the Trenches*. — The *Head of the Sap:* — *Of the Works*, &c. meaning thoſe Parts advanced the furtheſt towards the Enemy. See WORKS, SAP, &c.

Such a Night the *Head* of the Trenches was carried further by an hundred Paces. — There are two *Heads* of a Trench; that is, two Attacks. See TRENCH and ATTACK.

The *Head of a Horn-Work*, is that Part contain'd between two Demi-Baſtions. See HORN-*Work*.

HEAD *of a Ship*, or other Veſſel, is the *Prow*, or Part that goes foremoſt. See PROW. See alſo SHIP.

HEAD, in the Manage. The Perfections required to the *Head of Horſe*, are that it be ſmall, narrow, lean and dry. — Horſes with a big groſs *Head*, are apt, by their Weight, to reſt and loll upon the Bridle; and ſo incommode the Rider's Hand. — A Horſe with a large *Head* can never look ſtately, unleſs he have a long and very well turned Neck, and place his *Head* well. — Horſes with groſs fat *Heads*, much charged with Fleſh, are ſubject to Infirmities of the Eyes.

But the chief Thing in a Horſe's *Head* is a good *Onſet*, ſo as he may be able to bring his *Head* into his natural Situation; which is, that all the fore Part, from the Brow to the Noſe, be perpendicular to the Ground; ſo that if a Plummet were applied thereto, it wou'd but juſt raze or ſhave it. See HORSE.

The *Head* of a Horſe is alſo uſed to import the Action of his Neck, and the Effect of the Bridle and Wriſt.

*Moors* HEAD, is underſtood of a Horſe with a black *Head* and Feet; the Body being uſually of a Roan Colour. See HORSE.

*Moors Head*, is alſo uſed by Engineers, for a Kind of Bomb or Granado, ſhot out of a Cannon. See BOMB and GRANADO.

*Moors Head*, is alſo uſed in Heraldry, for a Repreſentation, uſually in Profile, of a *Black-moors Head*, ſwath'd or roll'd about with a Bandage; frequenly bore as a Creſt. See CREST.

*Moors Head*, in Chymiſtry, is a Cover, or Capital, of an Alembic, having a long Neck, to convey the Vapours rais'd by the Fire, into a Veſſel, which ſerves as a Refrigeratory. See ALEMBIC.

In Muſic, the HEAD of a Lute, Theorbo, or the like, is the Place where the Pins or Pegs are ſcrew'd, to ſtretch or ſlacken the Strings. See LUTE, *&c.*

The *Dragons Head*, in Aſtronomy, *&c.* is the aſcending Node of the Moon, or other Planet. See NODE, DRAGON, *&c.*

HEAD-*Ach*, a painful Senſation in the Muſcles, Membranes, Nerves, or other Parts of the *Head*. See CEPHALALGIA.

It is ſuppoſed to ariſe from an extraordinary Diſtention of thoſe Parts, either by the Fluids therein being rarified, or their Quantity and Motion increas'd.

When attended with a Vomiting, Deafneſs, and Watching, it portends Madneſs; with a Noiſe in the Ear, Dulneſs of Feeling in the Hands, *&c.* an Apoplexy or Epilepſy. See MADNESS, APOPLEXY, *&c.*

The Cure is by Bleeding in the Jugular; Cupping, or applying Leeches to the Temples, and behind the Ears and Neck. — Iſſues, Emeticks, and Diaphoreticks are alſo occaſionally uſed; with Anti-epilepticks and Apoplecticks. — A Veſicatory applied to the whole Scalp, is the laſt Remedy.

M. *Homberg* gives us an extraordinary Inſtance of the Cure of a moſt vehement and inveterate *Head-Ach*, by an accidental Burn of the *Head*. See BURN.

HEAD-*Borow*, ſignifies the Perſon who is chief of the Frank-Pledge; and had antiently the principal Direction of thoſe within his own Pledge. See FRANK-*Pledge*.

He was alſo called *Burrow-Head*, *Burſholder*, now *Boſholder*, *Third-Borow*, *Tything-Man*, Chief-Pledge, and *Borow-Elder*, according to the Diverſity of Speech in divers Places. See TYTHING-*Man*, *&c.*

This Officer is now uſually call'd a *High-Conſtable*. See CONSTABLE.

The *Head-Borow* was the chief of ten Pledges; the other nine were call'd *Hand-Borows*, or *Plegii Manuales*. See FRIBOURG.

HEAD *Farcin*. See FARCIN.

HEAD-*Land*, in Husbandry, is that Part which is ploughed acroſs, at the Ends of other Lands.

HEAD *Mould-Shot*, a Diſeaſe in Children, wherein the Sutures of the Skull, generally the Coronal, *ride*; that is, have their Edges ſhot over one another; and ſo cloſe lock'd together, *e. gr.* as to compreſs the internal Parts, the Meninges, or even the Brain it ſelf. See SUTURE.

The Diſeaſe uſually occaſions Convulſions; and is ſuppoſed to admit of no Cure from Medicines; unleſs Room cou'd be given, by manual Operation, or a Divulſion of the Sutures.

The *Head Mould-Shot*, is the Diſorder oppoſite to the Horſe-Shoe Head. See HORSE-*Shoe Head*.

HEAD-*Pence*, and HEAD-*Silver*. See COMMON *Fine*.

HEAD-*Sea*, is when a great Wave, or Billow of the *Sea*, comes right a-head of the Ship, as ſhe is in her Courſe.

HEAD-*Stall*, in the Manage. See CAVESON.

HEALFANG, or HALSFANG, in our antient Cuſtoms, *Colliſtrigium*, or the Puniſhment of the Pillory. See PILLORY.

The Word is compounded of two *Saxon* Words, Halſ, i. e. *Collum*, and ꝑang, *Captura*; *pœna ſcilicit qua alicui Collum ſtringatur*. See COLLISTRIGIUM.

*Healfang*, however, cannot ſignifie a Pillory in the Charter of *Canutus de Foreſtis*, Cap. 14. *Et pro culpa ſolvat Regi duos ſolidos quos Dani vocant* Halfehang.

Sometimes it is taken for a pecuniary Puniſhment, or Mulct, to commute for ſtanding in the Pillory; and is to be paid either to the King, or to their chief Lord. — *Qui falſum Teſtimonium dedit, reddat Regi vel Terræ Domino* Halfeng. *Leg. H.* 1.

HEALING, in its general Senſe, includes the whole Proceſs of curing or removing a Diſorder, and reſtoring Health. See CURE and DISEASE.

In this Senſe, Medicine is defined the Art of *Healing*. See MEDICINE, *&c.*

In its more reſtrained Senſe, as uſed in Chirurgery, *&c.* *Healing* denotes the uniting or conſolidating the Lips of a Wound or Ulcer. See WOUND and ULCER.

The Medicines, proper for this Intenſion, are call'd Incarnatives, Agglutinatives, Vulneraries, *&c.* See INCARNATIVE, AGGLUTINANT, VULNERARY, *&c.*

Dr. *Beale* has a Diſcourſe of *Healing Springs* and *Waters* in the *Philoſoph. Tranſact.* N°. —. See WATER and SPRING.

HEALING, in Architecture, denotes the Covering the Roof of a Building. See ROOF and COVERING.

The *Healing* is various; as of *Lead*, *Tyles*, *Slate*, *Horſham Stone*, *Shingles*, *Reed* and *Straw*. See LEAD, TYLES, STONES, SHINGLES, *&c.*

HEALTH, *Valetudo*, *Sanitas*, a due Temperament, or Conſtitution, of the ſeveral Parts whereof an Animal is compoſed, both in Reſpect of Quantity and Quality. — Or it is that State of the Body, wherein it is fitted to diſcharge the natural Functions perfectly, eaſily, and durably. See BODY, LIFE, FUNCTION, *&c.*

*Health*, is the State or Condition, oppoſite to *Diſeaſe*. See DISEASE.

The Preſervation, and Reſtoration of *Health*, makes the Object of the Art of Medicine. See MEDICINE.

The Condition, or Continuance of *Health*, depends principally on the ſix Non-Naturals, viz. *Air*, *Food*, *Exerciſe*, the *Paſſions*, *Evacuation* and *Retention*, and *Sleep* and *Waking*. See each in its Place, FOOD, EXERCISE, PASSION, *&c.*

The Antients perſonified and even deified *Health*; or rather, erected a Goddeſs to whom they ſuppoſed the Care of *Health* to belong. — The *Greeks* worſhipp'd her under the Name *Hygeia*, and the *Latins* under that of *Sanitas*. — The Place of her Worſhip at *Rome* was on the *Mons Quirinalis*, where ſhe had a Temple; and a Statue crown'd with Medicinal Herbs.

We frequently find the Goddeſs *Health* on the Reverſe of Medals. — She is repreſented with a Serpent ſtretch'd on her left Arm, and holding a Patera to it with the left. Sometimes ſhe has an Altar before her, with a Serpent twiſted round the ſame, and raiſing its Head to take ſomething out of the ſame. The Inſcription is SAL. AUG.

*Houſe of* HEALTH, a Kind of Hoſpital, or public Building, for the Reception and Entertainment of Perſons infected with the Plague, or coming from Places infected therewith. See PEST-*Houſe*, QUARANTINE, *&c.*

In the like Senſe we ſay, Officers of *Health*, Certificate of *Health*, &c.

HEAM, among Farriers, the ſame with the After-birth in Women. See SECUNDINE.

Thyme, Penny-Royal, Winter Succory, or common Horehound, boil'd in white Wine, and given a Mare, are eſteem'd hood to expel the *Heam*. — Dittany given in a Peſſary, expels the *Heam*, as well as the dead Fole: So do Fennel, Hops, Savin, Angelica, *&c.*

HEARING, *Auditus*, the Act, or Faculty of perceiving Sounds. See SOUND and PERCEPTION.

*Hearing* is reckon'd among our external Senſes. — Its Organ is the *Ear*, and particularly the auditory Nerve diffuſed thro' the ſame: And its Object certain Motions, or Vibrations of the Air. See SENSE, EAR, and AIR.

Hence, *Hearing* may be more ſcientifically defined a Senſation, whereby from a due Motion impreſs'd on the Fibrillæ of the auditory Nerve, and communicated thence to the Senſory; the Mind perceives, or gets the Idea of Sounds. See SENSATION.

Philoſophers have differ'd as to the immediate Organ of *Hearing*. — *Ariſtotle* will have it the *Cochlea* and *Tympanum*, and takes the Senſe of *Hearing* to be ſeated therein. *Hiſt. Animal*, Cap. 10. in which he is followed by *Galen*, Lib. 8. *de uſu par.* See TYMPANUM, *&c.*

The Moderns ſpeak of the Point on much better Ground. — The Ear, and the ſeveral Parts thereof, Membranes, Canals, Labyrinths, Nerves, *&c.* are only Means, Vehicles, for the Reception, Modification, and Tranſmiſſion of the ſonorous Matter to the Brain; which is the Seat of the Senſe. See BRAIN and SENSORY.

A Sound, in Effect, is nothing but a certain Refraction, or Modulation of the external Air, which being gathered by the external Ear, paſſes through the *Meatus Auditorius*, and beats upon the *Membrana Tympani*, which moves the four little Bones in the *Tympanum*. See AURICLE and TYMPANUM.

In like Manner, as it is beat by the external Air, theſe little Bones move the internal Air, which is in the *Tympanum* and *Veſtibulum*; which internal Air makes an Impreſſion upon the auditory Nerve in the Labyrinth, and *Cochlea*, according as it is moved by the little Bones in the *Tympanum*; ſo that according to the various Refractions of the external Air, the internal Air makes various Impreſſions upon the auditory Nerve, the immediate Organ of *Hearing*; which different Impreſſions repreſent different Sounds.

Sir

Sir *Isaac Newton* carries the Thing ſomewhat farther, and ſuppoſes *Hearing*, like Seeing, to be perform'd, not immediately by the Vibrations of the Air, but by thoſe of ſome other more ſubtle Medium, excited in the auditory Nerves by the Tremors of the Air, and propagated thro' the ſolid Capillaments of the Nerve to the Place of Senſation. See MEDIUM, VISION, *&c.*

The curious Structure of the Labyrinth, and Cochlea, tend to make the weakeſt Sounds audible; for the whole Organ of *Hearing* being included in a ſmall Space, had the auditory Nerve run in a ſtrait Line, the Impreſſion would only have been made on a very ſmall Part of it; and the Strength of the Impreſſion being, *Cæteris paribus*, always as the Number of Parts upon which the Impreſſion is made, Sounds which are now low, could not have been heard at all. — If the auditory Nerve had, like the *Retina*, been expanded into a large Web, which had covered or lined ſome wide Cavity, the Impreſſion of Sounds even in this Caſe had been much weaker, than they are now: For this large Cavity had given Room for the Sounds to dilate; and all Sounds grow weaker, as they dilate.

Both of theſe Inconveniencies are prevented by the preſent Structure of the Labyrinth and Cochlea, whoſe Canals, by their winding, contain large Portions of the auditory Nerve, upon every Point of which the ſmalleſt Sound being at once impreſſed becomes audible; and by their Narrowneſs, the Sounds are hindred from dilating: And the Impreſſions made upon the Nerves by the firſt Dilatations are always the ſtrongeſt.

The Strength of the Impreſſion in narrow Canals, is likewiſe increaſed on Account of the Elaſticity of the Sides of the bony Canal; which receiving the firſt and ſtrongeſt Impulſes of the Air, do reverberate them more ſtrongly upon the auditory Nerve.

It may be obſerved, that tho' Air be the uſual Matter of Sounds; ſo that a Bell rung in *Vacuo* is not heard at all: Yet will moſt other Bodies, properly diſpoſed, do the like Office; only ſome more faintly than others. See MEDIUM.

Thus may a Sound be heard thro' Water, or even thro' Earth; of which we have various Inſtances. See SOUND.

Add, that tho' the Ear be the ordinary Organ of *Hearing*; yet *Hagerup*, a *Daniſh* Phyſician, maintains, that one may hear with the Teeth. — Thus, if one End of a Knife, or the like, be applied on a Harpſichol, and the other held between the Teeth; the Muſic thereof will be plainly heard, tho' the Ears be ever ſo cloſely ſtopp'd. — But this, perhaps, may as well be referr'd to the Senſe of Feeling. See FEELING.

Such as Want the Senſe of *Hearing* are ſaid to be *Mute* or *Deaf*. See DEAFNESS.

'The Senſe of *Hearing*, ſays *Cicero*, is always open; 'for this we have Need of even when aſleep. The 'Paſſage to it is full of Turns, and Meanders; that 'nothing hurtful may enter or find its Way in. If any 'little Vermine does endeavour to paſs; it muſt ſtick and 'be bemired in the *Cerumen*, or Ear-Wax, laid for that 'Purpoſe near the Entrance.' *De Nat. Deor. L.* 2 Cap. 57.

HEARING, is particularly uſed in Civil and Judicial Concerns, for a Cauſe, being brought before the Judge and Jury, and the Parties being heard as to the Merits thereof. See CAUSE, JUDGE, *&c.*

Such a Cauſe was kept off eight Months, e're it was brought to a *Hearing*. — We are to have our *Hearing* the laſt Day of the Term. See ISSUE.

The *Hearing* of Embaſſadors at the Courts of Princes is uſually call'd *Audience*. See AUDIENCE and EMBASSADOR.

HEARSE, among Hunters, an Hind in the ſecond Year of her Age. See HUNTING.

HEART, *Cor*, in Anatomy, a muſculous Part, in the animal Body, ſituate in the *Thorax*; wherein the Veins all terminate, and from which all the Arteries ariſe; and which, by its alternate Contraction and Dilatation, is the chief Inſtrument of the Circulation of the Blood, and the Principle of vital Action. See ARTERY, VEIN, BLOOD, LIFE, *&c.*

This noble Part is included in a Capſula, or Pouch, call'd the *Pericardium*; whoſe Structure and Office will be explain'd under the Article PERICARDIUM.

The Figure of the *Heart* is a Cone, or Pyramid reverſed; the upper, and broader Part whereof, is called the *Baſis*; and the lower, the *Cone*, *Apex*, or *Point*; which is turn'd a little towards the left Side.

Its Magnitude is indeterminate, and different in ſeveral Subjects, according to their reſpective Dimenſions. — Its ordinary Length is about ſix Inches, its Breadth at the Baſis four or five; and the whole Circumference fourteen. Its Place is in the middle of the *Thorax*, between the two Lobes of the Lungs; and it is faſten'd to the *Mediaſtinum* and *Pericardium*, and ſupported by the great Blood-Veſſels, to which alone it is immediately connected; being, for the Conveniency of its Motion, diſengaged from any other Impediments. — It is cover'd with a thin Membrane, which, about the Baſis, is guarded with fat; and which is no other than the common Membrane of the Muſcles. See MEMBRANE.

It has two great Cavities, call'd *Ventricles*, ſomewhat unequal; the right being larger, capable of containing between two and three Ounces of Blood. — They are divided by a fleſhy Partition, conſiſting of the ſame muſcular Fibres with the *Parietes* themſelves, and called the *Septum*; the Figure whereof is Concave towards the left Ventricle, and Convex towards the right. — There is no immediate Communication between the Ventricles; but for the Blood to paſs out of one into the other, it muſt fetch a round thro' the Lungs. See SEPTUM, *&c.*

The *Parietes*, or Sides of theſe Ventricles, are of a Thickneſs and Strength very unequal; the left much exceeding the right, becauſe of its Office, which is to force the Blood thro' all the Parts of the Body; whereas the right drives it through the Lungs only, and is therein greatly aſſiſted by other Parts. — The right Ventricle, in Effect, ſeems only intended with a View to the Lungs; whence, in ſuch Animals as have no Lungs, we only find one Ventricle, which is the left. See LUNGS.

In the Ventricles are little Muſcles, called *Columnæ Carneæ*, or *Lacertuli*, derived from the *Parieties*, and connected, by tendinous Extremities, to the *Valves* of the *Heart* hereafter mention'd. See COLUMNÆ.

The Ventricles are capped each with an *Auricle*, or little Muſcle, conſiſting, like the Ventricles themſelves, of a double Order of fleſhy Fibres. See AURICLE.

The Veſſels, either ariſing from, or terminating in the *Heart*, and its Auricles are two *Arteries*, viz. the *Aorta*, and the *Pulmonary* Artery, which have their Origin from the two Ventricles, *viz.* the *Aorta* from the left, and the *Pulmonary* from the right: And two *Veins*, which terminate in the Auricles, *viz.* the *Cava* Vein in the right, and *Pulmonary* Vein in the right. See AORTA, CAVA, PULMONARY, *&c.*

At the reſpective Orifices of theſe Veſſels are placed *Valves*. See VALVE.

Particularly, at the Orifice of the Arteries, within each of them, are three ſemi-lunar Valves, or Membranes, of a ſemi-lunar Figure, which cloſe the Orifice of the Artery, and hinder the Relapſe of the Blood into the *Heart* at the Time of its Dilatation. — At the Mouth of the right Ventricle, juſt at its Juncture with the Auricle, are three others call'd *Tricuſpides*, from their three Points being faſten'd by tendinous Fibres to the *Columnæ Carneæ*; ſo that upon the Contraction, or Syſtole of the *Heart*, they cloſe the Orifice, and hinder the Blood from recurring into the great Vein. — The ſame Office do the two Mitral Valves, at the Exit of the left Ventricle, ſtopping the Return of the Blood into the Pulmonary Vein. See SEMI-*Lunar*, TRICUSPID, and MITRAL.

The Subſtance of the *Heart* is entirely fleſhy, or muſculous. — The Antients, indeed, generally took it for a *Parenchyma*; but *Hippocrates* had a juſter Sentiment; and after him *Steno* and the Moderns, have evidently found it to conſiſt of a continued Series of proper muſculous Fibres, variouſly contorted, or wound up, and ending at the Orifices of the reſpective Ventricles, where they form their Tendons.

In diſſecting the *Heart*, after taking off the proper Membrane, there appear, on the outer Surface of the right Ventricles, ſome ſlender ſtrait Fibres tending to and ending in the Baſis. — Immediately under theſe is a double Order of ſpiral Fibres, the exterior whereof aſcend obliquely from the Septum to the Baſis, and form a Sort of *Helix*, or *Cochlea*: The interior take a contrary Courſe; winding obliquely from the right Side towards the left, ſo as to encompaſs both Ventricles, and ending in the Baſis on the left Side, form likewiſe an *Helix* of an inverſe Order. — Under theſe appear the Fibres of the left Ventricle; and firſt, a ſpiral Series running to the left, under which, as in the other Ventricle, lie another Order running the contrary Way, which not only extend to the outward Paries, but encompaſſing the whole Ventricle, make the Septum more immediately appertain to, and be a Part of, the left Ventricle. Some of them, inſtead of terminating, as the reſt do, in the Tendons of the *Heart*, run inwards, and form the *Columnæ Carneæ*; while others, reaching down to the Cone, are wound about it, and form the Circle called the *Centre* of the *Heart*. See CENTRE.

The Fibres of the *Heart* appear to be the ſame with thoſe of the other Muſcles; whence the Part now generally paſſes for a real Muſcle; tho' ſome think the Inference not over juſt, inaſmuch as the *Aorta* has the ſame Claim to be reputed a Muſcle. See MUSCLE and AORTA.

Some late Authors, upon conſidering the Structure and Diſpoſition of the ſpiral Fibres, chuſe rather to make the *Heart* a double Muſcle, or two Muſcles tyed together. — In Effect, the two Ventricles, with their reſpective Auricles, are found two diſtinct Bodies, two Veſſels, or Cavities, which may be ſeparated, and yet ſtill remain Veſſels; the Septum, which was ſuppoſed to belong only to the left, being now found to conſiſt of Fibres derived from them both. — To ſay no more, the two Ventricles, according to M. *Winſlow*, are two ſeveral Muſcles united together, not only by the Septum, but by ſeveral Plans of Fibres ariſing from the exterior Baſe of the *Heart*, and meeting at the *Apex*, which entering the left Ventricle, lines the Parietes, *&c.*

The *Heart* has alſo its proper Blood Veſſels, *viz.* two Arteries ſpringing from the Entrance of the *Aorta*; and one larger Vein, with one or two leſſer; all which, from their encompaſſing the *Heart*, are called *Coronariæ*. See CORONARY.

The Nerves of the *Heart* and its Auricles, come from a Plexus of the *Par Vagum*, called by *Willis*, *Plexus Cardiacus*. See NERVE and PLEXUS.

It has alſo *Lymphæducts*, which carry the *Lymph* from the *Heart* to the *Thoracic* Duct. See LYMPHÆDUCT.

The Uſe of the *Heart*, and its appendant Auricles, is to circulate the Blood through the whole Body: In Order to which, they have an alternate Motion of Contraction and Dilatation. — By the Dilatation, call'd the *Diaſtole*, their Cavity is open'd, and their internal Dimenſions enlarged to receive the refluent Blood from the Veins; and by their Contraction, call'd the *Syſtole*, their Cavity is ſhrunk, and their Dimenſions leſſen'd, to expel the Blood again into the Arteries. See SYSTOLE and DIASTOLE.

It muſt be added, that theſe alternate Motions of the *Heart* and Auricles, are oppoſite in Time to each other; the Auricles being dilated whilſt the *Heart* is contracted again; and contracted whilſt it is dilated, to drive the Blood into it. See AURICLE.

By Means of the right Ventricle, the Blood is driven through the Pulmonary Vein, from which being received into the Pulmonary Artery, it is returned to the left Ventricle; from which by the *Aorta*, it is diſtributed all over the reſt of the Body, and thence returned to the right Ventricle by the *Vena Cava*; ſo making an entire Circulation through the whole Body. See CIRCULATION.

*Scheuchius* ſpeaks of a Man who had no *Heart*; but *Molinetti* denies it: As alſo that there ever were two *Hearts* found in any Man, tho' the Caſe be common in divers Inſects, which have naturally ſeveral *Hearts*; witneſs Silk-Worms, which have a Chain of *Hearts* running the whole length of their Bodies. But we have inconteſtable Inſtances of two *Hearts*, even in the ſame Man. — There have been *Hearts* found all gnawed and devoured with Worms: *Muretus* open'd the *Hearts* of ſome *Banditti*, which were all Hairy, or at leaſt inveſted with a *Tomentum*, or Down. — And what is ſtill more extraordinary, we have Accounts of Perſons in whom the *Heart* has been found inverted, or turned upſide down; particularly in a Woman hang'd ſome Time ago in *Saxony*, and a Man hang'd at *Paris*. *Journ. des Scav.*

Timorous Animals have always larger *Hearts* than courageous ones; as we ſee in Deer, Hares, Aſſes, *&c.* — There is a Bone found in the Baſis of the *Hearts* of certain Animals, particularly Deer; which ſeems to be no other than the Tendons of the Fibres of the *Heart* indurated and oſſified.

Hiſtorians relate, that Pope *Urban* VIII. being open'd after his Death, was found to have ſuch a Bone in his *Heart*. The Caſe is very uſual in the Trunk of the *Aorta*, which ſprings from the *Heart*. See AORTA.

Many amphibious Creatures, as the Frogs, *&c.* have but one Ventricle in the *Heart*. — The Tortoiſe is ſaid by the *French* Academiſts to have three Ventricles: M. *Buſſiere* charges this on them as a Miſtake; and maintains it has but one. The Point is ſcarce yet aſcertain'd. *Mem. de l'Acad. An.* and *Philoſoph. Tranſact.* N°. 328.

*Theory of the Motion of the* HEART.

The Principle of Motion in the *Heart*, or the Power from which its alternate Contraction and Dilatation ariſes, has been greatly controverted among the late Phyſicians and Anatomiſts.

The Expulſion of the Blood out of the Ventricles, argues a very conſiderable Motion in the Part. — The motive Power, 'tis certain, muſt ſurmount the Reſiſtance made to it; and according to *Borelli*'s Computation, the Reſiſtance made to the Motion of the Blood thro' the Arteries, is equal to 180000 Pounds, which therefore are to be removed by the *Heart*; or elſe the Circulation muſt ceaſe. Now, whence comes the Machine of the *Heart* to have ſuch a Power? And after the Expulſion, what other Power is it that ſurmounts the former, and reſtores the Part to its State of Dilatation, to produce a reciprocal *Æſtus*?

The whole Affair remain'd in the utmoſt Darkneſs and Uncertainty, till Dr. *Lower*'s excellent Treatiſe *De Corde*, where the Mechaniſm, whereby the Contraction, or Syſtole, is effected, was admirably explain'd. — The Cauſe of the Dilatation, or Diaſtole, which Dr. *Lower* had in great Meaſure over-look'd, has ſince been happily ſupplied by Dr. *Drake*.

That the *Heart* is a Muſcle, furniſhed and inſtructed for Motion like other Muſcles, is abundantly demonſtrated by Dr. *Lower* and others; and as it is a ſolitary Muſcle, without any proper Antagoniſt, and not directly under the Power of the Will, nor exerciſing voluntary Motion, it approaches neareſt to the ſphincter Kind, which has theſe Conditions in common with it. See SPHINCTER.

But in conſtant, and regular Alternations of Contraction and Dilatation, the *Heart* differs exceedingly from all the other Muſcles of the Body. See MUSCLE.

This Alternation has given the Learned Abundance of Trouble, who finding nothing peculiar in the Structure, which ſhould neceſſarily occaſion it; nor any Antagoniſt, whoſe Re-action ſhould produce it; have been extremely perplexed to find out the Cauſe.

That, Contraction is the proper Action and State of all Muſcles, is evident both from Reaſon and Experience. For if any Muſcle be freed from the Power of its Antagoniſt, it immediately contracts, and is not by any Action of the Will or Spirits, to be reduced to a State of Dilatation. — Thus, if the Flexors of any Joint be divided; the Extenſors of that Joint being by that Means freed from the contrary Action of their Antagoniſts, the Joint is immediately extended, without any Conſent of the Will, and in that State remains; and ſo *vice verſa*, if the Extenſors be divided.

Hence it appears, that the ordinary Muſcles have no reſtitutive Motion, but what they derive from the Action of their Antagoniſts, by which they are ballanced. — Thus the Sphincters of the *Anus*, *Veſica*, &c. having no proper Antagoniſts, are always in a State of Contraction, and ſuffer nothing to paſs them, but what is forced through them by the contrary Action of ſome ſtronger Muſcles, which, tho' not properly called Antagoniſts, yet on all neceſſary Occaſions, perform the Office of ſuch. See ANUS, VESICA, *&c.*

We have here, then, an adequate Cauſe of the Contraction of the *Heart*, viz. the natural *Vis Motrix* of muſculous Fibres, whoſe proper *Niſus*, or Tendency, is to contract themſelves. See MUSCULAR and FIBRE.

It may be added, however, that tho' the muſcular Fibres of the *Heart*, acted by the Nerves, be the immediate Inſtrument of its Conſtriction, or Syſtole, as is ſhewn by Dr. *Lower*, yet is there another Cauſe which contributes not a little thereto, and which Dr. *Lower* over-look'd, *viz.* the intercoſtal Muſcles and Diaphragm, which aid and facilitate this Contraction, by opening a Paſſage for the Blood through the Lungs, which denied, would be an invincible Obſtacle. — Add, that the pulmonary Artery and Vein, ſpreading themſelves throughout all the Diviſions and Sub-diviſions of the *Bronchia* of the Lungs, and being as it were co-extended therewith, muſt ſuffer the like Alteration of ſuperficial Dimenſions, as the *Bronchia* do in the Elevation and Depreſſion of the *Coſtæ*. So that while the Ribs are in a State of Depreſſion, whether before Commerce with the external Air, or after, the annular Cartilages of the *Bronchia* ſhrink one into another, and by that Means their Dimenſions are exceedingly contracted: In Conformity to which Condition of the *Bronchia*, the pulmonary Artery and Vein muſt likewiſe, either by Means of their muſcular Coats, contract themſelves to the ſame Dimenſions, or lie in Folds or Corrugations; which is leſs probable. — On the other Hand, when the Ribs are elevated, and the Diaphragm bears downwards, the Air ruſhing into the Lungs, ſhoots out the cartilaginous Rings, and divaricates the Branches of the *Trachea*, and by them extends the ſeveral Diviſions of the pulmonary Artery and Vein, and thereby lengthens and enlarges their Cavities: And this their alternate Action, will be continued, and imparted to the *Heart*; from which they ariſe.

Thus is a Paſſage open'd to the Blood from the light Ventricle of the *Heart*, to the left, through the Lungs, to which it could not otherwiſe paſs; and the Oppoſition which the Blood, contained in that Ventricle, muſt otherwiſe neceſſarily have made to its Conſtriction, is taken off; and the Syſtole thereby facilitated. See SYSTOLE.

For the Diaſtole, or Dilatation of the *Heart*, Dr. *Lower* contents himſelf to aſcribe it to a Motion or Reſtitution of the over-ſtrained Fibres. — His Words are, 'Since all 'its Motion conſiſts in its Contraction; and the Fibres 'of the *Heart* are made for Conſtriction only; 'tis evi-'dent, all the Motion of the *Heart* is in its Syſtole; But,

'as the Fibres are ſtretch'd beyond their Tone in every 'Conſtriction; for this Reaſon, after that *Niſus* is over, 'the *Heart* relaxes again by a natural Motion of Reſtitu-'tion, and is diſtended by the Influx of new Blood from 'the Veins. The Diaſtole, then, is not effected by any 'further Action of the *Heart* beſide a Remiſſion of its 'former Tenſion, and the Influx of the Blood.'

Now, if Contraction be the ſole Action of thoſe Fibres, as it certainly is, and as the Author here confeſſes; how can their Diſtention, vulgarly tho' improperly, call'd their Relaxation, be a Motion of Reſtitution? For, from the Nature of thoſe Fibres, and their Diſpoſition; the Structure of the *Heart* manifeſtly appears tonical, and its Dilatation a State of Violence. So that the Conſtriction is the true Motion of Reſtitution, and the only State to which it will ſpontaneouſly return when the Force is taken off; and thus we are left ſtill to ſeek for the true Cauſe of the Diaſtole, which appears the moſt difficult Phænomenon relating to the *Heart*.

Mr. *Cowper*, in his Introduction to his *Anatomy*, improves on the Share Dr. *Lower* hints the Blood to have in that Action, and makes it the main Inſtrument of the Dilatation of the *Heart*; in which he is followed by Dr. *Drake*; who, however, differs from him as to the Manner, and Reaſons of its being ſo.

'The *Heart* of an Animal,' ſays Mr. *Cowper*, 'bears a great 'Analogy to the Pendulums of thoſe artificial *Automata*, 'Clocks and Watches, while its Motion is performed like that 'of other Muſcles; the Blood doing the Office of a *Pondus*.' — If he means that the Blood, in its Reflux, by gravitating on the Auricles and Ventricles, dilates and expands them; acting therein as a Counterpoize to its Contraction as a Muſcle; 'tis pity he had not given an Explication at large of ſo abſtruſe and important a Phænomenon: The ſpecific Gravity of the Blood, not ſeeming a Cauſe adequate to the Effect it is here ſuppoſed to produce. — For if the Blood act only as a Weight, by meer Gravitation; ſo much of it only as deſcends from above the *Heart*, can be employed in that Action; which, at the largeſt Computation, does not amount to above five Pound Weight, and muſt be able, according to the Computation of *Borellus*, to overcome a Reſiſtance of 135,000 Pound.

Whatever, therefore, the Force that dilates the *Heart* and is the Cauſe of the Diaſtole, be, it muſt be equal to that of the *Heart*, the intercoſtal Muſcles and Diaphragm; to all which it acts as an Antagoniſt.

Such a Power is hard, perhaps impoſſible, to be found in the Machine of an animal Body; and yet without ſome ſuch Antagoniſt, it is as impoſſible the Circulation of the Blood ſhould be maintained. — All the Engines yet diſcovered within the Body, conſpire towards the Conſtriction of the *Heart*, which is the State of Quieſcence, to which it naturally tends; yet we find it alternately in a State of Violence, or Dilatation: And on this Alternation does all animal Life depend.

Some external Cauſe, therefore, muſt be found to produce this Phænomenon; which Cauſe muſt be either in ſome Quality of the Air, or the Preſſure of the Atmoſphere, becauſe we have no conſtant and immediate Commerce, with any other *Media*.

Some Phyſicians obſerving this, and that deprived by whatſoever Means of Communication with the external Air, we became inſtantly extinct; have imagined, that in the Act of Inſpiration, certain purer Parts of the Air were mixed with the Blood in the Lungs, and conveyed along with it to the *Heart*, where they nouriſhed a Sort of vital Flame, which was the Cauſe of this reciprocal *Æſtus* of the *Heart*. See FLAME.

Others, rejecting an actual Flame, have fancied that theſe fine Parts of Air, mixing with the Blood in the Ventricles of the *Heart*, produced an Efferveſcence which dilated it. See EFFERVESCENCE.

But theſe Notions have been long exploded, upon ample Conviction; and 'tis a Point yet undetermined, whether any Air does mix with the Blood at all in the Lungs or not. See LUNGS, *&c.*

But, ſuppoſing ſome Air do inſinuate it ſelf into the pulmonary Vein, it can no other Way dilate the *Heart*, than by an Efferveſcence in the left Ventricle, which would not dilate the right. — But even this Opinion is contradicted by Autopſy, and abundantly confuted by divers Authors. See RESPIRATION.

Upon the whole, the groſs Body of the Atmoſphere appears to be the true Antagoniſt to all the Muſcles ſerving for ordinary Inſpiration, and the Conſtriction of the *Heart*; which is confirmed not only from its ſufficient Power, but the Neceſſity of its Action upon animal Bodies. See ATMOSPHERE.

The *Heart*, we have obſerv'd, is a ſolitary Muſcle, of very great Strength; and the intercoſtal Muſcles and Diaphragm, which likewiſe have no Antagoniſts, are a vaſt additional Force, which muſt be ballanced by the contrary Action of ſome equivalent Power, or other. For tho' the Action of the intercoſtal Muſcles be voluntary, it does not exempt them from the Condition of all other Muſcles ſerving for voluntary Motion, which would be in a State of perpetual Contraction, notwithſtanding any Influence of the Will, were it not for the Libration of antagoniſt Muſcles. This Libration, between other Muſcles, is anſwered by the Weight of the incumbent Atmoſphere, which preſſes upon the *Thorax*, and other Parts of the Body. And as in all other voluntary Motions, the Influence of the Will only gives a Prevalence to one, of two Powers before equilibrated; ſo here it ſerves to enable thoſe Muſcles to lift a Weight too ponderous for their Strength not ſo aſſiſted: So that as ſoon as that Aſſiſtance is withdrawn, the Ribs are again depreſſed by the mere Gravitation of the Atmoſphere, which would otherwiſe remain elevated thro' the natural Tendency of thoſe Muſcles to Contraction.

This is evidently proved from the *Toricellian* Experiment, and thoſe made upon Animals in *Vacuo*; where, aſſoon as the Air is withdrawn, and the Preſſure thereby taken off, the intercoſtal Muſcles and Diaphragm are contracted, and the Ribs elevated in an Inſtant, and cannot by any Power of the Will be made to ſubſide, till the Air is again let in to bear them forcibly down. See VACUUM.

As in the Elevation of the Ribs, the Blood, by the Paſſage open'd for it, is in a Manner ſollicited into the Lungs; ſo in their Depreſſion, by the Subſidence of the Lungs, and Contraction of the Blood Veſſels conſequent thereof, the Blood is forcibly driven thro' the pulmonary Vein into the left Ventricle of the *Heart*. And this, together with the general Compreſſion of the Body by the Weight of the Atmoſphere which ſurrounds and preſſes on its whole Surface, is that Power which cauſes the Blood to mount in the Veins, after the Force impreſs'd upon it by the *Heart* is broken and ſpent, and which ſuffices to force the *Heart* from its natural State to Dilatation.

Upon computing the Weight of a Column of Air equal to the Surface of the Body, it appears a Power ſufficient for the Effects here aſcribed to it: And conſidering that the Bodies of Animals are compreſſible Machines, it appears that it muſt of Neceſſity affect them in the Manner here laid down. — And yet, tho' our Bodies be entirely compoſed of *Tubuli*, or Veſſels filled with Fluids, this Preſſure, how great ſoever, being equal every Way, could not affect them, were it not that the ſuperficial Dimenſions are eaſily variable; becauſe, being compreſs'd on all Parts with the ſame Degree of Force, the contained Fluids could not any where begin to recede, and make Way for the reſt to follow, but would remain as fix'd and immoveable, as if they were actually ſolid. See FLUID. — But, by the Dilatation of the *Thorax*, Room is made for the Fluids to move; and by the Coarctation of it, freſh Motion is impreſt; which is the great Spring whereby the Circulation is ſet and kept going.

This reciprocal Dilatation and Contraction of the ſuperficial Dimenſions of the Body, ſeems ſo neceſſary to animal Life, that there is not any Animal ſo imperfect as to want it, at leaſt none to which our anatomical Enquiries have yet reach'd. — For tho' moſt Kinds of Fiſh, and Inſects, want both moveable Ribs and Lungs, and conſequently have no dilatable *Thorax*; yet that Defect is ſupplied by an analogous Mechaniſm, anſwering ſufficiently the Neceſſities of their Life. — Thus, Fiſhes, which have no Lungs, have Gills to do the Office of Lungs, receiving and expelling alternately the Water, whereby the Blood-Veſſels ſuffer the ſame Alteration of Dimenſions, as in the Lungs of more perfect Animals. See GILLS.

Add, that the Lungs, or Air-Veſſels of Inſects, are much more different from thoſe of perfect Animals, than thoſe of Fiſhes are; and yet in their Action and Uſe, agree perfectly with both; that is, removing and expelling the Air, and varying the Dimenſions and Capacities of the Blood Veſſels. Having no *Thorax*, or ſeparate Cavity for the *Heart* and Air-Veſſels, the latter are diſtributed thro' the whole Trunk; by which they communicate with the external Air through ſeveral Spiracles or vent Holes, to which are fitted ſo many little *Tracheæ* or Wind-Pipes, which thence ſend their Branches to all the Muſcles and *Viſcera*, and ſeem to accompany the Blood-Veſſels all over the Body, as they do in the Lungs of perfect Animals. By this Diſpoſition, in every Inſpiration, the whole Body is inflated, and in every Expiration compreſſed; and conſequently the Blood-Veſſels muſt ſuffer a Viciſſitude of Extention and Contraction, and a greater Motion be thereby impreſſed on the contained Fluids, than the *Heart*, which in theſe Creatures does not appear to be muſcular, would be capable of giving. — The only Animal, exempted from this neceſſary Condition of receiving and expelling alternately ſome Fluid in and out of the Body, is a Fœtus:

But this, while included in the Womb, ſeems to have little more than a vegetative Life; and ought ſcarce to be reckon'd among the Number of Animals: And were it not for that ſmall Share of muſcular Motion which it exerciſes in the Womb, it might, without Abſurdity, be accounted a Graft upon, or Branch of the Mother. See FOETUS, EMBRYO, &c.

One Difficulty we muſt not here conceal, which will lie againſt the whole Doctrine, *viz.* That the *Hearts* of ſeveral Animals have been found to beat regularly and ſtrongly, even in *Vacuo*; not leſs ſo than in the Air. Witneſs the *Hearts* of Frogs, tried by Mr. *Boyle*. *Philoſoph. Tranſact.* N°. 62.

*Eſtimate of the Force of the* HEART.

The Quantity of the Force of the *Heart* has been variouſly eſtimated, and on various Principles; by various Authors, particularly *Borelli*, *Morland*, *Keill*, *Jurin*, &c.

The Force of the *Heart* may be defined by the Motion wherewith the *Heart* contracts; or by the Motion of a Weight which being oppoſed to the Blood at its Exit out of the *Heart*, will juſt balance and ſtop the ſame. — This we have no Way of coming at *a priori*; the internal Structure of the Part, and the Nature and Power of the contracting Cauſe being but imperfectly known: So that the only Means remaining, is to eſtimate it by the Effects.

All the Action of the *Heart* conſiſts in the Contraction of its Ventricles: The Ventricles contracting, ſtrike or preſs upon the Blood, and communicating Part of their Motion thereto, drive it out with Vehemence where the Paſſage is open. — The Blood thus protruded into the *Aorta*, and pulmonary Artery, preſſes every Way; partly againſt the Coats of the Arteries, which by the laſt Diaſtole had been left in a collapſed, flaccid State; and partly againſt the anterior Blood moving on too ſlowly before it. By ſuch Means the Coats of the Arteries are gradually diſtended, and the antecedent Blood has its Motion accelerated. — By the Way it may be obſerved, that the more flaccid the Arteries are, the leſs Reſiſtance will they make to a Dilatation; and the more they are dilated, the more ſtrongly will they reſiſt a further Diſtraction; ſo that the Force of the Blood, at its Egreſs out of the *Heart*, is at firſt ſpent in diſtending the Arteries, more than protruding the antecedent Blood; but afterwards more in protruding the Blood, than in diſtending the Arteries.

*Borelli*, we have already obſerved, in his *Oecon. Animal.* makes the Obſtacles to the Motion of the Blood thro' the Arteries, equivalent to 180,000 Pounds; and the Force of the *Heart* it ſelf, only equal to 3,000 Pound, which is only $\frac{1}{60}$ of the Oppoſition it has to overcome. Then, deducting 45,000 Pound for the adventitious Help of the muſcular Elaſtic Coat of the Arteries; he leaves the *Heart* with a Force of 3,000 Pound, to overcome a Reſiſtance of 135,000 Pound; that is, with 1 to remove 45; which he ſuppoſes it enabled to do by Virtue of Percuſſion.

But had he proceeded in his Calculation to the Veins, which he allows to contain Quadruple the Quantity of Blood as the Arteries do, and to which this Energy of Percuſſion either does not reach at all, or very languidly; he would readily have ſeen the Syſtem of Percuſſion to be inſufficient.

But his Calculus it ſelf is alſo found to be faulty; the Force aſcribed by him to the *Heart* being immenſely too great. — Dr. *Jurin* ſhews, that had he not made a Miſtake in the Computation, the Reſiſtance which the *Heart* has to overcome, muſt have come out, on his own Principles, much greater; and inſtead of 135,000 Pound, would have been 1,076,000 Pound, which tranſcends all Probability.

The great Faults in his Solution conſiſt, according to Dr. *Jurin*, in his eſtimating the motive Force of the *Heart* by a Pondus at reſt; in ſuppoſing the whole Weight ſuſtain'd by a Muſcle, in one of his Experiments, to be ſuſtain'd wholly by the contracting Force thereof; in aſſuming Muſcles, equally heavy, to be of equal Force: In ſuppoſing the utmoſt Force of the *Heart* exerted at every Syſtole, &c.

Dr. *Keill*, in his Eſſays of the *Anim. Oecon.* firſt ventured to ſet aſide *Borelli*'s Calculus; and ſubſtituted another, almoſt infinitely ſmaller, in its Stead. His Method of eſtimating the Force of the *Heart* is as follows: — Having the Velocity wherewith a Fluid flows out at an Orifice, without meeting any Reſiſtance from an anterior Fluid; the Force which produces that Motion is thus determined. Let the Line AB be the heighth from which a falling Body will acquire a Velocity equal to that wherewith the Fluid flows out at the Orifice; then is the Force which produces the Motion of this Fluid, equal to the Weight of a Cylinder of the ſame Fluid, whoſe Baſe is equal to the Orifice, and Weight equal to

B

2 A B: *Coroll.* 2. *Prop.* 36. *Lib.* II. Newton *Princip.*

Now, the Blood flowing out of the *Heart*, is reſiſted in its Motion by the anterior Blood in the Arteries and Veins, and therefore cannot flow with all the Velocity the Force of the *Heart* will give it; part of that Force being ſpent in overcoming the Reſiſtance of the Maſs of Blood. If therefore we knew how much the Velocity of the Blood is diminiſhed by this Reſiſtance, or what Proportion the Velocity of the Blood reſiſted, has to the Blood driven out, and not reſiſted; having already determined the Velocity of the Blood as it is reſiſted, we might eaſily recollect the Velocity, by which the Blood would flow were it not reſiſted; and from thence, the abſolute Force of the *Heart*.

To find this, the Author made the following Experiment. — Having uncover'd the *Iliack* Artery and Vein in the Thigh of a Dog, near his Body; and paſſed convenient Ligatures under them; he open'd the whole Diameter of the Veſſels, and received the Blood which run from it in the Space of ten Seconds: The ſame was afterwards done by the Artery, for the ſame Space of Time; and both the Quantities of the Blood were exactly weighed. The Experiment was repeated for the greater Security: Till, the Quantity of Blood from the Artery, was found at a Medium, to that from the Vein in the ſame Space of Time, nearly as $7\frac{1}{2}$ to 3.

Now, the Velocity of the Blood in the *Iliack* Artery, ſo near the *Aorta*, muſt be nearly the ſame with that in the *Aorta* it ſelf; and conſequently the Velocity with which it flows out of the *Iliack* Artery cut aſunder, is the ſame with which it would flow out of the *Heart* unreſiſted: Or, the Blood runs thro' a Wound in the *Iliack* Artery, with all the Velocity it received from the *Heart*. Now all the Blood which runs along the *Iliack* Artery, returns again by the *Iliack* Vein; and conſequently, the Quantities of Blood which paſs thro' both in the ſame Space of Time, are equal. The Quantity of Blood, therefore, which runs out of the *Iliack* Vein cut aſunder, is the ſame which ran thro' the *Iliack* Artery, before it was cut, in that Space of Time. Having, therefore, the Quantity which runs thro' the *Iliack* Artery when it is cut, and when it is not cut, we have their Velocities; for the Velocity of a Fluid, running thro' the ſame Canal, in equal Spaces of Time, is directly as their Quantities: But the Velocity of the Blood, when the Artery is cut, is equal to that it receives by the full Force of the *Heart*; and the Velocity when it is not cut, is that Velocity with which the Blood moves thro' the *Aorta*, reſiſted by the anterior Blood: And therefore theſe two Velocities are to one another as $7\frac{1}{2}$ to 3.

If now the *Heart* throws out two Ounces of Blood every Syſtole, which is a probable Aſſumption, then the Blood moves thro' the *Aorta* at the Rate of 156 Feet in a Minute; and therefore the abſolute Velocity, wherewith the Blood would be forced into the *Aorta*, did it find no Reſiſtance, is ſuch as would make it move 390 Feet in a Minute, or $6\frac{1}{2}$ Feet in a Second.

We now proceed to enquire, what is the Height from which a falling Body will acquire this given Velocity; for this Height doubled, gives the Length of the Cylinder whoſe Baſe is equal to the Orifice of the *Aorta*, and Weight equal to the abſolute Force of the *Heart*.

It is known by Experiment, that the Force of Gravity will make a Body move 30 Feet in a Second, which is the Velocity it acquires in falling thro' 15 Feet; and therefore this Velocity is to the Velocity of the Blood flowing without Reſiſtance into the *Aorta*, as 30 to 6. 5: But becauſe the Heights from which Bodies acquire given Velocities, are as the Squares of the Velocities, that is, as 900 to 42. 25; therefore, as 900 to 42. 25, ſo is 15 to 0. 74. — This Height doubled, gives 1. 48, or in Inches 17. 76, which is the Height of a Cylinder of Blood, whoſe Baſe is equal to the *Aorta*, which we have ſuppoſed to be equal to 0. 4187; and therefore the ſolid Content is 7. 436112, the Weight of which is equal to the abſolute Force of the *Heart*.

This Weight is five Ounces, whence the *Force of the* Heart *is found equal to the Weight of five Ounces.*

The ſame Author, by another Method of Calculating, from the Laws of Projectiles, finds the Force of the *Heart* almoſt equal to 8 Ounces, which tho' ſomewhat more than was before determined, yet the Difference is of no ſmall Moment in Reſpect of *Borelli*'s Account; the great Failing in whoſe Calculation Dr. *Keill* takes to ariſe from his not diſtinguiſhing between the Blood at reſt, and already in Motion. — The Force of the *Heart*, 'tis certain, is not employ'd in giving Motion to any Quantity of Blood at reſt, but only to continue it in Motion; how that Motion firſt aroſe, ſeems out of human Capacity to determine. 'Tis demonſtrable, that if the Reſiſtance of the Blood always bore the ſame Proportion to the Force of the *Heart*

it

it does now, the Blood never could at firſt be put in Motion by the *Heart*. If the Blood conſtantly moved forwards, with the Motion firſt communicated to it; and did the Coats of the Veſſels make no Reſiſtance; the poſterior Blood would not be retarded by the anterior, and the Force of the Blood would equal the intire Force of the Mover. But becauſe of the Reſiſtance made by the Coats of the Blood-Veſſels, and the Force which is ſpent in diſtending them, the Blood is continually retarded in its Motion as it circulates, and would in a ſhort Time ſtop, were not the Motion loſt made up again by a freſh Impulſe from the *Heart*; and therefore the Force of the *Heart* muſt be equal to the Reſiſtances the Blood meets with in its Motion: If it were more, the Velocity of the Blood would be continually increaſing; if leſs, it would continually decreaſe; and at laſt ſtop: And hence it is evident, that if the Circulation of the Blood was once ſtopped, all the Force of the *Heart* could never ſet it moving again.

Thus much for Dr. *Keill*'s Syſtem: — Dr. *Jurin* charges even this with its Defects; and particularly in that it ſuppoſes the Weight, whereby the Motion of Water running out at a Veſſel may be generated, to be what generates that Motion: Which, this laſt Author takes for a Miſapprehenſion of Sir *Iſaac Newton*'s Corollary; urging, that the Water falling by the Power of Gravity, acquires its Motion of it ſelf; and that the Weight falling the ſame Time, only receives a Motion equal to that of the Water out of the Veſſel. — There are ſome other Points which he objects againſt; and of which the learned Author, has an expreſs Vindication in the *Philoſoph. Tranſactions*; to which his Antagoniſt has ſince reply'd: But the Author dying in the mean Time prevented any Rejoynder.

Dr. *Jurin*, however, proceeds to give another Computation, on more unexceptionable Principles; tho' his Adverſary has found occaſion therein for Recrimination.

He conſiders one of the Ventricles of the *Heart* impelling the Blood, as a given Body impelling another at Reſt, with a given Velocity; and after communicating Part of its Motion thereto, proceeding with the ſame common Velocity. On which Principle the Force of the *Heart* will either be equal to the Factum of the Weight of the Ventricle, and its initial Velocity ere it impels the Blood; or to the Sum of the Motions of the Ventricle and the Blood flowing out of the ſame, and the Motion communicated to the Coats of the Arteries and the antecedent Blood.

Now, it is demonſtrable: 1°. That the Motion whereby a hollow Machine, unequally contractile, does act in Contraction, is equal to the Sum of the Factums of the ſeveral Particles of the Machine multiplied into their reſpective Velocities. Whence it follows, that the Motion of the Machine is equal to the Factum of its Weight into ſome mean Velocity between the Particles moved ſwifteſt, and thoſe moved ſloweſt. — 2°. That if the Water be expreſs'd out of the Orifice of ſuch a Machine, the Motion of the Water, burſting out of the ſame, will be equal to the Sum of the Facta of any tranſverſe Sections of all the Threads of Water, ſeverally multiplied into their reſpective Lengths and Velocities: Whence it follows, that the Motion of the Water is equal to the Factum of the Water iſſuing out at the Orifice into ſome mean Length between that of the longeſt Thread and the ſhorteſt. Hence, alſo, if there be ſeveral ſuch Machines full of Water, and contracted alike, whether equally or unequally, the Motion of the Water, burſting out at the Orifice of one of them, will be in a Ratio compounded of the Quadruple Ratio of any homologous Diameter of the Machine, and the reciprocal Ratio of the Time wherein the Contraction is effected.

From theſe Data is drawn a Solution of the Problem, *To find the Force of the Heart?* — For, calling the Weight of the left Ventricle, or the Quantity of Blood equal to the ſame, $p$; the inner Surface of the Ventricle, $S$; the mean length of the Filaments, or Threads of Blood expell'd from the ſame, $l$; a Section of the *Aorta*, $s$; the Quantity of Blood, contain'd in the left Ventricle, $q$; the Time wherein the Blood would be thrown out of the *Heart*, were the Reſiſtance of the Arteries and antecedent Blood removed, $t$; the variable Velocity, wherewith the Blood would flow thro' the *Aorta*, if the Reſiſtance were taken away, $v$; the variable Length of the *Aorta*, paſs'd over by the Blood, $x$; and the Time wherein the length $x$ is run, $z$. — The mean variable Velocity of the Blood contiguous to the Ventricle, or the mean Velocity of the Ventricle it ſelf will be $= \frac{sv}{S}$; the Motion of the Ventricle, $= p \times \frac{sv}{S}$; the Motion of the Blood iſſuing out, $= sv \times \overline{l + x}$; and their Sum, or the Force of the Ventricle, $= sv \times \frac{p}{S} + l + x$. But, $v = \frac{x}{z}$; whence, by the inverſe Method of Fluxions, the Force of the Ventricle is found $= \frac{sx}{z} \times \overline{\frac{p}{S} + \frac{x}{2}} + l$. But ſince $z = t$; $sx = q$. And hence, the Force of the Ventricle $= \frac{q}{t} \times \overline{\frac{p}{S}\frac{q}{2s} + l}$. After the like Manner the Force of the right Ventricle, (noting the ſame Things by *Greek* Letters, which in the left are denoted by *Italic* ones) is found $= \frac{q}{t} + \overline{\frac{\pi}{\Sigma} + \frac{q}{2\sigma}} + \lambda$. So that the whole Force of the *Heart* is $= \frac{q}{t} \times \frac{p}{S} + \frac{\pi}{\Sigma} + \frac{q}{2S} + \frac{q}{2\sigma} + l + \lambda$. *Q. E. F.*

If now we ſuppoſe $p = 8$ Ounces, and $\pi$ to 4 Ounces, avoird; $S = 10$ Square Inches, and $\Sigma =$ to as much; $l = 2$, and $\lambda = 1\frac{1}{2}$ Inches; $q = 2$ Ounces, avoird; $s = 0{,}4185$ Square Inches, $\sigma = 0{,}583$; and $t = 0\ 1''$: The Forces of the Ventricles will be equal to the Weights underwritten, *viz.*

| | *Lib. Oz.* |
|---|---|
| Of the left Ventricle, — — — — | 9 — 1 |
| Of the right Ventricle, — — — — | 6 — 3 |
| *Force of the whole* Heart, — — — | 15 — 4 |

Which Weights have a Velocity, wherewith they wou'd move an Inch each Second of a Minute.

*Cor.* Hence it is inferr'd, that when the Pulſe is quicker than ordinary, either the Reſiſtance is leſs than ordinary, or the Force of the *Heart* is increas'd, or a leſs Quantity of Blood than uſual is expell'd at each Contraction of the *Heart*; and *vice verſa*. — As alſo, that if the Reſiſtance be either increas'd or diminiſh'd; either the Pulſe, or the Quantity of Blood expell'd at each Contraction, will be either increas'd or diminiſh'd reſpectively. — And that if the Force of the *Heart* be increas'd or diminiſh'd, either the Pulſe muſt be accelerated, or the Reſiſtance diminiſh'd. See PULSE.

On theſe Principles, Dr. *Jurin* proceeds to demonſtrate the three following Theorems.

1°. That the whole Motion of Reſiſtance made to the Blood, iſſuing out of the *Heart* in the Syſtole, or the whole Motion communicated to the antecedent Blood and the Coats of the Arteries, is equal to the whole Force of the *Heart*, *quam proxime*.

2°. That the Motion communicated to the antecedent Blood in a Syſtole, is to the Motion communicated to the Coats of the Arteries, as the Time of the Syſtole is to the Time of Diaſtole. Whence if, with Dr. *Keill*, we ſuppoſe the Syſtole perform'd in one third of the Interval between two Pulſes, the Motion communicated to the antecedent Blood will be $\frac{1}{3}$ of the whole Motion of the *Heart*; and that communicated to the Arteries $\frac{2}{3}$.

3°. In different Animals, the Force of the *Heart* is in a Ratio compounded of the Quadruple Ratio of the Diameter of any homologous Veſſel, and the inverſe Ratio of the Time wherein the *Heart* is contracted; or a Ratio compounded of the Ratio of the Weight either of the *Heart*, or the whole Animal; the ſubtriplicate Ratio of the ſame Weight, and the reciprocal Ratio of the Time.

HEART-*Burn*, a Diſeaſe, among Phyſicians uſually call'd *Cardialgia*. See CARDIALGIA.

HEART, in the Manage. — A Horſe that works in the Manage, with Conſtraint and Irreſolution, and can't be brought to conſent to it, is ſaid to be a Horſe of *two Hearts*.

HEARTH, *Focus*. See FIRE, CHIMNEY, *&c.*

HEARTH-*Money*. See CHIMNEY-*Money*.

HEARTH-*Stones*. See FIRE-*Stone*.

HEAT, *Calor*, one of the primary Qualities of Bodies; oppoſed to *Cold*. See QUALITY and COLD.

Or, *Heat* may be defined a Phyſical Being, whoſe Preſence is known, and its Degree meaſured, by the Expanſion of the Air, or Spirit, in the Thermometer. See THERMOMETER.

*Heat* is properly a Senſation, excited in us by the Action of Fire: Or it is the Effect of Fire on our Organ of Feeling. See SENSATION and FIRE.

Hence it follows, that what we call *Heat*, is a particular Idea, or Modification of our own Mind; and not any Thing exiſting in that Form in the Body that occaſions it. — *Heat* is no more in the Fire that burns the Finger, than Pain in the Needle that pricks it. — In Effect, *Heat*, in the Body that gives it, is only Motion; in the Mind, only a particular Idea, or Diſpoſition of the Soul. See IDEA.

*Heat*,

*Heat*, with Reſpect to our Senſation, or the Effect produced on us by a *hot* Body, is eſtimated by its Relation to the Organ of Feeling; no Object appearing to be *hot*, unleſs its *Heat* exceed that of our Body: Whence, the ſame Thing to different Perſons, or at different Times to the ſame Perſon, ſhall appear both *Hot* and *Cold*.

*Heat*, as it exiſts in the hot Body; or that which conſtitutes and denominates a Body *hot*, and enables it to produce ſuch Effects on our Organ; is variouſly conſider'd by the Philoſophers. — Some will have it a Quality, others a Subſtance, and others only a Mechanical Affection, *viz.* Motion.

*Ariſtotle*, and the *Peripateticks*, define *Heat* a Quality, or Accident, whereby homogeneous Things, *i. e.* Things of the ſame Nature and Kind, are collected or gather'd together; and heterogeneous ones, or Things of different Nature, ſever'd or diſ-united. — Thus, ſays he, the ſame *Heat* which aſſociates and brings into a Maſs ſeveral Particles of Gold before ſeparate, ſeparates the Particles of two Metals before mix'd together.

But, not only the Doctrine, but the very Inſtance he produces, is faulty: For *Heat*, tho' continued to Eternity, will never ſeparate a Maſs, *e. gr.* of Gold, Silver, and Copper: And, on the contrary, if ſeveral Quantities of Gold, Silver, and Copper, be put ſeparately in a Veſſel over a Fire; notwithſtanding all their Heterogeneity, they will be mix'd and congregated into a Maſs thereby.

In Effect, *Heat* cannot be ſaid to do either this Thing or that univerſally; but all its Effects depend on the Circumſtances of Application. — Thus, to do the ſame Thing in different Bodies, different Degrees of *Heat* are required; as, to mix Gold and Silver, the *Heat* muſt be in a moderate Degree, but to mix Mercury and Sulphur in the higheſt. See GOLD, SILVER, *&c.*

Add, that the ſame Degree of *Heat* ſhall have oppoſite Effects: — Thus a vehement Fire ſhall render Water, Oils, Salts, *&c.* volatile; and yet the ſame imbody Sand and a fix'd alcaline Salt, into Glaſs. See GLASS.

The *Epicureans*, and other *Corpuſcularеans*, define *Heat* not as an Accident of Fire, but as an eſſential Power or Property thereof, the ſame, in Reality, with it, and only diſtinguiſh'd therefrom in the Manner of our Conception.

*Heat*, then, on their Principles, is no other than the volatile Subſtance of Fire it ſelf, reduced into Atoms, and emitted in a continual Stream from ignited Bodies; ſo as not only to *warm* the Object within its reach, but alſo, if they be inflammable, to *kindle* them, turn them into *Fire*, and conſpire with them to make *Flame*.

In Effect, theſe Corpuſcles, ſay they, flying off from the ignited Body, while yet contain'd within the Sphere of its Flame, by their Motion conſtitute Fire; but when fled, or got beyond the ſame, and diſperſed every Way, ſo as to eſcape the Apprehenſion of the Eye, and only to be perceivable by the feeling, they take the Denomination of *Heat*; inaſmuch as they ſtill excite in us that Senſation.

The *Carteſians*, improving on this Doctrine, aſſert *Heat* to conſiſt in a certain Motion of the inſenſible Particles of a Body, reſembling the Motion whereby the ſeveral Parts of our Body are agitated by the Motion of the Heart and Blood. See HEART and BLOOD.

Our lateſt, and beſt Writers of Mechanical, Experimental, and Chymical Philoſophy, differ very conſiderably about *Heat*. — The fundamental Difference is, whether it be a peculiar Property of one certain immutable Body call'd *Fire*: Or whether it may be produced mechanically in other Bodies, by inducing an Alteration in the Particles thereof.

The former, which is as antient as *Democritus*, and the Syſtem of Atoms; had given Way to that of the *Carteſians* and other Mechaniſts; but is now with great Addreſs retriev'd and improved on by ſome of the lateſt Writers, particularly *Homberg*, the younger *Lemery*, *Graveſande*, and above all, the learned and induſtrious *Boerhaave*, in a Courſe of Lectures expreſly on *Fire*; the Reſult whereof we have already laid down under the Article FIRE.

The Thing we call *Fire*, according to this Author, is a Body, *Sui generis*, created ſuch *ab Origine*, unalterable in its Nature and Properties, and not either producible *de Novo*, from any other Body, nor capable of being reduced into any other Body, or of ceaſing to be Fire.

This Fire, he contends, is diffuſed equably every where, and exiſts alike, or in equal Quantity, in all the Parts of Space, whether void, or poſſeſs'd by Bodies; but that naturally, and in it ſelf, is perfectly latent and imperceptible; and is only diſcover'd by certain *Effects* which it produces, and which are cognizable by our Senſes.

Theſe Effects are *Heat*, Light, Colour, Rarefaction and Burning; which are all Indications of Fire, as being none of them producible by any other Cauſe: So that wherever we obſerve any of theſe, we may ſafely infer the Action and Preſence of Fire.

But, tho' the Effect cannot be without the Cauſe, yet the Fire may remain without any of theſe Effects; any, we mean, groſs enough to affect our Senſes, or become Objects thereof: And this, he adds, is the ordinary Caſe; there being a Concurrence of other Circumſtances, which are often wanting, neceſſary to the Production of ſuch ſenſible Effects.

Hence, particularly, it is, that we ſometimes find ſeveral, and ſometimes all of theſe Effects of Fire together, and ſometimes one unaccompanied with any others; according as the Circumſtances favour or diſpoſe for the ſame. — Thus we find Light without *Heat*; as in rotten Wood, putrid Fiſhes, or the mercurial Phoſphorus: Nay, and one of them may be in the higheſt Degree, and the other not ſenſible; as in the Focus of a large burning Glaſs expoſed to the Moon, where, tho' the Light, as Dr. *Hook* found, was ſufficient to have inſtantly blinded the beſt Eye, yet no *Heat* was perceivable, nor was there the leaſt Rarefaction occaſion'd in an exquiſite Thermometer. See LIGHT.

On the other Hand, there may be *Heat* without Light, as we find in ſolid Phoſphorus; in Fluids, which emit no Light, even when they boil, and not only *heat* and rarify, but alſo burn or conſume the Parts; and in Metals, Stones, *&c.* which conceive a vehement *Heat* ere they ſhine, or become ignited. — Nay, and there may be the moſt intenſe *Heat* in Nature without any Light: Thus in the Focus of a large burning concave, where Metals melt, and the hardeſt Gems vitrify, the Eye perceives no Light; ſo that ſhould the Hand happen to be put there, it would be inſtantly turn'd into a Coal, or even a Calx.

So alſo Rarefractions are frequently obſerved by the Thermometer, in the Night Time, without either *Heat* or Light, *&c.*

Thus it appears, that the Effects of Fire have a Dependance on other concurrring Circumſtances; ſome more, and others leſs. — One Thing ſeems to be required in common to them all, *viz.* that the Fire be *collected* or brought into leſs Compaſs: Without this, as Fire is every where equably diffuſed, it could have no more Effect in one Place than another, but muſt either be diſpoſed to warm, burn, and ſhine every where, or no where. Indeed ſuch every where does amount to no where; for to have the ſame *Heat*, &c. in every Place, would be to have no *Heat*: 'Tis only the Changes that we perceive; thoſe alone make the Mind diſtinguiſh in its State, and become conſcious of the Things that diverſify it. So our Bodies being equally preſs'd on all Sides by the ambient Air, we feel no Preſſure at all; but if the Preſſure be only taken off in any one Part, as by laying the Hand over an exhauſted Receiver, we ſoon grow ſenſible of the Load.

This Collection is perform'd two Ways: The firſt, by *directing* and *determining* the fluctuating Corpuſcles of Fire into Lines, or Trains, call'd *Rays*; and thus driving infinite Succeſſions of the fiery Atoms, upon the ſame Place or Body, each to produce its ſeveral Effort, and ſecond that of the preceding ones, till by a Series of Augmentations, the Effect is ſenſible. — This is the Office of thoſe Bodies which we call *Luminaries*; ſuch as the Sun, and other heavenly Bodies; and Culinary Fires, Lamps, *&c.* on Earth, which do not emit the Fire from their own Subſtance, as is commonly conceiv'd, but only by their rotatory Motation direct the undetermined Corpuſcles into parallel Rays. And the Effect may be ſtill further intended by a ſecond Collection of theſe parallel, into converging Rays, by Means of a Concave Speculum, or a Convex Glaſs, which at length bring them all into a Point; whence thoſe aſtoniſhing Effects of our large burning Glaſſes, *&c.* See RAY, PARALLEL, CONVEX, BURNING *Glaſs*, &c.

The ſecond Way wherein the Collection is made, is not by determining the vague Fire, or giving it any new Direction; but merely by aſſembling it; which is done by the *Attrition*, or rubbing of two Bodies ſwiftly againſt each other; ſo ſwiftly, in Effect, as that nothing in the Air, except the floating Fire, has Activity enough to move an equal Pace, or ſucceed faſt enough into the Places continually relinquiſh'd by it: By which Means Fire, the moſt agile Body in Nature, ſlipping in, becomes collected in the Path of the moving Body; ſo that the moveable has, as it were, a fiery Atmoſphere around it. — Thus it is the Axes of Chariot Wheels, Mill-ſtones, the Ropes of Ships, Cannon-Balls, *&c.* conceive *Heat*, and frequently kindle into Flame.

Thus much for the Circumſtance in *Heat*, common to all the Effects of Fire, *viz.* Collection. — The particular Circumſtances are various: Thus, for it to warm, or to *heat*, i. e. give the Senſation of it, 'tis neceſſary that there be more Fire in the *hot* Body, or Thing, than in the Organ whereby it is to be felt; otherwiſe the Mind will not be put into any new State upon its Approach, nor have any new Idea. — Whence, alſo, if the contrary to this obtains, *v. gr.* if there be leſs Fire in the external

Object

Object than in the Organ, it will raiſe an Idea of Cold, or Chilline ſs.

Thus it is that a Man coming out of a hot Bath, into a moderately warm Air, ſeems as if he were got into an exceſſively cold Place; and another entering a Room ſcarcely warm, in a very pinching Day, will at firſt fancy himſelf in a Stove. — Whence it appears, that the Senſe of *Heat* does by no Means determine the Degree of Fire; the *Heat* being only the Ratio, or Difference, between the internal and external Fire.

As to the Circumſtances neceſſary to the Fires producing Light, Burning, Rarefaction, *&c.* See LIGHT, BURNING, *&c.*

The mechanical Philoſophers, particularly my Lord *Bacon*, Mr. *Boyle*, and Sir *Iſaac Newton*, look on *Heat* in another Light. — They do not conceive it as an original inherent Property of any particular Sort of Body; but mechanically producible in any Body.

My Lord *Bacon*, in an expreſs Treatiſe *de Forma Calidi*, deduces, from a particular Enumeration of the ſeveral Phænomena and Effects of *Heat*:

1°. That *Heat* is Motion: Not, that Motion generates *Heat*, or *Heat* Motion; tho' in many Caſes, this be true: But, that the very Thing *Heat* is very Motion, and nothing elſe. — But this Motion, he ſhews, has ſeveral peculiar Circumſtances which conſtitute it *Heat*.

As, 2°. That it is an expanſive Motion, whereby a Body endeavours to dilate or ſtretch into a larger Dimenſion than it had before.

3°. That this expanſive Motion is directed towards the Circumference, and at the ſame Time upwards; which appears hence, that an Iron Rod being erected in the Fire, will burn the Hand that holds it, much ſooner than if put in laterally.

4°. That this expanſive Motion is not equable, and of the whole, but only of the ſmaller Particles of the Body; as appears from the alternate Trepidation of the Particles of hot Liquors, ignited Iron, *&c.* — Laſtly, that this Motion is very rapid.

Hence, he defines *Heat* an expanſive, undulatory Motion, in the minute Particles of the Body; whereby they tend, with ſome Rapidity, towards the Circumference, and at the ſame Time incline a little upwards.

Hence, again, he adds, that if in any natural Body, you can excite a Motion whereby it ſhall expand or dilate it ſelf; and can ſo repreſs and direct this Motion upon it ſelf, as that the Dilatation ſhall not proceed uniformly, but obtain in ſome Parts, and be check'd in others, you will generate *Heat*.

This Doctrine, *Des Cartes* and his Sect adhere to with ſome little Variation. — According to them, *Heat* conſiſts in a certain Motion, or Agitation of the Parts of a Body, like to that wherewith the ſeveral Parts of our Body are agitated by the Motion of the Heart and Blood. See CALIDUM.

Mr. *Boyle*, in a Treatiſe of the *Mechanical Origin of Heat and Cold*, ſtrenuouſly ſupports the Doctrine of the Producibility of *Heat*, with new Obſervations and Experiments: As a Specimen, we ſhall here give one or two.

In the Production, ſays he, of *Heat*, there appears nothing, on the Part either of the Agent or Patient, but Motion and its natural Effects. — When a Smith briſkly hammers a ſmall Piece of Iron, the Metal thereby becomes exceedingly hot; yet there is nothing to make it ſo, except the forcible Motion of the Hammer, impreſſing a vehement and variouſly determined Agitation on the ſmall Parts of the Iron, which being a cold Body before, grows, by that ſuper-induced Commotion of its ſmall Parts, hot: Firſt, in a more looſe Acceptation of the Word, with Regard to ſome other Bodies, compared with which it was Cold before: And then ſenſibly *Hot*, becauſe this Agitation ſurpaſſes that of the Parts of our Fingers; and in this Inſtance, oftentimes, the Hammer and the Anvil continue cold, after the Operations; which ſhews that the *Heat*, acquir'd by the Iron, was not communicated by either of thoſe Implements as *Heat*, but produced in it by Motion great enough ſtrongly to agitate the Parts of ſo ſmall a Body as the Piece of Iron, without being able to have the like Effect upon ſo much greater Maſſes of Metal, as the Hammer and the Anvil. Tho', if the Percuſſions were often, and briſkly renew'd, and the Hammer were ſmall; this alſo might be *heated*. — Whence it is not neceſſary that a Body it ſelf ſhould be hot to give *Heat*.

If a large Nail be driven by a Hammer into a Plank of Wood, it will receive ſeveral Strokes on its Head, ere it grow hot; but when it is once driven to the Head, a few Strokes ſuffice to give it a conſiderable *Heat*: For while, at every Blow of the Hammer, the Nail enters farther into the Wood, the Motion produced is chiefly progreſſive, and is of the whole Nail tending one Way; but when the Motion ceaſes, the Impulſe given by the Stroke, being unable to drive the Nail further on, or break it, muſt be ſpent in making a various, vehement, and inteſtine Commotion of the Parts among themſelves, wherein the Nature of *Heat* conſiſts. *Mech. Product. of Heat and Cold.*

That *Heat*, ſays the ſame Author, is mechanically producible, appears probable from a Conſideration of its Nature, which ſeems principally to conſiſt in that mechanical Property of Matter called Motion; but which is here ſubject to three Conditions or Modifications.

Firſt, the Agitation of the Parts of the Body muſt be vehement. — For this diſtinguiſhes the Bodies ſaid to be *hot*, from thoſe which are barely fluid. — Thus, the Particles of Water, in its natural State, move ſo calmly, that we do not feel it at all warm, tho' it could not be a Liquor, unleſs they were in a reſtleſs Motion; but when Water becomes actually *hot*, the Motion manifeſtly and proportionably appears vehement, ſince it does not only ſtrike our Organs of Feeling briſkly, but ordinarily produce numerous very ſmall Bubbles, melts coagulated Oil caſt upon it, and affords Vapours, which by their Agitation aſcend into the Air. — And if the Degree of *Heat* be ſuch as to make the Water boil, the Agitation becomes more manifeſt by the confuſed Motions, Waves, Noiſe, Bubbles, and other obvious Effects, excited therein. Thus, in a heated Iron, the vehement Agitation of its Parts may be eaſily inferred from the Motion, and the hiſſing Noiſe it makes with the Drops of Water that fall upon it. — But tho' the Agitation be various, as well as vehement, yet there is a third Condition required to make a Body *hot*; which is, that the agitated Particles, or at leaſt the greateſt Number of them, be ſo minute, as to be ſingly inſenſible. — Were an Heap of Sand to be vehemently agitated by a Whirl-wind, the Bulk of the Corpuſcles would keep their Agitation from being properly *Heat*, tho' by their numerous Strokes upon a Man's Face, and the briſk Commotion of the Spirits, which may thence enſue, they may perhaps produce that Quality.

The ſecond Condition is, that the Determination be very various, and tend all manner of Ways. — This Variety of Determinations appears to be in *hot* Bodies, both by ſome of the Inſtances already mentioned, and eſpecially that of Flame, which is a Body; by the Dilatations of Metals when melted; and by the Operations of *Heat*, exerciſed by *hot* Bodies upon others, in what Poſture or Situation ſoever the Body to be *heated* thereby, be applied to them: Thus a Coal, throughly kindled, will appear on all Sides red, and melt Wax, and kindle Brimſtone, whether the Body be applied to the upper, the lower, or any other Part of it. — Hence, if we duly attend to this Notion of the Nature of *Heat*, 'tis eaſy to diſcern how it may be mechanically produced ſeveral Ways; for, except in ſome few anomalous Caſes, by whatever Means the inſenſible Parts of a Body can be put into a very confuſed and vehement Agitation, *Heat* will be introduced into that Body: And as there are ſeveral Agents and Operations, by which the *heating* Motion may be excited; ſo there muſt be ſeveral mechanical Ways of producing *Heat*: Various Experiments may be reduced to almoſt each of theſe Heads; Chance it ſelf having, in the Laboratories of Chymiſts, afforded ſeveral Phænomena referable thereto. Boyle, *Ubi ſupra.*

This Syſtem is further ſupported by Sir *Iſaac Newton*, who does not conceive *Fire*, as any particular Species of Body, originally endued with ſuch and ſuch Properties. — *Fire*, according to him, is only a Body much ignited, *i. e.* heated hot ſo as to emit Light copiouſly; what elſe, ſays he, is red hot Iron than Fire? and what elſe is a burning Coal than red hot Wood? or Flame it ſelf than red hot Smoak? 'Tis certain, that Flame is only the volatile Part of the Fuel *heated* red hot, *i. e.* ſo hot as to ſhine; and hence only ſuch Bodies as are volatile, *i. e.* ſuch as emit a copious Fume will flame; nor will they flame longer than they have Fume to burn. — In diſtilling hot Spirits, if the Head of the Still be taken off, the aſcending Vapours will catch Fire from a Candle, and turn into Flame. So ſeveral Bodies, much heated by Motion, Attrition, Fermentation, or the like, will emit lucid Fumes; which, if they be copious enough, and the *Heat* ſufficiently great, will be Flame; and the Reaſon why fuſed Metals do not flame, is the Smallneſs of their Fume; for, that Spelter, which fumes more copiouſly, does likewiſe flame. — Add, that all flaming Bodies, as Oil, Tallow, Wax, Wood, Pitch, Sulphur, *&c.* by flaming waſte, and vaniſh into burning Smoak. *Opticks.*

And do not all fixed Bodies, when *heated* beyond a certain Degree, emit Light and ſhine? And is not this Emiſſion perform'd by the vibrating Motion of their Parts? And do not all Bodies, which abound with terreſtrial and ſulphureous Parts, emit Light as often as thoſe Parts are ſufficiently agitated; whether that Agitation be made by external Fire, or by Friction, or Percuſſion, or Putrefaction,

or any other Cauſe? — Thus, Sea-Water, in a Storm; Quickſilver agitated in *Vacuo*; the Back of a Cat, or the Neck of a Horſe, obliquely rubb'd in a dark Place, Wood, Fleſh and Fiſh, while they putrifie, Vapours from putrifying Waters, uſually call'd *Ignes fatui*; Stacks of moiſt Hay or Corn, Glow-Worms, Amber and Diamonds, by rubbing; Scrapings of Steel, ſtruck off with a Flint, *&c.* emit Light. *Id. Ibid.*

Are not groſs Bodies and Light convertible into one another? And may not Bodies receive much of their Activity from the Particles of Light, which enter their Compoſition? I know no Body leſs apt to ſhine than Water; and yet Water, by frequent Diſtillations, changes into fix'd Earth; which, by a ſufficient *Heat*, may be brought to ſhine like other Bodies. *Id. Ibid.*

Add, that the Sun and Stars, according to Sir *Iſaac Newton*'s Conjecture, are no other than great Earths vehemently heated: For large Bodies, he obſerves, preſerve their *Heat* the longeſt, their Parts *heating* one another; and why may not great, denſe, and fixed Bodies, when *heated* beyond a certain Degree, emit Light ſo copiouſly, as by the Emiſſion and Re-action thereof, and the Reflections and Refractions of the Rays within the Pores, grow ſtill hotter, till they arrive at ſuch a Period of *Heat* as is that of the Sun? Their Parts may be further preſerved from fuming away, not only by their Fixity, but by the vaſt Weight and Denſity of their Atmoſpheres incumbent on them, and ſtrongly compreſſing them, and condenſing the Vapours and Exhalations ariſing from them. Thus, we ſee, warm Water, in an exhauſted Receiver, ſhall boil as vehemently as the hotteſt Water open to the Air; the Weight of the incumbent Atmoſphere, in this latter Caſe, keeping down the Vapours, and hindering the Ebullition, till it has conceiv'd its utmoſt Degree of *Heat*. So, alſo, a Mixture of Tin and Lead, put on a red-hot Iron in *Vacuo*, emits a Fume and Flame: But the ſame Mixture, in the open Air, by Reaſon of the incumbent Atmoſphere, does not emit the leaſt ſenſible Flame. — Thus much for the *Syſtem of the Producibility of Heat*.

On the other Hand, M. *Homberg*, in his *Eſſai du Souffre Principe*, holds, that the Chymical Principle, or Element, Sulphur, which is ſuppoſed one of the ſimple, primary, pre-exiſtent Ingredients of all natural Bodies, is real Fire; and conſequently that Fire is co-eval with Body. *Mem. de l'Acad.* An. 1705. See SULPHUR.

Dr. *S' Graveſande* goes on much the ſame Principle: Fire, according to him, enters the Compoſition of all Bodies, is contained in all Bodies, and may be ſeparated or procured from all Bodies, by rubbing them againſt each other, and thus putting their Fire in Motion. But Fire, he adds, is by no Means generated by ſuch Motion. *Elem. Phyſ.* T. II. *C.* 1.

A Body is only ſenſibly *hot*, when the Degree of its *Heat* exceeds that of our Organs of Senſe; ſo that there may be a lucid Body, without any ſenſible *Heat*; and conſequently, as *Heat* is only a ſenſible Quantity, without any *Heat* at all.

*Heat*, in the hot Body, ſays the ſame Author, is an Agitation of the Parts of the Body, made by Means of the Fire contained in it; by ſuch Agitation a Motion is produced in our Bodies, which excites the Idea of *Heat* in our Minds: So that *Heat*, in Reſpect of us, is nothing but that Idea, and in the hot Body nothing but Motion. — If ſuch Motion expel the Fire, in right Lines, it may give us the Idea of Light; if in a various and irregular Motion, only *Heat*.

M. *Lemery* the younger, agrees with theſe two Authors in aſſerting this abſolute, and ingenerable Nature of Fire; but he extends it further. — Not contented to confine it as an Element to Bodies, he endeavours to ſhew that it is equably diffuſed thro' all Space, is preſent in all Places, in the void Spaces between Bodies, as well as in the inſenſible Interſtices between their Parts. *Mem. de l'Acad.* An. 1713. See ÆTHER.

This laſt Sentiment falls in with that of *Boerhaave* above deliver'd: — It ſeems extravagant to talk of *heating* Cold Liquors with Ice; yet Mr. *Boyle* aſſures us, he has eaſily done it, by taking out of a Baſon of cold Water, wherein ſeveral Fragments of Ice were ſwimming, one Piece or two which he perceived very well drenched with the Liquor, and ſuddenly immerſing them into a wide mouthed Glaſs, of ſtrong Oil of Vitriol: For the Menſtruum preſently mixing with the Water, which adhered to the Ice, produced in it a briſk *Heat*, ſometimes with a manifeſt Smoke, and that ſuddenly diſſolving the contiguous Parts of the Ice, and thoſe the next, the whole Ice was ſoon reduced to Water; and the corroſive Menſtruum being, by two or three Shakes, well diſperſed thro' it, the whole Mixture would immediately grow ſo hot, that ſometimes the containing Vial could not be endured in ones Hand. Boyle, *Ubi ſupra.*

There is a great Variety in the *Heat* of different Places, and Seaſons. — Naturaliſts commonly lay it down, that the nearer the Centre of the *Earth*, the hotter it is found; but this does not hold ſtrictly true. — In digging Mines, Wells, *&c.* they find that at a little Depth below the Surface, it feels cool; a little lower, and it is yet colder, as being now beyond any Reach, or Influence, of the Sun's Rays, inſomuch that Water will freeze almoſt inſtantaneouſly; and hence the Uſe of Ice-Houſes, *&c.* but when a little lower, *viz.* about 40 or 50 Foot deep, it begins to grow warmer, ſo that no Ice can bear it; and then the deeper they go, ſtill the greater the *Heat*: Till, at length, Reſpiration grows difficult, and the Candles go out.

Hence, ſome have Recourſe to the Notion of a Fund of Fire lodg'd in the Centre of the Earth; which they conſider as a central Sun, and the great Principle of the Generation, Vegetation, Nutrition, *&c.* of foſſil and vegetable Bodies. See *Central* FIRE. See alſo EARTH, EARTHQUAKE, *&c.*

But Mr. *Boyle*, who had been at the Bottom of ſome Mines himſelf, ſuſpects that this Degree of *Heat*, at leaſt in ſome of them, may ariſe from the peculiar Nature of the Minerals generated therein. To confirm this, he inſtances in a Kind of Mineral, of a Vitriolic Kind, dug up in large Quantities, in ſeveral Parts of *England*, which by the bare Effuſion of common Water will grow ſo hot, as almoſt to take Fire.

On the other Hand, as you aſcend high Mountains, the Air grows more and more piercing and Cold: Thus the Tops of the *Pico de Theide* in *Bohemia*, the Pike of *Tenariff*, and ſeveral others, even in the moſt ſultry Countries, are found eternally inveſted with Snow and Ice; the *Heat* never being ſufficient to thaw the ſame.

In ſome of the Mountains of *Peru* there is no ſuch Thing as running Water, but all Ice: Plants make a Shift to grow about the Feet of the Mountains, but near the Top no Vegetable can live, not for Want of Food, but thro' the Intenſeneſs of the Cold. — This Effect is attributed to the Thinneſs of the Air, and the little Surface of Earth there is to reflect the Rays. The Rays are here only determined into a Parallelliſm; but the Effect of direct parallel Rays is found, by Computation, to be very inconſiderable; this Effect being really greater in Winter than Summer.

HEAT, in Geography. — The Diverſity of the *Heat* of Climes and Seaſons, ariſes from the different Angles, under which the Sun's Rays ſtrike upon the Earth's Surface. See CLIMATE, ANGLE, *&c.*

It is ſhewn in Mechanicks, that a moving Body, ſtriking perpendicularly on another, acts on it with all its Force; and that a Body ſtriking obliquely, acts with the leſs Force, the more it deviates from the perpendicular. — Now, Fire, moving in right Lines, muſt obſerve the ſame Mechanical Law as other Bodies; and conſequently its Action muſt be meaſured by the Sine of the Angle of Incidence: And hence Fire, ſtriking on any Obſtacle in a Direction parallel thereto, has no ſenſible Effect, by Reaſon the Ratio is almoſt infinite, *i. e.* nothing. Accordingly, the Sun, radiating on the Earth in the Morning, ſcarce produces any warmth at all. See PERCUSSION and COMPOUND *Motion*.

Hence, Dr. *Halley* gives a mathematical Computation of the Effect of the Sun, under different Seaſons and Climates; going on this Principle, that the ſimple Action of the Sun, as all other Impulſes or Strokes, is more or leſs forcible, according to the Sines of the Angles of Incidence, or to the perpendicular let fall on the Plane: Whence, the vertical Ray (which is of the greateſt *Heat*) being put for Radius, the Force of the Sun on the Horizontal Surface of the Earth will be to that, as the Sine of the Sun's Altitude at any other Time.

Hence it follows, that the Time of the Continuance of the Sun's ſhining, being taken for a Baſis, and the Sines of the Sun's Altitudes erected thereon as Perpendiculars; and a Curve drawn through the Extremities of thoſe Perpendiculars: The Area comprehended will be proportionate to the Collection of the *Heat* of all the Sun Beams in that Space of Time.

Hence it will follow likewiſe, that under the Pole the Collection of all the *Heat* of a tropical Day is proportionate to a Rectangle of the Sine of 23 Degrees and an half, into 24 Hours; or the Circumference of a Circle; that is, the Sine of 23 Degrees and an half, being nearly $\frac{4}{10}$ of Radius, as $\frac{8}{10}$ into 12 Hours; or, the Polar *Heat* is equal to that of the Sun continuing 12 Hours above the Horizon at 53 Degrees height; than which the Sun is not 5 Hours more elevated under the Equinoctial.

But whereas the Nature of *Heat* is to remain in the Subject, after the Luminary that occaſion'd its being *heated* is removed, and particularly in the Air; under the Equinoctial the 12 Hours Abſence of the Sun does but little dimi-

diminiſh the Motion impreſs'd by the paſt Action of his Rays wherein *Heat* conſiſts, before he riſes again; but under the Pole, the long Abſence of the Sun for ſix Months, wherein the Extremity of Cold does obtain, hath ſo chill'd the Air, that it is, as it were, frozen, and cannot, before the Sun has got far towards it, be any Ways ſenſible of his Preſence, his Beams being obſtructed by thick Clouds, and perpetual Fogs and Miſts.

Add, that the differing Degrees of *Heat* and Cold in different Places, depend, in great Meaſure, upon the Accidents of Situation, with Regard to Mountains or Valleys, and the Soil. — The firſt greatly help to chill the Air by the Winds, which come over them, and which blow in Eddies through the Levels beyond. See WIND.

Mountains, ſometimes, turning a Concave Side towards the Sun, have the Effect of a burning Mirror on the Subject plain; and the like Effect is ſometimes had from the Concave or Convex Parts of Clouds, either by Refraction or Reflection. And ſome even take theſe to be ſufficient to kindle the Exhalations lodg'd in the Air, and produce Thunder, Lightning, *&c.* See MOUNTAIN, MIRROR, *&c.*

As to Soils: A ſtony, ſandy, or chalky Earth, 'tis known, reflects moſt of the Rays into the Air again, and retains but few; by which Means a conſiderable Acceſſion of *Heat* is derived to the Air; as, on the contrary, black ones abſorb moſt of the Rays, and return few into the Air, ſo that the Ground is ſo much the hotter. See BLACKNESS, WHITENESS, *&c.*

This the Peaſants, who inhabit the Moraſs *de Veenen*, where Turf is dug, are very ſenſible of; walking there but a little while, the Feet grow extremely hot, but the Face not at all: On the contrary, in a ſandy Place, the Feet are ſcarce warm when the Face is ſcorch'd by the great Reflection.

The following Table gives every tenth Degree of Latitude to the Equinoctial and Tropical Sun, by which an eſtimate may be made of the intermediate Degrees.

| Lat. | Sun in ♈. ♎. | Sun in ♋ | Sun in ♑ |
|---|---|---|---|
| 0 | 20000 | 18341 | 18341 |
| 11 | 19696 | 20290 | 15834 |
| 20 | 18797 | 21737 | 13166 |
| 30 | 17321 | 22651 | 10124 |
| 40 | 15321 | 23048 | 6944 |
| 50 | 12855 | 22991 | 3798 |
| 60 | 10000 | 22773 | 1075 |
| 70 | 6840 | 23543 | 000 |
| 80 | 3473 | 24673 | 000 |
| 90 | 0000 | 25055 | 000 |

Whence are deducible the following Corollaries:

1°. That the Equinoctial *Heat*, when the Sun becomes vertical, is as twice the Square of the Radius: Which may be propoſed as a Standard to be compared with, in all other Caſes.

2°. That under the Equinoctial, the *Heat* is as the Sine of the Sun's Declination.

3°. That in the frigid Zones, when the Sun ſets not, the *Heat* is as the Circumference of a Circle into the Sine of the Altitude at 6. And, conſequently, that in the ſame Latitude, theſe Aggregates of Warmth, are as the Sines of the Sun's Declination; and at the ſame Declination of the Sun, they are as the Sines of the Latitudes into the Sines of the Declination.

4°. That the Equinoctial Days *Heat*, is every where as the Coſine of the Latitude.

5°. In all Places where the Sun ſets, the Difference between the Summer and Winter *Heats*, when the Declinations are contrary, is equal to a Circle into the Sine of the Altitude at 6, in the Summer parallel; and conſequently thoſe Differences are as the Sines of Latitude into, or multiplied by, the Sines of Declination.

6°. From the foregoing Table it appears, that the Tropical Sun, under the Equinoctial, has of all others the leaſt Force: Under the Pole it is greater than any other Days *Heat* whatever, being to that of the Equinoctial as 5 to 4.

From the Table, and theſe Corollaries, a general Idea may be conceived of the Sum of all the Actions of the Sun in the whole Year, and thus that Part of *Heat*, which ariſeth ſimply from the Preſence of the Sun, may be brought to a Geometrical Certainty. — The *Heat* of the Sun, for any ſmall Portion of Time, is always as a Rectangle, contain'd under the Sine of the Angle of Incidence of the Ray, producing *Heat* at that Time.

HEAT, is uſually divided, by the School Philoſophers, into *Actual* and *Potential*.

*Actual* HEAT, is that which we have been hitherto ſpeaking of, and which is an Effect of real, elementary Fire.

*Potential* HEAT, is that which we find in Pepper, Wine, and certain chymical Preparations, as Oil of Turpentine, Brandy, Quick-lime, *&c.* See POTENTIAL.

The *Peripateticks* account for the *Heat* of Quick-lime from an Antiperiſtaſis. See ANTIPERISTASIS.

The *Epicureans*, and other *Corpuſcularеans*, attribute even *potential Heat*, to Atoms or Particles of Fire detain'd and lock'd up in the Bores of thoſe Bodies, and remaining at reſt therein; which being excited to Action again by the *Heat* and Moiſture of the Mouth, or by the Effuſion of cold Water, or the like Cauſe, break their Incloſures, and diſcover what they are.

This Doctrine is well illuſtrated by M. *Lemery* the younger, in the Inſtances of Quick-lime, Regulus of Antimony, Tin, *&c.* in the Calcination whereof he obſerves, 1°, That the Fire, which they imbibe in the Operation, makes a ſenſible Addition to the Weight of the Body, amounting ſometimes to one tenth of the whole; and, that during this Impriſonment, it ſtill retains all the particular Properties or Characters of Fire; as appears hence, that when once ſet at Liberty again, it has all the Effects of other Fire.

Thus, a ſtony, or ſaline Body being calcined, and Water poured thereon, that Fluid is found ſufficient, by its external Impreſſion, to break up the Cells, and let the Fire out; and upon this the Water is rendred more or leſs warm, according to the Fire lodged therein. — Hence, alſo, it is, that ſome of theſe Bodies viſibly contain a deal of actual Fire; and the ſlighteſt Occaſion is capable of diſengaging it: Upon applying them to the Skin, they burn and raiſe an Eſchar, not unlike the Top of a live Coal.

To this it is objected, that the Particles of Fire are only ſuch in Virtue of the rapid Motion, wherewith they are agitated; ſo that to ſuppoſe them fixed in the Pores of a Body, is to diveſt them at once of that, which conſtituted them Fire; and, conſequently, to diſqualify them for producing the Effects aſcribed to them. — To which M. *Lemery* anſwers, that tho' the rapid Motion of Fire do contribute very greatly to its Effects, yet the particular Figure of its Particles is to be conſider'd withal. And tho' Fire ſhould be detained, and fixed in the Subſtance of Bodies, yet why ſhould it fare worſe than other Fluids in the ſame Circumſtances? Water, for Inſtance, is a Fluid, whoſe Fluidity depends, as already obſerved, on Fire, and conſequently is leſs fluid than Fire; and yet every Day, Water incloſed in Bodies of all Sorts, without loſing its Fluidity, or any of the Properties that characterize it.

Add, that when Water is froze, the Motion of its Parts is, doubtleſs, diſcontinued; and yet the Figure of the Particles remaining the ſame, it is ready to commence a Fluid, as before, upon the leaſt warmth. See WATER.

Laſtly, tho' Salt be allowed to be the Matter of Taſtes, and that it has certain Properties, ariſing chiefly from the Figure of its Parts; yet it only acts when diſſolved; or, which amounts to the ſame, when it ſwims in a Fluid proper to keep its Parts in Motion: Yet it is not leſs Salt, or leſs the Matter of Taſte, when not in a State of Diſſolution: To diſpoil it of that Quality, the Figure of its Parts muſt be alter'd. See SALT.

As to what may be further objected of the Impoſſibility of fixing ſo fine, ſubtle, penetrative, and active a Matter as Fire, within the ſpongeous Subſtance of a groſs, porous Body; it will be of no great Weight, unleſs it can be proved, that the Pores of the Cells are bigger than the ſame. — If it be inſiſted, again, that a Body which could find its Way into a ſolid Body, might get out again the ſame Way; and that as it only penetrated the Body, by Reaſon its own Corpuſcles were ſmaller than the Pores, the ſame Conſideration muſt let it out again: It is anſwer'd, that the Pores are not now in the ſame Condition as before; the Fire, in calcining, open'd and dilated the Pores; which, upon the Fire's ceaſing, muſt cloſe and contract again. *Mem. de l'Acad.* An. 1713.

Mr. *Boyle* endeavours to ſet aſide this Account, and ſubſtitute a mechanical Property, *viz.* a peculiar Texture of Parts, in lieu of Fire. — Tho' a great Likeneſs might be expected between the Particles of Fire adhering to the Quick-lime, and thoſe of highly rectified Spirit of Wine; yet he has not found that the Effuſion of the Spirit upon Quick-lime, produced any ſenſible *Heat*, or viſible Diſſolution of the Lime, tho' it ſeem'd to be greedily ſuck'd in, as common Water would have been. And, further, he found, that if cold Water were poured on the ſame Lime ſo drenched, there would enſue no manifeſt *Heat*; nor did the Lump appear ſwelled or broken, till ſome Hours after; which ſeems to argue, that the Texture of the Lime admitted ſome Particles of the Spirit of Wine into ſome of its Pores, which were either larger, or more fit, without admitting it into

moſt numerous, whereinto the Liquor muſt be received, to be able ſuddenly to diſſipate the Corpuſcles of Lime into their minuter Particles.

Theſe Phenomena, according to Mr. *Boyle*, ſeem to ſhew, that the Diſpoſition which Lime has to grow hot with Water, greatly depends on ſome peculiar Texture; ſince the aqueous Parts, which one would think capable of quenching moſt of the fiery Atoms, ſuppoſed to adhere to Quick-lime, did not near ſo much weaken the Diſpoſition of it to *Heat*, as that Acceſs of the ſpirituous Corpuſcles, and their Contexture with thoſe of the Lime increas'd it.

Yet, in other Places, he appears rather to give into the Corpuſcular Scheme: Urging, that if inſtead of cold Water, you quench the Lime with hot Water, the Ebullition will be, oftentimes, far greater than if the Liquor were cold; which indeed might well be expected, hot Water being much fitter than cold, ſuddenly to pervade the Body of the Lime, and haſtily diſſolve, and ſet at Liberty, the fiery and ſaline Parts, wherewith it abounds. And what a greater Intereſt Salts may have in producing ſuch *Heats* than cold Water, he has alſo tried, by pouring acid Spirits, and particularly Spirit of Salt, upon good Quick-lime: For by this Means there would be a far greater Degree of *Heat* excited, than if he had uſed common Water; and this, whether he employed the Spirit cold or hot.

It is not eaſy, ſays the ſame Author, to apprehend how ſuch light and minute Bodies, ſhould be ſo long detained, as muſt by this Hypotheſis be allowed, in Quick-lime eſpecially; ſince no great *Heat* enſues the pouring of Water upon *Minium*, or *Crocus Martis per ſe*, tho' they have been calcined by a violent Fire, the Effluvia whereof ſeem to adhere to them, by the Increaſe of the Weight the Lead and Iron manifeſtly receive from the Operation of it. *Mech. Orig. of Heat.*

HEAT, in the Animal Oeconomy, *Natural* HEAT, *Vital* HEAT. See CALIDUM *Innatum*. See alſo HEART and BLOOD.

HEAT, in Chymiſtry. See FIRE and BATH.

HEAT, in Smithery, *&c.* See IRON.

HEAT, is alſo uſed in Reſpect of Race-Horſes, for the Exerciſes to be given them by Way of Preparation, *&c.* See HORSE.

Two *Heats* in a Week are reckon'd a juſt Meaſure for any Horſe of what State or Conſtitution whatever. — The Jockies lay it down as a Rule, that one of the *Heats* be given on the ſame Day of the Week, whereon the Horſe is to run his Match; and this to be the ſharpeſt *Heat*.

HEATHEN, See PAGAN.

HEAVE, at Sea, ſignifies to throw away, or fling any Thing over-board. — When a Ship, being at Anchor, riſes and falls by the Force of the Waves, ſhe is alſo ſaid to *Heave and ſet*.

*To* HEAVE *at the Capſtain*, ſignifies to turn it about. See CAPSTAIN.

*To* HEAVE *a Flag aboard*, is to hang it out. See FLAG, SIGNAL.

*To* HEAVE *out the Top-ſails*, is to put them abroad. See TOP-SAIL.

HEAVE-*Offerings*, under the *Jewiſh*-Law, were the firſt Fruits given to the Prieſt. See FIRST-*Fruit*.

HEAVEN, *Cœlum*, an Azure, tranſparent Orb, inveſting our Earth; wherein the Celeſtial Bodies perform their Motions. See EARTH, *&c.*

This is the popular Notion of *Heaven*; for the Word, it muſt be obſerved, has various other Ideas, in the Language of Philoſophers, Divines and Aſtronomers: Agreeably to which, we may lay down divers *Heavens*, as the *Higheſt*, or *Empyrean Heaven*; the *Ethereal*, or *Starry*, *Heaven*; the *Planetary Heaven*, &c.

HEAVEN, among Divines, call'd alſo the *Empyrean* HEAVEN, is the Abode of God, and bleſſed Spirits; as Angels, and the Souls of the righteous deceas'd. See GOD, ANGEL, *&c.*

This is alſo frequently call'd in Scripture the *Kingdom of Heaven*; the *Heaven of Heavens*; and by St. *Paul*, the *third Heaven*; ſometimes *Paradiſe*; the *New Jeruſalem*, &c. See EMPYREAN, *&c.*

This *Heaven* is conceiv'd as a Place in ſome remote Part of infinite Space, wherein the Deity is pleas'd to afford a nearer, and more immediate View of himſelf; a more ſenſible Manifeſtation of his Glory; a more adequate Perception of his Attributes, than in the other Parts of the Univerſe, where he is likewiſe preſent. See UNIVERSE, OMNIPRESENCE, *&c.*

This makes what the Divines alſo call the *Beatifick Viſion*. See VISION.

Authors are much divided as to the Reality of ſuch *Local Heaven*. — In this Senſe of the Word, *Heaven* ſtands oppoſed to *Hell*. See HELL.

The inſpired Writers give us very magnificent Deſcriptions of *Heaven*, the Structure, Apparatus, and Attendance thereof; particularly *Iſaiah*, and St. *John* the Divine. — The Philoſopher *Plato*, in his *Dial. de Anim.* ſpeaks of *Heaven* in Terms that bear ſo near a Reſemblance to thoſe of Scripture; that *Euſebius* charges him with borrowing his Account thence. *De Præpar. Evangel. L.* XI. C. 37.

The antient *Romans* had a Kind of *Heaven* in their Syſtem of Theology, call'd *Elyſium*, or the *Elyſian Fields*. See ELYSIAN *Fields*.

The *Mahometan Heaven*, or *Paradiſe*, is very groſs, agreeably to the Genius of their Religion. See MAHOMETANISM, ALCORAN, *&c.*

HEAVEN, among Aſtronomers, call'd alſo the *Etherial* and *Starry* HEAVEN, is that immenſe Region wherein the Stars, Planets and Comets are diſpoſed. See STAR, PLANET, *&c.*

This is what *Moſes* calls the *Firmament*, ſpeaking of it as the Work of the ſecond Days Creation; at leaſt 'tis thus the Word רקוע is uſually render'd by his Interpreters; tho' this ſomewhat abuſively, to countenance their own Notion of the *Heavens* being Solid. — The Word, 'tis certain, properly ſignifies no more than *Expanſe*, or *Extenſion*; a Term very well adapted by the Prophet to the Impreſſion which the *Heavens* make on our Senſes: Whence, in other Parts of Scripture, the *Heaven* is compared to a *Curtain*, or a *Tent* ſtretch'd out to dwell in. — The LXX. firſt added to this Idea of Expanſion, that of *Firm* or *Solid*; rendering it by στερεωμα, according to the Philoſophy of thoſe Times; in which they have been follow'd by the Modern Tranſlators.

The later Philoſophers, as *Cartes*, *Kircher*, &c. have eaſily demonſtrated this *Heaven* not to be *Solid*, but *Fluid*; but they ſtill ſuppoſe it full, or perfectly denſe, without any Vacuity, and canton'd out into ſo many Vortices. See ÆTHER, CARTESIANISM, *&c.*

But others carry the Thing much further, and overturn not only the Solidity, but the ſuppoſed Plenitude of the *Heavens*. — Sir *Iſaac Newton* has abundantly ſhewn the *Heavens* void of almoſt all Reſiſtance, and conſequently of almoſt all Matter; from the Phænomena of the Celeſtial Bodies; from the Planets perſiſting in their Motions without any ſenſible Diminutions of their Velocity; and the Comets freely paſſing in all Directions towards all Parts of the *Heavens*. See RESISTANCE, PLANET, COMET, VORTEX, *&c.*

*Heaven*, taken in this general Senſe, for the whole Expanſe between our Earth and the remoteſt Regions of the fix'd Stars, may be divided into two very unequal Parts, according to the Matter found therein, *viz.* the Atmoſphere, or *Aerial Heaven*, poſſeſs'd by Air; and the *Ætherial Heaven*, poſſeſs'd by a thin, unreſiſting Medium, call'd *Æther*. See ATMOSPHERE, AIR, ÆTHER and MEDIUM.

HEAVEN, is more particularly uſed in Aſtronomy, for an Orb, or Circular Region of the Ætherial *Heaven*. See ORB.

The antient Aſtronomers aſſumed as many different *Heavens*, as they obſerved different Motions therein. — Theſe they ſuppoſed all to be *Solid*, as thinking they could not otherwiſe ſuſtain the Bodies fix'd in them; and *Spherical*, as being the moſt proper Form for Motion.

Thus they had ſeven *Heavens* for the ſeven Planets, *viz.* — The *Heavens* of the *Moon*, of *Mercury*, *Venus*, the *Sun*, *Mars*, *Jupiter* and *Saturn*. See PLANET, *&c.*

The eighth was for the fix'd Stars, which they particularly call'd the *Firmament*. See FIRMAMENT.

*Ptolomy* added a ninth *Heaven*, which he call'd the *Primum Mobile*. See MOBILE.

After him two *Cryſtalline Heavens* were added, by King *Alphonſus*, &c. to account for ſome Irregularities in the Motions of the other *Heavens*: And, laſtly, an *Empyrean Heaven* was drawn over the whole, for the Reſidence of the Deity; which made the Number twelve. See EMPYREAN, *&c.*

The *Cryſtalline Heavens*, were not ſuppoſed to have any Stars fixed in them: They incompaſs'd the inferior, Starry and Planetary *Heavens*; and communicated their Motion to them. — The firſt ſerved to account for that ſlow Motion of the fix'd Stars, whereby they advance a Degree Eaſtward in 70 Years; whence the Preceſſion of the Equinox. The ſecond was to ſolve the Motions of Libration, or Trepidation. See PRÆCESSION, LIBRATION, TREPIDATION, *&c.*

But others admitted many more *Heavens*, according as their different Views, and Hypotheſes required. — *Eudoxus* ſuppoſed 23, *Calippus* 30, *Regiomontanus* 33, *Ariſtotle* 47, and *Fracaſtor* 70.

We may add, that the Aſtronomers did not much concern themſelves whether the *Heavens*, they thus allow'd of,

were

were real or not, provided they ſerved a Purpoſe in accounting for any of the Celeſtial Motions, and agreed with Phænomena. See HYPOTHESIS, SYSTEM, PHÆNOMENA, &c.

Among the other Reveries of the Rabbins, contained in the *Talmud*, we find it aſſerted, that there is a Place where the *Heavens* and Earth joyn together; that *Rabbi Barchana* going thither, laid his Hat on the Window of *Heaven*; and that going to take it again immediately after, it was gone, the *Heavens* having carried it off; ſo that he muſt wait for a Revolution of the Orbs to bring it to its Place again.

HEAVINESS, See WEIGHT, GRAVITY, &c.

*For the Laws of the Deſcent of* Heavy *Bodies*. See DESCENT, &c.

In Strictneſs, *Heavy* Bodies do not tend preciſely to the very Centre of the Earth, except at the Poles and the Equator; by Reaſon of the ſpheroidal Figure of the Earth. — Their Direction is every where perpendicular to the Surface of the Spheroid. See EARTH and SPHEROID.

HEAULME, or HEAUME, in Heraldry, an *Helmet*, or Head-piece. See HELMET.

HEWING *of Timber*. See TIMBER.

HEBBERMAN, in our antient Law-Books, a Fiſherman below *London-Bridge*; thus call'd, becauſe he commonly fiſhes at Ebb Water. See EBB.

HEBBERTHEF, in our antient Cuſtoms, a Privilege of having the Goods of a Thief, and the Trial of him, within a particular Diſtrict.

HEBDOMADIUS, antiently denoted a Canon, or Prebendary, in a Cathedral Church, who had the peculiar Care of the Choir, and the Inſpection of Officers of it for his Week. See CANON, CATHEDRAL, and CHOIR.

HEBDOMADEER, HEBDOMADARY, HEBDOMADARIUS, a Member of a Chapter, or Convent, whoſe Week it is to perform the Office, rehearſe the Anthems and Prayers, preſide and perform the uſual Functions which Superiors perform at ſolemn Feaſts, and on other extraordinary Occaſions.

The *Hebdomadeer* generally collates to the Benefices which become vacant during his Week: Tho' this is uſually look'd on as an Abuſe.

The Word is form'd of the *Greek*, ἑβδομας, which ſignifies the Number ſeven, of ἑπτα, *Seven*. See WEEK.

In Monaſteries, the *Hebdomadary* is he who waits at Table for a Week, or other ſtated Period; directs and aſſiſts the Cook, &c.

In Church Antiquity, we meet with nine different Sorts of *Hebdomadeers*, viz. — The *Hebdomadarius Cantor*, or *Hebdomadary Chantor*; *Hebdomadarius Chori*, *Hebdomadary* of the Choir; which two were really the ſame, *viz.* he who preſided at the public Service: *Hebdomadary* of the Kitchin, *Hebdomadarius Coquinæ*: *Hebdomadary* of the Defunct or the Dead, *Hebdomadarius Defunctorum*, he who took Care of the Office and Service of the Dead: *Hebdomadarius Invitatorii*, he who ſang the Invitatory: *Hebdomadarius Lector ad Menſam*, he who read at Meal Time: *Hebdomadarius majoris Miſſæ*, he who read Maſs: *Hebdomadarius Pſalterii*, which probably was the ſame with the *Hebdomadarius Chori*: And *Hebdomadarius ſacri Altaris*, which might be the ſame with *Hebdomadeer* of the high Maſs.

HEBRAISM, an Idiotiſm or Manner of Speaking peculiar to the *Hebrew* Tongue. See IDIOTISM.

There is no Underſtanding, even the Verſions of the Old Teſtament, without ſome Acquaintance with the *Hebrew*; they are ſo full of *Hebraiſms*.

We have Abundance of *Hebraiſms* borrow'd from Scripture, and naturalized in our own Language; as, *Son of Perdition*: *To ſleep in the Lord*, &c. See HEBREW.

HEBREW, ſomething relating to the People of the *Jews*, i. e. to the twelve Tribes, deſcended from the twelve Patriarchs, the Sons of *Jacob*. See JEWS. Thus we ſay,

HEBREW *Bible*. See BIBLE.

HEBREW *Character*. See CHARACTER.

There are two Kinds of *Hebrew* Characters; the *Antient*, call'd alſo the *Square*; and the *Modern*, or *Rabbinical* Characters.

The *Square Hebrew*, takes its Denomination from the Figure of its Characters, which ſtand more *Square*, and have their Angles more exact and preciſe than the other.

This Character is uſed in the Text of Holy Scripture, and their other principal and moſt important Writings. — When both this, and the *Rabbinical Character*, are uſed in the ſame Work; the former is for the Text, or the fundamental Part; and the latter, for the acceſſory Part, as the Gloſs, Notes, Commentaries, &c.

The beſt and beautifulleſt Characters of this Kind, are thoſe imitated from the Characters in the *Spaniſh* Manuſcripts; next, thoſe from the *Italian* Manuſcripts; then, thoſe from the *French*; and laſtly, thoſe of the *Germans*, whoſe Characters are much the ſame, with Reſpect to the other genuine *Square Hebrew* Characters, that the *Gothic* or *Dutch* Characters are with Reſpect to the *Roman*.

Several Authors contend, that the *Square* Character is not the real, antient *Hebrew* Character, wrote from the Beginning of the Language to the Time of the *Babyloniſh* Captivity; but that it is the *Aſſyrian*, or *Chaldee* Character, which the *Jews* aſſumed, and accuſtom'd themſelves to, during the Captivity, and retain'd afterwards. — Theſe Authors add, that what we call the *Samaritan* Character, is the antient *Hebrew*.

The learned Jeſuite *Souciet* maintains, with great Addreſs, that the antient *Hebrew* Character, is that found on the Medals of *Simon*, and others, commonly call'd *Samaritan Medals*; but which, he aſſerts, were really *Hebrew* Medals, ſtruck by the *Jews*, and not by the *Samaritans*. See SAMARITAN.

The *Modern*, or *Rabbinical Hebrew* Character, is a good neat Character, form'd of the *Square Hebrew* by rounding it, and retrenching moſt of the Angles, or Corners of the Letters, to make it the more eaſy and flowing. — Thoſe uſed by the *Germans*, are very different from the *Rabbinical* Character uſed every where elſe, tho' all form'd alike from the *Square* Character, but the *German* more ſlovenly than the reſt.

The *Rabbins* frequently make uſe either of their own, or the *Square Hebrew* Character, to write the modern Languages in. — There are even Books in the vulgar Tongues, printed in the *Hebrew* Characters: Inſtances whereof are ſeen in the *French* King's Library.

HEBREW *Language*, call'd abſolutely HEBREW, is the Language ſpoke by the *Hebrews*, and wherein moſt of the Books of the Old Teſtament are wrote; whence it is alſo call'd the *Holy*, or *Sacred Language*. See LANGUAGE.

There is no Piece, in all Antiquity, wrote in pure *Hebrew*, beſide the Books of the Old Teſtament; and even ſome Parts of thoſe are in *Chaldee*. See CHALDEE.

The *Hebrew*, then, appears to be the moſt antient of all the Languages in the World; at leaſt, 'tis ſo with Regard to us, who know of no older. Some learned Men will have it the Language ſpoke by *Adam* in Paradice; and that the Saints will ſpeak it in Heaven.

*Alberti*, in his *Hebrew Dictionary*, endeavours to find in each Word, in its Root, in its Letters, and the Manner of pronouncing them, ſome natural Reaſon of the Signification of that Word. But he has carried Matters too far; and it has been ſhewn, in the Memoirs *de Trevoux*, that on his Principles, Words which really ſignify quite different Things, ſhould ſignify the ſame.

*Neuman*, and *Loeſcher*, have proſecuted *Alberti*'s Scheme further, and with more Addreſs than he has done: The firſt, in his *Geneſis Linguæ Sanctæ*, and *Exodus Linguæ Sanctæ*; and the latter, in his Treatiſe *de Cauſis Linguæ Hebreæ*.

Be this as it will, the *Hebrew*, ſuch as we have it in the Holy Scripture, is a very regular, analogical Language, and particularly ſo in its Conjugations. Properly ſpeaking, there is but one, ſimple Conjugation; but this is varied in each Verb ſeven or eight Ways, which has the Effect of ſo many different Conjugations, and affords a great Number of Expreſſions, whereby to repreſent, under one ſingle Word, all the different Modifications of a Verb; and ſeveral Ideas at once, which in the modern, and moſt of the antient and learned Languages, are expreſſible only by Phraſes.

The Original, or Primitive Words in this Language, which they call *Radices*, Roots, rarely conſiſt of more than three Letters, or two Syllables, which are expreſs'd by two Sounds, or by the ſame Sound redoubled, which is indicated by a Point. See ROOT, RADICAL, &c.

There are twenty two Letters in the *Hebrew* Language, which Grammarians divide into *Guttural*, *Palatal*, *Dental*, *Labial*, and *Lingual*. — This Diviſion is taken from the ſeveral Organs of Speech; ſome whereof contribute more than others to the Pronunciation of certain Letters. See VOICE. See alſo GUTTURAL, PALATAL, &c.

Uſually, they only reckon five Vowels in the *Hebrew*, which are the ſame with ours, *viz.* a, e, i, o, u; but then each Vowel is divided into two, a long, and a *breve* or ſhort: The Sound of the former is ſomewhat graver, and longer; and that of the latter ſhorter, and more acute. — It muſt be added, that the two laſt Vowels have quite different Sounds, different, we mean, in other Reſpects beſide Quantity and Degree of Elevation.

To theſe ten or twelve Vowels muſt be added ſome others call'd *Semi-Vowels*, which are only ſlight Motions ſerving to connect the Conſonants, and make the eaſier Tranſitions from one to another. See VOWEL.

The Number of Accents is prodigious in the *Hebrew*. — There are near forty different ones; and of theſe, there are ſeveral, whoſe Uſe is not well aſcertain'd, notwithſtanding all the Enquiries of the Learned into that Matter.

In the general, we know theſe three Things: 1°. That they ſerve to diſtinguiſh the Sentences, and the Members thereof, like the Points and Comma's, *&c.* in *Engliſh*. 2°. To determine the Quantity of the Syllables: And 3°. To mark the Tone wherewith they are to be ſpoke or ſung. See ACCENT.

'Tis no Wonder, then, there ſhould be more Accents in the *Hebrew* than in other Languages; as they do the Office of three different Things, which in other Languages are called by different Names. See PUNCTUATION, QUANTITY, *&c.*

As we have no *Hebrew*, but what is contain'd in the Scriptures; that Language wants a World of Words; not only by Reaſon, in thoſe primitive Times, the Languages were not ſo copious as at preſent, but alſo on this Account that the inſpired Writers had occaſion to mention many of the Terms that might be in the Language.

The *Chaldee*, *Syriac*, *Ethiopic*, *Arabic*, &c. Languages, are all only Dialects of the *Hebrew*; as the *French*, *Italian*, *Spaniſh*, &c. are Dialects of the *Latin*. See CHALDEE, SYRIAC, ARABIC, *&c.*

*Rabbinical* HEBREW, or HEBREW *of the Rabbins*, or *modern* HEBREW, is the Language uſed by the Rabbins, in the Writings they have compoſed. See RABBIN.

The Baſis, or Body hereof, is the *Hebrew* and *Chaldee*, with divers Alterations in the Words of thoſe two Languages, the Meanings whereof they have conſiderably enlarged and extended. Abundance of Things they have borrowed from the *Arabic*. — The reſt is chiefly compoſed of Words, and Expreſſions, chiefly from the *Greek*; ſome from the *Latin*; and others, from the other modern Tongues; particularly that ſpoken in the Place where each Rabbin lived or wrote.

The *Rabbinical Hebrew*, muſt be allowed a very copious Language: — M. *Simon*, in his *Crit. de l'Ancien Teſtam.* L. III. *C.* 27. obſerves, that there is ſcarce any Art, or Science, but the Rabbins have treated thereof in it. They have tranſlated moſt of the antient Philoſophers, Mathematicians, Aſtronomers, and Phyſicians; and have wrote themſelves on moſt Subjects: They do not want even Orators and Poets. Add, that this Language, notwithſtanding 'tis ſo crowded with foreign Words, has its Beauties viſible enough in the Works of thoſe who have wrote well.

M. *Simon* ſays, 'tis impoſſible to reduce it into an Art, or Syſtem of Rules; tho' ſeveral learned Men are of another Sentiment; and it not only appears poſſible, but has actually been perform'd. *Genebrard* firſt attempted it in his *Iſagoge Rabbinica*, which yet goes no further than to the learning to read it. *Buxtorf* ſeconded him, at the End of his *Hebrew Grammar*; where we have an additional Piece, under the Title *Lectionis Hebræo-Germanicæ uſus & Exercitatio*. Others have gone yet further: *Majus* has lately given us a Rabbinical Grammar, at *Gieſſen*, under the Title of *Johannis Maii Grammatica Rabbinica*: And before him *Sennert* had done the ſame; *Rabbiniſmus*, h. e. *Præcepta Targumico-Talmudico Rabbinica*. Wirtemb. *An.* 1666.

HECATOMB, HECATOMBES, in Antiquity, a Sacrifice of an hundred Beaſts of the ſame Kind, at an hundred Altars, and by an hundred Prieſts, or Sacrificers. See SACRIFICE.

*Pythagoras* is ſaid to have ſacrificed a *Hecatomb* to the Muſes, of an hundred Oxen, in Joy and Gratitude, for his diſcovering the Demonſtration of the 47th Propoſition of the Firſt Book of *Euclid*, viz. that in a rectangled Triangle, the Square of the Hypothenuſe is equal to the Squares of the two other Sides. See HYPOTHENUSE.

The Word is form'd of the *Greek*, ἑκατόμβη, which properly ſignifies a ſumptuous, or magnificent Sacrifice. — Others derive it from the *Greek* ἑκατὸν, *Centum*, a Hundred, and βῶς, *Bos*, Bullock, *&c.* On which Footing, the *Hecatomb* ſhould be a Sacrifice of an hundred Bullocks.

For the Origin of *Hecatombs*. — *Strabo* relates, that there were an hundred Cities in *Laconia*; and that each City uſed to ſacrifice a Bullock every Year, for the common Safety of the Country; whence the Inſtitution of the celebrated Sacrifice of an hundred Victims, call'd *Hecatombs*. Others refer the Origin of *Hecatombs* to a Plague; wherewith the hundred Cities of *Peloponeſus* were afflicted; for the Removal whereof, they jointly contributed to ſo ſplendid a Sacrifice.

Some derive the Word from ἑκατὸν, and πῆς, *Pes*, Foot; and on that Principle hold, that the *Hecatomb* might conſiſt of only twenty five four footed Beaſts. They add, that it did not matter what Kind of Beaſts were choſe for Victims, provided the Quota of Feet were but had.

Yet *Julius Capitolinus* relates, that for a *Hecatomb* they erected an hundred Altars of Turf, and on theſe ſacrificed a hundred Sheep, and an hundred Hogs. He adds, that when the Emperors offered Sacrifices of this Kind, they ſacrificed a hundred Lyons, a hundred Eagles, and a hundred other Beaſts of the like Kind.

The Month wherein the annual, or ordinary *Hecatomb* was ſacrificed, was hence called the *Hecatombeon*. See MONTH.

The *Athenians* had a Sacrifice of the ſame Kind, offered yearly to *Mars*, called *Hecatomphoneuma*, of ἑκατὸν, *Centum*, and φονευμα, of φονεύω, *occido*, I kill; and that of φονος, *Cædes*.

HECATOMPHONIA, was an antient Sacrifice among the *Meſſenians*; offer'd by ſuch as had ſlain an hundred Enemies in Battel. See SACRIFICE.

*Pauſanias* makes mention of one *Ariſtomenes* of *Corinth*, who offered no leſs than three *Hecatomphonia*.

The Word comes from ἑκατὸν and φωνεύω, *I kill*.

HECK, among Husbandmen, a *Rack*; at which Horſes are fed with Hay.

It is alſo an Engine, wherewithal to take Fiſh in the River *Owſe*. — A *Salmon-Heck*, is a Grate for the catching of that Sort of Fiſh. See *Salmon* FISHING.

Hence, alſo, the Word *Heckagium*, or *Heceagium*, which occurs in antient Records, for a Rent paid the Lord for the Liberty to uſe ſuch Engines.

HECKLING of *Hemp*, See HEMP.

HECTIC, or HECTIC *Fever*, in Medicine, a Sort of ſlow habitual Fever, gradually preying on and conſuming the Moiſture of the Body, and ending in a *Tabes*, or Conſumption. See FEVER.

The *Hectic* is alſo an Attendant of a Conſumption; and is reputed one of the Diagnoſtic Signs thereof. See CONSUMPTION and PHTHISIS.

The Word is *Greek*, ἑκτικὸς, form'd of ἕξις, *Habitus*; a Quality hard to ſeparate from its Subject.

The *Hectic*, Dr. *Quincy* obſerves, is the Reverſe of thoſe Fevers which ariſe from a *Plethora*, or too great a Fulneſs from Obſtruction. This being attended with too lax a State of the excretory Paſſages, and particularly thoſe of the Skin, whereby ſo much runs off, as leaves not Reſiſtance enough in the contractile Veſſels to keep them ſufficiently diſtended, ſo that they vibrate oftener, agitate the Fluids more, and keep them thin and hot.

The Remedy conſiſts in giving a firmer Tone to the Solids, and laying more Load upon the Fluids, and thus bringing them to a better Conſiſtence; which is effected by Means of Balſamicks, Agglutinants, and Foods of the beſt Nouriſhment. — All Evacuation herein is bad.

A Milk Diet, is much recommended in *Hectick*s, and particularly Aſſes-Milk, as being the leaſt viſcid and heavy. Dr. *Baynard* propoſes Butter-Milk as a Succedaneum to Aſſes-Milk. According to him, it anſwers moſt of the Indications in this Caſe, as it cools, moiſtens, nouriſhes, &c. He adds, that he has known many Perſons cured of obſtinate *Hectick*s, by a continued Uſe thereof. See ANTIHECTICKS.

HEDAGIUM, antiently ſignified a Toll, or Cuſtom, paid at the Hyth, or Wharf, *&c.* for landing Merchandize, Goods, *&c.* See WHARF, HYTH, *&c.*

From ſuch Toll, or cuſtomary Duty, Exemptions were ſometimes granted by the Sovereign to particular Perſons, and Societies.

The Word is form'd from *Heda*, a Hyth, Port or Wharf.

HEDGE, in Agriculture, *&c.* a Fence, incloſing a Field, Garden, or the like; made of Branches of Trees interwoven. See FENCE.

The Word is form'd of the German *hag*, or *haag*, or the Anglo-Saxon *hegge*, or *hoeg*; which ſignify ſimply Incloſure, Circumference.

*Quick-ſet Hedge*, is that made of quick, or live Trees, which have taken Root; in Contradiſtinction to that made of Faggots, Hurdles, or dry Boughs, *&c.*

To plant a *Quick-Hedge* of Thorn, or the like, Mr. *Mortimer* directs, that the Sets be about as big as the Thumb, and cut within four or five Inches off the Ground: That if the *Hedge* have a Ditch, it be three Foot wide a-top, and one at Bottom, and two deep: That if the *Hedge* be without a Bank, or Ditch, the Sets be in two Rows, almoſt perpendicular, and at a Foot Diſtance: That the Turf be laid with the Graſs Side downwards: That at every 30 Foot Diſtance, a young Oak, Elm, Crab, or the like be placed: That Stakes be driven into the looſe Earth, at about two Foot and a half Diſtance, ſo low as to reach the firm Ground.

When

When the *Hedge* is eight or nine Years growth, it may be *ſplaſh'd* or laid down; by giving the Shoots, or Branches, a Cut with a Knife, or Bill, half thro'; and then weaving it about the Stakes, and trimming off the ſmall ſuperfluous Branches.

Inſtead of Building a Garden Wall facing the North Eaſt, Mr. *Lawrence* adviſes, that to ſave Charge, *&c.* a Crab-Tree *Hedge* of three Rows be planted; which will be a good Mound, and quickly grow up to be a better Fence than a Wall againſt the Weſt and South-Weſt Winds, which make the greateſt Deſtruction in a Garden, and which blow two Parts in three of the whole Year: Beſide the Stock of Fruit ſuch a *Hedge*, grafted with Red ſtreak, or Gennet Moyl, will yield.

*Eſpalier* HEDGES. See ESPALIER.

*Tranſplanting of* HEDGE-*Rows*. See TRASPLANTING.

HEEL, in Anatomy, the hind Part of the Foot. See FOOT.

In Winter, the *Heels* are liable to Kind of Chilblains, call'd *Kibes*, which tend to Mortification. See CHILBLAIN.

The *Bone of the Heel* is called *Calcaneum*. See CALCANEUM.

HEEL *of a Horſe*. See HORSE.

The *Heel* ſhould be high and large; and one Side not riſe higher on the Paſtern than the other. — The Diſtempers incident to this Part, are ſcabbed *Heels* and Scratches. See SCRATCHES.

The *Heel* is properly the hind Part of the Foot; and has two Sides, where the Quarters terminate; or, it is the lower hinder Part of the Foot, comprehended between the Quarters, and oppoſite to the Toe. — Some narrow *heel'd* Horſes have high *Heels*, but ſo weak and tender, that by preſſing the two Sides of the *Heel* one againſt another, they will ſenſibly yield. See HOOF.

To *open the Heels*, is to pare the Foot, and cut the *Heel* low, almoſt cloſe to the Fruſh; taking it down within a Finger's Breadth of the Coronet, or Top of the Hoof, ſo as to ſeparate the Quarters, and by that Means weaken and take away the Subſtance of the Foot, and make it cloſe, and become narrow at the *Heels*.

The *Heel of the Horſeman*, being the Part which is armed with a Spur; the Word is uſed for the Spur it ſelf: As, this Horſe underſtands the *Heels* well. See AID and CORRECTION.

To *ride a Horſe from one Heel to another*, is to make him go Side-ways, ſometimes to one *Heel*, and ſometimes to another.

HEEL, in the Sea-Language. — If a Ship lye on one Side, whether a-ground or a-float, they ſay ſhe *heels* offward, or to the Shore, a-ſtar-board, or a-port.

HEEL *of a Maſt*, is that Part of the Foot thereof, which is pared away ſlanting, that the Maſt may be ſtay'd afterward on. See MAST.

HEELER, or *Bloody-Heel Cock*, is a fighting Cock which ſtrikes or wounds much with his Spurs: — Cock-Maſters know ſuch a Cock, even while a Chicken, by the ſtriking of his two Heels together in his going.

HEGIRA, in Chronology, a celebrated Epocha, uſed by the *Arabs* and *Mahometans*, for the Computation of Time. See EPOCHA.

The Word *Hegira*, in its original *Arabic*, ſignifies *Flight*; the Event which gave Occaſion to this Epocha, being *Mahomet*'s Flight from *Mecca*. — The Magiſtrates of that City fearing his Impoſtures might raiſe a Sedition, reſolved to expel him: This, accordingly, they effected in the Year of our Lord 622, on the Evening of the 15th or 16th of *July*.

To render this Epocha more creditable, the *Mahometans* affect to uſe the Word *Hegira* in a peculiar Senſe, for an Act of Religion, whereby a Man forſakes his Country, and gives Way to the Violence of Perſecutors and Enemies of the Faith: They add, that the *Coraichites* being then the ſtrongeſt Party in the City, obliged their Prophet to fly, as not being able to endure his aboliſhing of Idolatry.

This Flight was not the firſt; but it was the moſt famous. It happen'd on the 14th Year from his aſſuming the Character of Prophet and Apoſtle, and promulgating his new Religion. See MAHOMETANISM.

The *Orientals* do not agree with us, as to the Time of the *Hegira*. Among the *Mahometans*, *Amaſſi* fixes it to the Year of Chriſt 630; and from the Death of *Moſes* 2347: And *Ben Caſſem*, to the Year of the World 5800, according to the *Greek* Computation. Among the Chriſtians, *Said Ebn Batrik* refers the *Hegira* to the Year of Chriſt 614, and of the Creation 6114.

*Khondemir* relates, that it was *Omar*, the ſecond Caliph, that firſt eſtabliſh'd the *Hegira* as an Epocha, and appointed the Years to be numbered from it: At the Time he made this Decree, there were already ſeven Years elapſed. This Eſtabliſhment was made in Imitation of the Chriſtians; who, in thoſe Times, reckon'd their Years from the Perſecution of *Diocleſian*. See DIOCLESIAN *Æra*.

But there is another *Hegira*, and the earlier too, tho' of leſs Eminence: — *Mahomet*, in the 14th Year of his Miſſion, was obliged to relinquiſh *Medina*: The *Caraſchaites* had all along oppoſed him very vigorouſly, as an Innovator, and Diſturber of the public Peace. Many of his Diſciples, not enduring to be reputed Followers of an Impoſtor, deſired Leave of him to abandon the City, for Fear of being obliged to renounce their Religion. This Retreat makes the firſt *Hegira*.

Theſe two *Hegira's*, the *Mahometans* in their Language call *Hegiratan*.

The Word is *Arabic*, form'd of הגרה, *hagirah*, Flight; of הגר, to fly, quit ones Country, Family, Friends, *&c.*

The Years of the *Hegira* conſiſt only of 354 Days. To reduce theſe Years to the *Julian* Calendar, *i. e.* to find what *Julian* Year a given Year of the *Hegira* anſwers to; reduce the Year of the *Hegira* given, into Days, by multiplying by 354; divide the Product by 365, and from the Quotient ſubſtract the Intercalations, *i. e.* as many Days as there are four Years in the Quotient; and, laſtly, to the Remainder add 622. See YEAR.

HEIGHT, the third Dimenſion of a Body, conſider'd with Regard to its Elevation above the Ground. See DIMENSION and ELEVATION.

*Altimetria* teaches how to find, or meaſure all *Height*, both acceſſible and inacceſſible. See ALTIMETRIA.

The Inſtruments chiefly uſed to meaſure *Heights*, are the *Quadrant*, and the Geometrical *Quadrat*. See QUADRANT and QUADRAT. See alſo SHADOW and MIRROR.

To meaſure the *Height* of Mountains, and particularly thoſe of the Moon. See BAROMETER, MOON, *&c.*

HEIGHT, is ſometimes alſo uſed for *Depth*. See DEPTH.

The Deſign of Levelling, is to find the different *Heights*, or Depths, of Places. See LEVELLING.

HEIGHT, in Aſtronomy, *&c.* is more properly call'd *Altitude*. See ALTITUDE.

The *Height*, or Altitude, of the Sun, *&c.* is an Arch of the Meridian, comprehended between the Sun, *&c.* and the Horizon. See SUN, *&c.*

To find the Meridian *Heights* of the Sun, Stars, *&c.* See MERIDIAN *Altitude*.

The *Height* of a Star, is either true or apparent. — The apparent *Height* is its Diſtance from the rational Horizon; or, rather, it is the *Height* of a Star ſuch as it appears: The true *Height* is, what remains after the Refraction has been ſubſtracted. See REFRACTION.

M. *Parent* ſuggeſts a new Method of taking *Heights* at Sea, by a common Watch. — 'Tis obvious, that in an oblique Sphere, the Difference between the riſing and ſetting of two Stars, on the ſame Meridian, is greater, as they are further diſtant from one another. See RIGHT *Aſcenſion*.

Now, the Aſtronomical Tables furniſhing us with Tables of the right Aſcenſions and Declinations of all the fix'd Stars; 'tis eaſy, after obſerving the Difference of Time between the riſing of two Stars, to diſtinguiſh that Part of the Difference which accrues from their different Poſition, from that which ariſes from the Obliquity of the Sphere. — But ſuch Difference is the preciſe *Height* of the Pole of the Place of Obſervation. See POLE.

Indeed, the Ship not being immoveable, but changing Place between the two Obſervations; ſeems to lay the Method under ſome Difficulty; to which M. *Parent* anſwers, that a ſmall Alteration either of the Ship's Longitude or Latitude, will make no ſenſible Error; and that if ſhe have gone a large Diſtance between the two Obſervations, 'tis eaſy reckoning how much it is, and allowing for it. See SAILING, *&c.*

HEIGHT, in Geography, Navigation, *&c.* is properly call'd *Elevation*. See ELEVATION.

The *Height*, or Elevation of the Pole, is an Arch of the Meridian intercepted between the Horizon and the Pole. See POLE.

The *Height* of the Pole is always equal to the Latitude of the Place. See LATITUDE.

HEIGHT, in the Manage, *&c.* the Stature of a Horſe, *&c.* See STATURE and HORSE.

It is a reputed Imperfection in a Horſe, when ſet too *high* on his Legs, *i. e.* when the Legs are too long in Proportion to the Body.

Some Jockeys have determined a Meaſure for them thus: — Take a String, and meaſure from the Horſe's Withers to his Elbow, and what Length that is, the ſame ſhould he have betwixt the Elbow and the lower Part of the Heels. — Some meaſure their Colts after this Manner at a Year old; being of Opinion that the Legs of a Colt at this Age, are as long as they ever will be.

The Duke of *Newcaſtle*, and Sir *W. Hope*, allow this to hold generally, but not univerſally.

HEIGHTS, in the military Art, are the Eminences round a fortified Place, whereon the Armies uſually poſt themſelves. — The Enemy had ſeiz'd all the *Heights*: Appear'd on the *Heights*, &c.

HEIR, *Hæres*, in the Civil Law, he who ſucceeds to the whole Eſtate and Effects of another, whether by Right of Blood, or of Teſtament. See SUCCESSION.

The Inſtitution of an *Heir*, is a Circumſtance neceſſary to the Validity of a Teſtament. See TESTAMENT.

There are two principal Kinds of *Heirs*, *Apparent* and *Preſumptive*.

An *Heir Apparent*, is he on whom the Succeſſion is ſo ſettled, that he cannot be ſet aſide, without altering the Laws of Succeſſion.

*Heir Preſumptive*, See PRESUMPTIVE *Heir*.

The Word is form'd of the Latin *Hæres*, of the Verb *hærere*, to ſtick, remain faſt, be near, follow immediately, &c.

HEIR, in Common Law, is he who ſucceeds, by Right of Blood, to any Man's Lands, or Tenements in Fee.

For, nothing paſſes in Common Law, *Jure hæreditatis*, by Right of Inheritance, but *Fee*. See FEE.

By Common Law, therefore, a Man cannot be *Heir* to Goods or Chattels; for *Hæres dicitur ab hæreditate:* 'Tis the Inheritance denominates the *Heir*. See INHERITANCE.

Every *Heir*, having Lands by Deſcent, is bound by the Acts of his Anceſtors, if he be named; it being a Maxim, that *qui ſentit Commodum ſentire debet & Onus*.

Moveables, or Chattels immoveable, are given by Teſtament, to whom the Teſtator thinketh fit; otherwiſe they lye at the Diſpoſition of the Ordinary, to be diſtributed as he in Conſcience likes beſt.

*Laſt* HEIR, See LAST *Heir*.

HEIR *Loom*, in our Law-Books, ſignify ſuch Houſhold Furniture, as is not inventoried after the Owner's Deceaſe; but neceſſarily comes to the *Heir* along with the Houſe. See HEIR.

*Heir Loom* comprehends divers Implements; as Tables, Preſſes, Cup-boards, Bed-ſteads, Furnaces, Wainſcot, and ſuch like, which, in ſome Countries, have belonged to a Houſe for certain Deſcents, and are never inventoried after the Deceaſe of the Owner as Chattels are, but accrue by Cuſtom, not by common Law, to the *Heir*, with the Houſe it ſelf.

*Conſuetudo Hundredi de* Stretford, *in Com.* Oxon. *eſt quod hæredes tenementorum infra Hundredum predict. exiſten. poſt mortem Anteceſſorum ſuorum habebunt*, &c. *Principalium, Anglice an* Heir-Loome, *viz. De quodam genere Catallorum, utenſilium*, &c. *Optimum plauſtrum, optimam Carucam, optimum Ciphum*, &c. Coke on Littleton.

HELCESAITES, or ELCESAITES, a Sect of antient Hereticks, in the IId Century; denominated from their Leader *Elxai*, or *Helxeus*.

The *Helceſaites* condemn'd Virginity, and held it a Duty of Religion to marry: They taught that Jeſus Chriſt was a mere Creature, who appear'd at the Beginning of the World in the Figure of *Adam*, and afterwards under that of *Jeſus Chriſt*. That the Holy Spirit, which they ſuppoſed of the Female Sex, was the Siſter of Jeſus, &c. They eſtabliſh'd ſeven Witneſſes of an Oath, *viz.* Salt, Water, Earth, Bread, Heaven, Air and the Wind.

HELEPOLIS, in Antiquity, a military Machine, for the battering down the Walls of a Place beſieged.

The *Helepolis*, as deſcribed by *Diod. Siculus*, &c. appears to have been no more than the *Aries*, or battering Ram, with a Roof, or Covering over it, to prevent its being ſet on Fire, as alſo to ſcreen the Men who work'd it. See ARIES.

Some will have it a Combination of two or three battering Rams, moving on large ſtrong Wheels, roofed over, and cover'd with raw or wet Skins. It had ſeveral Iron Points, or Heads, wherewith the Execution was done; form'd much like the Thunderbolts which Painters repreſent. Within, was a great Number of Soldiers, who drove it with Force of Arm and by Means of Ropes, violently againſt the Wall where the Breach was intended.

Others, will have *Helepolis* a generical Name, comprehending all the Machines uſed by the Antients in the beſieging of Towns; as, among us, the Name *Artillery* includes all the Sorts of Fire Arms. — But this Opinion is chiefly founded on the Origin of the Name, and does by no Means ſuit with thoſe minute Deſcriptions given of the *Helepolis* in the antient Writers.

The Word is *Greek*, ἑλέπολις, compounded of the Words ἑλεῖν, *to take*, and πόλις, *City*.

The Invention of the *Helepolis*, and divers other military Machines, is aſcribed to *Demetrius*, which, with the great Number of Cities he took thereby, gave him the Denomination of *Poliorcetes*, or City Taker.

HELIACA, in Antiquity, Sacrifices, and other Solemnities, perform'd in Honour of the *Sun*; whom the *Greeks* call *Helios*, ἥλιος. See SUN, CIRCUS, &c.

HELIACAL, in Aſtronomy. — The HELIACAL *Riſing* of a Star, Planet, &c. is its iſſuing, or emerging out of the Rays and Luſtre of the Sun, wherein it was before hid; whether this be owing to the Receſs of the Sun from the Star, or of the Star from the Sun. See RISING.

HELIACAL *Setting*, is its entering or immerging into the Sun's Rays, and ſo becoming inconſpicuous by the ſuperior Light of that Luminary. See SETTING.

Or, a Star *riſes Heliacally*, when after it has been in Conjunction with the Sun, and on that Account inviſible, it gets at ſuch a Diſtance from him, as to be ſeen in the Morning before the Sun's Riſing. — The ſame is ſaid to *ſet Heliacally*, when it approaches ſo near the Sun, as to be hid therein. So that, in Strictneſs, the *Heliacal* Riſing and Setting, are only an Apparition and Occultation. See OCCULTATION, &c.

The *Heliacal* Riſing of the Moon, happens when ſhe arrives at the Diſtance of 17 Degrees from the Sun; for the other Planets, 20 Degrees Diſtance is required: And for the Stars more or leſs, as they are greater or ſmaller. See MOON, PLANET and STAR.

*To find the* HELIACAL *Riſing and Setting by the Globe*. See GLOBE.

The Antients computed that a Star, between the Tropicks, would be forty Days ere it got clear of the Sun's Rays, and become conſpicuous again. *Heſiod* firſt made this Computation; and the reſt follow'd him. The Period comes very near to the Computation of the Moderns: For the Sun advancing nearly a Degree every Day, it will be 20 Days approaching thereto, from the *Heliacal* Setting of the Star; and 30 Days more withdrawing, till the *Heliacal* Riſing.

The Word is derived from the *Greek*, ἥλιος, *Sol*, Sun.

HELIASTES, in Antiquity, Officers, or Magiſtrates of *Athens*, conſtituting a Court of 500 Perſons, or Judges, who took Cognizance of Civil Matters.

The Court of *Heliaſtes* was one of the ſix Civil Juriſdictions of *Athens*; and that to which Matters of the greateſt Moment were uſually brought: So that it was held the moſt conſiderable of all the Civil Tribunals. The Delinquencies of the military Men were alſo brought before the *Heliaſtes*.

*Ulpian* gives us two Etymologies of the Word: Some, ſays he, derive it from ἥλιος, *Helios*, Sun; and hold it thus call'd by Reaſon they ſat in the open Air, in Sight of the Sun. *Ulpian* himſelf chuſes rather to derive *Heliaſtes* from Ἡλιαία, *Heliæa*, the Place where this Court, or Council was held; and that from ἀλίζω, *I aſſemble*, of ἅλις, *ſatis*, enough.

HELICE, in Aſtronomy, the ſame with *Urſa*. See URSA.

HELICOID *Parabola*, or the *Parabolic Spiral*, a Curve ariſing upon a Suppoſition of the Axis of the common *Apollonian Parabola's*, being bent round into the Periphery of a Circle. See PARABOLA.

The *Helicoid Parabola*, then, is a Line paſſing thro' the Extremities of the Ordinate, which now converge towards the Centre of the ſaid Circle.

Suppoſe, *e. gr.* the Axis of the common *Parabola* to be bent into the Periphery of the Circle B D M, *Tab. Conicks Fig.* 11; then, the Curve B F G N A, which paſſes thro' the Extremities of the Ordinates C F, and D G, which converge towards the Centre of the Circle A; conſtitutes what we call the *Helicoid*, or *Spiral Parabola*.

If the Arch B C, as an Abſciſſe, be called $x$, and the Part C F of the Radius, as an Ordinate to it, be call'd $y$; the Nature of this Curve will be expreſs'd by the Equation $lx = yy$. See CURVE and EQUATION.

HELIOCENTRIC, in Aſtronomy, is applied to Things which would appear ſo to the Eye, were it placed in the Centre of the Sun. See SUN.

The Word is compounded of ἥλιος, *Sun*, and κέντρον, *Centrum*.

HELIOCENTRIC *Latitude* of a Planet, is the Inclination of the Line drawn between the Centre of the Sun and the Centre of a Planet, to the Plane of the Ecliptic. See LATITUDE.

The *Heliocentric Latitude* of a Planet is thus determined. — If the Circle K L M, *Tab. Aſtronom. Fig.* 62. repreſent the Orbit of the Earth round the Sun, and the inner one A N B n be placed ſo, as to be inclined to the Plane of the other (for which Reaſon it appears in the Form of an Ellipſis) when the Planet is in N or n, (which Points are called its Nodes) it will appear in the Ecliptic, and ſo have no Latitude; if it move to P, then, being ſeen by the Sun, it will appear to decline from the Ecliptic, or to have Latitude; and the Inclination of the Line R P, to the Plane of the Ecliptic, is called the *Planet's Heliocentric Latitude*, and the Meaſure of it is the Angle P R q, ſuppoſing the Line P q, to be perpendicular to the Plane of the Ecliptic.

This *Heliocentric Latitude* will be continually increaſing, till it come to the Point A, which they call the Limit, or utmoſt Extent of it; and then it will decreaſe again, till

till it come to nothing in N; after which it will increaſe again till it come to B; and laſtly, be decreaſing again, till the Planet come to be in n, &c.

HELIOCENTRIC *Place* of a Planet, is the Place wherein the Planet would appear to be, if viewed from the Centre of the Sun: Or the Point of the Ecliptic, wherein a Planet view'd from the Sun, would appear to be. See PLACE.

The *Heliocentric Place*, therefore, coincides with the Longitude of a Planet view'd from the Sun. See LONGITUDE and PLANET.

HELIOCOMETES, a Phænomenon ſometimes obſerv'd at the ſetting of the Sun.

It was denominated *Heliocometes*, q. d. *Comet of the Sun*, by *Sturmius*, and *Pylen* who had ſeen it, in Regard it ſeems to make a Comet of the Sun, being a large Tail, or Column of Light fix'd, or hung to that Luminary, and dragging after it at his Setting, much in the Manner of the Tail of a Comet. See COMET.

In that obſerved by M. *Pylen* at *Gryphſwald*, March 15. 1702, at Five of the Clock in the Afternoon, the End which touched the Sun was only half the Sun's Diameter broad; but the other End, oppoſite to the Sun, much broader. Its Length was above ten Diameters of the Sun; and it moved in the ſame Track as the Sun. Its Colour was yellow next the Sun, and darker further off. It was only ſeen painted on the thinner, higher Clouds: A little Teleſcope eaſily diſcover'd that there was nothing of it on the thicker, and lower Clouds; tho' the naked Eye could not diſcover ſo much. It laſted, in its full Vigour, the Space of an Hour, and then gradually diminiſh'd.

HELIOSCOPE, in Opticks, a Sort of Teleſcope, peculiarly fitted for viewing and obſerving the Sun, without doing Prejudice to the Eye. See TELESCOPE.

*Helioſcopes* are neceſſary in viewing the Phænomena of the Sun; as his Spots, Eclipſes, &c. See SUN, SPOT, ECLIPSE, &c.

There are various Apparatus's of this Kind. —

As coloured Glaſſes are found to diminiſh the Force of the Sun's Rays; to make a *Helioſcope*, 'tis enough that both the Object Glaſs, and the Eye Glaſs of the Teleſcope, be of colour'd Glaſs; the firſt, *e. gr.* of Red, and the latter Green.

But, as there is a Neceſſity for the Glaſſes to be very tranſparent, and equally colour'd; which rarely happens: *Hevelius* chuſes rather to uſe two plain coloured Glaſſes, with a Piece of Paper between, either tied, or cemented together, and applied before the Eye Glaſs.

Dr. *Hook*, in an expreſs Treatiſe on *Helioſcopes*, recommends four reflecting Glaſſes placed in the Tube; by theſe, he obſerves, the Force of the Rays will be ſo weaken'd, as only to ſtrike the Eye with a 256*th* Part of their Force: And this *Helioſcope* he prefers to all others.

M. *Huygen*'s Method is much eaſier: — He only blackens the inſide of the Eye Glaſs of the Teleſcope, by holding it over the Flame, or Smoak of a Lamp or Candle. Or, which is yet more commodious, blackens a Piece of plain Glaſs, and holds it between the Eye and the Object Glaſs: Or, which is beſt of all, claps the ſmoak'd Glaſs to another, with a Rim of thick Paper between, to keep the black from rubbing off, and fits the two into a Cell, or Frame, to be applied between the Eye and the Eye Glaſs.

The Word is compounded of ἥλιος, and σκέπτομαι, *video*, *ſpecto*, I ſee, view, conſider.

HELIOTROPE, HELIOTROPIUM, in Natural Hiſtory, a Plant popularly call'd the *Sun-flower*; as alſo *Tournſol*, or *Turnſol*. See TOURNSOL.

The Word is compounded of the *Greek*, ἥλιος, *Sun*, and τρέπω, *verto*, I turn.

HELIOTROPE, is alſo a pretious Stone, of a green Colour, ſtreak'd with red Veins. See PRETIOUS *Stone*.

*Pliny* ſays 'tis thus call'd, by Reaſon when caſt into a Veſſel of Water, the Sun's Rays falling thereon, ſeem to be of a Blood Colour; and that when out of the Water, it bears ſome Reſemblance of the Figure of the Sun; and is proper to obſerve Eclipſes of the Sun withal, as a *Helioſcope*.

The *Heliotrope* is alſo call'd *Oriental Jaſper*, on Account of its ruddy Spots. See JASPER.

It is found in the *Eaſt Indies*; as alſo in *Ethiopia*, *Germany*, *Bohemia*, &c. Some have aſcribed to it the Faculty of rendering People inviſible, like *Gyges*'s Ring.

HELISPHERICAL *Line*, in Navigation, denotes the *Rhumb Line*. See RHUMB *Line*.

It is thus call'd, becauſe, on the Globe, it winds round the Pole Helically, *i. e.* ſpirally, and ſtill comes nearer and nearer to it.

HELIX, in Geometry, a *Spiral Line*. See SPIRAL.

In Architecture, ſome Authors make a Difference between the *Helix* and *Spiral*.

A Stair-Caſe, according to *Daviler*, is in a *Helix*, or is *Heliacal*, when the Stairs, or Steps, wind round a Cylindrical Newel; whereas the Spiral winds round a Cone, and is continually approaching nearer and nearer its Axis. See STAIR-*Caſe*.

The Word is *Greek*, ἕλιξ, and literally ſignifies a *Wreath*, or *Winding*, of ἑλίσσω, *involvo*, I inviron.

HELIX, in Anatomy, is the whole Circuit or Extent of the Auricle, outwards: In Oppoſition to which the inner Protuberance anſwering thereto is call'd *Antheli*x. See AURICLE and EAR.

HELIX, is alſo uſed in Architecture, for the *Caulicoles*, or little Volutes, under the Flower of the *Corinthian* Capital; call'd alſo *Urillæ*. See CAULICOLES and URILLÆ.

HELL, *Tartarus*, *Infernus*, a Place of Puniſhment, wherein the Wicked are to receive the Reward of their Deeds, after this Life. — In this Senſe, the Word *Hell* ſtands oppoſed to *Heaven*. See HEAVEN.

Among the Antients, *Hell* was call'd Ταρταρος, Ταρταρα, *Tartarus*, *Tartara*; Ἅιδης, *Hades*, *Infernus*, *Inferna*, *Inferi*, &c. — The *Jews*, wanting a proper Name for it, call'd it *Gehenna*, or *Gehinnon*, from a Valley near *Jeruſalem*, wherein was a Tophet, or Place, where a Fire was perpetually kept. See GEHENNA.

Divines reduce the Torments of *Hell* to two Kinds; *Pœna Damni*, the Loſs and Privation of the Beatific Viſion; and *Pœna Senſus*, the Horrors of Darkneſs, with the continual Pains of Fire inextinguiſhable.

Moſt Nations and Religions have their *Hell*. — The *Hell* of the Poets is terrible enough: Witneſs the Puniſhment of *Tityus*, *Promotheus*, the *Danaids*, *Lapithæ*, *Phlegyas*, &c. deſcribed by *Ovid* in his *Metamorphoſis*. *Virgil*, after a Survey of *Hell*, Æneid. *Lib.* VI. declares, that had he a hundred Mouths and Tongues, they would not ſuffice to recount all the Plagues of the tortured. — The New Teſtament repreſents *Hell* as *a Lake of Fire and Brimſtone*; *a Worm which dies not*, &c. *Rev.* XX. 10, 14, &c. *Mark* IX. 43, &c. *Luke* XVI. 23, &c. — The *Caffres* are ſaid to admit 13 *Hells*, and 27 Paradiſes, where every Perſon finds a Place of Recompence ſuited to the Degree of Good or Evil he has done.

There are two principal Points of Controverſy among Writers touching *Hell*: The 1*ſt*, Whether there really be any *Local Hell*, any proper and ſpecific Place of Torment and Fire: The 2*d*, Whether the Torments of *Hell* are to be Eternal.

I. The Locality of *Hell*, and the Reality of the Fire thereof, has been controverted from the Time of *Origen*. — That Father, in his Treatiſe περὶ ἀρχῶν, interpreting the Scripture Account metaphorically; makes *Hell* to conſiſt not in external Puniſhments, but in the Conſcience of Sinners, the Senſe of their Guilt, and the Remembrance of their paſt Pleaſures. — St. *Auguſtine* mentions ſeveral of the ſame Opinion in his Time; and *Calvin*, and many of his Followers, have embraced it in ours.

The Retainers to the contrary Opinion, much the greateſt Part of Mankind, are divided as to the Situation, and other Circumſtances of this horrible Scene. — The *Greeks* after *Homer*, *Heſiod*, &c. conceiv'd *Hell*, Τοπον τινα ὑπο την γην μεγαν, &c. a large and dark Place under the Earth: Lucian, *de Luctu*, and *Euſtath.* in *Homer*.

Some of the *Romans* lodg'd it in ſubterranean Regions, directly under the Lake *Avernus*, in *Campania*; which they were led to from the Conſideration of the poiſonous Vapours emitted by that Lake. See AVERNUS. — Thro' a dark Cave, near this Lake, *Virgil* makes *Æneas* deſcend to *Hell*. See ELYSIUM.

Others placed *Hell* under *Tenarus*, a Promontary of *Laconia*, as being a dark frightful Place, beſet with thick Woods, out of which there was no finding a Paſſage. This Way, *Ovid* ſays, *Orpheus* deſcended to *Hell*. — Others fancied the River, or Fountain of *Styx* in *Arcadia*, the Spring-head of *Hell*, by Reaſon the Waters thereof were deadly.

But theſe are all to be conſider'd as only Fables of Poets; who, according to the Genius of their Art, allegoriſing and perſonifying every Thing, from the certain Death met withal in theſe Places, took Occaſion to repreſent them as ſo many Gates, or entering Places, into the other World. See FABLE, PERSONIFYING, &c.

The Primitive Chriſtians, conceiving the Earth a large extended Plane, and the Heavens an Arch drawn over the ſame; took *Hell* to be a Place in the Earth, the furtheſt Diſtant from the Heavens; ſo that their *Hell* was our Antipodes. See ANTIPODES.

Tertullian, *De Anima*, repreſents the Chriſtians of his Time, as believing *Hell* to be an Abyſs in the Centre of the Earth; which Opinion was chiefly founded on the Belief of Chriſt's Deſcent into *Hades*, Hell, *Matt.* XII. 40. See the following Article HELL.

The learned Mr. *Whiſton* has lately advanced a New Opinion. — According to him, the Comets are to be conceiv'd as ſo many *Hells*, appointed, in the Courſe of their Trajectories, or Orbits, alternately to carry the Damned into the Confines of the Sun, there to be ſcorch'd by his Flames; and then return 'em to ſtarve in the cold, dreary, dark Regions, beyond the Orb of *Saturn*. See COMET.

The Reverend and Orthodox Mr. *T. Swinden*, in an expreſs Inquiry into the *Nature and Place of Hell*, not contented with any of the Places hitherto aſſign'd; contends for a new one. — According to him, the Sun it ſelf is the *Local Hell*. See SUN.

This does not ſeem to be his own Diſcovery: — 'Tis probable he was led into the Opinion by that Paſſage in *Rev.* XVI. 8, 9. — Tho' it muſt be added, that *Pythagoras* ſeems to have had the like View, in that he places *Hell* in the Sphere of Fire; and that Sphere, in the middle of the Univerſe. — Add, that *Ariſtotle* mentions ſome of the *Italic*, or *Pythagoric* Schools, who placed the Sphere of Fire in the Sun, and even called it *Jupiter*'s Priſon. *De Cœlo*, L. II. See PYTHAGORIAN.

To make Way for his own Syſtem, Mr. *Swinden* undertakes to remove *Hell* out of the Centre of the Earth, from theſe two Conſiderations: — 1°. That a Fund of Fuel or Sulphur, ſufficient to maintain ſo furious and conſtant a Fire, cannot be there ſuppoſed: And 2°. That it muſt want the nitrous Particles in the Air, to ſuſtain and keep it alive. — And how, ſays he, can ſuch Fire be Eternal, when by Degrees the whole Subſtance of the Earth muſt be conſumed thereby?

It muſt not be forgot, however, that *Tertullian* had long ago obviated the former of theſe Difficulties, by making a Difference between *Arcanus*, and *Publicus Ignis*, ſecret and open Fire: The Nature of the firſt, according to him, is ſuch, as that it not only conſumes, but repairs what it preys upon. — The latter Difficulty is ſolved by St. *Auguſtine*, who alledges, that God ſupplies the Central Fire with Air, by a Miracle.

Mr. *Swinden*, however, proceeds to ſhew, that the Central Parts of the Earth are poſſeſs'd by Water, rather than Fire; which he confirms from what *Moſes* ſays of *Water under the Earth*, Exod. XX. from *Pſalms* XXIV. 2. and *Job* XXXI. 8. — As a further Proof, he alledges that there would want Room, in the Centre of the Earth, for ſuch an infinite Hoſt of Inhabitants, as the fallen Angels, and wicked Men.

*Drexelius*, we know, has fix'd the Dimenſions of *Hell* to a *German* Cubic Mile, and the Number of the Damned to an hundred Thouſand Millions: *De Damnator Carcer. & Rogo.* But Mr. *Swinden* thinks he needed not have been ſo ſparing in his Number, for that there might be found an hundred Times as many; and that they muſt neceſſarily be unſufferably crowded in any Space we could allow 'em in our Earth. — 'Tis impoſſible, he concludes, to ſtow ſuch a Multitude of Spirits in ſuch a ſcanty Apartment, without a Penetration of Dimenſions, which, he doubts, is not good Philoſophy, even in Reſpect of Spirits: If it be, he adds, 'he does not ſee why God ſhould prepare, *i. e.* 'make, a Priſon for 'em, when they might have been all 'crowded together into a Baker's Oven.' *p.* 206.

His Arguments for the Sun's being the *Local Hell*, are,

1°. Its Capacity: — No Body will deny the Sun ſpacious enough to receive all the damned conveniently; ſo that there will be no Want of Room. Nor will Fire be wanting, if we admit of Mr. *Swinden*'s Argument againſt *Ariſtotle*, whereby he demonſtrates that the Sun is hot, *p.* 208, and *ſeq.* — The Good Man is 'fill'd with Amaze-'ment to think what *Pyrenean* Mountains of Sulphur, 'how many *Atlantic* Oceans of ſcalding Bitumen, muſt 'go to maintain ſuch mighty Flames as thoſe of the 'Sun: Our *Ætna* and *Veſuvius* are mere Glow-Worms,' *p.* 137.

2°. Its Diſtance and Oppoſition to the *Empyreum*, which has uſually been look'd upon as the Local *Heaven*; ſuch Oppoſition is perfectly anſwerable to that Oppoſition in the Nature and Office of a Place of Angels and Devils, of Elect and Reprobate, of Glory and Horror; of Hallelujahs and Curſings: And the Diſtance quadrates well with *Dives* ſeeing *Abraham afar off*, &c. *the great Gulf between them*; which this Author takes to be the Solar Vortex.

3°. That the *Empyreum* is the higheſt, and the Sun the loweſt Place of the Creation; conſidering it as the Centre of our Syſtem: And that the Sun was the firſt Part of the viſible World created; which agrees with the Notion of its being primarily intended or prepared to receive the Angels, whoſe Fall he ſuppoſes to have immediately preceded the Creation.

4°. The early, and almoſt univerſal Idolatry paid the Sun; which ſuits well with the great Subtlety of that Spirit to entice Mankind to worſhip his Throne.

II. As to the Eternity of *Hell Torments*, we have *Origen*, again, at the Head of thoſe who deny it; it being the Doctrine of that Writer, that not only Men, but Devils themſelves, after a ſuitable Courſe of Puniſhment, anſwerable to their reſpective Crimes, ſhall be pardoned and reſtored to Heaven. Aug. *de Civit. Dei*, L. XXI. *C.* 17. — The chief Principle *Origen* went upon was this, that all Puniſhments are emendatory; applied only as painful Medicines, for the Recovery of the Patient's Health. Other Objections inſiſted on by modern Authors, are the Diſproportion between temporary Crimes, and eternal Puniſhments, *&c.*

The Scripture Phraſes for Eternity, as is obſerved by Archbiſhop *Tillotſon*, do not always import an infinite Duration: Thus, in the Old Teſtament, *For Ever*, often ſignifies only a long Time; particularly till the End of the *Jewiſh* Diſpenſation: Thus in the Epiſt. of *Jude*, V. 7. the Cities of *Sodom* and *Gomorrah* are ſaid to be ſet forth for an Example, ſuffering the Vengeance of *Eternal Fire*; that is, of a Fire that was not extinguiſhed till thoſe Cities were utterly conſumed. — So one Generation is ſaid to come, *&c.* but the Earth endureth *for Ever*.

In Effect, M. *le Clerc* notes, that there is no *Hebrew* Word which properly expreſſes Eternity: עולם *Holam*, only imports a Time whoſe Beginning or End is not known; and is accordingly uſed in a more or leſs extenſive Senſe, according to the Thing treated of.

Thus, when God ſays, concerning the *Jewiſh* Laws, that they muſt be obſerved לעולם *leholam*, for ever; we are to underſtand as long a Space as he ſhould think fit; or a Space whoſe End was unknown to the *Jews* before the coming of the Meſſiah. — All general Laws, and ſuch as do not regard particular Occaſions, are made *for ever*, whether it be expreſſed in thoſe Laws or not; which yet is not to be underſtood in ſuch a Manner, as if the Sovereign Power could no Way change them.

Archbiſhop *Tillotſon*, however, argues very ſtrenuouſly, that where *Hell Torments* are ſpoke of, the Words are to be underſtood in the ſtrict Senſe of infinite Duration; and what he eſteems a peremptory Deciſion of the Point is, that the Duration of the Puniſhment of the Wicked, is in the very ſame Sentence expreſſed by the very ſame Word which is uſed for the Duration of the Happineſs of the righteous, which all agree to be Eternal. 'Theſe,' ſpeaking of the Wicked, 'ſhall go away, εἰς κόλασιν αἰώνιον, into eternal Puniſhments, but the Righteous, εἰς ζωὴν αἰώνιον, into Life eternal.

The ſame great Author attempts to reconcile this Eternity with the Divine Juſtice, which had not been ſatisfactorily done before. — Some had urged that all Sin is infinite, in Reſpect of the Object it is committed againſt, *viz.* God, and therefore deſerves infinite Puniſhment: But, that Crimes ſhould be heightned by the Quality of the Object, to ſuch Degree, is abſurd; ſince the Evil and Demerit of all Sin muſt then be equal, inaſmuch as none can be more than infinite; and conſequently there can be no Foundation for Degrees of Puniſhment in the next Life. Add, that for the ſame Reaſon as the leaſt Sin againſt God is infinite, in Reſpect of its Object; the leaſt Puniſhment inflicted by God may be ſaid to be infinite, becauſe of its Author; and thus all Puniſhments from, as well as Sins againſt, God, would be equal.

Others have urged, that if the Wicked were to live for ever, they would ſin for ever: But this, ſays the Author, is mere Preſumption. Who can ſay, that if a Man lived ever ſo long, he would never repent? Beſides, the Juſtice of God only puniſhes Sins Men have committed, not thoſe they might poſſibly have done.

Others therefore urge that God gives Men the Choice of everlaſting Happineſs and Miſery; and that the Reward promiſed to Obedience, is equal to the Puniſhment threaten'd to Diſobedience. — To which it is anſwer'd, that tho' it be not contrary to Juſtice to exceed in Rewards, that being Matter of mere Favour; it may be ſo to exceed in Puniſhments.

It may be added, that Man in this Caſe has nothing to complain of, ſince he has only his Election. — But tho' this may ſuffice to ſilence the Sinner, and make him acknowledge his Deſtruction to be of himſelf, yet does not ſatisfie the Objection from the Diſproportion between the Crime and the Puniſhment. — All the Conſiderations, therefore, hitherto alledg'd, proving ineffectual; our great Author is left to ſolve the Difficulty himſelf.

In Order to this, he obſerves that the Meaſure of Penalties, with Reſpect to Crimes, is not only, nor always taken from the Quality and Degree of the Offence; much leſs from the Duration and Continuance of it; but from the Reaſons of Government, which require ſuch Penalties

as

as may ſecure the Obſervation of the Law, and deter Men from the Breach of it. — Among Men it is not reckon'd Injuſtice to puniſh Murther and many other Crimes which perhaps are committed in a Moment, with perpetual Loſs of Eſtate, or Liberty, or Life. So that the Objection of temporary Crimes being puniſhed with ſuch long Sufferings, is of no Force.

In Effect, what Proportion Crimes and Penalties are to bear to each other, is not ſo properly a Conſideration of Juſtice, as of Wiſdom and Prudence in the Law-giver, who may enforce his Laws with what Penalties he pleaſes, without any Impeachment of his Juſtice, which is out of the Queſtion.

The primary End of all Threatning is not Puniſhment, but the Prevention of it: God does not threaten that Men may ſin and be puniſhed; but that they may not ſin, and ſo eſcape: And therefore the higher the Threatning runs, the more Goodneſs there is in it.

After all, it is to be conſider'd, ſays the good Archbiſhop, that he who threatens, has ſtill the Power of Execution in his own Hands. — There is this Difference between Promiſes and Threatnings; that he who promiſes, paſſes over a Right to another, and thereby ſtands obliged to him in Juſtice, and Faithfulneſs to make good his Word; but it is otherwiſe in Threatnings; he that threatens, keeps the right of puniſhing ſtill with him, and is not obliged to execute what he threatened, any further than the Reaſons and Ends of Government require. — Thus, God abſolutely threaten'd the Deſtruction of *Nineveh*; and his peeviſh Prophet underſtood the Threatning to be abſolute, and was angry for being employ'd in a Meſſage that was not made good: But God underſtood his own Right, and did what he pleaſed, notwithſtanding the Threatning he denounced, and notwithſtanding *Jonah* was ſo touched in Point of Honour, that he had rather have periſhed, than *Nineveh* ſhould have eſcaped.

HELL, *Hades*, is ſometimes alſo uſed, in the Scripture-Style, for Death, or Burial; by Reaſon the *Hebrew* and *Greek* Names, ſignifie ſometimes the Place of the damn'd, and ſometimes ſimply the Grave. See TOMB, SEPULCHRE, *&c.*

Divines are divided about the Senſe of that Article in the Apoſtle's Creed, where our Saviour is ſaid to have been crucified, dead and buried, and that he deſcended into *Hell*, ἄδης. — Some underſtand this Deſcent into *Hell* as no other than a Deſcent into the Tomb, or Sepulchre; which others object againſt, in that his Burial is expreſly mention'd before; and maintain, that our Saviour's Soul actually deſcended into the ſubterraneous, or Local *Hell*; where he triumph'd over the Devils, *&c.*

The *Romaniſts* add, that he there comforted the Souls in Purgatory; and brought away the Spirits of the Patriarchs, and other juſt Perſons, departed till that Time, carrying them with them into Paradice. See PURGATORY, PATRIARCH, *&c.*

In the *Romiſh* Church, that Part of *Hell*, wherein thoſe were retained who died in the Mercy and Favour of God before our Saviour's Suffering, is call'd *Limbus*. See LIMBUS.

HELLEBORE, HELLEBORUS, HELLEBORUM, ELLEBORE, a medicinal Plant, reputed, among the Antients, a ſpecific for the Cure of Folly, Melancholy, and Madneſs.

There are two Sorts of *Hellebore*, the Black and White.

The *Black Hellebore*, *Helleborus Niger*, call'd alſo *Melampodium*, has a dark-coloured Root, furniſhed with Abundance of little Fibres; its Stem green, its Leaves dented, and its Flower of a Carnation Hue, not unlike the Roſe.

The *White Hellebore*, *Helleborus Albus*, call'd alſo *Veratrum*, to diſtinguiſh it from the former, has a whitiſh Root, beſet with Fibres of the ſame Colour, ſhooting out at a Sort of Bulb, not unlike the Head of an Onion. Its Leaves are broad; at firſt green, afterwards of a yellowiſh red. From the middle of the Leaves riſes a Stem, two or three Foot high, which ſeparates about the middle into Branches, each whereof bears a conſiderable Number of little Flowers like Stars, diſpoſed in Manner of a *Spica*, or Ear.

'Tis only the Roots are uſed, in each Kind; which are to be choſen large and fair, furniſh'd with big Filaments: Thoſe of the White, tan coloured without, and white within; and thoſe of the Black, blackiſh without, and browniſh within; dry, clean, and of a ſharp diſagreeable Taſt.

The Antients, as already obſerved, had a great Opinion of their Efficacy in Diſeaſes of the Mind; whence various Phraſes and Forms of ſpeaking among Writers: As *Caput Helleboro Dignum*. — He needs a double Doſe of *Hellebore*. — The Iſland of *Anticyra*, ſituate againſt Mount *Oeta*, was famous for the Growth and Uſe of this Plant, it being here in its greateſt Perfection, and uſed with the beſt Effect. — Whence the Proverb, *Naviget Anticyras*, ſend him a Voyage to *Anticyra*.

They act as Purgatives, but ſo very violently, both upwards and downwards, as frequently to cauſe Convulſions; whence the Uſe of them internally is now out of Doors, unleſs joyn'd with other Purgatives, and even Alterants to correct them; but are ſtill retain'd with Succeſs, for the Farcy in Horſes, and the Scab in Sheep.

The chief Uſe wherein the preſent Practice acknowledges white *Hellebore*, is in Form of a ſternutatory Powder, to clear and open the Head. See STERNUTATORY.

The black *Hellebore* uſed among us, Dr. *Quincy* ſuggeſts to be much inferior in Virtue to that of the Antients; for that it will not operate much by Stool, but is only a powerful Alterative, getting far into the Habit, and ſo promoting Sweat. See PURGATIVE.

He adds, that he has known it do Wonders in the Gout and Rheumatiſm, and that it rarely fails in Obſtructions of the Menſes.

HELLENISM, a Sort of *Greeciſm*; or a Phraſe accommodated to the Genius and Conſtruction of the *Greek* Tongue. See GREEK.

The Word *Helleniſm*, is diſtinguiſh'd from a *Greeciſm*, in that the former is not applied to Authors who have wrote in *Greek*: Their Language, it is evident, ſhould be a continual *Helleniſm*: But it is applied to Authors, who writing in ſome other Language, uſe Turns and Expreſſions peculiar to the *Greek*.

There are Abundance of *Helleniſms* in the Vulgate Verſion of the Scriptures. See VULGATE.

HELLENISTIC, or HELLENISTIC *Language*, that uſed among the *Helleniſts*. See HELLENISTS.

The Criticks are divided as to this Language. — Several of them, and among the reſt *Druſius* and *Scaliger*, take it to be the Language uſed among the *Grecian Jews*, They add, that 'tis in this Language the *Greek* Tranſlation of the Seventy was wrote; and even the Books of the New Teſtament compoſed. — M. *Simon* calls it the *Language of the Synagogue*.

It muſt not be imagined, that this was any peculiar Language diſtinct from all others; or even any peculiar Dialect of the *Greek*: 'Twas thus denominated, to ſhew that it was *Greek*, mix'd with *Hebraiciſms*, and *Syriaciſms*.

*Salmaſius* has oppoſed the common Opinion of the Learned touching the *Helleniſtic* Language; and has wrote two Volumes on the Subject. But his Diſputation turns chiefly on Words.

HELLENISTS, HELLENISTÆ, a Term occurring in the *Greek* Text of the New Teſtament, and which in the *Engliſh* Verſion is render'd *Grecians*.

The Criticks are divided as to the Signification of the Word. — *Oecumenius* in his *Scholia* on *Acts* VI. 1. obſerves, that it is not to be underſtood as ſignifying thoſe of the Religion of the *Greeks*, but thoſe who ſpoke *Greek*, τὸς ἑλλενιςὶ φθεγγομένους. The Authors of the Vulgate Verſion, indeed, render it, like ours, *Græci*; but the Meſſieurs *du Port Royal*, more accurately, *Juifs Grecs*, Greek or Grecian Jews; it being the *Jews* who ſpoke *Greek* that are here ſpoke of, and who are hereby diſtinguiſhed from the *Jews* call'd *Hebrews*; that is, who ſpoke the *Hebrew* Tongue of that Time. See HEBREW.

The *Helleniſts*, or *Grecian Jews*, were thoſe who lived in *Egypt*, and other Parts, where the *Greek* Tongue prevail'd. 'Tis to them we owe the *Greek* Verſion of the Old Teſtament, commonly call'd the *Septuagint*, or Seventy. See SEPTUAGINT.

*Salmaſius*, and *Voſſius*, are of a different Sentiment with Regard to the *Helleniſts*. The latter will only have them to be thoſe who followed the *Greek* Party. *Scaliger* is repreſented in the *Scaligerana*, as aſſerting the *Helleniſts* to be the *Jews* who lived in *Greece*, and who read the *Greek* Bible in their Synagogue.

HELM, in Navigation, a Horizontal Piece of Timber, ſerving to move another fitted into it at right Angles, call'd the *Rudder*. See RUDDER.

The *Helm*, or *Tiller of a Ship*, is a Beam, or Piece of Timber, faſten'd into the Rudder, and ſo coming forward into the Steerage; where he that ſtands at *Helm* ſteers the Ship. See STEERAGE, SAILING, *&c.*

To *A Lee the Helm*, ſignifies to put the *Helm* to the Lee-Side of the Ship. — To *Bear up the Helm*, is to let the Ship go before the Wind. — To *Port the Helm*, is to put the *Helm* over to the right Side of the Ship. — To *Right the Helm*, or *Helm the Midſhip*, is to keep it even with the Middle of the Ship. — To *Starboard the Helm*, is to put it to the right Side of the Ship.

HELM, in Chymiſtry, is the Head of a Still or Alembic; thus call'd, becauſe in Figure it ſomething reſembles a *Helm*, or Helmet. See ALEMBIC.

Hence, to bring a Thing *over the Helm*, is the ſame as to force it by Fire up to the Top of the Veſſel, that it

it may diſtil down into the Receiver by the Beak of the Head. See DISILLATION.

And when they ſay, ſuch a Thing cannot be brought over the *Helm*, they mean, that it is of too fixed a Nature to be raiſed into Vapour, by the Force of Fire. See FIXITY and VOLATILITY.

HELMET, or HELM, an antient Armour of Defence, wore by the Cavaliers, both in War, and in Tournaments, as a Cover and Defence of the Head; and ſtill uſed by Way of Creſt or Ornament, over the Shield or Coat of Arms. See CREST.

The *Helmet* is known by divers other Names, as the *Cask*, *Head-piece*, *Steel-Cap*, &c. See CASK.

The *Helmet* cover'd the Head and Face, only leaving an Aperture about the Eyes, ſecured by Bars, which ſerved as a Viſor.

The *Helmet* is bore in Armoury as a Mark of Nobility; and by the different Circumſtances of the bearing of the *Helmet*, are the different Degrees of Nobility indicated. In *France*, whence all our *Heraldry* originally came, the following Rules obtain.

A Perſon newly ennobled, or made a Gentleman, bears over his Eſcutcheon a *Helmet* of bright Iron or Steel; in Profile, or ſtanding ſideways; the Vizor quite cloſe.

A Gentleman of three Deſcents bears it a little open, but ſtill in Profile, ſhewing three Bars of the Vizor.

Antient Knights, *&c.* have it in Profile, but ſhewing five Bars; the Edges of Silver.

A Baron's *Helmet* is of Silver, the Edges gold; with ſeven Bars, neither quite in Profile, nor yet in Front; with a Coronet over it adorned with Pearls. See BARON.

Viſcounts and Earls formerly bore a Silver *Helmet*, with gold Edges; its Poſition like the former: But now they bear it quite fronting, with a Coronet over it. See VISCOUNT and EARL.

Marquiſſes bear a Silver *Helmet*, damaſk'd, fronting; with eleven Bars, and their Coronet. See MARQUIS, *&c.*

Dukes and Princes have their *Helmet*, damaſk'd, fronting, the Vizor almoſt open, and without Bars; with their Coronets over them. See DUKE, *&c.*

Laſtly, the *Helmets* of Kings and Princes, are all of Gold, damaſk'd, full fronting, and the Vizor quite open, and without Bars. See KING, *&c.*

The *Helmets* of Baſtards are to be turn'd to the left, to denote their Baſtardy. See BASTARD.

Among the *Engliſh Heralds*, theſe Laws are of late ſomewhat varied. — *Leigh* will have the *Helmet* in Profile, and cloſe, to belong to Knights: But all other Authors give it to Eſquires and Gentlemen.

To a Knight they aſſign the *Helmet* ſtanding right forward, and the Bearer a little open. See KNIGHT.

The *Helmet* in Profile, or poſited ſide-ways, and open, with Bars, belongs to a Nobleman under the Conditon of a Duke.

The *Helmet* right forward, and open, with many Bars, is aſſigned to Dukes, Princes, and Kings.

Thoſe turned ſidewiſe, are ſuppoſed to be giving Ear to the Commands of Superiors; and thoſe right forwards to be giving Orders with abſolute Authority.

Commonly there is but one *Helmet* in a Shield; but, ſometimes, two or three; if there be two, they muſt be placed facing each other: If three, the two Extremes muſt be looking towards that in the middle.

HELMONTIAN *Laudanum*. See LAUDANUM.

HELPS, in the Manage. — To teach a Horſe his Leſſons, there are ſeven *Helps*, or Aids, to be known. — Theſe are the *Voice*, *Rod*, *Bit*, or *Snaffle*; the *Calves* of the Legs, the *Stirrups*, the *Spur*, and the *Ground*. See AID.

The *Helps* are occaſionally turn'd into *Corrections*. See CORRECTION.

HELVETIC, ſomething that has a Relation to the *Switzers*, or *Swiſs* Cantons, who were antiently called *Helvetii*.

The *Helvetic* Body is the Republic of *Switzerland*, conſiſting of thirteen Cantons, which make ſo many particular Common-wealths. See CANTON.

By the Laws, and Cuſtoms of the *Helvetic* Body, all Differences between the ſeveral States, and Republicks are to be decided within themſelves, without the Intervention of any foreign Power.

HELVIDIANS, a Sect of antient Hereticks, denominated from their Leader *Helvidius*.

Their diſtinguiſhing Principle was, that *Mary* the Mother of *Jeſus* was not a Virgin; but had other Children by *Joſeph*.

HEMEROBAPTISTS, a Sect among the antient *Jews*, thus call'd from their waſhing and bathing every Day, in all Seaſons. See BAPTISM.

*Epiphanius*, who mentions this as the fourth Hereſy among the *Jews*, obſerves, that in other Points they had much the ſame Opinions as the *Scribes* and *Phariſees*; only they denied the Reſurrection of the Dead, in common with the *Sadducees*, and retain'd a few other Impieties of theſe laſt.

*D' Herbelot* ſpeaks of them as a Sect ſtill ſubſiſting: — The Diſciples of St. *John Baptiſt*, ſays he, who in the firſt Ages of the Church were called *Hemerobaptiſtes*, have conſtituted a Sect, or rather a Religion a-part, under the Name of *Mendai Iahia*. Theſe People, whom our Travellers call Chriſtians of St. *John Baptiſt*, by Reaſon their Baptiſm is very different from ours, have been confounded with *Sabæans*, from whom, however, they are very different. See SABÆANS.

HEMERODROMI, among the Antients, were Centinels, or Guards, appointed for the Security and Preſervation of Cities, and other Places. See GUARD.

They went out of the City every Morning, aſſoon as the Gates were open'd, and kept all Day patrolling round the Place, ſometimes making Excurſions further into the Country, to ſee that there were no Enemies laying in wait to ſurpriſe them.

The Word is *Greek*, ἡμερροδρόμοι, compounded of ἡμέρα, *Day*, and δρομος, *Courſe*, *running about*, &c.

HEMERODROMI, were alſo a Sort of *Couriers* among the Antients, who only travell'd one Day, and then deliver'd their Packets or Diſpatches, to a freſh Man, who run his Day; and ſo on, to the End of the Journey. See COURIER.

The *Greeks* had of theſe Sort of Couriers, which they learnt from the *Perſians*, the Inventors thereof, as appears from *Herodotus*. — *Auguſtus* had the ſame: At leaſt, he eſtabliſhed Couriers, who, if they did not relieve each other from Day to Day, yet did it from Space to Space, and that Space was not great.

HEMI, a Word uſed in the Compoſition of divers Terms. — It ſignifies the ſame with *Semi*, or *Demi*, viz. half; being an Abbreviature of ἥμισυς, *hemiſys*, which ſignifies the ſame. See SEMI and DEMI.

The *Greeks* retrench'd the laſt Syllable of the Word ἥμισυς, in the Compoſition of Words; and after their Example we have done ſo too, in moſt of the Compound Words borrowed from them.

HEMICRANIA, in Medicine, a Species of *Cephalalgia*, or *Head-Ach*; wherein one Hemiſphere, or half of the Head is affected. See CEPHALALGIA and HEAD-*Ach*.

HEMICYCLE, HEMICYCLIUM, is a *Semicircle*. See SEMICIRCLE.

HEMICYCLE, is particularly applied in Architecture, to Vaults in the Cradle-Form; and Arches and Frames, or Sweeps of Vaults, conſtituting a perfect Semi-circle. See VAULT.

To conſtruct an Arch of hewn Stone, they divide the *Hemicycle* into ſo many Vouſſoirs; taking Care to make them an uneven Number, that there be no Joynt in the middle, where the Key-Stone ſhould be. See KEY.

The *Hemicyclium* was alſo a Part of the *Orcheſtra* in the antient Theatre. — *Scaliger*, however, obſerves, it was no ſtanding Part of the *Orcheſtra*; being only uſed in Dramatic Pieces, where ſome Perſon was ſuppoſed to be arrived from Sea, as in *Plautus*'s Rudens.

The Antient's had alſo a Sort of Sun-Dial, call'd *Hemicyclium*. — It was a concave Semicircle, the upper End or Cuſp whereof look'd to the North.

There was a Style, or Gnomon, iſſuing from the middle of the *Hemicycle*, whereof that Point correſponding to the Centre of the *Hemicycle*, repreſented the Centre of the Earth: And its Shadow projected on the Concavity of the *Hemicycle* which repreſented the Space between one Tropic and another, the Sun's Declination, the Day of the Month, Hour of the Day, *&c.*

The Word is compounded of ἥμισυς, *dimidius*, and κυκλος, *Circle*.

HEMINA, a Veſſel uſed as a Meaſure among the antient *Romans*. See MEASURE.

The *Hemina* contain'd eight Ounces of Liquor; and was the 12th Part of the *Congius*. See CONGIUS.

The Word is form'd of the *Greek*, ἥμι, *half*. Several Authors have wrote expreſs Treatiſes on the *Roman Hemina*; particularly Meſſ. *Arnaud* and *Pelletier*.

St. *Benedict* preſcribes the *Hemina*, as the Portion or Quantity of Wine to be allowed the Religious of his Order at each Meal. Fa. *Mabillon*, who has wrote on the Subject, ſhews that this *Hemina* is a Meaſure peculiar to the *Benedictines*, as well as the Pound of Bread allowed the ſame Religious, which only conſiſted of fifteen Ounces. Fa. *Lancelot* has a Diſſertation to prove that the *Hemina* of Wine, preſcribed by St. *Benedict*, only amounts to a *Demi Septier* of *Paris* Meaſure: Others make it two *Septiers*; and others three.

HEMIOLUS,

HEMIOLUS, an antient Mathematical Term, occurring chiefly in Musical Writers. — It signifies the Ratio of two Things, whereof the one contains the other once and an half; as 3 : 2, or 15 : 10. See RATIO.

*Macrobius*, on the *Somnium Scipionis*, L. II. *C.* 1. observes, that the Concord, call'd in the antient Music *Diapente*, and in the Modern a *Fifth*, arises from this Proportion. See FIFTH.

The Word is compounded of ἥμι, *half*, and ὅλος, *whole*.

HEMIOPE, or HEMIOPUS, a Musical Instrument in Use among the Antients. See MUSIC.

The *Hemiopus* was a Flute with only three small Holes. See FLUTE.

The Word is compounded of ἥμι, and ὀπὴ, *Hole*.

HEMIPLEGIA, or HEMIPLEXIA, in Medicine, a Palsy of one whole Side of the Body. See PALSY and PARALYSIS.

The Word is compounded of ἥμι, *half*, and πλήσσω, *I strike*, or *seize*.

HEMISPHERE, HEMISPHERIUM, in Geometry, is one half of a Globe, or Sphere, when divided into two by a Plane passing thro' its Centre. See SPHERE.

If the Diameter of a Sphere be equal to the Distance of the two Eyes; and a right Line drawn from the Centre of the Sphere to the middle of that Distance, be perpendicular to the Line which joyns the Eyes: The Eyes making a Rotation on the Axis, or middle Point between them, will see the whole *Hemisphere*. — If the Distance of the Eyes be either greater or lesser than the Diameter of the Sphere; in making such Rotation they will view respectively more or less than a *Hemisphere*. See VISION.

The Writers in Opticks demonstrate, that a Glass *Hemisphere* unites parallel Rays at the Distance of a Diameter, and one third of a Diameter from the Pole of the Glass. See LENS, PARALLEL, *&c.*

The Centre of Gravity of a *Hemisphere* is five Eights of the Radius, distant from the Vertex. See CENTRE.

HEMISPHERE, in Astronomy, is particularly used for one half of the Mundane Sphere. See WORLD, ASTRONOMY, *&c.*

The Equator divides the Sphere into two equal Parts, call'd the *Northern* and *Southern Hemispheres*. See EQUATOR.

The *Northern Hemisphere*, is that half in whose Vertex is the North Pole. — Such is that represented by D P A, (*Tab. Astronomy Fig.* 52.) terminated by the Equator D A, and having the Pole P in its Zenith. See POLE and NORTH.

The *Southern Hemisphere*, is that other half D Q A, terminated by the Equator D A; and having the South Pole Q in its Zenith. See SOUTH.

The Horizon also divides the Sphere into two *Hemispheres*, *upper* and *lower*. See HORIZON.

The *Upper Hemisphere* is that half of the Mundane Sphere H Z R, terminated by the Horizon H R, and having the Zenith Z in its Vertex. See ZENITH.

The *Lower Hemisphere*, is that other half H N R, terminated by the Horizon H R, and having the Nadir N in its Vertex. See NADIR.

HEMISPHERE, is also used for a Map, or Projection, of half the terrestrial Globe, or half the Celestial Sphere, on a Plane. See MAP and PROJECTION.

*Hemispheres*, are frequently called *Planispheres*. See PLANISPHERE.

The Word is compounded of ἥμι, *half*, and σφαῖρα, *Sphere*, or *Globe*.

HEMISPHEROIDAL, in Geometry, something that approaches the Figure of a Hemisphere, but is not justly so. The Cacao opens when yellow and ripe, into two large *Hemispheroids*, three Foot in Diameter. *Freezier*.

HEMISTICH, in Poetry, half a Verse. See VERSE.

'Tis disputed, whether or no the *Hemistichs*, left in the *Æneid*, were left with Design; or whether they are owing to the Work's being unfinish'd.

In *English*, &c. the Common and *Alexandrine* Verses, require a Rest at the End of each *Hemistich*: Common Verses at the End of four Syllables; and *Alexandrine* at the End of six. See VERSE, PAUSE, REST, ALEXANDRINE, *&c.*

*Leonine* Verses rhime both at the End and at the *Hemistich*. See LEONINE, RHYME.

The Word is compounded of ἥμι, *half*, and στίχος, *Verse*.

HEMITONE, in the antient Music, was, what we now call an half Note or Tone. See NOTE and TONE.

HEMITRITÆUS, in Medicine, an irregular, intermitting Fever, which returns twice every Day; by which it is distinguish'd from the *Quotidian*, which only returns once in the Day. See FEVER.

The Word is compounded of ἥμι, *half*, and τεταρτῖος, *third*.

HEMLOCK, *Cicuta*, a Narcotic Plant; of some Use in Physic, in that Intention. See NARCOTIC.

There is a Plaster denominated from it in the College Dispensatory; consisting of the Juice of the Plant boiled up with Gums, *&c.*

The Common *Hemlock* is a Poison; tho' not of the violent Sort. — We have Instances of considerable Quantities being taken without the least Disorder. *Philosoph. Transact.* N°. 231. See POISON.

The *Cicuta* so much celebrated among the Antients, was the Juice of a Species of this Plant, call'd *Oenanthe Aquatica*. See CICUTA.

HEMP, a Plant of great Use in the Arts and Manufactories; furnishing Thread, Cloth, Cordage, *&c.* See THREAD, *&c.*

*Hemp*, by Naturalists call'd *Cannabis*, bears a near Analogy to Flax, *Linum*; both in respect of Form, Culture and Use. See FLAX.

The Plant is annual; that is, must be sown a-fresh every Year. — It rises quick, into a tall, slender Sort of Shrub, whose Stem however is hollow, and big enough to be charr'd, and thus used in the Composition of Gun-Powder. — Its Leaves arise by fives or sixes from the same Pedicle, and are a little jagged; yielding a strong Smell, which affects the Head. — Its Flowers grow grape-wise, opposite to each other, in Manner of a St. *Andrew*'s Cross; each consisting of five yellowish Stamina, incompass'd with a like Number of Petala, purple without, and white within. — Its Fruit, or Seed, is small and round, fill'd with a white solid Pulp; and grows on the Top of the Stem; having its Pedicles distinct from those of the Flowers. — Lastly, its Bark is a Tissue of Fibres, joyn'd together by a soft Matter, which easily rots it.

*Hemp* is of two Kinds; Male, popularly call'd *Karl*; and Female, or *Fimble*. — 'Tis the Male alone that produces Seed, to perpetuate the Kind: From the Seed of the Male arises both Male and Female.

It does not appear, that the Antients were acquainted with the Use of *Hemp*, in respect of the Thread it affords. *Pliny*, who speaks of the Plant in his *Natural History*, L. XX. *C.* 23. says not a Word of it; contenting himself with extolling the Virtues of its Stem, Leaves and Root. In Effect, what some Writers of the *Roman* Antiquities remark, *viz.* that the *Hemp*, necessary for the Use of War, was all stored up in two Cities of the *Western* Empire, *viz.* at *Ravenna* and *Vienna*, under the Direction of two Procurators, call'd *Procuratores Linificii*; must be understood of Flax.

The Seed is said to have the Faculty of abating Venereal Desires; and its Decoction in Milk, is recommended against the Jaundice, *&c.* — The Leaves are held good against Burns, and the Juice thereof against Deafness. — The Powder, or Flower, mix'd with any ordinary Liquor, is said to turn those who drink thereof, stupid.

The Culture and Management of *Hemp*, makes a considerable Article in Agriculture; there being divers Operations required therein, as *Pulling*, *Watering*, *Beating*, *Swingling*, &c.

The Plant is sown in *May*, in a warm, sandy, rich Soil; and is it self sufficient to destroy Weeds on any Ground. — About *Lammas* they begin to gather it; the Light or Female being first ripe. The Marks of its Maturity, are its Leaves turning yellow, and the Stalks white.

The Way of gathering, is to *pull* it up by the Roots; after which they bind it up in Handfuls or Bundles: The Male they let stand eight or ten Days in the Air, that the Seed may dry and ripen; after which they cut off the Heads, and beat or thrash them to get out the Seed. — They also beat the Female, to get out a thick fetid Sort of Dust, contain'd therein.

This done, they proceed to *water* or *rate* it, by laying it five or six Days in a Pool, or other stagnant Water, to rot the Bark. A Stream, or running Water, would do the Business much better, but that it infects the Water, and gives it a Quality very pernicious to the Health; for which Reason it is forbid to rate it in Waters used for domestic Purposes

When rotted, and taken out again, they *dry* it; then *Brake* or beat out the dry Bun, or Hex, which is the woody Part of the Stem, from the Rind or Bark which covers it, by crushing it in a tooth'd or nick'd Instrument call'd a *Brake*, beginning with the Root End.

When the Bun is sufficiently broke, and hangs by small Shivers, they *swingle* or beat them out with a Piece of Wood, edged for the Purpose. — Note, the *Karl Hemp* they sometimes break with the Fingers, and strip off the Rind, without the Help of the *Brake*, or *Swingle*.

The next Thing is to *beat* the *Hemp*; which is done either on a Block, or in a Trough, with an Hammer, or with Beetles; till it feel sufficiently soft and pliable. — It remains now to be *heckled*, or passed thro' divers Tooth-Instruments, not unlike the Wool-dressers Combs, of different Fineness: This, separating the shorter Tow from it, the rest is fit to be spun, wove, *&c.* for Thread,

Cloth, Cordage, or the like. See SPINNING, CORDAGE, &c.

HENDECAGON, in Geometry, a Figure which has eleven Sides, and as many Angles. See FIGURE and POLYGON.

In Fortification, it is taken for a Place defended by eleven Baſtions. See BASTION.

The Word is *Greek*, ἑνδεκαγωνον, compounded of ἑνδεκα, *eleven*, and γωνια, *Angle*.

HENDECASYLLABUS, in the *Greek* and *Latin* Poetry, a Verſe of eleven Syllables. See VERSE.

*Sapphic*, and *Phaleuc* Verſes, are *Hendecaſyllables*, or *Hendecaſyllabic*, E. gr.

Sap. *Jam ſatis terris nivis atque diræ*, &c.
Phal. *Paſſer mortuus eſt meæ Puellæ*, &c.

The Word is *Greek*, compounded of ἑνδεκα, *Eleven*, and συλλαμβανω, whence the Word Syllable is borrow'd.

HENOTICUM, in Church Hiſtory, a famous Edict of the Emperor *Zeno*, in the Vth Century, intended to reconcile, and reunite the *Eutychians* with the Catholicks. See EUTACHIAN.

It was procured of the Emperor, by Means of *Acacius* Patriarch of *Conſtantinople*, with the Aſſiſtance of the Friends of *Peter Mogus*.

The Sting of this Edict lies here, that it does not admit the Council of *Chalcedon*, like the other three, but rather ſeems to charge it with Errors. — It is in Form of a Letter, addreſs'd by *Zeno* to the Biſhops, Prieſts, Monks, and People of *Egypt* and *Lybia*. It was oppoſed by the Catholicks, and condemn'd in Form by Pope *Felix* III.

The Word is *Greek*, ἑνοπκὸν, q. d. *unitive*, *reconciliative*; of ἑνδω, *I unite*.

HEPAR, in Anatomy, the *Liver*. See LIVER.

HEPAR *Uterinum*, the ſame with *Placenta*. See PLACENTA.

HEPATIC, in Medicine and Anatomy, ſomething that relates to the *Liver*; which the *Greeks* call ἧπαρ, *Hepar*. See LIVER.

HEPATIC *Flux*. See FLUXUS *Hepaticus*.

HEPATIC *Vein*, is that otherwiſe call'd *Baſilica*. See BASILICA.

HEPATIC *Duct*, is a Veſſel more uſually call'd *Porus Bilarius*. See PORUS *Bilarius*.

HEPATI-*Cyſtic Ducts*. See CYST-*Hepatic Duct*.

HEPATIC *Aloes*, is that otherwiſe call'd *Aloes Succotrina*. See ALOES.

HEPATIC *Plexus*, See PLEXUS *Hepaticus*.

HEPATITES, *Liver Stone*, in Natural Hiſtory, a Sort of Stone, thus denominated from its Liver-Colour. See STONE.

HEPATITIS, in Medicine, an Inflammation of the *Liver*, with an Abſceſs or Impoſthume thereof. See INFLAMMATION and LIVER.

The *Hepatitis* bears a near Reſemblance to the *Pleuriſy*; only that its Symptoms are leſs intenſe. See PLEURISY.

It uſually either kills the Patient, or diſcuſſes, or ſuppurates gradually, or degenerates into a Schirrus.

HEPATOSCOPIA, the Art of divining, or diſcovering future, or hidden Things, by inſpecting the Entrails of Beaſts. See DIVINATION.

The Word is compounded of the *Greek* ἥπαρ, the Genitive of ἧπαρ, *Liver*, and σκοπέω, *I conſider*; the Liver being a Part principally regarded.

The *Romans* call'd it *Extiſpicina*. See EXTISPEX.

HEPTACHORD, in the antient Poetry. — *Heptachord Verſes*, were thoſe ſung or play'd on ſeven Chords; that is, in ſeven different Notes, or Tones; and probably on an Inſtrument with ſeven Strings.

The Word is compounded of ἑπτὰ, *ſeptem*, and χορδὴ, *Chord*, *String*.

HEPTAGON, in Geometry, a Figure conſiſting of ſeven Sides and ſeven Angles. See FIGURE.

If the Sides be all equal, it is call'd a *Regular Heptagon*. See REGULAR.

In Fortification, a Place ſtrengthen'd with ſeven Baſtions for its Defence, is call'd a *Heptagon*. See BASTION.

The Word is compounded of ἑπτὰ, *ſeptem*, ſeven, and γωνια, *Angle*.

HEPTAGONAL *Numbers*, are a Sort of Polygonal Numbers; wherein the Difference of the Terms of the correſponding arithmetical Progreſſion is five. See POLYGONAL *Number*.

One Property, among others, of theſe Numbers, is, that if they be multiplied by 40, and 9 added to the Product; the Sum is a ſquare Number. See NUMBER.

HEPTAMERIS, EPTAMERIS, literally ſignifies a ſeventh Part; being form'd of the *Greek*, ἑπτὰ, *ſeven*, and μερις, *Part* or *Portion*.

The Word is uſed by M. *Sauveur*, in his Principles of *Acouſticks*, for the ſeventh Part of a *Meris*; and in his *Syſtem*, for the 43d Part of the Octave. See OCTAVE.

HEPTAMERON, a Term literally implying *ſeven Days*; being compounded of ἑπτὰ, *ſeven*, and ἡμερα, *Day*.

It is chiefly uſed as a Title of certain Books, containing the Tranſactions of ſeven Days.

The *Heptameron* of *Margared de Valois*, Siſter to *Francis* I. of *France*, and Queen of *Navarre*, is a very ingenious Piece, in the Manner of *Boccace*'s *Decameron*.

HEPTARCHY, a Government compoſed of ſeven Perſons: Or a Country govern'd by ſeven Perſons; or divided into ſeven Kingdoms. See GOVERNMENT.

The *Saxon Heptarchy*, included all the *Southern* Part of *England*, which was canton'd out into ſeven petty Kingdoms. It ſubſiſted from the Year 428, to the Year 825, when King *Egbert* re-united them into one; and made the *Heptarchy* into a Monarchy. See MONARCHY.

The Word is compounded of the *Greek*, ἑπτὰ, *ſeven*, and ἀρχὴ, *Imperium*, Command, Rule.

HEPTATEUCH, in Matters of Literature, a Volume conſiſting of ſeven Books: Or a Work in ſeven Books.

The Term is chiefly applied to the firſt ſeven Books of the Old Teſtament, viz. *Geneſis*, *Exodus*, *Leviticus*, *Numbers*, *Deuteronomy*, *Joſhua*, and *Judges*; that is, the five Books of *Moſes* called the *Pentateuch*; and the two following ones, which are uſually joyn'd therewith. See PENTATEUCH.

The Word is compoſed of ἑπτὰ, *ſeven*, and τευχομαι, *I do*, *I work*; whence τευχος, *a Work*, *Book*, and ἑπτάτευχος, *Heptateuch*, a Work of ſeven Parts; or ſeven different Works joyn'd in one Volume.

HEPHTHEMIMERES, in the *Greek* and *Latin* Poetry, a Sort of Verſe conſiſting of three Feet, and a Syllable; that is, of ſeven half Feet. See VERSE, FOOT, &c.

Such are moſt of the Verſes in *Anacreon*.

Θέλω | λέγειν | Ατει | δας,
Θέλω | οδε κάδ | μον ἀ | δεῖν, &c.

And that of *Ariſtophanes* in his *Plutus*:

Ἐ πεδε μητει χοῖρι.

They are alſo call'd *Trimetri Catalectici*.

HEPHTHEMIMERES, or HEPHTHEMIMERIDE, is alſo a *Cæſura*, after the third Foot, that is, in the ſeventh half Foot. See CÆSURA.

'Tis a Rule, that this Syllable, tho' it be ſhort in it ſelf, muſt be made long, on Account of the *Cæſura*, or to make it an *Hephthemimeres*: As in that Verſe of *Virgil*.

*Et furiis agitatus Amor, & conſcia Virtus.*

It may be added, that the *Cæſura* is not to be on the fifth Foot, as it is in the Verſe which Dr. *Harris* gives us for an Example,

*Ille latus niveum molli fultus Hyacintho.*

This is not a *Hepthemimeres Cæſura*, but a *Hennea-mimeres*, i. e. of nine half Feet.

The Word is *Greek*, Ἑφθεμιμερὴς, compoſed of Ἑπτὰ, *ſeven*, ἡμισυς, *half*, and μερος, *Parts*.

HERACLEONITES, antient Hereticks, of the Party of the *Gnoſticks*; thus called from their Leader, *Heracleon*. See GNOSTICKS.

S. *Epiphanius*, Hær. 36. is very ample on this Hereſy. He repreſents *Heracleon* as one who had reform'd the Theology of the *Gnoſticks* in many Points; tho', at Bottom, he had retain'd the principal Articles thereof. He refined on the ordinary Interpretations of Abundance of Texts of Scripture; and even alter'd the Words of ſome to make them conſiſt with his own Notions.

For Example, he maintain'd, that by thoſe Words of St. John, *all Things were made by him*, is not to be underſtood the Univerſe, and all that is good therein: The Univerſe, which he calls *Æon*, was not made by the Word, but was made before him. And to ſupport this Conſtruction, he added to thoſe Words of St. John, *without him nothing was made*, thoſe other Words *of Things in the World*.

He diſtinguiſhed two Kinds of Worlds; the one Divine, the other Corruptible; and reſtrained the Word πάντα, *all Things*, to this laſt. He held that the Word did not create the World immediately, and of himſelf, but only gave Occaſion to the *Demiurgos* to do it.

The *Heracleonites*, after the Example of their Maſter, annull'd all the antient Prophecies; holding, that St. *John* was really the Voice that proclaimed and pointed out the Meſſiah, but that the Prophecies were only empty Sounds, and ſignified nothing. — They held themſelves ſuperior in Point of Knowledge to the Apoſtles; and on that footing dared to advance the moſt extravagant Paradoxes, on Pretence of explain-

explaining Scripture in a ſublime, elevated Manner. They were ſo fond of theſe Myſtic Interpretations, that *Origen*, tho' a Stickler that Way himſelf, was obliged to reproach *Heracleon* with his abuſing Scripture by that Means. See PROPHECY, ALLEGORY, &c.

HERACLIDES, in Antiquity, the Deſcendants of *Hercules*; whom the *Greeks* called Ἡρακλῆς, *Heracles*.

The *Heraclides* were expell'd from *Peloponneſus*, by *Euriſtheus* King of *Mycenæ*, after the Death of *Hercules*.

The Return of the *Heraclides* into *Peloponneſus*, is a celebrated Epocha in the antient Chronology; tho' the Time when it happen'd is differently aſſign'd, by reaſon Authors miſtake the divers Attempts which they made to return, for the Return it ſelf. The firſt Attempt was 20 Years before the taking of *Troy*: The ſecond, was 100 Years later, or 80 Years after the taking of *Troy*. This laſt is ſuppoſed to have ſucceeded; at leaſt, according to *Petavius*, who mentions only theſe two. *Rat. Temp.* P. I. *L.* I. C. 12. and *Doctr. Temp.* L. IX. and *C.* 30.

*Scaliger* diſtinguiſhes three Attempts; and fixes the firſt, 50 Years later than *Petavius*, viz. 30 Years after the taking of *Troy*. He ſays nothing of the ſecond, which was unfortunate like the firſt; but places the third in the ſame Year with *Petavius*. — This Return occaſion'd a World of Changes and Revolutions in the Affairs of *Greece*; ſcarce a State, or People, but were turn'd upſide down thereby. See EPOCHA.

The Return of the *Heraclides* is the Epocha of the Beginning of profane Hiſtory: All the Time that preceded it, is reputed fabulous. Accordingly, *Ephorus*, *Cumanus*, *Calliſthenes*, and *Theopompus*, only begin their Hiſtories from hence. See HISTORICAL.

HERALD, an Officer of Arms, antiently in great Repute, and poſſeſs'd of ſeveral conſiderable Functions, Rights and Privileges. See ARMS and ARMOURY.

Their principal Employment was to compoſe, or make out Coats of Arms, Genealogies, and Titles of Nobility. They were the Superintendants of military Exploits, and the Conſervators of the Honours of War. They had a Right to take away the Arms of ſuch as for Cowardice, Treaſon, &c. deſerv'd to be degraded. They had a Commiſſion to examine, and correct the Vices and Diſorders of the Nobles, and to exclude them from Juſts, Tournaments, &c. To them belong'd the correcting of all Uſurpations, and Abuſes relating to Crowns, Coronets, Caſks, Creſts, Supporters, &c. They took Cognizance of all Differences among the Nobles, with Reſpect to their Bearings, the Antiquity of their Families, Precedencies, &c. They went into the Countries to ſearch into the Grounds and Pretenſions of Nobility; and had a Right to open all Libraries, and to command all the antient Charters and Inſtruments in the Archives to be ſhown them. They had Admiſſion into all foreign Courts; where they were commiſſion'd to proclaim War, and Peace; and their Perſons were held ſacred as thoſe of Embaſſadors.

To them it belong'd to make Publication of Juſts and Tournaments; to call the People to them; to ſignify the Cartels; to mark the Ground, Liſt, or Place of Duel; to ſee fair play obſerv'd; and to divide the Sun between the two Parties. In the Army, they advertiſed the Cavaliers, and Captains, of the Day of Battle, and aſſiſted therein, before the Standard, retiring, after the firſt Onſet, to ſome Place of Eminence, there to obſerve who behaved beſt, and to give a faithful Report thereof to the King. They number'd the Dead, reliev'd the Enſigns, redemanded Priſoners, ſummon'd Places to ſurrender, and in Capitulations walk'd before the Governour of the Place, to ſecure and warrant his Perſon. They were the principal Arbitrators of the Diſtribution of the Spoils of the vanquiſh'd, and of military Rewards. They publiſh'd Victories; and gave Notifications thereof to foreign Courts. They convened the Eſtates of the Kingdom, aſſiſted at Royal Marriages, and frequently made the firſt Demand; officiated at ſolemn Feaſts, &c.

The Origin of *Heralds* is very antient. — *Stentor* is repreſented by *Homer* as *Herald* of the *Greeks*, who had a Voice louder than fifty Men together. The *Greeks* call'd them κήρυκες, and σημηνοφύλακες; and the *Romans*, *Feciales*. See FECIALES.

The *Romans* had a College of *Heralds*, appointed to decide whether a War were juſt or unjuſt; and to prevent its coming to open Hoſtilities, till all Means had been attempted for deciding the Difference in a pacific Way. See COLLEGE.

*Heralds*, or *Heralds at Arms*, have formerly been denominated *Dukes at Arms*, becauſe properly belonging to Dukes; as Kings at Arms, to Kings. See KING *at Arms*.

In *England*, we have ſix *Heralds*, viz. 1°. *Richmond*, 2°. *Lancaſter*, 3°. *Cheſter*, 4°. *Windſor*, 5°. *Somerſet*, 6°. *York*. Their Office is to wait at Court, to attend public Solemnities, proclaim War and Peace; look to the Regulation of the Bearings of Arms, ſearch Pedigrees, &c.

They were formerly created and chriſten'd by the King, who ſlowly pouring a gold Cup of Wine on their Head, gave them their *Herald's* Name: Now 'tis done by the Earl Marſhal. — They could not arrive at the Dignity of *Herald*, without having been ſeven Years Purſuivant: Nor could they quit the Function of *Herald*, but to be made King at Arms. See POURSUIVANT, &c.

The modern *Heralds*, i. e. thoſe we properly call *Heralds*, have loſt a good deal of the Diſtinction and Offices of the antient ones. What relates to the making out Arms, the rectifying of Abuſes therein, &c. is chiefly committed to the *Kings at Arms*.

And in the Army, Drums and Trumpets have ſucceeded to the Function of *Heralds*; being ſent by the Generals on the ſame Errands; and on that Account enjoying the ſame Rights and Privileges. Their Perſons are under the Protection of the Law of Nations, when they bear the Marks of their Office publickly, *i. e.* the Trumpeter his Trumpet, and the Drummer his Drum; in the ſame Manner as the *Herald* his Coat.

The ſix *Heralds*, with the three Kings at Arms, and the four Purſivants, are a *College*, or Corporation; erected into ſuch by Charter of *Richard* III. who granted them divers Privileges, as to be free from Subſidies, Tolls, and all troubleſome Offices. See COLLEGE *of Arms*.

Clarencieux, and Norroy King at Arms, are alſo call'd *Provincial Heralds*. See CLARENCIEUX, &c.

The Word *Herald*, according to *du Cange*, comes from the two *German* Words, *Here*, Army; and *helt*, or *held*, Servant; becauſe chiefly ſerving in the Army: Others, will have the two Words ſignify *Champion of the Army*, in Alluſion to their Office of denouncing War, proclaiming Peace, &c. — *Du Cange* adds, that they were call'd *Clarigarii* as well as *Heralds*.

*Borel* derives the Word from the Latin *Herus*, Maſter; *q. d.* one coming from his Maſter. Others from *Herhaut*, q. d. High-lord; others from *Herold*, which is the ſame with *Dominus Veteranus*: And others, laſtly, from *heerhoud*, q. d. faithful to his Lord, or the Army.

HERALDRY, the Art of Armoury, and Blazoning; or the Knowledge of what relates to the Bearing of Arms, and the Laws and Regulation thereof. See ARMS, ARMOURY, BLAZON, &c.

*Heraldry* likewiſe comprehends what relates to the Marſhalling of ſolemn Cavalcades, Proceſſions, and other Ceremonies at Coronations, Inſtallments, Creations of Peers, Funerals, Nuptials, &c. See HERALD.

HERB, a Name common to all Plants whoſe Stalks, or Stems, die away every Year, after their Seed is become ripe. See PLANT.

There are ſome *Herbs* whoſe Root periſhes with the Stem: And others, where the Root ſurvives the Stem by ſeveral Years. See ROOT and STEM.

Of the former, thoſe which come to Maturity the firſt Year, and after they have caſt their Seed, die away; are call'd *Annuals*: Such are *Wheat*, *Rye*, &c. See ANNUALS.

Thoſe which only bear Flowers and Fruit the ſecond Year, or even the third Year, and then periſh; are called *Biſannuals*: Such are the Garden *Angelica*, and ſome others.

*Herbs* whoſe Root does not periſh after they have ſhed their Seed, are call'd *Perennials*; ſuch are *Mint*, *Fennel*, &c. See PERENNIAL.

Of theſe, ſome keep their Leaves all the Year round, and are call'd *Ever-greens*; as the *Aſarabaca*, *yellow Violet*, &c. See EVER-GREEN.

The reſt loſe their Leaves, and continue bare, part of the Year; as *Fern*, *Colts-foot*, &c.

*Herbs* are alſo diſtinguiſhed into *Kitchin*, or *Sallet-Herbs*, and *Medicinal Herbs*.

*Sallet*-HERBS, *Pot*-HERBS, } See { SALLET. POT-*Herb*.

The Word *Herb* is form'd of the Latin *Herba*; which ſome derive from *Arvum*, Field: Others derive it from the *Greek*, φερβεῖν, *paſcere*, to feed; of φερβὴ, *Pabulum*. Of the Greek *Ferbe*, the *Latins* form'd *Ferba*; and of *Ferba*, Herba, after the Manner of the *Spaniards*, who always change the *f* at the Beginning of a Word into *h*. See F and H.

HERBAGE, a collective Name, comprehending all Kinds of *Herbs*. See HERB.

The antient Hermits liv'd altogether of *Herbage*. See HERMIT.

What makes the principal Difference in the Goodneſs of Butters and Cheeſes, is the Difference of *Herbage*. See BUTTER, &c.

HERBAGE, in Law, ſignifies the Paſture, or Fruits of the Earth, provided by Nature for the Bite or Mouth of Cattle. See PASTURE, &c.

The

The Word is alſo uſed for a Liberty, that a Man hath to feed his Cattle in another Man's Ground; as, in the Foreſt. — *Occurrit frequens* (ſays *Spelman*) *pro jure depaſcendi alienum ſolum, ut in foreſtis.*

HERBAL, a Book which treats of Plants; or deſcribes the Figure, Genus, Species, Properties, Virtues, *&c.* of *Herbs*, Trees, Seeds, *&c.* See PLANT.

Such are *Gerard*'s *Herbal*, *Parkinſon*'s *Herbal*, &c.

HERBAL, is alſo uſed for a Set or Collection of Specimens of the ſeveral Kinds of Plants, dried and preſerved in the Leaves of a Book.

In the *Philoſophical Tranſactions*, we have a Method deſcribed for preſerving Specimens for ſuch an *Herbal*. — The Flowers, Leaves, *&c.* gather'd perfectly ripe, and in their true Colours, are to be ſpread on brown Paper, with the Parts all diſplay'd as diſtinctly as may be. If the Stem, or the Body of the Flower, *&c.* be thick, one half to be pared away to make it lye flat. Over them is to be ſpread another brown Paper; and the whole to be put between two Iron Plates, ſcrew'd tight together, and thus baked in an Oven for two Hours. When taken out, waſh them over with a Mixture of Brandy and *Aqua fortis*, and lay them on freſh Paper to dry. Laſtly, lick over the Backſides with a Bruſh dipped in a Diſſolution of *Gum Dragon*, to make them ſtick; and lay them in the Paper Book, where they will lye faſt, and always look freſh.

HERBALIST, or HERBORIST, a Perſon knowing in Plants; the ſame with *Botaniſt*. See BOTANIST.

HERBE, in the Academies, a Reward, or ſome good Stuff given to a Horſe that has work'd well in the Manage. See HORSE, *&c.*

HERBENGER, or HARBINGER, an Officer of the King's Court, who allots the Noblemen, and thoſe of the Houſhold their Lodging. See HARBINGER.

HERCULES, in Aſtronomy, one of the Conſtellations of the Northern Hemiſphere. See CONSTELLATION.

The Stars in the Conſtellation *Hercules*, in *Ptolomy*'s Catalogue are 29: In *Tycho*'s 28: In the *Britannic* Catalogue 95. The Longitudes, Latitudes, Magnitudes, *&c.* whereof are as follow.

*Stars in the Conſtellation* HERCULES. ΕΝ ΓΟΝΑΣΙΝ.

HERCULEUS *Morbus*, in Medicine, the Epilepſy; thus call'd, from the Terror of its Attacks, and the Difficulty of Cure. See EPILEPSY.

HERD, among Hunters, a Company, or Aſſemblage, of black or fallow Beaſts; in Contradiſtinction to *Flock*. See FLOCK.

A *Herd* of Deer from ſuch a Foreſt. — The Deer begin to *herd* in the Month of *December*. See GAME, HUNTING, *&c.*

In the Hunting Language, there are various Terms uſed for Companies of the divers Kinds of Game. — We ſay a *Herd* of Harts or Bucks; a *Bevy* of Roes; a *Rout* of Wolves; a *Richeſs* of Martens, *&c.* See HUNTING.

The Word is form'd of the antient Gauliſh *Hordage*, ſignifying the ſame Thing.

HERDEWICH, HERDEWIC, HERDEWYCH, in our antient Law-Books, a Grange, or Place for Cattle and Husbandry. See GRANGE.

*Et unam* Herdewycham *apud Hethcotum in Peco*, &c. Mon. Angl.

HEREBOTE, the King's Edict antiently iſſued to command his Subjects into the Field.

The Word is form'd of the Saxon *Here*, Exercitus, *Army*; and *Bode*, a *Meſſenger*.

HEREDITAMENTS, in Law, are ſuch Things immoveable, as a Man may have to himſelf and his Heirs, by Way of Inheritance; or which, not being otherwiſe bequeathed, do naturally, and of Courſe, deſcend to him,

and

and his next Heir of Blood, and fall not within the Compaſs of an Executor, or Adminiſtrator, as Chattels do. See HEIR, HEIR-*Lome*, &c.

It is a Word of a large Extent; and much uſed in Conveyances; for by the Grant of *Hereditaments*, Iſles, Seigniories, Mannours, Houſes, and Lands of all Sorts, Charters, Rents, Services, Advowſons, Conveyances, and whatever may be inherited, will paſs. See CONVEYANCE.

HEREDITARY, ſomething appropriated to a Family, or belonging thereto by Right of Succeſſion from Heir, to Heir. See HEIR.

Of Monarchies, ſome are *Hereditary*, others *Elective*: Of *Hereditary* Monarchies, ſome only deſcend to the Heirs Male, as in *France*; others to the next of Blood, whether Male or Female, as in *England*, *Spain*, &c. See MONARCHY and ELECTIVE.

The Dominions of the Emperor are diſtinguiſhed into *Hereditary*, which are thoſe he derives from his Anceſtors by Right of Blood and Inheritance; and thoſe he enjoys in Quality of Emperor, by Virtue of his Election.

HEREDITARY, is alſo applied to Offices, and Honours affected or attach'd to certain Families. — The Offices of Lord Great Chamberlain, and Earl Marſhal, are *Hereditary*, in the Families of the *Howards*, and *Lindſeys*. See MARSHAL and CHAMBERLAIN.

'Tis of no very long Date, that the Dignities of Duke, Count, &c. are *Hereditary*. See DUKE, COUNT, &c.

The Canon Law has taken all poſſible Precautions to prevent Benefices from becoming *Hereditary*. See BENEFICE.

HEREDITARY, is alſo uſed figuratively for Good or Evil Qualities, Habitudes, &c. capable of being tranſmitted, by Blood, from Father to Son.

The Gout, King's-Evil, Madneſs, &c. are *Hereditary* Diſeaſes, *i. e.* are tranſmitted from the Parents in the Stamen, or firſt Rudiments of the Fœtus. And ſuch, probably, is the Origin of numerous other Chronic Diſeaſes.

HEREDITARY *Right*, is a Right, or Privilege, in Virtue whereof a Perſon ſucceeds to the Effects of his Anceſtors.

The Nonjurors, &c. hold *Hereditary Right* to be *divine Right*, i. e. of God's own Appointment, and conſequently indiſpenſible. They ſtickle for the Obligation of *Hereditary Right*; in Favour of the Deſcendants of King *James* II. See JACOBITES.

HERESIARCH, or *Arch-Heretic*; the Founder or Inventor of a Hereſy; or the Chief, and Ring-leader of a Sect of *Hereticks*. See HERETIC.

Thus *Arius*, and *Socinus*, are called *Hereſiarchs*; as being the Founders and Patriarchs of the *Arians* and *Socinians*. See ARIANS and SOCINIANS.

*Simon Magus* is recorded as the firſt *Hereſiarch* under the New Law. See SIMONIANS.

The Word is compounded of αἵρεσις, *Hæreſis*, Hereſy; and ἀρχὸς, *Princeps*, Prince, Chief.

HERESY, an Error in ſome Point of Chriſtian Faith, attended with Obſtinacy in the Defence thereof. See ERROR and HETERODOXY.

'Tis properly the Obſtinacy that conſtitutes the Character of *Hereſy*; not the Error. — When a Man is humble, and ingenuous; ready and deſirous to receive further Light and Inſtruction; gives every Thing urged againſt him its due Weight, he is not guilty of *Hereſy*. — *Errare poſſum*; Hæreticus *eſſe nolo*, is a celebrated Maxim of St. *Auguſtine*.

*Tertullian*, in his Treatiſe *of Preſcriptions*, defines *Hereſy* by *Choice*; agreeably to the Etymology of the Word. — A Heretic, in this Senſe, is one who of his own Choice, on his own Bottom, invents, propoſes, or even embraces, any new Dogma, or Article of Faith.

The Word is form'd of the *Greek*, αἵρεσις, which, among the Antients, had none of that odious Signification attach'd to it by Eccleſiaſtical Writers. It only ſignified a *peculiar Opinion*, or *Dogma*. — In this Senſe they ſaid, the *Hereſy* of the Stoicks, of the Peripateticks, &c. meaning their Sect, their Syſtem, &c.

HERESY, is ſometimes alſo uſed, by Extenſion, for a Propoſition that is notoriouſly falſe in ſome other Science beſides Theology.

Thus, it is a *Hereſy* in Morals, to ſay that a Man muſt be grateful. It is a *Hereſy* in Geometry, to ſay that two Triangles, whoſe Angles are ſimilar, are not proportional.

HERETIC, a Perſon who maintains or adheres to a *Hereſy*. See HERESY.

A real *Heretic*, is properly he who maintains a falſe Opinion out of a Spirit of Obſtinacy, Faction, or Hypocriſy. — A *Heretic* makes Profeſſion of Chriſtianity, by which he is diſtinguiſhed from an *Infidel*, *Jew*, and *Idolater*.

A Man does not become a *Heretic* by doing a Thing condemn'd, or forbidden by the Goſpel, and, of Conſequence, repugnant to the Chriſtian Faith; but by a ſtiff Adherence to an Opinion oppoſite to ſome Article of the Chriſtian Faith, whether it regard Speculation or Practice.

The Sects of *Hereticks* who have diſturbed the Church are innumerable. See SECT.

The Emperor *Maximus*, who uſurped the Throne from *Gratian*, was the firſt that decreed the Pains of Death to *Hereticks*.

By our own Law, *Hereticks* were antiently to be burnt. And there was a Writ, *de Hæretico comburendo*, which lay for that Purpoſe; but it is taken away by Stat. *Car.* II. See HÆRETICO, &c.

HERISSON, or HERSILLON, in Fortification, a Beam armed with Iron Spikes, the Points whereof are turn'd outward; ſupported by a Pivot, on which it turns; and ſerving as a Barrier to block up a Paſſage.

*Heriſſons* are frequently placed before Gates; eſpecially the Wicket Doors of a Town, or Fortreſs, to ſecure thoſe Paſſages, which muſt of Neceſſity be frequently opened and ſhut.

HERITAGE. See INHERITANCE.

HERMAPHRODITE, a Perſon who has both the Sexes; or the genital Parts both of Male, and Female. See SEX, &c.

The *Greeks* call them *Androgynes*, q. d. *Men-women*. See ANDROGYNOUS.

Naturaliſts diſtinguiſh four Kinds of *Hermaphrodites*: Whereof the laſt are the perfect *Hermaphrodites*, or thoſe which have the *Pudenda* of both Kinds; but theſe are rarely found. 'Tis affirm'd, however, that there were two ſuch *Hermaphrodites* married to each other; and that each begot Children upon the other. See various Inſtances of *Hermaphrodites* in a Diſſertation of M. *Loffhagon* in the *Nouv. Lit. Mar. Balth.* 1704. p. 105. Bauhin, *de Hermaphrod.* Ludov. Bonaciot. *Tract. de Part. Form.* C. 9. Aldrovand. *De Monſtr.* C. 1. Paul Zacch. *Quæſt. Med. Legal.* T. I. *L.* VII. §. 8.

Others diſpute all that has been ſaid of the Subject; maintaining, that the ill Conformation of the Parts of Generation, the Teſticles being detain'd or conceal'd in Men, and the Clitoris longer than ordinary in Women; have been the ſole Occaſion of the Miſtake.

Dr. *Quincy* thinks, that the frequent Uſe of Laſcivious, Frictious, and Titillations, may contribute greatly to the Extention of the Clitoris; and make it paſs with the Ignorant for a Penis. This, he adds, was the Caſe in the celebrated Inſtance of the two Nuns at *Rome*, who after they had lived Women for many Years, became Men: But on what Grounds we do not know.

'The extraordinary Size of the Clitoris, ſays Dr. *Drake*, 'and its Propendance, ſometimes, out of the Body in In-'fants, makes the Women miſtake ſuch Children for that 'Sort of Monſters call'd *Hermaphrodites*. Of this Kind, 'I had one brought to me, the Clitoris whereof hung out 'of the Body ſo far, at about three Years old, that it re-'ſembled very much a Penis; but it wanted a Perfora-'tion; and inſtead of that, juſt behind it, the Urine 'iſſued at a Hole, which was nothing elſe but the Corner 'of the Rima; the Clitoris filling all the reſt of the 'Orifice: So that the Parents miſtook it for a Boy, 'and as ſuch chriſten'd it; but the Neighbours called it 'an *Hermaphrodite*. Anthropol. *p.* 148.

But we have an authentic Account, in the Hiſtory of the Royal Academy of Sciences, of a real *Hermaphrodite*; which may put the Point out of Queſtion. — The Perſon had all the external Characters of a Woman in the Face, Neck, Breaſts, Hips, and *Pudendum*; and accordingly had been baptized in that Quality, and named *Margaret*; but had withal the real Characters of a Man, and a very able one. — The *Pudendum Muliebre* appear'd very well, but was not above two Fingers breadth deep; out of the middle of the *Rima*, or Aperture thereof, there hung a pretty bulky *Penis*, which in an Erection came out eight Inches. The *Penis* was well form'd, except that it had no Prepuce, nor was accompanied with any apparent Teſticles. The Urine and Seed came out at it as in Men; and what was very extraordinary, the *Menſes* flow'd thro' the ſame, and this very regularly once a Month.

The Perſon was brought Sick to the Hoſpital of St. *James* at *Thouloufe*; and the Account was given by M. *Veay*, Surgeon of the ſame Hoſpital; who adds, that having ſhewn the whole to ſeveral Phyſicians, and the Vicars General, they order'd the Party to take the Name and Habit of a Man; it being apparent, that he could do the Office of a Man, but not that of a Woman.

The Interpreters, and Commentators on the Civil Law, hold, that an *Hermaphrodite*, who has choſe the Male Sex, as that which prevails moſt in him; may no longer do the Office of a Woman. And the *French* Lawyers produce an Arret of the Parliament of *Paris*, whereby a young *Hermaphrodite* was condemn'd to be burnt on that very Account.

At *Athens*, and *Rome*, they look'd on *Hermaphrodites* as ominous Monſters, and precipitated them into the Sea; as we are inform'd by *Alexander ab Alexandro*.

*S. de Rennefort* relates, that at *Surat* there are Abundance of *Hermaphrodites*; who, with Women's Cloaths, wear Men's Turbans, to diſtinguiſh them, and let all the World know they have two Sexes.

In 1376, *Albert*, Biſhop of *Bremen*, and Brother of the Duke of *Brunſwic*, was accuſed by *John de Tzeſtezulete*, or *Ceſtervel*, Dean of his Chapter, with being an *Hermaphrodite*; but he cleared himſelf.

*J. Frederic Mayer*, a *Lutheran* Divine, has an expreſs Diſſertation, to prove that an *Hermaphrodite* cannot be a Prieſt: It was printed at *Grypſwald* in 1705. And *Willenberg*, another *Lutheran* of *Dantzick*, has wrote to prove them excluded from all Civil Employments, like Women.

The Word is form'd of the *Greek*, ἑρμαφρόδιτος, a Compound of ἑρμῆς, *Mercury*, and ἀφροδίτη, *Venus*, q. d. a Mixture of *Mercury* and *Venus*, i. e. of *Male* and *Female*.

For, it is to be obſerved, *Hermaphroditus* was originally a proper Name; applied, by the Heathen Mythologiſts; to a fabulous Deity, whom ſome repreſent as a Son of *Hermes*, Mercury, and *Aphrodites*, Venus; and who being deſperately in Love with the Nymph *Salmacida*, obtain'd of the Gods to have his Body and hers united into one. Others ſay, that the God *Hermaphroditus* was conceiv'd as a Compoſition of *Mercury* and *Venus*, to exhibit the Union between Eloquence, or rather Commerce, whereof *Mercury* was God; with Pleaſure, whereof *Venus* was the proper Deity. Laſtly, others think this Junction intended to ſhew that *Venus*, Pleaſure, was of both Sexes: As, in Effect, the Poet *Calvus* calls *Venus* a God.

*Pollentemque Deum Venerem.*

As alſo *Virgil*, Æneid. *Lib.* II.

*Diſcedo ac ducente Deo flammam inter & hoſtes*
*Expedior* ——

*Heſychius* obſerves M. *Spon*, calls Venus *Aphroditos*; and *Theophraſtus* affirms, that *Aphroditos*, or *Venus*, is *Hermaphroditus*; and that in the Iſland of *Cyprus* ſhe has a Statue, which repreſents her with a Beard like a Man.

HERMAPHRODITE, is alſo applied, metaphorically, to divers other Things beſide Men.

The lateſt Botaniſts and Floriſts, make a Diviſion of Plants, which they call *Hermaphrodites*; as having both the Male and Female Parts of Generation, *viz.* the Stamina and Piſtil in the ſame Flower. See PLANT, FLOWER, GENERATION, PISTIL, *&c.*

Divers of the Inſect and Reptile Kind, are alſo *Hermaphrodites*; particularly Worms, Snails, *&c.* See INSECT, *&c.*

In the Memoirs of the *French* Academy, we have an Account of a very extraordinary Kind of *Hermaphrodites*, which not only have both Sexes, but do the Office of both at the ſame Time. — Such are Earth-Worms, the round tail'd Worms found in the Inteſtines of Men and Horſes; Land-Snails, and thoſe of freſh Waters; and all the Sorts of Leaches. And as all theſe are Reptiles, and without Bones, M. *Poupart* concludes it probable, that all other Inſects which have thoſe two Characters, are alſo *Hermaphrodites*.

The Method of Coupling, practiſed in this Claſs of *Hermaphrodites*, may be illuſtrated in the Inſtance of Earth-Worms. Theſe little Serpents creep, two by two, into Holes proper to receive them; where they diſpoſe their Bodies in ſuch Manner, as that the Head of the one is turn'd to the Tail of the other. Being thus ſtretch'd out length-wiſe, a little conical Button, or *Papilla*, is thruſt forth by each, and received into an Aperture of the other.

Theſe Animals, being Male at one End of the Body, and Female at the other; and the Body flexible withal; M. *Homberg* does not think it impoſſible but that an Earth-Worm may couple with it ſelf; and be both the Father and Mother of its young.

HERMATHENA, in Antiquity, a Figure repreſenting *Mercury* and *Minerva* both in one.

M. *Spon* gives divers Figures of *Hermathenæ*, in his *Rech. Cur. de l'Antiquite*, p. 98. They are a Sort of Statues rais'd on ſquare Pedeſtals, after the Manner of *Hermes*; only that the Attributes of *Minerva* are added thereto. See HERMES.

The Word is a Compound of *Hermes*, Mercury; and *Athena*, a *Greek* Name of *Minerva*.

HERMERACLES, in Antiquity, a Figure compounded of *Mercury* and *Hercules*.

M. *Spon* gives us a Type of an *Hermeracles*, *Rech. Cur. de l'Antiq.* p. 96. *fig.* xiii. The Name *Hermeracles*, he obſerves, was given to a Divinity, repreſented after the Manner of *Hermes*, with the additional Attributes of *Hercules*, viz. a Lion's Skin and a Club. — This he aſcribes to the Cuſtom among the *Greeks*, of placing the Statues of *Mercury* and *Hercules* in the Academy, and *Gymnaſiums*, as both the one and the other preſided over the Exerciſes of the Youth.

HERMES, among Antiquaries, a Sort of Figure or Statue, of the God *Mercury*; uſually made of Marble, tho' ſometimes of Braſs, without Arms or Legs; and planted by the *Greeks* and *Romans* in their Croſs-ways.

*Servius* gives us the Origin hereof, in his Comment on the VIIIth Book of the *Æneid*. Some Shepherds, ſays he, having one Day caught *Mercury*, call'd by the Greeks *Hermes*, aſleep, on a Mountain; they cut off his Hands; from which he, as well as the Mountain where the Action was done, became denominated *Cyllenius*, from κύλλος, *maim'd*: And thence, adds *Servius*, it is, that certain Statues without Arms are denominated *Hermes*'s, *Hermetes*.

But this Etymology of the Epithet *Cyllenius*, contradicts moſt of the other antient Authors, who derive it hence, that *Mercury* was born at *Cyllenus*, a City of *Arcadia*, or even on the Mountain *Cyllenus* it ſelf, which had been thus call'd before him.

*Suidas* gives a Moral Explication of this Cuſtom of making the Statues of *Mercury* without Arms. The *Hermetes*, ſays he, were Statues of Stone placed at the Veſtibles, or Porches of the Doors, and Temples at *Athens*; For this Reaſon, that as *Mercury* was held the God of Speech and of Truth, ſquare and cubical Statues were peculiarly proper; having this in common with Truth, that on what Side ſoever they are view'd, they always appear the ſame.

It muſt be obſerved, that *Athens* abounded more than any other Place in *Hermes*'s: There were Abundance of very ſignal ones in divers Parts of the City; and they were one of the principal Ornaments of the Place. They were alſo placed in the high Roads and Croſs-ways, by Reaſon *Mercury*, who was the Courier of the Gods, preſided over the High-ways: Whence his Surname of *Trivius*, from *Trivium*, and that of *Viacus*, from *Via*.

From *Suidas*'s Account above cited, it appears, that the Terms, *Termini*, uſed among us in the Doors, Balconies, *&c.* of our Buildings; take their Origin from theſe *Athenian Hermes*'s; and that it were more proper to call them *Hermetes* than *Termini*; for that tho' the Roman *Termini* were ſquare Stones, whereon a Head was frequently placed, yet they were rather uſed as Land-Marks, and mere-Stones, than as Ornaments of Building. See TERMINI.

HERMETIC, or HERMETICAL *Art*, a Name given to Chymiſtry, on a Suppoſition that *Hermes Triſmegiſtus* was the Inventor thereof, or excell'd therein. See CHYMISTRY.

We know but little of this *Hermes*, only that he was an antient King of *Egypt*, 1000 Years prior to *Æſculapius*. *Zozimus Panopolitanus* mentions him as having wrote of *Natural Things*; and there are ſeveral Pieces ſtill extant under his Name, but all ſuppoſititious. See VOLUME.

HERMETICAL *Philoſophy*, is that which undertakes to ſolve and explain all the Phænomena of Nature, from the three Chymical Principles, Salt, Sulphur, and Mercury. See PHILOSOPHY. See alſo PRINCIPLE, *&c.*

A conſiderable Augmentation was made to the antient *Hermetical Philoſophy* by the modern Doctrine of Alcali and Acid. See ALCALI and ACID.

HERMETICAL *Phyſic*, or *Medicine*, is that Syſtem, or Hypotheſis, in the Art of Healing, which explains the Cauſes of Diſeaſes, and the Operations of Medicines on the Principles of the *Hermetical Philoſophy*; and particularly on the Syſtem of Alcali and Acid. See MEDICINE and CHYMISTRY.

HERMETICAL *Seal*, a Manner of ſtopping or cloſing Glaſs Veſſels, for Chymical Operations, ſo very accurately, that nothing can exhale, or eſcape; not even the moſt ſubtile Spirits.

It is perform'd by heating the Neck of the Matraſs, or other Veſſel, in the Flame of a Lamp, till it be ready to melt; and then with a Pair of Pinchers twiſting it cloſe together. — This they call putting on *Hermes's Seal*.

Tho', there are other Ways of *ſealing* Veſſels *Hermetically*, viz. by ſtopping them with a Plug, or Stopple of Glaſs, well luted into the Neck of the Veſſel. — Or, by turning another *Ovum Philoſophicum* upon that wherein the Matter is contain'd.

HERMHARPOCRATES, in Antiquity, a Deity, or Figure of a Deity, compoſed of *Mercury*, and *Harpocrates*, the God of Silence.

M. *Spon*,

M. *Spon* gives us an *Hermharpocrates*, in his *Rech. Cur. de l'Antiquite*, p. 98. *fig.* xv. having Wings on his Feet, like *Mercury*; and laying his Finger on his Mouth, like *Harpocrates*. 'Tis probable they might mean by this Combination, that Silence is ſometimes Eloquent.

HERMIANS, HERMIANI, or HERMIOTITÆ, a Sect of Hereticks, in the IId Century; thus called from their Leader *Hermias*.

One of their diſtinguiſhing Tenets was, that God is Corporeal. They are alſo call'd *Seleucians*. See SELEUCIANS.

HERMIT, or EREMIT, EREMITA, a devout Perſon, retir'd into a Solitude, to be more at Leiſure for Contemplation, and to diſencumber himſelf of the Affairs of the World. See ANCHORET.

The Word is form'd of the *Greek*, ἔρημος, *Eremus*, Wilderneſs; and, according to the Etymology, ſhould rather be wrote *Eremit*, the Spirit being ſoft.

A *Hermit* is not reputed a Religious, unleſs he have made the Vows. See MONK, Vow, *&c.*

*Paul*, ſirnamed the *Hermit*, *Paulus Eremitanus*, is uſually reckon'd the firſt *Hermit*; tho' St. *Jerom*, at the Beginning of the Life of that Saint, ſays, it is not known who was the firſt. — Some go back to St. *John* the *Baptiſt*, and others to *Elias*.

Others make St. *Anthony* the Founder of the *Hermetical* Life: But others take him to have only rekindled and heighten'd the Fervour thereof; and hold, that the Diſciples of that Saint own'd S. *Paul* of *Thebes* for the firſt that practiſed it. — The Perſecutions of *Decius* and *Valerian* are ſuppoſed to have been the Occaſion.

Several of the antient *Hermits*, as S. *Anthony*, &c. tho' they lived in Deſarts; had yet Numbers of Religious accompanying them. See SOLITARY.

There are alſo divers Orders and Congregations of Religious, diſtinguiſhed by the Title of *Hermits*; as, *Hermits* of St. *Auguſtin*, of St. *John Baptiſt*, of St. *Jerom*, of St. *Paul*, &c.

HERMITS *of St. Auguſtin*, is a religious Order, more frequently call'd *Auguſtins*, or *Auſtin* Friars. See AUGUSTIN.

It is commonly pretended to have been inſtituted by that Father; but without much Ground. This is pretty certain, he laid the Foundations of a Monaſtic Order about the Year 388, and retired to his Father's Eſtate near *Tagaſta*, to lead a religious Life, with ſome Companions: But it does not at all appear, that this Order has ſubſiſted ever ſince; nor that the *Hermits* of St. *Auguſtin* are deſcended without Interruption from them.

This Order, in Reality, only commenced under Pope *Alexander* IV, in the middle of the XIIIth Century; and was form'd gradually by the Union of divers Congregations, which had no Rule, or at leaſt had not that of St. *Auguſtin*. — Theſe Congregations were thoſe of *John Bonites*, the moſt antient of all; that of the *Hermits* of *Tuſcany*; that of the *Sacheld*; thoſe of *Vallerſuta*; of St. *Blaiſe*; of St. *Benedict de Monte Fabulo*; of the *Tower of Palmes*; of *Sancta Maria de Marcetta*; of St. *James de Molinio*, and *de Loupſavo* near *Lucca*.

This Coalition was not made by *Innocent* IV. as moſt Hiſtorians of the Order contend: All that Pontiff did, was to unite ſome *Hermits* in *Tuſcany*, to whom he gave the Rule of St. *Auguſtin*: But theſe were a diſtinct Body from thoſe juſt mention'd. — It was *Alexander* IV. that made the grand Union; as appears from his Bull, publiſhed in the *Mare magnum* of the *Auguſtins*.

That Pontiff undertook this Union from the firſt Year of his Pontificate, *viz.* the Year 1254. It was the Year 1256, ere the Superiors of all the Congregations could be got together. In the general Chapter the Union was effected: *Lanfranc Septala*, a *Milaneze*, was choſen General; and the Order divided into four Provinces, *viz.* thoſe of *France*, *Germany*, *Spain* and *Italy*.

Since that, other Orders have been united to the *Hermits* of St. *Auguſtin*; as, the poor Catholicks, *&c.* and the Order now conſiſts of 42 Provinces.

After ſo many Unions, the Order began to divide again into ſeparate Congregations, according to the Relaxations, and Reformations that afterwards got footing. — Such, are the *Barefooted Hermits* of St. *Auguſtin*; the Congregation of *Centorbi*, or the *Sicilian Reform*; the Congregation of the *Colorites* in *Calabria*, &c.

There are alſo ſeveral Congregations of Nuns, under the Appellation of *Hermits of St. Auguſtin*.

As alſo a third Order of *Hermits of St. Auguſtin*. See THIRD *Order*.

HERMITS *of Brittini*, was a Congregation form'd under Pope *Gregory* IX. who gave them the Rule of St. *Auguſtin*.

Their firſt *Hermitage*, or Abode, was in a ſolitary Place, call'd *Brittini*, in the Marquiſate of *Ancona*; whence their Name. — They led a very auſtere Life; never eat any Meat, and faſted much.

HERMITS *of Camalduli*. See CAMALDULI.

HERMITS *of St. John Baptiſt*, was a religious Order in *Navarre*; whoſe principal Convent, or *Hermitage*, was ſeven Leagues from *Pampelona*.

Till the Time of *Gregory* XIII, they lived under the Obedience of the Biſhop of that City; but the Pope confirm'd them a Religious Order, approved their Conſtitutions, and admitted 'em to make the Vows. — Their Way of Living was exceeding auſtere: They went bare-footed, wore no Linnen, lay on Boards, with a large Stone for a Pillow, and bore a large wooden Croſs on their Breaſts.

Their Houſe was a Kind of *Laura*, rather than a Convent; canton'd out into Cells, in which they lived ſolitary, in the middle of a Wood. See LAURA.

HERMITS *of St. Jerom*. See JERONIMITES.

HERMITS *of St. Paul the firſt Hermit*, is an Order form'd in the XIIIth Century, by the Union of two Bodies of *Hermits* in *Hungary*; viz. thoſe of St. *James de Patach*, and thoſe of *Piſilia* near *Zante*.

Upon their being incorporated, they choſe St. *Paul* the firſt *Hermit*, for the common Patron, and Protector of their Order; and aſſumed his Name. — They multiplied very conſiderably in *Hungary*, *Germany*, *Poland*, and other Provinces; and came to have ſeventy Monaſteries in *Hungary* alone: But the Revolutions and Wars in that Kingdom reduced them again.

HERMITAGE, properly ſignifies a Convent of *Hermits*. See HERMIT and CONVENT.

The Name was alſo popularly attributed to any Religious Cell, built and endowed in a private and recluſe Place; and thus annexed to ſome large Abbey, of which the ſuperior was call'd *Hermita*. See SOLITARY, RECLUSE, *&c.*

HERMITAN, in Phyſiology, a dry North, and North Eaſterly Wind, or Breeze, uſually blowing on the Coaſts of *Guinea* in *Africa*. See WIND and BREEZE.

The *Hermitan* ſometimes alſo blows from other Points.

HERMODACTYL, in Medicine, a Drug uſed as a gentle Purgative, *&c.* See PURGATIVE.

Naturaliſts are not agreed as to the Origin of this Drug. — Some will have it the Root, and others the Fruit of a Plant. To reconcile them, one might probably allow two Kind of *Hermodactyls*; the one a Root, the other a Fruit.

The Fruit is about the Size of a little Cheſſnut, in Figure reſembling a Heart; ruddy without, very white within; of a light fungous Subſtance; without Fibres; eaſily broke, and reducible into a Powder like Flower, of a ſweetiſh Taſt, but ſomewhat viſcid. It is brought to us dried from *Egypt* and *Syria*.

Authors differ as to the Plant which bears it. In the common Opinion it paſſes for a Sort of *Colchicum*: Others take it for a tuberous *Iris*.

*Hermodactyls* are chiefly uſed to purge pituitous Humours of the Brain and Joynts. — They are ſo efficacious in ſcowering the mucilaginous Glands, and preſerving them from the Lodgments of gritty Matters, which occaſion the Gout and arthritic Complaint; that they are denominated, by ſome Writers, *Anima Articulorum*. — They alſo promote Sweat.

HERMOGENIANS, a Sect of antient Hereticks, denominated from their Leader *Hermogenes*; who lived towards the Cloſe of the IId Century. See HERESY.

*Hermogenes* eſtabliſh'd *Matter* as his firſt Principle; and made *Idea* the Mother of all the Elements. See IDEA, *&c.*

The *Hermogenians* were divided into ſeveral Branches, under their reſpective Chieftains, viz. *Hermians*, *Seleucians*, *Materiarii*, &c. See HERMIANS, SELEUCIANS, *&c.*

The *Manichees* ſprung from the *Hermogenians*. See MANICHEES.

HERNIA, in Medicine, *&c.* a Deſcent of the Inteſtines, or *Omentum*, out of their natural Place; or, rather, the Tumour form'd by that Deſcent; popularly called a *Rupture*. See DESCENT and RUPTURE.

When the *Peritonæum* happens to be broken, or extraordinarily dilated; the *Viſcera*, and particularly the Caul and ſmall Guts, are apt to fall out of their Place, and to form theſe Sorts of Tumours called *Hernia's*.

They happen moſt uſually in the *Inguen*, or Groin; the Scrotum, and Navel: Tho, ſometimes, in other Places; as above or below the Navel; in the Side, far above the *Inguen*, in the upper Part of the Thigh, near the Spine, *&c.*

*Hernia's* are occaſion'd by Blows, violent Concuſſions, over-ſtretching in Vomiting, hard Labour, or Wind; from which laſt Cauſe it is, that they are ſo frequent in Children, and ſo eaſily help'd by timely Cure: In Adults they are generally incurable. From *Hernia's* frequently ariſe the

the Iliac Paſſion, and ſometimes Inflammations, and even Gangrenes of the Inteſtines.

*Hernia's* are variouſly denominated, both according to the Parts diſplaced, and to thoſe whereon they fall.

A Deſcent of the Inteſtines into the Scrotum, which is the moſt uſual Kind of Rupture, is call'd *Enterocele*. See ENTEROCELE.

If, inſtead of the Inteſtines, the *Omentum* be fallen; it is called *Epiplocele*. See EPIPLOCELE.

A Deſcent of both, is called *Entero-Epiplocele*. See ENTERO-EPIPLOCELE.

If the Inteſtines fall on the Navel, it is call'd *Omphalocele*. See OMPHALOCELE.

If they fall thro' the Perforation of the *Obliquus Deſcendens* into the Groin; it is called *Bubonocele*, or *Inguinalis*. See BUBONOCELE.

There are alſo a ſpurious Sort of *Hernia's*, or Tumours of the Teſtes, *&c.* occaſion'd, not by the Deſcent of any of the ſolid Parts, but by a Coagmentation of ſome of the Fluids.

When the Teſticles are ſwell'd, and diſtended with a watery Humour, it is called a *Hydrocele*, or *Hernia Aquoſa*. See HYDROCELE.

When with Wind, *Pneumatocele*, or *Hernia Ventoſa*. See PNEUMATOCELE.

When the Tumour is owing to a Mole, or Excreſcence of Fleſh, it is call'd *Sarcocele*, or *Hernia Carnoſa*. See SARCOCELE.

When to a Dilatation of the Veſſels, in Manner of a Varix, *Circocele*, or *Hernia Varicoſa*. See VARIX, *&c.*

A Kind of prominent Tumour in the Throat, is frequently call'd *Bronchocele*, or *Hernia Gutturalis*. See BRONCHOCELE.

Some late Authors alſo ſpeak of *Hernia's*, or Deſcents of the Bladder into the Scrotum; but theſe are rare. — M. *Mery* concludes, that they never ariſe from mere Accident; but when they do happen, it muſt be the Effect of an original ill Conformation. — His Reaſon is, that the Bladder of Urine is too big to paſs thro' the *Annuli* or Rings, which the Inteſtines paſs thro'; beſide that it is faſten'd too ſtrongly on all Sides to admit of a Deſcent.

M. *Petit*, however, is of a different Sentiment; and maintains that *Hernias* of the Bladder may be produced after the ordinary Manner of others. See the *Memoires de l'Acad.* An. 1717.

The Word is Latin, *Hernia*, and originally ſignifies the ſame with *Tumor Scroti*; call'd alſo *Ramex*.

*Priſcian* obſerves, that the antient *Marſi* gave the Appellation *Herna* to Rocks: Whence, ſome will have *Hernia's* thus called *propter duritiem*, on Account of their Hardneſs. — *Scaliger* chuſes rather to derive the Word from the *Greek*, ἕρνος, *Ramus*, Branch.

HERO, in the antient Theology and Mythology, was a great and illuſtrious Perſon, of mortal Nature; tho', by the Populace, ſuppoſed to partake of Immortality; and, after his Death, placed by them in the Number of the Gods. See GOD.

*Hero's* were, properly, Perſons partly of divine, and partly of human Extraction; being begot between a Deity and a Mortal: As *Achilles*, who was the Son of the Goddeſs *Thetis*, by *Peleus*; or *Hercules*, who was the Son of *Jupiter* and *Alcmena*.

A *Hero*, then, coincides with what we otherwiſe call a *Demi-God*: Accordingly, *Lucian* defines a *Hero* to be a Medium between God and Man; or, rather, a Compoſition of both. See DEMI-*God*.

The Word is form'd of the Latin *Heros*, and that of the *Greek*, ἥρως, *Semi-deus*, Demi-god.

St. Auguſtin, *de Civit. Dei*, Lib. X. obſerves, that it is highly probable, ſome one of *Juno*'s Sons was originally called by this Name; that Goddeſs being called in *Greek* ἥρα: Or, it may be, that great Men have been diſtinguiſhed by this Appellation, in Alluſion to the Opinion of the Antients, that virtuous Perſons, after their Deaths, inhabited the wide Expanſe of Air, which is *Juno*'s Province.

*Iſidore* inclines to think, that *Hero's* were thus call'd, *quaſi aeroes, aerei*, Perſons of ſuperior Merit, and worthy of Heaven. — *Plato* derives the Word from the *Greek*, ἔρως, *Amor*, as intimating the *Hero's* to have ariſen from the Copulation of a God with a mortal Woman; or of a Goddeſs with a Man. — Others derive the Name from the *Greek*, ἐρεῖν, *dicere*, to ſpeak; the *Heroes* being Perſons who by their Eloquence led the People at their Pleaſure: Others, laſtly, derive the Word from the *Greek*, ἥρα, *Terra*, Earth; the *Heroes*, on their Principle, being the *Dii Terreſtres*, or Gods of the Earth.

HERO, is alſo uſed, in a more extenſive Senſe, for a great, illuſtrious, and extraordinary Perſonage; particularly, in reſpect of Valour, Courage, Intrepidity, and other military Virtues.

Fa. *Bouhours* makes this Diſtinction between a *Great* Man and a *Hero*, that the latter is more daring, fiery, and enterprizing; and the former, more prudent, thoughtful, and reſerved: — In this Senſe we properly ſay, *Alexander* was a *Hero*, *Julius Cæſar* a great Man.

HERO *of a Poem*, or *Romance*, is the principal Perſonage, or he who has the Top-Part therein. See POEM, ROMANCE, *&c.*

The *Hero* of the Iliad is *Achilles*; of the Odyſſee, *Ulyſſes*; of the Æneid, *Æneas*; of *Taſſo*'s Jeruſalem, *Godfrey* of *Bulloign*; of *Milton*'s Paradice Loſt, *Adam*; tho' Mr. *Dryden* will have the *Devil* to be *Milton*'s *Hero*; in Regard he gets the better of *Adam*, and drives him out of Paradice.

The Character of *Achilles*, is the inexorable Wrath of a haughty, valiant, unjuſt, revengeful Prince: That of *Ulyſſes*, is the wiſe and prudent Diſſimulation of a courageous King, whoſe Conſtancy nothing could ſhake: That of *Æneas*, is Piety, Gentleneſs, Good-Nature, and Humanity; ſuſtain'd, like the others, with an invincible Courage. See CHARACTER.

Many of the Criticks find Fault with the *Hero* of the *Æneid*. — He is too ſenſible and delicate; and wants of the Fire, Firmneſs, and uncontrollable Spirit, remarkable in the *Hero* of the *Iliad*. — Piety, Tenderneſs, and Submiſſion to the Gods, are the Virtues of the middle Claſs of Mankind: They do not ſtrike and command enough for a *Hero*, who is to be the Inſtrument of ſuch notable Exploits. — *St. Evremond* looks on *Æneas* as fitter to have been the Founder of a Religious Order, than of an Empire.

Fa. *Boſſu* defends *Virgil*'s *Hero*, or at leaſt *Virgil*, with admirable Addreſs. — *Æneas*'s Character, he obſerves, was not to be form'd on the Model, either of *Achilles*, or *Ulyſſes*; nor to be of the ſame Kind with them; as the Fable, the Deſign of the *Æneid*, was very different from thoſe of the *Iliad* and *Odyſſee*. See FABLE, ACTION, *&c.*

What *Virgil* had in View, was to make the *Romans* receive a new Kind of Government; and a new Maſter: This Maſter, then, muſt have all the Qualities requiſite for the Founder of a State, and all the Virtues which make a Prince beloved. — The Violence of *Achilles* was of Conſequence precluded; ſo was the Diſſimulation of *Ulyſſes*; that being a Quality which renders a Man ſuſpected, not beloved.

*Virgil* was reſtrained in his Choice; his *Hero* was to be of the Genius of *Auguſtus*: The Poet was in the Condition of a Painter, who is obliged to accommodate a Piece of Hiſtory to the Model of a Face that is given him. — The Characters of *Homer*'s two *Heroes*, as being directly oppoſite to his Deſign, he has thrown upon *Turnus* and *Mezentius*, who are the Counterparts to his *Hero*.

'Tis diſputed among the Criticks, whether it be neceſſarily required, that the *Hero* of an Epic Poem be a good and virtuous Man? — Fa. *Boſſu* maintains the Negative: Between a *Hero* in Morality, and a *Hero* in Poetry, the ſame Diſtinction is to be made as between Moral, and Poetical Goodneſs: — Hence, as the Manners of *Achilles*, and *Mezentius*, are poetically as Good as thoſe of *Ulyſſes* and *Æneas*; ſo thoſe two cruel and unjuſt Men, are as regular poetical *Heroes*, as theſe two juſt, wiſe, and good Men. See MANNERS.

*Ariſtotle*, indeed, repreſents the *Heroic* Virtue, as a Virtue more than human; and, of Conſequence, *Heroes*, as divine Perſons, whom the Excellency of their Nature raiſes above our Claſs: But this, he ſays in his Books of Morality; in his Poeticks he ſpeaks another Language. — The prime Perſon of a Poem, whom we call the *Hero*, he obſerves, muſt neither be good nor bad, but between both: He muſt not either be ſuperior to the Generality of Mankind by his Virtue and Juſtice; nor inferior to them by his Crimes and Wickedneſs. The Moral, and Epic *Heroes*, therefore, even on *Ariſtotle*'s Principles, have nothing in common with each other: The one muſt be rais'd above Mankind; and the other muſt not be on a Level with the moſt perfect of Men.

In Effect, both reaſon, the Nature of the Poem which is to be a Fable, the Practice of *Homer*, and the Rules of *Ariſtotle* and *Horace* agree, that ſo far is it from being neceſſary that the *Hero* of an *Epopea* be a perfect, faultleſs Man; that it is not neceſſary he be an honeſt Man: And that 'tis no Ways irregular to make him as perfidious as *Ixion*; as unnatural as *Medea*; or as brutal as *Achilles*. See MANNERS.

'Tis another Subject of Controverſy among the Criticks, whether the Cataſtrophe, or Concluſion of the Action, is neceſſarily to leave the *Hero* happy, and at Eaſe; or whether it be allowable to leave him unhappy?

The general Practice of the *Heroic* Poets ſtands for the Affirmative: We have ſcarce one Example of a *Hero* who is overcome, and remains unhappy: Excepting *Adam* in *Milton*.

In Tragedy, the Caſe is different: Unhappy Cataſtrophes, according to *Ariſtotle*, are preferable to happy ones; and were always much better received among the Antients. Indeed, one Reaſon may be, that in the popular States of *Greece*, Monarchs being odious, nothing pleas'd them better than to ſee the Misfortunes of Kings: And even among us, where that Conſideration does not hold, yet the unhappy Concluſion has its Advantage. — The Tragic Scene is the Throne of the Paſſions; and Terror and Pity are there to rule in a peculiar Manner: Now thoſe Paſſions ariſe the moſt naturally from unhappy Events; and the Audience, quitting the Theatre, full of the Misfortunes wherewith it was cloſed, preſerve their Concern much longer, and feel more forcible Effects from it, than if their Tears had been wiped away, and their Sighs ſmother'd in the Satisfaction of a more happy *Peripetia*. See TRAGEDY, CATASTROPHE, and PERIPETIA.

But theſe Reaſons have no Place in the Epopea; which is not intended ſo much to purge the Paſſions, as to remove ill Habitudes. — But 'tis true withal, that the Epopea does not exclude all unhappy Concluſions: The Nature of Epic Fable, is ſuch as admits equally of good and bad Perſons for the prime Parts; the unhappy Adventure of a Lamb unjuſtly devour'd by a Wolf, is a Subject every Way as inſtructive, and as regular, as the Generoſity of a Lyon, who lets himſelf be diſarmed of his Rage by the Innocence of the ſame Lamb.

'Tis true, if the Poet propoſed his *Hero* as a Pattern of Perfection for Imitation, the Misfortunes falling on him would ſuit very ill with the Deſign: But this was doubtleſs the fartheſt Thing in the Intentions of the great Maſters of the Epopea above-mentioned. — The only Reaſon, perhaps, that can be given for the uniform Practice of the Poets in this Reſpect, is, than an Epic Poem, containing an Action of much more Extent than that of a Tragic Poem, the Reader would not be ſo well ſatisfied, if, after ſo many Labours and Difficulties as the *Hero* is brought to ſtruggle withal, he ſhould not, at laſt, be brought off; but periſh miſerably. There is ſomething, no doubt, great and good in the *Hero*, which, in the Courſe of the Poem, makes us concern'd for him; ſo, that after ſo long an Acquaintance, we cannot leave him miſerable, without ſome Anxiety; which it is not the Buſineſs of the Poet to raiſe. See EPIC *Poem*.

HEROIC, ſomething belonging to a *Hero*, or *Heroine*. See HERO.

Thus we ſay, *Heroic* Actions, *Heroic* Virtue, *Heroic* Style, *Heroic* Verſe, *Heroic* Poet, *Heroic* Age, *&c.*

HEROIC *Poem*, is that which undertakes to deſcribe ſome extraordinary Action, or Enterprize. See POEM.

*Homer*, *Virgil*, *Statius*, *Lucan*, *Taſſo*, and *Milton*, have compoſed *Heroic Poems*. See ILIAD, ÆNEID, *&c.*

In this Senſe, *Heroic Poem* coincides with an *Epic Poem*. See EPIC.

HEROIC *Poetry*. See EPIC *Poetry*.

HEROIC *Age*, is that Age or Period of the World, wherein the *Heroes*, or thoſe called by the Poets the *Children of the Gods*, are ſuppoſed to have lived.

The *Heroic Age* coincides with the fabulous Age. See FABULOUS.

HEROIC *Verſe*, is that wherein *Heroic* Poems are uſually compoſed; or that proper for ſuch Poems. See VERSE.

In the *Greek* and *Latin*, Hexameter Verſes are peculiarly denominated *Heroic Verſes*, as being alone uſed by *Homer*, *Virgil*, &c. See HEXAMETER.

*Alexandrian* Verſes of twelve Syllables, were formerly call'd *Heroic Verſes*, as being ſuppoſed the only Verſe proper for *Heroic* Poetry; but the later Writers uſe Verſes of ten Syllables. See ALEXANDRIAN.

HEROINE, a Woman that has the Qualities and Virtues of a *Hero*; or that has done ſome Heroic Action. See HERO.

HERODIANS, a Sect among the *Jews*, at the Time of *Jeſus Chriſt*; mention'd by St. *Matthew* XXII. 16. and St. *Mark* III. 6.

The Criticks, and Commentators on the New Teſtament, are very much divided with regard to the *Herodians*. — St. *Jerom*, in his Dialogue againſt the *Luciferians*, takes the Name to have been given to ſuch as own'd *Herod* for the Meſſiah: And *Tertullian* and St. *Epiphanius* are of the ſame Sentiment. — But the ſame *Jerom*, in his Comment on St. *Matthew*, treats the ſame Opinion as ridiculous; and maintains, that the *Phariſees* gave this Appellation, by Way of Deriſion, to *Herod*'s Soldiers, who paid Tribute to the *Romans*: Agreeably to which, the *Syriac* Interpreters render the Word by the *Domeſticks of Herod*, i. e. his Courtiers.

M. *Simon*, in his Notes on the 22d Chapter of *Matthew*, advances a more probable Opinion. — The Name *Herodian*, he imagines, to have been given to ſuch as adhered to *Herod*'s Party and Intereſt, and were for preſerving the Government in his Family; about which there were great Diviſions among the *Jews*.

Fa. *Hardouin*, will have the *Herodians* and *Sadducees* to have been the ſame Thing. See SADDUCEES.

HERPES, in Medicine, a cutaneous Heat or Inflammation, occaſioning a Roughneſs of the Skin, by Means of a Number of little Puſtules ſpreading this Way and that.

The Word is form'd of the *Greek*, ἕρπω, *paulatim gradior*, *repo*, by Reaſon the Eruptions creep from Place to Place.

There are divers Kinds of this Diſeaſe:

The *ſimple* HERPES, is a ſingle Puſtule or two, riſing chiefly on the Face, of a whitiſh or yellowiſh Colour, pointed, and with an inflamed Baſe. — Theſe dry away of their own Accord, upon letting out the little Drop of Pus contain'd in them.

The ſecond Species of *Herpes*, is what we otherwiſe call *Serpigo*; and in *Engliſh*, a *Tetter*, or *Ring-worm*. See SERPIGO and TETTER.

*Milliary* HERPES, is an Aſſemblage of innumerable little Puſtules, under the Cuticle, of the Size of Millet Seeds: Popularly call'd the *Shingles*. See SHINGLES.

The *Herpes Milliaris*, according to *Wiſeman*, approaches very nearly to the Nature of the *Pſora*; and therefore to be cured with Mercurial Catharticks, *&c.* See PSORA.

HERPES *Exedens*, is of a more corroſive Kind; the Puſtules are ruddy, and attended with an itching; and ulcerate the Parts they riſe on.

HERRING, See FISH and FISHERY.

*Herrings* are ſometimes preſcribed in Medicine, by Way of Cataplaſms, to the Feet, in Fevers; as being ſuppoſed to draw the febrile Matter downwards. Tho', 'tis more probable, this Effect ſhould be owing to the Salt uſed in the Pickle.

*Pickled* HERRING, *Red* HERRING, } See *Herring* FISHERY.

HERRING *Buſs*, a Veſſel proper for the *Herring* Fiſhery. See FISHERY.

HERRING *Cob*, is a young *Herring*. See *Herring* FISHING.

HERRING *Fiſhery*, See *Herring* FISHERY.

There are divers Names given to *Herrings*, according to the different Manners wherein they are ordered, as,

1°. *Sea-Sticks*, being ſuch as are catched all the Fiſhing Seaſon, and are but once packed. — A Barrel of theſe holds ſix or eight Hundred; eight Barrels to the Tun, by Law: An Hundred of *Herrings* is to be a Hundred and twenty; a Laſt ten Thouſand; and they commonly reckon fourteen Barrels to the Laſt. See LAST, *&c.*

There are others reckon'd on Shore, called *repacked Herrings*: Seventeen Barrel of *Sea-Sticks* make from twelve to fourteen of repacked ones.

The Manner of Repacking, is to take the *Herrings*, waſh them out in their own Pickle, and lay them orderly in a freſh Barrel. Theſe have no Salt put to them, but are cloſe packed, and headed up by a ſworn Cooper, with Pickle, when the Barrel is half full; the Pickle is Brine, ſo ſtrong as that the *Herring* will ſwim in it.

2°. *Summers*, are ſuch as the *Dutch* Chafers, or Divers, catch from *June* to the 15*th* of *July*. — Theſe are ſold away in *Sea-Sticks*, to be ſpent preſently, in Regard of their Fatneſs; for that they will not endure Repacking: They go one with another, full and ſhotten; but the repacked *Herrings* are ſorted, the full *Herrings* by themſelves.

3°. The *ſhotten* and *ſick Herrings* by themſelves; the Barrel whereof is to be mark'd diſtinctly.

4°. *Crux Herrings*, which are ſuch as are caught after the 14*th* of *September*. — Theſe are cured with Salt upon Salt, and are carefully ſorted out, all full *Herrings*, and uſed in the Repacking.

5°. *Corred Herrings*, ſerve to make *Red Herrings*, being ſuch as are taken in the *Yarmouth* Seas, from the End of *Auguſt* to the middle of *October*, provided they can be carried aſhore within a Week, more or leſs, after their taking. — Theſe are never gipped, but rowed in Salt, for the better preſerving of them, till they can be brought on Shore; and ſuch as are kept to make *Red Herrings*, are waſhed in great Vats in freſh Water before they are hanged up in the *Herring-Hangs*, or *Red Herring* Houſes.

As for the *Manner of ſalting Herrings*. — The Nets being haled on board, the Fiſhes are taken out, and put into the War-backs, which ſtand on one Side of the Veſſels: — When all the Nets are thus unloaded, one fills the Gippers Baſket. — The Gippers cut their Throats, take out the Guts, and fling out the full *Herrings* into one Baſket, and the ſhotten into another: — One Man takes the full Baſket when they are gipt, and carries them to the Rower-back, wherein there is Salt. — One Boy rows and ſtirs them about in the Salt; another

them thus rowed, and carries them in Baſkets to the Packers. — Four Men pack the *Herrings* into one Barrel, and lay them, one by one, ſtraight and even; and another Man, when the Barrel is full, takes it from the Packer. — It is let ſtand a Day or more open to ſettle, that the Salt may melt and diſſolve to Pickle; after which they are fill'd up, and the Barrel headed. — The Pickle to be ſtrong enough to ſuſtain a *Herring*; otherwiſe the Fiſh decay in it.

HERRING *Silver*, was Money formerly paid in lieu of a certain Quantity of *Herrings*, for a Religious Houſe.

HERSE, in Fortification, a Lattice, or Portcullice, in Form of an *Harrow*; beſet with Iron Spikes.

It is uſually hung by a Cord faſten'd to a Moulinet; to be cut, in Caſe of Surprize, or when the firſt Gate is broken with a Petard; that the *Herſe* may fall, and ſtop up the Paſſage of the Gate, or other Entrance of a Fortreſs.

Theſe *Herſes* are alſo often laid in the Roads, to incommode the March as well of the Horſe, as the Infantry.

The *Herſe* is otherwiſe call'd a *Sarraſin*, or *Cataract*; and when it conſiſts of ſtrait Stakes, without any Croſs-pieces, it is call'd *Orgues*. See ORGUES, *&c.*

The Word *Herſe* is *French*, and literally ſignifies *Harrow*; being form'd of the Latin *Herpix*, or *Hirpex*; which denote the ſame Thing.

HERSILLON, or HERISSON, in the military Art, a Name given to a Sort of Planks, or Beams, ten or twelve Foot long, whoſe two Sides are drove full of Spikes, or Nails, to incommode the March of the Infantry, or Cavalry. See HERISSON.

HESPER, HESPERUS, in Aſtronomy, a Star call'd alſo *Veſper*, *Phoſphor*, *Phoſphorus*, *Lucifer*, and the *Morning Star*. See PHOSPHORUS, VESPER, *&c.*

The Word is form'd of the *Greek*, ἕσπερος, and ſuppoſed to have been originally the proper Name of a Man, Brother of *Atlas*, and Father of the *Heſperides*. See HESPERIDES.

*Diodorus*, L. III. relates, that *Heſperus* having aſcended to the Top of Mount *Atlas*, the better to obſerve and contemplate the Stars, never return'd more; and that hence he was fabled to have been changed into a Star.

HESPERIDES, in the antient Mythology, were the Daughters of *Heſper*, or *Heſperus* a Brother of *Atlas*.

The *Heſperides* were three in Number, *Ægle*, *Arethuſa*, and *Heſperarethuſa* — *Heſiod*, in his *Theogony*, makes them the Daughters of *Nox*, Night; and ſeats them in the ſame Place with the *Gorgones*, viz. at the Extremities of the Weſt, near Mount *Atlas*: 'Tis on that Account he makes them the Daughters of *Night*, by reaſon the Sun ſets there.

The *Heſperides* are repreſented by the Antients, as having the keeping of certain golden Apples, on t'other ſide the Ocean. The Poets give them a Dragon to watch the Garden where the Fruit grows: This Dragon *Hercules* ſlew, and carried off the Apples.

*Pliny* and *Solinus* will have the Dragon to be no other than an Arm of the Sea, wherewith the Garden was incompaſs'd; and which defended the Entrance thereof. And *Varro* ſuppoſes that the Golden Apples were nothing but Sheep. Others, with more Probability, ſay they were Oranges.

The *Garden of the Heſperides*, *Heſperii Horti*, or *Horti Heſperidum*, are placed by ſome Authors at *Larache*, a City of *Fez*; by others, at *Berniche*, a City of *Barca*, which tallies better with the Fable. Others, take the Province of *Suſa* in *Morocco*, for the Iſland wherein the Garden was ſeated. Laſtly, *Rudbecks* places theſe fortunate Iſlands, and the Garden of *Heſperides*, in *Sweden*. See FORTUNATE.

HESYCHASTES, a Perſon who keeps himſelf vacant and at Leiſure, to attend the better, and with the leſs Interruption, to the Contemplation of divine Things.

The Name was chiefly uſed by the Antients for ſuch among the Monks as did not employ themſelves in any Labour of the Hands, but renounced all bodily Action, to reſign themſelves wholly to Prayer and Meditation.

The Word is *Greek*, form'd of ἡσυχάζω, *quieſco*, *quieti indulgeo*, a Derivative of ἥσυχος, *quietus*, quiet. *Heſychaſtes* in *Greek*, anſwers to the literal Senſe of *Quietiſt* in *Engliſh*.

HETERIARCH, HETERIARCHA, in Antiquity, an Officer in the *Greek* Empire; whereof there were two Species: The one call'd ſimply *Heteriarcha*; and the other, *great Hetriarcha*, who had the Direction of the former.

Their principal Function was to command the Troops of the Allies; beſides which, they had ſome other Duties in the Emperor's Court, deſcribed by *Codin*, *de Officiis*, C. 5. *n.* 30, 31, 32, 37.

The Word is form'd of the *Greek*, ἑταῖρος, *Socius*, Companion, Ally, and ἀρχὴ, *Imperium*, Command.

HETEROCLITE, HETEROCLITON, in Grammar, an irregular, or anomalous Word, which either in Declenſion, Conjugation, or Regimen, deviates from the ordinary Rules of Grammar. See ANOMALOUS, IRREGULAR, *&c.*

The Word is peculiarly affected to Nouns, which vary, or are irregular, in Point of Declenſion; having fewer Caſes, Numbers, *&c.* than ordinary; or are of one Declenſion in one Number, and another in another. See NOUN, DECLENSION, *&c.*

We have varying *Heteroclites*, defective, and redundant *Heteroclites*, &c.

Under the Claſs of *Heteroclites*, come *Aptotes*, *Diptotes*, *Monaptotes*, *Triptotes*, *Tetraptotes*, *Pentaptotes*, &c. See APTOTE, DIPTOTE, *&c.*

The Word is *Greek*, ἑτερόκλιτος, form'd of ἕτερος, *alter*, another, different, and κλίνω, *I decline*.

HETERODOX, in Polemical Theology, ſomething that is contrary to the Faith or Doctrine eſtabliſh'd in the true Church.

Thus, we ſay, a *Heterodox* Opinion, a *Heterodox* Divine, *&c.*

The Word ſtands in Oppoſition to *Orthodox*. See ORTHODOX.

It is form'd of the *Greek*, ἑτερόδοξος, a Compound of ἕτερος, *alter*, and δόξα, *Opinion*.

HETERODROMUS *Vectis*, in Mechanicks, a Lever wherein the Fulcrum, or Point of Suſpenſion, is between the Weight and the Power. See LEVER.

This is what we otherwiſe call a *Lever of the firſt Kind*. — Such is that repreſented *Tab. Mechanicks*, *Fig.* 1.

If either the Weight be in the middle between the Power and the Fulcrum; or the Power between the Weight and the Fulcrum, the Lever is denominated *Homodromus*. — Such are thoſe repreſented *Fig.* 2 and 3.

HETEROGENEITY, in Phyſicks, the Quality, or Diſpoſition, which denominates a Thing *Heterogeneous*.

The Word is alſo uſed for the *Heterogeneous* Parts themſelves. — In this Senſe, the *Heterogeneities* of a Body are the ſame Thing with the *Impurities* thereof.

*Heterogeneity*, is a Term of a very lax Signification, and brought by the Chymiſts to ſerve almoſt for any Thing they do not underſtand; ſo that all Diſagreement, or Inaptitude to Mixture between any Bodies, is imputed to the *Heterogeneity* of their Parts.

But, ſo far as the Term may be made uſe of, to convey any diſtinct Signification, it muſt be by conſidering natural Bodies under different Sortments, according as they are diverſified by Figure, Bulk, Motion, and their more ſenſible Properties: So that thoſe of different Sortments are *Heterogeneous* to one another, and the Parts of the ſame Sortment, homogeneous. See HOMOGENEOUS.

Thus the Diviſion Chymiſtry makes of Bodies into Oils, Salts, Spirits, *&c.* may be reckoned, with Reſpect to one another, *Heterogeneous*; tho' the Parts of each Diviſion are among themſelves Homogeneous.

In Effect, they are two Terms, which ſerve frequently for a Refuge to Ignorance; otherwiſe the common Terms of *like* and *unlike* might ſerve every whit as well. *Quincy*.

HETEROGENEOUS, or HETEROGENEAL, literally imports ſomething of a different Nature, or that conſiſts of Parts of different Kinds: In Oppoſition to *Homogeneous*. See HOMOGENEOUS.

Thus, we ſay, Milk is a *Heterogeneous* Body; compoſed of Butter, Cheeſe, and Whey. See MILK.

The Refining of a Metal, is the purging it of all its *Heterogeneous* Parts. See REFINING.

The Word is *Greek*, form'd of ἕτερος, *alter*, different, and γένος, *Genus*, Kind; *q. d.* compoſed of different Kinds of Parts.

HETEROGENEOUS, is particularly applied in Mechanicks, to thoſe Bodies whoſe Denſity is unequal in different Parts of their Bulk. See DENSITY.

Or, *Heterogeneous* Bodies are ſuch, whoſe Gravities are not proportionable to their Bulks. See GRAVITY.

Bodies equally denſe, or ſolid in every Part, or whoſe Gravity is proportionable to their Bulk, are ſaid to be Homogeneous. See BODY, *&c.*

HETEROGENEOUS *Light*, is that which conſiſts of Parts or Rays of different Refrangibility, Reflexibility, and Colour. See LIGHT, RAY, REFRANGIBILITY, *&c.*

HETEROGENEOUS *Nouns*, in Grammar, are ſuch as have one Gender in the Singular Number, and another in the Plural. See GENDER, *&c.*

HETEROGENEOUS *Numbers*, are thoſe referr'd to different Units, or Integers. See NUMBER.

HETEROGENEOUS *Quantities*, are thoſe which are of ſuch different Kind and Conſideration, as that one of them

taken

taken any Number of Times, never equals or exceeds the other. See QUANTITY.

HETEROGENEOUS *Surds*, are ſuch as have different radical Signs, as, $\sqrt{^2}$ a a, and $\sqrt{^3}$ : b b : $\sqrt{^5}$ 9, and $\sqrt{^7}$ 19.

How to reduce *Heterogeneous Surds* to Homogeneous ones; ſee under the Article SURDS.

HETERORHYTHMUS, a Term uſed by ſome fanciful Writers, for a Courſe of Life unſuitable to the Age of thoſe who live it.

The ſame is alſo applied to Pulſes, when they beat variouſly or irregularly in Diſeaſes. See PULSE.

The Word is compounded of the *Greek*, ἕτερος, and ῥυθμὸς. See RHYME.

HETEROSCII, in Geography, a Term vulgarly applied to thoſe Inhabitants of the Earth, whoſe Shadow, at Noon-tide is always projected the ſame Way. See SHADOW.

In this Senſe, the Inhabitants of the temperate Zones are denominated *Heteroſcii*. See ZONE.

HETEROSCII, however, in Strictneſs, and according to the Origin and Reaſon of the Word, is a Term of Relation; and denotes thoſe Inhabitants, which, during the whole Year, have their Noon-tide Shadows projected different Ways from each other.

Thus, we who inhabit the Northern temperate Zone, are *Heteroſcii* with Regard to thoſe who inhabit the Southern temperate Zone: And thoſe are *Heteroſcii* with Reſpect to us.

From this Definition it follows, that only the Inhabitants of the two temperate Zones are *Heteroſcii*; nor is the Word ordinarily applied to any other. Tho', in Reality, there is always one Part of the torrid Zone, whoſe Inhabitants are *Heteroſcii* with Regard to thoſe of the reſt, and with Regard to thoſe of one of the temperate Zones, except at the Time of the Solſtices. And even at that Time all of the torrid Zone are *Heteroſcii* with Regard to thoſe of one of the temperate Zones.

But as this is variable, and the People of the torrid Zone have their Shadow now on this, and then on that Side; the Cuſtom is to call them *Amphiſcii*, and not *Heteroſcii*. See AMPHISCII.

The Word is *Greek*, form'd of ἕτερος, *other, different*; and σκία, *Shadow*.

HETEROUSII, HETEROUSIANS, a Sect, or Branch of *Arians*; the Followers of *Aetius*, and from him alſo denominated *Aetians*. See AETIANS.

They were called *Heterouſiani*, by Reaſon they held, not that the Son of God was of a Subſtance like, ſimilar to that of the Father; which was the Doctrine of another Branch of *Arians*, thence called *Homoouſians*, *Homooufii*: But that he was of another Subſtance different from that of the Father. See ARIAN and HOMOOUSIAN.

The Word is *Greek*, compoſed of ἕτερος, *alter*, and οὐσία, *Subſtance*.

HEXACHORD, in the antient Muſic, a Concord commonly called by the Moderns, a *Sixth*. See CONCORD and SIXTH.

The *Hexachord* is two-fold, *Greater* and *Leſſer*. — The *Greater Hexachord*, is compoſed of two greater Tones, two leſſer Tones, and one greater Semitone; which make five Intervals. The *Leſſer Hexachord* conſiſts only of two greater Tones, one leſſer Tone, and two greater Semitones. See TONE.

The Proportion of the former, in Numbers, is as 3 to 5; and that of the other, as 5 to 8.

The Word is *Greek*, compounded of ἕξ, *Sex*, Six; and χορδὴ, *Corda*, Chord, or String.

HEXAEDRON, or HEXAHEDRON, in Geometry, one of the five regular Bodies, popularly call'd a *Cube*. See CUBE and REGULAR *Body*.

The Square of the Side of a *Hexaedron*, is in a ſubtriple Ratio to the Square of the Diameter of the circumſcribed Sphere. — Hence, the Side of the *Hexaedron* is to the Side of the Sphere it is inſcribed in, as 1 to the $\sqrt{3}$; and conſequently incommenſurable thereto.

The Word is *Greek*, form'd of ἕξ, *Sex*, Six; and ἕδρα, *Sedes*, Seat.

HEXAGON, in Geometry, a Figure of ſix Sides, and as many Angles. See FIGURE and POLYGON.

If theſe Sides and Angles be equal, it is called a *Regular Hexagon*. See REGULAR.

The Side of a *Hexagon* is demonſtrated to be equal to the Radius of a Circle circumſcribed about the ſame. See CIRCLE and RADIUS.

Hence, a regular *Hexagon* is inſcribed in a Circle, by ſetting the Radius off ſix Times upon the Periphery. See INSCRIBED.

To deſcribe a *Hexagon* on a given Line A B, (*Tab. Geometry, Fig.* 84.) draw an Equilateral Triangle A C B; the Vertex C will be the Centre of a Circle, which will circumſcribe the *Hexagon* required. See CIRCUMSCRIBING.

In Fortification, a *Hexagon* is a Fortreſs with ſix Baſtions. See BASTION.

The Word is *Greek*, form'd of ἕξ, *Sex*, Six, and γωνία, *Angulus*, Angle.

HEXAMERON, a Name given to divers Writings both of antient and modern Authors, containing Commentaries, or Diſcourſes, on the firſt Chapter of *Geneſis*; wherein is delivered the Hiſtory of the Creation, or the firſt ſix Days of the World.

St. *Baſil*, St. *Ambroſe*, &c. have wrote *Hexamerons*.

The Word is *Greek*, ἑξάμερον, compoſed of ἕξ, *Sex*, Six, and ἡμέρα, which in the *Doric* Dialect is wrote ἁμέρα, *Day*.

HEXAMETER, in the antient Poetry, a Verſe uſed by *Greek* and *Latin* Writers, conſiſting of ſix Feet. See FOOT and VERSE.

The firſt four Feet of a *Hexameter*, may be indifferently either *Dactyls* or Spondees; but the laſt Foot, in Strictneſs, is always to be a Spondee; and the laſt but one a Dactyl. Such is that of *Homer*,

Εἰς ὕδωρ μ' ἔῤῥιψας, ἔχει θεὸς ἔκδικον ὅμμα.

And that of *Virgil*,

*Diſcite Juſtitiam moniti & non temnere Divos.*

*Hexameter* Verſes are divided into *Heroic*; which are to be grave and majeſtical, ſuitable to the Dignity of Heroic Poetry: And *Satyrical*, which may be more looſe and negligent, as thoſe of *Horace*. See HEROIC, *&c.*

Epic Poems, as the Iliad, Odyſſee, Æneid, *&c.* conſiſt of *Hexameter* Verſes alone: Elegies and Epiſtles ordinarily conſiſt alternately of *Hexameters* and Pentameters. See PENTAMETER.

Some of the *French* and *Engliſh* Poets have attempted to compoſe in *Hexameter* Verſes, but without Succeſs. *Jodelle* made the firſt Eſſay in 1553, with a Diſtich in Praiſe of *Olivier de Magny*, which *Paſquier* repreſents as a Maſter-piece. 'Tis this,

*Phœbus, Amour, Cypris, veut Sauver, nourrir & orner*
*Ton Vers, & ton Chef, d'Umbre, de Flamme, de Fleurs.*

But this Kind of Poetry pleaſes no Body. The Modern Languages are not at all fit for a Kind of Verſe whoſe Cadence depends altogether on long and ſhort Syllables. See QUANTITY, VERSE, *&c.*

The Word is *Greek*, compoſed of ἕξ, *Six*, and μέτρον, *Menſura*, Meaſure, Foot.

HEXAMILION, EXAMILLION, in Antiquity, a celebrated Wall built by the Emperor *Emanuel*, over the Iſthmus of *Corinth*.

It took its Name from ἕξ, *Six*, and μιλιον, which in the vulgar *Greek* ſignifies a Mile; as being ſix Miles long.

The Deſign of the *Hexamilion*, was to defend *Peloponneſus* from the Incurſions of the *Barbarians*. — *Amurath* II. having rais'd the Siege of *Conſtantinople*, in the Year 1424; demoliſh'd the *Hexamilion*, tho' he had before concluded a Peace with the *Greek* Emperor.

The *Venetians* reſtor'd it in the Year 1463, by thirty Thouſand Workmen, employ'd for fifteen Days, and cover'd by an Army commanded by *Bartholdo d'Eſte*, General of the Land Forces, and *Louis Loredano*, General of the Sea.

The Infidels made ſeveral Attempts upon it, but were repulſed, and obliged to retire from the Neighbourhood thereof. But *Bartholdo* being kill'd at the Siege of *Corinth*, which was attempted ſoon after; *Bertino Calcinato*, who took on him the Command of the Army, abandon'd, upon the Approach of the Beglerbeg, both the Siege and the Defence of the Wall, which had coſt them ſo dear: Upon which it was finally demoliſh'd.

HEXAPLA, or EXAPLA, in Church Hiſtory, a Bible diſpoſed in ſix Columns, containing the Text, and divers Verſions thereof; compiled and publiſhed by *Origen*. See BIBLE.

Euſebius, *Hiſt. Eccl.* L. VI. *C.* 16. relates that *Origen*, after his Return from *Rome* under *Caracalla*, applied himſelf to learn *Hebrew*; and began to collect the ſeveral Verſions that had been made of the ſacred Writings, and of theſe to compoſe his *Tetrapla* and *Hexapla*: Others, however, will not allow him to have begun till the Time of *Alexander*, after he had retired into *Paleſtine*, about the Year 231.

To conceive what this *Hexapla* was, it muſt be obſerv'd, that beſide the Tranſlation of the ſacred Writings, call'd the *Septuagint*, made under *Ptolomy Philadelphus*, above 270 Years before Chriſt; the Scripture had been ſince tranſlated into *Greek* by other Interpreters. The firſt of thoſe Verſions, (or, reckoning the *Septuagint*, the ſecond) was that of *Aquila*, about the Year of Chriſt 140: The third was that of *Symmachus*, publiſhed, as is commonly ſuppoſed,

ſuppoſed, under *Marcus Aurelius:* The fourth was that of *Theodoſian*, under *Commodus:* The fifth was found at *Jericho*, in the Reign of *Caracalla*, about the Year 217: And the ſixth was diſcover'd at *Nicopolis*, about the Year 228. Laſtly, *Origen* himſelf recover'd Part of a ſeventh, containing only the *Pſalms*. See VERSION.

Now *Origen*, who had held frequent Diſputations with the *Jews* in *Egypt* and *Paleſtine*, obſerving that they always objected againſt thoſe Paſſages of Scripture quoted againſt them; and appeal'd to the *Hebrew* Text; the better to vindicate thoſe Paſſages, and confound the *Jews*, by ſhewing that the Seventy had given the Senſe of the *Hebrew*; or rather to ſhew, by a Number of different Verſions, what the real Senſe of the *Hebrew* was: undertook to reduce all theſe ſeveral Verſions into a Body, along with the *Hebrew* Text; ſo as they might be eaſily confronted, and afford a mutual Light to each other.

In Order to this, he made Choice of eight Columns: In the firſt he gave the *Hebrew* Text in *Hebrew* Characters: In the ſecond, the ſame Text in *Greek* Characters. The reſt were filled with the ſeveral Verſions abovementioned; all the Columns anſwering Verſe for Verſe, and Phraſe for Phraſe. In the *Pſalms* there was a ninth Column for the ſeventh Verſion.

This Work *Origen* call'd Ἑξαπλα, *Hexapla*, q. d. *Sextuple*, or a Work of ſix Columns; as only regarding the firſt ſix *Greek* Verſions.

Indeed, S. *Epiphanius*, taking in likewiſe the two Columns of the Text, calls the Work *Octapla*, as conſiſting of eight Columns. See OCTAPLA.

This celebrated Work periſh'd long ago: Tho' ſeveral of the antient Writers have preſerved us Pieces thereof; particularly S. *Chryſoſtom* on the *Pſalms*, *Philopomes* in his *Hexameron*, &c. — Some modern Writers have endeavoured to collect Fragments of the *Hexapla*, particularly *Druſius*, and Fa. *Montfaucon*.

HEXASTYLE, HEXASTYLOS, in the antient Architecture, a Building with ſix Columns in Front. See COLUMN.

The Temple of Honour and Virtue at *Rome*, built by *Mutius*, was a *Hexaſtyle*. See TEMPLE.

The Word is compoſed of ἕξ, *Six*, and στύλος, *Column*.

HEYRS, in Husbandry, are young timber Trees, uſually left for Standards in felling of Woods or Copſes. See TIMBER, FELLING, STANDARD, &c.

HIATUS, a *Latin* Term, properly ſignifying the Aperture of the Mouth; from the Verb *hiare*, to gape.

It is variouſly uſed in Works of Literature, &c. to denote a *Chaſm*, or *Gap*. Particularly in Verſes, where there is a claſhing of Vowels, by ſome Words ending with a Vowel, and the following one beginning with another. — Tho' oft the Ear the open Vowels tire.

This claſhing of Vowels, ſo diſagreeable to the Ear, is called a *Hiatus* in Proſe as well as Verſe. — The *Romans* were ſo very careful to avoid it, that they always ſuppreſs'd the preceding Vowel even in Proſe; as is obſerved by *Cicero* in his *Orator*.

The Word *Hiatus* is alſo uſed for a Defect in a Manuſcript Copy; where ſomething is loſt, or effaced, by the Injuries of Time, or otherwiſe.

In a theatrical Piece, there is ſaid to be a *Hiatus*, when a Scene is not well connected to the next, but leaves the Action interrupted. See SCENE.

In Matters of Genealogy, *Hiatus* is an Interruption in a Line or Series of Deſcendants. — Thoſe Proofs of eight Hundred Years are impoſſible, by Reaſon of the frequent *Hiatus's* occaſion'd by Civil Wars, *Gothic* Inundations, &c.

HICKUP, HICCOUGH, or HICKET, *Singultus*, in Medicine, a ſudden irregular Inſpiration; wherein the Stomach, and the Parts contain'd in the lower Venter, are driven from below, upwards.

The *Hickup* is not a Diſorder of the Stomach, as is uſually imagined, but a convulſive Motion of the *Diaphragma*; whereby that Muſcle retiring impetuouſly downwards, impels the Parts beneath it.

It is occaſion'd by ſharp Humours; a too great Plenitude of the Stomach; a Bit of any Thing ſtopp'd at its upper Orifice; or, in the general, by any Thing capable of irritating the Nerves of the *Diaphragma*.

The Remedy for the *Hiccough*, according to *Hippocrates*, is to fetch the Breath very long, or even to ſtop the Breath for ſome Time. A Sneezing happening upon a *Hiccough* generally cures it; the Diaphragm, ſhook by the violent Expiration, being apt to throw off what before irritated it.

The Word is form'd of the Flemiſh *Hick*, which ſignifies the ſame Thing. Others derive it *ab* hiſcendo; others, *a difficili Anhelitu*.

HIDAGE, or HYDAGE, was an extraordinary Tax; antiently payable to the King for every Hide of Land. See HIDE.

*Sunt etiam quædam communes Præſtationes, quæ Servitia non dicuntur, nec de Conſuetudine veniunt, niſi cum neceſſitas intervenerit, vel cum Rex venerit; ſicut ſunt* Hidagia, Coragia, & Carvagia, *& alia plura de neceſſitate & ex conſenſu communi totius regni introducta, & quæ ad dominum non pertinent*, &c. Bracton *Lib.* II. Cap. 6.

King *Æthelred*, in the Year of Chriſt 994, upon the Landing of the *Danes* at *Sandwich*, taxed all his Lands by *Hides*. Every 310 *Hides* of Land found one Ship furniſhed; and every 8 *Hides* found one *Jack*, and one Saddle for the Defence of the Realm.

Wilhelmus Conqueſtor *de unaquaque* Hida *per* Angliam *ſex ſolidos accepit. Floren. Wigorn. in* An. 1084.

The Word *Hidage* is alſo uſed for a being quit of that Tax; which was alſo call'd *Hyde-Gild*.

HIDE, the Skin of a Beaſt; particularly that of a Bullock or Cow. See SKIN and LEATHER.

We have *Hides* of divers Denominations, according to their State, Quality, &c.

*Raw* HIDE, or *Green* HIDE, is that which has not undergone any Preparation; being in the ſame Condition as when taken off the Carcaſe.

*Salted* HIDE, is a green *Hide*, ſeaſon'd with Sea-Salt and Alum, or Salt-Petre; to prevent its ſpoiling and corrupting, either by keeping it too long in Cellars, or in tranſporting it too far in a hot Seaſon.

There are alſo *Hides dried in the Hair*, ſent from *America*; particularly thoſe of Buffelo's, &c. See BUCANEER.

*Tann'd* HIDE, is a *Hide* either green, ſalted or dried, further dreſſed and prepared by the Tanner, by paring off the Hair, and ſteeping it in Pits of Lime and Tan. See TANNING.

*Curried* HIDE, is that which after tanning, has paſſed thro' the Curriers Hands, and has thus received its laſt Preparation, and is fitted for Uſe. See CURRYING.

HIDE, HYDE, or HYDA, in our antient Cuſtoms, was a Meaſure, or Quantity of Land, containing ſo much as could be yearly till'd with a ſingle Plough. See PLOUGH *Land*.

*Beda* calls the *Hide* of Land *Familia*, and defines it to be ſo much as was ſufficient for the ordinary Maintenance of one Family. See FAMILY.

In other Authors it is called *Manſum*, *Manens*, *Caſata*, *Carucata*, *Sullinga*, &c. See CARUCATA.

*Crompton*, in his *Juriſdict.* Fol. 222, ſays a *Hide* of Land, contains one hundred Acres: He adds, that eight *Hides* make a *Knight's Fee*. In an antient Manuſcript the *Hide* is fix'd at 120 Acres.

But Sir *Edward Coke* adds, that a Knight's Fee, a *Hide*, or Plough-Land, a Yard-Land, and an Oxgang of Land do not contain any certain, determinate Number of Acres. See KNIGHT's *Fee*, YARD *Land*, &c.

The Diſtribution of *England* into *Hides* of Land is very antient; there being mention made of it in the Laws of King *John*, Cap. 14. *Henricus* I. *Maritand, filiæ ſuæ gratia Imperatori, cepit ab unaquaque* Hida *Angliæ tres Sol.* Spelman.

HIDE-*Bound*, a Diſorder of a Horſe, or other Beaſt, wherein his Skin ſticks ſo tight to his Ribs and Back, as not to be looſen'd from it with the Hand.

The Diſorder is ſometimes owing to Poverty and bad keeping; at other Times to over Riding or a Surfeit, the Horſe being ſuffered when he is hot, to ſtand long in the wet; or to a morbid Dryneſs of the Blood, which not having its natural Courſe, cauſes the Skin to ſhrink up, and cleave to the Bones.

HIDE-*Bound*, among Husbandmen. — Trees are ſaid to be ſo when the Bark ſticks too cloſe. See BARK.

HIDEL, in our antient Statutes, ſignifies a Place of Protection, or a Sanctuary. See SANCTUARY.

HIDGILD, in the Laws of King *Canute*, is explained by *Pretium redemptionis aut manumiſſionis Servi*; from the *Saxon* hiðe, *i. e.* the Skin, and gild, *pretium*, i. e. the Price by which he redeemed his Skin from being whipp'd. See GILD.

*Si liber feſtis dictis operetur, perdat libertatem; ſi ſervus, corium perdat, vel* Hidgildum, *i. e.* let him be whipped, which was the Puniſhment for Servants. *Vel* Hidgildum, *i. e.* let him pay for his Skin; by which Payment he is to be excuſed from Whipping.

HIDROTICKS, or rather HYDROTICKS, in Medicine, are the ſame with *Sudorificks*. See SUDORIFICKS.

Carduus Benedictus, Zedoary, Gayac, Angelica, &c. are of the Number of *Hidroticks*, or *Hidrotic* Medicines.

The Word is compoſed of the *Greek*, ἱδρὼς, *Sweat*.

HIERACITES, HIERACITÆ, a Sect of antient Hereticks; denominated from their Leader *Hieracas*.

This *Hereſiarch* was by Nation an *Egyptian*; and, beſide his Mother-Tongue, was a Maſter of the *Greek*, and well ſeen in all the polite Parts of Learning. Being born a Chriſtian, he had been brought up to the Study of the Holy Scriptures, whereof he had a more than ordinary Acquaintance; ſo that he wrote Commentaries on ſome of them: But, by an ill Uſe of his Knowledge, he fell into divers Errors, in which his Intereſt and Authority among the Monks of *Egypt* procured him Abundance of Followers.

He abſolutely denied the Reſurrection of the Body; maintaining that the Soul alone roſe again; and that the Reſurrection was altogether ſpiritual. — *Epiphanius* ſurmiſes that he might have imbibed this Error from *Origen*.

The ſame *Hieracas*, and his Followers likewiſe condemn'd Marriage; being of Opinion that it was only allowed under the Old Teſtament, and till the Coming of Jeſus Chriſt; but that under the New Law, all Marriage was prohibited, as incompatible with the Kingdom of God.

S. *Epiphanius* produces the Paſſages of Scripture whereon he founded this Doctrine. He adds, that *Hieracas* did not give into *Origen*'s Error with Regard to the Myſtery of the Trinity, but allow'd the Son to be really and truly begotten of the Father: He was alſo Orthodox with reſpect to the Holy Ghoſt; excepting for ſome Peculiarities received from the *Melchiſedechians*, on which he had refined. He lived a very auſtere Life, and promoted the ſame among his Followers: But after his Death they degenerated a-pace.

HIERA PICRA, in Pharmacy, a Kind of Electuary, firſt deſcribed by *Galen*; compoſed of Aloes, Cinnamon, Mace, Aſarabacca, Spicanardi, Saffron, Maſtic and Honey.

It is uſed to purge and cleanſe the Stomach; remove Obſtructions, promote the Menſes and Hæmorrhoids, and ſweeten the Blood. Tho' its chief Uſe among us, is in making the *Tinctura ſacra*. See TINCTURA.

It is denominated from the *Greek*, ἱερὸς, *ſacer*, holy, by Reaſon of its rare Virtues; and πικρὸς, *amarus*, bitter; Aloes, which is the Baſe thereof, rendering it extremely bitter. See ALOES.

There is another *Hiera*, call'd *Hiera Diacolocynthidos Pachii*, by Reaſon *Colocynthis* is the Baſe thereof, and that it was firſt uſed with good Succeſs by *Pachius* of *Antioch*, in divers obſtinate Diſeaſes. — It is compoſed of *Colocynthis*, *Opoponax*, *Ariſtolochia rotunda*, *Agaric*, and other Ingredients.

It is uſed in Epilepſies, Apoplexies, Palſies, and Lethargies, to excite the Menſes, and promote the Expulſion of the After-birth.

There is alſo a third Sort of *Hiera*, call'd *Liberanus*; but rarely uſed. — Dr. *Quincy* ſays, 'tis one of the moſt ridiculous Medleys ever contrived. It paſſes for a Cordial, *&c.*

HIERARCHY, HIERARCHIA, in Theology, the Order, or Subordination, among the ſeveral Choirs, or Ranks of Angels. See ANGEL.

St. *Dionyſius*, and other of the antient Writers, eſtabliſh nine Choirs, or Orders of celeſtial Spirits, *viz.* Seraphim, Cherubim, Thrones, Dominions, Principalities, Powers, Virtues, Angels and Archangels: And theſe he divides into three *Hierarchies*. See SERAPH, CHERUB, *&c.*

The Word is *Greek*, form'd of ἱερὸς, *ſacer*, holy, and ἀρχὴ, *Principatus*, Principality, *q. d.* ἱερὰ ἀρχὴ, *ſacer Principatus*, holy Principality or Command; and Principality in holy Things.

HIERARCHY, is alſo uſed on Earth, for the Subordination between Prelates and other Eccleſiaſticks. See ECCLESIASTICAL *Polity*.

Archbiſhops, Biſhops, Prieſts, and Deacons, compoſe the *Hierarchy* of the Church of *England*. In that of *Rome*, the Pope has likewiſe a Place at the Head of the *Hierarchi*.

Fa. *Cellot*, a Jeſuit of *Paris*, has publiſhed a Volume expreſs, *de Hierarchia* and *Hierarchis*, L. IX, on the *Hierarchy*, and thoſe who compoſe it. He there diſtinguiſhes a created, and an increated *Hierarchy*; a divine, and a human or eccleſiaſtical *Hierarchy*; and in this, a *Hierarchy* of Juriſdiction, a *Hierarchy* of Order, and a *Hierarchy* of Graces the moſt ſublime of all. — He defines *Hierarchy*, in the general, a Principality, Command, or Superiority in holy Things: *Principatus*, or *Imperium in rebus Sacris*. He holds, that *Hierarchy* excludes all below Biſhops; and that neither Prieſts nor Deacons can be reckon'd among the Number of *Hierarchy*. *Bellarmin*, *Hallier*, *Aurelius*, &c. he holds, were all miſtaken, and did not diſtinguiſh between being of the *Hierarchy*, and being under it. According to him, to *be of*, or *in the Hierarchy*, are the ſame Thing; and are only applicable to thoſe who govern the Church, or have ſome Part in the Adminiſtration thereof: On the contrary, to be under the *Hierarchy*, is to be ruled or governed by the *Hierarchy*.

*Cellot* will not admit of any Difference between theſe three Expreſſions. To prove that they all denote the ſame Thing, he inſtances in the Caſe of Monarchy, alledg'd for the ſame Purpoſe by *P. Aurelius*: Urging, that in a Monarchy, all, even the Subjects are in the Monarchy, of the Monarchy, or under the Monarchy; and that none are excluded but Foreigners: And that the Caſe is the ſame in the *Hierarchy*.

HIERATIC *Paper*, among the Antients, was the fineſt Sort of Paper; which was ſet apart only for ſacred or religious Uſes. See PAPER.

HIEROGLYPHIC, a Symbol, or Myſtic Figure, uſed among the antient *Egyptians*, to cover, or conceal the Secrets of their Theology. See CHARACTER.

*Hieroglyphicks* are properly Emblems, or Signs of divine, ſacred, or ſupernatural Things; by which they are diſtinguiſhed from common *Symbols*, which are Signs of ſenſible and natural Things. See SYMBOL.

*Hermes Triſmegiſtus*, is commonly eſteemed the Inventor of *Hieroglyphicks*: He firſt introduced them into the Heathen Theology; from whence they have been tranſplanted into the *Jewiſh* and *Chriſtian*.

The Word is compoſed of the *Greek*, ἱερὸς, *ſacer*, holy, and γλύφειν, *ſculpere*, to engrave; it being the Cuſtom to have the Walls, Doors, *&c.* of their Temples, Obeliſks, *&c.* engraven with ſuch Figures.

Sacred Things, ſays *Hippocrates*, ſhould only be communicated to ſacred Perſons. — Hence it was, that the antient *Egyptians* communicated to none but their Kings and Prieſts, and thoſe who were to ſucceed to the Prieſthood and the Crown, the Secrets of Nature, and the Myſteries of their Morality and Hiſtory; and this, by a Kind of Cabbala, which at the ſame Time that it inſtructed them, only amuſed the reſt of the People. — Hence the Uſe of *Hieroglyphicks*, or myſtic Figures, to veil their Morality, Politicks, *&c.* from prophane Eyes. *Spon.* This Author, it may be obſerved, and many others, do not keep to the preciſe Character of a *Hieroglyphic*, but apply it to prophane as well as divine Things.

*Hieroglyphicks* are a Kind of real Characters, which do not only denote, but in ſome Meaſure expreſs the Things. — Thus, according to *Clemens Alexandrin.* Strom. 5. A Lion is the *Hieroglyphic* of Strength and Fortitude; a Bullock, of Agriculture; a Horſe, of Liberty; a Sphinx of Subtlety, *&c.* See HIEROGLYPHICAL.

HIEROGLYPHICAL, ſomething containing a *Hieroglyphic*. See HIEROGLYPHIC.

In *Egypt* are ſtill found divers Obeliſks, Figures, *&c.* full of *Hieroglyphical* Figures or Characters. See HIEROGRAMMATEI.

'From the inmoſt Receſſes of the Dome, ſays *Apuleius*, 'he brings forth certain Books wrote in myſtic, unintel-'ligible Characters; conſiſting partly of Figures of Ani-'mals, apparently ſuggeſting ſome compendious Sayings; 'and partly of Knots, and Flouriſhes; all abundantly 'ſecured from the too curious Eyes of profane Readers. 'The religious Rites of the *Egyptians*, are moſtly involved in ſuch Figures of Animals, which are hence called 'ἱερογλυφικὰ γράμματα, *Hieroglyphical Letters*.

HIEROGRAMMATEI, among the antient *Egyptians*, were the Prieſts appointed to explain the Myſteries of Religion, and to direct the Performance of the Ceremonies thereof.

The *Hierogrammatei* invented and wrote Hieroglyphicks, and Hieroglyphical Books, and occaſionally explain'd 'em, with other Matters relating to the Doctrines of Religion. If we may believe *Suidas*, they were alſo Prophets; at leaſt, he relates, that a *Hierogrammateus* foretold to an antient King of *Egypt*, that there would be an *Iſraelite* of great Wiſdom, Virtue and Renown, who ſhould humble *Egypt*.

The *Hierogrammatei* were always near the King, to aſſiſt him with their Informations and Councils: The better to fit them for this, they made uſe of the Skill and Knowledge they had acquired in the Stars, and the Motions of the heavenly Lights; and even of the Writings of their Predeceſſors, wherein their Functions and Duties were deliver'd. They were exempted from all civil Employments; were reputed the firſt Perſons in Dignity next the King; and bore a Kind of Scepter in form of a Plough-ſhare.

After *Egypt* became a Province of the *Roman* Empire, the *Hierogrammatei* ſunk into Neglect.

HIEROMNEMON, an Officer in the antient *Greek* Church; whoſe principal Function was, to ſtand behind the Patriarch at the Sacraments, Ceremonies, *&c.* and ſhew him the Prayers, Pſalms, *&c.* he was to rehearſe. — He alſo cloath'd the Patriarch in his pontifical Robes; and aſſign'd the Places of all thoſe who had a Right to be around him, when ſeated on his Throne; as the Maſter of the Ceremonies now does to the Pope.

The *Hieromnemon* was commonly a Deacon; when he was in Prieſt's Orders, as it ſometimes happen'd, he was excuſed from dreſſing the Pope in his pontifical Habits. Whether he were Deacon, or Prieſt, he had under him an Officer named *Caſtriſius*. He had alſo the keeping of the Book entituled *Contacion*, or Book of Ordination; and that call'd *Enthronianiſmus*, which was a Sort of Ritual.

The Word is compoſed of the *Greek*, ἱερὸς, *ſacred*, and μνήμων, one who adverтiſes, or puts in Mind of.

HIERONYMITES, or *Hermits of St. Jerom.* See JERONYMITES and HERMIT.

The Word is compounded of ἱερὸς, *holy*, and ονομα, *Name*.

HIEROPHANTES, or HIEROPHANTA, in Antiquity, a Prieſt among the *Athenians*. See PRIEST.

The *Hierophantes* was properly the Prieſt of the Goddeſs *Hecate:* At leaſt, the Title was only given to the Prieſts when they performed the Sacrifices of that Goddeſs, and in reſpect of her.

St. *Jerom* ſays, that the *Hierophantes* extinguiſhed the Fire of Luſt, by drinking *Cicuta*, or the Juice of Hemlock; or even by making themſelves Eunuchs. — *Appollodorus* obſerves, that it was the *Hierophanta* who inſtructed Perſons initiated into the Religion, in the Myſteries and Duties thereof; and that it was hence he derived his Name. For the ſame Reaſon he was alſo called *Prophetes*, Prophet. — He had Officers under him to do the ſame Thing, or to aſſiſt him therein, who were alſo called *Prophetes* and *Exegetes*, i. e. Explainers of divine Things.

To the *Hierophantes* it belonged to dreſs and adorn the Statues of the Gods, and to bear them in Proceſſions and Ceremonies.

The Word comes from ἱερὸς, *holy*, *ſacred*, and φαινω, *I appear*.

HIEROPHYLAX, an Officer in the *Greek* Church. — His Quality is that of Guardian, or Keeper of the holy Things, Utenſils, Veſtments, &c. anſwering to our *Sacriſtan*, or Sexton. See SACRISTAN.

The Word is compoſed of ἱερὸς, *ſacer*, and φύλαξ, *Keeper*, of φυλάτω, *I keep*.

HIEROSCOPY, HIEROSCOPIA, a Kind of Divination, perform'd by conſidering the Victim, and every Thing that occurs during the Courſe of the Sacrifice. See SACRIFICE and VICTIM.

The Word is form'd of ἱερὸς, *ſacer*, and σκοπέω, *I conſider*.

HIGH, *Altus*, a Term of Relation, applied to a Body, conſider'd according to its third Dimenſion, or its Elevation above the Horizon, or even above the Ground. See HEIGHT.

Thus, we ſay, the Pike of *Tenariff* is reputed the *higheſt* Mountain in the World. See MOUNTAIN.

The Monument is 202 Foot *high* from the Ground. See MONUMENT.

The Tower of St. *Paul's*, before its firſt burning down in 1086, was 520 Foot *high*; on this was a Pole of Copper, and on that a Croſs 15 Foot and a half high. — The Towers of *Notre Dame* at *Paris*, ſo much talk'd of, are 212 Foot *high*, &c. See ALTITUDE.

HIGH, is alſo uſed to denote a Perſon in Power, Dignity, &c. See TITLE and QUALITY.

Thus God is frequently called in Scripture the *moſt high*. So on Earth we ſay, *high* and puiſſant Lord, Prince, &c. — The States General of the United Provinces, are called their *High Mightineſſes*. See STATES, &c.

So in *England* we ſay, *High* Court of Parliament. See PARLIAMENT.

Lord *High* Chancellor, } See { CHANCELLOR.
Lord *High* Treaſurer, } See { TREASURER.

HIGH, in Muſic, is ſometimes uſed in the ſame Senſe with *loud*, in Oppoſition to *low:* And ſometimes in the ſame Senſe with *Acute*, in Oppoſition to *Grave*. See SOUND, ACUTENESS, GRAVITY, &c.

HIGH *Bearing-Cock*, is a Term uſed with Reſpect to Fighting Cocks; denoting one larger than the Cock he fights withal. — As a Low Bearing Cock is one overmatched for Height.

HIGH-*Dutch*, is the *German* Tongue in its greateſt Purity, &c. as ſpoken in *Miſnia*, &c. See LANGUAGE. See alſo GERMAN, DUTCH, &c.

HIGH *Operation*, in Chirurgery, is a Method of extracting the Stone; thus call'd, by Reaſon the Stone is taken out at the upper Part of the Bladder. See STONE.

For the Method of performing the *High* Operation. See LITHOTOMY.

The *High* Operation is ſaid to have been firſt practiſed by *Roſſy*, others ſay by *Franco* a Chirurgeon of *Lauſan*. It has been lately retriev'd by Mr. *Douglas*, and now practiſed with good Succeſs by Mr. *Cheſelden*, and others.

HIGH *Relievo*, See RELIEVO.

HIGH *Sea*, or *Ocean*, is that far from Land. See SEA and OCEAN.

HIGH *Water*, is that State of the Tides when they ceaſe to flow. See TIDES, FLUX, &c.

HIGHNESS, a Quality, or Title of Honour given to Princes. See TITLE and QUALITY.

The Kings of *England* and *Spain* had formerly no other Title but that of *Highneſs*; the firſt, till the Time of *James* I. and the ſecond, till that of *Charles* V. See MAJESTY.

The petty Princes of *Italy* began firſt to be complemented with the Title of *Highneſs* in the Year 1630. — The Duke of *Orleans* aſſumed the Title of *Royal Highneſs*, in the Year 1631, to diſtinguiſh himſelf from the other Princes of *France*.

The Duke of *Savoy*, now King of *Sardinia*, bore the Title of *Royal Highneſs*, on Account of his Pretenſions to the Kingdom of *Cyprus*. — 'Tis ſaid that Duke only took the Title of *Royal Highneſs*, to put himſelf above the Duke of *Florence*, who was called great Duke; but the great Duke has ſince aſſumed the Title of *Royal Highneſs*, to put himſelf on a Level with the Duke of *Savoy*.

The Prince of *Conde* firſt took the Title of *Moſt ſerene Highneſs*, leaving that of ſimple *Highneſs* to the natural Princes.

HIIS *Teſtibus*, q. d. *Theſe Witneſſes*; was a Phraſe antiently added in the end of a Deed that was written in the ſame Hand with the Deed; upon which the Witneſſes were called, the Deed read, and then their Names entred. See DEED and WITNESS.

This Clauſe of *Hiis teſtibus*, in Subjects Deeds, continued till, and in, the Reign of *Hen.* VIII. but is now wholly omitted. *Coke* on *Littleton*.

HILARIA, in Antiquity, Feaſts celebrated every Year, by the *Romans*, on the eighth of the Calends of *April*, in Honour of the Mother of the Gods. See FEAST.

The *Hilaria* were ſolemnized with great Pomp, and rejoycing. Every Perſon dreſs'd himſelf as he pleas'd, and took the Marks, or Badges, of whatever Dignity, or Quality, he had a Fancy for.

The *Romans* took this Feaſt originally from the *Greeks*; who call'd it ΑΝΑΒΑΣΙΣ, q. d. *Aſcenſus:* The Eve of that Day they ſpent in Tears and Lamentations, and thence denominated it ΚΑΤΑΒΑΣΙΣ, *Deſcenſus*.

Afterwards, the *Greeks* took the Name ΙΑΑΡΙΑ, from the *Romans*; as appears from *Photius*, in his Extract of the Life of the Philoſopher *Iſidore*.

*Caſaubon* maintains, that beſide this particular Signification, the Word *Hilaria* was alſo a general Name for all Solemn, or Feaſt Days, whether public or private and domeſtic. But *Salmaſius* does not allow of this.

*Triſtan*, T. I. *p.* 482. diſtinguiſhes between *Hilaria* and *Hilariæ*. The former, according to him, were public rejoycings; and the latter, Prayers made in Conſequence thereof; or even of any private Feaſt, or Rejoycing, as a Marriage, &c. The public laſted ſeveral Days; during which, all Mourning, and Funeral Ceremonies, were ſuſpended.

The *Hilaria*, were firſt inſtituted in Honour of the Mother of the Gods, as is obſerved by *Macrobius*, L. I. *C.* 10. and *Lampridius*, in his Life of *Alexander Severus*; being apparently intended to expreſs the Joy conceiv'd at the Birth of the Gods.

HILARODE, or HILARODUS, in the antient Muſic and Poetry, a Sort of Poet among the *Greeks*, who went about ſinging little gay diverting Poems, or Songs; tho' ſomewhat graver than the *Ionic* Pieces. See RHAPSODUS.

The *Hilarodes* appear'd dreſs'd in white, and were crown'd with Gold. At firſt they wore Shoes; but afterwards aſſumed the *Crepida*, which was only a Soal, tied over the Foot with Straps.

They did not ſing alone; but had always a little Boy, or Girl, to attend them, playing on ſome Inſtrument.

From the Streets, they were at length introduced into the Tragedy; as the Magodes were into Comedy. See MAGODES, TRAGEDY. &c.

The *Hilarodes* were afterwards call'd *Simodes*, from a Poet named *Simus*, who excell'd in this Kind of Poetry.

The Word is compounded of ἱλαρὸς, *joyful*, and ᾠδὴ, *Singing*, *Song*. See HILARODIA.

HILARODIA, a Poem, or Compoſition in Verſe, made, or ſung by a Sort of Rhapſodiſts call'd *Hilarodes*. See HILARODE.

*Scaliger* holds *Hilarodia*, *Hilaro-Tragedia*, *Phlyacography*, and the *Rhintonic* Fable, to be all Names for the ſame Thing. See HILARO-TRAGEDIA.

HILARO-TRAGEDIA, a dramatic Performance, partly tragic, or ſerious; and partly comic, or merry. See DRAMA.

*Scaliger*, *Poet.* L. I. *C.* 52. holds, the *Hilaro-Tragedia* and Hilarodia, to be one and the ſame Thing. Others, rather take the *Hilaro-Tragedia* to have been pretty nearly what we call a *Tragi-Comedy*. Others, again, will have it to have been a pure Tragedy, only terminating with a happy Cataſtrophe, which brings the Hero out of a wretched into a fortunate State. — But the firſt Opinion ſeems the moſt probable, and the beſt warranted. See TRAGEDY.

*Suidas*

*Suidas* mentions one *Rhinton*, as the Inventor of this Kind of Poem: Whence it was alſo called *Rhintonica fabula*.

HILARY *Term*. See TERM.

HILL. See MOUNTAIN.

HILLOCK. See MOUNT.

HIN, a *Hebrew* Meaſure, containing the ſixth Part of an Epha; or one Wine Gallon and two Pints. See MEASURE, EPHA, *&c.*

HIND, a Female Stag of the third Year. See HUNTING.

HIND *Calf*, a Hart of the firſt Year. See HUNTING.

HIND *Hand*, in the Manage. See HAND.

HINDENI *Homines*, antiently ſignified a Society of Men; from the *Saxon* hindene, *Societas*.

In the Time of our *Saxon* Anceſtors, all Men were ranked into three Claſſes; the *Loweſt*, the *Middle*, and the *Higheſt*; and were valued according to the Claſs they were in; that in Caſe an Injury were done by any one, Satisfaction might be made according to the Value, or Worth of the Man it was done to.

The *Loweſt* were thoſe who were worth ten Pounds, or two hundred Shillings; call'd *Viri ducentini*, or *Twyhindemen*, and their Wives *Twyhinda's*.

The *Middle* were valued at ſix hundred Shillings; and were called *Sixhindemen*, and their Wives *Sixhinda's*.

The *Higheſt* were valued at twelve hundred Shillings; and were called *Twelvehindimen*, and their Wives the *Twelvehinda's*. See TWIHINDI, and TWELVEHINDI.

HINE, or HIND, in the *Saxon* Language, ſignifies a Servant, or one of the Family: But it is now taken in a more reſtrictive Senſe, for a Servant at Husbandry; and the Maſter-*hine*, is he that overſees the reſt.

HINGES, in Building, thoſe neceſſary Irons, by Means whereof Doors, Lids, Folds of Tables, *&c.* make their Motion, whether of opening, ſhutting, or folding, *&c.* See DOOR, *&c.*

The Species of *Hinges* are many, *viz.* Bed, Box, Butts, Caſement; *Lancaſhire*, and ſmooth-filed; Caſting, Cheſt-black, *Lancaſhire*, ſmooth-filed, Coach, Deſk, Dovetails, Eſſes, Folding, Garnets, Dozen-ware-long, Dozen-ware-ſhort, Weighty-long, Weighty-ſhort, Lamb-heads, Port, Side-*Lancaſhire*, Side ſmooth filed, Side with riſing Joynts; *Lancaſhire*, and ſmooth filed, Side with Squares, Screw, Scuttle, Shutter; *Lancaſhire*, and ſmooth filed, Stall, Trunk of ſundry Sorts, Joynts; *Lancaſhire*, Dozen-ware with Hooks, Dozen-ware long, Dozen-ware ſhort, Weighty long, Weighty-ſhort.

HIP. See HAUNCH.

HIP-*Shot*, a Diſorder of a Horſe, when he has wrung or ſprained his Haunches, or Hips, ſo as to relax the Ligaments, that keep the Bone in its due Place.

The Signs are, that the Horſe will halt much, and go aſide long, trailing his Leg after him; and the *Hip* which is hurt will be lower than the other; the Fleſh falling away on the Side of his Buttock.

HIPS, in Building, are thoſe Pieces of Timber, placed at the Corners of a Roof. See ROOF.

The *Hips* are much longer than the Rafters, by Reaſon of their oblique Poſition, and are placed not with a right or ſquare Angle, but a very oblique one; and by Conſequence are not, at leaſt ought to be, ſquare at any Angle, as Rafters are not at all, but Level at every one of 'em; and which is yet more, as Rafters have but four Plains, theſe commonly have five. See RAFTER.

They are commonly, by Country Workmen, called Corners: Some call them *principal Rafters*, and others *Sleepers*. Indeed, *Hips* and *Sleepers* are much the ſame; only the *Sleepers* lie in the Vallies, and joyn at Top with the *Hips*; but thoſe Surfaces or Plains, which make the Back of the *Hip*, are the under Sides of the Sleeper.

The *Backs of a Hip*, are thoſe two Superficies, or Plains, on the outſide of the *Hip*, which lie parallel, both in Reſpect of their Length and Breadth, with the Superficies of the adjoyning Side, and End of the Roof.

HIP-*Mould*, is by ſome uſed for the back of the *Hip*. — Others underſtand it of a Prototype, or Pattern, commonly made of a Piece of thin Wainſcot; by which the Back, and the Sides of the *Hip* are ſet out.

HIP-*Roof*, among Builders, called alſo *Italian* Roof; is a Roof which has neither Gable Head, nor Shread Head, or Jerkin Head; which laſt, are both Gable and *Hip* at the ſame End. See ROOF.

A *Hip-Roof* has Rafters as long, and with the Angles at the Foot, *&c.* at the Ends of Building, as it has at the Sides; and the Feet of the Rafters on the Ends of ſuch Buildings as have *Hip-Roofs*, ſtand on the ſame Plane, *viz.* parallel with the Horizon, and at the ſame Height from the Foundation, with Rafters on the Sides of the Roof.

HIP-*Tyles*. See TYLE.

HIPPEUS, or EQUINUS, in Phyſiology, a Sort of Comet which ſome Writers ſuppoſe to bear a Reſemblance to a Horſe.

But the Shape of this Kind of Comet is not always alike; being ſometimes oval, and ſometimes imitating a Rhomboides. — So its Train is ſometimes ſpread from the Front, or Fore-part, and ſometimes from the hind Part.

Hence, this Claſs of Comets is diſtinguiſhed into *Equinus Barbatus*, *Equinus Quadrangularis*, and *Equinus Ellipticus*. See COMET.

HIPPIATRICE, the Art of curing the Diſeaſes of Brutes, and particularly *Horſes*.

This we rather call the *Farrier*'s Art. See FARRIER.

The Word is compoſed of ἵππος, *Horſe*, and ἰατρὸς, *Phyſician*.

HIPPOCENTAUR, in Antiquity, a fabulous Monſter, ſuppoſed to be half Horſe, and half Man.

What gave Occaſion to the Fable, was, a People of *Theſſaly*, inhabiting near Mount *Pelion*, who became thus denominated, by reaſon they were the firſt that taught the Art of Mounting on Horſeback; which occaſion'd ſome of their Neighbours to imagine that the Horſe and Man made but one Animal. See HORSEMANSHIP.

The *Hippocentaurs* differ'd from the Centaurs, in this, that the latter only rode Bullocks, and the former Horſes, as the Names themſelves intimate. See CENTAUR.

*Pliny* affirms, he had ſeen a real *Hippocentaur* at *Rome*. — On the Medals of *Gallian*, is repreſented a Centaur drawing a Bow, or holding a Globe in the right Hand, and the Helm of a Ship in the left; with this Inſcription, APOLLINI CONS. AUG. *To Apollo the Conſervator of Auguſtus*. — *Triſtan* conſiders both the one and the other, as a Symbol of the Protection *Gallian* had received from *Apollo* in his Wars againſt the *Perſians*.

The Word is pure *Greek*, form'd of ἵππος, *Equus*, Horſe, and κεντέω, *pungo*, I prick, ſpur, and ταῦρος, *Taurus*, Bull.

HIPPOCRAS, or HYPOCRAS. See HYPOCRAS.

HIPPOCRATES'S *Sleeve*, *Manica Hippocratis*, a Kind of Filter, or ſtraining Bag, form'd by joyning the oppoſite Angles of a ſquare Piece of Flannel, in Form of a Pyramid; and uſed to percolate, or ſtrain Syrups, Decoctions, *&c.* for Clarification. See FILTRE, FILTRATION, *&c.*

HIPPOCRATICA *Facies*, See FACIES *Hippocratica*.

HIPPODROME, HIPPODROMUS, in Antiquity, a Liſt, or Courſe, wherein their Horſe Races were perform'd; as alſo their Horſes exerciſed.

The Word is *Greek*, compoſed of ἵππος, *Equus*, Horſe, and δρόμος, *Curſus*, of the Verb δίδρομαω, *curro*, I run.

HIPPOLAPATHUM, in Natural Hiſtory, a Species of Lapathum, call'd alſo *Monk's Rhubarb*. See RHUBARB.

HIPPOMANES, a Sort of Poiſon, famous among the Antients as an Ingredient in amorous Philters, or Charms. See POISON, PHILTER, and CHARM.

Naturaliſts are not agreed about the Nature of the *Hippomanes*. — *Pliny* deſcribes it as a blackiſh Caruncle, found on the Head of a new born Colt; which the Dam bites off, and eats, aſſoon as ſhe is delivered. He adds, that if ſhe be prevented herein by any others cutting it off before, ſhe will not take to, nor bring up, the young.

*Servius* and *Columella* deſcribe it as a poiſonous Matter, trickling from the *Pudendum* of a Mare, when proud, or longing for the Horſe.

At the End of Monſ. *Bayle*'s Dictionary, is a very learned Diſſertation on the *Hippomanes*; and all its Virtues both real and pretended.

The Word is *Greek*, ἱππομανὲς, compounded of ἵππος, *Equus*, Horſe, and μανια, *Furor*, Fury, Madneſs.

HIPPOPODES, or HIPPOPEDES, in the antient Geography, an Appellation given to certain People, ſituate on the Banks of the *Scythian* Sea; as being ſuppoſed to have Horſe's Feet.

The *Hippopedes* are mention'd by *Dionyſius*, Geogr. *v.* 310. *Mela*, L. III. *C.* 6. *Pliny*, L. IV. *C.* 3. And St. *Auguſtin*, de Civit. *L.* XVI. C. 8. But the Truth is, they had this Appellation given them on Occaſion of their Swiftneſs, or Lightneſs of Foot.

The Word is compoſed of ἵππος, *Horſe*, and πὸς, *Pes*, Foot.

HIPPUS, in Medicine, an Affection of the Eyes, wherein they continually ſhake and tremble; and thus repreſent Objects as if continually fluctuating. See EYE.

It is thus called from the *Greek*, ἵππος, *Horſe*; in regard the Objects appear to ſhift as much as when we are riding. *Blanchard*.

HIRCUS, in Anatomy, a Part of the Auricle, or outer Ear. See EAR.

The *Hircus* is that Eminence next the Temples. See AURICLE.

The Word is *Latin*, and ſignifies Goat.

HIRCUS, in Aſtronomy, a fixed Star; the ſame with *Capella*. See CAPELLA.

HIRCUS,

HIRCUS, is alſo uſed by ſome Writers for a Comet, encompaſſed as it were with a Main, ſeemingly rough and hairy. See COMET.

HISSING, an Appellation given by Grammarians to the three Conſonants, S, X, and Z. See CONSONANT. See alſo S, X, and Z.

HISTERIC, See HYSTERIC.

HISTIODROMIA, or HYSTIODROMIA, the Art of Sailing, or of conducting Veſſels on the Sea. See SAILING.

*Hiſtiodromia* is the ſame with what we otherwiſe call *Navigation*. See NAVIGATION.

*Hiſtiodromia* turns on four Points, any two whereof being given, the other two are eaſily found from 'em by the Loxodromic Tables, Sines, Tangents, Secants, Mertor's Chart, *&c.*

Theſe four Things are, the Difference of Latitude, Difference of Longitude, the Courſe, and the Diſtance run. See LONGITUDE, LATITUDE, RHUMB and DISTANCE.

The Word is *Greek*, compoſed of ἱστίον, a *Sail*, of ἱστός, the *Maſt* of a Ship, which comes from ἵστημι, *ſto*, I ſtand; and δρόμος, *Courſe*, of δρέμω, *I run*.

HISTORICAL, ſomething that relates to Hiſtory. See HISTORY.

Thus, we ſay, *Hiſtorical Truth*, *Hiſtorical Style*, &c. The Donation of *Conſtantin*, the Reality of a Pope *Joan*, &c. are *Hiſtorical* Points, very much controverted.

*Henry Stevens* has publiſhed a *Hiſtorical* and Poetical Dictionary; ſince improved and augmented by *Morery*. Mr. *Bayle* has given us an *Hiſtorical* and Critical Dictionary: *Diodorus Siculus*, *Vignier*, and Biſhop *Nicholſon*, *Hiſtorical* Libraries.

The *Hiſtorical* Art conſiſts chiefly in the arranging and diſpoſing of the various Incidents, ſo as to conſtitute one uniform, well connected whole. Fa. *Daniel*.

The principal Qualities of the *Hiſtorical* Style, are Perſpicuity and Brevity. See STYLE.

HISTORICAL *Column*, is that whoſe Shaft is adorned with Baſſo-Relievo's carved all around from Bottom to Top, repreſenting the Hiſtory and Actions of ſome illuſtrious Perſon. See COLUMN.

In *Hiſtorical Columns*, the Figures may be either diſpoſed in a ſpiral Line, continued from one End to the other; as in the *Trajan* Column at *Rome*: Or in diſtinct Bands, or Circles, containing ſo many different Subjects.

HISTORIOGRAPHER, a profeſs'd Hiſtorian, or Writer of Hiſtory; or a Perſon who applies himſelf peculiarly thereto. See HISTORY.

The Term is chiefly uſed for a Perſon who has a peculiar Charge and Commiſſion to write the Hiſtory of his Time. — The *Hiſtoriographer* to his Majeſty is an Officer under the Lord Chamberlain: His Salary 200 *l. per Ann.*

The Word is compoſed of the *Greek*, ἱστορία, *Hiſtory*, and γράφω, *ſcribo*, I write.

HISTORY, a Recital, or Deſcription of Things as they are, or have been; in a continued, orderly Narration of the principal Facts and Circumſtances thereof. See ANNALS.

The Word is *Greek*, ἱστορία, *Hiſtoria*, and literally denotes a *Search of curious Things*, or a *Deſire of knowing*, or even a *Rehearſal of Things we have ſeen*; being form'd of the Verb ἱστορεῖν, which properly ſignifies to *know a Thing by having ſeen it*. Tho' the Idea affected to the Term *Hiſtory*, is now much more extenſive; and we apply it to a *Narration of divers memorable Things*, even tho' the Relator only takes them from the Report of others.

The Origin of the Word is from the Verb ἵστημι, *I know*; and hence it is, that among the Antients ſeveral of their great Men were call'd *Polyhiſtores*, q. d. Perſons of various, and general Knowledge. See POLYHISTORES.

*Hiſtory* is divided, with Regard to its Subject, into the *Hiſtory of Nature*, and the *Hiſtory of Actions*.

HISTORY *of Nature*, or *Natural* HISTORY, is a Deſcription of natural Bodies; whether terreſtrial, as Animals, Vegetables, Foſſils, Fire, Water, Air, Meteors, *&c.* or Celeſtial, as the Stars, Planets, Comets, *&c.* See NATURE, *&c.*

Such are *Ariſtotle*'s, *Diaſcorides*'s, *Aldrovandus*'s, &c. *Hiſtories*: Such alſo are *Ray*'s and *Geſners* Hiſtory of Quadrupeds; *Willoughby*'s *Hiſtories* of Birds, Fiſhes, *&c.* Such, laſtly, are Mr. *Flamſteed*'s Hiſtoria *celeſtis*, or *Hiſtory* of the heavenly Bodies.

*Natural Hiſtory* is the ſame with what we otherwiſe call *Phyſiology*. See PHYSIOLOGY.

HISTORY, with Regard to Actions, is a continued Relation of a Series of memorable Events, in the Affairs, either of a ſingle Perſon, a Nation, or ſeveral Perſons and Nations; and whether included in a great, or a little Space of Time.

Thus, *Thucydides* has wrote the *Hiſtory* of *Greece*; *Livy* of *Rome*; *Mezeray*, and Fa. *Daniel*, of *France*; *Tyrrel*, and *Echard*, the *Hiſtory* of *England*; *Buchanan* of *Scotland*; *Clarendon*, the *Hiſtory* of the Rebellion; *Thuanus*, Biſhop *Burnet*, &c. the *Hiſtory* of their own Lives and Times.

*Euſebius*, *Baronius*, &c. have wrote the *Hiſtory* of the Church; Biſhop *Burnet* that of the Reformation, *&c.*

Several Authors have wrote on the Method of Reading, and Studying *Hiſtory*; and, among the reſt *Lucian*, *Bodinus*, *Voſſius* the elder, *Whear*, *Patrici*, *Beni*, *Maſcardi*, *de Silhon*, F. *le Moine*, Fa. *Rapin*, the Abbot *de St. Real*, Fa. *Thomaſſin*, &c.

*Hiſtory* is divided into *Antient* and *Modern*, *Univerſal* and *Particular*, *Sacred* and *Profane*.

Fa. *Meneſtrier* gives us the proper Characters of the divers Kinds of *Hiſtory*, with great Accuracy. — He diſtinguiſhes *Hiſtory*, with Regard both to its Matter, and its Form; and gives curious Inſtances of each particular.

*Hiſtory*, with Regard to its Matter, is either Sacred, or Natural, or Civil, or Perſonal, or Singular.

*Sacred* HISTORY, is that which lays before us the Myſteries and Ceremonies of Religion, Viſions or Appearances of the Deity, *&c.* Miracles, and other ſupernatural Things, whereof God alone is the Author. — Such are the Book of *Geneſis*, the Goſpels, Apocalypſe, *&c.* See MIRACLE, GOSPEL, REVELATION.

*Natural* HISTORY, is a Deſcription of the Singularities of Nature; its Irregularities and Prodigies; and the Alterations it undergoes in the Birth, Progreſs, End, and Uſe of Things. — Such is *Ariſtotle*'s *Hiſtory* of Animals; *Theophraſtus*'s *Hiſtory* of Plants; and the entire Body of *Natural Hiſtory*, by *Pliny*: Such alſo are *Acoſta*'s Natural *Hiſtory* of the *Indies*; Plott's *Hiſtory* of *Staffordſhire*, &c.

*Civil* HISTORY, is that of People, States, Republicks, Communities, Cities, *&c.* — Such are thoſe of *Thucydides*, *Halicarnaſſæus*, *Livy*, *Polybius*, *Mezeray*, Fa. *Daniel*, *Milton*, *Buchanan*, &c.

*Perſonal* HISTORY, is that which gives the Portrait, or Life of ſome ſingle Perſon. — Such are the Lives of *Plutarch*, *Corn. Nepos*, *Suetonius*, &c. The Lives of the Painters, Poets, Philoſophers, Saints, *&c.*

*Perſonal Hiſtory*, is the ſame with what we otherwiſe call *Biography*. See BIOGRAPHY.

*Singular* HISTORY, is that which deſcribes a ſingle Action, Siege, Battel, or even War, Expedition, *&c.*

*Hiſtory*, with Regard to its Form, is either *ſimple*, or *figurate*, or *mix'd*.

*Simple Hiſtory*, is that deliver'd without any Art or foreign Ornament; being only a naked, and faithful Recital of Things, juſt in the Manner, and Order wherein they paſs'd. — Such are the Chronicles of the *Eaſtern* Empire; the Faſti; Chronological Tables, Journals, *&c.* See FASTI.

*Figurate Hiſtory*, is that which is further enrich'd with Ornaments, by the Wit, Ingenuity, and Addreſs of the Hiſtorian. — Such are the Political, and Moral *Hiſtories* of the *Greeks*, *Romans*, and moſt of the Moderns.

This latter is a Kind of rational *Hiſtory*; which, without ſtopping at the Shell or Outſide, the Appearances of Things, diſcovers the Springs and Movements of the ſeveral Events; enters into the Thoughts, the Breaſts of the Perſons concern'd therein; diſcovers their Intentions and Views; and by the Reſult of enterprizing Undertakings, diſcovers the Prudence or Weakneſs, wherewith they were laid, conducted, *&c.*

Theſe are much the moſt uſeful, and entertaining *Hiſtories*. — To this Claſs, may be peculiarly referr'd the *Hiſtories* and Annals of *Tacitus*, among the Antients; and thoſe of *Guiccardin*, *Petavius*, and Biſhop *Burnet* among the Moderns.

*Mix'd Hiſtory*, is that which, beſide the Ornaments of figured *Hiſtory*, calls in the Proofs and Authorities of ſimple *Hiſtory*; furniſhing authentic Memoirs, or original Letters, Manifeſto's, Declarations, *&c.* to vouch the Truth of what is ſaid. — Such are the *Hiſtories*, or Collections of *Ruſhworth*; Monſ. *Rapin Thoyras*'s *Hiſtory* of *England*; the Genealogical *Hiſtories* of *Ducheſne*; Monſ. *de Marca*'s *Hiſtory* of *Bearn*, &c.

HISTORY, is alſo uſed for a Romance; or a fabulous, but probable Relation, of a Series of Actions or Adventures feign'd or invented by the Writer. — Such is the *Hiſtory* of the Civil Wars of *Granada*; the *Hiſtory* of *Don Quixot*; the Ethiopic *Hiſtory* of *Heliodorus*, &c. See ROMANCE.

HISTORY, in Painting, is a Picture compoſed of divers Figures, or Perſons, repreſenting ſome Tranſaction, or Piece of *Hiſtory*, either real or feign'd. See PAINTING.

Painters are diſtinguiſh'd into Portrait Painters, Flower and Fruit Painters, Painters of Beaſts and Land-ſkips, and *Hiſtory* Painters. — The firſt Place is univerſally allow'd to *Hiſtory* Painters, as the moſt difficult, maſterly, and ſublime Province. See ORDONNANCE.

HISTRIO, in the antient Comedy, was a *Buffoon*, or Droll, who acted ſome humorous Part to excite Laughter and Merriment. See COMEDY.

HOAR-*Froſt*, *Pruina*. See FROST and PRUINA.

HOARSENESS, *Raucedo*, a Diminution of the Voice. See VOICE.

The Part here affected is the Aſpera Arteria, and particularly its Head or the Larynx. See ASPERA and LARYNX.

The next Cauſe of *Hoarſeneſs* is a too plenteous Effuſion of thin Lympha upon the Part.

*Hoarſeneſs* is a Sort of Catarrhal Indiſpoſition, ariſing from a too great Acrimony or Saltneſs of the Lymph. See CATARRH.

Sperma Ceti, Decoct. Rapar. & Rob. Paſſular, are approv'd Remedies herein. --- Where the Diſorder is inveterate, Incidents and Expectorants are frequently of Service.

HOBBLERS, in our ancient Cuſtoms, were Men, who, by their Tenure, were oblig'd to maintain a little light Nag, or Hobby, for the certifying any Invaſion toward the Sea Side.

The Name was alſo uſed for certain *Iriſh* Knights, who uſed to ſerve as light Horſemen upon *Hobbies*.

HOBBY, a Sort of Hawk that preys upon ſmall Game, as Doves, Larks, &c. See HAWK.

HOBITS, a Sort of ſmall Mortars, uſed for annoying the Enemy at a Diſtance with ſmall Bombs. See MORTAR and BOMB.

HOC-*Tueſday Money*, or HOKE-*Day Money*, a Tribute anciently paid the Landlord, for giving his Tenants and Bondmen Leave to celebrate *Hock-day*, or *Hoke-day*; in Memory of the Expulſion of the domineering *Danes*. See HOKE *Day*.

HOD, a Sort of Tray for carrying Mortar, in uſe among Bricklayers.

HODEGOS, a Term purely *Greek*, ſignifying *Guide*.

The Word is chiefly uſed as the Title of a Book compos'd by *Anaſtaſius* the *Sinaite*, toward the Cloſe of the Vth Century; being a Method of diſputing againſt the Hereticks, particularly the Acephali.

Mr. *Toland* has alſo publiſh'd a Diſſertation under the ſame Title. Its Subject is the Pillar of Fire, &c. which went before the *Iſraelites*, as a Guide in the Deſart.

HODGE-*podge*, or HOTCH-*potch*, a Diſh of Meat cut to Pieces, and ſtrew'd with ſeveral Sorts of Things together.

HODGE-*podge*, or HOTCH-*pot*, in Law, is the putting together of Lands, of ſeveral Tenures, for the more equal dividing of them. See HOTCH-*pot*.

HODMAN, a young Scholar admitted from *Weſtminſter* School to be Student in *Chriſt's Church* College in *Oxford*. See SCHOOL.

HOE, or HOW, a Husband-man's Tool, made like a Cooper's Adz, to cut up Weeds in Gardens, Fields, &c.

This Inſtrument is of great Uſe, and ſhould be more employ'd than it is, in hacking and clearing the ſeveral Corners, Creeks, and Patches of Land, in ſpare Times of the Year, which would be no ſmall Advantage thereto.

HOG-*ſteer*, among Hunters, a wild Boar of three Years old. See HUNTING.

HOGGET, or HOGREL, is a young Sheep of the ſecond Year.

HOGINHINE, or rather AGENHINE, *q. d. ſervus proprius*, or *third Night own Servant*; is he that comes Gueſtwiſe to an Inn or Houſe, and lies there the third Night: After this he was accounted of that Family; and if he offended the King's Peace, his Hoſt was anſwerable for him. See THIRD *Night awn Hine*.

HOGOE, properly, HAUT-GOUT, a Meſs in Cookery, denominated from its high Savour or Reliſh.

Its Preparations, Ingredients, &c. are various. --- Its Baſis is uſually ſome Meat, *e. gr.* Leg of Mutton, minc'd with Suet and ſavoury Herbs, as Shalot, Thyme, Spinage, &c. added thereto, with ſeaſoning of Salt and Pepper, and Yolks of Eggs: The whole work'd up into a Ball, and thus boil'd; frequently, in the Body of a Cabbage, firſt faſhion'd like a Duck, or other Fowl, with a Head ſtuck on. --- It remains to be ſerv'd up with a proper Sauce, as Butter, Yolks of Eggs, Anchovies, &c.

HOGSHEAD, a Meaſure, or Veſſel of Wine, or Oil; containing the fourth Part of a Tun; or 63 Gallons. See MEASURE, TUN, GALLON, &c.

Two of theſe *Hogſheads* make a Pipe or But. See PIPE.

The Diſtillers weigh their Veſſels when full, and for a *Hogſhead* allow 4 hundred Weight, 2 Quarters, and 22 Pound, Cask and Liquor.

HOKE-*day*, or HOCK-*day*, or HOCK-*Tueſday*, in our ancient Cuſtoms, *Dies Martis quem quindenam Paſchæ vocant*; the ſecond *Tueſday* after *Eaſter* Week.

This Day was very remarkable in former Times, inſomuch as to be uſed on the ſame Footing with *Michaelmas*, for a general Term or Time of Account. --- We find Leaſes without Date reſerving ſo much Rent payable *ad duos Anni terminos, ſcil. ad le* Hoke-day, & *ad Feſtum Sancti Mich.* See HOCK-*Tueſday Money*.

In Accounts of *Magdalen* College in *Oxford*, there is yearly an Allowance, *pro mulieribus Hockantibus*, of ſome Manors of theirs in *Hampſhire*; where the Men *hock* the Women on *Mondays*, & *contra* on *Tueſdays*. --- The Meaning of it is, that on that Day the Women in Merriment ſtop the Ways with Ropes, and pull Paſſengers to them, deſiring ſomething to be laid out in pious Uſes.

HOLD *of a Ship*, the loweſt Part of the Ship; including all that Part lying between the Keelſon, and the lower Deck. See SHIP, &c.

In the *Hold* are the Steward's Room, the Powder Room, the Bread Room, and the Boatſwain's Room; divided from each other by Bulk-Heads.

The *Hold* is the Store Room in a Merchant Ship, or the Place wherein the Goods, at leaſt all the heavier and more cumberſome, are ſtow'd. The reſt are diſpos'd between the two Decks; at leaſt in *Dutch* Ships, which have their *Holds* very ſhallow, and the Space between the Decks, high.

To find the Burthen of a Ship, the *Hold* is to be meaſur'd. See BURTHEN.

HOLD-*faſt*, an Iron Hook in Shape of the Letter S, fix'd in a Wall to retain and ſupport it.

HOLLAND, in the Commerce of Linnen, a fine, white, even, cloſe kind of Linnen Cloth, chiefly uſed for Shirts, Sheets, &c. See LINNEN.

It is wrought in the Provinces of *Holland*, *Frizeland*, and other Parts of the United Provinces; whence the Appellation.

The principal Mart or Staple of this Cloth is at *Haerlem*, whither it is ſent from moſt other Parts as ſoon as wove, there to be whiten'd the enſuing Spring.

That manufactur'd in *Frizeland* is the moſt eſteem'd, and call'd *Frize Holland*. It is the ſtrongeſt, and the beſt colour'd of any of that Fineneſs. --- It is never callender'd, nor thicken'd with Pap, as the reſt; but is imported juſt as it comes from the Whitſter. --- It is diſtinguiſh'd by its being Yard, Quarter, and half wide; which is half a Quarter more than thoſe commonly call'd *Frize Hollands*, which are not right.

*Gulix Holland* is very white and fine, and is chiefly uſed for Shirts; being the ſtrongeſt of any for its Fineneſs, except true *Frize*. 'Tis juſt Yard wide.

*Alcamore Holland*, is a very ſtrong Cloth, and wears exceeding well. 'Tis about Yard, Quarter, and half wide.

HOLLOW, in Architecture, a Concave Moulding, about a Quadrant of a Circle; by ſome call'd *Caſement*, by others an *Abacus*. See CASEMENT, &c.

HOLLOW *Square*, is a Body of Foot drawn up with an empty Space in the Middle, for the Colours, Drums, and Baggage; facing, and cover'd by the Pikes every Way to oppoſe the Horſe. See SQUARE.

HOLLOW *Tower*, in Fortification, is a Rounding made of the Remainder of two Briſures, to join the Curtain to the Orillon; where the ſmall Shot are play'd, that they may not be ſo much expos'd to the View of the Enemy. See TOWER, &c.

HOLM, HULMUS, ſignifies as much as *Inſula amnica*, a River-Iſland, according to *Bede*; or plain graſſy Ground upon the Water-ſides, or in the Water, according to *Cambden* ---*Cum duobus* Holmis *in Campis de Wedonc.* Mon.

Hence, where any Place is call'd by that Name, or where this Syllable is join'd with any other in the Names of Places, it ſignifies a Place ſurrounded with Waters. --- As the *Flatholmes*, the *Stepholmes*, near *Briſtol*. --- If the Situation of the Place be not near the Water, it may ſignify a hilly Place; for *Holm* in *Saxon*, is in *Engliſh* an Hill, or Cliff.

HOLOCAUST, a kind of Sacrifice, wherein the whole Offering is burnt or conſum'd by Fire; call'd alſo in the Scripture, *Burnt-offering*. See SACRIFICE and OFFERING.

The Word is *Greek*, ὁλόκαυστον, ὁλοκάυτωμα, compounded of ὁλος, *totus*, whole; and καίω, *Uro*, *Igne Abſumo*, I conſume with Fire.

HOLOGRAPH, in the Civil Law, ſomething written wholly in the Hand-writing of the Perſon who ſigns it.

The Word is chiefly uſed in ſpeaking of a Teſtament, written wholly in the Teſtator's own Hand. See TESTAMENT.

The *Romans* did not approve of *Holographic* Teſtaments; and tho' *Valentinian* authoriz'd them by a Novel, they are not uſed where the Civil Law is in full Force.

The Word is *Greek*, compos'd of ὅλος, all, and γράφω, I write.

HOLOMETER, a Mathematical Inſtrument, ſerving univerſally for the taking of all Sorts of Meaſures, both on the Earth, and in the Heavens.

The *Holometer* is the ſame with *Pantometer*. See PANTOMETER.

The Word is *Greek*, compos'd of ὅλος, and μετρέω, I meaſure.

HOLSOM. --A Ship is ſaid to be *holſom* at Sea, when ſhe will hull, try, and ride well without rolling or labouring.

HOLYNESS, or HOLINESS, *Sanctity*; the Quality which conſtitutes or denominates a Perſon or Thing *holy*; *i. e.* free or exempt of Sin. See SIN.

HOLYNESS is alſo us'd in reſpect of Perſons and Things that are *ſacred*, *i. e.* ſet apart to the Service of God, and the Uſes of Religion. See SACRED and SAINT.

In this Senſe we ſay *holy* Days, *holy* Ordinances, the *holy* Bible, *holy* Goſpels, *holy* War, *&c.* --- The *Roman* Catholicks call the Inquiſition the *holy* Tribunal; the See of *Rome*, the *holy* See, *&c.* See INQUISITION, *&c.*

*Holy* Oil, *holy* Water, *&c.* See OIL, WATER, *&c.*

*Paleſtine* is particularly call'd the *holy* Land, and *Jeruſalem* the *holy* City. --- Princes formerly made a Practice of going to ſignalize their Religion in the *holy* Land; who, if they had had any Religion, would have ſtaid at Home. See CROISADE.

In the *Romiſh* Countries, one Third of the Year is taken up in *holy* Days, Saints Days, *&c.* In *Scotland*, they obſerve no ſtated *holy* Days, beſide *Sundays*.

*Holy Week*, is the laſt Week of Lent, call'd alſo *Paſſion Week*. See LENT and PASSION.

*Holy Thurſday*, is what we otherwiſe call *Maunday Thurſday*. See MAUNDAY.

*Holy* Year is ſometimes us'd for the Year of Jubilee. See JUBILEE.

In the *Jewiſh* Tabernacle, and afterwards in the Temple, were two Places; the one call'd the *Holy*, *Sanctorum*; and the other, which was more retir'd, the *Holy of Holies*, *Sanctum Sanctorum*, or the Sanctuary. See SANCTUARY.

The *Holy* was ſeparated from the *Holy of Holies* by a Veil.--- In this latter Place was the Ark of the Covenant kept. See ARK.

HOLYNESS is alſo a Title or Quality attributed to the Pope; as that of Majeſty is to Kings. See TITLE, QUALITY, *&c.*

Even Kings writing to the Pope, addreſs him under the venerable Appellation of your *Holyneſs*, or *Holy* Father; in *Latin Sanctiſſime*, or *Beatiſſime Pater*. See POPE.

Anciently the ſame Title, *Holyneſs*, was given to all Biſhops; as appears in St. *Auguſtin*, *Fortunatus*, *Nicholas* I. *Caſſiodore*, &c. --- St. *Gregory* compliments ſome of his cotemporary Biſhops with *Your Beatitude*, *Your Holyneſs*.

The *Greek* Emperors of *Conſtantinople* were alſo addreſs'd under the Title of *Holyneſs*, in regard of their being anointed with *holy* Oil at their Coronations. --- *Du Cange* adds, that ſome of the Kings of *England* have had the ſame Title; and that the Orientals have frequently refus'd it to the Pope.

*Order of the* HOLY *Ghoſt*, is a military Order in *France*, the principal, in Point of Dignity, in that Kingdom. See ORDER and KNIGHT.

It was inſtituted by King *Henry* III. in 1569, in Memory of three great Events happening on the ſame Day, *viz.* his Birth, Acceſſion to the Crown of *France*, and Election to that of *Poland*; and is to conſiſt of 100 Knights only; who, to be admitted, are to make Proof of their Nobility for three Deſcents.

The King is the Grand Maſter or Sovereign, and takes the Oath as ſuch on his Coronation Day; whereby he ſolemnly vows to maintain for ever the Order of the *Holy Ghoſt*, without ever ſuffering it to ſhrink, fall, or diminiſh, ſo long as it is in his Power to hinder it; and never to attempt to alter or diſpenſe with any of the irrevocable Statutes of the Order.

The Knights are all to wear a Gold Croſs, hung about the Neck by a blue Silk Ribbon or Collar; and the Officers and Commanders are alſo to wear a Croſs ſewed on the left Side of their Cloaks, Robes, and other upper Garment.

Before they receive the Order of the *Holy Ghoſt*, that of St. *Michael* is conferr'd, as a neceſſary Degree; for which Reaſon their Arms are ſurounded with a double Collar.

*Croſs of the* HOLY *Ghoſt*, in Heraldry. --- A *Croſs of the Holy Ghoſt* conſiſts of a Circle in the Middle, and on it the *Holy Ghoſt* in Figure of a Dove: the four Arms are drawn narrow from the Centre, and widening to the Ends, where the returning Lines divide each of them into two ſharp Points, upon each of which is a Pearl. See CROSS.

From the Intervals of the Circle between the Arms, iſſue four Flower-de-luces. --- This is the Croſs worn by the Knights of the Order of the *Holy Ghoſt* in *France*.

HOLY-*Rood Day*, a Feſtival obſerv'd by the *Roman* Catholicks, in Memory of the Exaltation of our Saviour's Croſs. See EXALTATION *of the Croſs*.

HOLY-*water Sprinkle*, among Hunters, ſignifies the Tail of a Fox. See TAIL.

HOMAGE, or HOMMAGE, in its general and literal Senſe, denotes the Reverence, Reſpect, and Submiſſion which a Perſon yields his Maſter, Lord, Prince, or other Superior. See LORD, *&c.*

HOMAGE, HOMAGIUM, HOMINIUM, in Law, is an Engagement or Promiſe of Fidelity, which the Vaſſal or Tenant who holds a Fee, renders to the Lord when admitted thereto. See FEE, VASSAL, LORD, *&c.*

The Word is form'd of the *Latin*, *Homo*, Man; by reaſon when the Tenant takes this Oath, he ſays, *Ego devenio homo veſter*, *I become your Man*: For the ſame Reaſon, *Homage* is call'd *Manhood*: So the *Homage* of his Tenant, and the Manhood of his Tenant, is all one. *Coke on Littl.* fol. 64.

In the original Grants of Lands and Tenements by Way of Fee, the Lord did not only tye his Tenants to certain Services; but alſo took a Submiſſion, with Promiſe and Oath to be true and loyal to him as their Lord and Benefactor.

This Submiſſion, *&c.* is call'd *Homage*, the Form whereof, as appointed by Stat. 17 *Edw.* II. is in theſe Words: When a Free-man ſhall do *homage* to his Lord, of whom he holdeth in Chief, he ſhall hold his Hands together between the Hands of his Lord, and ſhall ſay thus: "I become your "Man from this Day forth for my Life, for Member, and "for worldly Honour; and ſhall owe you my Faith for the "Land I hold of you, ſaving the Faith that I owe unto "our Sovereign Lord the King, and to mine other Lords.

In this Manner the Lord of the Fee, for which *Homage* is due, takes *Homage* of every Tenant as he comes to the Land or Fee. *Glanvil*, indeed, excepts Women; who only perform *Homage* by their Husbands; in regard *Homage* is ſuppos'd to have a more immediate Relation to Service in War; but *Fitzherbert* denies the Exception, *Nat. Brev.* fol. 157.

He adds, that Biſhops do no *Homage*, but only Fealty, and, probably, for the ſame Reaſon as Women. Yet do we read, that the Archbiſhop of *Canterbury* does *Homage* on his Knees to our Kings at their Coronation; and that the Biſhop of *Man* is *Homager* to the Earl of *Derby*.

*Fulbec* reconciles this: By our Law, ſays he, a religious Man may do *homage*; but may not ſay to the Lord, *Ego devenio homo veſter*; becauſe he has already profeſs'd himſelf to be only God's Man; but he may ſay to him, "I do unto "you *Homage*, and to you ſhall be faithful and loyal.

*Homage* and Fealty, or Faith, are two diſtinct Things, different Duties. See FEALTY.

Originally, *Homage* was perform'd by the Gentleman, and Fealty by the Peaſant. Others ſay, that *Homage* was that perform'd to the Lord himſelf; and Fealty to his Seneſchal or Steward, for his Lord. --- 'Tis added, that he who holds Lands for Term of Life, owes *Homage*, but not Fealty.

Biſhops take the Oath of Fealty and Loyalty to the King for the Temporalities they hold of him; but without *Homage* or Vaſſalage. See TEMPORALITY.

HOMAGE-*Liege* was a more extenſive Kind of *Homage*, whereby the Vaſſal held of the Lord, not only for his Lands, but for his Perſon. --- So that the Lord might uſe him againſt all Mankind, whether within or without the Kingdom, excepting the King. See LIEGE.

This Kind of *Homage* was render'd bare-headed, with the Hands join'd on the Goſpels, one Knee on the Ground, and without Sword, Girdle, or Spurs. --- By which it was diſtinguiſh'd from *Frank Homage*. See FRANK.

There are alſo other Diſtinctions of *Homage*, as,

*Plain Homage*, or *Homage* of a Fee, where no Oath of Fidelity is taken.

*Homage of Devotion*, which is a Donation made the Church, and does not import any Duty or Service at all.

*Homage of Peace*, which a Perſon makes to another after a Reconciliation, as an Aſſurance that he will no longer diſturb his Peace, *&c.*

*Homage*, again, is divided into *new*, *i. e.* that perform'd upon the Grant of the Fee; and *Auncęſtrel*.

HOMAGE *Auncęſtrel*, is where a Man, and his Anceſtors, Time out of Mind, have held their Land of the Lord and his Anceſtors by *Homage*.

If ſuch Lord have receiv'd *Homage*, he is bound to acquit the Tenant againſt all other Lords above him, of every Manner of Service: And if the Tenant has done *Homage* to his Lord, and is impleaded, and vouches the Lord to warranty, the Lord is bound to warrant him; and if the Tenant loſe, he ſhall recover in Value againſt the Lord, ſo much of the Lands as he had at that Time of the Voucher, or any Time after. See VOUCHER.

HOMAGE is alſo us'd for the Jury in a Court-Baron; becauſe commonly conſiſting of ſuch as pay *Homage* to the Lord of the Fee. See JURY and COURT-*Baron*.

HOMAGE is alſo taken, in ſome Caſes, for the particular Place or Diſtrict where the Services are to be perform'd.

HOMAGER, a Perſon that does, or is bound to do, *Homage* to another. See HOMAGE.

This Lordſhip is ſo extenſive, that there are above 120 Tenants or *Homagers* therein.

HOMAGIO *reſpectuando*, is a Writ iſſu'd out to the Eſcheator, commanding him to deliver Seiſin of Lands to the Heir that is at full Age, notwithſtanding his *Homage* not being done.

HOMESOKEN, or rather HAMSÖKEN, the Privilege or Freedom which every Man hath in his Houſe. — Hence he who invades that Freedom, is properly ſaid *facere Homeſoken*. See HAMSOKEN.

This ſeems to be what we now call *Burglary*, which is a Crime of a very heinous Nature, as being not only a Breach of the King's Peace, but a Breach of that Liberty which a Man hath in his Houſe, which, as we commonly ſay, ſhould be his Caſtle, and therefore ought not to be invaded. *Bracton lib.* 3. See BURGLARY.

The Word is alſo us'd for an Impunity to thoſe who have committed this Crime.—Hamſokne, *hoc eſt quietus eſſe de amerciamentis pro ingreſſu hoſpitii violenter & ſine licentia contra pacem Regis, & quod teneatis placita de hujuſmodi tranſgreſſione in curia veſtra. W. Thorn*, 2030.

HOME-*ſtall*, a Manſion Houſe or Seat in the Country. See MANSION.

HOMER, or OMER, a *Jewiſh* Meaſure, containing the tenth Part of the *Epha*. See MEASURE and EPHA.

HOMICIDE, in common Law, the killing of a Man.

It is divided into *voluntary* and *caſual*.

*Voluntary Homicide*, is that which is deliberate, and committed with a ſet Purpoſe and Mind to kill; and is either with a precedent Malice, or without. --- The former is Murder, and is a felonious killing, with Malice prepenſe, any Perſon in the Realm, living under the King's Protection. See MURDER and MANSLAUGHTER.

*Caſual Homicide*, is either merely caſual or mix'd. --- Merely *caſual*, is when a Perſon kills another by pure Miſchance, being about his lawful Occaſions; as in the Caſe of an Ax ſlipping out of a Man's Hand, or falling off the Helve while he is felling a Tree. See *Chance* MEDLEY.

It is accounted *mix'd*, when there is Negligence, or ſome other unwarrantable Circumſtance, attending the Action.

HOMILY, or HOMELY, originally ſignify'd a Conference or Meeting; but has ſince been apply'd to an Exhortation, or Sermon deliver'd to the People. See SERMON.

The *Greek* Word, *Homilia*, ſays M. *Fleury*, ſignifies a familiar Diſcourſe; like the *Latin*, *Sermo*: And Diſcourſes deliver'd in the Church took theſe Denominations, to intimate that they were not Harangues, or Matters of Oſtentation and Flouriſh, like thoſe of prophane Orators; but familiar Diſcourſes, as of a Maſter to his Diſciples, or a Father to his Children.

All the *Homilies* of the *Greek* and *Latin* Fathers are compos'd by Biſhops.---We have none of *Tertullian*, *Clemens Alexandrinus*, and other learned Perſons; by reaſon, in the firſt Ages, none but Biſhops were admitted to preach.

The Privilege was not ordinarily allow'd to Prieſts till toward the Vth Century. --- St. *Chryſoſtom* was the firſt Prieſt that preach'd ſtatedly: *Origen* and St. *Auguſtin* alſo preach'd, but it was by a peculiar Licence or Privilege.

*Photius* diſtinguiſhes *Homily* from *Sermon*; in that the *Homily* was perform'd in a more familiar Manner; the Prelate interrogating and talking to the People; and they, in their Turn, anſwering and interrogating him: So that it was properly a Converſation; whereas the Sermon was deliver'd with more Form, and in the Pulpit, after the Manner of the Orators.

There are ſeveral fine *Homilies* of the Fathers ſtill extant; and particularly of St. *Chryſoſtom*, St. *Gregory*, &c.

The Word is *Greek*, ὁμιλία; form'd of ὅμιλ⊙, *Cœtus*, Aſſembly, Council.

HOMINE *capto in Withernamium*, a Writ for apprehending him that has taken any Bondman or Woman, and led him or her out of the County; ſo that he or ſhe cannot be replevy'd according to Law. See WITHERNAM.

HOMINE *Replegiando*, a Writ for the Bailing of a Man out of Priſon. See BAIL, REPLEVY, &c.

HOMINICOLÆ, HOMINCOLÆ, in Antiquity, a Name which the Apollinariſts gave to the Orthodox, to denote them Worſhippers of a *Man*. See APOLLINARISTS.

As the Orthodox maintain'd that Jeſus Chriſt was God-man; the Apollinariſts accus'd them of adoring a Man, and call'd them *Hominicoles*.

The Word is form'd of the *Latin*, *homo*, *hominis*, Man, and *colo*, I worſhip.

HOMOCENTRIC, in Aſtronomy, a Term of the ſame Import with *concentric*. See CONCENTRIC.

The Hypotheſis of *Ptolomy* is explain'd by means of divers *homocentric* and excentric Circles. See EXCENTRIC, &c.

The Word is *Greek*, compos'd of ὁμὸς, alike, ſimilar, and κεντρον, Centre.

HOMOEOPTOTON, ομοιοπτωτον, a Figure in Rhetorick, where ſeveral Members of a Sentence end in like Caſes.

HOMOEOTELEUTON, ομοιοτελευτον, a Figure in Rhetorick, where ſeveral Members of a Sentence end alike.

HOMOGENEOUS, or HOMOGENEAL, is a Term apply'd to various Subjects, to denote, that they conſiſt of ſimilar Parts, or Parts of the ſame Nature and Kind. — In contra-diſtinction to *Heterogeneous*, where the Parts are of different Natures, &c.

Natural Bodies, for the generality, are compos'd of *homogeneous* Parts; as a Diamond, a Metal, &c. — Artificial Bodies, on the contrary, are Aſſemblages of *heterogeneous* Parts, or Parts of different Qualities; as a Building, of Stone, Wood, &c. See HETEROGENEAL.

The Word is compos'd of the *Greek*, ὁμὸς, *idem*, or *æqualis*, and γεν⊙, *Genus*, Kind.

HOMOGENEAL *Light*, is that whoſe Rays are all of one and the ſame Colour, Degree of Refrangibility and Reflexibility. See LIGHT and RAY.

HOMOGENEAL *Numbers*, are thoſe of the ſame Kind and Nature. See NUMBER.

HOMOGENEAL *Surds*, are ſuch as have one common radical Sign; as $\sqrt[3]{:27}$, and $\sqrt[3]{:3}$. See SURD.

HOMOGENEUM, *Comparationis*, in Algebra, the known Quantity in an Equation; call'd alſo *Abſolute Number*. See EQUATION, &c.

It is call'd *Homogeneum Comparationis*, of *Compariſon*, to diſtinguiſh it from the other Terms; which tho' *homogeneous* as well as this, *i. e.* always rais'd to the ſame Degree of Power, are not the Quantities to which Things are here *compar'd* or referr'd.

HOMOIOMERICAL Principles, a peculiar Kind of Principles, ſuppos'd, by *Anaxagoras*, in all mix'd Bodies; being determinate Numbers of ſuch ſimilar Principles, as, when they came to become Parts, *e. gr.* of an Animal Body, would there make ſuch Maſſes and Combinations as their Nature requir'd, *viz.* the Sanguinary Particles would then meet all together and make Blood, the Urinous Particles conſtitute Urine, the Oſſeous ones Bones, the Carneous Fleſh, &c. See PRINCIPLE.

HOMOLOGATION, in the Civil Law, the Act of confirming or rendering a Thing more valid and ſolemn, by a Publication, Repetition, or Recognition thereof.

The Creditors have ſign'd the Contract; there remains nothing but to get it *homologated*.

The Word comes from the *Greek*, ὁμολογία, Conſent, Aſſent, form'd of ὁμὸς, *ſimilis*, alike, and λογ⊙ of λέγειν, *dicere*, to ſay, *q. d.* to ſay the ſame thing, to conſent, agree.

HOMOLOGOUS, in Geometry, is apply'd to the Sides of ſimilar Figures; which are ſaid to be *homologous*, or in Proportion to each other. See SIMILAR.

Thus, the Baſe of one Triangle, is *homologous* to the Baſe of another ſimilar Triangle: So, in ſimilar Triangles, the Sides oppoſite to equal Angles, are ſaid to be *homologous*. See TRIANGLE.

Equiangular or ſimilar Triangles, have their *homologous* Sides proportional.

All ſimilar Rectangles are to each other, as the Squares of their *homologous* Sides. See RECTANGLE.

The Word is *Greek*, compos'd of ὁμ⊙, Similar, and λογ⊙, Ratio, Reaſon, *q. d.* Quantities alike to each other in Ratio. --- So, if the Ratio of A to B, be the ſame as of C to D; here A is *homologous* to C, as B to D; by reaſon of the Similitude between the Antecedents and Conſequents. The two Antecedents, and the two Conſequents, then, in any continu'd Geometrical Proportion, are *homologous* Terms. See PROPORTION.

HOMOLOGOUS *Things*, in Logick, are ſuch as agree in Name, but are of different Natures. --- Theſe coincide with what we otherwiſe call *Equivocal Terms*. See EQUIVOCAL.

HOMONYMIA, in Logic, an *Equivocation*. See HOMONYMUS, &c.

HOMONYMUS, or HOMONYMOUS, in Logic, is apply'd to a Word which has two different Meanings; or expreſſes two Things of different Nature and Quality.

*Homonymous* is the ſame as *Equivocal*. See EQUIVOCAL.

The Word is compos'd of ὁμὸς, *ſimilis*, and the Ionic ονυμα for ονομα, *nomen*, Name.

HOMOOUSIOS, ομοουσιος, among Divines, a Being of the ſame Subſtance or Eſſence. See SUBSTANCE. See alſo PERSON, &c.

HOMOOUSIANS, HOMOUSIANS, HOMOUSIONS, HOMOUSIONISTS, HOMOUSIASTS, are Names which the Arians anciently gave to the Orthodox, by reaſon they held that God the Son is *Homooufios*, *i. e.* conſubſtantial with the Father. See HETEROUSIANS.

*Huneric*, King of the *Vandals*, publiſh'd a Reſcript, directed to all the *Homouſian* Biſhops. See PERSON, &c.

The Word is *Greek*, ὁμούσι⊙, or ομοὐσιας, ſignifying *of the ſame Subſtance*.

HOMOPHAGI, among the ancient Geographers, a Name given to certain Nations who fed on raw Fleſh; as the *Scythians*, &c.

The Word is form'd of ὠμ⊙, crude, raw; and φάγω, I eat.

HOMUNCIONATES, a Name the Arians gave to the Orthodox, in the IVth Century; by reaſon they admitted two Subſtances and two Natures in Jeſus Chriſt.

HOMUNCIONISTS, a Sect of Hereticks, the Followers of *Photin*; and from him alſo call'd *Photinians*. See PHOTINIANS.

They had this Appellation in reſpect of their denying the two Natures in Jeſus Chriſt, and holding that he was only mere Man.

The Word is form'd of the *Latin*, *Homuncio*, a Diminutive of *homo*, Man; *q. d.* little Man.

HOMUNCIONITES, were a Sect of ancient Hereticks, whoſe diſtinguiſhing Dogma it was, that the Image of God was impreſs'd on the Body, not on the Soul or Mind of Man.

HOND-*habend*, in our ancient Cuſtoms, from the *Saxon*, *hond*, Hand, and *habens*, having; a Circumſtance of a manifeſt Theft, when the Party is taken with the Mainor, or Mainover, *i. e.* the Thing ſtolen in his Hand.

*Bracton* alſo uſes *Hand-berend* in the ſame Senſe. *Sc. Latro manifeſtus.* See HAND-*habend.*

So in *Fleta*, *Furtum manifeſtum eſt ubi aliquis latro deprehenſus ſeiſitus de aliquo latrocinio* Hand-habbind, & Backberinde, & *inſecutus fuerit per aliquem cujus res aliqua fuerit, quæ dicitur Seeborgh, & tunc licet inſecutori rem ſuam petere criminaliter ut furatam.*

It alſo ſignifies the Right which the Lord hath to judge and determine of this Offence in his Court.

HONE, a fine Sort of *Whet-ſtone*, whereon to ſet a Razor or Penknife.

It is of a yellowiſh Colour, being Holly-wood petrify'd or chang'd into Stone, by lying in the Water for a certain Seaſon. See PETRIFACTION.

Of theſe there are ſaid to be ſome in *Oxfordſhire*, that will be thus petrify'd in a very ſhort Time.

HONEY, *Mel*, a ſweet ſort of Juice ſuck'd from Vegetables by the Bees, and repoſited in their Combs. See WAX.

*Honey* is properly one of the Juices afforded by the Flowers, and is found to exude from all Sorts thereof; the very bittereſt, as Aloes and Colocynth, not excepted.

In all Male Flowers that have Utricles at the Bottom of the Petala, is found a viſcid, ruddy, ſweet Juice in good Plenty; whence it is, that we ſee the Children gather Cowſlips, Fox-gloves, *Honey*-ſuckles, &c. and ſuck the *Honey* from them. --- The Bees too viſit theſe Flowers; and putting in their Proboſcides, or Trunks, ſuck out the *Honey-Juice*, and load their Stomachs therewith; to be afterwards diſcharg'd and laid up in their Combs: --- So that *Honey* is a vegetable Subſtance.

In the Belly of the Bee is a ſmall tranſparent Bladder, which is the proper Receptacle of the *Honey*: When the Animal finds this full, it returns, enters one of the Cells, and diſcharges it there by that Part of the Head ſituate between the two Jaws, which it extends wider than ordinary, moving its Head at the ſame time this way and that. --- If a Drop happen to be ill plac'd, it ſucks it up again by its Proboſcis, and diſcharges it a-new. --- When a Cell is fill'd with *Honey*, they ſtop it up with Wax for Winter Store. See WAX.

*Honey* was anciently taken for a Dew that fell or deſcended on the Flowers; but what proves this a Miſtake, is, that the Bees only gather it after the Sun is up, when there is no Dew left: It muſt therefore be either a Liquor prepar'd in the Flower, and excreted by its proper Veſſels, like Manna. See MANNA.

Or rather, it appears to be the fine Duſt, or Farina Fecundans of the Apices. --- For, according to the Obſervations of M. *du Vernay*, the Bees, when in the Search of *Honey*, fix on no other Parts but the Stamina and Apices, and not on ſuch as yield any other Liquor. See FARINA.

What is very remarkable, is, that *Honey*, in Virtue of its vegetable Nature, is diſcover'd by M. *Lemery* to contain Iron; which Diſcovery may ſerve as an Anſwer to M. *Geoffroy*'s Chymical Queſtion, *viz.* Whether there is any Part of a Plant without Iron? For if ſo delicate an Extract from the fineſt Part of the Flower, and this further elaborated in the little Viſcera of the Inſect, be not void of Iron, we may deſpair of ſeeing any ſo. See IRON.

We have two Kinds of *Honey*, *white* and *yellow*. --- The white, call'd alſo *Virgin Honey*, trickles out ſpontaneouſly from the Comb, by turning it up or breaking it.

The ſecond is ſqueez'd from the Combs in a Preſs, after having firſt ſoften'd them with a little Water over the Fire. --- There is alſo an intermediate Sort, of a yellowiſh white Colour, drawn by Expreſſion, without Fire.

The *Honey* left to ſtand two or three Days, purges itſelf; throwing up a Scum of Wax and other Droſs, which is to be taken off.

Some Naturaliſts will have the *Honey* to be of a different Quality, according to the Difference of the Flowers or Plants the Bees ſuck it from. --- Accordingly *Strabo* relates, that there is a Kind of *Honey* in *Pontus*, which is a ſtrong Poiſon; being procur'd by Bees which feed upon Aconite and Wormwood.

F. *Lamberti*, in his Account of *Mingrelia*, aſſures us of the contrary; and affirms it the beſt *Honey* in the World, by reaſon of the great Quantity of Bawm growing there. --- He adds, that there is another very white Kind of *Honey*, hard as Sugar, and which does not ſtick to the Hands.

The Ancients rank'd Sugar and Manna among the Species of *Honey*. See SUGAR and MANNA.

*Honey* has conſiderable medicinal Virtues; being reputed a good Detergent and Cleanſer; and in that Quality uſed both internally and externally, for the Viſcera, Wounds, Ulcers, &c.

*Honey* is the Baſis of ſeveral Compoſitions in Pharmacy. --- Of *Honey*, with the Addition of Roſes or Violets, Mercurialis, &c. is made *Mel Roſatum*, *Mercuriale*, &c.

There is alſo a *Mel Scilliticum*, or a Preparation of Squillæ: *Mel Paſſulatum Violatum*, made with Raiſins boil'd in hot Water: And *Mel Anthoſatum*, made of Roſemary Flowers.

The Chymiſts alſo draw a Water, a Spirit, an Oil, &c. from *Honey*.

*Honey* is alſo an Ingredient in ſeveral Drinks, as *Mum*, *Metheglin*, &c. See MUM, METHEGLIN, &c.

*Wild* HONEY. *S. Adauman*, Abbot of *Hii*, in his Deſcription of the holy Places, obſerves, that in the Place where St. *John Baptiſt* liv'd in the Deſart, there are Locuſts which the poor People boil with Oil, and a Sort of Herbs with large long Leaves, of a Milk Colour, and a Taſte like that of *Honey*; and that this is what in Scripture is call'd *wild Honey*.

HONEY-*Dew*, is a ſweet-taſted Dew, found early in the Morning on the Leaves of divers Sorts of Plants. See DEW.

*Honey-Dews*, or *Mildews*, are of a very different Nature from Blaſtings, being caus'd by the condenſing of a fat moiſt Exhalation, rais'd in a hot dry Summer, from Plants and Bloſſoms; as alſo from the Earth; which, by the Coolneſs and Serenity of the Air in the Night, or in the upper clear Region of the Air, is thicken'd into a fat gluey Matter, and falls to the Earth again; Part whereof reſts upon Oak Leaves, and ſome other Trees, whoſe Leaves are ſmooth, and do not eaſily admit the Moiſture into them.

*Gaſſendus* holds, that a viſcid Juice tranſpiring out of the Leaves, helps to compoſe this *Honey*, or to convert the Dew falling on them into a *Honey* Subſtance, which before had nothing of it: And hence he accounts for the Reaſon why we find it on ſome Trees, and not on others.

This *Honey-Dew* falling on the Ears and Stalks of Wheat, beſmears them with a different Colour from the natural; and being of a clammy Subſtance, ſo binds up the young, tender, and cloſe Ears of the Wheat, by the Heat of the Sun, that it prevents the Growth and Compleating of the perfect Grain therein.

A Shower of Rain ſucceeding preſently after the Fall thereof, or the Wind blowing ſtiffly, are the only natural Remedies againſt it.

HONEY-*Comb*, a waxen Structure, full of Cells, fram'd by the Bees to depoſit their *Honey*, Eggs, &c. See CELL, WAX, HONEY, &c.

The great Sagacity and Contrivance of the Bees in making their *Combs*, have often been admir'd. --- Their Labour is diſtributed regularly among them; ſometimes thoſe Bees that carry the Wax in their Jaws and Chaps, moiſten and mollify it with ſome Liquor that they diſtil upon it; the ſame ſometimes build the Walls of their hexagonal Cells; but ſometimes others do it; but thoſe that form the Cells never poliſh them. --- Others come and make the Angles more exact, and cloſe and ſmooth the Superficies. --- And as in the doing of this, ſome ſmall Bits of Wax are pared off, there are ſome whoſe Buſineſs is to take theſe, that they may not be loſt.

M. *Maraldi* has alſo obſerv'd, that thoſe Bees that poliſh the Walls, work longer than thoſe that build them; as if Poliſhing were not ſo laborious as Building.

They begin their Work at the Top of the Hive, faſtening it to the moſt ſolid Part thereof: Thence it deſcends downwards, being continu'd from Top to Bottom, and from one Side to another; and to make it the more Solid, they uſe a Sort of temper'd Wax that is pretty much like Glue. The Form of the Cells, of which the *Honey-Comb* is made, is hexagonal; a Figure that, beſides what is common with a Square and equilateral Triangle, has the Advantage of including a greater Space within the ſame Surface.

HONEY-*Comb*, in Gunnery, is a Flaw in the Metal of a Piece of Ordnance when it is ill caſt, and ſpongeous.

HONI *Soit Qui Mal y Penſe*, q. d. *Evil to him that thinks Evil*; the Motto of the moſt noble Order of the Knights of the Garter. See GARTER.

HONOR, HONORABLE, HONORARY } See { HONOUR. HONOURABLE. HONOURARY.

HONORIACI, in Antiquity, a Species or Order of Soldiery, under the Eaſtern Empire. — It was the *Honoriaci* that introduc'd the *Goths*, *Vandals*, *Alani*, *Suevi*, &c. into *Spain*.

*Didymus* and *Verinianus*, two Brothers, had, with great Vigilance and Valour, defended the Paſſages of the *Pyreneans* againſt the Barbarians for ſome time, at their own Expence; but being at length kill'd, the Emperor *Conſtans* appointed the *Honoriaci* to defend thoſe Paſſages, who, not contented to lay them open to all the Nations of the North then ravaging the *Gauls*, join'd themſelves to 'em.

HONOUR, HONOR.— Beſide its literal Senſe, wherein it denotes a Teſtimony or Token of Eſteem and Submiſſion, *Honour* is particularly apply'd in our Cuſtoms to the more noble Kinds of Seignories or Lordſhips; whereof other inferior Lordſhips or Manors hold, or depend. See SEIGNORY.

As a Manor conſiſts of ſeveral Tenements, Services, Cuſtoms, &c. (See MANOR, SERVICE, &c.) So an *Honour* contains divers Manors, Knights-Fees, &c.

It was alſo formerly call'd *Beneficium* or *Royal Fee*; being always held of the King in Capite. *Spelman*. Anciently, *Honor* ſignify'd the ſame as *Baronia*. See BARONY.

By Stat. 37. *Hen.* 8. cap. 18. The King is impower'd by Letters Patent to erect four ſeveral *Honours*, *viz. Weſtminſter*, *Kingſton upon Hull*, St. *Oſythe*, and *Donnington*; and as many other *Honours* as he will. — The Manner of creating theſe *Honours*, may be gather'd from the Stat. 33 *Hen.* 8. cap. 37, &c.

*Maids of* HONOUR, are young Ladies, in the Queen's or Princeſs's Houſhold, whoſe Office is to attend the Queen, &c. when ſhe goes abroad, &c. They are ſix in Number, and their Salary 300*l. per Annum* each.

The *French* call *Chevaliers de* HONNEUR, *Knights*, or *Gentlemen of* HONOUR, the Gentlemen Uſhers of Queens and Princeſſes, who attend them, give them their Hand, &c. See USHER.

*Counſellors of* HONOUR, or *honorary Counſellors*, are ſuch as have a Right to enter or ſit in Aſſemblies, Courts, &c. to deliberate or give Judgment in the ſame, tho' they do not properly and ordinarily belong thereto.

The *Honours of the Louvre*, are certain Privileges affected to divers Dignities or Offices, particularly thoſe of Duke, Peer, Chancellor, &c. as, to enter the *Louvre* in a Coach; to have the Tabouret or Stool in the Queen's Preſence, &c.

The *Honours of the Houſe*, are certain Ceremonies obſerv'd in receiving Viſits, making Entertainments, &c. perform'd either by the Maſter himſelf, or by ſome Perſon appointed for that Purpoſe; as, to go and receive the Gueſts, to conduct them out again, to ſee they be well ſeated, help them to the choice Bits, &c. And all this in a polite agreeable Manner.

The *Honours of the City*, are the publick Offices or Employments thereof.— He has been Conſtable, Overſeer of the Poor, and Church-warden, of his Pariſh; Common-Councilman, Alderman, and laſtly Mayor: He has paſs'd all the *Honours* of the City.

The *Honours of the Church*, are the Rights belonging to the Patron, &c. As a Seat and Sepulchre in the Chancel, to be firſt ſerv'd with the conſecrated Bread and Wine, &c.

The *Honours* is alſo us'd for the principal Parts of the Apparatus of great Ceremonies; as Coronations, Conſecrations, Chriſtenings, &c. Such are the Oil, Tapers, &c. — Such Lords or Ladies bore the *Honours* at ſuch a Ceremony. In Obſequies, they anciently preſented the *Honours*, that is, the Shield, Creſt, Sword, Gantlets, Spurs, Banner, Horſe, &c.

*Funeral Honours*, are the Ceremonies perform'd at the Interments of great Men; as Hangings, Hearſes, Funeral Harangues, &c.

HONOUR *Courts*, are Courts held within the *Honours*, or Seignories above mention'd. See COURT.

HONOUR *Point*, in Heraldry, is that next above the Centre of the Eſcutcheon; dividing the upper Part into two equal Portions. See ESCUTCHEON.

HONOURABLE *Amends*, *Amende* HONORABLE, an infamous Kind of Puniſhment, us'd in *France*, &c. on Traytors, Parricides, Sacrilegious Perſons, and other heinous Criminals.

It conſiſts in this, that the Offender is deliver'd up to the common Hangman, who having ſtript him to his Shirt, and put a Rope about his Neck, and a Wax Taper in his Hand, leads him to the Court, where he is to beg Pardon of God, the King, the Court, and his Country.

Sometimes the Puniſhment ends here; and ſometimes Death or the Galleys are added.

HONOURABLE, or HONORABLE *Ordinaries*, in Heraldry, are the principal Ordinaries or Bearings, which, when in their full Extent, may poſſeſs one Third of the Field. See ORDINARY.

Some only allow of nine, *viz.* the *Croſs*, *Chief*, *Pale*, *Bend*, *Feſſe*, *Chevron*, *Salteer*, *Giron*, and *Eſcutcheon*: Others add more, *viz.* the *Bar*, *Bordure*, &c. See each under its proper Article, CROSS, CHIEF, PALE, &c.

HONOURARY, or HONORARY, is underſtood of a Perſon who bears or poſſeſſes ſome Quality or Title, only for the Name's Sake, without doing any of the Functions thereto belonging, or receiving any of the Advantages thereof.

Thus we ſay, *honourary* Counſellors. See *Counſellors of* HONOUR.

In the College of Phyſicians, *London*, are four *Honourary* Fellows. See COLLEGE.

The Royal Academy of Sciences at *Paris*, conſiſts of four Claſſes of Members, *viz. Honourary*, Penſionary, Aſſociates, and Adjuncts. See ACADEMY.

The *Honourary* are to be twelve in Number, and all Inhabitants of the Kingdom.

HONOURARY *Services*, are ſuch as relate to the Tenure of grand Sergeanty, and are commonly join'd with ſome *Honour*. See SERVICE.

HONOURARY is alſo us'd for a Lawyer's Fee; or a Salary given to publick Profeſſors of any Art or Science.

HONOURARY *Tutor*, is a Perſon of Quality appointed to have an Eye over the Adminiſtration of the Affairs of a Minor; while the Onerary Tutors have the real effective Management thereof. See TUTOR, &c.

HONTEFONGENTHEF, a Thief taken hond-habend, *i. e.* having the Thing ſtolen in his Hand. See HOND-*halend*.

HOOD. See CNAPEROON and CUCULLUS.

HOOD, in Falconry, is a Piece of Leather, wherewith the Head of a Hawk, Falcon, or the like, is cover'd. See HAWK, FALCON, &c.

After ſeeling a young Hawk, ſhe is to be fitted with a large eaſy *Hood*, which is to be taken off and put on very often, watching her two Nights; and handling her frequently and gently about the Head. When you perceive ſhe has no Averſion to the *Hood*, unſeel her in an Evening by Candle-light, continuing to handle, *hood* and *unhood* her, as before; till at laſt ſhe takes no Offence, but will patiently endure handling. See HAWKING.

After unſeeling, anoint with the Finger and Spittle the Place where the ſeeling Thread was drawn through; then *hood* her, and hold her on your Fiſt all Night.

As ſoon as ſhe is well reclaim'd, let her ſit upon a Perch; but every Night keep her on the Fiſt three or four Hours, ſtroaking, *hooding*, and *unhooding*, &c. And thus you may do in the Day-time, when ſhe hath learn'd to feed eagerly, and without Fear.

HOOF, *Ungula*, the horny Part which covers the Feet of divers Animals, as Horſes, Bullocks, &c. See HORN.

The *Hoof* ſerves much the ſame Purpoſes as the Nails of ſome Animals, and the Claws of others. See NAIL.

The *Hoof* of a Horſe ſurrounds the Sole and the Coffin Bone. — To be good, it ſhould be of a dark Colour, ſomewhat ſhining, high, ſmooth, of a round Shape, but a little larger below than above; ſhort, that the Horſe may tread more on the Toe than on the Heel; ſomewhat hollow within, having a narrow Fruſh, and broad Heels. See HORSE.

The *Hoof* ſhould not have Circles, which are a Sign of its being brittle, and that that Horſe, having been often ſhod, has had his Feet ſpoil'd by the many Pieces broke out of it. — A white *Hoof* is commonly brittle.

To judge whether the *Hoof* be good and ſtanch, lift up the Foot, and conſider if it have a Shoe forg'd purpoſely for it, and be very much pierc'd, and the Holes made in unuſual Parts, as wanting Horn enough to take hold by in thoſe Places where the Nails are commonly driven.

Sometimes they are forc'd to pierce the Shoes nigh the Heels, becauſe the fore-part is bad; it being otherwiſe unuſual to drive the Nails near the Heels, except the Toe be ſo much ſpl t and broke as not to bear Nails.

If the *Hoof* be not round, but broad, and ſpreading out at the Sides and Quarters, the Horſe commonly has narrow Heels, and, in Time, will be flat-footed; which Sort of Foot is weak, and will not long carry a Shoe, nor travel far, but ſurbate: And that treading more on his Heels than Toes, will cauſe him to go low on his Paſterns.

If the *Hoof* be long, it will make him tread altogether on his Heels. — If crooked, *viz.* broad without and narrow within, ſo that the Horſe is ſplay-footed, it will cauſe him to tread too much inward, and cut or interfere. — If the Fruſh be broad, the Heels will be weak and ſoft. — If the Heels be narrow and tender, the Horſe will in time grow *Hoof*-bound.

The Infirmities to which *Hoofs* are liable, are, the caſting of the *Hoof*, *Hoof*-bound, *Hoof*-hard, *Hoof*-hurt, looſe *Hoof*, falſe Quarters, &c.

*Caſting of the* HOOF. — A Horſe is ſaid to *caſt his Hoof*, when the whole Coffin of the *Hoof* becomes looſen'd, and

falls off from the Bone. --- This may be remedy'd by Care and proper Application; a new *Hoof* being procurable, if the Coffin Bone, &c. be not hurt.

Horſes ſometimes caſt their *Hoofs* by reaſon of ſome Prick, Stub, foundring, ſurbating, or other Accident, that cauſes an Impoſthumation in the Foot; ſo that the *Hoof*, and ſometimes the Coffin Bone, being ſpungy and eaſily broken, fall off in large Pieces. The laſt when it happens is deſperate.

Hoof-*bound*, is a ſhrinking in of an Horſe's *Hoof* on the Top, and at the Heel; which makes the Skin ſtare above the *Hoof*, and to grow over the ſame.

It befals an Horſe divers ways, either by keeping him too dry in the Stable, by ſtrait ſhoeing, or by ſome unnatural Heat after foundering.

Hoof-*hurt*. --- In labouring Beaſts, eſpecially Oxen, if the *Hoof* be hurt with a Coulter or Share, it may be cur'd by a Salve of Pitch and Greaſe mix'd with Powder of Brimſtone, diſſolv'd together, and with an hot Iron melted in the ſere *Hoof* or Clee.

Hoof-*looſen'd*, is a Diſſolution or dividing of the Horn or Coffin of a Horſe's *Hoof* from the Fleſh, at the ſetting on of the Coronet.

If the parting be round about the Coronet, it comes by means of foundering; if in part, then by a Prick of ſome Channel-nail, Quitter-bone, Retreat, Gravelling, Cloying, or the like.

The Signs of being looſen'd by foundering, is its breaking firſt in the fore Part of the Coronet, right againſt the Toes; becauſe the Humour always deſcends towards the Toe. --- If it proceeds from pricking, graveling, or the like, the *Hoof* will looſen round about equally, even at firſt. --- If occaſion'd by a Quitter-bone, or Hurt on the Coronet, it will break right above the grieved Part, and rarely be ſeen to go any farther.

Hoof-*ſwell'd*, is an Infirmity that ſometimes befals young Horſes, when they are over-rid, or wrought hard, which makes them ſwell in that Part, by reaſon of the Blood falling down and ſettling there; which if not ſpeedily remov'd will beget a wet Spavin.

HOOK in Angling, &c. See Angling, &c.

HOOKS, in Buildings, &c. are of various Sorts; ſome of Iron, and others of Braſs.

1°. *Armour Hooks*, which are generally of Braſs, and are to lay up Arms upon, as Guns, Muskets, half Pikes, Pikes, Javelins, &c. 2°. Caſement *Hooks*. 3°. Chimney *Hooks*, which are made both of Braſs and Iron, and of different Faſhions: Their Uſe is to ſet the Tongs and Fire-ſhovel againſt. 4°. Curtain *Hooks*. 5°. *Hooks* for Doors, Gates, &c. 6°. Double Line *Hooks*, large and ſmall. 7°. Single Line *Hooks*, large and ſmall. 8°. Tenter *Hooks* of various Sorts. See Tenter.

HOOK-*pins*, in Architecture, are taper Iron Pins, only with a *Hook*-head, to pin the Frame of a Roof or Floor together.

HOOP, a Meaſure of a Peck. See Peck.

HOP, or Hops, a Plant of the reptile Kind, whoſe Flower is a principal Ingredient in Beer, and other Malt Liquors. See Brewing. See alſo Beer and Malt-*Liquor*.

The *Hop* creeps like Snake-weed, unleſs it find Pales or Shrubs to hang to; or unleſs they who cultivate it, plant Poles for the Purpoſe. --- Its Stem is long, flexible, rough, and hairy. --- Its Leaf indented like that of the Vine, and cover'd with a kind of prickly Down like that of the Cucumber. Its Flowers are of a greeniſh Yellow, reſembling, both as to Form and Size, thoſe of the Female Elm; and grow in a kind of Bunch or Cluſter. In this Flower is a blackiſh bitter Grain contain'd, which is the Seed of the *Hop*.

In the Spring time, while the Bud is yet tender, the Tops of the Plant being cut off, and boil'd, are eat like Aſparagus; and found effectual to looſen the Body: The Heads and Tendrils are good to purify the Blood in the Scorbutus, and moſt cutaneous Diſeaſes: Decoctions of the Flowers, and Syrops thereof, are of uſe againſt peſtilential Fevers: Juleps and Apozems are alſo prepar'd with *Hops*, for Hypochondriacal and Hyſterical Affections, and to promote the Menſes.

The Propagation and Culture of *Hops*, being a Point of ſome Nicety, as well as great Advantage, we ſhall lay down a little Syſtem thereof. --- 'Tis certain there is nothing in all the rural Employments, that, under prudent Management, turns to more account; very large Eſtates having been rais'd by this Commodity in a few Years paſt. --- *Switzer* tells us, he has known Ground yield 30*l. per Annum per* Acre, planted therewith: To ſay nothing of the great Number of Poor that are employ'd therein, *viz.* in the Planting, Soiling, Digging, Houghing, Poling, Tying, Picking, &c.

*Culture of* Hops, *and* Hop *Gardens.*

*Hops* are of divers Kinds: *Mortimer* reckons four, *viz.* the *wild Garlic Hop*, which is not worth propagating; the *long and ſquare Garlic Hop*, which, tho' valuable, yet on account of the Redneſs towards the Stalk, does not bear the beſt Price; the *long white Hop*, which is the moſt beautiful and fertile; and the *oval Hop*. Another Author diſtinguiſhes the *Hops* to be cultivated into the white and grey Binds; the latter being a large ſquare *Hop*, more hardy, and bearing a plentifuller Crop than the former; tho' it does not ripen ſo early.

*For the Soil of Hops.* --- There is ſcarce any but may ſerve, except ſtoney, rocky, and ſtiff Clay Ground: The beſt, however, is that which is light, deep, and rich; which will be the better if Sand be mix'd with it: A black Garden Mould is alſo excellent. If the Ground be cold, ſtiff, and ſour, the beſt Means of Improvement is to burn-beat it. *Mortimer* adds, that in *Kent*, where they eſteem new Land beſt for *Hops*, they plant their *Hop* Gardens with Cherry Trees and Apple Trees, at a good Diſtance; that when the Land is paſt the beſt for *Hops*, (which happens in about ten Years) the Cherry Trees may begin to bear; and 30 Years after, when the Cherry Trees are ſpent, the Apple Trees may be in Perfection.

*For the planting of Hops.* --- The Ground is firſt to be prepar'd by tilling it the Beginning of the Winter, either with the Plough or Spade. In *October*, (and ſometimes, tho' rarely, in *March*) they proceed to plant; marking out the Places where each Hillock or little Plantation is to be. Some plant in Squares, Checquer-wiſe, which is the moſt convenient Form, where they intend, in the Courſe of the Tillage, to plough with Horſes between the Hills: But the beſt Form for the *Hop*, as well as the moſt pleaſing to the Eye, is the *Quincunx*. See Quincunx.

If the Ground be poor, or ſtiff, 'tis neceſſary ſome good Mould, or elſe a Compoſt of Manure and Earth, be laid in Holes a Foot ſquare, in the ſeveral Places where the Hills are to be. --- The Diſtance of the Hills in dry hot Ground may be ſix Foot; but in moiſt and rich Ground, ſubject to bear large Hops, eight or nine.

For planting, the largeſt Sets are to be choſen, eight or ten Inches long, having each three or four Joints. Theſe to be ſet in Holes, made for the Purpoſe, one at each Corner of a Hole, and a Fifth in the Middle, raiſing the Earth two or three Inches about.

*For the dreſſing of Hops.* --- If the *Hop*-Ground be old, and wore out of Heart, they find it convenient to dig about them, toward the Beginning of each Winter, and take away a Quantity of the old Earth; its Place to be ſupply'd with what is fatter and freſher. --- If the *Hops* be in good Heart, Manuring and Pruning is moſt adviſable. In order to this, they pull down the Hills, and undermine all about, till they come near the principal Roots. This done, taking off the Earth from the Roots, they find by the Colour, &c. which are new Shoots, and which old ones; and cut off all the new ones. --- When the Roots are thus dreſs'd, the new Mould or Manure to be apply'd.

*For the Poling.* --- The Time is when the *Hops* begin to appear above Ground: The Number and Dimenſions of the Poles to be adjuſted to the Diſtance of the Hills, the Nature of the Soil, and Strength of the *Hop*. --- To prevent *Houſling*, the Poles are to be made to lean outwards; and particularly toward the South, to receive more of the Sun's Beams; it being Matter of Obſervation, that a leaning Pole bears more *Hops* than an upright one.

*As to tying.* --- When the *Hops* are got two or three Foot above Ground, the next Buſineſs is to conduct and tye them to ſuch Poles as are empty, and at a proper Diſtance for them. --- They are to be ty'd with wither'd Ruſhes, or Woollen Yarn; but not ſo cloſe as to hinder their climbing up the Poles: Two or three Strings may ſuffice for a Pole. This Operation to be attended to in *April* and *May*.

About Midſummer, when they ceaſe to run in Length, and begin to branch, ſuch of them as are not yet got up to the Tops of the Poles, ſhould have their Heads nipp'd off, or elſe be diverted from the Pole, that they may branch the better; which is more for the Increaſe of the *Hop*, than its extending in Length.

Sometimes in *May*, after Rain, the Hills are to be made up with a Hoe, or Spade, or by ploughing; which will be a Means to deſtroy the Weeds: And 'tis neceſſary, if the Spring or Summer prove dry, to water them twice or thrice in a Seaſon.

*Hops blow* toward the latter End of *July*; and the forward ones are ripe by the Cloſe of *Auguſt*. --- Their Ripeneſs is diſcover'd by their fragrant Scent, their changing of Colour, being eaſily pull'd, and by the browniſh Colour of the Seed.

*Hops are to be gather'd* when they look a little browniſh, and that without delay: the moſt expeditious Way, is, to make a Frame with four ſhort Poles or Sticks, laid on four Forks driven into the Ground, of ſuch Breadth, as to contain either the Hair-Cloth of your Kiln, or a Blanket tacked round it about the Edges. --- On this Device, the Poles, with the *Hops* on them, may be laid, being either ſupported by Forks, or the Edges of the Frame; at each Side whereof, the Pickers may ſtand, and pick the *Hops* into it. --- When the Blanket or Hair-Cloth is full, untack it, carry it away, and place another, or the ſame empty'd, in the ſame Frame again; and this Frame may be daily remov'd, with little Trouble, to ſome new Place of the Garden near the Work.

*Hops* muſt not be gather'd while wet; but if the Dew be on them, or a Shower of Rain has taken them, the Pole may be ſhaken, and they'll dry the ſooner: If they be over-ripe, they'll be apt to ſhed their Seed, wherein conſiſts their chief Strength; neither will they look ſo green, but ſomewhat brown, which much leſſens their Value; though ſome let them ſtand as long as they can, becauſe they waſte leſs in the dropping; for four Pounds of undry'd *Hops*, thorough ripe, will make one of dry; whereas five Pounds of thoſe ſcarely ripe, yet in their Prime, make but one; ſo that 'tis judg'd the Proprietors get more in the thorough-ripe *Hop* by the Weight, than they loſe in the Colour.

As faſt as the *Hops* are pick'd, they muſt be *dry'd*: Some among us, eſpecially the *Flemmings* and *Hollanders*, make uſe of an *Ooſt* or Kiln for this Purpoſe: Others dry them on the ordinary Malt Kiln in an Hair-Cloth: But the beſt Way, is to make a Bed of flat Ledges, about an Inch thick, and two or three Inches broad, ſawn, and laid one acroſs the other, Checkerwiſe, the flat Way; the Diſtances about three Inches, or the like; the Ledges ſo enter'd, are put into another, that the Floor may be even and ſmooth: This Bed may reſt on two or three Joyces ſet edgewiſe, to ſupport it from ſinking; then cover it with large double Tin ſolder'd together at each Joynt; and ſo order the Ledges before they are laid, that the Joynts of the Tin may always lie over the Middle of a Ledge; and when the Bed is wholly cover'd with Tin, fit Boards about the Edges of the Kiln to keep up the *Hops*, only let the one Side be to remove, that the Hops may be ſhoved off as before. The *Hops* may be turn'd on this Tin-Bed or Floor with great Safety, and ſmall Expence of Fuel; beſide that, any manner of Fuel will ſerve for this Purpoſe as well as Charcoal, the Smoak not paſſing thro' the *Hops*: But it muſt not be forgot, to make Conveyances for it at the ſeveral Corners and Sides of the Kiln.

The *turning of Hops* after the eaſieſt and moſt ſecure Manner, is found to be not only a Waſte and Injury to the *Hop*, but alſo an Expence of Fuel and Time; yet it may be prevented, in Caſe the upper Bed, whereon the *Hops* lie, have a Cover that may be let down and rais'd at Pleaſure; which Cover may be tinn'd over, by nailing ſingle Tin Plates to the Face of it, that when the *Hops* begin to dry, and are ready to be burnt, you may let down this Cover within a Foot and leſs of the *Hops*, which will reflect the Heat upon them, that the uppermoſt *Hop* will be as ſoon dry as the lower, and every *Hop* equally dry'd.

The *Method of bagging Hops*, (after they have lain a Month more to cool and toughen) is to make a round or ſquare Hole in an upper Floor, big enough for a Man with eaſe to go up and down, and turn and wind in it; then tack a Hoop about the Mouth of the Bag faſt with Packthread, that it may bear the Weight of the *Hops* when full, and of the Man that treads them: That done, let the Bag down thro' the Hole, and the Hoop will reſt above, ſo as to keep the Bag from ſliding wholly thro'; into this Bag caſt a few *Hops*, and before you go in to tread, let an handful of *Hops* be tyed at each lower Corner with a Piece of Packthread, to make, as it were, a Taſſel, whereby the Bag, when full, may be conveniently lifted or remov'd; then go into the Bag, and tread the *Hops* on every Side, another ſtill caſting in as faſt as you require, till it be full: When 'tis well trodden and fill'd, let the Bag down by unripping the Loop, and cloſe the Mouth of the Bag, filling the two upper Corners as you did the lower: This Bag, if well pack'd and dry'd, will keep ſeveral Years in a dry Place; only Care muſt be taken, that Mice do not ſpoil or waſte the *Hops*; not that they'll eat them, but make their Neſts therein.

HOPLITES, Hoplitæ, in Antiquity, were ſuch of the Candidates at the *Olympic* and other ſacred Games, as ran Races in Armour. See Game.

One of the fineſt Pieces of the famous *Parrhaſius*, was a Painting which repreſented two *Hoplites*; the one running, and ſeeming to ſweat large Drops; and the other laying his Arms down, as quite ſpent and out of Breath. *Pliny* l. xxxv. c. 10, and *Paſchas. de Coronis*, l. vi. cap. 14.

The Word is *Greek* ὁπλίτης, form'd of ὅπλον, Armour.

HOPLOMACHI, in Antiquity, were a Species of Gladiators. See Gladiator.

The *Hoplomachi* were thoſe who fought in Armour, either compleatly arm'd from Head to Foot, or only with a Cask and Cuiraſſe.

The Word is compos'd of the *Greek* ὅπλον, Armour, and μαχομαι, I fight.

HOPPER, a Veſſel wherein Seed-Corn is carry'd at the Time of Sowing. See Sowing.

The Word is alſo uſed for that wooden Trough in a Mill, into which the Corn is put to be ground. See Mill.

HORARY, ſomething relating to *Hora*, *Hour*. See Hour.

Horary *Circles* of the Globe. See Globe.

Horary *Circles*, or *Lines*, in Dialling, are the Lines or Circles which mark the Hours on Sun-dials. See Dial.

The *Horary Motion of the Earth*, *i.e.* the Arch it deſcribes in the Space of an Hour, is 15 Degrees; not accurately, (for the Earth moves with different Velocity, according to its greater or leſs Diſtance from the Sun) but near enough for ordinary Computations. See Earth.

HORD, Horde, Horda, in Geography, is uſed for a Company or Body of wandering People which have no ſettled Abode or Habitation; but ſtrole about *Aſia* and *Africa*, dwelling in Chariots, or under Tents, to be ready to ſhift as ſoon as Herbage, Fruits, and the preſent Province is eaten bare.

*Hord* is properly the Name which the *Tartars*, who inhabit beyond the *Volga*, in the Kingdoms of *Aſtracan* and *Bulgaria*, give to their Villages.

A *Hord* conſiſts of 50 or 60 Tents rang'd in a Circle, leaving an open Place in the Middle. --- The Inhabitants of each *Hord* uſually form a military Company or Troop; the eldeſt whereof is commonly the Captain, and depends on the General, or Prince of the whole Nation.

The Term *Hord* is a *Tartarian* Word, and literally denotes a *Multitude*.

HORDEATUM, a liquid Medicine, made of Barley, beat and boil'd with other ſuitable Ingredients.

HORDEOLUM, in Medicine, a ſmall Tubercle ariſing on the Palpebræ or Eye-lids. See Palpebræ.

It is thus call'd from the *Latin*, *Hordeum*, Barley, as reſembling a Barley Corn.

The Cure of the *Hordeolum* and *Grando*, is by Diſcutients and Suppuratives.

HORDICALIA, or Hordicidia, in Antiquity, a religious Feaſt held among the *Romans*, wherein they ſacrific'd Cattle big with young. See Feast.

This Feaſt fell on the 15th of *April*; on which Day they ſacrific'd thirty Cows big with Calf, to the Goddeſs *Tethys*, or *Terra*, Earth: Part of them were ſacrific'd in the Temple of *Jupiter*. --- They were burnt, at firſt, by the Pontifices; afterwards, by the eldeſt of the Veſtal Virgins.

*Alexand. ab Alexandro Genial. Dier.* writes *Hordalis dies*; and from him, ſome of the Moderns call the Feaſt *Hordalia*; but *Varro* writes it *Hordicalia*, and *Feſtus*, *Hordicidia*.

The Word *Hordicidia* is form'd of *horda*; which *Feſtus* explains by *prægnans*, pregnant; and *cædo*, I ſacrifice. *Ovid*, in his *Faſti*, l. iv. v. 631, deſcribes *horda*, or *forda*, to be *Bos prægnans*; of φορὰς, *gravida*.

HORIZON, or Horison, in Aſtronomy, a great Circle of the Sphere, dividing the World into two Parts or Hemiſpheres; the one upper, and viſible; the other lower, and hid. See Circle and Hemisphere.

The Word is pure *Greek*, and literally ſignifies *bounding* or *terminating the Sight*; being form'd of ὁρίζω, *termino*, *definio*, I bound, I limit; whence it is alſo call'd *Finiter*, Finiſher.

The *Horizon* is either *Rational* or *Senſible*.

The *rational*, *true*, or *Aſtronomical* Horizon, which is alſo call'd ſimply and abſolutely the *Horizon*, is a great Circle, whoſe Plane paſſes thro' the Centre of the Earth, and whoſe Poles are the *Zenith* and *Nadir*.

Such is the Circle H R (Tab. Aſtronomy, Fig. 52.) whoſe Poles are the *Zenith* and *Nadir*: Whence it follows, that the ſeveral Points of the *Horizon* are a Quadrant diſtant from the *Zenith* and *Nadir*.

The Meridian and Vertical Circles, all cut the rational *Horizon* at right Angles, and into two equal Parts. See Meridian and Vertical *Circle*.

The *ſenſible*, *viſible*, or *apparent* Horizon, is a leſſer Circle of the Sphere, as *hr*, which divides the viſible Part of the Sphere from the inviſible.

Its Poles, too, are the *Zenith* and *Nadir*: And conſequently the *ſenſible Horizon* is parallel to the *rational*; and it is cut at right Angles, and into two equal Parts by the Verticals.

The *ſenſible Horizon* is divided into Eaſtern and Weſtern.

The *Eaſtern* or *Ortive* Horizon, is that Part of the *Horizon* wherein the heavenly Bodies riſe. See Rising.

The *Weſtern* or *Occidual* Horizon, is that wherein the Stars ſet. See Setting.

HORIZON, in Geography, is a Circle paſſing over a given Part of the Earth, and dividing the viſible Part of the Earth and Heavens, from that which is inviſible. See EARTH.

The Altitude or Elevation of any Point of the Sphere, is an Arch of a Vertical Circle, intercepted between it and the ſenſible *Horizon*. See ALTITUDE and ELEVATION.

This is peculiarly denominated *ſenſible Horizon*, to diſtinguiſh it from the *rational* or *true*, which paſſes thro' the Centre of the Earth; as already obſerv'd.

By *ſenſible Horizon* is alſo frequently meant a Circle, which determines the Segment of the Surface of the Earth, over which the Eye can reach; call'd alſo the *Phyſical Horizon*.

In this Senſe we ſay, a ſpacious *Horizon*, a narrow ſcanty *Horizon*. To find the *Extent of the Horizon*, or how far a Man's Proſpect reaches, by means of the Height of his Eye, ſuppoſing the Earth an uninterrupted Globe, is a common Caſe of right-angled plain Triangles, where two Sides and an oppoſite Angle are given. --- Thus, ſuppoſe AHB (Tab. Geography, Fig. 8.) a great Circle of the terraqueous Globe, C the Centre, HC its Semidiameter, and E the Height of the Eye; ſince HE is a Tangent, the Angle at H is a right Angle; ſo that there are given HC, 398,386 Miles, or 21,034781 *Engliſh* Feet, CE the ſame Length at the Height of the Eye on the Maſt of a Ship, or at only a Man's Height, &c. added to it, and EHC the oppoſite right Angle.

By theſe three Parts given, it is eaſy to find all the other Parts of the Triangle. ---And firſt, for the Angle at C, in order to find the Side HE; the Proportion is, as the Side CE to the Angle at H, ſo is the Side HC to the Angle at E; which being ſubſtracted from 90 Degrees, the Remainder is the Angle at C. Then, as the Angle at E is to its oppoſite Side HC; or elſe, as the Angle at H is to its oppoſite Side CE; ſo the Angle at C to its oppoſite Side EH, the viſible *Horizon*.

Or the Labour may be ſhorten'd by adding together the Logarithm of the Sum of two given Sides, and the Logarithm of their Difference; the half of which two Logarithms, is the Logarithm of the Side requir'd, nearly. For an Example, we will take the two Sides in Yards, by reaſon ſcarce any Table of Logarithms will ſerve us any farther: the Semi-diameter of the Earth is 7,011594 Yards; the Height of the Eye is two Yards more, the Sum of both Sides is 14,023190.

| | |
|---|---|
| Logar. of which Sum is - - - | 7,1468468 |
| Logar. of two Yards, the Differ. is | 0,3010300 |
| Sum of both Logar. - - - - | 7,4478768 |
| The half Sum - - - - - - | 3,7239384 |

is the Logarithm of 5296 Yards = three Miles, which is the Length of the Line EH, or Diſtance the Eye can reach at ſix Feet Height.

This, at leaſt, would be the Diſtance on a perfect Globe, did the viſual Rays come to the Eye in a ſtrait Line; but by means of the Refractions of the Atmoſphere, diſtant Objects on the *Horizon* appear higher than really they are, and may be ſeen at a greater Diſtance, eſpecially on the Sea, which is a Matter of great Uſe, eſpecially to diſcover the Land, Rocks, &c.

Father *Laval*, Profeſſor of Hydrography at *Marſeilles*, found that the *Horizon* of his Obſervatory to the Sea-ward was never more than 15 Minutes, nor leſs than 13 ½; that is, the Arch of the Circumference of the Earth, intercepted between the Obſervatory and the *Horizon*, fluctuated between thoſe two Quantities; whence M. *Caſſini* deduces, that the Extent of the *Horizon* is ſeven *French* Leagues of three Miles each; and that the Obſervatory is 175 Foot high.

The Extent of the *Horizon*, at the ſame Place, and the ſame Height, is very ſubject to vary, by means of Differences in the Atmoſphere, which occaſion others in the Refractions. See REFRACTION.

When the Sea was full, or the North-Weſt or South-Eaſt Wind blew, and the Air hazy about the *Horizon*, F. *Laval* always found his *Horizon* the lower; *i. e.* the Refraction which ſhould raiſe it in that Caſe was leſs than ordinary. --- And yet on the common Principles, the Air being now much charged with Vapours, the very contrary were rather to be expected. --- This makes M. *Caſſini* ſuſpect, that there is ſome other refractive Matter in the Atmoſphere, beſide the Air itſelf.

The ſame Author obſerves, that at a Height much greater than that of F. *Laval*'s Obſervatory, he found the Arch terminated by the *Horizon* to the Seaward, 42', without any ſenſible Variation; whence he concludes, that the Variations are the greater, as the Height is the leſs; which may ſeem contrary to what he had aſſerted in another Place, *viz.* that the Variations in the apparent Altitudes of Bodies are greater, as theſe Objects are more remote, by reaſon they are ſeen thro' the larger Quantity of Air, which is all liable to be vary'd. --- But the Contradiction may be ſolv'd.

HORIZON *of the Globe*. See GLOBE.

HORIZONTAL, ſomething that has a Regard to the *Horizon*, is taken in the *Horizon*, or on a Level with the *Horizon*. See HORIZON.

In this Senſe we ſay, a *Horizontal* Plane, *Horizontal* Line, *Horizontal* Diſtance, &c.

HORIZONTAL *Plane*, is that which is parallel to the *Horizon* of the Place; or nothing inclin'd thereto. See PLANE.

The Buſineſs of Levelling, is to find whether two Points be in the *horizontal* Plane; or how much the Deviation is. See LEVELLING.

HORIZONTAL *Plane*, in Perſpective, is a Plane parallel to the *Horizon*, paſſing thro' the Eye, and cutting the Perſpective Plane at right Angles. See PERSPECTIVE *Plane*.

HORIZONTAL *Line*, in Perſpective, is a right Line drawn thro' the principal Point, parallel to the *Horizon*: Or, it is the Interſection of the *horizontal* and perſpective Planes.

Such is the Line PQ (Tab. Perſpective, Fig. 12.) paſſing thro' the principal Point F.

HORIZONTAL *Dial*, is that drawn on a Plane parallel to the *Horizon*; having its Gnomon, or Style elevated according to the Altitude of the Pole of the Place it is deſign'd for.

*Horizontal Dials* are, of all others, the moſt ſimple and eaſy. ---The Manner of deſcribing them, ſee under the Article DIALLING.

HORIZONTAL *Range*, or *Level Range* of a Piece of Ordnance, is the Line it deſcribes, when directed parallel to the *Horizon*, or *horizontal* Line. See RANGE.

Dr. *Halley* gives two very ready Theorems, the one to find the greateſt *horizontal* Range at 45 Degrees Elevation, in any Shot made upon any inclin'd Plane, with any Elevation of the Piece whatſoever; and the other to find Elevations proper to ſtrike a given Object with any Force, greater than what ſufficeth to reach it with the middle Elevation.

1°. A Shot being made on an inclin'd Plane: having the *horizontal* Diſtance of the Object it ſtrikes, with the Elevation of the Piece, and the Angle at the Gun between the Object and the Perpendicular; to find the greateſt *horizontal* Range of that Piece laden with the ſame Charge; that is half the Latus Rectum of all the Parabolæ made with the ſame Impetus. --- Take half the Diſtance of the Object from the Nadir, and the Difference of the given Elevation from that half; ſubſtract the verſed Sine of that Difference from the verſed Sine of the Diſtance of the Object from the Zenith: The Difference of thoſe verſed Sines, will be to the Sine of the Diſtance of the Object from the Zenith, as the *horizontal* Diſtance of the Object ſtruck, to the greateſt Range at 45 Degrees.

2°. Having the greateſt *horizontal* Range of a Gun, the *horizontal* Diſtance and Angle of Inclination of an Object to the Perpendicular; to find the two Elevations neceſſary to ſtrike that Object. --- Halve the Diſtance of the Object from the Nadir; this Half is equal to the half Sum of the two Elevations ſought: Then ſay, As the greateſt *horizontal* Range is to the *horizontal* Diſtance of the Object, ſo is the Sine of the Angle of Inclination, or Diſtance of the Object from the Perpendicular, to a fourth Proportional; which Fourth being ſubſtracted from the verſed Sine of the Diſtance of the Object from the Zenith, leaves the verſed Sine of half the Difference of the Elevations ſought; which Elevations are therefore had, by ſubſtracting that half of the Difference to and from the aforeſaid half Sum. See PROJECTILE.

HORIZONTAL *Shelters*, among Gardeners, are Defences diſpos'd parallel to the *Horizon* for tender Plants, Bloſſoms, and Fruits in the Spring, againſt Blaſts and pinching Nights.

The uſual Shelters that have obtain'd, are Baſs-mats, and other warm Coverings, which are roll'd up in the Day-time, and let down in the Night. --- In lieu of theſe, the Revd. Mr. *Lawrence* firſt propos'd *horizontal Shelters*, chiefly on this Principle, that moſt of our Froſts and Blaſts fall perpendicularly; *i. e.* the condens'd Vapours falling from the upper Region, do, at Night, form themſelves toward the Surface of the Earth, into Drops of Dews, ſubject to be frozen by the Coldneſs of the Air. See DEW, FROST, &c.

The *horizontal Shelters* are to be made by laying Rows of Tyles, at certain Diſtances one above another, in the Structure of the Wall, ſo as to project or hang over the Plane of the Wall, to carry off the Dew, Wet, &c. --- 'Tis an Inconvenience objected to this Method, that it is difficult to lead a Tree rightly among the Tyles, or to keep its Figure duly fill'd up.

HORIZONTAL *Parallax*, HORIZONTAL *Refraction*, HORIZONTAL *Projection*, HORIZONTAL *Diſtance* } See { PARALLAX. REFRACTION. MAP. DISTANCE.

HORN, *Cornu*, a hard callous Subſtance, growing on the Head of divers Animals. See ANIMAL and HEAD.

'Tis laid down as a Rule by ſome Naturaliſts, that no Animals have *Horns* but thoſe that are cloven-footed.

The *Horns* are uſually a double Part; inſomuch that there is but one Exception, and this too controverted. See UNICORN.

The *Horns* of a Deer are properly call'd his *Head*. See HEAD.

In the Hiſtory of the *French* Academy of Sciences, we have an Account of a Bullock's *Horn* dug out of the Ground in ploughing, which had ſhot forth fibrous Roots, and appear'd to have grown or vegetated after the Manner of a Plant.

*Horns* make a conſiderable Article in the Arts and Manufactures. --- Bullocks *Horns* ſoften'd by the Fire, ſerve to make Lanthorns, Combs, Inkhorns, Tobacco-Boxes, &c.

*Horn* is ſometimes alſo uſed for the Hoof of a Horſe, &c. See HOOF.

*Hart's*-HORN, *Cornu Cervi*. --- The Scrapings or Raſpings of the *Horn* of this Animal are medicinal, and uſed in Aſtringent Draughts, Ptiſans, &c. with that Intention.

It yields by Diſtillation a very penetrative volatile Spirit. See SPIRIT, &c.

*Ammons* HORN. See CORNU *Ammonis*.

HORN is alſo a Sort of muſical Inſtrument, of the Wind Kind; chiefly uſed in Hunting, to animate and bring together the Dogs, and the Hunters. See HUNTING.

The *Horn* may have all the Extent of the Trumpet. See TRUMPET.

The Term anciently was, *Wind a Horn*; all *Horns* being in thoſe Times compaſs'd: But ſince ſtraight *Horns* are come in faſhion, they ſay, *Blow a Horn*, and ſometimes, *Sound a Horn*.

There are various Leſſons on the *Horn*; as the *Recheat*, *Double Recheat*, *Royal Recheat*, *Running* or *Farewel Recheat*, &c. See RECHEAT.

The *Hebrews* made uſe of *Horns* form'd of Rams *Horns*, to proclaim the Jubilee; whence the Name *Jubilee*. See JUBILEE.

HORN, in Anatomy. See CORNU, MATRIX, &c.

HORN, in Architecture, is ſometimes uſed for *Volute*. See VOLUTE.

HORN *of Plenty*. See CORNU COPIA.

HORN *with Horn*, or *Horn under Horn (cornutum cum cornuto)* when there is Common *per cauſe de vicinage*, Intercommoning of horned Beaſts. See COMMON and INTERCOMMON.

HORN *Work*, in Fortification, a Sort of Out-work advancing toward the Field, to cover and defend a Curtain, Baſtion, or other Place ſuſpected to be weaker than the reſt; as alſo to poſſeſs a Height, &c. See OUT-*work*.

It conſiſts of two Demi-Baſtions, as L M N and O P Q, Tab. Fortification, Fig. 12. and a Curtain N O. --- Its Sides or Wings are uſually parallel; tho' ſometimes they approach or contract toward the Place, forming what they call a *Queue d'Aronde*, or *Swallows Tail*. See QUEUE *d'Aronde*.

When the Wings are too long, they ſometimes make Epaulements to flank them. --- The Parts of the *Horn-work* next the Country, are to be furniſh'd with a Parapet.

Two *Horn-works* join'd together, make a Crown-work. See CROWN-*work*.

HORN *Beam Pollengers*, are Trees which have been lopp'd, and are of about twenty Years Growth. See TREE and LOPPING.

HORNGELD and HORNETE, (from the *Saxon*, *Horn*, and *Geld*, Payment) ſignifies a Tax within the Foreſt, to be paid for the feeding of *horned* Beaſts. See GELD.

To be free of this, is a Privilege granted by the King to ſuch as he thinks good. --- *Quietum eſſe omni collectione in Foreſta de Beſtiis cornutis aſſes. Et ſint quieti de omnibus Geldis, & Danegeldis, & Wodgeldis, & Senegeldis, &* Horngeldis, &c. See SUBSIDY.

A Horſe is ſaid to be *Horn hipped*, when the Tops of the two Haunch Bones appear too high.

HORNAGIUM, HORNAGE, in our ancient Law Books, ſeems to import the ſame with Horngeld. See HORNGELD.

HORODICTIC *Quadrant*. See QUADRANT.

HOROGRAPHY, the Art of making or conſtructing Dials; call'd alſo *Horologiography*, *Gnomonica*, *Sciaterica*, *Photoſciaterica*, &c. See DIALLING.

The Word is compounded of ὥρα, *hora*, Time, Hour, and γράφω, *ſcribo*, I write.

HOROLOGIOGRAPHY, the Art of making or conſtructing Dials. See DIALLING.

HOROLOGIUM, a common Name among the *Latin* Writers, for any Inſtrument or Machine to meaſure the Hours withal. See CHRONOMETER.

Such are our Clocks, Watches, Sun-Dials, &c. See CLOCK, WATCH, DIAL, &c. See alſo CLEPSYDRA.

The Word is originally *Greek*, ὡρολόγιον, compos'd of ὥρα, *hora*, Time, Hour, and λόγος, Speech, Diſcourſe.

HOROLOGIUM, HOROLOGION, is alſo a Name the *Greeks* give to their Liturgy or Breviary; by reaſon it contains the daily *Hours*, or the ſeveral Offices to be rehears'd each Day. See HOUR.

The *Greeks* call it ὡρολόγιον, which anſwers to what in *Latin* and *Engliſh* we call *Diurnum*, or *Diurnal*.

The Ὡρολόγιον is the Breviary of the *Greeks*. See BREVIARY.

HOROPTER, in Opticks, is a right Line, drawn thro' the Point where the two Optic Axes meet, parallel to that which joins the Centres of the two Eyes, or the two Pupils.

Such is the Line A B (Tab. Opticks, Fig. 67.) drawn thro' the Point of Concourſe C, of the Optic Axes of the Eyes D and E, parallel to H I, which joins the Centres of the Eyes H and I.

It is call'd *Horopter*, as being found by Experience to be the Limit of diſtinct Viſion. See VISION.

*Plane of the* HOROPTER. See PLANE *of the Horopter*.

HOROSCOPE, in Aſtrology, is the Degree of the Aſcendant, or Star riſing above the Horizon, at any certain Time when a Prediction is to be made of a future Event; as, the Fortune of a Perſon then born, the Succeſs of a Deſign then laid, the Weather, &c. See ASCENDANT.

*Mercury* and *Venus* were in the *Horoſcope*, &c. They were anciently ſo infatuated with *Horoſcopes*, that *Albertus Magnus* is ſaid to have had the Temerity to draw that of Jeſus Chriſt.

The Word is *Greek*, compos'd of ὥρα, *hora*, Hour, and the Verb σκέπτομαι, *ſpecto*, *conſidero*, I conſider. --- The *Latins* call it *Cardo Orientalis*.

HOROSCOPE is alſo uſed for a Scheme or Figure of the twelve Houſes, *i. e.* the twelve Signs of the Zodiac, wherein is mark'd the Diſpoſition of the Heavens for the given Time. See HOUSE and FIGURE.

Thus we ſay, to draw a *Horoſcope*, conſtruct a *Horoſcope*, &c. We call it more peculiarly *calculating* a Nativity, when the Life and Fortune of a Perſon are the Subject of the Prediction: For they draw *Horoſcopes* of Cities, great Enterprizes, &c.

*Lunar* HOROSCOPE, is the Point which the Moon iſſues out of, when the Sun is in the aſcending Point of the Eaſt.

This is alſo call'd the *Part of Fortune*. See PART.

HOROSCOPE, is alſo a Mathematical Inſtrument, in manner of a Planiſphere; but now diſuſed. See PLANISPHERE.

It was invented by *J. Paduanus*, who compoſed a ſpecial Treatiſe thereon.

HORROR, HORROUR, ſtrictly ſignifies ſuch an Exceſs of Fear, as makes a Perſon tremble. --- In Phyſick it denotes ſuch a Shuddering or Quivering as precedes an Ague Fit; and is often join'd with Rigores and Lumbagines. See AGUE, FEVER, &c.

Thro' Ignorance of this Acceptation, ſome have underſtood Fear to be accounted by Authors among the antecedent Symptoms of thoſe Diſtempers.

HORS *de ſon fee*, *q. d.* out of his Fee, is an Exception to avoid an Action brought for Rent iſſuing out of certain Land, by him that pretends to be the Lord, or for ſome Cuſtoms and Services. --- For if the Defendant can prove the Land to be without the Compaſs of his Fee, the Action falls. See DISTRICT.

HORSE, a Domeſtick Quadruped, of great Uſe in the Affairs of Agriculture, Commerce, War, Sporting, &c.

The *Horſe* makes the Subject of a very extenſive Art, call'd *Horſemanſhip*, conſiſting of divers ſubordinate Arts or Branches. See HORSEMANSHIP.

From the ſame Beaſt ariſe the Profeſſions of Chivalry, Knighthood, &c. See CHEVALIER, &c.

Authors are divided as to the Time when Men firſt began to mount *Horſes*. — The Scholiaſts of *Euripides*, and *Euſtathius* on the IId Book of the Iliad, ſpeak as if the Ancients had been unacquainted with the Uſe of Saddle *Horſes*, and had only uſed them to draw Chariots, &c. They add, that Courſes on *Horſe*-back were not introduc'd at the Olympic Games, before the 85th Olympiad. — But this can ſcarce be; in regard the Centaurs, to whom the Invention is attributed, liv'd long before that Time. See CENTAUR.

It appears likewiſe from *Pauſanias*, that there were *Horſe* Courſes even in the Time of *Hercules*, the Inſtitutor of the Olympic Games. See OLYMPIC.

The Parts of a *Horſe*'s Body furniſh a great Variety of Terms, by no means to be overlook'd. — The Skin and Coat are call'd the *Hair*; the long Hair on the Neck the *Main*; the Fore-top the *Toping* or *Tuke*; the Hair behind, on the Feet, the *Fetlock* or *Fetter-lock*; that growing over the Top of the Hoof, the *Coronet* or *Cronet*; that on the Eye-lids, the *Brills*. —The Ridge whereon the Main grows, is call'd the *Creſt* or *Criſt*; the fore Part, from the Neck to the fore Legs, the *Briſket* or *Cheſt*; the Mark frequently running down his Face, the *Rache*; and that in the Forehead, the *Star*. — The

Top of the Shoulder Blades, at the ſetting on of the Neck, is call'd the *Withers*; the Place where the Saddle is ſet, the *Dock*; and a Bruiſe or Hurt thereon, a *Navel-gall*; the Middle of the Back, from the Main to the Hips, the *Reins*; the Extremity of the Reins above the Hips, the *Croupe*; the Tail, the *Dock* or *Runt*; the hollow or ſinking of the Back-bone, the *Sway*; the hind Part of the Belly, next the Genital, the *Flank*; that nearer the Thighs, the *Groins*; the looſe Skin wherein the Yard is, the *Sheath*; and the fore Parts of the Shoulders, next the Breaſts, the *Fillets*. — The uppermoſt Part of the hind Leg, next the Buttock, is call'd the *Stiffle* or *Stiffle Joint*; the after Joint, or bending of the hind Leg, the *Chambrel* or *Elbow*; the inner, the *Ham* or *Hough*; the Joint at the Fetlock, the *Paſtern*, *Ancle*, or *Fetlock Joint*; the Foot, above the Hoof of the Ancle Joint, the *Coronet*. — The Part from the Withers to the Top Joint of the Thigh, is call'd the *Shoulder*; the middle Joint of the fore Leg, the *Knee*; the right Leg before, the *farther Leg*; and the left, the *nearer*. — The Hoof is call'd the *Horn*; the Hollow of the Hoof, the *Coffin*; the tender Part of the Hoof, next the Heel, the *Fruſh*; the Ball of the Foot, the *Frog*; the Part to be pared or cut off the Hoof when overgrown, the *Rift*; the fore Part of the Hoof the *Toes*; the hind Part, where there is a Riſing in the Middle of the Sole, the *Heel*; and the Inſides meeting on the Heel, the *Quarters*. — *Of moſt of theſe a further Account will be found under their reſpective Articles.*

The Maſters in this Art lay it down, that a Horſe to be good, and well made, muſt have three Parts like thoſe of a Woman, *viz.* the Breaſt, which is to be broad, the Hips round, and the Main long; three of a Lion, *viz.* Countenance, Intrepidity, and Fire; three of a Bullock, *viz.* the Eye, Noſtril, and Joint; three of a Sheep, *viz.* the Noſe, Gentleneſs, and Patience; three of a Mule, Strength, Conſtancy, and Foot; three of a Deer, Head, Leg, and Hair ſhort; three of a Wolf, Throat, Neck, and Hearing; three of a Fox, Ear, Tail, and Trot; three of a Serpent, Memory, Sight, and Turning; three of a Hare or Cat, Running, Walking, and Suppleneſs.

*Horſes* are diſtinguiſh'd into divers Kinds, and differently denominated, with regard to their Strain or Country. — As the *Neapolitan*, known by his Hawk Noſe. — The *Spaniſh Genet*, by his ſmall Limbs. — The *Barb*, by his fine Head and deep Hoof. — The *Dutch*, by the Roughneſs of his Legs. — The *Engliſh* by his ſtrong knitting together, *&c.* — The *Flandrin*, &c. See GENET, BARB, *&c.*

*Horſes* are alſo diſtinguiſh'd with regard to the Uſes or Offices they are reſerv'd for; as, the Coach *Horſe*, War *Horſe*, Hunting *Horſe*, Running *Horſe*, Pack *Horſe*, &c. See COACH, HUNTING, *&c.*

*Horſes* are alſo diſtinguiſh'd with regard to their Colours; as — *A Bay*, which admits of divers Shades or Caſts, *viz.* a black Bay, brown Bay, dapple Bay; all which have conſtantly black Mains and Tails. — *Dun* and *Mouſe Dun*, having frequently a black Liſt along the Back, which denominates them Flea-back'd. — *Flea-bitten*, which is white ſpotted with red. — *Grey*, Dapple Grey, Silver Grey, Sad or Powder'd Grey, Black Grey, Sandy Grey, and Iron Grey. — *Griſſel* or *Rount*, a light Fleſh Colour intermix'd with white. — *Peach Colour*, or *Bloſſom Colour*. — *Pyebald*, which conſiſts of two Colours, one of them white. — *Roan*, a Bay, Black, or Sorrel, intermix'd with white Hairs. — *Rubican*, Black or Sorrel, with white Hairs ſcatter'd about his Body. — *Sorrel*, Common Sorrel, Red or Cow-colour'd Sorrel, bright or light-colour'd Sorrel, burnt Sorrel; all chiefly diſtinguiſh'd by the Colour of their Manes. — *Starling Colour*, reſembling a browniſh or blackiſh Grey, only more freckled, or intermix'd with white. — *Tyger Colour*, much the ſame with the brand. ed Grey, only the Spots ſmaller. — *Wolf Colour*. — *Deer Colour*. — *Black*. — *White*, &c.

Theſe Colours are generally conſider'd as Symbolical of the Nature, Qualities, *&c.* of the Beaſts; and accordingly their Value is much influenc'd hereby. — The dapple Grey is priz'd for Beauty; the brown Bay for Service; the Black with Silver Hair for Courage; the Roan for Countenance; the Sorrel, Black without white, and Iron Grey, are reputed hot and fiery; the bright Grey, Flea-bitten, and Black with white Spots, are ſanguine; the White, Dun, and Pye-bald, phlegmatic and heavy; the Mouſe Dun, red Bay, and blue Grey, are dull; the Peach Colour rarely prove obedient to the Spur; the Sorrel ſeldom fail of being good, eſpecially if their Legs, Tails, and Manes be black; and the ſame may be ſaid of the Flea-bitten, at leaſt thoſe ſo mark'd in the fore Parts, or over the whole Body; for when only behind 'tis an ill Sign.

Indeed 'tis hard laying down any univerſal Rules. — The White, which promiſe the leaſt, prove good when black about the Eyes and Noſtrils. And there are excellent Iron Greys, tho' they are not reputed a good Colour.

*For the Age, Teeth, Mark*, &c. *of Horſes*. See AGE, TEETH, MARK, *&c.*

*For the Furniture*, &c. *of a Horſe*. See SADDLE, BRIDLE, BIT, *&c.*

HORSE is alſo us'd, in the Military Language, to expreſs the Cavalry. See CAVALRY.

The Army conſiſted of 30000 Foot, and 10000 *Horſe*. See INFANTRY.

The *Horſe* includes *Horſe* Guards, *Horſe* Granadiers, and Troopers. — Dragoons are alſo frequently comprehended under the Name, tho' they fight on Foot. See HORSE *Guards*, GRANADIER, DRAGOON, *&c.*

*Horſe* Guards, by the *Spaniards* call'd *Guardas de a Cavallo*; by the *French*, *Gardes de Corps*; the *Germans*, *Leibgardy*; and by the *Engliſh* uſually *Life Guards*; are the Guards of the King's Perſon and Body, conſiſting of 800 Men, well arm'd and equipp'd. See GUARD.

They are divided into three *Troops*; and to each is now added, by Eſtabliſhment, a Troop of Granadiers, conſiſting of 64 Men; all under the Command of a Captain. See TROOP, GRANADIER, CAPTAIN, *&c.*

Each Troop of *Horſe* Guards is divided into four Diviſions or Squadrons; two of which, conſiſting of 100 Men, commanded by a principal commiſſion'd Officer, two Brigadiers, and two Sub-brigadiers, with two Trumpets, mount the Guard, one Day in ſix, and are reliev'd in their Turns.

Their Duty is, by Parties from the Guard, to attend the King's Perſon when he goes out near Home. — When he goes out of Town, he is attended by Detachments out of all the three Troops.

One of the three *Captains of the Horſe Guards* attends on the King when he walks on foot, immediately next his Perſon; carrying in his Hand an Ebony Staff or Truncheon with a Gold Head.

One Diviſion of Granadiers mounts with a Diviſion of the Troop to which they belong; and go out on ſmall Parties from the Guard, perform Centinel Duty on foot, attend the King alſo on foot, *&c.*

*Maſter of the* HORSE. See MASTER *of the Horſe*.

*Light* HORSE, includes all the *Horſe* except thoſe of the Life Guard.

The Term *Light Horſe* is ſometimes apply'd to an independent Troop; or a Troop not embody'd into a Regiment.

The Denomination aroſe hence, that anciently they were lightly arm'd, in Compariſon of the Royal Guard, which were arm'd at all Points.

HORSE, is alſo a Term uſed in various of the Arts and Manufactories, for ſomething that helps to ſuſtain their Work from the Ground, for the more commodious working at it.

The *Horſe* uſed by the Tanners, Skinners, call'd alſo the *Leg*, is a Piece of Wood cut hollow and roundiſh, four or five Foot long, and placed aſlope; upon which they pare their Skins to get off the Dirt, Hair, Fleſh, *&c.* See TANNING, CURRYING, CHAMOISING, *&c.*

*Horſe* is alſo uſed in Carpentry for a Piece of Wood jointed acroſs two other perpendicular ones, to ſuſtain the Boards, Planks, *&c.* which make Bridges over ſmall Rivers; and on divers other Occaſions.

*Wooden* Horſe. See EQUULEUS.

HORSE is alſo a Rope in a Ship, made faſt to one of the Fore-maſt Shrouds; having a dead Man's Eye at its End, through which the Pendant of the Sprit-ſail Sheets is reev'd.

HORSE is alſo a Cant Name lately introduc'd into the Affair of Lotteries, for the Chance or Benefit of a Ticket or Number for one or more Days, upon Condition, if it be drawn a Prize within the Time covenanted for, of returning to the Seller an undrawn Ticket. See CHANCE and LOTTERY.

To determine the Value of a *Horſe*. — Multiply the Amount of the Prizes in the Lottery by the Time the *Horſe* is hired for; and from the Product ſubtract the Amount of the Number of Prizes by the Value of an undrawn Ticket into the Time of the *Horſe*: The Remainder being divided by the Number of Tickets into the whole Time of drawing, the Quotient is the Value of the *Horſe*. See GAMING.

HORSEMANSHIP, the Art of breaking, diſciplining, and managing *Horſes*. See HORSE.

*Horſemanſhip*, in its Latitude, includes what relates to the Make, Colour, Age, Temper, and Qualities of *Horſes*; their reſpective Countries and Climates, with the Manner of breeding, propagating, *&c.* the Diſcovery of the Uſes or Services they are fitteſt for, whether the Wars, the Race, the Saddle, or Labour; and forwarding and accommodating them thereto.

In this general Senſe, it alſo includes the Knowledge of the Defects and Diſeaſes of *Horſes*, and the Remedies proper for the ſame; with the ſeveral Operations requiſite thereto, as *Docking*, *Gelding*, *Shoeing*, &c. And thus takes in the Farrier's Province. See FARRIER. See alſo DOCKING, GELDING, SHOEING, *&c.*

But the Word is in a more peculiar Manner underſtood of the Art of *Riding*; or of directing a *Horſe* to Advantage, not only in the ordinary Motions, but more eſpecially in the managing or making him work, upon Volts, Airs, &c. See MANAGE, RIDING, VOLT, AIR, &c.

HORSE *Shoe*, a Cover or Defence for the Sole of a *Horſe*'s Foot. See SHOE, HOOF, &c.

Of theſe there are ſeveral Sorts; as — 1°. The *Planch Shoe*, or *Pancelet*, which is ſaid to make a good Foot, and a bad Leg; as cauſing the Foot to grow beyond the Meaſure of the Leg. It is choſe for a weak Heel, and will laſt longer than any other *Shoe*; being borrow'd from the Moil which has weak Heels and Fruſhes to keep the Feet from Stones and Gravel.

2°. *Shoes with Calkins*, which, tho' intended to ſecure the *Horſe* from ſliding, yet are reputed by many to do him more harm than good, in that he cannot tread evenly upon the Ground, whereby many times he wrenches his Foot, or ſtrains ſome Sinew, eſpecially upon ſtoney Ways, where Stones will not ſuffer the Calkins to enter. *Double Calkins* are leſs hurtful, as he treads evener with them than on the ſingle Calkins; but then they muſt not be over long or ſharp-pointed, but rather ſhort and flat.

3°. There are *Shoes with Rings*, firſt invented to make the *Horſe* lift his Feet up high; tho' ſuch *Shoes* are more painful than helpful, beſide the Unhandſomeneſs of the Sight. — This Defect is moſt incident to *Horſes* that have not ſound Hoofs; for tender Feet fear to touch the Ground that is hard: But what is intended for Remedy, proves a Prejudice to the *Horſe*, by adding high Calkins, or Rings to his *Shoes*, as by that means his Heels are made weaker than before.

4°. *Shoes* with *ſwelling Welts or Borders* round about them, are us'd in *Germany*, &c. which being higher than the Heads of the Nails, ſave them from wearing. — Theſe are the beſt Sort of laſting *Shoes*, if made of well temper'd Stuff, as they wear equally in all Parts, and the *Horſe* treads evenly upon them.

5° Others, who uſe to paſs Mountains, where Smiths are not ſo eaſily met with, carry *Shoes* about them, with Vices, whereby they faſten them to the *Horſe*'s Hoofs without the Help of the Hammer or Nail: Yet is this more for Shew than Service; for though ſuch *Shoe* may ſave a *Horſe*'s Feet from Stones, yet it ſo pinches his Hoof that he goes with Pain, and perhaps injures it more than the Stones do. — On ſuch emergent Occaſions, therefore, it were better to make Uſe of the *Joint Shoe*, which is made of two Pieces, with a flat Rivet Nail joining them together in the Toe, ſo that it may be taken both wide and narrow to ſerve any Foot.

6°. The *Patten Shoe* is us'd for a *Horſe* that is burnt in the Hip, Stiffle, or Shoulder, as it cauſes him to bear upon that Leg the Grief is on, and conſequently makes him uſe it the better.

8°. The *Panton* or *Pantable Shoe*, which opens the Heels, and helps Hoof-binding. — To which may be added the *half Panton Shoe*.

HORSE *Shoe* in Fortification, is a Work ſometimes of a round, ſometimes of an oval Figure, rais'd in the Ditch of a marſhy Place, or in low Grounds, and border'd with a Parapet.

Its Uſe is to ſecure a Gate, or to ſerve as a Lodgment for Soldiers, to prevent Surprizes, or to relieve an over-tedious Defence.

HORSE *Shoe Head*, a Diſeaſe in Infants, wherein the Sutures of the Head are too open, or too great a Vacuity is left between them; ſo that the Aperture ſhall not be totally clos'd up, or the Cranium in that Part be ſo hard as the reſt for ſome Years after. See SUTURE.

This Openneſs is found to be increas'd upon the Child's catching Cold. When the Diſeaſe continues long, 'tis reputed a Sign of Weakneſs and ſhort Life. In this Caſe 'tis uſual to rub the Head every now and then with warm Rum or Brandy, mix'd with the white of an Egg, and Palm Oil.

Sometimes the Diſorder ariſes from a Collection of Waters in the Head, call'd a *Hydrocephalus*. See HYDROCEPHALUS.

HORSE *Meaſure*, is a Rod of Box, to ſlide out of a Cane, with a Square at the End, being divided into Hands and Inches, to meaſure the Height of *Horſes*. See HAND.

HORSHAM *Stone*, is a kind of thin broad Slate, of a greyiſh Colour; formerly much uſed, eſpecially in *Suſſex*, to heal or cover Churches and Chancels, great Houſes, &c. See STONE, SLATE, COVERING, &c.

It is call'd *Horſham Stone*, becauſe chiefly brought from the Town of *Horſham*.

HORTAGILERS, in the Grand Signor's Court, are Upholſterers, or Tapiſtry-hangers. See TAPISTRY.

There is no City better or more orderly regulated than the Grand Signor's Camp: And to have a Notion of the Magnificence of that Prince, he muſt be ſeen in that Equipage; he being much better lodg'd and accommodated there, than at *Conſtantinople*, or any other City in his Dominions.

He has always two Tents or Pavilions, and two Sets of Furniture entire; that while he is in one, they may ſtretch or ſpread the other.

In order to this, he has conſtantly four hundred *Hortagilers* or Upholſterers in his Retinue, who go a Day's Journey before him, to fix on a proper Place. They firſt prepare that of the Sultan, then thoſe of the Officers of the Port, and the *Beglierbegs*, according to their Rank.

HORTICULTURE, the Art of Gardening. See GARDENING.

The Word is compounded of *Hortus*, Garden, and *colo*, I till, dreſs, &c.

HOSANNA, in the *Hebrew* Ceremonies, was a Prayer which they rehears'd on the ſeveral Days of their Feaſt of Tabernacles. See TABERNACLE.

It was thus call'd, by reaſon there was a frequent Repetition therein of the Word הושיעה נא, *ſerva nunc*, or *ſerva precor*, *i. e. Save us now*, or *Save us, we pray*.

There are divers of theſe *Hoſannas*. — The *Jews* call them *Hoſchanmoth*, *i e.* the *Hoſannas*. — Some are rehears'd on the firſt Day, others on the ſecond, &c. which they call *Hoſanna* of the firſt Day, *Hoſanna* of the ſecond Day, &c.

HOSANNA *Rabba*, or *Grand* HOSANNA, is a Name they give to their Feaſt of Tabernacles, which laſts eight Days; by reaſon, during the Courſe thereof, they are frequently calling for the Aſſiſtance of God, the Forgiveneſs of their Sins, and his Bleſſing on the new Year; and to that Purpoſe make great uſe of the *Hoſchannoth* or Prayers above mention'd.

The *Jews*, alſo, apply the Term *Hoſanna Rabba*, in a more peculiar Manner, to the ſeventh Day of the Feaſt of Tabernacles; by reaſon they apply themſelves more immediately on that Day to invoke the divine Bleſſing, &c.

HOSE, from the *Saxon*, *Hoſa*, a Stocking. See STOCKING.

HOSE *in Hoſe*, among Botaniſts, ſignifies one long Husk within another.

HOSE-*Husk*, in Botany, a long round *Husk* within another, as in Pinks, Julyflowers, &c. See FLOWER.

HOSPITAL, popularly SPITTAL, a Place or Building erected, out of Charity, for the Reception and Support of the Poor, Aged, Infirm, and otherwiſe helpleſs. See CHARITY.

The Word is form'd of the *Latin*, *Hoſpes*, Hoſt, Stranger. See HOST.

In the firſt Ages of the Church, the Biſhop had the immediate Charge of all the Poor, both ſound and diſeas'd; as alſo of Widows, Orphans, Strangers, &c.—When the Churches came to have fix'd Revenues allotted them, it was decreed, that, at leaſt, one fourth Part thereof ſhould go to the Relief of the Poor; and to provide for them the more commodiouſly, divers Houſes of Charity were built, which are ſince denominated *Hoſpitals*. See TITHE.

They were govern'd wholly by the Prieſts and Deacons, under the Inſpection of the Biſhop. See BISHOP, &c.

In Courſe of Time, ſeparate Revenues were aſſign'd for the *Hoſpitals*; and particular Perſons, out of Motives of Piety and Charity, gave Lands, and Money for erecting of *Hoſpitals*.

When the Church Diſcipline began to relax, the Prieſts, who till then had been the Adminiſtrators of *Hoſpitals*, converted them into a Sort of Benefices, which they held at Pleaſure, without giving account thereof to any Body; reſerving the greateſt Part of the Income to their own Uſe; ſo that the Intentions of the Founders were fruſtrated. — To remove this Abuſe, the Council of *Vienna* expreſly prohibited the giving any *Hoſpital* to ſecular Prieſts in the Way of a Benefice; and directed the Adminiſtration thereof to be given to ſufficient and reſponſible Laymen, who ſhould take an Oath, like that of Tutors, for the faithful Diſcharge thereof; and be accountable to the Ordinaries. — This Decree was executed and confirm'd by the Council of *Trent*. See OECONOMUS.

In *England*, *Hoſpitals* founded for the mere Relief of the Indigent and Neceſſitous, are peculiarly call'd *Alms-houſes*; the Name *Hoſpital* being reſerv'd to thoſe deſtin'd for the Sick, Aged, Young, &c.—The Principal of theſe are, The *Royal* HOSPITAL for diſabled Soldiers, commonly call'd *Chelſea College*. See COLLEGE.

It was founded by King *Charles* II. carry'd on by King *James* II. and finiſh'd by King *William* and Queen *Mary*.

The Building is very ſpacious and magnificent: Its Figure is a Π; the middle or front Part whereof conſiſts of a Chapel and Hall; the other two Lines being four Stories high, divided into Wards or Galleries, two in each Story, containing each twenty-ſix diſtinct Apartments for the Foot Soldiers. At each of the four Corners of the main Building, there is a Pavilion, in one whereof is the Governor's Lodging and the Council Chamber; the other being Lodgings for ſeveral of the Officers of the Houſe. Beſide the main

Building

Building, there are four Wings or Out-buildings; one for the *Infirmary*, another for ſeveral Officers of the Houſe, another for old maim'd Officers of Horſe and Foot; and the fourth for the Baker, Laundreſs, *&c.*

The Number of ordinary Penſioners is 476; beſide the Officers and Servants of the Houſe: The out, or extraordinary Penſioners, are alſo very numerous; and theſe, upon Occaſion, do Duty in the ſeveral Garriſons, from whence Draughts are made for the Army, *&c.* See INVALIDS.

The Penſioners are all provided with Cloaths, Diet, Waſhing, Lodging, Firing, and one Day's Pay in every Week for ſpending Money.

The Qualifications requir'd to be admitted of this Body, are, that each Perſon bring a Certificate from his ſuperior Officer, that he has been maim'd or diſabled in the Service of the Crown; or that he has ſerv'd the Crown 20 Years, which muſt be made appear by Muſter-Rolls.

To defray the Charges of this *Hoſpital*, there is a conſiderable Sum paid yearly out of the Poundage of the Army; beſide one Day's Pay of each Officer, and each common Soldier, every Year; which, in Time of War, amounts to 13 or 14000*l.*

For the Adminiſtration of this *Hoſpital*, there is a Governor, Lieutenant-Governor, Major, Treaſurer, *&c.*

*Greenwich* HOSPITAL, is a Retreat for Seamen, who, by Age, Wounds, or other Accidents, are diſabled from Service; and for the Widows and Children of ſuch as are ſlain in the Service.

This, in Point of Magnificence and Spaciouſneſs, excels even *Chelſea Hoſpital*. A good Part of it was built in K. *Charles* II's Time, at the Expence of 36000*l.* It was much promoted by King *William*; and finiſh'd under Queen *Anne* and King *George*.

The Number of Penſioners entertain'd in this *Hoſpital* is 300. To each hundred Men are allow'd ſix Nurſes, being the Widows of Seamen.

The Victualling is according to the Allowance of *Chelſea Hoſpital*, *viz.* four Men to a Meſs; each Meſs to contain four Pound of Fleſh, a Gallon of Beer, *&c.*

It is adminiſter'd by a Governor, Lieutenant-Governor, Captain, Lieutenant, Chaplain, Steward, Phyſician, *&c.*

*Chriſt's* HOSPITAL, popularly call'd the *Blue Coat* HOSPITAL, was anciently a Monaſtery of Grey Friars, founded by *Raihere*, the firſt Prior thereof, in the Time of *Henry* I. diſſolv'd by *Henry* VIII. and converted by *Edward* VI. into an *Hoſpital* for poor Children, who are ſupply'd with all Neceſſaries and Conveniencies, cloath'd, dieted, and taught.

Since its firſt Endowment it has receiv'd abundance of new Donations. A great Part of it was burnt down by the great Fire; but is again rebuilt by the Care of the Governors, tho' not without incurring a great Debt, and anticipating the Revenues of the *Hoſpital*.

Formerly, a thouſand poor Children, moſt of them Orphans, were maintain'd on this Foundation; and ſix or ſeven Score yearly put out Apprentices, and the Maids to Service; but the Number, thro' the Deficiency of the Funds, is now much leſs.

Here were two Mathematical Schools; the firſt founded by King *Charles* II; but they are now united. Youths are there taught ſeveral Parts of practical Mathematicks, particularly Navigation, to fit them for Apprentices to Maſters of Ships: To ſay nothing of the Grammar School, (whence the moſt pregnant Boys are yearly ſent to the Univerſity) Writing School, Drawing School, *&c.*

The Officers of this *Hoſpital* are a Preſident, Treaſurer, Governors, *&c.*

St. *Bartholomew*'s HOSPITAL adjoins to *Chriſt*'s *Hoſpital*, and formerly belong'd to the ſame Grey Friars.

At the Diſſolution of Monaſteries, *Henry* VIII. left 500 Marks a Year to it for the Relief of poor People; but it was more largely endow'd for the Uſe of ſick and lame Perſons only, by *Edward* VI.

It is govern'd by a Preſident, Treaſurer, *&c.* with other Officers. It is furniſh'd with two Phyſicians, and three Maſter Surgeons, beſide as many Aſſiſtant Surgeons.

In this *Hoſpital*, with two others depending on it, the one at *Kingſland*, the other call'd the *Lock* in *Southwark*, are about 300 Patients, provided with Lodging, Diet, Phyſick, Chirurgery, *&c.*

St. *Thomas*'s HOSPITAL, in *Southwark*, is for the ſame Purpoſes as that of St. *Bartholomew*.

It was originally founded an *Hoſpital*, by *Richard*, Prior of *Bermondſey*, in 1213; ſurrender'd to King *Henry* VIII; and given by *Edward* VI. to the Citizens of *London*, for an *Hoſpital* for infirm and lame People.

It conſiſts of four quadrangular Courts: In the firſt are ſix Wards for Women; in the ſecond, two Chapels, the leſſer for the private Uſe of the *Hoſpital*, and the larger Parochial: In the ſame Court are the Houſes of the Treaſurer, and other Officers: In the third Court are ſix or ſeven Wards for Men. The fourth has alſo three Wards, Baths hot and cold, a Chirurgery, Apothecary's Shop, *&c.*

There are about 3000 Perſons taken in and diſcharg'd out of this *Hoſpital* yearly.

The Governors of this *Hoſpital* are the Lord Mayor and Court of Aldermen, with about 260 other Citizens. Among which are a Preſident, Treaſurer, *&c.* two Phyſicians, and three Surgeons.

*Guy*'s HOSPITAL, or the HOSPITAL *of the Incurables*, is the Foundation of that wealthy Citizen and Bookſeller, *Thomas Guy*, Eſq;

It is chiefly intended for reputed incurable Perſons; and is even to take in yearly a certain Number of Patients turn'd out of the other *Hoſpitals*, particularly *Bethlehem*, as incurable.

The Founder beſtow'd 50000*l.* on the Building in his Life-time; and, by Will, endow'd it with 200000*l.* at his Death, in 1724: The greateſt Benefaction, without Diſpute, that ever was left by any one private Man.

Its Officers are a Preſident and Governors, moſt of which are the ſame with thoſe of St. *Thomas*'s *Hoſpital*, which is in the Neighbourhood thereof, with a Treaſurer, two Phyſicians, two Surgeons, *&c.*

BETHLEHEM *Hoſpital*, BRIDEWEL *Hoſpital*, SUTTON'S *Hoſpital* - } See { BETHLEHEM. BRIDEWELL. CHARTER-*houſe*.

HOSPITALER, one that entertains and provides for poor People, Travellers, *&c.*

The Name is chiefly apply'd to certain Communities of Religious. --- As the *Hoſpitalers* of *Elſefort* in *Eſſex*, inſtituted to take Care of Lepers; *Hoſpitalers* of St. *John Baptiſt* of *Coventry*; *Hoſpitalers* of St. *Julian*; *Hoſpitalers* of St. *Leonard* at *York*, &c.

The Religious *Hoſpitalers* generally follow the Rule of St. *Auguſtin*. Moſt of them pretend that St. *Martha* was their firſt Foundreſs, and chuſe her for their Patron, by reaſon ſhe entertain'd Jeſus Chriſt at her Houſe. Some of them go back to the Patriarch *Abraham*.

There are alſo *Hoſpitallers* among the military Orders; ſuch are the Knights of St. *Lazarus*, and St. *John* of *Jeruſalem*.

HOSPITALERS, HOSPITALARII, were a certain Order of Religious Knights, ſo call'd, becauſe they built an *Hoſpital* at *Jeruſalem*, wherein the Pilgrims were receiv'd. --- To theſe Pope *Clement* the Fifth transferr'd the Effects and Revenues of the Templars; whom, by a Council held at *Vienna*, he ſuppreſs'd, for their many and great Miſdemeanors. See TEMPLAR.

Theſe *Hoſpitalers* were otherwiſe call'd Knights of St. *John* of *Jeruſalem*, and are now the ſame with thoſe whom we call Knights of St. *John* of *Malta*. See MALTA.

HOSPITIUM, an Inn; a Term peculiarly us'd in our Law Books for an *Inns of Court*. See INNS *of Court*.

HOSPITIUM is alſo us'd for a little Convent, which the Religious built for the Reception of Strangers and Travellers of the ſame Order, who have occaſion to ſtay with them ſome time.

Moſt of the *Hoſpitia*, or *Inns*, in Time became fix'd Convents. See CONVENT.

HOSPODAR, the Title borne by the Princes of *Walachia* and *Moldavia*. See PRINCE.

The *Hoſpodars* of *Walachia* and *Moldavia*, receive the Inveſtiture of thoſe Principalities from the Grand Signor, by a Veſt and a Standard, which he gives them.

They are ſometimes depos'd by him; tho', in other Reſpects, they have the Sovereign Power within their States.

HOST, HOSPES, a Term of mutual Relation, apply'd both to a Perſon who lodges and entertains another, and to the Perſon thus lodg'd, *&c.*

Thus, the Inn-keeper ſays, he has a good *Hoſt*, in ſpeaking of the Traveller who lodges with him: And the Traveller, again, ſays, he has a kind *Hoſt*, in ſpeaking of his Landlord.

The Word is form'd of the *Latin*, *Hoſpes*, which ſome will have thus call'd, *quaſi hoſtium*, or *oſtium petens*; for *oſtium* was anciently wrote with an Aſpirate.

It muſt be obſerv'd, then, that it was the Cuſtom among the Ancients, when any Stranger ask'd for Lodging, for the Maſter of the Houſe, and the Stranger, each of them to ſet a Foot on their own Side of the Threſhold, and ſwear they would neither of them do any Harm to the other. --- It was this Ceremony that rais'd ſo much Horror againſt thoſe who violated the Law, or Right of Hoſpitality on either Side; inaſmuch as they were look'd on as perjur'd.

Inſtead of *Hoſpes*, the ancient *Latins* call'd it *Hoſtis*; as *Cicero* himſelf informs us: Tho', in Courſe of Time, *Hoſtis* came to ſignify an Enemy; ſo much was the Notion of *Hoſpitality* alter'd.

HOST is alſo us'd by Way of Abbreviation for *Hoſtia*, a Victim or Sacrifice to the Deity. See HOSTIA.

In this Senſe, *Hoſt* is more immediately underſtood of the Perſon of the Word incarnate, who was offer'd up a *Hoſt* or *Hoſtia* to the Father, on the Croſs; for the Sins of Mankind.

Host is peculiarly us'd in the *Romiſh* Church for the Body of Jeſus Chriſt, contain'd under the Species of Bread and Wine, which is offer'd up every Day, a new *Hoſt* or Sacrifice in the Maſs. See Mass.

Pope *Gregory* IX. firſt decreed a Bell to be rung, as the Signal for the People to betake themſelves to the Adoration of the *Hoſt*.

The Veſſel wherein the *Hoſts* are kept, is call'd the *Cibory*.

HOSTAGE, a Perſon left as Surety for the Performance of the Articles of a Treaty. See Treaty.

When two Enemies are on the Point of concluding a Treaty or Capitulation, 'tis frequent for them to give *Hoſtages* on each Side, as Sureties for the Execution of what is contain'd therein.

The Garriſon of ſuch a Place has capitulated, and given *Hoſtages*. Such an Officer was given as an *Hoſtage*.---The Word is form'd of *Hoſt*, and that of *Hoſpes*. See Host.

A *Hoſtage* is either a Principal or an Acceſſary, according to the State of the Caſe. He is only an Acceſſary, when, for Inſtance, a Prince promiſes Fidelity to another, and gives up his Son, or ſome other great Lord, to aſſure his Engagement, without any further Stipulation. For, here, if the Prince fail of his Word, the *Hoſtage* is no ways accountable for it.

But the *Hoſtage* becomes a Principal, when it is expreſly ſtipulated, that he ſhall be anſwerable for the Event: For Inſtance, if a City engage to ſurrender, in Caſe it be not reliev'd in ſo many Days; and to ſecure the Engagement give *Hoſtages*; theſe *Hoſtages* are what a Surety is to a Creditor for Debt of his Principal. So that if the Relief do not come, and yet the Citizens refuſe to ſurrender, the *Hoſtages* ſtand in their Place, become Principals, and liable to be puniſh'd for the Prevarication of thoſe they have become Surety for.

A *Hoſtage* given for another Perſon, becomes free when the Perſon dies.

HOSTEL, or Hotel, a *French* Term, anciently ſignifying a Houſe, or Dwelling-place.

It is now more commonly uſed for the Palaces or Houſes of the King, Princes, and great Lords. In this Senſe they ſay, the *Hotel de Conde*, *Hotel de Conti*, *Hotel du Louvre*, &c.

The Grand *Prevot de l'Hotel* is the firſt Judge of the Officers of the King's Houſhold. His Juriſdiction is much like that of the Lord Steward of the Houſhold of the King of *England*. See Steward.

The *Hotel de Ville* is what we call a *Town-houſe*, or *Town-hall*. See Hall.

HOTEL-Dieu, is a common Name for the chief Hoſpital for the Reception of ſick Perſons, in moſt of the Cities of *France*. See Hospital.

The *Hotel de Mars*, is an Hoſpital near *Paris* of the ſame Nature with *Chelſea* Hoſpital.

HOSTIA, Host, in Antiquity, a Victim offer'd in Sacrifice to a Deity. See Victim.

The Word *Hoſtia* is form'd *ab hoſtibus*, it being the Cuſtom to offer one before they join'd Battel, to render the Gods propitious; or after the Battel was over, to give them Thanks.

*Iſidore*, on this Word, remarks, that the Name *Hoſtia* was given to thoſe Sacrifices which they offer'd before they march'd to attack the Enemy; *ante quam*, ſays he, *ad Hoſtem pergerent*; in Contra-diſtinction from *Victims*, which were properly thoſe offer'd after the Victory: However, *Ovid* confounds the two, when he ſays,

*Victima quæ cecidit dextrâ Victrice vocatur;*
*Hoſtibus a Domitis* Hoſtia *nomen habet.*

*Fronton* makes another Diſtinction: According to him, *Victima* was a grand Oblation, and *Hoſtia* a ſmaller and leſs conſiderable one.

But be the Cuſtom in this reſpect what it will, 'tis generally allow'd that the Word *Hoſtia* comes from *Hoſtis*, Enemy: Tho' there are ſome who derive it from the *Latin* Verb *Hoſtio*, q. d. *ferio*, I ſtrike, ſmite.

HOSTILITY, the Action of an Enemy. --- During a Truce, all *Hoſtilities* are to ceaſe on both Sides: Such a City ſtands neuter, and commits no *Hoſtilities* on either Side.

The Word is *Latin*, *Hoſtilitas*, form'd of the Primitive *Hoſtis*, which ſignifies Enemy; and which anciently ſignify'd *Stranger*, *Hoſpes*. See Host.

HOT-Bath. See Bath and Thermæ.

Hot-Bed, a Piece of Earth or Soil plentifully enrich'd with Manure, and defended from cold Winds, &c. to forward the Growth of Plants, and force Vegetation, when the Seaſon or the Climate of itſelf is not warm enough. See Soil, Manure, Vegetation, &c.

By means of *hot Beds* skilfully manag'd, we can ſo nearly imitate the Temperature of other Climates, that Seeds of Plants brought from any Country between the Tropicks, may be made to flouriſh even under the Poles. See Exotic.

Heat and Humidity being the great Inſtruments of Vegetation; to promote the Growth of any Plants, theſe muſt be duly proportion'd, ſo as neither to exceed nor come ſhort of the Bounds Nature has allotted for it. ---Too much Heat we find rather ſcorches a Plant than makes it grow; and too much Moiſture frequently chills it, unleſs quickly exhaled from the Roots. --- With us, a moderate Heat is found the moſt eligible; ſuch as is rais'd by the Ferment of wet Straw and Horſe-litter, which, from the Earth lying thereon, will ſend forth, for ſome time, a gentle Steam, impregnated with vegetative Salts. See Plant, Water, &c.

The uſual Way of making *hot* Beds, is of Horſe-litter and Graſs mix'd together, and left on an Heap for eight or ten Days to putrefy; and then remov'd into a Bed, and cover'd up with Glaſſes or Frames. --- Others chuſe to take Horſe Dung a Month or ſix Weeks old, and make a Seed-Bed of it about four Foot high, and cover it up with Straw a Foot thick, which is to be remov'd in three or four Days, and its Place ſupply'd either with Cows Dung, or the laſt Years Ridges.

The Proceſs of ordering a good ſerviceable *hot Bed*, for the cuſtomary raiſing of Colliflowers, Cucumbers, Melons, Radiſhes, and other tender Plants and Flowers in *January* or *February*, is directed by Mr. *Mortimer* in Manner following:

Provide a warm Place defended from all Winds, by being inclos'd with a Pale or Hedge, made of Reeds or Straw, about ſix or ſeven Foot high, of ſuch Diſtance or Capacity as Occaſion requires. --- Within this Incloſure raiſe a Bed two or three Foot high, and three Foot over, of freſh Horſe Dung, about ſix or eight Days old; then tread it down very hard on the Top, make it level, and if you think fit, edge it round with Boards or Bricks, laying fine rich Mould about three or four Inches thick on it: When the extream Heat of the Bed is over, which you may perceive by thruſting in your Finger; plant your Seeds at pleaſure, and ſet your Forks four or five Inches above the Bed, to ſupport a Frame made of Sticks, and cover'd with Straw or Baſs-mat, in order to ſecure the Seeds and Plants from Cold and Wet; only the Covering may be open'd in a warm Day, for an Hour before Noon, and an Hour after. --- But take Care to earth up your Plants as they ſhoot in Height; and when able to bear the Cold, they may be tranſplanted.

In *Holland* they make uſe of *hot* Beds made of Sand; which are not ſo apt to raiſe unwholſome Damps as thoſe of Horſe Dung. --- The *Dutch* likewiſe make *hot* Beds of Tanner's Bark, which, when once rightly prepar'd, will maintain an equable Heat for ſix Months.

*Bradley*, with very good Reaſon, propoſes a Thermometer to be us'd to regulate the Heat of *hot* Beds. --- For Plants that are either to be brought up in a colder Seaſon, or a colder Climate than what they naturally require; you are to take the Height at which the Thermometer ſtands in their proper Seaſon or Clime, as a Standard; and by applying a Thermometer to the *hot* Bed, judge whether the Heat is to be intended or remitted. --- Thus a *hot* Bed for Cucumbers muſt be kept, to raiſe the Spirit in the Glaſs, to the ſame Height as the natural Temperature of the Weather will raiſe it to about the latter End of *May* and *June*, when Cucumbers will grow abroad without any artificial Heat or Shelter. See Heat and Thermometer.

Hot-House. See Stove, Sudatory, Hypocaustum, &c.

Hot-Shoots, or Hovilses, a Sort of factitious or compound Fuel, made of a third Part of any Coal, Pit, Sea, or Charcoal, mix'd with Loam. See Fuel.

Theſe Ingredients are to be made up into Balls, moiſten'd with a little Urine, or in any other Form at Pleaſure; and expos'd to the Air till thoroughly dry. --- Then may they be built into the moſt orderly Fire imaginable, affording a glowing, ſolemn, and conſtant Heat for ſeven or eight Hours without ſtirring. This Mixture is frequently us'd in ſome Parts to ſlacken the impetuous devouring of the Fire, and keep Coals from conſuming too faſt.

HOTCH-pot, or Hodg-podge. See Hodg-podge.

A Man being ſeiz'd of thirty Acres of Land in Fee, hath two Daughters, and gives with one of them ten Acres in Frank-Marriage, and dies ſeiz'd of the other twenty. If now ſhe that is thus marry'd will have any Part of the twenty Acres, ſhe muſt put her Lands given in Frank-Marriage in *Hotch-pot*, that is, ſhe muſt refuſe to take the ſole Profits of the ten Acres, but ſuffer them to be mingled with the other twenty, to the End an equal Diviſion may be made of the whole thirty between her and her Siſter. --- Thus for her ten Acres ſhe will be intitled to fifteen. *Coke on Littl.*

HOTTS, or HUTTS, the Pounces and round Balls of Leather ſtuffed, or ty'd on the ſharp End of fighting Cocks Spurs; to keep them from hurting one another in ſparring or breathing themſelves.

HOUGH, the Joint of the hind Leg of a Beaſt. See HAM.

To *Hough*, or *cut the Houghs*, is to *ham-ſtring*. See HAMSTRING.

HOUGH *bonny*, is a hard round Swelling or Tumor growing upon the Tip or Elbow of the Hoof or *Hough*.

It generally proceeds from ſome Stroke or Bruiſe; and if neglected till the Subſtance of the Swelling becomes hard like Glue, proves difficult to cure.

HOUND, *Canis Venaticus*, a Hunting Dog. See HUNTING.

*Hounds* may be diſtinguiſh'd, with regard to the Manner of their Hunting, into ſuch as find out and purſue the Game by Sight, and the Quickneſs and Swiftneſs of their Motion; of which Kind are the *Gaze Hound*, *Agaſæus*; and *Grey Hound*, *Canis Graius*; the *Terrier*, &c. and thoſe which find and purſue the Game by the Goodneſs of their Smell.

The Species of ſcenting Dogs may be divided farther into *Hounds*, ſimply ſo call'd, and *Blood Hounds*, each whereof admits of ſome Diverſities.

1°. As to *Hounds*, ſimply thus call'd, in *Latin*, *Canes Venatici*, *Odoratores*, *Sagaces*, &c. — Thoſe which are all of one Colour, as white, black, &c. are the moſt valu'd; then thoſe ſpotted with red: Thoſe ſpotted with dun are little priz'd, as wanting Courage and Hardineſs. — Fallow *Hounds* are of good Scent, and hardy, not fearing the Water: They keep the Chaſe well without Change; but not ſo ſwift as the white: They love the Hart above any other Chaſe, having little Stomach for the Hare, &c. whence they are not ſo fit for private Gentlemen; beſide that, they are apt to run at tame Beaſts.

The dun *Hounds* are of more general Uſe, being fit for all Chaſes. — Their Sagacity and Fidelity in knowing and ſticking to their Maſter's Voice and Horn, and none elſe, are much admir'd: They alſo underſtand each other, and know which are Babblers, which Lyers, &c. — They are of different Sizes and Qualities in the ſeveral Countries, &c. Mountainous and Woodland Parts breed a tall heavy Sort, call'd *ſlow Hounds*: Moderate Soils, where the Champaign and Covert ſhare pretty equally, produce a middle-ſized *Hound* of a nimbler Make.

The Marks of a good and fair *Hound* are, to be of a middle Proportion, rather long than round; the Noſtrils wide; Back, bowed; Fillets, great; Haunches, large; Ham, ſtraight; Tail, big near the Reins, and the reſt ſlender to the End; the Leg, big; the Sole, dry; and Claws, large.

*For the Terms uſed in reſpect of* Hounds, *their Noiſes*, &c. See HUNTING.

To enter a young *Hound*; after having taught him to know the Hollow and the Sound of the Horn, at about eighteen Months old he may be taken into the Field. The beſt Method to initiate him, is to take a live Hare, and trail her upon the Ground, this Way, then that; and, at length, hide her at a proper Diſtance. Then ſetting the *Hound* near the Trail, he will take Wind, and run to and fro about the Fields, Woods, Paths, &c. till he find which Way ſhe had gone: As he approaches nearer the lodged Hare, he will mend his Pace, and at laſt leap on his Prey, which he muſt be ſuffer'd to kill, and bringing it to his Maſter with Triumph, muſt be rewarded and encourag'd. — This done, he may be let run in a Pack of old *Hounds* to confirm and perfect him.

It ought to be noted, that whatever young *Hounds* are firſt enter'd at and rewarded with, they will ever after covet moſt; ſo that if they be intended, *e. gr.* for the Hart, they muſt not be enter'd at the Hind.

2. The *Grey-hound* might deſerve the firſt Place, by reaſon of his Swiftneſs, Strength, and Sagacity in purſuing his Game; ſuch being the Nature of this Dog, that he is well ſcented to find out, ſpeedy and quick of Foot to follow, fierce and ſtrong to overcome, yet ſilent, coming upon his Prey unawares.

The Make and Proportions requir'd in a good *Grey-hound*, are, that he have a long Body, ſtrong, and pretty large, a neat ſharp Head, ſparkling Eyes, a long Mouth, and ſharp Teeth, little Ears, with thin Griſtles in them, a ſtraight, broad, and ſtrong Breaſt, his fore Legs ſtraight and ſhort, his hind Legs long and ſtraight, broad Shoulders, round Ribs, fleſhy Buttocks, but not fat, a long Tail ſtrong and full of Sinews.

Of this Kind, thoſe are always fitteſt to be choſen among the Whelps that weigh lighteſt; for they will be ſooner at the Game, and ſo hang upon it, hindering its Swiftneſs, till the heavier and ſtrong *Hounds* come in to offer their Aſſiſtance; whence, beſide what has been already ſaid, 'tis requiſite for a *Grey-hound* to have large Sides, and a broad Midriff, that he may take his Breath in and out the more eaſily; his Belly ſhould alſo be ſmall, which otherwiſe would obſtruct the Swiftneſs of his Courſe; his Legs long, and his Hairs thin and ſoft.

The Huntſman is to lead theſe *Hounds* on his left Hand, if he be on Foot, and on the Right if on Horſeback. — The beſt Time to try and train them to the Game, is at twelve Months old, tho' ſome begin ſooner, with the Males at ten, and the Females at eight Months old, which laſt are generally more ſwift than the Dogs: They ſhould be kept in a Slip, while abroad, till they ſee their Courſe; neither ſhould you looſen a young Dog 'till the Game has been a conſiderable Time on Foot, being apt, by over Eagerneſs at the Prey, to ſtrain his Limbs.

3°. The *Gaze-hound*, or *Beagle*, is a Dog more beholden to the Sharpneſs of Sight, than his Noſe or Smelling; by Virtue whereof, he makes excellent Sport with the Fox and Hare.—He is alſo noted as exquiſite in chuſing of one that is not lank or lean, but full, fat and round, which, if it happen to return, and be mingled again with the Reſidue of the Herd, he will ſoon ſpy out, and leave the reſt untouch'd, never ceaſing, after he has ſeparated it from its Company, till he has weary'd it to Death.

Theſe Dogs are much us'd in the North of *England*, and on Champion Ground, rather than buſhy and woody Places, and by Horſemen more than Footmen. — If at any time he happen to take a wrong Way, upon the uſual Sign made by his Maſter, he immediately returns, takes the right and ready Courſe, beginning his Chaſe afreſh, with a clear Voice and ſwift Foot, following the Game with as much Courage as at firſt.

4°. The *Blood-hound* differs nothing in Quality from the *Scottiſh Slut Hound*, ſaving that it is more longly ſiz'd, and not always of the ſame Colour; but ſometimes red, ſanded, black, white, and ſpotted, &c. tho' moſt commonly either brown or red.

Their Nature is, that being ſet on by the Voice and Words of their Leader, to caſt about for the Setting of the preſent Game, and having found it, they will never ceaſe purſuing it with full Cry till it is tir'd, without changing for any other.

They ſeldom bark, except in their Chaſe, and are very obedient and attentive to the Voice of their Leader. — Thoſe that are really good, when they have found the Hare, make Shew thereof to the Huntſman by running more ſpeedily, and with Geſture of Head, Eyes, Ears, and Tail, winding to the Form or Hare's Muſe, never giving over Proſecution, with a Gallant Noiſe.

They have good and hard Feet, and ſtately Stomachs; and are very properly denominated *ſanguinary* or *Blood-hounds*, by reaſon of their extraordinary Scent; for if their Game be only wounded, ſo that it eſcapes the Huntſman's Hands, or if it be kill'd, and never ſo cleanly carry'd away, theſe Dogs, by their exquiſite Smell, will betray it, and not be wanting, either by Nimbleneſs or Greedineſs, to come at it, provided there be any Stains of Blood. — Nay, tho' by all the Cunning and Foreſight imaginable, a Beaſt be convey'd away without Spot or Blood, yet through the roughеſt and moſt crooked Ways and Meanders, will this Dog find out the Deer-ſtealer, and even in the thickeſt Throng, will, by his Smell, ſeparate and pick him out. See BLOOD-*hound*.

5°. The *Terrier*, or *Harrier* only hunts the Fox or Badger; being thus call'd, becauſe, after the Manner of a Ferret in ſearching for Coneys, he leaps into the Ground, and affrights or attacks the Beaſt, either tearing them in Pieces, or haling them out by Force; or, at leaſt, driving them out of their Harbours, to be taken in a Net, or otherwiſe.

The Huntſmen have commonly a Couple of *Terriers*, that they may put in a freſh one, as Occaſion ſerves, to relieve the other.

The Time of entering the *Terrier*, is when he is near a Twelve-Month old: If it be not done within that Time, they will hardly be brought to take the Earth. This entering and fleſhing of them may be perform'd ſeveral Ways. — Firſt, when the Foxes and Badgers have young Cubs, take an old *Terrier*, ſet him into the Ground, and when he begins to bay, hold the young one at the Hole or Mouth of the Earth, that he may liſten and hear the old ones Bay.

The old Fox or Badger being taken, ſo that nothing remains within but the Cubs, couple up the old ones, and put in the Young in their Stead, encouraging them by crying, To him, To him. — If they take any Cub within, let them do with it what they liſt; not forgetting to give the old *Terriers* their Reward, which is Blood and Livers fry'd with Cheeſe and ſome of their Greaſe; ſhewing them Heads and Skins to encourage them.

HOUR, *Hora*, an aliquot Part of a natural Day, uſually a 24th, ſometimes a 12th. See DAY.

An

An *Hour*, with us, is a Measure or Quantity of Time, equal to a 24th Part of the natural Day, or Nycthemeron; or the Duration of $\frac{1}{24}$th Part of the Earth's diurnal Rotation. 15 Degrees of the Equator answer to an *Hour*; tho' not precisely, but near enough for common Use. See TIME.

It is divided into 60 Minutes; the Minute into 60 Seconds, &c. See MINUTE.

The Division of the Day into *Hours* is very ancient; as is shewn by *Kircher*, *Oedip. Ægypt.* T. II. P. II. Class VII. c. 8. Tho' the Passages he quotes from Scripture do not prove it. --- The most ancient *Hour* is that of the 12th Part of the Day. *Herodotus*, lib. II. observes, that the *Greeks* learnt from the *Ægyptians*, among other Things, the Method of dividing the Day into twelve Parts.

The Astronomers of *Cathaya*, &c. Bishop *Beveridge* observes, still retain this Division. They call the *Hour Chag*; and to each *Chag* give a peculiar Name, taken from some Animal: The 1st is call'd *Zeth*, Mouse; the 2d *Chiu*, Bullock; the 3d *Zem*, Leopard; the 4th *Mau*, Hare; the 5th *Chin*, Crocodile, &c.

The Division of the Day into 24 *Hours*, was not known to the *Romans* before the first *Punic* War. --- Till that Time they only regulated their Days by the Rising and Setting of the Sun.

They divided the twelve *Hours* of their Day into four, *viz. Prime*, which commenc'd at six o'Clock; *Third* at nine, *Sixth* at twelve, and *None* at three. They also divided the Night into four Watches, each containing three *Hours*.

The Origin of the Word *Hour*, *hora*, comes, according to some Authors, from a Surname of the Sun, the Father of *Hours*, whom the *Ægyptians* call *Horus*. Others derive it from the *Greek*, ὁρίζειν, to terminate, distinguish, &c.

Others, from the Word *Urine*, which the *Greeks* call οὖρον; holding, that *Trismegistus* was the first that settled the Division of *Hours*, which he did from Observation of an Animal consecrated to *Serapis*, nam'd *Cynocephalus*, which makes Water twelve Times a Day, and as often in the Night; at equal Intervals.

There are divers Kinds of *Hours*, us'd by Chronologers, Astronomers, Dialists, &c.

*Hours* are divided into *equal* and *unequal*.

*Equal*, are the 24th Parts of a Day and Night precisely; that is, the Time wherein 15 Degrees of the Equator mount above the Horizon.

These are also call'd *Equinoctial Hours*, because measur'd on the Equinoctial; and *Astronomical*, because us'd by Astronomers.

They are also differently denominated, according to the Manner of accounting them.

*Babylonish* HOURS are equal *Hours*, reckon'd from Sunrise in a continu'd Series of twenty-four. See BABYLONISH *Hour*.

*Italian* HOURS are equal *Hours*, reckon'd from Sunset, in a continu'd Series of twenty-four. See ITALIAN *Hour*.

*Astronomical* HOURS are equal *Hours*, reckon'd from Noon, or Mid-day, in a continu'd Series of twenty-four. See ASTRONOMICAL.

*European* HOURS are equal *Hours*, reckon'd from Mid-night; twelve from thence to Noon, and from Noon to Mid-night twelve more.

*Unequal* or *temporary Hours*, are 12th Parts of the artificial Day or Night. The Obliquity of the Sphere renders these more or less unequal at different Times; so that they only agree with the equal *Hours* at the Times of the Equinoxes.

*Jewish*, or *planetary*, or *ancient* HOURS, are twelfth Parts of the artificial Day or Night.

Hence, as 'tis only in the Time of the Equinoxes that the artificial Day is equal to the Night; 'tis then only that the *Hours* of the Day are equal to those of the Night: At other Times they will be always either increasing or decreasing.

They are call'd *Ancient* or *Jewish Hours*, because us'd by the Ancients, and still among the *Jews*. They are call'd *Planetary Hours*, by reason the Astrologers pretend, that a new Planet comes to predominate every *Hour*; and that the Day takes its Denomination from that which predominates the first *Hour* thereof: As *Monday* from the Moon, &c.

HOURS, *Horæ*, among the ancient Poets, were certain Goddesses, the Daughters of *Jupiter* and *Themis*: They were three in Number, *Eunomia*, *Dice*, and *Irene*. To which were afterwards added two more, *Carpo* and *Tallote*.

*Homer* makes them the Door-keepers of Heaven. *Ovid* allots them the Employment of harnessing the Horses of the Sun: *Jungere Equos Titan velocibus imperat* Horis.

HOURS, *Horæ*, in the *Romish* Church, are certain Prayers perform'd at stated Times of the Day; as *Mattins*, *Vespers*, *Lauds*. See MATTINS, &c.

The lesser *Hours*, are *Prime*, *Tierce*, *Sixth*, and *None*. --- They are thus call'd, as being to be rehears'd at certain *Hours* prescrib'd by the Canons of that Church, in Commemoration of the Mysteries accomplish'd at those *Hours*.

These *Hours* were anciently call'd *Course*, *Cursus*. F. *Mabillon* has a Dissertation on these *Hours*, intitled, *de Cursu Gallicano*. The first Constitution enjoining the Observation of these *Hours*, is of the IXth Century, being found in a Capitular of *Heiton*, Bishop of *Basil*, directed to his Curates, importing, that the Priests shall never be absent at the Canonical *Hours* either by Day or Night.

*Prayers of forty Hours*, are publick Prayers continu'd for the Space of three Days successively, and without Intermission, before the Holy Sacrament, to obtain the Assistance of Heaven on some important Occasion. --- In these Days, Care is taken, that the Holy Sacrament be expos'd forty *Hours*, *viz.* 13 or 14 *Hours* each Day.

HOUR-CIRCLES, or HORARY-*Circles*, in Astronomy, &c. are great Circles, meeting in the Poles of the World, and crossing the Equinoctial at Right Angles; the same as Meridians. See MERIDIAN.

They are suppos'd to be drawn through every 15th Degree of the Equinoctial and Equator, and on both Globes are supply'd by the Meridian, *Hour-Circle*, and Index. See GLOBE.

The Planes of the *Hour-Circles* are perpendicular to the Plane of the Equinoctial, which they divide into 24 equal Parts.

HOUR-GLASS, a popular Kind of Chronometer or Clepsydra, serving to measure the Flux of Time, by the Descent or Running of Sand out of one Glass Vessel into another. See CHRONOMETER.

The best *Hour-Glasses* are those, which, instead of Sand, have Egg-shells well dry'd in the Oven, then beaten fine and sifted.

*Hour-Glasses* are much us'd at Sea for Reckoning, &c. See RECKONING, LOG, &c.

There are also a Sort of *Hour-Glasses*, which depend on the Flux of Water or other Liquid, more properly call'd *Clepsydræ*. See CLEPSYDRA.

HOUR-LINES, on a Dial, arise from the Intersections of the Plane of the Dial, with the several Planes of the *Hour*-Circles in the Sphere, and therefore must be all Right Lines. See DIAL and DIALLING.

HOUSAGE, a Fee which a Carrier or other Person pays for laying up Goods in a *House*.

HOUSE, a Habitation, or Place built with Conveniencies to live in; or a Building wherein to shelter a Man's Person and Goods from the Inclemencies of the Weather, and the Injuries of ill-dispos'd Persons. See BUILDING.

We say a Brick *House*, a Stone *House*, a *House* of two Stories, of three Stories, a Manor *House*, a Farm *House*, &c. See BRICK, STONE, STORY, MANOR, &c.

Ancient *Rome* consisted of 48000 insulated *Houses*. See INSULATED.

A Pleasure *House* or Country *House*, is that built for a Person to enjoy and divert himself occasionally in. This is the *Villa* of the ancient *Romans*; and what in *Spain* and *Portugal* they call *Quinta*; in *Provence*, *Cassine*; in some other Parts of *France*, *Closerie*; in *Italy*, *Vigna*.

In this Sense the Word *Vigna* is sometimes us'd in *English* to denote the Country Seats of the Noble *Romans*; as the *Vigna Farnese*, *Vigna Borghese*, &c. ---The Citizens of *Paris* have also their *Maisons de Bouteilles*, Bottle-*houses*, to retire to, and entertain their Friends; which, in *Latin*, might be call'd *Micæ*, the Emperor *Domitian* having a *House* built for the like Purpose, mention'd under this Name by *Martial*, lib. II. *Epig.* 59.

'Tis a Thing principally to be aim'd at, in the Site or Situation of a Country *House* or Seat, that it have Wood and Water near it: If it cannot be conveniently built among Trees, yet there are few Places where Trees may not be speedily rais'd about it. See TREE, PLANTING, TRANSPLANTING, &c.

It is far better to have a *House* defended by Trees than Hills; for Trees yield a cooling, refreshing, sweet, and healthy Air, and Shade, during the Heat of the Summer, and very much break the cold Winds and Tempests from every Coast in the Winter. --- The Hills, according as they are situated, defend only from some certain Winds; and if they are on the North Side of the *House*, as they defend from the cold Air in the Winter, so they also deprive you of the cool refreshing Breezes, which are commonly blown from thence in the Summer. --- And if the Hills are situated on the South Side, it then proves also very inconvenient.

A *House* should not be too low seated, since this precludes the Convenience of Cellars. --- If you cannot avoid building on low Grounds, set the first Floor above the Ground the higher, to supply what you want to sink in your Cellar in the Ground; for in such low and moist Grounds, it conduces much to the Dryness and Healthiness of the Air, to have Cellars under the *House*, so that the Floors be good, and ceiled underneath.

*Houses*

*Houſes* built too high, in Places obvious to the Winds, and not well defended by Hills or Trees, require more Materials to build them, and more alſo of Reparations to maintain them; and are not ſo commodious to the Inhabitants as the lower built *Houſes*, which may be at a much eaſier Rate, and alſo as compleat and beautiful as the other.

In Buildings or *Houſes* not above two Stories with the Ground Room, and not exceeding twenty Foot to the Raiſon-Place, and upon a good Foundation; the Length of two Bricks, or eighteen Inches for the heading Courſe, will be ſufficient for the Ground Work of any common Structure, and ſix or ſeven Courſes above the Earth to a Water-Table, where the Thickneſs of the Walls are abated, or taken in, on either Side, the Thickneſs of a Brick, namely two Inches and a Quarter.

For large and high *Houſes* or Buildings of three, four, or five Stories with the Garrets, the Walls of ſuch Edifices ought to be from the Foundation to the firſt Water-Table, three heading Courſes of Brick, or 28 Inches at leaſt; and at every Story a Water-Table, or taken in on the Inſide for the Summers, Girders, and Joints to reſt upon, laid into the Middle, or one Quarter of the Wall at leaſt, for the better Bond. --- But as for the innermoſt or partition Wall, a half Brick will be ſufficiently thick; and for the upper Stories, nine Inches, or a Brick length, will ſuffice.

The Parts, Proportions, *&c.* of the *Houſes* in *London*, are regulated by a Statute made for Rebuilding the City after Fire. --- By this it is enacted, That the *Houſes of the firſt and leaſt Sort of Building*, fronting By-ſtreets or Lanes, ſhall be two Stories high, beſide Cellars and Garrets; the Cellars ſix Foot and an half high, if the Springs of Water hinder not; and the firſt Story nine Foot from the Floor to the Ceiling, and the ſecond Story as much: That all the Walls in Front and Rear be, as high as the firſt Story, full the Thickneſs of the Length of two Bricks; and thence upwards to the Garrets, of the Thickneſs of one Brick and an half; and that the Thickneſs of the Garret Walls on the back Part, be left to the Diſcretion of the Builder, ſo that the ſame be not leſs than one Brick Length; and that the Thickneſs of the Party Wall in the Garret, be of the Thickneſs of the Length of one Brick at leaſt.

That the *Houſes* of the *ſecond Sort of Building*, fronting Streets and Lanes of Note, and the River of *Thames*, conſiſt of three Stories high, beſide Cellars and Garrets; that the Cellars thereof be ſix Foot and an half high, if the Springs hinder not; that the firſt Story contain full ten Feet in Height from the Floor to the Ceiling; the ſecond ten Foot, the third nine Foot; that all the ſaid Walls in the Front and Rear, as high as the firſt Story, be two Bricks and an half thick, and from thence upward to the Garret Floor of one Brick and an half thick; and the Thickneſs of the Garret Walls on the back Part, be left to the Diſcretion of the Builder, ſo that the ſame may not be leſs than one Brick thick: And alſo that the Thickneſs of the Party Walls between every *Houſe* of this ſecond and larger Sort of Building, be two Bricks thick, as high as the firſt Story, and thence upward to the Garrets of the Thickneſs of one Brick and an half.

Alſo that the *Houſes of the third Sort of Buildings*, fronting the high and principal Streets, ſhall conſiſt of four Stories high, beſides Cellars and Garrets; that the firſt Story contain full ten Foot in Height from the Floor to the Ceiling, the ſecond ten Foot and an half, and the third nine Foot, the fourth eight Foot and an half; that all the ſaid Walls in the Front and Rear, as high as the firſt Story, be two Bricks and an half in Thickneſs, and from thence upwards to the Garret Floor, of the Thickneſs of one Brick and an half; and that the Thickneſs of the Garret Walls on the back Part, be not leſs than one Brick; and alſo that the Party Walls between every *Houſe* of this third and larger Sort of Building, be two Bricks thick as high as the firſt Floor, and thence upwards to the Garret Floor one Brick and an half.

Alſo, that in all *Houſes of the fourth Sort of Buildings*, being Manſion *Houſes*, and of the greateſt Bigneſs, not fronting any Streets or Lanes as aforeſaid, the Number of Stories, and the Height thereof, ſhall be left to the Diſcretion of the Builder, ſo as he exceed not five Stories.

The ſame Act alſo enjoins, that no Timber be laid within twelve Inches of the fore Side of the Chimney Jambs; and that all Joyſts on the Back of any Chimney, be laid, with a Trimmer, at ſix Inches diſtant from the Back; as alſo, that no Timber be laid within the Tunnel of any Chimney, upon Penalty to the Workman for every Day's Default, of 10*s.* and 10*s.* every Week it continues unreform'd.

Add, That as the Buildings of *London* join one upon another, and almoſt every ſeveral *Houſe* hath a diſtinct Proprietor, the Parliament hath decreed, that the Wall dividing the Proprietors Ground, ſhall be built at the equal Charge of both the Owners: Whence it will not be impertinent to ſhew how theſe Party Walls are valu'd.

Now, all Brick-works, whether one, two, three, four, or any other Number of Brick Lengths in Thickneſs, are all to be reduc'd to the Thickneſs of a Brick and a half.

It hath been obſerv'd, that about 4500 of Bricks, of about 16*s.* *per* 1000; a hundred and a Quarter of Lime, at 10*s.* *per* Hundred; two Loads and a half of Sand, at 3*s.* *per* Load, will compleatly raiſe one Rod of Brick-work of a Brick and a half Thickneſs. See BRICK, *&c.*

And thus much will a Rod of Party Wall, the Materials only, reduc'd to a Brick and a half thick, amount to, at the former ſuppos'd Rates; to which may be added for Workmanſhip 1*l.* 8*s.*

So that for every Rod of Party Wall they allow 3*l.* apiece; whence, if a Party Wall be meaſur'd, and the Meaſure when reduc'd to a Brick and a half, be found to contain ſixteen Rods; that ſixteen multiply'd by 3*l.* giveth 48*l.* and ſo much is the one Proprietor to allow the other. See MEASURING, *&c.*

HOUSE *of Correction*. See CORRECTION.

*Work*-HOUSE. See WORK-*Houſe* and RASPHUYS. See alſo BRIDEWELL.

*Town*-HOUSE, or *Hall*, is a Place where the Officers and Magiſtrates of a Town or City hold their Meetings, for the due Adminiſtration of their Laws and Policy. See HALL, GILD, *&c.*

HOUSE is alſo us'd for a Convent or Monaſtery. See CONVENT, *&c.*

The Chief of ſuch an Order has ſo many *Houſes* dependent on it. --- There have been Reforms made of ſeveral religious *Houſes*.

Regular Prieſts give the Name *Houſes* to the Places they reſide in, and not that of Convents or Monaſteries, which properly belong to ſimple Friars. --- Thus we ſay, the *Jeſuits Houſe*, the *Barnabites* or *Theatins Houſe*.

The Jeſuits have both profeſs'd *Houſes* and Colleges for Novices, which they call *Houſes* of Probation.

They have alſo *Houſes* of Retreat for Spiritual Exerciſes, where they receive ſecular Perſons and Eccleſiaſticks, diſpos'd to practiſe the ſame with them, for eight or ten Days. See JESUITS.

HOUSE is alſo us'd for one of the Eſtates of the Kingdom aſſembled in Parliament. See PARLIAMENT.

Thus we ſay, the *Houſe* of Lords, the *Houſe* of Commons, *&c.* See COMMONS, *&c.*

HOUSE is alſo us'd for a Noble Family; or a Race of illuſtrious Perſons iſſu'd from the ſame Stock.

In this Senſe we ſay, the *Houſe* or Family of the *Stewarts*, the *Bourbons*, the *Houſe* of *Hanover*, of *Auſtria*, of *Lorrain*, of *Savoy*, &c.

HOUSE, in Aſtrology, is a twelfth Part of the Heavens. See HEAVEN.

The Diviſion of the Heavens into *Houſes* is founded on this, that the Stars and Planets when found herein have certain Influences, either good or evil ones, upon ſublunary Bodies; and to each *Houſe* is aſſign'd its particular Virtue or Influence; upon the Conſideration whereof they draw Horoſcopes. See INFLUENCE, HOROSCOPE, *&c.*

This Diviſion is made by ſix great Circles, call'd *Circles of Poſition*, which cut each other in the common Interſection of the Meridian and Horizon, in the common Way of Domifying, which is that of *Regiomontanus*: For the Ancients had three other Ways. See POSITION, DOMIFYING, *&c.*

Theſe Circles divide the Equator into twelve equal Parts, without any regard to the Zodiac.

The Horizon and Meridian are two Circles of the Cœleſtial *Houſes*, which divide the Heavens into four equal Parts, each whereof comprehends four *Houſes*. --- There are ſix above the Horizon, and as many below it; ſix Eaſtern, and ſix Weſtern ones.

The Theme or Figure of the Heavens alſo conſiſts of twelve Triangles, which are likewiſe call'd *Houſes*; wherein are laid down the Stars, Signs, and Planets, compriz'd within the reſpective Spaces of the Circles of Poſition. See THEME.

Each Planet has two certain *Houſes*, wherein it exerts its ſelf with peculiar Vigour; *Leo* is the Sun's *Houſe*, and *Cancer* that of the Moon; *Capricorn* is *Saturn*'s, &c.

Some call the *Houſes* *Dodecatemories*, and *Angles*; but that Name is more immediately appropriated to the twelve Signs or Diviſions of the Zodiac. See DODECATEMORY.

The Aſtrological *Houſes* have their particular Names according to their Qualities. --- The firſt is the *Houſe of Life*; being the Aſcendant, and containing five Degrees above the Horizon, the reſt beneath it. The ſecond is the *Houſe of Riches*. The third the *Houſe of Brothers*. The fourth, in the loweſt Part of Heaven, the *Houſe of Relations*, and Angle of the Earth. The fifth, the *Houſe of Children*. The ſixth, the *Houſe of Health*. The ſeventh, the *Houſe of Marriage*, and the Angle of the Weſt. The eighth, the *Houſe of Death*, and upper Gate. The ninth, the *Houſe of Piety*. The tenth, the *Houſe of Offices*. The eleventh, the

*Houſe*

*Houſe of Friends.* And the twelfth, the *Houſe of Enemies.*

It is popularly, and, as it were, poetically ſaid, that the Sun has twelve *Houſes*; by which are meant the twelve Signs; tho', in reality, it has only one Sign, *viz. Leo:* beſide, the Diviſion of *Houſes* is made by the Equator, and not the Zodiac.

They begin numbering the *Houſes* with the Aſcendant, and paſs thence to the Nadir, or *Fundas Cœli*; ſo as the Vertical Point makes the 10th.

HOUSE-*bote*, a Term compounded of *Houſe* and Bote, *Compenſation*; ſignifying Eſtovers, or an Allowance of Timber out of the Lord's Wood, for the Repair and Upholding a *Houſe* or Tenement.

*Houſe-bote* (ſays *Coke on Littl.* fol. 41. *b.*) is twofold, *viz. Eſtoverium ædificandi & ardendi.* See ESTOVERS.

HOUSE-*robbing*, or HOUSE-*breaking*, (from the *Saxon Houſebrice*) the robbing or plundering a Man in ſome Part of his *Houſe*, or Booth or Stall in a Fair or Market; the Owner, or his Wife, Children, or Servants, being within the ſame. See ROBBING.

This was Felony by Stat. 23 *Hen.* 8. and 3 *Edw.* 6. But is ſince made Felony, though none be within the *Houſe*, 39 *Eliz.* See BURGLARY.

HOUSE-*wife's Cloth*, is a middle Sort of Linnen Cloth between fine and coarſe, for Family Uſes.

HOUSHOLD, the Family or Domeſticks of a Prince or private Perſon. See FAMILY and DOMESTIC.

The Civil Government of the King's Court belongs chiefly to the *Lord Steward of the Houſhold.* See STEWARD. --- He has Authority over all Officers and Servants of the *King's Houſe*, except thoſe of the Chapel, Chamber, and Stable, who are under the Juriſdiction of the Lord Chamberlain, Maſter of the Horſe, and Dean of the Chapel. See CHAMBERLAIN, MASTER *of the Horſe*, and CHAPEL.

Under the Lord Steward are a Treaſurer of the *Houſhold*, Comptroller, Cofferer, Maſter of the *Houſhold*, Clerks of the Green Cloth, *&c.* See TREASURER, COMPTROLLER, COFFERER, GREEN *Cloth*, &c.

The *Troops of the Houſhold* are the Horſe Guards, Horſe Granadiers, and Foot Guards. See HORSE *Guard*, &c. --- The *Houſhold* Troops of *France* are call'd the *Gendarmerie.* See GENDARMES.

HOUSHOLD *Days*, are four ſolemn Feſtivals in the Year, when the King, after divine Service, offers a Bezant of Gold to God on the Altar. --- Theſe *Houſhold* Days are *Chriſtmas*, *Eaſter*, *Whitſunday*, and *All-Saints.* See BEZANT.

The *Houſhold* Days are part of the twelve Collar and Offering Days. See COLLAR *Day.*

HOUSING, or HOUSSE, a Cover laid over the Saddle of a Horſe, in order to ſave it from the Weather, Dirt, *&c.*

The Cavaliers appear'd with their embroider'd *Houſings.* --- The Word is form'd of the *French*, *Houſſe*, which ſignifies the ſame Thing, tho' it anciently ſignify'd a kind of Hood wore by Country People.

*Shoe* HOUSING, a Piece of Cloth border'd with a Fringe, oftentimes put round the Saddle, to cover the Croupe, and hang down to the lower Part of the Belly, to ſave the Stockings of thoſe that ride without Boots.

*Boot* HOUSING, is a Piece of Stuff faſten'd to the hinder Part of the Saddle, that covers a Horſe's Croupe, either for the Sake of Ornament, or to hide the Horſe's Leanneſs, or to ſave the Cloaths of the Rider from being daub'd and ſoil'd by the Sweat of the Horſe.

HOW, among Gardeners. See HOE.

HOWKER, or HOUCRE, a Veſſel much us'd by the *Dutch*; built ſomething like a Pink, but rigg'd and maſted like an Hoy. See FLOATING *Veſſel.*

They carry from 50 to 200 Tun; and with a ſmall Number of Hands will go to the *Eaſt-Indies.*

They tack ſoon and ſhort, will ſail well, and lie near the Wind; and live almoſt in any Sea.

HOZING of Dogs, the cutting the Balls of their Feet. See EXPEDITATING.

HOY, a ſmall Veſſel or Bark, whoſe Yards are not acroſs, nor the Sails ſquare, like thoſe of Ships, but the Sails like a Miſſen; ſo that ſhe can lie nearer than a Veſſel with croſs Sails can do.

HOYSE, or HOISE, the Sea Word for haling up any thing into the Ship, for getting up a Yard, *&c.* --- Thus they ſay, *Hoiſe* up the Yard, *Hoiſe* the Water in, *&c.*

HUCKLE *Bone*, the Hip Bone. See HIP *Bone.*

HUCKSTER, one that ſells Proviſions, or ſmall Wares, by Retail. See RETAIL.

HUDSON'S-BAY *Company.* See COMPANY.

HUE *and* CRY, a Law Phraſe. --- *Hue* ſignifies the Complaint of the Party robb'd, *&c.* and *Cry* the Purſuit of the Felon on the Highway, by deſcribing the Party, and giving Notice to ſeveral Conſtables from one Town to another, who are oblig'd to call upon the Pariſh for Aid in ſeeking the Felon, till he be apprehended, or, at leaſt, purſu'd to the Sea-ſide.

The *Normans* had a Purſuit with a Cry after Offenders, not unlike this; which they call'd *Clamor de Haro.* See HARO.

*Hue* is us'd alone, Anno 1 *Edw.* I. Stat. 2. --- In ancient Records it is call'd *Hutefium & clamor.* See VOCIFERATIO.

HUERS. See CONDERS.

HUG, or *Corniſh* HUG, a Term us'd in Wreſtling, when one has an Adverſary on his Breaſt, and holds him faſt there.

HUGUENOTS, an Appellation given to the Calviniſts of *France.* See CALVINIST.

The Name had its firſt Riſe in 1560; but Authors are not agreed as to the Origin and Occaſion thereof. *Paſquier*, *Menage*, &c. give us divers Etymologies, but none of them are ſtuck to.

*Du Verdier* derives it from *John Hus*, whoſe Opinions the *Huguenots* chiefly receive, and *Guenon*, Ape, *q. d. Hus's* Apes. See HUSSITES.

*Coquille* deduces the Name from *Hugues Capet*, whoſe Right of Succeſſion to the Crown, the Calviniſts maintain'd againſt thoſe of the Houſe of *Guiſe*, who pretended to be the Succeſſors of *Charlemaign.*

Others derive it from one *Hughes*, *Hugh*, a Sacramentarian, who had aſſerted much the ſame Doctrines as the *Huguenots*, under *Charles* VI.

Others fetch it from the *Swiſs* Word *Henſquenaux*, *i. e.* ſeditious People; or from *Eidgnoſſen*, *i. e.* Allies or Aſſociates in Faith, which is the Opinion *Maimbourg* inclines to, who hence concludes, that *Huguenot* is originally no Term of Reproach.

*Caſtelnau Mauviſſiere*, in his Memoirs, maintains them to have been thus call'd by the Populace, as being of leſs Value than a little Piece of Money of the ſame Name, being a Maille or Farthing, which, in the Time of *Hugh Caper*, was call'd *Huguenot*, *q. d.* not worth a Farthing.

Others take the Name to have been firſt given by way of Deriſion to a certain *German*, who being taken and examin'd as to the Conſpiracy of *Amboiſe*, before the Cardinal *de Lorrain*, was confounded, and ſtopp'd ſhort in the Beginning of his Harangue, which began with *Huc nos venimus.*

But the moſt plauſible Opinion is that of *Paſquier*, who obſerves, that at *Tours* the People have a Notion of a Spright or Goblin, call'd King *Hugon*, who ſtroles about in the Night Time; whence, as thoſe of the Religion met chiefly in the Night Time to pray, *&c.* they call'd 'em *Huguenots*, *q. d.* Diſciples of King *Hugon*: For it was at *Tours* they were firſt denominated. --- This Opinion F. *Daniel* aſſents to.

HUISSIER, a *French* Name for *Uſher*, *Sergeant*, and *Beadle.* See USHER, SERGEANT, and BEADLE.

HULKS, are large Veſſels, having their Gun Decks from 113 to 150 Foot long, and from 31 to 40 Foot broad. --- They will carry from 400 to 1000 Tuns. --- But their chief Uſe is for ſetting in Maſts into Ships, and the like: Though anciently the Word *Hulka* ſeems to ſignify a ſmall Veſſel.

HULL *of a Ship*, is her main Body, without any Maſts, Yards, Sails, or Rigging. See SHIP.

To *hull*, or *lie a hull*, is underſtood of a Ship, when, either in a dead Calm, (to preſerve her from beating her Sails againſt the Maſts) or in a Storm, when ſhe cannot carry all her Sails; they are taken in to preſerve them; ſo that nothing but her Maſts, Yards, and Riggings are abroad, and her Helm ty'd down to the Lee-Side of the Ship. --- In this State ſhe will lie eaſily under the Sea, if ſhe be a good Sailor; and make her Way one Point before the Beam.

*To ſtrike a* HULL, in the Sea Language, is to lie cloſely or obſcurely in the Sea in a Storm, or to tarry for ſome Conſort, bearing no Sail, with the Helm laſh'd a Lee.

HUMAN, ſomething that relates to Man, or the Nature of Man. See MAN and NATURE.

The *human* Body is the Subject of Medicine. See BODY.

*Epicurus* and his Followers deny that the Gods concern themſelves with *human* Affairs. See EPICUREANS.

Faith is diſtinguiſh'd into Divine and *Human.* See FAITH.

HUMANITY, the Nature of Man, or that which denominates him *human.*

*Neſtorius* would not allow the Infirmities of *Humanity* to be attributed to the Deity; nor the Attributes of the Deity to *Humanity.* See NESTORIANS.

HUMANITIES is alſo us'd, plurally, for the *Humaniores Literæ*, *i. e.* the Study of the *Greek* and *Latin* Tongues, Grammar, Rhetoric, Poetry, and the ancient Poets, Orators, and Hiſtorians. See PHILOLOGY.

Such a Student has gone thro' his *Humanities* with Applauſe: *Calvin* perform'd his *Humanities* in the College *de la Marche* at *Paris*.

HUMECTATION, *Moiſtening*, in Pharmacy, the preparing of a Medicine, by ſteeping it a while in Water, in order to ſoften and moiſten it when too dry, to cleanſe it, or to prevent its ſubtile Parts from being diſſipated in grinding it, or the like. See HUMIDITY.

The Term is alſo us'd for the Application of moiſtening or ſuppling Remedies. --- In this Senſe we ſay, Embrocations, Emplaſters, Unctions, *Humectations*, Fomentations, *&c.*

The Word is *Latin*, *Humectatio*, of *Humor*, Moiſture.

HUMERUS, in Anatomy, or *Os* HUMERI, the uppermoſt Bone of the Arm, popularly call'd the *Shoulder Bone*; extending from the Scapula or Shoulder-blade, to the upper End of the Cubitus, or Elbow. See ARM and SHOULDER, *&c.*

The *Humerus*, is a large, long, round fiſtular Bone, of a pretty hard, compact Subſtance; and its inward Cavity, which contains the Marrow, pretty long and large.

At its upper End it has a large round Head, which is cover'd with a very ſmooth Cartilage, and receiv'd into the Cavity of the Scapula, which makes a Juncture per Arthrodiam. --- This Head of the Bone being much larger than the Socket into which it is receiv'd, the Part extant is ſtrictly embrac'd by a Ligament, one Edge of which is faſten'd to the Margin of the Cartilaginous Socket of the Scapula, and the other to the lower Part of the Head of this Bone, thereby uniting them firmly together; yet ſo as to leave the Motion the freeſt of all the Articulations of the Body, and therefore liable to Diſlocations. See SCAPULA.

At the lower End of the *Humerus* are two Proceſſes, cover'd each with a Cartilage; the external and leſſer receiving the Extremity of the Radius; and the internal, the Head of the Cubitus. See RADIUS.

On the Out-ſide of each of theſe Proceſſes, is a ſmall Eminence, to which are faſten'd the Ligaments and Heads of the Muſcles that move the Carpus and Fingers. See CARPUS.

In this Bone are alſo three Sinus's; one on the fore Side of the large Proceſs, receiving a Proceſs of the Cubitus; another on the back Part which receives the Olecranum; and the third, a ſmall ſemilunar one between the two Proceſſes, anſwering to the Eminence of the Sinus's of the Cubitus. See CUBITUS.

The later Anatomiſts allow this Bone five different Motions, *viz.* upwards, downwards, forwards, backwards, and rotatory; and five Pair of Muſcles for Performance of the ſame, *viz.* the *Deltoides*, *Teres*, *Pectoralis*, *Infraſpinatus*, *Subſcapularis*, &c. See each under its proper Article, DELTOIDES, TERES, *&c.*

HUMID, HUMIDUM, *moiſt*. See HUMIDITY.

The School Philoſophers make Water the *primum Humidum*, the firſt of *humid* Bodies, and the Cauſe or Principle of *Humidity* in others, which are more or leſs moiſt, as they partake more or leſs of this Element. See WATER and ELEMENT.

HUMIDITY, or *Moiſture*, the Quality or Power of wetting or moiſtening other Bodies. See QUALITY.

*Ariſtotle* defines *Humidity*, by a paſſive Quality which indiſpoſes a Body from being retain'd in its own Bounds, but makes it eaſily retain'd in thoſe of another: which amounts to the ſame as his Definition of Fluidity. See FLUIDITY.

Others of the Peripatetick School, make *Humidity* a Quality whereby a Body is *humid*, *i. e.* moiſtens other Bodies, and, in moiſtening, ſoftens and diſpoſes them to receive any Figure or Impreſſion.

The modern Writers conſider *Humidity* as a particular Species of Fluidity; and define it a Fluor, which being apply'd on a ſolid Body, adheres thereto, and communicates the Quality to other Bodies. --- Others, ſomewhat more accurately, call *Humidity* the Power whereby a Body moiſtens another: But what that Power is, they do not ſhew.

But of this we are certain, that *Humidity* is no more than a Sort of relative Mode. --- So far as the component Particles of a Fluid, compar'd with reſpect to the Pores and Particles of other Bodies, or the Texture thereof, are apt and diſpos'd to enter thoſe Pores, or ſtick to thoſe Particles; ſo far is that Fluid *humid*: On the contrary, ſo far as there is a Repugnance or Incongruity between the Particles, *&c.* in reſpect of ſuch Bodies, the Fluid is not *humid*.

Thus Quickſilver is not moiſt in reſpect to our Hands or Cloaths, and other Things, which it will not ſtick to; but it may be call'd *humid* in reference to Gold, Tin, or Lead, to whoſe Surfaces it will preſently adhere, and render them ſoft and moiſt.

Even Water itſelf, which wets almoſt every thing, and is the great Standard of Moiſture and *Humidity*, is not capable of wetting all Things; for it ſtands, or runs off in globular Drops on the Leaves of Cabbages, and many other Plants; and it will not wet the Feathers of Ducks, Swans, and other Water-Fowl.

Add, that the Texture alone may cauſe the Fluid to be *humid*, as is plain, in that neither Quickſilver alone, Lead, or Biſmuth, will ſtick upon Glaſs; yet being mix'd together, they will form a Maſs that will do ſo; as appears from ſuch a Compoſition being frequently us'd in foliating Looking-Glaſſes. See FOLIATING.

HUMIDIUM *Radicale*, or *Radical Moiſture*. See RADICAL.

This, in reality, ſeems to amount to no more than the pureſt and moſt defecate Part of the nutritious Matter, in a Condition ready to be aſſimulated. See NUTRITION.

By too much Heat, as in Fevers, Hectics, *&c.* this *Humidity* is too haſtily exhauſted and ſpent.

HUMILIATION, the Act of *humbling*, *i. e.* of abating a Perſon's Pride, and bringing him lower in his own Opinion.

In this Senſe, *Humiliation* ſtands contra-diſtinguiſh'd from Mortification: *Humiliation* brings down the Mind; Mortification ſubdues the Fleſh. See MORTIFICATION.

HUMILIS *Muſculus*. See EYE.

HUMOR, or HUMOUR. See HUMOUR.

HUMORISTS, or *gli* HUMORISTI, HUMOURISTS, HUMORISTÆ, the Title of a celebrated Academy of learned Men at *Rome*. See ACADEMY.

The Academy of *Humoriſts* was eſtabliſh'd by *Paul Mancini*, who made uſe of *Gaſpard Silvianus* to aſſemble together all the Men eminent for Learning about *Rome*, and form them into a Society; as is obſerv'd by *Janus Niceus* in his Elogy of *Silvianus*, Part I. p. 32.

The Deviſe of this Academy is a Cloud, which being rais'd from the Salt Water of the Sea, returns again in Freſh; with this *Hemiſtick* of *Lucretius*, l. vi. *Redit agmine dulci*. *Jerom Alexander*, a *Humoriſt*, has three expreſs Diſcourſes on this Deviſe.

The Obſequies of M. *Peyresc* were celebrated in the Academy of the *Humoriſts*, whereof he was a Member, in above forty different Languages. *Gaſſendi de Vita Peyreskii*, l. vi. p. 399.

HUMOROSI, the Name of an Academy eſtabliſh'd at *Cortona* in *Italy*. See ACADEMY.

The *Humoroſi* of *Cortona* muſt not be confounded with the *gli Humoriſti* of *Rome*. See HUMORISTS.

HUMOUR, or HUMOR, in its general Senſe, ſignifies the ſame as *Liquor* or *Liquid*. See LIQUID and FLUID.

The Word is *Latin*, *Humor*, form'd of the *Greek* ὑγμα, *Pluvia*, Rain, of ὕω, *Pluo*.

HUMOUR, in Medicine, is apply'd to any Juice, or fluid Part of the Body, as the *Chyle*, *Blood*, *Milk*, *Fat*, *Serum*, *Lymph*, *Spirits*, *Bile*, *Seed*, *Salival* and *Pancreatic* Juices, *&c.* See each under its proper Head, CHYLE, BLOOD, BILE, *&c.*

The *four Humours* ſo much talk'd of by the ancient Phyſicians, are four liquid Subſtances, which they ſuppoſe to moiſten the whole Body of all Animals, and to be the Cauſe of the divers Temperaments thereof. See TEMPERAMENT.

Theſe are *Phlegm*, *Pituita*, *Blood*, *Bile*, and *Melancholly*. See PHLEGM, PITUITA, *&c.*

But the Moderns do not allow of theſe Diviſions. The *Humours* they rather chuſe to diſtinguiſh into *Nutritious*, or *Alimentary*, as *Chyle* and *Blood*; thoſe ſeparated from the Blood, as *Bile*, *Saliva*, *Urine*, &c. and thoſe return'd into the Blood.

*Humours*, again, are diſtinguiſh'd into *natural* or ſalutary, and *morbid* or corrupted. --- To the former Claſs belong all the Juices ordinarily ſecreted for the Uſes of the Body.

To the latter belong thoſe compound *Humours* which thicken, and grow putrid; cauſing Tumors, Abſceſſes, Obſtructions, and moſt Diſeaſes. See DISEASE.

Theſe are diſtinguiſh'd by various Names, *Malignant*, *Aduſt*, *Acrimonious*, *Corroſive*, *Crude*, *Peccant*, &c. See MALIGNANT, ADUST, *&c.*

HUMOUR is alſo us'd for the particular Temperament or Conſtitution of a Perſon, conſider'd as ariſing from the Prevalence of this or that *Humour*, or Juice of the Body. See TEMPERAMENT.

Thus we ſay, a Bilious Coleric *Humour*; a Phlegmatic *Humour*; a Melancholic, Reſtleſs, Hypochondriac *Humour*; a Sanguine, Gay, Sprightly *Humour*, &c. See SANGUINE, *&c.*

HUMOURS *of the Eye*. --- Anatomiſts and Opticians diſtinguiſh three particular *Humours* in the Eye, which they call the *Aqueous*, *Cryſtallin*, and *Vitrious*. See EYE.

The *Aqueous*, or *Watery Humour*, is plac'd in the anterior or fore Part of the Eye, which it poſſeſſes; and is thus call'd, becauſe clear and fluid like Water. See AQUEOUS.

The *Vitrious*, or *Glaſſy Humour*, fills the poſterior Part of the Eye; and is denominated from its Reſemblance of melted Glaſs. See VITRIOUS.

The *Cryſtalline Humour* is plac'd between the other two; and is thus call'd from its Solidity and Tranſparency, reſembling that of a Cryſtal. See CRYSTALLINE.

Theſe three *Humours* have each their Share in the Refraction of the Rays of Light neceſſary to Viſion. See VISION and REFRACTION.

Authors, both ancient and modern, ſpeak of the Regeneration of the *Humours* of the Eye; and give us Inſtances of their Reproduction, when by any Accident they had been let out. But their Inſtances generally go no farther than to the Aqueous and Vitrious *Humours*.

*Borhy*, only, in a Letter to *Bartholine*, ſays as much of the Cryſtalline. --- He affirms, that he has ſlit the Pupil of the Eye of divers Animals, and ſqueez'd out all the *Humours*, even the Cryſtalline, and has again perfectly reſtor'd them to Sight; and that the Eyes of the Birds, whereon the Operation had been perform'd, inſtead of being damag'd thereby, were render'd more lively and vigorous than uſual. He adds, that he had perform'd the ſame Experiment on divers Perſons, with ſo much Succeſs, that there remain'd not the ſmalleſt Appearance of a Cicatrix in the Eye.

HUMOUR is alſo us'd in Dramatic Poetry, for a ſubordinate or weaker Species of what the Criticks call *Manners*. See MANNERS.

*Humour* is uſually look'd on as peculiar to the *Engliſh* Drama; at leaſt, our Comic Poets have excell'd therein, and carry'd it beyond thoſe of any other Nation: Ours is perhaps the only Language that has a Name for it.

*Humour* is uſually conſider'd by our Criticks, as a fainter or weaker Paſſion peculiar to Comic Characters, as being found in Perſons of a lower Degree than thoſe proper for Tragedy. See CHARACTER and TRAGEDY.

Every Paſſion may be ſaid to have two different Faces, one that is ſerious, great, formidable, and ſolemn, which is for Tragedy; and another that is low, ridiculous, and fit for Comedy; which laſt is what we call *Humour*. See PASSION and COMEDY.

Wit only becomes few Characters: 'Tis a Breach of Character to make one half the Perſons in a Modern, or, indeed, in any Comedy, talk wittily and finely; at leaſt at all Times and on all Occaſions. --- To entertain the Audience, therefore, and keep the Dramatic Perſons from going into the common beaten familiar Ways and Forms of ſpeaking and thinking, recourſe is to be had to ſomething to hold the Place of Wit, that ſhall ſerve in lieu thereof, and divert the Audience, without going out of Character: And this does *Humour*; which therefore is to be look'd on as the true Wit of Comedy.

A very great Judge, the Duke of *Buckingham*, makes *Humour* to be all: Wit, according to him, ſhould never be us'd, but to add an Agreeableneſs to ſome proper and juſt Sentiment, which, without ſome ſuch Turn, might paſs without its Effect. See WIT.

HUNDRED, *Centum*, *Cent.* the Number of ten Times ten; or the Square of ten. See NUMBER.

The Place of *Hundreds* makes the third in Order in the *Arabic* Numeration. See NUMERATION.

We uſually expreſs the Quantity or Proportion of the Profits made in the Way of Commerce, *&c.* by the *Hundred*. --- They ask two and a half *per Cent.* or in the *Hundred*, for remitting Money to ſuch a City. The legal Intereſt of Money is 5 *per Cent.* or in the *Hundred*. See EXCHANGE, REMITTANCE, INTEREST, *&c.*

HUNDRED, is alſo us'd as a Meaſure to expreſs a certain Quantity or Number of Things. --- A *Hundred* of Salt at *Amſterdam* is 14 Tons.

Deal Boards are ſix Score to the *Hundred*, call'd the *long Hundred*. --- Pales and Laths are five Score to the *Hundred*, if five Foot long, and ſix Score of three Foot long.

HUNDRED *Weight*, or the *great Hundred*. See QUINTAL.

HUNDRED, HUNDREDUM, *Centuria*, is alſo a Part or Diviſion of a Shire or County. See SHIRE and COUNTY.

It was ſo call'd, either becauſe of old each *Hundred* found 100 Fidejuſſors or Sureties of the King's Peace, or 100 able Men for his War. See DECENNA, FRANK-*pledge*, &c.

Others rather think it ſo call'd, becauſe originally compos'd of an *hundred* Families. --- 'Tis true *Brompton* tells us, that an *Hundred* contains *centum Villas*; and *Giraldus Cambrenſis* writes, that the *Iſle of Man* hath 343 Villas: But in theſe Places the Word *Villa* muſt be taken for a Country Family; for it cannot mean a Village, becauſe there are not above 40 Villages in that Iſland. See VILLAGE.

So, where *Lambard* tells us that an *Hundred* is ſo call'd, *a numero centum hominum*, it muſt be underſtood of an *hundred* Men, who are Heads and Chiefs of ſo many Families.

*Hundreds* were firſt ordain'd by King *Alfred*, the 29th King of the Weſt *Saxons*: *Alfredus Rex* (ſays *Lambard*, *verbo* centuria) *ubi cum Guthrumo Dano fœdus inierat, prudentiſſimum olim a Jethrone Moiſi datum ſecutus conſilium, Angliam, primus in Satrapias*, Centurias, *& decurias partitus eſt. --- Satrapium, Shyre, à* Scyrian *(quod partiri ſignificat) nominavit, Centuriam*, Hundred; *& Decuriam, Toothing ſive Tienmantale*, i. e. *Decemvirale Collegium, appellavit; atque iiſdem nominibus vel hodie vocantur*, &c.

This dividing of Counties into *Hundreds*, for the better Government, King *Alfred* borrow'd from *Germany*; where *Centa* or *Centina* is a Juriſdiction over 100 Towns.

This is the Original of *Hundreds*, which ſtill retain the Name; but their Juriſdiction is devolv'd to the County-Court, ſome few excepted, which have been by Privilege annex'd to the Crown, or granted to ſome great Subject, and ſo remain ſtill in the Nature of a Franchiſe. See COURT.

This has been ever ſince the Stat. 14 *Edw.* III. whereby theſe *Hundred* Courts, formerly farm'd out by the Sheriff to other Men, were all, or moſt Part, reduc'd to the County Court, and ſo remain at preſent: So that where we read now of *Hundred* Courts, they are to be underſtood of ſeveral Franchiſes, wherein the Sheriff has not to do by his ordinary Authority, except they of the *Hundred* refuſe to do their Office.

The Word *Hundredum* is ſometimes alſo us'd for an Immunity or Privilege, whereby a Man is quit of the *Hundred*-penny, or Cuſtom due to the *Hundred*. See TURN and WARD.

HUNDRED-*lagh*, from *Hundred*, and the *Saxon*, *Laga*, Law, ſignifies the *Hundred* Court; from which all the Officers of the King's Foreſt were freed by the Charter of *Canutus*. See WARSCOT.

HUNDRED *Secta*, the Payment of perſonal Attendance ordering Suit and Service at the *Hundred Court*.

HUNDREDERS, HUNDREDARII, are Men impanell'd, or fit to be impannell'd, of a Jury, upon any Controverſy, dwelling within the *Hundred* where the Land in Queſtion lies. See JURY.

The Word *Hundreder* is alſo us'd for him who hath the Juriſdiction of an *Hundred*, and holds the *Hundred* Court. See HEAD-*Borough*.

Sometimes it is alſo us'd for the Bailiff of an *Hundred*. See BAILIFF.

HUNGARY *Water*, *Aqua* HUNGARICA, a diſtill'd Water, denominated from a Queen of *Hungary*, for whoſe Uſe it was firſt prepar'd. See WATER.

*Hungary Water* is one of the diſtill'd Waters of the Shops; and is directed in the College Diſpenſatory, to be made of Roſemary Flowers infus'd ſome Days in rectify'd Spirit of Wine, and thus diſtill'd. See DISTILLATION.

Its Virtues are much the ſame as thoſe of the Simple it is drawn from. See ROSEMARY.

HUNGER, *Fames*, a natural Appetite or Deſire of Food. See APPETITE and FOOD.

*Hunger* is properly diſtinguiſh'd into Natural and Animal: *Natural Hunger* is an Irritation of the Stomach, occaſion'd by Faſting; *Animal Hunger* is the Senſation or Perception of that Irritation, and the Deſire of Food conſequent thereon.

There are various Opinions as to the Nature, Cauſe, and Definition of *Hunger*; the Point having been controverted from *Ariſtotle* to our Time. --- *Galen* defines it a painful Senſation, ariſing from a Divulſion of the Stomach; The other Peripateticks call it an Appetite or Deſire of Hot and Dry: Which two Syſtems ſome Authors have endeavour'd to reconcile by taking them both in; and, accordingly define *Hunger* a natural Appetite or Deſire of Hot and Dry, occaſion'd by a painful Divulſion of the Membranes of the Stomach, ariſing from an Emptineſs thereof. See STOMACH.

The modern Philoſophers ſpeak more accurately and intelligibly on the Point --- *Hunger* is generally conſider'd by them as owing to the Sharpneſs or Acrimony of the Liquor contain'd in the Stomach, which vellicating the Fibres thereof, occaſions this uneaſy Senſation. --- They add, that the occaſional Cauſe of this Vellication, is the Emptineſs of the Stomach, which not furniſhing Food for the Stomach-Liquor to be employ'd on, expoſes its inner Membrane to the Action thereof.

In effect, 'tis generally agreed, that there is ſome menſtruous Juice or Humour continually diſcharg'd from the excretory Ducts of the neighbouring Glands into the Stomach, to aſſiſt in the Diſſolution and Digeſtion of the Food; and that this ſame Liquor, after the Food is gone, falls upon the Stomach itſelf, irritates its Nerves ſo ſtrongly, as to propagate the Impreſſion to the Brain, and thus produce the Perception of *Hunger*. See DIGESTION.

This Juice ſome will have to be acid, by reaſon Bodies of that Claſs are uſed to whet the Appetite and excite *Hunger*; and that fatty Bodies more readily remove it than others, by their adhering to the Acid Spicula, and blunting the Points thereof. See ACID.

Others denying the Exiſtence of any ſuch Stomach-Liquor, and accounting for Digeſtion without; it deny *Hunger* to have any Dependence thereon. --- The dry Attrition of the Coats of the Stomach, according to them, is the only Cauſe.

Thus it is that the *Indians* elude their *Hunger*, by ſwallowing Pills made of Tobacco Leaves and calcin'd Shells: Theſe Pills take away the Appetite, both as the Tobacco Leaves gradually diminiſh the Senſibility of the Stomach, and as the calcin'd Shells abſorb the Salino-acid Menſtruum.

Thus

Thus alſo it is, that poor People frequently ſmoak Tobacco to deceive their *Hunger*, not to ſatisfy it; for Tobacco affords no Nutriment; but it occaſions a plentiful Spitting, and by this Means diſcharges the Body of the corroſive Humour which cauſes *Hunger*.

This Syſtem Dr. *Drake* thus lays down: — When all the Chyme and Chyle is preſs'd out, the Stomach, which follows the Motions of its Contents, is again, by means of its muſcular Coat, reduc'd to a State of Contraction, and by that Means the Inner is brought to lay in Folds, which touching, and by means of the Periſtaltick Motion, rubbing lightly, upon one another, produce that gentle Senſe of fretting or Vellication, which we call *Hunger*, which being felt firſt in the upper Orifice, which is firſt evacuated, begins there to prompt us to repleniſh: But as by Degrees the Remainder of the Contents are expell'd, this Friction or Rubbing of the Membranes upon each other, ſpreads gradually over the whole Stomach, and renders our *Hunger* more urgent and impatient, till, by a new Repletion, we take away the Cauſe.

Others think the Blood, deriv'd from the adjacent Ramifications of Arteries into the Stomach, ſufficient to account for *Hunger*, without the Mediation either of Attrition or the Menſtruum. — The Maſs of Blood itſelf, they obſerve, is render'd acid thro' Abſtinence from Food; its ſoft balſamic Parts having been carry'd into all Parts of the Body, and lodg'd therein as Nutriment, to ſupply the Abſence of thoſe wore off and exhal'd: To which it may be added, that the Velocity of the Blood is conſiderably augmented a good while after eating, beyond what it was during the Action of Digeſtion.

Hence it is, that Perſons of a bilious Conſtitution, young People, and thoſe who labour hard, muſt ſooner find themſelves *hungry* than others. 2°. That *Hunger*, if it hold long, occaſions a violent Heat, and even ſometimes a Fever. 3°. That thoſe whoſe Humours are craſs and viſcid, are leſs incommoded with *Hunger* than others.

In effect, we obſerve, that ſome Animals, whoſe Humours are found to have thoſe Conditions, as Tortoiſes, &c. will live a long time without Food. — For Man, ſix or ſeven Days are commonly ſuppos'd the Limit within which, if he take no ſolid Food, he dies; tho' we have Inſtances of Abſtinence which far ſurpaſs this. See ABSTINENCE and FASTING.

HUNGRY *Evil*, is an unnatural and over-haſty Greedineſs in a Horſe, to devour his Meat faſter than he can chew it; and may be known by his ſnatching at it as if he would devour it whole.

HUNTING, the Art or Act of purſuing and chaſing Beaſts of Game. See GAME.

In its general Senſe *Hunting* includes the Purſuit both of hairy and feather'd Game; but in its more proper and reſtrain'd Signification, it is only applicable to Beaſts of Venery and Chace. See BEAST. See alſo FOWLING.

F. *de Launay*, Profeſſor of the *French* Laws, has an expreſs Treatiſe of *Hunting*. — From thoſe Words of God to *Adam*, *Gen.* i. 26 and 28. and to *Noah*, *Gen.* ix. 2, 3. *Hunting* was conſider'd as a Right devolv'd, or made over to Man; And the following Ages appear to have been of the ſame Sentiment, Accordingly we find that among the more civiliz'd Nations, as the *Perſians*, *Greeks*, and *Romans*, it made one of their genteeler Diverſions; and as to the wilder and more barbarous, it ſerv'd them for Food and Neceſſaries. — The *Roman* Juriſprudence, which was form'd on the Manners of the firſt Ages, made a Law of it; and eſtabliſh'd it as a Maxim, that as the natural Right of Things which have no Maſter, belongs to the firſt Poſſeſſor, wild Beaſts, Birds, and Fiſhes, are the Property of whoever can take them firſt.

But the Northern Nations of Barbarians, who over-run the *Roman* Empire, bringing with them a ſtronger Taſte for the Diverſion; and the People being now poſſeſs'd of other, and more eaſy Means of Subſiſtence from the Lands and Poſſeſſions of thoſe they had vanquiſh'd; their Chiefs and Leaders began to appropriate the Right of *Hunting*, and, inſtead of a natural Right, to make it a Royal one. — Thus it continues to this Day; the Right of *Hunting*, among us, belonging only to the King, and thoſe who derive it from him. See KING, LORD, &c.

And hence all our Laws and Charters of the Foreſt, Laws and Regulations for Preſervation of the Game, &c. See FOREST and GAME.

*Hunting* is practis'd in a different Manner, and with a different Apparatus, according to the Nature, Genius, and Addreſs of the particular Beaſt which is the Subject thereof. — Theſe Beaſts are the Hart, Hind, Hare, Boar, Wolf, Buck, Doe, Fox, Marten, and Roe; the five firſt whereof are denominated Beaſts of the *Foreſt*, or *Venery*, *Sylveſtres*; and the five latter, Beaſts of the *Field*, or of *Chace*, *Campeſtres*.

The Gentlemen and Maſters of the Sport have fram'd a new Set of Terms, which may be call'd the *Hunting Language*; a little View or Vocabulary whereof we ſhall here give the Reader.

The Terms, then, us'd for Beaſts of Venery and Chace, as they are in Company, are theſe. — They ſay, A *Herd* of Harts, and all Manner of Deer. — A *Bevy* of Roes. — A *Sounder* of Swine. — A *Rout* of Wolves. — A *Richeſs* of Martens. — A *Brace* or *Leaſh* of Bucks, Foxes, or Hares. — A *Couple* of Rabbets or Conies.

There are alſo Terms for their Lodging. — A Hart is ſaid to *Harbour*. — A Buck *Lodges*. — A Roe *Beds*. — A Hare *Seats* or *Forms*. — A Coney *Sits*. — A Fox *Kennels*. — A Marten *Trees*. — An Otter *Watches*. — A Badger *Earths*. — A Boar *Couches*.

Hence, to expreſs their diſlodging, we ſay, *Unharbour* the Hart. — *Rouſe* the Buck. — *Start* the Hare. — *Bolt* the Coney. — *Unkennel* the Fox. — *Tree* the Marten. — *Vent* the Otter. — *Dig* the Badger. — *Rear* the Boar.

The Terms for their Noiſe at Rutting Time are as follows: — A Hart *Belleth*. — A Buck *Grouns* or *Troats*. — A Roe *Bellows*. — A Hare *Beats* or *Taps*. — An Otter *Whines*. — A Boar *Freams*. — A Fox *Barks*. — A Badger *Shrieks*. — A Wolf *Howls*. — A Goat *Rattles*.

Terms for their Copulation. — A Hart or Buck goes to *Rut*. — A Roe goes to *Tourn*. — A Boar goes to *Brim*. — A Hare or Coney go to *Buck*. — A Fox goes to *Clickitting*. — A Wolf goes to *Match* or *Make*. — An Otter *Hunteth* for his Kind.

Terms for the Footing and Treading. — Of a Hart we ſay the *Slot*. — Of a Buck, and all fallow Deer, the *View*. — Of all Deer, if on the Graſs, and ſcarce viſible, the *Foiling*. — Of a Fox the *Print*; and other the like Vermin the *Footing*. — Of an Otter the *Marks*. — Of a Boar the *Track*. — The Hare, when in open Field, is ſaid to *Sore*; when ſhe winds about to deceive the Hounds, ſhe *Doubles*; when ſhe beats on the hard Highway, and her Footing come to be perceiv'd, ſhe *Pricketh*: In Snow, it is call'd the *Trace* of the Hare.

The Tail of a Hart, Buck, or other Deer, is call'd the *Single*. — That of a Boar, the *Wreath*. — Of a Fox, the *Bruſh* or *Drag*; and the Tip at the End, the *Chape*. — Of a Wolf, the *Stern*. — Of a Hare and Coney, the *Scut*.

The Ordure or Excrement of a Hart, and all Deer, is call'd *Fewments* or *Fewiſhing*. — Of a Hare, *Crotiles* or *Crotiſing*. — Of a Boar, *Leſſes*. — Of a Fox, the *Billiting*; and of other the like Vermin, the *Fuants*. — Of an Otter, the *Spraints*.

As to the Heads of Deer, ſomething has already been ſpoken under the Article HEAD.

For the Attire, or Parts thereof, thoſe of a Stag, if perfect, are the *Bur*, the *Pearls*, the little *Knobs* on it, the *Beam*, the *Gutters*, the *Antler*, the *Sur-Antler*, *Royal*, *Sur-Royal*, and all at Top the *Croches*. — Of the Buck, the *Bur*, *Beam*, *Brow-Antler*, *Black-Antler*, *Advancer*, *Palm*, and *Spellers*.

If the Croches grow in the Form of a Man's Hand, it is call'd a *Palmed Head*. — Heads bearing not above three or four, and the Croches placed aloft, all of one Height, are call'd *Crowned Heads*. — Heads having doubling Croches, are call'd *Forked Heads*, becauſe the Croches are planted on the Top of the Beam like Forks.

They ſay, a *Litter* of Cubs, a *Neſt* of Rabbets, a Squirrels *Dray*.

The Terms us'd in reſpect of the Dogs, &c. are as follow. — Of Greyhounds, two make a *Brace*; of Hounds, a *Couple*. — Of Greyhounds, three make a *Leaſh*; of Hounds, a *Couple* and *Half*. — They ſay, *let ſlip* a Greyhound; and *caſt off* a Hound. — The String wherein a Greyhound is led, is call'd a *Leaſh*; and that of a Hound a *Lyome*. — The Greyhound has his *Collar*, and the Hound his *Couples*. — We ſay a *Kennel* of Hounds, and a *Pack* of Beagles.

### *Styles or Manners of* HUNTING.

The Styles or Manners of *Hunting* are various, according to the Country, the Beaſt, and the Means whereby he is to be caught.

The *Hunting* us'd by the Ancients, was much like that now practis'd for the Rain Deer; which is ſeldom *hunted* at Force, or with Hounds; but only drawn with a Blood-hound, and foreſtall'd with Nets and Engines. — Thus did they with all Beaſts; whence a Dog is never commended by them for Opening, before he has diſcover'd where the Beaſt lies: Hence, they were not in any Manner curious as to the Muſick of their Hounds, or the Compoſition of their Kennel or Pack, either for Deepneſs, Loudneſs, or Sweetneſs of Cry, which is a principal Point in the *Hunting* of our Days.

Their *Huntſmen*, indeed, were accuſtom'd to ſhout and make a great Noiſe, as *Virgil* obſerves in the third of his *Georgicks*: *Ingentem clamore premes ad retia Cervum*. But that Confuſion was only to bring the Deer to the Nets laid for him.

The

The *Sicilian* Way of *Hunting* had ſomething in it very extraordinary. --- The Nobles or Gentry being inform'd which Way a Herd of Deer paſs'd, gave Notice to one another, and appointed a Meeting; every one bringing with him a Croſs-bow or Long-bow, and a Bundle of Staves ſhod with Iron, the Heads bored, with a Cord paſſing thro' 'em all: Thus provided, they came to the Herd, and caſting themſelves about in a large Ring, ſurrounded the Deer. --- Then each taking his Stand, unbound his Faggot, ſet up his Stake, and ty'd the End of the Cord to that of his next Neighbour, at the Diſtance of ten Foot from one another. --- Then taking Feathers, dy'd in Crimſon, and faſten'd on a Thread, they ty'd them to the Cord; ſo that with the leaſt Breath of Wind, they would whirl round. --- Which done, the Perſons who kept the Stands withdrew, and hid themſelves in the next Covert.

Then the chief Ranger entering within the Line with Hounds to draw after the Herd, rous'd the Game with their Cry; which flying towards the Line, were turn'd off, and ſtill gazing on the ſhaking and ſhining Feathers, wander'd about as if kept in with a real Wall or Pale.

The Ranger ſtill purſued, and calling every Perſon by Name, as he paſſed by their Stand, commanded him to ſhoot the firſt, third, or ſixth, as he pleas'd; and if any of them miſs'd, or ſingled out another than that aſſign'd him, it was counted a grievous Diſgrace.

By ſuch Means, as they paſs'd by the ſeveral Stations, the whole Herd was kill'd by the ſeveral Hands. *Pierus Hiercglyphic.* lib. 7. cap. 6.

*Hunting*, as practis'd among us, is chiefly perform'd with Dogs; of which we have various Kinds, accommodated to the various Kinds of Game; as *Hounds*, *Grey-hounds*, *Staunch Hounds*, *Blood-hounds*, *Terriers*, &c. See HOUND.

In the Kennels or Packs they generally rank them under the Heads of *Enterers*, *Drivers*, *Flyers*, *Tyers*, &c.

On ſome Occaſions, Nets, Spears, and Inſtruments for digging the Ground, are alſo requir'd: Nor is the *Hunting*-Horn to be omitted. See HORN.

The uſual Chaſes among us, are the *Hart*, *Buck*, *Roe*, *Hare*, *Fox*, *Badger*, and *Otter*. --- We ſhall here give what relates to each thereof.

By the way let it be obſerv'd, with regard to the Seaſons of Beaſts, that Hart and Buck *Hunting* begins at the End of Fencer Month, which is a Fortnight after *Midſummer*, and laſts till *Holy Rood-Day*. --- The Hind and Doe come in Courſe on *Holy-Rood-Day*, and laſt till *Candlemas*. — Fox *Hunting* comes in at *Chriſtmas*, and holds till the *Annunciation*. — Roe *Hunting* begins at *Michaelmas*, and ends at *Candlemas*. — Hare *Hunting* commences at *Michaelmas*, and goes out at the End of *February*. — Where the Wolf and Boar are hunted, the Seaſon for each begins at *Chriſtmas*; the firſt ending at the *Annunciation*, the ſecond at the *Purification*.

Here, too, is the Place for ſome general Terms and Phraſes, more immediately uſed in the Progreſs of the Sport itſelf: What belong to the ſeveral Sorts of Game, in particular, being reſerv'd for the reſpective Articles.

When the Hounds, then, being caſt off, and finding the Scent of ſome Game, begin to open and cry; they are ſaid to *challenge*. — When they are too buſy, e'er the Scent be good, they are ſaid to *babble*. — When too buſy where the Scent is good, they *bawl*. — When they run it end-ways orderly, holding in together merrily, and making it good, they are ſaid to be in *full Cry*. — When they run along without Opening at all, it is call'd *running Mute*.

When Spaniels open in the String, or a Grey-hound in the Courſe, they are ſaid to *Lapſe*.

When Beagles bark and cry at their Prey, they are ſaid to *yearn*.

When the Dogs hit the Scent the contrary Way, they are ſaid to *draw amiſs*.

When they take freſh Scent, and quit the former Chaſe for a new one, it is call'd *Hunting Change*.

When they *hunt* the Game by the Heel or Track, they are ſaid to *hunt Counter*.

When the Chaſe goes off, and returns again, traverſing the ſame Ground, it is call'd *Hunting the Foil*.

When the Dogs run at a whole Herd of Deer, inſtead of a ſingle one, it is call'd *Running Riot*.

Dogs ſet in readineſs where the Game is expected to come by, and caſt off after the other Hounds are paſs'd, are call'd a *Relay*. — If they be caſt off e'er the other Dogs be come up, it is call'd a *Vauntlay*.

When finding where the Chaſe has been, they make a Proffer to enter, but return, it is call'd a *Blemiſh*.

A Leſſon on the Horn to encourage the Hounds, is nam'd a *Call*, or a *Recheat*. — That blown at the Death of a Deer, is call'd the *Mort*. — The Part belonging to the Dogs of any Chaſe they have kill'd, is the *Reward*. — They ſay, *take off* a Deer's Skin; *ſtrip* or *caſe* a Hare, Fox, and all Sort of Vermin; which is done by beginning at the Snout, and turning the Skin over the Ears, down to the Tail.

*Hart* HUNTING, or HUNTING *of Red Deer*. --- This Animal, the firſt Year is call'd a *Calf* or *Hind-Calf*. --- The ſecond Year, a *Knobber*. --- The third, a *Brock*. --- The fourth, a *Staggard*. --- The fifth, a *Stag*. --- The ſixth, a *Hart*.

The Female is call'd a *Hind*. --- The firſt Year ſhe is a *Calf*. --- The ſecond, a *Hearſe*, and ſometimes a *Brocket's Siſter*. --- The third, a *Hind*.

Terms occurring more eſpecially in *Hunting* the Hart, and not yet explain'd, are as follow: --- The Print or Impreſſion where a Deer has lain, is call'd a *Layer*: If it be in Covert, or a Thicket, it is call'd his *Harbour*. --- Where a Deer has paſs'd into a Thicket, leaving Marks whereby his Bulk may be gueſs'd at, it is call'd an *Entry*. --- When they caſt their Heads, they are ſaid to *Mew*. --- When they rub their Heads againſt Trees to bring off the Pills of their Horns, they are ſaid to *Fray*. --- When a Deer hard *hunted* takes to Swimming in the Water, ſhe is ſaid to go to *Soil*. --- When they turn Head againſt the Hounds, they are ſaid to *Bay*. --- When the Hounds touch the Scent, and draw on till they put up the Hart, they are ſaid to *draw on the Slot*.

As to the Nature and Qualities of the Hart, it is to be obſerv'd that he is an excellent Swimmer; there being Inſtances, when ſore *hunted*, of his plunging into the Sea, and being kill'd by Fiſhermen 12 Miles from Land. --- When in going to rut, they have occaſion to croſs a great River, or Arm of the Sea, 'tis ſaid they aſſemble in great Herds; the ſtrongeſt goes in firſt, and the next of Strength follows; and ſo one after the other, relieving themſelves by ſtaying their Heads on the Buttocks of each other.

The Hind commonly carries her Calf eight or nine Months, which uſually falls in *May*: Some have two at once; and they eat up the Skin wherein the Calf laid. --- As the Young grows up, ſhe teaches it to run, leap, and how to defend itſelf from the Hounds.

The Hart is amaz'd at hearing any Call, or whiſtle in his Fiſt: If you cry *ware*, *ware*, or *take heed*, you will ſee him inſtantly turn back, and make ſome little Stand. --- His Senſe of Hearing is very perfect when his Head and Ears are erected; but very imperfect when he holds them down: Hence, when he pricks up his Ears, he is known to be apprehenſive of Danger. When he is on Foot, and not afraid, he wonders and takes Pleaſure to gaze at every thing he ſees.

The Hart is very long-liv'd, commonly reaching to an hundred Years, or upwards. --- The principal Marks of his Age are taken from his Head; yet is this ſomewhat precarious, ſome having more Croches thereon at the ſame Age than others. --- Thoſe are accounted to excell in Beauty of Horns, which bear them high.

The Horns do not grow to the Bone or Scalp, but only to the Skin, branching into many Spears, and falling off once a Year, in the Spring. --- Tho' ſolid throughout, as Stones, yet, if they remain awhile in the Air, they grow very light and friable, diſcovering themſelves to be no other than an earthly Subſtance, concrete and harden'd with a ſtrong Heat into the Form of Bones. See HEAD.

The Horns being fallen, they retire and hide themſelves in the Shades, to avoid the Annoyance of Flies; and only come out to feed in the Night. --- Their new Horns appear at firſt like Bunches, very ſoft and tender; but by the Increaſe of the Sun's Heat, at length grow harder, and are cover'd with a rough Skin, call'd a *Velvet Head*. --- As that Skin dries, they daily try the Strength of their new Heads upon Trees, which not only burniſhes and ſcrapes off the Roughneſs, but, by the Pain they feel, hereby admoniſhes them how long to forbear the Company of their Fellows; for when the Horn grows inſenſible, they return to their former Condition.

The taking of this Beaſt requires a deal of Art and Attention. --- "The deceitful and ſubtle Hart, ſays *Geſner*, "by Windings and Turnings deceives its Hunters, no leſs "than the Harts of *Meandros* flying from the terrible Cry "of *Diana*'s Hounds: the prudent *Hunter*, therefore, muſt "frame his Dogs, as *Pythagoras* did his Scholars, with "Words of Art, to ſet them on, and take them off at Pleaſure. See HOUND.

When he goes for Sport, he is firſt to encompaſs the Beaſt, *en ſon giſte*, in her own Layer; and thus unharbour her in the View of the Dogs, that ſo they may never loſe her Slot or Footing. --- But Note, a deal of Choice and Diſcretion is here requir'd; for he may not ſet off upon every one, either of the Herd, or thoſe which wander ſolitary: The young, the ſmall, &c. are to be paſs'd over; and partly by Sight, and partly by the Footing, Fewmets, the largeneſs of the Layer, &c. he muſt make Judgment of the Game, ſingling out for that Purpoſe the largeſt Head in the whole Herd.

There are divers Means for knowing an old Hart, *viz.* by the *Slot*, the *Entries*, the *Abatures* and *Foils*, the *Fewmets*, *Gate* and *Walks*, *Fraying-ſtocks*, *Head* and *Branches*.

1°. As to the *Slot*. --- The Treadings of the Hart's Foot are to be carefully noted: If you find the Treadings of two,

the one long, and the other round, yet equally big, the longeſt Slot declares the largeſt Hart: Add, that the old Hart's hind Foot never over-reaches the fore Foot, as that of the young ones does. --- 2°. The Fewmiſhing is chiefly to be judg'd of in *April* or *May*: If it be large and thick, it ſignifies the Hart to be old. --- 3°. To know the Heighth and Thickneſs of the Hart, obſerve his *Entries* and *Galleries* into the Thickets, and what Boughs he hath over-ſtridden; and mark from thence the Heighth of his Belly from the Ground; for a young Deer uſually creeps low as he paſſes to his Harbour, and goes thro' Places which the old one, being ſtiff and ſtately, will not ſtoop to. --- 4°. By his Gate it may be known whether the Hart be large, and whether he will ſtand long before the Hounds: If he have a long Step, he will ſtand long; being ſwift, light, and well-breath'd: If he have a great Slot, which is the Sign of an old Deer, he will be a Laſter. --- As to his *Fraying-Poſt*, note, that the older the Hart is, the ſooner he goeth to fray, and the greater is the Tree he chuſes to fray upon; it being neceſſary it be ſuch as may not bend.

Now, to ſeek or find out a Hart in his Haunt, or Feeding-Place, it is to be obſerv'd, that he changes his manner of feeding every Month. --- From the Concluſion of the Rutting time, which is in *November*, they feed in Heaths and broomy Places. --- In *December* they herd together, and withdraw into the Strength of the Foreſts, to ſhelter themſelves from the ſeverer Weather, feeding on Holm Trees, Elder Trees, Brambles, &c. The three following Months they leave herding, but keep four or five in Company, and in the Corners of the Foreſt, will feed on the Winter Paſture, ſometimes making their Incurſions into the neighbouring Corn Fields, if they can perceive the Blades of Wheat, Rye, &c. appear above Ground. --- In *April* and *May* they reſt in Thickets and ſhady Places, ſtirring very little till Rutting-time, unleſs diſturb'd. --- The three ſucceeding Months they are in their Pride of Greaſe, and reſort to Spring Copſes and Corn Fields. --- In *September* and *October* they leave the Thickets, and go to Rut; during which Seaſon, they have no certain Place either for Food or Harbour.

Having found out the Game, the *Hunters* diſcouple and caſt off the Dogs; and, ſome on Horſeback, others on Foot, follow the Cry with the utmoſt Art, Obſervation, and Speed; remembering and preventing the ſubtle Turnings and Headings of the Hart; ſtanding with Dexterity and Intrepidity to leap Hedge, Pales, Ditch, &c.

The utmoſt Addreſs and Circumſpection is to be uſed to keep to the Beaſt firſt attempted, and prevent the Dogs from purſuing any other: This, in effect, makes one of the principal Difficulties and Glories of the Chace; the Beaſt having a hundred Devices to put off ſome other Head for his own: Sometimes he will ſend forth ſome other little Deer in his Stead into the Dogs Way, lying cloſe the while himſelf; on which Occaſion the *Huntſman* is to ſound a Retreat, and break off the Dogs, and take in Leam, till the Game be recover'd.

Sometimes he will purpoſely ſeek out for other Deer at Layer, and rouſe them, to make the Hounds *hunt* change, himſelf lying down flat in ſome of their Layers upon his Belly, to make the Hounds over-ſhoot him: Add, that they may neither ſcent or vent him, he will gather up his fore Feet under his Belly, and blow or breathe on ſome moiſt Place of the Ground; ſo that the Hounds ſhall paſs within a Yard, without apprehending him. --- He will break into one Thicket after another to find Deer, rouſing, gathering them together, and herding with them; and even beating ſome of them into his Treads, that he may the more eaſily eſcape. — Finding himſelf ſpent, he will break herd, and fall a doubling and croſſing in ſome hard beaten Highway; always running againſt the Wind, not only to cool himſelf, but the better to hear the Voice of the Purſuers.

The laſt Refuge of a Hart ſorely *hunted*, is the Soil; keeping the Middle, for fear, leſt by touching a Bough, or the like, he may give Scent to the Hounds. He always ſwims againſt the Stream, whence the old Rule, *He that will his Chace find, let him try up the River, and down the Wind.* In taking Soil, he will ſometimes cover himſelf under Water, ſo as to ſhew nothing but his Noſe.

Where Opportunity of Water fails, he will fly into Herds of Cattel, as Cows, Sheep, &c. and will ſometimes leap on an Ox, Cow, or the like, laying the fore Part of his Body thereon, that ſo touching the Earth only with his hinder Feet, he may leave a ſmall, or no Scent behind. — What is further ſtill, the chief *Huntſman* to *Lewis* XII. relates, that a Hart which they were in hard Chace of, leap'd into a great tall white Thorn, which grew in a ſhadowy Place, and there ſtood aloft, till he was thruſt through by a *Huntſman*, rather than he would ſtir.

This being done, the *Hunter* with his Horn windeth the Fall of the Beaſt; upon which every one approaches, the ſkilfuleſt opens the Beaſt, rewarding the Hounds with what properly belongs to them; the *Huntſman*, at the ſame time, dipping Bread in the Skin and Blood of the Beaſt to give the Hounds their full Satisfaction.

The Hart is known to be ſpent by his running ſtiff, high, and lompering; by his Mouth being black and dry, without Foam on it, and his Tongue hanging out; tho' he will ſometimes cloſe his Mouth to deceive the Spectators: And by his Slot; for he will ſometimes cloſe his Claws together, as if he went at Leiſure, and ſtraight again open them wide, making great Glidings, and hitting his Dew Claws upon the Ground, &c.

When quite ſpent, and cloſe beſet, or intercepted on all Sides, the Hart uſually takes to Bay, and makes Force with his Head againſt the firſt Man or Dog that cloſes in upon him, unleſs prevented with a Spear, Sword, or the like. — Hence 'tis very dangerous going in to a Hart at Bay, eſpecially at Rutting-time, for then they are more fierce.

The Hart being kill'd, his Death is ſolemniz'd with great Ceremony. --- The firſt Thing, when the *Huntſmen* come in, is to cry *ware Haunch*, that the Hounds may not break into the Deer: Having ſecur'd this, they cut his Throat, and blood the younger Hounds, to make them love a Deer, and learn to leap at his Throat. Then having blown the *Mort*, and all the Company being come in, the moſt diſtinguiſh'd Perſon, who has not *taken Say* before, takes up the Knife, and lays it croſs the Belly of the Deer, (ſome of the Aſſiſtants holding by the fore Legs, and at the ſame Time the *Huntſman* drawing down the Pizzle) and thus draws the Knife along the Middle of the Belly, beginning near the Brisket, cutting deep enough to diſcover how fat he is. Then the moſt ſkilful Perſon breaks up the Deer, by firſt ſlitting the Skin from the cutting of the Throat downward, making the Arber, that the Ordure may not break forth, and then paunching him, and rewarding the Hounds therewith.

Laſtly, the Perſon that took the Say, being preſented with a drawn Hanger, he is to cut off the Head; which done, and the Hounds rewarded therewith, the concluding Ceremony, if a Buck, is a Double, if a Stag, a Treble, Mort blown by one, and a Recheat in Conſort by all that have Horns: The whole concluded with a general *Whoo, Whoop.*

*Buck* HUNTING, or HUNTING of Fallow Deer. — The Buck the firſt Year, is call'd a *Fawn.* — The ſecond Year, a *Pricket.* — The third, a *Sorel.* — The fourth, a *Sore.* — The fifth, a *Buck of the firſt Head.* — The ſixth Year, a *Great Buck.*

The Female is call'd *Doe* or *Doo.* — The firſt Year, a *Fawn.* — The ſecond, a *Tegg.* — The third, a *Doe.*

This Beaſt is common in moſt Countries, being as corpulent as a Hart, but in moſt Things reſembling more a Roe, except in Colour; which is various, but moſt commonly branded or ſandy on the Back, having a black Liſt all along on the Ridge, and the Belly and Sides ſpotted with white.

The Male has Horns not much differing from a Hart, except in Largeneſs, and that they grow out of the Head like Fingers out of the Hand; whence it is call'd *Cervus Palmatus.* The Female is without Horns.

Leſs Art and Skill are requir'd in lodging a Buck, than in harbouring a Hart; nor does there need ſo much drawing after: 'Tis ſufficient that you judge by the View, and mark what Grove or Covert he enters; for he does not wander and rove ſo often as a Hart, nor ſo frequently change his Layer.

When hard *hunted*, he takes to ſome ſtrong Hold or Covert he is acquainted with; not flying far before the Hounds, nor croſſing nor doubling, noruſing any of the Subtleties the Hart is accuſtom'd to.

The Buck will beat a Brook, but ſeldom a great River, as the Hart; nor can he ſtay ſo long at Soil.

The greateſt Subtlety a *Huntſman* need uſe in *Hunting* the Buck, is to beware of *Hunting* Counter or Change, becauſe of the Plenty of Fallow Deer, which uſe to come more directly upon the Hounds than the Red Deer do.

The Buck herds more than the Hart, and lieth in the dryeſt Places: But if he be at large, unconfin'd in a Park, he herds but little from *May* to *Auguſt*, becauſe the Flies trouble him. He takes Delight in hilly Places, but chuſes the Dales to feed in.

*Roe* HUNTING. — The Roe, the firſt Year, is call'd a *Kid.* — The ſecond, a *Gyrle.* — The third, a *Hemuſe.* — The fourth, a *Roe-Buck of the firſt Head.* — The fifth Year, a *Fair Roe Buck.*

We have no Roe Deer in *England*; but they abound in *Scotland*, *Germany*, *Africa*, &c. And it ſhould ſeem they had been more common among us, our ancient *Huntſmen* ſtill retaining the proper Terms for the Chace.

They make good Chace, ſtand long, and fly end-way. — When a Roe croſſes and doubles, it is call'd *Trapyning.*

Their Swiftneſs appears not only on Earth, but in Waters, thro' which they cut their Way as with Oars; whence they love Lakes and Streams, breaking the Floods to come at freſh Paſture, feeding on Ruſhes, &c.

Horns

Horns only grow on the Male; being ſet with ſix or ſeven Branches, not palm'd, but Branchy, yet ſhorter than Fallow Deer. After Rutting he caſts his Head.

They are ſaid never to wink, not even when aſleep; for which Conceit their Blood is preſcrib'd to Perſons dim-ſighted or pur-blind. --- The Tail of this Beaſt is leſs and ſhorter than that of a Fallow Deer, inſomuch, that it is queſtion'd whether it ought to have that Denomination.

They keep moſt in Mountains among the Rocks; and when *hunted*, *Martial* tells us, will hang thereon with their Horns, to delude the Dogs. --- They are often taken by counterfeiting of their Voice, which the *Huntſman* does by the Aſſiſtance of a Leaf in his Mouth.

When *hunted*, they turn much, and often, and will come back on the Dogs directly, when they can no longer endure. They alſo take Soil, as the Hart; and will hang by a Bough in ſuch a Manner, as that nothing ſhall appear but their Snout.

*Hare* HUNTING. — A Hare, the firſt Year, is call'd a *Leveret*. — The ſecond Year, a *Hare*. — The third, a *Great Hare*.

A Hare is call'd in *Hebrew*, *Arnebet*; which being Feminine, poſſeſs'd a great many with the Notion that all Hares were Females. --- He is call'd *Lagos* by the *Greeks*, for his immoderate Luſt, and by the ſame Nation *Ptoox*, for his Fear; and by the *Latins*, *Lepus*, *quaſi levi-pes*, to denote Swiftneſs of Feet.

There are four Sorts of Hares. --- Some live in the Mountains, ſome in the Fields, ſome in the Marſhes, and ſome any where indifferently.

Thoſe of the Mountains are the moſt ſwift, and thoſe of the Marſhes the ſloweſt: The wandering Hares are moſt difficult and dangerous to follow.

Each Part and Member of the Hare is form'd for Celerity; the Head is round and ſhort, of a convenient Length; the Ears long and lofty, to hear the Enemy at a Diſtance, and ſave itſelf in Time; the Lips continually move, ſleeping and waking; and the Eye is too big and round for the Lid to cover it, even when aſleep, ſo that the Creature ſleeps as it were on the Watch. The Breaſt is capacious, and fitted to take more Breath than any other Beaſt.

They feed abroad to conceal their Forms; and never drink, but content themſelves with the Dew. Her Ears lead the Way in her Chaſe; for with one of them ſhe hearkeneth to the Cry of the Dogs, the other being ſtretch'd forth like a Sail to promote her Courſe.

The Hares of the Mountains often exerciſe themſelves in Vallies and Plains, and, thro' Practice, grow acquainted with the neareſt Ways to their Forms. Thoſe which frequent Buſhes and Brakes, are not able to endure Labour, nor very ſwift, as being tender footed, and growing fat thro' Diſcontinuance of Exerciſe.

When the Hare has left the Dogs far behind, ſhe goes to ſome Hill or Riſing Ground, where, raiſing on her hinder Legs, ſhe obſerves at what Diſtance her Purſuers are.

The Scent is naturally ſtronger in Wood Hares than Field Hares; but in all Sorts it is ſtrongeſt when they feed on Green Corn. --- In Winter Mornings, the Scent does not lie till the Froſt be a little thaw'd: And it may be added, that a Hare always leaves more Scent when ſhe goes to Relief, than when ſhe goes to Form.

Her Footſteps are more ſeen in Winter than Summer, becauſe, as the Nights are longer, they travel farther. --- Their Prints are very uncertain at the full Moon; at which Time they leap and play together. The Young, it is to be obſerv'd, tread heavier than the Old, by reaſon their Limbs are weaker.

A Buck, or Male Hare, is known by his beating the hard Highways, feeding farther out in the Plains, and making his Doublings of a greater Compaſs than the Female, who keeps cloſe by ſome Covert Side, turning, winding, and croſſing in the Buſhes like a Coney, and rarely running out an End; whereas the Buck, having once made a Turn or two about his Form, then farewel Hounds, for he will frequently lead them five or ſix Miles without once turning his Head: Add, that the Buck is known, at his riſing out of Form, by his hinder Parts, which are more white, or his Shoulders redder than the Does.

The Hare regulates her Conduct according to the Weather. --- In a moiſt Day, ſhe holds the Highways more than at any other Time, by reaſon the Scent is then moſt apt to lie; and if ſhe come at the Side of any young Grove or Spring, ſhe forbears to enter, but ſquats down a-ſide thereof, till the Hounds have over-ſhot her; upon which ſhe returns the ſame Way ſhe came, without turning into any Covert, for Fear of the Wet and Dew hanging on the Boughs.

Regard is alſo to be had to the Place where the Hare ſits, and upon what Wind; for if her Form be either upon the North or South Wind, ſhe will not willingly run into the Wind, but aſide, or down the Wind: On the contrary, if ſhe Form in the Water, 'tis a Sign ſhe is foul and meaſled, and in the Courſe will make all her Doublings and Croſſings about Brook Sides, and near Plaſhes; for her Scent, under this Condition, being very ſtrong, ſhe needs a Place that will take but little.

Sometimes, when *hunted* down, ſhe will ſtart a freſh Hare, and ſquat in the ſame Form: Other times, ſhe will creep under the Door of a Sheep-Coat, and hide among the Sheep, or run among a Flock of Sheep; and not without the utmoſt Difficulty be taken from among them. --- Add, that ſome will take the Ground like a Coney; which is call'd going to *Vault*.

Some Hares will go up one Side of the Hedge, and come down the other; and we have known a Hare, that being ſorely *hunted*, has got upon a Quickſet Hedge, and ran a good way on the Top thereof, and then leap'd off upon the Ground: And 'tis no unuſual Thing for them to take themſelves to Furz Buſhes, and leap from one to another, whereby the Hounds are frequently in Default.

A Hare does not live above ſeven Years, at moſt, eſpecially the Buck: And if he and the Doe keep one Quarter, they will not ſuffer any ſtrange Hare to ſit by them; whence the Proverb, *The more you* hunt, *the more Hares you ſhall have*; ſince, having kill'd one Hare, another comes and poſſeſſes his Form.

By the Way it is to be obſerv'd, that to enter a young Kennel of Hounds, regard muſt be had to the Nature of the Country, and of the Quarry; for, according to the Place wherein they are enter'd, and the Game firſt given them, will they afterwards prove. Thus, if they be enter'd in a Champion Country, they will ever after more delight to *hunt* there than in any other Place, *&c.*

Having found where a Hare hath reliev'd in ſome Paſture or Corn Field; to find her Form, the Seaſon of the Year, and the State of the Weather, are to be conſider'd. --- In the Spring or Summer, a Hare will not ſit in the Buſhes, becauſe frequently offended with Piſmires, Snakes, and Adders; but will ſit in Corn Fields and open Places. --- In Winter, they chuſe to ſit near Towns and Villages, in Tufts of Thorns and Brambles, eſpecially when the Wind is Northerly or Southerly. --- According to the Seaſon and Nature of the Place where the Hare is accuſtom'd to ſit, there beat with your Hounds and ſtart her; which is better Sport than Trailing of her from her Relief to her Form. --- Having ſtarted her, ſtep in; and hollow in the Hounds till they have undertaken it, crying, *That*, *That*, or *There*, *There*, and go on with full Cry; then Recheat them, and follow at a Diſtance, taking Care not to forward them too much at firſt, as being apt, in the firſt Heat, to over-ſhoot the Game. --- Above all Things mind the firſt Doubling the Hare makes, which is to be a Key or Direction for the whole Day; all the other Doublings ſhe afterwards makes being like the firſt. --- According to the Policies you ſee her uſe, and the Place where you *hunt*, make your Compaſs, to help the Defaults, great or little, long or ſhort; always ſeeking the moiſteſt and moſt commodious Places for the Hounds to ſcent in.

*Fox* HUNTING. — This Animal, the firſt Year, is call'd a *Cub*. — The ſecond, a *Fox*. — The third, an *Old Fox*.

His Nature, in many Reſpects, is like that of a Wolf; and both bring the ſame Number of Cubs at a Litter; but the Fox litters deep under Ground, which the Wolf does not.

A Bitch Fox is hard to take, when bragged, and with Cub, in regard ſhe lies near her Burrow, into which ſhe runs upon Hearing the leaſt Noiſe; indeed 'tis no eaſy Matter to take her at any Time, as being a Beaſt of exceeding Subtlety.

What makes Fox *Hunting* the more entertaining, is, the ſtrong hot Scent he affords, which keeps up an excellent Cry; but as his Scent is hotter at Hand, ſo it dies ſooner than that of a Hare, *&c.* Add, that he never flies far before the Hounds, as not truſting to his Legs, or the Champion Ground, but has Recourſe to the ſtrongeſt Coverts. --- When he can no longer ſtand up before the Hounds, he takes Earth, and muſt be dug out. --- When cours'd by Greyhounds on a plain, his laſt Refuge is uſually to piſs on his Tail, and ſlap it in their Faces as they come near him; ſometimes ſquirting his thicker Excrement upon them, to make them give over the Courſe.

When a Bitch goes a Clicketing, and ſeeks the Dog, ſhe cries with a hollow Voice, not unlike the hollowing of a mad Dog; and the like Noiſe ſhe makes when ſhe miſſes any of her Cubs; but never cries at all when ſhe is killing, but defends herſelf in Silence to the laſt Gaſp.

The Fox is taken with Hounds, Greyhounds, Terriers, Nets, and Gins. --- Of Terriers there are two Sorts, the one crook-leg'd, and commonly ſhort-hair'd, which take Earth well, and lie long at Fox or Badger; the other ſhagged and ſtraight-leg'd, which will not only *hunt* above Ground as others, but alſo enter the Earth with great Fury, tho' they cannot ſtay in ſo long, by reaſon of their Vehemence.

The Fox chuſes to Earth in Ground hard to dig, as in Clay or Stoney Ground, or amongſt the Roots of Trees; and his Earth has commonly but one Hole, which goes ſtraight a long Way in, before it come at their Couch. He ſometimes by Craft poſſeſſes himſelf of a Badger's old Burrow, which has Variety of Chambers, Holes, and Angles. *Geſner* relates, that he frequently cheats the Badger of his Habitation, by laying his Excrements at the Mouth of his Burrow: Add, that the Wolf being an Enemy to the Fox, this latter ſecures his Earth, by laying an Herb call'd *Sea-Onion* in the Mouth thereof, which the Wolf has a natural Averſion to, ſo that he never comes near the Place where it either lies or grows.

*Badger* HUNTING. --- A Badger is call'd by ſeveral Names, *viz.* a *Gray Brock*, *Boreſon*, or *Bauſon*. --- The Male is a *Badger* or *Borepig*, and the Female a *Sow*.

This Beaſt is very frequent in *Italy*, *Sicily*, the *Alpine* and *Helvetian* Coaſts; and not uncommon in *France* and *England*.

There are two Kinds, the one reſembling a Dog in his Feet, and the other a Hog by his cloven Hoof: They differ too in their Snout and Colour, the one reſembling that of a Dog, the other of a Swine: The firſt has a greyer or whiter Coat than the other, and goes farther out to prey: They differ alſo in their Meat, the one eating Fleſh and Carrion like a Dog, the other Roots and Fruit like a Hog.

A late Author likewiſe mentions two Sorts of Badgers, but in a different Manner; the one, according to him, caſting his Flaunts long, like a Fox, having his Reſidence in Rocks, and making his Burrow very deep; whereas the Burrows of the other are made in light Ground, and have more Variety of Cells and Chambers: The one is call'd the *Badger-pig*, and the other the *Badger-whelp*; or the one may be call'd *Canine*, and the other *Swiniſh*: The firſt hath his Noſe, Throat, and Ears yelloviſh, and is much blacker and higher legg'd than the latter. Both live on Fleſh, hunting greedily after Carrion; and are pernicious to Warrens, eſpecially when big with young.

When the Badger Earths; after they have dug a good Depth, they make uſe of an Expedient to carry off the Earth. --- In order to which, one of them lies down on his Back, and on his Belly the reſt lay the Earth; thus taking his hind Feet in his Mouth, they draw the Belly laden Badger out of the Hole or Cave, and having disburden'd him, he re-enters, and repeats the Labour till the Work be compleated.

The Badger is a very ſleepy Beaſt, eſpecially in the Day-time, ſeldom ſtirring abroad but in the Night; whence the Denomination *Lucifuga*, *q. d.* Avoider of the Light.

The Badger is a deep biting Beaſt, having very ſharp Teeth; to guard againſt the Effects whereof, it is uſual to put great broad Collars about the Dogs Necks. His Back is broad, and his Legs longer on the right Side than the left, whence he runs beſt on the Side of a Hill or Cart-Road Way. He fights on his Back, and by this means is at Liberty to uſe both his Teeth and Nails: He has a Faculty of blowing up his Skin after a ſtrange Manner, by which he defends himſelf againſt any Blow or Bite of the Dogs; ſo that you may thraſh your Heart out on his Back; but a ſmall Stroak on the Noſe diſpatches him preſently.

In *Italy* and *Germany* they eat the Fleſh of Badgers, boiling it with Pears; but in *England* it is not liked, being of a ſweet rankiſh Taſte. 'Tis beſt in *September*; and of the two Kinds, the Swiniſh Badger is the beſt Meat.

They are long Livers, and generally grow blind by meer Age; from which Time they never ſtir out of their Holes, but are fed by the reſt.

The Method of *Hunting* the Badger is thus: --- Seek the Earths and Burrows where he lies, and in a clear Moon-ſhine Night go and ſtop all the Holes but one or two, and therein place Sacks, faſten'd with drawing Strings, which may ſhut him in as ſoon as he ſtrains the Bag. --- The Bags thus ſet, caſt off your Hounds, and beat all the Groves, Hedges, or Tufts within a Mile or two. What Badgers are abroad, being alarm'd by the Dogs, will ſtraight repair to their Earths, and ſo be taken.

He that ſtays to watch the Sacks, muſt ſtand cloſe, and upon a clear Wind; elſe the Badger will find him, and fly ſome other Way for Safety. If the Hounds either encounter him, or undertake the Chaſe before he can get into his Earth, he will ſtand at Bay like a Boar, and make excellent Sport.

If the Badger be attack'd in his Earth; as ſoon as he perceives the Terriers yearn him, he will ſtop the Hole between the Dogs and himſelf; and if the Dog continues baying, he removes his Baggage with him, and goes into another Appartment or Chamber, of which he uſually has half a Dozen in the Burrow; thus retreating from one to the other, till he can go no further, and barricading the Way as he goes.

*Otter* HUNTING --- The Otter is ſuppos'd by ſome, of the Caſtor or Beaver Kind, being, like it, an amphibious Creature, and living both in the Water and on Land; beſide that, the Reſemblance in Point of Shape is ſuch, as, were his Tail off, he were in all Reſpects like the Beaver; differing in nothing but Habitation, the Beaver frequenting both the ſalt Water and the freſh, but the Otter only the freſh. See CASTOR.

Tho' the Otter live much in the Water, he does not breathe like Fiſhes, but after the Manner of Quadrupeds. --- He is web-footed, like our Water Fowl, and can endure to be under Water a long Time without Reſpiration: And yet in Fiſhing he is frequently found to pop up his Noſe for Breath. --- He has an admirable Smell, whereby he will directly wind a Fiſh in the Water a Mile or two off; and is a moſt pernicious Beaſt to a Fiſh-pond, his Dexterity at diving, and hunting under Water being ſuch, that ſcarce any Fiſh can eſcape him: If by painful *hunting* aſhore he cannot fill his Belly, he will feed on Herbs, Snails, or Frogs: He will ſwim a fiſhing two Miles together, always againſt the Stream, that when his Belly is full, the Current may carry him down again to his Lodging, which is near the Water, artificially built with Boughs, Sprigs, and Sticks couch'd together in fine Order.

The Fleſh of this Beaſt is cold and filthy, as feeding on ſtinking Fiſh; for which Reaſon it is not eaten among us: Tho' among the *Germans* it is a pretty common Food; and the *Carthuſian* Fryars, who are forbidden to eat all Manner of Fleſh, are allow'd this. Some in *England* have, of late, ſaid much in Praiſe of Otter Pye.

The Otter is to be *hunted* by particular Dogs, call'd *Otter Hounds*; and alſo with ſpecial Inſtruments, call'd *Otter Spears*.

To find him out, ſome are to go on one Side the River, and ſome on the other; beating all the Way on the Banks, with the Dogs following. --- Thus it is ſoon found if there be an Otter in that Quarter; for the Otter cannot endure long in the Water, but muſt come forth to make his Spraints, and in the Night ſometimes to feed on Graſs and other Herbs. If the Hounds find an Otter, look in the ſoft and moiſt Places, to learn by the Prints which Way he bent his Head: If theſe make no Diſcovery, it may be partly perceiv'd by the Spraints. --- This done, follow the Hound, and lodge him as a Hart or Deer.

The Otter always endeavours to keep to the Water, where he is Maſter. --- In *Hunting* him therefore, you are to be ready with your Spears, to watch his Vents, for that is the chief Advantage: If you perceive where he ſwims under Water, ſtrive to get a Stand before him, where you expect he will Vent, and there endeavour to ſtrike him with the Spear: If you miſs, purſue him with the Hounds; which, if they be good, and well enter'd, will come chaunting and trailing along by the River Side, and beat every Tree-Root, every Oſier-Bed, and Tuft of Bull-Ruſhes; nay, ſometimes, they will take the Water, and beat it like a Spaniel; by which Means the Otter can hardly eſcape.

If the Beaſt find himſelf wounded with a Spear, he makes to Land, where he will maintain a furious Battle with the Dogs.

HURDLES, in Fortification, Twigs of Willows or Oſiers, interwoven cloſe together, and uſually laden with Earth. Their Uſe is to render Batteries firm, or to conſolidate the Paſſages over muddy Ditches, or to cover Traverſes and Lodgments for the Defence of the Workmen, againſt the artificial Fires or Stones that may be caſt upon them.

HURDLES, in Husbandry, are Frames made either of ſplitted Timber, or of Hazle Rods, platted together; to ſerve for Gates in Encloſures, or to make Sheepfolds, *&c.*

HURDS, or HARDS *of Flax* or *Hemp*, the coarſer Parts, ſeparated in the Dreſſings from the Tear or fine Stuff. See HEMP and FLAX.

HURLE *Bone*, in an Horſe, is a Bone near the Middle of the Buttock; very apt to go out of its Sockets with a Slip or Strain.

HURLERS, a ſquare Set of Stones in *Cornwall*, ſo call'd from an odd Opinion advanc'd by the common People, that they are ſo many Men petrify'd or chang'd into Stones, for profaning the Sabbath-Day by *hurling* the Ball, an Exerciſe for which the People of that Country have been always famous.

HURTS, in Heraldry, by ſome wrote HEURTS, and by others HUERTS, are azure or blue Roundles. See ROUNDLE.

The *Engliſh* Heralds diſtinguiſh between the Colours of Roundles, and give them different Names agreeable thereto: Thoſe of other Nations content themſelves to call theſe *Torteaux d' Azure*; and in other Caſes, only add the reſpective Colour to the Term *Torteaux*.

But theſe being blue, ſome will have them ſignify Bruiſes or Contuſions in the Fleſh, which oft turn to that Colour; others ſuppoſe them Hurtle Berries.

HURRICANE, a *Whirlwind*; or a Storm of Wind arising from a Contrariety and Oppoſition of ſeveral Winds. See WIND and WHIRLWIND.

*Hurricanes* are frequent in the *Eaſt* and *Weſt Indies*; making terrible Ravages in the Iſlands thereof; blowing down Houſes, rooting up Trees, and even whole Woods, &c.

They begin in the North, but turn round; and in a little time veer thro' all the Points of the Compaſs.

'Tis the Cuſtom for the *French* and *Engliſh* Inhabitants in the *Caribbee Iſlands*, to ſend every Year about *June* to the Native *Caribbees* of St. *Dominico* and St. *Vincent*, to know whether there will be any *Hurricanes* that Year: And about ten or twelve Days e'er any *Hurricane* come, they conſtantly ſend them Word.

The Prognoſticks thoſe Barbarians go by, are given us by Capt. *Langford*, who, in 1697, engag'd one of them, by Civilities, to reveal them to him.

'Tis one of their Principles, that all *Hurricanes* come either on the Day of the Full, Change, or Quarter of the Moon; each of which is diſcover'd by a Number of Phænomena the preceding Quarters, as, a turbulent Sky, Sun red, univerſal Calm, the Stars appearing red, Noiſes in Hollows or Cavities of the Earth, ſtrong Smell of the Sea, a ſettled weſterly Wind, &c.

That Author aſſures us, he receiv'd this Benefit from the Information, that whereas *Hurricanes* are ſo dreadful, that all Ships are afraid to put out to Sea while they laſt, and chuſe rather to periſh at Anchor in the Roads; yet, with good Management, a Veſſel may lie out at Sea in theſe, as ſafely as other Storms, by taking Care the Ports be well barr'd and calked, the Topmaſts and Tops taken down, the Yards a port laced, and the Doors and Windows ſecur'd. --- With theſe Precautions, that experienc'd Navigator preſerv'd his Veſſel in two great *Hurricanes*, and taught others how to do the ſame, by putting out from Port, where they would inevitably have periſh'd. And from the Prognoſticks above, he foretold ſeveral *Hurricanes* at Land.

He adds, that all *Hurricanes* begin from the North, and turn to the Weſtward, till arriving at the South-Eaſt, their Force is ſpent.

The Cauſe he ſuggeſts to be the Sun's leaving the Zenith of thoſe Places, and going back towards the South; and the repelling or bounding back of the Wind, occaſion'd by the calming of the general Trade Wind. *Philoſophical Tranſactions*, N°. 246.

HUSBAND, *Maritus*, a Man join'd or contracted with a Woman, in Marriage. See MARRIAGE.

By the Laws of *England*, the Wife is ſuppos'd wholly under the Dominion of her *Husband*, nor can act or will any thing of herſelf. See WIFE, FEME, &c.

In *Germany*, the Power of the *Husband* is not ſo extenſive; even the Princes of the Empire have not a Sovereign and Deſpotic Power over their Wives and Children. --- *Pagenſtecher*, a *German* Lawyer, has a Diſſertation to prove, that, by the Law of Nature, a *Husband* has not a deſpotic Power over his Wife; and that Marriage is not Monarchy. He ſtruggles hard to explain that Paſſage of St. *Paul* to the *Epheſians*, cap. v. 22. conſiſtently with his Scheme.

*J. Philip Palthen*, Profeſſor of Law at *Gryphſwald*, gives us a very learned Diſſertation on the *Husband* of a Queen, who is not King, *De Marito Reginæ*. He defines him a Man marry'd with a Princeſs that holds a Crown by Right of Inheritance, but who only contracted Marriage with him, on Condition that the Marriage ſhould not change his Condition, nor give him any Command over his Wife, or joint Authority with her; nor intitle him to ſucceed to any of her Royalties after her Deceaſe, without the Intervention of ſome further Act. Hence he concludes, that in ſuch Caſe 'tis the Queen is really King. See QUEEN and KING.

This, however, does not hinder but the *Husband* may be a King elſewhere, and in that Quality ſuperior to his Wife; for a Maiden Queen may either marry a Sovereign Prince, or a Subject, and this either of her own Realm, or another: Of all which Caſes he gives Inſtances: As, that of *Ferdinand* and *Iſabella*, whoſe Marriage did not give any Authority to the one over the Kingdom of *Arragon*, nor to the other over that of *Caſtile*; of *Joan*, Daughter of *Iſabella*, and *Philip* of *Auſtria*; *Philip* II. of *Spain*, and *Mary* Queen of *England*; the two *Joans* Queens of *Naples*; *Mary* Queen of *Scots*, and the Dauphin of *France*; and laſtly, Queen *Anne*, whoſe *Husband* was her Subject, yielded Homage to her as her Vaſſal, and took an Oath of Fidelity to her as her Miniſter. M. *Palthen* proceeds to examine in what Kingdoms this may happen; and ſhews, that it cannot be in an elective Kingdom, nor an uſufructuary one; whence he concludes, that we ſhall never ſee it in *Poland*, *France*, or *Germany*; but that there are Inſtances of it in all the other Monarchies, of any ſtanding, in *Europe*. He goes on to ſhew, that a Queen ought not to marry a King; that it is no Violation of the Conjugal Society, for her Husband to be ſubject to her; and anſwers all the Difficulties that may be ſtarted with regard thereto, particularly from Paſſages of Scripture, as *Iſ.* iii. 11. *Cor.* xiv. 34. *Gen.* iii. 6. *Eph.* v. 23. *Col.* iii. 18, &c.

HUSK, among Botaniſts, the Part which a Flower grows out of. See FLOWER.

Of theſe there are ſeveral Kinds, as *bulbous* or *round Husks*, *Bottle Husks*, *middle Husks*, *Foot Husks*, *Hoſe Husks*, &c. See HOSE-*Husk*, &c.

HUSSARS, HUSSARDS, or HUSSARTS, an Order or Species of Soldiery in *Poland* and *Hungary*, commonly oppos'd to the Ottoman Cavalry.

The *Huſſars* are Horſemen, cloath'd in Tygers and other Skins, and garniſh'd and ſet out with Plumes of Feathers. Their Arms are the Sabre and Bayonet.

They are very reſolute; firm Partiſans; and better in a haſty Expedition, than a ſet Battle.

The Emperor and King of *France* have of theſe *Huſſars* in their Service.

HUSSITES, a Party of Reformers, the Followers of *John Hus*. See REFORMATION.

*John Hus*, from whom the *Huſſites* take their Name, was born in a little Village of *Bohemia*, call'd *Hus*. --- He fell into the Sentiments of *Wicklif* and the *Waldenſes*; and in the Year 1407, began openly to oppoſe and preach againſt divers Errors in Doctrine, as well as Corruptions in Point of Diſcipline, then reigning in the Church. See WICKLIFFISTS and WALDENSES.

He was condemn'd, with *Jerom* of *Prague*, by the Council of *Conſtance*, and burnt, in the Year 1415: But his Diſciples ſtill ſtuck to his Doctrines. --- *Joh. Ziſca*, being put at their Head in *Bohemia*, maintain'd War a long Time againſt the Emperor *Sigiſmond*, with great Succeſs. And *Procopius Holy*, another of their Leaders, conducted them with equal Courage.

The *Huſſites* ſpread over all *Bohemia* and *Hungary*, and even *Sileſia* and *Poland*; and there are ſome Remains of them ſtill ſubſiſting in all thoſe Parts.

HUSTINGS, HUSTINGUM, from the *Saxon*, *Hus*, Houſe, and *Thing*, Cauſe; *q. d. domus cauſarum*, a Houſe where Cauſes are heard; or rather, from *Huſtinge*, Court or Council: Is the principal and higheſt Court in *London*, held in *Guild-hall*. See COURT and GUILD *hall*.

Of the great Antiquity of this Court, we find this Mention in the Laws of King *Edward* the Confeſſor. --- *Debet etiam in* London *quæ eſt caput Regni & Legum, ſemper curia Domini Regis ſingulis ſeptimanis, Die Lunæ* Huſtingis *ſedere & teneri: fundata erat olim & ædificata ad inſtar & ad modum & in memoriam veteris magnæ Trojæ, & uſque in hodiernum diem, Leges, & Jura & Dignitates, & Libertates Regiaſque conſuetudines ſuas una ſemper inviolabilitate conſervat.* Taylor's Hiſt. of Gavel-kind.

This Court is held before the Mayor and Aldermen of *London*. --- Error or Attaint lies there of a Judgment or falſe Verdict in the Sheriffs Courts.

Other Cities and Towns had alſo Courts of the ſame Name, as *Wincheſter*, *Lincoln*, *York*, *Shippey*, &c.

HUT, from the *Saxon*, *Hutte*, a ſmall Cottage or Hovel. See COTTAGE and HOVEL.

The Word is alſo us'd for the Soldiers Lodges in the Field. See BARRACK.

HUXING *of the Pike*, among Fiſhermen, a particular Method of catching that Fiſh; very diverting. See *Pike* FISHING.

For this Purpoſe, they take thirty or forty as large Bladders as can be got; blow them up, and tye them cloſe and ſtrong; and at the Mouth of each, tye a Line, longer or ſhorter, according to the Depth of the Water. At the End of the Line is faſten'd an armed Hook, artificially baited; and thus they are put into the Water with the Advantage of the Wind, that they may gently move up and down the Pond.

Now, when a Maſter Pike has ſtruck himſelf, it affords a deal of Entertainment to ſee him bounce it about in the Water with a Bladder at his Tail; at laſt, when they perceive him almoſt ſpent, they take him up.

HYACINTH, or JACINTH, in Natural Hiſtory, a precious Stone; thus call'd from its Reſemblance of the Purple Flower nam'd *Hyacinth*. See PRECIOUS *Stone*.

There are four Sorts of *Hyacinths*: thoſe intermix'd with a Vermillion Colour; thoſe of a Saffron Colour; thoſe of an Amber Colour; and, laſtly, thoſe of a white, intermix'd with a ſlight red.

*Hyacinths*, again, are diſtinguiſh'd into Oriental and Occidental. The Oriental come from *Calicut* and *Cambaya*, and are equal in Hardneſs to the Oriental Amethyſt. --- The Occidental are found in *Bohemia* and *Portugal*, which are a Degree ſofter.

The Stone graves or cuts fine, and would be more us'd for Seals, &c. but that the Graving frequently coſts more than the Stone.

The Antients us'd it for Amulets and Taliſmans; and bore it about their Neck, or ſet in Rings, &c. ſuppoſing it to have the Virtue of ſecuring them from the Plague, &c.

The *Hyacinth* us'd in Medicine, and whereof the Confection of *Hyacinth* is made, is a different Stone, of which there are three ſeveral Sorts: The firſt about the Bigneſs and Figure of a Grain of Salt, and pretty ſoft: The 2d ruddy, and ſhap'd like the Point of a Diamond, found in divers Parts of *Italy*, *Sileſia*, *Bohemia*, &c. The third is white, intermix'd with yellow, and ſome other Colours; being found in the ſame Places as the red.

In Strictneſs, only the firſt Kind ſhould be us'd in the Confection of *Hyacinth*; but the Druggiſts and Apothecaries frequently ſubſtitute the other.

*Confection of* HYACINTH, is a thin cordial Electuary, compos'd of divers Kinds of precious Stones, particularly of that whoſe Denomination it bears, with certain Earths, Seeds, Roots, Coral, Hartſhorn, and divers other Ingredients, well mix'd, and ground together. See CONFECTION *of Hyacinth*.

HYACINTHIA, in Antiquity, Feaſts held at *Sparta*, in Honour of *Apollo*, and in Commemoration of his Favourite *Hyacinth*.

This *Hyacinth* was the Son of *Amyclas*, King of *Sparta*, and was belov'd both by *Apollo* and *Zephyrus*. The Youth ſhewing moſt Inclination to the former, his Rival grew Jealous; and, to be reveng'd, one Day, as *Apollo* was playing at the *Diſcus*, *i. e.* Quoits with *Hyacinth*, *Zephyrus* turn'd the Direction of a Quoit which *Apollo* had pitch'd, full upon the Head of the unhappy *Hyacinth*, who fell down dead. *Apollo* transform'd him into a Flower of the ſame Name: And as a farther Token of Reſpect, inſtituted this Feaſt.

The *Hyacinthia* laſted three Days; the firſt and third whereof were employ'd in bewailing the Death of *Hyacinth*, and the ſecond in Feaſting and Rejoycing.

The People who aſſiſted at the Ceremony were crown'd with Ivy; by reaſon, ſays *Voſſius*, *de Idolol.* l. ii. c. 14. that *Bacchus* and *Apollo* were the ſame Perſon.

HYBISTRICA, in Antiquity, a ſolemn Feaſt, held among the *Greeks*, with Sacrifices and other Ceremonies; whereat the Men attended in the Apparel of Women, and the Women in that of Men, to do Honour to *Venus* in Quality either of a God, or a Goddeſs, or both.

Or, according to the Account given by others, the *Hybiſtrica* was a Feaſt celebrated at *Argos*, wherein the Women, being dreſs'd like Men, inſulted their Husbands, and treated them with all Marks of Superiority, in Memory of the *Argian* Dames having anciently defended their Country with ſingular Courage againſt *Cleomenes* and *Demaratus*.

*Plutarch* ſpeaks of this Feaſt in his Treatiſe of the great Actions of Women. — The Name, he obſerves, ſignifies *Infamy*; which is well accommodated to the Occaſion, wherein the Women ſtrutted it about in Cloaks, while the Men were oblig'd to dangle in Petticoats.

HYADES, in Aſtronomy, are ſeven Stars, famous among the Poets for the bringing of Rain. — Whence their Name, from the *Greek*, ὗειν, *Pluere*, to rain.

Their Place is in the Bull's Head; The Principal of them in the left Eye, by the *Arabs* call'd *Aldebaran*. Their Longitudes, Latitudes, &c. ſee among thoſe of the other Stars in the Conſtellation TAURUS.

The Poets feign them the Daughters of *Atlas* and *Ethra*. Their Brother *Hyas* being torn to Pieces by a Lioneſs, they wept his Death with ſuch Vehemence, that the Gods, in Compaſſion to them, tranſlated them into Heaven, and plac'd them in the Bull's Forehead, where they continue to weep; this Conſtellation being ſuppos'd to preſage Rain.

Tho' others of the Poets repreſent the *Hyades* as *Bacchus*'s Nurſes, and the ſame with the *Dodonides*, who fearing the Reſentment of *Juno*, and flying from the Cruelty of King *Lycurgus*, were tranſlated by *Jupiter* into Heaven.

HYDATIS, in Medicine, a Diſeaſe of the Eyes, conſiſting of a fatty Subſtance or Excreſcence, growing under the Skin of the upper Eye-lid; by which the whole Eye-lid, in Children, is ſometimes render'd Oedematous. See EYE.

HYDATIS is alſo us'd, among the modern Phyſicians, for a little Bladder of Water, occaſionally found in divers Parts of the Body. See HYDATIDES.

HYDATIDES, in Medicine, are little tranſparent Bags or Bladders full of Water, frequently found in divers Parts of the Body.

*Hydatides* are moſt common in dropſical Perſons, and are ſuppos'd to ariſe from a Diſtention and Rupture of the Lymphæducts; being found chiefly in the Parts abounding in thoſe Veſſels, as the Liver, Lungs, &c. — They are alſo ſometimes found in Icterical Caſes, See JAUNDICE, &c.

We have Inſtances of *Hydatides* voided both by Stool, by Urine, and by Vomiting. — They are of all Sizes, from a Pin's Head to a Pullet's Egg.

The Word is form'd of the *Greek*, ὕδωρ, Water, which, in the genitive Caſe, gives ὕδατος, whence ὑδατὶς, *Hydatis*. See HYDATIS.

HYDATOIDES, a Name ſome Authors give to the Aqueous Humour of the Eye, inclos'd between the Cornea and Uvea. See AQUEOUS *Humour*.

The Word is compos'd of ὕδος, ὕδατος, Water, and εἶδος, Form, Reſemblance.

HYDATOSCOPIA, call'd alſo HYDROMANCY, a kind of Divination, or Method of foretelling future Events, by means of Water. See HYDROMANCY.

There is a natural or allowable Kind of *Hydatoſcopia*: It conſiſts in foretelling Storms, Tempeſts, Hurricanes, &c. from natural Signs or Indications in the Sea, Air, Clouds, &c.

The Word is compounded of ὕδατος, the Genitive of ὕδωρ, Water, and σκοπέω, I view, I conſider.

HYDE *of Land*. See HIDE.

HYDE-*gyld*, from the *Saxon*, *Hydgyld*, a Price or Ranſom paid to ſave one's Skin from beating: Alſo the ſame with Hidage. See HEDGELD.

HYDRA, a Southern Conſtellation, conſiſting of twenty-ſix Stars, and imagin'd to repreſent a Water-Serpent. See CONSTELLATION and STAR.

*Stars in the Conſtellation* HYDRA.

HYDRAGOGUES, a Species of purgative Medicines; being ſuch as are ſuppos'd peculiarly fitted to diſcharge ſerous, or watery Humours. See PURGATIVES.

The ſtrongeſt Catharticks, Dr. *Quincy* obſerves, chiefly anſwer to the Character of *Hydragogues*; in that by their forcible ſhaking and vellicating the Bowels and their Appendages, they ſqueeze out Water enough to make the Stools appear little elſe. See CATHARTIC.

The principal *Hydragogues*, on the common Opinion, are the Juices of Elder, of the Root of Iris, of Soldanella, Mechoacan, Jalap, &c.

In the general, all ſudorific, aperitive, and diuretic Medicines, are *Hydragogues*.

The Word is form'd of ὕδωρ, Water, and ἀγειν, to draw, to lead.

HYDRARGYRUM, a Name the Chymiſts give to Mercury or Quickſilver. See MERCURY.

The Word is *Greek*, form'd of ὕδωρ, *aqua*, Water, and ἄργυρος, *argentum*, Silver, *q. d. Water of Silver*, by reaſon of its reſembling liquid or melted Silver.

HYDRAULICKS, that Part of Staticks which conſiders the Motion of Fluids, and particularly Water; with the Application thereof in artificial Water-works. See WATER.

To *Hydraulicks* belong, not only the conducting and raiſing of Water, with the conſtructing of Engines for thoſe Purpoſes; but alſo the Laws of the Motion of fluid Bodies. See MOTION.

Hydroſtaticks explain the Equilibrium of Fluids, or the Gravitation of Fluids at reſt: Upon removing that Equilibrium, Motion enſues; and here *Hydraulicks* commence.

*Hydraulicks*, therefore, ſuppoſe Hydroſtaticks; and the generality of Writers, from the immediate Relation between the two, join them together, and call them both either *Hydraulicks* or Hydroſtaticks. See HYDROSTATICKS.

The Laws of *Hydraulicks* the Reader will find under the Article FLUID.

And the Art of raiſing Waters; with the ſeveral Machines employ'd for that Purpoſe, as *Siphons*, *Pumps*, *Syringes*, *Fountains*, *Jets d'Eau*, *Fire-Engines*, &c. are deſcrib'd under their proper Articles, SIPHON, PUMP, SYRINGE, FOUNTAIN, FIRE-*Engine*, &c.

The Word is deriv'd from the *Greek*, ὑδραυλος, *ſounding Water*, form'd of ὕδωρ, *aqua*, Water, and αὐλὸς, *Tibia*, Pipe or Flute: The Reaſon whereof is this; that at the Time of the firſt Invention of Organs, being unacquainted with the Method of applying Bellows to blow them, they made uſe of a Cataract or Fall of Water to make a Wind, and ſound them. See ORGAN.

The principal Writers who have cultivated and improv'd the *Hydraulicks*, are *Jo. Ceva*, in his *Geometria Motus*: *Jo. Bap. Balianus*, *De Motu Naturali Gravium, Solidorum & Liquidorum*: *Mariotte*, in his *Mouvement des Eaux & autres Fluides*: *Dom. Guglielmini*, in his *Menſura Aquarum Fluentium*, where the higher Laws of *Hydraulicks* are reduc'd to Practice: Sir *Iſ. Newton*, in *Phil. Nat. Princ. Mathemat.* And *Varignon*, in the Memoirs of the Royal Academy of Sciences.

As to *Hydraulick* Machines, *Hero* of *Alexandria* is the firſt who has wrote thereon. Of the Moderns, the Principal are, *Solomon de Caux*, in a *French* Treatiſe of *Machines, and chiefly of Hydraulick ones*: *Caſp. Schottus* in his *Mechanica Hydraulico Pneumatica*: *De Chales* in his *Mundus Mathematicus*; *Boecler* in his *Architectura Curioſa*: And *Luc. Anthonius Portius*.

HYDRAULO-PNEUMATICAL, a compound Term apply'd, by ſome Authors, to ſuch Engines as raiſe Water by means of the Spring of the Air. See AIR, WATER, ENGINE.

Mr. *Boyle* mentions a very pretty Fountain, which he calls *Hydraulo-Pneumatical*; made by the Spring of the Air preſſing up Water in a Pipe, upon the Air's being exhauſted out of a Receiver, and thus the Weight of the Atmoſphere taken off. See FOUNTAIN, VACUUM, &c.

HYDRELÆON, or HYDRELÆUM, in Pharmacy, a Mixture of common Oil and Water. See OIL and WATER.

*Hydrelæon* taken internally, excites Vomiting; externally, it is Anodyne, and promotes Suppuration.

The Word is a Compound of the *Greek*, ὕδωρ, *aqua*, Water, and ἔλαιον, *Oleum*, Oil.

HYDRENTEROCELE, in Medicine, a Hernia, or Tumor occaſion'd by a Deſcent of the Inteſtines, and Water along with them, into the Scrotum. See HERNIA.

The Word is compounded of ὕδωρ, Water; ἔντερον, Inteſtine; and κήλη, Tumor.

HYDROCANISTERIUM, a *Fire-Engine*; or a Machine which ſpouts Water plentifully and with Force, to be apply'd to the extinguiſhing of Fires and Conflagrations of Houſes, &c. See FIRE, SPOUTING, &c.

We have various Contrivances to this Effect. --- The firſt, and which is, as it were, the Baſis of the reſt, is a Pump incloſ'd in a Ciſtula or wooden Vehicle fill'd with Water, and mounted on Wheels; the Pump being wrought with long Levers which come out of the Ciſtula; and the Water it raiſes directed to the Place by means of a jointed Tube. See PUMP.

The *Dutch* and others uſe a long flexible Tube of Leather, Sail Cloth, or the like, which they carry or conduct in the Hand from one Room to another, as Occaſion requires; ſo that the Engine may be apply'd where the Fire is only within-ſide, and does not burſt out to expoſe it to its external Action.

To improve on this original Fire-Engine, they have ſince contriv'd to make it yield a continu'd Stream; by ſubſtituting a forcing or preſſing Pump in lieu of the ſucking Pump. See FORCING *Pump*.

HYDROCELE, in Medicine, a Swelling or Bloating of the outer Integument or Skin of the Scrotum, occaſion'd by watery Humours caſt or detain'd therein.

The Word is form'd of the *Greek*, ὕδωρ, Water, and βαλλω, I caſt.

The *Hydrocele* is diſtinguiſh'd from an Hernia or Deſcent, in that the firſt is form'd by ſlow Degrees, and the latter all at once. See HERNIA.

Youth is moſt expos'd to the *Hydrocele*. --- It is cur'd by drying Medicines; or by letting out the Water with a Lancet, a Seton, or the like. --- But theſe only amount to a palliative Cure: To go to the Bottom of the Diſeaſe, recourſe muſt be had to Cauteries.

The Word is compounded of the *Greek*, ὕδωρ, *aqua*, and κήλη, Tumor.

HYDROCEPHALUS, or HYDROCEPHALE, in Medicine, a *watery Head*, or Dropſy in the Head. See HEAD.

The *Hydrocephalus* is a Congeſtion of Water in the Head, ſo as to diſtend and render it ſoft. See DROPSY.

There are three Kinds of *Hydrocephali*. The firſt, when the Water is gather'd between the Skull and the Skin: The ſecond, when between the Skull and the Brain: And the third, when the Water is collected in the Ventricles of the Brain.

Children are more liable to *Hydrocephali*, than Adults; by reaſon their Head is ſoft, and has been much compreſs'd in the Womb; or, perhaps, by their having been too roughly handled by the Midwife. --- Add, that the Bones of Childrens Heads being very ſoft, and their Sutures not yet exactly cloſ'd; they eaſily open, and give Way to an Influx of Water from without; whereas in Adults, the Bones of the Cranium are very hard, and cloſely bound together. See CRANIUM.

The *Hydrocephalus* is a Diſeaſe very difficult to cure. --- There is no Remedy but by ſevere bliſtering on the Sutures. --- It ſometimes ends in mortal Convulſions, and ſometimes in Lethargies or Apoplexies.

The Head, in this Caſe, is ſometimes extended to a prodigious Bulk; ſo that the Perſon cannot bear or ſuſtain it. Of this we have an extraordinary Inſtance given us by Dr. *Freind*, of a Girl two Years old, whoſe Head was 26 Inches in Circumference. *Philoſoph. Tranſact.* N°. 318.

The Word is *Greek*, form'd of ὕδωρ, Water, and κεφαλὴ, *Caput*, Head.

HYDROGRAPHICAL *Maps*, more uſually call'd *Sea Charts*, are Projections of ſome Part of the Sea, in Plano; for the Uſe of Navigation. See MAP and NAVIGATION.

In theſe are laid down all the Rhumbs or Points of the Compaſs, the Meridians, Parallels, &c. with the Coaſts, Capes, Iſlands, Rocks, Shoals, Shallows, &c. in their proper Places, Proportions, &c.

*Chriſtopher Columbus*, the firſt great Diſcoverer of *America*, was a Man that earn'd his living by making and ſelling *Hydrographical Maps*. He happen'd to be Heir of the Memoirs or Journals of a noted Pilot, one *Alonſo Sanchez de Huelva*, Captain of a Ship, who, by Chance, had been driven by a Storm to the Iſland of St. *Domingo*, and dy'd at *Columbus*'s Houſe ſoon after his Return. This gave *Columbus*

*lumbus* the first Hint to attempt a Discovery of the *West-Indies*, in which he succeeded.

*For the Construction of the several Kinds of* Hydrographical Maps; See CHART.

*For their Uses*; See SAILING.

HYDROGRAPHY, that Part of Geography which considers the *Sea*; principally, as it is navigable. See SEA and GEOGRAPHY.

*Hydrography* teaches how to describe, and measure the Sea; gives an Account of its Tides, Counter-tides, Currents, Soundings, Bays, Gulphs, &c. as also its Rocks, Shelves, Sands, Shallows, Promontories, Harbours, Distances, &c. from Port to Port, with all that is remarkable, either out at Sea, or on the Coast.

Some of the best Authors use the Term in a more extensive Sense; so as to denote the same with *Navigation*.

In this Sense *Hydrography* includes the Doctrine of Sailing; the Art of making Sea Charts, with the Uses thereof; and every thing necessary to be known, in order to the safest and most expeditious Performance of a Voyage. See NAVIGATION. See also SAILING, CHART, &c.

*Hydrography* is the most perfect of all the Mathematical Sciences; there being scarce any thing wanting to its Perfection, but the Discovery of the Longitude. See LONGITUDE.

The Jesuits *Ricciolus*, *Fournier*, and *De Chales*, are the principal Writers on the Subject of *Hydrography*.

In *France*, they have Professors of *Hydrography* establish'd in all their Sea Ports, who are to instruct the Youth intended for the Sea, in all the Parts of Navigation, Sailing, Steering, &c. with the several Branches of Mathematicks necessary thereto; as Arithmetick, the Doctrine of the Sphere, Trigonometry.

They are Royal Professors, and teach Gratis; having Salaries allow'd them by the King. They are also charg'd with the Examination of Pilots, &c.

The Word is compounded of the *Greek*, ὕδωρ, *aqua*, Water, and γράφω, *scribo*, *describo*, I write, describe.

HYDROMANCY, HYDROMANTIA, the Act or Art of divining or foretelling future Events by means of Water. See DIVINATION.

*Hydromancy* is one of the four general Kinds of Divination; the other three, respecting the other Elements, *viz.* Fire, Air, and Earth, are denominated *Pyromancy*, *Aeromancy*, and *Geomancy*.

*Varro* mentions the *Persians* as the first Inventors of *Hydromancy*; adding, that *Numa Pompilius* and *Pythagoras* made use thereof. See HYDATOSCOPY.

The Writers in Opticks, furnish us with divers *Hydromantic* Machines, Vessels, &c.

*To Construct a* Hydromantic Machine, *by Means whereof an Image or Object shall be remov'd out of the Sight of the Spectator, and restor'd again at Pleasure; without altering the Position either of the one or the other.*

Provide two Vessels ABF and CGLK (Tab. Hydraulicks, Fig. 31.) the uppermost fill'd with Water, and sustain'd by three little Pillars, one whereof, BC, is hollow, and furnish'd with a Cock B.

Let the lower Vessel CL be divided by a Partition HI, into two Parts; the lower whereof may be open'd or clos'd by means of the Cock P.

Upon the Partition place an Image, which the Spectator in O cannot see by a direct Ray GL.

If now the Cock B be open'd; the Water descending into the Cavity CI, the Ray GL will be refracted from the Perpendicular GR to O; so that the Spectator will now see the Image by the refracted Ray OG. — And again, shutting the Cock B, and opening the other P, the Water will descend into the lower Cavity HL; whence, the Refraction ceasing, no Rays will now come from the Object to the Eye. — But, shutting the Cock P again, and opening the other B, the Water will fill the Cavity again, and bring the Object in Sight of O afresh. See REFRACTION.

*To make a* Hydromantic Vessel, *which shall exhibit the Images of external Objects, as if swimming in Water.*

Provide a Cylindrical Vessel ABCD, (Tab. Hydraulicks, Fig. 32.) divided into two Cavities by a Glass EF, not perfectly polish'd: In G apply a Lens Convex on both Sides; and in H incline a plain Mirror of an Elliptic Figure under an Angle of 45°; and let IH and HG be something less than the Distance of the Focus of the Lens G; so that the Place of the Images of Objects radiating thro' the same, may fall within the Cavity of the upper Vessel. — Let the inner Cavity be blacken'd, and the upper fill'd with clear Water.

If now the Vessel be dispos'd in a dark Place, so as the Lens be turn'd toward an Object illumin'd by the Sun; its Image will be seen as swimming in the Water.

The Word is *Greek*, compos'd of ὕδωρ, Water, and μαντεία, Divination.

HYDROMEL, a Drink made of Water and Honey; call'd by the *Greeks* μελίκρατον.

*Hydromel* is Honey diluted with a sufficient Quantity of Water, and fermented by a long and gentle Heat. See HONEY.

Under the Class of *Hydromels* come our Mead, and Metheglin. See MEAD and METHEGLIN.

*Hydromel* is either *Simple*, call'd also *aqueous*, where Honey and Water are the only Ingredients, which may be prepar'd at any Time; or *Compound*, when other Drugs are added, to improve and exalt the Flavour and Virtues.

'Tis particularly call'd *Vinous Hydromel*, when it equals the Strength of Wine; which it is brought to do, not only by the great Quantity of Honey us'd in it, but also by its long Coction, Insolation, &c. This is only made in the Heat of Summer.

*Vinous Hydromel*, (the same with what we otherwise call Mead, &c.) is made of Rain Water and the best Honey boil'd together, and skum'd from Time to Time till they become of a Consistence to sustain an Egg. This done, the Liquor is expos'd to the Sun for 40 Days, to dispose it to ferment; then, adding some *Spanish* Wine, and keeping it two or three Months, it acquires a Flavour scarce inferior to Malmsey. — It fuddles readily; and the drunken Fit holds longer than that produc'd by Wines, by reason of its more viscid Consistence.

*Hydromel* is the common Drink of the *Poles* and *Russians*. *Diodorus Siculus*, lib. V. and *Aristotle*, relate, that the *Celtiberi* and *Taulantii*, ancient People of *Illyria*, drank *Hydromel* instead of Wine.

The Word is compos'd of ὕδωρ, Water, and μέλι, *Mel*, Honey.

HYDROMETER, an Instrument wherewith to measure the Gravity, Density, Velocity, Force, or other Property or Circumstance of Water. See WATER.

That wherewith the specific Gravity of Water is determin'd, is more usually call'd an *Aræometer* or *Water-poise*. See ARÆOMETER and WATER-*poise*.

The Word is compounded of the *Greek*, ὕδωρ, Water, and μετρον, Measure.

HYDROMETRIA, HYDROMETRY, the Mensuration of Waters, and other fluid Bodies, their Gravity, Force, Velocity, Quantity, &c. See WATER and FLUID.

*Hydrometria* includes both Hydrostaticks and Hydraulicks. See HYDROSTATICKS and HYDRAULICKS.

The Term is modern, and very little in use. — The first Instance where we meet with it, is in the Year 1694, when a new Chair or Professorship of *Hydrometry* was founded in the University of *Boulogne*, in Favour of *S. Guglielmini*, who had carry'd the Doctrine of Running Waters, with respect to Rivers, Canals, Dikes, Bridges, &c. to an unusual Length. See RIVER, WAVE, &c.

HYDROMPHALUS, in Medicine, a Tumor in the Navel, arising from a Collection of Water.

The *Hydromphalus* is distinguish'd from other Tumors of the Navel by its being very soft, and yet not tractable or obedient to the Touch, so as to diminish or enlarge by compressing it. When view'd, plac'd between the Eye and the Light, it is found transparent.

The *Hydromphalus* is discuss'd by emollient and resolutive Medicines. It is also also cur'd by a Puncture made in the Middle of the Navel.

The Word is form'd of the *Greek*, ὕδωρ, Water, and ὀμφαλὸς, *umbilicus*, Navel.

HYDROMYSTES, or HYDROMYSTA, a Name given to certain Officers in the *Greek* Church, whose Business was to make the holy Water, and sprinkle it on the People. See *Holy* WATER.

The Word is compounded of ὕδωρ, *aqua*, Water, and μύστης, a Person set apart for the Offices of Religion.

HYDROPARASTATES, or HYDROPARASTES, a Sect of Hereticks, the Followers of *Tatian*, call'd also *Encratites*, *Apotactites*, *Saccophori*, *Severiani*, and *Aquarians*. See ENCRATITES and AQUARIANS, &c.

The *Hydroparastates* were a Branch of *Manichees*, whose distinguishing Tenet was, that Water should be us'd in the Eucharist instead of Wine.

The Word is form'd of the *Greek*, ὕδωρ, Water, and παίσημι, I present, I offer.

HYDROPHOBIA, in Medicine, an Aversion or Dread of Water; a Symptom arising in Persons bitten by a mad Dog, or other Beast.

Tho' the Term *Hydrophobia* do, in Strictness, only denote this one Symptom; yet is it frequently apply'd to the whole Disease consequent on such Bite, with all its Symptoms.

The Word is *Greek*, compounded of ὕδωρ, Water, and φοβος, *Timor*, Fear, of φοβεμαι, *timeo*, I fear.

The History of this horrible Disease, as given by *Cœlius Aurelianus*, Dr. *Mead*, *Etmuller*, *Lister*, &c. is as follows:

The Bite of a mad Dog is attended with this ſurprizing Circumſtance, that its Effects frequently do not diſcover themſelves till after the Cauſe is forgot; the Wound itſelf cloſing and healing like any other common Wound. But, ſome time after, direful Symptoms enſue: Uſually they commence in about forty Days; ſometimes in ſixty, ſometimes not till ſix Months, and ſometimes not till a Year, or even two. The firſt Thing obſerv'd, is a wandering Pain throughout the whole Body, but chiefly about the wounded Part: The Patient grows anxious and melancholly, and very prone to Anger; complaining of every Thing, as the ambient Air, the Heavineſs of his Bed Cloaths, &c. He vomits; his Pulſe intermits, and ſomewhat of a Tremor is obſerv'd, with Convulſions of the Nerves and Tendons: Along with theſe he feels an inward Heat and Thirſt: At laſt the grand Symptom appears, which denominates the Diſeaſe, *viz.* the *Aquæ Pavor*, or Dread of Water, ſo that he cannot bear ſo much as the Sight of any Liquid, without the utmoſt Conſternation; much leſs can he ſwallow the ſmalleſt Drop. This is the Pathogonomic Sign of the Diſeaſe's being come to its Height; and never happens till two or three Days before the Patient's Death; the Diſeaſe being then, by the unanimous Conſent both of ancient and modern Phyſicians, abſolutely incurable.

With this there are other concomitant Symptoms. --- He foams at the Mouth, his Eyes ſtare, he cannot ſwallow his Spittle without Pain, and his *Penis* is conſtantly erected: Some bark and ſnarl like Dogs, and actually fancy themſelves transform'd into thoſe Creatures, and, in the Height of their Madneſs, are ready to fly upon and tear to Pieces the By-ſtanders. --- *Palmarius* obſerves, that the *Hydrophobous* Patient cannot bear to look in a Glaſs, or any tranſparent Body: And that he never recovers, unleſs he know himſelf in a Glaſs; this being a Sign that the Poiſon has not yet laid hold of the vital Parts.

It may be added, that the *Hydrophobia* is not only occaſion'd by the Bite of a mad Dog, but alſo of other Brutes, as Cats, Foxes, Wolves, Horſes, Mules, Bullocks, and even Cocks, &c. or of a Man in the like Condition.

Nor is any Bite or Wound at all neceſſary; the Saliva of a mad Dog, &c. being apt to convey the Diſeaſe by mere Contact, or Application to the Skin. --- Thus, we have an Inſtance in the *Philoſophical Tranſactions*, of two Men catching the Diſeaſe by putting their Fingers in the Mouth of a Puppy that had been bit by its mad Dam, and feeling its Tongue and Throat: And the like Inſtance we have in the ſame Work, of two Children in *Ireland*, who, by touching and handling the Head of a Dog that had been bit by a mad Dog, and waſhing the Wound, cur'd the Dog, but caught the Diſeaſe themſelves.

*For the Nature and Cauſe of the Hydrophobia*; --- Dr. *Mead*, from ſeveral Hiſtories of particular Caſes, concludes, that the *Hydrophobia* is the Effect of a particular Kind of Inflammation of the Blood, accompany'd with ſo great a Tenſion and Dryneſs of the nervous Membranes, and ſuch an Elaſticity and Force of the Fluid with which they are fill'd, that the moſt common Repreſentations are made to the Mind with too great Effect; ſo that the uſual Impreſſions on the Organs cannot be ſuffer'd. --- Hence that Timorouſneſs, unaccountable Anxiety, and Diſquietude, which are always the Forerunners of the *Dread of Liquids*; as alſo, the Pain often felt in making of Water, and the ſtrange Averſions ſometimes found in Patients at the Sight of any thing white, the Retina being hurt and griev'd by the lively Impreſſions of that Colour thereon. --- Nor is it hard to conceive, that when the Saliva is hot, and the Throat inflam'd and dry, the Swallowing of Drink ſhould cauſe ſuch an intolerable Agony.

M. *Tauvry*, from a nice Diſſection and Examen of the Parts of a Perſon dead hereof, conjectures, that the Saliva and Bile are the Fluids firſt infected; and that the Patient vomiting a Mixture hereof, the Throat becomes excoriated thereby; and hence that Horror for all Foods, and particularly Water, in regard this diſſolves thoſe grievous Salts contain'd in the Saliva and Bile. He adds, That the Nature of the Poiſon is ſuch, as diſſolves the balſamic and nutritious Part of the Blood, whence the Veins are dry'd up, ſo as not to admit any Blood from the Arteries; and the Arterial Blood by this means ſuſtaining the Action and Impreſſion of its Veſſels for ſo long a Time, is ſtill further diſſolv'd, attenuated, and ſpiritualiz'd, and thus ſent, in too great Quantity, and with too great Rapidity, to the Brain; whence thoſe Convulſions, Diſtractions, &c.

Dr. *Liſter*, from the remarkable Hiſtory of *J. Corton*, whom he attended under this Diſeaſe, concludes, 1°. That ſome of the organic Parts of his Body were actually transform'd into, or affected after the Nature of a Dog, eſpecially the Gula, Tongue, &c. ſo that any Fluid offer'd him in the erect Poſture of a Man, was frightful, as well as difficult to take, as much as it would be for us to get a Dog to drink ſtanding on his hind Legs. But this was not all; for when he was turn'd upon his Belly, and would have acted the Dog, he could not drink; tho' the Sight of the Liquor in that Poſture gave him as much Pleaſure, as in the other Poſture it did Pain; and tho' he frequently put out his Tongue, and lapp'd, yet he could not endure to take any thing Liquid into his Month, as tho' ſomething hinder'd him within. 2°. That his Spittle was envenom'd; for as oft as he ſwallow'd it, his Stomach vehemently abhorring it, it went to his Heart, as he ſaid, and was preſent Death to him: And ſo Liquid Things coming nearer to the Conſiſtence of Spittle, might give him the greater Terror, as they tended to promote the Diſcharge of Saliva into his Mouth; and for the ſame Reaſon might be more difficult to ſwallow than ſolid Things.

*As to the Cure of the Hydrophobia*, Dr. *Mead*, after *Galen*, recommends it, in this as in other venomous Caſes, to enlarge the Wound by a circular Inciſion, to apply a Cautery to it, and to keep it open for at leaſt forty Days. But if this Method ſeem too cruel, it may ſuffice to extract the Poiſon by clapping a Cupping-glaſs on the Place, having firſt made a deep Scarification. The Doctor adds, he has known a Perſon freſh bitten, happily ſav'd by the ſole Application of the *Unguentum Ægyptiacum* exceedingly hot.

If theſe external Precautions have not been us'd, or not in Time, recourſe muſt be had to internal Remedies: Alexipharmachicks muſt be drank; among which, the Aſhes of River Lobſters, or Cray Fiſh, are principally extoll'd by all the ancient Phyſicians; ſo that *Galen* affirms, no Body had ever dy'd who uſed this Remedy. Theſe Aſhes to be taken to the Quantity of one or two Spoonfuls every Day for forty Days ſucceſſively, either alone, or with Gentian Root and Frankincenſe in Wine.

But the frequent and ſudden plunging of the Patient over Head and Ears in the Salt Sea Water, is the beſt and ſureſt Preſervative againſt this Diſeaſe.

*Etmuller* recommends Cardiacks and Alexipharmachicks, but all in a double Doſe, and long continu'd; and Garlic, Rue, and Salt to be beat together, and apply'd in form of a Cataplaſm over the Wound. Purging with Hellebore and Mercurius Dulcis is alſo good; and Cantharides are a Sort of Specific. Scarrifying is commended; and after the Scarrification, an Onion roaſted under the Aſhes, to be apply'd. But the readieſt Remedy, he adds, is burning the Place affected with a red hot Iron, which effectually removes all the Malignity. If the Phyſician be not call'd till late, a Cupping-glaſs is to be apply'd very hot: An Iſſue near the Place may likewiſe be of Service.

Sir *Theod. Mayerne* gives the following Preſcriptions for the Bite of a mad Dog. Pluck the Feathers from the Breech of an old Cock, and apply it bare to the Bite: If the Dog were mad, the Cock will ſwell and die, and the Perſon bitten will do well: If the Cock dies not, the Dog was not mad. *Philoſoph. Tranſact.* N°. 191.

'Tis a common Notion, that a Hair of the ſame Dog apply'd on the Bite, attracts the Venom, and works a Cure: But a Phyſician of *Roſtock*, in a formal Diſſertation ſome Years ago, prov'd this a popular Error; and that the Remedy was more like to do harm than good.

The Marks whereby to know that a Dog is mad, are, his neither eating nor drinking, foaming at the Mouth and Noſtrils, looking ſad and ſullen, and running at any thing in his Way, whether Man or Beaſt, known or unknown, without barking. --- *Baldus*, a famous Lawyer, dy'd of the *Hydrophobia* four Months after his being bit in the Lip by a little Dog. And the ſame is ſaid of *Diogenes* the Cynic.

The Members of the Royal Academy of Sciences, furniſh us with various Inſtances of Perſons cur'd of the Diſeaſe by various Means. --- M. *Poupart* mentions a Woman perfectly recover'd by bleeding her to a Deliquium, binding her in a Chair for a Year, and feeding her all that Time with Bread and Water. --- M. *Berger* relates, that of ſeveral Perſons bitten, two were cur'd by bleeding them in the Forehead. --- M. *du Hamel* adds, that he has known Salt Water apply'd on the Wound, effect a Cure. --- Divers Caſes are produc'd of thoſe cur'd of the *Aquæ Pavor*, by being overwhelm'd with a great Quantity of Water; and one, by being only ty'd to a Tree, and 200 Pails of Water thrown on him. --- But the beſt Inſtance is that of M. *Morin*. A Maid of twenty Years of Age having all the Symptoms, was bath'd in a Tub of River Water, wherein a Buſhel of Salt had been diſſolv'd. They plung'd her naked again and again, till, harraſs'd almoſt to Death, they left her in it quite ſenſeleſs.---When ſhe came to herſelf, ſhe was ſurpriz'd to find herſelf looking at the Water without any Concern. *Hiſtoire del Acad. An.* 1709.

HYDROPHORIA, in Antiquity, a Feaſt or Funeral Ceremony, held among the *Athenians* and People of *Ægina*, in Memory of thoſe who periſh'd in the Deluge. See DELUGE.

The Word is form'd of the *Greek*, ὕδωρ, Water, and φερω, I bear, or carry off.

HYDROPIC, a dropſical Patient; or a Perſon ſwell'd and bloated with the Abundance of Water or Wind. See DROPSY.

The Word is form'd of ὕδωρ, Water, and ὤψ, *Facies*, Face.

HYDROPS, in Medicine. See DROPSY.

The Word is originally *Greek*, ὑδρωψ, of ὕδωρ and ὤψ.

HYDROPS *ad Matulam*, a Term ſometimes uſed for a *Diabetes*. See DIABETES.

HYDROPOTES, in Medicine, are ſuch as drink nothing but Water. See WATER.

It has long been controverted among Phyſicians, whether or no the *Hydropotes* live longer than other Perſons. See DRINK.

The Word is *Greek*, ὑδροπότης, of ὕδωρ, Water, and ποτης, *Potor*, Drinker, of πινω, *bibo*, I drink.

HYDROSCOPE, an Inſtrument anciently uſed for the meaſuring of Time. See CHRONOMETER.

The *Hydroſcope* was a Kind of Water-clock; conſiſting of a cylindrical Tube, Conical at Bottom: The Cylinder was graduated, or mark'd out with Diviſions, to which the Top of the Water becoming ſucceſſively contiguous, as it trickled out of the Vertex of the Cone, pointed out the Hour.

*Syneſius* deſcribes the *Hydroſcope* at large in one of his Letters. See CLEPSYDRA.

The Word is *Greek*, ὑδροσκόπιον, form'd of ὕδωρ, Water, and σκοπεω, I view, I conſider.

HYDROSTATICAL *Ballance*, a kind of Ballance contriv'd for the eaſy and exact finding the Specific Gravities of Bodies both Liquid and Solid. See SPECIFIC *Gravity*.

The Inſtrument is of conſiderable Uſe in eſtimating the Degree of Purity of Bodies of all Kinds; the Quality and Richneſs of Metals, Ores, Minerals, &c. the Proportions in any Mixture, Adulteration, or the like: Of all which, the Specific Weight is the only adequate Judge. See WEIGHT, METAL, GOLD, MIXTURE, &c.

The *Hydroſtatical Ballance* is founded on this Theorem of *Archimedes*, That a Body heavier than Water, weighs leſs in Water than in Air, by the Weight of as much Water as is equal to it in Bulk. --- Whence, if we ſubſtract the Weight of the Body in Water from its Weight in Air, the Difference gives the Weight of as much Water as is equal in Magnitude to the Solid propos'd.

Having, therefore, two Bodies, the one firm, the other fluid, together with the Weight of each apart; to find their Proportion, divide the greater by the leſſer, the Quotient compar'd to one that is an Unite, will be the Antecedent of the Proportion deſir'd.

The Inſtrument, with all its Apparatus, is repreſented Tab. Hydroſtaticks, Fig. 34. and needs little Deſcription.

To uſe it, the Weights E are ſo adjuſted, as to ballance what is to be hung on the other End of the Beam; in which State the Inſtrument is ready for Application.

Now, *to find the Specific Gravity of a Fluid.*---Hang to the other End of the Beam the little Scale F, and to the Bottom of the Scale the Bubble G; then fill a Cylindrical Veſſel OP about two Thirds with common Water; and when the Bubble is let into it, the Beam will remain in an horizontal Poſition, if the Water be of the ſame Specific Gravity as that in which the Bubble was adjuſted: If it be not, there will be a Variation; which is to be corrected by means of little Weights for that Purpoſe.

Having thus adjuſted the Bubble in that Water, the Specific Gravity of any other Fluid will be found by weighing the Bubble therein; and ſince you always weigh ſo much of the Liquid as is equal to the Bulk of the Bubble, if there be any Variation between ſuch Quantity, and the like Quantity of Water, it will be diſcover'd by putting Weights into the aſcending Scale.

2°. *To find the Specific Weight of a Solid.* --- Inſtead of the Bubble, hang on the Bucket HIK, and the Beam will be in Æquilibrio: Put the Solid intended to be examin'd therein, and counter-poiſe it with Weights in the other Scale: This done, note the Weight, and disburthen the Scales of the Solid and its Counter-poiſe, and ſink the Bucket into the Glaſs of Water. --- Then, as the Bucket will loſe as much of its Weight, as is the Weight of an equal Bulk of Water; add the Scale R upon the Part, which will bring all to an Æquilibrium. --- Laſtly, Put the Solid into the Bucket, and counter-poiſe it again with Weights; and as it anſwers in its Proportion to Water, it may be judg'd either genuine or adulterate, by comparing it to a Standard of that Species of Bodies to which it is ſuppoſed to belong.

HYDROSTATICKS, the Doctrine of Gravitation in Fluids; or that Part of Mechanicks which conſiders the Weight or Gravity of fluid Bodies, particularly Water; and of ſolid Bodies immerg'd therein. See GRAVITY and GRAVITATION.

To *Hydroſtaticks* belong whatever relates to the Gravities and Equilibria of Liquors; with the Art of weighing Bodies in Water, in order to eſtimate their Specific Gravities. --- Mr. *Boyle* has apply'd *Hydroſtaticks* to good Purpoſe, in examining and proving the Goodneſs and Purity of Metals, Minerals, and other Bodies, particularly Fluids, in an expreſs Treatiſe, entitled, *Medicina Hydroſtatica*. See HYDROSTATICAL *Ballance*.

The Word is *Greek*, compos'd of ὕδωρ, Water, and στατικὴ, Staticks, of στατὸς, *ſtans*, ſtanding, of ἵστημι, *ſto*, *ſiſto*, I ſtand, I ſtop: *Hydroſtaticks* being conceiv'd as the Doctrine of the Equilibrium of Liquors. See EQUILIBRIUM and STATICKS.

*The Laws of* HYDROSTATICKS, *with the Application thereof; ſee deliver'd at large under the Articles* FLUID and SPECIFIC *Gravity*.

*Hydroſtaticks* are frequently confounded with *Hydraulicks*, by reaſon of the Affinity of the Subjects; and ſeveral Authors chuſe to treat of the two promiſcuouſly. See HYDRAULICKS.

The eldeſt Writer on *Hydroſtaticks* is *Archimides*, who firſt deliver'd the Laws thereof in his Book *de inſidentibus humido*. *Marin. Gietaldus* firſt brought his Doctrines to Experiment, in his *Archimedes promotus*: And from him Mr. *Oughtred* took the greateſt Part of what he has given us on this Subject. Monſ. *Mariotte*, in a *French* Treatiſe, publiſh'd at *Paris* in 1686, *Of the Motion of Water and other Fluids*, gives moſt of the Propoſitions of *Hydroſtaticks* and Hydraulicks, prov'd by Reaſon, and confirm'd by Experiments: Nor are Mr. *Boyle's Hydroſtatical Paradoxes*, and *Medicina Hydroſtatica*, to be overlook'd: The Jeſuit *Fr. Tertius de Lanis*, in the IIId Tome of his *Magiſterium Naturæ & Artis*, lays down the Doctrines of *Hydroſtaticks* more amply than they are elſewhere found. F. *Lamy*, in the 2d Part of his Mechanicks, entitled, *Traite de l'Equilibre des Liqueurs*, delivers the fundamental Laws of *Hydroſtaticks*, and Hydraulicks; and the like is done by Dr. *Wallis*, in his *Mechanica*. Laſtly, Sir *Iſ. Newton* gives ſome of the ſublimer Matters in the 2d Book of his *Philoſoph. Nat. Princip. Mathemat.*

HYDROTICKS, in Medicine, *Sudorificks*; or Remedies that promote Sweat. See SUDORIFICKS.

The Word is *Greek*, form'd of ὕδωρ, *aqua*, Water.

HYGIEINA, that Branch of Medicine which conſiders *Health*; and diſcovers proper Means and Remedies, with their Uſe, in the Preſervation and Recovery of that State. See MEDICINE and HEALTH.

The Objects of this Branch of Medicine are the Non-Naturals. See NON-*Naturals*.

*Hygieina* may be divided into three Parts; *Prophylactice*, which foreſees and prevents Diſeaſes; *Synteritice*, employ'd in preſerving Health; and *Analeptice*, whoſe Office is to cure Diſeaſes, and reſtore Health. See PROPHYLACTICE, &c.

The Word is *Greek*, Υγιεινη, of ὑγιὴς, ſound, healthy.

HYGROCYRSOCELE, in Medicine, a Branch of a Vein ſwell'd with ill Blood, or other Humours. See VAREX.

The Word is compos'd of ὑγρὸς, *humidus*, and κιρσοκήλη, or rather κιρσοκήλη, *ramex varicoſus*.

HYGROMETER, a Machine or Inſtrument whereby to meaſure the Degrees of Dryneſs or Moiſture of the Air. See AIR, HUMIDITY, &c.

The Word is compounded of the *Greek*, ὑγρὸς, *humidus*, moiſt, and μετρέω, *metior*, I meaſure. See HYGROSCOPE.

There are divers Kinds of *Hygroſcopes*; for, whatever Body either ſwells or ſhrinks by Dryneſs or Moiſture, is capable of being form'd into an *Hygrometer*. --- Such are Woods of moſt Kinds, particularly Aſh, Deal, Poplar, &c. Such alſo is a Cat-gut, the Beard of a wild Cat, &c. See WOOD, &c.

The beſt and moſt uſual Contrivances for this Purpoſe, are as follow:

*Conſtruction of a* HYGROSCOPE.

Stretch a hempen Cord, or a Fiddle-ſtring, as AB (Tab. Pneumaticks, Fig. 7.) along a Wall, bringing it over a Truckle or Pulley B; and to the other Extreme D, tye a Weight E; into which fit a Style or Index FG.---On the ſame Wall fit a Plate of Metal HI, divided into any Number of equal Parts: And the *Hygroſcope* is compleat.

For it is Matter of undoubted Obſervation, that Moiſture ſenſibly ſhortens the Length of Cords and Strings; and that, as the Moiſture evaporates, they return to their former Length: And the like may be ſaid of a Fiddle-ſtring. --- The Weight, therefore, in the preſent Caſe, upon an Increaſe of the Moiſture of the Air, will aſcend; and, upon a Diminution of the ſame, deſcend.

Hence, as the Index FG will ſhew the Spaces of Aſcent and Deſcent; and thoſe Spaces are equal to the Increments and Decrements of the Length of the Cord or Gut ABD; the Inſtrument will diſcover, whether the Air be more or leſs humid now, than it was at another given Time.

Or thus:

If a more ſenſible and accurate *Hygroſcope* be requir'd, ſtrain a Whipcord or Fiddle-ſtring over ſeveral Truckles or Pulleys A, B, C, D, E, F, and G, (Fig. 8.) and proceed with the reſt as in the former Example. Nor does it matter whether the ſeveral Parts of the Cord AB, BC, CD, DE, EF

EF, and FG, be parallel to the Horizon, as expreſs'd in the preſent Figure, or perpendicular to the ſame.

The Advantage of this, above the former *Hygrometer*, is, that we have a greater Length of Cord in the ſame Compaſs: And the longer the Cord, the greater its Contraction and Dilatation.

Or thus:

Faſten a hempen Cord or Fiddle-ſtring AB (Fig. 9.) to an Iron Hook, and let the other End, B, deſcend upon the Middle of a horizontal Board or Table EF. Near B hang a leaden Weight of a Pound, C, and fit an Index CG. Laſtly, from the Center B deſcribe a Circle; which divide into any Number of equal Parts.

Now, it is matter of Obſervation, that a Cord or Gut twiſts itſelf as it is moiſten'd, and untwiſts again as it dries. --- Mr. *Molyneux*, Secretary of the *Dublin* Society, writes, that he could perceive this alternate Twiſting and Untwiſting in a Cord, by only breathing on it eight or ten times, and then applying a Candle toward it. Hence, upon an Increaſe or Decreaſe of the Humidity of the Air, the Index will ſhew the Quantity of Twiſting or Untwiſting; and, conſequently, the Increment or Decrement of Humidity or Siccity.

Or thus:

Faſten one End of a Cord or Fiddle-ſtring HI (Fig. 10.) to a Hook H; and to the other End faſten a Ball K, of a Pound Weight. Draw two concentric Circles on the Ball, and divide them into any Number of equal Parts. Fit a Style or Index NO into a proper Support N, ſo as the Extremity O may almoſt touch the Diviſions of the Ball.

Here, the Cord or Gut twiſting and untwiſting, as in the former Caſe, will indicate the Change of Moiſture, *&c.* by the ſucceſſive Application of ſeveral Diviſions of the Circles to the Index.

Or thus:

Provide two wooden Frames AB and CD, (Fig. 11.) with Grooves therein; and between thoſe Grooves fit two thin Leaves of Aſh AEFC, and GBDH, ſo as they may eaſily ſlide either Way. At the Extremes of the Frames A, B, C, D, confine the Leaves with Nails, leaving between them the Space EGHF, about an Inch wide. On I faſten a Slip of Braſs dented, IK; and in L a little dented Wheel, upon whoſe Axis, on the other Side of the Machine, an Index is to be put. Laſtly, from the Centre of the Axis, on the ſame Side, draw a Circle, and divide it into any Number of equal Parts.

Now, it being found by Experience, that Aſhen Wood readily imbibes the Moiſture of the Air, and ſwells therewith; and as that Moiſture ſlackens, ſhrinks again; upon any Increaſe of the Moiſture of the Air, the two Leaves AF and BH growing turgid, will approach nearer each other: And, again, as the Moiſture abates, they will ſhrink, and again recede.---Hence, as the Diſtance of the Leaves can neither be increas'd nor diminiſh'd without turning the Wheel L, the Index will point out the Changes in reſpect of Humidity and Siccity.

Or thus:

It is to be noted, that all the *Hygrometers* above deſcrib'd become ſenſibly leſs and leſs accurate; and, at length, undergo no ſenſible Alteration at all from the Humidity of the Air. The following one is much more laſting.

Take the *Manoſcope*, deſcrib'd under that Article, and, inſtead of the exhauſted Ball E, (Fig. 12.) ſubſtitute a Spunge, or other Body, which eaſily imbibes Moiſture. To prepare the Spunge, it may be neceſſary firſt to waſh it in Water; and when dry again, in Water or Vinegar wherein Sal Ammoniac or Salt of Tartar has been diſſolv'd, and let it dry again.

Now, if the Air become moiſt, the Spunge growing heavier, will preponderate; if dry, the Spunge will be hoiſted up; and, conſequently, the Index will ſhew the Increaſe or Decreaſe of Humidity of the Air.

In the laſt mention'd *Hygroſcope*, Mr. *Gould*, in the *Philoſophical Tranſactions*, inſtead of a Spunge, recommends Oil of Vitriol, which is found to grow inſenſibly lighter or heavier, in Proportion to the leſſer or greater Quantity of Moiſture it imbibes from the Air; ſo that being ſatiated in the moiſteſt Weather, it afterwards retains or loſes its acquir'd Weight, as the Air proves more or leſs moiſt. --- The Alteration is ſo great, that in the Space of 57 Days, it has been known to change its Weight from three Drams to nine; and has ſhifted an Index or Tongue of a Ballance 30 Degrees. --- A ſingle Grain, after its full Increaſe, has vary'd its Equilibrium ſo ſenſibly, that the Tongue of a Ballance only an Inch and half long, deſcrib'd an Arch one Third of an Inch in Compaſs; which Arch would have been almoſt three Inches, if the Tongue had been one Foot, even with ſo ſmall a Quantity of Liquor; conſequently, if more Liquor expanded under a large Surface were us'd, a Pair of Scales might afford as nice a *Hygroſcope* as any yet invented. --- The ſame Author ſuggeſts, that Oil of Sulphur per Campanam, or Oil of Tartar per Deliquium, or the Liquor of fix'd Nitre, might be ſubſtituted in lieu of the Oil of Vitriol.

This Ballance may be contriv'd two Ways; by either having the Pin in the Middle of the Beam, with a ſlender Tongue a Foot and half long, pointing to the Diviſions on an arched Plate; as repreſented in Fig. 12.

Or, the Scale with the Liquor may be hung to the Point of the Beam near the Pin, and the other Extreme be made ſo long, as to deſcribe a large Arch on a Board plac'd for the Purpoſe; as repreſented in Fig. 13.

From a Series of *Hygroſcopical* Obſervations made with an Apparatus of Deal Wood, deſcrib'd in the *Philoſophical Tranſactions*, Mr. *Coniers* concludes; 1°. That the Wood ſhrinks moſt in Summer, and ſwells moſt in Winter; but is moſt liable to change at Spring and Fall. 2°. That this Motion happens chiefly in the Day-time; there being ſcarce any Variation in the Night. 3°. That there is a Motion even in dry Weather; the Wood ſwelling in the Forenoon, and ſhrinking in the Afternoon. 4°. The Wood, by Night as well as Day, uſually ſhrinks when the Wind is in the North, North-Eaſt, and Eaſt, in Winter and Summer. 5°. By conſtant Obſervation of the Motion and Reſt of the Wood, with the Help of a Thermometer, one may tell the Situation of the Wind without a Weather-cock. See WIND.

He adds, that the Time of the Year may be known by it; for in Spring it moves quicker, and more than in Winter; in Summer it is more ſhrunk than in Spring; and has leſs Motion in Autumn than in Summer. See SEASON, WEATHER, *&c.*

HYGROSCOPE, is commonly us'd in the ſame Senſe with *Hygrometer*. See HYGROMETER.

*Wolfius*, however, regarding the Etymology of the Word, makes ſome Difference. According to him, the *Hygroſcope* only ſhews the Alterations of the Air in reſpect of Humidity and Dryneſs; but the *Hygrometer* meaſures them. A *Hygroſcope*, therefore, is a leſs accurate Hygrometer.

The Word is compounded of ὑγρὸς, moiſt, and σκοπέω, *video, ſpecto*, I ſee, I conſider.

HYLE, or HYLEC, among Alchymiſts, is their firſt Matter; or it is Matter conſider'd as produc'd by Nature herſelf; call'd alſo *Chaos*. See MATTER, ALCHYMY, *&c.*

The Word is *Greek*, ὕλη, which ſignifies Matter.

HYLEG, or HYLECH, in Aſtrology, an *Arabic* Term for a Planet; which in a Man's Nativity becomes the Moderator and Significator of Life. See NATIVITY, SIGNIFICATOR, *&c.*

HYLEGIAL *Places*, among Aſtrologers, are ſuch, in which, when a Planet happens to be ſet, it may be ſaid to be fit to have the Government of Life attributed thereto.

HYLOBII, or HYLOBIANS, a Sect of *Indian* Philoſophers, thus denominated by the *Greeks*, in regard they retir'd to Foreſts, to be more at Leiſure for the Contemplation of Nature.

The Name is compounded of the *Greek*, ὕλη, which, beſide Matter, ſignifies alſo Wood, Foreſt; and βιὸς, Life.

HYMEN, in Poetry, a Term of Invocation.---*Hymen* or *Hymenæus*, is properly a fabulous Divinity, ſuppos'd by the Ancients to preſide over Marriages; and who accordingly was invok'd in Epithalamiums and other matrimonial Ceremonies, under this Formula, *Hymen o Hymenæe.*

The Poets generally give this Deity a Chaplet of Roſes; and repreſent him as it were diſſolv'd and enervated with Pleaſures; dreſs'd in a yellow Robe, and Shoes of the ſame Colour; with a Torch in his Hand.---*Catullus*, in one of his Epigrams, addreſſes him thus:

*Cinge tempora floribus,*
*Suave olentis Amaraci.*

It was for this Reaſon, that the new marry'd Couple bore Garlands of Flowers on the Wedding-Day: Which Cuſtom alſo obtain'd among the *Hebrews*; and even among the Chriſtians, during the firſt Ages of the Church, as appears from *Tertullian*, *de Corona Militari*, where he ſays, *Coronant & Nuptæ Sponſos.*---S. *Chryſoſtom* likewiſe mentions theſe Crowns of Flowers; and to this Day the *Greeks* call Marriage στεφανωμα, in reſpect of this Crown or Garland. See CROWN and GARLAND.

HYMEN, in Anatomy, is a thin Membrane or Skin, reſembling a Piece of fine Parchment, ſuppos'd to be ſtretch'd in the Neck of the Womb of Virgins, below the Nymphæ; and to be broke when they are deflower'd; an Effuſion of Blood following the Breach. See DEFLORATION and VIRGIN.

The *Hymen* is generally look'd upon as the Teſt of Virginity; and when broke, or withdrawn, ſhews, that the Perſon is not in a State of Innocence.---This Notion is very ancient. Among the *Hebrews*, it was the Cuſtom for the Parents to ſave the Blood ſhed on this Occaſion, as a Token of the Virginity of their Daughter; and to ſend the Sheets, next Day, to the Husband's Relations. And the like is ſaid to be ſtill

practis'd

practis'd in *Portugal*, and ſome other Countries. See VIRGINITY.

And yet Authors are not agreed as to the Exiſtence of ſuch *Hymen*. Nothing, Dr. *Drake* obſerves, has employ'd the Curioſity of Anatomiſts, in diſſecting the Organs of Generation in Women, more than this Part: They differ not only as to its Figure, Subſtance, Place, Perforation, but even its Reality; ſome poſitively affirming, and others flatly denying it.

*De Graaf* himſelf, the moſt accurate Inquirer into the Structure of theſe Organs, confeſſes, he always ſought it in vain, tho' in the moſt unſuſpected Subjects and Ages: All he cou'd find, was a different Degree of Streightneſs or Wideneſs; and different Corrugations, which were greater or leſs according to the reſpective Ages; the Aperture being ſtill the leſs, and the Rugoſities the greater, as the Subject was younger, and more untouch'd.

Dr. *Drake*, on the other Hand, declares, that in all the Subjects he had had Opportunity to examine, he does not remember to have miſs'd the *Hymen* ſo much as once, where he had reaſon to depend on finding it. The faireſt View he ever had of it, was in a Maid who dy'd at 30 Years of Age: In this, he found it a Membrane of ſome Strength furniſh'd with fleſhy Fibres, in Figure round, and perforated in the Middle with a ſmall Hole capable of admitting the End of a Woman's little Finger, ſituate a little above the Orifice of the urinary Paſſage, at the Entrance of the Vagina of the Womb.

In Infants, it is a fine thin Membrane, not very conſpicuous, becauſe of the natural Streightneſs of the Paſſage itſelf, which does not admit of any great Expanſion in ſo little a Room; which might lead *de Graaf* into a Notion of its being no more than a Corrugation.

This Membrane, like moſt others, does probably grow more diſtinct, as well as firm, by Age. That it is ſometimes very ſtrong and impervious, may be collected from the Hiſtory of a Caſe reported by Mr. *Cowper*: In a marry'd Woman, 20 Years of Age, the *Hymen* was found altogether impervious, ſo as to detain the Menſes, and to be driven out by the Preſſure thereof, beyond the Labia of the Pudendum, not unlike a Prolapſus of the Uterus. On dividing it, at leaſt a Gallon of grumous Blood came forth. It ſeems the Husband, being deny'd a Paſſage that Way, had found another thro' the Meatus Urinarius, which was found very open, and its Sides extruded like the Anus of a Cock. See MEATUS.

Upon a Rupture of the *Hymen*, its Parts ſhrinking up, are ſuppos'd to form thoſe little fleſhy Knots, call'd *Carunculæ Myrtiformes*. See MYRTIFORMES *Carunculæ*.

HYMEN is alſo us'd by Botaniſts for a fine delicate Skin, wherewith Flowers are incloſ'd while in the Bud, and which burſts as the Flower blows or opens. See BUD.

The *Hymen* is particularly us'd in ſpeaking of Roſes.

HYMN, a Song or Ode in Honour of God; or, a Poem proper to be ſung, compos'd in Honour of ſome Deity. See SONG and ODE.

The *Hymns* or Odes of the Ancients generally conſiſted of three Stanzas or Couplets; the firſt call'd *Strophe*; the ſecond, *Antiſtrophe*; and the laſt *Epode*. See STROPHE, ANTISTROPHE, and EPODE.

The Word is form'd of the *Greek*, ὕμνος, *Hymn*, of the Verb ὑδω, *celebro*, I celebrate. — *Iſidore*, on this Word, remarks, that *Hymn* is properly a Song of Joy, full of the Praiſes of God; by which, according to him, it is diſtinguiſh'd from *Threna*, which is a mourning Song, full of Lamentation. See THRENA.

St. *Hilary*, Biſhop of *Poictiers*, is ſaid to have been the firſt that compos'd *Hymns* to be ſung in Churches: He was follow'd by St. *Ambroſe*. Moſt of thoſe in the *Roman* Breviary were compos'd by *Prudentius*. They have been tranſlated into *French* Verſe by the Meſſieurs *de Port Royal*. See PSALM.

The *Te Deum* is alſo commonly call'd a *Hymn*, tho' it be not in Verſe; ſo is the *Gloria in excelſis*. See TE DEUM and GLORIA *in excelſis*.

In the *Greek* Liturgy, there are four Kinds of *Hymns*; but then the Word is not taken in the Senſe of a Praiſe offer'd in Verſe, but ſimply of Laud or Praiſe.---The Angelic *Hymn*, or *Gloria in excelſis*, makes the firſt Kind; the Triſagion the ſecond; the Cherubic *Hymn* the third; and the *Hymn* of Victory and Triumph, call'd ἐπινίκιος, the laſt. See TRISAGION.

HYOIDES, in Anatomy.---The *Os Hyoides*, call'd alſo *Bicorne*, is a Bone ſituate at the Root of the Tongue, making, as it were, the Baſis or Foundation thereof. See TONGUE.

It is thus call'd from its imperfect Reſemblance of the *Greek* Upſilon υ; the Word being form'd of υ and εἶδος, Form; for which Reaſon it is alſo call'd *Ypſiloides* and *Hypſiloides*.

It generally conſiſts, in Adults, of three little Bones; and in Children of five or ſix. The middle Bone of the three, which is the ſhorteſt and broadeſt, is call'd the *Baſis*, and the two Side Bones *Cornua* or *Horns*; whence alſo the Appellations *Bicorne* and *Ceratoides*.

The Baſis of the *Hyoides* is about a Thumb's Breadth long on the outer Side, which is convex; the inner being concave. It is half a Finger broad, and has a ſmall Protuberance in the Middle. The Cornua are an Inch and half long, and broader at Bottom than at the Extremes, which are about two Inches aſunder.

It has two cartilaginous Proceſſes, call'd *Cornicula*, faſten'd about the Juncture of its Cornua with the Baſis. They are ty'd to the Proceſſus Styloides by long ſlender Ligaments; tho' ſometimes between them and the Styloides there is found a ſmall Muſcle, beſide the *Styloceratohyoideus*.

The Baſis of this Bone lies, as it were, on the Head of the Larynx; and its Horns are faſten'd by Ligaments to the upper Proceſſes of the *Cartilago Scutiformis*, and Styloides. See LARYNX, SCUTIFORMIS, &c.

It is mov'd by five Pair of Muſcles, *viz.* the *Sternohyoideum*, the *Coracohyoides*, the *Mylohyoideum*, *Geniohyoideum*, and *Stylohyoideum*. See each under its proper Article STERNOHYOIDEUM, CORACOHYOIDES, &c.

HYOTHYROIDES, in Anatomy, a Pair of Muſcles of the Larynx. See LARYNX.

They riſe from the anterior Part of the Os Hyoides, and are inſerted into the Cartilago Thyroides.---They ſerve as Antagoniſts to the Sternothyroides; and lift up the Thyroid Cartilage.

The Word is compounded of *Hyoides* and *Thyroides*. See THYROIDES, &c.

HYPALLAGE, or *Immutation*, a Grammatical Figure, whereby, of different Expreſſions which give the ſame Idea, we make Choice of that which is leaſt us'd; or, when there is a mutual Permutation or Change of Caſes, Moods, Regimens, &c. See FIGURE.

As, in this Inſtance, *Dare Claſſibus Auſtros*, inſtead of *Dare Claſſes Auſtris*.

The Word is *Greek*, ὑπαλλαγὴ, form'd of ὑπαλλαττω, I change; compos'd of ὑπω and ἀλλαττω, I change; of ἀλλος, *alter*, another.

HYPAPANTE, or HYPANTE, a Name which the *Greeks* give to the Feaſt of the Purification of the Holy Virgin; or the Preſentation of Jeſus in the Temple. See PURIFICATION.

The Word literally expreſſes *meeting*; by reaſon of the Meeting of old *Simeon* and *Anna* the Propheteſs in the Temple, at the Time the Child Jeſus was brought thither.

The Words *Hypante* and *Hypapante* are *Greek*, ὑπάντη and ὑπαπάντη, which properly ſignify humble and lowly Meeting; being compounded of ὑπὸ, under, beneath, and ἀντάω, I meet, of ἀντὶ, *contra*, againſt.

HYPER, a *Greek* Word, us'd in the Compoſition of divers Terms deriv'd from that Language.

The *Greek* Prepoſition, ὑπὲρ, *hyper*, literally ſignifies above, beyond; and, in Compoſition, expreſſes ſome Exceſs, or ſomething beyond the Signification of the ſimple Word it is join'd with. --- Hence,

HYPERBATON, in Grammar and Rhetoric, a Tranſpoſition; or, a figurative Conſtruction, inverting the natural and proper Order of the Terms of a Diſcourſe. See TRANSPOSITION.

The *Hyperbaton*, *Longinus* obſerves, is no other than a Tranſpoſal of Sentiments or Words out of the natural Order and Method of Diſcourſe; and always implies great Violence or Strength of Paſſion, which naturally hurries a Man out of himſelf, and diſtracts him variouſly.---*Thucydides* is moſt liberal in *Hyperbatons*.

*Quintilian* calls the *Hyperbaton*, *Verbi tranſgreſſio*. --- It is of uſe to enliven and animate the Diſcourſe: It is very proper to expreſs a violent Paſſion, and repreſent an Agitation of Mind in the livelieſt Manner.

The Word is deriv'd of the *Greek*, ὑπερβαίνω, *tranſgredior*, I go beyond; form'd of ὑπερ, *ultra*, beyond, and βαίνω, *eo*, I go.

HYPERBOLA, in Geometry, one of the Curve Lines, form'd by the Section of a Cone. See CONIC *Section*.

The *Hyperbola* ariſes when the Plane that cuts the Cone is not parallel to one of its Sides, as it is in the *Parabola*; but diverges from it outwards, not inward, as in the *Ellipſis*. See PARABOLA and ELLIPSIS.

Thus: If the Cone ABC (Tab. Conicks, Fig. 27.) be ſo cut, as that the Axis of the Section DQ continu'd, concur with the Side of the Cone AC, continu'd to E; the Curve ariſing from this Section is an *Hyperbola*. See CONE.

Some Authors define the *Hyperbola* to be a Section of the Cone, by a Plane parallel to its Axis. But this Definition is faulty: For tho' it be true that ſuch a Section really deſcribes a *Hyperbola*; yet it is likewiſe true, that a thouſand others may be deſcrib'd where the Plane is not parallel to the Axis, and which of Conſequence are not included in the Definition.

Authors ſometimes call the Plane terminated by this Curve, by *Hyperbola*; and in reſpect hereof, call the Curve itſelf the *Hyperbolic Line*.

A *Hyperbola* may be defin'd, with reſpect to its Properties, to be a Curve Line, wherein the Square of the Semi-ordinate is to the Rectangle of the Abſciſs into a right Line compounded

pounded of the ſame Abſciſs, and a given right Line call'd the Tranſverſe Axis, as another given right Line, call'd the Parameter of the Axis, is to the Tranſverſe Axis: Or, it is a Curve Line, wherein $ay^2 = abx + bxx$, that is, $b : a = y^2 : ax + x^2$.

In the *Hyperbola*, a mean Proportional between the tranſverſe Axis and Parameter, is call'd the *Conjugate Axis*: And if the Tranſverſe Axis AB (Tab. Conicks, Fig. 27.) be join'd directly to the Axis AX, and be biſſected in C; the Point C is call'd the *Centre of the Hyperbola*. See Axis and Centre.

If a right Line DE paſs thro' the Vertex A, (Fig. 20.) parallel to the Ordinates *Mm*, it is a *Tangent to the Hyperbola* in A. See Tangent.

If a right Line DE be drawn thro' the Vertex A of an *Hyperbola*, parallel to the Ordinates *Mm*, and be equal to the Conjugate Axis, *viz.* the Parts DA and AE equal to the Semi-axis; and right Lines CF and CG be drawn from the Centre C thro' D and E; thoſe Lines are call'd *Aſſymptotes of the Hyperbola*. See Assymptotes.

The Square of the right Line CI or AI, is call'd the *Power of the Hyberbola*. See Power.

### *Properties of the* Hyperbola.

In the *Hyberbola*, the Squares of the Semi-ordinates are to each other, as Rectangles of the Abſciſs into a certain right Line compos'd of the Abſciſs and Tranſverſe Axis. --- Hence, as the Abſciſſes $x$ increaſe, the Rectangles $ax + x^2$, and, conſequently, the Squares of the Semi-ordinates $y^2$, and therefore the Semi-ordinates themſelves, increaſe. The *Hyperbola*, therefore, continually recedes from its Axis.

2°. The Square of the Conjugate Axis, is to the Square of the Tranſverſe, as the Parameter, to the Tranſverſe Axis. --- And hence, ſince $b : a :: PM^2 : AP.PB$, the Square of the Conjugate Axis, is to the Square of the Tranſverſe; as the Square of the Semi-ordinate is to the Rectangle of the Abſciſs into a Line compos'd of the Abſciſs and Tranſverſe Axis.

3°. *To deſcribe an Hyperbola*, in a continu'd Motion; the Tranſverſe Axis, and the Diſtance from the Vertex being given. In the two Foci F and *f*, (Fig. 28.) fix two Nails or Pins; and to one of them, in F, tye a Thread FMC, faſtening the other End C to the Ruler C*f*, which exceeds the ſame by the Tranſverſe Axis AB. The other End of the Ruler being perforated, put it on the Pin *f*; and fixing a Style to the Thread, move the Ruler. Thus will the Style trace out an *Hyperbola*.

Again, with the ſame Data, any Number of Points in an *Hyperbola* are eaſily found, which may be connected into an *Hyperbola*. Thus, from the Focus *f*, with any Interval greater than AB, deſcribe an Arch; and making $fb = AB$; with the remaining Interval *bm*, from the Point F, draw another Arch interſecting the former in *m*: For, as $fm - Fm = AB$; *m* is a Point in the *Hyperbola*. And ſo of the reſt.

4°. If in an *Hyperbola*, the Semi-ordinate PM, Fig. 20. be produc'd till it meet the Aſymptote in R; the Difference of the Squares of PM and PR is equal to the Square of the Conjugate Semi-axis DA.---Hence, as the Semi-ordinate PM increaſes, the right Line PR decreaſes, and conſequently MR; and therefore the *Hyperbola* itſelf approaches nearer to the Aſymptote; but it can never abſolutely meet it, becauſe, as $PR^2 - PM^2 = DA^2$; it is impoſſible $PR^2 - PM^2 - PM^2$ ſhould ever become $= 0$.

5°. In an *Hyperbola*, the Rectangle of MR and M*r*, is equal to the Difference of the Squares $PR^2$ and $PM^2$. --- And hence, the ſame Rectangle is equal to the Square of the Conjugate Semi-axis DA; and conſequently all Rectangles form'd in the ſame Manner are equal.

6°. If *qm* be parallel to the Aſymptote CF, the Rectangle of *qm* into C*q* is equal to the Power of the *Hyperbola*. --- And hence, 1°. If we make $CI = AI = a$, $Cq = x$, and $qm = y$, we ſhall have $a^2 = xy$; which is the Equation expreſſing the Nature of the *Hyperbola* within its Aſymptotes. 2°. The Aſymptotes therefore being given in Poſition, and the Side of the Power of CI or AI; if in one of the Aſymptotes CG, you take any Number of Abſciſſes; ſo many Semi-ordinates will be found, and by them any Number of Points in an *Hyperbola* will be determin'd by finding third Proportionals to the Abſciſs, and the Side of the Power CI. --- 3°. If the Abſciſſes be not computed from the Centre C, but from ſome other Point L; and CL be ſuppos'd $= b$; we ſhall have $Cq = b + x$; and conſequently $a^2 = by + xy$.

7°. In the *Hyperbola*, as the Tranſverſe Axis is to the Parameter; ſo is the Aggregate of the Tranſverſe Semi-axis and Abſciſs, to the Subnormal: And as the Aggregate of the Tranſverſe Semi-axis and Abſciſs is to the Abſciſs; ſo is the Aggregate of the entire Tranſverſe Axis and Abſciſs to the Subtangent. See Subnormal and Subtangent.

8°. If within the Aſymptotes of an *Hyperbola*, from a Point thereof, *m*, (Fig. 29.) be drawn two right Lines H*m* and *m*K, and other two LN and NO, parallel to the ſame; H*m*, *m*K = LN, NO. And the ſame will hold, if you draw LN*o* parallel to the right Line thus drawn H*mk*, *viz.* in this Caſe likewiſe $Hm.mk = LN.No$. --- Conſequently, all Rectangles form'd after this Manner of right Lines drawn parallel either to the ſame Line H*k*, or to two, H*m* and *m*K, are equal to each other.

9°. If a right Line H*k*, be drawn in any Manner between the Aſymptotes of an *Hyperbola*; the Segments HE and *m*K intercepted on each Side between the *Hyperbola* and Aſymptotes are equal. --- And hence, if $Em = o$; the right Line H*k* is a Tangent to the *Hyperbola*: Conſequently, the Tangent FD intercepted between the Aſymptotes, is biſſected in the Point of Contact V. Laſtly, the Rectangle of the Segments H*m* and *mk*, parallel to the Tangent FD, is equal to the Square of half the Tangent DV.

10°. The Square of the Semi-ordinate in an *Hyperbola*, is to the Rectangle of the Abſciſs, and Aggregate of the Tranſverſe Diameter AB, (Fig. 30.) and Abſciſs AP, as the Square of the Conjugate Semi-diameter AD, is to the Square of the Tranſverſe Semi-diameter CA. --- Hence, if you ſuppoſe AP $x$, and $2r^2 = AB = a$, you will have $v^2 r^2 = ax + x^2$; conſequently $y^2 = (c^2 ax + c^2 x^2) : \frac{1}{4} aa = \frac{4c^2 x}{a} + \frac{4c^2 x^2}{a^2}$. Make $4c^2 : a = b$; then will $y^2 = bx + bx^2 : a$. So that the ſame Equation defines the Nature of the *Hyperbola* in reſpect of its Diameter, as expreſſes it in reſpect of its Axis; and the Parameter is a third Proportional to the Conjugate Diameters DE and AB.

11°. If from the Vertex A, and any Point of a Parabola N, you draw AF and TN parallel to the Aſymptote CR; the Rectangle of TN into TC, will be equal to the Rectangle of FA into FC. --- Hence, if $TC = x$, $TN = y$; the Equation expreſſing the Nature of a *Hyperbola* within Aſymptotes, in reſpect of its Diameter, will be $xy = ab$.

12°. An Aſymptote being taken for a Diameter; divided into equal Parts, and thro' all the Diviſions, which form ſo many Abſciſſes continually increaſing equally, Ordinates to the Curve being drawn, parallel to the other Aſymptote; the Abſciſſes will repreſent an infinite Series of natural Numbers; and the correſponding *Hyperbolic* or Aſymptotic Spaces, will repreſent the Series of Logarithms of the ſame Numbers. See Logarithm and Logarithmic *Curve*.

Hence, different *Hyperbola's* will furniſh different Series of Logarithms to the ſame Series of natural Numbers; ſo that to determine any particular Series of Logarithms, choice muſt be made of ſome particular *Hyperbola*. --- Now, the moſt ſimple of all the *Hyperbola's* is the Equilateral one; *i. e.* whoſe Aſymptotes make a right Angle between them. This, M. *de Lagni* alledges in Favour of the Binary Arithmetic, as being the Reſult of ſuch Equilateral *Hyperbola*. See *Binary* Arithmetic.

*For the Locus of an* Hyperbola. See Locus.

*For the Quadrature of an* Hyperbola. See Quadrature.

*Equilateral* Hyperbola, is that wherein the Conjugate Axis AB (Fig. 20.) and DE are equal.

### *Properties of the Equilateral* Hyperbola.

Since the Parameter is a third Proportional to the Conjugate Axis, it is alſo equal to the Axis.

Wherefore, if in the Equation $y^2 = bx + bx^2 : a$, you ſuppoſe $b = a$; the Equation $y^2 = ax + x^2$ will expreſs the Nature of the Equilateral *Hyperbola*.

And hence, the Squares of the Ordinates $y^2$ and $z^2$, are to each other as $ax + x^2$ and $av + v^2$: That is, as the Rectangles of the Abſciſſes into right Lines compos'd of the Abſciſs and Parameter.

If you ſuppoſe $CP = x$, $CA = r$, and $AP = x - r$, and $PB = r + x$. Conſequently $y^2 = x^2 - x^2$.

And ſince AE = CA; the Angle ACE will be half right; and conſequently the Angle of the Aſymptotes FCG a right Angle.

*Infinite* Hyperbola's, or Hyperbola's *of the higher Kinds*, are thoſe defin'd by the Equation $ay^m + ^n = bx^m (a + x)^n$. See Hyperboloides.

Hence, in infinite *Hyperbola's* $ay^m + ^n$, $av^m + ^n = bx^m (a + x)^n : bz^m (a + z)^n$: That is, $y^m + ^n : v^m + ^n = x^m (a + x)^n : z^m (a + z)^n$.

As the *Hyperbola* of the firſt Kind or Order has two Aſymptotes, that of the ſecond Kind or Order has three, that of the third, four, &c. See Asymptote, Curve, &c.

In reſpect of theſe, the *Hyperbola* of the firſt Kind, is call'd the *Apollonian* or *Conical Hyperbola*.

*Apollonian* Hyperbola is the common *Hyperbola*, or the *Hyperbola* of the firſt Kind: Thus call'd in Contradiſtinction to the *Hyperbola's* of the higher Kinds.

HYPERBOLE, in Rhetoric, a Figure, whereby the Truth and Reality of Things is exceſſively either enlarg'd or diminiſh'd.

As, He ran ſwifter than the Wind; He went ſlower than a Tortoiſe, &c.

The Character of an *Hyperbole* is to exaggerate or extenuate the Idea of the Thing ſpoke of, beyond the Bounds of Truth, or even Probability.

*Hyperbole's*, ſays *Seneca*, lye without deceiving; they lead the Mind to Truths by Fictions, they convey the Sentiment intended, by expreſſing it in Terms which render it incredible --- The *Hyperbole* promiſes too much, to make you conceive enough.

*Ariſtotle* obſerves, that *Hyperbole's* are the favourite Figures of young Authors, who love Exceſs and Exaggeration; ſo that Philoſophers ſhould not uſe them without a great deal of Reſerve.

The Pitch to which an *Hyperbole* may be carry'd, is a Point of great Delicacy: To carry it too far, is to deſtroy it: It is of the Nature of a Bow-ſtring, which, by immoderate Tenſion, ſlackens; and frequently has an Effect quite contrary to that intended. *Longinus*.

Thoſe *Hyperbole's* are beſt, which are latent, and are not taken for *Hyperbole's*. For this Reaſon, they ſhould ſcarce ever be us'd but in a Paſſion, and in the Middle of ſome important Incident: Such is the *Hyperbole* of *Herodotus*, ſpeaking of the *Lacedæmonians*, who fought at *Thermopylæ*, "They "defended themſelves, for ſome time, with the Arms that "were left them, and at laſt with their Hands and Teeth; "till the Barbarians, continually ſhooting, buried them, as "it were, with their Arrows." Now, what Likelihood is there that naked Men ſhould defend themſelves with their Hands and Teeth againſt armed Men; and that ſo many Perſons ſhould be buried under their Enemies Arrows? Yet does there appear ſome Probability in the Thing, by reaſon it is not ſought for the Sake of the Figure; but the *Hyperbole* ſeems to ariſe out of the Subject itſelf. *Id.*

Of the like Kind is that Paſſage of a Comic Poet mention'd by *Longinus*: He had Lands in the Country no larger than a *Lacedæmonian* Epiſtle. See LACONIC.

There are certain Manners of tempering the Harſhneſs of *Hyperbole's*, and giving them an Air of Probability. *Virgil* ſays, That to ſee the Fleets of *Anthony* and *Auguſtus* at the Battel of *Actium*, one would have taken them for the *Cyclades* floating on the Water: And *Florus* ſpeaking of the Expedition wherewith the *Romans* built a Number of Veſſels in the firſt *Punic* War, ſays, It ſeem'd, not that the Ships were built by Workmen, but that the Trees were transform'd into Ships by the Gods. They do not ſay that the Ships were floating Iſlands; nor that the Trees were metamorphoſed into Ships; but only that one might have taken them to be ſo. This Precaution ſerves as a Kind of Paſſport to the *Hyperbole*, if we may be allow'd the Phraſe, and makes it go down even in Proſe: For what is excus'd before 'tis ſaid, is always heard favourably, how incredible ſoever it be. *Bouhours*.

The Word is *Greek*, ὑπερβολη, *ſuperlatio*, form'd of the Verb ὑπερβάλλειν, *exſuperare*, to exceed, ſurpaſs by far.

HYPERBOLIC, ſomething relating either to an *Hyperbole*, or an *Hyperbola*. See HYPERBOLA and HYPERBOLE.

Thus we ſay, an *Hyperbolic* Expreſſion; an *Hyperbolic* Image, &c.

HYPERBOLIC *Line* is us'd by ſome Authors for what we call the *Hyperbola* itſelf.

In their Senſe, the plane Surface terminated by the Curve Line, is call'd the *Hyperbola*; and the Curve Line that terminates it, the *Hyperbolic Line*.

HYPERBOLIC *Leg* of a Curve, is that which approaches infinitely near to ſome Aſymptote.

Sir *Iſ. Newton* reduces all Curves, both of the firſt and of the higher Kinds, into thoſe with *Hyperbolic Legs*, and thoſe with Parabolic ones. See CURVE.

HYPERBOLIC *Conoid*. See CONOID.

HYPERBOLIC *Solid*. See CUBATURE.

HYPERBOLIC *Mirrour*. See MIRROR.

HYPERBOLICAL *Cylindroid*, is a ſolid Figure, whoſe Generation is given by Sir *Chriſtopher Wren*, in the *Philoſophical Tranſactions*.

Two oppoſite *Hyperbola's* being join'd by the Tranſverſe Axis, and thro' the Centre a right Line being drawn at right Angles to that Axis; and about that, as an Axis, the *Hyperbola's* being ſuppos'd to revolve; by ſuch Revolution, a Body will be generated, which is call'd the *Hyperbolic Cylindroid*, whoſe Baſes and all Sections parallel to them will be Circles. In a ſubſequent *Tranſaction*, the ſame Author applies the new Figure to the grinding of *Hyperbolical* Glaſſes; affirming, that they muſt be form'd this Way, or not at all. See MIRROR.

HYPERBOLI-FORM *Figures*, are ſuch Curves as approach, in their Properties, to the Nature of the *Hyperbola*; call'd alſo *Hyperboloids*.

HYPERBOLOIDES, are *Hyperbola's* of the higher Kind, wherein $m > 1$ and $n > 1$. *e.gr.* $ay^3 = bx^2(a+x)$.

HYPERBOREAN, in the ancient Geography.---The Ancients denominated thoſe People and Places *Hyperborean*, which were to the Northward of the *Scythians*. They had but very little Acquaintance with theſe *Hyperborean* Regions; and all they tell us of them is very precarious, much of it falſe.

*Diodorus Siculus* ſays, the *Hyperboreans* were thus call'd by reaſon they dwelt beyond the Wind *Boreas*; ὑπὲρ ſignifying above or beyond, and βορέης, *Boreas*, the North Wind. This Etymology is very natural and plauſible; notwithſtanding all that *Rudbecks* has ſaid againſt it, who would have the Word to be originally *Gothic*, and to ſignify Nobility. See BOREAS.

*Herodotus* doubts, whether or no there were any ſuch Thing as *Hyperborean* Nations. *Strabo*, who profeſſes that he believes there are, does not take *Hyperborean* to ſignify *beyond Boreas* or the North, as *Herodotus* underſtood it: The Prepoſition ὑπὲρ, in this Caſe, he ſuppoſes only to help form a Superlative; ſo that *Hyperborean*, on his Principle, means no more than *moſt Northern*: So that it appears the Ancients ſcarce knew themſelves what the Name meant.

HYPERCATALECTIC, in the *Greek* and *Latin* Poetry, is apply'd to Verſes which have one or two Syllables too much; or beyond the Meaſure of regular Verſe. See VERSE.

The *Greek* and *Latin* Verſes are diſtinguiſh'd, with reſpect to their Meaſure, into four Kinds: Acatalectic Verſes, where nothing is wanting at the End; Catalectic, which want a Syllable at the End; Brachicatalectic, which want a whole Foot at the End; and, laſtly, *Hypercatalectic*, which have one or two Syllables too many.---Theſe laſt are alſo call'd *Hypermeters*. See ACATALECTIC, CATALECTIC, &c.

The Word is *Greek*, compos'd of ὑπὲρ, over, beyond, and καταλήγω, I put to the Number, I add; ſo that *Hyper catalectic* denotes as much as *ſuper-added*.

HYPERCATHARSIS, in Medicine, *Super-purgation*; a too violent and exceſſive Purgation. See PURGE, PURGATION, and PURGATIVE.

The Word is compounded of the *Greek*, υπερ, *ſupra*, and καθαιρω, I purge.

HYPERCRISIS, in Medicine, an immoderate critical Excretion. See CRISIS.

Thus, when a Fever terminates in a Looſeneſs, the Humours ſometimes flow off faſter than the Strength can bear, and are therefore to be check'd.---This is a *Hypercriſis*.

The Word is compounded of υπερ *ſupra*, and κεισις, *Criſis*, Judgment.

HYPERCRITIC, an over-rigid Cenſor, or Critic; one who will let nothing paſs, but animadverts ſeverely on the ſlighteſt Fault. See CRITICISM.

The Word is compounded of ὑπὲρ, *ſuper*, above, beyond, and κριτικὸς, of κριτὴς, *Judex*; of κρίνω, *Judico*, I judge.

HYPERDULIA, in the *Romiſh* Theology, is the Worſhip render'd to the Holy Virgin. See VIRGIN.

The Worſhip offer'd to Saints is call'd *Dulia*; and that to the Mother of God, *Hyperdulia*; as being ſuperior to the former. See WORSHIP.

The Word is *Greek*, ὑπερδουλεία, compos'd of ὑπὲρ, above, and δουλεια, Worſhip, Service.

HYPERMETER, in the ancient Poetry, the ſame with *Hypercatalectic*. See HYPERCATALECTIC.

The Word is compos'd of ὑπὲρ, *ſuper*, and μετρον, Meaſure.

HYPERTHYRON, in the ancient Architecture, a Sort of Table, us'd after the manner of a Frieze, over the Jambs of Doric Doors and Gates, and the Lintels of Windows. It lies immediately under the Corona; and is by our Workmen uſually call'd the *King-piece*. See DOOR, WINDOW, &c.

The Word is form'd of ὑπὲρ, *ſuper*, over, and θύρα, *janua*, Gate.

HYPERSARCOSIS, in Medicine and Chirurgery, an Exceſs of Fleſh; or rather, a fleſhy Excreſcence, ſuch as thoſe generally ariſing on the Lips of Wounds, &c. See EXCRESCENCE, WOUND, FUNGOUS, &c.

HYPÆTHROS, HYPÆTHRON, HYPETHRE, HYPÆTROS, in the ancient Architecture, a Kind of Temple, open a-top, and thereby expos'd to the Air. See TEMPLE.

The *Hypethron*, according to *Vitruvius*, is any open Building or Portico, ſuch as anciently were certain Temples that had no Roof or Covering. --- Of this we have an Inſtance in the Temple of *Jupiter Olympius*, built by *Coſſatius*, a *Roman* Architect, at *Athens*.

Of *Hypæthrons*, ſome were Decaſtyle, others Picnoſtyle. But they had all Rows of Columns within-ſide, forming a kind of Periſtyle; which was eſſential to this Sort of Temple. See PERISTYLE.

The Word is form'd of ὑπὸ, *ſub*, under, and ἀὴρ, Air.

HYPHEN, an Accent or Character in Grammar, which implies, that two Words are to be join'd or connected into one Compound Word. --- As, Male-Sanus, Male-Administration. See ACCENT, CHARACTER, &c.

HYPNOTICK, in Medicine, a Remedy which promotes or induces Sleep; call'd alſo *Soporific*, *Opiate*, &c. See SOPORIFIC, OPIATES, &c.

The Word comes from the *Greek* υπνος, *ſomnus*, Sleep.

HYPO, a *Greek* Particle, retain'd in the Compoſition of divers Words borrow'd from that Language.

The *Greek* Prepoſition ὑπὸ, *Hypo*, literally denotes *under*, *beneath*: In which Senſe it ſtands oppos'd to ὑπερ, *ſuper*, above.

HYPOBOLE, in Rhetoric, a Figure whereby we anſwer before-hand, to what we apprehend the Adverſary will object.

The Word comes from the *Greek*, ὑπὸ, and βάλλω, *jacio*, I caſt.

HYPOCATHARSIS, in Medicine, a too faint or feeble Purgation. See PURGATION.

The Word is compounded of υπο, *ſub*, under, and καθαιρω, I purge.

HYPOCAUSTUM, among the *Greeks* and *Romans*, was a ſubterraneous Place, wherein was a Furnace that ſerv'd to heat the Baths. --- *Vitruvius* calls it *Caldarium*. See BATH, &c.

The Ancients had properly two Sorts of *Hypocauſta*; the one call'd by *Cicero Vaporarium*, and by others *Laconicum* or *Sudatio*; which was a large ſweating Bath, in which were three brazen Veſſels, call'd *Caldarium*, *Tepidarium*, and *Frigidarium*, according to the Water contain'd therein.

The other Sort of *Hypocauſtum*, was a Sort of *Fornax* or Kiln to heat their Winter Parlours, *Cœnatiunculæ Hybernæ*.

The latter *Hypocauſtum* was call'd *Alveus* and *Fornax*; and the Man that tended the Fire *Fornacator*.

The *Hypocauſtum* among the Moderns, is that Part or Place where the Fire is kept that warms a Stove or Hothouſe. See STOVE.

The Word is *Greek*, ὑποκαύστον, form'd of the Prepoſition ὑπὸ, *ſub*, under, and the Verb καίω, *incendo*, I burn.

HYPOCHYMA, or HYPOCHYSIS, in Medicine, a Diſeaſe of the Eyes, popularly call'd *Cataracts*. See CATARACT.

The Word is *Greek*, ὑπόχυμα, which literally denotes ſhedding, Effuſion, or pouring out; the Diſeaſe having formerly been ſuppos'd to ariſe from an Effuſion of ſome viſcid Humour upon the Pupil.

HYPOCHYSIS, in Medicine. See HYPOCHYMA.

HYPOCISTIS, in Medicine, a Juice, us'd in the Compoſition of Treacle, &c. See TREACLE, &c.

The *Hypociſtis* is the Juice, of a Shoot of the ſame Name, ſprouting out from the Foot of a kind of Ciſtus Tree, call'd *Laudanum*; common enough in the hot Countries. See LAUDANUM.

The Shoot grows about a Foot high; and one, two, or three Inches thick; ſomewhat bigger at Top than at Bottom; ſoft, ſucculent, of a yelloviſh Colour, and ſurrounded from Space to Space with a Sort of Rings, or browniſh Knots.

When gather'd, they pound it in a Mortar, and expreſs the Juice: That done, they evaporate it on the Fire till it come to the Conſiſtence of a hard blackiſh Extract, like *Spaniſh* Liquorice. Then they make it up into little Cakes for Carriage.

It is of a tart aſtringent Taſte, and us'd to ſtop Fluxes of the Belly, Vomitings, and Hemorrhages; tho' anciently much more than at preſent. It is alſo an Ingredient in Treacle, and ſome Unguents.

It is ſometimes us'd as a Subſtitute to Acacia.---Dr. *Quincy* ſays, it is the more powerful of the two. See ACACIA.

The Word is *Greek*, form'd of ὑπὸ, under, and κίστος, *Ciſtus*.

HYPOCONDRIA, or HYPOCHONDRIA, in Anatomy, a Space on each Side the Epigaſtric Region, or upper Part of the lower Belly. See ABDOMEN and EPIGASTRIC.

The *Hypocondria* compoſe the upper Part of the Epigaſtrium. They are ſituate on each Side, between the Cartilago Enſiformis, and the Cartilages of the Ribs, and the Tip of the Breaſt; and are divided, with reſpect to their Situation, into *Right* and *Left*.

In the *Right Hypocondrium* the Liver is found; and in the *Left* the Spleen, and a great Part of the Stomach. See LIVER, SPLEEN, &c.

*Hippocrates* ſometimes uſes the Word *Hypocondrium* for the whole lower Venter or Belly. See VENTER.

The *Hypocondria* are ſubject to divers Diſorders. See HYPOCONDRIAC *Diſeaſe*.

The Word is compos'd of the Prepoſition ὑπὸ, *ſub*, under, and χόνδρος, Cartilage; *q. d. Cartilagini Subjacens*, or under the Cartilages of the Ribs, &c. See CARTILAGE.

HYPOCONDRIAC *Diſeaſe*, *Affection*, or *Paſſion*, is the ſame with what we popularly call the *Spleen*, *Vapours*, &c. See DISEASE.

The *Hypocondriac* is a very comprehenſive Diſeaſe: It is variouſly denominated, according to the various Symptoms it is attended with, and the various Parts where it is ſuppos'd to be ſeated, or in which it ariſes.

When conceiv'd as ſituate in the *Hypocondriac* Regions, or ariſing from ſome Diſorder of the Parts contain'd therein, *viz.* the Spleen, Liver, &c. it is properly call'd the *Hypocondriacal Diſeaſe*, *Spleen*, &c.

When conceiv'd as owing to ſome Diſorder of the Womb, it is call'd *Hyſteric Affection*, &c. See HYSTERIC.

And laſtly, when the flatulent Rumblings in the Inteſtines, Belches, &c. are conſider'd, it is call'd the *Vapours*. See VAPOURS.

The *Hypocondriac* is a very common and obſtinate Diſeaſe: Few Men of a ſedentary Life, and fewer Women, are free from it: Its Symptoms are very numerous: The moſt uſual, are a Pain in the Stomach, Windineſs, Vomitings, a Swelling or Diſtenſion of the *Hypocondrium's* or upper Part of the Belly, Noiſes and Rumblings in the lower Venter, wandering Pains, a Conſtriction of the Breaſt, Difficulty of Breathing, Palpitation of the Heart, Faintings, Vigiliæ, Inquietudes, Swimming of the Head, Fear, Suſpicions, Melancholy, Deliriums, &c. Not that all theſe Accidents befal every Perſon ſeiz'd with this Diſeaſe; but ſometimes ſome of them, and at other Times others, according to the Conſtitution, &c. of the Patient.

In effect, the *Hypocondriacal* is a very vague, indeterminate Sort of Diſorder. Dr. *Sydenham* obſerves, that its Symptoms ape or emulate thoſe of moſt other Diſeaſes; and that whatever Part it is in, it produces ſomewhat like the common Diſeaſes of that Part.---Thus, in the Head, it produces a Sort of Apoplexy; Fits like the Epilepſy, call'd *Hyſteric* Fits; intolerable Head-ach, &c. In Perſons affected with the Chloroſis, it produces a Palpitation of the Heart; ſometimes, tho' rarely, it ſeizes the Lungs, and cauſes a continual dry Cough: It alſo imitates the Cholic, and Iliac Paſſion, and ſometimes the Stone, Jaundice, &c. In the Inteſtines it produces a Diarrhæa; in the Stomach, Nauſeas: Sometimes it ſeizes the external Parts, and particularly the Back, which it renders chilly and painful; and the Legs and Thighs, which it ſwells ſo as to reſemble the Dropſy: Seizing the Teeth, it reſembles the Scurvy (indeed, *Etmuller* makes the Scurvy itſelf to be only a great Degree of this Diſeaſe). Laſtly, which is the moſt unhappy Circumſtance of all, the Patient is more affected in Mind than in Body.

The Seat of this Diſeaſe is commonly ſuppos'd to be in the Animal Spirits, and the nervous Syſtem. Its Cauſe is referr'd to an acid Salt abounding in the Maſs of Blood; to which the ill Diſpoſition of the Stomach, and the other Parts contain'd in the Epigaſtrium, may greatly contribute. *Purcell* aſſigns Crudities and Indigeſtions as the prime Cauſe. According to *Sydenham*, vehement Motions of the Body, or more uſually violent Perturbations of the Mind, as Grief, Anger, Fear, &c. are its procatarctic Cauſes.

For the Cure, the principal Indication is to purify and ſtrengthen the Blood, which is to be effected, after proper Evacuations, by Chalybeats, Bitters, Strengthners, and Volatile Spirits. The Cortex has alſo notable Virtues in this Diſeaſe; as alſo a Milk Diet. Riding is admirable. *Sydenham*.

HYPOCONDRIACAL *Medicines*, are Remedies proper in the *Hypocondriac Diſeaſe*.

Such are all thoſe which tend to purify the Blood, Humours, and Spirits; as Chervil, Balm, Agrimony, and the other Cephalic and Cardiac Herbs: Such alſo are thoſe which purge Melancholy or Atrabilis, and thoſe which diſpel Wind and Vapours; and all Medicines good for Diſorders of the Nerves, particularly Vervain both Male and Female; but above all, frequent, gentle, Anodyne Purges.

HYPOCONDRIACAL *Regions*. See HYPOCONDRIA.

HYPOCRAS, or rather HIPPOCRAS, *Vinum Hippocraticum*, a kind of medicated Wine. See WINE.

*Hypocras* is a Drink or Beverage compos'd of Wine, with Spices and other Ingredients infus'd therein; much us'd among the *French* by Way of Dram after Meals.

There are various Kinds of *Hypocras*, according to the Kind of Wine, and the other additional Ingredients made uſe of; white *Hypocras*, red *Hypocras*, Claret *Hypocras*, Strawberry *Hypocras*, *Hypocras* without Wine, Cyder *Hypocras*, &c.

That directed in our College Diſpenſatory, is to be made of Cloves, Ginger, Cinnamon, and Nutmegs, beat, infus'd in Canary, with Sugar; to the Infuſion, Milk, a Lemon, and ſome Slips of Roſemary to be put, and the whole ſtrain'd thro' a Flannel.

It is recommended as a Cordial, good in Paralytic, Apoplectic, and all nervous Caſes.

*Menage* approves the Conjecture of thoſe who derive *Hypocras* from *Hyppocrates*, as ſuppoſing him the Inventor hereof. --- Others derive the Word from the *Greek* ὑπὸ and κεραννυμι, to mix.

HYPODROME. See HIPPODROME.

HYPOGÆUM,

HYPOGÆUM, in the ancient Architecture, a Name common to all the Parts of a Building that are under Ground; as the Cellars, Butteries, and the like Places.

The Word is form'd of the *Greek* ὑπό, under, and γαῖα, *Terra*, Earth.

HYPOGÆUM, ὑπόγαιον, in Aſtrology, is a Place under Ground, otherwiſe call'd the *Imum Cœli*.

HYPOGASTRIC *Region*. See HYPOGASTRIUM.

HYPOGASTRIC *Artery*, is an Artery ariſing from the Iliaca Interna, and diſtributed to the Bladder, the Rectum, and the Genital Parts, particularly in Women. See ARTERY.

HYPOGASTRIC *Vein* ariſes in the ſame Parts, and diſcharges itſelf into the Iliaca Interna. See VEIN.

HYPOGASTRIUM, in Anatomy, the lower Part of the Belly, or lower Venter; commencing from two or three Inches below the Navel, and extending to the Os Pubis. See VENTER and ABDOMEN.

The Word is *Greek*, form'd of ὑπό, *ſub*, under, and γαστὴρ, *Venter*, Belly.

HYPOGLOSSIS, or HYPOGLOTTIS, in Medicine, an Inflammation or Ulceration under the Tongue; call'd alſo *Ranula*. See RANULA.

HYPOGLOTTIS, in Anatomy, is a Name given to two Glands of the Tongue. See TONGUE.

There are four large Glands of the Tongue; two of them call'd *Hypoglottides*, ſituate under it, near the Venæ Ranulares; and two more on the two Sides of the Tongue. They all filtrate a kind of ſerous Matter, of the Nature of Saliva, which they diſcharge into the Mouth by little Ducts near the Gums.

The Word is *Greek*, compos'd of ὑπό, *ſub*, under, and γλῶτλα, *Lingua*, Tongue.

HYPOMOCHLION, in Mechanicks, the Fulcrum of a Lever; or the Point which ſuſtains its Preſſure, when employ'd either in raiſing or lowering Bodies. See LEVER.

The *Hypomochlion* is frequently a Roller ſet under the Lever; or under Stones, Pieces of Timber, &c. that they may be the more eaſily lifted up or remov'd.

The Word is *Greek*, form'd of ὑπὸ, *ſub*, under, and μοχλὸς, *Vectis*, Lever.

HYPOPYON, in Medicine, a Diſeaſe of the Eyes.---It conſiſts in a Collection of Pus, under or behind the Cornea; which ſometimes covers the whole Pupil, and obſtructs the Light. See EYE.

Some will have it the ſame with *Unguis*; but the more accurate make a Difference. See UNGUIS.

The *Hypopyon* ariſes from a Rupture of the Veſſels in the Uvea; occaſion'd either by ſome external Violence, or the Acrimony of the Blood therein.

'Tis very difficult of Cure. --- The Suppuration is to be prevented by proper Cataplaſms; or, if theſe have not Effect, is to be promoted. See SUPPURATION.

The Word is *Greek*, ὑπόπυον; form'd of ὑπὸ, *ſub*, under, and πυον, Pus.

HYPORCHEMA, in the *Greek* Poetry, a Poem compos'd in divers Kinds of Verſes, and of different Lengths. They were always very ſhort; and full of Pyrrhic Feet.

HYPOSPATISMUS, in the ancient Chirurgery. M. *Dionis* takes it to have been an Operation practis'd among the Ancients, by making three Inciſions in the Forehead, to the very Bone, about two Inches long; in order to cut or divide all the Veſſels between thoſe Inciſions. The Deſign of the Operation was to prevent Defluxions on the Eyes.

The Word comes from the *Greek*, ὑποσπασμὸς; form'd of ὑπὸ, under, and σπάσθη, *Spatula*; by reaſon after the Inciſions were made, they thruſt a Spatula all along between the Pericranium and the Fleſh.

HYPOSTASIS, a *Greek* Term, literally ſignifying *Subſiſtence*; uſed in Theology for *Perſon*.

Thus we hold, that there is but one Nature in God, and three *Hypoſtaſes*. See PERSON, TRINITY, &c.

The Word *Hypoſtaſis* is *Greek*, ὑπόστασις, *Subſiſtentia*; compounded of ὑπὸ, *ſub*, under, and ἵστημι, or στάω, *ſto*, *exiſto*, I ſtand, I exiſt.

The Term *Hypoſtaſis* is of a very ancient ſtanding in the Church. St. *Cyril* repeats it divers Times, as alſo the Phraſe *Union according to Hypoſtaſis*. The firſt Time it occurs in all Chriſtian Antiquity, is in a Letter of that Father to *Neſtorius*, where he uſes it inſtead of πρόσωπον, the Word we commonly render *Perſon*, which did not ſeem expreſſive enough. "The Philoſophers, ſays St. *Cyril*, have allow'd three *Hy-* "*poſtaſes*: They have extended the Divinity to three *Hy-* "*poſtaſes*: They have even ſometimes uſed the Word Tri- "nity: And nothing was wanting but to have admitted the "Conſubſtantiality of the three *Hypoſtaſes*, to ſhew the "Unity of the divine Nature, excluſive of all Triplicity "in reſpect of Diſtinction of Nature, and not to hold it "neceſſary to conceive any reſpective Inferiority of *Hy-* "*poſtaſes*."

This Term occaſion'd great Diſſentions in the ancient Church; firſt among the *Greeks*, and afterwards alſo among the *Latins*.

In the Council of *Nice*, *Hypoſtaſis* was defin'd to denote the ſame with *Eſſence* or *Subſtance*; ſo that it was Hereſy to ſay that Jeſus Chriſt was of a different *Hypoſtaſis* from the Father; but Cuſtom alter'd its Meaning. ---- In the Neceſſity they were under of expreſſing themſelves ſtrongly againſt the *Sabellians*, the *Greeks* made Choice of the Word *Hypoſtaſis*, and the *Latins* of *Perſona*; which Change prov'd the Occaſion of endleſs Diſagreement. Thoſe who took the Word *Hypoſtaſis* in its ancient Signification, could not bear to hear of three *Hypoſtaſes*, which, according to them, were ſo many divine Eſſences or Subſtances. And yet they who uſed the Word in the new Senſe againſt the *Sabellians*, all along declar'd, that they meant by it three Individuals, or three Subjects which ſubſiſt alike, and not three different Eſſences or Subſtances: So that in their Senſe, they admitted three *Hypoſtaſes* in one and the ſame Eſſence.

Others, by Eſſence, underſtood a common and indefinite Nature, as Humanity is to all Men in the general; and by *Hypoſtaſis*, a ſingle Nature, peculiar to each Individual, as each Man in particular is a Modification of the whole human Nature or Eſſence.---But this laſt Signification, which ſome attribute to St. *Baſil*, if apply'd to the Deity, would imply Tritheiſm: For if the three Perſons in the Trinity be three *Hypoſtaſes*, juſt as *Peter*, *James*, and *John* are, there are manifeſtly three Gods.

HYPOSTASIS, in Medicine, is the Sediment of the Urine, or that thick heavy Part of the Urine which ſubſides and ſettles at Bottom. See SEDIMENT. See alſo URINE.

HYPOSTATICAL, in Theology, is a Term uſed in ſpeaking of the Myſtery of the Incarnation.

The *Hypoſtatical Union*, is the Union of the human Nature with the Divine. See INCARNATION.

The Word was united *hypoſtatically* to the human Nature in the Perſon of Jeſus Chriſt.

HYPOSTATICAL *Principles*, among the Chymiſts, and particularly Paracelſiſts, are the three Chymical Elements, *Salt*, *Sulphur*, and *Mercury*; call'd alſo the *Tria prima*. See PRINCIPLE and ELEMENT.

HYPOTENAR, in Anatomy, the ſecond Muſcle of the little Finger. See MUSCLE and FINGER.

The *Hypotenar* ariſes from the little Bone of the Carpus, ſituate over the others, and is inſerted externally into the firſt Bone of the little Finger, which it ſerves to withdraw from the reſt.

The ſixth and laſt Muſcle of the Toes is alſo call'd *Hypotenar* or Abductor. See ABDUCTOR.

The Word is compounded of ὑπὸ, *ſub*, and *tenar*, a Muſcle of the Thumb. See TENAR.

HYPOTHECA, in the Civil Law, an Obligation, whereby the Effects of a Debtor are made over to his Creditor, to ſecure his Debt: The ſame with *Mortgage* in the Common Law. See MORTGAGE.

As the *Hypotheca* is an Engagement procur'd on Purpoſe for the Security of the Creditor, various Means have been made uſe of to ſecure to him the Benefit of the Convention. The Uſe of the Pawn or Pledge is the moſt ancient; which is almoſt the ſame Thing with the *Hypotheca*; all the Difference conſiſting in this, that the Pledge is put into the Creditor's Hands; whereas, in a ſimple *Hypotheca*, the Thing remain'd in the Poſſeſſion of the Debtor. It was found more eaſy and commodious to engage an Eſtate by a ſimple Covenant, than by an actual Delivery: Accordingly the Expedient was firſt practis'd among the *Greeks*; and from them the *Romans* borrow'd both the Name and the Thing; only the *Greeks*, the better to prevent Frauds, uſed to affix ſome viſible Mark on the Thing, that the Publick might know it was mortgag'd by the Proprietor: But the *Romans*, looking on ſuch Advertiſements as injurious to the Debtor, forbad the Uſe of them.

The *Roman* Lawyers diſtinguiſh'd four Kinds of *Hypotheca*'s: The *Conventional*, which was with the Will and Conſent of both Parties: The *Legal*, which was appointed by Law, and for that Reaſon call'd *Tacit*: The *Prætor*'s *Pledge*, when by the Flight or Non-appearing of the Debtor, the Creditor was put in Poſſeſſion of his Effects: And the *Judiciary*, when the Creditor was put in Poſſeſſion by Virtue of a Sentence of the Court.

The Conventional *Hypotheca* is ſub-divided into *general* and *ſpecial*. The *Hypotheca* is *general*, when all the Debtor's Effects, both preſent and future, are engag'd to the Creditor. It is *ſpecial*, when limited to one or more particular Things.

For the tacit *Hypotheca*, the Civilians reckon no leſs than 26 different Species thereof.

The Word comes from the *Greek*, ὑποθήκη, a Thing ſubject to ſome Obligation; of the Verb ὑποτίθεμαι, *ſupponor*, I am ſubjected; of τίθεμι, *pono*, I put.

HYPOTHENUSE, or HYPOTENUSE, in Geometry, is the longeſt Side of a right-angled Triangle; or that Side which

which ſubtends, or is oppoſite to, the right Angle. See TRIANGLE.

Thus, in the Triangle KML, (Tab. Geometry, Fig. 71.) the Side ML, oppoſite to the right Angle K, is call'd the *Hypothenuſe*.

'Tis a celebrated Problem in Geometry, that in every rectilinear right-angled Triangle, as KML; the Square of the *Hypothenuſe* ML, is equal to the Squares of both the other Sides, KL and KM.---This is particularly call'd the *Pythagorean* Problem, from its Inventor *Pythagoras*, who is ſaid to have ſacrific'd a Hecatomb to the Muſes, in Gratitude for their aſſiſting him therein. See PROBLEM, &c.

The Word is *Greek*, ὑποτείνουσα, *ſubtendens*, form'd of ὑποτείνω, *ſubtendo*, I ſubtend.

HYPOTHESIS, in Logic, is a Propoſition or Principle which we ſuppoſe, or take for granted, in order to draw Concluſions therefrom, for the Proof of a Point in Queſtion. See SUPPOSITION and PRINCIPLE.

In Diſputation, they frequently make falſe *Hypotheſes*, in order to draw their Antagoniſts into Abſurdities; and even in Geometry, Truths are deducible from ſuch falſe *Hypotheſes*. --- Thus, If the Sky ſhould fall, we ſhould catch Larks: The Conſequence is good, tho' drawn from a falſe *Hypotheſis*.

The Word is *Greek*, ὑπόθεσις, form'd of ὑπὸ, *ſub*, under, and θέσις, *poſitio*; of τίθημι, *pono*, I put.

Every Conditional or Hypothetical Propoſition, may be diſtinguiſh'd into *Hypotheſis* and Theſis: The firſt rehearſes the Conditions under which any Thing is affirm'd or deny'd; and the latter is the Thing itſelf affirm'd or deny'd. See HYPOTHETICAL.

Thus, in the Propoſition, a Triangle is half of a Parallelogram, if the Baſes and Altitudes of the two be equal: The latter Part is the *Hypotheſis*, if the Baſes, &c. and the former the Theſis, a Triangle is half a Parallelogram. See THESIS.

In ſtrict Logic, we are never to paſs from the *Hypotheſis* to the Theſis; that is, the Principle ſuppos'd muſt be prov'd to be true, e'er we require the Conſequence to be allow'd.

HYPOTHESIS, in Phyſicks, &c. is a kind of Syſtem, laid down from our own Imagination, whereby to account for ſome Phænomenon or Appearance of Nature. --- Thus we have *Hypotheſes* to account for the *Tides*, for *Gravity*, for *Magnetiſm*, for the *Deluge*, &c. See TIDES, GRAVITY, MAGNETISM, DELUGE, &c.

The real and ſcientific Cauſes of natural Things generally lie very deep: Obſervation and Experiment, the proper Means of arriving at them, are in moſt Caſes extremely ſlow; and the human Mind impatient: Hence we are frequently driven to feign or invent ſomething which may ſeem like the Cauſe, and which is calculated to anſwer the ſeveral Phænomena; ſo that it may poſſibly be the true Cauſe.

Philoſophers are divided as to the Uſe of ſuch Fictions or *Hypotheſes*, which are much leſs current now than formerly. --- The lateſt and beſt Writers are for excluding *Hypotheſes*, and ſtanding wholly on Obſervation and Experiment. See EXPERIMENTAL *Philoſophy*.

Whatever is not deduc'd from Phænomena, ſays Sir *Iſ. Newton*, is an *Hypotheſis*; and *Hypotheſes*, whether Metaphyſical, or Phyſical, or Mechanical, or of occult Qualities, have no Place in Experimental Philoſophy. *Phil. Nat. Prin. Math. in Calce*.

The *Carteſians* take upon them to ſuppoſe what Affections in the primary Particles of Matter they pleaſe; juſt what Figures, what Magnitudes, what Motions, and what Situations they find for their Purpoſe. --- They alſo feign certain unſeen, unknown Fluids, and endue them with the moſt arbitrary Properties; give them a Subtility which enables them to pervade the Pores of all Bodies, and make them agitated with the moſt unaccountable Motions. But is not this to ſet aſide the real Conſtitution of Things, and to ſubſtitute Dreams in their Place! Truth is ſcarce attainable even by the ſureſt Obſervations; and will fanciful Conjectures ever come at it? They who found their Speculations on *Hypotheſes*; even tho' they argue from them regularly according to the ſtricteſt Laws of Mechanicks, may be ſaid to compoſe an elegant and artful Fable; but 'tis ſtill only a Fable. *Cotes in præfat. ad Newton. Princip.*

HYPOTHESIS is particularly apply'd, in Aſtronomy, to the ſeveral Syſtems of the Heavens: Or the divers Manners wherein different Aſtronomers have ſuppos'd the heavenly Bodies to be rang'd, mov'd, &c. See SYSTEM.

The principal *Hypotheſes*, are the *Ptolomaic*, *Copernican*, and *Tychonic*. See PTOLOMAIC, COPERNICAN, TYCHONIC, &c.

The *Copernican* is now become ſo current, and is ſo well warranted by Obſervation; that the Retainers thereto, hold it injurious to call it an *Hypotheſis*.

HYPOTHETICAL *Propoſition*, is a Combination of two Categorical Propoſitions, the latter whereof follows from the former, which is diſtinguiſh'd by the Particle *if*. See PROPOSITION.

If he be a Man, he is an Animal: If the *Turk* ſleep, the Cock crows: If you repent, you ſhall be forgiven. See CONDITIONAL.

HYPOTRACHELION, in Medicine, is the lower Part of the Neck. See NECK.

It is thus call'd from ὑπὸ, *ſub*, under, and τράχηλος, *Collum*, Neck.

In Architecture, *Hypotrachelion* is uſed for a little Freeze in the *Tuſcan* and *Doric* Capital, between the Aſtragal and Annulets; call'd alſo *Colarin*, *Gorgerin*, &c. See COLARIN, &c.

It is alſo apply'd by ſome Authors in a more general Senſe, for the Neck of any Column; or that Part of the Capital thereof below the Aſtragal. See COLUMN and ASTRAGAL.

HYPOTYPOSIS, in Rhetoric, a Figure whereby a Thing is ſo livelily deſcrib'd or painted, that it does not ſeem to be read or heard, but actually ſeen, or preſented before the Eyes. See DESCRIPTION.

Such is that elegant one of *Cicero*, wherein he paints the Barbarity of *Verres*: *Ipſe Inflammatus ſcelere & furore in forum venit. Ardebant Oculi; toto ex ore crudelitas emanabat. Expectabant omnes quo tandem progreſſurus, aut quid nam acturus eſſet; cum repente Hominem corripi, atque in foro medio nudari ac deligari, & Virgas expedire jubet. Clamabat ille miſer ſe Civem eſſe Romanum*, &c.

The *Hypotypoſis* is frequently uſed by the Poets, and particularly *Virgil*, who abounds in Paintings.

The Word is *Greek*, ὑποτύπωσις, form'd of the Verb ὑποτυπόω, *per figuram demonſtro*, I ſhew, repreſent, or make any Thing be ſeen, of τύπτω, *Verbero*.

HYPOZOMA, in Anatomy, a Name given to ſuch Membranes as ſeparate two Cavities. See MEMBRANE.

In this Senſe, the Mediaſtinum is a *Hypozoma*.

HYPSILOGLOSSUS, in Anatomy. See BASIOGLOSSUS.

HYPSILOIDES, in Anatomy. See HYOIDES.

HYPSISTARII, HYPSISTARIANS, a Sect of Hereticks in the IVth Century; thus call'd from the Profeſſion they made of worſhipping the moſt High God, in *Greek* call'd Ὑψίστος, *Hypſiſtos*.

The Doctrine of the *Hypſiſtarians*, was an Aſſemblage of Paganiſm, Judaiſm, and Chriſtianity. They ador'd the moſt High God with the Chriſtians; but they alſo rever'd Fire and Lamps with the Heathens; and obſerv'd the Sabbath, and the Diſtinction of clean and unclean Things, with the *Jews*.

The *Hypſiſtarii* bore a near Reſemblance to the *Euphemites* or *Maſſalians*. See MASSALIAN.

HYSSOP, HYSSOPUS, a medicinal Herb, of a deterging cleanſing Quality, and chiefly uſed in Diſeaſes of the Breaſt and Lungs. See DETERGENT.

It is a ſtanding Ingredient in pectoral Apozems. --- There is alſo a Syrop, and a ſimple diſtill'd Water from it, us'd in the Shops. See WATER, &c.

It has alſo a Faculty to comfort and ſtrengthen; and is prevalent againſt Melancholy and Phlegm. --- It is propogated only by Slips.

Its Tops and Flowers reduc'd to Powder, are by ſome reſerv'd to ſtrew upon the colder Sallad Herbs. See SALLAD.

HYSSOPIC *Art*, a Name which *Paracelſus* gave to Chymiſtry, conſider'd as that Art purifies Metals, Minerals, &c. In Alluſion to that Text in the Pſalms, Purge me with *Hyſſop*, and I ſhall be clean. See CHYMISTRY.

HYSTERALGY, in Medicine, a Pain in the Matrix or Womb, occaſion'd by an Inflammation, or other Diſorder therein.

The Word is compounded of the *Greek*, ὑστέρα, *Matrix*, Womb; and ἄλγος, *dolor*, Pain.

HYSTERIC *Affection* or *Paſſion*, a Diſeaſe in Women, call'd alſo *Suffocation of the Womb*, and *Fits of the Mother*.

*Hyſteric Affection* is generally uſed by Authors promiſcuouſly with *Hypocondriac Affection*; the two Diſeaſes being ſuppos'd to be, in reality, the ſame. --- They only differ in Point of Relations and Circumſtance.

The *Hyſteric* is properly a Species or Branch of the Hypocondriac, peculiar to Women, and ſuppos'd to ariſe from ſome Diſorder of the Womb. See HYPOCONDRIAC *Affection*.

One of the Symptoms or Effects of Hypocondriac Diſeaſes is Convulſions, and Fits not unlike thoſe of the Epilepſy; theſe we call *Hyſteric* Fits; and the Diſeaſe that produces them, the *Hyſteric Affection*. *Sydenham*.

The Name *Hyſteric* is form'd of the *Greek*, ὑστέρα, *Uterus*, Womb; the Patient frequently fancying a Ball rolling in the Abdomen, and ſometimes riſing to the Throat, which ſome weakly enough have attributed to an Elevation of the Womb.

It is particularly denominated *Hyſteric Suffocation*, from one of its principal Symptoms, which is a Contraction of the Breaſt, and a Difficulty of Breathing.

Some Women under this Diſorder, fancy a Rope ty'd about their Necks, ready to ſtrangle them; and others, a Piece got into their Throats, which they cannot ſwallow, but ſtops their Breaſt: Some will even remain a good while as if really ſtrangled, without any Senſe or Motion.

The more common Symptoms or Accidents of this Diſeaſe, are a Swimming of the Head, Dazzling of the Eyes, Inquietudes, Pains of the Abdomen, Belches, Nauſeas, Vomitings, Deliriums, Convulſions. It is not always attended with all theſe Symptoms, but ſometimes with more, and ſometimes with leſs, and thoſe more or leſs violent.

Dr. *Purcel* deſcribes a *Hyſteric* Paroxyſm, as beginning with a Senſe of Coldneſs creeping up the Back, and afterwards ſpreading over the whole Body; Then enſues a Head-ach, and ſometimes a Palpitation of the Heart, with a fainting, from which the Patient ſoon recovers. Sometimes, after the Coldneſs, ſucceeds a remarkable Heat, which brings on the fore-mention'd Symptoms. *Baglivi* adds, that *Hyſteric* Women feel a Senſe of Cold in the Crown of the Head; and this he takes to be the chief Diagnoſtic of the Diſeaſe.

The ordinary Cauſes of this Diſorder are violent Paſſions, Rage, Love, Grief, ill News, ſweet Smells, *&c.* As for the popular Notion of malignant Vapours riſing from the Womb, and occaſioning all theſe Symptoms; the Learned all diſcard it, and hold Men as ſubject to the Diſeaſe as Women. The real Cauſe is in the Animal Spirits, and the nervous Syſtem; and the Affection does not differ from the Hypocondriac.

For the Cure; as many of the Symptoms are convulſive, Antiſpaſmodicks are indicated. During the Paroxyſm, fœtid Things, whether internally or externally apply'd, are of Advantage; particularly Caſtoreum, the Smoak of burnt Horn, or burnt Feathers held to the Noſe. Volatile Spirits alſo help to wake the Patient out of the Paroxyſm; as alſo tickling in the Soles of the Feet. Where 'tis ſeverer than ordinary, recourſe muſt be had to Punction, Scarification, Veſicatories, Cauſticks, *&c.* See HYSTERIC *Medicines.*

HYSTERICKS, or HYSTERIC *Medicines*, are Remedies proper to remove *Hyſteric* Affections; particularly Diſorders of the Womb.

There are divers Species of *Hyſtericks*: Some evacuate or cleanſe the Womb, by expelling any Impurities lodg'd therein: Others tend to ſtop immoderate Fluxes thereof: And others ſtrengthen the Tone of the Womb.

According to Dr. *Quincy*, *Hyſteric* Affections ariſe either from too titillating, or too uneaſy Senſations: The former proceed from that Irritation of the Nerves, which the Make and Secretion of thoſe Parts have naturally ſubjected them to, and which, in ſome Sorts of Conſtitutions, ariſe to that Degree, as to draw the whole Syſtem into Diſorder, and occaſion a ſurprizing Variety of Symptoms; *e. gr.* ſeveral Sorts of Convulſions, and Species of Madneſs; which therefore are by ſome termed *Furores Uterini.* See UTERINE.

Theſe Diſorders ſeem moſt effectually allay'd, by ſuch Things as are in a Manner the Reverſe of Cordials, and are both in Smell and Taſte very offenſive and diſagreeable: They ſeem to anſwer this End by ſuffocating, as it were, the Spirits, and damping their inordinate Sallies, ſo that ſuch Stimulation ceaſes, and the Fibres return to their natural Tone and Motions: For as what is grateful to the Senſes, gives an inexpreſſible Emotion to the fine nervous Filaments; ſo does what is fœtid and diſagreeable quite deſtroy that Emotion, and deaden it: And as the former Kind conſiſt chiefly of fine ſubtile volatile Parts, by which, as before explain'd under CEPHALICKS, they are fitter to enter the Nerves; ſo theſe are generally of a clammy viſcous Contexture, and thereby the fitter to envelope and entangle that ſubtile Juice; whereby its Motion is much retarded, and conſequently the Fibres render'd leſs ſpungy.

HYSTEROLOGY, HYSTEROLOGIA, in Rhetoric, a vitious Manner of ſpeaking, wherein the natural Order of Things is inverted; call'd by the *Greeks*, ὕστερον and πρώτερον, *q. d.* to put the firſt Thing where the laſt ſhould be.

The Word is *Greek*, ὑστερολογία, ſignifying a Diſcourſe inverted.

HYSTEROMATOCY, in Chirurgery, an Operation more uſually call'd in our Language the *Cæſarian Operation* or *Section.* See CÆSARIAN.

HYSTERON-PROTERON, ὕστερον πρότερον. See HYSTEROLOGY.

HYSTEROTOMIA, in Anatomy, an Anatomical Diſſection of the Uterus, or Womb. See MATRIX.

The Word is form'd of the *Greek*, ὑστέρα, *Matrix*, Womb, and τέμνω, *ſeco*, I cut, I diſſect.

HYTH, a Port, Wharf, or little Haven, to embark or land Wares at. --- Such are *Queen-hyth*, now *Maidenhead*, *&c.* See PORT, HAVEN, *&c.*
